RE: Re: Docket No. 20190031-WS - Application for increase in water rates in Highlands County, by Placid Lakes Utilities, Inc.
Our Matter No.: 070336

Dear Mr. Teitzman:

On behalf of Placid Lakes Utilities, Inc. (“Utility”) the following is the response to Staff’s Deficiency Letter dated June 12, 2019.

1. Pursuant to Rule 25-30.440(3), Florida Administrative Code (F.A.C.), the applicant should provide a copy of the most recent chemical analyses for each water system conducted by a certified laboratory covering the inorganic, organic turbidity, microbiological, radionuclide, secondary and unregulated contaminants specified in chapter 62-550, F.A.C. Please provide the results of the utility's most recent chemical analyses for inorganic, organic turbidity, radionuclide, secondary and unregulated contaminants.

RESPONSE: See attached Safe Drinking Water Laboratory Report from Florida-Spectrum Invironmental Services, Inc. dated May 2017.

2. Pursuant to Rule 25-30.440(5), F.A.C., the applicant should provide the most recent sanitary survey for each water plant and inspection report for each wastewater plant conducted by the health department or the Department of Environmental Protection (DEP). Please provide a copy of the utility’s most recent sanitary survey for its water plant conducted by DEP.

RESPONSE: The most recent Sanitary Survey Inspection by the Florida Department of Environmental Protection was included in Volume III as Schedule III-9 pages. Even though it is from 2016, it is the most current Sanitary Survey.

3. Pursuant to Rule 25-30.440(8), F.A.C., the applicant should provide a list of all field employees, their duties, responsibilities, and certificates held, and an explanation of each employee's salary allocation method to the utility's capital or expense accounts. Please provide the duties, responsibilities, and certificates held for P. Brewer, J. Reed, and C. Alejandro. Please also provide an explanation of the salary allocation method to the utility's capital or expense accounts for each employee listed on page 254 of the utility's MFRs – Volume III Engineering Information.

RESPONSE: The duties, responsibilities, and certificates held for each of the 3 former employees are attached to this response, as requested. The salary allocation method to capital projects for field employees is a combination of methods. Initially the field employees indicate on their weekly time reports the areas they spent their time working during the week. This includes capital projects. The bookkeeper charges capital projects directly for the employee's time spent on those projects. Second, after the capital project is completed, an evaluation is made by the Licensed Operator Supervisor as to the actual time spent on the capital project. He then passes that information on to both the Utility's Office Manager and Corporate Treasurer. Adjusting journal entries are then made to reclassify any employee time not directly charged on time reports to the appropriate capital project.

4. Pursuant to Rule 25-30.440(11), F.A.C., the applicant should provide a copy of all customer complaints that the utility has received regarding DEP secondary water quality standards during the past five years. Please provide all customer complaints that the utility has received regarding DEP secondary water quality standards during the past five years or indicate that no complaints were received.

RESPONSE: All Customer complaints for the year's 2017 and 2018 were included in Volume III, Schedule VII, Part A (Customer Complaints), Part B (Customer Bill Adjustments), and Part C (Customer Work Orders). Attached to this response is a list of all customer work orders from 2014 – 2018. Also attached are the work order slips generated at the time of the customer complaint. PSC records indicate that there were no registered customer water quality complaints from 2014 to 2016 made by customers. This completes the five year period requested.

Should you or Staff have any questions regarding this filing, please do not hesitate to give me a call.

Very truly yours,

/s/ Martin S. Friedman

Florida Department of Environmental Protection Safe Drinking Water Program Laboratory Reporting Format

DATA QUALIFIER CODES (From 62-160, Table 1)

The following qualifier codes shall be used by laboratories when reporting data values that either meet the specified descriptions outlined below or do not meet the quality control criteria of the laboratory. They are categorized on these 2 pages as Acceptable, Not Acceptable, or May Be Acceptable for compliance.

