MR. SCROGGIN: We talked a lot about time lines and I'm not asking him to interpret, I'm asking him to assume for purposes of my hypothetical that these are the operative dates, and he has reviewed dates and length of time of construction.

THE COURT: I'll overrule the objection.

THE WITNESS: You said spring of '88, Mr. Scroggin?

BY MR. SCROGGIN:

Q. Late 1988.

A. Late 1988. Appears then that their actions were prudent in that they took care of preliminary matters before they had the actual notice, so they were -- they were moving ahead of

Page 67

that time. I would hate to think you'd wait right until the time you got the final notice.

MR. SCROGGIN: I have no further questions.

THE COURT: Okay.

Thank you, sir, you may step down.

THE WITNESS: Thank you, sir.

THE COURT: Call your next witness.

MR. SCROGGIN: Florida Cities calls Randy -- Randall Armstrong.

THE COURT: Let's go ahead and take a fifteen minute recess.

(Thereupon, a brief recess was taken.)

Page 68

THE COURT: All right. Call your next witness.
THE DEPUTY CLERK: Raise your right hand.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: My name is Randall Lavoid, L-A-V-O-I-D; Armstrong, A-R-M-S-T-R-O-N-G.

- - -

Thereupon,

RANDALL LAVOID ARMSTRONG,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. SCROGGIN:

Q. Good morning, Mr. Armstrong.
Would you please state your current position?
A. I'm executive vice-president of the Phoenix Environmental Group, Incorporated.
Q. And how long have you served in that position?

Page 69

A. Essentially for the last six years.
Q. How long have you been with Phoenix Environmental?
A. Well, the first year – I actually set up my own company in 1990, which was Phoenix Environmental Associates. Later that year, my partner and I merged and formed the Phoenix Environmental Group.
So, for a brief time that first year, I was a company of one. But since that time, in 1991, I have held a position with the Phoenix Environmental Group.
Q. What is your educational training in college?
A. I have a bachelor of science degree in biology and education from the Florida State University, received that in 1971.
Q. Okay. And what was the first full-time employment you had after college?
A. For a brief time, in the summer of 1971, I did some research for the National Science Foundation. I was actually under contract with the Orange County School System in Florida to develop curriculum for aquatic studies for Orange County high school students.
Q. Can you tell me your next full-time employment?
A. Yes. For a very brief time, I taught high school in Orange County, Florida.
MR. QUINN: Your Honor, if it will expedite matters, the United States will stipulate to the credentials

Page 70

of Mr. Armstrong. As long as we know what the proffer is, we may be able to stipulate to that, too, sir.
MR. SCROGGIN: Your Honor, if I might read the areas in which I will proffer this witness as an expert witness.
THE COURT: All right.
MR. SCROGGIN: I will proffer him in the areas of the technical development of waste load allocations and their use in Florida; second, the use of waste load allocations in the development of effluent limitations in State permits in Florida; third, the sampling and analysis of surface waters and the analysis of water quality data; fourth, computer modeling of water quality impacts on surface waters in Florida.
THE COURT: Computer modeling of what?
MR. SCROGGIN: Computer modeling of water quality impacts on surface waters of Florida.
And fifth, comparisons of water quality data and water quality modeling to the water quality standards of Florida.
THE COURT: Comparisons of water quality data what?
MR. SCROGGIN: Comparisons of water quality data and water quality modeling to the water quality standards of the State of Florida.

Page 71

MR. QUINN: Your Honor, those five areas are further than we thought Mr. Armstrong was going to be designated to testify about. In fact, most of those go beyond the scope of his expert report and were not listed in his expert report or in his deposition at the time we took it. The five areas that Florida Cities seeks to have him certified in are beyond it.
My understanding of his report dealt solely with comparisons of water quality data in and around the Caloosahatchee River.
And for that reason, sir, we would object to the qualification of the witness for any of the other four or five other areas. I can't tell...
MR. SCROGGIN: Your Honor, may I suggest one -- I will try to expedite the process as much as I can, but I do believe that we should be allowed the opportunity to qualify him in these areas. He --
THE COURT: Well, you may be able to qualify him in these areas, but the question is whether he's going to be permitted to testify, notwithstanding the fact that he's got qualifications.
The Government has said that he's not entitled to testify in four of the five areas because he has not been proffered for that purpose appropriately under the rules.
MR. SCROGGIN: If I might, Your Honor, I'm

Page 72

referring to the joint pretrial statement in which Mr. Armstrong's testimony is characterized, and those areas include the historical water quality of the Caloosahatchee River –

THE COURT: All right. Where is that in the five categories that you have just gone through?

MR. SCROGGIN: That would be in number three, Your Honor, the sampling and analysis of surface waters and analysis of water quality data.

THE COURT: Sampling of surface water –

MR. SCROGGIN: – and analysis of water quality data.

THE COURT: – and analysis of water quality data.

MR. SCROGGIN: That was the third category I read.

THE COURT: All right. Just a moment.

(Pause.)

THE COURT: And that's as to the Caloosahatchee River?

MR. SCROGGIN: Yes, sir. That will be the scope of our questions to him.

THE COURT: All right.

MR. SCROGGIN: We're only going to talk about Waterway Estates with this expert, Your Honor. His analysis will deal only with the lower Caloosahatchee River and the impacts on that water body of the Waterway Estates facility.

Page 73

THE COURT: All right. Just a moment.

(Pause.)

MR. SCROGGIN: Reading again, Your Honor, from our -- the joint pretrial statement, he is also being offered for the existence of water quality data, and that would fall within the fifth category which is -- I'm sorry -- to continue reading, the existence or lack thereof of water quality data indicating any impact of any discharges to surface waters from the Waterway Estates wastewater treatment plant.

THE COURT: Yes, and I think the Government recognizes that that falls within his proffer, correct?

MR. QUINN: Yes, Your Honor.

The proffer is set forth on Page 30 of the joint pretrial statement.

THE COURT: I'm looking at it. Go ahead.

MR. QUINN: Okay. It sets forth those two areas. These five areas -- first, I couldn't write them down quick enough, but they sound like they are well beyond anything that is listed on Page 30 or in his expert report.

And for those reasons, we would request that the Court not permit any questioning into those areas.

THE COURT: All right. Go ahead, sir.

MR. SCROGGIN: Your Honor, we've addressed, I believe, the five categories that I listed. Number four --

Page 74

and the second quote that I just read I believe falls -- is the fifth category: The existence or lack thereof of water quality data indicating any impact. That would involve the comparisons of the water quality data and the modeling, which is how the data are, in fact, developed with the water quality standards of Florida, which is the fifth category I have given you. So, I believe, sir, we've done four and five so far. Also –

THE COURT: You know, it sure would help on matters that are so technical as this if you could dovetail your statement of what the witness is going to be offered -- the categories that he's going to be offered in to what you're now saying that you intend to offer.

I was writing as fast as I could. I didn't get all these categories down. And I may have to take a recess and get Mr. Miracle to give me a statement of these various categories and make sure that you're not going beyond what you have proffered, legitimately offered previously.

Yes, sir?

MR. QUINN: Your Honor, two points: First, in Mr. Armstrong's expert report, there are two parameters that are listed: One is to review the data for key parameters that are indicative of the overall health of the estuarial system to determine the overall quality of the Caloosahatchee River estuary and to assess whether water

Page 75

quality appeared to be changing over time and, two, to attempt to locate water quality data from the area near a previous discharge point from the Waterway Estates domestic wastewater treatment facility to determine if that previous discharge was impacting water quality. That's it. That's all that's in there.

And, sir, this is further complicated by the fact that the Defendants want Mr. Armstrong to be both a fact and an expert witness, and they are expanding the scope of what he's going to testify about as an expert.

MR. SCROGGIN: Your Honor, Mr. Armstrong was questioned at his deposition at great length about the first two areas that I have just mentioned: The waste load allocation technical developments and their use in permitting.

If the Court wishes for him to be a fact witness in those areas and not an expert witness, that might be a way to cut through this potential problem, and we would be willing to accept that.

MR. QUINN: Your Honor, by the Florida Cities stipulation to try to qualify him as an expert witness, they concede that he has to be an expert to talk about it. And if he's going to testify as a fact witness, then they shouldn't be allowed to be mixing like this, sir.

MR. SCROGGIN: Your Honor, he has, in fact, been a

Page 76

fact witness in this case and an expert witness in this case. His deposition was consumed almost totally with issues relating to his factual experience rather than the areas in which we had noticed the Department of Justice he would serve as an expert.

The area that -- the last three areas dealing with the sampling, computer modeling and analysis of water quality data clearly falls within the description that we have offered in the joint pretrial statement.

This witness participated personally in the studies and supervised personally the studies that are at issue for water quality sampling, and in that regard he may be regarded as a fact witness by the Court.

THE COURT: Anything else?

MR. QUINN: One more point, Your Honor. He was deposed as an expert witness on the basis of his report. The fact that we may have asked questions about his background and his experience dealt with that experience as it relates to his expertise and doesn't relate to what he was going to testify about in this case.

And I'm advised he wasn't deposed as a fact witness.

THE COURT: Okay. Mr. Miracle, I want this transcribed as quickly as possible.

Where is the report?

Page 77

MR. SCROGGIN: I have his report with me.

THE COURT: Is it an exhibit?

MR. SCROGGIN: It is an exhibit. Yes, sir, it is. And I would move it into evidence.

THE COURT: What exhibit is it?

MR. SCROGGIN: Mr. Armstrong's report is Florida Cities Exhibit Number 91.

THE COURT: Okay. Well, we're going to take a recess for a little while. I don't know how long it's going to take for the Court to attempt to parse through this and to determine this issue.

We'll be in recess.

(A recess was taken.)

THE COURT: All right. The witness has been proffered in five categories as an expert, and the Court is of the view that he should be allowed to testify as an expert in the areas which are numbered three, four and five a few moments ago before I recessed.

The third area was the sampling and analysis of surface waters and the analysis of water quality data, and the fourth area was computer modeling of water quality impacts on surface waters in Florida; and fifth, comparisons of water quality data and water quality modeling to the water quality standards of Florida.

It appears to the Court that there has not been a

Page 78

sufficient predicate laid procedurally to permit the Defendant to testify regarding the first two areas on which he has been proffered; that is, the technical development of waste load allocations and their use in Florida and, second, the use of waste load allocations in the development of effluent limitations in the state permits in Florida.

Proceed.

MR. SCROGGIN: Thank you, Your Honor.

BY MR. SCROGGIN:

Q. Mr. Armstrong, one of the facilities that is at issue in this case is the Waterway Estates facility, and I will ask you, sir, when you were contacted to undertake work as an expert witness on behalf of Florida Cities with respect to that facility.

A. I was contacted by you, I believe, in late 1992 or probably early 1993 at that time primarily to assist you with gathering information related to this case, if I recall correctly.

Q. And what particular information were you asked to collect?

A. I was asked to gather information primarily from the files of the Department of Environmental Regulation, files related to water quality studies that had been done of the Caloosahatchee River and also files relating to permitting actions that had been taken by the Department or the

Page 79

Department was involved with that were being undertaken by the Environmental Protection Agency.

Q. And were you later asked to act as an expert witness in this case?

A. Yes, I was.

Q. And did you prepare a report as part of your work as an expert witness?

A. Yes, I did.

Q. I would ask that the witness be shown Florida Cities' Trial Exhibit Number 91, and I will ask you, Mr. Armstrong, is this the expert report that you prepared for this litigation?

A. Yes, it is.

MR. SCROGGIN: Your Honor, I would ask to move Florida Cities' Exhibit 91 into evidence.

THE COURT: It will be received.

BY MR. SCROGGIN:

Q. Mr. Armstrong, can you tell me what period of time your expert report covers?

A. I looked at all the historical data that I could find on the lower Caloosahatchee River. I focused on the period from 1982 to 1984 primarily because that's where the vast majority of -- the time period during which the vast majority of the water quality information had been collected.

Page 80

Q. Were any restrictions placed upon what data you were to review for purposes of your report?
A. No.
Q. Specifically, what instructions were you given with respect to analyzing all available data for the lower Caloosahatchee River?
A. I was asked to attempt to locate any data that I felt would help me evaluate the water quality of the Caloosahatchee River without restriction, basically.
Q. Can you tell me what instructions, if any, you were given with respect to analyzing data regarding impacts of the discharges of the Waterway Estates facility?
A. Yes. Again, I was asked to attempt to locate any data that I could that would help me reach conclusions regarding the impact of the Waterway Estates discharge, essentially again without restrictions on the type or nature of the data that I could pursue.
Q. Were you given any instructions at all regarding what conclusions you should reach in your analysis?
A. No, sir.
Q. Can you tell us specifically what data sources you reviewed in preparation of your report?
A. I researched the files primarily of the Department of Environmental Regulation. That agency has been designated as the repository for water quality data in the State of

Page 81

Florida.
And I looked in a number of their files and talked to some individuals there focusing in on three major sources of data: One was the water quality data that is contained in what is called the Storage and Retrieval System. STORET, S-T-O-R-E-T, is the acronym.
The STORET system is the computerized data base that is operated by the Department into which, by far, the majority of their data is stored or placed.
I also focused on the intensive survey documents that had been prepared by the Department documenting water quality data that had been collected by the Department during intensive surveys of the lower Caloosahatchee River both in 1980 and again in 1987, I believe.
Q. Can you describe the 1980 intensive survey to which you referred?
A. Yes, I can. The survey was designed to evaluate water quality data in roughly a 12-to-15-mile stretch, I believe, of the lower Caloosahatchee River. It was conducted by Department staff members, including myself.
Q. What was your own participation in that study?
A. At the time of the study, I was the administrator of the water quality analysis section of the department. That section was responsible for designing and actually implementing the water quality study and then analyzing the

Page 82

data.
Upon completion of that study -- the project manager for the study was a Mr. Bruce DeGrove who reported directly to me in my capacity as administrator of the section. I was involved in discussions with Mr. DeGrove relating to the design of the study, how the study was to be executed, and then I actually participated in the fieldwork that was necessary to collect the water quality information.
Q. Did you use the information from the intensive survey in 1980 for any modeling purposes?
A. Yes, we did.
Q. Can you tell me what those purposes were?
A. Yes. We had been asked by our district office in Fort Myers, which at the time was called the Southeast Florida District Office -- excuse me -- South Florida District Office -- the district had asked us to undertake the study in question and supply the results to them in support of both permitting decisions that they were going to be facing in the coming years and also --
THE COURT: Just a moment.
Yes, sir?
MR. QUINN: Your Honor, I'm going to object at this time. It appears that this testimony, although couched as fact, is going into the area of waste load allocations and the use of waste load allocations and the development of

Page 83

waste load allocations. For those reasons, I would object.
MR. SCROGGIN: May I be heard, Your Honor?
This witness has been proffered and accepted by the Court as an expert in computer modeling of water quality impacts on surface waters of Florida, which is category number four. It may be helpful to ask the witness the question. The waste load allocation is, itself, one of the products of such computer modeling and is a subcategory of computer modeling. I do, indeed, anticipate asking --
THE COURT: You can be heard in just a minute when he gets through.
MR. SCROGGIN: I would, indeed, Your Honor, expect to ask him some questions of the particular kind of computer modeling in which he has been proffered and accepted as an expert. One kind of computer modeling is waste load allocation.
I could perhaps ask him those questions if there's any question about that technical characterization of a waste load --
THE COURT: Well, let me hear from Mr. Quinn first.
MR. QUINN: I apologize when I stood up earlier, Your Honor. I thought Mr. Scroggin was asking a question about waste load allocation. I was just going to object. I have nothing further on this point, sir.

Page 84

THE COURT: Well, ask your questions which you say will support your legal argument here.
BY MR. SCROGGIN:
Q. I ask you, sir, if the information from the intensive survey was used for any modeling purposes?
A. Yes, it was.
Q. And was one of those modeling purposes the development of a model to be used in the development of waste load allocations for the Caloosahatchee River?
MR. QUINN: Objection.
THE COURT: Is this something that he testified to in the deposition?
MR. SCROGGIN: Yes, Your Honor. Virtually his entire deposition was devoted to his personal role in the development of the computer models used in waste load allocations and in the history of the use of those computer models in waste load allocations for the lower Caloosahatchee River.
The deposition lasted approximately three-and-a-half hours. Of that period of time, I would estimate no more than 15 minutes deviated from that single topic.
THE COURT: Mr. Quinn?
MR. QUINN: Yes, Your Honor.
We're getting into his fact testimony; that is,

Page 85

what he was a percipient witness on, as opposed to what his expert report relies upon.
To the extent that the two are inextricably linked, it is difficult for us to make objections on this basis, but I would object that all of this information is of a fact nature, and he should not be allowed to testify in his expert capacity to what he did as a fact witness unless it's within his expert report, sir. And this information that is seeking to be elicited is not in his expert report, sir.
THE COURT: Okay. Well, I'm going to overrule your objection, Mr. Quinn.
MR. QUINN: May I add one more point, sir?
THE COURT: Yes, sir.
MR. QUINN: As an additional note, Mr. Armstrong was not disclosed to the United States as a fact witness until after the conclusion of discovery.
In fact, in response to interrogatories filed after the close of discovery, that was the first time that in writing he was notified -- we were notified of his fact witness position. At his deposition was, in fact, the first time we knew that he had any role as a fact witness in any development of waste load allocations.
THE COURT: Mr. Scroggin, you want to be heard on that point?

Page 86

MR. SCROGGIN: Yes, I would, Your Honor.
I would ask that my colleague Mr. Alex Bullock speak to this since he was the person personally involved in these interactions.
I will say that it was certainly no secret that Mr. Armstrong was, indeed, the supervisor of the entire waste load allocation process. We assumed that was the reason the Department of Justice devoted virtually the entire deposition to that, much somewhat to our surprise.
We did disclose Mr. Armstrong's dual role as an expert and a fact witness in Florida Cities' amended revised responses to Plaintiff's first and second interrogatories.
A very short paragraph simply reads:
Mr. Armstrong is also listed as an expert witness. Additionally, he was employed by the Florida Department of Environmental Regulation from the early '70's to the late '80's. Mr. Armstrong is a co-author of the 1981 planning document which Connie Kagey used improperly in rejecting Florida Cities' 1986 renewal application for Waterway Estates. Mr. Armstrong has also participated in at least two extensive surveys of the Caloosahatchee River and has personal knowledge of the river in the vicinity of Waterway Estates. That ends our disclosure of his role as an expert in the three areas the Court has designated, also his factual history of involvement which intertwines that

Page 87

expertise.
THE COURT: Mr. Bullock?
MR. BULLOCK: Your Honor, Mr. Scroggin has covered most of the material that I was going to speak other than the fact that Your Honor had provided a scheduling order I believe in January of '95 which listed dates in which witness lists would be projected -- I mean when witnesses would have to be served on the opposing sides.
It's my understanding that the Government filed interrogatories seeking who -- exactly who our witnesses would be sometime in May of '95. We objected to having to provide the witnesses at that time.
The Government filed a motion to compel. Judge Swartz did not rule on that motion to compel until November 3rd, shortly before the close of discovery.
I might also point out that the Government did not provide a witness list themselves until the close of discovery as well.
THE COURT: Okay.
MR. BULLOCK: If Your Honor will remember, the case was originally set for trial in October of '95 and then extended until January and now March.
THE COURT: Mr. Quinn?
MR. QUINN: Yes, Your Honor. Just one point: The document that Mr. Scroggin read from the answers to

Page 88

interrogatories, that is the document to which I referred, and that was filed after the close of discovery and after a possibility to take any depositions.

MR. SCROGGIN: May I respond, Your Honor?

THE COURT: No, no. I've heard enough.

Well, all right. Go ahead. It may be that the Eleventh Circuit would perhaps be wondering what I cut off, so go ahead.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. Returning to the question I believe I was asking you --

THE COURT: No, no. I thought you had something else regarding argument.

MR. SCROGGIN: No -- oh, I'm sorry.

THE COURT: I misunderstood.

MR. SCROGGIN: Yes, I did, Your Honor, and that was --

THE COURT: Sir?

MR. SCROGGIN: I'm sorry, I mistook what you had said. I apologize. I do have one final point with respect to the current issue --

THE COURT: And that's what I said: Go ahead.

MR. SCROGGIN: -- and that is, Your Honor, that the last point Mr. Quinn made was that they didn't have

Page 89

notice before the deposition. I would simply remind the Court, as I did earlier, the entire deposition was consumed with nothing but this single subject.

THE COURT: Okay. Well --

MR. SCROGGIN: Indeed, Your Honor, the document at issue was presented to this witness at his deposition and he was questioned on it at his deposition.

THE COURT: Well, I'm going to overrule the objections that have been made to this line of testimony, and I'll permit you to proceed.

Go ahead.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. Mr. Armstrong, I was questioning you about the data gathered from the intensive survey of 1980 in which you participated.

Did you also participate in the analysis of that data that was gathered as well as in the physical sampling of the data?

A. Yes, I did.

Q. And what did that analysis of the data involve?

A. We analyzed the data just visually to get a feel for what we're dealing with, but the primary tool used in the analysis of that data was a computer model.

Q. And was that computer model subsequently used in the

Page 90

1981 waste load allocation for the lower Caloosahatchee River?

A. Yes, it was.

Q. I would ask that the witness be shown the Government's Exhibit Number 349, which is the 1981 Caloosahatchee River waste load allocation documentation, Lee County.

MR. SCROGGIN: Your Honor, this was also one of our exhibits; but in the interest of avoiding any duplication of exhibits, I'm using the Government's exhibit which I believe --

THE COURT: It doesn't matter whose exhibit it is. It's admissible, usable for all purposes.

BY MR. SCROGGIN:

Q. Would you identify this document, sir?

A. Yes. It's entitled Caloosahatchee River Waste Load Allocation Documentation, Lee County, Water Quality Technical Series, Volume 2, Number 52.

Q. Can you tell me what role, if any, you had in this particular document, in its development and publication?

A. Yes. I was involved in the discussions with our district office over the need and scope of the study. I was involved with Mr. DeGrove and others in the design of the study, and I was involved in the actual analysis of the data, including development of the computer model that's contained -- or on which this waste load allocation

Page 91

documentation is based.

Q. Did Mr. DeGrove, the listed author of this document, work for you?

A. Yes, he did.

Q. Did he report to you?

A. Yes, he did.

Q. Did you personally --

THE COURT: Just a moment.

MR. QUINN: Objection, Your Honor. I believe we're going into fact testimony, and I lodge my objection on that basis.

THE COURT: Overruled.

BY MR. SCROGGIN:

Q. Did you personally supervise the various stages of development of this document?

A. Yes, I did.

Q. And did you approve the final draft before it was published?

A. Yes.

Q. Did you make any changes to intermediate drafts that may have been developed in -- before the final was published?

A. Yes.

Q. Can you tell me for what purpose this waste load allocation was developed?

Page 92

MR. QUINN: Objection; calls for a legal conclusion, I believe, Your Honor.
THE COURT: Overruled.
THE WITNESS: Yes. The district office -- as I mentioned, the South Florida District Office had asked us to undertake this study for their possible use in the future in making permitting decisions and also as a reanalysis of waste load allocations that would be needed for the development of what's called a 201 facilities plan for this part of the state.
BY MR. SCROGGIN:
Q. What is a 201 facilities plan?
A. The 201 process is a process that was set up to allow counties and cities within the State of Florida to seek federal funding to assist them with the design and construction of municipal wastewater treatment plants for their particular communities.
Part of that process involved the need to develop waste load allocations so that the cities and counties could know what type of facilities they would need to build in the future.
Q. Do you know what happened to this waste load allocation after it was published? And by that I mean, do you know for what purposes it was, in fact, used?
A. Not specifically, no.

Page 93

Q. Was it your understanding in developing this document that this document would prescribe requirements against -- to be enforced against dischargers along the Caloosahatchee River?
MR. QUINN: Objection; leading, Your Honor.
THE COURT: Yes, it is leading. Sustained.
BY MR. SCROGGIN:
Q. What was your understanding regarding the uses to which this waste load allocation could be used, if any, for purposes of controlling discharges to the Caloosahatchee?
A. We supplied this document and other similar documents to our district offices around the state for their use as they saw fit. It was not a requirement on our district offices; they could use this in conjunction with any other information that they had available in making their decisions for permitting purposes.
Q. Who makes the decisions for permitting purposes, in your experience, in Florida?
A. The permits for facilities such as these were issued by our district managers in the five different district offices around the state.
Q. Was it your understanding that this document would be a requirement for the district --
THE COURT: Well, don't lead the witness.
BY MR. SCROGGIN:

Page 94

Q. What understanding, if any, did you have regarding how this document might be used in the development of permits for dischargers to the Caloosahatchee River?
MR. QUINN: Objection; calls for speculation.
THE COURT: Overruled. You can answer the question.
THE WITNESS: These documents were provided as guidance for the district managers and their staff to make regulatory decisions. They were not requirements.
BY MR. SCROGGIN:
Q. What is your understanding of the difference between guidance and a requirement for the district managers?
A. Well, in my opinion, a requirement would be something that the district managers would turn around and place on the dischargers who were seeking permits; and as such, then those requirements would become binding through the permitting process.
Q. Do you know whether or not this waste load allocation was ever submitted to EPA?
A. I believe it was.
Q. Do you know if there was a response from EPA to this waste load allocation?
A. Not an official response, to my recollection.
Q. Do you know whether or not the development of this waste load allocation was premised upon concern about

Page 95

current or imminent water quality violations in the lower Caloosahatchee River?
THE COURT: Do you know? Yes or no.
THE WITNESS: Yes.
BY MR. SCROGGIN:
Q. And was it premised upon concerns about then current or imminent water quality violations in the lower Caloosahatchee River?
MR. QUINN: Objection; leading.
THE COURT: Overruled.
THE WITNESS: The concern, I think, that was expressed to us was that the district office would like assistance in evaluating the health of the river and any trends that might need to be addressed through their permitting process.
To my knowledge, there were not any significant current problems that they felt needed to be addressed.
BY MR. SCROGGIN:
Q. If there were no current problems that they felt needed to be addressed -- by that, sir, do you mean that there might have been future problems that might need to be addressed?
MR. QUINN: Objection, Your Honor. This is a hypothetical question posed to this witness in his fact capacity, and it's improper. Objection.

Page 96

THE COURT: Well, I think the question is vulnerable. I'm not sure on that basis, but I'll overrule the objection.
THE WITNESS: Could you repeat the question, please?
THE COURT: Read the question back.
MR. SCROGGIN: I'll rephrase the question, Your Honor.
THE COURT: All right.
BY MR. SCROGGIN:
Q. What does the 1981 waste load allocation, the Government's Exhibit 349, predict, if anything, about future problems in the lower Caloosahatchee River?
A. The study revealed that there were -- there should be concerns over future water quality, and there may be some particular things that would need to be done to protect water quality under future scenarios of design and treatment and discharge.
Q. I would direct your attention, sir, to Page 17 of Government's Exhibit 349 and in particular to the section 3.6 entitled Waste Load Allocation, the two paragraphs that are contained there.
THE COURT: Just a moment.
(Pause.)
THE COURT: Go ahead.

Page 97

BY MR. SCROGGIN:
Q. And I would ask you, sir, what does this document say regarding waste load allocations for the Waterway Estates facility?
A. It says in the first paragraph, The allocations for the present design flows and present locations are for Waterway Estates no discharge.
Q. Was it your understanding that that statement required Waterway Estates to cease discharge?
A. No.
Q. And why not?
A. During the study, it was determined that there may need to be some changes made to both the treatment and the location of the outfall for Waterway Estates as well as other facilities. Based on information we had received from our district office, it was felt that Waterway Estates would likely tie in to another facility, as opposed to undergoing those upgrades and possibly relocating the outfall. And the facility was dropped from future -- dropped from the study basically at that point in time. It was not considered further in completing the study.
Q. I would direct your attention to Page 12 of the same document, the last paragraph on the page, the second sentence, beginning, The Waterway Estates treatment plant. Would you mind reading that, sir?

Page 98

A. The Waterway Estates treatment plant was eliminated from further modeling due to the assumed tie-in to the Cape Coral facility and the assumed impracticality of upgrading to AWT and relocating the outfall for such a small flow.
Q. Is that statement consistent with the explanation you have just given for why the no discharge waste load allocation did not require the Waterway Estates facility to cease discharge?
A. Yes, it is.
Q. If this 1981 document is not containing requirements, for what purposes has it been used, if any?
MR. QUINN: Objection. It's a leading question, Your Honor.
THE COURT: Overruled.
THE WITNESS: I'm not sure if I know all the purposes for which it's been used. It was offered to our district offices as a planning and guidance document for whatever their needs might be or might have been.
BY MR. SCROGGIN:
Q. In supervising such projects, did you ever have an occasion to have discussions with your staff about when, if ever, dischargers could challenge such waste load allocations developed under your supervision?
A. Yes.
Q. What were those discussions?

Page 99

A. There were concerns on the part of our legal staff within the department and concerns expressed by my supervisor and my staff about the nature of the waste load allocations.
MR. QUINN: Objection; hearsay, Your Honor; move to strike that response.
THE COURT: Sustained.
MR. SCROGGIN: May I rephrase the question, Your Honor?
THE COURT: You can try.
BY MR. SCROGGIN:
Q. Did you develop any understanding regarding when, if ever, dischargers could challenge waste load allocations during your tenure at the Florida Department of Environmental Protection?
A. Yes, I did.
Q. And can you tell us what that understanding was?
A. I took the position as the administrator of the section and conveyed that position to our staff and our district offices that the waste load allocations were guidance documents; and since they were not binding and they were not requirements, they were not subject to challenge through the legal process within our agency.
If the documents were used in the permitting process and then as such became binding, the permits themselves, or

Page 100

proposed permits, were certainly subject to challenge.
Q. And who, if anyone, would incorporate waste load allocation requirements into a permit?
A. Within the agency, only our district offices.
Q. In such an instance, would a provision of a waste load allocation then become required and binding as opposed to merely planning and guidance?
A. Yes.
Q. Are there other factors that a district engineer would consider other than existing waste load allocations in determining state permit limits?
A. Yes, there are.
Q. What are those other factors?
A. The district offices, in deciding -- in making their permitting decisions, took the information that we had developed into play -- or under review for making their decisions, but they also looked at any existing water quality data. They frequently looked at the incidence of complaints, if any had been filed with the agency, regarding a particular discharger; history of other problems, such as fish kills or odor or color complaints, algae blooms; any other information that they might have on the water body and the discharger in question that might give them an indication of whether or not there were any problems out there that need to be addressed in the permitting process.

Page 101

Q. Can you point to anything in this document, sir, that requires Waterway Estates to cease discharging into the canal to which it was discharging at the time this study was conducted?
A. No, sir.
Q. Can you point to anything in this study that requires the Waterway Estates facility to move its outfall from the canal to the six-foot contour line?
A. No.
Q. Can you point to anything in this 1981 waste load allocation study that requires the Waterway Estates facility to upgrade its treatment facility from better than secondary to the still cleaner advanced wastewater treatment?
A. No.
Q. In preparing your expert report, did you reach any findings and conclusions regarding the health and trends in the health of the lower Caloosahatchee River?
A. Yes, I did.
Q. Can you tell me what those conclusions were?
A. Based on primarily the 12 years of data that I described earlier and the intensive surveys and other documents that I reviewed, it is my opinion that the overall health of the Caloosahatchee River I considered to be good.
Furthermore, with respect to trends, I could not determine that there were any trends to indicate that the

Page 102

water quality was either improving or declining in the river. It seemed to be pretty much steady throughout the study period.
Q. Did you reach any conclusions regarding whether or not the Waterway Estates facility had any measurable impact on the health of the Caloosahatchee River?
A. Yes, I did.
Q. And what was that conclusion?
A. I could not locate any data that would indicate that there was an impact -- a measurable impact or discernible impact from the Waterway Estates discharge.
Q. Did you reach any conclusion regarding whether or not moving Waterway Estates' outfall from the canal to the six-foot contour line had any beneficial impact on the health of the Caloosahatchee River?
A. Again, I found no data that would indicate that there was any difference in the water quality after moving the outfall. I simply could not find it.
Q. And what is the health of the Caloosahatchee River before and after the events that are at issue in this litigation; namely, the upgrade to AWT at Waterway Estates and moving the outfall of the six-foot contour line?
MR. QUINN: Objection; compound question, Your Honor.
THE COURT: Do you understand the question?

Page 103

THE WITNESS: I thought I did.
MR. SCROGGIN: I will rephrase the question if it would be more helpful.
BY MR. SCROGGIN:
Q. What is the health of the Caloosahatchee River which you have testified is unchanged during the period of time of your study from 1982 to 1994?
A. I would consider it good.
Q. And can you tell me what "good" means in terms of apprising the health of a river?
A. Well, I looked at various water quality parameters that I consider indicative of the health of a water body. In the period of record, there were occasions when for some of those parameters values would rise and fall. This is a very dynamic system, as most water bodies in Florida are, so water quality does fluctuate over time.
But in general, those parameters fell within what I would consider to be generally accepted ranges for water bodies such as this. It would indicate basically good water quality, good health.
Q. Can you tell me if you reached any conclusion regarding problems or potential problems with respect to nutrient loadings of the lower Caloosahatchee River during the period of your study?
A. With respect to nutrient loadings, both the nutrient

Page 104

concentrations, that is, nitrogen and phosphorus concentrations, and as well the clorophyll concentrations, which are sort of a measure of the productivity of the river, fell generally within good or acceptable ranges. Again, there were sporadic occasions where the values would fluctuate; but overall, I would consider those generally good.

Q. I'll show you, sir, behind you on the easel the enlarged chart that has been previously marked as Florida Cities' Exhibit 92 entitled Nitrogen Discharged to River. This is a table from the expert witness that we -- has previously testified in this case, Mr. Douglas Smith.

I will ask you, sir, do you recognize this table? Have you seen it before?

A. Yes, I have.

Q. And can you tell us the relationship, if any, of this table to the answer you have just given regarding nutrient loadings for the lower Caloosahatchee River during the time of your study?

THE COURT: Just a moment.

MR. QUINN: Your Honor, this chart was not within the expert report of this witness. It was in the expert report of Mr. Smith and at the time -- therefore, at the time he wrote his report was locked into his testimony. He couldn't have --

Page 105

MR. SCROGGIN: It's in evidence, Your Honor.

Might I ask him if it's consistent with the conclusions of his report?

THE COURT: I'll sustain the objection.

THE WITNESS: Would you mind repeating the question?

THE COURT: No, you don't have to answer it.

THE WITNESS: Oh, I'm sorry, Your Honor. I misunderstood.

BY MR. SCROGGIN:

Q. Can you tell me what data, if any, you found regarding the health of the canal to which Waterway Estates was discharging until it moved its outfall to the current six-foot contour line?

A. I did not locate any data from the canal system that would indicate that there were any problems. No data existed in the canal.

Q. Based upon your experience in planning, overseeing and taking such data in the past, do you have any opinion as to why certain areas are chosen for data collection and other areas are omitted from data collection?

A. Well, indeed, in this study, we discussed the scope of our study with our district office and within our staff in Tallahassee. It was felt that we would focus on the open water body of the Caloosahatchee River and not focus as much

Page 106

on the tributaries with respect to dischargers, such as Waterway Estates. The facility and the discharger were located very close to the river system, and we did not undertake a study of the specific area in the vicinity of the outfall. It just wasn't decided that it was something that we needed to, frankly, worry about in this study.

Q. What criteria would you use -- did you use in determining whether or not to sample the waters of the canal as opposed to the waters of the river?

A. Well, there really were two things that we were taking into consideration: One, of course, as I have already mentioned, was the distance from the facility and the discharge point to the river; that it was such a short distance that given the nature of the study and the size of the study area, we didn't feel that we should focus on such a small distance.

But more importantly, I think, if our district office had had any history of complaints or problems or violations in that canal, we would have included the study and -- that area in the study area. We had, you know, the resources and the expertise to look at the canal; it just simply wasn't an issue with our district office or with us at the time.

Q. Can you tell me what events might have triggered your sampling of the canal for this particular intensive survey?

MR. QUINN: Objection to speculation, conjecture.

Page 107

THE COURT: Sustained.

BY MR. SCROGGIN:

Q. What was the closest sampling station in the data you reviewed to the Waterway Estates facility?

A. If I recall, I believe the closest station that I could locate was in, I believe it was, a 1987 intensive survey and it was over a half a mile away.

Q. Would such a station be able to measure the impact of the Waterway Estates discharge?

A. Not in my opinion.

Q. And what's the basis of that opinion?

A. Well, the Caloosahatchee River is a very, very large estuary in this area. The Waterway Estates discharge was a relatively very, very small discharge.

Given the distance and travel time out to that station, I don't believe there would be any measurable impact discernible from the data that I could find.

Q. Did your study look at the risk of environmental harm caused by the Waterway Estates discharge into the Caloosahatchee River or into the canal?

A. Not really; only in a sense that we didn't --

THE COURT: Just a moment.

MR. QUINN: Objection; move to strike everything after "not really."

THE COURT: Sustained. It will be stricken.

Page 108

BY MR. SCROGGIN:
Q. Mr. Armstrong, have you reviewed the expert reports submitted by Mr. Mark Klingenstein in this litigation?
MR. QUINN: Objection. This goes beyond the scope of the items as set forth in the report.
MR. SCROGGIN: Your Honor, may we address that, please?
THE COURT: Yes.
BY MR. SCROGGIN:
Q. I will ask you, sir, did you hear his --
THE COURT: Wait a minute. Wait a minute. Can you address that? I thought you wanted to be heard.
MR. SCROGGIN: My understanding, Your Honor, was that the limitation on discussions of expert reports of other -- by each side was limited only to Mr. Smith and did not apply to any of the other experts.
THE COURT: Well, you assumed wrong.
MR. SCROGGIN: Yes, Your Honor.
THE COURT: Sustained.
MR. SCROGGIN: I would like to ask, Your Honor, several questions regarding what he heard in Mr. Klingenstein's testimony, if I might.
MR. QUINN: I'll object to that line of questioning, Your Honor. It's irrelevant. He's here as an expert in certain areas; and if it's not in his report, he

Page 109

can't testify to it, so why are we going to ask him what he heard here?
MR. SCROGGIN: I will limit my questions, Your Honor, to those areas in which he has been offered and accepted by the Court as an expert.
MR. QUINN: I will object, Your Honor, on the basis that those opinions will not be within his report.
MR. SCROGGIN: Can I respond, Your Honor?
THE COURT: Yes, sir.
MR. SCROGGIN: They are within the areas of expertise that he has been accepted by -- offered, proffered and accepted by this Court; and they are questions relating to and underlying the conclusions he reached in his own expert report.
THE COURT: Well, I guess we're getting to an issue as to whether an expert should be permitted to sit in the courtroom and listen to the testimony of another expert and then engage in a critique of the other expert's testimony, and I don't believe that's permitted.
Now, if you want to challenge that assumption --
MR. SCROGGIN: No, Your Honor.
THE COURT: -- I'd be glad to hear from you on that.
I'm not sure I'd be glad, but I would be willing to hear you on that.

Page 110

MR. SCROGGIN: No, I will not challenge that, Your Honor.
THE COURT: All right.
MR. SCROGGIN: I have no further direct questions of this witness.
THE COURT: Okay. We're going to recess for lunch until 1:35.
(The luncheon recess was taken.)

THE COURT: All right Mr. Quinn.

MR. QUINN: Yes, Your Honor. I don't believe Avatar Holdings has any questions.

MR. HIRD: That's correct.

THE COURT: Very well.

CROSS EXAMINATION

BY MR. QUINN:

Q. Good afternoon, Mr. Armstrong.

Sir, with regard to exhibit United States 349 the, wasteload allocation documentation, Lee County, isn't it true that the allocations in that document were prepared at the request of Fort Myers District Office due to pending requests for permit renewals?

A. I believe that was part of it.

Q. Okay.

And, sir, also, isn't I true that with regard to that same document, it was decided to re-evaluate prior allocations in this 1991 wasteload allocation document, is that correct?

A. That is correct.

Q. Okay.

Sir, isn't it true that in the 349, the wasteload allocation document, the Waterway Estates Treatment Plant was eliminated from further modeling through an assumption it would tie into the Cape Coral Facility?

A. That's correct.

Q. And it was also assumed that it would be impractical to upgrade the plant to AWT and to relocate the outfall, isn't that correct?

A. That's my understanding.

Q. But in fact, the plant did relocate its outfall, isn't that correct?

A. That's correct.

Q. And the plant has upgraded to AWT, isn't that correct?

A. Yes, I believe so.

Q. Sir, the relocation of outfall to the middle of the Caloosahatchee River has improved the dissipation of pollutants, isn't that correct?

A. I would assume so. I don't know if that's been proven, but I would assume it has.

Q. Common sense would indicate there's better dispersion in the middle of the river, isn't that right?

A. That's correct.

Q. Mr. Armstrong, isn't it true there are no water quality data supporting any conclusion about the historical quality of water at the Waterway Estates outfall?

A. At the previous outfall?

Q. At the previous outfall, sir?

A. I could find no data that I could point to that said that there was any impact.

Q. You could find no data at all, isn't that true?

A. I found data, but not in the vicinity of the outfall. The closest data I found were too far away.

Q. My question, sir, is, there is no -- there are no water quality data supporting any conclusion about the impact at the prior Waterway Estates outfall, isn't that true?

A. I agree with that.

Q. Mr. Armstrong, there are no water quality data supporting any conclusion about the historical quality of the water for the canal into which the Waterway Estates Plant used to discharge, are there?

A. That is correct.

Q. And, sir, there are no water quality data supporting, in fact, any conclusion about the historical quality of water for the area at the intersection between the canal and the Caloosahatchee River, isn't that correct?

A. Again, there were no data collected at that point and the closest data I felt were too far away to draw any conclusions.

Q. It is -- there's no data?

A. There is data, there's not data at the receiving points. There's data in the area, but not at that point.

Q. Excuse me, there's no data upon which you can base a conclusion as to either degradation or improvement of the water quality, can you?

A. That's correct.

Q. Sir, the data that you examined in your report had no

bearing whatsoever on localized impacts or effects due to the -- on pollutant discharge, is that correct?

A. I'm not sure if I understand what you mean by "had no bearing on." Could you maybe explain that?

Q. Sure. Let me ask the question, withdraw the question, I'll ask it a different way.

Sir, there was no data that addressed localized impact at either the prior outfall or at the current outfall in the middle of the river, is that correct?

A. That's correct.

Q. And, sir, the data which you did examine, the closest of which you said was about a half mile away, showed no trends in water quality either, improvement or degradation, isn't that correct?

A. That's correct.

MR. QUINN: Thank you.

No more questions, Your Honor.

THE COURT: Any redirect?

MR. SCROGGIN: I have only one question on redirect.

REDIRECT EXAMINATION

BY MR. SCROGGIN:

Q. You were asked regarding data on localized impacts in the cross examination, Mr. Armstrong. Does that mean that there were localized buildups of pollutants in the canal?

A. Not based on the information that I reviewed.

Q. Is there a likelihood there was a localized buildup in the canal if there's no data --

MR. QUINN Objection, calls for speculation. He is beyond the scope of my cross examination.

THE COURT: I'll sustain the objection.

MR. SCOGGIN: I have no further questions.

THE COURT: Thank you, sir. You may step down.

Call your next witness.

MR. BAISE: Your Honor, the Defendant Florida Cities Water Company calls Roger Hartung.

Thereupon,

ROGER HARTUNG,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness stand, please.

MR. QUINN: Your Honor, if I may be heard.

On Monday last, the Court reserved ruling on the United States' motion to exclude Mr. Hartung's testimony. At this point in time, we'd like to renew the motion.

THE COURT: All right, sir.

MR. QUINN: May I be heard on that?

THE COURT: Yes, sir.

MR. QUINN: If it's okay, I'll speak from here.

THE COURT: I think we can probably hear you.

MR. QUINN: For Mr. Hartung's testimony to be admissible under Rule 702, it must assist the Court to understand the evidence and to determine a fact in issue or to determine a fact in issue you. Mr. Hartung's report does neither. There's no evidence that Mr. Hartung can help this Court to understand the evidence in this case.

Simple and straightforward, Florida Cities has violated the Clean Water Act. It has discharged without permits, it has discharged pollutants in excess of permitted levels and the United States commenced an enforcement action to recover civil penalties.

The Defendants presented their case on mitigation and you may hear testimony that certain discharges didn't really exceed permitted levels or that certain exceedances were unavoidable or there was not any environmental harm or significant environmental impact. Those are the Defendants -- what the Defendants will allege, but Mr. Hartung can't testify to any of these.

In fact, Mr. Hartung's report doesn't even attempt to apply the facts of this case to the EPA policies and procedures that he is going to be preferred as an expert upon.

In addition, his testimony will not assist in the determination of a fact in issue. The only fact in issue is what is an appropriate penalty against Florida Cities in this instance.

My understanding is that Mr. Hartung will not address any issues as to Avetar. In addition, in reaching a decision on the issue of the appropriateness -- appropriate amount of penalty, the Court must apply the statutory factor as set forth in the Clean Water Act. The only factor Mr. Hartung can opine on is the catchall quote, such other factors as justice may require, unlike factors such as economic benefit or environmental harm or seriousness of violation or ability to pay.

That factor goes to the equities of this case which is something that this Court and this Court is totally equipped to decide without resorting to outside experts.

Again, Mr. Hartung doesn't allege that the -- in his report, Mr. Hartung does not allege EPA violated any law or any regulation in bringing this case, nor does he point to any alleged violations of EPA's own policies or any regulations, nor does he attempt to put the facts of this case into any kind of prospective upon which the Court can make a mitigation of penalty.

Your Honor, the United States submits that Mr. Hartung is no more qualified to render an opinion in this case about what the appropriate penalty is than I am, and that for those reasons, we move to exclude Mr. Hartung's -- we renew our motion to exclude Mr. Hartung's expert testimony.

THE COURT: Mr. Hartung, let me -- I may have some

dialogue with the attorneys here. It would probably be best not to have your presence. Would you mind please stepping out into the corridor and we'll be with you in just a moment.

Go ahead, Mr. Baise.

That's all right, you can go ahead.

MR. BAISE: Thank you, Your Honor.

Mr. Hartung has been designated as an expert witness by the Defendant Florida Cities. The Defendant has been on notice for some period of time with regard to Mr. Hartung. In fact, the Defendant even missed the opportunity to take Mr. Hartung's deposition which they were given the opportunity to do, so it strikes me somewhat disingenuous for the Government to indicate they want to strike his testimony when they really do not know exactly what his testimony is going to be, number one.

Number two, with regard to Mr. Hartung, here's an individual who has worked for the EPA, has supervised over fifty thousand permits in their enforcement in the agency, and can, we believe, assist the trier of fact with regard to such other factors as justice may require, and also, the seriousness criterion, Your Honor, because Mr. Hartung will point out the rules, the policies, the procedures with respect to EPA and how it abused those particular procedures in taking this permit away from Florida Cities. Obviously, list he's not going to testify to the facts with regard to Waterway Estates, but he

will lay out what the agency's policies and procedures were with regard to approving wasteload allocations.

This Court has heard a great deal about a 1981 wasteload allocation. Mr. Hartung helped develop the wasteload allocation program in part at EPA. He will point out to Your Honor that wasteload allocations are very important documents, they must go through a very careful screening and a approval process and if they do not go through that careful approval and screening process, they are unusable with an NPDES permit. That would mean that the wasteload allocation used in this permit was improper, unlawful. Therefore, we think it's very important, very helpful to the Court in terms of looking at the seriousness of the violation here.

The Government is accusing Florida Cities of having over a thousand days of discharges without a permit or discharge into the wrong location at the Waterway Estates into the Caloosahatchee River. Well, if the Government does not come in here with clean hands, Your Honor, whether or not it has made a mistake, and granted, our client did not appeal at the time they should have appealed, the engineers were looking at the situation, not lawyers, but the fact is, the Government has an obligation to abide by the rules, its own policies and procedures.

Mr. Hartung can lay this out because he's been through these experiences, he's worked on national committees,

Your Honor, looked at issues such as this and I think can be very helpful. The testimony is, I believe, very helpful in putting the six criteria into context for this Court, one, seriousness, two, such other our factors as justice may require. Thank you.

THE COURT: Mr. Quinn.

MR. QUINN: Yes, Your Honor. Counsel said we don't know what Mr. Hartung is going to testify to and that is patently wrong. Federal Rule of Civil Procedure 26 regarding the disclosure of experts states as follows: The report shall contain a complete statement of all opinions to be expressed and the bases and reasons therefor. And, Your Honor, there are no opinions as to any application of what EPA generally does in Region VI and what actually happened here, therefore, none of those opinions are helpful.

Second, the appropriate manner for these issues to be raised is through argument of counsel as is evident from the arguments here, not through the testimony of a purported expert witness on what EPA could have done without any application to the facts in evidence.

Your Honor, the Court is entirely capable of applying argument to the facts of this case and we don't need the witness here to do it, sir.

MR. BAISE: Your Honor, the Defendant finds it most interesting that EPA or the Defendant Department of Justice and

EPA have not brought forward their witnesses that they could have brought forward to assess to, one, what the policies and procedures of the agency were, even those individuals who were involved in the enforcement action with respect to the three facilities here, so, we felt it incumbent upon to us bring to the Court's attention what EPA's policies and procedures are with regard to how it handles NPDES Permits, how it handles wasteload allocations in those permits, and then, enforcements that can be taken upon those permits.

What Mr. Hartung has done in his report and what I was referring to a moment ago, Counsel, is that the Government had not taken Mr. Hartung's deposition, clearly it has the report. We prepared the report as required by the Court.

THE COURT: I'm going to cut this short and I'm going to overrule the objection. I'm going to permit the testimony. If the Court, as we get into this further and/or even subsequent to his testimony, determines that it is not probative of any of the issues in the case or is otherwise inappropriate for the Court to consider, we don't have a jury and I can recede from that if I find it necessary. I'm a little bit concerned about it. We're not here -- well, enough said. All right.

Ask Mr. Hartung to step back in, please.

THE CLERK: State your name and spell your last for the record.

THE WITNESS: Roger C. Hartung, H-A-R-T-U-N-G.

DIRECT EXAMINATION

BY MR. BAISE:

Q. Good afternoon, Mr. Hartung.

A. Afternoon.

Q. What is your occupation?

A. I'm an environmental consultant.

Q. How long have you worked in the environmental field, Mr. Hartung?

A. About twenty-four years.

Q. What professional degrees do you hold?

A. I have a degree, a Master of Science Degree from the University of Wisconsin in water resource management, and a Bachelor of Science Degree in civil engineering from University of Texas.

Q. When were you first employed by EPA?

A. December, 1971.

Q. So, you worked for EPA approximately twenty-five years?

A. I worked for them for twenty-three years until my retirement on September 30, 1994.

THE COURT: When were you at the University of Texas?

THE WITNESS: University of Texas, I graduated in 1961, January, 1961.

THE COURT: Thank you.

BY MR. BAISE:

Q. Do you have any professional degrees beyond what you received from the University of Texas, Mr. Hartung?
A. No, sir. Well, just the Master of Science at the University of Wisconsin that I mentioned.
Q. Where were you located when you were working for the U. S. Environmental Protection Agency, sir?
A. My career with EPA was spent in the Dallas Regional Office, Region VI?
Q. Did there come a time when you became aware of litigation between the United States and Florida Cities?
A. Yes, I think it was in September of last year.
Q. Were you asked to prepare a report regarding EPA's policies and procedures relating to the Clean Water Act relating to this litigation, Mr. Hartung?
A. Yes, I was.
Q. Did you prepare such a report?
A. Yes, I did.
Q. Did you write the report, Mr. Hartung?
A. Yes.
Q. Did you have any assistance in writing the report, Mr. Hartung?
A. No, I did not.
MR. BAISE: Your Honor, I would like to have identified as Florida Cities' Trial Exhibit Number 1, Mr. Hartung's report entitled, report on procedures used in the

implementation of the national pollutants discharge elimination systems authorized by the Federal Clean Water Act dated November 10, 1995, marked as Defendant's Number 1 and I ask this be moved into evidence, Your Honor.
MR. QUINN: Your Honor, I object on the same basis that I stated earlier.
THE COURT: All right. It will be overruled, it will be received.
BY MR. BAISE:
Q. Mr. Hartung, on page 1, you note that you were employed by Roy F. Weston, Incorporated. Is that still correct?
A. No, I'm no longer employed by them.
Q. Why not?
A. I was a manager there at the Fort Worth office. They no longer have a Fort Worth office. I'm self employed now.
Q. Mr. Hartung, would you briefly describe the position you held at EPA over your tenure with that agency?
A. Yes. From 1971 to about 1974, I was a staff environmental engineer in the water quality planning branch in the water division in EPA Region VI.
In 1974, I was promoted to section chief in that branch. In 1977, I was promoted to the position of branch chief of that same water quality planning branch. I held that position until November of 1981, when I became the chief of the NPDES enforcement branch in the water division. I held that position

for thirteen years until my retirement in 1994. And also, I was on detail at one time, in '87 and '88, a few months in the office of the water enforcement permits at NPDES national office in Washington, DC. I also held a position I think for three or four months at a time, two different occasions, as the deputy water division director of EPA, EPA Region VI.
Q. What experiences have you had in working with EPA Region IV, Mr. Hartung?
A. Uh, I have had experience and worked with them on occasions related to issues that involved both the regions, both in meetings and also conference calls, dealing with water quality issues, enforcement matters, and also I would meet with my counterparts in Region IV twice a year, what was called branch national branch chief meetings were headquarters of EPA and all the regions would attend for about a three day session.
I would meet with them including the other regions, about six days a year, and on occasion, I had the occasion to visit or I was invited over on one occasion to put on a seminar when I was in EPA headquarters down in Destin, Florida. I think it was Destin, and had visited the EPA Region IV offices in Atlanta on two occasions to exchange information about the NPDES program.
Q. What experience have you had serving on the national EPA committees, Mr. Hartung?
A. Quite a bit. I served on national committees that came

up which essentially produced and developed water quality, wrote guidelines for wastewater allocations, water management quality, present guidelines and regulations.
I was also involved in a committee that produced the national oversight NPDES program, oversight guidance. I was on a committee that produced the national enforcement management system that is used by all the regions and States for the NPDES program.
I was co-chair of a national committee once to expedite the processing of civil judicial cases. That was with EPA and Department of Justice.
I was chairman of a national committee dealing with storm water, industrial storm water guidelines. I was on a national committee for several years that worked on the definitions of significant non-compliance that would define what a significant violation of a NPDES permit was.
I was on a national committee, I was chairman of a national committee to come up with national sanitary overflow policies for the agency. I was on a committee on municipal water push prevention that came up with a national policy on that.
I was on a committee to come up with guidance and guidelines for implementing the national municipal policy which was a policy directed at getting most major cities in compliance by July 1st of '88.

And I was on the standing committee, I was chair of that committee for sometime, on the Agency's permit compliance system, computerized data system to track permit compliance and contains all the information about NPDES permits for the United States. I was on some others, but I can't think of them right now.

Q. And has EPA recognized any of your efforts in working in the environmental field over the last twenty some odd years?

A. Yes, I think they did.

Q. How have they recognized your efforts?

A. I received numerous awards including some five bronze medals. I think three of them were at the regional level and two at the national level, for such things as working on the committees that I mentioned.

Q. What are bronze medals so the Court will understand the hierarchy, Mr. Hartung?

A. It's the -- I think it's the highest medal that can be awarded an EPA employee at the regional level. And it's for some accomplishment. I was on a committee which I failed to mention a minute ago that worked on the guidelines for the administrative penalty policy back in '87. I got a bronze medal for that.

I also was working on one committee for municipal water push prevention, and I can't remember the other particular ones, but I also received a regional counsel award in about '88

or '89 and received several, I can't remember how many, what was called regional administrator awards.

Q. Mr. Hartung, in your report, you indicate and you already stated that in '77 you became chief of the water quality management branch and later in '81, the head of the newly created enforcement branch and Region VI was the enforcement branch responsible for overseeing NPDES permit programs?

A. Yes, we were responsible for overseeing the enforcement arena of the permit program.

Q. How many permits were within your oversight, Mr. Hartung?

A. Fifty thousand at the time of my retirement. That includes some Gulf of Mexico oil and gas platforms and some general permits for confined animal feeding operations as well as industrial storm water permits as well as normal discharge permits for industries and cities.

Q. Mr. Hartung, there's been a good deal of testimony in this case about water quality standards. What is your experience in working with the Clean Water Act water quality standards?

A. My initial job when I first joined the agency as a staff environmental engineer as well as section chief and branch chief, I worked for about ten years in the area of water quality standards. My job was to assist the State in implementing the many mandates that came out of the Clean Water Act of 1972 and establishment of the interstate water quality

standards was one of those mandates.

THE COURT: Could I stop you just a second, please? I've got a matter I've got to take up, but I can do it at sidebar independent of this case. Mr. Kunz.

MR. BAISE: You wish us to be excused?

THE COURT: No. Ms., Savage step up to sidebar. I don't need if Reporter.

(Brief pause.)

All right.

Pardon me. Go ahead, Mr. Baise.

BY MR. BAISE:

Q. Mr. Hartung, I'm not sure you were finished with your answer. What is your experience in working with the Clean Water act of water quality standards?

A. I think I was. I worked with the State for ten years and from about '72 through '81 in establishing and revising, upgrading those water quality standards.

Q. What is your experience in working with the Clean Water Act's NPDES permit program, Mr. Hartung?

A. As I mentioned, for the first ten years, '72 through about '81, my experience was in working with the State agency to establish effluent limitations that go into those permits and beginning in '81 through '84, my jobs switched to interpreting those permits and enforcement of them.

Q. What is your experience in working on water quality based

effluent limitations, Mr. Hartung?

A. Almost all of my experience in working with the State is to establish permit limits. We're dealing with water quality based effluent limits, those that had to be more stringent than secondary treatment for cities. Most of my experience dealing with municipals of domestic waste discharges?

Q. What is your experience in working with wasteload allocations in NPDES permits, Mr. Hartung?

A. I wrote the first set of guidelines to the State agencies back in the early '70's to perform those wastewater allocations. This included laying out scopes of services, approving contracts and subcontracts, also approving the final product and also furnishing that information in the permit required for inclusion in the NPDES permits in.

Q. What is your experience in working with the wasteload allocation approval process?

A. Essentially, it was my job for the first ten years of my career with EPA to make sure that these wastewater allocations were done, that they were submitted by the Governors of each of the five States in Region VI to our original administrator for our approval.

I recommended, concurred and reviewed all of these wastewater allocations and recommended approval by the regional administrator, and then it was my job also to make sure they were wastewater allocations which is essentially a water

quality base set of effluent limits were available to be written into the next round of NPDES permits.

Q. What is your experience in working with States in the administration of the NPDES permit program, Mr. Hartung?

A. Quite extensive. None of our States in Region VI until about the late '80's were ever approved or authorized to administer the NPDES program, mostly because of legal reasons. So when I was involved with the program, in those States, it was in a direct enforcement mode, direct implementation mode. That is, our region had to directly track and enforce the NPDES permits, the States had their own State permitting system, and we had to coordinate with the States quite extensively on running two parallel programs.

Q. What is your experience in working with major and minor NPDES dischargers, Mr. Hartung?

A. Most of my experience, I would say about eighty percent was with working with the major dischargers. By major, I mean, for cities and for domestic waste discharges, anyone that has a discharge greater or equal to a million gallons per day is classified as a major, the other dischargers are classified as minor. It's a little bit different system for industrials, it's a rating system, but the majors were the ones we concentrated on because the agency had made a decision to.

THE COURT: Now, this is not responsive to any question, Mr. Baise. He's answered your question.

BY MR. BAISE:

Q. Yes.

What is your experience in working with EPA discharge monitoring reports, Mr. Hartung?

A. Our enforcement program used those almost exclusively to determine -- to detect violation or non-compliance. We used them over compliance inspections. In addition, when I was at the national office of EPA, I was responsible for distribution of all the discharge monitoring reports to all the NPDES authorities, both the States and regions, and for having them pre-printed as far as what the conditions were that the permittee had to meet, either permit conditions or administrator order conditions.

Q. What is your experience with EPA in enforcement responses to violations of NPDES permits, Mr. Hartung?

A. I have had experience with all types of EPA enforcement responses. Most of the responses were informal, either phone calls or meetings, warning letters. That was about eighty percent of our responses. And then we had the formal responses and those consisted of administrative orders. I probably concurred on ten thousand of those in the thirteen years I was in that job.

We initiated some fifty civil -- excuse me -- criminal judicial cases and about two hundred civil judicial cases. I also concurred in and issued, actually had the authority to

issue some three hundred and fifty administrative penalty orders, another form of formal enforcement action.

Q. Mr. Hartung, have you written documents for EPA use and guidelines on water quality standards?

A. Yes, I have.

Q. And what were those documents?

A. Primarily -- you did say water quality standards?

Q. Yes, sir.

A. Primarily guidelines to staff and also to the States on how to paraphrasing the requirements of the laws back when we didn't have regulations and also interpreting EPA regulations.

Q. Would any of these guideline documents go into Region IV?

A. I don't know about the water quality standard documents. No, I don't know.

Q. Have you written documents, guidelines on the NPDES program?

A. Yes, I have.

Q. And what were those?

A. I was a co-author as I mentioned to the administrative penalty policy. And guidance -- actually wrote portions of the national policy and that was distributed to all regions and States that were administering the program.

I've co-authored overflow policy on a national committee which was distributed to all the regions. I've co-authored a municipal water push prevention regional policy which was

distributed nationally prior to the issuance of national policy. I have written all types of boiler plate and things related to administrative orders; how to issue administrative orders, how to issue administrative penalty orders, civil judicial packages that went through the system over at the Department of Justice that were distributed to -- I believe were distributed to all the regions, including Region IV.

Q. Have you written documents, uses, guidelines on wasteload allocations?

A. Yes, I believe I mentioned that I was writing some back in the early days, early '70's, and later on.

Q. What experience do you have in training EPA personnel, Mr. Hartung?

A. Quite a bit.

Q. What are those training items that you have implemented at EPA, Mr. Hartung?

A. In my capacity in the national job that I mentioned earlier, I traveled all over the United States and including Region IV, at their invitation, and trained them on use of the permit compliance system. I have given all types of seminars permittees as well as to States.

I remember specifically we had a round of seminars back in 1987 after one of the amendments to the Clean Water Act where we had a thousand permittees there. I have trained the staff internally in the region, I've trained branch chiefs at

national branch chief meetings, I have trained State legislators at their request, things of that nature.

Q. Branch chiefs you just mentioned in your last answer. Did it include branch chiefs in Region IV, Mr. Hartung?

A. Yes, it did.

MR. BAISE: Your Honor, Mr. Hartung's testimony was -- we laid out in his or in the pre-trial statement was -- Mr. Hartung's testimony will address EPA's general practices and procedures, and internal agency guidance regarding permitting and enforcement matters under the Clean Water Act.

His testimony will address the relationship and interactions between the environmental regulatory authorities of non-delegated States in EPA. It'll also address wasteload allocation approvals, TMDL total maximum daily load development and approval permitting requirements and permit writing, enforcement administrative records, enforcement of NPDES permits, and interpretations of EPA's permitting and enforcement guidance documents and memoranda.

Your Honor, on the basis and by virtue of his specialized knowledge and skill, and with regard to his experience on behalf of Florida Cities, we proffer Mr. Hartung as an expert?

MR. QUINN: We object, Your Honor. First, this is not an area in which expert testimony is normally accepted nor required. And second, on the basis of the reasons set forth in

Daubert versus Merrel Pharmaceuticals, 113 Supreme Court, 2786, we object. In addition, we object on the further basis that Mr. Hartung's expert report which has been entered in evidence as Defendant's Exhibit -- Florida Cities' Exhibit Number 1 contains no opinions regarding any of the facilities at issue in this action.

THE COURT: All right. The objection will be overruled. He'll be permitted to testify.

BY MR. BAISE:

Q. Mr. Hartung, what is your understanding of what the objectives are of the Clean Water Act?

A. Their main objective is, one, is to clean up the waters of the United States to a point where they can be usable for propagation of fish or wildlife and allow for recreation in and on the waters by humans. That is often referred to as the "fishable/swimable goals" of the Act.

Q. How are those objectives implemented?

A. There's a couple more.

Q. Excuse me, I'm sorry.

A. The second main objective is to prevent the discharge of toxic and toxic amounts, that is, to treat it below the toxic level, and the third objective was to set up a national wastewater management planning program that would help to achieve the other two objectives.

Q. How are those objectives implemented, Mr. Hartung?

A. Three different ways. The first way that is achieved is to establish water quality standards as a kind of a base of the pyramid upon which everything is based. Then, to establish what permit limits by the States would establish what permit limits were needed to protect those water quality standards and to issue and enforce those permits.

Q. As noted earlier, we heard a great deal about water quality standards. What is a water quality standard?

A. A water quality standard is a goal set by the State, approved by EPA, but it's a State water quality standard for a particular body of water. The State was required under the Clean Water Act to establish State water quality standards to protect its waters, such as there was a standard on each sub-river or subsection of the streams in the State. It consists of two parts; one is a designated use such as suitable for warm water fishing or contact recreation or things of that nature, and then there is a second part of the water quality standard that is to establish the amount of criteria that would protect that particular designated use, such as establishment of dissolved oxygen levels to protect the propagation of fish.

Q. Why is a water quality standard important?

A. It's important because in the Clean Water Act, it is the legal basis for all the permits that are issued which are -- which can cause cities and industries to build facilities that are wastewater treatment facilities that cost millions and

hundreds of millions of dollars.

Q. How is a water quality standard developed?

A. Well, there was a guidance put out and has been put out for years by the National EPA that was required by the Act that EPA publish some sort of guidance to help the States establish water quality standards. I think there were criteria put out by the national Academy of Sciences on three or four different occasions.

The standards are usually done and the designated uses were a lot of times established by what historically the particular stream segment had been used for, let's say for drinking water supply. For instance, they would put out designated use, drinking water supply, and then this criteria I mentioned had been published by EPA, helped established what numbers, let's say, for fishing, for instance, to what levels dissolved oxygen would be necessary to protect a fishery if that was designated.

Q. All right.

A. So, you establish the water quality standards, then would submit them to the EPA for review and approval.

Q. Why does EPA have to submit water quality standards to EPA for it's approval?

A. You mean the State?

Q. Yes.

A. Well, it's statutory requirements.

Q. How are water quality standards implemented by EPA or the States to protect surface waters, Mr. Hartung?
A. The question was how they implemented?
Q. Yes.
A. Generally through establishment of point source controls, that is, issuance of permits dischargers, industrial and municipal or domestic dischargers, and also through non-point source controls.
Q. Is that what is known as the NPDES Permit Program?
A. The one for dischargers, yes.
MR. BAISE: Your Honor, I would like to have marked as Florida Cities Defendant Trial Exhibit Number 7, training manual for NPDES permit writers.
THE COURT: Well now, they're all marked.
MR. BAISE: You have that in front of you, Your Honor?
THE COURT: Yes.
BY MR. BAISE:
Q. Mr. Hartung, I ask you to turn to Defendant's Exhibit or what has been marked for identification as Defendant's Exhibit Number 7. Do you have that in front of you?
A. Yes.
Q. What is this document, Mr. Hartung?
A. It's the training manual for NPDES permit writers published in May of 1987.

Q. What is the purpose of this document, Mr. Hartung?
A. It was used as a guide to the regional EPA people for actually writing a permit and NPDES permit where the authority rested in the -- at the EPA regional level.
Q. Was there a prior training manual for NPDES required, Mr. Hartung?
A. Yes. As I recall, there was something of this nature, only earlier in the process back in the '70's and early '80's.
Q. Have you used this document in your own work at EPA, Mr. Hartung?
A. Yes, I have.
Q. I direct your attention too page 15 of the training manual. Are NPDES permit writers, Mr. Hartung --
MR. QUINN: Your Honor, objection, if the witness is going to be reading from the exhibit. It's not in evidence. It ought to be.
THE COURT: If he's going to be reading from it, certainly.
Is that what --
BY MR. BAISE:
Q. Is this document published by EPA as far as you know?
A. Yes.
Q. This is an EPA document?
A. Yes. It was written by the office of water enforcement permits in Washington.

MR. BAISE: I move this document in evidence, Your Honor.
MR. QUINN: United States objects on two bases. First, this document is published in May of 1987. The only permit for which is at dispute in this case was denied in 1986, therefore, this document postdates and has little or no effect on that permit. On that basis, we object on the basis of relevance. And that's the only basis, sir.
THE COURT: All right.
Mr. Baise.
BY MR. BAISE:
Q. Mr. Hartung, is it your understanding the document includes any guidance or information for permit writers that was in existance before 1987?
A. Yes.
Q. Any reason to believe this is not a trustworthy document, Mr. Hartung?
A. No.
THE COURT: Well, Okay.
The denial of the NPDES permit was in 1986?
MR. QUINN: January, 1996, Your Honor.
THE COURT: All right.
This is a manual that is dated May, 1987?
MR. BAISE: That is correct.
THE COURT: I have no testimony before me, I don't

believe, that indicates this manual was in effect at the time that the NPDES permit was denied.
BY MR. BAISE:
Q. Mr. Hartung, do you have any reason to believe that the policies set forth in this document were not in effect in January of 19 -- or December of 1986?
A. No, I do not.
THE COURT: Well, still, that doesn't get it. If he has any reason to believe that it wasn't, I don't have any affirmative testimony that, you know, what existed prior to May 1987 in terms of the training manual for permit writers. You want to try to --
MR. BAISE: Your Honor, this was a document provided to us by EPA from its files from Ms. Kadey's files as I recall as the permit training manual. That was the manual that EPA officials used and it was an update of prior manuals and they did not produce prior manuals to us and as Mr. Jacobs notes on the side here, he produced everything that was available to them at the time, so this is the best evidence we have of the training manuals for permit writers during the 1980's.
MR. QUINN: I still object on the basis of relevance, Your Honor. What was available after the permit denial is irrelevant for purposes of analyzing whether EPA did anything wrong or whether there should by any mitigation based on the permit.

THE COURT: Let me ask you this. What did you designate in your objections as to the bases for the objections in the pre-trial submission, Mr. Quinn?

MR. QUINN: May I have a moment, sir?

THE COURT: Yes, sir.

MR. QUINN: Thank you.

Your Honor, I have three bases; irrelevant under 402, hearsay under 802 and hearsay within hearsay under 805.

MR. BAISE: Your Honor, all the Defendant can do is request information from the agency, get it produced in discovery as we asked for and did. This is the permit manual they produced to us as representing the permit training manual that the permit writers used from the agency and it was presumably an update.

THE COURT: Do you have -- what do you have that you're asking the Court to allow you to use this document; on the basis that this -- that you were informed that this is the manual that was used to deny the NPDES permit?

MR. BAISE: Yes or its predecessor. Not this particular one because that would have been impossible, the one as Mr. Quinn pointed out dated May, 1987. But as Mr. Hartung who has already given his experience with regard to dealing with such matters has reviewed this document, it is listed in the documents, he reviewed and he indicated to us that this basically or entirely was the document or type of document that

EPA used for permit writers training in the 1980s.

THE COURT: Well --

MR. BAISE: In fact, may I pose a question to Mr. Hartung?

THE COURT: Yes, sir.

BY MR. BAISE:

Q. Mr. Hartung, you have reviewed this training manual for NPDES permit writers dated May, 1987?

A. Yes, sir.

Q. Have you reviewed prior training manuals for NPDES permit writers?

A. Yes.

Q. In your review of this 1987 document, did you see any changes from any prior manual that you had reviewed relating to training manuals for NPDES permit writers?

A. I didn't note any differences, no.

THE COURT: I'll overrule the objection and I'll receive it.

BY MR. BAISE:

Q. Mr. Hartung, I direct your attention to page 15 of the document in question, the NPDES permit writer' guide. And I direct your attention to page 15, general consideration contents of a permit. Would you summarize your understanding of that particular paragraph, Mr. Hartung?

A. It talks about the particular sections, major section of

a draft permit.

Q. And what are those particular sections that should be in a draft permit, Mr. Hartung?

A. Section concerning effluent limitation of the permit, section about monitoring requirements, other standard conditions and special conditions if there were such things.

Q. So a NPDES permit must have included in them effluent limitations, Mr. Hartung, included in everyone of them?

A. Yes.

Q. I direct your attention to page 16 of the training manual for NPDES permit writers. I direct your attention to the paragraph entitled overview. Would you please summarize your understanding of that particular paragraph, Mr. Hartung?

A. It talks about three methods for determining effluent limitations and they're through effluent limitation guidelines, the establishment of effluent limitations by water quality considerations and another one called best professional judgment.

Q. What is an effluent limitation guideline, Mr. Hartung?

A. Effluent limitation guidelines is what the name implies. These are guidelines that were produced out of our Washington office of EPA that told the permit writer how to put together a technology based permit, that is, this is a set of information about how to write a permit without regard to the receiving waters' water quality.

Q. What is a technology based permit?

A. It's a permit that is written based on a particular -- you apply a certain technology, you get a particular predictable result as far as effluent. As an example, secondary treatment is a technology based set of permit limits.

Q. So all NPDES permits would have to have a technology based limit included in the NPDES permit?

A. As a minimum, the law requires the technology base is the minimum and then processed in was to test to see if the application of technology based permits was enough to protect the water quality standards in a particular water body and then if that was not the case, then water quality considerations came in to bear and the effluent limitations had to be tightened down from the technology based permit.

Q. That is what is known as quality water limited NPDES permit.

A. Yes, the latter that I talked about, yes.

Q. What is the best professional judgment permit, Mr. Hartung?

A. Well, that was used a lot in the early days, back in the early '70's when in lieu of an effluent limitation guideline, the permit writer was left to use his best professional judgment.

Q. So, if you have a technology based permit or a water quality limited permit, you would not be able to write a best

professional judgment permit, Mr. Hartung?
A. That is correct, you would not need to.
Q. I direct your attention to page 28 of this document, Mr. Hartung, section entitled water quality considerations overview. What is your understanding of the purpose of this paragraph, Mr. Hartung?
A. Just a second. (Brief Pause.)
It says that water quality based limitations are necessary to be used in a permit when it's necessary to protect the receiving waters. So water quality standard of receiving waters --
MR. QUINN: Objection, move to strike the answer as non-responsive to the question that was asked.
THE COURT: What was the question that was asked?
MR. QUINN: What was the purpose of the --
MR. BAISE: Your understanding of the purpose of this paragraph, Mr. Hartung.
THE COURT: I'll grant the motion, it's stricken.
What was the -- what was your understanding of the purpose?
MR. BAISE: Yes.
THE WITNESS: The purpose was to instruct the permit writer that in some cases water quality based limitations were required to protect the water quality standards.
BY MR. BAISE;

Q. I direct your attention to page 31 of this training manual, Mr. Hartung, to the paragraph, determination of water quality base limits. What is your understanding of the purpose of this paragraph as it relates to the permit writer, Mr. Hartung?
A. It was to instruct, again, to instruct the permit writer on how to determine water quality based limits.
Q. I direct your attention to the top of page 32, Mr. Hartung, in terms of the water quality based limits, and what is your understanding of the purpose of that paragraph, beginning at the top of page 32?
A. It was to instruct the permit writer on how the process works as far as the establishment of maximum daily loads and how they fit in the permit writing process.
Q. Does it also discuss allocating waste loads, Mr. Hartung?
A. Yes, it does.
Q. What is the purpose of a wasteload?
A. Well, the State has the responsibility of determining how much waste or wasteload a particular body of water can take without violating the State's standards.
So in some cases where the application of the technology based permit limits is not enough to do that, then there has to be an allocation, if you will, a cutback to each of the dischargers and that is what they mean by wasteload allocation. It's actually an allocation, if you want to think of it, of the

cutback or the amount necessary to be taken out of each of the dischargers wasteloads that they're discharging in the stream in order for it to meet the water quality standards.
Q. Mr. Hartung, I direct your attention to page 39 of this training manual to the section captioned, wasteload allocation. You find that, Mr. Hartung?
A. Yes, I have it.
Q. And I direct your attention to the second paragraph or the last paragraph -- second paragraph under wasteload allocation, but the last paragraph on the page. Would you read the first two sentences, Mr. Hartung?
A. A regulatory agency's first step in establishing a wasteload allocation scheme for a water segment is to determine the total maximum daily load, TMDL, of discharges a segment can receive without exceeding the applicable water quality standard. The TMDL established by the State must be submitted to EPA for its approval before incorporated into the State's water quality management plan.
Q. Does this comport with your understanding of EPA's policies and procedures, Mr. Hartung?
A. Yes.
Q. I direct you to the top of page 40. Would you read the first two sentences of the first paragraph at the top of page ;40 in the permit writer's manual.
A. Excuse me, did you say the first two sentences?

Q. Yes.
A. Once the State has determined the amount of discharge that a segment can assimilate without violating water quality standards, that amount less the amount of capacity reserved by the State if any is allocated among dischargers, the States are responsible for establishment and implementation allowable schemes?
Q. Would you like to go to the board there, Mr. Hartung, and draw out the wasteload allocation process and approval process, please?
A. Yes.
Q. And mark that for identification Defendant Florida Cities' 207.
THE COURT: Well, you can if you want it marked, you can put a label up there.
MR. BAISE: Yes, sir, we'll do that during the break, Your Honor.
THE WITNESS: it's going to be a very simply applied, overly simplified explanation here, but let's say for instance this is a stream segment and the water quality standard is the designated use for warm water fisheries. Not a very good looking fish. And the criteria to support the use, the second part of the water quality standard let's say was five parts per million dissolved oxygen, not allowed any discharge or any other thing going, oxygen-demanding material going into that

segment would allow the water quality standard to go below five. The total maximum daily load is comprised of a load allocation plus a wasteload allocation and let's say we had three cities discharging into this, say city A, city B and city C, less some type of non-point source, source of waste or oxygen-demanding material, the load allocation is the sum of the background material, amount of wasteload that comes in upstream, background loading, but any non-point source loading coming off farms or fields, plus a growth reserve. The statement, when you talk about non-point source, you're just talking about non-specified source of discharge.

BY MR. BAISE:

Q. Describe non-point force for His Honor, Mr. Hartung. Is that the term of art under the Clean Water Act?

A. Examples of non-point source would be storm water that contained street runoff. You have certain metals and all that accumulates on the streets, that would go in a culvert, storm water culvert. Another source of non-point sources would be off a field, let's say an insecticide sprayed on a field might wash off when it rained. Non-point source generally only get into the stream when it's raining. It's runoff, street runoff, any type of water that reaches the stream by sheet flow or not coming out of a pipe, let's say.

And we talk about dischargers, normally talk about coming out of a pipe, either a pipe coming out of an industry or pipe

coming out of a waste treatment plant. But this growth reserve is for really reserved for someone else that the State might want to allow to discharge into a stream.

A wasteload allocation, excuse me just a second, is the sum --

THE COURT: Just a moment.

(Brief pause.)

All right, go ahead.

THE WITNESS: The wasteload allocation would be the sum of the point dischargers, that is the A, B and C. Let's say the total maximum daily load for this segment had been determined by the State to be a hundred and thirty thousand pounds per day of BOD or oxygen-demanding material. And let's say the State had reserved for the load allocation of thirty thousand pounds per day. That means that the sum of the point dischargers cannot exceed thirty from a hundred and thirty cannot exceed a hundred thousand pounds per day of BOD.

The first test that is applied for these dischargers when analyzing what you need if you needed a wastewater allocation is to apply technology based permit limits. That is secondary treatment for these three cities. So let's say apply secondary treatment A, B and C, and you get secondary equals, let's say A had sixty thousand pounds per day, B consisted of thirty thousand pounds per day and C another thirty thousand. K stands for thirty.

THE COURT: Stands for thirty?

THE WITNESS: Yeah, in engineer jargon. You can say sixty K, that means sixty thousand. Secondary equals a hundred and twenty thousand pounds per day. Well, as you can see, a hundred and twenty thousand pounds per day exceeds the sum of what is allowed for wasteload allocation or for the dischargers. It exceeds it a hundred -- it's a hundred thousand compared to a hundred and twenty thousand, so that tells you that you must go beyond the technology based permit limits, and the wasteload allocation must equal no more than a hundred thousand pounds per day.

So what you have to do is go in there and say water quality based limits must equal -- the wasteload allocation must not exceed a hundred thousand pounds per day, so you add up, you cutback A, let's say, to fifty thousand pounds, B, twenty-five thousand pounds, and C, to twenty-five thousand pounds. The reason of this previous example of secondary treatment, this was sixty, thirty, thirty, so fifty percent of the available is fifty thousand pounds. This one would be twenty-five percent, this one would be twenty-five percent. Comes out to a hundred thousand pounds per day, so the two match and then you go ahead and apply the water quality based limits and issue your permits. The permits would be issued for these figures here, fifty thousand, not to exceed fifty thousand pounds per day, that comes out to be a certain

concentration, you have flow and concentration and you had loading and the most important is the pounds per day.

BY MR. BAISE:

Q. Who recommends those wasteload calculations in the first instance, Mr. Hartung?

A. I didn't understand the question.

Q. Who generates those wasteload allocations in the first instance that you have just described here, Mr. Hartung?

A. The State is required to generate those by the law. Wasteload allocations is just another way of describing water quality limited effluent limitation permits.

Q. Based on your experience, what is EPA's policy after receiving a State generated wasteload allocation and approving that wasteload allocation before it incorporates the wasteload allocation into an NPDES permit?

A. What is their policy?

Q. Yes, what is the policy, what is EPA's policy with regard to approving wasteload allocations before they go into an NPDES permit?

A. It's required by the statute as well as policy procedures, regulations that the EPA approve or disapprove the wasteload allocations within thirty days of receipt.

MR. QUINN: Objection, Your Honor, move to strike. That calls for legal conclusion. The witnesses has not been qualified as an expert in legal matters.

MR. BAISE: I didn't ask him a legal question. I asked him what EPA's policy was regarding --

THE COURT: I'll overrule the objection except that I'm concerned about the period of time we're talking about here. If you want to limit your question to when the policy he's talking about was applicable, I'll overrule the objection.

BY MR. BAISE:

Q. Mr. Hartung, in 1986, was it EPA's policy to require the approval of wasteload allocations before the wasteload allocation was incorporated into a NPDES permit?

A. Yes, it was. The law established that in 1972 as a requirement.

Q. Was it also EPA's policy in 1981 to require the approval of wasteload allocations before incorporating such wasteload allocation into a NPDES permit?

A. Yes.

Q. In your opinion, Mr. Hartung, why is it important to have an approval process where wasteload allocation --

MR. QUINN: Objection, that's not within Mr. Hartung's expert report.

MR. BAISE: It is within his expert report in terms of his describing policies and procedures relating to approvals of wasteload allocations.

MR. QUINN: Your Honor, if I may, the specific question asked is for his opinion on the importance of an issue

that is not within his expert report and I object to eliciting a response on that basis.

THE COURT: I'll overrule the objection.

THE WITNESS:: In my opinion, it's important that this -- excuse me, could you repeat the question?

BY MR. BAISE:

Q. Yes. In your opinion, why is it important to have an approval process for the wasteload allocation you have just described up here this afternoon?

A. It's important because in some States there are several different agencies that are generating these wasteload allocations, and in order to have an orderly process to make sure it was the official submission by the State designated agency that was designated by EPA to submit, and lastly, it's important because those do, once they're approved, are used in issuance of permits that generate wastewater treatment plants, that cost millions and hundreds of millions of dollars.

Q. Mr. Hartung, with respect to the questions I have just been asking you with respect to this manual, was this the same guidance that was given to permit writers before January of 1987?

A. Yes.

Q. This was the same guidance that was in effect when the permit was denied in December of 1986?

MR. QUINN: Objection, Your Honor, this is assuming a

fact not in evidence and asking this witness to testify about something which was not in his report. We've already established -- well, that's it, Your Honor.

THE COURT: Overruled.

THE WITNESS: Would you restate the question, please?

BY MR. BAISE:

Q. Is this the same guidance to NPDES permit writers that was in existance in December of 1986 when the permit was denied?

A. I don't know anything about permits being denied by --

THE COURT: All right, then just eliminate that part of question. How about the --

THE WITNESS: it was the guidance that was in effect at that time, yes. This guidance or something like this guidance which contained all the basic components which was based on the laws and regulations that was passed back in the '70's.

MR. BAISE: Thank you, Mr. Hartung.

Your Honor, I would like to have marked for identification Defendant's Trial Exhibit Number 4, EPA's review and approval.

THE COURT: All of these are premarked, correct?

MR. BAISE: Correct. Just my standard line, Your Honor.

THE COURT: Which one?

BY MR. BAISE:

Q. FCWC Trial Exhibit Number four, do you have it in front of you?

A. Yes.

Q. Are you familiar with this document, Mr. Hartung?

A. Yes.

Q. Would you describe this document for the record, Mr. Hartung?

A. It's a memorandum from EPA, Washington, D.C., from the monitoring and data support division, dated March 25, 1986, which lays out Epa's review and approval procedures for State submitted total maximum daily loads and wasteload allocations.

Q. Did you use this document in your work, Mr. Hartung?

A. I used previous documents like this. By this time in 1986, I was in the enforcement program.

MR. BAISE: Your Honor, I'd like to move in.

This is an EPA document, Mr. Hartung.

THE WITNESS: Yes.

BY MR. BAISE:

Q. Published by EPA?

A. Yes. We were briefed on it. At the time, there was a national meeting, I think it was in San Francisco, wherein permits, all the national permit branch chiefs from the region as well as enforcement branch chiefs and water quality planning branch chiefs were briefed about this document.

Q. Any reason to doubt the trustworthiness of this document, Mr. Hartung?
A. None.
MR. BAISE: I would move this into evidence, Your Honor.
MR. QUINN: Objection, Your Honor, on two bases. First is relevance as we stated in our papers before the Court. Second, this witness has no personal knowledge of anything within this document. He said he's seen documents like it. For those two bases, we object to the introduction of this document.
MR. BAISE: He said he was briefed, too.
THE COURT: Objection be overruled. What did you say, Mr. Baise, what did you --
MR. BAISE: He was briefed on the document. His testimony --
THE COURT: Were you talking to me?
MR. BAISE: Talking to counsel.
THE COURT: Don't address your remarks to counsel.
MR. BAISE: I know.
THE COURT: I thought that what you said.
MR. BAISE: Yes.
THE WITNESS: I actually had a copy of the document, read the document at the time it came out.
MR. BAISE: And I move this document be entered into

evidence, Your Honor?
THE COURT: Already received it.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. Mr. Hartung, I direct your attention to the fourth page of this document, dated March 25, 1986. Are you familiar with this memorandum dated March 25, 1986, Mr. Hartung?
A. Yes.
Q. Would you please summarize the purpose of this particular memorandum, Mr. Hartung?
A. I believe it was to remind the States as well as EPA regions about the procedures that had been in existence for years and it provided some additional ways to expedite procedures for getting total maximum daily loads and wasteload allocations approved by the regions because there was a national push to get a lot of people under compliance schedules and the wasteload allocation process was slowing things down, if you will.
Q. I direct your attention to the bottom paragraph of page 1, Mr. Hartung, under the subsection entitled purpose.
A. We were on page 4, is that right?
Q. Yes. I'm taking you back to page 1.
A. Can I have page 1?
Q. Last paragraph, first sentence, would you read that into the record, Mr. Hartung?

A. This guidance describes a step by step procedure for the review of State submitted total maximum daily loads and wasteload allocations that are required by the water quality management regulation and in Clean Water Act CWA including a list of questions and answers to focus on the key issues.
THE COURT: Where are you reading from?
MR. BAISE: Page -- this was actually marked page 1, Your Honor. Where the confusion comes, the first three pages are unnumbered. I apologize --
THE COURT: Okay.
MR. BAISE: -- in not giving you the direction on that, that's why the witness was confused.
Page 1, last paragraph, first sentence in that last paragraph on page 1 marked 1. Do you need him to go through it again.
THE COURT: No, no, I see it.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. Does this correctly reflect what you believe this document discusses, Mr. Hartung?
A. Yes, it does.
Q. Mr. Hartung, I direct your attention now to page 2 which has the number 2 on it. Page is entitled overview of the process.
MR. BAISE: You see that, Your Honor?

THE COURT: Yes.
BY MR. BAISE:
Q. Paragraph B, Mr. Hartung, I direct your attention towards, and would you read the first two sentences in that paragraph for the record?
A. As a foundation for all total maximum daily loads slash wasteload allocations prepared by the State, EPA and the State should agree to the process that the States will used to develop the wasteload allocation and prepare a written agreement which describes these procedures.
Such an agreement promotes consistency between projects and between States, i.e., how background data is applied, which models are to be used, how total maximum daily loads are determined, how loads will be allocated, et cetera. See appendix C for sample technical agreements.
Q. Is that your understanding as well, Mr. Hartung?
A. My understanding of what?
Q. Of this paragraph. Does this paragraph correctly reflect your understanding of agreements that have to be prepared between the State and the regions?
A. Yes, sir, it had been in existence since 1972.
Q. Mr. Hartung, I direct your attention to page 3 of the document entitled EPA review and approval procedure for State submitted TMDL's and WLA's. And I direct your attention to the bottom of page 3, EPA reviews the State's TMDL's, WLA's.

A. Okay, I have it.
Q. Would you read the first two sentences from that paragraph, Mr. Hartung?
A. To meet the requirements of section 303(d) of the Clean Water Act and the water quality management regulation, EPA must review and approve all total maximum daily loads. EPA may taylor its review to what is reasonable and appropriate, that is, where a State is clearly described as process in its CPP, that's continuing planning process. EPA may conduct an indepth review of a sample of the State's total maximum daily loads slash wasteload allocations to determine how well the State is implementing its approval process and give a less detailed review of the remaining total maximum daily loads and wasteload allocations.
Q. Do those two sentences reflect your understanding of this particular process, Mr. Hartung?
A. Yes. This was the part that was added, if you will, as far as policy in making this document. The rest of this document was just a reiteration of requirements that had been around forever.
Q. Mr. Hartung, I direct your attention to page 4, subparagraph H, subsection, EPA approves or disapproves State's submission. Would you read the first full paragraph, Mr. Hartung?
A. Yes. EPA either approves or disapproves the State's TMDL

slash WLA within thirty days after submission by the State. And approved TMDL slash WLA is certified, quote, unquote, by the EPA as having been developed in accordance with section 303(d) of the Clean Water Act and a letter of such approval is transmitted to the State.
Q. Does this reflect your understanding of what is required by EPA's policies and procedures relating to wasteload allocation, Mr. Hartung?
A. Yes, and also it's a statutory requirement.
Q. Mr. Hartung, would you read the first sentence of the second paragraph under H on page 4?
A. First sentence?
Q. First sentence only.
A. If EPA approves the State's total maximum daily load slash wastewater -- if EPA disapproves the Stat's TMDL slash WLA, the State -- excuse me, the EPA regional office not later than thirty days after the date of disapproval must develop the total maximum daily load slash wasteload allocation in accordance with section 303(d) and issue a public notice requesting comment on the revision.
Q. Does this paragraph reflect your understanding of EPA's policies and procedures in terms of disapproving State TMDL as wasteload allocations, Mr. Hartung?
A. Yes.
Q. Mr. Hartung, I direct your attention finally to page 6 of

this document. Are you on page 6, Mr. Hartung?
A. Yes. Sorry.
Q. Do you see where it indicates question and answer and then a second question and answer, second Q, where it begins the sentence after a TMDL?
A. Yes, sir.
Q. Would you read both that question and answer into the record, Mr. Hartung?
A. Question, after a TMDL slash WLA is submitted to EPA, what is the time period in which a decision for approval or disapproval is to be made. Answer, the regional administrator shall not later than thirty days after date of submission approve or disapprove the total maximum daily load slash wasteload allocation. This length --
Q. Thank you.
I'm sorry, I told you to read the entire answer. I thought I mentioned only one sentence. Please, go ahead, my fault.
A. This length of time also applies to EPA's review of the listing of the priority ranked segments still requiring total maximum daily loads slash wasteload allocations.
Q. And does this reflect your understanding of EPA's policies and procedures with respect to the approving wasteload allocation examples?
A. Yes, it does.

Q. Mr. Hartung, you testified earlier from this document that agreements were to be developed between the States and EPA on the approval of wasteload allocations?
A. Yes, sir, they were generally called continuing planning processes.
MR. BAISE: Your Honor, I'd like to identify the next exhibit as Florida Cities' Trial Exhibit Number 2.
BY MR. BAISE;
Q. Would you please turn to 2, Mr. Hartung?
A. I have it.
Q. Are you familiar with this document, Mr. Hartung?
A. Yes, I'm familiar with documents like it, plus I believe John Marlar briefed us at a national branch chief meeting when this first came out.
Q. Who is John Marlar, Mr. Hartung?
A. John Marlar was my counterpart as a branch chief in Region IV for years. He was chief of the water quality branch, And then also became like I did, the chief for the enforcement and permitting branch in 1981, so --
Q. Do you know Mr. Charles Jeeter who is addressed at the top of this letter?
A. Yes, I met him.
Q. Who is Mr. Jeeter?
A. He was the regional administrator of EPA Region IV at the time this document was issued in July, 1982.

MR. BAISE: Your Honor, I move this into evidence.

MR. QUINN: We object, Your Honor. As the basis of that, it's irrelevant, also improper, insufficient foundation has been laid and the cover memo is hearsay and was listed as one of our objections as well, and no foundation to that has been satisfied, sir.

THE COURT: Mr. Baise?

MR. BAISE: Your Honor, this again is a document provided to us in discovery by EPA as representing the agreement between Region IV and the State of Florida with regard to procedures relating to the approval or disapproval of wasteload allocations.

Initially, the agency was unable to produce the signed document between the State of Florida and EPA and in the second day or third day of depositions, they brought this to us as representing the official document between the two entities, so it's an official document from the agency. The two cover letters discuss the document. I can certainly go in and ask Mr. Hartung more foundation questions with regard to the agreement itself in order to authenticate it. However, I thought in light of fact the Government had produced this and the fact it is signed by a regional administrator, former regional administrator at EPA and also signed by the secretary of environment for the State of Florida, it's on U. S. Environmental Protection Agency letterhead, it's on State of

Florida letterhead, if that would be sufficient to make an official document.

THE COURT: I'll overrule the objection, be received.

BY MR. BAISE:

Q. Mr. Hartung, I believe you testified that you're familiar with such documents. How are you familiar with such documents as attached to the letter of July 9, 1982?

A. I was personally involved in developing the documents like this for each of the five States in Region VI; Texas, Oklahoma, Arkansas, Louisiana and New Mexico.

Q. Mr. Hartung, I would direct your attention and these pages are not numbered, Your Honor, so, the first two pages are the letter, the third page is the title page, fourth and fifth pages are signature pages, the page identified as general, Roman Numeral I, and it is unnumbered, but obviously is one because the page behind it is two.

MR. BAISE; Did you find it?

THE COURT: Yes.

BY MR. BAISE:

Q. Now, Mr. Hartung, I direct your attention to Roman I, sub

A. Do you see that, sir?

A. Yes, sir.

Q. Would you review the second paragraph and summarize your understanding of that particular paragraph?

A. If you'll give me a moment.

Q. Yes, sir.

A. It goes into the things that that previous document we discussed reiterated.

Q. Would you identify the previous document for the record?

A. Previous document was the headquarters document, I think it was dated 1986, which proscribed the procedures for approving the total maximum daily loads and wasteload allocations. And this paragraph spells out that, again, the mandates and requirements by the States under the Clean Water Act and section 303 of that Act, for developing wasteload allocations that protect the States' water quality standards. And also, that the EPA must approve or disapprove them.

The last part of the paragraph goes into the fact that this procedure has been unnecessarily time consuming, I think is the term used here, and needs to be sped up or expedited or changed to expedite the process.

Q. Mr. Hartung, was this an agreement executed between the State of Florida and EPA Region IV as far as you can tell from your review of the document?

MR. QUINN: Totally beyond the scope of this witness' knowledge.

MR. BAISE: It is before the Court, Your Honor, two letters, which again, as I pointed out, are on what appear to be official stationary. Number two was presented to us in discovery by EPA.

THE COURT: Well, it's in evidence. But, I don't know that this witness knows the answer to your question.

Sustained.

MR. BAISE: May I proceed?

THE COURT: Sustained. Yes.

BY MR. BAISE:

Q. Mr. Hartung, I direct your attention to page 9 of the document entitled State EPA Region IV agreement on the development of wasteload allocation and wasteload water permit limitations.

A. Roman Numeral IV?

Q. Roman numeral IV, page 9. Would you read that paragraph into the record Mr. Hartung?

A. Which paragraph?

Q. First paragraph, page 9, under Roman numeral IV entitled approval of wasteload allocations?

A. The EPA's required by 303(d) of the Clean Water Act to review and approve slash disapprove the allowable wasteloads established by the States within thirty days after submission. And additional thirty days is allowed to make necessary revisions to disapprove the identifications and loads. All final approvals of wasteload allocations are to be incorporated by the States into their water quality management plans through the continuing planning process required under 303(e) of the Act.

Q. And further, Mr. Hartung, I would direct your attention to page 10 of this document, the next page under Roman Numeral V, entitled incorporation of wasteload allocations into permit limitation. You see paragraph A on page 10, Mr. Hartung?

A. Yes.

Q. Would you read that into the record, please?

A. General. The wasteload allocations developed in accordance with this procedure and subsequently approved by EPA are to be directly incorporated into permit limitations unless there are overriding environmental concerns. The current NPDES permit will remain in effect until its specified expiration date. At that time, the approved allocation would be the basis for the permit limitations.

Q. Do those paragraphs you have just read reflect your understanding of EPA's policies and procedures relating to the approval or disapproval of wasteload allocations?

A. Yes, they do.

Q. Thank you.

MR. BAISE: You want to take a break, Your Honor?

THE COURT: Sir?

MR. BAISE: May we take a break?

THE COURT: Yes, we've been here for almost two hours, and we'll take fifteen.

(Thereupon, a brief recess was taken.)

THE COURT: Mr. Baise.

MR. BAISE: Thank you, Your Honor.

BY MR. BAISE:

Q. Now, Mr. Hartung, you have testified earlier about permit programs being run by both EPA and the States. What is a non-delegated State under the Clean Water Act?

A. What is it or —

Q. What is a non-delegated State under the Clean Water Act?

A. Well, the original intent of the Clean Water Act was to have each the States assume the administration of the NPDES Program and the State and the EPA was envisioned as kind of — am I being responsive?

Q. Yes.

A. — as an oversight — overseeing agency, as well as an enforcement backup, but as it turned out, as the State — I think there are still 10 States that never assumed the program, usually for legal reasons, so the law was written in terms of, well, the State would be running the program.

Q. Could you identify the program, please?

A. The program being the NPDES Permits and Enforcement Program.

Q. In such situations does both the State and EPA issue permits to a discharger?

A. Yes, they do.

Q. Why is that?

A. Well, the States have statutes and requirements that they have to abide by and the EPA Regional Office, then, in that situation, would have to carry out the mandates of the Clean Water Act or the Federal requirements.

In my region, it was our job to run the NPDES Program in parallel with five States that ran State programs under State Laws and Regulations.

Q. Do those permits have to assure that water — that water quality stands set for the State are maintained?

A. When you say those permits, which permits?

Q. The NPDES Permits.

A. Yes, they do.

Q. Do the State permits have to assure water quality standards are maintained?

A. Yes, they do.

Q. What is your understanding of whether EPA must give deference to a State-issued water discharge permit?

A. It's my understanding that —

THE COURT: Just a moment.

MR. QUINN: Objection that this is beyond the scope of the expert report, as well, sir.

MR. BAISE: In his expert report he indicates he's going to testify with regard to policies and procedures relating to delegated and non-delegated States, Your Honor.

THE COURT: I'll overrule the objection.

MR. BAISE: You may continue.

THE WITNESS: In my opinion, unless the results have been born out by some papers and policies written by EPA Headquarters, that unless there's some kind of clear error committed by the State in interpreting its water quality standards and issuing its own permit, then the EPA has to give deference to the State permit.

Q. What is your opinion, Mr. Hartung, as to whether EPA could require a no discharge effluent limit in an NPDES permit if such a limit was not in the State Permit for the same facility?

MR. QUINN: Objection. That opinion is not within the report, sir.

MR. BAISE: I would disagree, Your Honor, that this witness can testify — he is an expert, and it talks about the fact that he's going to discuss the policies and procedures with regard to delegated versus non-delegated States and whether those permits can require or have in them certain limitations.

MR. QUINN: That's not the basis of my objection. The basis of my objection is Rule 26, which requires the statement of all opinions to be expressed by the witness, and it is not — this is an opinion and is not in the report, and for that reason I object.

THE COURT: I'll sustain the objection to that question.

BY MR. BAISE:

Q. Mr. Hartung, what is your understanding as to whether or not EPA could require a no discharge effluent limit in an NPDES Permit and if such a limit is not in the State Permit for the same facility?

MR. QUINN: Objection Your Honor, same grounds.

THE COURT: Sustained.

BY MR. BAISE:

Q. Mr. Hartung, would you describe the State's role in administering the NPDES Program?

A. For a delegated State or for both?

Q. For both.

A. For non-delegated State, they still have a major role in the States establish the water quality standards, they generate the effluent limitations based on those standards, and they, also, are required to certify every EPA-issued NPDES Permit as meeting their water quality standards before that permit can be issued.

In the case where they administer the NPDES Program, they take over the permit issuance and enforcement of that permit. EPA, then, has an overview role to make sure that they are following the procedures that's laid out in the laws and regulations, and that the EPA is the

authority — excuse me — to override a State's enforcement action and take EPA action on a violation that they deem fit.

Q. Based on your experience and EPA's Policies and Procedures, does EPA challenge State Permits if they do not assure that water quality standards are being met?

A. They can, yes, and do.

Q. Do EPA-issued NPDES Permits contain wasteload allocations, Mr. Hartung?

A. Yes, they contain water quality limited effluent limitations which are based upon State wasteload allocation studies, yes.

Q. Do those wasteload allocations that are included in those EPA-issued NPDES Permits, do they need to be approved by EPA?

A. Do they need to be approved?

Q. Yes, or must be approved?

A. Yes, they must. Yes.

Q. And why?

A. Because, again, it is required by the Clean Water Act and by the Regulations from that Act.

Q. So it's your testimony that EPA cannot ignore the approval process of wasteload allocations and incorporate the wasteload allocations in the NPDES permits?

MR. QUINN: Objection.

THE COURT: This is your witness. Don't lead him like that.

MR. BAISE: I'm sorry, Your Honor, I didn't hear you.

THE COURT: Don't lead the witness.

MR. BAISE: Thank you.

THE COURT: I realize that a certain amount of that is not offensive and we don't have a Jury here, but that's a little much.

Go ahead.

BY MR. BAISE:

Q. Mr. Hartung, in your expert report you have discussed major and minor dischargers.

Is there any hierarchy of enforcement with respect to major and minor dischargers under EPA's Policies and Procedures?

A. Yes, there is.

Q. What is it?

A. The first priority, as I explained earlier, it's a research concern with EPA, is the issuance and enforcement tracking and enforcement of major industrial permits, major municipal permits, municipal, including domestic waste permit, and then major Federal facilities, that is, like air bases and things of that nature.

The second priority would be the issuance of

permits and enforcement of those permits for minor municipals, minor industrials and Federal facilities.

Probably a third hierarchy would be the issuance and enforcement of what's called general permits that are issued for an entire State or entire region, let's say a County. Those would include some that we had in our region that were offshore oil and gas, permits for the Gulf of Mexico, general permits, general permits for industrial storm water and for confined animal feeding operations.

And then there's a fourth category, which is whatever is left, including domestic — private domestics.

Q. And in your experience with EPA, are all minor dischargers permitted through the NPDES Permit System?

A. There was an attempt early on to permit all of them, but to my knowledge, some of them were never permitted, still have never been permitted in our region, and our region being Region 6.

The problem was that it was an overwhelming job to do that, so the agency generally relied on if there was a parallel program on the State's issuing permits to the minors — State Permits to the minors.

Q. And in your experience, Mr. Hartung, have you ever seen a case where an NPDES Permit was denied to one of your facilities treating human waste and the plant was meeting water quality standards and effluent limitations in the

NPDES Permit?

A. No. I've never — no.

Q. Is your answer no?

A. My answer is no.

Q. And that's based on the review of 50,000 permits, Mr. Hartung?

A. It's based on my experience —

MR. QUINN: Objection.

THE COURT: You can ask him what it's based on.

BY MR. BAISE:

Q. What is that based on, Mr. Hartung?

A. Based on my experience in 23 years and working in this area and EPA Region 6, primarily.

MR. BAISE: That finishes my direct questioning of Mr. Hartung, Your Honor.

THE COURT: Mr. Bird, do you have any questions?

MR. BIRD: Just briefly, Your Honor.

EXAMINATION

BY MR. BIRD:

Q. Mr. Hartung, you testified that you oversaw enforcement in Region 6 for a period of time?

A. For 13 years, yes.

Q. And I believe, if I recall your testimony, you indicated that you oversaw some 50 criminal cases, 200 civil cases, 350 administrative penalty orders and some number of

administrative orders.
A. Around 10,000 administrative orders, yes.
Q. In any of those instances, did Region 6 take enforcement action against the parent corporation of the discharger?
A. No, we did not.
MR. BIRD: Thank you.
No more questions, Your Honor.
THE COURT: Mr. Quinn.

EXAMINATION

BY MR. QUINN:
Q. Good afternoon, Mr. Bartung.
A. Good afternoon.
Q. Sir, in listing the priorities of the Clean Water Act, you missed one, didn't you? Didn't you?
A. I said the three major ones. I thought were the three major ones, yes.
Q. Did you miss the fact that it is an objective of the Clean Water Act — the first objective of the Clean Water Act is that it is the national goal that the discharge of pollutants into navigable waters be eliminated by 1985? Wasn't that a goal of the Clean Water Act, sir?
A. Yes, it was one of the original goals and a commission was set up by the Act to review that goal and that commission met — I don't know —

THE COURT: Well, you've answered his question.
MR. QUINN: Thank you, Your Honor.
BY MR. QUINN:
Q. Sir, in the Permit Writers Guide, which is Exhibit — Florida Cities Exhibit Number 7. I believe you have it in front of you.
A. Yes.
Q. Sir, if you turn to the third page of the Exhibit, please, and I want to ask a question and refer to something, okay? Tell me when you get there.
A. I have it. Page 3?
Q. Yes, sir.
Sir, this training manual is just a guidance, isn't it?
A. That's what it says in front of the manual, that's correct.
Q. It says, in fact, doesn't it say that the material in this manual is for instructional purposes only, it was developed to illustrate the applications of the technical principles of the NPDES Regulations and does not necessarily represent official policy of the USEPA?
A. That's what it says.
Q. Is that, in fact, what it is?
A. It contains a lot of official policy when it refers to the laws and regulations, of course.

Q. But the document itself does not represent the official policy of the USEPA; does it?
A. That's what it says.
Q. Sir, you're not here on behalf of the United States to testify on behalf of the United States today, are you?
A. No, sir.
Q. Sir, on page 1, numbered 1 of that same Exhibit, number 7, under purpose and format, one of the purposes — withdrawn.
It is recognized that each EPA Regional Office or approved State will have NPDES Permit processing procedures which have been specifically adapted for a specific geographical area and which incorporate local requirements. Therefore, it is the purpose of this manual to provide an explanation of those elements of the program which are common to any State or Regional Office which issues NPDES Permits. Particular emphasis will be given to those areas which historically have been difficult steps in the permitting process.
Do you see that?
A. Yes.
Q. Is that what it says?
A. Yes, sir.
Q. It goes on to say, to the extent possible, practical examples are used to demonstrate the concepts which are

discussed. It says that?
A. Yes, sir.
Q. Sir, with regard to the next document, the TMDL Wasteload Allocation, which is Exhibit Number 4, Florida Cities Water Company Exhibit Number 4. Sir, on page C-1, this, again, is a guidance document, isn't it? The Wasteload Allocation, Exhibit Number 4?
A. Are you referring to a particular page?
Q. I want to ask you in general, sir; is this just a guidance document?
A. Yes, it is.
Q. Okay. And on page C-1, doesn't it say, since conditions, procedures and methodologies may vary between EPA Regions and their States, a general outline of an example agreement is provided? Does it say that?
A. Yes, sir.
Q. So differences do exist — withdrawn.
You will acknowledge that differences exist between Regions; is that correct?
A. Oh, yes.
Q. And definitely within States within the Regions, too; right?
A. That's correct.
Q. Sir, on page 4 of that same document, I'd like to talk a little bit about TMDL's.

Sir, in Region 6, about how many streams or other water bodies are there in Region 6, which receive discharges from NPDES permitted facilities?

A. Almost all streams. I don't know the number.

Q. Thousands?

A. Oh, yes, thousands and thousands. Yes.

Q. How many of those streams and water bodies has a TMDL been done?

A. As of this date, probably all of them at least once.

Q. All of them have had TMDL's done; is that correct?

A. That's my understanding, yes.

Q. Sir, with regard to the State EPA Agreement, which is Exhibit Number 2, Florida Cities Water Company Exhibit Number 2.

A. Yes, sir.

Q. This document didn't set up anything required in stone, to your knowledge, did it? These are not in-stone requirements, are they?

A. This document lays out and reiterates what was in the law and the regulations, so it's pretty much in stone, I would say, for most of the things -- for the examples that I read from.

Q. I want to turn your attention to page 4, which is the first signature page that Mr. Cole on behalf of the State of Florida signed. Tell me when you find that, please.

A. Page 4?

Q. Yes, sir, of Exhibit 2.

A. Mr. Cole?

Q. Yes, where he signed off on it, sir.

A. Okay.

Q. Okay. About halfway down the paragraph, above the signature blocks it says, doesn't it, that both parties agree that the provisions of this document are reasonable and are understood to be goals toward which each party will strive. Doesn't it say that?

A. Yes, it does.

Q. It doesn't say anything about them being requirements, does it?

A. No, it doesn't say that.

Q. Thank you.

Mr. Hartung, is there any opinion in your expert report, which has been introduced as Defendant's Exhibit Number 1, is there any reference to the Florida Cities Barefoot Bay facility?

A. No, sir.

Q. Is there any reference in that report to Florida Cities Carrollwood facility?

A. No.

Q. Is there any reference in that report to Florida Cities Waterway Estates facility?

A. No, sir.

Q. Is there any reference to Florida Cities Water Company at all in that report?

A. No, sir.

Q. Thank you.

Sir, is there any reference in your expert report --

A. May I embellish my answer or just --

THE COURT: No, sir.

If counsel for the party calling you wishes to elicit something further, he can.

Go ahead.

BY MR. QUINN:

Q. Sir, is there anything in your expert report regarding the seriousness of the violation or violations alleged against Florida Cities Water Company?

A. No.

Q. Is there anything about the economic benefit, if any, resulting from the violations alleged against Florida Cities Water Company?

A. There is no mention of Florida Cities in that entire report.

Q. There's no mention of economic benefit, either, is there?

A. No, sir.

Q. Is there any mention of the history of such violations against Florida Cities Water Company?

A. No, sir.

Q. Is there any efforts about -- any reference to any good faith efforts to comply with the applicable requirements of the Clean Water Act in your report?

A. Concerning what?

Q. Is there any reference to any good faith efforts by Florida Cities to comply with the applicable requirements of the Clean Water Act in your expert report?

A. No, sir.

Q. Is there any reference in your expert report to the economic impact of the penalty upon the violator, Florida Cities Water Company?

A. No.

MR. QUINN: Your Honor, at this point the United States would again renew its motion to strike the testimony of Mr. Hartung.

THE COURT: Well, denied.

BY MR. QUINN:

Q. Mr. Hartung, how many articles have you published concerning EPA's general practices regarding permitting matters under the Clean Water Act?

A. By "published" what do you mean?

Q. Published in a journal of national distribution.

A. Probably half a dozen.
Q. In all those — each one of those was an article about permitting matters under the Clean Water Act; is that correct?
A. Yes.
Q. Sir, how many articles have you published concerning EPA's general practices regarding enforcement matters under the Clean Water Act?
A. Probably another half dozen.
Q. Sir, other than today, you've never testified as an expert witness on EPA's general practices and procedures regarding permitting and enforcement matters, have you?
A. No. I've given depositions when I was at EPA.
Q. Sir, you never worked in EPA Region 4, have you?
A. No.
Q. You've never supervised wasteload allocations in Region 4, have you?
A. No.
Q. You've never supervised anybody issuing permits in Region 4, have you?
A. No.
Q. You've never supervised any enforcements of Clean Water Act violations in Region 4, have you?
A. No.
Q. Sir, you didn't write the Clean Water Act, did you?

A. No. I would have to say no.
MR. BAISE: Objection, Your Honor. That is just not a relevant question.
THE COURT: Sustained.
BY MR. QUINN:
Q. You didn't write any code for Federal Regulations relating to permitting regulators — withdrawn.
You didn't write any of the permit regulations, did you?
A. No, not per se. No.
Q. Okay. You did not, by yourself, write the October 2nd, 1989, final version of the Revised Enforcement Management System, did you?
A. Say again.
Q. You did not, by yourself, write the October 2nd, 1989, final version of the Revised Enforcement Management System, did you?
A. Not by myself, no.
Q. That was written by a committee of EPA's Office of Water, located headquarters in Washington; right?
A. With input, major input from the regions.
Q. But you did not write, by yourself, the April 18th, 1986, National Guidance for Oversight —
THE COURT: He's already answered that, that he didn't, hasn't is?

MR. QUINN: It's a different question, Your Honor.
THE COURT: It just sounded the same.
All right.
BY MR. QUINN:
Q. Let me start over, Mr. Hartung. I'm sorry.
You did not, by yourself, write the April 18th, 1986, National Guidance for Oversight of NPDES Programs, did you?
A. No. I wrote that with the help of other States and EPA's Headquarters.
Q. That was written by Office of Water, located in headquarters in Washington, too; right?
A. They compiled it, yes.
Q. You didn't write the March 31st, 1992, Civil Penalty Assessment for Clean Water Wastewater Discharge Violations, did you?
A. What was the date?
Q. March 31, 1992.
A. No.
Q. Sir, you didn't write the May 1987, Training Manual for NPDES Permit Writers, did you?
A. No, I did not.
Q. You didn't write its predecessor, the one you were talking about on direct examination, either, did you?
A. No, I did not.

Q. You didn't — withdrawn.
Sir, have you ever supervised permit issuance?
A. Yes.
Q. When was that, sir?
A. The late 70's, when I was acting Deputy Water Division Director, EPA Region 6, and, also, in the early 90's when I was in detailed to that same job.
Q. But you've never supervised issuance of permits in Region 4, have you?
A. No, that's correct.
Q. Sir, can you please tell me what is a point source discharger?
A. Point source discharger is a term that was used to describe the difference between non-point source and point source, so that people could understand when you talk about a point source discharger, you were talking about a discrete point rather than sheet flow coming off of land somewhere.
Q. Is it correct that every point source discharger in the United States must receive an NPDES Permit from either the United States Environmental Protection Agency or a delegated State?
A. That's correct.
Q. Sir, you testified a little bit about a minor facility and I'd like to ask you again, what is a minor facility under Federal Regulations?

A. The minor facility is any facility, if you're talking about sanitary waste dischargers, that is below -- has a flow below one million gallons per day. And if you're talking about industrial minor, there's a point rating system, so many points for toxicity, et cetera, et cetera, and if you get an 80, that declares you a major and if you are below 80 it declares you a minor.

Q. All minor facilities require NPDES Permit, don't they?

A. That's what the law says, yes.

Q. So failure to have an NPDES Permit is a violation of the law, isn't it?

A. That's correct.

Q. The NPDES Permit System is essential to enforcing effluent limitations; isn't that correct?

A. Well, yes. The system -- you issue the permit with the effluent limits and you enforce the permit, which includes effluent limits.

Q. And the NPDES Permit System is essential to maintaining water quality standards, too; is that correct?

A. That's correct.

Q. Sir, whose responsibility is it to assure that a valid NPDES Permit is acquired; the discharger or the regulator?

A. The discharger.

Q. And whose responsibility is it to understand what the requirements of an NPDES Permit are; the discharger or the

regulator?

A. Say it again.

Q. Sure.

Whose responsibility is it to understand what the requirements of an NPDES Permit are; the discharger or the regulator?

A. I would say both, but, of course, it's the responsibility of the discharger.

Q. Sir, an administrative -- withdrawn.

Sir, an EPA-issued Administrative Compliance Order is not an NPDES Permit, is it?

A. No.

Q. An EPA-issued Administrative Penalty Order is not an NPDES Permit, either; is it?

A. No.

Q. And an State-issued Administrative Order is not an NPDES Permit, is it?

A. No.

Q. And a State-issued Permit in a non-delegated State is not an NPDES Permit; is it?

A. That's correct.

Q. And a State-issued Permit in a non-delegated State and an EPA-issued NPDES Permit are two different permits; correct?

A. Yes, that's correct.

Q. And each of those two different permits may have different requirements; isn't that correct?

A. That is, also, true.

Q. And compliance with the State-issued Permit in a non-delegated State does not excuse a violation of an NPDES Permit, does it?

MR. BAISE: Objection, Your Honor. All these questions go to liability. The Court has already found liability with respect to this Defendant.

THE COURT: Well, I'll -- I'll allow the examination. I'll overrule the objection.

THE WITNESS: Can you repeat the last question? I'm sorry.

BY MR. QUINN:

Q. Yes, sir. Incompliance with the State-issued Permit in a non-delegated State does not excuse a violation of an NPDES Permit, does it?

A. No, it's still a violation.

Q. Sir, with all your experience in Region 6, how many enforcement cases have you supervised where the facility had no NPDES permit?

A. Oh, in the hundreds.

Q. And how many, in all of your experience, how many enforcement cases have you supervised?

A. I supervised every enforcement case for 13 years.

Q. How many cases would that be, approximately?

A. Are you talking about including administrative orders which --

Q. Yes.

A. Well, 10,000 of those and 400 of Administrative Penalty Orders, that's 10,400 and 10,000 civil judicial, that would be 10,600, plus another 50 -- 10,650 cases, probably.

Q. So only a hundred out of the 10,650 cases were facilities for which no NPDES Permit was in place; is that correct?

MR. HIRD: Objection. I think that mischaracterises the testimony. I don't believe he said a hundred.

THE WITNESS: I said --

THE COURT: Well, I don't know whether he did or not. I'll overrule the objection.

BY MR. QUINN:

Q. Mr. Hartung?

A. I'm sorry. I keep asking you to repeat.

Q. Sure.

Isn't it correct that only about a hundred facilities out of the 10,650 cases that you've overseen were cases in which no NPDES Permit was in place?

A. That's correct. That's the only ones that we saw fit

to issue formal actions against.

MR. QUINN: Objection. Move to strike everything after "that's correct."

THE COURT: Denied.

BY MR. QUINN:

Q. Mr. Hartung, doesn't the decision to bring enforcement action require the exercise of discretion on the part of regulator?

A. Yes.

Q. Isn't it fair to say that as the level of EPA's enforcement response escalates, additional internal review is required.

A. It's done. I don't know if it's required. It makes sense.

Q. In Region 6, at the time that you retired, what level -- what levels of review were required to issue a warning letter?

A. My section chief signed those -- most of the warning letters, and I would look at them periodically, you know, maybe 10 percent.

Q. Just so I'm clear, is a section chief above you or would that be one of the people that reports to you?

A. No, I had three sections under me. I had a section chief or administrative section that took care of most of that.

Q. In Region 6, at the time you retired, what level of review was required to issue an Administrative Compliance Order?

A. It was reviewed by a technical section chief, administrative section chief and concurred on by myself and signed off on by the water division director above me.

Q. So you didn't have authority by yourself to issue Administrative Compliance Orders, did you?

A. That's correct. No branch chief did that. That's not delegable to the branch chiefs in the Region.

Q. How about with regard to Administrative Penalty Orders; is that the same?

A. No, it's not. For some strange reason I had the authority to issue Administrative Penalty Orders, but I didn't have authority to issue Administrative Orders. That was redelegated to me in about 1991.

Q. So it's a redelegation for Penalties Orders, but not a redelegation for Compliance Orders; is that correct?

A. That's correct. That was forbidden by some order out of Washington.

Q. Sir, in Region 6, at the time you retired, what levels of review were required to refer an action to the United States Department of Justice for enforcement?

A. Essentially the same levels of review, section chief, branch chief, division director, regional counsel, and,

also, the regional administrator and then it had to go forward to the EPA Headquarters before it went to the Department of Justice for their concurrence.

Q. Isn't it a fact, sir, that before a complaint can be filed in a Federal District Court, a trial lawyer and assistant section chief, section chief, deputy assistant attorney general, and the assistant attorney general for the Environment and Natural Resources Division must approve the filing; isn't that correct?

MR. BAISE: Your Honor, objection. He's asking for all of the procedures of the Justice Department in approving an action and that clearly is not in the expert's report nor brought out in his direct examination.

THE COURT: Objection overruled.

Can you answer that?

THE WITNESS: I -- I don't know the answer to your question.

Most of those relate apparently to the Department of Justice approvals.

BY MR. QUINN:

Q. Sir, do you agree that an important goal of the NPDES Enforcement Program is to provide an appropriate deterrent effect to violators?

A. Absolutely.

Q. And a means of establishing a deterrent effect is the

imposition of a civil penalty; isn't that correct?

A. That's one means, yes.

Q. Sir, with regard to permitting, isn't it true that if a State objects to the provisions of a proposed NPDES Permit, it can bring those objections to EPA's attention prior to the time the permit is issued?

A. That's correct.

They're asked to certify the NPDES Permit as protecting the water quality standards.

Q. Once, also, a discharger obtains a final permit denial from EPA, aren't there specific appeal procedures set forth in the Clean Water Act and the Regulations for the permittee?

A. That's correct.

Q. And aren't there specific time limits within which permittees must file their appeals?

A. That's correct.

Q. Sir -- withdrawn.

MR. QUINN: No more questions, sir.

THE COURT: Mr. Baise, do you have any redirect?

MR. BAISE: Yes. Thank you, Your Honor.

REDIRECT EXAMINATION

BY MR. BAISE:

Q. Mr. Hartung, counsel asked you about a commission that studied the goals of the Clean Water Act. Please describe

that commission for the record.
A. Actually, I believe I mentioned it, and he was talking about that one of the goals was elimination of — the total elimination of discharge.
My understanding was that the — as I recall, the Clean Water Act set up the commission when the Clean Water Act was passed in 1972, to see if that was a reasonable goal and that commission met and essentially admitted that that was a little bit too lofty a goal, and so that goal was dropped in my understanding.
I don't remember the exact date that everybody said that — in practicality it was dropped in the late 70's, because it was obvious to everyone that we could not eliminate all discharges.
Q. Do you know who was on that commission?
A. I don't recall. I just remember that the impression, it was pretty blue ribbon commission — I don't know why Rockefeller comes to mind. I don't know who was on it, though.
Q. Was this commission created by Congress to review the goals of the Clean Water Act?
A. That's right. That's correct. As part of the statute.
Q. Mr. Bartung, it has been brought out by counsel that a couple of the documents in evidence do not represent

official EPA policy.
Do you remember that question, Mr. Bartung?
A. Yes, sir.
Q. Could you describe EPA's practice and how it puts out documents relating to policies and procedures, if you know?
MR. QUINN: Objection, beyond the scope of direct and beyond the scope of cross.
THE COURT: I'll sustain the objection.
I don't think that's going to be very productive.
Let's move on.
BY MR. BAISE:
Q. Mr. Bartung, you indicated you have published articles?
A. Yes.
Q. Could you identify those articles you have published and the subject matter?
A. I published articles back in the 70's on — in some trade magazines on water quality planning activities, water quality standards, NPDES Permits, NPDES Enforcement Program.
I published one last year, formal paper, presented at a national conference on sanitary sewer overflows.
I published some material through the Dallas Morning News at one time back in the early 80's on wasteload allocations and their impact on the cities in that area.
There probably were more, but I don't recall them.

Q. Mr. Bartung, it's been brought out that you did not write a number of documents that are in question in this case.
Is it ever EPA's policy to have one person issue a document representing agency official or unofficial policy?
A. It is the policy of the agency to have the highest ranking, like the Director of the Office of Water Enforcement Permits, in this case, issue things likes the Oversight Guidance and the Enforcement Management System Guidance. It, generally, would recognize different regions for contributing or different States in some cases.
Q. Do teams of people generally produce documents such as are in evidence in this case, Mr. Bartung?
A. Yes, sir.
Q. Why was it your policy or procedure or EPA's policy or procedure not to permit minor dischargers for a period of time during, say, the last 10 years or 15 years, Mr. Bartung?
MR. QUINN: Objection. Mr. Bartung hasn't worked with EPA for the past two years, and I'm not sure that the purpose of this question — I think is —
MR. BAISE: I'll withdraw the question.
BY MR. BAISE:
Q. Mr. Bartung, did EPA have a policy of not permitting all minor dischargers into the waters of the United States?

A. I don't know that it was a written policy, but it became a practicality that the resources of the agency was spent issuing and reissuing majors and that was the top priority for sure, and so a lot of minor dischargers, if they were ever issued a permit to start with back in the 70's in the first round, never got another permit.
Q. Did it make a difference as to whether the State had permitted the minor discharger, Mr. Bartung?
A. Yes, sir.
Q. Why would that make a difference?
A. It made a difference because we at least knew they were being regulated and the State's generally paid more attention to minors than they did majors, so it's kind of like Jack Spratt and his wife —
THE COURT: Just a moment.
MR. QUINN: Objection, move to strike that response. Beyond the scope of direct and cross.
THE COURT: Overruled.
MR. BAISE: You may continue, Mr. Bartung.
THE WITNESS: I'm through.
BY MR. BAISE:
Q. Mr. Bartung, based on your experience in oversight of NPDES Permits in Region 6, and, also, your extensive experience in working with other regions, have you ever seen an enforcement action taken where EPA had taken an NPDES

Permit or NPDES Permit — discharger's permit away improperly?

MR. QUINN: Objection, calls for legal — sorry — calls for an expert opinion, which was not expressed in the report.

THE COURT: I'll sustain the objection.

BY MR. BAISE:

Q. Mr. Hartung, can you tell the Court and the record whether or not the majority of the enforcement actions that Region 6 or, based on your experience, EPA takes in enforcing NPDES Permits are mainly for injunctive relief?

A. The bulk of them. The purpose of enforcement actions, formal or informal, primarily was to get compliance, and so the bulk of the formal enforcement actions were for injunctive relief as well as sometimes for penalties.

MR. BAISE: No further questions, Your Honor.

THE COURT: Thank you, sir.

You may step down.

THE WITNESS: Thank you.

THE COURT: Call your next witness.

MR. BAISE: Your Honor, the Defendant Florida Cities, calls Mr. Patrick Lehman.

(Pause.)

THE CLERK: Raise your right hand.

Thereupon,

PATRICK LEHMAN,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box.

MR. HIRD: Your Honor, before Mr. Lehman begins, last Thursday the Government introduced a document called United States Offer of Proof in Lieu of Testimony of Witnesses that Plead the Fifth Amendment.

There was some discussion at the end of the day on Thursday as to what response, if any, would be required of the Defendants and at what time.

You had indicated at that point that you were taking under advisement as to when or whether any response would be required or how that document would be treated, and you indicated to the Defendants that you would not require a response earlier than Wednesday.

Since the next Court date is Wednesday, I wanted to bring the matter to the Court's attention, so we were aware what our responsibilities are.

THE COURT: Right. I was going to mention that before we concluded the day's proceedings.

Does that have to do with this witness here?

MR. HIRD: No, Your Honor.

If you want to take it up at the end of the day —

MR. BAISE: We just wanted to make sure we had time to take that up, Your Honor, this evening.

THE COURT: Why don't we go ahead and do that now. That is —

MR. BAISE: Do you want to have Mr. Lehman step down while we undertake that, Your Honor?

THE COURT: Well, okay. You can step down, sir. Just have a seat in front of the Courtroom or back of the Courtroom there.

All right. Well, do you want to be heard on the response that the Court will expect?

MR. HIRD: Your Honor, if you have some thoughts you were going to share with us as to what the intentions were —

THE COURT: Not specifically. I was going to afford you the opportunity to respond to the United States' Offer of Proof and whether the Court would receive depositions.

MR. HIRD: Your Honor, I don't think this was in connection with depositions.

THE COURT: It was not. Okay.

Then — well, I thought part of the — I thought part of the proffer was to offer those portions of the depositions listed on page 34 of the joint pretrial statement where the witnesses invoked the Fifth Amendment.

MR. HIRD: I'm sorry. I think now I got confused. You were right, Your Honor.

I thought you were referring to the depositions that were brought up on Friday when asked that question, so you are correct, it's the depositions.

THE COURT: So, that's one — as I recall now, that was one of the things that the Court was going to receive submissions from the Defendants addressing the propriety of the Court's receiving those depositions wherein the witnesses listed on page 34 pled the Fifth Amendment.

MR. HIRD: Your Honor, I think, as I see it, there are three issues. One is the receipt of the depositions, two is whether it's appropriate to draw adverse inferences, and three, the document itself, which as if you recall, Your Honor, we had just had handed to us. We've now had a chance to read it. And appears to be less drawing of adverse inferences from lack of testimony questions, but more the Government's interpretation of the exhibits that it has entered into evidence, and in some instances exhibits which have not been entered into evidence.

I certainly think that we would like to brief for you the question of whether it is appropriate for you to draw adverse inferences. To the extent the receipt of the depositions is connected with that, I would see those two issues linked together.

The third question is a separate question, assuming you were to take adverse inferences, is this appropriate offer of proof, given what this is functionally is an analysis of the documents, and if you look at the documents themselves, in many instances the documents are inconsistent with the conclusions drawn by the Government or the alternative language that can be brought out in the various exhibits.

What I would propose that we do is that we at one stage brief the propriety separately of drawing an adverse inference and admission of the depositions, if that -- if the Court Rules against the Defendants with respect to that, then we should somehow have an opportunity to respond within the documents themselves to show that the conclusions that the Government has drawn from the documents are not consistent with other things within the very same documents.

THE COURT: Okay. Yes.

MR. BULLOCK: Your Honor, along with that, the offer of proof presented by the Plaintiff made no -- had no specific, either evidentiary or case law basis, to make an offer of proof under the auspices that they were attempting to make the offer of proof and I would just join with Mr. Bird in saying we would appreciate the opportunity to brief the issue of whether or not such a offer is actually an offer of proof and is permissible in that form under the

Rules.

THE COURT: Okay. Mr. Jacobs.

MR. JACOBS: Your Honor, I'm not sure whether the Court has any leanings one way or the other in terms of what it's inclined to do.

I would reemphasize that the Government has no objection, whatsoever, to the Defendants interpreting the documents that the are, in fact, discussed in the offer and interpreting them and suggesting whatever inferences they see fit as being attachable to those documents.

I'm instructed that all of the exhibits that are cited in the offer of proof are already in evidence.

MR. BIRD: I think that's one exception, Exhibit 253. That was Mr. Dresner's --

MR. JACOBS: If that's the memo I take Mr. Bird's representation to it being, then I stand corrected, there's only one of many, many, many exhibits that are not already in evidence.

I do quite agree with Mr. Bird, that in large part the adverse inferences that we asked the Court to draw are adverse inferences that we believe are legitimate and appropriate interpretations of these documents.

I have no objection, whatsoever, to one or both of the Defendants briefing as an initial matter, whether they believe an offer of proof of this nature is an appropriate

means to bring to the Court's attention the adverse inferences that should be drawn, and secondly -- so that would be a procedural matter.

And secondly, I have no objection to the Defendants briefing from their own perspective what adverse inferences or what inferences, if they rather characterize it as such, should be drawn from the documents.

As I said, earlier -- early last week, there was -- there's no subterfuge, no trickery involved here. All we want to do is to make our offer, because the witnesses are unavailable, and that's something we've had no control over. It's something that the Defendants have had ultimately quite some say in, which witnesses would be called to testify. And I'm emphasized in the past that the witnesses, particularly the Avatar witnesses that were called to testify by Avatar Holdings, were the witnesses who did not have personal knowledge of the facts and circumstances directly relating to the allegations in the complaint, and it's the witnesses that we would like to call who are unavailable, and that's why we think we should be entitled to make the offer of proof.

THE COURT: Well, we have the issues presented or appear to be extant that as to the admissibility in the first instance of these depositions wherein these witnesses invoked the Fifth Amendment, and I suppose, I'm not sure

that the second issue can -- can or really should be regarded as a separate issue, because the second issue, which we've talked about, is whether it is legitimate for the Government to be entitled to have the Court draw negative inferences from the invocation of the Fifth Amendment.

Now, if the Court were to find against the Government on those issues, then it seems to me we would not have to go further with respect to any matters pertaining to the offer of proof, because the offer of proof would not be an appropriate document.

So, I'm wondering if this briefing should be bifurcated, as I think Mr. Bird had suggested.

MR. JACOBS: Judge, I didn't address the matter of the depositions on -- with respect to the present or former Avatar officers, that is to say, Messrs. Getman, Slaikus and Wilkov. I'm entitled to have those depositions into evidence, either because the person is a current officer of the company or because the person is unavailable as being outside of the jurisdiction, outside one hundred miles.

THE COURT: Well, I'm going to permit counsel for the Defendants to address those two issues; that is, the admissibility of the depositions and the inferences -- the admissibility of the depositions and the issue regarding whether the Court -- whether the Government is entitled to

have the Court draw inferences from the invocation of the Fifth Amendment, and I think the Government probably ought to have the opportunity to respond.

MR. HIRD: That procedure is perfectly satisfactory to us, although I would mention, I believe Your Honor has already ruled on the situation regarding Mr. Wilkov.

THE COURT: Yes, that's true.

MR. HIRD: The only question I guess is the question of the timing, when you would expect it, which may also get into questions about whether we -- quite frankly about how long the trial will be --

THE COURT: Yeah. Well, okay. Well, you tell me; where do you think we are in this trial at the present time?

MR. BAISE: With respect to the Defendant, Florida Cities, Your Honor, we have a number of witnesses left. I haven't counted them up today, but I believe, somewhat like the situation with Mr. Armstrong, Mr. Hartung, our case is going to move along rather rapidly. And frankly, we are looking to see whether or not there are at least a couple of witnesses that we can cut out and attempt to finish this off by Friday. It may be difficult. Obviously, we cannot control the amount of cross-examination time that the Government is clearly entitled to, but assuming it stays within the ranges and bounds we have seen to date, there's

at least a possibility of our completing our case on Friday.

Now, obviously, we're out tomorrow, and we have one witness who's only available on Wednesday, and we may have to put him on out of our preferred order, but there's a possibility we could get on maybe four or five of the witnesses on Wednesday, and if that is successful, we have a real shot at completing on Friday. If that's not successful, it probably will go over a day or two.

THE COURT: Uh-huh.

MR. BAISE: I'm not speaking, of course, for Mr. Hird, who obviously has one or two witnesses that -- well, I'll let Mr. Hird address it.

THE COURT: So, Mr. Baise, you say there's a possibility of you finishing your case by this Friday?

MR. BAISE: Yes, sir.

THE COURT: Mr. Hird?

MR. HIRD: Well, Your Honor, depending on the status of the offer of proof, I have three, what I believe is best described, three plus one. There's a Mr. Allen, who Mr. Baise will be calling in his case, and I had suggested that I would cross -- I'm sorry -- I would examine him with respect to my direct case when he appeared, so he appeared only once. So, if that happens, that would take that witness off.

I would then have two witnesses that I would go

forward with and as long as the status of the offer of proof is in doubt, there would be a third witness I would call. So, that would probably, assuming I can examine Mr. Allen at the time period suggested by Mr. Baise, that might add one more day.

THE COURT: Okay. Mr. Jacobs?

MR. JACOBS: Judge, first of all, I have no objection to Mr. Hird's suggestion that he examine Mr. Allen at the same time, for purposes of his case, as Florida Cities does -- when they examine him. I think that's a fair request and will speed things along.

I, by my count, I think based on the representations that have been made and the witnesses that have been called to date, at this point in time, my best approximation is that the Defendants together have 23 witnesses remaining on their list, 20 for Florida Cities and 3 for Avatar Holdings.

You can tell that we are somewhat shorthanded compared to the other side of the podium, and to the extent that the Defendants would advance us the courtesy, if they are going to cut, as Mr. Baise suggested, witnesses from the list, to the extent they could share that with us at their earliest available point in time, that would probably both facilitate our preparation, as well as expedite the examination of the witnesses when and if they are called.

THE COURT: Mr. Baise.

MR. BAISE: May I?

THE COURT: Yes, sir.

MR. BAISE: I think what Mr. Jacobs is still relying on is an earlier list that had 26 witnesses on it. My original -- excuse me -- the updated list had 18 witnesses on it, of which we have already taken care of Mr. Smith, three of those witnesses are by deposition, and that should take no more than half hour, and we've got Mr. Hartung.

THE COURT: Who do we have left? Let's get specific here.

MR. BAISE: Okay.

MR. BULLOCK: Your Honor, on Monday last we submitted a witness list to the Government that had 19 witnesses, three of whom would be called by deposition. We have already put forward -- let's see -- 1, 2, 3, 4 -- 4 witnesses. We have given them notice on Wednesday for approximately 7 witnesses.

THE COURT: The names? Well, I mean, you've given them the names?

MR. BAISE: In fact, my only list I've given to Mr. Jacobs. I wrote it out right after lunch hour, Your Honor. If he will hand me my list. On -- just the number or the names themselves, Your Honor?

THE COURT: Well, as long as -- since you have it, go ahead, yeah.

MR. BAISE: On Wednesday -- at this point it looks like Mr. Lehman may not be on today, so Mr. Lehman, and then a Ms. Kagey from EPA, who is coming down at our request. So Mr. Lehman, Ms. Kagey and the three depositions, and then Mr. Ron Blackburn, a State Official from the Florida DEP out of Fort Myers, followed by Mr. Mike Acosta, a Florida Cities employee, a Mr. Larry Good, who would talk about the Carrollwood situation, Mr. Bradtmiller, a Florida Cities employee.

MR. JACOBS: Mr. Baise, forgive the interruption. He's available on? I beg your pardon. You said one was available on Wednesday?

MR. BAISE: Mr. Bradtmiller is available only on Wednesday and will be taken out of normal order. Then we would hope to get on Dr. Abdul Ahmadi, another State Official, and finish up the day with Garald Allen.

MR. JACOBS: These are -- I'm sorry -- all 12 of these witnesses, then, on Wednesday?

MR. BAISE: Three of them are depositions and I believe there are 12 -- 1, 2, 3, 4, 5, 6, plus, excuse me -- Kagey and now we have Mr. Lehman, of course. I'm sorry, eight.

That's very ambitious.

THE COURT: Yes.

MR. BAISE: I realize that.

THE COURT: Okay.

MR. JACOBS: May I inquire further which ones, if you know now, you do not intend to call at all of the 19 on the list?

THE COURT: Yeah. Who will you not be calling from that list?

MR. BAISE: Out of the list I read you?

THE COURT: No, from the list that Mr. --

MR. BAISE: We haven't cut anyone yet. In fact, we were going to evaluate where we are this evening and see if there was anyone that we could cut from this, Your Honor.

I am advised by counsel that the Government may have a list that has a Mr. Michael Murphy on it, and we have decided to cut him off of the list. So that might help Mr. Jacobs with respect to the list he has.

MR. JACOBS: Your Honor, considering tomorrow we're not in Court, is it fair to request that we be advised tomorrow by the Defendants of any witnesses who also will be dropped from the list?

THE COURT: Yeah,

MR. BAISE: We can do that, Your Honor.

THE COURT: Yes. Advise them tomorrow of any additional witnesses that you -- and I expect counsel to act

in good faith in doing so, by tomorrow.

MR. BAISE: We have a very good working relationship on these issues, Your Honor.

THE COURT: Now, getting back to the written submissions, counsel, I don't see any realistic way for us to finish this case this week based on what I'm hearing, but --

MR. HIRD: Your Honor, that's why I raised the question, because I think it would make better sense to follow Your Honor's original suggestion and have the briefing on the admissibility and then the briefing on any response to the document if it's accepted to occur after we conclude at least the trial activities this week. If we are going to come back at some later date, we can still be doing that in that hiatus.

THE COURT: Okay. Well -- I'm going to -- can you have your Defendants have their written submissions addressing the admissibility of the depositions listed on page 34 and, also, the issue regarding the entitlement of the Government to the Court's drawing negative inferences from that as a -- well, drawing negative inferences from the invocation of the Fifth Amendment by Wednesday?

MR. HIRD: By a week from --

THE COURT: No, I was thinking in terms of this Wednesday, but I'm throwing that out as a --

MR. HIRD: Honestly, Your Honor, if we had understood that on Friday, I think we could have, and had not having heard direction from you, I don't think we can do that within that time period.

THE COURT: Uh-huh. Okay. Well, I guess I'm thinking now in terms of requiring your submissions later in the week and then the Government's opportunity to respond to that perhaps by the beginning of next week, sometime by Tuesday, say.

I guess maybe I'm asking for the submission -- I don't think it will take a great deal on your part to address those initial issues, and I would like to have that by close of business on Thursday of this week, and then the Government's response to that by --

MR. JACOBS: Thursday of the following week, sir?

THE COURT: No. Tuesday of the following week.

MR. JACOBS: Yes, sir.

THE COURT: And then I'll rule on that. Subject to the Court's ruling, we may not have to deal with the other issue; that is, on the offer of proof that the Government has filed.

MR. BULLOCK: Your Honor, would you object to a joint memorandum from the Defendants?

THE COURT: I would appreciate a joint memorandum. I'm glad you thought of it.

MR. BULLOCK: And Your Honor, would that be, I believe, the standard 20-page limit?

THE COURT: I'll tell you what, since we're going over the time that we scheduled for trial, why don't we say Friday from you guys and Thursday from the Government?

MR. JACOBS: Thank you, Judge.

MR. KIRD: Friday close of business?

THE COURT: Yes, sir.

MR. KIRD: Thank you.

MR. BAISE: Your Honor, may I just bring one more point that's a bit of a clarification, I think? When I mentioned a moment ago I thought that DOJ counsel was looking at an older list. As I look at what we have accomplished to date, I only count 11 witnesses for us to have to put on over three days, not 19, not 23.

THE COURT: Well --

MR. BAISE: Excuse me.

THE COURT: We may be able to do it, and that's my fondest hope. But, even if we do, I am not inclined to feel that that necessitates a revision of this briefing schedule that I've indicated.

MR. BAISE: No, I wasn't suggesting that. I was just bringing the actual number to your attention, so you would have that as background.

THE COURT: Right.

I need to -- these memoranda, how much -- what length are you contemplating?

MR. BULLOCK: Your Honor --

MR. BAISE: Short as possible.

MR. KIRD: I can certainly live within the 20-page limit and my goal is to make it much, much shorter, but I haven't started writing it yet, so I can't project. I certainly don't need an extension of that, and I'm going to try to shoot to do it in 10 pages.

MR. JACOBS: Whatever he shoots for, I'll shoot for.

THE COURT: Shoot for 10 pages, and I will hold you to a 15-page maximum on this, but let's try -- these are -- I think these issues are pretty discrete, isolated issues here, so I think you can do it in 10 pages.

Now, I have a sentencing at 8:45 on Wednesday. It should not be a lengthy sentencing. I think I can do it in 15 minutes and we'll start at 9:00.

Anything else?

Okay.

MR. BAISE: Yes, Your Honor, one item.

First off, we want to thank the Court for allowing the Courtroom Deputy to open the Courthouse at 8:45 -- 7:45. I'm sorry. Because we understand that there has to be certain orders issued for that to occur, and to the extent

that can continue when we have an 8:45 beginning, we would appreciate that.

THE COURT: We'll be starting at 9:00 on Wednesday, and to the extent that I can start earlier, I'll -- let me see -- you got your calendar there for next week?

THE CLERK: The rest of the week we have something early morning first thing.

THE COURT: We have -- I have canceled the sentencing and postponing the 4:00 sentencing for Wednesday, and I have one scheduled for 8:45 Wednesday morning and one 8:45 Thursday morning and one at 8:30 Friday morning. So, I can't be putting off everything that I -- everything else that I have. I've put off an emergency Grand Jury matter that would have taken some of this afternoon, and I'm going to try to hold that off until next week.

Okay. Then I'll see you all at 9:00 on Wednesday morning.

MR. BAISE: Thank you, Your Honor.

THE MARSHAL: All rise.

The Court will be in recess until 9:00 Wednesday.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC., Defendants.

Case No. 93-281-CIV-FTM-21
Wednesday, April 3, 1996
Tampa, Florida
9:00 a.m.

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Mr. Robert Homiak

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS
April 3, 1996
****

THE COURT: Morning counsel.

MR. BAISE: Good morning, Your Honor.

THE COURT: Okay.

Mr. Baise, you may proceed, sir. I think we're on --

MR. BAISE: Mr. Pat Lehman has been called and sworn in.

THE COURT: All right.

He hadn't started testifying as yet?

MR. BAISE: No, he had not.

THE COURT: All right.

MR. BAISE: And before he starts testifying, Your Honor, I would like to move into evidence the exhibit for Florida Cities marked 207 which is the diagram designed on wasteload allocations by Mr. Roger Hartung Friday afternoon about 4:00 o'clock.

If you would pull it back for Your Honor to review and it's where he describes and outlines basically what was in his -- or actually it spells out in greater detail what was in his testimony.

MR. QUINN: We object. It wasn't listed as an exhibit.

THE COURT: Sustained.

DIRECT EXAMINATION CONTINUING

BY MR. BAISE:

Q. Good morning, Mr. Lehman.

A. Morning.

Q. What is your occupation, Mr. Lehman?

A. I'm an environmental engineer.

Q. And can you define what environmental engineer is, Mr. Lehman?

A. My formal education is in wastewater, water treatment, process design.

Q. What college degrees do you hold, if any, Mr. Lehman?

A. I have a civil and environmental engineering degree from the University of Iowa I obtained in 1973, and also a masters degree in environmental engineering from the same University in 1975.

Q. Any particular major subject of study in either one of these degrees, Mr. Lehman?

A. There again, the environmental emphasis was on water and wastewater treatment.

Q. Who is your present employer, Mr. Lehman?

A. Currently, I work for the Peace River Manasota Regional Water Supply Authority.

Q. And please define what that entity is, for the record, Mr. Lehman.

A. It's an inter-governmental agency of four counties;

Manatee County, Sarasota, Charlotte and DeSoto Counties, to formulate a regional water supply system for the four counties.

THE COURT: Would you give me that, please, Peace River what?

THE WITNESS: Manasota, M-A-N-A-S-O-T-A, Regional Water Supply Authority.

THE COURT: All right. Go ahead.

BY MR. BAISE:

Q. Your job title?

A. Be authority engineer.

Q. What is your responsibility at this entity as the engineer, Mr. Lehman?

A. We're currently putting together a CIP program, expansion program. We currently operate a twelve MGD water treatment plant and distribution system. We wholesale water, so it's a transmission system. So I oversee those facilities from an engineering standpoint, and improvement projects, renewal and replacement projects, and also consult on the operations of it. And I'm also involved in the planning and expansion of those facilities.

Q. What is CIP?

A. Capital improvement program.

Q. Thank you.

How long have you been in this present position, Mr. Lehman?

Page 5

A. Going on about three and a half years.
Q. Where were you employed before this present position?
A. Before that, I had a, in the summer of '92, I did some consulting work with Haven and Emerson Engineers. Before that, for about three years, I was deputy director of the City of Tampa Water Department.
Q. What were you job responsibilities at the City of Tampa Water Department?
A. To act as an assistant to the director and basically do specific tasks that he would assign. That could basically be just about anything, from production distribution, helping in the financial, whatever aspects needed to be attended to at the time.
Q. And where were you employed before that?
A. That would have been for Florida Cities Water Company.
Q. What years were you employed at Florida Cities Water Company?
A. I started there in June '84 and left I think it was about April '89.
Q. What positions did you hold at Florida Cities Water Company?
A. I was originally hired as operations manager and somewhere in between leaving, I was given the title of vice president of operations some – maybe about a year or two before leaving.

Page 6

Q. What were your responsibilities as vice president for operations?
A. That was to oversee the operations of their water and wastewater treatment facilities and coordinate with the division managers and the operation staff as far as operations, maintenance requirements, compliance with the discharge limitation or drinking water quality, depending if you're talking about water or wastewater facilities.
Q. How many of these facilities were wastewater and how many were drinking water facilities, Mr. Lehman?
A. There were, counting up, about ten wastewater facilities throughout the West Coast and into Poinciana and Barefoot Bay on the East Coast, and I think there was about an equal number of water treatment facilities, also.
Q. Could you identify those facilities that you had operational responsibility for in the Sarasota area?
A. Directly in Sarasota?
Q. Just in the area.
A. There was Golden Gate down South, there was Fiesta Village in South Fort Myers, there was Waterway Estates in North Fort Myers, Gulf Gate, South Gate in Sarasota, there was Carrollwood, there were three wastewater facilities in Poinciana and one over in Barefoot Bay.
Q. When did you become familiar with the facility at Waterway Estates?

Page 7

A. Soon after being hired, I, you know, tried to become familiar with all the facilities and Waterway Estates being one of them.
Q. Were there files maintained on Waterway Estates in your office?
A. Yes.
Q. And why did you become familiar with Waterway Estates?
A. Obviously, to be in charge of operations, you need to become familiar with the existing permits' data and the actual operation of those facilities.
Q. Did you determine whether or not all the facilities had permits?
A. Yes, I'm sure I did.
Q. What type of permits did Waterway Estates require to operate, Mr. Lehman?
A. They required both an operating permit to discharge from the Florida Department of Environmental Regulation, and also an NPDES Permit issued through the EPA.
Q. And in your review of the files, Mr. Lehman, did you find State permits and NPDES Permits for the Waterway Estates facility when you arrived at Florida Cities in your position?
A. Yes.
Q. I would ask the witness to be presented with Defendants' Trial Exhibit Number 17, which is already in evidence, Your Honor.

Page 8

Do you have Florida Cities' Trial Exhibit Number 17 in front of you, Mr. Lehman?
A. Yes, I do.
Q. Please describe this document?
A. It is a discharge permit issued by the Florida Department of Environmental Regulation for the Waterway Estates Wastewater Treatment Facility.
Q. When was this permit issued?
A. It is dated April 1st, 1981.
Q. Is this the type permit that the State of Florida issues to allow discharge from a facility into the waters of the State of Florida?
A. Yes, it is.
Q. I direct your attention, Mr. Lehman, discounting the pages, to the fourth page which is entitled, applicants, A. A. Reeves. And I direct your attention to the paragraph that begins, "to operate." You see that?
A. Yes, I do.
Q. Would you summarize what that paragraph allows Waterway Estates to undertake?
A. It allows it to operate as a contact stabilization process wastewater treatment facility with effluent to a canal to Caloosahatchee River located off of the project site.
Q. Excuse me.
A. And then it gives the actual coordinate location.

Page 9

Q. What does contact stabilization process mean, Mr. Lehman?
A. It's a specific activated sludge process.
Q. With respect to this document, Mr. Lehman, it is noted at the bottom of each page, one of four pages, if you'll turn to the next page, two of four, if you will go to page 3 of four. And I direct your attention to paragraph two. Please summarize that paragraph, Mr. Lehman.
A. That is pursuant to the Florida Administrative Code, the permittee will maintain ninety percent of removal of BOD and suspended solids in the treatment process and other provisions of the chapter regarding domestic wastewater treatment.
Q. Are these requirements of secondary treatment, Mr. Lehman?
A. Yes, all the typical requirements.
Q. I direct your attention to the document following page 4 of four, entitled application to operate and construct a domestic wastewater treatment and disposal system. Do you see that page, Mr. Lehman, that's marked March 27, 1981?
A. No, I'm not following that one, I'm sorry.
Q. Okay.
Go to the end of four of four of the Florida permit.
A. Right.
Q. Then the next page should be application to operate and construct a domestic wastewater treatment and disposal treatment.

Page 10

A. All right.
Q. You see that?
A. Yes, I do.
Q. In that document, I would ask you to turn to page 3 of that document.
A. Okay.
Q. And page 3 of that document is entitled, general, and then has a listing under it of population. You see that page?
A. Yes, I do.
Q. Would you please summarize the information that is under subsection A there, Mr. Lehman?
A. It's providing the general statistics of population of the service area and the population served by the existing plant which is nine thousand fifty people, the present approved capacity of 1.08 MGD.
Q. And I direct your attention to subsection B-2, beginning with advanced wastewater treatment. Would you please describe what that section means, Mr. Lehman?
A. It specifically identifies advanced wastewater treatment, tertiary treatment provided for and provides check off for various aspects and there's an X indicated next to BOD slash suspended solids removal.
Q. What does that X mean, Mr. Lehman?
A. I'd interpret that as meaning that the removal for BOD and suspended solids is beyond secondary treatment and more

Page 11

into the advanced treatment aspect, tertiary treatment provisions.
Q. Does it mean this plant is meeting that level?
A. Yes.
MR. QUINN: Move to strike. It calls for speculation based upon what the plant's actually doing as compared to what it could do.
THE COURT: Overruled.
BY MR. BAISE:
Q. Mr. Lehman, I would ask you to turn two pages over to the page that is entitled, domestic wastewater characteristics. And what does this page mean with respect to the Waterway Estates Facility, Mr. Lehman?
A. It's providing the specific data that the influent concentration had of BOD and suspended solids' level and effluent capabilities of the facility.
Q. And what does it indicate the percent of removal is from that facility, Mr. Lehman?
A. For the five day BOD, it's listed as ninety-three percent removal, for the total suspended solids, it's listed at ninety-seven percent removal.
Q. Does this mean that this was the effluent treatment level the plant was achieving?
MR. QUINN: Objection, this again calls for speculation. This is before the time the witness was working

Page 12

for Florida Cities Water Company and anything he's going to testify on would be based on hearsay, too, sir.
THE COURT: Well, I think he's being asked to describe what this document purports to say. It's in evidence. I'll overrule the objection.
Isn't that what you're asking him?
MR. BAISE: Yes, sir.
BY MR. BAISE:
Q. Mr. Lehman, is there any indication or – are you familiar with this document?
A. I'm sure I was. I don't recall it specifically.
Q. Is there any indication in this document, Mr. Lehman, or did you know of any requirement in Florida Cities' permits at Waterway Estates to cease discharge of the effluent in 1981?
A. No.
MR. BAISE: Your Honor, I would ask that the paralegal take the chart, the top one I believe it is, excuse me, the bottom one, and have that marked as Florida Cities' Exhibit for identification 208.
And Mr. Lehman, I would ask that if you would take one of those felt tip pens and just put a circle around 1981, FDER issues an operating permit for Waterway Estates discharge –
MR. QUINN: Objection, Your Honor, several on this document. First, this document was not listed as an exhibit

Page 13

anywhere. Second, this document was given to us earlier this week, but it was not disclosed through which witness this document would be used. Third, this document upon examination is hearsay, hearsay within hearsay, and finally, Your Honor, this is a crutch for this witness to testify from.

The document is going to be doing the testifying, not the witness. The witness is here, he's the one who ought to be doing the testifying.

MR. BAISE: Your Honor, I'm only having it marked for identification purposes. I'm not going to move it into evidence. This is a very complicated project. There are a number of events which occurred here. The Government obviously has put in hundreds of documents we believe in order to sort of confuse the situation with respect to Waterway Estates. What we have presented here is a document that will help the trier of fact outline what occurred here at Waterway Estates, and because it is not going to be moved into evidence, we believe we can mark it for identification and for --

THE COURT: I need to know whether basically what you're presenting is this witness' testimony or whether you're basically asking him to testify from this document which you yourself say is not properly to be offered or received as an exhibit.

MR. BAISE: I did not say it was not going to be properly offered, Your Honor, I said it was going to be marked

Page 14

for identification.

THE COURT: You said you were not offering it.

MR. BAISE: That's right, I was not going to offer it in evidence, that's correct.

THE COURT: Right. So I need -- I need you to address this basic issue.

MR. BAISE: I'm using this particular writing under Rule 612 to refresh the witness' memory. It has been a number of years since he was involved in this particular project, and all I will do with respect to this witness and two others is merely confirm the dates after I have gone through the documents which confirm exactly what occurred.

So there is no new information, no new documents. It is merely an aid, a demonstrative aid in refreshing the witness' memory of events that occurred fifteen years ago.

MR. QUINN: Your Honor, this is a crutch, as it's going to be doing the testifying instead of the witness. It is not accurately in as a summary under Rule 1006 because the documents upon which it is based, I have no idea what they are, sir. It should not, clearly should not come in evidence, and second, this witness should not be allowed to rely upon it to refresh a recollection which has not even been established is not good right now.

MR. BAISE: I did not use to it refresh his recollection. He already testified with respect to the fact

Page 15

that Florida Cities' Waterway Estates had a permit dated April of 19 --

THE COURT: You indicated that part of your purpose of wanting to use this exhibit is that it will refresh the witness' recollection. Now if you want to try to qualify it, you can. He hasn't asked him any questions yet on this document. So, at this time, I'll defer ruling on this and we'll see where we go with it.

MR. BAISE: All I was going to do, Your Honor, is just ask him to mark April, 1981, which is indicated on this chart, FDER issues an operating permit for Waterway Estates. He already testified to this, this document is in evidence. All that marking would indicate is that we have covered that particular point.

THE COURT: Go ahead and mark it.

Mr. Lehman, you can mark that.

(Witness complying.)

BY MR. BAISE:

Q. Mr. Lehman, I direct your attention to Florida Cities' Exhibit Number 18. This, too, is in evidence, Your Honor.

Was this document in the file as you reviewed it when you took over your responsibilities at Waterway Estates and Florida Cities, Mr. Lehman?

A. It is the issuance of the NPDES Permit from the EPA.

Q. Are you familiar with this document?

Page 16

A. Yes.

Q. Directing your attention to page 2 of this document, Mr. Lehman, when was it issued?

A. It became effective September 24th, 1981.

Q. And when did the permit expire, Mr. Lehman?

A. The expiration date is midnight September 24th, 1986.

Q. And what are the receiving waters for the Waterway Estates Facility to discharge into?

A. It's listed as the Caloosahatchee River.

Q. I direct your attention, Mr. Lehman, to the third page entitled, effluent limits and monitoring requirements. Are you familiar with these permit limits for the Waterway Estates Facility?

A. Yes.

Q. Is there any limit of no discharge in this permit issued in 1981 by EPA, Mr. Lehman?

A. No, there is not.

Q. Mr. Lehman, I ask you to page through the twelve pages of the permit to the attachment on this document dated September 24, 1981, the NPDES Permit. The attachment is dated July 14, 1981. Do you find that document, Mr. Lehman?

A. Yes, I do.

Q. Please describe this document, Mr. Lehman.

THE COURT: Is this a letter?

MR. BAISE: Yes, it's a letter to Howard Zeller.

Page 21

A. So that the two could be coordinated.
Q. Is there any indication in the attachment that the Waterway Estates Facility has a no discharge wasteload allocation in 1986, Mr. Lehman?
A. No.
Q. I direct your attention to Defendants' Exhibit Number 23, dated June 30, 1986. What is this document, Mr. Lehman?
MR. BAISE: Wait just a second, Mr. Lehman. Do you have it, Your Honor?
THE COURT: Yes.
BY MR. BAISE:
Q. Okay.
Go ahead, Mr. Lehman. What is this document?
A. This is a permit denial letter or intent to deny letter on the NPDES application issued from the EPA to Florida Cities Water Company.
Q. Prior to this time, had EPA ever been to visit the Waterway Estates Facility, Mr. Lehman?
A. They typically come around on an annual basis for annual inspections at the facilities, so yes, I'm sure they had been there.
Q. Did State officials also come and visit the facility?
A. Yes. There was always someone from the Florida Department of Environmental Regulation with them.
Q. How frequently would they make these visits to the

Page 22

Waterway Estates Facility?
A. Typically annually. That was their goal.
Q. Would you accompany them on these visits?
A. I'd try to be available and normally would be, yes.
MR. BAISE: Excuse me, did you have a question, Your Honor?
THE COURT: No.
BY MR. BAISE:
Q. Excuse me.
On these visits, was it ever indicated that this Waterway Estates Facility had no discharge wasteload allocation?
A. No.
Q. So June 30, 1986, was the first time that you knew that the NPDES Permit might be denied for this facility?
MR. QUINN: Objection, leading, Your Honor.
THE COURT: Yeah. When was the first time is the proper way to ask the question.
BY MR. BAISE:
Q. Mr. Lehman, directing your attention to the third page of the document, dated June 30, 1986, would you summarize what this page represents?
A. This is the fact sheet attached to the letter of intent to deny from EPA outlining the synopsis of the application.
Q. And I direct your attention to page 2 of this document, and paragraph two. And would you please read paragraph two.

Page 23

A. Paragraph's entitled, proposed effluent limitation. And the paragraph reads, the final effluent limits for this facility to a canal to the Caloosahatchee River are, in quotations, no discharge.
Q. And would you read paragraph three?
A. Paragraph three is entitled, basis for final effluent limits and permit conditions. And the paragraph reads, the permit denial is based on a no discharge wasteload allocation developed by FDER on January 19th, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in a forthcoming administrative order.
Q. What was your reaction when you received this fact sheet in 1986, Mr. Lehman?
A. Came as a surprise that all of a sudden we're being told there is no wasteload allocation and especially when it's established by the FDER.
THE COURT: Excuse me, especially what; I didn't hear you?
THE WITNESS: Where the paragraph states that it was based upon studies by the FDER which is the Florida Department of Environmental Regulation.
THE COURT: I see.
BY MR. BAISE:
Q. What did you do immediately upon receiving this document, Mr. Lehman?

Page 24

A. Oh, I coordinated with Mr. Reeves.
Q. And who was Mr. Reeves?
A. He was the – let's see, what is his exact title. Would have been executive vice president. He was in charge of Florida Cities.
Q. You recall what you might have told Mr. Reeves with respect to this document?
A. I gave it to him and decided what to do.
Q. I direct your attention to page 3 of the fact sheet you have identified being attached to the June 30, 1986 letter. And directing your attention to paragraph ten, please summarize that, Mr. Lehman, please.
A. Okay.
That paragraph is entitled, the proposed scheduled for permit issuance, and it lists tasks and date timeframes for those task completions. The first one is fact sheet to applicant. And that would be June 30, 1986. The second was State certification request, also June 30, 1986. Public notice of permit denial, the date would be July 31st, 1986. And the last one is permit denial, issued August 4, 1986.
Q. Was there any consideration of shutting the plant down at this point, Mr. Lehman?
A. No.
Q. Why not?
A. There is no way to shut down a wastewater treatment

Page 25

plant. You're serving nine thousand people and it's, you know, there's no alternative.
Q. So what did you do, Mr. Lehman, after you received and met with Mr. Reeves with respect to this denial?
A. Well, one of the main things was coordinate with FDER, contact them, arrange to meet with them since the denial was being based on their studies, and find out the facts behind that.
Q. I direct your attention to Florida Cities' Exhibit Number 24. Did you prepare this document, Mr. Lehman?
A. Yes, I did.
Q. And this document being dated August 10, 1986?
A. Correct.
MR. BAISE: Your Honor, I would move this document into evidence because it has not been moved in prior to this time.
THE COURT: Be received.
BY MR. BAISE:
Q. Please describe this document for the record, Mr. Lehman?
A. It's a memorandum from myself to A. A. Reeves, and it is summarizing a meeting held at the Fort Myers district office of the Florida Department of Environmental Regulation in regards to the intent to deny the NPDES Permit.
Q. Did DER advise you in this meeting and does it reflect in this memorandum that the Waterway Estates Facility had a no

Page 26

discharge wasteload allocation?
A. At the time the memorandum was written?
Q. Yes.
A. No, there was not a no discharge at that time existing for the facility.
Q. In fact, why don't you read the first paragraph under the attendees, Mr. Lehman, into the record?
A. Okay.
The paragraph reads, the reference meeting was precipitated by the NPDES denial from the EPA. Waterway Estates Wastewater Treatment Plant has a valid DER operating permit with an expiration date of August 2nd, 1988. The DER recognizes the fact and will honor the existing permit.
Q. Did you or anyone at your direction make any calls to EPA to determine why they had issued this no wasteload allocation discharge permit, Mr. Lehman?
A. There probably was, but I don't recall specifically.
Q. Do you recall whether you were ever advised that DER made any phone calls with respect to the no wasteload allocation for the Waterway Estates Facility?
A. Not directly, no.
Q. What next did you do, Mr. Lehman, on behalf of Florida Cities after this meeting?
A. One of the requests and intents to the letter to deny was to develop a schedule to meet the intended no discharge

Page 27

compliance.
Q. Did you develop such a schedule?
A. Yes, I did.
Q. I direct your attention to Defendant's Trial Exhibit Number 25 dated September 16, 1986. Do you have that document in front of you, Mr. Lehman?
A. Yes, I do.
Q. And are you the Patrick J. Lehman who signed this letter to Ms. Connie Kagey on September 16th?
A. Yes.
Q. Please describe this letter for the record, Mr. Lehman?
A. This letter was in response to the intent to deny from EPA which requested a schedule for compliance with the no discharge and that is specifically what this letter was, was a proposed compliance schedule.
Q. I note that paragraph eight indicates completion date of 12-31-1988. Why was that date chosen, Mr. Lehman?
A. The completion and construction which is item seven, that was to coincide with expiration of the DER permit, and item eight followed that the following startup and placing the new facilities into service, that you were allowed so many months for compliance which this case allowed approximately four months to certify that the facilities were operating and meeting permit requirements.
Q. Did this list of tasks take into account all the levels

Page 28

of permitting that would be necessary for constructing any alternative at the Waterway Estates Facility?
A. It took into account normal permitting which would be FDER and on, you know.
Q. Did it take into account Lee County permitting requirements?
A. No, not anything that would be out of the normal.
Q. Was this a realistic schedule in your opinion at the time it was created by you?
A. It would have been extremely optimistic.
Q. Mr. Lehman, I direct your attention to page 2 of your letter of September 16, 1986. And would you read that paragraph into the record, please?
A. Okay.
That paragraph reads, the existing DER operating permit number DO36-72569 is valid through August 2nd, 1988. The DER has stated that there are no problems with the current operation and existing discharge limitations should remain in effect until expiration of the operating permit in 1988 per chapter 17-3 17-4 and 17-6 FAC for continual secondary wastewater treatment. No nutrient, and in parentheses, nitrogen and phosphorus limits should be placed on the discharge until the existing DER permit expires. Meanwhile, total N and total P will be monitored for effluent samples on a quarterly basis. All parameters will be monitored in

Page 29

accordance with Chapter 17-19, FAC.
Q. And what is total N and total P?
A. The N represents nitrogen and the P represents phosphorous.
Q. Thank you.
Mr. Lehman, directing your attention to --
MR. BAISE: Your Honor, I need to move this document dated September 16, 1986 marked as Defendants' 25 into evidence.
THE COURT: It'll be received.
BY MR. BAISE:
Q. Mr. Lehman, directing your attention to Defendants Exhibit, Florida Cities' Exhibit Number 27, do you have that document in front of you?
A. Yes, I do.
Q. Please describe this document for the record, Mr. Lehman.
A. This is a letter dated December 8, 1986 to Florida Cities Water Company, addressed to A. A. Reeves from Bruce Barrett, director of water management division at the EPA. And it is the actual letter notifying denial of the National Pollutants Discharge Elimination System Permit application for the Waterway Estates Facility.
Q. What did you do after receiving this letter, Mr. Lehman? Did you cease -- what did you do after receiving this letter?
A. Sir, coordinated with staff.

Page 30

Q. Why didn't you cease discharge at the Waterway Estates Facility since your permit had just been denied?
A. There again, there is no way to stop that. It's sanitary sewer service to nine thousand people. If you turn that off, what do you do?
Q. I direct your attention to five pages into the document. They are not numbered, I'm sorry to say. And the document I direct your attention to is titled, amendment to the fact sheet at the time of final denial. It's the next to the last page. Do you have it in front of you?
A. Yes, I do.
Q. What is this document?
A. It is an amendment to the fact sheet which the original fact sheet was the intent to deny.
Q. Who is it signed by, Mr. Lehman?
A. C. A. Kagey.
Q. Did you ever call Ms. Kagey with respect to this denial?
A. I don't recall if I did specifically, but could have.
Q. Mr. Lehman, would you take your felt tip pen and under the column 1986, circle EPA issues draft denial of Waterway Estates NPDES Permit, the 1986 column.
(Witness complying.)
And also the December notation, EPA issues final denial of Waterway Estates NPDES Permit based upon a no discharge wasteload allocation.

Page 31

(Witness complying.)
So Mr. Lehman, what did you and Florida Cities do after receiving this denial?
A. Part of the denial was, there be an administrative order forthcoming.
THE COURT: Say that again, please.
THE WITNESS: There would be an administrative order forthcoming as part of the -- since they denied the permit, that they would issue an administrative order.
BY MR. BAISE:
Q. What else did you do?
A. Started developing how to comply with it.
Q. I direct your attention to Defendants Exhibit Number 26, please. Do you have that in front of you, Mr. Lehman?
A. Yes, I do.
Q. A document entitled ESE at the top, meeting the challenge cover page on it?
A. Yes.
Q. What is this document, Mr. Lehman?
A. This is a proposal submitted from ESE which is an engineering consulting firm to do an investigative study of alternatives for the Waterway Estates Facility.
Q. Why were they submitting this letter to you, Mr. Lehman?
A. Florida Cities had requested from consultants to provide scope of services and costs to do evaluation of alternatives to

Page 32

bring Waterway Estates into compliance as to the proposed NPDES Permit.
Q. When did you start that process of seeking responses from engineering firms, Mr. Lehman?
A. It was in the latter part of '86.
Q. Is there a date on this letter?
A. I don't see one specifically.
Q. You know approximately when you received it?
A. It says it's in response to my letter dated November 10, '86, so given various time constraints to prepare it and provide a scope of services, I'm assuming that the very late part of '86 or early '87 timeframe.
Q. Mr. Lehman, directing your attention to paragraph two and would you read that paragraph into the record, please.
MR. BAISE: Excuse me, Your Honor, this has not been moved into evidence and I now propose to move it into evidence.
MR. QUINN: I'm sorry, which exhibit is that?
MR. BAISE: We're still on 26.
MR. QUINN: No objection.
THE COURT: It'll be received.
BY MR. BAISE:
Q. Now, you may read paragraph two, Mr. Lehman.
A. In developing our response to your request, we have focused on what we believe to be the most efficient approach to completing this study. Our analysis will be directed in

Page 33

establishing the wastewater effluent disposal and wastewater treatment process that will be economically feasible, environmentally permittable and will have the shortest time for implementation and construction.
Q. Why were you concerned about the shortest time for implementation and construction?
A. Obviously, we had a very short compliance schedule established that we submitted and we were going to make every effort to try to meet the end target of August, 1988.
Q. Mr. Lehman, I direct your attention to what is marked page 2 in a letter to Patrick J. Lehman from ESE. Could you please summarize what this page represents, Mr. Lehman?
A. This is a listing of specific tasks that would be performed in the scope of services by ESE to complete a total analysis and alternative study for various treatment processes for the facility.
It involves contacting the regulatory agency, developing flow projections for the facility, establishing the final technically feasible treated wastewater effluent disposal alternatives, identifying the constraints for each alternative, evaluate the disposal aspects that would be available, the options, and to develop the most appropriate treatment alternative for each feasible disposal alternative selected and to develop estimated capital and operating costs of each alternative, to evaluate the treatment and disposal

Page 34

alternatives.
The evaluation will be based on monetary costs, environmental impacts, the flexibility and reliability, constructibility and the implementation, and to select a recommended treatment process that would meet those above constraints. And then to prepare the preliminary design for the selected plan.
Q. Why was this all necessary?
A. It's all the normal process that you have got to start at the very beginning to develop flow projections. You can't just design a facility that is going to be there for twenty years to treat what you have today. You have to provide for the future, also.
And you have to do a very detailed analysis of each alternative. They all have their pros and cons, and site specific constraints. The size of the site was very restrictive. The need to meet a specific deadline provided a very specific timeframe to shoot for. There's just a lot of involvement.
Q. Did you direct ESE as to what alternatives it should consider?
A. We had some in mind that we knew were alternatives, whether they were feasible or not, didn't necessarily know. Plus, we relied on them to brainstorm any other alternatives that through their expertise that they would have available.

Page 35

Q. Now, Mr. Lehman, you testified you're a civil engineer. Why didn't you and your staff undertake this project?
A. Well, there wasn't much staff. We were pretty lean. There was myself, Rich Vorhees who was the construction engineer overseeing the construction going on through Florida Cities, and like I said before, there were ten wastewater plants and approximately another ten water treatment plants there that when it comes to significant projects like this, that is where consultants best come in that have the expertise and manpower to use on a specific project.
Q. I direct your attention to page 4 of this document with your name at the top of the page, Mr. Lehman. Beginning with a visit to the plant's site. Do you see that page?
A. Yes, I do.
Q. Please summarize C, D and E for the record, Mr. Lehman.
A. C, D and E?
Q. Yes.
A. These are specifics tasks that ESE had incorporated into their scope. C being, meet with the Florida Department of Environmental Regulation to discuss and obtain their opinion for the following effluent discharge alternatives; deep well injection, land application, reuse and discharge to the Caloosahatchee River. A maximum of a one day meeting is included in our fee. Paragraph D reads, meet with members of the North Fort Myers Utilities to determine the feasibility of

Page 36

receiving and treating wastewater flow generated within the Waterway Estates service area. If the North Fort Myers Utilities would agree to accept the wastewater flow, we'll ask them for approximate connection fees and monthly charges. Firm negotiations with utility company are not included in our fee. Paragraph E reads, contact the owners of the existing two golf courses located in the service area to investigate their desire to utilize the effluent for golf course irrigation and to determine approximate fee requirements.
Q. Now, did there come a time, Mr. Lehman, that you or Florida Cities hired ESE to undertake the tax action you have just outlined?
A. Yes. Florida Cities did hire ESE.
Q. When was that?
A. Shortly after this which would have been in the early part of 1987.
Q. So there was a contract signed between Florida Cities and ESE?
A. Yes.
Q. Would you take your felt tip pen and mark March, the first item under March, 1987, please, which reads, contract signed between Florida Cities Water Company and ESE to evaluate alternatives for the wastewater facility.
(Witness complying.)
Mr. Lehman, direct – withdraw that.

Page 37

How soon after hiring ESE did they start work, Mr. Lehman?
A. I recall they started immediately.
Q. Directing your attention to Florida Cities' Trial Exhibit Number 28, do you have that in front of you?
A. Yes, I do.
Q. It's a letter dated May 11, 1987?
A. Yes, sir.
Q. Please describe this letter for the record.
A. This is a letter addressed to A. A. Reeves, Florida Cities Water Company, written by John T. Marlar from the EPA. It's regarding the issuance of an administrative order regarding the Waterway Estates Wastewater Treatment Plant.
Q. Why did the Waterway Estates Facility have to have an administrative order, Mr. Lehman?
A. That comes –
MR. QUINN: Objection, calls for speculation as to the requirements for why – objection calls for speculation as to why an order had to be in place. Sorry.
THE COURT: Why don't you ask him first if he knows why. I'll sustain the objection at this point.
BY MR. BAISE:
Q. Are you familiar with 309 Orders from EPA, Mr. Lehman?
A. I became familiar, yes.
Q. Would you turn to the second page of the document. Is

Page 38

this an attachment to the letter dated May 11, 1987?
A. Yes, it is.
Q. Please describe this document for the record, please.
A. This is the actual order pursuant to Section 309, Clean Water Act, issued to Florida Cities Water Company, Waterway Estates.
Q. Did you review this document at the time it came in?
A. Yes, I did.
Q. Directing your attention to page 2, paragraph one, and the two columns under activity and due date, what was the purpose of these two columns, Mr. Lehman?
A. It provided activities which were specifically to submit progress reports and due dates listed for those items.
Q. And when was the facility to cease discharging?
A. The final task there is listed as, meet final requirements by ceasing discharge and the due date listed is September 30th, 1988.
Q. Is there anything in the order that suggests that the facility put in AWT facilities by September 30, 1988?
A. No.
Q. I would ask you to take your pen and circle under May of 1987 column, the item, EPA issues an administrative order. (
(Witness complying.)
I direct your attention, Mr. Lehman, to Defendants' Exhibit 194. And it's Plaintiff's Exhibit, Your Honor, 367.

Page 39

It's already in evidence.
THE COURT: Plaintiff's 367?
MR. BAISE: 367. Ours is 194.
BY MR. BAISE:
Q. Are you familiar with this document, Mr. Lehman?
A. Yes, I am.
Q. What is this document?
A. This is the preliminary engineering draft report prepared by ESE.
Q. Is this the report that you recently discussed in the letter they sent to you?
A. Yes, this is the report they developed under that contract, yes.
Q. Look at the first page. It says preliminary engineering draft reports. Was there a subsequent report after this one by ESE, Mr. Lehman?
A. I can't remember if there was or not.
Q. Can you read the writing that is below, draft report, which is circled, and make out what that writing is, and is that your handwriting?
A. Draft report, circled, and underneath it, looks like this says, this is final.
Q. When was this report submitted to you and Florida Cities, Mr. Lehman?
A. On the bottom is dated August, 1987, with the eighth

Page 40

penciled in.
Q. Is there any doubt in your mind that this is the ESE draft slash final report submitted to you in August, 1987?
A. No.
Q. I would ask you to – excuse me withdraw that.
Mr. Lehman, I direct you to page 1.1 and the page numbers are marked in the upper righthand corner. Do you see that page 1.1, Mr. Lehman?
A. Yes, I do.
Q. And I direct your attention to paragraph one, introduction. Would you please summarize that paragraph?
A. That's giving the basic background that Florida Cities Water Company owns and operates a 1.08 MGD advanced wastewater treatment plant at the Waterway Estates location and provides a present average daily flow is approximately 0.85 MGD with discharge into an adjacent canal flowing into the Caloosahatchee River, and then summarizes that the EPA has ordered Florida Cities Water Company to cease discharge of the effluent into the canal at the earliest date practical, but no later than September 30, 1988.
Q. And I direct your attention to paragraph 1.2, and would you read that into the record, Mr. Lehman?
A. That paragraph is entitled, the purpose?
Q. Correct.
A. The purpose of this report is to develop, study, and

Page 41

evaluate new effluent discharge and wastewater treatment process design alternatives and recommend the most cost effective and environmentally permittable alternative for the Waterway Estates Wastewater Treatment Plant.
Q. And I direct your attention to page 1.2, the next page. And would you summarize paragraph three?
A. The entire section here is a scope of services that ESE would do or did do. And specifically paragraph three was, contact the Florida Department of Environmental Regulation, Lee County, and other agencies that could have an impact on the study.
Q. Did ESE do that?
A. Yes.
Q. Directing your attention to paragraph five, what was the purpose of that paragraph?
A. As part of the study, that ESE would establish and define a maximum of five technically feasible treated wastewater effluent disposal alternatives and the major constraints for each alternative.
Q. Who came up with the number of five technically feasible effluent disposal alternatives, Mr. Lehman, if you know?
A. I don't know specifically. I'm sure it was probably a joint effort in negotiation between Florida Cities and ESE.
Q. And I direct your attention to paragraph six. Would you please read that into the record?

Page 42

A. Okay.
Paragraph six reads, evaluate all disposal alternatives developed above and select only those alternatives that will be feasible to implement within the time limitations.
Q. And what were the time limitations?
A. There again, by the administrative order and the schedule set forth in that, we were shooting for the target date to comply with, I think it was, September, 1988.
Q. Paragraph nine, would you read that into the record, please?
A. Paragraph nine reads, evaluate the treatment and disposal alternatives, evaluation will be based on monetary costs, environmental impacts, flexibility, reliability, constructibility and implementation.
Q. To your knowledge, were all of these tasks undertaken and completed by ESE and incorporated into this report?
A. Yes, sir.
Q. I next direct your attention to page 2.2. Do you see that page?
A. Yes, I do.
Q. And would you read into the record paragraph C.
A. This is under conclusions of the report?
Q. Yes?
A. Paragraph C specifically reads, water surface discharge of the treated effluent from the new Waterway Estates

Page 43

Wastewater Treatment Plant is the most viable alternative for disposal of effluent.
Q. Was this ESE's conclusion or was this your conclusion and ESE's, Mr. Lehman?
MR. QUINN: Objection, leading, Your Honor, and also calls for speculation.
MR. BAISE: Withdraw the question.
BY MR. BAISE:
Q. Whose conclusion was this, Mr. Lehman?
A. It is ESE's conclusion in the report.
Q. Did you have any input into this conclusion?
A. No.
Q. Did Florida Cities have any input into this conclusion?
A. No, it's based specifically on the data within the report.
Q. I direct your attention to page 2.3 under recommendations. You see that page?
A. Yes, I do.
Q. What were the recommendations of ESE to you and Florida Cities in August of 1987?
A. They provided specifically for recommendations listed under this section; the first one being that Florida Cities Water Company should apply to the Florida Department of Regulation for a wasteload allocation to discharge 1.4 MGD into the Caloosahatchee River, and the second recommendation was for

Page 44

Florida Cities to make an economic comparison between implementing the proposed AWT facilities and diverting the raw wastewater generated by the service area of Waterway Estates to the North Fort Myers Utility Wastewater Treatment Plant for treatment.
THE COURT: Where are you reading from?
MR. BAISE: It's paragraph B, Your Honor.
THE WITNESS: I'm paraphrasing, not reading.
THE COURT: I understand, I understand.
THE WITNESS: Okay.
The third recommendation is if the construction of the new advanced wastewater treatment plant is more feasible, it is recommended that Florida Cities Water Company authorize the design of the facility as soon as possible.
And the last recommendation was for Florida Cities Water Company to contact the EPA to update the agency on the steps that Florida Cities Water Company is taking to comply with the consent order and also to make a reasonable time extension beyond the established September 30, 1988 date to continue utilizing the existing point of discharge.
BY MR. BAISE:
Q. Why was a reasonable time extension needed beyond September 30, 1988, Mr. Lehman?
A. Based on the findings of this report, there was a lot of -- a lot involved with the process of upgrading the plant, no

Page 45

matter which alternative you were to undertake. And the time limitations were significant to doing the actual recommendations here, which was, do some further analysis, go out and solicit, obtain a design consulting firm to do the actual design, to do the permitting involved with that design prior to construction, and then to actually complete construction and certify operation of the facility.

Q. Why couldn't this be done faster, Mr. Lehman?

A. It's a long and involved process. It takes due prudence to complete such a project.

Q. Mr. Lehman, I direct your attention to page 6.1 in the ESE report of August, 1987. And I specifically direct your attention to paragraph 6.3. Do you find that page and that paragraph?

A. The first paragraph of that?

Q. No, 6.3?

A. Right, right.

Q. But it is page 6.1. You find that?

A. Yes.

Q. Okay.

Tell me what 6.3 means, Mr. Lehman?

A. 6.3 is evaluating the surface water discharge alternative for effluent disposal. And specifically it says, the proximity of the Waterway Estates Wastewater Treatment Plant's present site to the Caloosahatchee River will probably offer one of the

Page 46

best alternatives to dispose of the treated effluent.

Q. And I direct your attention to 6.2, the third paragraph, beginning with, the FDER. Would you read that into the record, please?

A. Oh, page 6.2?

Q. 6.2, yes.

A. All right.

Q. Third paragraph on page 6.2.

A. That paragraph reads, the FDER has recommended that Florida Cities Water Company applies for a wasteload allocation for the ultimate wastewater treatment plant capacity. Presently the FDER has not allocated all the pollutant loads that can be discharged into the river.

Q. And dropping down to the next paragraph, would you read that paragraph in, the four points under that paragraph?

A. That paragraph reads, as discussed above, this effluent disposal alternative provides good advantages for implementation. The advantages of this alternative offer are, one, proximity of the treatment plant to the river, two, effluent treatment requirements can be achieved, three, water quality simulation model is not required for wasteload allocation, and four, construction and operating permits can be obtained within short period of time.

Q. Was this the alternative eventually chosen by Florida Cities?

Page 47

A. Yes, it was.

Q. Did the item four turn out to be true?

A. No, it did not.

Q. Did this report look at other alternatives other than discharging into the river?

A. Yes, it did.

Q. I turn your attention to page 6.3. Do you have that in front of you?

A. Yes, I do.

Q. And I direct your attention specifically to paragraph 6.4.1. Please describe what slow rate means in this paragraph as well?

A. Slow rate is typically referred to as land irrigation where you take large areas of land and apply smaller quantities of water which can be utilized for irrigation and not cause any runoff.

Q. And was this alternative examined by ESE?

A. Yes, it was.

Q. And what factors did ESE examine with regard to offering this alternative to Florida Cities to cease its discharge?

A. Primarily the ability to have the adequate land space available, as I said, that you couldn't have any runoff and it is applied at a low volume which would require larger areas of land availability.

Q. Was the land available for the discharge from Waterway

Page 48

Estates under the study conducted by ESE?

A. No, it was not.

Q. What land options did ESE actually evaluate, Mr. Lehman, according to this report?

A. Specifically they looked at availability of golf courses, typically public park lands, landscaped areas, and whether there would be any potential sod or agricultural uses within the area, although that would be minimal on a residential area.

Q. And what conclusion did ESE come to with respect to spray irrigation being used on golf courses and other public lands as an alternative for Waterway Estates' discharge?

A. The basic conclusion was that there was not enough land availability within the service area.

Q. I direct your attention to page 6.5 and the last paragraph on page 6.5, and the last sentence or the last line on 6.5 beginning with, therefore. Does this paragraph still talk about spray irrigation?

A. Yes.

Q. Would you read the sentence at the bottom of 6.5, at the top of 6.6?

A. Yes, sir. That reads, therefore, the application of the treated effluent on to the land at slow rate is not feasible in this project. Did you want more?

Q. No, thank you.

What was the next alternative reviewed by ESE for the

Page 49

discharge from Waterway Estates, Mr. Lehman?
A. The next alternative is listed as rapid infiltration.
Q. And what does that mean in layman's language?
A. Those are often referred to as percolation ponds. That is where you build a pond and store the water where the land is more porous and effluent would actually infiltrate into the ground surface.
Q. And what does this report say with respect to how many acres would be needed for percolation ponds for Waterway Estates?
A. It states in here, an area of approximately 8.6 acres is required for the bottom of each pond.
Q. And how many ponds would have been required for Waterway Estates?
A. It's stated, a minimum of three ponds required.
Q. Is Waterway Estates located in a residential area?
A. Yes, it is.
Q. And what conclusion did ESE come to with respect to percolation ponds, Mr. Lehman, as an alternative for Waterway Estates discharge?
A. There again, it would require significant land availability to construct the ponds. And they did not find the land availability within the service area to sufficiently provide for this alternative.
Q. Directing your attention to page 6.7, and specifically

Page 50

paragraph 6.5 on 6.7, what is -- please describe what is on page 6.7, Mr. Lehman?
A. This is the alternative for underground injection which is a lot of times referred to as deep well injection. It would be synonymous.
Q. And what was the conclusion of ESE with respect to deep well injection for the discharge from Waterway Estates?
A. They concluded -- their conclusion was that underground injection as an alternative to the disposal of the effluent from Waterway Estates is not to be considered any further as a viable alternative.
Q. And why was that?
A. They have specific reasons stated in the report.
Q. What were those reasons?
A. Identified in the order, the first reason is, high risk associated with the performance of injection system after a large capital investment. Second reason being, a possibility of regulatory agencies opposing the underground injection, and the third reason being, no available time between August, 1987, and September, 1988, to have the injection well in operation and approved by FDER.
Q. Are you reading from the conclusions on page 6.8?
A. Yes, I am.
Q. Mr. Lehman, directing your attention to page 6.10, please summarize for the record this summary of the ESE report. Look

Page 51

at section 6.7.
A. 6.7?
Q. Correct.
A. Okay.
That is the summary and conclusions of this report. And it identifies the five effluent disposal alternatives that were considered and the determination for those alternatives.
Q. And look at the paragraph beginning, it was determined. Would you read that paragraph and four points into the record?
A. It was determined that four of the effluent disposal alternatives are not viable alternatives. These alternatives and the reasons that make them unfeasible alternatives are as follows: One, slow rate land application. Land is not available. Two, rapid infiltration. Land is not available. Three, underground injection. Two years minimum to obtain operating permit. High risk associated with the performance of the well. Probably regulatory agencies will not issue deep well injection operating permits after the first five years. And four, wetlands. No wetland available within a three mile radius of the Waterway Estates site.
Q. And the last paragraph, please. Read it.
A. It was concluded that the surface water discharge alternative is the only feasible and achievable alternative to be implemented for this project within the time constraints.
Q. Did you influence any of the conclusions in this report,

Page 52

Mr. Lehman?
A. No.
Q. You know of anyone at Florida Cities who influenced the conclusions of this report?
A. No.
Q. Then, Mr. Lehman, I would direct your attention to Defendants' Exhibit Number 60, and to a memorandum attached to Florida Cities' Exhibit Number 60. And while he's getting that document, what happened after Florida Cities received this report in August of 1987, Mr. Lehman?
A. Staff reviewed it and analyzed the alternatives and recommendations that were in -- were put into the report and tried to see if there were any other extenuating circumstances that could be improved upon.
Q. Why was that necessary?
A. Well, one of the items was the deep well injection and the potential to go to North Fort Myers Utilities and to look into that at a more indepth -- take a more indepth look at that aspect. And also, the potential to perhaps utilize some existing facilities and relocate the equipment from other Florida Cities' sites to the Waterway Estates Facility.
Q. Why didn't Florida Cities just start building immediately?
A. You can't just enter into a large project like this blindly. You've got to make sure you have taken the public

Page 53

interest into all aspects and are doing a prudent project that provides the best service, both technically and economically, to the public.
Q. I direct your attention to Defendants' Exhibit Number 60, which is, as I noted, Your Honor, has a memorandum attached to it, but this was how the document was produced and there's a memorandum dated May 29th, 1991.
MR. BAISE: Your Honor, I'm advised that the memorandum is from Tompkins to Bradtmiller, is Plaintiff's 371, but that particular memorandum does not have this October 27th, 1987 memorandum attached to it. So, I need to -- excuse me -- it is 371, so both documents are in. Just the second attachment then -- okay, excuse me.
371, that is the French to Reeves memo is 371. Thank you.
Excuse me, Your Honor, it is in evidence.
THE COURT: All right.
So what are you wanting him to look at?
MR. BAISE: I'm going to take him to this memorandum.
THE COURT: All right.
MR. BAISE: 371.
THE COURT: Plaintiff's 371?
MR. BAISE: Yes.
THE COURT: All right.
MR. BAISE: Reason it was confusing, Your Honor, I

Page 54

was going to move our 60 in, but since you advised us we didn't have to duplicate the records, I had not gone back and corrected my notes to myself on all my documents.
BY MR. BAISE:
Q. So looking at, Mr. Lehman, you're looking at document 60, which is the same as Plaintiff's 371. Are you looking --
THE COURT: Excuse me. He's looking at 371?
MR. BAISE: You have been given 371. I'm sorry, thank you.
THE COURT: All right.
BY MR. BAISE:
Q. What is that document, Mr. Lehman?
A. This is a memorandum from Bob French to Tony Reeves dated October 27, 1987.
Q. What is the purpose of this? Did you participate in preparing this document, Mr. Lehman?
A. I provided some technical input to it, yes.
Q. What is your understanding the purpose of this document is, Mr. Lehman?
A. It was to provide a further analysis of the alternatives presented by ESE and perhaps some alternatives to those to help reduce costs and have a better project.
Q. Let's go through the alternatives staff evaluated in October of 1987, Mr. Lehman. Look at the bottom paragraph on page 1. It begins, there are two other alternatives that were

Page 55

not explored in adequate detail. Are you familiar with that paragraph?
A. Yes.
Q. What were those alternatives?
A. The first alternative was to do a tie-in in the North Fort Myers Utility and utilize their treatment system and disposal system which was deep well. And I believe the second one was utilizing some existing facilities from the Fiesta Village Treatment Plants and to relocate that to the Waterway Estates Facility.
Q. Directing your attention to the bottom of that paragraph, four lines up from the bottom, beginning with the word "there is"; would you read that into the record, please?
A. There is some controversy among leading experts regarding the requirement of the Department of Environmental Regulation for a redundant production well in case of failure of the primary injection well.
Q. Read the next sentence, please.
A. While several utilities around the State have been required to install only one production well, there is concern that the regulations may be modified which would require the additional installation of a redundant disposal well.
THE COURT: Dispose -- all right.
THE WITNESS: Disposal facility. I'm sorry.
BY MR. BAISE:

Page 56

Q. The next sentence, please.
A. Since secondary effluent could be injected directly into the disposal zone, the existing treatment process with filtration would be adequate, assuming the plant operated within the appropriate design rating.
Q. And what was the cost assumed for deep well injection monitoring system for effluent reuse that is indicated on that page, Mr. Lehman?
A. There are two bottom line project costs. One, if a single injection well were to be allowable, which would be four point one million dollars, approximately, or if a redundant second injection well would be required, which would increase the total cost to over five point seven million dollars.
Q. Starting with the paragraph after the line total project costs, can you tell us what that paragraph means, Mr. Lehman?
A. Did you want me to read it or summarize?
Q. If you could summarize it? First off, what is the alternative that is being examined?
A. That is alluding to the alternative of connecting to the North Fort Myers utility and this was proposed by that utilities consultant which is Post, Buckley, Shew and Jernigan and it identifies that some internal line improvements and expansions would be required within the Waterway Estates service area as well as construction of approximately two and a half miles of force main outside the service area in order to

Page 57

tie-in to the North Fort Myers Utility System.
Q. How many miles would that mean Florida Cities would have to construct to hook up to this system, Mr. Lehman?
A. I think in total, it was somewhere around five miles.
Q. Five miles to hook up to the North Fort Myers Facility?
A. Yes.
Q. What would be the problems of trying to construct the line five miles?
MR. QUINN: Objection, assumes there would be problems.
THE COURT: Well, sustained. He hasn't in his testimony said there would be problems yet.
BY MR. BAISE:
Q. Excuse me, Your Honor.
Mr. Lehman, looking at the bottom paragraph of that page, which is not numbered, is there any indication of what would have to be done to hook up to the North Fort Myers Facility?
A. Yes. That paragraph depicts a layout of, you know, a proposed layout of the force main in order to get from the existing Waterway Facility up to the North Fort Myers Utility Facility.
Q. Why don't you just read that paragraph starting with, the pump station to hookup to the North Fort Myers Facility, Mr. Lehman, covering the five miles.
A. Okay. The entire paragraph?

Page 58

Q. Yes, please. I'll tell you when to stop. Start at the beginning of the pump station.
A. Okay.
That reads, the pump station W-1 would be upgraded to provide pump's capability to conveying wastewater collected from south of Hancock Bridge Parkway and pumping initially the entire length of force main to the connection with North Fort Myers Utilities on Bayshore Road. A twelve inch PVC force main thirty-three hundred lineal feet long would connect pump station W-1 with the existing twelve inch force main on Orange Grove Boulevard. A six inch force main, I believe that was B, would connect the Orange Grove Boulevard pump station to the existing six inch PVC, unused in parentheses, force main on Pondella Road and April Lane. Flow from the Orange Grove pump station would be split hydraulically based on the back pressure and flow, either north or south on Orange Grove Boulevard out of the pump station. A fourteen inch ductal iron pipe force main would be constructed on Moody Road between Hancock Bridge Parkway and Pondella Road, then east along Pondella Road. A sixteen inch ductal iron pipe force main would pick up the fourteen inch force main immediately to the east of Hancock Creek on Pondella Road, follow a zig-zag course north and east to the previously mentioned tie-in with North Fort Myers Utilities.
Q. That's sufficient, Mr. Lehman. That would cover

Page 59

approximately the five miles you mentioned earlier in your testimony?
A. Yes. I think it was somewhere around five miles of total pipeline.
Q. Would that pipeline have to be constructed through a residential facility area?
A. Absolutely, yes.
Q. Were there permits -- would there be permits necessary to construct all of these facilities through the residential areas?
A. Yes.
Q. What was the conclusion of the Florida Cities staff after evaluating the North Fort Myers option, Mr. Lehman?
A. I believe it was more costly than the other preferred alternative.
Q. And what alternatives did Florida Cities eventually choose with respect to ending the discharge at the Waterway Estates Facility, Mr. Lehman?
A. That was the surface water discharge recommended through ESE's report with some modification by being able to utilize existing facilities from the Fiesta Village Wastewater Treatment Plant and reuse them at the Waterway Estates site.
Q. Why were these decisions not being made sooner and faster, Mr. Lehman?
A. It all takes time in order to make a prudent decision.

Page 60

THE COURT: You --
THE WITNESS: As you gather more information --
MR. BAISE: Wait till Your Honor finishes, Mr. Lehman.
THE COURT: That's all right. I thought he was through with his answer. Go ahead.
THE WITNESS: Well, in order to make a prudent decision and gathering of data, it's a costly project and you can't afford to make mistakes you're going to have to live with for years down the road.
THE COURT: Let's take a recess till 11:00 o'clock.
(Thereupon, a brief recess was taken.)

Page 61

THE COURT: All right. Mr. Baise.
MR. BAISE: Thank you, Your Honor.
BY MR. BAISE:
Q. Forgive me, Mr. Lehman. We've changed reporters so I couldn't have the last question read back to me, but I will hopefully not propound a duplicate here. But just in case I didn't ask this question, what conclusion was reached by the staff of Florida Cities with respect to an alternative to be used at Waterway Estates in 1987 to end the discharge into the canal?
A. It was to accept the recommendation of ESE's reports for AWT treatment with surface water discharge with some modification by reutilizing facilities that were surplus at the Fiesta Village site and reutilizing them at Waterway Estates.
Q. And why was this decision made by you and the Florida Cities staff?
A. It was based on, number one, the recommendations of ESE in their report; plus after further analysis of the potential to tie in with North Fort Myers and the advantages still -- it was still more advantageous to utilize the -- upgrade the AWT and surface water discharge.
Q. What was the next step you took after -- you and Florida Cities took after making this decision in October of 1987?

Page 62

A. With the preferred option of what we wanted to do, then we could solicit and look for an actual design consultant to do the work.
Q. Could you please outline what specific steps were taken after October of 1987?
A. Generally, there would have to be a scope of services developed, a fairly detailed scope of services identifying what you wanted to accomplish in the design, bidding, construction phase by the -- the services to be performed by the consultant, so that they could prepare an adequate proposal that they could perform the work and develop a fee schedule to actually do that work.
Q. How long does that take?
A. To adequately do that can -- two, three, four weeks to make a -- to put everybody's heads together and develop a common scope of services.
Q. So, in October you made the decision to go with the AWT facility. And would you please circle October 1987 on the chart that FCWC reviews the ESE report, develops alternatives and selects the AWT option, under the 1987 column, please.
A. (The witness complied with the request of counsel.)
Q. Then what next happens after the staff has put its head together and come up with alternatives for a scope of work?

Page 63

A. Once you have developed a solid scope of services, then you can do the actual solicitation to engineering design firms; and they, in turn, will evaluate the proposed scope and actually pinpoint the exact tasks that they will provide and do that in enough detail that they can identify a cost associated with that so you can develop a contract.
Q. So, why didn't you cease discharging since you knew you were under this order from EPA at this time, Mr. Lehman?
MR. QUINN: Objection. This has been covered before, sir. It was asked and answered.
MR. BAISE: We're at a different period of time. They have taken a number of accounts --
THE COURT: All right. I'll overrule the objection. Go ahead, sir. Answer the question.
THE WITNESS: There again, there's no way to take that out of service until there was some alternative available for treatment.
BY MR. BAISE:
Q. I direct your attention to Florida Cities' Trial Exhibit Number 30. Do you have that in front of you, Mr. Lehman?
A. Yes, I do.
Q. Would you please identify this document for the record, Mr. Lehman?
A. This is a letter dated January 26th, 1988, written by

Page 64

myself and addressed to Peter McGarry of the EPA, and it is a progress report which is in compliance with the administrative order that we were operating under.
Q. And why did you have to write Mr. McGarry?
A. As stated previously in the administrative order, there were routine status reports where we would keep the EPA informed as far as our progress.
Q. Were these monthly status reports?
A. No, I don't think they were that frequent. The specific dates are identified in the administrative order. I think they were more quarterly or six months.
Q. Okay. And what did you advise Mr. McGarry on January 26th, 1988, Mr. Lehman?
And you are the same Pat Lehman that signed this letter on January 26th?
A. Yes, sir.
Q. What did you advise him?
A. Specifically, we told him the completion of the items, including the ESE report, which evaluated the alternatives and feasibility of those alternatives, and that the chosen -- or the preferred most feasible option is to upgrade the facility to achieve advanced wastewater treatment with discharge to the Caloosahatchee River as the optimum system, and also informed him that a waste load allocation request had been submitted to the Florida

Page 65

Department of Environmental Regulation and it was under review at the time of the writing of this letter; and that engineering design proposals had been solicited in December of '87 and that those proposals were currently under review.
Q. And what is an engineering design proposal?
A. That is proposals from the engineering consultants themselves that would specifically identify the tasks that they would perform, the actual work they would perform in order to do the actual design; prepare the plans and specifications that would allow for construction companies to bid on those plans and specifications, and the engineering fees that would be attached to provide those services.
Q. Why did it take from October 27th of '87 until December of '87 to solicit engineering design proposals?
A. Like I said before, the staff had to develop proposed scope of services, general tasks. And then once you solicit the consultants, they go through it with a fine tooth comb because their fees are based on those specific tasks, and so they have to go through detail by detail of the actual tasks that they see involved and identify those tasks in order to put a proper fee attached to that and that -- you know, that right there, for the consultants to review the proposals and prepare a good submittal -- you know, typically a month turnaround would be the minimum.

Page 66

Q. Why couldn't you just eliminate that layer and start building?
A. You couldn't just go out and give a blank check to a consultant. That would just be absurd. It would be, you know, unjust to the public and ratepayers. Business just isn't done that way.
Q. Did there come a time in 1988 when you did hire an engineering firm to design the AWT plant and outfall pipeline, Mr. Lehman?
A. Yes, there was.
MR. BAISE: Your Honor, I would like to move Florida Cities' Trial Exhibit Number 30 into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. I direct your attention, Mr. Lehman, to Florida Cities' Exhibit Number 190. Do you have 190 in front of you, Mr. Lehman?
A. Yes, I do.
Q. Tell us what 190 is.
A. This is an agreement for professional engineering services between Florida Cities Water Company and Source, Inc.
Q. Who is Source, Inc.?
A. It's an engineering consulting firm.
Q. How many engineering consulting firms bid on this

Page 67

project, if you recall?
A. I know at least two. Typically, we did three. I'm assuming we did at least three, but I'll well aware of at least two.
Q. What does this document represent, Mr. Lehman?
A. This is the actual agreement which sets forth the services that the engineer would provide in order to accomplish the design and construction of the facilities and also the fees that are associated with those services.
Q. I direct your attention to the page marked Number 1 at the bottom and it's titled "Agreement" at the top, which is Page 2 in actuality. Do you have that Page 1 in front of you?
A. Yes, I do.
Q. Is this the page that describes the engineer's services for building the AWT facility at Waterway Estates?
A. Yes, it does.
Q. Would you just quickly summarize the first four paragraphs and what the engineer had to do under this contract?
A. They were responsible for all the boundary and topographic survey that would be associated with the plant and also the outfall pipeline.
They would prepare the permit applications and drawings for construction of the proposed seawall

Page 68

construction along the south property line and also fill that would be required with that.
They would prepare and provide documents, drawings, renderings and permit applications for plant site zoning and Lee County development order filing.
They would attend staff conferences, zoning board and County Commission meetings as required by Florida Cities Water Company.
And they would prepare the engineering design, permit, zoning, bid and construction documents, and then those are itemized further in detail.
Q. Why would you have an engineering firm prepare permit applications?
A. The applications themselves typically demand the technical input, the design proposed drawings, the specifications for construction.
Q. Why did the engineer have to prepare and provide documents for zoning for Lee County?
A. There again, they would have all the technical expertise to prepare the technical data that would be incorporated into any permit request.
Q. Why wouldn't you or Florida Cities prepare these documents, Mr. Lehman?
A. We wouldn't have the detailed knowledge that the consultant that we hired had to do those services. They

Page 69

have all the background. They have done all the data research, and it's much more prudent for them to proceed with the preparation of those documents.
Q. Wouldn't it be faster for Florida Cities to prepare these permit documents?
A. No, because we wouldn't have had the technical expertise to do it.
Q. I direct your attention to Page 2 and marked Page 2 at the bottom of the page that has a listing of Paragraphs C through J. Do you see that Page 2, Mr. Lehman?
A. Yes, I do.
Q. I direct your attention to Paragraph H. Would you read Paragraph H into the record, please?
A. Paragraph H reads: Preparation and filing of permit applications to the State of Florida Department of Environmental Regulations, U.S. Corps of Engineers and U.S. EPA for construction and effluent discharge permits, including the NPDES permit for discharge to the Caloosahatchee River; includes plans, specifications and permitting for the subaqueous outfall construction.
MR. QUINN: Your Honor, I would move to strike that testimony. This document has not been entered into evidence. However, I will withdraw the objection if it is.
MR. BAISE: My apologies, and I move it into evidence, Your Honor.

Page 70

MR. QUINN: Withdraw the objection, Your Honor.
THE COURT: It will be received.
BY MR. BAISE:
Q. Why was this necessary, Mr. Lehman?
A. There again, the permitting requirements, that all appropriate permits would have to be filed for and that the plans and specifications in order to get those permits would have to be prepared, and that would be tasks performed by the consultant.
Q. Was this agreement actually signed between Florida Cities and Source, Incorporated, Mr. Lehman?
A. Yes, it was.
Q. Do you know what day or what month, approximately?
A. I don't know the specific date. I'm assuming in the earlier part of 1988, the first quarter, somewhere in that time frame.
Q. Mr. Lehman, I would ask you to circle under 1988 Source Engineering firm hired to design AWT plant and outfall pipeline, on that exhibit marked for identification purposes only.
A. (The witness complied with the request of counsel.)
Q. How soon after signing this contract did Source begin its work, Mr. Lehman?
A. I'm sure they started immediately upon having a contract.

Page 71

Q. Mr. Lehman, I direct your attention to Florida Cities Exhibit 193. Do you have that document in front of you?
A. Yes, I do.
Q. Please identify this document for the record.
A. This is a letter written by myself and addressed to Priscilla Oliver at the EPA. It's dated March 10th, 1988. And this is another progress report on Waterway Estates in accordance with administrative order.
MR. BAISE: Your Honor, I would move this Trial Exhibit 193 into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Specifically, what did you advise Ms. Oliver in 1988? And who is Ms. Oliver?
A. Ms. Oliver, I met her -- she had been down to do some of the inspections on the facilities, and somewhere I must have been directed to forward the progress reports to her. Specifically items within this -- there are eight specific items listed in here as far as updates.
Q. I direct your attention to Paragraph 7, Mr. Lehman.
A. Okay. Paragraph 7 --
Q. And would you read that into the record, please?
A. Yes. Paragraph 7 specifically has: Agreement for engineering services awarded to Source, Inc., to prepare detailed design and specifications for upgrading Waterway

Page 72

Estates' wastewater treatment with discharge to Caloosahatchee River.
Q. Does that help refresh your memory as to when the Source contract may have been signed?
A. That was obviously prior to March 10th of '88. Somewhere in that time frame, early '88, the earlier part.
Q. I direct your attention to the second page of that letter, Paragraph 8. Would you read that into the record, please?
A. Paragraph 8 reads: Florida Cities' Water Company letter dated March 1st, 1988, to DER containing proposed compliance schedule for Waterway Estates wastewater treatment plant.
Q. Do you know -- or do you recall what compliance schedule was contained in that letter of March 1, 1988?
A. I don't know right offhand the specifics, but...
Q. Was an extension requested?
A. Yes.
Q. I direct your attention to Florida Cities' Trial Exhibit Number 31.
MR. BAISE: These are the two documents, Your Honor, which have been separated, and the second one is Florida Cities' Number 52. One is the letter of August 31st, 1988, to Mr. Reeves, and attached to it was a Section 309 order, but the two documents got separated in numberi

Page 73

BY MR. BAISE:
Q. Mr. Lehman, are you familiar with the letter identified as Defendant's Exhibit Number 31?
A. Yes.
Q. Do you recall reviewing this letter at the time it was received by Florida Cities?
A. Yes.
MR. BAISE: Your Honor, I would move 31 into evidence -- 52 has already been moved into evidence --
THE COURT: It will be received.
MR. BAISE: -- so that we have these two together. Thank you.
BY MR. BAISE:
Q. Mr. Lehman, I direct your attention to 52, Exhibit 52. What is that document?
A. This is an amendment to order pursuant to Section 309, Clean Water Act. It's an amendment to the administrative order which was previously received by Florida Cities Water Company.
Q. And what are the new dates, Mr. Lehman?
A. The revisions for the specific activities were to start construction February 1st, 1989; complete construction May 1st, 1990, and meet final requirements by ceasing discharge November 1st, 1990.
Q. Why was this extension necessary to cease discharging

Page 74

at the Waterway Estates facility, Mr. Lehman?
A. Looking at the time constraints and factors involved with what needed to be done, that -- an extension was necessitated.
Q. Mr. Lehman, would you take your red felt pencil and circle under the column 1988 under August EPA modifies construction schedule with administrative order 87-085 to cease discharge by November 1990, please?
A. (The witness complied with the request of counsel.)
Q. Mr. Lehman, I direct your attention to Defendant's Exhibit 33. Do you have that in front of you?
A. Yes, I do.
Q. Please identify this document for the record.
A. This is the temporary operating permit issued by the Florida Department of Environmental Regulation. It's dated September 29th, 1988, specifically for the Waterway Estates facility.
Q. And turning to Page 2 of the document, which is Page 1 of the permit and entitled Permittee: A.A. Reeves, III, do you see that page?
A. Yes, I do.
Q. It's the second page but is identified as Page 1 of 6. Please describe the requirements set forth on this page, Mr. Lehman.
A. Specifically, the -- it provides for temporarily

Page 75

operating the existing facility and gives a time schedule of completion dates with the ultimate date being the date that wastewater facilities will be certified in compliance with your permit, November 1st, 1990.
Q. Are you familiar with this document?
A. Yes, I am.
Q. Have you read this document before?
A. Yes.
Q. Is there any place in this document, to your knowledge, that it tells Florida Cities to cease discharging into the canal?
A. No.
Q. And when is the Waterway Estates wastewater facility to be certified to be in compliance?
A. November 1st, 1990.
Q. Mr. Lehman, I would ask you to take your pen again and under the column 1988, under the month of September, circle --
THE COURT: Counsel, you can do that during a recess.
MR. BAISE: Okay.
THE COURT: You know, he's just a tool of yours right now when he does that, and we're wasting time.
MR. BAISE: Okay.
All right. That's my last question, Your Honor,

Page 76

to have him finish up with that. Thank you very much.
THE COURT: All right.
I didn't mean to suggest that you're a tool. I'm sure you understood my ruling in that respect.
(Laughter.)
MR. BAISE: Your Honor, I need to move 21 and 27 into evidence. 21 is the permit application from Mr. Lehman to Ms. Kagey.
THE COURT: All right. That will be received.
MR. BAISE: And 27 is the letter from EPA, Mr. Barrett, to the company --
THE COURT: That will be received.
MR. BAISE: -- dealing with that final denial.
THE COURT: All right. Was that your last question, you said?
MR. BAISE: Yes.
THE COURT: All right.
All right. Mr. Hird?

