The United States submits that this offer of proof clearly establishes that Avatar Holdings acted in such a way that it should be considered a "person who violates" under section 309(d) of the Clean Water Act, 33 U.S.C. 1319(d). The evidence establishes that through its officers, Avatar Holdings was actually involved in critical decisions directly relating to the proven violations.[28] Under Jacksonville Electric v. Bernuth, 996 F.2d 1107, 1108-09 (11th Cir. 1993), such involvement is a "sufficient condition" for the imposition of liability. Moreover, Avatar Holdings caused or directed the violations by failing to direct and authorize actions which would have resulted either in the cessation of the discharge or the timely construction of advanced wastewater treatment facilities at each of the three plants. Finally, Avatar Holdings exercised actual and pervasive control over Florida Cities' environmental practices. Hence, the United States respectfully submits that it

---

[28] The United States necessarily selected for discussion in this limited offer of proof the most enlightening documents. Other trial exhibits which were either authored or received by the key players and further support the inferences suggested herein are as follows: Gov. Exhibits ##16, 17, 20, 30, 33, 34, 54, 71-73, 80, 90, 94, 117, 122, 124, 126, 137, 149, 156, 159, 176, 178, 190, 192, 196, 198-201, 203, 209, 212, 219, 222, 233, 235, 237, 247, 250, 251, 287, 289, 307, 309, 312-314, 321, 368, 372, 378-380, 389, 395, 403, 423, 428, 429, 432, 434, 439, 441, 445, 447, 450, 462, 465, 476, 484-487, 493, 495-497, 512, 513, 515, 529, 530, 545, 548, 554, 560, 568, 573, 578, 579, 588, 589, 593.

has established Avatar Holdings' liability by a preponderance of the evidence.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY, et al., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

DEFENDANTS' JOINT MEMORANDUM OF LAW ADDRESSING THE INVOCATION OF THE FIFTH AMENDMENT BY CERTAIN WITNESSES

I. Introduction

Florida Cities Water Company ("FCWC") and Avatar Holdings Inc. ("AHI") hereby submit this joint memorandum of law addressing the appropriateness of drawing adverse inferences against the defendants from the invocation of the Fifth Amendment by certain witnesses. Given the facts of this case and the compelling circumstances surrounding the individuals' invocation of the Fifth Amendment, this Court should not draw adverse inferences against the defendants.

II. Argument

A. It Is Not Proper to Draw Adverse Inferences In This Case

The United States Supreme Court has held that while a district court may draw inferences from a party's invocation of its Fifth Amendment rights in a civil case, a district court has the discretion to refuse to draw such an inference. See Baxter v. Palmigiano, 425 U.S. 308, 318 (1976); see also Daniels v.

Pipefitters' Ass'n, 983 F.2d 800 (7th Cir. 1993) (affirming trial court's refusal to draw an adverse inference from a witness's invocation of the Fifth Amendment and explaining that the inference "may be drawn" but "does not necessarily need to be drawn.");[1] Old Sec. Life Ins. Co. v. Continental Illinois Nat'l Bank & Trust Co., 740 F.2d 1384 (7th Cir. 1984) (affirming district court's decision not to draw inferences where the plaintiff's theory of the case was unsupported by the evidence). "The assertion of the privilege, particularly on the advice of counsel, is an ambiguous response,"[2] and questions regarding the appropriateness of drawing an adverse inference should be considered on a "case-by-case basis." See Brink's Inc. v. New York, 717 F.2d 700, 708, 710 (2d Cir. 1983); United States v. District Council, 832 F. Supp. 644, 652 (S.D.N.Y. 1993).

In this case, there are several compelling reasons why adverse inferences should not be drawn. In United States v. Weitzenhoff,[3] the United States Court of Appeals for the Ninth Circuit created an extremely broad standard of criminal liability under the Clean Water Act. Following the Supreme Court's denial of certiorari of that decision, certain individuals made personal decisions to invoke the Fifth Amendment. And despite multiple

---

1. In Daniels, the Seventh Circuit stated that even if the district court erred in refusing to draw an adverse inference, any such error would have been harmless. 983 F.2d at 802.

2. Farace v. Independent Fire Ins. Co., 699 F.2d 204, 210-211 (5th Cir. 1983).

3. United States v. Weitzenhoff, 35 F.3d 1275 (9th Cir. 1994), cert. denied, 115 S. Ct. 939 (1995).

requests by counsel, the government failed to remove the threat of future criminal prosecution by granting immunity to these individuals in exchange for their testimony. Further, the government failed to ask particularized questions of the witnesses and cannot now ask the Court to speculate as to what questions the government might have asked in order to draw adverse inferences against the parties. In addition, the government has not been prejudiced because it had a full and fair opportunity to learn the facts of this case through numerous depositions of high ranking corporate officials, broad document requests, and site inspections.

B. The Decision to Invoke the Fifth Amendment In Light of Weitzenhoff Was Personal, Not Corporate

In Weitzenhoff, the Ninth Circuit interpreted broadly the criminal liability provision of the Clean Water Act, 33 U.S.C. § 1319(c)(2), and held that a person who knowingly discharged water could be convicted of a felony regardless of the individual's belief that their actions were innocent and lawful.[4] This decision instilled a legitimate fear of future criminal prosecution in certain individuals, principally the former employees of the defendants, and prompted those individuals to plead the Fifth Amendment at their depositions.[5]

---

4. Accord United States v. Hopkins, 53 F.3d 533 (2d Cir. 1995), cert. denied, 116 S. Ct. 773 (1996).

5. As Judge Kleinfeld recognized in the dissenting opinion from the order rejecting the suggestion for rehearing en banc of Weitzenhoff:

(continued...)

The witnesses' decisions to invoke the Fifth Amendment in the wake of Weitzenhoff were personal, not corporate. See Veranda Beach Club Ltd. Partnership v. Western Sur. Co., 936 F.2d 1364, 1374 (1st Cir. 1991) ("An individual's invocation of his fifth amendment privilege against self-incrimination is a personal decision" and "cannot be imputed to a corporation.") Contrary to the government's representations, both defendants would have preferred that the individuals waive their fifth amendment rights. The deposition of John Sladkus illustrates this point. At his deposition, Mr. Sladkus was represented by independent personal counsel. AHI's counsel, David B. Hird, was also present and stated that "Avatar Holdings believes that Mr. Sladkus' testimony will be extremely helpful to Avatar and has requested that he testify." Sladkus Dep. at 8. The government fails to point out that the privilege belongs to the individual,

---

5. (...continued)

> The harm our mistaken decision may do is not necessarily limited to Clean Water Act cases. Dilution of the traditional requirement of a criminal state of mind, and application of the criminal law to innocent conduct, reduces the moral authority of our system of criminal law. If we use prison to achieve social goals regardless of the morally innocent we incarcerate, then imprisonment loses its moral opprobrium and our criminal law becomes morally arbitrary.
>
> We have now made felons of a large number of innocent people doing socially valuable work.

Weitzenhoff, 35 F.3d at 1293 (Kleinfeld, J., dissenting).

not the corporation,[6] and it is for the individual to waive, not the corporation.

C. Despite Multiple Requests, the United States Failed to Grant These Individuals Immunity

Weitzenhoff created the threat that innocent conduct could be subject to criminal sanctions. The government is in a unique position to remove that threat through its exercise of the power of immunity but deliberately failed to take this step. Both counsel for FCWC and AHI requested that the government immunize these individuals from future criminal prosecution, and received no formal response.

In a letter dated July 13, 1995 (Exhibit A), FCWC's counsel formally requested that the government grant immunity to these individuals under 18 U.S.C. § § 6002 et seq. for the matters at issue in this litigation.

At the deposition of Mr. Sladkus, AHI's counsel urged the government to grant immunity to those individuals who pled the Fifth Amendment in light of Weitzenhoff. The following colloquy took place:

> Mr. Hird: I realize Mr. Scroggin has made this request on behalf of Florida Cities employees, but we request, with respect to Mr. Sladkus as well as other individuals, that the Government consider providing immunity so that Mr. Sladkus and those other individuals can testify at trial. . . . I make the request for immunity on behalf of Avatar Holdings for all witnesses that have been deposed and that have requested immunity because we believe that all of their

---

6. United States v. White, 322 U.S. 694, 699 (1944).

> testimony would be helpful to Avatar Holdings.
>
> Mr. Jacobs: The government believes that all of these witnesses would be helpful in the government's case and we go as far as showing that Avatar Holdings and Florida Cities both are liable for all of the allegations in the Complaint. It's the witnesses' choice to assert the Fifth Amendment. It's not under the control of the government as to whether or not the witnesses assert the Fifth Amendment and the government must respect the assertion of the Fifth Amendment of the Constitution.
>
> Mr. Hird: It is also the government's option and power to provide immunity to any individuals who note the Fifth Amendment. And if the Government believes that that testimony would be useful to the government, and we believe this testimony would be useful to Avatar Holdings, I believe Mr. Scroggin believes the testimony would be helpful to Florida Cities. Why don't we get the immunity?
>
> Mr. Jacobs: Mr. Hird, any questions for the witness?

Sladkus Dep. at 10-12. Government counsel did not take steps to obtain immunity but simply forwarded the defendants' request that witnesses be provided with immunity to another office in the Justice Department with no interest in the case. See Letter of July 31, 1995 from the Department of Justice to Don G. Scroggin and Sladkus Dep. at 13. (Exhibit B) The Department of Justice provided no further response.

It is disingenuous for the government to now seek to have negative inferences drawn from these individuals' invocations of the Fifth Amendment when there was no effort to alleviate the individual's fears, despite multiple requests for immunity. If the government truly wanted the testimony of these

individuals, rather than rest its case on negative inferences, it could have acceded to defendants' requests for immunity. The only conclusion that can be reached is that the government would rather have the Court draw the inference than have the actual testimony of these individuals presented to the Court.

D. This Enforcement Action For Punitive Relief Bears Greater Resemblance to A Criminal Action

This Court should refuse to draw adverse inferences against the Defendants for another significant reason. It is well-established that the Fifth Amendment prohibits the drawing of adverse inferences against a defendant from the defendants' invocation of the Fifth Amendment in criminal cases. See Griffin v. California, 380 U.S. 609 (1965). The Fifth Amendment privilege against self-incrimination was designed to protect "the innocent who otherwise might be ensnared by ambiguous circumstances,"[7] and prevents governmental compulsion of incriminating statements. The rule forbidding the drawing of adverse inferences in criminal cases prevents the government from reaping the undue benefits from the silence of a potentially innocent individual.

The present action has more characteristics of a criminal trial, than a civil one. It is not a dispute between two private parties but an enforcement action brought by the Department of Justice for punitive relief. The same element of governmental compulsion exists in this case as exists in criminal

7. Slochower v. Board of Educ., 350 U.S. 551, 557-558 (1956).

cases. The same danger of allowing the government to reap undue benefits from an innocent individual's silence is present here, as it is in so many criminal cases.[8]

E. No Adverse Inference Should Be Drawn Because The Government Asked No Specific Questions of the Witnesses

The government's failure to pose specific questions to the witnesses should bar any adverse inferences. The government engaged in a generalized inquiry and, in many instances, did not refer to specific documents. All of the deposition transcripts were less than twenty-five pages in length. The government should have followed the proper procedure of asking the witnesses particular questions. See United States v. Argomaniz, 925 F.2d 1349 (11th Cir. 1991). Then the government could request that inferences be made with respect to specific questions, instead of asking the Court to speculate as to what questions the government might have asked and in reference to which the individuals may have invoked the Fifth Amendment.

---

8. As Justice Brennan wrote in dissent of Baxter v. Palmigiano, 425 U.S. 308, 335 (1976):

> In a civil suit involving only private parties, no party brings to the battle the awesome powers of the government, and therefore to permit an adverse inference to be drawn does not implicate the policy considerations underlying the privilege. But where the government "deliberately seeks" the answers to incriminating questions, allowing it to benefit from the exercise of the privilege aids, indeed encourages, governmental circumvention of our adversary system.

F. The Government Had A Full and Fair Opportunity to Learn the Facts of This Case

These witnesses did not invoke the Fifth Amendment for the purpose of hampering the government's efforts to obtain facts through the discovery process. The government has engaged in thorough and wide-ranging discovery. Defendants combined produced well over 500,000 pages of documents. In addition, the government conducted a series of site inspections at all three facilities, including two inspections at Waterway Estates. Plaintiff has deposed eight FCWC officials for a total of ten days of testimony.[9]

Plaintiff also deposed the officials with greatest authority in AHI. AHI's Chairman of the Board, Leon Levy, AHI's President Edwin Jacobson, and AHI's Chief Financial Officer, Charles McNairy, answered all questions propounded to them by the government during deposition, and will testify at trial.[10]

Due to the government's sweeping and exhaustive discovery, the Court should not draw any adverse inferences against the defendants.

---

9. These witnesses are: Gerald Allen, President of FCWC, Julie Karleskint, Operations Manager, FCWC, Larry L. Good, Regional Manager for Sarasota Division and North Division, FCWC, William Sansbury, Division Manager, Barefoot Bay Division, FCWC, Glen Siler, Wastewater Operator, Barefoot Bay Plant, FCWC, Johnnie Overton, Senior Vice President, FCWC, 1992-1994 (currently Executive Vice President and Chief Operating Officer, Avatar Utilities Services, Inc.), Paul Bradtmiller, Executive Vice President and Chief Operating Officer, FCWC, and Jack Tompkins, former Operations Manager, FCWC.

10. The government also had the opportunity to depose Juanita Kerrigan, Secretary of AHI, who has been with the Company for several years, but failed to do so.

G. It is Inappropriate for the Court to Draw Adverse Inferences From the Individuals Highlighted By the Government In its Offer of Proof

1. Peter Sharp

Peter Sharp, former Chief Executive Officer of AHI, never invoked the Fifth Amendment or was deposed by the government. In fact, Peter Sharp died in April 1992, a year and a half before the government instituted this action against FCWC, and three years before AHI was added to this case. There is no authority for the proposition that the government is entitled to adverse inferences from his inability to testify.

2. Lawrence Wilkov

On March 28, 1996, this Court ruled that no adverse inferences should be drawn from Lawrence Wilkov's invocation of the Fifth Amendment. Mr. Wilkov was a former employee of AHI at the time of his deposition. Moreover, after leaving AHI in 1994, he sued AHI in a dispute arising out of his employment.

3. Robert Gordon

No adverse inference should be drawn against AHI from the invocation of the Fifth Amendment by Robert Gordon, President of Avatar Utilities. As Leon Levy testified, on March 28, 1996, Trial Tr. at 126, Mr. Gordon has never been an officer, director or employee of AHI.

In light of the number of FCWC employees who came forward to testify, including Gerald Allen, President of FCWC and Executive Vice President of Avatar Utilities, and Paul

Bradtmiller, Executive Vice President of FCWC, no adverse inference should be drawn against FCWC.

Significantly, Mr. Gordon's deposition only lasted 11 pages, adjourning after a short series of general questions.

4. John Sladkus

John Sladkus was a former employee of AHI at the time of his deposition. He resigned from AHI on January 1, 1991,[11] almost five years prior to his deposition, on August 24, 1995. At his deposition, he was represented by personal counsel. Retired from a lifetime of hard work, his personal concerns far outweighed any loyalty he still felt for AHI.

Mr. Sladkus' resignation predates the period in which most of the alleged violations occurred. All of the allegations relating to Carrollwood date from July 1991 to December 1991, seven months after Mr. Sladkus already left AHI. The allegations relating to Barefoot Bay date from November 1991 to June 1993, again, months after Mr. Sladkus' resignation. The allegations regarding Waterway Estates overlap Mr. Sladkus' employment only for approximately seven months.

At Mr. Sladkus' deposition, the government asked no specific questions regarding AHI's liability. The deposition took 14 pages, most of which was consumed by colloquy among counsel. The government cannot now reap the benefit of pure

---

11. John Sladkus did have a consulting arrangement with Avatar Holdings after retirement but there is no evidence that this arrangement involved him in any aspect of the issues before this Court.

speculation as to what questions might have been asked and in reference to which the Fifth Amendment might have been invoked, in order to draw adverse inferences against the parties.

5. Dennis Getman

Dennis Getman is general counsel to both FCWC and AHI. As Edwin Jacobson, AHI's President, testified at his deposition, Mr. Getman's business responsibilities at AHI are minor, and do not relate to utility operations. See Jacobson Dep. at 167-70. Had he not taken the Fifth Amendment, specific questions propounded to him would have been objectionable on the grounds of attorney-client privilege. In addition, his deposition was noticed prior to AHI's addition as a party to this action.

Mr. Getman's deposition lasted 13 pages, most of which was consumed by colloquy among counsel. As with the other depositions discussed above, the government did not ask specific questions to Mr. Getman at his deposition regarding AHI's liability and therefore cannot now force this Court to speculate as what questions might have been asked and in reference to which the Fifth Amendment might have been invoked. Moreover, the government has not been prejudiced in any way with respect to Mr. Getman's invocation of the Fifth Amendment. As represented by the government in Court, 99 privileged documents were inadvertently produced to them, many of which contained legal advice provided to FCWC by Mr. Getman.

6. James Elder and Antoine Reeves[12]

James Elder and Antoine Reeves have never been employees, directors, or officers of AHI. They are former employees of FCWC. At their depositions, both were represented by personal counsel. Their decisions to invoke the Fifth Amendment were purely personal. Therefore, no adverse inferences should be drawn against the defendants. Mr. Elder's deposition was 23 pages and Mr. Reeves' deposition was only 11 pages.

H. The Depositions of the Individuals who Invoked the Fifth Amendment Are Irrelevant

For the reasons enumerated above, this Court should not draw adverse inferences against the Defendants. If the Court rules in favor of the Defendants on this issue, we ask that the Court also exclude from evidence all depositions where the individual invoked the Fifth Amendment. The depositions would be irrelevant and thus inadmissible under Federal Rule of Evidence 402.

III. Conclusion

Under the facts and circumstances of this case, this Court should not draw adverse inferences against the defendants.

In light of the Weitzenhoff decision, certain individuals made personal decisions to invoke the Fifth Amendment. The government failed to alleviate the personal fears

12. These individuals were not discussed in the government's offer of proof, which is primarily addressed against Avatar Holdings. However, the government wishes to have the depositions at which these individuals invoked the Fifth Amendment admitted into evidence.

of these individuals through its power of immunity despite requests to do so, and now seeks to prejudice the defendants. Drawing adverse inferences in this governmental enforcement action for punitive relief presents many of the same dangers of doing so in a criminal action. Further, the government did not ask particularized questions of the witnesses and cannot now ask the Court to speculate as to what questions regarding the defendants the government might have asked and in reference to which the Fifth Amendment might have been invoked, in order to draw adverse inferences against the parties. Perhaps the most important point is that the government has had a full and fair opportunity to obtain the facts in this case through wide-ranging discovery. It has not been prejudiced in any way.

With respect to all individuals referenced in the government's purported offer of proof and the Revised Joint Pretrial Statement, at 34, defendants maintain that the drawing of adverse inferences is inappropriate.

Finally, in the event the Court finds it inappropriate to draw adverse inferences, defendants request that the depositions of these individuals who invoked the Fifth Amendment be excluded as irrelevant.

Exhibit_____(GHB-79)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

Florida Cities Water Company's
List of Witnesses for Direct Examination

Florida Cities Water Company ("Florida Cities") hereby propounds the following list of witnesses which it intends to call in its case in chief at the trial of this action. Florida Cities is providing this witness list in accordance with the agreement of counsel to exchange witness lists on Friday, March 15, 1996 at 2:00 P.M.. At trial, Florida Cities proposes to call the following witnesses for direct testimony:

1) Michael Acosta
2) Dr. Abdul Ahmadi
3) Gerald Allen
4) Randall Armstrong
5) Bruce Barrett (by deposition)
6) Ronald Blackburn
7) Paul Bradtmiller
8) Keith Cardey
9) Roosevelt Childress (by deposition)
10) Larry Good
11) James Greenfield (by deposition)
12) Roger Hartung

13) Charles Hill
14) Connie Kagey
15) Julie Karleskint
16) Patrick Lehman
17) Michael McWeeny
18) Michael Murphy
19) Douglas Smith

This list includes those witnesses which Florida Cities intends to call in its case in chief. Providing this list in no way limits Florida Cities' right to call rebuttal witnesses as necessary. Additionally, all counsel have agreed that each party will provide the names of out-of-state witnesses forty-eight (48) hours in advance of the day that the witness will be called to testify and twenty-four (24) hours in advance of the day that other witnesses will be called, including a proposed, non-binding order of witnesses for the next day. These exchanges will occur at 8:30 A.M. on the morning of the day before the witnesses are to be called.

I. SUMMARY AND CONCLUSIONS

INTRODUCTION

On behalf of the U.S. EPA, the Department of Justice charged FCWC with operating the Waterway Estates plant in violation of the requirements of the NPDES permit issued for the plant. The purpose of this report is to present an overview of factors related to the allegations, to provide a fair perspective of the significance of the permit exceedances experienced by the plant over several months in 1991 and 1992.

The report includes a description of the Waterway Estates wastewater treatment plant and the water quality of the Caloosahatchee River. It includes a description of the reasons for permit requirements for limiting nitrogen, phosphorous and toxicity, as well as a review of wastewater treatment plant processes and their typical performance to control these substances. Finally, this report reviews the schedule of the planning, design and construction of the improvements to the plant that occurred between 1986 and 1992 and their effects on construction of the Waterway Estates plant improvements, since it was the delays in completing the plant improvements which caused the permit exceedances.

The Waterway Estates wastewater treatment plant (WWTP) is located on the north shore of the Caloosahatchee River, directly across from the City of Ft. Myers, and northeast of the City of Cape Coral in south Florida. From its beginning in 1965 through 1986 the plant operated successfully, in full compliance with all regulatory agency permits. In 1986 the U.S. Environmental Protection Agency (EPA) denied an application submitted by the Florida Cities Water Company (FCWC) for renewal of the Waterway Estates plant's National Pollutant Discharge Elimination System (NPDES) permit. Over the next six years FCWC planned, designed, constructed and placed in service an upgraded WWTP. Following expiration of the 1986 NPDES permit, the plant operated under EPA Administrative Orders. A new NPDES permit was issued, effective November 1, 1989. The new effluent limits were based on treatment levels to be provided by the upgraded plant, by October 1991. Construction of the upgraded plant was not completed until April 1992, and the old plant was not capable of meeting the effluent limits contained in the 1989 permit. On several occasions during construction of the plant, FCWC reported exceedances of the conditions and

effluent limits contained in the Administrative Orders and the 1989 NPDES permit. This report addresses the alleged violations for discharge of excessive amounts of nitrogen, for failure of the plant effluent to pass toxicity tests, and for failure to move the point of discharge from a canal near the river's edge out to the main channel of the river on schedule.

By April 1992 the upgraded plant was in operation, and by June all limits established by the 1989 NPDES permit were consistently being met. The point of discharge had been moved by July 11, 1991. The sequence of events between 1986 and 1992 which included permit administration and the planning, design, construction and placing into operation the upgraded Waterway Estates plant are outlined in detail in Section II, and discussed in Section VIII of this report.

WATERWAY ESTATES AND CALOOSAHATCHEE RIVER

In the vicinity of Waterway Estates the Caloosahatchee River is affected by the tides of the Gulf of Mexico, and it flows both upstream and downstream on a daily basis in response to the relative elevations of the Gulf and the upstream water levels. Thus, "average" or "normal" flow is complex and difficult to generalize.

Municipal wastewater treatment plants are designed with the capacity to treat the flow of wastewater projected to be generated by the service area, and to provide the level of treatment required by EPA and FDEP. Plants are modified and expanded from time to time to meet increasing flow from the service area and to meet more stringent treatment requirements set by the regulatory agencies. The Waterway Estates wastewater treatment plant was planned, designed, constructed, and first placed into operation in 1965. The plant capacity was expanded in 1976 and additional treatment process units were added in 1980 to improve the level of treatment. Between 1986 and 1992 the plant was again modified to provide higher levels of treatment. From its beginning in 1965 to the present, the Waterway Estates plant has been a modern, effective plant which was well operated and maintained, and was consistently in substantial compliance with effluent limits established by the State of Florida.

Prior to 1986 the Waterway Estates plant's NPDES discharge permits required removal of about 85 percent of the typical sewage pollutants (biochemical oxygen demand and total suspended solids) on a monthly average. The plant provided a level of treatment which resulted in removal of about 98

percent of the typical sewage pollutants on a routine basis. Prior to 1986 the permits included no limits for the amount of nitrogen or phosphorous which could be discharged, and had no requirement for testing the effluent for toxicity. About one half of the nitrogen and phosphorous was removed by the treatment plant processes prior to 1992, and following the plant modifications completed in 1992 the nitrogen and phosphorous removal was increased to about 90 percent.

NITROGEN

Nitrogen and phosphorous are common elements found in domestic wastewater. They are also nutrients which are essential to the growth of plants and animals. When present in excessive amounts, nitrogen and phosphorous can contribute to undesirable growths of algae in natural water bodies. Studies by FDER in the early 1980's concluded that the total nitrogen discharged by wastewater treatment plants to the Caloosahatchee River should be limited to 1225 lb/day in order to prevent excessive algae populations in the river, and the limits should be incorporated into the NPDES permits of the plants. Limits were also placed on phosphorous. Prior to this there had been no limits placed on nitrogen discharges, so the Waterway Estates plant did not have treatment processes which could effectively remove nitrogen as required by the new limits.

.Effluent limits for nitrogen and phosphorous were for the first time imposed by the 1989 NPDES permit. The permit limited the amount of nitrogen contributed to the Caloosahatchee River by the Waterway Estates plant to 25 lb/day, which corresponds to an average concentration of 3 mg/L of total nitrogen in the plant effluent, at the plant's rated capacity of 1.0 mgd. Since construction of the processes necessary for removal of nitrogen to this level was not completed until April 1992, the plant discharged more nitrogen than allowed by the permit until construction was complete. This amounted to approximately 100 lb/day. However, even though the Waterway Estates plant discharged more than its 25 lb/day allocation, the total nitrogen contributed by it and the other wastewater plants in the vicinity was in the range of 300 to 400 lb/day, which was well below the 1225 lb/day established by FDER as an acceptable upper limit.

It was concluded that the even though the Waterway Estates treatment plant did not meet the 1989 NPDES permit effluent limits for total nitrogen in a timely fashion, this had no measurable or observable effect on the amount of algae in the Caloosahatchee River, and therefore no adverse effect on the river water quality.

TOXICITY

Wastewater which receives routine treatment at a wastewater treatment plant can still be toxic to sensitive species. The most common causes of toxicity are ammonia remaining in the treated wastewater or a deficiency of oxygen. Prior to April and June 1992 when new treatment processes were placed in operation, the Waterway Estates plant was not designed to effectively control ammonia. The effluent did, however, normally contain ample dissolved oxygen. Thus, prior to June 1992 it would not be unusual for the effluent to exhibit toxicity in a laboratory test. Effluent tests for toxicity were for the first time imposed by the 1989 NPDES permit, effective October 31, 1991. After the upgraded plant processes completed in June 1992 were successfully placed in operation, the plant consistently passed the toxicity monitoring tests.

The effluent from the Waterway Estates plant is discharged through a series of small pipes (diffusers) into the Caloosahatchee River where it mixes with the river water. The amount of mixing and consequent dilution is highly variable, depending primarily on the flow and velocity of the river currents, and the difference in density between the effluent and the river. Since the flow from the Waterway Estates plant averages about 1 mgd, the flow in the Caloosahatchee River averages over 1000 mgd, and the density of the effluent and the river are quite similar, significant dilution normally takes place. Typically, a zone will be present in the vicinity of the point of discharge where the concentration of effluent rapidly declines from full strength to trace amounts. The size of the mixing zone will vary from day to day, as the flow in the river and plant effluent vary.

The plant effluent was discharged through the diffusers and was diluted in the mixing zones during the time the plant effluent failed the toxicity tests. Any toxicity manifest by laboratory tests on the full strength, undiluted effluent was greatly diminished as the effluent passed through the mixing zone and was diluted by the natural flow of the river. Also, since the mixing zone in the vicinity of the point of discharge is typically small, any mobile organisms can readily escape or avoid immersion in the effluent, thus avoiding the toxic or noxious effects.

If the plant effluent exhibits toxicity in the laboratory tests, such as that caused by ammonia generated from the decomposition of organic matter, the toxic nature of the effluent would be rapidly dissipated as the discharge was mixed with the river water. From this it was concluded that the toxicity exhibited by the plant effluent before the modifications were completed in April and June 1992

was not a serious problem, and that little, if any, damage was experienced by the Caloosahatchee River. The plant was operating as it had been for many years: toxicity tests had never before been required; the level of treatment needed to eliminate most sources of toxicity had not been required prior to the 1989 NPDES permit.

LOCATION OF DISCHARGE

Administrative Order 89-109 established a schedule which required the Waterway Estates plant effluent pipe to be relocated from the canal adjacent to the plant out to near the center of the Caloosahatchee River, with the relocation work to be completed by August 1, 1991. Construction was begun in 1990 and completed in July 1991 on this relocation, ahead of the schedule established by Administrative Order 89-109.

The relocation work included construction of a pipeline 500 ft along the bottom of the access canal and 2000 ft along the Caloosahatchee River bottom out towards the center of the river near the main channel, where the depth reached six feet. A diffuser pipe 100 ft long with 10 individual discharge ports was attached to the end of the 2000 ft line.

In a 1990 report concerning the water quality in the Caloosahatchee River the FDER concluded that the magnitude of the improvement in water quality resulting from the relocation of the Waterway Estates plant's point of discharge could not be determined with certainty. This was based on the results of mathematical model simulations of the system, with the first plant discharge point at the canal, and the second at a new location near the center of the river. The results showed virtually no improvement in water quality in the river with the discharge point at the second location. However, actual measurements of water quality in the vicinity of the Waterways Estates discharge point revealed that with the treatment levels provided at that time, the concentration of algae was about ten percent higher than target values considered to be satisfactory. It was concluded by FDER that moving the point of discharge would improve the quality of the water in the Waterway Estates canals and in the Caloosahatchee River in the vicinity of the canals and the discharge. Improvements of this magnitude would be imperceptible, and would be expected to take place gradually over many months.

From a review of the FDER evaluations and data, Black & Veatch concluded that any delay in completing the relocation of the Waterway Estates discharge pipeline had minimal effect on the water quality in the Caloosahatchee River.

SCHEDULE

In 1986, EPA denied FCWC's application for renewal of an NPDES permit for the Waterway Estates plant, indicating that FCWC did not have an FDER waste load allocation to discharge Waterway Estates plant effluent to the Caloosahatchee River. This led FCWC to undertake a series of activities which eventually resulted in the construction of improvements to the Waterway Estates plant. Several alternatives were available to FCWC for disposing of the effluent from the plant. Each alternative involved significant construction of new facilities. FCWC opted to upgrade the existing Waterway Estates plant. Based on extensive evaluations, this alternative was considered to provide the lowest cost to the customers and to be the most implementable alternative from a technical and permittability standpoint. The Florida Public Service Commission, which regulates FCWC's financial activities, reviewed the decision and concluded that it was "prudent" for FCWC to upgrade the Waterway Estates plant. The resulting wastewater treatment facility consistently meets all environmental regulations.

Black & Veatch estimates that a project similar to the upgrade of the Waterway Estates plant typically requires about four years to plan, design, obtain permits, and construct. This duration assumes no significant uncontrollable delays resulting from external sources. The upgrade of the Waterway Estates plant required about five years and six months. Review of the project files reveals a number of reasons for the long duration, many of which were beyond the control of FCWC.

The first deadline established by EPA for completing construction of the necessary plant improvements was clearly unrealistic. As the project evolved and various delays occurred, EPA issued two extensions to the compliance deadline. The final requirement for completion of construction by August 1, 1991 was set forth in Administrative Order 89-109, issued on September 26, 1989. Major process components necessary for meeting the NPDES permit limits were completed and placed in operation by March 16, 1992, 227 days beyond the compliance deadline. Additional delays, which were beyond the control of FCWC

staff, occurred late in the project. These delays were significant enough to account for the 227 day delay. FCWC requested a third extension to account for the additional delays, but the request was denied by EPA.

II. INTRODUCTION

On behalf of the U.S. EPA, the Department of Justice charged FCWC with operating the Waterway Estates plant in violation of the requirements of the NPDES permit issued for the plant. The purpose of this report is to present an overview of factors related to the allegations, to provide a fair perspective of the significance of the permit exceedances experienced by the plant over several months in 1991 and 1992.

The report includes a description of the Waterway Estates wastewater treatment plant and the water quality of the Caloosahatchee River. It includes a description of the reasons for permit requirements for limiting nitrogen and toxicity, as well as a review of wastewater treatment plant processes and their typical performance to control these substances. Finally, this report reviews the schedule of the planning, design and construction of the improvements to the plant that occurred between 1986 and 1992 and their effects on construction of the Waterway Estates plant improvements, since it was the delays in completing the plant improvements which caused the permit exceedances.

CALOOSAHATCHEE RIVER

The Waterway Estates wastewater treatment plant is located on the north shore of the Caloosahatchee River, directly across from the City of Ft. Myers, and northeast of the City of Cape Coral in south Florida. The lower reach of the Caloosahatchee is a tidal river / estuary. The river extends from the northeast to the southwest across southwestern Florida, reaching the Gulf of Mexico at the city of Cape Coral, near Sanibel Island. It originates at Lake Okeechobee as a fresh water river. The flow is controlled by locks and dams, and the channel is maintained as a navigable waterway with a six ft channel depth. The river forms the western half of the Okeechobee Waterway that extends from the Gulf to the Atlantic Ocean. In the vicinity of Waterway Estates and down to its mouth the Caloosahatchee is shallow (less than ten ft deep) across its full width of approximately one mile.

As an estuary, the Caloosahatchee River is affected by the tides of the Gulf of Mexico, and flows both upstream and downstream on a daily basis in response to the relative elevations of the Gulf and the upstream water levels. Thus, "average" or "normal" flow is complex and difficult to generalize. Also, since the

river is extremely wide and quite shallow, the flow is strongly influenced by other natural factors such as winds and bottom irregularities. The average river flow over 23 years at a lock and dam about 15 miles upstream was about 1125 mgd. and ranged from zero flow on several occasions to a peak of about 13,800 mgd one day in 1970.

There are five major point source discharges of treated municipal sewage to the Caloosahatchee River in the vicinity of the Waterway Estates plant. The Waterway Estates plant is the smallest. In 1990 the City of Cape Coral sewage treatment plant discharged approximately 7.3 million gallons per day (mgd); the Central and South plants of the City of Ft. Myers, 11 and 12 mgd. respectively; the Fiesta Village plant, 5 mgd; and the Waterway Estates plant, 1.0 mgd.

WATERWAY ESTATES

Waterway Estates is a residential community on the north shore of the Caloosahatchee River, directly across from the City of Ft. Myers, and northeast of the City of Cape Coral. The total area of the community is about 2000 acres (3.1 sq miles). The total sewage produced by the community in 1991 averaged about 0.96 mgd, and the Waterways Estates sewage treatment plant was permitted to treat an average daily flow of 1.08 mgd. The flow was projected to increase to 1.5 mgd by the year 2000. Waterway Estates is a residential community with no major commercial or any industrial facilities in the service area. Thus, the wastewater delivered to the treatment plant consists exclusively of domestic sewage, with no unusual or deleterious waste products that could be generated by business and industry.

SEQUENCE OF EVENTS

The events pertinent to this case occurred over the course of about six years, between 1986 and 1992. During that time, a series of activities involving hundreds of participants took place. In order to have a better perspective of the facts presented in this report, a clear understanding of the progression of key events is needed.

On April 4, 1986, EPA notified FCWC of the upcoming expiration of the NPDES permit for the Waterway Estates plant. FCWC submitted a timely application to renew the NPDES permit. EPA denied FCWC's application for permit renewal, based on its interpretation that FCWC did not have an FDER

waste load allocation to discharge to the Caloosahatchee River. FCWC subsequently renewed its waste load allocation, and proceeded with designing, submitting permit applications and constructing an upgraded plant around the existing Waterway Estates plant. The new plant was designed to meet the discharge requirements of the waste load allocation. The new plant was substantially complete by June 5, 1992.

A listing of key events is presented below.

- April 7, 1986: EPA notifies FCWC that the NPDES permit for the Waterway Estates WWTP will expire in less than 180 days.
- May 9, 1986: FCWC applies to EPA for NPDES permit renewal.
- December 8, 1986: EPA denies FCWC's NPDES permit application.
- March 27, 1987: FCWC contracts with engineering consultant, ESE, to evaluate alternatives to achieve compliance with EPA regulations. Based on ESE's report and additional research by FCWC staff, FCWC concludes that the best alternative is to upgrade the Waterway Estates WWTP and obtain FDER authorization to discharge through a waste load allocation.
- May 11, 1987: EPA issues Administrative Order (AO) 87-085, citing FCWC with discharging to the Caloosahatchee River without an NPDES permit. AO 87- 085 defines a schedule for ceasing discharge and orders continued compliance with the previous NPDES permit in the interim.
- December 1, 1987: FCWC requests from FDER a waste load allocation for the Waterway Estates WWTP to continue discharging to the Caloosahatchee River.
- February 29, 1988: FCWC contracts with engineering consultant Source, Inc. to design, prepare permit applications, and provide construction phase services for upgrading the Waterway Estates plant and relocating the plant discharge pipe.
- August 31, 1988: EPA issues an amendment to AO 87-085 which revises the compliance schedule to begin any necessary construction by February 1, 1989 and to cease discharge to the Caloosahatchee by November 1, 1990.
- March 30, 1989: EPA notifies FCWC of continued non-compliance with AO 87-085, for failure to begin construction by February 1, 1989.
- May 16, 1989: EPA issues a notice of violation to FCWC regarding the Waterway Estates plant effluent.

- June 26, 1989: FCWC submits an application to EPA for an NPDES permit for the upgraded Waterway Estates plant with a relocated discharge pipe.
- September 26, 1989: EPA issues AO 89-109 citing FCWC with continuing to discharge to the Caloosahatchee River without an NPDES permit. AO 89-109 orders FCWC to start construction according to the schedule submitted in their recent NPDES permit application, in accordance with a revised compliance schedule. The revised schedule requires construction to start by August 1, 1990; completion of construction by August 1, 1991; and full compliance with NPDES requirements by October 1, 1991.
- September 29, 1989: EPA issues NPDES permit No. FL0030325.
- March 1, 1990: FDER issues a permit to FCWC to construct the plant improvements necessary to meet the NPDES permit requirements.
- May 17, 1990: FCWC proposes a revised schedule for compliance with the new NPDES permit.
- July 24, 1990: EPA issues amendment to AO 89-109. The amendment changes the required date for starting construction to August 1, 1990. The remaining compliance dates are unchanged.
- August 2, 1990: FCWC awards the construction contract to Cardinal Contractors.
- FCWC awards an engineering contract to Stone & Webster to replace Source, Inc.
- October 31, 1990: Cardinal Contractors receives Notice of Commencement.
- December 27, 1990: Lee County issues building permit.
- June 12, 1991: FCWC and EPA attend a show-cause hearing to discuss scheduling of the project.
- July 11, 1991: Relocated discharge pipe is certified and put to service.
- March 16, 1992: Major process components necessary for achieving NPDES limits are complete and on-line.
- April 1, 1992: Waterway Estates AWT plant is consistently meeting NPDES permit discharge limit for nitrogen.
- June 5, 1992: AWT plant construction achieves substantial completion.
- September 16, 1992: EPA issues a notice of violation regarding toxicity in effluent in February, April and June, 1992 and issues AO 92-093 requiring additional monitoring.

III. WATER QUALITY ISSUES

Florida has classified all public water bodies in the state into five categories, according to the highest and best use suitable for each. FDEP classifies the Caloosahatchee River as a Class III water body, which means it is suitable for recreation and the propagation and maintenance of a healthy, well-balanced population of fish and wildlife. Discharges to the river are limited as necessary to maintain Class III water quality standards. The limits are imposed and enforced through permits which are issued by EPA and the State of Florida.

NPDES PERMITS

NPDES permits are issued by EPA. The permits include requirements which limit the quantity of pollutants which can be discharged from a plant. Discharge limits generally are one of two types.

1) Where the quality of the water body receiving the wastewater treatment plant effluent is good, and the quality will not be significantly affected by the plant's effluent, NPDES permits typically require the plant to provide a level of treatment based on standard wastewater treatment processes. All plants must meet these minimum standards.

2) Where the quality of the water body receiving the wastewater treatment plant does not meet water quality standards or where the quality would be significantly affected by the discharge. the NPDES permits typically require a higher level of treatment. The higher level of treatment is based on an evaluation of the receiving water and all pollutants discharged to it. The evaluation is called a "waste load allocation" study. Following review and approval by EPA, the results of a waste load allocation study are used to establish the level of treatment required for each plant effluent. The waste load allocations are typically incorporated into the NPDES permit requirements, along with other requirements such as monitoring to assure the water quality is attained.

From 1965 through 1986 the Waterway Estates plant's NPDES permit was a type 1) permit. Following a waste load allocation study by FDER, the Waterways Estates plant was issued a type 2) NPDES permit, which required higher levels of treatment and more monitoring than the former permits.

EFFLUENT LIMITS

The effluent limits included in the Waterway Estates treatment plant NPDES discharge permit were developed by FDER as those required to maintain the quality of water in the Caloosahatchee River at an acceptable level. In 1984 and in 1990 FDER reviewed effluent limits for all discharges to the Caloosahatchee, including Waterway Estates. The 1990 FDER study used a mathematical model to represent the water quality and hydraulic characteristics of the river, and to estimate the effects of discharges on the water quality of the river. The FDER analyses and modeling work were reported in a 1990 FDER report titled, "Caloosahatchee River Water Quality Based Effluent Limitations Documentation", Water Quality Technical Series Volume 2, Number 121. In the 1990 report FDER stated that the dissolved oxygen concentration and nutrient (i.e. nitrogen and phosphorous) concentrations were the water quality parameters considered to be of primary importance in maintaining the quality of the river.

Effluent limits set by FDEP and EPA normally include allowances for the uncertainty inherent in defining acceptable upper limits, and for the natural variability and complexity of the systems involved. The Caloosahatchee River is an extremely complex system, and the water quality is highly variable. The water quality is strongly affected by the natural forces of rainfall and runoff and the chemicals carried into the river, and the natural water quality has been permanently altered by the effects of human activity along the river's full length, especially land clearing for farming and ranching, and the regular application of fertilizers and pesticides. The "natural population" of algae or the "natural concentration" of nutrients and other water quality parameters can only be estimated. Effluent limits for discharges are normally established based on the best estimates of FDEP and EPA and the results of mathematical models of the natural conditions of the river.

Previous work by FDER on the Caloosahatchee River in 1976-1977 and 1980-1981 established that pollutants in the sewage treatment plant discharges to the river would not cause the concentration of dissolved oxygen to decline below 5.0 mg/L, the minimum established by water quality standards. The 1990 report accepted these findings and did not consider oxygen concentrations in detail.

NUTRIENT LIMITS

For nutrient concentrations, the Class III standards require that in no case shall they be altered so as to cause an imbalance in natural populations of flora or fauna (plants or animals). In most situations, including the Caloosahatchee, algae is the natural population which is of concern, since algae growth in the receiving water is stimulated by increases in the nutrient concentrations. The concentration of nitrogen in the effluents is limited by the discharge permits in order to prevent an imbalance (increase) in the natural population of algae. In setting the effluent limits for individual discharges FDEP takes into account the existing or natural background levels as well as the contributions of the problem pollutants from all sources, including other point source discharges and stormwater runoff.

Excessive populations of algae can cause serious water quality problems in some circumstances, but in the Caloosahatchee River case, too much algae is simply a minor aesthetic problem. The river does not experience serious problems with excessive amounts of algae, and the water quality standards will help to prevent algae from becoming a problem. In the Caloosahatchee River the algae population is far too small to cause serious water quality problems such as floating mats, odors, significant oxygen depletion and changes in pH. In the Caloosahatchee, too much algae can cause the color of the river to appear slightly more green or brown than its natural color, and it can cause the river water to appear more cloudy (turbid).

The effluent limits on all dischargers were set by FDER and EPA to prevent the algae population from exceeding natural levels. As long as the total amount of nutrients added to the river from all sources remains below the level set by FDER and EPA, there should be no imbalance in the natural populations of plants and animals, including algae.

Chlorophyll-a is used as a convenient parameter to obtain a quantitative estimate of the total mass of algae present in a sample. The test for chlorphyll-a measures the amount of green pigment (chlorophyll-a) found in the suspended solids contained in a sample. Assuming that chlorophyll-a constitutes, on the average, 1.5 percent of the dry weight of algae, the total algae can be estimated by multiplying the chlorophyll-a content by a factor of 67.

A mathematical model of the Caloosahatchee River was used to guide the setting of the permit limits. Previous work by FDER on the Caloosahatchee in 1976-1977 found nitrogen and phosphorous as co-limiting nutrients; and a target

chlorophyll-a concentration of 0.020 mg/L was determined to represent a healthy condition. The 1990 analysis employed an average concentration of 0.011 mg/L of chlorophyll-a to represent the existing background concentration of algae in the river. The model predicted that increases in chlorophyll-a average concentrations caused by all five of the treatment plant effluents would be approximately 0.0025 mg/L if the plants only provided secondary treatment. If the five plants provided advanced treatment (as required by the permits) the average increase would be approximately 0.0004 mg/L. From the measurements of the existing water quality and the model's predictions of the effects of increasing nitrogen concentrations in the river, FDER concluded that the total nitrogen load to the river from individual dischargers could be as high as 1225 lb/day without causing an excessive increase in the algae population in the Caloosahatchee River. This value was used to establish effluent limits for each of the treatment plants discharging to the Caloosahatchee River, including Waterway Estates.

CONCENTRATION v. TOTAL LOAD

NPDES permits typically limit both the concentration of nitrogen in the effluent, and the total quantity (load) of nitrogen discharged to the river in a specified time. The two are directly related. The load depends on both the concentration as well as the wastewater flow and is calculated by multiplying the concentration times the flow and a constant:

Load (lb/day) = Concentration (mg/L) x Flow (mgd) x 8.34

In 1991 and 1992 the effluent nitrogen concentration from the Waterway Estates plant was limited to 3 mg/L as the monthly average of weekly samples, and the total nitrogen load was limited to 25.0 lb/day as the monthly average of weekly samples. The plant was designed with the capacity to treat a flow of 1.0 mgd. The discharge load limit of 25.0 lb/day is equivalent to a concentration of 3 mg/L in a flow of 1.0 mgd.

The potential for harm to the river is related to the total load of nitrogen discharged to the river from all sources, not to its concentration in the discharges. The permit limit on concentration can be considered to be an interim measure, intended to require the treatment plant to provide a satisfactory level of treatment during the time when the total flow to the plant is less than the plant's design capacity. As the flow to the plant increases to its design capacity and the level of

treatment (i.e. effluent concentration) remains constant, the total load limit is reached. At that point the two effluent limits are redundant.

The treatment plant operations staff has some control over the effluent concentration, down to the level of treatment that can be achieved using the processes at the plant. The treatment plant operations staff has essentially no control over the flow of wastewater to the plant. Thus, when the plant is operating at its flow capacity, if the plant operations are not satisfactory resulting in the concentration of nitrogen in the effluent to be greater than 3 mg/L both the permit limits on flow and load will be exceeded due to the single operations problem. There are no measures that plant operations staff can take to reduce the flow to the plant so that the load limits will not be exceeded.

TOXICITY LIMITS

Toxicity tests are routinely used to evaluate the acute toxicity of wastewater to the biological life of the receiving stream. The tests provide a good measure of the combined effects of all substances in the wastewater discharge. Normal domestic sewage contains few substances which are directly toxic to the biological life of a water body, but contains substances which can be deleterious. For example, inadequately treated sewage can contain organic matter that serves as a food source for microorganisms in a receiving water body. The food source can produce unnaturally high concentrations of the microorganisms, and their consumption of the organic matter can deplete the oxygen concentration in the water. If the oxygen concentration is lowered too much, it can be harmful to organisms which require oxygen for respiration.

Another example of harmful effects of inadequately treated sewage would be a situation where the sewage treatment processes decompose complex organic matter to produce ammonia. Concentrations of ammonia can be produced which are directly toxic to sensitive species in the water body. In fact, experience has shown that ammonia is the most common cause of toxicity in normal domestic sewage.

The effluent from the Waterway Estates plant is discharged through a pipe into the Caloosahatchee River where it mixes with the river water. The amount of mixing and consequent dilution is highly variable, depending primarily on the flow and velocity of the river currents, and the difference in density between the effluent and the river. Since the flow from the Waterway Estates plant averages

about 1 mgd, the flow in the Caloosahatchee River averages over 1000 mgd, and the density of the effluent and the river are quite similar, significant dilution normally takes place. Typically, a zone will be present in the vicinity of the point of discharge where the concentration of effluent rapidly declines from full strength to trace amounts. The size of the mixing zone will vary from day to day, as the flow in the river and plant effluent vary.

Any toxicity manifest by the full strength, undiluted effluent will be greatly diminished as the effluent passes through the mixing zone and is diluted by the natural flow of the river. Also, since the mixing zone in the vicinity of the point of discharge is typically small, any mobile organisms can readily escape or avoid immersion in the effluent, thus avoiding the toxic or noxious effects.

IV. SEWAGE TREATMENT

The Waterway Estates sewage treatment plant has always been a modern, effective plant which is well operated and maintained. Except for the brief period in 1991 and 1992 the plant has always consistently met its effluent limits. It has always provided a high level of treatment and has never posed a significant threat to the health or well being of its environment, including the Caloosahatchee River.

DOMESTIC SEWAGE

Domestic sewage is a dilute solution of solid matter suspended or dissolved in water, with high concentrations of bacteria and other microorganisms. Typical sewage is more than 99.3 percent just plain water. About half of the 0.7 of one percent of the solid matter in sewage consists of dissolved chemicals normally present in the drinking water used in the community, leaving only about 0.35 of one percent of the total as offensive matter.

The offensive matter contained in typical sewage is highly variable, and consists of sand and grit washed into sewers through leaking pipes; sticks, rags, paper and plastic items of all shapes and sizes; organic matter from garbage grinders, restaurants, toilets and showers; and dissolved chemicals and organic matter from household and commercial wastes.

TREATMENT PLANT CATEGORIES

Sewage treatment plants can be generally classified according to the level of treatment provided to remove the offensive matter from the sewage.

"Secondary" treatment plants provides a level of treatment suitable for most locations in the United States. This is the level of treatment typically required by NPDES permits if the quality of water in the receiving stream is acceptable and if the plant discharge will not cause water quality problems in the stream. Secondary treatment plants remove approximately 85 percent of the typical sewage pollutants (biochemical oxygen demand and total suspended solids) and effectively remove most bacteria, but remove only about half of the total nitrogen and total phosphorous.

Where the quality of the water in the receiving stream warrants a higher level of treatment, a "tertiary" treatment plant can be provided (90 to 95 percent removal of typical sewage pollutants).

An even higher level of treatment can be achieved with an "advanced" wastewater treatment (AWT) plant (97 percent removal of typical sewage pollutants).

A variety of treatment processes can be employed to achieve either secondary or higher treatment levels, and specific processes are available to target any particular pollutant. Plants are typically designed and operated to meet the limits established by the NPDES discharge permits.

Before construction of the plant modifications at Waterway Estates was completed in 1992, it was classified as a tertiary treatment plant. This plant routinely removed about 98 percent of the typical sewage pollutants (biochemical oxygen demand and total suspended solids), and 50 percent of the total nitrogen and total phosphorous.

The plant modifications completed in 1992 converted it to an AWT plant to reduce the concentration of nutrients in the effluent, as required by the 1989 NPDES permit. The new permit maintained the same limits on the typical sewage pollutants (biochemical oxygen demand, and total suspended solids) at a monthly average of 30 mg/L. Since completion of the 1992 plant upgrade the plant now routinely removes about 91 and 94 percent of the nitrogen and phosphorous, respectively.

SEWAGE TREATMENT PROCESSES

The basic concepts behind wastewater treatment are relatively simple. The wastewater flows in one end and out the other end of a series of tanks, called process units or treatment units. Each process unit is designed to remove some of the solid matter or to convert the solids from one form to another using physical, chemical or biological reactions.

The first treatment process removes large objects that can damage equipment or interfere with later processes. At the Waterway Estates plant, large suspended solids carried by the wastewater such as sticks, plastic items, and rags are caught on heavy mechanical grinders which cut them into small pieces.

In a secondary treatment plant most suspended and dissolved organic matter is removed from the wastewater by microorganisms. In principle, the process works like a farm growing biological products. The wastewater treatment plant grows microorganisms. The microorganisms are fed the organic matter present in the wastewater. They are grown in a large, well mixed basin. Air is mechanically

mixed and dissolved into the wastewater to provide oxygen required for the reproduction and growth of the microorganisms. As the quantity of microorganisms increases, some are removed from the process to maintain a fairly constant concentration in the process tank.

The excess microorganisms are removed from the process in a separate tank (secondary clarifier) where they are allowed to settle to the bottom. are raked to a central sump, and pumped out. The microorganisms produced by the treatment process are called sludge. Processing and disposing of the sludge produced by the plant is one of the final stages of wastewater treatment.

In a secondary treatment plant the microorganisms are effective in removing most of the organic matter from the wastewater, but some typically remain and constitute much of the waste matter in the plant effluent. In a tertiary treatment plant, the first series of treatment processes are the same as found in a secondary treatment plant, but additional processes are added. The most common additional process is simply a filter which strains out much of the suspended solids remaining from the secondary processes. The ammonia created from decomposition of organic matter often remains in both secondary and tertiary treatment plant effluent, thus creating the potential for ammonia toxicity problems.

In an AWT plant, additional treatment processes are added to those used for a tertiary treatment plant. These processes reduce the amount of nitrogen and phosphorous in the plant effluent. At the Waterway Estate plant the modifications completed in 1992 provide treatment processes that remove both the nitrogen and phosphorous using adaptations of the biological processes provided for secondary treatment.

The final treatment process in essentially all sewage treatment plants is to kill disease causing bacteria or viruses that survived the treatment processes. At the Waterway Estates plant the effluent is disinfected using an intense ultraviolet light which effectively kills bacteria and viruses.

SUMMARY

A sewage treatment plant employs a sequence of treatment processes to remove the solid matter from the wastewater and kill disease causing bacteria and viruses. The degree of treatment required is established by the FDER and the EPA, based on the characteristics of the stream where the treated wastewater is discharged and other factors.

Prior to 1992 the Waterway Estates plant provided a high degree of treatment for the typical sewage pollutants (biochemical oxygen demand and total suspended solids), which resulted in removal of about 98 percent of these pollutants on a routine basis. Prior to 1986 the NPDES discharge permits only required removal of about 85 percent of these pollutants on a monthly average. About one half of the nitrogen and phosphorous was removed by the treatment plant. However, the treatment processes were not designed to control ammonia. which is the probable source of toxicity experienced in early 1992. Following plant modifications completed in 1992 the nitrogen and phosphorous removal was increased to about 90 percent, and the new treatment processes provided for removal of ammonia as well as the other common pollutants.

V. NITROGEN

BACKGROUND

Nitrogen is a common element. About 80 percent of the earth's atmosphere is nitrogen as nitrogen gas (N_2) (meaning two atoms of the element nitrogen bound together to form one molecule of gas). Nitrogen combines with other elements such as carbon, hydrogen, phosphorous and numerous others (in very small amounts) to form organic matter. Thus, nitrogen is a common component of natural organic matter, including plant and animal tissue (e.g. protein) and liquids (e.g. urea). About 14 percent of the total weight of protein is nitrogen.

Since nitrogen is a common component of plant and animal matter, it is also required for the normal growth of plants and animals; and it is found in their normal foods. Protein and fertilizer are good food in large part because of the nitrogen they contain. The nitrogen found in fertilizer is frequently in the form of nitrate (NO_3), which is not suitable food for animals, but is good for plants.

Nitrogen is readily converted from one form of nitrogen compound to another by plants and animals, as well as through chemical processes such as the manufacture of fertilizer. Plants and animals routinely incorporate nitrogen into plant and animal tissue, as well as obtain chemical energy from the conversion of nitrogen from one compound to another. Also, where there is ample food, the populations of plants and animals flourish; whereas the absence of one or more necessary nutrients will limit the population. Nitrogen is one of the critical nutrients which control the population of plants and animals in water bodies.

Nitrogen dissolved in natural water bodies is used by the plants and animals, and the kinds and density of the plants and animals present in a water body can be related to the amount of nitrogen available for their use. Where there is a "natural" amount of nitrogen, a "natural" number of plants and animals will inhabit the waters. When there is an excessive amount of nitrogen, it can be used by the plants and animals to produce an unnaturally high population.

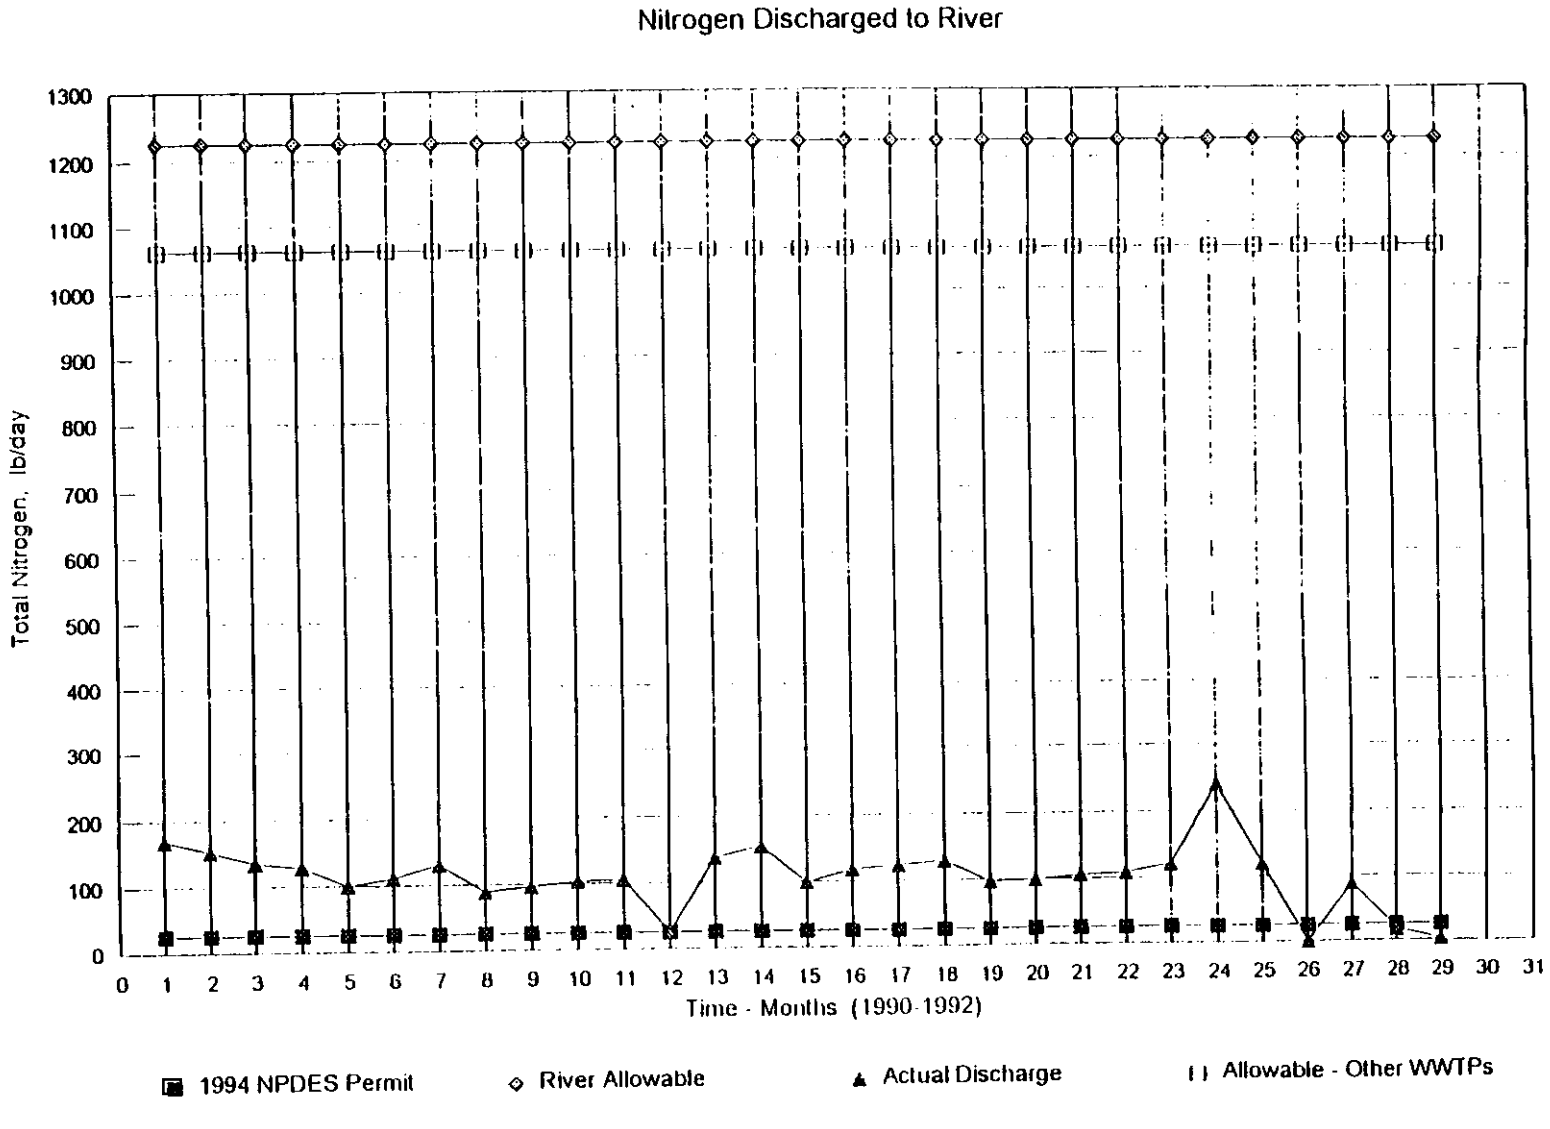
The common compounds containing nitrogen that are significant in domestic sewage are complex organic matter (garbage grinder products, shower drainage, toilet wastes, etc.), urea (partially decomposed protein, urine), and ammonia (from decomposing protein and urine). Secondary and tertiary sewage treatment plants are typically designed to break down complex organic matter. Nitrogen released from the organic matter is incorporated into new microorganism tissue, and some

of the nitrogen is released into the wastewater as ammonia. Advanced wastewater treatment processes are designed to convert and remove most of the remaining nitrogen products.

NITROGEN DISCHARGES

In the second half of 1991 and first four months of 1992 the Waterway Estates plant operated as it had for the preceding ten years, providing effective removal of organic matter and a portion of the nutrients, and disinfecting the sewage before discharge to the river. However, the treatment processes did not effectively control ammonia. The 1989 NPDES permit contained limits on the total amount of nitrogen that could be discharged which were lower than could be achieved by the Waterway Estates plant using its existing treatment process units. Plant performance did not meet the new requirements until April, 1992.

The relative magnitudes of the total nitrogen discharges to the Caloosahatchee River are illustrated by the graph on the following page. The graph presents the average discharge for each month from January 1990 through December 1992. The nitrogen is expressed as lb/day of total nitrogen, representing the nitrogen present in all chemical compounds, including organic matter, nitrites and nitrates. The line across the top of the graph represents 1225 lb/day.. This is the total amount of nitrogen considered to be acceptable by FDER, which will not result in an unacceptable increase in the population of plants (algae) and animals. The second line across the top of the graph represents 1075 lb/day. It is the total amount of nitrogen allocated by FDER to the other four municipal sewage treatment plants in the vicinity of the Waterway Estates plant. The straight line across the bottom of the graph represents 25 lb/day, which is the amount of nitrogen allocated by FDER to the Waterway Estates plant, and the limit included in the 1989 NPDES permit. The irregular line across the bottom of the graph represents the actual amount of total nitrogen discharged by the Waterway Estates plant during this time period, which was generally about 100 lb/day. A review of data from the other four municipal wastewater treatment plants in the vicinity of Waterway Estates indicated that the combined total discharged from those four generally amounted in the 300 to 500 lb/day range. The total of the 300 to 500 lb/day contributed by the other four plants plus the 100 lb/day contributed by the Waterway Estates plant was well



Waterway Estates

06/05/95

27465 / FCWC

below the 1225 lb/day total allowable discharge considered to be acceptable by FDER.

It can be concluded that the failure of the Waterway Estates treatment plant to meet the new effluent limits for total nitrogen in a timely fashion had no measurable effect on the amount of algae in the Caloosahatchee River, and therefore no adverse effect on the river.

VI. TOXICITY

The permit limits under which the Waterway Estates plant operated in 1991 and 1992 required the effluent to be tested every six months for toxicity using a standard bioassay test. Bioassay tests are routinely used to evaluate the acute toxicity of wastewater to the biological life of the receiving stream. Rather than conducting a large number of tests for specific chemicals that could be toxic to organisms, the bioassay test simply places sensitive organisms in a series of aquariums under controlled conditions and observes the response of the organisms. The usual objectives of bioassay tests are to determine the concentration of effluent which will kill 50 percent of the organisms in a specified period (LC_{50}), and to determine the maximum concentration that will have no apparent effect on the test organisms in 96 hours.

The 1989 NPDES permit required the Waterway Estates plant to test the effluent using two kinds of organisms (shrimp and minnows) using standard test procedures. Samples of plant effluent were collected at four different times over a one day period, and aquariums were filled with 100 percent plant effluent obtained in these samples. The test organisms were placed in the aquariums. The effluent was considered to fail the test if more than half of the test species died in one or more aquariums. The permit required the tests for toxicity to be performed once every two months for the first year, and once every six months thereafter.

Toxicity of treated domestic sewage can result from a variety of causes. Probably most often it is due to the presence of ammonia formed during the consumption of the organic matter by microorganisms in the treatment processes. Rarely is it due to the presence of chemicals dumped into the sewers by residential customers, because most household chemicals would be readily diluted to non-toxic levels as they are transported in the sewage and effectively removed by the sewage treatment processes. Also, there are no industries or commercial operations in the Waterway Estates service area which would discharge significant amounts of toxic wastes. Thus, the most likely cause of any toxicity in the plant discharge would be due to the presence of ammonia, or possibly to a diminished oxygen content.

TEST RESULTS

A bioassay test only registers whether any of the test animals die during the test. No information is provided on what might have been the cause of death. Also, the bioassay tests only indicate acute toxicity which occurs during the test itself. The results cannot be extrapolated to draw conclusions concerning long term toxicity.

The toxicity tests required by the 1989 NPDES permit included testing the organisms in 100 percent, undiluted plant effluent. The effluent failed the test if more than half of the organisms died within 48 hours from exposure to the undiluted effluent. Since the plant effluent is discharged directly into the Caloosahatchee River where it is mixed with the river flow, the total volume or region in the vicinity of the discharge where the effluent would remain undiluted would be small. Thus, any mobile organisms could readily move away from the undiluted effluent plume to avoid prolonged exposure.

If the plant effluent should exhibit toxicity, such as that caused by ammonia generated from the decomposition of organic matter, the toxic nature of the effluent would be rapidly dissipated as the discharge was mixed with the river water.

The Waterway Estates plant had operated for years discharging effluent that was essentially of the same quality as that discharged during the late spring of 1989. This was not a new discharge released into waters which had not been exposed to the effluent in the past. It is not likely that sensitive species were present in the vicinity which would be harmed by the effluent during this time period.

From this it was concluded that toxicity was not a serious problem with the Waterway Estates plant, and that little damage was experienced by the Caloosahatchee River, even when the bioassay tests indicated the presence of toxicity.

VII. LOCATION OF DISCHARGE

The Waterway Estates sewage treatment plant was originally constructed near the Caloosahatchee River and the intersection of two of the canals which comprise the access waterways of the Waterway Estates. The plant discharged its effluent directly to the canal along the south side of the property. The effluent mixed with the water in the canal and flowed about 500 ft east along the canal to the intersection with the Caloosahatchee. The canal is 60 ft wide in that reach and approximately 4.5 ft deep. When it reached the river, the effluent mingled with the flow of the river and was carried away according to the direction of the local currents.

At this location the Caloosahatchee River is approximately one mile wide, with a typical depth of less than five ft across most of its width. Channels are typically dredged about six ft deep to provide boat access to the shore. The main river channel is near the center of the river width, and is itself only about six ft deep.

The shallow depth across most of the river width combined with the relatively low flow in the river and the tidal influences result in river currents which are irregular in direction and velocity, and typically slow or non-existent near the shore lines. These conditions are unfavorable for the dispersion and dissipation of the effluent from the Waterway Estates plant.

The 1989 NPDES required the Waterway Estates plant effluent pipe to be relocated from the canal adjacent to the plant out to near the center of the Caloosahatchee River. Administrative Order 89-109 established a schedule which required the relocation work to be completed by August 1, 1991. Construction was begun in 1990 and completed in July 1991 on this relocation, ahead of the schedule established by Administrative Order 89-109.

The construction begun in 1990 on modifications to the plant included relocation of the plant discharge point from the canal adjacent to the plant out to the center of the Caloosahatchee River. The work included construction of a pipeline 500 ft along the bottom of the access canal and 2000 ft along the Caloosahatchee River bottom out to the center of the river near the main channel. A 100 ft long diffuser pipe with 10 individual discharge ports was attached to the end of the 2000 ft line.

The purpose of relocating the point of discharge was to obtain better dispersion and dissipation of the effluent by placing it near the main channel where most of the river flow occurred. This should reduce the impact of the effluent on water quality in the immediate vicinity of the discharge, such as lowering the nutrients available for algae growth.

In the 1990 report concerning the water quality in the Caloosahatchee River and waste load allocations, the FDER concluded that the magnitude of the improvement in water quality resulting from the relocation of the Waterway Estates plant's point of discharge could not be determined with certainty. This was based on the results of a mathematical model of the system. The model first evaluated water quality resulting from effluent released at the canal, and second, from effluent released at a new location near the center of the river. The results showed virtually no improvement in water quality in the river with the discharge point near the middle of the river. However, actual measurements of Caloosahatchee River water quality in the vicinity of the Waterways Estates discharge point revealed that with the treatment levels provided at that time, the concentration of algae was about ten percent higher than target values considered to be satisfactory for the river. FDER concluded that moving the point of discharge would improve the quality of the water in the Caloosahatchee River and the Waterway Estates canals, even though the improvement could not be documented with the mathematical model. Improvements of this magnitude would be imperceptible, and would be expected to take place gradually over many months.

From this it was concluded that any delay in completing the relocation of the Waterway Estates discharge pipeline had minimal effect on the water quality in the Caloosahatchee River.

VIII. SCHEDULE OF WATERWAY ESTATES PLANT MODIFICATIONS

PURPOSE

This section of the report presents an evaluation of the schedule followed by FCWC in pursuit of compliance with EPA regulations. The purpose of the evaluation was to determine whether FCWC pursued the necessary tasks in an appropriate, timely manner.

BACKGROUND

The completion of planning, design and construction of a wastewater treatment facility is not simply a technical, engineering process, but is a complicated effort requiring careful planning and contributions from many professionals with various expertise. Decisions made throughout the course of the project must balance many criteria, including technical feasibility, economics, and schedule.

Construction at the Waterway Estates WWTP presented an additional challenge to the engineers and construction contractor due to the unusually small and crowded conditions at the site. The existing plant had to remain in operation while it was essentially being completely rebuilt. The very compact construction site and the need to continue operating the existing plant throughout construction definitely resulted in a longer construction schedule than would have been possible at a more accessible site.

Projects require a substantial effort in coordination and administration to meet a variety of regulatory requirements. More stringent environmental protection laws have created an expansion of regulatory agencies on the local, state and federal level. Agencies at different levels of government frequently have overlapping jurisdiction and sometimes conflicting requirements. Regulations evolve, so nearly a full time effort for utilities to maintain a current understanding of the regulations and make corresponding modifications to their operations and facilities.

Changes in regulations can require a utility to undertake the expensive and time consuming task of upgrading or expanding their treatment facilities. This requires a series of complex tasks of uncertain and relatively unpredictable duration. A utility can anticipate regulation and/or scrutiny from the following

sources during the course of a project similar in nature to the modifications to the Waterway Estates plant completed in 1992:

- An array of environmental regulatory agencies with varying concerns such as wetlands protection, pollution control, public health, and endangered species protection, etc.

- Agencies with other concerns such as state and local transportation, energy efficiency and conservation, and building code enforcement.

- Concurrency review Committee, local zoning board, and utility departments.

- Private groups concerned with the effect of the new facilities on their personal lives and property values.

- Public entities controlling the use of public funds used in design and construction.

- Private interests seeking to influence design decisions for their own benefit.

Issues originating from each of these parties must be addressed over the duration of a project. At the same time, responding to legitimate concerns and issues impacts the primary project activities of defining, designing and constructing the required improvements.

These essential project activities must be accomplished while continuing to perform the primary function of a utility. In the case of FCWC that function includes serving Waterway Estates through the uninterrupted collection, treatment, and disposal of wastewater in an environmentally and economically responsible manner.

Because of the complexity, it is difficult to develop an accurate schedule for completing the series of tasks leading to an upgraded wastewater treatment facility. It is impossible to predict all potential sources of delay; and in many cases, it would not be possible to control or avoid such delays even if they were

anticipated. It is equally difficult, even for experienced professionals, to guide a project efficiently through the process of obtaining all required approvals and permits. This is due not only to the complexity and abundance of regulations, but also to the constantly changing and sometimes conflicting requirements. Despite the considerable challenge of defining an attainable schedule for completing a plant upgrade, EPA routinely imposes deadlines for compliance with its regulations. These deadlines are often imposed without the benefit of detailed knowledge of the circumstances surrounding each particular project.

EVALUATION

The evaluation of the FCWC schedule for accomplishing the modifications to the Waterway Estates plant consisted of the following tasks:

1. Review of FCWC's evaluation and selection of an alternative to comply with EPA requirements.

2. Development of a list of tasks which would normally be necessary to attain regulatory compliance, and definition of a normal schedule under which each task could be completed under typical conditions.

3. Review of FCWC files to determine the schedule under which tasks were actually completed.

4. Identification of the cause of any significant variance from the normal schedule and evaluation of FCWC's ability to control such variances.

1. Evaluation of Selected Alternative:

EPA's permit denial and Administrative Order (AO) 87-085 issued by EPA in May of 1987 did not specifically mandate the particular modifications which were eventually made to the Waterway Estates plant. AO 87-085 simply required FCWC to discontinue discharging Waterway Estates effluent to a canal to the Caloosahatchee River. This "No Discharge" requirement was based on FDER's Wasteload Allocation Documentation - Lee county, 1981 which assigned "No Discharge" to the Waterway Estates plant due to an incorrect assumption that Waterway Estates flow would eventually be diverted to the Cape Coral WWTP for

treatment. Contrary to EPA's interpretation of the 1981 document, the Waterway Estates WWTP had continuously discharged to the river under the authority of FDER permits and consent orders.

In determining a strategy for complying with AO 87-085, FCWC considered several alternatives including:

- Construct facilities to transport treated effluent from the plant and pump it into the ground via injection wells located off-site.

- Abandon the Waterway Estates Plant, construct facilities to transport untreated sewage to the North Fort Myers Utility (NFMU) collection system, and pay NFMU to accept the additional sewage.

- Construct facilities to upgrade the level of treatment provided by the existing Waterway Estates WWTP including a relocated discharge to the main channel of the Caloosahatchee River, and renew the FDER waste load allocation for upgraded treatment and the new discharge location.

- Construct a new advanced treatment facility which would discharge to the Caloosahatchee River, and obtain a waste load allocation from FDER.

Through the efforts of an environmental engineering consultant and FCWC staff, the alternatives were evaluated with regard to cost, schedule, and technical feasibility. In a memorandum dated October 27, 1987, FCWC concluded that the best alternative was to upgrade the existing Waterway Estates plant and renew the waste load allocation from FDER for discharging effluent to a different location in the Caloosahatchee River. This conclusion was based on the finding that the alternative was technically sound, environmentally acceptable, would be eligible for necessary permits, and would result in the lowest cost to the customers. It was not, however, estimated to require the shortest duration.

Financial considerations are legitimate criteria to be considered by FCWC since its actions are regulated by the Florida Public Service Commission (FPSC). FCWC spends thousands of hours every year justifying its actions and decisions to the FPSC. The FPSC routinely scrutinizes FCWC's capital and operational expenditures and decides whether the expenditures are "prudent" and in the best

interest of the customers. Any expenditure which does not meet FPSC's rules and policies may not be passed on to the customers in the service rates. In 1992, the FPSC held hearings to evaluate FCWC's request to raise customer rates to pay for the capital expenditure to upgrade the Waterway Estates plant. After evaluating the planning reports and hearing testimony from both the public and FCWC staff, the FPSC concluded that the proposed project was prudent, and approved a 174 percent rate increase to pay for the improvements. The amount of revenue which the FPSC allows FCWC to collect is directly related to the amount of the company's capital expenditures. Therefore, FCWC does not benefit financially from selecting the least cost alternative.

To summarize, the compliance alternative selected by FCWC was not considered to be the fastest method of achieving compliance. However, FCWC must balance the concerns of the various entities which control and/or scrutinize its decisions. In this case, EPA's desire for the earliest possible compliance was clearly in conflict with FPSC's desire for financial prudence. FCWC chose to upgrade the existing Waterway Estates WWTP, concluding that the alternative was implementable, permittable, and most economically beneficial for its customers. Ultimately, the decision was supported by FPSC. The resulting facility was granted all necessary environmental permits and consistently meets the requirements of those permits.

2. List of Sequential of Tasks:

Providing a new or expanded or upgraded wastewater treatment plant involves much more than just construction of the facility. The planning, design, permit administration, and construction of a wastewater treatment facility is composed of many individual tasks. While some of the tasks can be performed simultaneously, others must be completed in sequence. That is, the commencement of one task is dependent on the successful completion of a previous task. The series of sequential tasks which requires the longest overall duration defines the shortest possible time necessary to complete the entire project. This is known as the "critical path" concept, and it is a common scheduling tool used in design and construction for project planning and management. If a delay is experienced in the completion of any task on the critical path, the overall project schedule will be similarly delayed. Table 1 presents the sequential tasks which make up the critical path for the Waterway

Table 1. Schedule of Sequential Tasks

Task	Anticipated Duration (days)	Actual Duration (days)	Date Complete
Project Initiation			
EPA denies NPDES permit	N/A		08-Dec-86

Total Time:	1437	2006	

Estates plant upgrade project. Each task listed in the schedule is considered by Black & Veatch to be essential for the responsible execution of plant modifications such as were made at Waterway Estates.

Each anticipated task duration presented in Table 1 is an estimate of the time which would be needed complete the activity under typical conditions on a similar size and type project. The anticipated durations assume no unexpected, significant delays or obstacles due to external sources. These durations represent Black & Veatch's best estimate, based on extensive experience on similar projects involving preliminary planning, design, permitting, and construction activities. The sum obtained by adding all of the anticipated durations together represents the minimum completion time for the whole project, assuming the timely completion of every task on the critical path, and no delays originating from external sources.

3. Progression of the Waterway Estates Project:

Table 1 also presents the date on which each activity was actually completed, as shown in the FCWC project files, and the number of days associated with each activity. The progression of the critical path tasks for the Waterway Estates project is illustrated in Figure 1.

4. Variances from Anticipated Durations:

As shown in Table 1, six activities required significantly more time to actually complete than estimated to be necessary on similar projects. A discussion of each of these activities follows.

a. FCWC selection of, negotiation with, and award of a contract to a preliminary engineering consultant: FCWC received proposals from three consultants on December 3, 1986. A preliminary engineering contract was officially awarded to Environmental Science Engineering (ESE) 114 days later on March 27, 1987. The anticipated time to complete this activity is 60 days.

Documentation in FCWC's project files indicates that correspondence with EPA and FDER was underway to verify the renewal of the waste load allocation and confirm the actual requirements which must be met. Such unknowns would serve to complicate the definition of a scope of engineering services and slow down negotiations.

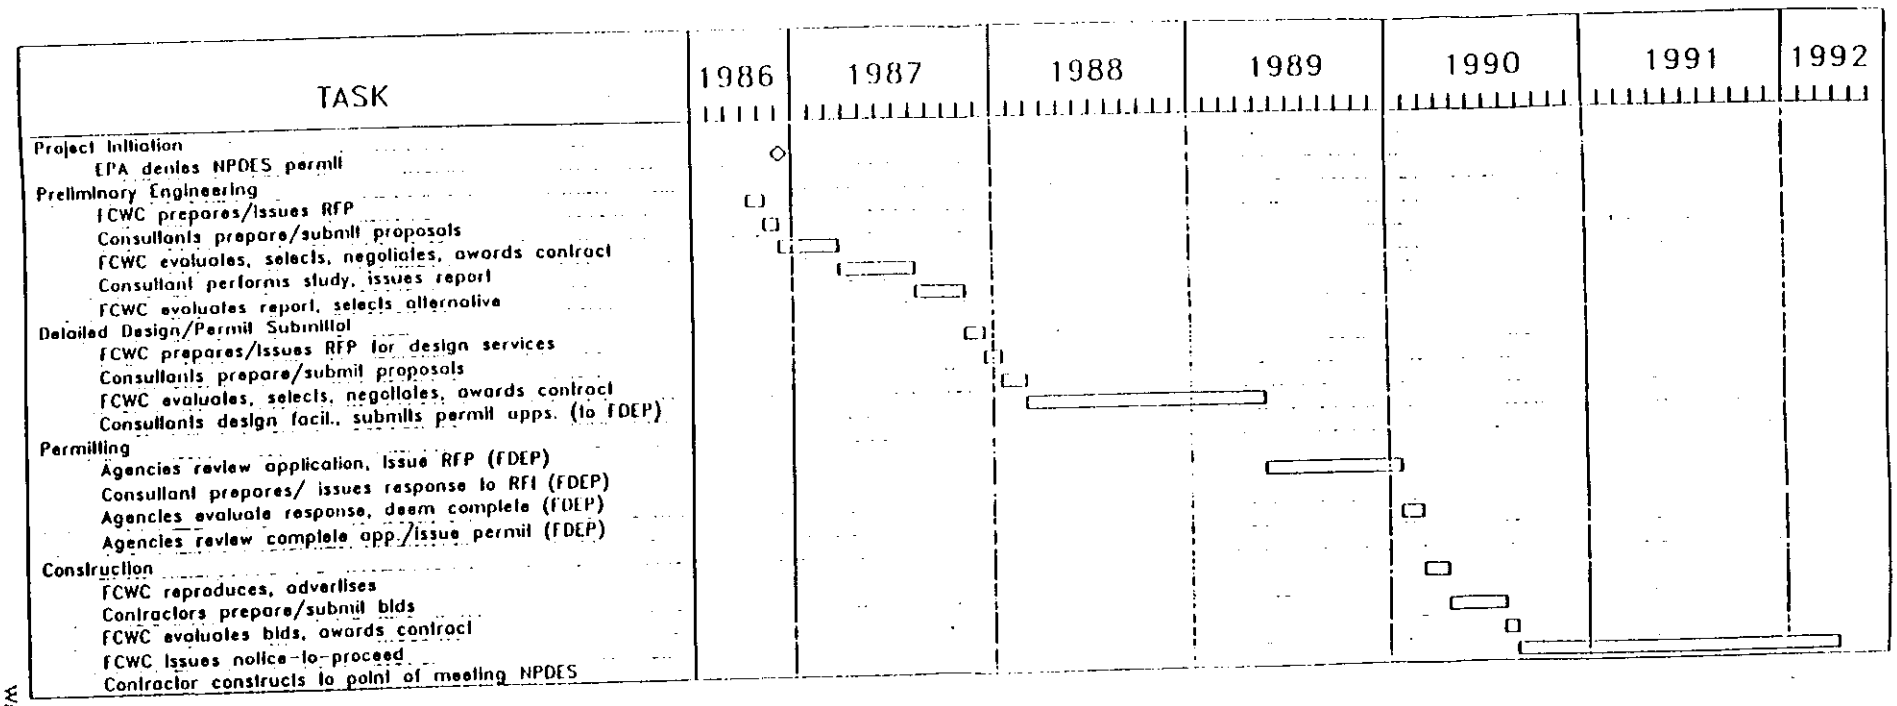

Figure 1

Progression of Critical Path Tasks Completed for the 1992 Waterways Estates WWTP Upgrade

b. FCWC evaluates the ESE report and selects a compliance alternative: ESE issued its report to FCWC on August 6, 1987. After conducting additional research and reviewing the issue internally, FCWC made a selection 91 days later on November 5, 1989. The anticipated time typically necessary to complete this task is 45 days.

Documentation in the files indicates that FCWC staff conducted further negotiations and correspondence with NFMU regarding their acceptance of sewage from Waterway Estates.

Again, this option proved to be infeasible due to high cost. During this period FCWC also continued to pursue a waste load allocation by FDER.

c. Source, Inc. designs facility and submits permit applications: Source, Inc. required 442 days following award of the design contract, to complete the design and submit a construction permit application to FDER on May 16. 1989. The anticipated time to complete this task is 240 days.

It is apparent from reviewing the project files that this phase of the project was hampered by a series of delays originating from a number of external sources. The delays were largely beyond the control of FCWC staff. They included the following:

- FDER's involvement in design process significantly slowed the progress of the design. In a September 14, 1988 letter, FDER disapproved Source, Inc.'s design concept. This disapproval resulted in a series of meetings and correspondence between FDER staff, Source, Inc. design staff and FCWC to discuss FDER's concern. Additionally, FCWC hired Barth Tec, Inc. as a consultant with expertise in treatment processes to review and comment on Source, Inc.'s process design in an effort to satisfy FDER's concerns. Barth Tec, Inc.'s report was provided to FDER for review. FDER's review resulted in relatively minor design revisions which were transmitted to Source, Inc. by FCWC in a letter dated December 21, 1988. Despite a 98 day delay to the progress of the design, the treatment process remained essentially as originally designed by Source, Inc.

- The acquisition of Lee County Zoning and Development Exemptions and approvals required nearly daily attention, from the original submittal date of

August 4, 1988 until the exemption from the development standards ordinance was granted on April 12, 1989. FCWC pursuit of this approval included the hiring of Montgomery, Esq., Pavese, Shields, Garner et.al. as legal representation and issuing a contract amendment for Source, Inc. on April 17, 1989. Submittal of the FDER construction permit application was delayed considerably while Lee County approvals were obtained.

- Source, Inc. and FCWC were in continual contact with EPA and FDER, addressing a number of issues. These activities diverted attention away from the design and permitting tasks. Dealings with EPA and FDER during this time included

  (1) continued pursuit of a waste load allocation from FDER,

  (2) pursuit of adjustment to the compliance schedules from EPA and FDER,

  (3) repeated reports updating EPA and FDER on the progress of the project.

  (4) a joint EPA/FDER inspection of the Waterway Estates plant.

  (5) EPA notice of non-compliance received March 30, 1989 requiring a massive submittal of FCWC internal data.

- Source, Inc. required 224 days longer to complete plans and specifications than indicated in its project schedule. The events discussed above account for part of this delay. Problems with the consultant's failure to meet the project schedule could not be anticipated by FCWC. Even when it became evident that Source, Inc. was not meeting the project schedule, FCWC could not have improved the situation by changing to a different consultant. FCWC's initial selection of Source, Inc. was based on an appropriate evaluation of potential consultants which considered experience, responsiveness to the request for proposals, and fee proposal.

  In order to retain a more responsive consultant, FCWC eventually replaced Source, Inc. just before the start of construction. However, it would not have been effective to replace Source, Inc. during design in order to speed progress. This would have required a lengthy selection process as well as an orientation period for the new consultant.

d. FDER Construction Permit application is made complete: A construction permit application was submitted to FDER on May 16, 1989. It was not until 251 days later, on January 22, 1990, that FDER declared the application complete. The estimated time required to complete this task is 90 days.

The 90 day estimated duration of this task is based on allowing 30 days for FDER to conduct an initial review for completeness and request additional data. 30 days for Source, Inc. to assemble and submit the additional information, and 30 days for FDER to review the additional information and issue a letter of completeness. The following events contributed to the delay in achieving a complete submittal:

- The initial request for information (RFI) was received by FCWC on June 16, 1989. At that time, Source, Inc. declined to respond the RFI without an additional contract amendment. After negotiations and the issuance of a contract amendment, Source, Inc. responded to the RFI on August 14, 1989, 29 days later than anticipated.

- FDER issued a second RFI on September 13, 1989. Again, Source, Inc. requested a contract amendment. FCWC staff prepared the response and issued it to FDER on October 10, 1989. A thorough initial review by FDER and an appropriate response by the consultant is typically expected to result in a complete permit application. A second RFI from FDER is not normally expected. This is particularly true of this project, considering FDER's involvement in the design process. The additional RFI resulted in a 57 day delay.

- The intervention of several other agencies disrupted the permitting process. These included the U.S. Department of the Interior which expressed concern for manatee habitat, North Fort Myers Utility in a final offer to provide wastewater service to Waterway Estates, and Lee County. The interventions ultimately resulted in no significant action, but they required a series of meetings, correspondence and telephone conversations on nearly a daily basis during the permitting process.

- FDER informed FCWC in a letter of October 11, 1989, that FCWC must comply with FDER's new antidegradation rule. The rule requires the preparation and submittal of an evaluation of the technological and economic feasibility of a wastewater reuse system which utilizes treatment plant effluent to offset the consumption of potable water. FCWC staff conducted the necessary research and transmitted the report to FDER on December 4, 1989. A minimum delay of 54 days can be attributed to the antidegradation requirement.

e. Cardinal Contractors constructs plant upgrade: On August 24, 1990, FCWC issued a Notice of Commencement to Cardinal Contractors instructing them to proceed with construction. Substantial completion was achieved 651 days later on June 5, 1992. The estimated time required to complete this task is 480 days.

Review of the documentation in FCWC's files revealed the following cause of delay:

- Following the issuance of the Notice of Commencement, Cardinal Contractors was denied a building permit by Lee County. The denial was based on a recently enacted Lee County requirement for a concurrency review and approval to precede the processing of a building permit application. FCWC and Stone & Webster, the new engineering consultant, prepared and submitted the concurrency review documents to the County, and Cardinal Contractors was issued a building permit on December 27, 1990, 125 days following the Notice of Commencement. Cardinal Contractors mobilized and began some construction activities before receiving the building permit. However, very little flexibility was available in the construction schedule which would allow lost time to be recovered. This was due to the extremely small space available at the site which limited the contractor's movements, and the need to maintain the existing plant in continuous operation.

  The major treatment process components necessary for achieving the NPDES permit limits were in place and on-line by March 16, 1992, 81 days before final completion.

SUMMARY

In Administrative Order 87-085, EPA issued a schedule which required FCWC to achieve compliance by September 30, 1988, 661 days after denial of the NPDES permit. This schedule was clearly unrealistic to complete any of the compliance alternatives available to FCWC.

EPA has historically been flexible regarding compliance schedules and frequently extends schedules as projects evolve as long as the permittee demonstrates an earnest effort towards compliance. As the project progressed, the inadequacy of the original compliance schedule became apparent. On August 31, 1988, EPA issued an amendment to AO 87-085 which extended the compliance date to November 1, 1990.

Subsequent to EPA's August 31, 1989 amendment, several events in design and permitting which were beyond the control of FCWC further delayed the project. This led to FCWC requesting a second extension to the compliance schedule. The revised schedule, issued by EPA with AO 89-109 on September 26, 1989, required completion of construction by August 1, 1991.

Additional delays beyond the control of FCWC occurred following the September 26, 1989 amendment. On May 17, 1990, FCWC requested an additional extension to the compliance deadline due to these ongoing delays. This request was denied by EPA. As detailed previously, these delays included:

- 57 days for issuance of an response to a second RFI regarding the FDER construction permit application.

- 54 days to respond to FDER's new antidegradation rule.

- 125 days delay obtaining a Lee County building permit due to Lee County's new concurrency review requirement.

The sum of these delays amounts to 236 days, and they do not include any delays associated with interference from various other sources. Major process components necessary for achieving NPDES effluent limits were complete and on-line by March 16, 1992, 227 days after the required completion date. The 236 days of delays which were clearly beyond the control of FCWC account for more time than the 227 days that construction missed the EPA deadline for completion.

FLORIDA CITIES WATER COMPANY'S MOTION TO STRIKE THE DEPOSITION TESTIMONY OF JACK WILLIAM TOMPKINS, OBJECTIONS AND COUNTER- DESIGNATIONS

Florida Cities Water Company ("Florida Cities") hereby renews its motion to strike the testimony, by deposition, of Jack W. Tompkins, notes objections to the remaining deposition testimony proffered by Plaintiff, and files counter-designations to the portions of the deposition which have been proffered by Plaintiff. Plaintiff has attempted to proffer the testimony of Mr. Tompkins as part of its contested rebuttal case, even though Plaintiff had previously tendered the deposition as a part of its case in chief. Then, after the defendants rested their respective cases, Plaintiff sought to offer Mr. Tompkins' deposition testimony as rebuttal to the testimony of Gerald Allen, Paul Braditmiller, and Julie Karleskint. Plaintiff has not articulated any grounds which support its argument that this testimony is proper rebuttal evidence. Accordingly, Mr. Tompkins deposition testimony should be stricken.

a) **Plaintiff is not entitled to rebuttal against Florida Cities.**

Under the Clean Water Act, a party which has been found liable for violations bears the burden of proof regarding mitigation. In the present case, Plaintiff still bears the burden of proof to establish liability against Avatar Holdings Inc. ("Avatar Holdings") while Florida Cities bears the burden of proof regarding mitigation. Although Plaintiff presented its evidence first in its attempt to establish liability against Avatar Holdings, this order of proof does not change the underlying burdens placed upon each party. Plaintiff seeks to have rebuttal against both Florida Cities and Avatar Holdings even though each of these defendants is in a different procedural posture. Because Florida Cities bears the burden of proof in this case, Plaintiff is not entitled to present any rebuttal evidence.

b) **The Tompkins deposition is not proper rebuttal evidence.**

At trial, Plaintiff argued that it offered Mr. Tompkins testimony as rebuttal evidence against Florida Cities in response to the testimony of Mr. Allen, Mr. Bradtmiller, and Ms. Karleskint. Although Plaintiff has not specified the nature of this rebuttal evidence, it appears that this testimony is being offered on the issues of construction delays at Waterway Estates, disposal options at Barefoot Bay, and the Carrollwood facility's status with EPA, state and local regulatory bodies during Mr. Tompkins' tenure at Florida Cities. Plaintiff proffered the testimony of Mr. Tompkins in its case in chief but withdrew its proffer. (Trial transcript ("Tr.") of March 29 at p. 5, l. 16 - p. 6, l. 21.) Instead, Plaintiff chose to present only Mr. Klingensein's testimony on these issues. Now, after Florida Cities has rested its case, Plaintiff is attempting to reoffer the testimony without any

showing that this testimony is proper rebuttal testimony. (Tr. of March 29 at p. 6, l. 22 - p. 8, l. 14.) In response to both defendants' objections and the Court's inquiry Plaintiff stated:

> THE COURT: Now, that's where I believe I made a comment about if this is – if this is deposition testimony that is properly to be presented during your case in chief, you can't just wait until later on and just throw it in as rebuttal. I do remember that.
>
> MR. JACOBS: I remember you saying something quite along those lines, It was, if it's properly rebutted, then you don't need to reserve the right, would be my recollection. And we can pull that transcript as well.
>
> But I respectfully suggest we've spent ten minutes discussing it and it will take only about ten to fifteen minutes if the Court would like to read it. If the Court would like to reserve judgment as to whether it's legitimate rebuttal –.

(Tr. of April 5 at p. 255, l. 24 - p. 256, l. 11.) Plaintiff made no further showing that this testimony was proper rebuttal evidence, even after reading approximately thirty minutes of testimony. In short, Plaintiff has made no compelling argument that it could not and should not have presented this evidence in its direct case.

Plaintiff was fully capable of offering this testimony during its case in chief. Indeed, Mr. Klingenstein offered opinions regarding the reasons for construction delays at Waterway Estates, disposal options at Barefoot Bay, and Florida Cities' knowledge of its status with the various environmental regulatory agencies. The portion of Mr. Tompkins' deposition offered by Plaintiff addresses the exact same issues. Additionally, many of the documents referenced in Mr. Tompkins's deposition were entered into evidence in through and in support of Mr. Klingenstein's opinions, not in response to any issues raised by Florida Cities' direct evidence. Any additional testimony on these issues should have been offered in Plaintiff's case in chief.

Plaintiff cannot claim surprise as a result of any testimony of Mr. Allen, Mr. Bradtmiller, or Ms. Karleskint because each of these witnesses testified in a manner which was consistent with their deposition testimony. While, on a number of occasions, Plaintiff attempted to impeach the testimony of these witnesses, it was unable to identify any substantive inconsistencies in any of these witnesses testimony. Plaintiff had reserved the right to call witnesses listed by Florida Cities in its case in chief. Plaintiff was free to call Mr. Allen, Mr. Bradtmiller, and Ms. Karleskint as its own witnesses. Instead, Plaintiff made a strategic choice to not call these witnesses and to withdraw the Tompkins deposition from its direct case. Plaintiff should not now be allowed to present this evidence in the guise of "rebuttal evidence."

Objections and Counter-designations

As a preliminary objection, Florida Cities notes that Plaintiff has made no effort to cross-reference the deposition exhibits referred to in the Tompkins deposition to the actual trial exhibit numbers. Without any system of cross-references, Plaintiff's designations add a needless layer of confusion to the presentation of the evidence.

Plaintiff's Designations and Specific Objections:

1) 142:1-143:9	Relevance, testimony out of context. **Counter-designation: p. 143, l. 10 - p.144, l. 23.**
2) 144:14-145:11	Relevance, lack of foundation.
3) 146:3-8, 16-19	Relevance, lack of foundation, testimony out of context. **Counter-designation: p. 146, ll. 9-21.**
4) 149:17-151:20	Relevance, lack of foundation, argumentative.
5) 153:7-154:11	Relevance, lack of foundation. **Counter-designation: p. 154, ll. 12-24.**

6) 158:6-8, 17-20	**Counter-designation: p. 158, ll. 9-16, ll. 21-25; p. 159, ll. 1-8.**
7) 174:5-15	Relevance, lack of foundation.
8) 182:19-24	Relevance, testimony out of context. **Counter-designation: p. 181, l. 8 - 185, l. 5.**
9) 208:21-209:2	Relevance, witness' lack of personal knowledge.
10) 222:24-223:8	Relevance, testimony taken out of context. **Counter-designation: p. 226, l. 7 - 228, l. 13.**

Other general Counter-designations:

p. 54, l. 22 through p. 55, l. 4

p. 59, l. 15 through p. 61, l. 20

p. 80, ll. 4-12

p. 82, l. 4 through p. 83, l. 11 -- In response to Plaintiff's motion to strike, Florida Cities responds that counsel asked for an engineering conclusion at p. 82, ll. 24-25 and Mr. Tompkins forthrightly answered the question posed to him.

p. 90, l. 21 through p. 91, l. 1

p. 96, l. 17 (which is referring to United States trial exhibit 410) through p. 97, l. 25.

p. 98, l. 22 through p. 99, l. 14

p. 104, l. 1 through p. 105, l. 105

p. 109, l. 8 through p. 110, l. 16

p. 115, l. 12 through p. 116, l. 5

p. 133, l. 1 through p. 134, l. 8

p. 221, l. 12 through p. 222, l. 10

p. 226, l. 13 through p. 227, l. 23

p. 229, l. 16 through p. 230, l. 7.

Conclusion

Plaintiff is not entitled to present the deposition of Jack W. Tompkins as rebuttal evidence against Florida Cities at this point in the case. Plaintiff had a full and fair opportunity to present this deposition during its case-in-chief and chose to withdraw this evidence. Once Plaintiff made this strategic choice, it must show that it is entitled to rebuttal evidence against Florida Cities and that the Tompkins deposition is, in fact, proper rebuttal evidence. Plaintiff has failed to establish either of these factors. Because Florida Cities bears the burden of proof, Plaintiff is not entitled to a rebuttal case. Additionally, the Tompkins deposition is not proper rebuttal evidence. Plaintiff could and should have presented this deposition in its case in chief. Mr. Tompkins' deposition does not rebut the testimony of any of Florida Cities' witnesses, but is merely an attempt to offer additional testimony about issues and documents addressed in Plaintiff's case-in-chief. Therefore Florida Cities respectfully requests that this testimony be stricken from the record in this trial.

Respectfully submitted,

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

PARTIES' PROPOSALS FOR POSTTRIAL SUBMISSIONS

In accordance with the Court's instructions, the parties submit the following proposals for posttrial submissions in this matter.

United States' Proposal:

The United States proposes that the parties each file no later than April 26, 1996 (1) Posttrial Proposed Findings of Fact and Conclusions of Law and (2) Posttrial Brief. The Defendants should be required to file a joint Posttrial Brief.

While the United States recognizes that the Court has not yet ruled on the adverse inference issue or Avatar Holdings' rule 52(c) motion, the United States believes that it is preferable to have all briefing completed in an expedited and concise manner so that the parties will not delay the Court's ruling. To the extent that the proposed findings and/or brief need to be revised in light of a subsequent court ruling, a party may seek leave of Court to do so.

Defendants' Response:

A deadline of April 26, 1996 is impractical. Before the defendants can submit their individual posttrial briefs and proposed findings of fact and conclusions of law,[1] other events must occur. First, the Court must rule on the appropriateness of drawing adverse inferences from certain witnesses' invocations of the Fifth Amendment. See Trial Tr. at 284, April 5, 1996 (where the Court states "apparently the Court is going to need to resolve those issues before the Court receives -- reasonably can expect to receive anything further from counsel"). Second, if the Court rules against the defendants on that issue, the Court has stated that it will then give the defendants an opportunity to respond to the government's Offer of Proof. See Trial Tr. at 287, April 5, 1996 (where the Court explains "assuming that I rule adversely to the Defendants on that issue, then I will need to give counsel for the Defendants the opportunity to address the proffer.").

In addition, Avatar Holdings Inc. (Avatar Holdings") is renewing its Rule 52(c) motion. The Court clearly indicated that if Avatar Holdings renewed its motion, its renewal must be taken into account by the parties in devising a logical and reasonable posttrial briefing schedule. Id. at 286 (All transcript pages referenced in Defendants' proposals are attached).

---

[1] We note that each defendant submitted a separate pretrial brief and set of proposed findings of fact and conclusions of law. Each defendant should be permitted to file a separate posttrial brief and set of proposed findings of fact and conclusions of law.

Because all of these factors must be taken into account in the briefing schedule, a deadline of April 26 for the parties' posttrial briefs and proposed findings of facts and conclusions of law is impractical and does not address the needs presented by this particular case. A ruling on the Fifth Amendment issue will affect the way the defendants will brief their case. The government's suggestion that we submit briefs and proposed findings of fact and conclusions of law by April 26 and then revise them upon leave of Court is not feasible, and may lead to a duplication of effort.

Defendants' Proposal:

1. 15 Days after the Court rules on drawing adverse inferences based on certain witnesses invoking the Fifth Amendment:

a. Defendants shall submit a response to plaintiff's offer of proof, not to exceed the number of pages of the offer of proof. No such submission need be made if the court declines to draw adverse inferences.

b. Avatar Holdings will file its memorandum in support of its motion under Rule 52(c), not to exceed 20 pages.

Avatar Holdings will serve its memorandum in support of its motion under Rule 52(c) on plaintiff the same day it submits the memorandum to Court.

This proposal is consistent with the Court's statement on April 5, 1996, Trial Tr. at 287: "Assuming that I rule adversely to the Defendants on that issue, then I will need to

give counsel or the defendants the opportunity to address the proffer." We also note that, the government stated on April 1, 1996, that it had no objection to one or both of the defendants briefing whether they believe an "offer of proof is an appropriate means to bring to the Court's attention the adverse inferences that should be drawn," and that it had no objection to the defendants briefing what inferences should be drawn from the documents referenced in the Offer of Proof. Trial Tr. 209-10.

Finally, the Court indicated that Avatar Holdings would have the opportunity to renew its Rule 52(c) motion, and its renewal should be taken into account in devising a briefing schedule. April 5, 1996, Trial Tr. 286.

United States' Response:

a. Although Defendants had the opportunity to rebut the United States' Offer of Proof during their cases, the United States does not object to a joint reply not to exceed the number of pages in the Offer if the Court believes Defendants require a further opportunity to reply.

b. If Avatar Holdings is to renew its Rule 52(c) motion, it should do so without further delay. The United States notes that Defendant Avatar Holdings made its Rule 52(c) motion at the conclusion of the United States' case-in-chief, and the United States responded, so only limited briefing, if any, should be necessary.

Defendants' Proposal:

2. Within ten calendar days after Avatar Holdings serves its memorandum in support of its motion under Rule 52(c), the government will submit its memorandum in opposition to Avatar Holdings' Rule 52(c) motion, not to exceed 20 pages.

United States' Response:

2. If the Court wishes to entertain a brief in support of this motion, the United States should have ten days from service of such a brief in which to file a response, pursuant to Local Rule 3.01(b).

Defendants' Proposal:

3. Within 30 days of the Court's ruling on whether to draw inferences from certain witnesses' invocation of the Fifth Amendment, all parties will submit posttrial briefs (not to exceed 25 pages) and proposed findings of fact and conclusions of law.

United States' Response:

3. The United States stands by its proposal that posttrial briefs and proposed findings of fact and conclusions of law be filed on or before April 26, 1996, so that the Court will be fully apprised and will not be delayed by excessive posttrial briefing.

Defendants' Proposal:

4. Closing Statements, 14 days after submission of posttrial briefs, or as soon thereafter as is consistent with Court's calendar. Plaintiff shall have 45 minutes, as shall the defendants collectively.

Defendants believe it is necessary for each side to have an additional 15 minutes for closing arguments (for a total of 45 minutes per side) given the complexity of the case. The Court stated the following "If need be, I will reconvene and hear arguments, but I'm going to leave that to you all to initiate a plan in that respect, taking into consideration both motions as well as summations." Trial Tr. at 286, April 5, 1996.

United States' Response:

4. The Court stated at the conclusion of the trial that if need be, it would reconvene to hear closing arguments. Trial Tr., April 5, 1996 at 286. In view of the lengthy trial and ample posttrial briefing, the United States does not believe that is necessary for the Court to reconvene to hear closing arguments in this bench trial. To the extent that the Court believes such arguments may be helpful to it in rendering final judgment, however, the United States proposes that the closings, like the

openings, be limited to thirty minutes per side (i.e., 30 minutes for the Defendants collectively).

DATED: April 18, 1996

Respectfully submitted,

FOR PLAINTIFF,
THE UNITED STATES OF AMERICA

LOIS J. SCHIFFER
Assistant Attorney General
Environment and Natural
Resources Division

Discussion of Offer of Proof	205

The third question is a separate question, assuming you were to take adverse inferences, is this appropriate offer of proof, given what this is functionally is an analysis of the documents, and if you look at the documents themselves, in many instances the documents are inconsistent with the conclusions drawn by the Government or the alternative language that can be brought out in the various exhibits.

What I would propose that we do is that we at one stage brief the propriety separately of drawing an adverse inference and admission of the depositions, if that -- if the Court Rules against the Defendants with respect to that, then we should somehow have an opportunity to respond within the documents themselves to show that the conclusions that the Government has drawn from the documents are not consistent with other things within the very same documents.

THE COURT: Okay. Yes.

MR. KELLOCK: Your Honor, Along with that, the offer of proof presented by the Plaintiff made no -- had no specific, either evidentiary or case law basis, to make an offer of proof under the auspices that they were attempting to make the offer of proof and I would just join with Mr. Kind in saying we would appreciate the opportunity to brief the issue of whether or not such a offer is actually an offer of proof and is permissible in that form under the

Rules.

THE COURT: Okay. Mr. Jacobs.

MR. JACOBS: Your Honor, I'm not sure whether the Court has any leanings one way or the other in terms of what it's inclined to do.

I would reemphasize that the Government has no objection, whatsoever, to the Defendants interpreting the documents that are, in fact, discussed in the offer and interpreting them and supporting whatever inferences they see fit as being attachable to those documents.

I'm instructed that all of the exhibits that are cited in the offer of proof are already in evidence.

MR. KIND: I think that's one exception, Exhibit 251. That was Mr. Dresdner's --

MR. JACOBS: If that's the same I take Mr. Kind's representation to it being, then I stand corrected, there's only one of many, many, many exhibits that are not already in evidence.

I do quite agree with Mr. Kind, that in large part the adverse inferences that we asked the Court to draw are adverse inferences that we believe are legitimate and appropriate interpretations of these documents.

I have no objection, whatsoever, to one or both of the Defendants briefing as an initial matter, whether they believe an offer of proof of this nature is an appropriate

means to bring to the Court's attention the adverse inferences that should be drawn, and secondly -- so that would be a procedural matter.

And secondly, I have no objection to the Defendants briefing from their own perspective what adverse inferences or what inferences, if they rather characterize it as such, should be drawn from the documents.

As I said, earlier -- early last week, there was -- there's no subterfuge, no trickery involved here. All we want to do is to make our offer, because the witnesses are unavailable, and that's something we've had no control over. It's something that the Defendants have had ultimately quite some say in, which witnesses would be called to testify. And I'm emphasized in the part that the witnesses, particularly the Avatar witnesses that were called to testify by Avatar Holdings, were the witnesses who did not have personal knowledge of the facts and circumstances directly relating to the allegations in the complaint, and it's the witnesses that we would like to call who are unavailable, and that's why we think we should be entitled to make the offer of proof.

THE COURT: Well, we have the issues presented or appear to be extant that as to the admissibility in the first instance of these depositions wherein these witnesses invoked the Fifth Amendment, and I suppose, I'm not sure

that the second issue can -- can or really should be regarded as a separate issue, because the second issue, which we've talked about, is whether it is legitimate for the Government to be entitled to have the Court draw negative inferences from the invocation of the Fifth Amendment.

Now, if the Court were to find against the Government on those issues, then it seems to me we would not have to go further with respect to any matters pertaining to the offer of proof, because the offer of proof would not be an appropriate endeavor.

So, I'm wondering if this briefing should be bifurcated, as I think Mr. Kind had suggested.

MR. JACOBS: Judge, I didn't address the matter of the depositions as -- with respect to the present or former Avatar officers, that is to say, Messrs. Gerson, Sladkus and Volkov. I'm entitled to have those depositions into evidence, either because the person is a current officer of the company or because the person is unavailable as being outside of the jurisdiction, outside the subpoena power.

THE COURT: Well, I'm going to permit counsel for the Defendants to address those two issues; that is, the admissibility of the depositions and the interviews -- the admissibility of the depositions and the issue regarding whether the Court -- whether the Government is entitled to

possible, and in this case, I am proposing some temporary measures that can be taken to improve our effluent quality and also I'm proposing a modification to the existing facility to allow construction to proceed quicker.

Q. How do these items relate to the completion of the new outfall line?

A. To the extent that the new outfall line would be placed in service, it was my intention to maximize treatment to attempt to meet the new effluent limits.

Q. Okay.

Is it fair to say that what you're recommending here would achieve compliance sooner than what was being done at the time?

A. Yes, sir.

Q. In fact, at the very end of your memo you say, quote, if approved by FDER, we will have substantially reduced construction time for the project, unquote; is that correct?

A. That is correct.

Q. Now, did you receive authorization to proceed in the manner that you recommended in this memorandum?

A. Uh, to be honest with you, I don't recall.

Q. Well, you would have had to receive authorization from Mr. Breedmiller; is that correct?

A. Yes, it is.

Q. Who is his boss?

THE COURT: I tell you what we're going to do. We're not going to read anymore tonight and I'm going to let you submit a copy of the balance of the portions that you want the Court to consider, and I will allow counsel to state their objections to the balance of the deposition.

MR. BULLOCK: Do I need to renew my motion to strike at this time or may I -- do you want me to?

THE COURT: You can do that when you file your submission objecting to not only the deposition itself, basically, but also portions that Mr. Jacobs is designating.

And, Mr. Jacobs, I would ask that you file your designations specifically by Wednesday of next week. And counsel for the Defendants, now this will -- you'll need to submit to the Court a copy unless you want to leave this with the Court.

MR. JACOBS: I think the original actually has already been filed with the Court and I'm ready to --

THE COURT: Well --

MR. JACOBS: -- leave that one as well, sir.

THE COURT: All right.

Then, all you'll need to do is just to designate a document. I know that you've got that in the pre-trial statement, but in order to make sure that the designations are accurate, I would ask that you file your written designation by -- I think you can do that actually by Tuesday, do that by

A. Mr. Reeves.

Q. If you look at the third page of Exhibit 155, there's a handwritten notation in the upper righthand corner. Do you know whose handwriting that is?

A. Yes, that is in my handwriting.

Q. What does it say, sir?

A. It says, quote, draft not sent per A.A.R., unquote.

Q. Who is A.A.R.?

A. That is Mr. Reeves.

Q. Does that refresh your recollection as to whether or not your recommendation was accepted?

A. Well, if you look at the date on that draft letter, it's March 28, 1991, versus my memorandum, which is May 17, 1991. It may be that the March 28th draft was something that I proposed earlier and was not approved and I was proposing it again. I don't know. I mean, the dates don't match up very well.

MR. BAISE: Again I would object that this is certainly confusing. It's not relevant to the time period. Actually we are talking about the contract that is, as stated earlier, was underway, the pipeline was constructed within a very quick and timely manner.

MR. JACOBS: Judge, he's testifying. The issue -- what is going on here is we're still before the compliance date and they're still out of compliance. This relates directly --

Tuesday, and then the Defendants can have until the following Tuesday, whatever date that is, to file your objections to the designations, but we're not going to sit here any longer. It's five till 6:00 now.

MR. JACOBS: I apologize. I obviously underestimated how long it would take, Judge. Do you want me to just list the designations?

THE COURT: Yes, sir. The remaining designations will be sufficient and that starts, I guess, with page 142.

MR. JACOBS: Yes, sir.

THE COURT: Okay.

I tell you what I'm inclined to do is instead of my telling you, I'd like to give counsel the opportunity to maybe put their heads together, including counsel for both sides, and proposing what you would recommend -- what you would suggest to the Court in terms of additional oral and/or written submissions in terms of final arguments, including any motions that you want the Court to consider. And I've done this before and it's worked fairly well.

I have received the Defendant's joint memorandum addressing the Fifth Amendment, invocation of the Fifth Amendment by certain witnesses and I have already indicated to the Government that they will have until a certain time to file their response to that.

But I think at this point, I would suggest that and

would ask that counsel assimilate what we have procedurally remaining, including the issues that are addressed by the joint memorandum that I just referred to. And it may be that the Court -- apparently the Court is going to need to resolve those issues before the Court receives -- reasonably can expect to receive anything further from counsel.

But I would suggest that you put that in the mix and come up with a recommendation as to how you feel that the Court should procedurally deal with the balance of what remains to be done, including, as I say, any -- if you feel that we ought to reconvene for purposes of hearing oral arguments, summation, then include that in your written submission.

Now, it may be that counsel for the Government and the Defendants can come to joint recommendations regarding these procedures and recommendations for written submissions, and all the better.

I had an admiralty case that was pretty complex and pretty involved and this is a little reminiscent of that, and they were able to come up with an effective plan, which I modified to some extent, but it was very helpful to the Court. I think it's helpful to counsel to have an opportunity to come up with a recommendation regarding that.

Do you all have any objections or questions regarding that?

MR. JACOBS: That sounds fine. I'm willing to

suggest something right now or we can work it out later and get back to the Court.

MR. BAISE: I would suggest we work it out later.

THE COURT: I think so.

MR. BAISE: We had a long day. We might -- I doubt we would not, but obviously --

THE COURT: Yeah. I will ask that you file your submissions by -- how much time do you want?

MR. JACOBS: Well, Judge, I have to do a brief by next Thursday on what I've just received today on the Fifth Amendment issue. May I propose the following: Thursday or Friday, two weeks from today, for these suggestions?

MR. BAISE: That would be acceptable to me. A couple of us are going to take some time to go fishing, so we're going to be out of pocket.

THE COURT: So you're suggesting, Mr. Jacobs, what would the date be?

MR. JACOBS: The 19th of April to file.

THE COURT: All right.

I will expect to receive -- to have you file with a courtesy copy to chambers your hopefully joint recommendations. And to the extent that you can't concur on your --

MR. BAISE: We can file them both places, I heard her question.

THE COURT: File a courtesy copy, yeah, because I'm

going to probably be in Jacksonville, still be in Jacksonville at that time, so, yeah, a joint recommendation. And to the extent that you can't agree, then your individual variations of what you're suggesting. Yes, sir.

MR. HIRD: Just for clarification, you reserved on our motion on Rule 52(c). I assume that's part of what we will be discussing in the submissions.

THE COURT: Right. You'll be -- I reserved on that, and I assume that a renewed motion will be made.

MR. HIRD: I certainly will, Your Honor.

THE COURT: And as a part of your considerations, you may want to include what you are recommending regarding how the Court will consider such motions and whether you want to address those in writing, including a briefing schedule on that.

Now, the Rule 52 motion, that will need to be resolved before -- before your summations -- before your final arguments, for obvious reasons. So, I'd like for you to take that into consideration when you -- when you deal with the procedures of the additional presentations to make to the Court.

If need be, I will reconvene and hear arguments, but I'm going to leave that to you all to initiate a plan in that respect, taking into consideration both the motions as well as summations.

MR. HIRD: And one more thing that I assume would be included, just for clarification. I assume the Court will rule on the Fifth Amendment issue, and if the ruling is adverse to the Defendants, they will have an opportunity to respond to the Government's offer of proof based on --

THE COURT: Yeah. You will recall that I did suggest that you address the Fifth Amendment issues, which you have apparently done, and the Court is going to need to rule on that and give the Defendants -- assuming that I rule adversely to the Defendants on that issue, then I will need to give counsel for the Defendants the opportunity to address the proffer.

And again, I think you need to take that into consideration in devising a meaningful organized briefing or procedural manner, a suggested procedural manner for finishing out what remains to be done.

Yes, Mr. Quinn.

MR. QUINN: Final question, sir, about the bench copy of the exhibits. Do you want to keep that in addition to the original, sir, for your use?

THE COURT: Yeah. Well, let's see. Actually, I'm not sure that that is necessary. The Court will have available to it the original exhibits which are also bound in three ring binders.

MR. QUINN: No, sir, the United States' Exhibits are not bound.

MR. BULLOCK: The binders in the corner are Florida Cities' and I believe -- I don't know if Avatar Holdings' are over there or not.

THE COURT: I think probably the Court better retain the copies that are presently bound. We'll find a place for them where we can keep them and have ready access to them until we're through.

Yes, sir.

MR. BAISE: Going back to the Charles Hill witness that Your Honor will recall, obviously -- going back to the Charles Hill matter, because he was unable to attend because of illness, and as you indicated, there certainly has been some testimony with regard to the PSC issues. I'm trying to think of a way of possibly providing like an affidavit or summary even with regard to what he would have testified to.

Obviously, counsel will have a response to that if we deem it necessary. I mean, we need to go back and look at what has been testified to with regard to the PSC testimony in order to stop any further testimony.

THE COURT: No, we're -- unless counsel wants to stipulate to that.

MR. BAISE: Okay.

THE COURT: We're --

MR. BAISE: I wanted that clarified. Thank you.

THE COURT: All right.

CLAUDIA M. FRY OFFICIAL U.S. COURT REPORTER

Anything further?

MR. BAISE: I beg your pardon?

THE COURT: Anything further? All right.

MR. BAISE: Thank you very much, Your Honor.

THE COURT: We'll be in recess.

(Thereupon, the proceedings were concluded.)

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

96 MAY -9 AM 10: 14

CLERK, U.S. DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
TAMPA, FLORIDA

UNITED STATES OF AMERICA

Plaintiff,

V.

CASE NO. 93-281-CIV-FTM-21

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.
_____/

ORDER

This cause comes before the Court on Defendants' Joint Memorandum of Law Addressing the Invocation of the Fifth Amendment by Certain Witnesses (Dkt. 301) and Plaintiff's Memorandum of Law in Support of its Request that the Court Draw Inferences From the Refusal to Testify by Defendants' Present and Former Officers and Managers (Dkt. 304).

Plaintiff states in its memorandum that the following inferences should be drawn from the refusal to testify by several witnesses, who are former and present officers and managers of Defendants, when said witnesses' refusal to testify is considered in conjunction with other evidence presented at trial: (1) that Avatar Holdings pervasively controlled the environmental practices of Florida Cities; (2) that Avatar Holdings officers were personally and pervasively involved in matters directly relating to the violations at the three wastewater treatment plants; (3) that the violations were serious; (4) that the Defendants have an extensive history of violations; and (5) that the Defendants patently failed to make meaningful good faith efforts to

comply with the applicable requirements. Plaintiff relies in part on Baxter v. Palmigiano, 425 U.S. 308, 318 (1976), wherein the Supreme Court found that the Fifth Amendment does not forbid adverse inferences against parties to civil actions when they refuse to testify in response to probative evidence offered against them.

Defendants assert that there are several reasons why adverse inferences should not be drawn in this case. First, Defendants argue that in light of the legitimate fear of criminal prosecution produced by the Ninth Circuit decision United States v. Weitzenhoff, 35 F.3d 1275 (9th Cir. 1994), cert. denied, 115 S.Ct. 939 (1995), the individuals' decisions to invoke the Fifth Amendment were personal, not corporate decisions. Next, Defendants point out that despite requests by Defendants, the United States has not granted immunity to the witnesses who invoked the Fifth Amendment. Defendants argue that the government could have granted immunity and that its decision not to do so leads to the conclusion that the government preferred for the Court to draw a negative inference rather than for the Court to hear the testimony of these witnesses. Next, Defendants argue that this enforcement action for punitive relief has more characteristics of a criminal trial than a civil one and that the element of governmental compulsion exists in this case. Defendants therefore assert that no adverse inferences should be drawn in order to prevent the government from reaping undue benefits from the silence of a potentially innocent individual. Defendants also argue that because no specific questions were asked of the witnesses, the Court should not be asked to speculate as to what the government might have asked in order to draw adverse inferences against the parties. Additionally, Defendants point out that Plaintiff had a full and fair opportunity through discovery, broad document requests, and site inspections, to learn the facts of this case. Finally, Defendants raise specific objections to the drawing of adverse

0 72A
(Rev. 8/82)

inferences from each of the witnesses' decision to invoke the Fifth Amendment. Defendants maintain that because the Court should not draw adverse inferences, the Court should exclude all depositions where the witness invoked the Fifth Amendment as such depositions would be irrelevant and thus inadmissible under Federal Rule of Evidence 402.

In response, the Plaintiff first requests that the Court reconsider its ruling from the bench that the deposition of Lawrence Wilkov, a former employee of Avatar Holdings who had filed suit against Avatar Holdings, was not admissible. Plaintiff asserts that the Court should not infer that Mr. Wilkov's potential testimony might be unreliable because he at one time filed suit against Avatar Holdings because the lawsuit did not arise from an environmental matter, but rather from a disagreement over the direction of the company. Further, Plaintiff points out that Mr. Wilkov received $1,000,000 in settlement of the suit, and he is bound by the terms of the settlement agreement to assist Avatar Holdings in this litigation and not assist the United States. Finally, Plaintiff points out that Defendants are paying for the personal representation of its present and former employees. The Court, however, finds that Plaintiff's assertions do not merit a departure from the Court's bench ruling, and the motion to reconsider the ruling that the Wilkov deposition is not admissible is DENIED.

Next, Plaintiff asserts that based upon Eleventh Circuit case law, the only test of whether an adverse inference is to be drawn is whether there is other probative evidence, citing United States v. A Single Family Residence, 803 F.2d 625, 629, n.4 (11th Cir. 1986) and Director of the Office of Thrift Supervision v. Lopez, 960 F.2d 958, 965 (11th Cir. 1992). Plaintiff points out that in A Single Family Residence, the Eleventh Circuit permitted an adverse inference to be drawn from the invocation of the Fifth Amendment by a corporate representative. 803 F.2d

AO 72A
(Rev. 8/82)

at 629, n.4. Additionally, Plaintiff points out that the fact that Plaintiff chose not to grant immunity is inconsequential to the determination of whether to draw adverse inferences because, as the Eleventh Circuit held in United States v. Georgia Waste Systems, Inc., 731 F.2d 1580, 1582 (11th Cir. 1984), "The Government has no duty under the Sixth Amendment or otherwise to immunize witnesses for the benefit of the defense. The Government's power to grant immunity is discretionary and the defendants have no right to subject its decision to judicial review." Further, Plaintiff asserts that the deposition transcripts show that the United States went through a litany of questions about each wastewater treatment plant and proffered numerous documents about each plant and that there was no doubt that each witness was invoking the Fifth Amendment in response to each substantive question. Finally, Plaintiff opposes Defendants' arguments with respect to each witness and asserts that a negative inference should be drawn by the pleading of the Fifth Amendment by Robert Gordon, John Sladkus, Dennis Getman, James Elder and Antone Reeves when considered together with other evidence in the record.

The Court agrees that in order to draw the adverse inferences in this civil case, there must be some other evidence to show that an adverse inference is appropriate. With respect to Robert Gordon, Plaintiff submits that he was identified by Mr. Levy as the person who was responsible for ensuring that the Clean Water Act was not violated and identified by Mr. Jacobson as having personal knowledge of the operation of the wastewater treatment plants. Plaintiff further states without supporting citation that there is abundant documentary evidence linking Gordon directly to the violations. With respect to John Sladkus, Plaintiff submits that he was identified by Mr. Levy as having significant authority, and Plaintiff asserts that his position of authority together with the documentary evidence, to which Plaintiff does not cite, show that he exercised his

) 72A
ev. 8/82)

authority in decisions relating directly to the violations in this case. With respect to Dennis Getman, Plaintiff submits that it is questionable whether his activities as Executive Vice President/General Counsel of Avatar Holdings and General Counsel of Florida Cities would have been shielded from discovery on the basis of the attorney-client privilege and that the documentary evidence, to which Plaintiff does not cite, shows that Getman was intimately involved in matters directly relating to the violations at issue in this case. Finally, with respect to James Elder and Antone Reeves, Plaintiff submits that they were sufficiently high-ranking to have knowledge of Avatar Holdings' role in the violations and that based on documentary evidence, to which Plaintiff does not cite, these witnesses could have given testimony adverse to Defendants. The Court finds that Plaintiff's assertions do not form a sufficient predicate upon which to base adverse inferences. The mere fact that the witnesses held positions of authority and responsibility does not without more lead to the conclusion that they would have given testimony that would support Plaintiff's liability case against Avatar Holdings and Plaintiff's penalty case against both Defendants. Further, Plaintiff has not set forth the substance of any documentary evidence, for the purposes of this motion, which demonstrates that the witnesses would have given adverse testimony.

Moreover, the Court finds no legal basis for drawing adverse inferences against Avatar Holdings for the Fifth Amendment invocations by Robert Gordon, James Elder, and Antoine Reeves, who were never officers, directors, or employees of Avatar Holdings. Further, the Court finds that there is a likelihood that because Dennis Getman holds the position of general counsel to both Defendants as well as other positions, Plaintiff's questions to him would have been objectionable on the grounds of attorney-client privilege.

'2A
(Rev. 8/82)

Upon consideration of the foregoing, it is hereby **ORDERED and ADJUDGED** that Plaintiff's request that the Court draw adverse inferences from the refusal to testify by Defendants' present and former officers and managers is **DENIED**, and the depositions of Lawrence Wilkov, Robert Gordon, John Sladkus, Dennis Getman, James Elder, and Antoine Reeves are **NOT ADMISSIBLE.**

DONE AND ORDERED, at Tampa, Florida, this 8th day of May, 1996.

RALPH W. NIMMONS, JR.
UNITED STATES DISTRICT JUDGE

Copies to: Counsel of record

AO 72A
(Rev. 8/82)

Exhibit_____(GHB-84)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' POSTTRIAL MEMORANDUM

I. Introduction

The United States brought this law suit for civil penalties under the Clean Water Act, 33 U.S.C. § 1319(b), to redress unlawful pollutant discharges from three Florida Cities Water Company wastewater treatment plants. These plants are the Barefoot Bay plant in Brevard County, which discharges into the Sebastian Creek, near the confluence of the Sebastian and Indian Rivers; the Carrollwood plant, in Tampa, which until its closure in 1992 discharged into the Sweetwater Creek; and the Waterway Estates plant in North Ft. Myers, which discharges into the Caloosahatchee River.

The Court granted the United States summary judgment on liability against Defendant Florida Cities on the United States' claims for unpermitted discharges, discharges to an unpermitted location and National Pollutant Discharge Elimination System (NPDES) permit violations at Waterway Estates, and claims for

NPDES permit violations at Barefoot Bay and Carrollwood.[1] The remaining issues at trial were the amount of the civil penalty to be awarded against Florida Cities, Defendant Avatar Holdings' liability as Florida Cities' parent company, and the penalty to be assessed against Avatar Holdings if it is held liable.

The United States contends that a substantial civil penalty is warranted in this case, primarily because of the extensive history of serious Clean Water Act violations at these plants and the Defendants' lack of serious, timely efforts to remedy them. In each instance, Defendants simply chose not to take the steps necessary to remedy long-standing problems, putting their short-term financial self-interest ahead of compliance with the law and care for the environment. The United States contends that Avatar Holdings should be held liable for the violations, and should also be subject to a substantial civil penalty, because it caused or directed the violations through its pervasive control of the environmental affairs of Florida Cities and its acts and omissions relating directly to the violations.

II. Penalty Calculation Under the Clean Water Act

The Clean Water Act was intended "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Gwaltney of Smithfield v. Chesapeake Bay Foundation,

---

[1] The Court granted Florida Cities summary judgment on the claims for unpermitted discharges at Barefoot Bay and Carrollwood and for EPA Administrative Order violations at Barefoot Bay. The Court denied the United States summary judgment on all claims as to Defendant Avatar Holdings, and granted Avatar Holdings' Motion for Judgment on the Pleadings for claims (or parts of claims) for violations which took place prior to May 5, 1990.

484 U.S. 49, 52 (1987) (quoting Section 101(a) of the Act). As Congress noted when it passed the Act, "no one has the right to pollute." S. Rep. No. 414, 92d Cong., 1st Sess. 8 (1971); See United States v. City of Menominee and Menominee Paper Co., 727 F. Supp. 1110, 1122 (W.D. Mich. 1989) ("No right exists to pollute our nation's waters.").

The penalty provisions of the Clean Water Act are set out in section 309(d) of the Act, 33 U.S.C. § 1319(d), which provides in pertinent part as follows:

> Any person who violates [specified sections of the Act] shall be subject to a civil penalty not to exceed $25,000 per day for each violation. In determining the amount of a civil penalty the court shall consider the seriousness of the violation or violations, the economic benefit (if any) resulting from the violation, any history of such violations, any good-faith efforts to comply with the applicable requirements, the economic impact of the penalty on the violator, and such other matters as justice may require.

33 U.S.C. § 1319(d).

The seminal case interpreting section 309(d) is the Eleventh Circuit opinion in Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128 (11th Cir. 1990). In Tyson Foods, the Eleventh Circuit sets out explicit guidance on the obligations of regulated entities under the Clean Water Act, and the purpose of, and criteria to be used in the assessment of a civil penalty for violations of the Act. One overriding principle in Tyson Foods is that a regulated entity simply is prohibited from discharging pollutants unless and until it can comply with the Act. The Court held as follows:

> There was one simple and straightforward way for Tyson to avoid paying civil penalties for violations of the Clean Water Act: After purchasing the plant, Tyson could have ceased operations until it was able to discharge pollutants without violating the requirements of its NPDES permit. Tyson chose not to do this and it must now bear the consequences of that decision.

Id. at 1141-42.

Compliance with the Clean Water Act at hundreds of thousands of facilities across the nation inevitably depends on the good faith voluntary efforts of citizens and corporations. To ensure voluntary compliance, it is vital that those who are found not to have complied be subjected to penalties, both to deter them from committing further violations ("specific deterrence") and to deter violations by others ("general deterrence"). As the Tyson Foods court stated:

> In Tull v. United States, 481 U.S. 412, 422-25, the Supreme Court made clear that economic gain and restoration of the status quo is not the only basis on which penalties should be awarded under the Clean Water Act. In addition, the penalties are designed to punish violators for their non-compliance and to serve the goal of retribution.

897 F.2d at 1141. See Tull v. United States, 481 U.S. 412, 423 (1987) (Punishment, in turn, would "further . . . deterrence" from future violations by potentially like minded dischargers.); Student Public Interest Research Group of New Jersey, Inc. v. AT & T Bell Laboratories, 617 F. Supp. 1190, 1197 (D.N.J. 1985) (Even if the defendant has corrected the violations, a substantial penalty is warranted to deter others).

The Eleventh Circuit also spelled out in detail how civil penalties are to be calculated. "In deciding upon the penalty to

be assessed against a defendant who has violated its NPDES permit, the point of departure for the district court should be the maximum fines for such violations permitted by the Clean Water Act." Id. at 1137.[2] The court "is to take each listed factor into account as well as any additional factors the court feels have bearing on the question of penalties." Id. at 1141. It is undisputed that because Florida Cities has already been found to be liable, it bears the burden of demonstrating that a given factor warrants mitigation of the penalty.[3]

III. The Statutory Maximum and the Penalty Factors Applied to Defendants' Violations

The Statutory Maximum

The United States has computed the statutory maximum in accordance with Tyson Foods and the Court's November 22, 1995 Order as follows: $6,725,000 for the Barefoot Bay violations, $14,700,000 for the Carrollwood violations, and $32,025,000 for the Waterway Estates violations.[4] Under Tyson Foods, then, $53,450,000 is the point of departure for assessing the amount of

---

[2] In calculating the statutory maximum, it is important to note that "the daily maximum penalty applies separately to each violation of an express limitation," id. at 1138, and that a monthly limitation violation subjects the violator to a maximum penalty for each day of that month (e.g., $750,000 for a monthly violation in a month with thirty days), id. at 1139.

[3] See Florida Cities' Water Company's Motion to Strike the Deposition Testimony of Jack William Tompkins, Objections and Counter-Designations at 2.

[4] Defendants' violations are summarized in table form in Gov. Exhibits 1, 255, and 348, and in calculations attached hereto. The number of violations is based on the Court's summary judgment order, with the exception of five additional Barefoot Bay toxicity violations, which were since admitted in Defendant Florida Cities Water Company's Amended Revised Responses to Plaintiff's First and Second Interrogatories at 19-20 (response 26.a) (in evidence). All daily violations were multiplied by $25,000 and all monthly violations were multiplied by the number of days in the month in which they occurred and then multiplied by $25,000.

the penalty to be imposed in this case. As shown in the discussion which follows, based on the penalty factors Defendants are entitled to only limited mitigation.

Seriousness of the Violations

Defendants' discharge violations, which include discharging without an NPDES permit, discharging at an unpermitted location, and discharging in violation of the terms and conditions of three NPDES permits, were all serious to varying degrees, largely because they all presented the potential for environmental harm.[5] Under the Clean Water Act, the United States need not show **actual** environmental harm to demonstrate that the violations were serious. The unrebutted expert testimony presented at trial proved that all of the discharge violations had the potential to cause environmental harm. This evidence should suffice to establish seriousness, particularly because the violations were of an act expressly designed to protect the environment and the public welfare. A "particularized showing of the harm" is not required and proof of the overall risk of the pollutants is sufficient. See Public Interest Research Group of New Jersey, Inc. v. Powell Duffryn Terminal, Inc., 913 F.2d 64, 79 (3rd Cir. 1990), cert. denied, 111 S. Ct. 1018 (1990); Chesapeake Bay Foundation v. Gwaltney of Smithfield, 611 Supp. 1542, 1560, 64

---

[5] The monitoring violations at Barefoot Bay were less significant in the circumstances of this case than would often be true of monitoring violations. Florida Cities had monitored for CBOD, instead of BOD as required by its permit. Once the company actually requested a change in the permit parameter, EPA permitted it to report CBOD. Nonetheless, it was the company's responsibility to report the correct pollutant parameter, and its failure to do so warrants the imposition of some penalty.

(E.D. Va. 1985), aff'd, 791 F.2d 304 (4th Cir. 1986), cert. denied, 479 U.S. 1029 (1987) ("The gravity [seriousness] component should account for the risk of environmental harm as well as any actual environmental harm").[6]

Indeed, in view of Defendants' undisputed burden to establish mitigating circumstances, it is Defendants' burden to prove that there was no environmental harm, not the government's burden to prove that there was environmental harm. Defendants have failed to meet that burden. While Defendants' expert testified that any harm was minimal, he based that opinion in part on his conclusion that aquatic life would likely not have been harmed by Defendants' violations because the aquatic life would have been driven off by Defendants' earlier violations. Even if true, the argument that the damage had already been done by the time of the instant violations should not be a basis upon which to mitigate the penalty: to permit such a benefit to inure to a violator would clearly negate the deterrence goal under Tyson Foods.

The Barefoot Bay plant discharges into an agricultural canal leading to the Sebastian Creek, at a point approximately two miles from its confluence with the Indian River. Klingenstein Report, Gov. Ex. 597 at 3; 597/C (photos 118-21, 129-30); 505

---

[6] Indeed, in passing the Act in 1972, Congress abandoned harm to the receiving waters as the basis of the nation's water control program. The 1972 Act contained "a major change in the enforcement mechanism of the Federal water pollution control program from water quality standards to effluent limits." Id., 1972 U.S. Code Cong. & Ad. News at 3674. Thus, to require a showing of actual environmental harm to demonstrate that the violations were serious would contradict the underlying premises of the Clean Water Act and amount to regression to pre-1972 water control law.

(video); Klingenstein Testimony, March 25, 1996, at 102-103. The Sebastian Creek and Indian River are part of the Indian River Lagoon Basin, a protected and sensitive water body, which has been adversely impacted by discharges from wastewater treatment plants. Klingenstein Testimony, March 25, 1996 at 85-86; Report at 11; Gov. Exs. 57; Gov. Ex. 249 at 11; see also Indian River Lagoon System and Basin Act, 1990 Fla. Sess. Law Serv. 90-262. The Total Residual Chlorine (TRC) and toxicity violations at Barefoot Bay had the potential to cause further environmental harm to these already-damaged and sensitive water bodies. Klingenstein Testimony, March 25, 1996 at 85, 93-94; Klingenstein Report at 12.[7] Further, the wood stork, an endangered species which inhabits the Barefoot Bay area, would have been susceptible to harm from excessive chlorine ingested by the organisms in the waters receiving the Barefoot Bay discharge. Klingenstein Testimony, March 25, 1994 at 93-94; Gov. Ex. 179.

Until Florida Cities closed its Carrollwood plant, it discharged into the Sweetwater Creek, which flows into Tampa Bay. Klingenstein Report at 6 (and topographic map attached thereto); Gov. Ex. 597/C (photos 7, 9-12). Like the Indian River Lagoon Basin, Tampa Bay was the source of serious water quality concerns, Gov. Ex. 294. Hence, the wholesale NPDES permit violations at the Carrollwood plant also had the potential to

---

[7] Toxicity tests measure the potential effect of the effluent on aquatic organisms in the receiving waters, and therefore provide a means of determining whether the effluent poses a danger to them. Klingenstein Testimony, March 25, 1996 at 83-84. Chlorine, which is used as a disinfectant in the wastewater, can be toxic. Id. at 92.

cause environmental harm given the nature of the water bodies and point of discharge. Klingenstein Testimony, March 25, 1996 at 125. The pollutants which accounted for the most frequent violations at Carrollwood, chlorine, phosphorous, and nitrogen, all have the potential for negatively impacting water quality, habitat, and fish. Smith Testimony, March 29, 1996, at 111-114.

