Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mary Lou Laslie

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Fidel Arbolaez

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kenneth Stevenson

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am a permanent Florida resident, and I love my state, our abundant sunshine and clean air. However, it seems we are headed in the wrong direction with regard to our energy policies which are not in keeping with the rest of the nation!

I urge you to move to protect and expand solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robin Peterson

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bob Pianka

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Richard Pinto

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Among other things, consider Thorium fuel, especially using it to reuse the long-term species-threatening problem nuclear wastes as fuel enough to empower our species millennia leaving it much less dangerous & of no use in weaponization for a period less than a few centuries rather than extremely dangerous for many many millennia.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Stephen Paul

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Eileen Kimsey

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Danuta Matus

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Cheryl Girouard

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robert Hall

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Susan Armistead

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am writing this from San Francisco where i have spent the past week at a professional trade conference for the solar industry and my biggest takeaway: Florida should be ASHAMED!! This industry is exploding across the US and the world and FL is woefully behind the curve STRICTLY because of the lack of State incentives, which translate into a hostile environment for the fastest growing industry in the nation! We are forfeiting thousands of jobs and million of $$ in economic activity. Even GA and both Carolina's have implemented good incentives. Rick Scott and state congressional republicans should be shot!

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mini Kaplan

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Maria Gosnell

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Dear Florida Public Service Commission,

time to step out of the stone age!!!

we have the most sun and have the worst solar record due to the inability to sell 3rd party power.

I am in construction and have studied for NABCEP certification. I HAVE MET WITH SEVERAL INTERNATIONAL INVESTORS READY TO INVEST MILLIONS IN FLORIDA'S SOLAR. THEY LEFT TO OTHER COUNTRIES DO TO THE EMBARRASSING POLICIES AND POOR ROI . THANKS.

Sincerely,
Cyril Taieb

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robin Pittman

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jayne Ortiz

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
eric hubbard

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Janet Kitsmiller

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian and scientist, I am very concerned that Florida is not at the forefront of alternative energy development. To the contrary, utility companies such as FPL try to convince customers that natural gas is clean energy, knowing full well that fracking not only wastes and contaminates huge amounts of ground water but that the methane releases contribute as much or more to climate change as coal use does.

I urge the Commission to ensure that Florida's power companies improve energy efficiency and to support rooftop and distributed solar power programs. This year's Florida Energy Efficiency and Conservation Act should set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. In particular, The Sunshine State needs to take advantage of this energy source and greatly expand its solar pilot programs.

I also urge the Commission to reject any attempt to exclude energy efficiency measures under the "rate" test and the "two-year payback" test, flawed tests that fail to identify which energy efficiency programs are in customers' best interest. Floridians deserve the same benefits as residents of other states that don't use these tests and where energy efficiency programs are rapidly growing, reducing bills and pollution while boosting economic growth.

Energy conservation and efficiency along with increased solar programs can meet Florida's energy needs, avoid the need for expensive new power plants and protect our air and water while reducing climate disrupting pollutants. We need to be pat of a clean energy future, not an outdated, dirty energy past.

Sincerely,
Cheryl Gross

These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Travis Thomas

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jane Myers

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Eleanor Frederick

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Diana Sanchez

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Glenda Peel

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I support everything said in this letter. We can't continue to burry our heads in the sand to jot supporting switching over to clean energy. Florida is extremely vulnerable to climate change (sea level rise, droughts, floods). Don't risk our future by supporting policies that promote the status quo of coal and gas only and concentrated energy systems that don't allow for individual household production sharing.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Marilyn Preston

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Hello, Sunshine!

As a relatively new Floridian, coming from states with far less sun and far more solar, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

USE WHAT WE'VE GOT!

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Ronald Cicciarelli

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Colleen Augsburger

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

At this year's FEECA proceeding please explore ways to open energy production to more competition. Our existing energy structure gives monopoly power to only a few providers. These providers have been using very limited methods to reduce electricity consumption and have been using only limited sources for power generation.

Opening up the market for alternative power generation and rewarding the reduction in electricity consumption will reduce power bills and make it possible for the the public to choose non-carbon energy production. This will help the state meet the new carbon reduction targets.

Sincerely,
Samuel Kendall

Run Duke Energy proposals through a "fine- tooth comb"...
they are recently guilty of polluting the streams of North Carolina and colluding with the state Department of Natural Resources nearly allowing Duke a "sweetheart" fine for heavy damage to the environment....