CROSS EXAMINATION

BY MR. HIRD:
Q. Good morning, Mr. Lehman.
A. Good morning.
Q. On examination by Mr. Baise, you discussed the process of considering alternatives for discharge at the Waterway Estates facility, and I believe you discussed the ESE report

Page 77

and the memorandum that was prepared internally that followed that report, is that correct?
A. Yes, sir.
Q. In the process of considering these alternatives, did you ever discuss any of these alternatives with any officials of Avatar Holdings?
A. No, not at Avatar Holdings.
Q. Did you ever discuss -- and when you made the selection of these alternatives, was that made by Florida Cities or by Avatar Holdings?
A. As far as I know, by Florida Cities.
Q. Was Peter Sharp involved at all in the consideration of these alternatives, to your knowledge?
A. No, not to my knowledge.
Q. Was Leon Levy involved at all, to your knowledge?
A. No, not that I know of.
Q. Was John Sladkus involved at all, to your knowledge?
A. No.
Q. Was Lawrence Wilkov involved at all, to your knowledge?
A. No.
Q. Mr. Lehman, were you aware of any plan by Avatar Holdings to acquire all the utilities in Lee County?
A. No.
Q. Mr. Lehman, were your operations at Florida Cities

Page 78

micromanaged by Peter Sharp?
A. No.
Q. Thank you.
MR. HIRD: No more questions.
THE COURT: Okay. Mr. Quinn?
MR. QUINN: Thank you, Your Honor.
CROSS EXAMINATION
BY MR. QUINN:
Q. Good afternoon, sir.
So I don't mispronounce your name, can you please tell me what your last name is?
A. It's Lehman, long E.
Q. Thank you, Mr. Lehman.
MR. QUINN: Before we start questioning, I'd like Mr. Moore to remove both those exhibits, please.
(Pause.)
MR. QUINN: Thank you.
BY MR. QUINN:
Q. Mr. Lehman, you're not here appearing today under a subpoena, are you?
A. Yes, I am.
Q. Sir, at your depositions in October of 1995, Florida Cities Water Company provided you with personal counsel, didn't they?
A. Yes, sir, I had counsel. Yes.

Page 79

Q. Sir, you've been hired by Florida Cities Water Company to testify before, haven't you?
A. For this?
Q. You have been hired before on other occasions to testify, haven't you?
A. Yes.
Q. How many times have you been -- withdrawn.
Please tell me how many times you have been hired by Florida Cities to testify on their behalf.
A. I think it was only once.
Q. Sir, I'd like to draw your attention to Defendant's Exhibit 52, in particular Paragraph 6.
Sir, an administrative order, or an amendment to an administrative order, is not, in and of itself, an NPDES permit, is that correct?
A. No, it's not. It's not an NPDES permit.
Q. Okay. I'd like to draw your attention to Paragraph 6 -- Excuse me. Did you read Paragraph 6 when you got that document, sir?
A. I'm sure I did.
Q. Okay. Paragraph 6 states, does it not, that nothing in this order shall be construed to prevent further enforcement of the violations stated herein, nor shall it preclude institution of administrative penalties or civil litigation based on violations of the Clean Water Act.

Page 80

Isn't that what it says?
A. Yes.
Q. Sir, wasn't one of your responsibilities at Florida Cities Water Company to ensure that wastewater plants had NPDES permits?
A. Yes.
Q. And during your five years -- approximately five years of tenure at Florida Cities Water Company, isn't it a fact that Florida Cities Water Company never possessed an NPDES permit for the Barefoot Bay facility?
A. No.
MR. BAISE: Objection, Your Honor; that's outside the scope of his testimony.
THE COURT: I'll overrule the objection.
BY MR. QUINN:
Q. Do you need me to repeat the question, sir?
A. Yeah. Could you say that again?
Q. During your approximately five years of tenure at Florida Cities Water Company, isn't it a fact that Florida Cities never had an NPDES permit for the Barefoot Bay facility?
A. No, I don't think so.
Q. Sir, do you remember giving a deposition in this case?
A. Yes.
Q. And do you remember the following exchange that took

Page 81

place between you and the counsel for the United States? Question --

THE COURT: Page and line.

MR. QUINN: Page 26, sir, Line 15.

BY MR. QUINN:

Q. Question: So, it is fair to say that to the best of your knowledge, during your five-year tenure with the company during the years '84 to '89, there was no NPDES permit for Barefoot Bay?

And do you remember giving the following answer: Yeah. Remembering that's a few years back, yes.

Do you remember that?

MR. BAISE: Objection, Your Honor. My direct was solely limited to Waterway Estates. It was solely limited to the permitting situation. It was solely limited --

THE COURT: Well, it was limited to Waterway Estates.

MR. BAISE: Not Barefoot Bay, Your Honor.

THE COURT: That's outside the scope, is it not, Mr. Quinn?

MR. QUINN: Your Honor, this goes to his credibility. He was operations manager at the time, and I'm testing his knowledge about other facts and this evidence is relevant. It has been brought out before.

THE COURT: Well, now, just because the evidence

Page 82

is relevant doesn't mean it's within the scope of the direct examination of this witness.

MR. QUINN: Sir, he also testified that it was within his scope of responsibilities to assure compliance with the NPDES permits, and this goes into that, sir.

MR. BAISE: I did not include any questioning with regard to Barefoot Bay, Your Honor. It was all, as you can see, on the Waterway Estates facility.

THE COURT: Okay. I'll sustain the objection, Mr. Quinn, as outside the scope.

BY MR. QUINN:

Q. Moving on, then, Mr. Lehman, do you recall applying for renewal of the NPDES permit for the Waterway Estates plant on May 9th, 1986?

A. Yes.

Q. Okay. And at the time you filed the renewal request, the Waterway Estates plant was discharging into a canal that led to the Caloosahatchee River, is that correct?

A. Yes, it is.

Q. And the permit renewal request sought to continue the discharge into the canal, isn't that correct?

A. Yes, it did.

Q. Sir, doesn't 40 C.F.R., Section 122.21(d) require that an applicant file with EPA an application for renewal at least 180 days prior to expiration of the permit?

Page 83

MR. BAISE: Objection, Your Honor. He's asking this witness to come to a legal conclusion, one, based on a document that's not in front of him, and, two, outside of his scope of expertise.

THE COURT: Well, I think I'm going to permit you to ask him, Mr. Quinn, if he is familiar with that requirement. I'll overrule the objection.

MR. QUINN: Thank you.

BY MR. QUINN:

Q. Mr. Lehman, are you familiar with the requirements that an applicant for renewal of an EPA NPDES permit file that application at least 180 days prior to its expiration?

A. I can't recall that right offhand, no.

Q. But you were responsible for assuring compliance with NPDES regulations, isn't that correct?

A. Yes.

Q. And you're not familiar with that particular regulation, is that right?

A. I haven't done that for a long time.

THE COURT: He's answered your question. Let's move on.

BY MR. QUINN:

Q. The permit for which the Waterway Estates plant -- withdrawn.

The permit for which the application was sent in in

Page 84

May of '86 was set to expire on September 24th, 1986, isn't that correct?

A. Yes, I believe it was that date.

Q. So, Florida Cities Water Company filed for the renewal late, didn't it?

A. I'd have to count the days of...

Q. Count the days between May and September 24th, is that correct?

A. Yes.

Q. Okay. Sir, on June 30th, 1986, EPA wrote to you to inform you that EPA intended to deny the NPDES permit renewal request, isn't that correct?

A. Yes, sir.

Q. And you received this letter, didn't you?

A. Yes, sir.

Q. Okay. Sir, Florida Cities Water Company did not even write to ESE until November 10th, 1986, isn't that correct?

A. It was somewhere in that time frame.

Q. Okay. EPA clearly informed you that there could be no permitted discharges to the Caloosahatchee River via the canal, isn't that correct?

A. That was in the intent to deny, yes.

Q. Isn't it true that EPA informed you that the permit was also being denied because there was a, quote, no discharge, end quote, waste load allocation for the plant

Page 85

that had been developed by FDER?
A. Yes, sir.
Q. And didn't EPA also tell you that Florida Cities had certain appeal rights if it wanted to challenge the permit denial, correct?
A. Yes.
Q. And you personally read that portion of the EPA's letters to you that set forth these appeal rights, didn't you?
A. Yes. I believe they were all attached.
Q. And Florida Cities never exercised those appeal rights, did they?
A. No.
Q. Sir, you knew that the Waterway Estates facility did not have a waste load allocation at that time; that is, in May of '86, isn't that correct?
(Pause.)
A. I never inquired about one because there was a DER permit.
Q. But you knew they did not have a waste load allocation, isn't that correct?
A. Well, I have never seen anything that said they did or didn't. Now, there's a permit to --
Q. So, you don't know whether or not you had a waste load allocation; is that what you're saying?

Page 86

THE COURT: Wait a minute.
MR. BAISE: Objection.
THE COURT: Did you finish your answer?
THE WITNESS: Yes.
THE COURT: Okay. What was your objection?
MR. BAISE: Objection. The question has been asked and answered now at least twice.
THE COURT: Well, I'm not sure it has. Go ahead.
BY MR. QUINN:
Q. You don't know whether or not Florida Cities Water Company had -- withdrawn.
You don't know whether or not Florida Cities Water Company had a waste load allocation at that time, is that correct?
A. I inferred that there was one because the State had permitted it to operate.
Q. But you didn't know that for a fact, did you?
A. It was my understanding they wouldn't issue a permit unless an allocation existed or -- yes.
MR. QUINN: Objection; move to strike as non responsive.
THE COURT: I'll deny your request. Ask your next question.
MR. QUINN: Yes, sir.
BY MR. QUINN:

Page 87

Q. In fact, Florida Cities Water Company met with Florida Department of Environmental Regulation in an attempt to obtain a waste load allocation for the Waterway Estates plant shortly after it received EPA's permit denial letter, isn't that correct?
A. An allocation to the six-foot contour, yes.
Q. So, they did seek to meet with FDER about that waste load allocation, is that correct?
THE COURT: He said "yes."
Didn't you say "yes"?
THE WITNESS: Yes.
THE COURT: Yes. Go ahead.
BY MR. QUINN:
Q. And you participated in that meeting, didn't you?
A. Yes.
Q. And that meeting occurred on July 29th, 1986, isn't that correct?
A. Yes.
Q. Okay. In fact, you wrote a memo to Mr. Reeves memorializing these conversations, didn't you?
A. Yes, I did.
Q. And in the memorandum -- withdrawn.
Didn't you tell Mr. -- withdrawn.
Didn't you inform Mr. Reeves that there was a potential waste load allocation at the Waterway Estates

Page 88

facility, but that Florida Cities Water Company would have to apply for it?
A. Yes. At the six-foot contour, yes.
Q. So, there was no doubt in your mind that the Waterway Estates plant did not have a waste load allocation at that time for the six-foot contour, is that correct?
A. That's correct.
Q. Sir, wasn't it your understanding at the time that in order to obtain an NPDES permit for the Waterway Estates facility to discharge to the Caloosahatchee River, Florida Cities would have to relocate the discharge to the six-foot contour line?
A. Yes, that was my understanding.
Q. And, in fact, DER also informed you during your meeting of the need to relocate the discharge point from the canal to the six-foot contour line, isn't that correct?
A. When the existing permit expired, yes.
Q. But DER told you you would have to move the outfall, isn't that correct?
A. By 1988, yes.
Q. You told -- withdrawn.
You informed Mr. Reeves of the need to relocate the discharge point to the six-foot contour line in the river, didn't you?
A. Yeah. In the memorandum?

Page 89

Q. Is it in the memorandum of August 10th, 1986?
A. Yes, sir.
Q. Sir, in addition to obtaining a waste load allocation from FDER and relocating the outfall, isn't it true that Florida Cities also needed to upgrade the Waterway Estates plant if it wanted to continue to discharge to the Caloosahatchee River?
A. Yes, sir.
Q. In fact, Florida Cities had to achieve advanced wastewater treatment at the facility, isn't that correct?
A. As part of the waste load allocation --
Q. Correct.
A. -- with discharge at the six-foot contour, yes.
Q. Now, sir, did you write to EPA to propose a schedule for coming into compliance with the Waterway Estates facility?
A. Yes, I did.
Q. Sir, I'd like to show you Plaintiff's Exhibit 359, which has been marked for identification. Sir, have you ever seen Exhibit 359 before?
A. Yes, I have.
Q. Isn't that the letter you wrote to EPA?
A. Yes, it is.
MR. QUINN: At this time the United States moves Exhibit 359 into evidence.

Page 90

THE COURT: It will be received.
BY MR. QUINN:
Q. Sir, did you develop the proposed schedule in that letter by yourself?
A. Yeah, I developed it.
Q. In this letter, Florida Cities is proposing to complete construction and start-up of the facility by August 1, 1988, isn't that correct?
A. Yes, sir.
Q. Sir, in developing the schedule, you relied on your experience as an engineer, isn't that correct?
A. Yes, sir.
Q. And at the time you wrote that schedule, you believed the proposed schedule was realistic when you proposed it, did you not?
A. If everything were to go just perfect, I was very optimistic.
Q. I'm going to read you a question and answer you gave at your deposition from Page 68, Line 17.
THE COURT: You're going to --
MR. QUINN: I'm going to ask him if this was the answer he gave to the question as stated. Page 68, Line 17.
BY MR. QUINN:
Q. The question was: Were these realistic dates, Mr. Lehman, based on your experience?

Page 91

And didn't you give the following answer: Yes. I wouldn't have put them down if they weren't?
Isn't that what you testified to, sir?
A. Yes, sir.
Q. So, at the time they were realistic deadlines, isn't that correct?
A. Yes.
Q. In fact, EPA accepted your proposal to complete construction at the Waterway Estates plant by August 1, 1988, isn't that right?
A. Yes, sir.
Q. In fact, EPA used the construction schedule you proposed in an administrative order issued to Florida Cities Water Company, isn't that correct?
A. I'm assuming after their review they incorporated it, yes.
Q. I'd like you to turn to United States Exhibit 364, please. Sir, is this the administrative order that EPA issued?
A. Yes, it is.
Q. And have you seen that administrative order before?
A. Yes, sir.
MR. QUINN: The United States moves Exhibit 364 into evidence.
THE COURT: It will be received.

Page 9

BY MR. QUINN:
Q. And this was a construction schedule in this administrative order that you, the operations manager of Florida Cities, believed to be realistic based upon your experience as a professional engineer, isn't that correct?
(Pause.)
Q. It's on Page 2 of that Exhibit 364.
A. Okay. Under "Activities"?
Q. Yes.
A. Oh, I see it.
Q. Would you like me to ask my question again, Mr. Lehman?
A. Okay. The schedule didn't necessarily match the one I had submitted --
Q. But the date --
A. -- because it had progress reports; it's got the highlighted bottom line, yes.
Q. But the complete construction date matches your proposed --
A. Right; just that, yes.
Q. Sir, we talked earlier a little bit about a meeting between Florida Cities and the Florida Department of Environmental Regulation to discuss the need for Florida Cities to request a waste load allocation at Waterway Estates.

Page 93

Sir, that meeting occurred on July 29th, 1986, isn't that correct?
A. Yes.
Q. And, sir, in August of 1987, ESE submitted its report regarding Waterway Estates, Plaintiff's Exhibit 267, isn't that correct?
A. Yes.
Q. And Mr. French didn't think that the ESE report was adequate, did he?
(Pause.)
A. I don't recall if he thought it was adequate, but he did some more investigation into it, yes.
Q. Mr. French -- withdrawn.
Was Mr. French your boss at that time?
A. Not immediate. Mr. Reeves was.
Q. Okay. Was Mr. French two levels above you?
A. He was a level above, but not directly through the flow -- organizational flow.
Q. Let me see if I can ask it a better way. Was Mr. French your superior --
A. Yes.
Q. -- at that time?
Mr. French said in his critique of that report that not all of the alternatives were explored in adequate detail, is that correct?

Page 94

A. Yes, sir, I think that's what it said.
Q. In fact, ESE looked only at land application and perc ponds within the service area of Waterway Estates, isn't that correct?
A. I believe that's what is stated in the report, yes.
Q. They didn't look at land application or perc ponds outside of the service area, did they?
A. Not to my knowledge.
Q. ESE was constrained in part by cost and expenses, wasn't that correct?
A. Yes. That's part of the evaluation, yes.
Q. And costs were a consideration in ESE's recommendations, isn't that correct?
A. Yes.
Q. At the time in 1987, FDER tended to be favorable, did it not, towards deep well injection as a disposal option?
(Pause.)
A. There were installations of those, yes.
Q. Sir, the ESE report did not consider a connection with the North Fort Myers Utilities, is that correct?
A. No. I think one of the recommendations was for -- to evaluate that.
Q. One of the recommendations in --
A. -- in the ESE report. I think it alluded to that.
Q. Sir, I'd like to show you Exhibit 371, Plaintiff's,

Page 95

please, and I'm going to be referring you to the second page of that exhibit, please.
Sir, at the time that ESE did its evaluation and Mr. Reeves critiqued it, did you know that North Fort Myers Utilities had deep wells?
A. I had been told that, yes.
Q. When were you told that?
A. I don't know specifically when, but that was one of the options, to tie in to them, because they had a system in deep wells.
Q. So, you knew that back in '87?
A. Whenever this was going on. I think that's the time frame, yes.
Q. Sir, at the time did you know that North Fort Myers Utility was using spray irrigation as a disposal alternative?
A. I wasn't totally versed in what they had, no.
Q. Well, did you know that they were using spray irrigation?
A. No.
Q. But you did know they were using wells?
A. I had been told that, yes.
Q. Okay.
MR. BAISE: Objection to counsel characterizing North Fort Myers as using wells. I believe the testimony is

Page 96

they had one well.
THE COURT: Okay. Mr. Quinn, you want to be heard on that?
MR. QUINN: No, sir.
THE COURT: Okay. You stand corrected, then?
MR. QUINN: I stand corrected, sir.
THE COURT: All right.
BY MR. QUINN:
Q. Now, on or about December 1st, 1987, you wrote a letter to FDER requesting a waste load allocation for the Waterway Estates plant, didn't you?
A. I did sometime, yes.
Q. I'd like to show you what we have -- Exhibit 374, please. Sir, have you seen Exhibit 374 before?
MR. QUINN: This has been entered into evidence, Your Honor.
BY MR. QUINN:
Q. Have you seen Exhibit 374 before?
A. Yes.
Q. That's not your signature, though, is it?
A. No, it's not.
Q. But you wrote the letter, didn't you?
A. Yes, I did.
Q. Okay. So, is it correct to say that on December 1st, 1987, you wrote a letter to FDER requesting a waste load

Page 97

allocation for the Waterway Estates plant?
A. Yes.
Q. So, despite knowing in August '86 of the need to apply for a waste load allocation to discharge to the Caloosahatchee River, Florida Cities waited about 16 months to file this application for a waste load application -- allocation, isn't that correct?
A. Yes, sir.
Q. Isn't it true, sir, that on January 28th, 1988, you wrote a letter to Pete McGarry of EPA to update him on the progress of the construction schedule set forth in your earlier letters?
A. Yes.
Q. So, it's more than 16 months since you proposed a construction schedule to EPA. Is it fair to say at this point in time the proposed schedule set forth in your letter of September 16th, 1986, had slipped substantially?
A. Yes.
Q. And on January 28th, 1988, it's pretty clear that Florida Cities will be unable to meet the compliance dates that you proposed in your letter of September 16th, 1986, isn't this correct?
A. Yes, sir.
Q. About five weeks after you wrote to EPA, you also wrote a letter to FDER proposing a completely new schedule

Page 98

for coming into compliance at Waterway Estates, didn't you?
A. I did at some time frame in there, yes.
Q. I'd like to show you -- turn to Exhibit 376, which is in evidence, sir.
So, is it correct to say, sir -- do you have that in front of you?
A. Yes, I do.
Q. So, is it correct to say that on March 1, 1988, you wrote a letter to the FDER proposing a completely new schedule for coming into compliance at Waterway Estates, isn't that correct?
A. Yes, sir.
Q. In this letter, you, on behalf of Florida Cities, is proposing -- withdrawn.
In this letter, Florida Cities is proposing a completion of construction date for the Waterway Estates facility of May 1, 1990, isn't that correct?
A. Yes, sir.
Q. And that's Line 11 on that exhibit, is that correct?
A. Yes.
Q. Now, in that letter, it contemplates a 15-month schedule between beginning and completing construction, isn't that correct?
(Pause.)
A. Pardon me. Fifteen months from construction?

Page 99

Q. It contemplates a schedule from beginning construction to completion of construction.
I'll show you to Lines 10 and 11.
A. Oh, I see. Yes.
Q. Okay. Just so I can make sure it's clear, in this March 1, 1988, letter, a 15-month schedule between initiation and completion of construction is contemplated, isn't that correct?
A. Yes, sir.
Q. So, was that a reasonable approximation for the amount of time that it would take to construct this project based upon your engineering experience?
A. I think at that time, yes, it was reasonable with the construction to be over a year.
Q. Yet, previously you proposed to EPA a construction schedule of only eight months, isn't that correct?
A. Yes, sir.
Q. Had the scope of the construction project changed so significantly to warrant almost doubling the amount of time that was necessary for completion of this project?
A. There was much more detail available at this time.
Q. But had the scope of the construction project changed?
A. Yes, because there was much more detail available.
Q. And that warranted, in your opinion, an almost doubling of the amount of time necessary to complete the

Page 100

construction?
A. Yes, sir.
Q. EPA had agreed to amend its prior administrative order to incorporate the revised time frames that you had proposed, isn't that right?
A. Yes, sir.
Q. I'd like to show you Exhibit 387. Do you have that, sir?
A. Yes.
Q. On March -- is this a memorandum that you wrote, sir?
A. Yes, sir.
Q. And those are your initials, aren't they?
A. Yes, it is.
MR. QUINN: The United States would move 387 into evidence.
THE COURT: It will be received.
BY MR. QUINN:
Q. This is a March 17th, 1989, memo that you wrote to Mr. French discussing a call that you received from EPA, isn't that correct?
A. Yes, sir.
Q. And during the telephone call with EPA, EPA had asked you whether construction had started by February 1, 1989, isn't that correct?
A. Yes, sir.

Page 101

Q. Now, the February 1, 1989, date for starting construction was, in fact, the date Florida Cities itself had proposed, isn't that correct?
A. I believe so, yes.
Q. And this February 1989 date for beginning construction of the plant upgrades at Waterway Estates was, in fact, six months later than the date by which Florida Cities had originally proposed to have completed construction, isn't that correct?
A. From the original --
Q. From the original proposal, that's correct.
A. From September? Approximately, yes.
Q. Florida Cities hired a contractor by the name of Source Engineering to perform the plant upgrades -- withdrawn.
Florida Cities hired an engineering firm by the name of Source to analyze and design the plant upgrades at the Waterway Estates facility, isn't that correct?
A. Yes, sir.
Q. And, in fact, you had recommended that Florida Cities hire a different contractor, isn't that right?
A. Yes, sir.
Q. You recommended that they hire ESE Engineering, correct?
A. Right.

Page 102

Q. And that was based upon your engineering opinion, correct?
A. Yes.
Q. And your experience as an engineer, correct?
A. Yes.
Q. And your experience with ESE, isn't that correct?
A. Partially, yes.
Q. Sir, now, you believe that ESE was better qualified to perform the work at Waterway Estates at least in part because it had done the preliminary work at the facility, correct?
A. That would have been one of the aspects.
Q. And also you believe that ESE could have potentially completed the work more quickly than Source could have, isn't that correct?
A. Yes, sir.
Q. Isn't it also true that Mr. Rich Voorhess, the construction engineer for Florida Cities, also recommended that ESE rather than Source be given the contract for the work at the plant?
A. Yes, sir.
Q. So, your recommendation that ESE be considered and Mr. Voorhees' recommendation that ESE be considered was rejected, is that right?
A. Yes. It was overridden, yes.

Page 103

Q. It was overridden by your superiors, isn't that correct?
A. Yes, sir.
Q. Given the cost of the project, isn't it true that Avatar Holdings was required to approve the selection of the contractor?
MR. BAISE: Objection, Your Honor. That clearly is outside the scope of direct testimony.
MR. QUINN: Your Honor, it is not. Mr. Hird elicited questions about that on whether or not Avatar Holdings had any part in any of the decisions Florida Cities made.
MR. HIRD: I won't object to being --
THE COURT: Wait a minute. Are you through?
MR. QUINN: Yes, I am.
THE COURT: Go ahead.
MR. HIRD: I'm sorry. I won't object as being outside the scope. I do want to object that it would be misleading. Are you talking about approving the contract or selection of the contract? I'm not certain whether that's been --
THE COURT: I'll overrule the objection as outside the scope.
You want to clarify your question, counsel?
MR. QUINN: Yes, sir.

Page 104

BY MR. QUINN:
Q. Sir, I'm going to ask you two questions that are similar: First, given the cost of the project, isn't it true that Avatar Holdings was required to approve the selection of the contractor?
A. They approved the contract or -- it was a Conward system where Mr. Reeves was --
THE COURT: A what?
THE WITNESS: It was titled a "Conward."
THE COURT: "Conward"?
THE WITNESS: Conward. That was just the name of document itself.
THE COURT: Short for "contract award"?
THE WITNESS: Yes.
THE COURT: Go ahead.
THE WITNESS: And Mr. Reeves would send it to Miami. I don't know the logistics.
BY MR. QUINN:
Q. Okay. But is it your understanding that Avatar Holdings approved the contract itself?
A. I don't specifically know who approved it as to what their...
Q. Sir, was it your understanding that Avatar Holdings was required to approve the Conward that dealt with the contract based on -- because of the amount of this contract?

Page 105

A. I guess someone representing them would sign off on the amount of money to be spent on the contract.
MR. HIRD: Move to strike; outside the witness' personal knowledge.
THE COURT: Well, he said he guesses. I'll strike his answer.
MR. QUINN: Okay.
BY MR. QUINN:
Q. Sir, isn't it correct that Source, Incorporated, had submitted a lower bid for the work than ESE had?
A. I believe they did.
Q. Okay. And in your view, isn't it -- withdrawn.
Sir, is it your view that Source's lower cost played a strong consideration in the decision to hire Source?
MR. BAISE: Objection, Your Honor. This would be outside his knowledge with regard to those people who made the decision on hiring Source.
THE COURT: Well, he can testify if he knows. I'll overrule the objection.
BY MR. QUINN:
Q. Do you remember the question, sir?
A. If cost played a part?
Q. I think we moved on from there.
A. Oh, okay. I'm sorry.
THE COURT: Go ahead and ask the question again.

Page 106

MR. QUINN: Okay.
BY MR. QUINN:
Q. Sir, isn't it your view that Source's lower cost bid played a strong consideration in the company's decision to hire Source?
A. I don't know how strong a consideration it was.
Q. Sir, do you remember giving a deposition -- I'm going to refer to Page 33, Lines 4 through 6 -- sir, do you remember the question was asked: All right. Was it a strong -- withdrawn.
Let me just start over: All right. Was it a strong consideration, to your knowledge, Mr. Lehman?
And the answer that you gave was: I'm sure it was.
Is that the answer you gave?
A. If you read it, it probably is. I'm sure it is.
Q. Sir, in fact, this entire project could have been speeded up, couldn't it have?
A. I'm not sure how.
Q. Well, didn't it take about 454 days for Source Engineering to submit the plans and design specifications?
A. I think he got toward the end of my tenure there, so I can't tell you what the final was.
Q. By the time you left, Source Engineering hadn't submitted the design specs and engineering plans, had they?
A. The final ones?

Page 107

Q. The final ones.
A. No, I don't believe so.
Q. In fact, in the schedule that you had negotiated with Source Engineering, those final plans and design specs were supposed to have been there by the time that you ultimately left, isn't that correct?
A. I don't know what the time frame specifically was in their contract, but...
Q. Sir, EPA issued Florida Cities its intent to deny the permit renewal on June 30th, 1986, is that correct?
A. Yes.
Q. Okay. And Florida Cities did not apply for a waste load allocation until December 1987, about 17 months later, is that correct?
A. Yes, sir.
Q. That application could have been submitted earlier, couldn't it have?
A. Yes, sir.
Q. And it could have been submitted on time, too, couldn't it have?
MR. BAISE: Objection, Your Honor. We don't know what "on time" means.
THE COURT: Well, do you know what "on time" means?
THE WITNESS: On time for the waste load

Page 108

allocation -- are you talking about the waste load allocation submittal?
BY MR. QUINN:
Q. Yes.
A. There is no --
THE COURT: I'll overrule the objection. Of course, you would have to ask him whether he knew what "on time" means.
MR. QUINN: I'll withdraw the question. It's getting too confusing.
THE COURT: Good, good.
MR. QUINN: May I have one moment, sir?
THE COURT: Yes, sir.
(Pause.)
BY MR. QUINN:
Q. Just a few more questions, please, sir.
You were the operations manager of Florida Cities Water Company during your tenure there, is that correct?
A. Yeah; then the title changed somewhere through there, toward the latter part.
Q. I think you said you became an executive vice-president for operations?
A. No.
Q. No? You became a vice-president for operations?
A. Yes, sir.

Page 109

Q. Okay. Thank you.
And you reported to Mr. French indirectly, is that correct?
A. Indirectly?
Q. Yes, or -- withdrawn.
How did you report to Mr. French?
A. Through Mr. Reeves, specifically through the organizational chart.
Q. Do you know to whom Mr. French reported?
A. Mr. Reeves.
Q. Mr. French reported to Mr. Reeves?
A. That was -- yeah.
Q. And what position did Mr. Reeves hold?
A. He was -- what was his exact title? Executive vice-president over Florida Cities.
Q. Do you know to whom Mr. Reeves reported?
A. I think it was directly to Mr. Gordon.
Q. And who was Mr. Gordon?
A. His title is -- I think it was -- he was with Avatar Utilities. The specific title -- he was president? I can't be sure. I can't remember exactly if that was his title.
MR. BAISE: Objection, Your Honor.
THE COURT: Just a moment.
MR. BAISE: Objection, Your Honor. The witness obviously doesn't know the clear answers to the questions

Page 110

being propounded by counsel, and so I object to that line of questioning unless the witness absolutely knows the answer to the question.
THE COURT: I'm going to overrule the objection. If he knows, he can answer, but don't speculate.
THE WITNESS: All right.
THE COURT: And would you speak a little bit louder, please?
THE WITNESS: Okay.
BY MR. QUINN:
Q. You don't know -- withdrawn.
You personally don't know whether Mr. French or Mr. Reeves or Mr. Gordon had consultations with Avatar Holdings officials about the Waterway Estates discharge alternatives, do you?
A. No, I don't.
Q. Thanks.
MR. QUINN: No more questions, sir.
THE COURT: Redirect?
MR. BAISE: Just a few questions.
REDIRECT EXAMINATION
BY MR. BAISE:
Q. On what occasions have you been hired by Florida Cities to testify for pay, Mr. Lehman?
A. The one occasion I know is Carrollwood had a rate

Page 111

case; that was a number of years ago.
Q. Is that the only time you have ever been hired by Florida Cities since you left them to testify on their behalf?
A. I believe so.
Q. Are you being paid by Florida Cities to testify in this particular matter?
A. No.
Q. With regard to the knowledge of the waste load allocation, I believe you testified you believed that there was a waste load allocation for Waterway Estates to discharge into the canal?
A. Yes. There was a permit.
Q. And wasn't the waste load allocation that had to be sought a waste load allocation --
MR. QUINN: That's going to be leading, sir.
THE COURT: Yes, it is definitely leading.
BY MR. BAISE:
Q. Directing your attention back to Government Exhibit 374, Mr. Lehman --
THE COURT: What was the number, again?
MR. BAISE: 374, Your Honor.
THE COURT: All right.
BY MR. BAISE:
Q. Do you have 374 in front of you, Mr. Lehman?

Page 112

A. Yes, I do.
Q. Looking at the first paragraph of 374, was the waste load allocation for a million gallon plant or a million point five gallon plant, Mr. Lehman?
A. It was for ultimate capacity of 1.5 MGD.
Q. Did that require a new waste load allocation?
A. Yes. It required an increase.
Q. Did it require a new waste load allocation in the Caloosahatchee River?
A. Yes.
MR. QUINN: Objection; asked and answered.
THE COURT: Overruled.
BY MR. BAISE:
Q. With regard to decisions not being accepted, Mr. Lehman, and with regard to Source being hired rather than ESE, were all of your decisions always accepted by your superiors?
A. No.
Q. Did it come to pass that Source did design the facility at Waterway Estates, Mr. Lehman?
A. As far as I know. It wasn't completed final when I left.
Q. Were the draft plans submitted by Source in April of 1989?
A. There were draft plans, yes.

Q. Did the plant that Source designed end up being approved by FDER, to your knowledge?
A. That I can't tell you.
MR. BAISE: Thank you, Your Honor.
THE COURT: All right. Thank you, sir. You may step down.
We'll be in recess for lunch until, let's say, 1:20.
(The luncheon recess was taken.)

THE COURT: Mr. Bullock.

MR. BULLOCK: Good afternoon, Your Honor.

Florida Cities would call Connie Kagey.

THE CLERK: Raise your right hand.

Thereupon,

CONNIE A. KAGEY,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box.

State your name and spell your last for the record, please.

THE WITNESS: Connie A. Kagey, K-A-G-E-Y.

DIRECT EXAMINATION

BY MR. BULLOCK:

Q. Good afternoon, Ms. Kagey, my name is Alex Bullock. May I ask you first to identify for employed?

A. Excuse me?

Q. Could you identify by whom y

A. I am employed by the United Protection Agency, Region IV.

Q. And how long have you been

A. I have been employed there

MR. BULLOCK: Your Hono

employed by the adverse party in this case, I would request the Court's permission to ask leading questions.

THE COURT: Yes, sir.

MR. BOMIAK: No, Your Honor.

THE COURT: Beg your pardon?

MR. BOMIAK: I said, no, Your Honor

THE COURT: Oh, all right. I didn't call — I didn't understand what you were saying — you thought I said whether there was any objection?

MR. BOMIAK: Yes, Your Honor.

THE COURT: Okay.

You'll be permitted to do so.

MR. BULLOCK: Thank you, Your Honor.

BY MR. BULLOCK:

Q. Ms. Kagey, isn't it true you began writing NPDES permits in 1981?

that was probably 1982.

. And isn't it true that there are three ting effluent limitations into NPDES permits? — in writing permits, each limitation is ed on three different methods. nd isn't it true that one of those methods is ed effluent limitation guidelines?

ht. Isn't it true that another method is

NOTE PAGE PATTERN

1 → 2 → 3 → 4

through water quality-based effl

A. In what regards are you cr limitations?

Q. Well, in examination of based on, not on ... guidelines, but on water-quality guidelines?

A. Yes.

Q. Isn't it true that another method is through the use of best professional judgment?

A. Yes.

Q. All right. Ms. Kagey, you were involved in reviewing the 1986 renewal application filed by Florida Cities for the Waterway Estates facility; isn't that correct?

A. I don't remember the exact time line of the application.

Q. All right. Isn't it correct —

THE COURT: Without regard to the time, were you involved in it?

THE WITNESS: I have been involved with Florida Cities Water Waterway Estates permit on two different occasions. I do not remember exactly what the applications were dated.

THE COURT: All right. Go ahead.

BY MR. BULLOCK:

Q. Ms. Kagey, I'd ask you to look at Defendant Florida Cities' number 21, and ask you to turn to the second page of

. There is a — I refer you to there's a date 15, 1986. Isn't it correct this was the date lication was received by the Environmental Agency Region IV?

A. I do not know if this was the received date, but this date was put on the application. I do not know if this was the received date.

Q. Okay. Would you agree with me that Florida Cities filed an application to renew its NPDES Permit in 1986?

A. That's what it appears to be.

Q. All right. Isn't it correct that Florida Cities had received previous Federal NPDES Permits for the Waterway Estates facility in 1975 and 1981?

A. I do not remember the exact date because I was not the permit writer on those.

Q. All right. Would you agree with me, though, that there was an existing NPDES Permit in effect at that time?

A. Yes, as far as I can remember, there was at least one existing permit.

Q. All right. In reviewing permit applications, isn't it true that you rely on various pieces of EPA internal guidance?

A. Yes.

Q. And isn't it also true that you rely upon guidance from other sources, including State permits and State

wasteload allocations?
A. Yes.
Q. Okay. Isn't it true that States develop water quality standards in order to protect the receiving waters from high amounts of pollution?
A. Could you clarify that question?
Q. Certainly. Let me ask you this way: What is your understanding of why States develop water quality standards?
A. Okay. As you say, to protect receiving waters of the State from — okay — from various pollutants, be it high or not necessarily high, but from pollutants.
Q. All right. Isn't it correct that you are not familiar — excuse me. Let me start over again.
Can you identify what a wasteload allocation is?
A. To the best of my understanding, a wasteload allocation is developed by the State for a water body or a particular water stream or segment in order to protect that segment from, be it, for example, DO nutrients or other pollutants of concern.
Q. Okay. Isn't it correct that you are not familiar with EPA's process of approving wasteload allocations?
A. I have just recently come into some knowledge of what I think — what I perceive as possibly being the approval process.
Q. All right. And when did you come into this

information?
A. Within the past year.
Q. All right. And so you did not have any understanding of that process at the time, in 1986, when you worked on the Waterway Estates renewal application?
A. Not that I can remember.
Q. And you did not have any understanding of that procedure at the time of your deposition, taken October 24th, 1994?
A. I do not recall.
Q. All right. Do you remember giving your deposition on October 24th, 1994?
A. I remember giving it in October. I do not know the exact date.
Q. And I'm going to read you a question which was posed to you and your answer, and let me ask you, did you give the following answer in response to the following question: Are you familiar with the process of approving wasteload allocations? And your answer was: No.
Is that the answer which you gave?
A. Without seeing the document in front of me, I would not like to venture a guess.
Q. Okay.
THE COURT: Well, are you talking about — I'm sorry — were you going to hand her a copy?

MR. BULLOCK: I would be glad to hand her a copy of the deposition.
THE COURT: I don't really think — all you are going to be doing is handing her a transcript and she's never seen the transcript before.
You say you don't know whether you testified to that or not; is that correct?
THE WITNESS: Excuse me. I have seen my transcript. I do not recall if I actually said that.
THE COURT: It might help you to see the transcript?
THE WITNESS: Yes, sir.
THE COURT: Go ahead.
MR. BULLOCK: I'm sorry. I should have had one available. I apologize.
Your Honor, I don't know what the Court's practice is about breaking the seal, if you require —
THE COURT: Here's my practice today.
(Pause.)
BY MR. BULLOCK:
Q. Let me ask you, Ms. Kagey, to turn to page 41, and the question which I read to you starting with line 20: Are you familiar with the process of approving wasteload allocations? And your response was: No. Is that the response which you gave?

A. I believe it was, yes.
Q. Are you — Ms. Kagey, let me ask you, are you familiar with the process of developing wasteload allocations?
A. No, I am not.
Q. All right. And isn't it true that you would not utilize a draft wasteload allocation which had not been approved by EPA in writing a permit?
MR. BOMIAK: Objection, Your Honor. At what period of time is the question directed? Is this in general? The permit denial was back in 1986.
THE COURT: All right. Why don't you direct your question to a specific period of time, Mr. Bullock.
BY MR. BULLOCK:
Q. Ms. Kagey, in 1986, would you a used a draft wasteload allocation, which had not been approved by EPA, in writing a permit?
A. No, sir, I do not believe I would.
Q. And that is because the final wasteload allocation may have been different from the draft allocation; is that correct?
A. That would be much in my general understanding, yes.
Q. Okay. Isn't it true, Ms. Kagey, that EPA permit writers are supposed to contact the EPA's wasteload allocation section to determine the status of an applicant's wasteload?

MR. HOMIAK: Your Honor, same objection. I don't know if he's referring to present day or back in 1986.

THE COURT: Sustained.

BY MR. BULLOCK:

Q. In 1986, Ms. Kagey, wasn't it true that EPA permit writers were supposed to contact the agencies wasteload allocation section to determine the status of an applicant's wasteload allocation?

A. I do not recall the formal procedures that were in place back in the 1986 time period.

Q. Isn't it true the EPA permit writers, in 1986, did not make independent assumptions regarding wasteload allocations?

A. In — could you clarify that, please?

Q. Certainly. In terms of — let me ask the question again.

As of 1986, wasn't it true that an EPA permit writer did not make an independent assumption regarding the wasteload allocation section, other than what the wasteload allocation section had determined?

A. Excuse me. I'm having trouble answering the question as asked.

Q. Okay.

A. It's — to the best I can recall, I consulted with the staff of the wasteload allocation back in the mid 1980's. I

do not know the exact time period, and I'm not even sure if that was the correct organizational name.

MR. BULLOCK: Okay. Your Honor, I'll move to strike as non-responsive and —

THE COURT: Well, I'll deny that request.

BY MR. BULLOCK:

Q. Ms. Kagey, isn't it true EPA denied the 1986 NPDES Permit renewal application for Waterway Estates based upon your recommendation?

A. Yes.

Q. Isn't it true that denial of an application to renew a permit is extremely rare?

A. Yes.

Q. All right. Isn't it true that you, yourself, at the time of your deposition only remembered working on one other denial of a permit renewal?

THE COURT: Well, never mind what she remembered at the time of the taking of the deposition.

You can ask her now and then if it's inconsistent to what she testified to before, you can confront her with that.

BY MR. BULLOCK:

Q. Isn't it true, Ms. Kagey, that you only remember working on one other denial of a permit renewal application, other than Waterway Estates, in 1986?

A. There may have been others, but I can only think of one other that I can name.

Q. Isn't it true, Ms. Kagey, that you recommended the denial of Florida Cities' application based upon a purported no discharge wasteload allocation from the State of Florida for the Waterway Estates facility?

A. Could you clarify exactly what you mean? What you were referencing to?

Q. Okay. Let me ask you this: What was the basis of your recommendation of denial?

A. Upon reviewing of my record for deposition and for trial, I had — I had used a cover page and one page of a wasteload allocation that stated, no discharge for Waterway Estates.

Q. All right. Let me ask you to look at Plaintiff's Exhibit 349.

Ms. Kagey, can I ask you to identify for the record what the cover page of Exhibit 349 is?

A. It states Caloosahatchee River Wasteload Allocation Documentation, Lee County, Water Quantity Technical Series, Volume 2, Number 52, Bruce DeGrove —

Q. That will be fine. That's sufficiently identifies it. Thank you.

Isn't it true, Ms. Kagey, the only two pages which you reviewed of this document were the cover page of the

document, which you just read, and page 17?

A. Without having my permit file in front of me, I could only venture a guess, yes, that page 17 is the same one. I do recognize the cover page.

Q. At your deposition, do you remember giving the following answer to the following question: Is this the document that you reviewed in preparation for your 1986 denial of the Waterway Estates permit application —

A. I don't recall without having seen my deposition.

THE COURT: Wait a minute.

Did you give the answer yet?

MR. BULLOCK: No, sir, I haven't.

THE COURT: Wait until he finishes his question.

BY MR. BULLOCK:

Q. According to my records it's the cover page and page 17 of this document which — that was used.

Did you give that answer at your deposition?

A. I do not recall. My deposition was over a year ago.

Q. All right. Let me refer you to page 83 of your deposition, and that's line 17 through 21.

A. That is what I said in deposition.

Q. Thank you.

Isn't it correct, Ms. Kagey, that you made no attempt to review the entire document?

A. As far as I can recall, that is correct.

Q. All right. Isn't it true, Ms. Kagey, that you did not review, at the time you looked at these two pages of the document that we discussed, isn't it true that you did not review any EPA memorandum regarding this document?
A. I do not recall any.
Q. All right. Isn't it true, that at the time you reviewed the document, you didn't know whether this document was ever approved by EPA?
A. Are we still talking about the 1986 time period?
Q. Yes. Uh-huh.
A. Could you ask the question again, or could I have the question repeated?
Q. All right. Isn't it true, Ms. Kagey, that you didn't know whether this document was ever approved by EPA when you were reviewing it in 1986?
A. I don't believe it was, but I can't recall completely.
Q. Isn't it true that you don't recall whether you contacted the EPA Region IV wasteload allocation staff to determine if this was a valid allocation?
A. I do not recall.
Q. All right. Isn't it true, Ms. Kagey, that you usually draft permits in accordance with the -- let me start over again.

For purposes of drafting a Florida permit, isn't it true that you usually draft permits for facilities in

Florida in accordance with FDER effluent limits and operating limits?
A. In a lot of cases Florida standards were used, but it also depended on the type of facility.
Q. Isn't it true that permit writers at EPA, during 1986, were instructed to obtain copies of the current FDER operating permit from the applicant?
A. To the best that I can remember, yes, because I know I personally did it.
Q. You know that you personally did request?
A. Yes.
Q. Isn't it true that Florida Cities included a copy of its 1983 FDER permit with its 1986 NPDES renewal application?
A. I cannot recall if they did.
Q. Was it your usual practice, Ms. Kagey, to contact the wasteload allocation staff to determine whether or not there was a valid wasteload allocation for an applicant, during 1986?
A. I don't entirely recall. I know back in the mid 1980's I did work closely with the wasteload allocation staff.
Q. But back in 1986, you don't remember; is that correct?
A. That's correct.
Q. Let me ask you to look at Defendant's Exhibit 21. Let

me ask you to look at the page 1 of the State permit, which was attached to the application. It would be the third page of the exhibit. Do you see the paragraph in the middle of that page which says, operation of a 1.08 MGD?
A. Yes, sir.
Q. Would you read that entire paragraph, please?
A. Operation of a 1.08 MGD contact stabilization wastewater treatment facility of effluent discharge to a canal to the Caloosahatchee River as depicted in drawings and documentation show on file in this office. Project is located off Inlet Drive, North Fort Myers.
Q. All right. Isn't it true, Ms. Kagey, that the Florida permit attached to Exhibit 21, authorized Waterway Estates to discharge to the canal which flowed to the Caloosahatchee River?
A. The State permit issued by Florida authorized discharge.
Q. Let me ask you also to look at Exhibit 17, and I'm asking you to look at what would be the fourth page of the exhibit, it's the first page entitled 1 of 4 to the document, and you see the paragraph which begins, to operate a 1.080 MGD?
A. Yes, sir.
Q. Would you read the first sentence of that paragraph?
A. To operate a 1.080 MGD contact stabilization process

wastewater treatment facility with effluent canal to Caloosahatchee River located off project site.
Q. Exhibit 16, can I ask you to look back and tell me what the date of Exhibit 16 is?
A. The first page says, January 1981.
Q. All right. Could you tell me what the date of Exhibit 17 is?
A. The first page of that exhibit with the letter to Mr. Reeves is dated April 2nd, 1981.
Q. And looking at the State permit, which is attached to Exhibit 21, can you tell me what the date of issuance of that permit is?
A. The cover page from the State permit appears to have the date of issuance as August 2nd, 1983.
Q. Isn't it true, Ms. Kagey, that Florida issued two permits for the Waterway Estates facility to discharge after the date of Exhibit 16?
A. That appears to be the case.
Q. Okay. Ms. Kagey, let me ask you to look at Exhibit 18. Do you have that in front of you?
A. Yes.
Q. Can you tell me the effective date -- excuse me -- first of all, can you identify what Exhibit 18 is?
A. I'm sorry, I could not understand you.
Q. Could you identify what the effective date of Exhibit

18 is?
A. On the permit cover page it states, this permit shall become effective on September 24th, 1981.
Q. So, isn't it true, Ms. Kagey, that Florida Cities received an NPDES Permit from EPA some eight months after Exhibit 16 was published?
A. That appears to be the case.
Q. Isn't it true, that you failed to consider the State 1983 permit when you recommended the denial of the 1986 NPDES Permit renewal?
A. Could you please repeat the question?
Q. Certainly. Isn't it true that you failed to consider the State 1983 discharge permit when you recommended denying the 1986 NPDES Permit renewal application?
A. No, sir. I took that into consideration.
Q. All right. Let me ask you to look at Exhibit 199.
THE COURT: What was the number?
MR. BULLOCK: 199, Your Honor.
BY MR. BULLOCK:
Q. Can you identify Exhibit 199 for the record?
A. This exhibit is dated May 28th, 1985. It's a letter to Mr. Anthony Reeves, Vice-president, Florida Cities Water Company, P O BOX 5846, Sarasota, Florida, in regards to compliance evaluation inspection, Florida Cities Water Company, Waterway Estates, NPDES FL0030325.

Q. Okay. Let me ask you, what is attached to this letter?
A. It is an NPDES compliance inspection report.
Q. Isn't it true, that this report was a joint report, inspection report with FDER?
A. It appears to be.
Q. All right. Let me refer you to the third page of the Exhibit. Under section E, subsection G, isn't it true that subsection G indicates that Florida Cities' number and location of the discharge points as described in the permit were in compliance?
MR. BOMIAK: Your Honor, objection. There's been no testimony elicited that Ms. Kagey conducts compliance inspections for EPA. The testimony was she writes permits.
MR. BULLOCK: Your Honor — I'm sorry.
THE COURT: All right.
MR. BULLOCK: Your Honor, EPA's internal breakdown in terms of how they allocate out various portions of responsibility really should not impact on whether or not the agency as a whole had knowledge of any particular issue.
This is an official EPA compliance inspection report which indicates the company was in compliance as to where it was discharging. And it was conducted by both Ms. Kagey's own agency and the State of Florida.
THE COURT: I'll overrule the objection.

You can answer the question.
Do you remember the question?
THE WITNESS: No, sir, I do not.
THE COURT: Read the question back.
(Thereupon, the above-referred to portion of the testimony was read back by the court reporter as above recorded.)
THE WITNESS: Excuse me. I'm having a hard time finding which particular section you are talking about.
MR. BULLOCK: Okay. Your Honor may I approach and point it out to her?
THE COURT: You better do that, quickly.
THE WITNESS: It appears that it was marked yes on both of those questions.
BY MR. BULLOCK:
Q. Let me refer you next to Exhibit 200, and ask you to turn to the second page of Exhibit 200, under subsection C, areas evaluated during inspection. Do you see that section?
A. Yes, sir.
Q. All right. The effluent receiving waters have received a satisfactory rating; isn't that correct?
A. Correct.
Q. All right. And satisfactory is the highest rating under that section; isn't that correct?
A. It appears to be, yes, sir.

Q. Isn't it true that these two compliance inspections indicate that EPA considered that Florida Cities was discharging to a proper location during this period of time?
MR. BOMIAK: Objection, Your Honor. Again, there's been no foundation laid that Ms. Kagey's familiar with these compliance inspection reports, and in any way in their preparation. She can't really testify as to what it is they state with respect to where the discharge point is.
THE COURT: I'll overrule the objection.
You can answer.
THE WITNESS: Could you repeat the question?
BY MR. BULLOCK:
Q. Ms. Kagey, isn't it true that based upon these compliance inspection reports, EPA considered the Waterway Estates discharge to be discharged into the proper location?
A. That's what it appears that the compliance officer at the time noted.
Q. All right. Isn't it true that between January 1981, and April of 1986, EPA took no action which directed Waterway Estates to cease discharge —
MR. BOMIAK: Objection, that's clearly beyond the scope of this witness' —
THE COURT: I agree. I'll sustain the objection.
BY MR. BULLOCK:
Q. Ms. Kagey, who is Roosevelt Childress?

A. Roosevelt Childress is presently one of the unit chiefs in our permit section.
Q. Okay. What was his possession in 1986?
A. I do not recall.
Q. All right. How long has he been unit chief?
A. I do not know.
Q. Okay. What are the responsibilities of a unit chief?
A. A unit chief is usually the immediate supervisor of staff members, and in our section, was probably the main contributing hands-on, day-to-day type of person, knowledgeable about permit writing.
Q. Okay. Who is Bruce Barrett?
A. Bruce Barrett at one time was division director. I believe the organization was Water Management Division.
Q. All right. And was he in this position during 1986?
A. I do not recall.
Q. All right. Who is Jim Greenfield?
A. Jim Greenfield is one of my colleagues. I do not know the exact position or organization he's in. I tend to association him with wasteload allocations.
Q. And how long has he been in that position?
A. I do not know
Q. Let me ask you, Ms. Kagey, to look at Defendant Florida Cities' Number 3. Could you identify this document for the record, Ms. Kagey?

A. It's a memorandum dated December 26, 1985, subject, interpretation of State standards for permitting purposes, from Tom DeRose, Assistant Regional Counsel, to James R. Patrick, Chief of the Permit Section.
Q. Is your name on this document?
A. Yes.
MR. BULLOCK: Your Honor, we would move Defendant's number 3 in evidence.
MR. HOMIAK: Objection, Your Honor. It is irrelevant. Second, it's not been established Ms. Kagey received this document. Her name may appear on the cover receipt. It's not been established she's ever seen or has received the document.
MR. BULLOCK: Your Honor, this document was produced pursuant to discovery from the Government, and it came from Ms. Kagey's files.
THE COURT: I'll overrule the objection.
It will be received.
BY MR. BULLOCK:
Q. Ms. Kagey, let me ask you to look at the first paragraph, the second sentence, which begins with, according to this decision. Let me ask you to read the next several sentences and I'll stop you.
A. According to this decision, EPA has authority, indeed, a duty, under section 301-B-1-C to interpret State law,

apply those limitations and conditions which it deem necessary to satisfy the requirements of State law. This is true in the absence of State certification. This is also true where EPA determines that the State has committed clear error in its certification. For example, where State overlooks applicable State water quality standards, citing OTC Opinion 58, March 29, 1977. However, there's no indication that the State has overlooked its standards or otherwise committed clear error -- I'm sorry. I'm going to restart that. However, where there is no indication that the State has overlooked its standards or otherwise committed clear error, EPA must give deference to the State. In short, if EPA and the State arrive at two different but equally persuasive interpretations of a standard, EPA should defer to the State's interpretation when included in the State certification.
Q. Thank you.
Ms. Kagey, isn't it correct that the EPA's regulations state that there are only four reasons for which a facility can have its permit taken away?
A. I do not know the answer.
MR. BULLOCK: Thank you.
THE COURT: Mr. Homiak.
MR. HIRD: I have no questions, Your Honor, of this witness.

THE COURT: Thank you, sir.
MR. HOMIAK: Your Honor, for the record, my name is Bob Homiak. I was introduced on the first day of the trial. I didn't expect to be participating in the trial, but Ms. Fitz-Henley had to leave suddenly. I'm an attorney with the Department of Justice in Washington.
With the Court's permission, I will conduct this examination.
THE COURT: Yes, indeed, you may proceed, Mr. Homiak.
Welcome to the fray.
MR. HOMIAK: It's a pleasure to be here, Your Honor.
THE COURT: You just lost some credibility.
Go ahead, Mr. Homiak.

CROSS-EXAMINATION

BY MR. HOMIAK:
Q. Ms. Kagey, I believe you testified you've been employed by EPA Region IV since 1980; is that correct?
A. That's correct.
Q. And you've begun writing discharge permits in 1982; is that correct?
A. To the best of my knowledge, yes.
Q. Are these NPDES Permits that we are referring to, Ms. Kagey?

A. Yes. National Pollutant Discharge Elimination System.
Q. Approximately how many permits have you written during your tenure at EPA?
A. I'm not even sure of a good approximate number. It could be anywhere between a hundred to two hundred.
Q. Now, Ms. Kagey, do you also review permits that have been written by other members of the NPDES Permits branch?
A. That is not the correct branch name, but, yes, I have reviewed others NPDES Permits that have been drafted and finalized by other permit writers.
Q. And when did you begin reviewing the permits that have been drafted by others, please?
A. I don't recall the year, but I believe I've been doing it for maybe five to six years, at least.
Q. And could you give me an approximation of how many permits that you've reviewed during the past five or six years in this position?
A. It's probably amounted to maybe fifty to a hundred permits a year, based on our cycle of permits, except for this past fiscal year, because Florida has been delegated and we're not issuing as many permits, except for Federal facilities.
Q. Now, Ms. Kagey, Mr. Bullock asked you a number of questions concerning EPA's denial of a NPDES Permit for the Waterway Estates facility back in 1986, and my question was,

to the best of your recollection, was your decision to denial Florida Cities' request for the NPDES Permit renewal for Waterway Estates reviewed by others in Region IV before it became final?
A. To the best of my recollection, it was reviewed by others.
Q. And can you recall who would have reviewed that decision?
A. No, I do not recall.
Q. Ms. Kagey, I want to direct your attention to an Exhibit, Government Exhibit number 354, please.
Do you have that document, Ms. Kagey?
A. Yes, sir.
Q. First of all, I'll ask you if you can identify it, please?
A. This letter is dated June 30th, 1986, going to Mr. Patrick Lehman of Florida Cities Water in regards to the NPDES Permit denial, Waterway Estates, NPDES number FL0030325. It is from myself.
Q. Thank you.
Is that your signature that appears on page 2 of this document, Ms. Kagey?
A. Yes, sir.
Q. Now, Ms. Kagey, if you would, please, read the first paragraph of that letter to Mr. Lehman, please.

A. The Environmental Protection Agency, EPA Region IV, intends to deny your application for a National Pollution Discharge Elimination System, NPDES Permit, from the above referenced facility. In accordance with the Federal Water Pollution Control Act, EPA has tentatively determined there can be no permitted discharges to Calooosahatchee River via canal. The enclosed fact sheet provides the rationale for this decision.
Q. Now, Ms. Kagey, I would direct your attention to the third page of this Exhibit, a document dated June 30, 1986, entitled, Fact Sheet. Do you have that?
A. Yes, sir.
Q. To the best of your recollection, is this the fact sheet that you included in your letter to Mr. Lehman or a copy thereof?
A. To the best of my recollection, this is a copy of the fact sheet.
Q. And I would direct your attention to page number 2 of that fact sheet, please, paragraph number 3. Do you see that?
A. Yes, sir.
Q. Would you read the first sentence, please?
A. The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981.
Q. Ms. Kagey, turning back to page number 2 of this

Exhibit, please, the sentence at the top of the page, would you read that, as well, please?
A. If you have any questions concerning the rationale for denial or the procedures associated with the NPDES Permit Program, please contact me at 404-347-2156.
Q. Now, Ms. Kagey, to the best of your recollection, did anyone at Florida Cities contact you in response to this letter that was issued in June of 1986?
A. There may have been a letter requesting an extension of time for — based on what we asked them to submit to us.
Q. Well, with the exception of that, Ms. Kagey, do you recall whether representatives from Florida Cities ever contacted you with questions concerning the rationale for denial?
A. No, I do not recall any.
Q. Okay. Now, Ms. Kagey, directing your attention back to page 1 of this document, the last sentence of the —
A. Excuse me. Let me go back. When I said no, I do not recall any, I'm sorry, I misquoted.
From what I remember, going through my stuff prior to the trial, there was — they had requested an extension of time. I believe we gave them some sort of extension of time. They came back in with a proposed proposal and I think they may have commented to the denial, but I do not remember the content of that.

Q. Okay. I want to direct your attention now to page 1, the final sentence, which refers to — says, after the State EPA will go to public notice with this denial action and a compliance schedule will be developed to obtain the cessation of discharge. Do you see that sentence, Ms. Kagey?
A. Yes, sir.
Q. Would you describe to the Court briefly what the public notice process is, please?
A. Public notice process, as defined by Federal Law, requires us to go to public notice to allow permittee or third party to submit comments in relationship to a draft permit.
Q. Did I understand you correctly that not only the permittee, but members of the public may comment on the draft permit in the public notice process?
A. Yes, sir.
Q. Okay. And under EPA's procedures, is there a duty to respond to significant comments that are received during the public notice process?
A. EPA — as far as I can remember, there is law that does require EPA to respond to significant comments received by the permittee or third parties.
Q. And Ms. Kagey, did EPA, in fact, go to public notice in this matter?

A. To the best of my knowledge, yes, we did.
Q. To the best of your knowledge, was Florida Cities notified independently of the fact that EPA was going to public notice with the proposed denial action?
A. From review of my files, yes, I had sent them a copy of the public notice.
Q. To the best of your recollection, Ms. Kagey, did Florida Cities ever object to EPA's proposed action during the public notice process?
A. To the best of my knowledge, they did not submit comments during the public notice period.
Q. Now, let me ask you, Ms. Kagey, if Florida Cities had come to you, either after reviewing your letter of June 30th, 1986, or as part of the public notice process, with conclusive evidence that the Waterway Estates facility, indeed, had a wasteload allocation that was not — no discharge, would you have reconsidered your proposed permit denial?

MR. BULLOCK: Objection, Your Honor, speculation, hypothetical.

THE COURT: I'll overrule your objection.

Can you answer that?

THE WITNESS: Yes, sir.

Yes, I would go back and reconsider.

BY MR. HOMIAK:

Q. Ms. Kagey, I now want to direct your attention to a document that has been identified as Government Exhibit 361. Do you see that document?
A. Yes, sir.
Q. I'll ask you, can you identify this document, please?
A. This is the — a copy of the December 8, 1986 letter to Mr. Reeves, Florida Cities Water, regarding the Waterway Estates NPDES Permit number FL0030325.
Q. And who signed this letter, Ms. Kagey?
A. I do not know. It was someone acting for Bruce R. Barnett, director, Water Management Division.

I believe this is Al Smith, but I'm not certain of that signature.

Q. Ms. Kagey, if you would direct your attention, please, back to page 1 of this document, specifically to the first paragraph, I would ask you to if you would read those three sentences out loud, please?
A. You are here by notified of denial of the National Pollutant Discharge Elimination System, NPDES Permit application for the above referenced facility. This action constitutes the Environmental Protection Agency, EPA final permit decision in accordance with 40 CFR 124.15-A. Any person may contest this decision by submitting a timely request for a hearing to the regional administrator under 40 CFR 124.74 or 124.114.

Q. Okay. Now, Ms. Kagey, directing your attention to the very top of page 2 of this Exhibit, would you read that sentence, please?
A. If you wish to request a hearing under 40 CFR 124.74 or 124.114, you must submit a request, and original and two copies, to the regional hearing clerk within 30 days from the receipt of this letter.
Q. Ms. Kagey, to your knowledge, did Florida Cities file a request for a hearing of this permit denial?
A. No, sir.
Q. Now, Ms. Kagey looking back to page 1 of this document, this is approximately — the date of this document is approximately five months after EPA first informed Florida Cities of its intent to deny the Waterway Estates permit renewal; isn't that correct?
A. Approximately five or six months, correct.
Q. Ms. Kagey, I want to direct your attention at this point to the very last page of what has been identified as Exhibit — Government Exhibit 361. Do you see that?
A. Yes, sir.
Q. Is that your signature that appears above the line, permit writer?
A. Yes, sir.
Q. Ms. Kagey, directing your attention to what's numbered as paragraph number 3, State Certification, the document

waived per 40 CFR 124.15-C. Do you know what that is in reference to?
A. To the best of my recollection, when we cited that, that meant that the State waived by -- waived State certification by not responding to us within the 60 day time period.
Q. And was the State notified of -- the State of Florida notified of EPA's intent to deny the Waterway Estates permit renewal request?
A. Yes, it was, through the State certification request.
Q. And would the State, also, have had an opportunity to comment on the proposed denial during the public comment process that you discussed earlier?
A. Yes.
Q. Ms. Kagey, is it fair to say that Florida Cities had three separate opportunities to bring any alleged errors to EPA's attention before the Waterway -- Waterway Estates permit denial became final?
A. Yes. One informal and two formally.
Q. And what was the informal process you just alluded to, please?
A. In one of my documents that we've already looked at, I believe it was either June or July, where I told that we were intending to deny the permit, and then I go on in the letter saying, we will go to public notice after this date.

Q. Okay. And what were the two formal opportunities to bring -- to object to EPA's decision, please?
A. The first and formal -- the first formal opportunity would be at the time of public notice, during the public notice period, and the second time would be after the issuance of the permit decision, and you could -- they could have requested an evidentiary hearing.
Q. Ms. Kagey, going back to your direct testimony, did you testify that, to the best of your recollection, you did testify with -- I'm sorry -- that you did consult with the Wasteload Allocation Unit before taking action on the Waterway Estates?
A. I do not recall.
Q. Ms. Kagey, going back to your duties to review the permits that are written by others, do you have a formal title? Is there a formal title that goes with that position?
A. No, sir.
MR. HOMIAK: Okay. One moment, Your Honor
(Pause.)
MR. HOMIAK: Your Honor, no further questions of Ms. Kagey.
THE COURT: Any redirect?
REDIRECT EXAMINATION
BY MR. BULLOCK:

Q. Ms. Kagey, let me ask you, in response to questions regarding Exhibit 361, Government's Exhibit 361, which was a letter signed by Bruce Barrett, was Mr. Barrett one of your supervisors in December of 1986?
A. If he was -- if he was the division director, which I put on that letter, and I'm assuming he was, yes, he was my -- a higher supervisor.
Q. Okay. Let me ask you to look, again, at the last page of Exhibit 361. Let me ask you this in general question, and not only to the last page, but the entire document, is there anything in Exhibit 361 or any notification of Florida Cities that they were required to build an AWT treatment facility?
A. There's nothing in this reference to say that they were supposed to build an AWT facility.
Q. Let me ask you, then, to look at Exhibit 354, and it would be the fourth page, although it's headed page 2. You read from paragraph 3, the basis for the final effluent limits and permit conditions.
A. Yes, sir.
Q. All right. And Mr. Homiak asked to you read that paragraph. Can you explain the inconsistency between your finding of the no wasteload allocation from January of 1981 and the State's continued permitting of discharge and the 1981 and 1983 permits?

MR. HOMIAK: Objection, Your Honor, I think that's calls for a legal conclusion.
THE COURT: Uh-huh.
MR. BULLOCK: Your Honor, she's making a legal conclusion in this document that there's no wasteload allocation and they can't discharge.
THE COURT: I'll overrule the objection.
BY MR. BULLOCK:
Q. Can you explain that inconsistency between the continued State permitting and the language which you used in paragraph 3?
A. No, I cannot explain the inconsistency because both were written by Florida, not by us.
Q. All right. Let me ask you to look at Defendant's Exhibit 22. Let me ask you some -- while you're flipping to that, let me ask you some questions.
Mr. Homiak asked you whether or not anyone from -- Mr. Homiak asked you whether or not you remembered contacting the wasteload allocation branch and you said you didn't remember whether you did or not; is that correct?
A. I believe that was my answer.
Q. All right. Well, let me ask you to look at Exhibit 22 and identify it for the record.
A. This appears to be an inner-office memorandum to Bruce DeGrove from Dick Richardson, dated May 27th, 1986, subject,

City of Cape Coral, Sewage Treatment Plant Outfall Pipe Location.

Q. And would you look at page 2 and identify the attachment to that memorandum?

MR. BOMIAK: Your Honor, objection. This is a State document. It's the State Department of Environmental Regulation. There's been no indication who Bruce DeGrove and Dick Richardson are. There's been no testimony that this witness has ever seen this document before or should know anything about it, and I would object to any questioning on this -- any further questioning on this.

THE COURT: Yes, sir.

MR. BULLOCK: Your Honor, I have not really had a chance to identify it with the witness yet, to ask her who -- about the letter that is attached to it. Mr. DeGrove has been identified in this trial.

THE COURT: Well, go ahead, and I'm not sure that I'm going to allow any substantive questions on this as yet, but we'll see where you are going with this. I'll take under submission the -- I'll overrule the objection at this point, but subject to readdressing it.

Go ahead.

BY MR. BULLOCK:

Q. Ms. Kagey, could you look at the second page of this Exhibit and identify it for the record, please?

A. It appears to be a May 7th, 1986 letter from the State of Florida to Mr. Marshall Byatt, Facility Performance Branch, Water Management Division, EPA Region IV, in regards to Lee County, City of Cape Coral Wasteload Allocation and NPDES Permit.

Q. Who is Mr. Byatt?

A. Mr. Byatt has worked in the permit section with me for quite sometime.

Q. Okay. Is the Facilities Performance Branch the branch of EPA Region IV which would have the -- which would be in charge of maintaining records regarding wasteload allocations?

A. That organization no longer exists.

Q. In 1986, was the Facilities Performance Branch the branch of Region IV, which was required to keep information regarding wasteload allocations?

A. I do not recall.

Q. Okay. Have you ever seen this letter before?

A. Yes.

Is there any particular time limit?

Q. Did you see this letter in 1986?

A. I do not recall.

Q. You don't know whether you saw it or not?

A. I don't, no.

Q. And would correspondence regarding wasteload

allocation have been important to you in making a determination of whether a wasteload allocation existed for the Waterway Estates facility?

A. If I had some knowledge of correspondence regarding wasteload allocations, yes, that would be used in my subsequent actions.

Q. And you would have gotten -- you would have obtained information from the Facilities Performance Branch; is that correct?

MR. BOMIAK: Objection. I think this is completely beyond the scope of my examination of Ms. Kagey.

MR. BULLOCK: Your Honor, Ms. Kagey was asked about whether or not she would -- if she received information as to whether or not there was a wasteload allocation, if her decision would have been different.

THE COURT: Asked on --

MR. BULLOCK: On cross-examination, yes, sir.

THE COURT: I'll overrule the objection.

THE WITNESS: Could you repeat the question?

BY MR. BULLOCK:

Q. Yes, ma'am.

Would it have been important for you to have seen information regarding wasteload allocations that was generated by the State of Florida for the Caloosahatchee River and the Waterway Estates facility?

A. If it had concerned the Waterway Estates facility, yes, it would have been important.

MR. BULLOCK: Thank you, Ms. Kagey.

THE COURT: All right. Thank you.

You may step down.

Call your next witness.

(Pause.)

MR. BAISE: At this point, Your Honor, the Defendant Florida Cities proposes to read into the record three deposition transcripts from the depositions that were taken of Mr. Childress at a 30 (b) 6 deposition, deposition taken of Mr. Childress and a 30 (b) 6 deposition taken of Mr. Greenfield and a deposition taken of Mr. Bruce Barrett, whose name has been mentioned in testimony in the last few moments.

We have the certified copies of those depositions, Your Honor, and, again, I'm not sure what the practice is in this Court.

Do you want me to present those certified copies to you at this point?

THE COURT: Well --

MR. BAISE: If you do not want the entire deposition, we have copies of the excerpts.

THE COURT: Well, you are going to be reading them into the record or at least those portions that you are

proffering. I don't have to have them presented to me, if there's no dispute as to the accuracy of what you are reading.

Now, if you have a copy for me, so that I can follow along, that might be helpful, just from a logistics standpoint.

MR. BAISE: Yes. May Mr. High approach the bench?

THE COURT: Yes.

MR. HIGH: I don't know what your practice is, but I'm going to be reading the answers.

THE COURT: Yeah, just go ahead and take the witness stand.

(The following deposition excerpts were read into the record by Mr. Baise reading the questions and Mr. High reading the answers.)

MR. BAISE: Your Honor, this is from the certified transcript of Mr. Roosevelt Childress' deposition, given on May 19th, 1995 and August 14th, 1995.

THE COURT: All right. Just a moment.

MR. BAISE: Starting on page 15, line 20.

THE COURT: All right.

BY MR. BAISE:

Q. Starting with the question on page 15: How does a permit writer know whether or not he or she is required to include any numerical limit from such a document in an NPDES

Permit decision?

A. In the process of drafting an NPDES Permit, we contact the wasteload allocations unit at EPA to ask if there is a valid allocation document to support effluent limitations within a permit, and based on the information we get back form the allocations unit we accept it at face value and write the permit based on what they tell us.

Q. Second question to Mr. Childress: When you make those inquiries to the wasteload allocation unit and get back the information which you then use in such permits is a distinction made between wasteload allocations that are approved by EPA and those that are not yet approved or unapproved?

Ms. Fitz-Henley, objection.

MR. QUINN: Your Honor, I lost the line on that exchange. May I have it, please?

MR. BULLOCK: Excuse me.

MR. QUINN: Page 15?

MR. BAISE: May I, please?

THE COURT: Yes.

MR. BAISE: Page 15, starting at line 20.

THE COURT: We're on page 16 now.

MR. BAISE: We may be up to 16.

THE COURT: Page 16, line 12.

MR. QUINN: Thank you, sir.

THE COURT: Yes, sir.

MR. BAISE: Mr. Fitz-Henley, objection.

THE COURT: Well, go ahead.

A. I rely on the allocations unit to give me the correct information to use in the permit. It's my understanding that they would give us only allocations that have been approved.

Q. Question, to Mr. Childress: To your knowledge, has EPA every relied on wasteload allocations that have not been approved in developing NPDES Permit limitations?

A. Not to my knowledge.

Q. Now to page 17. Question to Mr. Childress: Section 303 of the Clean Water Act discusses two different kinds of wasteload allocations, one submitted to EPA for approval and one submitted to EPA for information.

To your knowledge, has a permit writer at EPA ever relied upon wasteload allocations submitted for information rather than for approval in developing a permit limitation?

A. Not to my knowledge.

Q. Page 30, line 16.

THE COURT: Line what?

MR. BAISE: Page 30, line 16.

MR. QUINN: That's stops in the middle of an answer for me, sir.

THE COURT: Yeah.

MR. BAISE: In fact, I start the question: In your experience, Mr. Childress, would it be usual for a permit writer to rely only on the title page and one page for a wasteload allocation in developing an NPDES Permit effluent limitation?

Ms. Fitz-Henley, Objection.

MR. QUINN: I will also object, Your Honor, as to the assumption that is at the beginning of the sentence.

THE COURT: You mean without reading the assumption?

MR. QUINN: Yes, sir.

THE COURT: You have left out part of the question.

BY MR. BAISE:

Q. Starting at line 13: Assuming that Ms. Kagey's testimony and the objection of her counsel, Mr. Jacobs, are substantially read into this record, in your experience, Mr. Childress, would it be usual for a permit writer to rely only on the title page and one page from a wasteload allocation in developing an NPDES Permit effluent limitation?

Objection, Ms. Fitz-Henley.

MR. QUINN: I object, also, on the basis of it calls for speculation.

And Ms. Fitz-Henley objected, obviously, as to

form, sir.

THE COURT: I don't understand the question, with the assumption that you're making in that question, that is, assuming that Mrs. Kagey's testimony and the objection of her counsel, Mr. Jacobs, are substantially correctly read into this record, in your experience, would Mr. -- would it be usual for a permit writer to rely on the title page and one page from a wasteload allocation in developing an NPDES permit effluent limitation.

What is the assumption you are talking about there?

MR. BAISE: I cannot recall, Your Honor, at the time what the assumption was. That's why I cut out that particular portion of the --

THE COURT: I'm going to sustain the objection.

Go ahead.

BY MR. BAISE:

Q. Page 34, line 11, question: Can you tell me what it is?

MR. QUINN: Objection. I don't know what "it" is either, sir.

MR. BAISE: You can't get there if you've stricken my last answer from Mr. Childress, Your Honor.

THE COURT: Okay. Well, I don't think the 11th Circuit is going to know what "it" is either, if it goes in

like this.

Just a moment.

(Pause.)

MR. BAISE: If I --

THE COURT: Just a moment.

(Pause.)

Well, I think you better go back -- it seems to me like you got to go back a question.

Do you have your transcript?

MR. BAISE: I do not have the transcript. I just had typed out what I had taken from the transcript and turned over to the Government.

Your Honor, I would request reconsideration of your ruling with regard to the question on page 30 starting with the sentence, in your experience, Mr. Childress. The question is very clear. Would it be usual for the permit writer to rely only on the title page and one page. Ms. Kagey already testified that that's what she relied upon was the title page and one page or two pages, to make her determination.

THE COURT: I've already ruled and I'm not going to reconsider that. It's unclear as to what the question is assuming.

Now, let's get on with it, and I'm telling you that your proffered question here from page 34, line 11, can

you tell me what it is, certainly I'm not going to -- well --

MR. BAISE: I would agree, Your Honor. Strike it.

I do not have the line with the question that starts, if a State issues such a State water quality certification -- it's about --

THE COURT: Line 22.

MR. BAISE: Line 22, starting with that question.

Q. If a State issues water quality certification, does it mean that the State has determined that the draft Federal permit will not violate water quality standards in the State?

Ms. Fitz-Henley, objection.

MR. QUINN: I object, as well, Your Honor. It calls for speculation and in the question is omitted the word "such," but with that -- two objections, sir.

THE COURT: All right. Speculation?

MR. QUINN: Yes, sir. And Ms. Fitz-Henley objected on the basis of form.

THE COURT: All right. Just a moment.

Well, who is Roosevelt Childress? Is there evidence in the record as to who he is?

MR. BAISE: Ms. Kagey just gave evidence, Your Honor.

THE COURT: Oh, yes, that's right.

And refresh my recollection as to who she said he was.

MR. BAISE: He was one of the supervisors in the Region IV EPA Office supervising her work.

I cannot tell you his exact title. Maybe one of Government counsel can give you the exact title, but I know Ms. Kagey gave what she thought was his title and responsibilities in her testimony a few moments ago.

And he was designated as 30 (b) 6 witness to respond --

THE COURT: Well, I'll permit, over objection, the question, however, you did leave out the word "such." Read the question over again and --

MR. BAISE: I'm sorry if I left out the word "such."

Q. If a State issues such water quality certification, does it mean that the State has determined that the draft Federal permit will not violate water quality standards in the State?

Ms. Fitz-Henley, objection.

A. Yes.

Q. Does this document makes any mention of no discharge for this facility?

A. No.

Q. Question: And the date of this document is January

14th, 1981, six months after the wasteload allocation of January 1981 referenced earlier; is that correct?
A. That's correct.
Q. Page 48, starting with line 4, question: In looking at the 1981, January wasteload allocation and this document taken together, does it appear to you that the State of Florida is requiring no discharge from this facility, at least during the period of time '81 to '83?
A. The State is not requiring no discharge during that time period, 81 to '83.
Q. During the break I gave you the next Exhibit just for you to review in the interest of time. And the next Exhibit is the 1983 renewal of the State permit for five years, dated August 2nd, 1983, and it's been previously marked as Kagey Exhibit 52. Have you reviewed this document?
A. Yes, I have.
Q. Question: Can you tell me what it is?
A. It is the operating permit for that Florida Cities Water Company facility to discharge wastewater into the canal leading to the Caloosahatchee River effective from the date of issuance, August 2nd, 1983, to the date of expiration, August 2nd, 1988.
Q. Was this permit in effect at the time of EPA's 1986 decision?
A. Yes.

Q. Does this permit make any mention or reference to a State requirement of no discharge?
A. No, it does not.
MR. BAISE: The next deposition that we'd like to read portions of into the record, Your Honor, is involving Mr. Bruce Barrett. Starting on page 3, line 24, and Mr. Barrett, as you may recall —
MR. BOMIAK: Excuse me. What page?
MR. BAISE: Page 3 —
MR. BOMIAK: Your Honor, I object that's not designated as part of the deposition they were going to read into evidence.
MR. BAISE: It was just stating Mr. Barrett's full name and address, Your Honor. So I can drop it. It was just to clarify it's Mr. Bruce Barrett.
THE COURT: Any objection to that?
MR. BOMIAK: None, Your Honor.
MR. BAISE: Ms. Kagey referred to him and the fact he signed the documents so it's just merely introductory.
THE COURT: Go ahead. He's withdrawn the objection.
BY MR. BAISE:
Q. Page 30, 1 through 8: Do you know of any instances where Florida permitted a discharge and EPA decided to mandate no discharge?

A. No.
Q. Would EPA normally defer to a State's judgment therefore regarding whether or not there should be a discharge?
A. Yes.
Q. Page 59.
MR. BOMIAK: I'm sorry. Page 59?
MR. BAISE: 59.
Q. Line 5, question: Mr. Barrett, you have a document in front of you that two months before EPA denied the permit they were sent a letter, which I believe your testimony said indicated that Waterway Estates had a wasteload allocation. Yet EPA's decision in 1986 references one document out of this series and this is the 1981 document.
THE COURT: And that is the —
MR. BAISE: And that is the 1981 document. And it's referenced in the attached FAX sheet, the second page. I believe you'll see no reference to any of the other documents.
My question to you is, in your experience at EPA and now having looked at these series of documents, do you see any inconsistency here?
A. Yes.
MR. BOMIAK: Objection, Your Honor, on the grounds that mischaracterizes the documents and it's misdescribing

and testifying as to the inferences to be drawn from the documents.
THE COURT: I think that's an objection as to the form of the question, and unless asserted at the time of the deposition is being waived.
Overruled.
BY MR. BAISE:
Q. Question: And what is that inconsistency?
A. That the permit issued did not appear to be responsive to the most recent water quality analysis by the State in terms of a wasteload allocation.
Q. Question: Is it relevant that the State had granted and renewed its own discharge permit in 1981 and in 1983, and that in 1986 that latter permit was still in effect?
Mr. Harrison, objection, counsel, assumes facts.
MR. BOMIAK: I would also assert it calls for speculation on the part of the witness, Your Honor.
MR. BAISE: And question presumably be Mr. Harrison here: You may answer.
THE COURT: Excuse me, just a minute.
MR. BAISE: Excuse me.
THE COURT: And your objection, Mr. Bomiak, again was what?
MR. BOMIAK: It's speculation. The question refers to — it appears to refer to State permits that have

been granted and renewed, and it, also, calls for a legal conclusion that those state permits are still in effect.

This is an EPA witness, Your Honor.

THE COURT: I'll sustain the objection.

Go ahead.

BY MR. BAISE:

Q. Question: Would it appear that the State permits were consistent with water quality certification to EPA that you reviewed earlier?

MR. HOMIAK: Excuse me. I lost that, Mr. Scroggin — I mean, Mr. Baise. Were you just continuing?

MR. BAISE: Again, I cannot give you the line number, because I just have it typed in —

THE COURT: He was reading from line 9.

BY MR. BAISE:

Q. Would it appear that the State permits were consistent with the water quality certification to EPA that you reviewed earlier?

A. Yes.

Q. From the documents you have reviewed, is there any basis that, in your experience as a permit writer, you could reach the conclusion that the State of Florida had required no discharge from this facility?

MR. HOMIAK: Again, Your Honor, objection. It

calls for a legal conclusion on what the State of Florida had or had not done.

MR. BAISE: Your Honor, this was a high level, EPA Region IV individual, Mr. Bruce Barrett. There's been testimony here from Ms. Kagey that he, in fact, signed some of the documents that came to Florida Cities denying their permit.

He was familiar with the Florida State permits. This was an individual that was fully competent to testify on these issues, and we had documents in front of him, the '81 and '83 permits, as noted in the earlier question, and the 81 and '83 permits from Florida are in evidence in this case.

THE COURT: All right. Just a moment.

Okay. Well, you know, you've asked him based upon his experience as a permit writer you could reach the conclusion that the State of Florida had required no discharge from this facility.

MR. BAISE: Correct, Your Honor, and he had the documents in front of him.

THE COURT: Yeah, but you're asking him to testify on the basis of his being a permit writer and he says he's not a permit writer.

MR. BAISE: I'm sorry. Who said he was not a permit writer?

THE COURT: He did. He says, well, first of all, I'm not a permit writer.

MR. BAISE: I see.

THE COURT: And there's an objection at that time of lack of foundation in addition to the other objections that have been asserted here, and I don't think I can allow that over objection.

Sustained.

MR. BAISE: I would turn to the Greenfield deposition testimony, Your Honor. Page 3, starting line 15, Mr. Baise: We stipulate this deposition is being taken pursuant to Rule 30 and specifically rule 30 (b) 6, Mr. Quinn: So stipulated.

MR. QUINN: I only note for the record an objection that that was not designated on the page, but I just want to object on that basis, sir.

THE COURT: Well, is that an issue here?

MR. QUINN: No, sir, actually, it's not. I think maybe I should just note it for the record, sir, that that's not —

THE COURT: All right. So noted.

MR. BAISE: Page 63, Mr. Greenfield's deposition, starting at line 2.

THE COURT: Refresh my recollection as to who Mr. Greenfield is. From the record that we have in our

case.

MR. BAISE: Ms. Kagey, again, testified as to his position at EPA, and I believe her testimony was that he was the Wasteload Allocation Coordinator.

MR. HOMIAK: I would object that that characterizes Ms. Kagey's testimony that she gave earlier.

MR. BAISE: Well, I can read in two lines that were not designated: Please tell is your title, Mr. Greenfield.

I am the Region IV wasteload allocation TMDL coordinator.

MR. QUINN: We have no objection to that, Your Honor.

THE COURT: All right. Thank you.

All right.

MR. BAISE: Page 63.

THE COURT: Page 63?

MR. BAISE: Page 63, line 2.

THE COURT: All right.

BY MR. BAISE:

Q. Question: Is it your earlier testimony that you are unaware that the agency must approve wasteload allocations within 30 days after submission by the State?

A. No. I'm aware that is in the regulations. That 30 days was not always met. Let me rephrase that one. We

tried to meet it. Where it was going to be a controversial issue or an issue, a complex issue, we would request the State submit a draft document so that we could then review it.

Q. Question: Do you know of anything in the record which would suggest that the 1981 scenario document, which included several wasteload options, do you know whether it was ever approved within a 30-day period?

A. I do not know.

Q. Then to — appears to Greenfield second day of testimony, page 224, line 13: Do you agree or disagree with this statement: The regional administrator shall either approve or disapprove such listing and loadings not later than 30 days after date of submission to the regional administrator?

Mr. Quinn: Objection.

MR. QUINN: Your Honor, that objection is obviously as to form.

THE COURT: And the specific objection is what?

MR. QUINN: The objection I made at the time was to the form of the question in that it is — it calls — it could have been corrected because there was a lack of foundation at the time, and that, I submit, was an objection that I made at that time.

THE COURT: So your objection as to form is that

there was no foundation?

MR. QUINN: Yes, sir.

MR. BAISE: Your Honor, obviously, we did not put in all of the foundation which would go with these questions or answers or we would be here all day.

THE COURT: We're going to be here all day, anyhow.

MR. BAISE: Or all week.

I was trying to make this as concise and short as possible relating to the issues which have been already brought up to the Court, as to whether or not EPA must approve or disapprove such listings. You had that testimony from Mr. Hartung, and now this is from a 30 (b) 6 witness, speaking for the United States, on whether they agree or disagree with a particular statement.

MR. QUINN: May I clarify, sir? My objection is not as to the foundation as we sit here today. My objection was to the foundation at the time we took the deposition, that there was not foundation then, and because there wasn't foundation then, there, also, can't be foundation today.

THE COURT: I'll sustain the objection, Mr. Baise.

BY MR. BAISE:

Q. Do EPA's records establish, or do you have any knowledge on the agency's behalf that the regional administrator either received or approved or disapproved a

stream segment on the Caloosahatchee River that we are discussing and its listing and loadings not later than 30 days after it was submitted in January of 1981?

A. Are you asking if we approved this report within 30 days?

Q. Question: Any report? Any number? Any document?

A. That was on January 1981?

Q. Correct.

A. Going back through our records, I did not see an approval within 30 days of this document.

Q. Question: Now, the document we are talking about to be clear for the record, is — why don't you identify it?

A. Wasteload Allocation Documentation of January 1981 Completed for the Caloosahatchee River.

Q. Question: And go ahead and identify the Exhibit number again for the record.

A. Exhibit Kagey 38.

Q. Question: Thank you.

Do you agree with the statement, Mr. Greenfield: That if the regional administrator in Region IV approved the listing of the Caloosahatchee River segment we are discussing and its loadings, that the State of Florida shall incorporate that listing and loadings into its current water-quality-management plan?

Mr. Quinn: Objection.

MR. QUINN: My objection at that point in time, sir, was that it was a compound question. My objection at this time is that it calls for speculation.

THE COURT: Okay. I'll overrule the objection.

MR. BAISE: Answer.

A. Section 303 requires that the loadings be approved by regional administrator and incorporated into the plan, yes.

Q. Question: Do EPA records establish or do you have any knowledge on the agency's behalf —

THE COURT: Wait just a minute.

Yes, Mr. Quinn.

MR. QUINN: There's a couple lines in between that which is on line 14, Your Honor, and Mr. Baise — that I believe there's an additional part of the answer at line 9 through 13 that should be, for continuity, be put in there, sir.

THE COURT: Okay. You want to -- you don't have yours there; right?

MR. BAISE: I have mine.

THE COURT: Why don't you show him what he's talking about, sir.

Well, go ahead, read from yours, Mr. Quinn.

MR. QUINN: Question: Do we -- sorry, go ahead.

THE COURT: Then answer.

A. No, I mean, that's what the regulations say. They do

not say specifically this river allocation, but this allocation should be included, should have been included in the Florida's water quality plan.

BY MR. BAISE:

Q. Question: Do EPA's records establish or do you have any knowledge on the agency's behalf if their EPA Region IV administrator approved any listing for the loading in the 1981 document, Kagey Exhibit 38, and that approval, that listing and that loading were incorporated in the State of Florida's water quality management plan?

A. I have no knowledge of that occurring.

MR. BAISE: That completes the deposition testimony we would like to put into the record, Your Honor.

THE COURT: All right.

Call your next witness.

You can have this back.

MR. BAISE: I beg your pardon?

THE COURT: You can have this back here.

Call your next witness.

Where is the deposition this came out of — this envelope that I opened?

MR. QUINN: That was the Ms. Kagey deposition, Your Honor.

THE COURT: Where is that?

I unsealed that and — there it is. Okay.

It needs to be filed.

Wait a minute. Now, wait a minute. I don't — that was read from. That deposition was read from; is that correct?

MR. BAISE: Which deposition are you referring to?

THE COURT: Okay. The deposition that was included in the envelope that I tore open a little while ago.

MR. BAISE: That was Kagey's deposition, Your Honor, for purpose of impeaching when she was on the stand.

THE COURT: For purposes of impeachment?

MR. BAISE: That's right.

THE COURT: That doesn't need to be filed.

MR. BAISE: I do not think so, no.

THE COURT: That doesn't need to be filed.

You tendered it to me, since it was sealed, and I unsealed that and gave the deposition back to you for your use for use in cross-examining Ms. Kagey.

MR. BAISE: That was not a 30 (b) 6 deposition, the way Childress and Greenfield depositions were 30 (b) 6 depositions of the United States.

THE COURT: You are not filing those depositions, either, because the segments have been read into the record.

MR. BAISE: Correct. We didn't want to burden the record.

THE COURT: For the record, I have returned to you the original of that Kagey deposition that I removed from the sealed envelope about an hour ago.

MR. BAISE: Correct, Your Honor.

THE COURT: Okay.

Next witness.

MR. BAISE: Do you want to proceed or take a break, Your Honor?

THE COURT: When did we convene at?

MR. BAISE: 1:20.

THE COURT: Well, why don't we go ahead and take 15 minutes.

THE MARSHALL: All rise.

(Thereupon, a brief recess was taken, after which the following proceedings were had:)

MR. BAISE: Your Honor, because of the travel schedule of one of our witnesses, we're going to be calling Mr. Bradtmiller out of the order.

We had originally submitted to the Court and to Government counsel, and they have been apprised we are going to take him out of order and would request your permission to have him called at this time.

THE COURT: Yes, sir.

MR. BULLOCK: Your Honor, Florida Cities would call Paul Bradtmiller.

THE CLERK: Raise your right hand.

Thereupon,

PAUL H. BRADTMILLER,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box.

State your name and spell your last for the record, please.

THE WITNESS: My name is Paul E. Bradtmiller, B-R-A-D-T-M-I-L-L E R.

DIRECT EXAMINATION

BY MR. BULLOCK:

Q. Good afternoon, Mr. Bradtmiller.

Would you please state your educational background beginning with college?

A. Following graduation from high school, I attended Northwestern University in Evanston, Illinois for one year and then entered the US Naval Academy in Annapolis from which I was graduated with a Bachelor of Science Degree and commissioned in the Civil Engineer Corps of the US Navy. In the Civil Engineer Corps I served 20 years in the planning design, construction, maintenance and operation of shore facilities and utilities, and while in the Civil Engineer Corps earned a Bachelor of Civil Engineer Degree at

Rensselaer (Phonetic) Polytechnical Institute in Troy, New York and a Master of Arts Degree at the University of Oklahoma in Norman, Oklahoma.

Q. When did you retire the Navy?

A. I retired from the Navy June 1st, 1977.

Q. Could you briefly outline the job that you've held since you resigned — retired from the Navy?

MR. JACOBS: That calls for a narrative, but we waive it in the interest of time.

THE COURT: All right.

THE WITNESS: Upon retirement I first managed water, wastewater and electric municipal utility in Middletown, Pennsylvania for seven years, then moved to Vermont, where I was the general manager of the Vermont Electric Power Authority and a director of the Electric Power Company for five years and then moved to Sarasota, Florida or Venice, Florida, where I worked for Dames and Moore Consulting Engineer on the Sarasota County Water Improvement Program for a year and following that, joined Florida Cities Water Company in February of 1991.

Q. What was the first position you held with Florida Cities?

A. I joined Florida Cities in the position of Senior Vice-president.

Q. When was the first major project you worked on at

Florida Cities?

A. First major project I worked on was the interconnect —

THE COURT: When did you join Florida Cities water?

THE WITNESS: February 1991. Late in February, I think about the 22nd.

THE COURT: All right.

BY MR. BULLOCK:

Q. And I'm sorry, did you finish your answer about —

THE COURT: No, he didn't.

Go ahead.

THE WITNESS: My first major assignment was work on the negotiations with Hillsborough County regarding an interconnect to its system at Carrollwood.

Q. Who was the lead negotiator for Florida Cities?

A. I was the lead negotiator.

Q. Who did you negotiate with on behalf of Hillsborough County Department of Sanitary Services?

A. I — at that time it was Michael McSweeny, who I believe his title was Director of the Utilities Department.

Q. Was the company examining any other options besides connection with Hillsborough County?

A. Yes. When I came aboard the company, it had already opened bids on constructing an advanced wastewater treatment

plant at the Carrollwood plant site, and the company was reevaluating whether to proceed with the award of that contract or interconnect with the county.

Q. Okay. Did you undertake an analysis of the two options?

A. Yes. Our staff analyzed the cost for either an interconnect or proceeding with the construction and what the result of each course of action would translate into rates for our customers.

Q. Did you reach a conclusion regarding which would be the better option for the company to pursue?

A. Yes. From a rate making point of view for the customers, most prudent approach was to at that time interconnect with the county, based on the terms that the county was offering at that time.

Q. In Hillsborough County, who governs the rates which companies such as Florida Cities would charge?

A. The Board of County Commissioners.

Q. And what procedures does the Board of County Commissioners follow?

A. The Board of County Commissioners follows the — they're governed by the same Florida statute as the Public Service Commission and the Board of County Commissioners follows the —

THE COURT: Just a second.

MR. JACOBS: Hearsay, lack of foundation.

THE COURT: Well —

MR. BULLOCK: I'll be glad to lay one.

THE COURT: I think you better.

BY MR. BULLOCK:

Q. Are you familiar with the procedures which the Hillsborough County Board of County Commissioners uses in determining rates for privately-owned, publically-regulated utilities?

A. Yes.

Q. And what procedures are those?

A. Procedures are essentially those that are followed by the Florida Public Service Commission.

Q. You indicated a minute ago that you recommended connection with the county. What was the basis for your recommendation?

A. I was first — the county, before I came aboard, had reapproached the company on negotiating an interconnect —

THE COURT: Sir?

MR. JACOBS: He said before he came on board. The rest is hearsay. Move to strike.

MR. BULLOCK: Your Honor, he's not testifying as to what the county —

THE COURT: I'll overrule the objection.

Go ahead, sir. Go ahead with your answer.

THE WITNESS: When I came aboard, the county had already requested the company to renegotiate — reopen negotiations for an interconnect. The company had opened bids to build a new plant for three million dollars. The county had asked to reopen negotiations and think were underway.

THE COURT: That's what you understood and that's what you had been told; is that correct?

THE WITNESS: That's correct.

THE COURT: Well —

MR. JACOBS: Renew the motion, Your Honor.

THE COURT: I'll grant the motion. I'll strike his testimony in that respect.

Just go ahead and elicit from him what he knows and what he did.

BY MR. BULLOCK:

Q. How much was the bid proposal for an AWT that Florida Cities offered for bid?

MR. JACOBS: Vague as to point in time.

BY MR. BULLOCK:

Q. When you came on board in 1991, were there bid proposals which had been let from Florida Cities?

A. Yes, bids had been opened and there was a low bid that was conforming.

Q. And how much was the low bid?

A. The low bid was —

THE COURT: Just a moment.

MR. JACOBS: Again, I don't mean to interrupt frequently, I just want to clarify whether he's testifying from personal knowledge or matters that occurred before his arrival and I think we are still vague as to time.

THE COURT: All right.

Was this before or after your arrival, Mr. Bradtmiller?

THE WITNESS: The bid opening was before my arrival.

BY MR. BULLOCK:

Q. Was the receipt of the bid, the low bid, did that occur before or after your arrival?

A. Well, the bids were received and opened before my arrival, yes.

Q. Was the low bid accepted before your arrival?

A. The low bid was determined to be conforming. It had not been accepted as far as awarding a contract, but it was common knowledge in the general office of what that bid was.

Q. In your responsibilities as senior vice-president, did you review the bid?

A. Yes, I knew the bid amount.

Q. All right.

THE COURT: Go ahead. Go ahead. I'll overrule

the objection. He was a senior vice-president.

You can have him on cross.

Go ahead.

BY MR. BULLOCK:

Q. Mr. Bradtmiller, I had asked you to explain the basis of your decision to recommend connection to the county and I believe you just explained that the bid had been — the low bid that came in was at three million dollars.

A. It was a little less than three million dollars, but when you added the engineering, the round figure for the plant investment would have been at three million.

My first assignment was to determine the constructability —

THE COURT: Is this in response to your question?

MR. BULLOCK: Yes.

THE COURT: I think you've answered his last question.

Ask your next question.

BY MR. BULLOCK:

Q. How did you determine that the connection with the county was the appropriate choice?

A. My first assignment was to determine the constructability of an interchange and pumping facility in terms of construction feasibility and the time frame.

Q. Were you able to undertake and reach a conclusion as

to that assignment?

A. Yes.

Q. And what was the conclusion?

A. My conclusion was that if we could reach an agreement by mid-year we could accomplish the project on a fast track by the end of the year.

Q. And that was an agreement with Hillsborough County?

A. No, that was a determination — oh, I'm sorry. You meant reach an agreement?

Q. Yes.

A. Yes, that would have been with Hillsborough County.

Q. Did you undertake another step in your analysis?

A. Well, the next step was to determine the economic feasibility in terms of what would be prudent as a regulated utility in terms of the investment options between interconnecting or building a plant and what the impact of each option would be on the rate-paying customer.

Q. Okay. If you had chosen the AWT facility, what would have been the increase in the rate base?

A. If we built the AWT facility, the increase in the rate base would have been the three million dollars.

Q. Okay. At the time you were making this study, had you chosen the connection with the county, what would have been the increase in the rate base?

A. At that time we were looking at an investment of about

$500,000 for a repump station and interconnecting force main.

Q. Were there any other inclusions in the rate base as a result of examining the option to connect with the county?

A. Yes. The major consideration and the reason that I could go forward with negotiations was that within a few weeks of my becoming involved, the county had agreed that it would not charge the company a five million dollar or five and a half million dollar capacity investment in their plant.

Q. If the county had charged that to the company would the company have included that in its rate base?

A. We would have capitalized that as capacity purchase, yes.

Q. All right. Did you and the county enter any negotiations regarding the connection fee?

A. Yes. We agreed with the county staff that the connection fee of about $5,000 per customer connection would be billed to the customers, they would become customers — our customers would become customers of the county for treatment. They would remain our customers for collection and billing, and we would be the billing agent for the county. But the connection fee would be collected from each of the customers over a period of 18 years for the initial three years, I think it was something between $12 and $13 a

month and for —

THE COURT: This was to pay for the $5,000 charge?

THE WITNESS: Per connection, yes, sir.

THE COURT: All right.

BY MR. BULLOCK:

Q. As a result of your negotiations with the county, what was the county's position regarding the connection fee?

A. As I stated in the agreement it set forth that the customers would pay that to the county over a period of 18 years and we would collect it for them.

Q. So that the — would that, then, be included in the rate base?

A. No.

Q. Was the company involved in any discussions with EPA after February of '91, regarding the Carrollwood wastewater treatment plant?

A. Yes.

Q. Okay. What was the status of these discussions?

A. When I came aboard, the company was under an administrative order, which set forth operating limits for the plant discharge until an NPDES Permit was issued.

We received the intent to issue the permit, but the permit was written for an advanced treatment plant.

Q. Mr. Bradtmiller, what type of treatment plant was Carrollwood when you joined the company in February of '91?

A. Secondary treatment.

Q. What were the effluent limitations contained in the administrative order?

A. I don't recall specifically what they were, but they were definitely for an advanced plant. The secondary plant was not capable of meeting the nitrogen and phosphorus removal.

Q. Did you, yourself, communicate with EPA regarding the application for an NPDES Permit?

A. Yes. When we received the intent to issue the permit, the operations manager, Mr. Tompkins, at that time briefed me on the history of it and had prepared a letter and I signed a letter to EPA that the plant could not meet those effluent limits.

Q. Let me ask you to refer to Florida Cities' Exhibit 135. Is this the — would you identify for the record what this Exhibit 135 is?

A. This is a letter from Florida Cities Water Company, signed by me, to a Martha Hunter in the permit section of EPA Region IV, regarding a revised draft, Carrollwood wastewater treatment plant NPDES Permit, and it's dated March 1st, 1991, in which I state that we are unable to comply with the requirements.

THE COURT: Is this in evidence?

MR. BULLOCK: Yes, Your Honor, it is.

THE COURT: Okay. Go ahead.

Do you want him to continue?

BY MR. BULLOCK:

Q. If you would just characterize what you were asking EPA in the letter?

A. Yes. We accordingly asked and repeated a prior request that the interim limits established in the consent order between the Environmental Protection Commission of Hillsborough County of the State of Florida be incorporated in the NPDES Permit.

Q. All right. To your knowledge, were the interim limits established in the consent order with the State of Florida reflected in the administrative order from EPA at this time?

A. As I recall, yes.

Q. All right. Let me ask you to look at Exhibit 137.

Your Honor, this is, also, in evidence.

THE COURT: Okay.

THE WITNESS: Yes, I have it.

Q. All right. And would you just identify 137 for the record?

A. This is a letter from Florida Cities Water Company to Dianne Barrett, Public Notice Coordinator of Region IV EPA, dated April 1, 1991.

Q. And could you tell the Court in summary what the substance of the letter is?

A. It acknowledges that on March 19th we received the public notice for the referenced permit and restated that the treatment plant could not comply with the effluent limits and, again, requested that those limits be modified to the limits set forth by the Environmental Protection Commission, Hillsborough County and the State of Florida Department of Environmental Regulation.

Q. Let me ask you to look at Exhibit 138.

A. Yes, I have it.

Q. Mr. Bradtmiller, let me ask you to identify this without reading any of the substance of it. First of all, have you seen this document before?

A. Yes. I signed it.

Q. And would you identify the document for the record?

A. It's a letter from Florida Cities Water Company to John T. Marlar, Chief of Facilities Performance Branch of Region IV EPA, dated April 11, 1991.

MR. BULLOCK: Your Honor, I would move Florida Cities' 138 into evidence.

THE COURT: It will be received.

BY MR. BULLOCK:

Q. Would you read the second paragraph into the record, Mr. Bradtmiller?

A. As of this date, Florida Cities Water Company, FCWC, is ready to award a construction contract for the

Carrollwood AWTP. However, we are still involved in negotiations with Hillsborough County Utilities Department on an alternative to transport the Carrollwood flows to Hillsborough County's existing wastewater treatment facilities in order to eliminate this discharge. Negotiations are continuing to progress with the county. FCWC intends to resolve this issue as promptly as the procedures of the county allow.

Q. Let me ask you to look next at Florida Cities' 139. And this is already in evidence, Your Honor.

A. Yes.

Q. Would you identify that for the record, please, Mr. Bradtmiller?

A. This is a certified letter from Florida Cities Water Company, dated May 20, 1991, to John T. Marlar, Chief, Facilities Performance Branch, EPA Region IV.

Q. Okay. And would you summarize the purpose of this letter?

A. This is a progress report on the Carrollwood advanced wastewater treatment project as required under the administrative order at that time.

Q. Let me ask you to look next at Exhibit 141. This is already in evidence, Your Honor.

A. Yes.

Q. All right. Mr. Bradtmiller, is this the agreement

which you were referring to in your May 20 letter to Mr. Marlar?

A. Yes. May 20 letter, we advised Mr. Marlar that the negotiations had been successfully completed with the Hillsborough County staff, and this is a letter from the Board of County Commission, Manager of Records, transmitting officially to the company a copy of the agreement that we had negotiated, which was officially approved by the Board of County Commissioners on June 5th.

Q. What was Florida Cities' responsibilities under the June 5th agreement with Hillsborough County?

A. Our responsibility was to build a repump station and interconnect force main to tie in with the Hillsborough County system by December 31, 1991.

Q. Where did the force main that Florida Cities was responsible for extend?

A. It was to extend from the edge of our old plant site to the boundary of our franchise on the west -- on the west side of Dale Mabry Boulevard at Sweetwater Creek.

Q. And what were the county's responsibilities and duties under this agreement?

A. The county's responsibility was to build a force main connection from its facilities on Gunn Highway, east to the point of connection at Sweetwater Creek.

Q. When did Florida Cities complete its construction?

A. We completed our construction about Thanksgiving time. About Thanksgiving in the last week of November.

Q. And what year was that?

A. 1991.

Q. And when did the county complete its construction phase?

A. The county construction was completed and certified by the DER inspector at the time on the first — I forgot the date, but it was the first Friday in January.

Q. Was the company — did the company connect with the facility on that day?

A. The company was connected, but we did not transfer flow on that date. We were given notice near close of business on that Friday and we held until Monday morning to transfer flow.

Q. Why did you wait until Monday morning?

A. We did not want to transfer flow initially over a weekend when there may be some interruption or break in the line.

The county's line had failed inspection several times during the previous two weeks. That's why the county wasn't ready to take our flow the first part of December when we were ready to transfer.

Q. Mr. Bradtmiller, let me ask you to look at Exhibit 140, which is in evidence.

A. Yes, I have it.
Q. Would you identify this document for the record?
A. This is a letter dated May 28, 1991, from EPA Region IV to Florida Cities Water Company, addressed to me, signed by W. Ray Cunningham, Director of the Water Management Division.
Q. And are you familiar with this document?
A. Yes. This is a letter that transmitted to the company the NPDES Permit for the facility.
Q. Are you familiar with the terms of the NPDES Permit?
A. Yes.
Q. All right. And what type — what level of treatment did this permit require?
A. It required an advanced level of treatment for removal of phosphates and nitrogen.
Q. Mr. Bradtmiller, after this permit went into effect, did you ever correspond with EPA regarding the Carrollwood facility's ability to meet AWT treatment levels?
A. Yes.
Q. And when did you provide this correspondence?
A. With each submission of a DMR we repeated our request that the limits imposed be those in that the secondary plant could meet. When we entered into the agreement, we, also, notified EPA.
MR. JACOBS: I'm sorry. What agreement is he

referring to?
THE COURT: Do you want the answer read back?
MR. JACOBS: The question and answer, if you don't mind.
THE COURT: All right. Mr. Court Reporter read the question and answer back, please.
(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)
MR. JACOBS: Move to strike the answer as non-responsive.
THE COURT: Denied.
BY MR. BULLOCK:
Q. Mr. Bradtmiller, let me ask you to look at Exhibit 145.
A. Yes, I have it.
Q. Mr. Bradtmiller, are you familiar with this document?
A. Yes.
Q. Would you just identify, without comment, other than to identify it, what this document is?
A. It's a letter from Florida Cities Water Company, dated August 21, 1991, to Mr. Michael Bon, Chief of the Compliance Section, Region IV EPA.
MR. BULLOCK: Your Honor, I would move Florida Cities' 145.

THE COURT: It will be received.
BY MR. BULLOCK:
Q. Would you summarize this letter, Mr. Bradtmiller?
A. We acknowledge the NPDES Permit. We report that on June 5th, Hillsborough County entered into an agreement with Florida Cities Water Company to treat the wastewater flow, and until such time as the necessary transportation facilities are completed, we again requested that EPA provide release to FCWC from compliance with the NPDES requirements.
Q. Did you ever receive any response to this letter?
A. No.
Q. Did you attach letters asking for similar relief to the discharge monitoring reports through the remainder of the year?
A. Yes, sir.
Q. All right. Let me ask you, Mr. Bradtmiller, to look at Exhibit 140 again, and what I believe is the tenth page of the Exhibit. The title of that page is called an Amendment To the Statement of Basis.
A. Amendment to the Statement of Basis, yes.
Q. Would you read the section under public comment just to yourself.
(Pause.)
Mr. Bradtmiller, after you — after Florida Cities

received this permit, did it ever — strike that. Let me start over again.
Let me ask you to read these two paragraphs under public comment into the record.
A. Item 2, Public Comment: On April 1, 1991 —
THE COURT: An April 1. I thought you said "on."
THE WITNESS: I did and I misspoke.
An, A-N, an April 1, 1991 letter was received from Florida Cities Water Company, FCWC. In this letter FCWC requested that the interim limits established in the consent order of February 4, 1991, entered into by FCWC with the Environmental Protection Commission of Hillsborough County and the State of Florida Department of Environmental Regulation be incorporated into this permit. This request is a compliance matter. A copy of the letter was given to Thomas Pluff in the compliance section on April 8, 1991. The Compliance Section will address the request after final issuance of this permit.
Q. Mr. Bradtmiller, did the discharge monitoring reports, which Florida Cities submitted for July '91 through January of '92, contain any exceedences of the permit limitations?
A. Yes.
Q. Did Mr. Pluff ever contact Florida Cities regarding any of the exceedences which were reported on the DMR's?
A. Not to my knowledge.

Q. Did EPA take any enforcement action regarding these exceedences prior to the amendment of this complaint in May — excuse me — in April of 1995?
A. Not to my knowledge.
MR. BULLOCK: Thank you, Mr. Bradtmiller.
THE COURT: Mr. Bird.

DIRECT EXAMINATION

BY MR. BIRD:
Q. Good afternoon, Mr. Bradtmiller.
I believe you testified you joined Florida Cities as Senior Vice-president; is that correct?
A. Yes.
Q. And you were the principal negotiator on behalf of Florida Cities with respect to the connection to Hillsborough County; is that correct?
A. Yes.
Q. Did you ever discuss any of your negotiations with any of the officials of Avatar Holdings?
A. No.
Q. Did you ever correspond to them about the status of your negotiations?
A. No.
Q. Did you ever receive any comments from any of them about what should be done in the negotiations?
A. No.

Q. You, also, testified that you reviewed or were aware of bids for the construction of the AWT plant at Carrollwood; is that correct?
A. Yes.
Q. Did you ever discuss those bids with anyone in Avatar Holdings?
A. No.
Q. Did you ever receive any comments from anyone at Avatar Holdings about them?
A. No.
Q. Did you ever receive any correspondence concerning those bids from anyone in Avatar Holdings?
A. No.
Q. Mr. Bradtmiller, did Peter Sharp micro-manage your operations at Florida Cities?
A. No, I never knew Mr. Sharp.
MR. BIRD: Thank you.
THE COURT: Okay. Who will be — Mr. Jacobs, you will be examining?
MR. JACOBS: Yes, Your Honor.
THE COURT: Okay. You may cross-examine.

CROSS-EXAMINATION

BY MR. JACOBS:
Q. Good afternoon, Mr. Bradtmiller.
Your personal counsel is here today, is he not,

sir?
A. Yes.
Q. And who is paying his bill?
A. Florida Cities Water Company.
MR. BULLOCK: Objection, Your Honor, relevancy.
THE COURT: Just a minute.
I'll overrule the objection. He's answered it.
BY MR. JACOBS:
Q. Now, you testified that you first joined Florida Cities Water Company in February 1991 as the Senior Vice-president; is that correct, sir?
A. Yes.
Q. So you don't have any personal knowledge of any events relating to this case that transpired prior to February 1991; is that correct? Personal knowledge?
A. Only to the extent that it was not in the official documents of the company that I've read in performance of my duties at that time as Senior Vice-president.
MR. JACOBS: Your Honor, I move to strike as non-responsive. I'm asking him for his personal knowledge. Clearly what he gleaned from documents is not personal knowledge.
THE COURT: I'm not going to strike it, but I'll permit you to probe further, because I'm not sure that you got the full answer to that.

MR. JACOBS: Okay.
BY MR. JACOBS:
Q. Restricting your attention to personal knowledge, Mr. Bradtmiller, you don't have any personal knowledge of anything that transpired prior to 1991, do you, sir?
A. Do you mean by personal knowledge, personal involvement at the time an event occurred?
Q. Yes. I would be willing to define it as that. Yes.
A. Yes.
Q. So your answer is, you don't have any personal knowledge of events that transpired prior to February 1991; is that correct?
A. I was not involved in them, that's correct.
Q. Now, Mr. Bradtmiller, on — have you discussed this case with any of the other witnesses who are testifying here?
A. No.
Q. Including Mr. Blackburn?
A. Not in details of the case, no.
Q. Not in details. But you did discuss the case with Mr. Blackburn; is that correct?
A. The reason why we were both here, yes.
Q. What exactly did you discuss with Mr. Blackburn about the case?
A. That it was a long day for him and me.

Q. Anything else, sir?
A. No.
Q. How long did the discussions with Mr. Blackburn take place for?
A. On this particular issue, a few moments.
Q. How long did your conversation today with Mr. Blackburn take place? How long was that conversation?
A. There were a number of short conversations regarding traffic, uh, the current administration of the DEP under its new secretary, the work load, their staffing, reuse permitting in South Fort Myers. Just general topics that one would discuss with someone in that position.
Q. And nothing specifically relating to this case that you can recall, sir?
A. No.
Q. These discussions all took place today?
A. Out there on the bench, yes.
Q. Now, Mr. Hird asked you about whether you had contacts with officers of Avatar Holdings and I would like to start by focusing you on Avatar Holdings.
To whom do you report, Mr. Bradtmiller?
A. To Mr. Gerald Allen.
Q. And what's his position?
A. His current position is Executive Vice-president of Avatar Utilities and President of Florida Cities Water

Company.
THE COURT: Are we talking about right now?
MR. JACOBS: Yes, sir. And the point is well taken. I'm going to take him back.
THE COURT: I think we better do that, because right now it's not very relevant.
MR. JACOBS: Fair enough.
BY MR. JACOBS:
Q. During the time that you were involved with the negotiations that you said you were involved with, with respect to the interconnection with Hillsborough County at the Carrollwood facility, to whom did you report then, sir?
A. Mr. Tony Reeves.
Q. And what was his position?
A. Executive Vice-president of Florida Cities Water Company.
Q. And do you know to whom he reported at the time?
A. Mr. Gerald Allen.
Q. And do you know what Mr. Allen's position was at that time?
A. Executive Vice-president of Avatar Utilities.
Q. But not President of Florida Cities; correct?
A. That's correct.
Q. And did you, also, at that time, sir, have contact with Mr. Gordon, Robert Gordon?

A. Yes.
Q. And what was his position?
A. His position was President of Florida Cities Water Company and President of Avatar Utilities.
Q. And at that time where was Mr. Allen's office located?
A. Coral Gables.
Q. He didn't have an office at the Florida Cities office in Sarasota, did he, at that time?
A. No.
Q. And where was Mr. Gordon's office located at that time, sir?
A. Coral Gables.
Q. He didn't have an office at the Florida Cities offices in Sarasota, did he?
A. No.
Q. Now, Avatar Holdings and Avatar Properties and Avatar Utilities are all in the same office building in Coral Gables, aren't they, sir?
MR. BULLOCK: Objection, Your Honor, outside the scope.
MR. HIRD: I'd certainly join in the objection.
MR. JACOBS: It's directly related to Mr. Hird's question about his —
THE COURT: I'll overrule the objection.
THE WITNESS: What was the question again?

BY MR. JACOBS:
Q. Avatar Holdings and Avatar Properties and Avatar Utilities are all in the same office building in Coral Gables; is that correct?
A. Yes, I believe so.
Q. Now, back at the time when you became Executive Vice-president of Florida Cities, which I believe you said was February '92; is that correct?
A. In February '92, yes.
Q. To whom did you report from that time forward?
A. To Mr. Gerald Allen.
Q. And what was his position at that time?
A. Executive Vice-president of Avatar Utilities.
Q. And at that time where was his office?
A. Coral Gables.
Q. And —
MR. BULLOCK: Your Honor, this line of questioning is clearly after the time —
THE COURT: I'm sorry?
MR. BULLOCK: This line of questioning deals with issues and matters clearly after the time of which direct examination covered.
MR. HIRD: I join in the objection, Your Honor.
MR. JACOBS: I'm not sure Mr. Hird's direct was so limited.

THE COURT: I'll sustain the objection. I think it's going beyond.

BY MR. JACOBS:

Q. Mr. Bradtmiller, you consider Florida Cities' employees to be Avatar employees, do you not?

MR. HIRD: Objection.

THE COURT: Well, when are you talking about? Now?

MR. JACOBS: I'd be willing to put the question in the context of the time period that was examined more thoroughly on direct. I would prefer to start with now and go back, if necessary.

MR. HIRD: I have several bases for my objection, Your Honor. Number 1, outside the scope. Number 2, the term Avatar is being used confusedly, whether it means Avatar Holdings or whether it means Avatar Utilities, whether it means Avatar Properties. Number 3, Mr. Bradtmiller has not been identified as someone that's thoroughly familiar with the wage and employment structure of any of these companies and, you know, in terms of how -- who's an employee of whom, that would probably come from someone from the human resources department and that's clearly --

THE COURT: You had asked the witness some questions. Would you refresh my recollection as to the area

that you -- so that I can hone in on this --

MR. HIRD: I asked him specifically if he ever had communications with Avatar Holdings' officials, and my intent was that was officers and directors of Avatar Holdings and I asked him about his communications with those and he responded to that question. I, also, asked him the specific question whether Peter Sharp micro-managed Florida Cities' operation.

MR. JACOBS: Your Honor, may I?

THE COURT: Just a moment.

MR. BULLOCK: I would, also, join in and note that the entirety of my questions dealt with the negotiations with Hillsborough County, the company's decisions and the negotiations and communication with EPA.

THE COURT: Well, I understand. I'm more concerned regarding this particular area that Mr. Jacobs wants to go into as to the extent to which Mr. Hird may have inquired of this witness insofar as the corporate relationship here. And Mr. Hird is suggesting and you are, too, I think, Mr. Bullock, that the examination in that area was more closely circumscribed than apparently Mr. Jacobs views it.

Mr. Jacobs, you wanted to be heard further?

MR. JACOBS: I think Mr. Bullock's point is well taken that his focus was fairly narrow and was on

Carrollwood and the connection to Hillsborough County and those negotiations that the witness took place -- took part in, rather, forgive me, took place during that confined period of time.

Mr. Hird's questions about his contacts with Avatar Holdings and his questions about his contacts of what he knew about Mr. Sharp had no time limit and I believe opened the door fairly.

THE COURT: I agree. I will overrule the objection.

Go ahead.

MR. HIRD: Your Honor, I still have the other aspects of my objection, which was that the term "Avatar" is being used in a misleading fashion and that this witness does not have basis of knowledge because there's no discussion about familiarity with the employment practices.

THE COURT: Okay. I will overrule your objection with respect to the last point.

With respect to the use of "Avatar" in a confusing manner, we'll try to -- Mr. Jacobs, try to be more specific than you have been in that respect. And we'll try to be -- I'll try to be vigilant to that area, Mr. Hird, and if you will note your objections as we go along, if we don't respect that, and we'll take those up as we come to them.

Go ahead.

MR. JACOBS: I think if we can just go back to Mr. Levy's testimony, the evidence shows that Mr. Levy refers to Avatar as one big Avatar, without the distinctions and so did the employees, and that's been the testimony and I would like to elicit that.

THE COURT: Well, go ahead and ask your questions and we'll see where we go on that.

BY MR. JACOBS:

Q. Now, Mr. Bradtmiller, you do consider Florida Cities' employees to be Avatar employees, do you not?

MR. HIRD: Same objection, Your Honor. I don't think that clarifies the term "Avatar."

MR. JACOBS: I'll restrict that to Avatar Utilities for the purposes of moving on.

THE COURT: All right. Very well.

BY MR. JACOBS:

Q. Do you consider Florida Cities' employees to be Avatar Utilities' employees, don't you, sir?

A. Yes, we feel ourselves that way.

Q. And, in fact, you consider Florida Cities' employees as well as just part of the Avatar group of employees, do you not?

MR. HIRD: Still objecting on the use of the term "Avatar."

THE COURT: Well, I'll overrule the objection.

THE WITNESS: Only in a very limited sense.
BY MR. JACOBS:
Q. Let me refer you back to your deposition testimony starting on page 26.
MR. BULLOCK: Your Honor, could we have a date and page and line?
THE COURT: Date of the deposition?
MR. BULLOCK: Yes, sir. There were two.
MR. JACOBS: November 21st, 1994, page 26, line 15, question: Have you ever met Mr. Jacobson?
THE COURT: He's asking you do you recall giving the following answers to the following questions and he's going to read them now.
Go ahead.
MR. JACOBS: Thank you, Judge.
BY MR. JACOBS:
Q. Mr. Bradtmiller, have you ever met Mr. Jacobson, and you responded: On two occasions.
Do you recall giving that response?
A. Yes.
Q. And who is Mr. Jacobson?
A. Mr. Jacobson is currently the President of Avatar Holdings.
Q. And then do you recall that I asked you his — forgive me. The question I asked you, line 23, page 26: He makes

regular visits? Do you recall saying, quarterly?
A. At that time he visited quarterly, yes.
Q. And then I asked you quarterly —
THE COURT: Wait just a moment.
MR. BULLOCK: Is he trying to —
THE COURT: I'm not sure, Mr. Jacobs, what you're doing here. This is supposed to be inconsistent with what he's testified to?
MR. JACOBS: It is, but as opposed to just taking a quick splice out of the deposition that I wanted to without any lead-in, I backed up a little bit.
THE COURT: All right. Okay. Well, go ahead and finish your proffer.
BY MR. JACOBS:
Q. Okay. Question, line 25: Quarterly?
Mr. Bradtmiller, did you answer: His goal, as I understand, is to make quarterly visits to the locations in Florida and talk informally to the employees about what the company's doing. Do you recall giving that answer, sir?
A. Yes.
Q. And do you recall then, line 5, on page 27, I asked you: To which employees? Do you recall, sir, answering: To the properties and utilities employees. Do you recall that answer, sir?
A. Yes.

Q. And then question, line 17, Avatar Properties? And you interrupted — do you recall interrupting and answering, yes?
A. I don't recall, but that would be the answer.
Q. Question: And Avatar Utilities employees? Do you recall saying, correct?
A. If it states it there, that's the answer I gave.
THE COURT: This isn't helping me at all, Mr. Jacobs.
MR. JACOBS: One more question and answer.
THE COURT: Well, all right. Let me hear it and then I'll hear the objection and we'll see if it stands.
BY MR. JACOBS:
Q. Then, sir, I asked you the question, line 11: But I thought you told me there were only half a dozen Avatar Utilities' employees. Do you recall, sir, answering: Well, when I speak of Avatar Utilities' employees, I speak of Florida Cities and FUI employees, as well as just part of the Avatar group of employees.
Did you give that answer, sir?
A. If it is there, that's the answer I gave you. I don't recall it. That was a few years ago.
MR. BULLOCK: Your Honor, my only comment, I still don't see how this impeaches —
THE COURT: The latter part, I think, perhaps

justified maybe the preceding questions and answers. So I'm going to overrule the objection. I'll receive it for what it's worth.
BY MR. JACOBS:
Q. Now, Mr. Bradtmiller, as Executive Vice-president of Florida Cities Water Company, you turn to Mr. Getman for legal advice, do you not, sir?
A. Yes. He's our attorney.
Q. Now, when you say he's your attorney, Mr. Getman, in fact, is general counsel for Avatar Holdings, as well as all of its primary and secondary subsidiaries; correct?
A. Correct.
Q. In fact, you have known him to represent both parties to an agreement when both parties are Avatar subsidiaries; correct?
MR. HIRD: Your Honor, I think this is going way beyond the scope of direct. You recall my specific questions had to do with whether he was consulting with respect to his activities in dealing with, in negotiating with Hillsborough County, and whether there was conversation made of the alternatives with Avatar Holdings.
THE COURT: I think this gets a little bit beyond, Mr. Jacobs. I'm going to pull you in a little bit on this.
I'll sustain the objection.
MR. JACOBS: I'll move on, Your Honor.

BY MR. JACOBS:

Q. Mr. Bradtmiller, when you came to Florida Cities in February of 1991, there was no NPDES Permit to discharge from the Carrollwood plant to the Sweetwater Creek; correct?

A. Yes.

Q. And were you involved in the permit application, or had that been submitted prior to your arrival, to your knowledge?

A. I was not involved in the application.

Q. Do you have knowledge of whether the application had, in fact, been submitted prior to your arrival?

A. As I recall, yes.

MR. HIRD: Objection, Your Honor. Mr. Jacobs objected in the beginning about items beyond his knowledge and now he's going back —

MR. JACOBS: I'll rephrase.

THE COURT: You can't have it both ways, Mr. Jacobs.

MR. JACOBS: Sauce for the goose, sauce for the gander. I'll rephrase.

THE COURT: That's a good one. I wish I thought of that.

MR. JACOBS: I think you did a while ago, Your Honor.

THE COURT: Okay. Go ahead.

MR. JACOBS: I'm trying to learn something here.

THE COURT: Okay.

BY MR. JACOBS:

Q. Let me ask you this, Mr. Bradtmiller, was the NPDES Permit application for the Carrollwood plant pending at the time that you arrived at Florida Cities in February of '91?

A. Yes.

Q. And at that time was it your understanding, in February of '91, that the company was going to build an AWT plant at Carrollwood?

A. We were prepared to build one.

Q. Directing your attention to your deposition on November 21st, 1994, page 161, line 24, Mr. Bradtmiller, I'm going to ask you — read back the question I asked you at that time, read back the answer and then ask you if you recall giving that answer. Question: When you came on board in February of '91, was the company anticipating building an AWT upgrade at the Carrollwood plant? Answer: Yes.

Do you recall giving that answer?

A. Yes.

Q. Now, Mr. Bullock took you through a series of Defendant Exhibits and I might just try and summarize those to expedite matters and I'll ask you to agree whether I've accurately summarized these.

There was a March '91 letter, an April '91 letter, Defendant's Exhibits 135, 137, another April '91 letter, which was 138, and the Defendant's 138 and Defendant's 139, it was May, '91, letter. And finally, I'll take you to the May 21st, 1991 letter, in which you tell EPA that you're hooking up to or planning to hook up to Hillsborough County. Have I accurately summarized that group of documents?

A. I lost track of the numbers. I would like to go through them and make sure, but —

Q. We can do that. Let's start chronologically, then, with Defendant's Exhibit 135. Okay. 135, you're telling Ms. Hunter at EPA that you've looked at the revised draft Carrollwood permit and you're going to be unable to comply until such time as an AWT plant is completed; correct?

A. Yes.

Q. But you're not telling her that you're negotiating with Hillsborough County at this point in time, are you?

A. No.

Q. Now, flipping to 137, you're responding, again, Defendant's 137, you're responding to EPA on the public notice and again, you're telling them that the plant you're going to be building, your AWT plant will not be able to or rather that you will not be able to comply with the limits set forth in the public notice on the permit until you build your AWT plant; correct?

A. That's correct.

Q. Okay. Flipping to 138, this is your April 11th, letter 1991 — of 1991, and here you're telling EPA that you're actually involved in negotiations with Hillsborough County; correct?

A. Yes.

Q. And then flipping to Defendant's 139, you tell EPA that you successfully concluded with negotiations with Hillsborough County for the interconnection; is that right?

A. Yes.

Q. And this letter is dated May 20th, 1991; correct?

A. Yes.

Q. Now, EPA issued the permit on May 28th, 1991; correct?

A. I don't recall. I'll have to look.

Q. Okay. Defendant's 140.

A. Yes.

Q. Okay. You never withdrew the NPDES Permit application prior to the final issuance of the permit; isn't that correct, sir?

A. Correct.

Q. And because the plant was never built, the AWT plant, the permit was violated until you finally ceased discharge; is that correct?

A. Yes.

Q. Now, isn't it true that Florida Cities Water Company

wanted to build and own the pipe that connected to the Hillsborough County interconnection point, so that it could put that investment in its rate base and include it in the sewer charges to the Carrollwood customers?

A. That was one reason.

MR. JACOBS: Thank you.

No further questions.

THE COURT: Okay. Any redirect?

MR. BULLOCK: Nothing from Florida Cities, Your Honor.

THE COURT: Mr. Bird.

MR. BIRD: Nothing from Avatar Holdings.

THE COURT: Thank you, sir.

You may step down.

Call your next witness.

MR. BAISE: Defendant Florida Cities calls Mr. Ron Blackburn, Your Honor.

THE CLERK: Raise your right hand.

Thereupon,

RONALD D. BLACKBURN,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box.

State your name and spell your last for the record, please.

THE WITNESS: Ronald D. Blackburn, B-L-A-C-K-B-U-R-N.

DIRECT EXAMINATION

BY MR. BAISE:

Q. What's your occupation, Mr. Blackburn?

A. I'm Environmental Administrator for the State of Florida Department of Environmental Protection in the Fort Myers District Office.

Q. Your job title?

A. Environmental Administrator.

Q. What education, if any, do you have post high school, Mr. Blackburn?

A. I have a Bachelor of Arts Degree from Florida State University.

Q. What was your major of study?

A. Liberal Arts.

Q. What are your responsibilities in your present job?

A. Currently, I'm the head of Administrative and Technical Support and I function as the substitute for the district manager in his absence.

Q. Any other responsibilities, Mr. Blackburn?

A. I oversee two branch offices within our district; one in Marathon and one in Punta Gorda.

Q. What do those branch offices do?

A. They do pretty much the same work that we do in the district office in Fort Myers, but they're satellite-type offices.

Q. Prior to your present position, what were your other positions in the Florida Department of Environmental Protection?

A. I've had various positions within the agency since '72. I think at the point we're talking about right now, between '78 and the mid 80's I was the Program Grants Coordinator between Environmental Protection Agency and the State District Office.

Q. What is a Program Grants Administrator?

A. At that point, there were grants available through EPA for funding for municipal wastewater treatment plants to upgrade and make improvements on their facilities.

Q. Are these upgrades known as 201 plans?

A. Yes.

Q. What is a 201 plan?

A. That is the section of the Clean Water Act that made the program or initiated the program in the first place.

Q. And what program are we talking about here?

A. Again, that's the Federal Grants Program that was part of the Clean Water Act.

Q. There is a program to build sewage treatment plants?

A. Yes, sir.

Q. Any particular type of sewage treatment plant?

A. It was just for municipalities and it was for sewage treatment plants and appurtenances, lift stations, force mains.

Q. How long have you worked for FDER or FDEP?

And Your Honor, if I go back and forth it's because the name changed at some point.

When did it change, Mr. Blackburn?

A. Yes, sir, we've changed names three times since my employment. Just about four years ago we changed from DER to DPC.

Q. What are regional waste treatment facilities, Mr. Blackburn?

A. They are municipally or privately-owned facilities that are pretty large size. We have what we call package plants and we have large wastewater treatment plants.

Q. What's your experience with water pollution control issues in the State of Florida?

A. Mainly through the grants program, I became somewhat knowledgeable of the responsibilities for wastewater treatment, how the plants were developed and plans were developed to cover that aspect.

Q. What's your experience with the state permitting program controlling water pollution in the State of Florida?

A. Again, as part of the grants program, any permits we

issued were supposed to dovetail with that effort. In other words, whatever facilities were being built were supposed to -- the permits were supposed to reflect and be in compliance with water quality standards.

Q. What is your experience in working with USEPA on permits for facilities to discharge in waters in the State of Florida, Mr. Blackburn?

A. I have very limited experience, other than knowing about what they call the NPDES Program, which is the Federal program for permitting discharges for surface water permits.

Q. Is Florida now what is known a delegated State for the NPDES Program?

A. It is at this point.

Q. When did the State receive that authorization, if you know?

A. I believe it was this past year.

Q. Do you know why it was not granted until this last year?

A. No, sir. As far as I know, we had petitioned for it for a few years, but I don't know the specifics.

Q. What is your experience in working with private wastewater treatment facilities?

A. Various experience. We regulate private facilities, as well, from small plants to 50,000 gallons up to a million gallons.

Q. Any difference between how private wastewater treatment facilities and public wastewater treatment facilities are regulated by the State of Florida?

A. Yes, sir.

Q. And what are those differences?

A. My understanding, it varies a great deal depending upon the county, but most of the private facilities are regulated through the Public Service Commission, while the municipalities are under home rule.

Q. To your knowledge, any difference between how EPA would regulate a private and public waste treatment facilities in the State of Florida?

MR. QUINN: Objection. Beyond this witness' scope and calls for speculation.

MR. BAISE: I said, to his knowledge.

THE COURT: I'll overrule the objection.

It's an open-ended question as to time. Talking about at the time in question or --

MR. BAISE: He's testified he's been involved in this business since '71, so seems to me his background covers an extraordinarily broad spectrum, Your Honor.

THE COURT: I'll overrule the objection.

Go ahead.

BY MR. BAISE:

Q. Can you answer the question?

A. Could you restate that for me, please?

Q. Do you know if there -- strike that.

Do you know of any differences as to how EPA might regulate private and public waste treatment facilities in the State of Florida as they discharge?

A. Not that I'm aware of. They should be the same.

Q. Can you explain the relationship between Florida DER and EPA and it relates to the permitting of facilities in the State of Florida?

A. The permitting of facilities for surface water discharges must meet the Federal Water Quality Standards Act and to do that, our permits are oversaw by EPA. In other words, when we issue a State permit, it goes through EPA to make sure that water quality has been addressed.

Q. What is the water quality standard in the State of Florida?

A. The water quality standard is site specific.

Q. Is the water quality -- are the water quality standards developed by Florida and approved by EPA?

A. Yes, sir. The standards are developed in Tallahassee.

Q. What pollutants are regulated from wastewater treatment plants in Florida, Mr. Blackburn?

A. There's a variety of them now. They've expanded since my knowledge of them, but used to be BOD, which is biochemical oxygen demand, total suspended solids, nitrogen

and phosphorus, primarily.

Q. Are you familiar with the segment of the Caloosahatchee River where the Waterway Estates facility discharges?

A. Yes, sir.

Q. Within that general area, how many waste treatment facilities discharge into the Caloosahatchee River?

A. In the Caloosahatchee estuary there's two facilities for the City of Fort Myers, there's the Waterway Estates, there's the Fiesta Village facility, which is the sister facility to Waterway Estates and the City of Cape Coral.

Q. When did you first become familiar with the Waterway Estates facility which discharges into the canal leading into the Caloosahatchee River?

A. I would say, late 70's, '78.

Q. What brought that facility to your attention?

A. Again, as part of the grants process, it was under evaluation to note its effects on the receiving bodies.

Q. Did the facility have a State permit?

A. Yes, sir.

Q. Do you recall what that State permit regulated?

A. It regulated the specific discharge. I don't know the parameters specifically.

Q. Did there come a time in 1981, Mr. Blackburn, that the Florida DER developed a document known as the Caloosahatchee

River Wasteload Allocation Documentation for Lee County?
A. Yes, sir.
Q. What was your understanding for the reason for the creation of that document?
A. Basically with all the dischargees into the estuary area, we tried to do a modeling of survey to be equitable and to establish what we call wasteload allocations for the dischargers that would take into account their specific circumstances and yet address water quality issues. As I mentioned, it was done out of Tallahassee through a modeling effort on their part.
Q. Was this a development of the 201 plans?
A. Yes, sir.
Q. Was this what you would call — was this a planning document?
A. Yes, sir. It was a planning document at that point.
Q. Were there any requirements set forth in this document at the time it was created, Mr. Blackburn?
A. I wouldn't use the term requirements. It was outlined that the constituents that were mentioned would be what we would be expecting on future permits.
Q. Did Waterway Estates have a wasteload allocation to discharge into the canal of the Caloosahatchee River in 1981?
A. Yes, sir.

Q. Did the State of Florida issue a permit to the Waterway Estates facility to discharge into the canal to the Caloosahatchee River in 1981?
A. Yes, sir.
Q. And that wasteload allocation was included in that permit?
A. Yes, sir.
Q. Did there come a time in 1983, when the State of Florida issued another permit to this Waterway Estates facility to discharge into the canal into the Caloosahatchee River?
A. Yes, sir.
Q. Did that permit include a wasteload allocation?
A. Yes, sir.
Q. Did the Waterway Estates facility in 1986 have a wasteload allocation to discharge into the canal of the Caloosahatchee River?
A. Yes, sir, it's part of the permit. Same thing.
Q. And did this facility have a wasteload allocation to discharge in 1987 into the canal of the Caloosahatchee River?
A. As long as they were under valid permit the wasteload allocation was included in that decision.
Q. Did there ever come a time that this facility was required to cease discharging into the canal of the

Caloosahatchee River?
A. Not to my knowledge.
Q. Then why did Florida DER or DEP ask Waterway Estates to move its discharge pipe out to the 6-foot contour line in the Caloosahatchee River?
A. As I recall, the other facilities were doing that, Florida Cities had experienced some minor problems along the way, and we issued a temporary operating permit during that time frame, that I recall, to address those problems, but one the issues we felt would be beneficial is for them to extend the pipe out to the 6-foot contour.
Q. Was it a requirement?
A. No, sir, not at that point.
Q. Mr. Blackburn, I'd like to draw your attention to a document noted as Florida Cities' Trial Exhibit Number 19, please.
Are you familiar with this document, Mr. Blackburn?
A. Yes, sir.
Q. Did you author this document?
A. Yes, sir.
Q. I'd like to move this document into evidence, Your Honor.
THE COURT: Okay. It will be received.
BY MR. BAISE:

Q. Would you please summarize this document for the record, Mr. Blackburn?
A. You'll see it's addressed to, at that time, my boss, Phil Edwards, who is the District Director and it's just a combination of the wasteload allocations for the Caloosahatchee River from all the dischargers that discharged into that water body, with the exception of Oakbridge Park, which was a proposed facility, which was not built at that point.
Q. Did Waterway Estates have a discharge allocation into the canal into the Caloosahatchee River in 1983, February 23rd?
A. Yes, sir.
Q. I direct the witness's attention to Florida Cities' Trial Exhibit Number 22, please.
A. Yes, sir.
Q. Are you familiar with this document?
A. I have two documents. I have a cover memo from Dick Richardson to Bruce DeGrove and a letter from Mr. Richardson to Marshall Byatt of EPA.
Q. First question, are you familiar with the cover memo?
A. Yes, sir.
Q. Are you familiar with the attachment to the cover memo?
A. Yes, sir.

Q. Are you CC'd on that document?
A. I'm CC'd on the letter.
Q. On the second document?
A. Yes, sir.
Q. Do you recall receiving or viewing the document at the time it was created?
A. That's been quite a while ago, but I'm sure I did review it at that time.
MR. BAISE: Your Honor, I would move this into evidence on behalf of Florida Cities.
THE COURT: I'll will be received.
MR. QUINN: Your Honor, we object only to the first page of that Exhibit, as a lack of foundation.
THE COURT: Okay. I'll sustain the objection as to the first page.
I'll receive the balance of that Exhibit. Will not receive the memo from Richardson to DeGrove.
MR. BAISE: This is how the document was presented to us, so that's why we did not take it apart, to maintain the completeness of the document.
THE COURT: That memo will need to be removed from the original exhibit.
Now, if you want to preserve that for identification purposes or if it doesn't matter to you, then, that's fine. But if you want to preserve that as a

part on appeal, then you'll need to preserve that. But I don't want it as a part of the exhibits that I review.
MR. BAISE: If fact, what I will do, when Dr. Ahmadi comes on, as he's CC'd on this, I'll bring it in through him at that time.
THE COURT: All right.
BY MR. BAISE:
Q. Mr. Blackburn, this is a letter dated May 7th, 1986. Would you please describe this letter for the record, please?
A. Yes, sir. It just reiterates the wasteload allocations that we had established to Mr. Marshall Byatt of the Water Management Division of EPA Region IV.
Q. Is there any indication in the letter that Waterway Estates has a no discharge wasteload allocation for the canal discharging into the Caloosahatchee River?
A. No, sir.
Q. Did, in fact, on May 7th, 1986, Waterway Estates have a wasteload allocation to discharge into the canal leading to the Caloosahatchee River?
A. Yes, sir.
Q. I direct your attention, Mr. Blackburn, to Florida Cities' Trial Exhibit Number 29.
A. Yes, sir.
Q. Do you recognize this document?

A. Yes, sir. I authored it.
Q. When?
A. June 2nd, 1987.
Q. Would you please read the document into the record — excuse me.
Your Honor, I would move this into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Would you please read this document, Mr. Blackburn, that you sent to Mr. Edwards?
A. This was through Mr. Edwards to Mr. Rick Ricciweitz (phonetic) and it concerns the subject of sewage treatment plant discharges to Charlotte Harbor, Caloosahatchee River and estuary. It covered two estuaries there. Just to follow up on our discussion yesterday, the following are the permitted surface water discharges to the referenced water bodies, Charlotte Harbor, no authorize —
THE COURT: Colon.
THE WITNESS: I'm sorry — colon, no authorized discharge. In parens, technically the City of Punta Gorda —
THE COURT: Wait. Wait. Slow down a little bit for the reporter.
THE WITNESS: Sorry, sir.
THE COURT: He can go fast, but not quite that

fast. It's late in the day.
THE WITNESS: I know.
Technically the City of Punta Gorda, 2.0 MGD, does have a discharge permit, but it is for excess from their spray irrigation/reuse system. Even then, the discharge is not directly to the harbor, end of paren. All other facilities recycle wastewater through ponds or spray irrigation. Now, addressing the Caloosahatchee River Estuary. Fort Myers Central STP, that's abbreviation for sewage treatment plant —
BY MR. BAISE:
Q. You can leave out those numbers?
A. All right, sir.
11.0 MGD, Fort Myers South, Sewage Treatment Plant, 12.0 MGD, Fiesta Village STP, 5.0, MGD, Waterway Estates STP, 1.08 MGD, City of Cape Coral STP, 7.3 MGD. Should you have any questions, et cetera.
Q. Any suggestion in the document that Waterway Estates had a no discharge wasteload allocation into the canal in the Caloosahatchee River on June 2, 1987?
A. No, sir.
Q. Mr. Blackburn, you testified a few moments ago or mentioned water quality standards. Are you familiar with the water quality standards for this segment of the Caloosahatchee River where the Waterway Estates facility

discharges into the canal?
A. Yes, sir.
Q. Did the discharges from the Waterway Estates facility ever — strike that question.
Did the Waterway Estates facility cause violation to the water quality standards in this segment of the water — in this segment of the Caloosahatchee river?
A. They have had problems from time-to-time. They experienced a problem with sluds that I'm aware of a few years prior to this.
Q. Did they violate the water quality standards?
A. Yes, sir, at that point they did.
Q. Did they continue to violate the water quality standards?
A. No, sir, they took corrective actions.
Q. Did the violation that you talked about cause long-term or cause any harm to the water qualities in the Caloosahatchee River?
A. Not of a very significant nature, no, sir.
Q. Any short-term harm caused by their discharges in the Caloosahatchee River?
A. Probably some short-term harm, yes, sir.
Q. How much would that be?
A. Negligible.
Q. Did there ever come a time you had to revoke the

permit to this particular facility?
A. No, sir.
Q. Are you aware of any no discharge permits issued to sewage treatment facilities to cease discharging into any water body in the area of your jurisdiction?
A. Not that I'm aware of, no, sir.
Q. Do you have any information of any improvement to the water quality in the canal since the Waterway Estates' discharge point has been moved from the canal to the river?
A. No, sir.
Q. Did there come a time when Government counsel, Mr. Jacobs, contacted you to be a witness in this case?
A. Yes. Mr. Jacobs — I should say someone from his office called the early part of December and asked if I could meet with Mr. Jacobs this last December '95.
Q. Did you, in fact, meet with Mr. Jacobs?
A. Yes, sir, I met with Mr. Jacobs in Fort Myers.
Q. What did Mr. Jacobs ask you about?
MR. QUINN: Objection, hearsay.
THE COURT: Sustained.
BY MR. BAISE:
Q. Were you aware before that meeting that you had been listed as a witness by Mr. Jacobs?
MR. QUINN: Objection, relevance.
THE COURT: Sustained.

BY MR. BAISE:
Q. What did you tell Mr. Jacobs when you met with him, Mr. Blackburn?
A. I just went over Mr. Jacobs' questions and he had more or less the same sort of questions we are discussing here.
Q. Did you tell him that this facility had a wasteload allocation to discharge in 1986 from the State of Florida?
MR. QUINN: Objection.
THE COURT: All right. What does this have to do with that? Why is this relevant? Why is this admissible?
MR. BAISE: The reason this is relevant, Your Honor, is that the Government had been aware at least since December that this facility had a wasteload allocation to discharge into the canal and as I mentioned in my opening statement, they continued to persist in the pretrail statement that there was no wasteload allocation for this facility to discharge into the canal. State officials put the Government on notice that there was a wasteload allocation. They say there was not. Here are the people who create the wasteload allocation, administer wasteload allocation, and the Government is ignoring that fact.
So, I'm going through Mr. Blackburn here to point out fairly clearly that in December, December of 1995, when the Government had listed Mr. Blackburn as a witness, they went to talk to him, he told them, one, this is a planning

document, the 1981 document, and two, this facility had a wasteload allocation, so why persist in saying that this facility didn't have a wasteload allocation? So, that's why it is relevant, Your Honor. Goes to the seriousness of the violations, such are the factors that justice may require, and we find it —on Florida Cities' behalf, when we found out about this, it's somewhat amazing, there's no work product privilege here between Mr. Jacobs and this witness. They had listed him as a witness. Once Mr. Jacobs talked to this witness, found out the facts, the Government decided not to call Mr. Blackburn. That's when I decided I would call Mr. Blackburn.
THE COURT: All right. Mr. Quinn.
MR. QUINN: Your Honor, this is argument and argument isn't to be introduced in front of a witness and has nothing to do with what this witness is testifying about, sir. And we, also, dispute a lot of the assertions made by counsel, but I don't want to get into that at this point, sir. I'd like to reserve those for argument at the conclusion of the case.
MR. BAISE: The Court asked me why and where I was going and so I believe I had an obligation to advise Your Honor on why I had propounded this line of questions to Mr. Blackburn. And we were talking about facts here of what he told Mr. Jacobs; one, that there was a wasteload

allocation, as I elicited from Mr. Blackburn.

THE COURT: The fact that he has told counsel for the Plaintiff that there was a wasteload allocation —

MR. BAISE: In December of 1995. And the pretrial brief is written and has a line in there that says there's no wasteload allocation. That's just wrong. And we want to bring that out.

THE COURT: Yes, Mr. Quinn.

MR. QUINN: Your Honor, at the risk of going into argument, Florida Cities, as Ms. Kagey testified, had three opportunities to bring this issue to a head, and it was informal and two formal opportunities to bring the existence or non-existence of a wasteload allocation up, so the permit could be appealed, and that was not done.

In addition, my questions, I believe, on cross-examination might shed some light on this, as well, sir, without disclosing what they will be until I ask them.

MR. BAISE: Your Honor, we admit — I mean, we acknowledged or stipulated to the liability. The fact is, the permit was taken away. What we are talking about here, as I said in opening statement, is mitigation, common sense, applying it to the six factors and it's very important for this client to have brought out in this Court in terms of mitigation the fact that the Government knew that there was a wasteload allocation. This is the first time we have been

able to conclusively establish it before Your Honor.

THE COURT: Okay. I'll overrule the objection.

If it becomes apparent to the Court that I have improperly allowed this into evidence, I can rectify that since I'm the trier the fact, also. But as of now, anyhow, I'm going to take the position that it's not inadmissible and I'll overrule the objection.

Proceed.

BY MR. BAISE:

Q. And what did you tell Mr. Jacobs, Mr. Blackburn, with regard to the wasteload allocation at the Waterway Estates facility discharging into the canal into the Caloosahatchee River?

A. Again, as I recall my discussions with Mr. Jacobs, I said any wasteload allocation that we issue you is incorporated as part of our permit. If they have a permit, they have a wasteload allocation inherent in that permit.

MR. BAISE: Thank you very much, Mr. Blackburn.

THE COURT: Any questions?

MR. HIRD: I have no questions, Your Honor.

THE COURT: All right.

MR. QUINN: Just a few, if I may, Your Honor.

THE COURT: All right.

Just a moment.

(Pause.)

All right, Mr. Quinn.

CROSS-EXAMINATION

BY MR. QUINN:

Q. Good afternoon, Mr. Blackburn. My name is Tony Quinn.

Sir, I'd like to draw your attention to Florida Cities Water Company Exhibit Number 19. If you have that in front of you, sir.

A. Yes, sir.

Q. Okay. Mr. Blackburn, are you aware of the treatment levels for advanced wastewater treatment?

A. Yes, sir.

Q. What are the treatment levels for total phosphorus?

A. Anything above — what we usually do for — anything above secondary levels is considered advanced waste treatment.

Q. What are secondary levels, then?

A. Secondary levels are for BOD and suspended solids.

Q. So if there is a treatment level including phosphorus and nitrogen, that would be advanced waste treatment; isn't that correct?

A. Yes, sir.

Q. Sir, I'd like to draw your attention to Exhibit, Florida Cities Exhibit Number 19, the line that says, Waterway Estates. Do you see that, sir?

A. Yes, sir.

Q. Do you see the line under total nitrogen/pounds?

A. Yes, sir.

Q. Does that mean — and the number there is 27.02; is that correct?

A. Yes, sir.

Q. Does that mean that there was advanced waste treatment required for that facility, Waterway Estates?

A. No, sir. That means they could not exceed that loading under that capacity.

Q. You just told me that secondary treatment did not address total nitrogen, didn't you?

A. No, I said secondary treatment was just for BOD and suspended solids. Any further treatment of total nitrogen or phosphorus is advanced waste treatment.

Q. So, if there is a poundage limitation for total nitrogen and a poundage limitation for total phosphorus, then that requires advanced waste treatment, doesn't it?

A. Yes, that would require advanced treatment.

Q. So, Waterway Estates has poundage limitations for total nitrogen and total phosphorus; right?

A. For this document, yes, sir.

Q. And therefore, based on what you just told me, that means they had a requirement for AWT, too; right?

A. No, sir. That doesn't mean that at all. That meant they could not exceed those poundage requirements.

Q. How is that different than what I asked you, sir? You were telling me that --
A. Because the plant was a secondary level plant, there's going to be so phosphorus, there's going to be so much nitrogen. I'm not an engineer, but this was calculated on advanced waste treatment, okay, for the entire estuary and their share of that poundage would be 1.08 MGD and there's the limits and that's why you can see the other limits are much higher because the volume is much higher. The City of Fort Myers has 12 million gallons, 300 pounds limit. So that's the differential.
Q. The limitations of 3.0 milligrams per liter for nitrogen is advanced waste treatment; isn't that correct?
A. Yes, sir.
Q. And 3.0 milligrams per liter calculated out equals approximately 27 pounds of total nitrogen per day, doesn't it?
A. Yes, sir.
Q. So, my question is, for that facility, there was an AWT limitation on total nitrogen, wasn't there?
A. No, sir. There was -- the limitation would be associated with the permit. This has -- this is just for planning purposes right here at this point.
Q. So, for planning purposes, there was a limitation on the total amount of total nitrogen which would have been

introduced; is that correct?
A. That is what we would anticipate in future permits we would have been requesting.
Q. And the same would hold true, also, for the .5 milligrams per liter of phosphorus; is that correct?
A. Yes, sir.
Q. Sir, and at those two poundage limitations and at the flow of 1.08 million gallons per day, they could not have met those poundage limitations without advanced waste treatment; isn't that correct?
MR. HIRD: Objection. I think the witness already stated these are not limitations, it's a planning document.
THE COURT: I'll overrule the objection.
THE WITNESS: If I understand your question correctly, they would have had to make changes to their existing facility to accommodate these allocations.
BY MR. QUINN:
Q. And those changes would have been an upgrade to AWT; is that correct?
A. Yes, sir.
Q. Okay. Sir, also, I'd like to draw your attention to the bottom of the page, last paragraph.
Sir, reference is made to the 6-foot contour or deeper. Can you tell me why there was reference to a 6-foot contour line in the Caloosahatchee River?

A. Basically, that was a consideration that we felt would be fair, for lack of a better term, for all the dischargers, that it would disperse the nutrients at a more stable situation. So, we, again, Tallahassee generated this information. We felt like that all the dischargers would have to meet that.
Q. And it was, also, because -- withdrawn. It was, also, to prevent a localized build-up of those nutrients, too, wasn't it?
A. Yes, sir.
Q. So, discharge to below the 6-foot contour would have left a better dispersion of the nutrients; isn't that correct?
A. Discharge at the 6-foot contour leads to better dispersion. Anything before that could be localized build-up, but it's going to depend on the area.
Q. So, sir, if there was a wasteload allocation for the Waterway Estates facility, it would have to have been for AWT and for discharge at the 6-foot contour; isn't that correct?
A. The wasteload allocation -- we're mixing up things here, but this was a wasteload allocation designed for future facilities. The limits that are established here were for, as you can see, design, Fort Myers South, design, Fort Myers Central. Cape Coral was existing and Waterway

Estates was existing. So, they were calculated in the mix along with people that were designing to expand the facilities.
Q. But the existing line for Waterway Estates requires treatment level at advanced waste treatment for total nitrogen and total phosphorus, doesn't it?
A. Those limitations right there, they could have -- would have been -- 1.08, right. Would have required advanced waste treatment, right, at that point.
Q. And, also, would have required discharge at the 6-foot contour line or deeper; is that correct?
A. When you say requirement, that was calculated as part of the overall calculations for the wasteload.
Q. So, was this a planning document?
A. Yes, sir.
Q. Just like the wasteload allocations; is that what you're saying?
A. Yes, sir.
Q. So, back in 1981, there was no final FDER wasteload allocation; isn't that correct?
A. If I can reiterate, whatever the permit stipulated as requirements was a consideration of the wasteload allocations.
Q. But we're talking -- we're mixing apples and oranges.
A. I know we are.

Q. There's a wasteload allocation; is that correct?
A. Yes, sir.
Q. And sometimes that wasteload allocation is incorporated into a permit, which is, in an of itself, enforcible; is that correct?
A. It should always be incorporated in the permit for any facility that discharges.
Q. With regard to wasteload allocations only and not those incorporated into permits, back in 1981, there was no FDER wasteload allocation for Waterway Estates, was there?
A. There was a permit issued and the basis of it was that any permit we issued would not violate the criteria outlined here.
Q. And that was AWT, wasn't it, sir?
A. The limits outlined would reflect AWT treatment.
Q. And the limits outlined also reflect discharge below the 6-foot contour; is that correct?
A. Right, they reflect that was the case, the 6-foot contour.
Q. If those limits were incorporated into a permit, that would require -- that would require an AWT permit; is that correct?
A. Yes, sir. Any permit that was issued for AWT would stipulate that within the permit specifically for that facility.

Q. But FDER has issued in the past permits that did not require AWT, didn't it?
A. If they don't exceed the poundage that's listed here, they may not need to go to advanced waste treatment.
MR. QUINN: Thank you, Mr. Blackburn.
THE COURT: Any redirect?
MR. BAISE: No further questions.
THE COURT: You may step down.
Call your next witness.
MR. QUINN: Your Honor, we move to strike all the testimony at this point of Mr. Blackburn as it relates to the conversations with Mr. Jacobs.
THE COURT: Well, I'll deny that at this point.
MR. BAISE: How late did you anticipate?
THE COURT: I was thinking about 5:30.
THE CLERK: Raise your right hand.
Thereupon,
MICHAEL ACOSTA,
having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:
THE CLERK: Take a seat in the witness box.
MR. BAISE: Your Honor, may I have the paralegal put those charts up that we had this morning, please?
THE COURT: Yes, sir.

THE CLERK: State your name and spell your last for the record, please.
THE WITNESS: My name is Michael Acosta, A-C-O-S-T-A.
THE COURT: Yes, Mr. Quinn.
MR. QUINN: For the reasons we stated earlier, with the use of these two exhibits that have been marked for identification earlier, we renew those objections at this time, sir.
THE COURT: I know of one.
MR. QUINN: There are --
THE COURT: I saw one after lunch, a second one, I believe, but no reference was ever made to it. And I think I know, what -- yeah, that one there. Nothing was said about that.
MR. QUINN: Nothing was said about that. It was up, however.
With regard to the first one, I lodged a series of objections this morning and I would merely lodge the same objections again for this witness.
THE COURT: All right. So, the record -- the 11th Circuit will know what we are talking about, you are talking about this Defendant Waterway's Exhibit for identification 208?
MR. QUINN: Yes, sir.

THE COURT: Which was this chart we talked about earlier today.
MR. QUINN: My objection, if you would like me to, I could restate them -- one was, it wasn't ever disclosed to us as an exhibit. It's not listed as a trial exhibit. Second, it was given to us later, but it wasn't told through which witnesses it would be used. In addition, it's hearsay. Hearsay within hearsay.
THE COURT: Well, so far, so far, that exhibit which I believe Mr. Baise has indicated he doesn't intend to offer it in evidence, but says that it can legitimately be used as a demonstrative exhibit to assist the witnesses in their testimony. That has not come to pass as yet. In fact, the manner in which 208 has been used sounds to me like, if anything, it would more properly be used during closing arguments as an aid to counsel in closing argument because the documents -- the document was not prepared by the witness and there's no nexus, is what I'm saying, between the witness that testified regarding 208 and you had him drawing these circles around things. So, it's -- the print is so small, I can't even read it from where I am. Now, I'm the trier of fact. And, frankly, I just had in the back of my mind I'd rule on this if and when the time comes.
So, it hasn't been offered into evidence and I, as I told Mr. Baise, I think before lunch, I guess I finally

told him that I didn't want to waste any more time with the witness drawing orange circles around various parts of this exhibit, because I said this is simply a tool of counsel in doing that. So, that's where we are on this thing now, and I don't intend to take any more time with it.

If Mr. Baise wants to draw circles around these, he can do that during recess, and if he wants to use it for some purposes later on, we'll address it at that point. Now, that's a long way around telling you that I'm not real impressed with that right now.

MR. BAISE: Your Honor, this is one of the witnesses who helped prepare that chart.

THE COURT: Oh.

MR. BAISE: I'm sorry to let you go on. I didn't want to interrupt you. He's one of the two witnesses who actually prepared that.

THE COURT: Okay. We'll see where we are, then.

MR. JACOBS: Judge, just an administerial matter as Mr. Hird set precedent yesterday afternoon after Mr. Lehman took the stand and you asked for administerial matters before we adjourned, and I hope it won't take as long Mr. Hird yesterday, but there's an agreement that on the morning of each day of Court we receive a witness list for the next morning, and it's 5 P.M. and it's long past 9 A.M. and we haven't seen that list for tomorrow.

And the other matter that I hesitate to raise in the same vein, but feel like I should, is that the Court would suggest yesterday — sorry — on Monday, that the Defendants indicate to us on Tuesday, that was yesterday, which witnesses they would be cutting from their witness list, and they represented on Monday that they would be cutting, and I have a phone message yesterday to the effect they are not cutting any witnesses, and if that's the case, the record should reflect that, so there's no further confusion. That's the second matter. But the first matter, it's after 5 and the list for tomorrow was due at 9 A.M.

THE COURT: Mr. Baise.

MR. BAISE: Yes, Your Honor, he's absolutely correct. We were just totally unsure of how many of these witnesses we would get through today. I'm not sure whether we will, in fact, given the cut-off time, we probably will not get through Mr. Acosta.

It's at this point, as I said to Your Honor on Monday, I thought there was a slim chance of finishing up by Friday, and I think in light of the progress we have made today, that is becoming more than a slim possibility, it's becoming a moderate possibility of finishing, because we've been able to get through —

THE COURT: Okay, well, I need you to go ahead and get this witness list now for tomorrow. Need to know that

now.

MR. BAISE: May we have a five-minute recess, Your Honor?

THE COURT: Well —

MR. BAISE: We have to determine the order in light of the moving around of Mr. Bradtmiller.

THE COURT: We will take a five-minute recess.

MR. BAISE: Thank you, Your Honor.

(Thereupon, a brief recess was taken, after which the following proceedings were had:)

MR. BAISE: Your Honor, we have provided the remaining list of our witnesses, both for Thursday and Friday, to Government counsel, and I apologize we did not meet that requirement this morning, but with the hectic schedules and trying to determine how to move witnesses around, given their schedules, I, frankly, overlooked that, so I apologize.

THE COURT: All right. Why don't you share that with me? Could you read that list to me?

MR. BAISE: Mr. Jacobs, why don't you read it?

THE COURT: Just hand it to Mr. Baise and let me — I'd like to know where we are going, also.

MR. BAISE: We have Mr. Acosta sworn. The next witness would be Mr. Larry Good.

THE COURT: Hold on just a second. All right.

Go ahead.

MR. BAISE: You have Mr. Acosta on the stand. Then the next witness would be Mr. Larry Good, Mr. Gerald Allen, Ms. Julie Karlaskint, Mr. Charles or Chuck Hill, Mr. Keith Cardey, and Dr. Abdul Ahmadi, A-H-M-A-D-I.

And after Florida Cities rests and Avatar will be calling a Mr. Ed Jacobson, J-A-C-O-B-S-O-N, Ms. Georgia Metcalf, M-E-T-C-A-L-F, and Charles McNairy, M-C-N-A-I-R-Y.

And I think with respect to several of these witnesses, Your Honor, there will be similar to Mr. Blackburn, they will not take more than an hour, hour and a half at most between my direct and I would think their cross, so that's why I told you I thought we had a possibility of making it.

THE COURT: Okay. Thank you.

DIRECT EXAMINATION

BY MR. BAISE:

Q. Mr. Acosta, what is your occupation?

A. I'm an engineer.

Q. What kind of engineer?

A. An environmental engineer.

Q. Would you please define an environmental engineer for the record?

A. Environmental engineering is the study and control of waste or pollutants from several different sources, air,

water, wastewater, and includes the infrastructure to get that water or wastewater to the different treatment facilities.

Q. What college degrees, if any, do you have?

A. I have a Bachelor of Science in Environmental Engineering from the University of Florida.

Q. Any advanced degrees?

A. No, sir.

Q. Any seminars or certificates beyond that point?

A. I am a Registered Professional Engineer in the State of Florida.

Q. What is your present position?

A. I am Vice-president of Engineering and Operations.

Q. For what?

A. For Florida Cities Water Company.

Q. Have you held prior positions in Florida Cities Water Company?

A. Yes.

Q. What are they? Or were they? Excuse me.

A. I held three other positions. Excuse me.

Q. Would you define those positions and the responsibilities for each of those positions?

A. The first position I held was Division Engineer in the Lee County Division of Florida Cities. That involved the engineering of in-house projects and developer-installed

projects throughout Lee County.

The second position that I held was Regional Engineer of the South Region, which includes Collier and Lee County, and that position was similar in scope, but it involved the responsibility for the entire South Region including both counties.

And the position just prior to this position — the position I currently hold, was Manager of Engineering and Construction, and that position involved the responsibility for design and construction of facilities throughout the company, including Collier and Lee Counties.

Q. Are you familiar with the permitting requirements in Lee County as a result of these positions you have held, Mr. Acosta?

A. Yes.

Q. What are those requirements, based on your personal knowledge?

A. To obtain — to build on a site in Lee County, a development order or an exemption from a development order must be acquired from the county, in addition to all the appropriate building permits and zoning requirements, et cetera.

Q. Can you explain or define those appropriate building permits and zoning?

A. Well, the zoning permit would be — the property comes

along with a certain zoning that requires set backs and all of those, the appropriate things to — for the site to be built upon to have the least impact on its neighbors. The exemption or the development order is a document received from the county that includes all of the site plans that are submitted to the county, and must be obtained prior to building on a site.

Q. Which offices have you worked with with respect to permitting in Lee County, Mr. Acosta?

A. I have worked with Development Review, Lee County Utilities, the Department of Transportation, the Department of Natural Resources. All of those.

Q. Are all these offices necessary to work with in obtaining permits to construct a facility in Lee County?

A. For at least some of those offices are required and in some cases all of them are required.

Q. Can you describe those cases where all of those offices would be involved?

A. A case where you have environmental concern, some environmental concern would involve — Natural Resources, Utilities are involved to make sure that adequate service is provided to the property. DOT, Department of Transportation, for the same reason, to get the roads and infrastructure in. And the Codes and Building Department to ensure that building requirements of the county are met.

Q. Did there come a time when you became familiar with the Florida Cities Waterway Estates facility?

A. Yes.

Q. When was that?

A. That was in the fall, late fall of 1987.

Q. And how did you become familiar with the Florida Cities Waterway Estates facility, Mr. Acosta?

A. I was asked to tour perspective engineering firms around the Waterway Estates facility in preparation for their proposals.

Q. What proposal are you referring to, Mr. Acosta?

A. There was a request for proposals for the design and permitting of the Waterway Estates upgrade.

Q. And what did your touring around involve with these particular contractors, Mr. Acosta?

A. I took the engineers that requested that around the facility to get a feel for what the existing facility looked like, and what would need to be done to upgrade the facility to advanced waste treatment.

Q. Do you recall how many engineering firms you toured around the Waterway Estates facility in 1987? Excuse me.

A. I'm sorry. I recall two or three.

Q. Do you recall the individual companies' names?

A. No, not the individual — I remember one individual person, but I do not recall the firm he was with at the

time.

Q. Do you recall any of the companies who looked at the possibility of being involved in the Waterway Estates expansion?

A. Source, I recall, uh, getting phone calls from and Mr. Robart Wright and my memory fails as to which firm he was with at the time.

Q. Why is it necessary for these firms to come and make a tour of the facility?

A. It is generally to get a feel for what facilities are in place, what the lay of the land is, how constrained the site is. Generally, just to see what the facilities are and what will need to be done in order to upgrade the facility.

Q. Did there come a time when Florida Cities hired one of these firms you toured around the facility in -- did you say December of 1987?

A. In the late fall, yes, sir, December.

Q. Excuse me.

So did there come a time when one of these firms was hired by Florida Cities?

A. Yes.

THE COURT: Okay. It's 5:30. Let's go ahead and recess and we'll -- I have a proceeding at 8:30 and I intend to be through with that by 9:00, so we'll convene at 9:00 tomorrow morning. We'll be in recess.

It's 8:45. Let's still plan on 9:00 and I'll try to get through with it.

MR. BAISE: We'll be here by 8:45. We'll be ready.

(Thereupon, the proceedings were concluded.)

C E R T I F I C A T E

I hereby certify that the foregoing is an accurate transcription of proceedings in the above-entitled matter.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, vs. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC., Defendants.

Case No. 93-281-CIV-FTM-21

Monday, April 4, 1996
Tampa, Florida
9:10 a.m.

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

April 4, 1996

****

THE COURT: Morning. All right.

MR. BAISE: Morning.

THE COURT: We have Mr. Acosta, is it?

MR. BAISE: Yes, Mr. Michael Acosta.

THE COURT: On direct examination.

Mr. Baise, you may proceed.

MR. BAISE: Thanks.

DIRECT EXAMINATION CONTINUING

BY MR. BAISE:

Q. Just to repeat the question where we left off last night, Mr. Acosta, because I'm unsure as to whether or not you had an opportunity to answer it before we closed the session for the day; what was your involvement with the Waterway Estates Facility?

A. In late '87, I was the assistant regional engineer. From that point forward in various capacities as helping out generally, getting the permitting through and then once construction started, a much more active role.

Q. Mr. Acosta, I would like to bring to your attention Florida Cities' Trial Exhibit 14-A.

MR. BAISE: Your Honor, this would be a series of photographs?

THE WITNESS: Yes, sir.

BY MR. BAISE:

Q. Do you have photograph Florida Cities' Trial Exhibit 14-A in front of you, Mr. Acosta?

A. Yes.

Q. Can you identify the photograph, Mr. Acosta?

A. Yes.

Q. What is it?

A. It is the Waterway Estates Advanced Wastewater Treatment Plant.

Q. Did you take this photograph, Mr. Acosta?

A. No.

Q. Is this a true and accurate depiction with respect to what is at Waterway Estates discharge into the canal into the Caloosahatchee River?

A. Yes, it is.

Q. Could you please describe the facilities which are in this photograph, Mr. Acosta?

A. Yes. The equalization tank is shown, the two biological treatment units are shown, the digester is shown, the U. V. Disinfectant Facility is shown, the denitrification filters are shown, and the administration building is shown on here.

Q. Is this a depiction of the facility after the construction was completed, Mr. Acosta?

A. Yes, it is.

MR. BAISE: Your Honor --

BY MR. BAISE:

Q. And when was the construction completed on this facility, Mr. Acosta.

A. I didn't hear that.

Q. When was the construction completed on this facility?

A. Construction was completed in 1992, April of 1992.

MR. BAISE: Your Honor, I would move this into evidence.

THE COURT: It'll be received.

BY MR. BAISE:

Q. Mr. Acosta, I direct your attention to Florida Cities' Trial Exhibit 14-C.

MR. BAISE: Your Honor, probably have a complete set, but some of them are just duplicates. In order to save time, I'm going to go through the most important ones.

BY MR. BAISE:

Q. Do you have 14-C in front of you, Mr. Acosta?

A. Yes, sir.

Q. Can you identify this photograph?

A. It appears to be the back right corner of the property at the Waterway Estates Advanced Wastewater Treatment Facility.

Q. Can you be more specific as to the right back corner, I believe you said?

A. Correct. Right back corner being the southwest corner of

Page 5

the property.
Q. And what does this photograph depict?
A. It's the property line between Florida Cities, the canal and the adjacent marina.
Q. Does this photograph accurately represent the southwest back corner of the facility at Waterway Estates discharge into the canal, Mr. Acosta?
A. Yes.
MR. BAISE: Your Honor, I would move Florida Cities' 14-C into evidence.
MR. QUINN: Your Honor, I don't think I have an objection. I want to make sure the file copy is not purple like my copy is.
THE COURT: Purple?
MR. QUINN: Yeah. Mine is sort of purple. I wasn't sure if the exhibit that is going to be entered into evidence is purple.
THE COURT: Well, where is the --
MR. BAISE: Mine has a slightly purple tinge to it as well.
THE COURT: Do I have -- do I have the original here?
MR. BAISE: You may have the original.
THE COURT: Is that what is being handed to me or not?
THE PARALEGAL: You have the Court's copy.

Page 6

THE COURT: Let me show you what I have got then. I don't know whether that is purple or not.
THE CLERK: Yep, purple.
MR. BAISE: May we approach the bench?
THE COURT: Yes, sir.
MR. QUINN: I think you have got the same color as I do, sir, but I believe Mr. Bullock is going to check to see if the official file copy is the original photograph, in which case I don't think I will have an objection. I want to clarify that for the record.
THE COURT: This is the official exhibit here.
MR. QUINN: Okay.
So then I would object as to the color. This is not a fair and accurate representation of -- this does not appear to be a fair and accurate representation of the relevant scene in this case. I did not interpose that objection in my earlier filings because I thought there would be an original. I thought the purple tinge was something that was just unique to the color copying.
THE COURT: Oh, good.
MR. BAISE: We're not presenting this with respect to trying to move anything in color or algae or anything else.
THE COURT: Okay.
The Court will, since you're concerned about that, Mr. Quinn, the Court will announce that it will disregard the

Page 7

purple color and will assume that that was a deficiency in the color processing.
MR. QUINN: Thank you, sir.
THE COURT: All right.
MR. BAISE: And I move --
THE COURT: It'll be received.
MR. BAISE: -- C into evidence.
THE COURT: It'll be received.
BY MR. BAISE:
Q. Mr. Acosta, I direct your attention to Florida Cities' Trial Exhibit Number 14-F as in Frank. Would you please describe this scene, Mr. Acosta?
A. This is a photograph taken, looking southeastward from what appears to be the top of the denitrification filters, shows the U. V. Disinfection Facility in lower left, the canal leading out to the Caloosahatchee River and in the background, the Caloosahatchee River itself.
Q. So this photograph is a true and accurate photograph at the Waterway Estates Facility discharging into the Caloosahatchee River?
A. Yes, it is.
MR. BAISE: Your Honor, I would move 14-F into evidence.
MR. QUINN: Only objection, sir, again is with color.
THE COURT: All right.

Page 8

It appears that perhaps then the color processing -- it appears some of the colors appear purple. That probably is not totally accurate, so the Court will disregard that. It'll be otherwise received.
MR. BAISE: It would appear, Your Honor, on most of these, there is this purple on the photographs and certainly we'll stipulate there is a purple tinge that would not normally be there.
THE COURT: All right.
BY MR. BAISE:
Q. Mr. Acosta, I direct your attention to Florida Cities' Trial Exhibit 14-G. You have that in front of you?
A. Yes, I do.
Q. Would you please describe this scene?
A. This again appears to be taken from the denitrification filters. It shows the U. V. Disinfection Facility, the back half of one of the two biological treatment units, the adjacent boat storage marina, and the Caloosahatchee River along with the canal.
Q. Even though the discharge pipe is under water, is there any indication as to how one could tell where the discharge pipe from this facility may be in this photograph and if so, could you identify it?
A. No, not from this photograph.
MR. BAISE: Your Honor, I would move 14-G into

Page 9

evidence with the stipulation that we have just discussed.
THE COURT: All right.
It'll be received with that same understanding.
BY MR. BAISE:
Q. Mr. Acosta, I draw your attention to Florida Cities' Trial Exhibit Number 14-H, as in Howard.
A. I have it.
Q. Could you please describe this scene?
A. This is a view of the canal taken from what appears to be the -- adjacent to the gazebo next to the marina. Next to Waterway Estates, you see the high storage boat -- high boat storage on the righthand side, the back half of the biological treatment unit and the canal.
Q. Again, looking at this photograph, is there any marker that would indicate where the discharge pipe might be that you could draw to the Court's attention?
A. I do not see one on this photograph, no.
MR. BAISE: Your Honor I would move 14-H into evidence.
THE COURT: All right.
With the same understanding, the Court will receive 14-H.
BY MR. BAISE:
Q. Mr. Acosta, I draw your attention to Florida Cities' Trial Exhibit Number 14-K, as if kangaroo.
A. I have it.

Page 10

Q. Please describe this scene?
A. This again appears to be taken from the back of the boat storage marina, next to the gazebo. It's a view of the exit of the canal and the Caloosahatchee River with the City of Fort Myers on the opposite bank.
Q. Again, is there any marker that would indicate where the pipe discharge into the canal might be in this photograph?
A. No, I do not see one.
MR. BAISE: Your Honor, I would move 14-K into evidence with the stipulation.
THE COURT: All right.
It'll be received with the same understanding as to the purple tinge.
BY MR. BAISE:
Q. And finally, Mr. Acosta, I draw your attention to Florida Cities' Trial Exhibit 14-L. Do you have that in front of you?
A. I do.
Q. Would you please describe this scene and is it a fair and accurate representation?
A. Again, it appears to be taken from the denitrification filters. Shows the U. V. Disinfection Facility, the back half of the biological unit -- of the two biological treatment units, the boat storage area, the canal, the Caloosahatchee River and the City of Fort Myers on the opposite bank and it is a true and accurate depiction of the facilities that are there.

Page 11

Q. Is there any indication for or physical item that would suggest to you where the discharge pipe might be coming from the facility in this photograph?
A. The only indication of the pipe exits the back of the U. V. Disinfectant Facility, and then goes underground and subaqueous thereafter.
THE COURT: What --
MR. BAISE: Excuse me, Your Honor.
THE COURT: Where is that you're talking about?
THE WITNESS: The U. V. Disinfection Facility here.
BY MR. BAISE:
Q. Please identify "right here," Mr. Acosta.
A. Right here is the handrailings that you see in the picture, the U. V. Disinfectant Facility is just ahead of that, and the discharge is just there on the other side of that U. V. Disinfection Facility.
THE COURT: All right.
THE WITNESS: That is where the pipe exits the wall and underground subaqueous out.
MR. QUINN: As a point of clarification, are we talking about at the time the photograph was taken or some other point in time or today?
THE COURT: Can you clarify that?
THE WITNESS: At the time the photograph was taken and today, that's as it exists today.

Page 12

BY MR. BAISE:
Q. Again, so the record is absolutely clear, Mr. Acosta, the U. V. System stands for what?
A. Ultra violent disinfection.
Q. And is it the white box with the blue screen in the middle of it?
A. No, it's not. That is the sampler. The entire structure is a U. V. Disinfection Chamber.
Q. So the entire structure bracketed by the iron railing fence is presumably painted white with the two blue structures on the left and righthand side, is that the U. V. System?
A. That is correct.
Q. And it has two stand pipes that would appear in the middle of the photograph?
A. Yes, those are the valves.
Q. So, is that the U. V. System there?
A. That whole structure is, yes.
THE COURT: Okay.
Let's move on. You want to offer that?
MR. BAISE: I would move this in evidence.
THE COURT: Be received, with the same understanding.
BY MR. BAISE:
Q. Mr. Acosta, I would draw your attention to Florida Cities' Exhibit 190 which is already in evidence.
A. I have it.

Page 13

Q. You have that in front of you?
Mr. Acosta, what is this document?
A. This is the agreement for engineering services between Florida Cities Water Company and Source.
Q. Are you familiar with this document?
A. Yes.
Q. I direct your attention to paragraph three on page 1 marked one of this document. You see paragraph three?
A. Yes, sir.
Q. Could you summarize what paragraph three requires the contractor to undertake?
A. Paragraph three requires the preparation of the drawings, permit applications for the upgrade of the Waterway Estates Facility including the zoning.
Q. And zoning, would you describe what zoning needs be undertaken by the contractor?
A. In this particular case, variance from the zoning had to be acquired in order to build the facility as it exists today. The setbacks were such that they could not be met and include all of the facilities on the site.
Q. Why were you asking the contractor to undertake the zoning work, Mr. Acosta?
A. It is more efficient for the engineering firms to do that work. They have access to the drawings that they're preparing. It's more efficient for them to do it.

Page 14

Q. Did Florida Cities and you have staff to undertake the zoning and permit applications in Lee County, Mr. Acosta?
A. We had the staff to do the permitting. We did not have the staff to do the drawings and the design calculations.
Q. When did Source develop drawings and renderings and permit applications for Lee County, Mr. Acosta?
A. The zoning variance was filed in June of 1988.
Q. And why was the zoning variance required to be filed?
A. In order to get a variance from the setbacks.
Q. And what is a setback?
A. A Setback is an amount of land that needs to be left between the edge of a property and the nearest building or structure.
Q. What was Lee County's response to this request for a variance?
A. It was denied in August of '88.
Q. Why was the variance denied in August of 1988, Mr. Acosta?
A. It's not clear why Lee County denied it. We -- Florida Cities appealed that decision. The development order -- exemption to the development order that was filed was also denied because the zoning variance was not in place.
Q. Mr. Acosta, did you help prepare the Waterway Estates timeline that is at your immediate right?
A. Yes.

Page 15

Q. Did anyone from Florida Cities help you prepare this document?
A. Yes.
Q. Who were those individuals?
A. Julie Karleskint, primarily.
Q. Mr. Acosta, could you circle August, 1988, Lee County denies development exemption because of no zoning variance. It's the next to the last item on the first column.
A. I need a writing instrument.
Q. Oh, I'm sorry.
(Witness complying.)
What did you do after the zoning variance was denied, Mr. Acosta.
A. It was appealed.
Q. And what happened after the appeal was taken?
A. The zoning variance was ultimately granted.
Q. When was the zoning variance granted?
A. October of '88.
Q. Were there any other permits or zoning orders that the contractor or Florida Cities had to obtain before this project could be constructed?
A. Yes. From Lee County, we still needed a development order or an exemption from the development order.
Q. What is the development order?
A. Development order is a document required by ordinance in

Page 16

Lee County that allows you to build on a site. It's typically done for all site development with the exception of a single family residential house.
Q. What impact did the delay of these orders have on the engineers drawing up plans and specifications for this facility?
A. The drawings could not be completed, finalized until the zoning and development orders were in place. All the structures could not be located appropriately.
Q. When did Lee County eventually grant Florida Cities and it's engineer a development order?
A. In April of '89.
Q. 1989?
A. Yes, sir.
Q. What was the impact of Lee County -- strike that question.
Were there any other permits that Lee County needed to grant Florida Cities and its engineer before final plans and specifications could be developed by the engineer?
A. Once the development order was or the exemption to the development order was issued, at that point, no.
Q. Was there a State level of permitting necessary for this facility?
A. Yes.
Q. Why was that State level of permitting not concurrent

Page 17

with the permitting program in Lee County?
A. The construction permit for the facility could not be completed until the plans were able to be finalized and that did not occur until Lee County issued their exemption to the development order and the zoning variance.
Q. So when did the engineering firm and Florida Cities initiate their efforts to work with the State of Florida's Department of Environmental Protection or Regulation?
A. May of 1989.
THE COURT: What year?
THE WITNESS: '89. Excuse me, Your Honor.
THE COURT: All right.
BY MR. BAISE:
Q. What approvals did the State of Florida have to grant Florida Cities and its engineer for this project to be initiated?
A. The FDER at the time needed to issue a construction permit for the plant itself and a dredge and fill permit for the outfall line.
Q. The State of Florida had to grant a dredge and fill permit?
A. Yes.
Q. What were the State of Florida's concerns with respect to this facility, Mr. Acosta?
A. The construction permit application must involve all the

Page 18

drawings of the final drawings, design calculations to insure the regulator, the environmental regulators that they have reasonable assurance that the facility will meet the design parameters and the effluent limitations that are set out.
Q. What efforts did Florida Cities make to speed up this process of getting Florida State approval for this project?
A. There were meetings with FDER to facilitate the permitting. There is not a terribly lot that the applicant can do once the permit has been filed.
Q. When did these efforts take place, Mr. Acosta?
A. Throughout that, from May through that summer.
Q. That summer being what?
A. The summer of 1989.
Q. Florida Cities had its final plans and specifications from the engineering firm, why didn't it just start construction?
A. I don't believe that based on my experience that it's legal to start construction without having that construction permit from the State in place.
MR. QUINN: Objection, move to strike. It calls for a legal conclusion.
THE COURT: Well --
MR. BAISE: I didn't ask him for a legal conclusion.
THE COURT: I think it may have some relevance as to the state of mind or motivation of the Defendant, rather than

Page 19

attempting to elicit a legal conclusion, so I'll overrule the objection.
BY MR. BAISE:
Q. Did a Dr. Abdul Ahmadi ever review the project as it was prepared by Source Engineering, Mr. Acosta?
A. Yes, he did.
Q. Do you know what issues Dr. Ahmadi raised with regard to the Florida Cities' project?
A. I believe that Dr. Ahmadi was initially concerned about the aeration process, the extended duration process. He was not convinced that that process would meet AWT standards.
Q. Were there other individuals at the State involved in this project who expressed concerns about what this project was about?
A. Not that I'm aware of.
Q. When did the State of Florida grants its construction permit for this facility, Mr. Acosta?
A. Sometime ten months later, which would put it in March of '90.
Q. Mr. Acosta, I direct your attention to Florida Cities' Trial Exhibit Number 41.
THE COURT: I've got 41. Is this the Defendant's Exhibit?
MR. BAISE: Yes. You have it, Your Honor?
THE COURT: Yes.

Page 20

BY MR. BAISE:
Q. Are you familiar with this document, Mr. Acosta?
A. Yes, sir.
Q. Is this the document you were just referring to?
A. This is the construction permit.
Q. Please describe this document and the date.
A. The last part of that question?
Q. And the date.
A. The date. The date of issue was March 1st, 1990, expiration, November 1st, 1990. And it is the construction permit for the Waterway Estates Advanced Wastewater Treatment Plant's upgrade.
Q. Why couldn't this permit have been obtained before March 1 of 1990?
A. Again, the permit could not have been filed for until the final plans were in place. Those could not have been done until the zoning and the exemption to the development orders or the development order itself were granted by Lee County.
MR. BAISE: Your Honor, I would move Defendants' 41 into evidence.
THE COURT: It'll be received.
BY MR. BAISE:
Q. Mr. Acosta, I directing your attention to the first paragraph of the first page and would you read that paragraph into the record, please?

Page 21

A. Enclosed is Permit Number DC36-165119 to construct a modification to the subject sewerage treatment facility issued pursuant to Section 403.087, Florida Statutes.
Q. Thank you.
Mr. Acosta, I direct your attention to Defendants' Trial Exhibit Number 36.
A. I have it.
Q. Are you familiar with this letter of April 19, 1989, Mr. Acosta?
A. Yes.
Q. Who is Mr. Edwards?
A. Mr. Edwards was the director of management, district management at the South District of FDEP.
Q. And who is Mr. Robert H. French who signed the letter?
A. Mr. French was senior vice president for Florida Cities at the time.
Q. Did you work with Mr. French?
A. Yes.
Q. Were you aware of the activities going on at the time that Mr. French is writing about on April 19, 1989?
A. Yes, I was generally aware of those.
MR. BAISE: Your Honor, I would move Defendants' Exhibit Number 36 into evidence at this time.
MR. QUINN: Your Honor, I would -- United States objects on the basis of hearsay. The letter was written by

Page 22

Mr. French, who is not here, Mr. Edwards, who is not here. There are a number of other attachments which are hearsay and appear to be hearsay within hearsay because they relate to requests that were made.
MR. BAISE: Your Honor, this is a business record from their files. I believe he testified he was aware of the events that occurred at the time. It is Florida Cities' normal practice to keep these records as part of their normal record-keeping process. Mr. French is in Australia and Mr. Edwards is retired.
MR. QUINN: Your Honor, the United States submits that an improper basis and foundation has been laid to meet the exemption of the hearsay rule through this witness and the United States submits that it can't be met through this witness either.
MR. BAISE: Mr. -- excuse me.
THE COURT: Well, it hasn't been met yet.
BY MR. BAISE:
Q. Mr. Acosta, was this letter recording the events accurately, in your opinion, at the time of these events?
A. Yes.
Q. Was this record made from information transmitted by a person with whom you have knowledge of, Mr. Acosta?
A. Can you repeat that?
Q. Yes.

Page 23

Was this letter made by an individual and with information that you were aware of at the time that the information was generated?
A. Yes. I was generally aware of the information that is contained in this letter.
Q. And were letters such as this one dated April 19, 1989, kept in the course of regularly conducted business activity of Florida Cities?
A. Yes.
Q. Was it regular practice of Florida Cities and Mr. French and yourself to make records of your activities?
A. Yes.
Q. And does this report accurately reflect the activities that took place at the time and described on April 19, 1989?
A. Yes.
Q. You have any doubt to these or any reason to doubt the source and circumstances of trustworthiness of this document?
A. No, I do not.
THE COURT: Where is this letter been during the interim between April 19, 1989 and the present, or a copy of it? The original, of course, purportedly went to DER.
THE WITNESS: Letters such as this generally are kept in two ways; one, in the reading file of the individual who generates it, and secondly, in the project file.
THE COURT: All right, just a moment.

Page 24

(Brief Pause.)
I'll overrule the objection. I'll receive it as Exhibit 36.
BY MR. BAISE:
Q. Mr. Acosta, I direct your attention to the second full paragraph of the letter dated April 19, 1989, to Mr. Edwards. Sentence – paragraph beginning with the word "while."
A. Yes, sir.
Q. Would you read that paragraph, please?
A. Yes, sir.
While Florida Cities Water Company made every effort, both directly and through legal and engineering consultants, to expeditiously obtain the required zoning and development –
THE COURT: Slow down a little bit, please.
THE WITNESS: Okay.
Excuse me. -- required zoning and development order permits from Lee County.
BY MR. BAISE:
Q. Excuse me. Could you please start over so the record will be clear for the Reporter?
A. Yes, sir.
While Florida Cities Water Company made every effort, both directly and through legal and engineering consultants, to expeditiously obtain the required zoning and development order permits from Lee County, it was not until April 12th, 1989,

Page 25

that the final exemptions and approvals were received.
Between August 4, 1988 and August 12th, 1989, there were nearly continuous meetings and correspondence with a variety of Lee County officials in the Planning and Zoning Department. The revision of the plans associated with attempts to comply with all of the often conflicting requirements of Lee County staff substantially delayed the project to the point where we are behind schedule for the milestones specified in the consent order and the temporary operating permit.
Q. Mr. Acosta, I direct your attention to page two of the letter signed by Mr. French, second paragraph. The page not marked two, but it's the second physical page attached to Number 36.
A. Yes.
Q. Beginning with the words, "as you're well aware," would you please read that paragraph into the record?
A. Yes.
As you are well aware, Florida Cities Water Company does not completely control the activities and the achievement of this accelerated compliance schedule. The administrative process of issuing a construction permit is not completely determined by Florida Cities or FDER. It is our intention to utilize the strongest possible language to insure the contractors bid on the plant modifications are able to complete construction in the specified time to permit the accelerated

Page 26

completion dates contained in the proposal.
While the consent order contains language that allows for an extension of the completion date for circumstances beyond the control -- beyond and circumstances beyond the control are in parentheses.
THE COURT: In quotes.
THE WITNESS: In quotes, I'm sorry.
-- of Florida Cities Water Company, it is our desire to comply with the date specified and have modified facilities certified in compliance by November 1st, 1990.
BY MR. BAISE:
Q. Thank you, Mr. Acosta.
Is there a sequence of events attached to this document which lays out for the State of Florida what Florida Cities has been undertaking since March of 1987?
A. Yes, there is.
Q. Thank you.
Mr. Acosta, I direct your -- excuse me.
You have testified that the State of Florida issued its permit to allow construction to begin on this project and what month and what year?
A. March, 1990.
Q. Would you take your pen and please mark in the 1990 column under March, FDER issues construction permit for Waterway Estates and wastewater treatment plant and outfall

Page 27

line. Thank you.
(Witness complying.)
Mr. Acosta, I direct your attention to Florida Cities' Trial Exhibit Number 37. Do you have that document in front of you, Mr. Acosta?
THE COURT: Yes, sir.
MR. QUINN: Your Honor, at this point, we would request that the testimony regarding Exhibit Number 36 be stricken, in particular the proposed -- the sequence of events which was attached.
In addition, the United States would point out that there is a stamp on the bottom of page 36 which indicates this document in fact came from the records of the Florida DER and not from the records of Florida Cities Water Company and therefore, the hearsay exemption could not have been met, sir.
MR. BAISE: Which page are you referring to, counsel?
MR. QUINN: Excuse me, sir. I'm referring to the first page. There is a stamp dated April 21, '89, DER, South Florida District.
Sir, I have an additional basis, if Your Honor would like to hear that. That is hearsay, one, hearsay as to the attachments to the letter as well as these appear to be self-serving statements by people who aren't here.
MR. BAISE: Is counsel raising an authenticity argument with respect to this document?

Page 28

MR. QUINN: No, no, sir. I'm raising, Your Honor -- no, Your Honor, I'm not. I'm raising a hearsay objection. The document is probably authentic and that has nothing to do with any of my objections.
THE COURT: Well --
MR. BAISE: Do you want me to question -- excuse me.
THE COURT: All right.
Now it seems to me that -- that your observation regarding the file stamp showing received April 21, 1989, South Florida District, that would be an objection that seems to go to identification authentication.
MR. QUINN: Your Honor, my objection -- actually, that goes to the -- if it's within the exemption under the hearsay exception, you have to show that the document came from his records. I don't believe -- I did not intend that to be an authenticity objection, but merely to go to the basis of their -- Florida Cities' attempt to assert this document. If it's within one of the narrow exceptions to the hearsay rule for that objection, I object. I'm not saying it's not authentic 'cause it's a document that apparently came from FDER, but I object to using it in this manner because it's hearsay.
MR. BAISE: May I respond, Your Honor?
THE COURT: Yes, sir.
MR. BAISE: By virtue of the fact of the official stamp, South Florida District, it seems to me to further

Page 29

authenticate the veracity and authenticity of this document. Mr. Acosta already testified, it seems to me, that there certainly was a present sense impression generated at the time by Mr. French, he's familiar with all of the events which occurred. And he's attested to the validity of those events occurring.

If we follow counsel's suggestion that this document be considered hearsay, then it makes it almost improbable to get regularly recorded business records into evidence when parties are unavailable. And there's no reason to believe, as Mr. Acosta has said, that that document is in any way untrustworthy, and therefore, and with respect to the calendar of events which are attached to the letter, Mr. Acosta -- I didn't ask him a question about the calendar of events. If the Court desires, I will do so.

THE COURT: Just a minute.

(Brief Pause.)

MR. BAISE: And because of the stamp on it, Your Honor, we can certainly argue the other exception to the hearsay rule, that it certainly indicates it is a public record or report that comes from a public office or agency.

THE COURT: Well, I don't think that's a public record or a report under 803.8. I don't think the fact that the South Florida District of DER puts a received stamp on a document that it has received qualifies that under the criteria

Page 30

set forth for public records and reports which is part of the hearsay exception set forth in Rule 803, so I don't think that helps you any. Just a moment.

(Brief Pause.)

MR. BAISE: Your Honor, when I was having him testify, I did not have him testify to the first paragraph where it says, this sequence of events attached to this letter. So, I don't know whether that makes any difference in your reviewing this or not. I'm obviously relying on --

THE COURT: Sir?

MR. BAISE: I'm relying on 803.6 is the rule.

THE COURT: Yes, I'm looking for that.

MR. BAISE: Someone have 803.6?

MR. HIRD: Your Honor, would you like a copy of --

THE COURT: No, I've got 803.6. I've been looking at that.

MR. QUINN: Your Honor, based on counsel's representation that he drew no testimony from the attachments, we would move to sever those pages from the exhibit and we would still renew our objection as to the exhibit proper.

MR. BAISE: I would object to that because then we would not have a complete document.

THE COURT: Okay.

Well, I'll tell you when I want to hear from you any further.

Page 31

(Brief Pause.)

Okay.

This witness has not qualified this document for admission into evidence under Rule 803.6, and it hasn't been proferred as a qualified document under any other provision of the ruling other than 803.8, and for the reasons I mentioned earlier, that clearly does not satisfy the criteria set forth in 8 as a public record and report.

The Court will recede from its previous ruling and will sustain the objection and not receive 36 and the Court will strike the testimony of the witness insofar as his publishing the contents of that document.

Proceed.

BY MR. BAISE:

Q. Mr. Acosta, I draw your attention to a document dated July 14, 1989, Defendants' Exhibit 37.

A. I have it.

Q. Are you familiar with this document, Mr. Acosta?

A. Yes.

Q. And who is Mr. French?

A. Again, senior vice president of Florida Cities at the time.

Q. And were you aware of the letter at the time it was written?

A. Only generally.

Page 32

THE COURT: What was the question, I couldn't hear you.

MR. BAISE: Were you familiar with this letter at the time it was written?

THE COURT: What was your answer?

THE WITNESS: Only generally.

BY MR. BAISE:

Q. Were you aware Mr. French sent a letter to Ms. Pricilla Oliver at the time, USEPA?

A. No.

Q. Do you know who Ms. Pricilla Oliver is?

A. No, I do not.

Q. What is this document regarding?

A. It regards that all the construction permits have been applied for and that we -- that Florida Cities intends to accelerate the schedule to comply by the November 1st, 1990 compliance date.

MR. BAISE: Your Honor, I would move this document into evidence.

THE COURT: Be received.

BY MR. BAISE:

Q. Mr. Acosta, would you read the first full paragraph in this letter to Ms. Oliver at USEPA?

A. Pursuant to your letter of June 21st, 1989, Florida Cities Water Company has applied for all construction permits

Page 33

associated with the upgraded above referenced facility.
Additionally, we have applied for an NPDES Permit based on our proposed upgraded AWT facility. We have received bid proposals for the construction of the outfall line of the Waterway Estates Plant to the six foot contour of the Caloosahatchee River and anticipate the completion of a construction bid package which can be advertised for bids on the proposed upgrade to the referenced facility by July 21st, 1989.
Upon issuance of all appropriate construction permits, construction will begin with the facility to be projected to be served by in compliance by November 1st, 1990.
Q. Did there come a time when USEPA did issue a NPDES Permit to the Waterway Estates Facility, Mr. Acosta?
A. I believe so.
Q. I direct your attention to Florida Cities' Exhibit 196. Do you have that document in front of you, Mr. Acosta?
A. Yes, I do.
Q. Please describe this document for the record?
A. It is the NPDES Permit for the Waterway Estates Facility.
Q. And to whom is this letter written?
A. Robert French.
Q. And who is the letter from?
A. It's on page 2 -- I'm sorry. Al J. Smith.
THE COURT: Did you say Al Smith?

Page 34

THE WITNESS: Yes.
THE COURT: Of EPA?
THE WITNESS: Yes, sir.
BY MR. BAISE:
Q. EPA, Region IV?
A. That's the letterhead.
Q. Thank you.
And Mr. Acosta, would you turn to the seventh page of this document, that page starting with POTW permit number. Do you find that page?
A. I have it.
Q. Please describe this page for the record, Mr. Acosta.
A. It is the authorization to discharge under the NPDES Permit into the Caloosahatchee River.
Q. And what are the receiving waters named in this permit, Mr. Acosta?
A. The Caloosahatchee River.
Q. And who is the permit signed by?
A. Al Smith.
Q. And the date?
A. September 29, 1989.
MR. BAISE: Your Honor, I would move this permit into evidence, Florida Cities' Exhibit Number 196.
THE COURT: It'll be received.
BY MR. BAISE:

Page 35

Q. Back to permitting, Mr. Acosta, were there any Federal permits in addition to the one we have just reviewed that were required for constructing this facility?
A. Yes.
Q. What were they?
A. An Army Corps of Engineers dredge and fill permit.
Q. Please describe an Army Corps of Engineers dredge and fill permit?
A. In order to excavate in waters of the U. S. or bury a pipe, in this case, the Army Corps of Engineers dredge and fill permit must be applied for and received.
Q. When did Florida Cities apply for an Army Corps of Engineers dredge and fill permit?
A. In April of 1989.
Q. And Mr. Acosta, would you take your pen and circle under April of 1989, Florida Cities applies for an FDER and U. S. Army Corps of Engineers dredge and fill permit?
(Witness complying.)
Why was that permit applied for in April of 1989, Mr. Acosta?
A. The Lee County exemption to the development order had just been received and that showed the outfall line and its configuration out through the canal and actually into the Caloosahatchee River.
Q. Why couldn't you have filed for the Army Corps of

Page 36

Engineers' permit back in say January of 1987?
A. The final location of the outfall line was not determined until the exemption to the development order was received. It could have changed at any point up to that time.
Q. So, April of 1989 was the first time Florida Cities could apply for this permit?
A. Yes.
Q. What is the process by which the Army Corps of Engineers issues its permit, if you know?
A. I have -- my knowledge is somewhat sketchy. There is a public notice and then the purpose.
Q. Was there a public notice in this case?
A. Yes.
Q. Anyone comment?
A. Not to my knowledge.
Q. Did EPA comment?
A. I don't know.
Q. When was this permit finally issued by the Army Corps of Engineers, Mr. Acosta?
A. A little over twelve months later in April of 1990.
Q. Would you circle under the column, 1990, U. S. Army Corps of Engineers permitted in April?
(Witness complying.)
What did Florida Cities do next after receiving or were there any other permits necessary, Mr. Acosta, before this

Page 37

project could proceed?
A. At this point, no. Some other permitting needed to be obtained, but that was to come later when a contractor was onboard.
Q. So did construction start immediately upon receiving the Corps of Engineers' permit, Mr. Acosta?
A. No.
Q. Why not?
A. The bids had just been received for the upgrade to the wastewater treatment plant and they were being evaluated.
Q. How long did it take to evaluate the bids, Mr. Acosta?
A. Notice to proceed was issued in August of 1990 to the contractor.
Q. Why did it take from April of 1990 until August of 1990 to issue a notice to proceed?
A. In a project this complex and intricate as this one, Florida Cities routinely does value engineering to insure the best possible product is being put on line for the ratepayers of Florida Cities Water Company.
Q. But why didn't you start construction immediately?
A. To insure that the best possible product was put out there at the lowest possible cost for the ratepayers of Lee County.
Q. I direct your attention to a document dated May 10th, 1990, and it is Florida Cities' Exhibit 44. You have Florida

Page 38

Cities' Exhibit 44 in front of you, Mr. Acosta?
A. Yes.
Q. What is this document?
A. It is a monthly update that was routinely done to EPA regarding the activities of the month just past.
Q. And who is Mr. Williamson?
A. Mr. Williamson was the division manager of the Lee County Division at the time?
Q. And who is the addressee, Mr. Marlar?
A. He is the chief of the facility's performance branch of the management division of the U. S. Environmental Protection Agency, Region IV.
Q. This letter, at least the copy we have, is a little hard to read. Can you summarize what the two paragraphs say, Mr. Acosta?
A. Basically summarizes that the Army Corps of Engineers' permit was received in April of 1990, and that the bids to the modification and improvements to the treatment plant were also received in April of 1990.
MR. BAISE: I would move Defendants' 44 into evidence, Your Honor.
THE COURT: Be received.
BY MR. BAISE:
Q. So, in May of 1990, you were advising EPA of the status of what was occurring. How long did it take to undertake the

Page 39

value engineering that you just mentioned a moment ago, Mr. Acosta?
A. From April to early August, when the notice of award and ultimately notice to proceed were issued.
Q. I direct your attention to Defendants' Exhibit Number 46. Do you have this document in front of you?
A. Yes.
Q. What is it?
A. It is a letter from Mr. James Elder to Mr. Kenneth Kwan of USEPA.
Q. And can you describe what the document tells EPA?
A. That there's been unforeseen delays in the zoning and permitting through Lee County, delays in obtaining the Army Corps of Engineers' permit, and that the construction -- the cost of the construction for the project is being negotiated with the contractor.
Q. Is there any indication as to when construction may begin in this letter?
A. I do not see one, no. Oh, I change that. He requests a new construction -- I can't read it.
Q. I asked you whether or not there was a construction date mentioned.
A. Yes.
Q. And what was that date?
A. August 1st, 1990.

Page 40

MR. BAISE: Your Honor, I would move Defendants' Exhibit Number 46 into evidence.
THE COURT: Be received.
BY MR. BAISE:
Q. Mr. Acosta, I direct your attention to Defendants' Exhibit Number 47. Do you have that in front of you?
A. Yes.
Q. Please describe this document for the record?
A. This is the notice to proceed to Cardinal Contractors.
Q. Who was Cardinal Contractors?
A. They were the general contractor for the upgrade of the wastewater treatment plant.
Q. Is the hiring of Cardinal Contractors the result of a review that was undertaken from April until August?
A. Yes.
Q. Who is Mr. Elder?
A. Mr. Elder was the manager of engineering and construction for Florida Cities Water Company at the time.
Q. And who is Mr. Bill McDevitt?
A. Mr. McDevitt is the director of Cardinal Contractors.
Q. And who was cc'd on this letter?
A. Stone and Webster and me.
Q. You're the M. Acosta that is mentioned cc on this letter?
A. Correct.
MR. BAISE: Your Honor, I would move Defendants' 47

Page 41

into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Mr. Acosta, I direct your attention to Defendants' Exhibit Number 50. Do you have that document in front of you?
A. Yes.
Q. What is it?
A. It is another one of the, in this case, bi-monthly update to EPA.
Q. Why was Florida Cities keeping EPA apprised of its progress, Mr. Acosta?
A. In order that they would know exactly what was going on throughout the project.
Q. And who is Mr. Marlar?
A. He's the chief of the facilities' performance branch, water management Division, USEPA, Region IV.
Q. Larry Griggs?
A. Assistant regional manager and division manager of Lee County at the time.
MR. BAISE: Your Honor, I move Defendants' Exhibit Number 50 into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Mr. Acosta, would you read those two paragraphs in the letter?

Page 42

THE COURT: When you say "Lee County," you meant the Lee County Division of Florida Cities?
THE WITNESS: Correct.
BY MR. BAISE:
Q. Would you read those two paragraphs that were sent to Mr. Marlar at EPA on October 22, 1990?
A. Yes.
As you are aware, during August, September 1990, negotiations continued with the apparent low bidder on the Waterway Estates Wastewater Treatment Plant's modification project. These negotiations resulted in an issuance of a notice of award to Cardinal Contractors, Inc. The contractor applied for the Lee County building permit, but without success. This building permit is the only holdup at present, however, the contractor has begun to mobilize to the site in preparation for construction.
Numerous shop drawings have been received and approved so the contractor can begin ordering materials.
Q. Could you read the last sentence again? I believe you did not quote it accurately Mr. Acosta.
A. Numerous shops submittals have been received and approved so that the contractor can begin ordering materials.
Q. Thank you.
MR. BAISE: Excuse me, one moment, Your Honor.
(Brief Pause.)

Page 43

BY MR. BAISE:
Q. So when did construction actually start on this project, Mr. Acosta?
A. The contractor did some limited stuff in the October, November area, but actual construction didn't start until after the building permit was issued by Lee County in December of 1990.
Q. So why did this project need a building permit from Lee County since prior permits had already been granted on this project?
A. Once the contractor is aboard, he must apply for a building permit for all the structures on the site. That cannot be obtained by anybody but a licensed general contractor.
Q. Why didn't the contractor start building on August 1 as soon as he was given the notice to proceed?
A. He had to obtain the building permit among other things.
Q. As far as you know, is that a requirement?
A. Yes.
Q. So construction began in what month, what year?
A. In earnest, construction began in January of 1991, after the building permit was secured in late December.
Q. And how long did it take to construct the outfall line?
A. Approximately --
Q. How long did it take to construct the outfall line once

Page 44

the permit was granted by Lee County?
A. The outfall line took six months to build.
Q. How long did it take to build the AWT facility?
A. It was completed in April of 1992, so approximately sixteen months.
Q. How long did it take the Army Corps of Engineers to grant this facility the permit, Mr. Acosta?
A. Twelve months.
Q. And how long did it take the State of Florida to grant permits to this facility, Mr. Acosta?
A. Ten months.
Q. And how long did it take Lee County to grant permits to this facility, Mr. Acosta?
A. The exemption and zoning variance were from June of 1988 through April of 1989, so ten months there, and then a three month window to issue the building permit.
Q. Thank you.
Mr. Acosta, I direct your attention to Florida Cities' Exhibit Number 51.
A. I have it.
Q. Please describe this document for the record, Mr. Acosta.
A. The document extends the compliance date to September 1st, 1992, by FDER.
Q. And what are the attachments to the letter of October 30, 1990, Mr. Acosta?

Page 45

A. They appear to be the construction permit for the Waterway Estates.
Q. Issued when?
A. March 1st, 1990.
MR. BAISE: Your Honor, this document is already in evidence.
BY MR. BAISE:
Q. Would you read the three paragraphs on page 1 of this letter of October 30, 1990, Mr. Acosta?
A. Yes.
This acknowledges receipt of your correspondence dated October 25, 1990, requesting an extension for the above referenced project. Please be advised that the subject permit is extended until September 1st, 1992. This letter must be attached to the permit number DC36-165119 and becomes part of that permit. All conditions of the permit shall remain the same.
Q. Why did this permit need to be extended until September 1, 1992, Mr. Acosta?
A. Because of the delays in obtaining the permitting through the Corps and through Lee County.
Q. Wasn't there anything you or the contractor could do to speed up the permitting at the Corps of Engineers?
A. No.
Q. Is there anything you could do to speed up the permitting

Page 46

from the Florida Department of Environmental Regulation?
A. No.
Q. Why not?
A. It is largely out of the applicant's hands once those applications are submitted. You can make phone calls to the people who are reviewing the permit and that is about it.
Q. Did you in your position make any phone calls or you know of anyone who did?
A. I did not in my position.
Q. Do you know of anyone who did?
A. I believe that Mr. French and Mr. Elder made numerous phone calls.
Q. Mr. Acosta, I direct your attention to Defendants' Exhibit Number 53. Do you have that document in front of you?
A. Yes, I do.
Q. Please describe this document and its date for the record?
A. It is dated November 28th, 1990, it is another summary to Mr. Marlar, of USEPA, Region IV, from Mr. Griggs, and it states a notice of award and a notice of commencement have been given to the Cardinal Construction and that a building permit is in the process of being obtained.
Q. Who is Mr. Griggs?
A. Mr. Griggs was the assistant regional manager and division manager of Florida Cities Water Company, the Lee

Page 47

County Division.
Q. And Mr. Marlar is with EPA?
A. Yes, sir.
MR. BAISE: Your Honor, I'd move Defendants' Exhibit 53 into evidence.
THE COURT: Be received.
BY MR. BAISE:
Q. Would you read the last paragraph of the letter dated November 28th, 1990, Mr. Acosta?
A. The building permit is being processed by the Lee County Building Department. Approval by the County has been issued with the exception of the control building which is presently being approved. Also note that the shop drawings are being processed so the contractor can order materials accordingly.
Q. So why couldn't Florida Cities start building the pipeline and the other buildings with the exception of the control building, Mr. Acosta, in November of 1990?
A. The building permit still was not in hand. The other portions of the project had been approved by the building department, but a permit had not been issued.
Q. Mr. Acosta, I direct your attention to Florida Cities Exhibit 54. Do you have that document in front of you?
A. Yes, sir, I do.
Q. Describe this document and its date?
A. It's dated December 11, 1990, the letter is to Mr. Marlar

Page 48

of USEPA from Mr. Jack Tompkins, and it requests an extension to September 1st, 1992, to coincide with the extension granted by FDER.
MR. BAISE: Your Honor, I would move 54 into evidence.
THE COURT: It'll be received.
BY MR. BAISE:
Q. Would you read both of those paragraphs into the record, Mr. Acosta?
A. Yes.
Florida Cities Water Company is currently operating under the reference NPDES Permit and administrative order. Due to delays with the construction of our advanced wastewater treatment facility, Florida Cities Water Company has entered into negotiations with the Florida Department of Environmental Regulation in order to arrive at a mutually agreed upon date for completion of this construction.
As a result of these negotiations, Florida Cities Water Company and the FDER have recently concluded an executed and agreed order which provides for certain completion dates for the subject facility. Enclosed is a copy of this agreement.
Q. Please slow down just a little bit.
A. Okay.
Florida Cities Water Company respectfully requests that EPA Administrative Order Number 89- 109 be modified to reflect

Page 49

these agreed dates. Specifically, we request that paragraph one of the order be changed to indicate that substantial completion will be achieved September 1st, 1992, and that the facility will comply with the NPDES Permit requirements at the permitted location on November 1st, 1992.
Q. When was the facility known as the AWT facility actually completed, Mr. Acosta?
A. April, 1992.
Q. To your knowledge, did EPA ever respond to this letter?
A. Not to my knowledge, no.
Q. To your knowledge, was the Florida Cities' Water Company ever granted an extension to November 1, 1992, to complete the project?
A. By EPA?
Q. Yes.
A. Not to my knowledge, no.
Q. Mr. Acosta, I draw your attention to Defendants' Exhibit Number 55. Do you have that in front of you?
A. Yes, I do.
Q. Please describe this document and its date?
A. It is dated December 18th, 1990, written to Mr. Marlar of USEPA by Mr. Griggs,.
MR. BAISE: Your Honor, I would move this document into evidence. It's another progress report.
THE COURT: It will be received.