The Waterway Estates plant has discharged either directly or indirectly into the Caloosahatchee River. It is undisputed that the river had the ability to assimilate wastewater treatment discharges, but, to avoid localized impacts of pollutant discharges, it was best protected if such discharges were at the six-foot contour line of the River itself. Klingenstein Testimony, March 25, 1996 at 146; Klingenstein Report at 15; Smith Testimony, April 1, 1996 at 10; Armstrong Testimony at 112. Gov. Ex. 349 (pp. 10, 14); Gov. Ex. 422. Having lost its NPDES permit because it had no wasteload allocation and its discharge point was improperly located, the Waterway Estates plant continued to discharge into a boat canal leading to the Caloosahatchee River without a permit from January 9, 1987 until October 31, 1989.[8] Once it received a new permit, effective November 1, 1989, the plant continued to discharge to the canal instead of the River until July 1991. Until the plant was upgraded to advanced wastewater treatment standards in April

---

[8] Because the initial Complaint was filed in this matter on October 1, 1993, the statute of limitations bars claims before October 1, 1988. Hence, paragraph 43 of the Second Amended Complaint pleads violations occurring on and after that date.

1992, it violated the nitrogen and toxicity limitations in its NPDES permit.

Discharging without an NPDES permit goes to the very heart of the Act itself, and is inherently a matter of grave concern, as such disregard of the basic regulatory requirement undermines the efficiency of the Clean Water Act and merits a substantial penalty. All of the unlawful discharges to the canal, as well as the permit violations, had the potential to cause environmental harm given the nature of the water bodies and points of discharge. Klingenstein Testimony, March 25, 1996 at 149; see Klingenstein Report at 14-15; Smith Testimony, March 29, 1996, at 111-114 (impact of nitrogen).

The United States recognizes that although the violations were by and large serious, there is no demonstrable evidence of harm. Due to the frequency and duration of the violations, however, when coupled with the potential for environmental harm, Defendants are entitled to only limited mitigation of the statutory maximum based on the seriousness of the violations.

Economic Benefit Resulting from the Violations

The United States was not permitted to introduce evidence relating to its economic benefit calculations, the Court holding that such calculations were required to take the form of expert testimony. Trial Transcript, March 30, 1996 at 22. Defendants' expert testified that because Florida Cities would have been able to pass its compliance expenditures along to its customers through increased rates, it realized no net economic benefit

through its non-compliance. Cardey Testimony, April 5, 1996 at 101, 114.[9] Assuming that is true, rather than providing a basis for mitigation of the penalty, this argument only serves to suggest that the violations were all the more inexcusable, since Defendants could have made the investments necessary to comply with the law without any long-term financial impact. Most importantly, any investment that was subsequently not approved by the Florida Public Service Commission could not have been recouped, Cardey Testimony, April 4, 1996 at 114, a perpetual and overwhelming consideration to the defendants as they made critical decisions relating to the violations at issue.

History of Violations

The evidence at trial established that the three wastewater treatment plants operated illegally without NPDES permits for a cumulative total of over two decades: from 1980-91 at Barefoot Bay, Gov. Exs. 30 (Table 1), 153, 155, FCWC Admission No. 10; 1981-92 at Carrollwood, FCWC Admission No. 24; and 1986-88 at Waterway Estates, FCWC Admission No. 31. In addition, Florida Cities violated EPA administrative orders at all three facilities. Gov. Exs. 146, 151, 154, 157, 163, 166, 169, 170,

---

[9] Anticipating this argument, the United States sought to introduce expert testimony that Avatar had derived substantial profits (in amounts that would have been calculated in the testimony) by proceeding with its residential development of Barefoot Bay without obtaining an NDPES permit for discharges from its wastewater treatment plant. The Court excluded that testimony from evidence on the ground that it related to periods of unpermitted discharges that were addressed in an earlier EPA administrative order and are not directly at issue in this action. The United States then sought to introduce an alternative calculation of economic benefit, based on the value to Florida Cities of delaying expenditures to come into compliance, through an EPA official. The Court excluded this economic benefit testimony, holding that such calculations were required to take the form of expert testimony.

310, 364, 382. Thus, Defendants have a long record of violating the Clean Water Act, on the basis of which there is no reason to mitigate the penalty.

Efforts to Comply and Alternatives to Noncompliance

A considerable amount of trial testimony related to the means that were available to ensure compliance at each of the three plants, as contrasted against the measures Florida Cities actually took to timely comply with the Act and its permits. That testimony revealed that while Florida Cities did make sporadic attempts to remedy violations at each of the three plants at issue, those efforts were halfhearted and insufficient under the circumstances, particularly in view of the duration of the periods of violations. Most significantly, at each plant, Florida Cities knowingly chose, for financial reasons, to forego a readily available alternative to continuing its unpermitted discharges, delaying compliance for years.

The Barefoot Bay plant is located in a very rural area of Brevard County, where there is an abundance of undeveloped land, much of which is used as orange groves. Klingenstein Report of at 16; (and topographic Map); Gov. Exs. 597/C (photos), 505 (video). As Gerald Allen, then the Avatar Utilities vice-president overseeing the study of the discharge alternatives at Barefoot Bay, wrote in a 1989 report, "Approximately 3,000 acres of orange groves are located within 1.5 miles of the Barefoot Bay Wastewater Treatment Plant." Gov. Ex. 114 at 3, Allen Testimony, April 4, 1996 at 218. This land could have been used to build

additional percolation ponds, for spray irrigation purposes, or to construct a deep well. Klingenstein Testimony, March 25, 1996, at 115-16 (ponds); 116 (irrigation); 119 (deep well); Exhibit 597/D/1 [timeline]; see Klingenstein Report at 16-17. Instead of utilizing one of these technically and technologically feasible disposal options, Klingenstein Testimony, March 25, 1996, at 116, 119-20; Testimony of Jack Tompkins at 208-09; Defendants chose to continue their discharges for over a decade, finally obtaining a permit in 1991.[10]

While the trial record supports the conclusion that the Defendants did study and consider these three options, the record also supports the conclusion that all of them were ultimately rejected due to their cost, and the concern that the cost ultimately might not be recovered through rate base increases if the Florida Public Service Commission did not subsequently approve the expenditure. Building additional percolation ponds meant both purchasing additional land and incurring construction costs. Defendants did not thoroughly pursue this option because of the cost involved. Klingenstein Report at 16. Negotiations with the neighboring grove owners might well have succeeded had Florida Cities not insisted that the grove owners pay for the

---

[10] In March 1990, Florida Cities did implement limited spray irrigation, which allowed for the disposal of approximately 90,000 gallons per day of effluent during dry weather. Klingenstein Testimony, March 25, 1996 at 118; Klingenstein Report, Gov. Ex. 597/D/1 [timeline].

It bears noting that the NPDES permit was issued with the express proviso that Florida Cities cease discharging into the Sebastian Creek by June 30, 1995. Based on the testimony of Gerald Allen, Florida Cities continued to discharge into the Sebastian Creek, notwithstanding this deadline. Allen Testimony, April 4, 1996 at 231.

effluent and refused to indemnify them. See Allen Test., April 4, 1996 at 133-138, 219-220. Defendants did not contract to purchase neighboring land for spray irrigation purposes until 1995 because they perceived the cost as being too high. Allen Test., April 4, 1996 at 221-222. And, Defendants did not build a deep well because they perceived the risk to be too high that the well would fail and they would not be able to recover their costs through their customers. Allen Test., April 4, 1996 at 208-209.[11]

Had Defendants made the necessary investment to simply cease the discharge, the permit violations at Barefoot Bay would never have occurred. Klingenstein Testimony, March 25, 1996 at 118. Alternatively, Defendants could have invested earlier in an advanced wastewater treatment plant, such as they finally constructed after this case was brought, to meet permit limits for toxicity and Total Residual Chlorine, Klingenstein Report at 18; Klingenstein Testimony, March 25, 1996 at 92, as well as in the sulphur dioxide unit which corrected the Total Residual Chlorine violations, Karleskint Testimony, April 5, 1996, at 82.

Viable alternatives also existed at Carrollwood which would have prevented the violations in this case. From 1983 until 1986, and beginning again in approximately 1988, the City of Tampa's 60-million gallon/day plant had the capacity to allow Florida Cities to connect its Carrollwood customers to the City

---

[11] In reality, though, of the numerous deep wells within 100 miles of the Barefoot Bay plant along the east coast of Florida, only one had failed, Allen Test., April 4, 1996 at 223-226, Gov. Ex. 137.

of Tampa system. See Testimony of William Schafer at 9-10. Had Defendants availed themselves of this opportunity, they could have avoided **seven years** of unpermitted discharges (from 1984-91) to a very small water body with limited ability to sustain a pollutant discharge, as well as the NPDES permit violations in the instant case, see Klingenstein Testimony, March 25, 1996 at 127-28.

Instead of connecting to the Tampa system, Defendants chose to wait until the Hillsborough County system had capacity to treat the Carrollwood wastewater in 1992. Again, the reasons were financial. Under cross-examination at trial, Florida Cities' own regional manager conceded that the company chose not to connect to the Tampa wastewater treatment system because the perceived costs of doing so ($1.5-million) were too high. Good Testimony, April 4, 1996 at 92-94.

Alternatively, in order to meet its NPDES permit limits, Defendants could have built an advanced wastewater treatment plant (as they at one time contemplated) in order to timely meet permit limits and prevent the violations. As Florida Cities itself admits, "[t]he Carrollwood facility at issue was a Secondary Treatment facility and therefore could not comply with an AWT permit." FCWC Amended Revised Interrogatory Answers at 4.

Defendants also had both interconnection and upgrade options at the Waterway Estates plant which would have prevented the violations. North Fort Myers Utilities, a neighboring private utility, both had capacity for -- and interest in -- treating

the Waterway Estates wastewater. From early 1987 through early 1990, North Fort Myers Utilities negotiated with Florida Cities Water Company regarding the possibility of providing wastewater treatment service to the Waterway Estates customers, only to have Florida Cities reject its offers. Schenkman Testimony, March 27, 1996 at 230-43, Gov. Exs. 362, 385, 397, 408. Indeed, North Fort Myers Utilities ultimately was prepared to provide wastewater treatment services for the Waterway Estates wastewater at a cost of no more than the cost Florida Cities represented it would incur to upgrade its Waterway Estates plant at the time. Schenkman Testimony, March 27, 1996 at 238. Furthermore, that option was a particularly attractive one from an environmental standpoint because the North Fort Myers plant uses deep well injection and spray irrigation to dispose of its treated effluent without any surface water discharge. Id. at 230.

Defendants chose not to avail themselves of the North Ft. Myers Utilities option. Again, the reason was financial. To connect to North Ft. Myers Utilities meant giving up the Waterway Estates plant, an investment Defendants simply were not willing to lose, particularly in view of the Avatar Holdings' CEO's mandate that Florida Cities' "long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the City's." Gov. Ex. 384.

Had Waterway Estates connected to the North Ft. Myers Utilities plant, none of the Waterway Estates violations in this case would have occurred. Klingenstein Report at 20-21.

Alternatively, Defendants were free at any time to apply for a wasteload allocation, build an advanced wastewater treatment plant, and move the discharge location -- as they eventually did -- to enable them to obtain and meet the terms and conditions of an NPDES permit. Id. A 1980 FDER study of the Caloosahatchee River which resulted in a 1981 wasteload allocation document allocating a "zero wasteload" (i.e., no discharge) to the Waterway Estates plant was premised on the assumption that the plant would tie in to a larger regional plant then under consideration. Gov. Ex. 349 at 12. When the plans for that plant fell through Defendants knew or should have known that they needed to make alternative arrangements for the discharge because the 1981 study made clear that their discharge to the canal could not continue. Id. at 10.

Notwithstanding that they had no wasteload allocation to discharge to the canal, and that in order to continue to discharge to the River at any location the plant would need to be upgraded to advanced wastewater treatment standards, in 1986, Defendants chose to apply for a renewal of the NPDES permit without making any provisions to upgrade the plant or change the outfall location. Gov. Ex. 352. Although EPA notified Florida Cities six months prior to the formal date that EPA took action on the renewal application that it intended to deny the application, Gov. Ex. 354, Florida Cities neither pursued its administrative remedies with EPA, Kagey Testimony, April 3, 1996 at 140-43, nor took any immediate measures to upgrade the plant

and move its discharge point.

After the formal permit denial, Gov. Ex. 361, Florida Cities again failed to pursue its administrative remedies with EPA, FCWC Admission No. 29, (whose decision ultimately could have been appealed to the U.S. Court of Appeals), as was its right, nor took action to correct the situation in an expeditious manner, resulting in years of violations. Instead, Defendants leisurely proceeded to debate what course of action to take, and, after finally coming to the conclusion that they would indeed upgrade the plant and move the outfall, finally applied for a wasteload allocation in December 1987. Lehman Testimony, April 3, 1996, at 96-97.[12]

It is undisputed that Florida Cities made a poor choice of a design engineer for the project, Smith Testimony, April 1, 1996 at 21-22, which was contrary to the recommendations of its own operations manager and construction engineer, Lehman Testimony, April 3, 1996, at 101-102. Cost appears to have been the

---

[12] The testimony of FDEP employees equating temporary state operating permits with wasteload allocations is neither particularly credible, nor of any legal significance in this federal action brought in pertinent part for discharges without a federal permit and for discharges to a location not permitted by a federal permit. FDEP's own 1983 records indicate not that there were formal wasteload allocations, but only that there was capacity for a wasteload allocation at advanced wastewater treatment levels, assuming proper location of the outfall at the six-foot contour line of the River itself. FCWC Ex. 19.

EPA was entitled, as it did, to premise its permit denial on the absence of a formal wasteload allocation. To the extent that the FDEP testimony appears to have been introduced in a belated effort to challenge the denial of the permit renewal, in its November 22, 1995 Order, the Court has already ruled that the Defendants are barred by statute from now challenging the denial of the permit renewal, having not exhausted either their administrative or judicial remedies at the time. See 33 U.S.C. § 1369(b)(2); 40 C.F.R. Part 124; Middlesex Count Sewerage Authority v. National Sea Clammers Association, 453 U.S. 1, 14 (1981).

dispositive factor in the selection. Because of this and other contractor disputes and delays, many of which also appeared to relate to cost, Gov. Exs. 406, 411, 424, 425, 431, 437, 442, 444; Tompkins Testimony (by deposition) at 153-54, the design and construction process exceeded even the time Defendants' own expert testified it should take, Smith Testimony, April 1, 1996 at 20-21. As a result, Defendants failed to come into compliance at the Waterway Estates plant until 1992.[13]

In sum, viable alternatives were available which would have allowed Defendants to cease discharging in a timely manner at each of the three plants at issue, and, alternatively, to build advanced wastewater treatment plants capable of meeting the terms and conditions of the NPDES permits. Defendants knew of those options, but simply failed to avail themselves of them because they were concerned that they risked making or losing financial investments that they would not be able to recover through their customers. While it is true that the Defendants finally came into compliance at all three plants, compliance followed only after both the United States and the State of Florida had taken repeated enforcement actions.

All of the violations in this case were clearly avoidable. That they occurred reflects an indifference to the law and the environment, which is clearly unacceptable under Tyson Foods.

---

[13] After Florida Cities finally applied for an NPDES permit, EPA issued one on September 29, 1989, which took effect on November 1, 1989, Gov. Ex. 399.

Thus, there is no basis to mitigate the penalty as a result of good faith efforts to comply.

Economic Impact of Penalties on the Defendants

The United States acknowledges that the imposition of the statutory maximum of $53,450,000 would have a substantial economic impact on the defendants, and that such an impact alone provides an appropriate basis for mitigation of the penalty in this case. Both defendants, however, do have the ability to pay a substantial civil penalty in this case. The unrebutted testimony of the United States' financial expert, Ms. Zimmer, who analyzed the financial conditions of both defendants by examining publicly available materials, SEC filings, and financial statements, both audited and unaudited, conclusively established that each can afford to pay a penalty in excess of $7.5 million without adverse impact. See Expert Report of Eileen Zimmer at 8-11; Testimony of Eileen Zimmer at 196-97.

Proposed Penalty

The United States proposes the following assessment of the civil penalties in this action, based upon the Clean Water Act penalty factors and the deterrent objectives Tyson Foods, as applied to the facts of the case:

Unpermitted Discharges	396 days @ $5,000/day $1,980,000
Discharges at Unpermitted Location	621 days @ $3,000/day $1,800,000
Permit Discharge Violations	1042 days @ $1,000/day $1,042,000
Permit Monitoring Violations	79 days @ $500/day

	39,500
TOTAL CIVIL PENALTY	$4,861,500

District courts awarding penalties in Clean Water Act cases have taken a variety of approaches in determining an appropriate penalty. A sliding scale, as suggested above, can account for the different levels in the seriousness of the violations. Percentages of the total statutory maximum also are not uncommon, and the ability to pay is obviously an important consideration. On balance, the United States respectfully suggests that the $4,861,500 figure, which represents roughly two-thirds of each defendant's ability to pay, but less than ten per cent of the statutory maximum penalty, is a fair penalty.

IV. Avatar's Liability

Drawing on Jacksonville Electric v. Bernuth, 996 F.2d 1107, 1110 (11th Cir. 1993), this Court has ruled that in order for Avatar Holdings to be held liable for the violations at issue, it must have acted in such a way that it should be considered a "person who violates" under section 309(d) of the Clean Water Act, 33 U.S.C. 1319(d). See Court's Order, November 22, 1996 at 28-29. Under Bernuth, a case brought under the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA" or "Superfund"), involvement in the decisions that resulted in the pollution is alone a "sufficient condition" for the imposition of liability upon a parent as an operator of its subsidiary's business: "[A]ctual involvement in decision regarding the disposal of hazardous substances is a sufficient, but not a necessary, condition to the imposition of operator

liability." 996 F.2d at 1110.

Thus, while actual and pervasive control can be demonstrated by actual involvement in daily operations, participation in the decisions that resulted in the pollution can by itself be a sufficient basis for liability. Id. Moreover, Bernuth should not be construed to mean that the parent has to interact on a daily basis with the subsidiary or, for that matter, that the actual involvement need relate to all aspects of the subsidiary's operations. See United States v. Fleet Factors Corp., 901 F.2d 1550 (11th Cir. 1990), cert. denied, 498 U.S. 1046 (1991) (actual day-to-day involvement is not necessary).[14]

As discussed by the United States in earlier pleadings, there is ample precedent under the Clean Water Act itself for a parent company to be held liable under a direct theory of liability, albeit no published opinions directly on the subject. In perhaps the most famous Clean Water Act case in American history, the United States named the parent under such a theory and the Court held that the parent company could be held criminally liable for the acts of its subsidiary if it exercised sufficient control over it. United States v. Exxon Corporation and Exxon Shipping Company, No. A90-015 CR (D. Alaska, October 29, 1990) (copy attached hereto) at 9. In so holding, the Court made specific reference to the "important public interest at stake with respect to protection of the environment." Id. at 6.

---

[14] The panel in Bernuth acknowledged that the panel in Fleet intended that "participation in management decisions relating to hazardous waste" alone was sufficient to impose operator liability under CERCLA. 996 F.2d at 1110, n.2.

The documentary evidence at trial clearly established that Avatar Holdings acted in such a way that it should be considered a "person who violates" under section 309(d) of the Clean Water Act, 33 U.S.C. 1319(d) because Avatar Holdings exercised actual and pervasive control over Florida Cities' environmental practices in general and particularly at the three wastewater treatment plants which were operating in violation of the law. Through its officers, Avatar Holdings not only was actually involved in critical decisions directly relating to the proven violations, but caused or directed the violations through actions and inactions which resulted in the continuation of unlawful discharges and the failure to timely construct advanced wastewater treatment facilities at each of the three plants.

The documentary evidence shows that in particular five "key players" (Peter Sharp, John Sladkus, Lawrence Wilkov, Dennis Getman, and Robert Gordon), acting on behalf of Avatar Holdings, were personally and pervasively involved in Florida Cities' environmental affairs, relevant events relating to the three wastewater treatment plants, and the violations at issue.[15]

Barefoot Bay

Barefoot Bay represents both a real estate and utility investment to Avatar Holdings because it owns, markets, and

---

[15] Peter Sharp was Avatar Holdings' Chief Executive Officer, Levy Testimony at 37, 40; Gov. Ex. 518. Lawrence Wilkov was formerly Avatar Holdings' President Levy Testimony at 47-48; Gov. Exs. 526, 551, 591; Dennis Getman is Avatar Holdings' Executive Vice-President/General Counsel, see Gov. Exhibit #522 at 2; Robert Gordon is Avatar Utilities' President, Levy Testimony at 63.; and John Sladkus was formerly Avatar Holdings Executive Vice-President, Land & Utility Operations, Levy Testimony at 43-46; Gov. Exs. 519, 526.

manages the development, as well as provides water and wastewater services to its residents.[16] Avatar was well aware in 1980, when it acquired Barefoot Bay, that wastewater disposal was an important issue that needed to be addressed at any development. Gov. Ex. 516. It was also aware as early as the early 1980s that Barefoot Bay did not have adequate sewage disposal facilities, but proceeded to develop the property anyway.[17] While Avatar Holdings did make efforts to address the problem, those efforts were hampered by an overwhelming focus on cost, which resulted in the problem continuing unabated while the development expanded. As demonstrated below, the documentary evidence shows that the sewage disposal problem at Barefoot Bay was personally and directly handled and supervised by Avatar Holdings officials, with essentially only staff-level support by subsidiary employees.

As early as July 21, 1983, Avatar management meetings included discussion of land areas that were needed "for future construction to accommodate the complete build-out of Barefoot Bay," Gov. Ex. 11, an apparent reference to the construction of

---

[16] Documents refer to Barefoot Bay as an **Avatar Holdings** real estate operation, project, or cost center, often without any reference to an Avatar subsidiary. Gov. Ex. 58 at 8, Gov. Ex. 518 at 7, Gov. Ex. 550, and Gov. Ex. 546 at 5. Avatar Holdings financed the Barefoot Bay inventory. Gov. Ex. 51 at 3, 6-11.

[17] When Avatar Holdings acquired Barefoot Bay and its treatment plant in 1980, 1,444 of some 5,200 planned lots (the anticipated "buildout" number) had been sold. Gov. Ex. 30 at 2 (Table 1). The effluent flow data reflects that as of 1980, the average daily flow from the development was 126,000 gallons/day, id., although the two percolation ponds built to date together at best only had the capacity for 100,000 gallons/day. Klingenstein Testimony, March 25, 1996 at 103-04. As a result, unpermitted overflows into the Sebastian River were already occurring.

additional percolation ponds on which to dispose of the effluent. In a February 29, 1984 memorandum, Wilkov recognized that the "[s]ituation requires immediate action," and states that "[i]ncreased capacity should be 'on line' by November 1984." Gov. Ex. 15. Wilkov also says that Avatar Holdings should "find a way to have the utility [i.e., Avatar Utilities] fund the entire amount [estimated at $600,000-700,000]" id., a concept which Peter Sharp later ratified as follows in a June 28, 1984 memorandum to Wilkov, Sladkus, and Gordon:

> We must be sure that the cost of the percolation pond and related construction end up 100% as part of Barefoot Bay's rate base on which rates can be charged to customers from day one.

Gov. Ex. 18.

The cost allocation issue resolved, the next question was where to build the additional ponds. On March 13, 1985, Gordon wrote in a memo to Wilkov, with a copy to Sladkus, suggesting either an adjacent orange grove or the neighboring "Hearndon" property, costing out each option at $1.3 million, while noting that "[w]e have exhausted the alternatives of wastewater effluent disposal at Barefoot Bay." Gov. Ex. 31.

An August 1985 memo shows that Peter Sharp remained personally aware of the necessity of building the additional percolation ponds, as well as very concerned about how much they would cost, and well aware of the government scrutiny to which

environmental matters are subject. Gov. Ex. 38.[18] The new ponds were never built, however, and on January 16, 1987, Sladkus updates Sharp, Wilkov, and Kleinerman by memorandum, on the apparent complete failure of the existing ponds, suggesting the possibility of spray irrigation. Gov. Ex. 52. Again, cost was an issue.[19] At the same time, Avatar officials were aware of the potential for environmental harm caused by effluent disposal in the area:

> The Indian River Lagoons system is considered to be deteriorating as a result of fresh water discharges from storm water runoff, drainage canals, and wastewater effluent which has presumably killed seagrass beds and clambeds and have degraded water and sediment quality throughout the system.

Gov. Ex. 57.

Sladkus gave Sharp another full report on the Barefoot Bay wastewater problem on February 11, 1988, attaching a file memorandum written by Gordon, memorializing a meeting with FDER at which Gordon and his team convinced FDER that they would construct a deep well system for the disposal of the effluent in

---

[18] Gordon updates Wilkov on October 10, 1985 (copying Getman, Kleinerman, and Sladkus) that the plans and specifications for the percolation ponds were submitted to the DER for their approval on August 27, 1985, Gov. Ex. 41. In a January 29, 1986 letter, Sharp represents that "Avatar has recently acquired adjacent land for the purpose of increasing the capacity of its sewage plant." Gov. Ex. 45. (emphasis added) Status reports from Gordon to Sladkus (with a copy to Wilkov and Kleinerman) followed. Gov. Exs. 46, 50.

[19] Again, there was the question of where. Avatar Holdings was only willing to use a limited portion of the 270-acre Hearndon property as a spray irrigation site in conjunction with its development as a golf course and homesites. Gov. Ex. 53 at 3; Gov. Ex. 55, 57. Yet, a May 1, 1987 memorandum to reveals that at this time Avatar Holdings officials were acutely aware that they already lacked sufficient wastewater disposal capacity at Barefoot Bay and that proceeding towards "buildout" would require still additional capacity. Gov. Ex. 56.

lieu of the percolation ponds, that the land on which the percolation ponds were to be situated would be used as a spray irrigation site, and that ongoing connections from Barefoot Bay lots could continue. Gov. Ex. 61. They also promised FDER that the plant would be upgraded to advanced wastewater treatment (AWT) standards if a surface water discharge were approved.[20] Id.

Avatar Holdings soon abandoned the idea of the deep well, however, because it was concerned that it would have to bear the cost of the well if it failed. Allen Testimony, April 4, 1996 at 208-09.[21] After travelling to New York in June 1989 to brief Avatar Holdings officials on the issue, Gov. Exs. 83, 92, in November 1989, Gerald Allen prepared a report entitled "Wastewater Disposal Alternatives to Deep Well Injection, Barefoot Bay" which he transmitted directly to Avatar Holdings'

---

[20] The gist of Gordon's memo (copies of which went to Getman, Sharp, Sladkus, and Wilkov, among others) indicates that Defendants were balking at actually constructing the percolation ponds contemplated some four years earlier, even though Defendants were fully aware that they had an ongoing illegal discharge, and that DER wanted the percolation ponds built and the ongoing connections to cease.

[21] A March 15, 1988 memo from Sladkus to Sharp demonstrates that Sharp's pervasive involvement extended right down to the selection of the engineer who was to conduct the preliminary study for the deep well injection system. Gov. Ex. 64. Memoranda to/from Sladkus and Gordon and Allen, See Gov. Exs. 67-69, 74, 76, 78, as well as Sladkus' own handwritten notes, Gov. Ex. 77, show that Sladkus continued to closely monitor the situation at Barefoot Bay after the decision was made to build a deep well, and became increasingly involved in the project, when, in early 1989, Gordon became concerned that the deep well might fail. Gov. Exs. 81-85, 87, 91. Wilkov and Getman were also kept apprised. Gov. Ex. 86. Later, not long before resigning, Sladkus reconsidered, recommending the construction of a deep well in a September 14, 1990 memo to file which he copied to Wilkov and Sharp. Gov. Ex. 143. By this point in time, he had learned that the risks of such a well had been exaggerated, and thought that it presented a more economically prudent solution to the wastewater disposal question. Thus, he writes "for all these various reasons, it is now proposed that we reverse our decision. We are under severe pressure from the regulatory agencies to cease discharge into the Indian River and need to make an early decision." Id.

Board members and officers, Gov. Ex. 115, but not to any Florida Cities officers. Allen Testimony, April 4, 1996 at 214-15.[22] In a January 26, 1990 memorandum to Wilkov, Sladkus considered and conditionally approved spray irrigation as the alterative of choice. Gov. Ex. 118. Avatar officers then focussed on acquiring a neighboring orange grove known as the Micco Groves to use as the spray irrigation site. Although the Micco Groves were not ever ultimately acquired, the efforts to acquire them, like the earlier efforts relating to the percolation ponds and the deep well illustrate Avatar Holdings' direct and pervasive involvement -- at the highest levels -- in matters relating directly to the Barefoot Bay effluent disposal issue.[23]

In sum, the documentary evidence makes patently clear that Avatar Holdings' officers and directors were fully cognizant of the unlawful discharge at Barefoot Bay, and were pervasively involved in critical decision-making on how it was to be addressed. Solving the effluent disposal problem yielded to

---

[22] By this point in time, Avatar Holdings was concerned about the risk of having to bear the cost of the failure of a deep well, Allen Testimony, April 4, 1996 at 208-09, and the focus of its highest officers turned instead toward spray irrigation. Gov. Exs. 96-99, 103, 105, 106.

[23] After numerous unsuccessful efforts to purchase the groves by Getman, acting in various capacities on behalf of various Avatar entities, Gov. Exs. 112, 125, 129, 130, 138, 140, 139, in March 1991, Avatar began condemnation proceedings, in accordance with Sharp's earlier orders, who continued to be kept apprised of their progress. See Gov. Ex. 165. On June 19, 1990 Gordon responded directly to Sladkus, with copies to Getman and Wilkov, saying that "condemnation of the Micco Grove property would be extremely difficult because (a) the property is not unique (other property would be available for a price) and (b) there are alternatives to spray irrigation." Gov. Ex. 133. Sharp, however, was undeterred by Gordon's forthright assessment, and, by memo of June 25, 1990, endorses Sladkus' June 15, 1990 suggestion that they use eminent domain powers to obtain the property. Gov. Ex. 134. Finally, in a July 1, 1990 memorandum to Wilkov, Sharp ordered that eminent domain be pursued, Gov. Ex. 135, and that he be given a status report, which indeed followed. Gov. Ex. 136. See also, Gov. Exs. 131-32.

Avatar Holdings' primary goal of developing Barefoot Bay.[24] Had Avatar Holdings taken advantage of the many opportunities to cease the discharge entirely in previous years, an NPDES permit would not have been necessary and none of the violations at Barefoot Bay would have occurred. Alternatively, it should have made the investment to upgrade the plant in a timely manner.

Carrollwood

Avatar Holdings was also pervasively involved in decision-making relating to the unpermitted discharge at Carrollwood. As far back as August 6, 1984, Gordon sent a memorandum to Sladkus, with a copy to Wilkov, which confirms that Florida Cities was advised in October 1979 that it would have to stop discharging into the Sweetwater Creek, but that it found the available alternatives unacceptable; that its temporary operating permit was subsequently denied; and that it intended to fight the matter in the courts if necessary. Gov. Ex. 270.

An exchange of memoranda between Gordon and Getman in 1986 makes it clear that Avatar endorsed tactics resulting in the continuation of the unpermitted discharge until Hillsborough County would accept the Carrollwood sewage. Gov. Exs. 280-81. In March 1988, Gordon reported to Sladkus that he was working to

---

[24] Sharp was personally well aware that the additional connections to the sewage system resulted in added wastewater discharge. By memo of February 25, 1991, Sharp specifically questioned Gordon about the discharge flow to be permitted in the context of the units connected to the system. See Gov. Ex. 160. In his reply to Sharp the following day, Gordon details the flow data from the Barefoot Bay treatment plant, noting that as of December 31, 1990, there were "4,298 ERC's connected to the system with 754 additional vacant lots." Gov. Ex. 162. Thus, in the decade since 1980, Avatar had added nearly 3,000 hook-ups, without remedying the effluent disposal problem.

get Hillsborough County to lower the fees it would charge to connect the Carrollwood system to its system, and that he viewed building an AWT plant as an alternative. Gov. Ex. 291. Both Sharp and Sladkus were personally involved in the process. See Gov. Exs. 74, 76-78. After executing a "conward" in April 1989 authorizing engineering services for the AWT plant, Gov. Ex. 567, Sharp wanted some questions answered about cost, flow, recovery of costs through rate base, and construction completion time.[25] Clearly, Avatar Holdings officials were resolved not to cease the unlawful discharge into the Sweetwater Creek unless and until the effluent from the plant could be connected to the Hillsborough County system at a favorable price, or failing, that to build an AWT plant. Had they been willing to make the timely investment in an alternative disposal option, or, for that matter, to upgrade the plant to advanced wastewater treatment standards, none of the violations in the instant case would have occurred.

Waterway Estates

Avatar Holdings was also pervasively involved in critical decisions relating to environmental compliance at the Waterway Estates plant. On August 14, 1986, Gordon sent word of EPA's intent to deny the permit renewal to Avatar Holdings officials, including Sladkus, Getman, and Wilkov, with a brief explanation: "The EPA wants the Company to either discontinue discharging

---

[25] Gov. Exs. 299-300. While Sharp's memo was not produced in discovery, his questions can be inferred from the memoranda which addressed them.

effluent to a canal which ultimately goes to the Caloosahatchee River or improve the treatment to AWT and seek a wasteload allocation to the Caloosahatchee." Gov. Ex. 358.

On January 16, 1987, just seven days after EPA's permit denial took effect at Waterway Estates, Sladkus reported to Sharp, Wilkov, and Kleinerman that the plant either needed to apply for a wasteload allocation and upgrade to AWT or connect to North Fort Myers Utilities (NFMU), a neighboring privately-owned wastewater treatment plant. Gov. Ex. 52. In June 1987, Gordon forwarded to Sladkus a copy of EPA's compliance order. Gov. Ex. 365. On August 31, 1987, Gordon forwarded to Sladkus a copy of an engineering report on the feasibility of disposing of the Waterway Estates wastewater, indicating that cost remained the primary issue: "[a]s you can imagine from the recommended cost of treatment and disposal, additional work [on the options] will have to be done." Gov. Ex. 369. On November 19, 1987, apparently after additional work was done, Gordon again writes to Sladkus attaching an options memorandum. Gov. Ex. 373.

It is clear from the evidence that Avatar was evaluating whether to expend a large sum of money to upgrade the Waterway Estates plant or to contract with NFMU to treat its waste. Ultimately, Avatar made a business decision to forego connecting to NFMU. Gov. Ex. 466. An exchange of memoranda dated between August 1988 and October 1988 between Sharp and Gordon indicates that, far from considering yielding the Waterway Estates franchise to a competitor, whether public or private, Sharp had

visions of taking over all of the water and wastewater utilities in Lee County. Gov. Exs. 70, 381, 383. Sharp's final mandate to Gordon was as follows: "FCWC's long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the City's." Gov. Ex. 384.

The same documents reveal that this mandate emerged after the Lee County options were discussed at the same September 7, 1988 "utilities meeting," see Gov. Ex. 383, at which environmental compliance at Waterway Estates, Barefoot Bay, and Carrollwood were agenda items. Gov. Ex. 70. As Leon Levy testified, shutting down the Waterway Estates plant would have been inconsistent with Sharp's stated objective. Levy Testimony, March 28, 1996, at 96. The most likely inference from this evidence is that Sharp personally ruled out an immediately available compliance measure -- connecting to the North Ft. Myers system -- which would have avoided all of the violations at Waterway Estates, in favor of what he perceived to be the long-term financial interests of Florida Cities.

For the Waterway Estates plant to comply with its new NPDES permit, the upgrade and relocation of the outfall needed to be completed by November 1, 1989, its effective date. Gov. Ex. 399. Sladkus closely monitored the situation. Gov. Exs. 74, 76-78. He, in turn, was closely monitored by Sharp, right down to the approval of expenditures for such minor items as pumps. Gov. Ex. 109. By memo of October 2, 1989, Sharp wrote Sladkus that "[w]e must have assurance from Bob Gordon that the entire cost of the

upgrade and expansion of this plant will be included as used and useful." Gov. Ex. 400. By cover memo dated June 5, 1990, Allen sent Sladkus a conward requesting approval for the Waterway Estates improvements. Gov. Ex. 414. On June 11, 1990, Sladkus rejected the conward. Gov. Ex. 416. These additional documents suggest that cost was an overwhelming consideration to Avatar Holdings in the upgrade and expansion necessary for compliance.

When, in July 1991, it became clear that the Waterway Estates AWT improvements were behind schedule (making the NPDES permit violations inevitable), Allen wrote a memorandum directly to Sharp, with copies to Getman, Gordon, and Wilkov. Gov. Ex. 455. As noted earlier, additional measures -- requiring additional expenditures -- could have been taken to expedite compliance. Again, apparently for financial reasons, such expenditures were not authorized.

In sum, the United States respectfully submits that a preponderance of the evidence establishes that Avatar Holdings a sufficiently direct role in causing or directing the violations, and should be held liable for them.[26]

IV. Conclusion

Florida Cities is a sophisticated company which is in a

---

[26] Finally, it bears noting that as far back as 1986 the Avatar Holdings Board of Directors was concerned about potential liability for environmental violations, Levy Testimony, March 28, 1996 at 98, and engaged an environmental lawyer to assist it with the environmental affairs of its utilities. The minutes of the Avatar Holdings Board level suggest that Avatar Holdings' primary concern was not complying with environmental laws, but ensuring that it was sufficiently distanced from the utilities to avoid liability for not complying. Gov. Ex. 48 at 14, Gov. Ex. 353 at 12, Gov. Ex. 356 at 1-5. Avatar Holdings should not be permitted to succeed in that effort.

business heavily regulated by both the State of Florida and the federal government. The utility operations of its parent company, Avatar Holdings, comprised a major component of its business at all times relevant to this law suit. Both companies clearly had the experience, knowledge, and resources to comply with the law. Instead of complying, they chose to flout the law for approximately a decade, arrogating a right to pollute where one clearly does not exist.

Under the rationale set forth in Tyson Foods, Avatar should not have allowed any development at Barefoot Bay while its wastewater plant was in violation of the Clean Water Act, and should have required and authorized Florida Cities to implement the discharge alternative that most immediately resulted in compliance with the Clean Water Act at all three plants.

Applying the section 309(d) penalty factors as required by Tyson Foods leads to the following conclusions: all of the discharge violations were at least moderately serious in that they had the potential to cause environmental harm; Defendants have an extraordinarily long history of Clean Water Act violations at all three plants; Defendants' efforts to comply were sporadic and lacking in either diligence or determination; and each defendant can afford to pay a penalty of at least $7,500,000. There is a limited basis on which the penalty should be mitigated due to the lack of demonstrable extensive environmental harm, the ability to pay, and the asserted lack of net economic benefit.

Tyson Foods speaks in terms of punishment for the sake of deterrence. A substantial penalty will send an important message to those who would pollute the nation's waters. Similarly, the imposition of a substantial civil penalty on Avatar Holdings will send an important message to parent companies that, when they exercise pervasive control over a subsidiary, and particularly a subsidiary's environmental practices, that control should include the mandate that the subsidiary comply with environmental laws and permits. Such messages help curb disrespect both for the law and the environment, and further the goals of the Clean Water Act, as construed in Tyson Foods.

Accordingly, the United States respectfully requests that the Court impose a civil penalty of $4,861,500 on each Defendant for the violations alleged in the Second Amended Complaint.

Respectfully submitted,

Exhibit_____(GHB-85)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' POSTTRIAL PROPOSED FINDINGS OF FACT AND CONCLUSIONS OF LAW

I. PROPOSED FINDINGS OF FACT

Barefoot Bay

A. Violations

1. The NPDES permit violations at the Barefoot Bay plant, which discharges to the Sebastian Creek, were as follows: 182 Total Residual Chlorine ("TRC") violations, Order, 11/22/95 at 16; 8 chronic whole effluent toxicity test violations ("toxicity"), id., Defendant Florida Cities Water Company's Amended Revised Responses to Plaintiff's First and Second Interrogatories [hereinafter "FCWC's Amended Revised Interrogatory Responses"] at 19 (response 26.a); and 79 Biological Oxygen Demand ("BOD") monitoring violations at Barefoot Bay, Order, 11/22/95 at 16.

B. Seriousness of Violations

2. The Sebastian Creek and Indian River are part of the Indian River Lagoon Basin, a protected and sensitive water body, which has been adversely impacted by discharges from wastewater treatment plants. Klingenstein Testimony, March 25,

1996 at 86; Klingenstein Report. at 11; Gov. Exs. 57; Gov. Ex. 249 at 11; See Indian River Lagoon System and Basin Act, 1990 Fla. Sess. Law Serv. 90-262.

3. Toxicity tests measure the potential effect of the effluent on aquatic organisms in the receiving waters, and therefore proivde a means of determining whether the effluent poses a danger to them. Klingenstein Testimony, March 25, 1996 at 83-84. Chlorine, which is used to disinfect the wastewater, can be toxic. Id. at 92.

4. The TRC and toxicity violations had the potential to cause environmental harm, Klingenstein Testimony, March 25, 1996 at 85 (toxicity); 93-94 (TRC); Klingenstein Report at 12, although the BOD monitoring violations did not.

5. The wood stork, an endangered species which inhabits the Barefoot Bay area, would have been susceptible to harm from excessive chlorine ingested by the organisms in the waters receiving the Barefoot Bay discharge. Klingenstein Testimony, March 25, 1994 at 93-94; Gov. Ex. 179.

C. History of Violations

6. The Barefoot Bay treatment plant discharged to the Sebastian Creek without an NPDES permit during the period 1980-1991. Gov. Exs. 30 (Table 1, , 153, 155; FCWC Admission No. 10.

7. The BOD, Fecal Coliform, Total Suspended Solids ("TSS"), pH, and Dissolved Oxygen ("DO") limits of EPA Administrative Order No. 90-106 were violated. FCWC's Amended Revised Interrogatory Responses at 46-49.

8. There is a long history of serious Clean Water Act violations at the Barefoot Bay plant, spanning over a decade, which had the potential of causing environmental harm. Klingenstein Report at 3-6.

D. Efforts to Comply

9. There was an abundance of undeveloped land in the vicinity of the Barefoot Bay plant on which the effluent could have been discharged through additional percolation ponds, spray irrigation, or deep well injection. Klingenstein Testimony, March 25, 1996, at 115-16 (ponds); 116 (spray irrigation); 119 (deep well); See Klingenstein Report at 16-17 and timeline (Gov. Ex. 597/D/1).

10. There was no technological or technical reason why any of those three options could not have been utilized to cease the Barefoot Bay discharge to the Sebastian Creek, id.; Tompkins Testimony (by deposition) at 208-09; and thereby avoid all of the current violations. Klingenstein Testimony, March 25, 1996 at 118.

11. Testimony by Florida Cities' current president (formerly Avatar Utilities vice-president) suggests that the reason those options were not implemented was financial. Allen Testimony, April 4, 1996 at 133-138, 208-09; 219-222.

12. In addition to these options to cease the discharge, Defendants could have constructed an advanced wastewater treatment ("AWT") plant that would meet the Barefoot Bay NPDES permit limits and thereby prevented the TRC and

toxicity violations. Klingenstein Report at 18; Klingenstein Testimony, March 25, 1996 at 93.

13. Florida Cities promised the Florida Department of Environmental Regulation ("FDER") in 1988 that the plant would be upgraded to advanced wastewater treatment standards if a surface water discharge were approved. Gov. Ex. 61.

14. The TRC violations at Barefoot Bay resulted in part from poor operation and maintenance practices, Klingenstein Report at 5-6; these violations ceased after Florida Cities installed a sulphur dioxide unit at the plant. Karleskint Testimony, April 5, 1996, at 82.

15. Florida Cities failed to adequately monitor the performance of its contract laboratory, with the result that it reported the Carbonaceous Biochemical Oxygen Demand ("CBOD") of its effluent instead of the BOD of its effluent. Id. at 24-25.

Carrollwood

A. Violations

16. There was a total of 234 NPDES permit violations at the Carrollwood plant, which discharged to the Sweetwater Creek leading in to Tampa Bay, as follows: Phosphorus (25), CBOD (4), Nitrogen (10), TRC(184), Total Suspended Solids (6) and Fecal Coliform (5). Order, 11/22/95 at 18-19; Gov. Ex. 255.

B. Seriousness

17. In 1979, FDER determined that there should not be any wastewater discharge to the Sweetwater Creek because of concerns about the water quality in Tampa Bay. Smith Testimony,

March 29, 1996, at 197-198.

18. The NPDES permit violations at Carrollwood had the potential to cause environmental harm given the nature of the water bodies they affected and the point of discharge. Klingenstein Testimony, March 25, 1996, at 125; Gov. Ex. 294.

19. The pollutants which accounted for most frequent violations at Carrollwood, chlorine, phosophorous, and nitrogen, all have the potential for negatively impacting water quality, habitat, and fish. Smith Testimony, March 29, 1996, at 111-114.

C. History of Violations

20. The Carrollwood wastewater treatment plant discharged effluent into the Sweetwater Creek on a daily basis without an NPDES permit from November 1, 1984 to June 30, 1991, FCWC Admission No. 24.

21. The discharge from the Carrollwood plant violated federal, state, and local laws and regulations. Defendant Florida Cities Water Company's Amended Revised Responses to Plaintiff's First and Second Interrogatories at 51-57; Tompkins Testimony at 222-23.

D. Efforts to Comply

22. The NPDES permit violations at Carrollwood are attributable to Defendants' failure to cease discharge or build an AWT plant in a timely manner. Klingenstein Testimony, March 25, 1996 at 127; FCWC Amended Revised Interrogatory Answers at 4.

23. The Carrollwood effluent could have been connected to the City of Tampa system, which had capacity for the

Carrollwood effluent from 1983 until 1986, and beginning again in approximately 1988. Schafer Testimony, March 28, 1996, at 9-10. Although connecting to the City of Tampa system would have allowed Florida Cities to cease its discharge into Sweetwater Creek, the company perceived the costs of doing so ($1.5-million) as too high. Good Testimony, April 4, 1996, at 92-94.

24. Florida Cities preferred instead to connect to the Hillsborough County system. Good Testimony, April 4, 1996, at 104-105. At no time prior to 1991, however, did Hillsborough County have the capacity to accept the Carrollwood wastewater into its system for treatment at a sufficiently close plant, and Defendants reach an agreement for the County to accept the wastewater until 1991. McWeeney Testimony, March 29, 1996, at 56, 61; Klingenstein Testimony, March 25, 1996 at 133. It was not until January 1992 that the Carrollwood plant shut down and its wastewater was connected to the Hillsborough County system. McWeeney Testimony, March 29, 1996, at 57-58; Gov. Ex. 341.

25. As early as April 1984, Florida Cities' regional manager had come to the conclusion that Hillsborough County was not a reliable tie-in point for the Carrollwood system, Good Testimony, April 4, 1996, at 97. Any initial obligation imposed by FDER for Carrollwood to connect to the County of Hillsborough's treatment system was terminated when Florida Cities and the County failed to reach an agreement by April 1, 1984 to connect to the County system. Good Testimony, April 4, 1996, at 104. FCWC Ex. 97.

26. Had the Carrollwood plant been connected to the Tampa system, the permit violations for which Florida Cities has been held liable would not have occurred. See Expert Report of Mark Klingenstein at 12.

27. Other disposal options which were technically and technologically feasible would have resulted in the cessation of the discharge to the Sweetwater Creek, and thereby avoided all of the violations. Klingenstein Testimony, March 25, 1996 at 133; Exhibit 268; Gov. Ex. 597/D/2 (timeline). An advanced wastewater treatment plant could also have been constructed, in order to avoid the violations. Klingenstein Report at 13.

Waterway Estates

A. Violations

28. The violations at Waterway Estates, which discharged directly and indirectly to the Caloosahatchee River, were as follows:

--396 days of unpermitted discharges;

--621 days of discharges to an unpermitted location;

--21 Total Nitrogen (TN) permit effluent violations; and

--8 chronic whole effluent toxicity test violations.

Order, 11/22/95 at 2, 19-20, 23-24; See Klingenstein Report at 9; Gov. Exs. 456, 505, 597/C (photos 87, 88, 90).

B. Seriousness of Violations

29. Based on studies conducted by FDER, the water quality of the Caloosahatchee River would be better protected if the Waterway Estates plant discharged to the six-foot contour

line of the River itself instead of to the canal. Klingenstein Testimony, March 25, 1996 at 146; Klingenstein Report at 15; Smith Testimony, April 1, 1996 at 10; Armstrong Testimony, April 1, 1996, at 112. Gov. Exs. 349 (pp. 10, 14); 422.

30. All of the violations at Waterway Estates had the potential to cause environmental harm given the nature of the water bodies and points of discharge. In particular, discharging to the canal instead instead of the River itself was deemed likely to result in "localized impacts" of the pollutant discharges. See id.; Klingenstein Testimony, March 25, 1996 at 149; Klingenstein Report at 14-15.

C. History of Violations

31. Unpermitted discharges from the Waterway Estates plant began in January 1987, when EPA's denial of the plant's NDPES permit renewal application took effect. FCWC Admission No. 31.

D. Efforts to Comply

32. Notwithstanding the absence of an NPDES permit after January 9, 1987, Florida Cities continued to discharge without an NPDES permit, FCWC Admission No. 31, until EPA issued an NPDES permit effective November 1, 1989, which authorized the Waterway Estates plant to discharge directly into the Caloosahatchee River at the six-foot contour line at advanced wastewater treatment levels. Gov. Ex. 399. FCWC Admission No. 33.

33. The Waterway Estates outfall was not relocated to

the six-foot contour line of the River until July 1991. Gov. Ex. 456.

34. North Ft. Myers Utilities ("NFMU"), another privately-owned utility which operates a wastewater treatment plant approximately 5 miles from the Waterway Estates plant, Allen Testimony, April 4, 1996, at 238, and uses spray irrigation and deep well injection to dispose of its effluent without any surface water discharge. Schenkman Testimony, March 27, 1996, at 230. NFMU offered to connect the Waterway Estates wastewater to its plant at a cost of $3.2-million, which NFMU understood to be less than the cost of upgrading the plant and relocating the outfall. Schenkman Testimony, March 27, 1996, at 230-43, Gov. Exs. 362, 385, 397, 408.

35. Defendants chose not to avail themselves of the NFMU and other available options to cease the discharge at Waterway Estates. If they had, none of the Waterway Estates violations at issue here would have occurred. Klingenstein Report at 20-21; Gov. Ex. 597/D/3 (timeline). Alternatively, they could have upgraded the plant and moved the outfall in a timely manner.

36. Capacity was available in the Caloosahatchee River for the Waterway Estates discharge as early as 1983, assuming proper location of the outfall. FCWC Ex. 19.

37. There is no technical or technological reason why Florida Cities, before applying to renew its permit in 1986, could not have applied for a wasteload allocation, moved the

outfall, and upgraded the plant to AWT capability. Klingenstein Testimony, March 25, 1996 at 168.

38. Defendants (and/or their agents) were responsible for significant delays in the construction necessary to upgrade the Waterway Estates plant and relocate its outfall, including the poor choice of a design engineer for the project. Klingenstein Testimony, March 25, 1996, at 164-167; Gov. Ex. 406, 411, 424, 425, 431, 437, 442, 444; Tompkins Testimony (by deposition), January 9, 1995, at 153-54; Lehman Testimony, April 4, 1996, at 101-102.

39. Florida Cities failed to take measures that would have resulted in compliance at an earlier date, Tompkins Testimony at 120, 134-37; 139-43; 144-46, which can be attributed to financial reasons, id. at 149-51, Gov. Ex. 424; Acosta Testimony, March 28, 1996, at 67-68.

B. Avatar Holdings' Liability

40. Avatar Holdings, Inc. is Florida Cities' de facto and ultimate parent company, none of the intermediary corporate entities having any employees. Allen Testimony, April 4, 1996, at 191-93.

41. Avatar Holdings directly and pervasively controls Florida Cities' environmental practices.

42. Five "key players" (Peter Sharp, John Sladkus, Lawrence Wilkov, Dennis Getman, and Robert Gordon), acting on behalf of Avatar Holdings, were personally and pervasively involved in Florida Cities' environmental affairs, relevant

events relating to the three wastewater treatment plants, and the violations at issue.

43. Peter Sharp was Avatar Holdings' Chief Executive Officer, Levy Testimony, March 28, 1996 at 37, 40; Gov. Ex. 518. Lawrence Wilkov was formerly Avatar Holdings' President (and later also its Chief Executive Officer), Levy Testimony at 47-48; Gov. Exs. 526, 551, 591; Dennis Getman is Avatar Holdings' Executive Vice-President/General Counsel, see Gov. Ex. 522 at 2; Robert Gordon is Avatar Utilities' President, Levy Testimony at 63; and John Sladkus was formerly Avatar Holdings Executive Vice-President, Land & Utility Operations, Levy Testimony at 43-46; Gov. Exs. 519, 526.

44. Avatar Holdings' water and wastewater utilities holdings were significant when Peter Sharp and Leon Levy acquired the company in 1980, and these holdings continued to play a large role in Avatar Holdings' business until it sold off the mid-west utilities in 1993 for approximately $60-million. Levy Testimony at 58-59.

45. Barefoot Bay represents both a real estate and utility investment to Avatar Holdings because it finances, markets, and manages the development, as well as provides water and wastewater services to its residents. See Gov. Ex. 51 at 3, 6-11, Gov. Ex. 58 at 8, Gov. Ex. 518 at 7, Gov. Ex. 550, and Gov. Ex. 546 at 5.

46. Cost was a major factor to Avatar Holdings in the consideration of available options to cease the unpermitted

discharges from the Barefoot Bay wastewater treatment plant. See Gov. Exs. 12, 14, 16-17, 22-23, 3-32, 35, 38, 49, 62-632, 66, 88, 104, 109, 112, 119, 121, 126, 184, 191, 235.

47. That only 1,444 of some 5,200 planned lots (the anticipated "buildout" number) had been sold when Avatar Holdings acquired Barefoot Bay and its treatment plant in 1980, see Gov. Ex. 30 at 2 (Table 1), whereas as of December 31, 1990, there were "4,298 ERC's connected to the system with 754 additional vacant lots," Gov. Ex. 162, leads to the conclusion that Avatar Holdings was more concerned during that decade with developing Barefoot Bay than with solving the effluent disposal problem at its wastewater treatment plant.

48. Avatar Holdings officials were aware of the potential for environmental harm caused by effluent disposal in the Barefoot Bay area. Gov. Ex. 57.

49. None of the violations at Barefoot Bay would have occurred had Avatar Holdings been willing to make the investment in any of the available cease discharge alternatives (since an NPDES permit then would not have been necessary) or made an earlier investment to upgrade the plant in a timely manner.

50. Avatar Holdings was aware as of August 6, 1984, that Florida Cities was advised in October 1979 that it would have to stop discharging into the Sweetwater Creek, but that it found the available alternatives unacceptable; that its temporary operating permit was subsequently denied; and that Robert Gordon intended to fight the matter in the courts if necessary. Gov.

Ex. 270.

51. Avatar Holdings endorsed tactics that resulted to in the continuation of the unpermitted discharge into the Sweetwater Creek until Hillsborough County could accept the Carrollwood sewage. Gov. Exs. 280-81.

52. Avatar Holdings was aware on August 14, 1986, of EPA's intent to deny the Waterway Estates permit renewal, and that EPA wanted Florida Cities to either discontinue discharging effluent to a canal which ultimately goes to the Caloosahatchee River or improve the treatment to AWT and seek a wasteload allocation to the Caloosahatchee. Gov. Ex. 358.

53. Avatar Holdings was aware on January 16, 1987, (just seven days after EPA's permit denial took effect at Waterway Estates), that the Waterway Estates plant either needed to apply for a wasteload allocation and upgrade to AWT or connect to North Fort Myers Utilities (NFMU), a neighboring privately-owned wastewater treatment plant. Gov. Ex. 52.

54. Avatar Holdings was aware in June 1987 that EPA had issued an administrative compliance order for the Waterway Estates plant. Gov. Ex. 365.

55. Cost was the primary issue in Avatar Holdings' consideration of the wastewater disposal options at the Waterway Estates plant. Gov. Ex. 369.

56. Peter Sharp issued a mandate requiring that "FCWC's long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the

City's." Gov. Ex. 384.

57. Shutting down the Waterway Estates plant, and connecting the effluent to North Ft. Myers Utilities would have been inconsistent with Sharp's stated objective, which was never countermanded. Levy Testimony, March 28, 1996, at 94, 96.

58. After the decision was made to upgrade the Waterway Estates plant, Sharp demanded assurances "that the entire cost of the upgrade and expansion of this plant will be included as used and useful." Gov. Ex. 400.

59. Avatar Holdings was integrally involved in -- and responsible for -- critical decisions relating to rejection of alternative disposal options and whether and when to upgrade all three plants to advanced wastewater treatment standards, decisions that resulted in, or could have prevented, the violations for which this action has been brought.

C. Ability to Pay

60. Each defendant can afford to pay a penalty in excess of $7.5 million without adverse economic impact. See Expert Report of Eileen Zimmer at 8-11; Testimony of Eileen Zimmer, March 28, 1996, at 196-97.

II. PROPOSED CONCLUSIONS OF LAW

1. The objective of the Clean Water Act is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Section 101(a) of the Clean Water Act, 33 U.S.C. § 1251(a); Gwaltney of Smithfield v. Chesapeake Bay Foundation, 484 U.S. 49, 52 (1987).

2. No one has the right to pollute. S. Rep. No. 414, 92d Cong., 1st Sess. 8 (1971).

3. In determining the appropriate civil penalty to be imposed, the Court is guided by Section 309(d) of the Clean Water Act, 33 U.S.C. § 1319(d), and the holding in Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128 (11th Cir. 1990).

4. In deciding upon the penalty to be assessed against a defendant who has violated its NPDES permit, the point of departure for the district court should be the maximum fines for such violations permitted by the Clean Water Act. Tyson Foods at 1137.

5. In calculating the statutory maximum, "the daily maximum penalty applies separately to each violation of an express limitation," Tyson Foods at 1138, and a monthly limitation violation subjects the violator to a maximum penalty for each day of that month (e.g., $750,000 for a monthly violation in a month with thirty days), Tyson Foods at 1139.

6. In order for Avatar Holdings to be held liable for the violations at issue, it must have acted in such a way that it should be considered a "person who violates" under section 309(d) of the Clean Water Act, 33 U.S.C. 1319(d). See Court's Order, November 22, 1996 at 28-29.

7. Under Jacksonville Electric v. Bernuth, 996 F.2d 1107, 1110 (11th Cir. 1993), involvement in the decisions that resulted in the pollution is alone a "sufficient condition" for the imposition of liability upon a parent of its subsidiary's

business.

8. Under Bernuth, parent company liability may also be predicated on actual and pervasive control demonstrated by actual involvement in daily operations, but such control should not be construed to mean that the parent has to interact on a daily basis with the subsidiary or, for that matter, that the actual involvement need related to all aspects of the subsidiary's operations. See also, United States v. Fleet Factors Corp., 901 F.2d 1550 (11th Cir. 1990), cert. denied, 498 U.S. 1046 (1991).

9. Through its officers, Avatar Holdings not only was actually involved in critical decisions directly relating to the proven violations, but caused or directed the violations through actions and inactions which resulted in the continuation of unlawful discharges and the failure to timely construct advanced wastewater treatment facilities at each of the three plants.

10. Avatar Holdings is liable for the all of the violations for which Florida Cities has been found liable (with the exception of violations occurring on or before May 1, 1990) because Avatar Holdings caused or directed those violations within the meaning of the Clean Water Act.

11. Defendants are liable for a total of 264 separate days of violation at the Barefoot Bay facility, 588 separate days of violation at the Carrollwood facility,[1] and 1281 separate

---

[1] Under Tyson Foods, because some of the NPDES violations were of monthly limitations, defendants are liable for: (a) 92 separate days of violation for Total Suspended Solids (TSS); (b) 153 separate days of violation for Total Phosphorus (TP); (c) five (5) separate days of violation for Fecal Coliform (FC);

days of violation at the Waterway Estates facility, for a total statutory maximum penalty of $53,325,000.[2]

12. The purposes of a civil penalty are restitution, deterrence, and retribution. Tull v. United States, 481 U.S. 412, 422-25.

13. Under the Clean Water Act, the United States need not show actual environmental harm to demonstrate that the violations were serious. See Public Interest Research Group of New Jersey, Inc. v. Powell Duffryn Terminal, Inc., 913 F.2d 64, 79 (3rd Cir. 1990), cert. denied, 111 S. Ct. 1018 (1990); Chesapeake Bay Foundation v. Gwaltney of Smithfield, 611 Supp. 1542, 1560, 64 (E.D. Va. 1985), aff'd, 791 F.2d 304 (4th Cir. 1986), cert. denied, 479 U.S. 1029 (1987).

14. Defendants bear the burden of proving mitigating circumstances sufficient to reduce the maximum penalty.

15. Defendants are not entitled to mitigation of the statutory maximum penalty based on the history of the violations, or good faith efforts to comply.

16. The seriousness of the violations, as well as Defendants' asserted lack of economic benefit derived from the violations and the economic impact of the penalty on the

---

(d) 122 separate days of violation for Total Nitrogen (TN);
(e) 32 separate days of violation for failures to properly monitor for Carbonaceous Biological Oxygen Demand (CBOD); and,
(f) 184 separate days of violation for Total Residual Chlorine.

[2] Under Tyson Foods, because the Total Nitrogen (TN) violations were of monthly limitations, defendants are liable for 261 separate days of violation.

violators, provide a limited basis for mitigation of the penalty.

17. In accordance with Section 309(d) of the Clean Water Act, each defendant shall pay a civil penalty of $4,819,500 to the United States Treasury.

DATED: June 5, 1996

Respectfully submitted,

LOIS J. SCHIFFER
Assistant Attorney General
Environment and Natural Resources Division
U.S. Department of Justice

INTRODUCTION

Defendant Florida Cities Water Company ("Florida Cities") hereby submits its post-trial brief, proposed findings of fact, and proposed conclusions of law. The mitigation evidence which Florida Cities presented at trial demonstrates that none of Florida Cities' actions resulted in serious violations of the Clean Water Act ("CWA"), that none of these violations caused any environmental harm or placed the state of Florida's surface waters at risk, that Florida Cities did not profit from any non-compliance with the CWA, and that Florida Cities at all times cooperated in good faith with the Environmental Protection Agency ("EPA") and the Florida Department of Environmental Protection ("FDEP"). Moreover, more than one-third of the violations at issue (those relating to discharge without a permit at Waterway Estates and total residual chlorine at Barefoot Bay) would not have occurred but for EPA's own mistakes or omissions. Indeed, the amendments to the Complaint to add two more facilities to Plaintiff's initial action in this case occurred not in the timely course of EPA's enforcement, but in an apparent effort in this litigation to prop up a case that had proven weak. In sum, the evidence presented at trial establishes that any penalty assessed by this Court for the violations at issue should be de minimis, no more than $48,000.

STATEMENT OF THE LAW

Congress has set forth a specific procedure to determine the amount of any civil judicial penalty assessed under the CWA. As articulated in Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc.:

> [The Court] should first determine the maximum fine for which [a defendant] may be held liable. If it chooses not to impose the maximum, it must reduce the fine in accordance with the factors spelled out in section 1319(d), clearly indicating the weight it gives each of the factors in the statute and the factual findings that support its conclusions.

897 F.2d 1128, 1142 (11th Cir. 1990).

Section 1319(d) (CWA § 309(d)) sets forth the following six factors which the Court shall consider in determining an appropriate penalty:

a) the seriousness of the violation or violations;
b) the economic benefit (if any) resulting from the violation;
c) any history of such violations;
d) any good-faith efforts to comply with the applicable requirements;
e) the economic impact of the penalty on the violator;
f) and such other factors as justice may require.

Thus, the amount of the penalty, pursuant to CWA section 1319(d), is within the discretion of the trial court. Id.; Hawaii's Thousand Friends v. City and County of Honolulu, 821 F. Supp. 1368 (D. Haw. 1993). As discussed more fully below, applying each of these factors to the violations at issue establishes that Florida Cities should be subject to only a de minimis fine, which should not exceed $48,000.

This trial concerned events at three Florida wastewater treatment plants ("WWTPs") owned and operated by Florida Cities: Waterway Estates (near Fort Myers), Carrollwood (near Tampa), and Barefoot Bay (near Sebastian). See Florida Cities' attached Proposed Findings of Fact ("FoF") 4, 20, 29.

WATERWAY ESTATES

A) Discharge Without a Permit

The evidence presented at trial demonstrated that Waterway Estates operated without an NPDES permit due to EPA's mistake in improperly denying the facility's 1986 permit renewal. FoF 5, 6. Throughout the period in question, Waterway Estates was at all times under the regulatory supervision of both EPA and FDEP and was discharging effluent in full compliance with the limitations established by each of these agencies. FoF 4, 7, 13, 14, 16. Florida Cities

cooperated fully in timely constructing a new advanced wastewater treatment ("AWT") facility and in timely moving the outfall to a new approved location. In addition, Florida Cities explored in good faith other alternatives, none of which, after careful examination, proved feasible.

1) Seriousness of the Violations

At trial, Plaintiff stipulated that it had no evidence of harm to public health or the environment as a result of any discharge from Waterway Estates. FoF 1. This acknowledged lack of environmental damage significantly mitigates the seriousness of the violations when calculating penalties.[1] Additionally, Plaintiff has presented no credible evidence of any potential environmental harm that might have resulted from the discharge without a permit. Rather, the evidence at trial demonstrated the absence of any risk of harm, as described below.

First, Randall Armstrong, Florida Cities' expert on water quality, testified that he reviewed the available data on the water quality of the Caloosahatchee River and concluded that there were no data indicating that the water quality in the river had deteriorated between 1980 and 1991. Additionally, Douglas Smith, a nationally recognized wastewater engineer, testified that the total effluent from all of the regulated dischargers into the lower Caloosahatchee River (of which Waterway Estates' discharge constituted only about 10%) at no time ever threatened to exceed the assimilative capacity of the river.

Second, EPA issued two administrative orders that authorized Florida Cities to continue to discharge secondarily treated effluent from Waterway Estates between January 1987 and October 1991. FoF 7, 14. EPA could have placed more stringent limitations on the effluent

---

[1] Atlantic States Legal Foundation v. Universal Tool & Stamping Co., Inc., 786 F.Supp. 743 (N.D. Ind. 1992); United States v. Roll Coater, Inc., 1991 U.S. Dist. LEXIS 8790.

had the Agency been concerned about water quality. However, both of these administrative orders mandated that Waterway Estates continue to meet the effluent limitations contained in its previous NPDES permit issued in 1981. FoF 7, 14. EPA never sought to enjoin Florida Cities from discharging secondarily treated effluent from Waterway Estates, nor did it even require Florida Cities to reduce the volume of its discharge. Plaintiff presented no evidence at trial indicating that EPA had any concerns regarding potential risk of harm to the environment or public health from the continuing secondarily treated discharges from Waterway Estates during the construction period.

Moreover, the secondary discharge from Waterway Estates was continuously authorized at all relevant times both by EPA administrative orders and by FDEP permits and consent orders, all of which contained strict effluent limitations. FoF 4, 7, 13, 14, 16. At trial, the responsible FDEP officials, Dr. Abdul Ahmadi (Administrator of Water Facilities, FDEP South District) and Ronald Blackburn (District Manager, FDEP South District) testified that FDEP has no evidence that the relatively small outflow of treated effluent discharged from Waterway Estates had any impact on the water quality of the Caloosahatchee River. Apr. 5, Tr. 146-148. Also, there was no discernible improvement in water quality once Waterway Estates upgraded to AWT and moved its outfall farther into the river. In sum, the water quality of the Caloosahatchee River was neither threatened nor impacted in any discernible way by any effluent discharges from Waterway Estates.

Plaintiff's only evidence regarding risk of harm from these violations is the unsupported opinion testimony of Mark Klingenstein based on his review of documents selected by Plaintiff's attorneys. Mr. Klingenstein's opinion regarding the seriousness of the violations is unreliable for two reasons. First, the majority of his opinion regarding this group of violations is based on

his misunderstanding of Plaintiff's exhibits 349 (the 1981 waste load allocation ("WLA") study) and 422 (the 1990 follow-up to the 1981 WLA study). Mr. Klingenstein mistakenly concluded that these two studies demonstrate that discharges from Waterway Estates had a negative impact upon the canal and the Caloosahatchee River and that these two documents establish that Florida Cities should have upgraded to AWT and moved the plant outfall in the early 1980s. Mar. 25, Tr. 143-148. However, on cross-examination Mr. Klingenstein acknowledged that the 1981 and 1990 studies were based not upon any actual data, but rather on computer modeling. Mar. 27, Tr. 22. Significantly, these computer models were based upon assumed scenarios which, in fact, never occurred between 1980 and 1991. Id. at 33. Mr. Klingenstein admitted that he had seen no actual data supporting any opinions regarding risk of harm from Waterway Estates' secondarily treated effluent but, had relied upon his own mistaken understanding of the two computer modeling studies. Id.

Second, Mr. Klingenstein assumes that the 1981 study put Florida Cities on notice that it had no wasteload allocation for Waterway Estates and that the plant would have to cease discharge. Mr. Klingenstein's assumption is wrong, as demonstrated by the evidence presented at trial. As noted above, Mr. Armstrong and Dr. Ahmadi testified that the 1981 study was merely a planning document, not a binding wasteload allocation.

2) Economic Benefit

This Court has held, in its March 25, 1996 Order, that the CWA's economic benefit factor means avoided or delayed costs from noncompliance. There are no such avoided costs here. The rates charged for treatment of wastewater by Florida Cities are regulated by the Florida Public Service Commission ("PSC") or in certain jurisdictions within Florida, by the county equivalent of the PSC. For a publicly regulated utility to obtain any return on its capital

investments, the cost of these investments must be included in the utility's rate base. Any change in the rate base must be approved by the PSC, which insures that Florida Cities's revenue and profit level are reasonable. Apr. 4, Tr. 122. The PSC rate approval process mandates that any capital expenditure to be included in the utility's rate base must be reasonable and prudent. Until a capital improvement is approved by the PSC as "used and useful," a utility cannot include the cost of the capital improvement in the company's rate base and thereby benefit economically. FoF 40, 41. Therefore, under PSC regulation, Florida Cities can realize an economic benefit only from investing, not from deferring investment.

The PSC's regulation of Florida Cities' rates and profit margins sharply distinguishes this case from CWA cases involving private manufacturing or other industrial dischargers. Only such non-PSC-regulated dischargers can receive the economic benefit of greater profits from non-compliance with the CWA by delaying expenditure of capital or other costs of compliance.[2] In contrast, a regulated utility such as Florida Cities realizes a return on its investment only when the costs of improvements are included in the utility's rate base. Under this arrangement, a privately owned, publicly regulated utility such as Florida Cities has no incentive to delay expenditures for environmental compliance. Unlike the majority of the private sector, a regulated utility is guaranteed a return on its investment in environmental compliance, but it must demonstrate to the PSC that its expenditures were reasonable and prudent.

In the present case, Florida Cities demonstrated that it did not receive any economic benefit as a result of discharging without an NPDES permit. FoF 41. The evidence presented

---

2 See also Hughey v. JMS Development Corporation, 78 F.3d 1523 (11th Cir. 1996) (where private land development firm did not benefit when it demonstrated factual impossibility of eliminating discharge and compliance with state/local pollution standards).

demonstrated that Florida Cities had no warning that it would lose its permit in 1986. During the 1987-1989 period at issue, Waterway Estates continued to discharge pursuant to the same effluent limitations and operated the plant in the same manner required by its 1981 NPDES permit. FoF 7. When it received its 1989 NPDES permit and accompanying administrative order, the facility was allowed to discharge at the same treatment levels required by the previous permit. FoF 14,15. Because it could not include any costs of upgrading to AWT until these costs were included in the rate base, Florida Cities did not benefit from discharging without a permit.

3) History of Violations

There is no history of violations at the Waterway Estates facility which would support the imposition of any penalties. EPA's denial of Florida Cities' 1986 renewal application was based solely on EPA's misinterpretation of the 1981 WLA planning document, not on any history of violations. FoF 5, 6. Additionally, the DMRs for Waterway Estates demonstrate that the facility consistently met or exceeded its treatment requirements. Waterway Estates was always within the regulatory framework of both EPA's NPDES program and FDEP's stringent regulatory program. Florida Cities submitted monthly DMRs to EPA and worked closely with EPA and FDEP during all relevant periods.

4) Good Faith Efforts To Comply with the Regulations

Once Florida Cities received the denial of its 1986 renewal application, it immediately began working with EPA and FDEP in an attempt to find alternatives to discharging. FoF 8, 9, 10. Florida Cities' hired a technical consultant, Environmental Sciences Engineering ("ESE") to evaluate alternatives. As soon as ESE recommended that Florida Cities upgrade the plant to AWT, Florida Cities began the process to design the plant modifications. FoF 9, 10. Both Dr.

Ahmadi, the FDEP official who directly oversaw the permitting of the plant, and Douglas Smith testified that the design and construction of the plant occurred in a reasonable period of time, given the numerous and extensive delays caused by various regulatory agencies. FoF 12, 17.

5) Economic Impact of a Penalty upon Florida Cities

At trial Florida Cities demonstrated that the company does not have the ability to pay a large penalty. As noted above, Florida Cities' rates, profit margin, and rate of return are regulated by the PSC. FoF 40, 41. Over the last several years the company has expended large amounts of capital to upgrade several of its facilities to AWT status. Until these improvements are completed, the costs cannot be included in the rate base. The cost of carrying these long-term capital improvements has placed a significant drain on the company's financial resources. FoF 42. Even Plaintiff's financial expert witness, Eileen Zimmer, acknowledged that Florida Cities had a negative net income for the last several years. FoF 42. Ms. Zimmer suggested that the company could borrow the money to pay a large penalty. However, she acknowledged that the only source likely to loan money for this purpose would be its parent, Avatar Holdings Inc. ("Avatar Holdings"), who Zimmer admitted had lost money in each of the last five years. This evidence demonstrates that Florida Cities is unable to withstand a large penalty.

6) Other Factors which Justice May Require

The evidence presented at trial demonstrates that Ms. Kagey's mistaken belief, that FDEP had taken away Waterway Estates' wasteload allocation, was the genesis of this lawsuit. At all relevant times, Waterway Estates had a wasteload allocation to discharge secondarily treated effluent into the canal. Plaintiff now seeks to penalize Florida Cities for discharge without the permit that EPA itself wrongfully refused to renew. EPA never sought to enjoin discharges from the Waterway Estates facility, and was willing to allow continued discharge at

secondary treatment levels between January 1987 and October 1991. In light of these facts, EPA's claim that these discharges were serious violations is without merit.

B) Discharge to an Unpermitted Location

When Waterway Estates was constructed, the plant's outfall discharged to a tidally influenced canal adjacent to the Caloosahatchee River. This outfall was approved as the discharge point in both the 1975 and 1981 NPDES permits and the 1981, 1983, and 1988 FDEP permits. During the 1980s, FDEP began to require facilities which were discharging into the Caloosahatchee River and which were also seeking to expand their capacity to move their outfalls to the middle of the river. However, until Waterway Estates received its September 1988 FDEP permit, no government agency ever required that the outfall should be moved. Apr. 5, Tr. 148.

EPA issued administrative order ("AO") 89-109 on September 26, 1989. FoF 14. It authorized Florida Cities to continue to discharge into the canal until the outfall was relocated. It set a construction schedule mandating that the plant outfall must be operating at the six-foot contour line by August 1, 1991. FoF 14. Despite construction delays caused by unexpected problems with rock in the river bottom, the outfall was in place and operating on July 14, 1991, over two weeks ahead of the construction schedule contained in AO 89-109, and over one year ahead of the state construction schedule. FoF 18. Now Plaintiff seeks to recover penalties for discharge into the canal during the time in which compliance with the permit was physically impossible even when the permit was issued. Applying the CWA's six mitigation factors demonstrates that, at best, the Court should assess a minimal penalty.

1) Seriousness of the Violation

These violations are extremely minor. Mar. 27, Tr. 91. The 1989 NPDES permit, along with AO 89-109, contained the first EPA requirement for Florida Cities to move the outfall. As noted above, AO 89-109 contained a construction schedule for the outfall's relocation. EPA, which had full control over the contents of the AO, never raised any concerns about the length of the construction schedule and was aware that Florida Cities completed, ahead of the construction schedule's deadline, the extension of the outfall to change the discharge location.

At trial, Plaintiff attempted to establish that Florida Cities should have been on notice through the 1981 WLA study to move the outfall prior to receiving the 1988 FDEP permit. This theory is belied by the facility's 1981 NPDES permit, the 1981 and 1983 FDEP permits, the various joint inspection reports of EPA and FDEP, and the testimony of Ronald Blackburn and Abdul Ahmadi, all of which indicate that Waterway Estates was authorized to discharge secondarily treated effluent into the canal during the 1980s.

2) Economic Benefit Caused by Non-compliance

At trial, Florida Cities demonstrated that it gained no economic benefit from these violations. As Keith Cardey, Florida Cities' expert in economic impacts of PSC regulation, testified, the company could not benefit from any avoided costs by delaying construction, because the company can only earn a return on facilities that have been placed in the rate base. FoF 41. While there was technical non-compliance with the permit's implied discharge location, the company was discharging in accordance with EPA AO 89-109. Once the company received all the necessary government permits, it immediately sought to begin construction of the new outfall. As noted above, Florida Cities exceeded EPA's construction schedule, placing

the new outfall in service over two weeks ahead of schedule. FoF 18. Because Florida Cities met the requirements of AO 89-109, it did not delay compliance or receive economic benefit.

3) History of Violations, and 4) Good Faith Efforts To Comply with Regulations

Florida Cities does not have a history of such violations at this facility. The first requirement to move the outfall was contained in the 1989 NPDES permit. Even Mr. Klingenstein acknowledged that immediate compliance with the 1989 NPDES permit was impossible. Both the 1975 and 1981 NPDES permits, as well as the FDEP discharge permits during this period, allowed the facility to discharge into the drainage canal. FoF 4 When it granted the 1989 permit, EPA was aware that the outfall must be moved from the drainage canal to the six-foot contour line and provided a corresponding construction schedule, which was met by Florida Cities. This effort demonstrates Florida Cities' good faith.

C. **Permit Exceedances**

Waterway Estates' 1989 NPDES permit contained effluent limits for treatment at AWT levels, including limits on nitrogen. FoF 15. Between August 1991 and April 1992, Waterway Estates was able to meet its permit limits for all other parameters contained in the permit. However, because the final plant upgrade had not been completed, Florida Cities was unable to meet the nitrogen limitations. The company did lower the levels of nitrogen in the effluent by adding temporary equipment to the treatment process as an interim treatment method. FoF 19. The excess nitrogen in the effluent resulted in nitrogen violations as well as toxicity test failures.

1) Seriousness of the violations

a) Nitrogen violations

The evidence presented at trial established that both the nitrogen violations and the toxicity test failures were minor violations. Douglas Smith testified that the nitrogen effluent violations had no measurable impact on the river. Mar. 29, Tr. 170. Plaintiff stipulated that it had no evidence of environmental harm from these violations. Plaintiff's only evidence addressed the risk of harm. Mr. Klingenstein testified that the Waterway Estates nitrogen permit exceedances, which occurred between August 1991 and April 1992, were "serious" violations because the Caloosahatchee River is a "threatened" river. However, Mr. Klingenstein offered no evidence regarding how the river was placed at higher risk by these exceedances.

In contrast to Mr. Klingenstein's unsubstantiated testimony, Douglas Smith testified that these nitrogen exceedances were well within the river's assimilative capacity for nitrogen. Mr. Smith and Mr. Armstrong reviewed data regarding the health of the river and found no indication that the river had been harmed by these discharges and no increases in algae concentrations which would threaten the health of the river. Dr. Ahmadi testified that these discharges did not violate the state's water quality standards. During this period Florida Cities was discharging in accordance with FDEP's interim effluent limits, which were not scheduled to change until September 1992. FoF 16. It is important to note that EPA was willing to allow nitrogen discharges at secondary levels from 1987 until October 1991 and FDEP was willing to allow these discharges until September 1992. Apr. 5, Tr. 147. Had either of these agencies been concerned about the increased risk of harm, they could have demanded lower effluent

levels at any time. The evidence at trial demonstrated that these nitrogen exceedances were minor violations of the CWA.

b) Toxicity violations

Under the 1989 NPDES permit, Florida Cities was required to perform toxicity tests on the Waterway Estates effluent. Toxicity tests involve subjecting one of several species of fragile, aquatic organisms (such as water fleas or fat head minnows) to 100% plant effluent in a laboratory setting. These animals are particularly sensitive to ammonia in the effluent. Toxicity tests are conducted in a laboratory to determine the impact in the laboratory of 100% effluent on sensitive test organisms, not actual toxic impacts in the receiving waters. Once the effluent was discharged, any negative effects would immediately dissipate in the canal. Mar. 29, Tr. 143.

In the present case, both Plaintiff and Florida Cities agree that these exceedances were caused by the nitrogen levels in the effluent. Mr. Klingenstein opined that these exceedances were serious, but he provided no explanation or data to support this opinion. In contrast, Mr. Smith explained the nature of the toxicity test, the fact that the test addresses laboratory conditions, not actual conditions in the river, and that the effluent would have had a non-measurable impact on the river. Waterway Estates had been discharging secondarily treated effluent into the river for at least fifteen years prior to the start of toxicity testing with no negative impact on the Caloosahatchee River. As noted previously, between September 1991 and April 1992, Florida Cities was able to reduce the level of nitrogen (and hence ammonia) in the effluent through temporary measures. FoF 19. Once the complete nitrogen process was in place, the toxicity failures ceased. The evidence presented at trial demonstrated that these toxicity violations were, at most, minor violations for which this court should assess a de minimis penalty.

2) Economic Benefit Caused by Noncompliance and 3) History of Such Violations

There was no economic benefit caused by these effluent limitation violations, nor was there any history of such violations at Waterway Estates.

4) Good Faith Efforts To Comply with the Regulations

Plaintiff also argued that Florida Cities could have chosen other options, such as connection with the North Fort Myers Utilities plant, deep well injection, percolation ponds, or spray irrigation, all of which would have avoided any discharges into the river. In fact, Florida Cities explored all of these options before choosing to pursue an upgrade to AWT. FoF 8. The testimony at trial established that connecting with the North Fort Myers Utility would have been the most expensive option for Florida Cities' customers, and this alternative probably would not have been approved by the PSC. FoF 10. Florida Cities hired ESE in 1987 to explore these other options. FoF 9. ESE found that sufficient land not available for percolation ponds or spray fields, no readily available golf courses or agricultural land available for spray irrigation, and serious concerns about the long-term viability of deep well injection systems. Mr. Klingenstein made no independent effort to establish whether any of these options were viable, but instead merely argued that these were options which the company did not pursue vigorously. It is important to note that the PSC reviewed the company's actions and found that Florida Cities acted prudently in choosing to upgrade the Waterway Estates plant. Apr. 4, Tr. 126.

Mr. Klingenstein also argued that Florida Cities took too long to design, permit, and construct the AWT upgrade. However, on cross-examination, Mr. Klingenstein acknowledged that he has no experience designing wastewater treatment plants for a privately owned, publicly regulated utility. He has no experience in obtaining permits for such a facility. He has no experience in obtaining permits from Lee County, from the various water management districts,

or from FDEP. In contrast, Mr. Smith, who has vast experience in all of the above areas, testified that Florida Cities acted in a timely fashion considering the regulatory delays from local, regional, state, and federal agencies.[3/] The upgrade was completed six months ahead of the FDEP construction schedule. FoF 18. Dr. Ahmadi, who oversaw the upgrade on behalf of FDEP, testified that given the construction delays it faced, Florida Cities completed the upgrade in a timely manner.

CARROLLWOOD

A) Permit Exceedances

Florida Cities' Carrollwood wastewater treatment plant, located in Hillsborough County, at all times relevant to Plaintiff's Complaint discharged effluent in compliance with secondary standards, and actually achieved the more stringent AWT standards for two pollutants -- biochemical oxygen demand ("BOD") and total suspended solids ("TSS ") -- before the facility was taken out of service. FoF 20. The permit exceedances were solely the result of having an AWT permit for a secondary facility during this short period.

As discussed below, application of the CWA's mitigation factors demonstrate that a de minimis penalty is appropriate.

1) Seriousness of the Violations

As with the other violations at issue, EPA admits that it has no evidence of environmental harm from these violations. FoF 1. Plaintiff's only evidence regarding risk of harm was Mr. Klingenstein's opinion, unsupported by any evidence, that Sweetwater Creek and

---

3Hughey v. JMS Development Corp., 78 F.3d 1523, 1530 (11th Cir. 1996). See United States v. Ohio Edison Co., 725 F.Supp. 928, 933 (N.D. Ohio 1989) (good faith adherence to government directives and a lack of effective communication between federal and state government mitigates the penalty).

Tampa Bay were potentially seriously impacted by these discharges. Mr. Smith testified that the Carrollwood plant was providing better than secondary treatment during the period in question. While it was physically impossible for the effluent to meet AWT treatment levels consistently, the plant was able to meet some of its AWT parameters. Mr. Smith testified that these discharges would have had a minimal negative impact on the receiving waters and that any impact would not have been measurable. Mar. 29, Tr. 152.

Significantly, these are violations of the AWT standards in the new AWT permit, not violations of the secondary standards in AO 90-100. Although the plant was able to meet the AWT treatment limits in some instances, in general it could not meet these levels consistently. FoF 25, 26. Had EPA, FDEP, or the Hillsborough County Environmental Protection Commission been concerned about any increased risk of harm from these discharges, any of these agencies could have imposed more stringent effluent limitations. However, from July 1990 through January 6, 1992, all of these agencies continued to authorize Carrollwood to discharge secondarily treated effluent into Sweetwater Creek, which demonstrates that these regulatory agencies saw no risk of harm from the discharges.

2) Economic Benefit

Florida Cities respectfully refers the Court to its discussion of economic benefit contained in the Waterway Estates section, which addresses regulated private utilities and rate base issues. Additionally, at trial Florida Cities established that it spent hundreds of thousands of dollars seeking alternatives to discharge at Carrollwood, money that it will never be able to recover through the rate base. These costs include the various water quality studies, the design costs for the proposed AWT plant, and other engineering costs for these alternatives. Thus, not only did Florida Cities fail to benefit from noncompliance, but it actually lost money in its

vigorous efforts to respond to the regulatory dilemma created not by Florida Cities, but by the complex interactions of the federal, state, and local agencies.

3) History of Violations

There is no history of violations of AWT standards at the Carrollwood facility prior to the issuance of the AWT NPDES permit for the secondary treatment facility in 1991.

4) Good Faith Efforts To Comply with the Regulations

Florida Cities made good faith efforts to comply with the requirements of its NPDES permit and was able to meet the effluent limitations on some occasions. Temporary measures are evidence of good faith.[4] Moreover, Florida Cities complied at all times with the requirements of AO 90-100, which EPA kept active during the time in which the secondary treatment facility could not possibly meet the new permit's AWT limits. FoF 26, 27. EPA kept AO 90-100 in effect until March 6, 1992, when it informed Florida Cities that the company had fully complied with the administrative order and that the Agency was "inactivating" the order. FoF 27.

5) Economic Impact of a Penalty upon Florida Cities

Florida Cities respectfully refers the Court to the discussion of this factor contained in the Waterway Estates section of this brief.

6) Other Factors which Justice may Require

The testimony regarding Carrollwood demonstrates that Florida Cities made every effort to resolve issues resulting from the discharge. As noted above, the actual NPDES violations were for a level of treatment beyond the physical capacity of the plant. FoF 25. No

---

[4]Roll Coater, U.S. Dist LEXIS at 22; Universal Tool & Stamping, 786 F.Supp. at 753.

environmental harm occurred, and the plant was taken out of service six months after the NPDES permit was granted. Significantly, Plaintiff raised these violations for the first time only when it amended the Complaint in 1995 and now seeks to recover millions of dollars in penalties. The evidence demonstrates that any penalty assessed should be de minimis.

BAREFOOT BAY

The total residual chlorine ("TRC"), BOD, and toxicity violations at Barefoot Bay are minor for a number of reasons and deserve de minimis penalties.

1) Seriousness of the Violations

Most of the TRC violations at Barefoot Bay would not have occurred but for EPA's failure to inform Florida Cities of EPA's policy for filling out monthly Discharge Monitoring Reports ("DMRs"). As with all other violations at issue, Plaintiff stipulated that it has no evidence of environmental harm which occurred from the violations at Barefoot Bay. Additionally, Plaintiff has presented no credible evidence of any risk of harm that might have resulted from the discharges at Barefoot Bay.

a) TRC Violations

The TRC violations are in fact false alarms resulting from EPA's failure to provide instructions regarding how to report extremely low levels of chlorine. These false alarms do not indicate excess chlorine in the effluent. Beginning in September 1992 the Barefoot Bay plant replaced its old DPD colorimeter with a new DPD colorimeter. Although the DPD colorimeter is approved in the Code of Federal Regulations and specifically allowed in the NPDES permit by EPA, the method is not accurate at levels below 0.2 milligrams per liter (mg/l). FoF 33. Indeed, in its own guidance, EPA recognizes the fact that the DPD colorimeter is inaccurate below 0.2 mg/l. FoF 34. Thus, compliance with the NPDES permit's limit of 0.01 mg/l could

not physically be determined with accuracy by the very test method EPA had approved. To address this inconsistency, EPA developed guidance instructing the discharger in these circumstances to report any measurements at or below 0.1 mg/l as "Not detectable" FoF 34. Thus, measurements using the DPD colorimetric method at or below 0.1 mg/l could have been properly reported as "ND" and been in full compliance with the NPDES permit limit of 0.01 mg/l. Significantly, during the period of time at issue (between September 1992 and April 1993), Barefoot Bay's measured values using this test method were at or below 0.1 mg/l. Had Florida Cities been informed by the EPA regulators of the reporting guidance, this guidance would have rendered these TRC "violations" as full compliance with the permit. However, EPA never communicated to Florida Cities this critical information regarding how to report such low readings. Had Florida Cities known of EPA's guidance on this issue, it would have reported "Not detectable" on its DMRs, and the TRC violations would not be before this Court. The fact that Barefoot Bay could have reported "Not detectable" and been in compliance with its permit and the CWA demonstrates the minimal nature of these violations. Indeed, Florida Cities' Operations Manager, Julie Karleskint, performed subsequent tests which demonstrated that the DPD method found false positive readings for chlorine in water known to be chlorine free.

b) BOD/CBOD violations

At trial Plaintiff acknowledged that the BOD/CBOD violations are not serious violations. The FDEP had required Florida Cities to report CBOD instead of BOD. The laboratory hired by Barefoot Bay measured CBOD, but mistakenly reported the results as "BOD." Ms. Karleskint testified that when Florida Cities discovered this error it asked the laboratory to report both measurements. After the mistaken reporting came to light, Barefoot Bay applied for

a modification to its permit to report CBOD instead of BOD, as FDEP required. FoF 36. EPA granted this modification in March 1994, thus recognizing that the CBOD numbers reported all along by Barefoot Bay were indeed the appropriate parameter for this facility.

There was no environmental harm from these violations. FoF 1. Mr. Smith testified that CBOD test results may be easily extrapolated to BOD values. FoF 37. Mr. Smith performed such a conversion and established that none of the CBOD data would have been a violation of BOD effluent limitations. FoF 37. Thus, these reporting errors were minor violations.

Plaintiff's principal argument regarding Barefoot Bay is that Florida Cities should have implemented other options to discharge. However, as with the other facilities at issue, Plaintiff presented no evidence to support this contention. Mr. Klingenstein conducted no independent analysis of any alternatives to demonstrate that Florida Cities should have chosen an alternative. The evidence demonstrated that Florida Cities explored a number of alternatives to discharge, including building additional percolation ponds, deep well injection systems, and various forms of spray irrigation. FoF 38. In each instance, Florida Cities was faced with conflicting regulatory requirements, local opposition, or property owners who would not sell land on commercially reasonable terms. At the end of this process FDEP agreed that these options were not viable and that surface water discharge was the best option.

c) Chronic Toxicity

Likewise, the chronic toxicity violations are not serious. The chronic toxicity failures frequently occur as a result of nitrogen present in the effluent. Barefoot Bay's secondary treatment facility was not designed to remove any nitrogen, nor did EPA include nitrogen limits in the facility's NPDES permit. Thus, there is an inherent inconsistency between allowing

nitrogen in the effluent, but limiting the consequent toxicity. However, Mr. Smith testified that any excess ammonia in the effluent would have no measurable impact upon the receiving waters. Mar. 29, Tr. 146.

2) Economic Benefit

Florida Cities received no economic benefit as a result of the violations at Barefoot Bay for the same reasons stated previously.

3) History of Violations

There is no history of violations for TRC, toxicity, or misreporting of CBOD measurements at Barefoot Bay. Barefoot Bay has paid penalties to EPA for discharge without a permit. In assessing this penalty, EPA indicated that the discharges had not caused any environmental harm and would have been in compliance with an NPDES permit, had one been in effect. The enforcement staff of EPA Region IV noted in its enforcement file that Florida Cities had been very cooperative with both EPA and FDEP in attempting to resolve the discharge issue.

At all times since the mid-1980's, the Barefoot Bay plant has had authority from the State of Florida to discharge pollutants to the agricultural drainage canal. FoF 30. The state has required Barefoot Bay to investigate many options to cease the discharge, and Florida Cities has complied with those requirements. FoF 38. However, no discharge option has proven feasible. FoF 39.

4) Good Faith Efforts to Comply with the Regulations

Florida Cities has constructed an AWT facility at Barefoot Bay until the planned cessation of discharge through total reuse occurs by the required date of 1997. FoF 39. Florida Cities has always dealt in good faith to comply with the CWA. For example, upon discovery of

APPROPRIATE PENALTY UNDER THE CLEAN WATER ACT

A de minimis penalty for the violations in this case is appropriate, given judicial precedent and Plaintiff's own prior determinations regarding appropriate penalties for similar violations from these same facilities. Trial courts have broad discretion when deciding the appropriate civil penalty amount in Clean Water Act enforcement actions.[5/] Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1395 (D. Haw. 1993) is particularly instructive. There, the court found the City of Honolulu liable for 9,870 treatment violations and 104 bypass and reporting violations of the NPDES permit at defendant's WWTP, which (in contrast to all of Florida Cities' facilities at issue) had continuously failed to meet secondary treatment standards. After calculating the statutory maximum of almost $250 million, the court applied the six mitigation factors of CWA section 1319(d) and imposed a penalty of $718,000 -- a reduction of 99.71%. The court based this significant reduction upon considerations of the lack of measurable environmental harm, the negligible economic benefit from the violations, and the City's good faith reliance on the state's water quality regulations. Other trial courts mitigated penalties well over 99% even in situations where these mitigation factors were not present and where the actual or potential environmental harm was significant.[6/]

5Tull v. United States, 481 U.S. 412 (1987) (determination of penalty is "highly discretionary"); Sierra Club v. Cedar Point Oil Co., 73 F.3d 546 (5th Cir. 1996) (trial court's determination is "highly discretionary"); Hawaii's Thousand Friends, 821 F.Supp. at 1395 (court found that mitigation of 99.71% was within its "sound discretion," even though the discharges failed to meet secondary treatment standards, discharges of raw sewage were numerous and unreported, and there was a lack of good faith efforts to come into compliance).

6See Hawaii's Thousand Friends, 821 F.Supp. 1368; Sierra Club v. Cedar Point Oil Co., 73 F.3d 546 (reduction of 99.08% appropriate for moderately serious violations and no demonstration of good faith or exploration of alternatives to discharge); United States v. Wayne County, Michigan, 1994 U.S. Dist. LEXIS 18775 (E.D. Mi. 1994) (consent decree entered for a $417,000 penalty for the discharges of raw sewage into the Detroit River at a 115 mgd wastewater treatment plant).

Florida Cities has proven at trial that for the violations present here, there was no risk of harm, no actual harm, no economic benefit, evidence that a significant penalty would have a seriously adverse impact on Florida Cities, an abundance of good faith efforts to come into compliance with the Clean Water Act, and local, state, and federal regulations -- which frequently were contradictory.

Plaintiff's prior actions also offer guidance regarding the Agency's valuations of similar violations. Of the 1539 violations found in this case, a penalty of up to $1000 per violation may be appropriate for those violations for which mitigation is less (even though secondary standards were consistently met) -- 21 nitrogen violations and 3 toxicity violations at Waterway Estates and 3 toxicity violations at Barefoot Bay (a total of 27 violations). In its pretrial brief, Plaintiff suggests a penalty of $1,000 per day for effluent violations. Florida Cities acknowledges that $1,000 per violation may be an appropriate upper limit for these 27 violations ($27,000).

For the remaining 1512 remaining violations, a lower penalty is appropriate. First, Plaintiff has asserted in its pretrial brief that discharge without a permit is the most serious category of CWA violation in this case. Second, EPA's own valuation of discharge without a permit violations at Carrollwood is instructive in setting a standard for the remaining violations. In AO 90-100 for the Carrollwood facility, after considering all relevant factors, EPA found that 37 months of discharge without a permit was worth $15,000 or $13.51 per day. Exhibit 201. Florida Cities suggests that given the mitigation evidence presented at trial, EPA's valuation from Carrollwood's discharge without a permit is, at a maximum, appropriate to be applied to all remaining lesser violations. Therefore, for the remaining 1512 violations, this Court should assess a penalty of no more than 1512 times $13.51, or $20,428 for all remaining violations.

The total amount of these two calculations is a total penalty of no more than $48,000, which is consistent not only with EPA's prior determinations, but also the case law supporting greater than 99% reductions in the statutory maximum fine where these mitigation factors are present.

CONCLUSION

Although this Court has found Florida Cities liable for various violations of the Clean Water Act, the evidence at trial demonstrated that at each facility in question, mitigating circumstances should significantly reduce the imposition of monetary penalties to a de minimis amount.

Respectfully submitted,

I. FLORIDA CITIES WATER COMPANY'S PROPOSED FINDINGS OF FACT

A. GENERAL

1. The United States stipulates that no evidence exists of any actual environmental harm resulting from any violation in this case.[1]

2. At the time of the violations alleged in the Second Amended Complaint, the Barefoot Bay, Carrollwood, and Waterway Estates plants provided better than secondary wastewater treatment. Secondary wastewater treatment, by far the most common type of wastewater treatment in the United States, removes pollutants primarily through biological treatment processes, whereby 85% of the biochemical oxygen demand ("BOD") and total suspended solids ("TSS") are cleansed from the raw sewage.[2]

3. Advanced Wastewater Treatment ("AWT") goes beyond secondary treatment to remove approximately 97% of the pollutants from the wastewater including nitrogen and phosphorous. Less than 10% of the wastewater treatment plants in the United States provide AWT.[3]

B. WATERWAY ESTATES

4. In 1975 Florida Cities received a wasteload allocation and NPDES permit number FL0030325 which authorized Waterway Estates to discharge 1.08 mgd of secondarily treated effluent to a canal leading to the Caloosahatchee River. EPA renewed this permit without any modifications in 1981. Florida Cities also received permits from FDER in 1975, 1981, and 1983 for discharge

to the canal which placed stringent and detailed requirements on the Waterway Estates effluent.[4]

5. On May 9, 1986, Florida Cities applied to EPA Region IV for what should have been a routine renewal of its NPDES permit. However, permit writer Connie Kagey denied the application.[5]

6. The permit denial was based upon Connie Kagey's review of the cover page and page 17 of the January 1981 Caloosahatchee River Wasteload Allocation Documentation ("1981 Study"), a preliminary planning document drafted as guidance to FDER regional offices making permitting decisions, whereby she wrongly determined that Waterway Estates had no wasteload allocation to discharge effluent. Basing the permit denial on this planning document was erroneous.[6]

7. Once the existing NPDES permit expired in January 1987, EPA issued Administrative Order ("AO") 87-085 whereby EPA authorized Waterway Estates to continue discharging effluent under the terms of the now expired 1981 NPDES permit and directed that the facility cease its discharges by September 30, 1988.[7]

8. In light of the deadline, Florida Cities began immediate efforts to find alternatives to surface water discharge, including public access spray irrigation, restricted access irrigation, percolation ponds, deep well injection, and upgrading the existing plant to AWT.[8]

9. After careful study, Environmental Science and Engineering Inc. ("ESE"), consultants hired by Florida Cities, determined that upgrading the facility to AWT was the most technologically sound, cost effective, and prudent method of treating wastewater at Waterway Estates.[9]

10. In addition to ESE's recommendation, Florida Cities evaluated a possible interconnection with North Fort Myers. The problems associated therewith, including the greatest price increase to ratepayers out of all disposal alternatives, did not alter the conclusion that construction of an AWT facility was best from engineering and business perspectives.[10]

11. In early 1988, Florida Cities hired Source, Inc. as the design engineer to design the upgrade. Once Source completed its design, Florida Cities applied for required state and local permits.[11]

12. Substantial construction delays, beyond Florida Cities' control, were caused by local, state, and federal regulatory requirements, such as the local zoning issues, the Army Corps of Engineers' permit, and the FDER construction permit, that had to be fulfilled before construction could begin.[12]

13. In August 1988, EPA amended its May 1987 AO to require Waterway Estates to complete construction and meet final effluent requirements by November 1, 1990. Concurrently, FDER issued a temporary operating permit also requiring compliance with effluent limitations by November 1, 1990. The FDER permit specifically allowed secondary discharges to the canal

until that date, and EPA did not challenge or comment on the issuance of this permit.[13]

14. On September 26, 1989, EPA issued AO 89-109, which contained a construction schedule for the AWT upgrade, a construction schedule for the relocation of the outfall to the 6-foot contour line of the Caloosahatchee River, and interim secondary treatment effluent limitations from the 1981 NPDES permit until the AWT construction was completed.[14]

15. At the same time, on September 29, 1989, Florida Cities received NPDES permit No. FL0030325 which contained effluent limitations for an AWT facility, though EPA knew Waterway Estates could not satisfy the limitations until the AWT upgrade was complete.[15]

16. In March 1990 FDER issued Florida Cities a construction permit, the effective date of which was subsequently extended by FDER through September 1992, for the AWT upgrade and relocation of the outfall.[16]

17. Because of the numerous permitting delays, on December 11, 1990, Florida Cities requested that EPA extend AO 89-109 to match the September 1992 construction deadline set by FDER. EPA never responded to this request.[17]

18. Once Florida Cities had completed the lengthy and complex process to plan and design the AWT upgrade and the outfall, including obtaining all necessary permits, construction of the outfall was completed ahead of both the FDER and EPA schedules. The AWT upgrade was completed

[17] Day 7, p. 47, l. 24 - p. 49, l. 10; *Florida Cities' exhibit(s):*54.

ahead of FDER's schedule, but failed to meet the deadline set in AO 89-109, even though delays beyond Florida Cities' control were experienced.[18]

19. During the period of violations at issue, Florida Cities installed temporary measures to reduce nitrogen in the effluent--thus improving the operation beyond secondary treatment and approaching the nitrogen removal level of AWT.[19]

B. CARROLLWOOD

20. Carrollwood was located in Hillsborough County until January 6, 1992 when it was taken out of service and ceased its discharges. Until then, Carrollwood discharged secondarily treated effluent to Sweetwater Creek. The violations at issue occurred between July 1991 and January 1992, when the facility was being taken out of service and was operating pursuant to an NPDES permit which contained AWT effluent limits.[20]

21. Between 1975 and January 1992, Carrollwood was authorized and required by a series of FDER permits and consent orders to discharge secondarily treated effluent to Sweetwater Creek. In addition, since the late 1970s Florida Cities was required to interconnect Carrollwood with Hillsborough County's wastewater system. Throughout the 1980s and early 1990s, Florida Cities pursued interconnection, only to have the County delay all interconnection dates. Hillsborough County did not have capacity to accept flows until the second quarter of 1991.[21]

---

[18] Day 4, p. 173, l. 3 - p. 178, l. 17; Also Day 7, p. 43, l. 20 - p. 44, l. 16; Also Day 2, p. 91, ll. 23-25; *United States' exhibit(s):*456, *Florida Cities' exhibit(s):*51, 80, 92, 195.

[19] Day 8, p. 67, l. 22 - p. 68, l. 17; Also Day 2, p. 96, ll. 11-18.

[20] Day 1, p. 122, l. 25 - p. 123, l. 9; p. 134, ll. 1-8; Also Day 4, p. 148, l. 2 - p. 149, l. 18; p. 151 - 152; *Florida Cities' exhibit(s):*157.

[21] Day 2, p. 106, ll. 17-23; p. 131, ll. 10-16; p. 135, ll. 11-21; Also Day 4, p. 48, ll. 2-8; p. 51, ll. 2-21; p. 52, l. 10 - p. 53, l. 5; p. 55, l. 24 - p. 56, l. 7; Also Day 1, p. 128, ll. 19-22; p. 133, ll. 8-11; *United States' exhibit(s):*260; *Florida Cities' exhibit(s):*97, 99, 106, 108, 125, 132.

22. Since late 1990, Florida Cities had been operating Carrollwood under EPA AO 90-100 which imposed secondary treatment limits. No violations of secondary treatment limits were recorded between July 1, 1991 and January 6, 1992 at Carrollwood.[22]

23. In early 1991, Florida Cities simultaneously pursued two tracks for compliance at Carrollwood: an AWT upgrade and interconnection with Hillsborough County. Florida Cities fully informed EPA about the dual tracks.[23]

24. Shortly thereafter, Hillsborough County agreed to waive a $5.5 million capacity fee, which led to an agreement , signed on June 5, 1991, to interconnect the two facilities by January 1992, and Florida Cities abandoned plans to construct AWT.[24]

25. Also in early 1991, Florida Cities was expecting issuance of a new NPDES permit for an AWT facility. EPA was aware as early as October 1990 that AWT limits could not be met until January 1992 when construction of AWT was anticipated to be complete. Consequently, even before the agreement with Hillsborough County, Florida Cities repeatedly requested secondary interim limits and relief from AWT. Then, in light of the interconnection agreement, Florida Cities further pursued such relief. In May 1991, the NPDES permit was issued with AWT limits. Because timing of the AWT limits posed a problem. EPA requested that Tom Plouff of the enforcement section guide Florida Cities.[25]

26. Every month between July 1991 and January 1992, with every DMR it filed, Florida Cities

[25] Day 6, p. 188, l. 15 - p. 192, l. 9; Also Day 2 p. 142, l. 6 - p. 143, l. 13; *Florida Cities exhibit(s):*135, 137, 138, 139, 140, 141, 142.

notified EPA that Carrollwood could not meet the AWT limits under any scenario and requested that AO 90-100, with secondary treatment limits, remain in effect.[26]

27. At the same time, EPA never revoked AO 90-100, which authorized secondary treatment, until March 1992, two months after the interconnection with Hillsborough County had occurred and the discharge ceased.[27]

28. In 1991, EPA assessed a $15,000 penalty ($13.51/day) under CWA § 309 for discharges without an NPDES permit between June 1987 and July 1990 at Carrollwood. EPA considered the non-serious nature of the discharges, the lack of economic benefit, the lack of any history of violations, and other matters that justice might require.[28]

C. BAREFOOT BAY

29. The Barefoot Bay treatment plant in Brevard County discharged secondarily treated effluent into an agricultural canal which provides drainage and which also receives non-point source pollution from agricultural runoff.[29]

30. Since the early 1980s, Barefoot Bay has been fully authorized by FDER to discharge secondarily treated effluent to the agricultural drainage canal, and during the period at issue there is no evidence that the discharges have had any perceptible impact on the receiving waters.[30]

[26] Day 6, ll. 16-24; Also Day 2 pp. 134, 138, 139, 143, 145; *United States' exhibit(s):*341; *Florida Cities' exhibit(s):*131, 135, 139, 142, 145, 147, 148, 150, 151, 152, 154.

[27] *United States' exhibit(s):*310; *Florida Cities' exhibit(s):*156.

[28] Day 2, p. 120, l. 8 - p. 121, l. 7; Also Day 8, p. 3, l. 22 - p. 4, l. 13; *Florida Cities exhibit(s):*201.

[29] Day 2, p. 161, ll. 2-12; Also Day 1, p. 77, ll. 10-12; p. 80, ll. 11-24; Also Day 4, p. 119, ll. 10-17; p. 123, ll. 7-24; *Florida Cities' exhibit(s):*183.

[30] Day 4, p. 113, ll. 1-24, p. 129, l. 19 - p. 130, l. 12; p. 136, l. 25 - p. 138, l. 8; p. 141; Also Day 1, p. 92, ll. 6-18, p. 100, ll. 10-13; Also Day 2, p. 179, ll. 13-17; *Florida Cities' exhibit(s):*183.

31. On November 1, 1991, NPDES permit number FL0042293 became effective. It required Florida Cities to report to EPA BOD levels, total residual chlorine levels, and toxicity test results.[31]

32. In September 1992 Barefoot Bay began reporting TRC exceedances after purchasing a new DPD test kit, and Florida Cities addressed the perceived violations by installing a sulphur dioxide system and purchasing an amperometric titrator.[32]

33. At the time, Florida Cities was reporting TRC exceedances at levels between 0.06 and 0.10 milligrams per liter, and the permitted test method that was being used, the DPD colorimetric test method, had a detection limit of approximately 0.2 milligrams per liter.[33]

34. EPA guidance materials state that detected values below the detection limit for the appropriate test method should be reported "Not Detectable," a standard that would comply with the NPDES permit. Had Florida Cities been informed by EPA to report "Not detectable," as opposed to reporting the actual values, it would have done so and been in compliance with its permit.[34]

35. During the period in question, Florida Cities used the carbonaceous biochemical oxygen demand (CBOD) test, a modification of the BOD test, to measure the oxygen demand exerted by treated effluent on the receiving stream.[35]

36. Once it was discovered that Florida Cities inadvertently had been submitting CBOD values instead of BOD values, Florida Cities immediately applied for a NPDES permit modification to

[35] Day 1, p. 96, ll. 2-11.

allow for CBOD--a request to which EPA agreed with no change to the actual limit.[36]

37. BOD levels can be extrapolated with a reasonable degree of accuracy from the reported CBOD levels. Even though Barefoot Bay misreported CBOD values, the effluent would have complied with the applicable permit limits.[37]

38. In cooperation with state and local regulatory authority, Florida Cities investigated various alternatives to discharge, such as deep well injection, which was approved by FDER but blocked by St. John's Water Management District, and spray irrigation, which was approved by FDER but blocked by neighboring citrus grove owners, until it was decided that Florida Cities should be allowed to construct an AWT facility at Barefoot Bay.[38]

39. After all of the difficulties caused by unrelated third parties while exploring discharge alternatives, Florida Cities has upgraded the Barefoot Bay facility to AWT at a cost of several million dollars and is allowed to discharge effluent to the drainage canal.[39]

E. ECONOMIC BENEFIT AND IMPACT OF PENALTY ON FLORIDA CITIES

40. In Florida, a utility must demonstrate to the Florida Public Service Commission that decisions related to the expenditure of funds for both operations and capital improvements are prudent before being allowed to recover those expenditures from the rate payers.[40]

41. As a regulated entity under the PSC, Florida Cities must invest in capital improvements before the PSC will allow Florida Cities to earn a rate of return and Florida Cities cannot receive any

[40] Day 7, p. 117, l. 18 - p. 118, l. 5; p. 122.

economic benefit from delaying expenditures.[41]

42. The government's own expert witness concludes in her report that Florida Cities working capital and liquidity are poor. Since the time her report, Florida Cities' debts have risen by approximately $4.3 million, further reinforcing her conclusion.[42]

43. Florida Cities has major mandatory preferred stock redemption obligations every year between 1997 and 2001. The cash from this stock redemption will flow to Allstate Insurance Company, not to an Avatar Holdings related entity.[43]

44. Florida Cities and Avatar Utilities Inc. have approximately $17 million of budgeted capital expenditures for 1996 going toward many enhancements and improvements to the water and wastewater facilities. These expenditures will exhaust the available lines of credit.[44]

45. Clean Water Act penalties are not tax deductible. Therefore, Florida Cities would have to increase its revenues by an amount equivalent to the penalty plus an appropriate amount to cover income taxes. Such freedom to increase revenues is not available under PSC regulation.[45]

II. FLORIDA CITIES WATER COMPANY'S PROPOSED CONCLUSIONS OF LAW

A. GENERAL BACKGROUND

46. The Clean Water Act ("CWA") was enacted by Congress in 1972 with the express objective of restoring and maintaining the chemical, physical, and biological integrity of the Nation's waters. 33 U.S.C. § 1251(a); Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1391 (D. Haw. 1993).

47. Pursuant to 33 U.S.C. § 1319(d) of the CWA, Florida Cities is liable for civil penalties under the Clean Water Act. In determining the amount of a civil penalty the court is required to consider each of the following factors:

a. the seriousness of the violation or violations;
b. the economic benefit (if any) resulting from the violation;
c. any history of such violations;
d. any good-faith efforts to comply with the applicable requirements;
e. the economic impact of the penalty on the violator;
f. and such other matters as justice may require.

33 U.S.C. § 1319(d); Atlantic States Legal Foundation v. Tyson Foods, Inc., 897 F.2d 1128, 1140-41 (11th Cir. 1990). The existence of any one of these factors can mitigate against the imposition of the statutory maximum penalty.

48. First, the Court needs to determine the maximum fine for which Florida Cities may be liable. Tyson Foods at 1142. The Court determines the maximum civil penalty in a CWA case by (1) determining the categories of violations, (2) adding up the number of daily violations in each category, (3) totaling the violations in each category, and (4) multiplying this total by $25,000. Hawaii's Thousand Friends at 1395. Second, if the Court decides to reduce the maximum fine, it should reduce the fine in accordance with the factors spelled out in 33 U.S.C. § 1319(d).

49. The determination of the appropriate civil penalty is highly discretionary and within the sound discretion of the trial court. Tull v. United States, 481 U.S. 412, 425 (1987); Sierra Club v. Cedar Point Oil Co., 73 F.3d 546, 576 (5th Cir. 1996); Hawaii's Thousand Friends at 1395.

50. The Court's primary focus should be on the statutory framework of 33 U.S.C. § 1319(d), but the Court may refer to EPA's internal policies and guidance. Tyson Foods at 1142; see also Chemical Manufacturers Ass'n v. Natural Resources Defense Council, Inc., 470 U.S. 116, 125, 84 L.Ed.2d 90, 105 S.Ct. 1102 (1985) ("[the] view of the agency charged with administering the statute is entitled to considerable deference").

51. In evaluating the "seriousness of the violations," the Court may evaluate several indicators, including the number of violations, their duration, their significance (the degree of exceedance and the relative importance of the provision violated), and the actual or potential harm to human health and the environment. Hawaii's Thousand Friends at 1383.

52. Large violations or exceedances do not mandate that a Court impose large penalties. United States v. Roll Coater, Inc., 1991 U.S. Dist. Lexis 8790 at 10. "Serious," as used in the CWA, means more than the amount of pollutant over that authorized by regulations, and lack of environmental damage significantly mitigates the seriousness of the violation when calculating penalties. Roll Coater at 11; Atlantic States Legal Foundation v. Universal Tool & Stamping Co., Inc., 786 F.Supp. 743 (N.D. Ind. 1992).

53. "Economic benefit" is meant to quantify the economic gains resulting from delaying capital expenditures necessary to come into compliance with the CWA. Hawaii's Thousand Friends at 1387. The implication of the economic benefit factor is that unless the discharger is fined an amount at least as great as the economic benefit in not complying with the regulations, the statute

serves little deterrent value. But, the Court retains the discretion to reduce the imposed penalty below the calculated economic benefit. Roll Coater at 12. The statute implies that "economic benefit" need not exist in every case.

54. The "history of violations" refers to previous violations not related to the instant litigation. Roll Coater at 16. Florida Cities has paid penalties to EPA for discharge without a permit at Barefoot Bay and Carrollwood. In the aggregate, the total of the Barefoot Bay and Carrollwood penalties amounted to $21,000 dollars which considered over 8 years of discharges without a permit violations, approximately 2950 days. In imposing those penalties, EPA assessed many of the same factors that the Court is considering in this case. These penalties equate to roughly $7.11 per day.

55. "Good faith efforts to comply with the applicable requirements" includes consideration of matters such as the investigation of alternatives, the difficulty of compliance, and compliance with the requirements imposed by state and local regulatory agencies. Roll Coater at 18; United States v. Edison Co., 725 F.Supp. 928, 933 (N.D. Ohio 1989)(good faith adherence to Ohio EPA's directives and guidance as well as possible lack of effective communication between Ohio EPA and the United States EPA mitigates against a substantial penalty); Hughey v. JMS Development Corporation, 78 F.3d 1523, 1530 (11th Cir. 1996). If the defendant can demonstrate that it has been proceeding in an attempt to come into compliance with the CWA, then credit will be given under this mitigation factor. Universal Tool & Stamping Co. at 751-52.

56. Reliance on and compliance with interim standards in permits and administrative orders is a significant mitigating factor. Hawaii's Thousand Friends at 1396.

57. Temporary measures taken by a discharger geared towards pollution control evidence good faith.

Roll Coater at 22; Universal Tool & Stamping at 753.

58. "Such other matters as justice might require" is a catch-all consideration for the court. "The fact that a violator is 'without fault' in committing violations of the CWA does not absolve the violator from penalties, although it may mitigate the amount of penalties assessed." Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1391 (D. Haw. 1993) (citations omitted).

B. WATERWAY ESTATES

59. The violations of the CWA at Waterway Estates are not serious and did not cause any environmental harm. Plaintiff admits that it has no evidence of any environmental harm resulting from the Waterway Estates discharges, and the risk of harm is negligible due to the nature of the pollutants. Moreover, the FDER, the state agency charged with protecting Florida's water quality, had fully permitted FDER and Waterway Estates always discharged within those effluent limits

60. Likewise, Waterway Estates' discharge to the canal is not serious. Administrative Order 89-109 indicated that Waterway Estates could continue to discharge to the canal until August 1, 1991. Waterway Estates ceased discharge to the canal on July 14, 1991, two weeks ahead of the schedule in the Administrative Order and more than a year in advance of the state-imposed deadline.

61. The nitrogen and toxicity violations are not serious. Waterway Estates was constructing an advanced wastewater treatment facility at the time of the violations. Moreover, the assimilative capacity for nitrogen of the Caloosahatchee River was never exceeded or even approached. In light of these considerations, Florida Cities is entitled to significant mitigation of the penalty.

62. Florida Cities did not derive any economic benefit from delaying capital expenditures at Waterway Estates. As the statute implies, there is no requirement that there be any economic benefit for noncompliance. Under PSC regulation, Florida Cities can not benefit from a delay because a return on capital can only be earned once an investment is made: without an investment, there is no return. Therefore, there is a total lack of economic benefit.

63. At Waterway Estates, Florida Cities does not have any history of violations for discharge without a permit, or discharge at the wrong location, or nitrogen or toxicity exceedances. Therefore, Florida Cities is entitled to significant mitigation of any penalty due to this factor.

64. Florida Cities has made substantial good-faith efforts to comply with the applicable requirements at Waterway Estates. Upon notification of the denial of their NPDES permit in 1986, Florida Cities immediately began the process to seek out alternatives to discharge. Once alternatives had been reviewed and the AWT alternative chosen, Florida Cities began the lengthy and complex process of designing and permitting the AWT construction. The construction schedule was hampered by the myriad federal, state and local regulations and approval processes, over which Florida Cities had no control. Yet, Florida Cities completed the construction of the new outfall by July 1991, ahead of the schedule in EPA's Administrative Order 89-109, and finished the AWT by April 1992.

65. At all times between October 1, 1988 and June 1992, Waterway Estates was complying with FDER directives and local regulation. FDER, charged with the responsibility to protect Florida's waters, permitted the AWT construction and secondary treatment limits through September 1992. Moreover, EPA never objected to any FDER permit or indicated any imminent threat of harm to human health or the environment. Florida Cities met the FDER construction deadlines

which will substantially mitigate the penalty.

66. Further, there is no indication that Florida Cities failed to advise EPA of the construction delays caused by federal, state and local regulators. During this time, EPA was informed of the construction progress and of the nature of the discharges through a series of DMRs, progress reports, and other communications.

67. Finally, EPA's erroneous refusal to renew the 1986 NPDES permit is the genesis of this action against Waterway Estates. Basing its decision upon a preliminary planning document that neither posed wasteload allocation requirements nor was approved by the agency within the statutorily mandated 30 day window under CWA § 303, the EPA acted without legitimate basis and outside of its authority. Moreover, EPA is required to defer to a state's effluent limitations unless EPA can show clear error or that the state was ignoring its own water quality standards. Because of the nature of a discharging wastewater treatment plant is such that it cannot immediately cease operations without fear of causing a significant human health risk and because the FDER had permitted secondary discharges at the time the 1986 denial occurred, the penalty against Florida Cities will be substantially mitigated.

C. Carrollwood

68. The NPDES violations at Carrollwood are not serious and did not cause any environmental harm. There is no evidence of any environmental harm or risk of harm resulting from the discharges to Sweetwater Creek. In fact, the evidence has shown that the plant almost achieved AWT effluent characteristics, so the risk of harm is very low. Under this factor, the penalty will be substantially mitigated.

69. Also, Carrollwood was being regulated under AO 90-100 which permitted secondary discharges

to Sweetwater Creek. Between July 1991 and January 1992 Carrollwood did not violate any secondary treatment effluent limits or this AO.

70. The Carrollwood violations result from the issuance of an AWT permit for a facility upgrade which was eventually abandoned in favor of an alternative solution. In fact, the interconnection with Hillsborough County was just as timely as the AWT upgrade, having been implemented in January 1992, and eliminated all discharges to Sweetwater Creek, while saving the ratepayers several million dollars in rate increases.

71. On the same basis articulated in Conclusion of Law number 62, Florida Cities has not derived any economic benefit from delaying capital expenditures at Carrollwood.

72. Florida Cities does not have a history of effluent limit violations, although it has paid a minor penalty for discharging without a NPDES permit. After consideration of many of the same factors at issue before the Court, such as the seriousness of the violation, the economic benefit, the ability to pay, good faith efforts to comply with the CWA, and other matters that justice might require, EPA fined Carrollwood $13.51 per violation for discharging without a permit.

73. Florida Cities has engaged in numerous good-faith efforts to comply with the requirements of the CWA. Since the late 1970s, Carrollwood was required by FDER permits to interconnect its facility with Hillsborough County. Hillsborough County could not offer wastewater treatment service until spring 1991. Additionally, Florida Cities assessed alternatives to interconnection with Hillsborough County, but no alternative proved feasible until 1989 when FDER allowed Florida Cities to construct AWT. Even after deciding to construct AWT, Florida Cities did not abandon its pursuit of an interconnection agreement with Hillsborough County. The penalty will be substantially mitigated due to Florida Cities good faith efforts to comply.

74. Further, the evidence shows that Florida Cities kept EPA fully informed of the two alternatives it was pursuing. EPA received numerous letters explaining the dual AWT and interconnection solutions. Further, EPA was made aware on numerous occasions that Carrollwood would not be able to meet AWT limits until January 1992, and Florida Cities continuously requested interim relief from the forthcoming AWT permit. EPA had clear notice since October 1990 that secondarily treated effluent would be discharged until January 1992.

75. At all times between July 1991 and January 1992, Carrollwood complied with state permits and consent orders, which required the facility to continue its operations and imposed secondary treatment standards. Florida Cities' compliance with state regulations and directives will substantially mitigate the penalty.

D. Barefoot Bay

76. The NPDES violations at Barefoot Bay are not serious and did not result in any environmental harm. There is no showing that any environmental harm or risk of harm resulted from the chlorine, toxicity, or BOD violations. The violations were of short duration, and were corrected quickly. Further, any pollution from Barefoot Bay would be diluted and dissipate almost immediately in the agricultural drainage canal. Therefore, Florida Cities is entitled to significant mitigation of the penalty.

77. On the same basis articulated in Conclusion of Law number 62, Florida Cities has not derived any economic benefit from delaying capital expenditures at Barefoot Bay.

78. Florida Cities does not have a history of TRC, toxicity, or BOD violations at Barefoot Bay although it has paid a minor penalty for discharging without a NPDES permit. After consideration of many factors, including disposal options that Florida Cities pursued, the lack of

economic benefit, the good faith attempts to come into compliance, the state authorized discharges, and the lack of environmental harm. EPA assessed a $6000 penalty in consideration for over 5 years of discharging without a permit.

79. Florida Cities has repeatedly engaged in good-faith efforts to comply with the applicable requirements of the CWA. Florida Cities pursued many disposal options only to be delayed and hampered by conflicting viewpoints of various regulatory agencies and neighboring citrus grove owners who appealed the FDER construction permit for a spray field. Florida Cities had no control over those delays. For each violation at issue, Florida Cities promptly notified EPA of the violations and expeditiously sought remedies for them. There is no evidence that Florida Cities intentionally failed to report information or intended to mislead EPA. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to their good faith efforts to comply.

80. At all times relevant to this action, Barefoot Bay has been authorized by FDER and the St. John's River Water Management District to discharge secondarily treated effluent to the agricultural drainage canal, and Florida Cities has been pursuing the ultimate elimination of the discharges in manners acceptable to the state and local regulators. Florida Cities' compliance with state and local directives will further mitigates the penalty.

E. Economic Impact of a Penalty on Florida Cities

81. Any civil penalty will have an substantial economic impact on Florida Cities. Currently, Florida Cities' has major mandatory financial obligations in the near future, but has few liquid assets with which it can pay. Additionally, Florida Cities debt level has substantially increased. As a utility being regulated by the PSC, Florida Cities can not raise its rates at will to cover a penalty.

82. Florida Cities must finance its capital projects to survive and keep pace with regulatory

mandates. Any substantial penalty will adversely affect Florida Cities' ability to finance capital projects and will place risk on Florida Cities' continued viability.

E. Penalties

83. In 1991, EPA assessed penalties against Florida Cities for discharging without permits at Barefoot Bay and at Carrollwood. In assessing those administrative penalties, EPA found that Class I administrative penalties were warranted, and EPA chose not to pursue those claims in a federal court for $25,000/day/violation. EPA found an abundance of facts that warranted substantial mitigation and fined Florida Cities $6,000 and $15,000 respectively for more than 8 years of discharging without permits. This equates to approximately a 99.99% reduction from the conceivable statutory maximum penalty.

84. Upon consideration of the factors enumerated in § 309(d) for all three Florida Cities facilities in this case, this Court will reduce the penalty 99.99% from the statutory maximum.

85. Recent case law supports at least a 99% reduction from the statutory maximum penalty. Even in cases where there was evidence of environmental harm, a substantial risk of environmental harm, lack of good faith efforts to comply with the CWA, or no investigation of alternatives courts have reduced the penalty to a fraction of 1% of the statutory maximum. See Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368 (D. Haw. 1993); Sierra Club v. Cedar Point Oil Co., 73 F.3d 546 (5th Cir. 1996).

Exhibit ____ (GHB-88)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' MOTION FOR RECONSIDERATION OF THE COURT'S RULING ON ADVERSE INFERENCES AND FOR EXTENSION OF PAGE LIMITS FOR POSTTRIAL SUBMISSIONS

By Order of May 8, 1996, the Court denied the United States' request that the Court draw adverse inferences from the refusal to testify by Defendants' present and former officers and managers and ruled that the depositions of these individuals are inadmissible. While implicitly recognizing that adverse inferences may be drawn in this civil case, the Court concluded that the United States did not set forth the substance of any documentary evidence supporting adverse inferences. Because there is abundant documentary evidence supporting adverse inferences which was set forth extensively in the United States' Offer of Proof submitted at trial, and which the Court has apparently overlooked, the United States moves the Court to reconsider its ruling.

By separate Order of May 8, 1996, the Court also set out a posttrial briefing schedule. The United States also moves the

Court to amend that order to permit the United States additional pages in which to brief the issue of Avatar Holdings' liability.

Respectfully submitted,

LOIS J. SCHIFFER
Assistant Attorney General

FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,

Plaintiff,

v.

AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC.,

Defendants.

CIVIL ACTION NO.
93-281-CIV-FTM-21

UNITED STATES' MEMORANDUM IN SUPPORT OF ITS MOTION FOR RECONSIDERATION OF THE COURT'S RULING ON ADVERSE INFERENCES AND FOR EXTENSION OF PAGE LIMITS FOR POSTTRIAL SUBMISSIONS

I. Introduction

By Order of May 8, 1996, the Court denied the United States' request that the Court draw adverse inferences from the refusal to testify by Defendants' present and former officers and managers and ruled that the depositions of these individuals are inadmissible. While implicitly recognizing that adverse inferences may be drawn in this civil case, the Court concluded that the United States did not set forth the substance of any documentary evidence supporting adverse inferences. Because there is abundant documentary evidence supporting adverse inferences which was set forth extensively in the United States' Offer of Proof submitted at trial, and which the Court has apparently overlooked, the United States summarizes that evidence

below and respectfully requests the Court to reconsider its ruling.[1]

By separate Order of May 8, 1996, the Court also set out a posttrial briefing schedule. The United States also moves the Court to amend that order to permit the United States additional pages in which to brief the issue of Avatar Holdings' liability.

II. Avatar Holdings' Role at the Wastewater Treatment Plants

A vast number of documents demonstrate Avatar Holdings' pervasive involvement, through its officers and directors, in the environmental affairs of Florida Cities and events and decision-making directly relating to violations of the Clean Water Act at issue.[2] In particular, these documents establish that five "key players" (Peter Sharp, John Sladkus, Lawrence Wilkov, Dennis Getman, and Robert Gordon), acting on behalf of Avatar Holdings, were personally and pervasively involved in relevant events relating to the three wastewater treatment plants. While Sharp is deceased, the testimony of Sladkus, Wilkov, Getman, and Gordon, would have supported the inferences suggested below had they not pled the Fifth Amendment.

---

[1] The United States' Offer of Proof, attached hereto as exhibit A, was incorporated by reference pursuant to Fed. R. Civ. P. 10(c) into the United States' Memorandum in Support of its Request that the Court Draw Adverse Inferences from the Refusal to Testify by Defendants' Present and Former Officers and Managers at footnote 1. The United States also attached to its brief lists which cross-reference the depositions exhibits to trial exhibits.

[2] While the key Avatar documents are dated, many are "new" to the United States, having been produced only subsequent to the close of discovery in November 1995 and only after the Court ordered Avatar to produce them on the United States' Motion to Compel. Order, November 13, 1995. Thus, it bears noting, that they were not available to the United States when it filed its summary judgment motion in June 1995.

Barefoot Bay

Barefoot Bay represents both a real estate and utility investment to Avatar Holdings because it owns, markets, and manages the development, as well as provides water and wastewater services to its residents.[3] As a sophisticated developer, Avatar was well aware in 1980, when it acquired Barefoot Bay, that wastewater disposal was an important issue that needed to be addressed at any development. Gov. Ex. 516. Nonetheless, the documentary evidence demonstrates Avatar Holdings proceeded to develop the Barefoot Bay property without adequate sewage.

When Avatar Holdings acquired Barefoot Bay and its treatment plant in 1980, 1,444 of some 5,200 planned lots (the anticipated "buildout" number) had been sold. Gov. Ex. 30 at 2 (Table 1). The effluent flow data reflects that as of 1980, the average daily flow from the development was 126,000 gallons/day, id., although the two percolation ponds built to date together at best only had the capacity for 100,000 gallons/day. Klingenstein Tr. Test., March 25, 1996 at 103-04. As a result, unpermitted overflows into the Sebastian River were already occurring. In short, while buildout was a long way off, no provision was made for the increasing flows from the connection of additional lots

---

[3] Documents refer to Barefoot Bay as an Avatar Holdings real estate operation, project, or cost center, often without any reference to an Avatar subsidiary. Gov. Ex. 58 at 8, Gov. Ex. 518 at 7, Gov. Ex. 550, and Gov. Ex. 546 at 5. Avatar Holdings unconditionally guaranteed an unsecured $950,000 loan to Avatar Properties, up to $800,000 of which was to be used to finance Barefoot Bay inventory. Gov. Ex. 51 at 3, 6-11. The loan documents are signed twice by Peter Kleinerman: once as Executive Vice President of Avatar Properties, the recipient of the loan, and once as Executive Vice President of Avatar Holdings, the guarantor of the loan. Gov. Ex. 51 at 11.

to the sewage system. Yet, Avatar Holdings continued to market and develop the remaining lots, and to connect them to a sewage system which guaranteed that the additional flow would wind up in the Sebastian River. As demonstrated below, the documentary evidence reveals that Avatar continued to expand the Barefoot Bay development with knowledge of the inadequate sewage provisions and the increasing volume of the unpermitted discharge violations.

As early as July 21, 1983, Avatar management meetings included discussion of land areas that were needed "for future construction to accommodate the complete build-out of Barefoot Bay," Gov. Ex. 11, an apparent reference to the construction of additional percolation ponds on which to dispose of the effluent. At the July 27, 1984 Avatar Holdings Board of Directors meeting, Wilkov reminded the Board that "the Department of Environmental Regulation has been imposing stricter requirements, and that in his opinion developmental growth within certain areas will depend heavily upon the availability of water and sewer facilities." Gov. Ex. 21 at 5. [emphasis added].[4] In a February 29, 1984 memorandum, Wilkov recognizes that the "[s]ituation requires immediate action," and states that "[i]ncreased capacity should be 'on line' by November 1984." Gov. Ex. 15. Wilkov also says that they should "find a way to have the utility [i.e., Avatar

[4] Attached to the minutes of the same Board meeting is a detailed questionnaire relating to drinking water at Barefoot Bay, which is also indicative of the environmental/regulatory matters which came directly to the Board's attention. Gov. Ex. 21 at 6-7.

Utilities] fund the entire amount [estimated at $600,000-700,000]" id., instead of Avatar Holdings, a concept which Peter Sharp later ratified as follows in a June 28, 1984 memorandum to Wilkov, Sladkus, and Gordon:

> We must be sure that the cost of the percolation pond and related construction end up 100% as part of Barefoot Bay's rate base on which rates can be charged to customers from day one.

Gov. Ex. 18.

The cost allocation issue resolved, the next question was where to build the additional ponds. One possibility for the location of additional ponds was an adjacent orange grove. See Gov. Exs. 19, 37. Another possibility, suggested by Gordon to Wilkov and Sladkus on October 23, 1984, was the acquisition of a neighboring parcel of land known as the Hearndon property, in which Avatar Holdings was interested primarily to expand the Barefoot Bay development.[5] Gov. Ex. 24. The Avatar Holdings Board of Directors approved obtaining an option on the Hearndon property at its November 30, 1984 Board meeting. Gov. Ex. 25 at 4. This option was perceived as having the attraction of reducing land costs since a separate land acquisition would not be necessary for the new ponds.[6] On March 13, 1985, Gordon wrote

---

[5] In a December 4, 1984 memorandum from Gordon to Sharp, Wilkov, Sladkus, Getman, and Kleinerman (Executive Vice President, Treasurer and Chief Financial Officer of Avatar Holdings, Gov. Ex. 351 at 1), among others, Gordon reports that "there appeared to be some higher sandy areas" on the Hearndon property "that would be suitable" for pecolation basins. Gov. Ex. 26.

[6] A letter drafted by Peter Sharp in December 1985 and (after editing by Wilkov) sent to a New York banker, describes how various Avatar entities are to benefit by the purchase, Gov. Exs. 27, 29.

in a memo to Wilkov, with a copy to Sladkus, that "[w]e have exhausted the alternatives of wastewater effluent disposal at Barefoot Bay," and suggested either of the two options, each of which he costed out at 1.3 million. Gov. Ex. 31.

Peter Sharp remained personally involved in the decision-making relating to the acquisition of the additional property for wastewater disposal purposes. On August 2, 1985, he wrote a detailed memo to Gordon, entitled "Barefoot Bay - Land Acquisition for Wastewater Effluent Percolation Basins," referencing a July 30, 1985 memo from Gordon to Sharp, Wilkov and Getman (which was never produced), which appears to relate to a legal dispute with the grove owner over the purchase of the land. Gov. Ex. 38. The memo reveals that Sharp was personally aware of the necessity of building the additional percolation ponds, as well as very concerned about how much they would cost, and well aware of the government scrutiny to which environmental matters are subject.

Gordon updates Wilkov on October 10, 1985 (copying Getman, Kleinerman, and Sladkus) that the plans and specifications for the percolation ponds were submitted to the DER for their approval on August 27, 1985, Gov. Ex. 41. In a January 29, 1986 letter, Sharp represents that "Avatar has recently acquired adjacent land for the purpose of increasing the capacity of its sewage plant." Gov. Ex. 45. [emphasis added] On February 11, 1986, Gordon gives Sladkus (with a copy to Wilkov and Kleinerman), a lengthy report which reflects that the DER had

issued a construction permit on January 14, 1986, and that load testings were being scheduled. Gov. Ex. 46. A similar status report to Sladkus (again with a copy to Wilkov and Kleinerman), followed on June 12, 1986. Gov. Ex. 50.

The new ponds were never built, however, and on January 16, 1987, Sladkus updates Sharp, Wilkov, and Kleinerman by memorandum, on the apparent complete failure of the existing ponds, suggesting the possibility of spray irrigation. Gov. Ex. 52. The minutes of the January 30, 1987, meeting of the Avatar Holdings Board of Directors reflect that Avatar Holdings was only willing to use a limited portion of the 270-acre Hearndon property as a spray irrigation site in conjunction with its development as a golf course and homesites. Gov. Ex. 53 at 3. Similarly, it appears from an April 13, 1987 memorandum from Wilkov to Kleinerman, Getman, and Gordon, among others, that Avatar Holdings officials were reluctant to devote substantial portions of Hearndon to effluent disposal instead of land development.[7] Gov. Ex. 55. Yet, a May 1, 1987 memorandum to Wilkov, Getman, Kleinerman, and Gordon, among others, reveals that at this time Avatar officials were acutely aware that they already lacked sufficient wastewater disposal capacity at Barefoot Bay and that proceeding towards "buildout" would require still additional capacity. Gov. Ex. 56. A May 26, 1977 memorandum to Wilkov (with copies to Getman and Gordon, among

[7] Although the Hearndon property was finally acquired in early 1988, Gov. Ex. 65 at 7, it appears that the property was never used for either purpose.

others) also suggests that Avatar officials were concerned about the cost of using the Hearndon property for spray irrigation, and documents Avatar officials' awareness of the potential for environmental harm caused by effluent disposal in the area:

> The Indian River Lagoons system is considered to be deteriorating as a result of fresh water discharges from storm water runoff, drainage canals, and wastewater effluent which has presumably killed seagrass beds and clambeds and have degraded water and sediment quality throughout the system.

Gov. Ex. 57.

Sladkus gives Sharp another full report on the Barefoot Bay wastewater problem on February 11, 1988, attaching a file memorandum written by Gordon (with copies to Getman, Sharp, Sladkus, and Wilkov, among others), memorializing a meeting with DER. Gov. Ex. 61. The gist of Gordon's memo indicates that Defendants were balking at actually constructing the percolation ponds contemplated some four years earlier, even though Defendants were fully aware that they had an ongoing illegal discharge, and that DER wanted the percolation ponds built and the ongoing connections to cease. Gordon and his team convinced DER that they would construct a deep well system for the disposal of the effluent in lieu of the percolation ponds, that the land on which the percolation ponds were to be situated would be used as a spray irrigation site, and that ongoing connections from Barefoot Bay lots could continue. They also promised DER they would upgrade the plant to advanced wastewater treatment (AWT) standards if a surface water discharge were approved.

