# **Case Background**

On April 1, 2019, Florida Power & Light Company (FPL or utility) filed a petition for approval of revisions to its underground residential differential (URD) and underground commercial differential (UCD) tariffs. The URD and UCD tariffs apply to new residential and commercial developments and represent the additional costs, if any, FPL incurs to provide underground distribution service in place of overhead service. As discussed in the recommendation, based on current cost, including long term operational cost, FPL does not incur any additional costs to provide residential underground service; therefore, the proposed URD differentials are \$0. The proposed (legislative version) URD and UCD tariffs are contained in Attachments A and B to the

Docket No. 20190081-EI Date: July 25, 2019

recommendation. FPL's current URD and UCD tariffs were approved by Order No. PSC-16-0424-TRF-EI.<sup>1</sup>

The Commission suspended FPL's proposed tariffs in Order No. PSC-2019-0211-PCO-EI.<sup>2</sup> FPL responded to staff's first data request on May 31, 2019 and filed a revised response to staff's data request No. 6 on July 2, 2019. The Commission has jurisdiction over this matter pursuant to Sections 366.03, 366.04, 366.05, and 366.06, Florida Statutes (F.S.).

<sup>&</sup>lt;sup>1</sup> Order No. PSC-16-0424-TRF-EI, issued October 3, 2016, in Docket No. 160071-EI, In re: Petition for approval of 2016 revisions to underground residential and commercial differential tariffs, by Florida Power & Light Company. <sup>2</sup> Order No. PSC-2019-0211-PCO-EI, issued June 3, 2019, in Docket No. 20190081-EI, In re: Petition for approval of 2019 revisions to underground residential and commercial differential tariffs, by Florida Power & Light Company.

# Discussion of Issues

**Issue 1:** Should the Commission approve FPL's proposed URD tariff and associated charges?

**Recommendation:** Yes. The Commission should approve FPL's proposed URD tariffs and associated charges as shown in Attachment A, effective September 5, 2019. (Doherty)

**Staff Analysis:** Rule 25-6.078, Florida Administrative Code (F.A.C.), defines investor-owned utilities' (IOU) responsibilities for filing updated URD tariffs. FPL has filed the instant petition pursuant to subsection (3) of the rule, which requires IOUs to file supporting data and analyses for URD tariffs at least once every three years.

The URD tariffs provide charges for underground service in new residential subdivisions and represent the additional costs, if any, the utility incurs to provide underground service in place of overhead service. The cost of standard overhead construction is recovered through base rates from all ratepayers. In lieu of overhead construction, customers have the option of requesting underground facilities. Any additional cost is paid by the customer as contribution-in-aid-of construction (CIAC). Typically, the URD customer is the developer of a subdivision.

Traditionally, three standard model subdivision designs have been the basis upon which each IOU submits URD tariff changes for Commission approval: low density, high density, and a high density subdivision where dwelling units take service at ganged meter pedestals (groups of meters at the same physical location). Examples of this last subdivision type include mobile home and recreational vehicle parks. While actual construction may differ from the model subdivisions, the model subdivisions are designed to reflect average overhead and underground subdivisions.

Costs for underground construction have historically been higher for standard overhead construction and the additional cost is paid by the customer as a CIAC. In FPL's 2016 underground differential tariff, the cost differential was zero for ganged meters and some tiers of the low and high density subdivisions. As shown on Table 1-1, FPL's proposed URD differential charges are now \$0 for all three subdivision models. Therefore, the URD customer will not be assessed a CIAC charge for requesting underground service in a new residential subdivision. FPL explained that the decrease in the differentials, for some subdivision tiers, is primarily attributable to changes in operational costs as discussed in more detail in the section of the recommendation titled operational costs.

Table 1-1 shows the current and proposed URD differentials for the low density, high density, and ganged meter subdivisions.

| Types of Subdivision | Number of Service<br>Laterals in Subdivision | Current URD<br>Differential | Proposed URD<br>Differential |
|----------------------|--|-----------------------------|------------------------------|
| . <u> </u>           | Tier 1 – 200 or more                         | \$0                         | \$0                          |
| Low Density          | Tier 2 – 85 – 199                            | \$183.35                    | \$0                          |
| •                    | Tier 3 – less than 85                        | \$266.35                    | \$0                          |
|                      | Tier 1 – 300 or more                         | \$0                         | \$0                          |
| High Density         | Tier 2 – 100-299                             | \$0                         | \$0                          |
| 6                    | Tier 3 – less than 100                       | \$57.97                     | \$0                          |
| Ganged Meter         | All Tiers                                    | \$0                         | \$0                          |

Table 1-1Comparison of Differential Per Service Lateral

Source: 2016 order and FPL's 2019 filing

The calculations of the proposed URD charges include (1) updated labor and material costs along with the associated loading factors and (2) operational costs. These costs are discussed below.