Page 50

BY MR. BAISE:
Q. Would you read the last paragraph of this letter dated December 18th, 1990, Mr. Acosta?
A. The Lee County building permit has been issued by the Lee County Building Department. Shop drawings are being processed. The contractor can order materials and equipment accordingly.
Q. Again why was Florida Cities keeping Mr. Marlar and these other EPA officials apprised of what was occurring in this facility?
A. We were just keeping them informed of all that was going on in regards to the upgrade of the facility.
Q. Was there anything you could have done at Florida Cities or you personally could have done to speed up this Lee County building permit process?
A. No.
Q. Why not?
A. Again, once you file the application or once a contractor files the application, it is in the hands of the building department and you can only respond to any questions they might have.
MR. BAISE: I have no further questions, Your Honor.
THE COURT: Okay.
Mr. Hird.
MR. HIRD: Thank you, Your Honor.
CROSS EXAMINATION

Page 51

BY MR. HIRD:
Q. Good morning, Mr. Acosta.
A. Good morning.
Q. You described this morning and yesterday evening the process of designing and building the upgrade of the Waterway Estates Plant to AWT and the outfall, is that correct?
A. That's correct.
Q. And you were intimately involved with the process at each stage?
A. By and large, yes.
Q. Did you ever discuss any of the steps of the process with Leon Levy?
A. No.
Q. Did you ever discuss them with Peter Sharp?
A. No.
Q. Did you ever discuss any steps in the process with John Sladkus?
A. No.
Q. Did you ever discuss any steps in the process with Lawrence Wilkov?
A. No.
Q. Did you ever communicate in any way with those individuals about the process?
A. No.
Q. In the course of this process, where your activities

Page 52

micro-managed by Peter Sharp?
A. No.
Q. Have you ever met Mr. Sharp?
A. No.
MR. HIRD: Thank you very much.
THE COURT: All right.
Mr. Quinn.
Just a moment.
(Brief Pause.)
All right, Mr. Quinn.
MR. QUINN: Thank you sir.
CROSS EXAMINATION
BY MR. QUINN:
Morning, Mr. Acosta. My name is Tony Quinn.
MR. QUINN: Your Honor at this time, I'd like Mr. Moore to remove the chart, please.
THE COURT: Okay.
BY MR. QUINN:
Q. Mr. Acosta, just so I'm clear, to whom did you report at Florida Cities in the 1990 timeframe?
A. 1990 itself?
Q. Yes.
A. In 1990, I was the assistant regional engineer and had reporting responsibilities to the regional manager, assistant regional manager and to the corporate office in Sarasota which

Page 53

is primarily entailed the manager of engineering construction.
Q. And when you say corporate office, you mean Florida Cities Water Company's Corporate office?
A. Yes, in Sarasota.
Q. Thank you.
Sir, in your experience, zoning variances are routinely applied for and granted, aren't they?
A. No.
Q. Zoning variances are not routinely applied for?
A. Zoning variances are routinely applied for, not routinely granted.
Q. Sir, in your experience, how many zoning variance requests have you seen?
A. In my experience at Florida Cities, three.
Q. Sir, zoning variance requests can be applied for at any time, isn't that correct?
A. No.
Q. Zoning variance requests can be filed prior to the actual construction beginning, isn't that correct?
A. Yes.
Q. In fact, it must be, isn't that correct?
A. If a zoning variance is required, it must be.
Q. Let me ask you, if a zoning variance is required, a zoning variance request can be applied for well in advance of the actual construction date, isn't that correct?

Page 54

A. Yes.
Q. Sir, and in your experience, building permits are routinely applied for, too, isn't that correct?
A. Yes.
Q. And building permits are routinely granted?
A. By and large.
Q. And construction permits are routinely applied for, too, isn't that correct, sir?
A. From which agency?
Q. From Lee County?
A. Lee County did not issue the construction permit.
Q. Who issued the construction permit with regard to Waterway Estates?
A. FDER.
Q. And so let me ask my question again. Construction permits are routinely applied for to FDER, isn't that correct?
A. Correct.
Q. Sir, and Florida dredge and fill permits are routinely applied for, isn't that correct?
A. Yes.
Q. And they're also routinely received, aren't they?
A. Yes.
Q. And the Army Corps of Engineers dredge and fill permits are routinely applied for, aren't they, sir?
A. Yes.

Page 55

Q. Sir, aren't delays in permitting common?
A. That's been my experience.
Q. Sir, couldn't the construction permits, the Florida dredge and fill permits, the Army Corps of Engineers permits have been avoided simply if Florida Cities Water Company had tied the Waterway Estates Plant into the North Fort Myers Utility?
A. No, I don't believe that all of those could have been eliminated.
Q. Sir, how about this. Could the Florida dredge and fill permit have been eliminated if Waterway Estates had tied into the North Fort Myers Utility?
A. Not knowing the route of the force main, I cannot answer that question.
Q. If the route had not gone through water or any estuary, would there have been a need for the Florida dredge and fill permit?
MR. BAISE: Objection, Your Honor. This is outside the scope of direct examination. I didn't ask him or get into anything with respect to North Fort Myers and its impact that I was able to get into with Mr. Lehman, so the questions that counsel is propounding would have been more important for Mr. Lehman than Mr. Acosta.
MR. QUINN: Your Honor, I'm talking about permitting and the question elicited dealt with permitting. I'm saying

Page 56

they could have avoided the permitting.
THE COURT: Well, I'm not sure that he's really been, you know, that really hasn't been raised in direct examination and I think if you intend or want to get into that, you'll have to do it with another witness or with this witness if you want to call him. I'll sustained the objection.
BY MR. QUINN:
Q. Mr. Acosta, source incorporated was selected by Florida Cities Water Company to provide professional engineering services for the Waterway Estates Plant's upgrade to AWT and for the relocation of the outfall to the six foot contour, is that correct?
A. Yes.
Q. And the number of days originally allotted to provide the engineering plans and specifications was wrong, wasn't it?
A. I don't recall it was wrong.
Q. Well, it didn't take two hundred days, did it?
A. No.
Q. To submit -- withdrawn -- to provide the engineering plans and specifications?
A. Submit them to whom?
Q. To Florida Cities and have them completed?
A. I don't believe that it did take two hundred days.
Q. No, it took four hundred and forty-five days for Source Engineering, did it not, to actually get usable plans and

Page 57

specifications produced, isn't that correct?
A. What do you mean by "usable"?
Q. Plans that were acceptable to the regulatory agencies, isn't that correct?
A. No.
Q. How long did it take Source Engineering to get usable and acceptable plans completed?
A. The regulatory agencies were multi here. The zoning required drawings and those were submitted within a couple of months of Source coming on board.
Q. With regard to the construction permits to FDER, didn't it take almost four hundred and forty-five days for Source Engineering to provide acceptable engineering plans and specifications?
A. I think that it took that long to submit them to the DER. It had nothing to do with producing them at the time, it had to do with the delays in the zoning and the exemptions to the variance.
Q. But there were problems with Source Engineering, weren't there?
A. Some.
Q. What do you mean by "some"?
A. Some in that they were – they wanted to – did not want to attend certain meetings that we had asked them to attend. Nothing in regard to their design and design calculations.

Page 58

Q. Well, by the time Cardinal Contractors finally got on the site, they were impacted by the inadequate drawings that Source used and made, isn't that correct?
A. Not to my knowledge, no.
Q. Sir, Florida Cities hired Source, Incorporated to do the engineering work on this case, is that correct?
A. Yes.
Q. Sir, Source, Incorporated was responsible in conjunction with Florida Cities Water Company for submitting the appropriate drawings to the FDER, isn't that correct?
A. Yes.
Q. And in fact, didn't FDER make several requests for further information to Florida Cities Water Company with regard to its application?
A. I believe they did. That's pretty routine.
Q. Sir, if Florida Cities Water Company had submitted a complete application at the time it did, then there wouldn't have been any additional delays related to that application and request for information, isn't that correct?
A. No, it has been my experience in the permitting for wastewater treatment plants that you always get requests for additional information. I have not been through one that did not require an additional request for information.
Q. Sir, have you ever worked where you submitted a complete application, where you submitted a complete application because

Page 59

of all the information required was contemplated and put in there by a reputable firm?
A. We have used multiple firms. Every single firm that has applied for a wastewater treatment plant construction permit since I have been involved has had requests for additional information.
Q. The initial, as we were talking about a little bit, or the FDER application was incomplete the first time, wasn't it?
A. I don't know if it was incomplete, they requested additional information.
Q. What's the difference between not being incomplete and request for additional information?
A. Request for additional information can be fine-tuning of a particular number, difference in engineering judgment, all kinds of things like that. It doesn't mean that you left out a piece of paper that needed to be submitted.
Q. Well, let me ask you this. FDER didn't consider it complete at the time you initially submitted it, did they?
A. I believe as soon as they requested additional information, the time tolls on their time to review the permit.
MR. QUINN: Move to strike, Your Honor. That was not responsive.
THE COURT: Yeah. I don't think that was responsive.
Now you're asking him whether FDER considered it complete upon the filing of the application?

Page 60

MR. QUINN: The initial application.
THE COURT: Do you know whether they considered it complete?
THE WITNESS: No.
BY MR. QUINN:
Q. You also testified that it took several additional submissions and changes in design -- withdrawn.
Didn't it take additional submissions and changes in design before FDER considered the application complete?
A. I don't believe they were changes in design so much as they were refinements of the design.
Q. Well, isn't a refinement a change, Mr. Acosta?
A. No, not necessarily.
Q. How is a refinement not a change?
A. For instance, if you have a certain amount of variation capability, whether you put in six aerators or seven it's not any particular design change, not in my professional opinion.
Q. Six is different than seven, isn't it?
A. Yes.
THE COURT: Uh, the Court will take judicial notice six is different from seven. Let's move on. This doesn't help me a great deal.
BY MR. QUINN:
Q. I'm sorry, sir.

Page 61

Mr. Acosta, in retrospect, the selection of Source Engineering was a poor choice by Florida Cities Water Company, wasn't it?
A. No.
Q. So all the delays were anticipated, all -- withdrawn.
All the delays that were caused by Source were anticipated and accepted by Florida Cities Water Company, is that correct?
A. No, I don't think that Source caused delays.
Q. You don't think Source caused any delays, is that your testimony?
THE COURT: That is what he just said.
MR. QUINN: All right.
BY MR. QUINN:
Q. Sir, you know how long it took for the additional information to be submitted to FDER?
A. No, not off the top of my head.
Q. Sir, didn't Florida Cities have a dispute with Source over who was to submit the additional information?
A. I don't recall if it was a dispute over that particular item, no.
Q. Florida Cities had a dispute with Source, right?
A. In regards to the attendance of meetings, that's my knowledge.
Q. Isn't attendance at meetings indicative that an

Page 62

engineering firm was a poor choice if they don't go to meetings?
A. No, not necessarily.
Q. So does Florida Cities expect that engineers that it hires and pays aren't going to attend meetings that are required?
A. It's not uncommon that Florida Cities will attend a meeting at which the engineer is not present and engineers attend meetings in our place. That's not uncommon, no.
Q. Sir, isn't it true that the dispute between Source and Florida Cities Water Company involved at least in part whether Florida Cities Water Company was going to pay Source to provide the additional information that was required for the FDER permits?
A. I believe I've read something along those lines, yes.
Q. Sir, by the time Cardinal got on the job, there was concern that there were going to be delays in completion of the project, isn't that correct?
A. Yes.
Q. And Cardinal was the contractor, the general contractor for the upgrade?
A. Correct.
Q. And relocation of the outfall?
A. No.
Q. No? They were -- there was a marine contractor involved

Page 63

in the relocation of the outfall?
A. I don't know if I would term them a marine contractor. It was not Cardinal.
Q. It was not Cardinal, sir. In fact, despite the fact that a notice to proceed was issued on August 24, 1990, as of November 2nd, 1990, Cardinal Contractors was still unable to proceed, is that right?
A. With the construction, that's correct.
Q. Sir, I'd like to show you United States Exhibit 429.
Sir, have you seen this exhibit, document before, 429?
A. No, I have not.
Q. I believe 429 is in evidence. 429 is in evidence.
I'd like to draw your attention to the sentence beginning "notwithstanding." Can you please read that into the record about halfway through in the first paragraph, sir.
MR. BAISE: I object, Your Honor. As I look at 429, assuming I have the appropriate document, which is written by Dennis Getman to J. Landers, it has to deal with the North Fort Myers Homeowners Association lawsuit and what the company should be doing with regard to dealing with this lawsuit. I believe I did not raise anything, one, to Fort Myers, two, any lawsuit, certainly about time and money relating to the success of the petition.
MR. QUINN: I believe also, sir, the caption says it deals with Waterway Estates Wastewater Treatment Plant.

Page 64

THE COURT: Well, all right. Well, let's see where we're going with this. I'll overrule the objection at this point.
THE WITNESS: What was the question again?
BY MR. QUINN:
Q. The question was a request.
A. What was the request?
Q. Could you please read the sentence beginning "not withstanding"?
A. Notwithstanding, we do need to get prepared to fight this matter and hopefully all we'll be expending is time and money as the chances of success of the petition do not appear to be very great in my opinion.
Q. Sir, I'd like to turn your attention now to Exhibit 424. A few page back from where --
THE COURT: Just a moment. Before you go further, let me look at something here.
(Brief Pause.)
Okay.
BY MR. QUINN:
Q. Sir, you at 424, Mr. Acosta?
A. Yes.
Q. Okay.
Sir, is this Exhibit 424, which I believe is in evidence, a letter from Cardinal Contracting to Florida Cities Water

Page 65

Company, is that correct?
A. Yes.
Q. Okay.
Sir, isn't it true that the causes for the delay of starting construction and actual construction were well known to everybody involved in the construction?
MR. HIRD: I'm sorry, objection, vagueness. I'm not sure what causes we are talking about. I'm not sure who everybody is.
BY MR. QUINN:
Q. Withdraw the question. I apologize, sir.
Isn't it true that the Waterway Estates Plant's upgrade was delayed in getting started through facts well known to Florida Cities Water Company?
MR. HIRD: Same objection. We don't know what facts are being talked about.
THE COURT: Well, I'll overrule the objection. If you know.
THE WITNESS: Say that again, please.
BY MR. QUINN:
Q. I'll withdraw the question.
Would you please read the first paragraph?
A. The one that begins with "the reference"?
Q. Yes.
A. The reference project has been delayed in getting started

Page 66

through facts well known and arising from one, an incomplete set of construction drawings, two, changes in scope -- in the scope of the project which are still continuing, and three, in the administrative tasks left undone which were needed to facilitate the permitting process.
Q. Okay, sir.
With regard to item one that is referenced in this paragraph, who was responsible for providing a complete set of construction drawings?
A. I believe it was Source.
Q. And Source did not provide them to Florida Cities, a complete set of construction drawings to Florida Cities as of November 2nd, 1990, isn't that correct?
A. No, I disagree with the letter.
Q. Sir, Cardinal thought that an incomplete set of construction drawings had been provided, didn't they?
A. I presume that they thought that, based on this letter.
Q. Sir, there were changes in scope of the project which were continuing as of November 2nd, 1990, weren't there?
A. I don't know of any changes in scope. The project was to upgrade the advanced wastewater treatment plant as it -- from what it existed. That's what the scope originally was and what it was on November 2nd.
Q. Sir, didn't Cardinal also present an opportunity for Florida Cities Water Company to accelerate the construction

Page 67

schedule?
A. Is that in this letter somewhere?
Q. Yes. Well --
A. Point it out.
Q. I'll ask you to read paragraph two then at the bottom of page one.
A. Okay.
The one bracketed by number two?
Q. Yes.
THE COURT: You want him to read that to himself or outloud?
MR. QUINN: I'd like him to read it to himself and then I'll ask him the same question.
THE COURT: All right.
BY MR. QUINN:
Q. While you're reading it, my question was, didn't Cardinal offer to accelerate the schedule?
A. Yes, they did. It appears that they did offer to accelerate.
Q. It said two of the ways they offered to accelerate the schedule were, one, having the current staff work overtime, is that correct?
A. It just says work overtime.
Q. Work overtime. Okay, isn't -- well one of the opportunities was for people to work overtime, isn't that

Page 68

correct?
A. Correct.
Q. The other one was to get more people, additional manpower, is that correct?
A. Correct.
Q. Now, manpower and people involved money, isn't that correct?
A. Typically.
Q. Okay.
Florida Cities Water Company did not choose to accelerate the schedule, did they?
A. Not to my knowledge, no.
Q. Sir, also in this letter, I'm going to ask you a question -- withdrawn.
Cardinal was getting upset with the casual dismissal of its warnings, threats, pleadings and grovelling, isn't that correct?
MR. BAISE: Objection, Your Honor, with regard to the characterization of the question. There's been no suggestion of any grovelling brought forth in any direct testimony here.
THE COURT: Well, all right.
Well, I don't know, there may be some grovelling going on that hasn't been brought out on direct and he's entitled to bring it out if there is.
BY MR. QUINN:

Q. Sir, I'd like to turn your attention to the second page and -- I withdraw the question.

Underneath the inset that says, one and two, please read the paragraph that begins "it is imperative."

A. It is imperative that the terms of how Cardinal is going to proceed on this project be worked out now. The casual dismissal of our warnings, threats, pleadings and grovelling --

THE COURT: Oh, there it is.

THE WITNESS: -- is no longer acceptable. A clear understanding of the responsibilities, duties, liabilities must exist between all parties involved.

THE COURT: Let's take a fifteen minute recess.

(Thereupon, a brief recess was taken.)

Page 70

THE COURT: Mr. Quinn?
MR. QUINN: Thank you, Your Honor.
BY MR. QUINN:
Q. Sir, wasn't Cardinal Contracting distressed by the slowness of shop drawing review and turnaround?
(Pause.)
A. I don't know that I see that in this letter. I don't recall that from the time, no.
Q. Wasn't Cardinal concerned that the project was being injured due to inordinately long shop drawing turnaround?
A. I don't recall that being the specific issue back then, no.
Q. Sir, I'd like to show you United States Exhibit 431, which has been entered into evidence. Do you have that in front of you, sir?
A. Yes.
Q. Please read the first sentence.
A. It says: Confirming our telephone conversation of today, we are quite distressed at the slowness of the shop drawing review and turnaround.
Q. Please read the first sentence of the second paragraph.
A. The project and Cardinal Contractors are being injured by the slow shop drawing review process.
Q. So, Cardinal was concerned that the project was being

Page 71

injured, is that correct?
A. I would take that from the letter, yes.
THE COURT: He doesn't --
MR. QUINN: Withdraw the question.
BY MR. QUINN:
Q. Sir, Cardinal was concerned about the return of other shop drawings, too, weren't they?
A. What does "other" mean? This says "shop drawings." That's pretty general.
Q. Well, they were -- withdraw that question, then.
Cardinal was concerned about the specific delays with regard to the turnaround of individual shop drawings and designs, weren't they?
A. I would gather that from the letter, yes.
Q. Sir, I'd like to show you United States Exhibit 431.
A. That's where we're at.
THE COURT: That's the exhibit we're on.
MR. QUINN: I'm sorry. Wrong page.
I'm sorry. United States Exhibit 443.
I'm sorry. 442. Excuse me, sir.
BY MR. QUINN:
Q. Isn't it true, sir, that there are -- there was -- withdrawn.
Isn't it true that there was a delay of approximately 59 days related to the methanol tank drawings?

Page 72

A. That wasn't a delay. That had been the elapsed time since it was submitted.
Q. Submitted to whom?
A. I presume it was Stone and Webster.
Q. But there was a 59-day elapsed time for review of methanol tank drawings, isn't that correct?
A. That's what this letter says.
Q. And then each one of those dates -- there are 41 days for instrumentation. There was an elapsed time for review of those, isn't that correct?
A. That's what the letter says.
Q. And there was a 39-day elapsed time for Formica drawings, F-O-R-M-I-C-A, right?
A. That's what the letter says.
THE COURT: Well, do you know? Do you know?
THE WITNESS: Beyond what this letter says, no, I do not.
THE COURT: All right.
BY MR. QUINN:
Q. And, sir, as to a different aspect of one of Cardinal's concerns, wasn't Cardinal also concerned that delays in the administration of the contract change orders was also injuring project completion?
A. I don't know that they were so much concerned about change orders injuring project completion as project payment

Page 73

schedules to them.
Q. Sir, you testified earlier during the cross examination and then earlier during direct examination that the permits which were required for the Waterway Estates project were related to each other. Is that a fair summary of what you said?
A. They are not so much related to each other as you can't proceed with one without the other.
Q. Okay. I appreciate the clarification. Thank you.
Now, which was the first permit or authorization that was required to proceed with the Waterway Estates upgrade?
A. I believe the zoning was the first thing that was needed.
Q. And the zoning application could have been done earlier, couldn't it?
A. No.
Q. Why not?
A. From the time that Source was engaged to the time that the zoning variance was submitted was a matter of a couple of months, two or three months.
Q. So, is it your testimony that you couldn't have done it earlier with -- withdrawn.
Is it your testimony that you could not have applied for the zoning variance earlier because you didn't have the drawings; you didn't know what you were going to do?

Page 74

A. Right. The drawings had not been prepared. The site plans had not been prepared prior to engaging Source.
Q. Is that the only reason?
A. Well, the application had obviously not been done, but that was the primary reason, is the site layout was not in place.
Q. So, if you hired Source earlier to do -- if you had hired Source earlier -- withdrawn.
Could you have hired Source earlier?
A. Not based on what I have read that the -- we request proposals in December, no.
Q. If you had requested proposals earlier than December, you could have hired Source earlier, couldn't you?
A. Yeah. Theoretically, of course.
Q. I'm sorry?
A. Yes. Of course.
Q. But you didn't seek bid proposals on that earlier, did you?
MR. BAISE: Objection, Your Honor. I believe this is outside my scope of direct. I believe he testified that he was brought into this project around December of 1987 to start showing the contractors around the facility so that they could see it, so he was not involved for, I believe the testimony was, December of 1987.
THE COURT: I'll sustain the objection.

Page 75

BY MR. QUINN:
Q. One final question: If Source had been engaged earlier and had submitted the drawings earlier, then the zoning variance could have been sought earlier, isn't that correct?
MR. BAISE: I believe that's running the same question around the same barnyard, Your Honor.
THE COURT: I'll sustain the objection. I think the answer to that is pretty obvious anyhow.
MR. QUINN: With that, then, I'll sit down.
Thank you, sir.
THE COURT: All right. Redirect?
REDIRECT EXAMINATION
BY MR. BAISE:
Q. Mr. Acosta, Mr. Quinn asked you about zoning variances being routine and routinely granted. Could you explain how routine it is to file a zoning variance for an advanced waste treatment facility in Lee County in the State of Florida?
A. It is my experience that there are, I believe, three advanced wastewater treatment plants in Lee County, period. Two of them belong to Florida Cities; the other one, the City of Cape Coral.
To my knowledge, they are not routinely granted. Obviously, advanced wastewater treatment plants --

Page 76

THE COURT: Say that again. I missed that.
MR. BAISE: Yes, the noise, and I couldn't hear it either for the jackhammer, Your Honor, so please speak up, Mr. Acosta.
THE WITNESS: Advanced wastewater treatment plants are obviously not a routine thing to be submitted to zoning, building, development order review. None of that stuff is routine for wastewater treatment plants.
These folks are generally seeing site plans for subdivisions, commercial establishments, those kind of things; not wastewater treatment plants.
BY MR. BAISE:
Q. So, the granting of zoning variances for housing projects would be routine?
MR. QUINN: Objection; leading.
THE COURT: It is leading. Sustained.
BY MR. BAISE:
Q. What would be a routine zoning variance, in your opinion? Strike that.
Moving on to the amount of time Source took to develop its plans -- final plans and specifications, Mr. Acosta, Mr. Quinn elicited that it took approximately 445 days. What delayed Source in getting its final plans and specs completed?
A. The zoning had to be in place. The development order

Page 77

had to be in place before the drawings could be finalized for submission to DER.
THE COURT: Have I not heard this so far? Haven't I heard this before, or not?
MR. BAISE: I --
THE COURT: Okay. Well --
MR. BAISE: I don't know. I was responding to the question.
THE COURT: Let's not duplicate.
In other words, you could respond to everything he said, but I just don't want you to have him repeat what he's already testified to.
MR. BAISE: Sure.
BY MR. BAISE:
Q. Did this facility ultimately work that Source designed, Mr. Acosta?
A. Yes.
Q. How well did it work?
A. Extremely well.
Q. Is this plan and specification for the Waterway Estates facility an easy project, complicated project or what?
MR. QUINN: Objection. This goes beyond the scope of direct and cross. Easy or not, it was what it was, and this wasn't elicited on direct, and I didn't ask him whether

Page 78

it was easy on cross.
THE COURT: Well, I'll overrule the objection.
BY MR. BAISE:
Q. Describe the construction of this AWT facility versus a secondary treatment facility, Mr. Acosta.
A. This particular --
MR. QUINN: I'll object to that, too, sir. I didn't cover that on cross either.
THE COURT: What was the question?
MR. QUINN: I think it was the difference between secondary and advanced wastewater treatment.
MR. BAISE: It was just talking about how much time it took to complete this project.
THE COURT: I think this goes beyond the scope of cross. I'll sustain the objection.
BY MR. BAISE:
Q. Mr. Acosta, it was raised on your cross about Source refusing to attend meetings. Can you please describe that situation?
A. In most engineering contracts, a certain number of meetings are planned in the design to attend with regulatory agencies. Once those were attended, Source wanted to not attend further meetings without being compensated for them.
Q. With respect to the plans being submitted to the Florida Department of Environmental Protection and the

Page 79

Florida Department of Environmental Protection asking for additional information, does the Department have a deadline upon which they have to respond to an application?
A. Yes.
Q. And what is the State of Florida's -- what is your experience with the State of Florida with regard to asking for additional information due to these deadlines?
A. It is routine. They have 90 days to issue a permit or deny a permit, and they must ask within 30 days for additional information.
Q. With respect to the questions raised by Mr. Quinn regarding Cardinal Contracting, could you please describe your experience with contractors when they have a fixed price contract?
MR. QUINN: Objection, Your Honor. This could have been covered on direct. I don't think I covered it on cross.
MR. BAISE: It is raised in your Exhibit 442 with regard to "Cardinal reserves its rights to recover time and money due to inordinately long shop drawing" --
THE COURT: I'll overrule the objection.
BY MR. BAISE:
Q. Could you please describe the relationship between the person wanting the facility constructed and the contractor during this period of time, Mr. Acosta?

Page 80

A. It is routine banter between contractors and owners. Contractors typically will send all kinds of letters establishing that everything is delaying them other than themselves and will build a file, if you will, to try to collect additional dollars later on in the contract.
MR. BAISE: No further questions, Your Honor.
THE COURT: Thank you, sir. You may step down. Call your next witness.
MR. BULLOCK: Good morning, Your Honor. Florida Cities calls Larry Good.
THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: Larry L. Good, G-O-O-D.
THE COURT: All right. We have some work obviously being done somewhere outside the Courthouse area, specifically a jackhammer, and it is somewhat distracting.
I'm going to have that checked out to see who is

Page 81

doing it and what their schedule is. I, frankly, am not inclined to put up with that for the whole day.
And in the meantime, while we're checking that out, keep your voices up, and I would ask, Mr. Good, if you could speak loudly and close to the microphone there.
THE WITNESS: Yes, sir.
THE COURT: All right.
- - -
Thereupon,
LARRY L. GOOD,
a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:
DIRECT EXAMINATION
BY MR. BULLOCK:
Q. Mr. Good, what is your current position?
A. Regional manager.
Q. And who are you employed by?
A. Florida Cities Water Company, Poinciana Utilities, Inc.
Q. Mr. Good, what professional licenses do you hold?
A. Hold a Class A water treatment plant operator, State of Florida, and a Class A wastewater treatment plant operator, State of Florida.
Q. All right. Were you employed by Florida Cities in

Page 82

1983?
A. Yes, I was.
Q. What was your position with Florida Cities in 1983?
A. Regional manager.
Q. All right. Mr. Good, to your knowledge, had Florida Cities' Carrollwood plant been able to connect with Hillsborough County's facilities by 1983?
A. No, they were not.
Q. All right. Was the company under any order regarding connection to Hillsborough County?
A. Yes, they were.
Q. Okay. What order do you refer to?
A. The Department of Environmental Protection, or DER at that time, Department of Environmental Regulation.
Q. And what did the FDER order state?
A. Basically that we were to tie in to Hillsborough County utility system.
Q. In 1983, had the company -- excuse me.
In 1983, did the company examine any other alternatives to connection with Hillsborough County?
A. Yes.
Q. What other options did the company consider?
A. We proposed to build an advanced wastewater treatment plant with a discharge into Sweetwater Creek.
Also, we looked at possible percolation ponds on-site

Page 83

or off-site along with reuse to golf courses.
Q. Did the company in 1983 have other advanced wastewater treatment plants?
A. Yes, we did.
Q. All right. Had you had any involvement in any of these other advanced wastewater treatment plants?
A. Yes, I did.
Q. What involvement had you had?
A. Before that, I was the chief operator of two advanced waste treatment facilities in Sarasota County and then became the division manager over those operations in late -- early -- late '79.
Q. Did FDER accept the company's proposal regarding AWT?
A. No, they did not.
Q. Did they inform the company as to why they rejected this proposal?
A. They could give us no technical reasons, as I remember.
Q. You indicated that the company looked at off-site storage?
A. Percolation ponds.
Q. All right. Was the company able to determine whether percolation ponds was a valid option?
A. They were an option at that time, yes.
Q. Okay. Did the company find any land to construct a

Page 84

percolation pond?
A. I believe there were three off-sites out of the Carrollwood franchised area that we looked at.
Q. How far away from the Carrollwood plant were these sites?
A. The closest, I believe, was approximately about two and a half miles.
Q. Was the company able to -- did the company purchase any of these sites?
A. No.
Q. Why not?
A. The cost was inhibitive.
Q. All right. Did the company examine any other options for reuse?
A. Yes.
Q. And what options were those?
A. We contacted several golf courses in the area to have them take our effluent for reuse for spraying on the golf course.
Q. Were the golf courses able to accept the effluent?
A. No.
Q. And why not?
A. They had already had contracts with Hillsborough County.
Q. Let me back up just a second. Did you examine any

Page 85

other options in 1983?
A. We also looked at the on-site percolation ponds.
Q. Okay. And were you able to construct an on-site percolation pond?
A. No. The site wasn't large enough to handle the flow.
Q. All right. Any other options which the company reviewed?
A. The City of Tampa.
Q. Okay. Were you involved in discussions with the City of Tampa?
A. Yes.
Q. All right. With whom did you have discussions from Tampa?
A. After several contacts with different people at the City of Tampa, Mr. Schafer was finally the initial contact to discuss this.
Q. Did the City represent whether or not it had capacity?
A. At the time, yes, they said they had capacity.
Q. All right. Did the City indicate whether or not there were available connection points?
A. They gave us three options of connection.
Q. Did they give any one of those three as the preferable option?
A. Yes.
Q. Which one of those three?

Page 86

A. I believe that was Armenia, about three miles away, or something like that.
Q. All right. Did the City provide costs for connection?
A. They gave us a tentative number of $800.
Q. And what would that $800 figure apply to?
A. Per residential connection.
Q. All right. Were there other costs associated with connecting with the City?
A. Yes.
Q. What were those costs?
A. To build a forced main and a lift station to pump the effluent from the treatment facility to the treatment -- collection system of the City of Tampa.
Q. Did the City offer to pay for any of the costs to connect to their facility?
A. No.
Q. Did the City ever provide a firm figure to Florida Cities about the cost to connect?
A. No.
Q. Did the company seek a firm figure from the City?
A. Yes.
Q. Was it possible for the company to make a decision on the viability of this option without a firm figure?
A. No.
Q. Thank you, Mr. Good.

Page 87

MS. TSOTSOS: We only have a few questions, Your Honor?
THE COURT: All right.
How do you pronounce your name?
MS. TSOTSOS: Tsotsos.
THE COURT: Tsotsos?
MS. TSOTSOS: Uh-huh.
THE COURT: T-S-O-T-S-O-S?
MS. TSOTSOS: Yes. That's it.
THE COURT: Just like it's spelled, huh? Okay.
MS. TSOTSOS: Very difficult to pronounce.

CROSS EXAMINATION

BY MS. TSOTSOS:

Q. Good morning, Mr. Good.
A. Good morning.
Q. You testified this morning regarding your involvement with various issues related to the Carrollwood wastewater treatment plant, is that correct?
A. Yes.
Q. Did you ever discuss any of these issues relating to the Carrollwood wastewater treatment plant with Leon Levy?
A. No.
Q. Did you ever discuss any of these issues relating to the Carrollwood wastewater treatment plant with Peter Sharp?
A. No.

Page 88

Q. Did you ever discuss any of these issues relating to Carrollwood with Lawrence Wilkov?
A. No.
Q. To your knowledge, did Peter Sharp micro manage the operations of the Carrollwood wastewater treatment plant?
A. Not to my knowledge.
MS. TSOTSOS: No further questions.
THE COURT: All right.

CROSS EXAMINATION

BY MR. HOMIAK:

Q. Good morning, Mr. Good. My name is Bob Homiak. I'm representing the United States in this matter.
Mr. Good, in order to discharge a treated pollutant to surface waters, a facility needs to have both a state and federal permit, isn't that correct?
A. Yes.
Q. And if a particular body of water had a zero waste load allocation, then you couldn't discharge into that body of water, isn't that correct?
A. Yes.
Q. Now, at least as early as August of 1983, Florida Cities was informed by the State of Florida that it had to cease discharging to Sweetwater Creek by January 1st, 1985, isn't that correct?
A. Yes.

Page 89

Q. And as you testified earlier, Florida Cities examined a number of options for ceasing discharge to Sweetwater Creek, is that correct?
A. Yes.
Q. Now, in fact, one of the options, as you testified earlier, concerned connection to the City of Tampa, and isn't it true that on August 23rd, 1983, you wrote a letter to Mr. Elton Smith, director of the City of Tampa's wastewater office, inquiring about the possibility of connecting to the Tampa system?
A. xx To my knowledge, yes, that was about the time frame.
Q. Okay. And as you've testified earlier, you had conversations with a Mr. Schafer of the City of Tampa, and let me ask you: Did those include a meeting on or about December 7th, 1983, to discuss tying into the City's system?
A. The exact date I'm not sure of, but we did meet with them, yes.
Q. And, in fact, you actually discussed some dollar figures with Mr. Schafer, is that correct?
A. There was dollars mentioned, yes.
Q. Now, at the time Carrollwood had a customer base of about a thousand, isn't that -- at the time that you were discussing with Mr. Schafer about the possibility of connecting to the City of Tampa system, Carrollwood had a

Page 90

customer base of about 1,000, isn't that correct?
A. The residential and commercial customers would be about 1,150 altogether.
Q. Well, approximately how many hook-ups would you have been talking about?
A. About 1,150.
Q. So that the figure of $800 per home that Mr. Schafer mentioned during that discussion would have meant that Florida Cities would have incurred costs of roughly $880,000 to connect to the City's system, is that correct?
A. That's one of the costs, yes.
Q. All right. Now, that figure that Mr. Schafer quoted to you was a reasonable figure in your mind, wasn't it?
A. To us it was reasonable but -- yes.
Q. And as you've testified, Mr. Schafer wrote you on December 29th, 1983, setting forth three different options for hooking up to the Tampa system, is that correct?
A. Yes.
Q. Okay. And as you've testified, one of those options was available immediately, correct?
A. Yes.
Q. So, in January of 1984, Florida Cities could have hooked up to the Tampa wastewater system and ceased discharging to Sweetwater Creek, isn't that correct?
A. No.

Page 91

Q. It was not technically possible to connect to the Tampa wastewater treatment system at the end of -- in January 1984?
A. The City never made a final offer of any site, no.
Q. Mr. Good, isn't it true that Mr. Schafer asked Florida Cities to provide some information to him if Florida Cities was interested in hooking up to the Tampa system?
A. There was information they wanted in that letter that they would like to have.
Q. And you referred that letter to Mr. Reeves, isn't that correct?
A. Yes, I did.
Q. And who was Mr. Reeves at that time, please?
A. He was the vice-president of Florida Cities Water Company.
Q. And did you have the knowledge to respond to the questions that Mr. Schafer was asking of you in his letter of December 29th?
A. Yes. I knew where to get the information.
Q. You knew where to get the information.
Did you, in fact, ever obtain this information and provide it to Mr. Schafer?
A. No, I did not.
Q. Do you know whether anyone at Florida Cities Water Company ever obtained this information and provided it to

Page 92

Mr. Schafer?
A. No, I do not.
Q. But Florida Cities chose not to comply by hooking into the Tampa treatment system because it perceived the cost as being too high, isn't that correct?
A. We could never get an exact cost.
MR. BULLOCK: Chose not to comply as to what? I'm sorry, the question is unclear.
THE COURT: Restate your question.
MR. HOMIAK: I'll restate it. I'm sorry, Your Honor.
BY MR. HOMIAK:
Q. Isn't it true that Florida Cities chose not to tie in to the Tampa system because it perceived the cost as being too high?
A. We never were able to get the cost, exact cost.
Q. Well, Mr. Good, do you recall in your deposition of October 10th, 1994, Page 72 -- do you recall Mr. Jacobs asking you the following question?
Do you have any recollection of why the Carrollwood waste wasn't then transferred to the City of Tampa instead of continuing to be discharged into Sweetwater Creek?
Answer: I would say -- excuse me. Probably, I would say, due to costs.
Do you remember giving that answer, Mr. Good?

Page 93

A. Yes.
Q. Okay. And do you remember the follow-up question from Mr. Jacobs?
The cost being too high?
Answer: Yes.
Do you remember that?
A. Yes.
Q. Now, in order to hook up to the City's system, Florida Cities would have had to construct a forced main to the connection point that was being proposed by Mr. Schafer, correct?
A. Yes.
Q. And is it correct that you estimated the cost to construct that forced main to be approximately $600,000?
A. That's a possible figure. I'm not sure. I would have to think about that a minute.
Q. Mr. Good, do you recall that question being put to you at your deposition on Page 76? Actually, the question begins at the bottom of Page 75.
By Mr. Jacobs: So, help me. We're talking about a total maximum for running that forced main of roughly 600,000, is that correct?
Answer: Uh-huh.
Question: Is that a yes?
Answer: Yes.

Page 94

Do you recall that testimony, sir?
A. Yeah. That would be for the forced main, yes.
Q. Okay. And you further estimated it would have cost about one and a half million dollars for Carrollwood's waste to have been transferred to Tampa in late 1983 and to get out of Sweetwater Creek at that time, isn't that correct?
A. That's a possible figure, yes.
Q. I believe you testified earlier that in August of 1983, the Florida DER had ordered Florida Cities to cease discharging to Sweetwater Creek by no later than January 1st, 1985, is that correct?
A. Yes.
Q. Now, despite the State's order to cease discharge by January 1st of '85 and the City of Tampa's immediate availability to accept the sewage, Florida Cities chose not to tie in to the Tampa system, isn't that correct?
A. Yes.
Q. But instead entered into a series of negotiations with Hillsborough County?
THE COURT: Is that correct?
MR. HOMIAK: Is that correct?
THE COURT: That's a question now.
MR. HOMIAK: Yes. I'm sorry, Your Honor.
THE WITNESS: Yes.
BY MR. HOMIAK:

Page 95

Q. Now, Mr. Good, I would like to show you what has been marked as Government Exhibit Number 263. Do you have that exhibit in front of you, sir?
A. Yes, I do.
Q. Can you identify it?
A. It's a letter to Mr. Reeves from Bruce Kennedy, County of Hillsborough.
Q. Sir, I would direct your attention to the first paragraph, second sentence, the sentence that begins, We anticipate.
A. Yes.
Q. I would ask if you would read that out loud, please.
A. We anticipate a time frame of late 1985 at the earliest before we could consider providing the service.
Q. And is this service for the Carrollwood discharge?
A. Yes.
Q. Okay. Now, late 1985, as set forth in the letter, is already beyond the date on which Florida Cities had been ordered to cease discharging to Sweetwater Creek, isn't that correct?
A. I believe so, yes.
Q. Excuse me?
A. Yes.
Q. Now, Mr. Good, I would like to show you at this time what has been marked as Government Exhibit Number 265. Do you have that, sir?
A. Yes, I do.
Q. Do you recognize that document?
A. Somewhat, yes.
Q. Okay. Would you identify the document for the record, please?
A. It's a memo to file from A.A. Reeves concerning the Hillsborough County temporary operating permit, modifications and conditions at Carrollwood wastewater plant.
Q. And does this memorandum to the file recount the events of a meeting that took place on August 22nd, 1983, between Florida Cities and the DER?
A. Yes, I believe it does.
Q. And you attended that meeting, is that correct?
A. Yes, I did.
Q. And that meeting was also attended by a Mr. William J. Harper of the Hillsborough County Environmental Protection Commission, is that correct?
A. Yes.
Q. Mr. Good, I'd like to direct your attention to Page 2 of that exhibit, please, and ask if you would read the first sentence on the top of Page 2, please, out loud.
A. Mr. Harper suggested that we look for the spray irrigation sites, including any adjacent golf courses, and

Page 96

Page 97

connect the City of Tampa and ask if we could connect to their system.
Q. So, the County itself suggested to Florida Cities that maybe it should contact the City of Tampa about connecting to the City treatment system, isn't that correct?
A. The County Environmental Pollution Control did.
Q. Now, isn't it correct, Mr. Good, that based upon your discussions with Hillsborough County about the possibility of connecting the Carrollwood treatment plant into the County system, you came to the conclusion that the County was not a reliable tie-in point in 1984?
A. Yes.
Q. But despite those misgivings, Florida Cities applied to the County for wastewater service in April of 1984, isn't that correct?
A. Yes.
Q. Did the County inform you subsequent to your filing of the application specifically on September 6th of 1984 that it would not be able --
MR. BULLOCK: Objection, Your Honor. This is outside the scope. My direct was limited to 1983 and January of 1984 in connection with the City of Tampa. He's asking about subsequent '84 discussions with Hillsborough County.
THE COURT: Sustained.

Page 98

MR. HOMIAK: Your Honor, may I --
THE COURT: Briefly.
MR. HOMIAK: -- respond to that?
Mr. Good has obviously discussed the options that were available in terms of connecting to Hillsborough and the City of Tampa, and the issue that Mr. Good is really testifying to goes to good faith efforts of Florida Cities to comply with the law, which is one of the factors that this Court is going to be applying in determining to what extent, if any, to mitigate the penalty.
I would submit that I should be entitled to ask questions that tend to show the lack of good faith in pursuing a particular option because it undercuts the mitigation case that Florida Cities is putting on.
THE COURT: Mr. Bullock, do you want to be heard further on that?
MR. BULLOCK: Your Honor, I would renew the objection about scope.
Also, given the fact that this -- the limitations that were on this witness' testimony, I think to argue that something happened a year or two years later and he can address whether or not it's an issue of good faith, again, is outside the scope.
THE COURT: I'm going to adhere to my original ruling. That's not to say that the Government, if he has

Page 99

him under subpoena, can call him in rebuttal, but I think technically the objection is well taken. I'll adhere to my ruling.
Proceed.
MR. HOMIAK: Your Honor, if I may ask -- I want to make sure I understand the Court's ruling -- is it that the cross examination is limited to the 1983 time frame?
THE COURT: Well, with respect to the efforts with the City of Tampa. If the efforts with the City of Tampa goes beyond 1983, I think that would be properly within the scope of direct examination.
MR. HOMIAK: And with respect to efforts with the County of Hillsborough?
THE COURT: I've sustained that objection.
(Pause.)
BY MR. HOMIAK:
Q. You testified earlier --
THE COURT: Just a moment, please, counsel.
Florida Cities Water has called this witness and has examined him for the purpose of eliciting testimony regarding Florida Cities Water in its efforts to find an alternative discharge mechanism, and counsel has confined the examination to the City of Tampa system as a possible alternative.
I have heard testimony at some length regarding

Page 100

those efforts. Frankly, I think it's a close question as to whether the Defendant should be permitted to restrict examination of this witness to that one area, that one alternative.
The witness is being presented to attempt to persuade the Court that Florida Cities has exerted -- well, this, of course, is on mitigation.
I'm concerned that perhaps this may be an undue restriction of the Plaintiff's examination or right to take issue with this testimony that has been proffered, offered for the purpose of showing that Florida Cities has exhibited good faith in exploring alternative avenues of discharge.
MR. BULLOCK: Your Honor, I'll withdraw the objection.
THE COURT: Thank you. And I'll recede from my ruling.
MR. HOMIAK: Your Honor, I have to confess, I forgot what question is on the table. Could I have it read back, please?
THE COURT: Read the question back, Mr. Miracle.
(Record read back.)
THE COURT: The question wasn't completed. You can pick up there.
MR. HOMIAK: I'll complete it.
BY MR. HOMIAK:

Page 101

Q. Mr. Good, in my prior question, I asked if you had applied for wastewater service in April of '94, is that correct?
A. Yes.
Q. And on September 6th, 1984, Florida Cities was informed by Hillsborough County that it would not be able to accept wastewater from the Carrollwood facility until at least June of 1987, isn't that correct?
A. I believe those were the dates, yes.
Q. Now, that June 1987 date is two and a half years after the Florida DER has ordered the company to cease discharging into Sweetwater Creek, isn't it?
A. Yes.
Q. Moreover, the June 1987 date was not definite but was contingent upon the County expanding the River Oaks plant, isn't that correct?
A. Yes.
THE COURT: Contingent on what, did you say?
MR. HOMIAK: The County of Hillsborough expanding the River Oaks wastewater treatment plant.
THE COURT: Okay.
BY MR. HOMIAK:
Q. Now, I believe -- withdraw the question.
EPA had issued an administrative order to Florida Cities for the Carrollwood treatment plant, isn't that

Page 102

correct?
A. I believe so, yes.
Q. And based upon Florida Cities' representations that Hillsborough County would not be able to connect the Carrollwood plant until June of '87, EPA amended that order to give Florida Cities until June of '87 to cease discharge, isn't that correct?
A. I believe that's right, yes.
Q. All right. Now, did you subsequently learn that Hillsborough County had pushed back the possible connection date from June of 1987 to fall of 1988?
A. Yes.
Q. Okay. So, under the revised schedule, fall of 1988, Florida Cities isn't even going to be able to meet the June '87 deadlines set forth in EPA's amended order, isn't that correct?
A. Yes.
Q. And you were worried about this, weren't you, Mr. Good?
A. Yes.
Q. And you informed Mr. Tony Reeves that the County's projected connection date had, once again, slipped, isn't that correct?
A. Yes. He was aware of that.
Q. Mr. Good, you testified that an FDER permit required

Page 103

Florida Cities to connect to Hillsborough County -- to the Hillsborough County collection system, is that correct?
A. Yes.
Q. Didn't Florida Cities, in fact, request a permit modification from FDER so that it would not have to connect to Hillsborough County?
A. Yes.
Q. Okay. Mr. Good, I would like to direct your attention to an exhibit that's been marked as Florida Cities Water Company Exhibit Number 97. Do you have that exhibit in front of you, sir?
A. Yes, I do.
Q. What is the date of that letter, please?
A. August 8th, 1983.
Q. Can you identify this letter for the record, please?
A. It's a letter from the Department of Environmental Regulation to Mr. A.A. Reeves concerning the Hillsborough County Carrollwood operation.
Q. Would you read the first full sentence of that letter, please?
A. We are in receipt of your request for modification of permit conditions. The conditions are changed as follows.
Q. Okay. Now, I want to refer your attention, please, to Page 2 of this exhibit, which is labeled Attachment A. Do you have that, sir?

Page 104

A. Yes.
Q. I would direct your attention to Paragraph D and ask you to read that, please.
A. If an agreement with Hillsborough County is not made by the deadline in Paragraph B, the permittee shall submit a construction application to provide an alternate effluent disposal method by July 1st, 1984.
Q. What date is referred to in Paragraph B, please?
A. April 1st, 1984.
Q. Now, on April 1st, 1984, Florida Cities had no agreement with the County of Hillsborough to connect to the County system, isn't that correct?
A. Yes.
Q. That is correct?
A. That is correct.
Q. Did Florida Cities submit an application to the State Department of Environmental Regulation to provide an alternate effluent disposal method by July 1st, 1984?
A. Not to my knowledge, no.
Q. Okay. I want to direct your attention to Paragraph E of that attachment, please, and ask if you would read that.
A. The discharge to Sweetwater Creek shall cease no later than January 1, 1985.
Q. So, the State still wants the discharge ceased by January 1st, 1985, correct?

Page 105

A. Yes.
Q. So, in fact, at least as of August 8th, 1983, the State of Florida was telling Florida Cities Water that if connection could not be made to Hillsborough County, it should look elsewhere, isn't that true?
A. Yes.
Q. And specifically connection to Hillsborough County by a date certain being -- well, if there was no agreement reached by April 1, 1984, that Florida Cities should look for options -- other options, isn't that correct?
A. Yes.
Q. Yet, you still continued to pursue connection to the County wastewater treatment facility long after January of 1985, correct?
A. Yes.
Q. Despite the fact that you viewed them as being not reliable as a source of connection?
A. Yes.
MR. HOMIAK: Your Honor, at this point I would like to continue my examination of Mr. Good moving on to a different facility, Barefoot Bay; and I would offer as a rationale for being allowed to continue this the same argument I made earlier.
I don't know whether Mr. Bullock is going to renew his objection at this point.

Page 106

MR. BULLOCK: Your Honor, as to scope and Barefoot Bay, I would renew that objection.

THE COURT: Yes. I perceive a distinction there. I was willing to allow you to inquire with respect to those matters that you have been asking Mr. Good about of late, but I think that would be beyond the scope.

MR. HOMIAK: Your Honor, if I might? I think Your Honor really hit upon the point earlier when you questioned the fairness of allowing Florida Cities, which has designated something like 19 different witnesses, to pick and choose and define very narrowly what they will be allowed to testify on -- testify to on direct examination in order to prove their penalty mitigation case.

Mr. Good is a regional manager with Florida Cities, and he's quite familiar with the activities at Barefoot Bay and I believe that --

THE COURT: Well, nevertheless, we operate under the same rules as we do in any other case, and I'm doing my best to apply those rules here. And I firmly believe that we would be going beyond permissible scope of the direct examination to permit you to do that. Over objection, I'm not going to allow it.

All right.

MR. HOMIAK: Thank you, Your Honor.

THE COURT: Are you through? Is that all?

Page 107

MR. HOMIAK: I'm sorry. I have no further questions, then, Your Honor.

THE COURT: Okay. Mr. Bullock, do you have redirect?

MR. BULLOCK: Yes, Your Honor.

REDIRECT EXAMINATION

BY MR. BULLOCK:

Q. Mr. Good, who would have paid the costs of the construction and the hook-up fee, the connection fee at Carrollwood?

A. Ultimately, the customer.

Q. All right. Would there also have been any costs associated with plant abandonment?

A. Yes.

Q. Who would have paid those costs?

A. Ultimately, the customer again.

Q. All right. Who regulates the rates for the Carrollwood customers?

MR. HOMIAK: Your Honor, at this point I would object. Who regulates the rates at Carrollwood is clearly beyond the scope of my cross examination of Mr. Good.

I hesitate to make the objection having sought to go beyond what Mr. Bullock thought was the scope of his direct examination, but there has been no mention of Public Service Commission or --

Page 108

THE COURT: Well, for what purpose do you seek to elicit this information?

MR. BULLOCK: Your Honor, Mr. Homiak delved deeply into the issue of costs and why costs were a decision factor.

THE COURT: Yes, and that's the reason why I think that -- well, why I think it was appropriate for you to ask the preceding questions, and I think this is probably just an extension of that, so I'll permit you to go briefly into that and I'll overrule the objection.

BY MR. BULLOCK:

Q. Mr. Good, who regulated the rates for Carrollwood customers?

A. Hillsborough County Commissioners.

Q. All right. Who regulated -- who issued permits for discharge facilities at Carrollwood?

A. The Florida Department of Environmental Regulation.

Q. Okay. Was there any County oversight of the wastewater treatment plant?

A. Yes.

Q. And what branch of the County Government issued -- oversaw discharges?

A. Hillsborough County Pollution Control.

Q. All right. And which portion of the County dealt with -- strike that. Let me start again.

Page 109

In 1983 -- excuse me. In 1984, what other options were available to -- in July 1, 1984, what other options were available to Florida Cities for the Carrollwood effluent?

A. Again, we were looking at the City of Tampa, Hillsborough County, building an AWT plant with discharge to Sweetwater Creek, percolation ponds, spray irrigation.

Q. Based on the information which you had received from Tampa, was the company ever able to determine whether or not the cost to connect to Tampa would have been prudent?

A. No.

Q. To your knowledge, in 1983, could the City of Tampa have in any way voided the provision of the FDER permit which required connection to Hillsborough County?

MR. HOMIAK: Your Honor, objection. This calls for a legal conclusion about what the County could or could not do.

THE COURT: Well, if I thought that testimony was being offered solely for the purpose of proving what the law was, I think your objection would be quite well taken.

I am dealing, however, with some subjective motivations, and that sort of thing, and perhaps to some extent what the -- what they -- what the witness may have perceived may play into it, so for that reason, I'm going to overrule your objection.

Do you remember the question?
THE WITNESS: No, sir.
THE COURT: I don't either.
BY MR. BULLOCK:
Q. Would any action -- in 1983, would any action taken by the City of Tampa have removed the requirement to connect to the Hillsborough County facility?
A. Yes.
Q. Okay. What would that have been?
A. If we were able to connect to their system.
Q. All right. And would any action on the part of the Hillsborough County Department of Sanitary Sewers -- or Sanitary Services have changed the requirement of the FDER permit?
A. Yes.
Q. And did, in fact, Hillsborough County in '83 have capacity?
A. I don't believe so.
Q. All right. Thank you.
THE COURT: All right. Thank you, sir. You may step down.
All right. We'll recess for lunch until 1:25.
(The luncheon recess was taken.)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Friday, April 5, 1996
Tampa, Florida
9:05 a.m.

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Mr. Robert Homiak

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

April 5, 1996

****

THE COURT: Morning.

MR. BULLOCK: Good morning, Your Honor.

THE COURT: All right.

I believe we were starting or about to start redirect.

Mr. Bullock, you may proceed.

MR. BULLOCK: Thank you, Your Honor.

REDIRECT EXAMINATION

MR. BULLOCK:

Q. Good morning, Mr. Allen.

A. Good morning.

Q. Mr. Allen, Mr. Jacobs asked you questions about costs for providing effluent or charges that Florida Cities would provide for the effluent. I believe your testimony was there was no specific rule for the Public Service Commission. Why was Florida Cities concerned about the price if any to be charged for the effluent?

A. Related to the impression that it would leave on the other ratepayers as well as with the Commission. Under the fundamental rules of regulated utilities, you're not permitted to discriminate amongst customers, so if you give service to one customer in a particular class, then there's an obligation

to provide service without charge to other customers in the same class.

Q. Mr. Allen, let me ask you now questions, Mr. Jacobs asked you questions about the issue of when you were attempting to come to agreement with the grove owners about providing effluent, you discussed price. I believe you and Mr. Jacobs determined that you had actually come to an agreeable price. Were there other issues that killed the deal?

A. Yes, sir.

Q. What were those issues?

A. Basically, the indemnification issues.

Q. And how did the indemnification issues kill the deal?

A. Because the seller was demanding indemnification far beyond what was considered reasonable.

Q. Was it possible to put a dollar figure on the amount of indemnification which the grove owners were seeking?

A. No, sir, not the indemnification, the breadth of the indemnification that the sellers were demanding.

Q. Let me ask you, Mr. Allen, to take a look at Exhibit 307, as Plaintiff's 307. Let me ask you to refer to page 5 of Exhibit 307.

Mr. Allen, what were the issues that were underlying the meeting that this memo deals with?

A. This memo dealt with the, I believe a meeting with the USEPA regarding Carrollwood.

Q. Were the violations at Carrollwood at this meeting addressed?

A. Yes, there were alleged violations.

Q. And what were those violations for?

A. I'll have to refer to the memorandum. I believe it related to discharges to Sweetwater Creek.

Q. Were the issues or the violations which were discussed in this meeting which this memoranda memorializes, were these violations resolved with EPA?

A. Yes.

Q. And how much was the fine for those violations?

A. The final resolution resulted in a fine of fifteen thousand dollars.

Q. All right, sir.

Let me ask you then to turn to Plaintiff's Exhibit 570. Mr. Allen, would you read paragraph one of 570?

A. The fact pattern involved with the City of Cape Coral is substantially worse in nature than that occurring with FCWC.

Q. Mr. Allen, what was the fact pattern with the City of Cape Coral?

A. It's my understanding that the discharges from the Cape Coral Wastewater Treatment Plant which led to some action by EPA were about eight times the discharges from the Waterway Estates Plant.

Q. Do you know the daily discharge capacity for the City of

Cape Coral?
A. I believe it was something on the order of eight million gallons a day, six to eight million gallons a day, if I recollect; average.
Q. What are the receiving waters for the Cape Coral Plant?
A. The Caloosahatchee River.
Q. And what was the fine which --
MR. JACOBS: I'm sorry, could we have a timeframe for that? Were you asking him where the discharge is at this time or --
THE COURT: You're asking the Court to ask counsel to put a timeframe on that. You ask me and I'll --
MR. JACOBS: Forgive me, sir. That's what I'm --
THE COURT: All right.
BY MR. BULLOCK:
Q. Mr. Allen, do you know? The question that I asked you previously was what was the receiving waters for the Cape Coral Plant. Do you know what the receiving waters for the Cape Coral Plant was?
A. Yes, sir.
Q. And what were they?
A. Caloosahatchee River.
Q. And is that true during the entire -- from 1988 forward?
A. Well, it was certainly true in 1988. I believe that that discharge may have been eliminated subsequently or at least

reduced.
Q. All right.
Do you know the amount of the fine that Cape Coral paid?
A. Yes, sir.
Q. And what was the amount of that fine?
A. Seven hundred and fifty thousand dollars.
MR. BULLOCK: Thank you.
I'm sorry, Your Honor, no further questions.
THE COURT: All right, Mr. Hird.
REDIRECT EXAMINATION
BY MR. HIRD:
Q. Good morning, Mr. Allen.
A. Good morning.
Q. Mr. Jacobs asked you questions about where you received your check. During the time period in this case, from 1988 to 1993, who paid your check?
A. This was Avatar Utilities.
Q. And prior to 1993, did Avatar Utilities have a separate employment staff?
A. Yes.
Q. Now, Mr. Jacobs asked you about your recent change in position and change in July of last year to becoming president of Florida Cities. You know why you obtained that promotion?
A. Well, Mr. Robert Gordon, who is now president of Avatar Utilities, Florida Cities and the other Avatar Utilities'

subsidiaries, plans to retire and this change was merely a transition into his retirement plans.
Q. Did the promotion have anything to do with this case?
A. Absolutely nothing to do with this case.
THE COURT: Mr. Hird, this is -- this is recross for you?
MR. HIRD: No, Your Honor, its redirect.
THE COURT: Oh, you called him on direct, also?
MR. HIRD: Right, if you recall.
THE COURT: Okay, okay.
MR. HIRD: I'm sorry, Your Honor, for the confusion.
THE COURT: All right.
BY MR. HIRD:
Q. Now, Mr. Jacobs asked you several questions concerning Dennis Getman. What role does Dennis Getman have with respect to -- strike that.
What position does Dennis Getman have with respect to Florida Cities?
A. Mr. Getman is the general counsel for Florida Cities.
Q. Is Mr. Getman also the general counsel for Avatar Holdings?
A. Yes, sir.
Q. Is Mr. Getman the general counsel for Avatar Utilities?
A. Yes, sir.
Q. Does Mr. Getman have any business or operational

responsibility for Florida Cities?
A. No, sir.
Q. Does Mr. Getman have any business or operational responsibilities for Avatar Utilities?
A. No.
Q. If you were bringing an in-house lawyer to a meeting affecting Avatar Utilities or Florida Cities, who would you bring?
A. Mr. Getman.
Q. I'd like to have you take a look at Government Exhibit 400, if you would. Do you have that, sir?
A. Yes, sir.
Q. Yesterday, Mr. Jacobs asked you some questions about this and I believe you said that the CONWARD discussed in this Exhibit did not deal with Waterway Estates Treatment -- Wastewater Treatment Facility, is that correct?
A. That is correct.
Q. What did the CONWARD have to deal with?
A. The CONWARD had to deal with the Waterway Estates Water Treatment Plant.
Q. How do you know that?
A. Well first, the engineering firm discussed in the memorandum, Dire-Riddle, had nothing whatsoever to do with the Waterway Estates Wastewater Treatment Plant, but they were the engineers for designing a planned expansion of the Waterway

Estates Water Treatment Plant.

Furthermore, the budgeted amounts do not match those for the Waterway Estates Wastewater Treatment Plant.

Q. I'd like you to turn to the last two pages of the exhibit. Is that a memo from you?

A. Yes, sir.

Q. And does that memo discuss the water treatment system as opposed to the wastewater treatment system?

A. That is correct.

Q. Mr. Allen, was Mr. Sharp confused when he wrote this memo?

A. Yes, indeed.

Q. I'd like to have you take a look at Government Exhibit 4, if you would. Mr. Jacobs questioned you about this memo, do you recall?

A. Yes, sir.

Q. What is the date of this memo?

A. July 2nd, 1991.

Q. Wasn't this the same month that the outfall at Waterway Estates was completed?

A. That is correct.

Q. Now, at the time this memo was written, was Mr. Sharp still chief executive officer of Avatar Holdings?

A. No, sir, Mr. Sharp was, I believe, the chairman of the executive committee.

Q. But he had resigned as chief executive officer?

A. I believe that is correct.

Q. How soon after this memo did Mr. Sharp die?

A. Mr. Sharp died in April, 1992, so some eight, nine months following this memo.

Q. Now, did you -- I'd like you to look at the line called ref and CB script notation on A6/2491, Sharp to Gordon. Were you responding to a handwritten note from Mr. Sharp?

A. Yes, sir.

Q. How often did you correspondence with Mr. Sharp in the course of your activities at Avatar Utilities?

A. Very infrequently.

Q. How often did he correspond to you?

A. Very infrequently.

Q. In this letter, you talk about a meeting with EPA concerning an enforcement action, is that correct?

A. That is correct.

Q. Is an EPA enforcement action a usual or unusual event for Florida Cities?

A. Well, it's unusual to the extent that I believe this may have been probably the second such meeting that I was involved in, at least.

Q. And did you tend to write Mr. Sharp about usual or unusual events?

A. Very unusual events.

Q. Okay.

Now, one last question, Mr. Allen. Why did you change your mind and decide to testify rather than invoke the Fifth Amendment?

A. I felt personally very uncomfortable with asserting my Fifth Amendment rights. I felt that from the company's standpoint, it was important that I come forward and testify and as time went on, I became personally more uncomfortable with that assertion.

Q. Was this a personal decision or a company decision?

A. Absolutely personal decision. The company had nothing to do with it, sir.

MR. HIRD: Thank you very much, Mr. Allen.

THE COURT: Mr. Jacobs, you have recross?

MR. JACOBS: Very brief, Your Honor.

THE COURT: Well, make sure that it's proper recross.

MR. JACOBS: Yes, sir.

RECROSS EXAMINATION

BY MR. JACOBS:

Q. My recross is limited to one exhibit that Mr. Bullock asked you to look at, Mr. Allen, Exhibit 570, and the comparison he asked you to make with the City of Cape Coral.

Now, he asked you whether the City of Cape Coral effluent was discharged to the Caloosahatchee River and at first you said yes, and then I believe you said that part of the

discharge may have been eliminated.

Let me ask you, sir, isn't it true that the City of Cape Coral has a one hundred percent reuse system and has no discharge whatever to the Caloosahatchee River?

A. No, sir, I'm not aware that there is no discharge. I he presumed there was probably a zero discharge permit, but I really don't know.

Q. A zero discharge permit, that means no discharge, correct?

A. No, sir, it doesn't.

Q. What does it mean to you?

A. It means that there -- a discharge is allowed only uncertain storm events, certain rainfall events, normally a rainfall with a return frequency of ten years.

Q. So, very, very rare, is that correct?

A. That would be correct, yes.

Q. Once in ten years?

A. Well, I couldn't say -- couldn't limit it to once in te years. It would be any time there's a rainfall event that qualifies for a once in ten year event, a discharge would be allowed, yes, sir.

Q. Okay.

But otherwise, with that exception, the City of Cape Coral has no discharge to the Caloosahatchee River or at lea it has a one hundred percent reuse system with that exceptio

is that correct?
A. Sir, I'm just not sure. I'm not that familiar with their permits. I do know they have a reuse system.
Q. And isn't it also true that the City of Cape Coral has offered to buy from Florida Cities Water Company all of the effluent discharged from the Waterway Estates Plant to the Caloosahatchee River to use in that reuse system so the Waterway Estates would have no discharge at all?
A. No, that is not correct.
THE COURT: Thank you, sir. You may step down.
Call your next witness.
MR. BULLOCK: Your Honor, our next witness will be Julie Karleskint. Mr. Scroggin will handle that.
While Ms. Karleskint is coming, I needed to inform the Court, we had given the Court a list of witnesses yesterday, one of who was Charles Hill. Mr. Hill is an employee of the Florida Public Service Commission. We were informed after Court yesterday that Mr. Hill, I believe it was yesterday, suffered an attack of diverticulitis and is not going to be able to be here today. We gave notice of that to counsel yesterday as best we could. We FAXed them a letter to the U. S. Attorney's Office in Tampa, and I believe Mr. Quinn acknowledged that they got that letter this morning.
If there is an additional day of testimony at some point in time, we would reserve the right if possible to bring

Mr. Hill that day.
THE COURT: Very well. We'll see where we are.
MR. BULLOCK: Thank you.
THE COURT: When we get through this day.
THE CLERK: Raise your right hand.
Thereupon,
JULIE KARLESKINT,
having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:
Take a seat in the witness box. State your name and spell your last for the record.
THE WITNESS: Julie Karleskint. I'm sorry, can you repeat?
THE CLERK: Spell your last for the record.
THE WITNESS: K-A-R-L-E-S-K-I-N-T.
DIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Good morning, Ms. Karleskint.
A. Morning.
Q. Would you please state your current position.
A. I'm the operations manager for Florida Cities Water Company.
Q. And how many years have you served in that position?
A. A little over four years.

Q. To whom do you report?
A. I report?
Q. In that position?
A. I report to Mike Acosta and also to Paul Bradtmiller and Gerald Allen.
Q. And can you describe your responsibilities as operations manager for Florida Cities Water Company?
A. I'm responsible for overseeing the operations and the maintenance of the water and wastewater treatment facilities as well as regulatory compliance for those facilities.
Q. Ms. Karleskint, what communications if any do you have with others at Florida Cities Water Company regarding environmental compliance?
A. I have -- I work with the division managers who oversee directly the water and wastewater facilities at that division. I work with the wastewater superintendents and the water superintendents and I also keep Mike Acosta, which is my direct supervisor, informed of what is happening.
THE COURT: Can you pull the -- position yourself so that you're closer to the microphone?
THE WITNESS: Okay.
BY MR. SCROGGIN:
Q. And what communications if any do you have with the environmental regulatory agencies regarding environmental compliance at Florida Cities Wastewater Treatment Facilities?

A. I have frequent communication with them on an as needed basis and also just to let them know what is happening at Florida Cities so they're not caught by surprise.
Q. What role if any do you play in the submission of discharge monitoring reports to EPA pursuant to the NPDES Permits held by some of these facilities?
A. I review those on a monthly basis before the division fills them out and then I review them and we submit them from our office, Mike Acosta will sign them, and then we'll make sure they're sent out on a monthly basis.
Q. Do those responsibilities include Barefoot Bay and Waterway Estates.
A. Yes, they do.
Q. Do those responsibilities ever include the Carrollwood Facility up to the time it went out of business?
A. I believe Carrollwood went out of -- quit discharging as soon as I became operations manager in '92, so I don't remember in my job as operations manager reviewing Carrollwood monitoring reports.
Q. Do you have any procedures to assure that the submissions to EPA are accurate and correct?
A. I try to verify the information provided by the divisions that it is, that the forms are filled out correctly.
Q. I believe you referred to a transition in your responsibilities at Florida Cities Water Company. Can you tel

me what your previous position was for Florida Cities Water Company?
A. My previous position was not with Florida Cities Water Company, it was with Avatar Utilities. I was the environmental auditor or environmental engineer for Avatar Utilities and I audited the facilities, the Missouri City Water Company and Florida Cities Water Company, and I also provided technical assistance to those facilities on an as needed basis.
Q. Can you describe what the environmental audit program was at Avatar Utilities, Incorporated?
A. It was basically -- we call it the environmental assurance program. And that is what I was brought to Avatar Utilities to do. Gerald Allen had come there the previous year and he had developed this program for assuring environmental compliance and what we did, we took a look at all the rules and regulations and developed a checklist and went to all the facilities and did an audit of those facilities and looked at all the present rules and regulations.
We also looked at proposed rules and regulations and how they may impact the utility operation. We reviewed the permits, we did a walk-through of the facilities, and we try to perform comprehensive audits and report those findings to Mr. Allen.
Q. What recommendation if any did you make based upon the environmental audits that you conducted for Avatar Utilities?

A. I made numerous recommendations. Basically, what we -- fencing in all the wells, putting -- developing special areas for hazardous chemicals, letting them, you know, upgrading the underground storage tanks with respect to the U. S. -- the rule that had just come into effect. Just, I mean, we just looked at all the rules and regulations and how they impact the utility and made recommendations pursuant to that.
Q. And you worked for Avatar Utilities conducting the environmental audit program for how many years?
A. I believe three years.
Q. What were those years?
A. 1989 -- I came in January, '89, and I started my job as operations manager in January of '92.
Q. And you're operations manager today at Florida Cities?
A. Yes, sir.
Q. Having been there approximately four years, can you very briefly telling us what educational and professional training you have relative to your current positions with Florida Cities?
A. Upon graduation from high school, I went to the University of Oklahoma. I attended them till 1982, and I graduated with a BS in environmental science. Upon graduation, at O.U., I went on to Oklahoma State University and received my masters of science degree in bio-environmental engineering.
A few years later, I worked full time for the State of

Kansas, but I also attended the University of Kansas and received my civil engineering degree from the University of Kansas in 1988.
Q. Can you tell me what professional licenses you hold?
A. I'm a professional engineer in the State of Florida, Kansas and Missouri. And I also hold a Class A Wastewater Operators license in the State of Missouri.
Q. Since college, have your responsibilities been related to water quality and the treatment of either drinking water or sewerage?
A. My primary focus has been water and wastewater.
Q. Can you tell me what instructions if any you gave other personnel at Florida Cities regarding the notification of regulatory agencies if events or incidents occurred at any Florida Cities Facilities?
A. I always told them they need to notify the regulatory agencies when they ever had any abnormal events and I believe they have been very good at that and also notify me and letting me know what was going on, also.
Q. What agencies did you instruct them to notify?
A. Primarily, I had them notifying State agencies. If there was reason to notify EPA, I told them to notify me and then I would be the responsible party.
Q. Why did you tell them to notify first the State agencies rather than EPA?

A. Because we had a very good working relationship with the State agencies. The State agencies were there, I mean, they inspected the facilities on a recurrent basis. They knew the operators at that facility, and that is basically who we -- the State and county agencies, who we believed were the proper agencies to call.
Q. Can you compare the frequency of contacts that Florida Cities Facilities had with EPA versus the Florida Department of Environmental Protection or its predecessor, the Florida Department of Environmental Regulation?
A. EPA contact was very infrequent. The EPA personnel would probably come to the facility once a year to perform an annual inspection and they had usually come with the DEP or DER as it was, so they usually performed joint inspections, but that is basically all we -- the discharging facilities, the non-discharge facilities, we never saw EPA.
Q. Were there any differences in the level of scrutiny or the stringency of regulations given by these two agencies to the wastewater treatment facilities of Florida Cities?
A. Yes. The State regulations seemed to be a lot more stringent, and they also seemed to -- they just appeared much more often, so we had a much more frequent contact with them.
State regulations basically mean we had the Indian River Lagoon Act which basically requires no discharge into the Indian River Lagoon. We have the Grizzle-Figg up in this area

which requires advanced levels of wastewater treatment, and then in the central district, there's also a no discharge push by the State of Florida and EPA just usually followed along with whatever the State requirements were.

Q. Can you tell me what Grizzle-Figg is to which you referred?

A. Grizzle-Figg is a bill that was passed by two legislators, here in Florida. Primarily, in this area here, in Tampa Bay, was concerned with the treatment of the water quality of Tampa Bay, so it basically required that everyone that discharged into Tampa Bay, every facility that discharged into Tampa Bay have an advanced level of wastewater treatment if they were to discharge.

Q. Do you know what year Grizzle-Figg was passed, approximately?

A. I would have known. Right now, I'm a little nervous. I think it was like 1987, but I may -- I'm not sure.

Q. Did you ever make any recommendation regarding environmental compliance to Florida Cities Water Company that were costly to the company?

A. Yes, I did.

Q. Can you give any examples of those recommendations that were regarding environmental compliance that were costly to the company?

A. Basically -- well, the most costly ones were upgrading

the treatment plants which Florida Cities Water Company was already in the process of doing at the time of doing the audits. So, they were making those improvements as I was doing the audits. They were in the process of working through getting the permits and getting that done.

So, a lot of my recommendations were just in -- like for the Carrollwood Facility, putting in a post-aeration tank even though we knew that facility was going to abandoned. We also built laboratories so we could improve the treatment of that facility and improve the process so we could try to meet it as best we could. It was a secondary plant and we did our best to meet the limits in the permit, and so we made some improvements to that, even though we knew it was going to be abandoned in six to eight months.

Q. And when you worked for Avatar Utilities prior to your current position with Florida Cities, did you make recommendations to Avatar Utilities that were costly to Avatar Utilities?

MR. HOMIAK: Objection, referring to plants.

BY MR. SCROGGIN:

Q. Any issue relating to the environmental audit program you administered?

A. Almost all the recommendations that I made that dealt with environmental compliance, regardless of cost, it was something that was required for that to meet environmental

regulations or even for safety. They, Avatar Utilities, Florida Cities, they went through and they did make those improvements.

Q. In your entire history at Avatar Utilities and now at Florida Cities, have you ever made a recommendation that you believed was required for environmental compliance that was overruled by your superiors for cost considerations?

A. Never.

Q. Have you ever felt, in your tenure at Avatar Utilities or at Florida Cities, pressure in any way to downplay taking steps to address in timely fashion the implementation of procedures necessary or required for environmental compliance?

A. No.

Q. I'd like to turn to, Ms. Karleskint, to the exceedences that are alleged for the three facilities in this case, Barefoot Bay, Carrollwood and Waterway Estates. Do you know what kind of effluent was being discharged throughout your tenure at the Barefoot Bay Facility?

A. Yes, sir.

Q. And what was that kind of effluent?

A. It was secondary treated effluent.

Q. Are there different degrees of secondary treatment?

A. Yes. There are --

THE COURT: Well, he hasn't asked you a question. You answered the last question. Go ahead.

BY MR. SCROGGIN:

Q. Can you tell me what level of secondary treatment the Barefoot Bay Facility had?

A. I believe that we exceeded for the most part the BOD and TSS limitations, I mean requirements, for secondary treatment, and in most cases, you would see that it actually met the BOD and TSS, actually met advanced wastewater treatment levels.

Q. I'll ask you, Ms. Karleskint, to be shown Florida Cities' Exhibit Number 192, which is the final permit for the Barefoot Bay Facility. This document is already in evidence. I'll ask if you recognize this document.

A. Yes, I do.

Q. And I would direct your attention to the permit requirements that are on the fourth page of this Exhibit 192, with the title, part one, effluent limitations and monitoring requirements. Do you see that?

A. Yes, I do.

Q. And can you tell me -- the focus of these questions is going to be BOD. Can you tell me what is required by this permit for the Barefoot Bay Facility to test for and report?

A. It requires an annual BOD of twenty milligrams per liter, monthly average of thirty milligrams per liter and a daily maximum of sixty milligrams per liter.

Q. During the period of time from November, 1991 through November, 1993, do you know what the Barefoot Bay Facility

tested for and recorded on its discharge monitoring reports with respect to the BOD requirement in this permit?
A. Yes. I believe they were testing for carbonaceous BOD.
Q. And what is the difference between carbonaceous BOD and BOD which is described in the permit?
A. This says a five day BOD, and then we were testing for carbonaceous BOD. Back I believe in 1989, the State went from testing requirements for a five day BOD to a carbonaceous BOD because they believed that test to be -- well that test is a more accurate BOD test for a five day period.
Q. Which test is more accurate?
A. The carbonaceous BOD.
Q. And is that the test that you were in fact reporting to EPA?
A. Yes, the EPA permit was, yes.
Q. Why were you reporting the more accurate CBOD test to EPA when the permit required reporting of BOD?
A. Basically, it was a mistake. It was a laboratory mistake. The laboratory was performing carbonaceous BOD for the State permit and they were -- when they were reporting it to, they were reporting it as BOD and it was -- it was an error. We thought we were getting BOD results and we actually were getting carbonaceous BOD results from our outside laboratory.
Q. How was the mistaken misreporting of BOD when the permit

-- I'm sorry, CBOD, when the permit required CBOD detected?
A. We immediately --
Q. I asked you how was it detected.
A. Through the EPA performance inspection, audit inspection
Q. And what if anything did Florida Cities do upon being notified that there was the accident in this misreport of CBOD when the permit required a report of BOD?
A. We immediately informed the laboratory they needed to be testing for both BOD and carbonaceous BOD.
Q. And why did you test for both?
A. Because the permit, the State permit required carbonaceous BOD testing and the Federal permit required BOD testing.
Q. Have you reviewed the numbers reported for BOD that were actually CBOD on the DMR's?
A. Yes, sir.
Q. And can you tell me, based upon your knowledge of the difference between BOD and CBOD, would the effluent have complied for each month at issue for this particular parameter it reported correctly, BOD instead of CBOD.
THE COURT: Just a moment.
MR. HOMIAK: Your Honor, objection. I think this calls for an expert opinion as to the testing difference between CBOD and BOD and Ms. Karleskint has not been offered as an expert in these analytical procedures and I would object to

her testimony as merely her opinions.
MR. SCOGGIN: May I be heard?
THE COURT: Yes, sir.
MR. SCROGGIN She has many years experience in analysis and operation of these facilities. I'm simply asking her, based upon that experience which is before the Court, if she made a determination of whether or not these numbers, had they been correctly reported, would have been less than the permitted limits. That is her job, is to make such determinations on a regular basis.
MR. HOMIAK: Your Honor, I'm not quarreling unnecessarily. Ms. Karleskint could have been offered as an expert to testify about the differences between BOD and CBOD, but she wasn't, and I think she's not submitted an expert report, offered her opinion on this issue, and I think --
THE COURT: I agree, I'll sustain the objection.
BY MR. SCROGGIN:
Q. Did you take any -- did Florida Cities take any other steps regarding the BOD/CBOD issue other than starting to report BOD correctly to EPA?
A. Yes, we did. We examined a permit notification to the EPA to test for CBOD in lieu of BOD so we didn't have to do the test twice.
Q. And I would ask that the witness be shown Florida Cities' Exhibit Number 176. I will ask if you recognize this document?

A. Yes, I do.
Q. Can you identify the document?
A. It's a letter to EPA requesting that the five day BOD test required by the above referenced permit be changed to the five day carbonaceous BOD test since the Florida Department of Environmental Protection has changed the permit requirements to consider BOD.
Q. Did you review the letter before it was sent to EPA?
A. I believe I actually drafted the letter.
MR. SCROGGIN: I'd ask that 176 be moved into evidence.
THE COURT: Be received.
BY MR. SCROGGIN:
Q. Ms. Karleskint, Exhibit 176 you testified is the request of Florida Cities that EPA change the requirement from reporting BOD to instead requiring CBOD. What was the response of EPA, if any?
A. They changed the permit and basically used the exact same permit limitations they had for the BOD test for the carbonaceous BOD test.
MR. SCROGGIN: I would ask the witness be shown Florida Cities' Exhibit Number 177 and also Number 90. Just to speed things up, these are two closely related exhibits, Number 177 and also Number 90.
BY MR. SCROGGIN:.

Q. First, Number 177, I'll ask if you recognize this document?
A. Yes, I do.
Q. Have you seen it before?
A. Yes, I have.
Q. And what is this document?
A. It's the intent to modify the Barefoot Bay permit from using the test of BOD to CBOD.
MR. SCROGGIN: I would ask that 177 be moved into evidence?
THE COURT: Will be received.
BY MR. SCROGGIN:
Q. And I would turn your attention now, Ms. Karleskint, to Florida Cities' Exhibit -- I'm sorry, I misspoke, Florida Cities' Exhibit Number 179, please. We'll get to 90 in a second.
Can you tell me what Exhibit 179 is?
A. It's the final modification of the Barefoot Bay permit which required testing for carbonaceous BOD in lieu of BOD.
Q. And did you review this document when Florida Cities received it from EPA?
A. Yes, I did.
MR. SCROGGIN: And I'd ask 179 be moved into evidence.
THE COURT: It'll be received.
MR. SCOGGIN: Ms. Karleskint, what do these sequence

of documents -- how did these documents change the requirements for reporting to EPA either CBOD or BOD for the Barefoot Bay Facility.
A. There was no change.
Q. Well, the permit began with requiring the reporting of BOD and I believe your testimony was that EPA changed the permit to now require the reporting of CBOD, is that correct?
A. I'm sorry, I misunderstood the question.
Yes, the change was from testing for five day BOD to testing for five day carbonaceous BOD with no change in permit limits or monitoring requirements.
Q. Did you have any other experiences with EPA changing permits from BOD on CBOD?
A. Yes. I believe at the same time, we requested that the Waterway Estates Facility and the Fiesta Village Facility permits be changed from five day BOD to five day CBOD since we were already testing for those. Also, they were State requirements.
Q. And I'll direct the witness' attention to Florida Cities' Exhibit Number 90 at this time and ask if you recognize that document?
A. Yes, I do.
Q. And what is that document?
A. It's the intent to modify the Waterway Estates permit from BOD to CBOD.

Q. And was there any further steps taken by EPA to make that draft determination final at the Waterway Estates Facility?
A. Yes, they did finalize that modification.
Q. Did you make any determination regarding the seriousness of the environmental harm that might have been caused by this accidental misreporting?
MR. HOMIAK: Objection, Your Honor. I believe the issue of environmental harm calls for an expert opinion and again, Ms. Karleskint has not been offered as an expert in anything.
MR. SCROGGIN: May I be heard, Your Honor?
THE COURT: Yes, sir.
MR. SCROGGIN: I'm not asking her expert opinion, Your Honor. Part of her job responsibilities, she has testified, is to assist and make recommendations to her company regarding steps that must be taken to assure environmental compliance. I'm asking her if she did in fact make any determination herself based upon her experience and pursuant to her responsibilities recording the seriousness of this with respect to making such recommendation.
THE COURT: Yes.
MR. HOMIAK: Your Honor, I think there's a fundamental difference between determining what the regulatory requirements are and whether or not there is environmental harm that may or has resulted from a particular discharge. I think

the latter requires some demonstrated expertise.
THE COURT: All right.
Well, I'll hear the testimony on proffer and then I'll determine whether it's appropriate or inappropriate, given the fact that she has not been offered as an expert, that is, given the fact that there's not been compliance with requirements under Rule 26. Go ahead.
BY MR. SCROGGIN:
Q. Ms. Karleskint, did you make any determination regarding the seriousness of this accidental misreporting of CBOD when the permit initially required BOD?
A. I don't remember if I signed the letter, but I did draft a response to EPA upon --
THE COURT: Did you make a determination as to the seriousness. I think that is the question that -- you can answer that and then you can explain.
THE WITNESS: Okay. Thank you.
I did not believe that there was any impact to the environment --
THE COURT: No, no, did you make a determination as t the seriousness of this mistake; yes or no?
THE WITNESS: Yes.
BY MR. SCROGGIN:
Q. What was that determination?
A. My determination was there was no impact to the

environment due to the difference in the CBOD test versus the BOD test.
Q. Does it make any difference to you, Ms. Karleskint, in the level of urgency of the recommendation you make to Florida Cities whether or not you think that there is environmental harm related to the operation of these facilities?
A. Not really. EPA requirements requires that if you have actual environmental -- if you have harm to the environment, you need to notify them within -- if there's actual harm to the environment, you need to notify them within twenty-four hours.
It's my position and Florida Cities' philosophy is to comply with every regulation there is and to respond as quickly as possible to anything, regardless of whether it just be something on paper or environmental impact, but --
THE COURT: Okay, okay, counsel, she's offering an opinion here based upon, as you say, her experience and whatever else, her education, and you should have -- you should have complied with Rule 26 if you wanted to elicit that information. So I agree with the Government, I think that is not appropriate, so I'll strike her answers to the last couple of questions.
MR. SCROGGIN: Yes, Your Honor.
BY MR. SCROGGIN:
Q. I'd like to move on to the TRC, total residual chlorine issues at Barefoot Bay, and I'll ask you, Ms. Karleskint, do

you know what test method was being used to test for total residual chlorine at Barefoot Bay during the period of September, 1992, through March of 1993?
A. Yes, sir. We were using the DPD colorimetric method as specified in our NPDES Permit.
Q. And I would direct your attention, if I might, Ms. Karleskint, to the numerical values that were reported for TRC at Barefoot Bay during this period and for this purpose, I suggest we use the DOJ charts that were attached to the Government's summary judgment, and that exhibit number I believe is Government Exhibit 1, and ask that the witness be shown Government's Exhibit 1.
Ms. Karleskint, do you remember what the permit limit was for TRC at the Barefoot Bay Facility?
A. Yes, it was .01 milligrams per liter.
Q. With the Court's permission, I would like to ask this witness, since this is a mathematical issue, if she might be allowed to draw on the sheet while she -- as part of her answer in terms of illustrating the differences between the permit limit and the reported numbers, and I'll ask you again, first, what was the test method being used, Ms. Karleskint?
A. The DPD colorimetric method.
MR. HOMIAK: Your Honor, I'd like to reserve my ability to object to this if it's offered in evidence.
THE COURT: What, this document here?

MR. HOMIAK: This document that is being created.
THE COURT: Well, it's not been offered in evidence, and so certainly, there is no problem with the witness using the pad to illustrate his or her testimony.
BY MR. SCROGGIN:
Q. And can you illustrate the difference between the permit limit of .01 and on that chart so that the we may be able to see more clearly the difference between reported values and the permit's limit?
A. Yes, sir.
Q. Ms. Karleskint, may I ask you to just describe what these lines are after you draw whatever it is you're drawing. You've written on your chart the numbers .01 .1, .2, .3. Can you tell us what the units are for those numbers, Ms. Karleskint?
A. All units are in milligrams per liter for parts per million.
Q. And would you draw a line on the chart showing what the permit limit was for TRC?
A. The permit limit was .01 which is the very bottom line on the chart.
Q. Would you now put on the chart perhaps with a little X or some different symbol what actual numbers were reported to EPA as being measured with the DPD method taken from the Government's Exhibit 1, and would you read off those numbers, please, the reported values that you just placed on the chart

above the .01 permit limit?
A. These are maximum values that were reported for the month. The values -- maximum values were, there's .1, .08, there's a .05 and there's a .06, I believe, and some of those were reported twice for several of the months.
Q. Did EPA inspect the Barefoot Bay Facility during the time the DPD EPA method was being used to test for TRC?
A. Yes, they did.
Q. Did you review all those inspection reports you received from EPA?
A. Yes, I did.
Q. What instruction if any did you receive from EPA regarding how to record numbers for TRC?
A. They did not make any suggestions with that whatsoever.
Q. Did EPA make any suggestions that you change the way the the numbers were being reported to EPA?
A. No, they did not.
Q. Do you know today what the detection limits of the DPD method that was being used at this time at Barefoot Bay?
MR. HOMIAK: Objection. I believe once again this gets into the field of expert testimony. What the detection limits of a particular analytical procedure, I believe, is the subject of expert testimony unless there is some document that has already been offered into evidence that sets forth what th limits of a particular procedure is, and once again,

Ms. Karleskint hasn't been offered as an expert in this field and has not followed the order pursuant to Rule 26 and I object.

MR. SCROGGIN: May I be heard?

THE COURT: Yes.

MR. SCROGGIN: Ms. Karleskint testified her responsibilities include, on a daily basis, having to make such determinations, to check for the accuracy and correctness of the numerical numbers being submitted to EPA, part of those responsibilities including whether or not they're reliable.

I'm asking her if she knows whether or not these numbers being submitted to EPA were, pursuant to those responsibilities, correct and reliable. A component of that, I would be glad to lead her through a series of questions in determining the reliability of such numerical data, is knowing the detection limit for whatever method is being used.

THE COURT: All right.

Go ahead, and I'll take under submission the objection.

BY MR. SCROGGIN:

Q. Do you know the detection limit for this EPA approved method?

A. Yes, I do.

Q. And what is that?

A. It's 0.2.

Q. Would you draw that on your chart, please?

THE COURT: How do you know that?

THE WITNESS: I recently have done some research into that and it's based upon the EPA method, 330.5 which is referenced in the Code of Federal Regulations, this DPD colorimetric method and it is accurate from .2 to 4 million gallons per liter.

THE COURT: Where did you determine that from, specifically?

THE WITNESS: This is an EPA document, chemical analysis for water and wastewater.

MR. SCROGGIN: Your Honor, if I might, can I ask the Court to take judicial notice of the Code of Federal Regulations which referenced this test method and the EPA treatise which is incorporated by reference into that reference that is the document that is being referred to?

THE COURT: That should have been -- has that been something that has been divulged to the Plaintiff in this case, that is, that you're asking the Court to take judicial notice of a document?

MR. SCOGGIN: Yes, Your Honor. I have a copy of this document to Plaintiffs earlier this week, told them I would be using it or it was being referred to by Ms. Karleskint's testimony.

THE COURT: Earlier this week. I'm talking about

timely.

MR. SCOGGIN: Your Honor, this document came to our attention only this week. It is --

THE COURT: How did it come to your attention?

MR. SCROGGIN: Came to our attention from Ms. Karleskint. It was a document specifically requested pursuant to our discovery requests of the Government on two separate occasions. It was never produced by the Government. We became aware of it this week. We provided a copy of it to the Government and it is a reference as to specific limits --

THE COURT: How did you request it? Was there a document that was filed, a motion to produce or are you saying it was requested twice before and they failed to produce it? I'm simply asking, is there any question about that, as to whether there was a request for production?

MR. HOMIAK: Yes, Your Honor. I do have some question about that. I would point out that --

THE COURT: It's a matter, it doesn't surprise me. Go ahead. I didn't mean to cut you off, Mr. Homiak.

MR. SCROGGIN: Your Honor, in our first --

THE COURT: Mr. Homiak, I asked you a question and I cut you off. I didn't mean to.

MR. HOMIAK: Well, Your Honor, I'd point out the document that Mr. Scroggin is referring to is a public document and there is certainly no duty to produce documents.

THE COURT: So you declined the request to produce it because it's a public document. Is that what you're telling me?

MR. HOMIAK: If it was requested, Your Honor, and I can't say right now that it certainly was or was not, I'd have to review the discovery request. There certainly was no motion made to compel the production.

THE COURT: All right.

Go ahead, Mr. Scroggin.

MR. SCROGGIN The reason there was not a motion to compel was because we were unaware of the document, but in our first document request --

THE COURT: That was the reason there was not a motion to compel?

MR. SCROGGIN: That's correct. We were unaware of it. We did specifically request on January 12th, 1994, in our initial document request, all documents relating to EPA's procedures including internal guidance or manuals regarding the procedures for the review and interpretation of water quality data as well as for all documents including studies, evaluations, tests or reports regarding health or environmental effects of discharges of wastewater from the Waterway Estates facility. This clearly is such a manual regarding test procedures. In our second document request, we again requested manuals, guidance from EPA.

THE COURT: Ma'am, you can have a seat there, this may take a while.

MR. SCROGGIN: This document was not produced. We were unaware it and had we been aware of it, we would have included it in our exhibits for this trial, sir.

THE COURT: So you're asking the Court to take judicial notice of what now?

MR. SCROGGIN: Of a public document that is specifically incorporated by reference into the Code of Federal Regulations, it is referred to in part one -- in part 136.3 of 40 CFR table 1-B, refers specifically to test method 330.5. This is the official EPA document containing the information that Ms. Karleskint has just discussed for that test method. It is the document that EPA makes public of which we were unaware that is specifically referenced and we would argue incorporated by reference in the Code of Federal Regulations, it is EPA's own test manual, sir, that we're asking to be referred to.

THE COURT: So that she can give her opinion on the detection. Well, for what purpose?

MR. SCROGGIN: For the purpose, sir, of demonstrating that had Ms. Karleskint been timely made aware of this document, she would not have reported as she did on these DMR's and there would be no exceedences for TRC pursuant to EPA's own guidance.

She's testified that -- she's testified that she received no instructions from EPA during -- EPA instructions regarding the use of this test method which EPA itself prescribed. Had she received these instructions, she would have reported differently on the DMR's and we would not be here on this particular case. That is with respect to TRC, all the TRC exceedences would vanish and not be before the Court had Ms. Karleskint been given the guidance from EPA that she was not aware of is the importance of this.

THE COURT: Mr. Homiak.

MR. HOMIAK: Your Honor, I have a number of points. First of all, I don't see how Mr. Scroggin can say they were unaware of the document and then rely on the Code of Federal Regulations which allegedly referenced this document and incorporates it by reference.

According to Mr. Scroggin, certainly, Florida Cities was on notice of what the requirements of the Code of Federal Regulations are. I would also point out, Your Honor, that in the -- that the copy that was given to me by Florida Cities, there is a date stamp on the cover page which says received October 12, 1992. This document obviously came from, is being produced by Florida Cities, and so, someone obviously had it in October of 1992, so I don't see how Mr. Scroggin can claim that it was just recently discovered. It is a 1987 document, Your Honor.

I would also point out that the pages of this exhibit -- of this document that were given to me contain a cover page and three pages, the first page of which is numbered 330.5-1 which suggests to me that this is a document that is several hundred pages long. And we've received three pages of it. I think it would be very unfair at this point for Mr. Scroggin to introduce this document not having offered it as a trial exhibit before and expect us to be aware of a document that is clearly several hundred pages in length, so I would object.

I think that if the company wanted to use this exhibit, it should have designated it as a trial exhibit, alternatively, made some sort of an emergency motion to this Court setting forth the facts of this instead of relying, waiting until Ms. Karleskint is on the stand and trying to introduce it at this point.

MR. SCROGGIN: May I be heard, Your Honor?

THE COURT: Yes.

MR. SCROGGIN: The date reference of October 12, 1992, I think does require clarification, but I think Ms. Karleskint can best answer that if you wish to know why that date is there.

The indication it was the date received by Florida Cities, I would proffer to the Court, is that is incorrect. Second, the Government is essentially seeking to suppress its own guidance so it will not be before the Court. Surely, if we

are obligated to gather all test methods published in the Code of Federal Regulations as counsel has argued which would be in the tens of thousands of such documents, surely the Government itself cannot argue that these documents are not before the Court as being incorporated into the Code of Federal Regulations, and therefore, a public document that the Court may at its discretion take notice of.

THE COURT: No, sir, I've heard all I'm going to hear on this issue. I'm going to overrule the objection. I'm going to take judicial notice of the Code of Federal Regulations and the document that it purports to incorporate. I'll overrule the objection on the ground that -- stated ground that the witness is stating opinions in violation of Rule 26, at least for purposes of testimony that I have so far heard. Proceed.

MR. SCROGGIN: I would just state, Your Honor, that the reason we provide only three page are those -- we believe are the only three relevant pages from this document. The other test methods are not relevant.

THE COURT: Now, have you got the document?

MR. SCROGGIN: Yes.

THE COURT: You referred to the CFR provision. Now, have you got a copy of that, by chance, the pertinent portion of it, or are you going to rely upon just an incorporation by reference?

MR. SCROGGIN: I have a copy of -- one copy of the

Code of Federal Regulations. We have the CFR, but if it incorporates by reference -- and I do have copies of other documents prepared for insertion into the notebooks pending approval of the Court.

THE COURT: All right.

I have received that over objection, but I need to make sure you've got it there for presentation.

MR. SCROGGIN: I do, sir. And the documents number would be Florida Cities' Exhibit Number 209, and I'll provide a copy to the Court, the courtesy copy to Your Honor and to the other, the Government, and I would ask that Exhibit 209 be moved into evidence which is these three pages taken from the document.

THE COURT: Received over objection. Now let's move on.

BY MR. SCROGGIN:

I would ask that the witness be shown the Florida Cities' Exhibit Number 209. If I may have just a moment, I will give these to the appropriate people.

(Brief Pause.)

BY MR. SCROGGIN:

Q. I would direct your attention, Ms. Karleskint, to Exhibit Number 209, to page 3 on .5-1. My first question to you is, do you know why this page is numbered 330.5, why the page number begins with that?

A. I believe it's referring to the method which is 330.5?

Q. And is that the number of method referred to in the Code of Federal Regulations?

A. Yes, it is.

Q. Would you please read the very first paragraph, the very first sentence in this document. I'm sorry, strike that.

Would you please identify how you used -- how you would have used this document?

A. This is a document that the people in the laboratory and wastewater facilities used. It talks about how to do the different tests required in the permit.

Q. Is this -- are these the instructions for how to do the DPD colorimetric method?

A. Yes, they are.

Q. And is that the EPA approved method that appeared in the Barefoot Bay permit?

A. Yes, it is.

Q. And would you please read the first sentence of instructions on how the EPA gives -- on how to do this -- perform this method?

A. DPD colorimetric method is applicable to natural and treated waters at concentrations from 0.2 to 4 milligrams per liter.

Q. Ms. Karleskint, on your chart, would you please show where 0.2 to 4 milligrams per liter would appear?

A. Right here is 0.2, 4 milligrams per liter would be probably up at the ceiling there and I don't have enough paper.

Q. Did you reach any conclusion regarding how you would report using this method now that you know the detection limit from the EPA manual, did you reach any conclusion regarding how you would report future values of TRC from the wastewater treatment facilities that were below 0.2?

MR. HOMIAK: Objection, Your Honor. I think this -- Mr. Scroggin's statement mischaracterizes the statement that the witness just read. It says the DPD colorimetric method is applicable to natural and treated waters and --

THE COURT: Going too fast for the Court Reporter. Back up and read it again.

MR. HOMIAK: Your Honor, the basis of my objection is that I believe that Mr. Scroggin has mischaracterized the sentence that the witness has read into the record, that the sentence reads, that DPD colorimetric method is applicable to natural and treated waters at concentrations from 0.2 through 4 milligrams per liter. It does not say that is the detection limit.

THE COURT: Does not say what?

MR. HOMIAK: It does not say, as Mr. Scroggin indicated, this constitutes the detection limit of this method.

MR. SCROGGIN: Ms. Karleskint --

THE COURT: Well, wait a minute. I'll sustain the

objection.

MR. SCROGGIN: Sorry, Your Honor, I'll reframe the question.

BY MR. SCROGGIN:

Q. Ms. Karleskint, pursuant to the EPA instructions saying that this test method is applicable to natural and treated waters from .2 to 4, what does that tell you, if anything, regarding its applicability to the values you've written on your chart as measured from the Barefoot Bay Facility?

MR. HOMIAK: Objection. I think that clearly is calling for an opinion by the witness and she's not been offered as an expert in detection levels for the DPD colorimetric test.

MR. SCROGGIN: May I be heard, Your Honor?

THE COURT: Go ahead, yes.

MR. SCROGGIN: Ms. Karleskint's responsibilities on a daily basis are to make determinations of how to write numbers into the discharge monitoring reports submitted to EPA. My question to her relates to pursuant to EPA's instructions, how would she write those numbers. Seems to be clearly related to her current responsibilities.

THE COURT: Well. I'll take under advisement the objection.

Read the question back.

(Record read back.)

You can answer the question.

THE WITNESS: These numbers are not valued.

MR. SCROGGIN: Can you explain that?

THE COURT: What numbers are not valued.

THE WITNESS: The numbers that we detected with our DPD method are all below the detection limit indicated in that guidance and that these numbers are all below the applicable detection for that test method.

THE COURT: Sir.

MR. HOMIAK: Your Honor, she's assuming again that the fact that it's applicable means this is the detection method and there is -- she has no expertise that's been offered that she really has any -- excuse me -- has no expertise in the detection limits of this particular method. She's just saying applicable in her mind means detection limit and I object to that. I think that mischaracterizes the document which is not been fully produced as required under Rule 106 and I object.

MR. SCROGGIN: I'll be happy to rephrase the question.

THE COURT: Rephrase it then, let's see where we go.

BY MR. SCROGGIN:

Q. Ms. Karleskint, pursuant to EPA's instructions, this test method is applicable from .2 to 4 milligrams per liter. Did you make any conclusion regarding its applicability the numbers that you in fact reported for Barefoot Bay; is it applicable?

A. No.

Q. And why is it not applicable?

A. Because the permit limit was well below the detection limit of the test procedure used.

THE COURT: Sir.

MR. HOMIAK: I move to strike the conclusion that this is below the detection level.

MR. SCROGGIN: Your Honor, if I may be heard.

THE COURT: Yes.

MR. SCROGGIN: Ms. Karleskint uses technical terms on a daily basis. I cannot direct her how to use these terms. These are the terms she uses in her profession and in her interactions with the agency.

I would be happy to ask her if she believes that the -- that the fact that this test method is applicable to .2 to .4 and it is not applicable below .2 means that that is the detection limit, but we need not reach that unless Your Honor wishes.

THE COURT: Well, I don't know, maybe I have put us on a road that is allowing you to elicit testimony, opinion testimony from a person who, although qualified by training, experience, and education to render such opinions, nevertheless, the procedures have not been followed to alert your opposition to the fact that this would be done, but the Court having previously ruled as it has, I will adhere to my previous ruling, and I'll overrule the objection.

BY MR. SCROGGIN:

Q. Ms. Karleskint, I would direct your attention to Florida Cities' Number 158, and ask if you --

THE COURT: Well now, we didn't get an answer to the last question, did we? Did you get an answer to the last question?

MR. SCROGGIN: I believe we did, Your Honor, but I'll be happy to rephrase it.

THE COURT: Was there an answer? Read it back.

MR. SCROGGIN: If I may, I believe we had a motion to strike the answer, so I think we did have the answer.

THE COURT: I'd like to have the answer read back to me.

(Record read .)

All right.

The Court will deny the motion to strike. Ask your next question.

BY MR. SCROGGIN:

Q. Ms. Karleskint, I direct your attention to Florida Cities' Exhibit Number 158 and ask if you recognize this document?

THE COURT: Yes, ma'am, just a moment.

(Brief Pause.)

Go ahead.

158, did you say?

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. Can you identify, Ms. Karleskint, what this document is?

A. Yes, it's a memo from the chief of the facilities performance branch of EPA to the permit section staff.

Q. Have you seen this document before?

A. Only in preparation for this trial.

Q. Had you seen this document during the period in which the TRC levels of concern to this Court were being reported to EPA?

A. No, sir, I had not.

Q. I would direct your attention to page 4 of this exhibit. The first full paragraph beginning with the words "the NPDES Permit conditions," and ask you to read that paragraph and then I would ask you to read into the record beginning with the second sentence whose first words are "depending on the wastewater."

A. Depending on the wastewater, these tests may not detect --

THE COURT: Wait, wait, wait, where are you reading?

MR. SCROGGIN: On page 4, Your Honor, the first full paragraph which begins with the words "the NPDES Permit."

And the second sentence, I believe, beginning with the words "depending on the wastewater."

THE COURT: All right, go ahead.

THE WITNESS: Depending on the wastewater, these

tests may not detect chlorine down to a 0.01 milligram per liter level. A minimum detection level of 0.02 has been suggested. Therefore, in those cases, the permittee need only report not detectable using one of these tests to be considered in compliance. As detection levels improve over time, more accurate comparisons will be possible.

BY MR. SCROGGIN:

Q. Ms. Karleskint, how would you have reported the TRC values on the discharge monitoring reports submitted to EPA during the period of November, 1991, to November -- I'm sorry -- during the period of September, 1992, through March, 1993, had you been given these instructions and guidance from EPA?

A. After I discussed it with EPA, I would have reported it as not detectable.

Q. And what would your understanding be regarding the number of exceedences for TRC that would remain during this period of time had you reported NTD instead of the numerical values you have written on your chart?

A. We would have been in compliance with the permit requirements.

Q. I'd like to turn to the Barefoot Bay toxicity exceedences in this case. And I'll ask you, Ms. Karleskint, do you know why the Barefoot Bay Facility failed its toxicity test during the period October, '92, May, '93 and September, '94?

A. I believe that it was probably due to the fact that the

Barefoot Bay Wastewater Treatment Plant at that time was a secondary wastewater treatment plant. According to EPA guidance, the primary causes of toxicity, one of the primary causes is ammonia. Since the plant was a secondary treatment plant, it was not treating for ammonia and therefore that could have caused the toxicity at the Barefoot Bay Treatment Plant.

Q. Based on your experience with Florida Cities and other wastewater treatment facilities, is it difficult for a secondary plant discharging secondary effluent to comply with such toxicity tests?

A. It's very difficult.

Q. And if the plant upgrades to advanced wastewater treatment, is it easier for those plants to comply with the same toxicity test?

A. It usually does become easier as you upgrade the plants.

Q. What is the current status of the Barefoot Bay Facility with respect to its discharge effluent?

A. We are presently -- we are -- we've just finished the upgrade of the Barefoot Bay Plant to AWT and we're in the startup mode of the AWT processes.

Q. The permit for the Barefoot Bay Facility which you reviewed earlier, did it have any provision under -- I'll be happy for you to review it again, if you don't remember, regarding ceasing discharge from the Barefoot Bay Facility?

A. Yes. The original permit issued back in '89 I believe

required to cease discharge by July of '95.

Q. And did the Barefoot Bay Facility in fact cease all discharge by July of 1995?

A. No. We submitted a permit application for the discharge to EPA a hundred and eighty days prior to that permit's expiration in accordance with the rules and regulations.

THE COURT: Did you say 1995?

THE WITNESS: Yes, I did.

MR. SCOGGIN: I intended to say 1995.

THE COURT: All right, okay.

MR. SCROGGIN: I think I did.

THE COURT: You did.

BY MR. SCROGGIN:

Q. And what was the response of EPA to this request, if any?

A. If I recall, we did get a letter from EPA that said our permit application was considered complete, and that until a permit was issued, this usually is a standard letter we get from EPA, but you may continue to discharge until a new permit is issued in accordance with your old permit.

Q. What role if any did the State of Florida Department of Environmental Protection play in Florida Cities' request to continue discharging from the Barefoot Bay Facility?

A. The FDEP assumed delegation for the EPA NPDES program in May of 1995. Therefore, EPA was sort of out of the picture. They worked for the State of Florida, but we now responded.

Florida was handling the renewals of all the permits. We got a letter in July of '95 from the State of Florida that indicated that although our NPDES Permit had expired, we may continue to discharge in accordance with the second amended consent order with the State of Florida and that a new permit would be issued. Once the plant was -- once the AWT plant was complete, a new permit would be, I think they said, would be -- they would -- it would have the new permit conditions at that time.

Q. Was it your understanding that this gave Florida Cities authority to discharge from the Barefoot Bay Facility?

A. Could you repeat the question?

Q. Was it your understanding that this response from the Florida Department of Environmental Protection gave Barefoot Bay authority to continue discharging under Federal law?

A. Yes, sir.

MR. HOMIAK: Objection, it calls for a legal conclusion. I'm also not sure what the relevance is to the discharges. I think, Mr. Scroggin, are you talking about after the periods of time that were alleged in the complaint?

THE COURT: Well, I'll overrule the objection, it's highly leading, but the question wasn't made on that basis. You remember the question.

THE WITNESS: No.

THE COURT: Okay, read the question back.

(Record read back.)

THE WITNESS: Yes it did.
BY MR. SCROGGIN:
Q. You testified earlier that you interacted pursuant to your responsibilities to insure environmental compliance, both with EPA and the State. Has that level of interaction, the relative level of interaction with these two agencies changed since the State of Florida Department of Environmental Protection received delegation in 1995 to implement and enforce the Federal NPDES program?
A. EPA still does come down with the State of Florida to do joint performance audit inspections, so they do visit the facilities.
THE COURT: Well, is that a yes or no?
THE WITNESS: I apologize, Your Honor.
Could you repeat the question and I'll try to answer it.
THE COURT: Read the question back. It's either yes or no. In necessary, you can explain.
(Record read back.)
THE WITNESS: Yes.
BY MR. SCROGGIN:
Q. How has that relative interaction with these two agencies changed?
A. EPA does not seem to be coming down nearly -- they come down very rarely. They do come every once in awhile with a

joint -- with the State to do a joint performance audit inspection. Besides that, we get very little correspondence from them or calls from them or very little interaction with them at all.
Q. Has there been any change in the level of interaction with the State now that the State has assumed the responsibilities of implementing the Federal permitting program?
A. Yes.
Q. And how -- what are those changes?
A. The State has added on considerable more staff and that staff comes down and inspects the facilities on a much more frequents basis.
Q. I'd like to turn now to the Carrollwood facility, and the exceedences that have been found for this facility. I'll direct your attention, Ms. Karleskint, to Florida Cities' Exhibit Number 140 which is already in evidence which is the Carrollwood Facility's NPDES Permit. Ms. Karleskint, do you recognize this document?
A. Yes, sir.
Q. Can you tell me what kind of facility this permit is for? Can you tell from looking at it?
A. Yes, sir.
Q. What kind of facility is that for?
A. It's for an advanced wastewater treatment facility.

Q. And how can you tell that by looking at the permit?
A. Due to the permit limits for carbonaceous BOD, total suspended solids and nutrients as well as residual chlorine.
Q. While you keep that exhibit in front of you, I would also ask you to look at Government Exhibit 255 which are the charts prepared for the Government's summary judgment motion that lists the reported numbers that led to the exceedences for these various parameters which Ms. Karleskint referred.
I'm not going to ask you to tell us, I'm asking you if you reviewed these numbers and verified indeed there were exceedences for all the parameters that you mentioned?
A. Yes, sir.
Q. And do you have any explanation for why the Carrollwood Facility violated these parameters that you say are appropriate for an advanced wastewater treatment facility?
A. The Carrollwood Facility was a secondary wastewater treatment plant and the permit limitations were for an advanced wastewater treatment plant.
Q. I'd ask the witness be shown Florida Cities' Exhibit 146 and also 155, they're two similar documents. Do you recognize these documents, Ms. Karleskint?
A. Yes, sir.
THE COURT: 146 and what?
MR. SCROGGIN: 155, Your Honor.
BY MR. SCROGGIN:

Q. What are these two documents?
A. It's a letter from Paul Bradtmiller to --
Q. Excuse me for interrupting. Refer to 146. What is 146?
A. Exhibit 146 is a letter from Paul Bradtmiller, senior vice president of Florida Cities Water Company, to Mr. Michael Hom of the compliance section of EPA.
Q. Did you draft this letter or --
A. I don't believe so.
Q. Did you review it before it was sent to EPA?
A. I don't believe so.
Q. Were you familiar that this request had been made to EPA?
A. No, sir.
Q. Okay.
Were you in any -- were you personally involved in any way in the management of the Carrollwood Facility during the period of time for which -- the six months period of time for which these exceedences were reported?
A. Yes, sir.
Q. And can you describe what that involvement was?
A. Gerald Allen had asked me to take a look at the Carrollwood Facility and the EPA permit for that facility, also an inspection report I believe that had been done by EPA and see what we could do at the Carrollwood Facility since we did have a permit that had advanced levels of wastewater treatment to see if was there any improvements we could make to improve

the facility to meet as best we could the advanced wastewater treatment limitations.
Q. Do you have any -- you've testified that the Carrollwood Facility was a secondary facility but had an advanced wastewater treatment, a much more stringent permit. Do you have any explanation therefore as to how Carrollwood, being only a secondary facility, did not violate TSS and BOD every month during this six months period?
A. I think a lot --
THE COURT: Just a moment.
MR. HOMIAK: Well, objection, Your Honor, I think we're getting into a field of opinion testimony as well. Ms. Karleskint is opining on the operation of the specific --
THE COURT: I don't know what the basis of her knowledge would be on that, and until you've laid some kind of foundation, I'm not going to permit her to answer that question.
MR. SCROGGIN: I'll be happy to lay a foundation, Your Honor.
BY MR. SCROGGIN?
Q. Ms. Karleskint, can you describe the steps that you took regarding the operations at the Carrollwood facility during this six months period.
A. I believe it started before that six months period, the steps I took.

Q. Can you describe what those steps were?
A. Right. I made several visits to the Carrollwood Facility and met with the division manager there, Derwood Horak and the wastewater treatment plant operator, Dennis McDowell. We sat down and we went through the EPA performance audit inspection. I wrote several memos that had been shown to me during my deposition concerning the treatment of that facility. And I also made recommendations on ways we could improve the performance of the treatment facility.
Q. And did you improve the performance of the treatment facility through these steps that you implemented?
A. I believe that the treatment facility, the performance of the treatment facility performance did improve.
Q. Can you say in what regards it improved.
A. With respect to the process of carbonaceous BOD and TSS.
Q. Based upon your experience with Florida Cities and with other wastewater treatment facilities, is it unusual for a secondary plant to be able to achieve the very stringent AWT requirements for TSS and BOD?
A. Yes, but that is dependent upon many factors about the treatment plant, whether or not it has excess capacity, if it's operating at capacity, and such other factors.
Q. I'd like to move on to the Waterway Estates Facility. I'll ask the witness be shown Florida Cities' Exhibit Number 196.

MR. SCROGGIN: Your Honor, if I might ask, does Your Honor intend to take a break this morning?
THE COURT: Yes, I will be taking a break about 11:00 o'clock. Why? You want to take a break now?
MR. SCROGGIN: That's up to Your Honor.
THE COURT: Well, if there's a -- if there is a physical or otherwise need, then I certainly want to be sensitive to that.
MR. SCROGGIN: No, Your Honor.
THE COURT: Okay.
BY MR. SCROGGIN:
Q. I would direct your attention to Florida Cities' Exhibit 196 and ask if you recognize this document?
A. Yes, sir.
Q. What is it?
A. It's the final issuance of the NPDES Permit for Waterway Estates.
Q. And would you look at the effluent limitation requirements that are contained in this permit and tell us where you find them, what page of the exhibit are the effluent limitations found on? Count pages back to the first page of the exhibit, no matter what the number written on the page is.
A. Page 8.
Q. Can you tell from these effluent limitations what kind of plant this permit is intended for?

A. Based upon the nutrient limitations, it's intended for advanced wastewater treatment.
Q. And do you know, during the period of time at question for this case, what kind of facility the Waterway Estates Facility was, and by that, I mean with respect to the exceedences that are reported from July, 1991, through March, 1992, for toxicity and total nitrogen?
A. I'm sorry, you're going to need to repeat the question.
Q. Can you tell me what kind of facility Florida Cities Waterway Estates Facility was during the period of time of the toxicity and total nitrogen violations?
A. Yes, it was a secondary treatment plant.
Q. Is this -- and how do you explain that a secondary plant cannot achieve the AWT limits?
A. A secondary treatment plant does not have the capability to normally remove the nutrients, primarily nitrogen and phosphorus, so it's very difficult for a secondary treatment plant achieve the nutrient removal required within this permit.
Q. Once the Waterway Estates Facility achieved AWT status, did it then comply with the toxicity and nitrogen limitations in this permit?
A. Yes, sir.
Q. I would ask that the witness be shown Florida Cities' Exhibit Number 80, and ask if you could identify that document?
A. Yes, sir.

Q. What is this document?
A. It's a letter from myself to Mr. Ken Kwan of the EPA indicating to him the biological treatment unit number two for the Waterway Estates was put into service.
MR. HOMIAK: Excuse me, Your Honor, I'm confused. I think he said number --
MR. SCROGGIN: Number 80. I'm sorry.
MR. HOMIAK: Oh, 80. Thank you.
BY MR. SCROGGIN:
Q. You've testified that once the Waterway Estates Facility achieved AWT status, that the violation for toxicity and total nitrogen stopped occurring?
A. Once it wasn't -- yes, but the toxicity, we did not meet the toxicity limitation until we had both biological treatment units on line which was basically I think the end of June, 1992. This indicates that the large BTU unit was put into service, but the way we constructed the plant, it was two facilities and we only -- we had to keep one operating while we redid the work on the other facility.
MR. SCROGGIN: I would ask that exhibit be moved into evidence.
THE COURT: Be received.
BY MR. SCROGGIN:
Q. I'd turn the witness' attention to Florida Cities' Exhibit 86, and ask if you can identify this document?

A. It's a letter from Al Herndon of the EPA to Paul Bradtmiller of Florida Cities Water Company advising him that the terms agreed to in the October, 1992 administrative order for testing of toxicity, uh, will be done in an accelerated manner in order to shorten the period of the administrative order.
Q. Was this an enforcement action by EPA taken because of the toxicity failures?
A. Yes, sir.
THE COURT: Just a moment.
MR. HOMIAK: Objection. First of all, I think whether or not this is an enforcement action calls for a legal conclusion. I would also argue that if Mr. Scroggin is referring to the exhibit, I think he mischaracterized it as being an enforcement action.
MR. SCROGGIN: I'll be happy to withdraw the question and rephrase if that would speed things up.
THE COURT: All right.
BY MR. SCROGGIN:
Q. Ms. Karleskint, did EPA initiate enforcement action because of the toxicity failures?
A. Yes, sir.
Q. And does this document number 86 make reference to that enforcement action?
A. Yes, sir.

MR. SCROGGIN: I would ask that 86 be moved into evidence.
THE COURT: It will be received.
BY MR. SCROGGIN:
Q. Finally, Ms. Karleskint, I direct your attention to Florida Cities' Exhibit Number 88, and ask if you recognize this document?
A. Yes, sir.
Q. Have you seen it before?
A. Yes, sir.
Q. Can you tell me what it is?
A. It's a letter from EPA to Mr. Bradtmiller at Florida Cities advising him Administrative order number 92-093 issued in September of '92 has been placed in an inactive status.
Q. And how did you interpret this document when you received it?
A. That we had complied with the terms and the administrative order and that it had between activated.
MR. SCROGGIN: And I'd ask 88 be moved into evidence.
THE COURT: Be received.
BY MR. SCROGGIN:
Q. Ms. Karleskint, during the period of time when the toxicity violations were occurring, did Florida Cities take any temporary measures with respect to reducing nitrogen?
A. Yes, sir, we did.

Q. Can you describe what those measures were?
A. Yes. We tried to accelerate the construction schedule based on the denitrification filters, to have them completed so that we could try to denitrify out of the original treatment plant.
We started feeding methanol out of five gallon drums to provide a food source for the denitrifiers to provide denitrification. Basically, in order to remove nitrogen, you have to nitrify all the ammonia and organic -- you have nitrify it and denitrify it so it's -- so you're going through the nitrogen chain to convert it to nitrogen gas which is released into the air.
Q. Why did you take temporary measures to try to reduce nitrogen when the Waterway Estates Facility was already under construction to build AWT that would remove nitrogen?
A. We wanted to comply with the administrative order as soon as possible.
MR. SCROGGIN: I have no further questions.
THE COURT: All right.
We'll take fifteen minutes.
(Thereupon, a brief recess was taken.)

Page 69

THE COURT: All right, Mr. Hird.

CROSS EXAMINATION

BY MR. HIRD:

Q. Good morning, Ms. Karleskint.

You testified that you -- your first project for Avatar Utilities were working on audits of individual facilities, is that correct?

A. Yes, sir.

Q. Did you prepare audit reports?

A. Yes, sir.

Q. Did you ever provide these audit reports to Leon Levy?

A. No, sir.

Q. Did you ever discuss the contents with him -- with Mr. Levy?

A. No, sir.

Q. Did you ever provide these reports to Peter Sharp?

A. No, sir.

Q. Did you ever discuss the contents of those with Mr. Sharp?

A. No, sir.

Q. Did you ever provide them to John Sladkus?

A. No, sir.

Q. Did you ever discuss the contents of them with Mr. Sladkus?

A. No, sir.

Page 70

Q. Did you ever provide them to Lawrence Wilkov?

A. No, sir.

Q. Did you ever discuss the contents with Lawrence Wilkov?

A. No, sir.

Q. Now, you testified today about certain exceedences at the Barefoot Bay treatment plant. Have you ever discussed those exceedences with any of the four gentlemen that I mentioned?

A. No, sir.

Q. You also testified about exceedences at Carrollwood. Have you ever discussed those with any of those four gentlemen?

A. No, sir.

Q. Finally, you discussed exceedences at Waterway Estates. Have you ever discussed those -- I'm sorry.

You testified today about exceedences of the Waterway Estates permit. Have you ever discussed those exceedences at all with any of those gentlemen?

A. No, sir.

Q. During your work for Avatar Utilities and Florida Cities, did you ever receive any direction from Peter Sharp to do anything?

A. No, sir.

Q. Did you ever communicate with Mr. Sharp?

Page 7

A. No, sir.

Q. Did you have a sense -- any sense that Peter Sharp was micro managing your operations?

A. No, sir.

Q. Thank you very much, Ms. Karleskint.

THE COURT: Mr. Homiak.

CROSS EXAMINATION

BY MR. HOMIAK:

Q. Good morning, Ms. Karleskint. My name is Bob Homiak and I'm representing the Government in this action.

Ms. Karleskint, Mr. Scroggin asked you during direct examination whether you had ever made recommendations regarding compliance to Florida Cities that were costly -- that required costly upgrades to the wastewater treatment plants. Do you remember that?

A. Yes, sir.

Q. And your testimony was that those requests had never been declined?

A. Yes, sir.

Q. Now, compliance with the law is not an option, is it, Ms. Karleskint, in your opinion?

A. No, sir.

Q. So, those expenditures had to be made to come into compliance, isn't that true?

A. Yes, sir.

Page 7

Q. With respect to the BOD versus CBOD reporting issues at Barefoot Bay, you indicated that the State permit required you to report CBOD, correct?

A. Yes, sir.

Q. And, of course, the EPA NPDES permit required you to report BOD?

A. Yes, sir.

Q. Now, did you, in fact, inform the laboratory -- did Florida Cities inform the laboratory that was doing the testing of the two differing requirements: One for CBOD, one for BOD?

A. I don't know the answer to that, sir.

Q. Well, would you agree, Ms. Karleskint, that it's the permittee's duty to understand the terms and conditions of their various permits pursuant to which it operates?

A. Yes, sir.

Q. So that Florida Cities should have notified, at any rate, the laboratory doing the analyses of the two different permitting requirements, shouldn't it have?

A. They may have, sir. I do not know.

Q. Did you know what data was being reported by the laboratory?

A. Now I do, yes.

Q. Was only CBOD being reported?

A. At that time, yes.

Page 73

Q. So, either the laboratory didn't know of the BOD requirement, or Florida Cities was not monitoring the results very carefully; wouldn't that be correct?
A. I don't know, sir. That was a division responsibility.
Q. Now, Ms. Karleskint, I'd like to direct your attention to the Barefoot Bay permit that you testified to earlier. And this is Government Exhibit 399, although you may have been using the Florida Cities exhibit earlier.
I'd like to direct your attention again, Ms. Karleskint, to the page of this exhibit that is designated Roman numeral one dash two. Do you see that?
A. Yes, sir.
Q. Now, directing your attention to the third paragraph in what is numbered two, I believe you testified earlier that the DPD method was specified in the permit. Was that your prior testimony?
A. Sir, I have the Waterway Estates permit in front of me, and Paragraph 3 has to do with ph.
Q. I apologize, Ms. Karleskint, and to the Court. It's Government Exhibit 185. I apologize for the confusion.
Do you see the paragraph I'm referring to, Ms. Karleskint?
A. Yes, sir.
Q. Was it your prior testimony that the DPD method was specified in the permit?
A. Yes, sir.
Q. Now, the DPD method is not specifically required by this permit, is it?
A. No, sir.
Q. The permit, in fact, provides the permittee with a number of options, isn't that correct?
A. Yes, sir.
Q. Okay. So, it was Florida Cities' decision to use the DPD method as opposed to one of the other allowable methods under the permit, isn't that correct?
A. Yes, sir.
Q. Now, Ms. Karleskint, wouldn't you agree that it is the permittee's duty to ensure that the proper testing and analytical procedures are being used to measure compliance with NPDES permits?
A. Yes, sir, and we had -- when EPA was there to do a performance audit inspection, we asked them if we were using --
THE COURT: Well, you've answered his question.
THE WITNESS: Okay.
THE COURT: If counsel wants on redirect to elicit that --
THE WITNESS: Okay.
THE COURT: -- then perhaps they can.

Page 7

BY MR. HOMIAK:
Q. Ms. Karleskint, I want to refer you to what was marked as Defendant's Exhibit 209, the methods for chemical analysis of water and waste.
THE COURT: Defendant's Exhibit 209?
MR. HOMIAK: Yes.
THE COURT: I don't have that.
MR. HOMIAK: Your Honor, that's the three or four page exhibit that we argued about this morning.
THE COURT: Okay, okay. Yes. All right.
BY MR. HOMIAK:
Q. Ms. Karleskint, when did you become aware of the existence of this document?
A. I probably used this document -- I probably seen it before back in college, to be honest; but I specifically became aware of this document with respect to looking up -- looking it up for DPD.
I just recently found this and was looking it up this past week -- maybe last Thursday or Friday or Monday; I can't recall -- but it's been very, very recently.
Q. Were you directed to look this up in preparation for trial?
A. I wasn't exactly asked to look it up. When we prepared for trial, we were looking for a document that would reference what the detection limit was for total

Page 7

residual chlorine.
So, when I was doing some review, I noticed that this method was referenced in an EPA inspection report, so I went to it and I realized I had this book and I went and looked it up.
Q. Does Florida Cities use the DPD method to measure total residual chlorine at any of its other facilities?
A. I believe we are using it at some of our non discharging facilities, like in Poinciana, yes, sir.
Q. But not at Waterway Estates or Carrollwood, is that correct?
A. We don't have a plant at Carrollwood, but we do not -- we use amperometric titration at Waterway Estates -- no, actually, we don't use -- we just started using chlorine at Waterway Estates.
Q. Ms. Karleskint, did you testify earlier that the laboratory that you used was familiar with this manual?
A. The laboratory was not doing this test.
Q. Where was the test being performed; right at Florida Cities' property?
A. It was being done by the plant operator.
Q. I'd next like to direct your attention to what has been designated Florida Cities' Water Company Number 158
Ms. Karleskint, I'd direct you to Page 4 of that exhibit and specifically to the sentences that you read into

Page 77

the record earlier, which begins at the middle of Paragraph Number 2: Depending on the wastewater, these tests may not detect chlorine down to zero point zero one milligrams per liter level. Do you see that?
A. Yes, sir.
Q. Would you read the next sentence, please, the parenthetical?
A. Yes, sir. A minimum --
THE COURT: What page are we on?
MR. HOMIAK: Page 4 of the exhibit, Your Honor.
THE COURT: Okay, okay.
THE WITNESS: A minimum detection level of zero point zero two milligrams per liter has been suggested.
BY MR. HOMIAK:
Q. Doesn't that suggest to you, Ms. Karleskint, that the detection level of the DPD method is really zero point zero two rather than the point two you mentioned earlier?
A. No, sir.
Q. It doesn't?
A. No, sir.
Q. What does this level -- what does this sentence mean, to your understanding?
A. Well, I know from -- I now know that they are referring to the amperometric titration level, and that's the minimum detection level of amperometric titration.

Page 78

Q. But we're not talking about amperometric titration.
A. I know, sir.
Q. Are you saying that this memo is simply in error?
A. No, sir. What I'm saying is, this memo is talking about -- it's talking about either the amperometric titration method or the DPD colorimetric method, if you look at the very first sentence, and that for the amperometric titration method, the detection limit is zero point zero two.
Q. Well, Ms. Karleskint, you indicated earlier the testing that was being done for TRC was being performed by Florida Cities' personnel, isn't that correct?
A. Yes, sir.
Q. And that Florida Cities' personnel had a duty to understand the terms and conditions of the NPDES permit, isn't that correct?
A. Yes, sir.
Q. Then they should have taken care to use an appropriate test method, shouldn't they?
A. They did verify with EPA that they were using the correct method.
MR. HOMIAK: Move to strike, Your Honor.
THE COURT: Well, I'll deny the motion.
If you want to ask the question again -- I'm not sure that you got a response to your question.

Page 79

BY MR. HOMIAK:
Q. Now, Ms. Karleskint, you've testified earlier that one of your jobs at Florida Cities is to review DMR's for accuracy, isn't it?
A. Yes, sir.
Q. But Mr. Acosta actually signs them?
A. Yes, sir.
Q. I want to direct your attention to Florida Cities' Exhibit Number 185 -- it's the Barefoot Bay permit -- and I want to direct your attention to that same paragraph we looked at earlier, the third paragraph in number two.
A. I'm looking at a federal income statement right now.
Q. Excuse me. I'm sorry.
(Pause.)
A. Yes, sir.
Q. I want to direct your attention to the sentence that begins after the underlined reference to standard methods, the sentence that starts, If chlorine.
A. You would like me to read it?
Q. Do you see that sentence?
A. Yes, sir.
Q. Would you read it, please?
A. Yes, sir. If chlorine is not detected using one of these methods, the permittee shall report on the discharge monitoring report the analytical results for chlorine as

Page 80

being measured at less than the detection level for the test method selected.
Q. And, in fact, Florida Cities detected chlorine in the effluent samples at Barefoot Bay between September '92 and March of '93, didn't it?
A. Using the DPD method, they did, sir.
Q. And you reported, then, to EPA on your DMR's of September '92 to March '93, correct?
A. Yes, sir.
Q. And the levels that you reported exceeded the allowable concentration for total residual chlorine, or zero point zero one, did it not?
A. Yes, sir.
Q. At any time between September 1992 and March '93 did you ever consider using a different test method to test for TRC at Barefoot Bay?
A. I don't recall when we decided to change the test method, but when we first started detecting -- I'm sorry, sir.
Q. In fact, you became concerned at some point, did you not, about the validity of the DPD method?
A. Yes, sir.
Q. And you became concerned, as I understand it, because you were reporting TRC violations or exceedences in your DMR's, isn't that correct?

Page 81

A. Can I explain the --
Q. Let me rephrase the question. After reporting the TRC levels that you did between September '92 and March of '93, did Florida Cities take steps to reduce the level of total residual chlorine in the effluent?
A. Could you repeat the question?
Q. Well, after reporting the TRC violations that you did between September of 1992 and March of 1993, did Florida Cities take any steps to reduce or eliminate what it perceived as being excessive TRC from the effluent?
A. Yes, sir.
Q. And what steps did it take?
A. Once we detected chlorine with the DPD colorimetric method, we believed that there was actually traces of chlorine and, therefore, we went through the permitting steps and the construction of sulphur dioxide facilities to assure that there would be no chlorine whatsoever.
Q. And you installed a sulphur dioxide, or SO-2, unit at Barefoot Bay, did you not?
A. Yes, sir.
Q. Do you recall when that was installed?
A. Did you say we had the --
Q. I'm asking if you recall when the sulphur dioxide unit was installed.
A. Right now, because I'm nervous, I cannot tell you the

Page 8

Q. And subsequent testing that you did using the amperometric titration method showed levels that were with permit limits, correct?
A. Yes, sir.
Q. And where were these effluent -- where were these samples taken?
A. They were taken prior -- we made a lot of modifications to the Barefoot Bay treatment facility also during that time. We had a chlorine contact chamber for -- prior to putting in the SO-2, we had ponds that we were using for dechlorination; then it would go into the old contact chamber, and then there was the outfall that discharged into the agricultural drainage ditch.
We were testing for the total residual chlorine at the discharge point from this -- from the old contact unit. There was an old Cohen contact unit, and we were testing for it right there at that discharge as -- there was a weir there, and that's where we were testing for the chlorine residual.
Q. Now -- I'm sorry.
A. What happened, though, is after we put in the SO-2 unit, we no longer needed to use those ponds for dechlorination, so we started bypassing the ponds since we did not need that detention time in them.
Q. Now, the question, though -- let me rephrase the

Page 82

exact date it was installed.
Q. But it was sometime after March of '93, was it not?
A. Yes, sir.
Q. Now, after you installed the sulphur dioxide unit, you continued to get TRC readings in excess of permitted limits, didn't you, using the DPD method?
A. Yes, sir.
Q. And this puzzled you because the sulphur dioxide unit should have removed the total residual chlorine, is that correct?
A. I knew that the sulphur dioxide had removed the residual chlorine.
Q. So, at that point, as I understand it, you switched to another test method to test for chlorine, is that correct?
A. Yes, sir.
Q. And what method did you switch to?
A. Amperometric titration.
Q. But your switch to the amperometric titration method was clearly subsequent to the installation of the SO-2 unit, right?
A. Yes, sir.
Q. And the purpose of the SO-2 unit was to reduce or eliminate the total residual chlorine from the effluent, isn't that true?
A. Yes, sir.

Page 8-

question because I'm not sure that you've answered it.
A. Okay.
Q. After switching to the amperometric titration method, were you taking your chlorine samples, TRC samples you were reporting to EPA, after the effluent had been through the sulphur dioxide unit?
A. Yes, sir.
Q. Again, the sole purpose of that unit was to remove TRC from the effluent?
A. Yes, sir.
Q. So that the non existence or the levels of chlorine that were being reported after you went to the SO-2 treatment system and the amperometric -- well, let me withdraw that and re-ask the question.
The levels of chlorine that you were detecting after you installed the SO-2 unit, dechlorination unit, really are not representative of the chlorine levels that preceded installation of that unit, isn't that correct?
A. I'm not sure I quite understand what you're asking.
Q. Well, the point is, you installed a sulphur dioxide unit to eliminate total residual chlorine?
A. Yes, sir.
Q. And you've tested your total residual chlorine after you've installed the SO-2 unit?
A. Yes, sir.

Page 85

Q. And those levels were below the permitted levels, is that correct?
A. With what test method?
Q. With the amperometric test method.
A. With the amperometric titration test method, yes, sir.
Q. So, the existence or the fact that the effluent passed the TRC levels after installation of the SO-2 unit really tells you nothing about TRC levels before installation of the unit, isn't that correct?
A. No, sir. What we did find out is, when we were using the DPD test method, when we first put it -- installed the SO-2 system, even though we were feeding an excess of SO-2, we still detected chlorine with the DPD colorimetric method.
It was at that time that we contacted HACH, the maker of the test kit, for the DPD test method, and they had indicated to us at that time that the detection limit was point one milligrams per liter.
I had not referred to this EPA manual that I just recently had found. I wasn't even aware of that at that time. I was just -- we had the detection limit from using the little spectrophotometer. And that is when we decided, Hey, we have to change our test method. We realized that the DPD was not an accurate test, and we ordered all the equipment for the amperometric titration.
Q. So, then, your first understanding of the detection

Page 86

level of the HACH method that you just referred to was based upon discussions with HACH representatives, wasn't it?
A. Yes, sir.
MR. HOMIAK: Your Honor, as you know, we have a continuing objection to whether or not the Defendant's Exhibit 209, in fact, should be admitted and, in fact, indicates that point two represents a detection level for the DPD method.
And I would move to strike the witness' testimony about the detection limit for the DPD method being point one based upon her discussions with HACH representatives as being hearsay.
THE COURT: Yes, sir?
MR. SCROGGIN: Your Honor, counsel elicited this with a direct question. It's hard for him to discount the answer at this time by calling it hearsay.
THE COURT: Okay. I'll overrule the objection and deny the motion.
BY MR. HOMIAK:
Q. How was chlorine administered to the wastewater at Barefoot Bay?
A. Through a chlorine gas injection system. I'm trying to explain it. There's a --
Q. Well, I'm not sure that that's necessary.
How is the amount of chlorine that's injected into the

Page 87

water regulated?
A. By a rotameter.
Q. Excuse me?
A. It's sort of difficult for me to explain to you, but you have a chlorine gas cylinder, and then you have a water line that feeds into it. The chlorine gas sort of rises into it.
You have a regulator on the chlorine cylinder. And I think in this case we had -- there's different types of systems, and I'm not quite sure which one we have at Barefoot Bay. But I think the regulator is attached directly on to the chlorine cylinder.
And then you have a rotameter up on the wall that you say how many pounds of chlorine you're going to use, and that pulls the chlorine -- you have a vacuum system and it pulls a certain amount of pounds of chlorine, injects it with the water, just regular potable water, and then it goes -- the solution -- the chlorine solution is fed into the wastewater stream.
Q. But in terms of setting the amount of chlorine that will be injected into the waste stream, is that a determination that's made by the plant operator?
A. Yes. You're basically required by the State of Florida -- we also have what you call --
THE COURT: Do you want this?

Page 88

MR. HOMIAK: Not particularly, Your Honor.
THE COURT: Okay. You've answered the question. The answer is "yes."
BY MR. HOMIAK:
Q. So, it's up to the operator, if I understood your testimony, to set the amount of chlorine that will be injected into the effluent?
A. Yes, sir.
Q. And the equipment that you previously described carries that out and injects the proper -- or the preset amount of chlorine into the effluent, is that correct?
A. Yes, sir.
Q. Now, do chlorine levels in the effluent typically increase and decrease over time?
A. Yes, sir.
Q. Ms. Karleskint, turning now to the permit toxicity violations at Barefoot Bay, how many violations did the company report for toxicity?
A. I don't recall at the moment.
MR. SCROGGIN: Your Honor, the number of violations is already a matter of record as found by the Court in the summary judgment.
MR. HOMIAK: Well, Your Honor --
THE COURT: That's noted. Go ahead.
BY MR. HOMIAK:

Page 89

Q. Ms. Karleskint, were you asked to assist in the preparation of Florida Cities' responses to the Government's interrogatories that were served in this action?
A. Yes, sir.
Q. And, Ms. Karleskint, in those interrogatories, do you recall indicating that for whole effluent toxicity at Barefoot Bay, there were at least eight violations since the complaint was filed?
A. I may have, sir, yes.
Q. Well, Ms. Karleskint, isn't it true that the number of -- that there were -- since the complaint was filed, there have been five more failures of whole chronic effluent toxicity tests; two of the routine samples and three of the follow-up samples failed while the plant is presently under construction for the upgrade?
A. Yes, sir.
Q. Now, for Waterway Estates --
THE COURT: Just a moment.
MR. SCROGGIN: Your Honor, I'd move to strike this last answer. It's not part of this case. The complaint has not been amended to include these alleged violations. And they are irrelevant to any of the mitigation factors. Certainly a history of such violations, for example, would not be read, I would suggest, to include alleged violations after -- in the future of those alleged in the complaint.

Page 90

MR. HOMIAK: Your Honor, I believe in her direct testimony, Ms. Karleskint testified that there were three whole effluent toxicity violations and -- simply pointing this out as to the existence of a discrepancy between the witness' testimony and what the company has reported in its responses to interrogatories.
THE COURT: I'll overrule the objection.
BY MR. HOMIAK:
Q. For Waterway Estates, Ms. Karleskint, you spoke earlier of certain temporary measures that the company took to comply with the administrative order while it was in the process of upgrading to advanced wastewater treatment, isn't that correct?
A. Yes, sir.
Q. Now, wouldn't you agree the compliance with an EPA administrative order is not optional?
A. Yes, sir.
Q. Ms. Karleskint, do you know whether the North Fort Myers Utilities Company had -- I'm sorry. Strike that, Your Honor.
Do you know, Ms. Karleskint, whether the City of Cape Coral wastewater treatment plant has offered to take the effluent from the Waterway Estates plant for use in its reuse system?
THE COURT: Just a moment.

Page 91

MR. SCROGGIN: Objection, Your Honor. This is beyond the scope of direct examination. There was no mention of the Cape Coral facility in my direct examination.
MR. HOMIAK: Your Honor, Mr. Scroggin on direct clearly went into the compliance or non compliance issues at all three facilities, including Waterway Estates.
THE COURT: Well, we're not going to expand things any more than they already are. I'm going to sustain the objection.
MR. HOMIAK: One moment, Your Honor.
(Pause.)
MR. HOMIAK: Your Honor, I have no further questions for this witness. Thank you, Ms. Karleskint.
THE COURT: Any redirect?
REDIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Ms. Karleskint, in response to counsel's questions regarding the status of the DPD method, you testified that the DPD was approved by EPA and listed in the permit, is that correct?
A. Yes, sir.
Q. Did you review any documents in which EPA had reviewed the use of the DPD method at the Barefoot Bay facility?
A. Yes, sir. They had --
Q. Can you tell me what those documents said?

Page 9

A. Yes, sir. EPA had performed a performance audit inspection of the Barefoot Bay wastewater treatment plant, and they did look at the test method we were using for chlorine residual.
Q. And what was the test method that EPA looked at --
A. DPD.
Q. Excuse me. One moment. Let me finish my question.
What was the test method you were using -- that Barefoot Bay was using when EPA reviewed the testing for TRC at Barefoot Bay?
A. DPD.
Q. You testified also that you no longer use DPD at Barefoot Bay, is that correct?
A. Yes, sir.
Q. You now use what method?
A. Amperometric titration.
Q. You were also asked whether or not making tests now with amperometric titration are relevant since you are testing after sulphur dioxide is being added to the effluent.
My question for you is: Did you perform any other tests that would give you information regarding whether or not the DPD tests were giving you false alarms or real information?
MR. HOMIAK: Object. It's not clear what time

Page 93

frame Mr. Scroggin is referring to.
THE COURT: Okay. Well, let's see if you can put a time frame to your question.
BY MR. SCROGGIN:
Q. After changing from the DPD method to the newer amperometric method, did you do any tests with the DPD method to determine its sensitivity at low levels of chlorine?
A. Yes, sir.
Q. And what were those tests, and what were the results?
A. We had done several tests with this -- since this case with the spectrophotometer of question just for our own knowledge.
We followed the standard methods in the test and did a set of seven tests to determine what the -- based upon standard methods, and after discussions with HACH on the actual detection limit using the standard methods method to determine what the detection limit was on that spectrophotometer.
This was done sometime after Barefoot Bay was, but recent tests show the spectrophotometer that hasn't been used in a while is -- the detection limit is point five milligrams per liter.
Q. Do you do any tests with water that you knew absolutely, positively had no chlorine in it?

Page 94

A. Yes, sir.
Q. And what were the results of those tests?
A. Yes, sir. We tested with deionized water that we knew that had no chlorine residual and found -- we found traces of chlorine -- the DPD methods picked up levels of up to point zero six milligrams per liter of chlorine, and we knew that there was -- after calibration, we knew that there was no chlorine whatsoever in that deionized water.
Q. If you're using the DPD method to do tests on water -- deionized water that you know has absolutely no chlorine and yet still get readings that indicate chlorine, did you reach any conclusion regarding the value of those readings?
A. Yes. We determined that they -- the DPD colorimetric method was not the method to be using to determine levels up to point zero one; that it was not accurate and those levels were not valid.
Q. During the time you were using the DPD method, you used it for what reason?
A. We used it to determine what the total residual chlorine was in our effluent.
Q. No. I'm sorry. For what reason? Why did you use the DPD method during the time that it was being used as the means of reporting values to EPA?
A. It was shown in the permit to be an EPA acceptable method. And when we questioned it with EPA if we were using

Page 9

an acceptable method, they indicated that it was an acceptable method.
Q. You received several questions during cross about the magnitude of chlorine. That's what we have been discussing for some time. You also have experience, do you not, pursuant to your testimony, with drinking water facilities? Can you tell me the relative magnitude of total residual chlorine that we're talking about on your chart behind you and that were reported for Barefoot Bay and compare those with that from a drinking water facility?
MR. HOMIAK: Objection, Your Honor. This is clearly beyond the scope of the cross examination.
THE COURT: Sustained.
MR. SCROGGIN: I have no further questions, Your Honor.
THE COURT: Okay. Thank you. You may step down.
MR. HOMIAK: Your Honor, simply for the record, we would renew our objection to the admission of Defendant's Exhibit 209 into evidence and any testimony of Ms. Karleskint that called for opinions since she was not designated as an expert witness in accordance with this Court's order and the provisions of Rule 26.
THE COURT: Okay. Your renewed objection will be overruled, and your motion will be denied.
Call your next witness.

Page 9

MR. HIGH: Good morning, Your Honor.
Florida Cities calls Keith Cardey.
THE DEPUTY CLERK: Raise your right hand, please.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: Keith Cardey. The last name is spelled C-A-R-D-E-Y.
- - -
Thereupon,
KEITH CARDEY,
a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:
DIRECT EXAMINATION
BY MR. HIGH:
Q. Good morning, Mr. Cardey.
A. Good morning.
Q. Mr. Cardey, what educational experience do you have?
A. I'm a graduate of the University of Wisconsin in

Page 97

electrical engineering and the University of Kentucky School of Law.
Q. When did you graduate from Wisconsin?
A. 1949.
Q. And when did you graduate from Kentucky?
A. 1951.
Q. What work experience do you have since 1952?
A. Since 1952?
Q. Yes, sir.
A. Well, let me start out -- let me start back a little farther.
I worked for Kentucky Utilities Company up until 1949, I believe; and at that time -- I went to law school at the same time and then went to Illinois Power Company. From there, I went to Consolidated Water Company in Chicago. Consolidated Water Company, by the way, was the parent of Florida Cities Water Company.
After that, I started my own consulting and concurrently with that acquired a water company near Chicago. It's water and wastewater. And I was president and major stockholder in that company and did consulting work -- and am still doing it to some extent -- but in 1975, I was also made president of Florida Water Utilities Company which operated several subsidiaries on the east coast of Florida.

Page 98

Q. Approximately when did you begin your career as a consultant?
A. In the '60's.
Q. As a consultant, did you have any clients in Florida?
A. Yes. I think percentage wise I probably did more work in Florida than any other state.
Q. And in what field of expertise were you consulting?
A. Primarily in the regulatory field; and when I say that, probably more in the ratemaking area than any other.
Q. In what type of industry were your clients?
A. Utility companies.
Q. Do you have any clients that were wastewater treatment plants?
A. Yes. Just about all of the companies in Florida had both water and wastewater.
Q. Approximately how many rate cases have you appeared in throughout your career?
A. First, I haven't kept track of them; but if I said 150 to 175, I'm -- I may even be on the low side there.
Q. Approximately how many rate cases in Florida have you appeared in?
A. Probably 75, somewheres in that area.
Q. And approximately how many rate cases for Florida Cities Water Company have you appeared in?
A. Well, if I said 40, 45, it's probably reasonable. The time period was 1965 to 1972, so during that period.
Q. In reports that you prepare in rate cases, do they involve comparisons of actual versus pro forma earnings?
A. Yes, they do.
Q. Is that like the report you have done in this case?
A. Yes.
MR. HIGH: Your Honor, I would offer Mr. Cardey as an expert in the areas of Florida Public Service Commission regulation and in the economic effects of PSC regulation on privately-owned, publicly-regulated utilities.
MR. QUINN: We don't have an objection, but I don't believe a foundation has been laid for Florida Public Service Commission regulations.
THE COURT: You don't have an --
MR. QUINN: I don't have an objection to proffering the witness at some point in time as an expert witness in those areas, but I do not believe an appropriate foundation has been laid at this time, sir.
THE COURT: All right. Well, proceed.
MR. HIGH: Your Honor, Mr. Cardey has stated that he's appeared in some 200 cases in front of the Florida PSC, and I believe in that duty he would have to at least --
THE COURT: Well, you go ahead and proceed; and if there are objections to specific questions, then they can raise them and then we'll see at that point whether a

Page 10

sufficient predicate has been laid.
MR. HIGH: Okay.
BY MR. HIGH:
Q. Mr. Cardey, what instructions were you given for your report?
A. I was asked to study the operations of Florida Cities Water Company and to express an opinion of whether the delay in the construction of these wastewater plants benefitted Florida Cities Water Company.
Q. And who selected the dates?
A. Legal counsel selected the dates.
Q. And did you make that request to counsel?
A. Did I?
Q. Yes.
A. Yes. I did.
Q. Did you review documents in preparing your report?
A. Yes. I did.
Q. Who selected the documents that you reviewed?
A. I selected all the documents.
Q. And how did you select the documents?
A. Well. I made requests to the company for specific information.
MR. HIGH: I would ask that the witness be shown Florida Cities' Exhibit Number 184.
BY MR. HIGH:

Page 101

Q. Mr. Cardey, what is this document?
A. This document is a study that I made to demonstrate that Florida Cities did not benefit in the delay in construction -- I mean did not benefit through the delay in construction of the wastewater plants.
Q. Do you express any opinions in this document?
A. Yes, I do.
Q. Are these opinions your own?
A. Yes.
Q. Did anyone other than yourself have any input as to the opinions reached in this report?
A. No.
MR. HIGH: Your Honor, I would ask that Number 184 be moved into evidence.
THE COURT: Okay. It will be received.
BY MR. HIGH:
Q. Mr. Cardey, what is your opinion as to the amount of economic benefit received by Florida Cities from non compliance?
A. No benefit.
Q. Do you express any opinion in this report on Florida Cities' ability to pay a civil penalty?
A. No.
Q. In preparing this report -- what steps did you take to prepare this report?

Page 10:

A. They are a part of the development of a rate case, so it's -- all the rate cases that I developed in Florida that are subject to regulation by the Florida Public Service Commission.
Q. Could you please summarize Subparagraph 2 of Section 367.081?
A. It sets out the basis for rate regulation; and I think from this case, one of the things that is important is that where capital improvements are mandated by regulatory authorities, it permits the company to recover the cost of those improvements.
In addition to that, it also -- since, you know, it has the best -- has the benchmark for regulation; namely, a utility is entitled to a fair return on its rate base utilized in providing public service.
Q. Do you know what the standard is by which the Public Service Commission will judge a rate case?
A. Well, the standard is that it covers all costs -- and here we're talking about operating costs, depreciation, taxes -- and then a fair rate of return on property used and useful in providing public service.
Q. I'd ask you now to turn to Page 74 of your report, please. I'd ask you, what is this document?
A. This applies to Hillsborough County and it's the rate making code for rate cases in that county.

Page 102

A. The basic procedure was this: First, I took the actual operations of the division during the dates shown on the exhibit; and on that I superimposed the cost associated with the construction of a wastewater treatment plant. The costs include both operating and capital costs. And I did that each year for the period shown in the exhibit.
Q. Okay. Did you make any assumptions about the costs of construction?
A. Yes, you always make assumptions, assumptions as to the capital cost, assumptions as to the level of operating expenses.
Q. Okay. Once you superimposed the construction costs of the wastewater treatment plants, did you then account for the regulatory climate?
A. Yes. The way that it is developed follows the framework of the regulation in Florida.
Q. Mr. Cardey, I'd ask you to turn to Page 30 of your report, and I'd ask you, what is this document?
A. I didn't hear what you said.
Q. What is this document contained within your report?
A. This document is a part of the Florida Statute. It involves the procedure for fixing rates and charges of water and wastewater companies in Florida.
Q. Approximately how many times have you referred to this document throughout your career?

Page 10-

I might say that in Hillsborough County, it's the County Board that regulates rates; it's not subject to the jurisdiction of the Public Service Commission.
Q. To the best of your knowledge, are the standards equivalent?
A. Very similar, yes.
Q. Mr. Cardey, what period of time did you perform an analysis for for Waterway Estates?
A. The dates are set forth on the first page.
Do you want me to read those dates?
Q. Please.
A. For North Fort Myers, it's October 1, 1988, to June 30th, 1992.
Carrollwood, November --
Q. In performing -- okay. I'm sorry. Continue.
A. -- November 1984 to December 31, 1991.
Barefoot Bay is April 1990 to October 31, 1991.
Q. In performing your analysis for Waterway Estates, from what documents did you get information that you would utilize in your report?
A. The actual operations, of course, were from the books and records of the company.
The cost of the wastewater treatment plant and the operations were taken from a rate case the company prepared for this division.

Page 105

Q. And after applying the methodology that we spoke about previously, what is your opinion about the --
A. My opinion is that the delay in the construction of the plant did not benefit the company. And if they had constructed a plant and had it in service by October 1, 1988, the earnings of the company would have been increased by a million nine hundred ninety-seven thousand dollars more than the actual operation.
Q. And is that because -- strike that.
Is one of your assumptions that the rate increase would have gone into effect as soon as the AWT plant had gone into service?
A. Yes, that's true.
Q. Okay. Turning your attention to the Carrollwood plant --
A. May I back up just a shade?
The Commission would have issued an order approximately the time the plant went into effect. In jurisdictions under the Florida Commission, there's roughly a 30-day period before the rates go into effect.
Q. Turning your attention to the Carrollwood plant, from what documents did you gather information regarding the costs of the Carrollwood plant?
A. Again, the actual figures are from the books and records of the company. The cost of the plant and the

Page 106

estimated cost of operation were provided to me by the company.
Q. What is your conclusion with respect to the Carrollwood plant?
A. Again, with respect to Carrollwood, if the plant had been built and in service by November 1st, 1984, that operation would have generated a million eight hundred and twenty-seven thousand dollars more than they actually experienced during that period.
Q. So, is it your opinion that there was no economic benefit by delaying compliance at Carrollwood?
A. That's correct.
Q. Turning your attention to Barefoot Bay, Mr. Cardey, from what documents did you receive information that you included in this report?
A. Again, the actual financial data is from the books and records of the company.
The cost of the AWT treatment plant was from a preliminary rate case the company was preparing, and it included both the capital cost as well as their operating cost.
Q. What is your opinion regarding whether Barefoot Bay benefitted by delaying compliance?
A. Well, again, there is no benefit. But if they had constructed the plant and had it in service by April 1,

Page 107

1990, they would have generated $803,000 more than they actually did experience.
Q. Can you say with a reasonable degree of certainty that there is no economic benefit for delaying compliance from the publicly-regulated utility?
A. Yes, that's true.
MR. HIGH: Your Honor, I have no further questions.
MR. HIRD: I have no questions, Your Honor.
THE COURT: Okay. How long do you think you'll be, Mr. Quinn?
MR. QUINN: Your Honor, I have the proverbial 20 questions, so I don't think I'll be that long. I believe 15 minutes is all I need, sir.
THE COURT: All right. Well, why don't we go ahead and finish with this witness and then we'll recess for lunch, or if we can...
MR. QUINN: Yes, sir.

CROSS EXAMINATION

BY MR. QUINN:
Q. Good afternoon, Mr. Cardey.
A. Thank you.
Q. Mr. Cardey, you're self-employed currently, aren't you?
A. Yes.

Page 108

Q. And since 1989, Florida Cities Water Company has been your largest client, isn't that correct?
A. In 1989, I think they -- that's true, I think, yes.
Q. And at the time of your deposition back in October, sir, you had only three clients altogether, is that right?
A. That's all I want, yes.
Q. Sir, losing your largest client would decrease your personal income, wouldn't it?
A. I think it will all be decreased to zero after this year.
Q. You're going to retire, sir?
A. I think so.
Q. Sir, your report addresses certain operations, and I'm going to ask some questions about those.
Sir, Florida Cities continued to operate at a profit during the times that you examined, is that correct?
A. Total -- Florida Cities in total are you talking about?
Q. Yes, I am.
A. Yes. Uh-huh.
Q. And during those time periods, they did not lose any money, is that correct?
A. In total, that would be true, yes.
Q. And, sir, by not upgrading the facilities, that is, the three wastewater treatment plants, Florida Cities did

Page 109

not lose any money, did they?
A. In total?
Q. In total, sir.
A. Yes, that's true.
Q. Sir, isn't it just the case that Florida Cities just didn't increase its profit in total during the period of time that you examined?
A. Well, that's what my studies said; they would have increased it more, yes.
Q. Thank you.
Sir, you're familiar with the statutes regarding the Public Service Commission, is that correct?
A. Yes.
Q. Particularly as they apply to wastewater utilities, is that right?
A. Yes.
Q. And you're also familiar with the Hillsborough County rules and regulations governing ratemaking for wastewater utilities, is that correct?
A. Yes.
Q. Sir, what authority does the Florida Public Service Commission have to prohibit a wastewater utility from making an expenditure which would not be included in the rate base?
A. I don't believe they have any authority to prohibit any expenditure, but they do have the authority to determine

Page 110

whether it's in the rate base.
Q. But if an expenditure was made and not -- and no attempt was made to include it within the rate base, then the Florida Public Service Commission would have no authority over that decision, is that correct?
A. If it's attached to the utility system and it's a part of the utility system, certainly they have jurisdiction once it's in service.
Q. But if it is not attempted to be included as portion of the rate base, then they have no authority to prohibit it, is that correct?
A. I don't understand your question.
Q. Let me try to ask it again, sir. Isn't it true that the Florida Public Service Commission has no authority to prohibit a wastewater utility from making a capital expenditure so long as that capital expenditure is not included in the rate base?
A. No, I don't believe that statement is quite true.
Q. Why is that not true, sir?
A. I don't believe they have authority to regulate capital expenditures period.
Going to the second part, they do have authority to judge whether any capital expenditure is in the rate base.
Q. Just so I understand what you said, sir, the Florida Public Service Commission has no authority to prohibit

Page 11

capital expenditures?
A. I think that's true, yes.
Q. Does the Hillsborough County equivalent have any authority to prohibit capital expenditures?
A. I don't believe so.
Q. Sir, in your experience with both Hillsborough County and the Florida Public Service Commission, is there a mechanism in those rules and regulations that would allow a public utility to request some sort of preliminary determination of whether a capital expenditure would be allowable as includable in the rate base?
A. Yes.
Q. And what is that procedure, sir?
A. I don't know whether it's set out in the rules, but there is a procedure that permits that. And I might indicate to you that Florida Cities actually did that in the development of a water system in Lee County.
Q. Sir, did Florida Cities ever do that with regard to any of the upgrade alternatives for wastewater plants, to your knowledge?
A. Yes, they did with the south Lee County system.
Q. When you say "south Lee County system," which facility are you talking about, sir?
A. They call it the Fiesta Village plant.
Q. Let me ask the question a little bit differently.

Page 11

With regard to the Waterway Estates, the Carrollwood and th Barefoot Bay facilities, did Florida Cities ever exercise that mechanism to get a preliminary determination of whether a capital expenditure would be includable within the rate base, to your knowledge?
A. In Carrollwood, of course, at the -- in 1992, they arrived at that decision with the County board with the abandonment of the sewer plant and the inclusion of some forced mains and lift stations in the rate base.
On the other two, I'm not a part of those cases, so I can't tell you that, but I don't believe they did.
Q. Thank you.
Sir, doesn't a public utility have a general obligation to give adequate service at the lowest possible cost consistent with public policy?
You want me to ask that again?
A. No, no. I got it. The "consistent with public policy," I -- I'm -- I think I generally agree with that, yes.
Q. Sir, would you also generally agree that public policy requires compliance with law?
A. I think so, yes.
Q. Are recoverable costs in a rate application -- withdrawn.
Recoverable costs in a rate application typically

Page 113

include the recovery of costs of capital in the rate base and depreciation as well, is that correct?
A. That's true.
Q. And sometimes a ratemaking authority may deny an application for an increase in a rate, is that correct?
A. That's true, yes.
Q. And by doing that, they would not include the capital expenditures which have already occurred into the rate base?
A. No, that's not -- you carried your example too far.
Q. Okay.
A. They will either approve or deny a rate request after making a thorough study on whether the costs are recovered, depreciation recovered, taxes are recovered, and whether the operation provide a fair return upon property used and useful in providing service.
Q. Okay. Thank you.
Sir, isn't it true that if a ratemaking authority did not find that an expenditure was recoverable, that the utility would be required to bear a portion of those costs of the improvement itself and not be able to pass them on to the ratepayers?
A. Florida -- the question isn't quite clear. In certain cases what you say is true. In certain other cases, if there is excess capacity, the Florida Public Service Commission has a provision that allows you to recover those

Page 114

costs from future developers. In other words, the excess capacity is for the benefit of future developers, and they pass that cost on to that group of people.
Q. Let me ask you a question: With the exception of excess capacity, isn't it true that if the ratemaking authority does not find that an expenditure was recovered, then the utility would be required to bear the costs of improvement itself?
A. Yes, that would be true.
Q. Sir, isn't it true that Florida Cities Water Company was and is capable of financing the addition of -- the additions at wastewater -- I'm sorry. Let me try that again.
Sir, isn't it true that Florida Cities Water Company was and is capable of financing the additions at Waterway Estates, Carrollwood and Barefoot Bay?
A. Well, I can go along with the "was," but the "is" -- I can't tell you about the future; but historically in the past, they have been capable of financing those plant additions.
Q. Let me move the question back in time a little bit, sir. At the time that you prepared your report, isn't it -- wasn't it your opinion that Florida Cities Water Company was and is capable of financing the AWT addition at the Waterway Estates, Carrollwood and Barefoot Bay wastewater treatment

Page 115

plants? And that's on Page 13 of your report.
A. Yes. Uh-huh.
Q. Sir, was that your opinion at the time you wrote the report?
A. Yes.
Q. Thank you.
MR. QUINN: I have no more questions -- well, I have one more question apparently, sir.
(Pause.)
MR. QUINN: Thank you. No more questions.
MR. HIGH: No redirect, Your Honor.
THE COURT: No redirect?
All right. Thank you, sir. You may step down.
All right. Let's recess until 1:30.
(The luncheon recess was taken.)

THE COURT: All right. You may call your next witness, Mr. Baise.

MR. BAISE: Yes, Your Honor.

Defendant Florida Cities calls Dr. Abdul Ahmadi.

THE CLERK: Raise your right hand.

Thereupon,

ABDUL B. AHMADI,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box, please.

State your name and spell the last for the record, please.

THE WITNESS: My name, Abdul B. Ahmadi, A-H-M-A-D-I.

DIRECT EXAMINATION

BY MR. BAISE:

Q. Good afternoon, Dr. Ahmadi.

A. Good afternoon, Mr. Baise.

Q. What is your occupation?

A. I'm a professional engineer in charge of the domestic wastewater, drinking water, industrial wastewater facilities for the State of Florida, South District.

Q. How long have you held that position?

A. I held that position since 1990.

Q. What positions have you held before 1990?

A. Prior to that, I was working with the same agency and I was in charge of the water program, which did include the domestic wastewater facilities.

Q. What is your education background, if any, post high school, Dr. Ahmadi?

A. I have a Bachelors of Science in Civil Engineering from the University of Kabul, Afghanistan. I have a Masters in Civil and Sanitary Engineering from the University of Cincinnati and a Ph.D in Environmental Engineering Sciences from the University of Florida.

Q. What are your responsibilities in your present position with the State of Florida?

A. Currently, I'm in charge of the permitting compliance and enforcement of State Rules as they apply to water facilities, which includes wastewater facilities, domestic, industrial and drinking water, surface waters and ground waters.

Q. Do you have additional training beyond your formal training in the field of environmental engineering?

A. I have attended several professional seminars, several dozen and attend one or two every year.

Q. What is your experience in interpreting State water law requirements?

A. I have extensive experience in that regard.

In 1981, upon graduation from the University of Florida, I joined the Department of Environmental Regulation as a Staff Engineer and my work primarily involved review of permit application for domestic wastewater and drinking water.

I remained in that position until 1983. At that time I passed the Professional Engineers Exam in the State of Florida and became a Registered Engineer and was promoted to the Chief of Permitting for the District.

In 1988 — I remained there until 1988, at that position, and in 1988, we had a reorganization and I was given some more responsibilities. And then in 19 — in addition to what I had. And then in 1990, we had yet another reorganization and I was given the current responsibilities.

Q. Could you speak just a little more slowly for the Court Reporter?

A. I certainly could. Thank you.

Q. Thank you.

Any additional current licenses or certifications you hold Dr. Ahmadi?

A. Yes, basically, the professional engineer's, and I do give lectures to the universities, professional groups, the DEP Staff on a statewide basis.

Q. How many people work for you, Dr. Ahmadi?

A. Currently, I have 33 people working for me, which comprises professional engineers, chemists, biologists, environmental scientists and managers.

Q. How is your office organized in terms of departments?

A. The State of Florida basically has divided the entire State into six districts and we are one of the six districts and it has seven counties. And we are located in Lee County, we have two branch offices, one in Marathon that handles Monroe County, the Florida Keys and one in northern part of Charlotte County, which handles the Charlotte Harbor area.

Q. Is Waterway Estates located in one of those counties?

A. Waterway Estates is located in Lee County, Florida.

Q. How is your personal office organized? If I'm not using the correct word — sections or department?

A. Yes, we have different sections in the Division of Water Facilities and we have a Domestic Wastewater Section, which is headed by a profession engineer who reports directly to me, and I have two professional engineers in that section and four engineers and five or six chemists, biologists-type people, inspectors.

And then we have an Industrial Wastewater Section that is the smallest in our district. We have three people there; two professional engineers, in fact, and one

secretary.

And then I have a *Drinking* Water Section with five staff professional engineers and two non-professional engineers and two environmental specialists and one secretary.

And then an Ambient Surface Water Section. And then have I some people in the fields that report to us on compliance issues.

Q. What is an Ambient Water Section, I believe you said?

A. Those are the surface water monitorings on strategic locations periodically to see how the waters are doing.

Q. Is this to determine water quality?

A. Basically to determine water quality and they produce a biannual report to see how the waters have maintained their quality, whether they degraded or they got better or they remained the same.

Q. Do you publish a biannual report on the Caloosahatchee River?

A. Not on the Caloosahatchee River. They are primarily — the resources are limited for the State as is the case with most Governmental agencies. They are prioritizing other bodies of water which has more ecological significance and importance than the Caloosahatchee River water.

Primarily our points are in Charlotte County, in the

Charlotte Harbor area, and in the Marco Island area, Naples — Naples way. We do not have any monetary stations on the Caloosahatchee River.

Q. Again, speak slowly for the reporter, please.

Have you had an opportunity to teach any courses in environmental engineering or science or the area that you are —

A. Yes, I have. I graduated from the college, I was an Assistant Professor, prior to coming to the United States, and then I attended the University of Cincinnati for two years. Upon return back to Afghanistan, I taught there at the University in Kabul, Afghanistan until 1975.

I taught Public Health Engineering, Wastewater Engineering, Drinking Water Engineering courses.

Then I came back to the United States for pursuing further studies and graduate studies at the University of Florida.

Q. Have you had an opportunity to publish in the field of environmental engineering?

A. Yes, I have several publications.

Q. Could you describe at least two or three of them for the Court, please?

A. My Master Thesis at the University of Cincinnati was on — included demands on natural and polluted waters. My Dissertation at the University of Florida was Aqueous

Activity of Metals and Corrosion Control, and secondly, two or three papers I coauthored on that subject.

I've given lectures at the Water Management Districts on ground water issues and have given lectures at the University of Florida this year, in fact, twice, on Wastewater and Drinking Water State-of-the-Art Technology.

Q. And Dr. Ahmadi, in the testimony we have had a Florida Statute mentioned on several occasion by the name of Grizzle-Figg. Are you familiar with what Grizzle-Figg is?

A. Yes. It's a legislative act that was passed in the State of Florida for a specific area. Generally when a rule is passed, it's statewide. In certain cases the resources demand that because of ecological significance and importance of a given body of water, the usual rules may not be sufficient, so they design specific rules for the specific geographical area.

The Grizzle-Figg Rule established the Tampa Bay and the Charlotte Harbor area, designated those two as the waters that need to be protected above and beyond what the rules apply to all other waters in the State. And any wastewater discharging to those two bodies of water must meet the highest standards before they discharge to those bodies of waters.

Q. Another Act that has been mentioned is the Indian River Lagoon Act. What is that?

A. That is parallel to the Grizzle-Figg Act, primarily in the Orlando area where the Indian River Lagoon is located. Because of the importance of that body of water, they created specific rules for the protection of that body of water. They are geographic specific, it applies from what point to what point, in which directions. If you're outside those limits, it does not have any relevance.

Q. When did you become familiar with the facility known as Waterway Estates discharging into a canal into the Caloosahatchee River, Dr. Ahmadi?

A. I guess since my starting with the DEP, maybe in the first year or so.

That was in 1981.

Q. Dr. Ahmadi, I would direct your attention to Florida Cities Exhibit Number 15.

Now, Dr. Ahmadi what is the State classification of the Caloosahatchee River in the vicinity of the Waterway Estates wastewater treatment plant?

A. The water there is classified as a class 3 body of water.

Q. What does that mean?

A. Basically all waters of the State are classified into five groups, class 1, class 2, class 3, class 4, and class 5. 1 is considered the most important water in terms of its use and that's considered potable water classification,

water used for drinking purposes. Now, it would be used as a source of drinking water, that's class 1.

Class 2 are the next higher class of water, which is used for propagation of shell fish and recreational uses.

Class 3 are generally all other waters that are not classified as 1 and 2. So, it's an intermediate in terms of quality.

Class 4 is agricultural waters, which the quality is really not that important, as long as there are no salts in them for agricultural uses.

Class 5 is industrial and a navigation waters.

Q. When you say class 4, agricultural, is that like agricultural canals?

A. Agricultural canals, irrigation water, yes, for growing plants and vegetables and trees and nurseries and so forth.

Q. Directing your attention to the exhibit I've had put in front of you, are you familiar with this document?

A. Yes, I am.

Q. What is this document?

A. This is the Lower Florida River Basin Water Quality Management Plan that DER created and published in December 1975.

Q. Have you read this document before?

A. I believe I've seen certain sections of it. Read

certain sections.

Q. Is this a State of Florida official publication?

A. Yes, it is.

MR. BAISE: Your Honor, I would move this document into evidence.

MR. QUINN: Your Honor, we had listed an objection of relevance in that this is a 1975 document. For that reason, we maintain that objection of relevance.

THE COURT: Okay.

MR. BAISE: May I speak to that, Your Honor?

THE COURT: Yes, sir.

MR. BAISE: Your Honor, this is the beginning of the story.

This is the document that lays out the beginning wasteload allocation for Waterway Estates.

It also describes that wasteload allocation, which was carried over into Federal permits, so it is clearly relevant to the background of there being a wasteload allocation in this case, and the fact that there never was a termination of the wasteload allocation, so we think it is quite relevant.

THE COURT: I'll overrule the objection.

It will be received.

BY MR. BAISE:

Q. Dr. Ahmadi, I would direct your attention to page

Roman Numeral I-18 entitled, Implications of Basin Plans for Local Units of Government.

Do you see that page with that title?

A. Yes.

Q. Directing your attention further down to the last paragraph on that page, do you see that paragraph, sir?

A. Yes. The one starts with, "in contrast"?

Q. Yes.

And directing your attention further down to the sixth line that begins on the right hand side, "in some cases," would you read that into the record, please?

A. In some cases water quality may be so sensitive to pollution that any discharge may result in a violation of State requirements for water quality. In these extreme cases, no discharge of pollutants to surface waters will be allowed and wastewater treatment plants which are currently discharging to surface waters will eventually be required to convert to a form of non-surface disposal such as land spreading.

Q. Thank you, Dr. Ahmadi.

I direct your attention further toward the back of the document to a page entitled, Roman Numeral III-242, entitled, Effluent Limitations-Load Allocations.

A. Yes.

Q. Do you find that page, Dr. Ahmadi?

A. Yes. Table 20.2 AA-12.

Q. Would you describe what this table means, Dr. Ahmadi?

A. This is a summary of the wasteload allocation or effluent limitations for five facilities that are contained on this table.

Q. And is Waterway Estates one of those facilities in 1975?

A. Yes, Waterway Estates is listed as the fourth facility.

Q. And what is the receiving water for the Waterway Estates in 1975?

A. The receiving water is designated as the Caloosahatchee River.

Q. And what are the load allocations for Waterway Estates in 1975?

A. The design capacity is 1.08 million gallons per day.

Q. What does "UOD" mean? Because that is a term that has not been defined in the Court, Dr. Ahmadi.

A. That's the ultimate oxygen demand, which is a pollution load, actually.

Q. Would that be I equivalent to biological oxygen demand today?

MR. QUINN: Objection, leading.

MR. BAISE: I was just seeking a clarification for the Court.

THE COURT: I'll overrule the objection.

Do you know?

BY MR. BAISE:

Q. Do you know, Dr. Ahmadi?

A. No, it's different.

THE COURT: Yes, sir.

MR. QUINN: Also, object that this witness is not an expert. He's not been qualified as an expert. This seems to require a little bit of expertise to answer that question, too, sir.

MR. BAISE: If he can't answer the question, that's fine.

MR. QUINN: Yes, sir.

Well, whether he can answer the question or not, he hasn't been qualified as an expert and this requires an expert opinion.

In order to be — a lay witness can't testify to expert opinions unless they're rationally based under Rule 701, and we haven't laid a foundation for him to give any of this stuff, sir.

THE COURT: Well, I don't know that it takes an expert opinion to testify as to whether UOD is a term that is equivalent to today's term or subsequent term of BOD.

Is that the question? Do you know that, sir?

THE WITNESS: It is defined on the bottom of this

page, Your Honor. UOD pounds per day equals the design flow of the plant times the —

THE COURT: It's your witness and your question, so —

MR. BAISE: Let's just — I'll drop the question. I was just doing it for the Court's clarification, since BOD and CBOD had been such a point of contention.

BY MR. BAISE:

Q. Dr. Ahmadi, in the second column it is noted that the Caloosahatchee River is the receiving water for Waterway Estates; is that correct?

A. Yes.

Q. Dr. Ahmadi, I would direct your attention to Roman Numeral III-227, please. I'm sorry. It's 229. My copy is barely —

A. Okay.

Q. It's entitled, 7, Load Allocations and Effluent Limitations. Do you see that page?

A. Yes, sir.

Q. And that's Roman III-229?

A. Yes.

Q. Dr. Ahmadi, would you read the paragraph beginning with the two words, "this segment"?

A. This segment contains the Caloosahatchee River from the W.P. Franklin Lock and Dam at Olga to its mouth at San

Carlos Bay, a distance of approximately 30 miles. Five wastewater treatment facilities (WTF) discharge directly to the river in the vicinity of Fort Myers and seven other facilities discharge to tributaries, as listed in Table 28.2 AA-6. The locations of the discharges are shown in figure 28.2 AA-4.

Q. So there are five facilities discharging directly to the Caloosahatchee; is that correct?

A. Right.

Q. Would you turn to page Roman III-207, please?

Do you see that page, Dr. Ahmadi?

A. Roman III-207?

Q. Yes.

A. Yes.

Q. Describe what that page represents, Dr. Ahmadi.

A. It is a Waste Source Inventory.

Q. And does it name Waterway Estates in one column?

A. Yes, Waterway Estates is listed here and is the fourth facility.

Q. And what is the receiving discharge point for the Caloosahatchee River?

A. The discharge point is listed as the Caloosahatchee River.

Q. I direct your attention down to the J. Colin English School. What is the discharge point for that facility?

A. Says canal to Powell Creek.

Q. Thank you.

Since you've worked for the Federal Department of Environmental Protection, Dr. Ahmadi, has the water quality of Caloosahatchee River improved or been degraded?

A. I've been working with the State of Florida and since I've been with the agency we have not documented any degradation in the water quality in the Caloosahatchee River.

Q. Are water quality standards met in the Caloosahatchee River in the area of the discharge of the Waterway Estates facility, Dr. Ahmadi?

A. Yes, sir.

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit 16.

And it's Plaintiff's 349, also, in evidence, Your Honor, depending on which notebook you have.

THE COURT: I've got it in the form of Defendant's Exhibit.

BY MR. BAISE:

Q. Dr. Ahmadi, what is a 201 Plan?

A. It is a facility's planning which will list what to be done with a facility in terms of treatment, expansion, design, future plans, effluent disposal.

Q. How do 201 Plans and regional facilities connect

together?
A. Generally with the passage of the Clean Water Act back in the early 70's, a lot of money became available to local facilities, particularly governmental entities, cities, counties and so fourth, to come up with a facilities plan and try to improve their wastewater treatment practices and operations and either eliminate discharges or improve treatment so they could lessen the impact on receiving waters under the NPDES Program.
A lot of money was available and in those 10 to 15 years some 50 billion dollars of Federal money was spent on that program. So this is in relation to that.
Q. Is this document prepared in part for a 201 Plan for a regional facility?
A. Yes.
Q. What regional facility was this document prepared for, Dr. Ahmadi?
MR. QUINN: Objection.
THE COURT: Just a moment.
MR. QUINN: Objection, sir.
I believe this goes beyond the actual personal knowledge. We've been talking about it for a while and it has not been offensive to the United States, but goes beyond the personal knowledge of Dr. Ahmadi.
He testified that he came to work — I believe he

testified that he came to work for the State in 1981, and this document was worked on before that.
I don't believe that he's testifying from his own personal knowledge, and he lacks personal knowledge to talk about it.
If what he's testifying about is an opinion, then it's an expert opinion and he hasn't been qualified to talk about that.
In addition, he can't even give an opinion on it because he does not have a personal perception of it at the time that it was done, sir.
MR. BAISE: May I respond?
THE COURT: Yes, sir.
BY MR. BAISE:
Q. Dr. Ahmadi, are you familiar with this document?
A. Yes, I am.
Q. Do you use this document in your work at — in your present position?
A. Yes, we do.
Q. Any reason to believe that this document is not a trustworthy document?
A. No, I have no doubt about it.
We work closely with our section in Tallahassee in production of these documents.
THE COURT: I'll overrule the objection.

It will be received.
BY MR. BAISE:
Q. Is this what is known as a planning document, Dr. Ahmadi?
THE COURT: It's already received.
You were objecting to his testimony?
MR. QUINN: Yes, sir.
THE COURT: I'll overrule the objection.
BY MR. BAISE:
Q. You may answer.
A. Yes, sir, it's a planning document.
Q. Are there any requirements in this document?
A. There are certain steps and plans for the future of the Lee County -- the Waterway Estates plant is located on the northern side of Lee County. There are several facilities that were on the southern side. There was another plant on the north side, which was the Cape Coral -- City of Cape Coral. The county at that time was planning to have a regional one or two facilities for the entire northern part and that plan did not become implemented.
Q. Dr. Ahmadi, I direct your attention to Florida Cities Exhibit 198.
Are you familiar with this document, Dr. Ahmadi?
A. Yes, I am.
Q. What is this document?

A. It's a letter that's written by the United States Environmental Protection Agency, Region IV, dated January 22, 1981, and signed by William Cloward, Chief of Permits Section.
Q. Who is CC'd on the document, Dr. Ahmadi?
A. Mr. Mickey Bryant of the Florida DER.
Q. Is that Florida DER your office?
A. Yes, the State DER, our predecessor agency of the DEP.
Q. Turning to page 2, with respect to this document, does it indicate what the receiving waters are to this --
MR. QUINN: Objection. I don't believe this document is in evidence, Your Honor, and I have AN objection as to this witness' competence to talk about this document.
THE COURT: All right.
MR. BAISE: May I comment on it?
THE COURT: Yes.
MR. BAISE: This is the permit from the United States. It is a document that has attached to it a reference to one of the documents we have just referred to, the 1975 study, which is the '75 study that gives the wasteload allocation, and I will get to that in just a moment. But he says he is familiar with this document, his office received it, he is --
THE COURT: Well, at this point are you offering it in evidence? Is that what you're going to do?

MR. BAISE: I'm going to get ready to offer it in evidence, Your Honor.

BY MR. BAISE:

Q. Dr. Ahmadi, have you read this document before?

A. Yes, I have.

Q. Have you read documents similar to this before?

A. Yes, in almost all surface water discharge cases.

Q. Do you review Federal NPDES draft permits and final permits in the normal course of your work?

A. Yes, if we are copied and receive a copy we review that.

THE COURT: Say again, please, sir.

THE WITNESS: Yes, if we are copied and it's sent to us, we review those documents.

MR. BAISE: I would move this into evidence, since it is a United States Environmental Protection Agency document, Your Honor. It's the draft permits into Florida Cities in 1981, on January 22nd, it has attached to it the draft EPA NPDES Permit, the permit limitations, and attached to that, of course, is the wasteload allocation. So, it is certainly an official document of the US EPA, to the best of our ability to determine it, and it was, to my knowledge, produced by EPA in our request for production of documents.

MR. QUINN: I have an objection to the introduction of the document through this witness.

This witness does not have personal knowledge of this particular document. He might have seen documents like this before.

My objection as stated in our earlier filings was relevance and I would renew that objection, as well.

THE COURT: Let me ask you this: Have you registered an objection regarding the authentication of this document?

MR. QUINN: No, sir, we did not, because we did not because we didn't know it was going to come in --

THE COURT: Excuse me?

MR. QUINN: If this came in through the proper witness -- it's an authentic document, sir. We have no objection to its authenticity. We have an objection to using the document with this witness.

THE COURT: Well, the document -- all right -- and the objection that you have listed in your objections is relevancy?

MR. QUINN: Yes, sir.

THE COURT: All right.

MR. BAISE: My objection -- excuse me, Your Honor.

THE COURT: Let me hear you on your objection regarding relevancy independent of this witness' testimony.

MR. QUINN: The relevance objection deals with the fact this is a 1981 draft document and our violations in

this case are talking about 1986, for this facility, sir.

THE COURT: Okay. Mr. Baise.

MR. BAISE: I find that somewhat disingenuous, Your Honor, whether or not the Government has gone back to --

THE COURT: Never mind whether you find it disingenuous, but tell me what your response is.

MR. BAISE: My response is, Your Honor, that this document is the only document the Government produced to us with respect to wasteload allocations in 1981, so you can track that 1981 wasteload allocation through '83, '86 and into the 90's.

And with regard to the actual permit that is given to the discharger, EPA does not attach the fact sheet to their final permit, and this particular fact sheet is the one that points out the wasteload allocation given to this facility in 1981, comes from the 1975 document. So, there is a history step-by-step of where the wasteload allocation comes from, and how it's incorporated into both the Federal and State permits. So, that's why it is relevant, Your Honor.

MR. HIRD: Your Honor, may I say something in support of Mr. Baise's position?

THE COURT: Yes, sir.

MR. HIRD: On the first day of trial we objected

to the introduction of the numerous Government documents that predated the violations at issue, and over objection I think hundreds of documents were admitted into evidence.

I think the Defendants should have the right to introduce historical documents that explain mitigation or lack of viability, and for those reasons, I would support Mr. Baise's position.

THE COURT: Okay. Anything further?

MR. QUINN: Nothing further, sir.

THE COURT: All right. I'll overrule the objection.

I'll receive the document in as 198.

BY MR. BAISE:

Q. Dr. Ahmadi, I direct your attention to page 12 -- I'm sorry, it is a not numbered on your document, but count 12 pages to the page of the draft EPA permit dated January 22, 1981. The page is entitled, Final Effluent Limitations. And do you find that page?

A. Yes, sir.

Q. Do you find that page?

A. Yes, sir.

Q. Directing your attention to paragraph 5, would you read paragraph 5 into the record, please?

A. It says number 5: Final effluent limitations were derived from wasteload allocation given in Lower Florida

River Basin Water Quality Management Plan, page III-242.
Q. Is that the same Roman III-242 that you referred to in the 1975 document?
A. Yes, sir.
Q. Is this the wasteload allocation for the Florida Cities Waterway Estates facility located on the canal discharging into the Caloosahatchee River in 1981?
A. Yes, sir.
Q. Dr. Ahmadi, I direct your attention to Florida Cities Trial Exhibit Number 17.
This is already in evidence, Your Honor.
Do you have that document in front of you, Dr. Ahmadi?
A. Yes, sir.
Q. What is this document?
A. This is a State permit for the Waterway Estates to operate their facility and discharge their effluent to the Caloosahatchee River.
Q. Is there any zero discharge limitation in this permit, Dr. Ahmadi?
A. No, it authorized them to discharge.
Q. Would you turn to page 1 of 4? It would be the fourth page in on this document.
A. Yes, sir.
Q. Do you see that page?
A. Yes, sir.

Q. Department of Environmental Regulation letterhead?
A. Yes, sir.
Q. Would you read that paragraph starting with, "to operate" into the record?
THE COURT: Just a minute
MR. BAISE: Hold on, Dr. Ahmadi.
THE COURT: What page?
THE WITNESS: Page 1 of 4.
MR. BAISE: 1 of 4, but the fourth page in, Your Honor.
THE COURT: Okay.
BY MR. BAISE:
Q. Would you read that paragraph?
A. Yes, sir.
Q. Up to where it says, "location of the project." That's not necessary.
A. To operate a 1.080 million gallons per day contact stabilization process wastewater treatment facility with effluent to canal to the Caloosahatchee River located off project site.
Q. Is there anything in this document that says there's a zero discharge for this project into the canal to the Caloosahatchee River on April 2, 1981, Dr. Ahmadi?
A. No. This is their authorization to discharge to the river.

Q. Does this mean there's a wasteload allocation for this discharger to discharge into the canal, Dr. Ahmadi?
A. Yes, sir.
Q. Turning your attention to Defendant's Exhibit Number 2, Dr. Ahmadi.
By the way, did EPA ever challenge that permit that was issued in 1981?
A. No.
Q. EPA ever comment on that permit issued in 1981?
A. No.
Q. Turning your attention to Defendant's Exhibit Number 2, what is this document, Dr. Ahmadi?
And this is, also, in evidence, Your Honor.
A. Yes, this is State of Florida letter that's written and signed by Terry Cole, who was the assistant secretary at the time to Mr. Charles Jeter of the EPA.
Q. Are you familiar with this document?
A. Yes, I am.
Q. You worked with this document?
A. Yes.
Q. I direct your attention to page 9 of this document, Dr. Ahmadi. Page 9, Roman Numeral IV.
A. Okay.
Q. Would you read that first paragraph into the record, Dr. Ahmadi?

A. Roman Numeral IV: Approval of Wasteload Allocations. The EPA is required by 303 (d) of the Clean Water Act to review and approve/disapprove the allowable wasteload established by the State within 30 days after submission. An additional 30 days is allowed to make necessary revisions to disapprove identifications and loads. All final approvals of wasteload allocations are to be incorporated by the States into the water quality management plans through the continuing planning process required under 303 (e) of the Act.
Q. Do you have any knowledge as to whether or not the '81 wasteload allocations suggested by the planning document for the Caloosahatchee River was ever approved under this paragraph?
A. No, I don't. I think it was not approved.
Q. Thank you.
Turning to Defendant's Exhibit number 20, Dr. Ahmadi.
This, too, is in evidence, Your Honor.
Do you have number 20 in front of you?
A. Yes, sir.
Q. What is this document?
A. This is a State of Florida permit to operate the Waterway Estates facility.
Q. Is there any no discharge wasteload allocation in this document, Dr. Ahmadi?

A. No. Basically this says that the utility is allowed to discharge to the river, and this was issued on August 2, 1983.
Q. And what was the expiration date of this permit, Dr. Ahmadi?
A. It was the maximum five years to August 2, 1988.
Q. Did Waterway Estates have a wasteload allocation to discharge into the canal of the Caloosahatchee River in 1983?
A. Yes, the permit was for a 1.08 MGD contact stabilization process, wastewater treatment facility with effluent discharge to a canal to the Caloosahatchee River as depicted in drawings and documentation on file in this office.
Q. Did the Waterway Estates facility have a wasteload allocation discharge into the canal in 1984?
A. Yes, sir.
Q. In 1985?
A. Yes, sir, through this permit.
Q. 1986?
A. Yes, sir.
Q. 1987?
A. Yes, sir.
Q. 1988?
A. Till August of 2, 1988, yes, sir.

Q. Did the EPA comment on this permit?
A. No.
Q. Did EPA challenge this permit?
A. No.
Q. Did EPA work with the State of Florida on joint inspections of this facility?
A. Yes, sir.
Q. Did EPA ever raise this issue of not having a wasteload allocation to you or any of your staff?
A. No.
Q. Was this facility meeting water quality standards in 1983?
MR. QUINN: Objection.
THE WITNESS: Yes, sir.
THE COURT: Wait a minute.
MR. QUINN: I think that calls for an expert opinion.
THE COURT: Okay. It sounds like it to me.
MR. BAISE: May I comment?
THE COURT: Yes, sir.
MR. BAISE: The State of Florida and this office and this gentleman had the responsibility, Your Honor, for maintaining and achieving water quality standards. They developed data. He has individuals who develop data. They have to make conclusions all the time with regard to whether

or not each and every facility meets water quality standards.
If they do not need water quality standards, that's how you get into what we've been discussing, wasteload allocations. So, it's mean a fact question for him, not an expert opinion.
It is a situation that's clearly covered by 701, where a lay person has to have certain facts at his fingertips and disposal to come to conclusions. Clearly this data allows him to determine whether water quality standards are met.
THE COURT: Yes, sir.
MR. QUINN: I'm just saying, sir, this is an expert opinion. I still maintain it's an expert opinion. If they wanted to list him as an expert they could have done it. He's not an expert before the Court.
Whether something satisfies water quality standards or not is -- the United States' position is that requires an expert opinion and for that reason we object.
THE COURT: Okay. Well, I'll overrule the objection.
You can answer the question.
THE WITNESS: The State of Florida --
BY MR. BAISE:
Q. I think you answered, but would you repeat your

answer, please?
A. The State of Florida is, through Chapter 403, Florida Statute, is required to deny a permit if they do not meet any water quality standards for any reasons. We are requiring all facilities to submit to us monthly operation reports --
THE COURT: What was your question "yes"?
THE WITNESS: Yes, the question is they have complied with the Rule and not --
THE COURT: You've answered the question, sir.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. I'll repeat this question: Was the facility meeting water quality standards in 1984?
A. Yes, sir.
Q. '85?
A. Yes, sir.
Q. '86?
A. Yes, sir.
Q. '87?
A. Yes, sir.
Q. And '88?
A. Yes, sir.
Q. Thank you.
MR. QUINN: I just object to all that and move to

strike.

THE COURT: The same ruling. Deny the motion to strike.

BY MR. BAISE:

Q. Dr. Ahmadi, why did Florida DEP require in 1988 the Waterway Estates facility to move its discharge point to the middle of the Caloosahatchee River?

THE COURT: Did you say why?

MR. BAISE: Yes.

THE WITNESS: BY that time it became evident to the State that the planning is not going to be implemented for regional facility on the north side of the county, which included the Waterway Estates plant, and, also, because of the consistency and uniformity with other facilities, we requested that Waterway Estates' facility be upgraded to the advanced waste treatment and, also, relocate their discharge point.

Q. So you asked Waterway Estates to move its discharge point for consistency reasons?

THE WITNESS: Yes, sir.

MR. QUINN: Objection, leading.

THE COURT: Sustained.

MR. QUINN: Move to strike.

THE COURT: Granted.

BY MR. BAISE:

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 3.

Do you have that document in front of you, Dr. Ahmadi?

A. Yes, sir.

Q. This document is already in evidence, Your Honor.

Dr. Ahmadi, I'd like to draw your attention — first off, are you familiar with this document?

A. Yes, sir.

Q. I'd like to draw your attention to the fourth line of that document and have you read starting with the word "according."

A. According —

Q. Go ahead. I'll tell you when to stop.

A. According to this decision, EPA has authority, indeed a duty under section 301 (b) (1) (c), to interpret State Law and apply those limitations and conditions which it deems necessary to satisfy the requirements of State law. This is true in the absence of state certification; this is also true where EPA determines that the State has committed clear error in the certification, for example, where a State overlooks applicable State water quality standards.

Q. You can skip citing OGC and start with "however."

A. However, where there is no indication that the State has overlooked the standards or otherwise committed clear error, EPA must give deference to the State.

Q. Continue.

A. In short, if EPA and the State arrive at two different, but equally persuasive, interpretations of a standard, EPA should defer to the State's interpretation when included in a State certification.

Q. You can stop there and got to the last paragraph starting with the two words, "the question," please.

A. The question then arises as to what interpretation the Region should write into permits when there is no certification, but the State has expressed its interpretation in a State-issued permit.

Q. Continue.

A. This question arises because of Region IV's agreement with the State of Florida to consider State-issued permits as interpretation of the State Law in view of certifications.

Q. Would you turn to page 2 of this document dated December 26, 1985?

I'm not sure what the first word is on my copy. The printing is blotted out and I assume it's the same with Your Honor. I assume it means, the agreement. Mine is unclear.

Can you tell, Dr. Ahmadi?

A. The same with this, only the "e" is there. I assume it's "t-h."

The agreement should only be construed to require EPA

to impose in its permits the interpretation of State Law which the State has embodied in permits it has issued unless those State interpretations are clearly erroneous or EPA has a strong scientific or technological support for a different interpretation, such that EPA's interpretation is more persuasive than that of the State.

Q. Does this memorandum represent your understanding of the relationship between your office and Region IV EPA on handling permits?

A. Yes, sir.

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 23.

This, too, is in evidence, Your Honor.

Dr. Ahmadi, what is this document dated June 30, 1986?

A. This is a notification of the NPDES Permit denial by EPA for the Waterway Estates.

Q. Are you familiar with this document?

A. Yes, sir.

Q. Have you seen this document before?

A. Yes, sir.

Q. Do you recall seeing it in 1986?

A. Yes, sir.

Q. Now, Dr. Ahmadi, I direct your attention to page 2 of the attached fact sheet. Go over to the fourth page. Do you see the page where it is numbered 2, 3, 4, 5, and 6?

A. Yes, sir.
Q. I direct your attention to paragraph 2, Proposed Effluent Limitations. Would you read those into the record please?
A. Number 2: Proposed Effluent Limitations. The final effluent limits for this facility to a canal to the Caloosahatchee River are no discharge.
Q. Paragraph 3, please.
A. Basis for Denial Effluent Limitations and Permit Conditions. The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in the forthcoming administrative order.
Q. On June 30, 1986, Dr. Ahmadi, did the State of Florida have a no discharge allocation requirement for this project discharging into the canal into the Caloosahatchee River?
A. No, the State didn't have a no discharge. They were authorized to discharge by permit.
Q. Are these two paragraphs incorrect, Dr. Ahmadi?
MR. QUINN: Objection.
THE WITNESS: Yes —
THE COURT: Wait a minute. Wait a minute, sir.
MR. QUINN: Objection. That calls for an opinion. Calls for a legal conclusion and calls for an opinion from a

lay witness.
THE COURT: Well, I'll sustain the objection.
Go ahead.
Proceed.
BY MR. BAISE:
Q. Dr. Ahmadi, I direct your attention — well, strike that.
Dr. Ahmadi, in June of 1986, was the effluent from the Waterway Estates facility meeting State water quality standards?
A. Yes.
Q. Was it meeting Federal water quality standards?
A. It should have. Generally, the State requirements are stringent than the Federal.
Q. I beg your pardon. More stringent did you say?
A. Generally.
Q. Was this discharger, Waterway Estates, meeting its effluent limitations in June of 1986?
A. Yes, they were.
MR. QUINN: I object as to the qualification as to referencing State or Federal effluent limitations.
MR. BAISE: State.
THE COURT: State.
Same answer?
THE WITNESS: Yes, sir, State.

BY MR. BAISE:
Q. Would the Federal effluent limitations have been any different?
A. Generally, as I say, the Federals are less stringent than the State, in most cases.
Q. Federal standards are less stringent than the State's?
A. Yes, sir.
Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 32.
Do you have that in front of you?
A. Yes, sir.
Q. Did there come a time when the State of Florida did request Waterway Estates to move its discharge from the canal to the Caloosahatchee River 6-foot contour line?
A. Yes, sir.
Q. Did Waterway Estates eventually move their discharge to the 6-foot contour line?
A. Yes, they did.
Q. What did they have to do in order to move their discharge to that contour line?
A. By Florida Statutes, they are required to obtain a permit from the State for upgrading the treatment and, also, extending the line from the point of discharge from the canal to the middle of the river.
Q. So, once they are ordered to move their discharge

pipe, they cannot just immediately start construction, even if they wanted to do so?
A. No, they can't.
Q. Directing your attention to this Exhibit 32, are you familiar with this document?
A. Yes, I am.
Q. Are you the Dr. Ahmadi referred to in the first paragraph?
A. Yes, sir.
Q. What discussions were you holding in approximately September of 18 with Mr. William Harrop and any other individuals regarding this project, Dr. Ahmadi, if you recall?
A. Yes, they were — Harrop was retained as the consultant for the Waterway Estates facility and the Florida Statutes require that for design of a facility a professional engineer, who is registered in the State, must apply for the permit, and we were discussing the operating of the plant to AWT.
Q. What role does your office or do you, personally, play with respect to approving a project for construction such as the one at Waterway Estates, Dr. Ahmadi?
A. The State Statutes clearly require application to the State and then, also, requires a timely review by the State of Florida DEP.

Q. What is a timely review?
A. The timely review is we are obligated to review the application within the first 30 days and then generate a letter for additional information.
Q. Do you routinely grant permission to start these projects within 30 days?
A. No. It's almost impossible in most cases, if there is a necessity for explanations or omissions and clarifications and so forth.
Q. Why is it next to impossible?
A. Because it's a complicated process. The design of a facility, the treatment units, the choice of the chemicals, the equipment, and all this has to be in compliance with the Rule and we should have been given reasonable assurances that that would work once it's constructed.
In order to reach that point, we have to correspond several times back and forth, until such time that we are satisfied that what's proposed is going to meet the intent of the Rule.
Q. You reviewed the plans and specifications for this project, Dr. Ahmadi?
A. I did review certain parts of the application, yes, sir.
Q. Can you give us some idea --
MR. QUINN: Withdrawn.

BY MR. BAISE:
Q. Can you describe the nature of this particular project?
A. Yes. The project is located in the middle of a residential area on a relatively tight site. There is not much room really to design and place structures.
Q. Why is that important?
A. It's important from the point of view of expanding the facility from the conventional treatment which was there to an advanced wastewater treatment. They were building more units, more capacity, more volumes, more pumps and they required a permit not only from us, but from other governmental entities, as well.
But as far as the DEP's responsibility is concerned, we are to make sure what they are proposing will achieve the end result.
Q. Did Florida Cities or its engineering consultants provide you the information you needed to make your decision on a timely basis?
A. Most of the time they did, yes, sir.
Q. Any time they did not?
A. No.
Q. Can you describe or do you know, Dr. Ahmadi, looking at the second paragraph of this letter, what options and alternatives are being discussed by Mr. Harrop in this

letter to Mr. French as a result of this conversation with you in, say, roughly September of 1988?
A. This the September 14, 1988 letter?
Q. Yes, it is.
A. Bill Harrop writes to Robert French of the Florida Cities Water Company and says, it is apparent from our recent discussion --
Q. You can't read. I was just asking you with regard to paragraph 2 about the options and alternatives that might have related to the conversation you had with these gentlemen.
A. The options were that they had to consider some other alternatives for the plant design. We were questioning that certain units were very similar to a conventional treatment and that necessitated an advanced waste treatment process design.
Q. Thank you, Dr. Ahmadi.
I direct your attention to a letter dated October 11th, 1988, Defendant's Exhibit Number 34, please.
A. Number 34?
Q. Yes. Defendant's Exhibit 34.
A. Goes from 32 to 53.
Q. Defendant's Exhibit, Trial Exhibit Number 34.
A. Sorry for that.
Q. Would you please identify this letter, Dr. Ahmadi?

A. Yes, sir. This is a letter written by the DEP to Robert French of Waterway Estates Utility by me and copied the consulting engineer and Tony Reeves, the vice-president.
Q. Can you summarize --
Your Honor, I would move this letter into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Could you summarize your concerns that were raised during your meeting with the Florida Cities official, Mr. French?
A. Primarily after consulting with our engineers, some ten issues that were relevant to this project, including irrigation/production, reliability, chambers, and flow equalization, and we told them those needed to be addressed before we could issue a permit.
Q. Can Florida Cities' engineer develop final plans and specifications until these ten items were specified?
A. No, they cannot.
Q. Why not?
A. Because they would be wasted. If we are not satisfied to give them a permit, they cannot do that. And if we object to it or if we deny their permit, it's a waste of resources and time.
Q. So Florida Cities and its engineer had to satisfy each and every one of these items?

THE COURT: Sir?

MR. QUINN: No. Sorry, sir.

BY MR. BAISE:

Q. How long did it take Florida Cities and its engineer to satisfy FDER's concerns, Dr. Ahmadi?

A. I believe from the time they applied for the permit until we issued, was close to nine months.

And that's not an unusually high time for these kind of projects.

Q. Dr. Ahmadi, I draw your attention to a letter dated November 1st, 1988, Florida Cities Exhibit Number 35.

A. Yes, sir.

Q. Are you familiar with this letter, Dr. Ahmadi?

A. Yes. This is a letter in response to the previous letter that we wrote to Florida Cities. Mr. French responded.

Q. And you're the Dr. Ahmadi in the addressee block?

A. Yes, sir.

MR. BAISE: Your Honor, I would move this Florida Cities Exhibit Number 35 into evidence.

THE COURT: It will be received.

BY MR. BAISE:

Q. In the interest of time, Dr. Ahmadi, could you summarize this document for the Court?

A. Mr. French indicated in this letter that they have

retained Mr. Barth, who is a well-known authority on wastewater process, that he would be reviewing their process.

Q. Who is Mr. Barth and why was he retained?

MR. QUINN: Objection.

BY MR. BAISE:

Q. Who is Mr. Barth?

A. He was a wastewater treatment processing engineer expert.

Q. Did you request Mr. Barth be retained?

A. No, we didn't. We, basically, told the utility that we need those ten concerns that are addressed in our letter adequately responded to, and their response was that they could hire a different consultant to review that aspect of the application.

Q. Was there anything Florida Cities or its consultant could do to speed up your review process, Dr. Ahmadi?

A. Could you repeat that?

Q. Was there anything Florida Cities or its consultant could have done to have speeded up your review process?

A. For a project of that size, that particular process, probably not.

Q. Dr. Ahmadi, did your office ever order Waterway Estates to cease discharging into the canal into the Caloosahatchee River?

A. No, we didn't.

Q. Why not?

A. There was several reasons. One, the Caloosahatchee River was studied by the State a couple of times and it maintained its quality. And second, the facilities that are currently discharging up to this date are well below their permitted design capacity, so they are — the river is receiving half of its wasteload, actually, and that's another reason. And third, there was really no alternative.

Q. I direct your attention to Defendant's Exhibit Number 36.

Do you have that in front of you, Dr. Ahmadi?

A. Yes, sir.

Q. Please describe this document for the record, doctor.

A. This is also a letter that is written by Bob French of Florida Cities Water Company to the District Manager Phil Edwards on April 19, 1989.

Q. Who was Phil Edwards?

A. My supervisor and the district manager of the South District.

Q. Have you seen this letter before?

A. Yes, sir.

Q. Did you see it in April of 1989?

A. Yes, sir.

MR. BAISE: I move this into evidence, Your Honor.

MR. QUINN: Objection. We say this document is hearsay and hearsay within hearsay as to the attachments. We talked about this the other day.

The sequence of events and the proposed compliance schedule contain hearsay and hearsay within hearsay and the cover letter itself dated to Mr. Edwards contains hearsay.

MR. BAISE: May I respond?

THE COURT: Did I sustain your objection?

MR. BAISE: Yes, you did, and I withdraw the document because this is the one that had on it the stamp received and there was some concern about whether Mr. Acosta had gotten it out of Florida Cities' files, and the issue went off on the fact that this was stamped received April 21, 1989, South Florida District. And since Dr. Ahmadi said he saw it at the time it came in, he worked for Mr. Edwards, he reviewed the document at the time, and certainly represents the events as they were occurring at the time accurately and honestly.

MR. QUINN: I object to the characterization of how this letter sets out the events accurately and honestly. It does what it does and we think it's hearsay.

THE COURT: Okay. Well, let's talk about it a minute.

MR. BAISE: I would move, Your Honor, it comes in under 803-6.

THE COURT: As an exception to the hearsay rule?

MR. BAISE: Correct. Particularly in light of his testimony.

THE COURT: Well, do you want to tell me how this qualifies under the requirements of the rule as a business record?

MR. BAISE: It's certainly a memorandum or a record, it's acts and events that were made at or near the time, and information transmitted by a person with knowledge, who would have been Mr. French. The document was kept in the course of regular conducted business by the Florida DER office a indicated by the stamp, April 21, 1989, and the only thing Dr. Ahmadi has not testified to is whether or not it was the regular practice of that business to make a memorandum or report of this sort and keep it within the custodian of a qualified witness.

THE COURT: Well, how about that?

MR. BAISE: Dr. Ahmadi, are these records kept by a qualified custodian in your offices?

THE WITNESS: Yes, they are. In fact, we are required by Florida Statutes to permanently keep all permitting letter — documents.

THE COURT: Well, who does that? That is, who keeps the records?

THE WITNESS: The records are kept by the — we

have a file clerk, Your Honor.

MR. BAISE: Five or file clerk?

THE WITNESS: Uh-huh.

MR. BAISE: Excuse me.

MR. QUINN: We still submit that the exceptions requirements have not been met.

The recording of the acts, events, conditions, opinions or diagnoses have to be made at or near the time. You know, we don't know what Mr. French was talking about here, sir. Mr. French isn't here. That's why it's hearsay.

Dr. Ahmadi said file clerks, and if they wanted to get the document in as a business record, they could have brought the file clerks in.

We're not submitting that it's not authentic, we're just submitting that they haven't met the requirements under this aspect of the exception to the hearsay rule.

MR. BAISE: Your Honor, we were told about Judge Swartz we did not have to bring custodians forward to authenticate these documents and maintain — and to assure that they were maintained in the ordinary course of business at the offices, so seems to me that Judge Swartz has dealt with that issue.

MR. QUINN: I'm not objecting to authenticity, sir. They're probably authentic.

THE COURT: Just a moment.

MR. BAISE: Your Honor, there's an 11th Circuit case called Beech Aircraft where it's stated that the United States bear the burden of showing there's a lack of trustworthiness with regard to this document —

THE COURT: Now, that case deals with public records and reports under subsection 8, doesn't it?

MR. BAISE: I've just been given a note from someone who is looking and trying to provide me information, Your Honor.

THE COURT: Well, give me just a moment here.

Okay. I'm referring to the pretrial conference before Magistrate Judge Swartz on December 28th, 1995, referring to the list of custodian of records.

He says: I want those witnesses eliminated and I want any documents that they were to authenticate approved for the purpose of authentication and I need a supplement to this, and I will give you ten days to get it supplemented.

Mr. Bullock: Would Your Honor also consider that for any EPA documents?

The Court: That's both ways.

Mr. Bullock: Thank you.

The Court: All exhibits have got to be examined and this Court is going to get a supplement to this that says there's are no objections to authenticity unless there is a document that you absolutely contend is not a true

document.

So, the Court led counsel to believe that there would be no need to bring in a custodian of records.

We've been talking about a requirement of the business records as evidence, provision of 803, which requires a custodian of records to properly establish the document's authenticity and, of course, a custodian of records would be expected to satisfy some of the requirements of the business records as evidence provisions of 803 Sub 6.

Do you want to be heard on that?

MR. QUINN: No, sir. For purposes of this document, the United States will concede as to what the Court read about authenticity.

However, I will address some of the points of 803-6 and other hurdles that have to met. It has to be established that the document was made at or near the time, by or from information transmitted by a person with knowledge. We don't have anything here today, sir, about Mr. French's personal knowledge.

MR. BAISE: This would, also, qualify as a public record, as well, given the fact it's got this stamp on it and would qualify as an exception to hearsay under 8.

MR. QUINN: May I be heard on that?

THE COURT: Wait a minute. This — I think I

mentioned the other day that I don't think that this is the kind of a record that is contemplated under 8. This isn't a public record that can report -- just a moment, let me read this again.

(Pause.)

Subsection 8, public records and reports. Records, reports, statements or data compilations in any form of public offices or agencies setting forth, A, the activities of the office or agency, or, B, matters observed pursuant to duty imposed by law as to which matters there was a duty to report excluding, however, in criminal cases, matters observed by police officers and other law enforcement personnel, or, C, in civil actions and proceeding, and against the Government in criminal cases. Factual findings resulting from an investigation made pursuant to authority granted by law, and thus the sources of information or other circumstances indicate lack of trustworthiness.

MR. BAISE: B., Your Honor, I was referring to.

THE COURT: Sir?

MR. BAISE: B., matters observed pursuant to his duty imposed by law.

THE COURT: No, I don't believe that subparagraph 8 is applicable here. I disagree with you.

MR. BAISE: Okay.

THE COURT: And I don't believe that this record has been adequately qualified as a business record, so I'll sustain the objection.

BY MR. BAISE:

Q. Dr. Ahmadi, I draw your attention to Defendant's Exhibit Number 33.

A. Yes, sir.

Q. Do you have that document in front of you?

A. Yes, sir.

Q. This, too, is in evidence, Your Honor.

Please describe this document for the record, Dr. Ahmadi.

A. This is a September 14, 1988 letter that's written by William Harrop, Jr., P.E. of Source, Incorporated to Bob French with copy to Tony Reeves.

Q. And what is attached to this letter?

MR. QUINN: Can I have a clarification as to what document?

THE COURT: This is Exhibit 33.

MR. BAISE: Defendant's Trial Exhibit 33, State of Florida Permit, dated September 2th, 1988.

THE WITNESS: I'm sorry. I read the 32.

MR. QUINN: Thank you.

THE COURT: He was describing another document.

THE WITNESS: I was reading it erroneously.

BY MR. BAISE:

Q. What is attached to the letter sent by Mr. Phil Edwards?

A. I'm sorry. For the number 33 is State of Florida document dated September 29, 1983.

Q. Is it '88? It's hard to see.

A. Hard to read.

Q. What is attached to this letter of September 29th, 1988, Dr. Ahmadi?

A. The temporary permit, six pages.

Q. And could you please look to page 2 and describe what Florida Cities is to undertake, starting with paragraph or line 1 at the bottom of the page of 1 of 6?

A. Starting with 1, date?

Q. Yes.

Please summarize that for the record.

A. Date when planning is expect to be complete. It says completed.

Date when engineering will be complete. September 23, 1988.

Source of funds. Invested-owned utility.

Number 4, Date construction application will be submitted to upgrade or eliminate the existing plant. October 8, 1988,

Number 5, Date construction contract will be let.

January 9, 1989,

Number 6, Date construction will commence. February 1, 1989.

Number 7, Date construction is to be complete and so certified. May 1, 1990.

Number 8, Date that wastewater facilities will be certified "in compliance" with your permit. November 1, 1990.

Q. To your knowledge, was Florida Cities able to meet this November 1, 1990, deadline, Dr. Ahmadi?

A. Yes.

Q. Are you aware of any additional delays that Florida Cities met with regard to meeting this date of November 1, 1990?

A. There were some delays from zoning from Lee County and permitting from the Army Corps of Engineers.

Q. Is there any order to cease discharge from the Waterway Estates in this permit issued on September 29, 1988, from the State of Florida?

A. No.

Q. Turning your attention to the exhibit for the Defendant, Number 51.

Do you see this document of October 30, 1990?

A. Yes, sir.

Q. This, too, is in evidence, Your Honor.

Dr. Ahmadi, please look to paragraph 2 of this letter to Mr. Reeves, and please read that paragraph into the record.

A. The letter is signed by Mr. Phillip Edwards, Deputy Assistant Secretary, to A. A. Reeves. Please be advised that the subject permit is extended until September 1, 1992.

Q. Why was that necessary for this particular facility, Dr. Ahmadi?

A. This was necessary due to the delays that were beyond the control of the utility due to permitting and involvement of the different governmental entities.

MR. QUINN: Objection, move to strike, calls for opinion and goes beyond the actual personal knowledge of the witness, goes to opinion and expert opinion, as well, sir.

MR. BAISE: Do you have personal —

THE COURT: Well, I'll sustain the objection.

BY MR. BAISE:

Q. Do you have personal knowledge of this date, Dr. Ahmadi?

A. Yes, sir.

Q. And do you have personal knowledge as to why it was extended?

A. Yes. It was reasonable that there were delays that obviously they could not go ahead with construction without a permit from the appropriate agency, otherwise they get in

trouble for violation of the permit, or the activities that they engage in.

Q. And did Waterway Estates still have a wasteload allocation to discharge in the canal on October 30th, 1990?

A. Yes, sir, through this permit. Through the earlier permit.

Q. Dr. Ahmadi, did this discharge cause any environmental harm as they were discharging into the canal in the Caloosahatchee River in 1990?

A. No measurable harm.

MR. QUINN: Move to strike again.

THE COURT: Just a moment.

MR. QUINN: Objection, move to strike, that environmental harm calls for an expert opinion.

THE COURT: Sustained. And it will be stricken.