| The following codes (B,D,E,I,K,L,M,U,V,!) ARE ACCEPTABLE for use with results submitted for compliance with 62-550 and 62-555. | |
|--|---|
| SYMBOL | MEANING |
| B | Results based upon colony counts outside the acceptable range. Applies to microbiological tests and specifically to membrane filter colony counts. It is to be used if the colony count is generated from a plate in which the total number of coliform colonies is outside the method indicated ideal range. This code is not to be used if a 100 mL sample has been filtered and the colony count is less than the lower value of the ideal range. |
| D | Measurement was made in the field (i.e., in situ). This code applies to any value (except field measurements of pH, specific conductance, dissolved oxygen, temperature, total residual chlorine, transparency, turbidity or salinity) that was obtained under field conditions using approved analytical methods. If the parameter code specifies a field measurement (e.g., "Field pH"), this code is not required. |
| E | Indicates that extra samples were taken at composite stations. |
| I | The reported value is greater than or equal to the laboratory method detection limit but less than the laboratory practical quantitation limit. |
| K | Off-scale low. Actual value is known to be less than the value given. This code shall be used if the value is less than the lowest calibration standard and the calibration curve is known to be non-linear; or the value is known to be less than the reported value based on sample size, dilution. Shall not be used to report values that are less than the laboratory practical quantitation limit or laboratory method detection limit. |
| L | Off-scale high. Actual value is known to be greater than value given. To be used when the concentration of the analyte is above the acceptable level for quantitation (exceeds the linear range or highest calibration standard) and the calibration curve is known to exhibit a negative deflection. |
| M | When reporting chemical analyses: presence of material is verified but not quantified; the actual value is less than the value given. The reported value shall be the laboratory practical quantitation limit. This code shall be used if the level is too low to permit accurate quantification, but the estimated concentration is greater than or equal to the method detection limit. If the value is less than the method detection limit use "T" below. |
| U | Indicates that the compound was analyzed for but not detected. This symbol shall be used to indicate that the specified component was not detected. The value associated with the qualifier shall be the laboratory method detection limit. Unless requested by the client, less than the method detection limit values shall not be reported (see "T" below). |
| V | Indicates that the analyte was detected at or above the method detection limit in both the sample and the associated method blank and the value of 10 times the blank value was equal to or greater than the associated sample value. Note: unless specified by the method, the value in the blank shall not be subtracted from associated samples. |
| ! | Data deviate from historically established concentration ranges. |
| The following codes (A,F,H,N,O,T,Z,?,*) are NOT ACCEPTABLE for use with results submitted for compliance with 62-550 and 62-555. | |
| A | Value reported is the arithmetic mean (average) of two or more determinations. This code shall be used if the reported value is the average of results for two or more discrete and separate samples. These samples shall have been processed and analyzed independently. Do not use this code if the data are the result of replicate analysis on the same sample aliquot, extract or digestate. |
| F | When reporting species: F indicates the female sex. |
| H | Value based on field kit determination; results may not be accurate. This code shall be used if a field screening test (i.e., field gas chromatograph data, immunoassay, vendor-supplied field kit, etc.) was used to generate the value and the field kit or method has not been recognized by the Department as equivalent to laboratory methods. |

Notes and Definitions

- U Indicated that the compound was analyzed for but not detected. This shall be used to indicate that the specific component was not detected. The value associated with the qualifier shall be the laboratory method detection limit.
- J3 The matrix spike recovery exceeded method acceptance limits indicating matrix interference.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the detection limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- V Indicated that the analyte was detected in both the sample and the associated method blank.
- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- Z Too many colonies were present for accurate counting.

QC=Qualifier Codes as defined by DEP 62-160
 Unless indicated, soil results are reported on actual (wet) weight basis.
 Work performed by outside (subcontracted) labs denoted by SUB in Analyst Field.

Results relate only to this sample.

Maria Castellanos - Lab Manager

Placid Lakes Utilities, Inc.

A DIVISION OF LAKE PLACID HOLDING CO.

410 Washington Blvd. NW
Lake Placid, Florida 33852

Office: (863) 465-0345
Water Plant: (863) 465-2427
Fax: (863) 465-1313

PAM BREWER -

Vice President & Corporate Secretary, Office Manager. Management responsibilities include overall management of the utility, and directing administrative staff. Administrative responsibilities include budgeting, accounting, information systems, data management, billing, financial planning, and reporting to government officials (FL DEP & FL PSC) and to the utility's Board of Directors. Handle requests for information. Prepare and modify documents including correspondence, reports, memos and emails. Enter and organize items into filing system. Monitor accounts receivable aging and follow up on delinquent accounts to expedite payments. Competencies include problem solving, collect and research data, and customer service.

James Reed -

Assistant Supervisor. Assist with inventory control, documenting all preventative maintenance on water treatment plant, wastewater plant, and lift stations. Assist in ordering parts for plants, responsible for all pumps (inventory, ordering, and repairs). Daily maintenance of plant grounds, general labor, valve locate, valve exercise, meter reading, meter installation, water line flushing, and customer service. Certificates include: Hazardous materials, Operations / OSHA Level II, FW & PCOA Systems, Operators course, Distribution manager Level III.

Christopher Alejandro -

Field Technician. Daily maintenance of plant grounds. General labor, including meter reading, meter installation, water line flushing, valve exercise, and customer service. On scheduled "on call" duty on nights and weekends.