And respectfully remember, the commission's decisions are under constant review by an increasingly environmentally aware- public.....

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Ginger Nesmith

These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
dawn Klinges

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Patricia Keelean

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mary Mobley

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lucy Keller

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

I absolutely detest the entire nuclear fueled market, the expenses involved in building these dangerous waste lands and the fact these nuclear plants are out of harmony with our environment. It's not energy efficient. It's only meant to fulfill the pockets and egos of the few who think they call the shots.

Time for Floridians to take that privilege out of those hands. We know our rights and we know what we don't want!

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. FPL is too limited in the amount of rebates they offer each year. I believe they only accept 100 or less applications each year! That's peanuts! It would take over a hundred years to get every homeowner up and solar powered! It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

I know it's in the big corporations best interests to keep us chained to their waste belts, but I don't really care about those fat cats. I am a Floridian. Born and raised. I live in a state that requires air conditioning nearly year round. My electric bills are ridiculous. Why should I pay you for something that should be free? You are only the middleman! Our sunshine is glorious! And, it's free! You all are making money on our hard earned dollars and frankly, I'm tired of it.

Time for change! I can already see our future here in Florida. We will have clean energy with or without your support. Best if you all do something to make that happen now so you can think of some way to make a little pocket change. Otherwise, I envision people finding solutions to fuel their homes on their own, cutting out you, the middleman.

Sincerely,
Karyn Wolfer

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
John Dieffenbach

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Steve Shenesky

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Julius Roehl

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kathy Robinson

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mark Siegel

These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Barbara Maddux

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs. IT'S THE RIGHT THING TO DO!

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jacqueline Taylor

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
D Lebedeff

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kellie Pilgreen

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Claudia Navarro

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Wanda Russell

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Howard Buss

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Dr. Jim Hanson

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michael Montgomery

Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kerry Mcneil

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Adriana Lopez

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Rachel Defauw

I find it very hard to believe that the cost of installing solar outweighs the money that would be saved by not having to buy coal, since the cost of sunshine is NOTHING. It is true that the sun does not shine all the time, and storage batteries would be needed, but solar power could surely be used to supplement the other forms of energy production, and would most certainly help improve the air quality in our state. We will use up all our coal, oil and gas long before the sun dies, and we need to be finding ways to use the energy it can provide before it is too late..

Sincerely,
Patricia Gallenkamp

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Dennis Hall

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I insist that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support solar rooftop programs.

Our leaders want growth; they want a flourishing tourism industry, they want a flourishing fishing industry, all of which are increasingly impossible with filthy fossil fueled power production or water-wasting/water-warming nuclear power production.

Solar rooftops suffer the least line loss and offer the swiftest power recovery after storm events. They keep money circulating within Florida communities, instead of continually flowing out of state. They don't enrich lobbyists, they don't enrich industrialists ... they instead enrich every facet of Floridians' lives.

I insist that sunshine-drenched Florida make better use of rooftop solar power than cloudy Germany.

And you must insist, too. It's your job.

Sincerely,
Susan Chandler

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
William Walton

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Susan McGrath

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Every time I fly into MIA my first thought is that there is NO SOLAR POWER in any direction. All those flat, industrial roofs which fill mile after mile of roads in all directions from the airport and not one has a solar panel on the roof. Why is the Sunshine State so lacking in solar power initiatives? Why is the Sunshine State lacking in mandatory solar power production? Why have the politicians and the power industry shut down third-party solar initiatives? Something is really rotten in the Sunshine State.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Helen Hauck

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michael Myjak

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Adelia Vachon

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

You took a stand against more dirty coal plants some years ago --and the goal was clean energy and reducing the demand. I spent two years of my life working toward this goal. Now, you can see what a great thing it was to stop filthy coal ---wouldn't you like to look back ten years from now and be proud that you reduced demand and pushed solar and renewables? Easy to answer that, isn't it. I hope to hear from you re future plans and I support efforts of the PSC. Do what's right in the name of humanity!

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Colleen McGlone

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs. It is VITAL for our country to have safe, renewable energy sources and eliminate the vulnerability of energy dependence. Our security depends on this, and there is no rationale for blocking solar expansion as an integral part of our energy future.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bradley Boyden

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
alexander nytko

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lisle Lewis

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kenneth Utting

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Keller Rivers

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.