BY MR. BAISE:

Q. If this facility had remained discharging into the canal leading into the Caloosahatchee River, could it still be discharging and meeting water quality standards, State of Florida?

A. In my opinion, due to the other --

THE COURT: Wait a minute. Wait a minute.

Yes, sir.

MR. QUINN: Objection. He said, in his opinion, and that will elicit an expert response.

THE COURT: Read the question back to me, again, please.

MR. BAISE: I can rephrase the question, Your Honor, to speed it up.

THE COURT: all right.

BY MR. BAISE:

Q. Dr. Ahmadi, do you have any facts or any data that would suggest that Waterway Estates could still be discharging into the canal without causing water quality standards violations?

THE COURT: Yes or no? Do you have any facts?

THE WITNESS: No. We don't have any facts that — could you repeat that?

BY MR. BAISE:

Q. Do you have any facts showing any water quality harm in the canal in 1990?

A. No, we do not have any facts.

Q. Do you have any facts showing any environmental benefit by moving the pipe to the Caloosahatchee River in 1990?

A. No, we don't have that.

Q. In 1991?

A. No.

Q. 1992?

A. No.

Q. Therefore, could the facility still be discharging into the canal without violating water quality standards?

A. Yes.

MR. QUINN: Objection, move to strike. First, it calls for speculation, and second, speculation of an expert.

THE COURT: All right. Read the question back.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: I'll sustain the objection.

BY MR. BAISE:

Q. Did EPA comment on the permit that was issued by the State of Florida in 1988, Dr. Ahmadi?

A. No.

Q. Did EPA ever challenge that permit issued in 1988?

A. No, nobody did.

Q. And the Waterway Estates facility had a wasteload allocation to discharge in the canal up until it moved its pipe in 1991?

THE COURT: Don't lead the witness. This is your witness.

BY MR. BAISE:

Q. Dr. Ahmadi, was there ever a time that Waterway Estates did not have a wasteload allocation to discharge into the canal?

A. No, not from the State. All the time they did.

MR. BAISE: Thank you.

THE COURT: Is that all, Mr. Baise?

MR. BAISE: Yes, sir.

MR. HIRD: I have no questions for this witness.

THE COURT: Mr. Quinn.

CROSS-EXAMINATION

BY MR. QUINN:

Q. Good afternoon, Dr. Ahmadi. My name is Tony Quinn. I represent the United States.

A. Good afternoon.

Q. Sir, when did you first start with the Florida Department of Environmental Regulation?

A. That's the first place where I applied for a position and was interviewed. There were two positions and I was offered both of them.

Q. And what year — what date was that?

A. That was in September 1981.

Q. So when did you start work for FDER?

A. In September of 1981.

MR. QUINN: Your Honor, at this time the United States would move to strike all the testimony of Dr. Ahmadi which relates to his personal observations made on or before the date he started work in September of '81.

THE COURT: Motion denied.

BY MR. QUINN:

Q. Sir, prior to the delegation to Florida, NPDES Permits and State permits were different requirements, weren't they?

A. It was a parallel program, yes.

Q. But they were requirements that were separately enforcement, weren't they?

A. Yes.

Q. And prior to the delegation of the NPDES Program to Florida, a facility discharging pollutants to a surface water required both a State permit and a Federal NPDES Permit; is that correct?

A. Yes.

Q. Sir, in Florida, do permittees have a right to appeal a State permit denial?

A. Yes, they do.

Q. Are you familiar, now that Florida has been delegated the NPDES Program, are you aware whether permittees have a right to appeal permit denials?

A. Yes, we give them the point of entry, and on receipt of the permit they have certain amount of days to appeal for a permit, object to it if they dislike any of the conditions.

Q. So it's a permit appeal process; is that correct?

A. Yes.

Q. Sir, prior to the delegation of the NPDES Program to

the State of Florida, do you know whether permittees had the opportunity to appeal permit denials of NPDES Permits?

A. My understanding is that they would have.

Q. So, if a permittee thought that a permit was wrongfully denied, it could have appealed; is that correct?

A. Yes.

Q. Sir, you mentioned during your discussion with Mr. Baise the Cape Coral facility. My question deals with that facility.

Doesn't the Cape Coral facility currently have one hundred percent use of its effluent on land application?

A. No, it doesn't.

Q. Does it have any surface water discharge?

A. Yes, they do.

Q. Only during wet weather; isn't that correct?

A. Yes.

Q. Other than only during the wet weather discharge, Cape Coral has land application for its effluent in entirety; is that correct?

A. Yes. About three years ago the city, after several years of referendums and a lot of pros and cons, the citizens decided they are going to embark on a project that will deliver water to each home —

MR. QUINN: Objection. Move to strike everything after "yes."

THE COURT: All right. Stricken.

BY MR. QUINN:

Q. Sir, can you tell me what is the wet weather discharge storm event that allows the wet weather discharge?

A. Any time the land cannot accept effluent due to excessive rainfalls, such as this last year we had close to 75 inches of rain in our area, our part of the State, they are authorized to discharge their entire effluent or portion of to it the river.

Q. What is the trigger that allows them — withdrawn.

What is the triggering event or the triggering amount of rainfall that authorizes a surface water discharge from the Cape Coral facility, if you know?

A. We have an application rate of 2 inches per week. Anything above and beyond that will soak the land and the land will not accept it and create surface water runoff.

Q. Sir, is it the State of Florida's position — withdrawn.

Does the State of Florida encourage land use application for wastewater facilities?

A. Yes, we do.

Q. And does the State of Florida discourage surface water discharges?

A. Where we use as feasible, yes.

Q. Why does the State of Florida discourage surface water

discharges?
A. For two reasons: One is the conservation of the resource, it eliminates the need for additional potable water or ground water of high quality, and that's normally used for irrigation, it would be safe to be used for other purposes, and second, it will not be a direct discharge to a surface quarter stream.
Q. Because a direct discharge of pollutants to the water might have an environmental impact?
A. Well, it does — in fact, it could be debated both ways. If ground water is contaminated, it is extremely difficult to clean up that water. If surface water gets contaminated, due to the natural reactions, currents, and so forth, it is easier to get cleaned up.
Q. Do pollutants — withdrawn.
Does pollutants discharge to a surface water body have a tendency or a possibility of impacting environmentally on that water body?
A. It would, depending on what the pollutants are and what concentrations are.
The State Rules, all of them, allow certain amount of pollutants to be discharged to the ground water or to the surface waters.
Q. Thank you.
Sir, we talked a little bit about the 1981

Caloosahatchee Wasteload Allocation document. I'm not going to ask you any specifics about them, I'm just going to ask you in general about it.
You didn't write the 1981 Wasteload Allocation document, did you?
A. No, I didn't. We have a separate section in Tallahassee, which is the technical department and they do it for the entire state and they are headquartered in Tallahassee and we work closely with them.
MR. QUINN: Objection, move to strike everything after, "no, I did not."
THE COURT: I'll deny the motion to strike.
Go ahead.
BY MR. QUINN:
Q. Sir, all your knowledge about the purpose of the wasteload allocation document came after it was written; isn't that a fact?
A. After I joined the DEP, that was part of my job requirement, to review the Statutes and the Rules, Administrative Codes and implement those in the permitting process.
Q. So people told you about the wasteload allocation document at that time; is that right?
A. That was part of my job, as I said.
Q. Okay. Sir, does the Florida Department — withdrawn.

The Florida Department of Environmental Protection or the Florida Department of Environmental Regulation, I'm not sure exactly which one it's going to be based on the time, but either FDEP or FDER required that the Waterway Estates' outfall be moved to the 6-foot contour line because there was more dispersion of pollutants at that location; isn't that correct?
A. That was the premise for all of them, for all of the dischargers to that body of water.
Q. So we talked about a little bit about wasteload allocations, and we talked a little bit about permits on your direct examination.
A wasteload allocation is different than a permit, isn't it?
A. A permit is the authority to discharge and in that it contains certain conditions and under what conditions.
Q. And the wasteload allocation is a condition which is enforcible through a permit; isn't that correct?
A. If it has been determined that a facility is granted a specific wasteload, then that is contained in the permit and only enforcible if it's in the permit.
Q. So a wasteload allocation which is not in a permit is not enforceable; is that correct?
A. Right.
MR. QUINN: Excuse me, one moment, sir.

(Pause.)
BY MR. QUINN:
Q. I'd like to turn your attention, please, if I may, to Florida Cities Water Company Exhibit Number 32.
This was the document between Source and Mr. French that Dr. Ahmadi talked about a little bit, Your Honor.
Do you have the document in front of you, Dr. Ahmadi?
A. You said 34 or —
Q. I'm sorry. 32 is the one I'm talking about.
A. Yes, sir.
Q. Okay. Sir, with regard to your conversations with Florida Cities Water Company and Source Engineering, isn't it true that the Florida Department of Environmental Regulation needed to make requests — withdrawn.
Isn't it true the Florida Department of Environmental Regulation needed to make four requests for additional information regarding this project?
A. I'm not sure of the exact number, but there was several requests back and forth.
Q. On direct testimony you said, I believe in response to a question, that you didn't think there was anything that could be done to have sped up the review process; isn't that correct?
A. Yes, I said that it took approximately nine months and that's not an unusually long time.

Q. Sir, wouldn't submission of a complete and accurate application have speeded up the review process?

MR. BAISE: Objection to the characterization of accurate application. There's been no suggestion that there was an inaccurate application submitted here; only an application which, as he pointed out, there are always questions with regard to any application such as this, that is as complicated as this project was.

MR. QUINN: I'll rephrase the question, sir.

THE COURT: All right. I'm not requiring you to, but go ahead.

MR. QUINN: I think I will, just to save a little time.

BY MR. QUINN:

Q. Sir, wouldn't submission of a complete application the first time have speeded up the application review process?

A. It would, but it's not customary. As I said, in 99 percent of cases there is need for additional information in all such cases.

MR. QUINN: Objection, move to strike everything after "it would" as non-responsive.

THE COURT: Read it back to me, please.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: Denied.

BY MR. QUINN:

Q. Sir, in 99 percent of the cases are four additional information requests usually sent?

A. Yes, sir.

Q. Four times it is —

A. Four or more.

Q. Has the Department of Environmental Regulation ever requested that applicants do a better job in submitting applications the first time?

MR. BAISE: Objection. That's outside the scope of my direct.

THE COURT: Well, I don't know. I'm kind of curious, myself.

THE WITNESS: Well, the application on the very top says, in fact, that it should be fully executed and supporting documents given to us. But, there are a lot of factors to be considered; chemical, biological, process, equipment, and others, layout. Unless we are satisfied that the process they proposed will give us that degree of confidence that they will meet the standards, we will not be able really to decide on the merits of what has been proposed, and that's, as I said, customary in all such treatment process.

BY MR. QUINN:

Q. One final line of questions for you, Dr. Ahmadi.

Sir, are you familiar with something called the Anti-degradation Rule?

A. Yes, sir.

Q. Sir, if a wastewater treatment plant had a complete construction permit application with FDER before the effective date of the Anti-degradation Rule, isn't it a fact the required treatment levels set forth the Anti-degradation Rule would not be required?

MR. BAISE: Objection.

THE COURT: Wait, wait.

MR. BAISE: I certainly didn't bring the Anti-degradation Rule on direct, Your Honor.

MR. QUINN: He did not, but this goes to knowledge about the delays we've been talking about, so I believe it is within the scope.

In addition, the Anti-degradation Rule came up in earlier testimony as one of the mitigating factors.

THE COURT: I'll overrule the objection.

Do you remember the question, sir?

THE WITNESS: Yes. The Anti-degradation Rule, when it was passed, had a cut-off date. It was only applicable to future projects and expansion only. The expanded portion. This facility did not expand. The expansion that took place — actually, there was an

expansion, but it was through reuse of land application. The facility was downgraded, in fact, as to discharge. It was 1.08 and came to 1.0 for the surface water discharge. The balance of that, which is 1.5, goes to land application and reuse.

BY MR. QUINN:

Q. So if the application for the upgrade of the Waterway Estates' treatment plant had been submitted and been deemed complete prior to the effective date of the Anti-degradation Rule, none of those requirements would have been applicable to that construction project; is that correct?

A. What requirements?

Q. The requirements of the Anti-degradation Rule.

A. There are no additional requirements under the anti-degradation that will be retroactively applied to a facility. Only to expansion or new construction.

Q. So my question goes to that, though, sir. If the application had been submitted after that cut-off date, then the Anti-degradation Rule could not have been applied retroactively to it; is that correct?

A. Yes. The anti-degradation is not an issue at all here because they did not expand the facility to discharge surface waters. The expansion is to land application reuse site.

MR. QUINN: Thank you.

I have no more questions, Dr. Ahmadi, sir.

THE WITNESS: Thank you.

THE COURT: Redirect.

REDIRECT EXAMINATION

BY MR. BAISE:

Q. Dr. Ahmadi, in talking about the Cape Coral facility, did I hear you correctly in saying it could discharge over if two inches of rain was received within a certain time period?

A. No, I said the rate of application of effluent on land for irrigation purposes is two inches per week. If we get, let's say, two or three inches per week of rain, then the land cannot accept any additional water.

Q. How frequently does this area receive two to three inches of rain per week?

A. In our part of the State, beginning in late May to October, it's 7, 8, 10 inches a week.

Q. How frequently, then, does Cape Coral discharge into the Caloosahatchee River?

A. As soon as the rain hits, they're partially starting discharge and sometimes one hundred percent discharge.

Q. I'm sorry. One hundred percent?

A. Right, of what they produce is discharged.

Q. How many gallons is that?

A. Currently they have to two facilities. They are

permitted for close to 14 million gallons.

Q. 14 million?

A. Yes, sir.

Q. How many gallons is Waterway Estates' discharge?

A. Waterway Estates discharge is limited to one million gallons, so it would be one over 14th of that or 7 percent.

Q. Regarding wasteload allocations, are those included in the Florida permits when they are issued, Dr. Ahmadi?

A. Yes. When the permits are issued, it lays out all the conditions, what they can and what they cannot do and what type of treatment they need to achieve.

Q. What other ways, if any, besides an operating permit, does FDER use to authorize discharges to surface waters?

MR. QUINN: Judge, I think this is beyond the scope of my cross examination.

THE COURT: Read the question back to me.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: Mr. Baise.

MR. BAISE: I was just going back to the Cape Coral situation, which has struck me as interesting when counsel drew out that Cape Coral could be discharging into the Caloosahatchee River --

THE COURT: I'll overrule it.

MR. BAISE: -- These enormous amounts --

THE COURT: I'll overrule it.

Go ahead

BY MR. BAISE:

Q. Do you understand the question, Dr. Ahmadi?

A. No, there's no other way, other than the permits.

Q. Dr. Ahmadi, how many private waste treatment companies or facilities do you work with?

A. Close to 700 in our district.

Q. Could you compare those facilities' performance with Waterway Estates' performance?

A. I not compare one to the other, but I have a generalized feeling --

THE COURT: I think this is beyond the scope.

MR. BAISE: I'll withdraw the question, Your Honor.

BY MR. BAISE:

Q. How many permit applications does your office review in a year's time, Dr. Ahmadi?

A. Only the facilities which I log in personally, and then assign it to the engineers. Close to one thousand per year.

Q. How many of those permit applications are granted upon the first application submitted to your office?

A. Some applications which are on the -- not the

process -- like the distribution system or collection system or pump station, those are simple. They could be complete, we could deny them right away or we could issue them right away. There's a different time limit of 30 days. So, if you exclude those, the others all of them would require, and some of them 1, 2, 3 years, in fact, to finalize.

MR. BAISE: Thank you very much.

THE COURT: All right.

We'll take a 15-minute recess.

(Thereupon, a brief recess was taken after which the following proceedings were had:)

THE COURT: Call your next witness, Mr. Baise.

MR. BAISE: Your Honor, Florida Cities rests with the exception of calling Mr. Charles Hill, the PSC person that turned up ill today and could not make it. So, we have no further witnesses to call on behalf of Florida Cities, but Avatar, of course, has three witnesses that I've advised the Court that it would be calling for the remainder of the afternoon.

THE COURT: Okay.

MR. BAISE: Do you want Mr. Hird to begin?

THE COURT: Yes, sir.

MR. BAISE: Thank you.

THE COURT: Now, are you -- you're resting. Did I understand you correctly to ask for leave to rest subject to calling Mr. Hill at some other time?

MR. BAISE: Correct, Your Honor.

THE COURT: Uh-huh. (Indicating affirmatively.) Well --

MR. BAISE: I assume we're not going to finish this afternoon and, therefore, we will have to look at your calendar or whatever decision you make with regard to the way we can do that.

THE COURT: I'll take that under submission and we'll --

MR. BAISE: Sure.

THE COURT: -- press on.

MR. BAISE: Thank you.

THE COURT: Okay.

Mr. Hird, you may call your first witness.

MR. HIRD: Thank you, Your Honor.

Avatar Holdings calls as its first witness Edwin Jacobson.

Thereupon,

EDWIN JACOBSON,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness stand. State your name and spell your last for the record, please.

THE WITNESS: Edwin Jacobson, J-A-C-O-B-S-O-N.

DIRECT EXAMINATION

BY MR. HIRD:

Q. Good afternoon, Mr. Jacobson. Are you associated with Avatar Holdings, Incorporated?

A. Yes.

Q. What position do you hold with respect to Avatar Holdings?

A. President and chief executive officer.

Q. When did you first become associated with Avatar Holdings?

A. June, 1992.

Q. Now, you testified that you're chief executive officer of Avatar Holdings. Are you chief executive officer of any other companies?

A. Yes.

Q. Could you identify those companies, please?

A. Chicago Milwaukee Corporation, Heartland Partners and Milwaukee Land Company.

Q. For purpose of convenience, I'm going to call those three companies that you mentioned the Chicago companies. Is that acceptable to you?

A. Yes.

Q. Okay.

Do any of the Chicago companies have an ownership interest in Avatar Holdings?

A. No.

Q. Does Avatar Holdings have an interest in any of the Chicago companies?

A. No.

Q. Where do you maintain your offices, sir?

A. I maintain two offices; one in Coral Gables, Florida, and the other in Chicago, Illinois.

Q. And you split time between those offices?

A. Yes.

MR. JACOBS: Can we just ask that he lean a little

bit less? I realize he's probably, in good faith, trying to expedite this.

THE COURT: All right.

BY MR. HIRD:

Q. Sir, what are your duties as chief executive officer of Avatar Holdings?

A. To establish a vision for the corporation, to communicate that vision both to the employees of the company as well as to people outside the company, investors and others, to develop plans in connection with the company's vision, to develop an organizational program to provide the structure, to implement the plans, to recruit people from outside the company, as well as develop people within the company to support the organizational structure, to monitor the implementation of the activity in connection with the company's vision and then to measure performance against those plans.

Q. Could you describe Avatar Holdings' business, please, sir?

A. Avatar Holdings is a diversified real estate company with essentially an autonomous water and wastewater utility subsidiary. The principal focus is home building, which is conducted at numerous locations in Florida, including Orlando, Hollywood, Florida, Cape Coral, as well as Rio Rico in Arizona.

Additionally, the company has a developing vacation ownership business which is in Tennessee, in Pigeon Forge,

where the company is building a new vacation ownership resort, in Poinciana, where it's developing an existing resort, as well as pursuing a search for a third resort on the East Coast.

Additionally, the company operates resorts in Cape Coral, Florida, which it has recently renovated, as well as a major resort in Rio Rico, Arizona. The company operates a retail lot business, as well as engaging in various activities related to commercial real estate in addition to the water utility business.

Q. Is the emphasis of Avatar Holdings' business on the real estate business or on the utility operations?

A. The emphasis is on the real estate business.

Q. Now, does Avatar Holdings operate through subsidiaries?

A. Yes.

Q. What are its principal subsidiaries?

A. The principal subsidiary is Avatar Properties.

Q. And what does Avatar Properties do?

A. Well, Avatar Properties is engaged in the many real estate activities that I've described earlier; home building, vacation ownership activities, retail lot sales, commercial real estate, as well as the resorts.

Q. Is the Barefoot Bay Development a real estate operation of Avatar Holdings and its subsidiaries?

A. Yes.

Q. And is that a major or minor real estate development?

A. It's not a material aspect of the company.

Q. Why do you say that?

A. The Barefoot Bay community is nearing completion. I believe that approximately ninety-five percent of the home sites have been sold and are occupied, so there is a limited amount of activity with respect to the community. We do operate a golf course. We have a small retail center and, in addition, we have some commercial real estate.

Q. Over the last several years, has Barefoot Bay been a major profit center for the company?

A. The only significant profit that Barefoot Bay has contributed is its golf course and that is not a significant factor in terms of the overall company.

Q. Now, in the last few years, did Avatar Holdings sell any of its utility operations?

A. Yes, it did.

Q. What operations were sold?

A. The company sold its midwest facilities which were located in Missouri, Indiana, Ohio and Michigan.

Q. And what effect did that sale have on the size of Avatar Holding's utility operations?

A. It reduced it materially.

Q. Did you participate in that sale?

A. Yes, I did.

Q. Other than your participation in the sale of Midwest

Utilities, what has your involvement been in Avatar -- well, strike that.

You mentioned that Avatar Holdings has a utility business. What is the principal subsidiary that runs that business?

A. Well, there are four levels of subsidiaries. Avatar Utilities is the first line subsidiary, then there is Consolidated Water Company and Florida Cities Holding Company and then, Florida Cities.

Q. Okay.

Other than your participation in the sales in the Midwest Utilities operations, what has your involvement been as Avatar Utilities in Florida Cities' business?

A. Principally, capital investing and funding in connection with capital investment. Then, additionally, I have encouraged the management of Avatar Utilities to pursue a contract management business and I've had conversations and discussions with them in connection with that activity.

Q. Have you ever been involved in the operation of any of Florida Cities' wastewater treatment plants?

A. No.

Q. Have you ever been involved in any environmental compliance issues at Florida Cities' wastewater treatment plants?

A. No.

Q. Prior to this, the initiation of this lawsuit, were you aware of any of the alleged violations at the Barefoot Bay Treatment Plant?

A. No.

Q. Prior to the initiation of this lawsuit, were you aware of any of the alleged violation at the Carrollwood Plant?

A. No.

Q. Prior to the initiation of this lawsuit, were you aware of any of the alleged violations at the Waterway Estates Treatment Plant?

A. No.

Q. Other than yourself, who else is an officer of Avatar Holdings?

A. Mr. Charles McNairy, who is the company's chief financial officer, Mr. Dennis Getman, who is the company's general counsel, Mr. Pat Settles who is the company's assistant general counsel, Mr. Lawrence Goldus, who is the company's controller and Ms. Juanita Kerrigan, who is the company's secretary.

Q. Does Avatar Holdings have any employees?

A. No.

Q. Why not?

A. That is not the way the company is structured.

Q. Now, you mentioned Mr. Getman. What are Mr. Getman's duties?

A. As the company's general counsel, he is responsible

principally for the legal activities of the company and its subsidiaries. In addition, he has two other responsibilities; customer service and land and housing registration.

Q. Can you explain what you mean by "customer service"?

A. Customer service is provided in connection with the sale of home sites as well as vacation ownership intervals which are sold on a installment basis. Customer service is involved with the collection of those receivables, as well as communication to the individuals.

Q. And what do you mean by "land registration"?

A. Most states require that a project be registered in their state and meet certain requirements before residents of their states can be solicited for the sale of those properties.

Q. Does Mr. Getman have any business responsibilities with relationship to the utility operations?

A. No.

Q. Now, does Mr. Getman have an additional title besides general counsel?

A. Yes.

Q. What is that title, please?

A. Executive vice president.

Q. And what does that title represent?

A. That represents that he is a senior officer of Avatar Holdings.

Q. Does that title come with any additional duties?

A. No.

Q. Are you familiar with Robert Gordon?

A. Yes.

Q. Who is Mr. Gordon?

A. Mr. Gordon is the president and CEO of Avatar Utilities.

Q. Is Mr. Gordon an officer of Avatar Holdings?

A. No.

Q. Is he a director of Avatar Holdings?

A. No.

Q. Is he an employee of Avatar Holdings?

A. No.

Q. Are you familiar with Gerald Allen?

A. Yes.

Q. Who is Mr. Allen?

A. I'm sorry?

Q. Who is Mr. Allen?

A. Mr. Allen is the president and CEO of Florida Cities.

Q. Is Mr. Allen an officer of Avatar Holdings?

A. No.

Q. Is Mr. Allen a director of Avatar Holdings?

A. No.

Q. Is Mr. Allen an employee of Avatar Holdings?

A. No.

Q. Mr. Jacobson, were you familiar with Peter Sharp?

A. Yes.

Q. How did you know Mr. Sharp?

A. When I was recruited for the position of president and chief executive officer of Chicago Milwaukee Corporation, Peter Sharp was one of three directors who were then members of the executive committee of Chicago Milwaukee who interviewed me for the position.

Q. And did you subsequently assume that position?

A. Yes.

Q. Did you deal with Mr. Sharp in the course of your activities as chief executive officer for the Chicago companies?

A. Yes.

Q. In that role, did -- were you micro-managed by Mr. Sharp?

A. No.

Q. What was Mr. Sharp's involvement with the Chicago companies?

A. As a director and a member of the executive committee, his principal focus was major financial events.

Q. Are you aware that Mr. Sharp is dead?

A. Yes.

Q. Did you meet with Mr. Sharp during the last year of his life?

A. Yes.

Q. Could you describe the circumstances under which you met with Mr. Sharp?

A. After Mr. Sharp became ill, he did not attend board meetings, so, on some occasions when I was in New York, following those board meetings, I visited him and discussed the details of the board meetings.

Q. About when was this?

A. I recall one meeting at his apartment that took place either in late '91 or early '92. I don't recall the exact time period.

Q. At the time, was Mr. Sharp visibly ill?

A. My only recollection of his physical state, he did not look well and he had very swollen feet.

MR. HIRD: Thank you, Mr. Jacobson. No more questions.

THE COURT: Mr. Jacobs.

CROSS-EXAMINATION

BY MR. JACOBS:

Q. Good afternoon, Mr. Jacobson.

A. Good afternoon.

Q. Mr. Hird asked you about your affiliation with what he's now called for short the Chicago companies. You're, in fact, the CEO of C.M.C. Heartland, one of those Chicago companies, correct?

A. Yes.

Q. And in that capacity, you make three hundred and fifty thousand dollars a year; is that correct?

A. No.
Q. What is your salary?
A. Two hundred and seventy-five thousand.
Q. Has it gone down since your deposition?
A. Yes.
Q. And as CEO of Milwaukee Land Company, do you still make ninety thousand dollars a year?
A. Yes.
Q. And as president and chief executive officer of Avatar Holdings, do you still make three hundred and twenty-five thousand dollars a year?
A. Yes.
Q. Now, Mr. Hird also asked you whether there was any relationship between these Chicago companies and Avatar Holdings, and I believe you said no; is that correct?
A. My recollection of the question is he related it to cross investment, and my answer was no.
Q. Let me ask you this. Are you familiar with the firm called Odyssey Partners?
A. Yes.
Q. And is that firm, Odyssey Partners, substantial investors in C.M.C. Heartland?
A. Yes.
Q. Isn't it also true Odyssey Partners are substantial investors in Milwaukee Land Company?

A. No.
Q. At the time of your deposition, were Odyssey Partners substantial investors in Milwaukee Land Company?
A. Yes.
Q. Odyssey Partners are also substantial investors in Avatar Holdings, correct?
A. That is correct.
Q. And in fact, Mr. Levy is the managing general partner at Odyssey Partners, correct?
A. I would characterize him as a general partner, not the managing general partner.
Q. Would you characterize him as a managing general partner?
A. A general partner.
Q. Do you recall, has that status changed since your deposition, Mr. Levy's position with Odyssey Partners?
A. No.
Q. Let me read you a question I asked you at your deposition and then I'm going to read the answer from the transcript and ask you if you recall giving that answer. All right, Mr. Jacobson?
A. Certainly.
Q. And for the Court's reference, I'm on page 136 of Mr. Jacobson's deposition given in Chicago, Illinois on the 26th day of June, 1995, line twenty.
Question: How would you describe Mr. Levy's occupation?

Answer: He's a managing general partner of a boutique investment company.
Do you recall giving that answer, sir?
A. Yes.
Q. Question, line 24: This boutique is Odyssey?
Answer: Odyssey Partners.
Do you recall giving that answer, sir?
A. Yes.
Q. Would you agree with me now he's a managing general partner of Odyssey Partners?
A. No.
Q. Did you think you had it wrong at your deposition?
A. I subsequently saw a legal document that characterized Mr. Levy as a general partner.
Q. And from that document, you've now decided that he's a general partner rather than a managing general partner?
A. Yes.
Q. What was the basis of your testimony at the time of your deposition, that he was a managing general partner?
A. At that time, that was my understanding.
Q. And what was the basis of that understanding?
A. Pardon?
Q. What was the basis of your understanding at the time of your deposition that he was a managing general partner?
A. That was my understanding historically, that he and

Mr. Jack Nash were the managing general partners. Subsequently, I became aware of the fact that Mr. Nash is the managing general partner and the other partners are characterized as general partners.
Q. Now, when you were in New York to see Mr. Levy, you'd see him at his Odyssey Partners offices, correct?
A. Generally.
Q. And you'd take that opportunity to brief him on matters relating to C.M.C. Heartland, Milwaukee Land, what we're now calling the Chicago companies, as well as Avatar Holdings, correct?
A. No.
Q. Do you recall at your deposition I asked you -- and this is page 135, line sixteen: You're at his office at Odyssey anyway to discuss Chicago Milwaukee business?
Answer: Yes.
Do you recall saying that?
A. Yes.
Q. So, you take the opportunity to brief him, and then you interrupt, and your answer is, as a matter of courtesy.
Do you recall giving that answer?
A. Yes.
Q. And then, the question is: On Avatar business?
Do you recall answering right?
A. Yes.

Q. Now, was there any connection between Peter Sharp and C.M.C. Heartland and Milwaukee Land Company, the Chicago companies?
A. Yes.
Q. What was that connection, sir?
A. Peter Sharp was a director and member of the board's executive committee.
Q. Of the Chicago companies?
A. Yes.
Q. And was that also the case for Mr. Levy?
A. At one point, that is correct. He was not a member of the executive committee, but he was a member of the board of directors during the first few years of my tenure with the Chicago companies.
Q. Now, on -- I believe you testified that you first became associated with Avatar Holdings in June of 1992; is that correct, sir?
A. That is correct.
Q. And is it also true that at that time you became the director and chairman of the executive committee of the board of directors?
A. Yes.
Q. But you didn't actually become president and chief executive officer of Avatar Holdings until March of 1994, correct?

A. That is correct.
Q. Is it also fair to say that you have no personal knowledge of events relating to Avatar Holdings and its subsidiaries which occurred prior to June of 1992?
A. That is correct.
Q. And you have no personal knowledge of what Mr. Getman's duties were with Avatar Holdings prior to June of 1992; is that correct?
A. I have no personal knowledge.
Q. And is that also true with respect to what Mr. Sladkus' responsibilities were with Avatar Holdings?
MR. HIRD: Objection. I think there was no discussion about Mr. Sladkus in my direct.
MR. JACOBS: I think he opened the door by inquiring about the responsibilities of one of the Avatar Holdings' officers and I don't think I should be restricted to only asking about the responsibilities of that one officer.
THE COURT: I'll sustain the objection.
BY MR. JACOBS:
Q. Mr. Hird asked you about Mr. Gordon, correct?
A. Yes.
Q. And I believe you said he's the president of Avatar Utilities, correct?
A. Yes.
Q. At the time of your deposition, did he also hold another

position?
A. He may have. I don't recall it.
Q. Are you aware that Bob Gordon was president of Florida Cities Water Company at one time?
A. I don't have any recollection as to the time of when he held that position.
Q. Okay.
Let me ask it a different way. Do you know whether Bob Gordon was ever president of Florida Cities Water Company?
A. My recollection is that at one point he was.
Q. And you just don't know at what point?
A. Yes.
Q. Now, you maintain an office in Chicago and also in Coral Gables, correct?
A. Yes.
Q. And the office you maintain in Coral Gables is located at 255 Alhambra Circle?
A. That's correct.
Q. And that is the location of Bob Gordon's office as well, correct?
A. That is correct.
Q. And Mr. Gordon's office is actually at Avatar Holdings' suite of offices, correct?
A. Well, it occupies space within an office that Avatar Holdings also has space.

Q. Is that a yes?
A. Pardon?
Q. Is that a yes?
A. Would you repeat the question.
THE COURT: Read back the question.
(Record read back.)
THE WITNESS: The answer is yes, but many of our subsidiaries are headquartered in that space.
MR. JACOBS: Move to strike everything after yes, Your Honor.
THE COURT: I'll deny the motion.
BY MR. JACOBS:
Q. Mr. Gordon reports to you correct, Mr. Jacobson?
A. Yes, he does.
Q. Now, since you became president of Avatar Holdings, has he always reported to you?
A. Yes.
Q. Now, Mr. Getman's office is in that same Avatar Holdings suite, correct?
A. Yes.
Q. And Mr. Getman is executive vice president of Avatar Holdings in addition to being the general counsel, correct?
A. Yes.
Q. And he's also executive vice president of Avatar Development, correct?

A. Yes.
Q. And he is, as well, executive vice president of Avatar Properties, correct?
A. Yes.
Q. Do you know whether, before Mr. Getman became executive vice president of Avatar Holdings, he was a senior vice president of Avatar Holdings?
A. Yes.
Q. And do you know whether, before he became a senior vice president of Avatar Holdings, he was a vice president of Avatar Holdings?
A. My recollection is that that was his title prior to becoming senior vice president.
Q. Is that a yes?
A. Yes.
Q. And Mr. Getman reports to you, correct?
A. Yes.
Q. Now, Mr. Allen is executive vice president of Avatar Utilities, correct?
A. I don't have any personal knowledge of that.
Q. Do you know whether Mr. Allen is affiliated with Florida Cities Water Company?
A. Yes.
Q. At the time of his deposition -- or rather, your deposition, was Mr. Allen executive vice president of Avatar

Utilities?
A. I don't recall his position at the deposition.
Q. Let me again go through this procedure where I'll read you a question and ask you if you gave a certain answer. For the record, I'm on page 71 of Mr. Jacobson's deposition.
Question, line eight: Does Avatar Utilities have a vice president?
Answer: I'm aware of an executive vice president.
Do you recall giving that answer?
A. Yes.
Q. Question, line eleven: And who is that?
Answer, line twelve: Gerald Allen.
Do you recall giving that answer, sir?
A. Yes.
Q. Now, until recently, Mr. Allen's office was in the same suite of offices as Avatar Holdings, correct?
A. On the same floor, yes.
Q. Now, is it fair to say that one of the persons at Avatar Holdings or any of its subsidiaries who you would identify as having personal knowledge of the functioning of the wastewater treatment plants operated by Florida Cities you would identify as Mr. Allen and Mr. Gordon?
MR. HIRD: I object to the form of the question. I think it's --
THE COURT: Okay.

Did you understand the question, sir?
THE WITNESS: Not totally.
THE COURT: Okay.
Why don't you restate it.
BY MR. JACOBS:
Q. I'll restate it.
Mr. Jacobson, who would you identify as the persons at Avatar Holdings or any of its subsidiaries who would have direct knowledge? You said you didn't have direct knowledge, as I recall, of the Florida Cities?
A. That's correct.
Q. Right. Okay.
Which people at Avatar Holdings or any of its subsidiaries would you say had personal knowledge of the function of wastewater treatment plants operated by Florida Cities?
A. I would not designate anybody at Avatar Holdings. I believe that Mr. Gordon and Mr. Gerald Allen would have such knowledge.
Q. And that was the same answer you gave at the deposition, correct?
A. I could only respond to that if I saw the deposition record.
Q. Now, Mr. Jacobson, Mr. Hird asked you about your involvement with the wastewater treatment plants and I believe

he asked you about involvement prior to the filing of the lawsuit.
Subsequent to the filing of this lawsuit, you have had meetings and discussions with Avatar Utilities and Avatar Holdings' officers about the lawsuit, correct?
A. I've had discussions with Mr. Allen, Mr. Gordon, Mr. Getman and the company's outside counsel.
Q. Now, I'm not asking you about discussions you had with the outside counsel. Just for the record, you did have discussions with these other folks you identified and the focus of those discussions was whether the case should be settled before Avatar Holdings was named as a Defendant; is that correct?
A. The discussions were held at all occasions with the participation of counsel.
Q. Outside counsel?
A. Outside counsel and the company's general counsel.
Q. Do you recall on deposition I asked you about such a meeting? I'm on page 143, line two. Question: Who was there?
Answer: Gordon, Jacobson, Wilkov, Getman. I'm not sure whether Allen attended or not. There was a letter that related to it, but we attended face to face as well and my recollection is there was an attorney, as I mentioned earlier, on the phone to explain the case to us. And the purpose of the meeting was to determine whether we should pursue a settlement.

Do you recall giving that answer, sir?
A. Yes.
Q. Now, these meetings that you've held to discuss whether the case should be settled have not included Florida Cities' officers, have they?
A. Well, first of all, I didn't hold these meetings; I participated in them. At that point in time, I was not the president and chief executive officer of the company; I was chairman of the executive committee.
THE COURT: Well, did Florida Cities Water people participate, that's the question, in such meeting?
THE WITNESS: I recall one meeting Mr. Allen participated in.
BY MR. JACOBS:
Q. But at that time, Mr. Allen was not an officer of Florida Cities Water Company; isn't that correct, sir?
A. I don't recall whether he was or was not at that point in time.
Q. The meeting that we're talking about, do you recall when that took place, sir?
A. I'm sorry?
Q. The meeting that we were discussing, do you recall when that took place?
A. It took place at our office in Coral Gables.
Q. And do you recall when, sir?

A. No, I don't recall the exact dates.
Q. Do you recall whether it followed shortly after a meeting between representatives of EPA and the Justice Department in December of 1992?
A. My recollection is that it occurred after such meetings, but I don't recall the dates.
Q. Would you say it occurred within the same month or two after that meeting?
A. I really don't recall.
Q. Let me direct your attention, then, to Government Exhibit 494. Do you have that in front of you, sir?
A. Yes, I do.
Q. Do you recall receiving a copy of this?
A. I don't recall receiving a copy of it.
Q. But you're listed as cc?
A. Yes.
Q. Any reason to believe you didn't receive a copy of it?
A. No reason to believe I didn't.
Q. Is it fair to say that this memorandum from Mr. Allen reports to you on the meeting I referred to just a few moments ago between EPA and Justice Department officials and Avatar Utilities and Florida Cities officials?
A. Yes.
Q. Now, the meeting that you -- or the decision -- you subsequently had to be briefed about this meeting that you said

took place in Coral Gables. I ask you again, how long after this memorandum was written do you believe that meeting took place?
A. I don't have any recollection of the timing.
Q. Would you give me your best estimate in months?
A. I can't really give you an estimate, I don't know. It occurred after this, but I don't recall the sequence of time.
Q. Within the following year?
A. Oh, certainly.
Q. Now, Mr. Hird asked you on direct examination about the sale of the Avatar Holdings Midwest Utilities. Do you recall that?
A. Yes.
Q. And this sale took place in September, 1993, correct?
A. Correct.
Q. And the price was roughly sixty million dollars, correct?
A. Approximately.
Q. And these were water and wastewater utilities, correct?
A. Correct.
Q. Would it be fair to say, sir, that prior to September 19, 1993, Avatar Holdings had substantial utility holdings?
A. Yes.
MR. JACOBS: Thank you. No further questions.
THE COURT: Redirect, Mr. Hird.
MR. HIRD: Yes, sir.

REDIRECT EXAMINATION
BY MR. HIRD:
Q. Mr. Jacobson, Mr. Jacobs asked you whether you were aware of Mr. Getman's duties prior to your coming to the company. Do you recall that?
A. Yes.
Q. Since you came to the company, do you recall any action that changed Mr. Getman's duties?
A. There was one change.
Q. And could you describe that?
A. That was the assignment of customer service to Mr. Getman.
Q. And do you recall any other action that changed Mr. Getman's duties?
A. That is correct.
Q. Now, Mr. Jacobs asked you about meetings concerning -- about your attendance in a meeting concerning the Government's claims in this case. Do you recall?
A. Yes.
Q. And did you say that Mr. Gordon was in attendance at the meeting?
A. Yes.
Q. Do you know, sir, whether Mr. Gordon was president of Florida Cities Water Company at the time?
THE COURT: What was the question -- excuse me --

whether he what?
BY MR. HIRD:
Q. Whether Mr. Gordon was president of Florida Cities Water Company at the time?
A. My recollection, best recollection, is he was at that point.
Q. Now, Mr. Jacobs turned your attention to Exhibit 494. Do you have that in front of you, sir?
A. I'm not sure. Is this the document you have reference to? Yes.
Q. Does this document refer to an impending lawsuit by the Justice Department against Florida Cities?
A. Yes.
Q. I'm sorry?
A. Yes, that would be my interpretation.
Q. Could you turn to page 3 of the document, and could you read the first sentence in the last paragraph?
MR. JACOBS: Relevancy.
THE COURT: Overruled.
BY MR. HIRD:
Q. Can you read it into the record, please, sir, the first sentence of the last paragraph on page 3?
A. Page 3: Mr. Jacobs explained his intent to bring suit in Federal Court demanding the statutory penalties unless a settlement agreement could be reached immediately.

Q. Thank you.
Now, is a lawsuit against an Avatar Holding's subsidiary -- strike that.
Is a lawsuit brought by the Justice Department against an Avatar Holding's subsidiary a usual or unusual event?
A. A very unusual event.
Q. And would you expect, in the course of normal business operations, such an unusual event to be brought to the attention of a parent corporation?
A. Yes, I would.
Q. And would you expect it to be brought to your attention personally?
A. Yes.
Q. And at this time, is Mr. Wilkov president of Avatar Holdings?
A. Yes, he was.
Q. And would you expect to it be brought to his attention?
A. Yes, I would.
MR. HIRD: Thank you. No more questions.
THE COURT: Thank you, sir. You may step down.
THE WITNESS: Thank you.
THE COURT: Call your next witness.
MR. HIRD: Your Honor, before I call my next witness -- well, actually I'll do that later. The next witness we will call is Georgia Metcalf.

Thereupon,
GEORGIA METCALF,
having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:
THE CLERK: Take a seat in the witness box. Please state your name for the record and spell your last.
THE WITNESS: My name is Georgia Metcalf, M-E-T-C-A-L-F.
DIRECT EXAMINATION
BY MS. TSOTSOS:
Q. Good afternoon, Ms. Metcalf. Are you associated with Barefoot Bay Development Corporation?
A. Yes, I am.
Q. What position do you hold with Barefoot Bay Development Corporation?
A. I'm president of Barefoot Bay Development Corporation.
Q. When did you start working for Barefoot Bay Development Corporation?
A. 1984.
Q. What does Barefoot Bay Development Corporation do?
A. Barefoot Bay Development Corporation is in the business of developing and selling manufactured housing and lots.
Q. What is manufactured housing?
A. Manufactured housing is housing that is built to HUD

standards. It is shipped to the site in separate modules, it has the wheels and axles removed on the site and is permanently attached to the land.
Q. Who are Barefoot Bay Development Corporation's typical customers?
A. Our typical customers are retirees between the ages of fifty-five and sixty-five.
Q. Is Barefoot Bay Development Corporation a subsidiary of any company?
A. Yes, it is.
Q. What is the name of that company?
A. Avatar Properties, Incorporated.
Q. How many lots in total are there at Barefoot Bay?
A. There are five thousand eleven plotted lots. Actual remaining built -- or actual buildable lots are four thousand nine hundred forty-nine.
Q. Could you please jot down that four thousand nine hundred forty-nine figure on the scratch pad and indicate what that represents?
A. (Witness complying with the request of counsel.)
Q. When you first came to Barefoot Bay in 1984, how many lots with preconstructed homes had Barefoot Bay Development Corporation sold?
A. Lots with homes on them were one thousand eight hundred one.

Q. Could you indicate that number on the pad?
A. (Witness complying with the request of Counsel.)
Q. Prior to the time you came to Barefoot Bay Development Corporation, had the company also been selling lots without homes?
A. Yes, they had.
Q. About how many lots without homes had been sold prior to your arrival in 1984?
A. Approximately one thousand eight hundred fifty-six.
Q. Can you also jot that number down on the pad and indicate what that figure represents?
A. (Witness complying with the request of counsel.)
Q. So, as of 1984, how many lots in total had been sold at Barefoot Bay Development?
A. About three thousand six hundred and fifty-seven.
Q. Can you indicate that number on the pad?
A. (Witness complying with the request of counsel.)
Q. As of 1984, what was the number of Barefoot Bay hookups?
A. Utility hookups as of -- or effective 1984, were, I think, two thousand four hundred thirty-eight.
Q. So, as of 1984, which was greater; the number of utility hookups or the number of lots sold?
A. The number of lots sold.
Q. Why was the number of lots sold greater than the number of hookups as of 1984?

A. Because the company had sold lots to builders and individual residents who had not put homes on those lots yet.
Q. With respect to the lots without homes that had been sold, did the purchasers have the right to build their own homes on those lots?
A. Yes, they did.
Q. If a lot purchaser built a home on that lot, would Barefoot Bay Development Corporation get any additional payment?
A. No, they would not.
Q. If a lot purcheser built a home on a lot, would the purchaser have the right to hook into the sewage system provided by Florida Cities Water Company?
A. Yes, they would.
Q. Could Barefoot Bay Development Corporation prevent a lot purchaser from tying into the Florida Cities treatment works?
A. No, they could not.
Q. During the period from 1984 to 1991, did the owners of these lots construct homes?
A. Yes, many of them did.
Q. Did they tie-in to Florida Cities treatment works?
A. Yes, they did.
Q. After you arrived in 1984, did Barefoot Bay continue to sell lots without preconstructed homes?
A. No, the company did not.

Q. Why didn't they?
A. They -- the company would have been competing with itself in trying to sell house lot packages.
Q. Between 1984 and 1991, about how many lots with preconstructed homes were sold at Barefoot Bay?
A. I'm sorry. The years, 19 --
Q. Between 1984 and 1991.
A. Barefoot Bay Development Corporation sold seven hundred and forty-five homes between that time period.
Q. Did Barefoot Bay Development Corporation ever sell a customer two lots with a single home?
A. Yes, it did.
Q. What do you call those?
A. Those are double lots.
Q. About how many double lots did Barefoot Bay Development Corporation sell?
A. Approximately thirty-nine to date.
Q. When Barefoot Bay Development Corporation sold a double lot, how many utility hookups would there be?
A. One.
Q. About what percentage of total lots at Barefoot Bay were sold between 1984 and 1991?
A. I'm sorry. Could you repeat the question?
Q. About what percentage of the total lots at Barefoot Bay were sold between 1984 and 1991?

A. Barefoot Bay Development Corporation sold probably sixteen percent of those lots.
Q. In the years 1992 and 1993, how many lots were sold at Barefoot Bay?
A. Thirty-three and twenty-nine respectively.
Q. And in total?
A. In total -- I'm sorry, I'm nervous -- thirty-three and twenty-nine.
Q. I would like to direct your attention to Avatar Holdings' Exhibit 5. Could you identify Exhibit 5 for the record?
A. Yes. It is an exhibit that I put together.
Q. Did you prepare this document from information contained in your files at the Barefoot Bay Development Corporation?
A. Yes, I did.
MS. TSOTSOS: Your Honor, I would like to move into evidence Avatar Holdings' Exhibit 5.
THE COURT: Be received.
BY MS. TSOTSOS:
Q. Ms. Metcalf, did Barefoot Bay Development Corporation ever consider acquiring a piece of property called the Herndon Property?
A. Yes, it did.
Q. What did Barefoot Bay Development Corporation plan to do with this property?
A. The intent was to build a golf course housing community.

Q. Was Florida Cities ever asked to provide wastewater services to the proposed Herndon Property?
A. Yes, it was.
Q. Would Florida Cities' Barefoot Bay Plant have provided wastewater services to the Herndon Development?
A. Yes, it would have.
Q. If Florida Cities had provided these services, what effect would it have had on the volume of water discharged from the Barefoot Bay Plant?
A. At build-out, it would have had a negative impact on the amount of water discharged.
Q. Why didn't it go through?
A. The engineering and the permitting took much longer than anticipated, so that by the time it was complete, the economic climate had changed. The market was no longer there for the amount of houses that would have to be sold. The initial impact financially was too great to try to recover that with eighteen months of sales, which economically were not there.
In addition, the three seats on the county commission had changed and the political climate was no longer friendly for development.
MS. TSOTSOS: Thank you, Ms. Metcalf.
THE COURT: Mr. Quinn.
MR. QUINN: No questions, Your Honor.
THE COURT: Thank you, ma'am. You may step down.

Mr. Hird.
MR. HIRD: Yes, Your Honor. Before we call our last witness, I'd like to move into evidence Avatar Holdings' Exhibit 4, which is the Government's responses to Avatar Holdings' interrogatory requests.
MR. QUINN: No objection, Your Honor.
THE COURT: Okay.
It will be received.
MR. HIRD: Thank you, Your Honor.
Avatar Holdings calls Charles McNairy.
Thereupon,
CHARLES MCNAIRY,
having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:
THE CLERK: Take a seat in the witness box. Please state your name and spell your last name for the record.
THE WITNESS: My name is Charles McNairy, M-C-N-A-I-R-Y.
DIRECT EXAMINATION
BY MR. HIRD:
Q. Good afternoon, Mr. McNairy.
A. Good afternoon.
Q. Are you associated with Avatar Holdings, Incorporated?
A. Yes, I am.

Q. What position do you hold, sir?
A. I'm currently executive vice president, treasurer and chief financial officer.
Q. When did you first become associated with Avatar Holdings?
A. I joined Avatar in January of 1985.
Q. In what position?
A. As the vice president of finance.
Q. And could you describe your further career with Avatar Holdings?
A. Yes. I stayed in that position until the first week of April, 1987, at which time I left the employ of Avatar, and went to work for a company by the name of J.I. Gizlack Mortgage Corporation as vice president and controller.
Q. And how long were you with that company?
A. I stayed there for approximately eighteen months, until October of 1988.
Q. What did you do then, sir?
A. At that point, I returned to Avatar as vice president of finance.
Q. And were you subsequently promoted?
A. Yes, I was. In September of 1992, I was promoted to senior vice president, treasurer and chief financial officer.
Q. Are you a certified public accountant, sir?
A. Yes, I am.

Q. And in what states, sir, are you licensed to practice accountancy?
A. I'm licensed both in North Carolina and in Florida.
Q. Now, are you involved -- do your duties as chief financial officer involve the preparation of financial statements in Avatar Holdings, 10-K and 10-Q submissions to the Securities and Exchange Commission?
A. Not so much the preparation as the review of said statements.
Q. Do your duties involve the review of financial statements in Avatar Holdings' annual reports?
A. Yes, it does.
Q. Mr. McNairy, does Avatar Utilities have a seperate accounting system from other Avatar Holdings' operations?
A. Yes, it does.
Q. I'd like you to take a look at Avatar Holdings' Exhibit 1, if you would, please.
MR. HIRD: Your Honor, this is already in evidence.
BY MR. HIRD:
Q. Can you recognize Exhibit 1, sir?
A. Yes, I do.
Q. What is it, please?
A. It is Avatar Holdings' 1994 annual report to shareholders.
Q. Could you turn to page 39, please. Do you have that in

front of you, sir?
A. Yes, I do.
Q. I'd like you to look at the second column running across. Does that indicate the loss or gain from operations during each of five fiscal years?
A. It indicates an operating loss for the three years of 19 -- it's difficult to read this -- of 1991, 1992 --
THE COURT: Can you speak a little louder, please, sir?
THE WITNESS: Sure. It indicates a loss in the years of 1991, 1992 and 1994.
BY MR. HIRD:
Q. And let me refer you to the year 1990. What does it indicate?
A. It indicates, in effect, a pretax income of eleven million one hundred thirty-two.
Q. Now, is that gain due to any unusual event that occurred that year?
A. Yes, it is. In June of 1990, the company sold certain property in California known as Woodland Hills, resulting in a pretax gain of approximately twenty-five million dollars.
Q. And if that sale had not gone through, would the company have had a loss in that year?
A. Yes, it would have.
Q. Approximately how much of a loss would it have had?

A. On a pretax basis, approximately fourteen million dollars.
Q. Now, you mentioned that there was also a gain indicated for the year 1993; is that correct?
A. That is correct.
Q. Was there also an asset sale that year?
A. Yes, there was.
Q. What sale was that?
A. In fact, the Midwest Water and Wastewater Utility Companies were sold that year, resulting in a pretax gain of approximately twenty-two million dollars.
Q. And was there any other events, unusual events, that occurred that year that may have affected loss or gain from operations?
A. Yes, there was. We recorded a four and-a-half million dollar reversal of an expense that had been accrued in 1987 into other income.
Q. Now, putting aside those two unusual events, would there have been a loss or a gain in the year 1993?
A. There would definitely have been a loss absent those two transactions.
Q. And approximately how much of a loss would there have been?
A. Approximately eight and-a-half to nine million dollars.
Q. Could I ask you to look at Avatar Holdings' Exhibit 9 for

a moment?
A. Okay.
Q. Could you tell us what Exhibit 9 is, please, sir?
A. Exhibit 9 is the company's September 30th, 1995 10-Q as filed with the Securities and Exchange Commission.
Q. Now, Mr. McNairy, could you look at page 4 of Exhibit 9?
A. Yes.
Q. What is page 4?
A. Page 4 is the consolidated statement of operations for the nine months and the three months ended September, '95, and 1994.
Q. In the first nine months of 1995, did Avatar Holdings have a loss or gain?
A. The company had a consolidated loss of five million four hundred forty-four thousand dollars.
Q. And in a similar nine-month period in 1994, did the company have a loss or gain?
A. It had a loss of six million seventy-seven thousand dollars.
Q. And what was the final loss that it had for the year total in 1994?
A. '94 or '95?
Q. '94.
A. Uh --
Q. You can refer back to page 39 of Exhibit 1.

A. All right, sir.
For 1994, the loss was fourteen point six million dollars.
MR. HIRD: Your Honor, just so the record is clear, by stipulation of counsel, we have stopped with accounting information for Avatar Holdings as of the nine-month period in 1995. Avatar Holdings has just filed its new annual report, but in discussions -- I'm sorry -- its new 10-K, which indicates its final figure for the year, but by stipulation of counsel, we're not going beyond that figure.
MR. QUINN: That is correct, Your Honor. The discovery had been provided and our accountants couldn't look at it, so we had ended at this point in time.
MR. HIRD: The 10-K was filed during the course of the trial, Your Honor.
THE COURT: All right.
BY MR. HIRD:
Q. Now, do your duties as chief financial officer of Avatar Holdings involve you in Avatar Holdings' effort to borrow money?
A. Yes, it does.
Q. And does it involve you in the efforts of Avatar Holdings' subsidiaries to borrow money?
A. On the real estate side, yes. On the utilities side, no.
Q. But you're informed of borrowing on the utilities side,

correct?
A. Yes, I am aware of those activities.
Q. What types of lines of credit does Avatar Holdings have, Avatar Holdings and subsidiaries?
A. Well, Avatar Properties currently has three lines of credit secured by its contracts and mortgage receivables.
Q. Are there -- is there a difference between corporate lines of credit and project lines of credit?
A. Well, yes. In addition to those credit facilities that I just described, it also has a line of credit secured by the investment portfolio. I would describe those lines as being corporate lines of credit.

Then, Avatar Properties has various construction and development lines of credit, the proceeds of which can be used only to develop the property that has been pledged as collateral for those lines of credit.
Q. So, with respect to the development lines of credit, that money is earmarked for specific projects?
A. Yes, it is.
Q. And that money could not be used for other purposes?
A. Absolutely not.
Q. That money could not be used to pay a civil penalty?
A. Absolutely not.
Q. With respect to the corporate lines of credit, can you describe those for us, please?

A. Well, the investment portfolio is secured by a thirty-six million dollar line of credit, which is fully drawn, so there is no additional availability under that line of credit facility.

There are two lines of credit secured by the notes and mortgage receivables which are fully utilized, meaning that there is no availability under those two lines of credit.

There is a third line secured by certain notes and mortgages which has a current availability of two million dollars.
Q. So, among those three lines of credit, there's only two million dollars available?
A. Available, that is correct.
Q. Now, you indicated that the portfolio that one of the -- strike that.

You indicated that there is a thirty-six million dollar line of credit that is secured by a portfolio of investment; is that right?
A. That is correct.
Q. How much is that portfolio worth in excess of the thirty-six million dollars line of credit?
A. Approximately six million dollars.
Q. And do you have any investment fees that will be due on that portfolio?
A. Yes, we do.

Q. How much are those?
A. Approximately a million dollars.
Q. So, the net available assets in that portfolio is about five million dollars?
A. That's correct.
Q. So, you have the five million dollars excess in the portfolio and the two million dollars available under the unused portion of the line of credit; is that correct?
A. That's correct.
Q. That makes a total of seven million?
A. Correct.
Q. Are there any planned expenditures that Avatar Properties is going to make in the coming year?
A. Yes, there are.
Q. And what are those expenditures?
A. Well, among other things, we have planned approximately eight million dollars of committed land development expenditures in both Poinciana, Florida and Rio Rico, Arizona.
Q. And you have eight million dollars of mandated expenditures?
A. Approximately, yes.
Q. And this is mandated by whom?
A. By the, in the case of Florida, the Division of Land Sales for the State of Florida along with the respective counties in which the projects are located. In the case of

Arizona, State of Arizona and Santa Cruz County, which is the county in which the project is located.
Q. And will you use the excess value of the portfolio to satisfy those mandatory obligations?
A. To the extent that it's necessary, we certainly will.
Q. And would you use the excess availability in the line of credit to satisfy those obligations?
A. Yes, sir.
Q. In all, between those two sources of funds, you have seven million?
A. Correct.
Q. And you have eight million dollars' worth of mandated expenditures?
A. Yes.
Q. How are you going to make up the rest of it?
A. We would anticipate covering the rest of it through additional borrowings which have yet to be negotiated or committed to by various lenders. We would also anticipate operating cash flows to cover the deficiencies.
Q. And have you any other additional expenditures on the Avatar Property sites other than that eight million dollars in mandated expenditures?
A. We have significant operating expenses, yes, we do.
Q. Approximately how much?
A. Well, let me run down; we have property taxes of

approximately five and-a-half million dollars. We have various insurance costs for things like liability insurance, workers compensation of, say, two million dollars. We have three million dollars of interest expense related to our debentures that were issued back in 1980 that have virtually nothing to do with current operations. And then we have standard, what I call overhead expenses, that are several million dollars beyond that.

Q. And how much in total are these expenses that you foresee in the future?

A. Well, over and above the eight million dollars, I would say in the neighborhood of twelve to fourteen million dollars beyond that for this year, for 1996.

Q. Now, turning to the Avatar Utilities' side of the house, does Avatar Utilities and its subsidiaries have any lines of credit?

A. Yes, it does.

Q. And is there any availability under those lines of credit?

A. Yes, there is. Currently, under the Florida Cities' line of credit facility, there is an availability of approximately ten million dollars, and on Avatar Utilities' line of credit facility, there's an availability of approximately two million dollars.

Q. And are Avatar Utilities and Florida Cities planning any

expenditures in the coming year?

A. Yes, they are.

Q. What are these expenditures?

A. Capital expenditures of approximately seventeen million dollars are planned for 1996.

Q. And what is this seventeen million dollars devoted to?

A. It reflects enhancements and improvements and expansions to existing plants, that is, water treatment plants, wastewater treatment facilities, expansion of the lines that service the community in which the utilities operate.

Q. And do you plan to use the availability under these two -- does Avatar Utilities and Florida Cities plan to use the availability under these two lines of credit to satisfy this obligation?

MR. QUINN: I believe this goes beyond the scope of this witness' knowledge, talking about Florida Cities and Avatar Utilities. This witness is the chief financial officer of the parent Avatar Holdings.

MR. HIRD: Your Honor, I'm somewhat surprised since the Government's whole contention is the two are the same, but I believe he's the chief financial officer for the entire -- for the holding company, and his responsibility is to prepare and review financial statements.

THE COURT: I'll overrule the objection.

THE WITNESS: To answer the question, the answer is,

yes, we would intend to use available lines of credit on the part of Avatar Utilities and Florida Cities to finance the expected capital expenditures.

BY MR. HIRD:

Q. That would exhaust the entire twelve million dollars that is available?

A. More than -- yes, it would.

Q. Now, does Avatar Holdings or its subsidiaries have any land assets that have not been used as collateral for debt?

A. Yes, it does.

Q. Could you describe these land assets, please?

A. We have significant land holdings that, for the most part, are undeveloped and are debt free.

Q. Could these assets be used as collateral for debt?

A. On a practical level, the answer is no.

Q. Why not?

A. Because in this day and age, a lender has two basic requirements; in order to lend money against a given asset, A, there has to be a specific loan to value ratio which we could meet and we do meet the test, but secondly and more importantly, a lender will not lend money against an asset unless that asset generates cash flow. Undeveloped land does not generate cash flow, so there would be no cash flow from these hypothetical loans which could be used to repay the loans.

Q. Mr. McNairy, has Florida Cities Water Company issued preferred stock?

A. Yes, it has.

Q. To whom has it issued preferred stock?

A. It issued preferred stock to its parent company, which is FCWC Holdings, Inc.

Q. And has FCWC Holdings, Inc. issued preferred stock?

A. Yes, it has.

Q. And to whom has it issued the preferred stock?

A. To Allstate Insurance Company.

Q. Does Florida Cities have an obligation to redeem its preferred stock?

A. Yes, it does.

Q. And does FCWC Holdings have an obligation to redeem its preferred stock?

A. Yes, it does.

Q. Would the proceeds of the redemption of Florida Cities' preferred stock be used to redeem FCWC Holdings' preferred stock?

A. Yes, it would.

Q. Do you know what the cost redemption -- the price of redemption will be?

A. The mandatory redemption requirements as outlined in the annual report are one million eight hundred thousand dollars per year beginning in 1997, through the year 2001, which will

equal the total outstanding balance of approximately nine million dollars.
Q. Now, you said "as outlined in the report."
A. Yes.
Q. In the annual report that is Avatar Holdings' Exhibit 1?
A. I'm sorry. Could you repeat the question?
Q. Is that Avatar Holdings' Exhibit 1?
A. Yes, it is.
Q. Could you turn to the page in the report and just identify which page that is?
A. Yes, I can. If you'll look on page 27, under notice, the first full paragraph there under the table outlines that the mandatory redemption of a million eight per year commences in March of 1997.
Q. Page 27, notice?
A. Correct, 27, notice.
Q. And the number there, that reads one -- that looks like one thousand eight hundred dollars, is really one point eight million dollars?
A. Yes, it is. If you look at the headings, we have said the numbers are in thousands, so that is one million eight hundred thousand dollars.
Q. Mr. McNairy, could Avatar Holdings or its subsidiaries borrow to pay a penalty in this action?
A. No, it could not.

Q. How do you know that?
A. Because I've talked with the various lenders and the lenders have indicated unwillingness to lend money to fund a fine.
Q. Does Avatar Holdings have available funds to pay a significant penalty in this action?
A. No, it does not.
MR. HIRD: Thank you, Mr. McNairy. No further questions.
MR. QUINN: May I have a moment?
THE COURT: Yes, sir.
(Brief Pause.)
MR. QUINN: Thank you, Your Honor.

CROSS-EXAMINATION

BY MR. QUINN:
Q. Good afternoon, Mr. McNairy. My name is Tony Quinn and I met you during your deposition.
Sir, as of the end of the third quarter of 1995, Avatar Holdings was current in meeting its debts and obligations; isn't that correct?
A. That is correct, yes.
Q. And Avatar Holdings is a publically traded corporation; isn't that correct?
A. Yes, it is.
Q. If Avatar Holdings, at the end of the third quarter of

1995, anticipated that it was unable to meet its current obligations, would there be some obligation on it to report this financial condition?
A. Yes, there would be.
Q. And did Avatar Holdings report anything about an inability to meet its obligations?
A. No, it did not.
MR. QUINN: Thank you. I have no questions, sir.
MR. HIRD: No redirect.
THE COURT: Thank you, sir. You may step down.
I believe you said this was your last witness.
MR. HIRD: Yes, Your Honor. If you can just give me a moment.
THE COURT: Okay.
MR. HIRD: I just want to take a moment to just double check there are no additional exhibits I need to move into evidence, Your Honor. If I can confer with Government counsel for just a minute.
(Brief Pause.)
Your Honor, I move in Avatar Holdings' Exhibit Number 2.
THE COURT: The Government concurs?
MR. QUINN: Yes.
THE COURT: Okay.
It will be received.

MR. HIRD: Your Honor, Avatar Holdings rests.
THE COURT: All right.
Any rebuttal?
MR. JACOBS: May I inquire, before I answer, as to what the Court's schedule is for the rest of the day?
MR. BAISE: I would have the same inquiry, Your Honor, with regard to how you would like to proceed.
THE COURT: Well --
MR. JACOBS: I'm happy to tell you where I'm going with this, if that helps.
THE COURT: All right.
MR. JACOBS: I anticipate my rebuttal case lasting, at most, fifteen minutes. I would be prepared immediately following thereafter to give my closing argument and that way obviate the need for any of us to see each other again for a while perhaps.
THE COURT: I assume you're talking about one witness?
MR. JACOBS: Yes, which we're just going to read in, so there won't be any -- it's a deposition, so we won't have cross-examination. That's why I can tell you it would be at most fifteen minutes.
THE COURT: Well --
MR. JACOBS: But I don't want to give my closing argument if the other side is not going to give theirs right

afterwards. I don't want them to have a chance to ponder that for a while.

MR. BAISE: And I guess I am curious that you're going to read in a deposition after you have rested.

MR. JACOBS: Rebuttal, Mr. Baise. Rebuttal, Your Honor.

THE COURT: Talking about rebuttal here. Mr. Baise, you have a loose end here.

MR. BAISE: Yes.

THE COURT: And so, I suppose the issue is whether the Court is going to leave open the evidence in this case. That's the issue.

MR. BAISE: Yes, Your Honor. As explained to Your Honor this morning, Mr. Hill has diverticulitis, I guess it is, and was unable to come and he's the witness that we need to discuss the Public Service Commission aspect of this case.

THE COURT: Well, we've already had a significant amount of testimony regarding the Public Service Commission. I've given you a lot of latitude.

MR. BAISE: Yes. Yes, you have.

THE COURT: And frankly, I'm not inclined to bring us back here for any further testimony.

MR. BAISE: I can't say that I am looking forward to it either, Your Honor. It's just we had planned --

THE COURT: Well, I tell you what I'm going to do.

I'm going to go ahead and finish the testimony in this case and then we'll talk about submissions after that. I know that there may need to be some motions made at the conclusion of all of the evidence. But I want to go ahead and finish the evidence.

MR. BAISE: Okay.

THE COURT: And so, I'm not going to leave open the evidence in the case after we've heard from the rebuttal witness.

Frankly, I had intended to recess by 5:00 o'clock today, but that was with the assumption we would have a substantial amount of testimony remaining and that is not the case here.

So, this is Good Friday and it's regrettable that I have felt necessary to take up the full day and then some with work when many of us would feel a need to be elsewhere, but in an effort to try to accommodate everybody, as well as the Court, in finishing the evidence in this case, I felt it necessary.

And in view of the fact there is very little time the Court has to predictably reschedule the conclusion of this trial, I want to go ahead and take what time we have today to just give a full day to this case. All right.

Yes, sir.

MR. BAISE: Let me offer this suggestion without

having consulted with counsel about it. If they can go ahead and put in their rebuttal and schedule closing arguments for a subsequent day when the Court's calendar would accept that -- and the reason I ask for that is that the Government, in this case, has put in approximately, I think it's five hundred to six hundred exhibits. Many of those exhibits, as Your Honor knows, go back over the entire history of Barefoot Bay. We did not believe that all those would be allowed in in terms of the history.

So, unlike Mr. Jacobs, I cannot say I'm prepared to offer closing argument with regard to that massive number of exhibits they have put in and comments that I'm going to make with respect to those exhibits.

THE COURT: Well, I'm not going to hear closing arguments --

MR. BAISE: Oh, you're not. Excuse me.

THE COURT: -- this evening. We'll talk about whether I'm going to entertain oral closing arguments or whether the Court will ask for written submissions.

MR. BAISE: Do you normally request post-trial briefs with respect to a matter such as this, Your Honor, so we can start thinking about that, if that's your direction?

THE COURT: Let me think about that a little bit and determine how we can best deal with the interests you have and summing up, as it were. And the interest that the Court has in

obtaining from you meaningful assistance in resolving the Court's resolution of this case. So, let me go ahead and hear the rebuttal and then we will talk about this a little bit further.

MR. JACOBS: Your Honor, the United States calls Jack William Tompkins by deposition. With the Court's permission, Mr. Moore will act in Mr. Tompkins' role in terms of reading responses to questions.

MR. BULLOCK: May I be heard on this matter?

THE COURT: Yes, sir.

MR. BULLOCK: May I ask to whom the rebuttal is being addressed?

THE COURT: Well, what do you have to say about that, Mr. Jacobs? We've got two Defendants.

MR. JACOBS: I would say that Mr. Tompkins was the former operations manager. I would suspect that the rebuttal would be addressed primarily to the issue of the alternatives that were available and the good faith efforts with which those alternatives were addressed, and in particular, the speed with which those alternatives were addressed.

Mr. Tompkins is, unlike many of the witnesses called, a former company employee with no dog in the fight, to use the expression that I heard earlier. And specifically, in response to Mr. Bullock's question, I would proffer he would probably rebut some of what Mr. [illegible]miller said, some of what Mr. Allen

said, probably what Ms. Karleskint said, off the top of my head.

MR. BULLOCK: Two points on that. Initially, in this matter, Florida Cities, since all the liability has usually been found against it, bears the burden of proof which Plaintiff conceded in the trial brief. We would argue, since Florida Cities bears the burden of proof, rebuttal evidence against Florida Cities would be improper.

Secondly, Mr. Tompkins' deposition was designated in the pre-trial order as one of the Government's witnesses. Mr. Jacobs has already offered proof about good faith, speediness of any response in his case in chief. The proper place to have brought that type of evidence would have been in his case in chief. That is the same type of evidence which he offered Mr. Klingenstein, his expert testimony. I would contend that's improper rebuttal evidence. This is evidence which should have been brought in his case in chief.

MR. JACOBS: Judge, may I be heard?

THE COURT: Yes.

MR. JACOBS: I believe there's a suggestion by Mr. Bullock that Mr. Tompkins' testimony, although we haven't even begun here yet, might be cumulative. I dare say, if anybody presented cumulative evidence in this case, it's been the Defendants, not the Government.

THE COURT: Well --

MR. JACOBS: And we have yet to call a single Florida Cities Water Company employee or ex-employee, for that matter.

THE COURT: Well, he's pointed out that the -- that the Defendant Florida Cities has the burden of proof, correct, on the --

MR. BULLOCK: Mitigation issue.

THE COURT: -- mitigation issues. Well, I don't know but what we might have -- ought to have started out with Florida Cities going first if that is -- you know, I sit up here and I try cases day in and day out and I guess that I'm just attuned to the fact that, you know, one side goes first and the other side and we've got possible rebuttal by the other side.

Well, it had occurred to me at one point when we commenced this trial as to what the order of proof would be because I read that the liability has been determined and that Florida Cities has the burden of proof on mitigation.

But the fact of the matter is that we've gone, I don't know -- I guess I assumed that with this army of lawyers involved in this case and nobody seemed to object to the manner in which we were proceeding procedurally, that is, with the Government going first, that who was to question that.

So, anyhow, Mr. Bullock, you want to respond to that?

MR. BULLOCK: Well, Your Honor, I don't mean to -- I did raise this issue on the first day of the trial that there

should be no rebuttal evidence.

THE COURT: You did?

MR. BULLOCK: Yes.

THE COURT: I guess it's my early Alzheimer's Disease, maybe not so early. You did?

MR. BULLOCK: You raised a question about whether or not there would be rebuttal witnesses. I raised at that point in time the issue we had the burden of proof and that there shouldn't be rebuttal witnesses against us.

THE COURT: I'm sorry.

MR. BULLOCK: You didn't respond one way or the other, but looked kind of like --

THE COURT: I had a blank look on my face?

MR. BULLOCK: I wasn't going to say that.

THE COURT: Go ahead.

MR. BULLOCK: The other issue is that providing the fact that these designations which the Government is suggesting that they now read into evidence to rebut was something that was available to them in their case in chief, it's the same type of evidence which they presented in their case in chief. It's all the questions and all the six factors they went through with Mr. Klingenstein. To say now that they have -- that they can rebut using the same type of evidence that was available to them and that he strategically chose to not read it at that point in time is, I believe, outside the scope of

what would be proper rebuttal.

MR. JACOBS: Judge.

THE COURT: Yes, sir.

MR. JACOBS: We had the opportunity to read these in last Friday and in the interest -- in fact, if you look at pages 32 to 34, I believe, of the joint pre-trial statement, you'll see we did quite extensive deposition designations. And I think the Court may rule that what we said at the time -- by the way, I have absolutely no recollection, as I join the Court's Alzheimer's, if that is what happened.

THE COURT: I'm glad to hear you say that.

MR. JACOBS: I have no recollection whatsoever of -- Mr. Quinn's checking the transcript from the first day right now -- I don't recall this issue ever being addressed, but what I do specifically recall is Friday morning, in the effort to move the case along, the Government said, well, we won't read any of these long depositions into the record.

Now, the Court had mentioned that it had had a bad experience in this respect and we said, well, we'll just reserve the right, then, to read what we think we need to in as rebuttal and I promised the Court at the time that we'd only read in what we needed to. And if you look at 32 and 33, you'll see we --

THE COURT: Now, that's where I believe I made a comment about if this is -- if this is deposition testimony

that is properly to be presented during your case in chief, you can't just wait until later on and just throw it in as rebuttal. I do remember that.

MR. JACOBS: I remember you saying something quite along those lines. It was, if it's properly rebutted, then you don't need to reserve the right, would be my recollection. And we can pull that transcript as well.

But I respectfully suggest we've spent ten minutes discussing it and it will only take about ten or fifteen minutes if the Court would like to read it. If the Court would like to reserve judgment as to whether it's legitimate rebuttal --

THE COURT: Well, let's go ahead and hear it and I'll reserve ruling on whether it's proper rebuttal or not. I tried to avoid reserving a lot of stuff because that can get away from you very quickly, but I think I would go ahead and reserve ruling on your objections that you have made, Mr. Bullock.

MR. BULLOCK: All right, sir.

THE COURT: All right.

MR. JACOBS: Starting on page 14, line fourteen.

BY MR. JACOBS:

Q. Do you wish to have your personal --

MR. HIRD: Excuse me. Is this -- Your Honor, could we ask whether this is volume one or volume two?

MR. JACOBS: It's volume one. Sorry.

MR. HIRD: Thank you.

BY MR. JACOBS:

Q. Do you wish to have your personal attorney present, Mr. Tompkins?

A. No. Mr. Scroggin serves as my attorney also.

Q. Okay.

So, it's your understanding that Mr. Scroggin represents both Florida Cities Water Company and you personally in this matter?

A. That's correct.

Q. Okay.

Did you, in fact, retain Mr. Scroggin to be your personal attorney in this matter?

A. Yes, when I was contacted by Mr. Scroggin concerning this and Mr. Scroggin offered to represent me at no cost.

Q. I see. Did he tell you he was just doing it out of the kindness of his heart or did you get the impression somebody else was paying the bill?

THE COURT: Wait, wait, wait, sir.

MR. BAISE: Objection, Your Honor. This goes to really no issue that has been raised in this trial with regard to Mr. Scroggin representing this client and I would object on the grounds of 403, that although relevant evidence may be excluded if it's --

THE COURT: All right. All right. All right.

Just a moment.

MR. BAISE: Confusion of the issues.

MR. JACOBS: Judge, we had a lot of testimony about who is paying the bills and I want to establish that every single --

THE COURT: Overruled. Proceed.

MR. JACOBS: Mr. Moore, would you read the answer, please then, line six?

THE WITNESS: Well, I indicated there is a contract between me and Mr. Scroggin that indicates that Florida Cities Water Company is paying the bill for his services on my behalf.

MR. JACOBS: Thank you. Skip to page 36, line seventeen.

BY MR. JACOBS:

Q. I see. And at what time did you go to work for Florida Cities Water Company?

A. Yes, I did.

MR. JACOBS: I'm sorry. I misread the question. Let me go back.

BY MR. JACOBS:

Q. I see. And at that time, did you go to work for Florida Cities Water Company?

A. Yes, I did.

Q. And what months of 1989?

A. I believe that that was in August of 1989. I'm not

exactly sure.

MR. JACOBS: Skipping to page 40, line twelve.

BY MR. JACOBS:

Q. Now, you made reference to the period of your employment with Florida Cities Water Company. Just for the sake of the record, I think at this point in time, I need to ask you when you stopped working there so we have a timeframe.

A. I believe that that was in September of '91.

MR. JACOBS: Next page, line five.

BY MR. JACOBS:

Q. Tell me what your responsibilities were, please, sir, with Florida Cities Water Company.

A. Initially, I was hired at Florida Cities as their construction manager. The purpose of that position is to assist Florida Cities in completing construction of their capital improvements projects.

Shortly after I started work, I was then moved to the position of operations manager, which the purpose of that is to manage the operations, plant operations and system operations of Florida Cities Water Company.

MR. JACOBS: Next page, page 42, line nineteen.

BY MR. JACOBS:

Q. To whom did you report when you worked for Florida Cities Water Company?

A. I reported to Bob French initially and Bob subsequently

left the company and a Paul Bradtmiller replaced him.
MR. JACOBS: Next page, line eleven.
THE COURT: That's an answer.
MR. JACOBS: Yes, I'm sorry, that's an answer. Let me back up to line eight. Thank you, Your Honor.
BY MR. JACOBS:
Q. What would you say were your major projects during the course of your employment with Florida Cities Water Company?
A. As operations manager, I wasn't involved with what I would call major projects. My function was more to oversee the day-to-day operations of the facilities.
Q. And how many facilities were there that you oversaw?
A. I can't remember the exact number. There was the Fort Myers facilities, the Golden Gate facilities, the Carrollwood facilities, Barefoot Bay and Poinciana Utilities. I think that's -- and Sarasota Utilities.
Q. Did you have responsibilities both for the water and the wastewater treatment facilities?
A. Yes, I did.
Q. And were you the operations manager for all of the Florida Cities Water Company wastewater treatment facilities during the course of your employment with the company?
A. Yes, I was.
MR. JACOBS: Line sixteen.
BY MR. JACOBS:

Q. Did your responsibilities include permitting matters?
A. Yes, permitting was certainly involved in the operation there.
MR. BAISE: Objection. Can we have just a moment to catch up with them on the computer, please.
THE COURT: Yes. What page are you on?
MR. JACOBS: 44.
THE COURT: Still 44.
(Brief pause.)
MR. JACOBS: If it would facilitate matters, I invite Mr. Baise to look on with me at the podium.
MR. BAISE: May I, Your Honor?
THE COURT: Yes, sir.
BY MR. JACOBS:
Q. Did your responsibilities include permitting matters?
A. Yes, permitting was certainly involved in the operations there.
Q. And what was your role in permitting?
A. In permitting, I would review existing permits, apply for new permits, things like that.
Q. And were you responsible for submitting to various Government agencies reports required by such permits?
A. Yes, I was.
Q. What were some of the reports?
A. Typically, any reports that were required by the various

Government agencies, discharge monitoring reports, operating reports, just the whole gamut of required reporting.
MR. JACOBS: Skip to -- go to line 69 -- page 69, rather, line twenty-five.
BY MR. JACOBS:
Q. Now, was there a delay in transmitting this information to DER that can be attributed to the fact that Florida Cities Water Company and the design engineer were having a fee dispute?
THE COURT: The design engineer Source were having a fee dispute.
MR. JACOBS: Thank you, Judge.
THE WITNESS: Yes, there was.
BY MR. JACOBS:
Q. And do you know how long that delay was?
A. No, I don't.
Q. We're going to take a look at that a little bit more. I take it that you can't -- I take it you can't tell me, without my refreshing your recollection a little bit more, how long it took for you all to finally get that resolved; is that correct, or can you take a stab at it?
A. Well, shortly after this issue came up. And as I mentioned earlier, I moved into the operations end and I did not have further involvement with that issue, I don't believe.
Q. Well --

A. At least not much.
Q. Maybe you'd like to think you didn't, Mr. Tompkins, but I think you did for at least a little while.
A. Okay.
Q. Correct me if I turn out to be wrong. I wish you would. But I've got some more paper with your name on it. We're going to start with Exhibit 309, which takes us into August. Let me ask you first, sir, do you recognize Exhibit 309?
And for the record, Exhibit 309 is the deposition, is trial Exhibit 393 which is in evidence.
A. Exhibit Number 309 is a FAX from source to myself dated August 9, 1989.
Q. Do you recall receiving this FAX about or on August 9, 1989?
A. No, sir, I don't specifically recall receiving this FAX. We got an awful lot of FAX'es. I have no doubt that this FAX was received, but I just don't specifically recall getting this FAX.
Q. Okay.
Let's look at the first page of Exhibit 309. It seems to be, does it not, the DER letter of June 16th of '89?
A. That is, I think, Source's basis for additional funds. Whether that is the true issue or not remains -- I don't know. I suspect that it probably wasn't, but that is speculation on my part.

Q. Mr. Tompkins, I'm not asking you to speculate and I'm not asking you necessarily, yet at least, to tell me whether Source was right or wrong and I'm not -- I'm certainly not going to referee whether Source was right or wrong. All I'm trying to do here is reconstruct a timeline and I think you've probably --

A. Very good. Very good.

Q. I think you've probably caught on by now that that's all I want to do. Do you have a recollection of a June 16th, 1989 letter from DER that sort of was the precipitant of this fee dispute?

A. I recall that DER issued a comment letter and the consulting engineers utilized that as a basis for requesting additional fees.

Q. And it took a while to get this ironed out, didn't it?

A. I believe that is correct, sir.

Q. Okay.

And by "this," I mean the fee dispute. It took awhile to get the fee dispute ironed out and you couldn't provide the information to DER until you got the fee dispute ironed out; isn't that correct?

A. I think that is correct.

Q. Okay.

And now we're into August of '89, so it's still not yet resolved; isn't that correct?

A. That is correct.

Q. Okay.

Do you recall for how long after August of '89, FDER considered your application incomplete because it was still missing this information that was the basis of the fee dispute?

A. No, sir, I do not recall.

Q. I'm handing you Exhibit 310.

For the record, that is trial Exhibit 406, which is already in evidence.

Do you recognize that?

A. Exhibit Number 310 is a letter from FDER to Mr. French stating the application is incomplete.

Q. And do you recall receiving a copy of this letter?

A. Again, I'm sure I did. I have no specific recollection of it.

Q. Would you look in the upper righthand corner of the exhibit?

A. Yes, sir.

Q. That is Exhibit 310, and tell me if your initials appear in the upper righthand corner?

A. I cannot make out what is up there. It looks like there was something on my copy of it.

Q. There is something on my copy of it, too, and I apologize. Unfortunately an important part seems to have been obscured, that is to say, the second letter of your initials.

A. Yes, sir.

Q. Well, were these types of letters generally routed to you and were they routed by initials in the upper righthand corner?

A. Yes, the routing was normally done by initials in the upper corner. Whether or not this one was routed to me, I do not recall.

Q. Okay.

Is it your recollection that the FDER permit application was still incomplete as of November 17, 1989?

A. Based on looking at this letter, I would say that that is true.

MR. JACOBS: Skipping now to page 79, line twenty.

BY MR. JACOBS:

Q. All right.

We started with a conversation you had in June of '89, which we're guessing, I think, is about the time you started, and here we are in November of '89, six months later and the permit application is still incomplete; is that correct?

A. Yes, sir.

MR. JACOBS: Skipping now to page 99, line fifteen.

BY MR. JACOBS:

Q. Okay.

Are those your initials on the upper righthand corner of Exhibit 317?

A. Yes, they are.

MR. JACOBS: For the record, exhibit 317 at the deposition trial is Exhibit 411, which is also in evidence.

BY MR. JACOBS:

Q. And is this a checkmark by your name?

A. Yes, it is.

Q. Okay.

Do you know if this one went from into out without your looking at it or did you look at this one?

A. I most likely would have looked at this one. I don't have any specific recollection of it, but I normally -- on DER types of correspondence, they were read pretty carefully and thoroughly and certainly the same goes for the EPA.

Just for your clarification, when you refer to a checkmark being there and it not having been looked at, you know, we get a lot of junk mail and things like that and sometimes that gets checked and gone on before people would, you know, go without really an indepth view, but on this type of correspondence, it would be reviewed pretty in-depth.

Q. Do you recall whether you had reason, at the time of your review of this exhibit, to question Mr. Edwards' assessment that the company incurred a ten-month delay to respond to the agency's request for information?

A. No, I don't, sir.

MR. JACOBS: Skipping now to page 105, line fourteen.

BY MR. JACOBS:

Q. You didn't have a permit to discharge in the canal at this time, did you?
A. No, sir.
Q. And that is where you were discharging at this point in time?
A. That's correct. I believe that is correct.
MR. JACOBS: Skipping to page 116, line seventeen.
BY MR. JACOBS:
Q. At this point in time, Mr. Tompkins, when you were in charge of operations and you have got a facility which isn't meeting its permit and it's about to miss the deadlines in the administrative order, do you sort of keep that to yourself or are you the kind of guy who tells your manager?
A. Well, hopefully I was able to advise my manager, you know, when appropriate. I considered it part of my job.
Q. Okay.
And did you, in fact, keep not only your manager apprised of this situation, but some fairly high-level folks both at Florida Cities Water Company and Avatar?
A. Yes, I did.
MR. HIRD: Objection, Your Honor. The question is vague and is misleading as to what is meant by Avatar.
THE COURT: Just a moment.
MR. JACOBS: That might be an objection as to form, which could have been obviated if made at the time of

deposition, in addition to which, this was the common -- what evolved in all these depositions and what evolved in even Mr. Levy's testimony, everyone refers to everything as just Avatar. The distinctions that Mr. Hird is careful to make, and I don't fault him for making them, are not made on a day-to-day basis by the employees. That's been established in the evidence at trial.
MR. HIRD: I'd like to point out that that deposition was taken before Avatar Holdings was a party in this case, so there was no opportunity to make comments at the deposition. I certainly disagree with Mr. Jacobs' characterization about the use of the word "Avatar."
THE COURT: I'll overrule the objection.
MR. JACOBS: Is the answer in evidence? Line six.
BY MR. JACOBS:
Q. Do you recall who you kept apprised of the situation?
A. No, I don't.
Q. I'm handing you Exhibit 324.
For the record, that is trial Exhibit 432, also in evidence.
Does that refresh your recollection with respect to whom you kept apprised of the --
A. Yes, it does.
Q. Who did you keep apprised of the situation?
A. Mr. Elder, Mr. Reeves, Mr. Allen and Mr. Getman.

MR. JACOBS: Moving on now to volume two and picking up with page 120, line ten.
BY MR. JACOBS:
Q. Were you concerned at the time you wrote this memorandum that you were still not discharging at the permitted location?
A. Right. The intent of this is to basically speed up compliance.
MR. BAISE: Objection, Your Honor. We have really no idea what the memorandum is referring to or any foundation for the memorandum I see prior to the --
THE COURT: Yeah. What memorandum are we talking about here?
MR. JACOBS: Exhibit 324, which -- at the deposition that is, which is 432, which is in evidence.
THE COURT: Well -- how do we know that?
MR. JACOBS: From page 118.
THE COURT: From page 118?
MR. JACOBS: Yes, sir, line seven.
MR. BAISE: What is the memorandum about? Again, Your Honor, I would renew my objection that this brings home -- the point is this is confusing, cumulative and misleading with regard to what occurred.
THE COURT: Well, all right.
It's apparent that --
MR. JACOBS: I'm sorry. I can cure it. It refers --

324 was the last exhibit that I referenced in volume one.
THE COURT: And that was on page?
MR. JACOBS: 117. I'm handing 324 to you to refresh your recollection, who did you keep apprised? Answer --
THE COURT: Right, right, right. All right.
It's apparent to the Court that you're referencing Exhibit 324, so I'll overrule the objection.
MR. JACOBS: And as I look back, I apologize, I skipped two questions on page 119. If the Court would permit me to go back to volume one.
THE COURT: Go ahead.
MR. JACOBS: Line nine, question.
BY MR. JACOBS:
Q. And would you include somebody like Mr. Allen or Mr. Getman at Avatar?
MR. HIRD: Same objection, Your Honor.
THE COURT: Overruled.
THE WITNESS: Because of the significance of the issue, I felt that it was important to bring in the parent company.
BY MR. JACOBS:
Q. Did you have a lot of dealings with Mr. Allen and Mr. Getman?
A. I had several dealings with them, yes.
MR. JACOBS: Now, picking up with 120, should I read

that question again, Judge, where we left off where the objection was?

THE COURT: Yes. Go ahead.

BY MR. JACOBS:

Q. Were you concerned at the time you wrote this memorandum that you were still not discharging at the permitted location?

A. Right. The intent of this is to basically speed up compliance.

MR. JACOBS: Skipping to page 122, line eighteen.

BY MR. JACOBS:

Q. Well, what this memorandum again is --

MR. JACOBS: I'm sorry. I went to an answer. The question is, and were you getting frustrated by that point in time that you couldn't get the facility into compliance fast enough, because that sure is what it sounds like from this memorandum?

MR. BAISE: I would object that 122, fourteen is not designated.

THE COURT: It's not designated. Don't read it.

MR. JACOBS: The answer is -- I'm sorry. Do you want me to just read the answer?

THE COURT: Well --

MR. BAISE: The answer is not in context.

THE COURT: Don't read the answer because that is not -- that is not proper.

MR. JACOBS: I think we're talking about the same memorandum.

THE COURT: Well, I don't care whether we're talking about the -- you know, you've got to -- well, just a moment.

I'll sustain the objection.

MR. JACOBS: Next question, line twenty-two.

BY MR. JACOBS:

Q. Okay.

Did you get any kind of response from Mr. Getman?

A. No, I didn't.

Q. Well, didn't he write somebody a memo about your memo? Here, look at Exhibit 325.

And for the Court's reference, this is trial Exhibit 434 also in evidence.

A. Okay.

He did.

Q. And did you get a copy of it?

A. Yeah, I'm copied on this distribution list, yes, sir.

Q. Okay.

And do you recall getting this memorandum?

A. Yes, I do.

Q. Okay.

A. I sure do.

Q. Even though it doesn't have your checkmark you know you saw this?

A. I believe so, yes, sir.

Q. Okay.

Does anything in particular stand out about it that makes you so sure that you recall it?

A. The wording in here on the documentation is probably what makes me recall it.

Q. Okay.

And at the time you saw this memorandum, what did you understand Mr. Getman asking you to do, if anything?

A. To extensively document all the issues related to this project.

Q. For what purpose?

A. Because of the possibility of future litigation.

MR. JACOBS: Skipping to page 132, line twelve.

BY MR. JACOBS:

Q. I'm handing you Exhibit 332.

For the record, that's trial Exhibit 438, also in evidence.

Do you recognize that, sir?

A. I do.

Q. Okay.

Would you describe it for the record, please?

A. Certainly. This is a letter from Paul Braatmiller to Mr. Peter McGarry of EPA, dated March 14, 1991, responding to a notice of violation.

Q. You have seen this letter before, I take it?

A. Yes.

Q. Did you write it?

A. Most likely I did write part of it, sir.

Q. Directing your attention to page two, item number three, which reflects EPA's dissatisfaction with the compliance schedule because the current project construction completion date is more than a year past schedule.

Did you write the line that says, quote, Florida Cities Water Company is making all possible efforts to work with the contractor and project engineer as to advance the construction schedule?

A. I don't recall if I wrote that particular line or not, sir.

Q. Is that particular line true? Was it true at the time?

A. I don't know how to address that one.

Q. Truthfully?

A. Well, there's a possibility that some additional efforts could have been made that weren't made.

Q. Okay.

Would you tell me what those were, please?

A. Well, there is -- you could do temporary facilities, for instance.

MR. JACOBS: Next page, line nineteen.

BY MR. JACOBS:

Q. I'd be very happy with specific examples. I guess I'm asking you to tell me if this statement is truthful and I think you're telling me it's not truthful, that FCWC really wasn't making all possible efforts, all possible effort to work with the contractor and project engineers to advance the construction schedule?
A. Well, I --
Q. Isn't it fair to say that that is an exaggeration based on what you've just told me?
A. Probably so.
Q. And did you keep -- well, let me ask you this. Who was your immediate supervisor at this point in time at Florida Cities?
A. Mr. Bradtmiller.
Q. And did you keep him apprised of your conversations with Mr. Kwan?
A. Yes, I did.
Q. Did Mr. Bradtmiller express a concern at any point in time of the things that -- excuse me -- that things were over a year behind schedule from EPA's perspective?
A. I don't recall such a conversation.
Q. Well, were you concerned, you personally?
A. Yes, I was concerned.
Q. Okay.
Did you express that concern to Mr. Bradtmiller?

A. Yes, I did.
Q. On one occasion, more than one occasion?
A. I'm sure on at least one occasion, if not more.
Q. Okay.
And did you find him to be responsive to your concern?
A. Somewhat responsive, I'd say.
Q. Is it fair to say that you would have liked him to have been more responsive?
A. Oh, absolutely, absolutely.
Q. And is it fair to say that, looking back at Exhibit 327, that that was not the only time, that is to say, February of 1991, was not the only time that you personally tried to push things ahead here or speed things up, to use your words?
A. I'm sure that that was not the only time.
Q. In fact, you wrote a similar letter again on April 1st of '91, did you not?
A. Yes, I did.
Q. And is Exhibit 333 --
And for the record, that's trial Exhibit 444, also in evidence.
-- which I'm handing you -- that letter, sir?
A. Yes, it is.
Q. And again, is the purpose of this letter to again try to speed things up at Waterway Estates?
A. Let me --

MR. BAISE: Objection, Your Honor, with respect to the relevancy of this line of reading any of this material which we're talking about.
February 8, 1991, the project is already underway and being constructed. In February of 1991, the pipeline is being constructed, the AWT facility is being constructed. This doesn't have any relevance to speeding up the project. At this point, the project is now in the hands of the contractors.
MR. JACOBS: That's exactly what this testimony is about, how to speed up the completion of the project. That's the whole point.
MR. BAISE: But this --
MR. JACOBS: That he made recommendations that would have resulted in the project being completed faster in compliance, completed sooner.
MR. BAISE: Final plans and specifications had been approved. The contractor got underway in January of 1991, constructed the pipeline in six months and the remainder in sixteen months, Your Honor.
THE COURT: Well --
MR. BAISE: I do not see how this is relevant with respect to Florida Cities' official speeding up when it already had been locked in in terms of final plans and specifications and is approved by FDER and the Army Corps of Engineers and Lee County.

THE COURT: I'll sustain the objection, Mr. Jacobs.
MR. JACOBS: In that case, I'll move on to page 139, line twelve.
BY MR. JACOBS:
Q. Question: I'm now handing you Exhibit 335.
And for the Court's reference, this is trial Exhibit 446, also in evidence.
Would you tell me if you recognize that, sir?
A. Yes, I do.
Q. Would you identify it for the record, please?
A. This is a letter from -- or excuse me -- a memorandum from myself to Mr. Bradtmiller dated May 17, 1991.
Q. And are there attachments to that memorandum?
A. Yes, there are.
Q. And what are the attachments?
A. The attachments are a quote from a company called Chlorinator Replacement Parts for installing a supinator, a draft letter to Mr. Phillip Edwards, Department of Environmental Regulation, dated March 28, 1991.
Q. What is the issue here?
A. It's going to take me a few minutes to read through all this.
Q. Take your time.
A. The issues in this memorandum are, again, looking for ways to get this facility into compliance as quickly as

possible, and in this case, I am proposing some temporary measures that can be taken to improve our effluent quality and also I'm proposing a modification to the existing facility to allow construction to proceed quicker.

Q. How do these items relate to the completion of the new outfall line?

A. To the extent that the new outfall line would be placed in service, it was my intention to maximize treatment to attempt to meet the new effluent limits.

Q. Okay.

Is it fair to say that what you're recommending here would achieve compliance sooner than what was being done at the time?

A. Yes, sir.

Q. In fact, at the very end of your memo you say, quote, if approved by FDER, we will have substantially reduced construction time for the project, unquote; is that correct?

A. That is correct.

Q. Now, did you receive authorization to proceed in the manner that you recommended in this memorandum?

A. Uh, to be honest with you, I don't recall.

Q. Well, you would have had to receive authorization from Mr. Bradtmiller; is that correct?

A. Yes, it is.

Q. Who is his boss?

A. Mr. Reeves.

Q. If you look at the third page of Exhibit 335, there's a handwritten notation in the upper righthand corner. Do you know whose handwriting that is?

A. Yes, that is in my handwriting.

Q. What does it say, sir?

A. It says, quote, draft not sent per A.A.R., unquote.

Q. Who is A.A.R.?

A. That is Mr. Reeves.

Q. Does that refresh your recollection as to whether or not your recommendation was accepted?

A. Well, if you look at the date on that draft letter, it's March 28, 1991, versus my memorandum, which is May 17, 1991. It may be that the March 28th draft was something that I proposed earlier and was not approved and I was proposing it again. I don't know. I mean, the dates don't match up very well.

MR. BAISE: Again I would object that this is certainly confusing. It's not relevant to the time period. Actually we are talking about the contract that is, as stated earlier, was underway, the pipeline was constructed within a very quick and timely manner.

MR. JACOBS: Judge, he's testifying. The issue -- what is going on here is we're still before the compliance date and they're still out of compliance. This relates directly --

THE COURT: I tell you what we're going to do. We're not going to read anymore tonight and I'm going to let you submit a copy of the balance of the portions that you want the Court to consider, and I will allow counsel to state their objections to the balance of the deposition.

MR. BULLOCK: Do I need to renew my motion to strike at this time or may I -- do you want me to?

THE COURT: You can do that when you file your submission objecting to not only the deposition itself, basically, but also portions that Mr. Jacobs is designating.

And, Mr. Jacobs, I would ask that you file your designations specifically by Wednesday of next week. And counsel for the Defendants, now this will -- you'll need to submit to the Court a copy unless you want to leave this with the Court.

MR. JACOBS: I think the original actually has already been filed with the Court and I'm happy to --

THE COURT: Well --

MR. JACOBS: -- leave that one as well, sir.

THE COURT: All right.

Then, all you'll need to do is just to designate a document. I know that you've got that in the pre-trial statement, but in order to make sure that the designations are accurate, I would ask that you file your written designation by -- I think you can do that actually by Tuesday, do that by

Tuesday, and then the Defendants can have until the following Tuesday, whatever date that is, to file your objections to the designations, but we're not going to sit here any longer. It's five till 6:00 now.

MR. JACOBS: I apologize. I obviously underestimated how long it would take, Judge. Do you want me to just list the designations?

THE COURT: Yes, sir. The remaining designations will be sufficient and that starts, I guess, with page 142.

MR. JACOBS: Yes, sir.

THE COURT: Okay.

I tell you what I'm inclined to do is instead of my telling you, I'd like to give counsel the opportunity to maybe put their heads together, including counsel for both sides, and proposing what you would recommend -- what you would suggest to the Court in terms of additional oral and/or written submissions in terms of final arguments, including any motions that you want the Court to consider. And I've done this before and it's worked fairly well.

I have received the Defendant's joint memorandum addressing the Fifth Amendment, invocation of the Fifth Amendment by certain witnesses and I have already indicated to the Government that they will have until a certain time to file their response to that.

But I think at this point, I would suggest that and

would ask that counsel assimilate what we have procedurally remaining, including the issues that are addressed by the joint memorandum that I just referred to. And it may be that the Court -- apparently the Court is going to need to resolve those issues before the Court receives -- reasonably can expect to receive anything further from counsel.

But I would suggest that you put that in the mix and come up with a recommendation as to how you feel that the Court should procedurally deal with the balance of what remains to be done, including, as I say, any -- if you feel that we ought to reconvene for purposes of hearing oral arguments, summation, then include that in your written submission.

Now, it may be that counsel for the Government and the Defendants can come to joint recommendations regarding these procedures and recommendations for written submissions, and all the better.

I had an admiralty case that was pretty complex and pretty involved and this is a little reminiscent of that, and they were able to come up with an effective plan, which I modified to some extent, but it was very helpful to the Court. I think it's helpful to counsel to have an opportunity to come up with a recommendation regarding that.

Do you all have any objections or questions regarding that?

MR. JACOBS: That sounds fine. I'm willing to

suggest something right now or we can work it out later and get back to the Court.

MR. BAISE: I would suggest we work it out later.

THE COURT: I think so.

MR. BAISE: We had a long day. We might -- I thought we would not, but obviously --

THE COURT: Yeah. I will ask that you file your submissions by -- how much time do you want?

MR. JACOBS: Well, Judge, I have to do a brief by next Thursday on what I've just received today on the Fifth Amendment issue. May I propose the following: Thursday or Friday, two weeks from today, for these suggestions?

MR. BAISE: That would be acceptable to me. A couple of us are going to take some time to go fishing, so we're going to be out of pocket.

THE COURT: So you're suggesting, Mr. Jacobs, what would the date be?

MR. JACOBS: The 19th of April to file.

THE COURT: All right.

I will expect to receive -- to have you file with a courtesy copy to chambers your hopefully joint recommendations. And to the extent that you can't concur on your --

MR. BAISE: We can file them both places, I heard her question.

THE COURT: File a courtesy copy, yeah, because I'm

going to probably be in Jacksonville, still be in Jacksonville at that time, so, yeah, a joint recommendation. And to the extent that you can't agree, then your individual variations of what you're suggesting. Yes, sir.

MR. HIRD: Just for clarification, you reserved on our motion on Rule 52(c). I assume that's part of what we will be discussing in the submissions.

THE COURT: Right. You'll be -- I reserved on that, and I assume that a renewed motion will be made.

MR. HIRD: I certainly will, Your Honor.

THE COURT: And as a part of your considerations, you may want to include what you are recommending regarding how the Court will consider such motions and whether you want to address those in writing, including a briefing schedule on that.

Now, the Rule 52 motion, that will need to be resolved before -- before your summations -- before your final arguments, for obvious reasons. So, I'd like for you to take that into consideration when you -- when you deal with the procedures of the additional presentations to make to the Court.

If need be, I will reconvene and hear arguments, but I'm going to leave that to you all to initiate a plan in that respect, taking into consideration both the motions as well as summations.

MR. HIRD: And one more thing that I assume would be included, just for clarification. I assume the Court will rule on the Fifth Amendment issue, and if the ruling is adverse to the Defendants, they will have an opportunity to respond to the Government's offer of proof based on --

THE COURT: Yeah. You will recall that I did suggest that you address the Fifth Amendment issues, which you have apparently done, and the Court is going to need to rule on that and give the Defendants -- assuming that I rule adversely to the Defendants on that issue, then I will need to give counsel for the Defendants the opportunity to address the proffer.

And again, I think you need to take that into consideration in devising a meaningful organized briefing or procedural manner, a suggested procedural manner for finishing out what remains to be done.

Yes, Mr. Quinn.

MR. QUINN: Final question, sir, about the bench copy of the exhibits. Do you want to keep that in addition to the original, sir, for your use?

THE COURT: Yeah. Well, let's see. Actually, I'm not sure that that is necessary. The Court will have available to it the original exhibits which are also bound in three ring binders.

MR. QUINN: No, sir, the United States' Exhibits are not bound.

MR. BULLOCK: The binders in the corner are Florida Cities' and I believe -- I don't know if Avatar Holdings' are over there or not.

THE COURT: I think probably the Court better retain the copies that are presently bound. We'll find a place for them where we can keep them and have ready access to them until we're through.

Yes, sir.

MR. BAISE: Going back to the Charles Hill witness that Your Honor will recall, obviously -- going back to the Charles Hill matter, because he was unable to attend because of illness, and as you indicated, there certainly has been some testimony with regard to the PSC issues. I'm trying to think of a way of possibly providing like an affidavit or summary memo with regard to what he would have testified to.

Obviously, counsel will have a response to that if we deem it necessary. I mean, we need to go back and look at what has been testified to with regard to the PSC testimony in order to stop any further testimony.

THE COURT: No, we're -- unless counsel wants to stipulate to that.

MR. BAISE: Okay.

THE COURT: We're --

MR. BAISE: I wanted that clarified. Thank you.

THE COURT: All right.

Anything further?

MR. BAISE: I beg your pardon?

THE COURT: Anything further? All right.

MR. BAISE: Thank you very much, Your Honor.

THE COURT: We'll be in recess.

(Thereupon, the proceedings were concluded.)

CERTIFICATE

STATE OF FLORIDA)
COUNTY OF HILLSBOROUGH)

I, CLAUDIA M. FRY, DENNIS MIRACLE and JAMES M. SPANGLER, Official Court Reporters for the United States District Court, Middle District, Tampa, Division,

DO HEREBY CERTIFY, that we were authorized to and did, through use of Computer Aided Transcription, report in shorthand the proceedings and evidence in the above-styled cause, as stated in the caption hereto, and that the foregoing pages numbered 1 to 290, inclusive, constitute a true and correct transcription of our shorthand report of said proceedings and evidence.

IN WITNESS WHEREOF we have hereunto set our hand in the City of Tampa, County of Hillsborough, State of Florida, this 5th day of April, 1996.

1 INTRODUCTION

1.1 Purpose

This report presents the results of a review of the Software Requirements Specification (SRS) for the TACJAM, QUICKFIX, TRAILBLAZER Maintenance Trainer Programs, Specification No. C5160201, dated 30 January 1989. This specification was submitted as CDRL Sequence No. A01T/B01T/C01T under Government Contract No. DAAB10-87-C-0070.

1.2 Scope

This SRS was reviewed for the following purposes:

a. To determine conformance of the SRS with requirements of DOD-STD-2167 and Data Item Description DI-MCCR-80025, Software Requirements Specification.

b. To assess the internal consistency and understandability of the SRS.

c. To assess the technical adequacy of the SRS for proceeding with software development.

d. To assess the technical adequacy of the SRS from a software support perspective.

e. To assess the traceability of SRS requirements to superior specifications.

1.3 Referenced Documents

Documents referenced for this review included:

a. Prime Item Development Specification for the TACJAM MAINTENANCE TRAINER PROGRAM, Specification No. C5158784, 10 February 1989.

b. Prime Item Development Specification for the QUICKFIX MAINTENANCE TRAINER PROGRAM, Specification No. C5158785, 7 February 1989.

c. Prime Item Development Specification for the TRAILBLAZER MAINTENANCE TRAINER PROGRAM, Specification No. C5158786, 14 February 1989.

d. DOD-STD-2167, Military Standard, Defense System Software Development, 4 June 1985.

e. DI-MCCR-80025, Data Item Description, Software Requirements Specification, 4 June 1985.

2 REVIEW COMMENTS

The table that follows lists comment(s) and/or recommendation(s) that are applicable to specific portions of the Software Requirements Specification for the TACJAM, TRAILBLAZER, QUICKFIX Maintenance Trainer Programs.

Item No.	Section	Comment/Recommendation
1.	Section 2.1	The publication dates listed for each of the Prime Item Development Specifications (PIDS) are incorrect. The dates should be modified to reflect the latest releases of these specifications.
2.	Section 3.2.1	Except for the Instructor Station and Student Station disk subsystems, Section 3.2.1 specifies memory and input/output channel reserve requirements only. Memory and input/output channel capacity requirements should be stated.
3.	Table 3.4.1.1-1	The table of Control Operations inputs does not list all inputs described in Section 3.4.1.1.2, Control Operations Processing. Inputs not listed include the wraparound messages from Student Stations, SSANs, password/system manager access code, instructor updated data and time.
4.	Section 3.4.1.1.2 l)	This section does not specify or reference any criteria used to determine the "severity" of a hardware failure that can cause a system shutdown.
5.	Section 3.4.1.1.2 m)	This section does not indicate whether the computer "up-time" is determined and stored periodically, or is determined and stored as a result of the detection of system shutdown or other conditions.
6.	Table 3.4.1.1-2	The table of Control Operations outputs does not list all outputs described in Section 3.4.1.1.2, Control Operations Processing. Outputs not listed include the logged date and time, the wraparound messages to Student Stations, the Student Station main menu, the Instructor Station main menu, and the computer up-time.

Item No.	Section	Comment/Recommendation
7.	Table 3.4.1.2-1	Change "...Add/Delete and Instructor..." to "Add/Delete Instructor...".
8.	Table 3.4.1.2-1	The table of Maintain System Integrity inputs does not list all inputs described in Section 3.4.1.2.2, Maintain System Integrity Processing. Inputs not listed include SSANs, password/system manager access code, name, and class number.
9.	Table 3.4.1.2-2	The table of Maintain System Integrity outputs does not include the "invalid class error message".
10.	Section 3.4.1.4	The sense of the second sentence implies that the word "independent" should be replaced with "dependent".
11.	Section 3.4.1.4.2 g)	This section references but does not completely specify requirements pertaining to the display of queued error messages. The section does not indicate the duration of display of each message, whether the operator must acknowledge each message before it is replaced with the next message, or the disposition of messages if the operator does not request their display.
12.	Section 3.4.1.4.2 h)	This section references but does not completely specify requirements pertaining to the dump of display data to the printer. The section does not indicate whether text only or text and graphics data will be dumped.
13.	Section 3.4.1.4.2 i)	This section references but does not completely specify requirements pertaining to a help key. The section does not indicate whether help data will be context sensitive.
14.	Figure 3.4.2-1	The label for object 2.2 should be Maintain Class.

Item No.	Section	Comment/Recommendation
15.	Section 3.4.2.2.2 c)	COI description appears to have been omitted from the list of Maintain Class parameters that can be modified.
16.	Table 3.4.2.2-2	Attendance record data is not listed as a Maintain Class Data output.
17.	Table 3.4.2.3-1	The output data item, Statistical Display, is listed as an input to Perform Statistical Analysis. It should be deleted from this table and added to Table 3.4.2.3-2.
18.	Table 3.4.2.3-2	The input data item, Statistical Request, is listed as an output to Perform Statistical Analysis. It should be deleted from this table and added to Table 3.4.2.3-1.
19.	Table 3.4.2.3-1 through Table 3.4.2.6-2	The input/output data items identified as transferred from/to the Control User Interface subfunction are not listed explicitly in the corresponding output/input tables for that subfunction (Tables 3.4.1.4-1 and -2). The same comment applies to many of the input and output tables for the Author Courseware, Perform Built-in-Test, and Perform Maintenance Training subfunctions.
20.	Section 3.4.3.1.2 o)2 (page 52)	Define the acronym FLFC when it is first used.
21.	Section 3.4.3.3.2 j) (page 58)	Change references to COI deletion or modification to "(in h)" and "(in i)", respectively.
22.	Section 3.4.4	Clarify the sentence "BIT software tests the operational readiness of equipment that either have no built-in tests or stand-alone built-in tests and do not interface with the Maintenance Trainer.".

Item No.	Section	Comment/Recommendation
23.	Table 3.4.4.1-1	The table of Level-A Test inputs does not include responses from devices tested, such as described in Section 3.4.4.1.2 b) and following.
24.	Figure 3.4.4-1	The BIT Data Flow Diagram does not depict data flow to/from devices tested.
25.	Table 3.4.4.1-2	The table of Level-A Test outputs does not include test stimuli to devices tested, such as described in Section 3.4.4.1.2 b) and following.
26.	Section 3.4.4.1.2	Failure conditions identified for all wraparound type tests should include both 1) received data different from transmitted and 2) messages not received. Section 3.4.4.1.2 b) properly includes both conditions. Section 3.4.4.1.2 d) and others do not.
27.	Section 3.4.4.1.2 i)	This section does not indicate the method used to test the plasma display internal processor and RAM.
28.	Section 3.4.4.2	Remove the comma from the first sentence.
29.	Section 3.4.4.2.2	It is unclear from the descriptions of tests requiring operator assessment, e.g., comparison of printer output with test pattern, whether any subsequent operator entry is used for status reporting, statistics, or archiving. Clarify. Any such operator entry should be added to the input table.
30.	Table 3.4.4.2-2	This list of Level-B Test inputs includes Student Station Available Disk Space. The Level-B Test processing description in Section 3.4.4.2.2 does not include requirements for this measurement. A section similar to Section 3.4.4.1.2 h) should be added here.
31.	Table 3.4.4.2-2	Table caption should be "Level-B Test Outputs".

Item No.	Section	Comment/Recommendation
32.	Table 3.4.5.4-1	The source of the input item. Excecution Information. should be Control Training Lesson.
33.	Section 3.4.5.5.2 f)7	This section should cite a specification for replica CRT display requirements, as done in the preceding section for the plasma displays.
34.	Section 3.5.1 a) & c)	Change "Appendicies" to "Appendices".
35.	Table 3.8-1	The Software Requirements Traceability Matrix is not consistent in its allocation of Prime Item Development Specification requirements. For example, PIDS Section 10.0 is listed for SRS Para No. 3.4.3.1.2.b, but not for related requirements. SRS paragraphs pertaining to processor reserves are traced to System Specification requirements only; they do not reference similar PIDS requirements. The procedure used to construct the matrix should be provided. The explanation should address why requirements are traced to one or both superior specifications and should explain precedence, if any.
36.	Section 4	The discussion of qualification requirements is essentially a restatement of the DI-MCCR-80025 preparation instructions. This section should be rewritten such that it meets the intent of the DID. Qualification methods (and techniques, tools, and tolerance limits, where applicable) should be specified for each requirement.

Item No.	Section	Comment/Recommendation
37.	Appendix I	The discussions of interfaces and interface data tables should address the following additional areas: - response time requirements - data validation/error detection - data correction - retransmissions - reaction if no response - priorities - method of synchronization - protocols - handshaking - resolution/prevention of contentions - message IDs - message lengths - message blocking/packing/format - data formats, units, scaling - data types, ranges - memory buffer requirements - hardware interface control/status data. - device addresses

3 SUMMARY AND CONCLUSIONS

The following sentences summarize the results of the review of the SRS against each of the stated objectives:

a. If it is assumed that interface requirements are adequately addressed in a separate Interface Requirements Specification, the SRS meets the intent of DOD-STD-2167 and Data Item Description DI-MCCR-80025.

b. The SRS is generally consistent and understandable.

c. The SRS was found to be technically adequate for proceeding with software development.

d. The SRS was found to be technically adequate from a software support perspective.

e. Because the System Specifications cited in Section 2.1 of the SRS had not been received prior to the conduct of this review, the review did not attempt to validate the SRS Requirements Traceability Matrix.

4 RECOMMENDATIONS

It is recommended that the Software Requirements Specification be modified to correct all deficiencies identified in this report. It is also recommended that the revised SRS be reviewed for requirements traceability once the SRS cited System Specifications have been received.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,) Case No. 93-281-CIV-FTM-21
Plaintiff,)
vs.) Wednesday, March 27, 1996
) Tampa, Florida
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,)
Defendants.)

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

THE COURT: Good morning.

All right. I think we're ready to proceed. Where is Mr. Jacobs?

MR. QUINN: Mr. Jacobs is on his way, Your Honor, but I'm going to carry on with the exhibits.

THE COURT: All right.

MR. QUINN: Avatar Holdings prepared over the night a stipulation which I'm in the process of reviewing. It seems to list all of the documents which we listed seriatim yesterday.

The stipulation puts in the Code 1, Code 2 and Code 3 objections. I believe it is acceptable.

It merely states that the objections are indicated in the following manner and that there are a few exhibits that the Government seeks to admit through the testimony of Mark Klingenstein that are not the subject of this stipulation. Defendants will raise the individual objections to these exhibits on Wednesday, today. These exhibits are identified as Government's Exhibits 172, 350, 510, 511 and 512.

I believe this stipulation is acceptable, so we can proceed with those five objections, Your Honor, and address those documents rather than the whole list that we had the other day. Maybe it will save some time.

MR. HIRD: Your Honor, we prepared this over night in order to save time.

I just want to note for the record that in addition to the exhibits that were admitted on Monday, the Government is seeking through Mr. Klingenstein to get in a total of 331 additional exhibits.

We have noted our objections for the record. We think a lot of these exhibits go way beyond the history of the violations and the information Mr. Klingenstein needed in order to state in his reports.

And we want to make very clear our sense that we feel that it is inappropriate for these exhibits to come in this way.

I'm sorry, Your Honor. I gather you're having trouble hearing me?

THE COURT: Well, I have heard you. I --

THE COURT SECURITY OFFICER: The court reporter has to hear you.

MR. QUINN: With the Court's permission, Mr. Jacobs is going to sign off on the stipulation and then we can address those five exhibits right now. We'll handle distributing these at the next break, Your Honor.

THE COURT: All right.

MR. QUINN: The next exhibit is Exhibit Number 172.

MR. HIRD: Your Honor, this exhibit appears to be handwritten notes. It does not appear to be an express business record, and I think our objection to this exhibit has to do with hearsay.

THE COURT: All right.

MR. JACOBS: Good morning, Your Honor.

THE COURT: Good morning.

By the way, the jackhammer will terminate at 9:00 o'clock, as I understand it.

MR. JACOBS: Thank you, Your Honor. I apologize for running a little late this morning.

This is a business record --

THE COURT: Is or is not?

MR. JACOBS: It is a business record from Florida Cities' own files.

THE COURT: I need to see the exhibit, please.

(Pause.)

MR. JACOBS: Just looking at the Bates number, this was produced by Florida Cities. It is a business record. It reflects a telephone conversation with the then executive vice-president of Florida Cities, Tony Reeves, if you look at the top of the exhibit.

THE COURT: Who is Tony Reeves?

MR. JACOBS: The former executive vice-president of Florida Cities who pled the Fifth Amendment.

Page 5

THE COURT: I'll overrule the objections and receive Exhibit 172.

MR. HIRD: The next exhibit, Your Honor, is Exhibit 350. Your Honor, this is a memorandum concerning the Florida Cities Fiesta Village wastewater treatment plant. That's not a facility in this case, and our objection is that it's irrelevant.

MR. JACOBS: Judge, it's not the first page of the memorandum, per se, but the attachment which contains important admissions by Florida Cities with respect to their knowledge of matters specifically relating to a waste load allocation at the Waterway Estates plant.

THE COURT: That was what number, 350?

MR. HIRD: 350, Your Honor.

THE COURT: 350.

MR. JACOBS: And the reference to Waterway Estates is on Page 3 of the exhibit.

Again, Exhibit 350, Page 3, you'll see references right up at Paragraph 7 to Waterway Estates. Then you'll see a reference in Paragraph 8 to the Caloosahatchee waste load allocation documentation which Mr. Klingenstein referred to in his testimony and, again, another reference in Paragraph 8 to Waterway Estates, so it's highly relevant.

THE COURT: Say that again. I just got the exhibit.

Page 6

MR. JACOBS: I'm sorry, Your Honor.

Exhibit 350 –

THE COURT: Right.

MR. JACOBS: – directing the Court's attention, if I may, to Page 3, Paragraphs 6 and 8 in particular, both reference the Waterway Estates plant. So does Page 4, for that matter.

The document references the waste load allocation study performed by the State of Florida in 1981 that Mr. Klingenstein referred to yesterday in his testimony.

THE COURT: Yes, sir?

MR. BULLOCK: If the Court please, Your Honor, this has somehow been represented as a document which Florida Cities admits knowing that it had no waste load allocation. We object to that characterization of the document. We don't believe the document says that. The document...

THE COURT REPORTER: Judge, could counsel go to the microphone? I'm having a very difficult time hearing them.

THE COURT: Mr. Miracle is having a difficult time. Is the microphone working at your table? No?

I tell you what, do we have the portable microphone? Do we have the portable, hand-held microphone?

THE DEPUTY CLERK: Yes, sir.

Page 7

THE COURT SECURITY OFFICER: It's working now.

THE COURT: It's working? All right.

MR. JACOBS: Your Honor, I might also say this: This is a petition of the Florida Cities Water Company, again, directing the Court's attention not to the cover page, but this was a publicly filed document apparently with Florida Department of Environmental Regulation. It's the petition itself signed by Florida Cities' own counsel that we ask be entered into evidence.

If the objection is specifically to Page 1, I could perhaps understand the basis of the objection, but not to a publicly filed document.

THE COURT: Mr. Bullock?

MR. BULLOCK: May I speak to that, Your Honor?

THE COURT: Yes, sir.

MR. BULLOCK: Your Honor, let me, first of all, refer you to Paragraph 8 on Page 3, the parenthetical that says, Except that the Respondent did not model its Caloosahatchee River waste load allocation documentation because of the assumed tie-in to Cape Coral, and the rest of the document -- the rest of the assumptions that are in that parenthetical.

If that parenthetical is removed – which, in fact, what happened is, there was no tie-in to the Cape Coral facility, then the assumptions which follow are

Page 8

incorrect, so what happened is the design conditions for -- or the underlying purpose for Waterway Estates not being included in the 1981 document didn't happen, so there is no evidence from this or from any document that Florida Cities lost its 1981 waste load allocation.

MR. JACOBS: Your Honor, he's arguing the merits. We would obviously have a different interpretation. The objection is relevancy. It relates directly to Waterway Estates. It's a publicly filed document. It's written by Florida Cities' own counsel.

THE COURT: All right. I'm going to sustain the objection as to the first page of this document, which is a memorandum. I'll receive the balance of it.

MR. HIRD: Your Honor, the last three exhibits are 510, 511 and 512 and they are all -- they are very similar. These are statements from depositions in which witnesses took the Fifth Amendment.

Our objection is we can't -- A, it's irrelevant and, B, we can't understand how this has anything to do with Mr. Klingenstein's opinion and how this would shape his views as to the seriousness of the violation or any other issue by looking at pages where individuals asserted their Fifth Amendment rights.

MR. JACOBS: In a civil case --

THE COURT: Wait, wait, wait.

Page 9

MR. JACOBS: I'm sorry, Your Honor.
THE COURT: Are you through?
MR. HIRD: I'm not finished.
Your Honor, the Court, while Mr. Jacobs --
THE COURT: I'll tell you what, I'll call on you -- I'll determine when counsel is through, and then I'll call on you, then you can start speaking.
MR. JACOBS: Yes, sir.
MR. HIRD: Mr. Jacobs may argue that you're entitled to draw an inference -- and we have a dispute with that -- but there is no question that Mr. Klingenstein has no particular power to draw an inference.
And the idea that he was somehow influenced by people taking their Fifth Amendment in his expert opinion is absurd.
THE COURT: All right. Just a moment.
Now, the exhibits we're talking about are 510, 511 --
MR. HIRD: -- 511 and 512.
THE COURT: -- 511 and 512.
All right. Just a moment.
(Pause.)
THE COURT: All right. Mr. Jacobs?
MR. JACOBS: Well, Your Honor, this is a civil matter in which adverse inferences, as the Court is well

Page 10

aware, can be drawn from the invocation by the Defendant's officers of the Fifth Amendment.
If the specific objection is to introducing it in the context of Mr. Klingenstein's testimony, we would be happy to reintroduce it during the testimony, or the lack of testimony, of the individuals who --
THE COURT: Well, I'm inclined to agree with Mr. Hird at least as to introducing these exhibits in connection with Mr. Klingenstein's testimony. We can address the balance of the objections if and when you proffer those exhibits again. But I'll sustain the objection at this point.
By the way, just so I'll understand, 510, 511 and 512 in my notebook simply state the -- make the statement, Upon the advice of counsel, I respectfully decline to answer and invoke my rights under the Fifth Amendment.
You're obviously saying that this pertains to a certain witness' invoking a Fifth Amendment privilege, and one cannot tell from looking at the exhibit in my notebook as to who is asserting that. I can't tell anything from this. That's just for future reference, I guess, but that's what's in my notebook.
MR. JACOBS: Yes, Your Honor.
The witness list itself will identify 510 as the statement of Gerald Allen, 511 as --

Page 11

THE COURT: Well, you see, the witness list is not really an exhibit as such. It's an aid. So, any exhibits that we've got in here need to stand on their own. That's for future reference --
MR. JACOBS: Thank you, Your Honor.
THE COURT: -- in this case.
MR. HIRD: Your Honor, if I may, just to make the record complete, we have a further objection with respect to 510, the statement of Mr. Allen. Mr. Allen ultimately did testify in deposition and will be a trial witness in this case.
THE COURT: Mr. Allen, did you say?
MR. HIRD: Yes, sir.
THE COURT: Okay.
All right. Are we ready for Mr. Klingenstein to retake the witness stand?
MR. JACOBS: Yes, Your Honor.
THE COURT: All right.
Yes, sir. You may proceed.
MR. JACOBS: Your Honor, no further questions of Mr. Klingenstein at this time.
THE COURT: All right. Mr. Bullock, you may cross-examine.
MR. BULLOCK: Thank you, Your Honor. Good morning.

Page 12

MARK JAMES KLINGENSTEIN,
being previously duly sworn, testified as follows:
CROSS EXAMINATION
BY MR. BULLOCK:
Q. Good morning, Mr. Klingenstein.
A. Good morning.
Q. Mr. Klingenstein, as I believe you testified in your direct testimony, you are currently employed by SAIC, is that correct?
A. Yes, that is.
Q. SAIC, for the most part, exists to provide expert witness and other services to EPA and DOJ, is that correct?
A. SAIC as an entity exists to provide a variety of high-tech consulting services to a variety of both Government and private clients.
Q. And one of your major clients is, in fact, EPA and another is DOJ, is that correct?
A. They are certainly very significant clients.
Q. As a matter of fact, your current duties include working on work assignments in which SAIC provides expert witness services to EPA and DOJ, is that correct?
A. Yes, that is correct.
Q. And you have previously managed a group of about 20 individuals all of whom are dedicated to providing expert witness and related services to EPA and DOJ, is that

Page 13

correct?
A. Expert witness services and other services related to U.S. EPA programs.
Q. Including enforcement actions, enforcement services?
A. Yes.
Q. All right. In the calendar year 1995, can you tell me how much of your time was spent working for EPA and DOJ on these work assignments?
(Pause.)
A. I couldn't tell you exactly. Certainly more than 50 percent of my time.
Q. And can you tell me how much in billable time you, yourself, generated for SAIC working on work assignments for EPA and DOJ?
A. I would assume that would be the same answer, which would be more than 50 percent of my time, which we work a 40-hour work.
Q. Can you tell me in dollar figures how much that was billed to EPA and/or DOJ?
A. Not off the top of my head.
Q. Can you give me a ballpark estimate?
A. Well, the billing rate -- my billing rate would be approximately 94, $95, $96 an hour, so that fraction of a year times $96.
Q. Okay. Now, you are also a vice-president, an

Page 14

assistant vice-president of SAIC?
A. Yes, an assistant vice-president.
Q. And as part of that, you would consider yourself part of management of SAIC?
A. Yes, that's true.
Q. All right. And can you tell me in dollar figures how much the enforcement unit that you used to manage generated for SAIC in 1995 as a result of working for EPA and DOJ?
A. Well, I didn't -- the portion of the company that's doing actual enforcement work, under my direction last year, we did just about a million dollars worth of work.
Q. Okay. Was that a similar figure for 1994?
A. Pretty close, roughly.
Q. Okay. How many times in the past five years have you worked as an expert witness or a consultant on behalf of a defendant in an environmental enforcement action?
A. I'm sorry, counsel. What do you mean "how many times"?
Q. How many times in the last five years have you been employed as an expert witness or a consultant on behalf of a defendant in an environmental enforcement action?
A. You mean how many different actions?
Q. How many contracts have you performed in which you have provided expert witness or expert consultant services for a defendant in an environmental enforcement action?

Page 15

A. Well, in terms of contracts, it would be two. We have one contract with EPA and one contract with the U.S. Department of Justice.
THE COURT: With a defendant, did you say?
MR. BULLOCK: With a defendant.
THE WITNESS: I'm sorry, sir. I --
MR. JACOBS: I'm sorry. For clarification, is it for the Defendant? I thought Mr. Bullock first asked --
THE COURT: I think he said "a defendant." Did you mean any defendant?
MR. BULLOCK: I meant any Defendant.
THE WITNESS: I'm sorry, sir. Did you mean working for the Defendant?
BY MR. BULLOCK:
Q. That's correct.
A. None.
Q. Thank you.
THE COURT: And that's any defendant, not just the Defendants in this case, is what his question pertains to. You understood that?
THE WITNESS: Yes. Thank you.
BY MR. BULLOCK:
Q. Let me refer you, if you have it in front of you, to your resume which is attached to the back of your report. You, on Page 2 of 7 --

Page 16

MR. BULLOCK: Your Honor, I believe it is Appendix A.
THE COURT: I've got it.
BY MR. BULLOCK:
Q. Mr. Klingenstein, you list a number of cases in which you have provided expert support. That would be the third paragraph down.
A. Yes.
Q. All right. Fort Smith, Arkansas, what type of case was that?
A. That was a Clean Water Act case.
Q. And who was the defendant?
A. Was the City of Fort Smith, Arkansas.
Q. A municipal facility?
A. Yes.
Q. The PennTech Paper Company, I assume, was a manufacturing facility?
A. Yes, that's correct.
Q. Menominee Paper was a manufacturing facility?
A. It was a manufacturing facility, but the case involved the Menominee municipal case -- facility as well.
Q. The Tyson's Chicken case was a manufacturing facility, correct?
A. Yes, that's correct.
Q. The Purnell Sausage and Gorton's of Gloucester, both

Page 17

of those were manufacturing facilities?
A. Yes, they were.
Q. O'Donell-Usen, what was that case?
A. That's a manufacturer.
Q. Okay. Terra Haute, Indiana?
A. Is a municipal facility.
Q. Winchester, Kentucky?
A. Was municipal.
Q. Okay. Hawaii Kai -- I'm not going to begin to pronounce that -- but Hawaii Kai?
A. Hawaii Kai. That is a municipal facility.
Q. All right. Bumnell?
A. Is a municipal facility.
Q. And Metro Dade Citizens Authority?
A. Involved the authority in Miami.
Q. All right. Taracorp?
A. It is an industrial facility.
Q. Gulf Chemical?
A. It's an industrial.
Q. And Jefferson County?
A. Is municipal involving the county authority.
Q. All right. You have never been employed by a privately owned, publicly regulated utility, have you?
A. I was employed by the City of Philadelphia while I was an intern in school.

Page 18

Q. Okay. Is the City of Philadelphia owned privately?
A. Oh, I'm sorry, sir. No.
Q. Okay. So, the answer to my question is, you have never been employed by a privately owned, publicly regulated utility?
A. No.
Q. All right. Have you ever provided consulting services for a privately owned, publicly regulated utility?
A. No, I don't believe so.
Q. All right. You have never designed a plant for a privately owned, publicly regulated utility?
A. No.
Q. All right. You have never sought to permit a facility like -- which is a privately owned, publicly regulated utility, correct?
A. That's correct.
Q. All right. And that would include any facility -- you have never permitted a facility in the state of Florida, is that correct?
A. That is correct.
Q. All right. You're not an engineer licensed in the State of Florida, are you?
A. No, I'm not.
Q. All right. Do you hold any operator licenses in the State of Florida for plant operations?

Page 19

A. No, I do not.
Q. Do you hold any licenses for plant operation in any state or political subdivision in the country?
A. No, I do not.
Q. Have you ever in any way overseen the construction of a facility for a privately owned, publicly regulated utility?
A. No, I have not.
Q. Have you ever provided any engineering or consulting services for any company who is regulated by the Florida Public Service Commission?
A. No, I have not.
Q. All right. And isn't it true that you really have no knowledge of the procedures and practices of the Florida Public Service Commission?
A. I have knowledge of their procedures based on the documents that I have reviewed as a result of my involvement in this particular case.
Q. Can you tell me which documents that involve the Public Service Commission you have reviewed?
A. Primarily correspondence that -- from Florida Cities, parties either to various outside entities, such as the State of Florida, or internal documents that have discussed Public Service Commission issues.
Q. Have you reviewed any of the statutes or regulations

Page 20

which govern the Florida Public Service Commission?
MR. JACOBS: Objection, Your Honor; beyond the scope of direct on the Public Service Commission.
THE COURT: Overruled.
THE WITNESS: No.
BY MR. BULLOCK:
Q. Have you reviewed any communication between Florida Cities and the Public Service Commission, or vice versa?
(Pause.)
A. That I can't recall.
Q. Let me turn now and ask you, what experience have you had performing modeling studies of river flows in the State of Florida?
A. None.
Q. You testified on Monday that you had interviewed EPA Region 4 employees about this case, is that correct?
(Pause.)
A. I don't specifically recall saying that on Monday.
Q. I believe you testified that you interviewed some EPA employees, isn't that correct?
A. My point, counsel, is I don't recall specifically whether EPA employees were identified as opposed to other individuals.
Q. Well, let me ask you this way, then: Have you ever interviewed any EPA Region 4 employees about -- well, we'll

Page 21

start with Waterway Estates -- and the claims that surround Waterway Estates?
A. I have had conversations with EPA Region 4 employees.
Q. About Waterway Estates?
A. Yes.
Q. Okay. Can you tell me who they were?
A. Mr. Ken Kwan and Ms. Gwen Fitz-Henley and Mr. Roger Pfaff.
Q. Let me turn with you now and talk about the 1981 waste load allocation study. In your report on Page 14, you have stated that the river was unacceptably impacted by nutrients from dischargers, the third paragraph up from the bottom.
A. Yes.
Q. Isn't it true, Mr. Klingenstein, that there is no actual data which supports this statement?
THE COURT: What paragraph? What does it start with?
MR. BULLOCK: FDEP's January 1981 Caloosahatchee River...
THE COURT: All right.
MR. BULLOCK: And, Your Honor, it is the last sentence of that paragraph.
THE COURT: All right.
THE WITNESS: My interpretation of the waste load allocation document was that the Florida agency was of the

Page 22

opinion that the overall nutrient loads to the river were a concern.
BY MR. BULLOCK:
Q. My question, Mr. Klingenstein, is, isn't it true that there is no actual data which supports this conclusion in your report?
(Pause.)
A. My belief is that the State agency came to this conclusion based on data available to them.
Q. Okay. And what data have you reviewed that support your conclusion that the river was unacceptably impacted?
A. Well, certainly even up through the present 1994 305(b) Florida State Water Quality Study, there are notations made that there is concern on the part of the State based on data from the last -- well, since, I believe, 1989 -- that there are still unacceptable nutrient loads to the river.
Q. All right. Well, let's go through some of this, then. The 1981 study, that was a modeling study, wasn't it?
A. Yes.
Q. All right. The 1990 study which was based on the 1989 information that you just spoke of was also a modeling study, wasn't it?
A. Yes, it was.
Q. Isn't it true, Mr. Klingenstein, that modeling is

Page 23

merely an attempt to predict possible impacts based upon certain assumptions of future water quality conditions under assumed scenarios of water flows, treatment and disposal options used in the river?
A. Not entirely to the extent that it doesn't necessarily have to be modeling future, at some far, distant point in time. A modeling effort is carried out typically using available data to calibrate the model, in effect to make the model as carefully represent as possible conditions in the river, and then a variety of different scenarios can be modeled. Both existing scenarios can be modeled as well as future or predicted scenarios.
MR. BULLOCK: Your Honor, I'm going to be referring to Plaintiff's Exhibit 349, or we have marked it as Florida Cities' Exhibit 16.
THE COURT: 349 is in evidence?
MR. BULLOCK: And I'll be glad to hand a copy of that, if you would like. It's our 16.
THE COURT: Same as Plaintiff's 349?
MR. BULLOCK: That is correct, Your Honor.
THE COURT: All right.
MR. JACOBS: Just for the record, Your Honor, it's not exactly the same.
THE COURT: All right.
MR. JACOBS: The first page is not the same.

Page 24

MR. BULLOCK: We'll be glad to give you our copy of Plaintiff's 349. The substance of the document is the same.
MR. JACOBS: I suspect that would be the case, Your Honor.
THE COURT: All right. Well, go ahead.
MR. BULLOCK: Thank you, Your Honor.
THE COURT: 349 is in evidence. And if he refers to something that's not in evidence, you can point it out.
MR. JACOBS: Thank you.
BY MR. BULLOCK:
Q. Mr. Klingenstein, who was this study prepared for?
A. I'm sorry, sir. Who was it prepared for?
Q. Who was it prepared for?
(Pause.)
Q. Well, let me move on a little bit. Let me refer you to the second paragraph of Page 1, beginning "These allocations." Isn't it true that this document was prepared for the Fort Myers District Office of the Florida Department of Environmental Regulation?
A. Yes, that would be the indication of that paragraph.
Q. All right. Who is it in the FDER or which section in the FDER actually issues discharge permits for the State of Florida?
A. I couldn't give you their formal name.

Page 25

Q. Okay. Do you know whether or not the discharge permits are issued from Tallahassee or from the regional offices?
A. I could not tell you.
Q. All right. Well, assume with me, then, that the district offices are the offices which issue the discharge permits. Under that scenario, then, this would have been -- the language in the paragraph which I just pointed out to you indicates that this study was generated due to pending requests for permits from -- at the Fort Myers office?
MR. JACOBS: Objection, Your Honor. I think this is an improper hypothetical for this witness. He's already testified he doesn't have personal knowledge of exactly which offices prepare these.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry. Could you repeat the question?
BY MR. BULLOCK:
Q. Assume with me, then, that the regional offices are the offices which issue the discharge permits; then the language of this document -- isn't it true that this document states that it was generated for the regional offices in preparation or due to pending requests for permit renewals?
A. Given that hypothetical, that would be the implication

Page 26

of that paragraph, yes.
Q. All right. Let's turn now to the study. I asked you a minute ago about the different scenarios -- whether or not modeling was based on assumed scenarios. You would agree with me that modeling is based on assumed scenarios, is that correct?
A. I agree that modeling can be based on assumed scenarios, but it can also be based on actual scenarios.
Q. All right. In real life, many of these assumed scenarios are unlikely to occur, is that correct?
A. That, I guess, would depend on what particular situation you were modeling, how likely the scenarios are to occur.
Q. Well, the 1981 study that we're looking at, the modeling study was based upon the predictions of certain design conditions simulated by DER in their computer program, isn't that correct?
A. Yes.
Q. Okay.
MR. BULLOCK: Your Honor, I realize we keep flipping back and forth between DER and DEP – and I know that is a little confusing -- but during this time it was FDER, and I think early -- in the early '90's it became FDEP, so I may say the same thing.
BY MR. BULLOCK:

Page 27

Q. One of the design conditions of this study, Mr. Klingenstein, was that all four facilities in this area of the river were all discharging at full capacity simultaneously?
A. Yes, I believe that's true.
THE COURT: Just a moment, please.
I'm looking for Plaintiff's 349.
(Pause.)
THE COURT: Go ahead.
BY MR. BULLOCK:
Q. If I might, Mr. Klingenstein, let me ask the question again: Isn't it true that the design conditions of this study were based upon the presumption that all four of the facilities in this area of the river were all discharging at full capacity simultaneously?
A. Yes, I believe it was.
Q. All right. Just as an aside, Mr. Klingenstein, how much time did you actually spend in reviewing this report -- in reviewing this study to generate your report?
A. I couldn't tell you an exact amount of time.
Q. Isn't it true, Mr. Klingenstein, that during the projected time of this study, that these -- the four facilities which discharge into this portion of the Caloosahatchee River never discharged at full capacity simultaneously?

Page 28

A. Well, I haven't reviewed data for all of these facilities, so I couldn't answer that question for all the facilities.
Q. All right. So, the answer to the question is, you don't know whether or not they discharged to full capacity simultaneously between 1980 and 1990?
A. As I said, I have not reviewed data for all the other facilities.
THE COURT: And so you don't know --
THE WITNESS: I do not know.
THE COURT: – because you haven't reviewed, correct?
THE WITNESS: Yes. Yes.
THE COURT: All right.
BY MR. BULLOCK:
Q. Have you reviewed data from Waterway Estates?
A. Yes, I have.
Q. And what years of data did you review?
A. I've reviewed flow data – I couldn't tell you every specific year -- but from the period of time of this study up until the present.
Q. And Waterway Estates never discharged at full capacity, did it?
A. That's correct.
Q. All right. So, in a sense, one -- right away, we can

Page 29

tell that one of the four design criteria for this modeling study never occurred?
(Pause.)
A. Well, the actual flows were not as high as the number that was used for this particular scenario, no; that's correct.
Q. Thank you.
You rely, on the bottom of Page 14 of your report, the 1990 study --
MR. BULLOCK: That is Plaintiff's 422, Your Honor.
THE COURT: Are you basically through with 349?
MR. BULLOCK: Your Honor, no, sir. You might want to keep it close.
THE COURT: Okay.
BY MR. BULLOCK:
Q. Mr. Klingenstein, you rely on the 1990 study for confirmation of the 1981 study in your report?
A. Yes.
Q. Okay. In fact, the 1990 study is another computer model, isn't that correct?
A. It reports the results of another modeling effort, yes.
Q. And the modeling effort in the 1990 study is -- actually, the 1990 study is a model of proposed expansions of all of the discharges on the Caloosahatchee River?

Page 30

A. I don't recall whether expansion of every one was proposed.
Q. How much time did you spend reviewing the 1990 study in preparing your report?
A. Again, I couldn't give you an exact figure.
Q. Okay. The 1990 study is assumed on all of the dischargers discharging at full capacity, isn't that correct?
(Pause.)
A. I know that the specific discharge assumptions were made in the report; without that document in front of me and having the ability to refer to it and compare that to the design capacity of each of those plants at that point in time...
Q. Okay.
MR. BULLOCK: Your Honor, what I have is the Defendant's exhibit that I can hand him. It's in evidence as a Plaintiff's exhibit. It's Plaintiff's 422.
THE COURT: All right. Hand me up Plaintiff's 422.
That's also Defendant's exhibit what?
MR. BULLOCK: I'm sorry. It is not a Plaintiff's exhibit.
THE COURT: Okay. Okay.
MR. JACOBS: I'm sorry to interrupt, Your Honor.

Page 31

For the record, are we looking at Plaintiff's 422?
MR. BULLOCK: That's correct.
MR. JACOBS: Thank you.
Does the witness have it in front of him?
THE WITNESS: I'm sorry. No, I don't.
THE COURT: What's the question?
MR. BULLOCK: Your Honor, I'm asking him whether or not the 1990 study was based on the -- whether or not any of the -- the 1990 study was based on assumptions that all of these facilities were discharging at full capacity.
THE COURT: Okay.
THE WITNESS: That appears to be true.
BY MR. BULLOCK:
Q. And, again, I believe you said that you have no knowledge of whether or not in fact these facilities have discharged at full capacity between 1990 and today?
A. I'm sorry. Could you repeat that?
Q. I said, I believe you have said earlier that you have no knowledge of whether or not the four facilities modeled in this study actually discharged at full capacity from 1990 until today?
A. Other than having seen some flow data for Waterway Estates...
Q. Has Waterway Estates ever discharged at full capacity between 1990 and today?

Page 32

A. Certainly recalling the data, its average flow has been below its capacity.
Q. Okay. The answer to the question is, you don't even know whether Waterway Estates or not has ever discharged at full capacity, correct?
A. Well, the answer is, I can't recall each individual day's data to say with certainty that on any one day it may not have reached its capacity flow, but its average flow has been below its capacity flow.
Q. So, you don't know?
THE COURT: I think I understand his answer. Go ahead.
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Isn't it true that your testimony as to risk of harm of discharges from the Waterway Estates facility is based upon computer studies of information -- excuse me -- computer studies of situations which, in fact, never came to pass?
A. My opinion as to the potential for harm came from a combination of the findings of these studies and the specific information that they provided about the flow characteristics in the Caloosahatchee River particularly in the area of the Waterway Estates discharge and from my professional opinion based on having inspected the facility,

Page 33

having seen the characteristics of that canal and what the likelihood was of the effluent building up in that canal.
Q. My question was -- and let me rephrase it slightly, then -- in part, your opinion is based on these computer models and the reports generated as a result of these computer models, correct?
A. Yes, that's correct.
Q. You can't say whether or not the situations that are forecast in -- or the presumptions that these computer models are based upon actually happened, can you?
A. In terms of having seen data in that canal, no. To my knowledge, such data doesn't exist.
Q. Okay. The data exists about what that flow was for all four facilities, doesn't it, Mr. Klingenstein?
A. Yes.
Q. All right. You haven't looked at that data for all four facilities that discharge in -- that this study is based upon, have you?
A. I have certainly possibly seen some data, but I have not looked at it in detail.
Q. All right. So, you can't say whether or not the predictions that the model predicts actually occurred because you don't know whether or not the scenarios assumed in the model ever existed or not, correct?
A. I believe that certain characteristics indicated by

Page 34

the model, particularly the build-up of effluent in the area of the Waterway Estates, occurred regardless of whether or not those plants discharged at exactly the flows that were put forth in this model.
Q. But the data -- but you haven't reviewed the data to support the model?
A. I have reviewed data regarding water quality in the river.
Q. You have testified that you believe the 1981 study provides a zero discharge for Waterway Estates, is that correct?
A. I believe those are the exact words from the document itself.
Q. All right. In the same document, the study also suggests that the company should build a new outfall for the plant, isn't that correct?
A. I believe there's mention of the fact that the outfall would need to be relocated.
Q. All right. Isn't there a logical disconnect here between a zero waste load allocation and then demanding that the company build an outfall for a plant that has a zero -- a new outfall for a plant that has a zero waste load allocation?
MR. JACOBS: Objection to the mischaracterization of the document.

Page 35

THE COURT: Overruled.
THE WITNESS: My read on the document was, and continues to be, that in carrying out the study, the State of Florida looked at the technical need to relocate the outfall and then, based on its understanding of what Florida Cities' intentions were, i.e., to tie in to a regional facility with Cape Coral, decided not to continue the modeling effort looking at the relocated outfall and so, therefore, assumed that no waste load allocation would go to the Waterway Estates facility because it would be tied in to the Cape Coral plant.
BY MR. BULLOCK:
Q. In fact, the next year, in 1982, that Cape Coral plant was cancelled or was never built, is that correct?
A. I don't know if it was in exactly 1982, but it seems in the 1982, 1983 time frame, that agreement fell apart.
Q. So, that scenario didn't occur either, did it?
A. No, apparently not.
Q. All right. Are you familiar with the State of Florida's laws and regulations that address permitting for facilities such as the Waterway Estates plant?
A. No, not in any detail.
Q. Can you tell me whether or not this document was binding upon the Fort Myers office in its ability to grant a permit to the Waterway Estates facility?

Page 36

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion, Your Honor.
MR. BULLOCK: Your Honor, he has --
THE COURT: Well, I'll permit him to answer the question, if he knows. Overruled.
THE WITNESS: No, I don't know.
BY MR. BULLOCK:
Q. In fact, later in 1981, isn't it true that the Fort Myers office of the FDER granted permission to continue discharging at the Waterway Estates facility after the 1981 waste load allocation study was published?
A. I believe a permit was issued.
MR. BULLOCK: If I may, I would like to show the witness Defendant's Trial Exhibit Number 17.
BY MR. BULLOCK:
Q. Let me refer you to what would be the third page of Exhibit 17. Isn't it true that this is a State of Florida DER operation permit for Waterway Estates?
A. Yes, it is.
Q. And the date of issuance is 1981 -- excuse me -- April 1, 1981?
A. Yes, it is.
Q. All right. And the next page, which is at the bottom of the page, set forth as Number 1 of 4?
A. Yes.

Page 37

Q. This page authorizes Florida Cities to operate a 1.08 MGD wastewater treatment plant to discharge effluent to the Caloosahatchee River – into a canal to the Caloosahatchee River, is that correct?
A. That is what is written there, yes.
Q. Didn't EPA also grant a permit to discharge to Waterway Estates in 1981?
A. I believe it was in 1981.
Q. Let me show you Defendant's Trial Exhibit, Florida Cities, Number 18 and refer you to the second page of that exhibit.
Isn't this a permit to discharge – an NPDES permit to discharge for Waterway Estates?
A. Yes, it is.
Q. Okay. Isn't it true that in 1983, the Florida Department of Environmental Regulation renewed the Waterway Estates discharge permit?
A. Yes, I believe that's true.
Q. Let me refer you to Defendant Florida Cities' Trial Exhibit Number 20 and refer you to Page 2 of that exhibit. Again, this is authorization to operate a 1.08 million gallons a day treatment facility and to discharge into the canal which leads to the Caloosahatchee River, correct?
A. Yes, that is true.
MR. BULLOCK: Your Honor, we would move

Page 38

Defendant's 17, 18 and 20 into evidence.
MR. JACOBS: No objection, Your Honor.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Referring to Exhibit 20, can you tell me what the expiration date of Exhibit 20 is? And I'm referring to Page 4 of 5.
A. All of the pages would indicate an expiration date of August 2, 1988.
Q. Thank you.
In investigating this claim, Mr. Klingenstein, you had access to the files of EPA Region 4 --
A. Yes.
Q. -- is that correct?
You had access to the materials put forth in discovery by Florida Cities, is that correct?
A. Yes, that is correct.
Q. You have worked on enforcement inspections of facilities for NPDES compliance, have you not?
A. Yes, I have.
Q. All right. Let me ask you to look at Florida Cities' Trial Exhibit 199. Can you identify what type of document 199 is?
A. 199 is what would be known as a CEI, or compliance evaluation inspection report.

Page 39

Q. All right. Was this report done jointly with the Florida Department of Environmental Regulation?
A. Yes, it was.
Q. All right. And let me refer you to Page 2 of 4 in the actual document.
A. I'm sorry. That would be Page 2 of 4 of the form itself?
Q. That's correct.
And on Line F -- excuse me -- Line G, would you read Line G?
A. Number and location of discharge points are as described in the permit.
Q. And the answer which was checked off?
A. Was "yes."
Q. All right. And would you read Line H?
A. Correct name and location of receiving waters.
Q. And that was checked off as a "yes" as well?
A. Yes.
Q. Is it unusual to have joint State and Federal inspections?
A. It's not uncommon.
MR. BULLOCK: Your Honor, we would move that Defendant's 199, Florida Cities, be moved in evidence.
MR. JACOBS: No objection, Your Honor.
THE COURT: It will be received.

Page 40

Why don't we have an understanding that if there is no objection, you need not say anything. And I'll pause for a moment to –
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Mr. Klingenstein, let me refer you to Florida Cities' Exhibit 200. Could you tell the Court what 200 is?
A. 200 is another compliance evaluation inspection report.
Q. And this was done jointly by FDER and EPA?
A. Yes, it was.
Q. All right. Let me refer you to Section C of the second page of this exhibit. And under the heading Effluent slash Receiving Waters, what grade was that given?
MR. JACOBS: Your Honor, this hasn't been moved into evidence yet. We object to questioning the witness about the document.
THE COURT: Correct.
MR. BULLOCK: I'm sorry, Your Honor. I would move for Defendant's 200 to be --
MR. JACOBS: Here we would object, Your Honor. The document is incomplete. There should be an attachment to it, as we understand it. The objection then would be based on Federal Rule of Evidence 106. We believe it's irrelevant. The objection would be based on Federal Rule of

Page 41

Evidence 402. We believe it's hearsay, and the objection would be based on Rule 802. Hearsay within hearsay, Rule 805.

MR. BULLOCK: Your Honor, it's my understanding this document was produced out of EPA's own compliance files. The document clearly states what it is.

The attachments which are attached to it have no bearing on the issue that it's being offered for. We sought this document in discovery requests, and this is a document which was produced to us.

THE COURT: I'll overrule the objections. If the Government wants to at a later time offer the balance of this for any purpose, the Court will entertain that at that time.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you again to Section C and the sub question that addresses Effluent slash Receiving Waters. What mark was that given?

A. An "S."

Q. And "S" under the key code means?

A. Is listed as being equal to satisfactory.

Q. And under Section C, satisfactory is the highest grade that can be given?

A. Yes.

Q. Thank you.

Page 42

Isn't it true, Mr. Klingenstein, that at any time during the 1980's, the Florida Department of Environmental Regulation could have withdrawn its permission for Florida Cities to discharge from Waterway Estates?

A. I can't speak on behalf of FDER, FDEP.

Q. In preparing your opinion or preparing to testify, did you interview any FDER or now FDEP officials?

A. Yes, I did speak to a number of them.

Q. Do you remember who you spoke to?

A. I certainly recall speaking to Mr. Ron Blackburn, and I believe I also spoke to a former FDER employee which would have been Mr. Bruce DeGrove.

Q. Okay. You had characterized Florida Cities' discharge without a permit between 1987 and 1989 as serious violations. The seriousness of those violations is based purely upon the fact that they didn't have an NPDES permit during that period, isn't that correct?

A. And my belief that discharge was taking place at the wrong level of treatment and to the wrong location.

Q. Again, the issues about the wrong level of treatment are based on the 1981 study and your analysis of that study, isn't that correct?

A. And my understanding and belief on what would have been the impacts of that secondary discharge on the particular point of discharge.

Page 43

Q. All right. You have no data which points out that, in fact, that area was actually impacted, do you not?

A. I have not seen data. In fact, I believe your Mr. Smith in his report did, in fact, refer to some data that might have existed that indicated there were impacts in that area of discharge.

Q. But you'll defer to Mr. Smith's testimony on that, won't you?

A. I have not seen data for the canal.

Q. In fact, isn't it true that the Plaintiff has admitted that there is no -- that they have no evidence of environmental harm?

THE COURT: Well, now, wait a minute -- well, go ahead.

MR. JACOBS: I'll object to the extent that the question calls for a legal conclusion here.

THE COURT: Yes. You know, the Plaintiff is the United States, and I think I'll sustain the objection, at least as framed.

BY MR. BULLOCK:

Q. Did you assist the Plaintiff in preparing any of its discovery requests -- responses to its discovery requests?

MR. JACOBS: Objection to the extent that the question invades the attorney work product privilege. Mr. Klingenstein served both as an expert witness and also

Page 44

as an expert trial consultant. The work that he did with respect to -- in his capacity, rather, as an expert trial consultant I believe would be protected.

MR. BULLOCK: Your Honor, I have not asked him the content of any work or conversation.

THE COURT: I'll overrule the objection at this point.

Ask the question again.

BY MR. BULLOCK:

Q. Mr. Klingenstein, did you participate in responding to any of the discovery requests which were propounded to the Plaintiff?

(Pause.)

A. Yes.

Q. All right. Have you read the actual discovery responses which the United States filed in this case?

MR. JACOBS: Objection, Your Honor. There have been numerous responses. If counsel could possibly pinpoint one or two for the witness so the record is accurate...

MR. BULLOCK: Sure. I'll be glad to.

BY MR. BULLOCK:

Q. Either the United States' responses to Avatar Holdings' second set of interrogatories, or responses to Florida Cities' interrogatories.

A. I believe I may have read portions of one or both, but

Page 45

I could not tell you specifically.
Q. Okay. Isn't it true that in the United States' responses to the Defendant Avatar Holdings' second set of interrogatories and in response to the Defendant Florida Cities' interrogatories, the United States has stated that --
MR. BULLOCK: Your Honor, may I withdraw that?
THE COURT: Yes, sir.
MR. BULLOCK: Just a moment, please, Your Honor.
(Pause.)
MR. BULLOCK: Let me withdraw that question, Your Honor, and ask it in a different way.
BY MR. BULLOCK:
Q. Isn't it true that in responses to Avatar Holdings' second set of interrogatories, the United States responded that it was aware of only potential and not actual harm or damage?
MR. JACOBS: Could I ask that the witness be shown the document before he responds?
THE COURT: I think that's fair.
MR. BULLOCK: This would be Avatar Holdings' Trial Exhibit Number 8.
MR. HIRD: Your Honor, I believe there's an exhibit book for the witness that we can provide for our exhibits so that we don't need to take it out of the binder.

Page 46

THE COURT: All right. That's one binder?
MR. HIRD: Yes. We have one binder.
THE COURT: All right. Here it is.
What number is that?
MR. BULLOCK: Number 8.
MR. JACOBS: Your Honor, I might assist in moving things along. The Government has, indeed, stipulated that we do not have evidence of actual environmental harm. The theory of our case is that there is the potential for environmental harm, and that was the substance of the testimony yesterday, if that's helpful to...
THE COURT: All right. Well, if that's helpful, fine.
MR. BULLOCK: I'll accept that stipulation and move on, Your Honor.
THE COURT: Okay.
BY MR. BULLOCK:
Q. Let me refer you to Page 1 of your report, the first paragraph under Section 2, Background, the last sentence where you said, By requiring receipt of a permit prior to discharge, the NPDES system allows EPA to determine whether a receiving water has the capacity to assimilate a pollutant discharge and, if so, at what particular point in the water body and for what quantities of particular pollutants. Is that correct?

Page 47

A. Yes, that's the word.
Q. All right. And the other point is, it allows EPA to know exactly what dischargers are in the various waters of the United States and what the substance of their discharge is?
A. That's the intent of the system, yes.
Q. Okay. Between January 1987 and November '89, isn't it true that the Waterway Estates facility remained within the EPA regulatory framework?
MR. JACOBS: Objection; vague.
THE COURT: What was your objection? Objection what?
MR. JACOBS: Vagueness, Your Honor.
THE WITNESS: In what sense, sir?
THE COURT: Wait.
You said "date"?
MR. BULLOCK: No, Your Honor. My question --
THE COURT: I'm sorry, I didn't understand what the -- you said objection what?
MR. JACOBS: On the grounds of vagueness, Your Honor. The question is vague and ambiguous.
THE COURT: Oh, vague, vague. I'm sorry, I didn't understand that. I thought you said "date." Vague.
All right. What was the question, please?
MR. BULLOCK: Your Honor, the question was,

Page 48

between January 1987 and November of '89, wasn't the Waterway Estates facility still within the regulatory framework of the EPA, of the NPDES system?
THE COURT: I'll overrule the objection.
Can you answer that?
THE WITNESS: My response would be, in what sense, sir?
BY MR. BULLOCK:
Q. Well, every month they sent in a discharge monitoring report, didn't they?
A. That's my belief.
Q. All right. And the facility was under an administrative order or a series of administrative orders issued by EPA, isn't that correct?
A. Yes.
Q. All right. So, every month EPA knew what was being discharged into the Caloosahatchee River, didn't it?
MR. JACOBS: During what period of time?
THE COURT: All right. Can you be more specific?
BY MR. BULLOCK:
Q. Between January '87 and November '89.
A. I can't speak for EPA's knowledge.
Q. Well, you said you believed they received discharge monitoring reports, isn't that correct?
(Pause.)

Page 49

A. That – I'll correct myself. I'm not sure.
Q. Okay. In general, a discharge monitoring report is the method by which EPA learns what a discharger is actually discharging through its effluent, correct?
A. Yes, that's correct.
Q. All right. So, if the evidence demonstrates that Florida Cities continued to submit discharge monitoring reports to EPA during the period of time from January '87 through November of '89, you would agree that EPA knew what was being discharged and the effluent?
MR. JACOBS: Your Honor, compound; calls for speculation. The witness has said he doesn't know whether the DMR's were submitted during that period. He testified yesterday that he reviewed the ones where violations were indicated, but he hasn't testified that he's reviewed all of the DMR's so –
THE COURT: Well, he's asking him in a sense a hypothetical. This is an expert witness. I'm going to allow him that latitude. I'll overrule the objection.
Do you remember the question?
THE WITNESS: If you could repeat it, please?
BY MR. BULLOCK:
Q. Certainly.
Assuming with me that the evidence indicates that Florida Cities submitted discharge monitoring reports to EPA

Page 50

Region 4 between January 1987 and November 1989, EPA would have been aware of the substances reported as being discharged in the effluent, correct?
A. Again, if such reports were submitted, EPA would have received them. I can't speak for who within EPA would have been aware of that information.
Q. Okay. Who normally receives discharge monitoring reports, Mr. Klingenstein; what branch of the EPA?
A. Typically, the compliance branch.
Q. Okay. And so here, the compliance branch of EPA Region 4 would have received any discharge monitoring reports sent by Florida Cities, correct?
A. I would have assumed, but I can't speak for Region 4's compliance branch.
Q. Have you ever interviewed anyone in EPA Region 4's compliance branch regarding this lawsuit?
MR. JACOBS: Asked and answered, Your Honor.
THE COURT: Overruled. Go ahead.
THE WITNESS: My only recollection of specific discussions with regard to this case has been with Mr. Kwan and Ms. Fitz-Henley.
BY MR. BULLOCK:
Q. Mr. Kwan works for which branch?
A. I believe he's in enforcement.
Q. All right. And is enforcement different than

Page 51

compliance in Region 4?
A. I can't speak to Region 4's exact organization.
Q. And Ms. Fitz-Henley is one of the legal counsel for EPA Region 4?
A. Yes.
Q. All right. It was within EPA's power to shorten the period of time that Florida Cities was discharging secondarily treated effluent, was it not?
MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.
THE COURT: Read the question back, Mr. Miracle.
(Record read back.)
THE COURT: Overruled.
THE WITNESS: I can't speak for EPA's particular control of that situation.
BY MR. BULLOCK:
Q. They had the authority to grant administrative orders and permits, didn't they?
A. Yes.
Q. And in the administrative orders, at some point in time they could have said, You will cease secondary discharge, correct?
MR. JACOBS: Same objection, Your Honor.
THE COURT: Overruled.
THE WITNESS: That would be my expectation that

Page 52

they could.
BY MR. BULLOCK:
Q. Have you reviewed the administrative orders relevant to Waterway Estates between 1987 and 1991?
A. I have looked at those orders.
Q. All right. In fact, those orders authorize discharge at secondary levels until October 1, 1991, or until the outfall was moved, isn't that correct?
MR. JACOBS: Objection, Your Honor. If he's going to be asked to discuss the administrative orders, first of all, I would ask that they be presented.
Secondly, I take strong issue to the word "authorize." That word does not appear in the administrative orders, and I'll object on the grounds that the question therefore calls for a legal conclusion.
MR. BULLOCK: Your Honor, I'll withdraw that and rephrase it.
BY MR. BULLOCK:
Q. Let me first refer you to Defendant's 28. Let me then refer you to Page 3 of Exhibit 28, Page 3 of the actual administrative order.
Paragraph 2 states --
THE COURT: Have you reviewed this order?
THE WITNESS: Yes, I have, sir.
THE COURT: Okay. Go ahead.

Page 53

BY MR. BULLOCK:
Q. Paragraph 2 states that this should be in no way considered a permit to discharge. However, if the Respondent does discharge to the waters of the United States in violations of the Act, the Respondent's discharge of treated wastewater shall at least comply with the effluent limitations monitoring schedule and other requirements contained in its previous permit.
Is that an accurate depiction of the document?
MR. JACOBS: I'm sorry. It's incomplete.
Paragraph 2 starts with, This should in no way be considered a permit to discharge. However...
MR. BULLOCK: I believe I read that, Your Honor.
THE COURT: I don't recall whether you did or not.
BY MR. BULLOCK:
Q. The point of my question, Mr. Klingenstein, is, EPA didn't have to state that the Respondent should at least comply with secondary discharge if it continued to discharge, did it?
(Pause.)
A. Could you repeat the question, counsel?
THE COURT: Do you want it read back, or do you want to repeat it?
MR. BULLOCK: I'll repeat it, Your Honor.
BY MR. BULLOCK:

Page 54

Q. EPA did not have to include this provision which stated that the facility should at least continue -- if it was going to discharge, should at least continue to comply with the effluent limitations monitoring schedules and other requirements of its previous permit?
A. Well, without offering a legal opinion as to whether this has to be included, I think EPA included this to specifically make the point that this does not operate as a permit.
Q. My question was, they didn't have to put the language in there about secondary treatment, correct?
A. When you say "secondary treatment," with regard to its previous permit?
Q. Correct.
You're familiar with the previous permits, are you not?
A. I have reviewed its permit.
Q. All right. Those are secondary treatment permits, are they not?
A. As I recall.
Q. All right. Let me refer you to Defendant Florida Cities' 195.
MR. BULLOCK: Your Honor, while he's doing that, I would move Exhibit 28 into evidence.
THE COURT: It will be received.

Page 55

BY MR. BULLOCK:
Q. Mr. Klingenstein, have you reviewed Exhibit 195 previously?
A. Yes, I have.
Q. All right. Let me refer you to Page 4 of the administrative order itself, Paragraph 2. Paragraph 2 contains the same language that was found in the previous exhibit, isn't that correct?
A. Yes, that is.
Q. All right. And, again, you have been involved in a number of EPA enforcement actions, correct?
A. Yes, I have.
Q. All right. EPA could have directed the company to shut down and cease secondary discharge, couldn't it?
MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.
THE COURT: I'll permit him to answer it if he can. Overruled.
THE WITNESS: EPA could have directed them to do such a thing.
BY MR. BULLOCK:
Q. Exhibit 195 also contains a construction schedule, does it not?
A. Yes, it does.
Q. And this was a construction schedule to construct an

Page 56

AWT, or an advanced wastewater treatment facility, correct?
A. And to relocate the outfall.
Q. And to relocate the outfall, isn't that correct?
A. Yes, it is.
Q. All right. So, at the time EPA issued this order, isn't it correct that EPA knew that the facility was continuing to discharge secondarily treated effluent?
A. Yes.
Q. And you have reviewed discharge monitoring reports between 1989 and 1991, have you not?
A. Yes, I have.
Q. All right. And those discharge monitoring reports came out of the files of EPA Region 4?
A. Yes.
Q. So, it's clear in your mind that EPA Region 4 was informed as to the character and the constituents of the effluent?
A. Yes.
Q. EPA did not require the advanced wastewater treatment plant to be completed under the schedule in this administrative order until September of 1991, isn't that correct?
A. I believe the date of compliance shown is October 1.
Q. October 1.
If EPA had thought that there was a serious risk of

Page 57

environmental harm from continued secondary discharge between 1989 and 1991, it was within their authority to shorten this construction schedule?
A. I cannot speak to the process that generated this construction schedule.
Q. Okay. The State of Florida actually has in a sense the front line on developing water quality standards, is that correct?
A. Within the State of Florida.
Q. Yes. And we're talking in this case only about the State of Florida, correct?
A. Yes.
Q. The State of Florida continued to authorize this, to continue secondary discharge, until September of 1992, isn't that correct?
A. I believe that's correct.
Q. All right. If the State of Florida had had serious concerns about continued discharge of secondarily treated effluent, they could have ordered the cessation prior to September of 1992, isn't that correct?
A. Again, not being able to speak for the State of Florida, but I would expect they would have had the ability under their State permitting system.
Q. Okay. Does EPA independently establish water quality standards for the State of Florida?

Page 58

(Pause.)
A. Not that I'm aware of.
Q. Okay. So, if it's done through EPA at all, it's done in conjunction with the State of Florida?
A. That's my understanding.
Q. All right. Let me ask you to assume with me that before May of 1986, there was no requirement to cease discharge of secondarily treated effluent into the canal adjacent to the Caloosahatchee River.
Under that scenario, isn't it true that Florida Cities had no technically available option to cease discharge by January of 1987?
A. I'm sorry. Your start date was --
Q. -- was May of '86.
A. If, in fact, their first notice of needing to cease discharge was May of 1986, it would have been very difficult to cease discharge by January of 1987.
Q. What technically feasible options would have been available?
A. Probably the most technically feasible would have been to connect to another authority.
Q. And was there another authority available between May of 1986 and January of 1987?
A. Not that I'm aware of.
Q. All right.

Page 59

MR. BULLOCK: Your Honor, at this time I would also move Defendant's 195 into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Do you know whether or not EPA ever challenged Florida's granting of the Waterway Estates permits in 1981, 1983 or 1988?
A. I'm not aware of whether such a challenge took place.
Q. All right. In fact, if there was no technically feasible alternative to discharge available to Florida Cities in January of '87, isn't it true that they could not cease discharging?
A. It would have been basically impractical.
Q. As a matter of fact, it would have been a public health hazard, wouldn't it?
A. Unless some alternate means of disposal was provided.
Q. Okay. We're assuming that -- first of all, you haven't identified an alternative that was available during that period of time, isn't that correct?
A. I have identified alternatives that were available during that period of time. The question I believe you had asked, sir, was whether if, in fact, their first notice took place in mid 1986, whether that alternative could have been implemented by January 1987.
Q. That's correct.

Page 60

A. That's a different question.
Q. And the answer to that question was no, it couldn't?
A. Would be difficult.
Q. All right. You have not been able to identify any alternative that, in fact, was available under the scenario that I proposed to you in January of '87?
A. The other possibility would have potentially been if a spray irrigation site could have been identified, an agreement made and wastewater transported to that spray irrigation site.
Q. Again, you have not identified any area where, in fact, that could have occurred between May of '86, January of '87, correct?
A. I have not seen documentation that would show me such an option existed within that six-month period that would have -- that could have been implemented within that six-month period.
Q. All right. Florida Cities operates Waterway Estate under a franchise agreement with Lee County, isn't that correct?
A. I believe that's correct, yes.
Q. Florida Cities provides wastewater treatment pursuant to permission from the Florida Public Service Commission, isn't that correct?
A. Yes, that is correct.

Page 61

Q. Well, to have ceased to provide treatment in January of 1987 would have been a violation of its franchise and its agreements with the Public Service Commission, isn't that correct?
A. I have not reviewed those agreements in detail, so I couldn't speak to that.
Q. All right. And isn't it true that ceasing to discharge with no viable alternative would have -- in January of '87, under the scenario that I have given you, would have created a public health hazard?
A. Again, without an alternative form of handling the wastewater, in effect, to shut the plant off, yes.
Q. Okay. I believe you testified that you had access to all of the materials which Florida Cities produced through discovery?
MR. JACOBS: Objection to the extent that the question mischaracterizes the witness' previous testimony. He said all of the documents, which there are hundreds of thousands of --
THE COURT: All right. Well, rephrase the question.
MR. BULLOCK: I'll withdraw it.
BY MR. BULLOCK:
Q. Were you given free rein to look at whatever discovery materials were in the possession of the Plaintiff which had

Page 62

been produced by Florida Cities?
A. No, I was not given free rein.
Q. Were you not allowed to look at some material?
A. Materials were sent to me for review.
Q. Okay. And is that the normal method that you as an expert witness use is you rely on someone else's judgment as to what you need to review to generate your opinion?
MR. JACOBS: Objection to the extent that this particular witness -- he's not asking this particular witness what he did; he's asking about expert witnesses in general, common procedures, and I don't know that this witness is qualified to answer that.
THE COURT: Well, I don't know. I think he can examine him concerning his customary mode of operation in playing a role in the determination of what documentation he may need, so I think that falls basically within proper cross.
MR. JACOBS: I understood the question to refer to expert witness testimony in general, not particular -- not this particular witness. I have no problem with examination regarding this particular witness' mode of operation.
THE COURT: Yes, I think we need to limit it to his --
MR. BULLOCK: Yes, Your Honor, and I intended it to be limited that way.

Page 63

THE COURT: Okay.
BY MR. BULLOCK:
Q. Is it normal for someone else to select what you review when you're rendering an expert opinion?
A. To the extent that in many of the cases we work on, files and documents for our review are provided to us rather than us going into and myself going into either EPA or State offices and, in effect, going through the State or the EPA files to look for materials.
Likewise, we rarely receive discovery materials directly as part of our support on a case. So, I would say no, having -- being sent materials is fairly common.
Q. Did you ask to see any other materials other than what was provided to you?
A. Certainly at various points in times, conversations took place where I -- where we asked whether certain materials were available, I'm sure.
Q. All right. Do you remember what additional information was forwarded to you?
A. No.
Q. Okay. Who selected the information that was sent to you?
A. I couldn't specifically say.
Q. Okay. Who signed the cover letter that came to you?
A. A certain amount of material was received from

Page 64

Mr. Jacobs; certain material was received from Mr. Kwan.
Q. Anybody else?
A. I'm trying to recall. I believe some of the materials that I received were signed by Mr. Bartlett.
Q. By Mr. --
A. -- Byron Bartlett. I believe that was materials received from the County.
Q. All right. Who did you have phone conversations with about whether or not other information existed?
A. Probably Mr. Jacobs and Mr. Kwan.
Q. Did you review the Environmental Sciences and Engineering August 1987 report to Florida Cities?
A. That would have been the preliminary engineering report?
Q. Correct.
A. Yes.
Q. Okay. The ESE report examined various options, isn't that true?
A. Yes, that is true.
Q. And these were options regarding how -- what would -- how the Waterway Estates effluent would be disposed of, isn't that correct?
A. Yes.
Q. All right. Let me refer you to the report which is Florida Cities' Trial Exhibit 194.

Page 65

Let me first ask you, this is the report we've referred to a few minutes ago?
A. Yes, this appears to be it.
Q. And you reviewed this in preparation of providing your opinion on behalf of the Plaintiff?
A. Yes.
Q. All right.
MR. BULLOCK: Your Honor, I would move that Florida Cities' 194 be moved into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Let me first discuss the issue of spray fields and/or percolation ponds.
First of all, the Waterway Estates facility is in a residential district, is it not?
A. Yes, it is.
Q. Do you have any opinion about how large a percolation pond, or ponds, would have been required to handle the Waterway Estates effluent?
A. Without seeing specific percolation tests for the area, in other words, for the soil characteristics of the area, I couldn't give you an estimate.
Q. Have you performed any tests yourself?
A. No.
Q. You are not, by background, a hydrogeologist, are you?

Page 66

A. No, I'm not.
Q. And you have no particular experience with the hydrogeology in Florida, do you?
A. No.
Q. Now, let me refer you to Page 6.6 of the exhibit, the ESE report.
MR. BULLOCK: Your Honor, the page numbers are in the upper right-hand corner.
Your Honor, can I hand this to the Clerk? I didn't know if you wanted her to have a copy of it or not.
THE COURT: Yes.
MR. BULLOCK: Okay.
I just handed a copy of the report to his Law Clerk.
MR. JACOBS: It's an additional copy of the same --
MR. BULLOCK: Of the ESE report. It's the same exhibit.
THE COURT: So that you won't think that there is some impropriety here, I asked a few minutes ago for retrieval of a duplicate copy of a report so that my Law Clerk could follow along, Ms. Lasso, and that's what he was offering to do.
So, if you have an extra copy, if we're going to spend any time on a document, I would appreciate it, if

Page 67

there is a spare document that is convenient, or if there are duplicates, Plaintiff's and Defendant's, then you can go ahead and tender another copy so we can follow along -- so she can follow along as well.
MR. BULLOCK: And I saw that, Your Honor; that's why I went ahead --
THE COURT: I understand.
Apparently Mr. Jacobs didn't understand that.
MR. JACOBS: No, I didn't understand.
THE COURT: I wanted to make sure that there was no suggestion of any impropriety there.
MR. JACOBS: I didn't think there was, Your Honor; I just wanted to know what was going on.
THE COURT: Right.
MR. JACOBS: Thanks.
BY MR. BULLOCK:
Q. Referring again to Page 6.6, ESE did calculations for the size, number and configuration of percolation ponds that would be necessary at Waterway Estates, isn't that correct?
A. Yes, that is correct.
Q. Okay. And the pond system required, according to ESE's calculations, 140 acres, isn't that correct?
A. Yes.
Q. And as you said a minute ago, you haven't performed any alternative calculations, isn't that correct?

Page 68

A. Yes, that is correct.
Q. All right. You testified that Florida Cities could have -- excuse me.
Your report on Page 21 states that Florida Cities could have constructed adequately-sized percolation ponds to handle the Waterway Estates flow.
Is that a correct reading of page -- that portion of Page 21?
A. Yes, that's a correct reading.
Q. All right. Isn't it true that ESE found that there was not adequate acreage available for the Waterway Estates facility to build percolation ponds?
A. Well, ESE found that there was not adequate acreage, as the report describes, within the service area. So, my interpretation of the report was that the limits of the investigation was, in fact, the Waterway Estates service area itself, and not the areas surrounding the service area.
So, not finding myself limited to that particular area, I did not see a reason to believe that there was not the possibility of an area outside that immediate service area for construction.
Q. But you didn't investigate to determine where that land might be, did you?
A. I did not carry out an investigation to specifically identify what pieces of property might have been available

Page 69

at that point in time.
Q. Okay. Do you know what the closest piece of property that might have been available at that time was?
A. No, I do not.
Q. So, you don't have any idea about how far away from the plant these ponds would have been?
A. No, because, again, Florida Cities and its consultants didn't apparently carry out such an investigation, or at least I have not seen documents to that effect, so no, I did not have that information available.
Q. All right. Are you aware of whether or not there are any Lee County ordinances that would be relevant to percolation ponds in a residential district?
A. I'm not specifically aware of what Lee County's ordinances are in that regard, no.
Q. All right. Are you aware of any FDER regulations regarding perc ponds in a residential district?
A. Excuse me. To the extent that there are certain requirements to protect the public as far as buffer zones and that sort of thing.
Q. Okay. Do you know how large the buffer zone would have to be?
A. It would depend on the size of the pond and the characteristics of the wastewater, I believe, put into it; but I couldn't tell you exactly what buffer zone would be

Page 70

required.
Q. You stated that permitting should not have been overly burdensome. I believe you just testified a minute ago that you're not aware of what the Lee County requirements would have been to permit this facility, are you?
A. Not specifically, but that was my belief.
Q. Okay. So, you really don't have any basis for your opinion that permitting this facility would or would not be burdensome, isn't that correct?
A. That was based only on the understanding of fairly widespread use of ponds in Florida, and those ponds being located in -- or in relatively close proximity to residential areas.
Q. But as to this particular permitting, you don't have any basis for this statement?
A. Other than that just stated.
Q. Aren't most percolation ponds right on the site of a treatment facility?
A. I couldn't speak for "most percolation ponds." Those I have seen have been.
Q. In your general experience, they have been?
A. Yes, in my experience.
Q. And how far away from a plant is it practical to have a percolation pond?
(Pause.)

Page 71

A. Depending on the characteristics of the terrain, a pond could be located quite some distance, since the terrain would tend to influence pumping costs.
In an area such as Florida where, in fact, the land is quite flat, I wouldn't see any reason that such a pond couldn't be located a number of miles away.
Q. That would require construction of a forced main between the plant and the pond?
A. Yes.
Q. All right. And you would have to construct a forced main at Waterway Estates through a residential neighborhood, wouldn't you?
A. Yes.
Q. Which would require other permits, would it not?
A. Yes.
Q. You have no opinion as to how much building perc ponds at Waterway Estates during this period of time would have cost, do you?
A. I have not carried out such a detailed estimate, no.
Q. You indicated that Florida Cities, in your words, on Page 21 appeared to have readily identified two golf courses capable of accepting AWT treatment effluent. And, again, that's in the second bullet point on Page 21.
A. Yes, I see that.
MR. BULLOCK: Your Honor, we have another copy of

Page 72

this report. I don't know if we should hand one up for your Clerk or --
THE COURT: That would be helpful.
You're talking about this witness' report, Mr. Klingenstein's report?
MR. HIRD: Your Honor, the copy that's being handed up is mine, and I would hope that -- and the tabs are tabs that I have put on it, so I hope that I could retrieve it for my cross.
THE COURT: Yes, sir. Certainly.
MR. JACOBS: Your Honor, if Mr. Hird needs his -- all the originals are in a box, I believe, at the hands of the Deputy Clerk, or thereabouts, and if the Law Clerk wants to make reference to those, we'll be happy to fetch them.
MR. HIRD: I have no problem with her using it now, Your Honor. It's just when I do my cross, I will need it.
THE COURT: Okay. Thank you.
Ignore the stickies, Maria.
THE LAW CLERK: Okay.
MR. BULLOCK: That would be better than trying to read my handwriting, Your Honor.
MR. JACOBS: No objection to the stickies, Your Honor.
THE COURT: Okay.

Page 73

BY MR. BULLOCK:
Q. Let me refer you in the next series of questions to Page 6.5 of the ESE study.
First of all, in order to discharge treated effluent onto a golf course, wouldn't Florida Cities have had to build an AWT upgrade at Waterway Estates anyway?
A. Yes.
Q. Now, ESE identifies on Page 6.5 two golf courses: El Rio, which is a 30-acre golf course, and Lochmore, which is an 18-hole track of 93 acres, is that correct?
A. Yes.
Q. All right. ESE goes on to note in the middle of the page, the last sentence of that middle paragraph, During dry weather, the golf courses apply approximately 200,000 gallons a day on Lochmore and 50,000 gallons a day on El Rio. Isn't that correct?
A. Yes, that is.
Q. All right. Do you have any opinion about how much they apply when it rains?
A. They would apply less.
Q. As a matter of fact, they may not apply anything at all on rainy days, isn't that correct?
A. That's entirely possible.
Q. Now, the minimum area of land needed to handle the Waterway Estates plant, according to ESE, was 220 acres,

Page 74

which includes 180 acres of wet area, five acres of storage, and a 35-acre buffer zone, isn't that correct?
A. Yes.
Q. The golf courses together only add up to 123 acres, if my math is right?
A. Yes, that's correct.
Q. All right. And that is approximately a hundred acres less than the land that was actually needed, isn't that correct?
A. Yes, that is.
Q. All right. And that would not have allowed discharge every day particularly during wet weather, isn't that correct?
A. That is correct.
Q. All right. So, these two golf courses together would have been inadequate to handle spray irrigation from Waterway Estates, isn't that correct?
A. Yes, that is correct.
Q. All right. The other area identified was identified as a 159-acre tract owned by Gerald and Mary Moody, isn't that correct?
A. Yes.
Q. And isn't it true that ESE approached the Moody family about selling this land?
A. That's the characterization of the report.

Page 75

Q. And isn't it true that the Moodys were not interested in purchasing that land?
MR. JACOBS: Objection. The witness can testify from the report, but he can't testify as to facts about whether ESE approached the Moody family. He has no basis.
THE COURT: Well, I don't know whether he does or not. He may have talked to those people and may have formed the basis of his report. If he hadn't, he can testify.
MR. BULLOCK: I'll withdraw the question, Your Honor, and ask it again.
THE COURT: All right.
BY MR. BULLOCK:
Q. Mr. Klingenstein, did you ever talk to the Moody family?
A. No, I did not.
Q. All right. And does the report indicate that ESE talked to the Moody family?
A. The report indicates that Florida Cities talked to the Moody family.
Q. Okay. And does the report indicate whether or not the Moody family was interested in selling the property?
A. It indicates -- would indicate that they were not.
Q. Okay. 159 acres would have been inadequate to handle the discharge from Waterway Estates, wouldn't it?
A. It would appear to have been, yes.

Page 76

Q. All right. Because even during extremely dry weather, 159 acres was below the minimum of 220, correct?
A. Yes.
Q. And it would have been even less effective during wet weather?
THE COURT: Is that correct?
THE WITNESS: Yes, that would be correct.
THE COURT: You need to put your questions in the form of questions.
MR. BULLOCK: Yes, sir.
THE COURT: Let's take a ten-minute recess.
(A recess was taken.)

MR. HIRD: Your Honor.
THE COURT: Yes, sir.
MR. HIRD: Before Mr. Bullock resumes, Avatar Holdings would designate as its corporate representative Mr. Leon Levy. When he comes in the Courtroom, I will identify him. He should be in some time today.
THE COURT: Very well. Thank you.
All right, Mr. Bullock.
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Going back to page 6.5 of the ESE study, you stated that Florida Cities never seriously pursued spray irrigation as an option on page 21 of your report.
Isn't it true that the ESE report presented sufficient information for Florida Cities to have determined that spray irrigation was not a viable option for the Waterway Estates Facility?
A. Based on my review of the report, I did not glean sufficient information to ascertain that other sites were not available, particularly those outside of the Waterway Estates service area, and that if such sites were available, whether or not they would be practical to use.
Q. Okay.
So you didn't do any research on that yourself either?
A. Not as to what was available at that point in time, no.

Q. All right.
Nor did you do any research or calculation about how much it would have cost to move the effluent from outside of the service area on a spray field or golf course; you don't have any opinion about that, do you?
A. Well, that would depend. Such cost would depend on the particular location of the site identified, so without specific sites being identified, it would not be practical to carry out such an evaluation.
Q. Okay.
I believe I may have asked this earlier, let me ask specifically, the next topic we want to discuss about is do deep well injection -- have you ever attempted to permit a deep well in the State of Florida?
A. No, I've not.
Q. Have you undertaken any research about the hydrology in the Lee County area as to its suitability for deep wells?
A. To the extent that I have had conversations with FDER personnel with regard to -- with regard to that possibility.
Q. Can a deep well be used as a primary disposal of treated effluent?
A. I believe reuse, surface reuse is also typically required.
Q. If -- all right.
Is deep well -- if you have a deep well as a primary

source of discharge, do you have to have an additional deep well as a backup in Florida?
A. I don't believe that specifically a second deep well has to be installed.
Q. All right.
Let me refer you to page 6.7 and the word "underground injection." Would you read the heading, first two sentences, please.
A. Underground injection at the WTP requires two, one, parentheses, one MGD capacity class one effluent disposal wells. The second injection well will serve as a backup as required by the FDER.
Q. This paragraph goes on to say that FDER is presently favorable toward deep wells, correct?
A. Yes, it does.
Q. All right.
This paragraph goes on to say that the public opinion in North Fort Myers would likely be strongly opposed to deep wells, does it not?
A. That is the report's characterization.
Q. All right.
The report also characterizes the South Florida Water Management District as being somewhat concerned about the proliferation of deep wells in this area of Florida, isn't that correct?

A. That is the report's characterization.
Q. And this concern is characterized because the South Florida Water Management District was concerned about, that the water injected in the deep wells is basically a non-recoverable resource, correct?
A. Yes.
Q. All right.
What is the South Florida Water Management District?
A. It is one of the local water management districts within Florida.
Q. And can you tell me what regulatory authority it has?
A. I believe such authority is as granted to it by the State.
Q. Have you reviewed in fact what regulatory authority is granted to the water management districts?
A. I know I'm not fully aware of all of its regulatory authority.
Q. All right.
And you indicated that reuse was a requirement when deep wells were involved, is that correct?
A. I believe some form of backup or some form of firm disposal is a requirement.
Q. Okay.
And that would be in case the deep well failed?
A. I believe so.

Q. All right.
And who would have required the reuse?
A. I would believe it would be likely the water management district.
Q. All right.
And the reuse would have required sufficient backup to handle the capacity of the plant?
A. Yes.
Q. And ESE has already identified that according to their report -- let me start over again.
Isn't it true ESE was unable to find any suitable discharge for surface water or, in this instance, for spray such as spray fields, golf courses, et cetera?
MR. JACOBS: Objection, it's one thing again to ask him to testify about the report, but when he gets into exactly the underlying investigation that ESE or ESE might not have done, I believe it's beyond the scope of this witness' expert testimony.
THE COURT: Well, I'll overrule the objection. If he doesn't know, he doesn't know.
THE WITNESS: Not having a contact with ESE with regard to what investigations they might have carried out, I would say only given the limitations that are of the investigation.
BY MR. BULLOCK:

Q. Isn't it true in their report that their report states they were unable to find adequate spray irrigation pockets?
A. I believe the way the report characterizes it, these were the particular locations that were identified within the service area.
Q. The facts indicated that that area was inadequate for the discharge of the capacity of the plant, isn't that correct?
A. That those sites that were identified were inadequate, yes.
Q. Okay.
You also -- strike that.
Isn't it true, Mr. Klingenstein, there was no State requirement to upgrade Waterway Estates to an advanced wastewater treatment plant until 1988?
A. I believe there was a State requirement for them to upgrade the plant by 1988.
Q. And where do you find that requirement?
A. I believe there may have been a requirement in the previous permit.
Q. Which permit would that have been?
A. I couldn't say for certain.
Q. You have reviewed the 1981 State permit, have you not?
A. I'm sorry.
Q. Earlier to this morning, we reviewed the 1981 FDER permit for Waterway Estates, correct?

A. Yes, we did.
Q. And we reviewed the 1983 permit for Waterway Estates issued by FDER, correct?
A. Yes, we did.
Q. Let me refer you to Trial Exhibit 33 which is the 1983 permit which we've already looked at before. I'm sorry, I told you the wrong number.
Let me refer you to Exhibit 20 which is the 1983 permit. You have Exhibit 20 in front of you?
A. Hold on.
Q. Florida Cities Exhibit 20?
A. Hold on for a minute.
Q. Would you take a minute and identify for me where in the 1983 permit there is a requirement for Waterway Estates to upgrade to advanced wastewater treatment.
A. No, there's no requirement.
Q. Let me show you -- let me ask you to look at Exhibit 17 which was the 1981 permit, and ask you whether or not you can find a requirement in the '81 permit to upgrade AWT?
A. No, there was no requirement.
Q. Let me refer you then -- strike that.
First, isn't it true then there was no requirement before 1988 from the State of Florida for the Waterway Estates Plant to be upgraded to advanced wastewater treatment?
A. I can't answer that from memory.

Q. All right.
Let me refer you to Exhibit 33 which is the 1988 State permit. Let me refer you to actually the second page of the exhibit, it's entitled page 1 of 6. This is the first permit -- excuse me -- isn't this the first permit that requires an upgrade to advanced wastewater treatment?
A. This permit does require upgrade to advanced wastewater treatment.
MR. BULLOCK: We would move Defendants' 33 in evidence.
THE COURT: It'll be received.
BY MR. BULLOCK:
Q. Let me also refer you to Defendant Florida Cities' 51. Can you identify Exhibit 51?
A. Yes, this is -- this is covered by cover letter October 30, 1990, and it is apparently an extension of the Waterway Estates permit.
Q. And this extension grants an extension, isn't it true, this extension grants an extension of the construction of AWT until September 1, 1992?
A. The permit was extended until September 1, 1992.
MR. HIRD: The corporate representative of Avatar Holdings, Mr. Leon Levy, is now present.
THE COURT: Yes, sir.
BY MR. BULLOCK:

Q. Now, are you aware of any other permits issued by the State of Florida to Waterway Estates between 1983 and 1988?

THE COURT: Would you ask that question again, please.

BY MR. BULLOCK:

Q. All right.

Sir, we have looked at the permits, Mr. Klingenstein, 1981, 1983, 1988 and 1990. Are you aware of any other permits between 1980 and 1990 from the State of Florida to the Waterway Estates Facility?

A. Not that I'm aware of.

Q. All right.

MR. BULLOCK: Your Honor, we would move that Florida Cities' 51 be admitted in evidence.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Isn't it true, Mr. Klingenstein, that you're unaware of any other requirement of the State of Florida to upgrade the Waterway Estates Treatment Plant, AWT, other than the 1988 and 1990 permits?

A. Trying to refresh my memory as to whether there was another State requirement; perhaps under an order to have this take place by the end of the term of the permit which expired in 1988.

Q. But in fact, you don't remember whether or not that

existed or not as you sit here today, do you?

A. At this moment, I do not recall.

Q. Let me refer to what has already been admitted in evidence as Florida Cities' Exhibit 195. Let me refer you to page three of the administrative order.

Isn't it true that paragraph one on page 3 of this exhibit contains a construction schedule for the construction of an advanced wastewater treatment plant at Waterway Estates?

A. Yes, it does.

Q. All right.

Are you aware of any earlier requirement other than this administrative order from EPA which required the construction of an AWT facility at Waterway Estates?

A. Not that I'm aware of.

Q. On page 21 of your report, you have stated that Florida Cities could have avoided discharge to an unpermitted location by extending the outfall in a timely manner; that would be the bottom paragraph.

A. Yes, that's correct.

Q. All right.

Isn't it true that Exhibit 195 contained the first requirement from EPA to Florida Cities to move the outfall at Waterway Estates?

A. Florida Cities' first notification of the need to address their situation would have come, in my mind, when the Cape

Coral Facility became non-reality and they should have recognized the need to have addressed their situation and put in place measures to have allowed them to discharge at the proper location.

MR. BULLOCK: Your Honor, I move to strike as non-responsive.

THE COURT: Ask the question again.

BY MR. BULLOCK:

Q. Isn't it true that the first requirement from the Environmental Protection Agency to Florida Cities to move the outfall of the Waterway Estates Plant occurred in Exhibit 195?

THE COURT: I'll grant your request and strike the answer.

THE WITNESS: Certainly with regard to notification from EPA, in my mind, the tentative denial of the permit and the basis for that denial should have put Florida Cities on notice that they had need to take action and, in fact, correspondence indicates such that Florida Cities was aware at that point to the need to take such action.

MR. BULLOCK: I would also move to strike, too, there is no requirement in the 1986 permit denial.

THE COURT: I'll let it stand for what it's worth.

BY MR. BULLOCK:

Q. Okay.

Did any of the earlier administrative orders issued by

EPA in 1987 and 1988 order Florida Cities to move the outfall?

A. I would need to refresh my memory by looking at those orders.

Q. As you sit here today, though, you can't remember whether or not they did or not.

A. As I said, I need to see those orders to refresh my memory.

Q. Let me refer you to Florida Cities' Exhibit 23. Could you identify Exhibit 23?

A. This is a letter dated June 30, 1986. It is to Mr. Patrick Layman and it's from Ms. Connie Kagey and it is a letter that is entitled NPDES Permit Denial, Waterway Estates, NPDES Permit Number.

Q. Can you identify where in this document there is the language that directs Florida Cities to move its outfall?

A. There is not language specifically requiring Florida Cities to move its outfall.

Q. So my question which we go back to is, isn't it true that the September 26th administrative order, September 26, 1989 administrative order, which is 89-109, is the first requirement from the Environmental Protection Agency for Florida Cities to move the outfall; yes or no?

MR. JACOBS: Again, Your Honor, I'd ask that the witness be permitted to look at all the administrative orders and not skip over some.

THE COURT: Well, if he needs to, if he has to do so, then I'll permit him to do so.

THE WITNESS: I would like to see the additional administrative orders, if I could.

(Pause.)

THE COURT: You're -- never mind.

BY MR. BULLOCK:

Q. Let me refer first --

THE COURT: You don't recall at this time; is that correct?

THE WITNESS: Yes, Your Honor.

THE COURT: All right.

Now if you want to, on redirect, to present him with those documents, you can. I think that is a better way to handle it at this point.

MR. BULLOCK: Your Honor, may we refer him to the documents? I'll handle it either way.

THE COURT: Your -- I'll permit you to do that if you want to.

MR. BULLOCK: I don't want to hold us up needlessly.

THE COURT: Okay.

BY MR. BULLOCK:

Q. Let me refer you first to Florida Cities' Exhibit 28 and then Exhibit 52, and ask you if in those documents you find any direction for Florida Cities to move the outfall of this

facility?

MR. JACOBS: Your Honor, objection to 52. It's one page of -- it's just one page, doesn't seem to be complete.

THE COURT: Well, he's asking him to -- well -- I don't know. What is 52? That's not in evidence, is that correct?

MR. BULLOCK: Not yet, Your Honor.

Your Honor, 52 is an amendment to Exhibit 28.

MR. JACOBS: I'll withdraw the objection with the understanding that it's incomplete, if that would assist in moving things along.

MR. BULLOCK: Your Honor, it's also Plaintiff's 382.

THE COURT: One page?

MR. BULLOCK: That I do not know, but our Exhibit 52 is their 382.

THE COURT: Well, take a look at Plaintiff's 382 and see what we have got because what I have in my binder is one page of what purports to be an amendment to the order.

MR. JACOBS: Your Honor, I withdraw the objection.

THE COURT: All right.

Do we have a question on the floor?

BY MR. BULLOCK:

Q. Is there anything in the '87 administrative order or the amendment thereto which directs Florida Cities to move the outfall of this facility?

A. Certainly not with regard to 52, not on that page and there's nothing in Defendants' Exhibit 28 that specifically requires the movement of an outfall or relocation of outfall.

MR. BULLOCK: Your Honor, I would note for the record the Plaintiff's version of this exhibit is also one page, I believe.

THE COURT: Okay.

I think that is why he withdrew his objection.

BY MR. BULLOCK:

Q. Isn't it true that the 89-109 administrative order gave Florida Cities until August 1, 1991 to complete the construction of the outfall?

A. I believe that was the date. We have unfortunately taken that exhibit away. Yes, I recall that was the date.

Q. Okay.

A. I'm sorry, that was the completion of outfall or upgraded facility.

Q. Completion of outfall?

A. Could I see that again, please.

Q. Exhibit 195.

A. I believe the date complete construction ceased discharge at current location, August 1, 1991.

Q. Isn't it true that the outfall was completed and put into service on July 14, 1991?

A. I recall it was in July of 1991, yes.

Q. All right.

That would be ahead of the schedule put forth in Exhibit 195, the construction schedule?

A. That would be ahead of that date.

Q. Isn't it true that in order to move the outfall, Florida Cities had to have a Section 404 Dredge and Fill Permit from the Army Corps of Engineers?

A. Yes.

Q. All right.

And in your experience, would it ever be possible for a construction project such as the Waterway Estates outfall to be moved to the six foot contour line without a Section 404 Permit?

A. I'm not aware of how that would be done.

Q. Isn't it true that Florida Cities filed for a dredge and fill permit on April 7, 1989?

A. I can't recall the date that they filed.

Q. Isn't it true that the Corps of Engineers did not grant this permit until April 11, 1990?

A. I believe it was in April, 1990, that if memory serves.

Q. Let me refer you to Exhibit 42, Florida Cities'. Would you identify Exhibit 42?

A. It is a letter from the Department of Army enclosing the construction permit with notice of authorization.

MR. BULLOCK: Your Honor, we would move Exhibit 42 in

evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true that Florida Cities was required to obtain building permits from Lee County before it began construction on either the AWT upgrade or the plant outfall?

A. Yes, that was true.

Q. Are you aware of how many permits the Florida Cities Waterway Estates Project had to obtain in order to construct the outfall and upgrade the plant?

A. I couldn't give you an exact number.

Q. Okay.

Do you know how many different permitting facilities Florida Cities had to apply to to obtain permits to construct the outfall and upgrade the plant?

A. I'm aware they had to get the permitting through the Army Corps of Engineers for the outfall, State permit and county permit.

Q. Do you know which county permit?

A. No, I'm sorry. County permits, in other words, that was a permit required from the county.

Q. Do you know how many permits from the county were required?

A. No, no, I do not.

Q. If you assume with me that the first requirement to move

the plant outfall came on September 26, 1989, isn't it true that it was physically and legally impossible to move this outfall by November 1, 1989?

MR. JACOBS: Objection, calls for a legal conclusion.

THE COURT: I'll permit him to answer it if he knows.

THE WITNESS: I'm sorry, your starting date was again?

BY MR. BULLOCK:

Q. If you assume with me the first time Florida Cities was required by the Environmental Protection Agency to move the outfall was September 26, 1989, wasn't it both physically and legally impossible to have the outfall moved by November 1, 1989, the effective date of the NPDES permit?

A. Assuming that no action had been taken on Florida Cities up to that point in time, yes, that would have been very unlikely.

Q. Are you familiar when Florida Cities applied to Lee County for a zoning variance to expand the building for the AWT construction?

A. I would need to refresh my memory on that, Counsel.

Q. Okay.

But as you sit here today, you're not aware of it?

A. Not the exact date, no.

Q. Did you review the Lee County applications for zoning variances?

A. I don't know if I reviewed the entire applications.

Q. All right.

Are you aware of when Florida Cities applied for a development ordinance exemption?

A. I would also need to refresh my memory.

Q. Do you even know what a development ordinance exemption is?

A. It is obviously exemption that is granted by that particular body with regard to certain ordinances involving facilities that are being built within the particular area, but I can't tell you specifically what is being exempted.

Q. You're just speculating as to what those are, is that correct?

A. In fact, I'm not speculating as to what those are.

Q. You've never filed any permit applications or anything like that, though, have you, in Lee County?

A. No, I have not.

Q. Are you aware of whether or not Florida Cities could have started construction of the AWT upgrade or the plant outfall before they received permission from Lee County?

A. I believe it needed Lee County's permission.

Q. Let's move now to the permits, exceedences of the NPDES permit. Isn't it true that the only parameters which were actually exceeded after the plant outfall was moved was nitrogen from August through April of the next year?

A. I believe, if I recall, yes, it was nitrogen violations.

Q. In fact, Florida Cities was meeting the other removal of the other pollutants in the effluent at AWT levels, isn't that correct?

A. I believe they were complying with their other permit requirements.

Q. And isn't it true that even during the interim in which there were actual exceedences of nitrogen, the Florida Cities had raised its level of nitrogen removal above secondary treatment levels.

A. I'm sorry, could you repeat that?

Q. Isn't it true that between August of '90 and April -- August '91 and August -- April of 92, that even though there were nitrogen exceedences, Florida Cities had raised the level of nitrogen removal in its effluent to above secondary treatment levels?

A. I believe there was an improvement in nitrogen removal.

Q. The answer to the question is yes?

A. Yes.

Q. The effluent limitations that were in effect between November 1, 1989 and August of '91 were contained in the administrative order that you've looked at earlier which would be Exhibit 195?

A. I'm sorry, that was within -- between which two dates?

Q. November 1, '89 -- or excuse me, it would be September 26, '89 through August of '91?

A. That should be true.
Q. All right.
And isn't it true there were no violations of these administrative order effluent limitations?
A. Yes, I believe that was true.
Q. All right.
Isn't it true that the State of Florida through the FDER allowed Waterway Estates to discharge secondary treatment levels until September of 1992?
A. I would need to go back and again refresh my memory on that document as to the specific date, but --
Q. Well, we looked earlier at the 1988 and 1990 State permits, correct?
A. Correct.
Q. And the 1988 and '90 State permits contained construction schedules, do they not?
A. Correct.
Q. And the 1990 permit was an extension of the construction deadlines, correct?
A. Yes, it was.
Q. Let me refer you to Exhibit 51. Isn't it true that Exhibit 51 in fact extends the construction schedule until September 1, 1992?
A. Yes. The subject permit was extended until September 1, 1992.

Q. In reviewing the decisions that Florida Cities made regarding the Waterway Estates Wastewater Treatment Plant, isn't it true that you don't take into account any consideration that Florida Cities was required to make regarding the Public Service Commission of the State of Florida?
A. No, I would not say that is true.
Q. Okay.
What considerations do you refer to in your report regarding the Florida Public Service Commission?
A. I don't recall whether I specifically made reference to the Florida Public Service Commission in my report.
Q. And I believe you testified this morning that the only information that you reviewed regarding the Florida Public Service Commission was correspondence back and from Florida Cities, I believe, to FDER; I'm not sure that I remember exactly the characterization.
A. Correspondence regarding issues regarding the Florida Public Service Commission.
Q. But you never reviewed any correspondence regarding the Florida Public Service Commission?
A. No, I believe I said I reviewed --
Q. I'm sorry.
A. Yeah.
Q. I'm sorry, let me withdraw that, sir.

You never reviewed any correspondence between Florida Cities and the Public Service Commission?
A. I can't tell you that. I don't recall exactly whether it was included correspondence between the Florida Public Service Commission and Florida Cities.
Q. Do you know whether or not the Florida Public Service Commission ever ruled on the prudency of Florida Cities' decision to expend the -- upgrade the AWT and the corresponding construction?
A. I'm aware of documents that discussed or indicated some testimony had been given at rate hearings, so I would assume there is likelihood that they did.
Q. Okay.
And you don't know the outcome?
A. I don't know the exact outcome, no.
Q. All right.
Earlier in your testimony, we reviewed some of the other cases that are listed in your resume for cases that you previously provided either expert testimony or consulting, and I believe that a number of those involved manufacturing facilities, isn't that correct?
A. Yes, it is.
Q. A manufacturing facility has different financial considerations than a privately owned publicly regulated utility, does it not?

A. I would say it has some that are similar and some that are different?
Q. All right.
And one of the -- how would you distinguish the differences?
MR. JACOBS: He's not being offered as an expert for purposes as it goes into finances. They objected when I got into that with him.
MR. BULLOCK: Your Honor, he's offered opinions about the motivations of why the company did or did not undertake certain activity. He's offered motivational opinions about whether or not the company was following the Clean Water Act and why it was and why it wasn't. I believe that --
THE COURT: All right.
What is it you're seeking to elicit from him now?
MR. BULLOCK: Shall I rephrase the question?
THE COURT: Yeah.
BY MR. BULLOCK:
Q. All right.
Isn't it true, Mr. Klingenstein, that a manufacturing facility -- that it behooves a manufacturing facility to not spend money on upgrades for environmental related construction?
THE COURT: All right.
I'll permit him to answer that.
THE WITNESS: I don't know that I would completely

agree with that.

THE COURT: Well, now, I think we're getting a little afield here. Now you have questioned him regarding his experience in some of the instances in which he has performed consulting services which relate to other than public/privately owned wastewater treatment facilities. But I think we're getting a little afield here. You want to be heard any further on this?

MR. BULLOCK: Your Honor, my only comment would be that he is offering opinions as to why Florida Cities made certain decisions and I would like to investigate whether or not he knows the differences between regulated utilities and the other types of facilities that he's investigated to determine whether or not his assumptions on why certain decisions were made are valid.

THE COURT: Yes, sir.

MR. JACOBS: The assumptions he made and the question I posed yesterday had to do with technology and whether an option was technologically feasible. I didn't get into this area of analyzing the difference between a publicly operated wastewater treatment plant, a privately upgraded wastewater treatment plant. We just didn't open the doors to those types of questions, Your Honor.

MR. BULLOCK: Your Honor, there are several references in his opinion.

THE COURT: Well, I'm going to allow it for what it's worth and if you want to get into it further on redirect, Mr. Jacobs, you can.

All right, go ahead.

BY MR. BULLOCK:

Q. Mr. Klingenstein, isn't it true that the only way that a regulated utility can earn a return on investments is to have that included in its rate base -- capital investment included in its rate base?

A. I would assume with the exception of any investment they might make that they might be able to later sell for profit, perhaps, but I would assume that in terms of when they own the investment, it would need to be on a rate base.

Q. So that isn't it true then that there is no benefit from an avoid cost of not spending money on capital expenditures for environmental protection?

A. Again, to the extent that I'm qualified to answer the question, my understanding of the process is that such an entity has to go to its regulatory body and in effect obtain approval for the inclusion of that expenditure in the rate base and that there is often concern on the part of such an entity as to whether or not the particular expenditure will be found appropriate for inclusion in the rate base.

And to the extent that an expenditure would be made, say that would be more expensive, but would be more timely and

therefore would meet a particular deadline, but would end up resulting in a higher cost to be passed along to the users, those in the rate base.

I would assume there is a risk that that additional cost might have to be borne by the company itself.

Q. But you would agree with me that the company's legitimate concern is that the Public Service Commission find that its expenditure is to be prudent?

A. I'm certain from a business standpoint, not being qualified as an expert in business matters, but as a business matter, I would assume it's of concern to them.

Q. Thank you.

Let's turn now to the Carrollwood facility. Did you interview anyone at EPA Region IV about Carrollwood?

A. Mr. Ken Kwan.

Q. And did Mr. Kwan state whether or not he had investigated the Carrollwood Facility during the period of time at issue in this lawsuit?

A. I can't remember specifically whether he used the word "investigated," but we discussed the facility.

Q. Did he indicate to you whether or not he had visited the Carrollwood Facility while it was in operation?

A. That I don't recall.

Q. Did you interview Mr. Thomas Pfaff?

A. No, I don't believe Thomas Pfaff and I have ever spoken

about Carrollwood.

Q. The NPDES permit which was effective July 1, 1991 for Carrollwood was an advanced wastewater treatment facility, correct?

A. The permit limits that it included would typically be expected to require an AWT Plant in order to meet them.

Q. Have you ever seen a secondary plant with the limitations contained in the July 1, 1991 permit?

A. Not that I recall.

Q. All right.

Isn't it true that it would be technically impossible for a secondary treatment plant to consistently meet all of the parameters in the July 1, 1991 permit?

A. Would certainly be very unlikely.

Q. Isn't it true that between July 1, 1991 and January, 1992, the Carrollwood Plant in fact met some of the limitations, particularly those for total suspended soilent and biological oxygen demand?

A. Yes. As I recall, they did meet some of those.

Q. Are you familiar with the measures which Florida Cities took which enabled the plant to meet some of the 1991 effluent limitations in that permit?

A. I don't recall which specific measures they took.

Q. Okay.

Do you know of any data which demonstrates that the

discharges from the Carrollwood Plant between July 1, '91 and January, 1992, caused any environmental harm to Sweetwater Creek?

A. Certainly I've seen data that I believe is from the -- what's known as the STORET System, that looks at the data from I believe mid-1989 through 1994 and splitting that data at the point in time at which the discharge was ceased.

There are noticeable reductions in both phosphorus and nitrogen load in the creek, these from a point several miles downstream from the site of the treatment plant.

Q. And have you made a survey of what other dischargers discharge into this particular body of water?

A. As I recall from the description in Florida Cities' contractor's report, LTI, I don't believe there were any substantial discharges.

Q. There was nine point source runoff in this area?

A. I would suspect there would be some, yes.

Q. This in fact is a heavily urbanized area, is it not?

A. Fairly well developed.

Q. Okay.

Are you able to, sir, with a reasonable degree of scientific certainty, more probably then not, that you can trace the effects you found in the STORET data specifically to the Carrollwood Plant?

A. Not specifically.

Q. Okay.

When did EPA first require Florida Cities to build an AWT Plant at Carrollwood?

A. I can't recall from memory when the first actual requirement to construct might have taken place.

Q. Isn't it true that the first -- strike that. Let me start over again.

Isn't it true that before the July 1, '91 NPDES permits, EPA never took any action which mandated an upgrade to AWT at Carrollwood?

A. As I said, I can't recall.

Q. So your answer actually is no?

A. Well, certainly I can't recall.

Q. Carrollwood had received -- and isn't it true that Carrollwood received an NPDES permit in 1975?

A. I believe that is true, yes.

Q. Isn't it true that between 1975 and January, 1992, the Carrollwood Facility was always authorized to discharge by the State of Florida?

A. I believe the facility operated under a series of permits.

Q. So the answer to my question is yes?

A. Yes.

Q. And are you aware of the Wilson-Grizzle Legislation in Florida?

A. To a certain degree.

Q. And what is your understanding of Wilson-Grizzle?

A. My understanding -- actually my understanding probably relates more to I think what is described as Grizzle-Figg.

Q. My question is about Wilson-Grizzle?

A. Other than being aware that I believe it predated Grizzle-Figg, not in detail.

Q. You don't know the specifics of that legislation?

A. No, not the specifics of that.

Q. Did Florida Cities apply for a renewal of its State discharge permit in 1979?

A. I would assume they did, but I would need to be refreshed as to the specifics of that application.

Q. Okay.

And did the State in fact grant a renewal?

A. That is my recollection.

Q. All right.

Isn't it true that at some point in time in 1979, FDER required that in the future, Florida Cities connect the Carrollwood Plant to a Hillsborough County Plant at a subsequent date?

A. Again, as I said, I recall that there was a reissuance, but I would need to have my recollection refreshed.

Q. Are you aware of whether or not in 1979 there was adequate capacity in any Hillsborough County Facility to accept

the Carrollwood flow?

A. My recollection based on correspondence between Hillsborough County and Florida Cities is no, there was not.

Q. And isn't it true that Hillsborough County is different from other sections of Florida in that Florida has delegated some of FDER's responsibility to Hillsborough County?

A. I couldn't speak for all the sections of Florida. That is apparently the case in Hillsborough.

Q. Let me refer you to Defendants' Exhibit 94. Have you located Exhibit 94?

A. Yes, I have.

Q. Would you identify it, please?

A. It's a letter dated February 14, 1983, to a Mr. A. A. Reeves, and it is on Hillsborough County Environmental Protection Commission letterhead. It's from a William J. Harper. It is a letter that basically states that Florida Department of Environmental Regulation Permit TP29-29206 requires connection to the Carrollwood Wastewater Treatment Plant to the Hillsborough County System by June 30, 1983.

MR. BULLOCK: Your Honor, I would move Defendants' 94.

