Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michael Murray

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

At this year's FEECA proceeding please explore ways to open energy production to more competition. Our existing energy structure gives monopoly power to only a few providers. These providers have been using very limited methods to reduce electricity consumption and have been using only limited sources for power generation.

Opening up the market for alternative power generation and rewarding the reduction in electricity consumption will reduce power bills and make it possible for the the public to choose non-carbon energy production. This will help the state meet the new carbon reduction targets.

Sincerely,
Samuel Kendall

Run Duke Energy proposals through a "fine- tooth comb"...
they are recently guilty of polluting the streams of North Carolina and colluding with the state Department of Natural Resources nearly allowing Duke a "sweetheart" fine for heavy damage to the environment....

And respectfully remember, the commission's decisions are under constant review by an increasingly environmentally aware- public.....

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Sandra Koop

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

It is long past time for the Sunshine State to become the Solar Power State.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Tammy Lettieri

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Colleen Hildebrand

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Along with many others, as a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Judith King

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Laura R. Goldstein

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Elena Jurgela

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Katherine Fleming

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

I absolutely detest the entire nuclear fueled market, the expenses involved in building these dangerous waste lands and the fact these nuclear plants are out of harmony with our environment. It's not energy efficient. It's only meant to fulfill the pockets and egos of the few who think they call the shots.

Time for Floridians to take that privilege out of those hands. We know our rights and we know what we don't want!

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. FPL is too limited in the amount of rebates they offer each year. I believe they only accept 100 or less applications each year! That's peanuts! It would take over a hundred years to get every homeowner up and solar powered! It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

I know it's in the big corporations best interests to keep us chained to their waste belts, but I don't really care about those fat cats. I am a Floridian. Born and raised. I live in a state that requires air conditioning nearly year round. My electric bills are ridiculous. Why should I pay you for something that should be free? You are only the middleman! Our sunshine is glorious! And, it's free! You all are making money on our hard earned dollars and frankly, I'm tired of it.

Time for change! I can already see our future here in Florida. We will have clean energy with or without your support. Best if you all do something to make that happen now so you can think of some way to make a little pocket change. Otherwise, I envision people finding solutions to fuel their homes on their own, cutting out you, the middleman.

Sincerely,
Karyn Wolfer

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Benjamin Oppenheim

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jim Broderick

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jean Seme

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Catherine Hickman

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
rob Jansen

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lance Messick

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Joan Cohen

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Yolanda Anaya

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bernardo Ramos

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Dorothy Hancock

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Maureen Primerano

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Nancy Stamm

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

We don't need more power plants - we need energy efficiency, including more wind and solar power.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Sandra Ames

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kathleen Hamilton

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
E Rubio

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Leo Judge

I find it very hard to believe that the cost of installing solar outweighs the money that would be saved by not having to buy coal, since the cost of sunshine is NOTHING. It is true that the sun does not shine all the time, and storage batteries would be needed, but solar power could surely be used to supplement the other forms of energy production, and would most certainly help improve the air quality in our state. We will use up all our coal, oil and gas long before the sun dies, and we need to be finding ways to use the energy it can provide before it is too late..

Sincerely,
Patricia Gallenkamp

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Laurie Levitan

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I insist that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support solar rooftop programs.

Our leaders want growth; they want a flourishing tourism industry, they want a flourishing fishing industry, all of which are increasingly impossible with filthy fossil fueled power production or water-wasting/water-warming nuclear power production.

Solar rooftops suffer the least line loss and offer the swiftest power recovery after storm events. They keep money circulating within Florida communities, instead of continually flowing out of state. They don't enrich lobbyists, they don't enrich industrialists ... they instead enrich every facet of Floridians' lives.

I insist that sunshine-drenched Florida make better use of rooftop solar power than cloudy Germany.

And you must insist, too. It's your job.

Sincerely,
Susan Chandler

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Deena Mickelson

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Margot Dorfman

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Every time I fly into MIA my first thought is that there is NO SOLAR POWER in any direction. All those flat, industrial roofs which fill mile after mile of roads in all directions from the airport and not one has a solar panel on the roof. Why is the Sunshine State so lacking in solar power initiatives? Why is the Sunshine State lacking in mandatory solar power production? Why have the politicians and the power industry shut down third-party solar initiatives? Something is really rotten in the Sunshine State.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Julie Walters

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Linda Ashton

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Steve and Cindy Griffith

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Dear Florida Public Service Commission,

You took a stand against more dirty coal plants some years ago --and the goal was clean energy and reducing the demand. I spent two years of my life working toward this goal. Now, you can see what a great thing it was to stop filthy coal ---wouldn't you like to look back ten years from now and be proud that you reduced demand and pushed solar and renewables? Easy to answer that, isn't it. I hope to hear from you re future plans and I support efforts of the PSC. Do what's right in the name of humanity!