A March 15, 1988 memo from Sladkus to Sharp demonstrates that Sharp's pervasive involvement extended right down to the selection of the engineer who was to conduct the preliminary study for the deep well injection system. Gov. Ex. 64. Memoranda to/from Sladkus and Gordon and Allen, See Gov. Exs. 67-69, 74, 76, 78, as well as Sladkus' own handwritten notes, Gov. Ex. 77, show that Sladkus continued to closely monitor the situation at Barefoot Bay after the decision was made to build a deep well, and became increasingly involved in the project, when, in early 1989, Gordon became concerned that the deep well might fail. Gov. Exs. 81-85, 87, 91. Wilkov and Getman were also kept apprised. Gov. Ex. 86.

In April 1989, Gordon forwarded to Sladkus an engineering report on deep well injection at Barefoot Bay, recommending that "we arrange a meeting to review the entire injection well controversy with CH2M Hill so that everyone has first hand information relative to the Barefoot Bay project's success." Gov. Ex. 83. CH2M Hill was asked to prepare materials for the meeting, which took place on June 13, 1989 in New York, Gov. Ex. 93, and was attended by Wilkov, Kleinerman, Gordon, Sladkus, and Getman, who decided to "[c]ontinue to pursue deep well simultaneously with permit to irrigate." Gov. Ex. 92.

By the time of his August 16, 1989 utilities report to Sharp and Wilkov (with copies to Allen, Getman, Kleinerman, Levy, and Sladkus), Gordon states that "[t]he Company's confidence level for success [in the deep well] is shrinking rather than

expanding." Gov. Ex. 96. Gordon then goes on to say that he is once again looking into the possibility of purchasing neighboring citrus groves, this time with an eye toward both using them for effluent disposal purposes as well as to produce oranges. In a follow-up memo to Sharp and Wilkov on August 21, 1989, Gordon updates them on the availability of the neighboring orange groves. Gov. Ex. 97. Sharp responds the very next day, asking to "be kept abreast of efforts to resolve the disposition of the effluent at Barefoot Bay." Gov. Ex. 98. Gordon updates Sharp on August 25, 1989, advising him that a meeting has been arranged with the FDER District Director to review the plans for spray irrigation on orange groves. Gov. Ex. 99. An exchange of memos the following month between Sharp and Sladkus again shows Sharp's ongoing close personal involvement in the Barefoot Bay effluent disposal issue. Gov. Exs. 103, 106.

In September 1989, Gordon sends Sladkus a copy of a submittal to FDER proposing spray irrigation instead of deep well injection. Gov. Ex. 105. In November 1989, Allen prepared a report entitled "Wastewater Disposal Alternatives to Deep Well Injection, Barefoot Bay" which he transmitted directly to Avatar Holdings' Board members and officers, Gov. Ex. 115, but not to any Florida Cities officers. [Allen Tr. Test., April 4, 1996 at 214-15]

In a January 26, 1990 memorandum to Wilkov, Sladkus carefully considers and conditionally approves spray irrigation. Gov. Ex. 118. In order to utilize spray irrigation, additional

land must be purchased, and the Avatar officers again turn their attention to the neighboring orange groves, this time focussing on one grove in particular that they were determined to acquire, the Micco Groves. After early unsuccessful efforts to purchase the groves by Getman, acting in various capacities on behalf of various Avatar entities, Gov. Exs. 112, 125, 129, 130,[8] on June 18, 1990, Sladkus inquired about the possibility of obtaining the property through condemnation proceedings. Gov. Ex 131. On the same day, Getman writes a memorandum saying that he has set up a meeting "for the four of us" [Getman, Gordon, Allen, and Wilkov] on the subject for June 22, 1990, noting in a "P.S." that "Mr. Sladkus would like to join this discussion by telephone conference." Gov. Ex. 132.

On June 19, 1990 Gordon responds directly to Sladkus, with copies to Getman and Wilkov, saying that "condemnation of the Micco Grove property would be extremely difficult because (a) the property is not unique (other property would be available for a price) and (b) there are alternatives to spray irrigation." Gov. Ex. 133. Sharp, however, is undeterred by Gordon's forthright assessment, and, by memo of June 25, 1990, endorses Sladkus' June 15, 1990 suggestion that they use eminent domain powers to obtain the property. Gov. Ex. 134. Finally, in a July 1, 1990 memorandum to Wilkov, Sharp orders that eminent domain be pursued, and that he be given a status report of an upcoming

[8] Getman's role is obviously multi-faceted. As Getman himself put it in a memorandum, at times he wore both his "developer" hat and "utility" hat, purporting to represent both sides to an agreement. Gov. Ex. 246.

meeting with an attorney on the subject. Gov. Ex. 135. Getman's status report reads as follows:

> Depending upon some unforeseeable circumstances, Mr. Davidson felt that FCWC had at least a "good" chance of obtaining a quick take for the property. We advised him that time was of the essence because of our DER Consent Order and he indicated that he felt that if things went somewhat smoothly that the eminent domain action could be completed as quickly as sixty days. Mr. Davidson does have a tremendous amount of experience in this area, and, basically, knows the judges who might get the case in Brevard County. As instructed, we are proceeding with a possible quick take eminent domain action.

Gov. Ex. 136.[9]

Meanwhile, Sladkus thought better of spray irrigation, and again recommended the construction of a deep well in a September 14, 1990 memo to file which he copied to Wilkov and Sharp. Gov. Ex. 143. By this point in time, he had learned that the risks of such a well had been exaggerated, and thought that it presented a more economically prudent solution to the wastewater disposal question. Thus, he writes "for all these various reasons, it is now proposed that we reverse our decision. We are under severe pressure from the regulatory agencies to cease discharge into the Indian River and need to make an early decision." Id. A November 14, 1990 handwritten note addressed to "Peter" [Sharp] which appears on the last page of an attachment to the memorandum

[9] The report took the form of a note from Getman to Sharp, Sladkus, and Wilkov which accompanies their "blind copies" ("bcc") copies of a letter, written by Getman on Avatar Holdings letterhead to the attorney after the meeting, instructing him to prepare draft minutes of a Florida Cities telephonic Board meeting yet to occur.

reflects that a nearby deep well had been permitted. Id. Shortly thereafter, Sladkus resigns.

After additional unsuccessful efforts to purchase the land by Getman, again acting in various capacities on behalf of various Avatar entities, Gov. Exs. 138, 140, 139, in March 1991, Avatar began condemnation proceedings, in accordance with Sharp's earlier orders, and he continued to be kept apprised of their progress. See Gov. Ex. 165. Although never actually successful, the attempts to acquire Micco Groves illustrate Avatar Holdings' direct and pervasive involvement -- at the highest levels -- in matters relating directly to the Barefoot Bay effluent disposal issue, and Florida Cities' distinct lack of involvement.

It bears noting that while this entire lengthy saga continued, so did the development of Barefoot Bay, with Sharp at the helm. Sharp was personally well aware that the additional connections to the sewage system resulted in added wastewater discharge. By memo of February 25, 1991 referencing "Barefoot Bay - Wastewater Effluent Disposal," Sharp specifically questioned Gordon about the discharge flow to be permitted in the context of the units connected to the system. See Gov. Ex. 160. In his reply to Sharp the following day, Gordon details the flow data from the Barefoot Bay treatment plant, noting that as of December 31, 1990, there were "4,298 ERC's connected to the system with 754 additional vacant lots." Gov. Ex. 162.

In sum, the documentary evidence makes patently clear that Avatar Holdings' officers and directors were fully cognizant of

the unlawful discharge at Barefoot Bay, and pervasively involved in critical decision-making relating to how it was to be addressed.

An NPDES permit for the Barefoot Bay plant was issued on September 16, 1991 and took effect November 1, 1991, under a "Cease Discharge Schedule" which provided for annual progress reports culminating in the required cessation of the discharge by June 30, 1995. Gov. Ex. 185, page I-4. It is unrefuted that the toxicity violations alleged in the United States' Second Amended Complaint resulted from the failure to upgrade the plant to AWT standards (as promised DER in 1988), rendering it incapable of consistently meeting the toxicity requirements of the permit. Had Defendants taken advantage of the many opportunities to cease the discharge entirely in previous years, an NPDES permit would not have been necessary and none of the violations at Barefoot Bay would have occurred.

Carrollwood

Avatar Holdings was also pervasively involved in decision-making relating to the unpermitted discharge at Carrollwood. As far back as August 6, 1984, Gordon sent a memorandum to Sladkus, with a copy to Wilkov, which confirms that Florida Cities was advised in October 1979 that it would have to stop discharging into the Sweetwater Creek, but that it found the available alternatives unacceptable; that its temporary operating permit was subsequently denied; and that it intended to fight the matter in the courts if necessary. Gov. Ex. 270. Gordon's

resolution that they would fight the matter in the courts perhaps accounts in part for why there is so little documentation of efforts to cease the discharge: Avatar simply decided not to make any serious efforts to timely cease its illegal discharge.

Discussions that took place at the Avatar Holdings Board level suggest Avatar Holdings' primary concern was not complying with environmental laws, but avoiding liability for not complying. Gov. Ex. 48 at 14, Gov. Ex. 353 at 12, Gov. Ex. 356 at 1-5. Indeed, a 1986 memorandum from Gordon to Getman makes it clear that Avatar decided to stall and continue its unpermitted discharge until Hillsborough County would accept the Carrollwood sewage. Gov. Ex. 280. Getman not only endorsed the stall, but also suggested that Gordon negotiate language that would facilitate a further stall with impunity. Gov. Ex. 281.

Eventually, Avatar did begin to study the alternatives. In 1986, Wilkov and Sharp approved an expenditure for an engineering study of the design of a pumping station and force main (pipe) to transfer the Carrollwood wastewater to the Hillsborough County facility. Gov. Ex. 282. Avatar apparently debated whether to tie in to another treatment plant or improve its own. Again, money was the central issue. In March 1988, Gordon reported to Sladkus that he was working to get Hillsborough County to lower the fees it would charge to connect the Carrollwood system to its system, and that he viewed building an AWT plant as an alternative. Gov. Ex. 291. As he did with the unpermitted

discharge at Barefoot Bay, Sladkus closely monitored the situation. Gov. Exs. 74, 76-78.

Sharp was also personally involved. After executing a conward in April 1989 authorizing engineering services for the AWT plant, Gov. Ex. 567, Sharp wanted some questions answered about cost, flow, recovery of costs through rate base, and construction completion time. Gov. Exs. 299-300.[10] It is unrefuted that because the AWT plant was never built, the permit violations alleged in the Second Amended Complaint were inevitable.

Waterway Estates

The key players also were pervasively involved in critical decisions relating to environmental compliance at the Waterway Estates plant.

On June 30, 1986, some six months before it actually denied Florida Cities' permit renewal at Waterway Estates, EPA sent a letter to Florida Cities advising it of the upcoming denial. Gov. Ex. 355. On August 14, 1986, Gordon forwarded that letter to Avatar Holdings officials, including Sladkus, Getman, and Wilkov, with a brief explanation: "The EPA wants the Company to either discontinue discharging effluent to a canal which ultimately goes to the Caloosahatchee River or improve the treatment to AWT and seek a wasteload allocation to the Caloosahatchee." Gov. Ex. 358.

---

[10] While Sharp's memo was never actually produced, his questions can be inferred from the memoranda which addressed them.

On January 16, 1987, just seven days after EPA's permit denial took effect at Waterway Estates, Sladkus reported to Sharp, Wilkov, and Kleinerman that the plant either needed to apply for a wasteload allocation and upgrade to AWT or connect to North Fort Myers Utilities (NFMU), a neighboring privately-owned wastewater treatment plant. Gov. Ex. 52.[11] In June 1987, Gordon forwarded to Sladkus a copy of EPA's compliance order. Gov. Ex. 365. On August 31, 1987, Gordon forwarded to Sladkus a copy of an engineering report on the feasibility of disposing of the Waterway Estates wastewater. Gov. Ex. 369. Cost remains the primary issue. Gordon wrote, "[a]s you can imagine from the recommended cost of treatment and disposal, additional work [on the options] will have to be done." On November 19, 1987, apparently after additional work was done, Gordon again writes to Sladkus attaching an options memorandum. Gov. Ex. 373.

It is clear from the evidence that Avatar was evaluating whether to expend a large sum of money to upgrade the Waterway Estates plant or to contract with NFMU to treat its waste. Ultimately, Avatar made a business decision to forego connecting to NFMU. Gov. Ex. 466. An exchange of memoranda dated between August 1988 and October 1988 between Sharp and Gordon lends insight to the decision-making process. This exchange makes clear that far from considering yielding the Waterway Estates franchise to a competitor, whether public or private, Sharp had

---

[11] Wasteload allocations were apparently a familiar subject, not only for the key players, but even for the Avatar Holdings Board of Directors. See Gov. Exhibit #386 at 6.

visions of taking over all of the water and wastewater utilities in Lee County. Gov. Exs. 70, 381, 383, and 384. Sharp's mandate to Gordon was as follows: "FCWC's long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the City's." Gov. Ex. 384. Ironically, the same documents also reveal that this mandate emerged after the Lee County options were discussed at Sharp's behest at the same September 7, 1988 "utilities meeting," see Gov. Ex. 383, at which environmental compliance at Waterway Estates, Barefoot Bay, and Carrollwood were agenda items. Gov. Ex. 70. Thus, the conclusion is all but inevitable that Sharp personally ruled out an immediately available compliance measure -- connecting to the North Ft. Myers system -- in favor of what he perceived to be the long-term financial interests of Florida Cities in upgrading the plant and relocating its outfall. Had the Waterway Estates wastewater been connected to the North Ft. Myers system in at that time, none of the Waterway Estates violations alleged in the Second Amended Complaint (which begin on October 1, 1988) would have occurred.

The plant upgrade and relocation of the outfall needed to be completed by November 1, 1989, the effective date of the new NPDES permit for Waterway Estates. Sladkus closely monitored the situation. Gov. Exs. 74, 76-78. He, in turn, was closely monitored by Sharp, right down to the approval of expenditures for such minor items as pumps. Gov. Ex. 109. By memo of October 2, 1989, Sharp writes Sladkus that "[w]e must have assurance from

Bob Gordon that the entire cost of the upgrade and expansion of this plant will be included as used and useful." Gov. Ex. 400. By cover memo dated June 5, 1990, Allen sends Sladkus conward number 940 requesting approval for the Waterway Estates improvements. Gov. Ex. 414. On June 11, 1990, Sladkus rejects the conward. Gov. Ex. 416. These additional documents suggest that delays in the upgrade and expansion necessary for compliance are also directly attributable to decisions made by Avatar officials.

Although Avatar knew in August 1986 that it needed to move the outfall from the canal to the River, the outfall was not moved until July 1991. When, in July 1991, it became clear that the Waterway Estates AWT improvements were behind schedule (making the NPDES permit violations inevitable), Allen wrote a memorandum directly to Sharp, with copies to Getman, Gordon, and Wilkov. Gov. Ex. 455.

CONCLUSION

The United States cites above to no fewer than 107 exhibits in evidence which support its case against Avatar Holdings, few of which could be the subjects of trial testimony because their authors and recipients pled the Fifth Amendment.[12] In short,

---

[12] The United States necessarily selected for discussion in this brief the most enlightening documents. Other trial exhibits which were either authored or received by the key players and are relevant to Avatar Holdings' liability are as follows: Gov. Exs. 16, 17, 20, 28, 30, 33, 34, 48, 54, 71-73, 80, 90, 94, 117, 122, 124, 126, 137, 149, 156, 159, 176, 178, 190, 192, 196, 198-201, 203, 209, 212, 219, 222, 233, 235, 237, 247, 250, 251, 273, 287, 289, 307, 309, 312-314, 321, 351 368, 372, 378-380, 389, 395, 403, 423, 428, 429, 432, 434, 439, 441, 445, 447, 450, 462, 476, 484-487, 493, 495-497, 529, 530, 538, 545, 548, 559, 560, 568, 573, 579, 588, 589, 593.

this evidence establishes that Avatar Holdings' officers and directors were personally and intimately involved both in Florida Cities' environmental affairs and in acts and omissions relating to the violations at issue. While the officers and directors have the right to plead the Fifth Amendment, Avatar Holdings cannot be permitted to evade liability by being the beneficiary of the assertion of these individual rights. Adverse inferences therefore should be drawn from their failure to testify.

Finally, in view of this failure to testify, in order to more fully describe the evidence against Avatar Holdings, the United States requests that it be permitted to file a posttrial brief that devotes 15 pages to Avatar Holdings' liability, for a total of 40 pages, and proposed findings of fact and conclusions of law that devote 10 pages to Avatar Holdings' liability for a total of 20 pages. These page totals are equitable since they are the sum of the limits the Defendants have been permitted in the aggregate.

Respectfully submitted,

Exhibit_____(GHB-89)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

Defendant Florida Cities Water Company's Memorandum in Opposition To Plaintiff's Motion for Reconsideration

Florida Cities Water Company ("Florida Cities") hereby files its opposition to Plaintiff's Motion for Reconsideration of this Court's May 8, 1996 Orders. Plaintiff's motion should be denied on two grounds. First, the motion does not meet the appropriate standard for reconsideration as set forth by this Court in its Order of December 21, 1996. Second, Plaintiff's supporting memorandum sets forth no supporting case law regarding either a motion for reconsideration or the issue of whether adverse inferences should be drawn in this case. Plaintiff's filing reargues its purported "Offer of Proof" which was offered at trial and which is now being re-offered as an exhibit to its memorandum. Accordingly, Florida Cities respectfully requests that this Court deny Plaintiff's Motion for Reconsideration.

Legal Standard for Reconsideration

In order to prevail on a motion for reconsideration, a moving party must meet a high standard of review. Reconsideration would be appropriate:

> where, for example, the Court has patently misunderstood a party, or has made a decision outside the adversarial issues presented to the Court by the parties, or has made an error not of reasoning but of apprehension. A further basis for a motion to reconsider would be a controlling or significant change in the law or facts since the submission of the issue to the Court. Such problems rarely arise and the motion to reconsider should be equally rare. . . [A] motion for reconsideration does not provide an opportunity simply to reargue an issue the Court has once determined.

Order of December 21, 1995 at 3, citing Times Newspapers Ltd. v. Times Publishing Co., 1993 WL 120614 at *9 (M.D. Fla. Feb 16, 1993)(citations omitted).[1] In the present case. Plaintiff does not base any of its arguments for reconsideration upon the grounds set forth above. Instead, Plaintiff merely identifies those portions of the May 8 Order with which it disagrees and states the reasons why it believes that the Court's ruling was in error. Plaintiff's motion fails to meet the initial standard of proof recognized by this Court and therefore should be denied.

---

[1] Florida Cities notes that Plaintiff's Motion for Reconsideration is the *sixth* such motion filed by the plaintiff in this action: United States' Memorandum in Opposition to Defendant's Motion for Extension of Time to File Objections to Magistrate's Order and Request for Reconsideration of Court's Order Granting That Motion (April 1995); United States' Memorandum in Support of Its Motion for Reconsideration of Court's Order on Amendment of Complaint (May 1995); United States Motion for Expedited Reconsideration of the Court's Ruling on Res Judicata and in Reply to Avatar Holdings' Motion for Clarification of the Court's Order (December 1995); United States' Trial Memorandum at page 18 urging the Court to "reconsider the standard its has articulated for imposing liability on a parent company under the Clean Water Act" (December 1995); United States' Memorandum in Support of its request that the Court draw adverse inferences from the refusal to testify at 3 "respectfully request[ing] the Court to reconsider [its ruling on the admissibility of the Wilkov deposition] (April 1996); and United States' Motion for Reconsideration of the Court's Ruling on Adverse Inferences and for Extension of Page Limits for Posttrial Submissions (May 1996).

Plaintiff's Motion Is Merely A Reargument of Plaintiff's Previous Memoranda

Plaintiff's memorandum is merely a reargument of its April 10, 1996 Memorandum in support of adverse inferences as well as its "Offer of Proof". Plaintiff has not presented any new or additional arguments which address whether this Court should draw adverse inferences. Instead, the memorandum repeats the same arguments presented in the "Offer of Proof."[2] Several passages and footnotes in the memorandum appear to have been copied from Plaintiff's previous memoranda with only minimal changes.[3] Plaintiff has neither identified any new supporting authority nor identified any error of misunderstanding or of

---

[2] In fact, Plaintiff has now filed approximately 70 pages of argument on these issues, the 35 page "Offer of Proof", its 15 page responsive memorandum served on April 10, and this 20 page Motion for Reconsideration.

[3]To provide limited examples, compare the following paragraphs from the Plaintiff's Offer of Proof and Plaintiff's most recent Motion for Reconsideration:

- Offer of Proof, p. 2, paragraph beginning "A vast number of documents demonstrate[. . .]" with Motion for Reconsideration, p. 2, paragraph beginning "A vast number of documents demonstrate[. . .]";
- Offer of Proof, p. 8, paragraph beginning "At the time Avatar Holdings acquired Barefoot Bay and its treatment plant[. . .]" with Motion for Reconsideration, p. 3, paragraph beginning "When Avatar Holdings acquired Barefoot Bay and its treatment plant[. . .]";
- Offer of Proof, p. 12, paragraph beginning "Peter Sharp was personally and intimately involved in the decision-making[. . .]" with Motion for Reconsideration, p. 6, paragraph beginning "Peter Sharp remained personally involved in the decision-making[. . .]";
- Offer of Proof, p. 15, paragraph beginning "Sladkus gives Sharp another full report[. . .]" with Motion for Reconsideration, p. 8, paragraph beginning "Sladkus gives Sharp another full report[. . .]";
- Offer of Proof, p. 28, paragraph beginning "Eventually, Avatar did begin to study the alternatives." with Motion for Reconsideration, p. 15, paragraph beginning "Eventually, Avatar did begin to study the alternatives.";
- Offer of Proof, p. 31, paragraph beginning "It is clear from the evidence that Avatar was evaluating[. . .]" with Motion for Reconsideration, p. 17, paragraph beginning "It is clear from the evidence that Avatar was evaluating[. . .];
- Offer of Proof, fn. 28 with Motion for Reconsideration, fn. 12.

apprehension by this Court. Finally, Plaintiff has failed to set forth any changed facts or circumstances which would warrant reconsideration. Plaintiff should not now be allowed to conceal what is simple reargument in the guise of reconsideration.

Conclusion

Plaintiff has failed to identify any compelling reason why this Court should reconsider its May 8, 1996 Orders. In fact, Plaintiff's Memorandum ignores the basic requirements for reconsideration set forth by this Court in its previous rulings. Florida Cities respectfully requests that the Court deny Plaintiff's Motion for Reconsideration and retain the briefing schedule and page limitations as previously set forth.

ORDER

This cause comes before the Court on United States' Motion for Reconsideration of the Court's Ruling on Adverse Inferences and for Extension of Page Limits on Posttrial Submissions (Dkt. 320) and Defendants' responses (Dkts. 322 & 323) in opposition thereto.

I. Motion for Reconsideration

Plaintiff moves for reconsideration of the Court's May 8, 1996 Order (Dkt. 315) wherein the Court denied the Plaintiff's request that the Court draw adverse inferences from the refusal to testify by several of Defendants' officers and managers and held that the depositions of those persons are inadmissible. This is Plaintiff's sixth motion for reconsideration in this action. Plaintiff states that it seeks in the motion for reconsideration to summarize the documentary evidence set forth in its Offer of Proof. Defendants oppose Plaintiff's motion in part because Plaintiff has not submitted case law on the legal issue before the Court, the issue of whether inferences should be drawn, but rather Plaintiff reargues its Offer of Proof. Avatar Holdings

32.

points out that the Plaintiff failed to explain in its fifteen page memorandum in support of its position on adverse inferences (Dkt. 304) the relevance of any of the documents in the Offer of Proof. Defendants also oppose Plaintiff's motion on the basis that it does not satisfy the requirements for a proper motion for reconsideration. Defendants point out that a motion to reconsider is:

> appropriate where, for example, the court has patently misunderstood a party, or has made a decision outside the adversarial issues presented to the court by the parties, or has made an error not of reasoning but of apprehension. A further basis for a motion to reconsider would be a controlling or significant change in the law or facts since the submission of the issue to the court. Such problems rarely arise and the motion to reconsider should be equally rare. But a motion for reconsideration does not provide an opportunity simply to reargue an issue the Court has once determined.

Times Newspapers, Ltd. v. Times Publishing Co., 1993 WL 120614 at *9 (M.D. Fla. Feb. 16, 1993)(citations omitted).

At trial, on Monday, April 1, 1996, the Court determined, following discussion and agreement among the parties, that the briefing concerning the issue of adverse inferences would be bifurcated. The Defendants would first brief the issue of the admissibility of and the drawing of adverse inferences from the depositions wherein the witnesses invoked the Fifth Amendment. Secondly, the Court indicated that, if it finds in favor of the Government on those issues, the Defendants would then have the opportunity to brief what inferences should be drawn from the documents and to respond to the conclusions in the Offer of Proof and that the Plaintiff would have an opportunity to respond.[1]

[1]Mr. Bullock, for Florida Cities, stated at trial that it sought the opportunity to brief the issue of whether such an offer is actually an offer of proof and is permissible in that form under the applicable rules. Mr. Hird, for Avatar Holdings, indicated that the Offer of Proof appeared "to be less drawing of adverse inferences from lack of testimony questions, but more the Government's interpretation of the exhibits that it has entered into evidence, and in some (continued...)

On May 8, 1996, the Court entered its Order holding that in order to draw adverse inferences in this case, there must be some other evidence to show that an adverse inference is appropriate and finding that Plaintiff had not cited in its memorandum to supporting evidence. The Court also denied the drawing of adverse inferences on the basis of Wilkov's having filed a lawsuit against Avatar Holdings, on the basis of Gordon, Elder and Reeves not being Avatar Holdings' employees, and on the basis of Getman's position as corporate counsel creating an attorney/client privilege concern. Thus, the Court held a hard, fast line to the briefing allowances permitted at trial and found that the Plaintiff had not shown any evidentiary support for its position in its memorandum in support of adverse inferences.[2] However, as the Court has agreed to the rule asserted by Plaintiff that there must be other evidence in support of the drawing of inferences, the Court has considered Plaintiff's motion for reconsideration and the documentary evidence referred to in the memorandum in support of the motion for reconsideration. The Court finds that said memorandum appears to be a memorandum in support of Avatar Holding's liability rather than in support of the proposition that, based upon the evidence, the drawing of adverse inferences is appropriate or warranted. Plaintiff has not explained how the documentary evidence is relevant to the issue of whether drawing inferences

[1](...continued)
instances exhibits which have not been entered into evidence." On April 5, 1996, the Court stated that if it accepted the Plaintiff's Offer of Proof, the Defendants would be given an opportunity to respond.

[2]Avatar Holdings asserts that the Plaintiff cannot correct the deficiency in its memorandum by claiming that the Offer of Proof is incorporated by reference as an exhibit to its brief under Rule 10 (c), Federal Rules of Civil Procedure. Avatar Holdings points out that Rule 10 (c) allows the incorporation of statements in a pleading by reference into pleadings or in any motion and that Rule 7 (a), Federal Rules of Civil Procedure, defines "pleadings" to include a complaint, an answer, and a reply. Avatar Holding therefore asserts that the Offer of Proof is not a "pleading." The Court agrees that the Plaintiff's incorporation by reference is procedurally improper under the Federal Rules of Civil Procedure. Further, the incorporation by reference is improper in that it effectively violates the page limitations on the briefs and the determination made at trial that the issue of what conclusions would be drawn from the Offer of Proof would be the second part of the bifurcated briefing.

AO 72A
(Rev. 8/82)

is proper. Additionally, the memorandum intermingles evidence of the activities of Peter Sharp, who was not deposed and did not invoke the Fifth Amendment because he was deceased. As conceded by Plaintiff at trial on Thursday, March 28, 1996, with respect to Sharp, the Plaintiff seeks to draw some inference, as opposed to an adverse inference, from the documentary evidence. Thus, the intermingling of evidence pertaining to Sharp's activities confuses the issue of whether the drawing of adverse inferences is appropriate. For these reasons, the Court will not recede from its May 8, 1996 Order.

II. Request for Extension of Page Limits

Plaintiff first requests that it be permitted to file a posttrial brief that devotes 15 pages to Avatar Holdings' liability, for a total of 40 pages, as opposed to the 25 pages permitted by the Court's Order (Dkt. 316). Plaintiff also requests that it be permitted to file proposed findings of fact and conclusions of law that devote 10 pages to Avatar Holdings' liability, for a total of 20 pages, as opposed to the 10 pages permitted by the Court's Order. Avatar Holdings forcefully opposes Plaintiff's requests for extensions. The Court will grant the Plaintiff's requests in part as provided below.

Upon consideration of the foregoing, it is hereby **ORDERED and ADJUDGED** that United States' Motion for Reconsideration of the Court's Ruling on Adverse Inferences and for Extension of Page Limits on Posttrial Submissions (Dkt. 320) is **GRANTED IN PART and DENIED IN PART**. The motion is **GRANTED** insofar as Plaintiff shall be permitted to file a posttrial brief that is not to exceed thirty five (35) pages and findings of fact and conclusions of law not to exceed eighteen (18) pages. The motion is otherwise **DENIED**.

AO 72A
(Rev. 8/82)

DONE AND ORDERED, at Tampa, Florida, this 31st day of May, 1996.

RALPH W. NIMMONS, JR.
UNITED STATES DISTRICT JUDGE

JUL 17 1996
GHB

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' CITATION OF ADDITIONAL AUTHORITY

The United States respectfully notifies the Court of two relevant cases which have been decided since trial of the instant case, United States v. Dean Dairy Products Company, CV-94-0621 (M.D. Penn., July 10, 1996), and In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 (EPA Env. Appeals Board, May 30, 1996), copies of which are attached hereto for the convenience of the Court and counsel.

Dean Dairy, the only other Clean Water Act NPDES civil enforcement action tried by the United States thus far in 1996, is highly relevant to the calculation of the civil penalty in the instant case. Faced with facts and issues strikingly similar to those in the instant case in a number of respects, the court in Dean Dairy imposed a civil penalty of $4,031,000. The decision contains instructive and relevant discussion of the application of the Clean Water Act penalty factors relating to the (1) seriousness and history of the violations, including a focus on the number and type of the violations as well as environmental harm; (2) economic impact of the penalty, including the impact on the parent company;

and (3) good faith efforts to comply.

In Dean Dairy, the court found that the violations were serious on the basis of sheer number (2,360) and continuity (six years), notwithstanding that the discharges were not toxic, while emphasizing that actual harm to the environment need not be proven to establish that substantial penalties are appropriate, see slip op. at 16-17. The court also found that the defendant's delay in committing itself to a serious solution to its violations reflected poorly on its good faith, id. at 19, and that in assessing the economic impact of the penalty, the court should look to the parent's finances because of its close interconnection with the subsidiary, id. at 19-20.[1]

Borough of Ridgway is relevant to the unpermitted discharge violations at Barefoot Bay and Carrollwood, which the Court held in its November 22, 1995 order are barred by res judicata. In Borough of Ridgway, the Environmental Appeals Board of the EPA reversed the decision of its administrative law judge first called to the Court's attention by Florida Cities in its October 31, 1995 "Citation of Dispositive Authority." Relying in part on Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992) (cited by the United States in its December 19, 1995 memorandum in support of its motion for reconsideration on this issue), the Board held that EPA "cannot possibly be held ... to have forfeited its authority to

[1] While the court imposed a penalty equal to twice the economic benefit of noncompliance, it noted that such an approach would be inappropriate in cases in which the violator receives little or no economic benefit. Id. at 21 and n. 4.

penalize [the defendant] for NPDES permit violations" which arose after the filing of the complaint. Borough of Ridgway at 15-16.

The United States would be pleased to fully brief either or both of these decisions and their applicability to the instant case if the Court so pleases.[2]

[2] In deciding upon the penalty in the instant case, the Court may also find helpful the United States Court of Appeals for the Fifth Circuit's recent discussion of the Clean Water Act penalty in United States v. Marine Shale Processors, 81 F.3d 1329 at 1335-39 (5th Cir. 1996). The appellate court vacated and remanded the $3,000,000 civil penalty in that case as a result of what it characterized as an insignificant but nonetheless clearly erroneous finding of fact which it concluded warranted recalculation of the penalty. In so doing, the circuit court suggested that the recalculation of the penalty, which it noted represented less than eight per cent of the $45,000,000 statutory maximum, was at the defendant's peril. Id. at 1337.

UNITED STATES OF AMERICA,	:	CIVIL ACTION NO. 1:CV-94-0621
Plaintiff	:	
v.	:	
THE MUNICIPAL AUTHORITY OF UNION TOWNSHIP; and DEAN DAIRY PRODUCTS COMPANY, INC. d/b/a FAIRMONT PRODUCTS,	:	
Defendants	:	

FILED
HARRISBURG, PA
JUL 1 1996
MARY E. D'ANDREA, CLERK
Per

M E M O R A N D U M

I. Introduction

On December 14, 1995, the court awarded summary judgment to the United States on the question of Fairmont Products' liability under the Federal Water Pollution Control Act ("the Clean Water Act" or "the Act"), 33 U.S.C. § 1251 et seq., for 1,754 violations of its Industrial User Wastewater Discharge permit ("IU permit"), and 79 instances of interference with the Municipal Authority of Union Township's Publicly Owned Treatment Works ("POTW"). The United States seeks the imposition of a civil penalty under 33 U.S.C. § 1319(d) for Fairmont's violations of the Act. Section 1319(d) provides that the violator of a permit issued pursuant to the Act shall be subject to a civil penalty not to exceed $25,000 per day for each violation. This penalty

0 72A
Rev 8/82

provision further states that in assessing the penalty, the court shall consider the following factors:

> [T]he seriousness of the violation or violations, the economic benefit (if any) resulting from the violation, and history of such violations, any good-faith efforts to comply with the applicable requirements, the economic impact of the penalty on the violator, and such other matters as justice may require.

33 U.S.C. § 1319(d).

The court conducted a trial on the penalty issue on January 29 to 31, 1996. The parties have submitted extensive post-trial proposed findings of fact, and the issue is now ripe for disposition. Also ripe for disposition are motions in limine filed by both Fairmont and the United States.

II. Factual Determinations

A. Background

Dean Foods, Inc. ("Dean Foods") is a national corporation in the business of processing and distributing dairy and other food products, and is the largest fluid milk processor in the United States. On June 7, 1987, Dean Foods purchased Fairmont Products through a 100% stock purchase, and in so doing it acquired Fairmont's dairy plant located in Belleville, Pennsylvania. In April 1992, Dean Foods merged the Fairmont plant with Dean Foods of Pennsylvania. The newly formed entity, Dean Dairy Products, Inc. ("Dean Dairy"), is a wholly owned subsidiary

AO 72A
Rev. 8/82)

of Dean Foods, and includes the Fairmont plant and another dairy plant located in Sharpsville, Pennsylvania.

Robert Horton, who was assistant plant manager at Fairmont prior to the stock purchase, was made plant manager shortly after Dean Foods acquired Fairmont. Horton was the Fairmont plant manager until approximately October 1991, when Dave Koontz, a Dean Foods employee since 1981, was made plant manager. Koontz remains Fairmont's plant manager.

In 1974, the predecessor company to Fairmont, Abbott's dairy, entered into an agreement with Union Township to construct a POTW to be used by the dairy plant for wastewater treatment. Pursuant to the agreement, the plant owner would pay a monthly user fee to the POTW based upon the level of flow, Biological Oxygen Demand ("BOD") and Total Suspended Solids ("TSS") discharged into the POTW. The wastewater stream from the plant discharged into the POTW resulted from equipment rinsing, product spills and sewage at the plant. Fairmont continued this use of the POTW after Dean Foods acquired it.

In 1983, the United States Environmental Protection Agency ("EPA") required Union Township to develop a pretreatment program to regulate the discharge of industrial users of the POTW, including the Fairmont plant. The EPA approved Union Township's pretreatment program in October 1984. In June 1989, pursuant to the pretreatment program, Union Township issued an IU permit to the Fairmont plant. The IU permit limits the BOD, TSS, pH and

flow which Fairmont can discharge into the POTW; the permit has monthly average limits and daily maximum limits for TSS and BOD. The IU permit requires Fairmont to submit discharge monitoring reports to Union Township on a monthly basis.

B. History And Seriousness Of Violations

The court has ruled that Fairmont is liable for 1,754 violations of its IU permit and 79 instances of interference with Union Township's POTW between July 1989 and April 1994, when this suit was filed. Fairmont continued to violate its IU permit even after this action was commenced, however. When all of Fairmont's IU permit violations are aggregated between July 1989 and April 1995, at which point Fairmont brought its wastewater problems under control, Fairmont committed approximately 2,360 violations.

Between July 1989 and February 1995, Fairmont violated its IU permit with respect to either BOD or TSS monthly average limits in 54 of 68 months. And, in virtually all months in which there was no monthly average TSS or BOD violation, Fairmont still violated daily maximum limits. On average, the violations for which the court has found Fairmont liable exceeded its IU permit limit by roughly the following percentages: 30% over monthly average TSS limit; 34% over daily maximum TSS limit; 21% over monthly average BOD limit; 23% over daily maximum BOD limit. In eight months Fairmont exceeded its monthly average TSS limit by over 100%.

AO 72A
Rev. 8/82)

BOD and TSS are "conventional" and not "toxic" pollutants. While Union Township's POTW was designed to treat these pollutants, among others, excessive quantities of BOD and TSS can cause interference with a POTW and can damage waterways.

Union Township's POTW discharges into the Kishacoquillas Creek ("the Creek"). As of 1984, it was evident that the POTW was degrading the Creek, and by 1990, poor substrate conditions resulting from solids deposition and bacterial growths were directly affecting the benthic community, resulting in greater numbers of pollution-tolerant taxa. In 1992, the Creek was found to be further degraded by solids deposition, nutrient enrichment and organic overloading. The organic overloading and the substrate degradation was limiting the diversity of the benthic community and increasing the density of a few pollution-tolerant taxa. This degradation was caused by the discharge from Union Township's POTW. Because of this environmental damage to the Creek, the Pennsylvania Fish and Boat Commission ceased stocking the Creek in the vicinity of the POTW's discharge point. The cessation of the fish stocking program in 1993 removed 3,200 trout from 3.8 miles of the Creek.

When the court held Fairmont liable for 79 instances of interference with Union's POTW, that determination entailed a finding that in each instance Fairmont inhibited or disrupted Union Township's POTW and in so doing contributed to a violation of the POTW's National Pollutant Discharge Elimination System

LO 72A
Rev. 8/82)

("NPDES") permit. Because Union Township's NPDES permit violations resulted in the discharge of excess pollutants into the Creek, Fairmont contributed to the degradation of the Creek by contributing to the NPDES permit violations. However, neither party presented evidence which permits an approximation of the degree of Fairmont's responsibility for the degradation of the Creek.

C. Good Faith Efforts To Comply

Because the IU permit requires that Dean submit monitoring reports to the POTW on a monthly basis, Fairmont was aware of its violations from the time of its first monitoring report in July 1989. Mr. Koontz, Fairmont's plant manager since October 1991, acknowledged that the plant manager who preceded him at Fairmont "did not address the violations seriously." The record supports Koontz' observation that during the first two years and three months of the violations no meaningful action was taken by Fairmont to remedy the situation. Indeed, during this period Fairmont showed no concern whatsoever with its chronic violation of the Clean Water Act.

Fairmont's first significant effort to address some of its permit exceedance problems was to install a flow equalization tank and reroute certain piping into the tank. In November 1991, almost immediately after Mr. Koontz was made plant manager, he asked Dean Foods officials to approve funds for the flow

equalization tank in Fairmont's capital budget for the fiscal year beginning June 1992. Funding for the project was approved by Dean Foods in March 1992. Construction started in June 1992 and was competed in October 1992 at a cost of approximately $86,000. Thus, Fairmont's first serious response to its wastewater problems became effective approximately three years and three months after Fairmont learned of the problem.

It is clear that the flow equalization tank was intended principally to address Fairmont's flow violations, which were persistent prior to installation of the tank. While it was believed by certain individuals at Fairmont that the tank may cause reductions in BOD and TSS, there was not a serious expectation by Fairmont that the tank would resolve its BOD and TSS permit exceedances. This is not surprising with respect to BOD since Fairmont's violations of its monthly average BOD limit did not begin until February 1992, after Koontz had requested funding for the flow equalization tank. However, the TSS violations were a consistent problem beginning in June 1989, and, as of October 1992, when the flow equalization tank came on line, Fairmont still did not have a specific plan to ensure compliance with their IU permit with respect to either BOD or TSS. The flow equalization tank resolved Fairmont's flow violations, as it was intended to do, but it did not contribute to any reduction in BOD or TSS exceedances.

AO 72A
Rev. 8/82)

Between February and April 1993, Fairmont retained several consulting companies to analyze its IU permit exceedances and recommend remedial action. Fairmont implemented some but not all of the consultants' recommendations. The most significant recommendation implemented was the diversion into a storage tank of certain materials which had previously been discharged to the POTW; this material was sold to farmers for use as hog feed. The implementation of the consultants' recommendations did not reduce Fairmont's BOD and TSS levels.

Between 1991 and 1994, Fairmont made the following additional efforts to address its BOD and TSS violations: (1) reduced water usage in several of its cleaning systems; (2) educated employees regarding potential sources of BOD and TSS in the plant and the need to eliminate these sources, and requested employee participation in addressing the problem; (3) attempted to reduce product leaks and spills wherever possible, and to encourage reporting of product spills; (4) looked for equipment, which it considered economically feasible, to reduce solids and BOD loadings in the waste drains. These efforts did not reduce Fairmont's BOD and TSS exceedances.

The final step taken by Fairmont to address its BOD and TSS violations, and the one which proved to be successful, was to install a pretreatment system. Fairmont began to consider installing a pretreatment system sometime prior to January 1992. The court believes that it was evident to Fairmont by this time

that a pretreatment system was an option very likely to resolve its IU permit violations -- but it was also far more costly than any of Fairmont's efforts described above. After much deliberation, Fairmont reached a final decision to install a pretreatment system in approximately March or April of 1994. It started construction immediately and the facility became operational in April 1995. Since that time Fairmont has been in compliance with its IU permit with only a few exceptions.

Some of Fairmont's delay in committing to the installation of the pretreatment system resulted from its uncertainty about whether it wished to participate in a planned expansion of Union Township's POTW, and about how such an expansion would affect its ability to comply with its IU permit. However, it is clear that the principal and overriding cause of the passage of several years between the time that Fairmont began to consider pretreatment and when it firmly and finally decided to commit to it was the system's high cost. The pretreatment facility was installed at a cost of approximately $865,000.

During the nearly six year period in which the violations occurred, Fairmont could have achieved compliance with its IU permit by reducing its production volume, and it was aware of this fact. Instead, while Fairmont delayed committing itself to a serious solution to its violations, it continued to produce at a volume which it recognized was very likely to generate levels of BOD and TSS beyond that allowed by its IU permit. Fairmont

O 72A
(Rev. 8/82)

chose not to reduce production volume because it viewed the concomitant reduction in earnings as too high a price to pay for compliance with the Clean Water Act. Fairmont vacillated between operating at a profit and operating at a loss during the period of the violations and Mr. Koontz claims to have believed that Dean Foods would close the plant if he reduced volume and profits in order to achieve compliance with the IU permit.

D. Economic Benefit To Violator

The parties stipulate that Fairmont did not realize any economic benefit from delaying the capital investments necessary to achieve compliance with its IU permit. Fairmont did, however, realize an economic benefit during the period of the violations by producing at a volume above that which would have allowed it to operate within its IU permit. Fairmont itself concluded, in assessing its wastewater treatment options, that to comply with its IU permit by reducing volume would have caused a reduction in earnings of $417,000 in its 1994 fiscal year. Production volume at Fairmont was higher in each year from 1989 to 1993 than it was in 1994, and, therefore, it is reasonable to believe that Fairmont gained at least $417,000 in earnings annually during the period of its violations. On this basis, the court concludes that between July 1989 and April 1994, Fairmont gained approximately $2,015,500 by violating its IU permit.

AO 72A
(Rev. 8/82)

E. Economic Impact Of Penalty

As will be explained in the legal discussion below, Dean Foods is the corporate entity whose assets should be examined to determine the economic impact of the penalty on the violator. The following factual findings support this conclusion.

Dean Dairy is a wholly owned subsidiary of Dean Foods. Dean Foods receives the profits of its subsidiaries, such as Dean Dairy and its Fairmont plant. Dean Foods then provides its subsidiaries with funding for expenses through annual capital budgets. Therefore, Dean Foods retains the ultimate decision making authority regarding whether and when capital investments will be made for equipment necessary to allow Fairmont to operate within its IU permit. For example, the expenditures for the equalization tank, the repiping and the pretreatment system all required approval and appropriations from Dean Foods through the capital budget process. Dean Foods listed expenditures for the pretreatment system as a major capital improvement in its 10(k) report for its 1995 fiscal year.

Dean Foods was closely involved with Fairmont in considering the alternatives available to address Fairmont's wastewater problems. This involvement extended to the point of Dean Foods officials attending numerous Union Township meetings on the issue. It was abundantly clear to both Mr. Koontz and Dean Foods officials that Dean Foods would make the final decision of whether Fairmont would participate in Union Township's plans to

AO 72A
Rev. 8/82)

expand its POTW, and, if so, to what degree, and whether Fairmont would install a pretreatment facility. Mr. Koontz has acknowledged the fact that he was taking instruction from his superiors at Dean Foods on this matter. Dean Foods had complete control over whether and when Fairmont would come into compliance with its IU permit.

For its 1995 fiscal year, Dean Foods reported approximately $519,000,000 in assets and $304,000,000 in liabilities. Dean Foods' assets therefore exceed its liabilities for this period by approximately $215,000,000. The magnitude of fine which the court believes to be warranted in this case can be easily absorbed by Dean Foods without threatening its solvency.

III. Conclusions Of Law

A. General Framework

The Clean Water Act's penalty provision is aimed at deterrence with respect to both the violator's future conduct (specific deterrence) and the general population regulated by the Act (general deterrence). Student Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., 19 Envtl. L. Rep. 20903, 20904, 1989 WL 159629, *3 (D.N.J. April 6, 1989) (citing Chesapeake Bay Foundation v. Gwaltney of Smithfield, Ltd., 611 F. Supp. 1542, 1557 (E.D. Va. 1985) (subsequent history omitted)). The goal of deterrence requires that a penalty have two components. First, it must encompass the economic benefit of noncompliance to ensure

that the violator does not profit from its violation of the law. Second, the penalty must include a punitive component in the form of a sum in addition to economic benefit which accounts for the degree of seriousness and/or willfulness of the violations. Without the second component, those regulated by the Clean Water Act would understand that they have nothing to lose by violating it. Id. The court will apply this framework to the findings of fact set forth above.

In adopting this approach, the court rejects the United States' contention that the proper methodology for arriving at a penalty requires that the court begin at the statutory maximum ($45,825,000 in this case), and move down from that figure to the degree warranted by mitigating factors. The United States relies upon Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128, 1142 (11th Cir. 1990), as support for this contention. While the court agrees with United States' reading of Tyson, it disagrees with Tyson, and prefers instead to begin with economic gain and add a sum to that figure guided by the other § 1319(d) factors and the need for punishment and deterrence. This method of calculating the civil penalty in a Clear Water Act case is clearly the majority view. See supra Hercules and Gwaltney; see also Public Interest Research Group of New Jersey, Inc. v. Magnesium Elektron, Inc., 40 ERC 1917, 1995 WL 461252, *16 (D.N.J. March 9, 1995) (economic benefit is the "starting point" and the other § 1319(d) factors are used to increase that amount); Student

AO 72A
Rev. 8/82)

Public Interest Research Group of New Jersey, Inc. v. Monsanto Company, 18 Envtl. L. Rep. 20999, 1988 WL 156691, *16 (D.N.J. March 24, 1988) (specifically rejecting the "top down" method).

B. Economic Benefit

As stated above, the court estimates that Fairmont benefited by $2,015,500 as a result of its violations of the Act. Fairmont insists, however, that this figure is not an acceptable measure of economic benefit because: (1) it is speculative; (2) the EPA's Clean Water Act Settlement Policy does not recognize this theory of economic benefit; and (3) it represents a potential reduction in "revenue" and not "profit."

The court rejects all three arguments. First, if a violator of the Act can achieve compliance with the Act by reducing production volume, it is incumbent upon the violator to do so. Tyson Foods, 897 F.2d at 1141-42. While the court acknowledges that its determination of Fairmont's economic benefit is somewhat speculative, it is in the nature of this factor that its quantification will be imprecise. Hercules, 19 Envtl. L. Rep. at 20905, 1995 WL 159629 at *5 (citing Gwaltney, 611 F. Supp. at 1558). Nevertheless, the court must endeavor to reach a " 'rational estimate of [the violator's] economic benefit, resolving uncertainties in favor of a higher estimate.' " Id. (quoting Gwaltney, 611 F. Supp. at 1558) (emphasis added). The estimate "must encompass every benefit that defendants received

AO 72A
Rev. 8/82)

from violation of the law." United States v. Mac's Muffler Shop, Inc., 25 ERC 1369, 1986 WL 15443, *8 (N.D. Ga. Nov. 4, 1986)(emphasis added). It would eviscerate the Act to allow violators to escape civil penalties on the ground that such penalties cannot be calculated with precision. Moreover, Fairmont itself produced the figure which the court is relying upon to estimate economic gain when it weighed the option of reducing production volume as a means of complying with its IU permit. This fact mitigates the uncertainty in calculating economic benefit in this case.

The court is also unpersuaded by the fact that the EPA's settlement policy does not specifically recognize this theory of economic benefit. The court believes that its approach is faithful to the plain meaning of § 1319(d) and is consistent with the authority cited above. The court is, of course, not bound by EPA settlement policy.

Finally, Defendant asserts, in conclusory fashion, that the $417,000 figure represents a potential annual loss in "revenue" and not "profit" and therefore is not an appropriate basis for measuring economic gain. In fact, the Fairmont document at issue states that the "plant effect" of reducing volume to achieve compliance with the Act would be a reduction in "projected earnings" of $417,000. This appears to the court to be a sensible basis to estimate Fairmont's net economic gain from noncompliance and Defendant proposes no reason to believe otherwise.

AO 72A
(Rev. 8/82)

C. Seriousness And History Of Violations

In evaluating the seriousness and history of Fairmont's violations, the court will first consider the number, frequency and degree of the violations. Student Public Interest Research Group of New Jersey, Inc. v. Monsanto Company, 18 Envtl. L. Rep. 20999, 1988 WL 156691, *15 (D.N.J. March 24, 1988). In doing so, the court may weigh all of Fairmont's violations in the record, not just those regarding which liability has been determined. Hercules, 19 Envtl. L. Rep. at 20904, 1989 WL 159629 at *4; Mac's Muffler Shop, 25 ERC 1369, 1986 WL 15443 at *11 n.1.[1] In addition, the court must consider the harm to the environment caused by the violations. Hercules, 19 Envtl. L. Rep. at 20905, 1989 WL 159629 at *6-7. It must be emphasized, however, that because actual harm to the environment is by nature difficult and sometimes impossible to demonstrate, it need not be proven to establish that substantial penalties are appropriate in a Clean Water Act case. Public Interest Research Group of New Jersey, Inc. v. Magnesium Elektron, Inc., 40 ERC 1917, 1995 WL 461252, *17 (D.N.J. March 9, 1995)(collecting cases).

The instant case involves a very large number of violations -- the court has ruled that Fairmont is liable for 1,754 violations of its IU permit with respect to BOD and TSS, and has found that Fairmont committed a total of approximately 2,360

1. Accordingly, the court will deny Fairmont's motion in limine to exclude evidence of its IU permit violations after April 1994.

AO 72A
(Rev. 8/82)

violations of its IU permit between July 1989 and April 1995. These violations were essentially continuous for nearly six years. In view of the large number of Fairmont's IU permit exceedances, and their continuity over such a lengthy period, the court considers the violations to be serious. This seriousness is magnified by the fact that the violations contributed to tangible degradation of Kishacoquillas Creek.[2]

The court acknowledges, at the same time, that this case is not among the most egregious when compared with reported Clean Water Act cases. It involves conventional and not toxic pollutants. While conventional pollutants such as TSS and BOD are regulated by the Act and can cause serious damage to waterways, it is appropriate to consider the toxic/conventional pollutant distinction when weighing the seriousness of a permit violation. See, e.g., PIRG v. Powell Duffryn Terminals, Inc., 720 F. Supp.

2. Fairmont has made a motion in limine to exclude evidence that discharge from the POTW damaged the Creek. Fairmont argues that: (1) any damage to the Creek resulting from Union Township's violation of its NPDES permit has already been resolved by a settlement between Union Township and the Pennsylvania Department of Environmental Protection ("PDEP"); and (2) the United States failed to produce certain evidence of the condition of the Creek within the discovery deadline. With respect to the first argument, the court finds the settlement between Union Township and PDEP to be irrelevant to Fairmont's liability. With respect to the second argument, it is inconsequential because there is sufficient evidence in the record which was timely produced to support the court's conclusion that discharge from Union Township's POTW degraded the Creek. Accordingly, the first part of the motion in limine will be denied and the second part will be deemed irrelevant and dismissed.

AO 72A
(Rev 8/82)

1158, 1161 (D.N.J. 1989). Toxic pollutants generally pose a greater threat to human life. Id.

Furthermore, the degree of the exceedances in this case -- 30% over monthly average TSS limit and 21% over monthly average BOD limit -- appear to be lower than in many cases cited by the parties. See, e.g., Duffryn, 720 F. Supp. at 1161 (majority of violations exceeded permit by over 200%; approximately 1/3 of violations exceeded permit by 400%; substantial number of violations exceeded permit by over 1000%); Hercules, 19 Envtl. L. Rep. at 20906, 1989 WL 159629 at *8 (majority of violations exceeded permit by over 140%; approximately 1/4 of violations exceeded permit by over 300%). The court does not intend to minimize the degree of Fairmont's violations, and notes, again, that in eight months Fairmont exceeded its monthly average TSS limit by over 100%. The court nonetheless believes that the appropriate penalty is this case will be lower than if, for example, Fairmont's average violations for both TSS and BOD were over 100%.

D. Good Faith/Willfulness Of Violations

For a period of approximately two years and three months following the issuance of Fairmont's IU permit in July 1989, Fairmont knowingly exceeded its IU permit limits and was essentially indifferent to its violations of the Clean Water Act. After Mr. Koontz arrived at Fairmont in October 1991, Fairmont

AO 72A
(Rev. 8/82)

engaged in investigation, deliberation, planning and piecemeal efforts to deal with the problem for approximately another two and one-half years before it undertook the costly course of action necessary to come to terms with the violations -- that is, the installation of a pretreatment facility. While Fairmont delayed committing itself to a serious solution to its violations, it continued to produce at a volume which it recognized was very likely to generate levels of BOD and TSS beyond that allowed by its IU permit. Although Mr. Koontz may have believed that reducing production volume could threaten the viability of Fairmont, the observance of laws duly enacted by Congress is not left to the discretion of a regulated entity, after consultation with its accountant. Fairmont's lengthy delay in meaningfully confronting its IU permit violations, and its unwillingness to reduce production volume until its wastewater problem was under control, do not speak highly of its good faith in this matter.

E. Economic Impact On The Violator

In assessing the economic impact of the penalty, the court will look to the finances of Dean Foods because it is so closely interconnected with Fairmont for purposes of the instant suit that the two should be treated as a single entity. Public Interest Research Group of New Jersey, Inc. v. Top North Metal Finishing Co., Inc., 29 ERC 1022, 1988 WL 155725, *7 (D.N.J. Dec. 23, 1988); see also Magnesium Elektron, 40 ERC 1917, 1995 WL

AO 72A
(Rev. 8/82)

461252 at *17 (court looked to assets of parent corporation of violator to determine economic impact of penalty when economic benefit of noncompliance was transferred to parent corporation). "[T]he piercing of the corporate veil . . . is a 'tool of equity that is appropriately utilized when the court must prevent fraud, illegality or injustice, or when recognition of the corporate entity would defeat public policy or shield someone from pubic liability for a crime.' " Carpenters Health and Welfare Fund of Philadelphia and Vicinity v. Kenneth R. Ambrose, Inc., 727 F.2d 279, 284 (3d Cir. 1983)(quoting Publicker Industries, Inc. v. Roman Ceramics Corp., 603 F.2d 1065, 1069 (3d Cir. 1979))(brackets and internal quotations omitted). Here, Dean Foods was closely involved with Fairmont in evaluating the options for resolving Fairmont's wastewater problems, and it had complete control over whether and when Fairmont would achieve compliance with its ND permit. At the same time, Dean Foods was siphoning off profits from Fairmont. It would constitute a serious injustice to allow Dean Foods to profit from Fairmont's violations of the Act, which occurred while Dean Foods retained control over Fairmont's wastewater problem and failed to take timely remedial action, and at the same allow Dean Foods to escape liability for the violations. Judicial sanction of such an arrangement would surely encourage violation of the Clean Water Act.[1]

---

1. Accordingly, Fairmont's motion in limine to exclude evidence of Dean Foods' financial condition will be denied.

AO 72A
Rev. 8/82

F. Aggregate Penalty

When determining what sum should be added to the violator's economic gain to serve the function of punishment and general deterrence, the court must bear in mind that "[i]f the regulated community perceives that violations of the law are treated lightly, the government's regulatory program is subverted." Mac's Muffler Shop, 25 ERC 1369, 1986 WL 15443 at *10. The penalty must be " 'high enough to insure that polluters cannot simply absorb the penalty as a cost of doing business.' " Natural Resources Defense Counsel v. Texaco, 800 F. Supp. 1, 27 (D. Del. 1992)(quoting Duffy, 720 F. Supp. at 1166). This judgment must be made on a case by case basis. Under the particular circumstances of this case, the court believes that the ends of punishment and deterrence will be served if the penalty for noncompliance, in addition to the loss of economic benefit, is an additional sum equal to the economic benefit from noncompliance. With this approach it is hoped that the potential economic gain which would tempt a regulated entity to violate the Clean Water Act, when converted into a potential economic loss of the same magnitude, will inspire fidelity to the law.[4]

4. Of course, in cases in which the violator receives little or no economic benefit from noncompliance, this approach to assessing the civil penalty will be inappropriate.

Accordingly, the court will impose a civil penalty of $4,031,000. An appropriate order will be issued.

O R D E R

In accordance with the accompanying memorandum, IT IS HEREBY ORDERED THAT:

1. The Clerk of Court is directed to enter judgment for the United States and against Fairmont in the amount of $4,031,000.

2. Fairmont's motion in limine to exclude evidence of its IT permit violations after April 1994 is denied.

3. Fairmont's motion in limine to exclude all evidence of damage to the Kishacoquillas Creek is denied.

4. Fairmont's motion in limine to exclude evidence of Dean Foods' financial condition is denied.

5. The parties' motions in limine are otherwise deemed irrelevant and dismissed.

6. The Clerk of Court is directed to close the file.

WASHINGTON, D.C.

In re:	
Borough of Ridgway, Pennsylvania	CWA Appeal No. 95-2
Docket No. CWA-III-141	

[Decided May 30, 1996]

REMAND ORDER

Before Environmental Appeals Judges Ronald L. McCallum and Edward E. Reich.

BOROUGH OF RIDGWAY, PENNSYLVANIA

CWA Appeal No. 95-2

REMAND ORDER

Decided May 30, 1996

Syllabus

The U.S. Environmental Protection Agency, Region III, filed two separate Clean Water Act administrative enforcement actions against the Borough of Ridgway, Pennsylvania, the first in July 1994 and the second in January 1995. Each action sought penalties based on alleged violations of discharge limitations in Ridgway's National Pollutant Discharge Elimination System permit, including the limitations governing carbonaceous biochemical oxygen demand ($CBOD_5$) and total suspended solids (TSS). In the first action, the violations charged were alleged to have occurred during January, February, March, and April 1994; in the second action, the violations charged were alleged to have occurred during May, June, July, and August 1994. Each action was filed as a Class I administrative penalty action under Clean Water Act § 309(g)(2)(A), and in each action the penalty proposed to be assessed was less than the $25,000 statutory maximum penalty that EPA is authorized to assess through the Class I procedures. When aggregated, however, the penalties proposed to be assessed against Ridgway in the two actions exceeded $25,000. Ridgway objected that, as a matter of law, the Region's two actions against it arose from a single "transaction" that could not be arbitrarily subdivided for purposes of satisfying the Class I penalty cap. Ridgway argued that the second action filed against it produced a violation of the cap and should therefore be dismissed.

On cross-motions for summary determination and for accelerated recommended decision filed in the second action, the Presiding Officer agreed with Ridgway and recommended that the Region's second complaint be withdrawn with prejudice. He opined that a permittee's continuous noncompliance with a particular discharge limitation, such as a limitation governing CBOD, or TSS, represents a single "transaction" and gives rise to a single enforcement "cause of action" embracing all violations of that limitation from the initial failure to comply until compliance is actually achieved. He further opined that if EPA brings a penalty action charging violations of a kind that are still ongoing at the time the action is commenced, EPA is precluded from later bringing a second penalty action based on

the same kind of violation. For those reasons, the Presiding Officer concluded, EPA was precluded from bringing a second penalty action against Ridgway, in January 1995, based on the same kinds of ($CBOD_5$ and TSS) violations previously alleged in the Region's July 1994 action. On July 6, 1995, the Regional Administrator accepted the Presiding Officer's recommendation and ordered that the second complaint against Ridgway be withdrawn with prejudice. The Environmental Appeals Board undertook sua sponte review of the Regional Administrator's order.

Held: The reasons stated by the Regional Administrator did not adequately support an order requiring withdrawal of the second complaint against Ridgway. Specifically, the Regional Administrator's analysis failed to distinguish between two different kinds of constraints on EPA's enforcement authority: (1) the doctrine of res judicata, and (2) the Clean Water Act's $25,000 Class I penalty cap.

The Regional Administrator relied on the doctrine of res judicata as grounds for dismissal of the second complaint. Res judicata, however, only precludes the assertion in subsequent litigation of claims that were or could have been brought in a prior action between the same parties that has already been reduced to judgment. Because the Region's first enforcement action against Ridgway has not produced a final judgment, the claims asserted in the Region's second action cannot possibly be barred by res judicata principles. The Regional Administrator's res judicata analysis is also flawed because many of the violations alleged in the Region's second action had not yet occurred at the time the first action against Ridgway was commenced; such violations could not possibly have formed the basis for a penalty claim in the first action, and therefore their assertion in a second action cannot be barred by res judicata principles.

The Regional Administrator may also have implicitly concluded that, by filing its second complaint, the Region violated the Clean Water Act's Class I administrative penalty cap. If so, however, neither that conclusion nor the factual findings that would support it were explicitly stated. Because whatever findings and conclusions the Regional Administrator may have reached in regard to that issue are not evident from the existing record, the Board reinstates the second complaint and remands for further proceedings to determine whether the Region's maintenance of the second action would be consistent with the Class I penalty cap.

Before Environmental Appeals Judges Ronald L. McCallum and Edward E. Reich.

Opinion of the Board by Judge Reich:

This administrative penalty action arises under section 309(g) of the Clean Water Act, 33 U.S.C. § 1319(g), and is before the Environmental Appeals Board pursuant to section 28.29 of the Proposed Non-APA, Consolidated Rules of Practice for the Administrative Assessment of Civil Penalties (56 Fed. Reg. 29,995, 30,033 (1991)).[1] By order dated July 19, 1995, the Board suspended and undertook to review, sua sponte, the "Final Decision and Order of Withdrawal" issued in this matter by the Regional Administrator for U.S. EPA Region III. Based on its review, the Board concludes that the Regional Administrator's decision to withdraw the complaint filed against respondent, the Borough of Ridgway, Pennsylvania (Ridgway), was premised on an incorrect application of the doctrine of res judicata. The Board therefore remands this matter to the Regional Administrator for reinstatement of the complaint and for further proceedings consistent with the discussion herein.

I. *Background*

Ridgway operates a sewage treatment plant that discharges to the Clarion River under a Clean Water Act National Pollutant Discharge Elimination System (NPDES) permit.[2] The facility received its initial NPDES permit in 1985, and that permit was most recently reissued, by the Commonwealth of Pennsylvania, in 1993.

---

[1]The proposed Part 28 Rules of Practice are currently being implemented as guidance in Class I administrative penalty actions commenced under Clean Water Act § 309(g), 33 U.S.C. § 1319(g). Section 28.29 of the proposed rules authorizes the Administrator to suspend implementation of the Regional Administrator's final order in a contested or default action and to review, sua sponte, "its conclusions of law or its sufficiency pursuant to § 28.28(a)(3)." *See infra* note 6. The Administrator has delegated that authority to the Environmental Appeals Board. EPA Delegation of Authority 2-51 (Jan. 24, 1992).

[2]Under the Clean Water Act, pollutant discharges to waters of the United States, like the Ridgway sewage treatment facility's discharge to the Clarion River, are unlawful except to the extent authorized by permit. CWA § 301(a). The National Pollutant Discharge Elimination System is the principal permitting program under the Clean Water Act. *Id.* § 402.

The permit is enforceable both by the State and by EPA. *See, e.g.*, Clean Water Act § 309(g)(1)(A) (authorizing EPA to assess a civil penalty for violation of a State-issued NPDES permit).

In July 1994, Region III's Water Management Division issued an administrative complaint alleging that Ridgway had violated its NPDES permit by discharging pollutants in excess of permit limits between January 1994 and April 1994. Specifically, the complaint alleged daily violations pertaining to Carbonaceous Biochemical Oxygen Demand (CBOD5) throughout January, February, March, and April of 1994; daily violations pertaining to Total Suspended Solids throughout January, February, March, and April of 1994; and a single violation pertaining to effluent pH during March 1994.[2] The complaint proposed to assess a "Class I" administrative penalty against Ridgway in the amount of $24,800. Ridgway filed a response to the complaint pursuant to section 28.20 of the proposed Part 28 rules, and a Regional official, Benjamin Kalkstein, was designated as the Presiding Officer to adjudicate the matter. The action initiated by the Region's July 1994 complaint remains pending before Presiding Officer Kalkstein.

The dispute that is now before us had its origin in the Region's decision in July 1994 to institute a Class I administrative penalty action against Ridgway rather than a Class II action. Clean Water Act § 309(g) establishes two different classes of administrative penalties,[3] and the two classes of penalties are governed by two different sets of adjudication procedures. A *Class II* penalty, which can range as high as $125,000, can be imposed only after an opportunity is provided for a "hearing on the record" under the standards of the Administrative Procedure Act (5 U.S.C. § 554), as

---

[2] For purposes of this decision only, the Board will assume that the violations occurred as alleged.

[3] In addition, the Clean Water Act provides for a judicial civil action for penalties of up to $25,000 per day for each violation. CWA § 309(d), 33 U.S.C. § 1319(d).

implemented by EPA regulations at 40 C.F.R. Part 22. *See* CWA § 309(g)(2)(B). A *Class I* penalty is statutorily limited as follows: "The amount of a class I civil penalty * * * may not exceed $10,000 per violation, except that the maximum amount of any class I civil penalty under this subparagraph shall not exceed $25,000." CWA § 309(g)(2)(A). In assessing a Class I penalty, the Agency must provide the respondent with "a reasonable opportunity to be heard and to present evidence" (*id.*), but, unlike Class II proceedings, Class I penalty actions are not subject to the APA-derived procedures in Part 22. As previously noted, Class I adjudications under the Clean Water Act are currently governed by the procedures in EPA's proposed 40 C.F.R. Part 28.

The Region's July 1994 complaint, in proposing a penalty of $24,800, thus proposed a penalty very near the upper limit of the range of penalties that can be assessed through the Part 28 procedures. Had the Region wished to assess a penalty in excess of $25,000, it would have had to institute either a civil judicial action under section 309(d) or a Class II administrative penalty action, in which Ridgway would have been entitled to an adjudication of its liability by an administrative law judge under Part 22.

The controversy now before the Board arose when, in January 1995, the Region filed a second complaint (Docket No. CWA-III-141) for Class I penalties against Ridgway. The 1995 complaint was based on daily violations of Ridgway's NPDES permit that allegedly occurred during May, June, July, and August 1994. Specifically, the second complaint alleged daily violations pertaining to $CBOD_5$ throughout May, June, and July of 1994; and daily violations pertaining to Total Suspended Solids throughout May, June, July, and August 1994. The second complaint proposed to assess a Class I penalty against Ridgway in the amount of $21,500.

In its answer to the Region's second complaint, Ridgway asserted, among other things, that the Region was attempting to circumvent the $25,000 statutory limitation applicable to Class I penalty actions, by filing two separate Class I actions that, in

combination, sought total penalties in excess of $25,000. According to Ridgway, the Region "consciously and intentionally bifurcated its enforcement actions" in order to proceed under the Class I (non-APA) rules, rather than filing a single Class II penalty action that would be subject to the rules in 40 C.F.R. Part 22. Answer at 11. This matter was also referred to Benjamin Kalkstein, the Presiding Officer hearing the first action.

In an April 7, 1995, motion for summary determination and for an accelerated recommended decision, the Region responded to Ridgway's argument by denying any attempt to manipulate penalty amounts so as to deprive Ridgway of an Administrative Procedure Act hearing under Part 22. The Region explained that it had chosen to examine Ridgway's compliance with its NPDES permit at four-month intervals, and to determine, at those intervals, whether further enforcement action was warranted. The Region argued that other possible enforcement strategies – for example, filing a new enforcement action for each month based on the discharge monitoring report (DMR) submitted to the Region for that particular month,[5] or taking no enforcement action while amassing evidence of violations so numerous as to justify referral to the Justice Department for a judicial filing – would have been impracticable and/or an inefficient use of Agency resources. The Region further argued that its choice among alternative enforcement strategies is, in any event, a discretionary matter.

On April 25, 1995, Ridgway cross-moved for summary determination and for an accelerated recommended decision. In its motion, Ridgway argued that the timing of the Region's two administrative complaints, the penalty amounts claimed, and the

---

[5] All NPDES permits require the permittee to monitor its own effluent for compliance with permit limitations and to report the results of such monitoring, at specified intervals, on a standard form known as a Discharge Monitoring Report or "DMR." *See* 40 C.F.R. §§ 122.41, 122.48. It is evident from the record that Ridgway was filing such reports with Region III on a monthly basis during the period of the violations alleged in the Region's two enforcement actions.

nature of the alleged violations combined to suggest a deliberate abuse of the Region's statutory authority to impose penalties through non-APA hearing procedures. Specifically, as to timing, Ridgway stated that its May 1994 DMR had been mailed to the Region on or about June 8, 1994, well before the Region filed its first Class I complaint on July 14 of that year; the July 1994 complaint did not, however, allege any violations based on the excessive CBOD$_5$ and TSS discharges reported by Ridgway in its May 1994 DMR. Noting that the penalty proposed in the first complaint was $24,800, or only $200 less than the statutory maximum, Ridgway argued that Region III must deliberately have refrained from including any allegations pertaining to May 1994 in the initial complaint, solely in order to channel Ridgway into a Class I forum under the Part 28 procedural rules.

Moreover, Ridgway claimed that it had been constructing modifications to its sewage treatment plant throughout the period of the violations alleged in both complaints, and that the Region knew, with absolute certainty, that the facility's excessive TSS and CBOD$_5$ discharges would be corrected only upon completion of that construction project. Thus, according to Ridgway, as of July 14, 1994 the Region knew or should have known (1) that Ridgway's discharge had failed to comply with permit limits governing CBOD$_5$ and TSS during May 1994, and (2) that the same kinds of violations would continue to occur for the foreseeable future, until the completion of an ongoing facility modification. With access to that information, the Region had nonetheless chosen to address the Ridgway facility's noncompliant discharge in the context of a Class I penalty action subject to a $25,000 penalty cap. Having made that choice, the Region should now be required to abide by the jurisdictional limitations of the forum it had chosen. For these reasons, the filing of the Region's second complaint – which, in its practical effect, raised the proposed penalty against Ridgway from $24,800 to $46,300 for a single course of violative conduct – represented an improper use of the Class I procedure, and the second complaint should therefore be dismissed.

The Region, in a responsive memorandum, acknowledged that it had probably received Ridgway's May 1994 DMR on or about June 16, 1994. But the Region denied having intentionally disregarded the May DMR during its preparation of its first complaint against Ridgway:

> EPA was examining the trend of improvement (or lack thereof) in Respondent's effluent violations over four-month periods. Thus, as of July 14, 1994 [the date of the first complaint], no decision had been rendered as to what, if any enforcement action, would be taken with respect to the May 1994 violations. Moreover, counsel for Complainant submits that the actual date of filing of the first complaint is not relevant, but should be viewed as a function of the cumbersome internal approval process imposed by EPA upon such documents. EPA would have been perfectly within the realm of its enforcement discretion to file sequential penalty actions for each month's violations on a monthly basis. In fact, the approach adopted by EPA conserved the resources expended by the [Presiding Officer] as well as Respondent and the Agency.

Complainant's Response to Second Motion for Summary Determination at pp. 3-4.

The Presiding Officer heard oral argument on the parties' cross-motions for summary determination on June 19, 1995, and granted Ridgway's motion in an order dated June 29, 1995. Consistent with this order, in a July 3, 1995 recommended decision, the Presiding Officer recommended to the Regional Administrator that the second of the two complaints against Ridgway be ordered withdrawn with prejudice. The Presiding Officer concluded that Ridgway's continuous and uninterrupted pollutant discharges in excess of permit limits gave rise to one, and only one, enforcement "cause of action." Because the Region chose, in its initial complaint,

to pursue that cause of action only as to violations committed through April of 1994, the institution of a second action addressing subsequent violations of the same permit provisions constituted impermissible "claim splitting," and the second action was therefore barred under the doctrine of *res judicata*. The Regional Administrator agreed with the Presiding Officer's recommendation and, in a Final Decision and Order dated July 6, 1995, ordered the second action (Docket No. CWA-III-141) withdrawn with prejudice.

This Board suspended implementation of the Regional Administrator's Final Decision and undertook, sua sponte, to review the decision pursuant to proposed 40 C.F.R. § 28.29. The Board heard oral argument on September 27, 1995, and now issues this decision. For the reasons discussed below, the Board concludes that the Regional Administrator's order to withdraw the second complaint based on *res judicata* grounds was erroneous. However, the Board further concludes that upon remand of this matter to the Regional Administrator, he should determine whether Ridgway has raised a sufficient claim of abuse of the Class I process to warrant an inquiry along the lines discussed *infra* in Section II.B.2 of this decision.

II. *Discussion*

A. Scope of Review

Under the proposed Part 28 rules, the Board is authorized to review the Regional Administrator's decision and order in a Class I penalty matter only for legal error and for compliance with the requirements of proposed § 28.28(a)(3).[4] The Board is bound by the Regional Administrator's factual determinations. *See* proposed 40 C.F.R. § 28.29(c) ("The Regional Administrator's findings of fact are

---

[4]Proposed 40 C.F.R. § 28.28(a)(3) itemizes certain matters that the Regional Administrators are expected to include in their final decisions in Class I penalty matters - for example, factual findings sufficient to establish jurisdiction, statements regarding the availability of judicial review, and the like.

* * * not subject to review by the Administrator."). After reviewing the Regional Administrator's decision and order, the Board may "amend its conclusions of law, withdraw the order, remand the order for appropriate action by the Regional Administrator, or * * * allow the order to issue unchanged." Proposed 40 C.F.R. § 28.29.

B. The Merits

As we understand the Regional Administrator's decision, his rejection of the second complaint against Ridgway was based on a theory of compulsory joinder of claims that the Regional Administrator derived from the doctrine of res judicata. Thus, his decision concludes that where two actions are pending between the same parties, the later-filed action should be dismissed if the matters alleged in both actions can be viewed, according to a res judicata analysis, as parts of a single "claim":

> [W]hen consecutively-filed DMRs show a clear pattern of continuing noncompliance, the discrete violations merge into a larger claim, indicative of a larger problem. If Complainant chooses to pursue a limited number of discrete violations in one case, knowing that there are other, closely related violations that could be brought in the same action, he will lose the right to pursue the latter violations.

Final Decision at 4. The Regional Administrator's reliance on res judicata principles is evident from his references to the "merger" of "closely related violations" into a "larger claim," and most unmistakably from his reference to unasserted violations that "could be brought" in the complainant's first action.

The Regional Administrator did not, we recognize, employ the term "res judicata" in his final decision, nor does that term appear in the Presiding Officer's recommended decision to withdraw the Region's second complaint against Ridgway. Rather, the Presiding Officer's recommended decision, and the final decision of

the Regional Administrator that is before us for review, refer only to a prohibition against "claim-splitting" as grounds for dismissal of the second complaint. *See* Final Decision at 3 ("Under the 'claim-splitting' doctrine, the entire claim should have been brought in a single case, not in sequentially-filed complaints.").

However, the Presiding Officer made clear, in his June 29, 1995 order granting Ridgway's motion for summary determination, that his references to "claim splitting" were to be understood as invoking the rules of res judicata (claim preclusion) that actually determine whether related claims should be joined in a single action and that define the consequences of a litigant's failure to do so. Thus, the Presiding Officer's reasons for recommending withdrawal of the second complaint appear in a section of his June 29 order titled "Preclusion," and his discussion includes the statement that "[t]he 'claim-splitting' and 'claim-preclusion' doctrines would preclude the initiation of a new action involving causes of action that could or should have been brought with a pending action." Order on Motions for Summary Determination and Accelerated Recommended Decision at 16. Indeed, to the extent that a prohibition against "claim splitting" has any meaning, it "is simply another name for [the claim preclusion aspect of] res judicata." *Prisco v. State of New York*, No. 91 Civ. 3990 (RLC), 1992 U.S. Dist. Lexis 5273 at *12 (S.D.N.Y. 1992). *See also Hapbey v. Linn County*, 924 F.2d 1512, 1517 (9th Cir. 1991) ("[T]he rule against splitting a cause of action has no teeth to it apart from the doctrine of claim preclusion. A plaintiff may split his cause of action in an initial suit and this initial suit may be reduced to judgment without infirmity. In a subsequent suit, however, the plaintiff is prevented by the doctrine of claim preclusion from raising any item of damage or ground of recovery that was a 'part' of the first cause of action."), *vacated in part on other grounds*, 953 F.2d 549 (9th Cir. 1992) (en banc).[7]

---

[7] The Presiding Officer's references to "claim splitting" also appear to reflect a judgment about the proper application of the Clean Water Act's Class I penalty cap -- though it is far from clear that the Presiding Officer actually intended to rely on the (continued...)

For the reasons set forth in Section B.1, *infra*, we conclude that the Regional Administrator's application of *res judicata* principles was incorrect and that his order to withdraw the second complaint on that basis was erroneous. That conclusion does not, however, dispose of Ridgway's contention that successive Class I penalty actions claiming aggregate penalties in excess of $25,000 are, at least in some circumstances, inconsistent with the Clean Water Act's administrative enforcement framework.

With respect to that issue, we think it clear that the Class I penalty cap is intended to impose a limit on EPA's otherwise considerable discretion in choosing among the enforcement mechanisms established in the Clean Water Act. Thus, we do not accept Region III's claim of absolute discretion to utilize, without regard to the circumstances of the particular violations at issue, a series of smaller administrative penalty actions in lieu of a single larger action. Rather, if the Regional Administrator finds that EPA's institution of multiple Class I actions against a respondent represents an attempt to deny a Class II hearing to which the respondent is properly entitled, the Regional Administrator may direct that one or more of those actions be withdrawn so as to reduce the Region's aggregate penalty claim to an amount that will not exceed $25,000. At that point, if the Region wishes to seek additional penalties based on the violations alleged in the withdrawn complaint or complaints,

---

[(...continued)

penalty cap in support of his decision. Ridgway's counsel has, in any event, sought to employ the term "claim splitting" in some such alternative sense, as in his statement that EPA enforcement staff "took their cause of action, split it in two," because "[t]here's no discovery rights under Class One." Transcript of September 27, 1995 Oral Argument at 31. The implication of that statement is not that the Region's second action was barred by *res judicata*, but that the Region was using Class I procedures to limit Ridgway's opportunity for discovery in what should really have been a Class II case. In the interest of clarity, throughout the remainder of this opinion we will avoid the ambiguous term "claim splitting," and will refer to the two analytically distinct issues arising from the Region's second enforcement action as (1) *res judicata* and (2) the penalty cap.

the Region may do so only if the enforcement proceedings that are still pending are reconfigured in one of the ways described later in this opinion. The basis for our conclusions, and a suggested framework for further proceedings on remand, are set forth in the discussion that follows.

1. *Res Judicata*

Initially, we conclude that the Regional Administrator committed two fundamental errors in his application of res judicata principles. First, the Regional Administrator erred by applying res judicata in the absence of any prior adjudication of Ridgway's Clean Water Act penalty liability; res judicata principles come into play only after litigation between the parties has resulted in a final judgment. Second, the Regional Administrator erred by applying res judicata to preclude the assertion, in a second action, of claims based on conduct that had not yet occurred as of the time the first action was filed.

In the absence of a final judgment resulting from the Region's first enforcement action against Ridgway, res judicata simply could not apply to bar the initiation of a second action. "Application of the claim preclusive aspect of the res judicata doctrine requires a showing * * * that there has been * * * a final judgment on the merits in a prior suit." *United States v. Athlone Industries*, 746 F.2d 977, 983 (3d Cir. 1984). The *Restatement (Second) of Judgments*, on which the Presiding Officer sought to rely, clearly states that "[t]he rules of res judicata are applicable only when a final judgment is rendered." *Restatement (Second) of Judgments* § 13, at 132. *See also id.* Comment a ("The rules of res judicata state when a judgment in one action is to be carried over to a second action and given a conclusive effect there * * *."); *International Harvester Co. v. Occupational Safety & Health Review Comm'n*, 628 F.2d 982, 984-85 (7th Cir. 1980) (preclusion of a second administrative enforcement action by a prior administrative action presupposes a final agency resolution of the first action equivalent to a civil "judgment on the merits"; such preclusion can occur only after the agency "resolves disputed issues of fact

properly before it which the parties have had an adequate opportunity to litigate"[8]; and *see generally* 18 C. Wright, A. Miller & E. Cooper, *Federal Practice and Procedure* § 4404 (1981). The Regional Administrator and the Presiding Officer, by focusing their analysis exclusively on the scope of a "claim" under the Clean Water Act, overlooked the fact that the Region's "claim" against Ridgway – whatever it might consist of – had not yet been adjudicated,[9] and that res judicata does not apply in the absence of a final judgment.[10]

The foregoing considerations are enough to require that the Regional Administrator's final decision be withdrawn and the matter remanded. It might be useful, however, if we were briefly to address a second kind of error that appears to have affected the Regional Administrator's res judicata analysis. Specifically, the Regional

---

[8]The formulation quoted in the text is derived from *United States v. Utah Construction & Mining Co.*, 384 U.S. 394 (1966), which states:

> "When an administrative agency is acting in a judicial capacity and resolves disputed issues of fact properly before it which the parties have had an adequate opportunity to litigate, the courts have not hesitated to apply res judicata to enforce repose.

Id. at 422 (quoted in *International Harvester*, 628 F.2d at 984). *See also Restatement (Second) of Judgments* § 83(1) ("A *valid and final adjudicative determination* by an administrative tribunal has the same effects under the rules of res judicata, subject to the same exceptions and qualifications, as a judgment of a court.") (emphasis added).

[9]Indeed, the litigation to which the Regional Administrator's decision would accord preclusive effect is still pending before the Presiding Officer.

[10]The *Restatement* would interpret "finality" less rigorously in the context of collateral estoppel (issue preclusion), and would require only that a previous adjudication of the relevant issue be "sufficiently firm to be accorded conclusive effect." *Restatement (Second) of Judgments* § 13. Actual finality would be required, however, in the context of claim preclusion, with which we are concerned in the present case. *Id.* In any event, even if a "firm" adjudication of Ridgway's Clean Water Act liability were sufficient for claim preclusion purposes, no such adjudication has occurred.

Administrator failed to consider the fact that the Region's second action was based on new conduct by Ridgway, much of which allegedly occurred after the Region filed its first action. Instead, the Regional Administrator treated the Region's second action as if it were merely based on new consequences of the same conduct by Ridgway already alleged in the first action. As a result, the Regional Administrator erroneously held that the Region should have included, in its first complaint, claims based on pollutant discharges that had not yet occurred when the first complaint was filed – and ultimately held that the Region was precluded from asserting those claims in a subsequent action.

Contrary to the Regional Administrator's analysis, a litigant is not required, and indeed is generally not permitted, to assert speculative claims based on conduct that has not yet occurred, and res judicata principles therefore do not require joinder of claims based on such conduct. *See Lawlor v. National Screen Service Corp.*, 349 U.S. 322 (1955) (res judicata does not extinguish claims that could not have been sued upon in prior litigation); *see also International Harvester Co.*, 628 F.2d at 985-86 (continuing violations of a single administrative regulation give rise to multiple enforcement causes of action); *Doe v. Allied-Signal, Inc.*, 985 F.2d 908, 915 (7th Cir. 1993) (under a res judicata analysis, "plaintiffs need not amend their filings to include issues that arise after the original suit is filed") (citing 18 C. Wright, A. Miller & E. Cooper, *Federal Practice and Procedure* § 4409 (1981)); *Manning v. City of Auburn*, 953 F.2d 1355, 1360 (11th Cir. 1992) ("[W]e do not believe that the res judicata preclusion of claims that 'could have been brought' in earlier litigation includes claims which arise after the original pleading is filed in the earlier litigation."). Thus Region III cannot possibly be held, by filing a complaint on July 14, 1994, to have forfeited its authority to penalize Ridgway for NPDES permit violations that Ridgway had not yet

committed, or had not yet reported to the Region, as of July 14, 1994.[11]

The principal case cited by the Presiding Officer, *Supporters to Oppose Pollution Inc. v. Heritage Group*, 973 F.2d 1320 (7th Cir. 1992), actually illustrates the error that affected his analysis. In *Supporters*, res judicata was applied to preclude a second action based

---

[11]The Presiding Officer, in recommending a more expansive rule of preclusion, cited *Alyeska Pipeline Service Co. v. United States*, 688 F.2d 765 (Ct. Cl. 1982). The *Alyeska* court rejected, as have all other courts, the contention that a final judgment between two parties bars subsequent litigation based on similar conduct occurring after the entry of judgment. *Alyeska* did suggest, however, that claims arising between the date of the complaint and the date of judgment may be extinguished by res judicata once judgment is entered; the court thus imposed, in effect, a duty to amend one's complaint to include related claims when and as they mature. The Court of Claims appears to be alone in recognizing any such duty:

> Most cases assume that an action need include only the portions of the claim due at the time of commencing that action. The Court of Claims, however, appears to follow a rule that requires a plaintiff to amend to add later maturing claims. The difficulty presented by this alternative lies in identifying a suitable stopping point. Substantial disruption could result from forced amendment at any time after significant discovery has been accomplished, and it is hard to justify any test relating to the progress of discovery or other pretrial events so clear that plaintiffs could afford to apply it without seeking explicit judicial guidance. Perhaps the best rule would be that claims for damages need include only matters arising before the commencement of suit, while claims for declaratory or injunctive relief that intrinsically deal with conduct persisting through trial or into the future should embrace all matters arising prior to the close of trial or even judgment.

18 C. Wright, A. Miller & E. Cooper, *Federal Practice and Procedure* § 4409, at 76-77. Among the cases rejecting an *Alyeska*-type duty to amend, and endorsing the contrary rule described in the Wright, Miller & Cooper treatise, are *Green v. Illinois Dep't of Transportation*, 609 F. Supp. 1021 (N.D. Ill. 1985); *United Food & Commercial Workers Local 100-A v. City Foods, Inc.*, 878 F. Supp. 122 (N.D. Ill. 1995); *Doe*, *supra*, 985 F.2d at 915; and *In re Gain Electronics Corp.*, 138 Bankr. 464 (Bankr. D.N.J. 1992).

on new consequences of conduct that occurred before the first action was commenced. In the first action, the plaintiff successfully sued a landfill operator under RCRA, but was unable to state a claim against a second entity – the Heritage Group – that the plaintiff attempted to add as a defendant in that action. When the landfill operator went out of business, having closed the offending landfill but having failed to clean it up, the same plaintiff filed a second action against the Heritage Group, relying on a modestly different theory of liability than the one rejected in the prior litigation. Specifically, although no new wastes were being deposited at the landfill in question, the second action alleged that there remained a risk of ground water contamination due to continuing migration from the landfill of previously deposited wastes.

The court held those allegations insufficient to state a new "claim" against Heritage. Heritage was not alleged to have engaged in any new conduct violative of RCRA since the first action was filed. Although the violations already litigated were continuing to generate further consequences in the form of additional environmental harm, no new conduct by the defendant was alleged. Accordingly, the plaintiff could have presented its alternative theory of liability against Heritage in the first action, and was precluded from doing so in a subsequent lawsuit:

> Traditional principles of preclusion allow additional litigation if some new wrong occurs. [Plaintiff] contends that ongoing releases are new wrongs. Yet ongoing releases were known at the time of the initial suit; they were the principal basis of the claim. That the size of the release is better known now than then takes us nowhere; new evidence of injury differs from a new wrong. Additional knowledge about the loss from a tort does not authorize new suits. There is no new wrongful conduct by Heritage after the conclusion of [the first action]. [Plaintiff] relies on *Lawlor v. National Screen*

Service Corp., 349 U.S. 322, 327 (1955), but that case involved new conduct and so is beside the point.

Supporters, 973 F.2d at 1326 (citations omitted).[12] In this case, in sharp contrast, the allegations of the Region's second complaint are based on "new wrongful conduct" by Ridgway: The first complaint alleges that Ridgway discharged pollutants in violation of permit limits during one four-month period, whereas the second complaint alleges that Ridgway discharged pollutants in violation of permit limits during a different, non-overlapping four-month period. Each complaint seeks only to redress violations alleged to have occurred within the time frame covered by that complaint. The principles discussed in *Supporters* in no way suggest that the Region's second action was barred by res judicata, and the Regional Administrator erred by so holding.

2. *The Class I Penalty Cap*

Although res judicata principles do not require EPA to combine a multiplicity of Clean Water Act violations in a single enforcement action, the Agency must exercise its Clean Water Act administrative penalty authority in a manner consistent with the Act. As previously noted, the Act distinguishes between Class I and Class II penalty actions based on the magnitude of EPA's civil penalty claim, and the number of violations combined in a single action will sometimes tip the balance between a Class I penalty and a Class II penalty. Violations that continue to occur during the pendency of a Class I penalty action can give rise to some difficult issues where, as in this case, the respondent's aggregate penalty exposure (based on violations alleged in the original Class I action and subsequent violations of the same permit limits) eventually exceeds the $25,000

[12] *See also United States v. Athlone Industries*, 746 F.2d 977, 984 (3d Cir. 1984) (in determining whether two complaints reflect the same "cause of action" for res judicata purposes, the primary focus is on "whether the acts complained of [are] the same, whether the material facts alleged in each suit [are] the same and whether the witnesses and documentation required to prove such allegations [are] the same").

Class I penalty cap. Under those circumstances, the Agency's interest in prompt and effective Clean Water Act enforcement may be at odds with the respondent's interest in having access, to the extent afforded by statute, to an APA "hearing on the record" under Part 22 to contest the imposition of the penalty.[3] The present case requires us to address those potentially conflicting interests.

Both Ridgway and the Region find support for their preferred resolution in the text and structure of Clean Water Act § 309. Ridgway simply points to the greater procedural protections that Congress explicitly provided for larger administrative penalty actions. To allow the Region to bring a series of small enforcement actions under non-APA procedures would, Ridgway argues, effectively nullify the congressional determination that greater potential liability should be accompanied by a higher level of procedural formality.

Region III, for its part, points to the varied array of enforcement mechanisms made available in section 309 – including

---

[3]In their rulings in this matter, the Presiding Officer and the Regional Administrator did not explicitly discuss Ridgway's claimed entitlement to an APA hearing. Their predominant concern, instead, seems to have arisen from Ridgway's suggestion that the Region's use of two separate complaints (where one Class II complaint would arguably have sufficed) represented a form of "harassment." *See* Ridgway's Memorandum in Support of Motion for Summary Determination at 7-8. That claim does not, however, furnish an adequate basis for dismissal of the second action against Ridgway. Courts have occasionally used the term "harassment" (or "duplicative prosecution") to refer to a particular kind of due process concern arising when a governmental entity, having failed to secure a desired remedy in one litigation setting, proceeds to file multiple additional actions based on the very same conduct, in disregard of the res judicata or collateral estoppel effect of the previous adjudication. *See, e.g., Facchiano v. United States Dep't of Labor*, 859 F.2d 1163, 1168 (3d Cir. 1988), *cert. denied*, 490 U.S. 1097 (1989) (court may intervene where "an agency's malicious prosecution and disregard for the principles of preclusion amount to a violation of a party's due process"). Because the complaints against Ridgway are not "duplicative" and the fundamental prerequisites for applying the preclusion doctrines are not met in this case, EPA's failure to apply those doctrines cannot constitute "harassment."

Class I administrative penalty actions, Class II administrative penalty actions, and judicial penalty and injunctive actions – as evidence that Congress sought to *confer* a high degree of flexibility and of "prosecutorial" discretion in the Clean Water Act enforcement context. Based on that understanding of the statutory purpose, the Region argues that it must be afforded a very wide latitude in determining how many violations to address in any given enforcement action, what remedies to seek, and what enforcement mechanism to use. By undermining the finality of those determinations we would, according to the Region, force Agency enforcement staff to maximize (perhaps unnecessarily or even counterproductively) both the number of violations alleged in an initial enforcement action and the scope of the relief requested in such an action; a comprehensive initial complaint would be needed to assure EPA's ability to address all of a permittee's violations, but to require such comprehensiveness would, the Region argues, be inconsistent with the enforcement flexibility intended by the 1987 Water Quality Act amendments. The Region therefore claims, in substance, that its decision whether to file a Class I action or a Class II action should not be open to challenge under any circumstances.

The Region buttresses that contention with a number of compelling practical observations. Among other things, the Region points out that there are valid and laudable reasons for filing a Class I action – such as to encourage Clean Water Act compliance without resorting to a large penalty claim – that may be difficult to discern in hindsight. It is also a simple matter for a respondent to claim, in hindsight, that a particular kind of violation was likely to continue without interruption, whereas the Region, without the benefit of hindsight, might well have concluded at the relevant time that a Class I penalty action would cause the violations to stop. Even where a violation cannot be immediately remedied, a Class I action may provide sufficient impetus towards moving the respondent to compliance so as to make any further enforcement action unnecessary. It would be anomalous and inappropriate, the Region contends, to allow a respondent such as Ridgway to cite its own

continuing noncompliance as a basis for challenging the legitimacy of a regulatory agency's discretionary enforcement decisions.

We believe that Congress did indeed, in the 1987 amendments, intend to enable EPA to respond flexibly and efficiently to Clean Water Act violations, and we agree that the Region is entitled to flexibility in its choice of an enforcement action to the fullest extent consistent with the statute. However, it is clear from the statutory text that the Region's discretion in this regard is not unconstrained. As the Region itself concedes, the 1987 Water Quality Act amendments clearly created an administrative enforcement structure offering more procedural safeguards to a respondent faced with a larger penalty claim.[4] EPA must, we conclude, give effect to the congressional policy reflected in the creation of two different Clean Water Act administrative penalty classes governed by two different sets of adjudication procedures, even if doing so means that EPA must occasionally resort to a more time-consuming or resource-intensive set of penalty assessment procedures. That obligation is rooted in the basic principle that "[a] statute must, if possible, be construed in such a fashion that every word has some operative effect." *United States v. Nordic Village, Inc.*, 503 U.S. 30, 36 (1992). In order to give "operative effect" to Congress's choice of one adjudication procedure for smaller penalty actions and a different procedure for larger actions, we reject the Region's claim of unlimited authority to institute a series of Class I penalty actions against a single discharger no matter what the circumstances. Rather, the Region's decision must be subject to review, within the context of the Class I process, to ensure that the Region has not instituted a series of Class I actions for the improper

---

[4] While the Region emphasizes that Class I procedures are sufficient to afford due process (see, e.g., Oral Argument Transcript at 50-51), the Region has also acknowledged that "broader procedural rights are available [to the respondent] under 40 C.F.R. Part 22 than under proposed 40 C.F.R. Part 28." Region's Response to Respondent's Second Motion for Summary Determination at 6.

purpose of denying the respondent an opportunity for an Administrative Procedure Act hearing.[5]

The question whether the institution of serial Class I actions represents an abuse of the Region's Class I authority is necessarily fact-dependent, and is therefore properly decided by the Regional Administrator, upon the recommendation of the Presiding Officer. If the Presiding Officer concludes that a reasonable claim of abuse has been suggested – based, for example, on a contention that the violations in question were certain to continue and that the Region had made clear its intention to seek additional penalties in the event the violations continued – he or she may undertake such factfinding as may be necessary to resolve that claim. However, if the Presiding Officer chooses to examine such allegations, EPA's decision to proceed under Class I should be regarded as presumptively valid, in light of EPA's generally broad discretion to select from among its enforcement options under the Clean Water Act. The respondent must therefore bear the burden of going forward with facts to support a claim that, when the Region filed the first of multiple Class I actions addressing substantially identical permit violations, the Region was attempting to avoid the Class II hearing process in a circumstance where, as of the date of the initial filing, the Region's penalty claim already exceeded (or was certain to exceed) $25,000. In addition, the Region's decision to proceed under Class I, if challenged, cannot legitimately be judged with the benefit of hindsight, but only on the basis of the information available to the Region at the time of its decision. The Region is therefore entitled to the benefit of any uncertainty that existed at the time of its decision. The Presiding Officer and the Regional Administrator may not overturn a reasonable decision to proceed under Class I simply because, in the exercise of their own independent judgment, they conclude that they would have chosen to proceed under Class II

[5] For similar reasons, multiple Class II penalty actions instituted against a single discharger, seeking an aggregate penalty in excess of $125,000, would presumably be subject to examination by an administrative law judge to ensure against a violation of the Class II penalty cap.

instead. Rather, the Presiding Officer and the Regional Administrator may overturn the enforcement staff's decision to proceed under Class I only where necessary to protect against a clear abuse of the Class I process.

If the Presiding Officer concludes that an abuse of the Agency's Class I penalty authority has occurred, the Presiding Officer may on that basis recommend to the Regional Administrator that one or more of the Class I actions pending against the respondent be withdrawn, thereby reducing the aggregate penalty claim against the respondent to an amount not exceeding the $25,000 statutory cap. In the event that withdrawal is ordered on those grounds, the complainant may request leave to withdraw its remaining Class I action or actions, so as to consolidate all of its penalty claims into a unitary Class II administrative action or into a judicial action under Clean Water Act § 309(d); in the alternative, the complainant may request leave to consolidate all of its penalty claims into a single Class I action, provided that the complainant reduces its total penalty claim to no more than $25,000 in that action.[16]

We emphasize that by acknowledging the possibility of an abuse of the Agency's Class I penalty authority, we do not mean to suggest that such an abuse occurred in this case. Having decided to order the withdrawal of the Region's second action on other grounds, neither the Presiding Officer nor the Regional Administrator in this case undertook a factual inquiry into whether the Region's use of Class I was based on impermissible considerations. Thus, neither the Presiding Officer nor the Regional Administrator made any finding as to whether the Regional enforcement staff refrained from including, in their initial Class I complaint, additional known permit violations substantially identical

---

[16]Such a request for leave to withdraw or to amend would be governed by proposed 40 C.F.R. § 28.18. A withdrawal without prejudice or an amendment may be made as of right prior to the filing of a response to the complaint; thereafter, a complaint may be amended or withdrawn without prejudice only by stipulation with the respondent or by permission of the Presiding Officer.

to violations that were included in that complaint, solely to keep the penalties sought in that action below the Class I penalty cap. Nor did the Presiding Officer or Regional Administrator make any finding of fact with respect to Ridgway's alternative contention (which the Region has denied) that the Regional enforcement staff knew the violations claimed in the initial Class I complaint would continue indefinitely and that they would lead inevitably to additional penalty claims. Therefore, upon reinstatement of the second complaint, the Regional Administrator should determine whether Ridgway has raised a sufficient claim of abuse of the Class I process to justify an inquiry along the lines discussed in this decision and, if so, proceed in accordance with the discussion herein.

III. *Conclusion*

For the reasons stated herein, the Regional Administrator's Final Decision and Order of Withdrawal is vacated and this matter is remanded for further proceedings consistent with this order.

So ordered.

FT. MYERS, FLORIDA

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	CIVIL ACTION NO.: 93-281-CIV-FTM-21

RECEIVED
JUL 22 1996
GHB

Defendants' Joint Response To Plaintiff's Citation of Additional Authority

The Defendants Florida Cities Water Company ("Florida Cities") and Avatar Holdings Inc. ("Avatar Holdings") hereby respond to Plaintiff's Citation of Additional Authority. Plaintiff cites United States v. Dean Dairy Products Co., CV-94-0621 (M.D. Pa. July 10, 1996), as additional support for its proposed penalty under the Clean Water Act ("CWA"). Additionally, Plaintiff cites In re: Borough of Ridgeway, Pennsylvania, CWA Appeal 95-2 (EPA Env. Appeals Board, May 30, 1996) in an implicit effort to seek reconsideration of this Court's November 22, 1995 and December 21, 1995 Orders. Neither of these decisions contain any guidance relevant to the issues presented in the parties' post-trial briefs.

a) Dean Dairy Products Co.

Plaintiff claims that the facts in Dean Dairy are "strikingly similar" to the facts of the present case, rendering the trial judge's penalty calculations in that case relevant to the present action. The facts of Dean Dairy are dramatically different from the facts of the present case in

at least five significant aspects, briefly set forth below.

First, the court in Dean Dairy found that the defendant's discharges significantly contributed to the degradation of the receiving waters. Slip op. at p. 5. However, in the present case, Plaintiff has stipulated that there is no evidence that any discharge from any of Florida Cities' facilities caused any environmental harm. Tr. of 3/27/96 at p. 46. Moreover, the evidence shows that virtually all of Florida Cities' discharges met the standards set for secondary treatment of effluent. Tr. of 3/29/96 at pp. 129, 149-152, 168.

Second, the court in Dean Dairy Products found that the defendant realized an economic benefit of $2,015,500 from its violations of the CWA. Slip op. at p. 10. This finding of an economic benefit was crucial to the court's penalty determination, since the final penalty of $4,031,000 was calculated at twice this economic benefit. In contrast, Florida Cities and Avatar Holdings presented evidence which demonstrated that they received no economic benefit from any CWA violations. Tr. of 4/5/96 at pp. 105-107. Plaintiff did not introduce any evidence to the contrary.

Third, the court in Dean Dairy relied upon testimony from the defendant's plant manager that, during certain periods of time, good faith efforts were not undertaken by the defendant to comply with the CWA. Slip op. at p.6. In the present case, however, there is substantial evidence of Florida Cities' good faith efforts to comply with the CWA and the significant practical and bureaucratic hurdles that the company faced in its attempts to do so. Tr. of 4/3/96 at pp. 255-256 and 4/4/96 at pp. 13-23.

Fourth, there is no indication in Dean Dairy that the CWA violations at issue were the result of actions by any other party. However, in the present case, Florida Cities presented

evidence that a substantial portion of violations (including discharge without a permit at Waterway Estates and TRC violations at Barefoot Bay) were actually a result of EPA's own errors and omissions. Tr. of 4/3/96 at pp. 124, 133-136, 169-174, 231.

Fifth, Dean Dairy was penalized for a substantial number of violations which occurred after the complaint was filed. Slip op. at p. 4. In the present case, all of the facilities were in compliance with the CWA at the time that these complaints were brought, and there were no ongoing CWA violations at any of these facilities.

b) **In re: Borough of Ridgway, Pennsylvania**

Plaintiff also cites In re: Borough of Ridgway, Pennsylvania for the implicit proposition that this Court should reverse those portions of its November 22, 1995 Order (reaffirmed December 21, 1995) which dismissed Plaintiff's allegations of discharge without an NPDES permit at the Barefoot Bay and Carrollwood plants on the grounds of res judicata. There are three reasons why this additional authority is irrelevant in the present action. First, Plaintiff's citation to Borough of Ridgway serves as Plaintiff's seventh request for reconsideration in this case. Second, Plaintiff has not set forth any of the grounds necessary for reconsideration, as set forth in this Court's earlier Orders. In its November 22, 1995 Order, this Court relied upon well established Eleventh Circuit precedent supporting its finding of res judicata, not upon Borough of Ridgway. Third, the Environmental Appeals Board reversed the Presiding Officer's decision regarding the applicability of res judicata upon factual grounds that are not relevant to the present case.

UNITED STATES OF AMERICA

Plaintiff,

V.

CASE NO. 93-281-CIV-FTM-21

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.
_____/

ORDER

The Court has reviewed the case of In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 (EPA Env. Appeals Board, May 30, 1996), submitted with the Plaintiff's submissions of additional authority (Dkt. 333). The Court has also reviewed the case of Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992), a case relied upon by the Environmental Appeals Board in Borough of Ridgway but not previously cited to the Court by any of the parties herein. The parties are DIRECTED to file a memorandum addressing the question:

> What is the effect of In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 and Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992) on the Court's November 22, 1995 Order precluding the claims in paragraphs 16, 17-23 and 30?

In addressing the above question, the parties should delineate relevant facts, such as which document, if any, constitutes the "original pleading" in the prior administrative proceedings for Barefoot Bay and Carrollwood. For convenience of reference, copies of pertinent record

AO 72A
Rev. 8/82)

evidence should be attached as exhibits to the memorandum. To the extent that a party suggests that the Court's prior preclusion of claims was overly inclusive, the party should clearly indicate the specific claims which it believes were properly precluded and those which it believes were not properly precluded.

Further, given the present post-trial but pre-judgment posture of this case, the parties may also include in their memoranda comment upon the proper procedure by which the Court may readdress its claims preclusion ruling of the November 22, 1995 Order.

The above referred memoranda shall not exceed fourteen (14) pages and shall be filed on or before Friday, August 2, 1996. Thereafter, the parties may file, on or before Friday, August 9, 1996, responsive memoranda not exceeding eight (8) pages.

DONE AND ORDERED, at Tampa, Florida, this 23rd day of July, 1996.

FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' REPLY MEMORANDUM IN SUPPORT OF REINSTATEMENT OF THE CLAIMS EXCLUDED BY THE COURT ON RES JUDICATA GROUNDS

INTRODUCTION

In their "Joint Memorandum in Response to the Court's Order of July 23, 1996," Defendants both fail to discuss relevant and important principles enunciated in In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 (EPA Env. Appeals Board, May 30, 1996) and Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992), and fail to acknowledge their effect on the claims precluded by the Court's November 22, 1995 Order. Defendants instead attempt to rehash the merits of their defense that the administrative consent agreements at issue were intended to resolve all unpermitted discharge claims at Barefoot Bay and Carrollwood, a defense expressly rejected by the Court in its June 21, 1995 Order. Because the Court correctly held in that Order that the unpermitted discharge violations and administrative order violations were separate violations, and these violations are not barred by res judicata under Ridgway and

Manning as applied to this case, the Court should reinstate those claims.

DISCUSSION

I. Manning and Ridgway

The fundamental question highlighted by both parties in their initial briefs is whether the claims at issue constitute separate causes of action for res judicata purposes. Defendants overlook important principles and language in both Manning and Ridgway which stand for the proposition that, at a minimum, certain of the claims at issue allege new wrongful conduct which are indeed separate causes of action. And, Defendants overlook the language of the Clean Water Act itself, as construed in Atlantic States Legal Foundation v. Tyson Foods, 897 F. 2d 1128, 1139-39 (11th Cir. 1990), and this Court's June 21, 1995 Order, which makes clear that each day that a violation of the Act occurs is a separate cause of action. Nonetheless, even under the Defendants' limited analysis of Manning and Ridgway, the claims at issue must be considered separate causes of action which should be reinstated.

Defendants cite, as does Manning, to NAACP v. Hunt, 891 F.2d 1555, 1561 (11th Cir. 1990), which holds that "the principal test for comparing causes of action is whether the primary right and duty or wrong are the same in each action", and that "[r]es judicata applies not only to the precise legal theory presented in the prior case, but to all legal theories and claims arising out of the same nucleus of operative fact." [emphasis added to

highlight language omitted from Defendants' quotation] As Defendants note in their brief, the Court in Manning cautions against oversimplication in such a comparison: "A Court 'must look to the factual issues to be resolved [in the second cause of action] and compare them with the issues explored in' the first cause of action." 953 F.2d at 1359 [bracketed material original; citation omitted].

Applying these principles above to the instant case, even without reference to Ridgway, yields the conclusion that none of the United States' claims should be precluded. The factual issue before the Court in this action is whether Defendants violated the Clean Water Act during the time periods and in the manners alleged in the complaint. The factual issue in the earlier administrative proceedings was whether Florida Cities violated the Clean Water Act during the earlier time periods and in the manners described in the administrative consent agreements. Because each day of violation of the act constitutes a separate cause of action under Tyson Foods, and the time periods involved are different, the factual issues to be resolved in this civil action are distinct from those in the earlier administrative proceedings.

An examination of the administrative agreements reveals that the previous administrative actions simply did not involve or resolve any future violations arising after the dates specified

in the agreements themselves.[1] Indeed, while Defendants actually admitted to -- and paid a penalty for -- the violations specifically covered by the administrative consent agreements, they neither admitted to -- nor paid a penalty for -- any other violations.[2] Thus, they cannot be said to have resolved, within the meaning of Manning, the additional later violations alleged in the instant case.[3]

While Defendants now strain to distinguish the facts in Ridgway, it was this very set of facts which Florida Cities earlier found so compelling and relevant as to warrant its filing a "Notice of Dispositive Authority" in which it quoted from the Presiding Officer's erroneous holding that "once a transaction has been litigated between parties, those parties may not raise new causes of action involving that transaction in a new case in

---

[1] In addition, there was no mention whatsoever of administrative order violations in the Barefoot Bay administrative complaint or settlement.

[2] As previously noted, the administrative consent agreements set out specifically what violations had been committed, and that the orders settled those violations. See Exhibits C and D to United States' initial brief. While non-admission of liability language is often standard in some settlement documents, in these agreements, defendants actually admit liability for the specified violations. They do not admit liability in the agreements, however, for future violations, and have never argued that the agreements establish their liability for future violations. It stands to reason, then, that if the consent agreements are not res judicata as to liability for future violations, they cannot be res judicata as to penalty for future violations.

[3] While the unpermitted discharge violations in both actions may involve the same underlying cause -- Defendants' failure to timely apply for and obtain NPDES permits -- the nuclei of operative fact are distinctly different because they involve separate violations which occurred on different (and later) dates.

any forum." Florida Cities' Notice of Dispositive Authority at 2 [emphasis added by Florida Cities]. Clearly, as described in the United States' initial brief, the facts in Ridgway were indeed similar to those in the instant case. And, just as clearly, the Presiding Officer in Ridgway was wrong: a party may indeed raise a new cause of action in a later proceeding. Because the claims at issue involve new causes of action, the United States is not precluded from raising them in this proceeding.[4]

II. Additional Authorities

Defendants' reliance on Supporters to Oppose Pollution Inc. v. Heritage Group, 973 F.2d 1320 (7th Cir. 1992), is misplaced. Having previously been party to a civil action seeking redress for the disposal of hazardous wastes, the private party plaintiff in STOP argued that it was entitled to bring a new civil action because there were ongoing releases of hazardous substances from materials already deposited. The Seventh Circuit noted that the landfill operator had already closed the dump, so no new hazardous materials were being deposited. 973 F.2d at 1323. The court therefore held that the plaintiff had failed to establish that these ongoing releases constituted new wrongful conduct

---

[4] EPA is precluded by the administrative consent agreements from revisiting the lenient penalties assessed for the periods specified therein. Thus, Florida Cities has fully received the benefit of its bargain. By the same token, it must also accept the consequences, which have always included the possibility of additional penalties for additional violations.

occurring since the earlier civil action. 973 F.2d at 1326.[5] This distinction was precisely the basis upon which the EPA Environmental Appeals Board in Ridgway found that the STOP case did not involve new wrongful conduct, in "sharp contrast" to the facts in Ridgway itself, where new NPDES violations had occurred. Ridgway at 18.

Were the United States relying in the instant case on an argument that the violations resolved in the administrative consent agreements were continuing to cause damage to the aquatic environments of the Sebastian and Indian Rivers, and the Sweetwater Creek and Tampa Bay respectively, then there might be a basis for res judicata to apply under the STOP case. The United States has never made any such argument. Rather, the United States has consistently argued that the claims at issue in the instant case involve new and separate violations (i.e., new wrongful conduct) which were not previously resolved. The United States is entitled, as a matter of law, to bring these claims as separate causes of action.[6]

Although they concede that "the underlying principles referred to in Manning and Ridgway are applicable to this case,"

---

[5] Similarly, in United States v. Gurley, 43 F.3d 1188, 1196 (8th Cir. 1995), cited by Defendants, the court held that both the earlier action and the later action involved the disposal and later release of hazardous wastes. Having chosen to bring a Clean Water Action for disposal and release, EPA was precluded from bringing a subsequent CERCLA action for the same wrong. Id. at 1197.

[6] That the new and separate violations arguably were foreseeable, an argument advanced both by Defendants and the violators in Ridgway, is irrelevant to the question of whether the violations constitute separate causes of action.

Defendants' brief at 6, Defendants decline to actually apply these principles to the facts at bar. And, while frequently repeating that res judicata should apply to bar the claims at issue because they allegedly arise from the "same nucleus of operative fact," Defendants fail to actually define what that so-called identical nucleus is in each case. Instead, they embark on an unsubstantiated extra-record argument based on a distorted version of facts already rejected by the Court in its June 21, 1995 Order, which is a substantial digression from the res judicata issue the Court ordered briefed. Because this discussion is beyond the scope of the Court's July 23, 1996 Order, it merits no further consideration.[7]

III. Procedural posture

The only additional evidence Defendants actually identify as being necessary in their view if the Court reinstates the claims at issue is evidence relating to the negotiation of the consent agreements. In its November 22, 1995 Order (p. 12 at n.10), however, the Court held such evidence irrelevant because the agreements themselves are "not ambiguous" and "'the scope of a consent decree must be discovered within its four corners, and not by reference to what might satisfy the purposes of one of the parties to it.' Paradise v. Prescott, 767 F.2d 1514, 1525 (11th Cir. 1985) (citations omitted.)" Thus, there is no reason to

[7] To the extent that the Court does wish to revisit the discussion of the events leading up to the administrative consent agreements, it is respectfully referred to the United States' Memorandum in Support of its Motion for Reconsideration of Court's Order on Amendment of Complaint, filed May 15, 1995.

reopen the record to admit such evidence. Moreover, at their insistence, Defendants had an eight-day trial in which to present evidence of mitigation. It is hard to conceive of what additional evidence they would need to present even if the claims are reinstated.

CONCLUSION

Defendants have failed to carry their burden of demonstrating that the United States' claims for unpermitted discharges at Barefoot Bay and Carrollwood and Administrative Order violations at Barefoot Bay should be barred by res judicata. In accordance, then, with the Ridgway and Manning decisions, and the other authorities cited herein and in the United States' initial brief, these claims should be reinstated. Summary judgment should be entered in favor of the United States on those claims, and penalties assessed for the violations alleged therein in accordance with the penalty scheme previously proposed.

I) PRELIMINARY STATEMENT

The Defendants, Florida Cities Water Company ("Florida Cities") and Avatar Holdings Inc. ("Avatar Holdings"), hereby file this joint response to Plaintiff's "Memorandum in Support of Reinstatement of the Claims Excluded by the Court on the Grounds of Res Judicata." Plaintiff's arguments are without merit and are not supported by Eleventh Circuit precedent or the Clean Water Act, 33 U.S.C. §§ 1251 et. seq. ("CWA"). This Court's application of res judicata to the facts of this case, as set forth in its November 22, 1995 Order ("Order"), is correct. Defendants respectfully request that the Court reaffirm its prior rulings. All four factors required for res judicata to bar the claims alleged in paragraphs 16-23 and 30 of Plaintiff's Second Amended Complaint are present in this action.

II) ARGUMENT

a) All of the Elements of Res Judicata are Present.

In the first section of its brief, Plaintiff argues that In re: Borough of Ridgway, CWA 95-2 (May 30, 1996), stands for the proposition that res judicata bars only claims that arose before the violations alleged in the administrative complaint. Plaintiff's argument ignores the elements of res judicata, as set forth in I.A. Durbin, Inc. v. Jefferson National Bank, 793 F.2d 1541, 1549 (11th Cir. 1986) and Manning v. City of Auburn, 953 F.2d 1355 (11th Cir. 1992) ("Manning"). These cases hold that res judicata bars subsequent claims when the following four elements are present:

1) a final judgment on the merits,
2) decided by a court of competent jurisdiction,
3) the parties from each suit must be identical,
4) the same cause of action must be involved in both cases.

Manning, 953 F.2d at 1358. All of these elements are present in this case. Because elements (2)

and (3) above are not in dispute, the following discussion addresses only elements (1) and (4).

1. The same cause of action is involved in both cases.

Plaintiff argues that Manning stands for the proposition that res judicata cannot bar claims that arose after the dates of the administrative complaint. However, the Manning court did not limit the application of res judicata so narrowly. The court explained that "[i]n this circuit, the determination of whether the causes of action in two proceedings are the same is governed by whether the primary right and duty are the same." Manning, 953 F.2d at 1358. The court emphasized that the test is one of substance, not form. Id. Contrary to Plaintiff's argument, the court's focus in Manning was whether the operative facts of the first and second suits were the same. The Eleventh Circuit found that the facts surrounding the discrimination complained of in Manning's complaint arose out of a different "operative nucleus of fact" than that alleged in the prior class action. Therefore, only the claims in the second action that arise out of a different operative nucleus of fact are exempt from res judicata.

Plaintiff also argues that the Environmental Appeals Board in Ridgway held that only those claims that arose before the dates of the violations alleged in the administrative complaint would be barred. Pl. Mem. at 3. However, this position is supported neither by Ridgway nor by Eleventh Circuit precedent, as set forth in Manning and Durbin. In Ridgway, the Environmental Appeals Board ("Board") overturned the EPA Region III Administrator's decision principally on the ground that there was no final adjudication of the claims alleged in the first complaint, holding that without this final adjudication, res judicata could not bar the claims in the second complaint. In addition, the Board noted that the violations alleged in the first complaint (for effluent limitation violations from January through April 1994) were different from the

allegations of the second administrative complaint (for effluent limitation violations from May through July 1994) in that these violations constituted "new conduct by Ridgway," which would not be barred by res judicata. Ridgway, CWA Appeal No. 95-2 at 13.

Unlike the scenarios found in Manning and Ridgway, the allegations of paragraphs 16-23 (Barefoot Bay) and paragraph 30 (Carrollwood) arose from a "common nucleus of operative fact," with respect to each facility. First, there is a fundamental difference between the unpermitted discharge violations at Barefoot Bay and Carrollwood, and the permit effluent limitation violations which occurred in Ridgway. That difference is EPA's unique power to determine the issuance and effective date of an NPDES permit. Whereas a series of effluent violations may be caused by different and unpredictable reasons from day to day, the unpermitted discharges are a result of the same reason each day. The reason for not having an NPDES permit was considered by EPA in the prior administrative hearings, as is evidenced by the "Notes on Proposed Penalty Assessment" for both Barefoot Bay and Carrollwood. The evidence needed to establish liability for the unpermitted discharge claims alleged in the Second Amended Complaint would be exactly the same as the evidence considered five years ago by EPA at the time of the administrative settlement.

Second, EPA was anticipating the issuance of NPDES permits at the time of each settlement. At Carrollwood, Florida Cities applied for its permit on July 31, 1990. EPA issued its "Intent to Issue" an NPDES permit for Carrollwood on September 15, 1990. On September 25, 1990 EPA filed Administrative Complaint No. CWA-IV-90-542. alleging discharge without a permit "since 1987." EPA did not issue the "Consent Agreement and Order Assessing Penalties" until April 19, 1991, and did not issue the permit until May 28, 1991. All of the

violations at Carrollwood clearly arose from the "same operative nucleus of fact," i.e., the facility's lack of an NPDES permit. At the time of the Administrative Complaint and the Consent Agreement, EPA knew that the facility did not have a permit and knew that a permit application had been submitted. During the period between August 1990 and June 1991, when the application was pending, EPA was the only party that could determine how long the discharge without a permit would continue. When EPA filed CWA-IV 90-542 on September 25, 1990, EPA anticipated that a permit would be granted in February of 1991. (Florida Cities Trial Exhibit 201). Because the permit was not actually granted until May 28, 1991, and did not become effective until July 1,1991, Plaintiff now seeks to recover for additional days of discharge without a permit, even though the permit's issuance was completely within the Agency's control.[1]

The facts at Barefoot Bay are analogous to those at Carrollwood. Florida Cities applied for an NPDES permit for Barefoot Bay on February 28, 1990. EPA did not issue the permit until September 16, 1991, with an activation date of November 1, 1991, a delay of eighteen months. By the time that EPA filed Administrative Complaint CWA-IV 91-538 on September 25, 1991, Florida Cities had its permit, and by the date of the Consent Agreement the permit was in effect. While the Administrative Complaint alleges only violations on September 14, 1989, the Notes on

[1] Plaintiff argues that these additional days of unpermitted discharge at Carrollwood are worth an additional $5,000.00 per day in penalties. The evidence presented at trial demonstrated that the Region IV enforcement officers who actually investigated the violations, who met with Florida Cities' officials, and who were most familiar with the facts of the case levied a $15,000.00 penalty for thirty-seven months of discharge without a permit (or $13.51 per day). Now, over five years after the original investigation, without any testimony from the investigating officers, and without presenting any evidence that would support such a tremendous penalty, Plaintiff seeks to recover over $1,000,000.00 for these additional ten months of unpermitted discharge.

Proposed Penalty Assessment, which are part of the administrative record, demonstrate that EPA was aware of the ongoing discharges at Barefoot Bay since 1985 but elected not to include any other days of discharge in the administrative complaint, even though additional allegations for those violations could have been brought at that time. (Florida Cities Trial Exhibit 202). As with Carrollwood, all of the unpermitted discharges at Barefoot Bay arose out of the "same operative nucleus of fact," i.e., discharge without a permit. The facts demonstrate that EPA knew of all of the unpermitted discharges and alleged administrative order violations, as a result of receiving Florida Cities' discharge monitoring reports, when it brought the administrative complaint. EPA could have brought all of the claims in Paragraphs 16-23 of the Second Amended Complaint as a part of the administrative penalty action. EPA's election not pursue all possible claims bars EPA from resurrecting them in this case.

Plaintiff also argues that under Atlantic States Legal Foundation v. Tyson Foods, Inc., 897 F. 2d 1128, 1139-40 (11th Cir. 1990), each day of violation constitutes a new cause of action and, therefore, actions for subsequent days of violations are not barred by res judicata. Rather, the portion of the opinion to which Plaintiff cites, stands only for the proposition that each day can be considered a separate day of violation for the purpose of calculating a penalty, not for purposes of res judicata. Tyson Foods simply does not address whether each day of violation converts one cause of action into a series of mini-causes of action for the purposes of res judicata.

More important, Plaintiff's reading of Tyson Foods is at odds with Eleventh Circuit precedent addressing res judicata in the context of the "same operative nucleus of fact." See, Manning, 953 F.2d at 1538, and NAACP v. Hunt, 891 F.2d 1555, 1561 (11th Cir. 1990). Even

if each day of a CWA violation is an independent cause of action, res judicata bars subsequent actions if they derive from the "same operative nucleus of fact."

2. There was a final judgment on the merits.

Plaintiff attempts to distinguish EPA's administrative penalty actions from judicial penalty actions by asserting that the statutory penalty caps on administrative penalties do not make the administrative and judicial forums equivalent for purposes of res judicata. First, Plaintiff cites no authority for the proposition that the CWA preempts the doctrine of res judicata. Second, Plaintiff's argument fails to acknowledge that EPA chose voluntarily from an array of enforcement options to assess administrative penalties. Under the 1987 CWA Amendments, EPA had three options for assessing penalties against Florida Cities: EPA could have chosen to proceed in an enforcement action to assess (1) administrative Class I penalties, (2) administrative Class II penalties, or (3) civil judicial penalties. After assessing factors listed under CWA § 309(g)(3), EPA exercised its prosecutorial discretion by pursuing penalty actions for Class I administrative penalties. At the time, EPA knew that this election would result in its permanent preclusion from re-litigating those matters in another forum.[2] A subsequent lawsuit is barred regardless of whether the penalties are paid in administrative or judicial forums. See Astoria Federal S&L v. Solimino, 501 U.S. 104 (1991); United States v. Holloway Oil Co., Case No. 88-59-Civ-J-14, 28 ERC (BNA) 1990 (M.D. Fla. 1988).

---

[2] Plaintiff asserts that the difference in the CWA's civil judicial penalty provisions and administrative civil penalty provisions renders an administrative adjudication incompetent for res judicata purposes. Yet these different options for enforcement of the CWA do not affect what claims can be addressed, how many claims can be addressed, or how these claims are resolved, other than the amount of the potential maximum penalty per violation.

With regard to Barefoot Bay and Carrollwood, EPA exercised its enforcement discretion and determined that a Class I penalty was warranted for the violations alleged in the earlier administrative actions. Plaintiff now seeks to re-open that litigation. Plaintiff should not be allowed to re-litigate those issues that were or could have been brought in the prior penalty action because all four elements of res judicata are present.

III) STATE OF THE RECORD

The Court's Order was issued in the context of cross-motions for partial summary judgment. Plaintiff's suggestion that the Court should reverse itself and award summary judgment to the government ignores the standard necessary to prevail on a summary judgment motion, namely, whether there exist any genuine issues of material fact. If this Court determines that a genuine issue of material fact exists, then this Court may need to hear testimony on liability, not just penalties. However, Defendants maintain that the Order should be reaffirmed.

Second, Plaintiff suggests that if the Court were to modify its Order by awarding it summary judgment, then no further evidence would be necessary. As stated in the previous filing, Defendants did not present several witnesses and exhibits because the penalty issues were moot in light of the November Order. Plaintiff apparently presented such evidence, and states that it needs no further direct testimony. Therefore, if penalty issues are re-opened, Defendants would request that this Court limit Plaintiff to cross-examination in any such proceeding, and allow Defendants to present further direct testimony on penalty mitigation.

Third, even if the Order were modified, the Court should not accept the testimony or report of expert witness Eileen Zimmer. Plaintiff's argument that Zimmer's report is of "renewed relevance" is incorrect. For the same reasons set forth in "Defendants' Joint Motion In

Limine to Exclude the Testimony and Report of Eileen Zimmer," her testimony and report remain flawed on multiple bases and should be excluded. Plaintiff's suggestion that the Court should hear her testimony amounts to nothing more than another motion for reconsideration, and Plaintiff has not met any legal standard that would give this Court reason to reconsider its previous evidentiary ruling. Plaintiff contends that the decision in United States v. Dean Dairy Products Co., CV-94-0621 (M.D. Pa. July 10, 1995) supports its own "wrongful profits" argument; however, this argument is flawed on two grounds. The Dean Dairy court's rationale addressing "wrongful profits," like Ms. Zimmer's analysis, is contrary to the majority position for calculating economic benefit as set forth in this Court's Order of March 25, 1996. Also, in Dean Dairy, the court found that the subsidiary discharger actually profited from its delayed capital expenditure. In the present case, the testimony and evidence presented demonstrated that Florida Cities made no profit from any delayed capital expenditure. (Testimony of Keith Cardey; Apr. 5 tr., pp. 101-107) If the Court were to hear Ms. Zimmer's testimony, Defendants would need additional cross-examination.[3]

IV) CONCLUSION

For the reasons set forth above, Florida Cities and Avatar Holdings respectfully request that this Court reaffirm its November 22, 1995 Order and deny Plaintiff's efforts to reinstate the allegations of Paragraphs 16-23 and 30 of Plaintiff's Second Amended Complaint.

---

[3] Defendants also note that, contrary to Plaintiff's statement contained in footnote 13 of its memorandum (Pl. Mem. at 13), Defendants presented the testimony of Charles McNairy, who testified that the defendants would be unable to pay a significant penalty. Day 8, p.245.

Exhibit_____(GHB-96)

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA

Plaintiff,

V.

CASE NO. 93-281-CIV-FTM-21

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.

ORDER

On July 23, 1996, in light of the Plaintiff's submissions of additional authority (Dkt. 33), the Court entered an Order (Dkt. 335) directing the parties to file memoranda and responsive memoranda addressing the question: "What is the effect of In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 and Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992) on the Court's November 22, 1995 Order precluding the claims in paragraphs 16, 17-23 and 307" The Court further directed the parties to delineate relevant facts, such as which document, if any, constitutes the "original pleading" in the prior administrative proceedings for Barefoot Bay and Carrollwood. The parties have filed their memoranda (Dkts. 336 & 337)[1] and their responses to each others' initial memoranda (Dkts. 338 & 339).

[1]The Court notes that the Plaintiff has referred the Court to the United States' Memorandum in Support of its Motion for Reconsideration of Court's Order on Amendment of Complaint, filed May 15, 1995 (Dkt. 87) and the United States Memorandum in Support of its Motion for Expedited Reconsideration of the Court's Ruling on Res Judicata and in Reply to Avatar Holding's Motion for Clarification of the Court's Order, filed December 19, 1995 (Dkt. 230).

$2.00

Upon consideration of the parties' memoranda and upon review of the applicable law and relevant portions of the file in this case, the Court finds that its prior determination that the claims in paragraphs 16, 17-23 and 30 were barred by res judicata was correct. The Court will, however, clarify its reasoning as set forth in its November 22, 1995 Order (Dkt. 212) and state its reasons for upholding the prior determination. The Court notes that the parties agree that the Administrative Complaints in the prior administrative proceedings constitute the original pleadings in those proceedings for purposes of the instant res judicata analysis.

The Plaintiff argues that while Manning involved facts and circumstances readily distinguishable from the instant case, Manning sets out relevant and binding principles which should be understood as barring, not requiring, the application of res judicata to certain claims in the instant case. The Eleventh Circuit in Manning stated:

> [W]e do not believe that the res judicata preclusion of claims that 'could have been brought' in earlier litigation includes claims which arise after the original pleading is filed in the earlier litigation. Instead we believe that, for res judicata purposes, claims that 'could have been brought' are claims in existence at the time the original complaint is filed or claims actually asserted by supplemental pleadings or otherwise in the earlier action.

953 F.2d at 1360 (emph. in original). The Plaintiff argues that under Manning, res judicata cannot bar claims that arose after the dates of the administrative complaints in the instant case. Further, Plaintiff asserts, Manning shows that the EPA was under no duty to supplement its administrative complaints to include subsequent violations. Additionally, Plaintiff argues that Ridgway indicates that only those claims that arose before the dates of the violations alleged in the administrative complaints may be barred. The EPA Environmental Appeals Board in Ridgway stated:

> [T]he Regional Administrator failed to consider the fact that the Region's second action was based on new conduct by Ridgway, much of which allegedly occurred after the Region filed its first action. . . [A] litigant is not required, and indeed is generally not permitted, to assert speculative claims based on conduct that has not yet occurred, and res judicata principles therefore do not require joinder of claims based on such conduct.

CWA Appeal No. 95-2 (EPA Env. Appeals Board, May 30, 1996) at 14-15. Plaintiff further argues that under Ridgway, any claim that arises after the date of the violation(s) in the complaint is "new wrongful conduct" that can be the subject of a separate action. Thus, Plaintiff argues that all claims arising after those alleged in the Administrative Complaints may be brought in the instant action.

Plaintiff also asserts that while the principles in Manning and Ridgway protect nearly all of the claims at issue from being barred by res judicata, the facts in this case are such that the doctrine of res judicata should not apply beyond the claims that were expressly addressed in the Administrative Orders. Plaintiff argues that the settlement is unambiguous, and by its own terms, sets out its own preclusive effect. Plaintiff also argues that Congress has legislated the extent of the preclusive effect of an administrative order in the Clean Water Act and that the doctrine of res judicata cannot be used to extend the protection afforded by statutory law.[2]

The Defendants argue, on the other hand, that while the underlying legal principles referred to in Manning and Ridgway are applicable to this case, the distinguishing facts render the results in those cases irrelevant to this action. Defendants state that in Manning, the issue

---

[2]Plaintiff points out that the Clean Water Act provides that "Action taken by the Administrator . . . under this subsection shall not affect or limit the Administrator's . . . authority to enforce any provision of this chapter" except for any violation which has been the subject of an administrative order. 33 U.S.C. 1319 (g)(6). Further, Plaintiff points out that under the Clean Water Act, each day of an unpermitted discharge or effluent violation is a separate violation, such that each violation constitutes a separate cause of action. 33 U.S.C. § 1319 (d), Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128, 1139-40 (11th Cir. 1990).

is whether the two suits involved the same cause of action, and the Eleventh Circuit found that the two suits were based upon different sets of facts. Defendant further states that the main issue in Ridgway is whether the prior suit was a final judgment. Defendants assert that in the instant case, the allegations arose out of the same nucleus of operative fact for each facility and that final adjudication had occurred. Defendants assert that a review of the facts of the present case, including a time line of the events at Barefoot Bay and Carrollwood, demonstrates that res judicata is applicable to the instant case. Defendants point out the following facts for Barefoot Bay:

September 14, 1989	EPA Region IV enforcement officer Roy Herwig visits the Barefoot Bay WWTP and informs Florida Cities that the company needs a NPDES permit for the facility.
February 28, 1990	Florida Cities files its application for a NPDES permit with Region IV. EPA loses this application, thus delaying the process of acquiring a permit by over three months.
June 8, 1990	Florida Cities reapplies for an NPDES permit. EPA acknowledges that it lost the first application.
September 26, 1990	Region IV issues Administrative Order 90-106, which contains interim effluent limitations for the facility's discharges and requires the facility to submit monthly discharge monitoring reports.
September 16, 1991	Region IV issues NPDES Permit No. FL0042293 for Barefoot Bay, but delays the effective date of the permit until November 1, 1991. This permit contains permanent effluent limitations for the facility.
September 25, 1991	Region IV issues Administrative Complaint CWA-IV 91-538 seeking penalties for discharge without a NPDES permit. EPA's "Notes on Proposed Penalty Assessment" state that EPA is fully aware that discharges have occurred since 1985.
November 1, 1991	NPDES Permit No. FL0042293 becomes effective.

November 6, 1991 — Region IV issues the Consent Agreement and Order Assessing Administrative Penalties ("Consent Agreement") for CWA-IV 91-538 in the amount of $6,000.00.

The Defendant asserts, and the Court agrees, that the time line demonstrates that Region IV knew with certainty at the time it issued the Administrative Complaint that the unpermitted discharges would continue until November 1, 1991 because Region IV issued and determined the effective date of the permit on September 16, 1991. Region IV was solely responsible for granting the permit and selecting its effective date. Thus, all of the discharges without a permit for the period of time between September 25, 1991, the date the Administrative Complaint was filed, and November 1, 1991, the day the NPDES permit became effective, resulted from the same nucleus of operative fact: the absence of an NPDES permit. The Court therefore finds that res judicata bars the claims in paragraph 16,[3] as Plaintiff knew of those claims and could have asserted them in the prior Administrative Complaint.

Additionally, Region IV knew of the claims in paragraphs 17-23[4] when it brought the Administrative Complaint on September 25, 1991 and could have asserted them in that Administrative Complaint, as the Notes on Proposed Penalty Assessment show that they were within the scope of that proceeding. Therefore, those claims are also properly precluded by res judicata. Thus, the Court finds that Manning and Ridgway are distinguishable, because the claims sought to be asserted in this case are not different claims based on new conduct; rather

[3]Paragraph 16 alleges that Defendants discharged pollutants from Barefoot Bay without an NPDES permit from July 1, 1990 to October 31, 1991.

[4]Paragraphs 17-23 allege that Defendants violated EPA Administrative Order 90-106 for Barefoot Bay from September 26, 1990 to October 31, 1991.

they are the same type of claims, they were not speculative claims, and they were known at the time the original pleading was filed in the underlying litigation.[5]

Defendants have also pointed out the following facts for Carrollwood:

August 15, 1975	Region IV issues NPDES Permit No. FL0029319 for the Carrollwood WWTP.
April, 1980	Florida Cities applies to renew it NPDES permit.
September 27, 1984	Region IV denies Florida Cities' permit renewal application based upon the Florida Department of Environmental Regulation's (FDER's) unwillingness to renew its operating permit for the facility.
November 27, 1984	Region IV issues Administrative Order 85-044, which oversees the Carrollwood facility's continued discharge until June 1987.
July, 1987	The Florida Legislature enacts the Grizzle-Figg Act which authorized discharges into Sweetwater Creek within certain limitations.
November 17, 1989	After compliance with the prerequisites of Grizzle-Figg, Florida Cities applies for a FDER construction permit, a necessary prerequisite to obtain an NPDES permit.
July 27, 1990	FDER grants the construction permit.
July 31, 1990	Florida Cities applies to Region IV for a NPDES permit.
September 15, 1990	EPA issued its "Intent to Issue" an NPDES permit for Carrollwood.
September 25, 1990	Region IV issues Administrative Complaint No. CWA-IV 90-542 seeking penalties for discharge without a NPDES permit at Carrollwood "since June 1987."
April 19, 1991	Region IV issues CWA-IV 90-542 Consent Agreement and Order Assessing Penalties for discharge without a permit from July 1987 to July 1990 containing a $15,000 penalty.

[5]The Court recedes from its previous reliance on Supporters to Oppose Pollution Inc. v. Heritage Group, 973 F.2d 1320 (7th Cir. 1992).

2)

May 28, 1991	Region IV issues NPDES Permit No. FL0029319 for an AWT facility at Carrollwood, which became effective on July 1, 1991.
July 1, 1991	NPDES Permit No. FL0029319 becomes effective.
January 6, 1992	The Carrollwood WWTP ceases discharge into Sweetwater Creek. The facility is taken out of service and the effluent is transferred to a Hillsborough County facility, pursuant to the interconnection agreement of June 5, 1991.

The Defendant asserts, and the Court agrees, that the time line demonstrates that Region IV knew at the time that it filed the Administrative Complaint that the unpermitted discharges would continue until the Region IV issued and determined the effective date of the permit based on the permit application that was pending. During the period between Florida Cities' application for an NPDES permit and the issuance of the permit, Region IV was solely responsible for granting the permit and selecting its effective date, which thereby determined how long the discharge without a permit would continue. Thus, all of the discharges without a permit for the period of time between September 25, 1990, the date the Administrative Complaint was filed, and July 1, 1991, the day the NPDES permit became effective, resulted from the same nucleus of operative fact: the absence of an NPDES permit. The Court therefore finds that Manning and Ridgway are distinguishable and that res judicata bars the claims in paragraph 30,[6] as Plaintiff knew of those claims and could have asserted them in the prior Administrative Complaint.

Upon consideration of the foregoing, the Court REAFFIRMS its November 22, 1995 Order granting res judicata effect to the claims in paragraphs 16, 17-23 and 30 of the Second Amended Complaint.