# Labor and Material Costs

The installation costs of both underground and overhead facilities include the labor and material costs to provide primary, secondary, and service distribution lines as well as transformers. The costs of poles are specific to overhead service while the costs of trenching and backfilling are specific to underground service. The utilities are required, by Rule 25-6.078(5) F.A.C., to use current labor and material costs.

FPL explained that generally the majority of overhead and underground material and labor costs have increased since 2016. With respect to labor costs, the cost of underground labor increased at a higher rate than it increased for overhead labor. FPL stated that contractual arrangements driven by market conditions determine the labor rates for both FPL employees and contractors.

Table 1-2 provides the labor and material differential, or pre-operational, costs. As Table 1-2 shows, only the low density cost differential of \$210.53 is a positive number, indicating that underground labor/material costs are higher than overhead labor/material costs for the low density subdivision. For the high density and ganged meter subdivisions, overhead labor/material costs are higher than underground labor/material costs.

| Labor and Material Costs (Pre-operational Costs) |            |            |            |  |
|--|------------|------------|------------|--|
| Low Density                                      | 2016 Costs | 2019 Costs | Difference |  |
| Underground labor/material costs                 | \$2,413.84 | \$2,558.39 | \$144.55   |  |
| Overhead labor/material costs                    | \$2,272.49 | \$2,347.86 | \$75.37    |  |
| Per service lateral differential                 | \$141.35   | \$210.53   | \$69.18    |  |
| High Density                                     |            |            |            |  |
| Underground labor/material costs                 | \$1,640.45 | \$1,767.54 | \$127.09   |  |
| Overhead labor/material costs                    | \$1,691.48 | \$1,773.71 | \$82.23    |  |
| Per service lateral differential                 | (\$51.03)  | (\$6.17)   | (\$44.86)  |  |
| Ganged Meter                                     |            |            |            |  |
| Underground labor/material costs                 | \$1,051.82 | \$1,125.49 | \$73.67    |  |
| Overhead labor/material costs                    | \$1,344.17 | \$1,397.83 | \$53.66    |  |
| Per service lateral differential                 | (\$292.35) | (\$272.34) | (\$20.01)  |  |

# **Operational Costs**

Rule 25-6.078, F.A.C., requires that the differences in net present value of operational costs between overhead and underground systems, including average historical storm restoration costs over the life of the facilities, be included in the URD charge. The non-storm operational costs represent the cost differential between maintaining and operating an underground versus an overhead system over the life of the facilities. The storm cost component represents storm restoration costs avoided when an area is undergrounded, thereby reducing the cost to restore an overhead system. The avoided storm cost is subtracted from pre-operational and non-storm operational costs, thus reducing the URD differential charge. FPL's methodology to calculate the operational costs was approved in Order No. PSC-08-0774-TRF-EI<sup>3</sup> and remains the same in the instant docket.

# Non-storm Operational Costs

FPL's operational costs for an overhead system are higher than the operational cost for an underground system, resulting in a negative number as shown in Column B in Table 1-3. For the low density subdivision, for example, the operational cost differential in 2016 was \$208 (indicating that underground operational costs were higher than overhead operational costs). As shown in Table 1-3, the operational cost differential for the low density subdivision is now -\$2,103. FPL explained that the primary reason for this change in operational cost is the increase in overhead operational costs as a result of FPL's increased capital investments associated with its distribution storm hardening initiatives. The utility used a 5-year average of historical operational costs (2014-2018) for its calculations in this docket.

<sup>&</sup>lt;sup>3</sup> Order No. PSC-08-0774-TRF-EI, issued November 24, 2008, in Docket No. 070231-EI, In re: Petition for approval of 2007 revisions to underground residential and commercial distribution tariff, by Florida Power & Light Company.

FPL explained that the 2016 and 2017 hurricane season significantly increased the avoided storm restoration cost impacts. Specifically, FPL stated that the utility incorporated more than \$1.5 billion in overhead storm restoration costs for hurricanes Matthew, Hermine, and Irma. Therefore, the amount representing avoided storm restoration costs increased significantly from 2016.

Table 1-3 presents the pre-operational, non-storm operational, and the avoided storm restoration cost differentials between overhead and underground systems. The proposed differential is \$0 when the calculation results in a negative number.

Table 1-3 Components of the URD Charges

Source: FPL's 2019 Filing

# Conclusion

Staff has reviewed FPL's proposed URD tariffs and associated charges, its accompanying work papers, and its responses to staff's data requests. Staff believes the proposed URD tariffs and associated charges are reasonable and recommends approval. FPL requested that the tariffs be made effective 30 days after the Commission vote. Staff recommends that the Commission approve FPL's proposed URD tariffs and associated charges, effective September 5, 2019.

Issue 2: Should the Commission approve FPL's proposed UCD tariffs and associated charges?