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Shirley Palmenteri

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs. It is VITAL for our country to have safe, renewable energy sources and eliminate the vulnerability of energy dependence. Our security depends on this, and there is no rationale for blocking solar expansion as an integral part of our energy future.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jennifer Winter

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Stephen Brown

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Donald Utzman

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Alyssa Barton

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michael Fox

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kenneth Toole

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.
= = = = = = = = =
After the vast majority of scientists have identified the risks, WHY would you want to place Florida's ecology in jeopardy by enabling the fossil fuels industries to FURTHER pollute our environment??
Demand a higher percentage of renewable alternatives and LEAVE IT IN THE GROUND!

Sincerely,
Robert Reed

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Willard Martz

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Rebecca Lambert

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Barbara Fite

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Anne Kruger

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

The future health of our planet and ultimately our families is slipping away. While it very well may already be too late, we have a fundamental responsibility to course correct and make an effort to impact change. "Climate change is a fact. And when our children's children look us in the eye and ask if we did all we could to leave them a safer, more stable world, with new sources of energy, I want us to be able to say yes, we did." --President Barack Obama, January 28th, 2014

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Anna Camarata

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Valentina Mamut Sosa

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Shirley Waltz

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.
NO NUCLEAR POWER PLANTS, EITHER!

Sincerely,
Carla Ochoa

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
sylviane Mahaux

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am near native Floridian of 35 years plus, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs- these 40+ year are proven economically so why isn't in use.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not even used in other states because they fail to identify which energy efficiency programs are in customers' interest. Likewise, other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Furthermore, please protect and expand the solar pilot programs in one of the sunniest states in the country! It makes absolutely no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Finally, it is absurd that Floridians had paid for the plant in Citrus county when Progress Energy nee Duke Energy is a profit making company!

Sincerely,
Kathryn Konigsberger

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Tracy Arcure

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Martha James

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Harriett Eckstein

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Doris Emich

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Tim Bear

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Solar energy is something that Florida has plenty of. Lets use it to the fullest.

Sincerely,
Hilda Andrews

Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Diana Frank

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jim Holmberg

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants. We have above normal UV levels ten months of the year. I have never been able to understand why we don't use solar energy; other states are encouraging residents and businesses to switch to solar ..they don't have ten months of summer like we do. It's long past time , especially in view of the threat of rising sea levels and other effects of Global Warming that you take the enlightened approach and make solar use an essential part of your current and future planning for our state...you have an important responsibility to the people you were chosen to serve...not to the power companies and other special interests.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Genevieve Turner

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Nigel Ward

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

My name is Anthony Cortez and I am a registered nurse working on a blood cancer unit at Shands Hospital at the University of Florida. Pollution of our environment is a major cause of the cancers we see on our floor as well as the unfathomable pain, suffering, and death of our dear patients nurses witness continuously. Dirty energy is a major contributor to cancer. I sincerely ask that you carefully read the message below and recognize the crucial importance of clean energy to the health and well being of the people of Florida...

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Victoria Mclacklin

Please email these comments to Clerks Office at:
Clerk@Psc.state.fl.us and Filings@psc.state.fl.us

Docket No. 130199-130205

In 2010, Florida legislature enacted section 163.08! Enabling special taxing districts to be established to finance energy efficiency and renewable energy improvements for both residential and commercial properties. Then in 2011, the Village of Pinecrest enacted an ordinance authorizing the Village to join a group of six other municipalities in Miami-Dade County to create the Green Corridor, a special taxing district known as PACE, for Property Assessed Clean Energy Taxing District. The Green Corridor was the first authorized PACE District in the State of Florida. It allows property owners to finance energy efficiency, wind resistance and renewable energy projects through financing by a special assessment on the property owners property tax bill. In the past two years this new Green Economy has certified hundreds of new vendors, financed over a million dollars in improvements and created hundreds of new jobs, while enabling those residential and commercial owners to realize tremendous savings through efficiency and renewables.