---

[6]Paragraph 30 alleges that Defendants discharged pollutants from Carrollwood without an NPDES permit from August, 1990 to June, 1991.

DONE AND ORDERED, at Tampa, Florida, this 16th day of August, 1996.

Exhibit_____(GHB-97)

AO 450 (Rev. 5/85) Judgment in a Civil Case

United States District Court

MIDDLE DISTRICT OF FLORIDA

UNITED STATES OF AMERICA

V.

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY

JUDGMENT IN A CIVIL CASE

CASE NUMBER: 93-281-Civ-FTM-21

☐ Jury Verdict. This action came before the Court for a trial by jury. The issues have been tried and the jury has rendered its verdict.

☒ Decision by Court. ~~This action came to trial or hearing before the Court.~~ The issues have been tried or heard and a decision has been rendered.

IT IS ORDERED AND ADJUDGED that judgment is entered in favor of plaintiff United States of America and against defendant Florida Cities Water Company for the violations at the three wastewater treatment plants as follows:

Barefoot Bay	$5,610.00
Carrollwood	$14,675.00
Waterway Estates	$289,425.00
TOTAL	$309,710.00

Judgment is entered in favor of defendant Avatar Holdings, Inc. and against plaintiff United States of America on plaintiff's claims against it.

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

TAMPA, FLORIDA

UNITED STATES OF AMERICA

Plaintiff,

V. CASE NO. 93-281-CIV-FTM-21

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.
_____/

MEMORANDUM ORDER

This is an action by the United States of America ("Plaintiff") against Florida Cities Water Company ("Florida Cities"), a private utility company, and its parent company, Avatar Holdings, Inc. ("Avatar Holdings"), brought pursuant to the civil penalty provisions of the Clean Water Act (CWA), 33 U.S.C. § 1319 (b). The action was tried to the Court sitting without a jury. Upon due consideration of the testimony and evidence presented herein, the arguments of counsel, and the proposed findings submitted by the parties, the Court issues the following opinion as its findings of fact and conclusions of law in accordance with Rule 52, Federal Rules of Civil Procedure.

PROCEDURAL BACKGROUND

Prior to trial, the Court decided summary judgment motions of all three parties. The Court granted Plaintiff summary judgment on liability against Florida Cities on the Plaintiff's claims for National Pollutant Discharge System (NPDES) permit violations at Barefoot Bay and

Carrollwood and claims for unpermitted discharges, discharges to an unpermitted location and NPDES permit violations at Waterway Estates. The Court granted Florida Cities summary judgment on the allegations in paragraphs 16-23 and 30 of the Second Amended Complaint, which consisted of a claim for discharge from Barefoot Bay without an NPDES permit, claims for violations of Administrative Order (AO) 90-106 for discharging without a permit from Barefoot Bay, and a claim for discharge without an NPDES permit from Carrollwood. The Court also granted Avatar Holdings partial judgment on the pleadings as to all allegations against Avatar Holdings that date back more than five years due to the five year statute of limitations, 28 U.S.C. § 2462. The remaining issues at trial were the amount of civil penalty to be assessed against Florida Cities[1], the liability of Avatar Holdings as Florida Cities' parent company, and the amount of civil penalty to be assessed against Avatar Holdings if it is found to be liable. The parties have filed their proposed findings of fact and conclusions of law and post-trial briefs, and Avatar Holdings has additionally filed a memorandum of law in support of judgment as a matter of law and Plaintiff has filed a memorandum in opposition thereto.

FINDINGS OF FACT — FLORIDA CITIES[2]

Florida Cities is a utility company, which owns and operates the three wastewater treatment plants that are involved in this case: Barefoot Bay, Carrollwood, which is no longer

[1]In accordance with the Pretrial Order (Dkt. 248), the trial of this case proceeded upon the Revised Joint Pretrial Statement (Dkt. 264), and said pretrial statement is controlling. In the pretrial statement, the parties indicated that the only issue to be tried with respect to Florida Cities was the amount of the civil penalty to be assessed. Therefore, the Court will base the amount of penalties on the number of violations determined in the Court's prior Orders in this case.

[2]Additional findings of fact are incorporated into the Court's discussion of the six factors to consider in assessing the amount of the civil penalty, as is required by the Eleventh Circuit in Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., 897 F.2d 1128, 1142 (11th Cir. 1990)(stating that in determining the amount of penalty, the district court must indicate the weight it gives to factors in the applicable statute and the factual findings that support its conclusions).

AO 72A
(Rev. 8/82)

in operation, and Waterway Estates. In order for a company to discharge to surface waters of the United States, it must obtain an NPDES permit issued from the Environmental Protection Agency (EPA) or by a state to which the EPA has delegated NPDES permitting authority. Prior to May 1, 1995, Florida was a "non-delegated" state under the CWA such that dischargers in Florida were required to be permitted by both the EPA and the Florida Department of Environmental Protection (FDEP)[3].

I. Barefoot Bay

The Barefoot Bay plant is located in Brevard County, Florida, and it discharges treated effluent into an agricultural drainage canal which leads to the Sebastian River. Barefoot Bay utilizes two percolation ponds. Barefoot Bay provides secondary wastewater treatment to a residential community and is currently undergoing a plant modification to provide advanced wastewater treatment. On November 1, 1991, NPDES permit FL0042293 became effective. The permit required Florida Cities to report to EPA total residual chlorine (TRC) levels, toxicity test results, and biochemical oxygen demand (BOD) levels. The 269 Clean Water Act violations pertaining to Barefoot Bay in this case are the following exceedances of NPDES permit FL0042293: 182 violations of the TRC limitation between September 1992 and March 1993; 3 chronic toxicity test failures in September-October 1992, May 1993, and February 1994; and 79 violations for failure to report BOD on a weekly basis between November 1991 and June 1993 and twice in November 1993.

[3]The Florida Department of Environmental Protection (FDEP) was formerly known as the Florida Department of Environmental Regulation (FDER). Throughout this Memorandum Order, FDEP should be read to mean either FDEP or its predecessor agency, FDER, depending on the relevant time period.

In September 1992, Barefoot Bay purchased and put into use a new Hach DPD DR-100 chlorine tester, which is an EPA approved method for testing chlorine limits of 0.01 milligrams per liter. However, the EPA guidance materials acknowledge that the DPD DR-100 colorimeter is inaccurate below levels of 0.1 milligrams per liter. Thus, the EPA guidance materials allow dischargers who test for TRC with the DPD DR-100 colorimeter to report measurements below 0.1 milligrams per liter as non-detectable. Between September 1992 and March 1993, Florida Cities reported chlorine residuals at or below 0.1 milligrams per liter. Had Florida Cities reported the chlorine as non-detectable rather than as an actual number, Florida Cities would have been deemed to be in compliance with chlorine limits under the Clean Water Act. In any event, after reporting the chlorine residuals at Barefoot Bay, Florida Cities constructed, permitted and placed into service by March 3, 1993 an amperometric titrator and a sulfur dioxide feed, which eliminates chlorine through the combination of sulfur dioxide with the chlorine residual.

With respect to the chronic toxicity test violations, the testimony presented at trial established that the most common cause of chronic toxicity failures is the presence of ammonia in the effluent. Ammonia is made of nitrogen and hydrogen (NH_3). Although advanced wastewater treatment provides for nutrient removal from effluent, secondary treatment does not provide for removal of nutrients such as nitrogen or phosphorus. Thus, Barefoot Bay, a secondary treatment plant, was not designed to remove the nitrogen which resulted in the chronic toxicity test violations.

With respect to the BOD violations, Florida Cities had been reporting carbonaceous biochemical oxygen demand (CBOD) rather than BOD as required in the permit. The BOD test measures the oxygen demand exerted by treated effluent on the receiving system. In October

AO 72A
(Rev. 8/82)

1993, Barefoot Bay applied to EPA for a modification of NPDES permit FL0042293 to allow monitoring for CBOD instead of BOD, and EPA granted the modification request with no change in the actual limit. The testimony at trial showed that BOD levels can be extrapolated with a reasonable degree of accuracy from CBOD levels. Thus, even though Barefoot Bay improperly reported CBOD levels, the effluent would have complied with the applicable permit limits.

II. Carrollwood

Until it was closed on January 6, 1992, the Carrollwood plant was located in Hillsborough County, Florida, and provided secondary wastewater treatment to a residential community. Between 1975 and January 1992, Carrollwood discharged secondarily treated effluent into the Sweetwater Creek pursuant to a series of FDEP permits and consent orders. In May 1991, the EPA issued NPDES permit FL0029319, which imposed advanced wastewater treatment standards. The 234 Clean Water Act violations pertaining to Carrollwood in this case are exceedances of the NPDES permit limitations for phosphorus, CBOD, nitrogen, TRC, Total Suspended Solids (TSS), and fecal coliform between July 1991 and January 1992.

In 1979, the FDEP determined that there should be no discharge into Sweetwater Creek, which leads to Tampa Bay, in order to reduce the amount of pollution going to Tampa Bay. In 1984, the EPA denied Florida Cities' NPDES renewal application to discharge into the Sweetwater Creek. In April 1988, FDEP issued Carrollwood an operating permit to the Carrollwood facility requiring Florida Cities to connect to the Hillsborough County system or to construct an advanced wastewater treatment facility by October 1, 1990. In the summer of 1990, Florida Cities applied to the FDEP for another operation permit and the permit application was denied. However, Florida Cities and FDEP entered into a consent order in January 1991

reincorporating the effluent limitations of the April 1988 operating permit and extending until April 1992 the construction deadline for interconnection to Hillsborough County or completion of advanced wastewater treatment. The consent order also required Florida Cities to continue to operate the wastewater treatment plant in accordance with the 1988 effluent limitations.

Since late 1990, Carrollwood also operated under EPA AO 90-100, which imposed secondary treatment limits. No violations of secondary treatments were recorded between July 1, 1991 and January 6, 1992, and Florida Cities met the effluent limitations and monitoring requirements of the active administrative orders. In May 1991, the EPA issued the NPDES permit with advanced wastewater treatment limits. The level of treatment required by the NPDES permit reflected increased treatment requirements for phosphorous and nitrogen which were unattainable by the secondary treatment plant.

In 1991, Florida Cities simultaneously pursued two remedial options: connection to the Hillsborough County system and construction of an advanced wastewater treatment. Hillsborough County did not have capacity to accept effluent until the second quarter of 1991. After Hillsborough County agreed to waive a $5.5 million capacity fee, an agreement was signed on June 5, 1991 to interconnect the two facilities by January 1992. Florida Cities then abandoned plans to construct an advanced wastewater facility. Both before and after the agreement with Hillsborough County, Florida Cities requested that the EPA allow secondary interim limits and relief from the advanced wastewater treatment requirements. The EPA never revoked AO 90-100, which authorized secondary treatment, until March 1992, two months after the interconnection with Hillsborough County was completed. In 1991, the EPA assessed a

AO 72A
(Rev. 8/82)

$15,000 penalty ($13.51/day) under the CWA for discharges without an NPDES permit between June 1987 and July 1990 at Carrollwood.

III. Waterway Estates

The Waterway Estates plant is located in Lee County, Florida. Since April 1992, Waterway Estates has provided advanced wastewater treatment, and prior to that time, it provided secondary wastewater treatment. Waterway Estates has discharged treated effluent into the Caloosahatchee River since July 14, 1991, and prior to July 14, 1991, it discharged treated effluent into a canal which led to the Caloosahatchee River. The Waterway Estates plant exceeded NPDES permit FL0030325, which imposed advanced wastewater treatment standards, for a total of 1038 Clean Water Act violations consisting of: 396 violations for discharge without an NPDES permit between October 1, 1988 and October 31, 1989; 621 violations for discharging into a canal, instead of to the 6-foot contour line of the Caloosahatchee River between November 1, 1989 and July 14, 1991; 18 violations of total nitrogen loading and concentration; and 3 toxicity test violations.

In 1975, Florida Cities received a wasteload allocation and an NPDES permit which authorized Waterway Estates to discharge secondarily treated effluent to a canal leading to the Caloosahatchee River. The EPA renewed the permit in 1981 and 1983, and on May 9, 1986, Florida Cities applied to EPA Region IV for a routine renewal of its NPDES permit. At that time, permit writer Connie Kagey denied the application. Ms. Kagey based her denial on her review of the cover page and page 17 of the January 1981 Caloosahatchee River Wasteload Allocation Documentation, which is a preliminary planning document drafted as guidance by FDEP regional offices making permitting decisions. Based on her review of the planning

document, Ms. Kagey determined that Waterway Estates had no wasteload allocation. However, Florida Cities was given opportunities to bring any errors to the EPA's attention at several occasions: after receiving the letter indicating that there would be a public notice period, during the public notice period, and after the issuance of the permit decision when Florida Cities could have requested a hearing under 40 C.F.R. §§ 124.74 or 124.114.

Once the existing NPDES permit expired in 1987, the EPA issued AO 87-085, whereby the EPA authorized Waterway Estates to continue discharging effluent under the terms of the 1981 NPDES permit and directed that the facility cease its discharges by September 30, 1988. Florida Cities then decided to construct an advanced wastewater treatment facility and hired Source, Inc. in early 1988 to design the upgrade. In August 1988, the EPA amended its 1987 administrative order to require Waterway Estates to complete construction and meet final effluent requirements by November 1, 1990. The FDEP also issued a temporary operating permit requiring compliance with effluent limitations by November 1, 1990. The temporary permit allowed secondary discharges to the canal until November 1, 1990, and the EPA did not challenge or comment on the issuance of this permit.

On September 26, 1989, the EPA issued AO 89-109, which contained a construction schedule for the advanced wastewater treatment upgrade, a construction schedule for the relocation of the outfall to the 6-foot contour line of the Caloosahatchee River, and interim secondary treatment effluent limitations from the 1981 NPDES permit until the advanced wastewater treatment construction was completed. Additionally, on September 29, 1989, the EPA issued NPDES permit No. FL0030325, which contained effluent limitations for an advanced wastewater treatment facility. The FDEP also issued a construction permit which

provided an extension of time for the advanced wastewater treatment upgrade and relocation of the outfall to September 1992. Florida Cities requested that the EPA extend AO 89-109 to match the September 1992 construction deadline set by the FDEP, but the EPA did not respond to the request. Florida Cities then completed the advanced wastewater treatment upgrade in April 1992, ahead of the FDEP's schedule, but failed to meet the deadline set in AO 89-109 for October 1, 1991. The outfall to the six-foot contour line of the Caloosahatchee River was operational on July 14, 1991, ahead of the deadlines established in the state construction permit and EPA AO 89-109.

CONCLUSIONS OF LAW — FLORIDA CITIES

The penalty provisions of the Clean Water Act are set forth in 33 U.S.C. § 1319 (d), which provides in pertinent part:

> Any person who violates [specified sections of the Act] shall be subject to a civil penalty not to exceed $25,000 per day for each violation. In determining the amount of a civil penalty the court shall consider the seriousness of the violation or violations, the economic benefit (if any) resulting from the violation, any history of such violations, any good-faith efforts to comply with the applicable requirements, the economic impact of the penalty on the violator, and such other matters as justice may require.

The Clean Water Act was intended "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." Gwaltney of Smithfield v. Chesapeake Bay Foundation, 484 U.S. 49, 52 (1987)(quoting Section 101(a) of the Act). In Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., the Eleventh Circuit stated that in determining penalties under the Clean Water Act, "the point of departure for the district court should be the maximum fines for such violations permitted by the Clean Water Act." 897 F.2d 1128, 1137 (11th Cir. 1990). The Court further stated that if the district court chooses not to impose the maximum

fine, "it must reduce the fine in accordance with the factors spelled out in section 1319(d), clearly indicating the weight it gives to each of the factors in the statute and the factual findings that support its conclusions." Id. at 1142. The Court also noted that in Tull v. United States, 481 U.S. 412, 422-425 (1987), "the Supreme Court made clear that economic gain and restoration of the status quo is not the only basis on which penalties should be awarded under the Clean Water Act. In addition, the penalties are designed to punish violators for their non-compliance and to serve the goal of retribution." Id. at 1141.

The statutory maximum for the violations at issue is calculated by multiplying daily violations by $25,000. In order to calculate the statutory maximum for monthly violations, the number of monthly violations is multiplied by the number of days in the month they occurred and that number is multiplied by $25,000. Thus, the Court's computation of the statutory maximum is as follows: $6,600,000 (264 x 25,000) for the Barefoot Bay violations, $14,675,000 (587[4] x 25,000) for the Carrollwood violations, and $32,025,000 (1281[5] x 25,000) for the Waterway Estates violations. The total is $53,300,000. In accordance with Tyson Foods, this statutory maximum is the Court's departure point, and the Court will consider Defendants' arguments to reduce the penalty in accordance with the factors in § 1319 (d). The Plaintiff argues that the penalty should only be reduced to $4,861,500.

---

[4]The Carrollwood violations consist of violations of the following parameters, several of which are monthly violations: (1) Phosphorus from July-November 1991, the equivalent of 153 days of violations; (2) Carbonaceous Biological Oxygen Demand (CBOD) in October 1991, the equivalent of 31 days of violations; (3) Nitrogen in July 1991 and from September-November 1991, the equivalent of 122 days of violations; (4) Total Residual Chlorine, amounting to 184 violations; (5) Total Suspended Solids from October-December 1991, the equivalent of 92 days of violations; and (6) Fecal Coliform, amounting to 5 violations. The sum of these violations is 587.

[5]The Waterway Estates violations consist of the following: 396 days of unpermitted discharges; 621 days of discharges to an unpermitted location; Nitrogen violations between July 1991 - March 1992, the equivalent of 261 separate days of violations; and 3 chronic toxicity test violations. The sum of these violations is 1281.

AO 72A
(Rev. 8/82)

Florida Cities maintains that the penalty should be de minimis — no more than $48,000. Florida Cities points out that trial courts have broad discretion when deciding the appropriate civil penalty amount in Clean Water Act enforcement actions, citing Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1395 (D.Haw. 1993). Florida Cities points out that in Hawaii's Thousand Friends, the court found that mitigation in the amount of 99.71% of the maximum statutory penalty was within its "sound discretion," even though the discharges failed to meet secondary treatment standards, discharges of raw sewage were numerous and unreported, and the court found a lack of good faith efforts to comply with the NPDES permit or avoid other violations. The courts' determination of the penalty under the Clean Water Act has been characterized as "highly discretionary." Tull v. United States, 481 U.S. 412, 413 (1987), Sierra Club v. Cedar Point Oil Co., 73 F.2d 546, 575 (5th Cir. 1996).

Florida Cities asserts that the Court should use its discretion to find that a penalty of up to $1,000 per violation is appropriate for the following violations in which mitigation is less: 18 nitrogen violations and 3 toxicity violations at Waterway Estates and 3 toxicity violations at Barefoot Bay (a total of 24 violations), which amounts to a penalty of $24,000. For the remaining 1512 violations, Florida Cities says that the EPA's own valuation of discharge without a permit violations at Carrollwood is instructive in setting a standard for the remaining violations. In AO 90-100 for Carrollwood, the EPA found that 37 months of discharge without a permit between June 1987 and July 1990 was worth $15,000 or $13.51 per day. Thus, Florida Cities suggests that, for the remaining 1512 violations, the Court should assess a penalty of no more than $20,428 (1512 x 13.51) for all remaining violations.

I. Seriousness of the Violations

In evaluating the seriousness of the violations at issue in this case, the Court considers the number, duration and degree of the violations as well as the actual or potential harm to human health and environment. United States v. Dean Dairy Products Co., CV-94-0621, p. 16 (M.D. Penn., July 10, 1996), Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1383 (D. Hawaii 1993). A substantial reduction in the maximum statutory penalty is warranted where the violations caused minimal environmental damage. Id. at 1397, Atlantic States Legal Foundation, Inc. v. Universal Tool & Stamping Co., Inc., 786 F.Supp. 743, 753 (N.D. Ind. 1992). In the instant case, the Court finds that most of the violations of total residual chlorine (TRC), toxicity violations and BOD at Barefoot Bay are not serious. First, although Plaintiff concedes no harm, it asserts that a "particularized showing of harm" is not required and that proof of overall risk of pollutants is sufficient, relying upon Public Interest Research Group of New Jersey, Inc. v. Powell Duffryn Terminal, Inc., 913 F.2d 64, 79 (3rd Cir. 1990), cert. denied, 111 S.Ct. 1018 (1990); Chesapeake Bay Foundation v. Gwaltney of Smithfield, 611 F.Supp. 1542, 1560 (E.D. Va. 1985), aff'd, 791 F.2d 304 (4th Cir. 1986), cert. denied, 479 U.S. 1029 (1987); Dean Dairy, supra at p. 16. Plaintiff's expert Mark Klingenstein, pointed out that a potential risk of harm exists, as the discharge from Barefoot Bay proceeds to the Sebastian River and the Indian River Lagoon, which water bodies have been identified as a habitat for fish, wildlife, and the wood stork, an endangered species. Klingenstein also pointed out that those water bodies have been identified as "threatened water bodies that were being negatively impacted by nutrient load" in the Surface Water Improvement and

Management Act. The Court notes, however, that, with respect to all of the violations, Plaintiff has not in any way quantified the risk of environmental harm.

Further, although the number of violations is relatively high (182 TRC, 3 chronic toxicity, 79 BOD) and the duration of the violations is considerable,[6] the degree of the violations lessens the seriousness of the violations. The TRC violations occurred because Florida Cities was unaware that the test method approved by the EPA did not provide precise results and that the levels measured could have been reported as "not detectable," such that Florida Cities would have been deemed to be in compliance with the NPDES permit. Further, the Plaintiff has acknowledged that the BOD violations are not serious, as they occurred simply because Florida Cities mistakenly reported CBOD instead of BOD. Douglas Smith's testimony established that a conversion of the CBOD test results was possible, and that such conversion showed that none of the CBOD data would have been a violation of BOD effluent limitations. With respect to the chronic toxicity test failures, which occur as a result of nitrogen present in the effluent, the Court notes that Barefoot Bay's secondary treatment facility was not designed to remove nitrogen, and the EPA did not include nitrogen limits in the NPDES permit for Barefoot Bay. Thus, there appears to be an inconsistency between allowing nitrogen in the effluent while limiting the consequent toxicity. Upon consideration of the foregoing evidence, the Court finds that the TRC and BOD violations at Barefoot Bay are not serious, and that the toxicity test violations are somewhat serious.

---

[6]The 182 total residual chlorine violations occurred between September 1992 and March 1993; the 3 chronic toxicity test failures occurred in September-October 1992, May 1993, and February 1994; and the 79 violations for failure to report biochemical oxygen demand occurred on a weekly basis between November 1991 and June 1993, and twice in November 1993.

AO 72A
(Rev. 8/82)

Second, the Court finds that the NPDES violations at Carrollwood are not serious. First, the Plaintiff admits that it has no evidence of environmental damage from these violations. Although Klingenstein testified that there is a potential risk of harm to the Sweetwater Creek and Tampa Bay due to the nature of the water bodies, the evidence does not demonstrate a quantifiable risk of environmental harm. Further, Smith testified that the Carrollwood plant was providing better than secondary treatment during the period in question and that the environmental impact of BOD and TSS was very small or essentially not measurable. The Court also notes that it is appropriate for the Court to consider the toxic/conventional pollutant distinction when weighing the seriousness of a violation and for the Court to consider that conventional pollutants such as TSS and BOD are not among the most egregious pollutants. Dean Dairy, supra, p. 17, citing PIRG v. Powell Duffryn Terminals, Inc., 720 F.Supp. 1158, 1161 (D.N.J. 1989). Additionally, although the total number of NPDES violations is high (234), the duration was not extended (between July 1991 and January 1992). The Court also finds that the degree of the violations was not substantial because the EPA kept AO 90-100 in effect, thereby authorizing Carrollwood to discharge secondarily treated effluent into Sweetwater Creek. The violations at Carrollwood are violations of the advanced wastewater treatment standards in the July 1991 NPDES permit, not violations of the secondary standards in AO 90-100. The FDEP also permitted Carrollwood to discharge secondarily treated effluent to Sweetwater Creek, which further demonstrates that the degree of the violations was not substantial.

Third, the Court finds that most of the violations at Waterway Estates are not serious. Plaintiff has conceded that there is no evidence of environmental damage as a result of discharges

AO 72A
(Rev. 8/82)

from Waterway Estates. However, Klingenstein testified that to avoid localized impacts of pollutant discharges, the Caloosahatchee River was best protected if such discharges were at the six-foot contour line of the River itself. Klingenstein further testified that the permit violations had the potential to cause environmental harm due to the nature of the water bodies. The Court notes, however, that Plaintiff has not demonstrated a quantifiable risk of environmental harm. Rather, as Klingenstein acknowledged on cross-examination, his opinion that the discharges from Waterway Estates had a negative impact upon the canal and the Caloosahatchee River was based upon two studies consisting of computer models of assumed scenarios. Further, Klingenstein admitted that he had not reviewed in detail the actual data concerning the canal and the Caloosahatchee River but indicated that he believed that certain characteristics indicated by the model were useful. Next, the Court notes that the number of violations at Waterway Estates (1038) is sizable and the duration of the violations is somewhat extended.[7] However, the Court finds that the degree of most of the violations is not substantial. The EPA issued two administrative orders that authorized Florida Cities to continue to discharge secondarily treated effluent from Waterway Estates and to meet the effluent limitations in the 1981 NPDES permit between January 1987 and October 1991. Thus, the secondary discharge from Waterway Estates was continuously authorized at all relevant times by both EPA administrative orders and by FDEP permits and consent orders. Further, the EPA did not require Waterway Estates to reduce the volume of its discharge. Additionally, the discharges to an unpermitted location violations are somewhat mitigated by the fact that the canal was a previously approved discharge location.

[7]The 396 violations for discharge without an NPDES permit occurred between October 1, 1988 and October 31, 1989, and the 621 violations for discharging into a canal, instead of to the 6-foot contour line of the Caloosahatchee River, occurred between November 1, 1989 and July 14, 1991.

II. Economic Benefit

The Court finds that the consideration of whether Florida Cities enjoyed an economic benefit as a result of the violations does not weigh in favor of mitigation of the penalties. Florida Cities argues that when a capital improvement, such as an upgrade in a wastewater treatment plant, is approved by the Florida Public Service Commission (PSC) as "used and useful," the utility can include the cost of the capital improvement in the rate base and thereby benefit economically, such that Florida Cities can realize an economic benefit only from investing, not from deferring investment. Mr. Keith Cardey testified, based on the assumption that the Florida PSC's rate increase is in effect as soon as the advanced wastewater treatment plants begin service, that Florida Cities did not enjoy an economic benefit as a result of its violations at any of the three facilities at issue in this case.[8] However, as Plaintiff points out, any investment that was subsequently not approved by the PSC could not have been recouped. Further, Florida Cities has not established that the cost of the capital improvement would be immediately approved and included in the rate base. Thus, the Court disagrees with Florida Cities' contention that it can only realize an economic benefit from investing, not deferring investment.

[8]With respect to Barefoot Bay, Cardey testified that if Florida Cities had constructed the advanced wastewater treatment plant and had it in service by April 1, 1990, Florida Cities would have generated $803,000 more than they actually experienced. With respect to Carrollwood, Cardey testified that if Florida Cities had constructed the advanced wastewater treatment plant and had it in service by November 1, 1984, the operation would have generated $1,827,000 more than they actually experienced. With respect to Waterway Estates, Cardey testified that, if Florida Cities had constructed the advanced wastewater treatment plant and had it in service by October 1, 1988, the operation would have generated $1,997,000 more than they actually experienced.

III. History of Violations

The Court has considered the history of violations at the three facilities at issue and finds that this factor supports some mitigation of the penalties. With respect to Barefoot Bay, Florida Cities admits that prior to November 1, 1991, it did not have an NPDES permit to discharge effluent from Barefoot Bay and that it has paid penalties for discharge without a permit. Further, the Court notes that Barefoot Bay exceeded AO 90-106 from September 26, 1990 to October 31, 1991. However, Florida Cities points out that it entered into a Consent Order with the FDEP which permitted discharges until a feasible alternative could be found. Additionally, the Court notes that there is no history of violations for TRC, toxicity, or misreporting of BOD measurements at Barefoot Bay. At Carrollwood, Florida Cities discharged without a permit from November 1, 1984 to June 30, 1991. However, the FDEP issued permits effective June 1980 through May 1985 and April 1988 through October 1990 for Carrollwood. In September 1990, the EPA issued AO 90-100, which provided effluent guidelines and limitations. Further, the Court notes that there is no history of violations of advanced wastewater treatment standards at Carrollwood prior to the issuance of the NPDES permit containing advanced wastewater treatment standards in 1991. At Waterway Estates, the Court again finds no history of violations which support imposition of maximum penalties. Although Waterway Estates discharged without a permit from January 1987, after the EPA's denial of the NPDES permit took effect, until October 1, 1988, Waterway Estates consistently met its secondary wastewater treatment requirements during all relevant periods.

IV. Good Faith Efforts to Comply with Requirements

The Court has considered Florida Cities' efforts to comply with its various requirements and finds that the efforts to comply in some instances support a small mitigation of the penalties. First, with respect to Barefoot Bay, Plaintiff points out that it is located in a rural area of Brevard County, where there are approximately 3,000 acres of orange groves within 1.5 miles which could have been used to build additional percolation ponds, spray irrigation, or a deep well. Although the evidence at trial shows that these options were considered since the mid-1980s, and that Florida Cities purchased a 40 acre site in December 1985, the alternatives were rejected due to cost and effectiveness concerns. Klingenstein gave his opinion that these alternatives were feasible and would have eliminated the violations at Barefoot Bay. Further, Plaintiff maintains that Florida Cities could have invested earlier in a sulfur dioxide unit and an advanced wastewater treatment plant in order to meet permit limits for toxicity and TRC. The Court agrees that Florida Cities' efforts to comply with the applicable requirements of the Clean Water Act were prolonged, and decisions were made slowly over the course of several years due to much concern regarding the cost of the options, such that Florida Cities did not purchase the 316 acres of the H&S groves for spray irrigation until July 1995. Nevertheless, the Court gives due weight to Florida Cities' efforts in investigating means to comply with the requirements, and the Court notes that some delays were caused by third parties outside of Florida Cities' control, such as delays caused by challengers to the construction permit for a spray field system on a 300-acre spray field site, which led to administrative proceedings and hearings. Further, the Court notes that Florida Cities acted promptly to solve the TRC exceedances and misreporting of CBOD.

AO 72A
(Rev. 8/82)

With respect to Carrollwood, Plaintiff points out that Florida Cities could have connected with the City of Tampa's plant, which had available capacity, or could have built an advanced wastewater treatment plant after the Grizzle-Figg legislation took effect in 1987, in order to prevent unpermitted discharges in the years 1984 through 1991 and permit violations after July 1991.[9] Rather, Florida Cities waited until the Hillsborough County system had capacity to treat the Carrollwood wastewater in 1992 due to the perceived high costs of connecting to the Tampa wastewater treatment plant, which involved the construction of a force main of between 10,000 and 15,000 feet. The Court agrees that Florida Cities was dilatory in proceeding in its efforts and making its decisions to correct the violations at Carrollwood. However, the Court also gives due weight to Florida Cities' efforts to comply with the requirements of the EPA. Florida Cities complied at all times with the requirements of AO 90-100, which the EPA kept active during the time in which the secondary treatment facility could not meet the NPDES permit's advanced wastewater treatment limits.

With respect to Waterway Estates, Plaintiff points out that Defendants knew or should have known that they needed to consider alternative arrangements for Waterway Estates due to the 1981 study which indicated that the discharge to the canal could not continue. Plaintiff also points out that Florida Cities had interconnection and advanced wastewater treatment upgrade options which would have prevented the violations. From February 1987 through February 1990, North Fort Myers Utilities discussed the possibility of providing wastewater treatment service to Waterway Estates, but Florida Cities rejected this option for reasons of cost and concern that the PSC may not approve such connection. Plaintiff asserts that this option was a

[9]Klingenstein's report also indicates the opinion that spray irrigation, percolation ponds, and deep well injection were other options.

particularly attractive one from an environmental standpoint because the North Fort Myers plant uses deep well injection and spray irrigation to dispose of its treated effluent without any surface water discharge. In 1986 Florida Cities applied for a renewal of its NPDES permit, which was denied in January 1987. In December 1987, having decided to upgrade its plant and move the outfall, Florida Cities applied for a wasteload allocation. In November 1989, Florida Cities' new NPDES permit became effective. Due to contractor disputes and delays, the design and construction process for the upgrade was delayed, and Defendants failed to comply with its NPDES permit until 1992. Additionally, in its efforts to prevent discharges to an unpermitted location, Florida Cities did not begin the construction of the outfall extension until December 1990, and the new outfall was not completed until July 1991. The Court again finds that Florida Cities' efforts and decisions proceeded slowly such that the violations were not eliminated expeditiously. However, the Court gives due weight to the efforts of Florida Cities to construct its advanced wastewater treatment plant within a reasonable time despite the delays caused by third parties. The Court also notes that Florida Cities had explored alternatives to surface water discharge, including public access spray irrigation, restricted access irrigation, percolation ponds, and deep well injection.

V. Economic Impact of the Penalty

The Court finds that Florida Cities does not have the ability to pay the statutory maximum penalty and that the economic impact of the penalty on Florida Cities constitutes a mitigating factor. The Court notes that Eileen Zimmer testified for the Plaintiff that Florida Cities can afford to pay a penalty up to of $7.5 million (if the penalty is paid over the course of five years) without a material adverse affect on the company. Ms. Zimmer indicated that she analyzed

AO 72A
(Rev. 8/82)

publicly available materials, SEC filings, and financial statements of Florida Cities, and in her report she stated that she considered "the stable nature of the business the company is in, its historical ability to generate income and its dividend payment history." Ms. Zimmer suggested that Florida Cities could borrow the $7.5 million to pay for the penalty; however, she acknowledged that the only source likely for a loan would be Avatar Holdings, who Zimmer conceded lost money in each of the last five years. Further, Zimmer conceded that Florida Cities' liquidity as represented by its current equity to debt ratio and working capital is poor and that long term debt has increased somewhat and remains at moderate levels. At trial, she also stated that short term liabilities increased between 1993 an 1994 by about $4.3 million. Further, the record shows that Florida Cities is obligated to pay Allstate Insurance Company preferred stock redemption obligations every year between 1997 and 2001. Additionally, the Court finds significant the testimony of Charles McNairy[10] that Florida Cities and Avatar Utilities, Inc. have approximately $17 million of planned capital expenditures for enhancements, improvements, and expansions to the existing water treatment plants which will exhaust the available lines of credit. Finally, as a utility being regulated by the PSC, Florida Cities cannot simply raise its rates to cover a penalty, and the payment of the penalty is not tax deductible.

VI. Other Matters as Justice May Require

Florida Cities argues that the Court should consider several facts pertaining to each of the facilities at issue in this case. The Court finds that the facts noted by Florida Cities, such as Barefoot Bay's compliance with the directives and authorizations of the FDEP, Carrollwood's inability to meet the NPDES requirements which were beyond the physical capacity of the plant,

[10]Charles McNairy testified that he is currently the Executive Vice-President, treasurer, and Chief Financial Officer of Avatar Holdings, Inc.

AO 72A
(Rev. 8/82)

and Waterway Estates' possession of a wasteload allocation to discharge secondarily treated effluent when Kagey denied the permit renewal based upon her review of a planning document, have already been considered by this Court in connection with the above five factors. Florida Cities does raise a new argument, however, that the Plaintiff raised the violations pertaining to Carrollwood for the first time when it amended the Complaint in 1995 and should not be allowed to recover millions of dollars in penalties by including those violations. Nevertheless, the Court finds the above five factors to be determinative of the mitigation of the penalty to be assessed.

VII. Penalties

Having considered the factors discussed above, the Court finds that the statutory maximum should be mitigated as set forth herein. First, the 79 violations of BOD at Barefoot Bay will be penalized in the amount of $10 per day of each violation. The 182 TRC violations will be penalized at $10 per day of each violation. The three (3) chronic toxicity test violations will be penalized in the amount of $1,000 per day of each violation. With respect to the 234 Carrollwood NPDES permit violations, the penalty will be in the amount of $25 per day of each violation. The 18 nitrogen and three (3) chronic toxicity test violations at Waterway Estates will be penalized in the amount of $1,000 per day. The 621 days of discharges to an unpermitted location will be penalized in the amount of $25 per day. Finally, the 396 days of unpermitted discharges from Waterway Estates will be penalized in the amount of $25 per day.

FINDINGS OF FACT — AVATAR HOLDINGS

Avatar Holdings is a diversified company which has more than 60 direct and indirect subsidiaries engaged in a variety of business operations including home construction, vacation ownership, resort operations, retail land sales, property management, commercial and industrial

development, and water and wastewater utilities operations. Avatar Holdings places its principal emphasis on the real estate operations. Avatar Utilities, Inc. ("Avatar Utilities") is a subsidiary of Avatar Holdings and is the parent for all of Avatar Holdings' utility subsidiaries. Until 1993, Avatar Utilities was the parent of numerous utility companies which operated approximately 37 water supply companies and 13 wastewater plants. In late 1993, Avatar Utilities downsized through the sale of 29 plants.

The formal relationship between Avatar Holdings and Florida Cities is as follows: Avatar Holdings is the parent of Avatar Utilities; Avatar Utilities is the parent of Consolidated Water Company; Consolidated Water Company is the parent of Florida Cities Water Company Holdings, Inc.; and Florida Cities Water Company Holdings, Inc. is the parent of Florida Cities. However, the evidence in this case has shown the involvement of employees of only three of these entities: Avatar Holdings, Avatar Utilities, and Florida Cities. Further, the evidence established that Avatar Holdings does not control any of Florida Cities' individual plants on a daily basis. The utilities subsidiaries make decisions concerning plant operation, not Avatar Holdings. When Florida Cities chooses a contractor for a particular project involving a capital expenditure exceeding $75,000, it seeks contract award ("conward") approval form Avatar Holdings. Avatar Holdings has never rejected a conward request from Florida Cities or Avatar Utilities relating to the operation of plant facilities or environmental compliance.

Further, Avatar Holdings officers and directors generally held utility operations review meetings once a year to discuss financial matters, budget performance, and future budget plans. With respect to the three facilities at issue in this case, Avatar Holdings officers and directors discussed and sent memoranda concerning planning matters. As for Barefoot Bay, the Plaintiff

AO 72A
(Rev. 8/82)

introduced evidence at trial showing that in 1983, "Avatar" management meetings included discussion of land areas needed "for future construction to accommodate the complete build-out of Barefoot Bay." Further, in February 1984, Lawrence Wilkov, former President of Avatar Holdings, wrote a file memorandum which noted the cost to acquire and build ponds, stated that a way should be found to have the utility fund the entire amount, and stated that the situation requires immediate action as increased capacity should be "on line" by November 1984. In June 1984, Peter Sharp, former Chief Executive Officer of Avatar Holdings, wrote to Wilkov, John Sladkus,[11] and Robert Gordon[12] that they "must be sure that the cost of the percolation pond and related construction end up 100% as part of Barefoot Bay's rate base on which rates can be charged to customers from day one." Further, in 1985 Gordon informed Wilkov of cost estimates of percolation ponds for Barefoot Bay and Sharp gave his opinions to Gordon regarding Gordon's efforts in acquiring land for percolation ponds. In 1986, Gordon sent Sladkus status reports on the Barefoot Bay plant. In January 1987, Sladkus informed Sharp and Wilkov by memorandum that the ponds were not functioning and suggested the possibility of spray irrigation. In 1988, Sladkus gave Sharp another report on Barefoot Bay attaching a file memorandum written by Gordon concerning Gordon's meeting with the FDEP, and Sladkus also sent Sharp a memorandum recommending the retention of a particular engineering company. The Plaintiff also points to memoranda between Sladkus, Wilkov, Dennis Getman[13] and Sharp

[11]John Sladkus was Avatar Holdings' Executive Vice President.

[12]Robert Gordon is President of Avatar Utilities.

[13]Dennis Getman is Avatar Holdings' Executive Vice-President, and he is also General Counsel for Avatar Holdings, Avatar Utilities and Florida Cities.

indicating their awareness of or involvement in the deep well project or alternatives to deep well injection, such as spray irrigation, at Barefoot Bay.

With respect to Carrollwood, Sladkus was informed by two memos in December 1988 and by participation in a meeting at Avatar Utilities in January 1989 of the status and schedules pertaining to Carrollwood projects. Further, Sharp was concerned with cost, flow, recovery of costs through the rate base, and construction completion time. However, Paul Bradtmiller, Executive Vice-President of Florida Cites, who was involved in the advanced wastewater treatment construction process and was the principal negotiator on behalf of Florida Cities with respect to connection to Hillsborough County, testified that he never discussed the advanced wastewater treatment process or the negotiations with Hillsborough County with any officials of Avatar Holdings. Further, the testimony of William Shafer, Head of Planning for the Sanitary Sewer Department of the City of Tampa, who was involved in negotiations with Florida Cities regarding possible connection to Tampa in the 1980s, did not show any involvement by Avatar Holdings in the negotiation process.

With respect to Waterway Estates, in January 1987, Sladkus reported to Sharp and Wilkov that the plant either needed to apply for a wasteload allocation and upgrade to advanced wastewater treatment or connect to North Fort Myers Utilities. In June 1987, Gordon forwarded to Sladkus a copy of the EPA's compliance order for Waterway Estates. In August 1987, Gordon forwarded to Sladkus a copy of an engineering report on the feasibility of disposing of the Waterway Estates wastewater, noting that due to the recommended cost of treatment and disposal, additional work would be necessary. In November 1987, Gordon again wrote to Sladkus attaching a memorandum outlining various options regarding upgrading Waterway

AO 72A
(Rev. 8/82)

Estates. On October 3, 1988, Gordon wrote Sharp and Wilkov a memorandum stating that County Commissioner Bigelow indicated that he wanted the County Commission to get out of the water and wastewater day-to-day operations and felt that could only be accomplished through privatization or establishment of a water/sewer authority which would take over the direction and operation of the utility systems. On October 7, 1988, Sharp wrote to Gordon that Florida Cities' "long term objective should be to own the entire Lee County system--that is, the County's facilities as well as the City's."

Further, Sladkus was informed by two memos in December 1988 and by participation in a meeting at Avatar Utilities in January 1989 of the status and schedules pertaining to Waterway Estates projects. Sladkus also informed Sharp of the budgeted items for Waterway Estates. In October 1989, Sharp wrote Sladkus that "[w]e must have assurance from Bob Gordon that the entire cost of the upgrade and expansion of this plant will be included as used and useful." In July 1991, when it became clear that the Waterway Estates advanced wastewater treatment improvements were behind schedule, Gerald Allen, President of Florida Cities and formerly Vice-President of Avatar Utilities, wrote a memorandum to Sharp with copies to Getman, Gordon, and Wilkov updating them on the status of the project.

However, Allen and Patrick Lehman[14], who were involved in the selection of discharge alternatives at Waterway Estates, stated at trial that it was not Avatar Holdings, but rather Florida Cities and Avatar Utilities, that made the decisions regarding the alternatives. Further, Lehman testified that the alternatives were not discussed with Avatar Holdings. Additionally, in a memorandum to Sladkus on June 5, 1990, Allen requested approval of a conward to upgrade

[14]Patrick Lehman was employed at Florida Cities between June 1984 and April 1989, initially as an Operations Manager and later as Vice-President of Operations.

AO 72A
(Rev. 8/82)

the Waterway Estates facility. When Sladkus responded with a recommendation that the project be rebid because the price appeared high, Allen informed him of the disadvantages of rebidding the project. Sladkus then did not seek to have Florida Cities rebid the contract, and the contract was approved with the original bidder.

In the fall of 1988, Avatar Utilities developed an Environmental Assurance Program. This was not an Avatar Holdings' program. Allen did not make any reports to the full Avatar Holdings Board of Directors regarding audits performed under the Environmental Assurance Program, but did report to the Avatar Holdings Audit Committee. Allen's reports provided the progressive status as to whether a field audit, draft audit, or final audit report had been completed. Allen did not provide the reports of field audits themselves or describe the findings of the field audit reports to the Avatar Holdings Audit Committee. Allen did not describe for the Avatar Holdings Audit Committee the alleged violations at Barefoot Bay, Carrollwood, or Waterway Estates.

CONCLUSIONS OF LAW — AVATAR HOLDINGS

This Court previously determined in its November 22, 1995 Order that, in determining whether Avatar Holdings is liable as a parent corporation under the Clean Water Act, the standard of liability in § 107 of the Comprehensive Environmental Response and Liability Act (CERCLA) does not apply. Under that standard, a parent corporation is liable as an "operator" under CERCLA if it "directly and pervasively controlled" the actions of the subsidiary "to the extent of actually involving itself in the daily operations of the subsidiary." Jacksonville Electric Authority v. Bernuth Corp., 996 F.2d 1107, 1110 (11th Cir. 1993). This Court stated in its Order that, under the Clean Water Act, "the mere fact of being a parent exercising control over

AO 72A
(Rev. 8/82)

a violating subsidiary does not properly subject the parent company to liability." Although the Court indicated that it would consider evidence showing "actual and pervasive control of Florida Cities to the extent of actually being involved in the daily operations of Florida Cities," the various portions of the Court's opinion show that the Court intended the standard for Avatar Holdings' liability as a parent corporation to be based on a stricter standard of "directing or causing" the violations in such a way that it may be considered a "person who violates" under § 309 (d) of the Clean Water Act. To the extent the Court's language in the November 22, 1995 Order broadened this intended standard, the Court recedes from that portion of its November 22, 1995 opinion.

The Court finds that the evidence adduced at trial does not establish that Avatar Holdings directed or caused any of the violations of the Clean Water Act at issue in this case. Thus, the Court finds that Avatar Holdings is not a "person who violates" under section 309 (d) of the Clean Water Act. The evidence as a whole shows that Avatar Holdings' role in the operations of the three Florida Cities' facilities was limited to overall financial review and long term strategic planning, as Avatar Holdings' officers were concerned with large costs and budgetary planning. The fact that Avatar Holdings officials were informed of environmental compliance issues and discussed the costs of large projects that would eventually eliminate violations does not amount to the type of action or direction for which liability arises under the Clean Water Act. Further, the evidence shows that Avatar Holdings did not make the type of operational decisions that amount to directing or causing the violations in this case. Additionally, there is no legal basis under the Clean Water Act for holding Avatar Holdings liable for any failure to

AO 72A
(Rev. 8/82)

act because it was not the entity responsible for decisions regarding operations and environmental compliance.

With respect to Barefoot Bay, the evidence does not establish that Avatar Holdings caused or directed the violations of TRC, toxicity test failures, and failure to monitor BOD. First, there is no evidence that Avatar Holdings' officials were aware of these violations or that they ever discussed these violations. Further, there is no evidence that Avatar Holdings had any involvement in the measurements of these tests or knowledge or control regarding how the measurements of these tests are conducted or how such measurements are reported to the EPA. Although the Plaintiff argues that Avatar Holdings caused the Barefoot Bay violations because of an alleged profit motive in having its indirect subsidiary, Barefoot Bay Development Corporation, develop a mobile home community at Barefoot Bay, the evidence does not establish any link between the development of the mobile home community and the Barefoot Bay NPDES violations. Further, the evidence regarding Avatar Holdings' concern for costs and long-term planning of large projects such as percolation ponds or alternative discharge options does not establish that Avatar Holdings controlled the discharge options at Barefoot Bay such that it could have directed or caused the Barefoot Bay violations.

With respect to Carrollwood, the evidence again does not establish that Avatar Holdings caused or directed the violations of TSS, phosphorus, nitrogen, CBOD, TRC, or fecal coliform. Although the Plaintiff argued that Avatar Holdings caused the violations because it was not willing to connect to Hillsborough County sooner or build an advanced wastewater treatment plant sooner, the evidence does not establish any link between Avatar Holdings' actions and statements and the Carrollwood violations. Rather, the evidence shows that the utilities

subsidiaries devised and considered the alternatives and made the decision to proceed with the Hillsborough County connection. Additionally, there is no evidence that Avatar Holdings' officials were aware of the Carrollwood NPDES violations or that they ever discussed these violations. There is also no evidence that Avatar Holdings had any involvement in the measurements of these tests or knowledge or control regarding how the measurements of these tests are conducted or how such measurements are reported to the EPA. Moreover, the evidence regarding Avatar Holdings' concern for costs and long-term planning of large projects does not establish that Avatar Holdings controlled the discharge options at Carrollwood such that it could have directed or caused the Carrollwood violations.

With respect to Waterway Estates, the evidence again does not establish that Avatar Holdings caused or directed the violations of alleged discharges into an unpermitted location during the period of May 5, 1990 through July 14, 1991 or the NPDES permit violations relating to nitrogen levels and toxicity test failures.[15] First, although the Plaintiff argues that Avatar Holdings caused the delays in upgrading Waterway Estates to an advanced wastewater facility, the evidence does not show that Avatar Holdings was involved in the selection of alternatives or the construction of the advanced wastewater treatment plant. Further, the fact that Sharp expressed his opinion that the long term objective should be to own the entire Lee County system does not amount to a strategy on the part of Sharp to do so, and there is no evidence that Avatar Holdings took steps to acquire the entire Lee County system. Moreover, both Allen and Lehman testified at trial that they were unaware of any plan by Avatar Holdings to acquire the Lee

[15]The Court's November 22, 1995 Order barred certain claims against Avatar Holdings based on the statute of limitations, 28 U.S.C. § 2462. Thus, with respect to Waterway Estates, Avatar Holdings is potentially subject to liability only for the violations of discharges to an unpermitted location during the period of May 5, 1990 through July 14, 1991 and the NPDES violations at Waterway Estates.

AO 72A
(Rev. 8/82)

County system. Additionally, the evidence shows that the delays in the construction of the advanced wastewater treatment plant involved difficulties in the permitting process, and the evidence shows that Avatar Holdings was not involved in the permitting process. The evidence does not establish that Avatar Holdings delayed construction; rather, it shows that Avatar Holdings approved a conward to upgrade the Waterway Estates facility without a rebidding for the project. Finally, the evidence regarding Avatar Holdings' concern for costs and knowledge of the alternatives and the status and schedules of the projects does not amount to an exercise of control, decision-making or other activity that caused or directed the violations at Waterway Estates.

CONCLUSION

Upon consideration of the foregoing, it is hereby **ORDERED and ADJUDGED** that:

1. The Clerk is **DIRECTED** to enter judgment in favor of Plaintiff and against Florida Cities. The amount of civil penalties to be assessed against Florida Cities for the violations at the three wastewater treatment plants are as follows:

Barefoot Bay	$ 5,610.00
Carrollwood	$14,675.00
Waterway Estates	$289,425.00
TOTAL	**$309,710.00**

2. The Clerk is **DIRECTED** to enter judgment in favor of Defendant Avatar Holdings and against Plaintiff on Plaintiff's claims against it.

3. Avatar Holding's Rule 52 (c) Motion for Judgment as a Matter of Law is **DENIED as moot.**

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS INC., and FLORIDA CITIES WATER COMPANY, Defendants,	)	Civil Action No. 93-281-Civ-FTM-21

Florida Cities Water Company's Verified Motion for Attorneys Fees

Pursuant to Fed. R. Civ. P. 54 and Local Rule 4.18, Florida Cities Water Company hereby moves to recover its attorneys fees with respect to the claims barred by the Court's ruling concerning the doctrine of res judicata. The amount sought is $407,634.50.

The support for this motion is set forth in the accompanying memorandum of law. Counsel for Florida Cities has conferred with counsel for Plaintiff in a good faith effort to resolve the issues raised by this motion, and counsel have been unable to agree on the resolution of the motion.

Respectfully submitted,

Florida Cities Water Company's Memorandum of Law in Support of Its Verified Motion for Attorneys Fees

I. Preliminary statement

Pursuant to Rule 54 of the Federal Rules of Civil Procedure and Local Rule 4.18, Florida Cities Water Company ("Florida Cities") submits this memorandum of law in support of its application for attorneys fees incurred in defending against claims contained in paragraphs 16 - 23, 28, 30, and 45 of Plaintiff's second amended complaint, and brought against two of its facilities, Barefoot Bay and Carrollwood. This Court determined that these claims were barred by the doctrine of res judicata. Florida Cities seeks to recover its attorneys fees incurred due to Plaintiff's initial discovery efforts beginning in about January, 1995 relating to Barefoot Bay and Carrollwood, defending against the amendments to the complaint, handling discovery issues relating to the two facilities, and moving for summary judgment. By filing the claims identified above against Barefoot Bay and Carrollwood, the Plaintiff has created costly litigation for

Florida Cities, which was unnecessary. The Plaintiff failed to review key documents in its own files and failed to talk with its own employees who had knowledge of the facts at issue. The documents and key employees' testimony demonstrated that the Plaintiff failed to conduct a competent preliminary review and factual inquiry before filing this action. Plaintiff's pursuit of the above-mentioned claims, which are barred by res judicata, therefore can constitute bad faith and can provide support for a reward of attorneys fees incurred in defending against the barred claims. Florida Cities submits its verified motion for attorneys fees in the amount of $407,634.50. A detailed listing of these attorneys fees is appended as Attachment A.

II. Florida Cities is Entitled to Attorneys Fees with respect to the Claims Barred by Res Judicata

The Court has inherent authority to award attorneys fees "when a losing party has acted in bad faith." Kreager v. Solomon, P.A., 775 F.2d 1541, 1543 (11th Cir. 1985); see also Chambers v. Nasco, Inc., 501 U.S. 32 (1991). This power may be exercised against the United States pursuant to the waiver of sovereign immunity contained in 28 U.S.C. § 2412(b), a provision of the Equal Access to Justice Act, without regard to the prevailing party's net worth. See American Hosp. Ass'n v. Sullivan, 938 F.2d 216, 219 (D.C. Cir. 1991).

Courts have found that a Plaintiff's pursuit of claims which are barred by res judicata can constitute bad faith and support an award of attorneys fees incurred in defending against the barred claims. See Ellingson v. Burlington Northern, Inc., 653 F.2d 1327, 1332 (9th Circ. 1981) (affirming award of fees and awarding fees on appeal where "the gravamen of the present complaint was resolved before [an administrative tribunal]" and was accordingly "patently barred by res judicata"); United States v. Nesglo, Inc., 744 F.2d 887,891 (1st Cir. 1984) (affirming

award of attorneys fees and awarding fees on appeal where third-party plaintiff pursued third-party complaint which was "barred under well-settled principles of res judicata"); see also Pallante v. Paine Webber, Jackson and Curtis, Inc., Fed. Sec. L. Rep., (CCH) P92,219 (S.D.N.Y. 1985) (awarding fees and costs to defendant for plaintiff's pursuit of case barred by res judicata, noting "responsibilities of counsel in specialized areas of the law to refrain from pursuing litigation that they must have known lacked an adequate basis in law").

The Department of Justice and EPA's lawyers could have made one simple phone call and determined from their own staff people that prior EPA administrative actions had disposed of the claims of unpermitted discharges at Barefoot Bay and Carrollwood. By this simple act, they would have known the claims they were about to bring were barred by res judicata. The facts are overwhelming that neither the Department of Justice nor EPA ever discussed this issue with the appropriate EPA staff. In fact, Florida Cities had to expend tremendous resources to find Roy Herwig, the EPA enforcement officer for Barefoot Bay, who declared that he believed that the issue of discharge without an NPDES permit was fully resolved at Barefoot Bay and "none of this would be revisited."

It is fundamental that the Plaintiff should base its allegations on known facts. In fact, Plaintiff presented no credible evidence to refute EPA's own administrative record relating to Barefoot Bay. As a result, the Plaintiff engaged in bad faith and reckless disregard of its responsibility by burdening the Defendants with the costs of relitigating the barred claims against Florida Cities. The Court's Order of November 22, 1995 demonstrates that the Plaintiff failed to initiate a reasonable inquiry into the scope of the administrative action taken by EPA at Barefoot Bay. The same simple phone call would have produced the same result with regard to

Carrollwood, and Florida Cities would not have been forced to expend enormous funds to defend itself on administrative claims that had already been settled. Again, the Plaintiff failed to undertake a reasonable inquiry at Carrollwood to determine the facts. EPA's principal negotiator of the Carollwood settlement testified that, when the Carrollwood consent agreement was signed, he knew that Florida Cities would be discharging without a permit, and this did not warrant an increase in the penalty because "the case was settled, long since settled." As with the Barefoot Bay allegation, the Department of Justice and EPA failed to check with the EPA enforcement officer who negotiated the Carrollwood settlement. It is also clear the Plaintiff did not undertake any due diligence to verify the enforcement officer's interpretation of the documents in the closed file.

The consequence of these reckless actions by the Department of Justice and the Environmental Protection Agency has been that Florida Cities has been subjected to expensive litigation costs in relitigating issues that had long been settled by EPA. Florida Cities is therefore eligible for an award of attorneys fees that it has incurred in defending against claims already settled by EPA and thus barred from being relitigated under the res judicata doctrine. Florida Cities seeks to recover all attorneys fees relating to the claims which were barred by the Court's Order of November 22, 1995. It is difficult to precisely identify all the attorneys fees relating to these claims; however, the attached affidavit and list of fees created by Gary H. Baise is the best calculation available.

III. Conclusion

For the foregoing reasons, Florida Cities should be awarded attorneys fees in the amount of $407,634.50.

Respectfully submitted,

By: _____

GRAND TOTAL FOR ATTORNEY TIME $407,634.50

Affidavit of Gary H. Baise on Motion for Attorneys Fees

I, Gary H. Baise, a partner in the law firm of Baise & Miller, P.C. was retained by Florida Cities Water Company ("Florida Cities") in 1993 to represent its interests in a Clean Water Act action filed by the United States Department of Justice and U.S. Environmental Protection Agency in the Middle District of Florida. I am Trial Counsel for Florida Cities, and am responsible for the defense of that action. I am personally knowledgeable about each and every action taken in defense of that action. I am familiar with the services rendered in connection with the Barefoot and Carrollwood claims found to have been barred by res judicata. I have prepared and reviewed the attached Motion for Attorneys Fees. To the best of my knowledge, it is correct, these listed fees were necessarily incurred in the case, and the services for which fees have been charged were actually and necessarily performed.

I declare, under penalty of perjury, that the listed fees are true and correct, to the best of my knowledge.

Gary H. Baise

Date: September 2, 1996

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

United States of America, Plaintiff, v. Avatar Holdings Inc., and Florida Cities Water Company, Defendants.	Civil Action No.: 93-281-Civ-FTM-21

Defendant Florida Cities Water Company's Motion for Bill of Costs

Pursuant to Fed. R. Civ. P. 54 and Local Rule 4.18, Defendant Florida Cities Water Company ("Florida Cities") hereby submits its motion for bill of costs in the amount of $87,157.20 for certain costs incurred in this action. A detailed listing of these costs is appended as Attachment A. Counsel for Florida Cities has conferred with counsel for Plaintiff in a good faith effort to resolve the issues raised by this motion, and counsel have been unable to agree on the resolution of the motion.

On March 30, 1995, an Offer of Judgment in the amount of $500,000.00 plus costs was served by hand upon counsel for Plaintiff. This Offer of Judgment was not accepted. On August 20, 1996, a judgment for Plaintiff and against Defendant Florida Cities was entered in the amount of $309,710.00. As stated by Fed. R. Civ. P. 68, if the judgment finally obtained by the offeree is not more favorable than the offer, the offeree must pay the costs incurred after the

making of the offer. On August 28, 1996, Florida Cities gave notice to the Court of the Offer of Judgment; for the convenience of the Court, the Offer of Judgment is appended as Attachment B. Accordingly, Defendant Florida Cities requests its costs in this action from March 30, 1995 to date.

The costs to be awarded include all costs properly awardable in an action. Blumel v. Mylander, 165 F.R.D. 113 (M.D. Fla. 1996). The costs that may be awarded are set forth in 28 U.S.C. § 1920. Parkes v. Hall, 906 F.2d 658 (11th Cir. 1990); Barneby v. E.F. Hutton & Co., 130 F.R.D. 679 (M.D. Fla. 1990). Additional descriptions of the fees payable are set forth in 28 U.S.C. § 1821.

The Court is accorded great latitude in determining taxable costs. Loughan v. Firestone Tire and Rubber Co., 749 F.2d 1519 (11th Cir. 1985). A district court's determination of costs will be overturned only for an abuse of discretion. Tanker Management, Inc. v. Brunson, M.D., 918 F.2d 1524 (11th Cir. 1990).

For the reasons stated above, Defendant Florida Cities respectfully requests that it be awarded its costs in the amount of $87,157.20.

Respectfully submitted,

By: Gary H. Baise SFH
Counsel for Florida Cities Water Company

Total	$31,095.77	

(3) Fees and disbursements for printing and witnesses.		Witness fees are limited by 28 U.S.C. § 1821 to $40 per day. See Crawford Fitting Co. v. J.T. Gibbons, 482 U.S. 437 (1987); Parkes v. Hall, 906 F.2d 658 (11th Cir. 1990). Mileage, travel, and subsistence expenses are recoverable under §§ 1821 and 1920, however, to the extent they are reasonable. Cullen v. Georgia Dept. of Trans., 29 F.3d 1489 (11th Cir. 1994); Desisto College at 913.
Date	Amount	Description
3/29/96, 4/1/96	$80.00	Black & Veatch - Testimony at trial of D. Smith
4/1/96	$40.00	Phoenix Environmental - Testimony at trial of R. Armstrong (expert on wasteload allocations; expert on scientific issues)
c. 4/1/96	$595.00	Phoenix Environmental expenses (excludes witness fee)
4/1/96	$40.00	Testimony at trial of R. Hartung (expert on EPA wasteload allocation)
c. 4/1/96	$703.82	R. Hartung expenses (excludes witness fee)
4/5/96	$40.00	Testimony at trial of K. Cardey
c. 4/5/96	$447.00 (est.)	K. Cardey expenses (excludes witness fee)

Total	$1,945.82	Pursuant to the Order of Magistrate Judge Swartz on November 3, 1995, Florida Cities will seek expert witness fees and expenses for the depositions of certain experts. This request will be made separately from the motion for bill of costs.
(4) Fees for exemplification and copies of papers necessarily obtained for use in the case		Photocopying necessary for maintenance of an action is recoverable under § 1920(4). Desisto College at 913-14; Allen v. United States Steel Corp., 665 F.2d 689, 697 n.5 (5th Cir. 1982). Copies attributable to discovery, copies of exhibits, and documents prepared for the Court's consideration are recoverable. Fressell v. AT&T Technologies, Inc., 103 F.R.D. 111, 115-16 (N.D. Ga. 1984). Copies obtained only for the convenience of counsel are not recoverable. Allen v. Freeman, 122 F.R.D. 589, 591 (S.D. Fla. 1988). Extra copies of filed papers, correspondence, and copies of cases are considered only for the convenience of counsel. Fressell at 116.

March 14. 1995

Affidavit of Gary H. Baise on Motion for Bill of Costs

I, Gary H. Baise, a partner in the law firm of Baise & Miller, P.C. was retained by Florida Cities Water Company ("Florida Cities") in 1993 to represent its interests in a Clean Water Act action filed by the United States Department of Justice and U.S. Environmental Protection Agency in the Middle District of Florida. I am Trial Counsel for Florida Cities, and am responsible for the defense of that action. I am personally knowledgeable about each and every action taken in defense of that action. With the approval of Florida Cities, I authorized the preparation and presentation of the Offer of Judgment, served on opposing counsel on March 30, 1995. I have reviewed the attached Motion for Bill of Costs, and, to the best of my knowledge, it is correct, these listed costs were necessarily incurred in the case, and the services for which fees have been charged were actually and necessarily performed.

I declare, under penalty of perjury, that the listed costs are true and correct, to the best of my knowledge.

Date: September 2, 1996

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' MEMORANDUM IN OPPOSITION TO DEFENDANTS' MOTIONS FOR COSTS AND ATTORNEYS' FEES

Introduction

Both of the defendants have requested costs and attorneys' fees in this action. Defendants seek attorneys' fees under section "b" of the Equal Access to Justice Act, ("EAJA"), 28 U.S.C. § 2412(b), in connection with their successful defense of the United States' claims for unpermitted discharges at Barefoot Bay and Carrollwood, and the United States' claims for administrative order violations at Barefoot Bay. The fee request is based on Defendants' assertion that these claims were brought in "bad faith" because the United States should have known that they were barred by res judicata.

Avatar Holdings has also applied to recover all of its costs pursuant to section "a" of EAJA, 28 U.S.C. § 2412(a), which allows the award of costs to "the prevailing party." Florida Cities has moved to recover the costs it incurred subsequent to March 30, 1995, on the grounds that it made an offer of judgment

on that date under Rule 68, Fed. R. Civ. P., which it asserts was more favorable than the judgment subsequently obtained from the Court.

Defendants plainly cannot meet the common law "bad faith" standard for an award of attorneys' fees incorporated in section "b" of EAJA. Although the Court ultimately ruled that the unpermitted discharge claims in question are barred by res judicata, the United States' position that those claims were not barred was based on a reasonable reading of the facts and law. Thus, the requests for attorneys' fees should be rejected.

The United States concedes that Avatar, as a prevailing party at trial, is entitled to costs under section "a" of EAJA. However, in its application for costs, Avatar has failed to adequately document many of its claimed costs or to show that the specific costs claimed were necessary, as required under 28 U.S.C. § 1920. Therefore, the Court should allow only $1,841.25 of the costs claimed by Avatar.

Florida Cities is not entitled to its costs because costs may be awarded against the United States only to the extent an underlying statute waives sovereign immunity for such costs. In any event, the United States' own costs, to which it is entitled under EAJA section "a", fully offset Florida Cities' legitimate costs.

Accordingly, the Court should award Avatar the portion of its costs that it has adequately documented and justified, and should deny the Defendants' other requests for fees and costs.

I. The Law Governing Awards of Costs and Fees Against the United States

A. EAJA

EAJA, as amended, governs the award of costs and fees in civil actions in which the United States is a party. Under section "a" of EAJA, the court may award costs to the prevailing party in any civil action brought by or against the United States. Under section "b" of EAJA, the court may award reasonable fees and expenses to the prevailing party in any civil action brought by or against the United States. The relevant section of the statute reads as follows:

> **§ 2412. Costs and fees**
>
> **(a)(1)** Except as otherwise specifically provided by statute, a judgment for costs, as enumerated in section 1920 of this title, but not including the fees and expenses of attorneys, may be awarded to the prevailing party in any civil action brought by or against the United States or any agency or any official of the United States acting in his or her official capacity in any court having jurisdiction of such action. A judgment for costs against the United States shall, in an amount established by statute, court rule, or order, be limited to reimbursing in whole or in part, the prevailing party for the costs incurred by such party in the litigation.
>
> . . . .
>
> **(b)** Unless expressly prohibited by statute, a court may award reasonable fees and expenses of attorneys, in addition to the costs which may be awarded pursuant to subsection (a), to the prevailing party in any civil action brought by or against the United States or any agency or any official of the United States acting in his or her official capacity in any court having jurisdiction of such action. The United States shall be liable for such fees and expenses to the same extent that any other party would be liable under the common law or under the terms of any statute which specifically provides for such an award.

28 U.S.C. § 2412.

Rule 54, Fed. R. Civ. P., also governs the awards of costs to prevailing parties. It reads in pertinent part as follows:

> Except when express provision therefor is made either in a statute of the United States or in these rules, costs other than attorneys' fees shall be allowed as of course to the prevailing party unless the court otherwise directs; **but costs against the United States, its officers, and agencies shall be imposed only to the extent permitted by law.**

Rule 54(d)(1), Fed. R. Civ. P. [emphasis added]. It is clear, then, under Rule 54, that costs may be imposed against the United States only to the extent permitted by applicable law, which in this case is EAJA.

Prior to the enactment of EAJA, costs could never be assessed against the United States, even when an opposing party prevailed, unless a statute expressly waived the United States' sovereign immunity for costs in that type of action. See United States v. Bodcaw Company, 440 U.S. 202 (1979). EAJA operates as a limited waiver of sovereign immunity that permits a court to award costs and, where appropriate, fees to a "prevailing party" in litigation with the United States: section "a" of EAJA constitutes the United States' limited waiver of sovereign immunity to cost awards, and section "b" of EAJA, 42 U.S.C. § 2412(b), constitutes the United States' limited waiver of sovereign immunity to fee awards. Section "b," then, subjects the United States to the traditional two exceptions to the

American Rule against fee-shifting.[1] These exceptions are (1) the "bad faith" exception, which allows fee-shifting when the non-prevailing party acted "in bad faith, vexatiously, wantonly, or for oppressive reasons," Spencer v. N.L.R.B., 712 F.2d 539, 543 (D.C. Cir. 1983), cert. denied, 466 U.S. 936 (1984); and (2) the "common benefit" exception, which allows a litigant whose legal actions has the effect of preserving or recovering a fund for the benefit of others in addition to him or herself to recover attorneys' fees from the fund or from the benefitted parties. Id.

B. Costs awardable under 28 U.S.C. § 1920

Under section "a" of EAJA, costs may be taxed in favor of the prevailing party in accordance with 28 U.S.C. § 1920, which provides in its entirety as follows:

> A judge or clerk of any court of the United States may tax as costs the following:
>
> (1) Fees of the clerk and marshal;
> (2) Fees of the court reporter for all or any part of the stenographic transcript necessarily obtained for use in the case;
> (3) Fees and disbursements for printing and witnesses;
> (4) Fees for exemplification and copies of papers necessarily obtained for use in the case;
> (5) Docket fees under section 1923 of this title;
> (6) Compensation of court appointed experts, compensation of interpreters, and salaries, fees, expenses, and costs of special interpretation services under section 1828 of this

---

[1] Under the "American Rule," prevailing parties generally cannot recover attorneys' fees from their opponents. Alyeska Pipeline Service Co. v. Wilderness Society, 421 U.S. 240, 247 (1975). Where awards of attorneys' fees against the United States are involved, a rule similar to the American Rule comes into play. Id. at 250-56. Such awards require explicit waivers of sovereign immunity. Id. The statute generally governing such awards is EAJA.

title.

The court is vested with broad discretion on the allowance of costs pursuant to section 1920, Loughan v. Firestone Tire & Rubber Co., 749 F.2d 1519 (11th Cir. 1985), a statute through which Congress intended to impose "rigid controls on cost-shifting in federal courts," Parkes v. Hall, 906 F.2d 658, 659 (11th Cir. 1990), citing Crawford Fitting Co. v. J.T. Gibbons, Inc., 482 U.S. 437 (1987). The party seeking to tax costs under EAJA, bears the burden of establishing that "the incurrence of any particular expense was reasonably necessary to the case." Harrisburg Coalition Against Ruining the Environment v. Volpe, 65 F.R.D. 608, 611 (M.D. Pa. 1974).

C. Rule 68

Rule 68, Fed. R. Civ. P., generally provides that a party who finally obtains a judgment which is not more favorable than an offer of judgment that it declined to accept must pay the costs incurred after the offer was made. However, because Rule 68 does not by itself constitute a wavier of sovereign immunity, it applies to the United States only to the extent that there is a waiver of sovereign immunity in the underlying statute. An Advisory Committee note to Rule 68 reads as follows: "For recovery of costs against the United States, see Rule 54(d)." Rule 54(d), as noted above, provides that an award of costs against the United States shall be imposed only "to the extent permitted by law." Because the Clean Water Act itself, 33 U.S.C. § 1251, et. seq., is silent on the subject of awarding costs

and fees in cases brought by the United States, EAJA governs such cases.

EAJA's limited and specific waiver of sovereign immunity, however, should not be read to allow Rule 68 to extend to all cases where costs would be allowable against a private party. Rather, the terms of EAJA's waiver of sovereign immunity should be strictly construed. In 1983, the Supreme Court declined to expand a specific and limited waiver of sovereign immunity in the Clean Air Act to allow the non-prevailing party to shift fees in the case, holding that waivers of sovereign immunity "'must be strictly construed in favor of the sovereign' . . . and not 'enlarge[d] . . . beyond what the language requires.'" Ruckelshaus v. Sierra Club, 463 U.S. 680, 685 (1983) [citations omitted]. In a 1992 Clean Water Act case, the Supreme Court cited to the quoted language from Sierra Club in holding that "any waiver of the National Government's sovereign immunity must be unequivocal." U.S. Dept. of Energy v. Ohio, 503 U.S. 607, 615 (1992). See also United States v. Bodcaw Company, 440 U.S. 202, 204 n. 3 (1979)("It is settled that litigation costs cannot be assessed against the United States in the absence of statutory authorization."). As for EAJA itself, the Fifth Circuit has held that "as a limited waiver of sovereign immunity, section 2412 is to be strictly observed." Fenton v. Federal Insurance Administrator, 633 F.2d 1119, 1122 (5th Cir. 1981).

Thus, the law is clear that an award of costs, like any award against the United States, requires an unequivocal waiver

of sovereign immunity. EAJA provides a waiver of sovereign immunity for costs, but only in favor of the "prevailing party." Because the United States has not waived its sovereign immunity to costs in Clean Water Act cases beyond the terms of EAJA, Rule 68 cannot be applied against the United States as prevailing plaintiff in this case.[2]

II. Defendants' Motions for Fees

Both defendants rely on section "b" of EAJA, 28 U.S.C. § 2412(b) as the legal basis for the claims for fees. As a threshold matter, Florida Cities is not entitled to be considered for such an award because it did not prevail in this action. In any event, neither Avatar nor Florida Cities is entitled to recover section "b" attorneys' fees because neither the common law nor any statute would authorize an award of attorneys' fees against the United States under the circumstances of this case.

The sole basis upon which Defendants claim they are entitled to attorneys' fees is the United States' alleged "bad faith" in bringing the claims which the court held barred by res judicata. Avatar claims that the so-called bad faith entitles it to the attorneys' fees it incurred in bringing a motion for clarification of the court's summary judgment order to determine whether the court's res judicata ruling extended to Avatar

---

[2] The Rules Enabling Act, 28 U.S.C. § 2072, also precludes the application of Rule 68 here. That Act expressly prohibits an application of the rules of civil procedure which would "abridge, enlarge or modify any substantive right." 28 U.S.C. § 2072(b). A court may not apply Rule 68 where, as here, to do so would create an enlarged right to costs beyond what Congress has chosen, through EAJA, to provide.

Holdings, and Florida Cities claims it is entitled to over $400,000 in attorneys' fees it says it incurred since January 1995 in defending against the claims the court ultimately barred by res judicata.

There are no circumstances, least of all bad faith, which warrant the award of attorneys' fees in the instant action. There were both ample factual and legal bases for the United States to bring the claims at issue. Indeed, this Court, before allowing the United States to amend its complaint, made the following factual finding, which stands to this day:

> Upon careful review of the relevant pleadings and exhibits, the Court finds....Section 1319(g)(6)(A)(iii) provides that only violations that are expressly resolved in a final administrative order, and for which the violator has paid a penalty, may not be the subject of a subsequent judicial proceeding for civil penalties. 33 U.S.C. § 1319(g)(6)(A)(iii). Each day that illegal conduct continues constitutes a separate day of violation and may be penalized separately. 33 U.S.C. § 1319(d); Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., 897 F.2d 1128, 1138-39 (11th Cir. 1990). . . . Further, the Court finds unpersuasive Florida Cities' argument that the timing of the Consent Agreements indicates that they were in complete settlement of all past alleged violations. The language of the Consent Agreement is clear as to which violations are covered: those on September 14, 1989 at Barefoot Bay and June 1987-July 1990 at Carrollwood. Had the parties intended the Consent Agreements to reflect a full settlement of all claims, then the specific paragraphs in the Consent Agreement should have indicated those claims were covered.

Order, June 21, 1995, pp 5-6. See also, Order, November 22, 1995, p. 12 n.10.

While Florida Cities accuses the United States of failing to properly investigate whether the claims at issue had been settled, the United States, before moving to amend the complaint,

performed just such an investigation, and found, as did the court, that only specific earlier claims had been settled. The proposed amended complaint purposely pled only later violations.

While the Court ultimately determined that the claims at issue were barred by res judicata, the United States believes that there was and is substantial support for its position that the claims are not barred. See, e.g., Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992); In re: Borough of Ridgway, Pennsylvania, CWA Appeal No. 95-2 (EPA Env. Appeals Board, May 30, 1996). Indeed, as recently as last month, the Court ordered the parties to rebrief this very issue in light of those decisions, plainly implying that the resolution of the res judicata issue was by no means obvious, even after the extensive earlier briefing. In these circumstances, there is no possible basis for asserting that the United States maintained its position in bad faith.[3]

In short, by no stretch of the imagination, can it be said that the United States acted in bad faith in bringing the claims the Court ruled barred by res judicata. Hence, no basis exists upon which the Court may impose attorneys' fees against the United States.

---

[3] It is worth noting that Florida Cities itself failed to argue that the claims at issue were barred by res judicata in both its brief opposing amendment of the initial complaint and in its affirmative brief opposing summary judgment on those claims. Not until it later filed a Notice of Disposition Authority in which it relied on an EPA Presiding Officer's erroneous decision, which was since overturned by EPA's highest administrative tribunal, did Florida Cities itself argue res judicata.

III. Avatar Holdings' Application for Costs

Because Avatar Holdings may be considered a "prevailing party," within the meaning of section "a" of EAJA and Rule 54(d), the Court may elect to award it such costs as are allowable under 28 U.S.C. § 1920 and are properly documented and justified. Assuming that the Court elects to allow costs in this case, the specific costs claimed should be closely scrutinized. Under close scrutiny, it appears that only a small part of the costs claimed in Avatar Holdings' application is properly justified and documented.[4]

Transcript fees

Avatar Holdings has requested that it be allowed the costs of its copies of transcripts of four discovery depositions taken by the United States and of one pretrial conference before the magistrate judge.

In order for transcript fees to be awarded, under Desisto College, Inc. v. Town of Howey-in-the-Hills, 718 F. Supp. 906 (M.D. Fla. 1989), aff'd, 914 F.2d 267 (11th Cir. 1990), they must have been necessarily obtained for use in the case and not merely for the convenience of counsel.[5] Three of the four deposition transcripts for which Avatar claims costs were of depositions of

---

[4] Moreover, the verification submitted with Avatar's application for costs is legally insufficient because it was not filed under penalty of perjury as required by 28 U.S.C. § 1746.

[5] In Desisto, the court allowed the defendant the costs of transcripts for discovery depositions which it took (i.e., affirmative discovery), which the court found to be necessary in light of the facts known at the time.

Avatar Holdings' own officers and/or directors, Leon Levy (two transcripts) and Edwin Jacobson. Avatar cites to no precedent for awarding the costs of transcripts of depositions of a party's own officers/directors, and fails to explain how these were truly "necessarily obtained for use in the case," within the meaning of section 1920. The fourth transcript was of a brief deposition of a former Avatar Holdings officer, John Sladkus, who refused to testify on Fifth Amendment grounds. While arguably the minimal cost incurred for that transcript may be awardable, in its application for costs, Avatar Holdings chose to lump the cost of that transcript with the cost for a copy of Mr. Levy's deposition, with the result that it is undiscernible how much the 16-page Sladkus transcript cost.[6] Solely to avoid burdening the court with an argument about such a relatively small sum, the United States will concede that Avatar Holdings is entitled to the entire $1,284.45 it claims for the four deposition transcripts.

While the cost of a transcript of a pretrial conference might be considered necessary depending on the circumstances, the December 11, 1995 pretrial conference for which Avatar Holdings seeks reimbursement involved almost exclusively a discussion of the res judicata issue now very familiar to the court. Avatar

---

[6] The United States does not wish to split hairs over whether the so-called colloquy (which consisted largely of a monologue by counsel for Avatar Holdings about the unfairness of criminal prosecution under the Clean Water Act which Defendants' counsel insisted on repeating at **each** deposition at which the Fifth Amendment was asserted) which accounted for most the transcript was truly necessary.

Holdings fails to explain how a copy of the transcript of that conference was in any way necessary and not merely for the convenience for counsel as he subsequently briefed the issue.[7] Hence, the cost sought for the first pretrial conference should not be allowed.

Witness Disbursements

Avatar Holdings submits that it is entitled to the travel expenses of bringing four of its officers/directors to trial as witnesses, as well as per diem for those witnesses.[8] None of these expenses, however, are itemized, and, there is no explanation given for why Mr. McNairy's and Ms. Metcalf's expenses were more than twice Mr. Jacobson's.[9] And, because Mr. Levy was the designated corporate representative of Avatar Holdings at trial, his travel expenses are not recoverable. Ezelle v. Bauer Corp., 154 F.R.D. 149, 154 (S.D. Miss. 1994)[10]

---

[7] Only the second pretrial conference, held on December 28, 1995, truly related to the conduct of the upcoming trial itself and arguably may be considered necessary.

[8] According to Avatar Holdings, Georgia Metcalf is technically an officer not of Avatar Holdings itself, but of its subsidiary, Barefoot Bay Development Corporation.

[9] Avatar claims $185.60 in unitemized expenses for Mr. Jacobson's brief testimony, but $365.00 and $399.82 in unitemized expenses for Mr. McNairy's and Ms. Metcalf's even briefer testimony. Mr. Jacobson is based in Chicago and Miami, Mr. McNairy in Miami, and Ms. Metcalf, in Brevard County.

[10] If the court finds that Avatar Holdings is entitled to be reimbursed for Mr. Levy's attendance because he was called as a witness by the United States, the reimbursement should be limited to per diem and travel by common carrier from Miami, Avatar Holdings' corporate residence. Having given notice at the pretrial conference that it would call Mr. Levy as a witness at trial, the United States should not be responsible for flying Mr. Levy to

Solely to avoid burdening the court and the parties with any further argument on the subject, the United States will concede that Avatar Holdings is entitled to $185.60 each in expenses for Messrs. Jacobson and McNairy, and Ms. Metcalf, for a total of $556.80.

Duplicating costs

While Avatar Holdings ordinarily would be entitled to recover reasonable duplicating costs for necessary photocopies, it has patently failed to describe or itemize in any way the enormous expense it claims under this category ($16,363.90). Under Cullens v. Georgia Department of Transportation, 29 F.3d 1489, 1494 (11th Cir. 1994) and Desisto, 718 F. Supp. at 914, photocopying costs are disallowed in their entirety when no itemized evidence is presented which distinguishes between copies which were necessary and copies which were merely convenient.[11] This cost therefore should not be allowed.

In sum, because Avatar Holdings' Bill of Costs is defective in so many respects, it should be disallowed, except to the extent of $1,841.25

Tampa from the Bahamas, because Mr. Levy chose to be "on vacation" there during trial, and, in any event, finds questionable Avatar Holdings' assertion that no common carrier was available for the trip from the Bahamas to Tampa.

[11] Avatar Holdings' unsubstantiated approximation that only 20% of all copying was for the convenience of counsel is insufficient. The $16,363.90 lump sum figure, which is completely silent as to the nature and purpose of the materials copied, number of copies, per-page cost, and date of the costs, is simply unacceptable.

IV. Florida Cities' Motion for Bill of Costs

Florida Cities bases its claim for costs on Rule 68. In its motion, Florida Cities fails to cite any authority which supports the proposition that costs under Rule 68 are available against the United States when it is the prevailing party.[12] As discussed at length above, however, there is ample authority to the contrary.

Because Florida Cities is not the prevailing party entitled to costs under EAJA, its offer of judgment does not provide an independent basis for awarding costs. Assuming arguendo that the court finds that Rule 68 costs can be awarded to Florida Cities in this case, however, the specific costs it claims, like those of Avatar, must be closely scrutinized. Under close scrutiny, its bill must be vastly diminished. And, any costs to which Florida Cities ultimately is found to be entitled must be offset against the costs to which the United States is entitled as the prevailing plaintiff under EAJA.[13]

Several examples suffice to demonstrate that Florida Cities

---

[12] Florida Cities has failed to file a brief in support of this motion, as required by Local Rule 3.01(a). In its brief in support of its motion for attorneys fees (not costs) Florida Cities itself recognizes that EAJA constitutes a waiver of sovereign immunity, Florida Cities Water Company's Memorandum of Law in Support of its Verified Motion for Attorneys Fees at 2, but its motion for costs is silent on the subject of sovereign immunity insofar as it relates to an award of costs under Rule 68. The United States' research in this case has not located any published authority to support the proposition that the United States has waived its sovereign immunity to an award of costs under Rule 68.

[13] While the United States elected not to file its own affirmative motion for an award of costs under EAJA, that election should not deprive it from benefiting from such an offset.

has failed to carry its burden in justifying its costs. Florida Cities has not even begun to demonstrate, as required by 28 U.S.C. § 1920, how, in just one year, it incurred $54,115.61 in photocopying costs that were "necessarily obtained for use in the case." Not a single photocopying line item reveals the volume of material photocopied or the per copy rate charged, which, judging by the cost alone, was excessive.[14]

The purpose of the copying also is rarely revealed, and, to the extent that it is, many of the broadbrush labels used to describe the purpose suggest that the copying was much more likely to have been for the convenience of counsel, than necessarily obtained for use in the case.[15] So, too, does the

---

[14] By way of further example, Florida Cities claims one charge of over $4,000 for photocopying of EPA documents. The United States offered to make EPA documents available to Florida Cities without any charge other than an offset against the photocopying charges that Florida Cities imposed on the United States for copies of documents it produced. The United States should not bear the excessive charges Florida Cities apparently incurred because it declined that offer. Similarly, the United States offered to provide Florida Cities with copies of exhibits used at depositions, also to be offset against charges the United States incurred for photocopying of Florida Cities' documents, but again Florida Cities elected to decline the offer and incur its own copying charges.

[15] According to Florida Cities' Bill of Costs, it paid $27,688.89 to Gabeler, Baise & Miller, P.C.; $12,155.60 to Baise and Miller, P.C.; $12,433.01 to Gabeler, Battocchi & Griggs, LLP; $705.83 to Henderson, Franklin; and $132.50 to Holland & Knight. These figures **exclude** payments purportedly made to a law firm for copying charges the firm incurred through a subcontractor such as a copy center such as Kinko's. While the bulk of the copying appears to have been performed by the law firms, they apparently also engaged contractors for some tasks. These tasks are no better described or justified.

Although trial concluded on April 5, 1996, a July 19, 1996 charge of $2,019.36 is attributed to April 1996 copying by Gabeler, Battocchi & Griggs, as is a July 31, 1996 charge of $1,043.14 for

sheer volume of the copying, and the multiplicity of counsel and law firms.[16] There also seems to have been a good deal of duplicative copying.[17] And, in not a single instance, does Florida Cities state that a particular item for which it was charged for photocopying was of a document actually filed with the court. Under Cullens, 29 F.3d at 1494, and Desisto, 718 F. Supp. at 914, then, the photocopying claim should be disallowed in its entirety.

Similarly, some of the court reporter charges do not even specify the name of the deponent or even the court reporter (see Florida Cities' Motion for Bill of Costs, Attachment A, page 1),

---

June 1996 copying.

[16] The extraordinarily and unexplained large photocopying costs paid to law firms at least also raise the question of whether a substantial volume of photocopying resulted from the repeated reconfiguration of law firms involved in the case. For example, there is an unexplained $7,666.34 charge for copying at Gabeler, Battocchi & Griggs during the month of January 1996, when the case was dormant (trial having been continued on January 4, 1996 at Defendants' behest). Florida Cities filed a notice on January 2, 1996, reflecting a January 1, 1996 reconfiguration of Gabeler, Baise & Miller resulting in Mr. Baise becoming affiliated with Baise & Miller and Mr. Scroggin becoming affiliated with Gabeler, Battocchi & Griggs. The reasonable inference is that the unexplained $7,666.34 was incurred as a result of this reconfiguration and was therefore for the convenience of counsel rather than necessarily obtained for purposes of the case.

In the absence of any other plausible explanation, it seems fair to conclude that the sheer number of counsel active on behalf of Florida Cities at one time or another in this case, together with their various and evolving affiliations, resulted in photocopying for their convenience.

[17] For example, there are over $8,000 in trial exhibit copying charges listed in late December 1995, and over $8,000 listed again on March 31, 1996 as "copies required for trial."

and very few actually identify a given charge as being for a stenographic transcript as distinguished from the many other services provided by court reporters.[18] None of the witness expenses, all of which are associated with Florida Cities' expert witnesses, are itemized.

Assuming Florida Cities is entitled to recover any of its costs in this action, which the United States vigorously denies, it is incumbent upon Florida Cities to submit a proper Bill of Costs. Because, even under a relatively cursory audit, Florida Cities' Bill of Costs is so overinflated, undocumented and otherwise suspect, it should be entirely disallowed by the court. To the extent that any of Florida Cities' costs are allowed, the United States is entitled to an offset of its own costs, which, for transcripts, trial exhibits, and duplication total $29,204.83. See Declaration of Gayle Simmons (and attachment).

---

[18] Only court reporter fees for stenographic transcripts can be taxed as costs under 28 U.S.C. § 1920. In some instances, however, Florida Cities charges for duplicative videotapes and stenographic recordings of identical depositions (Id., "Kwan" charges on p. 2). In another instance, Florida Cities charges for the transcript of a deposition it unilaterally took after the close of discovery (Id., "Shoemaker" charge on p. 2), without the Court's permission or the United States' attendance. In one instance, Florida Cities claims a charge for an "audio transcript" of a deposition for which it also claims a stenographic transcript (in fact, it subpoenaed the tapes from the court reporter) (Id., "Lehman" charges on p.3).

It is also unclear in how many instances, for convenience of counsel, Florida Cities ordered expedited copies of transcripts, resulting in higher-than-normal transcription charges. For example, Florida Cities ordered daily copy of the trial transcript, at a cost of over $10,000.

Conclusion

Each party should bear its own costs and fees in this action, with the exception of the $1,841.25 the United States has agreed to pay to Avatar Holdings.

Respectfully submitted,

LOIS J. SCHIFFER

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

DECLARATION OF GAYLE SIMMONS

I, Gayle Simmons, declare:

1. I am a paralegal employed by the Environmental Enforcement Section of the Environment and Natural Resources Division of the United States Department of Justice. In that capacity, I was assigned to assist counsel for the United States of America in this litigation.

2. I have reviewed Justice Department records relating to the costs incurred in this case, and I have verified that the said costs were in fact incurred in connection with this action.

3. Attached to this declaration is an accurate listing of the costs incurred by the United States in this action. Based on the information I reviewed, the costs appearing on this attachment are correct.

I declare, under penalty of perjury that the above statements are true.

DATED: September 19, 1996

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

97 FEB -3 AM 10:48

UNITED STATES OF AMERICA

Plaintiff,

V.

CASE NO. 93-281-CIV-FTM-21-I

FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,

Defendants.
_____/

ORDER

This cause comes before the Court on motions of the Defendants Florida Cities Water Company ("Florida Cities") and Avatar Holdings, Inc. ("Avatar Holdings" or "Avatar") to tax costs and certain attorney's fees against the Plaintiff United States of America. Specifically, filed herein are Defendant Florida Cities' Motion for Bill of Costs (Dkt. 346) and Verified Motion for Attorneys Fees (Dkt. 347) and Defendant Avatar Holdings' Motion for Judgment of Costs (Dkt. 348) and Application for Attorney Fees (Dkt. 349) and Memorandum (Dkt. 350) in support thereof. Plaintiff has filed a Response (Dkt. 352)[1] to these filings.

[1] To the extent that Plaintiff's Response (Dkt. 352) asserts the United States' entitlement to an award of costs under 28 U.S.C. § 2412(a), such request is untimely under Rule 4.18, Local Rules, Middle District of Florida, as it was submitted more than fourteen days after the entry of judgment. The filings prompted by Plaintiff's Response (Dkt. 352) are discussed below in part IV.

Defendants also filed a Joint Motion to Extend Time in Which to Apply for Costs and Attorney Fees and for Expedited Consideration (Dkt. 345). However, since both Defendants timely submitted their applications for costs and attorney's fees,[2] the motion to extend time will be denied as moot.

BACKGROUND

This action was instituted by Plaintiff, the United States of America, against Florida Cities Water Company ("Florida Cities"), a private utility company, and its parent company, Avatar Holdings Inc. ("Avatar Holdings"), pursuant to the civil penalty provisions of the Clean Water Act (CWA), 33 U.S.C. § 1319 (b). As more fully set out in prior orders of this Court, the Court previously granted partial summary judgment in favor of Defendant Florida Cities and partial judgment on the pleadings in favor of Defendant Avatar on several counts of Plaintiff's Second Amended Complaint, based on various grounds.

The action was tried to the Court sitting without a jury, after which the Court issued a Memorandum Order (Dkt. 341) containing its findings of fact and conclusions of law, pursuant to Rule 52, FRCP, and entered judgment (Dkt. 342) in favor of Defendant Avatar Holdings on all of Plaintiff's claims, but in favor of Plaintiff on its claims against Florida Cities in the amount of $309,710.00, id. Thereafter the Defendants submitted the above-referenced motions for costs and attorney's fees pursuant to Rule 54, FRCP and Rule 4.18, Local Rules, Middle District of Florida.[3]

---

[2] See Rule 4.18, Local Rules, Middle District of Florida; Rule 54, Federal Rules of Civil Procedure.

[3] The Court notes that, subsequently, the United States has filed a Notice of Appeal (Dkt. 357) of this Court's judgment. The pendency of this appeal does not remove this Court's jurisdiction to hear the Defendants' timely filed motions for attorney's fees and costs. Budinich v. Becton Dickinson & Co., 486 U.S. 196, 202 (1989) ("[A] decision on the merits is a 'final decision' for purposes of [28 U.S.C.] § 1291 whether or not there remains for adjudication a request for attorney's fees attributable to the case."); see also Andrews v. Employee's Retirement Plan of First Alabama Bancshares, Inc., 938 F.2d 1245, 1247 n.3 (11th Cir. 1991)(recognizing same).

AO 72A
(Rev. 8/82)

Avatar Holdings seeks to recover its costs incurred in defending this suit as a prevailing party under 28 U.S.C. § 2412(a). Florida Cities, having made a Rule 68 offer of judgment to Plaintiff that was greater than the amount which Plaintiff ultimately recovered, seeks to recover those costs it incurred subsequent to making that offer. Both Defendants seek to recover their attorney's fees under 28 U.S.C § 2412(b) and the common law bad faith exception to the American Rule, contending that the United States' relitigation of those claims which this Court held to be barred by res judicata constitutes bad faith.[4]

The United States, in its Response (Dkt. 352), concedes Avatar Holdings entitlement to costs under 28 U.S.C. § 2412(a), but contends that Avatar's inadequate documentation thereof significantly reduces the amount which it claims, and argues that Florida Cities is not entitled to costs under Rule 68 absent an underlying waiver of the United States' sovereign immunity against such awards. Regarding the Defendants' claims for attorneys' fees under 28 U.S.C. § 2412(b), Plaintiff argues that the circumstances and procedural history of this case demonstrate that the United States did not litigate in bad faith.

---

[4] As a general proposition, parties can seek to recover their attorney's fees incurred in litigation with the United States under either one of two sections of the Equal Access to Justice Act, 28 U.S.C. § 2412. While both sections may be applicable in a particular situation, the amount recoverable and standards applicable under each section are significantly different. Compare 28 U.S.C. § 2412(b) with 28 U.S.C. § 2412(d). Application of the common law bad faith exception to the American Rule through § 2412(b) requires a showing of egregious conduct by the United States, but allows for recovery of fees at the market rate. Section 2412(d) requires a lesser showing to recover fees against the United States, but recovery thereunder is, inter alia, subject to the "substantial justification" and "special circumstances" exceptions, is limited to a rate of $75 per hour absent special justification, and requires submission of an application in a particular form. See generally Brown v. Sullivan, 916 F.2d 492, 495 (9th Cir. 1990)(discussing differences between § 2412(b) & (d)); Garcia v. Sullivan, 781 F. Supp. 969, 973-74 (S.D.N.Y. 1991)(same); Fitzgerald v. Hampton, 545 F. Supp. 53, 56 & n.8 (D.C.D.C. 1982)(same).

As the Defendants submitted their requests for attorney's fees pursuant to 28 U.S.C. § 2412(b), basing their right to recovery on the United States' alleged bad faith (which standard is only applicable under § 2412(b)), and did not submit a fee application in the form required by § 2412(d)(1)(B), the Court need not and will not consider the Defendants' rights to fees, if any, under § 2412(d).

AO 72A
(Rev. 8/82)

I. PRELIMINARY CONSIDERATIONS: 28 U.S.C. § 2412, Rule 54, Sovereign Immunity, & The American Rule on Attorney's Fees

Rule 54, FRCP, provides the procedure by which a party may seek recovery of costs and attorney's fees.

> Rule 54. Judgments; Costs
>
> (d) Costs; Attorneys' Fees
>
> (1) Costs Other than Attorneys' Fees. Except when express provision therefor is either in a statue of the United States or in these rules, costs other than attorney's fees shall be allowed as of course to the prevailing party unless the court otherwise directs; but costs against the United States, its officers, and agencies shall be imposed only to the extent permitted by law. . . .
>
> * * *
>
> (2) Attorney's Fees
>
> (A) Claims for attorneys' fees and related nontaxable expenses shall be made by motion unless the substantive law governing the action provides for the recovery of such fees as an element of damages to be proved at trial.

It is beyond peradventure that the United States, as Sovereign, is immune from suit as well as liability in its courts unless it expressly consents thereto[5]. This principle is equally applicable to the payment of costs and attorney's fees in litigation in which the United States is involved. Without its consent, the United States cannot be held liable for the payment of costs[6] or attorney's fees.[7]

Rule 54 (d)(1), FRCP provides that, "costs against the United States, its officers, and agencies shall be imposed only to the extent permitted by law," but is merely declaratory of that proposition. The section has been held "not [to] effect any change in principle[s]" of sovereign immunity. 10 C. Wright et al., Federal Practice & Procedure, § 2672 p.236 (citing RFC v. J.G. Menihan Corp., 312 U.S. 81, 85

---

[5] See 14 C. Wright et al., Federal Practice & Procedure § 3654 pp.186-193 (1985 & Supp. 1996).

[6] 10 Wright et al., § 2672 p.235 (1983)(citing United States v. Chemical Foundation, Inc., 272 U.S. 1 (1926)).

[7] See 14 Wright et al., § 3654 pp.192-193 (1985 & Supp. 1996).

AO 72A
(Rev. 8/82)

(1941)). The same is true for awards of attorney's fees against the United States; a party seeking fee against the United States must still have some underlying affirmative Congressional grant of such right in order to proceed under Rule 54. As the Clean Water Act makes no express provision for fees or cost such affirmative grant, if any, must be contained in 28 U.S.C. § 2412, known also as the Equal Acces to Justice Act (EAJA).

As first enacted in 1948, 28 U.S.C. § 2412 was extremely narrow in scope, only allowing fo the taxation of costs against the United States in a few specifically enumerated classes of cases. See 1(Wright et al.§ 2672 p.236 (1983). Otherwise, § 2412 echoed the J.G. Menihan case in its mandate tha any consent by the United States to the taxation of costs had to take the form of an "express . . . Act o Congress." This, as Professor Wright notes, made taxation of costs against the United States the exception, not the rule. 10 Wright et al., § 2672 at 237.

In 1966, seeking to end the disparity in treatment between private parties and the United States concerning the allowance of court costs,[8] Congress amended 28 U.S.C. § 2412 to permit federal courts to tax costs against the United States to the same extent that they, in their discretion,[9] could tax costs against private litigants. See 10 Wright et al., § 2672 at 238. However, the amendment expressly prohibited the award of attorney's fees and expenses against the United States pursuant to that section. See id. at 239 (citations omitted); 14 Wright et al., § 3660 p. 367 (citations omitted).

[8] S. Rep. No. 1329, 89th Cong. 2d Sess. (1966), reprinted in 1966 U.S.C.C.A.N. 2527, 2528.

[9] Id. at 2529.

AO 72A
(Rev. 8/82)

Total parity between the United States and private litigants as regards the awarding of fees and costs in litigation was not achieved until 1980, when 28 U.S.C. § 2412 was again amended.[10] The effect of this amendment was to give federal courts the discretionary authority to award attorney's fees against the United States to the same extent that such were available against private litigants, see 10 Wright et al., § 2672 at 241, in addition to the courts' preexisting power to tax costs against the United States

The statute now reads, in relevant part:

> s 2412. Costs and fees
>
> (a)(1) Except as otherwise specifically provided by statute, a judgment for costs, as enumerated in section 1920 of this title, but not including the fees and expenses of attorneys, may be awarded to the prevailing party in any civil action brought by or against the United States or any agency or any official of the United States acting in his or her official capacity in any court having jurisdiction of such action. A judgment for costs when taxed against the United States shall, in an amount established by statute, court rule, or order, be limited to reimbursing in whole or in part the prevailing party for the costs incurred by such party in the litigation.
>
> * * *
>
> (b) Unless expressly prohibited by statute, a court may award reasonable fees and expenses of attorneys, in addition to the costs which may be awarded pursuant to subsection (a), to the prevailing party in any civil action brought by or against the United States or any agency or any official of the United States acting in his or her official capacity in any court having jurisdiction of such action. The United States shall be liable for such fees and expenses to the same extent that any other party would be liable under the common law or under the terms of any statute which specifically provides for such an award.

Thus, 28 U.S.C. § 2412, in its current form, effects a waiver of the United States' sovereign immunity against the imposition of costs and attorney's fees to prevailing parties in civil actions, and exposes the United States to liability for such awards to the same extent that such awards may be imposed against private individuals. The Federal Rules of Civil Procedure subject private litigants to

---

[10] P.L. 96-481, § 204, 94 Stat. 2327 et seq., reprinted in 1980 U.S.C.C.A.N. 4984 et seq.

AO 72A
(Rev. 8/82)

awards of litigation costs under Rules 54 and 68, among others. However, since the Courts of th United States operate under the American Rule on Attorney's Fees, the Supreme Court has mandate that attorney's fee awards must be made pursuant to one of the few recognized common law exception or one of the many express statutory exceptions to the American Rule. Alyeska Pipeline Service Co v. Wilderness Society, 421 U.S. 240 (1975). One of these common law exceptions is known as the bac faith exception, pursuant to which a court may award fees to a party's opponent to punish the party's vexatious litigation. See part II, infra. The express wording and unequivocal legislative history of § 2412(b) make clear that Congress intended for these exceptions to apply to the United States under the EAJA. H. Rep. No. 96-1418, 96th Cong. 2d Sess. 9 (1980), reprinted in 1980 U.S.C.C.A.N. 4953, 4984, 4987 (applicability of common law and statutory exceptions to United States under EAJA).[11]

II. FEES

To recover fees under § 2412(b) of the EAJA, the Defendants must be "prevailing part[ies]" as defined by that section, and must prove that the United States litigated in bad faith. It is undisputed that Defendant Avatar is a prevailing party; it is not so clear whether Florida Cities is. However, the Court need not determine Florida Cities' status as a prevailing party under 2412(b) given the Court's determination of the issue of Plaintiff's alleged bad faith, as explained below.

---

[11] The Court is cognizant that the EAJA is a waiver of the United States' sovereign immunity, and that therefore construction of any of the provisions of this act must be undertaken carefully. There has been some disagreement among the federal appellate circuits as to how expansively or narrowly the EAJA should be construed, compare NTEA v. NHTSA, 972 F.2d 669 (6th Cir. 1992) (liberal construction) with Estate of Smith, 930 F.2d 1496 (10th Cir. 1991) (narrow construction) and Fenton, 633 F.2d 1119 (5th Cir. 1981) (same). Fenton, decided prior to October 1, 1981, is binding precedent in the Eleventh Circuit. See Bonner v. City of Prichard, 661 F.2d 1206, 1207 (11th Cir. 1981)(adopting as binding precedent all decisions rendered by the former Fifth Circuit Court of Appeals prior to the close of business on September 30, 1981).

AO 72A
(Rev. 8/82)

"[A]ttorney's fees may be awarded to a successful party when his opponent has acted in ba faith, vexatiously, wantonly, or for oppressive reasons." F.D. Rich Co. v. Industrial Lumber Co., 41 U.S. 116, 129 (1974). Bad faith can take various forms. Both specific instances of conduct, and overal patterns of behavior, whether occurring prior to the institution of or during litigation, can constitute ba faith to support an award of attorney's fees under § 2412(b). See Brown v. Sullivan, 916 F.2d 492 (9t Cir. 1990); Fitzgerald v. Hampton, 545 F. Supp. 53 (D.C.D.C. 1982). The Eleventh Circuit has als recognized the bad faith exception in situations in which the losing party has "acted in bad faith vexatiously, wantonly, or for oppressive reasons," Kreager v. Solomon & Flanagan, P.A., 775 F.2c 1541, 1543 (11th Cir. 1985)(citing Alyeska Pipeline Service Co. v. Wilderness Society, 421 U.S. 240, 258-59 (1975)), whether such conduct occurred prior to or during litigation, id. The court has directed that "[i]n determining the propriety of a bad faith award, 'the inquiry will focus primarily on the conduct and motive of a party rather than on the validity of the case.' " Id. (citations omitted).[12]

In their motions for attorney's fees, both Defendants posit that the maintenance of claims that are found to be barred by res judicata is bad faith sufficient to merit an award of attorney's fees. The Defendants assert that Plaintiff herein made little or no effort to determine the scope of prior administrative (EPA) dispositions of various claims, instead recklessly relitigating these claims and thereby unnecessarily burdening the Defendants and the Court. Plaintiff counters that there was ample

[12] Both the former Claims Court (now the United States Court of Federal Claims) and the Second Circuit have enunciated similar but distinctive frameworks for analyzing conduct alleged to be bad faith. See, e.g., St. Paul Fire & Marine Ins. Co. v. U.S., 4 Cl. Ct. 762 (Cl. Ct. 1984); New York Housing Authority v. Kemp, 751 F. Supp. 1123 (S.D.N.Y. 1990). However, because these tests place equal emphasis on whether the claims are colorable and the nature of the prosecuting party's motives, they have a slightly different focus than the Eleventh Circuit test, which focuses primarily on the conduct and/or motive of the prosecuting party. Although not relying on them in reaching its result, the Court notes these tests shed significantly more light on the general subject of the bad faith exception than Eleventh Circuit case law, due to the brief treatment of the topic in Kreager and the general lack of Eleventh Circuit case law on the subject, and support the Court's conclusion on the bad faith issue in this case.

AO 72A
(Rev. 8/82)

factual and legal support for its assertion of the later-precluded claims, and that it did undertake an investigation into the administrative disposition of those claims before seeking to add them to this case by amendment of the complaint. Plaintiff further maintains that the significant briefing which this Court required of the parties on this issue underscores the opacity of the res judicata issue presented in this case.

This Court is not persuaded that Defendant has adduced sufficient proof of the bad conduct or ill motive of Plaintiff in litigating these claims so as to support a finding of bad faith. Plaintiff's actions and conduct herein are simply not of the character that merits awards under the bad faith exception. Nonetheless, the Court will address the case law specifically cited by both Defendants in support of their assertion that Plaintiff's litigation of the precluded claims constitutes bad faith.

The defendants rely on the cases of United States v. Nesglo, 744 F.2d 887 (1st Cir. 1984), Ellingson v. Burlington Northern, Inc., 653 F.2d 1327 (9 Cir, 1981), and Pallante v. Paine Webber, Jackson & Curtis, Inc., No. 84 CIV 5761, 1985 WL 1360 (S.D.N.Y. May 14, 1985). In each of these cases, whenever the party against whom fees were awarded was met with a defeat, it simply ignored the clearly final adjudication of its claims and filed a new suit asserting the same claim. The Nesglo and Ellingson plaintiffs asserted their particular claims multiple times (three for Nesglo, five for Ellingson), in various forums, with the plaintiff in each case making two intermediate trips to the respective appellate court. The Pallante Plaintiffs were equally defiant, though not as repeatedly. After losing the arbitration of their claim before the American Stock Exchange, they filed a state court lawsuit based on the identical facts and same theory as their original claim instead of moving to challenge the arbitration as they could have done. In each case, despite the rendering of clear rulings against them on all relief sought, the Nesglo, Ellingson, and Pallante plaintiffs returned to court and reasserted the

AO 72A
(Rev. 8/82)

identical claims. And thus, in each case, the courts which assessed them attorney's fees for bad fai were able to determine with relative ease that all the claims being asserted were barred by res judicat Such is not the situation in the present case.

In the instant case, those claims which the Court found to be barred by res judicata were not large portion of the Plaintiff's case, much less the totality thereof. Nor, as Plaintiff correctly asserts, wa the applicability of res judicata to those prior claims such a clear-cut issue. In reaching its decision tha certain of Plaintiff's claims were precluded, the Court required much briefing of the issues by th parties, as well as rebriefing upon the Court's grant of reconsideration. Such is quite different from th situation characterizing those cases of bad faith cited by the Defendants, in which parties continuall relitigated their claims after receiving definitive rulings on all those claims.

Although the Defendants herein may have been greatly frustrated by being forced to mount a defense to claims that were later found to be barred by res judicata, the Court notes that such a reactior by the Defendant does not compel the conclusion that the United States litigated in bad faith. Ever when federal courts have determined that a party's prosecution of a claim was unreasonable,[13] or unwise and without great concern for his adversary, so as to greatly frustrate him,[14] they have still found that such behavior is not bad faith, and is not litigation undertaken vexatiously, wantonly, or for oppressive reasons.[15]

III. COSTS

A. The Defendants' Entitlement to Costs

As Plaintiff has conceded that Defendant Avatar is entitled to costs under 28 U.S.C. § 2412(a) as a "prevailing party," the Court need not address this issue. Plaintiff, however, does contest Defendant Florida Cities' entitlement to costs, arguing that it cannot recover costs against the United States pursuant to a Rule 68 Offer of Judgment because there exists no underlying statute which waives the United States' sovereign immunity in suits, like the present, in which the United States prevails. The United States contends that since a judgment was returned in its favor on its claims against the Defendant Florida Cities, the Florida Cities is thereby precluded from being a § 2412(a) "prevailing party." The Court agrees with Plaintiff's analysis and, grudgingly, with its conclusion. Rule 68 Offers of Judgment, available only to nonprevailing parties under the Rule, operate through Rule 54, which provides that costs against the United States can be imposed only "to the extent permitted by law." Since the Clean Water Act is apparently silent on the award of costs[16] in cases brought by the United States, the EAJA is the only provision ostensibly applicable to Defendant's requests for costs. But since § 2412(a) of the EAJA only grants costs to a "prevailing party," parties seeking costs under Rule 68 are implicitly precluded from the scope of § 2412(a). Thus, although it is against the clear intent of Congress in amending the EAJA in 1966,[17] based upon the principles of sovereign immunity discussed below, this Court concludes that Florida Cities cannot recover costs against the United States under Rule 68, FRCP, because of the bar imposed by the doctrine of sovereign immunity.

---

[16] The parties' briefs are silent on this issue.

[17] See, supra, part I.

AO 72A
(Rev. 8/82)

The Supreme Court has recently reiterated the "common rule, with which [it] presume[congressional familiarity, that any waiver of the National Government's sovereign immunity must b unequivocal. Waivers of immunity must be construed strictly in favor of the sovereign, and nc enlarge[d] . . . beyond what the language requires. United States Department of Energy v. Ohio, 50 U.S. 607, 615 (1992)(citations omitted)(internal quotation marks omitted). Such a strong statemer cannot be disregarded, as would be necessary in order for this Court to conclude that an award of cost under Rule 68 to a nonprevailing party such as Florida Cities is permitted under the plain language o the EAJA, which only permits such awards to "prevailing parties."

The Court notes that despite the strenuous argument between Defendant Florida Cities anc Plaintiff over whether the United States is subject to the operation of Rule 68 through 28 U.S.C. § 2412(a), neither party is able to cite any case law bearing on this subject. Nor has the Court been able to locate any authority on this point.[18] While the history and purposes of Rule 68 and 28 U.S.C. §

[18] The case of U.S. v. American Commercial Barge Line Co., 988 F.2d 860 (8th Cir. 1993), cited in Defendant's Replies (Dkts. 353 & 355), is inapposite. Inter alia, American Commercial deals with the effect of the U.S.'s rejection of an offer of judgment on its right to prejudgment interest under admiralty law. The Eighth Circuit's recitation of the procedural history of the case, which does not even rise to the level of obiter dictum, merely recounted that the district court therein did award costs to the Defendant based upon the U.S.'s rejection of an offer of judgment which exceeded the final judgment in favor of the United States The Eighth Circuit did not pass on the propriety of that award, as it was not an issue before the court. The opinion of the district court is unpublished and its reasoning is thus unknown.

The case of U.S. v. Trident Seafoods Corp., 92 F.3d 855 (9th Cir. 1996) is equally frustrating in the manner it comes close to addressing, but never does directly address, the issue before this Court. Trident deals with the interplay of Rule 68, the Clean Air Act, and the EAJA. Although an offer of judgment was made by the Trident defendant to the United States in an amount which exceeded the final judgment in favor of the United States, and which apparently formed the basis of the district court's award of costs to the defendant under 2412(a), the correctness of that basis of the award was not at issue on appeal. Rather, the Ninth Circuit addressed the issue of whether a specific provision of the substantive statute at issue (the Clean Air Act) relating to fees and costs preempted the more general provisions of the EAJA. As with American Commercial Barge Line, supra, the Trident lower court opinion is unpublished.

AO 72A
(Rev. 8/82)

2412(a) militate strongly for an award of costs to Florida Cities, the procrustean doctrine of sovereign immunity precludes such.[19] Florida Cities' bill of costs must therefore be denied.[20]

---

[19] Rule 68 is clearly intended to encourage settlement of cases by forcing parties to take seriously any offers of settlement properly tendered. For if a Plaintiff rejects a Rule 68 offer that is larger than the verdict he ultimately receives, he is then liable to the Defendant for all costs incurred by the Defendant after the offer was made. Rule 68 thus reverses the normal operation of Rule 54, which otherwise would allow a prevailing party to recover his costs, and instead mandates that the offeree pay to the offeror all costs incurred by the offeror after making the offer of judgment, despite the fact that he may have prevailed pursuant to a verdict returned in his favor. As noted by Plaintiff, and stated explicitly by the rule itself, Rule 54 requires that taxation of costs against the United States be made pursuant to some specific grant of that right.

The legislative history of the EAJA, as noted hereinabove in part I, makes absolutely clear that in enacting 2412(a) Congress intended to "provide for uniformity of treatment in the award of costs" between private litigants and the United States, and to do away with any "governmental advantage derived from the principle favoring immunity of the sovereign from suit." S. Rep. No. 1329, 89th Cong. 2d Sess. (1966), reprinted in 1966 U.S.C.C.A.N. 2527, 2528. In making these changes to § 2412, Congress was surely aware of Rule 68, which had been in effect in the same basic form since the adoption of the Federal Rules in 1937. Thus, notwithstanding Plaintiff's argument that Rules Enabling Act, 28 U.S.C. 2072, prohibits the application of the FRCP so as to "abridge, enlarge, or modify any substantive right," the Court believes that Congress intended for the 1966 amendments to § 2412 to submit the United States to the full liability faced by private parties for taxation of costs--including the operation of Rule 68. It is highly unlikely that Congress in its crafting of an Act with the stated purpose of completely equalizing the United States and private litigants in the awarding of costs and attorney's fees could have intended to exclude the United States from the operation of Rule 68.

But the plain language of the EAJA simply does not extend that far, and the doctrine of sovereign immunity precludes any expansive interpretation of that language. Perhaps the Eleventh Circuit will view the issue differently, but the expansion of the EAJA contrary to the Supreme Court's pronouncements regarding sovereign immunity is simply not the province of this Court.

[20] One could also argue, as does Defendant in its Reply briefs, that the term "prevailing party" in 28 U.S.C. § 2412(a) should be construed in line with the construction of that term under 42 U.S.C. § 1988, which provides for awards of attorney's fees to the prevailing party as part of costs, in cases arising under the Civil Rights Act. It is clear that the vast body of case law defining "prevailing party" that has arisen under 42 U.S.C. § 1988 of the Civil Rights Act was intended to apply equally to that term under § 2412(b) the EAJA, see H.R. 96-1148, 96th Cong. 2d Sess. 11, reprinted in 1980 U.S.C.C.A.N. 4984, 4990 ("It is the committee's intention that the interpretation of the term ['prevailing party'] . . . be consistent with the law that has developed under existing statutes."), and that the Supreme Court has approved of the application of case law arising under various statutory fee schemes to any situation in which a fee award is authorized to a prevailing party, Hensley v. Eckerhart, 461 U.S. 424, 433 n.7 (1983)("The standards set forth in this opinion [on the issue of the proper relationship of the results obtained to an award of attorney's fees] are generally applicable in all cases in which Congress has authorized an award of fees to a 'prevailing party' ".); however, it is not so clear that this body of law should be applied to awards of costs under § 2412(a). While this argument is facially logical--sections § 2412(a) & (b) and § 1988 all use identical terminology--such reasoning suffers from at least two significant defects.

First, what is now § 2412(a), and specifically its "prevailing party" terminology, was enacted over a decade before the enactment of the attorney's fees provision in 42 U.S.C. § 1988, upon which rests most, if not all, of the federal statutes dealing with the issue of when a party is considered "prevailing" under the various federal statutes authorizing fee awards to such parties. Second, adoption of such precedent in cases involving § 2412(a) would generally undermine the very purposes of the EAJA, as a defendant's status as a "prevailing party" for purposes of § 1988 depends upon a determination that the plaintiff litigated in bad faith. Sullivan v. School Board of Pinellas County, 773 F.2d 1182, 1188 (11th Cir. 1985)(citing Hughes v. Rowe, 449 U.S. 5, 14 (1980)); Hill v. Longini, 767 F.2d 332, 335 (7th Cir. 1985)("A defendant may be considered a prevailing party under section 1988 if plaintiff's action was 'vexatious, frivolous, or brought to harass or (continued...)

B. Costs awardable

Having concluded that Avatar is entitled to costs under § 2412(a), the Court is unable to make a complete award of costs because of insufficiencies in the Defendant's application for costs. Thus, seeking to avoid making a more piecemeal ruling on this issue, the Court will grant the Defendant Avatar leave to file a bill of costs which this Court can consider. While the form of its submission is helpful to the Court,[21] the necessary substance is lacking. The primary fault of the submitted bill is its lack of specificity and itemization, particularly as regards the expenses listed for photocopying.

As the parties are well aware, 28 U.S.C. § 1920(4) and case law arising thereunder[22] only permit the recovery of costs for photocopies necessary to the maintenance of the suit. At a minimum, Avatar's amended application for costs shall state the nature of the document or item copied, the purpose or necessity for which the cost was incurred, explaining such where it is not plainly obvious. Additionally the length of the document or item and the per page rate should be provided. As for costs claimed under 28 U.S.C. § 1920(2) for reporter/stenographicservices and charges, Avatar should also state the purpose or necessity of these expenses, again explaining such where necessary. Particularly, Avatar shall address

---

[20] (...continued)
embarrass the defendant.'")(citing Hensley v. Eckerhart, 461 U.S. 424, 429 n.3 (1983)). Hinging a party's ability to recover costs under § 2412(a) upon a determination of litigation impropriety by the United States would lessen a private party's incentive to litigate its rights, contrary to Congress' desire in enacting the EAJA to "reduce the deterrents and disparity" in contesting government action. Cf. U.S. v. Trident Seafoods Corp., 92 F.3d 855, 863 (9th Cir. 1996)(refusing to import the Clean Air Act § 7413(b) requirement of unreasonable government action for awarding costs and fees into the analysis of an EAJA § 2412(a) cost award). Additionally, adoption of such precedent in cases involving § 2412(a) would clearly prohibit the awarding of costs to Defendants herein, as this Court has already determined that Plaintiff herein did not litigate frivolously, vexatiously, or for an improper purpose. Defendants would thus, presumably, avoid advocacy of such a position.

[21] The Court would note for the Defendant Avatar's benefit that Florida Cities' attachment to its bill of costs was in a form particularly helpful to the Court in ruling on this issue.

[22] See, e.g., DeSisto College v. Town of Howey-in-the-Hills, 718 F. Supp. 906 (M.D. Fla. 1989).

AO 72A
(Rev. 8/82)

the issue of costs recoverable for trial transcripts requested at the expedited rate if it intends to asse: a claim for such.

In doing the above, Avatar shall also address the deficiencies alleged by the Plaintiff in it Response (Dkt. 352) where applicable, make relevant reference to the abundant case law arising unde 28 U.S.C. § 1920, and generally provide the maximum relevant detail possible. Failure to address thes deficiencies will result in denial without further notice of those costs inadequately supported. Avatar' amended applications for costs shall be submitted to the Court no later than February 21, 1997. The Plaintiff shall have the normal time frame as set out by the Local and Federal Rules within which tc respond. Chambers copies shall be provided by the parties to this Court's Tampa chambers by the same applicable deadlines.

IV. Defendant Florida Cities' Replies

Finally, there is the matter of the multiple documents filed by Defendant Florida Cities and the United States herein. These pleadings are Defendant Florida Cities' Motion to File Reply Memorandum (Dkt. 353) along with attached Reply Memorandum; Defendant Florida Cities' Notification etc. (Dkt. 354); Defendant Florida Cities' Notice of Substitution of Reply Memorandum (Dkt. 355); and United States' Memorandum in Opposition etc. (Dkt. 356). The parties, of course, are aware of Rule 3.01(b), Local Rules, Middle District of Florida, and its prohibitions. However, it is not inappropriate under Local Rule 3.01(b) for the Defendant to have filed a motion for leave to file a reply and have attached the proposed reply to such motion. The Defendant's motion will be granted.

Upon consideration thereof, it is hereby **ORDERED AND ADJUDGED**:

1. Defendants' Joint Motion to Extend Time in Which to Apply for Costs and Attorney's Fees and for Expedited Consideration (Dkt. 345) is hereby **DENIED as moot.**

AO 72A
(Rev. 8/82)

2. Defendant Florida Cities' Verified Motion for Attorneys Fees (Dkt. 347) is **DENIED**.

3. Defendant Avatar Holdings' Application for Attorney Fees (Dkt. 349) is **DENIED**.

4. Defendant Florida Cities' Motion for Bill of Costs (Dkt. 346) is **DENIED.**

5. Defendant Avatar Holdings' Motion for Judgment of Costs (Dkt. 348) is **GRANTED in part**. Pursuant to the Court's instructions above, Defendant shall submit an amended application for costs no later than February 21, 1997. Plaintiffs shall timely respond thereto as provided under the rules. Courtesy copies shall be provided the Court as directed above.

6. Defendant Florida Cities' Motion to File Reply Memorandum (Dkt. 353) is **GRANTED**. The Clerk is **DIRECTED** to file the reply Memorandum attached to Defendant's Motion (Dkt. 353) as well as Defendant's Substituted Reply (Dkt. 355).

DONE AND ORDERED, at Tampa, Florida, this 3rd day of February, 1997.

RALPH W. NIMMONS, JR.
UNITED STATES DISTRICT JUDGE

MEMORANDUM

TO: Dennis Getman

FROM: Gary H. Baise

DATE: January 31, 1996

RE: Four-Month Billing Summary

I am faxing to you a summary of actual costs for attorney time worked versus what I ended up billing to Florida Cities. You have asked me on several occasions to be sensitive to costs and attempt to stay within your budget. Since July, I have maintained the records with regard to this case. Prior to August the records are on Ms. Gabeler's computer and I will attempt to obtain those records as well. It was in July that Mr. Miller and I raised serious questions regarding Ms. Gabeler's bookkeeping habits and her handling of firm funds.

From July on you can see how much time I have written off of each bill. In many cases I took substantial amounts of time from Don's and others' efforts and, as I told you, it distressed him greatly because it lowered his income and potential for a bonus. I told him repeatedly we had to look out for the client's interest and overall production for the client, but he deeply resented it. I think you can see from these numbers that I have attempted to keep attorney costs under control.

For example, note the month of August which I considered a light month because of vacation time. I found that the tasks which I had authorized had taken a lot more time than I felt was needed; therefore, knowing that legal efforts for October, November, and December were going to be substantial, I severely reduced what I thought was inefficient expenditures of effort by lawyers and paralegals.

Miami, FL 33152-0300

Dear Dennis:

Enclosed is our statement for August services. During the month of August, we reviewed expert reports and worked with the expert witnesses; participated in assisting bond counsel on the decisions he needed; prepared for and conducted the difficult depositions involving Ken Kwan, and started the work on the Motion for Partial Summary Judgment and Opposition to the Government's Motion for Summary Judgment. In addition work was undertaken with regard to reviewing various depositions developing privilege logs, and Don participated in the taking of depositions of Avatar officers.

Again for your information you know that on some of the days listed, Don and Lance put in more hours than I show on the bill but as I told you before I believe not every hour is fully billable. I do not bill for just being in place. Given the fact that we have exceeded your budget at this point, I will continue working with you on trying to deal with the high costs involved in this case.

Cordially,

Gary H. Baise

Dear Dennis:

Enclosed is our statement for work for December 1995. My apologies for the delay; however, it has not been easy, given the law firm split, to obtain all of the expenses for the month of December. I believe I now have all of the expenses in terms of copying costs. Also you will note I have lowered legal time significantly. The legal time amounted to over $202,000. I reduced the time where I thought there was duplication and inefficiencies in order to keep the cost under some semblance of control. Don's time for example was approximately 275 hours and I do not believe anyone could be efficient and effective for that number of hours, so I reduced his time accordingly. In addition, I reduced paralegal time as well.

Please give me a call after you receive this and we can discuss it further.

Cordially,

Gary

Dear Dennis:

Enclosed please find our statement for the month of February 1996. All of the time involves trial preparation and organization of documents for the trial. As usual, should you have any questions with respect to the activities we undertook on your behalf in February, by all means give me a call.

Also if you want me to review Don's time, I will do so. I've had to caution him on a number of occasions to stop doing duplicate work such as reviewing Leon Levy's deposition which I had told him not to touch because that was Weil, Gotshal's responsibility. I assume he did so, and there have been several other occasions where I felt he was doing things I would not have authorized had he been under my direct supervision.

Cordially,

Gary H. Baise

Dear Dennis:

Enclosed is our statement for services rendered during the month March. This statement covers work for my team to handle 15 out of the 18 witnesses and the 5 witnesses called by the government for which we also handled cross-examination. We handled all document preparation and organization for our witnesses. I have tried to avoid as much duplication of effort as possible. In fact, I have written down our time where I thought there was any duplication or little value added by my team.

I shall call you when I return from Illinois next Tuesday, and we will discuss this matter further.

Cordially,

Gary H. Baise

Dear Dennis:

Enclosed please find our statement for services for April 1996. This statement covers the last week of trial and incidental matters that Lance and Alex undertook after the trial. Because you were present with us during the trial, I shall not engage in any lengthy description in this letter. Again, you can probably tell from the hours, I have marked down some of our time since many of the days were 10 to 14 hours in total effort.

Cordially,

Gary H. Baise

Dear Dennis:

Enclosed please find our statement for services rendered during the month of July 1996. The month was spent on responding to Jacobs' filing of the Dean Dairy case as additional authority to support his case; preparing a response to the court's order; and handling of the res judicata issue. I have reduced my time because there certainly was duplication in the study of the City of Manning and Ridgway cases. I did not want to charge you for three of us studying and reviewing those two cases.

Cordially,

Gary

Dear Dennis:

Enclosed is our statement for the month of December, 1996. I had estimated this bill to be approximately $2,500 for Joe's budget; however, the total amount is somewhat under that estimate. All the time expended was for work on the appeals issue.

We look forward to holding our victory for you in 1997 and certainly appreciate the confidence you bestowed upon us in 1996. I thank you very much for your support.

Cordially,

Gary

May 1995

Mr. Dennis J. Getman, Esq.
Avatar Holdings Company, Inc.
P.O. Box 523000
Miami, FL 33152-3000

Dear Dennis:

Enclosed please find our statement for services rendered during the month of May. During the month, we worked on finishing the defense of the depositions involving the taking of the Fifth Amendment, developed the motion to strike DOJ's amended complaint, engaged in document production and obtaining documents from EPA, prepared and conducted the first 30 (B)(6) depositions against the government in Atlanta, responded to the government's interrogatories and admission request and, as you know, filed a separate lawsuit under the Freedom of Information Act against the Department of Justice.

In addition, we have started legal research on the issue of comparability between Florida's Water Act and the authority. As you may recall, at one time the comparability issue was the only defense David thought available to Florida Cities. At that time, we all agreed it was not a very strong defense. However, in light of Florida being granted delegation under the Clean Water Act, I want the comparability issue reviewed again because I may want to pursue this issue on Florida Cities' behalf.

You will note I really spent no time on settlement issues because of the flurry of activity during the month of May, but as soon as we get the Court's decision on our pending motions, I plan on pursuing that strategy vigorously, assuming things turn out reasonably well, as they have to date.

I continue to appreciate you support and confidence and, as you know, will do everything in my power to bring this matter to a close as quickly and as cost effectively as I can.

Cordially,

Gary H. Baise

February 3, 1995

Mr. Dennis J. Getman
Executive Vice President - General Counsel
Avatar
P.O. Box 523000
Miami, Florida 33152-3000

Dear Dennis:

Enclosed please find our statement for services rendered during the month of January. A couple things I want to note with respect to this bill as compared to the Jenner & Block bill. I have lowered my billing rate from $275.00 down to $250.00/hour. Don's rate remains at $225.00/hour and Steve's rate comes down to $180.00/hour. You will note some new names on the bill in terms of associates. One person we have just hired whose name is not on the letterhead yet is Liz Poliner. She has worked for me on issues in the past and is a very good lawyer. Lance High is one of our excellent associates here at this firm. Ray Battocchi is a senior litigator at this firm with extensive Justice Department experience under his belt.

Dennis, we appreciate your confidence in continuing with Don and me. We realize this is very difficult and trying time for the company, and we continue to be very sensitive to the entire issue.

Again, many thanks.

Sincerely yours,

Gary H. Baise

Dennis J. Getman, Esquire
Avatar Holdings Co, Inc.
P. O. Box 523000
Miami, FL 33152-3000

Dear Dennis:

Enclosed is our statement for February, 1995. The month was extremely active as a result of the issues revolving around the Weitzenhoff case, discovery issues, and the effort to put together the motion for summary judgment which will, from what I can tell, will be creating some new law in applying the old common law concept of void ab initio to the Clean Water Act. This motion is my best shot at a "hail Mary pass" to knock out the key claim against Waterway Estates. I should have the draft motion to you within the next ten days.

I am sorry for the mix-up on the January bill. I was waiting for your approval on the new billing rates, and I guess you were waiting for the new statement. I am enclosing the new January, 1995 statement with the one for February.

Cordially,

Gary H. Baise

Dennis Getman, Esq.
Avatar Holdings Company, Inc.
P.O. Box 523000
Miami, FL 33152-0300

Dear Dennis:

Enclosed is our statement for August services. During the month of August, we reviewed expert reports and worked with the expert witnesses; participated in assisting bond counsel on the decisions he needed; prepared for and conducted the difficult depositions involving Ken Kwan, and started the work on the Motion for Partial Summary Judgment and Opposition to the Government's Motion for Summary Judgment. In addition work was undertaken with regard to reviewing various depositions developing privilege logs, and Don participated in the taking of depositions of Avatar officers.

Again for your information you know that on some of the days listed, Don and Lance put in more hours than I show on the bill but as I told you before I believe not every hour is fully billable. I do not bill for just being in place. Given the fact that we have exceeded your budget at this point, I will continue working with you on trying to deal with the high costs involved in this case.

Cordially,

Gary H. Baise

November 15, 1995

Dennis Getman
General Counsel, Florida Cities Water Co.
Avatar Holdings Co., Inc.
255 Alhambra Circle - 8th Floor
Miami, FL 33134-7412

Dear Dennis:

Enclosed please find our statement for services rendered during the month of September 1995. A substantial portion of September's work related to the research, preparation, and production of the Memorandum for Partial Summary Judgment. In addition, we continued our examination of the basis for a possible Rule 11 Motion against Dan Jacobs and the Department. Time was spent on working with the experts and on the preparation of their reports. We had meetings with various witnesses in Florida and helped in preparing declarations for attorneys who previously worked on this matter. We also met and talked to Florida and County regulatory staff as to their recollections on activities involving Barefoot Bay and Carrollwood.

The expenses are high again this month, in part due to the lengthy video deposition of Ken Kwan. Even though it was expensive, I believe it was worthwhile in terms of preserving how this fellow conducted himself and our ability to use it against him in trial.

If there is any item on here which is not completely clear to you, please let me know. In light of our budget problems, I continue working on keeping both attorney and expense costs down as much as possible. Because of my more active involvement as we start preparing for trial, I'll continue to be very sensitive to the budget issue.

Cordially,

Gary

255 Alhambra Circle - 8th Floor
Miami, FL 33134-7412

Dear Dennis:

Enclosed please find our statement for services rendered during the month of October 1995. There were a number of depositions prepared for and taken during October. In addition, there was a sizable effort regarding the preparation of experts and expert reports. We also had a great deal of document production and checking plaintiff's discovery requests in making sure we were in compliance with all of the production orders. The travel costs were high for the month. I believe I have everything identified precisely, but should you have any questions please call me regarding any of these expenses.

With regard to this check, please send it by U.S. Postal Service to Gabeler, Baise & Miller, P.O. Box 455, McLean, Virginia 22101. Many thanks.

Miami, FL 33134-7412

Dear Dennis:

Enclosed is our statement for work for December 1995. My apologies for the delay; however, it has not been easy, given the law firm split, to obtain all of the expenses for the month of December. I believe I now have all of the expenses in terms of copying costs. Also you will note I have lowered legal time significantly. The legal time amounted to over $202,000. I reduced the time where I thought there was duplication and inefficiencies in order to keep the cost under some semblance of control. Don's time for example was approximately 275 hours and I do not believe anyone could be efficient and effective for that number of hours, so I reduced his time accordingly. In addition, I reduced paralegal time as well.

Please give me a call after you receive this and we can discuss it further.

Dear Dennis:

Enclosed please find our statement for the month of February 1996. All of the time involves trial preparation and organization of documents for the trial. As usual, should you have any questions with respect to the activities we undertook on your behalf in February, by all means give me a call.

Also if you want me to review Don's time, I will do so. I've had to caution him on a number of occasions to stop doing duplicate work such as reviewing Leon Levy's deposition which I had told him not to touch because that was Weil, Gotshal's responsibility. I assume he did so, and there have been several other occasions where I felt he was doing things I would not have authorized had he been under my direct supervision.

Dear Dennis:

Enclosed is our statement for services rendered during the month March. This statement covers work for my team to handle 15 out of the 18 witnesses and the 5 witnesses called by the government for which we also handled cross-examination. We handled all document preparation and organization for our witnesses. I have tried to avoid as much duplication of effort as possible. In fact, I have written down our time where I thought there was any duplication or little value added by my team.

I shall call you when I return from Illinois next Tuesday, and we will discuss this matter further.

Cordially,

Dear Dennis:

Enclosed is our statement for services rendered during May 1996. This month's work is very straightforward, and we worked on preparing the post-trial brief. My plan was for Lance to go through all of the transcripts so that you would not have expensive time expended on this task. Obviously I cannot control Don's time with regard to this task; however, it would be my belief he would have very little effort since Lance did virtually all of the work on findings of fact and conclusions of law research.

I shall be calling you to discuss customer satisfaction issues next week so if you have any thoughts along this line, I would appreciate your view.

Cordially,

Gary

Dear Dennis:

Enclosed please find our statement for services rendered during the month of July 1996. The month was spent on responding to Jacobs' filing of the Dean Dairy case as additional authority to support his case; preparing a response to the court's order; and handling of the res judicata issue. I have reduced my time because there certainly was duplication in the study of the City of Manning and Ridgway cases. I did not want to charge you for three of us studying and reviewing those two cases.

Miami, FL 33134-7412

Dear Dennis:

Enclosed is our statement for the month of December, 1996. I had estimated this bill to be approximately $2,500 for Joe's budget; however, the total amount is somewhat under that estimate. All the time expended was for work on the appeals issue.

We look forward to holding our victory for you in 1997 and certainly appreciate the confidence you bestowed upon us in 1996. I thank you very much for your support.

Cordially,

Gary

Dear Dennis,

Enclosed is a small bill for the month of February, 1997. We are continuing to do some legislative history research during this slow period regarding the Clean Water Act. The rest of the time, as you can see, is fairly insignificant.

I look forward to seeing you folks when you are in Washington.

Cordially,

Gary H. Baise

Miami, FL 33134-7412

Dear Dennis:

Enclosed is our statement for the month of January, 1997. As you can see, we started some preliminary efforts towards preparing for the appeal. This included meeting with David, Joanne, and Lance, preparing a plan for the upcoming brief, and starting some initial research on some Clean Water Act legislative history. We look forward to bringing this matter to a successful conclusion for you in 1997.

Cordially,

Gary

Dear Dennis,

Enclosed is our statement for services rendered during the month of March, 1997. All of the time basically relates to the appeal and dealing with the settlement issue. I assume we will know very soon as to whether this matter will actually settle or we have to get underway again.

I certainly enjoyed having dinner with you and your wife last week, and look forward to paying off my bet to you very soon in Florida. Also, I really appreciate your confidence with regard to the new case.

Dear Dennis,

Enclosed is our statement for services rendered during the month of April, 1997. As you can see, I continued a low level of effort in anticipation that the Department of Justice would appeal. As you can see, we were doing background work on res judicata in order to be able to move quickly upon receipt of Mr. Ferlo's brief. If you have any questions, please let me know.

Cordially,

Miami, FL 33134-7412

Dear Dennis,

Enclosed please find our statement for services rendered during the month of May, 1997. Again, the limited research I had undertaken was still assuming the Department of Justice would appeal. I know you are pleased that the Department of Justice has finally exercised good judgment with regard to your case by withdrawing from the appeal. I know I am extremely pleased that Mr. Ferlo has seen the strength of our collective position and the weakness of his client's position.

I look forward to coming to Miami and taking all of you out to dinner to pay off my debt that I owe you. Believe me, it will be my pleasure.

Cordially,

Gary H. Baise

Executive Vice President - General Counsel
Avatar
P.O. Box 523000
Miami, Florida 33152-3000

Dear Dennis:

Enclosed please find our statement for services rendered during the month of January. A couple things I want to note with respect to this bill as compared to the Jenner & Block bill. I have lowered my billing rate from $275.00 down to $250.00/hour. Don's rate remains at $225.00/hour and Steve's rate comes down to $180.00/hour. You will note some new names on the bill in terms of associates. One person we have just hired whose name is not on the letterhead yet is Liz Poliner. She has worked for me on issues in the past and is a very good lawyer. Lance High is one of our excellent associates here at this firm. Ray Battochi is a senior litigator at this firm with extensive Justice Department experience under his belt.

Dennis, we appreciate your confidence in continuing with Don and me. We realize this is very difficult and trying time for the company, and we continue to be very sensitive to the cost issue.

Again, many thanks.

Sincerely yours,

Gary H. Baise

APPEARANCES:

B. KENNETH GATLIN, Attorney at Law, Gatlin, Schiefelbein & Cowdery, 3301 Thomasville Road, Tallahassee, Florida 32312; appearing on behalf of Florida Cities Water Company.

ALSO PRESENT: Alex Bullock (via telephone)

HAROLD McLEAN, Esquire, Office of the Public Counsel, 111 West Madison Street, Tallahassee, Florida 32399; appearing on behalf of the Citizens of the State of Florida.

ROSANNE GERVASI, Staff Counsel, Florida Public Service Commission, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850; appearing on behalf of Staff.

S T I P U L A T I O N S

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that objections, except as to the form of the question, are reserved until hearing in this causes; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

DEPOSITION

Whereupon,

GARY H. BAISE

was called as a witness, having first been duly sworn to speak the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

MS. GERVASI: Let's go ahead and go on the record and show that counsel agrees to the usual stipulations, that the witness has already been sworn in.