THE COURT: Be received.

BY MR. BULLOCK:

Q. In fact, to your knowledge, was there capacity in the Hillsborough System by June 30, 1983?

A. Based on correspondence I see, no.
Q. Florida Cities -- let's back up a second.
Florida Cities applied to renew its NPDES permit in 1980, is that correct?
A. 1980 or 1979.
Q. 1980 --
A. Again, I need to have my recollection refreshed.
Q. All right.
Isn't it true that in order for EPA to issue a NPDES permit in a non-delegated State such as Florida, EPA must obtain State certification of the permit?
A. That is my understanding, yes, that's how the system works.
Q. All right.
And to your knowledge, was Florida able to certify --
A. I'm sorry, which year?
Q. Let me finish my question.
A. I'm sorry.
Q. To your knowledge, was Florida able to certify the 1980 application to renew the NPDES permit?
A. I've not seen such or I don't recall anyway seeing such certification, but I understand that a permit was issued.
Q. You understand the 1980 NPDES permit was issued?
A. There was a permit.
Q. Isn't it true that actually that permit application was

denied in 1984?
A. Yes.
Q. All right.
And in fact, wasn't it denied because the State would not certify the permit?
A. If I recall correctly, yes.
Q. Now, you testified that Florida Cities had another option in 1983 to divert the effluent coming into the Carrollwood Plant, is that correct?
A. Yes.
Q. That would be with the City of Tampa, correct?
A. Yes.
Q. And the City of Tampa -- isn't it true that the City of Tampa identified a connection point into its system at approximately fifteen thousand feet from the Carrollwood Plant?
A. I believe they identified three connections, but the fifteen thousand foot connection was available at that time.
Q. Okay.
And fifteen thousand feet is approximately three miles?
A. Yes, sir.
Q. Have you calculated what the cost would have been to build a three mile force plant?
A. I have not carried a detailed calculation of that cost.
Q. Have you visited the area in which the Carrollwood Plant was located?

A. Yes, I believe as I've indicated in my direct testimony we did visit the site of the former plant.
Q. Would you identify the surroundings of the Carrollwood Plant?
A. A residential area.
Q. Is it a relatively upscaled residential area?
MR. JACOBS: Relevancy, Your Honor.
THE WITNESS: I can't --
THE COURT: Wait, wait, wait, wait.
THE WITNESS: I'm sorry.
THE COURT: What's the relevancy?
MR. BULLOCK: Your Honor, during the direct, they were discussing whether or not there were alternatives available. One of the alternatives would have been apparently not drive a three mile force main through a residential --
THE COURT: Overruled. You remember the question?
MR. JACOBS: I'm sorry, I wanted to make my objection a little bit clearer. My point was that there is no -- the point is it's not relevant whether this was an upscale community or not in terms of putting a force main through it. That's the relevancy part of my objection.
THE COURT: I understand. Overruled.
BY MR. BULLOCK:
Q. I'm sorry, the answer to the question was?
A. Could you repeat it.

Q. Was this a relatively upscaled neighborhood?
A. Other than having a general impression of it being a relatively pleasant area, I don't have a particular memory of what type of housing was in there.
Q. Have you performed any calculations about the costs of land condemnation or eminent domain proceedings or easements which Florida Cities would have needed to receive to build a three mile force main?
A. No, I have not.
Q. Do you have any idea what permitting requirements Florida Cities would have had to undertake to build a three mile force main through Carrollwood?
A. Well, certainly construction permits would have been required probably from both local and county.
Q. The City of Tampa was going to charge a connection fee for each of the hookups from -- excuse me -- connection fee of a certain figure per household that discharged into the Carrollwood System, isn't that correct?
A. Yes, I believe that was correct.
Q. And in fact, isn't it true that the tentative figure from the City of Tampa to the Carrollwood facility was approximately eight hundred --
A. I'm sorry, how much?
Q. Was approximately eight hundred dollars per customer?
A. I recall hearing that figure.

Q. All right.
Isn't it true there would have been other fees as well as the connection fee?
A. I would assume, yes.
Q. All right.
Do you have a complete figure about how much it would have cost to construct a force main and hookup to the City of Tampa?
A. No.
Q. Isn't it true that Florida Cities would have had to submit this proposal to the Florida Public Service Commission or -- excuse me -- or to the Hillsborough County equivalent of the Public Service Commission?
A. I would assume they would have.
Q. All right.
And in that submittal, wouldn't Florida Cities have been required to demonstrate that hooking into Tampa would have been a prudent decision?
A. To the extent that they would have been able to recover the cost as opposed to pay for it out of their own pocket, I believe so, yes.
Q. All right.
During the 1980s, did Hillsborough County ever develop adequate capacity to accept the Carrollwood effluent?
A. Based on the representation in the correspondence, no.

Q. All right.
You have testified that there were other options which the company could have used as disposal methods at Carrollwood, correct?
A. Yes.
Q. All right.
One of the options was percolation ponds. Have you performed any calculation as to how large the percolation ponds would have been required at Carrollwood?
A. No, not independent.
Q. Have you performed any investigation of whether or not there was adequate land in the area at Carrollwood to build percolation ponds?
A. I've not, beyond what I have seen in the 1980 Jamal Report which I believe was entered yesterday.
Q. Did you yourself perform any hydrogeologic studies to determine whether or not there were any suitable sites for percolation ponds?
A. No.
Q. Is the Carrollwood residential subdivision densely populated?
A. I believe it's a reasonably well developed area.
Q. All right.
Do you know how much vacant land was in the area immediately around the plant during the 1980s?

A. Not beyond that which was characterized in the 1984 report.
Q. And how much did the '84 report state?
A. It identified a number of potential sites that had been looked at. It was not inclusive as to whether they were the only available sites in the area.
Q. I believe you identified there were some golf courses which would have -- which the company could have connected to the discharge effluent?
A. I believe the 1984 report looked at one golf course.
Q. Do you know whether or not these facilities were already accepting effluent from other locations?
A. That I can't recall.
Q. Okay.
Again, a golf course can only accept the maximum load during dry weather, isn't that correct?
A. Yes, that is true.
Q. And during wet weather, there would need to be other resources, correct, for disposal?
A. I would assume either storage -- adequate storage or other disposal objectives.
Q. Was there adequate storage available at the Carrollwood Facility?
A. Certainly not as it was constructed.
Q. And in order to discharge effluent to the golf courses,

that would have required AWT treatment?
A. Yes.
Q. Are you aware of whether or not Florida Cities requested permission in 1979 to construct an AWT Plant at the Carrollwood Facility?
A. I would need my memory refreshed as to whether they specifically requested permission to construct.
Q. As you sit there today, you have -- you can't answer one way or the other?
A. I have a recollection there may have been some discussion about AWT, but I can't recall whether they specifically requested the permission to construct.
MR. BULLOCK: The Court's indulgence just a second, Your Honor.
BY MR. BULLOCK:
Q. What materials were made available to you regarding the enforcement issues at Carrollwood?
A. Files from USEPA and files from Hillsborough County. I don't recall whether separate FDER files were reviewed.
Q. All right.
Let me refer you to Florida Cities Trial Exhibit 201.
A. I'm sorry, this is 200, I'm sorry.
MR. BULLOCK: Your Honor, is it in --
THE COURT: No, I don't have that volume.
THE CLERK: That's the one you just gave me.

THE COURT: I thought that went to 200. I thought you said 201.

THE CLERK: It goes to 202.

THE COURT: Oh, I'm sorry.

Well, okay.

(Brief Pause.)

MR. BULLOCK: This is the official copy, it's 201.

THE COURT: Yeah, I have 201.

MR. BULLOCK: I'm sorry.

THE COURT: I didn't think I did. I thought it just went through 200, but I found it now. Thank you.

BY MR. BULLOCK:

Q. Mr. Klingenstein, would you identify Exhibit 201?

A. This is entitled notes on the proposed penalty assessment and it appears to be undated.

MR. JACOBS: Objection to the use of the exhibit before it's been received in evidence, if in fact it is.

THE COURT: Well, hasn't been offered yet. It may well be offered, but I don't know, he hasn't.

BY MR. BULLOCK:

Q. Were you provided the -- we've discussed briefly what you looked at regarding Carrollwood. Were you provided the entire enforcement file for the Carrollwood Enforcement Facility?

A. I was provided materials from the enforcement file. I don't know if I was provided the entire enforcement file.

Q. One of the important aspects in the enforcement file would be the reports from the individuals from EPA that you actually investigated who actually investigated the facility, is that correct?

A. Certainly, yes.

Q. And I believe we established earlier that you never saw this facility when it was in operation, correct?

A. Yes, that is correct.

MR. BULLOCK: Your Honor, we would move Defendants' Trial Number 201 into evidence, the notes and proposed penalty and assessment which were produced from the Plaintiff's own enforcement files.

MR. JACOBS: Your Honor, here we would object on a couple of bases. First of all, the notes appear to be incomplete. Secondly, the Court already found in its November 22nd, 1995 order that the consent agreement that was entered into between EPA and Defendant Florida Cities with respect to the previous violation at the Carrollwood Plant, that that consent agreement should be construed within its four corners. I'm reading from page 12, footnote ten of the Court's November 22nd, 1995 order.

And I further quote, thus the consent agreement, within its four corners, the Court finds there's no indication that the notes are part of or are incorporated into the consent agreement, so, we would say they're irrelevant.

MR. BULLOCK: Your Honor, this was part of the Carrollwood Enforcement File which was produced pursuant to discovery, it was produced from EPA Region IV's own files. I believe that alone qualifies under Rule 803(a) as a public report.

THE COURT: This was in whose enforcement file?

MR. BULLOCK: EPA's Enforcement File for Carrollwood. Judge Swartz had directed that -- basically the tone of his order was that we would not have any authentication questions and he struck all the custodian of records as witnesses. I don't believe there's any argument that this is actually the document that was contained in the enforcement file regarding Carrollwood that the Government produced pursuant to discovery.

THE COURT: Yes, sir.

MR. JACOBS: Judge, I'm not arguing the document is not authentic, I'm arguing that the Court has already found it to be irrelevant and I'm also arguing that the document is incomplete.

Again, the Court found that the notes are -- there's no indication that the notes are a part of or are incorporated into the consent agreement and it's the consent agreement that is relevant and not any internal notes written by an EPA employee that related to whether or not the agency should accept the consent agreement.

MR. BULLOCK: Your Honor, this is not being offered

to somewhat contradict the consent agreement. Mr. Klingenstein has testified that in some part his opinion is based on his review of the EPA files which would include the enforcement files that came from Region IV.

THE COURT: I agree. I'll overrule the objection. Be received over objection.

BY MR. BULLOCK:

Q. Let me refer you to page 2 of this exhibit, and ask you to read paragraph six under other matters that justice may require.

A. Other matters that justice may require; penalty reduction is justified due to the re-evaluation of wasteload allocation by the State of Florida indicating discharges permissible under stringent requirements. In July, 1987, Grizzle-Figg Legislation became effective allowing discharges to certain streams provided specific conditions were met. The Grizzle-Figg provisions are applicable to Sweetwater Creek and the DER has modified its wasteload allocation to allow for discharges into the Sweetwater Creek. In 1988, Respondent retained and consultants conducted a minimum negative impact study.

Would you like me to continue.

Q. Yes.

A. The study indicated that discharges could be allowed but with stringent effluent limitations imposed to discharger. And

wastewater treatment -- I'm sorry -- and application was submitted to DER for construction of an advanced wastewater treatment AWT upgrade in November, 1989.

In July, 1990, DER issued Respondent a construction permit for the construction. On July 31, 1990, Respondent submitted an application for an NPDES permit. EPA plans to issue an NPDES permit to Respondent.

Q. Would you also read paragraph four under economic benefit?

A. The economic benefit realized by Respondent was --

THE COURT: Just a moment.

MR. JACOBS: I'll object again, beyond the scope of the witness' not being offered as an economic benefit expert, again technology and technological, but not economic benefit.

MR. BULLOCK: Your Honor, he's testifying as to the seriousness of violations. One of the issues under serious violation would be what kind of avoid cost or what kinds of economic benefit were gained from this.

THE COURT: He hasn't been offered as an expert in that area nor has he testified.

MR. BULLOCK: I'll withdraw it, Your Honor.

THE COURT: All right.

Let's recess for lunch. We'll reconvene at 1:15.

(Thereupon, a luncheon recess was taken.)

All right, Mr. Bullock.

MR. BULLOCK: Good afternoon, Your Honor.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Defendants' 97. Could you identify this document, please?

A. This is --

MR. JACOBS: I'd object to the request that the witness be asked to identify documents. There's been no foundation laid that he has seen it before and should know how to identify it.

THE COURT: Can you identify this exhibit?

BY MR. BULLOCK:

Q. Mr. Klingenstein, can you identify Exhibit D-97?

A. Certainly on the basis of appearance and contents. I don't know whether I recall I specifically read the document or not.

Q. If you will turn to page 2 which is an attachment, isn't it true this -- strike this first.

What does this document purport to be?

A. By its appearance, it's a modification of the permit for the Carrollwood Plant from FDER.

Q. And if you would turn the page and see subparagraph A; isn't it true this states the connection from the Carrollwood Plant should be made to the Hillsborough County Dale Mabry System?

A. Yes, it does.

MR. BULLOCK: Your Honor, I would move D-97 into evidence?

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Let me refer you to Florida Cities' Exhibit 96. Are you familiar with this document?

A. Yes, I am.

Q. And would you identify what this document is?

A. This is a letter dated June 28, 1983, to Mr. A. A. Reeves. It's on County of Hillsborough letterhead and it's signed by Mr. Bruce E. Kennedy and the subject is connection of Carrollwood WWTP to County WW System.

Q. And this letter indicates that Hillsborough County did not have adequate capacity to accept the Carrollwood effluent, is that correct?

A. Yes, that is correct.

MR. BULLOCK: I would move D-96 into evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Defendants' 108. Have you reviewed this document before?

A. Yes, I have.

Q. All right.

And would you identify for the record what the document is?

A. This is a -- this is a permit from the State of Florida Department of Environmental Regulation, date of issue, 4-5-88, for the Carrollwood S-DWWTP.

Q. And that would be the Carrollwood Wastewater Treatment Plant?

A. Yes.

Q. And page 2 of this exhibit sets forth specific limits for the effluent, is that correct?

A. Yes, it does.

Q. And those are secondary limits?

A. If you mean under paragraph four, yes, they would be consistent with the secondary plant's performance.

MR. BULLOCK: I would move D-108 in.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me direct you to D-125, and ask you if you've ever seen this exhibit?

A. Yes, I have.

Q. And would you identify what this exhibit is?

A. This is a letter on the Board of County Commissioners, Hillsborough County, Florida, Office of the County Administrator letterhead, and it is a letter dated July 27, 1990, it's to Mr. A. A. Reeves, and it is from Mr. Michael W. McNeeny.

Q. And it has no subject listed?

THE COURT: I'm sorry, you looking at Defendants' 125?
THE WITNESS: I'm sorry, I believe that was --
THE COURT: Letter dated July 27, 1990?
THE WITNESS: I believe so.
THE COURT: Okay.
MR. BULLOCK: I'm sorry, Your Honor, we were intending to put in the 1990 permit to construct.
THE COURT: Well, my 125, apparently Mr. Klingenstein's is just what he described.
MR. BULLOCK: Until we can identify it, let me withdraw that line of questioning.
BY MR. BULLOCK:
Q. You testified this morning that you, Mr. Klingenstein, that you were familiar with the Grizzle-Figg Legislation?
A. To a degree, yes.
Q. Okay.
What is your understanding of the purpose of Grizzle-Figg Legislation?
A. My understanding of its purpose was to -- is that its purpose was to allow for the discharge of effluent from wastewater treatment plants to certain bodies of water as long as certain conditions were met, those conditions being a certain level of treatment and minimum negative impact being demonstrated.
Q. Do you know when Grizzle-Figg was passed?

A. My belief is 1987.
Q. All right.
Prior to that time, excuse me -- let me start over again.
Do you know what water bodies Grizzle-Figg affected?
A. Not, I can't recall inclusively.
Q. Isn't it true that prior to the passage of Grizzle-Figg, Florida Cities would have been unable to build an AWT Plant?
A. It's my understanding that Grizzle-Figg is the piece of legislation that enabled them to, so that would be my understanding.
Q. Okay.
And isn't it true that once Grizzle-Figg was passed, Florida Cities requested that they be allowed to build an AWT Plant at Carrollwood?
A. Yes, that's my understanding.
Q. And isn't it true that the FDEP required that a minimum negative impact study be performed?
A. Yes, they did.
Q. All right.
And was that study in fact performed?
A. Yes, it was.
Q. All right.
Let me refer you to exhibit -- Defendants' Exhibit 116, and ask you if you've seen this study before?
A. Yes, I have.

Q. And would you identify the study for the record?
A. Well, this is a cover letter from Florida Cities Water Company dated June 19, 1989 to Florida Department of Environmental Regulation from Mr. Robert French and it is to the attention of Mr. Bruce DeGrove, environmental supervisor, and it is a letter, cover letter transmitting the results of a minimum negative impact study.
Q. You have in fact reviewed the minimum negative impact study that is attached, isn't that true?
A. Yes, that is true.
Q. This is what is known as a Limno-Tech Study?
A. Yes.
MR. BULLOCK: Your Honor, we would move Defendants' 116 in evidence?
MR. JACOBS: The only part of that I'd object to is the cover page, Your Honor. He's reviewed the report, I'm not sure he's seen the cover page which is hearsay.
BY MR. BULLOCK::
Q. Have you in fact reviewed the cover page?
A. Yes, I have seen the cover letter.
MR. JACOBS: Withdraw the objection.
THE COURT: It will be received, 116.
BY MR. BULLOCK:
Q. Florida eventually accepted the minimum negative study that Limno-Tech put forth, isn't that correct?

A. Yes.
Q. And on that basis, Florida Cities was issued a construction permit to construct an AWT Facility.
A. Yes, after certain concerns, initial concerns were satisfied, yes.
Q. Isn't it true also that in 1988, Hillsborough County informed Florida Cities that it would have available capacity in 1990?
A. I'm sorry, that was in which year.
Q. 1988?
A. I believe there was correspondence from Hillsborough in that year regarding when capacity would be available. I would need to refresh my memory as to exactly what year they represented.
Q. You have read correspondence, though, the 1988 correspondence informing them?
A. I recall reading correspondence in that timeframe that discussed when capacity might be available, but I don't recall specifics as to exactly when.
Q. Let me refer you to Defendants' 106. Have you seen this document before?
A. Yes, I believe so.
Q. And this is a document we were speaking of a few minutes ago from 1988?
A. Certainly possibly one of them.

MR. BULLOCK: Your Honor, I move Defendants' 106 in evidence?
THE COURT: Be received.
BY MR. BULLOCK:
Q. Let me refer you to page 2 of this exhibit. Isn't it true that page 2 contains a capacity fee of approximately five point five million dollars?
A. Yes, it does.
Q. And that would be divided among the twelve hundred customers of Carrollwood?
MR. JACOBS: Objection, lack of foundation as to the number of customers.
THE COURT: Well, I don't know whether he knows or not to testify to that. I'll overrule the objection at this point.
BY MR. BULLOCK:
Q. Mr. Klingenstein, have you reviewed data about how many customers the Carrollwood Plant served?
A. I certainly have, but I can't recall exactly what that number was.
Q. All right.
Would you disagree -- assume hypothetically that the plant served approximately twelve hundred customers.
A. Yes.
Q. You would then divide the capacity fee among -- the five

point five million dollars among the customers of the plant?
MR. JACOBS: Same objection, Your Honor.
THE COURT: Okay, well --
MR. JACOBS: Or slightly similar to the improper hypothetical at this point. Not offered again for the financial reasons, but for technological reasons.
THE COURT: If there's no evidence regarding the number of customers, I think it is vulnerable to objection. I'll sustain the objection.
BY MR. BULLOCK:
Q. All right.
May I also then refer you, Mr. Klingenstein, to Exhibit D-125. And let me ask you, are you familiar with this document?
A. Yes, I am.
Q. And would you identify what this document is?
A. This would be the July 27, 1990 letter that had been previously identified from an Board of County Commissioners, Hillsborough County, Florida, letterhead, from Mr. Michael McWeeny to Mr. A. A. Reeves.
Q. All right.
Isn't it true this document states that the Hillsborough -- the capacity for Carrollwood to hook into the Hillsborough System would be available during the first quarter of 1991 -- excuse me, sometime after the first quarter of 1991?

A. Yes, it does.
Q. All right.
THE COURT: During the first quarter of 1991; isn't that what it says?
MR. BULLOCK: Well, it's expected to be commissioned during the first quarter of 1991, then after the startup capacity, would be --
THE COURT: Oh, okay.
BY MR. BULLOCK:
Q. Isn't it true then, Mr. Klingenstein, that the first time that Hillsborough County would have had capacity to accept the Carrollwood -- I guess the technical term is influent, would have been sometime after -- during or after the first quarter of 1991?
A. That is my understanding based on a review of the documents and the correspondence.
MR. BULLOCK: I would move Defendants' 125 in evidence.
THE COURT: Be received.
BY MR. BULLOCK:
Q. Isn't it true, Mr. Klingenstein, that Florida Cities in fact applied for an AWT Permit at the Carrollwood Facility sometime in June or July of 1990?
A. In that timeframe.
Q. All right.

Let me refer you to Defendants' 126. Have you reviewed this document before?
A. I don't recall that I have specifically seen this document.
Q. Can you identify what this document is?
A. Its covered by a letter dated July 31, 1990, it's addressed, one, Florida Cities Water Company, and addressed to NPDES Permit Section, Environmental Protection Agency, and it is signed by Mr. Jack Tompkins and the subject is Carrollwood WWTP NPDES Permit Number FL0029319.
Q. Is this form an application form for an NPDES permit?
A. Yes, it is.
MR. BULLOCK: Your Honor, I would move D-126 in evidence.
THE COURT: It'll be received.
BY MR. BULLOCK:
Q. Let me refer you to Defendant Florida Cities' 129, Mr. Klingenstein, and ask you if you have seen this document before?
A. I believe so.
Q. All right.
And isn't it a letter from Florida Cities to EPA advising EPA that it could not meet the limitations contained in the draft permit -- I'm sorry -- I should -- continues to say as the plant was presently construed?

A. Yes.
Q. Isn't it true this letter also requests that interim limitations be established that would allow the plant to continue to operate until AWT Plant was brought on line?
A. Yes, it does.
Q. And doesn't it also state that the plant would not be in operation until January of 1992?
A. Yes, that is the date stated.
Q. Let me refer you next to Defendants' 131.
MR. BULLOCK: Your Honor, while he's looking at that, may I move Defendants' 129 into evidence?
MR. JACOBS: Your Honor, we'd object on the basis of the grounds that it's a letter -- purports to be a letter to EPA, but it doesn't have an EPA receipt stamp and it's not signed, so I'm not sure it ever was sent.
MR. BULLOCK: Your Honor, it's listed as Plaintiff's 311. If they would have more preference to use it, we'll be glad to move theirs in evidence as well.
MR. JACOBS: One moment.
Objection is withdrawn.
THE COURT: It'll be received.
MR. BY BULLOCK:
Q. Mr. Klingenstein, have you seen Exhibit 131 before?
A. Yes, I have.
Q. And would you identify the letter and what's attached to

it?
A. It is a letter to Ms. Martha Hunter, it's on Florida Cities' Water Company letterhead, it is from Jack Tompkins, and it is regarding the NPDES Permit for the Carrollwood Wastewater Treatment Plant.
Q. Isn't it true this letter again points out that the draft permit is for AWT limitations and that the company would not be able to meet those limitations at the Carrollwood facility until January, 1992?
A. Yes.
MR. BULLOCK: Your Honor, we would move Defendants' 131 into evidence?
THE COURT: Be received.
BY MR. BULLOCK:
Q. Let me ask you next to look at Defendant Florida Cities' 132. Have you seen 132 before?
A. I believe so.
Q. Let me refer you to page 3 of 11 in Exhibit 132, paragraph eight. Let me refer you to what is the sixth line down in paragraph eight, beginning with this consent order, and ask you to read that sentence?
A. This consent order authorizes and requires Respondent to continue to operate the WWTP.
THE COURT: Continue to what; operate?
THE WITNESS: I'm sorry, to continue to operate.

THE COURT: You're on paragraph --
THE WITNESS: I'm sorry, this is --
MR. BULLOCK: Your Honor.
THE COURT: You're on paragraph eight, page 3 of 11?
MR. BULLOCK: Yes, sir.
THE WITNESS: I believe I was on the sixth line down, Your Honor.
THE COURT: Oh, one, two, three, four, five, six, okay. I was on the first line.
BY MR. BULLOCK:
Q. If you would begin to read that sentence again?
A. Surely. This consent order authorizes and requires Respondent to continue to operate the WWTP in compliance with T.O.P. until such time as the new AWT WWTP is constructed and placed into service.
Q. And since environmental law is filled with an abundance of acronyms, WWTP means?
A. Wastewater Treatment Plant.
Q. And isn't it true TOP means the State Temporary Operating Permit?
A. Yes.
MR. BULLOCK: Your Honor, we would move 132 into evidence?
THE COURT: Be received.
MR. JACOBS: I'm sorry, Your Honor, again, this is an

unsigned document, it's -- the last two pages of the exhibit have numerous signature lines, there's not a signature. This could conceivably be a draft of a consent order that was negotiated between the parties, neither of which was the Federal Government.
MR. BULLOCK: We'll be glad to pull from the files a copy, the signed order and substitute it.
THE COURT: Okay.
Or you can show it to counsel and see that that satisfies him, either way.
MR. JACOBS: I have 132, I have just been handed another 132. The objection is that 132 is not signed, and again, it's a consent order presumably negotiated between two parties and neither of which is the Federal Government.
THE COURT: Well, we're talking about identification, authentication and I thought that the Magistrate Judge talked to you guys about that, at least I asked him to at the pre-trial conference.
MR. BULLOCK: Yes, Your Honor, he did.
MR. JACOBS: He did, and we objected, but with all candor, we objected on relevancy grounds and we did not object on authenticity grounds.
MR. BULLOCK: Your Honor, I have a copy of --
MR. JACOBS: It's not relevant because it's not signed, I suppose would be another way to look at it.

THE COURT: It's not relevant because it's not signed. Well, that's -- I'm not real impressed with that backdoor approach.

MR. JACOBS: I'm not sure I am anymore myself, Your Honor.

MR. BULLOCK: I'll be glad to hand this copy of the signed permit to Mr. Jacobs if he wants to review it.

THE COURT: All right.

MR. JACOBS: I'd be happy to accept counsel's representation this is an exact copy that he's just handed me of 132, except for the fact that it's been signed.

THE COURT: Well --

MR. JACOBS: But it doesn't appear to be --

THE COURT: I tell you what, I'm going to receive it subject to some later problem with that document and you can study it and compare it, but --

MR. JACOBS: Just on a short comparison, it's not the same document by any means.

THE COURT: Not the same?

MR. JACOBS: No, sir.

THE COURT: Well, okay, I'm going to reserve ruling on that. I'll sustain the objection at this point. If you want to try to move it later on after you have had a chance to look at it further, we'll see about it.

MR. BULLOCK: Thank you, Your Honor.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Exhibit Number 135, and ask you if you have seen this document before?

A. Yes, I believe I have.

Q. And can you identify the document?

A. It's a letter dated March 1, 1991, on the Florida Cities Water Company letterhead, it's to Ms. Martha Hunter from Mr. Paul Bradtmiller and it is a revised draft of the Carrollwood Wastewater Treatment Plant.

MR. BULLOCK: Your Honor, we would move Defendants' 135.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true this letter is another request from Florida Cities to EPA to adopt the interim limits between establishing a consent order between FDEP and Florida Cities which would in a sense be secondary limits?

A. This letter does request that the interim limits established in the consent order between EPA and Florida Cities be included.

Q. Let me ask you to look at 137 and ask you if you have seen that?

A. I believe -- I'm sorry, I believe I've seen this.

MR. BULLOCK: Your Honor, we would move Defendants' 137 into evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Just to save some time, Mr. Klingenstein, isn't this letter also a request for EPA to continue secondary treatment levels at Carrollwood?

A. The letter again requests the interim limits be incorporated.

Q. Let me refer you to Defendants' 139. Have you seen this document before?

A. Yes, I believe I've seen this.

Q. All right.

Would you identify it, please?

A. This is a letter dated May 20th, 1991. It's on Florida Cities Water Company letterhead to John T. Marlar, it is from Mr. Paul Bradtmiller and it's re, Carrollwood Advanced Wastewater Treatment Plant, Administrative Order Number 90-100, and then gives the NPDES permit number.

MR. BULLOCK: Your Honor, we would move Defendants' 139.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true this letter informs EPA that in fact Florida Cities has completed an agreement with the Hillsborough County Public Utilities Department to connect Carrollwood to the Hillsborough County Facility?

A. Certainly, the letter indicates that negotiations had been completed and that the agreement was scheduled to be, I suppose, reviewed for approval by the County Commissioners.

MR. BULLOCK: Your Honor, I'm getting ready to move into a different area, just so the record is complete. If you want to address at this time, Mr. Baise and Mr. High have reviewed the document that we had the disagreement over earlier, the State Consent Order, and it is identical in fact to the exhibit that we proferred earlier save for the fact this one actually is signed. There are two exhibits attached to it which are State permits which are already into evidence.

MR. JACOBS: Well, that's what made them different as I quickly saw that 132 had eleven pages and they handed me something with roughly thirty or thirty-five. I was able to tell the Court it wasn't the same document. I didn't compare it, perhaps counsel, if I might suggest, would like to remove from the one he's saying is the signed version, the additional pages, then I would have no objection to 132 if it's identical. I'm not trying to belabor the issue, I'm trying to advance.

MR. BULLOCK: I'll be glad to submit pages one through eleven of this report.

THE COURT: All right.

Want to show it to counsel.

MR. JACOBS: I can't review all eleven pages, but I'll be happy to accept Mr. Baise's representation it's

identical, so if he makes that representation, I will.

MR. BAISE: I make that representation, Your Honor.

MR. JACOBS: I withdraw the objection.

THE COURT: Defendants' 132 will be received.

MR. BULLOCK: Your Honor, may we substitute the version of it at a later time so Mr. Jacobs can make a copy of this?

THE COURT: Yes, sir.

BY MR. BULLOCK:

Q. Let me ask you to look next at Defendants' 140, and ask you if you've seen this document before?

A. Yes, I have.

Q. And could you identify it?

A. It's dated, I'm sorry, May 28, 1991, it is on U. S. Environmental Protection Agency, Region IV letterhead to Mr. Paul Bradtmiller, Senior Vice President, Florida Cities Water Company, it is signed by Mr. W. Ray Cunningham, and it is re, final issuance of NPDES Permit Number FL0029319, Carrollwood WWTP, and it covers the NPDES permit.

Q. And the permit is attached to it, is it not?

A. Yes.

MR. BULLOCK: Your Honor, we would move Defendants' 140 into evidence.

THE COURT: It will be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer to what I believe is the tenth page of that exhibit. Isn't it true this is identified as the amendment to the statement of the basis at the time of issuance of this permit?

A. Yes, it is.

Q. Let me refer you to paragraph two and actually -- excuse me -- sub heading two and the two paragraphs which fall under public comment and ask you to read those two paragraphs?

A. And in April 1, 1991, letter was received from Florida Cities Water Company FCWC. In this letter, FCWC requested that the interim limits established in the consent order of February 4, 1991 entered into by FCWC with the Environmental Protection Commission of Hillsborough County and the State of Florida, Department of Environmental Regulation be incorporated into this permit. This request is a compliance matter. A copy of the letter was given to Thomas Pfaff and the compliance section. On April 8th, 1991, the compliance section will address the request after final issuance of this permit.

Would you like me to continue, sir?

Q. That's fine, thank you.

Let me refer you next to Defendants' 142.

Have you seen this document before?

A. Yes, I believe I have.

Q. Would you identify it for the record?

A. It is a letter on Florida Cities Water Company letterhead

dated June 24, 1991. It's addressed to Mr. Michael Ham, the Environmental Protection Agency. It's signed by Mr. Paul Bradtmiller, and the subject is NPDES Permit Number FL0029319, Administrative Order Number 90-100, Carrollwood Wastewater Treatment Facility.

Q. Isn't it true this is also a request from the company for relief from the AWT limits and a new permit?

A. Yes.

Q. All right.

And isn't it true that this letter states that it was written pursuant to discussions with Thomas Pfaff of the EPA Enforcement Staff?

A. That's the indication.

Q. All right.

MR. BULLOCK: Your Honor, the next series of exhibits are 147, 148, 150, 151 and 154. These are the discharge monitoring reports for the Carrollwood Facility. The DMR's are already in evidence. If you remember on Monday we objected, they did not have the cover letters attached. I don't know exactly how you want me to approach these. I'd like to move the DMR's with the cover letters into evidence.

THE COURT: Any objection?

MR. JACOBS: No, Your Honor. I said on Monday if you wanted to introduce the cover letters, I have no objection and I stand by that.

THE COURT: All right.

Do each one of them have a cover letter; is that what you're saying?

MR. BULLOCK: That's correct, each of those exhibit numbers that I read to you have cover letters attached to them.

THE COURT: So you're offering them individually?

MR. BULLOCK: Yes.

THE COURT: Are the numbers you just indicated?

MR. BULLOCK: That's correct.

THE COURT: Say again, please.

MR. BULLOCK: 147, 148, 150, 151, 154.

THE COURT: All right.

Then they'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me ask you to look very briefly at the first page of each of those exhibits and tell me if you've ever seen them before?

MR. BULLOCK: Your Honor, I would also include Exhibit 152 which is also a DMR with a cover letter attached.

THE COURT: All right, will be received.

THE WITNESS: I don't recall whether I've seen the cover letters.

BY MR. BULLOCK:

Q. All right.

Isn't it true these cover letters informed EPA that they

will be transferring the wastewater flow from the Carrollwood Plant to Hillsborough County in late December or early -- well, they will be transferring it and that they will request a cancellation of their NPDES permit or --

MR. JACOBS: Could I ask counsel to rephrase, I think that was vague.

THE COURT: Well --

MR. JACOBS: He started down one track and switched. I'm not sure the record will reflect --

THE COURT: Well, just restate the question, if you would.

BY MR. BULLOCK:

Q. Mr. Klingenstein, isn't it correct that each of these cover letters informed EPA that Hillsborough County -- that Carrollwood will connect with Hillsborough County and that Florida Cities will seek a revocation of its NPDES Permit?

A. Well, certainly Exhibit 147 does, 148 does --

Q. Isn't it true, Mr. Klingenstein --

THE COURT: Wait, he's not through.

THE WITNESS: And 150 does.

THE COURT: Okay.

THE WITNESS: As does 151.

THE COURT: You through?

THE WITNESS: I'm sorry, was 151 the last of those that you asked me to look at?

BY MR. BULLOCK:

Q. 152 and 154?

A. Yes, 152 as does 154.

Q. Mr. Klingenstein, isn't it true that the Administrative Order 90-100 remained in effect until March 3rd, 1992?

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.

THE COURT: Okay.

Well, if you know, I'll overrule the objection. Do you know?

THE WITNESS: No, I couldn't tell you.

BY MR. BULLOCK:

Q. Let me refer to Florida Cities Exhibit 156. Have you seen this document before?

A. Yes, I believe I have.

Q. I believe you testified earlier that the effluent limitations in 90-100 were in fact secondary treatment limits, is that correct?

A. I believe that was what we said, yes.

Q. And let me ask you to read the first paragraph of Exhibit 156?

A. This is the cover letter?

Q. That is correct?

A. Dear Mr. Bradtmiller, we are in receipt of your February 10, 1992 correspondence regarding the closure of the above

mentioned facility. This is to advise you Administrative Order Number 90-100 parentheses WKS issued on September 27, 1990, has been complied with and placed in an inactive status.

Q. Mr. Klingenstein, isn't it true that you have reviewed the enforcement history in EPA Region IV of the Carrollwood Facility?

A. I've reviewed documents from the enforcement file.

Q. Isn't it true that no enforcement action against Carrollwood was taken for the violations of the permit between July 1, '91, through January, 92, until this lawsuit was amended in April of '95?

A. I'm not aware of any.

Q. Thank you.

MR. BULLOCK: Let me move 156 in evidence, Your Honor.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let's turn now to Barefoot Bay. Did you interview anyone at EPA Region IV about the enforcement history of the Barefoot Bay Facility?

A. I believe I spoke to Mr. Kwan.

Q. Did you speak to anyone else?

A. Not that I recall.

Q. So you did not speak with Roy Herwig, is that correct?

A. Not with regard to Barefoot Bay.

Q. Do you know who Roy Herwig is ?

A. Yes, I know Roy Herwig.

Q. Who is Roy Herwig?

A. He's an employee of EPA Region IV.

Q. And to your knowledge, was Mr. Herwig involved in the enforcement actions at Barefoot Bay?

A. I've seen Mr. Herwig's name mentioned in the correspondence.

Q. Do you recall what documents you reviewed from the EPA Region IV enforcement files in preparation of your report?

A. Not specifically. I mean, there were quite a number.

Q. Let me refer you to Florida Cities' 202, and ask you if you've ever seen this document?

MR. JACOBS: Just for the record, Your Honor, forgive the interruption, but apparently we had a renumbered exhibit list yesterday, sorry, Monday, at the beginning of Court, and until now, it's matched up with the Government's objections that were submitted to the Court by exhibit by exhibit.

At this point, it no longer matches because the list was shortened, so I'm happy to try and keep up, but it might take me a moment longer to look at the exhibit because I no longer have the current list and the Court's list is no longer current because as I say, the Defendants gave us a new list Monday morning which was the time we submitted our list to the Court with our objections, not before.

MR. BULLOCK: Your Honor, I might respond by saying that this previously has been listed, we have identified that Exhibit 202 was formerly Florida Cities' 498 and that the Plaintiffs objected to this on the grounds of irrelevancy and offers to compromise.

MR. JACOBS: Well, Counsel did indicate that it was formerly 498 which will help us, but the objections aren't listed on the new list, so I think perhaps we've got to do a new list for the Court.

Now we have new numbers. I'm thinking both in terms of my own problem in keeping up as well as the Court's in making sure it has a current version of the Government's objections which it no longer does. I don't know how many these are, Mr. Bullock. If there's only a few, we perhaps can work through it.

MR. BULLOCK: I believe there are four; is that correct, four?

MR. JACOBS: I yield to the Court on that issue. We'll do a new list or --

THE COURT: Now, does this -- what effect, Mr. Bullock, does this new list have on it the list of objections that the United States has now?

MR. BULLOCK: Your Honor, the only difference between my list, I mean, the difference would be that we added at the end of the list Exhibits 199, 200, 201 and 202. Those were

previously identified to the Government as exhibits that we intended to use at trial. Those were previously identified with the trial exhibit number and the Government has filed objections as far as I'm able to tell to only one of those. As I say, it only involves four documents and we can easily give Mr. Jacobs the prior exhibit numbers right now.

MR. JACOBS: May I just inquire with respect to the additional exhibits, your list now goes up to 202. We objected up to 519. Have you, with the exception of those four, withdrawn all the remaining ones following 202?

MR. BULLOCK: Your Honor, we have provided, pursuant to the Court's order, a copy of our exhibit list with the exhibits that we intend to put in on our direct case. We reserve the right, I believe, as did all parties to put in documents for cross examination or rebuttal purposes, and so -- but in terms of the -- and I'll be glad to have Mr. High, who actually negotiated this with Mr. Quinn, discuss this matter if the Court sees fit. Again, we're talking about four documents that we can identify right now to counsel for the Plaintiff.

MR. JACOBS: Your Honor, we certainly endeavored to put on our list every single document we intended to use here for purposes of direct or cross examination so we wouldn't get into a situation like this again. If it's only four, we'll work with the Defendants. I would like to have a representation as to whether they have withdrawn everything after 202, and

then perhaps we can move on.

THE COURT: Take a fifteen minute recess, work it out, gentlemen.

(Thereupon, a brief recess was taken.)

Okay, we all set?

MR. BULLOCK: That's correct, Your Honor.

Your Honor, we have discussed this on the break, we have identified, in fact, there are only four exhibits that were added to the end of the list, two of them the Government has no objection to.

The third one is Exhibit 201 which you have already admitted into evidence over their objection and a fourth one is 202 which we're offering now and they filed the same objection. They were previously identified with other numbers on them.

The only reason we moved them in is the Court's order directed us to put them in sequential number and when we were removing exhibits, we changed the numbers so they would continue to be in sequential number and have identified that for Plaintiff's counsel.

MR. JACOBS: And Your Honor, we appreciate counsel for the Defendant working with us on this and indeed, I think he's accurately represented there's only one that remains now and that is the newly numbered 202 for clarification, though again, one matter that I had raised before we recessed briefly was what happened to the three hundred or so exhibits after 199

and I just want to make sure they're not going to resurface as cross examination exhibits.

MR. BULLOCK: Your Honor, in our submission in the joint pre-trial statement, we stated that we listed the documents which we would put forth in our direct case and we reserved the right to use other documents for rebuttal and cross examination and this is the first objection I've heard to that inclusion in the joint pre-trial order.

MR. JACOBS: Judge, we endeavored, on the other hand, we understood the arrangement to be that we list every conceivable document, both for everyone's own convenience as well as the Court in our exhibit list.

MR. BULLOCK: Your Honor.

MR. JACOBS: We understood that to be our obligation and that is what we've done and I'm just trying to make sure we're not going to have any surprises. We've begun at 200, are we going to go back up to 500? I didn't realize we were down to 200 until Monday and going back up to 500. I'd rather know now than again to take the time of the Court on an individual basis when they start popping up and with new numbers.

THE COURT: All right.

You had a list of five hundred and some odd exhibits?

MR. BULLOCK: That's correct, Your Honor. We had attempted to come up with a -- we came up with a list of five hundred exhibits that were submitted with a revised joint

pre-trial statement in January.

Subsequent to that list, we made an effort, because we knew the time was going to be precious in this trial, to get them down to as minimum number as possible and the documents that we were going to use on our direct case and so that is where the new 202 list came on Monday.

THE COURT: Are you saying that you have no obligation to list documents that you intend to use on cross examination, that you only have the obligation to list exhibits that you intend to introduce in your case in chief? That is not -- that is not proper.

MR. BULLOCK: May I beg the Court's indulgence just a second?

THE COURT: Yes.

MR. JACOBS: Judge, if I -- forgive me.

MR. BULLOCK: Your Honor, as for cross examination, we would agree that we would be bound by the 202 list. As for rebuttal, I believe that is a different issue. If there is surprise, we would have no way to identify those documents in advance.

THE COURT: Well, that is another issue, I think. Yes, sir.

MR. JACOBS: Judge, again, it's my understanding and I'm always the Plaintiff in these cases, that the Plaintiff gets rebuttal case, but not necessarily the Defendant, but in

any event, in the Court's February 27th, 1995 order setting out what the pre-trial -- the joint pre-trial statement to be filed with the Clerk of the Court shall contain, paragraph eight, item D as in dog, a list of all exhibits with notation of all objections thereto. There is no --

THE COURT: All exhibits what? Read it to me.

MR. JACOBS: Paragraph eight, no later than three work days prior to the date set for the pre-trial conference of which -- by the way, there were two before the Magistrate Judge, one in early --

THE COURT: I know that.

MR. JACOBS: Okay, sir. The parties file their joint pre-trial statement with the Clerk of the Court with a, quote, courtesy copy, unquote, so marked.

THE COURT: I know, just read to me that paragraph.

MR. JACOBS: Subparagraph d, lower case d as in dog, a list of all exhibits and Rule 5.04, exhibit substitutes to be offered at trial with notation of all objections thereto. That is verbatim.

THE COURT: All right.

MR. BULLOCK: That was the five hundred list, Your Honor.

THE COURT: That was the five hundred?

MR. BULLOCK: That we filed.

THE COURT: Yeah. Okay.

Well, and that was furnished to Plaintiff's counsel?

MR. BULLOCK: That's correct.

THE COURT: When?

MR. BULLOCK: That was furnished I believe January 14th or 15th.

THE COURT: And the new list that Mr. Jacobs is referring to?

That was a pared down list that was furnished on Monday morning?

MR. BULLOCK: That is correct.

MR. JACOBS: My interpretation would be that the requirements would still hold, they would need to list all exhibits that they intend to introduce at trial. We're happy to see fewer, but again --

THE COURT: All right. Well --

MR. BULLOCK: I don't mean to belabor this point, Your Honor, but in at least two different occasions in front of the Magistrate, Mr. Jacobs made extensive comments and arguments about the length of our exhibit list, so we have on a number of occasions attempted to cull through these documents to lower --

THE COURT: You had seventeen hundred and some odd at one point, didn't you?

MR. BULLOCK: That's correct, Your Honor, that was before you issued either of the Summary Judgment orders and so

after that, we have been -- we have been aggressively and in some instances frantically paring them down. We recognized that's too much as well and we got them down to --

THE COURT: Well, you're saying that it's possible that you want to reserve the right -- let's see, you're Defendants, so you've got -- you don't have rebuttal.

MR. BULLOCK: Well --

THE COURT: Go ahead.

MR. BULLOCK: Your Honor, this is one of those unusual cases where we bear the burden of mitigation.

THE COURT: Well, okay.

And so, if any of the exhibits, hopefully not, but if any of the exhibits among those other three hundred and some odd are offered, then I'll hear the objection at the time. They may not be. Hopefully not.

MR. BULLOCK: Thank you, Your Honor.

THE COURT: All right.

All right, let's proceed.

MR. BULLOCK: Your Honor, I believe that I had moved Defendants' 202 into evidence.

THE COURT: All right.

MR. JACOBS: We object. Again, this would be -- these are additional notes. Same objection as the other notes. I know the Court's already ruled on them.

THE COURT: 201, I think. All right. The Court

will, for the sake of consistency, at least, overrule the objection to 202, and the Court will base its ruling on the same ruling as 201. Be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, is there a reason why you didn't speak to Mr. Herwig about his investigation of Barefoot Bay?

A. Other than he did not speak to me, no, none that I can identify.

Q. Well, you were engaged to form an expert opinion about this case, isn't that correct?

A. Yes, that is correct.

Q. Mr. Herwig is the only EPA official who investigated this case during the time period at issue to your knowledge, isn't that correct?

A. As I said, I've seen his name in the records, so I certainly have knowledge that he had some involvement.

Q. Okay.

Is there a reason then why you didn't feel it was necessary in formulating an opinion to learn the facts from the actual investigating agent of EPA Region IV?

MR. JACOBS: Objection, assumes facts not in evidence. There's no indication Mr. Herwig was the investigating agent for this facility. At this point in time, he's written some notes?

THE COURT: Sustained.

Ask your next question.

BY MR. BULLOCK:

Q. All right.

Would you refer to page 3 of the notes on proposed planning assessment. Would you read that for the Court, please?

A. Surely. The entire page?

Q. Excuse me, would you read paragraph six for the Court, please?

A. Sure. The enforcement team considered the fact that Respondent has been working closely with the Florida Department of Environmental Regulation since 1985 to develop a solution to the problem. Since being contacted by EPA, Respondent has been very cooperative. Consideration was given to calculating liability on a daily basis beginning with the initial overflow in 1985.

However, since the Respondent has been working with DER and since the effluent being discharged would have met the limitations contained in the permit now being issued by EPA, it is believed that the true violation was limited to that of not applying for an NPDES permit.

Q. EPA Region IV issued an administrative order for Barefoot Bay, isn't that correct?

A. Yes, I believe that is correct.

Q. And in fact, you have testified about violation of the

effluent limitation in that administrative order, isn't that correct?

A. Yes, it is.

Q. EPA issued a final NPDES permit in November of 1991, isn't that correct?

A. I'm not sure the issuance was in November of 1991. I believe the effective date was 1991, November, 1991.

Q. All right.

And isn't it true that the effluent limitations in the final permit were different than those contained in the administrative order, isn't that correct?

A. Yes, as I recall.

Q. Let me refer you to Plaintiff's 145, and also at the same time, Defendants' Exhibit 192. Are you familiar with those two documents?

A. Yes, I am.

Q. And I believe you did testify that the limits in the final permit were different than in the administrative order, isn't that correct?

A. Yes.

Q. All right.

And have you performed any comparisons of the exceedences which occurred of the administrative order to determine whether or not they would have been exceedences of the final permit limits?

A. Not that I specifically recall, no.

Q. Do you know where the final permit limit numbers were derived from?

A. Since I was not involved in the development of the permit nor have I seen the files that related to the development of the permit, no, I couldn't speak to where specifically each of those numbers came from.

Q. If the evidence shows that in fact the effluent, the exceedence levels would not have been -- exceedences, excuse me. Let me start over again.

If the evidence shows that the effluent would have passed the limitations in the permit as opposed during the period of time covered by the administrative order, would that lessen the seriousness of the violation of the administrative order?

A. From a technical standpoint, it would depend on the bases of each of the relative numbers.

Q. Okay.

And again, the State of Florida is taking the lead in determining water quality standards; isn't that correct?

A. Yes.

Q. When we played the videotape that you shot of the Barefoot Bay Plant, isn't it true that it showed a number of citrus groves in the area?

A. Yes.

Q. Were there other agricultural activity in the area?

A. I would expect so.
Q. And isn't it true that these facilities would be using agricultural chemicals?
A. I would expect they would.
Q. And isn't it true that some of these chemicals would eventually make their way into the canal and into the Sebastian River?
A. Yes.
Q. And isn't it true nine point source pollution such as agricultural runoff is one of the greater dangers on the Sebastian River?
A. Yes.
Q. And in fact, on Monday, you referred to Plaintiff's Exhibit 249 which is the SWIM document, the Surface Water Improvement Management Plan?
A. Yes.
Q. Let me refer to that document and ask you to look again at page 11. Mr. Jacobs asked you to read the second bullet point on page 11 about domestic and industrial wastewater treatment plants on Monday, is that correct?
A. I don't recall whether he specifically requested that I read that bulleted item.
Q. Isn't it true the first bullet point discusses runoff from residential and commercial property, storm water discharges?

A. Yes, it does.
Q. All right.
And these are also serious problems for the Sebastian River and Indian River Lagoon?
THE COURT: You asking him or telling him?
BY MR. BULLOCK:
Q. Isn't it true these are also serious problems?
A. Yes.
Q. The third bullet point addresses the problem -- isn't it true the third bullet point addressed the operation of marinas and boatyards as serious problems for the Indian River Lagoon?
A. Yes, it does.
Q. And this includes discharges of heavy metals, hydrocarbons and raw sewage, isn't that correct?
A. Yes, that's what is characterized, that's right.
Q. And secondarily treated effluent does not include raw sewage, does it?
A. It should not if there are no by-passes.
Q. One of the NPDES permit violations you discussed was toxicity, is that correct?
A. Yes, correct.
Q. And isn't it true that toxicity involves subjecting certain test species to one hundred percent effluent in a laboratory?
A. Yes.

Q. All right.
Toxicity testing in and of itself, isn't it true, it is not a test of the effluent as it inter -- reacts with the receiving water?
A. It's intended to provide an indication of whether or not that effluent has the capacity to provide toxic -- to cause toxic effects in organisms in the receiving water.
Q. My question was, though, isn't it true it is not -- it does not address the actual way in which the effluent reacts with the receiving water?
A. Well, as I said, it's intended to provide a measure of what will happen to the organisms in the receiving water when it's discharged there.
Q. It's done in the laboratory, isn't it?
A. Yes, yes.
Q. One of the other violations involved total residual chlorine?
A. Yes.
Q. And I believe you testified yesterday that chlorine is used to disinfect effluent in one of the final stages of treatment?
A. Yes.
Q. Isn't it true during the period of time involving the TRC exceedences at issue, Florida Cities was using an EPA approved method to test for total residual chlorine?

A. My recollection was that there was an issue regarding which method was used versus which method should have been used.
Q. Are you aware that the Plaintiff has withdrawn that allegation in this case?
A. Yes, I am.
Q. All right.
Are you familiar with EPA Region IV's policy on how to report total residual chlorine levels in discharge monitoring reports for facilities in Florida depending upon the various test methods used?
MR. JACOBS: Objection, assumes facts not in evidence. That is to say that EPA Region IV reporting procedures are any different from the rest of the --
THE COURT: Read the question back.
(Thereupon, the record was read back.)
Overruled.
THE WITNESS: I'm aware there is language in the permit or at least I've seen language in permits to that effect.
BY MR. BULLOCK:
Q. Okay.
Let me ask you to refer to Defendant Florida Cities' Exhibit 158.
THE COURT: I've got it, I just need to purge my

bench here.

Okay.

BY MR. BULLOCK:

Q. Are you familiar with this document?

A. No, I'm not.

Q. Would you identify the document?

MR. JACOBS: Objection, how can he identify it if he's not familiar with it, Your Honor.

MR. BULLOCK: If I may, Your Honor.

THE COURT: Well, yeah. You know, technically the question is inappropriate. If he doesn't know what the document is, he can't identify it. If you're asking him truly for the purpose of identification, yeah, go ahead.

MR. BULLOCK: Your Honor, this is a document which was produced by EPA's files pursuant to a document production. It's on United States Environmental Protection Agency letterhead, and my purpose in asking him to identify it was merely to identify what the title of the document was on the records.

THE COURT: Well, all right.

You can ask him that question.

BY MR. BULLOCK:

Q. Can you identify or state for us what the title of the document is?

A. It's on United States Environmental Protection Agency,

apparently memo paper, dated April 11, 1986, and it appears to be entitled Region IV NPDES Permits, Chlorine Strategy.

MR. BULLOCK: Your Honor, I would move Defendants' 158 in evidence.

MR. JACOBS: Objection, Your Honor, hearsay and relevancy.

THE COURT: Hearsay and relevancy. Let me hear your relevancy.

MR. JACOBS: I'm seeing this for the first time as well as Mr. Klingenstein. Look at the date, it's April, 1986, the violation --

THE COURT: Now wait a minute, you're saying this document was not produced or rather was not disclosed to you? You're not --

MR. JACOBS: No, oh, no, that I'm not saying, Your Honor.

THE COURT: All right.

MR. JACOBS: I'm saying I've just scanned this, this very moment, which is not an excuse, because it has been produced earlier.

THE COURT: What's the relevance?

MR. JACOBS: The point is that it's dated April, '86. There is no foundation laid that it's in that. Then it refers to a policy or strategy, as I read the title, there's no evidence that it applies at the point in time that the

violations took place which is after November of 1991 which is over five and a half years later, and as I scanned the document, the bottom of page 4 speaks in terms of a July 1, 1988 deadline, so again, I'm drawing conclusions from a quick glance at the document, but it seems to relate to a policy or practice or strategy that might have been in effect between '86 and '88 and not after November, '91 which is when the violations in question took place.

MR. BULLOCK: Your Honor, the document again was found in EPA's own files.

THE COURT: All right.

Well, I'll assume that.

We're talking about relevancy.

MR. BULLOCK: The relevancy is, Your Honor, this is a document that demonstrates how or its guidance to permit riders on dealing with the issue in Florida which has a particularly sensitive issue regarding residual chlorine and EPA and Florida have contracted agreements about issues such as permitting and residual chlorine and this document is a guidance to permit riders on how to address the issue on permits in Florida, TRC testing under various test methods.

THE COURT: Okay.

Other objections?

MR. JACOBS: Yes, Your Honor. Again, if it was an instruction to a permit rider, I'm not sure that the foundation

has been laid. Again, the permit was written in 1991, five and a half years later there is no indication that this policy was in effect at that time and therefore, I would say it's irrelevant.

MR. BULLOCK: Well, Your Honor --

THE COURT: All right.

I'll overrule the objections and receive it for what it's worth.

MR. BULLOCK: Thank you, Your Honor.

THE COURT: Don't thank me, just move on.

MR. BULLOCK: That's -- all right.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to page four, the second paragraph which begins with the NPDES permit conditions. Have you read the paragraph?

A. Yes, I have.

THE COURT: Which paragraph?

MR. BULLOCK: I'm sorry, the second paragraph, Your Honor?

THE COURT: All right.

BY MR. BULLOCK:

Q. Referring also to Defendants' 192 which is the 1991 permit, isn't it true that the 1991 permit allowed Florida Cities to use the DPD colorimetric method to test for total residual color that's found on page I-2 of the permit?

A. Not in my interpretation of that paragraph.
Q. In fact, Mr. Klingenstein, the Government has withdrawn its claim that -- isn't it a fact that the Government has withdrawn its claim as to the propriety of which test method was used?
MR. JACOBS: I object, asked and answered.
THE COURT: Is that the same question you elicited from him before?
MR. BULLOCK: Well, Your Honor, he testified that in a fashion, Your Honor, but asked in a different context, he's --
THE COURT: All right, all right, I'll overrule the objection. Let's get going.
BY MR. BULLOCK:
Q. Well, assume with me, Mr. Klingenstein, that the DPD colorimetric test method was in fact permitted under the permit. In the next series of questions, I'll ask you to follow that assumption. What was the -- isn't it true that the NPDES permit required a TRC residual level of .01?
A. Yes.
Q. And this was in effect based on concerns from the State of Florida?
A. Yes.
Q. All right.
Isn't it true that the EPA guidance in the 1986 document

that you're looking at states that the EPA knew that the DPD colorimetric method was not sensitive enough to detect chlorine down to a .01 level?
A. Yes.
Q. And therefore in those cases, the permittee need only report non-detectable using one of those tests to be considered in compliance, isn't that correct?
THE COURT: That's not non-detectable, it's not detectable.
BY MR. BULLOCK:
Q. Not detectable?
A. That's the indication in Exhibit 158.
Q. And assume with me for purposes of hypothetical that Florida Cities was not informed of this requirement or this method of reporting. If they were using the DPD colorimetric method, wouldn't in fact some of the TRC violations be false reports, false positives and in fact should have been reported as non-detect?
A. That would depend on what detection limit Florida Cities was receiving in the DPD test.
Q. But in fact if they were not receiving down to .01, isn't it true that this EPA memo states that they should be told to check off non-detect -- not detect?
A. What the memo is indicating is that if in fact you're at or below your detection limit, then you would put non-detect --

not-detect.
Q. And under those assumptions, isn't it true that some of the TRC exceedences that were reported could in fact be false positives.
A. Again, that would depend on specifically what detection limit you were achieving.
Q. But it is possible those were false positives; yes or no?
A. It is possible.
Q. Let's look at some of the alternatives which you listed as possibilities at Barefoot Bay for alternative discharge.
Have you investigated what land was available to be purchased for percolation ponds in the Barefoot Bay area?
A. To the extent that I have seen documents in the file that indicated that various parcels of land were discussed as being potentially available for sale.
Q. Are you aware of the cost per acre of that property?
A. Some of those documents included costs.
Q. All right.
Have you yourself personally investigated the cost of the land?
A. Independent of those documents?
Q. Correct?
A. No.
Q. You have no independent opinion then as to reasonable cost of land in Brevard County for agricultural land which

could be purchased for percolation ponds?
A. No.
Q. You have no opinion as to what price the Florida Public Service Commission would have found to be prudent, isn't that correct?
A. No.
Q. All right.
You testified on Monday that the company built two test ponds on what's been referred to as the forty acre site, but those ponds lacked sufficient capacity to accept all the plant's effluent, isn't that correct?
A. Yes.
Q. Isn't it true that in fact the company determined that the hydrogeological conditions in the Barefoot Bay area were not suitable for percolation ponds?
A. I would characterize it that the company investigated the capacity of a limited number of sites and based on the inadequate capacity of those sites decided to abandon pursuit of percolation ponds.
Q. But you haven't done the research to determine in fact whether or not any sites in the area were suitable for percolation ponds?
A. It's my opinion want of sufficient size might have been.
Q. What do you base that opinion on?
A. The fact that the company was percolating a certain

amount of wastewater through an existing size pond. They did carry out tests on-site that demonstrated percolation capacity of some fixed capacity or a given size of a piece of property and therefore that a proportionately larger site would be expected to likely provide the necessary capacity.
Q. So that's based on your review of documents in this case?
A. Of actual tests carried out by Florida Cities' consultants.
Q. Those were documents in this case?
A. Yes.
Q. But isn't it true that Florida Cities determined that percolation ponds were not a viable option in Barefoot Bay?
A. It's my opinion that Florida Cities decided not to pursue percolation ponds. I can't speak as to what all of their motivations were.
Q. Do you know what requirements were necessary to permit the percolation ponds in Brevard County, Florida?
A. I'm not aware of all of the State of Florida's requirements, however, I assume that Florida Cities was since they had previously done so.
Q. So the answer to the question is, you're not aware of the permitting requirements for percolation ponds in Brevard County, correct?
A. I can't say I know all of them, no.
Q. Which requirements are you familiar with?

A. Well, certainly that the pond would have to have adequate capacity to accept the plant's flow and be concerned with protection of ground water quality.
Q. Which permitting agency requires that?
A. Well, that would probably be FDER, certainly.
Q. But you're not really familiar with FDER permitting requirements for perk ponds, are you?
A. Not in detail.
Q. All right.
You're not familiar in detail with the requirements for Brevard County, are you?
A. No.
Q. Isn't it true that the Florida Department of Environmental Regulation agreed with Florida Cities' analysis of the perk pond option and directed the company to look at other discharge options?
A. I recall from the correspondence that the Florida Department of Environmental Regulation agreed with the position to not pursue putting percolation ponds on the sites that had been previously put forth or had been looked at by Florida Cities. I can't say whether they would have not agreed to a percolation pond on another site.
Q. Let's turn to the spray field option. You testified that the company started looking at the option of spray fields in 1987, but did not purchase any land until recently, is that

correct?
A. Yes.
Q. Isn't it true that on a number of occasions, Florida Cities contacted grove owners in the area about providing effluent for various groves for spray irrigation?
A. Yes.
Q. Isn't it true that -- strike that. Let me back up.
Would AWT have been required for discharge into spray irrigation?
A. Depending on what land you were spraying on to.
Q. Okay.
What land would secondary effluent have been allowed to be sprayed on?
A. Wholly owned land, I believe, without any food crop on it?
Q. If it was owned by Florida Cities but had food crop on it, it would require AWT?
A. Yes.
Q. And isn't it true that if it was owned by other owners, and was growing food crops, it would be -- the effluent should be treated to AWT levels?
A. That's my understanding.
Q. Isn't it true that Florida Cities was unable to find other owners of groves who would accept the spray effluent?
A. Florida Cities, based on my review of the documents,

Florida Cities spoke to a number of grove owners, however, financial issues seemed to continue to stand in the way of them being able to reach an agreement.
Q. Isn't it true that they could not find other grove owners to take the spray effluent, Mr. Klingenstein?
MR. JACOBS: Objection, Your Honor, to the extent that he's asking again for a matter of fact, not a matter that he's gleaned from documents.
THE COURT: I'll overrule the objection.
THE WITNESS: Certainly, history bears out that they did not end up in an agreement with any other grove owners.
BY MR. BULLOCK:
Q. You reviewed a number of pieces of correspondence back and forth between Florida Cities and various grove owners, correct?
A. Yes.
Q. And Florida Cities was unable to -- that correspondence indicated that Florida Cities was unable to come to any agreement with these grove owners, correct?
A. With the grove owners they were in contact with, yes.
Q. What was the financial reasons you referred to a minute ago?
A. That I recall, issues regarding the cost of on-site development on the groves which would be improvements to the irrigation systems, to allow distribution of wastewater,

storage facilities on-site, cost of the wastewater itself that Florida Cities was interested in charging the grove owners for the actual wastewater. Those sort of issues.

Q. Isn't it a fact that the Public Service Commission mandated that Florida Cities charge for effluent?

MR. JACOBS: Objection, calls for speculation, facts not in evidence.

THE COURT: Well, I don't know whether he knows that or not.

BY; MR. BULLOCK:

Q. Do you know whether or not Florida Cities was mandated to charge for its effluent by the Public Service Commission?

A. I would say I don't know whether or not the Florida Cities Public Service Commission -- I'm not aware that there was something that would have prevented Florida Cities from providing the effluent to the grove owners at no cost, if they had been willing to assume that cost.

Q. Okay.

The answer to the question is, you don't know whether or not the EPA mandated that Florida Cities charge for its effluent; yes or no?

A. No, I'm not aware of anything that specifically required Florida Cities to charge.

Q. So, if they did require that, it would be news to you?

THE COURT: Well, go on to your next question.

Let's pause for change of Reporters.

(Thereupon, there was a change in Court Reporters.)

Page 179

CONTINUED CROSS-EXAMINATION
BY MR. BULLOCK:
Q. Isn't it true that Florida Cities actually initiated an eminent domain proceeding to obtain grove land for spray irrigation in the Barefoot Bay area?
A. Yes, I am aware that such an action was taken.
Q. Isn't it true that a group of adjacent landowners intervened in that proceedings and appealed the issue to the Florida Court of Appeals?
A. Yes, I am aware of that.
Q. And didn't that stay the eminent domain proceedings?
A. Yes, it did.
Q. Isn't it true that FDER continued to authorize the company to discharge surface water and directed that the company continue to look at other alternatives following the eminent domain proceeding, if you know?
A. I believe that's true.
Q. All right. Let's turn to the deep well injection option. You testified that Florida Cities did not look into deep well injection seriously until 1989; is that correct?
A. Yes.
Q. And, again, we've -- you've testified earlier that you don't have any particular experience with deep wells in the state of Florida, correct?
A. That's correct.

Page 180

Q. Are you familiar with the permitting process for deep wells vis-a-vis Brevard County?
A. Just to the extent that I am from this case.
Q. And what Brevard County requirements are you aware of?
A. Well, I am aware of the requirement specifically to go through the water district.
Q. All right. Would there be county-specific permits as opposed to the water district permits to your knowledge?
A. That I can't say.
Q. Have you researched the performance of other deep wells in the Brevard County area?
A. To the extent that I followed that issue through the documents that have been available.
Q. Have you performed any independent research yourself?
A. On?
Q. Deep well performance in Brevard County.
A. I had one conversation with a Florida Department of Environmental Regulation employee with regard to performance of wells.
Q. And who was that?
A. I cannot recall the name offhand. That was some time ago.
Q. Have you reviewed the operating data from any other deep well in Brevard County?
A. No, I've not.

Page 181

Q. Isn't it true that the St. Johns River Water Management District would govern permitting of deep wells in Brevard County?
A. They have an involvement in it.
Q. Okay. Did you interview anyone at the St. Johns River Water Management District about their policies on deep well injection?
A. No, I did not.
Q. All right. Didn't Florida Cities actually apply for permits for deep well?
A. Yes, they did.
Q. And isn't it true that Florida Cities could not have proceeded with the construction of deep wells without the permission of the St. Johns River Water Management District?
A. That's my understanding.
Q. The NPDES permit violations at issue, let me moye back to those just a second. Between the date of those violations -- excuse me. Let me start over again.
Were there any enforcement actions taken by EPA on those violations prior to the Barefoot Bay facility being added to this lawsuit in April of 1995?
A. Not that I can recall, not that I'm aware of.
Q. Mr. Klingenstein, I have a few brief questions back on Waterway Estates that I omitted, and I will move through those very briefly.

Page 182

One of the other options which you had identified was a connection to the North Fort Myers Utility?
A. Yes.
Q. All right. And in your report -- excuse me. Let me add -- North Fort Myers' capacity is based upon spray fields and deep well injection; is that correct?
A. Yes, that's correct.
Q. All right. Do you know how many deep wells North Fort Myers had?
A. No, I'm not aware of the exact number.
Q. Do you know the cost of connecting to North Fort Myers?
A. I've seen documents that have included various discussions of what the costs might be.
Q. Have you yourself performed any calculations about the cost of connection to the North Fort Myers compared to the actual construction of the AWT plant?
A. No, I've not.
Q. In the 1981 and 1990 studies -- let me refer you to the 1990 waste load allocation study, which is in evidence as Plaintiff's 422. Let me refer you specifically to page 17, the third paragraph. The last sentence of the third paragraph reads, "This is the same recommendation made in the 1981 model document (WQTS, Volume II, Number 52)."
Isn't it true that the recommendation that they were referring to is moving the point of discharge? Is that

Page 183

correct?
A. Yes.
Q. And the term used in this 1990 study is "recommendation" and not "requirement"; isn't that correct?
A. The document uses the word "recommendation."
MR. BULLOCK: Your Honor, that completes my cross.
There are about four or five documents which we would request to move into evidence which we've discussed: Florida Cities Number 23, which is the NPDES Permit Denial in '86.
No objection?
MR. JACOBS: No objection.
THE COURT: All right. It will be received.
(Florida Cities Exhibit Number 23 received in evidence.)
MR. BULLOCK: The next one, Your Honor, would be 33, which is the letter re: Lee County Waterway Estates temporary operating permit.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: Okay. Be received.
(Florida Cities Exhibit Number 33 received in evidence.)
MR. BULLOCK: 52, which is the amendment to Section 309, I believe you ruled on that already, and the Government objected and then withdrew its objection.

Page 184

MR. JACOBS: I agree, Your Honor.
THE COURT: Okay. Be received.
(Florida Cities Exhibit Number 52 received in evidence.)
MR. BULLOCK: 142, which is a letter regarding the Carrollwood NPDES permits requesting relief in the permit, I believe you had already ruled on that as well.
MR. JACOBS: (Indicates affirmatively.)
MR. BULLOCK: Your Honor, I believe that the record will indicate that you already admitted these, although Ms. Cole indicated to us that she had not written them down or didn't have --
THE COURT: 142 was not actually offered. I don't know whether it was an oversight.
MR. BULLOCK: I'm sorry. It's my fault, then, Your Honor, and I would offer it at this time.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: It will be received.
(Florida Cities Exhibit Number 142 received in evidence.)
MR. BULLOCK: And 192, the final issue of the NPDES permit for Barefoot Bay.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: Okay. It will be received.
(Florida Cities Exhibit Number 192 received in

Page 185

evidence.)
MR. BULLOCK: The only other matter, Your Honor, we now have copies of Exhibit 132, which was the Hillsborough County consent order. Mr. Jacobs had raised the question that the copy he had seen earlier didn't have -- was not executed. We now have copies of all of it sufficient for everyone of the actual document. We'd just like to substitute that.
THE COURT: All right. That's 132.
Okay. Mr. Bullock, are you through?
MR. BULLOCK: I am, Your Honor.
THE COURT: Okay. Mr. Hird?
MR. HIRD: Thank you, Your Honor.
If we may, I'd like to retrieve my copy of the report.
THE COURT: Yes, sir.
MR. HIRD: But we have a substitute copy we will give to the law clerk.
THE COURT: All right. Thank you.
CROSS-EXAMINATION
BY MR. HIRD:
Q. Good afternoon, Mr. Klingenstein.
A. Good afternoon.
Q. You testified when questioned by Mr. Bullock that SAIC's annual billings to EPA and DOJ for enforcement matters was approximately $1 million in the last two years; is that

Page 186

correct?
A. Approximately a million dollars each year I believe was the testimony.
Q. I'd like you to look at the first page of your resume in the bottom paragraph. Do you see a reference there, sir, that billings were approximately $2 million per year?
A. Yes. That was for those two years.
Q. Thank you. Now, Mr. Klingenstein, if I -- on pages 4 and 7 -- or pages 4 and 5 of your resume you describe your experience with treatment system design and operation; is that correct?
A. Yes.
Q. And you describe being involved in the construction of three facilities on those two pages; is that correct?
A. Yes.
Q. And those include, one, metal finishing facility and, two, electroplating facilities; is that correct?
A. Yes.
Q. Now, the pollutants that come from metal finishing and electroplating facilities are different in nature and kind than those that come from domestic sewage facilities; isn't that correct?
A. Yes.
Q. And the treatment technology used to remove those pollutants from the waters is completely different from that

Page 187

that's used for domestic sewage; is that correct?
A. There are certainly significant differences.
Q. Well, you use principally ion exchange to remove metals from these facilities. Wouldn't that be correct?
A. You could. You --
Q. And you don't use ion exchange --
THE COURT: Wait. Wait. Wait.
MR. HIRD: I'm sorry.
THE COURT: Had you finished?
THE WITNESS: You could use ion exchange. You could use precipitation technologies. There are a variety of technologies that could be used.
BY MR. HIRD:
Q. And those technologies are not used with domestic wastewater sewage; is that correct?
A. Typically not.
Q. Now, Mr. Klingenstein, you identified yourself as an engineer when you began your examination; is that correct?
A. Yes.
Q. And you were qualified as an expert in wastewater treatment; is that correct?
A. Yes.
Q. You don't have any training as a psychiatrist or a psychologist, do you?
A. None whatsoever.

Page 188

Q. And you're not an expert here testifying here about human behavior or human motivation, are you?
A. That's not my understanding.
Q. Okay. I'd like you to turn to page 9 of your report, if you would.
A. I'm sorry. Which page?
Q. Page 9. Do you have that page, sir?
A. Yes, I do.
Q. Could you read the first full paragraph -- I'm sorry. It's the second full paragraph beginning "furthermore."
A. "Furthermore, FCWC failed to avail themselves of the opportunity to connect to the North Fort Myers Utility Company, NFMU, an available option which would have allowed cessation of discharge prior to August 1988. Correspondence after this date indicates that FCWC decided that the plant upgrade and relocation of the outfall were the best choice nominally for cost reasons.
"However, the assertion that cost prevented FCWC from connecting to NFMU is not consistent with the record. NFMU indicated that it would provide service to Waterway Estates for 3.6 million or less (competitive with FCWC's actual costs on the upgrade and outfall extension)."
THE COURT: What page are we on?
THE WITNESS: I'm sorry. Page 9 of the report, sir.
MR. HIRD: Page 9, Your Honor, of his report.

Page 189

THE COURT: And what paragraph?
MR. HIRD: The paragraph that begins "furthermore." I believe it's the second.
THE COURT: Okay. Okay. Go ahead.
THE WITNESS: "A November 27, 1991 FCWC memo from Gordon to Levy provides an indication of another possible motivation for FCWC's rejection of NFMU's offer. NFMU's financial health and need to sell capacity was discussed, and a recent balance sheet for the utility was attached. It appears that FCWC did not want to yield its customers to its competitor."
BY MR. HIRD:
Q. Now, here you're writing about Florida Cities' motivation, aren't you? Isn't that correct? You're writing about what you consider Florida Cities' motivation to be?
A. I would be offering an opinion there as to a potential reason for why such a connection was not made.
Q. And you've just testified previously that you're not trained to speak as an expert about motivation; is that correct?
MR. JACOBS: He said he wasn't a psychiatrist.
THE COURT: Well, all right. Let's move on. I've got that point.
MR. HIRD: All right.
BY MR. HIRD:

Page 190

Q. Well, let me explore this issue with you. I'd like to have you take a look at Government's Exhibit Number 466, if you would. And at the same time would you get a copy of Avatar Holdings' Exhibit Number 3, please?
THE COURT: I missed your last question, Mr. Hird. What was that?
MR. HIRD: I'm going to ask him questions, Your Honor, about Government Exhibit 466 and Avatar Holdings Exhibit 3.
BY MR. HIRD:
Q. Do you have those in front of you, sir?
A. I have one of them. I'm sorry. And the other one was your Exhibit 3?
Q. Do you have Exhibit 466 in front of you, sir?
A. I have 466 in front of me, and I have your Exhibit 3.
Q. Okay. First I'd like to ask you whether 466 is the November 27, 1991 memo that you're referring to on page 9.
A. Yes, it is.
Q. And then looking at Exhibit 3 I'd like to ask you whether the first three pages of Avatar Holdings Exhibit 3 correspond to Exhibit 466 from the Government.
THE COURT: You mean are identical?
MR. HIRD: Are identical.
THE WITNESS: They certainly appear to be.
MR. JACOBS: Just for the record, they have

Page 191

different Bates numbers, but I'll agree in substance they are. The Bates numbers may or may not --

BY MR. HIRD:

Q. Now --

MR. JACOBS: I'm sorry. Also on the top of Avatar 3 there's a handwritten notation "file."

THE COURT: All right. Go ahead.

BY MR. HIRD:

Q. Now, Mr. Klingenstein, this memo to which you refer to is written on November 27, 1991. That's correct?

A. Yes.

Q. I believe you testified that the negotiations between Florida Cities and North Fort Myers occurred in mid-1988; is that correct?

A. In the late 1980s.

Q. So this is written two to three years after those negotiations were over.

THE COURT: Is that correct?

THE WITNESS: Yes.

BY MR. HIRD:

Q. Now, you offer your opinion that because this document 466 includes references to North Fort Myers' financial health and the need to sell capacity and included a balance sheet that Florida Cities was concerned that it did not want to yield its customers to its competitors; is that right?

Page 192

A. Yes.

Q. I'd like you to look at the first page of 466 and the corresponding first page of Exhibit 3. Do you see a line that says "ref"?

A. Yes.

Q. And subpart B in that says, "B, memorandum dated 11/20/91, Sharp to Wilkov"?

A. Yes.

Q. Okay. Could you turn to the fourth page of Avatar Holdings Exhibit 3? Do you have that, sir?

A. Yes, I do.

Q. Does that appear to be a memorandum from Peter Sharp to Lawrence Wilkov dated November 20, 1991?

MR. JACOBS: Objection, lack of foundation. He hasn't established that the witness has seen this document yet.

MR. HIRD: Your Honor, this document -- I don't believe the witness has. However, this document comes from Mr. Levy's files and is a business record.

I am going to be using it for Mr. Klingenstein in the nature of impeachment, so therefore I think I can appropriately question Mr. Klingenstein about it. I will be offering it through Mr. Levy.

THE COURT: Well, how do you plan to impeach the witness on the basis of a document that he's not seen before?

Page 193

MR. HIRD: I am attempting to show him that there is another cause that would supplant his opinion as to why the Florida Cities -- why this memorandum was written and that this memorandum has nothing to do with the cause that he attributes to it.

THE COURT: Well, I don't know -- I think maybe you might be able to ask him questions of a hypothetical nature at this point.

MR. HIRD: All right, Your Honor.

THE COURT: But I'm going to sustain the objection to the document at this point.

MR. HIRD: Then I will move to a hypothetical.

BY MR. HIRD:

Q. Let me ask you to assume that sometime shortly before the November 27th, 1991 letter was written that North Fort Myers Utility had approached Avatar Holdings and expressed an interest in Avatar Holdings or one of its subsidiaries to purchase North Fort Myers Utility, either the whole thing or an interest.

Can you make that assumption with me?

A. If you ask me to, yes.

Q. Now, if you make that assumption, wouldn't it be reasonable for a memo to be prepared that discussed North Fort Myers Utility's financial health?

A. Yes.

Page 194

Q. And wouldn't it be reasonable to discuss the need to -- North Fort Myers Utility's need to sell capacity?

A. Yes.

Q. And wouldn't it be reasonable to include a balance sheet?

A. Yes.

Q. And wouldn't this provide another explanation different from the one in your report as for why the November 27th, 1991 memo was written?

A. Yes.

Q. All right. Turning back to the November 27th, 1991 memo -- or, rather, for a moment let's turn back to your report. I believe when Mr. Bullock questioned you, he asked you whether you compared the cost of connecting to North Fort Myers to the cost of building an upgrade and the outfall extension; is that correct?

A. Yes, I believe he asked me that.

Q. And you said that you didn't compare it.

A. I believe I said I had not carried out my own detailed independent analysis of that.

Q. I see. But in this paragraph you seem to indicate that you believe the two costs were comparable; is that correct?

A. I believe I was referring to a piece of correspondence that had specifically offered a summation of what the cost would have been.

Q. Do you know if that summation of the cost included tax

Page 195

gross-up?
A. No, I do not.
Q. Do you know what tax gross-up is?
A. No, I do not.
Q. Now, if you take a look at Exhibit 466, which has been referenced in your letter – in your report, rather, 466, do you see in the middle of the middle paragraph on the first page the phrase "the tax gross-up impact made the connection uneconomic compared to upgrading our existing plant"? Do you see that phrase?
A. Yes, I do.
Q. And you were unable to interpret that phrase because you didn't know what tax gross-up is; is that correct?
A. I interpreted it to the extent that it was an indication that there was some tax-related cost that was being identified as having had an impact on the cost.
Q. And further down in 466 is the statement "being unable to reach an agreement that made economic sense – the gross-up was the killer – Florida Cities turned its attention to upgrading its existing wastewater treatment facility." Do you see that?
A. Yes, I see that.
Q. So at least in the view of this letter the tax gross-up was something that made a difference in terms of Florida Cities' decision here; is that correct?

Page 196

A. Apparently in the view of the writer.
Q. But you don't know what difference it was and how it impacted the comparative costs?
A. Not at this point, no.
Q. I'd like you to turn to the second page of 466. That shows the balance sheet for National Fort Myers Utilities (sic) that you referred to in your report; is that correct?
A. Yes.
Q. And it shows a negative number for equity capital of $3,995,000 in the year 1990; is that correct?
A. It appears to, yes.
Q. And moving down the page, in the year 1990 it shows a net loss of 1,479,000; is that correct?
A. Yes, it does.
Q. And turning to the last page of 466, there is the statement – in the paragraph beginning "obviously," there is the statement, "Obviously without a bailout by the county, North Fort Myers Utilities' future appears bleak." Do you see that?
A. Yes, I do.
Q. Now, in considering whether to hook up to North Fort Myers in 1988, would it have been reasonable for Florida Cities to consider the financial condition of North Fort Myers?
A. Yes.

Page 197

Q. And it would not be a good solution for Florida Cities to hook up to a facility that was in danger of floundering because of financial reasons; is that correct?
A. Well, unless their hooking up made a difference in the condition of that entity.
Q. Now, you have talked about a Mr. Ken Kwan at several times during your examination. Mr. Kwan is the EPA enforcement lead for this case; is that correct?
A. Yes.
Q. And he is the – he's an engineer by training; isn't that correct?
A. Yes, I believe that's so.
Q. And he is the person who is responsible on behalf of EPA for making the technical decisions with respect to this case; is that correct?
A. I wouldn't want to characterize who makes the decisions for EPA.
Q. But he is the staff -- the front-line person, the first-line person with respect to technical issues in this case; is that correct?
A. He's been my primary point of contact in this case within EPA.
Q. Are you testifying under a contract with EPA or the justice department for this case?
MR. JACOBS: Objection, relevancy.

Page 198

THE COURT: Overruled.
THE WITNESS: EPA.
BY MR. HIRD:
Q. And do you have a contract officer in connection with that contract?
A. Within our company or within EPA?
Q. Within EPA.
A. Yes.
Q. And do you have a project officer within EPA with respect to this particular task order?
A. Yes.
Q. And is Mr. Kwan the project officer?
A. No.
Q. Now, I'd like to have you take a look at Exhibit 494, if you would.
MR. HIRD: This is Government Exhibit 494, Your Honor.
THE COURT: Yeah. I'm assuming that you don't have 494 exhibits.
MR. HIRD: We have only one book, Your Honor.
THE COURT: Yeah.
MR. HIRD: Do you have that in front of you, Your Honor?
THE COURT: I have 494.
THE WITNESS: Yes, I do too.

Page 199

BY MR. HIRD:
Q. This is one of the documents you relied on in your report, is it not?
A. I've seen this document, yes.
Q. Okay. This document refers to a meeting between EPA and the Department of Justice on one hand and representatives of Florida Cities and Avatar Utilities on the other, does it not?
A. Yes, it does refer to a meeting that took place.
Q. And this meeting took place on December 22nd, 1992; is that correct?
A. Well, I believe the meeting took place on December 16.
Q. I'm sorry. It took place on December 16th, and the memo is dated December 22nd; is that correct?
A. Yes, that appears to be correct.
Q. Okay. Now, at this meeting representing the Government was Mr. Jacobs; is that correct?
A. Representing the U.S. Department of Justice apparently, yes.
Q. And representing EPA was someone named Gwen Eason; is that correct?
A. Yes.
Q. Is that the same person as Gwen Fitz-Henley?
A. Yes.
Q. Also representing the Government at this meeting was Mr. Ken Kwan.

Page 200

A. Yes, that appears to have been correct.
Q. And this was a meeting about the Waterway Estates claims in this case; is that correct?
A. Yes.
Q. Okay. Now, at that meeting, if you go down to the first -- to the paragraph that has one line, about the middle of the first page, it says, "Ms. Eason stated the violations were as follows." Do you see that?
A. Yes.
Q. And those are essentially the Waterway Estates violations that are in this case; is that correct?
A. Without matching exact dates, yes.
Q. Well, it's actually a little broader because the alleged violations here start June 1988 and the complaint starts November 1, 1988; is that right?
A. I believe so.
Q. And then if you go down the next block, it says, "Ms. Eason stated the penalties are based on the following factors." Do you see that?
A. Yes.
Q. And the first factor is seriousness of violation; is that correct?
A. Yes.
Q. And, Mr. Klingenstein, you're here testifying about seriousness of violation; isn't that correct?

Page 201

A. That's correct.
Q. Now, on the next page you see a calculation of various dollar figures; is that correct?
A. Yes.
Q. And I'd like you to go down way towards the bottom of the calculation. You see a figure called gravity component seriousness.
A. Yes.
Q. Do you see that?
A. Yes.
Q. And what figure is that?
A. $407,000.
Q. And if you go back up to the heading of the paragraph, that states, "Mr. Kwan showed the calculations pertaining to the settlement model as follows"; is that right?
A. I'm sorry. Where is this exactly?
Q. Up at the --
A. Oh, I'm sorry. Just above that.
Q. Yeah.
A. Yes, I see that.
Q. So Mr. Kwan expressed at this meeting that the seriousness of the violations was worth to the agency $407,000; is that correct?
A. That's what this memo reflects.
Q. Now, you were here when Mr. Jacobs gave his opening

Page 202

argument on Monday?
A. Yes, I was.
Q. And Mr. Jacobs asked this Court for $1.9 million with respect to the claims of unpermitted discharge. Do you recall that?
A. Yes, I do.
Q. And that's almost five times the $407,000 figure in this letter.
THE COURT: Well, don't examine the witness on the basis of an opening statement by counsel. I won't permit that.
MR. HIRD: All right.
Your Honor, I have no further questions of the witness.
THE COURT: Redirect?
MR. JACOBS: Very briefly, Your Honor, with your permission.
THE COURT: Don't say "very briefly" unless you mean it now.
MR. JACOBS: I mean it, Your Honor.
THE COURT: Oh, good.
MR. JACOBS: First thing this morning we spoke of a stipulation. And we did submit it to Ms. Cole, but I understand that we have not technically moved into evidence all of the exhibits in the joint stipulation that has been

Page 203

signed by all three parties and submitted to the Court. And I'd like to do so at this time.

THE COURT: All right. Okay. I have the joint stipulation which I have reviewed, and the Court will permit over the objections which are reflected in the joint stipulation as Codes 1, 2, and 3 the exhibits that are set forth in Attachment A to that joint stipulation. I don't think that we will need to go through verbally all of those. I think you've got a record of that here in your joint stipulation.

And Ms. Cole can -- she's not here right now, but I'll instruct her to make note of that on the -- where she records the exhibits that are received.

All right.

REDIRECT EXAMINATION

BY MR. JACOBS:

Q. Mr. Klingenstein --

THE COURT: Now, that's of course with the exception of -- well, those exceptions are noted in the last paragraph of the joint stipulation which we've already addressed.

All right. Go ahead.

BY MR. JACOBS:

Q. Mr. Klingenstein, you spent some time with Mr. Bullock on the subject of when Florida Cities was on notice of the need to upgrade the plant and move the outfall, and you went

Page 204

through some documents with him. In your opinion, sir, when was Florida Cities Water Company first on notice of the need to upgrade the plant at Waterway Estates, that is, and move the outfall?

A. Well, in my opinion, Florida Cities' first indication that they would need to do something about that treatment plant was when in fact the 1981 waste load allocation study was completed and a zero waste load allocation was found for the plant based on the assumption that it was going to tie into the Cape Coral Regional Facility.

When that regional facility, the arrangement in effect fell apart, in my opinion Florida Cities should have been on notice that -- given that it was clear from the document that in fact no waste load allocation would be found to exist at the existing point of discharge for the existing level of treatment, some action would need to be taken. So back in that time frame, in the time frame when that fell apart, 1982, 1983.

Q. I see. Now, the waste load allocation study was what year?

A. 1981.

Q. And then continuing down the time line, so to speak, when did the concept of the regional plant fall through?

A. The documents that I've seen would seem to indicate that it was in the 1982-1983 time frame when that arrangement fell

Page 205

apart apparently due to cutbacks in federal funding.

Q. Now, assuming for whatever reason they were not on notice in 1981 or 1982 or 1983 of the need to upgrade the Waterway Estates plant and move the outfall, what milestone, if you will, would you next identify in terms of the notice that they received of the need to upgrade the plant and move the outfall?

A. Well, certainly a very formal notice would be the tentative denial of the permit.

Q. And would that be Florida Cities Exhibit 23?

A. If I could refer to it.

Yes, and that's dated June 30th, 1986.

Q. Very well. And was there any additional notice after that to Florida Cities that they needed to upgrade the plant and move the outfall?

A. Well, certainly they also received the formal denial at the end of the year that became effective in January of 1987.

Q. And would that be Florida Cities Exhibit 27?

A. Yes, which is dated December 8, 1986. Both of those documents indicate that there is no permit either going to be issued or issued for the discharge at that particular location for that particular discharge. The logical conclusion is that an additional -- rather, an alternative point and type of discharge is necessary or zero discharge is necessary.

Q. Now, Mr. Bullock also went through a series of

Page 206

administrative orders, known as AO's, with you at Waterway Estates, the first of which was Defendant's or Florida Cities' Exhibit 28. Would you take a look at that, please, sir?

A. Yes. That's dated May 11, 1987.

Q. Directing your attention to the second page of the administrative order itself, which is the third page of the exhibit, would you tell me what, if anything, the agency ordered Florida Cities to do with respect to its discharge?

A. Under item number 1, it specifically says that "Respondent shall cease discharging pollutants to waters of the United States at the earliest date practicable but not later than September 30, 1988. The Respondent shall report on progress toward meeting this compliance date as follows."

And then a two-column table of activities and due dates is provided that provides for a series of progress reports, the start of construction, completion of construction, and then the meeting of the final requirements to cease discharge.

Q. And that means cease discharge at the present location; is that correct?

A. Certainly there would not be anything that would preclude the application for the right to discharge at another location or with another type of discharge.

MR. BULLOCK: If the Court please, objection. The document speaks for itself as to what it means, and I would

Page 207

object to his interpretation which on the face of it appears to be outside of the scope of the meaning of the language of the document.

THE COURT: I'll overrule the objection.

BY MR. JACOBS:

Q. Had you finished your answer, Mr. Klingenstein?

A. Yes.

Q. Now, in your opinion, sir, was this order in schedule set forth in paragraph 1 of the administrative order, Florida Cities Exhibit 28, complied with?

A. No, it was not.

Q. Directing your attention to paragraph 2 of the same exhibit.

A. On page 3?

Q. Yes, sir. Does that paragraph give any indication with respect to whether this administrative order can be considered an NPDES permit?

A. Yes, it specifically reads, "This should in no way be considered a permit to discharge."

Q. Now, if the paragraph continues that "The Respondent does discharge to the waters of the United States in violation of the act," this administrative order provides that what needs to happen?

A. "The Respondent's discharge of treated wastewater shall at least comply with the effluent limitations, monitoring

Page 208

schedule and other requirements contained in its previous permit."

Q. Now, Mr. Bullock also directed your attention to a subsequent administrative order, Defendant's or Florida Cities' 195. Can I direct your attention to that administrative order, please?

THE COURT: Don't give me another one, please. I'll just do my best. Thank you very much, though.

THE WITNESS: Yes.

BY MR. JACOBS:

Q. First of all, is there an indication in Defendant's Exhibit 195, which is the September '89 administrative order, as to whether or not that administrative order constitutes an NPDES permit?

A. Yes, on page 4 there is the same language in paragraph 2 that this should in no way be considered a permit to discharge.

Q. And is there also a construction schedule set out in this administrative order?

A. Yes, on page 3 under paragraph number 1 there is a schedule listed at the bottom of the page, again a two-column table activities and due dates with start construction on May 1, 1990, complete construction and cease discharge at the current location August 1, 1991, and comply with NPDES requirements at permitted location by October 1, 1991.

Page 209

Q. And were any of these requirements violated?

A. Yes. Construction of the complete upgrade was not completed by the October 1, 1991 date.

Q. You mean the compliance with the NPDES permit requirements was not completed by October 1, 1991?

A. By October 1, 1991. The completion of all construction was not completed by August 1, 1991.

Q. Those are two separate requirements; is that correct?

A. Yes.

Q. And it's your testimony that both were violated?

A. Yes.

Q. Now, finally Mr. Bullock brought to your attention Defendant's or Florida Cities' Exhibit 52, the one-page, as it were, administrative order which substituted new dates for some of these milestones.

Again, is there a reference in this particular order as to whether this order excuses compliance with the Clean Water Act --

A. I --

Q. -- or an NPDES permit?

A. I'm sorry. I don't have it in front of me.

Q. I'm sorry. This is Defendant's 74. Oh, it has two -- I'm sorry. It's Defendant's 52 for trial purposes. It was Deposition 74.

A. Yes.

Page 210

Q. And what is the indication in that respect, sir?

A. There is again a construction schedule provided, again a two-column table showing activities and due dates, start construction February 1, 1989, complete construction May 1, 1990, and meet final requirements by ceasing discharge November 1, 1990.

Q. And these are new dates, are they, substituted dates for the previous order? Is that correct?

A. For the order that preceded this as opposed to the order that we just looked at.

Q. Is there one we haven't looked at to your knowledge that was in between?

A. Well, I'm sorry. Could we refer back to the previous one? What was the number of the previous one?

THE COURT: Is that 195?

MR. JACOBS: 195. Thank you, Judge.

BY MR. JACOBS:

Q. And before that we referred to 28 so perhaps I could rephrase the question and ask you to testify as to which previous administrative order this one-page administrative order amends.

A. Well, this one would amend 87-085.

Q. By setting out later dates; is that correct?

A. Setting out later dates, yes, as opposed to the dates that were in the --

Page 211

Q. Now, while it sets out later –
THE COURT: Wait. Wait. Wait.
Were you through?
THE WITNESS: Just as opposed to the dates that were in the one that we had previously reviewed.
MR. JACOBS: Sorry.
BY MR. JACOBS:
Q. Now, looking at the bottom of 52 again, you said the order sets out new dates. Does the order excuse compliance with the previous order with the NPDES permit or with the Clean Water Act?
A. Paragraph 6 notes that "Nothing in this order shall be construed to prevent further enforcement of the violation stated herein, nor shall it preclude institution of administrative penalties or civil litigation based on violations of the Clean Water Act."
Q. Thank you. Moving on to Carrollwood, Mr. Bullock called your attention to Exhibit 201, which were these notes written by an EPA staffer describing the history of compliance and/or lack thereof at Carrollwood. I'd like to direct your attention to the bottom of page 2 of the exhibit.
THE COURT: Now, you're talking about Defendant Florida Cities 201, correct?
MR. JACOBS: Yes, sir. Thank you.
BY MR. JACOBS:

Page 212

Q. The bottom of page 2, end of paragraph 6, of Defendant Florida Cities 201, "An application was submitted to DER for a construction of an Advanced Wastewater Treatment, AWT, upgrade in November 1989. In July 1990 DER issued Respondent a construction permit for the construction. On July 31st, 1991 Respondent submitted an application for an NPDES permit. EPA plans to issue an NPDES permit to the Respondent."
A. Yes, I see that.
THE COURT: Did he read that correctly?
THE WITNESS: Yes.
THE COURT: Okay.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, can you tell me whether you have an opinion as to whether one could draw an inference from that statement that the NPDES permit that EPA planned to issue was based on the construction of an AWT plant by Florida Cities Water Company?
A. Yes, that's the inference.
Q. Now, directing your attention to Florida Cities Exhibit 97, I believe Mr. Bullock directed your attention to page 2 of the exhibit to subparagraph A. I'd like you to look at subparagraph D, as in "dog," and E, as in "Ethel."
Would you read D, first of all, into the record?
A. "If an agreement with Hillsborough County is not made by the deadline in B, the permittee shall submit a construction

Page 213

application to provide an alternate effluent disposal method by July 1, 1984." Paragraph –
Q. Mr. – I'm sorry?
A. Paragraph E –
Q. Let me stop you at D, if I may. Now, do you know whether an agreement was reached between Florida Cities Water Company and Hillsborough County by July 1st, 1984?
A. Yes, I am aware that no agreement, such agreement was reached.
Q. In fact, when was the agreement reached?
A. The agreement was not reached until I believe mid-1991, the year prior to the disconnection, or, rather, the connection to Hillsborough County and the taking off line of the Carrollwood plant.
Q. So is it a fair inference from this state document that under the circumstances the permittee – that is, the state of Florida Cities Water Company – needed to submit a construction application to provide an alternate effluent disposal method by July 1, 1984?
A. That would appear to be the requirement of this modification of the permit.
Q. And now would you take a look at subparagraph E, as in "Ethel"?
A. Yes.
Q. And would you read that into the record, please?

Page 214

A. "The discharge to Sweetwater Creek shall cease no later than January 1, 1985."
Q. When did the discharge to the Sweetwater Creek cease?
A. When the connection was made to Hillsborough County in very early 1992.
Q. Seven years later?
A. Yes.
Q. Now, Mr. Bullock has brought to your attention a couple of documents reflecting correspondence between Florida Cities Water Company and the Hillsborough County with respect to a potential connection.
Based on your testimony yesterday, approximately how many pieces of such correspondence did you review in addition to the few that Mr. Bullock called to your attention?
A. I can't recall the exact number, but it's something between a half dozen and a dozen I would say.
MR. JACOBS: One moment, Your Honor.
THE COURT: Okay.
BY MR. JACOBS:
Q. Mr. Klingenstein, based on your review of the correspondence between Florida Cities and Hillsborough County over the span of the seven or eight years, can you tell me whether there was any commitment given by Hillsborough County to hooking up the Florida Cities Carrollwood system?
A. Based on my review of the correspondence, I didn't see

Page 215

what I would have considered to be anything approaching a commitment until 1991 when in fact an agreement was reached.
Q. Thank you. Did you see any documents that suggested that there could actually be a no guarantee of a connection?
A. Certainly there were a couple of documents, couple of letters that indicated concerns on Hillsborough County's part about being able to provide capacity certainly by a particular date.
Q. Did you see any indication that Hillsborough County encouraged Florida Cities Water Company to pursue alternative means of providing wastewater service given the deadline imposed on them by EPA?
A. No. Certainly there was at least one mention in a Hillsborough County letter that perhaps Florida Cities should pursue other options. And, frankly, I took the fact that Hillsborough County apparently lost one of Florida Cities' applications and that it had to be resubmitted some period of time later as an indication that they were not strongly encouraging such a connection.
Q. Directing your attention to Government Exhibit 263, would you look at the second full paragraph? I take it you've seen this document before, sir?
A. Yes, I have.
Q. Would you look at the second full paragraph, please, and read that into the record?

Page 216

A. "We understand that the Department of Environmental Regulation has requested that your facility be taken out of service and wastewater disposal service provided by Hillsborough County. However, we do not see this as a realistic possibility at this time or in the near future."
THE COURT: Was that not previously read?
MR. JACOBS: I don't think that paragraph was.
THE COURT: Okay. It just sounded kind of familiar.
MR. JACOBS: The document looked a little --
THE COURT: I don't want you to repeat anything. Okay.
Did you read that?
THE WITNESS: I don't know, Your Honor. I've read so much.
THE COURT: Okay. Go ahead. Move on.
BY MR. JACOBS:
Q. Directing your attention now to Government Exhibit 278 and in particular to page 2, have you previously examined this exhibit, sir?
A. Yes, I have.
Q. And in paragraph 2 of page 2 of Exhibit 278, does the indication or suggestion appear from Hillsborough County that Florida Cities pursue alternative means other than connecting to Hillsborough County?
A. There is a notation "the department would have no

Page 217

objection to Florida Cities pursuing alternative means of providing wastewater service for this development given the deadline" --
THE COURT: Wait. Wait. Wait.
THE WITNESS: Oh, I'm sorry.
THE COURT: A little fast for the Reporter.
THE WITNESS: Let me read that over.
"The department would have no objection to Florida Cities pursuing alternative means of providing wastewater service for this development given the deadline imposed on them by EPA."
BY MR. JACOBS:
Q. And what deadline was that, sir, if you know?
A. I'm sorry. What date?
Q. What deadline?
A. Oh, the deadline to cease discharge to the creek.
Q. Under an administrative order?
A. Yes.
Q. And do you recall what that deadline was?
A. I can't recall at this point which deadline.
Q. Now, Mr. Bullock also brought to your attention the permit application for the Carrollwood facility, did he not? I believe that was Defendant Florida Cities 126.
And I believe you said you've seen that previously; is that correct?

Page 218

A. Actually I don't -- I couldn't say whether I had seen that as I recall.
Q. I stand corrected. Are you familiar with reviewing these types of applications?
A. I'm familiar with these types of applications, yes.
Q. Okay.
A. I've not reviewed them for EPA in terms of submitted, but I'm familiar with reviewing them in the course of working with facilities.
Q. Very well. Directing your attention to the fifth page of the exhibit -- again, this is Defendant Florida Cities 126, and this would be the fourth page of the application itself. Is there an indication in the application -- is there an indication by the Florida Cities Water Company as to whether it intends to upgrade the Carrollwood plant?
A. Yes. Under --
Q. And what is that indication?
A. Under item 6, "treatment system," which requests the applicant to describe briefly any treatment systems used or to be used. "In general an Advanced Wastewater Treatment, AWT, System designed to comply with the Grizzle-Figg legislation by employing the following treatment technologies: screening, grit removal, flow equalization, biological treatment using the Orbal oxidation ditch process, clarification, tertiary filtration, chlorination, de-chlorination, and post-aeration."

Page 219

Q. Now, to your knowledge, sir, an EPA NPDES permit was issued based on this application; is that correct?
A. Yes, it was.
Q. And, in fact, that permit did require treatment of the effluent to AWT standards; is that correct?
A. Yes, it did.
Q. And is it a fair inference to be drawn that the permit was actually issued based on the representation in the application that the plant would be upgraded to AWT standards?
A. Yes, that is.
Q. Now, Mr. Bullock also asked you to look at Defendant Florida Cities Exhibit 156, and I wonder if you could take a look at that now, please.
A. Yes.
Q. And I believe he referred you to a paragraph that reflected that the administrative order had been placed in an inactive status; is that correct?
A. Yes.
Q. Now, by the time the administrative order had been placed in an inactive status, had the NPDES permit already been issued?
A. Yes, it had.
Q. In fact, when did that permit take effect?
A. I believe July 1991.
Q. And this deactivation, as it were, took place when?

Page 220

A. I believe it's dated March 3rd, 1992.
Q. In your professional opinion, sir, was the administrative order previously issued superseded by the NPDES permit that took effect in November 1991?
MR. BULLOCK: If the Court please –
THE COURT: Just a moment.
MR. BULLOCK: I don't believe this is a proper subject for his testimony if he's testifying about what an agency action does or doesn't do. He's not an agency employee. He doesn't know the purpose or the motivation behind sending that letter. He can look at the letter, but in terms of why it was done, the basis of doing it, is outside the scope of expert testimony.
MR. JACOBS: Your Honor, it's rebuttal, and I think they've well opened the door in terms of interpreting EPA documents.
MR. BULLOCK: Your Honor, there is an EPA official here who's sitting –
THE COURT: I'll sustain the objection.
MR. BULLOCK: Thank you.
BY MR. JACOBS:
Q. Finally, turning to Barefoot Bay, Mr. Klingenstein, Mr. Bullock also directed your attention to Government Exhibit 145, the administrative order for the Barefoot Bay facility, and I wonder if you could take a look at that again, please,

Page 221

sir.
A. Yes, I have that.
Q. Thank you. Could you tell me if there's language in this administrative order as to whether or not it constitutes a permit?
MR. BULLOCK: If the Court please, Your Honor, he went into this on direct, and he's asked the exact same whether or not –
THE COURT: Sounds familiar to me. I'll sustain the objection.
MR. JACOBS: Very well.
BY MR. JACOBS:
Q. Mr. Klingenstein, in your professional opinion, what is the purpose of these administrative orders at each of the three facilities?
MR. BULLOCK: If the Court please, Your Honor, same objection.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Directing your attention now to Defendant Florida Cities Exhibit 192, I think you previously identified this as the Barefoot Bay permit issued in September of '91 effective November of '91; is that correct, sir?
A. Yes.
Q. Now, Mr. Bullock brought to your attention an internal

Page 222

EPA document as I recall dating back to '95 – or – sorry – '85 that related to permit requirements for the testing for total residual chlorine. Do you recall that?
A. Yes.
Q. Now, does the permit itself instruct the permittee on the methods that are to be used both to measure and to report total residual chlorine?
A. Yes.
Q. And where does the permit do that?
A. On page Roman numeral I-2 which is within part 1, and it's under item number 2.
MR. JACOBS: Thank you, sir. No further questions at this time.
MR. BULLOCK: If I promise to be brief, Your Honor, and live up to it?
THE COURT: Well, I – this is going to have to truly be legitimate recross. What are the areas that you want to –
MR. BULLOCK: Two questions, Your Honor. Excuse me. Two areas, Your Honor. I would like to address issues raised regarding the 1986 permit denial, the Administrative Order 87-085, and I want to ask him about – a question about a letter of correspondence with Hillsborough County regarding –
THE COURT: I'll permit limited recross, but let's be very brief.

Page 223

RECROSS-EXAMINATION

BY MR. BULLOCK:

Q. Mr. Klingenstein, Mr. Jacobs asked you about the tentative denial of the '86 permit application in Exhibit 23. There's nothing in either the tentative denial or -- isn't it true that there's nothing either in the tentative denial or the formal denial in Exhibit 27 which directs upgrade to AWT?

A. There's nothing that specifically directs upgrade to AWT, that's correct.

Q. Let me also ask you to look at 87-085, which is Exhibit 28. Mr. Jacobs asked you to read paragraph 1 on page 2. The language in paragraph 1, page 2, isn't it true that this language states that "the Respondent shall cease discharging pollutants to the waters of the United States at the earliest date practical but no later than September 30, 1988"? Is that correct?

A. Yes, that's the language.

Q. There is no requirement in this order to begin constructing an AWT facility, is there?

A. No, there's no specific requirement to construct an AWT.

Q. And, in fact, EPA for whatever reason did not believe that at this point in time Florida Cities had the authorization to discharge into the waters of the United States; is that correct?

A. My interpretation would be that they did not have

Page 224

authorization to discharge into the waters of the United States at a particular place.

Q. And where is that stated? Is that stated in the '86 -- excuse me. Let me withdraw that.

Can you point out where that is in the '86 tentative denial?

A. Well, a denial denies a permit application.

Q. Okay. Would --

A. I'm sorry. An applicant applies to discharge a particular wastewater flow with certain characteristics at a certain place.

Q. Well, the denial has to state a basis of a denial, does it not?

A. My experience, typically they do, yes, they do include a reason for denial.

Q. Is there a -- let me refer you to page 2 of Exhibit 23, page 2 of the actual -- of the fact sheet. Excuse me.

The basis for the final effluent limits and permit conditions do not say anything about -- isn't it true that that does not say anything about whether or not there was a waste load allocation developed for the canal in 1981?

A. Only to the extent that that same document on the previous page lists receiving water as Caloosahatchee River via a canal.

Q. Isn't it true that the first time there was any

Page 225

requirement, any formal official requirement from the Environmental Protection Agency to Florida Cities Water Company regarding AWT construction was in September 26, 1989?

A. Certainly based on our review of documents today, that's the first document that I recall seeing that's specifically from EPA that specifically required AWT in writing in the document.

Q. So the answer to my question is yes?

A. Yes.

Q. Let me turn with you to Carrollwood briefly. Exhibit 272, which would be Plaintiff's 272 --

A. I'm sorry. That was 272?

Q. Correct. That would be the letter from Hillsborough County to Florida Cities in 1986. Is that correct?

A. No, this is -- I'm sorry. This is Government 272?

Q. Yes.

A. I'm looking at Government 272, which is dated September 27, 1984. It's a U.S. EPA letter from Paul Traina.

Q. I'm sorry. I may have written the wrong number down.

Well, I can ask you this question because you just recently looked at the document. Mr. Jacobs showed you a document from Hillsborough County in 1986 stating that the county did not have the capacity to accept the effluent and the county would have no objections to the company looking at other options. Do you remember that?

Page 226

A. Yes.

Q. All right. In fact, that letter came from the Hillsborough County Department of Sanitary Services; isn't that correct?

A. I'd have to look at the document again.

MR. JACOBS: We can stipulate to that if it would help.

MR. BULLOCK: Thank you.

BY MR. BULLOCK:

Q. Isn't it true that the Department of Sanitary Services is not the governing body for discharge permits in Hillsborough County?

A. My understanding, it is the Hillsborough County EPC would be.

Q. So the Sanitary Services could not excuse any condition of a Hillsborough County Environmental Protection Commission permit or an FDER permit, could it?

A. I would expect not.

MR. BULLOCK: Thank you.

THE COURT: Okay. Thank you, sir. You may step down.

THE WITNESS: Thank you, Your Honor.

(Mr. Klingenstein was excused.)

THE COURT: I think we'll go till 5:30 this evening. And we've been here for over two hours, so let's take a

Page 227

ten-minute recess.
(Recess taken.)
THE COURT: Sorry. I had an emergency.
Okay. Call your next witness.
MR. JACOBS: Your Honor, the United States calls Jack Schenkman.
While he's taking the stand, Your Honor, my questions of Mr. Schenkman will be very brief, and I understand that to be the case with both of the defendants as well.
Mr. Schenkman was kind enough to fly up from Miami on Monday and again today, so we're going to I think mutually agree to finish him today. And we'll try to do that by 5:30 within the Court's specifications.
THE COURT: All right.
THE CLERK: Raise your right hand.
(Whereupon Jack Schenkman was duly sworn.)
THE CLERK: Take a seat in the witness box.
State your name and spell the last for the record, please.
THE WITNESS: Jack Schenkman, S-c-h-e-n-k-m-a-n.
THE CLERK: Thank you.
DIRECT EXAMINATION
BY MR. JACOBS:
Q. Good afternoon, sir. And thank you for coming, and I

Page 228

apologize for the inconvenience.
Would you tell me how you're employed, please.
A. I'm the chairman of the board of North Fort Myers Utility.
Q. And that's in Fort Myers, Florida?
A. Yes, it is.
Q. And how long have you been affiliated with North Fort Myers Utilities?
A. I started at North Fort Myers Utility from the beginning, and it was about I would say around ten, 11 years ago.
Q. And does North Fort Myers Utilities operate a wastewater treatment plant?
A. Yes, it does.
Q. When was this plant first placed in service?
A. Let's see. About 1985, '84, something like that.
Q. Mr. Schenkman, do you recall executing a declaration in this case back in November?
A. Yes, I do.
Q. Would it refresh your recollection to have that handy?
A. Surely.
MR. JACOBS: Your Honor, may I?
THE COURT: Yes, sir.
THE WITNESS: Thank you.
BY MR. JACOBS:
Q. Now, making reference to your declaration as you see fit,

Page 229

sir, could you tell me what the capacity of the North Fort Myers Utilities Wastewater Treatment Plant is?
A. Two million gallons per day.
Q. And when did the plant have that capacity?
A. We had it -- we really started to build it in beginning of '87. By '88 we had it resolved, finished.
Q. And so when was the plant first placed in service?
A. The plant was placed in service before that in -- North Fort Myers Utility was near Old Bridge Village, which is one of my communities, and then I moved it to a 40-acre site, which it is in today, and we built a two-million-gallon facility at that time.
Q. And, again, with reference to your declaration, if you need to, sir, at what point in time did you have the two-million-gallon capacity?
A. 1987.
Q. Take a look at paragraph 2. Does that refresh your recollection as to when the two-million --
A. Yes, yes.
Q. All right. Just for the record, when did the plant have the two-million-gallons-per-day capacity?
A. From 1987 on.
Q. All right. Paragraph 2 you say, "North Fort Myers Utilities Wastewater Treatment Plant, which has a capacity of two million gallons per day, was first placed in service on

Page 230

August 27th, 1988."
A. That's true. But in 1987 it was under construction.
Q. Okay. I understand. You began construction in '87, and it was complete and ready to go in August of '88; is that correct?
A. That is correct.
Q. Now, can you tell me, Mr. Schenkman, what method the plant uses to dispose of its treated effluent?
A. Well, we send treated effluent to golf courses, public grounds, and so forth. It's all reuse.
Q. It's all reuse?
A. Everything is for reuse.
Q. So you do or you don't have any discharge to a surface water?
A. No, we don't. We also have a two-million-gallon deep well into the boulder zone in case of unusual weather so that we don't flood the streets.
Q. Or the golf course?
A. Or golf courses that might not be able to take the excess water we have.
Q. So in wet weather your backup is the deep well; is that correct?
A. That's correct.
Q. Now, Mr. Schenkman, at any point in time did you have discussions with representatives of the Florida Cities Water

Page 231

Company relative to providing wastewater treatment service to wastewater from the Waterway Estates facility?
A. I think some discussions began about 1987, and we offered to service them if they wanted to come in to us.
Q. And did your attorney actually conduct those negotiations --
A. That is correct.
Q. -- at your instruction?
A. That is correct.
Q. And did he copy you on the correspondence?
A. Yes, he did.
Q. Directing your attention now to Government Exhibit 362, which will be brought to you, Mr. Schenkman, is this a piece of correspondence that your attorney wrote?
A. That is correct.
Q. At your instruction?
A. That's right.
Q. And in this letter, Exhibit 362, does your attorney on your behalf offer to provide bulk sewer service to Florida Cities Water Company for the Waterway Estates plant?
A. That is right.
Q. And the date on this letter, sir?
A. Let me see. February 2nd, 1987.
Q. Was an agreement reached in February of '87?
A. No, we never did reach agreement with them. We made the

Page 232

offer.
Q. And just focusing on this offer for the moment, I see there's a signature line on the bottom of page 2 I take it that was never signed, meaning an agreement was not reached; is that correct?
A. That is correct.
Q. And is that because the offer was not accepted?
A. That is right.
Q. Now, were there subsequent negotiations?
A. Yes. They talked about it after. And we gave them a figure at the time. And then there was further discussions, but they never accepted us.
MR. JACOBS: Okay. Before we move on to the next piece of correspondence, Your Honor, I'd like to move 362 into evidence.
THE COURT: Be received.
(Government Exhibit Number 362 received in evidence.)
BY MR. JACOBS:
Q. Now, Mr. Schenkman, I'd like to direct your attention to Government Exhibit 385. Do you recognize Government Exhibit 385, sir?
A. Yes, yes, I do.
Q. And would you identify it, please, for the record?
A. It was dated November the 17th, 1988.

Page 233

Q. And, again, is this a letter from your attorney written on your behalf with respect to the same subject?
A. That is correct.
MR. JACOBS: Move 385 into evidence, please.
THE COURT: Will be received.
(Government Exhibit Number 385 received in evidence.)
BY MR. JACOBS:
Q. Now, Mr. Schenkman, in this particular November '88 letter, are you essentially lowering your price for the connection?
A. Yes, we did at that time to help out as much as we could to Florida Cities.
Q. You wanted to help them out. Did you also want to make a deal, Mr. Schenkman?
MR. BULLOCK: If the Court please, Your Honor, I know he's trying to rush to get through, but he is kind of bordering on leading a little bit, and we would object to it.
THE COURT: Okay. Well, try not to lead too much.
BY MR. JACOBS:
Q. Mr. Schenkman, let me direct your attention to the second full paragraph on the first page of Exhibit 385. Do you see that?
A. Yes, I do.
Q. Could you read that first sentence of the second full

Page 234

paragraph, please?
A. "Jack recently indicated that he could provide capacity at the same point on Pondella Road for a total of three-million-two primarily because of his willingness to utilize tax losses for the benefit of the deal which losses he could otherwise utilize on consolidation and other operations."
Q. Okay. That was paragraph 3. I wonder if I could ask you to read the first sentence of paragraph 2.
A. "Although Jack fully appreciates your intent to go forward with the construction of the advanced wastewater treatment unit on your Waterway Estates plant, I am reminded of our earlier discussion wherein you indicated to me that the possible interconnection" --
MR. BULLOCK: Objection.
THE COURT: Just a moment.
Sir?
MR. BULLOCK: Objection, hearsay.
THE COURT: I received this in evidence.
MR. BULLOCK: All right. I'll withdraw that.
THE COURT: Go ahead.
BY MR. JACOBS:
Q. "I am reminded."
A. "I am reminded of our earlier discussion wherein you indicated to me the possible interconnection into North Fort

Page 235

Myers Utility is simply a matter of dollars. The last time we discussed this matter, North Fort Myers Utility offered you one million gallon per day of capacity for three-million-seven and estimated it would cost an additional 800,000 to extend its lines to a point of interconnection on Pondella Road for a total cost of 4.5 million.

"Mr. Schenkman agreed to reduce that price somewhat, but you calculated your internal cost at an additional approximately 1.8 or 1.9 million."

Q. Okay. Now, moving on to the top of page 2 of the same exhibit, could you read just the last sentence of that first paragraph beginning with "therefore"?

A. Wait a minute. I lost you.

Q. Just flip the page.

A. Okay.

Q. And start on the top, first full paragraph but the second full sentence beginning with "therefore."

A. I first got to find it.

Q. May I approach?

THE WITNESS: Would you show me where it is? Where is he talking about?

Oh. "Therefore we extended the offer" --

THE COURT: No. Wait. Wait. Wait.

THE WITNESS: "Therefore we extend" --

THE COURT: Wait. Wait. "Therefore he extends,"

Page 236

right?

THE WITNESS: You're right, sir. I'm sorry.

THE COURT: The court reporter is taking this down. I don't want an error.

THE WITNESS: "Therefore he extends an offer to build lines and provide one million gallons of capacity to the designated point under Pondella Road for 3.2 million subject of course to negotiation of the appropriate contract to us to do so."

BY MR. JACOBS:

Q. Okay. Now, looking down two paragraphs, there is a representation by the author of the letter, Mr. Sundstrom -- and he is your attorney; is that correct?

A. That is correct.

Q. -- that you, Mr. Schenkman -- I'm sorry. -- that "Mr. Reeves and Bob French have consistently told Jack Schenkman and me," meaning Mr. Sundstrom, "that you would prefer to come to North Fort Myers Utilities as a permanent and final solution, but that, as aforesaid, it is simply a 'matter of dollars.'"

Do you recollect, Mr. Schenkman, that that is what in fact got in the way of reaching an agreement? Was it a matter of dollars?

A. That is correct, sir.

MR. BULLOCK: Objection.

Page 237

THE COURT: Wait. Wait. Wait a minute.

MR. BULLOCK: He's now being asked -- my impression of the question was that Mr. Schenkman is being asked what Mr. Sundstrom's understanding was of what Mr. Reeves and Mr. French were saying. I think, while I understand that the letter is in evidence, the subsequent questions beyond that are calling for hearsay.

THE COURT: Well, I'll overrule the objection.

BY MR. JACOBS:

Q. Let me ask it again, Mr. Schenkman. Did you hear from both Mr. Reeves and Mr. French -- do you remember who Mr. Reeves is at the time?

A. Yes, yes, I do.

Q. Did he work for Florida Cities Water Company?

A. At that time he did.

Q. Okay. And Mr. French, did he work for Florida Cities Water Company at that time?

A. Yes, he did.

Q. And did you hear from them that they would come to North Fort Myers Utilities --

THE COURT: Well, now, this is your witness. Don't lead him.

MR. JACOBS: I'm sorry, sir.

BY MR. JACOBS:

Q. The representation in the letter that these gentlemen

Page 238

told you that they would prefer to come to North Fort Myers Utilities as a permanent and final solution but that it was simply a matter of dollars that prevented them from coming, is that an accurate statement, Mr. Schenkman?

A. That is correct.

Q. Now, do you recall how you came up with the $3.2 million figure?

A. Well, that's what our cost was to go up to Pondella Road.

Q. Can you recollect whether Florida Cities ever represented to you what it would cost them to upgrade their plant and move their outfall and thereby continue their discharge as opposed to hooking up to your facility?

A. I wasn't privy. I heard rumors, but I wasn't privy to them telling me what it cost.

Q. Let me direct your attention then now to Exhibit 397. Is this again, Mr. Schenkman -- well, let me ask you this.

Can you identify 397?

A. Yes, I can.

Q. Would you, please?

A. Yes, dated September 25th, 1989.

Q. And who's this letter written to and by whom?

A. It was written Bill Sundstrom, Rose, Sundstrom & Bentley, to Florida Cities Water Company, attention to Mr. Tony Reeves at the time.

Q. And you're a recipient of a cc of this letter, are you,

Page 239

sir?
A. Yes, yes, I was.
MR. JACOBS: Move --
THE COURT: *Just a moment.*
MR. BULLOCK: Objection, Your Honor, hearsay. The document contains representations of Mr. Sundstrom's conversations with the Department of Environmental Regulation employees and what the employees said, and it's Mr. Sundstrom's characterizations of those conversations.
THE COURT: Okay. Yes, sir?
MR. JACOBS: I'm sorry. Did you sustain?
THE COURT: No, no. Do you want to be heard on that?
MR. JACOBS: Well, first of all, Your Honor, there's no objection to the exhibit on the objection list, and I'll move it into evidence on that basis at this time.
MR. BULLOCK: I'll withdraw it.
THE COURT: Be received.
(Government Exhibit Number 397 received in evidence.)
BY MR. JACOBS:
Q. Now, Mr. Schenkman, directing your attention to the bottom of the first page of the exhibit beginning with "North Fort Myers Utilities has capacity now permitted and in service to provide raw sewage treatment and disposal sufficient for

Page 240

the Waterway Estates district of Florida Cities Water Company" -- or, to be precise, "FCWC" -- through the end of that paragraph which reads, "NFMU has offered to provide sewage treatment and disposal services to FCWC for the same capacity at approximately the same or slightly less than that cost," can you tell me whether in trying to make a deal, as you said you did, with Florida Cities Water Company you essentially tried to give them a price that was lower than the price or cost that they would expend as represented to you to upgrade the plant and move the outfall?
THE COURT: Just a moment.
MR. BULLOCK: Question is leading.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Mr. Schenkman, do you recall receiving any information from Florida Cities that related to the cost of moving the outfall and upgrading the plant?
A. I don't know what that cost was, but we at that time offered them some tax advantages losses that we had that they -- that would be advantageous to them.
Q. Can you tell me whether Florida Cities Water Company *accepted your September 25th, 1989 offer?*
A. No, they didn't.
Q. And did you come to an understanding as to why?
A. They believed they felt that they can do it for less cost

Page 241

than what we offered.
THE COURT: Any further questions?
MR. JACOBS: Just one more document, Your Honor, if I could direct the witness's attention to Government 408.
BY MR. JACOBS:
Q. Do you have 408 in front of you, sir?
A. Yes, I do.
Q. Do you recognize that, and, if so, could you identify it, please?
A. Yes. It was written February the 5th, 1990 addressed to Mr. Reeves from Florida Cities Water Company.
Q. And it was written by whom, sir?
A. *It was written by -- let me see the back of it --* William Sundstrom.
Q. Is that your attorney?
A. Yes, he is.
Q. And did you receive a cc of this letter?
A. Yes, I did.
Q. At or about the time that it was written?
A. That's correct.
MR. JACOBS: I'd move 408 into evidence, sir.
THE COURT: Be received.
(Government Exhibit Number 408 received in evidence.)
BY MR. JACOBS:

Page 242

Q. Now, Mr. Schenkman, in Exhibit 408 do you again offer to make a deal with Florida Cities Water Company to connect the Waterway Estates plant?
A. Yes, we did.
Q. And was that offer accepted?
A. No.
Q. And did you in this February 5th, 1990 communication again drop the price?
A. I think we went down to three-million-two. I'm going to try to --
Q. Take your time, sir.
Let me direct your attention to paragraph 1 on the first page. Does that help, Mr. Schenkman, to refresh your recollection, first page of Exhibit 408?
A. Yes. "North Fort Myers Utility would commit to sell a million gallons of sewage treatment in an effluent disposal capacity to Florida Cities for a firm price of 2,470,000 or 2.47 -- $2.47 per gallon."
Q. Are you again dropping the price here, sir?
A. I think it was dropped a little bit at the time.
Q. And directing your attention to paragraph 3 to refresh your recollection, if you need to, did you also offer to construct the necessary sewage transference lines either at your own cost or at the county's cost to the point of connection?

Page 243

A. I think the way it reads -- and let me read it for you exactly because it's back to 1990. "Additionally, it is anticipated that the county would finance and construct all of the transference lines from the existing Waterway Estates plant to North Fort Myers Utility lines. Should you desire, North Fort Myers would commit to construct the remainder of the lines from interconnection of 41 and Pondella Road to the Waterway Estates plant as a recoverable investment as another option available to FCWC."
Q. And moving on, flipping the page now and starting with paragraph 4, did you also offer to finance the investment for Florida Cities Water Company?
A. That is correct. "North Fort Myers Utility would agree to finance the FCWC investment at its outstanding tax exempt rate of 8 percent with an amortization period not to exceed ten years."
Q. And now focusing your attention on the bottom of the page, same page, the second page of the exhibit, last paragraph, can you tell me, Mr. Schenkman, whether at this point in time you still had sufficient capacity to take the Waterway Estates effluent?
A. We did.
Q. Okay. And can you tell me, then, from the point in time of this first offer in February of '87 through February of 1990, over those three years did you at all times have the

Page 244

capacity to accommodate the Waterway Estates effluent?
A. Yes, we did.
Q. And was a deal ever reached?
A. No.
MR. JACOBS: Thank you. No further questions.
THE COURT: Mr. Bullock?
CROSS-EXAMINATION
BY MR. BULLOCK:
Q. Good afternoon, Mr. Schenkman.
A. Good afternoon.
Q. How are you? Nice to see you again.
Mr. Jacobs just asked you whether or not at all times between February of '87 and February of '90 did you have capacity to accept the Waterway Estates effluent. Isn't it true that you didn't have capacity until August of 1988 based on your own declaration?
A. Well, we had at that time capacity for 700 -- when we first started to construct, 700,000. By the time we would have hooked up we would have had capacity to take more than a million.
Q. But you didn't have completion of the two-million-dollar facility -- I mean two-million-gallon facility until August 27, 1988.
A. But we had the capacity to handle everything you had at the time which was -- we offered 700,000, and we had it at the

Page 245

time. And the time we would have connected the lines we would have had all the capacity you needed.
Q. Okay. The Waterway Estates plant was permitted for 1.08 million gallons a day, was it not? Isn't that true?
A. I don't know what they were permitted for at the time. I don't know what Waterway Estates had.
Q. All right. Isn't it true that they would have to find capacity for their -- the entire projected capacity of 1.08 MGD?
A. No, no. At the time when we made that offer we would have been completely finished at the time that lines were interconnected and hooked up.
Q. But my question was -- Mr. Jacobs' question to you was did you have the capacity in February of '87.
A. When we first discussed it --
THE COURT: Did you have the capacity in February of '87? That's his question.
THE WITNESS: February '87, no, I only had for 700,000.
BY MR. BULLOCK:
Q. How many deep wells does your facility have?
A. We have one deep well.
Q. Okay. How many -- what is the capacity of the spray field?
A. In the deep well?

Page 246

Q. No, the spray field.
A. The spray field?
Q. Yes.
A. Oh, we can send a million and a half, two million gallons in the spray field.
Q. All right. And then what is the capacity of the deep well?
A. Couple million gallons, two, three million gallons.
Q. Do you use the spray field and the deep well at the same time?
A. No. The only time we use the deep well, if there's heavy rain that the spray fields cannot take it, then we send it to a deep well. Otherwise we try to save as much as the water we can for the -- keep the aquifer intact.
Q. Mr. Jacobs asked you to look at what was Government's Exhibit 408, which is the February 5th, 1990 letter.
A. Okay. I'm looking at it. What did you want?
THE COURT: Just a moment.
BY MR. BULLOCK:
Q. Isn't it true that in February of 1990 Florida Cities was well on its way to constructing the AWT plant at Waterway Estates?
A. I don't know what Florida Cities had or didn't have. I didn't get into their affairs.
Q. Well, if you assume with me that they were well on their

Page 247

way to building an AWT plant -- excuse me -- to permitting and designing an AWT plant, let's assume that, would it have made sense to stop at that point in time and hook into your facility?

MR. JACOBS: Objection, calls for speculation.

MR. BULLOCK: I'll withdraw the question, Your Honor.

THE COURT: I'll overrule.

THE WITNESS: I can't speak for Florida Cities.

BY MR. BULLOCK:

Q. All right. Did you offer in your February 1990 letter to reimburse Florida Cities for any of the engineering or design costs that it would have already incurred in designing an AWT facility to Waterway Estates?

A. Not to my knowledge.

MR. BULLOCK: Thank you, Mr. Schenkman.

THE COURT: Give me just a moment, Mr. Hird. Go ahead, Mr. Hird.

MR. HIRD: Thank you, Your Honor.

CROSS-EXAMINATON

BY MR. HIRD:

Q. Good afternoon, Mr. Schenkman.

A. Afternoon.

Q. You I believe testified that the total capacity of North Fort Myers would be two million gallons per day; is that

Page 248

correct?

A. That's correct.

Q. And in the period that we're talking about, the late 1980s, when you first began operations, you only had commitments for about half of that; is that correct?

A. Less than half.

Q. Less than half. And in terms of getting a rate established from the Public Service Commission, isn't that rate based on the used capacity?

MR. JACOBS: Objection, beyond the scope.

THE WITNESS: I don't know.

THE COURT: Just a moment. I'll overrule the objection.

Do you know? Do you know, sir?

THE WITNESS: No, I don't know.

BY MR. HIRD:

Q. You don't?

A. No.

Q. You don't know whether the rate is based on the used capacity as opposed to the --

A. No, I don't.

Q. -- potential capacity? Okay.

Now, were you operating in the period of the late '80s in the red or in the black?

A. We haven't made a profit really, even today, that is, in

Page 249

the utility business. But we keep growing and growing and growing, and the assets keep growing with it.

Q. So you were operating in the red; is that correct?

A. Yes.

Q. Now, if you would turn to Exhibit 385, if you would.

THE COURT: Plaintiff's?

MR. HIRD: I'm sorry. Government Exhibit 385.

BY MR. HIRD:

Q. Do you have that in front of you, sir?

A. I don't know. The gentleman will tell me.

Q. Do you have that, sir?

A. I have it in front of me.

Q. Okay. If you'd look at the second paragraph -- and I believe you read this language with Mr. Jacobs -- it says, "The last time we discussed this matter, NFMU offered one million gallons per day of capacity for 3.7 million and estimated that it would cost an additional 800,000 to extend its lines to a point of interconnection for a total cost of 4.5 million." Do you see that?

A. Yes, I do.

Q. And then you see the next sentence, "Mr. Schenkman agreed to reduce the price somewhat, but you calculated that your internal costs at an additional approximately 1.8 or 1.9 million." Do you see that?

A. Yes, I do.

Page 250

Q. So if you add those together at that point in time, the cost to Florida Cities would be somewhere in the neighborhood of 6.3, 6.4 million; is that correct?

A. I don't know what the cost would be to Florida Cities.

Q. Well, you would have to add the 4.5 plus the 1.9, would you not, because of the internal cost that Florida Cities would bear?

A. Yeah, but, you see, we were using tax benefits that I would -- we wouldn't be spending any more than 4.5 on the job.

Q. But you see --

A. So what it would cost Florida Cities is really -- I wasn't aware of or --

Q. But your lawyer was aware that it would cost between 1.8 and 1.9 million additional, wasn't he? Didn't he say your internal costs would be an additional 1.8 or 1.9 million?

A. Yeah, that's correct.

Q. So if you add that to the 4.5, you get a total of approximately 6.4; is that correct?

A. Go ahead.

Q. Now, if you reduce the price here to 3.2 million --

A. That is correct.

Q. -- that would still mean the total cost to Florida Cities would be about 5.9 million; isn't that correct?

MR. JACOBS: Calls for speculation, Your Honor.

THE WITNESS: I'm not that --

Page 251

THE COURT: Overruled.
THE WITNESS: – familiar with the cost to Florida Cities because I don't run their books. I don't know.
BY MR. HIRD:
Q. But you recognize there's an internal cost to Florida Cities that's not reflected in your offer; is that correct?
A. I wouldn't have the internal cost of Florida Cities in my offer at any time. I wouldn't know what – how you run your company.
Q. You've indicated you don't know what the internal cost is, but if the internal cost was 1.8 or 1.9, that would be a factor in making this option, the option of connecting to North Fort Myers, more expensive, would it not?
A. That's a guesswork. I wouldn't know.
Q. But you recognize that there would be some internal cost to Florida Cities, but you don't know what –
A. Possibly.
Q. And do you have reason to disagree with your lawyer's estimate of 1.8, 1.9?
A. No. No, I don't.
Q. Okay. Now, in order to connect to North Fort Myers, Florida Cities would have to build a pipeline connection; is that correct?
A. That is correct.
Q. And Florida Cities would have to contribute that as

Page 252

property in kind to North Fort Myers; is that correct?
A. I believe so.
Q. And Florida Cities – and that would be taxable income to North Fort Myers, isn't that correct, that contribution?
A. I imagine so.
Q. And Florida Cities would have to pay the tax –
A. No.
Q. – on that contribution.
A. No, not really because we had a tax losses and benefits that we can pick up so it would save the money for Florida Cities.
Q. So you believe that that tax would not have to be –
A. That's correct.
Q. But you – Mr. Schenkman, you indicated that you were operating in the red at this time.
A. That's right.
Q. And if Florida Cities had made this deal, it would have helped you a good deal; is that correct?
A. To some degree.
Q. Did there come a time in 1991 that you made a proposal to Avatar Holdings or its subsidiaries to buy an interest in North Fort Myers?
A. Not to my knowledge.
Q. Did you ever – do you know a man named Arnold Sheven?
A. I heard of him, but I don't know him.

Page 253

Q. You don't know him?
A. (Indicates negatively.)
Q. You never contacted a lawyer with the law firm of Stroock, Stroock & Lavan?
A. I didn't.
MR. HIRD: Your Honor, I'd like to show the witness a portion of Exhibit -- of Avatar Holdings Exhibit 3 to see if it refreshes his recollection.
THE COURT: All right.
BY MR. HIRD:
Q. I'd like to show you the last page of Avatar Holdings Exhibit 3.
A. Sure.
Q. Would you read that to yourself, sir?
MR. JACOBS: Objection, no foundation.
THE WITNESS: Want me to read the whole thing?
THE COURT: Well, he showed him a document, and he's going to ask him to read it to himself to see if that refreshes his recollection regarding his last question, I guess.
MR. JACOBS: Which I would add, Your Honor, I think was beyond the scope of direct, well beyond the scope of direct.
MR. HIRD: Me?
THE COURT: Yeah.

Page 254

MR. HIRD: I think this is clearly within the scope of direct because we're talking about the connections between Florida Cities and North Fort Myers. And he's gone through the history, and there's another stage in the history that he hasn't gotten to.
MR. JACOBS: This is 1991. This is a November 1991 document, and the –
THE COURT: I'll sustain the objection, beyond the scope.
MR. HIRD: I have no more questions, Your Honor.
THE COURT: You don't have any redirect, do you?
MR. JACOBS: No, Your Honor, I do not.
THE COURT: All right. We'll reconvene at 8:45 tomorrow morning. We'll be in recess.
(Adjourned at 5:55 p.m.)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Thursday, March 28, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tantoso

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

THE COURT: Good morning.

All right. Mr. Jacobs, you may call your next witness.

MR. JACOBS: Thank you, Your Honor.

The United States calls William Schafer.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand.

Do you solemnly swear that the testimony you shall give in this cause shall be the truth, the whole truth, and nothing but the truth, so help you God?

THE WITNESS: I do.

THE DEPUTY CLERK: Take the witness stand.

State your name for the record and spell your last name.

THE WITNESS: My name is Bill Schafer, S-C-H-A-F-E-R.

- - -

Thereupon,

BILL SCHAFER,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. JACOBS:

Q. Good morning, Mr. Schafer.
A. Good morning.
Q. I understand you have been under subpoena since Monday. And while you are here in Tampa, I apologize for the lack of certainty as to when you would be called precisely, and we appreciate your yielding to Mr. Schenkman yesterday so he could get back to Miami.
Would you state, please, how you are employed?
A. I'm Head of Planning for the Sanitary Sewer Department of the City of Tampa.
Q. And for how long have you been employed in that capacity, sir?
A. Fifteen years.
Q. And would you describe, please, your responsibilities as Head of Planning in the Department of Sanitary Sewers?
A. My primary responsibility is to deal with expansions over our system and our plant to make sure we have enough capacity to add new development.
Q. And did there come a time when the City of Tampa expanded its wastewater treatment plant?
A. Yeah. The plant was -- the last major expansion was in 1978; we went to 60 million gallons a day. We're now doing another one.
Q. In 1983, sir, approximately how much capacity remained of the 60 million gallons that you expanded to in '78?

A. About ten million gallons a day.
Q. Now, did there come a time when Florida Cities Water Company contacted the City of Tampa to inquire about the possibility of connecting its Carrollwood sewer system to the City of Tampa sewer system in order to eliminate the Carrollwood plant?
A. Yes.
Q. And do you recall, sir, when that was?
A. It was in 1983.
Q. Directing your attention to Government Exhibit 266, would you identify Exhibit 266, please?
A. It's a letter to Elton Smith, who was the director of our department at that time, from Larry Good, who was the regional manager for Florida Cities Water Company.
Q. And can you testify that this letter was, in fact, received by your department, sir?
A. Yes, it was.
Q. And to your recollection, does this letter represent the contact that you said took place in 1983 to inquire about the possibility of the connection from Carrollwood to the City of Tampa system?
A. Yes.
Q. To your recollection, sir, did Florida Cities representatives subsequently meet with representatives of the City of Tampa Department of Sanitary Sewers to actually

Page 5

discuss the possibility of the connection of Carrollwood to the City of Tampa system?
A. Yes, they did.
Q. And do you know, sir, when that took place, that meeting?
A. It was sometime in the fall of '83, I think. It was after this letter.
Q. Okay. You are welcome to refer to your declaration that's, I believe, been provided to you, if you would like to pinpoint the date.
MR. JACOBS: And for the record, the declaration has been filed with the Court and has been provided to opposing counsel.
THE WITNESS: I don't have it. It's back with that stuff you took when I sat down. It should be right on top.
BY MR. JACOBS:
Q. Handing the witness his declaration filed with the Court on December 28th, 1995, and directing his attention to Paragraph 3, does that refresh your recollection, sir, with respect to at what point in time the meeting took place between the representatives of your department and the representatives of Florida Cities Water Company on the matter of the connection of the Carrollwood plant to the Tampa plant?

Page 6

A. Yes. It was October of that month -- of that year.
Q. And that year is 1983, sir?
A. '83, that's right.
Q. Did you subsequently, sir, on behalf of the City of Tampa write a letter to the Florida Cities Water Company describing the options available for connection of the Carrollwood system to the City of Tampa system?
A. Yes, I did.
Q. Directing your attention to Government Exhibit 525 at this time, sir, are you able to identify Exhibit 525?
A. Yes.
Q. Would you do so, please?
A. It's a letter from me to Mr. Good outlining the points of connection and some other -- and requesting additional information from them in order to proceed.
Q. And is that your signature on the bottom of Page 2 of Exhibit 525?
A. Yes, it is.
Q. And did you write and sign this letter on or about December 29th, 1983?
A. Yes.
Q. And in this letter, sir, how many different connection points do you propose as possibilities for the connection?
A. Three.
Q. And is there one in particular that you favored at the

Page 7

time?
A. The third one at 131st Street and Rome Boulevard.
Q. Directing your attention to Paragraph 3 of the letter, doesn't it say 131st and North Boulevard?
A. I'm sorry. What did I say? That's what I meant.
Q. I thought you said Rome.
A. Oh, I'm sorry. No, it's North Boulevard.
Q. Okay. And why did the City of Tampa favor that connection point, sir?
A. At that time, that was the only connection point available that was ready to go without any additional improvements on our part.
The other two that we had discussed all required additional downstream improvements.
Q. I see.
When you say "ready to go," does that mean -- what do you mean by that, sir?
A. It was in the ground; all they needed to do was run a line and connect to it and they were connected.
Q. It was immediately available?
A. Correct. And there was capacity in it.
Q. And the distance of the line that would need to be run was how long, sir?
A. 15,000 feet.
Q. Approximately three miles?

Page 8

A. About.
Q. Mr. Schafer, did Florida Cities actually subsequently request a connection from its Carrollwood system to the City of Tampa system?
A. No. The response -- I got a response from them, but it did not really request the connection. It just wanted to know what we needed -- I had asked for additional information, and they wanted to know why we needed that.
Q. The additional information you asked for, is that the information that you referred to on Page 2 of Exhibit 525?
A. Yes.
Q. And to your recollection, they responded how?
A. They wanted to know why I needed it, but they didn't go beyond that.
Q. Any subsequent contacts, to your knowledge?
A. No.
Q. Again, any subsequent actual request to connect the Carrollwood system to the City of Tampa system?
A. Not until some years later when they contacted me again to see if those options were still available.
Q. Do you recall when that was, sir?
(Pause.)
A. It was '86; '85 or '86.
Q. Directing your attention to Paragraph 5 of your declaration, does that refresh your recollection as to which

Page 9

year it was exactly?
(Pause.)
A. No. I have it in my notes, but that doesn't -- that just tells me it was '86 that the capacity was available again, but I don't -- I thought it was '86 that they called me again, or that they contacted us again.
Q. To the best of your recollection, they contacted you in '86 --
A. Yes.
Q. -- again.
And at the point that they contacted you again, did you then have capacity?
A. No, we *did* not.
Q. Why not?
A. Two things: One was that during that period, we had an increase in growth of development, and a lot of new projects came on line that we had committed -- that we had to commit to.
And we also had increases in ground water because of heavy rain, and the two things combined, it brought us -- the actual connected plus the committed unconnected brought us close to the 60 million gallon a day capacity. And we were under -- we had received notification from the Environmental Protection Commission that any additional connections to our system at that time would not be

Page 10

permitted.
Q. And this was in 1986?
A. That was '86.
Q. Now, did there subsequently come a time when you did have additional capacity that became available --
A. Yes.
Q. -- at your system?
And when was that, sir?
A. Within about two years of that time.
Q. So, is it fair to say from '83 to '86, you had capacity; from '86 to '88, you did not but --
A. Yes.
Q. -- subsequent to '88 you did?
A. Yes.
Q. Thank you, Mr. Schafer.
MR. JACOBS: No further questions.
THE COURT: Okay. Mr. Bullock?
CROSS EXAMINATION
BY MR. BULLOCK:
Q. Mr. Schafer, good morning. I'm Alex Bullock.
A. Good morning.
Q. Mr. Schafer, have you ever been a Hillsborough County employee?
A. No, I have not.
Q. All right. Referring to the December 29, 1983,

Page 11

letter, which is Exhibit 525 --
THE COURT: That wasn't offered, was it?
MR. BULLOCK: Oh, I'm sorry.
MR. JACOBS: Your Honor, it's already in evidence.
THE DEPUTY CLERK: It is.
THE COURT: Oh, it is? Okay. Excuse me. Both of those are --
MR. JACOBS: Yes, Your Honor, that's my understanding.
THE COURT: All right.
BY MR. BULLOCK:
Q. Mr. Schafer, when you met with the folks from Florida Cities first in October, you didn't give them a firm figure on the cost to connect at that point in time, did you?
A. No.
Q. All right. You gave them at some point in time a ballpark figure of a connection fee, which would have been approximately $800 a customer?
A. We gave them that number as kind of the maximum fee, but nobody knew at that time if that's actually what it would be. It was just a "Here's the most you'll probably have to pay" kind of number.
Q. In fact, this would have been the largest connection that the City of Tampa -- one of the largest connections that the City of Tampa would have undertaken at that time,

Page 12

isn't that correct?
A. I don't know. I would have to go back and look at my records.
Q. Carrollwood is not in the City of Tampa, is it?
A. No.
Q. All right. You have testified earlier that the connection location was about 15,000 feet from the Carrollwood plant?
A. Right.
Q. All right. Florida Cities would have been responsible for constructing the forced main that connected the plant to your system, isn't that correct?
A. That's correct.
Q. All right. Do you know whether or not Carrollwood ever hooked up into another system?
A. I understand that they eventually hooked up into the County system.
Q. All right. And do you know who paid the bill -- the forced main to hook them up into the County system?
A. No, I do not.
Q. All right. The Carrollwood area is a residential subdivision?
A. Uh-huh.
Q. Okay. I need for you to say "yes" or "no" so the court reporter can take that down.

Page 13

A. Yes.
Q. Thank you.
Building the forced main to connect to Tampa would have required Florida Cities itself to construct a forced main through the residential area, isn't that correct?
A. It would not -- I'm sorry. It would not have required them to construct a forced main through their residential area. It would have been through parts of the City, some parts of which are residential.
Q. All right. That would have required them to develop some -- the cost of going through residential areas and paying for disturbing roads and trees and issues like that?
A. Yeah, the normal costs of construction.
Q. All right. Do you have any opinion as to the cost of the construction of that forced main?
A. At that time, my best guess would have been a -- roughly, if you take two and a half times the cost of the size of the pipe in dollars and, say, that's your per foot cost, that generally takes care of the excavation and the restoration and any other thing that goes along with it.
Q. Would they have had to obtain building permits and construction permits from Hillsborough County?
A. They would have had to get permits from us, from Hillsborough County, and any state or -- any state or Federal roads that they would go through, they would also

Page 14

have to get permits from them.
Q. All right. In your December 29 letter that we have referred to, Exhibit 525, you did not give -- isn't it true that you did not give them a hard final cost?
A. No, I did not.
Q. Okay. You referred to some correspondence between Larry -- between Florida Cities when they wrote back to -- wanting to know why you needed additional financial information about the company?
A. That's correct.
Q. Isn't it true that in that letter, they also asked you to provide a connection fee figure so that they could evaluate the option further?
A. That's correct.
Q. All right. And did you ever provide a firm connection fee?
A. No, because we -- we needed the financial information to come up with the connection fee number, and we never got it. It was kind of a Catch-22.
Q. Okay. Why did you need the financial information on the company to determine a connection fee?
A. The main reason that we requested that was that we wanted -- two things, really -- one, to find out if they were financially stable; and if we did connect them, would they still be around ten years from now, or would we have to

Page 15

take over that system.
The other was, did they have any assets which might be usable as a capacity fee.
Q. Even without that information, isn't it true that you could have given them a figure that would have allowed them to -- a firm figure that would have allowed them to compare and develop whether or not that was a viable option?
A. They could have had the $800 a unit figure at any time.
Q. Okay. As a regulated utility, at least in Hillsborough County, Florida Cities' rates are governed by Hillsborough County's version of the Public Service Commission?
A. That's my understanding, yes.
Q. And the Hillsborough County Public Service Commission, or whatever the technical name of it is, would have had to pass on the prudency of that decision, isn't that correct?
MR. JACOBS: Objection; beyond the scope, Your Honor.
THE COURT: I think it is. I'll sustain the objection.
BY MR. BULLOCK:
Q. Mr. Schafer, isn't it really true that in terms of this dispute, you don't really have a dog in this fight?
A. I'm sorry?

Page 16

Q. You don't really have a dog in this fight about -- between EPA and Florida Cities, isn't that correct?
A. No, I don't.
Q. All right. And when you negotiated with -- you've negotiated a number of contracts dealing with a tie-in or connections to Tampa's system, isn't that correct?
A. That's correct.
Q. And when you were negotiating with Florida Cities, isn't it true that you believed that Florida Cities was negotiating with Tampa in good faith?
A. I had no way of knowing. I presumed that they would. I wouldn't have wasted time with them if I thought otherwise.
Q. You have negotiated with other people enough to determine whether or not you can figure if somebody is negotiating in good faith?
A. I think so.
Q. All right. Do you know how large a forced main they would have had to build?
A. I think it was a ten-inch forced main. But just off the top of my head, I don't recall. I've got it in my notes; it's there.
Q. All right. So, your estimation on calculating the forced main would be two and a half times the cost of per foot of a ten-inch pipe; is that how you would have

Page 17

calculated it?
A. Yeah, at that time. Now it's a whole lot more, but...
Q. Okay. As a matter of fact, the cost of that had gone up in the mid '80's, isn't that correct?
A. The cost of construction?
Q. Yes.
A. I can't say that one way or the other. It's all -- usually it's a function of how much -- how busy the contractors are, and I would presume at that time they got -- they were busier, so probably it did.
Q. And by mid to late 1980's, the cost of any connection fee with Tampa would have gone up as well?
A. The cost did not increase until 1987.
Q. All right. And that's when the City -- you testified the City had additional capacity?
A. Yes.
Q. All right. Thank you.
THE COURT: I thought you said you didn't have additional capacity until '88. Was it '87 or '88?
THE WITNESS: It was '88. You're right, Your Honor.
MR. BULLOCK: Thank you, Your Honor.
THE COURT: Okay. Mr. Hird?
MR. HIRD: Very briefly, Your Honor.
CROSS EXAMINATION

Page 18

BY MR. HIRD:
Q. Mr. Schafer, you said that you got additional capacity in 1988, is that correct?
A. Yes.
Q. And you didn't have it earlier in '86?
A. Correct.
Q. Did you ever have any communication with Florida Cities about that additional capacity?
A. No.
Q. Thank you.
THE COURT: Any redirect?
MR. JACOBS: Only one very brief question.
THE COURT: Okay.
REDIRECT EXAMINATION
BY MR. JACOBS:
Q. Mr. Schafer, you said that you didn't have a dog in the fight. I wonder if I could ask you, was it in the interests of your department to make a deal with Florida Cities to connect when you had that ten million gallon capacity?
Do you understand the question?
A. Yeah, I understand the question.
My answer is probably no.
Q. It was not in the City of Tampa's interest to --
A. No -- mainly the problem is that Florida Cities'

Page 19

franchise is outside of our service area. And theoretically, our capacity is reserved for our service area.
We were really only interested in that connection because there was some environmental problems involved and it was a good thing to do if we could do it.
Q. Did you want to make the deal?
A. At the time, yes.
Q. Thank you.
MR. JACOBS: No further questions.
THE COURT: Thank you, sir. You may step down.
THE WITNESS: Thank you.
THE COURT: Call your next witness.
MR. JACOBS: The United States calls Leon Levy.
THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand.
Do you solemnly swear that the testimony you shall give in this cause shall be the truth, the whole truth, and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take the witness stand.
MR. HIRD: Your Honor, before Mr. Levy begins his testimony, I would like to bring a procedural matter to the Court's attention.
Mr. Levy is chairman of the board of Avatar

Page 20

Holdings. We intend to call him in our case in chief. I had proposed to the Government that we allow the Government to begin examination of Mr. Levy; and when my turn comes, for me both to include the cross examination and my direct so that Mr. Levy will only have to testify one time. I believe this will serve the interests of judicial economy.
This will also be beneficial for Mr. Levy who resides in New York. He came here on a special chartered plane from Eleuthera in the Bahamas.
He is under the care of a cardiologist who he expects to see in New York in the next few days. He's also undergoing a series of root canal operations in New York.
I think both for Mr. Levy's interests and the interests of judicial economy, this is the proper thing to do.
I was surprised yesterday to learn that the Government would not accede to this request.
MR. JACOBS: Your Honor, Mr. Levy has been designated as the representative of the party entitling him to be in court the entire time of trial, first of all.
Second of all, there was not just one but two motions for protective orders filed by Avatar Holdings in which they maintained that Mr. Levy had no relevant information whatsoever to the case.
So, to hear now that Mr. Hird wants to call him as

Page 21

a witness in the middle of our case in chief, which we had expected to complete yesterday, I think is a bit of a disruption to our case.

And with all due respect to the needs of Mr. Levy, we have had witnesses waiting for days now to testify, and we will have more witnesses that they have asked us to put on standby.

And while I sympathize with this particular witness' needs, there are many people's needs here that need to be met, and we really would like to stick with our direct and then Mr. Hird's cross. And if Mr. Hird feels the need to call Mr. Levy again in his case, which I understand follows Florida Cities' case, we would have no objection to him recalling Mr. Levy at that time.

THE COURT: Well, you wouldn't be in a position to object to calling him anyhow.

How long would you intend to be, Mr. Hird?

MR. HIRD: I imagine -- my straight direct, right now, I would imagine, will go between half an hour and 45 minutes. When I see Mr. Jacobs cover whatever he's going to cover, I imagine that would cut down substantially my direct.

THE COURT: Well, I'll take that under submission. We'll get through the direct examination and see where we are at that time.

Page 22

MR. HIRD: Thank you, Your Honor.

THE DEPUTY CLERK: State your name and spell your last for the record, please.

THE WITNESS: Leon Levy, L-E-V-Y.

- - -

Thereupon,

LEON LEVY,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. JACOBS:

Q. Mr. Levy, first of all, there was a reference to a cardiology problem. I asked you at your deposition whether there was any medical reason why your deposition should not go forward. Do you recall mentioning this cardiology problem?

A. I don't remember whether I did or not, but I think at that particular time, being in New York and I didn't have any appointments with a cardiologist, I would have seen no reason why I shouldn't have gone forward.

It just so happened that I did have an appointment -- and I hate to discuss medical reasons in court; it's somehow like getting undressed -- but I did have an appointment with my cardiologist, which I have cancelled for today, but --

Page 23

Q. But not --

A. -- but I'm fine right now.

Q. Is there any urgent need for you to see your cardiologist this week, sir?

A. I don't think there's an urgent need.

Q. Now, how are you employed, sir?

A. I'm a partner of Odyssey Partners, which is the successor of Oppenheimer and Company, and is an investment partnership. And I'm also involved in a number of non-for-profit organizations which consume a great deal of time.

Q. Do you have any relationship to a company called Avatar Holdings?

A. I'm chairman of the board.

Q. And Mr. Hird represented that you reside in New York. From your deposition testimony, you reside in New York City at a place called Sutton Place, is that correct?

A. That is correct.

Q. And you also have a personal residence in Westchester County, New York, is that correct?

A. That is also correct.

Q. And you, in addition, have a residence, again, that Mr. Hird referred to in the Bahamas, is that correct, sir?

A. That is also correct.

Q. You do not reside nor have you ever resided in the

Page 24

State of Florida, is that correct?

A. That is also correct.

Q. And you have never maintained an office --

A. Only, I might add, with one exception: At the Government's suggestion, during the war, at Camp Blanding for a good while.

Q. And you have never maintained an office in the State of Florida, have you, sir?

A. No, I have not.

Q. But you do maintain an office in New York City, is that correct?

A. Yes, I do.

Q. And that office is at the offices of Odyssey Partners?

A. Right.

Q. And you don't have any other offices anywhere, is that correct?

A. That is also correct.

Q. So, when you conduct Avatar business, you conduct it from your Odyssey Partners office, is that correct, sir?

A. That is generally correct.

Q. Now, Mr. Levy, you have testified under oath on a number of occasions in a number of different matters, isn't that right?

A. Yes, I have.

Q. In fact, you have given your deposition some 25 to 30

Page 25

times, roughly, is that correct?
A. I really don't remember. That sounds as if it might be a fair estimate. I don't know.
Q. Do you recall whether that was exactly the estimate you gave at your deposition?
A. No, I don't recall.
Q. Okay. Let me direct your attention to Page 7 --
THE COURT: What does it matter? What does it matter?
MR. JACOBS: I'm sorry, sir?
THE COURT: Does it really matter?
MR. JACOBS: No. Okay. We'll move on.
THE COURT: Yes.
BY MR. JACOBS:
Q. You do, sir, recall giving your deposition in this particular matter on October 24th, 1995, and December 6th, 1995, both times in New York City, is that correct, sir?
A. Yes, I do.
Q. And would you tell the Court, please, whether you testified truthfully on both of those occasions?
A. I -- to the best of my ability.
Q. And prior to giving your deposition, on June 7th, 1995, you executed a declaration under penalty of perjury in this matter, isn't that correct?
A. I believe so.

Page 26

Q. And you do recall that the context in which you executed that declaration was a motion to -- motion for a protective order filed on behalf of Avatar Holdings to preclude your testimony on the grounds that you had nothing to do with Avatar Holdings, is that correct?
MR. HIRD: Objection; that's a mischaracterization.
MR. JACOBS: I'll rephrase.
BY MR. JACOBS:
Q. Do you recall, sir, that in that declaration you said, I reside and work in the State of New York. I am fully occupied with work that is unrelated to the affairs of Avatar Holdings?
A. Well, I think that is correct; but like everything else, there's a slight ambiguity there.
Q. I'm sorry. Let me make sure that the record is clear.
Have I correctly represented your statement in the declaration? And I'm happy to bring it up to you.
A. Well, if you tell me that that's what it says, I -- that's fine with me. But nevertheless, I mean, I am fully occupied with the work at Odyssey.
And I also should add that -- well, I don't know when work stops and ends and I spend a great deal more time than maybe a working day.
And, moreover, Avatar is an investment of ours at

Page 27

Odyssey, and so I work on that in New York.
Q. Well, let me ask you this, sir: Is it or is it not true that you are fully occupied with work that is unrelated to the affairs of Avatar Holdings?
A. Fully occupied? I guess it's not entirely true.
Q. In fact, at your deposition, did you not state that you spent 15 to 20 percent of your time on matters related to Avatar Holdings and its subsidiaries?
A. I might have. That's a pretty rough estimate because I don't keep time records.
Q. Would you agree that that's your testimony, sir?
A. Yes, I would.
Q. And didn't you at that time say that the statement in which you said, I am fully occupied with work that is unrelated to the affairs of Avatar Holdings, was a false statement?
A. It might have been not entirely correct.
MR. JACBOS: I'd like the witness to look at his deposition testimony, Pages 123 to 124.
THE COURT: Let me see what we're doing here procedurally, now. You're entitled, as I understand it, to offer the deposition testimony of an adverse party witness.
Now, if that's your purpose, and that is to offer during your case in chief the testimony -- deposition testimony of an adverse party witness, you just do that; you

Page 28

don't call the witness to the witness stand and confront him with the testimony that you want the Court to consider.
Now, if the witness testifies to something different -- if you call the witness and he testifies to something differently, then you can confront him with his deposition. I don't understand procedurally this approach here.
MR. JACOBS: Well, if the witness told me one thing at his deposition and he's telling you something else, Your Honor, I --
THE COURT: Well, you haven't even elicited any -- you know, you haven't asked him substantive questions as yet for -- and if his response is different from his affidavit or from his deposition, then you can confront him with his affidavit or his deposition or, as I say, alternatively, since he's a party in this case, he -- I believe he would qualify as a party where you could use his deposition as substantive evidence. But let's try to adhere to -- unless I have misstated what the proper procedure is on these matters...
MR. JACOBS: These are admittedly not substantive questions, or questions that don't go to substance. They really go to bias, Your Honor --
THE COURT: Well --
MR. JACOBS: -- and credibility.

Page 29

THE COURT: Yes. But, you see, he hasn't been offered –

MR. HIRD: Your Honor, Mr. Levy is obviously testifying as an adverse witness, and clearly his sympathies are with Avatar Holdings. I don't think Mr. Jacobs needs to labor this to demonstrate any sort of bias.

MR. JACOBS: Let me try and move on.

THE COURT: Yes, let's do that.

BY MR. JACOBS:

Q. Let me ask you, Mr. Levy, how much time did you spend on matters related to Avatar Holdings and its subsidiaries?

A. Again, I'd say – look, I come down every – eight times a year to board meetings at Avatar. Very occasionally I will come down, oh, I would say, once every several years when there's not a board meeting, and the annual meetings; and I get reports from Avatar in the mail. And occasionally I talk on the telephone to the chief executive about the real estate business.

It's hard to quantify and be particularly specific about something which, to me, is more amorphous.

Q. In fact, Mr. Levy, with the exception of your work with Odyssey Partners, Avatar Holdings takes up more of your time than any of your other business endeavors, isn't that correct, sir?

A. Well, business endeavors – I spend a great deal of

Page 30

time with the Institute for Advanced Studies where the chairman just became head of the World Bank and asked me to take over for him.

And I also spent a great deal of time at the Jerome Levy Institute, which is an economic research institute of which I'm president. Where the time is greater, I don't know. If I kept time sheets, I would be able to tell you, but I don't.

Q. Do you recall that at your deposition you testified that, quote, I spend the majority of my time on Odyssey Partner matters?

THE COURT: Do you all want a reference to the – if you're not interested in slowing down for the page and –

MR. HIRD: I'm trying to avoid slowing everything down; but if this continues this way, I guess we would need references to any deposition pages.

THE COURT: Okay. Well, at such time as you want to assert your rights in that respect – ordinarily, I require that counsel will – if they are impeaching a witness or attempting to with a deposition ask a witness – remind him of his deposition, Do you recall giving the following answer to the following question, page number, line number and so forth.

MR. JACOBS: Very well.

BY MR. JACOBS:

Page 31

Q. Mr. Levy, directing your attention to the deposition you gave on August 24th, 1995, in New York, and in particular to Page 73 – and a copy is being given to you and an original will be provided to the Court –

THE COURT: Well, I'm not requiring that. If you want to do that, that's fine but –

MR. JACOBS: I want you to be able to follow along if you –

THE COURT: Well, I know, but I'm not requiring that you do that with the witness either. That's not part of my requirements. But if you want to do that, that's all right.

BY MR. JACOBS:

Q. On Page 73, Line 4, Question: If we could go down the list of the organizations with which you're presently affiliated, Mr. Levy, would you tell me what percentage of your time you spend on matters relating to your affiliation with Odyssey Partners –

A. Right.

Q. – would you read your answer, sir, please?

A. Well, I might answer that by saying I spend a majority of my time on Odyssey Partner matters. And after that would come Avatar, and the others don't take up much time except that some of the non-for-profit organizations do. They truly take up most of the time, the Institute for Advanced

Page 32

Study and the Jerome Levy Institute.

Q. Thank you.

THE COURT: For future reference, Mr. Jacobs, you can ask him, Do you recall giving the following answer to the following question? And you read the question and you read the answer. And then you can ask him if he recalls giving that answer.

MR. JACOBS: Thank you, Your Honor.

THE COURT: All right.

BY MR. JACOBS:

Q. Mr. Levy, as chairman of the board of Avatar Holdings, do you consider yourself responsible for ensuring that Avatar Holdings and its subsidiaries comply with Federal laws and regulations?

A. Well, I certainly consider myself responsible for seeing that they are an ethically and morally run company.

I think the question you put to me is more of a legal question than a – so far as the ethics and the morals, I feel very strongly about that.

As far as how you answer a question like that or what its legal implications are, I just cannot answer it.

Q. Well, Mr. Levy, who at Avatar Holdings, if anyone, is the officer whose duties it would be to ensure that Avatar Holdings and its subsidiaries operate in compliance with Federal laws and regulations?

Page 33

A. Our chief legal officer and executive vice-president is Dennis Getman, who has been with the company for quite a number of years.
Q. Do you know how long, sir?
A. I would think about 15 years -- I may be mistaken -- but almost as long as I have.
Q. Now, Mr. Levy, in 1980, you and Peter Sharp acquired what was then known as GAC Corporation, isn't that right?
A. We acquired an interest in the bonds of GAC; and in a reorganization plan, the bondholders received a considerable amount of stock. But at that time we did not -- we -- and today -- we never had a majority of the stock.
Judge Britton, who is a Federal Judge in Miami, did something which I was told was unusual in a bankruptcy case, because the various parties of interest suggested directors, and Judge Britton discarded all of their suggestions and appointed a number of directors of his choosing.
I might say he did very well, I think, aside from myself or Peter Sharp, but that's for others to decide.
Q. You said you didn't have a majority of stock. Did you have a controlling interest, sir?
MR. HIRD: Object to the characterization of --
THE WITNESS: It became --
THE COURT: Wait, wait, wait.
THE WITNESS: Well, as it became --

Page 34

THE COURT: When an objection is made, Mr. Levy, you just wait until I rule on the objection.
THE WITNESS: I'm sorry.
MR. HIRD: I think this calls for a conclusion. If Mr. Jacobs wants to ask what percentage he controls, he can -- he owns, he can do that; but "controlling" is a subjective term.
MR. JACOBS: "Controlling," I think, is a term of art in Mr. Levy's profession.
THE COURT: All right. I'll overrule the objection, if he can answer it.
You can go ahead and answer the question, if you remember it. Do you remember the question?
THE WITNESS: Yes.
I think in a sense, Judge Britton appointed Peter Sharp -- I forget what appointment he gave Peter Sharp -- someone else was appointed chairman of the board at the time by the Judge. And after about a year, he retired and I became chairman of the board.
BY MR. JACOBS:
Q. And at that time Mr. Sharp became the chief executive officer, is that correct?
A. Yes, he was chairman of the executive committee at that time.
Q. And between you and Mr. Sharp, did you all have a

Page 35

controlling interest in Avatar Holdings?
A. Well, I guess in the -- I guess you might say we did.
Q. Now, you mentioned Peter Sharp. Who was Peter Sharp?
A. Peter Sharp was a fellow who was born here in Florida and his parents were in the hotel business, in the real estate business.
He subsequently became a good friend of mine. He went to Princeton where he studied medieval French.
THE COURT: Do you want to know all of this? Are you wanting to elicit this?
MR. JACOBS: I'm trying not to interrupt the witness in midstream.
I think some of it is relevant, actually.
THE COURT: All right. Go ahead.
THE WITNESS: And then he moved to New York, after having lived in different places, where he managed some family hotels, and finally he settled in New York.
BY MR. JACOBS:
Q. And did he become a successful real estate businessman in New York?
A. Yes, he was.
Q. And did you come to know him pretty well? You said he became a friend.
A. Yes, I knew him quite well.
Q. And in addition to being chief executive officer of

Page 36

Avatar Holdings, Mr. Sharp also served as the chief operating officer, is that correct?
A. I don't believe -- he was chairman -- well, he was chairman of the executive committee. I forget whether he was chief operating officer or not.
These titles are always rather fuzzy. In different companies they mean different things.
Q. What does it mean at your company, Avatar Holdings?
A. Well, the chief operating officer today, for example, would be Mr. Jacobson.
Q. Let me ask you this: Until Mr. Jacobson became the chief operating officer, was Mr. Sharp essentially the chief operating officer?
A. He may have been in title -- and I just don't remember -- I think -- he was chairman of the executive committee, but he was mostly concerned with very broad issues.
MR. JACOBS: Move to strike, Your Honor.
THE WITNESS: I'm sorry?
MR. JACOBS: Move to strike about the nature of the issues he was concerned with being broad; move to strike as non responsive.
THE COURT: I'll deny your motion. Let's move on.
BY MR. JACOBS:
Q. Directing your attention to Government Exhibit 518,

Page 37

Mr. Levy --
A. All right.
MR. BIRD: Could you give us a moment, Your Honor, to pull this?
THE COURT: Yes.
(Pause.)
BY MR. JACOBS:
Q. -- and in particular to Page 15 of the exhibit --
THE COURT: Just a moment.
(Pause.)
THE COURT: Okay. All right.
THE WITNESS: All right.
BY MR. JACOBS:
Q. Do you see the name "Peter Sharp" on Page 15?
A. Yes, I do.
Q. Could you tell me what position he held at this time with Avatar?
A. Chief executive officer and chief operating officer, director, chairman of the executive committee of the board.
Q. And what was the first title? I'm afraid, perhaps, that I overlapped with your answer.
A. Well, you didn't say in 1980. This is, I think, the original 10-K, or whatever, that the company filed. Subsequently, there were a number of other people who became president and perhaps chief operating officer and --

Page 38

THE COURT: He asked you what your --
THE WITNESS: I'm sorry?
THE COURT: He said chief executive officer.
MR. JACOBS: Right, and I'm afraid that -- the first item that's listed is president, and I can't tell whether he said that or --
THE COURT: Are you asking him to --
THE WITNESS: He was president --
THE COURT: Wait a minute.
Are you asking him to read what's on that exhibit?
MR. JACOBS: Yes, Your Honor.
THE COURT: Would you read what that says, please, sir?
THE WITNESS: Yes, sir. Thank you.
President and chief executive officer and chief operating officer, director, chairman of the executive committee of the board.
BY MR. JACOBS:
Q. And did he serve in all these capacities at the time that this 10-K form, as you have identified it, was filed with the Securities and Exchange Commission?
A. I assume he did, yes.
Q. Now, Mr. Sharp, after you and he acquired the controlling interest of Avatar Holdings, Mr. Sharp even moved to Florida -- he moved to Florida, did he not, when

Page 39

you first acquired the company?
A. Yes, he did.
Q. And he took an apartment in Coral Gables, right?
A. That is correct.
Q. So that he could work at the Avatar Holdings offices which are, in fact, in Coral Gables, is that correct?
A. That's so. I think he -- right. Whether his home was in Coral Gables or was near there is -- would be irrelevant, I guess.
Q. Okay. And, in fact, he stayed in Florida for the first two years after you and he acquired the controlling interest, isn't that correct?
A. Yeah. I seem to -- as best I remember.
Q. And after that time, he went back to New York City where he worked out of his offices at Peter Sharp and Company, is that correct?
A. That's correct.
Q. And the business he did which related to Avatar Holdings, to your knowledge, when he was in New York, he did out of those Peter Sharp and Company offices, is that correct?
A. That is correct.
Q. And New York City is where he resided after he returned from Florida after those first two years, is that right?

Page 40

A. That is also right.
Q. Now, although you said, Mr. Levy, that presidents -- other presidents were subsequently appointed, Mr. Sharp remained the chief executive officer of the company until 1990, isn't that true?
A. I believe that is true.
Q. And he remained the chairman of the executive committee of the board until 1991; is that not correct?
A. Yes, that is correct.
Q. Now, Mr. Sharp was a very wealthy man, wasn't he?
A. Yes, he was.
Q. In fact, he was on the Forbes list of the 500 richest men in the United States, is that correct?
A. Four hundred.
Q. And perhaps I should be more politically correct: Richest people.
A. Right.
Q. Now, Mr. Sharp was a micro manager, wasn't he, Mr. Levy?
A. He was a what?
Q. Micro manager.
A. No. He was very curious in that regard, by the way, because he had the ability --
THE COURT: Okay. He said "no." He answered your question.

Page 41

THE WITNESS: I'm sorry, I --
THE COURT: Ask your next question.
BY MR. JACOBS:
Q. Well, didn't he personally get involved in quite a variety of issues that related to Avatar Holdings and its subsidiaries?
A. His choices of what he got involved in was rather eccentric.
Q. Let me ask you this: When he got a memo or a letter about a given issue, didn't he go through it meticulously?
A. He often did.
Q. In fact, the example you gave me at your deposition was that if he got a legal brief from his lawyers, he would go through 80 pages and correct it for grammar and spelling and other less important details as much as for substance, is that correct?
A. He has been known to do that.
Q. And Mr. Sharp was very much in charge of any project he actually did -- I'm sorry, I'm going to start again.
Mr. Sharp was very much involved -- very much in charge of any project he got involved with at Avatar Holdings, wasn't he?
A. Yes. I would emphasize what he got involved with.
Q. That was the question.
A. Yes.

Page 42

Q. Now, knowing Mr. Sharp as well as you do, Mr. Levy, would you say that when Mr. Sharp said something, he meant what he said?
A. Yes. I would say he was an honorable man.
Q. Is that a "yes"? When he said something, he meant what he said?
A. Yes.
Q. And he was very used to giving orders, wasn't he?
A. Yes, he was.
Q. And when Mr. Sharp gave an order, he expected it to be carried out, didn't he?
A. He generally did.
Q. Did anyone at Avatar Holdings have the authority to countermand one of Mr. Sharp's orders?
A. I -- you know, that's a very complicated question. I would have to say not to my knowledge.
Q. And a man in Mr. Sharp's position, he wasn't really used to taking many orders, was he?
A. Well, I guess not, but...
Q. In fact, Mr. Sharp didn't really like to be told what to do, did he, Mr. Levy?
MR. HIRD: Objection. I have been letting some of these questions go forward, but this goes way beyond the scope, talking about general characterization of the individual. If Mr. Jacobs wants to talk about specific

Page 43

actions of Mr. Sharp, I think he needs to --
THE COURT: I think he covered this pretty well. Let's move on.
MR. JACOBS: Yes, sir.
BY MR. JACOBS:
Q. Now, at a point in time Mr. Sharp became ill, is that correct, Mr. Levy?
A. That is so.
Q. And he passed away in April of 1992, is that correct?
A. That is correct.
Q. With the exception of the time during which Mr. Sharp was ill, though, he was, in fact, for the entire period or entire course of his affiliation with Avatar Holdings in essence its chief executive officer, is that correct?
MR. HIRD: Objection, Your Honor; this was asked and answered. Mr. Jacobs has asked about when Mr. Sharp resigned as chief executive officer.
THE COURT: Sustained. Sustained. Let's move on.
BY MR. JACOBS:
Q. Moving on now, Mr. Levy, who was John Sladkus?
A. John Sladkus was a Czech who immigrated to the United States, became a citizen, and is an engineer.
Q. And did he have any relationship, business relationship with Mr. Sharp?
A. He worked with Peter Sharp fairly closely.

Page 44

Q. And he supervised engineering on Mr. Sharp's projects, including Avatar Holdings' projects, isn't that right?
A. Yes, he did.
Q. And do you happen to recall whether Mr. Sharp was an officer of Avatar Holdings?
THE COURT: Mr. Sladkus, you mean?
MR. JACOBS: Yes. Thank you, Your Honor.
THE WITNESS: I don't recall. He might well have been.
BY MR. JACOBS:
Q. Directing your attention to Government Exhibit 519, could you identify Government Exhibit 519, sir?
A. It is meetings of the -- minutes of the annual meeting of the board of directors of Avatar Holdings, held on May 14th, 1981, at 11:00 o'clock at the annual meeting of shareholders. I left out some -- the rest of...
MR. JACOBS: One moment, Your Honor.
THE WITNESS: I'm sorry?
MR. JACOBS: I was talking to the Judge, Mr. Levy.
(Pause.)
MR. JACOBS: Judge, with your indulgence, I want to move back and move 547 into evidence. I think that's one of the few we've referred to that had not yet been moved into evidence.
MR. HIRD: I'm sorry, Your Honor. I don't believe

Page 45

547 is one that has been discussed with this witness. If you can give me a moment so I can take a look at it...
(Pause.)
MR. HIRD: We have no objection.
MR. JACOBS: Likewise 551.
I'm sorry, Your Honor, I didn't give you a chance to rule.
THE COURT: 547 will be received.
MR. JACOBS: 551.
MR. HIRD: No objection.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Now, Mr. Levy, redirecting your attention to Exhibit 519, Page 4, do these minutes refresh your recollection as to whether Mr. Sladkus had an official position with Avatar Holdings?
A. Yes, it does. He did at that time.
Q. And what was that position, sir?
A. He was executive vice-president, land and utility operations.
Q. To your knowledge, did Mr. Sladkus hold that position throughout his entire affiliation with Avatar Holdings?
A. I really don't know without having the records.
Q. Now, Mr. Sladkus had quite a lot of responsibility with Avatar Holdings, didn't he, sir?

Page 46

A. Yes, he did.
MR. HIRD: Objection, Your Honor. The witness has previously testified he didn't know what Mr. Sladkus' position was.
THE COURT: I'll overrule the objection.
You can answer the question.
THE WITNESS: When this company emerged from bankruptcy, there was $160 million of mandated work that the previous management had not completed and which the Court or the Federal Trade Commission ordered to be done. Mr. Sladkus was in charge of the completion of this mandated work.
BY MR. JACOBS:
Q. In fact, Mr. Sladkus was the only one, in addition to you and Mr. Sharp, who had the authority to sign checks over $100,000 on behalf of any Avatar entity, isn't that correct, sir?
A. I accept that. I don't remember that, but I accept it.
Q. Is that a "yes"?
A. I'm sorry?
Q. Is that – I need –
THE COURT: Do you know or not know?
THE WITNESS: I don't know.
BY MR. JACOBS:

Page 47

Q. Directing your attention, then, to Exhibit 526, can you identify Exhibit 526, sir?
A. It's the minutes of the board of directors of Avatar Holding held on Friday, January 27th, 1984.
MR. JACOBS: Move 526 into evidence.
THE WITNESS: I beg your pardon?
THE COURT: It will be received.
MR. JACOBS: I'm talking to the Judge, Mr. Levy.
THE WITNESS: I'm sorry.
BY MR. JACOBS:
Q. Now, directing your attention, please, to Page 10 of Exhibit 526 and in particular to the second full paragraph on Page 10, doesn't that paragraph say that only you, Mr. Sharp and Mr. Sladkus have the authority to sign checks in the amounts of $100,000 or more?
A. Yes, it does say that.
Q. And does that then refresh your recollection as to whether only the three of you had that authority?
A. Well, I accept it as it's written.
Q. Any reason to believe it's not true?
A. No, no reason not to believe it.
Q. Turning your attention now to Mr. Lawrence Wilkov, could you tell the Court who Lawrence Wilkov is?
A. Mr. Lawrence Wilkov eventually became the president, chief operating officer of Avatar.

Page 48

Q. Do you know when he became the president?
A. I can't tell the date without seeing some --
Q. Does 1984 sound correct?
A. Yeah, that sounds right.
Q. Will you accept that?
A. I would gladly accept that.
Q. Okay. And then he became the chief executive officer beginning in 1990; would you accept that?
A. I would completely accept that.
MR. JACOBS: Move 526 into evidence which documents 1984 as the date for Mr. Wilkov joining the company.
THE COURT: All right. What number?
MR. JACOBS: 526.
THE COURT: That's already been received.
MR. JACOBS: I'm sorry. 551, which references the 1990 date when he became chief executive officer.
THE COURT: That's already been received.
MR. JACOBS: I'm sorry, Your Honor. I've got my exhibits out of order.
BY MR. JACOBS:
Q. Now, Mr. Wilkov's offices were in Coral Gables, is that correct?
A. That is correct, at the headquarters of the company.
Q. And he remained with the company until he got into a

Page 49

major disagreement with Edwin Jacobson, is that correct?
A. Well, you can put it that way.
Q. Now, Mr. Jacobson came on board in 1992 as a member of the board of directors and chairman of the executive committee of the board, is that correct?
A. That is correct.
MR. HIRD: Objection. Mr. Jacobson may have come on -- assumed the two roles at different times, and I think the question is misleading.
MR. JACOBS: The question wasn't meant to be misleading. Let me try it again, for the record.
THE COURT: Okay.
BY MR. JACOBS:
Q. Mr. Jacobson came on board in 1992 as director and chairman of the executive committee of the board, correct?
A. I believe that is --
MR. HIRD: Objection again. Mr. Jacobson, I believe, came on as director and subsequently in that year became chairman of the board.
THE COURT: Are you going to testify, or are you going to let this witness testify? I mean --
MR. HIRD: I think the question is misleading.
THE COURT: I don't think it is.
You know, this is a grown man. If he knows, he knows. If he doesn't, he doesn't. And if he testifies to

Page 50

something that is not accurate, you'll have him on cross examination. Now let's move on.
BY MR. JACOBS:
Q. Mr. Levy, do you know the answer? Do you need the question repeated?
A. No, I understand the question.
I believe he became -- to the best of my memory, he became chairman of the executive committee.
Q. Of the board of directors in 1992, is that correct, sir?
A. Yes, in 1992.
Q. And then he became president of the company in what year?
A. I would have to refresh my recollection as to the times.
Q. But it was subsequent to 1992, is that correct?
A. Yes.
Q. Now, as a result of the disagreement, as we've described it, with Mr. Wilkov, Mr. -- I'm sorry -- with Mr. Jacobson, Mr. Wilkov subsequently left the company, correct?
A. That is correct.
Q. And then he sued Avatar Holdings, Odyssey Partners and Mr. Jacobson over this employment dispute, correct?
A. That is right.

Page 51

Q. And that suit was settled for $1 million, is that correct?
A. That is right.
Q. Let's turn back to your acquisition with Mr. Sharp of GAC which you renamed Avatar.
Is it fair to say you did rename it "Avatar," Mr. Levy?
A. It was renamed "Avatar," you might say.
Q. And was that your idea or Mr. Sharp's or --
A. No, it was neither of our ideas.
Q. Why did it get renamed "Avatar"?
A. Well, GAC seemed an inappropriate name at the time. It had all sorts of connotations about defaulted debt and all the other things that a company in bankruptcy has.
And it was also originally named after a finance company in Harrisburg, Pennsylvania, which had nothing to do with what the company was now doing.
Q. Why was the name "Avatar" picked? What does "Avatar" mean?
A. Actually, the then treasurer of the company came up with the name of "Avatar," and it means reborn, or from the ashes, like a phoenix. It was a literary allusion.
Q. Now, you and Mr. Sharp acquired GAC primarily for the land, is that correct?
A. Well, we acquired it as you would acquire any company:

Page 52

For all of the assets minus all of the liabilities. And you would give more weight to some than others. And the land was obviously a principal consideration.
Q. Were the utility holdings an additional consideration?
A. Relative to the entire assets of the company, they would not have been very important at that time.
Q. Now, the original owners of the company were the Rosen brothers, is that correct?
A. That is correct.
MR. JACOBS: Move 253 into evidence.
MR. HIRD: Your Honor, I object to 253. 253 is a memo prepared by a gentleman who joined Avatar Holdings in 1995. It was done with the -- his own musings as to what may have happened to Avatar -- to the preexisting company prior to 1980.
The memo has nothing -- is not based on personal experience, is not based on anything that anyone in the management post bankruptcy had done. It was simply language by a gentleman who joined the company 15 years after the bankruptcy speculating as to what happened before the bankruptcy.
MR. JACOBS: Your Honor, may I respond?
THE COURT: Yes, sir.
MR. JACOBS: First of all, it's a business record of Avatar Holdings.

Page 53

Secondly, it contains Mr. Levy's handwritten notation on the top, and that was his testimony at his deposition.

Third, it's a historical narrative point by point of the history of the company. And Mr. Hird can certainly use his time on cross examination to dispute this history; but, otherwise, Mr. Levy has already testified in deposition that the history is correct.

THE COURT: All right. What do your objections say that you --

MR. HIRD: My objection, Your Honor, is this is not a business record. It's --

THE COURT: Is this what your recorded objections say?

MR. HIRD: Number one, it's not a business record.

Number two, Your Honor, it's not an admission.

Number three, the individual who prepared it had no personal knowledge and was not even involved in the company at the time.

Moreover, the activities of General Acceptance Corporation prior to 1980, before the bankruptcy, has nothing to do with not only the Avatar Holdings post 1980 but the violations at issue in this case which date from 1990.

So, it's totally irrelevant. It's hearsay; it's

Page 54

irrelevant; it's not an admission by a party opponent.

MR. JACOBS: Judge, there's no objection on their list.

MR. HIRD: Yes, there is. 253: Irrelevant; hearsay within hearsay.

MR. JACOBS: I'm holding Avatar Holdings' objections to Government exhibits, unless it's a superseded company --

MR. HIRD: That's way old. That's because you renumbered the exhibits, and we had to redo our objections.

Here you go. 253, there are the objections.

MR. JACOBS: Thank you.

May I respond to the objections?

THE COURT: Yes, sir.

MR. JACOBS: Your Honor, do you have the exhibit in front of you?

THE COURT: No, I don't have the exhibit.

MR. JACOBS: Let's get the exhibit.

(Pause.)

MR. JACOBS: We think it's on the bench.

THE COURT: 253?

MR. JACOBS: Yes, Judge.

THE COURT: Yes.

MR. JACOBS: Your Honor, there's testimony by Mr. Levy --

Page 55

THE COURT: Well, give me just a moment.

MR. JACOBS: I'm sorry, sir.

(Pause.)

THE COURT: Yes, Mr. Jacobs?

MR. JACOBS: It's a business record. Mr. Levy testified at his deposition that the author --

THE COURT: Well, now, don't tell me about what he testified during his deposition.

MR. JACOBS: It's a business record. It's an admission --

THE COURT: How do we know it's a business record?

MR. JACOBS: It comes from Mr. Levy's files. That's his handwriting at the top. He testified that that's his file, the handwriting.

Milton Dresner is a director of Avatar Holdings. He's recounting a history of Avatar Holdings, which is very relevant to the issues in this case, particularly Paragraph 3: The owners were quick to install roads without sewer and water.

MR. HIRD: Your Honor, if I may respond for a moment?

THE COURT: Are you through, Mr. Jacobs?

MR. JACOBS: I'm sorry, sir?

THE COURT: Are you through?

MR. JACOBS: Yes.

Page 56

THE COURT: Yes, sir?

MR. HIRD: Your Honor, to be a business record, a document has to be prepared at or near the time of the events. This is Mr. Dresner's memo done on July 15th, 19-- July 7th, 1995. Mr. Dresner joined Avatar Holdings in 1995. He is writing about events that precede 1980.

THE COURT: I agree. I don't think it qualifies as a business record. I'll sustain the objection.

BY MR. JACOBS:

Q. Mr. Levy, the Rosen brothers were the original owners of the company, is that correct?

A. To the best of my knowledge, yes.

Q. And to the best of your knowledge, they were hustlers, is that correct?

MR. HIRD: Objection, Your Honor. I think this goes to relevance. Mr. Levy has testified that he acquired -- he and Mr. Sharp became involved in Avatar Holdings in 1980 when it emerged from bankruptcy. The violation was in 1991. This isn't even a history of violations. This goes back to a different set of owners that were removed by the Bankruptcy Court and has nothing to do with this case.

THE COURT: Yes, sir?

MR. JACOBS: This is the beginning of a story, 1980, and I'm attempting to establish, as I did at

Page 57

Mr. Levy's deposition, that when Mr. Levy and Mr. Sharp took over this company, they knew what they were getting into in terms of the previous owners being hustlers -- and that's the word that appears in the deposition transcript -- and that they, in fact, were known to install roads without sewer and water. And the inadequacy of sewer facilities at Barefoot Bay is a major part of this case. And there is direct knowledge of this testimony by Mr. Levy based on his direct knowledge of these facts at his deposition.

MR. HIRD: Your Honor, if I may briefly respond, Mr. Levy has just testified this morning that Judge Britton ordered Avatar Holdings install $160 million worth of improvements to the properties in the new company. This is ancient, ancient history.

What's happening here is an effort to tar the company that was reinvented in 1980 with its history of prior owners before the time, and it's totally irrelevant to violations that don't start until 1990 at the earliest with respect to --

THE COURT: I'll sustain the objection.

BY MR. JACOBS:

Q. Mr. Levy, do you have knowledge of whether the Rosen brothers made a practice of selling land which did not have sewer and water service?

MR. HIRD: Same objection, Your Honor.

Page 58

THE COURT: Sustained.

MR. JACOBS: Your Honor, may I address --

THE COURT: No, sir. Let's move on.

MR. JACOBS: Okay.

BY MR. JACOBS:

Q. Now, in addition to the land, when you acquired GAC, you acquired significant water and wastewater utility holdings as well, is that correct?

A. That is correct.

Q. And these utility holdings included valuable holdings both in the mid-west and Florida, is that correct?

A. That is right.

Q. And one of these properties was Barefoot Bay, is that correct?

A. I believe so, yes.

Q. And Avatar acquired both the Barefoot Bay development and the Barefoot Bay wastewater treatment plant, is that correct?

A. I believe so. We acquired so many properties at that time, including a very complicated title insurance company, CATV systems and whatever. So, on any of the specifics, my memory is not necessarily accurate.

Q. Let me ask you this, moving from the past to the relative present, Mr. Levy: In 1990, did Avatar Holdings' utility operations represent a significant portion of the

Page 59

company's total business?

A. What is the "significant portion"? Yes, I guess it did, depending on how you define "significant portion."

Q. Isn't that the way Avatar Holdings characterized the holdings in its 10-K statement for that year?

A. Yeah, I guess it was.

Q. And that included 15 wastewater treatment plants, is that correct, sir?

A. If that's the number, that's right.

I say, if that is the proper number, that is -- I'll -- if you tell me that, I will agree; I accept that.

Q. You don't quarrel --

A. No, I don't quarrel.

Q. And including Barefoot Bay, is that correct?

A. Correct.

Q. Now, the water and wastewater utilities continued to play a large role in Avatar Holdings' business until it sold off the mid-west utilities in 1993 for approximately $60 million, is that correct?

A. That is correct.

Q. When you acquired Avatar, it had significant land holdings in Florida, correct?

A. That is correct as well.

Q. And these included Barefoot Bay?

A. Yes.

Page 60

Q. And a number of other land holdings?

A. Right.

Q. Now, you visited a number of these land holdings, isn't that right, sir?

A. Yes, sir.

Q. And you visited a number of these wastewater treatment plants, isn't that correct, sir?

A. I visited mostly water utilities. The only ones I remember having visited were in the mid-west.

Q. You don't recall having visited wastewater treatment plants?

A. No, I don't.

Q. Mr. Levy, at your deposition, I asked you, So you have been to some wastewater treatment --

MR. HIRD: Excuse me, Your Honor. Could he refer to the page and volume?

THE COURT: Yes, sir.

MR. JACOBS: By all means. This is the August 24th, 1995, deposition, in New York City, Page 65, Line 17. Question --

THE COURT: Wait, wait, wait. Let him find it.

(Pause.)

THE COURT: Okay. Did you give the following answers to the following questions? Go ahead.

BY MR. JACOBS:

Page 61

Q. Mr. Levy, did you give the following answers to the following questions? Question, Line 17: So, you have been to some wastewater treatment plants?
Answer: Yes.
A. Yes, that is true. The only ones I remember, though, were in the mid-west.
Q. But they were not just water --
A. No, they were wastewater treatment plants.
Q. And you said you visited a number of land holdings, but you never visited Barefoot Bay, is that correct?
A. I don't recall having visited Barefoot Bay.
Q. And the reason you didn't visit Barefoot Bay is because as an investor, it was worth a lot less to you than these other land holdings, is that correct?
A. That's right. We had a great deal of scattered land in Florida and most of the --
THE COURT: He answered "yes." He answered "yes."
THE WITNESS: Yes.
MR. JACOBS: I'm happy to move on, but I don't want to be interrupting --
THE COURT: No, no, I understand, but he's answered your question, so you can go ahead and ask your next question. He said "yes."
BY MR. JACOBS:
Q. What kind of housing is there at Barefoot Bay,

Page 62

Mr. Levy?
A. I'm told it's manufactured housing.
Q. Drawing on a word we used -- or that was used yesterday, is that upscale housing, Mr. Levy?
MR. HIRD: Objection. The witness has testified that he's never been to Barefoot Bay. In answer to the last question, he said he was told it's manufactured. I don't know how he can answer that question based on personal knowledge.
THE COURT: Overruled.
THE WITNESS: No, it is not upscale.
BY MR. JACOBS:
Q. Now, you didn't visit the Barefoot Bay, Carrollwood or Waterway Estates treatment plants, is that correct?
A. That is correct.
Q. That's because they were small investments for you, correct?
A. Relatively small in relation to the company.
Q. That's why you didn't visit them, is that correct?
A. Well, that would certainly have been a major reason.
Q. Mr. Levy, do you recall that at the July 27th, 1984, Avatar Holdings board of directors meeting, Mr. Wilkov, the president at the time of the company, reminded the board that, quote, The Department of Environmental Regulation has been imposing stricter requirements and that in his opinion,

Page 63

developmental growth within certain areas will depend heavily upon the availability of water and sewer facilities?
A. I'm sure that's true.
Q. As a member of the Avatar Holdings board of directors, Mr. Levy, you did receive -- you did receive a briefing on wastewater treatment, did you not?
A. Yes, we did.
Q. In fact, by late 1985, you had received a briefing not only on wastewater treatment in general, but on a particular plant called Fiesta Village which at that point in time was in the planning stage, is that correct?
A. I believe it was around that time, yes.
Q. And at that particular same Avatar board of directors meeting, a brochure was distributed entitled Nature's Way: How Wastewater Treatment Works for You, is that correct?
A. I don't recall that, but I will accept that.
Q. Now, Mr. Levy, who is Robert Gordon?
A. Robert Gordon is president of Avatar Utilities.
Q. And how long has he been with Avatar?
A. He was with the company going all the way back, I believe, certainly before I became involved.
Q. So, before 1980?
A. Yes.
Q. But it wasn't Avatar Utilities back then, was it?
A. No. It couldn't have been Avatar Utilities. I guess

Page 64

it was Consolidated Water.
Q. Turning now to the Barefoot Bay facility, Mr. Levy, did there come some point in time when you became aware that there was a problem with the disposal of the wastewater at Barefoot Bay?
A. Yes, I believe there was.
Q. And do you recall when you became aware of that problem?
A. No, I do not.
MR. JACOBS: Move 21 into evidence at this time.
MR. HIRD: Your Honor, if you would give us a moment?
THE COURT: Yes, sir.
(Pause.)
MR. HIRD: No objection, Your Honor.
THE COURT: It will be received.
MR. JACOBS: Move 25 into evidence.
(Pause.)
MR. HIRD: No objection.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Mr. Levy, directing your attention to Exhibit 25 --
A. Right.
Q. -- do you have that in front of you?
A. Yes, I do.

Page 65

Q. Would you identify it, please?
A. It's the minutes of the board of directors meeting on November 30, 1984.
Q. Directing your attention to Page 4 of Exhibit 25, do the minutes of this November 30th, 1984, board meeting refresh your recollection with respect to the date on which the Barefoot Bay effluent disposal problem came to your attention?
A. Well, it says what it says. I think the document speaks for itself.
THE COURT: Well, whether you think it speaks for itself or not, does it refresh your recollection? That's the question.
THE WITNESS: Let's see. We're on page -- this is Exhibit 25?
MR. JACOBS: Yes, sir, Page 4.
THE WITNESS: Page 4.
THE COURT: Why don't you ask him the question again. It's been a while.
BY MR. JACOBS:
Q. Looking at Page 4 of these November 30th, 1984, board meeting minutes, can you tell me whether the minutes refresh your recollection as to in what year you personally became aware of the problem with the disposal of the effluent from the Barefoot Bay wastewater treatment plant?

Page 66

A. Well, my honest answer has to be that, of course, I accept what it says here, but I cannot say that I remember at the time and it doesn't jog something in my memory that reminds --
THE COURT: Okay. He's answered your question.
BY MR. JACOBS:
Q. You have no reason to doubt -- let me ask you this --
A. No, I have no reason to doubt it.
Q. Okay. And you did sign these minutes, didn't you, on Page 9, Mr. Levy?
A. Right. No, I have no reason to doubt them.
Q. That you became aware in 1984 of these problems --
A. Correct.
Q. -- is that correct, sir?
A. Yes, sir.
MR. HIRD: Objection. I don't think that was his testimony. His testimony is that he signed this and that this says what it says; but he has no memory of the specific issue.
THE COURT: Well, I think that's a different matter. I'll overrule the objection.
BY MR. JACOBS:
Q. Now, Mr. Levy, can you tell me what, if anything, was done about these problems at the Barefoot Bay wastewater treatment plant, say, between 1984 and 1987?

Page 67

MR. HIRD: Objection. It's not clear what problems are being discussed. He just asked what he -- whether he has any recollection of this issue being raised. I'm not sure --
THE COURT: Well, if he has a difficult time understanding what problems there were, then he can say that and he won't be able to answer the question, but I'll overrule your objection.
THE WITNESS: Will you repeat your question, please?
THE COURT: Read the question back, Mr. Miracle.
(Record read back.)
THE WITNESS: I'm afraid I cannot.
BY MR. JACOBS:
Q. Okay. Now, at the January 30th, 1987, meeting of the Avatar Holdings board of directors, you received another report on this same problem, did you not, sir?
A. I would have to look at those minutes.
Q. Very well. Government Exhibit 53 will be directed to your attention.
MR. JACOBS: Your Honor, may I move 351 into evidence while he's looking at that, the minutes?
MR. HIRD: No objection.
THE COURT: 351?
MR. JACOBS: Yes, sir.

Page 68

THE COURT: All right. It will be received.
MR. JACOBS: And while he's looking, can I move 53 in, also minutes?
MR. HIRD: No objection.
THE COURT: It will be received.
THE WITNESS: Your question was -- excuse me.
THE COURT: I don't think he's asked -- you haven't asked a question yet, have you? You asked him to turn to Exhibit 53, correct?
MR. JACOBS: That was the last thing I did.
BY MR. JACOBS:
Q. The question was, before that, at this January 30th, 1987, meeting of the board of directors of Avatar Holdings, you received another report on the Barefoot Bay effluent disposal problem, is that correct, sir?
A. So it says in the minutes, yes. I believe the -- I'm sure they are correct.
Q. In fact, at that meeting, Mr. Wilkov, the president, reported that under consideration is extending the option to purchase property contiguous to the Barefoot Bay subdivision, the purpose being to determine if the soil tests positive for spray irrigation.
He advised that the 40 acres previously acquired by Avatar Utilities for such purpose had proven unsuitable for percolation ponds and a damage claim against the testing

Page 69

engineer is being considered.
He also advised that if the optioned property tests positive, we would construct a golf course on approximately 80 acres and develop the remaining 190 acres for home sites.
A. Right.
Q. Do you recall whether Mr. Wilkov gave that report at the meeting, sir?
A. My memory just doesn't work that I can remember him giving the report, but I'm sure he did if it says so.
Q. And you did sign these minutes on Page 8, sir?
A. And I certainly signed the minutes.
Q. Now, you personally continued to receive reports on this problem, did you not, sir?
A. I assume that if the reports were sent, I would receive them.
Q. All right. Let me direct your attention to Exhibit 61.
A. Right.
Q. Do you have that in front of you, sir?
A. Yes, I do.
Q. Do you see your name in the upper right-hand corner, handwritten; C.C.: Leon Levy? Can you make that out?
A. Oh, yeah.
Q. Okay. Now, this is a report -- the cover memo, anyway, is a report from John Sladkus to Peter Sharp, is

Page 70

that correct?
A. That is correct.
Q. And it attaches a memo from Robert Gordon to the file, is that correct?
A. It says: Enclosure: Robert -- Bob Gordon's memo of 2-10-88. The following page -- yes, it's Robert Gordon to the file.
Q. Now, Mr. Gordon's memo has to do with the meeting that he had with DER, is that correct?
A. Yes, the Orlando Department of Environmental Regulations. That's correct.
Q. In fact, this meeting Mr. Gordon represents as being held on February 9th, 1988, is that correct?
A. That's what he represents.
Q. And the purpose of the meeting which takes place in the Orlando Department of Environmental Regulation office is to discuss the proposed consent order recommended by the Orlando DER office in August 1987, is that correct?
A. That is apparently correct.
Q. And the consent order, according to Mr. Gordon, as originally drafted, basically required the company to eliminate the discharge from the Barefoot Bay wastewater treatment plant to a nearby canal and imposed a moratorium on additional connections to the system until there was a final resolve of the effluent disposal problem.

Page 71

The company countered with a recommended consent order whereby the company would request approval of the surface water discharge; would institute monitoring of the nearby canal to determine the level of treatment to meet water quality standards; would proceed to make any necessary changes to its treatment process to meet water quality criteria even if this meant converting the existing plant to advanced wastewater technology, is that correct?
A. That's what it says, and there's no reason not to believe it.
Q. And Mr. Gordon further represents that the meeting opened up with Mr. Alexander of the DER indicating that the discharge into the canal had gone on for over three years without an apparent resolve of the problem in the near future, and he wanted action now.
George Gioia, G-I-O-N-I-S, the Orlando DER enforcement officer, stated that it was their position that the consent order as proposed by the DER should be executed. And in order to discontinue the existing discharge to the canal, the company should proceed with construction of the percolation basins on the new 40-acre site.
Have I accurately represented that portion of the memo, sir?
A. Yes, you have.
Q. Continuing on, Mr. Landers, the Florida Cities Water

Page 72

Company attorney, proceeded to -- and I have added that in for the Court's benefit -- proceeded to explain that building the ponds did not solve any problem in that the ponds would not have sufficient capacity to eliminate the entire current discharge. If the surface water discharge was approved, building of the ponds would be a complete waste of time.
THE COURT: Of money.
MR. JACOBS: Thank you.
BY MR. JACOBS:
Q. Although the existing outfall was illegal, there was no reason why the DER could not approve a temporary discharge permit while the testing was going on.
Have I accurately represented that paragraph, as the Judge corrected me?
A. Yes, you have.
Q. After private discussion by the two parties -- I'm skipping down a little ways -- the company proposed the following: The company would enter into a consent order which would not contain a moratorium; would agree to immediately construct a spray irrigation system on the 40-acre site; and proceed to design and construct a deep well.
This proposal was generally accepted by Mr. Alexander, although expressing some reservation about the continued

Page 73

connection of additional customers to the system.
We also indicated that we needed our board approval before the consent order could be executed.
Did I accurately represent --
A. Yes, you accurately read it.
Q. Now, moving from Mr. Gordon's memo to the shorter memo which is the first page of Exhibit 61, Mr. Sladkus tells Mr. Sharp that he's -- first of all, in Paragraph 1 -- and I'll try and paraphrase this to save time -- that he's sending along a copy of Mr. Gordon's memo, is that correct?
A. That is correct.
Q. And he essentially paraphrases the memo in the following four paragraphs. Although he's numbered the paragraphs 2, 3, 3 and 4, there are a total of five paragraphs, is that correct?
A. Right.
Q. And he's outlined there the cost of the deep well system in Paragraph 3, is that correct?
A. This is on --
Q. In the first Paragraph 3, on that first page, Exhibit 61?
A. The deep well system -- oh, yes, $2 million. Right.
Q. Okay. And he also says, quote, We have confidence that it will be effective because there are a number of deep wells in the area. Correct?

Page 74

A. Right.
Q. And then he goes on to say, In addition, if successful, it will solve our Barefoot Bay problem once and for all?
A. That is correct.
Q. And I continue to quote, And finally, we really don't have any alternative. Did I accurately read that part --
A. Yes, you did.
Q. -- of Paragraph 3?
Now, backing up to Paragraph 2, the proposed resolution is as follows: We would immediately spray irrigate on the 40-acre Hearndon property.
Now, we haven't touched upon that yet, Mr. Levy. What is the 40-acre Hearndon property?
A. I really can't answer that without being --
Q. Refreshed?
A. -- refreshed.
Q. Okay. I can perhaps do that later.
We would also proceed with the design and subsequent construction of a deep well system. Correct?
A. That's what it says.
Q. The spray irrigation will pose no significant expense since we have spare traveling irrigators on Plant Number 2 in Poinciana, is that correct?
A. That's what it says.

Page 75

Q. What's Plant Number 2 in Poinciana, Mr. Levy?
A. I just don't know.
Q. What's Poinciana?
A. Poinciana is a large development outside of Orlando, or Kissimmee.
Q. I'm sorry?
A. Near Kissimmee.
Q. And do you know who owns that development?
A. We do.
Q. Meaning Avatar Holdings?
A. Avatar Holding, yes.
Q. So, is it fair to say that based on Mr. Sladkus' memo here that the irrigators are going to be moved from Poinciana's wastewater treatment plant over to the Barefoot Bay treatment plant?
THE COURT: Just a moment.
MR. HIRD: Objection; no personal knowledge.
THE COURT: I'll overrule the objection -- well, no, I'll sustain the objection to the form of the question, whether it's fair to say, particularly in the context of his previous responses. I'll sustain the objection.
BY MR. IACOBS:
Q. Is Mr. Sladkus here proposing that the irrigators be moved from another Avatar facility, Mr. Levy?
A. That apparently seems to be what he's saying, yes.

Page 76

Q. Now, moving down to what I'll call the second paragraph 3, which is actually the fourth paragraph, Mr. Sladkus says: As you will note in the memo, Bob made a tentative commitment subject to the board's approval.
Is "Bob" referring to Bob Gordon here?
A. I assume that's right, yes.
Q. And then he says, Meaning, of course, your consent to the above. Do you know what that means?
A. I assume that it -- Peter Sharp was the chief executive and that Sladkus wanted to be sure that Peter agreed with what Bob's commitment was.
Q. And Peter Sharp here is essentially the board as far as Mr. Sladkus is concerned, is that correct?
MR. HIRD: Your Honor, objection. It's not clear the board of which company. We have several companies that could be involved: Florida Cities, Avatar Utilities, Avatar Holdings.
THE COURT: Well, he can explain that if -- overruled.
You want the question read back, sir, or do you remember the question?
THE WITNESS: Well, yes. I guess that Peter was the chairman of the executive committee. And I believe at that time he was the chief executive officer of the company, and he would act for the -- as chief executive officer.

Page 77

(The witness' microphone fell on the floor.)
THE WITNESS: They never gave me any mechanical problems to work on with that company.
THE COURT: Why don't you let Mr. Doherty place the microphone where it needs to be, Mr. Levy. If you have problems with it, you call on Mr. Doherty here who is our mechanical engineer.
THE WITNESS: All right. Thank you.
Well, Peter -- first of all, normally, I guess in most companies, in between board meetings, the executive committee and the chairman of the executive committee acts for the board. I believe that it's that way with Avatar.
BY MR. JACOBS:
Q. Okay. I think you answered my previous question. Let me ask you another one, Mr. Levy. You referred to the company and Mr. Sharp's role, or roles, in the company. What company and what board were you referring to?
A. Well, I was referring -- there are so many different companies here, and each question would have to have its own answer.
Q. Right. Now, the question refers to actually your previous response: Peter Sharp, he was chairman of the executive committee of what company?
A. He was chairman of the executive committee of Avatar, but don't forget --

Page 78

Q. Avatar Holdings?
A. Avatar Holdings.
But you must be careful, because I am on the board of Avatar Holdings and have had very little to do with the utility companies, so my frame of reference would be Avatar Holdings whether --
MR. JACOBS: Move to strike, Your Honor.
THE COURT: Overruled; denied.
Go ahead. Ask your next question.
BY MR. JACOBS:
Q. In what I have called the second Paragraph 3, Bob made a tentative commitment subject to the board's approval. In this context, what board are we talking about, sir?
A. I can't tell.
Q. He says, Meaning, of course, your consent to the above, referring to Mr. Sharp. Do you know whether Mr. Sharp served on the board of any other Avatar entities?
A. No, I don't. I mean, he may have. I just don't know.
Q. Mr. Levy, directing your attention now to Government Exhibit 80, do you recognize this?
A. Yes, I do.
Q. Would you identify it, please?
A. It's the annual utility operations review meeting dated January 20, 1989. And there's an enclosure which seems to be the agenda for the meeting -- which is the

Page 79

agenda for the meeting.
MR. JACOBS: Move Exhibit 80 into evidence, if you will, Your Honor.
MR. HIRD: Your Honor, this witness -- this would still be subject to our objections for matters relating to barred claims and issues that preceded the statute of limitations, so I would like to preserve those objections for the record.
I would also like to state, with respect to any questioning on such documents, I wonder if we could have a standing objection with respect to those issues so we don't have to raise them with respect to specific questions.
THE COURT: Very well.
The Court will adhere to its previous rulings and will overrule your objections as to Government's Exhibit 80, and you will have the standing objection as you requested.
MR. JACOBS: Proceed, Your Honor?
THE COURT: Yes, sir.
BY MR. JACOBS:
Q. Mr. Levy, you did receive a copy of this, did you not?
A. Yes.
Q. In fact, that's your handwriting on it, correct?
A. I think it is. I'm sure, yes.
THE COURT: Let's take a ten-minute recess.
(A recess was taken.)

Page 80

THE COURT: Mr. Jacobs.
MR. JACOBS: Thank you, Your Honor.
BY MR. JACOBS:
Q. Mr. Levy, do you still have Trial Exhibit 80 in front of you?
A. Exhibit 80?
Q. Yes, sir?
A. Just let me check. Here it is, 80. Yes, Mr. Jacobs.
Q. And you did receive a copy of this memorandum at or about the time that it was written, correct?
A. Yes, I believe so.
Q. January 20, 1989?
A. Right.
Q. And it advises you of an upcoming utility meeting, did it not?
A. Yes, it does.
Q. And one of the items it advises you of is the agenda on a major construction project at Barefoot Bay, is that correct?
A. Yes, that's correct.
Q. Item number nine and the major construction project under item number nine for Barefoot Bay is deep well disposal system, is that correct?
A. That's correct.
Q. What is a deep well disposal system?
A. Well, it's a well that goes I guess below the surface

Page 81

water and you put effluent into the deep -- into the deep well.
Q. So you do understand that it's used for disposal of effluent?
A. Yes, I understand that.
Q. And the other major construction project listed is the Waterway Estates Wastewater Treatment Plant, is that correct?
A. Yes, that's correct.
Q. Now, do you recall whether at some later point in time the concept of a deep well for the Barefoot Bay effluent was rejected?
A. I don't recall that either way.
Q. Directing your attention then to Exhibit 96, do you have that in front of you, sir?
A. That is the one that begins with Ohio Suburban Water Company, Peter Sharp from Robert Gordon, August 16th?
Q. Yes. You're looking down into the text. If you could refer to the caption to identify it, sir.
A. Right.
Q. Is it from Gordon to Sharp and Wilkov?
A. It is, indeed.
Q. And subject, Avatar Utilities, general?
A. Correct.
Q. And the date is August 16, 1989?
A. That's correct.
Q. And you're the recipient of this memorandum, is that

Page 82

correct, sir?
A. Yes, I am.
Q. Directing your attention to page 3 of the exhibit. The first paragraph reads, the further the company gets into the deep well injection process, the more uncertain the whole process becomes. What company is this?
A. I assume that's Avatar Utilities. I don't know for a fact.
Q. All right, sir. The DER is demanding more and more testing and monitoring system design while at the same time expressing concern that the, quote, geology in Brevard County is properly understood and in at least one area of the county appears to be unsuitable for class one injection wells. The company's confidence level for success is expanding.
Did I accurately read that?
A. You accurately read that, Mr. Jacobs.
Q. And then he goes on to say, they're looking at spray irrigation at the time, is that correct?
A. That's correct.
Q. And he's advising the recipients of this memo that among other possibilities, he's looking at the possibility of acquiring orange groves on which to spray the effluent instead of constructing the deep well, is that correct?
A. That seems to be what he recommends or suggests we explore.

Page 83

Q. And he's even telling you he's thinking of going into the citrus business, isn't he? If you look at the second paragraph from the bottom of page 3.
A. Yes, well I think that would be not a recommendation to go into the citrus business, but if we go into the buying of the place to put the affluent, we would have to be in the citrus business and find out what it's about.
Q. Now I think you said "affluent," did you mean a effluent?
A. Right, right, excuse me.
Q. The other recipients of this memo, sir, are Mr. Allen, Mr. Getman, Mr. Kleinerman and Mr. Sladkus. Would you identify Mr. Allen, please?
A. Yes. Gerald Allen is the second person in Avatar Utilities.
Q. And Mr. Getman I believe you identified. What about Mr. Kleinerman?
A. Mr. Kleinerman was the chief financial officer of the company at that time.
Q. And for clarification, which company are we discussing?
A. He was chief financial officer of Avatar, but he may have also been chief financial officer of Avatar Utilities, GLU -
Q. Mr. Levy, do you mean Avatar Holdings?
A. Well, depends on context.
Q. What context did you mean the last answer?
A. My last answer, since I'm thinking in terms of Avatar

Page 84

since they're the people I work for, I would be most of the time thinking in terms of Avatar, but that is not a legal thought, that's merely a colloquial identification.
Q. When you identify Mr. Kleinerman as being an officer of Avatar, did you mean Mr. Kleinerman as an officer of Avatar Holdings?
A. He was an officer of Avatar Holdings.
Q. At the time of this memorandum, sir?
A. He also may have been an --
THE COURT: His question is at the time of this memorandum was he an officer of Avatar Holdings.
THE WITNESS: Yes, he was.
THE COURT: And you said he was also what?
THE WITNESS: He also may have been an officer of Avatar Utilities or whatever.
MR. JACOBS: Move to strike as speculation.
THE COURT: Overruled, denied.
BY MR. JACOBS:
Q. Now, if Mr. Gordon on behalf of Avatar Utilities wants to go ahead and build the deep well, whose approval does he need?
A. Well, the stock of Avatar Utilities was owned by Avatar Holdings, and which might have given him very, very broad discretion, but I think it's a matter of policy, you would notify the largest stockholder if you had a major expenditure in view.