It is high time that the State of Florida Public Service Commission takes that example and expands it statewide; bring the green economy, and the jobs that it creates, along with savings to businesses and homeowners, by setting efficiency goals for the State of Florida. The Florida Energy Efficiency and Conservation Act (FEECA) and other Florida statutes, as well as many studies in the past few years have identified the need for Florida to boost our energy efficiency and renewable standards. As we currently rate 27th in the country in efficiency, meaning more than half the states are more efficient than Florida, quite a sorry standing. PSC must address this challenge, and by raising the efficiency goals which is the cheapest way to reduce our energy costs, we can make significant improvements. The PSC responsibility to set goals not only for the state but for customer site renewables such as rooftop solar and solar water heaters should be ambitious, as the tools to finance are currently available throughout the state in many different formats offered by cities and counties.

12645 Pinecrest Parkway, Pinecrest, Florida 33156
T: 305.234.2121 | F: 305.234.2131
www.pinecrest-fl.gov

The 2014 energy savings process provides the people of Florida with an opportunity to weigh in and advocate for long overdue energy efficiency goals at the state level. We have already spoken at the local level by implementing programs such as PACE, by installing solar on our schools, commercial buildings and homes.

As we are faced with increasing challenges to diversify our economy to provide jobs, mitigate our impact to GHG emissions by investing in renewable energy on their homes and businesses, to provide our residents with the means to be more energy efficient, and self-sustaining.

The industry standard for power companies is to effect energy efficiency savings of 1% over prior year sales. The PSC must provide a standard that obligates our utilities to set policies and programs in place to accomplish real efficiency, while creating new jobs. Our largest utilities, Duke and FPL, both have parent companies that invest in energy efficiency in other states, now they must be required to meet such standards in Florida, in order to grow an energy efficient economy statewide. It is projected that if these utilities achieved such annual efficiency standards, it would create over 900 jobs and consumers would save about ten million dollars each year on their electric bills.

Sincerely,

Cindy Lerner
Mayor
Clerner@pinecrest-fl.gov

Enclosures

A. **Appearances**

FlaSEIA is not a registered intervener and therefore will not present testimony unless requested by the Commission

B. **Witnesses**

FlaSEIA will not present any witnesses in the above referenced dockets

C. **Exhibits**

FlaSEIA has two exhibits enclosed for recommendations made to Florida Power & Light (FPL) and Duke Energy

D. **Statement of Basic Position**

FlaSEIA is a trade organization made of solar contractors, distributors, manufacturers, utilities and other entities doing business in Florida who are interested in promoting solar thermal and electric energy use in Florida.

A 2012 University of Florida study, commissioned by the Florida Public Service Commission, section 1.5.1 **Findings Regarding Public Interest**

"Based on the analysis presented in this report, the research team believes that FEECA continues to be in the public interest, subject to certain qualifications."

The FEECA Solar Pilot Program has allowed many Florida residents, who contribute to FEECA through their utility bill, to enjoy clean renewable energy at a greatly reduced cost. Even though the photovoltaic program is limited in the number of participants, the program is invaluable to Florida to promote the installation of solar energy. The thermal program is very successful and FlaSEIA recommends its continuation without changes.

In an attempt to work with Florida utilities, FlaSEIA has made presentations and provided information to FPL and Duke Energy with recommendations for changes to the existing program to vastly improve the viability to the existing program.

With the cost of solar reaching an all-time low and an average installed cost of $3.00-4.00 per DC watt, and much less with larger systems, a rebate of $2.00 per watt constitutes as much as 66.6% of the installed cost, not counting the 30% federal tax incentive. When combined, a consumer receiving a FEECA utility rebate and federal tax credit can pay as little as 23% of the retail cost to install solar electric. FlaSEIA believes the rebate should be reduced to $0.50 per DC watt installed with a cap of $5,000 per customer. This change will allow four times the number of consumers to benefit. With the current rebate going to so few participants, it could very well be perceived as a transfer of wealth as FDACS stated. However, even this generous rebate pales in comparison to the transfer of wealth to shareholders of the utilities that as a result of recouping hundreds of millions of dollars from Advanced Nuclear Recovery without 1 kWh of production.

In addition to reducing the rebate amount, measures could be taken to improve RIM scores by requiring load management devices on every solar electric system installed. The cumulative effect of a reduced rebate and adding demand side management will have a tremendous impact on the viability of the program.