MR. GATLIN: And we don't waive reading.

MS. GERVASI: Okay. Mr. Baise, Rosanne Gervasi here. I represent the Staff of the Public Service Commission. I have several Staff members here listening to the deposition as well, and we have some questions which pertain to the testimony that you filed in the PSC docket, Docket No. 971663-WS, and please let us know if you need to take a break at anytime. I don't think I've got all that many questions for you. So it shouldn't take too long.

EXAMINATION

BY MS. GERVASI:

Q. Let me start if I could, please, with a reference that you make on Page 7 of your testimony. Do you have a copy of your testimony before you?

A. Yes, I do.

Q. If you could please refer to Page 7.

A. Yes, I have it in front of me.

Q. Starting on Line 12, you state that -- well, you're discussing the December 1986 denial of the NPDES permit by the EPA, and you state that Florida Cities officials immediately started working with the Florida DEP and the EPA to develop a resolution of the matter, correct?

A. That's correct.

Q. Do you know after that December '86 denial, when was the first recorded correspondence between Florida Cities Water Company and the EPA?

A. After the denial?

Q. Correct.

A. I'm not sure I could point to a specific piece of correspondence. It's my recollection that Patrick Lehman testified that after receiving the initial notice that he immediately called and started setting up meetings to start dealing with the problem. And that would have been in probably the -- I want to say August of 1986, I believe the notice from EPA that it was going to deny came down in approximately June or July of 1986. But when there was a piece of correspondence, I do not recall that.

Q. I think the first piece of correspondence that we have that we're privy to is from May of 1987. And so we're wondering, you know, if that's true, how is that an

immediate response? Or is there -- perhaps there's correspondence or documentation that exists showing that the response was indeed immediate.

A. There is certainly testimony to that effect, but I could not recall that kind of specifics at this point.

MR. GATLIN: What's the date you have on yours?

MS. GERVASI: The date that we have is May of 1987.

THE WITNESS: There were meetings that Mr. Lehman testified to and told me about that started occurring, as I said, virtually immediately upon their receiving this notice. There may be some notes referring to telephone conversations that Mr. Lehman and a Mr. Tony Reeves may have had with Florida officials, but if that is something you want us to go back and check on, we certainly can.

MS. GERVASI: If you would please. What I would like to ask for is a late-filed exhibit. We'll label it Late-filed Exhibit No. 1, of any correspondence or documentation showing that you -- that the Company responded to the 1986 permit denial prior to May of 1987.

THE WITNESS: Correct.

MR. GATLIN: Gary, we can work with you and the Company in this regard and we can discuss it later.

THE WITNESS: Thank you.

MS. GERVASI: Correspondence or Documentation Showing Response to 1986 Permit Denial -- to December 1986 Permit Denial. Okay. Thank you.

(Late-filed Exhibit No. 1 identified.)

BY MS. GERVASI:

Q. Mr. Baise, our understanding is that the Company had 90 days from the date of the EPA action to challenge that denial of the permit; is that right?

A. That's what EPA's regulations allowed, correct.

Q. And the Company failed to do that, right?

A. I found nothing in the record that supported their filing an appeal during that period.

Q. Do you have any idea why the Company didn't challenge the permit denial?

A. No, I do not.

Q. Did you ask the utility why they didn't respond to the denial after they retained you?

A. Yes, I did.

Q. What was their reasons that they gave you?

A. I wouldn't say that I asked the utility. I asked various individuals who were still working with the utility, and they did not know.

Q. So you don't know why the utility didn't respond?

A. I spoke to Mr. Tony Reeves, a former employee

about the matter, and he was the only one that had any opinion on this particular issue.

Q. What was his opinion, do you recall?

A. His opinion was, as I recall it, was that they were going to try to work with the EPA and solve the problem as quickly as they could.

Q. Based on your experience with EPA, do you have an opinion as to what the EPA would have done if the Company had responded within the 90 days of the permit denial, if the Company had protested the permit denial?

A. Yes, I have an opinion.

Q. What would your opinion be?

A. My opinion would be that EPA would have forced the issue and the Company would have had to have challenged the permit denial at that point.

Q. On Page 13 of your testimony, starting at Line 3. Let me know when you're there if you would, please.

A. Yes, I'm on Page 13, Line 3.

Q. You state that the Company told the court that the crux of the litigation was the EPA's improper denial of the December 8th, 1986 permit application, to renew the NPDES permit, right?

A. Right.

Q. Would you say that the Company built much of its defense around the fact that the EPA improperly denied the

permit?

A. I would say that was certainly a point, but as we got into the case we found other issues that related to mitigation factors that we built the major part of the defense around.

Q. Do you think that the litigation could have been avoided if the Company had challenged the permit denial?

A. No, I do not.

Q. Could you explain your answer?

A. Yes, I can. EPA officials did not know their own regulations. No one oversaw the activities of Ms. Kagey. Even after we brought the violation of EPA's own regulations to the agency's attention, it continued to resist our efforts. The agency had done something improper, incorrect or not in compliance with its own regulations. You saw that all the way through trial. So it would be my opinion that had this matter been brought to the agency's attention even earlier, they would not have changed their position.

Q. Okay, thank you. Let's go on to the subject of the penalties that the Company was facing. On Page 10 of your testimony, starting at Line 6.

A. Right.

Q. You testify that each of the allegations against the Company was asserted to be a separate -- asserted to be separate and daily violations, and that the Company faced

penalties of up to $25,000 per day per violation?

A. Correct.

Q. Was it your belief at that point in time that the Company would have been fined the full amount, the $25,000 a day per violation?

A. All I know is what the statute says. You start at $25,000 and then the second part of the statute says you look at the mitigation factors to reduce that $25,000 to a reasonable number, or a number. Whether it's reasonable or not is in the eye of the judge, and that's exactly what occurred here. The judge goes through that analysis and states the full amount that we were then subject to, which I think was $53,300,000. Those are the six factors. And reduces to the $10 and $25 per violation. I had asked in court for no more than $13.51 per day, based on mitigation factors, or other court cases similar to this one.

Q. Do you know of any other utilities the size of Florida Cities which have had to pay the full amount of such a fine, the full 25,000 for the level of noncompliance that Florida Cities had been charged with?

A. I do not know of any utility. I am aware of the Smithfield Ham case, where they were fined $12,600,000, and I cannot tell you how many days that was for, or whether it was for the full 25,000. But obviously Smithfield Hams is not a utility. The other case I'm familiar with is Dean

Foods, and they were fined 4.2 million, as I recall. And again, I cannot tell you whether that was up to the 25,000 for the number of days charged or not.

Q. Okay, going back to the Smithfield case, you said it was Smithfield what?

MR. GATLIN: Hams, H-A-M-S. Pork.

MS. GERVASI: I got it. As in the meat.

THE WITNESS: They have several divisions. Gwaltney Hams, but the title of the case I believe is Smithfield Hams or Smithfield Foods case.

BY MS. GERVASI:

Q. Do you recall what the violation was to cause that $12 million fine?

A. Virtually the same violations as here, alleged excess nitrogen discharges, phosphorus discharges, violations of water quality standards, violations of the NPDES permit. And I can't tell whether there's a charge of discharging without a permit, but virtually the same allegations made in that case as here. These are basically cookie cutter complaints the Department of Justice puts together against Clean Water Act permit holders.

Q. Okay, thank you. Do you have an opinion as to how much Florida Cities should have been fined per day per violation?

A. I gave that in argument. I laid out the basis for

that based on the fines which had been assessed to Carrollwood and Barefoot Bay. I used EPA's own numbers. In Barefoot Bay, I think the agency at its administrative level said $73. And for Carrollwood, I believe it was 270 some odd dollars, and that is set forth in our post trial brief.

MR. GATLIN: Per day?

THE WITNESS: No, that was a total fine that was recommended at the administrative level for those two facilities.

Then prior to that, and how I think they came up with that figure was just looking at, again, the six mitigation factors. They looked at economic damage, and they came up with those two numbers. But the number I argued for in court when the agency settled these two cases came up to $13.51, and that's how I developed the argument of how the fine should come out.

BY MS. GERVASI:

Q. Okay. Thank you. I would like to discuss Avatar's role in the litigation a little bit with you. On Page 36 of your testimony, you discuss the amended complaint.

A. I am on Page 36. Which line?

Q. Starting at Line 7.

A. Line 7, yes.

Q. And you're testifying about the fact that Avatar was named as an additional defendant?

A. Correct.

Q. In the litigation. Do you have an opinion as to why the DOJ decided to include Avatar at that point in the litigation?

A. Yes, I do.

Q. What is your opinion?

A. I believe that the Department of Justice was trying to bring additional pressure on Florida Cities to settle. No. 2, it had to bring in the parent because the parent, the government alleged, was in a position that it received, quote, "wrongful profits" or "wrongful benefits" from the actions of Florida Cities, and they made that argument and of course lost.

Q. You also testified that Avatar had retained separate counsel. I guess it was Weil, W-E-I-L, Gotshal, G-O-T-S-H-A-L?

A. Yes, Weil, Gotshal and Manges in New York, although it was their Washington office that handled this case.

Q. Did you represent Avatar at all during any of the DOJ litigation?

A. No, I did not.

Q. Do you know how much time Avatar's attorneys spent

on the case compared to your time? Any idea?

A. Any answer I would give there would be speculation. I don't know.

Q. Could you speculate for us?

A. I really find that hard to speculate on because I did not review their bills. They were submitted separate from mine, although I think I did see a conclusory statement when we filed Rule 54 and 68 requests for fees. But it was -- overall I would say it was small compared to the amount of time and effort that I and my team put in on Florida Cities' defense.

Q. Do you recall what their conclusory statement showed?

A. I do not, not specifically.

Q. How about in terms of trial time, did you -- do you recall how much time they spent at trial actively engaged in questioning as compared to you?

A. Oh, in terms of the number of witnesses and in terms of time actually on the stand, it would be no more than 15 to 20 percent, and maybe close to 10 percent of the actual time in trial. They had a number of witnesses, but those witnesses were on for a short period. I'm thinking of Leon Levy, treasurer of Avatar was on, and a couple of other people towards the end of the trial. In fact, I think it was the last day. My recollection is we ran through about

four of them in no more than about two or three hours. Whereas with regard to Florida Cities we often times had on our witnesses for two, three, four hours at a time. So 80/20 or less, 80 to 90 percent for Florida Cities and 10 to 20 percent trial time for Avatar, if that.

Q. Did you coordinate your efforts with Avatar's counsel, meet with them, or have discussions with them, coordinate your efforts in discovery or during the trial?

A. Yes, very closely.

Q. Do you believe that your expertise in any way benefited Avatar?

A. The Avatar question in many respects was a parent/subsidiary issue. Avatar, of course, is the New York firm's specific area of expertise, so I cannot say anything I did there or my team would have been that helpful.

Avatar was still, possibly, liable for charges under the Clean Water Act. And as a result, as curious as this seems, an anomaly could have developed here that Florida Cities would have been left completely virtually off the hook. And of course what the Justice Department was trying to do was to stick Avatar with almost a $5 million fine on Water Act violations.

With respect to at least working with Weil, Gotshal and making sure that they didn't make any mistakes on the Clean Water Act, yes, Weil, Gotshal benefited from my

efforts and my team's efforts, yes.

Q. Okay. Thank you. Moving on to the subject of legal fees. In several of your exhibits you make reference to a budget.

A. Yes, ma'am.

Q. Do you know if Florida Cities actually established a budget for the EPA/DOJ litigation?

A. It certainly was my impression that they did, because I submitted budgets to Mr. Gatlin. I can only assume that they did, but did I see a Florida Cities' budget or Avatar budget specifically allocated to this, the answer is no.

Q. You didn't ever actually see the budget, did you?

A. I did not, but I can tell you I felt the pressure of the budget. On one occasion the general counsel called me up, and that is Mr. Getman, asking me if I could further reduce our bills, which I think at that point may have gotten into the 125- to 150- or 160,000 a month range, and asked me if I could bring it down closer to $100,000 a month, and I did so.

Q. Mr. Baise, do you know if anybody -- or who at Florida Cities would have knowledge of this budget?

A. I would have to assume Mr. Getman, as the general counsel, would have knowledge of an internal budget, or possibly Mr. Gerald Allen, the president.

MR. GATLIN: Let me volunteer, if I may, that it would be Mr. Allen who would know the budget.

MS. GERVASI: Thank you.

BY MS. GERVASI:

Q. Mr. Baise, you discuss in your testimony and in detail about ex parte contacts with former employees, that DOJ had with former employees?

A. Correct.

Q. Do you have an opinion as to how the customers of Florida Cities could have benefited from that -- from that dispute, the ex parte dispute?

A. Yes. By our being able to cut off the Justice Department's efforts on that, cut down on a sizeable number of depositions, which the Department of Justice probably would have taken of those employees. We submitted a list of all former employees to the Department of Justice. And my recollection is that it numbered maybe 100 or more. The purpose of this, of course, was that the Department of Justice thought that they were going to find a whistle blower who was going to say all sorts of terrible things about Florida Cities and its activities.

And my guess is that -- and actually it's my opinion, not my guess, because I think I can state with reasonable certainty, that the Department of Justice would have sought to have deposed or otherwise contacted these

people, which would have meant we would have had to have contacted the people and maybe to depose them, and therefore an enormous savings in cost resulted as a result of my being able to cut the government's improper effort down at the point that we shut it down.

Q. Okay, thank you. Do you have a copy of your exhibits there with you? I know they're voluminous, but we're -- I would like to ask you about Exhibit 70 if you have it.

A. Yes, I do. Ms. Broadbent has all those under her.

Q. If you would refer then to Exhibit 70, please, at Page 2.

A. This is defendant Florida Cities' Proposed Findings of Fact and Conclusions of Law?

Q. Correct.

A. And turn to Page 2?

Q. Please.

A. I am there.

Q. And then at No. 2.

A. Yes, I am looking at No. 2.

Q. Here it states that Florida Cities -- Florida Cities states that the pending action was born out of a citizens' suit styled North Fort Myers Homeowners Association vs. Florida Cities Water Company.

A. Correct.

Q. Could you please explain -- explain this item, explain the relevance of this to the Florida Cities' litigation?

A. Yes, I can.

Q. Go ahead, please, sir.

A. I was told by Ken Kwan -- Kwan is an EPA employee -- that he had received telephone calls from the homeowners association.

The homeowners association was complaining about Florida Cities being able to discharge without a permit. And the fact is, the homeowners association didn't know the permit had been improperly taken away from Florida Cities. Mr. Kwan, or someone else in EPA, told me that this dispute actually arose out of a racial situation.

Florida Cities was going to accept the wastewater from -- I believe it was a low income housing project. Citizens did not want this low income housing project to be there because I assume -- and I don't know this for a fact, but my recollection is, and my assumption of this is it was an African American group that would be moving into this housing project.

Therefore, certain citizens used that fact, and the fact that we did not have a permit, to bring a lawsuit against Florida Cities. They in turn, of course, talked to EPA about bringing EPA's force to bear against Florida

Cities, and as EPA staff will tell you, they respond to citizen complaints.

And Mr. Kwan specifically, as I recall, made it clear that based on these citizens' complaints, that we didn't have a permit, even though he knew that EPA had taken the permit away. That was one of the bases for bringing the action against Florida Cities in the very first instance, to support the homeowners. If that story is true, I found it despicable. I don't know it all to be true. So much of what I'm telling you is hearsay, but that's why I put into this document that the citizens' suit first brought this matter to EPA's attention, and they therefore acted on it.

Q. Do you happen to have a copy of the complaint that was filed by that homeowners association?

A. I think we probably do somewhere in the bowels of all the files that we have on this case. It clearly was not a major action, and the conversations I'm relaying to you, as I said, are hearsay, in part. But certainly the conversations -- I think I allude to it, in fact I do, that there were contacts between Mr. Kwan and the North Fort Myers Homeowners Association. In fact, that is based on letters or telephone memos to the file prepared by Mr. Kwan, where the North Fort Myers Homeowners Association had directly contacted him. Then later I asked him, either informally before we really got into the shooting match over

the case, or it could have happened while we were deposing him. I'm just not sure where I got all of my information.

MR. GATLIN: Do you want a copy of the complaint?

MS. GERVASI: I don't think we need it. Thank you.

BY MS. GERVASI:

Q. Mr. Baise, if you would please refer to Page 27 of your testimony.

A. Yes, I'm at Page 27.

Q. At the top of that page, starting at Line 1, you're discussing that -- stating that Connie -- is it Kagey, K-A-G-E-Y?

A. That's correct.

Q. The EPA permit writer who denied the waterway permit renewal application made a decision that led the company into being forced to spend millions of dollars which did not improve the water quality of the Caloosahatchie River; is that correct?

A. That is correct.

Q. On what were those millions of dollars spent?

A. In two parts. One for construction, two on legal fees to defend itself.

Q. On construction of what, plant upgrades?

A. Let's start with the plant and the pipe which was moved out to the middle of the Caloosahatchie River.

Q. Okay.

A. As you will recall, one of the charges brought by the Department of Justice was that the Waterway Estates facility was discharging in the wrong location.

Dr. Ahmadi, the DEP representative, later testified, based on many interviews with me and my colleagues, that this facility could still be discharging into the canal to this day. By virtue of Ms. Kagey's mistake for not knowing the law, for not knowing her own agency's regulations, he took the legitimate Clean Water Act permit away from this company, therefore putting them in a position of not having a permit to discharge. No one knew all of the intricacies of EPA at that point and no reason for anyone to have been able to have known them, certainly on the Company's part. But as a result of her action, she then forced the Company to find a new discharge point, which was eventually, I believe, 2600 and some odd feet out into the Caloosahatchie River.

And Dr. Ahmadi testified at trial that they could not discern any water quality violations from the discharge in the canal, nor could he discern or be able to prove that there had been any water quality improvement by putting the discharge point out into the middle of the river.

Therefore, this company, these consumers, were forced to spend millions of dollars over a stupid mistake

made by an EPA employee. That's point one in terms of dollars being spent to put the pipe out in the river, and all the attendant permitting that went along with that.

Q. Before you go on to point 2, are you saying that the cost of upgrading to advanced water treatment and the cost of relocating the outfall line could have been avoided entirely; that those improvements were not necessary under the Clean Water Act?

A. They were not necessary under the Clean Water Act. The reason the Company went to AWT is it decided at that point if it could not discharge at the point where it had been discharging, then it should increase the size of the facility to obviously take on additional recipients. And by doing that, then they triggered the process to go to AWT because of the Grizzle Figg statute, as I recall, in Florida.

And so they enlarged the facility because they were going to have to move the discharge point to a whole host of decisions flowed from her taking the permit away from them improperly, or as I said, legally. But Dr. Ahmadi is someone to ask about this, or more importantly, you can see his testimony, and I think we may have put it in the post trial brief, where it's clear that this facility would be -- if it hadn't increased its size -- would be discharging into that unnamed canal to this day, in

compliance with its Clean Water Act permit and not violating water quality standards in the State of Florida. That was the stunning conclusion of this case.

And part 2 on the millions -- I didn't obviously in my testimony define that. Once I was able through looking at this record, my own area of expertise in the Clean Water Act, explain to the Company that they had not violated the Clean Water Act, and in fact as you have seen in my testimony, there's only four reasons by which the agency can take away your permit, and they're very serious reasons.

The agency, as you can see from the testimony, does not take permits away from people lightly. In fact it's almost never done. That's what puzzled me about this case from the very beginning, once I found out there were no water quality violations, or NPDES permit violations, is why did this happen? It made no sense, because there were no regulations being violated.

At that point the general counsel, Mr. Jacobson, Mr. Allen, Mr. Gordon, were obviously stunned at this, and felt that they should not be forced into a position of paying $5 million in penalties when they had not violated the Clean Water Act. They felt that was just absurd, assuming that my analysis of the case was correct. I showed them the regulations. I showed them the facts as I was

developing them all the way along, and they were the ones that made the final decision to defend the Company and the consumers' interest against this egregious action undertaken by EPA. So that is the reason I say here on Line 2 that FCWC was forced to spend millions of dollars which did not improve the water quality of the Caloosahatchie River. That was the sad thing about this case.

Q. Couldn't those millions of dollars have been saved if the Company had successfully challenged the permit denial in the first place and shown that the EPA improperly denied the NPDES permit?

A. That, of course, is speculation. So I think, given the attitude of the agency, you would have had to have gone through the same types of trials that I had to take them through. And as you can see from the record, we on many occasions shared with the Department of Justice where EPA was incorrect in its interpretation.

In fact, about midway through the case, I thought for sure, after we had taken Mr. Childress's, Mr. Greenfield's and Ms. Kagey's deposition, that the government would settle. The Department of Justice that I used to work for, after it was put on notice an agency had violated the law, would have settled the case.

I served as Acting Deputy Attorney General of the United States Department of Justice. I've had similar

situations come to my attention. The Department of Justice did not engage in such activity. I tried to bring that point to the Department of Justice counsel and EPA counsel, and I was ignored, basically because I think they wanted to seek to punish this company. In fact, on occasion the counsel for the Department of Justice called Florida Cities a renegade corporate polluter. And I think that poisoned the case from the beginning. I never was clear on why he came to that conclusion, particularly after we so clearly, clearly, demonstrated that the agency had, at best, made a mistake in taking the permit away. At worst it was engaged in a cynical activity to justify its previous activity.

Q. Do you have an opinion as to why the DOJ or the EPA had it in for this company?

A. You would have to divine that some other way. All I can do is take the body as I find it and defend the Company to the best of my ability, and when the Company was facing going into trial, almost $10 million in fines, we felt we had no choice in light of the fact that we had not violated, we felt, the Clean Water Act. The agency had clearly violated its own rules in taking the Clean Water Act permit away from us. We had not violated the water quality standards in the State of Florida.

In fact, as you may have seen in some of our documents, the state of Florida has very stringent Clean

Water Act standards. In fact those standards are more stringent than the federal standards. And that was another reason why this Company felt that it could not cave in to this improper kind of pressure. It had taken its environmental obligations very seriously. No one had ever said they violated the water quality standards of the state of Florida, not violated its clean water act permit, except from time to time there will be exceedences of the permit caused by, say, pesticides that have been sprayed and will get into your water system and kill some of your bugs and therefore you will have a problem in your discharge.

But based on its record, it felt that it had not violated the environmental rules, either in actuality or in spirit. Therefore, it decided that it could not accept this pressure brought on it by the Department of Justice. And we could never figure out why they seemed to be so diligent in their pursuit of the Company.

Q. Don't you think it would have been prudent for the Company to have at least attempted to challenge the permit denial at the beginning?

A. That is, again, speculation. You had engineers in the Company were operating in good faith. They thought that the EPA people knew what they were doing. There is evidence in the record from the very beginning, if EPA wanted them to stop discharging, they found that puzzling since it was a

public health facility, but they tried to figure out from EPA and the department what they wanted done. It was naivete on the engineer's part, but they wanted to do the best job possible in protecting the environment. But had they challenged it, as I said before, given what we've found out, given EPA Region 4's attitude with regard to this Company, they would have had to have spent several millions of dollars in defending themselves.

And if you're not familiar with the process, what happens is you challenge the final permit, as you're suggesting, then you go through an adjudicatory hearing or a trial, just exactly what we went through here, with all of the discovery, both written and oral, that's attendant to a U.S. District Court trial. And that's exactly what EPA puts you through on the adjudicatory side.

From a litigation standpoint they would have had to have spent certainly a substantial fund. Would they have had to have spent all that they spent here? I can't answer that question totally, but they would have had to have spent a substantial chunk of what they spent here to defend themselves in the EPA adjudicatory process.

Q. You said earlier that you didn't believe that the water quality was improved by the upgrades; is that right?

A. That is correct.

Q. What's your basis for making this claim?

A. Dr. Ahmadi, and a guy by the name of Randy Armstrong, who testified at trial. Dr. Ahmadi and Armstrong went back and looked at ten years of water quality data. And again, you can look at their testimony. It's exactly what they said, but I'm giving you my recollection. And Dr. Ahmadi said that, again, they could be discharging right where they originally discharged and water quality would not have been improved one wit. It would have been the same. The Company was meeting water quality standards.

Q. Okay, now, it's our understanding that almost seven years passed from the date the EPA denied the Company's NPDES permit application in December of '88 and the time that the DOJ filed suit on behalf of the EPA in 1993, right?

A. That is correct. And I think about 1988 is not correct.

Q. I meant to say '86. I apologize, December of '86 was when the --

A. Yes, I think it was December of '86 they sent the notice, but it did not become effective as a denial until, let's say, January 3rd, 4th or 5th of 1987. And then there was an administrative order entered about May of 1987.

Q. So it was approximately seven years before the DOJ filed suit?

A. That is correct.

Q. During that time, the Company -- is it true that the Company made steady progress towards completion of the upgrades required by the EPA?

A. Absolutely. They were doing everything they could to work, according to the records, with the Florida DEP, which was really the primary regulator.

The way the Clean Water Act operates, generally, is that EPA delegates to the state the authority to grant this permit. In Florida's situation, you still had a dual permit system because EPA in Florida could not agree on the requirements for delegation. You had a company that had to serve two masters for the same item. So by and large, EPA's record has always been, let the state, if it was more strict, regulate the discharge. And that basically is what had happened here.

Therefore, as I mentioned at the beginning of this deposition, Mr. Pat Lehman, as I recall, initiated phone calls virtually immediately after the Company received the first advance notice of those denials, and he made these contacts with the Florida DEP saying, we have this, what are we going to do? We cannot shut this facility down because it's a public health facility.

Q. It's our understanding that the Company completed the upgrades in April of 1992, which was prior to the time that EPA filed suit; is that right?

A. That's roughly correct, yes. I think the pipe was completed first out into the Caloosahatchie, and then because of some equipment delays, as I recall, it took just a few months longer to get the plant up and operating at AWT's data center. And I think that's the date you have just referred to.

Because once they received their permits, and you may have read where I make a stinging attack on the Corps of Engineers, because EPA said we delayed and delayed at Florida Cities in getting the pipe. The Corps of Engineers sat on our application to build the extension out into the river for -- I think it was 363 days, one year, that the federal government itself kept us from building the extension. And my recollection is we built that pipe in six months or less. But that's how quickly the Company could act once it got through the permitting process at the federal and state level.

Because this facility was built on such a small postage stamp sized piece of property, it was incredibly difficult to use the kind of technology they were going to use, keep the facility operating in compliance with the Florida permit, while they were constructing. It was almost literally like running the 100 yard race with one foot, not one hand, tied behind your back.

And as a result of that, and Dr. Ahmadi will tell

you this if you take his deposition, that he was concerned about the type of technology they were going to utilize at this facility. Therefore his office and the state office took quite a period of time, which I can't tell you what it was, but it was I think roughly a year, to review their plans before they could move forward. And of course without the permits they couldn't move forward. And in addition to that they had to obtain the local permits that you have to obtain in any state when you're going to be undertaking construction of that nature. All of these together caused much of the delay. Frankly, once they received the green light to construct, it didn't take them very long to construct the actual facility, or the addition to the facility, and the pipe itself.

Q. Do you have an opinion as to why the EPA decided to file suit at the time that it did, considering the amount of time that had elapsed and considering that the Company had completed all the upgrades at that juncture?

A. This is fairly typical of the Department of Justice, EPA. What you have to realize about EPA and the Department of Justice, when they see just raw numbers of a party allegedly discharging without a permit, it basically only looks at the size of the fine that can be extracted from the Company.

And you bring out the point that it took almost

seven years. First off, it takes a long time for one of these cases to go through the review process. And that's another reason why it's almost impossible to settle these cases, because so many people have looked at the case from the EPA and the Department of Justice.

The Department of Justice has, I think, roughly 180 some odd lawyers over there and they have to keep them busy. And one of the things they want to do is to have cases they can file. And this looked like, initially, a very delicious plum for them to pick on.

And in my opinion they wanted to get a large fine. That's one reason the Department of Justice stuck with the $5 million figure for so long. Once the Department of Justice saw that its case was failing in Waterway Estates, then they started casting about, as you can see from my testimony, for other facilities that the Company had. In fact, there really wasn't hiding of the fact that they wanted to look for other facilities. In fact, Mr. Leon, one of the individuals that we retained to try to help settle this case, was told that the Waterway Estates case had become much less serious, obviously in light of what we had discovered, and Barefoot Bay and Carrollwood were real problems, and the Department of Justice was going to take its focus off of Waterway Estates and focus on Barefoot Bay and Carrollwood.

Again, as demonstrated by our discovery, the Department of Justice did not do its homework, could not get its facts straight. EPA administrative people have already checked on those two facilities, checked with the people of the State of Florida, found out what the problems were, and in fact, I think this is the most telling thing, is that the Department of Justice would not even call those enforcement people to testify in trial, because they had said as far as they were concerned Barefoot Bay and Carrollwood both had been solved.

The fact is, the Department of Justice, because it wanted to count some beans, brought these actions and jacked up the pressure on Florida Cities from 50 some odd million to over 100 million in claims, again, all in an effort to get it settled for this $5 million number.

Q. Okay, thank you. Let me refer you now to your Exhibit GHB-38. It's a copy of the Company's Second Request for Production of Documents to the EPA.

A. Okay. Yes, ma'am. I have it in front of me.

Q. Do you know if any of the documents that the EPA provided in response to this production of document request relate to its litigation or settlement with the City of Cape Coral?

A. May I take a moment just to skim through this?

Q. Certainly.

A. It's been so long since I have looked at this, frankly, I don't recall all of what we asked for. (Pause)

Is there a particular paragraph you're looking at, Ms. Gervasi, that suggests the City of Cape Coral?

Q. No, we're just wondering what they provided, and if what they provided had anything to do with the City of Cape Coral.

A. Certainly at some point we received information on Cape Coral. Whether it derived from this particular request, I cannot tell you. Certainly Cape Coral was on my mind because Cape Coral had been raised by the Department of Justice on several occasions saying, we received $750,000 in fines from Cape Coral. That is a public entity. And as a private entity, you're going to have to pay much more.

I said, well, I knew the fellow who handled the City of Cape Coral case, he was a former associate of mine and he wasn't a litigator, and that maybe he saw that he didn't want to litigate the case and settled it as a result. And, but I said there should not be any distinction -- and certainly the Clean Water Act does not draw any distinction -- between public or private entities, for overrides; that that shouldn't make any difference anyway, because the Clean Water Act says that you look at six mitigation factors, if there is an alleged violation or exceedence of your Clean Water Act permit. So the City of

Cape Coral should not have any bearing on our matter finding larger than the City of Cape Coral.

Q. Do you recall whether the EPA provided copies of the complaint against the City of Cape Coral, or the settlement agreement?

A. That I do not recall.

Q. Could you check to see if you have copies of those documents, and if so, provide them as a late-filed exhibit?

A. Sure.

MR. GATLIN: Let's see, you want the complaint -- excuse me, I'm sorry.

MS. GERVASI: Yes, a copy of the complaint against the City of Cape Coral.

THE WITNESS: I would be surprised if we do not have it, but I cannot specifically recall it. But it played a substantial role in our initial settlement discussions with the Department of Justice and EPA. As I said, because my former associate, Mr. Davis, was involved in the case and my recollection is that I talked to him about these at the time, or if I didn't one of my colleagues did.

MS. GERVASI: If you would please then provide the complaint, as well as if you have a copy of the settlement agreement, we would like that as well, and any correspondence that you may have concerning that

litigation with the City of Cape Coral.

THE WITNESS: Copies I would receive, because I don't think we ever dealt with the City of Cape Coral directly, other than through its counsel.

MS. GERVASI: Correspondence where you may have discussed the Cape Coral situation with DOJ or EPA?

THE WITNESS: No, I wouldn't have any of that. The correspondence I thought you were referring to is just copies of correspondence that we might have involving Cape Coral.

MS. GERVASI: We'll take that too if you have any.

THE WITNESS: Okay. I'll just look at it and see what it is that we have.

(Late-filed Exhibit No. 2 identified.)

BY MS. GERVASI:

Q. Thank you. Mr. Baise, are you familiar with the testimony filed by Mr. Allen in this case on behalf of the utility?

A. I have read through the testimony once, yes.

Q. Mr. Allen testified that he believed that the government brought suit because it was substantially influenced by similar litigation brought against the City of Cape Coral on May -- March 15th of 1991. And he stated that he believed that the US EPA and DOJ felt compelled to

initiate litigation against Florida Cities to avoid the potential for having to defend their decision to lodge complaints against the city, and under somewhat similar circumstances declined to lodge complaints against Florida Cities.

Do you agree that that was the reason the suit was filed?

A. That would be based on Mr. Allen's personal knowledge, and I couldn't comment on that one way or the other. Mr. Allen is president of this Company, has extensive contacts in the utility community in Florida that I do not have. And I base that on his personal knowledge, and I could not comment in response to that.

Q. Attached to Mr. Allen's testimony as Exhibit 6, he provides a letter --

A. Now, I do not have his exhibits. I just have a copy of his testimony in the room here with me today. I may have it at another place, but I just don't have it immediately in front of me. Go ahead.

Q. Let me just try to describe a little bit about the letter to you. It's a letter from a Mr. Lee Dehihns, D-E-H-I-H-N-S, to Mr. Robert Gordon of Avatar Utilities.

A. Yes.

Q. And discussing settlement issues in the potential case with the government?

A. Yes.

Q. In the letter Mr. Dehihns summarized the EPA's complaint by saying that, simply stated, EPA believes taking from January of 1987 to March of 1992 to achieve operational status is unacceptable?

A. That is correct. I recall that letter.

Q. Do you believe that that fairly characterizes why the suit was filed?

A. It's one view of why the suit was filed. I've given you my view of my testimony as to why I think the lawsuit was filed, and that was driven by the North Fort Myers Homeowners Association and the underlying racial issue here. Obviously that could be a part of it. And I could be wrong in my assumptions. Mr. Allen can be correct in what he said and Mr. Dehihns be correct in what he said. I just don't know what all Mr. Dehihns based that on. I can tell you that in the initial basis of our settlement discussions, the Department of Justice did bring up the fact that they thought it had taken us way too long to construct pipeline and the facility, because I also told you earlier, there were reasons for that.

Again, this goes back to my point, the Department of Justice never could get its facts straight; that they knew nothing about the delays and didn't see seem to care about the delays in getting permits that were created by Lee

County, by the State of Florida itself, and most importantly, the Department of Justice.

And I think it's very important to also bring out here that the state set up compliance schedules for Florida Cities to meet. And to my recollection, Florida Cities always met those compliance schedules. They had to change those compliance schedules on more than one occasion because of the delays created by the Lee County Zoning Commission. I didn't put this in the testimony, but I'm pretty sure I got it into the trial testimony through Mr. Acosta. I think you have taken his deposition.

Q. Yes, sir, we have.

A. He's a better one to raise it with. And I believe I counted up at one time that there were 23 or 26 separate permitting decisions that had to be made by either Lee County and the State of Florida, or just Lee County alone, before you were able to get to the federal level. It was an incredible maze.

And we would explain this to the Department of Justice, and they just said too bad, that's your problem. And obviously that was upsetting to us. They had a lack of understanding of the facts as to why it took from, you say January of 1987 when the permit was formally denied, until whatever it was, April of '92, when we had both the pipe and facility operating.

Q. Going back to Mr. Dahihns' letter, he proposed a settlement offer in the amount of $250,000.

A. Correct.

Q. And part of the rationale for the offer was the belief that it was consistent with a comparable $750,000 settlement reached between DOJ and the City of Cape Coral. Do you recall that?

A. I do.

Q. Do you recall whether the $250,000 offer was made in writing to the DOJ?

A. I thought it was made by Mr. Dehihns, and I can't point you to a specific letter. I know the specific letter where Mr. Dehihns talks about the 5 million that the Department of Justice stuck on. But it is my recollection from, I believe Paul Bradtmiller, or Bob Gordon, that such an offer was made. I would have to find the exact piece of paper where that was made, or a document that confirms it was indeed made.

I can tell you in my own case that Mr. Burrs and I told the Department of Justice counsel that our initial review of this case certainly was in conformance with what Mr. Dehihns said. In fact we were a little bit lower, roughly $200,000, because of the facts that we thought we could prove.

So Mr. Dehihns and ourselves, under separate

analyses of the matter, came roughly to the same conclusion, and most importantly -- and that, remember, is just for one facility. And the court, after all of this effort, came to roughly the same conclusion with three facilities.

Q. There was a second settlement offer of $500,000 made, correct?

A. That's correct. I was behind that.

Q. Did either of those settlement offers discuss the EPA's settlement with the City of Cape Coral as being a basis for acceptance of the offers?

A. No. Certainly our $500,000 one did not. The basis of that was an extensive analysis. My team and I went through looking at EPA's then model, the Economic Benefit Model, what's called the gravity or the seriousness of the alleged violations, which we though was obviously very small, because we were in compliance with the NPDES permit.

Of discharging in the wrong location, we felt that where we were discharging was indeed part of the Caloosahatchie River, and EPA's permit had said discharging in the Caloosahatchie River. So made an argument on that point.

We had that situation, plus the other four factors for mitigation under the Clean Water Act, came up with 200,000, and then we added -- I think it was $300,000. If we could settle that now, you would save that much in legal

and trial costs. We did that in an offer of judgment because, again, I was trying to put pressure on the Department of Justice to settle this case, again, based on the fact we felt it should not be going forward. Therefore you say to the other side, I will settle this case now for 500,000. And if you don't accept, obviously you have to run the risk of having to pay our expenses if the case comes in under an amount.

The result was that the Department of Justice counsel, when he was handed this letter, and I'm told this by one of my colleagues, literally looked at it for maybe two to three seconds, and physically threw it back at my colleague, Mr. Scroggin, and said, in essence, this is not even serious, and went ahead with the deposition. So he scorned our good faith offer at that point to settle the case.

Q. In its defense before the court, did Florida Cities argue the similarities of its case to the DOJ's complaint against the City of Cape Coral and the subsequent settlement with Cape Coral?

A. I referred to several cases, I think in my opening statement, various arguments, but I don't believe I ever raised a settlement with Cape Coral. I was always pointing to court reported decisions.

Q. Okay. Thank you. Did you argue that the

government's proposed fines and settlement offer were unreasonable in light of its settlement with the city?

A. I didn't do that because your settlement discussions are obviously subject to Rule 408 and they're supposed to be confidential and all that kind of thing. So I don't believe that I ever said anything about the 500,000. My argument was focused on the $13.51, that I thought it was a fair, equitable number, and the court agreed with me on one point and came down to $10, as you know, per violation, and $25 for other violations. So he sort of split the baby.

Q. Okay. Thank you. Now we have information that the EPA issued an administrative order on May 11th of 1987 that set a deadline of September 30th of 1988 for the utility to meet all requirements. That was attached to Mr. Acosta's testimony as Exhibit MA-8.

A. I am familiar with it. I obviously don't have that exhibit here in front of me.

Q. Do you recall whether the utility failed to meet that September 30, 1988 deadline?

A. It is my recollection that it did not, again, due to having to get involved in these permitting issues, and I believe that order wanted them to cease discharging by that date, did it not? Is that what the administrative order wants as a result, which as a public health facility, the

Company would then have been forced into violating another set of Florida laws, and could not, of course, have shut down its operation, or it would have faced all sorts of property damage lawsuits and negligence lawsuits, had it shut down the facility.

Q. Yes, sir, that's what it was, cease and discharge, you're correct in your recollection.

A. Okay, because that was just another continuing battle we had with the Department of Justice. They had the view that we could just shut this facility down. We thought that was one of the silliest things we had ever heard; that you do not shut down a public health facility. They seemed to believe because we were a private company that we could shut down our manufacturing facility and stop manufacturing widgets. And as you know, that clearly is -- would be a violation of some federal -- or some Florida Statute. I don't know which one it is, but I'm sure you could find it. You could not shut that facility down without violating the law.

Q. Do you recall whether the utility notified the EPA that it was going to have to miss that deadline?

A. Specifically at this moment I can't recall that, but I cannot believe that they did not notify both the state and EPA that they were not going to be able to meet that. There were two or three iterations of that construction

schedule. As Mr. Acosta and others in the Company started working through what they were going to have to do, the schedule had changed, because of this extensive number of permits that they were going to have to obtain before they could do anything out there, including this dredge and fill permit issued by the Corps of Engineers, which took, as I said, I believe 363 days for the Company to obtain.

Q. Could you check to see, please, sir, whether or not you have a copy of a notification from the utility to EPA that it would miss that deadline?

A. Okay.

Q. That would be Late-filed Exhibit 3, Notification that Florida Cities Would Miss Deadline Set by Administrative Order Issued May 11th, 1987?

A. Okay.

Q. Thank you.

(Late-filed Exhibit No. 3 identified.)

BY MS. GERVASI:

Q. Now on Pages 8 and 9 of your testimony.

A. All right.

Q. You're discussing the pretrial meetings that occurred between Florida Cities and the DOJ and the EPA, and the fact that the DOJ, or the EPA, could not be convinced to lower the penalty below the 500,000, or the 5 million?

A. Where are we on Page 8 and 9?

Q. I was just kind of summarizing.

A. All right, fine. I see it now on Page 9, Line 12.

Q. Correct.

A. I have reviewed it.

Q. Why do you think that the DOJ wasn't willing to offer a lower settlement?

A. I -- and this is speculation on my part, you would have to ask the DOJ what their view was, or EPA. All we know is what the result was. I think they believe that, as Mr. Jacobs characterized us on several occasions, we were a renegade corporate polluter. And as a result, he felt -- in fact he did say, on a number of occasions, that this Company must be punished. And we couldn't figure out why.

Q. Okay. Thank you. Now, on Page 50 of your testimony.

A. Yes, I'm on Page 50.

Q. Starting I guess on Line 10, you're discussing the 2.2 million settlement offer, and that that was still unreasonable?

A. Correct.

Q. Why do you believe that was an unreasonable figure?

A. Well, one, the court certainly came to the conclusion that that number would have been unreasonable and

would have been outrageous for us to -- but at this point I was more convinced than ever that EPA had violated the law, violated its own regulations.

Dr. Ahmadi had testified that there were no water quality standards violations, no permit violations. We had reviewed, on a continuing basis because we're always watching these Clean Water Act cases that are tried or settled around the country, that $2 million would not in any way, shape or form be reasonable to settle for, in light of the facts in this case and in light of looking at the six mitigation factors under the Clean Water Act.

There's one really fickle factor, and I'm not sure how familiar you are, probably no reason for you to be familiar with the Clean Water Act. But one of the factors says such other factors as justice may require. That gives the court, obviously, extreme leeway to consider the facts. When you have the state of Florida through its lead officials telling you that they do not understand why EPA and the Department of Justice are bringing this lawsuit -- in fact I believe Dr. Ahmadi will tell you, and this is obviously subject to my recollection, but I believe Dr. Ahmadi told Mr. Jacobs that he didn't understand why Mr. Jacobs was bringing this action.

And he also told Mr. Jacobs -- and I think I may have elicited this testimony in trial -- that he had told

Mr. Jacobs he had no case, and that he shouldn't be proceeding with this case, and that Mr. Baise was correct with regard to his interpretation of the law; that is, this Company had always had a waste load allocation to discharge into the canal; that we were not violating any water quality standards, nor were we violating our Clean Water Act permit.

And as you can see from my testimony and all of the discovery work we did, we couldn't find, I think maybe with the exception of one other permit that had ever been removed from anyone in the history of the Clean Water Act. That's not to say there's not some out there, but we couldn't find it.

And even the lead experts from EPA, this Dr. John Marlar (Phonetic), who was one of the most knowledgable in all of EPA. He was at EPA when I helped put the agency together in 1970 with Bill Ruckelshaus. He said it was an extremely rare event.

Mr. Roger Hartung, who had processed over, I think it was, 19,000 enforcement actions at Region 6, and was a teacher of seminars within EPA, said that he was unaware of when there was ever a case where EPA took a permit away, or fines anywhere close to these numbers. So all of that went into my thinking at the time in advising the Company, it makes no sense for you to give away $2,200,000 of the

consumers' money here, or the ratepayers' money, when the federal government has so egregiously violated the law.

Q. Thank you, sir. Just one more question. And that is, was the utility's decision not to settle based in any part on the utility's belief that the Commission would disallow recovery of fines or penalties, as opposed to legal fees, from its customers?

A. You would have to ask Mr. Allen, and I guess Mr. Gatlin about that. I have no idea. All I advised them on was that they had been improperly sued, in my opinion, with regard to what happened here. They should not have ever had their permit taken away.

The two prior cases, Barefoot Bay and Carrollwood, had been appropriately correctly resolved by Region 4. That was, in my personal opinion, an outrage, that those cases were filed against this company.

I would have to tell you, at that point, in the heat of battle that we were in, in all due deference, and no criticism to you and the Commission, I don't think you ever entered my mind.

Q. I can understand that.

A. In fact, I am not even sure you existed at that point. I had so many fire fights going on, I could hardly keep them straight myself. And so obviously, I did not want to pick a fight with somebody else that I knew nothing

about.

Q. Okay, thank you, sir. That's all I have. I think Mr. McLean has some questions for you. Would you care to take a break, first?

A. Yeah, a five-minute break?

MS. GERVASI: That would be great. Thanks.

(Recess from 11:25 a.m. until 11:30 a.m.)

EXAMINATION

BY MR. McLEAN:

Q. Mr. Baise, it's Harold McLean, representing the Citizens of the State of Florida.

A. Yes, Mr. McLean, how are you?

Q. Doing well, sir. Let me ask you a couple questions. I would like to know your sense of what your function is in this case. Are you being offered as a fact witness, an expert witness or combination?

A. As far as I'm concerned, I am relating to you the facts with regard to my involvement in this litigation. It would be up to you as counsel or other counsel to qualify me as an expert witness, as I assume it would be in any proceeding of this nature. But my personal view is I'm a fact witness that has a great deal of background with regard to environmental statutes, particularly the Clean Water Act.

Q. And you could offer an opinion, and I gather that

THE WITNESS: Leave that up to my counsel, Mr. Gatlin.

MR. GATLIN: That's Mr. Getty, yes. But if you had questions about specific costs of Mr. Baise, I guess --

MR. McLEAN: I'm trying to make sure -- if I know that Mr. Baise's expertise is to be relied upon, I want to explore that expertise. If you're not going to rely on his expertise for the reasonableness of the fee, then obviously there's no need to go into his expertise on that issue.

THE WITNESS: I don't know. I'll leave that --

MR. GATLIN: As to the reasonableness of the fees and the reasonableness of the legal costs, it's Mr. Getty. If there's some costs specifically, regardless of whether the reasonableness of the fee is in question, if you think there's a charge that you want to ask a question about, then of course it's Mr. Baise.

MR. McLEAN: I think I understand.

THE WITNESS: I refer to what I think are the facts, Mr. McLean, on Page 80 of my testimony.

MR. McLEAN: I have that.

THE WITNESS: The steps that we took to keep the costs down. Those are facts I can testify to, but it's

going to be up to the Commission and experts to make the evaluation as to whether or not they were reasonable.

BY MR. McLEAN:

Q. Yes, sir. Now with respect to the amount of legal work which was required by the risk that Florida Cities faced from the various thrusts of the federal government, are you going to say that that was reasonable, or is that to another witness? To whom I should address those questions?

MR. GATLIN: Well, Mr. McLean, if I may, I think that this witness certainly would testify as to his own effort and what -- that that effort was appropriate or not. I don't know that that makes him necessarily have to be an expert.

MR. McLEAN: I agree with that, sure. But is this the witness --

MR. GATLIN: But, Mr. Getty is testifying as to the overall reasonableness of the effort and that what he did was -- what Mr. Baise did is reasonable and the amount charged is reasonable in his opinion, in his expert opinion.

MR. McLEAN: I see. So Mr. Baise will be tendered, more or less, as a fact witness to tell us what happened, what the various facts surrounding the litigation was and why he did what he did?

MR. GATLIN: Yes, and I think it -- in some respects, he will be testifying as an expert that, yes, indeed he did believe in his opinion that this was the correct course of action.

MR. McLEAN: Sure.

MR. GATLIN: And some questions were asked on cross-examination today, or on deposition as to what his beliefs might be. And based on his experience and expertise, I think that he's in a position to offer those opinions when somebody asks him.

MR. McLEAN: Okay.

BY MR. McLEAN:

Q. Let me direct a question to the witness then.

Mr. Baise, do you have experience in the economic regulation of investor-owned water and sewer utilities?

MR. GATLIN: Is he there?

THE WITNESS: Would you repeat that, please?

BY MR. McLEAN:

Q. I'll try to, yes. Do you have experience in the economic regulation of investor-owned water and sewer utilities?

A. Not on the economic regulation, no, sir.

Q. But certainly from an environmental standpoint. And I certainly don't question that. But my question is, have you been in this ratemaking process before, and if so

how much do you know about it?

A. No, I have not been in the ratemaking process before. I've represented public entities. I've represented the City of Fort Wayne. I've represented the state Department of Transportation, New York, Port of Oakland, Port of Indiana, eight entities, but never in a ratemaking context.

Q. Okay. And you understand -- I'm going to tell you what I think this proceeding is about and tell me if you agree with me.

A. Okay.

Q. That the Company has expended sums in its litigation with the federal government, and the question for the Commission in this case, in a macro sense, is to whether to let the Company bear those expenses or whether to let their rate holders bear those expenses. Is that consistent with your understanding?

MR. GATLIN: Did you mean to say shareholders? You said rate holders.

MR. McLEAN: Did I say rate holders?

THE WITNESS: I was going to say, could you repeat that question?

MR. McLEAN: I'll not only repeat it, I'll abandon it.

BY MR. McLEAN:

Q. My understanding, which may be flawed, of what the Commission is going to do in this case, is decide whether to let these expenses expended in connection with this litigation lie with the Company or shift the responsibility for those expenses to ratepayers.

A. I assume that's a fair characterization, but not knowing anything about this field -- I'm sure that's accurate, but it may be -- I'll let me counsel respond to that.

Q. Okay, well actually the question is directed to you, and I think it's your testimony that you don't know about that since you don't deal with the regulatory theatre that much, if at all?

A. Yes, I really cannot answer the question.

Q. And in a question by Ms. Gervasi, she directed a question to you regarding the $2.2 million settlement offer from the government which came down after the summary judgment. Do you recall that question?

A. Yes, I do.

Q. And I think your answer was that you wanted to make sure you were saving ratepayers' money, or that you didn't believe the expenditure of $2.2 million of ratepayers' money. What did you mean when you say ratepayers' money?

A. Because I assumed that this would be money that

ratepayers had paid to the Company and that would have to be paid out in fines. Ratepayers pay in each month, that money goes into the treasury. That's how this company makes its money, so that would have been ratepayers' money going over to pay a fine.

Q. Or expenses associated with the fine, correct?

A. Or expenses associated with the fine, yes.

Q. Now you weren't venturing any opinion as to that's what ought to happen, were you, at that point?

A. No, I was just giving you what my feeling was at the time, that this was an unjustified penalty for the ratepayers and this company. I saw them as one in the same, frankly.

Q. I see. So you didn't get into the question of splitting the responsibility, if any split is in fact to occur, right?

A. No. As I said earlier, in all due deference to you folks, the utility commission was not on my mind very much during that time.

Q. What about those poor souls who advocate before the Public Service Commission, you didn't think about those either, did you?

A. I certainly did. I thought about the ratepayers. I just didn't feel the money they had paid in should go to this kind of improper fine.

Q. Let's go a little bit more close to your testimony. I would like you to illuminate a couple items, if you would, or at least expand on them a little bit. Page 7, Line 14 actually, but the sentence begins at Line 12. Let me know when you have it if you will, please.

A. Page 7, Line 12?

Q. Yes.

A. FCW officials immediately started working the FDEP?

Q. Yes, sir. And Line 14 has a phrase there which interests me. It says, they could not shut down for repairs. I know you expanded on that a little bit in one of your answers to Ms. Gervasi. But I wish you would tell me why you believe that they couldn't shut down.

First of all, let me as an aside say that it was indeed a theory placed on the table at some point by the DOJ that you should shut it down; is that correct? Or that the Company should shut down that operation; is that correct?

A. That's correct.

Q. Why is it that it can't be shut down?

A. Because it would back the sewage up into your toilet.

Q. And it's your testimony that it can't be shut down, right?

A. That was my understanding. If you shut that

unless that pipe was shut off, raw waste would have been discharged into Florida waters. That is clearly a violation of Florida State law. It is clearly a violation of federal law, and if the pipe was shut down and waste backed up into people's toilets, I assume that that would create pretty quickly, as we've seen in some other cases we represent, public health hazards, and it also creates a damage situation. I represent the City of New Albany, Indiana right now where they have had waste backed up into people's homes, and they have to pay out damages for that waste running out on to the floor, damaging carpet, furniture and creating a public health problem. I assume the same situation would apply here.

Q. Those -- any persons -- well, let me ask the question differently. The notion that that facility cannot be shut down -- if I understand your testimony correctly, that's essentially what your saying, right?

MR. GATLIN: I think he also said -- just a minute, Mr. Baise. I think he said unless there was an alternative.

THE WITNESS: Yes, that's what I was just getting ready to say.

MR. GATLIN: I think you said that. Go ahead. I think you already characterized it that you couldn't be shut down without an alternative.

THE WITNESS: That is correct. The time that it would take to come up with an alternative, eventually it could be shut down. I didn't mean to say it could never in the history of time be shut down.

BY MR. McLEAN:

Q. But, anyone who sought to cease treatment and discharge raw sewage would be called to heel in short order by federal authorities and by state authorities as well, wouldn't they?

A. Certainly if they were going to shut the facility down, open up the valves and discharge straight into the water of Florida, and the water of the United States, that is criminal. In fact, the Department of Justice would send you to jail for doing that.

Q. Yes, sir. And part of what the Department of Justice might do is arrange with the approval of the court for someone else to run such a facility and get it back on track; isn't that true?

A. I suppose justice could put a company in receivership, but that's speculation on my part, and I'd rather not get into that.

Q. Let me ask you a little bit about that receivership business. This was essentially -- this litigation that we're dealing with, was essentially, in its essence, an enforcement action against Florida Cities Water

Company, right?

A. That's how it was entitled, correct.

Q. And had they taken a judgment of some size that Florida Cities didn't appear to be likely to be able to pay, can you take us down the road? Do you have the expertise to take us down the road, as to what would happen next? And my focus is, would the marshals sell the utility on the courthouse steps, or what happens in that process?

A. That would call for speculation even beyond my expertise. So I would not feel comfortable answering that question.

Q. Who does handle that sort of expertise -- I'm sorry, that sort of enforcement on behalf of the Department of Justice, if anyone?

A. I don't know, based on my history of the Clean Water Act, where that has ever happened.

Q. Are you aware of any wastewater company going into bankruptcy? And my question is, of course, in the context of a source of pollution. In other words, in your years at the Department of Justice, did you ever deal with a company that went into bankruptcy, and can you say -- can you say with any confidence what the likely scenario is when that occurs?

A. No, I'm not aware, but Gerald Allen would be the person to ask questions about that, in my judgment.

Q. All right. Back to your testimony, Page 13, Line 16, sir, let me know when you have it if you would. I don't know that you really need to reference it. It's a general question. Y'all --

A. Page 13, what line?

Q. I'm sorry, Page 13, Line 16. It deals with affirmative defenses.

A. Yes, sir, have it.

Q. What became of your affirmative defenses? I never found in your testimony what became of them. I see that there was a motion to strike them. What became of them?

A. And you wouldn't find anything in the record on that. The Department of Justice filed that motion to strike. We responded. Then later the Department of Justice filed an amended complaint, then a revised amended complaint. Therefore the court never ruled on that.

Q. In the subsequent -- I assume that you filed answers to both the amended and the revised amended complaints?

A. Correct.

Q. I don't recall whether you asserted affirmative defenses in those. Did you, by any chance?

A. Yes, sir.

Q. What were the affirmative defenses? And I apologize for not going to read it, but can you tell me

briefly?

A. We -- and I'll just summarize them off the top of my head. Impossibility, latches, impossibility -- I don't know if I mentioned that -- the delay caused by outside parties, failure to state a claim.

Q. That would be just a defense, right?

A. Just a defense. I'm just trying to think. Hang on just a second, and I can go through them. Yeah, failure to state a claim. Oh, yeah, here's one, a critical one, goes to Section 309 of the Act, that helped us to get Barefoot Bay and Carrollwood off of the hook. These claims were barred because a judicial action or quasi-judicial action had already taken place, and the fact that we had paid administrative penalties assessed by EPA Region 4 that I referred to earlier.

Q. That's the res judicata issue, correct?

A. You got it.

Q. Upon which you eventually prevailed, I believe, in the summary judgment.

A. We prevailed and set new law on that issue, which is one of the reasons why EPA failed to appeal this case formally, because they saw that as so devastating to their present position. They didn't want to get that locked in by the Eleventh Circuit Court of Appeals.

Q. I thought they did formally appeal, did they not?

A. They formally appealed and dropped it.

Q. Yes, as you did, right?

A. We only did it after they dropped their appeal.

Q. It was the result of mediation, was it?

A. No, it wasn't the result of mediation. It was the result of the Department of Justice realized they couldn't win the case. They also couldn't get us to agree to vacatur of the original opinion. And the Department of Justice asked me specifically to undertake an unethical act. And I refused to do so. The Department of Justice asked that we would go before Judge Nimmons, say to Judge Nimmons that we had agreed to a $309,000 fine, and then we, Florida Cities, would really only have to pay something somewhat less than that, maybe 150,000. And I said, "I think that is unethical, counsel, and I frankly don't want to discuss it anymore."

I refused to do that. And at that point, I would say within 24 hours, the Department of Justice came back to us after several of these mediation telephone conferences that you're referring to, and said they were going to drop the appeal because I refused at the direction of the company to agree to a vacatur of Judge Nimmons' order and opinion.

Q. I see, and that's on that issue of res judicata and to what extent the government is bound?

A. That's correct, on that issue. But back to your

question on the defenses, just going through them, we got hung up on the second one, on res judicata.

Q. Yes, sir.

A. The third defense was we claimed they were barred because of earlier settlement agreements entered into between Florida Cities and EPA.

Q. And that's the issue of whether the consent and judgment is to -- consent and judgment is to be treated the same as any other judgment, right?

A. Right.

Q. And you prevailed on that at -- in the summary judgment, I believe?

A. We also on --

Q. Pardon me, was that correct? You did prevail on the issue of whether the consent order was to be accorded the same stature as an order of court in terms of res judicata?

A. Yes, we did. I'm sorry I was looking at the fourth.

Q. That's okay.

A. We alleged, as we've already discussed, that EPA had illegally, wrongfully and properly denied our permit.

Q. Can I stop you there? Did you ever get an unequivocal ruling on that? I understand that your penalty was mitigated, but did you ever obtain a specific finding on

that issue?

A. Yes, I did.

Q. Where is that? The court found that the EPA illegally denied the permit?

A. No, the court did not find that. The court found that since the Company had not appealed that issue within the 90-day time frame that the other counsel was talking about, that we had waived our right at that point.

Q. I see. Can you hold your thumb where you are there, because I want to ask you a couple questions about that.

A. You bet.

Q. Counsel asked you a number of questions about why y'all didn't, in my words, pursue a direct appeal, or a direct attack, I should say, on that administrative order. Do you recall those questions, that line of questions?

A. I do.

Q. Now, I gathered from the gist of your testimony -- the gist of your testimony, according to my recollection, was that course of action probably would have been as expensive as the one taken; is that right?

A. That is my opinion because EPA would not back off even after we had laid out the facts to them, probably much more so than counsel should do in litigation of this nature. Therefore had the same track been taken, you would

have taken the same set of actions in the adjudicatory hearing up through an appeal, to the Court of Appeals, that basically we took here.

Q. Now, the Department of Justice came -- let me strike that and ask you a little bit differently the same thing. What I'm curious about is -- and I suppose I should know this, but the EPA has the attention of the homeowners association, or whoever, and they press forward with an enforcement action against the utility, and at some point the Department of Justice comes on the scene; is that generally correct?

A. Correct.

Q. Now, what is the triggering mechanism, if any, to bring the Department of Justice into the fray?

A. The triggering mechanism, as we found it, was a handwritten memo from a fellow by the name of Peter McGarry. And McGarry said in this memo, these folks do not have a permit at Florida Cities at the Waterway Estates facility. They are taking too long to build the facility and the pipeline. Refer this to the Department of Justice.

Q. In a general sense, is that somewhat typical of the way the Department of Justice comes in? Does the EPA have some disability in the sense they don't have their own enforcement department, or how does that work? You understand my question?

A. Yes, sir. Let me rephrase it just a little bit. But EPA has an enforcement arm through it's assistant administrator for enforcement. In the 1987 amendments to the Clean Water Act, the EPA was given enforcement authority up to $125,000 for administrative penalties. Then there's a Class 1 and Class 2 under that. So EPA can take enforcement action up to a certain point. Then after that point, the enforcement action is referred, through the enforcement division of the EPA, to the Department of Justice.

Q. Respecting the administrative challenge of the NPDES permit denial that Staff hints that perhaps you should have done, that was long before there was enforcement, or was it? Was that before or after the involvement of the Department of Justice?

A. That was before there was involvement by the Department of Justice. It was that single act by Ms. Kagey that set off this incredible chain of events. And there's testimony by her superiors that she violated EPA's own regulations. That's when I thought the case was settled, is when -- Mr. Roosevelt Childress, I believe, is the fellow who testified to that effect. Mr. Greenfield testified to that effect, and even Ms. Kagey, as difficult as it was to get it out of her, indicated in her deposition that, one, she was unaware of EPA's rules for denying a permit, said she just looked at two pages from a file and denied the

permit on those two pages without ever, one, consulting with anyone else, which was a violation of EPA's internal guidelines, as testified to by her superiors, and one person said it did appear there was nothing in the record that would seem to justify denying this permit holder its renewal application. We thought we had them absolutely cold at that point, and again, the Department of Justice would not settle this case for any reasonable number.

Q. Ms. Kagey is the author of the handwritten note which suggested DOJ should become involved, right?

A. No, Mr. McGarry, Pete McGarry, M-c-G-A-R-R-Y, I believe.

Q. Okay. I'm a little confused, then, on when -- what was Ms. Kagey's role in bringing the DOJ in?

A. You have basically what's called a five-year permit, and Ms. Kagey was reviewing the renewal of the Waterway Estates' permit renewal application, a fairly routine act.

Q. Okay, I'm with you there. Now I understand.

A. That was in, let's say --

Q. '87?

A. -- May or June of 1986, and she sends out a notice sometime, I want to say around July of 1987, that there's going to be a proposed denial. And then in January 3 or 4 of '87, the denial occurs. They have no permit to

discharge, a federal permit. They still have the state permit to discharge. And they start trying to figure out how to solve their problem. Now the Department of Justice is sent a note by Mr. McGarry, in, I would say, probably 1990 or '91. I would have to go back and look at that. It was a handwritten note, so do not hold me to the exact page.

Q. No problem on that. That was, in fact, years --

A. Years after the denial by Ms. Kagey, to get to your question.

Q. And years after the opportunity for the utility to engage in a direct attack upon the permit denial, right?

A. That's correct.

Q. So it's accurate to say that the Department of Justice didn't come into the case until years after that? That's correct too, isn't it? Necessarily?

A. I was not involved -- and you would have to look at Mr. Dehihns' involvement, but I believe that the facility and the pipeline were up and running in 1992, about April of '92. I want to say within six months or so after that, conversations at least start with Mr. Dehihns about a proposed penalty, because it allegedly took the Company so long to bring this facility back into compliance. It was either late '92 or early '93 because I am called June of '93, as I recall, by Mr. Getman, and that's when I get involved.

So there had been extensive conversations, as I understood it, in '92, because I believe Mr. Dehihns' letter is like December of 1992 where the $5 million number comes up.

Q. When the Department of Justice came in, if you'll permit the characterization, it came in with its enforcement hat on, right?

A. Absolutely.

Q. Does the Department of Justice have a hat appropriate for defending the EPA in administrative challenges of its administrative orders, which is a round about way of asking you, is it reasonable to assume that the Department of Justice would have become involved had the Company done a direct attack on the denial of the administrative order?

A. You would have to ask the Department of Justice and EPA about that.

Q. Well, let me ask you this. Does the EPA have the authority to process that attack -- and I'm saying attack. I probably should say challenge -- could the EPA have done that without consultations, or without the direct involvement of the Department of Justice?

A. I do not know how they would have handled that.

Q. But in any case, the serious money began to be spent in this case, in terms of expenses of litigation,

after the Department of Justice became involved, not before; is that correct?

A. That is correct.

Q. Let me turn to some -- well, actually you were holding your thumb on your affirmative defenses there. Are there any more of those?

A. Yes, there are.

Q. Yes, sir. Affirmative defense, by the way, my understanding is, I did what you say I did, but I have this reason, exculpatory reason, if you will. Is that --

A. That's right, it fits in with those six mitigation factors. It also fits in with the statute.

Q. I've got you, okay. You're waiting to tell me about the additional affirmative defenses.

A. I'm just looking here. I think I left on four. The fifth one was another twist on the 309 penalty. We say, plaintiffs' claims are barred because Florida Cities paid penalties assessed by the State of Florida under comparable Florida law. That is another defense.

Q. The res judicata claim?

A. It's in essence a res judicata claim, but it's given to you by the 1987 amendments.

Q. I understand.

A. If you have a comparable state program, the government shouldn't have two bites at your apple is what

that claim is about. Res judicata and collateral estoppel we argued; the Doctrine of Impossibility, I've already talked about; estoppel of the defense I've also raised; delay in issuing permits; enacting zoning exchanges; signing agreements; granting other approvals necessary for FCWC to meet compliance schedules. Tenth defense, improperly seeks duplicative penalties for that same violation. What they tried to do is pile on -- we would say there's a daily violation. Then they would say, well, yeah, that's right, there was a daily violation, but it also violated your monthly discharge, and thirdly, your annual discharge. So for one violation they would get not 25,000, but try to get it up to 75,000. And then finally, we threw in that they had violated our due process rights under the Fifth Amendment.

Q. Okay. Now, one thing that I sense throughout your testimony and other witnesses of the Company is that this company was either overly zealously prosecuted by the Department of Justice and the EPA, or -- I mean, sometimes I see terminology even stronger than that. That's consistent with your feelings about the case, isn't it?

A. There are a couple of points I would like to make with regard to that. One, I think Department of Justice counsel and EPA counsel did not have a good understanding of the Clean Water Act. There is a view, as I said earlier,

that if you have a technical violation, that's worth up to $25,000. So they add up all these numbers, come up with these astronomical numbers, not fully appreciate the mitigation factors.

As I said, the second section of the Clean Water Act mitigation factors, as I recall, were not passed until 1987. It would appear that the Department of Justice discounts those factors substantially. In fact, the Department of Justice tried to, in their motions for limine, eliminate a lot of our testimony on that point and failed.

Q. You testify at Page 82, the very last page of your testimony, that in fact the government was overly zealous, actually you say overzealous, in bringing this litigation against FCWC. That's the general tenor of much of your testimony; is it not?

A. That's right. I certainly made that point because, as pointed out to you and your colleagues, we would point out to the Department of Justice where we had absolute defense, and let me give you one example. One of the claims against, I think it was either Barefoot Bay or Carrollwood, the government said we were using the wrong testing instrument. We found in discovery that we could use this very testing instrument. It took us months to convince EPA to follow its own document. Now eventually they did drop out a claim that was worth about $15 million in the overall

claims.

On the TRC violations, long before we went to trial, we pointed out to them the weakness of their TRC violations; that is, if we used the correct instrument, all we had to report was nondetect. The government forced us to go through trial on that point. They would not drop that claim.

And what I couldn't understand as a lawyer, and as a former of Department of Justice employee, both as a trial lawyer and as an administrator, and also as someone who helped put EPA together, what was going on. Because rationality, rational facts, which we lawyers are supposed to be in pursuit of and then tell our clients what their risks are or are not, did not seem to work in this case.

Q. Let me interrupt just for a moment to ask whether you believe then that that course of conduct, or apparent motives, conduct, whatever, of both the EPA and the Department of Justice, was atypical to the existence as you know the agencies.

A. Actually, the agencies have become much more zealous, to use a term that I have used. I would say starting under the Bush administration and continuing under this administration.

Q. Can you contrast between zealous and reasonable? I mean, one can be zealous and be reasonable, but the clear

tenor of your testimony is that they were both zealous and unreasonable. Isn't that a fair characterization?

A. I would say in this case when you would bring reasonable facts to the attention of counsel on the other side, and those facts -- and the court established virtually everything we said as a fact -- that the Department of Justice was not reacting as a rationale person would or should when these kinds of facts are developed.

Q. And my question, I want to get to the issue of whether you regard that as something of an anomaly, or would you expect the Justice Department, EPA and so forth, in the future to behave more rationally, if you will?

A. No. As I said, this seemed to get started under the Bush administration. And my experience is that you have very young and inexperienced lawyers dealing with these issues, and they see these cases as career making cases, and there is little or no supervision that you can see from some of these cases. And as a result, there is this overly zealous prosecution by the department.

Q. Let me return to your testimony, a couple specific questions. If we're done with the affirmative defenses, I think --

A. That's it. I finished all of them that we have compiled, and I can't -- I think this is the last answer that we filed. Certainly it's typical of most of the

answers we filed. Let me just check here. Yeah, this had to be the last one, because I see we are dealing with a third claim for relief, which is Waterway Estates, which we did indicate that this was the answer for both Barefoot Bay, which became the centerpiece of the government's case until the judge knocked it out of the park on I think it was November 20th, 1995.

Q. All right, sir, there was a effort of the Company to protect -- and I don't mean to assign a whole lot of meaning to that word -- but protect former managerial employees of Florida Cities Water Company. You're familiar with that scenario; are you not?

MR. GATLIN: I don't think there's anything that indicates that Florida Cities tried to protect employees.

MR. McLEAN: That's probably a bad word.

THE WITNESS: I was going to ask you what you meant. My whole job was to protect this company from improper prosecution.

BY MR. McLEAN:

Q. Bad choice of words. What I want to get at is, it seems to me like you objected to the ex parte interviews with those former employees. And I want to get to the issue of whether you objected to the ex parte interviews or whether you objected to depositions where they were

represented by counsel. Did you blanket -- well, let me ask you if you understand my question so far, because I'm not sure I do.

The question is -- let me be more specific.

A. I think it goes back to the other question, but go ahead and rephrase it again.

Q. Yeah, these former managerial employees, you did not want to Mr. Jacobs and his entourage to go down to Australia and talk to them, right?

A. I didn't mind them talking to Mr. French at all. In fact, Mr. Jacobs was less than candid with regard to the French situation. Mr. Scroggin and I had had lunch with Mr. Jacobs, and we had talked about Mr. French being a fairly important witness here. We both agreed that we should depose him.

In fact, Mr. Scroggin and Mr. Jacobs laughed about their traveling together to go down to Australia to take this guy's deposition. And I said, come on fellows, we're not going to get free trips out of this. Let's see if Mr. French is not going to be able to come to the United States.

And within seven days of that conversation, which we didn't know at the time, and no hint, no hint at this lunch that Mr. Jacobs, Mr. Scroggin and I had, did Mr. Jacobs ever tell us that he was going to go off on his

own to meet with Mr. French. But we subsequently found out in a separate lawsuit that I brought against the Department of Justice in getting Mr. Jacobs' travel records, because I felt, frankly, he lied to me.

Q. What I want to get to is, was it the ex parte nature of the interviews with ex-managerial employees to which you objected, or was it the other side talking to them at all under any circumstances including depositions?

A. It was the ex parte portion of it, because we didn't care about them deposing these folks, because we knew that the Department of Justice had certain rules with regard to making ex parte contact, which gave rise to the disqualification issue later.

Q. When Ms. Gervasi asked you --

A. It also violated -- just so we're clear on this, Judge Kovachevich in the Middle District, in which we found ourselves operating, had ruled in previous cases that such conduct by Mr. Jacobs, which certainly we thought it was, was in violation of Florida ethical standards and rules.

Q. When Ms. Gervasi asked you about this general subject area, the fair import of the answer which I heard was that one of the benefits of your resisting producing these people, either for ex parte interviews, for depositions or anything else, was a substantial reduction in cost to the case, right?

A. That's correct.

Q. Now if you didn't object to them being deposed, and presumably the government could have deposed them, how does your resisting the ex parte interviews have anything to do with the expense which the Company incurred at that point?

A. Because that was the practical effect of our shutting down the ex parte contacts. Then Mr. Jacobs decided he didn't any longer want to proceed down that line.

Q. But Mr. Jacobs certainly could have --

A. He certainly could have, sure.

Q. -- deferred, or deposed them?

A. He absolutely could have done that, had he received permission from the court. As you know, under these new Federal Rules of Civil Procedure, you're limited in your first round. I think it's either ten or 15 depositions. But you can go to the court, and on good cause shown, raise that number substantially, which we both did.

Q. So the cost saving may have flowed from Mr. Jacobs as opposed to your resistance of the ex parte nature of the contacts; is that correct?

A. No, I wouldn't characterize it that way at all. I would say by the action I took, I shut Mr. Jacobs' operation down.

Q. But Mr. Jacobs certainly could have deposed him.

We're agreed on that; are we not?

A. He certainly could have noticed them for deposition, yes.

Q. You moved to disqualify Mr. Jacobs, did you?

A. Yes, I did.

Q. How far back do you and Mr. Jacobs go? Have y'all been acquainted before this case?

A. No, we had never met one another until this case.

Q. How did it serve the interests of the Florida Cities Water for you to move to disqualify Mr. Jacobs?

A. It served their interest because here was a fellow that was violating Florida law, violating the Department of Justice's, we thought, own regulations, and also, was a person who did not understand the Clean Water Act, and should -- had we gotten a different attorney, maybe they would have had a better understanding of the Clean Water Act.

Q. So that was really an effort to change attorneys?

A. To make sure that we had someone who would comply with the law.

Q. And you're addressing the law in terms of the ethical requirements that a lawyer has when you interview a party who's already represented, right?

A. Yes. And the whole matter was wrapped up fairly quickly. It wasn't a lengthy proceeding.

Q. But I thought you said that you also wanted a lawyer who understood the Clean Water Act better.

A. That's correct.

Q. And that was part of the reason for that motion, as well?

A. I wouldn't say it was part of it. It was certainly in the back of my mind. The reason I went after Mr. Jacobs is I felt he had violated Judge Kovachevich's clear standing law in the Middle District of Florida.

Q. That judge was sitting as a magistrate in that issue, was he?

MR. GATLIN: She.

BY MR. McLEAN:

Q. She, sorry.

A. Judge Kovachevich is the chief judge of the Middle District of Florida.

Q. Not a matter that comes frequently to my attention. There was an issue in there about, as I recall, you tried -- or at least -- not tried, I think you argued this disqualification issue to a magistrate; is that correct?

A. Judge Swartz. I felt he had just violated the rules, and I thought it was in this client's interest, if we had a lawyer that was violating the rules, that lawyer should no longer be on this case.

Q. And on Page 22, Line 13, you begin -- there's a phrase there which deals with the apparent denial of that motion to disqualify Mr. Jacobs.

A. Line 13.

Q. It actually begins at Line 12, Mr. Baise.

A. Okay.

Q. Way over on the right. In your testimony you say that the court did not see Mr. Jacobs as sufficiently unconscionable --

A. That's correct.

Q. And I stop on that because when I read the order I didn't see that the judge found that Mr. Jacobs had been unconscionable at all. Am I incorrect about that?

A. My recollection of the transcript is that the judge discussed his actions, and whether it met unconscionability. Mr. Jacobs testified that he went to Australia solely for vacation purposes and just decided since he was down there, he would just happen to drop by and see Mr. French. I will tell you, frankly, I didn't believe that, in light of the lunch I referred to earlier.

But the judge did, as I recall, discuss whether Mr. Jacobs' action rose to the level as set forth in Judge Kovachevich's opinion, and determined that if he was indeed down there on vacation and did just happen to go see this fellow, he was going to cut him a break.

Q. My question goes to this issue: You say, "because the court did not see Mr. Jacobs' action as sufficiently unconscionable." And my question is, did the judge find that Mr. Jacobs' action was unconscionable at all?

A. It didn't make a determination that his action was unconscionable, no. What it did do, though, Judge Swartz indicated that Mr. Jacobs could not proceed to contact anyone else without coming through me as counsel. I think there's a quote here somewhere in this paragraph that indicates that he didn't have carte blanche authority to go contact every witness in the case. Therefore, if he wanted to talk to anyone, he talked to me first about it.

Q. I have it.

A. So my view was at that point that I'd won 80 percent of, or 90 percent of, what I had been going after. Obviously I would have preferred having Mr. Jacobs disqualified, but that is a very serious charge to remove a lawyer under a motion to disqualify.

It was not an action taken lightly by me and my team. In fact, we agonized over it for several months, if you look at the time the actions occurred until we first filed our motion to disqualify. We felt his conduct was sufficiently egregious. He had misled us, certainly indirectly if not directly, with regard to deposing Mr. French, and the fact that the law was very clear, we

thought in Florida, with regard to ex parte contacts, that we had a specific obligation to defend this client's rights by making sure Mr. Jacobs complied with the law as we found it under Chief Judge Kovachevich in the Middle District of Florida.

Q. But the judge, when they ruled on your position on that, essentially ordered Mr. Jacobs to do that which he is ethically bound to do anyway, correct?

A. But he did not think he was ethically bound to do that, because he filed papers saying that he had every right to make these ex parte contacts.

Q. But the answer to my question is affirmative, right?

A. For you and I, we would agree that that is correct, but the Department of Justice takes the position it can have ex parte contacts even if a person is represented counsel. That has been ruled against by a couple of U.S. district courts, but the fact is that regulation, known as the Thornberg guidelines, or regulation, is still in effect. Justice thinks it is above the law or the rules of ethics and the canons of ethics in these states by making these ex parte contracts.

Q. In Line 14, can I strike the term "sufficiently" from your testimony without doing violence to the extent to which you accurately represent what the court found?

A. No, I would not agree to "sufficiently." That's exactly what I felt based on my review of -- I would say that's absolutely accurate.

Q. It is absolutely accurate that the court did not see Mr. Jacobs' action as sufficiently unconscionable, which necessarily implies, does it not, that the court found that it was at least somewhat unconscionable, correct?

A. That is my opinion as to --

Q. As to what the judge said.

A. As to what the judge said, and my being in the courtroom when this occurred, because I would say Mr. Jacobs came within a whisker. If he had not said he was there on vacation, in my opinion he would have been disqualified.

Q. The rest of us who weren't there have only the order to read.

A. That's correct. Well there's a transcript of this somewhere.

Q. It's also true, isn't it, that the judge speaks through the order and not through the transcript?

A. Absolutely. But you would have to look at the transcript to get sort of a feel for the order.

Q. Let's look at Page 30, Line 25, if you would, please.

A. Thirty.

Q. Bottom line, yes, sir, Page 30, bottom line. It

wasn't quite clear to me this reference to a negative attitude. I couldn't quite -- that's EPA's negative attitude. Was that -- I can't get a handle on whose negative attitude we're dealing with here.

A. Mr. Bradtmiller.

MR. GATLIN: Not Mr. Bradtmiller's negative attitude?

THE WITNESS: Paul Bradtmiller was an officer at Florida Cities, and he had referred in a memo --

MR. GATLIN: But the testimony doesn't say Mr. Bradtmiller is negative?

THE WITNESS: Yes, that's correct. And all I'm doing is just summarizing Mr. Bradtmiller's testimony, as I recall here.

BY MR. McLEAN:

Q. Was that the -- Mr. Bradtmiller's testimony where?

A. That would have been in his deposition. I believe it was November 21st, 1994, since I have that referred to on Line 21.

Q. Was that reference a characterization by the EPA as bunnyhuggers?

A. I don't think that was the memorandum, no. Mr. Bradtmiller was referring again, I believe, to this Mr. Pete McGarry had been involved in the meeting that Mr. Bradtmiller had attended years previous.

Q. Page 35, Line 5, there's a discussion about the offer of judgment, your Rule 68 offer of judgment?

A. Correct.

Q. Now in that offer of judgment, that's simply an offer to pay the government $500,000, right? That does not involve any admissions of wrongdoing; is that correct?

A. Correct.

Q. It's a matter of curiosity to me, and may have been to you too somehow, that sovereign immunity frustrates that offer of judgment. Could you briefly illuminate that point a little bit because that's essentially what happened in the long run, wasn't it, with respect to your request for costs?

A. The judge was -- I mean you can read his opinion as well as we can. That's how it sort of came out to us. He would like to have given it -- I thought we had a very clear shot at that, but he said since it's not specifically waived, he felt uneasy in doing that. In fact, I think that was one of the issues he invited the appeals court to take a look at.

Q. I'm looking through my notes here, Mr. Baise. I've not abandoned you. Page 41, Line 1. There is in italics up there, the "void ab initio" issue, and I'm a little unclear on what we're talking about there. Is that the res judicata issue?

A. No. That's a way I tried to knock this whole case out as quickly as I could, from the very beginning. Normally in these cases the government files its motion for summary judgment seeking obviously strict liability on the permit discharges, and subsequently the government did do that here. But in an effort to bring this case to a quick and painless end, as rapidly as I could, I had determined after the early depositions and the documents that we had discovered, that, as I said earlier, Ms. Kagey had violated EPA's own regulations, I realized that was a technical problem because the company had not filed its appeal within the 90-day period. But notwithstanding that, as you and I both know, that often times these jurisdictional issues can be overruled if a person was acting without authority of law or under violation of color of law.

So I went back to the common law of void ab initio and said that -- motion for summary judgment, that Ms. Kagey had operated in violation of the law, and therefore any decision that was derived from her action was obviously void ab initio. It was of no effect.

And we cited lots of Indian cases where this theory has worked, where the Indian tribes have signed contracts with the United States government. As we know, the Indian tribes were duped into signing many of these contracts, and as a result, the contract or the action was

voided. So I used those cases, plus marriage cases that I'm sure you're familiar with, where clearly the person is married, and you get married the second time, don't have your first divorce, the action is declared void ab initio.

Q. I'm not familiar with it, but it could happen.

A. It could happen because it's against public policy and you have violated the law. So I tried that in an effort to save this company as quickly as I could to get out of this case. The court basically said, nice try Mr. Baise, but I'm not going to go along with you on that.

Q. I skipped one of my questions here, Page 38 -- actually, Page 37 and 38. This is going to be a simple one. There is in your testimony reference to an order. It's the one that was the result of your moving to restrict what the government -- I think it's the culmination of the ex parte issue, where their complaint was ordered to essentially not include some matter which had been included before. And my Tab 42 deals with that ex parte witness identification thing. I meant to work this out before the deposition, but I would like to have the correct GHB-42. I was kind of wondering if your GHB-42 is the order which restricted that complaint or not.

MR. GATLIN: Let's look and see.

MR. McLEAN: I didn't mean to use deposition time with it, but I didn't have time before.

MR. GATLIN: You think there might be a wrong number?

MR. McLEAN: Yes. I think that's the order which dealt with the ex parte prohibition directed more or less Mr. Jacobs. And my -- the 42 which was referenced was one that kind of controlled what the government could -- there's a restriction on what they could allege because eventually the court ruled in the Company's favor on that res judicata issue.

THE WITNESS: Yes, it did. As you can tell, we had a heck of a dispute over Barefoot Bay and Carrollwood coming in. So that leaves the first amended complaint. I think I filed a rule or something on futility, that we had a defense on Barefoot Bay and Carrollwood, and tried to knock that out. The judge agrees with us initially. Mr. Jacobs and DOJ come back under a contract theory saying that we had signed a deal, but that deal only covered one day.

MR. GATLIN: The question, though, is, is Exhibit 42 the right reference?

THE WITNESS: I don't know if 42 --

MR. GATLIN: Look at 42 and see if it says what we say it says. When may have the wrong order. I don't know. Mr. McLean, we'd be glad to check that and let you know. Let's don't take time here to do it.

MR. McLEAN: That's fine.

THE WITNESS: The court ruled on the motion, and let's see, 42 is what? Our opposition to defend the motion to strike. So that cannot be.

MR. McLEAN: Just work that out and send me the right one.

MR. GATLIN: We can work that out later. Let's go on with the deposition.

BY MR. McLEAN:

Q. Yeah, man. Mr. Baise, I'll work that out with your counsel. I think there may be an error, not a big one, not substantive.

A. But clearly there were lots of disputes over the complaints and the amendments of the complaint going to the agency already deciding Carrollwood and Barefoot Bay, and that's why we moved to knock out his complaint.

Q. No problem with that. Page 41, Line 16, the DOJ exceeded the page limit on their motion for summary judgment, yet the court ruled on that summary judgment. What became of that page limit issue? Not that it's a biggy, but it struck my curiosity.

A. It's my recollection that we won on that, and the Department of Justice was required to go back and refile.

Q. Okay. Page 49, Line 10 of your testimony, you're discussing generally, I think, the results of the summary

judgment.

A. Which summary judgment here are we talking about? Oh, the final one where he knocks out Barefoot Bay and Carrollwood.

Q. To the extent that he did.

A. Yes.

Q. You find that that saved -- eliminated over $15 million in potential penalties. And I want to correlate that somehow.

A. Fifty million.

Q. Fifty million is what I meant to say. At $25,000 a hit, that's 2,000 violations, right? Let me just ask you to tell me where the 50 million came from. How did you come up with that number?

A. That number starts being derived from an interrogatory answered by Mr. Ken Kwan, where he adds up finally, and it took us some time to ever get the EPA to come up with the exact number of charges, and finally in an interrogatory he comes up with something like 104 million some few thousand dollars, and he breaks that out as Barefoot Bay, Carrollwood and Waterway Estates, much like the judge does in his opinion.

Q. Yes, sir.

A. And when you add up the numbers and attach those numbers to the paragraphs in the amended revised complaint,

it added up to roughly this number.

Q. And I think -- are you using $25,000 each?

A. Yes.

Q. Your -- and I'm going to have to skip around here a little bit. I apologize. Page 75, you are discussing the final order there. My arithmetic takes me to -- beginning on Page 75, continuing on to the next page -- 2,132 violations which the court sustained. Is that a valid number?

A. What page are we on? I'm sorry.

Q. Page 75.

A. Yes, I have Page 75.

Q. Reading your testimony there, beginning on Line 21 and continuing through 5, all I did was add up the violations which you mentioned and came up with 2,132 violations which the court found did in fact occur, right?

A. Right.

Q. And actually, you were discussing the final order there. And the final order is the point at which the court assesses fines for those violations, modest though they may be. He found the violations in the summary judgment, correct?

A. That's right. He found the technical violation that there was a violation of a permit.

Q. Now, if you were to take 104 million -- pardon me

for doing this. What I'm trying to figure out is -- and maybe you can tell me -- it appears that 2,132 violations alleged were sustained, and because of your $50 million number, I'm led to the notion that there were 2,000 violations alleged and denied. Is that valid? Is that a valid outlook for me to take?

A. I don't know about your math, but certainly there were a number of alleged violations of discharging without a permit, alleged at Barefoot Bay and Carrollwood. Whether that added up to 2,000, I can't tell you. You can certainly go back and figure it up.

Q. You're saying on Page 49 that that summary judgment essentially let y'all -- I don't want to say let you off, because you'll object to that.

A. Yes, sir.

Q. Exactly --

A. We were never liable for them in the first instance.

Q. Of course not. So you couldn't have been left off. But my point is -- how to phrase it -- the $50 million is fines which you were certain you would not have to pay at the end of the summary judgment, right?

A. Absolutely.

Q. And the 50 million is based upon your calculation of 25,000 per day per violation?

A. That is correct.

Q. Did you agree with my sum of 2,132 violations?

A. I don't know that I agreed with it. I assume your math is roughly correct. My recollection from the trial was that there were about 18- or 1900 violations left, but it's so close to 2,000, it may be correct.

Q. But it would be an ministerial act, but the correct way to perform that ministerial act would be is to look at your testimony on Page 75, add up the violations and come to a sum; is that correct?

A. That's correct. But the point is you would want to go to back to Ken Kwan's interrogatory to get the exact number.

Q. All right, sir. After the summary judgment, the government changed its view somewhat and gave you a less than attractive offer of 2.2 million to settle it, correct?

A. That is correct. As you know under the rules, you have to have a -- sort of a pretrial meeting, and at that point both parties are to walk in with their final and best offer in hand, and the person making that offer has to have the authority to accept on the spot.

Q. Did you avail yourself of the opportunity to throw it back across the table at them by any chance?

A. No, sir.

Q. I think I would have.

A. We are gentlemen. We do not engage in that kind of conduct.

Q. Just kidding.

A. I understand. I understand. But what we did do --

Q. You rejected it?

A. No, I didn't object.

Q. Reject.

A. I'm trying to think of the number that we gave. I assume -- I would have to go check whether we stuck with our 500,000, or we brought it back to the original 200,000. I just don't -- may I consult with Mr. Bullock for a moment on that?

Q. It's not important for me to know whether you countered with a little bit.

A. You don't counter in those situations. Each party comes with what they're willing to, in essence, write a check for within a day or two after.

Q. But at that point surely you can still negotiate on the spot?

A. You could certainly negotiate on the spot.

Q. My real question, which I was certain I would eventually get to, is, did that offer of settlement require FCWC to admit wrongdoing?

MR. GATLIN: We're talking about the 2,200,000 --

MR. McLEAN: Yes, sir.

THE WITNESS: That would depend on how you wrote the consent order, so no, I don't think so.

BY MR. McLEAN:

Q. So when the government said, we will settle for 2.2 million, they did not at that point require you to admit wrongdoing; they just wanted a check for 2.2 million?

A. You would have to ask the government what their position would be on that. Clearly, if one was going to write that kind of check, you are agreeing that you have a technical violation here, and whether or not the government would say, as you've often times see in the antitrust cases, neither side admits or denies anything --

Q. Sure, and that would be the likely language of that order, or can you say?

A. Typically, in consent orders, the ones I'm familiar with, you indicate that you have violated a consent order, but in a case like this, when we're in litigation, I would go back to my original point, you would have to ask the Department of Justice. It was not a condition that was laid on the table that day.

Q. I'm trying to get to the importance of the notion of admitting wrongdoing to FCWC. Was that a particularly important issue to that client, or was the money the principal issue, or how can you apportion the importance, if

you can at all?

A. I would say it was a question of the money being wrongly assessed against the Company and its ratepayers is how I looked at it at the time. The amount sought versus what this company had done and the fact that this company had been in compliance with the law for years just did not justify any kind of fine. They had been, frankly, put into violation of the law by an action of the United States government. And so any payment that would justify the government's wrongdoing here, I just found to be an anathema. I could not recommend that the client sign something that the government had created or caused. This client did not cause it.

Q. Aside from mitigation of the penalty considerations, did the court ever find that the government misbehaved in any way?

A. No, it did not.

Q. Did you have instructions from your client to avoid a finding of wrongdoing -- I don't want to say at all costs, but in conditions which in your judgment were unreasonable? Do you follow that question?

A. Yeah, I think I follow it.

Q. Okay.

A. First of all, that's an attorney/client privileged question, but the fact is, no, I never had any instructions.

Q. What was Chuck Hill -- Chuck Hill is an employee of the Public Service Commission, we're talking about the same one? Actually, I don't think you talked about it. Chuck Hill was a proposed witness.

A. Yes, he was.

Q. What was his proposed role in the case?

A. Actually, Mr. Bullock was going to handle him. He was from the Public Service Commission, or had a Public Service Commission background, and he was, as I recall, going to testify to the effect that the Company had dealt sufficiently with its public commitments in a realistic fashion, as I recall, but I would have to go check on that.

Q. Is it safe to say he wasn't a pivotal witness as far as your strategy was involved?

A. He was our last witness, and frankly, I'm searching desperately to think what it was he was going to testify about, and the court certainly didn't feel that he was pivotal.

Q. Could it have been the issue of whether the company could obtain economic benefit by deferring construction?

A. Keith Cartee (Phonetic) discussed that, but it may have been that we had Hill in there to do that. I'll just have to go back and check. I've lost my memory on that.

Q. You need not go back on my behalf.

A. If I recall correctly, he was a PSC person by background.

Q. And still is.

A. Okay.

Q. Yeah, he's boss of everybody in this room except me and Ken and the court reporter, I think, and the lawyer.

A. So you need to talk to him about what we were going to talk to him about.

Q. That wouldn't do me any good at all.

A. But I assume, and I do remember this, we would not have had him coming down to testify if he had not been helpful to our position.

Q. Sure. I'll settle for that. Page 74, Line 23. Get into this res judicata thing, and I think you -- this is the seventh request for reconsideration about this res judicata business, right?

A. It's not only res judicata. It seems as though every time Mr. Jacobs had a ruling go against him he would, sometimes in violation of the rules, come back and seek to discern the judge's opinion because he lost, I think we say the seventh time, but I think all together he sought nine separate reviews, which obviously drove up the costs for this client, and I think I'm correct on this, he lost every one of them.

Q. The judge reversed himself on the res judicata

issue, didn't he?

A. He did. Not on res judicata. What the judge did, the one time I think he reversed himself, is on those complaints. There are about three complaints. One time when the Justice Department comes back with a motion, the judge agrees with them, but when the judge handed down his opinion in November of '95, the judge came back and agreed with us on Barefoot Bay and Carrollwood that they both should be knocked out, with the exception of the actual permit exceedences.

Q. Refer back, if you would, to Page 41 on Line 4 of your testimony.

A. 41?

Q. Yes, sir, Line 4, the court also reversed its earlier rulings and allowed DOJ to proceed with its causes of actions for discharge without a permit at Barefoot and Carrollwood.

A. That's what I was referring to.

Q. But that's not the res judicata issue? Am I using that term incorrectly there?

A. At this point we're talking about the complaints themselves. Eventually what knocked out both of these -- in the larger sense, you are correct.

Q. Page 81, 21 of your testimony -- getting very near the end of my spiel here -- Page 81, 21, let me know when

you have it.

A. Yes, sir.

Q. FCWC agreed to certain penalties. That caught my eye. At what point did you do that? Are you talking about the settlement offers?

A. What I agreed to, there were a couple of -- a couple of, I think, nitrogen violations at Waterway Estates. They were like a thousand dollars each, and just wasn't worth the time of the client to litigate those things, as I recall.

Q. So that was in the earlier administrative --

A. No, no, this was the amount of the penalties, because when I made the -- I believe in my opening statement, or somewhere along the line, I made the point that there were certainly alleged exceedences that we were just not going to contest.

Q. Okay. Let me change focus entirely.

A. Again, at this point these matters had been mitigated, we felt, sufficiently, and we just didn't want to get into what I thought at that time really was a distraction.

Q. Let me change focus entirely just for a moment and ask you, exclusive of this action, which is before the Commission now, which is -- you've been hired as a witness in this case, when did you last invoice Florida Cities Water

for your services rendered in the EPA and DOJ litigation case?

A. I don't know. I would say -- because there hasn't really been anything going on for the last several months. I would have to go look. I suspect it was shortly after I finished this testimony.

MR. GATLIN: I think Mr. McLean is asking for the last bills relating to the litigation.

MR. McLEAN: Yes, sir, that's correct. Not this case.

THE WITNESS: It would be after the appeal was concluded, and that would have been --

BY MR. McLEAN:

Q. I'll settle for more than two years ago if you think that's correct.

A. I don't know. It would just be a guess on my --

MR. GATLIN: Mr. McLean, in an effort to be helpful, there's an exhibit that shows that.

THE WITNESS: I had not been hired as a witness.

BY MR. McLEAN:

Q. I want to get to the issue of when Mr. Baise believed that his retention for the litigation case was pretty much at an end, and I don't mean in terms of ethical obligation of the Company or anything like that, but when did you believe that that case had pretty much ended,

exclusive, again, of this case which is currently before the Commission? You understand the question?

A. No, I'm just thinking of when all those discussions occurred on the bills. I've got the billing statements here.

Q. Let me draw a distinction for you. And Mr. Gatlin may be right, I probably ought to just look this one up. But I want your impression as to when your duties with respect to litigating this case before the DOJ came to an end.

I would speculate -- of course I don't know, but I would speculate that it was around the time that the appeals were dropped, the final judgment issued, the check paid and so forth. Is that essentially when your retention for this case concluded?

A. Yes. Actually on the check being paid actually occurred sometime after we had heard from the Department of Justice. I would say it was sometime last summer, August, September, October.

Q. When the check was paid?

A. Yes. The check was paid somewhat later, but the actual appeal was dropped May or June of '97.

Q. '97. Okay.

A. And then it took some time, because I know Mr. Bullock talked to the Department of Justice lawyer on

interest. We had several conversations on that, where the check was to be delivered to, by whom, what have you, just sort of little nitpicking procedural items. But in terms of representation, it occurred when I told you about that telephone conversation that I received, that they were going to drop the appeal, and that the papers were obviously being appropriately created by the Department of Justice. We signed off on them.

Q. What was the date of that, give or take?

A. I would have to look at it, but I would say, again, that's May or June period. Might have gone over into July.

Q. Of '97?

A. Roughly the middle of '97.

Q. And you were retained in the case at what point?

A. I was actually retained, and I think the bills show this, the first call I received was from Dennis Getman sometime around the 1st of June, 1993. And I noticed in my bills at the time, I didn't charge him for the telephone call that he made. So I can't give you the exact date. He called me up and asked me to call this other law firm, and I note from my billing, I don't start billing until I guess I get the papers, so I don't have an exact date of when Dennis Getman actually called.

Q. So your involvement in the case was roughly four

years, give or take?

A. June of '93, yes, looks like that's about right.

Q. I think Ms. Gervasi asked you this question in so many words, but let me ask it with my spin on it. Was the court -- can you think of any point at which the court was made aware, if indeed it was, that either the costs or the penalties which might result from this litigation would be passed on to the customers of FCWC?

A. I don't think it ever came up.

Q. It was not discussed at all, for example, in the economic detriment argument? Isn't that what y'all call it?

A. Economic benefit, economic benefit to the Company.

Q. I understand that principle, but what is the opportunity of the Company, if any, to pass along this -- the expenses and the penalty to someone else? Was that ever -- did that ever come up in that discussion? Now you said basically it didn't come up in the entire case, right?

A. In the trial, I'm trying to think back here through the deposition.

Q. Came up in Mr. Allen's deposition, but that was the last that I heard of it.

A. Did it? I'm just not aware. But certainly at trial, I didn't put on anything on those lines, and I don't think the Department of Justice ever said anything about it. We knocked out -- one of their witnesses was going to

talk about economics and what -- whether that person would have done anything, I don't know. But I just don't think it ever came up.

Q. When you had -- let me ask you just a couple last questions here. Mr. Allen was a witness for both you -- you, I'm sorry -- for both FCWC and for Avatar; is that correct?

A. Well, I would call him an FCWC witness because we called him.

Q. He was sponsored -- was he ever sponsored by Mr. Hird? Was he ever sponsored by Avatar?

A. I don't think so. He was called by us, and then he was questioned by Mr. Hird, but he was an FCWC witness. He was called by me.

Q. He was questioned as a witness in Avatar's direct case, was he not? In other words he wasn't cross examined or held to be an adverse witness?

A. That's correct. He obviously would have been asked questions as a direct fact witness and not as a hostile witness, where he had been crossed.

Q. Sure, but Avatar would have to look primarily to Mr. Allen, would they not, to isolate -- if you'll permit the use of the term -- the decisions which were made -- isolate Avatar from the decisions which were made by Florida Cities Water Company, in this case from FCWC; is that right?

A. No, he wasn't the only one.

Q. Was he the principal one?

A. Would he be the principal? I mean, he clearly would be a key part of the equation, but the Department of Justice called the chairman of the board and Mr. Levy in an effort to establish a review that was undertaken, I believe, by not only Mr. Levy but I think Mr. Slapkis, who had also passed away, I think at that point.

Q. Were you at all concerned that Mr. Allen might be faced with divergent interests, i.e., that of Avatar and Florida Cities Water Company, or did you really -- and I guess this is a compound question, so please forgive it, but did you believe that the interests of Avatar and Florida Cities Water Company were essentially the same?

A. I don't know if the question ever arose. Mr. Allen told the truth, and what the decision-making process was. We talked to a number of people through Mr. Hird about what happened at Avatar. So the question just never came up.

Q. One last issue, and maybe just one last question. You told Ms. Gervasi that you didn't bear -- that Avatar dealt with their own defense. You didn't provide any defense for Avatar; you dealt with Florida Cities Water Company, right?

A. That's correct. FCWC hired me, and it was the

fact that this company was the permit holder. And under the Clean Water Act, you go after, quote, "the violator," unquote. So Avatar wasn't ever, in my opinion, one, a holder of the permit.

Q. But DOJ wanted to tie them into it, didn't they?

A. Absolutely. That's the only way they felt they could get the money, because they knew that the type of fine that they were seeking, that they couldn't get that out of Florida Cities, so they wanted to get to the parent's deeper pocket.

Q. Sure. And you began to suspect that, did you not, after the first complaint when they began to depose a number of people who might speak to that issue; is that correct? Or maybe you suspected it before then, but that was certainly some gathering storm clouds with respect to that issue, wasn't it?

A. Gathering storm clouds, I would agree with you.

Q. Now, did Avatar provide those witnesses with the representation during those depositions, or was that held to be your duty?

A. You would have to identify the witnesses. I just don't recall.

Q. Okay. And well, I don't want to refer specifically your testimony, but in general in your testimony you do identify a number of witnesses who were

deposed, and I got the distinct impression that you were saying, looks like they didn't get after Avatar because they are deposing these witnesses who know about that issue.

A. Oh, absolutely. My suspicions were certainly being aroused by discovery, and the fact that we were being successful in showing that the Waterway Estates case wasn't much of a case, if any case at all.

Q. Were there any of those witnesses who you said, wait a minute, this is Avatar's baby, let Avatar represent those witnesses at deposition? Did you ever do that?

A. No, because I think at that point when they first came on we just weren't quite clear where the government was going.

Q. And as it later turned out, the government was indeed -- matter of fact, one of the aspects of the amended complaint was they went after Avatar at that point, right?

A. Absolutely. It finally came out in the open at that point that they were going after Avatar.

Q. And Avatar's liability was not established at summary judgment level; it actually went to trial, didn't it?

A. That's correct.

Q. So looking back to these various --

A. These witnesses, for the most part, without identifying them specifically, I mean could cover the

testimony for both companies, I think at that point.

Q. Sure. But it was clear at the point that you mentioned in your testimony that they were in fact being sought and deposed by the government because they could testify to the Avatar liability issue, correct?

A. It would start out with Florida Cities. I mean, that was always -- and I can't think of -- that's why I was asking you earlier if you can identify which witness, because I'm thinking most of them.

Q. Okay.

A. It was from a Florida Cities' standpoint, even someone like Levy, it would tie back to Florida Cities.

Q. And certainly be relevant to both issues, namely the liability of Florida Cities and of Avatar, but was there any attempt at any point in this case to make -- and by this case I mean the case now before the Commission -- to apportion any expenses related to any of those depositions to Avatar, on the one hand, and Florida Cities on the other, or was the assumption indulged that those witnesses were deposed on behalf, if you'll permit the characterization, of Florida Cities Water Company?

A. Yeah, I would have to say at the time I was looking at them from a Florida Cities' standpoint.

Q. One second, and I think I'm through. There was one other, twice when you mentioned, you said, letting

Carrollwood and Barefoot Bay off the hook. And I certainly agree that the economic penalty was substantially lessened, so I don't want to hear about that, but there was, in fact, violations found at both those facilities, correct?

A. Yes, there were exceedences having to do with phosphorus and nitrogen, because neither facility was set up to meet this AWT standard. And the Carrollwood situation, as you can tell from the record, we were moving -- finally after all the delay caused by Hillsborough County, we moved, or FCWC moved, to shut that facility down. So there was a short period of time where the facility still was not being AWT, but what we pointed out to the court, and one reason you see these fines being insignificant, is that these facilities were operating, and this company operated these facilities at such a high level, they exceeded substantially a secondary treatment plant's levels. And this was testified to by this -- by Dr. Smith.

Q. Those were then actual violations of the permit?

A. They were technical exceedences. I never like to use the word "violation," because under the state of Florida, you're given a period of time to bring yourself into compliance.

Under the Clean Water Act, once you have a permit, and you're not meeting that permit, you don't have any period of time to bring yourself into compliance. It's just

one of the anomalies of the act. So we would say exceedences, yes, but the court saw that those exceedences were so insignificant in light of the good job these folks were doing in operating the facilities. That's why there was virtually no fine in either one of these facilities.

Q. The court didn't show any hesitation in calling them violations, did they -- did he?

A. Well the court has to make that determination just under the statute that these are violations to fit within Section 301.309 of the statute.

Q. Mr. Baise, thank you very much. I have nothing further.

MS. GERVASI: Mr. Gatlin?

MR. GATLIN: I have no questions.

MS. GERVASI: Can we establish a deadline for the three late-filed exhibits? Do you think you can get them in two weeks?

THE WITNESS: That is fine.

MR. GATLIN: Would you give me a memorandum or letter or something to make sure we have the right ones?

MR. McLEAN: Could I throw tab 42 in there along with it? I would like to see what that order says. It's not a big deal.

MR. GATLIN: Yes, I have a note on that. You want

REPORTER'S DEPOSITION CERTIFICATE

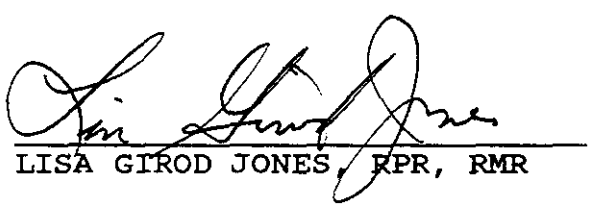
STATE OF FLORIDA)

COUNTY OF LEON)

I, LISA GIROD JONES, Registered Professional Reporter, certify that I was authorized to and did stenographically report the above-styled deposition; that a review of the transcript WAS requested; and that the transcript is a true and complete record of my stenographic notes.

I further certify that I am not a relative, employee, attorney, or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 26th day of May 1998.



LISA GIROD JONES, RPR, RMR

an exhibit as to what's supposed to be on 42?

MR. McLEAN: Whatever you intended to put on 42.

I think that just the wrong order was put in there, but I looked through the rest of the material and could not find the right order. Particularly since I have that order, I was reading it and I thought, I've seen this before.

MR. GATLIN: Just skimming it now, looks like we might have put the wrong order in there, but we'll make that determination and let you know.

MR. McLEAN: Thank you, sir.

MS. GERVASI: Mr. Baise, thank you very much and that concludes the deposition.

(Deposition concluded at 1:00 p.m.)

FLORIDA CITIES WATER COMPANY

No 2

TO: A.A. Reeves III

DATE: August 10, 1986

FROM: P.J. Lehman

SUBJ: Waterway Estates WWTP
DER Meeting July 29, 1986
NPDES/DER Permit Renewals

The above referenced meeting was held at the Ft. Myers DER office at the request of the DER.

Attending:

V. Melee, DER
L. Adair, DER
G. Romeis, DER
P. Lehman, FCWC

The referenced meeting was precipitated by the NPDES denial from the EPA. Waterway Estates WWTP has a valid DER Operating Permit with an expiration date of August 2, 1988. The DER recognizes this fact and will honor the existing Permit.

The local South Florida District DER office has recommended to Tallahassee the following:

1) Compliance with no discharge should be at expiration of current DER Operating Permit, August 2, 1988.

2) There should be no nutrient limits on existing WWTP. All Monitoring should be in accordance with DER regulations plus addition of quarterly monitoring of nutrients.

The attached DER inter-office memo outlines the above DER District Office recommendations.

The purpose of the meeting was to establish a compliance schedule with the DER to meet the August 2, 1988 deadline. Discharge option to the Caloosahatchee River would require a wasteload allocation. There currently is available capacity and if FCWC requests a WLA, the DER should be able to comply within four weeks. Other disposal options are available, i.e., upland spray irrigation or deep well injection, depending on the cost-effectiveness.

FCWC is to respond to the DER with a proposed compliance schedule providing target dates for major tasks completion in order to comply with the August 2, 1988 date to maintain no-discharge to the canal. The DER will formulate a consent agreement to this effect.

Re: Waterway Estates Wastewater Treatment Plant
NPDES Permit No. FL0030325

Dear Mrs. Kagey:

The following actions have been initiated regarding the information requested in your letter dated July 28, 1986:

1) The proposed compliance schedule is as follows:

	Task	Completion Date
1.	Demographic study and flow projections	10-31-86
2.	Engineering study of treatment and effluent disposal alternatives and process selection	1-31-87
3.	Prepare detailed engineering plans and and specifications	5-30-87
4.	Submit construction permit application to Florida DER	7-15-87
5.	Solicit bids for construction	9-15-87
6.	Award construction contract	11-30-87
7.	Complete construction and start-up	8-1-88
8.	Certify wastewater treatment plant is in compliance	12-31-88

FLORIDA CITIES WATER COMPANY
2112 Gulf Gate Drive
P[illegible] BOX 5846
Sarasota, Florida 34277
813-924-1128

Ms. Connie A. Kagey, Environmental Engineer September 16, 1988
Water Management Division
U.S. Environmental Protection Agency
Region IV

2) The existing DER operating permit No. D036-72569 is valid through August 2, 1988. The DER has stated that there are no problems with the current operation and the existing discharge limitations should remain in effect until expiration of the operating permit in 1988 per chapter 17-3, 17-4 and 17-6 FAC for conventional secondary wastewater treatment. No nutrient (nitrogen and phosphorus) limits should be placed on the discharge until the existing DER permit expires. Meanwhile, Total N and Total P will be monitored for effluent samples on a quarterly basis. All parameters will be monitored in accordance with Chapter 17-19 FAC.

If you have any questions, please do not hesitate to call me at (813) 936-1113.

Sincerely,

Patrick J. Lehman, P.E.
Operations Manager

Gary Baise's Deposition Exhibit 2
1 of 3

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA Plaintiff, v. CITY OF CAPE CORAL, FLORIDA, and THE STATE OF FLORIDA, Defendants.	CIVIL ACTION NO. 91-59-CIV-FTM-15(D)

CONSENT DECREE

Plaintiff, the United States of America ("United States"), on behalf of the United States Environmental Protection Agency ("EPA"), filed a Complaint on March 15, 1991, alleging that Defendant City of Cape Coral ("Cape Coral"), violated the Clean Water Act, 33 U.S.C. § 1251 et seq., and the conditions and limitations of National Pollutant Discharge Elimination System ("NPDES") Permit Number FL0030007.

Defendant owns and operates a publicly-owned treatment works ("POTW") known as the Everest Parkway Water Reclamation Plant, which discharges into the Caloosahatchee River.

The State of Florida has been joined as a Defendant pursuant to Section 309(e) of the Clean Water Act, 33 U.S.C. § 1319(e). Under Section 309(e), the State of Florida shall be liable for payment of any judgment, or any expenses incurred as a result of complying with any judgment, entered against Cape Coral, to the

extent that the laws of the State of Florida prevent Cape Coral from raising revenues need to comply with such judgment.

The undersigned parties have consented to the entry of this Decree without trial of any issues, and hereby stipulate to the Court that in order to settle the allegations stated in the United States' Complaint, this Consent Decree should be entered.

NOW, THEREFORE, it is hereby ORDERED, ADJUDGED, and DECREED as follows:

I. JURISDICTION

This Court has jurisdiction over the subject matter of this action and over the parties hereto pursuant to Section 309 of the Act, 33 U.S.C. § 1319, and 28 U.S.C. §§ 1345 and 1355. The Complaint states a claim upon which relief may be granted under Section 309 of the Act, 33 U.S.C. § 1319.

II. BINDING EFFECT

The provisions of this Consent Decree shall apply to and be binding upon the United States and Cape Coral and upon Cape Coral's officers, directors, agents, servants, employees, successors, assigns, and all persons, firms and corporations acting under the control or direction of Cape Coral. No later than thirty (30) days prior to transfer of ownership, operation, or other interest in the facility, Cape Coral shall give written notice of this Consent Decree to any such transferee; Cape Coral shall require, as a condition of the transfer, that the transferee fully comply with all terms and conditions of this Decree. Cape Coral shall also provide a copy of this Decree to

each contractor retained to perform any activity required by this Decree, and shall require any such contractor to fully comply with all terms and conditions of this Decree. Cape Coral shall notify in writing EPA Region IV, and the United States Department of Justice, at least thirty (30) days prior to any such transfer.

III. OBJECTIVES

The express purpose of the undersigned parties in entering into this Consent Decree is to further the objectives of the Clean Water Act, as stated at Section 101 of the Act, 33 U.S.C. § 1251. All plans, studies, construction, remedial maintenance, monitoring programs, and other obligations in this Decree or resulting from the activities required by this Decree shall have the objective of causing Cape Coral to come into and remain in full compliance with the Clean Water Act, including compliance with the terms and conditions of NPDES Permit Number FL00300007, and any renewals, modifications, and amendments to that Permit. It is also the express purpose of this Consent Decree to cause Cape Coral to fully comply with the provisions of all other applicable federal and state laws and regulations governing Cape Coral's operation of its POTW and discharges therefrom, and to minimize to the greatest extent possible the discharge of pollutants into the Caloosahatchee River.

IV. DEFINITIONS

Unless otherwise defined herein, terms used in this Decree shall have the meaning given to those terms in the Clean Water Act, 33 U.S.C. § 1251 et seq., the regulations promulgated

thereunder, and in any applicable NPDES permit.

V. COMPLIANCE WITH NPDES PERMIT

A. Cape Coral shall at all times fully comply with its NPDES Permit and the Clean Water Act.

B. Cape Coral shall take the following measures, and all other measures practicable, in order to ensure to the maximum extent possible that it complies with the effluent toxicity limits of its NPDES Permit:

1. Beginning no later than thirty days after entry of this Decree, and continuing for a period of twelve months, Cape Coral shall conduct monthly short-term mysid shrimp (Mysidopsis bahia) Survival, Growth and Fecundity Tests, and 48-hour mysid shrimp acute static tests on effluent from its POTW, following the procedures for such tests specified in its NPDES permit. Cape Coral shall analyze each sample used in the toxicity tests and a 24-hour composite influent sample (composed approximately one treatment plant detention period prior to composition of the effluent composite sample used for the toxicity tests) for the presence of the pesticide chemical diazinon.

2. If the effluent so tested fails any toxicity test described above in two consecutive months or there are, in the aggregate, four failures of any such test during the twelve month testing period, Cape Coral shall forthwith conduct a Toxicity Identification Evaluation (TIE), in accordance with the procedures contained in EPA publications EPA/600/3-88/034, 035, 036, Methods for Aquatic Toxicity Identification Evaluations.

3. Within thirty (30) days of the completion of the series of tests referred to in subparagraph 1 above, Cape Coral shall submit to EPA a comprehensive report assessing the results of those tests. Within sixty (60) days of the completion of the TIE, if one was required by EPA under subparagraph 2, Cape Coral shall submit to EPA a comprehensive report assessing the results of the TIE.

4. No later than thirty (30) days of its signature of this decree, Cape Coral shall submit to EPA for approval a public awareness plan designed to

reduce the amount of pesticide chemicals which are deposited into its sewer system. Cape Coral shall make any modifications to the plan required by EPA, and shall fully implement the plan, as modified, all within thirty (30) days of notification by EPA.

VI. MONITORING AND REPORTING

A. In addition to the monitoring and reporting requirements contained in its NPDES Permit, and in addition to the reporting requirements set out in Paragraph V(2) of this Decree, beginning with the calendar month in which this Decree is entered, and for every calendar month thereafter, Cape Coral shall submit a written progress report to EPA Region IV. The progress report shall fully describe all matters arising that month which relate to compliance with this Decree and, at a minimum, shall include the following information: (1) the status and progress of compliance measures required by this Decree; (2) sampling, testing, and monitoring results; and (3) a certification of compliance with all aspects of this Decree, or, in the alternative, a full description of each violation of this Decree, together with the reasons therefor and a description of any actions taken to remedy the violation and/or to prevent additional such violations. The progress report shall also include a projection of any compliance measures to be performed pursuant to this Decree during the following twelve (12) month period.

B. Each progress report shall be submitted within the first fifteen (15) days of the month immediately following the month which is the subject of the report. The full report shall

be made available for inspection by any person at Cape Coral's offices.

VII. STIPULATED PENALTIES

A. Effective January 1, 1992, Cape Coral shall pay stipulated civil penalties as follows for (i) each and every failure to comply with any deadline or affirmative requirement imposed under Articles II, V, VI, VII, X or XII of this Decree, and, (ii) for each and every violation of its NPDES permit except as specified in subparagraph B following:

Period of Failure to Comply	Penalty
1st to 30th day	$1,000.00/day per violation
31st to 60th day	$2,000.00/day per violation
After 60 days	$5,000.00/day per violation

B. Effective January 1, 1992, Cape Coral shall pay stipulated civil penalties as follows for each instance of noncompliance with any effluent limitation contained in its NPDES Permit:

Discharge Limitation	Penalty
Weekly Average Limit	$ 3,000 per week
Monthly Average Limit	$10,000 per month
Annual Average Limit	$25,000 per month
Acute Toxicity Limit	$20,000 per violation[1]
Chronic Toxicity Limit	$10,000 per violation[1]
Other effluent Limits	$ 500 per day

C. The stipulated penalties herein shall be in addition to other remedies or sanctions available to the United States by reason of Cape Coral's failure to comply with the requirements of

[1] This stipulated penalty applies only to violations occurring after July 1, 1995.

this Decree, any NPDES Permits, or the Clean Water Act.

D. Cape Coral shall pay stipulated penalties without demand no later than the 28th day of the month following the month in which the violation(s) occurred. Payment shall be made by cashier's check payable to the "Treasurer of the United States," and tendered to the United States Attorney for the Middle District of Florida, together with a letter describing the violation. A copy of the letter and the check shall be sent to the addressees specified in Section XVII herein.

VIII. FUNDING

Compliance with the terms of this Consent Decree by Cape Coral is not conditioned in any way on the receipt of any Federal or State grant funds.

IX. DELAYS OR IMPEDIMENTS TO PERFORMANCE

A. If any event occurs which causes, or Cape Coral reasonably believes is likely to cause it to violate any provision of this Decree, Cape Coral shall notify in writing the Court and the addressees specified in Section XVII herein within ten (10) days of the event. The notice, which shall be signed by an officer of Cape Coral under oath, shall specifically reference this Section of the Decree and describe in detail (1) the nature and duration of the violation; (2) the precise cause or causes of the violation; (3) the remedial measures taken or to be taken by Cape Coral to prevent or minimize the extent of violation, as well as to prevent future such violations; and (4) the timetable for implementation of the remedial measures. Cape Coral shall

adopt all reasonable measures to avoid or minimize any such violation. Failure by Cape Coral to comply with the notice requirement of this Section shall bar Cape Coral from requesting from EPA (1) an extension of time for performance of an obligation under this Decree and (2) a waiver of stipulated penalties.

B. Cape Coral may request from EPA an extension of time and/or a waiver of stipulated penalties for any violation or delay, provided Cape Coral complies with the notice requirement of paragraph A above and submits a sworn statement by its officer to the effect that the violation has been or will be caused entirely by circumstances beyond the control of Cape Coral or any entity controlled by Cape Coral, including Cape Coral's consultants and contractors, and that Cape Coral could not have foreseen and prevented such violation. If EPA agrees with the statement, it may extend the time for performance of a requirement under this Decree, and/or may waive any stipulated penalties. In the event EPA denies Cape Coral's request, Cape Coral may submit the matter to the Court for dispute resolution pursuant to Section XI of this Decree. In any such proceeding, in addition to the burdens imposed by Section XI, Cape Coral shall bear the burden of proving that any delay or violation of any requirement of this Consent Decree was caused entirely by circumstances beyond the control of Cape Coral or any entity controlled by Cape Coral, including its consultants and contractors. Cape Coral shall also bear the burden of proving

the duration and extent of any delay or violation attributable to such circumstances. Pending any decision by EPA and/or the Court, stipulated penalties shall be paid as provided herein.

C. Unanticipated or increased costs or expenses associated with the implementation of this Decree, changed financial circumstances, or technical infeasibility of meeting any NPDES effluent limitations shall not, in any event, serve as a basis for changes in this Decree, waiver of stipulated penalties, or extension of time under this Decree.

D. Compliance with any requirement of this Decree by itself, shall not constitute compliance with any other requirement. An extension of a specified compliance date based on a particular incident does not extend any subsequent compliance date or dates. Cape Coral must make an individual showing of proof regarding each delayed incremental step or other requirement for which an extension is sought.

X. PENALTY FOR PAST VIOLATIONS

Cape Coral shall pay a civil penalty in the amount of $750,000.00, plus interest, in full satisfaction of the United States' civil claims for Cape Coral's violations of its NPDES Permit and the Clean Water Act, as set forth in the Complaint filed herein, through January 1, 1992. Payment shall be made as follows:

(1) Within thirty (30) days of the entry of this Consent Decree, Cape Coral shall pay $375,000.00.

(2) No later than thirteen months after entry of this

Consent Decree, Cape Coral shall pay $375,000.00, plus interest on that amount accrued from the date of entry of this Decree, at the rate provided in 28 U.S.C. § 1961(a). Interest shall be compounded annually.

All payments shall be made by delivering a cashier's check made payable to the "Treasurer of the United States" to the United States Attorney for the Middle District of Florida. A copy of the check and the letter tendering such check shall be mailed to the addressees specified in Section XVII herein. Payments shall not be deductible for federal taxation purposes.

Neither the payment of this penalty nor Cape Coral's consent to this Decree shall constitute an admission of liability.

XI. DISPUTE RESOLUTION

If the parties are unable to agree upon any plan, procedure, standard, requirement, or other matter described herein, or in the event a dispute should arise among the parties regarding the implementation of the requirements of this Decree, Cape Coral shall follow the instructions of the United States unless it seeks a review in this court by appropriate pleading or motion filed within thirty (30) days of receipt of the United States' final written position concerning the dispute. The petition shall set out the nature of the dispute with a proposal for its resolution. The United States shall have thirty (30) days from receipt of the petition to file a response with an alternative proposal. In any such dispute, Cape Coral shall have the burden of proving that EPA's position is arbitrary and capricious and

not in accordance with the objectives of this Decree, and that adoption of Cape Coral's position will achieve compliance with the terms and conditions of its permit and the Clean Water Act in an expeditious manner.

XII. RIGHT OF ENTRY

Until termination of this Consent Decree, EPA and its authorized representatives, contractors, consultants and attorneys, shall have the authority to enter without notice, any facility covered by this Decree, at all times, upon presentation of credentials to a responsibile Cape Coral employee, for the purposes of:

1. monitoring the progress of activities required by this Decree;

2. verifying any data or information submitted to EPA in accordance with the terms of the Decree;

3. obtaining samples, and, upon request, splits of any samples taken by Cape Coral or its contractors and consultants;

4. reviewing, inspecting, and copying records; and

5. otherwise assessing Cape Coral's compliance with this Decree and its NPDES Permit.

This provision in no way affects any other right of entry or inspection that the United States and its agents have under any Federal law or regulation.

XIII. NOT A PERMIT

This Consent Decree is not and shall not be interpreted to be a permit, or a modification of an existing permit, for the discharge of pollutants under Section 402 of the Clean Water Act, 33 U.S.C. § 1342, nor shall it in any way relieve Cape Coral of

its obligation to comply with the requirements of its NPDES Permit and with any other applicable Federal or State law or regulation. The pendency of any proceeding concerning the issuance, reissuance, or modification of an NPDES permit shall neither affect nor postpone Cape Coral's duties and liabilities as set forth in this Consent Decree.

XIV. FAILURE OF COMPLIANCE

The United States by its consent to the entry of this Decree, does not warrant or aver in any manner that Cape Coral's complete compliance with this Decree will result in compliance with the provisions of the Clean Water Act, 33 U.S.C. § 1251 et seq., or its NPDES Permit. Cape Coral shall remain solely responsible for compliance with the terms of the Clean Water Act, this Decree, its NPDES Permit, and all applicable Federal and State laws and regulations, notwithstanding EPA's receipt, review, or approval of any plans or procedures formulated pursuant to this Decree, or any other action.

XV. NON-WAIVER PROVISIONS

A. This Consent Decree in no way affects or relieves Cape Coral of responsibility to comply with any Federal, State, or local law or regulation. Nothing contained in this Decree shall be construed to prevent or limit the United States' rights to obtain penalties or injunctive relief under the Clean Water Act or other Federal statutes or regulations, except as expressly specified herein.

B. The United States expressly reserves all remedies

available to it for violation of the Act not alleged in the Complaint filed in this matter, and all remedies available to enforce the provisions of this Decree.

C. This Consent Decree does not limit or affect the rights of Cape Coral or of the United States as against any third parties, nor does it limit the rights of third parties, not parties to this Consent Decree, against Cape Coral.

D. Nothing herein shall be construed to limit the authority of the United States to undertake any action against any person, including Cape Coral, in response to conditions which may present an imminent and substantial endangerment to the public health, welfare or the environment.

E. Nothing herein shall be construed to limit the authority of the United States under Section 308 of the Act, 33 U.S.C. § 1318.

XVI. COSTS OF SUIT

Each party shall bear its own costs and attorney's fees in this action. Should Cape Coral subsequently be determined to have violated the terms and conditions of this Decree, then Cape Coral shall be liable to the United States for any costs and attorney's fees incurred by the United States, in any action or proceeding against Cape Coral for noncompliance with this Decree.

XVII. FORM OF NOTICE

Except as specified otherwise, when written notification to or communication with the United States and/or EPA is required by the terms of this Consent Decree, it shall be addressed as

follows:

As to the United States and the United States Department of Justice:

Chief, Environmental Enforcement Section
Environment and Natural Resources Division
U.S. Department of Justice
Post Office Box 7611
Ben Franklin Station
Washington, D.C. 20044
Reference Case NO. DJ 90-5-1-1-3357

As to the United States Attorney:

United States Attorney
Middle District of Florida
500 Zack Street
Suite 400
Tampa, FL 33602

As to EPA

Florida/Mississippi Compliance Section
Facilities Performance Branch
Water Management Division
U.S. Environmental Protection Agency
Region IV
345 Courtland Street, N.E.
Atlanta, Georgia 30365

XVIII. MODIFICATION

Except as provided for herein, there shall be no modification of this Consent Decree without prior written approval of the parties to this Consent Decree and the Court.

XIX. PUBLIC COMMENT

The parties agree and acknowledge that final approval by the United States and entry of this Decree is subject to the requirements of 28 C.F.R. § 50.7 which provides for notice of the lodging of this Consent Decree in the Federal Register, an opportunity for public comment, and consideration of any comments.

XX. SEVERABILITY

The provisions of this Consent Decree shall be severable, and should any provisions be declared by a court of competent jurisdiction to be unenforceable, the remaining provisions shall remain in full force and effect.

XXI. CONTINUING JURISDICTION OF THE COURT

The Court shall retain jurisdiction to enforce the terms and conditions of this Decree and to resolve disputes arising hereunder as may be necessary or appropriate for the construction or execution of this Decree.

XXII. STATE'S RESERVATION OF RIGHTS

The State of Florida enters this Consent Decree for the limited purpose of facilitating an end to the dispute between the United States and Cape Coral. The State reserves its right to raise all defenses available to it under section 309(e) of the Clean Water Act, 33 U.S.C. § 1319(e), and to the claims raised by the United States in its Complaint. The United States agrees that the State shall have the right in such a dispute to raise all such defenses. Nothing in this Decree shall subject decisions of the State or any of its agencies regarding environmental permitting as provided by state law to modification or review by this Court.

XXIII. TERMINATION

This Decree shall terminate upon Motion of either the United States or Cape Coral, which may only be made once Cape Coral has paid all penalties due, has completed all compliance measures

specified herein, and EPA has certified that Cape Coral has satisfactorily achieved compliance with its NPDES Permit and the Clean Water Act for a period of twelve (12) consecutive months.

From: Gerald S. Allen
To: Dennis J. Getman
Subject: Civil Action - US v. City of Cape Coral and State of Florida
Date: May 13, 1992

Encl.: X

Ref: Memorandum - Barton to Allen and Bradtmiller, 5/8/92

CC:

Enclosed herewith is a copy of the above reference with enclosure (consent decree) pertaining to allegations of violations of the Clean Water Act by the City of Cape Coral. Note that the consent decree provides for a civil penalty in the amount of $750,000 for past violations and provides for stiff penalties for future violations.

I suspect this situation, when combined with the Citizens' suit brought against FCWC, may be the principle force behind the USEPA's reluctance to settle the Waterway Estates Wastewater Treatment Plant issue.

Re: Florida Cities Water Company

Date: May 8, 1992

It was suggested in our last conference call that EPA has made an analogy between Florida Cities and the City of Cape Coral. In an effort to determine the status of the Cape Coral case I have made several calls to the Assistant City Attorney and the outside counsel hired to handle the federal suit filed against Cape Coral.

The City of Cape Coral's sewage treatment discharges to the Caloosahatchee River. The plant capacity, initially approximately 4 mgd, has undergone several expansions to approximately 12 mgd, and ultimately is designed for 30+ mgd. Historically the plant had trouble meeting effluent limits and there were apparently several administrative orders entered at both the federal and state levels.

The City of Cape Coral and EPA had extensive enforcement discussions prior to the agency's referral to the Department of Justice (DOJ). In early 1991, the DOJ filed a suit against Cape Coral in the Middle District, alleging multiple violations of the City's NPDES permit (91-59 CIV FTM -15). Apparently, this suit was actually filed over one year after the EPA referred it to the Department of Justice.

According to Richard Davis (special counsel), the City had several settlement negotiation sessions with DOJ and EPA after the suit was filed. The respective negotiators ultimately agreed on the language in the attached **unexecuted** consent decree, which has not made its way through the DOJ and EPA hierarchies for approval and sign-off at the appropriate levels. As the consent decrees shows, the City has agreed to pay penalties of $750,000.00. The suit remains pending until the consent decree is finalized and entered by the District Judge.

FLORIDA CITIES WATER COMPANY

Gary Baise's Deposition Exhibit 3

No 3

July 22, 1988

Mr. Peter McGarry
U.S. EPA, Region IV
345 Courtland Street
Atlanta, Georgia 30365

RE: Waterway Estates WWTP
NPDES Permit No. FL0030325
Administrative Order No. 87-085(WMGM)

Dear Mr. McGarry:

Enclosed is a copy of the final DER Consent Order agreed upon by DER and Florida Cities Water Company. The schedule for compliance is included in the Consent Order.

At the present time, preliminary engineering has been completed for the construction of an advanced wastewater treatment plant with discharge to the Caloosahatchee River. Various permits for local agencies have been submitted, and the final engineering design is proceeding on schedule. Review of the wasteload allocation by the DER has shown that capacity for the point discharge is available. An NPDES discharge permit application will be submitted based on this allocation discharge requirement.

Florida Cities Water Company requests that the existing Administrative Order be extended to coincide with the schedule contained in the DER Consent Order. If you have any questions, please do not hesitate to call me at (813) 924-1128.

Sincerely,

Patrick J. Lehman, P.E.
Vice President, Operations

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IV

IN THE MATTER OF	)	
FLORIDA CITIES WATER COMPANY	)	
WATERWAY ESTATES	)	Order No. 87-085(wMGM)
FT. MYERS, FL	)	
NPDES PERMIT NO. FL0030325	)	

ORDER PURSUANT TO SECTION 309
CLEAN WATER ACT

Pursuant to the authority of Section 309(a) of the Clean Water Act (the Act), 33 U.S.C. 1319, which has been delegated to me, I hereby make the following Findings of Fact and Violation and Order:

FINDINGS OF FACT

1. Florida Cities Water Company (hereinafter, the Respondent), has submitted an NPDES permit application wherein it is stated that Respondent has a wastewater treatment system (Waterway Estates STP) which periodically discharges pollutants into waters of the United States.

2. The United States Environmental Protection Agency, Region IV (EPA), has denied issuance of a National Pollutant Discharge Elimination System (NPDES) Permit for the above discharge. The permit was denied December 8, 1986.

3. In accordance with Section 301(a) of the Clean Water Act, discharges of pollutants into waters of the United States are unlawful unless permitted by an NPDES permit, or specifically exempted from NPDES requirements. The final effluent limits for this facility to a canal of the Caloosshatchee River are "no discharge." An NPDES permit can not be issued to a facility that is discharging to a no discharge area.

VIOLATION

The Respondent is in violation of Section 301(a) of the Clean Water Act by discharging pollutants into waters of the United States without an NPDES permit.

ORDER

Based on the foregoing Findings of Fact and Violation, and pursuant to the provisions of Section 309(a) of the Act, as amended, it is hereby ordered:

1. That the Respondent cease discharging pollutants to waters of the United States at the earliest date practicable but not later than September 30, 1988. The Respondent shall report on progress toward meeting this compliance date as follows:

Activity	Due Date
Submit Progress Report	July 1, 1987
Submit Progress Report	August 1, 1987
Submit Progress Report	September 30, 1987
Start Construction	October 15, 1987
Submit Progress Report	December 30, 1987
Submit Progress Report	March 30, 1987
Complete Construction	August 1, 1988
Meet Final Requirements by Ceasing Discharge	September 30, 1988

2. This should in no way be considered a permit to discharge, however, if the Respondent does discharge to waters of the United States in violation of the Act, the Respondent's discharge of treated wastewater shall at least comply with the effluent limitations, monitoring schedule and other requirements contained in its previous permit.

3. That monitoring results obtained during each calendar quarter shall be summarized on a Discharge Monitoring Report Form (EPA Form 3320-1). Forms shall be submitted for each month and shall be postmarked no later than the 28th day of the month following the end of the month being reported on. Monitoring required by the State of Florida other than that specifically required by this Order shall be submitted in the same form as to the State but shall be included with Discharge Monitoring Report submissions.

4. If there is any transfer of ownership of this facility prior to completion of all requirements of this Order, then the new owner must be informed of these requirements and shall carry out the provisions. EPA shall be notified of any transfer of ownership.

5. The information required by this Order other than monitoring information shall be sent by registered mail or its equivalent to the following addresses:

Mr. John T. Marlar, Chief
Facilities Performance Branch
Water Management Division
U. S. Environmental Protection Agency
Region IV
345 Courtland Street
Atlanta, GA 30365

Mr. Phillip R. Edwards
Florida Dept. of Environmental Regulation
2269 Bay St.
Ft. Myers, FL 33901

6. Nothing contained in this Order shall be construed to prevent further enforcement of the violations stated herein.

RE: Public Notice - Intent to Deny
Waterway Estates, NPDES Permit No. FL0030325

Dear Mr. Reeves:

The Environmental Protection Agency (EPA), Region IV, has tentatively concluded that your National Pollutant Discharge Elimination System (NPDES) permit application should be denied. In accordance with the Federal Water Pollution Control Act, we have determined that there should be no permitted discharge from your facility to Caloosahatchee River via a canal. The enclosed fact sheet provides the rationale from this decision.

In accordance with 40 Code of Federal Regulations (CFR) 124.10(c)(1)(i), enclosed is the Public Notice pertaining to the Environmental Protection Agency's (EPA) tentative decision on your National Pollutant Discharge Elimination System (NPDES) permit application. All comments and objections to the proposed denial must be submitted to EPA within the time period specified in the Public Notice (refer to 40 CFR 124.13).

We have received your July 9, 1986, letter requesting an additional 90-day extension to evaluate your options and prepare engineering studies. To bring this facility into compliance with the zero discharge, EPA proposed to issue an Administrative Order containing a schedule of actions culminating in cease discharge, and containing a set of interim discharge limitations. This Administrative Order would be forthcoming after all final permit actions have been addressed which will be approximately October 1, 1986, if all proceeds on schedule. The information previously requested for and reiterated again should be received by us no later than September 30, 1986, which will give you approximately eighty (80) days of time extension:

1. A schedule, listing major actions necessary for you to attain a no discharge status, with estimated dates for each action including cessation of discharge;

2. A suggested set of interim effluent limits based on the design capabilities of your existing wastewater treatment facilities.

A state certification has been requested for this permit action.

Exhibit___MA-2

If you have any questions concerning the procedures associated with the permit program, please contact Mrs. Connie Kagey at the above address or by calling 904/347-2156.

Sincerely yours,

James R. Patrick, Jr.
Chief, Permits Section
Water Management Division

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET
ATLANTA, GEORGIA 30365

Date June 30, 1986

FACT SHEET

APPLICATION FOR
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
PERMIT TO DISCHARGE TREATED WASTEWATER
TO U.S. WATERS

Application No. FL0030325 Application Date May 9, 1986

1. SYNOPSIS OF APPLICATION

a. Name and Address of Applicant

Florida Cities Water Company - Waterway Estates WWTP
2112 Gulf Gate Drive
P.O. Box 5846
Sarasota, Florida 34277

Location of plant: 1667 Inlet Drive, North Fort Myers
Lee County, Florida

b. Type of Facility

Privately owned wastewater treatment plant
SIC Code 4952

c. Design Capacity of Facility

1.08 MGD

d. Applicant's Receiving Water

Caloosahatchee River via a canal (see Attachment A)

e. Description of Wastewater Treatment Facilities

Treatment consists of a 1.08 MGD contact stabilization wastewater facility.

f. Description of Discharges

Outfall Serial No. 001.
Information consists of the average of the daily average and maximum values from Discharge Monitoring Report (DMR) data during the period of January 1985 - April 1986.

Parameter (Units)	Value (daily avg./daily max)
Flow (MGD)	.574/-
BOD_5 (lbs/day)	29.2/67.1
(mg/l)	6.1/13.8
TSS (lbs/day)	47.1/185.9
(mg/l)	11.0/37.9
TKN (lbs/day)	47.4/59.1
(mg/l)	9.7/12.2
Fecal Coliform (N/100ml)	2/5
pH (standard units)	Minimum 6.3, Maximum 7.6

2. PROPOSED EFFLUENT LIMITATIONS

The final effluent limits for this facility to a canal to the Caloosshatchee River are "no discharge."

3. BASIS FOR FINAL EFFLUENT LIMITS AND PERMIT CONDITIONS

The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in a forthcoming administrative order.

4. REQUESTED VARIANCES OR ALTERNATIVES TO REQUIRED STANDARDS

Not Applicable

5. EFFECTIVE DATE OF PROPOSED EFFLUENT LIMITS AND COMPLIANCE SCHEDULE (IF APPLICABLE)

The permit denial will be effective immediately upon issuance of a final determination. However, EPA's Compliance Section will develop an administrative order which should specify interim limits and a schedule in order to achieve compliance with the no discharge allocation.

6. STATE CERTIFICATION REQUIREMENTS

State Certification was not received with the permit renewal application and will be requested on the permit denial.

7. DISCUSSION OF PREVIOUS NPDES CONDITIONS

The present NPDES permit, which expires September 24, 1986, contains the following limitations.

Parameter (Units)	Discharge Limitations	
	Daily Avg.	Daily Max.
Flow (MGD)	no limit	no limit
BOD_5 (lbs/day)	135	270
(mg/l)	15	30
TSS (lbs/day)	180	360
(mg/l)	20	40
TKN (lbs/day)	135	270
(mg/l)	15	30
Fecal Coliform (N/100ml)	200	400

The pH (standard units) not less than 6.0 nor greater than 8.5.

The BOD_5 and TSS (monthly average) to not exceed 10% of the respective monthly influent concentrations (90% removal).