Page 85

Q. Well, didn't we already establish that anything over a hundred thousand, you, Mr. Sharp or Mr. Sladkus had to personally approve?
A. We established that for signing checks at one particular time. I don't think it suggests anything more than that.
Q. Well, is it your testimony that Mr. Gordon did not require Mr. Wilkov and/or Mr. Sharp's approval in order to expend the funds that would be necessary either for the deep well or the spray irrigation?
A. I don't think I testified on that one way or another.
Q. Okay.
Do you have an understanding one way or another with respect to that?
A. I would think he would probably, as a matter of policy, discussed it with Mr. Sharp or --
Q. And sought Mr. Sharp's approval?
A. And sought that.
Q. Directing your attention now to Government Exhibit 97, sir, if you would. Do you have that in front of you, sir?
A. Yes, I do.
Q. And in this memorandum, Mr. Gordon -- or rather Mr. Gordon writes this memorandum five days after he wrote the previous one that we discussed, correct, which was Exhibit --
A. Why I'll take your word for it.
Q. I'm sorry, correction, Trial Exhibit 97?

Page 86

A. Uh-huh. (Indicating affirmatively.)
Q. So he's written 97 five days after 96, is that correct?
A. Well, is that date? Want me to check it or shall I take your word for it? I'd rather take your word for it, Mr. Jacobs.
Q. If you'll accept it, I'm sure the Court would.
MR. HIRD: We'll stipulate it was written five days later.
THE WITNESS: Right.
THE COURT: Thank you.
BY MR. JACOBS:
Q. And this second memorandum, Trial Exhibit 97, also relates to the possibility of an acquisition of an orange grove in the vicinity of the Barefoot Bay Plant to be used for effluent disposal, is that correct?
A. That's correct.
Q. And this memorandum is again written from Mr. Gordon to Mr. Sharp with copies to Mr. Allen, Mr. Getman, Mr. Kleinerman, Mr. Levy and Mr. Sladkus?
A. That is correct.
Q. Now, do you recall receiving on or about November 27th, 1989, a rather extensive report authored by Mr. Allen on the subject to alternatives to deep well injection?
A. I don't recall receiving it, but as I think you asked me in my pre-trial examination, I don't have a very good memory

Page 87

for all of those things.
Q. Directing your attention to Government Exhibit 115.
A. Right.
Q. Does 115 refresh your recollection with respect to whether or not you were the recipient of an extensive report from Mr. Allen on the subject of wastewater disposal alternatives to deep well injection at Barefoot Bay?
A. I accept it, I did receive it, Mr. Jacobs. I don't think you're misleading me by putting in.
Q. I'm sorry, I didn't hear you.
A. I don't think I would be misled by having somebody putting this in and ask me whether I received it if I hadn't received it.
Q. I'll stipulate to that, and can I ask you, sir, did you recall receiving it at or about the time that it was written and it's dated November 27, 1989?
A. Well, I would agree that I would have received it at that time.
Q. Directing your attention on the top of page 3, Mr. Allen represents that there are approximately three thousand --
THE COURT: Page 3 of what?
MR. JACOBS: I'm sorry, sir, same exhibit.
MR. HIRD: My exhibit of 115 is one page.
THE COURT: Yeah, there's only one page in Exhibit 115 in my notebook.

Page 88

MR. JACOBS: Uh, we might have consolidated 114 and 115. I suspect that 115 is the cover page for the report or cover memorandum for the report which is actually --

THE COURT: 114 in my book is Wastewater Disposal Alternatives to Deep Well Injection.

MR. JACOBS: Right, that would be the report that was transmitted by cover memorandum, Exhibit 115.

THE COURT: All right.

MR. JACOBS: I'm sorry for the confusion. Why don't we look at 114 since that appears to be the correct --

THE COURT: You want him to turn to --

MR. JACOBS: Page 3.

THE COURT: Three.

BY MR. JACOBS:

Q. And in the event we've not moved 114, I think we moved 114 already into evidence, yes, we have, so there is no problem there.

Now, Mr. Levy, directing your attention to the second full paragraph on page 3 of Exhibit 114, Mr. Allen represents that there are approximately three thousand acres of orange groves located within one point five miles of the Barefoot Bay Wastewater Treatment Plant.

A. Where on page 3 of exhibit?

Q. 114?

A. Right, yes, I'm with you.

Page 89

Q. Now, moving down to the third full paragraph on this same page of Exhibit 114, there is a discussion in that paragraph of consummating reuse agreements with the orange grove owner.

A. Right.

Q. Mr. Levy, do you know what reuse means in that context?

A. I can surmise, but that would be -- I don't know for a fact.

Q. Just give me your best understanding if you would then, sir?

MR. HIRD: Calls for speculation.

THE COURT: Well --

THE WITNESS: I would think --

THE COURT: Wait, wait, wait, wait.

THE WITNESS: I'm sorry.

THE COURT: Well, just a minute, just a minute. You said you would be surmising. Well, let's go ahead and give us that and I may strike it. It's how knowledgeable he appears to be. I'll overrule the objection.

THE WITNESS: I think it only means they would, after they were finished with whatever irrigation purposes or water purposes, that the orange groves would be returned to the original owner.

MR. JACOBS: I would stipulate to striking the response.

THE COURT: Well, they may withdraw the motion at this point.

Page 90

All right, do you adhere to your motion or your objection?

MR. HIRD: I adhere to my objection because the answer simply demonstrates that the --

THE COURT: You withdraw the objection?

MR. HIRD: I adhere to it.

THE COURT: Adhere to the objection, all right. It will be sustained, and I'll strike the witness' answer, his response.

BY MR. JACOBS:

Q. Now, Mr. Allen also kept you personally apprised of certain EPA regulations, did he not, sir?

A. Not particularly, no.

Q. May I direct your attention then to Exhibit 548. Do you recognize Exhibit 548, Mr. Levy?

A. Well, I can't say I recall having seen it, but I'm sure I did and I notice my handwriting on top of it.

Q. Is that handwriting that says file?

A. Yes.

Q. And you're on the distribution list on page 2, is that correct?

A. Yes, I am.

MR. JACOBS: Move 548 into evidence.

MR. HIRD: Your Honor, we object at this time, on

Page 91

grounds previously stated, also irrelevant. This deals with drinking water treatment standards, has nothing to do with wastewater treatment. Avatar Holdings ran drinking water -- I'm sorry -- Florida Cities and other Avatar Utilities subsidiaries ran water treatment systems to provide drinking water. Avatar Utilities and Florida Cities also ran water treatment plants providing drinking water and this rule deals with drinking water regulations.

MR. JACOBS: Your Honor, indeed it does, but the question was, did Mr. Allen keep you apprised of certain EPA regulations. It was more general, it was not specific.

THE COURT: I'll overrule the objection. Be received.

THE WITNESS: Apparently he did, and occasionally whether he did it systematically or frequently or rarely, I cannot tell you.

BY MR. JACOBS:

Q. Mr. Levy, now directing your attention to the Waterway Estates Wastewater Treatment Plant, do you recall being privy to the issue of Florida Cities' acquisition of the entire Lee County water and wastewater utilities system?

A. No, I don't recall it now.

Q. Directing your attention to Government Exhibit 384.

A. All right.

Q. Just to be sure, does this exhibit have three pages,

Page 92

Mr. Levy?
A. Yes, it does.
Q. And is the first page a memorandum from Mr. Sharp to Mr. Gordon?
A. Yes, it is.
Q. And does it attach a memorandum from Mr. Gordon to Mr. Sharp and Mr. Wilkov on which you're listed as a cc?
A. Yes, it does.
Q. Do either of these memorandums refresh your recollection to whether it was Florida Cities' goal to acquire the entire Lee County Water and Wastewater Utility System?
A. No more than merely the statement as it says here. That may have been a brainstorm of Peter's on that day or he may have been serious, I don't know.
MR. JACOBS: Non-responsive, move to strike. I asked him if it refreshed his recollection about the objective, I didn't ask him anything about whether it was serious or not.
THE COURT: Oh, I'll leave it in and I'll deny your request.
BY MR. JACOBS:
Q. Now, Mr. Sharp is saying that Florida Cities' long term objective should be to own the entire Lee County system, that is, the County's facilities as well as the City's, is that correct?
A. That's what he said.

Page 93

THE COURT: Just a moment.
MR. HIRD: Your Honor, although the second part of this Exhibit appears to be copied to Mr. Levy, there is no evidence that the first page has been -- ever came to Mr. Levy's attention, therefore I object to him being questioned without having personal knowledge.
THE COURT: Yes.
MR. JACOBS: It's hard to know exactly what he's seeing and what he hasn't seen because he testified that he throws a lot of documents away, and he's also testified that his recollection isn't very good, so I think it's fair to ask him about --
THE COURT: When did he testify he's thrown a lot of documents away? I may have missed that.
MR. JACOBS: No, I'm sorry, Your Honor, he did that in a deposition. I can --
THE COURT: Don't tell me what he said in a deposition.
MR. JACOBS: I can go through that. I'll voir dire him on this if that will assist the process.
THE COURT: I'll overrule the objection and receive it.
BY MR. JACOBS:
Q. Now Mr. Levy, Mr. Sharp says that the Florida Cities Water Company's long term objectives should be to own the

Page 94

entire Lee County system, that is the county's facilities as well as the city's, is that correct?
A. That's what it says.
Q. To your knowledge, did anyone ever countermand that objective?
A. No, not to my knowledge. I don't know. I'll leave it at that.
Q. Now, Mr. Levy, shutting down one of Florida Cities Lee County Wastewater Treatment Plants would not have been consistent with that objective, would it have been?
A. Well, he doesn't say it was an objective. It said it should have been an objective. I think he means that as a subject for discussion. I mean that's my interpretation, but he doesn't say it's an objective.
Q. He says Florida Cities' long term objective should be to own --
A. He doesn't say it's --
THE COURT: Wait, wait, wait, wait, wait, let him finish his question before you start answering.
BY MR. JACOBS:
Q. Mr. Sharp says, Florida Cities' long term objective should be to own the entire Lee County system, that is, the county's facility as well as the city's, is that correct?
A. That is correct.
Q. Now, to shut down one of the Florida Cities Wastewater

Page 95

Treatment Plants in Lee County is not consistent with that objective, is it?
A. Well, but there is -- I have a problem with the language because I don't know whether subjective should be there. You're talking about a -- well, look, I'm quibbling.
THE COURT: What did you say, sir?
THE WITNESS: I say, it would not be -- I'm not so sure that was an objective of Peter Sharp's, even from his language, which is all I have here, because when he said should be, that does not to me indicate an objective. That is like will be or is or it's something else.
BY MR. JACOBS:
Q. So, you're testimony is you're not sure whether this is -- strike that. I'll go back to my other question then.
Assuming that Mr. Sharp is stating that the objective should be and he is stating that the objective should be to own the entire Lee County system, isn't it true that shutting down one of Florida Cities' plants would not be consistent with that objective?
THE WITNESS: As far as the city's plants?
THE COURT: Just a moment.
MR. HIRD: Asked and answered, Your Honor.
THE COURT: Well, we got an answer of sorts. Let's try it again. Go ahead, see if you can answer it. Answer the question.

Page 96

THE WITNESS: Florida Cities –
THE COURT: Assuming that that is just an assumption.
THE WITNESS: No, no, Florida Cities is in Lee County.
BY MR. JACOBS:
Q. I think the Court can take judicial notice of the fact that the Waterway Estates Plant is in Lee County.
A. All right.
On that assumption, yes, you're right, it is inconsistent with acquiring all of the Lee County systems.
Q. Shutting down the Waterway Estates Plant would be inconsistent with the objective of owning the entire Lee County system, is that correct?
A. That is correct.
Q. In fact, the exact opposite is true, right? Rather than shutting down a plant, acquiring another plant would be consistent with that same objective, correct?
A. I think unless I were aware of all the circumstances surrounding it, I couldn't – I couldn't certify that -- agree with that necessarily.
Q. Well, assuming that the objective is to acquire the entire system, acquiring another plant would be consistent with that objective, correct?
A. Well, might have been duplication.
MR. BULLOCK: If the Court please, he's actually

Page 97

going – the basis of my objection is Mr. Levy's I believe testified that he doesn't have the factual background to understand what the Lee County system was and if we want to get into how many plants were in Lee County, how many customers they were going to treat, whether the plants they were going to buy or the plants they were going to shut done switched the same customers to other plants, that's a different story, but this hypothetical is getting way out of what the witness already testified he has any substantive knowledge or the ability to base an intelligent answer on the facts of that hypothetical.
THE COURT: Mr. Jacobs?
MR. JACOBS: Well, Your Honor, I think we finally got an answer to the question of what the objective was and I'm just taking it one step further and he's an intelligent man and he's the chairman of the board of the company and I think I'm establishing that.
THE COURT: I'll overrule the objection. I'll permit him to answer this question and let's move on.
THE WITNESS: Could you read that back to me, please?
(Record read back.)
And I suggest I cannot answer that because I don't know whether the other plant – closing down another plant wouldn't duplicate, might possibly expedite the acquiring of the system. Maybe one is duplicative of another. I just don't

Page 98

have enough information to be able to answer that.
MR. JACOBS: Your Honor, I respectively move to strike the answer as non-responsive. It is one thing to say he doesn't know, but he went on to speculate that shutting down might be –
THE COURT: Motion denied, ask your next question.
BY MR. JACOBS:
Q. Mr. Levy, are you aware that at the time Mr. Sharp and Mr. Gordon are exchanging these memoranda and the issue of acquiring all of the Lee County Waste – sorry, Wastewater and Wastewater Utilities is on the table that Florida Cities is discharging in the Caloosahatchee River without a permit?
A. No, I was not aware of that.
Q. Mr. Levy, isn't it true that over ten years ago, the Avatar Holdings' Board of Directors was concerned about potential liability for environmental violations?
A. That is certainly true.
Q. In fact, that issue came up at the January 30th, 1986 meeting of the audit committee of Avatar Holdings Board of Directors, isn't that correct?
A. That is correct.
MR. HIRD: Your Honor, I object. There's been no establishment that Mr. Levy served on the audit committee, so he cannot – this is going beyond his personal knowledge.
THE COURT: Well, I don't know whether it is or not.

Page 99

He may have personal knowledge.
MR. JACOBS: He already answer it.
THE COURT: What was his answer?
MR. JACOBS: Correct.
THE COURT: Well, ask your next question.
BY MR. JACOBS:
Q. In fact, isn't it true that the minutes of the March 20, 1986 audit committee meeting reflect that Mr. Getman, Mr. Gordon and Mr. Sladkus had met with Mr. David Berz, Esquire, an environmental attorney with Avatar general counsel Weil, Gotshal & Manges and that the purpose of that meeting was to discuss Mr. Berz' review and a settlement of the utility company's potential liability exposure and that Mr. Getman expressed Mr. Berz' opinion that the existing corporate structure and operating procedures provide adequate liability protection against an attempt to, quote, pierce the corporate veil, but that further assessments would be made?
MR. HIRD: If he's reading from an exhibit, can we have the exhibit number?
THE COURT: Yeah. I think the appropriate way to do that is let's get to the exhibit that you're reading from.
MR. JACOBS: By all means, Judge. I apologize. I'm trying to move things along. It's Government's Exhibit 353 and it is already in evidence.
May I inquire as to whether Ms. Cole has recorded

Page 100

this as being in evidence, 353?
THE CLERK: No, it's not.
MR. JACOBS: Move 353 into evidence.
MR. HIRD: Your Honor, we do not object.
THE COURT: Be received.
MR. JACOBS: Move 48 in evidence, if it's not in evidence.
MR. HIRD: What is 48?
MR. JACOBS: Also minutes. These are both minutes. Have they been accepted, Your Honor?
MR. HIRD: I'm trying to find 48. No objection to 48.
THE COURT: All right.
353 and 48 will be received.
BY MR. JACOBS:
Q. Let's look at 48 for a moment, Mr. Levy.
A. That's Exhibit 48. I don't think I have that here?
Q. We'll get it for you in just a moment.
A. I have it.
Q. Now, Mr. Levy, can you identify Exhibit 48?
A. Well, I see I have it in front of me, yes.
Q. Can you?
A. It's the minutes, oh, I'm sorry, it's the minutes of the meeting of the board held on Friday, March 21st, 1986.
Q. And is your signature on page 10? This is again Exhibit

Page 101

48, for the record.
A. Yes, that is my signature.
Q. And then is there an Exhibit A attached to these minutes, sir, following page 10?
A. Well, there's some minutes of the audit committee, yes, Exhibit A, something wrote in pen, yes, that's right.
Q. So the audit committee minutes are an exhibit to the minutes of the entire board of Avatar Holdings, is that correct?
A. They certainly were at this time if Exhibit A was written at this same time as the rest were when they were attached.
Q. Look at page 4 of the audit committee minutes.
MR. JACOBS: And while the witness is doing that, can I just ask for a stipulation, to speed things up, from Avatar Holdings, that in fact, and perhaps Ms. Tsotsos can speak to this, that the minutes of the Avatar Holdings Audit Committee or rather the Audit Committee of the Board of Directors of Avatar Holdings are in fact exhibits in the minutes --
THE COURT: Why don't you consult with -- if you're asking for a stipulation, my rule is to not request that in the present of the trier of the facts?
MR. JACOBS: Forgive me, sir.
THE COURT: Or within the trier of the facts' hearing.
MR. HIRD: Your Honor, we'll stipulate that the audit committee minutes are exhibits to the minutes of the board

Page 102

meeting. We'll not stipulate that Mr. Levy was in attendance at the audit committee meeting.
MR. JACOBS: I didn't go as far as that, all I wanted to be clear is --
THE COURT: Is the format?
MR. JACOBS: Yes, sir.
THE COURT: All right.
MR. JACOBS:
Q. Now, look at page 4 of the audit committee minutes, Mr. Levy?
A. Page 4 of the audit committee minutes?
Q. That would be three pages back from the end of the exhibit.
A. This is Exhibit 48?
Q. Yes, sir.
A. Right.
Q. Mr. Gordon indicated David Berz, Esquire, an environmental attorney with Avatar's general counsel --
THE COURT: You're reading now?
MR. JACOBS: YES.
THE COURT: Right.
MR. JACOBS: Yes, sir.
THE WITNESS: This is what page of that audit committee meeting?
THE COURT: Page 4.

Page 103

BY MR. JACOBS:
Q. Page 4, Mr. Levy, first full paragraph. I'm going to read it again to speed things along.
Mr. Gordon indicated that David Berz, Esquire, an environmental attorney with Avatar's general counsel, Weil, Gotshal & Manges, had been contacted requesting his assistance in assessing the utility company's environmental liability exposure with recommendation to limit said exposure, if any.
Did I accurately read that paragraph?
A. Yes, you did.
Q. Now, turning your attention to Exhibit 353, do you recognize that, sir?
A. That is minutes of a meeting of the Board of Directors held on May 29th, 1986.
Q. And you signed those minutes on page 8, did you not, sir?
A. Yes, I did.
Q. And attachment, it's an Exhibit A, which represents the minutes of the meeting of the audit committee of the Board of Directors of Avatar Holdings on March 20, 1986, correct?
A. Yes, they seem to be attached.
Q. And could I direct your attention, please, to page 4 of the audit committee notes, and again, that would be for your convenience, sir, four pages back from the end of the exhibit?
A. Right, I have it in front of me.
Q. And I'm going to read into the record the second full

Page 104

paragraph.
Mr. Getman reported that he, Mr. Gordon, and Mr. John K. Sladkus had met with David Berz, an environmental attorney with Weil, Gotshal & Manges, in Washington, DC, to discuss Mr. Berz' review and a settlement of the utility company's potential liability. Mr. Getman expressed Mr. Berz' opinion that the existing corporate structure and operating procedures provide adequate liability protection against an attempt to, quote, pierce the corporate veil, unquote. But that further assessments would be made.
Did I accurately read that paragraph, sir?
A. Yes, you did, Mr. Jacobs.
Q. Now, directing your attention to Government Exhibit 356, which I'll move into evidence at this time.
THE WITNESS: Is that the --
THE COURT: Will be received.
THE WITNESS: That is the minutes of the board meeting of Wednesday, July 30, 1986?
BY MR. JACOBS:
Q. And you signed those minutes, sir?
A. Yes, I did.
Q. Now, Mr. Levy, the majority of these minutes are devoted to environmental matters, is that correct?
A. I would have to read them in order to be able to answer that.

Page 105

Q. Fair enough.
THE COURT: What are you referring to? You're referring to --
MR. JACOBS: To 3 --
THE COURT: What exhibit?
MR. JACOBS: 356, sir.
THE COURT: 356. Well, we're not going to wait for him to read it. He can scan them if he wants to. We're not going to wait for him to read it.
MR. JACOBS: Fair enough.
BY MR. JACOBS:
Q. Let me see if I can put it a different way, Mr. Levy. Isn't it true that a majority of these meetings related to environmental issues, including --
A. Oh, this meeting, I would agree with, yes, I thought you were asking me in general if the minutes of the board refer to environmental matters.
Q. No, I'm just asking you about this meeting, sir?
A. Yes.
Q. Mr. Levy, were you personally concerned at any time that Avatar Holdings might be called to account for the environmental violations of Florida Cities?
A. I was concerned about everything that Avatar Utilities did, but I felt the people in the water companies were very conscientious and that they would, as you have to rely on other

Page 106

people, I felt comfortable relying on them.
Q. Mr. Levy, Avatar is a public trade corporation, isn't that right?
A. That's correct.
Q. And you have a large stake in Avatar Holdings, do you not?
A. That is also correct.
Q. In fact, no one has a larger stake, isn't that right?
A. That is true.
Q. In fact, you beneficially own over twenty-five percent of the stock, isn't that true?
A. No, that's not true.
Q. Directing your attention to Exhibit 591.
A. I'm afraid, Mr. Jacobs, you're probably including all of the stock the Odyssey partners own of which I'm merely one partner.
Q. 591 is already in evidence. It's a 1994 10-Q statement filed with the Securities and Exchange Commission?
A. Which page would you like me to turn to, Mr. Jacobs?
Q. I'd like you to turn to the schedule 14-A information towards the back of the document which lists the principal stockholders.
MR. HIRD: Are you talking about page 14, Exhibit A?
MR. JACOBS: No, it's a computer printout. That's why I'm struggling.

Page 107

BY MR. JACOBS:
Q. Let me refer you to Avatar Holdings Exhibit 1, which is the annual report.
MR. HIRD: This contains the same information.
THE COURT: Okay.
Let's move along.
MR. JACOBS: I'm sorry, Your Honor, I'm trying to convert a computer printout into a hard copy of the SEC statement. With the Court's permission, I'll read the footnote that I have in mind. I'll just ask the witness if he agrees. Is that permissible?
MR. HIRD: Which page does the footnote appear on the printout?
MR. JACOBS: I can show it to counsel in the computer version.
THE COURT: All right.
It's all right, fellas, just get on with it.
BY MR. JACOBS:
Q. Mr. Levy, footnote one under principal stockholders and security ownership of management represents that Mr. Levy, Mr. Nash -- let me read it. Mr. Levy, Jack Nash, Steve in Bussen-Mayer, Joshua Nash, by virtue of being general partners of Odyssey, share voting and dispositive power with respect to the common stock owned by Odyssey, and accordingly, may each be deemed to own beneficially the common stock owned by Odyssey.

Page 108

Do you agree with that statement?
A. Well, I am sure it's legally correct, but in layman's language, obviously all four of us did not own the same block of stock.
Q. The question was whether you beneficially own over twenty-five percent of the stock of Avatar Holdings?
A. Well --
Q. Using the definition, if you will, which is the definition or footnote from the SEC statement?
A. It's the SEC statement, I guess I have to accept that, but --
Q. Thank you.
And the next largest owner is an investment group which owns less than twenty percent, is that correct?
A. That's correct.
Q. Would you tell me, sir, as such a large stockholder in this company, would a multi-million dollar penalty against Avatar Holdings have an economic impact on you?
MR. HIRD: Objection. Are you talking about on Mr. Levy, personally, or on the company, or on Odyssey Partners. I need to know before the question is answered. I think it's vague. It should be clarified.
THE COURT: You need to clarify your question.
THE WITNESS: The question related to?
THE COURT: Wait, wait, wait.

Page 109

MR. JACOBS: Whether a penalty, a multi-million dollar penalty against Avatar Holdings would have an economic impact on the witness.
THE WITNESS: Yes, it would have an economic impact.
MR. JACOBS: Why?
THE WITNESS: Well, obviously --
THE COURT: Wait, wait, wait, wait, you have an objection?
MR. HIRD: I object to relevance, Your Honor, why the impact on the individual witness would -- what relevance does it have?
THE COURT: Yes, the issue is economic impact on the Defendant. I'll sustain the objection.
THE WITNESS: I mean, if it lost a dollar --
THE COURT: Wait, wait, wait, wait. I'll sustain the objection.
MR. JACOBS: No further questions.
THE COURT: Mr. Hird, you have -- I've taken under submission your request to be permitted to, at the conclusion of your cross examination, to present testimony that you would present over and above any testimony that you would elicit on cross examination of this witness.
MR. HIRD: Your Honor, actually, I think much of what Mr. Jacobs has questioned the witness about covers topics in my direct examination. I think there may be one or two areas in

Page 110

which we might get an objection as to scope and what I would suggest is to go through, because I think Mr. Jacobs has shortened my examination tremendously and I think if I could go --
THE COURT: I hope so, I hope so.
MR. JACOBS: I was trying to, Your Honor.
MR. HIRD: And do that, I think we would make it simpler. If Mr. Jacobs has an objection as to scope at that time, we can deal with it.
THE COURT: All right, All right.

CROSS EXAMINATION

BY MR. HIRD:
Q. Mr. Levy, Mr. Jacobs questioned you about the organization that you worked for, Odyssey Partners. Does Odyssey Partners have any relationship with Oppenheimer and Company?
A. Oppenheimer and Company was started by, among others, the partners of --
THE COURT: Well, is the answer to that yes or no and then you can explain.
THE WITNESS: The answer is no, okay.
BY MR. HIRD:
Q. What is Oppenheimer? Is Odyssey a successor in any way to Oppenheimer?
A. It is a successor. It has a historical relationship, but

Page 111

no current relationship?
Q. Could you explain that historical relationship?
A. Yes. Some of the partners of Oppenheimer -- of Odyssey started Oppenheimer and Company or were there at the very beginning. And many years later, the partners of Oppenheimer decided to sell Oppenheimer and Company, the partnership, and retain the proceeds and other assets of Oppenheimer and became an investment partnership and we called ourselves Odyssey because the buyers of Oppenheimer felt they were entitled, quite properly, to the name of the brokerage and the investment firm.
Q. And were you one of the original partners of Oppenheimer, sir?
A. I became a partner about a year after -- less than a year after the firm started?
Q. About when was that?
A. 1951.
Q. And when you worked for Oppenheimer, did you have any involvement in the Oppenheimer Fund?
A. Yes, I started the Oppenheimer Fund, Inc.
Q. And could you tell us what the Oppenheimer Fund was, please, sir?
A. The Oppenheimer Fund was a mutual fund. It was more of a hitch fund, actually, but it was a fund.
Q. Do you still have relationship with the Oppenheimer Fund?

Page 112

A. Yes, I'm chairman of the board.
Q. And when the Oppenheimer Fund started, about how much money did the fund have in terms of assets?
A. About two million dollars.
Q. And how much does it have today, sir?
A. Oh, the group – it's now a group of several different funds. It has about forty billion.
Q. Was the Oppenheimer Fund the first such mutual fund in America?
A. It had many distinct qualities about it which may have made it certainly among the first, but I don't –
Q. Now, when Mr. Jacobs asked you about how you spent your time, you mentioned that you worked for many not for profit organizations. Can you identify those organizations, please?
A. Yes. I work for the Institute for Advanced Studies down in Princeton.
Q. And what does that do?
A. It has four divisions. I'll make it very brief. That's where Einstein worked, that's where the people who interpret the Hubble Telescope photographs work. They work in abstract math and abstract physics and also in history.
Q. What position do you have with the organization, sir?
A. I'm vice chairman of the board when the chairman of the board is on leave.
Q. So you're acting chairman at this point?

Page 113

A. I'm active chairman.
Q. What other not-for-profit organizations do you work for, sir?
MR. JACOBS: I object, beyond the scope, relevance.
THE COURT: Wait, wait, I will overrule the objection.
THE WITNESS: I'm treasurer of the Institute for Advanced Studies as well as I work for the Guggenheim Foundation and the Guggenheim Awards and I'm chairman of that finance commission, I work for the Jerome Levy Institute, I'm president, and that's an economic research institute.
BY MR. HIRD:
Q. Any others, sir?
A. I'm sure there are, but, yes, the Rockefeller Institute in New York. I'm on the finance committee and board of directors of trustees.
Q. Do you have any training in the operation of wastewater treatment plants?
A. No, I do not.
Q. Do you own any -- have you ever operated wastewater treatment plants?
A. No, I certainly haven't.
Q. Do you have any background or training in the utility business?
A. None, except as looking in the financial statements of

Page 114

utilities.
Q. Now, in your position as chairman of the board of Avatar Holdings, what is the nature of your responsibilities?
A. I would say overall strategy and I would also think for certain times of financial decisions.
Q. What is your role with respect to the business of Avatar Holdings' subsidiaries?
A. I'm not really involved in the operating decision in the businesses.
Q. What is your involvement with the operation of Florida Cities Water Company?
A. Virtually nothing.
Q. Does the Avatar Holdings Board of Directors ever handle the day-to-day operations of the Florida Cities Water Company?
A. No, they do not.
Q. Now, you've seen a number of board minutes in this Court in Mr. Jacobs's examination. How often does the Avatar Holdings Board of Directors meet?
A. About eight times a year.
Q. And you preside at those meetings?
A. Yes, I do.
Q. Are you a member of the audit committee of Avatar Holdings' Board of Directors?
A. No, I'm not.
Q. Is anyone associated with the management of Avatar

Page 115

Holdings a member of the audit committee?
A. No, they are not.
Q. Who comprises the audit committee?
A. Oh, gee, I have to refresh my memory on that. I think it's Martin Myerson and –
MR. HIRD: Your Honor, I withdraw the question at the time. I'll show him the exhibit later that will help him refresh his recollection.
BY MR. HIRD:
Q. Have you ever been an officer, director or employee of Florida Cities Water Company?
A. No, I have not.
Q. Have you ever attended a Florida Cities board meeting?
A. No, I have not.
Q. Now, Mr. Jacobs showed you some correspondence which came to your attention – I'm sorry -- correspondence which you acknowledged that you received. Can you describe your practice in receiving correspondence? How do you treat correspondence when it comes into your office?
A. Yes. Depending upon its nature, I read it carefully or glance at it or other kinds of material that comes from Avatar, I might even discard without looking at it if there would be --
Q. So, how you treat a piece of correspondence depends on the nature of the subject matter?
A. Exactly.

Page 116

Q. Do you get more in a week than you could read?
A. Yes, I do.
Q. And what would your -- how would you treat a document that came to your office with respect to Avatar Holdings Utility business?
A. I think it would depend on the nature of the document.
Q. Well, what document would you read seriously and perhaps keep?
A. Well, I would be very interested in documents that suggested serious regulatory problems or suggested serious investment possibilities or commitments or you just have to make a subjective judgment as to the import on the entire operation on both the utilities and on the company itself as to how much time you would spend on the document. It's like allocating time for anything else.
Q. And how would you treat documents that dealt with technical aspects of utility operation at a particular plant?
A. I would have felt I could add very little to that. I would have difficulty understanding most of it, so I would probably not read any technical discussions of the water Utilities.
Q. Now, Mr. Jacobs asked you a number of questions about Peter Sharp. Did Mr. Sharp have any background experience in the utility industry before becoming --
A. Not to my knowledge, he had none.

Page 117

Q. Now, when you and Mr. Sharp acquired Avatar Holdings or required a significant interest in Avatar Holdings back in 1980, did you acquire it in order to obtain interest in real estate or to obtain a utility business?
A. We were interested in real estate.
Q. Why were you interested in real estate at that time?
A. Because prior to the whole exercise, Peter Sharp and I had a long conversation one day where Peter figured he owned enough real estate in New York and would like to own more real estate in the sun belt, and we looked at a number of companies that operated in the sun belt and owned land and finally we came across GAC.
Q. Now, when you and Mr. Sharp acquired an interest in GAC, you were appointed to the Board of Directors by Judge Britton?
A. That is correct?
Q. And who selected the original directors?
A. Oh, Jeff Hazard and Bill Porter recently resigned of the original directors appointed by the Judge.
Q. That was my question, Mr. Levy. Were the original directors appointed by the Judge?
A. A number of original directors were appointed by the Judge, yes.
Q. And was Mr. Jeffrey Hazard one of those?
A. He was among those, yes.
Q. Who is Mr. Hazard?

Page 118

A. He is a Professor at Yale Law School who was in charge of -- whose fame, and that I think is fair, is in the field of legal ethics.
Q. And did Mr. hazard serve as a director?
A. He did, for many years.
Q. Did he serve on the audit committee of the board?
A. I believe he did, yes.
Q. Was a Henry King Stanford appointed?
A. Yes, he was also appointed by Judge Britton.
Q. Who was Mr. Stanford?
A. He was president of the University of Miami for a great many years. Very distinguished gentleman.
Q. Was an Edward Houston appointed?
A. Yes, he was.
Q. Who is Mr. Houston?
A. Mr. Houston, I think, I believe was a Federal Judge in Fort Lauderdale.
Q. And did Mr. Houston serve on the Board of Directors?
A. Yes, he did, for quite a number of years?
Q. Did he serve on the audit committee?
A. I believe he did, yes. I think he was chairman of the audit committee.
Q. Was a William Porter appointed?
A. Yes, he was appointed also by Judge Britton, as was Mr. Houston.

Page 119

Q. And did Mr. Porter serve on the audit committee?
A. Yes, he did.
Q. Did a Martin Myerson become a director of Avatar Holdings?
A. That was sometime later, yes, he did.
Q. What was Mr. Myers background?
A. President of the University of Pennsylvania. He was Provost out in California.
Q. And did Mr. Myerson serve on the audit committee?
A. Yes, he did, still does.
Q. Did a Leon Kendall join the Board of Directors?
A. Yes, Lee Kendall did, indeed.
Q. And what was his background?
A. He was chairman of Magic which was the first mortgage insurance company, the earliest mortgage insurance company before that or after that. He was chairman of the SIA, the Security Industry Association, which represented all of the interest in the security business, and he's now a Professor at the University -- North Western University.
Q. Did Mr. Kendall serve on the audit committee?
A. He still does.
Q. And now, you had testified that Mr. Sharp came down to Florida the first couple years after Avatar Holdings emerged from bankruptcy, is that correct?
A. That is correct.

Page 120

Q. But he moved back to New York, is that correct?
A. That is also correct.
Q. Would that be in approximately 1982?
A. I think around that time.
Q. And from that time forward, Mr. Sharp never lived in Florida, is that correct?
A. That is correct, he visited Florida, but he didn't live in Florida.
Q. And you testified that Mr. Sharp is dead, is that correct?
A. Yes.
Q. And that he died in April of 1992?
A. Yes, that's right.
Q. What was the cause of his death, sir?
A. Cancer, lymph cancer.
Q. Do you know whether if he was ill for a long period of time?
A. Well, he was visibly ill, as much as he would go to the hospital over a few years. If I may, it was my instinct, every year he went out to the Mayo Clinic. He was a very quiet and private person. I think he had instincts that he was ill for much longer than he would let on.
Q. Now, sometime before his death, Mr. Sharp resigned as chief executive officer, is that correct?
A. That is correct.

Page 121

Q. And I think Mr. Jacobs asked you whether that occurred about 1990?
A. I think about then.
Q. Now, there were some questions concerning Mr. Sladkus?
A. Right.
Q. And you identified Mr. Sladkus when Mr. Jacobs showed you an exhibit that refreshed your recollection that Mr. Sladkus was an executive vice president of Avatar Holdings?
A. Right.
Q. Do you know whether Mr. Sladkus ever resigned that position?
A. Whether he did? I believe he did, yes.
Q. Do you recall when?
A. No, I don't.
Q. I'd like to show the witness Avatar Holdings' Exhibit 17.
Mr. Levy, do these appear to be board minutes of Avatar Holdings, Incorporated?
A. Yes, they do.
Q. And were these board minutes at the time that you were chairman of the board?
A. If you tell me what period this covers, to save time. What period?
THE COURT: It's a meeting?
MR. HIRD: it's Exhibit 17.
MR. JACOBS: Judge, to save time, we'd stipulate

Page 122

Mr. Sladkus resigned from the position of executive vice president of the land and utility operations as effective January 1st, 1991, if that's helpful.
MR. HIRD: That's what I was attempting to elicit.
THE COURT: Okay, very good.
MR. JACOBS: But not from his affiliation -- any other affiliation he might have held with the company subsequent to that time.
BY MR. HIRD:
Q. Now, you mentioned -- now what was Mr. Sladkus' background?
A. He was an engineer.
Q. Do you know whether -- excuse me.
Do you know whether his engineering expertise was in the nature of wastewater treatment or some other specialty?
A. I think he was a civil engineer. He built things, he supervised the building when Peter would build an office building or what-have-you, among other things.
Q. Was his experience in the construction industry?
A. I think so because we used to refer to the mandated work that we talked about before as horizontal engineering, when you had them put in the roads and whatever that was ordered by the Corp and the Federal Trade Commission and Sladkus spent a great deal of time working on that.
Q. All right.

Page 123

Where did Mr. Sladkus maintain his office?
A. I believe he maintained his office in the same building as Peter Sharp maintained his office, in New York.
Q. Did Mr. Sladkus apprise Sharp on projects that were unrelated to Avatar Holdings?
A. He certainly did, yes.
Q. To your knowledge, did Mr. Sladkus ever have an office in Florida?
A. Not to my knowledge.
Q. Was Mr. Sladkus a director of Avatar Holdings?
A. No, he is not, nor was he.
Q. Now, you had been questioned a little bit about Mr. Wilkov?
A. Correct.
Q. Was Mr. Wilkov a member of the audit committee of Avatar Holdings?
A. No, he was not.
Q. Was Mr. Sharp?
A. No.
Q. What was Mr. Wilkov's background?
A. I believe he was in the real estate business up in New York and then he moved to Florida and he acted as an independent and then he joined Avatar.
Q. And did he have any experience in the utility business?
A. Not to my knowledge.

Page 124

Q. You also discussed Mr. Getman who was identified as general counsel of Avatar Holdings, is that correct?
A. That is correct.
Q. What are Mr. Getman's responsibilities?
A. Well, Mr. Getman is responsible for overlooking, overseeing all of the legal aspects of the family of companies in the Avatar family.
Q. Do you know whether Mr. Getman also holds the title of executive vice president of Avatar Holdings?
A. Yes, he does.
Q. Does that title involve any duties in addition to his role as general counsel?
A. Yes, I believe it does.
Q. Do you know what those duties are?
A. I couldn't enumerate them.
Q. Does he have business responsibilities?
A. Yes, he does.
Q. Does he have business responsibility with respect to the utility operations?
A. Well, I don't know -- I really don't know since I couldn't enumerate and outline exactly what his responsibilities are.
Q. Would Jacobson know what Mr. Getman's business responsibilities would be?
MR. JACOBS: Objection.

Page 125

THE COURT: You can ask him if he knows, whether he would be in a position to know. I think that question would be legitimate, so rephrase your question. Overrule the objection.
BY MR. HIRD:
Q. Would Mr. Jacobson be in a position to know what those business responsibilities would be?
A. I can't see how.
Q. Now, you were asked some questions about Barefoot Bay and I believe you indicated that Barefoot Bay was one of the properties that was acquired when Avatar Holdings --
A. Yes, that was among the properties in Avatar Holdings from the GAC.
Q. Was this considered one of the major real estate properties?
A. No, it was not.
Q. Why not?
A. 'Cause its size possibility, potential, all of the other measures that you would use to measure one property as against another and the impact it would have on the company as a whole was not as great by a long shot as a Hoover Island, Poinciana, King Cal.
Q. Did you visit the major properties of Avatar Holdings?
A. Several times?
Q. Did you ever visit Barefoot Bay?
A. No, I never did.

Page 126

Q. Now Mr. Jacobs asked you whether you ever visited wastewater utilities. How often have you visited wastewater utilities owned by Avatar Holdings or its subsidiaries?
A. Oh, gosh, aside from when we first acquired the company and I went out in the midwest and visited most of the utilities that we had in the midwest, I would say almost never. The only familiarity I had was in a presentation to which Bob Gordon made at Fiesta which was an advanced wastewater plant that we built in Lee County, I believe.
Q. But you never visited Fiesta Village?
A. No, I never visited Fiesta Village.
Q. So you only visited some utilities in the midwest at the time that you first became involved with Avatar Holdings?
A. That's correct.
Q. You never visited Barefoot Bay Treatment Plant?
A. No.
Q. And you never visited the Carrollwood Treatment Plant?
A. No.
Q. And you never visited the Waterway Estates Treatment Plant?
A. No.
Q. Now, you were asked some questions about Robert Gordon. Does Mr. Gordon have any position with Avatar Holdings?
A. No.
Q. How many times a year do you speak with Mr. Gordon?

Page 127

A. Maybe two or three, at the most. Perhaps maybe we run into each other by accident. We'll be very friendly as we are, but I don't see him.
Q. You were also asked some questions about Gerald Allen. Does Mr. Allen have any positions with Avatar Holdings?
A. No, he does not.
Q. How many times a year do you speak with Mr. Allen?
A. Maybe I see him two or three times a year, at the most.
THE COURT: I assume you have some more?
MR. HIRD: I have some more, and Your Honor, actually it would be -- I can be in a better position after the break.
THE COURT: All right.
This would be a good time to recess for lunch. We'll reconvene at 1:15.
(Thereupon, a luncheon recess was taken.)
All right, Mr. Hird.
MR. JACOBS: Pardon me, may I be heard on one procedural matter with respect to tomorrow's schedule, with the Court's permission? Mr. Quinn and I have 5:00 p.m. flights which are apparently the last non-stop flights to Washington, and I just don't know if that's acceptable to the Court. I wanted to find out.
THE COURT: How are you going to be here and there at the same time?
MR. JACOBS: That's the point. If I'm going to be

Page 128

here, I'm not going to be on the 5:00 p.m. flight.
THE COURT: Well, let me see just a minute. Well, I have two sentencings tomorrow afternoon that were originally scheduled for 4:00 o'clock that I had moved back to 4:45, and those will be probably fairly lengthy sentencings, and I don't plan to be here Friday night, so we may be able to accommodate you.
MR. JACOBS: That would be great. Thank you, so much, Your Honor, and we'll cut it very close. If you want to go to 3:30 or 3:45, we'll take our chances getting out there by 5:00.
THE COURT: Probably will want to go till at least 3:45.
MR. JACOBS: All right, sir. but I've got a 5:00 o'clock flight.
THE COURT: Okay.
MR. JACOBS: It's 3:45.
THE COURT: You want to be heard?
MR. HIRD: Your Honor, defense counsel I believe is going to be here for the duration.
MR. BAISE: We're here for the duration, Your Honor, and we hadn't planned on returning over the weekend.
MR. HIRD: And we're prepared to go to however late Your Honor wishes.
THE COURT: Well, I'll tell you what, you know, I got

Page 129

some other balls in the air, too, and as a matter of fact, some things that have kept me awfully busy, and I'm here for the duration, not just this case, but if I want to continue in this position, Judges have to pace themselves, too, but which brings up the subject of where are we in this case? I have an estimate from the Government of several days, whatever it was, and the Defendants estimated eight days.
MR. BAISE: That is correct, Your Honor.
THE COURT: Where are we in that estimate?
MR. JACOBS: Judge, we estimated a maximum of five Court days. As you recall, we actually set out a potential scheme on how to split those five days up. The last penalty trial that we had was finished in three days, that includes both sides. We had anticipated completing our case in chief yesterday. We now anticipate, based on the length of the cross examination of Mr. Klingenstein, we'll complete our case in chief this afternoon.
MR. BAISE: With respect to Florida Cities, Your Honor, we have approximately seventeen witnesses that we need to call in light of the evidence that's been brought forth. We're going to do our very best to push that group into next week and it's going to be very difficult to do and we understand that.
MR. HIRD: On behalf of Avatar Holdings, assuming that Mr. Levy does not have to come back, which at this point I

Page 130

think is probably the case, we have, I think, two witnesses, I imagine would be completed in about two hours.
MR. JACOBS: Judge, those are reductions from the list. If counsel could share with us their revised list, we'd sure appreciate it. This is nineteen instead of twenty-six.
MR. BAISE: I may have mispoken, counsel, it's either seventeen or nineteen. I have to look at the list, Your Honor.
THE COURT: Well, why don't we – why don't you cooperate with each other to the extent of keeping each other abreast of the witnesses that you intend to call so we can try and move this thing along as expeditiously as possible.
MR. BAISE: We have been doing that, Your Honor. I find no difficulty in terms of working with Government counsel in terms of them keeping us apprised of their witnesses. In fact, we were just talking here a few moments ago about how to fill in the rest of today, assuming under the best of circumstances that they finish their case and we finish our cross, we have an hour or so left this afternoon, how can we fill that in productively. We're making arrangements, one of my colleagues has been attempting to make arrangements to pull in a gentleman that will talk about the Carrollwood situation for maybe the last hour, hour and a half this afternoon, if we have that amount of time.
MR. JACOBS: The agreement was, though, we exchange a day ahead of time not only who was going to be expected to be

Page 131

called the next day, but the order, and so far, it seems like the Defendants are not sticking with the order which is making our job a little bit tougher and we really did endeavor to get our precise number down way ahead of time as well as our order.
MR. BAISE: One of the reasons, Your Honor, that it has been somewhat difficult to keep that order is the length of time that direct and cross examination has been taking. Obviously, we have an order in which we would like to present our case, so what I'm, at the present time trying to do is fill in, if there's any time left this afternoon, with the gentleman who can deal with our Carrollwood situation so we can start with on direct cleanly tomorrow.
THE COURT: All right.
Well, we're going to move on now.
MR. BAISE: Thank you.
THE COURT: I think that Ms. Cole, I'm sure she told you that Tuesday I have to be in Jacksonville, that's not going to be a Court day.
MR. BAISE: Yes, she did.
THE COURT: I also have a two week trial calendar commencing a week from Monday in Jacksonville which I've committed to, so we'll move on now, okay.
MR. JACOBS: Can we plan on our flights for tomorrow? Will you be able to terminate by 3:45?
THE COURT: We'll do that.

Page 132

MR. JACOBS: Thank you, sir.
MR. HIRD: Your Honor, just to correct something, I said I mentioned two witnesses, in reality it's three, but one witness will be called during Florida Cities' examination, I will question him with respect to my case in chief.
MR. JACOBS: So we understand, who?
MR. HIRD: Gerald Allen. I've already told Mr. Quinn.
THE COURT: All right, proceed.
BY MR. HIRD:
Q. All right.
Mr. Levy, could you take a look at Government Exhibit 80, please?
A. Thank you.
Q. Mr. Levy, I believe Mr. Jacobs questioned you about Government Exhibit 80 and you identified it as a cover memo and the agenda?
A. Yes, that's correct.
Q. I'm sorry, I hadn't finished, I was waiting for Judge Nimmons to get the document.
THE COURT: Okay.
BY MR. HIRD:
Q. I believe when Mr. Jacobs questioned you about Exhibit 80, you identified this as a cover letter and agenda for an annual utilities operation meeting, is that correct?

Page 133

A. That is correct.
Q. And these annual meetings, they occur once a year?
A. If that often.
Q. Did you ever attend any of these annual utility operation meetings?
A. I think I attended one.
Q. But did you miss most of them?
A. Yes, sir.
Q. Why did you decide not to go to those meetings?
A. Well actually, if the meetings followed a regular board meeting, I would probably have attended it unless I had to be somewhere else.
Q. But you wouldn't go specially?
A. I wouldn't have gone specially.
Q. Okay.
If you could turn for a moment to Government Exhibit 61, please.
A. Yes, sir.
Q. Mr. Jacobs asked you a number of questions about Government Exhibit 61. I'd like to ask you a more basic question. Do you ever remember reading this exhibit, this document at the time it was dated?
A. Well, as I mentioned before, I don't remember reading it, but I wouldn't say that I didn't read it either.
Q. You were asked questions about disposal of effluent at

Page 134

Barefoot Bay. Is that an area about which you felt specially qualified?
A. No, it was not.
Q. Would it be your practice to deal with that issue directly or to leave it to others within Avatar Holdings or its subsidiaries to deal with such an issue?
A. I would normally always leave it to others in the subsidiary to deal with.
Q. Now, with respect to the attachment, the attachment refers to a meeting between Florida Cities Water Company and the Florida Department of Environmental Regulation, is that correct?
A. Yes, sir.
Q. Based on your review of the attachment, does it appear anyone attended that meeting on behalf of Avatar Holdings?
A. I'm sorry?
Q. Did anyone attend that meeting on behalf of Avatar Holdings?
A. Not to my knowledge.
Q. Did Avatar Holdings ever direct Florida Cities what to do with the effluent at Barefoot Bay?
A. Not as far as I know, sir.
Q. I'd like to have you look at Exhibit 384, please, government Exhibit 384.
A. Yes.

Page 135

Q. This is a document about which Mr. Jacobs questioned you. In particular, he asked you about the first paragraph 384. Can you read the second one, please, for the record?
A. What?
Q. Second paragraph of the first page.
A. Right.
Q. Could you read it aloud, please.
A. We should be trying to work out an agreement either to purchase now or to operate or lease the facilities with the right to purchase sometime in the future, preferably at a price fixed now.
Q. So, to the extent Mr. Sharp was suggesting that Florida Cities acquire Lee County's utility systems, he was talking about purchasing or leasing other systems, is that correct?
A. That seems to be the case.
Q. So, the control of Lee County Utility Systems could have been obtained by simply leasing or buying other utilities regardless of whether Waterway Estates continued to operate?
A. That is correct.
Q. I'd like to have you take a look at Government Exhibits 96 and 97, if you would, sir.
A. Yes, Mr. Hird.
Q. Now, Government Exhibit 96 is a memo entitled Avatar Utilities, general, is that not true?
A. That is correct.

Page 136

Q. And this memo refers to various different aspects of Avatar Utilities' operation, not just Barefoot Bay?
A. that is so.
Q. And that includes Avatar Utilities operations in the midwest, is that correct?
A. That's right.
Q. Did Avatar Utilities -- I think you alluded to this briefly, but was there a sale of Avatar Utilities' midwest operations?
A. Yes, there was.
Q. And does Avatar Utilities have any operations now outside the State of Florida?
A. It has a small operation in Arizona, very small.
Q. But previously, it was in what states?
A. It was in Ohio, Indiana, Michigan.
Q. Would Missouri be one?
A. Missouri, yes.
Q. And all of those operations were sold?
A. Right.
Q. And did that result in reduction in the number of employees that Avatar Utilities had?
A. Well, it certainly would have, certainly in the field.
Q. About when did that sale occur?
A. I think it occurred in '92 or '93, but I want to refresh my memory before I --

Page 137

Q. Now, exhibit -- the portion of Exhibit 96 that deals with Barefoot Bay, and Exhibit 97, both mention the possible purchase of orange groves; do you see that, sir?
A. Yes, I saw that.
Q. Would this have been a different business for Avatar Holdings?
A. Well, I don't think we owned any orange groves, but it would not have, in a sense, I guess the technical answer would be, yes, but it wasn't was so widely different from what we were doing. We had sod farms and other agricultural interests incident to whatever else we were doing.
Q. Now if a subsidiary was thinking of a new business venture, is that the kind of thing that would be brought to the attention of you or either Mr. Sharp?
A. Yes, if it was major, going into a new direction, that would have been brought to our attention.
Q. I'd like you to take a look at Government Exhibit 114 and 115, if you would, sir.
A. 114.
Q. 114 and 115.
A. Yes, sir.
Q. Are those in that book?
THE COURT: You have them?
THE WITNESS: I have the Exhibit. Did you ask me a question, I'm sorry?

Page 138

BY MR. HIRD:
Q. No, I didn't know if you had it yet.
A. I'm sorry.
Q. Exhibit 115 is a cover letter and Exhibit 114 is the memo from Mr. Allen about wastewater disposal alternatives, deep well injection at Barefoot Bay. Do you see those documents?
A. Yes, I do.
Q. All right.
Is this memo, 114 -- first of all, do you have a recollection of actually reading 114 at the time it was sent to you?
A. No, I don't have a recollection, no.
Q. Is the topic that 114 is discussing in the area of your responsibility and expertise?
A. No, it is not.
Q. And you testified I believe that you get a lot of things during the course of your affairs that you don't have time to read, is that correct?
A. That is correct.
Q. Mr. Levy, does Avatar Holdings control Florida Cities' operations on a daily basis?
A. No, it does not.
Q. Does it control the operations of any of its individual plants on a daily basis?
A. No, it does not.

Page 139

MR. HIRD: Your Honor, at this time, I'd like to move into evidence certain exhibits that have been designated as annual reports or board minutes of Avatar Holdings. I have discussed it with counsel during the break and I believe there are no objections.
MR. JACOBS: Well, what you said during the break was that some of them were incomplete. I said as long as they were complete, I have no objections.
MR. HIRD: I will give you the complete ones, Your Honor, and then to the extent any of these exhibits are incomplete, we have complete copies that can be substituted.
Exhibit 1 Avatar Holdings' 1994 annual report.
THE COURT: Wait a minute. All right.
Exhibit 1.
MR. HIRD: Avatar Holdings' Exhibit 1.
MR. JACOBS: Can counsel represent whether it's complete?
MR. HIRD: Yes, it is.
MR. JACOBS: No objection.
THE COURT: Be received.
MR. HIRD: Exhibit 10, Avatar Holdings' minutes of a board of directors meeting dated September 24, 1980 is complete.
THE COURT: It'll be received.
MR. HIRD: Exhibit 11, Avatar Holdings' minutes of a

Page 140

board of directors, dated 10-23-1980.
MR. JACOBS: Complete.
MR. HIRD: Complete.
THE COURT: Be received.
MR. HIRD: Exhibit 15, Avatar Holdings' minutes of a board of directors dated January 1 -- 25, 1990.
MR. JACOBS: Complete?
MR. HIRD: Complete.
THE COURT: Be received.
MR. HIRD: 17, Avatar Holdings' board meeting, date, January 1, 1931 -- January 31, 1991, complete.
THE COURT: Be received.
MR. HIRD: Exhibit 18, Avatar Holdings' board minutes dated 6-15-92, this is complete.
THE COURT: Be received.
MR. HIRD: Your Honor, the following exhibits we have in excerpted form. We do have complete copies to the Government if he wishes to see them. The Government had the full opportunity to review all of Avatar Holdings' board minutes, so we are offering them in their excerpted form. If that is not acceptable to the Government, we can replace the completed form. Exhibit 21.
THE COURT: This is among those now that you're talking about?
MR. HIRD: Pardon?

Page 141

THE COURT: This 21 is among those you're talking about?
MR. HIRD: Yes, the ones that I'm going to read are all of this variety.
MR. JACOBS: 21, in at least the version that was provided to us by Avatar Holdings, are not minutes of board meetings, they purport to be minutes of the audit committee meeting.
MR. HIRD: As Mr. Jacobs already established, the audit committee meetings are an exhibit to the board meeting. We do have the board minutes to which they were attached that can be provided as well to the Government if it's unacceptable for that reason.
MR. JACOBS: It is unacceptable if it's incomplete. If it's complete without the minutes of the board meeting, I think we established it is not complete.
MR. HIRD: We have the board minutes with us, we can attach that. The substance of what we wish to have it for is the audit committee minutes so we can have it admitted, either in its excerpted form or its whole form.
THE COURT: Well, do I already have the minutes; do we already have the minutes of the board meeting in evidence?
MR. HIRD: No, we do not, Your Honor. I can produce them, they can be authenticated through Mr. Levy or some other means. We simply -- and Mr. Jacobs personally was able to see

Page 142

the entire board minutes.
THE COURT: Well --
MR. JACOBS: It's true, I'm sorry, Your Honor.
THE COURT: All right.
We have documents here. The documents are -- these are exhibits that objections have been made to them. Now, what objections have been made by the Government with respect to this excerpted Exhibit 21?
MR. JACOBS: Incomplete under rule of evidence Rule 106.
THE COURT: Incomplete, well --
MR. HIRD: Federal Rule 106 is not an absolute bar. It simply provides the other party has the right to introduce the rest of the document. We can have the document entered as the audit committee minutes only or we have here that can be substituted the exhibit with the board minutes attached. In order not to clutter up the Court's record, I did not want to put in a longer document simply to get what was relevant which was the smaller portion.
THE COURT: How many of these do we have like this?
MR. HIRD: There's only four that we particularly wish to see added on. That's 21, 23, 24 and 25.
THE COURT: All right.
Well, let's go ahead and put the -- make it complete, satisfy the Government and can we do that sometime during the

Page 143

recess?
MR. HIRD: I can do that during the break, Your Honor, if we don't need Mr. Levy to authenticate the documents.
THE COURT: Okay.
MR. HIRD: There's only one other exhibit that I'd like Mr. Levy to authenticate, it's probably the only examination I think that is beyond the scope of what we have, if I may do that, it would --
THE COURT: Go ahead, ask your question.
BY MR. HIRD:
Q. Okay.
Mr. Levy, can you look at Avatar Holdings' Exhibit 3? Do you have that in front of you?
A. Yes, I do.
Q. Is that your marking file in the corner?
A. Yes, that's my marking, Mr. Hird.
Q. And if you could turn to the fourth page of the exhibit, see the words "call Bob Gordon" written in handwriting?
A. Yes.
Q. Is that your handwriting?
A. That is indeed my handwriting.
Q. Do these documents comprising Exhibit 3 come from your office?
A. Yes, I believe they do.
Q. Are these records that you keep in the ordinary course of

Page 144

your business as chairman of the board of Avatar Holdings?
A. Yes, although they would be probably filed in a warehouse sometime after about two years.
MR. HIRD: Your Honor, I move that Exhibit 3 be admitted in evidence.
MR. JACOBS: Your Honor?
THE COURT: Yes.
MR. JACOBS: May I be heard? Mr. Hird represented in open Court these were Mr. Levy's personal records and were not the documents, the business records of Avatar Holdings. I've just heard him say the opposite. He told the Magistrate that these were not produced to us as Avatar Holdings' records because they were Mr. Levy's personal records, at which point in time we had to go subpoena Mr. Levy. So to hear him now say these are Avatar Holdings' business records is somewhat inconsistent. We object. It's got to go one way or the other.
MR. HIRD: May I reply, Your Honor?
THE COURT: Yes.
MR. HIRD: I indicated that these were not records of Avatar Holding Company per se. What I've asked Mr. Levy today is whether these are business records that he keeps in the course of his duties as chairman of the board of Avatar Holdings. These are not from the official files of Avatar Holdings, but they were from the files that Mr. Levy keeps personally in connection with his responsibilities as Avatar

Page 145

Holdings Board of Directors, so I think the statements were consistent, but this is not from an official Avatar Holdings' file, but it is from the business files that he keeps for himself.
MR. JACOBS: Can't have it both ways, Your Honor. If he keeps them as Avatar Holdings' files, then they're Avatar Holdings' records. He's the chairman of the board of Avatar Holdings. Mr. Hird has argued repeatedly in pleadings and in open Court that these particular records were Mr. Levy's personal records.
Exhibit 3 also seems to contain three separate documents and would appear to be hearsay and hearsay within hearsay, certainly with respect to the second two.
MR. HIRD: Your Honor, I believe with respect to the second document, Mr. Levy identified that it was his handwriting on the documents, with respect to the third, it is clearly the document that is referred to and incorporated in the second.
THE COURT: I'm going to overrule and receive it.
MR. HIRD: Thank you, Your Honor.
Mr. Levy, thank you very much, I have no more questions.
And, Your Honor, with this inquiry, I don't believe I will need to bring Mr. Levy back.
THE COURT: All right.

Page 146

Okay.
Redirect.
MR. JACOBS: No redirect, Your Honor.
THE COURT: All right.
You have no redirect?
MR. BULLOCK: No.
THE COURT: Thank you very much, you may step down.
THE WITNESS: Thank you very much, sir.
THE COURT: Call your next witness.
MR. JACOBS: Your Honor, at this point in time, the United States would call James Elder, Dennis Gotman, Robert B. Gordon, Anton A. Reeves, III, John K. Sladkus and Lawrence Wilkov. All of these six individuals have refused to answer any substantive questions in this matter at deposition on the grounds that their responses would incriminate them and have asserted their Fifth Amendment Right not the respond. The depositions themselves are, I would proffer, the deposition testimony of these witnesses at this time as recorded on page 34 of the revised joint pre-trial statement. In addition, I would like to make an offer of proof.
THE COURT: What page?
MR. JACOBS: Page 34, Your Honor, joint pre-trial statement.
THE COURT: Yes.
MR. JACOBS: And in addition, I would make an offer

Page 147

of proof in lieu of the testimony of the witnesses who pled the Fifth Amendment because it's a bench trial. I've put it in writing and would like to submit it to the Court with the Court's permission.
MR. HIRD: Your Honor, I don't think we have seen this offer of proof.
THE COURT: Well, show it to counsel before you show it to me.
MR. JACOBS: I've got copies for counsel, sir, and the original.
THE COURT: Before you show it -- well, just hand it to the Clerk. Now, you're offering -- you're offering these portions of the depositions of the six witnesses that you named?
MR. JACOBS: Yes.
THE COURT: Which is set forth on page 34 of the joint pre-trial statement?
MR. JACOBS: Yes, Your Honor.
THE COURT: All right.
First of all, is there any objection to those portions of the depositions?
MR. BULLOCK: Your Honor, I would note, first of all, the Government has never attempted to list these people as witnesses in the joint pre-trial statement or anything filed or delivered to us subsequent to the joint pre-trial statement.

Page 148

MR. JACOBS: Your Honor – sorry.
THE COURT: Wait a minute.
MR. BULLOCK: We would also object under relevance of offering these portions of the depositions.
THE COURT: Now, let's take one thing at a time. If this is a list of depositions that the Government as indicated intends to introduce at trial, correct, depositions to be offered in evidence at trial?
MR. JACOBS: Yes, Your Honor.
THE COURT: I don't understand your first objection, counsel.
MR. BULLOCK: In the context of, if he is at the present time going to argue that he would call these people in his case in chief had he not – had they not pled the Fifth Amendment, we've never had any notice of the fact he would have called these people in his case in chief. He didn't list those as potential witnesses in the pre-trial statement.
THE COURT: Well, wait a minute. He's listed their depositions and certain pages and lines. I don't follow you.
MR. JACOBS: I might add, if I may.
MR. BULLOCK: Some of these people, in fact –
MR. JACOBS: I've also listed on page 15, I specifically stated in the same pre-trial statement that I would have called those witnesses but for the fact that they asserted the Fifth Amendment at deposition.

Page 149

MR. BULLOCK: I withdraw that.
MR. HIRD: I would like to make a specific – with respect to one of the individuals, John Sladkus, who we had initially indicated might be one of our witnesses, the Government objected to John Sladkus being on our witness list, so therefore I don't think the Government can thereby offer information concerning Mr. Sladkus' potential testimony.
THE COURT: Well, the Government objected to Mr. Sladkus being on your witness list?
MR. HIRD: That's correct, Your Honor.
MR. JACOBS: Only –
THE COURT: And was that ruled upon?
MR. HIRD: Ultimately, Mr. Sladkus' name was withdrawn. Actually, Your Honor, I think you probably did rule upon it in your order last Monday because it was briefed. We indicated –
THE COURT: You indicated in your response what?
MR. HIRD: Mr. Sladkus had been withdrawn.
MR. JACOBS: I believe the Court therefore ruled that issue is moot because Mr. Hird had withdrawn him as a witness.
THE COURT: Yeah. What was the issue?
MR. JACOBS: The issue was Mr. Hird listed Mr. Sladkus as a witness when we had deposed Mr. Sladkus. He asserted the Fifth Amendment Right, and therefore didn't testify. The Government's position was, well, if he's going to

Page 150

testify at trial, he has to be deposed first, and discovery had already closed, so we said that Mr. Hird couldn't call him as a witness. And therefore, Mr. Hird withdrew him from the witness list and the Court, as I recall Monday's order, said the issue was moot.
THE COURT: I did, I said the issue was moot because they had removed him from the witness list. That's what I said.
MR. HIRD: Yes, but we had no indication Mr. Sladkus would be treated as a witness by the Government.
THE COURT: He's been listed.
MR. HIRD: Not by the Government.
THE COURT: Yes, he has. Oh, okay, maybe – well, he is on page 34, his deposition.
MR. HIRD: I mean as a live witness.
MR. JACOBS: On Plaintiff's page 15, I said I would have listed all the witnesses, but for the fact they asserted their Fifth Amendment Rights at deposition. Especially notes the United States would call the witnesses who have asserted the Fifth Amendment at deposition, see section H, infra, which is indeed page 34. I believe I preserved the right in two places.
THE COURT: Okay, Mr. Bullock.
MR. BULLOCK: Your Honor, I have another separate objection, but I didn't want to interrupt.

Page 151

THE COURT: Yeah.
MR. BULLOCK: Your Honor, we had – this is the first time that the – at least Florida Cities has seen the offer of proof. I'm a little confused because as I understand –
THE COURT: Well now, wait just a minute. As I understand it, the Government has asked to introduce these depositions, that is not a separate issue.
MR. BULLOCK: Well, Your Honor, the offer of proof includes putting the depositions in. It's not clear whether just the depositions are going in. Mr. Jacobs also attached a number of exhibits to these depositions. It's not clear, I have not had the opportunity to figure out whether or not he's trying to include the exhibits which were attached to these depositions to bring them in as well.
THE COURT: Let me see the – well, have you – this is a thirty-five page document here. Have you tendered this to counsel before?
MR. JACOBS: Not before today, Your Honor. This is part of our case in chief, and as far as we're concerned, they're entitled to rebut it in their cases and we've offered it in in fairness to allow them to.
MR. HIRD: Your Honor, we have substantial objections to the offer of proof. I don't know whether you want to deal with that now or whether you want to deal just specifically with the depositions, but and we're prepared to deal with it,

Page 152

whichever sequence you want.
THE COURT: Well, I don't understand what this -- what is this document?
MR. JACOBS: This is my -- the Government's proffer, Your Honor, of what we would be able to show were these witnesses to testify.
THE COURT: They have not?
MR. JACOBS: They have refused to testify in response to any substantive questions.
THE COURT: Well, how do you determine what they would testify to?
MR. JACOBS: Based on the documentation. We asked the Court to draw adverse inferences in this civil matter through the documents. As I said in any opening statement, these witnesses did not testify, they have that right, but the Government has the right to ask the Court to draw adverse inferences from the failure to testify, and as I said in my opening statement, they've left a long paper trail and essentially what I've done for the Court here is taken the Court through the paper trail and suggested the adverse inferences that should be drawn.
MR. HIRD: Your Honor, two points --
THE COURT: Well now, just a minute.
MR. HIRD: Sorry, Your Honor.
THE COURT: Is this not more in the form of you're

Page 153

asking the Court, number one, assuming the Court receives in evidence those portions of the depositions wherein these witnesses take the Fifth Amendment and, of course, this is predicated, this offer or this document here is predicated on that, that is -- you're arguing what inferences the Court may draw from these various witnesses taking the Fifth Amendment during their depositions.
Now, is this not more in the form of arguments regarding reasonable inferences based upon the evidence that comes before the Court, including the claims of the Fifth Amendment than it is any separate items? This is not -- this is not evidence here, these are your arguments regarding the inferences the Court may legitimately draw based upon the evidence that is before the Court, including the claims of the Fifth Amendment.
MR. JACOBS: Yes, and based on the evidence that there are another perhaps twelve to fifteen documents that I would move into evidence at this time. The point is that at this point in the case, I would be calling six adverse witnesses, and I would be showing -- essentially, I would be showing the Court essentially through the testimony of those witnesses, as you saw me run Mr. Levy through certain documents, I would be introducing certain evidence. Because these individuals have refused to testify in a civil case, adverse inferences may be drawn. I'm simply setting forth here

Page 154

in this document and at this point in my case in chief what I would expect to be able to prove through the testimony of those witnesses, particularly the testimony of the Avatar witnesses, Mr. Getman, Mr. Gordon, Mr. Sladkus, Mr. Wilkov.
MR. HIRD: Your Honor, Mr. Bullock will go first.
THE COURT: Mr. Bullock.
MR. BULLOCK: Your Honor, a couple of issues. First of all, we're actually double checking the transcripts right now. I do not believe that at least in some of these depositions, Mr. Jacobs actually propounded questions to the witnesses, the answers of which he's now trying to infer negative because they took the Fifth Amendment.
Secondly, for example, I refer you to page 2 of this document where he starts out a listing of Avatar Holdings' key players, including Peter Sharp, a New York City real estate tycoon who took a close personal interest in his investment. Obviously, Mr. Sharp's deceased. I don't know if Mr. Jacobs' trying to put evidence in because he can't get hold of Mr. Sharp, but at this point in the case, basically to turn in a brief where he's basically writing the testimony these people I think is highly improper and not a legitimate offer of proof.
MR. JACOBS: If it's just --
MR. HIRD: May --
THE COURT: Sir?
MR. HIRD: Following the points of Mr. Bullock, in

Page 155

none of these instances were there any specific questions asked in the ten or fifteen minutes, these deposition ended on page 10 or 12, so there were no specific questions asked.
With respect to the documents, as the Court has seen, the substantial number of documents that were admitted into evidence, Mr. Jacobs can argue whatever inferences he can for those documents, but specific questions were not propounded to these witnesses.
Mr. Sharp, as Mr. Bullock said, was dead, so he shouldn't be included in this, and is the first person mentioned in this list, and beyond the -- with respect to Avatar Holdings, in particular, two of the individuals who are recited were former employees. Mr. Wilkov has not only left the company at the time he was deposed, but he had filed suit against the company in connection with his termination. Moreover, he was deposed before Avatar Holdings was even in the case.
Mr. Sladkus, as you have just seen, left the company in 1991 and was deposed over the summer of 1995. Mr. Getman who was the third individual was deposed both for Florida Cities and Avatar Holdings, but is an attorney, and many of the specific questions would have been objected to on the grounds of the attorney/client privilege.
What we have here is an effort to embellish on inferences that he would have the Court draw from the

Page 156

documents. We have here a post trial brief that is rephrased as an offer of proof and we think this document is wholly illegitimate under the circumstances. We also don't think that any adverse inference should be drawn against Avatar Holdings because as you heard, we had the chairman of the board testify. He's been able to depose the president, the vice president of financial operations, he would have been able to depose the secretary, Ms. Kerrigan, if he called her in time. We have substantial officers of Avatar Holdings to testify.

Thank you, Your Honor.

MR. JACOBS: Your Honor, on the point of depositions, I forgive Mr. Hird. I believe he was only present at one of these six. I forgive him for saying that I didn't ask substantive questions because I did. And in fact, there were stipulations made that these witnesses would refuse to answer any substantive questions and the pattern that I followed was I went through each facility and I asked questions about each facility, I handed over literally dozens if not in some cases over a hundred documents and asked them if they recognized them and I went through a series of questions, a litany, if you will, and to each question the witness asserted his Fifth Amendment Rights. In fact, in each instance, you'll recall yesterday we saw a sample of a cue card, if you will, that said I respectfully decline to answer. In fact, each of these witnesses would state their name and their address and I think

Page 157

that was about it. When I got to how are you employed, that is when they started asserting the Fifth Amendment Right.

And then I went through my litany relating to each facility. I proffered the documents that I would have asked them about. Those documents are attached to the depositions. The depositions have already been filed with the exhibits.

So I think I've got my record here that I would have had the opportunity to elicit substantial testimony from these witnesses. And all I'm doing now in my case in chief is making an offer of proof of what I could prove at this point in my case in chief if these witnesses took the stand and testified. And in a civil matter, I believe I'm entitled to make that offer.

THE COURT: Now, you've cited Jacksonville Electric versus Bermooth. Where is the body of law that deals with the inferences that may be drawn in a civil case from the Defendant -- a witness invoking the Fifth Amendment privilege?

MR. JACOBS: A moment, Your Honor, I think I have it.

In the United States trial memorandum, page 16. First of all, footnote seventeen, we set out again the --

THE COURT: Just a moment.

MR. JACOBS: Sorry.

THE COURT: What page?

MR. JACOBS: Page 16 of the Government's trial memorandum. We set out in footnote seventeen the record of the

Page 158

deposition testimony.

THE COURT: Right.

MR. JACOBS: Those individuals who pled the Fifth Amendment.

THE COURT: Right.

MR. JACOBS: And then at the bottom of the same page, we suggest the adverse inference.

THE COURT: Right.

MR. JACOBS: And the body of law following.

THE COURT: Okay.

MR. JACOBS: Your Honor, this is not an attempt at surprise. To the contrary, we're right to argue this later on, perhaps in post trial briefs. It might be said the Defendants had not had an opportunity to respond. By offering this at this point in time, I think the Defendants are in fact advantaged by being able to rebut to the extent that they're capable of my offer in the context of their cases.

And in particular, this document, as I said, relates mostly to the inferences to be drawn from the failure of the Avatar witnesses to testify, and based on Mr. Hird's request that the Avatar Holdings part of the case follow the Florida Cities part of the case which is expected, based on what we heard just after the recess to be much more lengthy, seventeen or nineteen witnesses as opposed to two, I think that will give Avatar Holdings sufficient time to address these adverse

Page 159

inferences that we've suggested. There is no surprise intended and there is no unfairness intended.

THE COURT: Okay.

MR. SCROGGIN: May Florida Cities be heard?

THE COURT: Sir?

MR. SCROGGIN: May Florida Cities address the issues raised by --

THE COURT: I thought you had? Who is doing that; both of you now?

MR. BULLOCK: Your Honor, the only difference would be is in case the Court had any question about the actual deposition, Mr. Scroggin was at the deposition, also has copies of --

THE COURT: All right.

MR. SCROGGIN: Thank you, Your Honor. I was present I believe at each one of the depositions at which the Fifth Amendment was asserted. I can state personally that the procedures for these was essentially in an assembly line process wherein on some occasions hundreds of documents were introduced without being identified other than by number. No questions were propounded regarding each of the exhibits that were produced, and indeed, several of these Fifth Amendment depositions took an hour, sometimes less, at two or three times were scheduled for a single morning. In one instance, counsel for the United States asked that we simply accept a boxful of

Page 160

documents without seeing what was in the box as though those would appear later as exhibits for the deposition.

We insisted they be taken out of the box and at least numbered, but they were neither reviewed, identified or discussed. And in most instances, specific questions other than the broadest of questions regarding the names of facilities were propounded, sometimes a dozen questions and the deposition was over.

Florida Cities' position would be that the inferences were not set up in a manner because the questions were not propounded in a manner that would allow any inference to be draw.

MR. HIRD: Your Honor, may I speak for Avatar?

THE COURT: Wait a minute, wait a minute.

MR. SCROGGIN: And finally, Your Honor, I would point out both the president, Mr. Gerald Allen and vice president, Mr. Paul Bradtmiller of Florida Cities have indeed agreed to testify and have waived their Fifth Amendment Rights.

MR. JACOBS: Your Honor, may I be heard on the matter of depositions?

THE COURT: Yes.

MR. JACOBS: Your Honor, these exhibits were actually pre-marked at the request of Florida Cities to expedite the process. They wanted their witnesses not to be humiliated, they wanted to be able to come in quickly, assert their rights

Page 161

and leave. We accommodated their request in that respect. In each deposition, I suggest that you will see that I've asked questions about each facility, substantive questions about each facility. When I handed the documents over, they were identified by exhibit number and the first question was, do you recognize any of the documents and the response was, I refuse to respond on the grounds of the Fifth Amendment, what you saw on that cue card yesterday, and at that point, I entertained a stipulation by Florida Cities' counsel that the witness would take the Fifth Amendment in response to any substantive question.

And at that point, I think I've set my record clear. There is nothing more to be done. I don't think I need to spend two days with each witness on each exhibit. I think the record shows clearly that the witness refused to testify beyond, as I say, his name and address.

THE COURT: All right, Mr. Hird.

MR. HIRD: Your Honor, looking quickly at this offer of proof which is, as we said, we've just seen, Mr. Jacobs wishes to draw adverse witness inference from five individuals, the first is Peter Sharp. Peter Sharp is dead. I don't think there is any adverse inference that can be drawn from a man being unable to testify because he's dead. The second is John Sladkus as the Court has heard, recently --

THE COURT: Well now, just a minute. What's the name

Page 162

of the first?

MR. HIRD: Peter Sharp.

THE COURT: Sharp. He could have been called as an adverse witness?

MR. JACOBS: Except he's deceased.

THE COURT: I understand that.

MR. JACOBS: He's unavailable.

MR. HIRD: He died in 1992. So there's no --

THE COURT: Now, the Government sought to take his deposition?

MR. HIRD: no, Your Honor, no.

MR. JACOBS: He was already deceased.

THE COURT: He was already deceased.

MR. JACOBS: Which I think makes him unavailable.

MR. HIRD: I don't think leads to an adverse witness inference.

MR. JACOBS: Perhaps not an adverse inference, certainly an inference from the paper trail, again the documentation.

THE COURT: Go ahead.

MR. HIRD: Okay.

I'm going to skip to Mr. Wilkov and go back to Sladkus. Mr. Wilkov was deposed at a time when he was no longer employed by Avatar Holdings. He had filed a lawsuit against Avatar Holdings and he was deposed before Avatar

Page 163

Holdings was a party in this case.

THE COURT: His name is what?

MR. HIRD: Lawrence Wilkov.

THE COURT: All right.

MR. HIRD: W-I-L-K-O-V. Fifth Circuit recognized the problem in the case of FDIC versus Fidelity and Deposit Company of Maryland, 45 F 3rd, 969, it's a 1995 decision, indicating that a problem in drawing inferences where you have a disgruntled ex-employee who may invoke the privilege to hurt his former employer. Here, we have a situation where an employee who obviously left under bad circumstances that caused him to sue his employer. The deposition itself was not taken a at time Avatar Holdings is in the case. It's inappropriate to draw an inference from that.

Mr. Sladkus, John Sladkus was deposed in the summer of 1995. Mr. Sladkus resigned from his connection with Avatar Holdings in 1991. He is therefore a former employee, although he -- I would not characterize him as a disgruntled former employee. I think this period of separation is so long that it's inappropriate to draw the inference with respect Mr. Sladkus.

There are two more individuals, one is Robert Gordon. You've heard the testimony today that Robert Gordon has never been an employee, officer or director of Avatar Holdings. He is president of Avatar Utilities. But he has no employment

Page 164

relationship with Avatar Holdings, therefore it is wholly inappropriate to draw the inference.

The last individual is Dennis Getman who holds the position of being general counsel to both Avatar Holdings and Florida Cities and was originally called, I believe, his deposition was noticed I believe at the time when Florida Cities was the only Defendant in the case. Had there been full questioning of Mr. Getman, there may have been numerous legitimate invocations of the attorney/client privilege since Mr. Getman's role is as general counsel, the two entities.

In this situation, Your Honor, Avatar Holdings' chairman of the board has just been – has just testified. The president, Edward Jacobson was deposed and will testify. Charles McNairy, the vice president for financial matters, was deposed and will testify. Juanita Kerrigan, the secretary of the corporation signed interrogatory responses, was originally on our witness list, been dropped, we don't believe she's necessary, but she would have been able to testify.

To draw these inferences we think is illegitimate and I would point out that the reason why these witnesses invoked the Fifth Amendment had to do with the scope of the Weisenoff case which it has been brought to your attention earlier which indicated that very broad criminal liability rule in connection with the criminal enforcement of the Clean Water Act. Prior to that case, there was a general perception that a knowing

Page 165

violation of the Clean Water Act required you to know that what you were doing was a violation of the Act itself. That case said no, in order to be criminally liable, all the Government has to prove is that you know what you did.

And certain individuals in the wake of that case made their personal decision to take the Fifth Amendment, including Mr. Sladkus and Mr. Wilkov, at that point and with no assertion of Avatar Holdings, and therefore, had ever reason to put personal considerations ahead of company considerations, so under the circumstances, we think it's highly I believe appropriate to draw these inferences.

If the Government believes that there is such a clear document trail, he has those documents in evidence, he can ask this Court to draw what inferences he wants, but to make up this inference just out of documents I think is illegitimate under the facts of this case where so many Avatar Holdings' employees have testified and the few – and the two or three that haven't were not employees at the time they were deposed, one employee is dead and the last one is a special case and general counsel and could have invoked the attorney/client privilege.

MR. JACOBS: May I, Your Honor, briefly?

THE COURT: Yes.

MR. JACOBS: With respect to Mr. Getman who is executive vice president according to Mr. Levy's own testimony

Page 166

this morning, the other point of Mr. Levy's testimony was Mr. Getman has been with Avatar Holdings back almost as far as Mr. Levy has been. Likewise, Mr. Gordon preceded Mr. Levy in terms of his affiliation with Avatar Utilities or whatever it was known before it became Avatar.

And finally, Mr. Sladkus, as you heard Mr. Levy, was one of three individuals in addition to Mr. Levy and Mr. Sharp that had the authority to expend funds over one hundred thousand dollars. It is true that Mr. Jacobson, the present president of Avatar Holdings, has testified. It is also true based on Mr. Levy's testimony that Mr. Jacobson did not become affiliated with the company until 1992.

Essentially, the people who are being offered by Avatar Holdings as willing witnesses here are the people who either came in after the fact or, as Mr. Levy is maintaining, has no recollection or knowledge of the violation.

We would be able to establish through this offer of proof and the documents that it references that the three individuals, Mr. Getman, Mr. Gordon and Mr. Sladkus were highly knowledgeable of the violation, highly involved on behalf of Avatar Holdings in decision-making directly relating to these violations.

THE COURT: All right.

Yes, sir.

MR. BULLOCK: Would Your Honor consider a request to

Page 167

take this under advisement till we can at least provide some kind of legal memorandum on the validity of this?

THE COURT: Did you address this in your trial memorandum?

MR. BULLOCK: No, Your Honor. We addressed the overall Fifth Amendment issue in the Summary Judgment. We have not addressed the propriety of the offer of proof in this context nor has either side actually submitted the actual testimony, copies of the depositions.

MR. JACOBS: We filed them, Your Honor.

THE COURT: All right.

Well, I don't think it would be appropriate for the Court to draw any inferences from the deposition of Lawrence Wilkov who is no longer with Avatar and indeed demonstrated some – certainly had no – well, demonstrated hostility by the fact he himself filed suit against Avatar.

As far as Sharp is concerned, I don't know, I don't understand how the Government is entitled, if I understand correctly, he was never deposed, he died before he was ever deposed. I don't know how you can assert the same rationale for drawing inferences against Avatar by reason of his unavailability at trial. Talk to me a little bit about that.

MR. JACOBS: Well, by all means, I don't think we have the same right under the line of cases that I cited to in my trial memorandum because he did not assert the Fifth

Page 168

Amendment. He is unavailable by definition. And therefore, we can suggest inferences from the documents that he's left behind. But I don't think we –

THE COURT: Yeah, yeah, that's argument. I mean, that's – you'd be able to do that or at least argue it.

MR. JACOBS: The reason for the introduction to Mr. Sharp actually at the beginning of the document is just to put in prospective some of the other exhibits that are cited in the offer of proof because so many of them went from Sharp to Sladkus, as you have seen this morning, through Wilkov or Sharp to Wilkov and Sladkus, and/or to Levy or Gordon to Sharp. And if it was just that particular portion of the document, I'd be happy to have the Court accept the document with excising the section on Peter Sharp. That again is on the bottom of page 2 and ends on the top of page 4, because I think I've elicited that information through Mr. Levy, so I'd be happy to have that stricken from the document if the concern is that he does not fall into the same category as the witnesses who plead the Fifth Amendment which I would concede in terms of adverse inferences.

THE COURT: Well, okay, I'm going to permit counsel for the Defendants to brief this issue and I'll take this under advisement, and I need to know, the Government is offering the depositions of which of these persons again; they're listed on page 34?

Page 169

MR. JACOBS: Yes, sir. James Elder, Dennis Getman, Robert Gordon, Anton A. Reeves, III, John K. Sladkus and Lawrence Wilkov.

THE COURT: I've already ruled on Lawrence Wilkov. I'm not going to -- I'm not going to allow that deposition, sir.

MR. HIRD: That was the clarification that I was standing to ask you about because I thought you had. I wasn't certain.

THE COURT: Now, now you were going to offer into evidence documents?

MR. JACOBS: Yes, Your Honor. Government's 16.

THE COURT: Well, how many of these are we talking about?

MR. JACOBS: It's a very short list.

THE COURT: You said very briefly yesterday afternoon, too, so you better -- they will be. How many are there?

MR. JACOBS: Yes, Judge.

(Brief Pause.)

Thirty-three, Your Honor.

THE COURT: Thirty-three?

MR. JACOBS: And I can't tell you how many --

THE COURT: Brief is relative -- short is relative, isn't it?

Page 170

MR. JACOBS: I'm not sure there will be objections to that many, although I can't speak to that.

Is 16 in already?

THE CLERK: Yes.

THE COURT: See, there are only thirty-two now.

MR. JACOBS: Briefer than I thought.

Is 26 and 30, are they in also? I think they might be?

THE CLERK: 26 and 30, yes.

MR. JACOBS: And 34 is as well, is it not?

THE CLERK: Yes.

MR. JACOBS: I'm sorry, I didn't do my homework. 38 is as well?

THE CLERK: No.

MR. JACOBS: Move 38 in.

MR. HIRD: Your Honor, once again, 38 is subject to, I guess, code one and code two objections.

THE COURT: All right.

Overruled, it will be received.

MR. JACOBS: 51 I believe is already in.

THE CLERK: No.

MR. JACOBS: Forgive me. Then I'll move 51.

MR. HIRD: We have no objection to 51.

THE COURT: Be received.

MR. JACOBS: 52.

Page 171

MR. HIRD: I believe 52 is in.

THE CLERK: No.

MR. HIRD: This also is a code one and code two objection, Your Honor.

THE COURT: All right.

It'll be received.

MR. JACOBS: 58.

MR. HIRD: This is Avatar Holdings, we have no objection.

THE COURT: Be received.

MR. JACOBS: 65.

MR. HIRD: We have no objection.

THE COURT: Be received.

MR. JACOBS: 81.

MR. HIRD: This has a code one and code two objection, Your Honor.

THE COURT: All right. It will be received.

MR. JACOBS: 82.

MR. HIRD: Code one and code two objection, Your Honor.

THE COURT: It'll be received.

MR. JACOBS: 83.

MR. HIRD: Code one and code two objection, Your Honor.

THE COURT: Will be received.

Page 172

MR. JACOBS: I believe 99 is in.
THE CLERK: Yes.
MR. JACOBS: I believe 156 is in.
THE CLERK: Yes.
MR. JACOBS: Is 156 in?
THE CLERK: Yes.
THE COURT: All right.
MR. JACOBS: 196.
MR. HIRD: We have no objection.
THE COURT: Be received.
MR. JACOBS: 201.
THE COURT: I thought that was in.
THE CLERK: No, it's not.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 203.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 273, these are minutes.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 383.
MR. HIRD: Your Honor, this is a code two objection.
THE COURT: All right. Overruled, it will be received.

Page 173

MR. JACOBS: 386.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 403.
MR. HIRD: This is a code two objection, Your Honor.
THE COURT: Overruled, be received.
MR. JACOBS: 462.
MR. HIRD: We have no objection to that one.
THE COURT: Received.
MR. JACOBS: 496.
MR. HIRD: We have no objection to that one.
THE COURT: Be received.
MR. JACOBS: 497.
MR. HIRD: No objection to that one.
THE COURT: Received.
MR. JACOBS: 513.
MR. HIRD: Your Honor, this is Mr. Sladkus' statement invoking the Fifth Amendment. I believe that is what you just took under advisement.
MR. JACOBS: I believe that is the cue sheet.
THE COURT: Cue sheet, oh yeah.
MR. JACOBS: If the Court wants to consider that with the offer of proof.
THE COURT: Yeah, that's going to be within the parameter of what I'm inviting counsel to brief. Okay, so I'll take that under advisement.

Page 174

MR. JACOBS: Likewise, 515, it's another cue sheet.
MR. HIRD: I believe that's on Wilkov. I think you already ruled on Mr. Wilkov.
THE COURT: Yes, I have. That is Wilkov's?
MR. HIRD: Yes.
THE COURT: Okay, well – is that Wilkov?
MR. QUINN: 515 is Lawrence Wilkov.
THE COURT: Yes, I'll sustain it.
MR. JACOBS: 515, it's a cue sheet for Mr. Elder.
MR. BULLOCK: Your Honor, wouldn't that also be the scope of the – wouldn't that also be within the scope of what you are holding in abeyance?
THE COURT: Yes.
MR. BULLOCK: Thank you.
THE COURT: Reserve on that.
MR. JACOBS: 522, these are minutes.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 521, also minutes, I believe.
MR. HIRD: No objection.
THE COURT: Be, received.
MR. JACOBS: 546, this is an annual report, 1990, of Avatar Holdings.
MR. HIRD: No objection.

Page 175

THE COURT: Be received.
MR. JACOBS: 560.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 568.
MR. HIRD: No objection.
THE COURT: Received.
MR. JACOBS: 579.
MR. HIRD: No objection.
THE COURT: Received.
Isn't that thirty-three?
MR. JACOBS: I'm sorry, sir?
THE COURT: Haven't we gotten past thirty-three in the exhibits?
MR. JACOBS: I'm on my last one.
THE COURT: Good.
MR. JACOBS: I'll count them and let you know if I was wrong again.
THE COURT: No. You got one more?
MR. JACOBS: 593 should be the last one, sir.
MR. HIRD: I'm sorry, 593?
THE COURT: 593.
MR. JACOBS: Yes.
MR. HIRD: We have no objection.
THE COURT: Be received.

Page 176

Okay.
I need to give counsel a time within which you'll be expected to address these issues here. I guess it comes -- it'll probably come as no surprise to you I'm probably not going to announce my ruling at the end of this case. I don't anticipate doing that. Frankly, the only reason why I would suggest that the Court has to have your response right away would be for the Court to rule on a motion made at the close of the Plaintiff's case which may be coming shortly, but when can you have your responses ready?
MR. HIRD: May we confer, Your Honor?
THE COURT: Yes, sir.
(Brief pause.)
MR. BULLOCK: Your Honor, would the Court consider Wednesday?
THE COURT: You want to be heard?
MR. JACOBS: Will we have the opportunity after Wednesday to respond? I don't mind if the Court wants to take the matter under submission. You don't expect to rule before the end of the case as I understand what the Court just said.
THE COURT: Yeah.
MR. JACOBS: We can do it in the context of --
THE COURT: Really, what we're talking about here --
MR. JACOBS: Do you want to do this in the context of post trial briefs? I have no problem with that, Your Honor.

Page 177

THE COURT: Well, that might be the best way to handle it.
MR. HIRD: Your Honor, Avatar Holdings was contemplating a Rule 52-C motion at the time that the Government finishes its case and if it's inconvenient for the Court, obviously we'll deal with it, but it had been our hope to put that motion forward in that way, hopefully.
Avatar Holdings had been planning a Rule 52-C motion when the Government finishes its case. We don't believe the Government has proven liability against Avatar Holdings. Obviously this is an issue that needs to be resolved before, that if the Court is more comfortable with doing it in the scope of post trial briefs, we obviously exceed to the Court, however, we don't intend to pursue a motion that the Court does not feel it's prepared to deal with, but if there's any matter which we can schedule so our 52-C motion can be considered and perhaps avoids us to unnecessarily produce witnesses, we would appreciate it.
MR. JACOBS: I'm not sure what he just proposed. If this is helpful, we probably have in evidence roughly five hundred documents already, many of which we would argue will establish Avatar Holdings' liability. If that relates to his upcoming motion, we just haven't had a chance to argue it. We argue some of these obviously in the offer of proof and again, in fairness, we really did intend the other side to rebut this

Page 178

in their case through evidence that they can present. They're sort of in control of the cards here because they have been able to pick which witnesses testify and which don't. It's a luxury we haven't had in terms of calling their witnesses.
THE COURT: Well, let me consider that and let you know by the end of the day how I think we ought to best handle this issue. When we first started talking about this and when I heard Mr. Jacobs talking about the number of exhibits, the exhibits are coming in and there is no uncertainty with respect to the exhibits themselves, I'm not talking about the cue cards here, and so, there is no uncertainty anymore regarding those exhibits. The only issue is as to which if any of these witnesses who have pled the Fifth Amendment is the Court going to permit the Government to rely upon adverse -- that is adverse to the Defendant's inferences.
MR. HIRD: And also what inferences can be drawn, Your Honor.
THE COURT: And what inferences can be drawn.
MR. JACOBS: Your Honor, again, there was no unfairness intended and if they want to rebut the offer during their cases or even in their post trial brief, I have no problem with that. In a sense, I've shown my hand as opposed to waiting till that point in time.
THE COURT: All right.
Well, Mr. Hird, frankly what the Court may wind up

Page 179

doing and likely will be doing is reserving ruling on your motion that you'll be making at the close of the Government's case and so I don't think that you're going to be prejudiced by the Court's providing for post trial motions or memoranda addressing this particular issue, but I'll hear you on your motion at the close of the Plaintiff's case and I haven't set that in concrete as yet.
MR. HIRD: Yes, Your Honor.
MR. BULLOCK: Your Honor, just one other point, two other points, just briefly. As you know, we have not had a chance to read this document. It's unclear from this document, at least a cursory review, as to how many of these documents are offered as proof inferences against which specific proposed witnesses or these individuals that the Plaintiff is trying to claim the Court should draw an adverse inference from. And I don't know if that's something you want to -- if you wanted to look at the documents this afternoon and see if that addressed any of the issues or not. And the other question is whether or not this is a brief of some sort and we could be excused from the Court's page limit as well since this is thirty-five pages as I assume it's either ten or fifteen pages over the Court's page limit for a brief.
MR. JACOBS: Your Honor, we stopped at thirty-five based on the precedent that you set earlier in this case when we submitted something in excess of thirty-five and you

Page 180

departed back to thirty-five and that is why we stopped at thirty-five here. There was, as I said before, fifteen years history to cover.

THE COURT: Well now, let me – let me make sure I understand. The Court is being asked to draw certain inferences from the invocation of the Fifth Amendment by these various witnesses. And are the – is the Government -- well, let me see.

MR. BULLOCK: Your Honor, I may be able to point you to --

THE COURT: Yes.

MR. BULLOCK: You look, for example, at page 34, there is a footnote which lists the whole slew of documents that the Government's claiming. These are other trial exhibits which support further the inferences suggested, but it's not identified which documents against which individuals to draw what inferences against which companies.

MR. JACOBS: Judge, this document relates almost exclusively to the liability of Avatar Holdings. I'm not sure we – only peripherally do we have adverse inferences with respect to Florida Cities for what that is worth.

THE COURT: Is that clear from your written submission?

MR. JACOBS: I think it should be, Your Honor. I perhaps can enlighten upon that.

Page 181

THE COURT: All right, I tell you what, Counsel, you'll have a greater opportunity to absorb this document. We have spent a considerable amount of time on this this afternoon, and I think that you know I don't have to necessarily put it in concrete this afternoon as to how we're going to deal with this. I think after you have had an opportunity to assimilate this, we can perhaps address procedurally how we best ought to approach this.

This is a fairly unusual situation here and frankly, I'm groping a little bit at this point and I don't doubt that in a civil case that certain inferences may be drawn by reason of a witness who is associated with a party in the case invoking the Fifth Amendment. But, just how far that can go, and I don't know at this point, so, I'll let you know when – I'll not require a response sooner than Wednesday, and may extend that further. So, perhaps we'll discuss it further in the morning. Okay.

Call your next witness.

MR. QUINN: Yes, Your Honor. The United States calls Ms. Eileen Zimmer.

Thereupon,

EILEEN ZIMMER,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

Page 182

THE CLERK: Take a seat in the witness stand. State your name and spell your last name for the record, please.

THE WITNESS: My name is Eileen Zimmer, Z-I-M-M-E-R.

DIRECT EXAMINATION

BY MR. QUINN:

Q. Thank you. Good afternoon, Ms. Zimmer.

A. Good afternoon.

MR. QUINN: Your Honor, we would like to make an offer of proof in light of the Court's ruling, it will not be long.

Were Ms. Zimmer allowed to testify as to the wrongful profits analysis, she would testify to those areas as set forth in parts one and three of United States Exhibit for identification 598.

BY MR. QUINN:

Q. Ms. Zimmer, where do you work?

A. I work for the Antitrust Division of the Department of Justice?

Q. What is your title at the United States Department of Justice, Antitrust Division?

A. I'm a senior financial analyst with the Corporate Finance Department.

Q. As senior financial analyst with the Corporate Finance Department, which unit did you work for?

A. Corporate Finance Unit.

Page 183

Q. As senior financial analyst with that unit, did you analyze wrongful profits and ability to pay in this case?

A. Yes, I did.

Q. Have you prepared an expert report in this action?

A. Yes, I have.

Q. And I'd like the witness to be shown Exhibit 598, please. My question is going to be is that your report when you get to it.

A. Yes, it looks like it is.

Q. Have you formed an opinion as to the ability of Florida Cities Water Company to pay a civil penalty in this case?

A. Yes, I have.

Q. Have you formed an opinion as to the economic impact of payment of a civil penalty on Florida Cities Water Company?

A. Yes, I have.

Q. Have you formed an opinion as to the ability of Avatar Holdings, Incorporated to pay a civil penalty in this case?

A. Yes, I have.

Q. And have you formed an opinion as to the economic impact of payment of a civil penalty on Avatar Holdings, Incorporated?

A. Yes, I have.

Q. Can I ask you some questions about your background as a financial analyst, Ms. Zimmer?

Where did you earn your undergraduate degree?

A. I earned it at Penn State University.

Page 184

Q. Which year?
A. 1976.
Q. Do you also have a Masters degree in business administration?
A. Yes, I do.
Q. And where did you get that?
A. From the George Washington University.
Q. And when did you get that?
A. In 1978.
Q. Have you taken any other graduate courses?
A. No, I haven't.
Q. And are you a certified financial analyst?
A. I'm a chartered financial analyst.
Q. Excuse me. Can you tell me what the requirements are to become a chartered financial analyst?
A. The chartered financial analyst program or CFA program is a program, is a three year course of study that covers a range of business disciplines including accounting, economic quantitative analysis, fixed incomes securities, equities, security analysis, and there's an ethics portion, and in addition, there is a three year experience requirement.
Q. Is this a self-study program, Ms. Zimmer?
A. It can be a self-study program. There's also courses, there is a national professional agency that runs the CFA program and each regional area such as for instance Washington,

Page 185

DC, has a regional chapter and they run review courses.
Q. Did you complete the required course work, Ms. Zimmer?
A. Yes, I did.
Q. When did you do that?
A. 1991?
Q. Did you complete the experience requirements?
A. Yes, I did.
Q. About how many chartered financial analysts are there in the United States?
A. I'm not sure of the exact number, but it's somewhere in the range of about thirty-five thousand.
Q. Can you tell be how does a chartered financial analyst differ from a certified public accountant?
A. A certified public accountant or a CPA is a professional accreditation in the acting field. The CFA program is a professional accreditation in, as I said, it covers a broader range of business disciplines.
Q. Have you taught any seminars in the field of financial analysis?
A. Within the Department of Justice, I have taught a few seminars for the various divisions within the Department and the AUSA's.
Q. And what areas were those seminars?
A. It was in understanding financial statements, bankruptcy and evaluating a company's ability to pay.

Page 186

Q. Ms. Zimmer, could you please briefly describe your employment history?
A. Yes. After I graduated, from Penn State, I worked as a statistician at the Census Bureau, U. S. Bureau of the Census, and then I went and obtained my MBA from the George Washington University. After I graduated, I worked for about a year for Washington Gas Light Company which is a public utility in the DC area. And after that, I worked for the Federal Energy Regulatory Commission for about five years. And after that, I started my job with the Department of Justice. I've been at Justice for twelve years.
Q. And has all that time been in the Antitrust Division?
A. Yes.
Q. Thank you. Can you please briefly describe your experience in determining a company's ability to pay a civil penalty in separate cases?
A. Well, I have twelve years of experience at Justice in doing that type of analysis, over twelve years.
Q. About how many cases or companies have you analyzed to determine their ability to pay a civil penalty?
A. I don't have an exact count, but it's hundreds of cases.
Q. And other than corporations, have you also analyzed other entities' ability to pay civil penalties?
A. Yes.
Q. That would still be within the same hundreds of cases?

Page 187

A. Right.
Q. Thank you. Can you please tell me a little bit about the work that you did in the U. S. versus Heater Boil Company and Sonny Wayne Mash? What was the work for?
A. That was in an ability to pay, that was for a sentencing hearing.
Q. And when was that?
A. I'm not -- I think it was in 1993, but I'm not sure. It's listed on my CV. It was antitrust price fixing sentencing hearing.
Q. About how many cases have you analyzed ability to pay in antitrust cases?
A. I really don't know. The number I gave previously included ability to pay cases in all of the divisions.
Q. And which of those divisions, please.
A. The Antitrust Division, the Civil Division and what is now known as the Environment and Natural Resources Division.
Q. Do you sometimes do analysis when the United States is a Defendant in a case?
A. Yes. Do you mean for ability to pay?
Q. Yes?
A. No.
Q. Do you sometimes testify when the United States is a Defendant, though?
THE COURT: You mean for the United States?

Page 188

BY MR. QUINN:
Q. For the United States. Withdrawn.
Do you ever do work in cases in which the United States is a Defendant?
A. Yes, I do.
Q. Thank you. And have you ever determined a company's economic benefit from non-compliance with a law or regulation?
A. Yes, I have.
Q. About how many times over the course of your twelve years?
A. The cases that I've worked on determining economic benefit were environmental cases and I have testified at my deposition that I had three cases that I worked on, three cases with regards to that.
Q. Have you ever analyzed wrongful profits which inured as a result of a violation of law or regulation?
MR. HIRD: Your Honor, I do believe we're getting to the point where it has been ruled on on our motion in limine.
THE COURT: Appears so.
MR. QUINN: I withdraw the question.
Your Honor, at this time, I'd proffer Ms. Eileen Zimmer as an expert witness in the area of financial analysis.
THE COURT: Okay, proceed.
BY MR. QUINN:
Q. Ms. Zimmer, could you please tell me what economic

Page 189

benefit means?
A. Economic benefit –
MR. HIRD: Your Honor, what I'm concerned about, we've set forth in our brief what we understood the law to be in economic benefits. You accepted our view, Magistrate Swartz endorsed it. That's fine. if this is another argument as to why wrongful profits should be used, I would object.
MR. QUINN: Your Honor, this is not another argument about wrongful profits. I'm merely getting into some definitions about what economic benefit is.
THE COURT: All right.
MR. HIRD: Also, I would like to point out there is nothing in her expert witness report about economic benefit other than wrongful profits analysis and therefore if they're going to substitute some additional numbers about economic benefit, we would most intensely object.
MR. QUINN: Ms. Zimmer is not going to talk about any numbers, Your Honor.
THE COURT: All right.
BY MR. QUINN:
Q. My question was, can you tell me what does economic benefits mean in your opinion, Ms. Zimmer?
MR. HIRD: Objection, Your Honor, are we talking under the Clean Water Act or talking generally?
MR. QUINN: I withdraw the gentleman.

Page 190

BY MR. QUINN:
Q. Under the Clean Water Act, what does the term economic benefit mean to you?
MR. HIRD: Objection, calls for a legal conclusion.
THE COURT: I'll overrule the objection. I'm not sure where we are going with this right now, but go ahead and answer the question.
THE WITNESS: In my opinion, economic benefit is the gain derived by an entity as a result of not being in compliance with a law. I guess in your example, it's the Clean Water Act.
BY MR. QUINN:
Q. Have you ever heard of the United States EPA's Ben Model?
A. Yes, I have.
Q. What is it, please?
A. The Ben Model is a computer model or program that was designed to be – I'll use the term, "user friendly," simple, easy to use. It's a computer program which calculates the economic benefit from delayed costs of compliance.
THE COURT: Wait just a minute. I'm trying to recall now, but my recollection of reviewing her report in dealing with pre-trial motions was that her opinions regarding economic benefits is centered on wrongful profits.
MR. QUINN: That is correct, just wrongful profits.
THE COURT: All right, now. I believe that what is

Page 191

carved out or what is left legitimately for her to testify to has to do with Defendants' ability to pay.
MR. QUINN: Yes, Your Honor. I'm trying to lay a foundation for a subsequent witness as to the Ben Model.
MR. HIRD: Your Honor, I would object because I think what they're attempting to do is put in evidence of economic benefit through the Ben Model which is a more traditional method of doing it which they did not produce in their expert testimony, did not give us before trial. The only calculations of economic benefit that they gave us was wrongful profit. Apparently what they're trying to do is Mr. Pfaff is their only witness left and now to do an economic Ben Model calculation is something that's never been disclosed to us in this case.
THE COURT: Where has she included in her report reference on the Ben Model?
MR. QUINN: Does not have any anything in her report with regard to the Ben Model. However, she did discuss it upon inquiry during her deposition.
THE WITNESS: In my report.
MR. HIRD: In her deposition, we asked her, Mr. High particularly, about the Ben Model, pointed out she hadn't used the accepted method for calculating the economic benefit and at that point, she had only produced wrongful profits analysis and forgone what is the traditional technique.
THE COURT: She's not going to be permitted to

Page 192

testify concerning anything that is not in her report.
MR. QUINN: Thank Your, Honor. I'll move on.
BY MR. QUINN:
Q. Moving to the area of about to pay, Ms. Zimmer; Ms. Zimmer, did you analyze the financial condition of Florida Cities Water Company with respect to its ability to pay a civil penalty in this case?
A. Yes, I did.
Q. How did you analyze the financial condition of Florida Cities?
A. I reviewed the documents produced by the Defendants here, the which include the financial statements from 1981 for my reports. I had the financial statements from 1981 through 1993. In addition, I attended the deposition of Mr. Murphy, the CFO of Florida Cities. But that deposition was after my report.
Q. Did you – you said you reviewed documents. I'd like to show you three exhibits, please, United States Exhibit 583, 584, 585. Could you please tell me whether you reviewed Exhibit 583 in preparation of your expert opinion?
A. Yes, I did.
MR. QUINN: Your Honor, I would –
THE WITNESS: Uh, can I clarify my answer?
BY MR. QUINN:
Q. Please?

Page 193

A. Are we talking about Florida Cities Water Company?
Q. I'm talking -- I'll withdraw the question.
In review, in preparing your expert opinion as to Florida Cities' and Avatar Holdings' ability to pay, did you review United States Exhibit 583 for identification?
A. Yes, I did.
MR. QUINN: Your Honor, I would move United States Exhibit 583 into evidence.
MR. HIRD: Your Honor, Exhibit 583 seems to be excerpts from Avatar Holdings' Exhibit 1 which is already in evidence and on that basis, we have no objection.
THE COURT: Be received.
BY MR. QUINN:
Q. Ms. Zimmer, did you review again portions of the Avatar Holdings Exhibit 584 for identification?
MR. HIRD: Mr. Quinn, I appear not to have a copy of Exhibit 584 in the notebook that you gave me.
MR. QUINN: I apologize.
MR. HIRD: Is that your annual report?
MR. QUINN: Portions of it.
MR. JACOBS: You want to see portions?
MR. HIRD: It might be easier to just use Exhibit 1.
MR. QUINN: I'm not going to refer to these documents at all, Your Honor. I wanted to identify them for the record and move them in evidence. Ms. Zimmer, if she needs to, will

Page 194

have them at her disposal.
MR. HIRD: You're representing that's another excerpt of Avatar Holdings' Exhibit 1?
MR. QUINN: My representation is that Exhibit 584 is a different excerpt of the same annual report, Your Honor.
THE COURT: Okay. Be received.
BY MR. QUINN:
Q. Thank you. Turn to page, hopefully there will be an exhibit there to United States Exhibit 585 for identification. Can did you review that exhibit, Ms. Zimmer?
A. Yes.
Q. Could you please tell me what it is?
A. It's the audited financial statements for Florida Cities Water Company for December 31st, 1993.
MR. QUINN: We're going to move the next book -- like you to take a look at Exhibits 591, 594, 595 and 596, and I'm going to ask you the same questions. With regard to United States Exhibit for identification 591, have you seen -- did you rely upon that exhibit?
A. Yes, I have.
Q. With regard to United States Exhibit 594 for identification, did you rely upon that exhibit, Ms. Zimmer?
A. 594?
Q. Yes.
A. For my report, are you talking about for my report?

Page 195

Q. For your ability to pay analysis only.
A. For my ability to pay analysis, yes, I did rely on 594.
MR. QUINN: Your Honor, I would move United States Exhibit 594 for identification into evidence, please.
MR. HIGH: no objection.
THE COURT: It'll be received.
BY MR. QUINN:
Q. Did you rely upon 595 for your financial analysis?
A. Yes, I did.
MR. QUINN: Your Honor, I would move United States Exhibit 595 into evidence at this time, please.
THE COURT: Be received.
BY MR. QUINN:
Q. Ms. Zimmer, would you please look at one last exhibit, Exhibit 596 for identification. Did you rely upon 596?
A. Yes.
Q. What is 596, please?
A. It's a SEC 10-Q quarterly report for the three month period ending September 30, 1995.
MR. QUINN: Your Honor, at this time, I'd like to move United States Exhibit 596 for identification into evidence.
THE COURT: It'll be received.
BY MR. QUINN:
Q. Ms. Zimmer, do you have an expert opinion as to Florida

Page 196

Cities Water Company's ability to pay a penalty in this case?
A. Yes, I do.
Q. What is your expert opinion on that?
A. My opinion is that Florida Cities Water Company has the ability to pay an amount up to seven and a half million dollars.
Q. And do you have an expert opinion as to the economic impact that payment of a civil penalty of up to seven and a half million dollars would have on Florida Cities Water Company?
A. Yes, I do.
Q. And what is that opinion, please?
A. My opinion is that a seven and a half million dollar amount would not have a material adverse affect on the company.
Q. Ms. Zimmer, you also stated earlier that you analyzed the financial condition of Avatar Holdings with respect to its *ability to pay a civil penalty in this case, is that correct?*
A. Yes, I did.
Q. Could you please tell me what you did do to go about analyzing the financial condition of Avatar Holdings?
A. Avatar is a public company, so I reviewed the filings that the company made with the SEC, and I also had a financial data base with printout information on public companies that is based on the SEC filing.
Q. What is the data base you had?

Page 197

A. The Standards and Poors Compustat Data Base.
Q. Ms. Zimmer, you did you attend any deposition of any chief financial officers?
A. Yes, I did.
Q. And?
A. The CFO of Avatar Holdings, Mr. McNairy.
Q. Ms. Zimmer, in your experience, do balance sheets of companies always accurately reflect the true value of a company?
A. A balance sheets reflect the accounting amount for the assets, the liabilities and the net worth of the company in terms of market value or the value, the total net worth or the total equity that's listed on a balance sheet. That number may or may not be reflective of a company's true market value.
Q. Ms. Zimmer, do you have an expert opinion as to Avatar Holdings ability to pay a civil penalty in this action?
A. Yes, I do.
Q. And *what is that opinion, please?*
A. My opinion is that Avatar can afford to pay a penalty up to fifteen million dollars.
Q. Ms. Zimmer, do you have an expert opinion as to the economic impact that payment of a penalty of up to fifteen million dollars would have on Avatar Holdings?
A. Yes, I do.
Q. And what is that opinion?

Page 198

A. My opinion is that a payment of fifteen million dollars would not have a material adverse affect to the company.
MR. QUINN: Thank you, Your Honor. I have no more questions.
THE COURT: Okay.
MR. HIGH:. Your Honor, may name is Lance High, I represent the Defendant Florida Cities.
THE COURT: Yes, you may proceed.
CROSS EXAMINATION
BY MR. HIGH:
Q. Good afternoon, Ms. Zimmer.
A. Good afternoon.
Q. Ms. Zimmer, you testified that you've always worked for the U. S. Government from 1978, 1979; is that correct?
A. Yes.
Q. Have you ever given any expert testimony for any entity other than the U. S. Government?
A. No.
Q. Ms. Zimmer, what percentage of time do you spend performing ability to pay analyses for the privately owned, publicly regulated utilities in your position with the Department of Justice?
A. Very little.
Q. Would that be less than ten percent of your time?
A. Yes, sir, certainly.

Page 199

Q. Have you ever performed an ability to pay analysis for a company that is regulated by the Florida Public Service Commission?
A. No, I have not.
Q. Ms. Zimmer, would you turn to page 8 of your report, please?
A. Could you tell me what the exhibit number is?
Q. I believe it's Plaintiff's 597 – 598.
THE COURT: What page?
MR. HIGH: Page 8, please, Your Honor.
THE WITNESS: 585?
BY MR. HIGH:
Q. 598, Ms. Zimmer.
A. Okay.
Q. Ms. Zimmer, you conclude on page 8 in the second paragraph that liquidity as represented by its current ratio and working capital is poor; is that for Florida Cities?
A. Yes, Florida Cities Water Company.
Q. And current ratio is the ratio of current assets to current liabilities, correct?
A. Yes, it is.
Q. And it's meant to be somewhat of a Litmus test for short term obligations, is that correct?
A. Typically, yes.
Q. And the results of that current ratio tell you that the

Page 200

working capital is poor, correct?
A. Yes.
Q. That means there's no free, access money just floating around in some bank account, correct?
A. That's one portion of liquidity.
Q. And then you go on to state, Ms. Zimmer, equity has been established since 1991, correct?
A. Yes, I do.
Q. And that long term debt has increased over that period of time, correct?
A. Yes.
Q. So for that period of time that you analyzed since 1991 through 1993, at least the equity to debt ratio, that has fallen, hasn't it?
A. I don't have those amounts specifically on this page. I think they're in a later exhibit.
Q. Well, in reaching that conclusion, Ms. Zimmer, didn't you analyze Florida Cities' financial statement?
A. Yes, I did.
Q. For the years 1989 through 1993?
A. Yes, I did. I'm just looking for the exhibit that has that balance sheet which is in Exhibit 4, just to check my answer before I give it. And the answer is that it has been declining somewhat, but it is basically stable.
Q. And the equity to debt ratio is another Litmus test,

Page 201

isn't it, about the financial situation?
A. It's another financial indicator.
Q. And over this period of time, it's been somewhat diluted, the equity has been stable and debt has increased, correct?
A. I'm not exactly sure what the question is. Could you repeat the question?
Q. The question is, Ms. Zimmer, over the period of time that you analyzed, the equity to debt ratio has been somewhat diluted, isn't that correct?
A. Well, actually when you're looking at the long term debt for the company, it went down in 1993,, in 1990 it was, just to use numbers, it's twenty-three and a half, I'm looking at the long term debt, long term debt as twenty-three and a half million, it went down in '91, it went up in '92, and went down again in '93. In terms of comparing a long term debt to total capitalization ratio, that ratio has actually improved somewhat in '93, but it's basically stable over the period.
Q. But you conclude, don't you, Ms. Zimmer, that equity has been stable, but long term debt has increased somewhat?
A. Over the years that I compared, it has increased, it went down in '93, it's changed in '94.
Q. Ms. Zimmer, would you turn to page 2, Plaintiff's Exhibit I believe it's 594, please?
A. Okay.
Q. And that indicates and would you – I'm sorry, would you

Page 202

turn to page 2 of that exhibit, please. I believe it would be the third page of the document, page 2.
A. Okay.
Q. And that's the page titled capitalization liability, isn't that correct?
A. I have it.
Q. And you say, Ms. Zimmer, long term debt has decreased between 1993 and 1994, is that correct?
A. No, I didn't. This financial statement indicates that the long term debt in '94 has gone down.
Q. That's right. It's gone down. Would you look a little bit below that under current liabilities, Ms. Zimmer?
A. Okay.
Q. What has happened to notes payable between 1993 and 1994?
A. Notes payable went up in '94 as compared to '93.
Q. And by how much did it go up?
A. About one point six million dollars.
Q. And accounts payable, how much did that go up between 1993 and 1994?
A. Oh, about a million dollars.
Q. And how much did the amount due to parent company affiliates go up between 1993 and 1994?
A. That went up about one point six million.
Q. So even though long term debt has been decreased by about one point five million dollars, short term liabilities have

Page 203

gone up by about six million, isn't that correct?
A. Actually, the number's more like four point three. I'm looking at the total current liability number.
Q. But the fact of the matter is liabilities have gone up by about four point three million?
A. Yes.
Q. Liabilities are debts, are they not?
A. They're obligations of the company.
Q. And the company must pay those obligations?
A. Well, you see, it depends. Mr. Murphy in his deposition specifically addressed the two million dollars that Florida Cities Water Company obtained in a loan from an affiliate. I think it was Consolidated Water Company, and he stated during his deposition he does not expect that Florida Cities would have to pay that back.
Q. Did you interview anybody from Consolidated Water Company?
A. No, I didn't.
Q. Did you investigate any of the loan terms between Consolidated Water company and Florida Cities Water Company?
A. We deposed Mr. Murphy in terms of seeing the actual loan document. No, I have not seen the loan document if there is a loan document.
Q. So other than Mr. Murphy's testimony, you have no independent basis?

Page 204

A. No, but Mr. Murphy is the CFO of the company of Florida Cities.
Q. But you yourself have no independent basis for saying Florida Cities Water Company will not have to pay the two million dollars?
A. The significance is Mr. Murphy is CFO of Florida Cities Water Company and the statement in his deposition.
Q. But you have no independent basis other than that statement?
MR. QUINN: Objection, Your Honor, asked and answered.
THE WITNESS: Right.
THE COURT: Sustained.
BY MR. HIGH:
Q. Ms. Zimmer, let's go back to your report, page 8, please. The next paragraph where we --
A. I forgot the number of the exhibit.
Q. 597.
A. Okay.
Q. Plaintiff's 597?
A. I think it's 598.
Q. 598, I'm sorry.
A. What page, please?
Q. Page 8.
A. Okay.
Q. Ms. Zimmer, you go on to state in the next paragraph, the

Page 205

third paragraph down, that earnings have declined over the period analyzed for Florida Cities Water Company, is that correct?
A. Yes, in the period covered in my report, yes.
Q. And then you state that revenues are increasing, but at a lower rate than costs, correct?
A. Yes.
Q. So costs are outpacing revenues?
A. During the period that is contained in my report, yes.
Q. You state then, Ms. Zimmer, capital expenditures have decreased over the period, correct?
A. Yes.
Q. Do you know what the capital expenditures for Florida Cities Water Company will be in the next five years?
A. That is another area that we deposed Mr. Murphy on, and he explained that during 1995, 1994 and 1995, Florida Cities Water had implemented a large capital expansion, capital expenditure program, but that he expected capital expenditures from 1996 forward for the next few years to be at light levels was the term he used.
Q. Do you know how much or what light levels means or is that the only basis for your opinion?
A. During his deposition, we deposed him and asked him what the capital expenditures in the five year plan were budgeted for, and he addressed that they had gone through this major

Page 206

capital expenditure program and they did not expect that their cash needs nor capital expenditures would be very -- would be significant in the next few years.
Q. But you don't know what significant is, do you, Ms. Zimmer?
A. He could not remember the actual numbers in the budget, and he was in -- the company was in the process of developing the next set of projections.
Q. You haven't seen those projections, have you?
A. No, I haven't.
Q. Those projections are not a part of your opinion, is that correct?
A. Right.
Q. And so if those projections are higher than what Mr. Murphy recalled, then that would affect your conclusions in this ability to pay analysis, is that correct?
A. It would depend on what those typically -- typically that's done during an interview and I can ask Mr. Murphy what the capital expenditures are for and whether or not there's any possibility or the likelihood that any of the capital expenditures could be delayed for a few years.
Q. But the fact of the matter is you don't know what the capital expenditures and capital budgets are for the next five years?
A. No, I do not.

Page 207

Q. Ms. Zimmer, you go on to state that their eighteen thousand shares of preferred stock will be retired annually between 1997 and 2001?
A. I see that.
Q. Do you know what the liquidation of those shares is?
A. Could I refer to the footnote in the financial statements?
Q. Yes, ma'am.
A. The liquidation value is stated at a hundred dollars per share.
Q. One hundred dollars liquidation value, is that what you said?
A. One hundred dollars per share.
Q. And is that an annual obligation of one point eight million dollars per share between 1997 and 2001, is that correct?
A. That's stated in the footnotes to the financial statements.
Q. And that is an obligation that Florida Cities Water Company will have to pay, correct?
A. It's an obligation that the company has; depends on the terms of the preferred stock.
Q. And it says in the financial statement that 18 thousand shares per year will be liquidated at a hundred dollars per share?

A. That's a liquidation schedule disclosed in the financial statement.
Q. So their one point eight million dollars obligation enters into your analysis?
A. The preferred stock liquidation and preferred stock dividend did enter into my analysis, yes, sir.
Q. You assume, Ms. Zimmer, don't you, that the preferred stock dividends will not be paid during this period of time that Florida Cities might be paying a penalty, is that correct?
A. What I assumed is that preferred stock dividend payments could be deferred?
THE COURT: We need to change Reporters. We'll take just a couple minutes. We'll be at ease.
(Thereupon, a ten minute recess was taken.)

Page 209

CONTINUED CROSS-EXAMINATION
BY MR. HIGH:
Q. Ms. Zimmer, I believe when we left off you stated that the preferred dividends would not be made during this five-year period for Florida Cities would be paying 1 to 1.5 million a year; is that correct?
A. What I assumed is that the preferred dividend payments would not be made. When we deposed Mr. Murphy, who, again, is the CFO of Florida Cities Water Company, we asked him who owned those preferred shares, and he mentioned that Florida Cities' immediate parent, FCWC Holdings, Inc., held the preferred shares.
In the footnote to the Florida Cities financial statements, it explains that in 1991 a certain amount of common stock shares were converted to preferred shares.
Q. And, Ms. Zimmer, aren't you assuming that the preferred shares of Florida Cities Water Company Holdings are owned by an Avatar-related entity? Isn't that correct?
A. I'm not making that assumption. What I'm making the assumption – the assumption I'm making is that the preferred stock of Florida Cities Water Company is owned by its immediate parent, FCWC Holdings, Inc., and that assumption is based on Mr. Murphy's deposition testimony.
Q. And have you investigated the preferred stock shares, the agreement, or the terms of the preferred stock? Strike that.

Page 210

Let me start over.
Have you investigated – in your analysis of this ability to pay, have you investigated the terms of the preferred stock?
A. During Mr. Murphy's deposition, we asked him what the specific terms of the preferred stock were, and he could not remember. They are – some of the terms are disclosed in a footnote to the financial statements, but other terms such as – for instance, some types of preferred stock when dividends are not paid, they just accumulate.
Q. Have –
A. Those details Mr. Murphy did not know.
Q. Ms. Zimmer, have you independently investigated the terms of the preferred stock?
THE COURT: You mean other than what she just testified?
BY MR. HIGH:
Q. Other than what you just testified to, Ms. Zimmer.
A. No.
Q. Ms. Zimmer, what would happen if Florida Cities Water Company defaulted on its preferred stock obligations?
A. It depends on the terms of the preferred. If it's owned by its immediate parent, it's very unlikely that an immediate parent would exercise whatever the default provisions are. There may be no default provisions. Also, as I said

Page 211

previously, the unpaid dividends may just accrue.
Q. Ms. Zimmer, isn't it also equally as likely that the credit rating of Florida Cities Water Company would be affected by a default on its preferred stock?
A. It depends. It's possible. It may or may not be affected.
Q. Assume for me that Florida Cities Water Company cannot opt out of this obligation to pay preferred stock dividends. Wouldn't that affect Florida Cities Water Company's ability to go to the market and borrow money?
A. It may or – it depends on how Florida Cities goes to the – when you say "go to the market," you're not talking about a public debt issuance, I assume. I assume you're talking about going to a bank or some private placement or something like that.
Q. Yes, ma'am.
A. It depends on the term of the debt. If there's security offered, depending on whatever security is offered, it may – what I'm saying is it may or may not affect it.
Q. Ms. Zimmer, do you know whether there are any assets free to be offered as security?
A. May I refer to the financial statement for a moment?
THE COURT: Yes.
THE WITNESS: The problem with answering that question is when you look on the financial statements, they do

Page 212

have first mortgage bonds which indicate that those are secured. But during our deposition with Mr. Murphy, he indicated that the company was in the process of refinancing and obtaining an additional long-term debt financing of $18 million. Some of that would be used to pay the 1995 capital expenditures, which I was previously discussing, and some of it would be used to pay back existing debt.
So at that time it had not yet been entered into, so that would certainly have an effect on the current security or unencumbered assets, depending upon whatever that – whatever happened.
BY MR. HIGH:
Q. Ms. Zimmer, I believe the question was do you know whether there are any plant assets free to be offered as security.
A. At this time, no.
Could I also offer a clarification?
THE COURT: Yes.
THE WITNESS: We're talking about obtaining additional borrowing. One of the other areas that Mr. Murphy mentioned in his deposition was the existence of a line of credit that Avatar Utilities, Inc. had, and he mentioned that Florida Cities Water Company was able to borrow from Avatar Utilities on that line. He mentioned that they never had, but that they were able to.

Page 213

And the 1994 10-K for Avatar indicates that the -- and also the deposition of Mr. McNairy, who at that time at least was the CFO of Avatar Holdings, indicated that the $15 million unsecured line of credit that Avatar -- that is listed in Avatar Holdings' 1994 10-K was a 15 million line of credit that Avatar Utilities had. And in that 10-K they cite that the unused portion was 8.2 million.

MR. HIGH: One moment, please, Your Honor.

THE COURT: Yes.

BY MR. HIGH:

Q. Ms. Zimmer, do you know whether Avatar Utilities is a defendant in this case?

A. I don't know for sure. I don't think it is.

Q. And you don't know whether Avatar Utilities or Avatar Holdings would be able to loan 1 to $1.5 million per year to Florida Cities Water Company; isn't that correct?

A. What I was referring to, I actually made a reference to it in my report, the possibility that Florida Cities could borrow the full amount from Avatar, and then they would -- they wouldn't have to borrow 1 and a half, 1 million to 1 and a half per year. They could borrow the entire amount up front. So it wouldn't be an annual borrowing.

Q. And I'll leave the issue of whether Avatar Holdings would be willing to offer that to Mr. Hird.

Ms. Zimmer, you concluded that it's unlikely that

Page 214

Florida Cities Water Company would be able to borrow money from a bank to pay this penalty; isn't that correct?

A. Typically that's often the case with companies. And in this instance it's probably likely that they could not borrow.

Q. And that's because banks like to lend money to income-generating activities; isn't that correct?

A. Right.

Q. So really the only instance or the only availability of $7 and a half million would have to come from Avatar Holdings; isn't that correct?

A. Well, actually when we're talking about Florida Cities Water Company's ability to pay, looking at their ability to generate income and a cash flow and using the guidance that Mr. Murphy gave in his deposition with regard to the fact that he expected future earnings for the company for the next few years out into the future to be in the one-and-a-half- to two-million-dollar range, plus he expected capital expenditures to be light, what I took from that was if you make the assumption that capital expenditures equal depreciation, which for Florida Cities is about let's say -- is about $3 million, the excess of cash flow, just looking at cash flow being depreciation plus earnings, the earnings would be available to fund a payment to the government.

If there were any other cash needs that the company may have, they had other options available, such as borrowing

Page 215

on this Avatar -- against this Avatar -- going to Avatar Utilities to borrow against their working capital line.

Q. And you don't know what the capital expenditures are in the future; you don't know whether they will equal the depreciation expense, do you?

A. No. But I made that assumption, and it's -- typically or generally speaking, it's an often-made assumption in analysis like this.

Mr. Murphy himself said that capital expenditures would be light, and that's in comparison -- I took that to be as in comparison to historical levels. And historical levels -- you can look in my report -- range from somewhere like 2 million to 7 -- I think 7 million was the 1994 or 5 amount, which, as Mr. Murphy explained, was due to an unusual capital expenditure program at Florida Cities.

Q. And isn't it a fact, Ms. Zimmer, that capital expenditures for the period of time you analyzed have always been greater than net income?

A. I didn't look at that specifically.

Q. Well, doesn't that mean, Ms. Zimmer, that Florida Cities Water Company has not been funding capital expenditures merely from operating activities?

A. Right, that's what that would mean.

Q. That means they've been borrowing the money for capital expenditures; isn't that correct?

Page 216

A. No, not necessarily. Depreciation is -- when you're looking at net income, that's after depreciation. And depreciation is a non-cash expense, so you add that back.

Q. But you don't know, Ms. Zimmer, whether the capital expenditures have been greater or less than depreciation over this period of time; isn't that correct?

A. If you look at page 8 of my report, you can see the bottom line on the earnings indicator chart lists the capital expenditures over those years compared, and there's a -- the third line is the net income line.

Depreciation you can find in Exhibit 1 to my report. The fourth line down, for the period 1981 through 1993, you can see that it -- it's in the $2 million range for '93. It was 2 and a half million for '94. It was somewhere in the range of around $3 million.

I did have nine-month statements for '95, which are produced in late 1995, and that had nine-month figures for the year 1995 ending September 30th. And it indicated that depreciation levels were somewhat higher than that in '94, which I previously stated were listed on the financial statements at about 3 million. It also indicated that net earnings for the company for the first nine months of '95 were a little bit higher than net earnings for the first nine months of '94.

And when you look at the 1994 statements, you'll see

Page 217

that net earnings included an accounting charge for expenses related to this case. They took a $1.3 million charge for the litigation costs relating to this case.

In addition, and as Mr. Murphy testified in his deposition, there were expenses actually incurred in 1994 for litigation costs relating to this case. The reason I mention that is that those are non-recurring costs. And when you add those non-recurring costs back to the earnings of the company, since Mr. Murphy said that the operating earnings of the company would be somewhat -- would be stable but somewhat increasing due to inflation and minor rate increases that they would probably likely apply for in the future, you can see that actually the company is generating increasing earnings.

Q. And the fact of the matter is, Ms. Zimmer, isn't it, that in the future the company also has recurring one-time costs such as preferred dividend liquidation obligations? Isn't that correct?

A. Well, we already talked about the preferred dividend obligations. The way I factored that in was that Mr. Murphy told or testified that the preferred stock was owned by its immediate parent, FCWC Holdings, so that it was -- my assumption was that those deferred dividend payments and redemption rights could be extended.

Q. And that's an assumption that you make --

A. Yes.

Page 218

Q. -- isn't that correct?

A. Yes.

Q. Ms. Zimmer, did you know whether a penalty in this case is tax deductible?

A. I don't -- typically we don't take a position with regard to the tax deductibility of a civil penalty payment.

Q. Isn't it a fact, Ms. Zimmer, that the tax deductibility does not exist for a penalty?

MR. QUINN: Objection, Your Honor. This goes beyond the scope and also conflicts with the statement of the witness that the United States doesn't take the position.

MR. HIRD: Your Honor, that may be the statement of the witness, but in any dealing that I've had with the United States in this and other cases, they take the position.

If the United States is taking a different position now, it would be interesting to know that.

THE WITNESS: Can I --

THE COURT: Well, I'm going to overrule the objection and permit the question.

Do you remember the question?

THE WITNESS: No, I don't.

BY MR. HIGH:

Q. Isn't it a fact, Ms. Zimmer, that a penalty in this case is not tax deductible?

A. Typically in my analysis I assume that it is

Page 219

nondeductible.

Q. And so in order to pay a $1.5 million penalty per year, Florida Cities would have to increase its revenues by about $2.2 million per year; isn't that correct?

A. Well, the -- you're assuming a 40 percent tax rate?

Q. Assuming 40 percent, yes, ma'am.

A. That's one way to look at it. The way I did it was I looked at the earnings history of the company, looked at what the future earnings would likely be, primarily basing my opinion on that. Nobody has a crystal ball, but I used Mr. Murphy's judgment that he expressed during his deposition. He is the CFO of the company, and I used his guidance, because he is the CFO of the company, and looked at what future cash needs would be. He expressed that they would be light in the next few years, so I kept capital expenditures to depreciation levels.

They could fund capital expenditures through depreciation, and then any excess would be used to pay a civil penalty. And that's on a net income basis after taxes.

And, for instance, looking at 1994, their ability to generate earnings -- I think their net income was 1.3 million, but as I mentioned earlier, that includes a $1.3 million charge for litigation expenses relating to this case. And then in addition, there were other -- there was at least $284,000 of litigation costs relating to this case, and

Page 220

Mr. Murphy testified that the 1994 amount was higher than the 284,000. So that is also a non-recurring expense which should be added back.

And I'm assuming that future earnings are at least equal to those of '94 and probably higher because, as I indicated when I was looking at the 1995 first nine months' unaudited statements that were provided in late '95 and they have a comparison for the first nine months of '95 to the first nine months of '94, it indicated for '95 that net earnings were higher than '94.

Q. Do you recall exactly how much higher?

A. It wasn't a large increase, but it was higher.

Q. So just a little --

A. A few percentage points, yes.

Q. Just a little bit higher?

A. Yes.

Q. And in this analysis you're assuming that net income or the -- strike that.

You're assuming the capital expenditures can be funded through depreciation; isn't that correct?

A. Basically, yes.

Q. And that if capital expenditures happen to go up in the future, then Florida Cities would have to borrow the money; isn't that correct?

A. When you look at the -- keeping with 1994 net earnings,

Page 221

those net earnings --
THE COURT: Can you answer that yes or no and then explain your answer, or can you do that?
THE WITNESS: Could you ask the question again? I'm sorry. I forgot what the question was.
BY MR. HIGH:
Q. If you assume -- your assumption is that capital expenditures will be funded through depreciation, correct?
A. Yes.
Q. And that if capital expenditures then go up, Florida Cities would have to borrow the money, correct?
A. It depends by how much capital expenditures go, how much they increase by.
THE WITNESS: Should I explain that?
THE COURT: If you need to.
THE WITNESS: Okay.
THE COURT: Briefly.
THE WITNESS: Looking at '94 net income, it's 1.3 million. They had a 1.3 million charge for these litigation expenses. You add that back, that's 2.6. Plus they had some pretax expenses for litigation expenses relating to this case. I'm not exactly sure how much that is, but it's at least 284,000. But those have to be put on an after-tax basis.
So let's just stick with the 2.6. That's the net income that's reflected on the '94 income statement, plus the

Page 222

1.3 charge, which is a non-cash order, a non-recurring expense. That's 2.6. If you pay a million or a million and a half to the government, there's a little bit left over. So if capital -- it allows capital expenditures to go up by the difference. Anything in excess would have to be borrowed.
BY MR. HIGH:
Q. Ms. Zimmer, you've referred a lot to Mr. Murphy's deposition. Did that deposition in any way affect your conclusions in this report?
A. No. That deposition occurred after the report. But this report is also based on information up through 1993, and Mr. Murphy had the use of the 1994 statement.
Q. And in this report you conclude that Florida Cities, if it were to pay the penalty, would have to borrow it from an Avatar-related entity, correct, pay the penalty up front?
A. No, I presented that as an option. The conclusion of my report listed on page 9 indicates that based on that information that Florida Cities could pay a million to a million and a half per year. However, if they were able to borrow from an Avatar-related entity, the -- and I'm assuming if they were able to borrow the full amount, they could pay the full amount up front.
Q. And the 7 and a half million up front would have to come from an Avatar-related entity, correct?
A. That's expressed in this report, yes.

Page 223

Q. So the answer is yes, Ms. Zimmer?
A. Could you ask the question again just so I get the exact wording?
Q. Sure.
THE COURT: You want it read back, or do you want to restate it?
MR. HIGH: I'll restate it, Your Honor.
BY MR. HIGH:
Q. Ms. Zimmer, your conclusion is that if Florida Cities were to pay a $7 and a half million penalty, it would have to come from an Avatar-related entity, correct?
A. If they were to be -- if they could -- if they had to pay it up front immediately.
Q. So your answer is yes?
A. Yes.
MR. HIGH: Thank you. No further questions, Your Honor.
THE COURT: Mr. Hird?
CROSS-EXAMINATION
BY MR. HIRD:
Q. Good afternoon, Ms. Zimmer.
A. Good afternoon.
Q. You indicated that you are a chartered financial analyst; is that correct?
A. Yes.

Page 224

Q. And you try to make a distinction between that and a CPA, a certified public accountant; is that right?
A. Yes.
Q. One of the distinctions that you didn't make between them is the nature of the body that certifies or charters them; is that correct?
A. Yes, they're chartered or certified by different bodies.
Q. And aren't certified public accountants certified by state agencies?
A. Yes.
Q. Governmental bodies; is that correct?
A. Actually I'm not a CPA, so I -- I do know they have to be state certified. I don't know which body does it.
Q. And chartered financial analysts are not certified by state agencies; is that correct?
A. Correct.
Q. Or by federal agencies?
A. Correct.
Q. Isn't it true that to be a chartered financial analyst you simply get a charter from a trade organization of chartered financial analysts?
A. It's the Association for Investment Management Research. I don't know if that's a trade organization. It's a --
Q. But that's not a governmental or regulatory agency?
A. No, it is not.

Page 225

Q. Okay. Thank you. Mr. High asked you a couple of questions about the preferred dividend on Florida Cities -- I'm sorry. Excuse me.

Mr. High asked you some questions about the preferred stock that's owned in Florida Cities by FCC Holdings, and you said that you assumed that the dividend on that preferred stock wouldn't have had to be paid because the parent corporation owned that -- owned Florida Cities; is that correct?

A. What I assumed is that those payments could be deferred or extended because it is owned by its immediate parent.

Q. Well, do you know that there is preferred stock in Florida -- in FCC Holdings? Do you know that preferred stock exists in FCC Holdings?

A. I assume --

Q. FCWC Holdings.

MR. HIRD: I'm sorry, Your Honor.

BY MR. HIRD:

Q. Let me ask the question again. Are you aware that the immediate parent of Florida Cities Water Company, FCC -- FCWC Holdings, has its own preferred stock?

A. No, I'm not aware of that. I assume they have the preferred stock of Florida Cities Water Company, but you're talking about a different --

Q. That there is preferred stock in FCWC Holdings; that it

Page 226

has itself issued preferred stock.

A. No, I'm not aware.

Q. And you're not aware that that preferred stock is owned by Allstate Insurance; is that correct?

A. No, I'm not aware.

Q. And you're not aware that the payment that Florida Cities will make on its preferred stock to its parent, FCC Holdings, will then be repaid by FCWC Holdings to its preferred shareholder, Allstate Insurance; is that correct?

A. Could you say that one more time?

MR. HIRD: Your Honor, may it help if I could illustrate it on the blackboard?

THE COURT: Yeah, you can write your question on there graphically.

MR. HIRD: Do we have any chalk?

THE COURT: Well, now, that's asking a little much. We're supposed to.

You've got all colors except white it looks like.

BY MR. HIRD:

Q. Okay. You have said that Florida Cities has preferred stock. And assume -- and you understand that Florida Cities' preferred stock is owned by FCWC Holdings; is that right?

A. Right.

Q. That's the immediate parent of Florida Cities.

A. Right.

Page 227

Q. Now, you are unaware that FCC Holdings has its own preferred stock.

A. Right.

Q. And you are unaware that that preferred stock is owned by Allstate Insurance; is that correct?

A. Right.

Q. And you're unaware that when Florida Cities will pay its dividend on its preferred stock that FCWC Holdings will then turn around and pay its dividend on its preferred stock to Allstate Insurance; is that correct?

A. That's correct.

Q. Thank you. I'd like you to turn to Avatar Holdings Exhibit 1, if you would.

MR. HIRD: Bob?

THE WITNESS: He said Exhibit 1.

Okay.

BY MR. HIRD:

Q. Ms. Zimmer, this is the 1994 annual report of Avatar Holdings. You indicated in your testimony that you viewed at least excerpts of the report. Did you view the whole annual report?

A. Yes, I had.

Q. Okay. I'd like you to turn to page 39, if you would.

A. Okay.

Q. I'm waiting till both you and the Court have that.

Page 228

THE COURT: My page numbers are partially --

MR. HIRD: It's the second to last page in the exhibit.

THE COURT: I've got it now.

MR. HIRD: It's headed "Five-Year Comparison of Selective Financial Data."

BY MR. HIRD:

Q. Can you see line 2 of this chart, "loss (income from continuing operations before extraordinary item and changes in method of accounting)"? Do you see that?

A. Yes, I do.

Q. This is the five-year comparison of losses and gains in Avatar Holdings, is it not?

A. Yes.

Q. Okay. Let's start with the year 1990. That shows an $11,132,000 gain; is that correct?

A. It shows an $11,132,000 income.

Q. Income. I'm sorry. You testified that you attended the deposition of Charles McNairy, chief financial officer of Avatar Holdings; is that right?

A. Yes.

Q. Didn't he testify in that deposition that this gain was due to a one-time sale of land assets owned by Avatar Holdings in California?

A. I remember the one time. I don't remember where they

Page 229

were located.
Q. But that this gain was due to a one-time sale of certain assets?
A. Yes.
Q. And that absent this gain there would have been a loss in that year; is that correct?
A. Yes.
Q. All right. 1991 we have it shows a loss of 8,635,000; is that correct?
A. That's what this indicates, yes.
Q. 1992 there was a loss of 4,342,000 before extraordinary items; is that correct?
A. That's correct.
Q. And there was an extraordinary item loss of 2,402,000; is that correct?
A. Yes.
Q. Now, in 1993 we have -- there's a gain of 5,474,000; is that right?
A. That's right.
Q. And in Mr. McNairy's deposition, didn't he testify that that was the year of the sale of the Midwest Utilities?
A. Yes, he did.
Q. And that without that sale there would have been a loss?
A. Yes, he testified to that.
Q. Okay. 1994 we have a loss of $14,621,000; is that

Page 230

correct?
A. That's correct.
Q. All right. Keep that in front of you, and if you could also -- keep a finger in that point and, if you could, also turn to Exhibit Number 9, Avatar Holdings Exhibit Number 9.
Do you have that in front of you, ma'am?
A. Yes, I do.
Q. This is the Avatar Holdings 10-Q for the third quarter of calendar year 1995?
A. Yes, it is.
Q. And that's through at least the beginning of October of 1995; is that correct?
A. It's through September 30th.
Q. Through September 30th. I'm sorry. I apologize. This is a document that you reviewed as well in preparation to testify; is that correct?
A. Yes.
MR. HIRD: Your Honor, I move in evidence Avatar Holdings Exhibit 9.
MR. QUINN: No objection, Your Honor.
THE COURT: Will be received.
(Avatar Holdings Exhibit Number 9 received in evidence.)
BY MR. HIRD:
Q. Turn to page 4, if you would, in Avatar Holdings Exhibit

Page 231

9.
THE COURT: What page?
MR. HIRD: Page 4.
BY MR. HIRD:
Q. Do you have that in front of you, ma'am?
A. Yes, I do.
Q. And if you look down on the list, nine months for 1975, loss before income -- I'm sorry -- net loss, do you see that?
A. Yes, I do.
THE COURT: 1995.
BY MR. HIRD:
Q. 1995 net loss. So for the first three quarters of 1995 Avatar Holdings had a net loss of 5,444,000; is that correct?
A. That's correct.
Q. And in the corresponding five months in nine months in 1994 its loss was 6,077,000; is that correct?
A. Yes.
Q. But its ultimate loss for the year in 1994 was 14,621,000, is that right, if you go back to Exhibit 1, page 39?
A. You're talking about '94?
Q. '94.
A. Yes.
Q. So you would expect, would you not, that the loss for the final year of 1994 -- 1995 would be significantly greater than

Page 232

5,444,000? Is that right?
A. No, that is not correct.
Q. You don't know of any particular event that would have shown a short-term gain in the last three months of 1995 --
MR. QUINN: Objection.
BY MR. HIRD:
Q. -- for Avatar Holdings?
MR. QUINN: Objection, Your Honor. This calls for information that was requested during the course of discovery and had not been provided. I object to any questions that deal with information that was accumulated after Ms. Zimmer wrote her report and that has not been produced by the defendants, if there's any change, material change, in economic circumstances.
MR. HIRD: I'm not asking -- I'm not offering evidence. I'm asking for an opinion whether she expects the sudden upturn in the company based on what she's seen.
MR. QUINN: Your Honor, she hasn't seen anything because they haven't given her anything.
MR. HIRD: She's seen over five years of history of the company.
THE COURT: Well, I'll sustain the objection.
MR. HIRD: Okay.
BY MR. HIRD:
Q. All right. Is it fair to say that the history of Avatar

Page 233

Holdings absent the two extraordinary asset sales in '90 and '93, the economic history from 1990 to the end of the third quarter in 1995, has been one of continuous losses?
A. They've had net losses on their financial statements.
Q. Continuously throughout that period essentially?
A. Except for those two years.
Q. And those two years the gains were only due to extraordinary asset sales.
A. Yes.
Q. And not to usual operations.
THE COURT: Is that right?
BY MR. HIRD:
Q. Is that right?
A. Yes.
Q. Okay. Ms. Zimmer, you've indicated that Avatar Holdings can pay $15 million --
A. Yes, sir.
Q. -- in penalties?
From what assets can Avatar Holdings make that payment?
A. Avatar has an investment portfolio listed on their balance sheet, and it's comprised of -- you mentioned the 1993 sale of the Midwest Utilities. In 1993 they sold the Midwest Utilities for about $60 million, and they took a $20 million gain on that on their books. The $60 million, it's reflected

Page 234

in their 1994 annual statement or its 10-K that those proceeds were put into an investment account that is used in part to secure certain lines of credit that Mr. McNairy testified were for the Avatar Properties, the real estate operations.
Q. So that the --
A. And --
Q. That investment portfolio is securing lines of credit against which Avatar Properties has already invested -- borrowed; is that right?
A. The 1994 --
Q. Excuse me, Ms. Zimmer. Can you answer yes or no before you go into your explanation?
A. Yes. And the explanation is is that part of those securities are securing the Avatar Property lines of credit. The foot -- the annual report in the SEC 10-K annual report as of '94 stated that approximately 45 million of the -- it was somewhere in the range of $50 million of assets in the investment portfolio were providing security to about 31, $32 million of Avatar Property lines of credit.
Q. And that's the 1994 report which is already over a year old; is that correct?
A. Correct.
MR. QUINN: Objection. Move to strike the last question; move to strike the last response. Again, this is information about being over a year old.

Page 235

Your Honor, she would have done more work if she had the information.
MR. HIRD: Your Honor, this witness has information that is current through the third quarter of the past calendar year. And to indicate that that was a year old at this point given the time period when that would have come out is not anything in any way restrictive on information that she would have had after that point. She's testifying about information she's seen since then.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry. Was there a question?
THE COURT: No, you answered it.
BY MR. HIRD:
Q. You answered the question.
Have you analyzed in any way Avatar Holdings -- or strike that.
Of this investment portfolio that we're discussing, is it held by Avatar Holdings or Avatar Properties?
A. At this point I'm not sure who owns it. It's listed in the consolidated Avatar Holdings financial statements. And Mr. McNairy, who's the CFO of Avatar Holdings, mentioned that that investment portfolio is used as in part, as I explained earlier, you know, security for Avatar Properties lines of credit.
Q. Didn't he also testify that it was in fact a portfolio

Page 236

held by Avatar Properties?
A. I don't remember that. He may have. I don't remember.
Q. So you just don't remember. But you have no information to say that that's untrue; you just don't remember?
A. I just don't remember.
Q. Assume with me that it is held by Avatar Properties. Avatar Properties is not a defendant in this case; is that correct?
A. What I understand is that Avatar Holdings is a defendant and Florida Cities Water Company is a defendant.
Q. And so your understanding is that Avatar Properties is not a defendant; is that correct?
A. Yes.
Q. And is it also your understanding that Avatar Properties is in the real estate business and not the utility business?
A. Yes.
Q. And that Avatar Properties has no direct connection with Florida Cities except that they're both subsidiaries of Avatar Holdings?
A. It's my understanding that they're both subsidiaries of Avatar Holdings. I don't have any other information to --
Q. But you have no other information about any connection between Avatar Properties --
MR. QUINN: Objection.
BY MR. HIRD:

Page 237

Q. – and Florida Cities?
THE COURT: Just a moment.
MR. QUINN: Objection. We've covered this. This has been asked and answered, Your Honor.
THE COURT: Sustained.
BY MR. HIRD:
Q. Would you reasonably expect this investment portfolio to be subject to management fees?
A. I think Mr. McNairy testified that there are two third-party managers of the investment portfolio, and so yes.
Q. And so they would pay management fees, and those would be expected in the ordinary course; is that correct?
A. Yes.
Q. And that would reduce the amount of money available in those portfolios; is that correct?
A. It depends on how the accounting is done. For instance, if you – just using – if you have a million-dollar portfolio and you have fees of let's say 100,000 and yet you earn 200,000, you have a net hundred-thousand-dollar gain.
Q. But that would reduce it beyond getting the – realizing the full 200,000 gain in your example; is that right?
A. Yes.
Q. Okay. Now, assuming that Avatar Holdings holds this portfolio, as a property company would it reasonably – would you reasonably expect it to have property taxes to pay?

Page 238

A. I'm not sure if your question -- I thought you said if Avatar Holdings holds the --
Q. I'm sorry. Let me strike that. I made an error.
Assuming that this portfolio is held by Avatar Properties as a property company, a real estate company, wouldn't real estate taxes be a recurring cost?
A. It doesn't matter if they hold a portfolio or not. I would normally expect a real estate company to have to pay property -- that owns real estate to have to pay property taxes.
Q. And wouldn't it use available assets to it to pay property taxes?
A. I would expect it would.
Q. And if it paid property taxes from that portfolio, wouldn't that reduce the amount in the portfolio?
A. Again, it depends on what the earnings from the portfolio are or were.
Q. In your report, Ms. Zimmer, you say that Florida Cities can pay 1.5 million without borrowing, but it can pay up to 7 million, 7 and a half million if it borrows from Avatar Holdings; is that correct?
MR. QUINN: Objection, Your Honor. Again, we've covered this a number of times.
MR. HIRD: I'm sorry. I think this was asked on Mr. High's questioning, and I'm asking some further -- I'm

Page 239

introducing a new topic.
THE COURT: I'm going to allow him to get into it, but only for the purpose of bringing out anything additional.
Of course, don't repeat anything unless it's --
MR. HIRD: I'm not repeating.
THE COURT: – necessary to get into some aspect of it.
MR. HIRD: I'm not repeating, Your Honor. I'm asking about a different issue.
THE COURT: All right.
MR. HIRD: I'm asking – Mr. High explored this question from a Florida Cities perspective, and I'm exploring it from an Avatar Holdings.
THE COURT: Go ahead.
BY MR. HIRD:
Q. If Avatar Holdings were to lend Florida Cities the additional money, how would it get paid back?
A. It depends on whatever the terms were that Avatar Holdings agreed – you know, they would have an agreement between Florida Cities and Avatar. They could spread payments over – you know, there would be an amortization.
Q. But wouldn't it be paid back out of money that would have otherwise gone from Florida Cities to Avatar Holdings as dividends?
A. I think – well, I think Florida Cities pays its parent

Page 240

dividends, Florida Cities Holdings. Are you talking about eventually it goes up to Avatar Holdings?
Q. Yes.
A. Well, any excess, it would be paid in interest and principal repayment rather than it would take away from dividend.
Q. It would take away --
A. The ability to pay dividends, yes.
Q. It would take away from the dividends. So ultimately the money would come out of Avatar Holdings' pocket, and it would not be repaid because the dividend income it would otherwise get would be lost; is that right?
A. They would not – it would prohibit Florida Cities from paying that amount in dividends. I'm not sure I'm following --
Q. And that would have been money that Avatar Holdings might otherwise get in dividends; is that right?
A. Yes, that's an option, that the company could pay it in dividends instead.
Q. So functionally if Florida Cities is assessed a penalty of more than 1.5 million and it borrows the excess from Avatar Holdings, that extra money really comes from Avatar Holdings' pocket, right?
A. Well, it's financed through Avatar. I assumed in my report Avatar Utilities. If you want to assume Avatar

Page 241

Holdings, that's fine.
Q. So it would in fact come from Avatar?
A. It would be financed by its parent or its ultimate parent. But Florida Cities would be paying it back through earnings over however many years out the loan went.
Q. And if this Court -- let's assume for the moment that this Court found Avatar Holdings not liable. If a payment was assessed against Florida Cities for an amount above 1.5 million that required Avatar Holdings to lend the money to Florida Cities, wouldn't Avatar Holdings essentially be paying a penalty for liability it didn't have?
MR. QUINN: Objection. This calls for a legal conclusion and speculation.
THE COURT: Sustained. Sustained.
BY MR. HIRD:
Q. Let me ask another question, then. You've said that in addition to the seven -- to Florida Cities paying this penalty that Avatar Holdings can pay its own penalty of up to 15 million; is that right?
A. Are you talking about in addition?
Q. Well, you said that Avatar Holdings can pay a penalty of up to 15 million.
A. Right.
Q. If this Court were to assess $7 and a half million penalties against Avatar Holdings and Florida Cities,

Page 242

wouldn't -- strike that.
You just testified that anything above 1.5 million that would be assessed against Florida Cities would come from Avatar Holdings or some other Avatar-related entity; is that right?
A. No, I don't think I testified to that. I testified that if payments were to be made up front, it could be made if its parent, some parent above Florida Cities Water, were willing to loan the money or finance the payment to Florida Cities.
Q. If those payments were being made in that manner and that parent was Avatar Holdings and Avatar Holdings would be assessed its own penalty, wouldn't Avatar Holdings functionally be paying twice for the same violation?
MR. QUINN: Objection. Again, it calls for speculation and a legal conclusion.
THE COURT: Sustained.
MR. HIRD: I have no more questions, Your Honor.
THE COURT: Redirect?
MR. QUINN: Your Honor, two items, and we can move on.
Your Honor, at this time I move United States Exhibit 585 into evidence. I neglected to earlier.
And also with regard to Ms. --
THE COURT: Wait. Wait. Wait.
MR. QUINN: I'm sorry.

Page 243

THE COURT: That's 585?
MR. QUINN: Yes, sir.
THE COURT: All right. Do we know which one we're talking about here?
MR. QUINN: It was one of the documents Ms. Zimmer reviewed.
THE COURT: All right. It will be received.
(United States Exhibit Number 585 received in evidence.)
MR. QUINN: Your Honor, with regard to Exhibit 598 -- that is the expert report of Ms. Zimmer -- in light of the Court's ruling, I would only like to move portions of it in and mark for identification the remaining portions that deal with wrongful profits.
Your Honor, I would like to move into evidence Exhibit 598 only Part 2.
THE COURT: Okay. That will be received.
MR. QUINN: I would also like to move into evidence Exhibit 598-A.
THE COURT: 598-A?
MR. QUINN: Yes, which is an --
MR. HIRD: Excuse me, Your Honor.
THE COURT: Just a moment.
MR. QUINN: 598-A is an attachment to Ms. Zimmer's report. It was just broken out. It's Attachment 1 or Exhibit

Page 244

1.
MR. HIRD: What does it have on its attachment?
THE COURT: You mean exhibit or -- no.
MR. HIRD: No objection.
THE COURT: Wait a minute. I haven't found it. 598-A?
MR. QUINN: Yes, sir.
THE COURT: Oh, is that a separately -- or is that an attachment?
MR. QUINN: It was an attachment to the original report, Your Honor.
THE COURT: Oh, I see. I see. Well, that's --
MR. QUINN: But it's a separately-marked exhibit. There are certain other ones --
THE COURT: All right. It's not indexed with a tab, but it is -- it's on a page which it has typewritten "Exhibit 1," and then the tab is Government Exhibit 598-A. And that's what you're talking about?
MR. QUINN: Yes, Your Honor.
THE COURT: Okay.
MR. QUINN: I would like 598-B and C to be marked only for identification. I will not move those.
I will move, however, Exhibit 598-D, 598-E, and 598-F into evidence, please.
MR. HIRD: We don't object, Your Honor.

Page 245

THE COURT: Sir?
MR. HIRD: We don't object.
THE COURT: Okay. Well, let me find them here and make sure we know what we're talking about.
You're offering D?
MR. QUINN: E and F, Your Honor.
THE COURT: D, E, and F?
MR. QUINN: Yes, sir.
THE COURT: All right. They'll be received.
MR. QUINN: Thank you.
Your Honor, we have no more questions of Ms. Zimmer.
THE COURT: All right. Thank you, ma'am. You may step down.
THE WITNESS: Thank you.
(Ms. Zimmer was excused.)
MR. QUINN: Your Honor, for purposes of the remainder of the day, United States has one remaining witness, which I believe will take ten minutes on direct examination, after which we have two ministerial items moving some depositions in and some interrogatories in. I don't know how long the cross-examination is going to go.
After we've done that we rest, so what would you prefer, Your Honor?
THE COURT: Well, I have a sentencing that's -- is the defendant here? Is he incarcerated?

Page 246

THE CLERK: Yes.
THE COURT: Okay. Are the lawyers here?
THE BAILIFF: Everybody's here, Your Honor.
THE COURT: Okay.
THE BAILIFF: I don't see the Government, Your Honor, but the defendant is here and his attorney is here.
THE COURT: What is the urgency, if any, with respect to the witness? Is there any urgency?
MR. QUINN: Oh, no, none. We just want instead of leaving him hanging overnight --
THE COURT: Sure.
MR. QUINN: We can move the ministerial stuff now if you're waiting for the other. Or we can come back after.
Your Honor, there's no urgency with regard to the witness.
THE COURT: Okay. Let's --
THE BAILIFF: Everybody's present.
THE COURT: Let's take the ministerial stuff.
MR. QUINN: Yes, Your Honor.
THE COURT: And then I think we're going to have to recess for the evening.
MR. QUINN: Your Honor, ministerial item number 1 deals with answers to interrogatories. United States would move the following exhibits in. And Mr. Moore will pass them on to the defendant. These are answers by the defendants.

Page 247

The first item is the March 30th, 1995 document Florida Cities' Answers to the United States' First Set of Interrogatories and the Correction to Florida Cities' Answers to the United States' First Set of Interrogatories. We'd like to move those into evidence, Your Honor.
THE CLERK: What number?
MR. QUINN: Should I continue on down the list, or would you like to take these one by one?
THE COURT: Take them one by one.
MR. QUINN: Okay.
THE COURT: Are these marked?
THE CLERK: What exhibit --
MR. QUINN: I'm sorry?
THE COURT: Are these marked?
MR. QUINN: As exhibits?
THE COURT: Yes.
MR. QUINN: They are not marked as exhibits, Your Honor.
THE COURT: All right. They'll be received.
MR. QUINN: Thank you. The next item is the November 22nd, 1995 Florida Cities' Amended Revised Responses to Plaintiff's First and Second Interrogatories.
THE COURT: Okay. They'll be received.
MR. QUINN: Your Honor, the next item is the June 8th, 1995 Defendant Florida City Water Company Answer to

Page 248

Plaintiff's Second Set of Interrogatories.
THE COURT: They will be received.
MR. QUINN: The next item is the June 9th, 1995 Defendant Florida Cities Water Company Answer to Plaintiff's First Request for Admissions.
THE COURT: Received.
MR. QUINN: The next item is the June 9th, 1995 Defendant Avatar Holding, Incorporated Objections and Answers to United States' First Request for Admissions.
THE COURT: Received.
MR. QUINN: The next item is the June 15th, 1995 Defendant Florida City Water Company's Answers to Plaintiff's Second Request for Admissions.
THE COURT: Received.
MR. QUINN: And the final discovery item is the July 14th, 1995 Defendant Florida City Water Company's Answers to Plaintiff's Third Set of Interrogatories.
THE COURT: Be received.
MR. QUINN: The final ministerial item, Your Honor, deals with the movement of -- I'd like to move in certain deposition transcript portions. These have been set out in our pretrial memorandum located at page 32, 33, 34 -- the joint pretrial statement. Excuse me. The revised joint pretrial statement, Your Honor, pages 32, 33, and 34.
THE COURT: Well, now, 34 is the one we were talking

Page 249

about earlier.
MR. QUINN: I'm sorry. The top of 34, Your Honor. It continues over for Ms. Karleskint.
THE COURT: Karleskint?
MR. QUINN: Yes, sir. And then --
THE COURT: Well, now, wait a minute.
MR. BAISE: Your Honor, a point of clarification, is the Government moving in the deposition of Gerald Allen?
THE COURT: Of who?
MR. BAISE: Gerald Allen.
MR. QUINN: Yes, we are, Your Honor.
MR. BAISE: Gerald Allen's going to be testifying, though. He's available.
MR. QUINN: Your Honor, we can use depositions for a -- deposition of a party for any purpose.
MR. BAISE: You can use it to impeach, but he's going to be here to testify. That's best evidence.
MR. QUINN: Your Honor, we can use it for any purpose according to the Federal Rules of Civil Procedure.
THE COURT: All right. Now, is this a party?
MR. JACOBS: Party officer.
THE COURT: Party officer?
MR. QUINN: Yes, sir.
THE COURT: Yeah, that can be used.
Now, what you're proposing to do is to introduce

Page 250

these and have me read them at some time during my leisure, or are you going to read them?
MR. JACOBS: May I address that, Your Honor?
THE COURT: Yes, sir.
MR. JACOBS: The intention was to put them into evidence and then, as with the 500 documents, it's not our concept that you would read all of them at your leisure but that perhaps we would call your attention to particular documents and particular portions of testimony in post-trial proceedings.
THE COURT: Well, let me tell you, I've been burned on this sort of thing before where during non-jury trials counsel have dumped depositions on the Court instead of reading them during the trial of the case, and it becomes quite burdensome.
MR. JACOBS: We -- I think it's our intention to cover, as we have with Mr. Levy, for example, most of the material that took place in the deposition with the witness, if he is being called in fact by the defendant or one of the defendants.
Although they propose to call 26 witnesses, by my present count anyway, in the next five days, I'm not sure they're going to get to all of them. I don't want to risk, of course, their not getting to some of them and my not moving into evidence deposition portions. And as the rules provide

Page 251

for parties, officer, or managing agent, we are entitled to use their statements in their deposition for any purpose.
So I can certainly represent to the Court that there's no intention to in any way mislead the Court here. We want to preserve our right to have this material in evidence for the record.
MR. BULLOCK: Your Honor, let me address a couple of different issues. First of all, as to page 32 of the March 27, 1995 deposition of Gerald Allen -- as you will recall, Mr. Allen is here as the corporate representative of Florida Cities -- which is a deposition in which Mr. Allen took the Fifth Amendment, Mr. Allen subsequently changed his mind and testified for two full days and will be one of our witnesses.
I'm not sure whether this falls under the offer of proof from earlier this afternoon. I'm not really sure that it's relevant if the witness in fact is -- has been deposed and will testify.
THE COURT: Well, this deposition of March 27, 1995, this is the one in which he did not testify?
MR. BULLOCK: Chose not to testify, Your Honor.
THE COURT: Now, you're addressing right now only that deposition?
MR. BULLOCK: That is correct, on this point.
THE COURT: Well, it seems to me that -- seems to me that that particular deposition would fall under the Court's

Page 252

reserved ruling, wouldn't it, Mr. Jacobs?
MR. JACOBS: Well, perhaps the inferences to be drawn from the deposition, but under Rule 32(a)(2), the deposition of a party or of anyone who at the time of the taking the deposition was an officer, director, or managing agent --
THE COURT: Well, I understand that. I don't think there's any issue as far as I'm concerned as far as the Court -- or your entitlement to present the deposition of a party and any officer and so forth.
What we're talking about now is whether that particular deposition doesn't fall within the Court's reserved ruling with respect to that grouping on page 34 of the revised joint pretrial statement.
MR. JACOBS: Perhaps I misunderstood the Court's ruling in that respect. Mr. Wilkov, there was a distinction made because he was a former officer. And I understood the Court to be taking under advisement the issue of the effect of the pleading of the Fifth Amendment by these witnesses. I did not understand -- and perhaps that was my mistake -- that we had -- I didn't understand that we had at that point in time in the discussion actually moved these depositions into evidence, which is what --
THE COURT: Well, you were offering the ones on page 34 into evidence, and the Court has reserved ruling on that.

Page 253

Now, I announced that I was sustaining the objection to Mr. Wilkov for the reasons that I mentioned.

But it seems to me that at this point at least I'm going to put the deposition of Mr. Allen dated March 27, 1995 in the same category and reserve on that.

MR. BULLOCK: Your Honor, I would add as a supplemental point to that, it's my understanding of Mr. Jacobs' argument is that because he was unable to depose the individuals we discussed early this afternoon he ought to be able to draw the inference. In fact, he's been able to depose Mr. Allen for two days, and so I'm not sure -- that to me is another and a separate argument on our behalf that this particular deposition shouldn't be included.

MR. JACOBS: I'm not asking that adverse inferences be drawn from Mr. Allen's prior failure to testify or his prior assertion of the right to testify. As you can see, he went on to testify. I've got --

THE COURT: Well, then why do you want the March 27, '95 deposition in evidence, then?

MR. JACOBS: I think I'm entitled to have it in evidence, and I'm interested in why there was a change, frankly, Your Honor. And I don't want to get into that too much, but there was obviously a change of heart of some sort, which I'd like to discuss with Mr. Allen when he takes the stand.

Page 254

MR. BULLOCK: Your Honor, he actually asked Mr. Allen that question in his deposition, and Mr. Allen answered it.

MR. JACOBS: Well, I still think I can ask him when he gets to the stand.

THE COURT: Well, all right. I'm inclined to believe that notwithstanding the fact that a witness originally may take the Fifth Amendment and not submit to deposition, if you're able -- if he changes his mind and does take -- you do take his deposition later on, although I think that you may very well be entitled to inquire as to why the change of heart, I'm not sure that the deposition, the original deposition, is admissible.

I will -- I'll reserve ruling on that, that issue.

MR. JACOBS: Very well. And --

THE COURT: Which when you do brief this subject that we've been talking about, which was precipitated by our discussion regarding page 34, you can treat that as well.

MR. BULLOCK: Your Honor, as on page 33 -- Your Honor, he is offering the deposition of Julie Karleskint. I don't believe and don't know exactly how the Court would define an officer or director. I don't believe Ms. Karleskint has ever been an officer or director of Florida Cities Water Company.

MR. JACOBS: If I may, Your Honor, he's left out

Page 255

"managing agent." And her title is operations manager, so we think she falls under the rule.

MR. BULLOCK: Your Honor, Florida Cities would contend that she is a staff person, not someone that rises to that level.

THE COURT: Well --

MR. BULLOCK: Your Honor, we'll withdraw that.

THE COURT: Okay. All right.

MR. HIRD: Your Honor, on page 34 I don't know which ones are being admitted. Are you stopping with Ms. Karleskint?

THE COURT: Yes.

MR. HIRD: Okay.

MR. JACOBS: For clarification, then, is the Court accepting --

THE COURT: Yeah, I guess so.

MR. JACOBS: -- Mr. Tompkins, Mr. --

THE COURT: Who, Tompkins?

MR. JACOBS: Is the first one, Jack W. Tompkins.

THE COURT: Yes.

MR. JACOBS: Gerald Allen on November 13th, '95 --

THE COURT: Yes.

MR. JACOBS: -- and December 15th, '95?

THE COURT: Yes.

MR. JACOBS: Paul Bradtmiller, November 18th, '94

Page 256

and November 21st, '94?

THE COURT: Yes.

MR. JACOBS: Julie Karleskint on April 21st, '94 and October 2nd, '95 as well as --

THE COURT: Yes.

MR. JACOBS: -- October 16th, '95?

THE COURT: Yes.

MR. JACOBS: Thank you, Your Honor.

MR. BULLOCK: Your Honor, as a procedural matter -- and I almost hate to bring this up --

THE COURT: Then don't.

MR. BULLOCK: But unfortunately I think I have to.

In terms of objections to the questions that were in the depositions --

THE COURT: Okay. If there are objections, then you can read them just as if the witness is testifying.

MR. BULLOCK: Okay.

THE COURT: You see, that's the thing that I do not want to get saddled with later on.

MR. JACOBS: I think I took all of these that you've accepted without exception. And I believe that Mr. Scroggin was present at all of them, and I think that -- and Mr. Scroggin can correct me if I'm out of turn -- I think there were relatively few objections. I believe Mr. Baise was present for one day of Mr. Bradtmiller, but otherwise

Page 257

Mr. Scroggin was present. So, again, I don't --
THE COURT: They're going to go on the record here in this courtroom. You can read them, and I'll hear the objections as they --
MR. JACOBS: You --
THE COURT: I don't know when we'll finish this trial.
MR. JACOBS: Judge, you want us to read the lines that there are objections to?
MR. BULLOCK: Your Honor, my understanding of the Federal Rules is that all objections save as to the form of the question are reserved until the time the deposition will be used.
MR. JACOBS: There was no stipulation to that effect, Your Honor.
MR. BULLOCK: That's the operating basis of the Federal Rules.
THE COURT: Okay. We're through for the day, gentlemen. I'll see you at 8:45 tomorrow morning.
MR. JACOBS: Judge, what was your ruling with respect to these --
THE COURT: Those depositions?
MR. JACOBS: Yes, sir.
THE COURT: Yeah. You're going to be permitted to have them read. That's my ruling. And I'll hear the

Page 258

objections as they're read.
MR. JACOBS: And if there are -- I'm trying to get to expedite matters. If there are -- as I say, most of these questions and answers were not objected to. Can they be accepted, then, as such and we'll just read the lines that are objected to with the objections, or we'll just waive those and take them right out if we don't think they're that important? Again, I'm trying to move things along.
THE COURT: Well --
MR. JACOBS: Because if the Court accepts that proposal, I think we could probably get through this in, at most, an hour, all of them.
MR. BULLOCK: Your Honor, these depositions were taken under the understanding they were pursuant to the Federal Rules, and our position is that that's the Federal Rules that all the objections save as to the form are preserved. I don't believe that requires --
THE COURT: Now, wait a minute. Sit down. Sit down.
Did not the order, the pretrial order or the scheduling order, or the local rule require that any objections to any depositions that are listed be set forth in the joint pretrial statement?
MR. JACOBS: I have it handy if it would help the Court, Your Honor.

Page 259

THE COURT: The scheduling order provides that the joint pretrial -- or the pretrial statement shall -- let's see. This is subparagraph -- well, paragraph 8-H. A list of all depositions to be offered into evidence at trial, as distinguished from possible use for impeachment, including a designation of the pages and lines to be offered from each deposition.
Well, I was under the impression that the order required all objections to any portions of the deposition designated be set forth in the pretrial statement. Not so.
MR. JACOBS: Judge, again, if I can be helpful, there were very few objections. I don't think this is going to be a problem.
I would be willing to meet with counsel and either remove from our proposal the questions that were objected to, excise them and offer the rest, or just read the few lines where there are objections and ask the Court to rule.
And, again, my best estimate would be that would take no longer than an hour.
MR. BULLOCK: Your Honor, the point is, the Federal Rules allow us to preserve all objections. That is the underlying assumption that we've used in these depositions and --
THE COURT: Well, and that's -- I was telling you that I was under the impression that I descended further than

Page 260

that, and I know now to amend my scheduling order.
Go ahead.
MR. BULLOCK: I was just going to make a point that there was no understanding that the defendant, this defendant, was waiving that. I believe Mr. Hird can speak that there was no understanding that Avatar Holdings was waiving that.
As a matter of fact, Ms. Tsosos just handed me a copy of Mr. Levy's deposition, which clearly says it was taken pursuant to Federal Rules and they're not waiving objections.
MR. JACOBS: We didn't offer Mr. Levy, sir.
THE COURT: Sir?
MR. JACOBS: We didn't offer Mr. Levy. He's here.
MR. BULLOCK: There has to be agreement of all counsel that you would waive that.
THE COURT: Okay. Well, Mr. Bullock has posited that objections, unless they are as to form, are not waived.
MR. BULLOCK: That's correct.
THE COURT: And that sounds right to me. I think that's correct. And I'll be traveling on that assumption.
Mr. Jacobs, is that not your understanding of the Federal Rule?
MR. JACOBS: It wasn't my understanding, Your Honor, unless there's a stipulation, which there was never at any of these depositions.
THE COURT: A stipulation of what?

Page 261

MR. JACOBS: By the parties that objections would be preserved. It was my understanding --

THE COURT: Well, now, you know, it's historically always been the case, as far as I recall, that while you must object as to the form of the question at a deposition, else run the risk of waiving those kinds of objections, that you don't waive the right to object to questions other than as to form.

Now, historically that's always been the case, I think. I mean that's -- as I get older, I know that when I -- the more dogmatic I am, the more I step on my own toes.

But, now, if you can disabuse me of that with some authority, then so be it. But I'm afraid that counsel for the defendants have a legitimate point here when they say that they will be entitled to raise objections to these depositions that are being offered on bases other than as to form unless they have raised the objections as to form during the deposition.

So that's what it appears at this point, so we'll proceed to hear your depositions in the morning. And we can have them read, and if somehow or other you can avoid the scenario that I think all of us see might occur, more power to you. But I will be here to hear these depositions tomorrow, however long it may take to read these excerpts.

So anything else?

Page 262

We'll reconvene at 8:45 tomorrow morning, and we'll plan to recess at 3:45 tomorrow afternoon.

MR. JACOBS: Thank you, sir.

(Adjourned at 5:10 p.m.)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Friday, March 29, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Pitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

THE COURT: Good morning.

Okay. Are we ready to proceed?

MR. JACOBS: Your Honor, with your permission, I would like to address the issue that we left off with yesterday which had to do with reading in portions of depositions that the Government listed in its part of the joint pretrial statement.

I recall the Judge mentioning that he anticipated taking under advisement any Rule 52 motion. With that in mind, what I would propose -- and I'm cautiously optimistic that this will at least alleviate a great number of these depositions; and if not, certainly a great number of the lines of the depositions that we would need to have read into the record -- I would like to withdraw our proposal that we read those into the record now and reserve the right to do so in our case on rebuttal, if need be.

I suspect that most of the information that we seek to have entered into evidence through the depositions we will be able to elicit through the witnesses that Defendants advised us that they will be calling.

THE COURT: Well, you can do that, of course, if it's proper rebuttal. I mean, you don't have to reserve your right to do that.

MR. JACOBS: The only one exception is one

witness, Mr. Tompkins, is unavailable beyond the subpoena power of the Court since he resides in Nashville, Tennessee, so that -- but he's the only witness of the ones we've listed who did not take the Fifth Amendment who the Defendants are not also anticipating calling.

And I will personally commit to going through that particular deposition before our case on rebuttal and excising out any information that we could really do without by that point in our case so that, again, I'm cautiously optimistic that we could get through this all in an hour at the end of the case, if need be.

THE COURT: Mr. Bullock?

MR. BULLOCK: If the Court please. Good morning, Your Honor.

THE COURT: Good morning.

MR. BULLOCK: A couple of points on that issue. First of all, I looked at some case law in the library last night. There is authority within the Court's discretion for you to exclude depositions which are being offered to be read in if you find that the evidence would be cumulative or duplicative. And I would be delighted to hand the Court the authority and give a copy of that to counsel as well.

That even though the Plaintiff may have a right to read that in, you in your discretion may exclude that if you find it, I believe, duplicative, cumbersome or if it would

interfere with the time in which the case would be tried.

I would also note that Mr. Tompkins, the witness who Mr. Jacobs just spoke about, at the time of the taking of the deposition was not an officer, director or manager of Florida Cities Water Company.

Rule 32(a)(2) says that the deposition must be of an officer, director, managing agent at the time of the taking of the deposition. So, we would object to Mr. Tompkins' deposition being offered in that manner.

MR. JACOBS: Are you through?

MR. BULLOCK: I would note that the authority that I have cited is also found in Wright and Miller, in Volume 8-A, Section 2145. And if the Court pleases, I'll be glad to hand that up and to serve copies to counsel.

THE COURT: Okay.

MR. JACOBS: While he's doing that, may I respond just briefly --

THE COURT: Yes, sir.

MR. JACOBS: -- on Mr. Tompkins?

We do not seek to have the deposition testimony of Mr. Tompkins read pursuant to 32(a)(2). We seek to have the deposition testimony of Mr. Tompkins read pursuant to Rule 32(a)(3) which provides, under Subsection B, that the witness is at a greater distance than one hundred miles from the place of trial or hearing.

Page 5

Like I said, he's in Nashville, and I would ask the Court to take judicial recognition that Nashville is more than a hundred miles from here.

THE COURT: Okay. Mr. Bullock, what about that? He's not offering it under 32(a)(2).

MR. BULLOCK: Your Honor, if that -- my impression was as of last night, Your Honor, it was under 32(a)(2). If that's what he represents, that's -- in my mind it's a totally different ball game.

And, Your Honor, if he submits the deposition, we, of course, would reserve the right to offer other sections of the deposition as well.

Let me also, Your Honor, suggest an additional alternative in the event that the Court does not want to exclude under the authority...

THE COURT: All right. Well, right now, we're only talking about Tompkins. As I see the scenario that has been painted by Mr. Jacobs, he's not going to be offering any of this deposition testimony during his case in chief with the possible exception of Mr. Tompkins.

MR. JACOBS: I'd even hold off on that, Your Honor. I'm going to offer nothing now.

THE COURT: I know, I know, but what -- my understanding is that with respect to all depositions except Tompkins, Mr. Jacobs is proposing to be willing to only

Page 6

offer those depositions that he would seek to offer on rebuttal, if any. They would, of course, need to properly be rebuttal.

With respect to Tompkins, I suppose he's asking the Court -- if I'm misreading you, Mr. Jacobs, let me know -- I suppose you were asking the Court for leave to permit you to evaluate the Tompkins deposition and augment your direct case with so much of his deposition testimony as you wish to do after the conclusion of the Defendants' cases. Is that what you're asking?

MR. JACOBS: I'm not sure I'm going to need to do that, no. Actually, I -- I'm sorry I didn't make myself clear.

We've already designated certain lines --

THE COURT: Yes.

MR. JACOBS: -- and what I said I would commit to do is try and cut back on those lines.

THE COURT: On rebuttal?

MR. JACOBS: Yes, sir.

THE COURT: But only on rebuttal?

MR. JACOBS: Yes, sir.

MR. BULLOCK: And, Your Honor, subject to his establishing that this is, in fact, proper rebuttal...

THE COURT: Well, that's what I'm saying: He'll have to -- he's not going to be able to reopen his case, as

Page 7

it were, with these depositions. He's going to step back and be willing to take the chance that he'll be able to cover what he can by cross examination. And then if there are some minimal matters -- hopefully minimal, if any -- that he feels that he needs to present on rebuttal, proper rebuttal, through these depositions, then he'll seek to do so.

MR. BULLOCK: This is just as to Mr. Tompkins' deposition?

THE COURT: No. I --

MR. JACOBS: The only qualification that I mentioned earlier is if there's a 52 -- my understanding is, the Court is going to take any 52 motion under advisement until the close of all of the evidence.

THE COURT: Well, I said I probably would be doing that, but what has that got to do with this?

MR. JACOBS: That's the one reservation that I have about making this proposal to move things along. There are some lines that will relate to Avatar Holdings' liability. And I'm happy to read those in, again, at the end of the evidence, but I don't want my case thrown out when I rest my case in chief because I haven't read those lines in.

THE COURT: Well, you're presenting your case as to both Florida Cities Water and Avatar, and you will be

Page 8

closing pretty soon --

MR. JACOBS: Within an hour, I hope.

THE COURT: -- so I don't understand where the Tompkins deposition has any -- what that has to do with the Rule 52 motion and whether the Court reserves on that or rules on it.

MR. JACOBS: No, that would have to do only with two of the three witnesses that come under 32(a)(2) and these are witnesses -- the Company's own employees.

THE COURT: Well, yes, but if you present either, you know, depositions under (a)(2) or (3)(b), they are going to need to come in in your case in chief unless they are proper rebuttal.

MR. JACOBS: I understand.

MR. HIRD: Your Honor, may I speak to this issue for a moment? The two witnesses that he's referring to, I believe, are Mr. Allen and Ms. Karleskint. While they may be officers or managing agents of Florida Cities, they are not of Avatar Holdings, so I don't think they come in against Avatar Holdings under that rubric.

We do intend -- Your Honor may defer ruling on the Rule 52(c) motion, but we do intend to make one on behalf of Avatar Holdings at the close of Plaintiff's case in chief.

THE COURT: Yes. That's not surprising.

All right.

Page 9

Which, incidentally, that last quote or that last statement could be misconstrued. I didn't mean anything by that; I'm meaning that that's almost always done. I'm not commenting on anybody's case here.

Okay. Whether you all are clear or not, I think I'm clear, and so we'll just move on at this point.

MR. JACOBS: Thank you, Your Honor.

THE COURT: Call your next witness.

MR. QUINN: Your Honor, the United States calls Roger Pfaff.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.

Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?

THE WITNESS: Yes.

MR. HIGH: Your Honor, I have one issue to raise before Mr. Pfaff begins his testimony.

Yesterday, counsel tried to lay a foundation through expert witness Eileen Zimmer about the economic benefit model. I expect that counsel will try and do that today through Mr. Pfaff.

I would call the Court's attention to United States' supplemental responses to Defendant's first interrogatories served on November 17th where the

Page 10

interrogatory was, Identify all persons who you intend to call as fact witnesses at any hearing or trial or other proceeding; state the subject matter on which the witness is expected to testify and summarize the facts to which each witness is expected to testify.

They identified Mr. Pfaff, and they identified Mr. Pfaff to testify to the nature and number of Defendant's violations at Barefoot Bay and Carrollwood and Waterway Estates and to the enforcement history at each of those facilities.

So, to the extent that Mr. Pfaff is going to testify about economic benefit, I would ask that his testimony be limited.

In addition, Defendants served 30(b)(6) notices of deposition on the Plaintiff, and one of the paragraphs, Paragraph 38, stated: Any economic analyses performed by EPA to assess the economic benefit the company gained for alleged instances of non compliance of Barefoot Bay, Carrollwood and Waterway Estates, and the United States designated Mr. Kenneth Kwan to speak to that.

So, again, to the extent that Mr. Pfaff is going to talk about economic benefit, I would ask that his testimony be limited.

MR. HIRD: Your Honor, we join in the objection.

We would also like to point out that Ms. Zimmer

Page 11

was the only expert designated with respect to economic benefit. The only economic benefit analysis that was provided to the Defendants was Ms. Zimmer's report which this Court has struck in appropriate part.

THE COURT: All right. Mr. Quinn?

MR. QUINN: Yes, Your Honor. If I may, I'd like to address the 30(b)(6) issue first.

The United States -- counsel correctly states the United States did not designate Roger Pfaff as the United States' designee for that purpose.

Under Rule 30(b)(6), we are entitled to designate any person who consents to testify on that behalf. The fact that we didn't designate Roger Pfaff for purposes of testifying about economic benefit at that time does not prohibit him from testifying at a later point in time.

The mere fact that his deposition was noticed and we put him up -- or the agency's deposition was noticed and we put up Mr. Pfaff to testify about an area doesn't mean he can't testify about another area.

THE COURT: All right. Well, what about the other argument?

MR. QUINN: The answers to interrogatories, counsel correctly read the response. Mr. Pfaff will not be putting up anything new today. He'll be testifying about -- the portion that he'll be testifying about comes within that

Page 12

area of enforcement history. There will be one document that we will use with Mr. Pfaff, and that document was done during the course of enforcement history.

And then as to the expert issue, the United States will present -- the testimony of Mr. Pfaff is not expert testimony at this point. What we're trying to elicit from him will not require expert opinions, because we are limited; he didn't write a report and we didn't list him as an expert.

THE COURT: Well, you'll be precluded from eliciting any expert testimony on economic benefit from this witness.

MR. QUINN: Yes, sir.

THE COURT: All right. To that extent, I will sustain any anticipated objection; but, of course, Mr. High, if you perceive that that's being violated, you, of course, have the right to object at the appropriate time.

All right. You may proceed.

MR. QUINN: Thank you, Your Honor.

- - -

Thereupon,

ROGER PFAFF,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. QUINN:

Q. Mr. Pfaff, where do you work?

A. At the U.S. Environmental Protection Agency in Atlanta.

Q. What is your title with the United States Environmental Protection Agency in Atlanta?

A. I'm chief of the Enforcement Section and the Water Management Division.

Q. When you say "Atlanta," do you mean Region 4?

A. Yes. That's the Region 4 office.

Q. How long have you been chief of the Enforcement Section, Water Management Division, at Region 4?

A. Six years.

Q. Sir, what is the BEN model?

A. It's a mathematical model used to compute the economic benefit of delayed or avoided costs of compliance with environmental laws.

Q. Can you tell me briefly what are delayed costs of --

MR. HIGH: Your Honor, I would object.

MR. HIRD: Objection, Your Honor.

MR. HIGH: This is getting into what the benefit model is.

MR. QUINN: This is a fact, Your Honor; this is not expert testimony.

MR. HIRD: Your Honor, the Plaintiff proffered testimony on economic benefit using one methodology. He is now -- they are now presenting economic benefit testimony using a completely different methodology.

THE COURT: What's the purpose of his testimony if it's not to attempt to elicit from him testimony regarding economic benefit?

MR. QUINN: Your Honor, an exhibit has been entered and he is going to explain that exhibit.

THE COURT: What is the exhibit?

MR. QUINN: 494, Your Honor.

THE COURT: What is that exhibit?

MR. QUINN: It is an exhibit which has -- it's a memorandum with some attachments.

And, Your Honor, I also add that in your order of Monday, the Court agreed that in the instant case economic benefit should be analyzed as the present day value of costs avoided by non compliance rather than profits earned during the period of non compliance, from Page 3 of that order; and also on Page 4 of that order, the Court notes that Kenneth Kwan --

THE COURT: Would you sit down?

Gentlemen, I asked my -- I'm getting a little crotchety, I guess -- and I apologize for that -- but my rule in this courtroom is only one of you standing at one

time. It's distracting to me when somebody else gets up while somebody is speaking.

As you know, I probably give attorneys more leeway in speaking than I should, but please don't get up until the other person has finished.

Go ahead.

MR. QUINN: Yes, Your Honor. I was reading from Page 4. Mr. Kwan testified at deposition that the method for calculating economic benefit involved analysis of the capital cost that is required to meet the permit or the Clean Water Act requirements as well as additional operations and maintenance expenses that are required to come in compliance.

On Exhibit 494, on the bottom -- it's numbered 733 and 734 -- are numbers which do that. And I am merely asking -- going to ask Mr. Pfaff to elucidate on those two pages.

And it does not -- my opinion is, and the United States' position is, this does not require a rocket scientist or expert testimony.

THE COURT: Okay, Mr. Hird.

MR. HIRD: Your Honor, this is an economic analysis. And although there is a model that's being used, it's a model that has been devised by EPA based on economic assumptions and economic analysis.

I agree that the analysis of avoided costs is the accurate way to measure economic benefit, but there are a lot of assumptions that go into this model that affect the ultimate result, assumptions as to what the costs were, assumptions as to what the delay factor is, all sorts of things that one would cross-examine an expert witness about.

We don't have a designated expert witness whose deposition we could take because the witness that was designated used a different methodology. We deposed that individual. We explained how the methodology was wrong, and there was a motion to limit it.

So, what they are doing now is saying Mr. Pfaff is a fact witness because he, you know, may have turned the dials in the BEN model. In fact, he did not do it.

So, I don't think it's within his personal knowledge as to this particular calculation, these particular results. And they are using him as a pseudo expert.

THE COURT: Is 494 in evidence?

THE DEPUTY CLERK: Yes, sir.

MR. HIRD: 494 is in evidence; that is correct, Your Honor.

THE COURT: What are you going to offer in evidence through him?

MR. QUINN: Just 494, Your Honor. That's it.

Page 17

THE COURT: Which is already in evidence?
MR. QUINN: Yes. I'm just going to have him talk about those two pages, sir.
If I may add, Your Honor, these types of numbers are run for every case that EPA handles in the Clean Water Act.
THE COURT: Well, I'll hear his testimony and take under submission the objections, and you can renew your objections after I have heard his testimony.
MR. HIRD: Your Honor, may we also object at certain points as we go through on lack of personal knowledge?
THE COURT: Yes, sir.
MR. HIRD: Thank you.
THE COURT: You may proceed.
BY MR. QUINN:
Q. Mr. Pfaff, could you please turn to United States Exhibit 494, and I'd like to direct your attention to Page 733 and 734 as Bates stamped on the bottom. That's about the fourth and fifth pages in.
A. All right.
Q. Mr. Pfaff, what do these pages show?
MR. HIRD: Objection, Your Honor. Counsel has not shown that Mr. Pfaff prepared these pages or how he is otherwise familiar with them.

Page 18

THE COURT: Okay. Overruled.
THE WITNESS: They are two outputs of -- an output of two BEN runs for the Waterway Estates facility, one showing the economic benefit of not employing the wastewater treatment plant, and the other one for not moving the outfall in a timely manner.
THE COURT: Tell me what a BEN run is. I have read about it, but you need to elicit from him what a BEN run is.
MR. QUINN: Yes, Your Honor.
BY MR. QUINN:
Q. What's the BEN model used for at EPA?
THE COURT: Or BEN model.
THE WITNESS: The BEN model is used to calculate the economic benefit of the avoided or delayed costs of compliance with environmental laws, and these are computer outputs from runs made using that model.
THE COURT: You know, somewhere along the line this model that somebody has devised to determine economic benefit and to establish economic benefit -- you're saying that this can be established without anyone testifying as an expert.
MR. QUINN: Yes, Your Honor, we are at this point.
THE COURT: Ordinarily, you have somebody give testimony of economic benefit, come in and talk about the

Page 19

BEN model and what it means and how it was devised and why it has credibility.
MR. QUINN: Your Honor, I can't tell you what we've done before because I'm not aware that we get this far in a whole lot of cases, so I can't tell you that, sir. But I'll be happy to look it up and get back to you.
THE COURT: I'm concerned about -- you know, the Court has precluded you, rightly or wrongly, from bringing in the expert that you have designated to testify regarding economic benefit who has used a wrongful profits analysis, and then you bring somebody else in to testify regarding economic benefit and tell me that there is no expert testimony that is needed, that he can just look at an exhibit, which is a so-called "BEN run," and breathe credibility and life into that exhibit. It sounds like an end run to me.
MR. QUINN: Your Honor, I apologize if it appears to be an end run. The United States' position is that this document is in evidence, and there is nobody to say what it is.
THE COURT: Well, you know, there are documents that come into evidence in massive document cases that may be meaningless if there is not someone who can properly interpret those documents; and it seems to me that the person to properly interpret a BEN run is going to have to

Page 20

be an expert.
MR. QUINN: Your Honor, I respectfully disagree that an expert is required to do this, particularly because of the fact that at EPA and under Mr. Pfaff's supervision, runs like these are calculated all the time. They are --
THE COURT: All right. Go ahead.
MR. QUINN: I'm sorry. They are periodically done by engineers. It is correct that certain assumptions are made. The assumptions that are made are not being proffered at this point in time, just merely what that document says, and that's all I'm trying to do through this witness, Your Honor.
THE COURT: The purpose for this is to establish economic benefit?
MR. QUINN: Yes, Your Honor. We're trying to put a number on the table.
THE COURT: Yes, I know you are.
Well, go ahead and we'll see where we go.
MR. QUINN: Thank you, sir.
BY MR. QUINN:
Q. I think my last question was, can you tell me what Page 733 shows with regard to whether it was pollution control equipment or the relocation of the outfall? Can you tell me which one 733 is?
A. 733 is the pollution control equipment.

Page 21

Q. What is 734?
A. The relocation of the outfall.
Q. What does Page 733 of United States Exhibit494 conclude about the economic benefit of delayed compliance for the failure to upgrade pollution control equipment as calculated by the BEN model?
MR. HIGH: Your Honor, I would object to lack of personal knowledge.
MR. HIRD: I join in the objection.
MR. QUINN: I will withdraw that question.
BY MR. QUINN:
Q. Do you know what Page 733 of U.S. 494 concludes about the economic benefit of delayed compliance?
MR. HIRD: Same objection, Your Honor, as well as our continuing one.
THE COURT: Well, I'll overrule the specific objection at this point.
Go ahead.
THE WITNESS: Yes.
BY MR. QUINN:
Q. What does Page 733 of United States Exhibit494 conclude about the economic benefit of delayed compliance regarding the pollution control equipment as calculated by the BEN model?
A. It shows that as of March of 1993, it would be

Page 22

$3,089,000.
Q. Sir, do you know what Page 734 of United States Exhibit 494 concludes about the economic benefit of delayed compliance for relocation of the outfall as calculated by the BEN model?
A. Yes.
Q. And what does 734 of United States Exhibit 494 conclude about the economic benefit of delayed compliance as calculated by the BEN model?
A. That as of March of 1993, it is $226,018.
Q. Thank you.
MR. QUINN: No more questions, Your Honor.
MR. HIGH: Your Honor, I move to strike Mr. Pfaff's testimony.
THE COURT: I'm going to grant the motion. I think it would be necessary for the Government to come in and have someone testify as to what the BEN model is, why it has credibility; and of necessity I think that would have to be a person who would qualify as an expert witness, Mr. Quinn.
MR. QUINN: Yes, Your Honor.
THE COURT: All right. I'll grant the motion to strike for those reasons.
MR. QUINN: And we have no more questions for Mr. Pfaff.

Page 23

THE COURT: Thank you, sir. You may step down.
MR. QUINN: Your Honor, the United States rests.
MR. HIRD: Your Honor, just before the United States rests, if I may, there were four exhibits that were tendered yesterday that were tendered in incomplete form, and the Court instructed that if we had complete versions of them, they would be admitted.
We have provided them to counsel for the Government. I have copies for the Court and personal copies for Your Honor.
THE COURT: All right. Have you shown them to counsel?
MR. HIRD: Yes, sir. I believe Ms. Tsotsos, my colleague, has shown them.
We would like to have them --
MR. JACOBS: If you will just identify them for the record, I don't think we'll have --
THE COURT: Right. What are the numbers?
MR. HIRD: These were Avatar Holdings' Exhibits 21, 23, 24 and 25.
MR. QUINN: We have no objection, Your Honor.
THE COURT: All right. Those are being tendered by Mr. Hird. And as I understand it, those will replace the originals.
Do we have the first ones that were --

Page 24

MR. HIRD: Yes, Your Honor.
THE COURT: The originals?
MR. HIRD: Yes, or the incomplete versions.
THE COURT: Incomplete versions.
And so you have got hard copies of those, and those will be returned to, I guess, Mr. Hird.
THE DEPUTY CLERK: Yes, sir.
THE COURT: All right.
MR. HIRD: Your Honor, are those documents received?
THE COURT: Yes.
MR. HIRD: Thank you, Your Honor.
MR. QUINN: Now we rest, Your Honor.
THE COURT: Okay. These are just copies here that you handed to me?
MR. HIRD: Yes, Your Honor. Those are personal courtesy copies.
MR. BAISE: Your Honor, before the Defendant Florida Cities starts its case, I would like to defer to Mr. Hird for a motion, Your Honor.
THE COURT: All right, sir. Mr. Hird?
MR. HIRD: Thank you, Your Honor.
Your Honor, at this time Defendant Avatar Holdings would like to move the Court for a judgment on partial findings under Rule 52(c) of the Federal Rules of Civil

Page 25

Procedure.

In the Court's decision on summary judgment, it established the standard for holding a parent company liable for the Clean Water Act violations of its subsidiary, and that is that there had to be evidence showing that the parent corporation caused or directed violations or exercised actual and pervasive control of the subsidiaries to the extent of actually being involved in Florida Cities' daily -- Florida Cities' operations on a daily basis. So, in other words, we had to either actually control or direct the violation or be integrally involved everyday in the subsidiary. There has been no evidence that shows an every-day involvement of the parent corporation in the subsidiary.

THE COURT: Well, now, wait a minute. Are you saying that the Plaintiff -- the Government has to show evidence of some activity each day?

MR. HIRD: I'm reading your opinion -- from your opinion, Your Honor. You stated --

THE COURT: I think you read too much into that opinion.

Now, read back to me the portion that you're talking about.

MR. HIRD: Exercising actual and pervasive control of Florida Cities to the extent of being actually involved

Page 26

in Florida Cities' operations on a daily basis.

THE COURT: Well, you're not saying that the Government has to come in and put on evidence that the Defendant did something each day?

MR. HIRD: Not that the Defendant caused violations each day, but we're talking about -- what I understood you were saying about daily operations was that the companies would be so integrally involved that every day -- that even the most routine decisions would be made at the senior corporate management of the parent corporation.

THE COURT: Okay. Go ahead.

MR. HIRD: That level of control has not been shown by any of the evidence presented to date. There has not been the evidence of control on the everyday, the routine basis, the ordinary activity level.

Now, the other possibility that Your Honor left open, and the possibility which is consistent with the Lambert case decided by this Court, is the -- is a finding that the parent company caused or directed the underlying violations.

And let's look at what's left truly of the Government's case against Avatar Holdings. What's left at -- we'll start with Carrollwood. At Carrollwood, what's left is the Government's allegations that in this narrow window of time, the last six months of 1991, there were

Page 27

violations of the permit for the Carrollwood plant, the advanced wastewater treatment permit that was issued to a secondary treatment plant.

The Government basically alleges that if Florida Cities had done things faster or had tied in to the City of Tampa, those violations wouldn't have occurred.

You heard Mr. Schafer testify yesterday. He didn't testify in any way of any communications with Avatar Holdings. There's no indication that Avatar Holdings had anything to do with any activity relating to those violations within that narrow six-month window.

Indeed, the Court found in its earlier decision that there was very little evidence concerning Avatar Holdings' involvement at Carrollwood in any period later than 1984, and there is very little even at the 1984 level. Nothing else has come in to make a difference.

With respect to Waterway Estates, what we have left at Waterway Estates is the Court granted our motion on statute of limitations. We have the tail end of the Government's claims of discharge in the wrong location and we have a few alleged permit violations afterwards.

The Government's case against Avatar Holdings with respect to Waterway Estates is that somehow Avatar Holdings had a grand conspiracy to buy -- to acquire all of the wastewater treatment facilities in Lee County and,

Page 28

therefore, stubbornly made its subsidiary continue to violate rather than shut down and tie in to North Fort Myers. Yet, you have seen that Avatar Holdings had an opportunity to buy North Fort Myers in 1991 and didn't act on it. So, there's really no evidence that Avatar Holdings somehow caused those violations.

With respect to Barefoot Bay, the Government has been able because -- to get into evidence some 255 documents going back approximately ten years before the alleged violation at Barefoot Bay.

But what do we have at Barefoot Bay? We have violations of reporting biological oxygen demand as carbonaceous biological oxygen demand, which is simply a question of which test was used and which reports were done. There's nothing that Avatar Holdings could have done to cause that.

We have total residual chlorine violations, and I think Mr. Klingenstein testified that what happened was chlorine was added at the end of the process to disinfect the wastewater stream, and an allegation is made that not enough chlorine was taken out, again, before it was discharged. And we have these three toxicity test violations which essentially are species in the laboratory reacting to whole effluent, reacting in such a way that is adverse to health.

Page 29

There is this ten-year history that is being offered to say that somehow the ten-year -- the activities of Avatar Holdings caused these very, very technical violations. But when you look at the ten-year history, all that's going on there is there is discussions of long-term alternatives by the subsidiary as to how they are going to deal with long-term discharge situations.

And since these discussions necessarily involve major issues and major expenses, they are brought to the attention of the parent corporation. And the parent corporation people ask questions and get involved. But there's no indication that Florida Cities came and said, We're going to violate our toxicity tests unless you, Avatar Holdings, do "X". And Avatar Holdings did not do "X."

There's no indication of anybody at Avatar Holdings coming into any of these plants and fiddling with the valves and somehow changing the discharge.

This is a stretch. What you're dealing with is very, very technical violations of permit, and yet you're claiming that long-term planning activities that go back ten years somehow result in very technical violations of the permit ten years later. It is pushing the Clean Water Act way beyond its scope.

Your Honor, we, of course, will respond to the Government's offer of proof with respect to the Fifth

Page 30

Amendment, but I'd like to just discuss the five individuals who are mentioned there.

One is Mr. Sharp who, as you know, died in April 1992. I don't think the Government is entitled to any adverse inference from a witness who died before they filed the complaint. Mr. Sharp was dying of cancer during the last years of his life and resigned as chief executive officer in 1990. That's before the violations alleged against Avatar Holdings occurred.

Mr. Wilkov you have already struck, Your Honor, for this.

Robert Gordon was identified yesterday by Leon Levy as the president of Avatar Utilities. He's not an officer, director, employee of Avatar Holdings, and there's absolutely no reason why his taking the Fifth Amendment should in any way be imputed to another company.

You're left with John Sladkus and Dennis Getman. Mr. Sladkus retired the beginning of 1991. That was testified to yesterday. The violations here alleged against Avatar Holdings begin at the earliest May 4th, 1990, so the overlap is minuscule. In fact, at Barefoot Bay and Carrollwood, the alleged violations do not begin before Mr. Sladkus was gone.

Mr. Sladkus was deposed five -- four-and-a-half years after he had resigned from Avatar Holdings. This is

Page 31

not someone who we control; this is someone who made a personal decision. It's inappropriate, we believe, under the circumstances to read anything into that inference.

Finally, there's Mr. Getman. Mr. Getman is general counsel both of Avatar Holdings and Florida Cities. He was noticed at the time before Avatar Holdings was in the case, and he could have responded to -- and had he not taken the Fifth Amendment, many of the questions would have been objected to under the attorney/client privilege.

In contrast, we have witnesses who have testified -- you have heard Mr. Levy. There are many, many documents that the Government has put into place. The Government cannot make up for the lack of evidence by these adverse inferences.

The Government wants to argue from these -- from the documents that are in place -- it obviously has the right to do so -- but these documents cannot be augmented or reinterpreted or reinvented through the specter of witnesses who have taken the Fifth Amendment.

Your Honor, what we have here is a lot of smoke that is disguising the fact that there really is not a case against the parent company. In fact, the only reason why the parent company is here was brought out yesterday in the questioning of Ms. Zimmer. Florida Cities does not have the ability to pay the penalty that the Government would ask

Page 32

from this court. And that's the sole reason why Avatar Holdings is in this case.

Your Honor, I request respectfully that you grant Avatar Holdings' judgment on -- partial -- on partial findings in our favor.

THE COURT: Okay. Let me hear argument from the Government in response, Mr. Jacobs, and then I'll hear from Florida Cities Water Company.

MR. JACOBS: Your Honor, the Court ruled in its November 22nd, 1995, order that in order for Avatar Holdings to be held liable, it must have acted in such a way that it should be a person who violates, quote, unquote, under Section 309(d) of the Clean Water Act.

The Court noted in the same decision that there was both probative evidence in at least two, if not three, of the facilities indicating that decisions were made by the parent company relating to the violations in the complaint.

As I noted in my opening statement, far more additional evidence has surfaced since that motion was adjudicated. In fact, much of the evidence that is now in evidence was not even available to the Government until the close of discovery.

You heard some references yesterday, I believe, to the documents that came from Mr. Levy's files not being Avatar Holdings' records; they were Mr. Levy's personal

Page 33

files. So, they were not produced in a timely fashion.
Likewise with Mr. Sharp, there was an argument made that the documents that Mr. Sharp generated and maintained were his personal records and not those of the Company's and so much of these -- much of this evidence wasn't even available to the Government until the close of discovery.
The evidence -- and there are now approximately 500 documents in evidence -- and that evidence establishes that through its officers, Avatar Holdings was actually involved in critical decisions relating to the proven violations.
I'm not talking about the past unpermitted discharge violations at Barefoot Bay and Carrollwood; I'm talking about all of the violations that the Court has already found took place.
Under the Bernuth case, such involvement is, quote, a sufficient condition, unquote, for the imposition of liability.
Moreover, Avatar Holdings caused or directed the violations -- that's the standard that the Court put in its November 22nd, 1995, order -- by failing to direct and authorize actions that would have resulted either in the cessation of the discharge or the timely construction of advanced wastewater treatment facilities at each of the

Page 34

three plants.
We have introduced expert testimony to the effect that the alternatives that would have prevented the violations were either a number of cease discharge alternatives or the construction of advanced wastewater treatment facilities.
Avatar Holdings' officers were involved in all of these decisions. Avatar Holdings' officers and directors exercised actual and pervasive control over Florida Cities' environmental practices.
I was struck by Mr. Hird's opening statement when he said -- and I remember the Court interrupted him -- the Government has never come in and sued a parent company before. And that's absolutely false. We sue the parent company under the Clean Water Act when the parent company is liable. This is not a case of new impression whatsoever. And, in fact, in open court before the Magistrate, we gave a citation to Mr. Hird of another case in which that was done, a published case, United States versus Menominee Paper Company. And then we also gave Mr. Hird a list of 750 or so Clean Water Act cases on file in Federal Courts throughout the country in all of the EPA regions, a number of which included cases in which we named the parent company.
It's not the least bit unusual; we only do it when we think the parent company is liable.

Page 35

THE COURT: Is there a reported case in which you have successfully sued a parent company?
MR. JACOBS: There is a reported case in which we successfully sued the parent company, United States versus Menominee Paper Company and Bell Packaging, and the public -- I'll get the citation. I believe it's in one of my pretrial submissions.
That was a summary judgment decision, and essentially the subsidiary conceded liability both by the subsidiary and the parent. So, I'm not sure to what extent in that particular decision the Court analyzes the standard to be applied. In any event, the case is 727 F.Supp. 1110, Western District of Michigan, 1989.
As I say, because the point was conceded, I'm not sure how much discussion of that particular issue there is in that particular reported decision; but that was a case where we did sue the parent company and successfully so.
THE COURT: All right.
MR. JACOBS: Moving on to the individual facilities. As I've said before and as we established through the testimony of Leon Levy, the story here starts in 1980. And Mr. Levy's testimony was simply an introduction to what we would have established through these witnesses who took the Fifth Amendment.
And I do not suggest that we -- there need to be

Page 36

an adverse inference drawn from Mr. Sharp's unavailability. I'm not legally entitled to an adverse inference obviously from his unavailability. But we are entitled to draw -- or ask the Court to draw inferences from the documents that he wrote or that he received and from the instructions that he gave. And Mr. Levy testified that when Mr. Sharp gave an instruction, he expected it to be followed. And Mr. Levy testified that as far as he knew, nobody countermanded Mr. Sharp's orders.
And the documents will demonstrate -- and as I've outlined in the offer of proof and as we heard from Mr. Levy yesterday in conjunction with one particular exhibit, Mr. Sharp's objective was to take over the entire Lee County system. There was no way when he stated that objective in that memorandum that his subordinates, whether they be an Avatar Holdings subordinate who worked directly with him up in New York at his real estate company, who also held an Avatar Holdings vice-president position -- John Sladkus -- there was no way they are going to go back and tell Mr. Sharp that they are going to sell the Waterway Estate franchise, or that they are going to connect the Waterway Estates franchise to Mr. Schenkman's facility when Mr. Sharp said, We want to take over all the private franchises in the area and all the municipal and county systems as well; we want to own the whole system.

Page 37

Now, that was way back in the mid '80's. The fact that much, much later in 1991 there was a decision made that they didn't want to buy Mr. Schenkman's facility because Mr. Schenkman, as they pointed out, was in the red, that doesn't mean that they have changed their objective any.

Now, at Barefoot Bay, which I point out -- and I know this has come out repeatedly in evidence -- this was an Avatar development entirely. And the board itself was repeatedly involved, repeatedly involved. And Mr. Sharp was repeatedly involved, and Mr. Sladkus oversaw the project as Mr. Sharp's engineer, what to do about the disposal of the effluent.

The evidence yesterday was that in 1984, it was clear that the board of directors of Avatar Holdings knew they had a problem with the disposal of that effluent, a problem that they had not even solved as we sit here today, as far as I know. While the plant is under construction, it's still not completed. A decade later, still not completed.

And had they built the plant that they are now building way back when, none of those violations -- none of the violations that the Court has already held took place would have taken place, and that's true at all three of these facilities.

If the plant -- this company, or these companies,

Page 38

don't have the right to pollute. But if they go through the proper permitting procedures and they are permitted to discharge into a water body, then they may discharge into a water body.

It's not as if we're not allowing them to conduct their business. Nobody said, You can't discharge into any of these water bodies, which they could conceivably have said as regulatory bodies. They said, Either you're going to have to stop discharging; or if you're going to continue to discharge, you're going to have to meet -- you're going to have to apply for the permit and you're going to have to meet the permit limits.

And to do that, they had to build three advanced wastewater treatment plants, technology that was available as far back as 1970. Long before this case started, advanced wastewater treatment plants existed.

And those judgment calls were not being made by the subsidiary; those judgment calls were being made by the parent company.

And the fact that I cannot put Mr. Getman on the stand -- every time they mention Mr. Getman, they call him general counsel. Every time I mention Mr. Getman, I call him vice-president of the company. He served as vice-president, senior vice-president, and now he serves as executive vice-president.

Page 39

And he's made many, many, many business decisions that have nothing to do with the legal counsel that he may or may not have given to Avatar Holdings or any of the subsidiaries.

And there was no assertion of attorney/client privilege or attorney work product at his deposition. He just took the Fifth Amendment.

There was no motion before the Magistrate to preclude him from testifying on the grounds that he was an attorney. And the Magistrate has expressly held, in conjunction with requiring the production of documents from Mr. Getman's files, that just because he happened to have a law degree and a title as general counsel didn't mean that the documents weren't subject to discovery.

Now, we are handicapped by virtue of the fact that the Defendants can select which witnesses they put on the stand and testify and which are going to assert the Fifth Amendment. We have no control over that.

And it just happens to be that the ones who testify -- the only person who testified who goes back to 1980, who has knowledge -- had only slight knowledge, admittedly -- and that was Mr. Levy.

The other people in the know, Mr. Gordon, who predated Mr. Levy, took the Fifth Amendment. Mr. Getman, who started in the early '80's, took the Fifth Amendment.

Page 40

Mr. Sladkus, who started in the early '80's, took the Fifth Amendment.

And there's a reference to other Avatar Holdings' officers testifying -- and that's true -- Mr. Jacobson, who didn't come along until '92; and the financial officers who presumably were not involved in the technical engineering decisions.

Now, Mr. Sladkus was an engineer. He was the one who was calling the shots directly under Mr. Sharp's direction up in New York.

And I dare say there are over a hundred documents that have Sharp and Sladkus' name on them directly relating to what to do about the effluent at Barefoot Bay. This was a problem they knew about in the early '80's and continued to be a problem, I dare say, through Mr. Sharp's death and Mr. Sladkus' resignation, which took place at approximately the same time.

So, I dare suggest that there is far enough -- far more than enough evidence to establish already at this point in time Avatar Holdings' liability for the violations.

Thank you, sir.

THE COURT: All right. Mr. Baise?

MR. BAISE: Your Honor, may I address the Court?

THE COURT: Yes, sir.

MR. BAISE: Two points, Your Honor, I would like

Page 41

to bring to your attention. Government counsel has made a great deal with regard to witnesses of Florida Cities not testifying and some of them taking the Fifth Amendment.

Mr. Allen, of course, is one that you have been told about that did take the Fifth Amendment and will be testifying.