FlaSEIA supports all solar energy projects, both electric and thermal, as every kWh and BTU produced from clean renewable solar energy equal dollars which remain in our state. As a fuel offset, solar energy can have a significant impact on the amount of money that leaves our state to import fossil fuels. FlaSEIA supports the FPL voluntary solar partnership program (VSP) provided that checks and balances are put in place to limit the amount of funds which can used for marketing and administrative costs. FlaSEIA would also ask that rooftop solar enjoy a dollar for dollar incentive for funds invested into FPL's VSP initiative.

FlaSEIA appreciates Duke Energy's position on the extension FEECA solar pilot. As a winter peaking utility, FlaSEIA's requested changes would have an even greater impact of offsetting winter peak load. As older HVAC equipment is replaced and Duke transitions to a summer peaking utility, the increased number of participants and demand side management measures will have the same positive effect.

FlaSEIA respectfully requests that the Florida PSC take into account the environmental benefits of solar. Each kWh produced by solar has no carbon offset and requires no water. Florida's number one industry, tourism, counts on our pristine beaches and clear water to continue to attract people from all over the world. Depleting our aquifers and other fresh water resources to create electricity that could be easily offset with solar is irresponsible. Section 366.81, Florida Statutes, the Legislature finds and declares that it is critical to utilize the most efficient and cost-effective demand-side renewable energy systems and conservation systems in order to protect the health, prosperity and general welfare of the state and it citizens.

One of the objectives of FEECA, when this legislation was originally enacted, was to reduce our dependence on oil and diversify our fuel sources. We have replaced oil with natural gas. Although long term projections are for stable natural gas prices, international politics, inclement weather and other factors place question marks on an accurate fuel price past ten years. To have Florida so dependent on one fuel source undermines one of the core reasons for FEECA and its objectives. History would not be kind to the decision makers who had the opportunity to effectively shape Florida's energy policy to include diversification, environmental responsibility and choices for Florida ratepayers.

In summation, upon reviewing the ten year site plans of all the PSC managed utilities and other interested parties, FlaSEIA believes that a long term, cost effective solar policy is achievable. FEECA can be altered to be more cost effective and viable with all parties coming to a reasonable resolution. To allow the FEECA solar pilot program to expire, meaningful solar policy in the state of Florida will be further delayed. Florida will to continue to fall further and further behind the rest of the county in a long term, responsible, diversified energy policy.

Re: FEECA Solar Rebate Program

Dear Mr. Hoffman,

The Florida Solar Energy Industry Association, (FlaSEIA,) represents the voice of solar, electrical, roofing, plumbing, general contractors, distributors and manufacturers in the state of Florida as well as thousands of Floridians that seek clean renewable energy as an alternative energy source for their homes and businesses. The declining costs of photovoltaic systems over the last four years have put solar energy within the reach of more Floridians every day.

FlaSEIA would like to work in conjunction with the investor owned utilities, (IOUs,) as well as the municipal and co-operative utilities to offer solar energy as an affordable, clean and viable energy source. The IOUs have worked with FlaSEIA to improve the solar rebate programs offered as part of the FEECA docket. Progress Energy Florida/Duke Energy and Florida Power & Light have made significant improvements to their respective programs in the past year and it is greatly appreciated

The current programs that offer rebates for photovoltaic systems are fully subscribed within a few minutes and a waiting list of several hundred filled. The overwhelming demand requires a comprehensive, standardized approach to ensure every ratepayer has an equal opportunity to participate in the program. In addition to an equal opportunity, FlaSEIA would also like the ability to provide solar to more ratepayers without adding additional costs to Florida citizens. FlaSEIA proposes the following;

1. The funds earmarked for solar from FEECA be increased from $.17 to $.70 per billing cycle to meet the demand of the Florida ratepayer. We ask that funds with less consumer demand be reallocated to the solar program.
2. The rebate amount per residential photovoltaic customer be reduced to $.50 per watt with a cap of $5,000. This change will allow four times the number of Florida citizens to participate and improve RIM scores by 400%
3. The rebate amount per commercial photovoltaic customer reduced to $.50 per watt with a cap of $25,000. In addition to more participants, this proposed change will bring rebates in line with the reduced costs of solar.