**Recommendation:** Yes. The Commission should approve FPL's proposed UCD tariffs and associated charges as shown in Attachment B, effective September 5, 2019. (Doherty)

**Staff Analysis:** Utilities are not required to file UCD tariffs pursuant to Rule 25-6.078, F.A.C.; however, as in prior URD petitions, FPL included proposed UCD tariffs in its petition. The UCD tariffs apply to small commercial or industrial customers (applicant) that request the installation of underground electric distribution facilities for a new building. The requested underground distribution facilities consist of underground service conductors, placed in conduit, and associated equipment that is installed from overhead feeder mains (or overhead termination point) to the designed point of delivery (where the utility's wires are connected to those of the customer).

The UCD charges represent the differential costs for underground commercial facilities and their equivalent overhead design. The calculations provided by FPL in its petition employ FPL's standard engineering design criteria and are based on actual 2018 labor and material costs. Unlike the URD calculations, the UCD calculations do not include long term operational and avoided storm restoration costs. In addition, the UCD tariffs provide credits that apply if the applicant provides trenching, backfilling, or installs FPL provided conduit or a concrete pad for a pad-mounted transformer.

FPL explained that including cost-based UCD charges in its tariff provides clarity to customers and FPL's field employees regarding the costs for commercial underground distribution facilities.

Staff reviewed FPL's supporting documentation for the UCD charges and believes the charges are cost based and reasonable. FPL requested that the tariffs be made effective 30 days after the Commission vote. Staff recommends that the Commission approve FPL's proposed UCD tariffs and associated charges, effective September 5, 2019.

**Issue 3:** Should this docket be closed?

**Recommendation:** If a protest is filed within 21 days of the issuance of the order, this tariff should remain in effect, with any revenues held subject to refund, pending resolution of the protest. If no timely protest is filed, this docket should be closed upon the issuance of a consummating order. (Trierweiler)

**Staff Analysis:** If a protest is filed within 21 days of the issuance of the order, this tariff should remain in effect, with any revenues held subject to refund, pending resolution of the protest. If no timely protest is filed, this docket should be closed upon the issuance of a consummating order.

#### FLORIDA POWER & LIGHT COMPANY

Twenty-SixthSeventh Revised Sheet No. 6.095 Cancels Twenty-FifthSixth Revised Sheet No. 6.095 (Continued from Sheet No. 6.090) 10.2.8.1 Credit for TUGs If the Applicant installs the permanent electric service entrance such that FPL's service lateral can be subsequently installed and utilized to provide that building's construction service, the Applicant shall receive a credit in the amount of \$60.0070.12 per service lateral, subject to the following requirements: a) TUGs must be inspected and approved by the local inspecting authority. b) All service laterals within the subdivision must be installed as TUGs. c) FPL must be able to install the service lateral, energize the service lateral, and set the meter to energize the load side of the meter can, all in a single trip. Subsequent visits other than routine maintenance or meter readings will void the credit. d) Thereafter, acceptance and receipt of service by the Customer shall constitute certification that the Customer has met all inspection requirements, complied with all applicable codes and rules and, subject to section 2.7 Indemnity to Company, or section 2.71 Indemnity to Company - Governmental, FPL's General Rules and Regulations, the Customer releases, holds harmless and agrees to indemnify the Company from and against loss or liability in connection with the provision of electrical services to or through such Customer-owned electrical installations. e) The Applicant shall be held responsible for all electric service used until the account is established in the succeeding occupant's name. This credit applies only when FPL installs the service - it does not apply when the applicant installs the service conduits, or the service conduits and cable. Location of Distribution Facilities 10.2.9. Underground distribution facilities will be located, as determined by the Company, to maximize their accessibility for maintenance and operation. The Applicant shall provide accessible locations for neters when the design of a dwelling unit or its appurtenances limits perpetual accessibility for reading, testing, or making necessary repairs and adjustments. Special Conditions 10.2.10. The costs quoted in these rules are based on conditions which permit employment of rapid construction techniques. The Applicant shall be responsible for necessary additional hand digging expenses other than what is normally provided by the Company. The Applicant is responsible for clearing, compacting, boulder and large rock removal, stump removal, paving, and addressing other special conditions. Should paving, grass, landscaping or sprinkler systems be installed prior to the construction of the underground distribution facilities, the Applicant shall pay the added costs of trenching and backfilling and be responsible for restoration of property damaged to accommodate the installation of underground facilities. 10.2.11. Point of Delivery The point of delivery shall be detennined by the Company and will normally be at or near the part of the building nearest the point at which the secondary electric supply is available to the property. When a location for a point of delivery different from that designated by the Company is requested by the Applicant, and approved by the Company, the Applicant shall pay the estimated full cost of service lateral length, including labor and materials, required in excess of that which would have been needed to reach the Company's designated point of service. The additional cost per trench foot is \$7.30.7.91. Where an existing trench is utilized, the additional cost per trench foot is \$3.78.3.00. Where the Applicant provides the trenching, installs Company provided conduit according to Company specifications and backfilling, the cost per additional trench foot is \$2.02.2.16. Any re-designation requested by the Applicant shall conform to good safety and construction practices as determined by the Company. Service laterals shall be installed, where possible, in a direct line to the point of delivery.