The reason I think it's important to bring to the Court's attention the fact that this whole issue arose has been alluded to on one occasion, and that is something called the Weitzenhoff case. When the Supreme Court refused certiorari with respect to that case coming out of the Ninth Circuit, I brought that case to all of the individuals' attention and asked them to take that case into consideration, consult with their own counsel with respect to what that case indicated. They did, and did so. Some chose to testify; some chose not to testify.

It all arose because the Weitzenhoff decision -- which a number of individuals commented on the area -- I believe it's an incorrect decision -- but the fact is, people have to draw their own conclusions with respect to what Weitzenhoff said. Weitzenhoff is very broad with regard to its potential liability.

So, we would suggest to the Court that, one, it review the Weitzenhoff case and take that into account.

Number two, counsel continues to suggest from the

Page 42

Government that these facilities did not have permits. They did not have the Federal permit; that is correct. But at all times they were discharging with State permits. That's number one.

Number two, these facilities were meeting the very high levels of secondary treatment, and I do not want to leave in the Court's mind that there was any discharge of raw or untreated waste during this particular period of time. And that obviously will come out in our direct case. Those are the only points I would like to make, Your Honor.

Thank you.

THE COURT: All right.

MR. HIRD: Your Honor, if I can have just one minute -- I literally mean just one minute.

THE COURT: Okay. You can have brief rebuttal.

MR. HIRD: First of all, Your Honor, the U.S. v. Menominee Paper decision had no discussion of corporate parent liability. We looked at that case when Mr. Jacobs brought it to our attention.

Secondly, Your Honor, Mr. Getman's deposition lasted for, I believe, a total of eight pages. No specific questions were asked to which the attorney/client privilege could have been raised.

But finally, I want to say, the most important thing I heard in Mr. Jacobs' statements was he's accusing

Page 43

Avatar Holdings of failing to take action to sufficiently direct the violations. And here's where I think Mr. Jacobs has confused the standards.

What he's asking the Court to do is assume that Avatar Holdings had a duty to act because certain information came up the chain and then our -- find Avatar Holdings liable because it didn't act. That's not the way it works.

Subsidiaries tell parent corporations about what they do. What has to be found to hold a parent corporation liable is the parent corporation reaching down and directing the subsidiary to do or not do something which the subsidiary would otherwise do or not do. That is not shown.

What Mr. Jacobs is saying is Avatar Holdings is liable for its inaction because it didn't do this, that or the other thing; putting aside the merits of what we did or what we didn't do or what Florida Cities did or didn't do, which Mr. Baise will get to. You can't prove pervasive control by inadequate supervision, and that's essentially what Mr. Jacobs is arguing.

Thank you, Your Honor.

THE COURT: All right. The Court is going to reserve ruling on the Rule 52 motions.

Florida Cities Water will go first, correct?

MR. BAISE: Yes, Your Honor.

Page 44

THE COURT: All right. Mr. Baise, you may call your first witness.

MR. BAISE: Your Honor, we are going to have to take a couple of our witnesses out of order because some of them have travel plans, particularly Mr. McWeeny, who will be the first individual to testify.

He will be testifying with regard to the Carrollwood facility and dealing with some of the points that have been raised with the Government. So, we would ask the Court's indulgence to allow us to take him out of order that we had suggested to the Government that we would follow.

THE COURT: All right, sir.

MR. BAISE: Thank you.

MR. BULLOCK: If the Court please, Your Honor, we would call Michael McWeeny.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.

Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?

THE WITNESS: I do.

THE DEPUTY CLERK: Take a seat in the witness stand.

State your name and spell your last for the

Page 45

record, please.
THE WITNESS: Michael W. McWeeny; M-C capital W-E-E-N-Y.
- - -
Thereupon,
MICHAEL W. McWEENY,
a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:
DIRECT EXAMINATION
BY MR. BULLOCK:
Q. Mr. McWeeny, good morning.
Would you state your position, please?
A. I'm the director of the Hillsborough County Department of Public Utilities.
Q. All right. What is your responsibility in that position?
A. To manage that portion of County Government providing the water and wastewater service to about 95,000 customers in unincorporated Hillsborough County.
Q. And how long have you been in this position?
A. Approximately ten years.
Q. All right. When did you join Hillsborough County?
A. I became an employee of Hillsborough County in June 1985.

Page 46

Q. All right. Who was your predecessor?
A. Prior to me coming to the Hillsborough County Utilities Department, we had an interim director, Bruce Olvin. Prior to him, the last permanent director was Bruce Kennedy.
Q. All right. Do you know how long Mr. Kennedy was in his position?
A. I believe Mr. Kennedy was the director for about three-and-a-half years.
Q. All right. Let me refer you, first of all, Mr. McWeeny, to Florida Cities' Trial Exhibit 96. Have you seen this document before?
A. Yes, I have.
Q. Can you identify it for the record?
A. Yes. It is a letter dated June 28th, 1983, from Bruce Kennedy to Mr. A.A. Reeves, III, at Florida Cities Water Company.
MR. BULLOCK: Your Honor, we would move Defendant's 96 into evidence.
THE DEPUTY CLERK: It's in.
MR. BULLOCK: I'm sorry. Thank you.
THE COURT: It will be received.
THE DEPUTY CLERK: It's already in.
THE COURT: Beg your pardon?
THE DEPUTY CLERK: It's already in.

Page 47

THE COURT: Already in. Okay.
Go ahead.
BY MR. BULLOCK:
Q. Mr. McWeeny, let me refer you to the first paragraph, the sentence that begins with, We anticipate.
A. Yes.
Q. Would you read that sentence, please?
A. We anticipate a time frame of late 1985 at the earliest before we could consider providing service.
Q. All right. When you joined Hillsborough County in 1985, did the system have capacity to accept the effluent from the Carrollwood plant?
A. We did not have capacity in the system at that time, no.
Q. All right. Let me ask you to flip a couple of exhibits to Defendant's Exhibit 99. Have you seen this document before?
A. Yes, I have.
Q. Would you identify it for the record?
A. It is a letter dated September 6, 1984, from Bruce Kennedy to Mr. L.L. Good of Florida Cities Water Company.
MR. BULLOCK: Your Honor, we would move Defendant Florida Cities' 99.
THE COURT: It will be received.
MR. BULLOCK: Thank you.

Page 48

BY MR. BULLOCK:
Q. Let me refer you to the second paragraph of that letter; and about the fourth line down, the sentence begins, The latest projected date.
A. Yes, sir.
Q. Would you read that, please?
A. The latest projected date for having the expanded plant in service is June 1987.
Q. All right. Let me ask you to also read the following sentence.
A. In addition, the identification of the point of connection to the County's system is dependent upon the completion of a master wastewater transmission plan for northwest Hillsborough County, tentatively anticipated to be completed by mid 1985.
Q. Okay. Was the plan completed by mid 1985?
A. There were numerous plans that were developed for the Hillsborough County wastewater system. I believe the master plan was actually presented in early 1986.
Q. All right. Do you know approximately how many plans there were for Hillsborough County?
A. I believe there were probably three or four iterations of master plans within the 1985 to 1990 time frame.
Q. Was there capacity available to accept the Carrollwood effluent in 1987?

Page 49

A. There was not.
Q. All right. And can you tell us why the date for the capacity was continuing to be pushed back?
A. Yes. Hillsborough County, in 1985, when I became the director, August of '85 when I became the director, was in a situation where our wastewater treatment plants were pushing their permitted capacities. We did not have capacity for new development, and we were not meeting our permit criteria.
We initiated a significant capital improvement program in 1986 wherein we borrowed approximately $367 million to expand and upgrade our utilities system. That was a significant capital improvement program, far larger than anything the County had ever done before.
As we began to undertake those capital improvements, we experienced our earliest -- our earliest scheduling as being a little optimistic, and we were not able to complete those projects as we initially scheduled them.
Q. When you indicated a minute ago that you were not meeting your permit criteria, what regulatory body permitted your facilities?
A. Our permits were through the Florida Department of Environmental Regulation and EPA.
Q. All right. Let me ask you to turn to Florida Cities' Exhibit 103. Are you familiar with this document?

Page 50

A. Yes, I am.
Q. Would you identify it for the record?
A. Yes. It is a letter that I signed addressed to Mr. A.A. Reeves, III, vice-president of Florida Cities, dated June 3, 1986.
MR. BULLOCK: Your Honor, we would move Florida Cities' 103.
THE COURT: It will be received.
MR. BULLOCK: Thank you.
BY MR. BULLOCK:
Q. You wrote this letter, Mr. McWeeny, is that correct?
A. My staff wrote it and then I signed it.
Q. What was the purpose of this letter?
A. The purpose of this letter was to establish the parameters for connection of the wastewater service from the Carrollwood subdivision, Florida Cities Water Company, to Hillsborough County.
Q. And did you identify whether or not a connection fee would be necessary? And I'll refer you to Page 3.
A. Yes. On Page 3, in Section B, we do have a statement regarding fees and charges saying that all of the fees and charges be calculated and collected pursuant to County ordinance.
Q. Did you require Florida Cities to submit an application?

Page 51

A. An application was required, yes, sir.
Q. All right. Did you identify a specific plant that the County was building which would allow the system to have capacity?
A. Yes. In Page 1, the last paragraph, I identified that we anticipated capacity would be available when we brought the Sheldon Road wastewater treatment plant on line. That's the plant we currently call the Northwest Plant.
Q. Okay. In 1986, when did you anticipate that the Northwest Plant, or the Sheldon Road plant, would be on line?
(Pause.)
A. I don't believe that in this letter we identified the specific date that that particular plant would be on line.
Q. Okay. Did you identify a date in which you believed that there would be sufficient capacity anywhere in the system?
(Pause.)
A. We did identify that we thought the River Oaks Plant would be expanded by spring of 1988 and that we -- that would make capacity available.
Q. Okay. Was the River Oaks Plant expanded by 1988?
A. The River Oaks Plant was undergoing expansion from about 1985 through about 1988.
Q. Did those expansions, in fact, provide sufficient

Page 52

capacity to accept the Carrollwood effluent?
A. While the River Oaks Plant would have had capacity to accept the flow, the River Oaks Plant is a significant distance from the Carrollwood area, service area; and there was not infrastructure to take the wastewater from that area to the River Oaks Plant.
Q. Let me refer you next to Exhibit 106. Are you familiar with this document?
A. Yes, sir.
Q. And would you identify it for the record?
A. It is a letter dated March 8, 1988, addressed to Mr. Dale Ernsburger, P.E., of Reynolds, Smith and Hill signed by myself.
MR. BULLOCK: Your Honor, I believe 106 is already in evidence.
THE DEPUTY CLERK: Yes, it is.
BY MR. BULLOCK:
Q. What was the purpose of writing this letter, Mr. McWeeny?
A. The purpose of this letter is to provide a preliminary review of the plans for the connection of the service area to the County system and to identify the fees that would be required.
Q. Is this the first time that the County was able to identify any fee specifically?

Page 53

A. I believe this is the first time that we communicated in writing what we had calculated the fees to be.
Q. All right. What did you calculate the connection fee to be?
A. $5.5 million.
Q. All right. And what made up the connection fee?
A. The connection fee is the fee that the County charges to recover the capital cost of the facilities needed to provide the service, including the transmission facilities to bring the wastewater to the plant for treatment, the treatment plant itself, and the effluent disposal and sludge disposal facilities.
Q. Did this $5.5 million figure include any costs that Florida Cities would have to undertake to connect to the plant?
A. It did not include the cost of the connection itself. This was just to pay for the existing facilities that would be utilized.
Q. All right. Were you able to identify a time in which capacity would be available?
(Pause.)
A. In this letter, we indicated that the application for service would be put on a priority list and the capacity would be -- correction -- the applicant would be notified when the capacity was available. We did not in this letter

Page 54

indicate when that would be.
Q. Did Florida Cities question the $5.5 million connection fee?
A. As I recall, they did have considerable objection to the five-and-a-half million dollar fee.
Q. Your office -- let me start over again.
Does your office permit privately-owned wastewater treatment facilities in Hillsborough County?
A. We do not.
Q. All right. Do you have any control over the permitted -- the terms of the permits that these facilities would receive?
A. We do not.
Q. Did you continue to negotiate with Florida Cities regarding the connection fee?
A. As I recall, we had several conversations, but it essentially dropped because we could not reach resolution.
The capacity fees are not a negotiable item in our normal administrative activity.
Q. Did the negotiations pick up at a subsequent time?
A. Subsequently, the negotiations did pick up.
Q. And do you know why they picked up?
A. It is -- I have no personal knowledge other than we were --
MR. QUINN: Objection.

Page 55

THE COURT: Sustained.
BY MR. BULLOCK:
Q. Was the County contacted by Florida Cities to continue negotiations?
A. It is my understanding that we were.
Q. All right. And do you know when these negotiations picked up again?
A. I believe that would have been in 1990.
Q. Were any other parties involved in the negotiations?
A. I believe only the County staff and one of the County Commissioners and representatives of Florida Cities were involved.
Q. All right. Let me refer you to Defendant's 125. Are you familiar with this document?
A. Yes, I am.
Q. And would you identify it for the record?
A. It is a letter dated July 27, 1990, to Mr. A.A. Reeves of Florida Cities Water Company signed by myself.
Q. All right.
MR. BULLOCK: Your Honor, 125 is already in evidence.
THE COURT: Okay.
BY MR. BULLOCK:
Q. What was the purpose of this letter, Mr. McWeeny?
A. This was a response to a question posed by Mr. Reeves

Page 56

regarding the scheduling of the completion of County capacity that could provide service to Florida Cities.
Q. All right. When did the County anticipate that capacity would be available?
A. We identified in this letter that capacity would be available -- anticipated to be available in the first quarter of '91, 1991.
Q. And, in fact, did capacity become available during that time?
A. Capacity did become available, yes.
Q. Let me ask you to refer to Defendant's 141, which is in the next volume. Mr. McWeeny, are you familiar with this document?
A. Yes, I am.
Q. And would you identify it for the record, please?
A. This document is the transmittal letter and an agreement between Hillsborough County and Florida Cities to provide wastewater service.
MR. BULLOCK: Your Honor, I would move Defendant's 141 into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Mr. McWeeny, could you identify the day this agreement was entered into?
A. The date of the agreement is June 5, 1991.

Page 57

Q. Okay. Does this agreement reflect whether or not the capacity fee would actually be levied by the County?
(Pause.)
A. The agreement does not require the payment of a capacity fee.
Q. All right. Under the terms of this agreement, who is to bear the cost of construction of the forced main which would have been needed to connect Carrollwood to Hillsborough County?
A. A point of connection was identified, and the County bore the costs up to the point of connection, essentially west of the point of connection, between there and our wastewater plant; and Florida Cities picked up the cost of the infrastructure up to the point of connection.
Q. Whose forced main was longer, Florida Cities' or the one the County would construct?
A. I don't recall the answer to that.
Q. All right. Does the agreement address any penalties for construction delays?
A. Yes, it did.
Q. Okay. And what does the agreement reflect regarding the payment of any penalties for construction delays?
A. If the County were responsible for construction delays and not making the connection by the date certain, the County would be responsible for those penalties.

Page 58

Q. All right. And what was the date certain in this agreement?
A. I believe the date certain was, from memory, December 31st, 1991.
Q. Okay. Are you aware of when the connection actually occurred?
A. I believe it was five or six days later than that.
Q. All right. Are you aware of the distance between the connection point and the Carrollwood facility?
A. Generally, but I do not know the specific number of feet or miles.
Q. All right. Mr. McWeeny, did the County, in fact, pay any penalties for construction delays?
A. Yes, we did.
Q. Thank you, Mr. McWeeny.
MS. TSOTSOS: Your Honor, Avatar Holdings has no questions of this witness.
THE COURT: All right. Mr. Quinn?
MR. QUINN: Yes, Your Honor. I will be brief, and I do mean brief.

CROSS EXAMINATION

BY MR. QUINN:
Q. Good morning, Mr. McWeeny. My name is Tony Quinn. I'm counsel for the United States.
Mr. McWeeny, your understanding is that Florida

Page 59

Cities -- is it your understanding that Florida Cities Water Company was under an order to cease discharge to the Sweetwater Creek?
A. It was my understanding they were under an order to either cease discharge or to upgrade their effluent to meet the advanced waste treatment standards.
Q. But during your course of dealings since 1985 with Florida Cities Water Company, you didn't detect any sense of urgency to their dealings, did you?
A. I don't know how to measure a sense of urgency. Certainly I think they were anxious or interested in compliance, but I don't know how to define a sense of urgency.
Q. Sir, do you remember giving a deposition in this case?
A. Yes.
Q. I'll refer to Page 33, Lines 12 through 18.
Sir, do you remember the question being asked, In your dealings with Florida City with respect to connecting to Carrollwood, to the County, did you get the idea that the Company had a sense of urgency to the connection?
And your answer to that question was: I don't recall one way or the other any sense of that urgency.
Do you remember that?
A. Yes, generally.
Q. Okay. Well, does that -- I mean, you just stated now

Page 60

you don't know how to --
THE COURT: Well, he's answered your question and I have his previous answer and I've got this answer. Let's move on.
MR. QUINN: Thank you.
BY MR. QUINN:
Q. Sir, during your course of dealings with Florida Cities Water Company, did Hillsborough County ever lead Florida Cities down the path that a connection would be forthcoming immediately?
A. I don't believe that in any of our communication with them we indicated that capacity would be immediately available.
I believe that we did indicate that capacity was anticipated to be available when certain plant construction was completed, but we did not guarantee a date or an immediacy.
Q. So, you just told them the truth as to what the circumstances were and how those circumstances changed, didn't you?
A. Yes, sir.
Q. Prior to June of 1985 when you joined Hillsborough County, there was capacity at the Dale Mabry Plant, wasn't there?
A. I think that the amount of capacity that was available

Page 61

at any of the facilities in that time frame was under some question. And, in fact, one of the first things that I did as the Utilities Director was to determine that I could not sign off on the certifications that capacity was available at our treatment facilities. And shortly thereafter, the regulatory agencies placed us under a moratorium until we could clarify the amount of commitments and flow at our facilities.

Q. How about prior to you coming on in June of '85, do you know whether adequate capacity existed at the Hillsborough County plants?

A. I do not know.

Q. Okay. Sir, you have mentioned during direct testimony that a County Commissioner was involved in negotiations in 1990. Why was a County Commissioner involved in the negotiations with Florida Cities?

A. Hillsborough County is organized under a system of commissioners where we have four district commissioners and three at-large commissioners.

The commissioner that was involved, I believe, was Commissioner Iorio, and that was her district and I believe that she was representing her constituents.

Q. In the course of your dealings with privately-owned wastewater treatment plants, is it unusual for -- withdrawn.

How many times has a commissioner been involved in

Page 62

negotiations?

A. This is the only agreement that we have of this type, but generally commissioners are not involved in the administration.

Q. So, is it safe to say that this is, to your recollection, one of the only times that a commissioner was involved in negotiations with Hillsborough County and a privately-owned wastewater treatment plant?

A. Yes.

Q. Sir, at any time subsequent to you coming on in 1985, June, did Florida Cities make a commitment to tie in to the Dale Mabry Plant? Did they make a written commitment?

A. I don't recall any commitment to make a connection until we entered into the June 5, 1990, agreement.

Q. Okay. Subsequent to June of '85 and prior to the agreement, did Florida Cities ever agree to pay for the construction of necessary transmission piping or pumping equipment?

A. The only commitment or agreement we have is the June 5 agreement.

Q. Sir, do you know if Florida Cities had made a commitment to tie in to the Dale Mabry Plant in June of1985 and had agreed to construct the necessary transmission piping and pump stations, whether they would have been put on that priority list you mentioned during direct testimony?

Page 63

A. If they had made the application after August of 1985 when I became the director, I would not have been able to sign off that there was capacity. Whether my predecessors would have signed off, I cannot say.

Q. So, do you know whether if they had done -- withdrawn.

Do you know whether if they had made those commitments prior to you becoming director, whether or not a connection would have been allowed?

A. I don't know the answer to that.

Q. Do you know whether it's possible?

A. I think that it would depend on whether the regulatory agencies at that time would have considered us having been over-committed in our capacity, and I don't know how they would have evaluated that.

Q. Sir, during the time you have been with Hillsborough County, have you ever not had an NPDES permit for any of your plants?

A. We have currently, I believe, nine major wastewater plants, several of which do not have NPDES permits.

Q. Is that because of the delegation to the State of Florida?

A. No. That's because they don't have discharges.

Q. Okay. Let me rephrase my question. Since June of 1985, did any of the plants under your direction which had discharges ever not have NPDES permits?

Page 64

A. The only one that comes to mind as not having a discharge -- an NPDES permit is the South County Treatment Plant which had an NPDES permit which was rescinded to a zero discharge NPDES permit.

Although we had NPDES permits at several of our facilities, we did have consent orders and consent decrees with both EPA and DER regarding restrictions to some of those discharges.

Q. And Hillsborough County considers administrative orders and permits to be important documents, don't they?

A. Absolutely.

Q. And you wouldn't not apply for one, would you?

A. I'm sorry, I didn't hear the question.

Q. You would not fail to apply to renew a permit, would you?

A. Not knowingly. We might by accident miss a date, but we would not knowingly fail to permit a plant.

Q. During the time that you were on board since 1985 to present, have you ever accidentally failed to reapply for a permit when necessary?

A. I don't recall that we have.

Q. Sir, with regard to the plants that don't have surface water discharges, what do they do with the effluent?

A. The effluent is reused for irrigation or some other type of reuse.

Page 65

Q. Are there holding ponds?
A. Many of our plants have holding ponds.
Q. Sir, are there also deep well injection places?
A. Hillsborough County has no deep well injection for effluent disposal.
Q. About how many ponds do you currently have?
(Pause.)
A. I believe that we only use percolation ponds for effluent disposal – I take that back. We have one plant currently in operation that uses percolation ponds for effluent disposal. We have lined ponds at several facilities that are used for holding reclaimed water for future reuse.
Q. Sir, prior to Exhibit 106, which was the agreement we were talking about a little bit further on, did Florida Cities Water Company ever ask Hillsborough County for a cost to tie in to the plant?
A. They did ask us through the application process what would be the conditions for the connection. Our preliminary plan review, which was one of the exhibits previously discussed, identified the capacity fees and a point of connection.
The normal approach is that the applicant is responsible for the infrastructure up to the point of connection.

Page 66

Q. Is that what happened in this case?
A. That was not what happened in this case. In this case, we entered into a separate specific agreement that identified a point of connection. And based on that point of connection, the infrastructure up to the point of connection was provided by Florida Cities and beyond the point of connection by the County.
Q. Would you say that was unusual in this circumstance for the County?
A. It was only unusual in that we had a separate agreement rather than just using the preliminary plant approval letter.
Q. Thank you, sir.
MR. QUINN: I have no more questions. Thank you.
MR. BULLOCK: Nothing, Your Honor. Thank you.
THE COURT: Thank you, sir. You may step down. Call your next witness.
MR. BAISE: Your Honor, Mr. Don Scroggin will call our next witness.
THE COURT: Okay.
MR. SCROGGIN: Florida Cities calls Mr. Douglas Smith.
THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: My name is Douglas G. Smith, S-M-I-T-H.

* * *

Thereupon,

DOUGLAS G. SMITH,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. SCROGGIN:
Q. Good morning, Mr. Smith.
A. Good morning.
Q. Would you please state your name and current position?
A. Douglas G. Smith, senior partner and regional environmental manager for Black & Veatch.
Q. How long have you been employed at Black & Veatch?
A. Just over 16 years.
Q. Can you tell us what Black & Veatch is?

Page 67

Page 68

A. Black and Veatch is a large engineering construction partnership founded some 81 years ago headquartered in Kansas City, Missouri, engaged in providing engineering and construction management and related services in the energy, environment and facilities business around the world. We have about 6,600 employees and do about $1.2 billion worth of business each year.
Q. Would you please tell me what college degree you hold?
A. I have an undergraduate degree, a bachelor of science, in civil engineering with an emphasis in sanitary engineering. I received that in 1971 from Kansas State University in Manhattan, Kansas.
And after that, I received a masters of science in civil engineering, essentially sanitary engineering, from the University of Colorado in Boulder; finished my work there in 1974 and the degree was conferred, I think, in 1975.
Then I have a juris doctor degree from the University of Denver College of Law, received that in 1989.
Q. Can you tell me what training you have relevant to the construction of wastewater treatment facilities?
A. Most of the training I have received has been pretty much on-the-job training. I began in the construction business in 1967 right out of high school and continued it essentially in some regard or another to the present time.

Page 69

I'm currently vice-president of our construction company, Black and Veatch Construction, Incorporated, where we engage in the construction of municipal water and wastewater treatment plants.

And during the 29 years since I first engaged in construction business, I have seen all kinds of construction activities regarding water and wastewater treatment plants for mostly what we would call municipal owners.

Q. Can you tell me if you have any other professional training?

A. We, in the engineering practices, have a number of informal and more formal training seminars and conferences and educational activities we take part of during the years.

I have attended or taken part in terms of either giving papers or participating in those educational activities essentially before even my undergraduate degree was completed, probably, say, beginning 1970 through the present time. And I probably averaged four or five of those kind of conferences or seminars each year, so probably in excess of a hundred such training sessions, generally focused in the sanitary engineering field, which has been the main focus of my vocation for the 25 years.

Q. Has this professional training related to the operation of wastewater treatment facilities?

A. Some of that has. As part of my early career, I was

Page 70

engaged directly in the operation of wastewater treatment facilities, and so I attended a great number of those. During the 1970's, that was a big focus.

After the 1970's, when I went to Black and Veatch in the consulting engineering business, I probably put less emphasis on just construction -- excuse me -- on operation-related activities; but that was always a part of these technical conferences and seminars that we attend -- that I attended.

Q. What was your first full-time job after college?

A. I began as chief of the sanitation branch for the Department of Army at Fort Riley, Kansas. I had responsibility for four wastewater treatment plants and three water systems, a couple of swimming pools and a landfill. Essentially I was the responsible operator for those plants; make sure they had to meet certain discharge requirements in the State of Kansas. And we then had operational -- I had operational responsibility, maintenance, those kind of things. And I did that until I returned to graduate school.

Q. What was your next full-time employment?

A. After completion of my graduate work at the University of Colorado, I began work for the City of Boulder, Colorado, and there I was first hired as assistant sewer division director and quickly moved to the sewer division director

Page 71

and then as public utilities director for the City of Boulder and at each of those levels had responsibility for the sewer division, which was all the sewer collection system, sanitary sewers, two sewage treatment plants, the largest of which was about 16 MGD; and then as public utilities director had responsibility for drinking water treatment, two surface water treatment plants which was -- one was about 50 MGD and the other was about 12 MGD, and then wastewater treatment, and then as well the storm water utility, which Boulder had one of the first storm water utilities in the U.S., and that was until I left there in 1979.

Q. You used the term "MGD." Can you tell us what "MGD" means?

A. That's a term representing the flow or capacity of one of these treatments plants. It stands for million gallons per day.

Q. Can you tell us what your next employment and responsibilities were?

A. I left the City in 1979 and for a few months worked for another consulting engineering firm, Hennings, Durman, Richardson in Phoenix, Arizona, and then was employed by Black and Veatch in late 1979 until the current time.

And during that period both with HDR and subsequently with Black and Veatch, I was first senior project manager in

Page 72

charge of large water and wastewater treatment plant construction - design and construction projects, related feasibility studies, water quality studies, management studies in terms of financing improvements and implementing them. And then on into the late '80's -- excuse me.

With Black and Veatch, I was hired in Denver and was part of the Denver office there until 1989 when I moved to Florida and had responsibility for the Florida operations of Black and Veatch.

Q. Can you tell me how many years' experience and training you have relating to the construction and design of wastewater treatment facilities in total?

A. Essentially, I'd certainly represent more than 25 years, since my undergraduate degree, and through that entire time the focus has been on wastewater treatment.

Q. How many years' experience do you have regarding the operations of wastewater treatment facilities?

A. Certainly the focus of my ten years in the 1970's, from early '72 when I was employed by the Department of Army until I left the City of Boulder in '79, operations was a big focus of mine.

However, even in the early '80's, through the mid 1980's, one of my principal projects I was involved with was the upgrading of the Denver Metropolitan Wastewater Reclamation District's central plant. It's a 185 MGD plant.

Page 73

And I was very involved with looking at operations through that time, so I'd say probably on the order of 15 years.
Q. What experience do you have relating to the assessment of the impacts of the operations of such wastewater treatment facilities?
A. I assume you mean impacts on receiving waters?
Q. Yes, sir, the environmental impacts on receiving waters from the operation of wastewater treatment facilities.
A. While I was in Boulder, specifically we had two wastewater treatment plants discharging to Boulder Creek, which was a high-quality, front-range stream, trout stream, in the upper reaches, and so there's a great deal of concern about the impacts of wastewater treatment flows on that water body. And I was involved directly in sampling and assessing the impacts of those discharges on that creek and in trying to figure out what ways we could improve the quality of effluent and diminish the impacts on the creek. That was through the '70's and the improvements were -- some improvements were built during the '70's and some later.
Then in the '80's, my focus was on Segment 15 of the South Platte River, which is the receiving waters of the Metropolitan Denver Disposal District's Plant, and we looked a great deal at flora and fauna in that reach of the stream and assessed impacts of water quality, particularly looking

Page 74

at dissolved oxygen conditions and ammonia discharges, impacts on ammonia on the fish species in the creek -- in the river.
Q. Have your experiences included the analysis and review of water quality data from receiving waters?
A. Right. Certainly in my graduate program, I actually did the sampling and testing and had to work those hours in the laboratory to actually know how to do the tests. After that point, essentially people worked for me that did it. We had laboratories in Boulder that performed those water quality analyses, and we did a great deal of working -- compilation of data and analyzing data and trying to determine what that data meant as to what kind of impacts were on the stream or what we could do to mitigate those impacts.
Q. What experience specifically in the State of Florida do you have regarding the construction of wastewater treatment facilities and the operations of wastewater treatment facilities in the State of Florida?
A. As I mentioned, I came to Florida in 1989 and during that time --
THE COURT: Let's stop there a moment. Let's take a ten-minute recess.
(A recess was taken.)

Page 75

THE COURT: Okay, Mr. Scroggin.
MR. SCROGGIN: Yes, Your Honor.
BY MR. SCROGGIN:
Q. Mr. Smith, can you tell me what national recognitions if any you've received for your experience in the areas of operations and construction of wastewater treatment facilities?
A. Well, probably the most important national recognition I've had is that of being accepted as a diplomate of the Academy of Environmental Engineers.
This Academy has been formed to recognize achievements and qualifications of those engaged in the practice of water, wastewater and air pollution engineering and it's a fairly vigorous examination and admittance procedure, and I was examined and admitted in 1989 and 1990.
Initially, I think it was '89 when I completed my application process and 1990 when I was interviewed and subsequently elected into the Academy and it's a fairly select group of a small number of what would be known as sanitary engineers with considerable experience in the field and recognized by their peers as such.
Q. You've testified you have experience relating to construction and operation of wastewater treatment facilities in the State of Florida.
I'm going to ask you now what experience if any do you have regarding the assessment of the environmental impacts in

Page 76

the State of Florida of wastewater treatment facilities?
A. You asked me that question, I didn't get to answer it, though, earlier. I don't know if you want me to answer that now regarding experience in the State.
Q. Yes, sir.
A. Particularly with wastewater treatment plants operation and construction, I've been involved with treatment plants in Pensacola, the Main Street Plant, which is about 20 MGD and the Avondale Plant which is now going to eight million gallons per day, the City of Tallahassee Treatment Plants, both of which have a combined capacity of about 25 MGD, City of Tampa, Hooker's Point, Howard F. Curen Plant, which is I think about 65 MGD, being expanded to 88 MGD, on down to the City of Manatee County Southwest Plant, Waterway Estates Plant, Caloosahatchee River, Fiesta Village, over to Fort Myers over to the Reedy Creek Plant for Disney World which is about an 8 MGD Plant, City of Daytona Beach, Western Regional Plant there which is 10 MGD. I might have missed a couple.
That's most of them I have been involved with regarding assessment of capacity, performance operations and recommendation for constructed improvements to change their treatment systems into the future.
Then your next question was which ones –
THE COURT: Wait a minute.
MR. JACOBS: I object. I let it go the first time,

Page 77

but I think it's a little improper for the witness –
THE COURT: Sustained, sustained.
BY MR. SCOGGIN:
Q. Mr. Smith, approximately how many such projects in the State of Florida have you been involved with?
A. I'd say at least fifteen to twenty treatment plants in individual projects, would probably be more than that 'cause there's multiple projects associated with individual plants, so –
Q. And how many such projects nationally have you been involved with?
A. Goodness, certainly more than a hundred, with probably fifty to a hundred treatment plants as individual plants that I've had projects associated with them.
Q. Have you published articles in professional journals?
A. Yes, published probably thirty to forty professional articles in journals and have presented those articles in addition to or presentations, probably another seventy-five presentations at conferences, technical symposiums.
Q. Can you tell me if you hold a professional license in the State of Florida?
A. Yes. I'm a registered engineer, professional engineer in the State of Florida, I think it's license number 43134, and licensed engineer in the State of Colorado. And since I left there, I essentially put it on inactive status, but I would

Page 78

become licensed again by just paying my dues back there.
MR. SCROGGIN: Your Honor, I could continue asking questions of this witness regarding his qualifications, but in order to save time and move forward, I would proffer this witness as an expert witness to this Court at this time in the areas of the construction and design of wastewater treatment facilities; second, in the area of operations of those wastewater treatment facilities; third, the environmental impacts of the operations of such facilities on the receiving waters and the associated environs; and finally, in the areas of analysis and review of water quality data.
THE COURT: Yes, sir.
MR. JACOBS: Opportunity to voir dire the witness, please?
THE COURT: All right.
You may voir dire.
You think he may not be qualified? Well, go ahead.
MR. JACOBS: I think he's not properly before the Court as an expert in this case, so, yes, the voir dire relates exactly to that subject sir.
THE COURT: All right.
VOIR DIRE EXAMINATION
BY MR. JACOBS:
Q. Mr. Smith, you signed three expert reports relating to three wastewater treatment plants at issue in this case,

Page 79

correct?
A. That's correct.
Q. But you didn't actually write any one of these three reports, did you?
A. I don't know what you mean by actually "write."
Q. Mr. Smith, do you recall that you were deposed in this matter on October 30, 1995, at the United States Attorney's Office here in Tampa?
A. Yes, sir, I do.
Q. Reading from page 7, line twenty-three of the deposition – transcript of that deposition; Mr. Smith, who wrote these reports. That's the question I'm reading, sir, and your answer was, they're prepared by our firm and there were two principal authors, Dr. Barcus Jernigan and Andy Westfall.
I ask you again, sir, isn't it correct that you did not write –
THE COURT: No, ask him – ask him if he gave those answers to those questions.
MR. JACOBS: I'm sorry, sir, forgive me.
BY MR. JACOBS:
Q. Did you give those answers?
A. Yes, I did.
THE COURT: Go ahead.
BY MR. JACOBS:
Q. Now, referring to page 8, line seven, but you didn't

Page 80

write them – question, but you didn't write them, is that correct. Answer, line eight, no, I did not.
Sir, did you give that answer?
A. Testimony at deposition says yes, I believe I did.
Q. Page 8, line fifteen, question, and did you rely on the work of Dr. Jernigan and Mr. Westfall in terms of the preparation of these reports, line eighteen, answer, yes I did.
Do you recall giving that answer, sir?
MR. SCROGGIN: Your Honor?
THE WITNESS: Yes.
THE COURT: Just a moment, sir.
MR. SCROGGIN: Your Honor, I would object to this line of questioning which may be appropriate for cross examination of the witness or indeed weight to be given the evidence that he will present.
I would suggest, however, that it's not related to his qualifications as an expert and I proferred him as an expert in this case based on his qualifications to render an expert opinion, not the merits of that opinion and not the weight that this Court would give it. I would suggest counsel seeks to argue a cross examination issue more than a qualification.
THE COURT: Overruled, go ahead.
BY MR. JACOBS:
Q. Now, in terms of what information you personally

Page 81

reviewed, Mr. Smith, prior to giving your deposition in October, isn't it true that aside from reviewing the Government's complaint, you never personally reviewed any documents whatsoever except for a few compilations compiled by your staff?
A. I reviewed drawings and data that we had taken from the files from Florida Cities Water Company. I looked at, I think, I believe I said miscellaneous DMR's and MOR's, that's discharge monitoring reports and monthly operating reports.
I did not look at them in great detail or try to correlate at that point, and yes, those documents were then transcribed or the results from those documents were transcribed to graph compilations and presented in a report. I looked at some, I don't know if I said maps, and certainly some memoranda, schedules, things like that, construction documents; reviewed those, yes.
Q. I'm referring now to your deposition, sir, again page 12, line twelve, and during the course of the preparation of –
THE COURT: Ask him if he made the following answers to the following questions.
BY MR. JACOBS:
Q. And, sir, I'm asking if you made the following answers to the follow questions at the time of your deposition. And during the course of the preparation of any of the drafts of the final versions of these three reports, Exhibits 875 and 876

Page 82

and 877, and those for the Court's reference were the deposition exhibit numbers; did you have the occasion to review any documents. That is the question.
Now, sir, my question to you is, did you give the following answer, I believe that I reviewed just compilations of information that was compiled by my staff as part of the reports. I did review the complaint. I'm trying to think if there's any other documents. Nothing sticks out in my mind, any particular documents I reviewed.
Did you give that answer, sir?
A. Yes, I did.
Q. Do you recall that I then asked you the following question, are you sure, though, and I'm referring to page 12, line twenty-two, you're sure, though, that you reviewed what you have characterized as compilations of information compiled by your staff, is that correct, and the answer. I'm asking you whether you gave that answer, is that correct?
A. Yes, compilations included such things as excerpts and copies, that's right.
MR. JACOBS: Move to strike his last answer, sir, as non-responsive.
THE COURT: Denied.
BY MR. JACOBS:
Q. Then, do you recall, sir, that I asked you, and I'm referring to page 13, line five of the deposition, and about

Page 83

how voluminous were these compilations for each plant. Do you recall, sir, giving the following answer, and I'm referring to page 13, line seven, these are like tables or a series of tables and graphs or of data points, sequence of dates, that kind of information. Do you recall giving that answer, sir?
A. Yes, I do.
Q. I see you looking down, are you looking at the transcript?
A. No, I'm just concentrating. Thank you.
Q. Okay, fine.
A. And those questions are asked in the narrow context of formal documents, we're talking about MOR's and DMR's and NPDES permits. We actual have books of three or four inches thick of information that is backup to the reports.
Q. Right. And I didn't ask you that, sir.
A. Okay.
Q. You said "we," you mean Black and Beach has all that information?
A. That's right.
Q. Let me be very clear. I'm asking you what you personally reviewed?
A. That's what I was saying.
Q. You're not saying you personally reviewed all those notebooks before your deposition?
A. We had a project notebook, that's essentially that, yes.

Page 84

THE COURT: Proceed counsel, let's move on.
MR. JACOBS: I need to be able to distinguish and for the witness to understand that I'm inquiring not into what –
THE COURT: Just ask the question.
BY MR. JACOBS:
Q. Okay, sir.
Now, the next question relates again to the compilations. Question on page –
THE COURT: No, no, no, I tell you what, just ask him a question and if you have got something there that is in conflict with what he testifies here before me, then you can ask him the question as to what he testified to earlier. But ask him a question now, don't be asking – don't be reading from the deposition until he says something that you think is inconsistent with what he is testifying to here?
BY MR. JACOBS:
Q. Okay.
The compilations, Mr. Smith, how voluminous were they?
A. The compilations that you asked me about in the deposition were compilations of data points from MOR's to DMR's. We have compilations of data from the project file that is in a notebook that was –
Q. I'm just asking you about the compilation?
MR. BAISE: Objection, Mr. Jacobs continues to interrupt the witness while he is answering.

Page 85

THE COURT: Sustained. Finish your answer.
THE WITNESS: I don't want to mislead anybody. We have a projects file that is part of a backup of a written report which includes data, memos, historical information. It's about a three or four inch notebook. I reviewed that.
And then you had asked me during the deposition very specifically as I recall about administrative orders, NPDES permits, MOR's, DMR's, and those I had not reviewed very closely, and that is the compilation of data points I spoke of that we had reduced to graphs which were included in the report, so I wanted to distinguish what we're talking about here.
THE COURT: All right, go ahead.
BY MR. JACOBS:
Q. I'm asking you whether you reviewed all those voluminous notebooks. My question to you now, sir, is it your testimony today, prior to your deposition you reviewed all those voluminous notebooks containing all that information you just referenced; you personally, sir?
A. There is one notebook, and I briefed through it prior to the testimony, obviously not enough, 'cause I didn't have all the facts in my mind.
Q. Now, let me go back to the earlier question, the compilations of data that you reviewed and you testified to at your deposition.

Page 86

How voluminous was that information, the compilations?
A. The compilations of data are essentially data points off MOR's, DMR's relating to specific effluent limit or effluent quality standards. They appear on OMR's, MOR's, DMR's at multiple places, so it's taking a point off of one month and putting it on a graph. So what I saw were graphs with those data points, and so talking about a few pages of graphs, that kind of thing. That's the compilations.
Q. Okay.
Now, aside from compilations that you've mentioned that were a few pages each that you've said were compilations of DMR and MOR information, and aside from the complaint, and aside from drafts of these reports that were prepared by others, isn't it true that prior to your deposition, you did not review any other data relating to this case?
A. Drafts of the reports, there are also some maps and diagrams, layouts of facilities, those kind of things that's in the backup, we didn't end up putting them in the final report. I think other than that, that's generally correct. I had not reviewed – as I recall, the question was aimed at had I reviewed the NPDES permits. I had not at that time.
Q. Okay.
So you think there might have been in addition to what I just outlined, the DMR's, MOR's, the drafts that were prepared by your staff and the compilations of a few pages, you think

Page 87

you might have also reviewed a couple maps?
A. Yes, we had maps in the file.
Q. I understand. You didn't -- you don't recall mentioning that at the deposition, but you do think you reviewed those prior to the deposition, is that correct?
A. I believe it is. I know it's part of the notebook. I know I looked at the notebook a lot more since then.
Q. So you're not sure whether you reviewed the maps before the deposition or since the deposition?
A. I believe I did look at them before. I know I've studied them since.
Q. Okay.
Aside from the information we've just gone over, the maps, the DMR's, MOR's, the draft reports and complaint, you did not review any other data related to this case prior to your deposition, is that correct, sir?
A. That wasn't in the reports, that's correct.
Q. Right, I included the reports in the question?
A. Yeah, I think that is right.
Q. Okay, thank you.
THE COURT: You through?
MR. JACOBS: Just a moment, Your Honor, if I may.
BY MR. JACOBS.
Q. And isn't it true that prior to your deposition, these compilations were not provided to the Government?

Page 88

A. As I say, the compilations came right off the documents you had in your possession, so they were -- they were just data points off of the MOR's, DMR's.
Q. Sir, I'm not asking you about the DMR's or MOR's, I'm asking you about compilations that were put together by your staff. Isn't it true they were not provided to the Government prior to your deposition?
A. They were on the graphs that were in the reports, so it was data put from a column kind of thing to the graph.
Q. Are you testifying that the compilations are in the reports just as they were as you reviewed them or they're exactly the same as in the reports?
A. They changed form from the numerical statistics, if you will, to that of being on a graph, so I don't think we -- well, we didn't publish the compilations as part of the report, we published the graphs, so -- and that's what we used to prepare the graphs.
Q. Okay.
So you did not give the Government the compilations?
MR. BAISE: Objection, this has been asked and answered about three times, now the fourth time.
THE COURT: Well, I don't know, I'll overrule the objection. Let's go ahead.
THE WITNESS: The columns of data were not given to, as far as I know, they weren't in the report, thus, you did not

Page 89

have them before our deposition -- before my deposition.
BY MR. JACOBS:
Q. I'm not sure I heard you; they were not in the report and you did not provide them prior to the deposition, is that your answer is, sir?
A. That is what I said, yes.
Q. And prior to your deposition, sir, you had never visited in the context of your services as an expert witness in this case any of the three plants, is that correct?
A. In the context of expert witness, that is correct.
Q. And the only preparation you did for your deposition, for the deposition itself, was to review the three reports written by your staff and highlight them in preparation for your testimony, isn't that correct?
A. That's correct.
MR. JACOBS: Your Honor, in your Monday, March 25th, 1996 order at the bottom of page 4, you ruled, quote, so that there would be no misunderstanding, Mr. Smith will not be permitted to give testimony based upon documents or information not relied upon to generate his report, nor will he be permitted to give testimony based on his subsequent visits to the facility sites.
The testimony elicited from this witness establishes that he did not write the reports, that he did not review or rely on any documents or information in preparation of the

Page 90

reports with the exception of the DMR's and MOR's, and with the exception of data compilations, and by the way, those were not provided either, to your knowledge, Mr. Smith, were the particular DMR's and MOR's that you reviewed, were those particular ones provided to the Government prior to your deposition?
THE WITNESS: We just had copies of them, so I don't know if they were.
MR. JACOBS: Okay.
And he's testified that the data compilations were not provided to the Government prior to his deposition as required by Rule 26(a)2, and that the only documents he personally reviewed prior to his deposition to prepare were the reports themselves.
The United States, therefore, moves on the basis of the Court's rulings on the bottom of page 4 of its March 25th, 1996 order, to exclude the testimony of Mr. Smith.
MR. SCOGGIN: May I respond, Your Honor?
THE COURT: Let me find the order. What page?
MR. JACOBS: Page 4, sir.
THE COURT: Just a moment.
MR. JACOBS: And we'd be relying in part, of course, on 26(a)2(b) which relates to the disclosure of expert testimony which I see the Court also refers to on page 4.
THE COURT: Just a moment.

Page 91

(Brief pause.)
All right.
MR. SCROGGIN: May I respond?
THE COURT: Yes. Go to the microphone, please.
MR. SCROGGIN: Referring to your order, Your Honor, on page 4, the order reads, Mr. Smith will not be permitted to give testimony based upon documents or information not relied upon to generate his report, nor will he be permitted to give testimony based on his subsequent visits to the facility sites.
We will not ask Mr. Smith to give testimony regarding any information not relied upon to generate his report, nor will he be asked any questions regarding the facility site visits that he subsequently made after his deposition.
The purpose of an expert witness is to assist the trier of fact in understanding technical complexities in a case such as this. We believe that this expert witness satisfies that requirement. I would, if I might, clarify with the witness, I had a line of questions that I was going to ask him regarding the preparation of the report, if that would help.
THE COURT: Go ahead, go ahead.
MR. SCOGGIN: I will not read from the deposition, I will simply ask the witness the same questions that were asked at the closure of the deposition, but were not read by Mr. Jacobs.
MR. JACOBS: Can we have a clarification, who asked

Page 92

the questions?
MR. SCROGGIN: I asked the questions at the end of the deposition. If I may, I will ask the witness unless you want to hear the deposition.
THE COURT: Go ahead.
BY MR. SCROGGIN:
Q. Mr. Smith, you worked with others in the preparation of your report?
A. That's correct.
Q. Did you work with others in the preparation of your report?
A. Yes, we did, I did.
Q. Were you personally involved in every phase of the analysis and preparation of these expert reports?
A. Yes, I was, from the moment we were engaged until the reports were actually published.
Q. Did you personally supervise and oversee the work of any staff member who was working under you?
A. Yes, I did.
Q. There has been much talk of the compilation of data. What exactly were these compilations of data; did they contain any new information not already in your report or already produced to the United States?
A. Not that I'm aware. The information was simply presented in a different form in the report than it was in our --

Page 93

essentially our data extractions that are compilations we had before then.
Q. Can you explain what you mean by "different form"?
A. For instance, on the information regarding the discharge monitoring reports and monthly operating reports, we would have a month and then a corresponding column, the actual effluent quality associated with that, so for like for May of 1991, you'd have BOD, 4.8 and TSS 3.2 and right on across the form, so that would be -- that would be like a compilation we had of a series of those. Those were then -- that's what we had in 'cause that's what we took it off, the MOR's, DMR's, we took those and put them in the report then, and on a graph, and so we've got graphs that have the exact same information, it just has on one ordinate of the graph it has date and time, on the other ordinate of the graph it has the relative magnitude of what that parameter was.
The other thing was that of dates and schedules, and so we had listed dates and schedules. We ended up putting in bar charts and that kind of thing in the charts.
Q. Do these compilations contain data or analyses of data?
A. It's simply data.
Q. Were they anything more than rearrangement of data that appeared in the charts that are part of your report?
A. No.
Q. Can you tell me if you received drafts of your expert

Page 94

report as they were in preparation?
A. Yes. We worked through them in kind of a stage at a time trying to establish first data and make sure we had a picture of things correct, and so Barcus Jernigan and Andy Westfall were working directly with me, they would write them and they would send them to me and I would mark them up and get on the phone, we'd be in conference or conference calls and go over the things it said and say -- I'd tell them, oh, I believe that something was different or changed or a different opinion of what they had written and we would modify that based on my direction. And we worked out each stage through the preparation of the report until the final report was completed.
Q. Can you tell me approximately how many contacts, personally, you had with your staff members during the preparation of these reports?
A. Oh, dozens. I mean, we began -- I think we were engaged in May of 1995, the report was completed in October, so five months. Certainly dozens of meetings and a couple dozen, twenty meetings. I don't know, something like that perhaps.
Q. Can you tell me what questions you asked of your staff in response to the drafts you received?
A. I might ask clarifying questions on the data, the text that was written, where did they get it or did we know about something else that made that raise a question on it, so I wanted to know more about that.

Page 95

I may have asked based on my own background I would have thought something different, could they defend where we were going with this thought interaction, just like that, just collegial development, pretty normal practice for us. I mean, I'm a large firm, we're always working as teams and nobody ever just writes a report by themselves.

MR. JACOBS: Objection, move to strike.

THE COURT: Denied.

MR. SCROGGIN:

Q. What changes did you make in the draft reports that you received from your team members?

A. Generally, I would get the reports and blueline them, things that, you know, I thought was the wrong conclusion or maybe a conclusion that should have a different approach to it.

Obviously, the facts -- I relied on my team for the facts and examination of those facts in the files is very tedious and time consuming which is not appropriate for me to be involved with, and so I just asked them where they got that stuff, that kind of thing.

Q. Is this team approach that you've described different from the approach you use in servicing other clients on similar projects?

A. No. I mean, that's the way we do business. We are -- we have project teams, that's the essence of every project is a project team to balance the views of different people.

Page 96

THE COURT: Okay.

You've answered his question.

BY MR. SCROGGIN:

Q. What steps did you take to assure that errors were not made in the transcription of data by your team members?

A. We had checks within the team and then we had clerical checking as for transcription purposes so we didn't make mistakes. We did make some and I think Mr. Jacobs pointed it out, our bibliography had a couple errors. Certainly, that's what we try to do. It's a little difficult because of the confidential nature of the work. We didn't make it available to very many within the firm.

Q. Do you take personal responsibility for all of the conclusions and analyses in your expert reports?

A. Yes, I do.

Q. And has your opinion expressed from those reports changed since the time of your deposition in any way?

A. No, they have not.

MR. SCROGGIN: Your Honor, I would renew my motion for proffering Mr. Smith as an expert witness and in the areas I've already enumerated in this case.

THE COURT: Okay.

Mr. Jacobs, you want to be heard any further?

MR. JACOBS: Very briefly, Your Honor.

BY MR. JACOBS:

Page 97

Q. Mr. Smith, Mr. Scroggin asked you about these drafts you reviewed.

THE COURT: No, no, I'm not talking about testimony, I'm talking about argument.

MR. JACOBS: Oh. I don't have anything further, Your Honor. No argument, Your Honor. Thanks.

THE COURT: All right.

Well, your testimony -- well, I guess I should ask counsel this.

Mr. Scroggin, this Court in its order provided that Mr. Smith would not be permitted to give testimony based upon documents or information not relied upon to generate his report.

MR. SCROGGIN: That is correct, Your Honor. We have no expectation of asking him any question regarding the compilation or other documents that --

THE COURT: Mr. Smith, will you be rendering any opinions or testimony based upon any documents or information not relied upon to generate your report or reports?

THE WITNESS: No, sir, I won't.

THE COURT: Will your testimony be based even in part on subsequent visits to the facility sites?

THE WITNESS: No, sir.

THE COURT: Okay.

I'll overrule the objection, I'll permit him to

Page 98

testify over objection.

BY MR. SCROGGIN:

Q. Mr. Smith, when were you retained as an expert witness in this case and by whom?

A. May of 1995, by Gabeler, Baise and Miller.

Q. Can you tell me the scope of inquiry that was given to you for your expert work?

A. In general, it was the three treatment plants. First emphasis was Waterway Estates. We were asked to look at the improvements that were made at the plant and had they taken a reasonable amount of time, and we looked at the effluent discharges, both during the time that the complaint was made and whether those discharges had any impacts or what the impacts might be on the receiving waters.

And then we looked at Barefoot Bay and asked similar kinds of questions about the treatment plant and what would be expected from the treatment plant and looked at the discharge and its impact on the receiving waters, what those impacts might be.

And then finally at Carrollwood Village, similar questions.

Q. Who personally was your contact for your retention as an expert witness?

A. I spoke with you, Mr. Scroggin, and we developed really our scope and idea of what we were going to perform.

Page 99

Q. What instructions were you given regarding the conclusions that you should reach in performing your analysis?
A. Well, we talked about wanting to maintain our objectivity and it was very important that our firm report what we saw and what we opined of our own basis of fact and that, you know, we were to render our judgment as an independent engineer and that was what we were to write.
Q. Did you in fact prepare expert reports for the three facilities; Barefoot Bay, Carrollwood and Waterway Estates, that are in issue in this litigation?
A. Yes, we did, a report for each one of the plants.
Q. Mr. Smith, are you familiar through your twenty-five years of experience with the design and operation of a general secondary treatment wastewater treatment facility?
A. Yes, I am.
MR. SCROGGIN: Your Honor, I would ask the indulgence of the Court in allowing Mr. Smith to go to the drawing board and to assist his testimony to speed the process, if we might, by his drawing --
THE COURT: Sure.
BY MR. SCROGGIN:
Q. I will ask you, sir, would you please draw and describe the operations of a general generic secondary treatment wastewater treatment facility?
A. Yes.

Page 100

Q. I'll ask you to do that, sir.
MR. JACOBS: Your Honor, may I move a little closer?
THE COURT: Sure.
THE WITNESS: Your Honor, we have domestic sewerage coming in from a sewage collection system. We generally look at this sewerage in regards to about three parameters; one is BOD, the other is TSS.
BOD is biochemical oxygen demand, and TSS. These are kind of the measures of how strong this sewerage is coming into the plant. For domestic sewerage, these typically are about two hundred parts per million of BOD and about a hundred and fifty parts per million to take suspended solids into a plant.
Sewerage comes in through a sewer line, gravity or pumped, and may first receive some general screening to take out any large items, rags and debris, wood, things like that. And that is scraped off on a screen, that is usually manually removed or with a machine, and then it goes into what we call a complete mixed activated --
THE COURT: Why don't you pivot that whole thing, that way you can move back. You can see how --
THE WITNESS: Now, that is --
THE COURT: Move back a little bit.
MR. JACOBS: Do you mind if I get a little closer to see?
THE COURT: Uh, I don't mind. I tell you what, just

Page 101

--
MR. JACOBS: We can look at it during the break, perhaps if you want to keep it there, Your Honor.
THE COURT: All right, go ahead.
THE WITNESS: This next stage of treatment is really where the work is done and you have the sewerage that comes in about two hundred parts per million, that's essentially raw sewerage that comes into the plant, comes into the activated sludge basin.
And in this basin, essentially all we're doing is adding air and that's added in various means, but essentially mixed with the sewerage and residents of the sewerage, micro-organisms, and begin growing and create what we call mixed liquor, which is eventually a biomass that consumes this BOD. It's the food for these micro-organisms.
They start growing with the help of air and changes this stuff that comes in as raw effluent from essentially sanitary waste from our houses, from restaurants, those kinds of places, is mixed, these bugs consume it, and then we take the bugs, this whole mixed volume now completely mixed and biogenous into a settling tank which we then separate the liquid from these bugs, essentially dead bugs and some that are still living, and this is separated out, the liquid then goes out and that becomes essentially the effluent which is discharged.

Page 102

The most important thing in a treatment plant is this return stream of what we call return activated sludge which is this microbial population that we're going to take back in to help start up the process. And we take off what we call waste activated sludge, the removal of those, and that right there is probably the single most important part of operating a wastewater plant is the waste activated sludge, how was that taken off and how is the age of that taken off.
The other aspect --
THE COURT: How is the what taken off?
THE WITNESS: The age of those bugs, how long they have been in the system.
THE COURT: Okay.
THE WITNESS: The other aspect that is very important is that of air, how much air you add to the process. If you can control these two things, that is essentially how you control the stream of the plant, the wasting of the sludge, the return of it, and thus, the air, so those are very important.
And this effluent which comes off the weir of this settling basin, then we usually add chlorine to and then in some cases, we take the chlorine -- the chlorine is added to disinfect the effluent, to kill disease-forming bacteria that might be in there.
Those bacteria may come in, they're called fecal-coliform, and they come in in the millions and by the

Page 103

time they go through the treatment plant, they're down here after chlorination to maybe, I think the standards are generally two hundred or four hundred, two hundred on an average basis, four hundred on a particular basis by the time it goes through the process.

So you've seen, we've taken out millions down to a very small number. That's a measure of how safe it is for public health purposes. This whole idea is for public health. Now, after the chlorine is added because chlorine is also a -- not only does it kill these kind of bugs, it has negative impact on other living things in the environment.

We add things such as sulphur dioxide to remove the chlorine. It's done its work, it's killed the bugs, now we have to, before it goes into the receiving waters over here, let's make it safe, and so then it's discharged. And that is generally a secondary treatment plant in general form.

So, air wasting, and the effluent from this plant, the BOD and TSS that comes in is usually removed at about 85 percent, yielding an effluent that is like thirty parts per million of BOD, and on the order of twenty to thirty parts per million of total suspended solids.

Now again, just to characterize this for you, Your Honor, total suspended solids are essentially if you took this effluent and put it through a coffee filter, the stuff remaining on the coffee filter is twenty to thirty parts per

Page 104

million, so one part of -- out of a liter would be what that is.

In the BOD, the test that's done for this is essentially, it's a measurement of how much oxygen like this air with this stuff, this food in this effluent consumed if were put in the stream, and it's very important because back when we were first discovering about these things in the stream, we looked at when sewerage was added to a stream, we saw that down the stream aways, we'd see a depression in the dissolved oxygen. The stream would use up it's dissolved oxygen to essentially do the same thing we now do in this tank.

That became of great concern and we figured it's about a five day period this happened and, thus, the test is called the BOD-5. That's what we're concerned about.

So, we put this sample in a bottle, we put it in an incubator, a certain time, and measure how much oxygen is consumed within that bottle and that's the measurement and that is something that has been around since early in the Twentieth Century. That's become now our standard of measurement. Really just measures the amount of organic matter to oxygen inducing impact. That's a general secondary treatment.

THE COURT: Okay.

MR. SCROGGIN: Your Honor, may the witness remain at the board as I ask my next question?

THE COURT: Yes.

Page 105

BY MR. SCROGGIN:

Q. Mr. Smith, what is raw sewerage?

A. Raw sewerage is that which is untreated and collected in the residential or commercial collection system, so it includes sanitary waste from households and residences and commercial establishments, includes gray water from like washing machines and floor drains, and that's generally it.

Q. Can you tell me the breakdown of raw sewerage between water and pollutants?

A. Well, two hundred parts per million means that two hundred parts of stuff in this million parts of water, so it's like ninety-nine point eight percent water and point two percent, or yeah, point two percent stuff.

Q. What is a part per million? Can you give us an example of a part per million?

A. Well, it's -- we're trying to figure this out. What would be a good way? It's actually equal to about one drop, like an eyedropper in thirteen gallons, and just calculate that out, and roughly to -- so you think of it as one drop in your gas tank which is like thirteen or fifteen gallons, that's the idea, that's the concentration of if one part per million is this, so twenty parts would be twenty drops in a gas tank or that kind of thing.

Q. What is BOD?

A. Well, that's what I was discussing a little bit earlier.

Page 106

BOD is biochemical oxygen demand. It's the amount of oxygen consumed by these micro-organisms from -- in a confined space where they can't get any other oxygen over a five day period.

Q. Your chart shows BOD two hundred parts per million after treatment. What is the BOD?

A. It comes in at about two hundred, exits under secondary treatment at about thirty.

Q. What is TSS?

A. That is the filterable fines that you can take out on a filter that is like a coffee filter, and that which is remaining, evaporated and weighed, and that is the TSS, total suspended solids.

Q. Your chart shows TSS and raw sewerage. It's approximately --

A. One hundred fifty parts per million coming in and it goes out at somewhere, twenty to thirty parts per million.

Q. Therefore, can you tell me, secondary treatment removes approximately what percentage of the BOD from the raw sewerage that comes into the treatment facility?

A. It's generally accepted about 85 percent. In fact, we used to define it that way, 85 percent removal with secondary treatment.

Q. Is there a higher level of treatment than secondary treatment?

A. Yes. Actually a couple different levels, but the next

Page 107

level would be tertiary treatment. And tertiary treatment is essentially taking this flow to the next level, removal of BOD and TSS, trying to get it down to much lower levels of BOD and TSS. And that would be by using other methods.

A couple of methods may be to add additional tankage on here or actually a separate tank where you would have had more aerated micro-organisms or you could add a filter where you would actually – a seine filter much like is used in drinking water treatment to remove the fines and with those fines you would take out some associated BOD, and so you might see with the tertiary treatment BOD and TSS removal up to 95 percent, so down to less than ten, ten, or something less than that.

Q. And is there a higher level of purification of sewerage than the tertiary treatment you just described?

A. Right. The next level from tertiary, again this is secondary –

MR. SCROGGIN: I don't mean to interrupt the witness, may I ask Your Honor that his chart be marked for identification only as Florida Cities' 203?

THE COURT: Mark anything you want to for identification.

THE WITNESS: The third one would be what we called advanced waste treatment, AWT, and the focus of advanced waste treatment is now is a shift. It's something that is developed as we've advanced our treatment technologies and advanced waste

Page 108

treatment is focused now on removal of nutrients. Nutrients are carbon, nitrogen and phosphorus.

Carbon we mostly remove because carbon is what is associated with BOD, biochemical oxygen demands, is mostly in carbonaceous form, that's carbon which is found everywhere in the atmosphere. Nitrogen now is of concern. Nitrogen comes in in domestic sewerage, mostly in the form of urea. It's converted from urea, organic nitrogen into usually ammonia, it's hydrolized into ammonia in the treatment process, and some of it actually may be changed to nitrate, another form of nitrogen. The key here is –

THE COURT: The first, is that what they call ammonical nitrogen?

THE WITNESS: Yes, ammonia, yes, that's correct, sir.

THE COURT: Contrasted with that, I got into this fertilizer case I had one time, contrasting nitrate nitrogen with ammonical.

THE WITNESS: That's correct, sir.

THE COURT: Okay.

THE WITNESS: These three are of concern, because these are the basic –

THE COURT: Nitrate nitrogen breaks down more readily, does it not.

THE WITNESS: Well, ammonia nitrogen requires oxygen to break it down. Nitrate nitrogen already has oxygen with it

Page 109

so it facilitates its breakdown because the breakdown then takes nitrogen to nitrate gas and right out into the atmosphere.

THE COURT: Okay.

THE WITNESS: The last one is phosphorus and it is of concern because each one of these are basic building blocks of essentially all life forms, certainly plant life. And of concern quite directly is we're concerned about growing algae in receiving waters.

So if we can limit these elements, the algae won't grow, we won't get algae falling out into the receiving waters which then is called putrification and can actually affect the water quality.

So the idea is if you control this advanced waste treatment, you can control the quality of the receiving water. So that's the focus of advanced waste treatment.

Now, what actually happens may be again carbon and nitrogen is treated in this basin here, again, by micro-organisms, and essentially it requires more air, the sludge age has to be older, takes longer because that which removes the nitrogen takes longer, the micro-organisms are slower to act, they're not as fast and not as relatively strong within the environment.

The phosphorus is usually removed by chemical precipitation and you add chemicals here in the solids liquid

Page 110

separation and that chemical ties up the phosphorus, it settles out with the sludge and is removed and so then we take the phosphorus out.

So that is generally advanced waste treatment and it may have standards. Generally accepted standards in Florida are five parts of BOD, five parts of suspended solids, three parts of nitrogen and one part of phosphorus. Again these are parts per million, one drop to thirteen gallons.

BY MR. SCROGGIN:

Q. Mr. Smith, you first described secondary treatment and your testimony was that secondary treatment removes 85 percent of CBOD and TSS. Can you tell me what does the effluent from a secondary treatment facility look like?

A. Well, the effluent from a secondary plant would have on the order of thirty parts of BOD and twenty to thirty parts of suspended solids. The total nitrogen is probably on the order of fifteen to twenty parts per million and the total phosphorus is six to eight parts per million.

Q. What color is the effluent from a secondary treatment plant, the first one that you described?

A. It's generally colorless, unless there's color in the drinking water that you use, which we have in Florida some places, but generally it's colorless, fairly clear, when you look at it, it's fairly clear to look at, probably doesn't sparkle, doesn't have that sparkling look you see in real clean

Page 111

water.
Q. What is, in your experience, the level of treatment that most sewerage treatment facilities in the United States have?
A. By far, most of them are secondary treatment plants.
Q. Approximately what percentage of the facilities in the country based on your experience would have either tertiary or advanced wastewater treatment?
A. It's a very small percent. I'd hate to put a number on it. Certainly, on the order of maybe less than ten percent of the plants in the U. S.
Q. And with advanced wastewater treatment, can you tell me the color and characteristics of the effluent from the facility you've just finally described, the most advanced wastewater treatment facility?
A. It would be very sparkling, actually look very clear. If we have used filters to remove some of the solids, it would be very clear, sparkling. It may still have color with it because there's really nothing in the treatment plant to remove color, but essentially looking at it, it looks like a fresh stream.
Q. Why are nitrogen and phosphorus of environmental concern in a secondary treatment facility's effluent?
A. Why are they or aren't they?
Q. Why are nitrogen and phosphorus of potential environmental concern in the effluent from a secondary treatment facility?

Page 112

A. Well, generally, they haven't been a concern in secondary treatment and they're not regulated or concerned of – the effluent isn't an issue. When it becomes an issue, the issue is that of being this building block and affecting the receiving waters for the purpose of growing algae, and the algae being an indicator of water quality and impact.
But there is another reason for nitrogen, and particularly the ammonia part of nitrogen. Actually, in many more plants than are receiving this kind of treatment, this 5,5,3,1, which this is total nitrogen, there's many more plants concerned with ammonia, because ammonia has an impact on fish in the River.
And so we're often asked to remove just the ammonia part or convert it to nitrate rather than leave it in the ammonia form because the ammonia in its unionized state is harmful to fish, can be harmful to some fish.
Q. Does that mean that effluent from a secondary effluent facility in Florida is harmful to fish?
MR. JACOBS: Objection, leading.
THE COURT: Overruled.
THE WITNESS: It can have an impact on fish, yes, but generally it's mitigated by the amount of water diluted with or the type of receiving water that is going into that kind of thing.
BY MR. SCROGGIN:

Page 113

Q. Can you tell me the role if any that chlorine plays in the effluents from secondary and advanced wastewater treatment facilities?
A. Well, I mentioned chlorine is introduced as a bactericide to kill the bacteria that are there in the effluent and that's very important from a public health standpoint. In fact, that's how we got started into sewerage treatment early in the century was to remove the disease-causing bacteria, that was the big issue.
So chlorine has been with us for sometime and it's an effective bactericide. It's been used in our drinking water, our swimming pools, very important. In fact, the levels that we added here are about the same that we add to our drinking water that we drink.
Now, what we've discovered is that we add this chlorine, is very effective, but now you've discharged that before it's mixed and has a chance to interact with the environs in the creek or whatever that receiving water is. It may actually – there's some species that actually find that as a toxic is the word, but really what it is, they find it unfriendly. They came up, the fish was swimming up to this area which has chlorine in it, they'd get like a buzz and turn around and go the other way, so it creates an area which they would not like to inhabit.
Based on that, we started in the '80's, started looking

Page 114

at trying to remove that chlorine and towards the end of the '80's, it became a standard to remove the chlorine with the addition of sulphur dioxide. It's essentially just another chemical to add in, it's essentially an anti-chlorine chemical. And we add that to remove the chlorine, happens instantaneously upon mixing.
THE COURT: What do you get when you mix chlorine with sulphur dioxide?
THE WITNESS: You get a chlorioxide, it's essentially harmless. And sulphur dissolves, and so this just –
THE COURT: Is that SO-2, is that a very odorous –
THE WITNESS: It's a gas that you add.
THE COURT: Very odorous?
THE WITNESS: That's hydrogen sulfide is what you're thinking of, that stinks like rotten eggs.
THE COURT: Yes, that's it.
THE WITNESS: This is SO-2, is really, and so, we add that, it undos what the chlorine did, is discharged, then it has no harm, and those fish then that might not want to get into the zone now can swim through freely.
BY MR. SCROGGIN:
Q. I'd like to turn now, Mr. Smith, and you may take the witness chair with the Court's permission, to the three facilities that are at issue in this case, and I will ask you first, the flows of raw sewerage into these three facilities

Page 115

which are Barefoot Bay, Carrollwood and Waterway Estates, and ask you, I will then ask you to compare, but I'll first ask you the flows?

A. The flow at Barefoot Bay, I think the period in question is about point five million gallons per day or half of a million gallons per day.

Q. How does that compare, sir, with the other facilities that you have had personal responsibility for with respect to the magnitude of flow?

A. Well, it's a very small plant, it's a pea-shooter plant we'd call it. It's compared to like the City of Tampa has sixty-five million gallons per day or a hundred thirty times as much, just finishing a project in Nevada that's eighty-eight million gallons a day, Denver was a hundred and eighty-five million gallons, so it's very small, not atypical in Florida to have small plants like that.

Q. What was the flow at Waterway Estates?

A. Waterway Estates is just under one million gallons per day.

Q. And at Carrollwood, sir?

A. I believe it's right around a half million gallons per day.

Q. In your experience, is the flow parameter of interest in evaluating environmental impacts of an operating wastewater treatment facility?

Page 116

A. Oh certainly, flow is very important because it's related to how much of an impact it has on receiving water because of the affects of dilution.

Q. Did you analyze the operations and environmental impacts of the Barefoot Bay Facility as part of your expert analysis?

A. I didn't analyze the operations. What I looked at is the results which indicate how it was operated and then, yes, we looked at that and we looked at the impacts in terms of the receiving water at Barefoot Bay which is the Satia Canal.

Q. And did you prepare an expert report for this litigation reviewing plant treatment capability of effluent quality at the Barefoot Bay Facility?

A. Yes, we did.

Q. And I would ask that the witness be shown Florida Cities' Exhibit Number 183. And I will ask you, sir, is this the expert report that you prepared pursuant to the instructions and retention you described for this litigation analyzing the Barefoot Bay Facility?

A. Yes, it is.

MR. SCROGGIN: Your Honor, I would move Florida Cities' 183 in evidence.

MR. JACOBS: Objection, Your Honor. This is hearsay. He didn't prepare the report. I've established that already on voir dire and the report is not automatically admissible under Rule 702. It is hearsay under 801(3), and I have additional

Page 117

authority. Engebretsen versus Fairchild Aircraft, E-N-G-R-B-R-E-T-S-E-N, 21 F 3rd, 721.

The witness has testified that the reports were not prepared by him, that the underlying data was not prepared by him. And I therefore think that under the authority of the case as stated and in particular, at 21 F 3rd, 728, the reports are inadmissible as evidence.

MR. SCROGGIN: May I respond, Your Honor?

THE COURT: Yes.

MR. SCROGGIN: Your Honor, the witness has testified that he personally supervised every phase of the preparation of these reports, including the analysis that underlies them. He says in his testimony, which we'll be happy to read back, but the Court has heard it today, that he takes personal responsibility for every word in these reports. And that he personally oversaw their preparation and the analysis upon which they relied.

We would ask the Court to accept them into evidence.

THE COURT: I'll overrule the objection. 183 will be received.

BY MR. SCROGGIN:

Q. Mr. Smith, would you please describe the Barefoot Bay Facility.

MR. SCROGGIN: And I might again ask the indulgence of the Court, if we could, Your Honor. I trust there would be no

Page 118

objection from the United States if we would use their own exhibit of the Barefoot Bay area as a map. I would ask that that which is --

THE COURT: You can use anything that is in evidence. Is that in evidence?

MR. SCROGGIN: It is already in evidence, Your Honor. It is attachment number one, Mark Klingenstein's expert report, and it is a geographic map of the Barefoot Bay area.

MR. BULLOCK: I have an extra copy of the report. I don't know if I should refer it to the Court.

THE COURT: All right.

THE WITNESS: I'm sorry, is there a question, Mr. Scroggin?

MR. SCROGGIN:. May I please ask that the written chart be removed so we can see the map more clearly, just tear off the page, it's been marked already as our exhibit number 203. It can be flipped over so the map is clearer.

THE COURT: You want to hand him the pointer from over in the corner there. He's got it.

BY MR. SCROGGIN:

Q. Mr. Smith, would you please describe the location of the Barefoot Bay Facility and its environs, and you may feel free to use the map at this time.

A. The facility is located adjacent to the Barefoot Bay development which is in southern Brevard County, southeast

Page 119

Brevard County.
THE COURT: Why don't you have a seat over there in the jury box, take those things out of chair there, Mr. Jacobs, and you can have a seat right there.
MR. JACOBS: I always get excluded from the Jury, normally.
THE COURT: Well, this will be a rare privilege for you. You can pretend like you're trying the facts, okay.
THE WITNESS: Okay.
I'm not exactly familiar with this map, but I think it's – I get somewhere, it's right along Micco Road which is right here. And I think – I don't know what version this, I believe the plant and development is right along in here, general area, maybe over here. I'm not sure if this is the development or the orange groves. It's in an area of citrus groves, southern Brevard County. I'm not sure that is the exact place or I'll be honest, I can't tell from this map.
BY MR. SCROGGIN:
Q. Have you reviewed your own map of this area?
A. Right, and I'm not sure which version this is. Seems like the one I have has a little different demarcation of the development actually, so –
Q. Based upon your previous review of maps of the Barefoot Bay area in preparation of your expert report, would you describe the location of the Barefoot Bay Facility and the

Page 120

route of the discharge from that facility?
A. Right. The plant discharges into this drainage canal which is essentially across the road from the plant and the site goes down –
MR. JACOBS: Objection, he's relying on his visit at this point in time. That is how he knows exactly where that drainage ditch is because he previously testified he hadn't visited the plant.
MR. SCROGGIN: Your Honor, he just testified he relied upon a map and schematic diagram of the plant in determining its location and environs, not his visit, I'm not asking him about his visit.
THE COURT: You relying on your visit?
THE WITNESS: I don't want to kid anybody, obviously the visit –
THE COURT: Don't, don't, I don't want him testifying concerning anything that he observed with respect to that visit after his deposition. I already ruled on that.
MR. SCROGGIN: Yes, Your Honor.
MR. JACOBS: Forgive me, I am going to move to strike some of the earlier testimony. It's now apparent to me that he couldn't have pinpointed the location as precisely as he did until after his deposition because in the deposition, he testified it was somewhere in Brevard County. That was all he could say, so I'm going to move to strike all of his testimony

Page 121

about the location of the plant.
BY MR. SCROGGIN:
Q. Mr. Smith, did you review a map of the area of the Barefoot Bay Facility?
THE COURT: All right.
Let me reserve on that. Go ahead and ask him.
BY MR. SCROGGIN:
Q. Sorry. Did you review a map of the Barefoot Bay area in preparing your expert report?
A. Yes, I did, and I think I, in the deposition, testified to that fact.
Q. May I ask you please, to remove the Government exhibit of that map and draw your own map based upon information that you had reviewed prior to your deposition in preparing your expert report.
A. The general forms of areas of interest are the Indian River Lagoon, Sebastian River, the north prong of the Sebastian River, and then this – the Barefoot Bay Plant and Barefoot Bay development.
And essentially, the plant discharges to a drainage canal which drains in general areas which is indicated on the map as citrus groves and flows down to this north prong of the Sebastian River.
And I think if you look at the map, it's on the order of – this distance is on the order of three to four miles from

Page 122

the point in which the plant discharges to the point which goes –
MR. JACOBS: Objection, there is no map in this report, there was no map provided to the Government prior to the deposition. Again, he's out of bounds, Your Honor.
THE COURT: Out of bounds?
MR. JACOBS: Out of bounds of the terms of your order. He's relying on information clearly reviewed subsequent to the deposition and/or his visit to the plant.
MR. SCROGGIN: Your Honor, he's testified that his – the map he's drawing is based upon information, maps that he reviewed prior to his deposition, any and all such maps.
THE COURT: Ask him that.
BY MR. SCROGGIN:
Q. I will, Your Honor.
Mr. Smith, is the map you're drawing based upon information and documents that you reviewed prior to your deposition and relied upon in preparing your expert report for the Barefoot Bay Facility?
A. Yes. We had had copies of USGA maps, USGA quad maps like this, similiar fashion.
Q. Is your testimony based upon your personal recollection of that review of those maps?
THE COURT: Just a moment, please.
BY MR. SCROGGIN:

Page 123

Q. How far, Mr. Smith, is the distance from the discharge of the Barefoot Bay Facility to the north prong of the Sebastian River.

THE COURT: I'm going to overrule the objection, the last objection that was made and the motion to strike and the immediately preceding one as well. Go ahead.

THE WITNESS: As I said, I think it's about three to four miles. If you look on the map, again, look at our report, the description I just gave orally is essentially the same description that I gave that is given in the report on page 6 of the Barefoot Bay report.

BY MR. SCROGGIN:

Q. Go ahead.

A. And so the drainage canal, there's a drainage canal, goes down, that's about three or four miles, then the River is, north prong of the Sebastian River is not very long, I don't believe, and then again into the Indian River Lagoon, this is a shorter distance than that, this distance here.

Q. The three to four miles along the canal, can you describe that canal?

A. It's a drainage canal which it has been -- the purpose of it is to drain the citrus area there, that's it use and purpose, so that it has upland characteristics for use for citrus groves.

So it drains the storm water from those groves, and thus,

Page 124

that's what is the receiving water for this sewerage treatment plant. I don't want to get into the particulars of the canal because I'm afraid I'd step over the line there, so I'd rather not.

Q. Yes, sir, I was only asking you the length of the canal based on your review.

A. Right, it's a man-made canal. Trapezoidal section kind of thing.

Q. Can you tell me, sir, what happens to pollutants such as chlorine residuals and ammonia that you said are present in secondarily treated effluent as they travel down such a canal?

A. Well, first with chlorine, as I said, it's a bactericide and an occident, so once it gets -- it wants to be consumed and wants to oxidize, so when it gets into the receiving water, it does its thing, and as soon as it does that, it's used up. It becomes essentially harmless.

So once it is in the mixing zone and it touches things that it can oxidize, then it essentially is used up and neutral.

So beyond a fairly short distance within the receiving water, depending on the flow, I would expect that you would find very little evidence of any chlorine that might have been in there.

Q. What is a short distance compared to three or four miles?

A. You know, fifty, hundred, two hundred yards, something

Page 125

like that. Depending on flows. Obviously with more flow, the distance would be shorter. And you're talking about a flow of either -- the effluent from the plant is a half mgd or it's like point seven five cubic feet per second, and I don't know what the flow in the canal is, but -- well, enough said there.

Then you asked about ammonia. Ammonia undergoes then the biological processes that may have occurred within the treatment plant and again it is a function of dilution, and the information we had received that was actually water quality monitoring done in this canal showed that total nitrogen concentrations in the canal were very low, on the order of one part per million, very low concentration, so we should say ammonia is even lower than that because its -- total nitrogen is all the different forms of nitrogen in the stream.

Q. Would you be able to give a more precise answer about the distance over which a pollutant such as residual chlorine would have an impact if you were to see a video of the Barefoot Bay Facilities outfall?

A. If it showed the channel and, you know, I could estimate the flow of the channel, it probably would help, yes.

MR. SCROGGIN: Your Honor, I would bear the Court's indulgence, I would ask the Court's permission, would ask perhaps after the lunch break the witness be allowed to view the United States' video, only the very brief section that relates to the outfall at Barefoot Bay.

Page 126

This is an expert witness who can evaluate it in front of the Court, and we would suggest that would assist the trier of fact in understanding the impact that is in question. That is with the Court's permission, I would ask the cooperation of the United States in being able to use their exhibit this afternoon for no more than a two or three minute excerpt from the video at which he could answer the question with more precision since it is this question that relates directly to the environmental harm or potential for harm that might have been caused by the outfall effluent at Barefoot Bay.

MR. JACOBS: Judge, we're happy to make the video available. My understanding is it's in evidence and he's allowed to rely upon it if he wants.

I might point out they've had the video which was made in December of '94 and they've certainly had a chance to show it to Mr. Smith, but I can't object to them showing it to him again if he hadn't seen it.

THE COURT: Okay.

All right, I think we're going to go ahead and take a recess till five minutes after 1:00 o'clock.

(Thereupon, a luncheon recess was taken.)

Page 127

THE COURT: Mr. Scroggin.
MR. SCROGGIN: Your Honor, during the lunch break, we procured a copy of the Government's exhibit videotape. And with the Court's permission, I would like to play us a portion of the videotape that, according to the testimony of the United States' expert, shows the outfall at the Barefoot Bay facility, which is one of the facilities located here.
THE COURT: All right.
MR. SCROGGIN: I have turned, Your Honor, the video so that it faces the witness, since he has not seen this video before. And I will --
THE COURT: Okay. Does that video have a number, exhibit number?
MR. IACOBS: I went to say 505, Your Honor.
THE COURT: Okay. That's all right.
MR. SCROGGIN: This is the road in front of the Barefoot Bay facility and the outfall, according to the testimony of the Government's expert. For the record, it is the Government's Exhibit 505, the videotape we are watching. And the counter on the tape begins at, approximately, 11 -- excuse me, approximately, 10:50. I believe it was set to zero when we started the tape in the beginning, just for reference, on this particular tape counter.
It's, approximately, one or two more minutes, Your

Page 128

Honor.
THE COURT: Okay.
MR. SCROGGIN: That's the end of the section, Your Honor, dealing with the outfall.
CONTINUED DIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Mr. Smith, after viewing that brief videotape of the outfall and the receiving water, Satilli Canal, at the Barefoot Bay facility as identified by the Government's expert, do you have any opinion based on your experience regarding the flow of the canal or its size?
A. Just looking at it, the flow looked to be coming out of -- it's on the order of a half MGD, depending on what time of day it was. It could vary a little bit. It appeared to be probably 16-inch pipe -- 12- to 16-inch diameter pipe. It's free falling into the stream there, although it's apparent that the water level has been up near the outfall at times, because the vegetation is stripped around there, around the outfall where the pipe is actually coming out.
It's hard to tell how wide it was, but looking at it just trying to get a sense of it, it's obviously more than 10 feet, less than 20, something like that. I didn't get any sense of depth at all. If you assumed it was a foot deep -- which I'd guess at least it's a foot deep based on the plunge pool that was exhibited by the flow from the sewage plant.

Page 129

A foot deep, 15 feet deep across, even a triangular section, would probably yield seven and a half feet in flow. And we're talking about flow that's about a tenth of that, so -- but that's a rough approximation based on a limited view of that. So, something on the order of ten-to-one flow dilution.
Q. Based on a ten-to-one flow dilution of the outfall in the Satilli Canal, do you have any opinion regarding the impact of Barefoot Bay's discharges on the Satilli Canal?
MR. IACOBS: Objection, Your Honor. He's going beyond the scope of this report. This data that he's just speculated or roughly estimated is not on the report, and I don't think he can now rely upon it to answer the question.
THE COURT: Okay. Sustained.
BY MR. SCROGGIN:
Q. Would you anticipate -- have you reviewed, Mr. Smith, the characteristics of the effluent at Barefoot Bay?
A. Yes, we have.
Q. And in your judgment, can you tell me what impacts, if any, might be expected from those discharges into the receiving water canal?
A. Well, in the period in question, the plant is discharging very well-treated secondary sewage, which I'd expect very little impact, if any discernible impact. Looking at the water quality data that was provided, some sampling in the canal,

Page 130

looks that the water quality is reasonably good. It's not a real high water quality receiving stream, and there's not much impact from the plant.
Q. What do you mean by very highly-treated secondary effluent?
A. Well, as I mentioned earlier, the secondary treatment would expect treatment to something like 30 milligrams per liter of BOD in that order. And we're seeing effluent here of half that amount, on the order of 15 milligrams per liter BOD, so -- something over 90 percent removal of BOD in suspended solids. So, it's doing a very good job of secondary treatment.
Q. In preparing your expert report, did you review the exceedances noted for failure to report BOD in the discharge monitoring reports turned into EPA for this facility during the period of November 1991 through November 1993?
A. Yes, we did.
Q. And did you reach any conclusion regarding the environmental impact, if any, of those failures to report BOD on the discharge monitoring reports?
MR. IACOBS: Objection, Your Honor. This has been a pattern. The question has been "have you," and the response has been "we." And I'm going to object on the grounds of vagueness, because we can't tell from the question whether Mr. Scroggin is asking Mr. Smith whether he personally did this

Page 131

type of review or analysis or whether his firm did. And I think that distinction is important for the purposes as I announciated earlier.

MR. SCROGGIN: May I respond, Your Honor?

THE COURT: I'll overrule the objection. You'll have him on cross.

THE WITNESS: Yes. We looked at it. Generally, as I recall, the tests that were being performed were actually carbonaceous BOD tests, and they were reporting what we call a CBOD. Indeed the permit was asking for BOD, and the exceedances then were being based on the fact that it was CBOD rather than BOD.

BY MR. SCROGGIN:

Q. In preparing your analysis, did you prepare a chart summarizing the trends of BOD or CBOD at Barefoot Bay during this period of time and the effluent from this treatment facility?

A. Yes, we did.

Q. I would ask, please -- we have an enlargement of one of the charts that are contained in the expert report -- the expert's report for Barefoot Bay. It's simply an enlargement for Florida Cities Exhibit 183.

Mr. Smith, can you describe what this chart presents?

A. Yes, sir. This top line is -- first, just as I mentioned earlier, this represents typical raw sewage, the strength of

Page 132

raw sewage, the BOD strength. Then it goes on to show the actual BOD strength. So, it's fairly what we call weak sewage coming into the plant. It looks like an average of maybe 125 to 150 milligrams per liter.

This diamond here is what's shown as the -- was in the order -- administrative order or the permit conditions as to effluent limits, 20 or 30 parts per million. And then the diamonds are the actual plant effluent reported, and I think that's where they were actually reporting numbers that were samples taken as CBOD and reporting them as BOD.

Q. Can you explain the difference that would be expected between the measured values for CBOD and BOD from this effluent during this period of time?

A. Well, it's interesting. This is a question that really was never an issue in years past in the sanitary engineering business, because CBOD was kind of all of BOD. You put this stuff -- diluted it into a bottle. You measured the amount of oxygen that was used up, and all the oxygen made the BOD.

Well, as we started going to higher and higher levels of treatment, it turns out that these -- as I showed you on that earlier chart -- the bugs that take up the nitrogen are not as strong as those that take up the carbon, and so it takes longer for them to do their thing.

And so, what's happened is, we've cleaned up the effluent more and more. There's not as much carbon for these

Page 133

bugs to consume. So, they consume all the carbon, and then they start consuming nitrogen. They convert ammonia to nitrate, and that exerts oxygen demand.

Well, what's happened is that in these very high quality effluents, such as we're seeing down here with discharges in the teens or ten, or somewhere in that range, at parts per million, it uses up all the carbon, exerts that demand. And then it starts using up the ammonia and exerts another demand, which we then call nitrogenous oxygen demand.

So, a plant operator is interested for his own treatment purposes in the carbonaceous demand, what's this plant doing, because that's what he's most interested in. But it does impact what the reported value is. But as I said, the work is first done by the carbonaceous microorganisms and then the nitrogenous.

So, what we see here in this graph is actually the reported CBOD values, because there's been an inhibitor added to the sample that doesn't let the nitrogenous microorganisms actually do their work. On the lower values, the impact of not having added that inhibitor could be greater, could be maybe as much as 25 percent more. So, if you had ten parts per million of CBOD, if you looked at total BOD, that may be as high as 12 or 13 parts.

If you were up higher than that, then the impact would be less, because it had to consume more carbon. It

Page 134

didn't have as much time for the nitrogen to be consumed. But from -- during the entire period up -- we've reported here through 6 of '93. Through this period here, this would never have exceeded effluent limitations, thus from that standpoint would not have impacted the environment any more than what was permitted by the permit.

Q. Mr. Smith, the Court has found that Florida Cities did incorrectly report CBOD values when the permit required reporting BOD values.

My question to you, sir, is can you tell from your analysis whether or not Florida Cities' effluent would have complied with the permit's limits during the time in question?

A. Well, that's what I was saying. In these areas here, the effluent reported as CBOD is very, very low. So, even that influence of NOD, Nitrogenous Oxygen Demand, would be, you know, relatively small, some on the order of 25 percent greater than what was reported.

If you added 25 percent to every one of those values, you're still well below the permit limits. Again, it's a very good effluent for that plant.

Q. During this period of time, sir, how many exceedances based on your analysis would Florida Cities had reported if they had been measuring and reporting correctly BOD instead of CBOD?

A. The only one we saw was early in the period, very early in

Page 135

the period, and I -- and that's this one spike here. Could you --

Q. But the period of time to which I'm referring you is November of '91 through November of '93. Let me phrase my question again, if I might, sir.

A. Okay.

Q. And that is, during the period of time of relevance to this litigation, November '91 through November '93, how many exceedances would Florida Cities have reported on the DMRs to EPA if they had been correctly measuring CBOD instead of BOD based upon your analysis?

MR. JACOBS: Objection. Asked and answered.

THE COURT: Overruled.

THE WITNESS: There would be no exceedances.

BY MR. SCROGGIN:

Q. No exceedances at all, sir?

A. No.

Q. I'd like to turn to the exceedances that are reported in the violations that have been found for total residual chlorine at the Barefoot Bay facility. I'm going to ask you, sir, can you tell me what levels of total residual chlorine the water quality standards of the state of Florida require in the final outfall from a sewage treatment facility?

MR. JACOBS: Objection. Relevancy. We're talking about a federal permit. There's no allegations of violations

Page 136

of the state permit.

THE COURT: Overruled.

THE WITNESS: It varies to application. Sometimes as high as .5 parts per million and as low as 003 for total residual chlorine. No detectable limit.

BY MR. SCROGGIN:

Q. Do you know, sir, what the specific permit limit was in the federal NPDES permit for total residual chlorine for this facility during the time of September 1992 through March of 1993?

A. I believe it was no detectable -- what do they call it -- no detectable trace or no detectable measurement.

Q. Do you know if the total -- do you know, in fact, what the -- what total residual chlorine values were reported by Florida Cities during this period of time?

A. I think we have that in the report. I'd have to look at that to be able to identify them. In looking again at the report, essentially .01 was the standard, which is essentially not below detectable levels. I don't recall what the actual limit -- what they were actually -- the numbers were.

Q. Well, the Court has already found that they reported numbers higher than .01 and, therefore, that there were exceedances reported on the DMRs. And the DMRs are -- have already been introduced into evidence.

Can you tell me, sir, what the -- what environmental

Page 137

impact, if any, you would anticipate from levels of chlorine residual between .01 parts per million and one part per million?

A. Well, again, chlorine is a biocide of an oxidant, and so when it's introduced into the receiving water, it's going to want to oxidize things. And it will be quickly diluted from the flow of the stream depending on the relative flow. That dilution, along with its active oxidizing strength, would dissipate within fairly short order, again based on the mixing zone of that stream.

Q. Would there be any impact, based upon your analysis of total residual chlorine, by the time the flow of the Satilli Canal reached the north prong of the Sebastian River, which you testified is, approximately, three or four miles away?

A. I would expect it to be dissipated well before it got to the Sebastian Creek.

Q. And can you tell me what you mean by "dissipated"? Does that mean with respect to the magnitude of environmental impact?

A. Right. Dissipated is that it's used up, and it has no oxidizing. It's the HCL -- HOCL. The hydrochloride ion is what is active, and that will essentially be used up, hydrochloride ion, and that this would be gone. And there may be chlorides left in the water, but -- and the impact would essentially, again, be in the mixing zone. It would be one of

Page 138

discouraging certain species that may be sensitive to this level of chlorine from entering that mixing zone.

Q. And would the impact downstream of the discharge from the Barefoot Bay facility, before it reached the north prong of the Sebastian River, be detectable?

A. Would the impact be detectable?

Q. The impact of total residual chlorine.

A. No.

Q. You stated that the permit limit is 0.1 parts per million. Your previous testimony was that one part per million is one drop in the 13 gallons. Can you tell us what one tenth of a part per million is?

A. It would be one tenth of a drop in 13 gallons. It's a very small amount.

Q. Do you have experience in evaluating the impacts of total residual chlorine on receiving water environments?

A. Yes, I do.

Q. Can you tell me what impacts, if any, you would anticipate from the discharge from the Barefoot Bay facility at levels of .1 to one part per million?

A. Again, it would be a very minor confined impact to the mixing zone area until it's dissipated. That could be confirmed by field measurement. But from what we've seen, the impacts would be fairly minor compared to -- this is a drainage canal. Depending on what species are there -- they've already

Page 139

become accustomed to not swimming into this zone, and essentially it just – it would be a barrier to some movement in the stream in that area.
Q. You testified earlier that the outfall you viewed in the videotape was above the surface water of the receiving water, the surface of the receiving water. Does that have any impact on the level of total residual chlorine that the outfall would realize in the receiving water?
A. Well, there would be some – just some off gases from any of the chlorine, just vaporization of it, stripping. The biggest impact is that the water is free falling, and there's some aeration going on. And so, it's making an aerobic environment and, you know, mixed well.
Q. And does that mean that the impact in the receiving water would be higher or lower than if the outfall were under the surface water?
A. I would expect it – the mixing – it promotes mixing, and mixing is important to dissipate the chlorine to diminish the amount of impact it would have.
Q. Can you compare the levels of total residual chlorine in the Barefoot Bay effluent with normal drinking water in the state of Florida?
A. Well, drinking water would normally be – have a chlorine residual of anywhere from one to two parts per million when it leaves the water plant and always has to have a residual in the

Page 140

distribution system. So, if you turn on the tap at your house, you would have chlorine in the tap so that it would oxidize the bacteria in the pipes.
MR. JACOBS: Objection. Goes beyond the scope of the report. Move to strike. He's not been qualified as an expert in water or water treatment or water distribution, and I don't believe any of this was in the report.
MR. SCROGGIN: May I respond, Your Honor?
THE COURT: Yes.
MR. SCROGGIN: He has testified that he has experience in water and wastewater treatment. And certainly with respect to the seriousness of the violation, the comparison to other environmental waters such as drinking water is relevant.
THE COURT: Overruled.
BY MR. SCROGGIN:
Q. I would ask you, sir, can you compare the levels of total residual chlorine, that is, how many times the total residual chlorine is there in drinking water compared to the levels in the effluent from the Barefoot Bay water treatment facility during this period of time?
A. Well, anywhere from ten times to – or two times to ten times or 20 times, as much in drinking water as there would be in the effluent going into this canal.
Q. And did you reach any expert opinion about the expected

Page 141

environmental impacts on the Satilli Canal from these TRC exceedances?
A. Yes, we did.
Q. And what was that?
A. We found it to be no measurable impact on the canal.
Q. And did you reach that conclusion with a reasonable degree of scientific certainty to state that there were no impacts on the canal?
A. Yes, we did – I did.
MR. JACOBS: Misstated the witness's prior testimony that – the prior testimony was measurable impact, and Mr. Scroggin asked him to confirm that there was no impact. And I think there's a difference between measurable and no impact.
THE COURT: You'll have him on cross. Overruled.
BY MR. SCROGGIN:
Q. I'd like to turn, sir, to the toxicity exceedances at the Barefoot Bay facility and ask you if – first of all, do you have any experience in – with respect to the use of toxicity tests to measure effluent?
A. Yes, I do.
Q. And what is that experience?
A. Well, the whole effluent toxicity test is a fairly new measurement of effluent strength and effluent conditions, quality if you will. The idea is that you take effluent in its – the whole effluent, if you will, a hundred percent

Page 142

effluent, and you subject some fairly fragile organisms to living in this whole effluent.
And the idea is to see if these very fragile organisms can live in the whole effluent, such that if it can, then that's good effluent. And if can't, then there may be some reason to look further into the effluent itself. It was an idea, a test that came about, to pick up the impacts of some difficult-to-measure compounds in wastewater treatment plants and effluent.
One of the offshoots of it, however, was that – what we found was that all of the species, which are generally fat head minnows or silver side minnows or fleas – or water fleas and shrimp, are also very susceptible to ammonia, which is ubiquitous in wastewater that has not been treated to advanced treatment methods.
And so, when it first came out in the late '80s as a test, then everybody that didn't remove ammonia failed the whole effluent toxicity test. So, we've been struggling with how to use it. It's a difficult test to use and now has become a standard for those with advanced waste treatment, that you need to pass that test.
Q. Is it more common in your experience to have whole effluent toxicity tests for advanced wastewater treatment, AWT facilities, than it is for secondary facilities?
A. Yes.

Page 143

Q. Is whole effluent toxicity testing designed to measure actual toxic impacts in the environment?
A. No. The idea is that you take these very fragile organisms, which may or may not live in the receiving waters that you're discharging to, and see can these very fragile organisms live in this effluent all by itself. And if they can, then good. That means that most everything in the stream will live there, too. If it can't, then again you move upstream and see if there's some things you need to remove.
Q. Where are the whole effluent toxicity tests performed if they're not based upon actual observations of the environment?
A. It's a laboratory test under controlled environment and conditions and with repeatable methods and procedures so that you can do them over and be assured of not introducing any other error into the test.
Q. What are those controlled conditions in the laboratory for a whole effluent toxicity test?
A. I couldn't recite them all, Mr. Scroggin.
Q. Do you know, for example, what concentration of effluent is used for the testing done at the Barefoot Bay facility?
A. Well, generally whole effluent -- the idea is that it's a hundred percent effluent that this organism needs to live in.
Q. Is any consideration taken of dilution in the environment that actually occurs in doing whole effluent toxicity testing in the laboratory?

Page 144

A. Generally not. Although, there's some that are actually -- there's some testing done to see what the dilution is in allowing it to live in that condition. But for the testing purposes, it's a hundred percent effluent.
Q. Do you know or have any opinion what caused the toxicity test -- whole effluent toxicity test failures of the Barefoot Bay facility during this period of time?
A. Most assuredly I'd say it was ammonia.
Q. And on what do you base that opinion?
A. Well, a couple things. One is, that's what we have found historically in the municipal treatment plants, is ammonia is the thing that causes us to fail. But more specifically on this plant, we've got a period in which it failed the test. We put in some advanced waste treatment, which removed ammonia, and then it passed the test. And the treatment that took place really wouldn't have removed anything else that might have been there, other than some solids or -- because they filtered it, and they took out the nitrogen.
And so, there isn't any -- you know, still microbial treatment, still bugs doing the same thing. It's just giving them a little longer to do it. So, generally I'd say ammonia is the key thing. I mean, you took out the ammonia, and it passed the test.
Q. Based upon your experience, would you anticipate that the effluent from a well-run secondary treatment facility would

Page 145

have sufficient ammonia to fail these new whole effluent toxicity tests that you've described?
A. Yes.
Q. Are you aware of the quality of the effluent during the time of interest for this litigation at Barefoot Bay? Was it, in fact, secondarily-treated effluent?
A. Yes, it was.
Q. And did you conclude with a reasonable degree of scientific certainty that the most likely cause of the failures of the whole effluent toxicity testing at Barefoot Bay was the presence of ammonia in the effluent?
A. That's correct. We did.
Q. Did your analysis reach any conclusions regarding the environmental impact with respect to the whole effluent toxicity test failures?
A. The plant had been discharging this effluent for some time, and whatever was occurring in the canal was pretty much their status quo. So, there's no impact from that -- continued during this period from November of '90 through '93, no additional impact at all from not passing those tests.
Q. The record in this case, sir, will -- according to EPA is that there has been continuous discharge from this facility since 1983. My question to you is, would you have anticipated, based on your judgment, to have seen some measurable impact after that length of time of operation of this facility?

Page 146

MR. JACOBS: Objection to the extent the question mischaracterizes the Government's position. He said continuous discharges since 1983. The testimony was that they began in 1980.
MR. SCROGGIN: I will be glad to amend my question to 1980.
THE COURT: All right.
BY MR. SCROGGIN:
Q. Assuming that there had been continuous discharge of this facility, as the Government has stated, since 1980, would you anticipate finding environmental impacts pursuant to your analysis?
A. Well, again, the water quality monitoring that we saw from '88 to '93, I think it was, by Bionomics indicated the total nitrogen in the canal was quite low, on the order of one or two parts per million. So, I would suspect that the ammonia fraction of that is quite low. And generally we're concerned with the -- actually the unionized portion of ammonia that affects fish and these organisms. So, I would expect very, very little impact and probably not measurable, probably not -- probably not there.
Q. I'd like now to move to the Carrollwood facility. But before I move to the Carrollwood facility, I will ask you, can you state the conclusion that you've just given with a reasonable degree of scientific certainty?

Page 147

A. Yes.
Q. I'd like now to move to the Carrollwood facility and the exceedances which the Court has already found are violations for CBOD: fecal coliform, nitrogen, phosphorous, TRC, Total Residual Chlorine, and Total Suspended Solids, TSS.
Are you familiar with the Carrollwood facility, Mr. Smith?
A. Only by historical reference. It's gone, and I didn't visit it before it was gone.
Q. Do you know the flow from the Carrollwood facility?
A. Yes. It's on the order of .5 MGD.
Q. And based upon your experience, how does that rank among sewage treatment facilities? Is it large or small, or can you describe its flow in terms of magnitude?
A. Again, it's a very small residential plant serving an area of old Carrollwood there, essentially residential and some commercial connections, fairly small.
Q. Do you know for over what period of time the Carrollwood facility had the violations that are alleged in this case, for how long a period of time?
A. I don't remember exactly the number of months, but until they achieved their connection. It's from the period in which they got a permit – because it was very low permit values based on AWT – until the time which they ceased discharging. So, during that period they had exceedances.

Page 148

Q. You said that it was a very low permit. Can you describe the – based upon the review you did for your expert report, what kind of permit did Carrollwood have during the period from July 1991 through December 1991?
MR. JACOBS: Objection. He said he hadn't reviewed the permit in preparation of his expert report.
BY MR. SCROGGIN:
Q. Do you know, sir, if –
MR. SCROGGIN: May I ask him the question, Your Honor, does he know what kind of permit?
THE COURT: All right. Yes.
THE WITNESS: Okay. I would characterize it as an AWT – the effluent limits are like AWT permit limits because they're very low and generally conform with what we know as the Grizzle-Figg Standards on the west coast. All of Tampa Bay is – anything that discharges into it generally is 5531. I think the actual number was 4.8 per BOD at Carrollwood: three of solids and three of total nitrogen and one of total phosphorous.
BY MR. SCROGGIN:
Q. The discharge monitor reports of the Carrollwood facility, do they contain both the measured values and the permit limits for any particular parameter?
A. Right. That's the way the columns are set up on the reports.

Page 149

Q. And you did review the information from the DMRs with respect to the Carrollwood facility?
A. Right. And we plotted those on the graphs, as well.
Q. Can you tell me if you reached any opinion regarding why there were these exceedances at the Carrollwood facility?
A. It was a permit – the standards are for a plant that is an advanced waste treatment plant, and the Carrollwood plant was essentially a good secondary plant.
Q. You said that Carrollwood is a good secondary plant. Would you anticipate that any good secondary plant would have violations such as those that occurred at Carrollwood if it had the permit limits that were imposed on Carrollwood during this six-month period?
A. Oh, absolutely. I mean, the Carrollwood plant actually did remarkably well, in terms of almost meeting some of the permit limits. Despite it being simply a secondary plant, it had an extraordinary performance record based on those standards.
Q. For some months the Court has found there was not a violation from the Carrollwood plant during this six-month period for TSS. You've testified that the permit limits were for an AWT facility. Would that include the permit limit for TSS?
MR. JACOBS: Objection to the extent that counsel is mischaracterizing the Court's ruling.

Page 150

THE COURT: What was your question? That the Court had found that there were not –
MR. SCROGGIN: During the six-month period, Your Honor, from July 1991 through December 1991, for Total Suspended Solids, TSS, and CBOD, Carbonaceous Biochemical Oxygen Demands, there are no violations. And my question to him is –
THE COURT: Wait a minute. There are no violations. Now, was this – you need to refresh my recollection. Was this based – what was this finding of the Court based on?
MR. SCROGGIN: The Court's summary judgment order in this case found violations for the Carrollwood facility during the period July 1991 through December 1991 for the parameters that I discussed: CBOD, fecal coliform, nitrogen, phosphorous, TRC, and TSS, but not for every month. Some months there are no violations for TSS and CBOD.
And my question to the witness is whether he would have expected a normal secondary plant to have violated every month.
THE COURT: Well, you can ask him that, but don't characterize my order.
MR. SCROGGIN: Yes, sir.
BY MR. SCROGGIN:
Q. Would you anticipate a well-run, good secondary plant to have violated these parameters every month if it had the

Page 151

permit limits that were given to the Carrollwood facility?
A. Yes, I would.
Q. And did you reach any conclusion as to how the Carrollwood plant was able to achieve the higher advanced wastewater treatment limits, the more stringent advanced wastewater treatment limits for TSS and CBOD, at least for some months during this six-month period?
A. Well, yes. I looked at it, and there's a couple of things they could do to optimize the operation in terms of the aeration and how that works. And the more you aerated, the more you treat this sewage within controlled periods, you can actually get better solids/liquids separation. And then they also had a holding pond at the end of it.
And assuming they didn't have any algal growth in the holding pond, they could actually get some additional clarification there to where there are very good treatment. And so, assuming they – obviously they must have had sufficient aeration capacity and clarification to get down to very low numbers.
Q. Based upon your experience with operations of sewage treatment facilities, can you tell whether – how would you rate the operation it was able to achieve, at least for some months on at least two parameters the more stringent limits of AWT, when the facility is a secondary facility?
A. Again, really it was extraordinary treatment that was

Page 152

being provided by that plant, because it was not intended for that kind of limit.
Q. Extraordinary in which way, sir? Is it extraordinarily good –
A. Extraordinarily good.
Q. –or extraordinarily bad?
A. Extraordinarily good.
Q. Did you reach any conclusion regarding the seriousness of environmental impacts during this six-month period when the Carrollwood facility operated as a secondary facility with an AWT permit? Did you reach any conclusion regarding the environmental impacts of these exceedances?
A. Of the BOD and TSS?
Q. Yes, sir.
A. Our conclusion was it would be essentially not measurable, very little impact on the receiving waters.
Q. And on what do you base that conclusion?
A. Well, the permit limits are written, again, to essentially minimize impact, really on the receiving waters of Tampa Bay. And in this area, this is very high quality treatment, and we would suspect background levels of BOD from just surface runoff to be in the order of what we're seeing from the treatment plant.
Q. And did you reach this conclusion with a reasonable degree of scientific certainty?

Page 153

A. Yes.
Q. You've addressed CBOD and TSS. Can you tell me what your assessment of the seriousness of the environmental impact was from the violations of fecal coliform?
A. Well, as I remember, the standards here were essentially zero on fecal coliform. So, if they had any fecal – which the only way you can get down to zero or 2.2 part – or 2.2 colonies under the most probable number test is essentially through filtration, and they were not providing filtration. And so, I would not be surprised at all that they would exceed it greater than that for fecal coliform.
Q. And I'll ask you the same question, sir. Did you reach any conclusion regarding the seriousness of the environmental impact regarding the nitrogen and phosphorous exceedances for the Carrollwood facility during this six-month period?
A. Nitrogen – it seems that there weren't many tests available of nitrogen and phosphorous. But those we had, again ammonia was – nitrogen is much lower than we would have expected from a secondary plant, that they're obviously achieving some level of nitrification. Nitrification is changing ammonia to nitrate with additional oxidation.
And so, obviously they were getting some of that, and that's what I would expect given the high quality of effluent they were achieving from the treatment process. So, it's much less than what we would expect from a secondary plant

Page 154

obviously, but it still exceeded the permit, because it was written from AWT plant.
Q. I'm sorry, sir. You said much less. You mean the environmental impact was much less than you would anticipate from a secondary –
A. The amount of ammonia or amount of nitrogen in the effluent was much less than I would have expected from a typical secondary plant. The amount of environmental impact – again without looking at direct water quality information, I would suspect that it would be a very minor amount of impact from ammonia in that stream.
Q. And did you reach that conclusion with a reasonable degree of scientific certainty?
A. Yes.
Q. I'd like to move on to the Waterway Estates facility, which has exceedances for toxicity and nitrogen and violations for discharge to the wrong location and discharge without a permit.
Are you familiar, sir, with the Waterway Estates facility?
A. Yes.
Q. Did you visit the Waterway Estates facility before your deposition?
A. Yes. Not inside the fence, though.
THE COURT: What did you say?

Page 155

THE WITNESS: I visited, but not inside the fence.
THE COURT: Oh.
THE WITNESS: I told Mr. Jacobs that I viewed through the windshield.
BY MR. SCROGGIN:
Q. Are you familiar with the environs of the Waterway Estates facility on land?
A. Generally, yes.
Q. Are you familiar with the hydrological area around the Waterway Estates facility? And by that I mean are you familiar with the water area, as opposed to the land area, around the Waterway Estates facility?
A. Yes. I mean, it's on a drainage canal adjacent to the Caloosahatchee River. You know, there's marine – some kind of marine facilities on each side of it, boat docks and whatnot, boat – boat barns, that kind of thing.
Q. Do you know the flow from the Waterway Estates facility?
A. As I recall, it's just under one million gallons per day during the period of interest.
Q. And do you know the flow of the Caloosahatchee River, the receiving water for which this facility was permitted?
A. I think we reported values in our report of greater than a thousand million gallons per day at the upstream gauging station, upstream of the discharge.
MR. SCROGGIN: With the Court's permission, I would

Page 156

like to ask the witness, please, based upon the work that he's done for his expert report, to draw the Waterway Estates facility, which has an unusual location. I would ask, if I might, please, to have the diagram that the witness has already done with respect to the Barefoot Bay facility marked for identification only as Florida Cities 204. And --
THE COURT: Well, you're going to need to make sure it's marked, if you want to do that. It's counsel's responsibility to premark all exhibits.
MR. SCROGGIN: Okay. We can mark it right now, Your Honor, if that's agreeable to the Court.
THE COURT: But my clerk's not doing that.
MR. SCROGGIN: Okay.
THE COURT: You need to do the leg work or have it done by one of your people.
MR. SCROGGIN: I'd like to mark for identification the witness's diagram of the Barefoot Bay facility as Florida Cities 204 for identification.
THE COURT: Put "For ID" on there, if you would. All right.
MR. SCROGGIN: With the Court's permission, I would like to ask the witness to step down and --
THE COURT: You can step down.
MR. SCROGGIN: – draw the layout of the Waterway Estates facility and its nearby environs.

Page 157

MR. JACOBS: Objection to the extent that it goes beyond the report and relies on his visit to the facility itself as opposed to the drive-by windshield view.
THE COURT: Well, let's only have the drive-by windshield view without relying upon your subsequent visit, and I'll overrule the objection otherwise.
THE WITNESS: I'll limit it to outside the plant itself. The Caloosahatchee River flows – it's kind of – north is going this way. The plant is located on a little drainage canal that I would guess was built to allow this area to be developed for residential purposes and to allow boat access up and down.
The plant is located right on the canal. There's, as I recall, some other kind of canal and kind of an island that's built out there. There's a restaurant here and a boat barn, and it seems like there's a boat – something else – a boat yard over here, and this is "boat barn," "restaurant." Canals kind of go various ways, and the plant is kind of sandwiched in.
I essentially drove up to that point and stopped and looked through the windshield at the plant. That was my windshield tour, and I went back out. So, I think that's a fair collection of what it was. This is the plant here.
BY MR. SCROGGIN:
Q. Can you tell me, sir, how does the size, the land

Page 158

area size of the Waterway Estates facility, compare to other facilities with which you are familiar?
A. It's a very tight site, very small, probably less than an acre.
Q. And are there any implications regarding the difficulty or ease of operation of a facility located on a small site?
A. Well, operationally it's not too hard. I mean, actually things are very close together, nice and compact. But it is a very tight site to try to put all the pieces of a treatment plant on it.
Q. In a moment we'll discuss your analysis of the steps described in your report for constructing – undertaking a construction project on such a site.
And I'll ask you now, are there implications for constructing a new facility on a site of this size that are – that distinguish it from other sewage treatment facility sites?
A. Well, the plant improvements, as I recall, were something in excess of $2 million. And if you can imagine trying to build a house on less than a one-acre site and spending more than a million dollars or $2 million on the house and yet staying in the existing house that's also on the site – that's kind of a sense of it. It's very compact, very difficult logistically to try to build something on that site, so – it's a very difficult site to try to do anything with.
Q. Do you know where the discharge from the Waterway Estates

Page 159

facility occurred from the time it was built until July 1991?
A. I believe it just went straight up from the plant into the canal, right here.
Q. Do you know the size of that canal?
A. It's probably 30 – I don't know. 40 feet across, something like that, just a typical boat canal, drainage canal kind of thing, access up into residential areas.
Q. Have you seen similar boat canals elsewhere in Florida?
A. Right. We have them down in South Tampa, all along the Tampa Bay, lots of them, kind of finger canals that go up and allow boat access to slip docks right up by the house. That's the kind of facilities that were built here, as well. So, you know, 30, 40 feet across, probably enough depth so that the boats can get in and out of there.
Q. Do you know whether this canal is tidally influenced or has its own independent flow of water?
A. I think we reported in our report that it is tidally influenced.
Q. Do you know how far the discharge point was from the edge of the Caloosahatchee River?
A. Well, as I mentioned, it goes from – here's the discharge – or was the discharge. The river goes down past the boat barn, and there's another kind of canal that comes in here, and I don't know really where that goes. There's a little island barrier out here, and then the main river is out

Page 160

here. I don't know. It's probably a good five iron, at least. I'd say a couple hundred yards, maybe, 180 yards.
Q. Do you know the level of treatment that the Waterway Estates facility achieved during the period of time of relevance to this litigation, which would be from July – I'm sorry – from November 1989 through April 1992?
A. Again, it's a secondary plant actually providing something a little greater than secondary treatment. They were actually providing some nitrogen removal in the plant through its operation.
Q. Does that mean that the effluent – or can you tell me, sir, how you would compare the effluent from the Waterway Estates facility with other secondary-treated facilities with which you have experience?
A. Well, it would be better effluent. As I recall, it also had filters on it at different times, and so the filters would provide even less in the way of solids and BOD. That wouldn't affect nitrogen and phosphorous generally, but it was a well-operated secondary plant achieving some nitrogen removal and excellent BOD and SS removal – TSS.
Q. Do you know of any limitations on the area of the Caloosahatchee River into which this facility was discharging regarding nitrogen and phosphorous?
A. Well, the concern at Caloosahatchee was that you would not discharge too much nutrients, again, to cause the provocation

Page 161

of algae. And so, there were measurements taken and work done by the Department of Environmental Regulation at the time to try to determine how much they could put in and develop those amounts. And so, there was concerns about nitrogen and phosphorous going in, because, again, the idea – the basic building blocks of algae – you don't want to formal algae in the river.

MR. SCROGGIN: With the Court's permission, I would like to have the witness refer to a blowup of – which is Exhibit No. 92 from the expert report that has been prepared.

BY MR. SCROGGIN:

Q. I'll ask you, sir, did you prepare this chart as part of the expert report that you – perhaps I should preface that by saying did you prepare a report for the Waterway Estates facility regarding these exceedances and their environmental impacts?
A. Yes, we did.
Q. And is this chart one of the charts that you prepared in your analysis for this facility?
A. Yes, it is.
Q. I would refer you to Florida Cities Exhibit No. 92, which I would like to show the witness at this time. I'll ask you, sir, is this the expert report that you prepared for the Waterway Estates facility?
A. Yes, it is.

Page 162

MR. SCROGGIN: I would ask that Florida Cities Exhibit No. 92 be moved into evidence.

MR. JACOBS: Same objection, Your Honor.

THE COURT: Okay. Overruled. It will be received.

(Florida Exhibit No. 92 was received into evidence.)

BY MR. SCROGGIN:

Q. Sir, can you explain this chart, which is from page 24 of your expert report and marked as Exhibit 92 – can you read the title and explain this chart to us, please, for the Waterway Estates facility?
A. The title of the chart is "Nitrogen Discharge To The River," and that's the Caloosahatchee River.

THE WITNESS: If I could, Your Honor.

THE COURT: Yes.

THE WITNESS: The chart is just to indicate the impact in terms of the amount of nitrogen being discharged from this plant into the Caloosahatchee River. There have been some work done to develop how much nitrogen could the river accept and not grow too much algae so as to create an environmental harm. And that number was up here in excess of 1200 pounds of nitrogen per year. Then it –

THE COURT: That's the threshold –

THE WITNESS: Pounds per day.

THE COURT: That's the threshold at which algae would develop?

Page 163

THE WITNESS: That's the threshold at which the amount of algae would be an impact. So, they wanted to keep it below that. So, they actually set a limit and said, "Okay. We'll allocate the amount of waste that can be put into the stream to be something on the order of a thousand fifty pounds of nitrogen per day." And so, they allowed the -- they divided this up and gave it to the various treatment plants to say, "You can discharge so much, the total of which can't be more than that," because once it gets more than that -- this is just a safety factor, if you will. And there could be other future things. They want to reserve it for a number of reasons they want to do.

The standard which was given to Florida Cities was actually 25 pounds per day, and that's essentially equal to one million gallons of flow and three parts per million of the nitrogen, total nitrogen in effluent. So, if you multiply it out, it's about 25 pounds per day of this total of over a thousand.

As you can see, these diamonds then are essentially the actual amount of discharge of nitrogen by the plant: less than 200, a hundred. And this goes from 90 through 92, a high of over 200 and clear down here, essentially zero, and again generally around a hundred pounds, which indicates that they were probably discharging about 12 parts of nitrogen rather than three.

Page 164

Again, putting it in perspective, it's this much of a total allocation of this much. And so, there's a great deal more capacity in the river than what was being used up by Florida Cities.

Q. Can you tell me from your chart whether or not Waterway Estates was meeting its permit limits for nitrogen during this period from August 1, 1992 on?

A. Generally it wasn't. There may have been one or two times that -- it looks like there's one or two times that it was meeting the limit.

Q. And can you compare the magnitude of the actual nitrogen in the effluent from Waterway Estates with respect to the total potential loading that you described for the river itself?

A. Well, again, the -- on the order of a hundred pounds per day is what Florida Cities -- again, about 12 parts per million over a capacity of a thousand seventy-five. So, they were about a tenth, perhaps, of the capacity of the river in terms of their discharge.

Q. You talked about the capacity of the river and dividing up the capacity of the river. Is that a wasteload allocation?

A. Yes. That's what -- essentially what's the capacity of this river to accept discharges, and then we allocate that capacity to various treatment plants based on relative size and other configurations. And that's allocating waste load, if you will, how much waste you each can contribute to the stream.

Page 165

And their allocation was quite small, only 25 pounds. They were in excess of their allocation. But compared to the whole, it's a very small amount.

Q. Does a wasteload allocation already consider the other discharges on the river?

A. Yes. That's part of the -- generally what they would do -- because this is -- you know, this is forever essential. I mean, a stream isn't going to change much. So, I would suspect that the existing -- this is allowing for future capacity in these plants. And so, in the ultimate kind of build-out, it could not exceed that number, but under current situations, it's much less than that.

Q. You testified that one of the consequences of an effluent containing more nitrogen might be producing algae. Is algae a serious environmental problem?

A. Well, it's an undesirable, if you will. It's not a threat to public health. It's not a threat to, you know, welfare or anything like that, but it's an undesirable. It could discolor the water. If there's too much of it, it actually can accumulate and affect other organisms which depend on clean bottomed rivers and so forth or -- not be covered up by the algae, that kind of thing.

Q. Do you know if there ever were observed any such discoloration of the water or algae problems in the Caloosahatchee River based upon your analysis?

Page 166

THE COURT: Just a minute.

MR. JACOBS: Objection. Hearsay.

THE COURT: I'll overrule the objection.

THE WITNESS: It's my understanding from work that was done by DER in about 1990, as I recall, they measure essentially chlorophyll-A from the algae. And they're fairly low concentrations, on the order of 15 or 16 micrograms per liter, with as high of about 19 micrograms per liter near the discharge.

BY MR. SCROGGIN:

Q. Were any of these measured values of chlorophyll-A in your judgment attributable to the Waterway Estates discharge?

A. Yes. I believe the spike from 15 to 19 is probably the result of the plant. It was taken near the -- up near the plant in the boundary of the Caloosahatchee River.

Q. Do you know if, in fact, there's any data that you considered in preparing your report that demonstrate any actual environmental harm attributable to the operation of the Waterway Estates facility?

A. Well, the work that was done at that time indicated they actually expected something on the order of 25 micrograms per liter and that this was much less than expected, that they had overestimated the impact by as much as a third, so that the plant had very little impact and certainly not that which was intolerable.

Page 167

Q. Did your report analyze the impacts regarding the relocation of the outfall from the canal to the six-foot contraline of the Caloosahatchee River?
A. Yes, we did.
Q. And what conclusions did you reach about the environmental impacts of that change in the outfall's location?
A. We said that it would – I would say that it would have an improved – it would improve the water quality generally, because it introduced the flow at a point which was getting very good mixing and dilution at the deepest point and probably the fastest point in the river and – yes.
Q. Are you aware of any data that actually demonstrated an improvement in the water quality of the Caloosahatchee River during – before and after the relocation of the outfall?
A. No.
Q. Do you know if there were any impact at all on the Caloosahatchee River attributable to the relocation of the outfall?
A. I'm sorry. Did you say any data or any impact?
Q. Any data of any impacts attributable to the relocation of the outfall at Waterway Estates.
A. I don't recall any right off, no. I mean, our judgment was one more of intuitive engineering judgment, to move it out to the mixing zone, that you're going to get better mixing and less of an impact on the river.

Page 168

Q. But did you analyze any data showing a lessening of impact on the river?
MR. JACOBS: Objection. Asked and answered. That's the third time.
THE COURT: Sustained.
BY MR. SCROGGIN:
Q. I'd like to move on to the exceedances for toxicity and nitrogen at the Waterway Estates facility and ask you, sir, if you have any opinion regarding the seriousness of these exceedances for toxicity of the Waterway Estates facility?
A. Much the same testimony as I made on the Barefoot Bay plant. Again, this is toxicity related generally ammonia in the effluent, that this plant did not remove all of the ammonia until it was upgraded. And after it was upgraded, it met the whole effluent toxicity test after it was up and running and in good shape.
So, it was our judgment and my judgment that indeed it was related to the ammonia, the toxicity was, and its failure to meet those tests.
Q. What kind of effluent was the Waterway Estates putting out during the period time of the toxicity failures? That would be from – the toxicity failures are reported in February through June of 1992.
A. Generally it was very good secondary treatment. Again, it was secondary treatment with some filtration, but not complete

Page 169

nitrification. Now, as I recall, the plant was put on line in about April, and it took them a little while to get the nitrification up and running and everything clicking. I don't recall when the last violation was, if it was June. And then after that, they begin meeting the whole effluent toxicity standard, after they got the plant fine-tuned and running properly.
Q. Based on your experience, would you anticipate that a facility upgrading from secondary to AWT such as the Waterway Estates would be able to achieve passage of the toxicity test after the completion of that upgrade?
A. Yes, I do.
Q. And can you tell me regarding the nitrogen exceedances if you have – if you reached any conclusion regarding the cause of the nitrogen exceedances of the Waterway Estates facility during the period of time of this litigation, which is July '91 through April – March of '92?
A. Again, the plant was generally not designed for complete nitrogen removal. They had levels of three parts per million, which is very, very low. And so, then they put in additional treatment methods, and they were able to get down below three. And so, they couldn't meet the standard because they didn't have the right treatment methods in place.
Q. Did the effluent coming from the Waterway Estates facility change during the period of time in question, to your

Page 170

knowledge?
Let me rephrase the question. Was there any change other than the improvement of the effluent during this period of time, to your knowledge, and based on your analysis?
MR. JACOBS: Objection. Assumes fact not in evidence, that is, to say the improvement of the effluent.
MR. SCROGGIN: Your Honor, he's testified that the effluent improved during this period of time.
THE COURT: Overrule the objection. Answer the question.
THE WITNESS: There would be no other reason for the improvement of the effluent quality except for the upgraded plant. There was no change in the influent, and the treatment processes were essentially the same that had been in place for some time. And so, the effluent quality changed when the new improvements were put in place.
BY MR. SCROGGIN:
Q. Did you reach any conclusion regarding the environmental impact of the toxicity and nitrogen exceedances from the Waterway Estates facility?
A. Very little impact on the Caloosahatchee River. I mean, obviously whether it's measurable or not in terms of – you could maybe measure it in a water quality fashion, but in terms of environmental impact or other fish or other living organisms impacted, I don't think you can measure it.

Page 171

Q. Did you reach that conclusion with a reasonable degree of scientific certainty?
A. Yes.
Q. One of the issues in this litigation is the length of time it took the Waterway Estates facility to upgrade from better-than-secondary effluent, as you testified, to the still cleaner advanced wastewater treatment. And I will ask you did you review the steps that a facility such as the Waterway Estates facility owned by Florida Cities took in order to achieve that upgrade from better than secondary to the still cleaner advanced wastewater treatment?
MR. JACOBS: Objection. Twice he's characterized the effluent as still cleaner, and that's a value judgment that's not in evidence.
MR. SCROGGIN: I believe, Your Honor, that he testified that the AWT effluent was still cleaner, but I'd be happy to ask him that question, if that would clarify it.
THE COURT: All right. Ask him that question.
BY MR. SCROGGIN:
Q. Is the advanced wastewater treatment that the Waterway Estates facility achieved still cleaner than the better than secondary with which they began?
A. Yes. The upgrade allowed them to take out the nutrients of nitrogen and phosphorous. It continued to lower the BOD and suspended solids. And so, yes. It was very high quality

Page 172

advanced waste treatments and able to meet the whole effluent toxicity test, as well.
Q. I will try to rephrase my question that I started with. And, that is, did you review the steps that a facility such as the Waterway Estates facility owned by Florida Cities Water Company would undertake in order to achieve this upgrade from better than secondary to the still cleaner advanced wastewater treatment facility?
A. Yes, I did.
Q. In your experience of the last 25 years, can you tell us how long such an upgrade might take for a facility such as this?
A. Well, it varies by wide margins. It varies largely because of the kind of permits that may be required. It's fairly predictable to estimate how much time goes from kind of figuring out the original idea and what options you have and preparing the engineering drawings and all that. That's fairly straightaway. But then once you get into the permitting realm, it becomes very difficult and unpredictable. There's other forces over which you as an engineer designer or an owner have no control.
MR. SCROGGIN: With the Court's permission, I would like to ask the witness if he would please go to the drawing board and describe those steps that are required for a facility such as Florida Cities Waterway Estates facility to upgrade

Page 173

from better than secondary to the still cleaner advanced wastewater treatment that they achieved.
THE COURT: Yes, sir.
THE WITNESS: Well, the owner was given essentially a new target. This is the new level of treatment that you're required to meet, essentially a new mission. So, there are a number of steps it has to do to get there. So, first of all, you have the mission defined, and that's the AWT. So, we begin through the process.
First of all, you have to figure out how am I going to do this. So, the first thing you do is evaluate alternatives and -- alternative ways of how I could do that, which would be -- generally what we've come to know what's the most economical, what's the most efficient way of getting there. In order to do that, the water company or an owner like that -- whether it's a municipality or water company -- would have to try to gain the expertise of outside firms to help them to do that evaluation.
So, they have to find and contract and engage this outside firm to develop this alternative evaluation. And from that, they would then interact and come to some agreement. And out of that would come then what is selected option. So, now we have a mission, and now we have an option of how we're going to actually accomplish our mission.
The next step then is, okay, this is kind of a

Page 174

concept. Now we have to take this concept and put it into bricks and mortar, concrete and steel. How do we actually put this project in place? So, the next step is some kind of preliminary design document that's going to start putting this together. Again, this requires outside expertise generally from a municipality or water company to do.
They would, again, go out and find and contract and engage some firm, engineering firm, to perform these tasks, and they would complete this preliminary design document. This allows the company or utility to then start planning from a capital point of view costs and so forth, how they're going to accommodate this and timing and so forth.
The next step would be then the detailed design and contract documents. These are the actual plans and specifications from which a contractor would erect and build these facilities. Now, in this case, they may continue to use the same engineer that was doing this part, if they performed satisfactorily. They may have to go out and get a new one. That's at the option of the owner. Generally we'd like to think if we were doing it we'd do a good job and we'd keep on going through.
The fourth step then begins where things start getting sticky, because this begins the permitting phase. During these steps, you have pretty much control of what's going on as the engineer, the owner, what's on the drawings and

Page 175

what's being prepared. Now at the permitting phase we start going out to others, to third parties, to see what indeed is being done.

The first permit that is very important is the FDEP or FDER – depending what time – what the department's called – permit to construct. And that allows the state to look at these drawings and see is it really – is what you've designed going to accomplish your mission. That's really the essence of it. And they'll take their judgment and their experience and look at it and see how you got there.

And generally that permitting process takes a fair amount of time. You fill out the permit. You do your job. You send it in. They have about 30 days, I believe, by regulation to reply, and generally that reply is in the form of some kind of question, clarification. You have 30 days to reply to that. They have another 30 days. So, you're kind of out about three months to even – to have a chance. And when there's other issues involved, it often creates other problems, and that may take quite a long time.

In this case, the other permit that was of difficulty was what we called the Corps of Engineers 404 Permit. This is a permit associated with building a pipeline in the Caloosahatchee River. Generally when we're doing a project like this, we get what's called a Nationwide 404 permit. The Corps of Engineers have said, "If you're going in general

Page 176

places, we can review your application. We'll give you a permit, not a problem, 30, 60 days."

In this case, we're going to a major drainage way, a major river, the Caloosahatchee River, and we're going out in the middle of it. So, now we've got navigation issues and all the other kind of problems. The Corps of Engineers are notorious for getting bogged into their bureaucracy and taking a very long time for this permit.

MR. JACOBS: Objection. Move to strike. No foundation and way beyond the report, the notoriousness of a U.S. Government agency, Army of Corps Engineers.

THE COURT: I'll deny your motion. Go ahead.

THE WITNESS: Other permits that we may have to get include the – what we call the SWFWMD permit, Southwest Florida Water Management District. That relates to storm water drainage on the site and changes, increases of impervious area, where that's to be drained. We have the local permits for development and meeting concurrency requirements, those kind of things.

All that's done before you even have done anything about engaging a contract. You don't have a contractor yet. This is just preliminaries to that. So, this is very difficult to guestimate in terms of planning. We've seen it from 30, 60, 90 days to take well over a year. And this is a – this is part of Florida's – developing projects in Florida. It's very

Page 177

typical of Florida.

From that point, assuming you have been granted those permits, then you'd move ahead to step five, which is actually the bidding of the project. And that's where we take these drawings and specifications. We send it out to the world of general contractors, and we ask them to bid the project: How much will it cost to meet what is going to be done here, and how long will it take you?

Those bids take on the order of 90 days to advertise the bids, to accept the responses, to check out the credibility of those, and then to move ahead. So, it's a minimum – kind of a 90-day period for that bid, unless there's some problems with it: Exceptions taken, they can't meet the contract documents, something like that.

Once that is done and the contract is awarded, the next permit is one that's obtained by the contractor, and that's generally the local building permit. And that's a permit that will go to the local agency, whether it's the county or the city in which the plant is located. And because most cities or counties don't look at sewage plants very often, they often have to engage in outside parties to help them review these plans and specifications.

It's not unusual then for that to take an extra bit of time and have that review done, check to make sure everything meets the codes and requirements. And then a

Page 178

building permit would be issued, and that permit would be going to the contractor, the general contractor who is going to build this plant. Now, he can actually begin construction and start building this project according to plans and specifications that has a construction period during which time he's actually putting in the concrete and steel that was described in the drawings.

And then at the end of that time would be a turnover period, a commissioning period, in which the owner would begin operating the plant with the new facilities and trying to get it up to speed to make sure it's meeting those requirements. There would be final permit sign-offs based on the completion of those activities. Essentially all of the permits would have to be certified by either the engineer on the site or the contractor or the owner to say that indeed those things that were promised to be done had been done and those certifications would be complete in this process.

BY MR. SCROGGIN:

Q. Mr. Smith, in describing the permits that are required in Southwest Florida, did you mean that Southwest Florida to include the permits that are required in Lee County?

A. Yes, yes. The area generally from Tampa, Sarasota, Manatee, Lee County.

Q. And can you tell me on, approximately, how many projects in Florida you have been associated with that have had to go

Page 179

through such steps for facilities like the – such as the Waterway Estates facility?
A. Actual treatment plant upgrades, we've probably done a dozen or so in Florida, in this general area, all the way up the coast.
Q. And did you review the length of time that it took the Florida Cities Water Company to go through these steps in performing your analysis?
A. Yes, we did.
Q. Did you reach any conclusion regarding whether or not Florida Cities completed the project in a timely fashion or not?
A. Yes, I did. I looked at the times and determined there was a fairly large amount of time that it took when the project was really out of the control of Florida Cities, and that was an exceeding long time. The actual work that was done was done in a reasonable amount of time for the work that was in the scope of that job, both in the design and construction phases and that, you know, it was a reasonable amount of time for the project.
Q. Mr. Smith, I'd like to turn your attention, please, to the Government's – United States Exhibit No. 597, which is the expert report from Mr. Mark Klingenstein, the United States Government – the United States' expert witness in this case.
MR. SCROGGIN: And I'll ask if the witness could

Page 180

please be shown that exhibit.
MR. JACOBS: Your Honor, it's my recollection on Monday that we sort of had an agreement that they weren't going to ask – we weren't going to ask Mr. Klingenstein about Mr. Smith's report, and they weren't going to ask Mr. Smith about Mr. Klingenstein's report.
THE COURT: That's my recollection.
MR. HIRD: Your Honor –
THE COURT: There's been a lot of water over the dam. I guess that's – no pun intended.
MR. BULLOCK: May I have just a second?
THE COURT: Yes, sir.
MR. BULLOCK: Thank you.
MR. SCROGGIN: Thank you, Your Honor, for your indulgence. We will be happy not to have him refer to the report, but simply to ask him a brief series of questions regarding these facilities, if that is consistent with the agreement that was reached.
THE COURT: You'd be happy to ask him questions regarding these facilities?
MR. SCROGGIN: I would like to – I have probably four questions, Your Honor, that I would like to ask him to determine whether or not he agrees with certain conclusions without reference to where those conclusions come from.
MR. JACOBS: It sounds like a back door to me, Your

Page 181

Honor.
THE COURT: It sounds like a back door.
MR. SCROGGIN: Then I'll withdraw the request, Your Honor, and –
THE COURT: No. I agree – I agree with the United States on that. My recollection is that this was discussed at the inception of the case. And I think that you would be accomplishing the same way – the same thing by doing it in this fashion as you would otherwise. So, I'll sustain the objection.
MR. SCROGGIN: That ends my direct examination of this witness.
Excuse me, Your Honor. There is one of the – Mr. Smith's expert reports which I would ask to move into evidence and have him view, if I might, before I end my direct examination, and that is the Florida Cities Exhibit No. 157, which while we discussed it I failed to have him identify and move into evidence. And if I might have him look at Florida Cities Exhibit No. 157, which is the Florida Cities –
THE COURT: Has he got it in front of him?
MR. SCROGGIN: He will in one second, Your Honor.
THE COURT: Okay.
BY MR. SCROGGIN:
Q. I'm going to ask you, sir, is this the expert report that you prepared for Florida Cities regarding the Carrollwood

Page 182

facility?
A. Yes, it is.
MR. SCROGGIN: And I would ask that it be moved into evidence, Your Honor.
MR. JACOBS: Same objection, Your Honor.
THE COURT: Same ruling. I'll overrule the objection. It will be received as Defendant's 157, Defendant Florida Cities 157.
(Florida Cities Exhibit No. 157 was received into evidence.)
MR. SCROGGIN: May I also ask, Your Honor, that the last two pages that the witness has drawn on the chart be marked for identification, No. 205 and 206 for the second page.
THE COURT: All right. Go ahead and mark it.
What we'll need to do is use the exhibit identification tags that you apparently – your associate has there.
MR. HIRD: We're preparing, Your Honor.
THE COURT: Yeah. Okay.
All right. Mr. Jacobs.
MR. SCROGGIN: Your Honor –
THE COURT: Just a moment.
THE WITNESS: Could we take a short break for restroom?
THE COURT: I think we need a – yes, sir.

Page 183

MR. HIRD: I have a few questions for this witness. I don't know whether you want the Co-Defendant to go before Mr. Jacobs or after. I have, approximately, five minutes.

THE COURT: You have five minutes. Okay. Well, we'll take Mr. Hird first, and then we'll take you, Mr. Jacobs. And we need to take a -- what time is it? Well, we'll go ahead and take a ten-minute recess.

(Brief recess taken.)

THE COURT: Okay. Mr. Hird.

MR. HIRD: Thank you, Your Honor.

DIRECT EXAMINATION

BY MR. HIRD:

Q. Mr. Smith, I believe you testified when you were describing the operations of the sewage treatment plant that in certain plants chlorine is added as a disinfectant toward the end of the process. Do I remember correctly?

A. Yes. That's correct.

Q. Is that the case at the Barefoot Bay treatment plant?

A. Yes.

Q. Now, turning to the exceedances of total residual chlorine at Barefoot Bay, is the chlorine in those exceedances -- was that due to the chlorine added after the process, or was that due to anything in the sewage from the homes of the residents of the Barefoot Bay development?

A. It would be from the chlorine added after the process.

Page 184

MR. HIRD: Thank you, Mr. Smith.

Thank you, Your Honor.

THE COURT: Mr. Jacobs.

CROSS-EXAMINATION

BY MR. JACOBS:

Q. Good afternoon, Mr. Smith.

A. Good afternoon, sir.

Q. Isn't it true that the Barefoot Bay plant was designed with the intention of disposing of the total effluent through percolation ponds and a spray irrigation system?

A. Yes, it is.

Q. And when was the plant designed?

A. Somewhere early -- late '70s, early '80s, I believe. Put into operation around 1980, I think, something like that. Let me think.

Q. That's your best recollection?

A. It may have been earlier. I'd have to look at a report to make sure of the actual dates was the dates we started looking at that kind of thing.

Q. Without looking at the Black & Veach report, you don't know when the plant was designed?

A. Beyond -- prior to that time, no. I can't remember if it was -- it may have been put in operation late '60s. What I remember is the operation of the percolation basins in the early '80s and not functioning in about '83 or so. So, that's

Page 185

the time frame I'm remembering.

Q. And the plant, again, to the best of your recollection, was designed when?

A. I don't remember exactly what time it was. As I say, it could have been late '60s, early '70s. That's where I'm not sure if it started operation then or if I'm thinking when it actually -- in the early '80s when the perc ponds ceased working very well.

Q. Okay. And by "perc ponds," you do mean percolation ponds, correct?

A. I mean percolation basins that are located on the plant site, yes.

Q. And as far as the Black & Veach investigation is concerned, in the Black & Veach report, you've concluded that there were two percolation ponds; is that correct?

A. That's correct.

Q. And isn't it true that these two percolation ponds at peak performance could only handle a hundred thousand gallons per day?

A. I think on the order of a hundred. I think it may have been something more than that, up to maybe 150 or a hundred, but in that range. That's correct.

Q. Are you speculating?

A. No. I think that it's not real clear what they did handle, because the water level varies in the ponds. So, the

Page 186

actual through-put of the ponds is a hard thing to quantify.

Q. Might it equally -- is it equally true that they might have been able to accommodate less than a hundred thousand?

A. Well, that's what I was saying, yes. The water level rises and falls in there. That's correct.

Q. Now, you just testified that the plant was designed to have percolation ponds and a spray irrigation system, correct?

A. Yes. That's what you asked me.

Q. Okay. And now, isn't it true, though, that a spray irrigation system was not ever put in place at that plant until March of 1990?

A. That may be true. I know that the spray irrigation has been used at the plant, and it's a fairly small site. Whether it was in the original design or not I'm not sure.

Q. Well, you said it was in the original design. What I'm asking you is whether the -- to the best of your knowledge, sir, when was that design actually first implemented?

A. Well, first, I didn't ever use the term "original design" until just now, and the plant as originally designed only had two perc ponds. The spray irrigation system was added because of the perc ponds not being sufficient. When was that put in place -- I'll take your word that it was 1990.

Q. You have no understanding of any spray irrigation system ever being installed at Barefoot Bay prior to March of 1990; is that correct?

Page 187

A. No. I don't have any understanding of that.
Q. And isn't it true that the spray irrigation system that was put in place in March of 1990 was a 40-acre site, which at, again, peak performance could accommodate 90,000 gallons of effluent a day in dry weather conditions?
A. It's a 40-acre site, and yes, I believe that's generally the amount of flow. It would largely depend on the way it was operated.
Q. And it would also depend, wouldn't it, on weather conditions?
A. Yes.
Q. In fact, it could not be operated at all if it was wet weather conditions, isn't that right, sir?
A. It would be unfavorable to operate it, right.
Q. Now, isn't it also true that in 1990, the same year when the spray irrigation system was first put in place, that the effluent flow from the plant was in the 421,000-gallons-per-day range?
A. It was certainly in the range greater than 400,000, yes.
Q. So, the spray irrigation system that was installed was not sufficient to eliminate the discharge to the Sebastian River; isn't that correct, in 1990?
A. That's correct.
Q. And isn't it also correct that there was no NPDES permit at that facility until 1991?

Page 188

A. Yes. I believe that's true.
Q. Now, isn't it also true that because the Barefoot Bay plant was a secondary treatment plant it was incapable of removing sufficient ammonia to regularly pass toxicity tests?
A. Yes. That's correct.
Q. So, since at least 1980 the discharge from the Barefoot Bay plant was bound to fail a sizable number of toxicity tests; is that correct?
MR. SCROGGIN: Objection, Your Honor, with respect to the time of these toxicity tests to which counsel referred.
MR. JACOBS: His report goes back actually to pre-1980, to the design days.
THE COURT: I'll overrule the objection.
BY MR. JACOBS:
Q. Do you recall the question, sir?
THE COURT: Do you remember the question?
THE WITNESS: Yes. Actually whole effluent toxicity tests didn't really come in to play until late in the '80s. So, it wouldn't mean much to have them back in the early '80s. It was a developing technology.
BY MR. JACOBS:
Q. Well, starting from the time that toxicity tests were put in permits, would you say that the Barefoot Bay plant was bound to fail such tests because it was a secondary treatment plant?
MR. SCROGGIN: Objection, Your Honor. Calls for speculation.
MR. JACOBS: Professional opinion.
THE COURT: Well, I'll allow him to answer it for whatever it's worth, if you can.
Can you answer that?
THE WITNESS: Yes. I mean, the issue is that this plant doesn't treat -- doesn't remove ammonia, doesn't change ammonia to nitrate. And as such, as long as it discharges ammonia, it's going to fail whole effluent toxicity tests. That's correct.
BY MR. JACOBS:
Q. Now, to have prevented the toxicity violation, isn't it true the company either needed to upgrade the plant to AWT standards or find an alternative source of discharge other than surface water?
A. To prevent the failure of those tests? Is that what you said at the beginning?
Q. Yes, sir.
A. Yes.
Q. Now, AWT plants existed as far back as the 1970s; isn't that right, sir?
A. The earliest plants were built in Lake Tahoe in the late -- middle '60s, late '60s. And then in terms of really being in place at any large use was kind of mid '70s to late '70s.

Page 189

Page 190

Q. All right. So, there was no technological reason, was there, sir, why the company could not have built an AWT plant at Barefoot Bay before November 1991, correct?
A. That's correct.
Q. And with respect to finding an alternative source of discharge other than surface water, alternatives that could have been pursued were building additional percolation ponds, building a deep well, or using spray irrigation, correct?
A. Those are all alternative disposal methods. That's correct.
Q. But you did not examine any such alternative that the company had available to it in the 1980s, correct?
MR. SCROGGIN: Your Honor, this goes beyond the scope of the direct and also the scope of his report, which does not discuss alternatives.
THE COURT: Which did not discuss alternatives?
MR. SCROGGIN: Yes, sir.
THE COURT: The objection is that examination of the witness regarding alternatives is outside the scope of the report and the direct examination; is that correct?
MR. SCROGGIN: Yes, sir.
MR. JACOBS: Your Honor, what I'm seeking to establish is, in fact, he didn't look at any of the alternatives. So, I'm not sure there's any inconsistency here. I'm confirming that neither he, nor his staff, nor the

Page 191

report even looked at any of these other alternatives.
THE COURT: Well, I'll overrule the objection. Go ahead.
THE WITNESS: That's correct. We didn't look at alternatives. It wasn't part of our charge.
BY MR. JACOBS:
Q. You said it wasn't part of your charge.
A. Right. Like mission, your scope.
THE COURT: What he was hired to do.
THE WITNESS: Right.
THE COURT: Isn't that what you meant?
THE WITNESS: Yes, sir.
BY MR. JACOBS:
Q. Hired by the lawyers?
A. That's correct. We were retained by the law firm of Gabeler, Baise & Miller.
Q. And the scope that they gave you was -- did not include looking at the cease discharge alternatives in the 1980s; is that correct?
A. They asked us to look at the effluent quality and its potential impacts on the receiving waters and then the exceedances that occurred.
Q. I'm not quite sure I got an answer. Let me ask you again. Your charge, as you put it, or your scope did not include in the scope -- or the charge given to you by the

Page 192

lawyers that hired you in this case, did not include examining any of the potential cease discharge alternatives at Barefoot Bay in the 1980s, correct?
A. I believe that's true. We did not look at alternatives.
Q. Now, Mr. --
THE COURT: So, don't examine him any further on that. That would be beyond the scope.
MR. JACOBS: No. That was it.
BY MR. JACOBS:
Q. Now, Mr. Smith, you state that ammonia is known to be toxic to certain species of aquatic life, correct?
A. That's correct.
Q. And in the Black & Veach report on Barefoot Bay, you essentially conclude, do you not, that the apparent toxicity of the effluent would not have had an effect on the organisms in the receiving stream because the effluent had the same toxic characteristics for years; is that correct?
A. That same ammonia for years, yes.
Q. Well, are we saying the same thing, toxic characteristics? I thought you said on direct that the toxic characteristics are attributable to the ammonia?
A. In the whole effluent toxicity test. I mean, really confined to that very specific test on very fragile species, it's toxic. To characterize ammonia as toxic is just not correct.

Page 193

Q. I didn't say it was toxic. I'm using the phrase "toxic characteristics." Isn't that what a toxicity test tests for, toxic characteristics of effluent? Isn't that fair?
A. It's a very narrow test meant to look at its toxicity on very fragile species that could be indicators of some compound in the effluent that may need additional treatment, so -- but ammonia itself, to say it's a toxic compound -- that's what I'm disagreeing with. I don't think I've said that and certainly don't intend to say that.
Q. I didn't use the word ammonia in the --
THE COURT: All right. Just ask your next question.
MR. JACOBS: All right, sir.
BY MR. JACOBS:
Q. In essence, isn't it true that you're saying that any aquatic life that would have been affected by the toxic characteristics of the effluent would have been affected not by these particular violations but by earlier unpermitted discharges?
A. Yes.
Q. Now, moving on to the total residual chlorine violations. Isn't it true that neither you, nor your Black & Veach staff, nor your report expressed an opinion on the possibility of endangered species being affected by the total residual chlorine violations at Barefoot Bay?
A. No. We did not express an opinion as to endangered

Page 194

species.
Q. Moving now to the BOD versus the CBOD violations, the monitoring violations. Mr. Smith, these are both tests that -- both of these tests, rather, test the biochemical oxygen demand, correct?
A. That's correct.
Q. But they are two different tests which at any given time would likely result in different values; is that correct?
A. Two different tests, the CBOD test and a BOD test?
Q. BOD and CBOD, what you discussed on direct.
A. Right. I mean, they're different tests, and they measure different things.
Q. And would result in different values, correct?
A. Perhaps, if they're different. I mean, there may not be an NOD. There may not be any difference between CBOD and BOD. It may be exactly the same thing.
Q. In your professional opinion, what's the most likely scenario, that they're going to come out the same or not?
A. It depends on the concentration of BOD in the water and the microorganisms in the water. A very high quality effluent -- below 30, below 20 parts per liter of BOD -- you'll see the influence of nitrogenous oxygen demand.
At higher concentrations, certainly in raw influent, you'd not see any impact of NOD, because it's much stronger, and you wouldn't have any population to incur that NOD. So,

Page 195

it's only in the highly-treated flow that you're even going to see an impact like that.
Q. I see. And tell me, is the Barefoot Bay highly-treated flow?
A. Yes.
Q. Okay. So then in the -- narrowing my question to the Barefoot Bay context, these are two different tests which at any given time would likely result in different values; is that correct, sir?
A. Yes.
Q. Now, moving on to your findings with respect to water quality. Isn't it true that in the Black & Veach report on Barefoot Bay you say that the water quality of the drainage canal into the Barefoot Bay -- into which the Barefoot Bay plant discharges is only "fair"?
A. I think that's the term we used, is fair.
MR. SCROGGIN: Your Honor, is there a page reference to the page in which counsel is reading?
THE COURT: Is this from his report that you're talking about?
MR. JACOBS: Do you want me to look it up, or should I move on?
THE COURT: Well --
MR. JACOBS: I'm trying to finish. I don't think --
THE COURT: Yeah. I don't think --

Page 196

MR. JACOBS: *It's page 6, if that's helpful.*
THE WITNESS: The first quality is talking about DO and whatnot in there. It says "fair." That's what it says.
THE COURT: If you're going to read from the report, if you would inform counsel what page.
MR. JACOBS: Fair enough, Your Honor.
BY MR. SCROGGIN:
Q. Now, Mr. Smith, is it fair to say that you have no opinion as to whether the water in the canal met water quality standards during the period 1988 to 1993?
A. Well, we have some of the data that was taken by Bionomics on that canal. I'm not sure as I know what the water quality standards would be on that canal. I recall that the data we had was water of pretty good quality. The reason we said "fair," I think, was related to the dissolved oxygen levels, which seemed to be depressed at different times. We weren't sure of why. The data didn't look real good in that regard, reliable good.
Q. Mr. Smith, I'm going to ask you a question that I asked -- I'm going to read a question that I asked you in your deposition, and then I'm going to ask you -- then I'm going to read the answer and ask you if that is the answer you gave. The question appears on page 85, line 1 of your deposition and reads as follows: "So, you have no opinion as we sit here today as to whether the quality of the water in the Sebastian

Page 197

Creek and the drainage canal leading to the creek meets water quality standards or met water quality standards during this five-year period?"
Answer, line 6: "That's correct."
Is that the answer you recall giving, sir?
A. Oh, absolutely. It was Sebastian Creek.
Q. Moving on to the Carrollwood facility, you are aware, are you not, sir, that in 1979 the state of Florida determined that there should be no discharge from the Carrollwood plant into the Sweetwater Creek, correct?
A. I am aware of that. Yes.
Q. And you're aware that at that point in time the state of Florida was interested in reducing the amount of pollution going into the Tampa Bay, correct?
A. Yes.
Q. In particular the nutrient load, correct?
A. Yes.
Q. Which means nitrogen and phosphorous; is that also correct?
A. That's correct.
Q. And those are some of the pollutants that come from wastewater treatment plants, correct?
A. Yes. That is correct.
Q. And, in fact, the discharge from the Carrollwood plant was having an impact on the nutrient load in Tampa Bay, was it not?

Page 198

A. Yes. *It had an impact.*
Q. Now, you are aware, sir, that in 1984 EPA denied Florida Cities NPDES permit renewal application to discharge into the Sweetwater Creek?
A. Yes.
Q. And that the Carrollwood plant continued to discharge in the Sweetwater Creek without an NPDES permit until 1991, correct?
A. That's correct.
Q. And you are also aware, sir, that when in 1991 EPA issued another NPDES permit for the Carrollwood plant effective July 1991, it required that the effluent being discharged from the plant into the Sweetwater Creek be treated at advanced wastewater treatment levels, correct?
A. That's correct.
Q. Now, requiring advanced wastewater treatment, or as we've said, AWT treatment, is a way of minimizing nutrient load, is it not?
A. That's correct.
Q. And in so doing, protecting the Tampa Bay, correct?
A. That's correct.
Q. Now, it's also true, isn't it, sir, that the violations that took place at the Carrollwood plant took place because the effluent was not being treated at AWT levels, correct?
A. The plant was not an AWT plant. In fact, the treatment

Page 199

that it was performing was actually comparable to AWT for a number of parameters, even though the plant was not intended to be an AWT plant. It did -- I think the exceedances were in nitrogen and phosphorous and fecal coliform.

MR. JACOBS: Move to strike as nonresponsive, Your Honor. I asked him about the violations, and he's focusing on the nonviolations?

THE COURT: Denied.

BY MR. JACOBS:

Q. Let me ask you this, sir. The violations that took place at the Carrollwood plant took place because the effluent was not being treated at AWT levels, correct?

A. That's correct.

Q. And these violations resulted in a nutrient load to the Tampa Bay above the levels that had been permitted; isn't that correct, sir?

A. Yes. That's correct.

Q. Now, let's talk about the Sweetwater Creek for a moment. This is a relatively small body of water, is it not?

A. Right. I think six and a half MGD is the average annual flow.

Q. That's the average annual flow, but isn't it true, in fact, that during the time that the Carrollwood plant operated, the only flow in the Sweetwater Creek at the point of the discharge was the discharge itself?

Page 200

A. No. That's not correct.

Q. Would that statement be correct during dry weather conditions?

A. It could be in dry weather conditions. It's a drainage canal, and so there are times obviously when it rains it's not going to be the only thing. And it heads waters in Island Lipsey Lake. So, it overflows from the lake into the canal, and that depends a large part on rainfall and other run-off conditions. So, when it's dry, it well could be that there's no flow upstream of the plant.

Q. And no flow downstream except for the effluent itself?

A. For a period. I mean, it's in an urban area, so there's all kinds of run-off that impacts this. This is a drainage canal, and it drains all of urban Carrollwood. So, when someone is watering their lawn in a dry period, the run-off would end up in the creek.

Q. Again, I'm going to read from your deposition testimony, sir. The question which appears on page 114, line 18 is, "When you have a stream with essentially zero flow during dry weather, what does that tell you about what's in the stream when the plant is discharging to it in dry weather?"

Answer, line 22: "It's pretty much effluent. I would say 100 percent at the point where it goes in."

Is that the answer you gave at your deposition?

A. Yeah. That was not particularly the Sweetwater Creek.

Page 201

But you said if there's a creek with no flow in it.

Q. And is Sweetwater Creek different?

A. Yes. I mean, the -- it's a drainage canal, and there's essentially always a certain amount of water in that canal. It drains a lake and the surrounding urban area.

Q. Are you saying that Sweetwater Creek is not typical of a small creek?

A. There are small creeks in urban areas. Yes. It's typical of a small creek in an urban area, which drains groundwater and which drains surface water.

Q. And on page 5 of your report or the Black & Veatch report, don't you say the flow is essentially zero?

A. There are times of the year when it's essentially zero. That's what we said.

Q. And at those times isn't the flow essentially just the effluent from the plant?

A. At the point of introduction.

Q. Yes. At the point of introduction it is essentially just the flow from the plant; is that correct?

A. At the point of introduction it's essentially the flow from the plant. Correct.

Q. Now, the permit limit at Carrollwood for total residual chlorine was .01 milligrams per liter, correct?

A. I believe that's true.

Q. And the TRC levels during the latter half of 1991 were in

Page 202

the 1.6 to 2.8 milligrams per liter range, correct?

A. I don't recall those numbers exactly. I'd have to --

Q. Would you like to look at the DMRs?

A. That would be fine, or a report.

MR. SCROGGIN: Your Honor, if I may suggest, Florida Cities would have no objection to the Government using its own summary tables from the -- that have a list of these values, only in the interest of speeding up this process, rather than using the actual DMRs, which are hard to read.

THE COURT: Okay. You want to do that, Mr. Jacobs?

MR. JACOBS: I appreciate the suggestion. I think that we do have these handy tables that are on file with the Court. They were filed at the time of the summary judgment proceedings. And I've asked Mr. Moore to look to see if we have an extra set for the Court to refer to, as well.

THE COURT: Well, okay. Don't hold up on that. If you find one, fine. Don't worry about it.

MR. SCROGGIN: May I ask, Your Honor, if he does decide to use these tables that they be marked as an exhibit.

THE COURT: Well, no. They're not an exhibit. They were a part of the summary judgment process, but they're not a trial exhibit.

MR. JACOBS: I think we did put them in, because Mr. Klingenstein relied upon them, so --

THE COURT: Oh, you did put them in as trial

Page 203

exhibits?
MR. JACOBS: Yes, sir.
MR. SCROGGIN: Then I would ask that he use the one that's already been put in as the exhibit.
MR. JACOBS: That would not expedite things, but we could just look for it, or you could just stipulate those were the values, 1.6 to 2.8, Mr. Scroggin.
Would you like to just take a quick look?
THE CLERK: What was the exhibit number, and I can get it out of the box over here?
MR. SCROGGIN: Your Honor, I have no objection to using our DMRs which have been submitted in as exhibits, their tables or their DMRs. We'd just ask they use something that's been submitted.
THE COURT: Okay. Whatever you all want to do let's work it out. I'm not -- whatever will be most expeditious. If there is an exhibit in evidence that can be utilized for that purpose, then find it.
MR. JACOBS: The summary that Mr. Scroggin kindly suggested that we use is, in fact, the Government 255, which has been moved into evidence and accepted. And I would direct the witness's attention to Government Exhibit 255.
THE WITNESS: Yes, sir, I have it.
BY MR. JACOBS:
Q. And the question, sir, is isn't it true that the TRC

Page 204

levels during the latter half of 1991 at Carrollwood were in the 1.6 to 2.8 milligrams per liter range?
A. Well, the one that's shown here is 2.5 and 2.0, 1.6, 1.8.
Q. Did you see the 2.8 November '91?
MR. SCROGGIN: Objection, Your Honor. November '91 is not -- no. I'm sorry. I withdraw the objection.
THE WITNESS: Yes, sir, I did. 2.8, there it is.
BY MR. JACOBS:
Q. Okay. Is it fair to say that's the high end of the range and 1.6 is the low end?
A. That looks to be the case.
Q. So, the TRC levels were anywhere from 160 times the permit limit to 280 times the permit limit, correct?
A. That's correct.
Q. And these violations occurred literally every day; isn't that right, sir?
A. These are reported as daily maximums, yes. So, it's hard to tell what was within it. That was the daily max.
Q. These were daily violations, correct?
A. Right.
Q. But you essentially conclude that these violations would not have caused any serious effect on organisms in the Sweetwater Creek because the chlorine levels of the effluent had always been that high; isn't that right?
A. The impact on the stream, as I've discussed earlier, is

Page 205

going to be fairly closely tied to the mixing zone and the oxidation of this chlorine. Certainly if there's no water upstream of the plant, there's nothing to impact in terms of the aquatic organisms there.
Q. Well, what about when there is water in the stream and there are aquatic organisms, then they'll be impacted by the higher chlorine?
A. I would say that it would create a barrier for them. They would probably not penetrate this zone of high chlorine.
Q. Okay. So, when you say there would be a barrier, that means the aquatic life would stay away from that area of the stream; is that correct?
A. That's correct.
Q. Now, isn't it true that the effluent at Carrollwood, rather, was not being treated at AWT levels during this point in time because an AWT plant had not been built?
A. Again, I'd say some parts of it was receiving treatment equal to AWT, but again to -- you're correct as to nitrogen, phosphorous, and chlorine, because --
Q. Now --
A. Because it was not built -- the rest of your question. It was not a plant built to treat that. Yes.
Q. So, in a couple of areas, it was providing the equivalent of AWT treatment, but in all the rest of the areas it was not; is that correct?

Page 206

A. That's correct. Yes.
Q. Okay. Now, Mr. Smith, there was no technological reason why an AWT plant could not have been built by July 1991, was there?
A. No.
Q. And these violations could have been avoided either by building an AWT plant or by ceasing the discharge; isn't that also correct?
A. Yes. That's correct.
Q. Now, if the city of Tampa had the capacity to accommodate the Carrollwood plant's effluent in 1984, that would have been a good alternative to discharging to the Sweetwater Creek; isn't that right, sir?
MR. SCROGGIN: Your Honor, I object. This is clearly beyond the scope of the direct examination. It is nowhere contained in his report.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Is it true, Mr. Smith, then that you didn't look at the possibility of connecting to the city of Tampa in your report?
MR. SCROGGIN: Same objection, Your Honor.
THE COURT: Sustained.
MR. JACOBS: I'm asking him if he covered that in his report, which is in evidence.
THE COURT: Well -- all right. You didn't cover that

Page 207

in your report?
THE WITNESS: No. We didn't get to that.
THE COURT: All right.
BY MR. JACOBS:
Q. You didn't personally cover it, but somebody else at Black & Veach did cover that in the report; isn't that correct, sir?
A. I don't recall that, Mr. Jacobs. But if it's in there, if it's in black and white, then obviously I'm in error.
Q. In your deposition, I asked you on page 125, line 14, "Did somebody else at Black & Veach do that" -- and I should back up a question, obviously, to put that question into context. The question on at line 6 is -- and I'm paraphrasing for the moment -- "did you look at the alternatives that existed during the period 1984 to 1991 that the company could have employed to cease the discharge?"
THE COURT: Could have what?
MR. JACOBS: "Could have employed to cease the discharge."
MR. SCROGGIN: Objection, Your Honor. Outside the scope of direct.
MR. JACOBS: It's in the report, Your Honor. The report is in evidence.
THE COURT: The report is in evidence, so -- and you presented the -- put the report into evidence. And I think, yeah, that's obviously something that the Court can consider.

Page 208

So, it's fair game for cross-examination. Overruled.
BY MR. JACOBS:
Q. Your answer at line 10 was "Okay." Do you recall that?
A. I'm sorry. You're asking with regard -- alternatives or to the city of Tampa in particular? I'm sorry.
Q. Well, starting with alternatives in general.
A. Right.
Q. And you answered "Okay" at line 10. Do you recall that?
A. Right. I do.
Q. And then I -- the next question was, "You personally, Mr. Smith?"
Answer: "Did I personally look at those alternatives? No."
Did you recall giving that answer?
A. I do recall that. Yes.
Q. "Did somebody else at Black & Veach do that" -- question.
Answer: "Yes."
Do you recall saying "Yes" to that question?
A. Yes, I do.
Q. Next page, 126, question on line 1: "Now, what were these alternatives, Mr. Smith?"
Answer: "We list them on page 27 of the report."
Do you recall giving that answer, sir?
A. I don't recall it, but if you're reading my deposition, I

Page 209

must have said it.
Q. And continuing with the same answer: "It includes underground injections, deep well, land application to spray fields, percolation ponds, urban irrigation, discharge to an adjoining utility."
Do you recall giving that answer, sir?
A. Something like that, right.
Q. Which -- and the next question is, "Which adjoining utilities were examined with respect to this last option, Mr. Smith?"
And your next answer was, "The city of Tampa and Hillsborough County."
Do you recall giving that answer, sir?
A. Again, I don't recall it, but I believe that's true.
Q. Now, Mr. Smith, if the city of Tampa had the capacity to accommodate the Carrollwood plant's effluent in 1984, that would have been a good alternative to discharging to the Sweetwater Creek; isn't that right?
A. It certainly would have been one to examine and see what the conditions for a connection would be.
Q. Would you agree with me that it would have been a good alternative?
A. Good in what respect, sir?
MR. SCROGGIN: Objection, Your Honor, to the characterization of good.

Page 210

THE COURT: Well, I'll overrule the objection to that.
THE WITNESS: It was good in terms of it would -- it would be good in that it would meet the discharge permits, yes. Good as to whether it was economical, I don't know.
BY MR. JACOBS:
Q. Now, back in 1983, Florida Cities also retained a contractor to study other possible alternatives, such as percolation ponds, spray irrigation, and deep well injection, correct?
A. I'm sorry. What was the date again?
Q. 1983.
A. Okay.
Q. Is that correct?
A. We reported those dates, yes, in the report. I'm not -- I don't have them right at the tip of my tongue.
Q. And that was the Jamal Study; is that correct?
A. Yes. I believe that's true.
Q. Now, there was no technological reason why one of these alternatives could not have been implemented; isn't that correct, sir?
A. Technology -- can it be done physically? Yes. Some of this could physically have been done.
Q. Turning your attention now to the Waterway Estates plant. Mr. Smith, in your 25 years working in the field of wastewater

Page 211

treatment, you've either studied or reviewed dozens of wastewater treatment plants; isn't that correct, sir?
A. That's correct.
Q. But in all of your 25 years of experience in this field, aside from Florida Cities, you have never had a client that operated a wastewater treatment plant and discharged into surface waters without an NPDES permit, have you?
A. Not without a permit. I've had clients that have had permits that have been in dispute, but they've had permits.
Q. But you never had a client –
A. That flat didn't have a permit, no.
Q. Aside from Florida Cities; is that correct?
A. That's correct.
Q. Now, the Waterway Estates plant discharges into the Caloosahatchee River; is that correct, sir?
A. It does today, yes.
Q. And you are aware, sir, that a 1990 study conducted by Florida Department of Environmental Regulation which looked at actual measurements of water quality in the vicinity of the Waterway Estates discharge point, revealed that with the treatment levels provided at the time the concentration of algae was about 10 percent higher than target values considered to be satisfactory, correct?
A. No. I think it was actually lower than the values that were predicted under the model, as I recall. It seems that the

Page 212

actual measurements were like 15 to 19 micrograms per liter. And they had targeted numbers of like 24 or 25. Again, that's my recollection.
Q. Directing your attention to the Black & Veach report, which has been marked and entered into evidence as Defendant's 92, sir, page 5, last paragraph about two-thirds of the way down.
A. I'm sorry. Page 5?
Q. Yes, sir. Last paragraph, starting with the word "however." Could you read that sentence aloud, please, sir?
A. "However" – let me just go ahead and read the paragraph to myself so I can understand the context.
THE COURT: Sure.
MR. JACOBS: Judge, while he's doing that, I've consulted with my co-counsel – and I'm not sure what your schedule is, but we'll both volunteer to miss our flights to get done with this witness. I've got maybe another half an hour. And I feel badly making that offer since you were kind enough to indulge my previous request.
THE COURT: Well, you know, I have built my schedule around what – I've got two sentencings starting at four o'clock.
MR. JACOBS: It's your pleasure, Your Honor. I'll pick it up Monday morning. I mean that. It's your pleasure.
MR. SCROGGIN: Your Honor, I will have some

Page 213

redirect. I would try to keep it brief, but I'll have some redirect based upon his cross-examination.
MR. JACOBS: Maybe we should pick it up Monday morning then.
THE COURT: Yeah, I think so. I wish had I known that.
MR. JACOBS: I'm sorry. We had hoped to be –
THE COURT: Well, we can go until four o'clock, but at four o'clock I'm going to have to –
MR. JACOBS: We'll probably miss the plane.
THE COURT: Oh, all right. Now, I set this schedule in part to accommodate my sentencings, but also you had – if you haven't canceled your flight – we're going to have to carry this over until Monday anyhow.
MR. JACOBS: Yes. That's the point.
THE COURT: I had planned on recessing at 3:45 preparatory to my four o'clock sentencings and also in line with your flight schedule.
MR. JACOBS: And I appreciate that. I thought perhaps we'd finish and –
THE COURT: Well, apparently we're not going to be able to.
MR. JACOBS: I agree, sir. I'm sorry.
THE WITNESS: Should I go ahead and answer your question, Mr. Jacobs?

Page 214

THE COURT: Why don't you do that?
THE WITNESS: I've got it in my mind, and I want to get it out.
THE COURT: Grab that thought.
THE WITNESS: Let me just – I'll read your sentence, and I'll tell you where the discrepancy is. "However, actual measurements of water quality in the vicinity of the Waterway Estates discharge points revealed that the treatment levels provided at that time, the concentration of algae, was about 10 percent higher than target values considered to be satisfactory."
Now, what I'm reporting to you, Mr. Jacobs, is that they had also looked at predicting what the impacts of secondary treatment would be, and they had predicted actually that the impact would be much greater than it was. So, you're correct in that it was higher than what they wanted in the stream based on AWT treatments, but it was lower than what they expected from what would have been a secondary plant.
BY MR. JACOBS:
Q. Could you just read the last sentence – I'm sorry – the following sentence, and then I'll be through for the moment?
A. Sure. "It was concluded by FDER that moving the point of discharge would improve the quality of the river" – "of the water in the Waterway Estates canals and in the Caloosahatchee River in the vicinity of the canals and the discharge."

MR. JACOBS: Thank you.
MR. SCROGGIN: Your Honor, may I ask if he's going to finish that sentence that he read the one sentence that follows?
MR. JACOBS: Maybe on his redirect.
THE COURT: Beg your pardon?
MR. JACOBS: I would suggest he could redirect on that issue.
THE COURT: Read that what?
MR. JACOBS: He's asking – he's now asking that the witness read other portions of the report, and I'm suggesting that that take place during the redirect.
THE COURT: Well, in fairness, it ought to be read now. And, of course, that's a fact issue that I would have to determine, and I don't frankly want to have to pause to do that. So, would you kindly read that, Mr. Jacobs?
MR. JACOBS: The following sentence?
THE COURT: What is it, the following sentence?
MR. SCROGGIN: The sentence begins with the word – it follows the sentence that was just read – "Improvements."
THE COURT: Or the witness can read that.
Would you read that?
THE WITNESS: "Improvements of this magnitude would be imperceptible and would be expected to take place gradually over many months."

BY MR. JACOBS:
Q. When you say "imperceptible," you mean to the naked eye?
A. In terms of trying to measure it. Obviously they were measured at 10 percent, so – would not be seen. That's correct.
Q. But it would be expected to take place over a number of months?
A. That's correct.
MR. JACOBS: Thank you.
THE COURT: Okay. Then we will be in recess until 8:45 Monday morning.
(Court adjourned at 3:47 p.m.)

CERTIFICATE

I hereby certify that the foregoing is an accurate transcription of proceedings in the above-entitled matter.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Monday, April 1, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tautges

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scruggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

April 1, 1996

******

THE COURT: Morning.

Okay.

Let's see, we had Mr. Smith on the witness stand. Mr. Smith, you can resume. Where is he?

MR. BULLOCK: He's outside, Your Honor.

MR. JACOBS: Your Honor, I just want to thank you on behalf of Mr. Quinn and I. We made our flights and due to the deluge of springbreakers, had we missed those, we never would have gotten home, without exaggeration. I do appreciate it.

THE COURT: Yes, indeed.

All right.

We're on cross examination, you may proceed, Mr. Jacobs.

MR. JACOBS: Thank you, Your Honor.

CROSS EXAMINATION CONTINUING

BY MR. JACOBS:

Q. Good morning, Mr. Smith?

A. Morning, Mr. Jacobs.

Q. Mr. Smith, you're relying on your reports for your testimony, are you not, sir?

A. Yes.

Q. Now, in preparing these reports, Dr. Jernigan and Mr. Westfall reviewed dozens of documents which they relied upon in turn in preparing the reports, is that correct?

A. That's correct.

Q. With the exception of documents that you mentioned on Friday that you personally reviewed prior to your deposition and prior to the preparation of the report, you personally reviewed no other documents prior to your deposition and prior to preparation of the report, is that correct, sir?

A. It's hard to be exclusive on that, Mr. Jacobs. I'm not sure -- no other documents, in particular reference to the case or this matter? I mean, you know, it's a very broad kind of question.

Q. Well, implicit at least from my prospective in the question was, documents related to the case, sir?

A. What I reviewed in particular were our project notebooks and, in particular, our report, various DMR's and OMR's and some various memoranda that had been prepared by the company, those kind of documents. This is the business of sanitary engineering. I'm always reviewing documents that have information, technical matters, that certainly have interest to this case, that are always, you know, a part of my daily routine. And I don't want to mislead you to think I don't read things that might impact my thinking on the case just because it wasn't listed or something.

Q. Right. Let me try again.

With the exception of those few documents that you've again just named, DMR's, OMR's, these compilations, the Government's complaint, before your deposition and before the preparation of the report, you personally prepared no -- you personally reviewed no other documents, correct, sir?

A. Mr. Klingenstein's report I think was in that group. I don't know if that counts as being one of the things, but I did review his report.

Q. That's fine. Anything else that comes to your mind now, sir?

A. Did I say there were some drawings and whatnot of existing plants? Right, I think that is it.

Q. Okay, thank you.

Now, you were retained to serve as an expert witness in this case in May of 1995, is that correct, sir?

A. Yes.

Q. And your firm is being paid how much to serve in that capacity?

A. We are retained on an hourly rate basis, so there's no set amount. It's based on how much work we do.

Q. Well, let me cut to the grist. Roughly how much has your firm made so far from serving as an expert witness in this case. Let me clarify. I mean for your services, Dr. Jernigan and Mr. Westfall and anybody else, for that matter, on your staff.

Page 5

A. I think we've billed –
THE COURT: You mean accrued, accrued or actually been paid as yet?
BY MR. JACOBS:
Q. Fair enough. Accrued. I assume they're getting paid timely. Accrued is a better question. Thank you, sir.
A. What I can tell you, Mr. Jacobs, how much we have been billed – how much we billed the law firm, I think it's on the order of forty thousand dollars.
Q. Okay.
Now, you and your firm have worked for Florida Cities for years, haven't you, sir?
A. We've worked for them I think for four years, maybe five.
Q. And they're a good client, aren't they?
A. They are a client. They are not – I don't know what you mean by "good." You know, that's a – they're – we have a good relationship with this client, yes.
Q. You do recall at your deposition I asked you the same question and you responded, yes, they're a good client?
A. Right. I'm not sure what your inferring, so I don't know what the good modifier – we have a good relationship with this client, Mr. Jacobs.
Q. Well, they paid you nearly half a million dollars in the last four or five years, isn't that correct, sir?
A. We have billed them for services in that amount. Of

Page 6

course, in prospective, we bill other clients probably thirty million dollars in that same period.
Q. I didn't ask you that, I asked you this client. Roughly half a million dollars in the last four or five years?
A. That's correct.
Q. Now, turning your attention back to Waterway Estates, where we left off on Friday. In terms of a water body's ability to assimilate a pollutant discharge, the greater the dispersion and dissipation, the greater the ability of the water body assimilate the pollutant discharge, correct, sir?
A. It would certainly happen much more quickly and with less immediate impacts. I don't know that it affects its overall capacity.
Q. Let me ask you this. Conditions in most parts of the Caloosahatchee River are unfavorable for the dispersion and dissipation of effluent, isn't that right, sir?
A. No, I wouldn't agree with that.
Q. Do you have your report in front of you?
A. No, sir, I don't.
Q. Directing your attention to the Black and Beach Report, Defendant's 92, in that case, please, in particular, page 28.
A. I'm sorry; page 28?
Q. Yes, sir. Of the Black and Beach Report, third paragraph, last sentence. Would you read that into the record, please, and just as a preamble to the first two paragraphs,

Page 7

describe the Caloosahatchee River.
A. Says these conditions are unfavorable for the – speaking of the conditions in the Caloosahatchee – are unfavorable for the dispersion and dissipation of the effluent from the Waterway Estates –
THE COURT: A little bit slower for the Court Reporter.
THE WITNESS: I'm sorry.
THE COURT: Would you read that again, a little slower.
THE WITNESS: Certainly. Speaking of the conditions in the Caloosahatchee River, these conditions are unfavorable for the dispersion and dissipation of the effluent from the Waterway Estates Plant.
BY MR. JACOBS:
Q. Thank you.
Now, conditions at the shoreline are particularly poor, are they not, sir?
A. I believe that is what that paragraph was about, actually.
Q. But would agree?
A. Yes.
Q. Okay.
Now, the flow in this river is slow or non-existent at the shoreline, isn't that right, sir?

Page 8

A. It's slow and it's tightly influenced, actually goes up and down at times.
Q. Correct or not correct; it's slow or non-existent, the flow, at the shoreline?
A. Correct.
Q. Now, when you have slow or non-existent velocity or flow, you have got unfavorable conditions for the dispersion and dissipation of effluent, isn't that correct, sir?
A. That is what we're reporting, yes.
Q. Okay.
And you agree with your own report, right?
A. Yes, sir, I do.
Q. Okay.
And the conditions in the canal, the boat canal where the previous outfall was, are even more unfavorable than the shoreline for the dispersion and dissipation of the effluent, isn't that right, sir?
A. As a relative matter, yes.
Q. The conditions, to summarize, for such dispersion and dissipation are least favorable in the canal, a little bit better right along the shoreline and best out in the middle of the river, using your term, "relatively speak," isn't that right, sir?
A. That's correct, Mr. Jacobs.
Q. In fact, Mr. Smith, didn't modeling by FDER show the best

Page 9

environmental protection of the river was afforded by a discharge to the six foot contour line of the river as opposed to a discharge to the canal?
A. There is absolutely no question about that, Mr. Jacobs. That is the best place for dispersion and dissipation of the effluent.
Q. And you do not debate, sir, as a matter of sound engineering principles, that a discharge to the six foot contour line of the river would therefore afford better environmental protection than a discharge to the canal?
A. There is no question about that.
Q. And would you therefore say as a matter of sound engineering principles that when FDER decided the discharge location should be moved to afford maximum environmental protection, it was making a correct decision?
A. Correct is a value-laden term, sir. I don't know correct -- what you're trying to say.
Q. Well, you're an engineer, you have been qualified as an engineer, from an engineering and environmental engineering standpoint?
A. Correct would be discharging into the canal, Mr. Jacobs. You could correct -- what we're saying is -- what you have described is the most environmentally protective manner would be the six foot contour line, but there's many things involved in that; permitting a pipeline, putting a pipeline in the

Page 10

middle of the river, across the river, building the pipe.
Q. The question -- let me read you back the question again.
It related to affording maximum environmental protection. That is the hypothetical, sir, that's the objective. If that is what FDER had in mind when it decided that the discharge location should be moved to afford maximum environmental protection, then it made the correct decision, is that right?
A. That's right.
Q. Now, Mr. Smith, the purpose of mixing, which you discussed in your eloquent, I almost want to say seminar, Friday morning with the illustrations that I was trying to following, the purpose of mixing is to maximize the water quality, isn't that right, sir?
A. Yes, that's correct.
Q. So then the requirement that the discharge point be the six foot contour line maximized water quality?
A. Yes, for those conditions, that's right.
Q. And while you might not be able to see an improvement in water quality with the naked I on a day-to-day basis, it was virtually certain that water quality would improve over time as a result of the relocation of the outfall, correct?
A. Absolutely right. In fact, probably improved the moment it was mixed out there in terms of the local water quality.
Q. In terms of what he call or the FDER report calls localized impacts?

Page 11

A. That's correct.
Q. Now, until April, 1992, the effluent discharged from the Waterway Estates Plant was only secondarily treated, correct?
A. Actually it was an advanced secondary plant, removing much more than a normal secondary plant, but not yet AWT.
Q. Okay, fair enough. Let me ask just make sure I understand your answer to my question, it was still secondary treatment, even if it was slightly more?
A. It was not AWT, it was greater than secondary.
Q. It was greater than secondary?
A. Oh yes. It was filter. There was much of the nitrogen removed. It was much better than secondary effluent.
Q. So would you call it sophisticated secondary?
A. I'd call it advanced secondary; something of that effect.
Q. But certainly not AWT?
A. Not AWT.
Q. Okay.
Now, isn't it even more important to discharge at the optimal point in terms of water quality when you have got effluent which is only secondarily treated?
A. If that is your goal, sir, to minimize the impacts on the receiving waters, it would -- that would be a better -- that would be a better environmental choice to do that, yes.
Q. Okay.
Now in 1981, the State determined the Waterway Estates

Page 12

Plant would have no wasteload allocation, isn't that correct?
A. I'm sorry, who determined that?
Q. The State of Florida.
MR. SCROGGIN: Objection, Your Honor, this is assuming a fact not in evidence?
THE COURT: Well, if he knows. Do you know that to be a fact?
THE WITNESS: We reported some of those things, Your Honor, but --
THE COURT: I'll overrule the objection.
BY MR. JACOBS:
Q. Do you need to hear the question again, sir?
A. Yes, please.
Q. In 1981, the State of Florida determine the Waterway Estates Plant would have no wasteload allocation, correct?
A. There's some dispute about that, but there's -- there was some issues about that. I think we reported that there was -- the work was going on about the wasteload allocation, it was unclear about whether Florida Cities had or had not one.
Q. But your report said there was none, isn't that correct?
A. That is what I've just said. I said we reported there wasn't one, but there was some dispute about that.
Q. Okay.
But -- I'll move on.
Now, between the time in 1981 that the State, according

Page 13

to your own report determined the Waterway Estates would have no wasteload allocation and December 1 of 1987, as far as you know, there was no request for a wasteload allocation, isn't that correct?
A. Not to my knowledge, sir.
Q. Directing your attention to your deposition testimony page 174, question line fifteen, I'm going to read the question and ask you if you gave the following answer, sir. Question, now between the time -- that time, referring back to 1981, and 1987, did you and your staff, for that matter, find any evidence of a request for a wasteload allocation.
Mr. Smith, did you give the following answer, not that we've made note of here and not that I know of here today?
A. I think that is just what I said wasn't it? Same thing. Same question; or did I miss something.
THE COURT: Yeah, did I miss something? What was his answer that you're seeking to impeach him from this prior?
MR. JACOBS: The previous question was essentially the same and I don't think he gave the correct answer. I don't think the answer was consistent with the deposition answer.
THE WITNESS: I thought I said I didn't know of any just right now and I thought that is what that you read?
THE COURT: Well, go ahead.
MR. JACOBS As long as that is what he said, I'll just move on.

Page 14

BY MR. JACOBS:
Q. On December 1st, 1987, Florida Cities Water Company requested a wasteload allocation, correct?
A. Right. That was -- yeah, they were also looking permits and all that, too, yeah. Okay.
Q. And you attribute the fact that Florida Cities Water Company waited until December 1, 1987, to apply for a wasteload allocation to their evaluation of various alternatives, correct?
A. Right. And I think there was some misunderstandings I mentioned earlier about whether they had one or didn't have one or whether the plant was to be joined to another regional plant, all those other things you'll get into later, I'm sure.
Q. Now, after Florida Cities evaluated these alternatives, they chose to continue their discharge, upgrade the plant and relocate the outfall, is that correct, Mr. Smith?
A. That's correct.
Q. Now this alternative they chose was not the fastest compliance alternative, was it, Mr. Smith?
A. There appeared to be a faster opportunity, yes.
Q. Now, couldn't the violations at Waterway Estates all have been avoid simply by connecting the Waterway Estates effluent to another system?
A. If it could have been worked out?
Q. Is that a yes?

Page 15

A. Yes, if it could have been worked out, yes.
Q. From a technical prospective?
A. Yes.
Q. You did not personally examine the possibility that the Waterway Estates Plant could have connected to the North Fort Myers Utility Wastewater System before any of these violations alleged in the second amended complaint took place, did you, Mr. Smith?
A. No, all we've done is review memoranda.
Q. And in fact, you don't have an opinion as to whether the Waterway Estates Plant should have connected to the North Fort Myers Wastewater System before any of these violations took place, correct?
A. I think we reported in our report that the cost was excessive and I believe that is we talked about in my deposition that we reported it was an excessive cost, but at the time, I did not know exactly what the cost was.
Q. You reported that the company considered it an excessive cost, isn't that right, sir?
A. Yes, sir.
Q. You didn't personally in your report say that the cost was excessive, correct?
A. I thought that was the term we used, but I'd have to look.
Q. Well, make reference to your report, if you'd like, but

Page 16

my understanding was in your report and in your deposition testimony, you did not express an opinion as to whether they should have connected, you might have expressed a historical narrative about how the company considered the cost to be excessive, am I right?
A. I think that is a fair judgment on it.
Q. All right.
Now, you don't have an opinion as to how much it would have cost to connect to the North Fort Myers system, do you, Mr. Smith, you personally?
A. I do.
Q. You do?
A. Yes. I didn't in my deposition, Mr. Jacobs, you're right.
Q. All right.
So you didn't at the time of your deposition, but you do now?
A. Right.
MR. JACOBS: In that case, sir, I move that he not be allowed to express that opinion.
THE COURT: Well, he hasn't given it yet, you haven't asked him for it, nobody's asking for it, so you don't need a motion?
BY MR. JACOBS:
Q. Now, when you say in your report that the North Fort

Page 17

Myers option, quote, proved to be infeasible due to high costs, page 38, you really mean to say, and I think we covered this already, the company decided that the cost was too high, correct?
A. The company did decide and in our review, we thought the same.
Q. Now, you don't say that in your report or your deposition though, do you, sir?
A. As I told you, I didn't say it in my deposition. I thought we used the term "excessive," and that's what I'm recalling, Mr. Jacobs.
Q. Directing your attention to your deposition testimony, page 227, line twenty, I asked you the question, on page 38 up at the top, Mr. Smith, you draw the conclusion that the connection to North Fort Myers Utilities proved to be infeasible due to high cost.
Let me ask you first, is this a question of your repeating the company's opinion that the cost was too high to the company or are you drawing your own conclusion here as an expert that the cost was too high. Answer, do you recall, sir, giving this answer, no, this was our review of the BSE report and the company's review of that. So it be – we weren't expressing what our thoughts were as to what was too high or not too high. Correct, is that your answer?
A. I believe that is true.

Page 18

Q. Mr. Smith, are you aware that the North Fort Myers System uses spray irrigation and deep well injection with no surface water discharge?
A. I think I'm aware of that. Certainly the deep well I was aware.
Q. And you're aware they have no surface water discharge?
A. Yes, sir, I was aware of that.
Q. Now, your report or the Black and Beach Report evaluates how much time it took Florida Cities to upgrade the Waterway Estates Treatment Plant, correct?
A. That's right.
Q. And the report suggests how much time was anticipated for each task and how much time each task actually took, correct?
A. That's right.
Q. And you do that in table one on page 35, correct, sir?
A. Yes, that's right.
Q. And some of the tasks took longer than Black and Beach thought was normal under the circumstances, correct?
A. That's right.
Q. Now, what you mean by quote "anticipated" duration in table one on page 35 of your report is Black and Beach's opinion of what you thought it would take, correct?
A. We thought it was a reasonable amount of time without undue interruptions.
Q. And some of the delays that took place are attributable

Page 19

to Florida Cities and/or its contractors it hired for the project, isn't that correct?
A. Some were, yes.
Q. In fact, sir, all of the delays under preliminary engineering in your table one are attributable either to Florida Cities and/or its contractors, correct?
A. You're using the term "delay," I don't know what you have in mind about delay.
Q. Okay, let me see if I can help you there. Your table as I'm sure you will recall and you can refer to it as you see fit, sir, sets up two columns; anticipated duration and actual duration. So, I'm referring to delay and we can use a more scientific word such as deviation if you're more comfortable with it to represent the difference between the time for each task or series of tasks?
A. How about the difference between anticipated and actual?
Q. You'd like me to use the word "difference"?
A. Delay is kind of a majority word, Mr. Jacobs, and I guess what I'm saying, we set out an anticipated time and then we had an actual time.
Q. Can we compromise and just use deviation?
A. That would be great.
Q. Okay.
More scientific perhaps.
A. Less majority.

Page 20

Q. All of these deviations under preliminary engineering in your table one are attributable either to Florida Cities and or its contractors, correct?
A. That is correct.
Q. Now, moving down to the detailed design, quote, unquote, section of your table one, these deviations in the preparation and issuance of the RFP are in fact attributable to Florida Cities, correct?
A. That's correct.
Q. And the, quote, consultant designs facility, quote, unquote, line item, do you see that?
A. I certainly do.
Q. Most of those delays were attributable to either Florida Cities or its consultants, correct?
A. Yes, it's part of their control.
Q. Okay.
Now, most of the contractor delays are attributable to Source Engineering which did the design, correct?
A. No, I don't think I'd agreed with that. Say that again. I heard you to say most of the contractor delays.
Q. Well, okay, maybe I should be more specific.
Source Engineering did the design, right?
A. Yes.
Q. And I'm sorry, 'cause I've -- my outline keeps saying delays and I've agreed to use deviations and I'm not trying to

Page 21

slip you up here, I'm going to try to hold true to my bargain.
The deviations between the anticipated time and actual time under design are attributable to Source Engineering, is that correct.
A. Well, actually, no I don't think they're all attributable to Source, there are some disputes between the company and Source about their scope and amending their scope and those kind of things, so, no, I think it's jointly held.
Q. Okay, between the company and Source, not all Source's fault?
A. No, it's just normal business transactions.
Q. I think my question was poorly phrased. I think that what I'm trying to establish is that Source did the preliminary design and to the extent there was a contractor deviation or a deviation for which this contractor was responsible as opposed to the company, that contractor was Source, is that correct?
A. And consultant is the word we use, that's why you through me. Contractor implies to me general contractor, so --
Q. I've been with the Government too long. We always use contractor. Okay.
Mr. Smith, moving right along, based on your twenty-five years experience in this field, and particularly your familiarity with engineering firms in the Tampa area, Mr. Smith, you would not have selected source to do this job, would you?

Page 22

A. I probably wouldn't have, no.
Q. In fact, you would have recommended someone else?
A. Probably would have.
Q. And there are many firms in this area that could have done this kind of project, aren't there?
A. Yes, including Source. I mean they were capable. I didn't say they weren't capable just because I wouldn't have chosen them?
Q. Fair enough. But there were firms with greater capabilities in wastewater treatment design in this area than Source?
A. Yes, I would agree with that.
Q. Okay.
Now continuing on down your table to your construction section. The line item that reads, quote, contractors prepare stroke submit bids, unquote. The delay there is attributable to the contractor, correct?
A. No.
Q. No. To the consultant?
A. Usually, what happens there, there are some questions regarding the bid raised by the contractors or issues that have raised during the bidding period, and so the owner or the engineer has to extend the bidding period and that is more than likely what happened during this period. The contractors is actually bound by contract to bid whatever period the owner and

Page 23

engineering allow him to bid, so the contractor really has no control over that time, it's the engineer or the owner that control that time.
Q. So that delays either the contractor or consultant or the company, correct?
A. The consultant or the company.
Q. Okay.
Finally, your line item that reads, quote, the contractor achieves substantial compliance, unquote. Here again, the delay is a attributable in part at least to the contractor, correct?
MR. SCOGGIN: Your Honor, Counsel keep using the term "delay," I think we agreed to use the term "deviation".
MR. JACOBS: I stand corrected for what it's worth.
BY MR. JACOBS:
Q. If I slip, Mr. Smith, and say delay because it's Monday morning and I'm looking at my outline, I do mean deviation.
A. Thank you, I understand that, it's clear. The contractor achieves substantial completion is the term, Mr. Jacobs, and there are a number of things that impinged upon his schedule there, and certainly he had charge of it. As I tried to describe, this is a very difficult construction site.
Q. I understand that, and that had to do with the size, if I followed your talk on Friday?
A. That's correct?

Page 24

Q. Right. Now when he starts out the contractor knows that's a problem 'cause presumably he goes to the site and takes a look, right?
A. Yes.
Q. Just like we did in the video and Mr. Klingenstein said that's a pretty lot of stuff on just a little site, right?
A. Great deal.
Q. Okay, so then that's something perhaps he can anticipate if he just takes a look in advance; is that fair?
A. Usually, unfortunately, you're giving a contract -- given a contract that has a firm completion date such as this one which is given by an order, and the contractor really has no opportunity to negotiate it or disagree with it before he bids the job. He takes the bid, often knowing he's unable to meet that deadline and is going to need to work it out during the period of the contract. Not at all unusual.
Q. Would you agree that before he signs the contract with the completion date that he would normally go take a look at the site?
A. Oh, probably required, in fact.
Q. Okay.
Now, Mr. Smith, if a client came to your firm in Tampa with the project such as the Waterway Estates upgrade and considered the project urgent and was willing to pay a premium to have the project expedited, would you in fact attempt to

Page 25

accommodate the client?
A. Yes, we would.
Q. And your timetable would be adjusted accordingly?
A. On those things over which we had control, yes.
Q. In fact, at your deposition, I gave you the same hypothetical question, didn't I?
A. Right.
Q. And what I called and I think we agreed to call the expedited or fast track, quote, unquote, timetable and you then proceeded to elaborate on table one by essentially in your deposition testimony suggesting how long each task would have taken under the expedited or fast track timetable, correct?
A. Right, I remember it well, Mr. Jacobs.
THE COURT: Are you seeking to impeach him based upon his deposition testimony?
MR. JACOBS: Not at all, I'm setting up --
THE COURT: All right. Well, let's -- there's no other purpose for harkening back to the deposition testimony. I got enough here in open Court without having to deal with -- unless it's impeachment.
MR. JACOBS: No, sir, it was really just to -- a lead into the next exhibit.
THE COURT: All right, go ahead.
MR. JACOBS: And the next question, more than anything else. That was not an attempt at impeachment.

Page 26

THE COURT: All right.
BY MR. JACOBS:
Q. Directing your attention now to Exhibit 508, Mr. Smith, and does --
MR. JACOBS: Just for the record, this is Government Exhibit 508. I've got terrible eyesight, can I get a little closer?
MR. SCOGGIN: Your Honor, we have objected to the use of this exhibit, it was only made available to us last week. We've never seen it before, was not part of the exhibits presented by the United States as part of this --
MR. JACOBS: Judge, actually it was a couple of weeks ago. What we did as we were preparing for trial, and in particular, preparing to examine Mr. Smith and trying to understand his own table, was what we've done here is illustrate his own table, table one from his report, and the deposition testimony which is why I used that as the lead into this questioning. So, I don't think there's anything unfair here. We're not submitting that exhibit for our own expert to testify to, all we've done is illustrate Mr. Smith's own report and his own table and his own testimony and --
THE COURT: You're not offering that in evidence then?
MR. JACOBS: Well, if he confirms that each of --
THE COURT: Well, it was not timely produced, was it,

Page 27

the exhibit?
MR. JACOBS: Well, normally for an expert, you'd product the exhibit at the time you produce his report, but again, this is the adverse expert's testimony and report we're seeking to illustrate after his report and testimony. I don't think there's anything unfair. If he testifies that it's inaccurate, that it doesn't accurately illustrate his own report and his own testimony, then I would --
THE COURT: I'll permit you to use it in a demonstrative manner, but whether I'm going to allow that in as an exhibit is problematic to be received as an exhibit as such.
MR. JACOBS: Very well, sir.
BY MR. JACOBS:
Q. Mr. Smith, would you take a look at what has been marked for identification so far as Exhibit 508?
A. Yes, I am.
Q. And feel free to refer to your table one which I see you have in front of you. Have we -- starting from the bottom --
THE COURT: Just a moment. Do we have that microphone that goes around the neck, because he needs both of his hands, I think. There we go. Just put that around your neck. I think everybody can hear you. Assuming it's working.
MR. JACOBS: I could speak up if need be.
THE COURT: Never mind, never mind. Can't get it

Page 28

working. Okay, go ahead.
MR. JACOBS: You keep the pointer.
MR. SCOGGIN: Your Honor, may we move to see the chart?
THE COURT: Yes, sir.
BY MR. JACOBS:
Q. Now, we both have a pointer.
Now, starting from the -- let's start with the middle line, the anticipated construction schedule and for no other reason than it is the first column in your table one, is that correct?
A. That's correct.
Q. Have we accurately represented your time line for anticipated construction?
A. It looks to be generally in conformance. Obviously, I'm not going to check every detail of it, but generally, it represents our table, but we would have said anticipated would be, yes, that's correct.
Q. Now moving down to your next column, is in fact actual construction schedule, is that correct?
A. Correct.
Q. And have we there again accurately illustrated your own second column of table one.
A. Looks pretty much in conformance, Mr. Jacobs?
Q. Okay. Now this next one might be a little bit tougher.

Page 29

What we have done on the top row is we've tried to illustrate your deposition testimony about the expedited or fast track schedule. Can you recall whether we've accurately done so?
A. I wouldn't know without going back and adding up all the days that we talked about in my deposition. Of course, as you recall from that time, this was a very unlikely scenario, but I'm kind of at your mercy.
THE COURT: Mr. Jacobs, you have a habit of smiling in a manner that indicates incredulity when a witness responds in certain ways. That's very distracting to me. And it's unbecoming and you may not even realize you're doing it, but you do it, and I don't want it anymore.
MR. JACOBS: Yes, sir, and I apologize, it's not intended in any disrespectful manner.
THE COURT: Well, what it is, it's a comment, unstated comment by the advocate on the witness' testimony.
MR. JACOBS: Fair enough.
THE COURT: Go ahead.
MR. JACOBS: I apologize.
BY MR. JACOBS:
Q. Well, let's go item by item then perhaps.
It's my recollection that you said in terms of in preparing the RFP had to be done under fast track in seven days, is that correct?
A. Mr. Jacobs, I mean, unless I wanted to look at my

Page 30

deposition testimony, I'm kind of at your mercy on this. I don't recall all the dates, I do recall our exchange that on that October 31st day, but that's all, or 30th, whatever date it was.
Q. And on the second item, consultant prepares and submits proposals, do you recall saying that could be done in fourteen to twenty days?
A. Yes.
Q. And insofar as SCWC, evaluating, selecting, negotiating and awarding the contract, you recall that you said that could be done in thirty days?
THE COURT: Well now, you're asking him to recall what he said on his deposition, sir, is that correct?
MR. JACOBS: Yes.
THE COURT: Mr. Jacobs?
MR. JACOBS: Yes.
THE COURT: How is that -- as I told you a few moments ago, I will permit you to impeach his testimony with his prior deposition. But, from a standpoint of substantive evidence, I'm not going to permit that, and frankly, I think that is one of the things that is wrong with that exhibit there. Go ahead.
BY MR. JACOBS:
Q. Let me take the point and rework the question, if I may. Under FCWC prepares, issues RFP, under a fast track scenario,

Page 31

sir, could that be done in seven days?
A. Yes.
Q. Consultants prepare stroke submit proposals. Under your own fast track scenario, could that be done in fourteen to twenty days?
A. Yes.
Q. FCWC evaluates, selects, negotiates, awards contract. Under your own fast track scenario, could that be done in thirty days?
A. Yes.
Q. Consultant performs study, submits report. Under your own fast track scenario, could that be done in ninety days?
A. Is that possible, yes.
Q. FCWC evaluates report, selects alternative. Under your own fast track scenario, could that be done in thirty days?
A. Thirty days would be certainly expedited, right.
Q. But within reason under --
A. It's possible.
Q. Moving down to the next line item and section. FCWC prepares, issues RFP for design services. Could that be done under a fast track in ten days?
A. That would be a real stretch, but assuming they had prepared for it ahead of time, yes.
Q. Consultant prepares stroke submits proposal. Could that be done in twenty-one days?

Page 32

A. Yes.
Q. FCWC evaluates, selects, negotiates, awards contract. Could that be done in forty-five days?
A. Yes.
Q. Consultant designs facility, submits permit aps -- that's applications?
A. That's correct.
Q. To FDER. Could that be done under your fast track scenario in a hundred and eighty days.
A. That would be a real push, but yes.
Q. Under permitting, could you go any faster than your anticipated duration?
A. As it turns out, you can't go that fast, Mr. Jacobs. I just did this under fast track and it took us two hundred and seventy-three days instead of two hundred and eighty-nine.
Q. So your anticipated duration is equivalent to a fast track in your own table here?
A. It's probably unrealistic optimism as it turns out.
Q. 'Cause you just did another one subsequent.
A. Just did one like this plant that took two hundred and seventy-three days. We were hammered on it all the way.
Q. After you did this report?
A. After I did the same kind of workup. Oh, after this report?
Q. Yes.

Page 33

A. Right.
Q. So you're relating an experience that took place after this report?
A. Oh, no, no, the work was done prior to the report being submitted, yes. You mean, we're talking about this report right here, the expert report for Waterway Estates?
Q. Yes, sir?
A. Yes, it was done prior to that.
Q. Okay.
But you agree at your deposition that the anticipated duration time 30/30/30/90?
A. Right.
Q. Was the fast track?
A. That was the best you could do, that's right, assuming everything hit. All I'm saying, even that is optimistic.
Q. Now finally, under construction, PCWC reproduces, advertises under the fast track, that could be done in thirty-seven days in conjunction with the contractors prepare and submit bids, correct?
A. That is possible.
Q. PCWC evaluates, bids, awards contracts or contract. That could be done in sixty days under the fast track?
A. Right.
Q. PCWC issues notice to proceed. That could be done in fourteen days under the fast track, correct?

Page 34

A. Right.
Q. And finally, contractor achieves substantial completion that could be done even under a fast track in four hundred and eighty days that you anticipated it would take, correct?
A. We thought that was a very aggressive schedule.
Q. So, you didn't change that?
A. Didn't change that.
Q. Right, okay.
Now, having gone through the schedule from table one in association with your deposition testimony, is it fair to say that we have accurately illustrated the fast track scenario or the expedited construction schedule from your own testimony?
MR. SCROGGIN: Objection, Your Honor, the term "expedited" is not the term that was used in questioning the witness. Fast track and expedited are not necessarily the same.
MR. JACOBS: I think they're both used. We could look into that matter.
THE COURT: I'll overrule the objection. Overruled.
THE WITNESS: Mr. Jacobs, it appears that you have accurately squished together all those dates, put them end to end, and as you recall in our deposition, I said that's pretty much impossible. There may be segments of this that you can do and sustain that kind of effort, but to do it all at once is really a misrepresentation. You cannot achieve that schedule

Page 35

without -- just under normal circumstances, and this takes no account for permitting agency interruptions or interventions, but those -- that chart that you have accurately adds up all those dates.
BY MR. JACOBS:
Q. In your own --
A. I believe what you have done in that way is correct.
Q. Okay.
MR. JACOBS: Your Honor, now I move 508 into evidence, please.
MR. SCROGGIN: Objection, Your Honor. We've stated for the record already our objection as to the use of this exhibit.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Mr. Smith, are you aware that Florida Cities actually received a notice of intent to deny the permit renewal back in June of 1986.
A. Yes, I believe that is right. Seems like they applied, they were noticed in April, so that makes sense. I'm not sure of the exact dates. But that sounds correct.
Q. Now, using 508 for illustrative purposes only, your table starts, table one, with EPA denying the permit in 1986, correct?
A. That's correct.

Page 36

Q. So, if they new in June of '86 that EPA intended to deny the permit, hypothetically, they could have gotten started under any of these time lines back in June of '86, is that correct, sir?
A. Hypothetically, that's correct, sir.
Q. Now, whether you got started in June of '86 or December of '86, under expedited schedule, you finished before July '91, isn't that correct?
A. Yes, again with the caveats we discussed already.
Q. And now, which is the bigger project, upgrading the plant or relocating the outfall?
A. Construction project, Mr. Jacobs?
Q. Yes.
A. The construction activity associated with the plant would be more difficult. Permitting we thought would be more difficult for the line.
THE COURT: Say that again. I'm not sure I understand you.
THE WITNESS: The physical construction activity we think is more -- would take longer with the plant than the line, but the line required a 404 permit from the Corps of Engineers. That's a very long lead time. We thought it would be less to get a permit for the plant which is an FDER permit.
THE COURT: Okay.
BY MR. JACOBS:

Page 37

Q. In point of fact, the contract with Source to design the relocation of the outfall was awarded in February of 1988 at the same time as the contract with Source to design the AWT plant, correct?
A. I believe that is right, as part of the same contract, but I'd have to exhume that again to confirm it.
Q. February '87, both contracts?
A. February '88.
Q. '88, February '88.
A. February 29th, yeah.
Q. Both contracts for the –
A. I believe that is right. Right.
Q. And the outfall had been relocated by July of '91, correct?
A. Yes, physically in place.
Q. But not before?
A. It was right – July – just ahead of July 1, it seems or June 30th, or something like that it was completed. Maybe it was an August deadline that was done in July. That may be what it was, Mr. Jacobs. I'm looking for those exact dates. I didn't find the exact date. Was done that summer in July, yes.
Q. Okay.
A. Pipeline was complete.
Q. Now, under expedited schedule, could the outfall have been relocated by March of 1990, as well?

Page 38

A. Well, the big problem with that schedule, Mr. Jacobs, it took a year to get a 404 permit. There is no inclusion of that here in that schedule.
Q. The 404 permit, that is what kind of permit?
A. That is a fill – you asking me – fill and dredge permit within the waters of the United States covered by Public Law 92500, Section 404, administered by the Corps of Engineers, yes.
Q. This is the same Corps of Engineers that you referred to on Friday as a notoriously slow agency?
A. It is one and the same.
Q. Okay.
If it's notoriously slow, does that suggest, and you know it's notoriously slow, does that suggest you put the permit application in at the first possible instance?
A. You can't apply for the permit until you have your design completed.
Q. And, does that suggest that you do your design at the first possible instance so you can get this permit into the infamously notoriously slow agency?
A. Notorious is my word, Mr. Jacobs, infamous is yours. And you would apply for it as soon as you had the design complete and knew that that was your selected alternative. You have to work through your selected alternatives to make sure you're going to discharge to the six foot contour point in the river.

Page 39

Once you have that, you proceed with the design, complete your design and, yes, then you would submit your application for permit.
Q. But if you know you have to do all these other things in order to get the 404 permit from the notoriously slow Army Corps of Engineers –
THE COURT: forget the "notoriously slow." I have heard that enough. Just – I understand what he's testified to on slowness of that agency. Just refer to the Corps of Engineers?
MR. JACOBS: Okay. Let me just move on, skip the Corps of Engineers.
THE COURT: Good.
BY MR. JACOBS:
Q. Since we heard enough about it.
If you know in June of '86 that EPA intends to deny the permit, then you could start all those design and other mechanisms that you need to complete before you applied for the Army Corps of Engineers permit six months earlier, is that correct?
A. If the company chose to move ahead, based on the preliminary intent, you could have moved to schedule ahead, that's right. Again, you still have to go through the steps of choosing alternatives, on and on.
Q. Well, assuming we start six months earlier, under the

Page 40

expedited construction schedule, is it fair to say you could ended six months earlier?
A. You could have ended six months earlier than whatever your schedule was. I wouldn't want to imply you could end six months earlier than March of 1990. 'Cause again, I think that's unrealistic in that it doesn't have time for permitting.
Q. Well, your expedited schedule did have time for permitting if you look back at table one as you elaborated upon again.
A. It had one hundred eighty days for the DER permit, doesn't have a year for the Corps of Engineers' permit, nor as we have found out, much longer time for DER?
Q. And the DER permit took a little extra time because DER wasn't satisfied with some of the information that the company had given it, is that correct?
A. There was a dispute and they had to understand exactly what the company was proposing.
Q. They asked – DER asked for additional information, isn't that correct?
A. They certainly did.
Q. And it took some time for the company to get the additional information to FDER; isn't that right?
A. That's typically interchange with that agency.
Q. In fact, the company had a dispute with its contractor over whether – or consultant over who was going to provide

Page 41

that information and whether the company had to pay the consultant to provide that information, isn't that correct?
A. That is part of scoping the job and understanding whether that in the scope or not.
THE COURT: Yeah, but his question is whether that's correct or not.
THE WITNESS: Yes, that's correct.
BY MR. JACOBS:
Q. Now, I posed a hypothetical that the company knows in June of '86 that they're going to get this permit renewal denied. If the company knows in 1981 that it doesn't have a wasteload allocation to discharge to the canal and it's going to have to relocate the outfall and upgrade the AWT standards to 1981, is it possible to complete these projects under any scenario by 1986?
A. If you start --
MR. SCOGGIN: Objection, Your Honor, question assumes a fact not in evidence.
MR. JACOBS: It's a hypothetical.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry, Mr. Jacobs, you said if you know in 1981 that you don't have wasteload allocation?
BY MR. JACOBS:
Q. If you know in '81 that you're going to have to upgrade your plant and relocate your outfall to get your NPDES permit

Page 42

renewed when it comes up for renewal in '86, you have got five years, isn't that right?
A. Right.
Q. And under any of these scenarios, expedited, anticipated or actual, you could complete the project, correct?
A. I think that is a reasonable time, although the only caution I'd give you is this -- the technology is changing, the technology that was proposed and caused part of the delays here with DER actually was because technology was changing. You're at the very front-end of when the kind of treatment technology was being put in place in Florida, and you'd actually have been kind of ahead of your time. Might have taken longer just to get it through. That's the only caveat I'd give you there, but it's kind of a raw time line, you'd think five years would be about the right time.
Q. It's just coming in Florida in the early '80's, but it had been out in -- out in Reno in that -- by 1970, is that right?
A. It was in -- Lake Tahoe was kind of a test demonstration site in the early '70's's. Again, not taking -- these are very stringent standards and unusually applied here in Florida and not widely applied throughout taught the U. S. and we're on the cutting edge in the early 1980's?
Q. Any reason you know of that Florida has these more stringent standards?

Page 43

A. Legislative fiat.
Q. Now, same hypothetical, if you know in 1982 that the possibility of a regional wastewater treatment plant for that Waterway Estates Plant had considered tying into -- if you knew that plant had fallen through in '82, could you complete the process under any scenario by '86?
A. That would be very difficult, I think.
Q. Four years?
A. Four years. Again, with new technology, selecting alternatives that really could buy off on, you're seven or eight years ahead of what actually happened and when it happened the DER had a great deal of difficulty with the technology questions.
Q. Under your anticipated schedule, it took about four years, isn't that right?
A. Right, but now you've moved it up in time, in history, so now we've got issues that have not yet been addressed by the regulators, and we've got to struggle with those more in terms. That's all I'm saying.
Q. It might have taken four years, might have taken a little bit more because there were new issues, is that what you're saying?
A. Right, exactly.
Q. Now, there were two types of NPDES permit violations at the Waterway Estates Plant; nitrogen and toxicity, correct?

Page 44

A. That is correct.
Q. And you do agree do you not that these violations would not have taken place had the plant been upgraded by the time the new NPDES permit took effect, correct?
A. That is correct.
Q. And you do agree do you not that the toxicity violations had an impact on water quality, isn't that right?
A. No, I don't believe that is true. Toxicity test violations had an impact; I don't think so, there's no connection there.
Q. Directing your attention to your deposition testimony, again I'll read you a question, and I'll ask you if you gave the following answer. Page ten, sorry, page 210, line thirteen, question, and from that you concluded that toxicity was not a serious problem with the Waterway Estates Plant. Answer, right. Question, when you say it's not a serious problem, would you say that -- would you say it was a problem but it just wasn't serious, or are you saying it wasn't a problem at all? Did you give the following answer, sir? In terms of water quality impacts, it has some water quality impact, obviously. Its nutrients in the water, and the ammonia is also nutrient contributing to the nitrogen load, so it has some impact. Do you remember giving that answer, sir?
A. Yes, I do.
Q. Next page I asked you, line one --

Page 45

THE COURT: Let me ask the witness, just for clarification so I understand. How does that answer differ from the one that you gave a moment ago?