4. Funds not used by the commercial customers after 180 days be reallocated to residential system installations.
5. Rebate funds allocated to residential and business customers through a lottery system to ensure every ratepayer has an equal chance.
6. Advanced notification of the rebate application date through the IOUs via the Internet, newsletters and bill stuffers so every ratepayer has the same access to notification of the rebate application process and date that gives all ratepayers opportunity to participate in this dynamic program.
7. Notification to the applicant of position on the utility's waiting list for applicants not accepted in the first round of funding. Transparency of the program will provide for a better perception of the utility and help the consumer better prepare for the photovoltaic installation.
8. Extend the solar pilot program for as long as the FEECA is deemed viable. According to a study by the University of Florida dated December 7, 2012 The FEECA program is not burdensome to the consumer and is a benefit to Florida ratepayers.

Florida ranked 14 in solar installations in the first quarter of 2012 according to the Solar Energy Industries Association, (SEIA,) not because of demand but, because of a lack of consistent available rebates and/or incentives.

The number of solar jobs in Florida is 4,224 according to the Solar Foundation. The proposed changes could potentially increase the number of jobs in Florida to over 20,000 without any additional cost to the state, utilities or rate payers. Structured, consistent incentives means more jobs for Florida.

We look forward to working with the I.O.U.'s and the Florida Public Service Commission to promote solar jobs in Florida and give Floridians and opportunity to use clean renewable energy.

Re: FEECA Solar Rebate Program

Dear Mr. Pietrzak,

Below are adjustments to the original FEECA letter, to make the solar program more cost effective based on the fact Duke Energy is a winter peeking utility. Our goal is to integrate solar technologies into Florida's energy portfolio that create a win for Florida, Florida utilities and the utility consumer.

1. **Require Demand Side Management on each PV system installed.**
   Currently DSM is not required for PV installations therefore PV acts as a "fuel offset" opposed to a technology that helps with winter peak. This will make a significant improvement to the RIM score. The DSM incentive will be forgone by the rebate recipient to reduce FEECA costs for all ratepayers with nonparticipants in mind.

2. **Reduce the Solar Electric rebate from the FEECA Solar Pilot Program from $2.00 per DC watt installed to $.50**
   More systems deployed with DSM devices equals greater reduced loads at winter peak.

3. **Increase PV rebate by $450 when installed with solar domestic hot water for DSM eligible properties**

Designed to help promote solar DHW and improve solar electric scores by further offsetting winter peak loads. (In effect, this change increases the DHW rebate to $1000 but, is designed to improve the PV RIM score.)

4. **Increase PV rebate by $150 for DSM eligible properties with swimming pool that convert to approved energy efficient swimming pool pumps**
   This will increase sales of EE swimming pool pumps, reduce winter peak loads and improve PV RIM scores.

5. **Solar Battery Interactive Systems**
   Increase the rebate per watt to $.75 for PV installations for homes with Grid Interactive/Battery Backup Systems and/or solar electric installations on homes with electric cars when the battery system of the electric car is able to be called on during times of peak demand.

6. **The recapture period on solar electric systems will be five years**
   To give assurance of the load offset for purposes of calculating RIM, a disincentive for dropping out of the program will be assessed on a prorated basis for a period of five years.

It's not all about RIM

FEECA has contained a public interest statement since its enactment in 1980. This statement was slightly modified in 2008 but the broad policy direction remained the same as in 1980: ***"The Legislature finds and declares that it is critical to utilize the most efficient and cost-effective demand-side renewable energy systems and conservation systems in order to protect the health, prosperity and general welfare of its citizens."***

Other benefits of solar not calculated in a RIM score

1. **Fresh water savings.** No water is used when electricity is created by solar energy.
2. **Less "imported" fuel.** According to the Florida Office of Energy, the equivalent of the state budget, approximately $63 billion dollars, leaves Florida to import fuel for electricity.

3. **Job creation through solar deployment.** Just over 4,000 people are employed in the solar industry full time in Florida. Conservative projections show an increase in the number of jobs to over 20,000 if Florida were to have a consistent, viable rebate program.

4. **Direct benefit to the consumer.** Consumers fund FEECA. Allowing consumers to utilize FEECA funds at their discretion within the spirit of the program should be a consumer right.

5. **Energy Diversification.** Over 60% of Florida's energy comes from natural gas. FEECA was designed to diversify Florida's energy portfolio and reduce our dependence on a single fuel source, oil. We are now replacing oil with natural gas. Are we making the same mistakes twice?

6. **No Co2 emissions.** Solar burns no fossil fuel to produce energy.

7. **Consumer Satisfaction.** The demand for solar is at an all-time high. Rebate programs are subscribed within minutes proving customer demand. Make rebates available to more customers and more customers will be happy with Duke Energy.