8. EPA CONTACT

Additional information concerning the permit may be obtained at the address and during the hours noted in Item 9 from:

Ms. Suzanne D. Potter
(404) 347-3004

9. THE ADMINISTRATIVE RECORD, including application, draft permit, fact sheet, public notice (after release), State Certification (after receipt), comments received, and additional information is available by writing the EPA, Region IV, or for review and copying at 345 Courtland Street, N.E., 3rd Floor, Atlanta, Georgia 30365, between the hours of 8:15 A.M. and 4:30 P.M., Monday through Friday. Copies will be provided at a charge of 20¢ per page.

10. PROPOSED SCHEDULE FOR PERMIT ISSUANCE

Fact Sheet to Applicant	June 30, 1986
State Certification Request	June 30, 1986
Public Notice of Permit Denial	July 31, 1986
Permit Denial Issued	August 4, 1986

11. PROCEDURES FOR THE FORMULATION OF FINAL DETERMINATIONS

a. Comment Period

The Environmental Protection Agency proposes to issue an NPDES permit to this applicant subject to the aforementioned effluent limitations and special conditions. These determinations are tentative and open to comment from the public.

Interested persons are invited to submit written comments regarding permit issuance or the proposed permit limitations and conditions to the following address:

Environmental Protection Agency
345 Courtland Street, NE
Atlanta, Georgia 30365
ATTN: Ms. Suzanne D. Potter

All comments received within thirty (30) days following the date of public notice will be considered in the formulation of final determinations with regard to proposed permit issuance.

b. Public Hearing

The EPA Regional Administrator will hold a public hearing if there is a significant degree of public interest in a proposed permit or group of permits, or if he determines that useful information and data may be obtained thereby. Public Notice of such a hearing will be circulated at least thirty days prior to the hearing.

c. Issuance of the Permit

After consideration of all written comments and of the requirements and policies in the Act and appropriate regulations, and, if a public hearing is held, after consideration of all comments, statements and data presented at the hearing, the EPA Regional Administrator will make determinations regarding the permit issuance. If the determinations are substantially unchanged from the tentative determinations outlined above, the Regional Administrator will so notify all persons submitting written comments, and, if a public hearing was held, all persons participating in the hearing. If the determinations are substantially changed, the EPA Regional Administrator will issue a public notice indicating the revised determinations.

Unless a request for an evidentiary hearing is granted, the proposed permit contained in the Regional Administrator's determinations shall become issued and effective and will be the final action of the U. S. Environmental Protection Agency.

d. Evidentiary Hearing

If the determinations are substantially unchanged, any interested person may submit a request for an evidentiary hearing on the permit and its conditions within thirty (30) days of the receipt of the notice described in section c. If the determinations are substantially changed, any interested person may submit a request for an evidentiary hearing within thirty days of the date of the public notice or of the date of becoming aware of the determinations, which ever comes first. Such requests will be within the time period if mailed by Certified Mail within the thirty-day period to the Regional Hearing Clerk, Environmental Protection Agency, 345 Courtland Street, N.E., Atlanta, Georgia 30308. All requests must contain:

(1) The name, mailing address and telephone number of the person making such request;

(2) A clear and concise factual statement of the nature and scope of the interest of the requester;

(3) The names and addresses of all persons whom the requester represents; and

(4) A statement by the requester that, upon motion of any party, or sua sponte by the Presiding Officer and without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;

(ii) All persons represented by the requester, and

(iii) All officers, directors, employees, consultants and agents of the requester and the persons represented by the requester.

(5) Specific references to the contested permit terms and conditions, as well as suggested revised or alternative permit terms and conditions (not excluding permit denial) which, in the judgement of the requester, would be required to implement the purposes and policies of the Act.

(6) In the case of challenges to the application of control or treatment technologies identified in the statement of basis or fact sheet, identification of the basis for the objection, and the alternative technologies or combination of technologies which the requester believes are necessary to meet the requirements of the Act.

(7) Specific identification of each of the discharger's obligations which should be stayed if the request is granted. If the request contests more than one permit term or condition then each obligation which is proposed to be stayed must be referenced to the particular contested term warranting the stay.

The granting of a request will stay only the contested portions of he permit. Uncontested provisions of the permit shall be considered issued and effective and the permittee must comply with such provisions. Except, if the permit is for a new source or new discharge, the applicant will be without a permit for the proposed new source or new discharge, pending final Agency action. The final Agency decision on the permit provisions contested at an evidentiary hearing will be made in accordance with Title 40, Code of Federal Regulations, Subpart H, found at 44 Federal Register 32938, et seq.

e. Panel Hearing

In the case of an "initial license," including the first grant of an NPDES permit, or the first decision on a requested variance, if the Regional Administrator elects to apply the provisions of subpart I and so states in the public notice of the draft permit, any person may request the Regional Administrator to hold a panel hearing on the permit. Such a request must be made within the comment period of the notice described above. Requests will be considered timely if mailed by certified mail within the comment period. All requests must contain:

(1) A brief statement of the interest of the person requesting the hearing;

(2) A statement of any objections to the draft permit;

(3) A statement of the issues which such person proposes to raise for consideration at such hearing;

(4) The name, mailing address and telephone number of the person making such request;

(5) A clear and concise factual statement of the nature and scope of the interest of the requester;

(6) The names and addresses of all persons whom the requester represents; and

(7) A statement by the requester that, upon motion of any party, or sua sponte by the Presiding Officer and without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;

(ii) All persons represented by the requester; and

(iii) All officers, directors, employees, consultants and agents of the requester and the persons represented by the requester.

(8) Specific references to the contested permit terms and conditions, as well as suggested revised or alternative permit terms and conditions (not excluding permit denial) which, in the judgment of the requester, would be required to implement the purposes and policies of the Act.

If the permit for which a panel hearing is requested is a new source or new discharge, the applicant will be without a permit for the proposed new source or new discharge, pending final Agency action. Panel hearings will be conducted in accordance with title 40, Code of Federal Regulations, Subpart I, at 44 Federal Register 32944, et seq.

Re: Lee County - DW
Waterway Estates

Dear Mr. Reeves:

Enclosed is Permit Number D036-72569, dated August 2, 1983

to operate the subject pollution source

issued pursuant to Section(s) 403.087, Florida Statutes.

Should you object to this permit, including any and all of the conditions contained therein, you may file an appropriate petition for administrative hearing. This petition must be filed within fourteen (14) days of the receipt of this letter. Further, the petition must conform to the requirements of Florida Administrative Code Rule 28-5.201 (see reverse side of this letter). The petition must be filed with the Office of General Counsel, Department of Environmental Regulation, Twin Towers Office Building, 2600 Blair Stone Road, Tallahassee, Florida 32301.

If no petition is filed within the prescribed time, you will be deemed to have accepted this permit and waived your right to request an administrative hearing on this matter.

Acceptance of the permit constitutes notice and agreement that the Department will periodically review this permit for compliance, including site inspections where applicable, and may initiate enforcement action for violation of the conditions and requirements thereof.

Sincerely,

Philip R. Edwards

RULES OF THE ADMINISTRATIVE COMMISSION
MODEL RULES OF PROCEDURE
CHAPTER 28-5
DECISION DETERMINING SUBSTANTIAL INTERESTS

PART II
FORMAL PROCEEDINGS

28-5.201 Initiation of Formal Proceedings.

(1) Initiation of formal proceedings shall be made by petition to the agency responsible for rendering final agency action. The term petition as used herein includes any application or other document which expresses a request for formal proceedings. Each petition should be printed, typewritten or otherwise duplicated in legible form on white paper of standard legal size. Unless printed, the impression shall be on one side of the paper only and lines shall be double-spaced and indented.

(2) All petitions filed under these rules should contain:

(a) The name and address of each agency affected and each agency's file or identification number, if known;

(b) The name and address of the petitioner or petitioners, and an explanation of how his/her substantial interests will be affected by the agency determination;

(c) A statement of when and how petitioner received notice of the agency decision or intent to render a decision;

(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;

(e) A concise statement of the ultimate facts alleged, as well as the rules and statutes which entitle the petitioner to relief;

(f) A demand for relief to which the petitioner deems himself entitled; and

(f) Other information which the petitioner contends is material.

****

A petition may be denied if the petitioner does not state adequately a material factual allegation, such as a substantial interest in the agency determination, or if the petition is untimely. (Section 28-5.201(3)(a), FAC)

PERMITTEE: Florida Cities Water Company
Post Office Box 5846
Sarasota, Florida 33579

I.D. Number: 36P01639
Permit/Certification Number: 0036-72569
Date of Issue: August 2, 1983
Expiration Date: August 2, 1988
County: Lee
Latitude/Longitude: 26.38.17/81.54.36
Section/Township/Range: 16/44S/24E
Project: Waterway Estates

This permit is issued under the provisions of Chapter(s) 403, Florida Statutes, and Florida Administrative Code Rule(s) 17-4. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the department and made a part hereof and specifically described as follows:

Operation of a 1.08 MGD contact stabilization wastewater treatment facility with effluent discharged to a canal to the Caloosahatchee River, as depicted in drawings and documentation on file in this office. Project is located off Inlet Drive, North Fort Myers.

ITTEE: Florida Cities Water Co.

I.D. Number: 36P01630
Permit/Certification Number: D036-72569
Date of Issue: August 2, 1983
Expiration Date: August 2, 1988

RAL CONDITIONS:

...e terms, conditions, requirements, limitations, and restrictions set forth herein are "Permit Conditions" and as such are binding upon the permittee and enforceable pursuant to the authority of Sections 403.161, 403.727, or 403.859 through 403.861, Florida Statutes. The permittee is hereby placed on notice that the department will review this permit periodically and may initiate enforcement action for any violation of the "Permit Conditions" by the permittee, its agents, employees, servants or representatives.

This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action by the department.

As provided in Subsections 403.087(6) and 403.722(5), Florida Statutes, the issuance of this permit does not convey any vested rights or any exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state or local laws or regulations. This permit does not constitute a waiver of or approval of any other department permit that may be required for other aspects of the total project which are not addressed in the permit.

This permit conveys no title to land or water, does not constitute state recognition or acknowledgement of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the state. Only the Trustees of the Internal Improvement Trust Fund may express state opinion as to title.

This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, or aquatic life or property and penalties therefor caused by the construction or operation of this permitted source, nor does it allow the permittee to cause pollution in contravention of Florida Statutes and department rules, unless specifically authorized by an order from the department.

The permittee shall at all times properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed or used by the permittee to achieve compliance with the conditions of this permit, as required by department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit and when required by department rules.

The permittee, by accepting this permit, specifically agrees to allow authorized department personnel, upon presentation of credentials or other documents as may be required by law, access to the premises, at reasonable times, where the permitted activity is located or conducted for the purpose of:

a. Having access to and copying any records that must be kept under the conditions of the permit;

b. Inspecting the facility, equipment, practices, or operations regulated or required under this permit; and

c. Sampling or monitoring any substances or parameters at any location reasonably necessary to assure compliance with this permit or department rules.

Reasonable time may depend on the nature of the concern being investigated.

If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in this permit, the permittee shall immediately notify and provide the department with the following information:

a description of and cause of non-compliance; and

b. the period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the non-compliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the non-compliance.

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, which are submitted to the department, may be used by the department as evidence in any enforcement case arising under the Florida Statutes or department rules, except where such use is proscribed by Sections 403.73 and 403.111, Florida Statutes.

10. The permittee agrees to comply with changes in department rules and Florida Statutes after a reasonable time for compliance, provided however, the permittee does not waive any other rights granted by Florida Statutes or department rules.

11. This permit is transferable only upon department approval in accordance with Florida Administrative Code Rules 17-4.12 and 17-30.30, as applicable. The permittee shall be liable for any non-compliance of the permitted activity until the transfer is approved by the department.

12. This permit is required to be kept at the work site of the permitted activity during the entire period of construction or operation.

13. This permit also constitutes:

( ) Determination of Best Available Control Technology (BACT)
( ) Determination of Prevention of Significant Deterioration (PSD)
( ) Certification of Compliance with State Water Quality Standards (Section 401, PL 92-500)
( ) Compliance with New Source Performance Standards

14. The permittee shall comply with the following monitoring and record keeping requirements:

a. Upon request, the permittee shall furnish all records and plans required under department rules. The retention period for all records will be extended automatically, unless otherwise stipulated by the department, during the course of any unresolved enforcement action.

b. The permittee shall retain at the facility or other location designated by this permit records of all monitoring information (including all calibration and maintenance records all original strip chart recordings for continuous monitoring instrumentation), copies of all reports required by this permit, and records of all data used to complete the application for this permit. The time period of retention shall be at least three years from the date of the sample, measurement, report or application unless otherwise specified by department rule.

c. Records of monitoring information shall include:

- the date, exact place, and time of sampling or measurements;
- the person responsible for performing the sampling or measurements;
- the date(s) analyses were performed;
- the person responsible for performing the analyses;
- the analytical techniques or methods used; and
- the results of such analyses.

15. When requested by the department, the permittee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the permit. If the permittee becomes aware that relevant facts were not submitted or were incorrect in the permit application or in any report to the department, such facts or information shall be submitted or corrected promptly.

ECIFIC CONDITIONS:

1. Drawings, plans, documents or specifications submitted by the Permittee, not attached hereto, but retained on file at the South Florida District Office, are made a part hereof.

2. The chlorine residual in effluent must be maintained at 0.5 ppm after at least fifteen (15) minutes contact.

3. Pursuant to Chapter 17-19, the Permittee will follow the sampling schedule provided for the plant described as having a capacity of 1.08 MGD flow and submission of operating reports.

Figure 3

Minimum Sampling Schedules and Parameters for Domestic Wastewater Treatment Plants[1]

Parameters	Design Flow						
	2,000 gpd up to 5,000 gpd	5,000 gpd up to 50,000 gpd	50,000 gpd up to 500,000 gpd	0.5 mgd up to 1 mgd	1 mgd up to 5 mgd	5 mgd up to 15 mgd	15 mgd and above
Flow[2], pH[3], and Chlorine Residual[4]	daily 5/wk	daily 5/wk	daily 5/wk	daily 5/wk	Continuous	Continuous	Continuous
BOD[5], Suspended Solids and for ANT surface discharges, NUTRIENTS[5,6]	quarterly[7]	monthly[7]	every two weeks[7]	weekly	weekly	daily 5/wk	daily 7/wk
Fecal Coliform[8]	quarterly	quarterly	quarterly	monthly	weekly	daily 5/wk	daily 7/wk

1. These frequencies may be increased or decreased by the Secretary or the Secretary's designee on a case by case basis, depending upon local requirements for assessment and maintenance of water quality.
2. Recording flowmeter and totalizer required for 100,000 gpd and greater-flow.
3. Grab sample; pH paper may be used for facilities up to 100,000 gpd flow. Hourly measurements during the period of required operator attendance may be substituted for continuous measurement where such devices are not available.
4. Free chlorine residual for advanced waste treatment facilities; total chlorine residual for all others. Hourly measurements during the period of required operator attendance may be substituted for continuous measurement where such devices are not available.
5. Grab samples may be used for facilities up to 100,000 gpd; other facilities require flow proportioned composite samples. Where Chapter 17-16 FAC requires a Class A, B, or C operator, compositing periods are 24, 16, or 8 hours, respectively.
6. Nutrient analysis is required for advanced waste treatment facilities discharging to surface waters and may be required for other facilities where the Department determines that a potential water quality problem exists.
7. Land disposal facilities which are percolation ponds, spray irrigation, land spreading, drainfields and soakage pits of up to 100,000 gpd may sample at one-half these frequencies. (This reduction does not apply to well, borehole or sinkhole disposal).
8. Grab sample.

DO36-72569

Dear Mr. Lehman:

This letter responds to your correspondence dated October 8, 1985 requesting modification of operating permit DO36-72569 and November 20, 1985 requesting decreased staffing requirements for the referenced facility.

Your request to change the mode of operation from contact stabilization to conventional activated sludge for reasons contained in the aforementioned letter is granted and your permit modified accordingly. All conditions of the permit shall remain the same. Furthermore, the Department hereby modifies the staffing requirements pursuant to Florida Administrative Code (FAC) Rule 17-16.375(8) for the Waterway Estates treatment facility, I.D. number 5236P01630 as follows:

> The treatment facility is a category II Class B, which must provide staffing by a Class C or higher operator: 6 hours/day for 5 days/week and one visit on each weekend day. The Lead/Chief Operator must be Class B, or higher.
>
> In the event the Department determines that treatment is not in compliance, the on site operator time will be increased to that specified in FAC Rule 17-16.370(3)(b) Class B.

This letter becomes a part of permit DC36-72569 and must be attached to that permit.

Continued . . . .

AN EQUAL OPPORTUNITY/AFFIRMATIVE ACTION EMPLOYER

COPY

Should you object to this permit, including any and all of the conditions contained therein, you may file an appropriate petition for administrative hearing. This petition must be filed within fourteen (14) days of the receipt of this letter. Further, the petition must conform to the requirements of Section 28-5.201, Florida Administrative Code (copy enclosed). The petition must be filed with the Office of General Counsel, Department of Environmental Regulation, Twin Towers Office Building, 2600 Blair Stone Road, Tallahassee, Florida 32301.

If no petition is filed within the prescribed time, you will be deemed to have accepted this permit and waived your right to request an administrative hearing on this matter.

Acceptance of the permit constitutes notice and agreement that the Department will periodically review this permit for compliance, including site inspections where applicable, and may initiate enforcement action for violation of the conditions and requirements thereof.

Sincerely,

Philip R. Edwards
District Manager

RULES OF THE ADMINISTRATION COMMISSION
MODEL RULES OF PROCEDURE
CHAPTER 28-5
DECISIONS DETERMINING SUBSTANTIAL INTERESTS

PART II
FORMAL PROCEEDINGS

28-5.201 Initiation of Formal Proceedings.

(1) Initiation of formal proceedings shall be made by petition to the agency responsible for rendering final agency action. The term petition as used herein includes any application or other document which expresses a request for formal proceedings. Each petition should be printed, typewritten or otherwise duplicated in legible form on white paper of standard legal size. Unless printed, the impression shall be on one side of the paper only and lines shall be double-spaced and indented.

(2) All petitions filed under these rules should contain:

(a) The name and address of each agency affected and each agency's file or identification number, if known;

(b) The name and address of the petitioner or petitioners, and an explanation of how his/her substantial interests will be affected by the agency determination;

(c) A statement of when and how petitioner received notice of the agency decision or intent to render a decision;

(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;

(e) A concise statement of the ultimate facts alleged, as well as the rules and statutes which entitle the petitioner to relief;

(f) A demand for relief to which the petitioner deems himself entitled; and

(g) Other information which the petitioner contends is material.

****

A petition may be denied if the petitioner does not state adequately a material factual allegation, such as a substantial interest in the agency determination, or if the petition is untimely. (Section 28-5.201(3)(a), FAC)

Mr. Marshall Hyatt
Facility Performance Branch
Water Management Division
EPA Region IV
345 Courtland Street, N.E.
Atlanta, Georgia 30365

RE: Lee County - DW
City of Cape Coral Wasteload Allocation
& NPDES Permit

Dear Mr. Hyatt:

With reference to our several telephone conversations regarding wasteload allocation and NPDES permit for the City of Cape Coral, I have enclosed copies of correspondence from our file relative to this subject.

In summary, Total Nitrogen (N) and Phosphorous (P) loadings to the Caloosahatchee River were established at 1100 lbs/day N and 183 lbs/day P by Florida Department of Environmental Regulation Water Quality Technical Series 2:52 of January 1981. Subsequent to this, computer simulation indicated additional nutrient loadings could be tolerated, and they are now established at 1225 lbs/day N and 204 lbs/day P maximum.

Considering a long term probability of 49 MGD sewage treatment capability in this area, these loadings translate to effluent standards of 3.0 mg/l N and 0.5 mg/l P (advanced treatment).

Current allocations are as follows:

STP	MGD	LBS. N	LBS. P
Ft. Myers Central	11.00	275.2	45.9
Ft. Myers South	12.00	300.2	50.0
Waterway Estates	1.08	27.0	4.5
Fiesta Village	5.00	125.1	20.9
Cape Coral (1988)	7.30	182.6	30.4
Sub Total	36.38	910.1	151.7
Old Bridge Park (proposed)	2.00	50.0	8.3
"Reserve" WLA	10.62	264.9	44.0
Total WLA	49.00	1225.0	204.0

Continued . . . .

Exhibit___MA-4

The "reserve" WLA would be available for some new future discharger or for plant expansion on a "first come - first served" basis. When maximum loading is reached, no additional discharge to the river would be permitted.

Regarding Cape Coral's pending NPDES permit renewal, the effluent limitations of 182.6 lbs/day N and 30.4 lbs/day P would be applicable at some time after completion of construction of their 7.3 AT plant. This was originally expected to occur on July 30, 1987 (reference temporary operating permit DT36-81932, copy enclosed). However, because of problems associated with facility planning activities, changes in consultants, proposed plant design changes, and other State grant related activities, the City will not be able to meet this schedule. Completion of construction is now expected to be "late 1988". Until then, effluent limitations as now specified in FL0030007 would be acceptable to us, and the more stringent limitations effective upon certification of completion of construction.

Regarding Cl_2 residual requirements, I have alerted the City Manager and the consulting engineers of the need to include dechlorination facilities in the plant design, and they are agreeable to this. However, this change in design will have to be approved by City Council and also must be incorporated as an additional cost item in grant related documentation. Consequently, they would appreciate receiving "official" documentation of this requirement as soon as possible, preferably in the form of an advance copy of the NPDES draft permit.

Also, in order to be cost effective, they would request that dechlorination requirements be deferred until the new AT plant goes into operation.

I hope this information will be helpful to you in drafting Cape Coral's new NPDES permit. Please let me know if you need additional information.

Sincerely,

D. G. Richardson
Engineer

FLORIDA CITIES WATER COMPANY

TO: A.A. Reeves III

DATE: August 10, 1986

FROM: P.J. Lehman

SUBJ: Waterway Estates WWTP
DER Meeting July 29, 1986
NPDES/DER Permit Renewals

The above referenced meeting was held at the Ft. Myers DER office at the request of the DER.

Attending:

V. Melee, DER
L. Adair, DER
G. Romeis, DER
P. Lehman, FCWC

The referenced meeting was precipitated by the NPDES denial from the EPA. Waterway Estates WWTP has a valid DER Operating Permit with an expiration date of August 2, 1988. The DER recognizes this fact and will honor the existing Permit.

The local South Florida District DER office has recommended to Tallahassee the following:

1) Compliance with no discharge should be at expiration of current DER Operating Permit, August 2, 1988.

2) There should be no nutrient limits on existing WWTP. All Monitoring should be in accordance with DER regulations plus addition of quarterly monitoring of nutrients.

The attached DER inter-office memo outlines the above DER District Office recommendations.

The purpose of the meeting was to establish a compliance schedule with the DER to meet the August 2, 1988 deadline. Discharge option to the Caloosahatchee River would require a wasteload allocation. There currently is available capacity and if FCWC requests a WLA, the DER should be able to comply within four weeks. Other disposal options are available, i.e., upland spray irrigation or deep well injection, depending on the cost-effectiveness.

FCWC is to respond to the DER with a proposed compliance schedule providing target dates for major tasks completion in order to comply with the August 2, 1988 date to maintain no-discharge to the canal. The DER will formulate a consent agreement to this effect.

RE: Waterway Estates
NPDES Permit No. FL0030325

Dear Mr. Reeves:

You are hereby notified of denial of the National Pollutant Discharge Elimination System (NPDES) permit application for the above referenced facility. This action constitutes the Environmental Protection Agency's (EPA) final permit decision in accordance with 40 CFR 124.15(a). Any person may contest this decision by submitting a timely request for a hearing to the Regional Administrator under 40 CFR 124.74 or 124.114.

This action will be effective thirty days from the date you receive this letter, provided that no request for a hearing is granted by the Agency under 40 C.F.R. 124.75 or 124.114. In the event that such a request is granted:

- For discharge(s) authorized by an NPDES permit, at the time this permit application was filed, the force and effect of this action will be stayed, all provisions(s) of the previous NPDES permit shall be fully enforceable and effective until the administrative review process is completed, as provided by 40 CFR 124.16 and 124.60

- For discharge(s) not authorized by an NPDES permit, at the time this permit application was filed, the Agency's granting of a hearing (requested by you or any other person) does not provide you authorization to discharge. In other words, there will not be an NPDES permit authorizing the discharge(s) and if such a discharge(s) occurs, the discharge(s) will constitute a violation of Section 301 of the Clean Water Act, (33 U.S.C. 1311) for which there is civil and/or criminal liability.

RECEIVED
SARASOTA OFFICE

Exhibit___MA-6

DEC 10 1986

If you wish to request a hearing under 40 CFR 124.74 or 124.114 you must submit a request (an original and two copies) to the Regional Hearing Clerk within thirty (30) days from the receipt of this letter. The request will be timely if mailed by certified mail within the thirty (30) day time period. For the request to be valid, it must conform to the requirements of 40 CFR 124.74. A copy of the requirements of 40 CFR 124.74 is attached.

Since this facility is presently discharging pollutants to waters of the United States, EPA intends to issue an Administrative Order to you for this facility. The Administrative Order will contain a schedule for this facility to cease discharge, and will specify interim discharge limitations. You will be contacted by a separate letter regarding the details of the Administrative Order.

Information on procedures pertaining to the filing of a hearing request or other legal matters may be obtained by contacting Ms. Jacqueline Colson, Assistant Regional Counsel, at (404) 347-3506.

Sincerely yours,

Bruce R. Barrett, Director
Water Management Division

Exhibit MA-7

NPDES CERTIFICATION WORKSHEET
(Municipal and Private S.T.P.'s)

AME OF FACILITY Waterway Estates W.W.T.P. (Florida Cities Water Company)

The following recommendations were made from staff discussions and opinions. When the current operating permit D036-72569 expires, the facility should be in compliance with ne no discharge status:

(1) This will require either removing the discharge pipe from the canal and relocating it to a six (6) foot contour line in the Caloosahatchee River with WLA limits and AWT for nutrient removal.

(2) Going to a land disposal system.

Meanwhile, this facility should monitor the following additional parameters in their ffluent namely, Total N and Total P on a quarterly basis. Due to the conventional ature of the plant, no nutrient (nitrogen and phosphorus) limits are placed on the discharge until the existing State operating permit expires. All other parameters hould be monitored in accordance with Chapter 17-19, Florida Administrative Code FAC).

The District Environmental Manager for Enforcement has been apprised of all the mentioned recommendations/comments and will initiate correspondence for corrective action which includes informing Florida Cities Water Company of the need for a compliance schedule to meet the no discharge requirement upon the expiration of the xisting permit, D036-72569.

The Department has no other problems with the above mentioned facility as long as hapter 17-3, 17-4 and 17-6, FAC, requirements are being met in the interim for a urface water discharge.

Re: Florida Cities Water Co., Waterway Estates WWTP - Ft. Myers, FL
Administrative Order No. 87-085(WMGM)
NPDES Permit No. FL0030325

Dear Mr. Reeves:

Pursuant to Section 309(a) of the Clean Water Act, as amended, the Director, Water Management Division, Region IV, United States Environmental Protection Agency, has determined that the above named facility is in violation of the Clean Water Act. As a result, the Director has issued a Section 309 Order which is enclosed.

Any person who violates a Section 309 Order shall be subject to a civil penalty not to exceed $25,000 per day of such violation pursuant to Section 309(d) of the Clean Water Act.

Under Executive Order 11738 and EPA regulations issued thereunder (40 Code of Federal Regulations, Part 15), facilities to be utilized in contracts, grants, and loans must be in full compliance with all standards established pursuant to the Clean Water Act and the Clean Air Act. A violation of the standards outlined in this notification may result in the subject facility becoming ineligible for participation in any work associated with a Federal contract, grant, or loan.

If you have any questions concerning the enclosed Order, please contact Ms. Priscilla Oliver, Water Management Division at 404/347-7428.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IV

IN THE MATTER OF FLORIDA CITIES WATER COMPANY WATERWAY ESTATES FT. MYERS, FL NPDES PERMIT NO. FL0030325	)))))	Order No. 87-085(wMG1)

ORDER PURSUANT TO SECTION 309
CLEAN WATER ACT

Pursuant to the authority of Section 309(a) of the Clean Water Act (the Act), 33 U.S.C. 1319, which has been delegated to me, I hereby make the following Findings of Fact and Violation and Order:

FINDINGS OF FACT

1. Florida Cities Water Company (hereinafter, the Respondent), has submitted an NPDES permit application wherein it is stated that Respondent has a wastewater treatment system (Waterway Estates STP) which periodically discharges pollutants into waters of the United States.

2. The United States Environmental Protection Agency, Region IV (EPA), has denied issuance of a National Pollutant Discharge Elimination System (NPDES) Permit for the above discharge. The permit was denied December 8, 1986.

3. In accordance with Section 301(a) of the Clean Water Act, discharges of pollutants into waters of the United States are unlawful unless permitted by an NPDES permit, or specifically exempted from NPDES requirements. The final effluent limits for this facility to a canal of the Caloosshatchee River are "no discharge." An NPDES permit can not be issued to a facility that is discharging to a no discharge area.

VIOLATION

The Respondent is in violation of Section 301(a) of the Clean Water Act by discharging pollutants into waters of the United States without an NPDES permit.

ORDER

Based on the foregoing Findings of Fact and Violation, and pursuant to the provisions of Section 309(a) of the Act, as amended, it is hereby ordered:

1. That the Respondent cease discharging pollutants to waters of the United States at the earliest date practicable but not later than September 30, 1988. The Respondent shall report on progress toward meeting this compliance date as follows:

Activity	Due Date
Submit Progress Report	July 1, 1987
Submit Progress Report	August 1, 1987
Submit Progress Report	September 30, 1987
Start Construction	October 15, 1987
Submit Progress Report	December 30, 1987
Submit Progress Report	March 30, 1987
Complete Construction	August 1, 1988
Meet Final Requirements by Ceasing Discharge	September 30, 1988

2. This should in no way be considered a permit to discharge, however, if the Respondent does discharge to waters of the United States in violation of the Act, the Respondent's discharge of treated wastewater shall at least comply with the effluent limitations, monitoring schedule and other requirements contained in its previous permit.

3. That monitoring results obtained during each calendar quarter shall be summarized on a Discharge Monitoring Report Form (EPA Form 3320-1). Forms shall be submitted for each month and shall be postmarked no later than the 28th day of the month following the end of the month being reported on. Monitoring required by the State of Florida other than that specifically required by this Order shall be submitted in the same form as to the State but shall be included with Discharge Monitoring Report submissions.

4. If there is any transfer of ownership of this facility prior to completion of all requirements of this Order, then the new owner must be informed of these requirements and shall carry out the provisions. EPA shall be notified of any transfer of ownership.

5. The information required by this Order other than monitoring information shall be sent by registered mail or its equivalent to the following addresses:

Mr. John T. Marlar, Chief
Facilities Performance Branch
Water Management Division
U. S. Environmental Protection Agency
Region IV
345 Courtland Street
Atlanta, GA 30365

Mr. Phillip R. Edwards
Florida Dept. of Environmental Regulation
2269 Bay St.
Ft. Myers, FL 33901

6. Nothing contained in this Order shall be construed to prevent further enforcement of the violations stated herein.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

REF: 4WM-FP

Mr. Robert French
Senior Vice President
Florida Cities Water Company
2112 Gulf Gate Drive
Sarasota, Florida 34277

RE: Final Issuance of NPDES Permit No. FL0030325
Waterway Estates WWTP

Dear Mr. French:

Enclosed is the National Pollutant Discharge Elimination System (NPDES) permit for the above referenced facility. This action constitutes the Environmental Protection Agency's final permit decision in accordance with 40 CFR 124.15(a). Any person may contest this decision by submitting a timely request for a hearing to the Regional Administrator under 40 CFR 124.74 or 124.114.

The permit will be effective as specified in the permit, provided that no request for a hearing is granted by the Agency under 40 C.F.R. 124.75 or 124.114. In the event that such a request is granted:

- For discharge(s) previously authorized by an NPDES permit, at the time this permit application was filed, the force and effect of the contested provision(s) of this permit will be stayed, and any comparable provision(s) of the previous NPDES permit as well as all uncontested provision(s) of this permit shall be fully enforceable and effective until the administrative review process is completed, as provided by 40 CFR 124.16 and 124.60.

- For discharge(s) not previously authorized by an NPDES permit, the Agency's granting of a hearing (requested by you or any other person) will result in no authorization to discharge. In other words, there will not be an NPDES permit authorizing the discharge(s) and if such a discharge(s) occurs, the discharge(s) will constitute a violation of Section 301 of the Clean Water Act, (33 U.S.C. 1311) for which there is civil and/or criminal liability.

If you wish to request a hearing under 40 CFR 124.74 or 124.114 you must submit a request (an original and two copies) to the Regional Hearing Clerk within thirty (30) days from the receipt of this letter. The request will be timely if mailed by certified mail within the thirty (30) day time period. For the request to be valid, it must conform to the requirements of 40 CFR 124.74. A copy of the requirements of 40 CFR 124.74 is attached.

Information on procedures pertaining to the filing of a hearing request or other legal matters may be obtained by contacting Ms. Jacqueline F. Colson, Assistant Regional Counsel, at (404) 347-2335.

Sincerely yours,

Al J. Smith, Acting Director
Water Management Division

Enclosures (3): Hearing Request Requirements
Final NPDES Permit
Amendment to Fact Sheet

cc: Florida DER (with Final Permit & Amendment)
Susan Aul; Atlanta, GA

REQUIREMENTS FOR EVIDENTIARY/PANEL HEARING REQUEST

Evidentiary Hearing (40 CFR 124.74)

(a) Within 30 days following service of notice of the Regional Administrator's final permit decision under 124.15 any interested person may submit a request to the Regional Administrator under paragraph (b) of this section for an evidentiary hearing to reconsider or contest that decision. If such a request is submitted by a person other than the permittee, the person shall simultaneously serve a copy of the request on the permittee.

(b) (1) In accordance with 124.76, such requests shall state each legal or factual question alleged to be at issue, and their relevance to the permit decision, together with a designation of the specific factual areas to be adjudicated and the hearing time estimated to be necessary for adjudication. Information supporting the request or other written documents relied upon to support the request shall be submitted as required by 124.73 unless they are already part of the administrative record required by 124.18.

ote: This paragraph allows the submission of requests for evidentiary hearings even though both legal and factual issues may be raised, or only legal issues may be raised. In the latter case, because no factual issues were raised, the Regional Administrator would be required to deny the request. However, on review of the denial the Administrator is authorized by 124.91(a)(1) to review policy or legal conclusions of the Regional Administrator. EPA is requiring an appeal to the Administrator even of purely legal issues involved in a permit decision to ensure that the Administrator will have an opportunity to review any permit before it will be final and subject to judicial review.

(2) Persons requesting an evidentiary hearing on an NPDES permit under this section may also request an evidentiary hearing on a RCRA or UIC permit, PSD permits may never be made part of an evidentiary hearing under Subpart E. This request is subject to all the requirements of paragraph (b)(1) of this section and in addition will be granted only if:

(i) Processing of the RCRA or UIC permit at issue was consolidated with the processing of the NPDES permit as provided in 124.4;

(ii) The standards for granting a hearing on the NPDES permit are met;

(iii) The resolution of the NPDES permit issues is likely to make necessary or appropriate modification of the RCRA or UIC permit; and

(iv) If a PSD permit is involved, a permittee who is eligible for an evidentiary hearing under Subpart E on his or her NPDES permit requests that the formal hearing be conducted under the procedures of Subpart F and the Regional Administrator finds that consolidation is unlikely to delay final permit issuance beyond the PSD one-year statutory deadline.

(c) These requests shall also contain:

(1) The name, mailing address, and telephone number of the person making such request;

(2) A clear and concise factual statement of the nature and scope of the interest of the requester;

(3) The names and addresses of all persons whom the requester represents; and

(4) A statement by the requester that, upon motion of any party granted by the Presiding Officer, or upon order of the Presiding Officer sua sponte without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;
(ii) All persons represented by the requester: and
(iii) All officers, directors, employees, consultants, and agents of the requester and the persons represented by the requester.

(5) Specific references to the contested permit conditions, as well as suggested revised or alternative permit conditions (including permit denials) which, in the judgement of the requester, would be required to implement the purposes and policies of the CWA.

(6) In the case of challenges to the application of control or treatment technologies identified in the statement of basis or fact sheet, identification of the basis for the objection, and the alternative technologies or combination of technologies which the requester believes are necessary to meet the requirements of the CWA.

(7) Identification of the permit obligations that are contested or are inseverable from contested conditions and should be stayed if the request is granted by reference to the particular contested conditions warranting the stay.

(8) Hearing requests also may ask that a formal hearing be held under the procedures set forth in Subpart F. An applicant may make such a request even if the proceeding does not constitute "initial licensing" as defined in 124.111.

(d) If the Regional Administrator grants an evidentiary hearing request in whole or in part, the Regional Administrator shall identify the permit conditions which have been contested by the requester and for which the evidentiary hearing has been granted. Permit conditions which are not contested or for which the Regional Administrator has denied the hearing request shall not be affected by, or considered at, the evidentiary hearing. The Regional Administrator shall specify these conditions in writing in accordance with 124.60(c).

(e) The Regional Administrator must grant or deny all requests for an evidentiary hearing on a particular permit. All requests that are granted for a particular permit shall be combined in a single evidentiary hearing.

(f) The Regional Administrator (upon notice to all persons who have already submitted hearing requests) may extend the time allowed for submitting hearing requests under this section for good cause.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET, N.E.
ATLANTA, GEORGIA 30365

AMENDMENT TO THE FACT SHEET AT THE TIME OF FINAL PERMIT ISSUANCE

FACILITY: Florida Cities Water - Waterway Estates DATE: SEP 29 1989

APPLICATION NO: FL0030325

PERMIT WRITER: Connie Kagey

1. Changes to Permit from Draft to Final Permit Stage:

For clarification, minor changes were made in Parts I and IV regarding the biomonitoring language. Page I-2, Item 8, was changed to reflect the current FAC reference. Page IV-1, Item 3, an additional sentence was included at the end of the paragraph concerning submittal of QA/QC reference toxicant tests if available.

Public Comment:

One comment dated August 31, 1989, was received from Susan Aul, Atlanta, Georgia. Ms. Aul believed that this facility should have an individual control stategy in reference to the 304(l) list. As noted by EPA's letter of September 12, 1989, this facility was not included on the 304(l) list and thus an individual control strategy is not required.

3. State Certification:

State certification was requested on July 25, 1989, and is hereby deemed waived per 40 CFR Section 124.53(c).

PERMIT NO. FL0030325

PART I

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS - FINAL

1. During the period beginning on the effective date of discharge and lasting through the expiration date of this permit, the permittee is authorized to discharge from outfall 001, sanitary wastewater.

Such discharges shall be limited and monitored by the permittee as specified below:

PARAMETER	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS		
	Annual Average	Monthly Average	Daily Maximum	Measurement Frequency	Sample Type	Sample Point
Flow, MGD	--	Report	Report	Continuous	Recording Flow Meter & Totalizer	Effluent
Biochemical Oxygen Demand (5 Day)	20.0 mg/l	30.0 mg/l	60.0 mg/l	1/week	16 hr. composite	Effluent
Total Suspended Solids	20.0 mg/l	30.0 mg/l	60.0 mg/l	1/week	16 hr. composite	Effluent
Total Nitrogen, as N	-- --	3.0 mg/l 25.0 lb/day	-- --	1/week	16 hr. composite	Effluent
Total Phosphorus, as P	-- --	0.5 mg/l 4.2 lb/day	-- --	1/week	16 hr. composite	Effluent
Fecal Coliform Bacteria,	200/100ml	--	800/100ml	1/week	Grab	Effluent
Dissolved Oxygen shall not be less than 5.0 mg/l				1/week	Grab	Effluent
pH	See Item 3 on Page I-2			Continuous	Recorder	Effluent

PART I (CONTINUATION)
EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

2. The annual average shall be reported on the discharge monitoring report for each month and shall be submitted as required in Part III. No violations for BOD_5, TSS, and Fecal Coliform will be deemed to have occurred until data have been compiled for the first 12 months after the effective date of the permit.

3. The pH of the effluent shall not be less than 6.0 standard units nor greater than 8.5 standard units. When pH is measured continuously, pH shall not deviate outside the required range more than 1% of the time (7 hours and 26 minutes) in any calendar month and no individual excursion shall exceed 60 minutes. An "excursion" is an unintentional and temporary incident in which the pH value of discharge wastewater exceeds the range set forth in this permit.

4. Any bypass of the treatment facility which is not included in the effluent monitored above is to be monitored for flow and reported on a Discharge Monitoring Report (DMR) Form (3320-1).

5. There shall be no discharge of floating solids or visible foam in other than trace amounts.

6. The effluent shall not cause a visible sheen on the receiving water.

7. The permittee has indicated that ultraviolet disinfection will be used at this facility; therefore, a total residual chlorine (TRC) limitation has not been incorporated into this permit. The permittee shall give notice to the Permit Issuing Authority if chlorine is used at this facility for disinfection. Such notice shall be given at least 60 days prior to the use of chlorine. This paragraph is in addition to that in Part II, Page II-8, Section D, Item 1.b.

8. The effluent (100%) for outfall 001 shall not be lethal to more than 50% of the appropriate test organisms. The testing for this requirement must conform with Part IV of this permit. Lethality to more than 50% of the test organisms in a test of 48 hours duration will constitute a violation of Florida Administrative Code Section 17-4.244(3)(a) and the terms of this permit.

9. Samples taken in compliance with the monitoring requirements specified in this permit shall be taken at the nearest accessible point after final treatment but prior to the actual discharge or mixing with the receiving waters.

B. SLUDGE MANAGEMENT PRACTICES

1. The permittee must sample and analyze the sludge and report to EPA the quantitative data for the 125 priority pollutants listed in 40 CFR 122, Appendix D, Tables II and III. Qualitative data for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) must also be submitted if the permittee knows or has reason to believe that TCDD is or may be present in the sludge.

   a. The permittee must submit the above data within 1 year of the effective date of this permit.

2. The permittee must submit within 30 days of the effective date of this permit the sludge production volume (specify if daily or annual; if actual volume is not known, estimate the quantity of sludge being handled and so indicate) and the sludge disposal practice.

3. The permittee shall provide sludge inventory data to the State and EPA, as part of EPA's inventory updates as requested. The data should include, but not be limited to, sludge quantity and characteristics.

4. Reopener. If an applicable "acceptable management practice" or numerical limitation for pollutants in sewage sludge promulgated under Section 405(d)(2) of the Clean Water Act, as amended by the Water Quality Act of 1987, is more stringent than the sludge pollutant limit or acceptable management practice in this permit, or controls a pollutant not limited in this permit, this permit shall be promptly modified or revoked and reissued to conform to the requirements promulgated under Section 405(d)(2). The permittee shall comply with the limitations by no later than the compliance deadline specified in the applicable regulations as required by Section 405(d)(2)(D) of the Clean Water Act.

5. Notice of change in sludge disposal practice. The permittee shall give prior notice to the Regional Administrator of any change planned in the permittee's sludge disposal practice.

6. Cause for modification. 40 CFR 122.62(a)(1) provides that the following is a cause for modification but not revocation and reissuance of permits except when the permittee requests or agrees. (a) Alterations. There are material and substantial changes or additions to the permitted facility or activity which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit.

7. Upon review of information provided by the permittee as required by the above items, or results from an on-site inspection, the permit shall be subject to modification to incorporate appropriate requirements.

C. SCHEDULE OF COMPLIANCE

1. The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule:

Discharge 001:

Operational level attained . . . Effective Date of Permit

2. No later than 14 calendar days following a date identified in the above schedule of compliance, the permittee shall submit either a report of progress or, in the case of specific actions being required by identified dates, a written notice of compliance or noncompliance. In the latter case, the notice shall include the cause of noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement.

Part II

STANDARD CONDITIONS FOR NPDES PERMITS

SECTION A. GENERAL CONDITIONS

1. Duty to Comply

The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

2. Penalties for Violations of Permit Conditions

Any person who violates a permit condition is subject to a civil penalty not to exceed $25,000 per day for each violation. Any person who negligently violates any permit condition is subject to criminal penalties of $2,500 to $25,000 per day of violation, or imprisonment for not more than 1 year, or both. Any person who knowingly violates permit conditions is subject to criminal penalties of $5,000 to $50,000 per day of violation, or imprisonment for not more than 3 years, or both. Also, any person who violates a permit condition may be assessed an administrative penalty not to exceed $10,000 per violation with the maximum amount not to exceed $25,000. [Ref: 40 CFR 122.41(a)]

3. Duty to Mitigate

The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

4. Permit Modification

After notice and opportunity for a hearing, this permit may be modified, terminated, or revoked for cause including, but not limited to, the following:

a. Violation of any terms or conditions of this permit;

b. Obtaining this permit by misrepresentation or failure to disclose fully all relevant facts;

c. A change in any conditions that requires either temporary interruption or elimination of the permitted discharge; or

d. Information newly acquired by the Agency indicating the discharge poses a threat to human health or the environment.

permittee believes that any past or planned activity would be cause ...ification or revoca:..on and reissuance under 40 CFR 122.62, the ...ttee must report such information to the Permit Issuing Authority. submittal of a new application may be required of the permittee. The ing of a request by the permittee for a permit modification, revocation reissuance, or termination, or a notification of planned changes or ipated noncompliance, does not stay any permit condition.

Toxic Pollutants

withstanding Paragraph A-4, above, if a toxic effluent standard or hibition (including any schedule of compliance specified in such ent standard or prohibition) is established under Section 307(a) of Act for a toxic pollutant which is present in the discharge and such ndard or prohibition is more stringent than any limitation of such tant in this permit, this permit shall be modified or revoked and s ued to conform to the toxic effluent standard or prohibition and the mittee so notified.

Civil and Criminal Liability

ent as provided in permit conditions on "Bypassing" Section B, Paragraph , and "Upsets" Section B, Paragraph B-4, nothing in this permit shall be nstrued to relieve the permittee from civil or criminal penalties for ncompliance.

...l and Hazardous Substance Liability

...ing in this permit shall be construed to preclude the institution of legal action or relieve the permittee from any responsibilities, abilities, or penalties to which the permittee is or may be subject under ...ion 311 of the Act.

State Laws

...ing in this permit shall be construed to preclude the institution of legal action or relieve the permittee from any responsibilities, abilities, or penalties established pursuant to any applicable State law egulation under authority preserved by Section 510 of the Act.

Property Rights

...e issuance of this permit does not convey any property rights of any ...rt, or any exclusive privileges, nor does it authorize any injury to ...rivate property or any invasion of personal rights, nor any infringement ...f Federal, State, or local laws or regulations.

. Onshore or Offshore Construction

permit does not authorize or approve the construction of any onshore offshore physical structures or facilities or the undertaking of any rx in any waters of the United States.

.. Severability

e provisions of this permit are severable, and if any provision of this it, or the application of any provision of this permit to any r umstance, is held invalid, the application of such provision to other rcumstances, and the remainder of this permit, shall not be affected ereby.

. Duty to Provide Information

e permittee shall furnish to the Permit Issuing Authority, within a asonable time, any information which the Permit Issuing Authority may quest to determine whether cause exists for modifying, revoking and suing, or terminating this permit or to determine compliance with this it. The permittee shall also furnish to the Permit Issuing Authority on request, copies of records required to be kept by this permit.

CTION B. OPERATION AND MAINTENANCE OF POLLUTION CONTROLS

per Operation and Maintenance

e permittee shall at all times properly operate and maintain all cilities and systems of treatment and control (and related appurtenances) ich are installed or used by the permittee to achieve compliance with the nditions of this permit. Proper operation and maintenance also includes e ate laboratory controls and appropriate quality assurance procedures. provision requires the operation of back-up or auxiliary facilities or milar systems which are installed by a permittee only when the operation ecessary to achieve compliance with the conditions of the permit.

Need to Halt or Reduce not a Defense

shall not be a defense for a permittee in an enforcement action that it uld have been necessary to halt or reduce the permitted activity in order maintain compliance with the condition of this permit.

Bypass of Treatment Facilities

a. Definitions

(1) "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility, which is not a designed or established operating mode for the facility.

(2) "Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

b. Bypass not exceeding limitations.

The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of Paragraphs c. and d. of this section.

. Notice

(1) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass; including an evaluation of the anticipated quality and effect of the bypass.

(2) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in Section D, Paragraph D-8 (24-hour notice).

d. Prohibition of bypass

(1) Bypass is prohibited and the Permit Issuing Authority may take enforcement action against a permittee for bypass, unless:

(a) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(b) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate backup equipment should have been installed in the exercise of reasonable engineering judgement to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(c) The permittee submitted notices as required under Paragraph c. of this section.

(2) The Permit Issuing Authority may approve an anticipated bypass, after considering its adverse effects, if the Permit Issuing Authority determines that it will meet the three conditions listed above in Paragraph d.(1) of this section.

Upsets

Up et" means an exceptional incident in which there is unintentional and emporary noncompliance with technology based permit effluent limitations ecause of factors beyond the reasonable control of the permittee. An s t does not include noncompliance to the extent caused by operational r r, improperly designed treatment facilities, lack of preventive intenance, or careless or improper operation. An upset constitutes an f rmative defense to an action brought for non-compliance with such c nology based permit limitation if the requirements of 40 CFR .2.41(n)(3) are met.

Removed Substances

is permit does not authorize discharge of solids, sludge, filter c wash, or other pollutants removed in the course of treatment or control astewaters of the United States unless specifically limited in Part 1.

C ION C. MONITORING AND RECORDS

Representative Sampling

mples and measurements taken as required herein shall be representative the volume and nature of the monitored discharge. All samples shall be k n at the monitoring points specified in this permit and, unless herwise specified, before the effluent joins or is diluted by any other stestream, body of water, or substance. Monitoring points shall not b anged without notification to and the approval of the Permit Issuing thority.

Measurements

r priate flow measurement devices and methods consistent with accepted .entific practices shall be selected and used to insure the accuracy and .iability of measurements of the volume of monitored discharges. The -i es shall be installed, calibrated and maintained to insure that the :u_acy of the measurements are consistent with the accepted capability of :t type of device. Devices selected shall be capable of measuring flows :h a maximum deviation of less than ± 10% from the true discharge rates tc ghout the range of expected discharge volumes. Once-through condenser >ling water flow which is monitored by pump logs, or pump hour meters as ecified in Part I of this permit and based on the manufacture's pump m s shall not be subject to this requirement. Guidance in lection,installation, calibration, and operation of acceptable flow asurement devices can be obtained from the following references:

(1) "A Guide of Methods and Standards for the Measurement of Water Flow", U.S. Department of Commerce, National Bureau of Standards, NBS Special Publication 421, May 1975, 97 pp. (Available from the U.S. Government Printing Office, Washington, D.C. 20402. Order by SD catalog No. C13.10:421.)

(2) "Water Measurement Manual", U.S. Department of Interior, Bureau of Reclamation, Second Edition, Revised Reprint, 1974, 327 pp. (Available from the U.S. Government Printing Office, Washington, D.C. 20402. Order by catalog No. 127.19/2:W29/2, Stock No. S/N 24003-0027.)

(3) "Flow Measurement in Open Channels and Closed Conduits", U.S. Department of Commerce, National Bureau of Standards, NBS Special Publication 484, October 1977, 982 pp. (Available in paper copy or microfiche from National Technical Information Service (NTIS), Springfield, VA 22151. Order by NTIS No.PB-273 535/5ST.)

(4) "NPDES Compliance Flow Measurement Manual", U.S. Environmental Protection Agency, Office of Water Enforcement, Publication MCD-77, September 1981, 135 pp. (Available from the General Services Administration (8BRC), Centralized Mailing Lists Services, Building 41, Denver Federal Center, Denver, CO 80255.)

Monitoring Procedures

onitoring must be conducted according to test procedures approved under 40 FR Part 136, unless other test procedures have been specified in this ermit.

Penalties for Tampering

The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate, any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or imprisonment for not more than 2 years, or both.

Retention of Records

The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report, or application. This period may be extended by the Permit Issuing Authority at any time.

Record Contents

Records of monitoring information shall include:

a. The date, exact place, and time of sampling or measurements;

b. The individual(s) who performed the sampling of measurements;

c. The date(s) analyses were performed;

d. The individual(s) who performed the analyses;

e. The analytical techniques or methods used; and

f. The results of such analyses.

Inspection and Entry

The permittee shall allow the Permit Issuing Authority, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit.

Inspect at reasonable time any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

SECTION D. REPORTING REQUIREMENTS

Change in Discharge

The permittee shall give notice to the Permit Issuing Authority as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

a. The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source; or

b. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under Section D, Paragraph D-10(a).

Anticipated Noncompliance

The permittee shall give advance notice to the Permit Issuing Authority of any planned change in the permitted facility or activity which may result in noncompliance with permit requirements. Any maintenance of facilities, which might necessitate unavoidable interuption of operation and degradation of effluent quality, shall be scheduled during noncritical water quality periods and carried out in a manner approved by the Permit Issuing Authority.

Transfer of Ownership or Control

A permit may be automatically transferred to another if:

a. The permittee notifies the Permit Issuing Authority of the proposed transfer at least 30 days in advance of the proposed transfer date;

b. The notice includes a written agreement between the existing and new permittees containing a specific date for transfer of permit responsibility, coverage, and liability between them; and

The Permit Issuing Authority does not notify the existing permittee of his or her intent to modify or revoke and reissue the permit. If this notice is not received, the transfer is effective on the date specified in the agreement mentioned in paragraph b.

Monitoring Reports

ee Part III of this permit.

Additional Monitoring by the Permittee

f the permittee monitors any pollutant more frequently than required by h s permit, using test procedures approved under 40 CFR 136 or as pecified in this permit, the results of this monitoring shall be included n the calculation and reporting of the data submitted in the Discharge o itoring Report (DMR). Such increased frequency shall also be indicated.

Averaging of Measurements

a culations for limitations which require averaging of measurements shall tilize an arithmetic mean unless otherwise specified by the Permit Issuing uthority in the permit.

Compliance Schedules

s of compliance or noncompliance with, or any progress reports on, m and final requirements contained in any compliance schedule of this ermit shall be submitted no later than 14 days following each schedule a e. Any reports of noncompliance shall include the cause of n compliance, any remedial actions taken, and the probability of meeting he next scheduled requirement.

Twenty-Four Hour Reporting

he permittee shall orally report any noncompliance which may endanger e lth or the environment, within 24 hours from the time the permittee e omes aware of the circumstances. A written submission shall also b rovided within 5 days of the time the permittee becomes aware of the i cumstances. The written submission shall contain a description of the n compliance and its cause, the period of noncompliance, including the xact dates and times; and if the noncompliance has not been corrected, the nticipated time it is expected to continue, and steps taken or planned to e uce, eliminate, and prevent reoccurance of the noncompliance. The ermit Issuing Authority may verbally waive the written report, on a ase-by-case basis, when the oral report is made.

e following violations shall be included in the 24 hour report when they ıdanger health or the environment:

1. An unanticipated bypass which exceeds any effluent limitation in the permit.

2. Any upset which exceeds any effluent limitation in the permit.

Other Noncompliance

e permittee shall report in narrative form, all instances of ncompliance not previously reported under Section D, Paragraphs D-2, 4 — D-7, and D-8 at the time monitoring reports are submitted. The pc rts shall contain the information listed in Paragraph D-8.

Changes in Discharges of Toxic Substances

e permittee shall notify the Permit Issuing Authority as soon as it knows has reason to believe:

1. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic substance(s) (listed at 40 CFR 122, Appendix D, Table II and III) which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

   (1) One hundred micrograms per liter (100 ug/l);

   (2) Two hundred micrograms per liter (200 ug/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 ug) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter (1 mg/l) for antimony; or

   (3) Five (5) times the maximum concentration value reported for that pollutant(s) in the application.

2. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant (listed at 40 CFR 122, Appendix D. Table II and III) which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

   (1) Five hundred micrograms per liter (500 ug/l);

   (2) One milligram per liter (1 mg/l) for antimony; or

   (3) Ten (10) times the maximum concentration value reported for that pollutant(s) in the permit application.

Duty to Reapply

f the permittee wishes to continue an activity regulated by this permit f.er the expiration date of this permit, the permittee must apply for and btain a new permit. The application should be submitted at least 180 days e~ore the expiration date of this permit. The Permit Issuing Authority a grant permission to submit an application less than 180 days in advance ut not later than the permit expiration date.

h re EPA is the Permit Issuing Authority, the terms and conditions of this ermit are automatically continued in accordance with 40 CFR 122.6, only nere the permittee has submitted a timely and complete application for a e ewal permit and the Permit Issuing Authority is unable through no fault f the permittee to issue a new permit before the expiration date.

2 Signatory Requirements

ll applications, reports, or information submitted to the Permit Issuing thority shall be signed and certified.

a. All permit applications shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means: (1) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (2) the manager of one or more manufacturing production facilities employing more than 250 persons or having gross annual sales or expenditures exceeding 25 million (in second quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official.

b. All reports required by the permit and other information requested by the Permit Issuing Authority shall be signed by a person described above or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above;

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.); and

(3) The written authorization is submitted to the Permit Issuing Authority.

c. Certification. Any person signing a document under paragraphs (a) or (b) of this section shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

. Availability of Reports

cept for data determined to be confidential under 40 CFR Part 2, all p rts prepared in accordance with the terms of this permit shall be a lable for public inspection at the offices of the Permit Issuing thority. As required by the Act, permit applications, permits and fluent data shall not be considered confidential.

. Penalties for Falsification of Reports

e Clean Water Act provides that any person who knowingly makes any false terial statement, representation, or certification in any record or other cument submitted or required to be maintained under this permit, luding monitoring reports or reports of compliance or noncompliance, or knowingly falsifies, tampers with, or renders inaccurate any monitoring evice or method required to be maintained under the Clean Water Act, all, upon conviction, be punished by a fine of not more than $10,000 or y imprisonment for not more than 2 years, or both.

SECTION E. DEFINITIONS

Permit Issuing Authority

The Regional Administrator of EPA Region IV or his designee, unless at some time in the future the State receives authority to administer the NPDES program and assumes jurisdiction over the permit; at which time, the Director of the State program receiving the authorization becomes the issuing authority.

Act

"Act" means the Clean Water Act (formerly referred to as the Federal Water Pollution Control Act) Public Law 92-500, as amended by Public Laws 95-217, 95-576, 96-483, 97-117, and 100-4, 33 U.S.C. 1251 et seq.

Mass/Day Measurements

a. The "average monthly discharge" is defined and the total mass of all daily discharges sampled and/or measured during a calendar month on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such month. It is therefore, and arithmetic mean found by adding the weights of the pollutant found each day of the month and then dividing this sum by the number of days the tests were reported. The limitation is identified as "Daily Average" or "Monthly Average" in Part I of the permit and the average monthly discharge value is reported in the "Average" column under "Quantity" on the Discharge Monitoring Report (DMR).

b. The "average weekly discharge" is defined as the total mass of all daily discharges sampled and/or measured during the calendar week on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such week. It is, therefore, an arithmetic mean found by adding the weights of pollutants found each day of the week and then dividing this sum by the number of days the tests were reported. This limitation is identified as "Weekly Average" in Part I of the permit. Enter the highest weekly average of sample measurments obtained during the reporting period in the "Maximum" column under "Quantity" on the DMR.

c. The "maximum daily discharge" is the total mass (weight) of a pollutant discharged during a calendar day. If only one sample is taken during any calendar day the weight of pollutant calculated from it is the "maximum daily discharge". This limitation is identified as "Daily Maximum", in Part I of the permit and the highest such value recorded during the reporting period is reported in the "Maximum" column under "Quantity" on the DMR.

The "average annual discharge" is a rolling average equal to the arithmetic mean of the mass measured in all discharges sampled and/or measured during consecutive reporting periods which comprise one year. For parameters that are measured at least once per month, the annual average shall be computed at the end of each month and is equal to the arithmetic mean of the monthly average of the month being reported and the monthly average of each of the previous eleven months. This limitation is defined as "Annual Average" in Part I of the permit and the average annual discharge value is reported in the "Average" column under "Quantity" on the DMR.

Concentration Measurements

a. The "average monthly concentration", other than for fecal coliform bacteria, is the sum of the concentrations of all daily discharges sampled and/or measured during a calendar month on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such month (arithmetic mean of the daily concentration values). The daily concentration value is equal to the concentration of a composite sample or in the case of grab samples is the arithmetic mean (weighted by flow value) of all the samples collected during that calendar day. This limitation is identified as "Monthly Average" or "Daily Average" under "Other Limits" in Part I of the permit and the average monthly concentration value is reported under the "Average" column under "Quality" of the DMR.

b. The "average weekly concentration", other than for fecal coliform bacteria, is the sum of the concentrations of all daily discharges sampled and/or measured during a calendar week on which daily discharges are sampled and measured divided by the number of daily discharges sampled and/or measured during such week (arithmetic mean of the daily concentration values). The daily concentration value is equal to the concentration of a composite sample or in the the case of grab samples is the arithmetic mean (weighted by flow value) of all the samples collected during that calendar day. This limitation is identified as "Weekly Average" under "Other Limits" in Part I of the permit. Enter the highest weekly average of sample measurments obtained during the reporting period in the "Maximum" column under "Quality" on the DMR.

c. The "maximum daily concentration" is the concentration of a pollutant discharged during a calendar day. It is identified as "Daily Maximum" under "Other Units" in Part I of the permit and the highest such value recorded during the reporting period is reported under the "Maximum" column under "Quality" on the DMR.

d. The "average annual concentration", other than for fecal coliform bacteria, is a rolling average equal to the arithmetic mean of the effluent or influent samples collected during consecutive reporting periods which comprise one year. For parameters that are measured at least once per month, the annual average shall be computed at the end of each month and is equal to the arithmetic mean of the monthly average of the month being reported and the monthly average of each of the previous eleven months. This limitation is identified as "Annual Average" under "Other Limits" in Part I of the permit and the average annual concentration value is reported under the "Average" column under "Quality" on the DMR.

Other Measurements

a. The effluent flow expressed as million gallons per day (MGD) is the 24 hour average flow averaged monthly. It is the arithmetic mean of the total daily flows recorded during the calendar month. Where monitoring requirements for flow are specified in Part I of the permit the flow rate values are reported in the "Average" column under "Quantity" on the DMR.

b. An "instantaneous flow measurement" is a measure of flow taken at the time of sampling, when both the sample and flow will be representative of the total discharge.

c. Where monitoring requirements for pH, dissolved oxygen or fecal coliform bacteria are specified in Part I of the permit, the values are generally reported in the "Quality or Concentration" column on the DMR.

d. The "average annual discharge" for fecal coliform bacteria shall be calculated in the same manner as that for mass limitations (see item II.E.3.d.).

...s of Samples

a. Composite Sample: A "composite sample" is a combination of not less than 8 influent or effluent portions, of at least 100 ml, collected over the full time period specified in Part I.A. The composite sample must be flow proportioned by either time interval between each aliquot or by volume as it relates to effluent flow at the time of sampling or total flow since collection of the previous aliquot. Aliquots may be collected manually or automatically.

b. Grab Sample: A "grab sample" is a single influent or effluent portion which is not a composite sample. The sample(s) shall be collected at the period(s) most representative of the total discharge.

Calculation of Means

a. Arithmetic Mean: The "arithmetic mean" of any set of values is the summation of the individual values divided by the number of individual values.

b. Geometric Mean: The "geometric mean" of any set of values is the N^{th} root of the product of the individual values where N is equal to the number of individual values. The geometric mean is equivalent to the antilog of the arithmetic mean of the logarithms of the individual values. For purposes of calculating the geometric mean, values of zero (0) shall be considered to be one (1).

c. Weighted by Flow Value: "Weighted by flow value" means the summation of each concentration times its respective flow divided by the summation of the respective flows.

Calendar Day

"calendar day" ...s defined as the period from midnight o... one day until ...dnight of the next day. However, for purposes of this permit, any ...secutive 24-hour period that reasonably represents the calendar day may ...e used for sampling.

Hazardous Substance

"hazardous substance" means any substance designated under 40 CFR Part ... pursuant to Section 311 of the Clean Water Act.

...0. Toxic Pollutants

"toxic pollutant" is any pollutant listed as toxic under Se... on ...(a)(1) of the Clean Water Act.

Part III

Other Requirements

A. Reporting of Monitoring Results

Monitoring results obtained for each calendar month shall be summarized for that month and reported on a Discharge Monitoring Report Form (EPA No. 3320-1), postmarked no later than the 28th day of the month following the completed calendar month. (For example, data for January shall be submitted by February 28.) Duplicate signed copies of these, and all other reports required by Section D of Part II, Reporting Requirements, shall be submitted to the Permit Issuing Authority and the State at the following addresses:

Environmental Protection Agency
Region IV
Facilities Performance Branch
Water Management Division
345 Courtland Street, N.E.
Atlanta, GA 30365

Florida Dept. of Environmental Regulation
South District Office
2269 Bay Street
Fort Myers, Florida 33901-2896

B. Reopener Clauses

1. This permit shall be modified, or alternatively, revoked and reissued, to comply with any applicable effluent standard or limitation issued or approved under Sections 301(b)(2)(C) and (D), 307(a)(2), and 405(d)(2)(D) of the Clean Water Act, as amended, if the effluent standard, limitation, or sludge disposal requirement so issued or approved:

   a. Contains different conditions or is otherwise more stringent than any condition in the permit; or

   b. Controls any pollutant or disposal method not addressed in the permit.

   The permit as modified or reissued under this paragraph shall also contain any other requirements of the Act then applicable.

2. This permit shall also be modified, or alternatively, revoked and reissued at the written request of the State to incorporate any more stringent or additional requirements contained in any uncontested State permit for this facility which is issued during the term of this NPDES permit.

Part IV
Biomonitoring Program

In accordance with Part I of this permit, the permittee shall initiate the series of tests described below within 90 days of the effective date of this Part to evaluate wastewater toxicity of the discharge from outfall 001.

1. The permittee shall conduct 48-hour static toxicity tests using the Mysid shrimp (Mysidopsis bahia) and the inland silverside (Menidia beryllina) or any other species approved by EPA. Tests shall be conducted once every two months for a period of one year following the initiation of the tests and once every six months thereafter for the duration of the permit using samples of 100% effluent. Four separate grab samples shall be collected at evenly-spaced (6 hr.) intervals over a 24-hour period and used in four separate tests in order to catch any peaks of toxicity and to account for daily variations in effluent quality. Results of all tests conducted with any species shall be reported according to EPA/600/4-85/013, Section 13, Report Preparation and Data Utilization, and shall be submitted to EPA with the monthly discharge monitoring report.

2. If lethality (less than 50% survival of tests organisms in 100% effluent) is found in any test of final effluent, this will constitute a violation of this permit. The permittee will then be subject to the enforcement provisions of the Clean Water Act. In the event a violation of toxicity limits results in an enforcement action, any different or more stringent monitoring requirements imposed in that enforcement action shall apply in lieu of the requirements of this permit condition for whatever period of time is specified by EPA in the enforcement action.

3. All test organisms, procedures, and quality assurance criteria used shall be in accordance with Methods for Measuring the Acute Toxicity of Effluents to Freshwater and Marine Organisms, EPA-600/4-85-013. A standard reference toxicant quality assurance test shall be conducted concurrently with each set of toxicity tests and its results submitted with the monthly discharge monitoring report. Alternatively, if routine QA/QC reference toxicant tests are available, these tests should be submitted.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

REF: 4WM-FP

Mr. A.A. Reeves, III
Florida Cities Water Co.
2112 Gulf Gate Drive
Sarasota, FL 33581

RE: Florida Cities Water Co., Waterway
Estates WWTP-Ft. Myers, FL
Administrative Order No. 89-109
NPDES Permit No. FL0030325

Dear Mr. Reeves:

Pursuant to Section 309(a) of the Clean Water Act, as amended, the Director, Water Management Division, Region IV, United States Environmental Protection Agency, has determined that the above-named facility is in violation of the Clean Water Act. As a result, the Director has issued a Section 309 Order which is enclosed.

Any person who violates a Section 309 Order shall be subject to a civil penalty not to exceed $25,000 per day of such violation pursuant to Section 309(d) of the Clean Water Act.

Under Executive Order 11738 and EPA regulations issued thereunder (40 Code of Federal Regulations, Part 15), facilities to be utilized in contracts, grants, and loans must be in full compliance with all standards established pursuant to the Clean Water Act and the Clean Air Act. A violation of the standards outlined in this notification may result in the subject facility becoming ineligible for participation in any work associated with a Federal contract, grant, or loan.

If you have any questions concerning the enclosed Order, please contact Ms. Priscilla Oliver, Water Management Division at 404/347-7428.

Sincerely yours,

John T. Marlar, Chief
Facilities Performance Branch
Water Management Division

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IV

IN THE MATTER OF FLORIDA CITIES WATER COMPANY WATERWAY ESTATES FT. MYERS, FL NPDES PERMIT NO. FL0030325	)	Administrative Order No. 89-109

ORDER PURSUANT TO SECTION 309
CLEAN WATER ACT

Pursuant to the authority of Section 309(a) of the Clean Water Act (the Act), 33 U.S.C. 1319, which has been delegated to me, I hereby make the following Findings of Fact and Violation and Order:

FINDINGS OF FACT

1. Florida Cities Water Company (hereinafter, the Respondent), submitted an NPDES permit application wherein it is stated that Respondent has a wastewater treatment system (Waterway Estates STP) which periodically discharges pollutants into waters of the United States.

2. The United States Environmental Protection Agency, Region IV (EPA), denied issuance of a National Pollutant Discharge Elimination System (NPDES) Permit for the above discharge location on December 8, 1986.

3. EPA issued Administrative Order No. 87-085 (wMGM) on May 11, 1987 ordering the Respondent to cease discharge no later than

September 30, 1988. The Order was amended on August 31, 1988 ordering the Respondent to cease discharge no later than November 1, 1990.

4. The Respondent submitted a new NPDES permit application for discharge at a different location than in the previous permit application.

5. EPA drafted an NPDES permit for the new discharge location on July 19, 1989.

6. The Respondent has submitted plans and specifications to the Florida Department of Environmental Regulation for improvements to the treatment facility and for discharge to the new location.

7. The Respondent continues to discharge pollutants at a location without an NPDES Permit. In accordance with Section 301(a) of the Clean Water Act, discharges of pollutants into waters of the United States are unlawful unless permitted by an NPDES permit, or specifically exempted from NPDES requirements.

8. Actual construction is dependant upon issuance of a State permit which can be delayed by administrative proceedings.

VIOLATION

The Respondent is in violation of Section 301(a) of the Clean Water Act by discharging pollutants into waters of the United States without an NPDES permit.

ORDER

Based on the foregoing Findings of Fact and Violation, and pursuant to the provisions of Section 309(a) of the Act, as amended, it is hereby ordered:

1. That the Respondent start construction to cease discharging pollutants to waters of the United States at the existing location at the earliest date practicable, and meet NPDES requirements in accordance with the schedule below. The Respondent shall report monthly on progress toward meeting this schedule. If any administrative challange is raised to issuance of a construction permit, the monthly reports shall detail all efforts to resolve such a challange.

Activity	Due Date
Start Construction	May 1, 1990
Complete Construction and Ceas Discharge at the Current Location	August 1, 1991
Comply with NPDES requirements at permitted location	October 1, 1991

2. This should in no way be considered a permit to discharge, however, if the Respondent does discharge to waters of the United States in violation of the Act, the Respondent's discharge of treated wastewater shall at least comply with the effluent limitations, monitoring schedule and other requirements contained in its previous permit.

3. That monitoring results obtained during each calendar month shall be summarized on a Discharge Monitoring Report Form (EPA Form 3320-1). Forms shall be submitted for each month and shall be ostmarked no later than the 28th day of the month following the end of the month being reported on. Monitoring required by the State of Florida other than that specifically required by this Order shall be submitted in the same form as to the State but shall be included with Discharge Monitoring Report submissions.

4. If there is any transfer of ownership of this facility prior to completion of all requirements of this Order, then the new owner must be informed of these requirements and shall carry out the provisions. EPA shall be notified of any transfer of ownership.

COMPOSITE EXHIBIT NO. _____

DOCKET NO.: 971663-WS -- PETITION OF FLORIDA CITIES WATER COMPANY FOR LIMITED PROCEEDING TO RECOVER ENVIRONMENTAL LITIGATION COSTS FOR NORTH AND SOUTH FT. MYERS DIVISIONS IN LEE COUNTY AND BAREFOOT BAY DIVISION IN BREVARD COUNTY.

P R O C E E D I N G S

THEREUPON:

MICHAEL ACOSTA,

having been previously duly sworn, testified as follows:

DIRECT EXAMINATION

BY MS. GERVASI:

Q. Mr. Costa, what positions have you held with Florida Cities?

A. Do you really want all of them?

Q. Wait. Before you answer that, would you please state your name and business address for the record?

A. Sure. Michael Acosta, 4837 Swift Road, Suite 100, Sarasota, Florida.

Q. Okay.

A. Positions I have held with the company. Started as the division engineer in Lee County in late '85. At some point, transitioned to regional engineer somewhere in the '89 time frame, still located in Lee County. In 1992, I came to Sarasota as manager of engineering and construction, and in 1995, became vice president of engineering and operations.

Q. And that's your current position?

A. Yes, that's my current position.

Q. What are your current responsibilities in that

position?

A. I'm responsible for all the management regarding the operations and engineering of the facilities throughout Florida Cities and Poinciana Utilities, including the operations budget, the capital improvement budget, and all the associated personnel issues therewith.

Q. Okay. Thank you. Let me refer you to your Exhibit 2 that's attached to your testimony. This is on the facts sheet for the Waterway state notification.

A. Yes.

MR. GATLIN: Excuse me?

MS. GERVASI: This is Exhibit 2 attached to his testimony, filed with his pre-filed testimony, page two of Exhibit 2.

THE WITNESS: Once you pass the letter?

MS. GERVASI: Yes, where it says state certification requirements.

BY MS. GERVASI:

Q. It says the state certification was not received with the permit renewal application and will be requested on the permit denial.

A. Uh-hmm.

Q. Did the DER waive state certification by not responding to the EPA within a certain time period?

A. I don't know if that's the procedure that is used, that there is a time limit used by the state agency to respond. I don't know that answer.

Q. Do you know when the DER submitted its MPDES certification worksheet for Waterway's May 1996 EPA permit application?

A. I would have to flip to my Exhibit 7, which is that certification worksheet itself, and see if there are any dates associated with that one.

Q. Take your time. Evidently there was a date at the bottom, but we can't make it out.

A. Yeah. If you can read that, I mean --

Q. Is your copy any better than mine?

A. No, I don't think so. I think you can probably guesstimate that that's an eight, the second to the last digit, but -- and that might be a six on the back side, but pure guessing there.

Q. Concerning the DER order to upgrade to advanced water treatment and relocate the outfall, is it correct that DER did in fact order the company to upgrade Waterway to advanced wastewater treatment standards?

A. It was their recommendation in the certification worksheet that that be done, and I think ultimately that became part of a consent order, that

that's what the company would do upon -- and that was involved with the renewal of the permit application that was to expire in '88.

Q. Okay. And also to relocate the outfall from the canal to the middle of the river?

A. To the six-foot contour, that's right.

Q. When did DER order the company to do this?

A. I don't know exactly when the consent order was executed, or that there was a consent order. In their original facts sheet, in the original certification, they were talking about at the time when the permit expires, which would have been in August of '88.

Q. Do you know why they ordered that?

A. As to the six-foot contour, only what I have read and seen in regards to this case and what Mr. Allen presented this morning. That's all I know about the six-foot contour. Pretty standard, if you are going to have a surface water discharge at the time, that you are going to meet advanced wastewater treatment standards. In fact, that is what the waste load allocation is based on, is the limits that would be created by advanced wastewater treatment.

Q. And this was agreed upon in a consent order? Is that right?

A. I don't know. I'm using that term loosely here, because I don't know for sure that that was in a consent order or a direction or as part of the permit that they were going to reissue in '88. I'm not a hundred percent exactly sure how it was going to be demanded by DEP that those two items be completed.

Q. Let me direct your attention to the company's response to Staff Interrogatory No. 34. In this response you say, a utility must timely submit its application for a DES permit renewal, and "timely" means usually no later than 180 days before the current permit expires. Is that correct?

A. Correct.

Q. Is it correct that Florida Cities submitted its MPDES permit renewal application for Waterway on May 9th, 1986, which was 139 days before the current permit expired on September 24th of '86? Are you aware of that?

A. I know that the application was submitted on May 9th. That was one of my exhibits. As to the actual permit expiration date, no, I do not know exactly when that was.

Q. Do you know whether it was late, whether the company was late in submitting the application?

A. No, to answer your question. I don't know if

the regulations at the time required a 180-day-in-advance. I answered the interrogatory as I am aware of the permit requirements today.

Q. Okay. Now, on page two of your testimony, you testified that the permit was issued on September 24th of '81, and you tell us it expired on September 24th of '86.

A. Maybe I knew that.

Q. But you don't know whether that was a late submission?

A. I have read nothing in my review of the record that EPA characterized in that manner at all, no. So I don't know that they viewed it as a late submission.

Q. Do you know whether before July 22 of 1986 the company owned and operated an advanced wastewater treatment plant?

A. July -- say that date again?

Q. 22nd of '86?

A. I believe Fiesta Village had -- Fiesta Village had just cranked up its operation in its advanced wastewater treatment mode in the beginning of '86. That was the first one in Lee County. Sarasota plants had had advanced wastewater treatment, albeit different treatment processes, for a long time before that, ten years or so before that.

Q. That was the city?

A. No, Sarasota County, our facilities here in Sarasota County.

Q. Okay. Were these plants secondary treatment plants before they became advanced wastewater treatment facilities?

A. Fiesta Village and Waterway Estates certainly both were. I don't know about Sarasota.

Q. Do you know how long it took the company to upgrade these plants to advanced standards?

A. I know Waterway Estates really well. Fiesta Village was -- I don't know the exact time when it started, no. It was a completely different type of project from a construction standpoint than Waterway Estates was, permitting and all that stuff. It was all different. As far as construction, I never reviewed it. I came on board just as it was finishing up.

Q. How about the Sarasota ones?

A. Sarasota ones were completed in the mid-'70s, so I have no knowledge of their construction, time frame, permitting, et cetera, et cetera.

Q. Did these plants dispose of their effluent by surface water discharge into waters of the United States?

A. Fiesta Village discharges effluent, yes, and

plants in Sarasota County discharge to creeks that ultimately go to Sarasota Bay. I don't know if the creeks are designated as waters of the U.S. or not. But certainly, ultimately they ended up as waterways of the U.S., yes.

Q. Do you know what the waste load allocation is?

A. For Fiesta Village, the waste load allocation is 5 MGD, million gallons per day. For the two Sarasota plants, they discharge to bodies of water that I don't believe have established waste load allocations, as such. And I don't know whether Sarasota Bay, Roberts Bay, here in Sarasota, have waste load allocations established or not. This is not something we have had to deal with, in my term of dealing with Sarasota plants.

Q. I want to discuss the September '86 compliance schedule a little bit. In the trial transcript of Patrick Lehman, he discussed his compliance schedule as being extremely optimistic. Are you familiar with that, with the proposed compliance schedule that was submitted back in September of '86 to the EPA?

A. I think I have seen it, but I don't have any recollection of beginning-to-end time frame, as I sit here this minute.

Q. Do you know whether, when submitting proposed

compliance schedules like that to regulatory agencies, it is standard procedure to have the vice president of engineering or operations approve the schedules?

A. Since I have been vice president, we haven't had to submit the compliance schedule, because we have been in compliance.

Q. That's good.

A. But you know, just from a company standpoint, both today and at the time, those big-picture issues were generally dealt with at the vice president or at that particular level, yes. There was no schedule that was dealt with on a local level, local being from our division levels. Beyond that, I don't know. I was not up here in Sarasota at the time.

Q. So you don't know whether that particular one was approved?

A. No.

Q. Do you have any idea why the company submitted a proposed compliance schedule which Mr. Lehman described at trial as being extremely optimistic?

A. No.

Q. Is it true that the company knew as of July 1986 that the discharge option required the company to request a waste load allocation?

A. I don't know exactly that that was the case.

You know, now, based on my review of the documents today, the waste load allocation already existed. Whether Mr. Lehman knew that -- the date, July 22nd of 1986 -- I don't know.

Q. And the engineering study of Waterway effluent disposal options was completed, we noted, on August 8th of 1997. Right? We gleaned that date from a production document request. I didn't bring them all with me.

A. I believe that was in my testimony, as well, but I just can't find it. Here it is.

On November 10th, we solicited engineering proposals for the preparation of the engineering report. That was November 10th of 1986.

Q. We're wondering why the company didn't request a waste load allocation prior to December of '87 for Waterway. Do you know?

A. No. And I have reviewed that letter that went in '87, and again, I'm not sure that that letter is requesting a waste load allocation for the 1 MGD. I think that what may have been the intent -- more likely the intent -- is the 1.5 MGD ultimate disposal capacity, which is in that letter. The letter is vague on that subject.

Q. Do you know when DER issued the company a waste load allocation?

A. Based on my review of the records now, the waste load allocation for Waterway Estates has been in place, documentable, since -- it's one of my exhibits, the letter from DEP to EPA -- since May 7th, 1986, that identifies Waterway Estates as a current allocation, as 1.08. So certainly on May 7th, 1986, DEP believed that there was a waste load allocation. The initial waste load allocation study was done, I believe, in the late '70s, early '80s.

Q. Are you referring to the letter that was part of your Exhibit 4?

A. Yes.

Q. That's regarding the City of Cape Coral waste load allocation. Correct?

A. Correct. Keep reading down, though. There's a little box in there that identifies current waste load.

Q. Okay.

A. See where it says current allocations are as follows. Waterway Estates was listed there as 1.08, which was the plant capacity at the time, and Fiesta Village is listed below at 5.

Q. Okay, thank you. Is it correct that the development order exemption for Waterway's outfall and advanced wastewater treatment plant was denied initially

because Lee County stated initially there was over 2500 square feet of impervious area and the impervious calculations weren't complete?

A. I believe that's correct, from review of my testimony.

Q. Why did the company not recognize the over 2500 square feet of the additional impervious area? Do you know?

A. Yes, because they didn't exist. These were open-top tanks, and the county didn't recognize that water that fell in them via rainfall would stay in those tanks and not run off. The county just didn't understand that, and once we were able to meet and tell them about that, they backed off of that.

Q. Did you have to do calculations or anything about that?

A. No. Once you take the tankage out of the picture, you fall below the criteria, and you don't have to do the impervious surface calculations. That's why they weren't done.

Q. Okay. Were there any other reasons why this exemption request was initially denied?

A. In my view, there is nothing I can point to as to a document and says the zoning issue, but the zoning issue took a while to resolve itself out. That was

certainly a -- not necessarily a denial point, but a hold-up point, until that was resolved. If the zoning didn't change, they certainly were not going to approve a development order that showed the tanks up against the property line and the zoning says you can't do that.

Q. Do you know when the exemption request was initially denied?

A. I believe that was initially denied in late summer of -- I believe we are dealing with 1988.

Q. Were there any subsequent denials after that?

A. No, not to my knowledge; no, nothing that I can find in the record, and nothing that I was involved with at the time.

Q. Okay. At the bottom of page 13 of your testimony, you were testifying about the zoning variance denial for Waterway's outfall in August of '88?

THE WITNESS: Hey, Ken, I need to get your copy of the testimony. My page 13, I am down here talking about building permits. On the bottom of 13?

MS. GERVASI: Bottom of 13 is where it states and you are talking about, you are saying that questions were raised by members of the board of adjustments and the general public.

BY MS. GERVASI:

Q. What specific questions did they raise? Do you recall?

A. I was not present at the time. This is again going back on -- based on my record, the records the company has and the records that the attorneys who were handling the zoning variance at the time had, and that was all that was in the record. My understanding was, from speaking with the attorney, that we were talking about -- we were literally putting some of these buildings on top of, within two feet of, the property line -- a very unusual circumstance -- and there was a marina next door on one side who was concerned in that regard, as to noise and all the other associated wonderful things with a wastewater treatment plant. And the board at that point did not believe that they had enough to approve.

Q. Do you know what additional information the company submitted to Lee County in response to those questions that were raised?

A. I believe that there was some vegetation stuff that was put into the site plans, and landscaping, fence line, that kind of stuff. That was about it, all we could do.

Q. With regard to Waterway's DER permit application for relocating the outfall or upgrading to

the advanced standards, why did it take the company six months to submit all the additional information that the DER was requesting?

A. The DER came back several different times during that course. It was not a matter of they gave us a list of 35 items upon the initial application, and then we submitted those 35 items over a six-month period.

What typically happens is they will send you a letter, you have to have it back in 30 days, you submit that, it generates more questions, you got another 30 days, et cetera, et cetera. They were concerned in regard to the process that they wanted more guarantees, that the process would, in fact, meet AWT standards.

They wanted some of what was infamously termed "reasonable assurance" that that was going to happen, and they weren't reasonably assured until that final date.

Q. Okay. One last thing I would like to request of you, if possible. We notice there are certain days of the EPA trial transcript that are missing from what's been pre-filed, and I wonder if we could ask you to provide a copy of the March 26th, 1996, transcript. We don't have that.

A. I think we as a company can do that. I can't

personally do it.

Q. I am asking you because I forgot to ask Mr. Allen.

A. That's fine.

MR. GATLIN: There are some dates, some weeks, that we didn't hold hearings.

MS. GERVASI: Okay, if there was --

MR. GATLIN: That may be one of the days.

MS. GERVASI: It could be. It could be. But we are missing March 26th of '96, April 2nd of 96, and April 4th of '96, starting with page 110 on that date.

MR. GATLIN: 110 on --

MS. GERVASI: On April 4th, right.

THE WITNESS: Are you missing pages, or --

MS. GERVASI: We are missing the entire day for the 26th and the 2nd of April.

THE WITNESS: Mr. Gatlin may be exactly right. There were breaks in the trial that spanned days.

MS. GERVASI: Okay. Let me go ahead and label this as Late-filed Exhibit 1 for you. And that's EPA trial transcripts.

MR. GATLIN: March 26th, April 2nd.

MS. GERVASI: Of '96. For those entire days. And for April 4th, '96, starting from page 110.

MR. GATLIN: Okay.

MS. GERVASI: Okay, one more request for another Late-filed exhibit.

THE WITNESS: Okay.

MS. GERVASI: In your Exhibit 2 that you submitted with your testimony, you refer to -- let's see, what page is this? Did you number these?

THE WITNESS: Well, I numbered the exhibits, but not the pages of the exhibit.

MS. GERVASI: Okay. Well, it's the first page of Exhibit 2. You refer to a July 9th, '86 letter in the third paragraph.

MR. GATLIN: He doesn't refer to it.

MS. GERVASI: Well, Mr. Reeves does, then; whoever wrote the letter.

THE WITNESS: Are we talking about the same exhibit?

MS. GERVASI: Exhibit 2.

MR. GATLIN: July 28, 1986 letter?

MS. GERVASI: Yes. Reference is made to a July 9th, '86, letter.

THE WITNESS: Yes, I see what you are saying.

MS. GERVASI: Do you have a copy of that letter?

THE WITNESS: I do not know. We can look.

MS. GERVASI: Okay. Let's label that as Late-filed No. 2. And if you have a copy of it, we'd like a copy of the July 9th, '86 letter requesting the 90-day extension. And if you don't mind, we will add those to the other ten that we asked for by the 18th, if you can do it.

MR. GATLIN: Sure.

MS. GERVASI: Thank you. That's all the questions I have.

CROSS EXAMINATION

BY MR. McLEAN:

Q. Mr. Acosta, I am here to represent the citizens of the State of Florida. We have intervened in the docket, as I think you know. Did you testify in the federal case?

A. I did.

Q. What was your role there? What kind of information did you bring to the Court?

A. Basically, the same information in my testimony regarding the permitting process, of getting from point A to point B -- as far as you are here today with no plant; you are here at point B with a fully constructed and in-compliance plant.

Q. So in the federal court, you are again in the

posture of again looking back on the company's records and saying what happened?

A. To the extent that that process dated back from the time that we started initiating, soliciting engineering proposals for the design of Waterway Estates, that's correct. From that point forward, I was involved to some extent -- not in the design, but in touring some folks around. That was my initial involvement at the plant.

Q. I see. Okay. And in this proceeding, your role is pretty much "I have looked and seen what the company did, and I believe they have acted prudently with respect to the engineering issues." Is that a fair summary of what you said?

A. From that point backward in time, that's correct.

Q. And from that point forward, you are saying, essentially, from an engineering perspective, what you did was reasonable.

A. That's right.

Q. Okay. And you will be tendered as an engineering expert, ready to give your opinion about those things? By the way, we would happily concede all of your qualifications.

A. Everybody always does.

Q. Sure, who wants to mess with that? You are an expert in sanitary engineering. Is that what they call it these days?

A. Sure, environmental.

Q. Environmental, right. That's the new term, right? Sanitary is the old term?

A. Yes.

Q. Are you going to bring any testimony forward about who pays or who should pay, and so forth?

A. Not to my knowledge.

Q. Unless I ask you something like that.

A. Right.

Q. The evidence that you give in this case -- I think this is a little repetitive, so I apologize, but the evidence you are bringing forth in this case was presented to Judge Nimmons, and presumably he ruled upon it?

A. To a great extent; to a great extent, yes.

Q. When you say "to a great extent," are you saying you kind of disagree with Judge Nimmons, or are you saying there are some he didn't rule on at all?

A. I believe there are some things in here that were not presented by me to Judge Nimmons; i.e., the waste load allocation stuff. I did not do that in federal court.

Q. Are you aware that Judge Nimmons found that the company had engaged in a number of violations? Is that right?

A. "Violations" to me is a legal term that gets me in trouble, so I steer away from that word. But in regards to certain items, yeah.

Q. In your testimony -- this is a difficult question to ask -- does your testimony form the basis, for, at least to some extent, the order that came out of federal court?

A. I don't know. My testimony is directed at the time periods in between milestones, if you will, that carried this process from concept to completion of construction.

Q. I see. One thing I am a little confused on is, you have been on the board of Florida Cities since when? A good while?

A. Late '85.

Q. Why is it you are in the position of having to review records to determine whether they are prudent? Is it because you were not in charge during that time?

A. That is correct. During the period of -- well, prior to 1982, I was located in the Lee County division office and these -- the federal permitting and permit preparation in general, as it is today, was

generally handled out of the corporate office in Sarasota.

Q. And you just said '82, and I think you may have meant '92.

A. Right. I was still in college then.

Q. Who was in the position -- the position you hold now, assuming it was filled during that time, who was in that position?

A. In what time frame? Because it changes.

Q. Can you take me through the succession?

A. Sure. In 1985, when I came on board, the position that I have today did not exist. There was a vice president of engineering that was one person and a vice president of operation that was another person. Those two people, through the course of four years, left the company. Those two positions reverted to managers of, respectively, engineering and operations. And at some point, there was a senior vice president position that was created and filled by a Mr. French at the time. That position has evolved into what my position today is, which is vice president of engineering and operations.

Q. Did Mr. French leave the company, or did he go to some other position at Avatar Holdings?

A. Mr. French left the company.

Q. And you took over immediately after Mr. French left?

A. No. There was a Mr. Bratmiller who came after Mr. French, with some time gap in between, obviously. And following Mr. Bratmiller's promotion, that position was filled by Mr. Overton. And Mr. Overton moved to a sister company. And after some time period, I was plugged into that position.

Q. Have you been asked to provide a summary of your testimony at any point in time?

A. No.

Q. Do you plan to provide a summary of your testimony?

A. That was not my plan as of when I came in this morning, no. It's going to be, frankly speaking, difficult to summarize the dates without getting somewhat lengthy.

Q. Without going through the whole thing?

A. Right.

Q. So you join me in the observation that sometimes the summary is longer than the testimony?

A. No.

Q. About two thirds of the time?

A. I was going to do a mathematical analogy to that.

MR. McLEAN: Let's don't. That's all I have, Mr. Acosta. Thank you.

MS. GERVASI: Mr. Gatlin, do you have any questions?

MR. GATLIN: No questions, and we would like to read.

MS. GERVASI: That concludes the deposition. Thank you.

THE WITNESS: Thank you.

(Deposition ended at 3:07 o'clock p.m.)

Re: Florida Cities Water Company - Waterway Estates
Wastewater Treatment Plant - Amended Consent Order
with Florida Department of Environmental Regulation

Dear Mr. Edwards:

Enclosed is the Amended Consent Order which was prepared by Francine Ffolkes at FDER - Tallahassee, which I have executed on behalf of Florida Cities Water Company (FCWC).

The principal changes set forth in this amended order are that paragraph 8 of the original order has been substantially modified and that paragraph 9 has been deleted. With the execution of this amended order, we will have removed the basis for the pending administrative proceeding. Ms. Ffolkes has advised our attorney that Dr. Ahmadi is aware of this action.

FCWC appreciates the cooperation of the FDER in this matter. If you have any questions, please telephone me.

Sincerely,

Tony

STATE OF FLORIDA DEPARTMENT
OF ENVIRONMENTAL REGULATION,

Complainant

OGC CASE NO.: 90-1747

vs.

FLORIDA CITIES WATER COMPANY
(WATERWAY ESTATES WASTEWATER
TREATMENT PLANT),

Respondent.

_____/

AMENDED CONSENT ORDER

This Consent Order is entered into between the State of Florida, Department of Environmental Regulation (hereinafter "Department") and Florida Cities Water Company (Waterway Estates Wastewater Treatment Plant) (hereinafter "Respondent").

The Department finds and Respondent neither denies nor admits the following:

1. The Department of Environmental Regulation is the administrative agency of the State of Florida charged with the authority to administer and enforce Chapter 403, Florida Statutes (F.S.), and the rules promulgated thereunder in Florida Administrative Code (F.A.C.) Title 17.

2. Respondent owns, operates, and maintains a 1.0 MGD wastewater treatment plant (activated sludge process) servicing

certain portions of North Fort Myers. This plant is located off of Inlet Drive, North Fort Myers, Lee County, Florida.

3. Respondent was authorized to operate the facility under Temporary Operating Permit DT36-152486, issued September 23, 1988 with expiration on November 1, 1990.

4. Respondent was issued a construction permit DC36-165119, issued March 1, 1990 with expiration on November 1, 1990.. The construction permit was extended on October 30, 1990 until September 1, 1992.

DT36-188171

5. A Temporary Operating Permit (TOP) ~~5236P01630~~, was issued to Respondent on January 22, 1991 with an expiration date of June 1, 1993.

6. On July 15, 1988 Respondent signed and entered into a Consent Agreement, OGC Case No. 88-0384 with the Department in order to resolve violations of Florida Administrative Code Rules: 17-600.750(1), 17-7.040, 17-600.740(1)(b)1.d and 17-601.500(1).

7. Respondent failed to comply with paragraph ten of OGC-Case NO. 88-0384, which required the construction of the wastewater treatment plant be complete and certified in compliance with all F.A.C. Rules and Florida Statutes regulating wastewater treatment facilities by November 1, 1990.

The Department and Respondent having met to discuss the above, have reached a mutually agreeable settlement of the above referenced matters pursuant to F.A.C. Rule 17-103.110(3), it is therefore

AGREED AND ORDERED:

8. Respondent shall make modifications to the treatment plant to ensure that it will consistently meet all applicable State standards. Respondent shall comply with the schedule DT36-188171 outlined in T.O.P. ~~S236P01630~~ as follows:

	ACTION	DUE DATE
a.	Substantial completion	September 1, 1992
b.	Facilities certified in compliance	June 1, 1993

9. Respondent's wastewater treatment facilities shall be in full compliance with all permits, F.A.C. Rules and Florida Statutes regulating wastewater treatment facilities and the provisions of this Consent Order no later than June 1, 1993. Failure to meet this Compliance deadline will result in a stipulated penalty of $200.00 per day until compliance is achieved. Acts of God and other delays due to circumstances beyond the reasonable control of the Respondent shall extend the compliance date one day for each day of delay.

Respondent shall notify the Department by telephone within seventy-two (72) hours and follow up in writing within seven (7) days of any "acts of God and/or other delays due to circumstances beyond the reasonable control of the Respondent", that would result in Respondent not meeting the compliance deadline of June 1, 1993.

10. Under current regulations, additional collection system connections cannot be allowed under a General Permit. However, the Department will process an Application to Construct Domestic

Wastewater Collection/Transmission systems [DER Form 17-1.205(2)] if Respondent takes additional measures to ensure that the total quantity of pollutants entering the Caloosahatchee River does not exceed the stipulated limits in the Temporary Operating Permit (T.O.P.). Based upon satisfaction of the Department's permitting requirements, the proposed Palm Island and Barrett Park projects may be allowed to connect to the Waterway Estates wastewater treatment system. Meeting the aforementioned effluent limits as outlined in the T.O.P. shall be considered a part of the Department's permitting requirements.

11. Respondent shall notify the Department by telephone within twenty-four (24) hours, and follow up in writing within seventy-two (72) hours of any non-compliance with any permit condition, F.A.C. Rule or Florida Statute with the following information:

a. A description of the cause of non-compliance; and

b. The period of non-compliance, including exact dates and times; or, if not corrected, the anticipated time the non-compliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the non-compliance. Violation of this provision will result in further enforcement action by the Department.

12. Respondent shall make payment of **$15,000.00** to the Department of Environmental Regulation in order to settle the issues raised in the Consent Order. The amount shall be made payable to the "State of Florida Department of Environmental

Regulation" and shall be submitted to 2269 Bay Street, Fort Myers, Florida 33901-2896, within twenty days of the entry of this Consent Order. For and in consideration of the complete and timely performance by Respondent of the obligations agreed to in this Consent Order, the Department hereby waives its right to seek judicial imposition of additional civil penalties concerning the issues resolved by this Consent Order.

13. Persons not parties to this Consent Order whose substantial interests are affected by this Consent Order have a right, pursuant to Section 120.57, F.S., to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapter 17-103 and 28-5, F.A.C., and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, Florida 32399-2400, within 21 days of receipt of this notice. Failure to file petition within the 21 days constitute a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, F.S.

14. Respondent waives its right to an administrative hearing on the terms of this Consent Order under Section 120.57, F.S., and its right to appeal this Consent Order pursuant to Section 120.68, F.S.

15. Entry of this Consent Order does not relieve Respondent of the need to comply with all applicable federal, state or local laws, regulations, or ordinances.

16. The terms and conditions set forth in this Consent Order may be enforced in a court of competent jurisdiction pursuant to Sections 120.69 and 403.121, F.S. Failure to comply with the terms of this Consent Order shall constitute a violation of Section 403.161(1)(b), F.S.

17. Respondent is fully aware that a violation of the terms of this Consent Order may subject Respondent to judicial imposition of damages and civil penalties of up to $10,000 per offense.

18. Respondent shall allow all authorized representatives of the Department access to the property at reasonable times for the purpose of determining compliance with the terms of this Consent Order and the rules of the Department.

19. The Department hereby expressly reserves the right to initiate appropriate legal action to prevent or prohibit future violations of applicable statutes or the rules promulgated thereunder not covered by the terms of this Consent Order.

20. No modification of the terms of this Consent Order shall be effective until reduced to writing and executed by both the Respondent and the Department.

21. All reports, plans, and data required by this Consent Order to be submitted to the Department should be sent to the Deputy Assistant Secretary, 2269 Bay Street, Fort Myers, Florida 33901-2896.

22. This Consent Order is final agency action of the Department pursuant to Section 120.69, F.S., and F.A.C. Rule

17-103.110(3), and it is final and effective on the date filed with the Clerk of the Department unless a Petition for Administrative Hearing is filed in accordance with Chapter 120, F.S.

Upon the timely filing of a petition this Consent Order will not be effective until further order of the Department.

FOR THE RESPONDENT:

A.A. Reeves, III
Executive Vice President

RE: NPDES Permit #FL0030325, EPA Administrative Order #89-109

Dear Mr. Marlar:

Florida Cities Water Company is currently operating under the referenced NPDES Permit and Administrative Order. Due to delays with the construction of our Advanced Wastewater Treatment Facility, Florida Cities Water Company entered into negotiations with the Florida Department of Environmental Regulation in order to arrive at mutually agreed upon dates for completion of this construction. As a result of these negotiations Florida Cities Water Company and the FDER have recently concluded and executed an agreed order which provides for certain completion dates for the subject facility. Enclosed is a copy of this agreement.

Florida Cities Water Company respectfully requests that EPA Administrative Order #89-109 be modified to reflect these agreed dates. Specifically, we request that paragraph 1 of the order be changed to indicate that substantial completion will be achieved September 1, 1992, and that the facilities will comply with the NPDES Permit requirements at the permitted location on November 1, 1992.

Should you have any questions concerning this request, please do not hesitate to contact us.

Sincerely,

Jack W. Tompkins, P.E.
Operations Manager

COMMISSION STAFF'S FIRST SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

INTERROGATORIES

1. Please provide a time line of events relating to the denial of the NPDES permit, beginning in 1986 when the permit was first denied and continuing to date.

   Response: (MA)

   See the APPENDIX for a time line of events associated with the NPDES permit at Waterway.

APPENDIX

COMMISSION STAFF'S FIRST SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

APPENDIX

Reference Interrogatory #1.

DATE	EVENT/ACTION
4-7-86	Notification of expiration date of NPDES Permit. Letter - USEPA -IV to FCWC.
5-7-86	FDEP notifies USEPA-IV of current waste load allocations to Caloosahatchee River where Waterway Estates WWTP discharges via a canal. Waterway Estates WWTP shown to have allocation of 1.08 MGD. Letter - FDEP (Richardson) to USEPA-IV (Hyatt).
5-09-86	Renewal application for WWE NPDES permit application submitted.
5-21-86	Acknowledgment of application for renewal of NPDES permit. Letter - USEPA -IV to FCWC.
7-22-86	Conclusion by USEPA -IV that the NPDES permit for Waterway Estates WWTP should be denied. Letter - USEPA-IV(Patrick) to FCWC (Reeves).
8-10-86	Recap of meeting with FDEP on 7/29/86 in their Ft. Myers office regarding the denial of NPDES Permit. Memo - FCWC (Lehman) to FCWC (Reeves).
9-16-86	Schedule of compliance action requested by USEPA submitted by FCWC. Letter - FCWC (Lehman) to USEPA (Kagey).
11-10-86	Requests for Fee Proposals for Engineering Study of WWE-WWTP by 12-3-86. Letters - FCWC (Lehman) to Post Buckley Schuh & Jernigan and others.
12-8-86	NPDES permit denial for WWE - WWTP. Letter - USEPA-IV (Barrett) to FCWC (Reeves).

3-27-87	FCWC and ESE enter into Agreement for engineering study of alternative treatment and disposal methods for WWE.
5-11-87	USEPA-IV issues Section 309 Administrative Order 87-085 setting forth schedule for ceasing discharge by 9-30-88. Letter - USEPA-IV(Marlar) to FCWC (Reeves).
8-87	Preliminary Engineering Draft Report submitted by ESE setting forth treatment and disposal options.
12-1-87	FCWC requested 1.5 MGD Wasteload Allocation to Caloosahatchee River. Letter - FCWC (Lehman) to FDEP-Ft. Myers (Blackburn).
12-14-87	FCWC request for proposals for engineering services to design upgrade of WWE WWTP. Generic letter - FCWC (French).
12-24-87	Answer to FCWC request for water quality based effluent limits for the WWE-WWTP. Memo - FDEP (DeGrove) to FDEP-SW (Blackburn).
1-26-88	Status update submitted to USEPA on WWE-WWTP expansion. Letter - FCWC (Lehman) to EPA (McGarry).
2-29-88	Executed Agreement for Engineering Services transmitted to Source, Inc. Letter - FCWC (French) to Source (Elliott).
3-1-88	Proposed compliance schedule for project submitted to FDEP-SW. Letter - FCWC (Lehman) to FDEP-SW (Romeis).
3-10-88	Status update submitted to USEPA on WWE-WWTP expansion. Letter - FCWC (Lehman) to EPA (Oliver).
5-7-~~86~~ 87 5-7-86	Information regarding wasteload allocation. Letter - FDEP-SW (Richardson) to USEPA -IV (Hyatt).

6-6-88	Report of meeting with Ahmadi and Mele of FDER to discuss plant requirements. Letter - Source (Harrop) to FCWC (French).
6-15-88	Final revised FDEP Consent Order transmitted by FDEP-SW. Letter - FDEP (Barbaccia) to FCWC (Reeves).
6-22-88	Summary of June 9, 1988 Show Cause Meeting at EPA regarding Gulf Gate, South Gate, Carrollwood and WWE-WWTP. Letter - Gatlin, Woods, Carlson & Cowdery (Cowdery) to FCWC (Lehman).
7-1-88	Request for information on current status of FCWC request for a wasteload allocation submitted to FDEP-SW. Letter - FCWC (Lehman) to FDEP-SW (Edwards).
7-15-88	Transmittal of FDEP Consent Order signed by both parties. Letter - FDEP-SW (Edwards) to FCWC (Reeves).
7-22-88	Transmittal of signed FDEP Consent Order copy and update on progress of project. Letter - FCWC (Lehman) to USEPA -IV (McGarry).
7-22-88	Transmittal of signed TOP application forms and filing fee. Letter - FCWC (Lehman) to FDEP- SW (Edwards).
7-26-88	Advisement that the modeling and allocations for the Caloosahatchee River system should be completed in October 1988. Memo - FDEP (DeGrove) to FDEP-SW (Mele).
8-04-88	FCWC notified (through counsel) that application to Lee County for Exemption from Development Standards Ordinance cannot be approved. Letter - Lee County (Hollingsworth) to Pavese, Garner et al (Montgomery).
8-8-88	Transmittal of Lee County exemption denial. Letter - Pavese, Shields, Garner et al (Montgomery.) to FCWC (French).

8-16-88	Summary of meeting with FDEP-SW (Blackburn) discussing the updated wasteload allocation study. Memo - FCWC (French) to File.
8-18-88	Appeal to Board of Zoning Adjustments of Board of County Commissioners for reconsideration of denial of exemption from Development Standards Ordinance.
8-19-88	Receipt of appeal submitted to Lee County Zoning. FAX - Pavese, Shields, Garner et al, Attorneys (Montgomery) to FCWC (French).
8-31-88	Amendment to Administrative Order 87-085 amending ceasing discharge date to 11-1-90 transmitted by USEPA-IV. Letter - USEPA -IV (Barrett) to FCWC (Reeves).
9-23-88	Temporary Operating Permit No. DT36-152486 issued by FDEP-SW. Letter - FDER (Edwards) to FCWC (Reeves).
9-27-88	Discussion of "reasonable assurance" requested by DER regarding the application for upgrading WWE-WWTP to an advanced wastewater treatment facility. Letter - FCWC (French) to FDEP-SW (Ahmadi).
11-1-88	Transmittal of Barth Tec, Inc.'s report and addressing items contained in Ahmadi's letter of 10/11/88. Letter - FCWC (French) to FDEP-SW (Ahmadi).
11-11-88	Submittal of a development order for WWE-WWTP to Lee County. Letter - Pavese, Shields, Garner et al (Montgomery).
1-17-89	Request for permit exemption submitted to SFWMD
2-7-89	Permit exemption #36-01008-S issued by SFWMD. Letter - SFWMD (Pemble) to Lee County Engineer (Brown).

3-17-89	Information regarding a call received from Donna Seadler of USEPA -IV inquiring as to whether construction on project had begun on 2/1/89 as per the compliance schedule in the Admin. Order & requesting written update of project.. Memo - FCWC (Lehman) to (French).
3-29-89	Application to Army Corps of Engineers for construction permit for outfall line. Project Summary Cover Sheet - W. Dexter Bender & Assoc.
3-30-89	Notice from USEPA-IV of noncompliance and requesting information. Letter - USEPA-IV (Barrett) to FCWC (Reeves).
3-30-89	Advisement alleging "continuing noncompliance with the CWA and Administrative Order 87-085 and requesting certain information. Letter - USEPA-IV(Barrett) to FCWC (Reeves).
4-7-89	FDEP/US Army Application for Activities in Florida Waters (new outfall) submitted by FCWC.
4-19-89	Notification to FDEP-SW of "circumstances beyond our control" and outlining new compliance schedule. Letter - FCWC (French) to FDEP-SW (Edwards).
4-24-89	Transmittal of information requested by USEPA-IV (3-30-89) including Preliminary Engineering Draft Report by ESE, and assuring USEPA -IV that every possible effort had been made to construct facility as outlined in the Consent Order. At this time, still anticipated compliance with Consent Order schedule. Letter - FCWC (Reeves) to USEPA -IV (Barrett).

5-15-89	Received notice that FDEP-SW has no problem with proposed adjustment to the compliance schedule as outlined in FCWC letter of 4/19/89. Letter - FDEP-SW (Edwards) to FCWC (French).
5-16-89	Notice of Violation of NPDES permit (TSS) transmitted by USEPA -IV. Letter - USEPA-IV to FCWC (Reeves).
5-17-89	Transmittal of construction permit application to upgrade WWE-WWTP transmitted to FDEP-SW.. Letter - Source (Harrop) to FDEP-SW (Edwards).
6-12-89	EPA Application Forms 1 and 2E transmitted to Source, Inc. for submittal to USEPA. Letter - FCWC (French) to Source, Inc.
6-12-89	US Corp of Engineers outfall application complete and submitted.
6-16-89	Acknowledgment of receipt of application for construction permit by FDEP-SW and requesting additional information. Letter - FDEP-SW (Edwards) to FCWC (French).
6-29-89	Bid from Kelly Brothers for outfall sewer line received by FCWC.
7-11-89	Acknowledgment of receipt of NPDES permit application by USEPA-IV. Application considered complete. Letter - USEPA - IV(Childress) to FCWC (French).
7-14-89	Public Notice from Army Corps of Engineers regarding construction application for outfall line issued by Army Corps of Engineers.
7-14-89	Response to USEPA-IV letter of 6/21/89, verifying that FCWC has applied for all construction permits plus NPDES permit and has received bids for construction of facility. Letter - FCWC (French) to USEPA -IV (Oliver).

7-14-89	Transmittal of requested operating statistics for WWE-WWTP and verification that all construction permits had been applied for and construction bids had been received. Letter - FCWC (French) to USEPA -IV (Barrett).
7-17-89	Resolution from City of Fort Myers granting easement for use of River Bottom.
7-19-89	Receipt of USEPA-IV Intent to Issue of NPDES permit for WWE WWTP; limited the facility to 1.0 MGD. Letter - USEPA -IV (Kagey) to FCWC (French).
8-3-89	Meeting between FCWC and FDEP regarding permit concerns.
8-15-89	FCWC meeting notes FDEP-SW (Ahmadi and Shoemaker) to discuss pending construction application. Memo - FCWC (Tompkins) to file.
9-6-89	FDEP outfall permit issued.
9-15-89	Explanation of the delay in review of FCWC outfall line application. Letter - Southwest Florida Regional Planning Council (Heath) to Army Corps of Engineers (Zattau).
9-26-89	Allegations by USEPA-IV that WWE-WWTP is in violation of the CWA and issuance of Section 309 Administrative Order 89-109 setting forth schedule for relocation of the outfall (8-1-91) in order to meet NPDES requirements (10-1-91). Letter -USEPA-IV (Marlar) to FCWC (Reeves).
9-26-89	Administrative Order 89-109 issued by USEPA - IV with Notice of Violation. Letter - USEPA-IV (Marlar) to FCWC (Reeves).
9-29-89	Final Issuance of NPDES Permit NO. FL0030325 by USEPA -IV for WWE-WWTP. Letter - USEPA-IV (Smith) to FCWC (Reeves).

10-3-89	Receipt of results of their review of the outfall line application. Letter - SW FL Regional Planning Council (Daltry) to U.S.Army Corps of Engineers (Zattau)
10-11-89	Request for compliance with Antidegradation Rule. Letter - FDEP-SW (Edwards) to FCWC (French).
11-17-89	Notice that Construction Permit application is still incomplete until compliance with Antidegradation Rule is satisfied. Letter - FDEP-SW (Edwards) to FCWC (French).
12-14-89	Transmittal of Technical and Economic Evaluation Report for Reclaimed Water at WWE WWTP to satisfy the anti-degradation requirements of the FAC. Letter - FCWC (Elder) to FDEP-SW (Edwards).
12-22-89	Request for a determination of adequacy of information supplied and status of the construction permit application. Letter - FCWC (Williamson) to FDEP-SW (Edwards).
1-19-90	FDEP issues Notice of Intent to Issue Construction Permit for WWE-WWTP outfall and upgrade.
1-22-90	Lee County Construction Board Findings of Fact, Conclusions of Law and Order regarding FCWC appeal of requirement for new 12-inch water main to provide fire protection for WWE-WWTP. Appeal granted.
1-24-90	Lee County Board of County Commissioners directed legal staff to review the FCWC Waterway Estates WWTP project and request an Administrative Hearing if appropriate.
1-31-90	Lee County Attorney issues opinion to County Commissioners regarding County's standing in challenging WWE-WWTP construction permit.

1-31-90	FDEP-SW notified FCWC that construction permit application was deemed complete and the Notice of Intent was issued on 1/19/90. Letter - FDEP-SW (Edwards) to FCWC (Williamson).
2-1-90	Notification that monitoring must be done and new permit parameters met; request reports as to schedule compliance. USEPA -IV (McGarry) to FCWC (Reeves).
2-20-90	Response to USEPA-IV letter of 2/1/90, which was not received until 2/13/90, advising USEPA -IV that FCWC will begin discharge monitoring at new location on 3/1/90, and that anticipated construction permit issuance date was 2/22/90. Letter - FCWC (Tompkins) to USEPA -IV (McGarry).
2-23-90	Received affidavit of Publication of Intent to Issue dated 1/25/90 and copy of Lee County Agenda Item Summary showing that Board decided not to intervene at that time. Letter - FCWC (Williamson) to FDEP-SW (Edwards).
2-23-90	Submittal of progress report for January 1990. Letter - FCWC (Williamson) to USEPA -IV (Marlar).
3-1-90	Construction permit for upgrading WWE-WWTP issued by FDEP-SW. Letter - FDEP-SW to FCWC (French).
4-4-90	FCWC submitted February 1990 progress report to FDEP-SW. Letter - FCWC (Williamson) to FDEP-SW (Edwards).
4-4-90	FCWC submitted February 1990 progress report to USEPA-IV. Letter - FCWC (Williamson) to USEPA-IV (Marlar).
4-11-90	Army Corps of Engineers construction permit for outfall line issued.

4-18-90	Results of the bid opening for the construction in connection with upgrading WWE-WWTP. Memo - FCWC (Elder) to FCWC (French).
4-19-90	Report on review of Construction and Process Plans by Dr. Edwin Barth submitted. Letter - Barth Engineering (Barth) to FCWC (Elder).
4-23-90	Submission of March 1990 progress report to FDEP-SW. Letter - FCWC (Williamson) to FDEP-SW (Edwards).
5-10-90	Submission of April 1990 progress report to USEPA-IV. Letter - FCWC (Williamson) to USEPA -IV (Marlar)
5-10-90	Submission of April 1990 progress report to FDEP-SW. Letter - FCWC (Williamson) to FDEP-SW (Edwards).
5-17-90	Submittal to FDEP-SW of proposed modification of compliance schedule within TOP #DT36-152486. Letter - FCWC (Elder) to FDEP-SW (Edwards).
5-17-90	Submittal to USEPA-IV proposing several modifications to the compliance schedule outlined in the Administrative Order, based on the fact that it took until March 1, 1990 to acquire the FDEP and Army Corps of Engineers permits. Letter - FCWC (Elder) to USEPA -IV (Marlar).
5-21-90	FDEP-SW response to 5/14/90 request for modification to Compliance Schedule and request for meeting 5/29/90. Letter - FDEP (Edwards) to FCWC (Elder).
6-1-90	Meeting FCWC and FDEP-SW regarding alternatives for modifications to the Consent Order Compliance Schedule. (See 6-6-90 summary).

6-5-90	Summary of meeting of 6/1/90 to discuss Consent Order transmitted by FDEP-SW. Letter - FDEP-SW (Edwards) to FCWC (French).
6-25-90	Response to letter of 6/21/90 concerning earlier request of 5/17/90 for modifications to Consent Order and permit applications; references to meeting of 6/1/90 and cites letter of 6/5/90 as FDEP's response to these requests. Letter - FDEP-SW (Edwards) to FCWC (Williamson).
7-3-90	FCWC submitted explanation for failure to meet 5-1-90 construction start date for WWE-WWTP upgrade. Letter - FCWC (Elder) to USEPA-IV (Kwan).
7-24-90	Amended USEPA -IV Administrative Order showing 8/1/90 as the "Begin Construction" date transmitted by USEPA-IV. Letter - USEPA -IV to FCWC (Tompkins).
8-2-90	FCWC served notice of contract award for upgrading Waterway Estates WWTP. Letter - FCWC (Elder) to Cardinal (McDevitt).
8-6-90	FCWC acknowledgment of receipt of approval of the modification of the Administrative Order construction start date, and transmitting a copy of the Notice of Award to Cardinal. Letter - FCWC (Tompkins) to USEPA -IV (Cunningham).
8-24-90	Notice to Proceed issued by FCWC to Cardinal (start construction of WWE-WWTP upgrade). Letter - FCWC (Elder) to Cardinal (McDevitt).
8-24-90	Cardinal transmitted executed contracts, bonds and insurance for project and payment bond to be recorded with Lee County, per mechanic's lien law. Letter - Cardinal (McDevitt) to FCWC (Elder).

8-30-90	FCWC transmitted schedule of major activities, preliminary schedule submitted by Cardinal and notification that Stone & Webster taking over as engineer of record. Letter - FCWC (Reeves) to FDEP-SW (Edwards).
9-5-90	Cardinal advises that they had begun the process of applying for the building permit. They stated that Lee County Concurrency Management Div. advised them that they would not process a building permit application without a concurrency.
9-24-90	FCWC submitted progress reports for August and September 1990 to USEPA-IV. Letter - FCWC (Griggs) to USEPA-IV (Marlar).
9-24-90	FCWC submitted progress reports for August and September 1990 to FDEP-SW. Letter - FCWC (Griggs) to FDEP-SW (Edwards).
9-26-90	Transmission of copy of SFWMD exemption to Lee County Department of Concurrency Management. Letter - FCWC (Elder) to Lee County Dept of Concurrency Management (McAlister).
10-1-90	FDEP-SW notifies FCWC that the information supplied them was not adequate to detail what circumstances were beyond the control of FCWC, and that the compliance date of 11/1/90 in the Consent Order would remain effective. Letter - FDEP-SW (Edwards) to FCWC (Reeves).
10-12-90	Transmittal of the "detail" by FCWC to FDEP-SW of information desired by FDEP to evaluate the circumstances that were beyond the control of FCWC leading to the project delays. Letter - FCWC (Reeves) to FDEP-SW (Edwards).
10-17-90	FCWC requested that Lee County explain delays in Lee County approval of WWE-WWTP upgrade and requested prompt attention to resolving problems. Letter - FCWC (French) to Concurrency Management Division (Carroll).

10-19-90	FCWC submitted application for a TOP to FDEP-SW. Letter - FCWC (Reeves) to FDEP-SW (Edwards).
10-22-90	FCWC submitted progress report for October 1990 to USEPA-IV. Letter - FCWC (Griggs) to USEPA -IV (Marlar).
10-25-90	FCWC submitted request to extend the expiration date of the FDEP construction permit from 11/1/90 to 9/1/92. Letter - FCWC (Reeves) to FDEP-SW (Edwards).
10-30-90	FDEP-SW approves extension of expiration date on the FDEP construction permit to 9/1/92. Letter - FDEP-SW (Edwards) to FCWC (Reeves).
11-5-90	FCWC transmitted executed contract between FCWC & Kelly Brothers, Inc. To Stone & Webster. Letter - FCWC (Elder) to Stone & Webster (Haumann).
11-21-90	FDEP-SW submits Consent Order for signature to resolve violations. FDEP- SW (Edwards) to FCWC (Reeves).
11-26-90	Updated construction schedule prepared.
12-4-90	FDEP-SW submits executed revised Consent Order. Letter - FDEP-SW (Edwards) to FCWC (Reeves).
12-11-90	FCWC request amendment to Administrative Order 89-109 to reflect substantial completion of facilities by 9-1-92 and compliance with NPDES permit by 11-1-92. Letter - FCWC (Tompkins) to USEPA -IV (Marlar).
12-12-90	FDEP-SW issues Intent to Issue TOP.
12-17-90	FCWC issued Notice to Proceed to Kelly Brothers, Inc. (outfall line). Letter - FCWC (Elder) to Kelly Brothers (Danny Kelly).

1-21-91	Application for Exemption of Lee Co. Ordinance.
1-22-91	FDEP-SW issued TOP for WWE-WWTP. Letter - FDEP-SW (Edwards) to FCWC (Reeves).
1-22-91	FCWC submitted progress report to USEPA-IV for November 1990 . Letter - FCWC (Griggs) to USEPA -IV (Marlar).
2-21-91	FCWC submitted progress report to USEPA-IV. Letter - FCWC (Tompkins) to USEPA -IV (Marlar).
3-1-91	FCWC transmitted chronology for WWE WWTP project to USEPA-IV. Letter - FCWC (Tompkins) to USEPA -IV (Kwan).
3-19-91	Review of conversation with USEPA -IV (Kwan) regarding a tentative meeting with USEPA -IV on 3/28/91. Kwan stated that USEPA -IV may have attorneys present due to the possibility of enforcement action. Memo - FCWC (Tompkins) to file.
4-2-91	Transmittal of Amended Consent Order and brief changes. Letter - FCWC (Reeves) to FDEP (Edwards).
4-3-91	FDEP-SW issued Amended Consent Order (90-1747).
4-8-91	Details of meeting with USEPA -IV in Atlanta on 4/4/91 including explanations given for the project being delayed. Memo - FCWC (Tompkins) to File.
4-10-91	Details outlining call from USEPA -IV (Kwan) who indicated that USEPA -IV has determined that FCWC (WWE) has been in non-compliance since 1987 and may institute fines in six-figure range, but may reduce amount for circumstances beyond our control. Memo - FCWC (Tompkins) to FCWC (Bradtmiller and Reeves).

4-12-91	FCWC submitted progress report to USEPA-IV recitation of status of key processes. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
4-29-91	USEPA-IV transmitted allegations that the Waterway Estates WWTP was in violation of the CWA citing discharge of effluent at an unpermitted location and sets Show Cause Meeting for 6-12-91 at USEPA -IV offices. Letter - USEPA-IV (Pfaff) to FCWC (Bradtmiller).
5-9-91	USEPA-IV request for information pertaining to WWE-WWTP. Letter - USEPA -IV to FCWC (Bradtmiller).
5-23-91	FCWC submitted progress report to USEPA-IV. Letter - FCWC (Elder) to USEPA -IV (Marlar).
6-12-91	Show Cause Hearing held in USEPA-IV Offices in Atlanta. Meeting summary memorialized by Allen memorandum to files dated 6-19-91.
6-24-91	FCWC submitted additional items required by USEPA -IV during the meeting of 6/12/91. Letter - FCWC (Bradtmiller) to USEPA -IV (McGarry).
6-24-91	Transmission of construction update. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
7-9-91	Transmission of copy of engineer's certification of new outfall line with request that FDEP place it into service. Letter - FCWC (Bradtmiller) to USEPA -IV (McGarry).
7-17-91	FCWC notified USEPA-IV that authorization to place new effluent outfall main from Waterway Estates WWTP in service had been granted by FDEP-SW. Letter - FCWC (Bradtmiller) to USEPA-IV (McGarry).

7-24-91	Transmission of DMR with construction update. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
8-2-91	FCWC transmitted response to telephone call from USEPA-IV (Kwan) on 7/31/91. Letter - FCWC (Bradtmiller) to USEPA -IV (Kwan).
8-12-91	Reminder to FCWC that since the plant has begun to discharge from the new outfall line, biomonitoring/toxicity testing must commence immediately as per the permit. FCWC was also instructed to dechlorinate final effluent samples before running required bioassays. Letter - USEPA -IV (Lankford) to FCWC (Bradtmiller).
8-22-91	Transmission of construction update. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
9-16-91	FCWC transmitted additional information to USEPA-IV as requested on 9-13-91. Letter - FCWC (Bradtmiller) to USEPA -IV (Kwan).
9-25-91	Transmission of construction update, DMR and toxicity report. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
10-24-91	Transmission of construction update, DMR and toxicity report. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
11-5-91	FCWC notified USEPA-IV that the denitrification filters and UV disinfection systems were in place and in partial use in accordance with FDEP letter dated 11/1/91. Letter - FCWC (Bradtmiller) to USEPA -IV (Kwan) .
11-14-91	FDEP requesting capacity analysis report to be submitted by 1/1/92 because three-month flows exceeded permitted capacity. Letter - FDEP-SW (Edwards) to FCWC (Bradtmiller).

11-27-91	Transmission of DMR with construction update. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
12-1-91	Transmission of DMR with construction update. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
1-8-92	FCWC notified FDEP that FCWC was ready to begin feeding methanol to denite filters and bring plant into compliance with AO. Letter - FCWC (Ytterberg) to FDEP- SW (Young).
1-13-92	FCWC notified USEPA-IV that denitrification filters and UV system were in place and a temporary feed system for methanol is being utilized as of 1/13/92. Addition of methanol should bring plant into compliance with USEPA -IV AO and NPDES permit. Letter - FCWC (Bradtmiller) to USEPA -IV (Kwan).
1-24-92	FCWC submitted construction update and transmittal of DMR and toxicity report. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
2-19-92	Transmittal of updated O&M costs. Fax - FCWC (Karleskint) to USEPA -IV (Kwan).
2-20-92	FCWC transmitted copies of the FDEP Amended CO and Final Order and discussed FDEP fine to USEPA-IV. Discussed revisited O&M costs; and temporary methanol feed system put into place 1/13/92. Letter - FCWC (Karleskint) to USEPA -IV (Kwan).
2-28-92	FCWC submitted status report to USEPA-IV. Received permits for underground storage tank installation. Outfall construction complete, certified and put into service on 7/11/91. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).

3-27-92	FCWC submitted status report to USEPA-IV. BTU #2 placed into service 3/16/92. Letter - FCWC (Bradtmiller) to USEPA -IV (Marlar).
4-21-92	FCWC notified USEPA-IV that BTU No. 2 was placed into service on 3/16/92. Monitoring for total nitrogen as of 4/3/92 indicates that the plant is consistently meeting the NPDES effluent nitrogen limitations. Letter - FCWC (Karleskint) to USEPA -IV (Kwan).
4-28-92	FCWC submitted construction update and DMR to USEPA-IV. Monthly avg for total nitrogen exceeded limitation, but as noted in letter to USEPA -IV (Kwan) on 4/20/92, the plant is meeting nitrogen limitations as of 4/3/92 and all other limitations within the NPDES permit. Unit key processes to meet effluent limitations are now in service or ready to place into service upon inspection by Lee County. Letter -FCWC (Bradtmiller) to USEPA - IV (Marlar).
5-20-92	FCWC submits through its counsel the factual background information pertaining to the Waterway Estates WWTP discharge and upgrade. Letter - Alston & Bird (DeHihns) to USEPA -IV (Eason).
5-27-92	FCWC submitted construction update, DMR and toxicity report to USEPA-IV. Primary unit processes key to meeting the effluent limitations have been placed into service. Facility met total effluent nitrogen limitations for April. Letter - FCWC (Bradtmiller) to USEPA -IV (Scarborough).
6-9-92	FCWC and legal counsel met with USEPA-IV. Meeting attendance list.

6-10-92	FCWC transmitted list of documents to USEPA - IV at 6/9/92 meeting and submitted further information requested by USEPA -IV at that meeting. Letter - FCWC (Karleskint) to Alston & Bird (DeHihns).
6-12-92	FCWC, through its legal counsel forwarded additional info requested by USEPA -IV at meeting on 6/9/92. Letter - Alston & Bird (DeHihns) to USEPA -IV (Eason).
6-25-92	FCWC submitted construction update and DMR to USEPA-IV. FCWC accepted project as substantially complete on June 5, 1992. Letter - FCWC (Bradtmiller) to USEPA -IV (Scarborough).
7-27-92	FCWC transmitted DMR and toxicity report to USEPA-IV. Letter - FCWC (Overton) to USEPA - IV (Scarborough).
8-17-92	FCWC notifies FDEP-SW that construction of WWE was substantially complete on 6/5/92, and that certification would be forthcoming. Letter - FCWC (Acosta) to FDEP-SW (Young).
9-16-92	FCWC received Notice of Violation and issuance of AO No. 92-093 for toxicity from USEPA-IV. Letter - USEPA -IV (Herndon) to FCWC (Bradtmiller).
9-25-92	FCWC responded to Notice of Violation dated 9/16/92 and the draft AO No. 92-903. FCWC does not believe continued monitoring of toxicity is necessary. Requests modification of existing permit rather than issuance of AO. Also request a mixing zone at terminus of outfall line. Letter - FCWC (Bradtmiller) to USEPA -IV (Herndon).

10-12-92	FCWC notified USEPA-IV that BTU #1 was put into service on 9/17/92, and became fully operational on 10/6/92. Plan to commence toxicity testing the week of 10/19/92 to comply with AO. Letter - FCWC (Karleskint) to USEPA -IV (Kwan).
10-13-92	FDEP-SW transmitted notice advising that recent discussions occurred with FCWC (Karleskint) regarding toxicity. Letter - FDEP-SW (Edwards) to FCWC (Bradtmiller).
11-9-92	FDEP-SW transmitted summary of action items to be implemented by FCWC. Letter - FDEP (Edwards) to FCWC (Overton).
11-16-92	USEPA directed FCWC to test for toxicity monthly beginning 10/92 in order to shorten the period of the AO from one year to six months. Letter - USEPA -IV (Herndon) to FCWC (Bradtmiller).
11-20-92	FCWC submitted NPDES Toxicity Test Report to USEPA-IV showing no toxicity. Letter - FCWC (Overton) to USEPA -IV (Scarborough).
11-24-92	FCWC requested a mixing zone for discharge from WWE AWTP and requested toxicity testing requirements from FDEP be similar to those required by USEPA -IV to avoid duplicate testing. Letter - FCWC (Karleskint) to FDEP-SW (Edwards)
11-24-92	NPDES DMR transmitted indicating toxicity being performed monthly on an accelerated basis in accordance with 11/13/92 letter by A. Herndon of USEPA -IV. Letter - FCWC (Overton) to USEPA -IV (Scarborough).
12-9-92	USDOJ notifies FCWC through its legal counsel that USEPA-IV had formally requested DOJ to file suit against FCWC. Letter - DOJ (Jacobs)to Alston & Bird (DeHihns).

12-11-92	USDOJ submitted BEN analysis to FCWC counsel showing resulting penalty calculations ($15,104,385). Letter - USDOJ (Jacobs) to Alston & Bird (DeHihns).
12-16-92	Meeting between FCWC, USEPA-IV and USDOJ to discuss allegations of violations of CWA at WWE-WWTP and settlement model. Meeting memorialized by memorandum, Allen to Files, 12-22-92. The settlement model indicated a settlement amount of $5,024,724.
12-16-92	Transmittal of four originals of FDEP Notification that a Domestic Wastewater Facility Will Be Placed Into Operation and one set of signed and sealed set of Record Drawings to FDEP Ft. Myers office. Letter - FCWC (Overton) to FDEP (Young).
12-18-92	FCWC counsel submits settlement issues in potential case US v. FCWC set forth in enclosed letter dated 12-9-92 from Jacobs offering settlement of $5,000,000. Letter - Alston & Bird (DeHihns) to AUI (Gordon).
12-22-92	Meeting between FCWC, USEPA-IV and USDOJ memorialized. Memorandum - Allen to Files.
4-14-93	USEPA-IV advised that AO No. 92-093 has been placed in an inactive status. Letter - EPA (Cunningham) to FCWC (Bradtmiller).
5-5-93	Draft response to USEPA allegations against FCWC. Memo to File (Barnette, Weil, Gotshal & Manges) received by FCWC via FAX.
10-1-93	USDOJ filed complaint in the U. S. District Court for the Middle District of Florida styled U.S.A. v. FCWC alleging violations of the CWA at WWE-WWTP.
3-31-94	NPDES permit application filed.
9-30-94	NPDES permit issued, became effective 1-1-95

3-30-95	USDOJ filed amended complaint expanding suit to include Carrollwood and Barefoot Bay and adding AHI as an additional defendant.
5-17-95	NPDES permit combined with operations permit with delegation to FDEP.
2-13-97	Permit application (combination NPDES and operations) submitted to FDEP to increase discharge to the Caloosahatchee River to 1.25 mgd.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET
ATLANTA, GEORGIA 30365

DEC 08 1986

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

REF: 4WM-FP

Mr. A. A. Reeves, III
Vice President & General Manager
Florida Cities Water Company
Post Office Box 5846
2112 Gulf Gate Drive
Sarasota, Florida 34277

RE: Waterway Estates
NPDES Permit No. FL0030325

Dear Mr. Reeves:

You are hereby notified of denial of the National Pollutant Discharge Elimination System (NPDES) permit application for the above referenced facility. This action constitutes the Environmental Protection Agency's (EPA) final permit decision in accordance with 40 CFR 124.15(a). Any person may contest this decision by submitting a timely request for a hearing to the Regional Administrator under 40 CFR 124.74 or 124.114.

This action will be effective thirty days from the date you receive this letter, provided that no request for a hearing is granted by the Agency under 40 C.F.R. 124.75 or 124.114. In the event that such a request is granted:

- For discharge(s) authorized by an NPDES permit, at the time this permit application was filed, the force and effect of this action will be stayed, all provisions(s) of the previous NPDES permit shall be fully enforceable and effective until the administrative review process is completed, as provided by 40 CFR 124.16 and 124.60

- For discharge(s) not authorized by an NPDES permit, at the time this permit application was filed, the Agency's granting of a hearing (requested by you or any other person) does not provide you authorization to discharge. In other words, there will not be an NPDES permit authorizing the discharge(s) and if such a discharge(s) occurs, the discharge(s) will constitute a violation of Section 301 of the Clean Water Act, (33 U.S.C. 1311) for which there is civil and/or criminal liability.

DEC 10 1986

If you wish to request a hearing under 40 CFR 124.74 or 124.114 you must submit a request (an original and two copies) to the Regional Hearing Clerk within thirty (30) days from the receipt of this letter. The request will be timely if mailed by certified mail within the thirty (30) day time period. For the request to be valid, it must conform to the requirements of 40 CFR 124.74. A copy of the requirements of 40 CFR 124.74 is attached.

Since this facility is presently discharging pollutants to waters of the United States, EPA intends to issue an Administrative Order to you for this facility. The Administrative Order will contain a schedule for this facility to cease discharge, and will specify interim discharge limitations. You will be contacted by a separate letter regarding the details of the Administrative Order.

Information on procedures pertaining to the filing of a hearing request or other legal matters may be obtained by contacting Ms. Jacqueline Colson, Assistant Regional Counsel, at (404) 347-3506.

Sincerely yours,

Bruce R. Barrett, Director
Water Management Division

Enclosures (3): Hearing Request Requirements
Amendment to Fact Sheet
Fact Sheet

cc: Florida Department of Environmental Regulation

REQUIREMENTS FOR EVIDENTIARY/PANEL
HEARING REQUEST

Evidentiary Hearing (40 CFR 124.74)

(a) Within 30 days following service of notice of the Regional Administrator's final permit decision under 124.15 any interested person may submit a request to the Regional Administrator under paragraph (b) of this section for an evidentiary hearing to reconsider or contest that decision. If such a request is submitted by a person other than the permittee, the person shall simultaneously serve a copy of the request on the permittee.

(b)(1) In accordance with 124.76, such requests shall state each legal or factual question alleged to be at issue, and their relevance to the permit decision, together with a designation of the specific factual areas to be adjudicated and the hearing time estimated to be necessary for adjudication. Information supporting the request or other written documents relied upon to support the request shall be submitted as required by 124.73 unless they are already part of the administrative record required by 124.18.

Note: This paragraph allows the submission of requests for evidentiary hearings even though both legal and factual issues may be raised, or only legal issues may be raised. In the latter case, because no factual issues were raised, the Regional Administrator would be required to deny the request. However, on review of the denial the Administrator is authorized by 124.91(a)(1) to review policy or legal conclusions of the Regional Adminstrator. EPA is requiring an appeal to the Administrator even of purely legal issues involved in a permit decision to ensure that the Administrator will have an opportunity to review any permit before it will be final and subject to judicial review.

(2) Persons requesting an evidentiary hearing on an NPDES permit under this section may also request an evidentiary hearing on a RCRA or UIC permit, PSD permits may never be made part of an evidentiary hearing under Subpart E. This request is subject to all the requirements of paragraph (b)(1) of this section and in addition will be granted only if:

(i) Processing of the RCRA or UIC permit at issue was consolidated with the processing of the NPDES permit as provided in 124.4;

(ii) The standards for granting a hearing on the NPDES permit are met;

(iii) The resolution of the NPDES permit issues is likely to make necessary or appropriate modification of the RCRA or UIC permit; and

(iv) If a PSD permit is involved, a permittee who is eligible for an evidentiary hearing under Subpart E on his or her NPDES permit requests that the formal hearing be conducted under the procedures of Subpart F and the Regional Administrator finds that consolidation is unlikely to delay final permit issuance beyond the PSD one-year statutory deadline.

(c) These requests shall also contain:

(1) The name, mailing address, and telephone number of the person making such request;

(2) A clear and concise factual statement of the nature and scope of the interest of the requester;

(3) The names and addresses of all persons whom the requester represents; and

4) A statement by the requester that, upon motion of any party granted by the Presiding Officer, or upon order of the Presiding Officer sua sponte without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;
(ii) All persons represented by the requester; and
(iii) All officers, directors, employees, consultants, and agents of the requester and the persons represented by the requester.

(5) Specific references to the contested permit conditions, as well as suggested revised or alternative permit conditions (including permit denials) which, in the judgement of the requester, would be required to implement the purposes and policies of the CWA.

(6) In the case of challenges to the application of control or treatment technologies identifed in the statement of basis or fact sheet, identification of the basis for the objection, and the alternative technologies or combination of technologies which the requester believes are necessary to meet the requirements of the CWA.

(7) Identification of the permit obligations that are contested or are inseverable from contested conditions and should be stayed if the request is granted by reference to the particular contested conditions warranting the stay.

(8) Hearing requests also may ask that a formal hearing be held under the procedures set forth in Subpart F. An applicant may make such a request even if the proceeding does not constitute "initial licensing" as defined in 124.111.

(d) If the Regional Administrator grants an evidentiary hearing request in whole or in part, the Regional Administrator shall identify the permit conditions which have been contested by the requester and for which the evidentiary hearing has been granted. Permit conditions which are not contested or for which the Regional Administrator has denied the hearing request shall not be affected by, or considered at, the evidentiary hearing. The Regional Administrator shall specify these conditions in writing in accordance with 124.60(c).

(e) The Regional Administrator must grant or deny all requests for an evidentiary hearing on a particular permit. All requests that are granted for a particular permit shall be combined in a single evidentiary hearing.

(f) The Regional Administrator (upon notice to all persons who have already submitted hearing requests) may extend the time allowed for submitting hearing requests under this section for good cause.

AMENDMENT TO THE FACT SHEET AT THE TIME OF FINAL DENIAL

NPDES Permit Number: FL0030325

Name of Applicant: Florida Cities Water Company - Waterway Estates

1) Changes to permit from Intent to Deny to Final Denial State:

None.

2) Public Comments:

The Company submitted a letter (dated September 16, 1986) proposing alternative disposal to be completed by December 31, 1988.