THE WITNESS: If you remember, Your Honor, the toxicity test is this business with this fragile organism in the water, so it's ammonia that impacts that organism. The question was, does the toxicity test connect to impaired water quality. That is what Mr. Jacobs was asking me. Toxicity test really goes to this fragile species, not to the water quality. That is what I was trying to ascertain.

THE COURT: All right.

MR. SCROGGIN: Your Honor, I would object to the extracting of the answer of the witness out of context and ask that the remainder of his answer be read into the record as well.

THE COURT: Any objection to doing that as well, Mr. Jacobs?

MR. JACOBS: If you prefer, Your Honor, as opposed to on cross examination.

THE COURT: I think it would be more helpful to me to have it done now.

MR. JACOBS: Fine, fine. If I might elaborate, the theme is, from what I understand Mr. Smith's testimony, he's saying you can't necessarily extrapolate from the laboratory test?

Page 46

THE COURT: You're not testifying, don't characterize his testimony. That can be done in argument or if you want to clarify it, you can ask further questions.

BY MR. JACOBS:

Q. Let he ask you this for clarification sake, Mr. Smith. You're saying that the federally mandated toxicity test because they're done in a laboratory aren't necessarily an indicator of toxicity in a given water body, is that what you're saying?

A. That was part of it. Again, it's toxicity as to this given species which may or may not inhabit the Caloosahatchee River. What you asked me is a water quality question. I see those as separate questions.

THE COURT: Go ahead and ask -- read the balance of that.

BY MR. JACOBS:

Q. The balance of the answer to the question, when you say it's not a serious problem, would you say it was a problem, but it just wasn't serious, or are you saying it wasn't a problem at all. I'll read your full answer without extraction and ask you if that's the answer you recall giving.

In terms of water quality impacts, it has some water quality impact, obviously its nutrients in the water and the ammonia is also a nutient contributing to the nitrogen loading, so it has some impact, how great an impact, again it's a very small amount of nutrients, a few pounds, in a river that is one

Page 47

thousand times larger than its flow; is that your complete answer?

A. That sounds correct, yes, sir.

Q. Now, starting again at the top of page 211, question one, so you're saying it had some impact, but a small impact; do you recall saying right?

A. Yes.

Q. And line four, question, and so it might have been a problem, but not a serious one. *Is that a fair way to* characterize your testimony. Answer, do you recall saying, pretty close. I'm not going to say it's a problem. That's what I'm weaseling on is the problem issue. It has some impact. Whether it's a problem now, and then I am embarrassed to say I interrupt you, and I say, question, I see. You're not willing to say whether it was a problem, you, and then you interrupt me and you give the answer, that is kind of a judgment for regulators to make, not for me. Do you recall giving that answer, sir?

A. I don't actually recall all that exchange, I remember parts of it, but it's in the deposition and it must have been said.

Q. Just a few more questions. Mr. Smith, starting with another one on toxicity, do you know the difference between a major municipal and a domestic wastewater treatment plant and a minor?

Page 48

A. Is that a Federal designation or something you're asking me, or you asking me to determine what's a major and a minor? I'm not sure I understand you.

Q. Are you aware of the way those terms are used in -- for Federal permitting process?

A. No, I don't know the cutoff between major and minor for Federal permitting purposes, I do not know that, Mr. Jacobs.

Q. Okay.

Are you aware that seventy-six percent of major municipal and domestic wastewater treatment permits in the State of Florida have whole effluent toxicity limit. Seventy-six percent of -- I'm sorry?

THE COURT: Read that -- sir?

MR. SCROGGIN: I'm just objecting to the time period the question refers to?

THE COURT: Would you state the question again or I can have it read back.

MR. JACOBS: I'll try to state it again.

BY MR. JACOBS:

Q. Are you aware, sir, that in the State of Florida, seventy-six percent of NPDES permits covering major municipal and domestic wastewater treatment plants have whole effluent toxicity limits?

THE COURT: What period are we talking about?

MR. JACOBS: The present?

Page 49

THE COURT: Present.
THE WITNESS: Could be, Mr. Jacobs, I don't know surface water discharges. I assume.
BY MR. JACOBS:
Q. Sure.
A. (Witness indicating affirmatively.)
Q. And are you aware that these whole effluent toxicity limits that are put in NPDES permits are put in when there is a reasonable potential that a water quality standard will be violated without such a limit?
THE COURT: Now just a moment.
MR. SCROGGIN: Objection, Your Honor, this witness is not purported to be an expert on permitting reasons for inclusion in the permits of certain limitations?
MR. JACOBS: He was put forth in four different categories. I dare say this would fall under at least one of them.
THE COURT: Well, I'll stretch the point and overrule the objection, receive it for what it's worth.
You remember the question?
Read it back.
(Record read back.)
THE WITNESS: Yes, I'm aware of that, although it's in dispute by several dischargers.
MR. JACOBS: No further questions, thank you, sir.

Page 50

THE COURT: Okay.
Redirect, Mr. Scroggin.
MR. SCROGGIN:: Yes, Your Honor.
REDIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Mr. Smith, during your cross examination on Friday, you were asked whether or not you had investigated the alternatives for the Barefoot Bay Facility discharge. And I would ask you, sir, you were asked specifically whether you had looked at building percolation ponds, deep wells, spray irrigation and other alternatives, to the surface water discharge at Barefoot Bay. Do you recall that exchange?
A. Yes.
Q. And I ask you, sir, your response was, no, that was not included in your mission. I would ask you, sir, do you have experience as a real estate appraiser, and are you experienced in such matters appraising property for potential acquisition?
MR. JACOBS: Objection, that is clearly outside the scope of his expert testimony?
THE COURT: You're not going to be eliciting testimony from him as to values?
MR. SCROGGIN: No, sir, I'm not. I'm simply establishing this is clearly outside the scope of his expertise for which he was offered.
THE COURT: I'll overrule the objection. You may

Page 51

answer the question.
THE WITNESS: No, I'm not experienced in that.
BY MR. SCROGGIN?
Q. Do you have any personal knowledge regarding the availability of property near the Barefoot Bay Wastewater Treatment Facility that might be suitable for spray irrigation fields or other alternatives?
A. No, I'm not personally aware of it.
Q. You were also asked a question regarding the impact of the Barefoot Bay effluent potentially on endangered species such as the endangered Wood Stork. And this question related to the impact of residual chlorine in the outfall. Do you recall that?
A. Yes.
Q. You also testified on Friday that the residual chlorine in drinking water was several times higher than that of the Barefoot Bay effluent, is that correct?
A. Yes, I believe that is right.
Q. Do you have any opinion, sir, regarding what impact if any there would be on endangered species if the Barefoot Bay Facility were discharging drinking water instead of treated secondary effluent?
MR. JACOBS: Objection.
THE COURT: Overruled.
THE WITNESS: Well, if -- regarding chlorine, I mean

Page 52

whether it's drinking water or sewerage, the chlorine still has the same affect on the receiving waters, so it would be worse to discharge drinking water with the high chlorine residual than it would sewerage.
BY MR. SCROGGIN:
Q. And would you anticipate that there would in fact be any impact on endangered species near Barefoot Bay for the discharge of drinking water?
MR. JACOBS: Objection, goes beyond the scope of his testimony and his report.
MR. SCROGGIN: I would suggest, Your Honor, it does not go beyond the scope of the cross examination which specifically suggested there would be an impact on the endangered Wood Stork and from the residual chlorine in the effluent. I'm simply asking him to compare that testimony and response to the cross examination question with his earlier direct testimony comparing the effluent to drinking water.
MR. JACOBS: Judge, he said had no opinion. He's not trying to elicit an opinion.
THE COURT: I'll overrule the objection. You can answer that.
THE WITNESS: Well, again, as to the chlorine, the chlorine residual would be higher I would suspect from drinking water in the stream, and would have the same kind of impact on the stream in terms of the barrier for certain aquatic species.

Page 53

Some species will swim through the zone, there's others that are more fragile that won't actually impact it. The more residual just takes longer before it would dissipate as it would move down the stream. As I say, the level that was given in the effluent actually reported as discharge is pretty small and as I think I testified Friday, would probably be dissipated in a matter of a few hundred yards downstream, so I mean, you're talking about a canal that goes three or four miles before it gets to the north prong of the Sebastian River, so there's a lot of room for Wood Storks to go in, but I'm not an expert on Wood Storks, so I don't know.

Q. Are you aware of whether or not the Setilic Island to which the Barefoot Bay discharges, is itself listed as an endangered or protected water body?

A. I'm not aware. I think the Indian River Lagoon is the only one of that group that is.

Q. By the time effluent reached the protected Indian River Lagoon, would you anticipate any impact at all from the chlorine residual in the Barefoot Bay's discharge?

A. No.

Q. Would you have the same answer even if that -- the chlorine residual in the Barefoot Bay discharge were several times higher, even as high as that in drinking water?

A. Yes, same opinion.

Q. I'd like to turn if I could to the Carrollwood Facility.

Page 54

You were questioned on Friday about the sources of pollution into Tampa Bay. And I would ask you, sir, if you know what pollutants are of concern to Tampa Bay that gives rise to it being a protected water body?

A. Well, certainly carbon, nitrogen and phosphorus are all of concern.

Q. And what are the sources of those pollutants; carbon, nitrogen and phosphorus, into Tampa Bay?

A. Any number of sources. Regulated sources include several sewerage treatment plants, principally the Howard F. Curen Plant which is operated by the City of Tampa, which has permitted discharge of some sixty-five or sixty-six MGD, and probably -- well, I'd have to calculate the number, hundred thousand pounds of nitrogen permitted from that facility.

But there is also a great deal in our case, unusually we handle a lot of fertilizer on the docks at the Port, that's another source of concern for nutrient loading into the Bay, and it's carefully monitored and try to keep clean.

Q. I'm sorry.

A. And then also, typical storm water runoff from urban areas from irrigated lawns that have been fertilized and wash nutrients into the receiving waters, eventually into Tampa Bay.

Q. Can you compare the magnitude between the regulated point sources of such discharges and the other non-point sources in the -- that would be resulting in pollution in the Tampa Bay

Page 55

area?

A. I don't have firsthand knowledge, Mr. Scroggin, of that. It would be a generalization.

Q. Do you know if -- do you have any estimate at all or any relative comparison of discharges from wastewater treatment facilities versus all of the other sources of pollutants in Tampa Bay?

A. I don't. I do know that we've taken out -- we've controlled the point sources from the wastewater treatment plants and we've seen that noticeable impact of improvement in the Bay over the last ten years, and so generally we consider that the non-point source pollution coming from runoff is greater than point sources, but in this case, because of the concentrated discharges that we have, I'm not sure that generalization holds true.

Q. Among the regulated point sources, the wastewater treatment facilities in the bay area, can you rank the Carrollwood Facility among the others?

A. It has to be near the bottom.

MR. JACOBS: Objection.

THE COURT: Just a moment, sir.

MR. JACOBS: I'm sorry, this goes beyond the scope of his report and deposition testimony.

THE COURT: Sustained.

BY MR. SCROGGIN:

Page 56

Q. With respect to the three facilities at Barefoot Bay, Mr. Smith, Carrollwood and Waterway Estates, you were asked on Friday for each of these facilities whether or not the pollution from each would have been lessened had they upgraded to an advanced wastewater treatment and your response, I believe, was yes, the pollution would have been reduced had they been upgraded to AWT. And I would simply ask you, first, with respect to the Barefoot Bay Facility, is it correct that the Barefoot Bay Facility began before its current upgrade, that the effluent from the Barefoot Bay Facility was cleaner than secondary and that it was eventually upgraded to the still cleaner advanced wastewater treatment?

A. Yes. It was cleaner than secondary, it had generally very high removals of BOD and suspended solids and achieved some nitrogen removal. So, yes, it was a very well treated secondary effluent.

MR. JACOBS: Your Honor, this sounds very familiar from his Friday direct testimony for what that is worth.

THE COURT: Well, it sounds familiar to me, and please don't have him restate what he's already stated.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. There's been a lot of discussion in your testimony regarding discharges into small water bodies such as the canal at Barefoot Bay, Sweetwater Creek and Carrollwood and the canal

Page 57

at Waterway Estates. And I would ask you, sir, are there certain conditions under which the health of the water in the small receiving water bodies is actually improved by the discharge of secondary treatment, at least with respect to some measures of the health on receiving water?

MR. JACOBS: Objection, goes beyond the scope of his report, his deposition testimony and the examination that I examined him on.

MR. SCROGGIN: Your Honor, the cross examination specifically directed the witness' attention to the impact on the small receiving water bodies of the pollution with the implication that it was always a negative impact. I'm simply asking the witness if that impact is in fact always negative.

THE COURT: I'll overrule the objection. You can answer that.

THE WITNESS: With respect to Barefoot Bay, that canal has probably got water in it all the time and, you know, even at the worst condition, I'd suspect there's quite a bit of dilution in whatever impact it's going to have, it's going to have. There's always water there. I don't think there's – increment of additional water is probably inconsequential from the Barefoot Bay Plant.

At Carrollwood on the Sweetwater Creek, there are periods during the year in which the creek water is regulated upstream, and so there is very little if any water in the creek

Page 58

upstream. In that case, putting water in that is of relatively high quality is actually going to assist some of the vegetation and aquatic life in the stream downstream. It's not a deterrent to all he aquatic life, just some that are more fragile. Under most conditions, though, that is again a fifteen to one dilution under average conditions in that creek.

In the case of Waterways Estates, it's just imperceptible. That canal, the mass of water in that canal versus what is coming out of the plant is pretty small. I mean, it's certainly not doing anything to enhance the water quality there because there's lots of water there.

Q. A significant portion of the questioning on Friday and today has dealt with what can be done technologically or physically, and I'll ask you, sir, have you ever in your years of experience dealing with the construction and operations of wastewater treatment facilities, had clients who had no cost constraints, who simply asked you the question of what was physically possible as opposed to what was practical or feasible?

A. I have had some that thought they had no cost constraints until they encountered what the real costs were and there's always constraints of some kind on cost.

Q. Do you in your work as a consultant assisting municipalities and companies in constructing and building wastewater treatment facilities, ever plan a project without

Page 59

any consideration of the cost?

A. No, that is usually the most important consideration, along with meeting your mission.

Q. Are you – do you have any familiarity with EPA's funding of certain wastewater treatment facilities in the United States and in Florida?

A. Yes, I do.

MR. JACOBS: Objection, this is beyond the scope.

THE COURT: Sustained.

BY MR. SCROGGIN:

Q. You stated today, sir, that environmental protection would be maximized at the six foot contour line with respect to the Waterway Estates Facility. Is that based on data or on modeling?

A. Based generally on intuition largely, Mr. Scroggin, in that you're going to get the best mixing and deepest segmented and highest velocity of the stream, and so, that is more of an engineering judgment, engineering intuition on my part. I think in modeling, that was done, was unable to show a real increase in water quality.

Q. You made a similar statement today regarding the six foot contour line being the spot in the river that would maximize the water quality. I would ask you the same question with respect to that answer, was that answer based upon data you reviewed or upon your intuition or modeling.

Page 60

A. It's again, based on my general understanding of effluent dispersion and dissipation. I've done a fair amount of work in that area and modeling, those things, so I have a good sense of what makes it work and in that case, I think that would be the optimal place of discharge.

Q. You were asked several questions today regarding wasteload allocations, whether or not the Waterway Estates Facility had a wasteload allocation, what its role was in the permitting process. I'll ask you, sir, do you have expertise in the development and use of wasteload allocations for permitting purposes in Florida?

A. I have done a fair amount of work in wasteload allocations. I've not been involved in wasteload allocations in Florida.

Q. Have you any expertise regarding the legal requirements of wasteload allocations to be used in effluent limitations in the State permits?

A. Not in Florida, no.

Q. And were you asked to perform any such analysis in preparing your expert report for this case?

A. No.

Q. You were asked several questions today regarding the deviation from the anticipated schedule for the construction projects, the construction of moving the outfall and the upgrade to AWT at the Waterway Estates Facility. You were

Page 61

asked in particular whether or not you had ever in your experience had a client tell you that the matter was urgent and offered to pay a premium. And I ask you, sir, do you have any knowledge or experience regarding how the Florida Public Service's Commission would view the prudency of paying premiums for urgent projects?

MR. JACOBS: Objection, goes beyond the scope. Also calls for speculation.

THE COURT: I'll overrule the objection.

Do you know? What is -- do you know?

MR. SCROGGIN: Do you have -- you want me to ask the question be read back?

THE COURT: Read the question back -- well, let me hear it 'cause I'm not sure I remember all of it.

(Record read back.)

Do you have a view, yes or no?

THE WITNESS: Yes or no? Yes, I would have a view.

THE COURT: Okay.

BY MR. SCROGGIN:

Q. Do you know whether or not the premiums paid for urgent projects are routinely approved by the Public Service Commission?

MR. JACOBS: Same objection, goes beyond the scope and calls for speculation.

THE COURT: I'll overrule the objection.

Page 62

THE WITNESS: I don't know about premiums, per se. What I know is that the Public Service Commission looks with excruciating detail at all the costs the company incurs and wants to include in the rate base. That is what I have personal experience with this company.

THE COURT: I'm recede from my previous ruling and sustain the objection and the answer will be stricken.

BY MR. SCROGGIN:

Q. Finally, Mr. Smith, you were asked several questions regarding the table in your expert report for -- regarding Waterway Estates which is Florida Cities' Exhibit Number 92, which has been entered into evidence, and on page 35 of that report, you have listed anticipated duration of days, actual duration of days, and date completed. You were asked several questions about a new column that does not appear on this table. That was characterized as the fast track. And for each one of the entries, you had a shorter period of time than that that is either the anticipated or the actual duration. And I'd ask you, sir, have you ever, in fact, in your experience seen one of those entries in the fast track achieved in practice?

A. One of the entries, you mean one line?

Q. A single one, such as the --

A. Yes.

Q. Very first one, a single entry in one of the rows; have you ever seen that small number of days actually achieved in practice for one of the items of the many on the list?

A. I would say it's true for every item by itself.

Q. And have you ever seen a project that requires all of these steps in fact achieve such a small number of days for each one of the many steps?

A. No, I haven't.

Q. Have you ever used the term "expedited schedule" for any of the projects that you have yourself been involved with?

A. Yes.

Q. You think it's fair to call an idealized small number of days for each one of these steps expedited; is that a fair characterization for the smallest number of days added together end to end that you have ever seen for each one of these many steps?

A. Well, what we would -- to look at a fast track or expedited schedule, we would look at the schedule in whole and some things are going to be short and others are going to be long, but we look at the schedule in the continuum and certainly we have dealt with fast track schedules.

Q. Have you ever achieved a schedule in fact for a project such that each one of the entries of these many steps was at its absolute minimum value in the column that you characterize as fast track?

A. No.

Q. Have you ever in your many years of experience known any other engineer who has ever been able to achieve an end to end minimization of each of the time required for each one of these steps for a complex project such as this?

MR. JACOBS: Objection, hearsay, calls for speculation.

THE COURT: Overruled.

THE WITNESS: Not that comes to mind right now, no.

BY MR. SCROGGIN:

Q. Do you think that such an idealized minimum time schedule is realistic in any sense?

A. No.

Q. Finally, the construction schedule was discussed in some detail today. I'll ask you, sir, do you know when in fact the -- or let me ask you a preliminary question first, if I might.

The date -- does the construction schedule depend in part on the date that the company knows that it in fact has no choice but to begin construction and move the outfall and by that, sir, I mean, does the beginning date for all of these many steps depend in part on a decision by the company that it must initiate the first step and begin the construction process?

A. Well, not only construction, but the entire investigation process. I mean, that was what Mr. Jacobs was going to. At some point, the company has to decide to go or not -- or to wait.

Page 65

Q. And you were asked the question regarding how long would it have taken the company had they made that initial decision to upgrade the outfall, upgrade the plant and move the outfall in 1981, actually, sir, do know the date on which in fact Waterway Estates was formally for the first time required to upgrade to AWT and move its outfall as opposed to pursuing any other alternative?

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.

THE COURT: Overruled.

THE WITNESS: Well, we had official denial listed as 8 December, '86.

BY MR. SCROGGIN:

Q. But that official denial, are you – do you know the language that is used in the official denial; does the official denial require an upgrade to AWT in moving the outfall or does it require ceasing discharge?

A. I don't recall right now, Mr. Scroggin.

Q. Assuming for purposes of my question that the 1986 denial only requires ceasing discharge without naming the alternative to be chosen to achieve that cessation of discharge in the canal. Do you know the date on which the company was formally required to move the outfall and upgrade?

A. I don't other than obviously they had agreements with the regulators based on the schedules that were negotiated, had

Page 66

that agreement with the regulators, so other than those dates which are embodied in the actual orders.

Q. Assuming for purposes of my last question that the first date on which Florida Cities was formally required to upgrade the plant and move the outfall was in late 1988 in the State permit, would that potentially shift from 1986 to 1988, the beginning date for the gaining of permits and construction processes?

MR. JACOBS: Object, beyond the scope. He didn't review those documents prior to his deposition, the State permits or administrative orders. I think that has been established.

MR. SCROGGIN: May I address that Your Honor?

THE COURT: Yes.

MR. SCROGGIN: We talked a lot about time lines and I'm not asking him to interpret, I'm asking him to assume for purposes of my hypothetical that these are the operative dates, and he has reviewed dates and length of time of construction.

THE COURT: I'll overrule the objection.

THE WITNESS: You said spring of '88, Mr. Scroggin?

BY MR. SCROGGIN:

Q. Late 1988.

A. Late 1988. Appears then that their actions were prudent in that they took care of preliminary matters before they had the actual notice, so they were – they were moving ahead of

Page 67

that time. I would hate to think you'd wait right until the time you got the final notice.

MR. SCROGGIN: I have no further questions.

THE COURT: Okay.

Thank you, sir, you may step down.

THE WITNESS: Thank you, sir.

THE COURT: Call your next witness.

MR. SCROGGIN: Florida Cities calls Randy -- Randall Armstrong.

THE COURT: Let's go ahead and take a fifteen minute recess.

(Thereupon, a brief recess was taken.)

Page 68

THE COURT: All right. Call your next witness.
THE DEPUTY CLERK: Raise your right hand.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: My name is Randall Lavoid, L-A-V-O-I-D; Armstrong, A-R-M-S-T-R-O-N-G.

- - -

Thereupon,

RANDALL LAVOID ARMSTRONG,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. SCROGGIN:

Q. Good morning, Mr. Armstrong.
Would you please state your current position?
A. I'm executive vice-president of the Phoenix Environmental Group, Incorporated.
Q. And how long have you served in that position?

Page 69

A. Essentially for the last six years.
Q. How long have you been with Phoenix Environmental?
A. Well, the first year -- I actually set up my own company in 1990, which was Phoenix Environmental Associates. Later that year, my partner and I merged and formed the Phoenix Environmental Group.
So, for a brief time that first year, I was a company of one. But since that time, in 1991, I have held a position with the Phoenix Environmental Group.
Q. What is your educational training in college?
A. I have a bachelor of science degree in biology and education from the Florida State University, received that in 1971.
Q. Okay. And what was the first full-time employment you had after college?
A. For a brief time, in the summer of 1971, I did some research for the National Science Foundation. I was actually under contract with the Orange County School System in Florida to develop curriculum for aquatic studies for Orange County high school students.
Q. Can you tell me your next full-time employment?
A. Yes. For a very brief time, I taught high school in Orange County, Florida.
MR. QUINN: Your Honor, if it will expedite matters, the United States will stipulate to the credentials of Mr. Armstrong. As long as we know what we may be able to stipulate to that, too, sir.
MR. SCROGGIN: Your Honor, if I might n areas in which I will proffer this witness as an e witness.
THE COURT: All right.
MR. SCROGGIN: I will proffer him in the areas of the technical development of waste load allocations and their use in Florida; second, the use of waste load allocations in the development of effluent limitations in State permits in Florida; third, the sampling and analysis of surface waters and the analysis of water quality data; fourth, computer modeling of water quality impacts on surface waters in Florida.
THE COURT: Computer modeling of what?
MR. SCROGGIN: Computer modeling of water quality impacts on surface waters of Florida.
And fifth, comparisons of water quality data and water quality modeling to the water quality standards of Florida.
THE COURT: Comparisons of water quality data what?
MR. SCROGGIN: Comparisons of water quality data and water quality modeling to the water quality standards of the State of Florida.

Page 71

MR. QUINN: Your Honor, those five areas are further than we thought Mr. Armstrong was going to be designated to testify about. In fact, most of those go beyond the scope of his expert report and were not listed in his expert report or in his deposition at the time we took it. The five areas that Florida Cities seeks to have him certified in are beyond it.
My understanding of his report dealt solely with comparisons of water quality data in and around the Caloosahatchee River.
And for that reason, sir, we would object to the qualification of the witness for any of the other four or five other areas. I can't tell...
MR. SCROGGIN: Your Honor, may I suggest one -- I will try to expedite the process as much as I can, but I do believe that we should be allowed the opportunity to qualify him in these areas. He --
THE COURT: Well, you may be able to qualify him in these areas, but the question is whether he's going to be permitted to testify, notwithstanding the fact that he's got qualifications.
The Government has said that he's not entitled to testify in four of the five areas because he has not been proffered for that purpose appropriately under the rules.
MR. SCROGGIN: If I might, Your Honor, I'm

Page 72

referring to the joint pretrial statement in which Mr. Armstrong's testimony is characterized, and those areas include the historical water quality of the Caloosahatchee River --

THE COURT: All right. Where is that in the five categories that you have just gone through?

MR. SCROGGIN: That would be in number three, Your Honor, the sampling and analysis of surface waters and analysis of water quality data.

THE COURT: Sampling of surface water --

MR. SCROGGIN: -- and analysis of water quality data.

THE COURT: -- and analysis of water quality data.

MR. SCROGGIN: That was the third category I read.

THE COURT: All right. Just a moment.

(Pause.)

THE COURT: And that's as to the Caloosahatchee River?

MR. SCROGGIN: Yes, sir. That will be the scope of our questions to him.

THE COURT: All right.

MR. SCROGGIN: We're only going to talk about Waterway Estates with this expert, Your Honor. His analysis will deal only with the lower Caloosahatchee River and the impacts on that water body of the Waterway Estates facility.

Page 73

THE COURT: All right. Just a moment.

(Pause.)

MR. SCROGGIN: Reading again, Your Honor, from our -- the joint pretrial statement, he is also being offered for the existence of water quality data, and that would fall within the fifth category which is -- I'm sorry -- to continue reading, the existence or lack thereof of water quality data indicating any impact of any discharges to surface waters from the Waterway Estates wastewater treatment plant.

THE COURT: Yes, and I think the Government recognizes that that falls within his proffer, correct?

MR. QUINN: Yes, Your Honor.

The proffer is set forth on Page 30 of the joint pretrial statement.

THE COURT: I'm looking at it. Go ahead.

MR. QUINN: Okay. It sets forth those two areas. These five areas -- first, I couldn't write them down quick enough, but they sound like they are well beyond anything that is listed on Page 30 or in his expert report.

And for those reasons, we would request that the Court not permit any questioning into those areas.

THE COURT: All right. Go ahead, sir.

MR. SCROGGIN: Your Honor, we've addressed, I believe, the five categories that I listed. Number four --

Page 74

and the second quote that I just read I believe falls -- is the fifth category: The existence or lack thereof of water quality data indicating any impact. That would involve the comparisons of the water quality data and the modeling, which is how the data are, in fact, developed with the water quality standards of Florida, which is the fifth category I have given you. So, I believe, sir, we've done four and five so far. Also --

THE COURT: You know, it sure would help on matters that are so technical as this if you could dovetail your statement of what the witness is going to be offered -- the categories that he's going to be offered in to what you're now saying that you intend to offer.

I was writing as fast as I could. I didn't get all these categories down. And I may have to take a recess and get Mr. Miracle to give me a statement of these various categories and make sure that you're not going beyond what you have proffered, legitimately offered previously.

Yes, sir?

MR. QUINN: Your Honor, two points: First, in Mr. Armstrong's expert report, there are two parameters that are listed: One is to review the data for key parameters that are indicative of the overall health of the estuarial system to determine the overall quality of the Caloosahatchee River estuary and to assess whether water

Page 75

quality appeared to be changing over time and, two, to attempt to locate water quality data from the area near a previous discharge point from the Waterway Estates domestic wastewater treatment facility to determine if that previous discharge was impacting water quality. That's it. That's all that's in there.

And, sir, this is further complicated by the fact that the Defendants want Mr. Armstrong to be both a fact and an expert witness, and they are expanding the scope of what he's going to testify about as an expert.

MR. SCROGGIN: Your Honor, Mr. Armstrong was questioned at his deposition at great length about the first two areas that I have just mentioned: The waste load allocation technical developments and their use in permitting.

If the Court wishes for him to be a fact witness in those areas and not an expert witness, that might be a way to cut through this potential problem, and we would be willing to accept that.

MR. QUINN: Your Honor, by the Florida Cities stipulation to try to qualify him as an expert witness, they concede that he has to be an expert to talk about it. And if he's going to testify as a fact witness, then they shouldn't be allowed to be mixing like this, sir.

MR. SCROGGIN: Your Honor, he has, in fact, been a

Page 76

fact witness in this case and an expert witness in this case. His deposition was consumed almost totally with issues relating to his factual experience rather than the areas in which we had noticed the Department of Justice he would serve as an expert.

The area that -- the last three areas dealing with the sampling, computer modeling and analysis of water quality data clearly falls within the description that we have offered in the joint pretrial statement.

This witness participated personally in the studies and supervised personally the studies that are at issue for water quality sampling, and in that regard he may be regarded as a fact witness by the Court.

THE COURT: Anything else?

MR. QUINN: One more point, Your Honor. He was deposed as an expert witness on the basis of his report. The fact that we may have asked questions about his background and his experience dealt with that experience as it relates to his expertise and doesn't relate to what he was going to testify about in this case.

And I'm advised he wasn't deposed as a fact witness.

THE COURT: Okay. Mr. Miracle, I want this transcribed as quickly as possible.

Where is the report?

Page 77

MR. SCROGGIN: I have his report with me.

THE COURT: Is it an exhibit?

MR. SCROGGIN: It is an exhibit. Yes, sir, it is. And I would move it into evidence.

THE COURT: What exhibit is it?

MR. SCROGGIN: Mr. Armstrong's report is Florida Cities Exhibit Number 91.

THE COURT: Okay. Well, we're going to take a recess for a little while. I don't know how long it's going to take for the Court to attempt to parse through this and to determine this issue.

We'll be in recess.

(A recess was taken.)

THE COURT: All right. The witness has been proffered in five categories as an expert, and the Court is of the view that he should be allowed to testify as an expert in the areas which are numbered three, four and five a few moments ago before I recessed.

The third area was the sampling and analysis of surface waters and the analysis of water quality data, and the fourth area was computer modeling of water quality impacts on surface waters in Florida; and fifth, comparisons of water quality data and water quality modeling to the water quality standards of Florida.

It appears to the Court that there has not been a

Page 78

sufficient predicate laid procedurally to permit the Defendant to testify regarding the first two areas on which he has been proffered; that is, the technical development of waste load allocations and their use in Florida and, second, the use of waste load allocations in the development of effluent limitations in the state permits in Florida.

Proceed.

MR. SCROGGIN: Thank you, Your Honor.

BY MR. SCROGGIN:

Q. Mr. Armstrong, one of the facilities that is at issue in this case is the Waterway Estates facility, and I will ask you, sir, when you were contacted to undertake work as an expert witness on behalf of Florida Cities with respect to that facility.

A. I was contacted by you, I believe, in late 1992 or probably early 1993 at that time primarily to assist you with gathering information related to this case, if I recall correctly.

Q. And what particular information were you asked to collect?

A. I was asked to gather information primarily from the files of the Department of Environmental Regulation, files related to water quality studies that had been done of the Caloosahatchee River and also files relating to permitting actions that had been taken by the Department or the

Page 79

Department was involved with that were being undertaken by the Environmental Protection Agency.

Q. And were you later asked to act as an expert witness in this case?

A. Yes, I was.

Q. And did you prepare a report as part of your work as an expert witness?

A. Yes, I did.

Q. I would ask that the witness be shown Florida Cities' Trial Exhibit Number 91, and I will ask you, Mr. Armstrong, is this the expert report that you prepared for this litigation?

A. Yes, it is.

MR. SCROGGIN: Your Honor, I would ask to move Florida Cities' Exhibit 91 into evidence.

THE COURT: It will be received.

BY MR. SCROGGIN:

Q. Mr. Armstrong, can you tell me what period of time your expert report covers?

A. I looked at all the historical data that I could find on the lower Caloosahatchee River. I focused on the period from 1982 to 1984 primarily because that's where the vast majority of -- the time period during which the vast majority of the water quality information had been collected.

Page 80

Q. Were any restrictions placed upon what data you were to review for purposes of your report?
A. No.
Q. Specifically, what instructions were you given with respect to analyzing all available data for the lower Caloosahatchee River?
A. I was asked to attempt to locate any data that I felt would help me evaluate the water quality of the Caloosahatchee River without restriction, basically.
Q. Can you tell me what instructions, if any, you were given with respect to analyzing data regarding impacts of the discharges of the Waterway Estates facility?
A. Yes. Again, I was asked to attempt to locate any data that I could that would help me reach conclusions regarding the impact of the Waterway Estates discharge, essentially again without restrictions on the type or nature of the data that I could pursue.
Q. Were you given any instructions at all regarding what conclusions you should reach in your analysis?
A. No, sir.
Q. Can you tell us specifically what data sources you reviewed in preparation of your report?
A. I researched the files primarily of the Department of Environmental Regulation. That agency has been designated as the repository for water quality data in the State of

Page 81

Florida.

And I looked in a number of their files and talked to some individuals there focusing in on three major sources of data: One was the water quality data that is contained in what is called the Storage and Retrieval System. STORET, S-T-O-R-E-T, is the acronym.

The STORET system is the computerized data base that is operated by the Department into which, by far, the majority of their data is stored or placed.

I also focused on the intensive survey documents that had been prepared by the Department documenting water quality data that had been collected by the Department during intensive surveys of the lower Caloosahatchee River both in 1980 and again in 1987, I believe.

Q. Can you describe the 1980 intensive survey to which you referred?
A. Yes, I can. The survey was designed to evaluate water quality data in roughly a 12-to-15-mile stretch, I believe, of the lower Caloosahatchee River. It was conducted by Department staff members, including myself.
Q. What was your own participation in that study?
A. At the time of the study, I was the administrator of the water quality analysis section of the department. That section was responsible for designing and actually implementing the water quality study and then analyzing the

Page 82

data.

Upon completion of that study -- the project manager for the study was a Mr. Bruce DeGrove who reported directly to me in my capacity as administrator of the section. I was involved in discussions with Mr. DeGrove relating to the design of the study, how the study was to be executed, and then I actually participated in the fieldwork that was necessary to collect the water quality information.

Q. Did you use the information from the intensive survey in 1980 for any modeling purposes?
A. Yes, we did.
Q. Can you tell me what those purposes were?
A. Yes. We had been asked by our district office in Fort Myers, which at the time was called the Southeast Florida District Office -- excuse me -- South Florida District Office -- the district had asked us to undertake the study in question and supply the results to them in support of both permitting decisions that they were going to be facing in the coming years and also --

THE COURT: Just a moment.

Yes, sir?

MR. QUINN: Your Honor, I'm going to object at this time. It appears that this testimony, although couched as fact, is going into the area of waste load allocations and the use of waste load allocations and the development of

Page 83

waste load allocations. For those reasons, I would object.

MR. SCROGGIN: May I be heard, Your Honor?

This witness has been proffered and accepted by the Court as an expert in computer modeling of water quality impacts on surface waters of Florida, which is category number four. It may be helpful to ask the witness the question. The waste load allocation is, itself, one of the products of such computer modeling and is a subcategory of computer modeling. I do, indeed, anticipate asking --

THE COURT: You can be heard in just a minute when he gets through.

MR. SCROGGIN: I would, indeed, Your Honor, expect to ask him some questions of the particular kind of computer modeling in which he has been proffered and accepted as an expert. One kind of computer modeling is waste load allocation.

I could perhaps ask him those questions if there's any question about that technical characterization of a waste load --

THE COURT: Well, let me hear from Mr. Quinn first.

MR. QUINN: I apologize when I stood up earlier, Your Honor. I thought Mr. Scroggin was asking a question about waste load allocation. I was just going to object. I have nothing further on this point, sir.

Page 84

THE COURT: Well, ask your questions which you say will support your legal argument here.
BY MR. SCROGGIN:
Q. I ask you, sir, if the information from the intensive survey was used for any modeling purposes?
A. Yes, it was.
Q. And was one of those modeling purposes the development of a model to be used in the development of waste load allocations for the Caloosahatchee River?
MR. QUINN: Objection.
THE COURT: Is this something that he testified to in the deposition?
MR. SCROGGIN: Yes, Your Honor. Virtually his entire deposition was devoted to his personal role in the development of the computer models used in waste load allocations and in the history of the use of those computer models in waste load allocations for the lower Caloosahatchee River.
The deposition lasted approximately three-and-a-half hours. Of that period of time, I would estimate no more than 15 minutes deviated from that single topic.
THE COURT: Mr. Quinn?
MR. QUINN: Yes, Your Honor.
We're getting into his fact testimony; that is,

Page 85

what he was a percipient witness on, as opposed to what his expert report relies upon.
To the extent that the two are inextricably linked, it is difficult for us to make objections on this basis, but I would object that all of this information is of a fact nature, and he should not be allowed to testify in his expert capacity to what he did as a fact witness unless it's within his expert report, sir. And this information that is seeking to be elicited is not in his expert report, sir.
THE COURT: Okay. Well, I'm going to overrule your objection, Mr. Quinn.
MR. QUINN: May I add one more point, sir?
THE COURT: Yes, sir.
MR. QUINN: As an additional note, Mr. Armstrong was not disclosed to the United States as a fact witness until after the conclusion of discovery.
In fact, in response to interrogatories filed after the close of discovery, that was the first time that in writing he was notified -- we were notified of his fact witness position. At his deposition was, in fact, the first time we knew that he had any role as a fact witness in any development of waste load allocations.
THE COURT: Mr. Scroggin, you want to be heard on that point?

Page 86

MR. SCROGGIN: Yes, I would, Your Honor.
I would ask that my colleague Mr. Alex Bullock speak to this since he was the person personally involved in these interactions.
I will say that it was certainly no secret that Mr. Armstrong was, indeed, the supervisor of the entire waste load allocation process. We assumed that was the reason the Department of Justice devoted virtually the entire deposition to that, much somewhat to our surprise.
We did disclose Mr. Armstrong's dual role as an expert and a fact witness in Florida Cities' amended revised responses to Plaintiff's first and second interrogatories.
A very short paragraph simply reads:
Mr. Armstrong is also listed as an expert witness. Additionally, he was employed by the Florida Department of Environmental Regulation from the early '70's to the late '80's. Mr. Armstrong is a co-author of the 1981 planning document which Connie Kagey used improperly in rejecting Florida Cities' 1986 renewal application for Waterway Estates. Mr. Armstrong has also participated in at least two extensive surveys of the Caloosahatchee River and has personal knowledge of the river in the vicinity of Waterway Estates. That ends our disclosure of his role as an expert in the three areas the Court has designated, also his factual history of involvement which intertwines that

Page 87

expertise.
THE COURT: Mr. Bullock?
MR. BULLOCK: Your Honor, Mr. Scroggin has covered most of the material that I was going to speak other than the fact that Your Honor had provided a scheduling order I believe in January of '95 which listed dates in which witness lists would be projected -- I mean when witnesses would have to be served on the opposing sides.
It's my understanding that the Government filed interrogatories seeking who -- exactly who our witnesses would be sometime in May of '95. We objected to having to provide the witnesses at that time.
The Government filed a motion to compel. Judge Swartz did not rule on that motion to compel until November 3rd, shortly before the close of discovery.
I might also point out that the Government did not provide a witness list themselves until the close of discovery as well.
THE COURT: Okay.
MR. BULLOCK: If Your Honor will remember, the case was originally set for trial in October of '95 and then extended until January and now March.
THE COURT: Mr. Quinn?
MR. QUINN: Yes, Your Honor. Just one point: The document that Mr. Scroggin read from the answers to

Page 88

interrogatories, that is the document to which I referred, and that was filed after the close of discovery and after a possibility to take any depositions.

MR. SCROGGIN: May I respond, Your Honor?

THE COURT: No, no. I've heard enough.

Well, all right. Go ahead. It may be that the Eleventh Circuit would perhaps be wondering what I cut off, so go ahead.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. Returning to the question I believe I was asking you --

THE COURT: No, no. I thought you had something else regarding argument.

MR. SCROGGIN: No -- oh, I'm sorry.

THE COURT: I misunderstood.

MR. SCROGGIN: Yes, I did, Your Honor, and that was --

THE COURT: Sir?

MR. SCROGGIN: I'm sorry, I mistook what you had said. I apologize. I do have one final point with respect to the current issue --

THE COURT: And that's what I said: Go ahead.

MR. SCROGGIN: -- and that is, Your Honor, that the last point Mr. Quinn made was that they didn't have

Page 89

notice before the deposition. I would simply remind the Court, as I did earlier, the entire deposition was consumed with nothing but this single subject.

THE COURT: Okay. Well --

MR. SCROGGIN: Indeed, Your Honor, the document at issue was presented to this witness at his deposition and he was questioned on it at his deposition.

THE COURT: Well, I'm going to overrule the objections that have been made to this line of testimony, and I'll permit you to proceed.

Go ahead.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. Mr. Armstrong, I was questioning you about the data gathered from the intensive survey of 1980 in which you participated.

Did you also participate in the analysis of that data that was gathered as well as in the physical sampling of the data?

A. Yes, I did.

Q. And what did that analysis of the data involve?

A. We analyzed the data just visually to get a feel for what we're dealing with, but the primary tool used in the analysis of that data was a computer model.

Q. And was that computer model subsequently used in the

Page 90

1981 waste load allocation for the lower Caloosahatchee River?

A. Yes, it was.

Q. I would ask that the witness be shown the Government's Exhibit Number 349, which is the 1981 Caloosahatchee River waste load allocation documentation, Lee County.

MR. SCROGGIN: Your Honor, this was also one of our exhibits; but in the interest of avoiding any duplication of exhibits, I'm using the Government's exhibit which I believe --

THE COURT: It doesn't matter whose exhibit it is. It's admissible, usable for all purposes.

BY MR. SCROGGIN:

Q. Would you identify this document, sir?

A. Yes. It's entitled Caloosahatchee River Waste Load Allocation Documentation, Lee County, Water Quality Technical Series, Volume 2, Number 52.

Q. Can you tell me what role, if any, you had in this particular document, in its development and publication?

A. Yes. I was involved in the discussions with our district office over the need and scope of the study. I was involved with Mr. DeGrove and others in the design of the study, and I was involved in the actual analysis of the data, including development of the computer model that's contained -- or on which this waste load allocation

Page 91

documentation is based.

Q. Did Mr. DeGrove, the listed author of this document, work for you?

A. Yes, he did.

Q. Did he report to you?

A. Yes, he did.

Q. Did you personally --

THE COURT: Just a moment.

MR. QUINN: Objection, Your Honor. I believe we're going into fact testimony, and I lodge my objection on that basis.

THE COURT: Overruled.

BY MR. SCROGGIN:

Q. Did you personally supervise the various stages of development of this document?

A. Yes, I did.

Q. And did you approve the final draft before it was published?

A. Yes.

Q. Did you make any changes to intermediate drafts that may have been developed in -- before the final was published?

A. Yes.

Q. Can you tell me for what purpose this waste load allocation was developed?

Page 92

MR. QUINN: Objection; calls for a legal conclusion, I believe, Your Honor.
THE COURT: Overruled.
THE WITNESS: Yes. The district office -- as I mentioned, the South Florida District Office had asked us to undertake this study for their possible use in the future in making permitting decisions and also as a reanalysis of waste load allocations that would be needed for the development of what's called a 201 facilities plan for this part of the state.
BY MR. SCROGGIN:
Q. What is a 201 facilities plan?
A. The 201 process is a process that was set up to allow counties and cities within the State of Florida to seek federal funding to assist them with the design and construction of municipal wastewater treatment plants for their particular communities.
Part of that process involved the need to develop waste load allocations so that the cities and counties could know what type of facilities they would need to build in the future.
Q. Do you know what happened to this waste load allocation after it was published? And by that I mean, do you know for what purposes it was, in fact, used?
A. Not specifically, no.

Page 93

Q. Was it your understanding in developing this document that this document would prescribe requirements against -- to be enforced against dischargers along the Caloosahatchee River?
MR. QUINN: Objection; leading, Your Honor.
THE COURT: Yes, it is leading. Sustained.
BY MR. SCROGGIN:
Q. What was your understanding regarding the uses to which this waste load allocation could be used, if any, for purposes of controlling discharges to the Caloosahatchee?
A. We supplied this document and other similar documents to our district offices around the state for their use as they saw fit. It was not a requirement on our district offices; they could use this in conjunction with any other information that they had available in making their decisions for permitting purposes.
Q. Who makes the decisions for permitting purposes, in your experience, in Florida?
A. The permits for facilities such as these were issued by our district managers in the five different district offices around the state.
Q. Was it your understanding that this document would be a requirement for the district --
THE COURT: Well, don't lead the witness.
BY MR. SCROGGIN:

Page 94

Q. What understanding, if any, did you have regarding how this document might be used in the development of permits for dischargers to the Caloosahatchee River?
MR. QUINN: Objection; calls for speculation.
THE COURT: Overruled. You can answer the question.
THE WITNESS: These documents were provided as guidance for the district managers and their staff to make regulatory decisions. They were not requirements.
BY MR. SCROGGIN:
Q. What is your understanding of the difference between guidance and a requirement for the district managers?
A. Well, in my opinion, a requirement would be something that the district managers would turn around and place on the dischargers who were seeking permits; and as such, then those requirements would become binding through the permitting process.
Q. Do you know whether or not this waste load allocation was ever submitted to EPA?
A. I believe it was.
Q. Do you know if there was a response from EPA to this waste load allocation?
A. Not an official response, to my recollection.
Q. Do you know whether or not the development of this waste load allocation was premised upon concern about

Page 95

current or imminent water quality violations in the lower Caloosahatchee River?
THE COURT: Do you know? Yes or no.
THE WITNESS: Yes.
BY MR. SCROGGIN:
Q. And was it premised upon concerns about then current or imminent water quality violations in the lower Caloosahatchee River?
MR. QUINN: Objection; leading.
THE COURT: Overruled.
THE WITNESS: The concern, I think, that was expressed to us was that the district office would like assistance in evaluating the health of the river and any trends that might need to be addressed through their permitting process.
To my knowledge, there were not any significant current problems that they felt needed to be addressed.
BY MR. SCROGGIN:
Q. If there were no current problems that they felt needed to be addressed -- by that, sir, do you mean that there might have been future problems that might need to be addressed?
MR. QUINN: Objection, Your Honor. This is a hypothetical question posed to this witness in his fact capacity, and it's improper. Objection.

Page 96

THE COURT: Well, I think the question is vulnerable. I'm not sure on that basis, but I'll overrule the objection.
THE WITNESS: Could you repeat the question, please?
THE COURT: Read the question back.
MR. SCROGGIN: I'll rephrase the question, Your Honor.
THE COURT: All right.
BY MR. SCROGGIN:
Q. What does the 1981 waste load allocation, the Government's Exhibit 349, predict, if anything, about future problems in the lower Caloosahatchee River?
A. The study revealed that there were -- there should be concerns over future water quality, and there may be some particular things that would need to be done to protect water quality under future scenarios of design and treatment and discharge.
Q. I would direct your attention, sir, to Page 17 of Government's Exhibit 349 and in particular to the section 3.6 entitled Waste Load Allocation, the two paragraphs that are contained there.
THE COURT: Just a moment.
(Pause.)
THE COURT: Go ahead.

Page 97

BY MR. SCROGGIN:
Q. And I would ask you, sir, what does this document say regarding waste load allocations for the Waterway Estates facility?
A. It says in the first paragraph, The allocations for the present design flows and present locations are for Waterway Estates no discharge.
Q. Was it your understanding that that statement required Waterway Estates to cease discharge?
A. No.
Q. And why not?
A. During the study, it was determined that there may need to be some changes made to both the treatment and the location of the outfall for Waterway Estates as well as other facilities. Based on information we had received from our district office, it was felt that Waterway Estates would likely tie in to another facility, as opposed to undergoing those upgrades and possibly relocating the outfall. And the facility was dropped from future -- dropped from the study basically at that point in time. It was not considered further in completing the study.
Q. I would direct your attention to Page 12 of the same document, the last paragraph on the page, the second sentence, beginning, The Waterway Estates treatment plant. Would you mind reading that, sir?
A. The Waterway Estates treatment pl from further modeling due to the assum Coral facility and the assumed impracti to AWT and relocating the outfall for sa
Q. Is that statement consistent with the have just given for why the no discharge allocation did not require the Waterway cease discharge?
A. Yes, it is.
Q. If this 1981 document is not containing requirements, for what purposes has it been used, if any?
MR. QUINN: Objection. It's a leading question, Your Honor.
THE COURT: Overruled.
THE WITNESS: I'm not sure if I know all the purposes for which it's been used. It was offered to our district offices as a planning and guidance document for whatever their needs might be or might have been.
BY MR. SCROGGIN:
Q. In supervising such projects, did you ever have an occasion to have discussions with your staff about when, if ever, dischargers could challenge such waste load allocations developed under your supervision?
A. Yes.
Q. What were those discussions?

Page 99

A. There were concerns on the part of our legal staff within the department and concerns expressed by my supervisor and my staff about the nature of the waste load allocations.
MR. QUINN: Objection; hearsay, Your Honor; move to strike that response.
THE COURT: Sustained.
MR. SCROGGIN: May I rephrase the question, Your Honor?
THE COURT: You can try.
BY MR. SCROGGIN:
Q. Did you develop any understanding regarding when, if ever, dischargers could challenge waste load allocations during your tenure at the Florida Department of Environmental Protection?
A. Yes, I did.
Q. And can you tell us what that understanding was?
A. I took the position as the administrator of the section and conveyed that position to our staff and our district offices that the waste load allocations were guidance documents; and since they were not binding and they were not requirements, they were not subject to challenge through the legal process within our agency.
If the documents were used in the permitting process and then as such became binding, the permits themselves, or

Page 100

proposed permits, were certainly subject to challenge.
Q. And who, if anyone, would incorporate waste load allocation requirements into a permit?
A. Within the agency, only our district offices.
Q. In such an instance, would a provision of a waste load allocation then become required and binding as opposed to merely planning and guidance?
A. Yes.
Q. Are there other factors that a district engineer would consider other than existing waste load allocations in determining state permit limits?
A. Yes, there are.
Q. What are those other factors?
A. The district offices, in deciding -- in making their permitting decisions, took the information that we had developed into play -- or under review for making their decisions, but they also looked at any existing water quality data. They frequently looked at the incidence of complaints, if any had been filed with the agency, regarding a particular discharger; history of other problems, such as fish kills or odor or color complaints, algae blooms; any other information that they might have on the water body and the discharger in question that might give them an indication of whether or not there were any problems out there that need to be addressed in the permitting process.

Page 101

Q. Can you point to anything in this document, sir, that requires Waterway Estates to cease discharging into the canal to which it was discharging at the time this study was conducted?
A. No, sir.
Q. Can you point to anything in this study that requires the Waterway Estates facility to move its outfall from the canal to the six-foot contour line?
A. No.
Q. Can you point to anything in this 1981 waste load allocation study that requires the Waterway Estates facility to upgrade its treatment facility from better than secondary to the still cleaner advanced wastewater treatment?
A. No.
Q. In preparing your expert report, did you reach any findings and conclusions regarding the health and trends in the health of the lower Caloosahatchee River?
A. Yes, I did.
Q. Can you tell me what those conclusions were?
A. Based on primarily the 12 years of data that I described earlier and the intensive surveys and other documents that I reviewed, it is my opinion that the overall health of the Caloosahatchee River I considered to be good.
Furthermore, with respect to trends, I could not determine that there were any trends to indicate that the

Page 102

water quality was either improving or declining in the river. It seemed to be pretty much steady throughout the study period.
Q. Did you reach any conclusions regarding whether or not the Waterway Estates facility had any measurable impact on the health of the Caloosahatchee River?
A. Yes, I did.
Q. And what was that conclusion?
A. I could not locate any data that would indicate that there was an impact -- a measurable impact or discernible impact from the Waterway Estates discharge.
Q. Did you reach any conclusion regarding whether or not moving Waterway Estates' outfall from the canal to the six-foot contour line had any beneficial impact on the health of the Caloosahatchee River?
A. Again, I found no data that would indicate that there was any difference in the water quality after moving the outfall. I simply could not find it.
Q. And what is the health of the Caloosahatchee River before and after the events that are at issue in this litigation; namely, the upgrade to AWT at Waterway Estates and moving the outfall of the six-foot contour line?
MR. QUINN: Objection; compound question, Your Honor.
THE COURT: Do you understand the question?

Page 103

THE WITNESS: I thought I did.
MR. SCROGGIN: I will rephrase the question if it would be more helpful.
BY MR. SCROGGIN:
Q. What is the health of the Caloosahatchee River which you have testified is unchanged during the period of time of your study from 1982 to 1994?
A. I would consider it good.
Q. And can you tell me what "good" means in terms of apprising the health of a river?
A. Well, I looked at various water quality parameters that I consider indicative of the health of a water body. In the period of record, there were occasions when for some of those parameters values would rise and fall. This is a very dynamic system, as most water bodies in Florida are, so water quality does fluctuate over time.
But in general, those parameters fell within what I would consider to be generally accepted ranges for water bodies such as this. It would indicate basically good water quality, good health.
Q. Can you tell me if you reached any conclusion regarding problems or potential problems with respect to nutrient loadings of the lower Caloosahatchee River during the period of your study?
A. With respect to nutrient loadings, both the nutrient

Page 104

concentrations, that is, nitrogen and phosphorus concentrations, and as well the clorophyll concentrations, which are sort of a measure of the productivity of the river, fell generally within good or acceptable ranges. Again, there were sporadic occasions where the values would fluctuate; but overall, I would consider those generally good.

Q. I'll show you, sir, behind you on the easel the enlarged chart that has been previously marked as Florida Cities' Exhibit 92 entitled Nitrogen Discharged to River. This is a table from the expert witness that we -- has previously testified in this case, Mr. Douglas Smith.

I will ask you, sir, do you recognize this table? Have you seen it before?

A. Yes, I have.

Q. And can you tell us the relationship, if any, of this table to the answer you have just given regarding nutrient loadings for the lower Caloosahatchee River during the time of your study?

THE COURT: Just a moment.

MR. QUINN: Your Honor, this chart was not within the expert report of this witness. It was in the expert report of Mr. Smith and at the time -- therefore, at the time he wrote his report was locked into his testimony. He couldn't have --

Page 105

MR. SCROGGIN: It's in evidence, Your Honor.

Might I ask him if it's consistent with the conclusions of his report?

THE COURT: I'll sustain the objection.

THE WITNESS: Would you mind repeating the question?

THE COURT: No, you don't have to answer it.

THE WITNESS: Oh, I'm sorry, Your Honor. I misunderstood.

BY MR. SCROGGIN:

Q. Can you tell me what data, if any, you found regarding the health of the canal to which Waterway Estates was discharging until it moved its outfall to the current *six-foot contour line*?

A. I did not locate any data from the canal system that would indicate that there were any problems. No data existed in the canal.

Q. Based upon your experience in planning, overseeing and taking such data in the past, do you have any opinion as to why certain areas are chosen for data collection and other areas are omitted from data collection?

A. Well, indeed, in this study, we discussed the scope of our study with our district office and within our staff in Tallahassee. It was felt that we would focus on the open water body of the Caloosahatchee River and not focus as much

Page 106

on the tributaries with respect to dischargers, such as Waterway Estates. The facility and the discharger were located very close to the river system, and we did not undertake a study of the specific area in the vicinity of the outfall. It just wasn't decided that it was something that we needed to, frankly, worry about in this study.

Q. What criteria would you use -- did you use in determining whether or not to sample the waters of the canal as opposed to the waters of the river?

A. Well, there really were two things that we were taking into consideration: One, of course, as I have already mentioned, was the distance from the facility and the discharge point to the river; that it was such a short distance that given the nature of the study and the size of the study area, we didn't feel that we should focus on such a small distance.

But more importantly, I think, if our district office had had any history of complaints or problems or violations in that canal, we would have included the study and -- that area in the study area. We had, you know, the resources and the expertise to look at the canal; it just simply wasn't an issue with our district office or with us at the time.

Q. Can you tell me what events might have triggered your sampling of the canal for this particular intensive survey?

MR. QUINN: Objection to speculation, conjecture.

Page 107

THE COURT: Sustained.

BY MR. SCROGGIN:

Q. What was the closest sampling station in the data you reviewed to the Waterway Estates facility?

A. If I recall, I believe the closest station that I could locate was in, I believe it was, a 1987 intensive survey and it was over a half a mile away.

Q. Would such a station be able to measure the *impact of* the Waterway Estates discharge?

A. Not in my opinion.

Q. And what's the basis of that opinion?

A. Well, the Caloosahatchee River is a very, very large estuary in this area. The Waterway Estates discharge was a relatively very, very small discharge.

Given the distance and travel time out to that station, I don't believe there would be any measurable impact discernible from the data that I could find.

Q. Did your study look at the risk of environmental harm caused by the Waterway Estates discharge into the Caloosahatchee River or into the canal?

A. Not really; only in a sense that we didn't --

THE COURT: Just a moment.

MR. QUINN: Objection; move to strike everything after "not really."

THE COURT: Sustained. It will be stricken.

Page 108

BY MR. SCROGGIN:
Q. Mr. Armstrong, have you reviewed the expert reports submitted by Mr. Mark Klingenstein in this litigation?
MR. QUINN: Objection. This goes beyond the scope of the items as set forth in the report.
MR. SCROGGIN: Your Honor, may we address that, please?
THE COURT: Yes.
BY MR. SCROGGIN:
Q. I will ask you, sir, did you hear his --
THE COURT: Wait a minute. Wait a minute. Can you address that? I thought you wanted to be heard.
MR. SCROGGIN: My understanding, Your Honor, was that the limitation on discussions of expert reports of other -- by each side was limited only to Mr. Smith and did not apply to any of the other experts.
THE COURT: Well, you assumed wrong.
MR. SCROGGIN: Yes, Your Honor.
THE COURT: Sustained.
MR. SCROGGIN: I would like to ask, Your Honor, several questions regarding what he heard in Mr. Klingenstein's testimony, if I might.
MR. QUINN: I'll object to that line of questioning, Your Honor. It's irrelevant. He's here as an expert in certain areas; and if it's not in his report, he

Page 109

can't testify to it, so why are we going to ask him what he heard here?
MR. SCROGGIN: I will limit my questions, Your Honor, to those areas in which he has been offered and accepted by the Court as an expert.
MR. QUINN: I will object, Your Honor, on the basis that those opinions will not be within his report.
MR. SCROGGIN: Can I respond, Your Honor?
THE COURT: Yes, sir.
MR. SCROGGIN: They are within the areas of expertise that he has been accepted by -- offered, proffered and accepted by this Court; and they are questions relating to and underlying the conclusions he reached in his own expert report.
THE COURT: Well, I guess we're getting to an issue as to whether an expert should be permitted to sit in the courtroom and listen to the testimony of another expert and then engage in a critique of the other expert's testimony, and I don't believe that's permitted.
Now, if you want to challenge that assumption --
MR. SCROGGIN: No, Your Honor.
THE COURT: -- I'd be glad to hear from you on that.
I'm not sure I'd be glad, but I would be willing to hear you on that.

Page 110

MR. SCROGGIN: No, I will not challenge that, Your Honor.
THE COURT: All right.
MR. SCROGGIN: I have no further direct questions of this witness.
THE COURT: Okay. We're going to recess for lunch until 1:35.
(The luncheon recess was taken.)

THE COURT: All right Mr. Quinn.

MR. QUINN: Yes, Your Honor. I don't believe Avatar Holdings has any questions.

MR. HIRD: That's correct.

THE COURT: Very well.

CROSS EXAMINATION

BY MR. QUINN:

Q. Good afternoon, Mr. Armstrong.

Sir, with regard to exhibit United States 349 the, wasteload allocation documentation, Lee County, isn't it true that the allocations in that document were prepared at the request of Fort Myers District Office due to pending requests for permit renewals?

A. I believe that was part of it.

Q. Okay.

And, sir, also, isn't I true that with regard to that same document, it was decided to re-evaluate prior allocations in this 1991 wasteload allocation document, is that correct?

A. That is correct.

Q. Okay.

Sir, isn't it true that in the 349, the wasteload allocation document, the Waterway Estates Treatment Plant was eliminated from further modeling through an assumption it would tie into the Cape Coral facility?

A. That's correct.

Q. And it was also assumed that it would be impractical to upgrade the plant to AWT and to relocate the outfall, isn't that correct?

A. That's my understanding.

Q. But in fact, the plant did relocate its outfall, isn't that correct?

A. That's correct.

Q. And the plant has upgraded to AWT, isn't that correct?

A. Yes, I believe so.

Q. Sir, the relocation of outfall to the middle of the Caloosahatchee River has improved the dissipation of pollutants, isn't that correct?

A. I would assume so. I don't know if that's been proven, but I would assume it has.

Q. Common sense would indicate there's better dispersion in the middle of the river, isn't that right?

A. That's correct.

Q. Mr. Armstrong, isn't it true there are no water quality data supporting any conclusion about the historical quality of water at the Waterway Estates outfall?

A. At the previous outfall?

Q. At the previous outfall, sir?

A. I could find no data that I could point to that said that there was any impact.

Q. You could find no data at all, isn't that true?

A. I found data, but not in the vicinity of the outfall. The closest data I found were too far away.

Q. My question, sir, is, there is no -- there are no water quality data supporting any conclusion about the impact at the prior Waterway Estates outfall, isn't that true?

A. I agree with that.

Q. Mr. Armstrong, there are no water quality data supporting any conclusion about the historical quality of the water for the canal into which the Waterway Estates Plant used to discharge, are there?

A. That is correct.

Q. And, sir, there are no water quality data supporting, in fact, any conclusion about the historical quality of water for the area at the intersection between the canal and the Caloosahatchee River, isn't that correct?

A. Again, there were no data collected at that point and the closest data I felt were too far away to draw any conclusions.

Q. It is -- there's no data?

A. There is data, there's not data at the receiving points. There's data in the area, but not at that point.

Q. Excuse me, there's no data upon which you can base a conclusion as to either degradation or improvement of the water quality, can you?

A. That's correct.

Q. Sir, the data that you examined in your report had no

bearing whatsoever on localized impacts or effects due to the -- on pollutant discharge, is that correct?

A. I'm not sure if I understand what you mean by "had no bearing on." Could you maybe explain that?

Q. Sure. Let me ask the question, withdraw the question, I'll ask it a different way.

Sir, there was no data that addressed localized impact at either the prior outfall or at the current outfall in the middle of the river, is that correct?

A. That's correct.

Q. And, sir, the data which you did examine, the closest of which you said was about a half mile away, showed no trends in water quality either, improvement or degradation, isn't that correct?

A. That's correct.

MR. QUINN: Thank you.

No more questions, Your Honor.

THE COURT: Any redirect?

MR. SCROGGIN: I have only one question on redirect.

REDIRECT EXAMINATION

BY MR. SCROGGIN:

Q. You were asked regarding data on localized impacts in the cross examination, Mr. Armstrong. Does that mean that there were localized buildups of pollutants in the canal?

A. Not based on the information that I reviewed.

Q. Is there a likelihood there was a localized buildup in the canal if there's no data --

MR. QUINN Objection, calls for speculation. He is beyond the scope of my cross examination.

THE COURT: I'll sustain the objection.

MR. SCOGGIN: I have no further questions.

THE COURT: Thank you, sir. You may step down.

Call your next witness.

MR. BAISE: Your Honor, the Defendant Florida Cities Water Company calls Roger Hartung.

Thereupon,

ROGER HARTUNG,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness stand, please.

MR. QUINN: Your Honor, if I may be heard.

On Monday last, the Court reserved ruling on the United States' motion to exclude Mr. Hartung's testimony. At this point in time, we'd like to renew the motion.

THE COURT: All right, sir.

MR. QUINN: May I be heard on that?

THE COURT: Yes, sir.

MR. QUINN: If it's okay, I'll speak from here.

THE COURT: I think we can probably hear you.

MR. QUINN: For Mr. Hartung's testimony to be admissible under Rule 702, it must assist the Court to understand the evidence and to determine a fact in issue or to determine a fact in issue you. Mr. Hartung's report does neither. There's no evidence that Mr. Hartung can help this Court to understand the evidence in this case.

Simple and straightforward, Florida Cities has violated the Clean Water Act. It has discharged without permits, it has discharged pollutants in excess of permitted levels and the United States commenced an enforcement action to recover civil penalties.

The Defendants presented their case on mitigation and you may hear testimony that certain discharges didn't really exceed permitted levels or that certain exceedances were unavoidable or there was not any environmental harm or significant environmental impact. Those are the Defendants -- what the Defendants will allege, but Mr. Hartung can't testify to any of these.

In fact, Mr. Hartung's report doesn't even attempt to apply the facts of this case to the EPA policies and procedures that he is going to be preferred as an expert upon.

In addition, his testimony will not assist in the determination of a fact in issue. The only fact in issue is what is an appropriate penalty against Florida Cities in this instance.

My understanding is that Mr. Hartung will not address any issues as to Avetar. In addition, in reaching a decision on the issue of the appropriateness -- appropriate amount of penalty, the Court must apply the statutory factor as set forth in the Clean Water Act. The only factor Mr. Hartung can opine on is the catchall quote, such other factors as justice may require, unlike factors such as economic benefit or environmental harm or seriousness of violation or ability to pay.

That factor goes to the equities of this case which is something that this Court and this Court is totally equipped to decide without resorting to outside experts.

Again, Mr. Hartung doesn't allege that the -- in his report, Mr. Hartung does not allege EPA violated any law or any regulation in bringing this case, nor does he point to any alleged violations of EPA's own policies or any regulations, nor does he attempt to put the facts of this case into any kind of prospective upon which the Court can make a mitigation of penalty.

Your Honor, the United States submits that Mr. Hartung is no more qualified to render an opinion in this case about what the appropriate penalty is than I am, and that for those reasons, we move to exclude Mr. Hartung's -- we renew our motion to exclude Mr. Hartung's expert testimony.

THE COURT: Mr. Hartung, let me -- I may have some

dialogue with the attorneys here. It would probably be best not to have your presence. Would you mind please stepping out into the corridor and we'll be with you in just a moment.

Go ahead, Mr. Baise.

That's all right, you can go ahead.

MR. BAISE: Thank you, Your Honor.

Mr. Hartung has been designated as an expert witness by the Defendant Florida Cities. The Defendant has been on notice for some period of time with regard to Mr. Hartung. In fact, the Defendant even missed the opportunity to take Mr. Hartung's deposition which they were given the opportunity to do, so it strikes me somewhat disingenuous for the Government to indicate they want to strike his testimony when they really do not know exactly what his testimony is going to be, number one.

Number tow, with regard to Mr. Hartung, here's an individual who has worked for the EPA, has supervised over fifty thousand permits in their enforcement in the agency, and can, we believe, assist the trier of fact with regard to such other factors as justice may require, and also, the seriousness criterion, Your Honor, because Mr. Hartung will point out the rules, the policies, the procedures with respect to EPA and how it abused those particular procedures in taking this permit away from Florida Cities. Obviously, list he's not going to testify to the facts with regard to Waterway Estates, but he

will lay out what the agency's policies and procedures were with regard to approving wasteload allocations.

This Court has heard a great deal about a 1981 wasteload allocation. Mr. Hartung helped develop the wasteload allocation program in part at EPA. He will point out to Your Honor that wasteload allocations are very important documents, they must go through a very careful screening and a approval process and if they do not go through that careful approval and screening process, they are unusable with an NPDES permit. That would mean that the wasteload allocation used in this permit was improper, unlawful. Therefore, we think it's very important, very helpful to the Court in terms of looking at the seriousness of the violation here.

The Government is accusing Florida Cities of having over a thousand days of discharges without a permit or discharge into the wrong location at the Waterway Estates into the Caloosahatchee River. Well, if the Government does not come in here with clean hands, Your Honor, whether or not it has made a mistake, and granted, our client did not appeal at the time they should have appealed, the engineers were looking at the situation, not lawyers, but the fact is, the Government has an obligation to abide by the rules, its own policies and procedures.

Mr. Hartung can lay this out because he's been through these experiences, he's worked on national committees,

Your Honor, looked at issues such as this and I think can be very helpful. The testimony is, I believe, very helpful in putting the six criteria into context for this Court, one, seriousness, two, such other our factors as justice may require. Thank you.

THE COURT: Mr. Quinn.

MR. QUINN: Yes, Your Honor. Counsel said we don't know what Mr. Hartung is going to testify to and that is patently wrong. Federal Rule of Civil Procedure 26 regarding the disclosure of experts states as follows: The report shall contain a complete statement of all opinions to be expressed and the bases and reasons therefor. And, Your Honor, there are no opinions as to any application of what EPA generally does in Region VI and what actually happened here, therefore, none of those opinions are helpful.

Second, the appropriate manner for these issues to be raised is through argument of counsel as is evident from the arguments here, not through the testimony of a purported expert witness on what EPA could have done without any application to the facts in evidence.

Your Honor, the Court is entirely capable of applying argument to the facts of this case and we don't need the witness here to do it, sir.

MR. BAISE: Your Honor, the Defendant finds it most interesting that EPA or the Defendant Department of Justice and

EPA have not brought forward their witnesses that they could have brought forward to assess to, one, what the policies and procedures of the agency were, even those individuals who were involved in the enforcement action with respect to the three facilities here, so, we felt it incumbent upon to us bring to the Court's attention what EPA's policies and procedures are with regard to how it handles NPDES Permits, how it handles wasteload allocations in those permits, and then, enforcements that can be taken upon those permits.

What Mr. Hartung has done in his report and what I was referring to a moment ago, Counsel, is that the Government had not taken Mr. Hartung's deposition, clearly it has the report. We prepared the report as required by the Court.

THE COURT: I'm going to cut this short and I'm going to overrule the objection. I'm going to permit the testimony. If the Court, as we get into this further and/or even subsequent to his testimony, determines that it is not probative of any of the issues in the case or is otherwise inappropriate for the Court to consider, we don't have a jury and I can recede from that if I find it necessary. I'm a little bit concerned about it. We're not here -- well, enough said. All right.

Ask Mr. Hartung to step back in, please.

THE CLERK: State your name and spell your last for the record.

THE WITNESS: Roger C. Hartung, H-A-R-T-U-N-G.

DIRECT EXAMINATION

BY MR. BAISE:

Q. Good afternoon, Mr. Hartung.

A. Afternoon.

Q. What is your occupation?

A. I'm an environmental consultant.

Q. How long have you worked in the environmental field, Mr. Hartung?

A. About twenty-four years.

Q. What professional degrees do you hold?

A. I have a degree, a Master of Science Degree from the University of Wisconsin in water resource management, and a Bachelor of Science Degree in civil engineering from University of Texas.

Q. When were you first employed by EPA?

A. December, 1971.

Q. So, you worked for EPA approximately twenty-five years?

A. I worked for them for twenty-three years until my retirement on September 30, 1994.

THE COURT: When were you at the University of Texas?

THE WITNESS: University of Texas, I graduated in 1961, January, 1961.

THE COURT: Thank you.

BY MR. BAISE:

Q. Do you have any professional degrees beyond what you received from the University of Texas, Mr. Hartung?
A. No, sir. Well, just the Master of Science at the University of Wisconsin that I mentioned.
Q. Where were you located when you were working for the U. S. Environmental Protection Agency, sir?
A. My career with EPA was spent in the Dallas Regional Office, Region VI?
Q. Did there come a time when you became aware of litigation between the United States and Florida Cities?
A. Yes, I think it was in September of last year.
Q. Were you asked to prepare a report regarding EPA's policies and procedures relating to the Clean Water Act relating to this litigation, Mr. Hartung?
A. Yes, I was.
Q. Did you prepare such a report?
A. Yes, I did.
Q. Did you write the report, Mr. Hartung?
A. Yes.
Q. Did you have any assistance in writing the report, Mr. Hartung?
A. No, I did not.
MR. BAISE: Your Honor, I would like to have identified as Florida Cities' Trial Exhibit Number 1, Mr. Hartung's report entitled, report on procedures used in the

implementation of the national pollutants discharge elimination systems authorized by the Federal Clean Water Act dated November 10, 1995, marked as Defendant's Number 1 and I ask this be moved into evidence, Your Honor.
MR. QUINN: Your Honor, I object on the same basis that I stated earlier.
THE COURT: All right. It will be overruled, it will be received.
BY MR. BAISE:
Q. Mr. Hartung, on page 1, you note that you were employed by Roy F. Weston, Incorporated. Is that still correct?
A. No, I'm no longer employed by them.
Q. Why not?
A. I was a manager there at the Fort Worth office. They no longer have a Fort Worth office. I'm self employed now.
Q. Mr. Hartung, would you briefly describe the position you held at EPA over your tenure with that agency?
A. Yes. From 1971 to about 1974, I was a staff environmental engineer in the water quality planning branch in the water division in EPA Region VI.
In 1974, I was promoted to section chief in that branch. In 1977, I was promoted to the position of branch chief of that same water quality planning branch. I held that position until November of 1981, when I became the chief of the NPDES enforcement branch in the water division. I held that position

for thirteen years until my retirement in 1994. And also, I was on detail at one time, in '87 and '88, a few months in the office of the water enforcement permits at NPDES national office in Washington, DC. I also held a position I think for three or four months at a time, two different occasions, as the deputy water division director of EPA, EPA Region VI.
Q. What experiences have you had in working with EPA Region IV, Mr. Hartung?
A. Uh, I have had experience and worked with them on occasions related to issues that involved both the regions, both in meetings and also conference calls, dealing with water quality issues, enforcement matters, and also I would meet with my counterparts in Region IV twice a year, what was called branch national branch chief meetings were headquarters of EPA and all the regions would attend for about a three day session.
I would meet with them including the other regions, about six days a year, and on occasion, I had the occasion to visit or I was invited over on one occasion to put on a seminar when I was in EPA headquarters down in Destin, Florida. I think it was Destin, and had visited the EPA Region IV offices in Atlanta on two occasions to exchange information about the NPDES program.
Q. What experience have you had serving on the national EPA committees, Mr. Hartung?
A. Quite a bit. I served on national committees that came

up which essentially produced and developed water quality, wrote guidelines for wastewater allocations, water management quality, present guidelines and regulations.
I was also involved in a committee that produced the national oversight NPDES program, oversight guidance. I was on a committee that produced the national enforcement management system that is used by all the regions and States for the NPDES program.
I was co-chair of a national committee once to expedite the processing of civil judicial cases. That was with EPA and Department of Justice.
I was chairman of a national committee dealing with storm water, industrial storm water guidelines. I was on a national committee for several years that worked on the definitions of significant non-compliance that would define what a significant violation of a NPDES permit was.
I was on a national committee, I was chairman of a national committee to come up with national sanitary overflow policies for the agency. I was on a committee on municipal water push prevention that came up with a national policy on that.
I was on a committee to come up with guidance and guidelines for implementing the national municipal policy which was a policy directed at getting most major cities in compliance by July 1st of '88.

And I was on the standing committee, I was chair of that committee for sometime, on the Agency's permit compliance system, computerized data system to track permit compliance and contains all the information about NPDES permits for the United States. I was on some others, but I can't think of them right now.

Q. And has EPA recognized any of your efforts in working in the environmental field over the last twenty some odd years?

A. Yes, I think they did.

Q. How have they recognized your efforts?

A. I received numerous awards including some five bronze medals. I think three of them were at the regional level and two at the national level, for such things as working on the committees that I mentioned.

Q. What are bronze medals so the Court will understand the hierarchy, Mr. Hartung?

A. It's the -- I think it's the highest medal that can be awarded an EPA employee at the regional level. And it's for some accomplishment. I was on a committee which I failed to mention a minute ago that worked on the guidelines for the administrative penalty policy back in '87. I got a bronze medal for that.

I also was working on one committee for municipal water push prevention, and I can't remember the other particular ones, but I also received a regional counsel award in about '88

or '89 and received several, I can't remember how many, what was called regional administrator awards.

Q. Mr. Hartung, in your report, you indicate and you already stated that in '77 you became chief of the water quality management branch and later in '81, the head of the newly created enforcement branch and Region VI was the enforcement branch responsible for overseeing NPDES permit programs?

A. Yes, we were responsible for overseeing the enforcement arena of the permit program.

Q. How many permits were within your oversight, Mr. Hartung?

A. Fifty thousand at the time of my retirement. That includes some Gulf of Mexico oil and gas platforms and some general permits for confined animal feeding operations as well as industrial storm water permits as well as normal discharge permits for industries and cities.

Q. Mr. Hartung, there's been a good deal of testimony in this case about water quality standards. What is your experience in working with the Clean Water Act water quality standards?

A. My initial job when I first joined the agency as a staff environmental engineer as well as section chief and branch chief, I worked for about ten years in the area of water quality standards. My job was to assist the State in implementing the many mandates that came out of the Clean Water Act of 1972 and establishment of the interstate water quality

standards was one of those mandates.

THE COURT: Could I stop you just a second, please? I've got a matter I've got to take up, but I can do it at sidebar independent of this case. Mr. Kunz.

MR. BAISE: You wish us to be excused?

THE COURT: No. Ms., Savage step up to sidebar. I don't need if Reporter.

(Brief pause.)

All right.

Pardon me. Go ahead, Mr. Baise.

BY MR. BAISE:

Q. Mr. Hartung, I'm not sure you were finished with your answer. What is your experience in working with the Clean Water act of water quality standards?

A. I think I was. I worked with the State for ten years and from about '72 through '81 in establishing and revising, upgrading those water quality standards.

Q. What is your experience in working with the Clean Water Act's NPDES permit program, Mr. Hartung?

A. As I mentioned, for the first ten years, '72 through about '81, my experience was in working with the State agency to establish effluent limitations that go into those permits and beginning in '81 through '84, my jobs switched to interpreting those permits and enforcement of them.

Q. What is your experience in working on water quality based

effluent limitations, Mr. Hartung?

A. Almost all of my experience in working with the State is to establish permit limits. We're dealing with water quality based effluent limits, those that had to be more stringent than secondary treatment for cities. Most of my experience dealing with municipals of domestic waste discharges?

Q. What is your experience in working with wasteload allocations in NPDES permits, Mr. Hartung?

A. I wrote the first set of guidelines to the State agencies back in the early '70's to perform those wastewater allocations. This included laying out scopes of services, approving contracts and subcontracts, also approving the final product and also furnishing that information in the permit required for inclusion in the NPDES permits in.

Q. What is your experience in working with the wasteload allocation approval process?

A. Essentially, it was my job for the first ten years of my career with EPA to make sure that these wastewater allocations were done, that they were submitted by the Governors of each of the five States in Region VI to our original administrator for our approval.

I recommended, concurred and reviewed all of these wastewater allocations and recommended approval by the regional administrator, and then it was my job also to make sure they were wastewater allocations which is essentially a water

quality base set of effluent limits were available to be written into the next round of NPDES permits.

Q. What is your experience in working with States in the administration of the NPDES permit program, Mr. Hartung?

A. Quite extensive. None of our States in Region VI until about the late '80's were ever approved or authorized to administer the NPDES program, mostly because of legal reasons. So when I was involved with the program, in those States, it was in a direct enforcement mode, direct implementation mode. That is, our region had to directly track and enforce the NPDES permits, the States had their own State permitting system, and we had to coordinate with the States quite extensively on running two parallel programs.

Q. What is your experience in working with major and minor NPDES dischargers, Mr. Hartung?

A. Most of my experience, I would say about eighty percent was with working with the major dischargers. By major, I mean, for cities and for domestic waste discharges, anyone that has a discharge greater or equal to a million gallons per day is classified as a major, the other dischargers are classified as minor. It's a little bit different system for industrials, it's a rating system, but the majors were the ones we concentrated on because the agency had made a decision to.

THE COURT: Now, this is not responsive to any question, Mr. Baise. He's answered your question.

BY MR. BAISE:

Q. Yes.

What is your experience in working with EPA discharge monitoring reports, Mr. Hartung?

A. Our enforcement program used those almost exclusively to determine -- to detect violation or non-compliance. We used them over compliance inspections. In addition, when I was at the national office of EPA, I was responsible for distribution of all the discharge monitoring reports to all the NPDES authorities, both the States and regions, and for having them pre-printed as far as what the conditions were that the permittee had to meet, either permit conditions or administrator order conditions.

Q. What is your experience with EPA in enforcement responses to violations of NPDES permits, Mr. Hartung?

A. I have had experience with all types of EPA enforcement responses. Most of the responses were informal, either phone calls or meetings, warning letters. That was about eighty percent of our responses. And then we had the formal responses and those consisted of administrative orders. I probably concurred on ten thousand of those in the thirteen years I was in that job.

We initiated some fifty civil -- excuse me -- criminal judicial cases and about two hundred civil judicial cases. I also concurred in and issued, actually had the authority to

issue some three hundred and fifty administrative penalty orders, another form of formal enforcement action.

Q. Mr. Hartung, have you written documents for EPA use and guidelines on water quality standards?

A. Yes, I have.

Q. And what were those documents?

A. Primarily -- you did say water quality standards?

Q. Yes, sir.

A. Primarily guidelines to staff and also to the States on how to paraphrasing the requirements of the laws back when we didn't have regulations and also interpreting EPA regulations.

Q. Would any of these guideline documents go into Region IV?

A. I don't know about the water quality standard documents. No, I don't know.

Q. Have you written documents, guidelines on the NPDES program?

A. Yes, I have.

Q. And what were those?

A. I was a co-author as I mentioned to the administrative penalty policy. And guidance -- actually wrote portions of the national policy and that was distributed to all regions and States that were administering the program.

I've co-authored overflow policy on a national committee which was distributed to all the regions. I've co-authored a municipal water push prevention regional policy which was

distributed nationally prior to the issuance of national policy. I have written all types of boiler plate and things related to administrative orders; how to issue administrative orders, how to issue administrative penalty orders, civil judicial packages that went through the system over at the Department of Justice that were distributed to -- I believe were distributed to all the regions, including Region IV.

Q. Have you written documents, uses, guidelines on wasteload allocations?

A. Yes, I believe I mentioned that I was writing some back in the early days, early '70's, and later on.

Q. What experience do you have in training EPA personnel, Mr. Hartung?

A. Quite a bit.

Q. What are those training items that you have implemented at EPA, Mr. Hartung?

A. In my capacity in the national job that I mentioned earlier, I traveled all over the United States and including Region IV, at their invitation, and trained them on use of the permit compliance system. I have given all types of seminars permittees as well as to States.

I remember specifically we had a round of seminars back in 1987 after one of the amendments to the Clean Water Act where we had a thousand permittees there. I have trained the staff internally in the region, I've trained branch chiefs at

national branch chief meetings, I have trained State legislators at their request, things of that nature.

Q. Branch chiefs you just mentioned in your last answer. Did it include branch chiefs in Region IV, Mr. Hartung?

A. Yes, it did.

MR. BAISE: Your Honor, Mr. Hartung's testimony was -- we laid out in his or in the pre-trial statement was -- Mr. Hartung's testimony will address EPA's general practices and procedures, and internal agency guidance regarding permitting and enforcement matters under the Clean Water Act.

His testimony will address the relationship and interactions between the environmental regulatory authorities of non-delegated States in EPA. It'll also address wasteload allocation approvals, TMDL total maximum daily load development and approval permitting requirements and permit writing, enforcement administrative records, enforcement of NPDES permits, and interpretations of EPA's permitting and enforcement guidance documents and memoranda.

Your Honor, on the basis and by virtue of his specialized knowledge and skill, and with regard to his experience on behalf of Florida Cities, we proffer Mr. Hartung as an expert?

MR. QUINN: We object, Your Honor. First, this is not an area in which expert testimony is normally accepted nor required. And second, on the basis of the reasons set forth in

Dalbar versus Mertel Pharmaceuticals, 113 Supreme Court, 2786, we object. In addition, we object on the further basis that Mr. Hartung's expert report which has been entered in evidence as Defendant's Exhibit -- Florida Cities' Exhibit Number 1 contains no opinions regarding any of the facilities at issue in this action.

THE COURT: All right. The objection will be overruled. He'll be permitted to testify.

BY MR. BAISE:

Q. Mr. Hartung, what is your understanding of what the objectives are of the Clean Water Act?

A. Their main objective is, one, is to clean up the waters of the United States to a point where they can be usable for propagation of fish or wildlife and allow for recreation in and on the waters by humans. That is often referred to as the "fishable/swimable goals" of the Act.

Q. How are those objectives implemented?

A. There's a couple more.

Q. Excuse me, I'm sorry.

A. The second main objective is to prevent the discharge of toxic and toxic amounts, that is, to treat it below the toxic level, and the third objective was to set up a national wastewater management planning program that would help to achieve the other two objectives.

Q. How are those objectives implemented, Mr. Hartung?

A. Three different ways. The first way that is achieved is to establish water quality standards as a kind of a base of the pyramid upon which everything is based. Then, to establish what permit limits by the States would establish what permit limits were needed to protect those water quality standards and to issue and enforce those permits.

Q. As noted earlier, we heard a great deal about water quality standards. What is a water quality standard?

A. A water quality standard is a goal set by the State, approved by EPA, but it's a State water quality standard for a particular body of water. The State was required under the Clean Water Act to establish State water quality standards to protect its waters, such as there was a standard on each sub-river or subsection of the streams in the State. It consists of two parts; one is a designated use such as suitable for warm water fishing or contact recreation or things of that nature, and then there is a second part of the water quality standard that is to establish the amount of criteria that would protect that particular designated use, such as establishment of dissolved oxygen levels to protect the propagation of fish.

Q. Why is a water quality standard important?

A. It's important because in the Clean Water Act, it is the legal basis for all the permits that are issued which are -- which can cause cities and industries to build facilities that are wastewater treatment facilities that cost millions and

hundreds of millions of dollars.

Q. How is a water quality standard developed?

A. Well, there was a guidance put out and has been put out for years by the National EPA that was required by the Act that EPA publish some sort of guidance to help the States establish water quality standards. I think there were criteria put out by the national Academy of Sciences on three or four different occasions.

The standards are usually done and the designated uses were a lot of times established by what historically the particular stream segment had been used for, let's say for drinking water supply. For instance, they would put out designated use, drinking water supply, and then this criteria I mentioned had been published by EPA, helped established what numbers, let's say, for fishing, for instance, to what levels dissolved oxygen would be necessary to protect a fishery if that was designated.

Q. All right.

A. So, you establish the water quality standards, then would submit them to the EPA for review and approval.

Q. Why does EPA have to submit water quality standards to EPA for it's approval?

A. You mean the State?

Q. Yes.

A. Well, it's statutory requirements.

Q. How are water quality standards implemented by EPA or the States to protect surface waters, Mr. Hartung?
A. The question was how they implemented?
Q. Yes.
A. Generally through establishment of point source controls, that is, issuance of permits dischargers, industrial and municipal or domestic dischargers, and also through non-point source controls.
Q. Is that what is known as the NPDES Permit Program?
A. The one for dischargers, yes.
MR. BAISE: Your Honor, I would like to have marked as Florida Cities Defendant Trial Exhibit Number 7, training manual for NPDES permit writers.
THE COURT: Well now, they're all marked.
MR. BAISE: You have that in front of you, Your Honor?
THE COURT: Yes.
BY MR. BAISE:
Q. Mr. Hartung, I ask you to turn to Defendant's Exhibit or what has been marked for identification as Defendant's Exhibit Number 7. Do you have that in front of you?
A. Yes.
Q. What is this document, Mr. Hartung?
A. It's the training manual for NPDES permit writers published in May of 1987.

Q. What is the purpose of this document, Mr. Hartung?
A. It was used as a guide to the regional EPA people for actually writing a permit and NPDES permit where the authority rested in the -- at the EPA regional level.
Q. Was there a prior training manual for NPDES required, Mr. Hartung?
A. Yes. As I recall, there was something of this nature, only earlier in the process back in the '70's and early '80's.
Q. Have you used this document in your own work at EPA, Mr. Hartung?
A. Yes, I have.
Q. I direct your attention too page 15 of the training manual. Are NPDES permit writers, Mr. Hartung --
MR. QUINN: Your Honor, objection, if the witness is going to be reading from the exhibit. It's not in evidence. It ought to be.
THE COURT: If he's going to be reading from it, certainly.
Is that what --
BY MR. BAISE:
Q. Is this document published by EPA as far as you know?
A. Yes.
Q. This is an EPA document?
A. Yes. It was written by the office of water enforcement permits in Washington.

MR. BAISE: I move this document in evidence, Your Honor.
MR. QUINN: United States objects on two bases. First, this document is published in May of 1987. The only permit for which is at dispute in this case was denied in 1986, therefore, this document postdates and has little or no effect on that permit. On that basis, we object on the basis of relevance. And that's the only basis, sir.
THE COURT: All right.
Mr. Baise.
BY MR. BAISE:
Q. Mr. Hartung, is it your understanding the document includes any guidance or information for permit writers that was in existence before 1987?
A. Yes.
Q. Any reason to believe this is not a trustworthy document, Mr. Hartung?
A. No.
THE COURT: Well, Okay.
The denial of the NPDES permit was in 1986?
MR. QUINN: January, 1996, Your Honor.
THE COURT: All right.
This is a manual that is dated May, 1987?
MR. BAISE: That is correct.
THE COURT: I have no testimony before me, I don't

believe, that indicates this manual was in effect at the time that the NPDES permit was denied.
BY MR. BAISE:
Q. Mr. Hartung, do you have any reason to believe that the policies set forth in this document were not in effect in January of 19 -- or December of 1986?
A. No, I do not.
THE COURT: Well, still, that doesn't get it. If he has any reason to believe that it wasn't, I don't have any affirmative testimony that, you know, what existed prior to May 1987 in terms of the training manual for permit writers. You want to try to --
MR. BAISE: Your Honor, this was a document provided to us by EPA from its files from Ms. Kadey's files as I recall as the permit training manual. That was the manual that EPA officials used and it was an update of prior manuals and they did not produce prior manuals to us and as Mr. Jacobs notes on the side here, he produced everything that was available to them at the time, so this is the best evidence we have of the training manuals for permit writers during the 1980's.
MR. QUINN: I still object on the basis of relevance, Your Honor. What was available after the permit denial is irrelevant for purposes of analyzing whether EPA did anything wrong or whether there should by any mitigation based on the permit.

THE COURT: Let me ask you this. What did you designate in your objections as to the bases for the objections in the pre-trial submission, Mr. Quinn?

MR. QUINN: May I have a moment, sir?

THE COURT: Yes, sir.

MR. QUINN: Thank you.

Your Honor, I have three bases; irrelevant under 402, hearsay under 802 and hearsay within hearsay under 805.

MR. BAISE: Your Honor, all the Defendant can do is request information from the agency, get it produced in discovery as we asked for and did. This is the permit manual they produced to us as representing the permit training manual that the permit writers used from the agency and it was presumably an update.

THE COURT: Do you have -- what do you have that you're asking the Court to allow you to use this document; on the basis that this -- that you were informed that this is the manual that was used to deny the NPDES permit?

MR. BAISE: Yes or its predecessor. Not this particular one because that would have been impossible, the one as Mr. Quinn pointed out dated May, 1987. But as Mr. Hartung who has already given his experience with regard to dealing with such matters has reviewed this document, it is listed in the documents, he reviewed and he indicated to us that this basically or entirely was the document or type of document that

EPA used for permit writers training in the 1980s.

THE COURT: Well --

MR. BAISE: In fact, may I pose a question to Mr. Hartung?

THE COURT: Yes, sir.

BY MR. BAISE:

Q. Mr. Hartung, you have reviewed this training manual for NPDES permit writers dated May, 1987?

A. Yes, sir.

Q. Have you reviewed prior training manuals for NPDES permit writers?

A. Yes.

Q. In your review of this 1987 document, did you see any changes from any prior manual that you had reviewed relating to training manuals for NPDES permit writers?

A. I didn't note any differences, no.

THE COURT: I'll overrule the objection and I'll receive it.

BY MR. BAISE:

Q. Mr. Hartung, I direct your attention to page 15 of the document in question, the NPDES permit writer' guide. And I direct your attention to page 15, general consideration contents of a permit. Would you summarize your understanding of that particular paragraph, Mr. Hartung?

A. It talks about the particular sections, major section of

a draft permit.

Q. And what are those particular sections that should be in a draft permit, Mr. Hartung?

A. Section concerning effluent limitation of the permit, section about monitoring requirements, other standard conditions and special conditions if there were such things.

Q. So a NPDES permit must have included in them effluent limitations, Mr. Hartung, included in everyone of them?

A. Yes.

Q. I direct your attention to page 16 of the training manual for NPDES permit writers. I direct your attention to the paragraph entitled overview. Would you please summarize your understanding of that particular paragraph, Mr. Hartung?

A. It talks about three methods for determining effluent limitations and they're through effluent limitation guidelines, the establishment of effluent limitations by water quality considerations and another one called best professional judgment.

Q. What is an effluent limitation guideline, Mr. Hartung?

A. Effluent limitation guidelines is what the name implies. These are guidelines that were produced out of our Washington office of EPA that told the permit writer how to put together a technology based permit, that is, this is a set of information about how to write a permit without regard to the receiving waters' water quality.

Q. What is a technology based permit?

A. It's a permit that is written based on a particular -- you apply a certain technology, you get a particular predictable result as far as effluent. As an example, secondary treatment is a technology based set of permit limits.

Q. So all NPDES permits would have to have a technology based limit included in the NPDES permit?

A. As a minimum, the law requires the technology base is the minimum and then processed in was to test to see if the application of technology based permits was enough to protect the water quality standards in a particular water body and then if that was not the case, then water quality considerations came in to bear and the effluent limitations had to be tightened down from the technology based permit.

Q. That is what is known as quality water limited NPDES permit.

A. Yes, the latter that I talked about, yes.

Q. What is the best professional judgment permit, Mr. Hartung?

A. Well, that was used a lot in the early days, back in the early '70's when in lieu of an effluent limitation guideline, the permit writer was left to use his best professional judgment.

Q. So, if you have a technology based permit or a water quality limited permit, you would not be able to write a best

professional judgment permit, Mr. Hartung?
A. That is correct, you would not need to.
Q. I direct your attention to page 28 of this document, Mr. Hartung, section entitled water quality considerations overview. What is your understanding of the purpose of this paragraph, Mr. Hartung?
A. Just a second. (Brief Pause.)
It says that water quality based limitations are necessary to be used in a permit when it's necessary to protect the receiving waters. So water quality standard of receiving waters --
MR. QUINN: Objection, move to strike the answer as non-responsive to the question that was asked.
THE COURT: What was the question that was asked?
MR. QUINN: What was the purpose of the --
MR. BAISE: Your understanding of the purpose of this paragraph, Mr. Hartung.
THE COURT: I'll grant the motion, it's stricken.
What was the -- what was your understanding of the purpose?
MR. BAISE: Yes.
THE WITNESS: The purpose was to instruct the permit writer that in some cases water quality based limitations were required to protect the water quality standards.
BY MR. BAISE;

Q. I direct your attention to page 31 of this training manual, Mr. Hartung, to the paragraph, determination of water quality base limits. What is your understanding of the purpose of this paragraph as it relates to the permit writer, Mr. Hartung?
A. It was to instruct, again, to instruct the permit writer on how to determine water quality based limits.
Q. I direct your attention to the top of page 32, Mr. Hartung, in terms of the water quality based limits, and what is your understanding of the purpose of that paragraph, beginning at the top of page 32?
A. It was to instruct the permit writer on how the process works as far as the establishment of maximum daily loads and how they fit in the permit writing process.
Q. Does it also discuss allocating waste loads, Mr. Hartung?
A. Yes, it does.
Q. What is the purpose of a wasteload?
A. Well, the State has the responsibility of determining how much waste or wasteload a particular body of water can take without violating the State's standards.
So in some cases where the application of the technology based permit limits is not enough to do that, then there has to be an allocation, if you will, a cutback to each of the dischargers and that is what they mean by wasteload allocation. It's actually an allocation, if you want to think of it, of the

cutback or the amount necessary to be taken out of each of the dischargers wasteloads that they're discharging in the stream in order for it to meet the water quality standards.
Q. Mr. Hartung, I direct your attention to page 39 of this training manual to the section captioned, wasteload allocation. You find that, Mr. Hartung?
A. Yes, I have it.
Q. And I direct your attention to the second paragraph or the last paragraph -- second paragraph under wasteload allocation, but the last paragraph on the page. Would you read the first two sentences, Mr. Hartung?
A. A regulatory agency's first step in establishing a wasteload allocation scheme for a water segment is to determine the total maximum daily load, TMDL, of discharges a segment can receive without exceeding the applicable water quality standard. The TMDL established by the State must be submitted to EPA for its approval before incorporated into the State's water quality management plan.
Q. Does this comport with your understanding of EPA's policies and procedures, Mr. Hartung?
A. Yes.
Q. I direct you to the top of page 40. Would you read the first two sentences of the first paragraph at the top of page ;40 in the permit writer's manual.
A. Excuse me, did you say the first two sentences?

Q. Yes.
A. Once the State has determined the amount of discharge that a segment can assimilate without violating water quality standards, that amount less the amount of capacity reserved by the State if any is allocated among dischargers, the States are responsible for establishment and implementation allowable schemes?
Q. Would you like to go to the board there, Mr. Hartung, and draw out the wasteload allocation process and approval process, please?
A. Yes.
Q. And mark that for identification Defendant Florida Cities' 207.
THE COURT: Well, you can if you want it marked, you can put a label up there.
MR. BAISE: Yes, sir, we'll do that during the break, Your Honor.
THE WITNESS: it's going to be a very simply applied, overly simplified explanation here, but let's say for instance this is a stream segment and the water quality standard is the designated use for warm water fisheries. Not a very good looking fish. And the criteria to support the use, the second part of the water quality standard let's say was five parts per million dissolved oxygen, not allowed any discharge or any other thing going, oxygen-demanding material going into that

segment would allow the water quality standard to go below five. The total maximum daily load is comprised of a load allocation plus a wasteload allocation and let's say we had three cities discharging into this, say city A, city B and city C, less some type of non-point source, source of waste or oxygen-demanding material, the load allocation is the sum of the background material, amount of wasteload that comes in upstream, background loading, but any non-point source loading coming off farms or fields, plus a growth reserve. The statement, when you talk about non-point source, you're just talking about non-specified source of discharge.

BY MR. BAISE:

Q. Describe non-point force for His Honor, Mr. Hartung. Is that the term of art under the Clean Water Act?

A. Examples of non-point source would be storm water that contained street runoff. You have certain metals and all that accumulates on the streets, that would go in a culvert, storm water culvert. Another source of non-point sources would be off a field, let's say an insecticide sprayed on a field might wash off when it rained. Non-point source generally only get into the stream when it's raining. It's runoff, street runoff, any type of water that reaches the stream by sheet flow or not coming out of a pipe, let's say.

And we talk about dischargers, normally talk about coming out of a pipe, either a pipe coming out of an industry or pipe

coming out of a waste treatment plant. But this growth reserve is for really reserved for someone else that the State might want to allow to discharge into a stream.

A wasteload allocation, excuse me just a second, is the sum --

THE COURT: Just a moment.

(Brief pause.)

All right, go ahead.

THE WITNESS: The wasteload allocation would be the sum of the point dischargers, that is the A, B and C. Let's say the total maximum daily load for this segment had been determined by the State to be a hundred and thirty thousand pounds per day of BOD or oxygen-demanding material. And let's say the State had reserved for the load allocation of thirty thousand pounds per day. That means that the sum of the point dischargers cannot exceed thirty from a hundred and thirty cannot exceed a hundred thousand pounds per day of BOD.

The first test that is applied for these dischargers when analyzing what you need if you needed a waste-water allocation is to apply technology based permit limits. That is secondary treatment for these three cities. So let's say apply secondary treatment A, B and C, and you get secondary equals, let's say A had sixty thousand pounds per day, B consisted of thirty thousand pounds per day and C another thirty thousand. K stands for thirty.

THE COURT: Stands for thirty?

THE WITNESS: Yeah, in engineer jargon. You can say sixty K, that means sixty thousand. Secondary equals a hundred and twenty thousand pounds per day. Well, as you can see, a hundred and twenty thousand pounds per day exceeds the sum of what is allowed for wasteload allocation or for the dischargers. It exceeds it a hundred -- it's a hundred thousand compared to a hundred and twenty thousand, so that tells you that you must go beyond the technology based permit limits, and the wasteload allocation must equal no more than a hundred thousand pounds per day.

So what you have to do is go in there and say water quality based limits must equal -- the wasteload allocation must not exceed a hundred thousand pounds per day, so you add up, you cutback A, let's say, to fifty thousand pounds, B, twenty-five thousand pounds, and C, to twenty-five thousand pounds. The reason of this previous example of secondary treatment, this was sixty, thirty, thirty, so fifty percent of the available is fifty thousand pounds. This one would be twenty-five percent, this one would be twenty-five percent. Comes out to a hundred thousand pounds per day, so the two match and then you go ahead and apply the water quality based limits and issue your permits. The permits would be issued for these figures here, fifty thousand, not to exceed fifty thousand pounds per day, that comes out to be a certain

concentration, you have flow and concentration and you had loading and the most important is the pounds per day.

BY MR. BAISE:

Q. Who recommends those wasteload calculations in the first instance, Mr. Hartung?

A. I didn't understand the question.

Q. Who generates those wasteload allocations in the first instance that you have just described here, Mr. Hartung?

A. The State is required to generate those by the law. Wasteload allocations is just another way of describing water quality limited effluent limitation permits.

Q. Based on your experience, what is EPA's policy after receiving a State generated wasteload allocation and approving that wasteload allocation before it incorporates the wasteload allocation into an NPDES permit?

A. What is their policy?

Q. Yes, what is the policy, what is EPA's policy with regard to approving wasteload allocations before they go into an NPDES permit?

A. It's required by the statute as well as policy procedures, regulations that the EPA approve or disapprove the wasteload allocations within thirty days of receipt.

MR. QUINN: Objection, Your Honor, move to strike. That calls for legal conclusion. The witnesses has not been qualified as an expert in legal matters.

MR. BAISE: I didn't ask him a legal question. I asked him what EPA's policy was regarding --

THE COURT: I'll overrule the objection except that I'm concerned about the period of time we're talking about here. If you want to limit your question to when the policy he's talking about was applicable, I'll overrule the objection.

BY MR. BAISE:

Q. Mr. Hartung, in 1986, was it EPA's policy to require the approval of wasteload allocations before the wasteload allocation was incorporated into a NPDES permit?

A. Yes, it was. The law established that in 1972 as a requirement.

Q. Was it also EPA's policy in 1981 to require the approval of wasteload allocations before incorporating such wasteload allocation into a NPDES permit?

A. Yes.

Q. In your opinion, Mr. Hartung, why is it important to have an approval process where wasteload allocation --

MR. QUINN: Objection, that's not within Mr. Hartung's expert report.

MR. BAISE: It is within his expert report in terms of his describing policies and procedures relating to approvals of wasteload allocations.

MR. QUINN: Your Honor, if I may, the specific question asked is for his opinion on the importance of an issue

that is not within his expert report and I object to eliciting a response on that basis.

THE COURT: I'll overrule the objection.

THE WITNESS:: In my opinion, it's important that this -- excuse me, could you repeat the question?

BY MR. BAISE:

Q. Yes. In your opinion, why is it important to have an approval process for the wasteload allocation you have just described up here this afternoon?

A. It's important because in some States there are several different agencies that are generating these wasteload allocations, and in order to have an orderly process to make sure it was the official submission by the State designated agency that was designated by EPA to submit, and lastly, it's important because those do, once they're approved, are used in issuance of permits that generate wastewater treatment plants, that cost millions and hundreds of millions of dollars.

Q. Mr. Hartung, with respect to the questions I have just been asking you with respect to this manual, was this the same guidance that was given to permit writers before January of 1987?

A. Yes.

Q. This was the same guidance that was in effect when the permit was denied in December of 1986?

MR. QUINN: Objection, Your Honor, this is assuming a

fact not in evidence and asking this witness to testify about something which was not in his report. We've already established -- well, that's it, Your Honor.

THE COURT: Overruled.

THE WITNESS: Would you restate the question, please?

BY MR. BAISE:

Q. Is this the same guidance to NPDES permit writers that was in existence in December of 1986 when the permit was denied?

A. I don't know anything about permits being denied by --

THE COURT: All right, then just eliminate that part of question. How about the --

THE WITNESS: it was the guidance that was in effect at that time, yes. This guidance or something like this guidance which contained all the basic components which was based on the laws and regulations that was passed back in the '70's.

MR. BAISE: Thank you, Mr. Hartung.

Your Honor, I would like to have marked for identification Defendant's Trial Exhibit Number 4, EPA's review and approval.

THE COURT: All of these are premarked, correct?

MR. BAISE: Correct. Just my standard line, Your Honor.

THE COURT: Which one?

BY MR. BAISE:

Q. FOWC Trial Exhibit Number four, do you have it in front of you?

A. Yes.

Q. Are you familiar with this document, Mr. Hartung?

A. Yes.

Q. Would you describe this document for the record, Mr. Hartung?

A. It's a memorandum from EPA, Washington, D.C., from the monitoring and data support division, dated March 25, 1986, which lays out Epa's review and approval procedures for State submitted total maximum daily loads and wasteload allocations.

Q. Did you use this document in your work, Mr. Hartung?

A. I used previous documents like this. By this time in 1986, I was in the enforcement program.

MR. BAISE: Your Honor, I'd like to move in.

This is an EPA document, Mr. Hartung.

THE WITNESS: Yes.

BY MR. BAISE:

Q. Published by EPA?

A. Yes. We were briefed on it. At the time, there was a national meeting, I think it was in San Francisco, wherein permits, all the national permit branch chiefs from the region as well as enforcement branch chiefs and water quality planning branch chiefs were briefed about this document.

Q. Any reason to doubt the trustworthiness of this document, Mr. Hartung?
A. None.
MR. BAISE: I would move this into evidence, Your Honor.
MR. QUINN: Objection, Your Honor, on two bases. First is relevance as we stated in our papers before the Court. Second, this witness has no personal knowledge of anything within this document. He said he's seen documents like it. For those two bases, we object to the introduction of this document.
MR. BAISE: He said he was briefed, too.
THE COURT: Objection be overruled. What did you say, Mr. Baise, what did you --
MR. BAISE: He was briefed on the document. His testimony --
THE COURT: Were you talking to me?
MR. BAISE: Talking to counsel.
THE COURT: Don't address your remarks to counsel.
MR. BAISE: I know.
THE COURT: I thought that what you said.
MR. BAISE: Yes.
THE WITNESS: I actually had a copy of the document, read the document at the time it came out.
MR. BAISE: And I move this document be entered into

evidence, Your Honor?
THE COURT: Already received it.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. Mr. Hartung, I direct your attention to the fourth page of this document, dated March 25, 1986. Are you familiar with this memorandum dated March 25, 1986, Mr. Hartung?
A. Yes.
Q. Would you please summarize the purpose of this particular memorandum, Mr. Hartung?
A. I believe it was to remind the States as well as EPA regions about the procedures that had been in existence for years and it provided some additional ways to expedite procedures for getting total maximum daily loads and wasteload allocations approved by the regions because there was a national push to get a lot of people under compliance schedules and the wasteload allocation process was slowing things down, if you will.
Q. I direct your attention to the bottom paragraph of page 1, Mr. Hartung, under the subsection entitled purpose.
A. We were on page 4, is that right?
Q. Yes. I'm taking you back to page 1.
A. Can I have page 1?
Q. Last paragraph, first sentence, would you read that into the record, Mr. Hartung?

A. This guidance describes a step by step procedure for the review of State submitted total maximum daily loads and wasteload allocations that are required by the water quality management regulation and in Clean Water Act CWA including a list of questions and answers to focus on the key issues.
THE COURT: Where are you reading from?
MR. BAISE: Page -- this was actually marked page 1, Your Honor. Where the confusion comes, the first three pages are unnumbered. I apologize --
THE COURT: Okay.
MR. BAISE: -- in not giving you the direction on that, that's why the witness was confused.
Page 1, last paragraph, first sentence in that last paragraph on page 1 marked 1. Do you need him to go through it again.
THE COURT: No, no, I see it.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. Does this correctly reflect what you believe this document discusses, Mr. Hartung?
A. Yes, it does.
Q. Mr. Hartung, I direct your attention now to page 2 which has the number 2 on it. Page is entitled overview of the process.
MR. BAISE: You see that, Your Honor?

THE COURT: Yes.
BY MR. BAISE:
Q. Paragraph B, Mr. Hartung, I direct your attention towards, and would you read the first two sentences in that paragraph for the record?
A. As a foundation for all total maximum daily loads slash wasteload allocations prepared by the State, EPA and the State should agree to the process that the States will used to develop the wasteload allocation and prepare a written agreement which describes these procedures.
Such an agreement promotes consistency between projects and between States, i.e., how background data is applied, which models are to be used, how total maximum daily loads are determined, how loads will be allocated, et cetera. See appendix C for sample technical agreements.
Q. Is that your understanding as well, Mr. Hartung?
A. My understanding of what?
Q. Of this paragraph. Does this paragraph correctly reflect your understanding of agreements that have to be prepared between the State and the regions?
A. Yes, sir, it had been in existence since 1972.
Q. Mr. Hartung, I direct your attention to page 3 of the document entitled EPA review and approval procedure for State submitted TMDL's and WLA's. And I direct your attention to the bottom of page 3, EPA reviews the State's TMDL's, WLA's.

A. Okay, I have it.
Q. Would you read the first two sentences from that paragraph, Mr. Hartung?
A. To meet the requirements of section 303(d) of the Clean Water Act and the water quality management regulation, EPA must review and approve all total maximum daily loads. EPA may taylor its review to what is reasonable and appropriate, that is, where a State is clearly described as process in its CPP, that's continuing planning process. EPA may conduct an indepth review of a sample of the State's total maximum daily loads slash wasteload allocations to determine how well the State is implementing its approval process and give a less detailed review of the remaining total maximum daily loads and wasteload allocations.
Q. Do those two sentences reflect your understanding of this particular process, Mr. Hartung?
A. Yes. This was the part that was added, if you will, as far as policy in making this document. The rest of this document was just a reiteration of requirements that had been around forever.
Q. Mr. Hartung, I direct your attention to page 4, subparagraph H, subsection, EPA approves or disapproves State's submission. Would you read the first full paragraph, Mr. Hartung?
A. Yes. EPA either approves or disapproves the State's TMDL

slash WLA within thirty days after submission by the State. And approved TMDL slash WLA is certified, quote, unquote, by the EPA as having been developed in accordance with section 303(d) of the Clean Water Act and a letter of such approval is transmitted to the State.
Q. Does this reflect your understanding of what is required by EPA's policies and procedures relating to wasteload allocation, Mr. Hartung?
A. Yes, and also it's a statutory requirement.
Q. Mr. Hartung, would you read the first sentence of the second paragraph under H on page 4?
A. First sentence?
Q. First sentence only.
A. If EPA approves the State's total maximum daily load slash wastewater -- if EPA disapproves the Stat's TMDL slash WLA, the State -- excuse me, the EPA regional office not later than thirty days after the date of disapproval must develop the total maximum daily load slash wasteload allocation in accordance with section 303(d) and issue a public notice requesting comment on the revision.
Q. Does this paragraph reflect your understanding of EPA's policies and procedures in terms of disapproving State TMDL as wasteload allocations, Mr. Hartung?
A. Yes.
Q. Mr. Hartung, I direct your attention finally to page 6 of

this document. Are you on page 6, Mr. Hartung?
A. Yes. Sorry.
Q. Do you see where it indicates question and answer and then a second question and answer, second Q, where it begins the sentence after a TMDL?
A. Yes, sir.
Q. Would you read both that question and answer into the record, Mr. Hartung?
A. Question, after a TMDL slash WLA is submitted to EPA, what is the time period in which a decision for approval or disapproval is to be made. Answer, the regional administrator shall not later than thirty days after date of submission approve or disapprove the total maximum daily load slash wasteload allocation. This length --
Q. Thank you.
I'm sorry, I told you to read the entire answer. I thought I mentioned only one sentence. Please, go ahead, my fault.
A. This length of time also applies to EPA's review of the listing of the priority ranked segments still requiring total maximum daily loads slash wasteload allocations.
Q. And does this reflect your understanding of EPA's policies and procedures with respect to the approving wasteload allocation examples?
A. Yes, it does.

Q. Mr. Hartung, you testified earlier from this document that agreements were to be developed between the States and EPA on the approval of wasteload allocations?
A. Yes, sir, they were generally called continuing planning processes.
MR. BAISE: Your Honor, I'd like to identify the next exhibit as Florida Cities' Trial Exhibit Number 2.
BY MR. BAISE;
Q. Would you please turn to 2, Mr. Hartung?
A. I have it.
Q. Are you familiar with this document, Mr. Hartung?
A. Yes, I'm familiar with documents like it, plus I believe John Marlar briefed us at a national branch chief meeting when this first came out.
Q. Who is John Marlar, Mr. Hartung?
A. John Marlar was my counterpart as a branch chief in Region IV for years. He was chief of the water quality branch. And then also became like I did, the chief for the enforcement and permitting branch in 1981, so --
Q. Do you know Mr. Charles Jeeter who is addressed at the top of this letter?
A. Yes, I met him.
Q. Who is Mr. Jeeter?
A. He was the regional administrator of EPA Region IV at the time this document was issued in July, 1982.

MR. BAISE: Your Honor, I move this into evidence.

MR. QUINN: We object, Your Honor. As the basis of that, it's irrelevant, also improper, insufficient foundation has been laid and the cover memo is hearsay and was listed as one of our objections as well, and no foundation to that has been satisfied, sir.

THE COURT: Mr. Baise?

MR. BAISE: Your Honor, this again is a document provided to us in discovery by EPA as representing the agreement between Region IV and the State of Florida with regard to procedures relating to the approval or disapproval of wasteload allocations.

Initially, the agency was unable to produce the signed document between the State of Florida and EPA and in the second day or third day of depositions, they brought this to us as representing the official document between the two entities, so it's an official document from the agency. The two cover letters discuss the document. I can certainly go in and ask Mr. Hartung more foundation questions with regard to the agreement itself in order to authenticate it. However, I thought in light of fact the Government had produced this and the fact it is signed by a regional administrator, former regional administrator at EPA and also signed by the secretary of environment for the State of Florida, it's on U. S. Environmental Protection Agency letterhead, it's on State of

Florida letterhead, if that would be sufficient to make an official document.

THE COURT: I'll overrule the objection, be received.

BY MR. BAISE:

Q. Mr. Hartung, I believe you testified that you're familiar with such documents. How are you familiar with such documents as attached to the letter of July 9, 1982?

A. I was personally involved in developing the documents like this for each of the five States in Region VI; Texas, Oklahoma, Arkansas, Louisiana and New Mexico.

Q. Mr. Hartung, I would direct your attention and these pages are not numbered, Your Honor, so, the first two pages are the letter, the third page is the title page, fourth and fifth pages are signature pages, the page identified as general, Roman Numeral I, and it is unnumbered, but obviously is one because the page behind it is two.

MR. BAISE; Did you find it?

THE COURT: Yes.

BY MR. BAISE:

Q. Now, Mr. Hartung, I direct your attention to Roman I, sub

A. Do you see that, sir?

A. Yes, sir.

Q. Would you review the second paragraph and summarize your understanding of that particular paragraph?

A. If you'll give me a moment.

Q. Yes, sir.

A. It goes into the things that that previous document we discussed reiterated.

Q. Would you identify the previous document for the record?

A. Previous document was the headquarters document, I think it was dated 1986, which proscribed the procedures for approving the total maximum daily loads and wasteload allocations. And this paragraph spells out that, again, the mandates and requirements by the States under the Clean Water Act and section 303 of that Act, for developing wasteload allocations that protect the States' water quality standards. And also, that the EPA must approve or disapprove them.

The last part of the paragraph goes into the fact that this procedure has been unnecessarily time consuming, I think is the term used here, and needs to be sped up or expedited or changed to expedite the process.

Q. Mr. Hartung, was this an agreement executed between the State of Florida and EPA Region IV as far as you can tell from your review of the document?

MR. QUINN: Totally beyond the scope of this witness' knowledge.

MR. BAISE: It is before the Court, Your Honor, two letters, which again, as I pointed out, are on what appear to be official stationery. Number two was presented to us in discovery by EPA.

THE COURT: Well, it's in evidence. But, I don't know that this witness knows the answer to your question.

Sustained.

MR. BAISE: May I proceed?

THE COURT: Sustained. Yes.

BY MR. BAISE:

Q. Mr. Hartung, I direct your attention to page 9 of the document entitled State EPA Region IV agreement on the development of wasteload allocation and wasteload water permit limitations.

A. Roman Numeral IV?

Q. Roman numeral IV, page 9. Would you read that paragraph into the record Mr. Hartung?

A. Which paragraph?

Q. First paragraph, page 9, under Roman numeral IV entitled approval of wasteload allocations?

A. The EPA's required by 303(d) of the Clean Water Act to review and approve slash disapprove the allowable wasteloads established by the States within thirty days after submission. And additional thirty days is allowed to make necessary revisions to disapprove the identifications and loads. All final approvals of wasteload allocations are to be incorporated by the States into their water quality management plans through the continuing planning process required under 303(e) of the Act.

Q. And further, Mr. Hartung, I would direct your attention to page 10 of this document, the next page under Roman Numeral V, entitled incorporation of wasteload allocations into permit limitation. You see paragraph A on page 10, Mr. Hartung?

A. Yes.

Q. Would you read that into the record, please?

A. General. The wasteload allocations developed in accordance with this procedure and subsequently approved by EPA are to be directly incorporated into permit limitations unless there are overriding environmental concerns. The current NPDES permit will remain in effect until its specified expiration date. At that time, the approved allocation would be the basis for the permit limitations.

Q. Do those paragraphs you have just read reflect your understanding of EPA's policies and procedures relating to the approval or disapproval of wasteload allocations?

A. Yes, they do.

Q. Thank you.

MR. BAISE: You want to take a break, Your Honor?

THE COURT: Sir?

MR. BAISE: May we take a break?

THE COURT: Yes, we've been here for almost two hours, and we'll take fifteen.

(Thereupon, a brief recess was taken.)

THE COURT: Mr. Baise.

MR. BAISE: Thank you, Your Honor.

BY MR. BAISE:

Q. Now, Mr. Hartung, you have testified earlier about permit programs being run by both EPA and the States. What is a non-delegated State under the Clean Water Act?

A. What is it or —

Q. What is a non-delegated State under the Clean Water Act?

A. Well, the original intent of the Clean Water Act was to have each the States assume the administration of the NPDES Program and the State and the EPA was envisioned as kind of — am I being responsive?

Q. Yes.

A. — as an oversight — overseeing agency, as well as an enforcement backup, but as it turned out, as the State — I think there are still 10 States that never assumed the program, usually for legal reasons, so the law was written in terms of, well, the State would be running the program.

Q. Could you identify the program, please?

A. The program being the NPDES Permits and Enforcement Program.

Q. In such situations does both the State and EPA issue permits to a discharger?

A. Yes, they do.

Q. Why is that?

A. Well, the States have statutes and requirements that they have to abide by and the EPA Regional Office, then, in that situation, would have to carry out the mandates of the Clean Water Act or the Federal requirements.

In my region, it was our job to run the NPDES Program in parallel with five States that ran State programs under State Laws and Regulations.

Q. Do those permits have to assure that water — that water quality stands set for the State are maintained?

A. When you say those permits, which permits?

Q. The NPDES Permits.

A. Yes, they do.

Q. Do the State permits have to assure water quality standards are maintained?

A. Yes, they do.

Q. What is your understanding of whether EPA must give deference to a State-issued water discharge permit?

A. It's my understanding that —

THE COURT: Just a moment.

MR. QUINN: Objection that this is beyond the scope of the expert report, as well, sir.

MR. BAISE: In his expert report he indicates he's going to testify with regard to policies and procedures relating to delegated and non-delegated States, Your Honor.

THE COURT: I'll overrule the objection.

MR. BAISE: You may continue.

THE WITNESS: In my opinion, unless the results have been born out by some papers and policies written by EPA Headquarters, that unless there's some kind of clear error committed by the State in interpreting its water quality standards and issuing its own permit, then the EPA has to give deference to the State permit.

Q. What is your opinion, Mr. Hartung, as to whether EPA could require a no discharge effluent limit in an NPDES permit if such a limit was not in the State Permit for the same facility?

MR. QUINN: Objection. That opinion is not within the report, sir.

MR. BAISE: I would disagree, Your Honor, that this witness can testify — he is an expert, and it talks about the fact that he's going to discuss the policies and procedures with regard to delegated versus non-delegated States and whether those permits can require or have in them certain limitations.

MR. QUINN: That's not the basis of my objection. The basis of my objection is Rule 26, which requires the statement of all opinions to be expressed by the witness, and it is not — this is an opinion and is not in the report, and for that reason I object.

THE COURT: I'll sustain the objection to that question.

BY MR. BAISE:

Q. Mr. Hartung, what is your understanding as to whether or not EPA could require a no discharge effluent limit in an NPDES Permit and if such a limit is not in the State Permit for the same facility?

MR. QUINN: Objection Your Honor, same grounds.

THE COURT: Sustained.

BY MR. BAISE:

Q. Mr. Hartung, would you describe the State's role in administering the NPDES Program?

A. For a delegated State or for both?

Q. For both.

A. For non-delegated State, they still have a major role in the States establish the water quality standards, they generate the effluent limitations based on those standards, and they, also, are required to certify every EPA-issued NPDES Permit as meeting their water quality standards before that permit can be issued.

In the case where they administer the NPDES Program, they take over the permit issuance and enforcement of that permit. EPA, then, has an overview role to make sure that they are following the procedures that's laid out in the laws and regulations, and that the EPA is the

authority — excuse me — to override a State's enforcement action and take EPA action on a violation that they deem fit.

Q. Based on your experience and EPA's Policies and Procedures, does EPA challenge State Permits if they do not assure that water quality standards are being met?

A. They can, yes, and do.

Q. Do EPA-issued NPDES Permits contain wasteload allocations, Mr. Hartung?

A. Yes, they contain water quality limited effluent limitations which are based upon State wasteload allocation studies, yes.

Q. Do those wasteload allocations that are included in those EPA-issued NPDES Permits, do they need to be approved by EPA?

A. Do they need to be approved?

Q. Yes, or must be approved?

A. Yes, they must. Yes.

Q. And why?

A. Because, again, it is required by the Clean Water Act and by the Regulations from that Act.

Q. So it's your testimony that EPA cannot ignore the approval process of wasteload allocations and incorporate the wasteload allocations in the NPDES permits?

MR. QUINN: Objection.

THE COURT: This is your witness. Don't lead him like that.

MR. BAISE: I'm sorry, Your Honor, I didn't hear you.

THE COURT: Don't lead the witness.

MR. BAISE: Thank you.

THE COURT: I realize that a certain amount of that is not offensive and we don't have a Jury here, but that's a little much.

Go ahead.

BY MR. BAISE:

Q. Mr. Hartung, in your expert report you have discussed major and minor dischargers.

Is there any hierarchy of enforcement with respect to major and minor dischargers under EPA's Policies and Procedures?

A. Yes, there is.

Q. What is it?

A. The first priority, as I explained earlier, it's a research concern with EPA, is the issuance and enforcement tracking and enforcement of major industrial permits, major municipal permits, municipal, including domestic waste permit, and then major Federal facilities, that is, like air bases and things of that nature.

The second priority would be the issuance of

permits and enforcement of those permits for minor municipals, minor industrials and Federal facilities.

Probably a third hierarchy would be the issuance and enforcement of what's called general permits that are issued for an entire State or entire region, let's say a County. Those would include some that we had in our region that were offshore oil and gas, permits for the Gulf of Mexico, general permits, general permits for industrial storm water and for confined animal feeding operations.

And then there's a fourth category, which is whatever is left, including domestic — private domestics.

Q. And in your experience with EPA, are all minor dischargers permitted through the NPDES Permit System?

A. There was an attempt early on to permit all of them, but to my knowledge, some of them were never permitted, still have never been permitted in our region, and our region being Region 6.

The problem was that it was an overwhelming job to do that, so the agency generally relied on if there was a parallel program on the State's issuing permits to the minors — State Permits to the minors.

Q. And in your experience, Mr. Hartung, have you ever seen a case where an NPDES Permit was denied to one of your facilities treating human waste and the plant was meeting water quality standards and effluent limitations in the

NPDES Permit?

A. No. I've never — no.

Q. Is your answer no?

A. My answer is no.

Q. And that's based on the review of 50,000 permits, Mr. Hartung?

A. It's based on my experience —

MR. QUINN: Objection.

THE COURT: You can ask him what it's based on.

BY MR. BAISE:

Q. What is that based on, Mr. Hartung?

A. Based on my experience in 23 years and working in this area and EPA Region 6, primarily.

MR. BAISE: That finishes my direct questioning of Mr. Hartung, Your Honor.

THE COURT: Mr. Bird, do you have any questions?

MR. BIRD: Just briefly, Your Honor.

EXAMINATION

BY MR. BIRD:

Q. Mr. Hartung, you testified that you oversaw enforcement in Region 6 for a period of time?

A. For 13 years, yes.

Q. And I believe, if I recall your testimony, you indicated that you oversaw some 50 criminal cases, 200 civil cases, 350 administrative penalty orders and some number of

administrative orders.
A. Around 10,000 administrative orders, yes.
Q. In any of those instances, did Region 6 take enforcement action against the parent corporation of the discharger?
A. No, we did not.
MR. KIRD: Thank you.
No more questions, Your Honor.
THE COURT: Mr. Quinn.

EXAMINATION

BY MR. QUINN:
Q. Good afternoon, Mr. Hartung.
A. Good afternoon.
Q. Sir, in listing the priorities of the Clean Water Act, you missed one, didn't you? Didn't you?
A. I said the three major ones. I thought were the three major ones, yes.
Q. Did you miss the fact that it is an objective of the Clean Water Act -- the first objective of the Clean Water Act is that it is the national goal that the discharge of pollutants into navigable waters be eliminated by 1985? Wasn't that a goal of the Clean Water Act, sir?
A. Yes, it was one of the original goals and a commission was set up by the Act to review that goal and that commission met -- I don't know --

THE COURT: Well, you've answered his question.
MR. QUINN: Thank you, Your Honor.
BY MR. QUINN:
Q. Sir, in the Permit Writers Guide, which is Exhibit -- Florida Cities Exhibit Number 7. I believe you have it in front of you.
A. Yes.
Q. Sir, if you turn to the third page of the Exhibit, please, and I want to ask a question and refer to something, okay? Tell me when you get there.
A. I have it. Page 3?
Q. Yes, sir.
Sir, this training manual is just a guidance, isn't it?
A. That's what it says in front of the manual, that's correct.
Q. It says, in fact, doesn't it say that the material in this manual is for instructional purposes only, it was developed to illustrate the applications of the technical principles of the NPDES Regulations and does not necessarily represent official policy of the USEPA?
A. That's what it says.
Q. Is that, in fact, what it is?
A. It contains a lot of official policy when it refers to the laws and regulations, of course.

Q. But the document itself does not represent the official policy of the USEPA; does it?
A. That's what it says.
Q. Sir, you're not here on behalf of the United States to testify on behalf of the United States today, are you?
A. No, sir.
Q. Sir, on page 1, numbered 1 of that same Exhibit, number 7, under purpose and format, one of the purposes -- withdrawn.
It is recognized that each EPA Regional Office or approved State will have NPDES Permit processing procedures which have been specifically adapted for a specific geographical area and which incorporate local requirements. Therefore, it is the purpose of this manual to provide an explanation of those elements of the program which are common to any State or Regional Office which issues NPDES Permits. Particular emphasis will be given to those areas which historically have been difficult steps in the permitting process.
Do you see that?
A. Yes.
Q. Is that what it says?
A. Yes, sir.
Q. It goes on to say, to the extent possible, practical examples are used to demonstrate the concepts which are

discussed. It says that?
A. Yes, sir.
Q. Sir, with regard to the next document, the TMDL Wasteload Allocation, which is Exhibit Number 4, Florida Cities Water Company Exhibit Number 4. Sir, on page C-1, this, again, is a guidance document, isn't it? The Wasteload Allocation, Exhibit Number 4?
A. Are you referring to a particular page?
Q. I want to ask you in general, sir; is this just a guidance document?
A. Yes, it is.
Q. Okay. And on page C-1, doesn't it say, since conditions, procedures and methodologies may vary between EPA Regions and their States, a general outline of an example agreement is provided? Does it say that?
A. Yes, sir.
Q. So differences do exist -- withdrawn.
You will acknowledge that differences exist between Regions; is that correct?
A. Oh, yes.
Q. And definitely within States within the Regions, too; right?
A. That's correct.
Q. Sir, on page 4 of that same document, I'd like to talk a little bit about TMDL's.

Sir, in Region 6, about how many streams or other water bodies are there in Region 6, which receive discharges from NPDES permitted facilities?
A. Almost all streams. I don't know the number.
Q. Thousands?
A. Oh, yes, thousands and thousands. Yes.
Q. How many of those streams and water bodies has a TMDL been done?
A. As of this date, probably all of them at least once.
Q. All of them have had TMDL's done; is that correct?
A. That's my understanding, yes.
Q. Sir, with regard to the State EPA Agreement, which is Exhibit Number 2, Florida Cities Water Company Exhibit Number 2.
A. Yes, sir.
Q. This document didn't set up anything required in stone, to your knowledge, did it? These are not in-stone requirements, are they?
A. This document lays out and reiterates what was in the law and the regulations, so it's pretty much in stone, I would say, for most of the things -- for the examples that I read from.
Q. I want to turn your attention to page 4, which is the first signature page that Mr. Cole on behalf of the State of Florida signed. Tell me when you find that, please.

A. Page 4?
Q. Yes, sir, of Exhibit 2.
A. Mr. Cole?
Q. Yes, where he signed off on it, sir.
A. Okay.
Q. Okay. About halfway down the paragraph, above the signature blocks it says, doesn't it, that both parties agree that the provisions of this document are reasonable and are understood to be goals toward which each party will strive. Doesn't it say that?
A. Yes, it does.
Q. It doesn't say anything about them being requirements, does it?
A. No, it doesn't say that.
Q. Thank you.
Mr. Hartung, is there any opinion in your expert report, which has been introduced as Defendant's Exhibit Number 1, is there any reference to the Florida Cities Barefoot Bay facility?
A. No, sir.
Q. Is there any reference in that report to Florida Cities Carrollwood facility?
A. No.
Q. Is there any reference in that report to Florida Cities Waterway Estates facility?

A. No, sir.
Q. Is there any reference to Florida Cities Water Company at all in that report?
A. No, sir.
Q. Thank you.
Sir, is there any reference in your expert report --
A. May I embellish my answer or just --
THE COURT: No, sir.
If counsel for the party calling you wishes to elicit something further, he can.
Go ahead.
BY MR. QUINN:
Q. Sir, is there anything in your expert report regarding the seriousness of the violation or violations alleged against Florida Cities Water Company?
A. No.
Q. Is there anything about the economic benefit, if any, resulting from the violations alleged against Florida Cities Water Company?
A. There is no mention of Florida Cities in that entire report.
Q. There's no mention of economic benefit, either, is there?
A. No, sir.

Q. Is there any mention of the history of such violations against Florida Cities Water Company?
A. No, sir.
Q. Is there any efforts about -- any reference to any good faith efforts to comply with the applicable requirements of the Clean Water Act in your report?
A. Concerning what?
Q. Is there any reference to any good faith efforts by Florida Cities to comply with the applicable requirements of the Clean Water Act in your expert report?
A. No, sir.
Q. Is there any reference in your expert report to the economic impact of the penalty upon the violator, Florida Cities Water Company?
A. No.
MR. QUINN: Your Honor, at this point the United States would again renew its motion to strike the testimony of Mr. Hartung.
THE COURT: Well, denied.
BY MR. QUINN:
Q. Mr. Hartung, how many articles have you published concerning EPA's general practices regarding permitting matters under the Clean Water Act?
A. By "published" what do you mean?
Q. Published in a journal of national distribution.

A. Probably half a dozen.
Q. In all those — each one of those was an article about permitting matters under the Clean Water Act; is that correct?
A. Yes.
Q. Sir, how many articles have you published concerning EPA's general practices regarding enforcement matters under the Clean Water Act?
A. Probably another half dozen.
Q. Sir, other than today, you've never testified as an expert witness on EPA's general practices and procedures regarding permitting and enforcement matters, have you?
A. No. I've given depositions when I was at EPA.
Q. Sir, you never worked in EPA Region 4, have you?
A. No.
Q. You've never supervised wasteload allocations in Region 4, have you?
A. No.
Q. You've never supervised anybody issuing permits in Region 4, have you?
A. No.
Q. You've never supervised any enforcements of Clean Water Act violations in Region 4, have you?
A. No.
Q. Sir, you didn't write the Clean Water Act, did you?

A. No. I would have to say no.
MR. BAISE: Objection, Your Honor. That is just not a relevant question.
THE COURT: Sustained.
BY MR. QUINN:
Q. You didn't write any code for Federal Regulations relating to permitting regulators — withdrawn.
You didn't write any of the permit regulations, did you?
A. No, not per se. No.
Q. Okay. You did not, by yourself, write the October 2nd, 1989, final version of the Revised Enforcement Management System, did you?
A. Say again.
Q. You did not, by yourself, write the October 2nd, 1989, final version of the Revised Enforcement Management System, did you?
A. Not by myself, no.
Q. That was written by a committee of EPA's Office of Water, located headquarters in Washington; right?
A. With input, major input from the regions.
Q. But you did not write, by yourself, the April 18th, 1986, National Guidance for Oversight —
THE COURT: He's already answered that, that he didn't, hasn't is?

MR. QUINN: It's a different question, Your Honor.
THE COURT: It just sounded the same.
All right.
BY MR. QUINN:
Q. Let me start over, Mr. Hartung. I'm sorry.
You did not, by yourself, write the April 18th, 1986, National Guidance for Oversight of NPDES Programs, did you?
A. No. I wrote that with the help of other States and EPA's Headquarters.
Q. That was written by Office of Water, located in headquarters in Washington, too; right?
A. They compiled it, yes.
Q. You didn't write the March 31st, 1992, Civil Penalty Assessment for Clean Water Wastewater Discharge Violations, did you?
A. What was the date?
Q. March 31, 1992.
A. No.
Q. Sir, you didn't write the May 1987, Training Manual for NPDES Permit Writers, did you?
A. No, I did not.
Q. You didn't write its predecessor, the one you were talking about on direct examination, either, did you?
A. No, I did not.

Q. You didn't — withdrawn.
Sir, have you ever supervised permit issuance?
A. Yes.
Q. When was that, sir?
A. The late 70's, when I was acting Deputy Water Division Director, EPA Region 6, and, also, in the early 90's when I was in detailed to that same job.
Q. But you've never supervised issuance of permits in Region 4, have you?
A. No, that's correct.
Q. Sir, can you please tell me what is a point source discharger?
A. Point source discharger is a term that was used to describe the difference between non-point source and point source, so that people could understand when you talk about a point source discharger, you were talking about a discrete point rather than sheet flow coming off of land somewhere.
Q. Is it correct that every point source discharger in the United States must receive an NPDES Permit from either the United States Environmental Protection Agency or a delegated State?
A. That's correct.
Q. Sir, you testified a little bit about a minor facility and I'd like to ask you again, what is a minor facility under Federal Regulations?

A. The minor facility is any facility, if you're talking about sanitary waste dischargers, that is below — has a flow below one million gallons per day. And if you're talking about industrial minor, there's a point rating system, so many points for toxicity, et cetera, et cetera, and if you get an 80, that declares you a major and if you are below 80 it declares you a minor.

Q. All minor facilities require NPDES Permit, don't they?

A. That's what the law says, yes.

Q. So failure to have an NPDES Permit is a violation of the law, isn't it?

A. That's correct.

Q. The NPDES Permit System is essential to enforcing effluent limitations; isn't that correct?

A. Well, yes. The system — you issue the permit with the effluent limits and you enforce the permit, which includes effluent limits.

Q. And the NPDES Permit System is essential to maintaining water quality standards, too; is that correct?

A. That's correct.

Q. Sir, whose responsibility is it to assure that a valid NPDES Permit is acquired; the discharger or the regulator?

A. The discharger.

Q. And whose responsibility is it to understand what the requirements of an NPDES Permit are; the discharger or the

regulator?

A. Say it again.

Q. Sure.

Whose responsibility is it to understand what the requirements of an NPDES Permit are; the discharger or the regulator?

A. I would say both, but, of course, it's the responsibility of the discharger.

Q. Sir, an Administrative — withdrawn.

Sir, an EPA-issued Administrative Compliance Order is not an NPDES Permit, is it?

A. No.

Q. An EPA-issued Administrative Penalty Order is not an NPDES Permit, either; is it?

A. No.

Q. And an State-issued Administrative Order is not an NPDES Permit, is it?

A. No.

Q. And a State-issued Permit in a non-delegated State is not an NPDES Permit; is it?

A. That's correct.

Q. And a State-issued Permit in a non-delegated State and an EPA-issued NPDES Permit are two different permits; correct?

A. Yes, that's correct.

Q. And each of those two different permits may have different requirements; isn't that correct?

A. That is, also, true.

Q. And compliance with the State-issued Permit in a non-delegated State does not excuse a violation of an NPDES Permit, does it?

MR. BAISE: Objection, Your Honor. All these questions go to liability. The Court has already found liability with respect to this Defendant.

THE COURT: Well, I'll — I'll allow the examination. I'll overrule the objection.

THE WITNESS: Can you repeat the last question? I'm sorry.

BY MR. QUINN:

Q. Yes, sir. Incompliance with the State-issued Permit in a non-delegated State does not excuse a violation of an NPDES Permit, does it?

A. No, it's still a violation.

Q. Sir, with all your experience in Region 6, how many enforcement cases have you supervised where the facility had no NPDES permit?

A. Oh, in the hundreds.

Q. And how many, in all of your experience, how many enforcement cases have you supervised?

A. I supervised every enforcement case for 13 years.

Q. How many cases would that be, approximately?

A. Are you talking about including administrative orders which —

Q. Yes.

A. Well, 10,000 of those and 400 of Administrative Penalty Orders, that's 10,400 and 10,000 civil judicial, that would be 10,600, plus another 50 — 10,650 cases, probably.

Q. So only a hundred out of the 10,650 cases were facilities for which no NPDES Permit was in place; is that correct?

MR. HIRD: Objection. I think that mischaracterises the testimony. I don't believe he said a hundred.

THE WITNESS: I said —

THE COURT: Well, I don't know whether he did or not. I'll overrule the objection.

BY MR. QUINN:

Q. Mr. Hartung?

A. I'm sorry. I keep asking you to repeat.

Q. Sure.

Isn't it correct that only about a hundred facilities out of the 10,650 cases that you've overseen were cases in which no NPDES Permit was in place?

A. That's correct. That's the only ones that we saw fit

to issue formal actions against.

MR. QUINN: Objection. Move to strike everything after "that's correct."

THE COURT: Denied.

BY MR. QUINN:

Q. Mr. Bartung, doesn't the decision to bring enforcement action require the exercise of discretion on the part of regulator?

A. Yes.

Q. Isn't it fair to say that as the level of EPA's enforcement response escalates, additional internal review is required.

A. It's done. I don't know if it's required. It makes sense.

Q. In Region 6, at the time that you retired, what level — what levels of review were required to issue a warning letter?

A. My section chief signed those — most of the warning letters, and I would look at them periodically, you know, maybe 10 percent.

Q. Just so I'm clear, is a section chief above you or would that be one of the people that reports to you?

A. No, I had three sections under me. I had a section chief or administrative section that took care of most of that.

Q. In Region 6, at the time you retired, what level of review was required to issue an Administrative Compliance Order?

A. It was reviewed by a technical section chief, administrative section chief and concurred on by myself and signed off on by the water division director above me.

Q. So you didn't have authority by yourself to issue Administrative Compliance Orders, did you?

A. That's correct. No branch chief did that. That's not delegable to the branch chiefs in the Region.

Q. How about with regard to Administrative Penalty Orders; is that the same?

A. No, it's not. For some strange reason I had the authority to issue Administrative Penalty Orders, but I didn't have authority to issue Administrative Orders. That was redelegated to me in about 1991.

Q. So it's a redelegation for Penalties Orders, but not a redelegation for Compliance Orders; is that correct?

A. That's correct. That was forbidden by some order out of Washington.

Q. Sir, in Region 6, at the time you retired, what levels of review were required to refer an action to the United States Department of Justice for enforcement?

A. Essentially the same levels of review, section chief, branch chief, division director, regional counsel, and,

also, the regional administrator and then it had to go forward to the EPA Headquarters before it went to the Department of Justice for their concurrence.

Q. Isn't it a fact, sir, that before a complaint can be filed in a Federal District Court, a trial lawyer and assistant section chief, section chief, deputy assistant attorney general, and the assistant attorney general for the Environment and Natural Resources Division must approve the filing; isn't that correct?

MR. BAISE: Your Honor, objection. He's asking for all of the procedures of the Justice Department in approving an action and that clearly is not in the expert's report nor brought out in his direct examination.

THE COURT: Objection overruled.

Can you answer that?

THE WITNESS: I — I don't know the answer to your question.

Most of those relate apparently to the Department of Justice approvals.

BY MR. QUINN:

Q. Sir, do you agree that an important goal of the NPDES Enforcement Program is to provide an appropriate deterrent effect to violators?

A. Absolutely.

Q. And a means of establishing a deterrent effect is the

imposition of a civil penalty; isn't that correct?

A. That's one means, yes.

Q. Sir, with regard to permitting, isn't it true that if a State objects to the provisions of a proposed NPDES Permit, it can bring those objections to EPA's attention prior to the time the permit is issued?

A. That's correct.

They're asked to certify the NPDES Permit as protecting the water quality standards.

Q. Once, also, a discharger obtains a final permit denial from EPA, aren't there specific appeal procedures set forth in the Clean Water Act and the Regulations for the permittee?

A. That's correct.

Q. And aren't there specific time limits within which permittees must file their appeals?

A. That's correct.

Q. Sir — withdrawn.

MR. QUINN: No more questions, sir.

THE COURT: Mr. Baise, do you have any redirect?

MR. BAISE: Yes. Thank you, Your Honor.

REDIRECT EXAMINATION

BY MR. BAISE:

Q. Mr. Bartung, counsel asked you about a commission that studied the goals of the Clean Water Act. Please describe

that commission for the record.
A. Actually, I believe I mentioned it, and he was talking about that one of the goals was elimination of — the total elimination of discharge.
My understanding was that the — as I recall, the Clean Water Act set up the commission when the Clean Water Act was passed in 1972, to see if that was a reasonable goal and that commission met and essentially admitted that that was a little bit too lofty a goal, and so that goal was dropped in my understanding.
I don't remember the exact date that everybody said that — in practicality it was dropped in the late 70's, because it was obvious to everyone that we could not eliminate all discharges.
Q. Do you know who was on that commission?
A. I don't recall. I just remember that the impression, it was pretty blue ribbon commission — I don't know why Rockefeller comes to mind. I don't know who was on it, though.
Q. Was this commission created by Congress to review the goals of the Clean Water Act?
A. That's right. That's correct. As part of the statute.
Q. Mr. Hartung, it has been brought out by counsel that a couple of the documents in evidence do not represent

official EPA policy.
Do you remember that question, Mr. Hartung?
A. Yes, sir.
Q. Could you describe EPA's practice and how it puts out documents relating to policies and procedures, if you know?
MR. QUINN: Objection, beyond the scope of direct and beyond the scope of cross.
THE COURT: I'll sustain the objection.
I don't think that's going to be very productive.
Let's move on.
BY MR. BAISE:
Q. Mr. Hartung, you indicated you have published articles?
A. Yes.
Q. Could you identify those articles you have published and the subject matter?
A. I published articles back in the 70's on — in some trade magazines on water quality planning activities, water quality standards, NPDES Permits, NPDES Enforcement Program.
I published one last year, formal paper, presented at a national conference on sanitary sewer overflows.
I published some material through the Dallas Morning News at one time back in the early 80's on wasteload allocations and their impact on the cities in that area.
There probably were more, but I don't recall them.

Q. Mr. Hartung, it's been brought out that you did not write a number of documents that are in question in this case.
Is it ever EPA's policy to have one person issue a document representing agency official or unofficial policy?
A. It is the policy of the agency to have the highest ranking, like the Director of the Office of Water Enforcement Permits, in this case, issue things likes the Oversight Guidance and the Enforcement Management System Guidance. It, generally, would recognize different regions for contributing or different States in some cases.
Q. Do teams of people generally produce documents such as are in evidence in this case, Mr. Hartung?
A. Yes, sir.
Q. Why was it your policy or procedure or EPA's policy or procedure not to permit minor dischargers for a period of time during, say, the last 10 years or 15 years, Mr. Hartung?
MR. QUINN: Objection. Mr. Hartung hasn't worked with EPA for the past two years, and I'm not sure that the purpose of this question — I think is —
MR. BAISE: I'll withdraw the question.
BY MR. BAISE:
Q. Mr. Hartung, did EPA have a policy of not permitting all minor dischargers into the waters of the United States?

A. I don't know that it was a written policy, but it became a practicality that the resources of the agency was spent issuing and reissuing majors and that was the top priority for sure, and so a lot of minor dischargers, if they were ever issued a permit to start with back in the 70's in the first round, never got another permit.
Q. Did it make a difference as to whether the State had permitted the minor discharger, Mr. Hartung?
A. Yes, sir.
Q. Why would that make a difference?
A. It made a difference because we at least knew they were being regulated and the State's generally paid more attention to minors than they did majors, so it's kind of like Jack Spratt and his wife —
THE COURT: Just a moment.
MR. QUINN: Objection, move to strike that response. Beyond the scope of direct and cross.
THE COURT: Overruled.
MR. BAISE: You may continue, Mr. Hartung.
THE WITNESS: I'm through.
BY MR. BAISE:
Q. Mr. Hartung, based on your experience in oversight of NPDES Permits in Region 6, and, also, your extensive experience in working with other regions, have you ever seen an enforcement action taken where EPA had taken an NPDES

Permit or NPDES Permit — discharger's permit many improperly?

MR. QUINN: Objection, calls for legal — sorry — calls for an expert opinion, which was not expressed in the report.

THE COURT: I'll sustain the objection.

BY MR. BAISE:

Q. Mr. Hartung, can you tell the Court and the record whether or not the majority of the enforcement actions that Region 6 or, based on your experience, EPA takes in enforcing NPDES Permits are mainly for injunctive relief?

A. The bulk of them. The purpose of enforcement actions, formal or informal, primarily was to get compliance, and so the bulk of the formal enforcement actions were for injunctive relief as well as sometimes for penalties.

MR. BAISE: No further questions, Your Honor.

THE COURT: Thank you, sir.

You may step down.

THE WITNESS: Thank you.

THE COURT: Call your next witness.

MR. BAISE: Your Honor, the Defendant Florida Cities, calls Mr. Patrick Lehman.

(Pause.)

THE CLERK: Raise your right hand.

Thereupon,

PATRICK LEHMAN,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box.

MR. HIRD: Your Honor, before Mr. Lehman begins, last Thursday the Government introduced a document called United States Offer of Proof in Lieu of Testimony of Witnesses that Plead the Fifth Amendment.

There was some discussion at the end of the day on Thursday as to what response, if any, would be required of the Defendants and at what time.

You had indicated at that point that you were taking under advisement as to when or whether any response would be required or how that document would be treated, and you indicated to the Defendants that you would not require a response earlier than Wednesday.

Since the next Court date is Wednesday, I wanted to bring the matter to the Court's attention, so we were aware what our responsibilities are.

THE COURT: Right. I was going to mention that before we concluded the day's proceedings.

Does that have to do with this witness here?

MR. HIRD: No, Your Honor.

If you want to take it up at the end of the day —

MR. BAISE: We just wanted to make sure we had time to take that up, Your Honor, this evening.

THE COURT: Why don't we go ahead and do that now. That is —

MR. BAISE: Do you want to have Mr. Lehman step down while we undertake that, Your Honor?

THE COURT: Well, okay. You can step down, sir. Just have a seat in front of the Courtroom or back of the Courtroom there.

All right. Well, do you want to be heard on the response that the Court will expect?

MR. HIRD: Your Honor, if you have some thoughts you were going to share with us as to what the intentions were —

THE COURT: Not specifically. I was going to afford you the opportunity to respond to the United States' Offer of Proof and whether the Court would receive depositions.

MR. HIRD: Your Honor, I don't think this was in connection with depositions.

THE COURT: It was not. Okay.

Then — well, I thought part of the — I thought part of the proffer was to offer those portions of the depositions listed on page 34 of the joint pretrial statement where the witnesses invoked the Fifth Amendment.

MR. HIRD: I'm sorry. I think now I got confused. You were right, Your Honor.

I thought you were referring to the depositions that were brought up on Friday when asked that question, so you are correct, it's the depositions.

THE COURT: So, that's one — as I recall now, that was one of the things that the Court was going to receive submissions from the Defendants addressing the propriety of the Court's receiving those depositions wherein the witnesses listed on page 34 pled the Fifth Amendment.

MR. HIRD: Your Honor, I think, as I see it, there are three issues. One is the receipt of the depositions, two is whether it's appropriate to draw adverse inferences, and three, the document itself, which as if you recall, Your Honor, we had just had handed to us. We've now had a chance to read it. And appears to be less drawing of adverse inferences from lack of testimony questions, but more the Government's interpretation of the exhibits that it has entered into evidence, and in some instances exhibits which have not been entered into evidence.

I certainly think that we would like to brief for you the question of whether it is appropriate for you to draw adverse inferences. To the extent the receipt of the depositions is connected with that, I would see those two issues linked together.

The third question is a separate question, assuming you were to take adverse inferences, is this appropriate offer of proof, given what this is functionally is an analysis of the documents, and if you look at the documents themselves, in many instances the documents are inconsistent with the conclusions drawn by the Government or the alternative language that can be brought out in the various exhibits.

What I would propose that we do is that we at one stage brief the propriety separately of drawing an adverse inference and admission of the depositions, if that — if the Court Rules against the Defendants with respect to that, then we should somehow have an opportunity to respond within the documents themselves to show that the conclusions that the Government has drawn from the documents are not consistent with other things within the very same documents.

THE COURT: Okay. Yes.

MR. BULLOCK: Your Honor, along with that, the offer of proof presented by the Plaintiff made no — had no specific, either evidentiary or case law basis, to make an offer of proof under the auspices that they were attempting to make the offer of proof and I would just join with Mr. Hird in saying we would appreciate the opportunity to brief the issue of whether or not such a offer is actually an offer of proof and is permissible in that form under the

Rules.

THE COURT: Okay. Mr. Jacobs.

MR. JACOBS: Your Honor, I'm not sure whether the Court has any leanings one way or the other in terms of what it's inclined to do.

I would reemphasize that the Government has no objection, whatsoever, to the Defendants interpreting the documents that the are, in fact, discussed in the offer and interpreting them and suggesting whatever inferences they see fit as being attachable to those documents.

I'm instructed that all of the exhibits that are cited in the offer of proof are already in evidence.

MR. HIRD: I think that's one exception, Exhibit 253. That was Mr. Dresner's —

MR. JACOBS: If that's the memo I take Mr. Hird's representation to it being, then I stand corrected, there's only one of many, many, many exhibits that are not already in evidence.

I do quite agree with Mr. Hird, that in large part the adverse inferences that we asked the Court to draw are adverse inferences that we believe are legitimate and appropriate interpretations of these documents.

I have no objection, whatsoever, to one or both of the Defendants briefing as an initial matter, whether they believe an offer of proof of this nature is an appropriate

means to bring to the Court's attention the adverse inferences that should be drawn, and secondly — so that would be a procedural matter.

And secondly, I have no objection to the Defendants briefing from their own perspective what adverse inferences or what inferences, if they rather characterize it as such, should be drawn from the documents.

As I said, earlier — early last week, there was — there's no subterfuge, no trickery involved here. All we want to do is to make our offer, because the witnesses are unavailable, and that's something we've had no control over. It's something that the Defendants have had ultimately quite some say in, which witnesses would be called to testify. And I'm emphasized in the past that the witnesses, particularly the Avatar witnesses that were called to testify by Avatar Holdings, were the witnesses who did not have personal knowledge of the facts and circumstances directly relating to the allegations in the complaint, and it's the witnesses that we would like to call who are unavailable, and that's why we think we should be entitled to make the offer of proof.

THE COURT: Well, we have the issues presented or appear to be extant that as to the admissibility in the first instance of these depositions wherein these witnesses invoked the Fifth Amendment, and I suppose, I'm not sure

that the second issue can — can or really should be regarded as a separate issue, because the second issue, which we've talked about, is whether it is legitimate for the Government to be entitled to have the Court draw negative inferences from the invocation of the Fifth Amendment.

Now, if the Court were to find against the Government on those issues, then it seems to me we would not have to go further with respect to any matters pertaining to the offer of proof, because the offer of proof would not be an appropriate document.

So, I'm wondering if this briefing should be bifurcated, as I think Mr. Hird had suggested.

MR. JACOBS: Judge, I didn't address the matter of the depositions on — with respect to the present or former Avatar officers, that is to say, Messrs. Getman, Sladkus and Wilkov. I'm entitled to have those depositions into evidence, either because the person is a current officer of the company or because the person is unavailable as being outside of the jurisdiction, outside one hundred miles.

THE COURT: Well, I'm going to permit counsel for the Defendants to address those two issues; that is, the admissibility of the depositions and the inferences — the admissibility of the depositions and the issue regarding whether the Court — whether the Government is entitled to

have the Court draw inferences from the invocation of the Fifth Amendment, and I think the Government probably ought to have the opportunity to respond.

MR. HIRD: That procedure is perfectly satisfactory to us, although I would mention, I believe Your Honor has already ruled on the situation regarding Mr. Wilkov.

THE COURT: Yes, that's true.

MR. HIRD: The only question I guess is the question of the timing, when you would expect it, which may also get into questions about whether we — quite frankly about how long the trial will be —

THE COURT: Yeah. Well, okay. Well, you tell me; where do you think we are in this trial at the present time?

MR. BAISE: With respect to the Defendant, Florida Cities, Your Honor, we have a number of witnesses left. I haven't counted them up today, but I believe, somewhat like the situation with Mr. Armstrong, Mr. Hartung, our case is going to move along rather rapidly. And frankly, we are looking to see whether or not there are at least a couple of witnesses that we can cut out and attempt to finish this off by Friday. It may be difficult. Obviously, we cannot control the amount of cross-examination time that the Government is clearly entitled to, but assuming it stays within the ranges and bounds we have seen to date, there's

at least a possibility of our completing our case on Friday.

Now, obviously, we're out tomorrow, and we have one witness who's only available on Wednesday, and we may have to put him on out of our preferred order, but there's a possibility we could get on maybe four or five of the witnesses on Wednesday, and if that is successful, we have a real shot at completing on Friday. If that's not successful, it probably will go over a day or two.

THE COURT: Uh-huh.

MR. BAISE: I'm not speaking, of course, for Mr. Hird, who obviously has one or two witnesses that — well, I'll let Mr. Hird address it.

THE COURT: So, Mr. Baise, you say there's a possibility of you finishing your case by this Friday?

MR. BAISE: Yes, sir.

THE COURT: Mr. Hird?

MR. HIRD: Well, Your Honor, depending on the status of the offer of proof, I have three, what I believe is best described, three plus one. There's a Mr. Allen, who Mr. Baise will be calling in his case, and I had suggested that I would cross — I'm sorry — I would examine him with respect to my direct case when he appeared, so he appeared only once. So, if that happens, that would take that witness off.

I would then have two witnesses that I would go

forward with and as long as the status of the offer of proof is in doubt, there would be a third witness I would call. So, that would probably, assuming I can examine Mr. Allen at the time period suggested by Mr. Baise, that might add one more day.

THE COURT: Okay. Mr. Jacobs?

MR. JACOBS: Judge, first of all, I have no objection to Mr. Hird's suggestion that he examine Mr. Allen at the same time, for purposes of his case, as Florida Cities does — when they examine him. I think that's a fair request and will speed things along.

I, by my count, I think based on the representations that have been made and the witnesses that have been called to date, at this point in time, my best approximation is that the Defendants together have 23 witnesses remaining on their list, 20 for Florida Cities and 3 for Avatar Holdings.

You can tell that we are somewhat shorthanded compared to the other side of the podium, and to the extent that the Defendants would advance us the courtesy, if they are going to cut, as Mr. Baise suggested, witnesses from the list, to the extent they could share that with us at their earliest available point in time, that would probably both facilitate our preparation, as well as expedite the examination of the witnesses when and if they are called.

THE COURT: Mr. Baise.

MR. BAISE: May I?

THE COURT: Yes, sir.

MR. BAISE: I think what Mr. Jacobs is still relying on is an earlier list that had 26 witnesses on it. My original — excuse me — the updated list had 18 witnesses on it, of which we have already taken care of Mr. Smith, three of those witnesses are by deposition, and that should take no more than half hour, and we've got Mr. Hartung.

THE COURT: Who do we have left? Let's get specific here.

MR. BAISE: Okay.

MR. BULLOCK: Your Honor, on Monday last we submitted a witness list to the Government that had 19 witnesses, three of whom would be called by deposition. We have already put forward — let's see — 1, 2, 3, 4 — 4 witnesses. We have given them notice on Wednesday for approximately 7 witnesses.

THE COURT: The names? Well, I mean, you've given them the names?

MR. BAISE: In fact, my only list I've given to Mr. Jacobs. I wrote it out right after lunch hour, Your Honor. If he will hand me my list. On — just the number or the names themselves, Your Honor?

THE COURT: Well, as long as — since you have it, go ahead, yeah.

MR. BAISE: On Wednesday — at this point it looks like Mr. Lehman may not be on today, so Mr. Lehman, and then a Ms. Kagey from EPA, who is coming down at our request. So Mr. Lehman, Ms. Kagey and the three depositions, and then Mr. Ron Blackburn, a State Official from the Florida DEP out of Fort Myers, followed by Mr. Mike Acosta, a Florida Cities employee, a Mr. Larry Good, who would talk about the Carrollwood situation, Mr. Bradtmiller, a Florida Cities employee.

MR. JACOBS: Mr. Baise, forgive the interruption. He's available on? I beg your pardon. You said one was available on Wednesday?

MR. BAISE: Mr. Bradtmiller is available only on Wednesday and will be taken out of normal order. Then we would hope to get on Dr. Abdul Ahmadi, another State Official, and finish up the day with Gerald Allen.

MR. JACOBS: These are — I'm sorry — all 12 of these witnesses, then, on Wednesday?

MR. BAISE: Three of them are depositions and I believe there are 12 — 1, 2, 3, 4, 5, 6, plus, excuse me — Kagey and now we have Mr. Lehman, of course. I'm sorry, eight.

That's very ambitious.

THE COURT: Yes.

MR. BAISE: I realize that.

THE COURT: Okay.

MR. JACOBS: May I inquire further which ones, if you know now, you do not intend to call at all of the 19 on the list?

THE COURT: Yeah. Who will you not be calling from that list?

MR. BAISE: Out of the list I read you?

THE COURT: No, from the list that Mr. —

MR. BAISE: We haven't cut anyone yet. In fact, we were going to evaluate where we are this evening and see if there was anyone that we could cut from this, Your Honor.

I am advised by counsel that the Government may have a list that has a Mr. Michael Murphy on it, and we have decided to cut him off of the list. So that might help Mr. Jacobs with respect to the list he has.

MR. JACOBS: Your Honor, considering tomorrow we're not in Court, is it fair to request that we be advised tomorrow by the Defendants of any witnesses who also will be dropped from the list?

THE COURT: Yeah,

MR. BAISE: We can do that, Your Honor.

THE COURT: Yes. Advise them tomorrow of any additional witnesses that you — and I expect counsel to act

in good faith in doing so, by tomorrow.

MR. BAISE: We have a very good working relationship on these issues, Your Honor.

THE COURT: Now, getting back to the written submissions, counsel, I don't see any realistic way for us to finish this case this week based on what I'm hearing, but —

MR. HIRD: Your Honor, that's why I raised the question, because I think it would make better sense to follow Your Honor's original suggestion and have the briefing on the admissibility and then the briefing on any response to the document if it's accepted to occur after we conclude at least the trial activities this week. If we are going to come back at some later date, we can still be doing that in that hiatus.

THE COURT: Okay. Well — I'm going to — can you have your Defendants have their written submissions addressing the admissibility of the depositions listed on page 34 and, also, the issue regarding the entitlement of the Government to the Court's drawing negative inferences from that as a — well, drawing negative inferences from the invocation of the Fifth Amendment by Wednesday?

MR. HIRD: By a week from —

THE COURT: No, I was thinking in terms of this Wednesday, but I'm throwing that out as a —

MR. HIRD: Honestly, Your Honor, if we had understood that on Friday, I think we could have, and had not having heard direction from you, I don't think we can do that within that time period.

THE COURT: Uh-huh. Okay. Well, I guess I'm thinking now in terms of requiring your submissions later in the week and then the Government's opportunity to respond to that perhaps by the beginning of next week, sometime by Tuesday, say.

I guess maybe I'm asking for the submission — I don't think it will take a great deal on your part to address those initial issues, and I would like to have that by close of business on Thursday of this week, and then the Government's response to that by —

MR. JACOBS: Thursday of the following week, sir?

THE COURT: No. Tuesday of the following week.

MR. JACOBS: Yes, sir.

THE COURT: And then I'll rule on that. Subject to the Court's ruling, we may not have to deal with the other issue; that is, on the offer of proof that the Government has filed.

MR. BULLOCK: Your Honor, would you object to a joint memorandum from the Defendants?

THE COURT: I would appreciate a joint memorandum. I'm glad you thought of it.

MR. BULLOCK: And Your Honor, would that be, I believe, the standard 20-page limit?

THE COURT: I'll tell you what, since we're going over the time that we scheduled for trial, why don't we say Friday from you guys and Thursday from the Government?

MR. JACOBS: Thank you, Judge.

MR. HIRD: Friday close of business?

THE COURT: Yes, sir.

MR. HIRD: Thank you.

MR. BAISE: Your Honor, may I just bring one more point that's a bit of a clarification, I think? When I mentioned a moment ago I thought that DOJ counsel was looking at an older list. As I look at what we have accomplished to date, I only count 11 witnesses for us to have to put on over three days, not 19, not 23.

THE COURT: Well —

MR. BAISE: Excuse me.

THE COURT: We may be able to do it, and that's my fondest hope. But, even if we do, I am not inclined to feel that that necessitates a revision of this briefing schedule that I've indicated.

MR. BAISE: No, I wasn't suggesting that. I was just bringing the actual number to your attention, so you would have that as background.

THE COURT: Right.

I need to — these memoranda, how much — what length are you contemplating?

MR. BULLOCK: Your Honor —

MR. BAISE: Short as possible.

MR. HIRD: I can certainly live within the 20-page limit and my goal is to make it much, much shorter, but I haven't started writing it yet, so I can't project. I certainly don't need an extension of that, and I'm going to try to shoot to do it in 10 pages.

MR. JACOBS: Whatever he shoots for, I'll shoot for.

THE COURT: Shoot for 10 pages, and I will hold you to a 15-page maximum on this, but let's try — these are — I think these issues are pretty discrete, isolated issues here, so I think you can do it in 10 pages.

Now, I have a sentencing at 8:45 on Wednesday. It should not be a lengthy sentencing. I think I can do it in 15 minutes and we'll start at 9:00.

Anything else?

Okay.

MR. BAISE: Yes, Your Honor, one item.

First off, we want to thank the Court for allowing the Courtroom Deputy to open the Courthouse at 8:45 — 7:45. I'm sorry. Because we understand that there has to be certain orders issued for that to occur, and to the extent

that can continue when we have an 8:45 beginning, we would appreciate that.

THE COURT: We'll be starting at 9:00 on Wednesday, and to the extent that I can start earlier, I'll — let me see — you got your calendar there for next week?

THE CLERK: The rest of the week we have something early morning first thing.

THE COURT: We have — I have canceled the sentencing and postponing the 4:00 sentencing for Wednesday, and I have one scheduled for 8:45 Wednesday morning and one 8:45 Thursday morning and one at 8:30 Friday morning. So, I can't be putting off everything that I — everything else that I have. I've put off an emergency Grand Jury matter that would have taken some of this afternoon, and I'm going to try to hold that off until next week.

Okay. Then I'll see you all at 9:00 on Wednesday morning.

MR. BAISE: Thank you, Your Honor.

THE MARSHAL: All rise.

The Court will be in recess until 9:00 Wednesday.

Exhibit____(GHB-77)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' OFFER OF PROOF IN LIEU OF THE TESTIMONY OF WITNESSES WHO PLEAD THE FIFTH AMENDMENT

I. Introduction

Due to the unavailability of knowledgeable and high-ranking past and present Avatar officers to testify because they have asserted their Fifth Amendment rights, the United States' proof of Avatar's liability necessarily rests primarily on documentary evidence, from which the Court can draw such inferences as it deems fit in view of the absence of the testimonial evidence. The United States respectfully submits that the inference that can and must be drawn is that Avatar Holdings pervasively controlled the environmental practices of Florida Cities, and therefore must be held liable for the violations for which Florida Cities has been held liable.[1]

[1] The United States' theory of liability against Avatar Holdings, including its argument on adverse inferences, was thoroughly briefed in the United States' Memorandum in Support of Motion for Partial Summary Judgment, which is incorporated herein pursuant to Rule 10(c), Fed. R. Civ. P. While this offer of proof primarily addresses inferences relating to Avatar Holdings'

(continued...)

A vast number of documents demonstrate Avatar Holdings' pervasive involvement in the environmental affairs of Florida Cities. Indeed, officers and directors of Avatar Holdings, at the highest levels in both Coral Gables and New York City, managed those affairs. Significantly, each of five "key players" (Peter Sharp, John Sladkus, Lawrence Wilkov, Dennis Getman, and Robert Gordon) who is now unavailable, was personally and pervasively involved in events directly relating to violations of the Clean Water Act at the three wastewater treatment plants.[2] Hence, Avatar Holdings must be held liable for the violations.[3]

II. Avatar's Key Players

Peter Sharp

Peter Sharp was a New York City real estate tycoon who took a close personal interest in his new investment. Sharp initially moved to Florida in Avatar's early years to oversee the company, and subsequently presided over it from the offices of Peter Sharp

---

[1](...continued)
liability, inferences can also be drawn from the evidence cited herein which relate to the appropriate penalty to be awarded, particularly inferences relating to Defendants' history of violations and efforts to comply with the applicable requirements.

[2] Sharp is deceased. The other key players have plead the Fifth Amendment.

[3] While the key Avatar documents are dated, many are "new" to the United States, having been produced only subsequent to the close of discovery in November 1995 and only after the Court ordered Avatar to produce them on the United States' Motion to Compel. Order, November 13, 1995. Thus, it bears noting, then, that they were not available to the United States when it filed its summary judgment motion in June 1995.

& Co. in New York.[4] Sharp initially served as the Chief Executive Officer, Chief Operating Officer, President, and Chairman of the Executive Committee of the Board of Directors of Avatar Holdings. Gov. Exhibit #518 at 18. Although presidents were subsequently appointed, Sharp remained the Chief Executive Officer of the company until 1990. Gov. Exhibit #547 at 5-6. Thereafter, Sharp remained the Chairman of the Executive Committee of the Board for an additional year, id., Gov. Exhibit #551 at 2, before taking ill.

According to Levy, Sharp was a workaholic micromanager, who paid such incredible attention to detail, for example, that he personally edited his lawyers' briefs. The documentary evidence demonstrates that Sharp's hand was everywhere; he personally and tightly controlled the company's pursestrings, including expenditures that were necessary to comply with the Clean Water Act, and his overwhelming focus on the bottom line necessarily impacted on the action of his subordinates.[5] Through this

---

[4] A press release announcing the appointment of Avatar Holdings' corporate officers includes the following information about Mr. Sharp:

> Peter Sharp, a former Florida resident will establish a home in Miami and will devote substantial time to the management of Avatar. Through various companies, Mr. Sharp owns and manages more than $500 million in residential, commercial, industrial, hotel and specialty properties, primarily in the New York area.

Gov. Exhibit #517 at 23.

[5] Sharp's personal approval was necessary for any Avatar entity expenditure above $10,000, Gov. Exhibit #524, until 1989, when he gave Sladkus authority for professional contractor

(continued...)

control, Sharp pervasively controlled the environmental affairs of the wastewater treatment plants.

Peter Sharp died April 17, 1992.

John Sladkus

John Sladkus worked for Peter Sharp in New York City. He was Sharp's right-hand man at Avatar Holdings, and its Executive Vice-President - Land and Utility Operations until January 1,

---

[5](...continued)
expenditures below $25,000, Gov. Exhibit #541.

A memo written from Sharp to Gordon about the Gulf Gate and South Gate wastewater treatment plants in Sarasota illustrates Sharp's micromanagement of the wastewater treatment plants:

> 1. If we have not had to put in emergency power generators for Gulf Gate and South Gate AWT's for the last 40 years, why do we need it now?
>
> 2. As to lift stations, if we absolutely feel we have to have it, it seems to me the cheaper emergency power would be batteries. These are cheap and can be periodically recharged from a mobile unit.
>
> 3. As to the AWT plant, we have excess capacity and I can't imagine that any power outage would last long enough to cause an overflow. If my memory serves me correctly, which it may not, emergency power was not installed in the AWT when it was recently built. If it is required by DER regulations, how come it was not done then?

Gov. Exhibit #543.

It bears noting that while the United States has exercised its discretion not to include in this action Clean Water Act violations at Gulf Gate and South Gate, Florida Cities concedes that violations did take place. See FCWC Amended Revised Responses to Plaintiff's First and Second Interrogatories.

1991. Gov. Exhibit #519 at 4, Gov. Exhibit #557 at 2.[6] His influence is best illustrated by virtue of the fact that only he, in addition to Levy and Sharp, had authority to sign checks over $100,000 on behalf of any Avatar entity. Gov. Exhibit #526 at 10. Trained in engineering, Sladkus apparently was Sharp's point man on major construction projects, necessarily including those relating to the Florida wastewater treatment plants. The documentary evidence shows that he was pervasively involved in environmental compliance issues at the three wastewater treatment plants.

John Sladkus has refused to testify in this case on Fifth Amendment grounds. See Deposition of John Sladkus, August 24, 1995.

Lawrence Wilkov

Lawrence Wilkov joined Avatar Holdings as its President and Chief Operating Officer in 1984, Gov. Exhibit #526 at 12, and became its Chief Executive Officer as well beginning in 1990. Gov. Exhibit #551 at 2. After major disagreements with Edwin Jacobson, who joined Avatar Holdings in 1992 as a Director and Chairman of the Executive Committee of the Board, Wilkov left the company in January 1994.[7] During his tenure, Wilkov presided over the company's headquarters in Coral Gables.

---

[6] Upon leaving this Avatar Holdings position, Sladkus was given five-year consulting contracts with Avatar Properties and Avatar Utilities. Gov. Exhibit #557.

[7] Wilkov sued Avatar Holdings, Odyssey Partners and Jacobson over his employment. The suit was settled for $1,000,000. Gov. Exhibit #591.

The documentary evidence reflects that in his capacity as President and Chief Operating Officer of Avatar Holdings, Wilkov was personally and pervasively involved in decisions relating to environmental compliance at the three wastewater treatment plants.

Lawrence Wilkov has refused to testify on Fifth Amendment grounds. See Deposition of Lawrence Wilkov, March 7, 1995.

Dennis Getman

Dennis Getman joined Avatar Holdings as Senior Vice President & General Counsel in 1982, Gov. Exhibit #522 at 2, and since has become its Executive Vice President & General Counsel. He appears to have been responsible for all of the company's regulatory affairs, including, in particular, all matters relating to environmental compliance. The documentary evidence demonstrates that Getman, who utterly disclaimed environmental restrictions and regulators, was personally and pervasively involved in decisions relating to environmental compliance at the three wastewater treatment plants.

Dennis Getman has refused to testify on Fifth Amendment grounds. See Deposition of Dennis Getman, May 1, 1995.

Robert Gordon

President of Avatar Utilities, Inc. (which is now operationally defunct), Robert Gordon has been the central player in Avatar Holdings' utility operations since the company's inception, reporting directly to the Avatar Holdings president.

Robert Gordon has refused to testify in this case on Fifth Amendment grounds. See Deposition of Robert Gordon, May 1, 1995.

III. Avatar Holdings' Role at the Wastewater Treatment Plants Barefoot Bay

One of the GAC real estate holdings that Messrs. Sharp and Levy acquired when they purchased the company in 1980 was Barefoot Bay, an upscale mobile home community on the Atlantic Ocean in an otherwise largely undeveloped rural area of Brevard County home to citrus groves. Barefoot Bay represented both a real estate and utility operation to Avatar because Avatar owned, developed and managed the development, as well as provided water and wastewater services to its residents.[8]

When Levy and Sharp acquired GAC in 1980, they knew at the time that its previous owners had acquired the reputation of developing land without proper sewage facilities. Deposition of Leon Levy, December 6, 1995 at 132-34; 265-66 and Gov. Exhibit #253. As a sophisticated developer, Avatar also was well aware in 1980 that wastewater disposal was an important issue that

[8] Documents refer to Barefoot Bay as an **Avatar Holdings** real estate operation, project, or cost center, often without any reference to an Avatar subsidiary. Gov. Exhibit #58 at 8, Gov. Exhibit #518 at 7, Gov. Exhibit #550, and Gov. Exhibit #546 at 5. Avatar Holdings unconditionally guaranteed an unsecured $950,000 loan to Avatar Properties, up to $800,000 of which was to be used to finance Barefoot Bay inventory. Gov. Exhibit #51 at 3, 6-11. The loan documents are signed twice by Peter Kleinerman: once as Executive Vice President of Avatar Properties, the recipient of the loan, and once as Executive Vice President of Avatar Holdings, the guarantor of the loan. Gov. Exhibit #51 at 11.

needed to be addressed at any development.[9] Against this historical backdrop, Avatar Holdings simply took over where GAC left off in terms of developing the property without adequate sewage.

At the time Avatar Holdings acquired Barefoot Bay and its treatment plant, 1,444 of some 5,200 planned lots (the anticipated "buildout" number) had already been sold. Gov. Exhibit #30 at 2 (Table 1). The flow data reflects that as of 1980, the average daily flow from the development was 126,000 gallons/day, id., although the two percolation ponds built to date together at best only had the capacity for 100,000 gallons/day. As a result, unpermitted overflows into the Sebastian River were already occurring. In short, while buildout was a long way off, no provision was made for the increasing flows from the connection of additional lots to the sewage system. Yet, Avatar Holdings continued to market and develop the remaining lots, and to connect them to a sewage system which guaranteed that the additional flow would wind up in the Sebastian River. The conclusion is inevitable that Avatar continued to expand the Barefoot Bay development with knowledge that it would thereby increase the magnitude of the unpermitted discharge violations. Avatar made that business decision both as the developer of Barefoot Bay and as the parent company of Florida Cities, intentionally choosing not to defer developing

---

[9] Wastewater Disposal appears as top line item in a generic "Summary of Procedures for Major Developments" prepared on January 18, 1980. Gov. Exhibit #516.

until it was able to comply with the law and ignoring the consequences to the environment.

As early as July 21, 1983, Avatar management meetings included discussion of land areas that were needed "for future construction to accommodate the complete build-out of Barefoot Bay," Gov. Exhibit #11, an apparent reference to the construction of additional percolation ponds on which to dispose of the effluent. At the July 27, 1984 Avatar Holdings Board of Directors meeting, Wilkov reminded the Board that "the Department of Environmental Regulation has been imposing stricter requirements, and that in his opinion **developmental growth within certain areas will depend heavily upon the availability of water and sewer facilities.**" Gov. Exhibit #21 at 5. [emphasis added].[10]

In a February 29, 1984 memorandum, Wilkov recognizes that the "[s]ituation requires immediate action. Increased capacity should be 'on line' by November 1984." Gov. Exhibit #15. In the same memorandum, Wilkov lists the issues associated with the construction of the percolation ponds. The primary issues relate to cost. Wilkov's estimate was $600,000-700,000. On the accounting question of whether the developer (Avatar Holdings) or the utility (Avatar Utilities) should be charged the cost, Wilkov

[10] Attached to the minutes of the same Board meeting is a detailed questionnaire relating to drinking water at Barefoot Bay, indicative of the environmental/regulatory matters which came directly to the Board's attention. Gov. Exhibit #21 at 6-7.

concludes that they should "find a way to have the utility fund entire amount." Id.

In a June 28, 1984 memorandum, Sharp issued what was to become one of his characteristic mandates on cost to Wilkov, Sladkus, and Gordon:

> We must be sure that the cost of the percolation pond and related construction end up 100% as part of Barefoot Bay's rate base on which rates can be charged to customers from day one.

Gov. Exhibit #18.

Having marching orders in hand about the cost, the next question was where to build the additional ponds. One possibility for the location of additional ponds was an adjacent orange grove.[11] Another possibility, conveyed by Gordon to Wilkov and Sladkus on October 23, 1984, was the acquisition of a neighboring parcel of land known as the Hearndon property, in which Avatar Holdings was interested primarily to expand the Barefoot Bay development. Gov. Exhibit #24. The Avatar Holdings Board of Directors approved obtaining an option on the Hearndon property at its November 30, 1984 Board meeting. Gov. Exhibit #25 at 4. This option was perceived as having the attraction of reducing land costs.

---

[11] On July 18, 1984, on behalf of Avatar Utilities, Gordon signed a letter agreement, executed on July 25, 1984 by William E. Burnett, Jr., on behalf of WHS Groves, for Avatar Utilities to conduct percolation tests on his property. Gov. Exhibit #19. The testing apparently showed that the land was suitable for percolation ponds because Avatar Utilities apparently entered into a purchase agreement with WHS Groves on May 1, 1985. Gov. Exhibit #37. Later, however, Wilkov reported that the testing was wrong. Gov. Exhibit #53 at 3.

In a December 4, 1984 memorandum from Gordon to Sharp, Wilkov, Sladkus, Getman, and Kleinerman[12], among others, Gordon reports that "there appeared to be some higher sandy areas" on the property "that would be suitable" for pecolation basins. Gov. Exhibit #26. A letter drafted by Peter Sharp in December 1985 and (after editing by Wilkov) sent to a New York banker, describes how various Avatar entities are to benefit by the purchase:

> The property which is the subject of the contract consists of 270 acres immediately adjacent to Barefoot Bay to the north. The contract is conditioned on Avatar's satisfaction with regard to a number of conditions including soils and zoning. Avatar Utilities Inc. requires about 20% of the acreage for a leaching field. Avatar Utilities Inc. will pay its proportionate share of the purchase price and such amount will be included in its rate base. The balance will give Avatar's Barefoot Bay Development sufficient acreage to add another golf course and approximately 700-750 manufactured housing sites.

Gov. Exhibit s 27, 29.[13]

On March 13, 1985, Gordon wrote in a memo to Wilkov, with a copy to Sladkus, that "[w]e have exhausted the alternatives of wastewater effluent disposal at Barefoot Bay and suggest either of the following options...." Gov. Exhibit #31. The two options both entailed acquiring an additional 40 acres of land on which

---

[12] Kleinerman was Executive Vice President, Treasurer and Chief Financial Officer of Avatar Holdings. Gov. Exhibit #351 at 1.

[13] Planning for the Hearndon development is very instructive in terms of where responsibilities fell -- the same key decision-makers on wastewater treatment issues at Barefoot Bay (Sladkus, Getman, and Gordon) were to plan wastewater treatment at the new neighboring development. Gov. Exhibit #28.

to construct additional percolation ponds. One of the sites was the orange grove; the other was on the Hearndon property. The cost of each option was roughly the same: $1.3-million.

Peter Sharp was personally and intimately involved in the decision-making relating to the acquisition of the additional property for wastewater disposal purposes. On August 2, 1985, he wrote a detailed memo to Gordon, entitled "Barefoot Bay - Land Acquisition for Wastewater Effluent Percolation Basins," referencing a July 30, 1985 memo from Gordon to Sharp, Wilkov and Getman (which was never produced), which appears to relate to a legal dispute with the grove owner over the purchase of the land. Gov. Exhibit #38. The memo reveals that Sharp was personally very aware of the necessity of building the additional percolation ponds, the government scrutiny to which environmental matters are subject, as well as very concerned about how much they will cost. Pertinent portions of the memo read as follows:

> 1. I think there is a better than 50/50 chance that we will lose this specific performance suit.
>
> . . . .
>
> 3. The $35,000 gamble is not a good one in my book because all government processes take much longer than anyone ever anticipates.
>
> . . . .
>
> 5. I can't understand what made anyone think you would get the necessary permits in the time period between May 6th and July 31st. Apparently we have not even filed the application with the DER.

Id.

Gordon updates Wilkov on October 10, 1985 (copying Getman, Kleinerman, and Sladkus) that the plans and specifications for the percolation ponds were submitted to the DER for their approval on August 27, 1985, Gov. Exhibit #41. In a January 29, 1986 letter, Sharp represents that "Avatar has recently acquired adjacent land for the purpose of increasing the capacity of its sewage plant." Gov. Exhibit #45.[14] [emphasis added] On February 11, 1986, Gordon gives Sladkus (with a copy to Wilkov and Kleinerman), a lengthy report which reflects that the DER had issued a construction permit on January 14, 1986, and that load testings were being scheduled. Gov. Exhibit #46. A similar status report to Sladkus (again with a copy to Wilkov and Kleinerman), followed on June 12, 1986. Gov. Exhibit #50.

The new parcels were never built, however, and on January 16, 1987, Sladkus updates Sharp, Wilkov, and Kleinerman by memorandum, on the apparent complete failure of the existing ones and suggesting the possibility of spray irrigation on a golf course to be constructed:

> ... Disposal ponds are not functioning. Further studies are underway to see whether they can be made functional by rotation, etc. If this is impossible, other means will have to be constructed, possibly a golf course. Deep well injection has been considered and ruled out as economically and, possibly technically unfeasible.

---

[14] The purpose of the letter was to solicit interest in the Avatar-owned Barefoot Bay's cable television system. According to the minutes of the March 21, 1986 Avatar Holdings Board meeting, Avatar Holdings ultimately agreed to sell the Barefoot Bay cable television system for $2.8-million. Gov. Exhibit #48 at 8.

Gov. Exhibit #52. The minutes of the January 30, 1987, meeting of the Avatar Holdings Board of Directors also reflect that attention has turned to the spray irrigation option:

> Mr. Wilkov reported that under consideration is extending the option to purchase property contiguous to the Barefoot Bay subdivision, the purpose being to determine if the soil tests positive for spray irrigation. He advised that the 40 acres previously acquired by Avatar Utilities for such purpose have proven unsuitable for percolation ponds, and a damage claim against the testing engineer is being considered. He also advised that if the optioned property tests positive we could construct a golf course on approximately 80 acres and develop the remaining 190 acres for homesites.

Gov. Exhibit #53 at 3.

It appears from Wilkov's report to the Board that Avatar Holdings was only willing to use a limited portion of the 270-acre Hearndon property as a spray irrigation site in conjunction with its development as a golf course and homesites. Similarly, it appears from an April 13, 1987 memorandum from Wilkov to Kleinerman, Getman, and Gordon, among others, that Avatar Holdings officials were reluctant to devote substantial portions of Hearndon to effluent disposal instead of land development.[15] Gov. Exhibit #55. Yet, a May 1, 1987 memorandum to Wilkov, Getman, Kleinerman, and Gordon, among others, reveals that at the same time Avatar officials were acutely aware both that they already lacked sufficient wastewater disposal capacity and that proceeding towards "buildout" at Barefoot Bay would require still

---

[15] Although the Hearndon property was finally acquired in early 1988, Gov. Exhibit #65 at 7, it appears that the property was never used for either purpose.

additional capacity. Gov. Exhibit #56. A May 26, 1977 memorandum to Wilkov (with copies to Getman and Gordon, among others) identifying its subject as "Barefoot Bay--Effluent Disposal" also suggests that Avatar officials were concerned about the cost of using the property for spray irrigation:

> Stating the obvious, I feel that it will be difficult to permit and construct an economically viable spray irrigation system under Hearndon [sic] property.

Gov. Exhibit #57. The same memorandum, reflects that Avatar officials were well aware of the potential for environmental harm caused by effluent disposal in the area:

> The Indian River Lagoons system is considered to be deteriorating as a result of fresh water discharges from storm water runoff, drainage canals, and wastewater effluent which has presumably killed seagrass beds and clambeds and have degraded water and sediment quality throughout the system.

Id.

Sladkus gives Sharp another full report on the Barefoot Bay wastewater problem on February 11, 1988, attaching a file memorandum written by Gordon (with copies to Getman, Sharp, Sladkus, and Wilkov, among others), memorializing a meeting with DER. Gov. Exhibit #61. The gist of Gordon's memo indicates that Defendants were balking at actually constructing the percolation ponds contemplated some four years earlier, even though Defendants were fully aware that they had an ongoing illegal discharge, and that DER wanted the percolation ponds built and the ongoing connections to cease. Gordon and his team convinced DER that they would construct a deep well system for the disposal of the effluent in lieu of the percolation ponds, that the land

on which the percolation ponds were to be situated would be used as a spray irrigation site, and that ongoing connections from Barefoot Bay lots could continue. They also promised DER they would upgrade the plant to AWT standards if a surface water discharge were approval. Sladkus' memo, which was originally intended for Sharp's eyes only ("No Circulation"), but was later copied to Leon Levy, reads as follows:

> 1. I am attaching a copy of Bob's memorandum of a meeting he had with the DER.
>
> 2. You will note that the proposed final resolution is as follows. We would immediately spray irrigate on the 40 acre Hearndon property. We would also proceed with the design and subsequent construction of a deep well injection system. The spray irrigation will pose no significant expense, since we have spare travelling irrigators on Plant #2 in Poinciana.
>
> 3. The deep well system will cost approximately $2,000,000. The risk there is that we can expect to expend approximately 1/2 of that before we will know whether the system is effective. We have confidence that it will be effective, because there are a number of deep wells in the area. In addition, if successful, it will solve our Barefoot Bay problem once and for all. And, finally, we really don't have any alternative.
>
> 3. [sic] **As you will note in the memo, Bob made a tentative commitment subject to the Board's approval. Meaning, of course, your consent to the above.**
>
> 4. Do you agree? (If possible, I would like to have your views before I leave for Florida, this afternoon.)

Id. [emphasis added].

This series of memos, as well as the ones that followed, make patently clear that Avatar Holdings was fully cognizant of the unlawful discharge at Barefoot Bay, and pervasively involved in critical decision-making relating to how it was to be

addressed. Indeed, these memos show that one man alone, Peter Sharp, personally involved himself in -- and controlled -- that decision-making. A March 15, 1988 memo from Sladkus to Sharp demonstrates that Sharp's pervasive involvement extended right down to the selection of the engineer who was to conduct the preliminary study for the deep well injection system. Gov. Exhibit #64. In that memo, Sladkus recommends to Sharp that they "retain CH2M Hill, primarily because they have been the engineers of the other successful deep well injections in the area." Id. Sharp was also personally involved in the selection of environmental auditors for Avatar utilities. Gov. Exhibit #538.

Memoranda to/from Sladkus and Gordon and Allen, See Gov. Exhibits ##67-69; 74, 76, 78, as well as Sladkus' own handwritten notes, Gov. Exhibit #77, show that Sladkus continued to closely monitor the situation at Barefoot Bay after the decision was made to build a deep well. Indeed, documents in the files of Peter Sharp and Co. reveal that when, in early 1989, Gordon became concerned that the deep well might fail, Sladkus became increasingly involved in the project. Gov. Exhibits ##81-85, 87, 91, and Wilkov and Getman were kept apprised as well. Gov. Exhibit #86.

In April 1989, Gordon forwarded to Sladkus an engineering report on deep well injection at Barefoot Bay. Gov. Exhibit #83. Gordon recommends that "we arrange a meeting to review the entire injection well controversy with CH2M Hill so that everyone has first hand information relative to the Barefoot Bay project's

success." Id. CH2M Hill was asked to prepare materials for the meeting, which took place on June 13, 1989 in New York. Gov. Exhibit #93. Gerald Allen's handwritten notes from the June 13, 1989 meeting reflect that it was attended by Wilkov, Kleinerman, Gordon, Sladkus, and Getman, who decided to "[c]ontinue to pursue deep well simultaneously with permit to irrigate." Gov. Exhibit #92.

By summer of 1989, however, the tide was turning towards dropping the deep well. In his August 16, 1989 utilities report to Sharp and Wilkov (with copies to Allen, Getman, Kleinerman, Levy, and Sladkus), Gordon states that "[t]he Company's confidence level for success is shrinking rather than expanding." Gov. Exhibit #96; Gordon then goes on to say that he is once again looking into the possibility of purchasing neighboring citrus groves, this time with an eye toward both using them for effluent disposal purposes as well as to produce oranges: "We feel that this is a good opportunity for the Company to acquire an earning asset as well as provide the base disposal area for treated effluent." Id. In a follow-up memo to Sharp and Wilkov on August 21, 1989, Gordon updates them on the availability of the neighboring orange groves. Gov. Exhibit #97. Sharp responded the very next day, asking to "be kept abreast of [his] efforts to resolve the disposition of the effluent at Barefoot Bay." Gov. Exhibit #98. Gordon updates Sharp on August 25, 1989, advising him that a meeting has been arranged with the FDER

District Director to review the plans for spray irrigation on orange groves. Gov. Exhibit #99.

An exchange of memos the following month between Sharp and Sladkus relating to a Conward for engineering services at the adjacent Hearndon site, again shows Sharp's close personal involvement. Gov. Exhibits ##103, 106.[16]

By September 1989, Avatar Holdings appears to have abandoned the deep well injection project. Gordon sent Sladkus a copy of a submittal to FDER proposing spray irrigation instead. Gov. Exhibit #105. In November 1989, Allen prepared a report entitled "Wastewater Disposal Alternatives to Deep Well Injection, Barefoot Bay" which he transmitted directly to Board members including Levy. Gov. Exhibit #115.

By January 1990, Avatar Holdings has decided to make an investment in spray irrigation. That decision is reflected in the execution of Conward #831, which Sladkus carefully considers and conditionally approves in a January 26, 1990 memorandum to Wilkov referencing "Barefoot Bay Effluent Disposal: Conward #831.[17]

---

[16] Sharp writes on September 22, 1989: "I do not understand what the resolution is in Barefoot Bay for disposition of the effluent from the waste from this plant." Gov. Exhibit #103.

After Sladkus explains in a September 27, 1989 memo, Gov. Exhibit #106, Sharp writes back, "At a later date if we enlarge the Barefoot Bay plant, we will be able to include Hearndon in the service area and hook it up to the Barefoot Bay plant." Gov. Exhibit #106.

[17] "Even though we authorize the total amount, Dyer Riddle will be given a contract for no more than one task at a time." Gov. Exhibit #118.

In order to utilize spray irrigation, additional land must be purchased, and the Avatar officers again turn their attention to the neighboring orange groves, this time focussing on one grove in particular that they were determined to acquire, the Micco Groves. After early efforts by Getman to purchase the groves failed[18], on June 18, 1990, Sladkus inquired about the possibility of obtaining the property through condemnation proceedings. Gov. Exhibit #131. On the same day, Getman writes a memorandum saying that he has set up a meeting "for the four of us" [Getman, Gordon, Allen, and Wilkov] on the subject for June 22, 1990, noting in a "P.S." that "Mr. Sladkus would like to join this discussion by telephone conference." Gov. Exhibit #132.

On June 19, 1990 Gordon responds directly to Sladkus, with copies to Getman and Wilkov, saying that "condemnation of the Micco Grove property would be extremely difficult because (a) the property is not unique (other property would be available for a price) and (b) there are alternatives to spray irrigation." Gov. Exhibit #133. Sharp, however, is undeterred by Gordon's

---

[18] In February 1990, Getman contacted Sun Bank regarding an outstanding Avatar offer to purchase the groves, which the bank held in trust. Gov. Exhibit #112. Using Avatar Holdings letterhead, he signed as Executive Vice President - General Counsel of Avatar Properties, Inc. Id. Using the same letterhead, but this time signing as Executive Vice President of Avatar Properties, he increases Avatar's offer on May 10, 1990, copying Wilkov and Kleinerman, among others. Gov. Exhibit #125. On June 14, 1990, a Getman memorandum to file referencing as its subject "Avatar Properties Inc./Avatar Utilities Inc. - Possible Purchase of Micco Grove Acreage in Brevard County, Florida," and copied to Gordon, Wilkov, and Kleinerman, among others, reflects that there is competition for the orange groves. Gov. Exhibit #129. Gordon responds to Getman's memo the next day copying Wilkov and Sladkus, among others. Gov. Exhibit #130.

forthright assessment, and, by memo of June 25, 1990, endorses Sladkus' June 15, 1990 suggestion that they use eminent domain powers to obtain the property. Gov. Exhibit #134. Finally, in a July 1, 1990 memorandum to Wilkov, Sharp personally makes the final decision on Micco:

> 1. I think your only solution to Barefoot Bay is condemnation of Micco Grove or another grove. I think we should pursue this.
>
> 2. I note Dennis [Getman] has a meeting on Monday. I would like to have the name of the attorney and the status of this matter after that meeting.

Gov. Exhibit #135.

The Monday (July 2, 1990) meeting was with Barry Davidson, the Miami lawyer Avatar hired to handle the condemnation action. On July 3, 1990, Getman writes a letter confirming the meeting and further instructing the lawyer. The letter, written on Avatar Holdings letterhead, but signed by Getman as General Counsel of Florida Cities Water Company, includes the following paragraph:

> From a standpoint of action of the Board of Directors of Florida Cities Water Company, we would like you to prepare draft meeting minutes in advance so that our future telephonic board meeting can be handled quickly and as mandated from a possible litigation standpoint.

Gov. Exhibit #136.

A note from Getman to Sharp, Sladkus, and Wilkov accompanying their "blind copies" ("bcc") copies of the letter reads as follows:

> Depending upon some unforeseeable circumstances, Mr. Davidson felt that FCWC had at least a "good" chance of obtaining a quick take for the property. We advised

> him that time was of the essence because of our DER Consent Order and he indicated that he felt that if things went somewhat smoothly that the eminent domain action could be completed as quickly as sixty days. Mr. Davidson does have a tremendous amount of experience in this area, and, basically, knows the judges who might get the case in Brevard County. As instructed, we are proceeding with a possible quick take eminent domain action.

Id.

After additional efforts to purchase the land also failed,[19] in March 1991, Avatar began condemnation proceedings, in accordance with Sharp's edict, and he was kept apprised of their progress. See Gov. Exhibit #165.

The Micco Grove illustration is useful from a number of perspectives. First and foremost, it highlights Avatar Holdings' direct and pervasive involvement in matters relating directly to the effluent disposal from the Barefoot Bay treatment plant. Indeed, it suggests not just that Avatar Holdings officers made critical decisions relating to environmental compliance at the Barefoot Bay plant, but that those decisions were made at the

---

[19] On July 25, 1990, Getman, writing on Avatar Holdings letterhead, signing as "Executive Vice President" of Avatar Properties increases his offer again. Gov. Exhibit #138. On August 24, 1990, Getman ups his offer yet again. Gov. Exhibit #140. He again uses Avatar Holdings letterhead, but this time, he makes the offer on behalf of Florida Cities Water Company, signing as its "General Counsel." Id. The same day, Getman writes a letter about wastewater treatment to a state environmental regulator, again using Avatar Holdings letterhead, but this time signing on behalf of Barefoot Bay Development Corporation as its Executive Vice President - General Counsel. Gov. Exhibit #139.

Getman's role is obviously multi-faceted. As Getman himself put it in a memorandum, at times he wore both his "developer" hat and "utility" hat, purporting to represent both sides to an agreement. Gov. Exhibit #246.

highest level of the company, that is, by its Chief Executive officer at the time -- Peter Sharp. Second, the illustration is extraordinarily revealing in that it clearly demonstrates the veritable commonality of interests of the various Avatar entities involved at Barefoot Bay.[20]

Not long after, Sladkus thought better of spray irrigation. In a September 14, 1990 memo to file which he copied to Wilkov and Sharp referencing "Barefoot Bay - Waste Water Disposal," Sladkus again favored the construction of a deep well. Gov. Exhibit #143. By this point in time, he had learned that the risks of such a well had been exaggerated, and thought that it presented a more economically prudent solution to the wastewater disposal question.[21] Thus, he writes "for all these various reasons, it is now proposed that we reverse our decision. We are under severe pressure from the regulatory agencies to cease discharge into the Indian River and need to make an early decision." Id.[22] A November 14, 1990 handwritten note addressed

---

[20] Notwithstanding the effort and resources that went into acquiring the Micco Groves, the property was never acquired. Deposition of Paul Bradtmiller II:97, although a March 13, 1991 memo from Gordon to Getman, Sharp, and Wilkov, among others, shows that mediation of the condemnation litigation did eventually result in a tentative agreement with Sun Bank for the purchase of the property. Gov. Exhibit #165.

[21] "It turns out that there has been only one failure of the deep well system and that the other plants, which were suspect in Brevard County, have performed in a satisfactory manner." Id.

[22] Sladkus might also have felt pressured by public opinion. A cartoon produced from the files of Peter Sharp. & Co., which appeared alongside an editorial in the Vero Beach Press Journal, depicts an outhouse with a pipe discharging into a water body.
(continued...)

to "Peter" [Sharp] which appears on the last page of an attachment to the memorandum reflects that a nearby deep well had been permitted. Id. Shortly thereafter, Sladkus resigns.

It bears noting that while this entire lengthy saga continued, so did the development of Barefoot Bay, with Sharp at the helm. Sharp was personally well aware that the additional connections to the sewage system resulted in added wastewater discharge. By memo of February 25, 1991 referencing "Barefoot Bay - Wastewater Effluent Disposal," Sharp specifically questioned Gordon about the discharge flow to be permitted in the context of the units connected to the system. See Gov. Exhibit #160. In his reply to Sharp the following day, Gordon details the flow data from the Barefoot Bay treatment plant, noting that as of December 31, 1990, there were "4,298 ERC's connected to the system with 754 additional vacant lots." Gov. Exhibit #162.

By this point in time, environmental audits had begun at the wastewater treatment plants, and Sharp wanted to keep track of them personally. By memo of March 12, 1991 to the Secretary of the Board, he ordered that "Update on Environmental Audits with respect to Utilities" be an agenda item "at least every other meeting." Gov. Exhibit #559.

An NPDES permit for the Barefoot Bay plant was issued on September 16, 1991 and took effect November 1, 1991, under a

---

[22](...continued)
The cartoon character is quoted as saying, "I got the idea from the sewer plant in Barefoot Bay." Gov. Exhibit #3. Avatar retaliated against the newspaper for the bad press by cutting off all advertising. See Gov. Exhibit #194.

"Cease Discharge Schedule" which provided for annual progress reports culminating in the required cessation of the discharge by June 30, 1995. Gov. Exhibit #185, page I-4. The toxicity violations alleged in the United States' Second Amended Complaint resulted from Avatar's failure to upgrade the plant to advanced wastewater treatment standards (as promised DER in 1988), rendering it incapable of consistently meeting the toxicity requirements of the permit. Of course, had Avatar taken advantage of its many opportunities to cease the discharge entirely in previous years, an NPDES permit would not have been necessary and none of the violations alleged at Barefoot Bay would have occurred.

Carrollwood

Avatar Holdings was also pervasively involved in decision-making relating to the unpermitted discharge at Carrollwood. As far back as August 6, 1984, Gordon sent a memorandum to Sladkus, with a copy to Wilkov, which reads in pertinent part as follows:

> Attached is a letter from the EPA denying our application for an extension of our Temporary Operating Permit for the Carrollwood Wastewater Treatment Plant located in Hillsborough County. The plant discharges its effluent into Sweetwater Creek. In October 1979 the Company was advised that it would have to stop discharging into the creek and would have to find another method of effluent disposal. At that time, the Company looked into spray irrigation on golf courses, building percolation ponds and other possible methods of disposal, all of which were rejected for one reason or another.
>
> . . . .

> We intend to write to the EPA and inform them of our negotiations with the County and attempt to have them reconsider their position. If they refuse, I believe our only alternative is to fight their mandate through the courts.

Gov. Exhibit #270.

Notwithstanding the permit denial, Getman announced at the September 28, 1984 meeting of the Avatar Holdings Board of Directors that "in the last three years the Corporation has not been denied one permit." Gov. Exhibit #273 at 10. This announcement, together with Gordon's resolution that they would fight the matter in the courts perhaps account in part for why there is so little documentation of efforts to cease the discharge: Avatar simply decided to ignore that both their state and federal permits had not been denied and not to make any serious efforts to cease its illegal discharge.

By early 1986, it is clear that the Board is concerned about potential liability for environmental violations.[23] The minutes of the January 30, 1986 meeting of the Audit Committee of the Avatar Holdings Board of Directors reflect that "Mr. Gordon indicated that David Berz, Esquire, an environmental attorney with Avatar's General Counsel, Weil, Gotshal & Manges, had been contacted, requesting his assistance in assessing the utility company's environmental liability exposure with recommendation to

---

[23] It bears noting that by late 1985, not simply the key players, but the entire Avatar Holdings Board of Directors had become familiar with wastewater treatment issues, having received a briefing from Gordon on Fiesta Village, a new advanced wastewater treatment plant, which included distribution of an informational brochure entitled "Nature's Way: How Wastewater Treatment Works for You." Gov. Exhibit #351 at 8, 17-18.

limit said exposure, if any." Gov. Exhibit #48 at 14. The minutes of the March 20, 1986 Audit Committee meeting reflect that Getman, Gordon, and Sladkus had met with Berz "to discuss Mr. Berz's review and assessment of the utility company's potential liability exposure," and that "Getman expressed Mr. Berz's opinion that the existing corporate structure and operating procedures provide adequate liability protection against an attempt to 'pierce the corporate veil', but that further assessments would be made." Gov. Exhibit #353 at 12.

By the July 30, 1986 Board meeting, a substantial portion, if not the majority of the meeting, relates to environmental issues, including further reports on meetings with Mr. Berz, sewage disposal at Poinciana (another Florida wastewater treatment plant), and litigation related to water contamination in Indiana. Gov. Exhibit #356 at 1-5.

Notwithstanding -- or perhaps because of -- the discussions that took place at the Board, the environmental violations not only continued, but increased. Indeed, because the actions of the key players following these meetings show no additional emphasis on compliance, it can only be concluded that Avatar Holdings' primary concern was not complying with the law, but was avoiding liability for not complying.

Indeed, a 1986 memorandum from Gordon to Getman makes it clear that Avatar decided to stall and continue its unpermitted discharge until Hillsborough County would accept the Carrollwood sewage:

> Enclosed is a proposed consent order to be entered into by FCWC with the DER to allow FCWC's Hillsborough WWTP to continue to discharge treated effluent into Sweetwater Creek. FCWC has been ordered by the DER to discontinue discharging its treated effluent to Sweetwater Creek. The solution to the problem is for the Company to connect to Hillsborough County's regional plant. The problem has been Hillsborough Countys [sic] inability to provide adequate capacity for our plant at this time.
>
> **The consent order will buy us time,** I do not see any resolve of the problem short of connecting to the Hillsborough plant. **I doubt that we will be connected by August 1988, expiration of consent order.**

Gov. Exhibit #280 [emphasis added].

Getman not only endorsed the stall, but also suggested that Gordon negotiate language that would a further stall with impunity. He wrote back as follows:

> You're probably 100% correct, in that a proposed Consent Order would only buy us further time.
>
> . . . .
>
> 2. I would be greatly surprised if the DER agreed without a fight to Paragraph #5 which states FCWC's only alternative. I believe that this language must be somewhere in the Consent Order as it is important for future leverage when, and if, FCWC is unable to comply with the cease and desist date of August 31, 1988.
>
> 3. Is there any chance that the aforesaid cease and desist date could be extended?

Gov. Exhibit #281.

Eventually, Avatar did begin to study the alternatives. In 1986, Wilkov and Sharp approved an expenditure for an engineering study of the design of a pumping station and force main (pipe) to transfer the Carrollwood wastewater to the Hillsborough County facility. Gov. Exhibit #282. Avatar apparently debated whether to tie in to another treatment plant or improve its own. Again,

money was the central issue. In March 1988, Gordon reported to Sladkus that he was working to get Hillsborough County to lower the fees it would charge to connect the Carrollwood system to its system, and that he viewed building an AWT plant as an alternative. Gov. Exhibit #291. As he did with the unpermitted discharge at Barefoot Bay, Sladkus closely monitored the situation. Gov. Exhibits ##74, 76-78.

Sharp was also personally involved. After executing a conward in April 1989 authorizing engineering services for the advanced wastewater treatment plant, Gov. Exhibit #567, Sharp wanted some questions answered about cost, flow, recovery of costs through rate base, and construction completion time. Gov. Exhibits #299-300.[24] Because the AWT plant was never built, the permit violations alleged in the Second Amended Complaint were inevitable.

Waterway Estates

The key players also were pervasively involved in critical decisions relating to environmental compliance at the Waterway Estates plant.

Against this background, on June 30, 1986, some six months before it actually denied Florida Cities' permit renewal at Waterway Estates, EPA sent a letter to Florida Cities advising it of the upcoming denial. Gov. Exhibit #355. On August 14, 1986, Gordon forwarded that letter to Avatar Holdings officials,

[24] While Sharp's memo was never actually produced, his questions can be inferred from the memoranda which addressed them.

including Sladkus, Getman, and Wilkov, with a brief explanation: "The EPA wants the Company to either discontinue discharging effluent to a canal which ultimately goes to the Caloosahatchee River or improve the treatment to AWT and seek a wasteload allocation to the Caloosahatchee." Gov. Exhibit #358.

On January 16, 1987, just seven days after EPA's permit denial took effect at Waterway Estates, Sladkus gave the following report to Sharp, Wilkov, and Kleinerman:

> Plant with a usable capacity of 750,000 GPD. Currently running at 600,000 GPD. Discharging into the canal which must terminate by August 1, 1988. Plant located on very limited (but valuable) site where it would be difficult, if not impossible, to convert to AWT Plant. **If we were to attempt such conversion, we would need to apply for [a] waste load allocation and build an outfall. Alternatively, we could attempt to negotiate a hook up into an existing private utility located approximately 4-5 miles away.** Apart from the cost of the forced main, we would have to pay the capacity charge and its attendant tax impact to the utility unless we could purchase a portion of the plant.

Gov. Exhibit #52. [Emphasis added].[25]

In June 1987, Gordon forwarded to Sladkus a copy of EPA's compliance order. Gov. Exhibit #365.[26] On August 31, 1987, Gordon forwarded to Sladkus a copy of an engineering report on

---

[25] Wasteload allocations were apparently a familiar subject, not only for the key players, but even for the Avatar Holdings Board of Directors. Later, Getman personally briefed the Board about litigation with FDER about a wasteload allocation for discharging from the Poinciana plant into the Reedy Creek. Interestingly, these November 17, 1988 Board minutes discuss the plant as if it were an Avatar Holdings plant: there is no mention either of Florida Cities or Avatar Utilities. Gov. Exhibit #386 at 6.

[26] In January 1987, the permit denial had taken effect, and Waterway Estates simply continued discharging without a permit.

the feasibility of disposing of wastewater at the Waterway Estates plant. Gov. Exhibit #369. Cost remains the primary issue. Gordon wrote, "[a]s you can imagine from the recommended cost of treatment and disposal, additional work [on the options] will have to be done." On November 19, 1987, apparently after additional work was done, Gordon again writes to Sladkus attaching an options memorandum. Gov. Exhibit #373.

It is clear from the evidence that Avatar was evaluating whether to expend a large sum of money to upgrade the Waterway Estates plant or to contract with another private wastewater treatment company, North Fort Myers Utilities (NFMU) to treat its waste. Ultimately, Avatar made a business decision to forego connecting to NFMU (which used land disposal methods of disposing of its effluent). Gov. Exhibit #466.

An exchange of memoranda dated between August 1988 and October 1988 between Sharp and Gordon lends insight to the decision-making process. This exchange makes clear that far from considering yielding the Waterway Estates franchise to a competitor, whether public or private, Sharp had visions of taking over **all** of the water and wastewater utilities in Lee County. Gov. Exhibits ##70, 381, 383, and 384. Sharp's mandate to Gordon was as follows: "FCWC's long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the City's." Gov. Exhibit #384. Ironically, the same documents also reveal that this mandate emerged after the Lee County options were discussed at Sharp's

behest at the same September 7, 1988 "utilities meeting," see Gov. Exhibit #383, at which environmental compliance at Waterways [sic] Estates, Barefoot Bay, and Hillsborough County [Carrollwood] were agenda items. Gov. Exhibit #70. Thus, the conclusion is all but inevitable that Sharp personally ruled out an immediately available compliance measure -- connecting to the North Ft. Myers system, in favor of what he perceived to be the long-term financial interests of Florida Cities.

North Ft. Myers Utilities had the capacity to accommodate the Waterway Estates discharge beginning in August 1988. Had the Waterway Estates wastewater been connected to the North Ft. Myers system in at that time, **none** of the Waterway Estates violations alleged in the Second Amended Complaint (which begin on October 1, 1988) would have occurred.

The plant upgrade and relocation of the outfall needed to be completed by November 1, 1989, the effective date of the new NPDES permit for Waterway Estates. Sladkus closely monitored the situation. Gov. Exhibits ##74, 76-78. He, in turn, was closely monitored by Sharp, right down to the approval of expenditures for such minor items as pumps. Gov. Exhibit #109. By memo of October 2, 1989, Sharp writes Sladkus that "[w]e must have assurance from Bob Gordon that the entire cost of the upgrade and expansion of this plant will be included as used and useful." Gov. Exhibit #400. By cover memo dated June 5, 1990, Allen sends Sladkus conward number 940 requesting approval for the Waterway Estates improvements. Gov. Exhibit #414. On June 11, 1990,

Sladkus rejects the conward. Gov. Exhibit #416. These additional documents suggest that delays in the upgrade and expansion necessary for compliance are also directly attributable to decisions made by Avatar officials.

Although Avatar knew in August 1986 that it needed to move the outfall from the canal to the River, the outfall was not moved until July 1991. When, in July 1991, it became clear that the Waterway Estates AWT improvements were behind schedule (making the NPDES permit violations inevitable), Allen wrote a memorandum directly to Sharp, with copies to Getman, Gordon, and Wilkov. Gov. Exhibit #455.

Avatar Holdings was not only directly involved in decision-making resulting in the violations, but also in strategy relating to EPA's enforcement actions as a result of the violations. Dennis Getman personally planned the strategy for negotiating a penalty for the Waterway Estates violations in a May 18, 1992 memorandum to Gerald Allen:

> At this point in time, I believe that the position of FCWC to the USEPA should be "firm" in nature without being too aggressive. Of course, that is not to say that we may not want to get aggressive at a later stage as sometimes you can cut a better deal with the attorneys at the Justice Department than you can with the "bunny hugger" environmentalist attorneys at the USEPA.

Gov. Exhibit #570.[27]

---

[27] In another example of his disdain for environmentalists, Getman gave orders that his personal written approval was necessary before Avatar's newsletter was distributed to any environmental groups. Gov. Exhibit #556.

CONCLUSION