8. **Public Perception.** Florida's number one industry is tourism. Our environment and eco-systems are not a political partisan issue. It is a matter of our state economic future. Protect the environment and our economy and the citizens of Florida will respond to Duke in kind.

FlaSEIA appreciates the continued dialog with Duke Energy. We believe open discussion to be the best way to see one another's perspective and find the best path for mutual benefit.

Regards,

Wayne Wallace
President

FPSC – recommended energy efficiency standards

The least expensive way to meet Florida's electricity needs is through energy conservation.

In 2005, the Florida PIRG (FPIRG) published *"Redirecting Florida's Energy: The Economic and Consumer Benefits of Clean Energy Policies"*. FPIRG determined that Florida could reduce electricity consumption by 28% over 15 years. They estimated that such measures would save Florida consumers $760 million on electricity bills in 2020.

In 2007, the American Council for an Energy-Efficient Economy (ACEEE) published *"Potential for Energy Efficiency and Renewable Energy to Meet Florida's Growing Energy Demands"*. ACEEE estimated that Florida could reduce electricity consumption by 19% over 15 years based on adoption of adoption of these programs:

1. Utility Sector Energy Efficiency Policies and Programs (EERS)
2. Appliance and Equipment Standards
3. Building Energy Codes
4. Advanced Building Program
5. Improved CHP Policies
6. Industrial Competitiveness Initiative
7. State and Municipal Buildings Program
8. Short-Term Public Education and Rate Incentives
9. Expanded Research, Development, and Demonstration Efforts

My own experience suggests these estimates are conservative. From 2008 to 2013, my own family reduced our domestic electricity consumption by 35% with no change in practices or thermostat settings. As appliances wore out, we replaced them with more efficient ones. We coated our glass doors with IR-restrictive (high-E) film. When the slides on our glass doors could no longer be serviced, we replaced the old single-pane doors with new double-pane doors and high-E glass. We called in a company to measure for AC leaks – their technician found some, which we sealed. We are generating further efficiency savings in 2014. Our roof needed replacing, so we just replaced it with a reflective metal roof, and we reinsulated the attic at the same time. Those two changes lowered our electricity bill for June by 21% below last year's. Our air conditioner is still OK, but when it needs replacing, we will get a higher SEER model. All told, routine upgrades will reduce my family's residential electricity consumption by 50%. My family averaged electricity reductions of 5% a year over seven years, with projections of similar savings over a 10-year span.

So, Florida has a choice. We can spend more money building new generation plants that add more carbon to the atmosphere and more nuclear waste to our on-site repositories, or we can incentivize energy savings, educate the public, and generate efficiencies that save our citizens money while reducing carbon emissions without adding to our intractable nuclear waste disposal problems. Utilities in North Carolina and Ohio have achieved better than 1% a year improvements in energy efficiency. For my own family's budget, pursuit of energy efficiency was a no-brainer. If my family could average 5% efficiency

a year over a ten year span, then statewide Florida can surely manage efficiency improvements of 1% a year. That is what I recommend the FPSC adopt as our statewide energy efficiency standard. It's achievable, it's the best financial deal for Florida's public, and it's the best stewardship of the global environment upon which we depend.

Good afternoon Mr. Stoddard,

We are in receipt of your 7/11/14 filing for Docket Nos. 130199-130205. However, the attached file is damaged or corrupted and we are unable to open the file for processing. The document will need to be resubmitted in order to be processed.

In addition to submitting documents by e-mail attachment to filings@psc.state.fl.us, you may also file documents directly through the Commission's website. The Commission strongly encourages the use of this e-filing method and may transition to mandatory e-filing in the future. Filers must submit pleadings so that they are properly oriented to be read without needing to be rotated. Pleadings accepted for filing will have the Document Number (DN) and a date/time stamp electronically affixed to the upper right-hand corner of the first page of the document. Filers should leave approximately 1 inch by 2 inches on the upper right-hand corner of the first page of filings empty to accommodate this stamp requirement. The filing party is responsible for ensuring that no information protected by privacy or confidentiality laws is contained in any document that would be posted to FPSC's Web site in the regular course of business.

The FPSC web based e-filing is accessible from the following link:
https://secure.floridapsc.com/(S(h33m0345m3elowndt4ee34en))/e-filings/efiling.aspx.

Please do not hesitate to contact our office should you have any questions.

Have a great afternoon,

Shawna Senko