3) State Certification:

Waived per 40 CFR 124.53(c)

December 4, 1986

5. .....copy of referenced enclosures to Exhibit No. M-6 attached to Michael Acosta's direct testimony is a letter dated December 89. 1988, from Bruce R. Barrett of the EPA to Mr. A. A. Reeves of FCWC, specifically the Hearing Request Requirements, the Amendment to the Fact Sheet, and the Fact Sheet.

No amended fact sheet found.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET
ATLANTA, GEORGIA 30365

Date June 30, 1986

FACT SHEET

APPLICATION FOR NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT TO DISCHARGE TREATED WASTEWATER TO U.S. WATERS

Application No. FL0030325 Application Date May 9, 1986

1. SYNOPSIS OF APPLICATION

a. Name and Address of Applicant

Florida Cities Water Company - Waterway Estates WWTP
2112 Gulf Gate Drive
P.O. Box 5046
Sarasota, Florida 34277

Location of plant: 1667 Inlet Drive, North Fort Myers
Lee County, Florida

b. Type of Facility

Privately owned wastewater treatment plant
SIC Code 4952

c. Design Capacity of Facility

1.08 MGD

d. Applicant's Receiving Water

Caloosahatchee River via a canal (see Attachment A)

e. Description of Wastewater Treatment Facilities

Treatment consists of a 1.08 MGD contact stabilization wastewater facility.

f. Description of Discharges

Outfall Serial No. 001.
Information consists of the average of the daily average and maximum values from Discharge Monitoring Report (DMR) data during the period of January 1985 - April 1986.

Parameter (Units)	Value (daily avg./daily max)
Flow (MGD)	.574/-
BOD_5 (lbs/day)	29.2/67.1
(mg/l)	6.1/13.8
TSS (lbs/day)	47.1/185.9
(mg/l)	11.0/37.9
TKN (lbs/day)	47.4/59.1
(mg/l)	9.7/12.2
Fecal Coliform (N/100ml)	2/5
pH (standard units)	Minimum 6.3, Maximum 7.6

2. PROPOSED EFFLUENT LIMITATIONS

The final effluent limits for this facility to a canal to the Caloosshatchee River are "no discharge."

3. BASIS FOR FINAL EFFLUENT LIMITS AND PERMIT CONDITIONS

The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in a forthcoming administrative order.

4. REQUESTED VARIANCES OR ALTERNATIVES TO REQUIRED STANDARDS

Not Applicable

5. EFFECTIVE DATE OF PROPOSED EFFLUENT LIMITS AND COMPLIANCE SCHEDULE (IF APPLICABLE)

The permit denial will be effective immediately upon issuance of a final determination. However, EPA's Compliance Section will develop an administrative order which should specify interim limits and a schedule in order to achieve compliance with the no discharge allocation.

6. STATE CERTIFICATION REQUIREMENTS

State Certification was not received with the permit renewal application and will be requested on the permit denial.

7. DISCUSSION OF PREVIOUS NPDES CONDITIONS

The present NPDES permit, which expires September 24, 1986, contains the following limitations.

Parameter (Units)	Discharge Limitations	
	Daily Avg.	Daily Max.
Flow (MGD)	no limit	no limit
BOD_5 (lbs/day)	135	270
(mg/l)	15	30
TSS (lbs/day)	180	360
(mg/l)	20	40
TKN (lbs/day)	135	270
(mg/l)	15	30
Fecal Coliform (N/100ml)	200	400

The pH (standard units) not less than 6.0 nor greater than 8.5.

The BOD_5 and TSS (monthly average) to not exceed 10% of the respective monthly influent concentrations (90% removal).

8. EPA CONTACT

Additional information concerning the permit may be obtained at the address and during the hours noted in Item 9 from:

Ms. Suzanne D. Potter
(404) 347-3004

9. THE ADMINISTRATIVE RECORD, including application, draft permit, fact sheet, public notice (after release), State Certification (after receipt), comments received, and additional information is available by writing the EPA, Region IV, or for review and copying at 345 Courtland Street, N.E., 3rd Floor, Atlanta, Georgia 30365, between the hours of 8:15 A.M. and 4:30 P.M., Monday through Friday. Copies will be provided at a charge of 20¢ per page.

10. PROPOSED SCHEDULE FOR PERMIT ISSUANCE

Fact Sheet to Applicant	June 30, 1986
State Certification Request	June 30, 1986
Public Notice of Permit Denial	July 31, 1986
Permit Denial Issued	August 4, 1986

11. PROCEDURES FOR THE FORMULATION OF FINAL DETERMINATIONS

a. Comment Period

The Environmental Protection Agency proposes to issue an NPDES permit to this applicant subject to the aforementioned effluent limitations and special conditions. These determinations are tentative and open to comment from the public.

Interested persons are invited to submit written comments regarding permit issuance or the proposed permit limitations and conditions to the following address:

Environmental Protection Agency
345 Courtland Street, NE
Atlanta, Georgia 30365
ATTN: Ms. Suzanne D. Potter

All comments received within thirty (30) days following the date of public notice will be considered in the formulation of final determinations with regard to proposed permit issuance.

b. Public Hearing

The EPA Regional Administrator will hold a public hearing if there is a significant degree of public interest in a proposed permit or group of permits, or if he determines that useful information and data may be obtained thereby. Public Notice of such a hearing will be circulated at least thirty days prior to the hearing.

c. Issuance of the Permit

After consideration of all written comments and of the requirements and policies in the Act and appropriate regulations, and, if a public hearing is held, after consideration of all comments, statements and data presented at the hearing, the EPA Regional Administrator will make determinations regarding the permit issuance. If the determinations are substantially unchanged from the tentative determinations outlined above, the Regional Administrator will so notify all persons submitting written comments, and, if a public hearing was held, all persons participating in the hearing. If the determinations are substantially changed, the EPA Regional Administrator will issue a public notice indicating the revised determinations.

Unless a request for an evidentiary hearing is granted, the proposed permit contained in the Regional Administrator's determinations shall become issued and effective and will be the final action of the U. S. Environmental Protection Agency.

d. Evidentiary Hearing

If the determinations are substantially unchanged, any interested person may submit a request for an evidentiary hearing on the permit and its conditions within thirty (30) days of the receipt of the notice described in section c. If the determinations are substantially changed, any interested person may submit a request for an evidentiary hearing within thirty days of the date of the public notice or of the date of becoming aware of the determinations, which ever comes first. Such requests will be within the time period if mailed by Certified Mail within the thirty-day period to the Regional Hearing Clerk, Environmental Protection Agency, 345 Courtland Street, N.E., Atlanta, Georgia 30308. All requests must contain:

(1) The name, mailing address and telephone number of the person making such request;

(2) A clear and concise factual statement of the nature and scope of the interest of the requester;

(3) The names and addresses of all persons whom the requester represents; and

(4) A statement by the requester that, upon motion of any party, or sua sponte by the Presiding Officer and without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;

(ii) All persons represented by the requester, and

(iii) All officers, directors, employees, consultants and agents of the requester and the persons represented by the requester.

(5) Specific references to the contested permit terms and conditions, as well as suggested revised or alternative permit terms and conditions (not excluding permit denial) which, in the judgement of the requester, would be required to implement the purposes and policies of the Act.

(6) In the case of challenges to the application of control or treatment technologies identified in the statement of basis or fact sheet, identification of the basis for the objection, and the alternative technologies or combination of technologies which the requester believes are necessary to meet the requirements of the Act.

(7) Specific identification of each of the discharger's obligations which should be stayed if the request is granted. If the request contests more than one permit term or condition then each obligation which is proposed to be stayed must be referenced to the particular contested term warranting the stay.

The granting of a request will stay only the contested portions of the permit. Uncontested provisions of the permit shall be considered issued and effective and the permittee must comply with such provisions. Except, if the permit is for a new source or new discharge, the applicant will be without a permit for the proposed new source or new discharge, pending final Agency action. The final Agency decision on the permit provisions contested at an evidentiary hearing will be made in accordance with Title 40, Code of Federal Regulations, Subpart H, found at 44 Federal Register 32938, et seq.

e. Panel Hearing

In the case of an "initial license," including the first grant of an NPDES permit, or the first decision on a requested variance, if the Regional Administrator elects to apply the provisions of subpart I and so states in the public notice of the draft permit, any person may request the Regional Administrator to hold a panel hearing on the permit. Such a request must be made within the comment period of the notice described above. Requests will be considered timely if mailed by certified mail within the comment period. All requests must contain:

(1) A brief statement of the interest of the person requesting the hearing;

(2) A statement of any objections to the draft permit;

(3) A statement of the issues which such person proposes to raise for consideration at such hearing;

(4) The name, mailing address and telephone number of the person making such request;

(5) A clear and concise factual statement of the nature and scope of the interest of the requester;

(6) The names and addresses of all persons whom the requester represents; and

(7) A statement by the requester that, upon motion of any party, or sua sponte by the Presiding Officer and without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;

(ii) All persons represented by the requester; and

(iii) All officers, directors, employees, consultants and agents of the requester and the persons represented by the requester.

(8) Specific references to the contested permit terms and conditions, as well as suggested revised or alternative permit terms and conditions (not excluding permit denial) which, in the judgment of the requester, would be required to implement the purposes and policies of the Act.

If the permit for which a panel hearing is requested is a new source or new discharge, the applicant will be without a permit for the proposed new source or new discharge, pending final Agency action. Panel hearings will be conducted in accordance with title 40, Code of Federal Regulations, Subpart I, at 44 Federal Register 32944, et seq.

DOCKET NO.: 971663-WS -- PETITION OF FLORIDA CITIES WATER COMPANY FOR LIMITED PROCEEDING TO RECOVER ENVIRONMENTAL LITIGATION COSTS FOR NORTH AND SOUTH FT. MYERS DIVISIONS IN LEE COUNTY AND BAREFOOT BAY DIVISION IN BREVARD COUNTY.

WITNESS: MICHAEL MURPHY-DIRECT

ON BEHALF OF: Florida Cities Water Company

DESCRIPTION:
1. Transcript of Deposition of Mr. Michael Murphy taken on May 6, 1998.
2. Responses to staff's first set of interrogatories Nos. 3,5,13-17,24,28.

PROFFERING PARTY: STAFF

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 971663-WS EXHIBIT NO. 12
COMPANY/ WITNESS: Staff
DATE: 8-12-98

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition of Florida Cities Water Company for limited proceeding to recover environmental litigation costs for North and South Ft. Myers Divisions in Lee County and Barefoot Bay division in Brevard County.

DOCKET No. 971663-WS
DATED: April 29, 1998

ORIGINAL

DEPOSITION OF: **Michael E. Murphy**

PURSUANT To: Notice of Taking Deposition by Counsel for Florida Public Service Commission

DATE: Wednesday, May 6, 1998

TIME: 3:11 p.m. to 4:08 p.m.

PLACE: 4837 Swift Road
Suite 100
Sarasota, Florida 34231

BEFORE: GAYL HARDEMAN, RPR, RMR, RDR
NOTARY PUBLIC, STATE OF FLORIDA

(Pages 1 - 47)

Late-filed 3 21
(Update of rate-case expenses including supporting documents)

P R O C E E D I N G S

THEREUPON:

Michael E. Murphy,

having been previously duly sworn, testified as follows:

DIRECT EXAMINATION

BY MS. GERVASI:

Q. Mr. Murphy, my name is Rosanne Gervasi, and I will be asking you some questions today on behalf of the Commission staff in the docket that you filed, number 971663-WS. Let me know if something I ask is unclear, and I will rephrase. Also, if you need a break, let us know and we will do that.

A. Okay.

Q. Could you please state your full name and business address for the record?

A. Michael E. Murphy, 4837 Swift Road, Sarasota, Florida, 34231.

Q. In your testimony, you state that you testified in the Barefoot Bay Docket No. 951258-WS. Correct?

A. That's correct, ma'am.

Q. Have you testified in any other dockets before the Public Service Commission?

A. Not to my current recollection.

Q. Have you testified before any other regulatory

body?

A. No, ma'am, not to my recollection.

Q. Do you recall if you were accepted as an expert in the prior docket that you testified in before the Commission?

A. I do not know if I was recognized as an expert or not.

Q. Do you consider yourself an expert in rate-setting matters?

A. No, ma'am, I do not.

Q. If you would please take a look at page four of your direct testimony, you testified that the financial penalties requested by the DOJ were so substantial that Florida Cities wouldn't have been able to fund the claims and would have probably been forced into bankruptcy. Correct? Starting at line 16.

A. That's my testimony, yes, it is.

Q. How did you come to the conclusion that the company would not have been able to fund the claims?

A. That conclusion is based upon the penalties, the claims, I believe, through the second phase of this case, and they exceeded, I believe, $105 million.

Q. And those were the facts that you used as your basis for this conclusion?

A. Yes, ma'am.

Q. On page five, you testify that you don't believe the company's lenders, banks or insurance companies were interested in financing non-cash-flow activities. Correct? Top of page five.

A. That's my belief, ma'am, yes.

Q. How did you come to that conclusion?

A. That conclusion is reached over approximately twenty years being a CPA, as well as working in industry and several years in the utility practice.

Q. Did the utility make inquiries or applications with any lending institutions about the possibility of borrowing funds to pay these penalties?

A. No, ma'am; I did not.

Q. So you made that assumption based on --

A. Just my general business knowledge over twenty years.

Q. Do you know who made the decision to decline the $5 million settlement offer made by the DOJ's trial attorney?

A. No, ma'am, I do not.

Q. Do you know who would know?

A. I believe Mr. Allen would know. Let me rephrase that. I would defer that question to Mr. Allen. I'm not clear as to that point, and I would defer that question to Mr. Allen, since I was not

involved in any of the negotiations or settlement discussions.

Q. So you don't know why the company decided not to accept the offer.

A. Me directly, no.

Q. Is it your belief that the company would have declared bankruptcy if it had been forced to pay a $5 million amount, settlement amount, by DOJ to settle?

A. I haven't formed any conclusion about a $5 million settlement amount, no.

Q. Do you have any opinion as to whether the utility wouldn't have been able to recover these costs from its customers, whether that fact entered into the decision not to accept the settlement offer?

A. I don't know anything to that nature, no.

Q. Now your Exhibit 2, MM-2, that you filed to your testimony on page five --

A. Can you give me a -- oh, page five. My page number is not the same as yours.

Q. Oh, okay. Do you have a schedule, though, before you?

A. I do have a schedule. I just have to get the right page.

Q. Okay.

A. I'm on that page.

Q. Can we tell from this schedule the litigation cost up to the date of the $5 million settlement offer?

A. If you give me that date, I can approximate it. I don't know that it's -- it's not -- it may not be readily apparent from this schedule, since that date was not a date of significance. This date was -- this schedule was put together with annual amounts, just calendar year, so...

Q. Okay. I guess the settlement offer was made sometime in '91. What we are trying to establish is that it appears the majority of the costs were incurred after the offer was made. Is that right?

A. I'm not really familiar with the settlement offer you are discussing, but if you are telling me it is after 1991, obviously, most of the costs in this exhibit are subsequent to 1991-1992.

Q. Are you aware that in the November 1995 pre-trial meeting, the DOJ made another settlement offer of $2.2 million?

A. Only aware of that because -- through the possibility of reading other persons' testimonies in this case. I wasn't at that meeting, so, or settlement talk.

Q. Are you aware that that offer was also declined by the company?

A. I'm not aware it was declined in so many terms.

Q. Do you have any idea why it wasn't accepted, or who made the decision to turn the offer down?

A. No, I don't.

Q. Again, would you defer to Mr. Allen on that?

A. Yes, I would defer to Mr. Allen in that regard.

Q. How much had Florida Cities incurred in legal costs up to the time that DOJ made the $2.2 million settlement offer? Do you know?

A. You would have to, again, give me a date, since the schedule was prepared in date order.

Q. That was in November of '95. Looking at page six of your pre-filed Exhibit 2, judging from the date on that schedule, it looks like the utility spent approximately $1.7 million. Is that right?

A. Umm, yeah, without having a calculator in here. I see from 1995, the utility spent 1.3 million. And for 1994, the utility spent 992,000. And for 1993, the utility spent 91,000. And for the years 1991, 1992, the utility spent 7,000. So that would exceed $2 million through the end of 1995.

Q. Okay, thank you. On page seven of your direct testimony, you state that all the customers were in

peril of being adversely affected by the litigation. Correct? Starting at line six.

A. Starting at line four, I say, the future viability of the entire company, including its water systems, was at stake. All customers were in peril of being adversely impacted by the litigation.

Q. Okay. Other than the chance that Florida Cities might have had to declare bankruptcy if it had been required to pay a large penalty, in what other ways were all of Florida Cities' customers affected?

A. I believe, obviously, bankruptcy is certainly one major peril of the penalties that we were -- claims that were being assessed against the company. Whether there was bankruptcy or not, the dollar amounts were of such significant impact that it would have probably precluded the company from conducting its normal business operations, plus making its normal -- its required capital additions.

Q. Was there anything else besides the possibility of bankruptcy?

A. Well, as I indicated, I think -- bankruptcy aside -- there may not have been funds to pay that significant an amount. I'm indicating that bankruptcy would not be required.

Q. Since the company chose to allocate its legal

costs to all of its systems, why wasn't Poinciana included in the allocation?

A. Poinciana is a subsidiary of Avatar Utilities, Inc., and we were dealing with Florida Cities Water Company.

Q. Okay. Now, the utility has requested its rates for this case through a surcharge. Right?

A. That's the terminology. Surcharge is the terminology that I used in my testimony.

Q. And then on page eight of your testimony, you discuss the surcharge rate that the company is proposing.

A. Yes, ma'am.

Q. What other methods of spreading the legal costs were discussed by Florida Cities besides using a surcharge rate?

A. Other methods considered? I don't know if it was to the extent of a discussion, but it would have been, obviously, charged to just a regular rate increase, either to a base facility charge or maybe a consumption charge, that was considered. We also considered the possibility of recording this as a regulatory asset, and then recovering that through future rate cases. But that, again, would have been through the possibility of an increase to the base

facility charge or consumption charges.

Q. And why did the company finally decide on the surcharge rate request?

A. As indicated, I think, in my interrogatory responses, ease of tracking the amount. Specifically because the number of customers will most likely increase over this ten-year recovery period, this surcharge could be stopped when the amount of litigation expenses has been recovered. It would have been easier, it was felt, to identify that, to track it, and then to cease that charge when the expenses were recovered.

Q. Okay. Could you explain the mechanics of the surcharge rate that the utility is requesting?

A. Can you be a little more specific? Can you refer to my testimony, please? Would that be under the, like, the rate schedule on page 11 of my testimony, where I refer to my Exhibit MM-4? Or do you just want me to ad lib?

Q. Yes.

A. Okay, ad lib in my own words.

Q. What is the company proposing?

A. Well, the proposal is to recover net legal expenses of $3.589 million, allocated, in this hearing, to Public Service Commission customers, an amount of $2.652 million plus rate-case expenses estimated at

$200,000, over a period of 120 months, or ten years.

The net legal expenses of $3.589 million is not the full amount of legal expenses, but has been reduced by an amount -- I believe Mr. Allen addressed that in his testimony. The methodology, then, is to take the expenses, net legal expenses to be recovered from the Public Service Commission customers and rate-case expense, divided by the net weighted Public Service Commission customers, both water and wastewater.

Q. Okay. Thank you. Who made the decision to use the surcharge rate?

A. That would have been a joint management decision. Myself would have been involved. Gerald Allen would have been involved, and we had a consultant who was also involved in that decision -- not decision, but helping to develop an accounting method. It would be Mr. McClellan.

Q. Do you believe that the use of a surcharge is the most appropriate way for the company to recover the legal cost?

A. Yes, I do.

Q. Why was ten years chosen as the recovery period?

A. I believe I indicated in my testimony, and I believe Mr. McClellan also indicates, that a ten-year

recovery period would not be overly burdensome to its customers, which we are mindful of. It would also allow Florida Cities to recover these legal expenses over a reasonable time period. Certainly five years would be more reasonable, but ten years is keeping in mind the impact upon our customers.

Q. So do you believe it's appropriate to spread the recovery over future periods?

A. In the context here, yes, I believe it's appropriate to recover it over future years.

Q. Why is that?

A. Why is that?

Q. Yes.

A. If we don't spread it over future years, obviously, the company doesn't have an opportunity to recover it, since our expenditures have been incurred from 1991 through 1996-1997. So these are past expenditures, much like other major expenditures which are deferred and amortized into the future. It's my belief that these are expenditures that should be deferred and recovered into the future.

Q. Okay. Why were the number of ERC's rather than the number of customers used for assessing the monthly charge?

A. I believe, as I indicate in my testimony, the

number of ERC's as converted, using a conversion, AWA conversion, more adequately reflects the number of total customers out there. We have -- we count as a customer maybe one apartment complex, which might have 80 or 100 individual rental units in it, or commercial accounts, maybe one customer in which you might have one, two, ten, or any number of commercial accounts.

The AWA factor is a normal convention that is used in rate-making and gets us to a base, a better base, over which to allocate the cost, rather than the customers, because "customers" doesn't, I guess, imply the actual number of customers involved.

Q. Thank you. Switching gears to the subject of regulatory assessment fees, if you would please refer to page 14 of your testimony. You state on line 16 that the costs were not grossed up for regulatory assessment fees. Right?

A. That's correct.

Q. Can you explain why the company did not include regulatory assessment fees in its proposal?

A. As I indicate here in my testimony, the company does not know if the commission will consider the surcharge subject to its fee. Since this was my calculation and I'm not an expert in regulatory assessment fees, I left it out of this calculation. I

thought, if it needs to be collected, it will be added on as part of the rate proceeding.

Q. What is your understanding of when regulatory assessment fees are due and what revenues are subject to them?

A. I would expect most revenues, general service and residential fees, are subject to a regulatory assessment fee. I do not know whether something like a surcharge is subject to a regulatory assessment fee.

Q. Do you know when they're due?

A. When they're due?

Q. Yes.

A. March 31st, I believe.

Q. Would you agree that this is revenue for the utility and, therefore, would be subject to regulatory assessment fees, if your proposal were to be granted?

A. If the PSC deemed it to be revenues, then it certainly would be subject to a regulatory assessment fee.

Q. Let me ask you some questions about legal fees incurred by Florida Cities. In several of your exhibits attached to the testimony of Gary Baise, he makes reference to a budget established for the DOT litigation. Do you know when that budget was established? Are you familiar with that budget at all?

A. No, I'm not familiar with that budget. If you have it, I will take a look at it. I wasn't involved in any -- in developing any budgets in connection with these legal expenditures.

Q. Okay. Do you have any knowledge as to how Florida Cities chose each of its lead attorneys in that litigation?

A. No, I do not, ma'am.

Q. Okay. Let's move on, then, to rate-case expense. Do you know how each of the witnesses who pre-filed testimony in this case were picked to testify?

A. You would be referring to my Exhibit MM-3, where we have rate-case expenses associated with Mr. Gatlin and Mr. McClellan and Mr. Gray Geddie?

Q. Yes.

A. Well, Mr. Gatlin is our principal rate attorney here in the state of Florida. I believe Mr. Allen was involved in discussion with Gray as an attorney, Gray Geddie -- I'm looking at this and I am wondering if I misspelled it. That is why I am hesitating.

MR. McLEAN: Maybe it is a descriptive term. Maybe Mr. Gray is gray.

THE WITNESS: And Mr. McClellan -- I believe the discussion -- I believe we may have involved

Mr. Gatlin in that discussion -- "we" being Mr. Allen and myself and Mr. Gatlin -- considering possible consultants that were deemed experts in accounting for rate-making, in accounting for utilities. And his name was brought up.

I contacted him, and he was available to do consulting work for us. Does that answer your question?

BY MS. GERVASI:

Q. Yes. Thank you. Let me move on and refer you to your response to production of document request No. 3. Do you have a copy of that?

MR. GATLIN: I don't think so.

BY MS. GERVASI:

Q. Here is a portion of it that I would like you to draw your attention to. You provided copies of supporting documents and invoices for rate-case expense, including two bills from Mr. Gatlin's firm, one from his firm for charges from, was it Deloitte & Touche?

A. Yes.

Q. Referring to the October 1st, 1997, bill for the Gatlin firm, can you please explain the charges that are shown on this bill?

A. These are the charges, I believe, as it indicates here, rendered by Mr. John McClellan, who is a

principal -- he may be a partner; a principal, at least -- with Deloitte & Touche, a CPA firm out of Washington, D.C., I believe, though this bill says Atlanta as their billing address.

I believe Deloitte & Touche billed Mr. Gatlin, who in turn billed Florida Cities Water Company, because I believe Mr. -- I believe Deloitte & Touche was retained by Mr. Gatlin's firm, and the hours involved on that bill, October 1st bill, indicate time that Mr. McClellan discussed the particulars -- we discussed the particulars of this case with him and discussed the particulars of accounting issues, different methodologies.

Certainly the use of the surcharge was developed based on his recommendations during -- I think we had a meeting and a subsequent phone call -- conversations and follow-ups. That's the primary focus of his work.

Q. Okay. If you will look on page two -- the second page of your response to that POD request -- just flip one page over, or maybe you are on the right page.

A. I am already on the second page.

Q. Okay. That's the right page, then. Where you have Mr. McClellan's name listed for 56 hours, you say, "The detail is provided separately." I don't think we

ever got that detail. Could you provide that?

A. I would be happy to provide that in a Late-filed exhibit.

Q. Okay. Let's go ahead and label it, Late-filed Exhibit 1, detail concerning Mr. McClellan's hours.

A. That would be the October 1st, 1997, bill.

Q. Right.

A. That would be correct.

Q. Also on the last page of that POD, the same question of Mr. McClellan there, you also state the detail of the November 19th, 1997, bill is provided separately, and we didn't receive that yet. So if you would, please, sir, provide that information to us as Late-filed Exhibit 2?

A. I will be happy to provide that information.

MS. GERVASI: Thank you, and we will label it "Detail concerning Mr. McClellan's hours from the November 19th, 1997, bill."

THE WITNESS: I apologize for not providing that.

MS. GERVASI: That's fine.

BY MS. GERVASI:

Q. Mr. Murphy, if the utility does not prevail in its request for recovery of its legal fees, do you believe rate-case expense associated with this docket

should be allowed anyway?

A. I haven't formed an opinion on that.

Q. Are you familiar with Mr. McClellan's testimony that rate-case expense should be spread over ten years?

A. Yes, I am.

Q. Do you agree with that?

A. Yes, I believe Mr. McClellan and I discussed that together, and as I indicated in my testimony, I realize that the statutes only allow four years, but it just seemed simpler to also recover that over the same ten-year period of time.

Q. Okay. As a final Late-filed exhibit request, could you provide us an update of rate-case expense as of today?

A. I certainly can.

Q. We will call that Late-filed Exhibit 3.

A. That would be an update of rate-case expenses?

Q. To date, right. Okay, and if you would please include all supporting documents as well as an estimate to complete the case through the final agenda. So rate-case expense including supporting documents, and an estimate to complete.

A. I will do my best on that estimate.

Q. Okay, thank you.

MS. GERVASI: Can we take a short break?

MR. GATLIN: Sure.

MS. GERVASI: I want to confer with staff just a minute.

MR. GATLIN: Sure.

MS. GERVASI: Thank you.

(Recess taken from 3:46 p.m. to 3:55 p.m.)

BY MS. GERVASI:

Q. Mr. Murphy, you said that you didn't consider yourself to be an expert in rate-setting matters. Is that right?

A. Only from the standpoint that -- could you define "expert"?

Q. Do you think that you would be qualified to give opinion evidence on the matter?

A. I'm a CPA. I have a Master's in accounting. I worked eight and a half years in public accounting at Peat Marwick in St. Louis, Missouri. I have been in industry since 1985, so I know accounting pretty well. I have only worked in the utility industry since I first came here in May of 1994. I have attended the eastern rate-making school --

Q. NARUC?

A. -- course. I have attended other courses. I have been involved in several rate cases. Florida

Cities has been involved in several rate cases since that point in time. I'm on an AWA committee, rates and charges.

I will be honest with you. I don't understand municipal rate-making cost of service at all, so from that standpoint, I'm certainly not a cost-of-service expert. I have a good understanding of rate-making, I think, for private industry, but I would -- I don't believe I would want to hold myself out as an expert.

Q. Doesn't Florida Cities prepare all of its MFR's for rate cases in-house?

A. Yes, and there is a rate manager, and I direct his activities. In the course of rate-making, we will defer, I think, to experts such as Mr. McClellan in this case, our auditors Ernst & Young, or other auditors such as Touche Ross or Arthur Andersen, who would hold themselves out and be considered experts. But in other rate cases, we would call the Public Service Commission staff, talk to them about matters.

So I believe we do a reasonable job of our MFR's, and we are certainly capable, I believe, of preparing our own filings, but I don't know about it. I don't have a business card that says, "Expert in rate-case filings," if that's -- that's a long way to answer, you know. When I go to cocktail parties, I

don't say "expert in rate-cases." I say "bookkeeper."

Q. Did the company consider having an in-house person testify on the surcharge issue, such as Larry Coel, for instance, as opposed to hiring an outside consultant for that purpose?

A. When we looked at this case, we certainly felt that -- I direct Larry, and I don't think that Larry has this expertise that was involved in this, so we felt an outside expert was certainly somebody that -- let's put it this way -- knew more than we did, should be involved in this case.

Q. So did you consider the issue of a surcharge to be of such a magnitude that you would need an outside consultant for that?

A. Just the general accounting -- not only the surcharge, but other accounting issues, as I have discussed in my testimony, of how to handle the legal fees, once granted, and how to record them on the books. These are issues that I think are not within Larry's domain, because he has learned his business pretty much here in Florida Cities, and we certainly haven't done anything of this size or magnitude.

MS. GERVASI: Thank you. That's all I have.

THE WITNESS: Thank you.

MR. McLEAN: Anybody need a break?

THE WITNESS: No, just had one.

CROSS EXAMINATION

BY MR. McLEAN:

Q. We will go to Harold McLean, who is representing the citizens of the State of Florida, who is intervening in this particular docket. I was looking, Mr. McClellan was your witness who essentially links more than rates, doesn't he? He more or less links the liability to the customers, doesn't he, as opposed to --

A. You might want to question him on that. He's the expert.

Q. Okay. He addresses regulatory principles in general, I think.

A. Yes, you are right. He addresses regulatory principles, and I think he has a good background in that area.

Q. You mentioned in your answers to Ms. Gervasi -- is that right?

MS. GERVASI: Close enough.

BY MR. McLEAN:

Q. -- something about a regulatory asset, if I remember. My understanding of what you will do is you will simply carry this on the books somehow. I don't thoroughly understand. But at such time as you have a

rate case that unrecovered, the aggregate of the unrecovered expenses would be included in rate base at that time -- is that correct -- as a regulatory asset?

A. You understand it just as well as I do.

Q. Good. That's very good news, actually. What's the rationale for keeping it out of rate base until such time -- it seems to me it makes sense to keep it out or to put it in, but not first one and then the other. Can you explain the rationale?

A. Well, as it currently stands, now those expenses were expensed below line in the years incurred, '91 through '96/'97. So they need to be reestablished onto the books through some proceedings such as the limited proceeding we are doing here right now. So those expenditures do not exist on the balance sheet right now. So we can't go to a balance sheet and make that part of rate-making. Well, to my knowledge you can't, but I'm not an expert.

Q. You could have at this point petitioned the Commission to do so. Couldn't you?

A. Certainly we could, yes. Certainly we could add them to rate base, as regulatory asset, and then obviously, I don't know what the proceeding would be.

Q. What I'm getting at is, I don't quite understand the rationale for not including it as a

regulatory asset now. As a result -- I am not asking you to do so, but I am a little unclear on why you have not asked them to do that now but it is your intention to ask them to do that later.

A. Would you be proposing that that they be recorded as a rate-base item now, as part of this limited proceeding, that a full-rate case be opened up, and that we would then would include that as part of an overall general rate-making process? Is that what you are proposing?

Q. No, sir. I'm not proposing anything. My question is to discover why it is that you are not asking for it as a regulatory asset now, but sometime later you will ask for it as a regulatory asset, when there's a full-blown rate case.

A. I think, as indicated in my testimony, the surcharge -- if you want to use that term, just because I don't know what else to call this -- is very simple to calculate. There aren't a whole lot of papers in here with numbers on them, very simple to administer and watch, and doesn't require a lot of additional calculations.

I indicated in my testimony that if the Public Service Commission was of such a mind that they wouldn't want to include this in a regulatory asset or rate base,

as long as we got the same effect, we wouldn't mind them being figured into the surcharge in and of itself, which would then give the same effect. The long and the short of that is, you know, just simplicity. It makes it an easier -- I mean for the customers to understand. I would not say I understand, but it is easier from that perspective, and it just makes the numbers a lot easier to work with, for everybody concerned.

Q. I understand the import of your answer if it is addressing surcharges, if it is included in the basis, as opposed to the gallon surcharge, things like that.

My question is a little different. Let me make sure I understand the mechanics. At the conclusion of this case, there would be a surcharge, specifically designed to recover the legal expenses that we have all talked about, in the rate case in this proceeding. Correct?

A. Correct.

Q. And that is the only thing that surcharge would be designed to recover.

A. That's correct.

Q. And there would be no carrying charges, if you can accept that phrase, on the unpaid balance.

A. That would be correct, too.

Q. Now, at some point in time, presumably whenever the next rate case comes along, the unrecovered expenses would be added to rate base distinctly, and presumably separately. One could still pick it out, but it would be added as a regulatory asset. Correct?

A. That would be correct, and handled --

Q. And the surcharge would survive? There would still be a surcharge?

A. There would still be a surcharge. The regulatory asset would be the net unamortized.

Q. Yes.

A. Presumably, if there was never a rate case in ten years, then the regulatory asset would not be picked up and included in rate-making. Now, let me add, though, that for purposes of determining over-earnings, you know, we would be looking to this to be a part of rate base, so that, you know -- I don't know what the magnitude might be, but it would be the same as a rate-base component, as a utility plant and service. It would be on the books. It would be considered as part of the rate base. But yes, in theory, if there never was a rate case in a particular division, then there would be no request for that carrying charge.

Q. Well, the simplicity that you identified as the virtue in an earlier question I asked, does it

somehow go away when that rate case comes along?

A. Yes. The accounting as discussed here would amortize that regulatory asset over a ten-year period of time. So at the end of ten years, that regulatory asset would no longer exist, whether there be, you know -- it just wouldn't exist any more. It wouldn't be there as part of the rate base.

Q. Are you testifying, then, that it is simplicity considerations that caused the company to decline to ask the Commission to include the unamortized balance in rate-base as a regulatory asset at the conclusion of this proceeding?

A. Well, I might want to think about that in a lot more detail, but right now, yeah, as part of this, its one major factor is simplicity, including that. If there's a rate case, then we will pick up the balance.

Q. I didn't quite mean to get into this in such detail, but it's getting more interesting. Four years down the road, there will be some unamortized balance, presumably, if you don't experience tremendous customer growth between now and then; there will be some unamortized balance. And at that point in time, you will want the Commission to include that regulatory asset and pay some return on that. Will it be apportioned between debt and equity, probably?

A. Correct.

Q. So you will earn a return on that, beginning four years down the road?

A. Beginning four years down the road.

Q. That will add to the surcharge, will it? You know, the surcharge will not be affected.

A. I don't know. If the PSC so deemed it, it could be added to that surcharge for that division, or I guess in normal rate-making, it would be included in the general service --

Q. So you will get -- I'm sorry?

A. -- the base facility charge or the consumption charge. Now, ten years out, and as long as those rates were in effect, then that amount would be included in the rates, even though the balance might continue to dissipate. Much like any utility plant service, the rates are designed based on the gross, as it were, utility plant service, as of the date of the rate case. Twenty years from now, when those assets are fully amortized or depleted, the rates would still reflect that full cost.

Q. Sure.

A. Now, certainly other things happen in those periods of time that, hopefully, you are either over-earning or have other expenditures that have offset

that depleting rate base that doesn't require a rate of decrease. But yeah.

Q. So the surcharge is almost a surrogate for depreciation expense on this regulatory asset.

A. As it were, yes.

Q. Now, what I can't figure out is four years down the road, you will still be collecting surcharge, but at that time, if you have a rate case, you will be adding to the burden that the customers carry -- or to the revenue -- a return on that regulatory asset. Is that correct?

A. That's correct.

Q. I don't understand why you are willing to forego that last component at the conclusion of this case. I'm not suggesting that you amend your filing to do so, but I'm confused as to why it's easy to forego it now. If rationale supports foregoing it now, why doesn't it support continuing to forego it?

A. We'd like to amend our rate case.

(Laughter).

THE WITNESS: Thank you, Harold, for the opportunity to increase the charge.

No, I'm not suggesting that we forego it in the future. That's not -- and I can see that may confuse you. I'm not suggesting that at all. I

believe that the accounting we have asked for is that it be included as a rate-base component, as a regulatory asset, and until such time that I have a rate case, I would like to include it in that rate filing so we can earn a return on it at that time. I'm not asking to forego it in the future, but I don't -- you know, unless I get it on my books, unless I get it in my rates, I never have the opportunity to earn on it.

BY MR. McLEAN:

Q. You will, in this scenario?

A. In this scenario, I will have an opportunity to earn on it if I have a rate case.

Q. But until?

A. Not until. That is, quite simply, all I am asking for.

Q. Did you participate in the decision not to ask for it as a regulatory asset now?

A. Yes, I did.

Q. I want to advance two potential reasons and ask you to respond to them. The first is: if you don't ask for recovery, rate of return on a regulatory asset at this point in time, it makes the entire scenario more palatable to the Commission. Was that a consideration?

A. I don't know, "palatable." I hate to fall

back on "easier." It's just easier to isolate this one particular instance. You know, I'm not proposing that I'm trying to hide the fact that there's more -- there's more than just the surcharge. Okay? But I would deal with that one when we have another rate case, when there are other issues to be considered. What you would be proposing is more complex rate cases at two, three separate locations, which would increase rate-case expenses quite a bit more than they are, to do that.

Now, if the PSC staff feels that -- and maybe they would like to -- Florida Cities ought to be allowed a reasonable rate of return on these invested moneys. And I'm not saying we shouldn't, okay? In my heart, I firmly believe that these expenditures should also be allowed a rate of return. That could be figured into the surcharge. And it, too, would go away in ten years. It could be handled in that manner just as easily. The method was selected as the method principally because of ease of calculation and monitoring.

Q. Second proposal on my part, to suggest a reason to you why you might have done it that way: if the company were in an over-earnings posture today, or, say, at the conclusion of its case, then they wouldn't be permitted to earn any return -- any additional return? Let me start over.

If the comparison were in an over-earnings posture today, then the Commission would not approve any return on that regulatory asset. Would it?

A. I don't know. I don't think I could answer that question. I'm not a Public Service Commission staff member, and I'm not the Commission.

Q. Well, you wouldn't recommend the Commission grant a return on a regulatory asset above and beyond a reasonable return, such that it would exacerbate an over-earnings posture, would you?

A. Well, certainly as outlined earlier, on some future rate case, we are only going to be allowed to earn up to our allowed rate of return, so that earnings on the regulatory asset is limited by whatever the rate-of-return range is. So, yeah. I mean your point is correct, but in the future, you know, there's also -- there would be a built-in limitation to start out with that -- to the extent there was any over-earnings in anything else, that we wouldn't be getting a total return on that particular asset.

Q. But for some reason, the company is willing to forego at this point in time a return on that regulatory asset until such time as you have a rate case?

A. Yes. I proposed to you that that reason is as simple as ease of consideration. I think I responded to

the Public Service Commission attorney and indicated there were other methods, and certainly we did consider other methods, including rate base, and then putting it into consumption fee and base facility charge; and to me it was a real complicated process.

Q. Sure. That, of course, is responsive to a question which would go to surcharge versus rolling it into base rates somehow, or something like that?

A. That would be responsive to the amortization, as well as the return on the unamortized asset.

Q. Okay. I want to ask you a couple of general questions about your testimony. You are going to be tendered as an expert in regulatory accounting, do you think?

A. I am tendered as the vice president of finance of Florida Cities Water Company -- chief financial officer.

Q. And your testimony says, essentially, our expenses were "X," our rate case expense is "Y," here's how you should allocate it, and it is an amount of money which is sufficient to put the company at risk, the amount of money -- let me start over. Sorry.

Your testimony says that our legal expenses associated with this endeavor were "X." Is that correct, whatever the number?

A. Yes.

Q. And your rate case expense is "X."

A. Correct.

Q. And we should be allowed to recover those by means of a surcharge and maybe some day by a regulatory asset and so forth. And you rely upon your expertise as an accountant to offer that evidence to the Commission. Correct?

A. Yes, if you say so.

Q. I would rather that you say so.

A. You know, I am the chief financial officer for the company. I don't propose to be an expert.

Q. Okay. And that gives you confidence to say that had that $104 million or $54 million, whatever it was, been assessed against the company, the company would have been at financial risk. Correct?

A. I believe that's a pretty obvious conclusion, yes.

Q. What's not quite so obvious to me -- and it is a fair conclusion to draw -- is that the customers would have been at risk, or perhaps their quality of service would have been at risk. You do draw that conclusion in your testimony. Right?

A. I believe I do. I draw that conclusion -- yes.

Q. Upon what expertise do you rely to offer that opinion evidence to the Commission?

A. Again, just a general twenty years of business experience, deriving upon that. Well, let me back up. I believe my testimony says, and I will paraphrase, that a financially stable company provides just better service for its customers.

Q. Okay.

A. That's just kind of a known element. I don't draw that from any particular document.

Q. Okay.

A. Certainly in this situation, you know, if we were, you know, I guess, maybe -- well, you know, I don't know if my testimony goes a whole lot to the financial risk of the company, but I think it's important to understand that my testimony goes more towards this financial risk than the allocation area. I think that it indicates that we're dealing with such large dollars involved here, that this should spread upon the general population.

That's really the sense of my testimony.

Q. In fact, you have to rely upon that to get to the water customers, in a sense, right? You have to say that in order to charge these water customers for things that occurred on the sewer side, it appears to us that

the company would have failed, had the DOJ been successful in getting a huge judgment. Is that fair?

A. Failed, or could have been put in financial peril, could not have been able to fulfill its duties as, you know, required by the Public Service Commission, or Hillsborough County, or Collier County, or Sarasota County.

Q. Lots of people want you to provide service. No question about that.

A. Yes.

Q. Lots of regulatory agencies. You even go so far as to suggest that bankruptcy might have been a result of a huge recovery or attempted recovery by the government. Correct?

A. It certainly could. It's a possibility.

Q. Do you have the expertise to take me down the road to show me what happens to customers if bankruptcy occurs?

A. No, I don't believe I do.

Q. Okay. You couldn't say, for example, whether creditors would regard -- you couldn't say whether creditors would insist to the Bankruptcy Court that Florida Cities Water remain as a going entity and comply with all regulatory requirements. Could you?

A. No, I don't know that I could. I think that,

you know, I have certainly been involved in bankruptcy situations, and non-utility concerns, and sometimes those businesses stay in business. Sometimes they close the door and leave the keys hanging on the door, and when they -- I personally have been involved in situations where companies have left the key in the door.

Q. Sure.

A. And it's a pretty bad dilemma for the customers, who may have been expecting a product, or a vendor, who may have been expecting a payment of a bill. It's a tough situation. Sometimes business goes on. Depends on which class of bankruptcy is involved.

Q. Are you suggesting Chapter 11, Chapter 13, something like that, would have been a likely result?

A. I cannot say.

Q. All right. In those areas where you have had experience, were the companies who went bankrupt in a pervasively regulated business, such as disposal of sewerage?

A. No, I wouldn't say they were pervasively regulated.

Q. From your experience as a CPA, can you generally say it may be difficult -- let me come up with a hypothetical utility which does in fact go bankrupt,

and say that you are advising the trustee in bankruptcy, or something like that. Would you suggest that the government have its utilities pipes be hauled off on trucks or maintained as a going concern? Which of those two scenarios would more likely be advantageous to creditors?

A. Certainly creditors would want to see that the -- well, depends on which bankruptcy proceeding you were under. In one of those, the existing creditors are out of luck. They have lost their money. They may not be willing to provide service to that company, if it remains in business. That company may be required to go out and find new vendors, if it could do that. In many situations -- and my experience is not broad upon utilities -- a company may file protection in bankruptcy that would allow it to continue business. But because it is bankrupt, it may not be able to continue in business. It's pretty hard to find a loan, pretty hard to find creditors to give you what you need to continue business, unless it is cash on demand, COD.

Q. Is there any testimony or expertise you will bring to the Commission that says, had the government recovered the $104 million judgment against Florida Cities Water Company, that service to customers would have terminated?

A. No, there is nothing in my testimony that indicates that.

Q. You do seem to hint at the notion that service would have deteriorated?

A. It's my general feeling, like I said. It's a very hypothetical thing we are talking about here.

Q. Sure, yes.

A. I don't know, you know. If this company went out of business today, it's my general feeling that customers certainly would have a deprivation in quality of service.

Q. Is there any reason to believe that whoever took over the entity, they would want different personnel to run it?

A. Yeah.

Q. There is a possibility the same people would run it. Isn't there?

A. It is possible. It could be the same possibility. I don't know how long that would take. I have never really been through that situation before. It may take days, weeks. It may even take years before, you know, an appropriate management team could be in there.

Certainly there's a lot that goes on in this company, from not only a day-to-day operational process,

but also the continuing repairs and maintenance of the existing lines, as well as the requirements to build and construct new plants, to meet increasing demands that not only the existing customers but the customers that might come on tomorrow and want new capacity, and down the line, down the road.

Q. Do you have any reason to believe that any successor in interest might not honor those obligations?

A. I wouldn't know whether they would or would not.

Q. Sure. Oh, at the end of your testimony -- let's see, page 15, line 21, you make me nervous with some language about you might modify your testimony eventually.

A. Well --

Q. Now, accountants like to modify their testimony in terms of arithmetic and things like that. I can accept things like that. But are you suggesting that you are going to change anything about the import of your testimony?

A. No. It just indicates that if I have a number wrong, I'm going to let you know about it.

Q. Sure, good. Have you prepared a summary of your testimony?

A. Summary?

Q. Yes, sir.

A. No.

Q. Have you prepared a written summary of your testimony?

A. No, my testimony is fifteen pages long and it's sitting right in front of me.

Q. So you wouldn't see the need to summarize it?

A. If somebody wanted me to summarize it, I would be happy to.

Q. What if somebody didn't want you to?

A. If somebody didn't want me to summarize it?

Q. It would depend on who they were?

A. I'm not familiar with your terminology, "summary of testimony."

Q. Good.

A. I have never done that before.

MR. McLEAN: That's all the questions I have. Thank you very much.

MS. GERVASI: Mr. Gatlin? Do you want him to read and sign?

MR. GATLIN: Yes. No questions.

MS. GERVASI: Okay. That concludes the deposition.

(Deposition ended at 4:08 p.m.)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition of Florida Cities Water Company for limited proceeding to recover environmental litigation costs for North and South Ft. Myers Divisions in Lee County and Barefoot Bay Division in Brevard County.	DOCKET NO. 971663-WS PSC Due Date 3/13/98 Fri. File:G:\FCSURCH\INTER\PSCINTR1.FCW

COMMISSION STAFF'S FIRST SET OF INTERROGATORIES (1-39) TO FLORIDA CITIES WATER COMPANY (FCWC) AND FCWC'S RESPONSES

The Staff of the Florida Public Service Commission, by and through its undersigned attorney, hereby propounds the following interrogatories, numbered 1 through 39, to Florida Cities Water Company (FCWC or utility), pursuant to Rule 1.340, Florida Rules of Civil Procedure. These interrogatories shall be answered under oath by the utility or its agent who is qualified to answer and who shall be fully identified, within thirty (30) days.

INSTRUCTIONS

A. FCWC shall answer these interrogatories to the fullest extent possible and shall furnish all information which is reasonably available to the utility, its principals, agents, attorneys, affiliates or other representatives. The utility may respond to an interrogatory by indicating that the requested information is reported on a specific schedule in the minimum filing requirements.

B. If the utility cannot answer a particular interrogatory in full, after exercising due diligence to secure the information to do so, it should state the answer to the extent possible and specify why it is unable to answer the remainder. In addition, the utility shall state whatever information or knowledge that it has concerning the unanswered portion.

C. If the requested information is not applicable, that response should be reported as well as the reason why. If the requested information is not available, that response should be reported as well as the reason why.

3. John McClellan testifies that if the utility had included the carrying costs in its request for recovery of legal fees, the costs would have accumulated to over $4.5 million. Why did the utility not request recovery of its carrying costs in this proceeding?

Response: (MM)

FCWC deemed recovery of the legal fees and potential to recovery a rate of return on unamortized regulatory asset in future rate cases to be sufficient. The shareholders are absorbing the carrying costs until the legal fees are included as a regulatory asset, included in rate base and included as part of some future rate case.

5. Has FCWC paid all the legal expenses included in this filing? If not, please provide a synopsis showing the amount paid and the balance due.

Response: (MM)

All the legal expense included in this filing have been paid by FCWC.

13. Referring to interrogatory no. 12, above, why was this policy changed?

Response: (MM)

There has been no change in policy. The legal fees related to the charges and litigation were segregated below the line once it was determined that the charges were an on going matter.

14. Referring to interrogatory no. 12, above, have any of these costs been included for recovery in any prior rate proceedings for FCWC?

Response: (MM)

No. Legal expenses were initially charged to the North Ft. Myers wastewater treatment plant expansion during 1992, 1993 and part of 1994. During 1994 FCWC began expensing legal fees associated with the charges and litigation below the line. During the course of the audit in connection with the 1995 North Ft. Myers wastewater rate case, the FPSC staff auditors brought to the attention of FCWC that certain costs were included in UPIS. FCWC agreed with the FPSC auditor and FCWC reclassified those costs out of UPIS to below the line legal expenses.

15. Why does FCWC believe that the litigation expenses should be booked as a regulatory asset?

Response: (MM)

Referring back to testimony MM _ page 15, line 8;

Q. Do you have a recommended accounting treatment ?
A. Yes. We recommend that the total legal expenses to be recovered be recorded as a regulatory asset and included in Rate Base. This regulatory asset would then be amortized over a ten year period. As the Surcharge is collected it would be recorded as a revenue which would be off-set by the amortization of the regulatory asset. Only the unamortized regulatory asset would remain in rate base.

The establishment of the regulatory asset reflects the fact that the actual Surcharges will be received over a ten year period yet establishes for inclusion in rate base the unamortized legal fees (deferred amount of the regulatory asset). See interrogatory no. 16, below.

16. Why has FCWC not asked for a rate of return on the deferred amount of the regulatory asset?

Response: (MM)

FCWC is requesting that the FPSC deem that the regulatory asset be included in rate base. As FCWC proceeds to have future rate cases, a rate of return on the unamortized regulatory asset would be included in the composition of rates. The surcharge would remain unaffected by rate of return. If the PSC felt that it was more correct to include in the surcharge an amount representing the rate of return on the regulatory asset, FCWC would not object.

17. Does the utility intend to include any of the remaining unamortized balance as a regulatory asset in rate base in any future rate proceedings?

Response: (MM)

Yes, see interrogatory no. 16, above. As FCWC proceeds to have future rate cases, a rate of return on the unamortized regulatory asset would be included in the composition of rates.

24. Why did the utility request that rate case expense for this proceeding be amortized over ten years instead of four, as is set forth in Section 367.0816, Florida Statutes?

Response: (MM)

By amortizing the rate case expense over a longer period of time, such as ten years, FCWC is extending the recovery of these costs, over more years, and thus lowering the impact to its customers.

Additionally, FCWC believes it will be administratively easier, less costly, and less confusing to the customers to have one rate decrease in ten years than have rate decreases after four and another six years later.

The typical 5/8" meter rate increases per water and wastewater service would be as follows:

Based on Four Amortization:

	Rates	Amortization Period
Rate Case Expense	$0.084	4 years
Surcharge Rate	$0.382	10 years
Total Rate	$0.47	Rounded

Based on Ten Year Amortization:

	Rates	
Rate Case Expense	$0.034	10 years
Surcharge Rate	$0.382	10 years
Total Rate	$0.42	Rounded

Initial Rate decrease	$0.05	Per service

28. If a surcharge is deemed appropriate, how should the charge be described on the customers' bills?

Response: (MM)

As a separate line item on the customer's monthly bill, stated as "surcharge" or another term the FPSC deems appropriate.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

MS. GERVASI: Before we get started, do we agree to the usual stipulations; again, which are that the deposition was taken pursuant to notice in accordance with the civil procedure rules; that counsel present stipulate that the witness is the person he has identified himself as -- I guess he's personally known to many -- that objections except as to the form the question are reserved until hearing, and any off-the-record conversations would be with the consent of the deponent.

MR. GATLIN: We stipulate.

MS. GERVASI: Thank you.

JOHN D. McCLELLAN

appeared as a witness and, after being duly sworn by the court reporter, testified as follows:

EXAMINATION

BY MS. GERVASI:

Q Mr. McClellan, I'm Rosanne Gervasi, and I will be asking you some questions today on behalf of the Commission Staff concerning the testimony that you filed in Docket 971663-WS.

If you would, please, sir, let me know if any of my questions are unclear to you, and I'll try to rephrase them as necessary. Also, if you need to take a break at any time, let us know and we'll be

happy to accommodate that.

A Thank you.

Q With that, would you please state your full name and address for the record?

A John D. McClellan, 555 12th Street Northwest, Suite 500, Washington, D.C. 20004.

Q Concerning the recovery methods that the utility is requesting in this docket, if you would, please, sir, refer to your prefiled testimony, Page 7. At Lines 1 through 10, you're stating your opinion of the method used by Mr. Allen in arriving at the $3,589,368, correct?

A Yes.

Q And you state that Mr. Allen's approach recognizes that costs would have been absorbed by Florida Cities had an early settlement been successful and the litigation process avoided.

A That's correct.

Q Then you go on to state that in assessing the utility's responsibility for a portion of these costs, that he correlated the DOJ's original offer of settlement, which was in the amount of $5 million, with the Court's final determination of a civil penalty of 300,000 and some odd dollars; correct?

A Correct.

Q Now, that early settlement amount did not occur, right? There never was a settlement?

A There was an offer, but no settlement; that is correct.

Q How is the recognition of Florida Cities absorbing an early settlement amount when there never was a settlement amount relevant in determining what the shareholders' burden of the litigation costs should be?

A That's a "what-if" situation. Had another action been taken, something different would have happened in this evaluation.

Q How is the correlation of the DOJ's $5 million settlement offer with the $300,000 civil penalty relevant in determining the company's shareholders' burden of the litigation costs?

A It establishes a correlation which the company chose to view as being an appropriate way to reduce the amounts assessed. I didn't necessarily agree with that, but that's their view; and to me it was a very conservative approach.

And I don't challenge it. I don't see it as being necessary, but they preferred it, so I didn't challenge it. But it's a way simply to recognize that there is some cost involved here that they avoided

$5 million, by not settling for 5 million.

However, they ended up paying 300,000. By drawing a ratio between those two, they draw a correlation between the amount expended in getting there as being maybe something they should absorb; and that's the way that's computed it.

It's not something I see as necessary, but I didn't challenge it. I don't think it's wrong. I just didn't see it as being something that was really needed to protect anybody. To me, it was overly conservative.

Q Do you have a better approach in mind?

A Oh, yes. To me, actually the better answer would be to assess the 3.8 million. That was the cost incurred. They did not incur 3.6, and to adjust it downward I thought was probably going -- bending over too far, or further than my reason -- my reasoning required; but then I couldn't say it's wrong.

It's certainly not improper, but it probably is more -- what's the right word? Generous is not a good word. It's probably more than I would have recommended on the front side. I would have recommended going after the cost you incurred. They chose not to do that, and I accept it as a way to do it.

Q Thank you. Did you look at, or do you know if the utility relied on any Florida Public Service Commission orders or decisions made by any other state commissions in arriving at this methodology?

A The ratio methodology?

Q Yes.

A I don't know. I actually -- I will volunteer that I doubt it, because I'm not sure there is such a thing. I've never seen such a thing.

Q Also on Page 7 of your testimony beginning at Line 21, you state that Mr. Allen also established a second recovery amount using a different measure, and that in this measure the litigation expenses of 3.8 million were reduced by the difference between the $500,000 settlement offer that presumably would have settled the issue, and then the final judgment of the 300 some odd thousand dollars imposed by the Court; right?

A Right.

Q In what way is the residual of the civil penalty from the $500,000 settlement offer relevant in determining the company's shareholders' burden of the litigation costs?

A It's a mechanical way to test some kind of sharing process. And as I observed in the earlier

answer, I'm not convinced that the sharing process is necessary; but the company chose to do it and this was one of the ways they chose to do it.

I would -- to reiterate, I -- in my view, the recovery of the $3.8 million -- or request for that would have been perfectly appropriate. They chose to reduce it by these measures.

Q Do you know if the company relied on any Public Service Commission order or decision in arriving at this conclusion?

A To my knowledge, they did not.

Q Did you consider any other methods for determining the company's shareholders' burden of the litigation costs?

A Yes, I did. I considered the cost incurred as the method. Now, whether the company considered that or not, I don't know. I assume they did, and they chose to reduce it by this ratioing method, but that is an assumption.

I considered the alternative an assessment of cost. They chose to allocate those costs. I'm not sure that's necessary or the right way, but that was the way they chose.

Q Did you consider any other methods besides that?

A [redacted]

Q Do you know why the company chose not to go with the method that you preferred?

A I don't know. I kind of wondered. I think they were trying to be fair in every way, trying to go to some extra degree to be fair. I'm not sure it was necessary. They thought it was.

Q And who made the decision to use the methodology that was presented?

A I don't know. I will observe this. When they came to me with the proposal to address the issue, this is what they planned to do.

Q If you will refer now to Page 10 of your testimony starting at Line 21, you testified that the company's litigation with the DOJ preserved the company from calamitous financial burdens and that the actions taken by the company clearly benefited all Florida Cities' customers; right?

A Correct.

Q Did the 3.8 million in litigation costs and the $300,000 civil penalty assessed cause any specific adverse impact to the quality of the Utility's service that you're aware of?

A I'm not -- I can't identify any of them. It has to. It's just the economics of the -- the nature

of the transaction has to have an effect, but I can't tell you what that effect was. You can't spend $4 million in a fairly small company and not have some effect.

Q But you're not able to provide any specific instances or --

A No.

Q -- examples of that?

A No. Someone else would have to address that.

Q Do you know if the penalty and costs incurred caused any delay in any scheduled or required plant improvements?

A I do not know. I could only surmise, but I don't know.

Q What specific benefits did all of Florida Cities' water and wastewater customers receive from the company's incurrence of these litigation costs?

A [redacted] -- depends on the [redacted] award -- a very severe, possibly financial burden placed on the system, which has to affect customers.

You can't operate a healthy system when you're crushed by financial pressure, and you can't provide great service with a crushed financial system,

so it feeds down.

The pressures, financial pressures, on the system, if extensive, would necessarily affect the quality of service provided by the system. It can't be avoided.

Q Isn't it correct that the DOJ's amended complaint encompassed only the company's Waterway Estates, Barefoot Bay and Carollwood wasterwater plants?

A That's correct.

Q And so those were the only wastewater plants that were the subject of the Florida Cities' litigation costs, right?

A That's correct.

Q The litigation costs and the penalty incurred didn't cause calamitous financial burdens, did they?

A I don't know. It did not put the company out of business, and it didn't cause financial burdens that were so obvious that they're apparent to me. But I don't know the answer.

And let me qualify. Calamitous is relative. I guess I would interpret calamitous to mean something that's obvious to everybody. And given that interpretation, no, it did not cause calamitous

results.

Q Then why, in your opinion, should all of the water and other systems' wastewater customers be burdened with these litigation costs?

A Because they avoided -- they were expended to avoid calamitous results.

Q To the entire --

A To the entire system, yes. If the company suffers severe financial pressures, penalties, burdens, then the entire system suffers.

Q Okay. Thank you. Have you had the opportunity to read Mr. Murphy's testimony that was filed in this case?

A Yes.

Q He testified -- and I don't know if you have a copy of his testimony with you -- but he testified --

MR. GATLIN: I don't think you do.

MS. GERVASI: I've got a copy here that you can look at.

Q **(By Ms. Gervasi)** On Page 4 of Mr. Murphy's testimony starting at Line 7, he testifies that the penalties requested by the DOJ were of such a financial magnitude that the financial integrity of the company was in jeopardy. Do you see

where I am?

A Yes, I see that.

Q He further states that the penalties requested by the DOJ were so substantial that Florida Cities would not have been able to fund the claims and would have probably been forced into bankruptcy.

Do you agree with these conclusions set forth by Mr. Murphy?

A I can certainly accept it as a rational expression. Would they have been forced into bankruptcy? I don't know. I would think with a $100 million assessment, they probably would. I don't know how it could be avoided.

With the $30 million, probably so. I don't know where it would have occurred, but I think it's a rational statement.

Whether bankruptcy occurred or not, the financial pressures would have been extreme, probably leading -- at some level leading to bankruptcy, yes.

Q If you would assume for a moment hypothetically that since 1993, the shareholders of Florida Cities had a capital investment of upwards of $30 million in the company, and based on this assumption, if the Court had found the company liable for the penalty amounts claimed by the DOJ,

specifically the 32 million sought in the original complaint and then the 104 million sought in the amended complaint, and if the company had gone into bankruptcy, would you agree that the shareholders would have lost their entire capital investment in the company?

A Yes. It would have been wiped out more or less, but effectively wiped out.

Q So that now given that the company was not forced into bankruptcy and the shareholders' capital investment remained intact, wouldn't it be fair to say that the shareholders benefited considerably more than the $236,842 incurred from the litigation efforts?

A I'm not sure I would characterize it that way. I would certainly agree that both benefited. More -- it depends. I don't know.

If you take all of my money and leave, I'm hurt. If you provide me service and you cut up my service -- off, if that should happen, am I am hurt more? I don't know. I'm hurt.

Both benefited. I will go that far.

Q But you haven't put a price tag on how much the company has benefited as opposed to the customers?

A No. I could not put a price tag on either. I don't know how much either benefited. I know that

the charges were -- that the claims imposed, or the assessments sought were extreme, and that the company attempted to avoid those assessments and was largely successful, and that was -- turned out to be a good action.

On the front side you don't know whether it will be or not, but you have to do it. Both parties, I think, benefited in the process. It is a cost of doing business, and in the cost of service approach it -- to me, it's a legitimate recoverable cost. It's a cost of doing business.

Q If you will look, please, sir, on Page 11 of your testimony starting at Line 18, you state -- you're talking about the surcharge and say that although there are alternative ways in which the costs may be assessed, the use of a surcharge has the clear advantage of providing for the recovery of a specific level of costs since the recovery process will terminate when the identified costs have been recovered; right?

A Yes. That's one of the positives of the surcharge.

Q Did you rely on any Commission orders or decisions made by other state commissions to arrive at this conclusion that the surcharge is an appropriate

vehicle by which to recover the litigation expenses?

A Generally, yes. Commissions have for a long time allowed certain costs to be recovered through a surcharge. They've allowed them to be recovered in other means, and it's one of the ways that it's allowed; and I rely on that as background.

There are a number of ways -- I will add to my statement -- there are a number of ways of recovering costs. This is one of them, and it seems to be an appropriate way to do it for a number of reasons; one of which is it is -- it's precise.

You measure the cost incurred, you recover the cost incurred, and it stops; plus, it starts. You start with a specific amount and you continue. So it's controlled. That's one of the positives.

Q Can you cite us to any of the orders that you relied on? Did you rely on any specific ones.

A No, just a lot of cases over the years where cost recovery has been permitted here and in other states and in various ways. This is one of the ways.

Q With respect to the recovery of rate case expense for this proceeding, on Page 16 now of your testimony, you state that the intent of the utility is to recover the rate case expense over the next 10 years; correct?

A Yes.

Q As well as the litigation expenses?

A Yes.

Q Both over 10 years.

A Yes, that's correct.

Q Are you aware that under Section 367.081(6) of the Florida Statutes that the recovery period for rate case expense in Florida is four years?

A Yes.

Q Are you aware of any cases where the Florida Public Service Commission has deviated from this statutory four-year recovery period since that section has been in effect?

A No.

Q Do you agree with this methodology?

A Well, I think it's a good method. Now, whether it can be done or not under the statutory provisions is another question, and I don't know. It sounds like it can't, but I'm giving you a layman's response there.

Q Okay. Thank you. Let's go on to the accounting treatment on Page 15 now of your testimony at Line 2. I'm sorry. This is Mr. Murphy's testimony again. On Page 15 of his testimony at Line 2, he testifies that the legal expenses were expensed below

the line. Are you aware of that?

A Based on his advice, yes.

Q And then according to Mr. Murphy, also on Page 15, starting at Line 9 of his testimony, Florida Cities' requested accounting treatment to recover the litigation costs is to record these costs as a regulatory asset which should be included in rate base and amortized over a 10-year period; right?

A Right.

Q Now, if the Commission grants recovery of these litigation costs, what is the accounting entry going to be? Do you know?

A I can give you the most probable. I would think that the company would record a regulatory asset at the moment that it was economically justified to be representing a cost to be recovered in the future by debiting a regular asset.

I presume they would have to run it through their surplus account initially to -- now, I don't want to get into the refined accounting. It may go through some revenue account, but into the surplus account. But the point would be to get that asset recognized. It exists -- given the Commission's approval. You would measure it, record it, and then start to amortize it as you recover the cost through

the amortization process and the surcharge that goes with it.

Q Would it be recorded as deferred revenue, do you think?

A No, no.

Q It wouldn't be --

A It would be recorded as an asset, a regulatory asset.

Q Would it be --

A Just like -- just -- it would have the same characteristics as a piece of plant and for ratemaking purposes at least.

Q So it wouldn't be called deferred revenue?

A You could call it that. I probably would not recommend it, but there's nothing wrong with that. That may be the label you apply to it.

When I say regulatory asset, I really was -- my thinking was too focused. That could be the regulatory asset label used.

Q Would the deferred revenue be the credit?

A No. The credit would go into surplus. You create an asset, your ownership interest just went up in the process.

Q You said you wouldn't prefer to call it deferred revenue. How would you prefer that it be

handled?

A Let me give you -- tell you something on the front side of this. I have not even looked at this issue, so any answers I'm giving you are right off the top of the head. If I thought about it for two hours or two days or something, I might decide -- but -- so I'll go -- but I'll give you some of my immediate answers.

I would think that you would create an asset representing a recoverable economic value, and you would put that on your records as "this is my asset". Now, you could, I suppose -- let me think about this, because I do have to think this through. This deferred revenue kind of leaves me a little off balance.

I guess you could credit some deferred revenue account, and then as you recovered the revenues, you would write down the asset, because you would be reducing its recoverable amount. I don't know what you would do with that deferred revenue account at that point. I guess you would reverse it into -- I don't know. I'd have to think that one through. I simply don't know.

And, by the way, I don't want to be unfair here. It may be whoever came up with that has a great

idea that I haven't thought through. Right now it strikes me as awkward. So I don't know.

Q Okay. You mentioned that there was a surplus, a surplus account. What would the surplus --

A It's an owner's equity. If I have an asset, I have an asset, and I own that asset. So I have equity.

Now, if it went into the deferred revenue account that we were talking about, it would end up there. It just wouldn't go there until it -- over the period. Because one way, you would feed it in slowly through revenues recovered into an equity holding that would be represented over cash by time over -- by cash over time.

The other way, you would set it up as an equity account now and revenues due over time. Technically it's the -- or in reality it's the same thing. It's a matter of mechanical handling.

I don't think, by the way, that any way you do it in the way of labels would be necessarily wrong. It's which is the best from purely an accounting perspective. From a ratemaking perspective, it kind of fades.

The one thing that's critical in the ratemaking perspective is that the asset can be

recognized as a legitimate investment, if you will, on which there is a time value, and you should get some kind of recognition of that time value given a rate case.

Now, that's the hitch here, and I'm probably wandering on some other stuff you want to talk about, so I'm going to stop.

Q No. Go right ahead. I don't want to stop you.

A Well, I will continue very briefly.

Q Okay.

A The way the recovery is structured, the original cost as though recovered today, as opposed to any time value add-on, the original cost will be recovered through the surcharge approach. I have $100. I'm going to recover $10 a year over the next 10 years, and I get $100.

Now, because I'm getting it over 10 years, I lose value because of time value. To recover that value, I need to get a return each year on that $10. The way this is structured, the company will have a regulatory asset, which they are requesting at least, be recognized as a rate base allowance in a ratemaking process. So it's sitting there. Just like plant.

If a rate case comes along in two years or

five years or eight years, it will be recognized, and they will get a time value on it. Between now and then they won't get anything added.

However, I assume the company files annual earnings reports and measures rate of return. When they file an annual earnings report, it will be in the rate base, and it will measure the earned rate of return. So it will have an immediate benefit.

If they're, for example, on a marginal earnings basis now, like they're earning 10.1% and they're authorized 10% so they're on the edge, and they drop this into the picture, it may pull them down to 9.5% and avoid a rate reduction.

The rate base has a real meaning from today forward because it will be used to measure rate of return. It may not generate additional revenues or it may. It depends on a rate case or the avoidance of a rate case. So it does have value, but it doesn't trigger immediate recovery of a cost from a time value perspective.

I will add one other for the thought of that to kind of round it out. Another way to have approached this -- and the company chose not to, and I've talked to them about this -- would be to bill into the assessment itself, the surcharge, a time

value measure so that rather than 3.8 million over 10 years, they would collect -- and that would be probably another million and a half dollars that's -- they would collect more, because a surcharge would be designed just like a mortgage; give you a levelized recovery including interest.

They chose not to do that. That's fine with me. That would have been one way to do it. The way they chose is to run that time value through the rate base. However, that's contingent in part upon having a rate case.

So it's -- to me it was a -- it's a way to do it. If you are trying to maximize cost recovery, it would not be the best way to do it. Now, if you're trying to do something else, it may be the -- a great way to do it. It's -- a lot of variables here.

I think that there's a fundamental principle that I'll fall back to. A cost has been incurred. It appears perfectly legitimate and avoided some serious problems. The cost turned out to be fairly large. Now the company is seeking recovery of those costs as a cost of doing business. They're seeking it in this manner, and this is one way to do it. There are other ways that it could be done, some better, some worse maybe. It depends on what you're trying to do.

Q I am going to ask you some more about that in a little bit. But I want to take you back for a minute to calling the recovery of these litigation costs deferred revenue.

Would it be appropriate, if the company were to do that, to put a deferred revenue account in the capital structure?

A If they did, then you'd be back to my position. That would be an equity account by special label. So that would be doing what I started off saying. And, no, there's nothing wrong with that. I say there's nothing wrong. It's kind of an odd accounting approach, but I don't -- it was not something that I see as offensive.

However, it does sound like you're kind of describing what I started off with, but with a carved out identification. And I have seen, by the way. Not here, not in this state, but I've seen that where they've -- carved out identification has been maintained.

Q If the deferred revenue account went into capital structure, wouldn't any of the cost rates that I'm going to tell you, would any of them be appropriate? All of them we think would be appropriate, and I want to know if you would agree.

A All right.

Q A zero cost, a commercial paper rate, or the overall rate of return.

A I'm not sure. Let me give you a kind of a hedging answer. I would first, if I had to make that decision, try to determine the real nature of those funds and the real cost related thereto.

First question, they are truly equity funds, but that does -- would not necessarily lead me to a conclusion that it had a true equity cost. It would go back to more of an identification of the nature of the expenditure of the funds and how that burden was imposed, and does this replace those funds; and if there was some kind of mix of debt and equity capital, I might impose like a rate of return on them.

If I concluded there was no mix, that these came out of equity from the front side, and now in effect we're putting them back in equity, they're pure equity, and then I would recommend an equity return. But I'd have to look at it for a while to give you an answer as to what I might conclude.

Q Do you know which of the three would be more appropriate? I mean, do you have an opinion as to which of the three would be?

A Depends on how the funds traced out. I'll

give you an example of my suspicion. I suspect -- and this is guesswork because I haven't looked at any numbers -- but I suspect the costs themselves when incurred hit the bottom line and hit the equity account; hit net income, reduced net income, flowed into equity.

None of those costs were deferred, so that's a rational conclusion. If equity was depressed in that process, now equity is being reinstated by this recoverability, I suspect my conclusion would be that an equity return would apply.

Q Okay. Thank you. The company is asking to recover prior years' expenses. Wouldn't it be reasonable, since these are prior year expenses, to use a zero cost rate rather than to require the ratepayers to pay a return on the unamortized balance since recovery is provided through the amortization?

A Not if you're trying to provide cost recovery, because the cost of the company is the cost -- the moneys expended plus any time value, that's true cost. And if you're trying to recover true cost, then the answer is, no, time value should be considered.

Q If the Commission grants recovery of these litigation costs, what specific monthly or annual

accounting entry or entries would the company record to account for the amortization of the proposed regulatory asset? Do you know?

A I haven't tried to think it through. I could do so right now if you want me to try it.

Q Maybe as a late-filed exhibit could you provide us an example of what the journal entries would look like?

A Well, I don't want to -- I can -- would it be okay for me to work with the company to do that?

Q Sure.

A Because I don't want to put entries into their mouth.

Q Certainly?

A I'll be happy to file it, but I would want them to concur that that made sense in their case.

Q Certainly.

A Yes; yes, I can do it.

Q Okay. Let's go ahead and label that as Late-filed Exhibit No. 1 and --

A Now, what we're talking about are the entries that would occur at the recorded -- let's do it this way. I'm going to add to my load some, and I know that's not the normal thing, but I'd rather have it complete.

Let's set up the initial entry, and that would touch on something like this deferred revenue account, if that's all right, and it may be. But let's set up the initial entry, if approved, and then the entry that would be recorded as recovery occurred; and that's a slight expansion of what we were talking about, but I'd feel better to have them both in the picture.

Q That would be great. Thank you.

Now, the company expensed these litigation costs in the past for both book and tax purposes, right?

A I think that's correct. I'm sure it is. I don't know that as a fact, but I would make a bet on it.

Q Do you know whether the amounts expensed for book purposes were the same as the amounts expensed for tax purposes in each year?

A I don't know, but my guess is that it would be; but I don't know.

Q Can we get another late-filed exhibit, please, showing the book amount expensed each year, the tax amount expensed each year, the current balance of deferred taxes, if any. And, again, feel free --

A There would be no deferred taxes. I can tell you that. Because they would have incurred an expense and claimed it for tax purposes. So deferred taxes -- if they have had deferred taxes, I'll be the first to ask why. So the answer is no on that one.

Q Okay.

A The other questions as to the annual cost expensed and recorded for tax purposes --

MR. GATLIN: And what you're asking for is how the Commission did it? I mean, how the company did it?

MS. GERVASI: Correct.

WITNESS McCLELLAN: Yeah, how they recorded it.

MR. GATLIN: And what?

MS. GERVASI: The book amount expensed each year and the tax amount expensed each year.

MR. GATLIN: And the way he'll furnish that information is to check with the company and do that.

WITNESS McCLELLAN: Yes, that's the one I'd have to get from them.

MS. GERVASI: Certainly.

WITNESS McCLELLAN: The other one, I could create some interest for you, but I'd rather do it in conjunction with them. This one I couldn't do without

their directly providing information.

MS. GERVASI: Very good. Thank you, sir.

WITNESS McCLELLAN: By the way, I will do this, too, because I wouldn't want to be -- I would want to be safe on it.

I will include in the request an identification of any deferred taxes which may have been created. I'll make a bet that none are there, but I think it would be good to verify that.

MS. GERVASI: Thank you. If there are any, we'd like to know about it.

WITNESS McCLELLAN: All right. I'll throw that one as a freebie, because I feel pretty safe on that one.

MS. GERVASI: Thank you.

Q (By Ms. Gervasi) What would be the tax impact if there were to be a rate of return on the regulatory asset? Do you know?

A It would be fully taxable. You would have to gross it up for tax purposes. That would be no matter -- yeah. No matter how you measured it, whatever was allowed would be fully taxable.

Q Going back to the company's requested rate of return on the proposed regulatory asset. On Page 9 of your testimony, Lines 15 -- starting at Line 15,

you state that recovery of the prior period costs is being requested for only the direct portion of the costs; right?

A Right.

Q No request is being made for recovery of the related prior years' carrying costs.

A Correct.

Q Now, we sent out some interrogatories to the company. I don't know if you've seen any of those, but in Interrogatory No. 3 -- and we have a copy of that, too, if you'd like to see it.

A Okay.

Q In Interrogatory 3 Staff asked why the utility did not request recovery of its carrying costs in this proceeding, and the company responded -- I believe it was Mr. Murphy on behalf of the company -- that Florida Cities deemed recovery of the legal fees and potential to recover a rate of return on the unamortized regulatory asset in future rate cases to be sufficient.

Is it the company's intent to forego now only the prior years' carrying costs?

A Yes. That's what the proposal is all about, yes. Yes, because the carrying costs in the early years were absorbed, and one of the ways to measure

full cost recovery would have been to accumulate those, compound them with interest, whatever the right rate is, and get a full cost to date. They didn't do that.

They took the hard cost, the dollars spent, out-of-pocket dollars, and rolled forward with that, and that's what this is all about. That's one of the points I challenged them on also is to why didn't they try to recover the entire cost, and this was the response they gave me.

Q Is it the Company's intent, then, to request future carrying costs in its individual divisions' rate proceedings as they're filed in the future? Do you know?

A That's my understanding, yes.

Q Since we're addressing all of the issues surrounding these litigation costs in this current proceeding as well as considering rate case costs for this proceeding, do you believe it's prudent to put off this issue to future rate cases?

A Prudent is a tough word. Do I believe it's necessary? No. I think we could bill those carrying costs right into the assessed -- to the surcharge and get them without a rate case.

Is it prudent to treat them as a rate base

asset and get them through rate case recovery? Yeah, that's an alternative way to do it. It's not as sure. It doesn't lock it in in the same way, but it -- it's certainly a way that many costs are recovered. That's the way your entire investment is recovered, through future cases.

You put a -- I'll give you an example, a parallel. You can put a huge plant in service today fully operational, but it does not push your rate of return below an acceptable level, so you live with that shortfall. If it doesn't build back up, you file a rate case. You don't get a nickel of carrying charges until you file a rate case. It's just the way regulation works, and that's what they chose to do.

Q Do you think it would have been preferable for the company to have requested all of that up front now, all of the carrying costs?

A It would have created more dollars, yes. Preferable would have to be evaluated in terms of everything else.

Would it have provided a more direct cost recovery? Yes, it would have.

MR. McLEAN: Be careful, Rosanne. I almost talked Mr. Murphy into doing that, you know.

(Laughter)

WITNESS McCLELLAN: I tried to. He wouldn't listen to me either. (Laughter)

Q (By Ms. Gervasi) Now, the request for the legal fees is in and of itself a controversial issue, wouldn't you say?

A It has -- it does create controversy. I don't really see the -- I don't see it as being controversial. If it's a cost of doing business and a prudent and legitimately incurred cost, then to me the controversy is over. Now, if it doesn't meet those two standards, yeah, you've got a real controversy.

Q Well, wouldn't you presume that if the prospective carrying cost issue is left out of this proceeding and included in future proceedings, that in those future cases the cost of litigating any or all of these EPA litigation costs again would ultimately increase future rate case costs?

A I'm not sure I understood the question. Let me see -- let me rephrase it. I think I heard two questions. I think I heard, question one: If it's not addressed now, included in the rate base in some way, won't it create future questions. And the answer is I don't know. I think the Commission should -- and let's assume the Commission approves the cost recovery.

I think in the process they would inherently and should directly approve the rate case rate base inclusion or it wouldn't make sense; say, yeah, you can have the dollars back, but we're not going to put it in the rate base. You could do it, but I would presume that they would take care of both issues right now.

If you had future situations like this where future lawsuits came up, then you've got a brand new situation. So whether that would affect current -- or future costs or not depends on how they were handled.

Would the Commission's action in this case affect future cost in any way? Yes. Starting the end of this year when the company files an earnings report, it could affect the cost, because it would have a rate base component in that did not exist last year. It would affect the reported rate of return in a way that it wasn't affected last year.

Could that have an impact on rates? Yes, it could have.

Q Don't you think it would be more costly to put off these carrying costs until later because, in effect, you'd have to be relitigating the EPA litigation costs all over again when we're doing it right now?

A No. In fact, it would be cheaper, if you're talking about the customer. Here's the reason: Given the company's proposition, the Commission, let's presume, approves basically what the company is asking for and gives the company a cost recovery through a surcharge of 3.6, or whatever, million dollars, recognizes that's this is a legitimate cost to be recovered and is a regulatory asset that should be in rate base, ball game is over for this case.

If the company files a case in the next year or year after next, five years from now, the decision has been made; this is part of the case.

Could somebody come in then and challenge both the rate base amount and the ongoing surcharge at that point? Of course they could. You can't -- I don't know how you stop that. But if the Commission has already resolved the issue now, I don't know how it -- necessarily becomes a future cost.

The issue should be resolved in this case fully, one way or the other, so we're not waiting for some event to resolve the issue. I think the Commission has all of the facts before it. I think the Commission would be wise to make a full decision covering all issues right now.

Q So you want --

A Now, that issue, by the way, includes recognition of a legitimate asset. We don't have a rate case, so we don't have a rate base to put it in today, but if they recognize it as a legitimate rate base investment, the issue is settled.

Q Are you saying that you think the Commission ought to determine now whether it will approve in a future case what those carrying costs will be and whether they should be --

A No, no, not what the cost should be, but the fact that it is entitled to recover the carrying cost associated with it. What they are? We don't know what the carrying cost on anything is going to be a year from now, because it's a mix, and it will change on everything. No, they can't determine that.

They can determine now -- and I think they should and I think they probably will -- but they should determine whether or not this is a legitimate investment for a rate base treatment.

Now, what the cost of that rate of return is is something that would have to be determined whenever you have a rate case.

MS. GERVASI: Thank you. That's all the questions that we have for you, Mr. McClellan. Thank you. We'll turn it over to Mr. McLean.

EXAMINATION

BY MR. McLEAN:

Q Mr. McClellan, I'm Harold McLean, Office of Public Counsel. I represent the citizens of the state of Florida.

You told Ms. -- as I understand it, the company is willing to forego the carrying charges from the conclusion of this case, whenever that maybe. It may be even before; until such time as there's a rate base out there somewhere.

A Well, foregoing the sense of generating specific recovery --

Q Yes.

A -- yes.

Q Agreed, and I stand corrected. Now, you told Ms. Gervasi that you challenged Mr. Murphy on that point. You challenged the company in general --

A Yes, I questioned why do you want to do this, why not try to recover the full costs through the surcharge.

Q What was their answer?

A They preferred to do it the other way, and so I let it go. It's their money. If they want --

Q At the point that you challenged them on that issue, was there any discussion about their

current earnings posture at that point?

A I don't think so. I don't recall any.

Q Now -- and I appreciate the correction you just made, and I want to ask you about that, because it seemed to me that you said that during the time presumably from the conclusion of this case until that rate case, that that asset -- there will be something akin to a regulatory asset carried on the books of the company although perhaps below the line; is that right?

A That's correct. Let me qualify that last "perhaps". There will be a regulatory asset recorded as an asset on the books which presumably will be permitted or recognized as a legitimate rate base addition.

Q I see. And there won't be any revenue component associated with that until the rate case comes on.

A Well, not unless it avoids a rate case by avoiding an overearnings. The answer, the simple answer, is no, there will not be.

Q It could also avoid an under -- an overearnings situation. In other words, for surveillance purposes that particular asset will be part of rate base.

A Absolutely.

Q And --

A And it could avoid an overearnings rate reduction; that's correct.

Q But it probably really won't do either one if the company is in the mid-range and so forth --

A If they're in the mid-range, it would probably have zero effect.

Q Okay. You mentioned that you've testified numerous times in Florida, and I'd like to know if you have testified in a situation analogous to this; in other words, where litigation expenses incurred in resisting a regulatory agency have been recovered.

A I don't recall. I may have. I just don't recall. I've testified on recovery of costs in a given period of an excessive nature from various causes, and I don't recall if litigation was one of those causes in those issues or not -- cases or not.

Q Nothing to do with an NRC, nuclear regulatory commission, or anything like that in this jurisdiction?

A Not in this jurisdiction, no.

Q In any jurisdiction?

A I was trying to recall. I did some work in North Carolina on an NRC issue, but it dealt with some

legislation that was being handled. I don't think it dealt with cost recovery except in the -- in a conceptual sense as opposed to actual dollars --

Q Your posture in this case is consultant to Florida Cities Water Company, right?

A That's correct.

Q And you don't do recurring -- for example Ms. Gervasi asked you for some late-filed exhibits that seemed to me like they would be generated from the company. You don't on a routine basis advise this company with respect to accounting issues, do you?

A That's correct.

Q So you have come into this case to testify about these issues?

A That's correct.

Q And I heard you say that -- something with which I totally agree -- that this case -- if this case determines that these expenses were a cost of providing water and sewer service to the public and were prudently incurred --

A Yes.

Q -- that they should be allowed.

A Yes, that's kind of the general test of recoverable costs.

Q Does your testimony reach to both of those

points?

A I do not expressly support them as being prudent or as being necessary. My reading is yes, but I haven't dealt with it as a point. My reading is assuming those conditions, and cost recovery is appropriate and this is an appropriate fashion in which to do so.

Q Okay. I want to get to that, because I want to make sure I'm asking the right questions to the right witness.

You say to the Commission that this, in fact, is an expense incurred in the production of water and sewer service to the public.

A Oh absolutely. I have no question about that. It's a cost incurred by this company in conducting its business, which is providing water and sewer service.

Q And you take it from other witnesses that it was -- the magnitude and all was prudent?

A That's correct, from -- yes, that's correct.

Q The basic theory of the case, if I understand, is that the company was faced with penalties from the Environmental Protection Agency and then from the Department of Justice which were of such magnitude as to seriously threaten -- you fill in the

blank, if you will, please.

A Their financial health, their financial stability; to impose a severe financial burden upon them that would lead to some consequences less than desirable.

Q Okay. Now, that's where my interest comes in, because I represent all those folks. Are you a witness who can quantify those less than desirable results?

A No.

Q You testified earlier in the deposition that you believed, I think, that there would be some deterioration of service.

A Well, there has to be. You can't strip away a company's financial base and let -- and it will operate the same way. That would be the strangest economic development in history.

Q And maybe even to the point of bankruptcy.

A Quite possible.

Q And I hate to be repetitive, but I want to know how it is that you know those things. Just because of your experience because when a company is financially strapped it can't continue to produce its product, or because you've been down that road?

A I've been down the road personally, yes. I

have seen other companies under the same pressures.

I know, for example, to put it on a personal level, that if someone brought a suit against me today for $5 million and I saw any hope of their winning -- well, then let's say they won that suit -- do I know what that would do to me? Yes, I know exactly what that would do to me. It would financially ruin me. Would it bankrupt me? Yes, it would bankrupt me. I can tell you that without a question.

Now, would that have -- would $100 million have bankrupted that water company, I don't know, but I'd make a heavy bet on it. Would 30 million have done it? I would probably bet on that. Would 5 million have done it? Probably not.

Q In that scenario where you were bankrupt, would accounting services still be available to the general public from other sources?

A Unless I had a monopoly on them, yes. Now, if I had an area that was mine and no one could touch it, the answer would be no. If Arizona is my territory and it was illegal for you to come into it and I couldn't provide the service, they'd be hurting.

Q Well, let's go through that bankrupt scenario to see if that's true. I'd like to know your view of -- well, I want to follow that bankruptcy.

What would happen in that process? As the company became more and more financially strapped, are you saying that the level of service would deteriorate along that path?

A It has to. If you cannot do the normal things in running your business, the normal repairs, the normal upkeep, the normal services, the normal dealing with customers because you have no money to send anybody out to do it, and you tell me the service is going to stay the same, I'm going to go look for answers from someone else, because I'm not going to believe a word you're saying. It has to happen.

Now, if you're asking me to quantify the degree to which it happens at a given level of penalty, I can't do that. All I can tell you is that it will have an effect. I know that from everything I know about business.

Q Okay. This is a -- you would agree with me, wouldn't you, that this is a pervasively regulated industry, among the most?

A Oh, I'll agree with that, yes.

Q Do you know any device by which -- and you'd agree with me that those regulatory agencies, EPA, Florida Department of Environmental Regulation -- did I get that right -- Environmental Protection -- and

the Public Service Commission each demand some level of service from the utilites --

A They --

Q -- all services --

A They can demand it, but they can't get it if it's not there. They have demanded it in a lot of cases, more than is given. When I was on the Commission I saw the Commission demanded -- demanding greater levels of service. Demanding doesn't get the job done. It's a nice concept, but it doesn't get a nickel's worth of water out to somebody.

Q So in your view, then, the EPA would simply stand back and watch this utility -- watch service decline -- well, would you accept that it is likely as service declines that the utility may be more of a pollution source than it otherwise would be?

A I would assume it would be, yes.

Q Are you suggesting that the EPA would simply ignore that or would --

A No. No. No, I'm not. I'm saying they would demand the company do better.

Q Okay. Isn't it rational to assume --

A And for whatever good that is --

Q Well, it might do some good because if the company --

A Right.

Q -- doesn't do that, they might get a $104 million judgment against them. They might --

A They might, and things might get worse.

Q Now --

A The EPA would have done nothing but made a bad situation worse.

Q Good.

A We're talking in hypotheticals, by the way.

Q Obviously not --

A This is so vague. All I can tell you as an absolute is that financial penalties, burdens on any system, water or otherwise, creates problems for the system in its basic service pattern.

Q Sure. And you're right, it's hypothetical. I just want to make sure the people I represent have a dog in the hunt, and I want you to tell me how that's the case.

A Okay.

Q Because isn't it reasonable if this utility went into bankruptcy that creditors would demand, among other things, that this utility be maintained as a going concern?

A Oh, certainly they would demand it. Now, again, what would happen I don't know. You're talking

about what people demand. Demanding and doing it are two different things.

Q Well, is it likely that they'd go out and pick up pipes, or is it likely that a bankruptcy trustee or a bankruptcy court would appoint a receiver?

A I would expect a receivership, yes.

Q And wouldn't that receiver be accountable to all those regulatory agencies?

A Yes.

Q Would that receiver have to generate rates that -- would that receiver have to charge rates that generate a return on the equity component on the present capital structure of the company?

A That receiver would have to generate revenues, either through rates or through accessing the markets, to run the business. That is where the rub comes in.

To run the business, if you're going to do anything, you have to access funds. You're either going to charge the customers up front to get the funds, or you're going out into the capital markets to get the funds.

If you are a receiver in a bankrupt business, the capital market is not going to be

beating your door down to loan you money on the best terms. You're going to pay more for it.

You're not going to pay a nickel more for it; your customers are going to pay for it for the next hundred years. There is a financial penalty in having financial pressure that cuts off your access to funds. That's just an economic financial truism. How much? That's another question. How long? I don't know. A long time.

Does it have an effect? Absolutely it has an effect. My credit rating affects my ability to borrow money at a good rate.

Q Sure.

A I may can borrow all the money in the world at 18%.

Q And all of these things inevitably, in your mind, result in a deterioration or perhaps even a curtailment of service?

A Oh, absolutely. I have no question about that.

Q Okay. So --

A If we're talking about $100 million or $30 million on a company this size or $5 million on me, I don't have any question about it.

Q I want to make sure we're talking about the

same thing. The EPA comes in within a $104 million fine, sues out the lien; somebody takes possession of the utility, and the water shuts off?

A I didn't say the water shuts off.

Q Well, I'm trying to find out if that's the case.

A I don't know. If it shuts off, I'm sure it will come back. The question is at what cost, at what level of service. I think the service would come back, but now you have to worry about the quality of the service, the level of pollutants, the rates to be charged, the borrowing rates and all of the things attendant with running an efficient business.

The efficiency has been grossly damaged by the lawsuit, by the bankruptcy. Don't point to me a company -- and I'm being a little facetious here -- that's in bankruptcy as an example of an efficient company. I just won't buy it.

Q Chrysler maybe?

A I beg your pardon?

Q Chrysler Perhaps. Was Chrysler --

A They were not bankrupt.

Q Were they close?

A Yes, but they weren't efficient either. They are not, but they changed it.

Q Were they able to price their misfortunes out the door, or did they have to participate in a free marketplace?

A They were in a competitive market. They had to deal with that competitive market.

Q Isn't this agency -- doesn't it exist to operate as a surrogate for that very marketplace?

A No. It sets prices. That term is used quite often. It doesn't impute, introduce, bring about competitive conditions. It simply sets prices that a competitive market would set if it were in place.

But as a surrogate -- you've got to be careful with that word. I've been -- I've resented it for years because it overplays the role of the competitor, the regulator. The regulator sets prices. It acts in the place of a competitor -- of a competitive market, and in that sense it replaces, but, it does not bring all of the competitive conditions with it.

Q I would certainly agree with that. I was hoping that it might.

A Well, we're prime in doing this in some other areas in the industry, I suppose, or in the electric industry at least.

Q Now, there's quite a bit of -- you testified at some length about apportionment in -- and trip me up here if I state it incorrectly -- about the apportionment of these expenses which you believe should be paid -- maybe perhaps I should say that the company believes, because I think you didn't quite agree with them -- but apportionment of the expenses for which the stockholders should be liable as opposed to the ratepayers. And again I'm not sure I understand the apportionment.

It sounds to me -- and I'm a layperson when it comes to accounting -- like you're putting the fine eventually paid over the amount demanded, multiplying that, the expenses, and then apportioning them to the shareholders' share and the customers' share; is that roughly correct?

A I think you described it correctly, yes --

Q And I think there was some adjustment to the denominator, because if I remember correctly, you described this to Ms. Gervasi, but you backed away from the $5 million. I think you said you disagreed with that. Do you understand what I'm asking?

A I think that was the alternative test they made where they reduced the $500,000 number by the $309,000 penalty and got $190,000 and used that to

reduce it and so on. It's a mechanical thing.

To me, I did not see it as a needed adjustment at all. The company wanted to share in this thing and they chose that way to do it, and I said, fine, it's your money, share it.

Q And my concern isn't too much on the fine-tuning, but basically the fine received -- the fine achieved, perhaps I should say -- over the fine demanded, and that led to an apportionment.

A And that kind -- I think that's a reasonable description.

Q Sure. And you testified to Ms. Gervasi, I think, that you didn't consider any other method.

A No. In fact, I didn't consider those as --

Q That's --

A I certainly didn't look for an additional method of something I didn't think was needed to start with.

Q Right; because you essentially would say that since it's cost of doing business, it does not matter that some of that fine might be somehow tied -- I'm sorry -- some of the expense be tied somehow to the fine and, thus, the shareholders' responsibility.

A That was my view. It's the cost of doing business.

Q With respect to your allocation method, that is allocating between shareholders on the one hand and ratepayers on the other, did you -- I'd like you to criticize a possible methodology, even though even the first one was not yours; but let me get your criticism on it.

Suppose the Commission were to compare -- instead of using the fraction that we talked about, suppose they were to use a fraction which represents -- let's see if I can get the numerator and the denominator right -- the number of violations alleged over the number of violations sustained. Would that make sense?

A No. Even if the principle was good, that wouldn't make any sense, because one violation might be worth $2 and one might be worth $20,000 and you give them the same weighting. If you would weigh them --

Q Yeah.

A It might make some sense, yeah.

Q Made them -- weight them -- well, that would get right back to the original fraction, though, wouldn't it?

A Oh, I don't know. I've never even heard your suggestion. But I'm just telling you if you took

numbers of violations, I wouldn't buy that even if I was all for sharing the cost with somebody, because to me that would grossly distort it one way or the other. I don't even know which way.

Q Why is that so?

A I just get -- told you. One violation might be a $2 violation, one might be a $2 million violation and you split it evenly because you've got one and one. That doesn't make any sense.

Q Well, assuming that you weight it.

A Well that would make more sense.

Q That would make more sense.

A Yes.

Q Weight it according to the magnitude of the fine associated --

A That would make more sense. I'm not saying it would make good sense, but it would make more sense.

Q More sense than --

A Than one and one, yes.

Q Not more sense that this methodology, right?

A No. Actually, these methods are fine if you want to do something like that. My challenge was these are cost incurred; why do you want to share them at all.

Q Well, let me ask a question about that. And we went down that bankruptcy scenario. I don't quite want to do that again. But in that scenario shareholders' equity would have been essentially eliminated, I think you said.

A Oh, yes, certainly at $100 million, probably at any of those levels, but --

Q It's like a scale that goes --

A In essence it would have been --

Q And this --

A -- it would have been severely crippled, if not killed.

Q And this litigation, at least -- if not completely -- but at least protected the shareholders' interests in that equity, didn't it?

A Oh, absolutely.

Q Is that a valuable service?

A Absolutely. That's part of running a business.

Q So what value did the stockholders give up to receive that value, if any?

A The same value they give up to pay someone to go out and do the job. If I pay you $1,000 a month to go keep the water going, what value does the shareholder get out of that? Gets an ongoing business

value out of it.

That's why, do I recover that $1,000 in my rates? Absolutely. That's the cost of doing business. I see this as no different. It's a cost of doing business. How does a shareholder benefit? The shareholder benefits by having a continuing financially viable business. It's that simple.

Q Had this litigation not -- had they not ensued -- I'm sorry -- had they not incurred these expenses, two things would have happened, if I hear your testimony correctly. Customers would have suffered.

A Both parties would have suffered, absolutely.

Q Yes, I heard you say that. But only the customers will pay for the litigation expenses, correct, under the --

A Yes, only the customers pay for all other costs of doing business, or at least in theory.

Q So, again, it turns on the issue of whether it is a legitimate cost of doing business --

A Oh, I have no problem with that obligation.

Q And it must necessarily follow that you believe that protecting the equity of a business is a necessary part of providing water and sewer service to

these customers.

A Protecting the financial viability of the business is. If that means protecting the equity, yes. If that means protecting the debt, yes. If that means doing some repair job, yes.

Q Let me ask you to take a real stretch on a hypothetical and assume that there are ready and willing persons, entities, individuals, whatever, who are willing to take up this business in the aftermath of a bankruptcy.

A Okay. A good Samaritan, I think you're about to describe. Go ahead.

Q Well, actually, trustee, receiver --

A Someone who is paid to do a job; all right.

Q There we go, yes. I think I've lost the train of my thought. Well, Let me ask you this, because --

A The question is, could they do it. The answer is, yes, they would do it in some form or fashion. Then the ultimate answer is, what would it do to the price of the good and the quality of the service. And I would have to conclude that if you're in a crippled situation, one or both are going to suffer.

If it doesn't, then our whole business

scheme across the spectrum is totally off balance. We need to be working in crisis, not -- we'd need to be working serving flat on our backs, not standing up strong, handing out service.

It doesn't make sense for me to conclude that to cripple a business financially will lead to a continued efficient well-run business. If that happens, we are really off base in our business approaches.

Q So if the Public Service Commission had a string of cases in which they decided that a financially strapped utility which is taken over by a financially healthy utility is better off, would you disagree with that?

A Let me rephrase and make sure I understood it. If there's a financially strapped utility taken over by a financially healthy utility, is a strapped operation better off?

Q Yes.

A Sure should be.

Q Sure. So what we do know, or you seem to say, is there will necessarily be a period of the reduction of quality of service. You're certain of that?

A I don't know how you would avoid it. If you

go into bankruptcy and you continue the same service at the same price, you're a magician, you're not a business --

Q When you say "your," are you presuming somehow that the same equity holders will be running the --

A I don't really care who runs it. Someone is going to incur cost of doing it. The current owners may get blasted, may get beat to death financially and walk away all bruised up; but the next time you go out to get an investor, he's going to look at that beat-up, bruised part of his over there with bandages all over it and says, I don't want any of that. I'm going to charge you 18% rather than 8% to avoid a beating like that. That's the nature of the lending business.

Q Now --

A If you could do it without -- if you could run a business without excessing funds, what difference does it make.

Q People who walk away bandaged and so forth are out of the new scenario, are they not?

A Absolutely not. Do you think investors are absolutely blind, they don't look at history?

Q No --

A Investors look at -- hard at history.

Q I think --

A They look hard --

Q I think you misunderstood --

A -- at financial --

Q Pardon me, sir. I think you misunderstood my question. You told me before that the stockholders' equity would be wiped out in a bankruptcy scenario.

A I presume so, yes.

Q Now, those stockholders don't have any continuing interest in that --

A They're over there lying on the stretchers, blood all over them.

Q They're gone. Might be some new guys running the company.

A Yeah.

Q One of those --

A If they can't do it without financial access -- or access to financial funds, they may be all right, but if they come to me looking for money, I'm going to look at that guy on the couch over there on the --

Q See what --

A -- bed over there, there's blood all over

him, and decide I don't want any of that, guys, goodbye.

Q Will you look to see maybe they're running a city on the side?

MR. GATLIN: Running the what?

MR. McLEAN: Running a city or a county on the side.

Q One --

A If they have enough money to back me up so I don't suffer any risk and I'd lose -- you know, I don't really care then.

Q So what you're saying is --

A If the State of Florida took over that operation, yeah. I'd loan them money on the State of Florida, absolutely.

Q Do you know that that's not a likely scenario?

A I don't know whether it is or --

Q Do you know --

A -- not. It sounds pretty wild, but --

Q Basically when we get to the point of bankruptcy, you don't know what happens after that?

A I have no idea. I'm not even sure there would be bankruptcy. All I know is there would be financial pressure, which may lead to bankruptcy. I

know financial pressure brings cost with it. I know that. How much I can't --

Q And the way --

A -- tell you.

Q The way you reach people like the water customers who had no part of this pollution, the way you reach people like that, the way your theory reaches to their pocketbooks is to say that service would deteriorate.

A No, absolutely not. You led into that. I'm saying I reach it by the very simple, regulatory -- established regulatory principle that if I am regulated, my prices are set to recover my cost of service, and I incur a cost of maintaining my business, and I have to incur it as prudent -- I don't do it badly, or don't do it improperly, or don't hire my brother-in-law to do it for my when he can't even spell his name, I'm entitled to recover my cost.

These are some of those costs. If I'm not entitled to recover my cost of defending my business from disaster, why should I be entitled to recover the cost of a truck I'm driving out to provide service and the man I'm putting in it?

If both maintain my business, both are cost of service, and under the regulatory principle, I'm

entitled to recover cost of service. I really do not understand why I have to carve up the pieces of doing cost of service, and because one is a lawsuit and one is a truck driver, I can't recover cost of service. I just violated the rule I set up.

Q Isn't the fine a cost of service?

A I'm sorry?

Q I'm sorry. Did you understand my question?

A No, I didn't.

Q Is the fine not a cost of service? The penalty which they paid in this case, three --

A Yes, I think that should be recovered, also. It probably isn't, but that's probably -- it's -- I'll give you a parallel to that.

There are some types of expenditures in utilities traditionally I'm not allowed to recover. And some -- for example, if an electric belongs to the EEI, some of the costs are disallowed. I disagree with that, but that's the regulatory posture, and I live with it.

Q You disagree with the charitable -- disallowance of charitable contributions?

A Not charitable, per se. Those don't bother me too much. I'm talking about the cost of running a business where you have to belong to organizations to

keep your finger in the economic pot.

There are a lot of things that regulators do I don't agree with but I accept. But, now, when we're talking about recovering cost of doing business that encompassed defending my company, if the regulator tells me I can't defend my company, then I will quit fighting lawsuits, and my customers are going to be -- I'm going to hurt. My customers are going to hurt. I don't know who is served by that.

Q But it is your testimony that you would recommend to the Commission that, if requested, that they permit a recovery of the fine as well the penalty?

A Probably. This is a case where the Commission's rationale would be probably -- and I'm not sure of a good argument against it -- that that's -- something like that, the penalty reflects a bad management move or bad management action, and we're going to stick the ratepayer -- or the equity holders with that; and, you know, my argument gets a little weak there.

So recognize that it -- it's a fairly weak argument. It's one I might even back off on.

Q If the company were found to have engaged in more than 1,300 violations of the Clean Water Act, do

you regard that as a prudent action taken to --

A You have to define the -- I don't know. You might be talking about 1,300 drops of water. I don't know. I don't know.

Q Do you know whether the court defined it?

A All I know is that the court came up with a finding that there were some things that should have been done differently, and there was a $300,000 fine in the face of the $30 million claim, and -- I don't know. It seemed to be a pretty big difference --

Q Was it a $30 million claim?

A That was -- 32 million was the last number I saw.

Q Okay. Do you know --

A I'm sorry. 32 was the first one. It was 104 was the --

Q 104. Do you recall whether the Government put on any testimony as to how much the company could afford?

A No, but the Court said something about it in the decision. I remember reading something about that. As a matter of fact, I think I had something in my testimony about that.

Q Did you testify in the federal trial?

A No.

Q Is there any aspect of the -- first of all, I guess I should ask you this question to which there is an obvious answer.

Do you have familiarity with the NARUC system of accounts?

A Yes.

Q Did you write them? (Laughter)

A I don't think so.

Q Is there anything in the NARUC system of accounts that suggests to you whether this is a cost of doing business?

Let me ask the question differently. Do you intend to rely upon the NARUC system of accounts as support for the position that you've taken in the case --

A Oh, no.

Q -- with respect to --

A That's an accounting system --

Q It really doesn't tell us how they --

A It doesn't tell -- for example --

(Court reporter asked for clarification.)

A To repeat the answer to the basic question is I'm not relying on the uniform system for my conclusion in this case. The uniform system may or may not support it. I'm sure it would, but that's not

the reason that I think it's legitimate.

Q With respect to the surcharge, the revenue generated by surcharge, do you regard -- are those likely -- is that revenue, if I've stated it correctly, likely taxable?

A I would assume so. I don't know of any reason that it would not be.

Q You said that that, the regulatory asset, if and when it's booked, should be booked as pure equity, I think.

A It will end up in the equity account, and I would just run it through equity. Now, would I carve out equity and call it something like a --

Q You --

A -- deferred revenue, I don't see that as a problem. To me, it's kind of -- it's a way to maintain identification of something that I don't know of any real reason to do, but I don't see anything wrong with it.

Q Is it at all possible that the Internal Revenue Service might regard the surcharge as recovery of that capital and, thus, not taxable?

A I doubt it, but I can't speak with authority on it. I'll tell you one reason that would reinforce what I just said. I presume -- I think we're going to

find this to be the case -- that when the legal costs were expended, they were deducted for tax purposes, and now that they're being recovered, I am quite sure that the IRS would want them taxed for tax purposes.

Regardless of what kind of conceptual support you might come up with that these aren't really revenues, they're really something else, you'd have a hard time with that one.

Q I agree. So were it a sort of standard revenue component of a rate case, it would have to be grossed up for taxes, right? Or it should be.

A Probably not.

Q Why so?

A Because of the tax benefits that came through with the recovery -- with the expenditure of the cost. I think if we were doing this in a rate case, we would have to take a close look at the tax implications to these revenues, and probably -- now, again, this is the first time I've looked at this, so I'm able to change my mind -- but my immediate reaction is that if we were doing this in a case as of right now putting these revenues into the case in some form or fashion, that we would have to exclude these revenues from the tax gross-up application because we should not gross these up, because we've already

gotten tax advantages out of them on the company side.

We don't want to now gross up and avoid the tax penalty, because that would be inappropriate. So I think we would have to do this very carefully in a rate case. It a mechanic to be done, but we would have to give it some kind of special treatment.

Q Let's think -- for the moment accept that it would need to be grossed -- I understand your answer and I seem to concur with it -- but assume for just a moment for the purposes of this question that it would need to be grossed up.

Is there any component of this case that asks for any portion of the gross-up which is foregone until the next rate case?

A I think the answer is no. I'm not sure I understand your question, but I think the answer has to be no.

Q In fact, I think, as we've discussed before, this case does not seek any recovery of the carrying charges between the conclusion of this case and the next rate case, whenever that may be.

A Right. Now -- right. And I will add this to this situation. The carrying charges will be taxable. They should be grossed up, because we're not now taking -- we're not offsetting some previous

deductible thing. This is a new revenue on the carrying charge side because it's a new cost.

Q There's nothing in your -- I was distressed when I saw that said that -- I believe you said in your testimony that the company was faced with the demand for $104 million.

A Yes.

Q You would agree with me that that is a maximum worst case or best case -- depending on whether you work for the DOJ or the company -- that is a maximum which they face. The fact is that they probably faced a maximum fine of somewhere in the neighborhood of $7 million maximum. Is that about right?

A I have no idea about the 7 million. From what I've seen, 104 is the maximum, and that's the most it was asked, and I can't believe the court would have given someone more than that in this kind of --

Q Nothing in this case, however, is directly geared to that 104; it's more or less geared to the 5 million in terms of demands, right?

A No. As I understand this case, it's all geared to having fought off the claims and incurring cost and recovering those costs.

Q I was more or less having reference to that

division of responsibility that we discussed before. It's 309 -- .309 million over 5 million.

A Well, that's not my creation, and while it's -- I can accept it, I really don't think it's necessary.

Q Your fraction would have been $309 different on the numerator -- $309,000 --

A Well, my --

Q Essentially --

(Simultaneous conversation.)

A No. My position --

Q -- go for the whole thing.

A No. My position -- that's the whole thing. My position would be you guys incurred 3.8 million costs in defending yourself; I think you're entitled to recover all of it.

Next question: How about the 309 of penalty? Well, I understand the Commission doesn't allow those things, so that's not a big number. My advice would have been probably, let's go with the 3.8 million, regardless of what I may think of the 309.

Q Have you testified in an actual federal bankruptcy proceeding?

A No.

Q Have you prepared a summary of your

testimony?

A No.

Q Did you hire Tom Voorhees or was that --

(Laughter)

A I hired Tom Voorhees. (Laughter)

MR. McLEAN: Thank you. That's all the questions I have.

MS. GERVASI: Mr. Gatlin?

MR. GATLIN: No questions, and we would prefer to read.

MS. GERVASI: Before we go off the record, let me just establish a deadline for the late-filed exhibits. Two weeks; is that enough time?

MR. GATLIN: Maybe we can go off the record.

MS. GERVASI: Sure.

(Discussion off the record.)

MS. GERVASI: Let's go back on the record very quickly to establish the deadline of May 29th for the two exhibits. That's two weeks from today.

(Deposition concluded at 2:40 p.m.)

Deposition of John McClellan

Florida Cities Water Company Rate Case

Docket No. 971663-WS

Page & Line	
10 , 20	Eliminate the word "an"
10 , 21	Change the phrase "of cost" to "of total costs"
16 , 14	Change the answer to: "Yes. The benefits to the shareholders of the avoided penalties appear to be greater than $236,842. Both the shareholders and the customers benefited from the Company's active defense against the complaint. I do not know which benefited the most, the shareholders or the customers."
17 , 11	Add the following at the end of the sentence: "and that is the real issue. Who benefited the most may be an interesting point, but it should not dictate the recoverability of costs prudently incurred in maintaining a financially healthy system."
20 , 15	Insert, at the beginning of the line, the phrase "by debiting a regulatory asset" and delete the same phrase at the end of the sentence.
21 , 11	Strike the word "and"
22 , 16	Change the first three sentences of the paragraph, through the middle of line 22, to: "I guess you could identify a portion of the credit balance in the earned surplus account as originating from deferred revenues. As these revenues are recovered, both the regulatory asset and the "deferred revenue" component of equity capital would be reduced. I do not know if such a separation of equity components would be necessary."
25 , 21	Strike the words "for the" and "of that"
25 , 24	Change "bill" to " build"
32 , 24	Change the word "interest" to " entries"
53 , 25	Change the word "not" to "now"
58 , 24	Change "cost" to "costs"
60 , 22	Change "obligation" to "observation"
63 , 19	Change "excessing" to "accessing"

COMMISSION STAFF'S FIRST SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

29. Did the EPA notify FCWC of any other reasons why Waterway Estates' (Waterway) 1986 NPDES permit application was denied other than stating that Waterway had no discharge wasteload allocation?

Response: (MA)

No, based on a review of Company records the no wasteload allocation was the only basis for the permit denial. As shown on Exhibit ___ MA-2 Page #2 of the Fact Sheet:

"3. BASIS FOR FINAL EFFLUENT LIMITS AND PERMIT CONDITIONS

The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in a forthcoming administrative order."

COMMISSION STAFF'S FIRST SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

32. Referring to interrogatory no. 31, above, did FCWC carry out any of these procedures to challenge either the July 22, 1986 tentative denial of Waterway's NPDES permit or the December 8, 1986 final denial of Waterway's NPDES permit?

Response: (MA)

No, FCWC did not.

COMMISSION STAFF'S FIRST SET OF PRODUCTION OF DOCUMENTS
TO FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

6. Please provide the workpapers supporting John McClellan's calculations of the carrying cost of the legal fees.

Response: (JM,MM)

See Attached.

RE: Docket No. 971663-WS
Petition of Florida Cities Water Company for limited proceeding to recover environmental litigation costs for North and South Ft. Myers Division in Lee County and Barefoot Bay Division in Brevard County.

Dear Ms. Gervasi:

At the deposition of John D. McClellan, you asked for Deposition Exhibits. Please find enclosed:

1. an exhibit showing the accounting for recovery of legal expenses; and

2. an exhibit showing the accounting for treatment of legal expenses as incurred.

Please let me know if you need further information.

Very truly yours,

B. Kenneth Gatlin

BKG/ldv
Enclosure

cc: Harold McLean, Esq.

Florida Cities Water Company
Accounting Treatment for Recovery of Legal Expenses
971663-WS

(1) Legal expenses approved by the Commission would be recorded as a debit to the Company's balance sheet "Regulatory Asset" NARUC account 186.3 and a credit to the Company's income statement "Other Income and Expense" NARUC account 421.

(2) Subsequently, the approved Surcharge is received over the recovery period (ten years) and is recorded as a credit to the Company's income statement "Other Revenue" NARUC accounts 474 (water) and 536 (wastewater).

(3) The Regulatory Asset would amortize annually in an amount equal to the Surcharge received for that year. The amortization would be reflected as a debit to the Company's income statement "Misc. Expense G&A " NARUC accounts 675 and 775 and a credit to the balance sheet Regulatory Asset.

(4) When all the legal expenses have been received through the Surcharge, presumably within ten years or less, the Regulatory Asset will be fully amortized and have a -0- balance on the Company's balance sheet. The collection of the Surcharge will also be discontinued.

(5) There is a tax effect to the above, "Deferred Taxes" NARUC account 283 will be credited for the tax effect of Other Income and Expense because taxes will not be paid until the Surcharge is collected. As the Surcharge is collected Deferred Taxes will be debited and Current Taxes Payable will be credited.

In the following ten year example, the Company recovers the legal expenses of $2,265,833 through the Surcharge. Taxes are paid based upon the collection of the Surcharge and not the initial recording of the Regulatory Asset. The receipt of the Surcharge is offset, above the line, so that the Company's operating income remains the same, however the Company recovers the legal expenses. The Regulatory Asset becomes a part of rate base and the Deferred Taxes a component of the Cost of Capital. If the Company has a rate case and if the Company is earning below its allowed rate of return, then the Regulatory Asset would be allowed as a component of rate base and the Deferred Taxes would figure into the calculation of the Cost of Capital.

Florida Cities Water Company
Accounting Treatment for Legal Expenses as Incurred
971663-WS

(1) Beginning in 1993 the Company began accruing legal fees, costs and ultimately the penalty as a credit to the Company's balance sheet "Misc. Accrued Liabilities" NARUC account 241 and a debit to the Company's income statement "Misc. Expenses" NARUC account 426. Misc. Expense is a Below The Line (BTL) expense.

(2) Subsequently, payments for legal fees, costs and ultimately the penalty were debited to Misc. Accrued Liabilities.

(3) There is a tax effect to the above. "Deferred Taxes" NARUC account 410.2 and "Income Taxes" NARUC account 409.2 were used to reflect the tax effect of the book and tax expense, respectively. These accounts are BTL income tax expense accounts. Deferred taxes, initially established in 1995, created a debit in the balance sheet deferred tax account because the amount deducted for tax expenses was less than the amount deducted for book expense. This deferral reversed out as payments were made. At December 31, 1997 there was a small balance left in this account.

(4) The following worksheet shows the amount of expense recorded for book purposes and tax purposes for each year. The worksheet also shows the balance in the deferred tax account (in this case a prepaid) at the end of each year. The book expense exceeds the tax expense because the penalty of $309,710 is not tax deductible and because there was more book expense accrued than has currently been expensed for tax purposes. This results in a small deferred (prepaid) tax balance at December 31, 1997.

Notes:

(a) Results are for the FCWC PSC divisions for the year ended 12/31/97.
(1) Surcharge is billed and collected and the Regulatory Asset is amortized over the same period, 10 years.
(2) If Surcharge is treated as an 'above the line '(ABV) item then the amortization is treated ABV.
(3) Regulatory Asset (the net legal expenses requested and allowed) are recorded as a one time income item.
The credit to income is tax effected. The tax effect is recorded as a deferred tax expenses, because the tax is paid only as the surcharge is received.

Florida Cities Water Company
Docket No._____
Rate Application for Recovery
of Legal Expenses
Exhibits____(ABA-1 thru ABA-2)
Dr. Abdul B. Ahmadi

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 971663-WS EXHIBIT NO. 4
COMPANY/ WITNESS: Ahmadi
DATE: 8-12-98

13274-97

FLORIDA CITIES WATER COMPANY

TESTIMONY OF DR. ABDUL B. AHMADI

Q. Please state your name and business address.

A. Dr. Abdul B. Ahmadi. My business is 2295 Victoria Avenue, Suite 364, Ft. Myers, Florida.

Q. Are you employed by the Florida Department of Environmental Protection (FDEP)?

A. Yes.

Q. What is your position with FDEP?

A. Program Administrator of Water Facilities

Q. What are your duties?

A. My duties include permitting, compliance, enforcement with regard to wastewater treatment facilities, industrial wastewater facilities, groundwater monitoring associated with those facilities, underground injection control facilities, and surface water discharges.

Q. Are you familiar with the history of permits pertaining to the Florida Cities Water Company's (FCWC) Waterway Estates wastewater treatment plant (Waterway) which was the subject of litigation brought in the U.S. District Court, Middle District of Florida, in October 1993, styled United States of American v. Florida Cities Water Company?

A. Yes.

Q. Did you give a deposition and testify at trial in that case?

A. Yes.

Q. Are Exhibits ____(ABA-1) and ____(ABA-2) a copy of the transcript of your deposition and testimony at trial respectively, in that litigation?

A. Yes.

Q. Have you reviewed the transcripts of your testimony of your deposition (Exhibit ___(ABA-1) and trial (Exhibit ____(ABA-2)?

A. Yes.

Q. Are there any changes or corrections you wish to make to these transcripts?

A. No. Except the middle initial as noted.

MR. McLEAN: The Citizens move the testimony of Hugh Larkin, Jr. into the record as though read, and that would include his appendix. Mr. Larkin has no exhibits.

CHAIRMAN JOHNSON: Okay. The testimony will be inserted as though read. Staff?

MS. GERVASI: Staff would like to identify as an exhibit the transcript of Mr. Larkin's deposition as well as late-filed Deposition Exhibit 1.

CHAIRMAN JOHNSON: It will be identified as Composite 16.

MS. GERVASI: Thank you.

(Exhibit 16 marked for identification.)

DIRECT TESTIMONY

OF

HUGH LARKIN, JR.

ON BEHALF OF THE CITIZENS OF FLORIDA

BEFORE THE

FLORIDA PUBLIC SERVICE COMMISSION

REGARDING THE RECOVERY OF LITIGATION COSTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Hugh Larkin, Jr. I am a Certified Public Accountant licensed in the states of Florida and Michigan and the senior partner in the firm of Larkin & Associates, Certified Public Accountants, with offices at 15728 Farmington Road, Livonia, Michigan 48154.

Q. HAVE YOU PREPARED AN APPENDIX WHICH DESCRIBES YOUR QUALIFICATIONS AND EXPERIENCE?

A. Yes. I have attached Appendix I which is a summary of my experience and qualifications.

Q. ON WHOSE BEHALF ARE YOU APPEARING?

A. Larkin & Associates was employed by The Florida Office of Public Counsel ("OPC") to provide testimony regarding the recovery of litigation costs from certain water and wastewater customers of the Florida Cities Water Company (FCWC) who are subject to the jurisdiction of the Florida Public Service Commission.

Summary of Recommendations and Conclusions

Q. WOULD YOU PLEASE SUMMARIZE THE RECOMMENDATIONS AND CONCLUSIONS YOU HAVE REACHED REGARDING THE RECOVERY OF LITIGATION COST FROM FLORIDA CITIES WATER COMPANY'S (FCWC) RATEPAYERS SUBJECT TO THE JURISDICTION OF THE FLORIDA PUBLIC SERVICE COMMISSION?

A. I am recommending that the Florida Public Service Commission not authorize the recovery of litigation costs from those ratepayers subject to its jurisdiction. I have reached this recommendation based on my conclusion that if the Commission were to authorize the recovery of these legal fees it would be retroactive ratemaking. Additionally, the litigation costs incurred primarily benefitted the stockholders and debtholders of FCWC. Also, to establish a precedent of this nature in the State of Florida would place ratepayers in a position of guaranteeing or being the payer of last resort for any and all litigation undertaken by regulated public utilities in the State of Florida.

Q. HOW WILL YOUR TESTIMONY BE ORGANIZED?

A. My testimony will be organized in the following headings:

a. Company's Proposal is Retroactive Ratemaking

b. Ratepayers Not Responsible for Fines, Penalties and Related Costs

c. Financial Integrity

d. Legal Expenses in this Instance are Atypical

e. Criminal Legal Fees

f. Inclusion of Unrecovered Legal Fees in Rate Base

g. Alternative Allocation of Legal Fees

Company's Proposal is Retroactive Ratemaking

Q. IS THERE ANY RATEMAKING BASIS FOR THE COMPANY TO REQUEST THE LEGAL FEES UNDER CONSIDERATION IN THIS CASE?

A. No, there is not. Clearly, what the Company is requesting is retroactive ratemaking. The Company did not and does not have an accounting order authorizing them to defer any of the expenses associated with the legal fees in question. In fact, the Company did not defer any of the legal expenses requested in this case. In each accounting year 1991 - 1997 the Company booked, "below the line" the legal fees according to Mr. Murphy's testimony. Thus, each year the Company recorded as expense the legal fees incurred. Since the Company has no accounting order allowing it to defer the expense and the expenses were incurred throughout the period 1991 - 1997, the Company cannot accumulate those expenses and then ask the ratepayers to compensate the Company at some future point. This is clearly retroactive ratemaking and is not authorized, either by the Florida Public Service Commission or generally accepted ratemaking principles. The Company has expensed the incurrence of the legal fees in each of the years 1991 - 1997. If the Company had a basis to recover these expenses, it was to file a rate case at the time the expenses were being incurred and ask for the recovery as part of a rate case, or to come before the Commission and ask for an Accounting Order allowing for the deferral of the legal fees to be considered in a single issue rate case. The Company has not done so, and has merely decided to retroactively attempt to recover these expenses from ratepayers. Thus, it appears to me that the Company should not prevail on this issue based on the fact that it had no authority to defer the expense and no authority to retroactively collect it

from ratepayers.

Ratepayers Not Responsible for Fines, Penalties and Related Costs

Q. UNDER RATE MAKING PRINCIPLES ARE RATEPAYERS HELD RESPONSIBLE FOR FINES, PENALTIES AND RELATED COSTS?

A. As a general rule, ratepayers are not responsible for fines and penalties or any related costs. Generally, rate making principles have concluded that fines and penalties are violations by management of laws that they knew or should have known existed, and that any violation of law is the responsibility of management, who work directly for stockholders. Thus, ratepayers in utility rate making cases are generally not held responsible for the payment of fines and penalties. Since the underlying principle of utility rate making is that the fines and penalties are the responsibility of management, who work directly for the stockholders, then any related expense, such as legal fees, should be treated in the same manner as the fine or penalty. Clearly, the Florida Public Service Commission has recognized that the fines and penalties incurred by utilities in their operations, regardless of whether those fines and penalties are assessed by a local jurisdiction, the state or a federal agency, should not be collected in rates from ratepayers. It is also reasonable that any associated expense, such as legal fees, interest or cost associated with correcting violations, should not be collected from ratepayers if these costs would not have been incurred absent the fine or penalty.

The reasoning underlying this basic principle is that management must be held responsible for its actions. It must be aware of the requirements of the law, and it must follow those laws regardless of their conclusion as to the fairness or economic reasonableness of the requirements of the law. If regulation allowed the recovery of

fines and penalties and/or any related costs from ratepayers, clearly, management and stockholders would be shielded from the affects of their actions. They could operate with impunity knowing that as a general principle they could recover any penalty or fine and related costs from ratepayers. Clearly, in a competitive environment they would not recover such costs. To the extent that the Commission shifts the costs of the violations - whether penalty or legal fees incurred in litigation over penalties - from the Company to the ratepayers, it holds the Company harmless from such violations and frustrates the purpose of the Clean Water Act.

Q. SHOULD THE FLORIDA PUBLIC SERVICE COMMISSION ENSURE THAT ITS ACTIONS ARE CONSISTENT WITH THE INTENT OF FEDERAL AND STATE REGULATORY AGENCIES?

A. Yes. This case provides an excellent example of how passing to the customers the expenses associated with a utility's violation of federal law would insulate the utility management from compliance with the CWA. It is worthy of note that neither the EPA, DOJ, nor the federal Judge was ever aware that the Company might shift the expenses of litigation its customers.

In fact, the contrary was indicated. In FCWC President Mr. Allen's November 13, 1995 Deposition, taken by the DOJ, he testified as follows:

> Q. (By DOJ Attorney Jacobs) Mr. Allen, are you involved in rate making proceedings for Florida Cities Water Company?
>
> A. Yes.
>
> Q. You mentioned that approximately $2 million had been set aside for purposes of this litigation. Do you know whether any of that money has been

included in the rate base?

A. No, it has not.

Q. And do you have plans to include any of that money in the rate base?

A. Highly doubtful.

Q. Why?

A. Well, I probably do not have the expertise from an accounting perspective to really address this, but -- and maybe I was presumptuous when I said probably not. The answer is, frankly, I don't know.

Q. Actually, you said highly doubtful, not probably not.

A. Well --

Q. On what did you base that answer? What made you think it was highly doubtful?

A. We.., it depends on -- depends on a number of factors. Quite frankly, the reason I said highly doubtful is I think the commission will look at this expense with -- when I say commission, I'm talking about the public service commission -- without a lot of inclination to include it in a rate base.

Q. Why do you say that?

A. Just based on my past experience with the commission.

Q. As we sit here today, is it your intention, as the president of Florida Cities Water Company, to include in any submission to the public service commission any of these funds that have been set aside for use in this litigation; that is to say, for purposes of rate-base calculations?

A. I don't know.

Q. Well, who will make that decision?

A. Well, I think the -- first, the decision will not be made until --even to

consider whether or not to seek rate base or any other treatment of these expenses until the outcome of the case is resolved.

Thus, Mr. Allen indicated that FCWC's seeking to include expenses associated with this litigation was "highly unlikely." While Mr. Allen hastened to add that he was no expert regarding whether the expenses could be recovered through the rate making process, the matter was apparently not raised again. It is reasonable to conclude that the DOJ and the Federal Judge were under the reasonable impression that the violator - FCWC - like any other violator - would be liable for whatever penalty and expenses arose from this litigation. It is also reasonable to assume that the Court and the DOJ were aware that the Company was incurring substantial litigation expenses, and that its ability to pay any penalty would be lessened to that extent

Q. HAS THE FLORIDA PUBLIC SERVICE COMMISSION ALLOWED THE RECOVERY OF FINES AND PENALTIES IN THE RATE MAKING PROCESS?

A. To my knowledge, they have not.

Q. HAS THE FLORIDA PUBLIC SERVICE COMMISSION ALLOWED THE RECOVERY OF LEGAL FEES AND RELATED COSTS ASSOCIATED WITH FINES AND PENALTIES?

A. I am aware of two cases in which the Commission dealt with a utility's legal expenses incurred in dealing with the Department of Environmental Regulation (DER) and the Environmental Protection Agency (EPA). The first of these cases involved Lehigh Utilities, Inc., in Docket No. 911188-WS, Order No. PSC-93-0301-FOF-WS, issued February 25, 1993.

In that Order, at page 21, the Commission stated the following:

> Test Year Legal Expenses
>
> In the MFRs, a portion of the allocated A&G expenses included non-rate case related legal expenses. OPC offered no testimony in support of its position that this amount should be reduced by the amount allocated for defense of DER and Environmental Protection Agency (EPA) fines.
>
> Utility witness Ludsen testified that Lehigh should pay its allocated share of legal expenses incurred in defending SSU systems from the various governmental entities that levy fines. Witness Ludsen further testified that negotiations which may avoid or reduce fines, or eliminate or postpone large improvements to systems, are included in this expense. He also testified that allocation of legal expenses maintains stable cost assignments to systems on a year-to-year basis.
>
> Based on the foregoing, we find it appropriate to allow the utility to recover its legal expenses relating to permitting and compliance. Accordingly, no adjustment to legal expenses has been made.

It is not clear from the above quoted Order what the extent of the legal fees were, or whether they related directly to fines and penalties imposed by the Environmental Protection Agency. The last paragraph in the quoted Order which discuss this issue states, in part, that the Commission is allowing "...legal expenses relating to permitting and compliance." This description does not appear to be the same as

defending the utility in an action where the Company has been fined for violation of a requirement of the law. Obtaining permits and complying with regulations would be a normal event in the course of operations and would not be the same as legal fees incurred to defend the Company's management and stockholders against violations of statutes or regulations. Additionally, it would appear that whatever legal fees were involved in the Lehigh Utilities case were probably de minimus, since the fine involved was only $7,500. The $7,500 fine was removed as part of a stipulation as shown on page 4, Item 4 of the Order.

Q. PLEASE DISCUSS THE SECOND CASE YOU ARE AWARE OF.

A. The second case is Docket No. 960451-WS, Order No. PSC-97-0618-FOF-WS, issued May 30, 1997. I was a witness in that docket, and I recommended that the Commission remove legal fees incurred to defend EPA and DEP violations. The amount of legal fees associated with my recommendation was $453. Needless to say, there was not extensive litigation of this issue. The Commission accepted the conclusion that "...the legal expenses incurred for defending fines from DEP and EPA could facilitate avoided or a reduced amount of fines." The full discussion of the issue in the Order is as follows:

> Legal Costs for Defense of EPA or DEP Violations
>
> OPC witness Larkin identified expenses included in the base year related to legal fees incurred to defend EPA and DEP violations. He testified that the utility's ratepayers should not be required to finance such violations, as these expenses are unrelated to the provision of water and wastewater service. As such, Mr. Larkin proposed adjustments to remove these expenses from the test year. By applying the 1996 and 1997 inflation factors to the base year

amount of $431, he proposed to reduce water operations by $163 and wastewater operations by $290.

In its brief, UWF argued that the utility has a good record of compliance with environmental rules and regulations. In support of this statement, the utility referred to the testimony of an employee of the Department of Health and Rehabilitative Services (HRS) and two employees of DEP, who appeared on behalf of staff in this proceeding. In further support of UWF's position that these legal expenses should be allowed, in its brief, the utility referenced Order No. PSC-93-0301-FOF-WS. By that Order, the Commission determined that it was appropriate to allow legal expenses incurred for defense of DER (now DEP) and EPA fines, as these costs could serve to avoid or reduce fines, or eliminate or postpone large system improvements.

Although we find that fines associated with violations of DEP and EPA should be borne by the shareholders of the utility, we believe it is reasonable for UWF to recover the costs of defending such fines. As the commission previously concluded, the legal expenses incurred for defending fines from DEP and EPA could facilitate avoided or a reduced amount of fines. Therefore, we find that no such adjustments are necessary to test year expenses.

As I previously indicated, the amount of legal fees were small, only $453. I do not believe that the Order in Docket No. 960451-WS represents a precedent by the Commission, nor does it focus on the relationship between the fines and penalties and legal fees. Moreover, it is doubtful that the commission should or did there intend to establish precedent in a $453 issue which would control a multi-million dollar issue in

a later case.

It is also worthy of note that in each of the cases, the expenses were test year expenses, unlike the instant case.

It is fair to say that at least in terms of materiality, this is a case of first impression before the Florida Pubic Service Commission.

Q. WHAT DO YOU MEAN BY FOCUS ON THE RELATIONSHIP BETWEEN THE FINES AND PENALTIES AND LEGAL FEES?

A. If an expense, whether it be a fine or a penalty, is not recoverable in rates because it does not meet the standard of a necessary and prudent expense incurred in the provision of water and wastewater service, then any related expense, such as legal fees, should not be included in rates. The associated legal expense must take on the same character as the fines and penalties. To do otherwise would cause the ratepayers to be responsible for an expense associated with the primary expense which the Commission has already found ratepayers not to be responsible.

Q. IS IT NOT TRUE THAT THE LEGAL FEES MAY SERVE TO REDUCE THE FINES AND PENALTIES?

A. That may be true. However, since the fines and penalties are the responsibility of the stockholder, only the stockholder would benefit from the reductions of the fine or penalty. Consequently, the stockholders should bear the cost related to the fine or penalty. As an example, if the Commission were to find that a particular item of plant constructed by a utility should not be added to rate base because it is not used or

useful or was not prudently incurred, the Commission would not add depreciation expense to rates in order to allow the Company to recover the costs of such plant. If stockholders were not entitled to earn a rate of return on the plant, they also would not be entitled to recover their investment through depreciation expense. The depreciation expense would follow the treatment of the plant. If the plant was eliminated from the cost of service, the depreciation expense would also be removed because the two are inter-related. The same is true with EPA fines and penalties. If the fines and penalties are eliminated from the cost of service, then legal fees associated with those fines and penalties should also be eliminated from the cost of service.

Q. I NOTE IN THE ORDER YOU QUOTED FROM DOCKET NO. 960451-WS, AN ARGUMENT WAS ADVANCED BY THE COMPANY IN ITS BRIEF THAT THE LEGAL FEES COULD ELIMINATE OR POSTPONE LARGE SYSTEM IMPROVEMENTS. ALTHOUGH THE COMMISSION DID NOT ADOPT THAT PORTION OF THE COMPANY'S ARGUMENT IN APPROVING THE $453 IN LEGAL FEES, WOULD YOU PLEASE COMMENT ON THAT PROPOSITION?

A. It is my understanding that neither the DEP nor the EPA orders companies to add large system improvements. It is my understanding that these two regulatory agencies find that companies are in violation of the law and that the company itself must determine how to eliminate the violation and comply with the law. The elimination of the violation may require the addition of system improvements, it may require repair, or it may require the connection of the wastewater system to another plant. The environmental agencies either find the utility is or is not in compliance with the requirements of the law. If these agencies are mistaken as to whether a

particular utility's wastewater treatment facilities comply with the law, then normally the company's own engineers can prove the company's compliance with the requirements of the law. No legal expense would be incurred, since it would be a matter of testing to determine whether the utility complies or does not comply with the environmental requirements. Consequently, I do not see how the incurrence of legal expenses could change the requirements of the law so that a utility would not have to comply with the environmental requirements. If there are alternatives that are less costly, clearly, that is within the prerogative of the utility to make those least cost plant additions, as long as they meet the standard required by the law.

A very similar argument was advanced by the Company in its litigation. In fact, it appears that the Company scheduled the testimony of Charles Hill, of the Commission staff to make the point. Essentially, the company argued that there could be no economic advantage to the company by deferring investment. As the argument goes, the ratemaking process permits the company a return only upon investment actually made, thus investment deferred or avoided can provide no economic benefit to the company. Implicit in this argument is the notion that deferring investment inures to the benefit of the customers rather than the utility.

Q. DID THE FEDERAL COURT ADDRESS THIS ARGUMENT.

A. Indeed it did. The Court rejected the argument finding that "...the Court disagrees with Florida Cities' contention that it can only realize an economic benefit from investing, not deferring investment. [Exhibit 6 (GHB-97, p16) memorandum order dated August 20, 1996] Thus while the company may champion the customer's interest in low rates, it is clear that the company also serves its own economic

interests by deferring construction which is sometimes later found to bring about violations of laws such as the CWA.

Q. IS IT YOUR UNDERSTANDING THAT FLORIDA CITIES WATER COMPANY WAS FOUND TO BE IN VIOLATION OF THE CLEAN WATER ACT?

A. It is my understanding, based on my review of the judgement issued by the United States District Court, that Florida Cities Water Company was found to violate the National Pollutant Discharge System (NPDES), violations were at Barefoot Bay and Carrolwood, and there were claims for unpermitted discharges, discharges to an unpermitted location and NPDES violations at Waterway Estates. The Court's Order indicates that there were 269 Clean Water Act violations at Barefoot Bay, 234 Clean Water Act violations at Carrolwood, and 1,038 Clean Water Act violations at Waterway Estates. None of the Court's findings appear to deal with how Florida Cities Water Company should or might have complied with the Clean Water Act, and it does not appear to me to have been part of the litigation before the court.

In fact, it is clear that the court was faced with two issues during the trial: 1) The amount of the penalty to be assessed against FCWC, and 2) the liability of Avatar, if any. FCWC's violations of the CWA were established by summary judgement.

Q. THROUGHOUT THE COMPANY'S FILING IN THIS CASE, THE COMPANY APPEARED TO BE ARGUING THAT THE JUSTICE DEPARTMENT REPRESENTING THE ENVIRONMENTAL PROTECTION AGENCY WAS UNREASONABLE AND COULD HAVE, AND SHOULD HAVE, SETTLED THIS SUIT EARLY ON WHEN LESS LITIGATION COST WOULD HAVE

BEEN INCURRED. WOULD YOU PLEASE COMMENT?

A. The Company's filing clearly indicates that they feel that the Justice Department was unreasonable and that significant legal fees were incurred as a result of the actions of the Justice Department. Neither I, nor the Commission, has any conclusive basis as to whether the Company is right or wrong in this contention. The Federal court had adequate opportunity to agree with the Company on this point. When the company sought to recover its attorney's and costs from the federal governments, the court found that the Company "[had] not adduced sufficient proof of the bad conduct or ill motive of [the Government] in litigating these claims so as to support a finding of bad faith. [The] Government's actions and conduct herein are simply not of the character that merits awards under the bad faith exception." [Exhibit 6 (GHB-101, p9)]

To react to the Company's allegations regarding the zeal of the government's prosecution of this case is to cast the Commission in the position of djudging the quality and motives of the Government's case. This is neither a legally sanctioned nor desirable role of the Florida Commission.

Even if assuming for the sake of argument that the Company is correct and that the Justice Department's pursuit of this case was extremely aggressive, there would be no basis to ask ratepayers to pay the legal cost. Clearly, the ratepayer is not and should not be the payer of last resort. The ratepayer should not be held to pay each and every cost that the Company feels it incurs as a result of over-zealous litigation on the part of the Federal Government. Ratepayers were not in charge of the Company's system. They did not plan it, they did not operate it, and they were not responsible for the analysis, application and violation of the Clean Water Act. Therefore, the

ratepayers should not be held responsible for these legal fees on the basis of the Company's argument of over- zealous prosecution. The theory that over-zealous prosecution shifts the burden of responsibility for these legal fees from stockholders to ratepayers is not reasonable.

Financial Integrity

Q. WHAT IS YOUR UNDERSTANDING OF FLORIDA CITIES WATER COMPANY'S ARGUMENT FOR PLACING THE RESPONSIBILITY FOR THE LEGAL FEES EXPENDED BY THE COMPANY TO DEFEND THE STOCKHOLDERS ON RATEPAYERS?

A. Two of the Company's witnesses, Mr. Murphy and Mr. McClellan, advance the theory that even though the Company realizes they cannot collect the penalty from ratepayers and that the penalty is the responsibility of the stockholders, any legal fees incurred in defending the stockholders from the incurrence of the penalty is the responsibility of the ratepayer. The underlying theory of both witnesses is that, had the Company not defended the stockholders from the payment of the settlement demanded by the Justice Department, the Company would have suffered financially, even to the extent that a bankruptcy filing might have been required. Had a bankruptcy filing been required, according to the Company's witnesses, the ratepayers would have suffered, and this, therefore, justifies requiring the ratepayers to reimburse the Company for defending its stockholders.

Q. DO YOU BELIEVE THAT THE COMPANY FILING FOR CHAPTER 11 BANKRUPTCY WOULD HAVE AFFECTED THE SERVICE RECEIVED BY RATEPAYERS?

A. No, I do not. When filing for Chapter 11 Bankruptcy, the normal procedure is that the payment of liabilities of the bankrupt company are held in abeyance and the company continues to operate in the hands of the debtor (the current owners of the company). The bankruptcy court would then decide which of the debts of the entity will be discharged and whether the entity should be sold in order to discharge debts of the bankrupt firm or reorganized with a restructuring of outstanding obligations. The bankruptcy court attempts to continue to operate businesses where feasible, since an operating entity is essentially more valuable than an entity which has discontinued operations. Additionally, in a situation where health, safety and welfare are part of the responsibility of the company in bankruptcy, the court would be vigilant to ensure that the public was not adversely affected by the bankruptcy filing. Thus, the Company's argument that a bankruptcy filing would have eliminated or affected the quality of service received by ratepayers is not realistic. The primary group which would have been affected detrimentally by a bankruptcy filing would have been the Company's investors (debtholders and stockholders). The stockholders' equity would have been in jeopardy. The satisfaction of any obligation that the court found could not be satisfied through liquid assets available in the bankrupt company would have been satisfied through sale of the Company. The court would have offered the bankrupt company for sale as an operating entity both to protect the health and safety of the public and to receive the highest value from the assets. Common sense would dictate that buried pipe, which does not provide service, is of no value even if the health and safety issues related to the operation of a water and wastewater utility could be set aside. It is probable that other water and wastewater companies in the area would have taken over these facilities in a bankruptcy sale.

Whereas the company presents a worst case scenario, i.e., that bankruptcy would have occasioned a severance or termination of service, it is as reasonable for the Commission to consider an offsetting best case scenario: that the utility (albeit not the shareholders) could have emerged from the bankruptcy proceedings, debts discharged and stockholder interests extinguished. With neither debt to retire, nor equity to service, utility rates might have seen a significant lessening.

The Company's dire predictions regarding a severe deterioration or cessation of service should be seen as an extreme and unlikely scenario.

Q. COULD FCWC JUST HAVE CURTAILED SERVICE WITHOUT DECLARING BANKRUPTCY, THUS HARMING RATEPAYERS?

A. I would think not. The Florida Department of Environmental Protection is charged with the responsibility of ensuring that health and safety standards are maintained at water and wastewater facilities. If operators are not operating these systems to protect the public interest, this agency has the responsibility to take action to ensure that they do. I would conclude that the curtailment of service would not be an option to a pervasively regulated industry.

In fact, one of the Company's own witnesses, Gary H. Baise, states exactly the opposite of Company witnesses Murphy and McClellan. On page 7, of his Direct Testimony, lines 12-14 he states, "FCWC officials immediately started working with the FDEP and EPA to develop a resolution of the matter because this was a public health facility and, unlike a manufacturing facility, could not shut down for repairs or cease operation." Mr. Baise recognized that the scenario set forth by Messrs.

Murphy and McClellan was not a realistic alternative and apparently neither did the FCWC officials whom Mr. Baise stated immediately started working on a solution. Clearly, the bankruptcy curtailment of service scenario is a strawman set up by the Company to attempt to paint the ratepayer as receiving benefits from FCWC's incurrence of legal fees.

Q. IS IT POSSIBLE THAT THERE IS SOME LEVEL OF SERVICE THE COMPANY COULD HAVE CURTAILED WITHOUT JEOPARDIZING HEALTH AND SAFETY?

A. Yes. It is possible that there are repair services that could have been delayed, minor amounts that could have been saved by not responding quickly to customer complaints, etc. However, the main beneficiary of the expenses incurred to fight the fines and penalties imposed by the Environmental Protection Agency was the stockholders, not the ratepayers. Had any substantial penalty been assessed against the Company, that penalty would purportedly have required the Company to file bankruptcy, thus eliminating or placing in jeopardy the equity interest of stockholders and debtholders. A continuation of service to customers would still have gone forward, regardless of whether the current stockholders and debtholders interest would have survived. The substantial benefit of the litigation was to the stockholders.

Q. WHAT EXPERIENCE HAS LARKIN & ASSOCIATES HAD WITH BANKRUPTCY FILINGS?

A. Larkin & Associates have been accountants for the trustee in bankruptcy of Michigan Interstate Railway Company, d/b/a/ Ann Arbor Railroad System, which was in

Chapter 11 before the United States Bankruptcy Court for the Eastern District of Michigan for approximately eight years. During that time as accountants for the trustee, we issued financial statements which were filed with the bankruptcy court. At no time during the period that Michigan Interstate Railway Company was in bankruptcy did the trustee attempt to eliminate services. During the approximate eight years that the trustee was in charge of the railroad system, the process was to reorganize the operation, such that it became profitable. It was eventually sold with debtors receiving some percentage of their outstanding obligation, while stockholders received a minor return of their investment. At no time did the trustee attempt to sell-off portions of the assets, which were essential to the operation of the railroad.

In addition to our direct involvement with the above identified bankruptcy, we have participated before public utility commissions where utilities either were in bankruptcy or were experiencing financial difficulties and contemplating bankruptcy. These utilities were the El Paso Electric Company, which did go into bankruptcy, Consumer Power Company (now Consumer Energy) and Gulf States Utilities. We are currently involved in the State of Connecticut on behalf of the Office of Consumer Counsel in cases involving Connecticut Light & Power Company, a subsidiary of Northeast Utilities. This company is currently experiencing financial difficulties as a result of the failure of its nuclear units to operate. It has been our experience that even utilities under financial stress do not attempt to curtail costs which might affect the quality of service to current ratepayers. The difficulty is always involved in maintaining bond payments to debt holders on an on-going basis. Any cash flow normally is used to maintain the level of service to current ratepayers. Thus, I do not believe that a utility experiencing financial difficulty would jeopardize its operation by curtailing service to

ratepayers.

Our bankruptcy experience aside, it is a matter of general knowledge that the trustee in bankruptcy has a fiduciary duty to creditors to conserve the assets of the bankrupt's estate. It would be a serious breach of that duty to permit a utility such as Florida Cities to simply shut down to the extent that its value was reduced to salvage value. The greatest value of Florida Cities to creditors is that of a going concern; it is entirely reasonable to assume that a trustee in bankruptcy would, on behalf of creditors, ensure that Florida Cities continued to achieve a revenue stream through the routine provision of service and the continued compliance with regulatory authorities. In other words, the Company's theory concerning a decline in service, and possible cessation flies in the face

of what we know the likely result of bankruptcy to be, and ought to be rejected for that reason.

Legal Expenses in this Instance are Atypical

Q. IN MR. ALLEN'S TESTIMONY, AT PAGE 46, HE ATTEMPTS TO CHARACTERIZE THE LEGAL EXPENSES INCURRED AS NORMAL, RUN OF THE MILL, REASONABLY AND PRUDENTLY INCURRED EXPENSES. DO YOU AGREE WITH THAT CHARACTERIZATION?

A. No, I do not. Clearly, these expenses are atypical. The way the Company has asked to recover the costs, the length of time the Company has asked to recover them over, and the fact that this is a single issue rate case clearly shows that they are not typical expenses. The expenses incurred were not incurred fulfilling the Company's

obligation to provide service. They were incurred in protecting the Company's stockholders from fines and penalties, resulting from established violations of federal law, which would have affected the stockholder's equity interest.

Q. MR. ALLEN ALSO CHARACTERIZES THESE LEGAL FEES AS THE SAME AS INCURRED BY THE COMPANY IN OTHER SETTLEMENT DEMANDS BY CLAIMANTS, INCLUDING REGULATORY AGENCIES. WOULD YOU PLEASE COMMENT?

A. Mr. Allen does not give specific details of what types of claimants and what regulatory agencies the Company incurs legal fees in relationship to. However, if the legal fees incurred are the result of defending management or the Company's stockholders against violations of laws which management failed to comply with, or against tort liability in which company management was expressly found to have breached a civil duty, then they would be of the same nature as those at issue in this case and should be excluded from recovery. One cannot place a broad description over legal settlements or legal fees as the Company has attempted and state that these are of the same nature, and therefore, ought to be recovered from ratepayers. In any instance where it is discovered that a violation occurred because management failed in its responsibilities, those legal fees should not be the responsibility of ratepayers.

Criminal Legal Fees

Q. IS IT YOUR UNDERSTANDING THAT SOME OF THE LEGAL FEES INCURRED MAY HAVE BEEN FOR THE CRIMINAL DEFENSE OF SOME OF THE COMPANY'S EMPLOYEES?

A. It is not clear whether the Company has removed from the total expenses legal fees

incurred for the possible criminal prosecution of some of the Company's management. To the extent that the Company incurred legal fees for criminal defense, and those fees are included within the expenses incurred, clearly that has no benefit to ratepayers and should be removed prior to the consideration of the Commission of any recovery.

Inclusion of Unrecovered Legal Fees in Rate Base

Q. SOME OF THE COMPANY'S WITNESSES SUGGEST THAT THE UNRECOVERED LEGAL FEES THAT ARE BEING AMORTIZED OUGHT TO BE INCLUDED IN RATE BASE IN THE COMPANY'S NEXT RATE CASE FILING. DO YOU AGREE?

A. No, I do not. The recovery of the legal fees, in my opinion, is not justified, it provides no benefit to the ratepayer and was incurred to protect the stockholders' interests. To allow the Company to earn a return on these illegitimate expenses would add insult to injury. If the Commission were to decide to allow the recovery of these expenses (if it can get around the retroactive recovery issue), that is all that the Company should recover. Anything above that amount is not justified.

Q. DOES THAT CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

QUALIFICATIONS OF HUGH LARKIN, JR.

Q. WHAT IS YOUR OCCUPATION?

A. I am a certified public accountant and a partner in the firm of Larkin & Associates, Certified Public Accountants, with offices at 15728 Farmington Road, Livonia, Michigan.

Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

A. I graduated from Michigan State University in 1960. During 1961 and 1962, I fulfilled my military obligations as an officer in the United States Army.

In 1963 I was employed by the certified public accounting firm of Peat, Marwick, Mitchell & Co., as a junior accountant. I became a certified public accountant in 1966.

In 1968 I was promoted to the supervisory level at Peat, Marwick, Mitchell & Co. As such, my duties included the direction and review of audits of various types of business organizations, including manufacturing, service, sales and regulated companies.

Through my education and auditing experience of manufacturing operations, I obtained an extensive background of theoretical and practical cost accounting.

I have audited companies having job cost systems and those having process cost systems, utilizing both historical and standard costs.

I have a working knowledge of cost control, budgets and reports, the accumulation of overheads and the application of same to products on the various recognized methods.

Additionally, I designed and installed a job cost system for an automotive parts manufacturer.

I gained experience in the audit of regulated companies as the supervisor in charge of all railroad audits for the Detroit office of Peat, Marwick, including audits of the Detroit, Toledo and Ironton Railroad, the Ann Arbor Railroad, and portions of the Penn Central Railroad Company. In 1967, I was the supervisory senior accountant in charge of the audit of the Michigan State Highway Department, for which Peat, Marwick was employed by the State Auditor General and the Attorney General.

In October of 1969, I left Peat, Marwick to become a partner in the public accounting firm of Tischler & Lipson of Detroit. In April of 1970, I left the latter firm to form the certified public accounting firm of Larkin, Chapski & Company. In September 1982 I re-organized the firm into Larkin & Associates, a certified public accounting firm. The firm of Larkin & Associates performs a wide variety of auditing and accounting services, but concentrates in the area of utility regulation and ratemaking. I am a member of the Michigan Association of Certified Public Accountants and the American Institute of Certified Public Accountants. I testified before the Michigan Public Service Commission and in other states in the following cases:

*Case Settled
**Issues Stipulated
***Company withdrew case

Additionally, I performed an investigation and analysis of Michigan Consolidated Gas Company and participated in the discussion which led to the settlement of Michigan Consolidated rate case which was culminated in Rate Order U-4166.

From April 28, 1975, to March 15, 1976, I was under contract to the Michigan House of Representatives as Technical Staff Director of a Special House Committee to study and evaluate the effectiveness of the Michigan Public Service Commission and the rates and service of public utilities. As Technical Staff Director, I supervised personnel loaned to the Committee from the State Auditor General's Office. The reports to that Committee prepared by myself and Allen Briggs, an attorney, to revise utility regulation, were adopted in virtually all material respects in its final report and recommendations and served as a basis of numerous bills introduced in the 1976 and 1977 sessions of the legislature. The Staff of the Committee, under my direction, investigated and reported to the Committee on numerous regulatory issues, including ratepayer participation in utility regulation, fuel cost adjustment clauses, purchased gas adjustment

clauses, comparative electric, gas and telephone rates, treatment of subsidiaries of utilities in ratemaking, research and planning capabilities of the Michigan Public Service Commission, utility advertising, regulatory oversight of utility management, deferred taxes in ratemaking and the organizational structure and functions of the Michigan Public Service Commission.

In the course of my work as a certified public accountant, I advise clients concerning the obtaining of capital funds, and have worked with banking institutions in obtaining loans. I have participated in negotiating the sale and purchase of businesses for clients, in connection with which I have valued the physical assets of various business firms, and also determined the value of present and future earnings measured by market rates of return. I have participated in acquisition audits on behalf of large national companies interested in acquiring smaller companies.

My testimony in utility rate cases has been sponsored by state Attorney Generals, groups of municipalities, a district attorney, Peoples' Counsel, Public Counsel, a ratepayers' committee, and I have also worked as a Staff Consultant to the Arizona Corporation Commission.

In November 1985, with two members of the firm, I presented a seminar on utility accounting for the Legal Services *Regional Utilities Task Force in Atlanta, Georgia.*

In September, 1988, with two members of the firm, I presented a seminar on utility accounting for the Office of Consumer Advocate, Attorney General's Office, State of Pennsylvania. Individuals from that division as well as Commission Staff members attended.

MS. GERVASI: Staff would like to at this time have the prefiled direct testimony of Ms. Patricia W. Merchant inserted into the record as though read.

CHAIRMAN JOHNSON: It will be so inserted.

MS. GERVASI: And she has no prefiled exhibits.

CHAIRMAN JOHNSON: Okay.

MR. GATLIN: I would like to offer for identification the deposition of Pat W. Merchant for the record.

CHAIRMAN JOHNSON: We'll mark that Exhibit 17, short titled "Deposition transcript of Merchant."

(Exhibit 17 marked for identification.)

FPSC-RECORDS/REPORTING

DIRECT PREFILED TESTIMONY OF PATRICIA W. MERCHANT

Q. Please state your name and professional address.

A. My name is Patricia W. Merchant and my business address is 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850.

Q. By whom are you employed and in what capacity?

A. I am employed by the Florida Public Service Commission as a Public Utilities Supervisor in the Division of Water and Wastewater.

Q. How long have you been employed by the Commission?

A. I started working at the Commission in September 1981.

Q. Would you state your educational background and experience?

A. I received a Bachelor of Science degree with a major in accounting from Florida State University in August 1981. Upon graduation, I was employed by the Commission as a Public Utilities Auditor in what is now the Division of Auditing and Financial Analysis. My primary responsibility in that capacity was to perform audits on the books and records of electric, gas, telephone, water and wastewater public utilities. In August 1983, I joined what is now the Division of Water and Wastewater as a Regulatory Analyst in the Bureau of Accounting. In May 1989, I became a Regulatory Analyst Supervisor in what is now the Accounting Section of the Bureau of Economic Regulation, in which capacity I am currently employed. I have attended various regulatory seminars and Commission in-house training and professional development meetings concerning regulatory matters.

Q. Are you a Certified Public Accountant?

A. Yes, I am. In September 1983, I received a certificate and a license to practice in the State of Florida by the Florida Board of Accountancy.

Q. Are you a member of any professional associations?

A. Yes. I am a member in good standing of the American Institute of Certified Public Accountants and the Florida Institute of Certified Public Accountants (FICPA). I am a former member of the Board of Governors of the FICPA and was the President of the Tallahassee Chapter of the FICPA for the year ended June 30, 1994. I currently am the Vice Chair of the Florida State University Accounting Conference Committee of the FICPA.

Q. Have you ever testified before the Florida Public Service Commission?

A. Yes, in Docket No. 840047-WS, Application of Poinciana Utilities, Inc. for increased water and wastewater rates; in Docket No. 850031-WS, Application of Orange/Osceola Utilities, Inc. for increased water and wastewater rates; in Docket No. 850151-WS, Application of Marco Island Utilities for increased water and wastewater rates; in Docket No. 881030-WU, Investigation of Sunshine Utilities rates for possible over earnings; in Docket No. 940847-WS, Application of Ortega Utility Company for increased water and wastewater rates; and in Docket No. 911082-WS, Water and Wastewater Rule Revisions to Chapter 25-30, Florida Administrative Code.

Q. Were you accepted as an expert in regulatory accounting?

A. Yes, I was.

Q. Have you ever testified before any other tribunals as an expert in regulatory accounting?

A. Yes. I testified before the Division of Administrative Hearings, Case No. 97-2485RU, Aloha Utilities, Inc., and Florida Waterworks Association, Inc., Petitioners, vs. Public Service Commission, Respondent, and Citizens of the State of Florida, Office of Public Counsel, Intervenors.

Q. Would you explain what your general responsibilities are as a Public Utilities Supervisor in the Accounting Section of the Bureau of Economic Regulation?

A. I am responsible for the supervision of five professional accountants in the accounting section. This section is responsible for the financial, accounting and rates review and evaluation of complex formal rate proceedings before the Commission. This specifically includes the analysis of file and suspend rate cases, overearnings investigations and limited proceedings of Class A and B water and wastewater utilities under the jurisdiction of the Florida Public Service Commission. The accounting section is also responsible for the review of smaller filings of Class A and B utilities, such as allowance for funds used during construction (AFUDC), allowance for funds prudently invested (AFPI), service availability applications, and tariff filings. This section coordinates, prepares and presents staff recommendations before the Commission on the above type cases. This section is also responsible for preparing testimony, testifying and writing cross-examination questions for hearings involving complex accounting and financial issues.

Q. Can you summarize the issues to which you are providing testimony?

A. I am testifying about Florida Cities Water Company's (FCWC) requested method of allocating litigation fees incurred to all FCWC water and wastewater customers. I am also providing opinion testimony regarding when or if environmental legal fees should be recovered by a utility's customers. Further, I address the accounting classification of any revenues which may be collected from the customers.

Q. Please explain your testimony regarding the allocation to all FCWC customers.

A. FCWC has requested that all of its water and wastewater customers reimburse the company for litigation expenses incurred in FCWC's defense against the U.S. Department of Justice (DOJ) and the U.S. Environmental Protection Agency (EPA). FCWC claims that the DOJ proposed penalties were of such magnitude, that any payment of these penalties would have severely damaged the financial integrity of FCWC. According to FCWC, by litigating these actions, FCWC preserved all systems from such calamity, thus benefitting all FCWC customers.

Q. Was FCWC ultimately required to pay the maximum penalty sought by the DOJ?

A. No. FCWC was fined a total of $309,710 for violations of the Clean Water Act (CWA). This was made up of $289,425 for the Waterway Estates Wastewater Treatment Plant (North Ft. Myers), $14,675 for the Carrollwood Wastewater Treatment Plant (Hillsborough County), and $5,610 for the Barefoot Bay Wastewater Treatment Plant (Brevard County). The utility incurred a total of $3,826,210 for legal fees in defense of its violations of the CWA.

Q. How did the utility account for these legal fees on its books?

A. During the early years the utility capitalized some portion of these costs for the expansion of the North Ft. Myers wastewater treatment plant. During 1994, FCWC began expensing these legal fees below the line for rate setting purposes. FCWC had written off all of these costs prior to 1997.

Q. Did the write-off of the penalties and legal fees cause any severe financial damages to FCWC?

A. No, in my opinion, they did not. FCWC has not filed bankruptcy or documented any direct financial harm caused by the write-off of these costs.

Q. In your opinion, should the threat of severe financial harm to FCWC resulting from the DOJ proposed penalties be considered the burden of all FCWC's water and wastewater customers?

A. No, it should not. These costs were incurred because of violations at specific wastewater facilities of FCWC. As Commission witness Moniz testifies, FCWC's rates for all but two systems have been set on a system-specific basis and are not uniform. The only facilities that have uniform rates are the North and South Ft. Myers water systems. To assume that the legal fees incurred for three wastewater systems found in violation of the CWA are the shared burden of all water and non-involved wastewater customers is inappropriate. These legal fees are not a cost of providing water service, nor are they a cost of wastewater service to any of the other FCWC wastewater facilities not penalized.

Q. Do you have an opinion regarding when or if environmental legal fees should be recovered by a utility's customers?

A. Yes. In general, legal costs prudently incurred by a utility for maintaining environmental compliance or bringing a utility into compliance with new environmental regulations should be considered a normal cost of doing business. If a utility can show that legal fees incurred for environmental compliance were prudent and sufficiently documented, then those costs should be recovered from the ratepayers. In a circumstance when an environmental agency claims that a utility is in non-compliance with environmental standards and a utility disputes this and ultimately is found to be in compliance, then

the Commission should look at the specifics in each case to decide whether the utility prudently incurred legal fees in its defense of these claims. It is also common for utilities to incur legal fees in conjunction with a penalty or a consent order. I do not believe that just because penalties were incurred that the associated legal fees should always be disallowed. If a utility can show that the legal fees in such a case minimized or avoided increased plant or operational costs to provide service, then such costs could be considered beneficial to the customers and this should be considered on a case by case basis. As long as the utility sufficiently justifies that the legal fees incurred were prudent and not excessive, then the legal fees, exclusive of the penalty, should be recovered through rates.

Q. What are some circumstances when environmental legal fees should not be recovered by the customers?

A. First, if a utility fails to provide sufficient documentation supporting its requested expenses or the amounts are deemed excessive or imprudent, then those costs should be disallowed. It is the utility's burden to show that its requested expenses are prudent and reasonable. Further, if the utility fails to show that it acted prudently to maintain compliance with environmental requirements, or that its defense mitigated other costs that might have otherwise been incurred in connection with violations, then the associated legal fees should be borne by the shareholders. The mere fact that a utility incurs legal fees associated with a penalty does not automatically require that those fees should be borne by the customers.

Q. Has the Commission addressed some of these issues in prior cases?

A. Yes. In Order No. PSC-97-1547-FOF-WS, (issued December 12, 1997, in

Docket No. 970521-WS, Betmar Utilities, Inc.), the Commission denied $1,245 in legal fees associated with contesting allegations of a Florida Department of Environmental Protection (DEP) consent order. The utility stated that the legal fees incurred were legitimate utility expenses in connection with a DEP consent order and as such, should be recovered. The Commission found that even if the legal fees were found to be prudent, the utility failed to meet its burden by its failure to provide supporting documentation to support its legal fees. In Order No. PSC-93-0423-FOF-WS (issued March 22, 1993, in Docket No. 920199-WS, Southern States Utilities, Inc.), the Commission allowed legal fees associated with environmental fines because the evidence supported that the ratepayers benefitted from the utility's defending itself in regulatory proceedings. If the utility succeeds, rate base or other expenses may be lower. In Order No. PSC-93-1070-FOF-WS (issued July 23, 1993, in Docket No. 920655-WS, Southern States Utilities, Inc. - Marco Island), the Commission found that the suggestion that legal fees be disallowed because they were incurred to defend the utility against alleged violations presupposes that the utility should acquiesce in all cases, whether or not fault exists. Litigation may be appropriate even when imposition of a fine is a possibility, when compliance with a disputed regulation will create adverse economic consequences. On other occasions, payment of a fine pursuant to a consent order, even when "guilt" is not admitted, may result in avoidance of further litigation costs that would be detrimental to a utility's financial condition. The Commission found that an absolute prohibition against recovery of legal fees in any proceeding where a fine may be imposed would be impractical. In that docket, the Commission was addressing test year legal fees of $20,738,

not all of which related to contesting environmental compliance with the EPA and DEP.

Q. How was this issued addressed by the Commission for other industries?

A. In Order No. PSC-97-1047-FOF-EI (issued September 5, 1997, in Docket No. 970007-EI, Investor-Owned Electric Utilities), the Commission accepted a stipulation that legal expenses directly associated with environmental compliance activities approved by the Commission incurred in order to comply with environmental laws or regulations should be recovered. However, the Commission stated that those costs will continue to be examined on a case-by-case basis in order to determine the prudence of its recovery. In Order No. 20162 (issued October 13, 1988, in Docket No. 880069-TL, Southern Bell), the Commission denied recovery of expenses incurred in the settlement of antitrust cases. The Commission found that Southern Bell had not shown that the expenses were reasonable or to the benefit of Florida ratepayers.

Q. Are you testifying to the issue of whether or not any costs should be recovered by the FCWC customers?

A. No, I am not recommending specifically as to whether or not any costs incurred by FCWC should be recovered through customer rates. If the Commission finds that FCWC has shown that the legal fees were reasonable and prudent and were incurred to maintain compliance, or to minimize or avoid other increased plant or operational costs to provide service, then it may be appropriate for some amount of legal fees associated with this litigation to be recovered by FCWC's customers. I am not testifying as to whether FCWC has met this burden in this case, or what amount, if any, should be considered prudent or reasonable.

Q. If the Commission does allow some costs to be recovered by the customers, how should they be allocated?

A. Any allowed costs should only be recovered from the North Ft. Myers, Barefoot Bay and Carrollwood wastewater customers. The fees should be allocated between these customers based on the evidence in the record that shows what costs were incurred to maintain compliance or how FCWC minimized or avoided other increased plant or operational costs.

Q. Please describe the accounting treatment for any amounts collected from the customers associated with these legal fees.

A. Any amounts collected from the customers to reimburse the utility for litigation costs incurred would be considered utility operating revenues and as such regulatory assessment fees are required to be collected on those amounts. These revenues should be recorded in Account No. 536, Other Wastewater Revenues. According to Section 367.145, Florida Statutes, regulatory assessment fees are based on 4.5 percent of gross revenues of the utility derived from intrastate business. The only exemption in the statute is for sales for resale made to a regulated company.

Q. Does this conclude your testimony?

A. Yes, it does.

MS. GERVASI: Staff would like to have the prefiled direct testimony of Ms. Sally H. Moniz inserted into the record as though read.

CHAIRMAN JOHNSON: It will be so inserted.

MS. GERVASI: Thank you.

DOCKET NO.: 971663-WS - Florida Cities Water Company

WITNESS: **Direct Testimony of Sarah (Sally) H. Moniz,** Appearing on Behalf of Staff

DATE FILED: JUNE 19, 1998

DOCUMENT NUMBER-DATE
06534 JUN 19 98
FPSC-RECORDS/REPORTING

DIRECT PREFILED TESTIMONY OF SARAH (SALLY) H. MONIZ

Q. Please state your name and professional address.

A. My name is Sarah (Sally) H. Moniz and my business address is 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0873.

Q. By whom are you employed and in what capacity?

A. I am employed by the Florida Public Service Commission (FPSC) as a Professional Accountant Specialist in the Division of Water and Wastewater.

Q. How long have you been employed by the Commission?

A. Since June, 1990.

Q. Please state your educational background.

A. I received a Bachelor of Business Administration degree with a Major in Accounting from Valdosta State College, which is now Valdosta State University, in August, 1981.

Q. Please describe your employment history and experience in the field of regulatory accounting.

A. In June of 1990, I began my employment with the Florida Public Service Commission, in the Division of Water and Wastewater. While employed with the Commission I have held the following positions: Regulatory Analyst II from June 1990 to November 1991; Regulatory Analyst III from November 1991 until October 1, 1994; and Regulatory Analyst IV from October 1994 until October 1996. In October of 1996, I was promoted to my present position as a Professional Accountant Specialist in the Bureau of Economic Regulation. Since my employment with the FPSC, I have attended various regulatory seminars and Commission in-house training and professional development meetings concerning regulatory matters. Additionally, I have participated in numerous

rate proceedings on behalf of Commission staff.

Q. Please explain your duties as a Professional Accountant Specialist in the Accounting Section of the Bureau of Economic Regulation.

A. As a professional accountant, I am responsible for financial, accounting and rate reviews and evaluations of complex formal rate proceedings before the Commission. This specifically includes the analysis of file and suspend rate cases, overearnings investigations and limited proceedings of Class A and B water and wastewater utilities under the jurisdiction of the FPSC. I am also responsible for reviewing smaller filings of Class A and B utilities, such as allowance for funds used during construction (AFUDC), allowance for funds prudently invested (AFPI), service availability applications and tariff filings. I coordinate, prepare, and present staff recommendations before the Commission on the above type cases. In addition, I am responsible for preparing testimony, testifying and writing deposition and cross-examination questions for hearings involving complex accounting and financial issues.

Q. Please describe your employment history in other areas of accounting.

A. Prior to my employment with the Commission, I held the following positions: Budget Specialist in the Office of Planning and Budget with the Florida Department of General Services, from May 1989 until June 1990; Accounting Supervisor in the Comptroller's office of the Florida Department of Transportation from October 1988 until May 1989; Accountant with the Georgia Department of Family and Children Services from September 1986 through October 1988; Staff Accountant with Callahan and Company, C.P.A.'s in Donalsonville, Georgia, from April 1986 until September 1986; Staff Accountant with Burke-Burke and Company, C.P.A.'s, Donalsonville, Georgia, from January

1985 until April 1986; Accounting Instructor, Gordon Junior College, Barnsville, Georgia, January 1984 until June 1984; Retail Cost Accountant Gold Kist, Inc., South East Division, Moultrie, Georgia, February 1982 until August 1983.

Q. What is the purpose of your testimony?

A. To discuss the regulatory treatment utilized by the Commission or reflected in prior Commission orders relating to Florida Cities Water Company's (FCWC or utility) defense to the Environmental Protection Agency/Department of Justice (EPA/DOJ) litigation. I am also testifying to the approved regulatory treatment of FCWC's facilities in past rate cases.

Q. When FCWC first began incurring legal costs related to EPA/DOJ litigation costs, how were these costs treated on the utility's books?

A. In the North Ft. Myers wastewater rate case (Docket No. 950387-SU), the Commission found that during 1992, 1993 and 1994, the utility capitalized EPA litigation legal fees as part of an expansion project to the North Ft. Myers wastewater treatment plant.

Q. Did the utility continue to capitalize the litigation expenses?

A. No. During 1994, the utility began expensing all additional legal fees pertaining to the lawsuit and reporting them below the line.

Q. How were the litigation expenses treated in the North Ft. Myers rate case?

A. By Order No. PSC-96-1133-FOF-SU, issued September 10, 1996, the Commission accepted a stipulation to remove the legal fees from rate base. The record did not reflect why these fees were capitalized for more than two years and then expensed below the line. Since the legal fees were not

included in the customer's rates, the Commission did not address the appropriateness of reporting the litigation fees above the line or the accounting treatment.

Q. Did the utility continue to expense these costs below the line?

A. Yes. According to Order No. PSC-96-1133-FOF-SU, all the legal costs were "expensed below the line".

Q. Concerning your other area of testimony, the approved regulatory treatment of FCWC's facilities in past rate cases, do any of FCWC's facilities have uniform rates?

A. Yes, pursuant to Order No. 16768 (Docket No. 851007-WU), the Commission approved uniform water rates for the North and South Ft. Myers' systems. However, all the other systems have separate rates for each facility.

Q. What cost components are shared among FCWC's water and wastewater facilities?

A. FCWC is a consolidated entity with six operating divisions, three of which are under the jurisdiction of the FPSC. As such, it has one set of financial statements and one consolidated balance sheet. The utility is required to use the balance sheet method to calculate its working components, as required by Rule 25-30.433(2), Florida Administrative Code. Therefore, working capital is allocated to all of the utility's facilities. FCWC also has one consolidated capital structure which is allocated based on rate base to each water and wastewater system. However, the Commission establishes a separate rate of return on equity for each facility. The utility's general plant is also allocated to each system.

Q. Does this conclude your testimony?

A: Yes, it does.

MR. GATLIN: May I inquire of Staff, was the deposition of Mr. Larkin that was identified as an exhibit, was that his complete deposition and exhibit?

MS. GERVASI: Do you mean was that the entire transcript of the deposition?

MR. GATLIN: Yes, right; the complete transcript of the deposition and the exhibit that he had. It looks to me like it was, but I wanted to make sure.

MS. GERVASI: Yes, sir, it is the complete transcript.

I guess we're on to the rebuttal.

CHAIRMAN JOHNSON: I guess I said for Ms. Moniz for that to be inserted into the record as though read, and there were no exhibits.

MS. GERVASI: No exhibits, correct.

MR. McLEAN: And no depositions, as I recall.

MS. GERVASI: Correct.

CHAIRMAN JOHNSON: Yes. We're on rebuttal.

MR. GATLIN: What was the number of Ms. Merchant's deposition?

CHAIRMAN JOHNSON: 17.

MR. GATLIN: I would like to offer the rebuttal testimony of Mr. Gerald S. Allen to be

inserted as though read.

CHAIRMAN JOHNSON: It will be inserted.

MR. GATLIN: I would like to offer the rebuttal testimony of Mr. Gary --

MS. GERVASI: Before we go on to that, did Mr. Allen not have any prefiled exhibits, Mr. Gatlin?

MR. GATLIN: None.

MS. GERVASI: Then at this point we'd like to identify as Exhibit No. 18 the deposition transcript for Mr. Allen taken on July 30th of 1998.

CHAIRMAN JOHNSON: It will be marked as 18.

(Exhibit 18 marked for identification.)

FLORIDA CITIES WATER COMPANY

RATE APPLICATION FOR RECOVERY OF LEGAL EXPENSES

REBUTTAL TESTIMONY OF GERALD S. ALLEN

TO DIRECT TESTIMONY OF

HUGH LARKIN, JR. AND PATRICIA W. MERCHANT

DOCKET NO. 971663-WS

Q. Please state your name and business address.

A. Gerald S. Allen, 4837 Swift Road, Suite 100, Sarasota, Florida 34231.

Q. By whom are you employed and in what capacity?

A. I am the President of Florida Cities Water Company(FCWC).

Q. Did you prepare prefiled testimony in this case?

A. Yes.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my testimony is to rebut certain parts of the direct testimony of Hugh Larkin, Jr. prefiled on behalf of the Florida Office of Public Counsel, and Patricia W. Merchant on behalf of the Public Service Commission.

Q. Beginning at line 18, page 3 of his prefiled testimony, Mr. Larkin states, "[I]f the Company had a basis to recover these expenses, it was to file a rate case at the time the expenses were being incurred and as for the recovery as part of a rate

case, or to come before the Commission and ask for an Accounting Order allowing for the deferral of the legal fee to be considered in a single issue rate case." Why didn't FCWC take one of actions suggested by Mr. Larkin?

A. Until the Court issued its Judgement and Memorandum Order on August 20, 1996 ((Exhibit 4 (GSA-24)), FCWC had no solid basis for predicting the outcome of the litigation and therefore did not have a basis for seeking recovery. In fact this outcome did not become final until the U.S. Court of Appeals for the Eleventh Circuit dismissed the respective appeals of the parties at their request on August 6, 1997. See Exhibit 6 (GHB-104).

Q. In your opinion, would the Commission have considered multiple rate applications as the legal expenses occurred?

A. No. I don't believe the Commission would have considered recovery until the outcome of the litigation had been finally decided. The litigation was very dynamic and was fraught with ancillary issues primarily as a result of the overzealous prosecution by the DOJ. A snapshot at any given point would significantly differ from a snapshot a few weeks later and this situation existed for

almost four years. Therefore, it was not possible to accurately predict the additional legal expenses from any given point to the conclusion of the case.

Q. Referring to page 5 of Mr. Larkin's testimony beginning at line 10, Mr. Larkin states, "[T]hat this case provides an excellent example of how passing to the customers the expenses associated with the utility's violation of federal law would insulate the utility management from compliance with the CWA. It is worthy of note that neither the EPA, DOJ, nor the federal Judge was ever aware that the Company might shift the expenses of litigation [to]its customers." How do you interpret this question and response?

A. First, I believe Mr. Larkin is stating that if utilities are allowed to recover expenses associated with defending themselves against alleged violations of the Clean Water Act (CWA),it would remove incentives to comply. Second, he concludes or at least implies that the Court's final decision would have been influenced had it known that the Company might seek recovery of legal expenses sustained in defending itself. Third, Mr. Larkin concluded that the excerpt from my testimony at deposition on November 13, 1995 concealed the Company's intent to

later seek recovery of said expenses.

Q. Do you agree with Mr. Larkin that if utilities are allowed to recover expenses associated with defending themselves against alleged violations of the Clean Water Act (CWA),it would remove incentives to comply?

A. No. First, I became involved in water and wastewater utility management before the enactment of the Clean Water Act (CWA), the Safe Drinking Water Act and many other laws governing water and wastewater utilities and have first hand experience with their evolution. I have witnessed the conflicting interpretations of these laws and the evolution of a new legal specialty. Compliance has always been a top priority personally and I have consistently promoted strict compliance as always being in the best interests of my employer and its utility customers. Those to whom I have reported since employment by Avatar Utilities Inc. and its subsidiaries, including Florida Cities Water Company, have strongly supported this position. The reasons include, but are not limited to, a demonstration of good environmental stewardship and corporate citizenship, avoidance of economic sanctions, maintaining productive relationships with

regulatory agencies and fostering professional pride throughout the company. To imply that the ability to recover a part of the Company's legal expenses in connection with defending itself against grossly overstated allegations of violations of the law represents a disincentive to comply borders on insult.

At $25,000 per day per violation as provided by the CWA, the greatest financial peril virtually always faced by alleged violators are penalties, not legal expenses. In the instant case, the Company faced potential penalties up to $104 million which is forty-six times the legal expenses it seeks to recover in this docket. The Company has never attempted to recover fines or penalties nor is it seeking to do so in this case. To adopt Mr. Larkin's conclusion, one would have to also conclude that the public defender act, which provides legal defense to those who cannot afford it, removes all perils associated with criminal acts and therefore is a disincentive to comply with the law. It is nonsense to conclude that recovery of legal expenses is a disincentive to comply with the CWA or any other law or rule.

Q. Do you agree with Mr. Larkin's conclusion that the

excerpt from your testimony at deposition on November 13, 1995 concealed the Company's intent to later seek recovery of said expenses?

A. No. My responses at deposition were based on the facts before me at that time when the Company faced penalties up to $104 million. The recovery of legal expenses through rates was an issue that I had given little thought to at that time. Furthermore, I did not have the benefit of knowing that the Court would dismiss almost half of the allegations in summary judgement and ten months later find penalties in the amount of $309,710 which was but a small fraction of the legal expenses sustained by the Company. I initially stated that I doubted that the Company would expect to include the expenses in rate base but upon immediate reflection indicated that I didn't know and that a decision would not be made to seek rate base treatment or any other treatment of the legal expenses until the outcome of the case was resolved. It is important to note that the DOJ had ample opportunity to bring the issue up at trial but did not do so. The DOJ trial counsel did not examine me, Mr. Cardy, the Company's rate making expert, any other Company witness, or the DOJ's financial expert regarding rate treatment of

penalties or legal expenses at trial in this case. To conclude that my testimony at deposition, which was not introduced into evidence at trial and presumably was never viewed by the Court, misled both the DOJ and the Court, and influenced the Courts decision is clearly without factual basis.

Q. Do you agree with Mr. Larkin's conclusion that the Court's final decision would have been influenced had it known that the Company might seek recovery of legal expenses sustained in defending itself.

A. No. Legal expenses sustained by defendants in CWA litigation and the source of funds to pay same are not among the factors set forth in the Act for determining the validity of allegations or the amount of penalties as will be discussed by Mr. Baise in his rebuttal testimony.

Q. Under the same circumstances and limiting the facts to those known to you at the time, would your responses to questions by the DOJ regarding recovery of expenses through rates been different?

A. No.

Q. Beginning at line 24, page 12 of Mr. Larkin's prefiled testimony, he states, "[T}he environmental agencies either find the utility is or is not in compliance with the requirements of the law. If

these agencies are mistaken as to whether a particular utility's wastewater treatment facilities comply with the law, then normally the company's own engineers can prove the company's compliance with the requirements of the law. No legal expenses would be incurred, since it would be a matter of testing to determine whether the utility complies or does not comply with the environmental requirements."

Q. Was this the approach that FCWC initially took in 1986 after the USEPA notified FCWC that it intended to deny renewal of the NPDES permit for the Waterway Estates Wastewater Treatment Plant and for several years thereafter in dealing with the EPA and DEP?

A. Yes. In fact, FCWC's engineers immediately opened communications with both agencies and started developing an action plan which FCWC believed would resolve the issues. There was never a dispute regarding the action which was necessary to satisfy the demands of the EPA and DEP. The EPA's dissatisfaction arose over the timeliness of completing the work set forth in the action plan. There was no legal counsel involvement until this dissatisfaction surfaced and little from that point in time until the DOJ entered the picture. The DOJ

was making demands on FCWC of a magnitude which could have placed the Company in serious jeopardy and it was prudent that the Company engage legal counsel in a more assertive manner.

Q. Had FCWC challenged the USEPA on its denial of renewal of the NPDES permit for the Waterway Estates Wastewater Treatment Plant in 1986, do you believe the ultimate outcome would have been different?

A. No, I don't believe the outcome would have been significantly different. It is my opinion that had FCWC challenged the denial and prevailed, the USEPA would have issued an administrative order mandating the upgrading of the treatment plant and relocation of the outfall initially instead of an order calling for the elimination of the discharge[1]. Since such initial order would not have altered FCWC's action plans, I conclude that the schedule would not have been altered. Therefore, the outcome would have not been altered.

Q. Beginning at line 21, page 22 of his prefiled testimony, Mr. Larking refers to "the criminal defense of some of the Company's employees." Were criminal charges brought against any past or current

---

1. See prefiled direct testimony, Gerald S. Allen, page 10, line 6 through p. 11, line 2.

Company employees by the United States or the State of Florida or to the best of your knowledge were criminal investigations ever undertaken by the United States or the State of Florida with respect to any matter surrounding or arising from the litigation in this docket?

A. No current or former employees were charged or, to be best of my knowledge, investigated. So, there was no need for "criminal defense." I can't explain Mr. Larkin's characterization other than another example of conclusions without factual basis.

Q. Did the Company retain, on behalf of certain current and former employees, legal counsel to represent their personal interest?

A. Yes, on a limited basis in view of the case, Weitzenhoff v. United States, cited at page 32 of my prefiled direct testimony. However, this matter is not relevant in this docket since the Company is not seeking recovery through rates any of the expenses associated with such legal services.

Q. What is your interpretation of Ms. Merchant's prefiled direct testimony with regard to the recovery of the legal expenses sought by FCWC in this docket?

A. Ms. Merchant seems to be presenting her personal

opinion regarding the criteria which the Commission should apply in arriving at its decision regarding recovery. She presents no opinion regarding whether or not recover should be allowed or the amount thereof, if any. However, she is firm in stating that recovery, if allowed, should be through rates applicable to N. Ft. Myers, Barefoot Bay and Carrollwood wastewater customers only.

Q. What criteria should the Commission apply in arriving at its decision.

A. The fundamental foundation governing the recovery of expenses through rates is the "reasonable and prudent" criteria and it should be applied by the Commission in arriving at a decision in this case. The Commission should consider the decisions of the Company regarding its legal defense of the allegations of the DOJ and the "reasonableness and prudence" of these decisions in light of the facts available to the Company at the time they were made. Of course, important to the "reasonable and prudent" test is evaluating the ultimate results of these decisions which was the Federal Court's judgement following the trial: penalties of less than one percent of the maximum penalty claimed in the Original Complaint, less than one-half percent of

the maximum penalty claimed in the Amended Complaint and slightly over six percent of the settlement offer rendered by the DOJ prior to the Original Complaint.

Q. Does this conclude your rebuttal testimony.

A. Yes.

MR. GATLIN: I offer the testimony of Mr. Gary H. Baise to be inserted into the record.

CHAIRMAN JOHNSON: Mr. Baise's testimony will be inserted as though read.

MR. GATLIN: And he has no exhibits.

CHAIRMAN JOHNSON: Staff?

MS. GERVASI: Staff would identify the transcript of Mr. Baise's August 5th, 1998 deposition.

CHAIRMAN JOHNSON: It will be identified as 19.

MS. GERVASI: Thank you.

(Exhibit 19 marked for identification.)

FLORIDA CITIES WATER COMPANY

FT. MYERS & BAREFOOT BAY DIVISIONS

WATER AND WASTEWATER OPERATIONS

REBUTTAL TESTIMONY OF GARY BAISE

TO

DIRECT TESTIMONY

OF

Hugh Larkin, Jr. and Patricia W. Merchant

DOCKET NO. 971663-WS

Q: Please state your name and business address.

A: Gary H. Baise, Baise, Miller & Freer, P.C., 815 Connecticut Avenue, N.W., Suite 620, Washington, D.C. 20006-4004.

Q: By whom are you employed and in what capacity?

A: I am a partner in the law firm of Baise, Miller & Freer, P.C.

Q. Have you filed testimony in this case?

A. Yes. I filed direct testimony in this case.

Q. What is the purpose of this rebuttal testimony?

A. The purpose of this testimony is to refute certain positions of OPC witness Hugh Larkin, Jr. and Patricia W. Merchant, PSC witness.

Q. On page 4, line 22 of his testimony, Mr. Larkin is discussing his position that legal costs should not be recovered from rate payers, testifying as follows:

"The reasoning underlying this basic principle is that management must be held responsible for its actions. It must follow those laws regardless of their conclusion as to the fairness or economic reasonableness of the requirements of the law. If regulation allowed the recovery of fines and penalties and/or any related costs from ratepayers, clearly, management and stockholders would be shielded from the affects of their actions. They could operate with impunity knowing that as a general principle they could recover any penalty or fine and related costs from ratepayers. Clearly, in a competitive environment they would not recover such costs. To the extent that the Commission shifts the costs of the violations - whether penalty or legal fees incurred in litigation over penalties - from the Company to the ratepayers, it holds the Company harmless from such violations frustrates the purpose of the Clean Water Act." Is Mr. Larkin correct, please explain?

A. Mr. Larkin concludes that if FCWC can shift the cost of violations in terms of legal fees to the rate payers, that holds the company harmless from such violation, which frustrates the purpose of the Clean Water Act. The amount of attorneys' fees would not be admissible as evidence in a CWA enforcement action;

Accordingly, the Court would have no authority to consider legal costs. The CWA does not address the issue of whether penalties or legal fees are to be paid by shareholders or ratepayers. Therefore, under the CWA there is no basis to support Mr. Larkin's policy argument that the purpose of the CWA is frustrated by shifting legal fees to ratepayers. It is apparent that Mr. Larkin does not understand the framework of the Clean Water Act (CWA) nor has he studied the many court cases involving the CWA. At $25,000 per day per violation and criminal sanctions of many years imprisonment, violators of the CWA are subject to some of the most severe civil and criminal penalties imposed by federal environmental laws. Clearly, violations of the CWA can result in the financial ruin of companies and individuals and the imprisonment of a company's officers and employees. Generally, in civil cases such as that brought against FCWC under the CWA, the legal expenses are very small compared to the potential liability associated with the allegations. To conclude, as Mr. Larkin apparently has, that the prospect of recovery of legal expenses associated with the defense of allegations of violations of the CWA represents a disincentive to comply is without basis and is not consistent with the

history of enforcement of the CWA. Until the Court ruled in this case there was never any consideration on my part that FCWC would be in a position to seek recovery of its legal fees in its rates.

Q. On page 5 of his testimony, starting with the answer on line 15 - Mr. Larkin says "... that neither the EPA, DOJ or the federal Judge was ever aware that the company might shift the expenses of litigation to its customers" Mr. Larkin then quotes from the deposition transcript of FCWC President, Mr. Allen, dated November 13, 1995. He concludes his answer on page 7, lines four through twelve are as follows: "Thus, Mr. Allen indicated that FCWC's seeking to include expenses associated with this litigation was "highly unlikely." While Mr. Allen hastened to add that he was no expert regarding whether the expenses could be recovered through the rate making process, the matter was apparently not raised again. It is reasonable to conclude that the DOJ and the federal Judge were under the reasonable impression that the violator - FCWC - like any other violator - would be liable for whatever penalty and expenses arose from this litigation. It is also reasonable to assume that the Court and the DOJ were aware that the Company was incurring substantial litigation expenses, and that its ability

to pay any penalty would be lessened to that extent." Would you please respond to Mr. Larkin's answer?

A. Mr. Larkin is simply incorrect and apparently has not thoroughly reviewed the record nor does he understand the provision of the CWA which sets forth the factors courts are to consider in assessing penalties. First, at deposition, neither Mr. Gerald Allen, FCWC's President nor Mr. Bradtmiller, FCWC's Executive Vice President, ruled out the prospect of attempting to recover legal expenses through rates. Second, if the department of Justice had wanted to bring this matter to the Court's attention it could have done so through its direct examination of Mr. Gerald Allen, but it did not choose to do so or through testimony presented by any other FCWC witness. Third, the matter of how FCWC proposed to recover part or all of the legal expenses associated with its defense (even if it knew at the time) was not a matter included in the six factors which the CWA specifies for consideration by courts in assessing penalties. Therefore, the matter was not relevant to the Court's deliberations or findings in FCWC's case.

Q. Mr. Larkin's answer starting on line 18, page 12 and ending on line 18, page 13 sets forth his understanding of environmental law and regulation by

the EPA and DEP. Is his understanding correct? Please explain.

A. Mr. Larkin indicates that it is his "understanding" that neither the DEP nor EPA orders companies to add large system improvements. Again, Mr. Larkin is incorrect. The agencies take an active role in regulating wastewater treatment works. The CWA gives the EPA ample authority to specify remedial action and it often does so in the form of consent orders and permit conditions. It is true the company may decide what type of equipment or what brand of equipment to put into place but the fact is the requirement is such that EPA or DEP is ordering the company through the permit and the administrative order process to install the improvements. An example is EPA Administrative Order No. 89-109 and NPDES certification worksheet ((see Exhibit 9 (MA-9) and Exhibit 9 (MA-7)) which directed FCWC to construct the treatment and other facilities necessary to relocate the effluent outfall and meet specific water quality standards. In addition, EPA has a tool that may order companies to construct supplemental environmental projects in order not to be subjected to additional fines. Therefore it is not accurate to suggest that all EPA does is to determine whether the company is or is not in

compliance with the law.

The CWA is a complex law subject to multiple interpretations and to conclude, as Mr. Larkin has, that it is a simple matter of the regulatory agency finding "the utility is or is not in compliance with the requirements of the law" is an oversimplification. It is indeed true that the agencies may allege that a company is in violation of the law and penalties therefor. It is up to courts to determine indeed whether there is a violation of the law. In many cases there may be a "technical" violation of the law and the courts may find penalties as low as $1 a day or slightly more as in the case of FCWC where many of the fines were only $10 a day compared to the agency's ability to charge or attempt to obtain $25,000 a day.

Mr. Larkin implies that the company's own engineers can work out any differences regarding compliance. FCWC pursued such course. With respect to all three wastewater facilities for which the DOJ ultimately alleged violations, the first step FCWC took was to have its engineers engage the DEP and EPA in an effort to assure that these facilities were in compliance and if not in compliance, to take the action necessary to bring them into compliance. In fact, all issues pertaining to both Barefoot Bay and

Carrollwood were satisfactorily resolved with both the EPA and DEP and the issues pertaining to Waterway Estates were satisfactorily resolved with the DEP, prior to the DOJ's allegations. It was not until the EPA wanted to pursue the Waterway Estates issue, notwithstanding the DEP's satisfaction with FCWC's action and the outcomes, and referred the matter to the DOJ was any appreciable legal work necessary. Furthermore, the amount of legal work necessary was increased substantially when the DOJ initiated an investigation of all of FCWC's wastewater facilities and finally amended its complaint in March 1995 to include the Carrollwood and Barefoot Bay facilities.

Q. Beginning at line 21, page 13 and ending at line 19, page 14, Mr. Larkin purports to explain certain aspects of the litigation and the Court's findings and the penalties imposed. Are his characterizations complete and accurate?

A. No. First, Mr. Larkin does not discuss the Original and Amended Complaints, the numerous motions and rulings of the Court prior to trial, the factors considered by the Court, and the penalties imposed relative to the penalties claimed by the DOJ at various stages of the proceedings leading up to the trial. Through these omissions Mr. Larkin brings into

focus only a few small parts of the total picture, including the following:

(1) In its original complaint, the DOJ was claiming penalties to $32,375,000 later amended claiming penalties to $104,325,000. After pre-trial rulings by the Court throwing out almost half of the alleged violations, the DOJ claimed penalties during the first day of trial to $53,450,000. These rulings were in response to motions filed by FCWC. In its post-trial memorandum, the DOJ proposed penalties in the amount of $4,861,500 for FCWC and a similar amount for Avatar. In its final ruling, the Court found penalties in the amount of $309,710. To put all of these claims into perspective, the penalties imposed by the Court were less than one percent of the maximum amount claimed under the Original Complaint, less than one-half percent of the maximum amount claimed under the Amended Complaint, slightly over one-half percent of the maximum amount claimed at the beginning of the trial and 6.37% of the penalty amount suggested in the DOJ's post-trial memorandum.

(2) It is virtually impossible to avoid a liability determination under the Clean Water Act inasmuch as it is called a strict liability statute. Therefore, every exceedance of a CWA permit is a violation. An

example would be any time you are running 56 mph in a 55 mph speed limit zone you are in violation of the law and should therefore be technically fined. If you're running more than 20 mph over a 55 mph speed limit, you may even be charged with reckless driving. The fact is, both policy and courts exercise a great deal of discretion. The same is true with the Clean Water Act. It was clear in this case that the Court found that even though there were technical violations, the mitigating factors set forth in the Clean Water Act (including the fact that none of the violations had resulted in environmental harm) were applied fully supported the conclusion that the penalty should be minuscule.

Q. Beginning on page 15 and concluding on page 16, line 4, Mr. Larkin sets forth his interpretation of the nature of the DOJ prosecution and FCWC's demand of recovery of legal costs from the government. Do you agree with Mr. Larkin's interpretation? Please explain.

A. No. First, regarding the nature of the DOJ prosecution, I firmly believe that anyone who thoroughly studies the record in this case will conclude that the prosecution was without merit. This conclusion is based on my twenty-eight years

experience as a practicing attorney in the area of federal environmental law. In fact, I believe the case would have been settled before the trial and before significant legals costs had been sustained by FCWC had proper supervision been afforded by a person with sufficient experience in the CWA.

Second, notwithstanding the Court's ruling regarding recovery of legal expenses by FCWC from the DOJ, it is appropriate to review the Court's Order (Exhibit ____ (GHB-101)). The "bad faith" standard is extremely confining. To prevail, it must be shown that the government undertook the litigation "vexatiously, wantonly, or for oppressive reasons." The fact that the government's action was unreasonable, without merit, or unwise is not in itself adequate to demonstrate bad faith as defined by the law. It is implicit in the Court's language in its ruling against FCWC regarding FCWC's contention that it was a "prevailing party" that the Court agreed with FCWC from a fundamental perspective but was bound by case law. The Court said, "[T]he United States contends that since a judgement was returned in its favor on its claims against the Defendant Florida Cities, [that] Florida Cities is hereby precluded from being a Sec. 2412(a) `prevailing party'. The Court

agrees with Plaintiff's analysis and, grudgingly (emphasis added), with its conclusion." See page 11, Exhibit ____ (GHB-101). Another noteworthy conclusion of the Court can be found on pages 12 and 13 of this exhibit, "[W]hile the history and purpose of Rule 68 and 28 U.S.C. Sec. 2412(a) militate strongly for an award of costs to Florida Cities, the Procrustean doctrine of sovereign immunity precludes such." It is my opinion that the relationship between the penalties sought by the DOJ and those imposed by the Court (cited above) when combined with the Court's language in its order pertaining to the recovery of costs by FCWC clearly supports the proposition that many of the DOJ's actions in this case were without merit.

Q. Beginning at line 3, page 10, of the prefiled testimony of Patricia W. Merchant, she states that "[A]ny allowed costs should only be recovered from the North Ft. Myers, Barefoot Bay and Carrollwood customers." Were the legal efforts, and accordingly legal expenses, associated with FCWC's defense limited to these wastewater systems?

A. No. Following the filing of the Original Complaint, the DOJ launched an investigation of all of FCWC's wastewater systems and considerable effort was devoted during the period beginning in early 1994 and the

filing of the Amended Complaint on March 30,1995 to this investigation and the discovery associated therewith. FCWC's wastewater systems are located in Collier, Lee, Brevard, Sarasota and Hillsborough Counties.

Q. Does this conclude your testimony?

A. Yes.

MR. GATLIN: And I offer the testimony of Mr. Michael Acosta to be inserted into the record.

CHAIRMAN JOHNSON: It will be so inserted.

MS. GERVASI: Staff would identify Staff's Second Request for Interrogatory No. 44 to be entered into the record.

CHAIRMAN JOHNSON: It will be marked as 20, Staff Exhibit 20, Acosta's Second Request for Interrogatories -- or Staff's Second Request for Interrogatories.

MS. GERVASI: Thank you.

(Exhibit 20 marked for identification.)

FLORIDA CITIES WATER COMPANY

RATE APPLICATION FOR RECOVERY OF LEGAL EXPENSES

REBUTTAL TESTIMONY OF MICHAEL ACOSTA

TO DIRECT TESTIMONY OF

HUGH LARKIN, JR.

DOCKET NO. 971663-WS

Q. Please state your name.

A. Michael Acosta.

Q. Have you previously provided testimony in this Docket?

A. Yes.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my testimony is to rebut certain aspects of the direct testimony of Hugh Larkin, Jr., appearing on behalf of the Citizens of the State of Florida.

Q. Specifically which part of Witness Larkin's testimony will you rebut?

A. I will rebut Witness Larkin's testimony regarding his assertion that the Department of Environmental Protection and Untied States Environmental Protection Agency only "find companies are in violation of the law and that the company itself must determine how to eliminate the violation and comply with the law."

Q. Is Witness Larkin's assertion as stated above accurate?

A. In this case, the assertion is not accurate.

Q. Please explain.

A. In 1986, the Waterway Estates Wastewater Treatment Plant (Waterway) was a secondary plant discharging into a canal that leads to the Caloosahatchee River with all the appropriate permits to do so. FDEP had established a wasteload allocation for the Caloosahatchee River that envisioned that all surface water discharges would ultimately meet advanced wastewater treatment (AWT) standards. It is clear from the NPDES Certification worksheet Exhibit 9 MA-7 that FDEP would be seeking the upgrade of Waterway to AWT and the relocation of the outfall to the six foot contour line in the Caloosahatchee River upon the expiration of the then current operating permit DO36-72569 if Waterway was going to continue discharging to surface waters. While FDEP did not design the facility it did require reasonable assurance that the facilities as designed would meet the stated water quality limits and not result in water quality violations. In this case, FDEP was not just requiring compliance but also requiring a specific upgrade to a treatment facility in order to achieve compliance with the wasteload allocation limits.

Q. Does this conclude your rebuttal testimony?

A. Yes.

MR. GATLIN: I offer the testimony of Mr. John D. McClellan, the rebuttal testimony, to be inserted into the record as though read.

CHAIRMAN JOHNSON: It will be so inserted.

MR. GATLIN: There are no exhibits.

MS. GERVASI: Staff offers the transcript of Mr. McClellan's July 30th, 1998 deposition as an exhibit.

CHAIRMAN JOHNSON: It will be marked as Exhibit 21.

(Exhibit 21 marked for identification.)

FLORIDA CITIES WATER COMPANY
RATE APPLICATION FOR RECOVERY OF LEGAL EXPENSES
REBUTTAL TESTIMONY OF JOHN D. MCCLELLAN
TO DIRECT TESTIMONY OF
HUGH LARKIN, JR. AND PATRICIA W. MERCHANT
DOCKET NO. 971663-WS

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. John D. McClellan, Deloitte & Touche LLP, 555 12th Street N.W., Washington D.C., 20004.

Q. ARE YOU THE SAME JOHN D. MCCLELLAN THAT FILED DIRECT TESTIMONY IN THIS CASE?

A. Yes.

Q. WHAT IS THE PURPOSE OF THIS REBUTTAL TESTIMONY?

A. Florida Cities Water Company ("FCWC" or the "Company") requested that I review and respond to the direct testimony filed by Mr. Hugh Larkin, Jr., who is appearing as a witness for the Florida Office of Public Counsel ("OPC").

Q. HAVE YOU REVIEWED MR. LARKIN'S TESTIMONY AND ARE YOU PREPARED TO RESPOND TO THE OBSERVATIONS CONTAINED THEREIN?

A. Yes.

Q. PLEASE PROCEED WITH YOUR RESPONSES.

A. As indicated on page two of Mr. Larkin's testimony, he is recommending that the Company

be denied recovery of any portion of the $3.8 million of costs incurred in defending itself against the litigation resulting from claims filed and penalties sought by the Department of Justice (DOJ). He states that his recommendation is based upon the following assumptions:

- Recovery of the costs would reflect retroactive ratemaking
- The owners and creditors of the Company were the primary beneficiaries of the significant results achieved in the defense efforts and should therefore bear the costs
- The allowance by the Commission of the recovery of these costs would result in putting ratepayers in the position of "guaranteeing...[the costs of] any and all litigation undertaken by regulated public utilities..." in Florida.

Each of these assumptions upon which Mr. Larkin has based his recommendation is erroneous.

Q. WHAT IS THE BASIC CHARACTER OF RETROACTIVE RATEMAKING?

A. Retroactive ratemaking generally refers to the

application of current rates to recover from current ratepayers (or return to current ratepayers) revenues that should have been recovered (or not recovered) in rates of prior periods to cover costs of ordinary events effects were limited to those periods. For example, if it is determined that 1997 rates did not produce an adequate level of earnings (i.e., the cost of equity capital in 1997) and 1999 rates are adjusted to recover the 1997 rate shortfall (or excess), this could give rise to a legitimate claim of retroactive ratemaking. At the same time, regulators commonly allow the recovery in current or future periods of explicitly identified non recurring or extraordinary costs incurred in prior periods.

Q. IS RECOVERY OF NON-RECURRING OR EXTRAORDINARY COSTS OF PRIOR PERIODS CONSIDERED TO BE RETROACTIVE RATEMAKING?

A. No. Regulators have long practiced the spreading of costs incurred in one period over subsequent periods and do not consider the practice to embrace retroactive ratemaking. Generally, the spreading of costs is applied either to avoid the dramatic rate impact that

would result if rates were adjusted to recover the costs currently or to recognize the longer term benefits of the costs (or both). This spreading of cost recovery is precisely what FCWC is seeking. Along with avoiding complications in anticipating and providing for costs that were being incurred each year that the litigation continued, delaying recovery and spreading the litigation costs over future periods avoids any dramatic rate impact and gives credence to the fact that there are ongoing benefits to avoiding the penalties sought by the DOJ. The recovery of the litigation expenses as proposed by FCWC in this proceeding does not constitute retractive ratemaking.

Q. MR. LARKIN OBSERVES ON PAGE THREE OF HIS TESTIMONY THAT THERE IS NO ACCOUNTING ORDER THAT PROVIDED FOR DEFERRING THE EXPENSES AS INCURRED. BASED ON THIS CONDITION, HE CONCLUDES THAT RECOVERY CANNOT BE PERMITTED. WOULD YOU RESPOND?

A. Extraordinary cost conditions are often recognized as the costs are being incurred and cost deferral is approved as the expenditures are made. In such instances, the future regulatory treatment of the

cost accumulations is reserved for determination at the next rate proceeding. In other instances the extent, impact and timing of the costs are not subject to determination, and accounting cost deferral may not be or can not be obtained in advance. In these instances, the request for deferral and recovery will not arise until a rate filing occurs. In either case, cost recovery provisions will not be determined in the absence of a rate proceeding. The advance accounting approval does not assure ultimate rate recovery. Neither does the absence of such advance approval prohibit ultimate rate recovery.

Q. WHAT WERE THE CONDITIONS RELATING TO COST DETERMINATION AND ULTIMATE OUTCOME THAT CONFRONTED FCWC IN THE LITIGATION PROCESS?

A. First, costs were incurred over a number of years. During this period FCWC did not know how long the process would continue. Second, FCWC simply did not know how much cost would be incurred in the process. There was no way to estimate these costs in advance. Finally, there was no way for FCWC to accurately predict the ultimate outcome of the litigation process.

Q. WHY DID FCWC NOT GO BEFORE THE COMMISSION AND

REQUEST, IN ADVANCE, AN ACCOUNTING ORDER?

A. For the reasons stated above FCWC simply did not have sufficient data and information to go before the Commission until the litigation process was completed.

Q. DOES REGULATORY APPROVAL TO DEFER THE RECORDING OF AN INCURRED COST CONCURRENTLY ESTABLISH APPROVAL OF THE RATEMAKING TREATMENT OF THAT COST?

A. No. In many instances the accounting order will explicitly state that the approval is limited to accounting measures and that the ratemaking treatment of the costs will be established in subsequent rate proceedings. Where not explicitly stated, this condition is normally implied. Accordingly, approval of a delay in reporting costs does not establish the subsequent ratemaking treatment.

Q. DO GENERALLY ACCEPTED ACCOUNTING PRINCIPLES ("GAAP") REQUIRE THAT AN ACCOUNTING ORDER EXIST FOR A REGULATED UTILITY TO DEFER A CURRENT COST ASSUMED TO BE RECOVERABLE IN FUTURE RATES?

A. No. GAAP directives for regulated systems are expressed in Financial Accounting Standards Board Statement No. 71 : Accounting for the Effects of

Certain Types of Regulation ("FASB 71") issued in 1982. As stated at Paragraph 9 of FASB 71, for accounting purposes a regulated utility shall capitalize (i.e., defer) an incurred cost that would otherwise be charged to expenses if both of the following criteria are met:

a. It is probable that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes, and

b. Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.

This provision provides that costs normally expensed under GAAP standards shall be deferred if "it is probable" (i.e., can reasonably be expected or believed on the basis of available evidence or

logic) that future revenues will be produced through rates provided to recover the costs. Otherwise, the costs must be expensed for financial reporting purposes. The deferral conditions address recoverability issues and accounting orders are not even mentioned.

Q. DOES THE ISSUANCE OF AN ACCOUNTING ORDER BY A REGULATOR SATISFY THE GAAP REQUIREMENTS FOR COST DEFERRAL?

A. No. As observed, the issue is cost recoverability. As expressed at Paragraph 4 of the Introduction to FASB 71, accounting orders may be imposed by regulators that do not conform with GAAP. Under these conditions, the issuance of the order does not provide a basis for capitalizing and amortizing the cost. This situation will arise when an accounting order is not accompanied by cost recovery probability, and in such instances the utility is not permitted to defer the costs for financial reporting purposes. Paragraph 4 of FASB 71 includes the following language:

> "...a regulatory authority may order an enterprise to capitalize and amortize a cost that would be charged to income currently by

an unregulated enterprise. Unless capitalization of that cost is appropriate under this Statement, generally accepted accounting principles require the regulated enterprise to charge the cost to income currently."

Q. IS AN ACCOUNTING ORDER NECESSARY FOR THE SUBSEQUENT RECOVERY OF A PRUDENTLY INCURRED PRIOR PERIOD COST?

A. No. An accounting order may be useful in supporting the conclusion that rate recovery can reasonably be expected, i.e., that it is "probable". However, as previously observed and clearly evidenced by regulatory decisions, the existence of an accounting order does not establish prospective cost recovery, and the absence of an accounting order does not prohibit prospective cost recovery.

Q. IF FCWC OBTAINS A RATEMAKING ORDER THAT PROVIDES FOR THE RECOVERY OF LITIGATION COSTS, WILL FCWC BE ABLE TO CURRENTLY RECORD THOSE COSTS INCURRED IN PRIOR YEARS?

A. Yes.

Q. DID THE OWNERS AND/OR CREDITORS OF THE COMPANY BENEFIT FROM THE LITIGATION EFFORTS?

A. Yes. Had the claimed penalties of tens of millions of dollars been applied, the owners certainly would have been adversely affected. The creditors may or may not have been.

Q. DID THE RATEPAYERS ALSO BENEFIT FROM THOSE EFFORTS?

A. Yes. As has been expressed in the Company's direct testimony, the financial pressures that would have been produced by the levels of penalties sought by the DOJ would have created severe problems. The financial impact of these problems is not quantifiable, but it follows that a financially healthy company can perform more efficiently and at less costs than can a financially crippled system. Any losses in efficiency and increases in costs that result from financial crises will necessarily impact customer rates or service, or both.

Q. IS THE RELATIVE DEGREE TO WHICH THE COMPANY OR ITS RATEPAYERS MAY HAVE BENEFITED A LEGITIMATE ISSUE IN DETERMINING THE PROPRIETY OF COST RECOVERY?

A. No. The issue is the right of recovery of costs prudently incurred in operating and maintaining the system. Under the Cost of Service standard, a regulated utility is entitled to an opportunity

to recover all costs prudently and legitimately incurred in providing efficient and reliable service, and in maintaining a financially healthy system. There does not appear to be any reasonable challenge to the position that had the Company not mounted a defense against the DOJ claims that (1) the financial consequences would have been extremely serious, (2) a financially healthy system would not have emerged and (3) rates and/or services could have been negatively impacted. Accordingly, it is appropriate to conclude that the litigation costs were necessarily and prudently incurred. Consequently, it is appropriate that cost recovery be permitted.

Q. IS THERE ANY MERIT TO MR. LARKIN'S CLAIM THAT THE COMMISSION'S ALLOWING THE COMPANY TO RECOVER THESE COSTS WILL PROVIDE A "GUARANTEE" THAT FLORIDA UTILITIES WILL RECOVER "ANY AND ALL LITIGATION" COSTS IN THE FUTURE?

A. No. There simply is no basis for such a claim.

Q. AT PAGE 4, MR. LARKIN OBSERVES THAT RATEPAYERS ARE NOT GENERALLY RESPONSIBLE FOR FINES, PENALTIES OR COSTS RELATED THERETO. HAS THE COMPANY REQUEST ELIMINATED BOTH THE PENALTY AND THE RELATED LITIGATION COSTS?

A. Yes. As has been observed elsewhere, the Company is not requesting recovery of the penalty imposed by the decision of the court and is not requesting the full amount of litigation costs incurred. The request for recovery of litigation costs is at a level that relieves ratepayers of the portion of the costs that may be associated with the penalty. In the request, the litigation costs have been reduced by the ratio of the $5 million penalty that would have been absorbed, had a settlement been made, to the $309,000 penalty imposed by the court. The result is consistent with the position advocated by Mr. Larkin

Q. BEGINNING AT PAGE 7, LINE 18, MR. LARKIN DISCUSSES TWO CASES ADDRESSING LEGAL FEES. WOULD YOU COMMENT ON THE DECISIONS RENDERED IN THESE CASES?

A. Yes. In the first instance it is noted that the OPC had taken the position that legal expenses "...should be reduced by the amount allocated for defense of fines."(Larkin testimony page 8, line 6) The Commission concluded that it would be appropriate to allow recovery of legal expenses relating to permitting and compliance and "Accordingly, no adjustment to legal expenses has been made." (Larkin testimony page 8, line 18)

This clearly shows that the OPC position relating to the disallowance of legal expenses "...allocated for defense of DER and Environmental Protection Agency (EPA) fines" was rejected. That decision fully supports the allowance of the litigation costs in this proceeding.

In the second case referenced (Larkin testimony page 9, line 11), the Commission again issued a decision that supports the Company request in this case. Specifically, the Commission concluded that although the fines imposed due to violations of DEP and EPA requirements should be borne by the shareholders, that it was "...reasonable for UWF to recover the costs of defending such fines." Mr. Larkin then rejects the Commission's adopted principle on the grounds that the amounts were insignificant. It is of note that the finding addressed the principle. It did not in any way condition the recognition of legal fees on the significance of the fees in question.

Q. IN THE ANSWER AT PAGE 15, LINE 2, MR. LARKIN OBSERVES THAT THE COMPANY PERCEIVES THE DOJ CLAIMS TO HAVE BEEN UNREASONABLE, RESULTING IN SIGNIFICANT LEGAL FEES, AND THAT THERE IS NO BASIS

ON WHICH THE COMMISSION MAY CONCUR WITH THIS COMPANY VIEW. WOULD YOU COMMENT?

A. I disagree. The DOJ was seeking damages exceeding $100,000,000. Ultimately, the court established damages at less than $310, 000, or about 0.3% of the penalty sought by the DOJ. Even if compared to the DOJ's early settlement offer of $5.0 million, the court imposed only about 6.0% of the DOJ amount. This appears to fully support the perception that the DOJ action was unreasonable.

Q. MR. LARKIN FURTHER OBSERVES AT THAT POINT THAT THE COMMISSION IS PUT IN THE POSITION OF JUDGING THE QUALITY AND MOTIVE OF THE DOJ AND THAT SUCH IS NOT THE COMMISSION'S ROLE. WOULD YOU COMMENT?

A. I agree that such judgement is not a responsibility of the Commission and would observe that no such judgement is needed. The court has already judged both the quality and the motive of the DOJ. It is abundantly clear that the court's decision imposing a $300,000 fine in a case claiming $100 million of amounts due from the Company has already judged the quality of the DOJ position as being grossly excessive. The Court clearly indicated its opinion as to DOJ's motive by saying, "[T]he United States contends that

since a judgement was returned in its favor on its claims against the Defendant Florida Cities, [that] Florida Cities is hereby precluded from being a Sec. 2412(a) `prevailing party'. The Court agrees with Plaintiff's analysis and, grudgingly (emphasis added), with its conclusion." See page 11, Exhibit 6 (GHB-101).

Q. IN RESPONSE TO A QUESTION AT PAGE 16, LINE 23, MR. LARKIN OBSERVES THAT HE DOES NOT BELIEVE THAT BANKRUPTCY WOULD HAVE AFFECTED THE SERVICE TO RATEPAYERS. WOULD YOU COMMENT?

A. Mr. Larkin's view of the impact of bankruptcy is quite interesting. He argues that service would not be affected and then observes that FCWC would have emerged from the bankruptcy with debts discharged and stockholder interests extinguished. He concludes with the observation that under these conditions that "...utility rates might have seen a significant lessening." From these comments, it could be rationally concluded that the bankruptcy actually would have been the best of all worlds for the ratepayers.

I have a problem with this conclusion. To me, it stretches the credulity of finance and economic theory to conclude that a utility that

goes through a bankruptcy proceeding will be able to maintain the same quality of service, and at lower rate levels, than was maintained by the utility operating from a healthy financial position. I am convinced that such conditions would result in undesirable consequences to ratepayers.

Q. IS BANKRUPTCY, OR THE POTENTIAL THEREOF, THE REAL ISSUE IN THIS PROCEEDING?

A. No. The issue is the ability to recover reasonable costs that were prudently incurred in defending against the proposed imposition of large penalties by the DOJ; penalties that subsequently were found by the court to be inappropriate.

Q. EVEN IF SERVICE LEVELS AND RATES WOULD NOT HAVE BEEN ADVERSELY AFFECTED BY A LARGE PENALTY, IS THAT JUSTIFICATION FOR DENYING RECOVERY OF THE COSTS INCURRED IN AVOIDING THE PENALTY?

A. No. As has been observed, the Company surely has a right, if not an obligation, to defend itself against claims that appear to be unwarranted or excessive. In doing so costs will be incurred, and to the extent that such costs are reasonable and the Company actions are prudent, the costs should be recoverable in the application of cost

of service ratemaking principles.

Q. AT PAGE 23 MR. LARKIN RECOMMENDS DISALLOWANCE OF A RETURN TO MEASURE THE IMPACT OF DELAYED RECOVERY OF THE LITIGATION COSTS. WOULD YOU COMMENT?

A. Yes. Mr. Larkin has avidly argued against recovery of the costs in any form or manner. At this point, he appears to be building a fall-back position that will gain a partial victory in the event that cost recovery is found to be appropriate. As I have stated, both in my direct testimony and in this rebuttal testimony, I believe that accepted cost recovery principles fully support the recovery of these costs. If these costs have been legitimately incurred in maintaining the system (and no one has challenged that), cost recovery opportunity clearly should be provided. Since a part of the total cost of litigation is the cost of recovery delay, the costs associated with the delay should also be recovered.

To spread recovery out over a ten year period results in adding time value costs to the amounts initially expended. Accordingly, assuming that cost recovery is found to be appropriate, the rate base inclusion is unavoidable if full cost

recovery is to be made possible.

Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?

A. Yes.

MR. GATLIN: I offer the testimony, the rebuttal testimony, of Mr. Michael E. Murphy to be inserted into the record as though read.

CHAIRMAN JOHNSON: It will be so inserted.

MS. GERVASI: And Staff would offer Responses to Staff's Second Request for Production of Documents No. 9 and Second Request for Interrogatories No. 40 and 47.

CHAIRMAN JOHNSON: It will be so marked and, it's Exhibit 22.

(Exhibit 22 marked for identification.)

FLORIDA CITIES WATER COMPANY

FT. MYERS & BAREFOOT BAY DIVISIONS

WATER AND WASTEWATER OPERATIONS

REBUTTAL TESTIMONY OF MICHAEL E. MURPHY

TO

DIRECT TESTIMONY

OF

HUGH LARKIN, JR. AND PATRICIA MERCHANT

DOCKET NO. 971663-WS

Q. Please state your name.

A. Michael E. Murphy, 4837 Swift Rd., Ste. 100, Sarasota, FL 34231.

Q. What is your position with Florida Cities Water Company(FCWC)?

A. I am Vice President and Chief Financial Officer.

Q. Have you offered direct testimony in this proceeding on behalf of FCWC?

A. Yes.

TESTIMONY OF HUGH LARKIN:

Q. On page 22, line 22, of the direct testimony of Mr. Hugh Larkin Jr., he brings up a point concerning legal fees incurred for the defense of some of FCWC's employees. Did you present exhibit MM-2, Legal Expense Schedule, which is a complete listing of legal expenses and costs for which FCWC is seeking to

recover in this case?

A. Yes I did.

Q. Did you exclude any and all legal expenses incurred for personal legal counsel for FCWC's employees in exhibit MM-2?

A. Yes. To the best of my knowledge, there are no legal expenses incurred for personal legal counsel for any FCWC employee included in MM-2.

TESTIMONY OF PATRICIA MERCHANT:

Q. On page 5, line 24, of the direct testimony of Ms. Patricia Merchant, she brings up a point concerning whether the penalties and legal fees caused severe financial damage to FCWC, would you please respond to her point?

A. In my prefiled direct testimony (beginning on page 4, line 6) I pointed out that over $100 million in penalties requested by the DOJ were of such magnitude as to constitute a possible financial calamity to FCWC. I never indicated that FCWC would be placed in financial calamity because of the legal expenses incurred by FCWC or penalty imposed by the Court.

Q. Has there been any financial harm to FCWC caused by the legal expenses incurred by FCWC or penalty imposed by the Court?

A. Financial harm is rather strong language. Certainly

the Company would be better off financially if it had not incurred over $4.0 million in legal expenses and penalties in connection with this litigation. Obviously the Company has less cash to pay operating and capital outlays and the Company has reduced equity and reduced financial ratios which are important when it comes time to borrow additional funds from outside sources.

Q. On page 6, line 6 Ms. Merchant indicates these costs were incurred because of violations at specific wastewater divisions. Is this correct?

A. No. Legal expenses were incurred for all FCWC wastewater divisions. As indicated in Mr. Allen's prefiled direct testimony (beginning on page 40, line 12), the DOJ was conducting discovery at all FCWC wastewater divisions until the Amended Complaint was filed in March 1995.

Q. On page 10, line 3 Ms. Merchant indicates that allowed costs should only be recovered from North Ft. Myers, Barefoot Bay and Carrollwood wastewater customers. How would this effect the Company's current proposal of collecting $.42 per water and wastewater customer per month?

A. That amount of $.42 per month would need to be increased to $3.44 per month for wastewater customers

in the North Ft. Myers, Barefoot Bay and Carrollwood divisions only. If somehow the Commission determined that an appropriate allocation method might be a ratio of the amount of penalty incurred by division, then North Ft. Myers wastewater customers would be charged $9.11 per month. Barefoot Bay and Carrollwood wastewater customers would be charged $.57 and $2.49 per month, respectively. All of these options assume a recovery period of 10 years.

Q. Does this conclude your testimony?

A. Yes.

MR. GATLIN: I believe that's all we have, Madam Chairman.

CHAIRMAN JOHNSON: Is that it, Staff, for you?

MS. GERVASI: Yes, ma'am.

CHAIRMAN JOHNSON: Public Counsel?

MR. McLEAN: Nothing further, Commissioner.

CHAIRMAN JOHNSON: Show all of those exhibits admitted, then, without objection.

MS. GERVASI: Thank you.

MR. GATLIN: Thank you.

(Exhibits 1-22 received in evidence.)

CHAIRMAN JOHNSON: Any other matters?

MS. GERVASI: The only other thing, Commissioner, if I may, just as a reminder, announce when briefs are due. And they are due on September the 14th, with Staff recommendation going to the Commission's regular Agenda Conference on November the 3rd.

CHAIRMAN JOHNSON: Any other questions, Commissioners, or parties?

Seeing none, is that it?

MS. GERVASI: Yes, ma'am.

CHAIRMAN JOHNSON: Okay. This hearing is adjourned.

MS. GERVASI: Thank you.

CHAIRMAN JOHNSON: Thank you.

MR. McLEAN: Thank you, Commissioners.

(Thereupon, the hearing concluded at 11:00 a.m.)

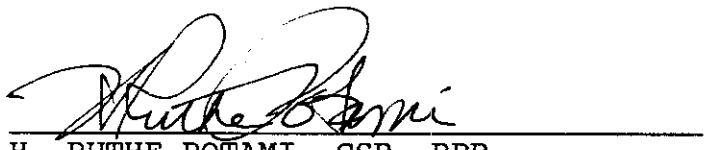
STATE OF FLORIDA)
: CERTIFICATE OF REPORTER
COUNTY OF LEON)

I, H. RUTHE POTAMI, CSR, RPR Official Commission Reporter,

DO HEREBY CERTIFY that the Hearing in Docket No. 971663-WS was heard by the Florida Public Service Commission at the time and place herein stated; it is further

CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript, consisting of 376 pages, Volumes 1 and 2 constitutes a true transcription of my notes of said proceedings and the insertion of the prescribed prefiled testimony of the witness.

DATED this 14th day of August, 1998.



H. RUTHE POTAMI, CSR, RPR
Official Commission Reporter
(904) 413-6732

FLORIDA CITIES WATER COMPANY

EXHIBITS _____ (ABA-1 THRU ABA-2) OF

DR. ABDUL B. AHMADI

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATE OF AMERICA, Plaintiff, vs. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CASE NO. 93-281-CIV-FTM-21

COPY

DEPOSITION OF ABDUL DAQI AHMADI

Upon oral examination taken by counsel for the Plaintiff on October 20, 1995, commencing at 9:45 a.m. at the office of the U.S. Attorney, 2000 Main Street, Suite 701, Fort Myers, Florida before Rose Marie Cychmistruk, RPR, Notary Public, State of Florida at Large.

APPEARANCES:

For the Plaintiff: T. ANTHONY QUINN, ESQ.
Trial Attorneys, Environmental Enforcement Section
U.S. Department of Justice
P.O. Box 7611, Ben Franklin Station
Washington, D.C. 20044-7611

For the Defendants: DON G. SCROGGIN, ESQ.
Gabeler, Baise & Miller, P.C.
1320 Old Chain Bridge Road
Suite 200
McLean, Virginia 22101

APPEARANCES (Cont'd.):

For Abdul Daqi Ahmadi:
NONA R. SCHAFFNER, ESQ.
Assistant General Counsel
State of Florida Department of Environmental Protection
Twin Towers Office Building, MS35
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

Thereupon,

ABDUL DAQI AHMADI,

the deponent herein, after having been first duly sworn, upon his oath, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. QUINN:

Q Dr. Ahmadi, would you please tell us your full name?

A My full name is Abdul Daqi Ahmadi; A-b-d-u-l, D-a-q-i, A-h-m-a-d-i.

Q I know that people refer to you as Dr. Ahmadi. What is your degree in, sir?

A I went to the University of Florida and obtained my Ph.D. in environmental engineering sciences.

Q And when did you do that, sir?

A This was in 1981.

Q Sir, have you ever had your deposition taken before?

A Yes, I have.

Q Okay. How many times?

A Many times.

Q Let me go over a couple of the rules or ground rules if I could. Do you understand that the court reporter is here to write down the words that you say so you should speak in words and not gestures. Do you

understand that?

A Yes.

Q Do you also understand that the oath you took is similar to an oath you would take in court? Do you understand that?

A Yes.

Q Because the court reporter is transcribing things as we speak, it's important we don't try to talk over each other, so I'll try to finish all my questions and I'll try not to overlap if you would do the same.

If you don't understand a question I've asked, let me know and I will try to rephrase it or repeat it. Okay?

A Yes.

Q If you don't understand a word I've used or a definition of a word I've used or the definition you think might be different, there might be some ambiguity and you recognize it, please let me know and I'll try to correct that right away. Okay?

A Okay.

Q Also, if you need a break at any time, please let me know and we'll take a break. Okay?

A Okay.

Q As I told both Miss Schaffner and you before we started today, I do not anticipate going very long with

you today, certainly no longer than lunch.

I'd like to get right into the areas of questioning that I have for you, sir.

Can you please give me an idea of your job duties currently?

A I am currently in charge of the -- all water facilities functions. It encompasses permitting, compliance, enforcement with regard to sewage treatment facilities, industrial wastewater facilities, groundwater monitoring associated with those facilities, underground injection control facilities. That includes surface water discharges as well as groundwater discharges.

Q Do you deal with this acquisition of potable water?

A I'm also dealing with, yes, drinking water facilities, permitting, compliance and enforcement.

Q And treatment of drinking water as well?

A Right.

Q Okay. What is your current job title, sir?

A I'm a water facilities administrator. I'm a Professional Engineer Administrator. That's the official title.

Q And do you hold a professional license in the State of Florida?

A Yes, I do. I'm a registered engineer with the

State of Florida since 1984 in sanitary engineering.

Q Sanitary?

A Uh-huh.

Q How long have you been with the Florida Department of Environmental Protection?

A I started with the Department -- our previous name was DER -- Environmental Regulation. It was changed to DEP two years ago in 1981, September of 1981.

Q During -- since 1981, have you been involved in water issues?

A I started as a staff engineer in 1981 primarily in permitting of domestic resource facilities, collection systems and then in 1984 was promoted to the district engineer after I obtained my professional engineer registration. And then at that time I was heading all district functions. I was a PE in addition to one other staff PE in the district.

Q PE is professional engineer?

A Yes.

Q Since 1981, have you had involvement with the Florida Cities Water Company, Incorporated?

A Off and on whenever an application came in or if there was a meeting or any other issue that involved a response just like with any other facility. I was involved to that extent.

Q How many facilities -- withdrawn.

How many privately owned wastewater treatment facilities are within your jurisdiction in your district?

A I have not counted exactly how many private as opposed to publicly owned treatment works but we have roughly 700 domestic resorted facilities in our district and most of those are private. We have some city, some county and some even Federal and state agencies, departments.

Q Tell me again, please, when you became your most recent job title with FDEP?

A The water facilities administrator, we have been going through reorganizations several times of the agency. In 1988 was the current title.

Q Okay.

A Prior to that, I was a program -- water program administrator which included all of the things we mentioned earlier. All state included division infringement activity.

Q It included industrial users and wastewater treatment, groundwater monitoring, underground injection control and surface water issues?

A Drinking water and regional fill prior to 1988. But since '88, it's only those facilities that I mentioned and you mentioned also.

Q Sir, you had mentioned that you were involved in three aspects with regard to those issues; permitting, compliance and enforcement; is that correct?

A Yes.

Q Okay. At any given -- well, at any given time, how many permit applications are pending for wastewater treatment plants?

A That's hard to really ascertain and see the exact number but I keep a manual log since I started the job back in 1981 for each year. The minimum we had is probably in the last two years which was close to a thousand permits per year. So far this year, we have over 900 permits, applications received in my section.

Q So, you're ahead of schedule this year.

A Compared to the last two years, we're doing a little better this year.

Q Okay. At any given time, how many enforcement actions are pending against wastewater treatment plants?

A Again, I do not count how many per year, but if -- we have an ongoing inspection of all the facilities. Some are scheduled, prescheduled on a five-year basis, others are unannounced schedules that if you go and if you find noncompliance, we bring them down.

So, I -- I don't have any figure on that but it's probably in the tens.

Q In the tens?

A Uh-huh; ten, 20, 30.

Q You talked about compliance inspections. Did you include the ten to 30 enforcement actions? Within that, did you include compliance inspections?

A No. Compliance inspections are one of the functions of the agency that is probably one of the better functions that we go and ascertain how the facility is visually, is it in compliance with the permit conditions, are the individual components working?

We inspect the records. Are they maintained? Sometimes we go in and inspect their lab operation while they perform the tests, make sure they are using standard methods, approved methods and also make sure they are using the approved equipment and that the chemicals are standardized, the equipment is standardized, quality assurance is there.

So, that's the personal inspection and then occasionally if he feels that the facility is not meeting the standards, our inspectors are trained to carry with them some chemicals and bottles and equipment where they would take a sample and run it to the laboratory of the state and then we analyze in our own lab the results and then we compare that with them.

Sometimes we split the samples while they're

there and tell them you analyze. We analyze, we'll compare the results and we'll determine whether you are in compliance or not.

So, that's a subject function which basically gives the assurance that the facility is in compliance with the state rules.

Q In a given year, if you can estimate for me, about how many compliance inspections occur in your district?

A We have over 300 drinking water facilities, over a hundred industrial, over 700 domestic resource facilities, over 700 injection wells in the outfall district. We'll like to get to those at least once a year on all of them.

Q With regard to the wastewater treatment plant or the domestic sewage plants -- and I'm going to use those two terms interchangeably -- out of the 700, can you tell me approximately how many were inspected, have been inspected thus far this year?

A We have about two and a half months left. I would say close to 70, 75 percent. We have one vacancy in the compliance section that -- that may throw off the numbers a little bit but generally you would like to keep this an ongoing business.

And we have a policy if there is a complaint,

always go to it. So, there are situations where a facility may be inspected five, six times a year and a lot more than others if there is a complaint or noncompliance.

Q In your staff of engineers, approximately how many people are -- withdrawn.

How many -- how is your staff of inspectors organized?

A We have in the domestic wastewater section a section manager who's also a professional engineer. He is in charge of the domestic wastewater section activities that includes again permitting, compliance and enforcement.

That section is subdivided into two groups; the permitting side and the compliance enforcement section. The permitting has primarily permitting engineers. We have one other professional engineer that works for him and then we have several other staff engineers who have been there for many years.

They basically review and process permit applications. Those are the construction permits, operation permits. We used to have temporary permits. Not any more since May. We delegated the permits program by the EPA, collection systems.

And then we have the compliance enforcement section which also reports to the section manager and

their main function is compliance and enforcement.

Q And how many people are in the compliance and enforcement section?

A In compliance and enforcement are five people. And then we have a section manager there who is an environmental manager and then several environmental specialists and one engineer.

Q So, if we break it out, each inspector inspects about 140 wastewater treatment facilities a year?

A The -- the permitting engineering also are doing some inspections and the groundwater technical support staff is also helping in that function.

Roughly, you will see about 120, 40. I go in and inspect occasionally the plants.

Q Have you ever inspected the Florida Cities Waterway Estates wastewater treatment plant?

A Yes, I have.

Q And how many times have you inspected it?

A Probably a couple of times.

Q When was the most recent time?

A Sometime this year. I don't recall the exact dates but sometime this year.

Q And was it in an enforcement or compliance inspection?

A This was just a reconnaissance inspection where

I wanted to get a feel of how they were doing.

Q Okay. Why did you go there?

A We were getting some complaints from the -- the people that -- nearby there is a restaurant. There was odor there. So, I asked the staff to go there and then one day I went on my own to verify their findings.

Q Was the finding that there was an odor coming from the wastewater treatment plant?

A The staff said there was none. And then when I went there, I noticed -- I went through the entire plant with the operator. I found nothing there.

Q Other than the complaints about odor, were there any other complaints regarding the Florida Cities Waterway Estates wastewater treatment plant this year? This year.

A This year, no. That's the only one complaint I got.

Q And was the only complaint from the restaurant?

A Yes.

Q Have you gone -- other than to do reconnaissance with regard to the odor issue, have you been to the Florida Cities Waterway Estates wastewater treatment plant on any other occasions this year?

A No.

Q Other than do the reconnaissance during your visit to the wastewater treatment plant, did you do

anything else other than determine if there was an odor problem?

A Basically looked at the overall operation which is -- will tell us if there is an operation problem with the facility that's causing the odors. Normally in a sewage plant, air is inadequate in the treatment process or a mechanical or an electric component is down or not functioning well. Basically the operator is not paying attention or the sludge is not withdrawn, a lot of things, and that kind of activity leads to odors. And I was looking for those signs but I couldn't find any.

Q Did you prepare a written report based upon your inspection, sir?

A No. I just told the staff that I went there and the plant seems to be in compliance from what I observed.

Q Based upon your recent inspection, what is your overall impression of Florida Cities Water Company's operations at the Waterway Estates wastewater treatment plant?

A They seem to be in compliance with our rules.

Q Would you say that they -- that Florida Cities Water Company operations at the Waterway Estates wastewater treatment plant are exemplary?

A They are trying hard to -- they understand they're in the middle of a relatively high class area.

And they're trying hard to make sure that the public is happy and that they are in compliance with the state rules.

Q Do you know -- can you tell me whether they're trying hard to make sure they're in compliance with the Federal?

A I see no reason why they shouldn't. If they want to try to be in compliance with the state rules, they should definitely be in compliance with the Federal rules.

Q You say they're trying hard to make sure the public is content or happy. Was there a point in time when they were not trying hard in your opinion?

A That's hard for me to say whether they were trying or not. There were times where there were more complaints in the past years.

Q Does -- withdrawn.

What does the fact that there are complaints about a wastewater treatment facility indicate to you?

A Could be a number of things. In fact, I got calls this last week from a lady who was very upset with the Reed (phonetic) case that was before the Public Service Commission in Tallahassee for this very plant we are talking about.

As you may know, that's a public service related facility in the State of Florida. They are obligated or

they are allowed under state rules to recover reasonable costs and fees and expenditures. Anything we impose as a state agency on them or as a county government or even Federal government is a consequence of our rules and that expense is passed on to the customers.

And in this case, this one customer is saying that they are paying close to a hundred dollars a month for one or two people and that's a lot of money and here that's not enough, they're asking for more. When they're asked why, they say it's the state and the Federals who are making them do this thing and do that thing. We have no choice.

So, then they call us; is that the case? We told them something, yes. We told them, you take this six-foot contour. We told them, you expand the plant to meet AWT. We told them, your expanding will not allow you even to go to the river and all these kind of things.

Q Are you familiar with the rate case that is going on now regarding Waterway Estates?

A Only that there is a case pending before the Public Service Commission. We do not get involved in the economic or financial aspects of it other than if you're asked, our staff provides them what we have in our files with regard to our dealings with them in compliance with the rules.

Q Have you supplied anything to the Public Service Commission with regard to your dealings with the wastewater treatment plant at Waterway Estates?

A I'm not sure on that. If they're in contact, yes, I believe we have. We have a very good working relation with the PC.

Q Can you tell me -- and you might not be able to answer this and that's okay -- whether a privately owned wastewater treatment plant is able to pass on costs of litigation to the rate payers?

A I'm not sure. I think the Public Service Commission probably will be able to tell that. My feeling is that they may find that we were -- this is -- this is doing cost of business and it should be passed on.

Q How about do you know whether a civil penalty for failure to comply with environmental regulations can be passed on to rate payers?

A That's in the same line. I'm not sure. If -- if there is a legal way, I'm sure they will find that way and implement it so that is passed on to the customers.

Q You'd mentioned two aspects of work done at the Waterway Estates plant; one was movement of the outfall and the second was upgrade to advanced wastewater treatment. Is that correct?

A Yes.

Q Okay. Are you familiar with any other modifications with the Waterway Estates plant?

A Yes, I am.

Q Okay. What else?

A We asked them to provide us a capacity analysis report back in 1991-'92, in that time, to value with their facility to find out how many people out there are being served, how many people is projected to be served in the future and how is their plant capable of providing service for those future connections.

In that line, they provide us a report and in their report they indicate that -- well, we found out that they really didn't have much reserve capacity for any future service and connections. And unless the area is fully developed and they do not intend to provide service to the future citizens, in those cases that's the end of that capacity and as the area is fully developed, no more expansion.

In their case, there are some future prospects for growth and development and we told them that they need to expand the plant. And that's mandatory by our rules if they expand the plant based on the capacity analysis report, then that cost is passable to the residents.

Q You talked about the capacity analysis report. Is that part of a master plan?

A No. It's a Florida Administrative Code requirement and it's specific to each entity in each private or public facility.

Q Are there any civil penalties that are -- that may be imposed as a result of a privately owned wastewater treatment plant having inadequate capacity for future growth?

A It is possible if we've issued them permits and they say that they have the capacity and then we find out that when those systems are built and certified and connected to the facility and the facility gets overloaded, yes, it is possible that they lead to noncompliance, that we will impose several penalties.

Q Now, with regard to movement of the outfall from the canal to the Caloosahatchee River, are you familiar with the events surrounding that?

A Yes.

Q Okay. Can you please tell me what first initiated the -- what was the first thing that was done to initiate the movement of the outfall from the canal to the river?

A Sometime around 1988, the department decided, if nothing else, for consistency purposes that we implement the AWT requirements on all surface water discharges to the river.

And we have the City of Fort Myers that has two plants that are discharging; one is north of us, I guess east of us that way, and then one is south of us that way, southwest. And then Florida Cities also owns another facility on the south side and they discharge in the same river on this side and then they own this plant on the north side, which is that way, and then the City of Cape Coral.

All of the facilities on the southern side of the river had AWT permits. In fact, prior to 1981 when I came here, they all had obtained AWT permits and were in operation or just being completed and all of the plants which were on the north there over by the AWT plants there. One other is the North Fort Myers utility, which is that way, and then Waterways is in the middle and Cape Coral is further down.

None of those had AWT and they were involved into a regional planning on the north side to have several facilities constructed and supported by the county and the city through a co-op and also the private folks will be merged with that and -- and either have a discharge or eliminate the discharges all together.

And that was in my opinion one reason based on my discussion with the staff -- I wasn't at the time when these things happened -- that that was the reason that led

to kind of a situation where the City of Cape Coral and North Fort Myers utility, the Waterways Estates Plant, all of them remained discharge to the river without obtaining the AWT sooner.

Q Was the modification to bring the plants to AWT imposed by the Grizzle-Figg law?

A No. Not in our case. The Grizzle-Figg law is specific only to two areas; one is Charlotte Harbor which is a subject ecosystem and one is Tampa Bay which is also.

This is facts specific where we determine that -- that everyone needs to be protected from pollution and a study was done and it was determined that up to 48 million or 49 million gallons a day could be discharged to the river without any detrimental impact.

And currently there is approximately two million gallons being discharged to the river. So, there's still some reserve capacity of 17 million that's left there.

Q Was there a point in time when the Waterway Estates wastewater treatment plant was assigned a zero waste load allocation for the Caloosahatchee River?

A Based on the planning documents that were in the initial stages that North Fort Myers Utility, Waterway Estates and the City of Cape Coral would all construct and operate two plants in the northern part and there may be land applying their effluent disposal. On that situation,

they may not be able to discharge.

Q Okay.

A It was just on a planning document. And that plan did not materialize and they were forced to discharge and continued to discharge.

Q When you say they were forced to discharge, do you mean forced to discharge to a surface water?

A Yes.

Q Okay. When --

A They continued to discharge because that's what they were doing.

Q They were discharging to the river at a point in time; is that correct?

A All along.

Q Okay.

A They've been discharging from the very beginning, the City of Cape Coral and Waterway Estates, to surface waters. And in that planning document, my understanding is they were planning to go to land application. If that plan would have been implemented, they should have not been discharged from Waterway Estates or the City of Cape Coral plants.

Q Do you know -- you said that the -- withdrawn.

The land application did not materialize. What -- what does that -- what do you mean by that? Can

you give me a little more insight?

A The plan did not get implemented all together. The City of Cape Coral went on its own, the county withdrew. Waterway Estates being a very minor player in this entire thing had a plant that was discharging. It continued to discharge and it did have permits from the state and to my understanding from agencies where most of their -- most of the time.

Q Are you aware that Waterway Estates did not have a Federal permit for at least some of the period of time?

A For some period of time, they may not have.

Q You also said that Waterway Estates was a very minor facility. Can you tell me what you mean by that?

A Compared to the other discharges, it's just about one million gallons a day which is minor in capacity and volume. The City of Fort Myers has 23 million gallons so that's in relation to that or Cape Coral has 14 million gallons. Their volume and discharge capacity is very small.

Q Can you tell me whether FDEP considers discharges to surface water as a more or less favorable alternative to land application of effluent?

A The DEP has a water policy which, believe it or not, in this area we have a lot of rain but even though the rain stops here in the south for two weeks, the

drought kicks in. So, we do have severe water problems here, water supply problems.

From that perspective, it's the state's position that we would encourage land use applications for most of the water sewage facilities and that's our official policy.

There are, of course, situations where the land is not available or it's not feasible if it's available. It's too costly. Then the rule does allow surface water discharges on the ground and all of that.

Q So I'm sure I understand this, you said that FDEP's water policy encourages land use. Does that mean FDEP's water policy discourages effluent discharge to water bodies?

A There are provisions in the rules. If reuse is feasible, our rule says that reuse should be taken but that decision is left to the utilities to make. If it's financially attractive to discharge surface waters to them and there are public interests involved in terms of, you know, the users and customers, then in those situations the -- the surface water discharge is allowable under our state rules.

Q Is feasible -- the term "feasible" defined within those rules by some specific formula?

A Feasible is a -- that decision really is left to

the utility to make. They have to present alternatives. Let's say they have three alternatives or four alternatives. Out of those, they have told us the cost of each and then if reuse is the most expensive of all, then obviously it's not practical because cost is passed to the customers.

Q Is feasible in terms of this rule equated with cost effective?

A To some degree it is related to the cost. I'm not sure if it's just equivalent to that but the utility makes that decision and if they give us those figures, we review them and then we take them to the case water.

Q You -- you do not independently investigate a utilities decision on whether land application is feasible or not feasible?

A To the extent possible, we check on that from our own knowledge but we don't have any staff to go in or accomplish where they would go in and investigate thoroughly

Q Do you know -- do you know whether any investigation into Florida Cities Water Company's determination -- determinations regarding land use were feasible or not feasible?

A Their situations really are a little different. They have been discharging since I've been with the

agency, so this policy became effective just in the past several years. So, it really didn't have a firm policy on that. And it applies only to new facilities or to expansion of existing facilities.

So, in their case I'm not even sure that that would apply because they were discharging.

Q At the time you -- you joined FDEP, do you know whether the Waterway Estates outfall was located in the middle of the Caloosahatchee River roughly or in a canal adjacent to the Caloosahatchee River?

A At the time I started with the DEP, the first year I have no idea if we even had a facility called Waterway Estates.

Q How about subsequent to your first year?

A After I get heavily involved, I found out there is such a facility in the north and they are discharging to the Caloosahatchee through a river -- through a canal.

Q Okay. Can you tell me a little bit about the flow that existed at the time in that canal leading to the Caloosahatchee?

A What do you mean "flow"?

Q Was the flow in the canal the same as the flow in the middle of the Caloosahatchee River?

A To the best of my knowledge, that canal is connected tidally to the river and for all practical

purposes they are both classified as Class III waters of the state. There's a definition for that. And, so, there's no distinction really in the qualities of the water or the standards that are applied to both of them.

Q My question was really more with regard to the flow. You'd said that the canal was tidally influenced. My question dealt not so much with the level of the water in the canal but, rather, the rate at which water flows through the canal. Can you shed any light on that?

A We had no information on the actual flows in the river to my knowledge or to the canal. The only thing we have knowledge is the discharge itself.

Q And what -- when you have only information about the discharge itself, can you tell me what you mean by that?

A The sewage plant discharged, which is the one million gallons per day capacity.

Q Can you tell me whether -- can you tell me whether or not the only flow in the river -- I'm sorry. Withdraw it.

Can you tell me whether or not the only flow to the canal was that which was added from the discharge of the wastewater treatment plant?

A The only extraneous flow would be that -- let's assume we totally eliminate the Waterway Estates plant, go

to land disposal, let's say, a hundred percent. That canal will still be as it is today when they are discharging so there is -- there's going to be flow, whatever amount of flow is in the river.

Q At the time Waterway Estates was discharging into the canal, can you tell me whether or not you would have gone swimming in that river -- I mean in that canal?

A Some people are swimming here and there in areas where there is no swimming and they jump in right here in fact on this canal -- Centennial Park.

And, personally, I don't even know how to swim unfortunately.

Q Would you have let your children swim in the canal that leads to the way the -- near where the Waterway Estates canal was discharging?

A I'd probably advise them not to swim in and around any sewage pond.

Q Okay. Why not?

A For one thing, there may be some viruses in there, in the effluent. And the viruses are not regulated by us but there is an indication and situation where they have advised.

Q Do your children swim in the middle of the Caloosahatchee River?

A They've gone boating in the middle of the river

and occasionally maybe some water splashed on them.

Q Have they gone waterskiing out there in the middle of the Caloosahatchee River?

A I don't think it's right in the middle but anywhere in the river they have -- I've seen sometimes where my kids have gone there and I've permitted them to go in.

Q Are you concerned about the viruses in the middle of the Caloosahatchee River?

A There is a chance for even known from sources, unregulated sources, there may be viruses and other pollutants and contaminants that may not be good and we've seen some in areas where there's no discharge and yet there have been positive incidences of high fecal chloroforms, that swimming has been prohibited by the HRS.

Q Is fecal chloroform an indicator of the presence of sewage, isn't it?

A It's an indicator of organism that shows they are of human origin or of warm blooded animals origin waste. It's not limited only to sewage facilities but that is most of the time a contributing factor.

Q Can you tell me whether the -- we're talking a little bit about the presence of or the potential presence of viruses or pathogens in the Caloosahatchee River. Can you tell me whether in your opinion there is a greater

chance of the presence of pollutants in the middle of the Caloosahatchee River than there was in the canal when Waterway Estates was discharging to it? Can you tell me whether there was more likelihood or not?

A The facilities are required to meet certain standards before the discharge by the state permits and as long as they meet those standards -- that standard is much lower than the standard for chloroforms for swimming waters.

Q Okay. You say that the canal was also a Class III water body. Is that correct?

A Yes.

Q Back when Waterway Estates was discharging to it, was it also a Class III water body?

A Yes, sir.

Q Class III water bodies have to meet certain measurements with regard to the presence of certain items. Is that correct?

A Yes, sir. All -- all water of the state are classified into a class from one to five.

Q And Class III allows human use; is that correct?

A Class III are classified as recreational waters primarily.

Q Class III is recreational waters?

A Uh-huh.

Q What are Class I?

A Class I are potable waters.

Q And Class V are?

A Industrial and navigational waters.

Q Since you've come aboard with FDEP, has the classification of the Caloosahatchee River changed?

A Not to my knowledge.

Q Can you tell me whether the condition of the Caloosahatchee River, the water -- withdrawn.

Can you tell me whether the water quality of the Caloosahatchee River has improved or been degraded since you came on board with FDEP?

A We have not documented any degradation of the water since I've been with the agency. It has remained the same.

There are occasional -- there are occasions that say in the summer months where you get an excessively high -- several days high temperatures and temperature in the water goes up, the water normally is affected by the temperature and so the dispersion of the natural aeration is less and so there have been some instances, but aside from the natural phenomenon, the water has stayed -- or has improved, stayed the same or has improved regardless of all the discharges.

Q Okay. Can you tell me why Florida Cities Water

Company moved the outfall from the canal to the river?

A Yes. We told them that they need to expand their plant or upgrade their plant to advance wastewater treatment and also to relocate their discharge point to the middle of the river.

Q Why -- why did FDEP require that the outfall be moved to the middle of the river?

A One thing is to become consistent with all the other discharges.

Q Okay. Any other reasons?

A The other would be that would be the area where there would be maximum dispersion.

Q And what do you mean by maximum dispersion?

A More mixing.

Q So, is it -- is it accurate to say that there was less mixing or less dispersion within the canal than there would be in the middle of the river?

A That probably is true.

Q Do you know that for a fact or is it just an assumption?

A That's what our experts told us that there would be better mixing in there and then we'd relieve mixing.

Q If there would be better dispersion in the middle of the water body, why did FDEP wait until 1988 to require the movement of the outfall?

A We haven't seen an impact on the receiving waters and, again, this was a very small facility.

Q When you say you haven't seen an impact on the receiving waters, what do you mean?

A Any degradation, fish kills, complaints.

Q Well, then why move the -- why require Florida Cities move the effluent?

A That was a puzzling question why we would do this. Basically for consistency. The Florida Cities have a plant on the south, had gone to AWT prior to 1981 and was discharging in the middle of the river on the southern side of Lee County and, so, the City of Fort Myers was doing the same thing.

The City of Cape Coral was on the north. They were in the same boat as the Waterway Estates plant and at about the same time we told both of them to go to the river at that point, at that time also.

Q Was Florida -- FDEP's order to simultaneously upgrade to AWT from secondary and to relocate the outfall?

A Could you repeat that?

Q Sure. Absolutely.

Did FDEP's order require that Waterway Estates upgrade to AWT and relocate the outfall?

A Yes. We did the same thing with one permit, both of them.

Q Wouldn't upgrading to AWT result in less pollutants being discharged to the canal even if the outfall had stayed the same?

A The --- the main thing with regard to AWT as opposed to the secondary treatment that they were achieving as the nutrients only. In fact, from the studies that were done by us, it was determined that the only limiting factor in the Caloosahatchee system is the phosphorus.

And if somehow we reduce or eliminate that, they could even go secondary treatment and the river will not be impacted. Because of that nutrient reduction requirement, we imposed the entire aid of utiliments (sic) on BUD sawdust or phosphorus and nitrogen. And that standard is a lot stricter than -- than the one that's on the books for the grade effect.

Q With regard to the nutrients, if -- the secondary treatment allows more nutrients in an advanced wastewater treatment than it does in an effluent; is that correct?

A Yes, sir. There is no reduction other than what's incidental to the treatment but you cannot for sure say what percentage was reduced.

Q Okay. And a discharge to the canal adjacent to Waterway Estates had less dispersion than a discharge to

the middle of the river; is that correct?

A At times if it's quiet and not too much wave action, wind action, less --

Q Okay. And the outfall at Waterway Estates is adjacent to, I believe, mangroves or other flora; is that correct?

A The current?

Q The -- the one in the canal.

A The one in the canal. There is some vegetation, yes.

Q And wouldn't the nutrients that were discharged when Waterway Estates was using secondary treatment affect the flora that was in that canal?

A It may in some cases may be beneficial, in other cases may be otherwise. So, we had no indication one way or the other.

Q Was any examination done one way or the other prior to requiring Florida Cities to move the outfall to the middle of the Caloosahatchee River?

A Not other than the worst allegations that is.

Q Was there any consideration given to just having Florida Cities Water Company upgrade to AWT and retain the outfall at its current location in the Caloosa -- in the canal?

A No. That was basically decided that anybody who

would discharge to the river, they would all go to either the six-foot contour line or they receive discharge.

Q And why?

A For consistency purposes and also for the long-term use of the river for surface water discharges.

As I say, an allocation of 49 million gallons was established and the river could take, let's say, a maximum number of pounds of pollutants and as long as that maximum is not exceeded, the river will function and should continue to function as a healthy ecosystem.

Our assessment is that even if Florida Cities and Cape Coral had continued with the secondary treatment, they would not have exceeded the pondage limit established for this body of water. So, that's one reason why there was not an impact or rush to get these folks to the six-foot county line.

This is for future plans that in case we do get into a 49 million gallons growth and development potential for the entire region, then in that case it will be crucial that we maintain the limits on that nutrients.

Q Is discharge of effluent to the Caloosahatchee River below the six-foot contour line preferable to discharge of effluent to canals leading into the Caloosahatchee River?

A That's a tough question really to answer. The

Caloosahatchee River, as I said, along with all its tributaries come out as Class III waters. And it has to maintain and meet the standard.

There is an assumption that if it's taken to the middle of the river -- that six-foot contour line, by the way, is a dredge canal. That is a man-made canal in the middle of the river from here to Lake Okeechobee is primarily for shipping and barging and things like that.

It was assumed that if it gets there, there would be more mixing, rapid mixing, and minimal impact. We have no evidence or data that if it was discharged to the shores that there would be more impact, I guess, but that is a perception or an assumption that was done.

Q Because the six-foot contour line is in the shipping channel -- is the six-foot contour line within the shipping channel?

A Uh-huh.

Q Because the six-foot contour line is in the shipping channel and because ships go up and down that, would there be more dispersion in that area than in those areas closer to shore?

A Again, we cannot count on ships that would be coming regularly, every five minutes. Sometimes there is one or two a day, sometimes one a week. But generally it was understood if it's taken to the middle of the river,

that's the deepest area and there will be better mixing.

Q Okay. Because of the better mixing in the middle of river, would it discharge to a place where there's better mixing be preferable to a discharge to a place where there is not such good mixing?

A Yes. There would be -- if you have given the amount of pollutants, if you want them mixed better than if you concentrate them in one area.

Q Okay. And why? Why is that better?

A If the pollutant is really a bad pollutant, it may have localized impacts, such as it would cause fish kills. And if there is a toxicant, it's a -- had an immediate impact or we have not seen from any of our facilities discharging Caloosahatchee any -- any impact such as fish kills, not to my knowledge.

Q About -- are you familiar with when Florida Cities Water Company finally did move the discharge point to the six-foot contour?

A Yes. We gave them a permit and told them to have prepared a plan to AWT and also continue expanded discharge to the six-foot contour.

Q And did they do that within the time limits initially set forth in the permit?

A Not in the initial permit.

Q Did they do it -- was -- withdrawn.

Was the permit modified in any way?

A Yes. I believe we extended the permit and gave them another temporary permit.

Q Okay. Did they come in -- did they meet the terms of the second permit which you call the temporary permit?

A I believe they did.

Q Okay. Do you know how much longer that second or temporary permit allowed them the primary first permit?

A I'm not positive. It may have been at least a year because they had some difficulties obtaining permits from other state and Federal agencies and local agencies.

We gave them a permit to go ahead, expand the plant and do all the work that we thought was necessary. And then when they went to the Army Corps of Engineers and to the county, they were telling them they're not going to get a permit to do this thing, so that was the reason that was indicated to us that they needed more time.

Q Is your office at FDEP involved at all with determining what the waste load allocation was for the Caloosahatchee River?

A We have basically a Level I and Level II study. Level I is where we do that in the district. We make a determination through historical data for reviews on any past; that is, information that is submitted to us each

month. If they are in compliance, then that's done and then we take care of the permits and price.

It's a Level II study that's more sophisticated, requires models and scientists were trained in that. And that's done in conjunction with our combination, done by our staff in Tallahassee.

Q Are you familiar with the point in time when the Waterway Estates facility was assigned a zero waste load allocation?

A In certain planning documents, that was assumed that there would be no discharge when they go to regional facilities in the north side.

Q And was that -- in those planning documents, did -- withdrawn.

Can you tell me whether those planning documents considered the point of discharge for the wastewater treatment plant in assigning a zero waste load allocation?

A I don't know what they -- what do you mean by it.

Q Okay. We talked -- we've been talking a little bit about the dispersion rate at various locations in the Caloosahatchee River and we had -- you'd indicated to me, I believe, that dispersion at the six-foot contour is greater than dispersion in tributary canals usually; is that correct?

A Yeah. That would be a true statement.

Q And that discharge -- excuse me. Withdrawn.

That the dispersion at the six-foot contour line was greater than the dispersion rate in the canal adjacent to the Waterway Estates facility; is that correct?

A Yes.

Q Okay. Can you tell me whether any consideration was given to that fact in the difference of the dispersion rates between the six-foot contour line location and the canal when in the planning documents a zero waste load allocation was assigned to the Waterway Estates facility?

A No. I believe the -- the entire premise there was that there would be regional facilities that will eliminate Waterway Estates and the City of Cape Coral and the North Fort Myers utilities plant all together. And then if that plant was to be implemented, there would be no discharge. So, on that basis, there was no discharge assigned to them.

Q So, the planning document assumed that the Waterway Estates plant would be put out of service.

A Dismantled. It would be dismantled as well as the City of Cape Coral and the North Fort Myers utility plants. The North Fort Myers utility plant was given allocation. They still have that in fact but they decided not to go to the river and instead go to the land

application and injection.

And the City of Cape Coral and Waterway Estates continued to discharge to the -- because of the lack of the planning or implementation of the plant.

Q Are you -- the document -- the planning document you're referring to, was that waste load allocation prepared by Mr. Bruce DeGrove (phonetic)?

I could show it to you if you'd like, if that will help.

A It was a planning document by the -- the county on the original and then our waste load allocation basically took the -- what the county wanted for the entire Lee County. And on the basis of that information, it was included in our waste load allocation document that it would be zero discharge for Cape Coral and Waterway Estates.

Q Was that zero waste load allocation for Waterway Estates ever changed?

A I'm not sure if it was changed in the WLA but it was a public knowledge that they were a surface water discharges and they had permits from us and we all along knew that.

Q Okay. When you say it was public knowledge, how did it become public knowledge?

A Public knowledge meaning that there was a plant

that was permitted by the state to discharge to tha where they were discharging all these years. And every time there is an expansion, it's advertised and everybody knows about it.

Q Did FDEP ever notify the United States Environmental Protectional Agency about a change in the waste load allocation for Waterway Estates from zero to something greater than zero?

A I'm not sure if he specifically sent a letter but EPA should have known because they had conducted a joint inspection with the DEP and they knew where the plant was, where the discharge was all these years, as I understand it.

Q I think -- I'm a little confused because of the fact that there was in fact a discharge doesn't mean that that discharge would have been permitted with regard to waste load allocations. Is that a correct statement?

A We -- to my knowledge, we've shared the information with the EPA and we conducted a joint inspection with EPA staff at the site and we've given ther reports and it should have been known to them as it was to us that, yes, there was a facility of this size and that was discharging to that point with these kinds of standards.

And those reports, they are very elaborate and

detailed, that we go through the labs and through the different procedures. They are six, seven pages. And this was rated satisfactory, that was unsatisfactory, this was excellent. And that report was signed and distributed to the utility and to the city -- I mean to the -- to the state and to the Federal government, so it shouldn't have been a surprise to us or to them that there was no discharge despite that one before that says they were assigned us discharging in one document.

Q So, it should not have been a surprise that there was in fact a discharge even though there was a no discharge waste load allocation.

A Yes. There shouldn't have been any doubt that there was a discharge.

Q When -- okay. When do you think EPA should have known that the zero waste load allocation was not being followed?

A Any time that they wanted to know, they should have known that because in their files it should have been clear that they were discharging and they all along had permits except maybe for that one period that -- that they didn't have a permit. But if there was a permit, the EPA should have known that the permit was for the discharge.

Q Do you know whether or not FDEP was obligated to let EPA know about a change waste load allocation?

Withdraw. Let me withdraw that.

Do you know whether or not EPA -- withdrawn.

Do you know whether FDEP had any obligation to change or request a change in the waste load allocation because Florida Cities Water Company was discharging to surface water bodies and therefore had greater than a zero waste load emission or discharge?

A We had, as I say, no problem with where the facility was in general. They were discharging. As far as I'm concerned, they could have continued with secondary treatment and I probably wouldn't see any impact on the receiving waters even at the point it was.

But there were a lot of factors such, as I say, a consistency with the other dischargers and also future growth in mind. That was the -- the basis why they were all forced to go to the six-foot contour line.

Q Is the fact that the outfall from the Waterway Estates plant is located at the six-foot contour line and that the treatment at the Waterway Estates plant advance wastewater treatment, is that in any way better than what it used to be at secondary in the outfall in the canal?

A Only in one thing and that's that phosphorus concentration and nitrogen concentration which we don't think is -- is essential but from my understanding that the phosphorus was an important parameter in the

ecosystem.

In order to limit that, they have to go to AWT and with that comes a lot of incidental advantages such as reduction of EUD and solids, nitrogen at the same time in order to achieve that phosphorus concentration.

Q There's also better dispersion at the six-foot contour line.

A The six-foot contour, there's better mixing and with the AWT there is less pollutants.

Q So, the fact that there is an outfall at the six-foot contour line means that there is better mixing and dispersion of the pollutants that are discharged; is that correct?

A That was the premise.

Q Okay. And the fact that there was AWT rather than secondary treatment means that there are less pollutants being discharged; is that correct?

A Yes.

Q Does the fact that there are less pollutants being discharged and that those pollutants are being better mixed, does that make the location and the treatment at Waterway Estates better today than it was when it was only secondary treatment in discharging to the canal?

A With respect to that one particular permit,

yeah, that's better. With regard to others, we have no evidence that they were really critical in any way or manner.

Q So, it's not better?

A What I'm saying is that I'm not sure if -- if nitrogen was an issue at all, whether its discharge was secondary standards at that point or with advanced standards at the six-foot contour.

Presumably that's better because of this perceived assumption of better mixing. But whether it was really that bad at that point without mixing and with that standard that's debatable because we really have no data and information to show that this is better than that. But only one thing which was the phosphorus concentration dictated the AWT limits.

Q There is no evidence or no data regarding the effect of the effluent being discharged into the canal; is that correct?

A Not much. In terms of water quality impacts or fish kills, things of that kind.

Q Were there any studies done on the effect of the discharge of pollutants into the canal from Waterway Estates?

A Not much.

Q Were there any?

A Not to my knowledge.

Q Okay. So, there were no studies?

A Other than that routine once every ten years or eight years, the WLA study that was done. We have no other studies.

Q Okay. What about any other evidence regarding any either positive effect or detrimental effect of the discharge of pollutants into the canal from the Waterway Estates plant?

A Probably not as long as they met what was in their permit in terms of the secondary standards the fecal chloroform, Ph and that -- that was assumed that there shouldn't be any effect on receiving waters.

Q So, there's no evidence that the discharge of pollutants was either beneficial or detrimental to your knowledge?

A Yes. On the basis of the maintenance of the standards for that class of water, we feel that there was no detrimental impact that could be pointed out that there is damage happening as a result of the discharge.

Q Can you point out that there was any beneficial impact as a result of their discharge to the canal?

A Probably not. Again, we -- we have no evidence to -- to show one way or the other but it was assumed if they had met the standards based on their permits at the

time that -- that there shouldn't be any impact on their water.

Q Do you know whether there was any obligation upon Florida Cities Water Company to apply for a waste load allocation to change the zero waste load allocation that they had earlier had?

A I'm not sure if it was known to them that -- that they had the zero discharge allocation because they were discharging knowingly and they had permits from us and from the Federal Government most of the time.

Q Did there come a point in time when Florida Cities Water Company did apply to have the waste load allocation for Waterway Estates changed from zero to something else?

A I thought it was the other way around. We told them that they had to go to AWT.

Q And you told them they had to go to AWT --

A Yes.

Q -- but what about the zero waste load allocation issue?

A I have no knowledge of whether they -- they knew that they had no allocation or not.

Q But do you know whether or not -- there was at some point in time a change in the waste load allocation for Waterway Estates; is that right?

A As far as I know, it has always been assumed that they -- well, a discharger with the exception of that one document. And they were discharging all those years, so I don't know if they for sure knew that they had zero allocation and they continued to discharge. I'm not --

Q Let me ask -- I'm going to ask you a question by analogy. For instance, I know that the speed limit on a given highway is 55 and I may choose to go 65 even though I know I'm only allowed to go 55.

A Uh-huh.

Q Using that analogy, can you tell me whether Florida Cities Water Company knew that it had a zero waste load allocation and knowingly continued to discharge even though it knew it should have discharged zero?

A I can't speak for them really. I have no idea.

Q Do you know what the waste load allocation for Waterway Estates is as we sit here today?

A Yes. They are given, I believe, a waste load allocation for up to one and a half million or two million gallons. I'm not sure of the exact figure but it's more than one for AWT and 49 million gallons for allocation.

Q When did they get that waste load allocation?

A When?

Q When.

A This is in the last revision of the waste

allocation, the last study that was done by the state.

Q Was that in 1991, do you think?

A 1991. Somewhere in that. It may have been a little earlier but by the time it got published, that was the date that was put on.

Q Prior to that recent modification by the state, was the Waterway Estates waste load allocation zero?

A No, except in that one very original document which said that there would be no Waterway Estates if that original plan was implemented. Then my feeling or understanding is that there was physically a plan that was discharging and that was given an allocation.

Q But there was no modification to the state waste load allocation document to saying that Waterway Estates had a greater than zero waste load allocation; is that correct?

A No. There was probably no need for that.

Q Okay. Why do you say there was no need for that?

A Because we know there was a plant and they were discharging to the river. If -- if -- let's say we assume there was a zero discharge, we will have told them, hey, you will not -- you have no allocation, you have no business to discharge. You should get out right away but that wasn't the case.

Q FDEP knew that they were in fact discharging; is that correct?

A Yes. We gave them permits all along and in fact my feeling is that EPA knew about the same thing, that there was a discharge and that where the discharge was exactly, they knew that also and how much the discharge was.

Q Do you know for a fact that -- I'm sorry. Do you know for a fact that EPA knew that they were in fact the discharger?

A Based on our documents and their documents, their permits, they should have known, yeah, that there was, otherwise they wouldn't have given them a permit.

Q You say they should have known, but do you know in fact whether EPA permit writers in fact did know that there was a discharge occuring from the Waterway Estates plan?

A If the -- my assumption is if they jointly went to the plant for inspection with us and -- and -- and we told them this is subsoil, it wouldn't be any of his business to come in and inspect the groundwater systems in the ground. They cannot do their subsoil discharge and I would know that that was in the back of their mind they're doing there because it's a subsoil discharge.

MR. QUINN: Can we go off the record for a

second?

(An Affirmation of ABdul B. Ahmadi, Ph.D., P.E. was marked for identification as Plaintiff's Exhibit Number 853.)

MR. QUINN: Let's go back on the record, please.

BY MR. QUINN:

Q Mr. Ahmadi, I've handed you what we've marked as Deposition 853 which is an Affirmation of Abdul B. Ahmadi, Ph.D., P.E. I'd like you to take a look at that, sir.

My first question is, have you ever seen this before, sir?

A Yes.

Q Okay. When?

A Well, I did this on that -- signed 11/18/94.

Q Okay. Is that your signature over on the right-hand side of Page 4?

A Yes, sir.

Q Do you recall the circumstances surrounding the preparation of this affirmation?

A Yeah. It was with regard to the Federal suit filed against the Waterway Estates facility and our involvement from the state's side based on our records and files and dealing with the permitting issues.

Q Who asked you to prepare this affirmation?

A Mr. Don Scroggin came to our office several

times to review the files and asked us a question with regard to our involvement with the facility.

Q Did your office type this affirmation or did Mr. Scroggin's office?

A I believe Mr. Scroggin's office did this.

Q Did Mr. Scroggin give you any reason why he wanted you to swear out an affidavit or an affirmation?

A No, other than the -- the suit primarily based on my knowledge of the facility and my information about the facts of the case.

Q Okay. Did Ms. Schaffner assist you in the preparation of this affirmation?

A No. I believe she wasn't even working with the DEP at the time, right?

MR. QUINN: You don't know.

MS. SCHAFFNER: I can't --

MR. QUINN: No. Don't ask her.

BY MR. QUINN:

Q Did another attorney from your office assist you in the preparation of this?

A No.

Q Did you consult with any attorneys prior to the preparation of this affirmation other than Mr. Scroggin?

A No.

I may have called an attorney in Tallahassee

that I have this affidavit and he said if you feel comfortable with the facts contained therein, then there's no problem.

Q I'd like to turn your attention to Paragraph 11 if we could, please, on Page 3.

A Okay.

Q The second sentence states, "This canal was considered part of the Caloosahatchee River." Do you see that, sir?

A Yes.

Q Can you tell me whether that is FDEP's position, that the canal was considered part of the Caloosahatchee River?

A That's my understanding, that the canal is a part of the Caloosahatchee River. And I mentioned earlier that the two works are closely -- they are contiguous to one another.

Q Okay. But we had also that the dispersion rate in the Caloosahatchee River is greater than the dispersion rate in the canal; is that correct?

A That was the assumption, that we required the Florida Cities to construct a line to the six-foot contour in the middle of the river.

Q And you also advised -- you also stated that you would advise your children not to swim in the canal. Is

that correct?

A I said in any canal that there is a sewage plant. That's my personal opinion.

Q And the reason for that was because of the risk of viruses or pathogens?

A The reason there may be some viruses and pathogens unknown to us that are not regulated and they may be there.

Q Now, are you familiar with -- I'm going to turn your attention to Paragraph 12, please, on Page 4. Reference is made to two permits; one April 1, 1981 and one August 2, 1993. Do you see those two?

A 1983, you mean?

Q Yes. I'm sorry. 1983. I apologize.

A Yes.

Q Okay. This paragraph states that the discharge locations or the outfalls was to a canal to the Caloosahatchee River. Do you see that?

A Yes.

Q Okay. Subsequent to 1983, there was another permit issued; is that correct?

A Uh-huh.

Q And that was on September 23rd, '88?

A Yes.

Q And that permit required a location of the

outfall to the six-foot contour line; is that correct?

A Yes.

Q And it also required upgrading of the facility to advance wastewater treatment; is that correct?

A Yes.

Q Are you familiar with a permit denial by the United States EPA for the Waterway Estates plant?

A Yes. Sometime there in that time there was a permit denial by the U.S. EPA.

Q Do you know the reasons around that permit denial?

A No. That's something I didn't get into, the details.

Q On Paragraph 8 on Page 2, please. I think you talked about this a little bit before but I'd like to just make sure I'm clear on it. The statement says, "FDEP does not grant discharge operation permits to any facility when FDEP has evidence that water quality standards are being violated by the discharge from that facility."

Do you see that part, sir?

A Yes, sir.

Q Okay. What -- what water quality standards are referenced in that sentence?

A For sewage treatment plants, we required that they meet a minimum standard for -- by a chemical oxygen

demand simply known as BOD, suspended solids.

Q TSS, total suspended solids?

A Right. Total suspended solids.

We have a proven residual requirement for this infection of the organisms, microorganisms. And then we have PH requirements and we require other tests, fecal chloroforms, as a standard. And we also required in time as for residuals, sludge, for metals and --

Q And how about --

A -- contaminants.

Q How about acute toxicity?

A We require dissolved oxygen. Acute toxicity in the early eighties was not done by the state until about maybe five, six years ago we had routinely contained that in the permits.

Q I'm sorry. I think I interrupted you. You also said you also require testing for DO?

A Dissolved oxygen, yes.

Q So, we've got BOD, dissolved oxygen, TSS, chlorine, PH, fecal and residuals?

A Uh-huh. Those are the things that we routinely monitor for most of the plants. Occasionally we may require other chemicals depending on such specific information and situations.

Q So, if a wastewater treatment plant is violating

any one of those parameters, FDEP will not grant a discharge operating permit?

A If those parameters are violated to an extent that it's consistently discharging substandard effluent to the river, then in those situations -- and you also see that the river is being impacted either through fish kills or other measurable impacts, then we do not give a regular state permit for that facility.

Q Is one of the purposes of requiring limitations on the amount of pollutants that can be sent into a river to prevent occurrences such as fish kills?

A The main thing is really to limit the discharge of pollutants to the river to maintain water quality. That's the main premise or the objective of the permits to reduce pollution, make sure that public health is ensured.

Q Aren't there indicators short of fish kills that water quality has been degraded?

A In general, as I said, that the -- the assurance of public health and the reduction of pollution to the water but fish kill is one symptom of, I guess, excessive pollution.

Q Aren't there other symptoms that could be detected through testing as opposed to waiting for fish to die?

A They're always where -- if he has reasons to

believe that pollution is occurring, yes, we go in and on our own we analyze the effluent after the treatment before the discharge to the river and we analyze the -- the waters upstream, downstream of the discharge and then compare that with the permit and the limitations that are contained in our rules.

Q When was the last fish kill that occurred in the Caloosahatchee River?

A I don't know exactly the -- the date but there was one around the Orange River maybe three, four years ago.

Q What would -- do you know what the cause was in general terms?

A Primarily, very high temperature and some fish were basically cooked.

Q Temperature is a -- change in temperature is considered a pollutant? Is that correct?

A For certain industry, yeah, that is the only pollutant. Thermal discharges like from power plants and we do have the power plant on the Caloosahatchee River. And this was a little bit in the vicinity of the plant in fact where this happened.

Q Now, you told me that discharge operation permits may be denied. But during -- withdrawn.

Even though a temper -- even though a discharge

operation permit may be denied, a temporary operation permit may be granted; is that correct?

A Yes.

Q Are there any other -- are there any conditions under which temporary operating permits will be not allowed?

A That will be extremely difficult. There may be a situation where we may deny all together if they are not doing anything which would be in total violation of the state rules. But under most conditions, if he have an existing sewage treatment facility, if, let's say, they are not in compliance with a specific portion of the rule, then they need some reasonable amount of time for planning, for permitting, for construction to get ready and that test is recognized in our rules through the temporary permit process.

The alternative is shutting down the facility which really is not an alternative because that indicates a public held situation and a lot of other problems.

Q Has -- to your knowledge -- withdrawn.

To your knowledge, has FDEP, this district, ever denied temporary operating permits to domestic wastewater treatment plants?

A Not to my knowledge. We've always given them temporary permits with a reasonable amount of time and in

most cases we've extended that time if it was not adequate due to reasons beyond their circumstances and control.

Q To your knowledge, has FDEP in this district ever shut down a domestic wastewater treatment plant?

A We'll require them through consent orders that either you cease discharge by a given date or you do alternatively corrective measures and correct the noncompliance problems by a given date.

We did not specifically say that you cannot operate the facility. We told them you either correct and comply with the rules or you find alternatives such as connection to another facility or whatever they want to do. And we left the alternative to them.

Q I'd like to go down to Paragraph 9 on Page 3, please. Paragraph 9 references something we were talking about a little while ago which was waste load allocations. My question is did FDEP consider the 1981 waste load allocation document which granted Waterway Estates a zero discharge to be binding?

A Not to my knowledge. At the time I wasn't with the agency and really didn't know about the practice but based on my discussion with the staff and others who were there dealing with these kind of things, they said this was primarily a planning document and for future goals and orientations and unless the permittee was told in writing

that this is what we plan and we intend to do, it was not considered mandatory.

And in this case definitely we did not tell the Waterway Estates that they must go to AWT based on this information by a given date until later in the 1988 time or so.

Q I'd like to turn your attention to Page 4, Paragraph 13. The last sentence of Paragraph 13 says, "Discharge from this facility is currently permitted by FDEP and is substantially in compliance with the permit."

What do you mean -- what do you mean by substantially in compliance with the permit?

A Substantially means that in general mostly in compliance.

Q Based upon the approximately 700 other wastewater treatment plants within your jurisdiction, approximately how many are substantially in compliance?

A Well, substantially in compliance basically means that they are in full compliance with our rules with the exception if you go with the microscope and may find something there very minor and inconsequential. We probably have, I would say, 90 percent of the facilities substantially in compliance.

Q And ten percent are substantially out of compliance? Is that what that means?

A Ten percent are having, yes, severe problems.

Q Are any of the 700 always in compliance?

A All?

Q Always in compliance?

A The whole?

Q I'm sorry. Let me withdraw that question and start over again.

Are any of the 90 percent always in compliance with the requirements of the FDEP permits?

A No. Things may change from facility to facility. A facility may be in full compliance for one, two, three years and may be out of compliance on the fourth year of the permit.

Q Are you familiar with the term of "significant noncompliance" as used in the Clean Water Act?

A I've heard but --

Q Does -- I'm sorry. Go ahead.

A Yeah. I've heard the terminology "significant noncomplied" also.

Q Does FDEP maintain a list of any facilities which are chronically out of compliance?

A No. We don't have a separate list but we require a permit from all the facilities at all times that they have a valid permit from us either in the form of regular permits -- that means they are in total

compliance -- or an operation permit. Now we have other mechanisms.

And we don't have a separate list where this facility is not in compliance but we keep -- each month we review their self-monitoring reports and determine whether they are in compliance or not. And we respond to each content by the substance. And then that's one mechanism where we find out and go through the file and through the records, through the MOR's to the past history and also a physical inspection of the facility with the operator.

And if you find noncompliance, then we have a mechanism how to correct it through enforcement.

Q Is there some threshold number of violations or instances of noncompliance that will initiate a more -- more scrutiny?

A Generally there is a pattern of some science; they give us sloppy monthly operation reports, inadequately completed, executed, the numbers may look suspect, we may get them late.

So -- and then we have complaints also from the citizens in the vicinity of the plant. We have a good feel for which facility has a good operation and really working hard and which ones don't.

Q In your -- in your office, is failure -- withdrawn.

What do you consider failure to report at all to be in terms of severity?

A What do you mean failure to report at all? Like don't communicate with the agency at all?

Q Let me give you an example. If a facility fails to turn in self-monitoring reports or discharge monitoring reports on a regular basis --

A Uh-huh.

Q -- to FDEP, is that considered severe, a severe violation?

A That would probably in the category of minor, moderate, major be in the middle somewhere.

Q Moderate?

A Moderate.

And then what we do is we -- if they miss one report, we call them right away that we didn't get your report, perhaps it's lost in the mail or maybe you didn't submit it to us or what happened. And they bring it.

There is one facility, believe it or not, they bring theirs, always two copies, and then with self-addressed and stamped envelopes and wants us to stamp it that we received it because one time we wrote them a letter that you didn't submit and this was a private utility. For the past three years they've been doing that each month. So, they are so particular about it.

And there are others that to them it doesn't matter. As long as it comes, it doesn't matter if it's a week late.

Q On the scale of -- that you gave me; severe, moderate and minor, I believe. Were those the --

A Minor, moderate and major.

Q Okay. On that scale, what would you consider -- withdrawn.

On that scale, how would you classify failure to obtain a permit?

A Based on state rules, failure to obtain a permit will be major itself.

Q Based on that scale of minor, moderate and major, how would you classify discharge of pollutants from an outfall other than the permitted outfall?

A Discharge of pollutants, if it has a major impact on the environment, would be considered major. If it's discharge of pollutant with minor impact, it would probably be moderate.

Q But that is a case-by-case analysis?

A Yes. We do have some guidance on that where we've outlined what is major, what's moderate, what's minor, all kinds of things.

Q Are you aware that you've been listed as a witness to testify in this action?

A Yes, sir.

Q What are you going to talk about at trial?

A Whatever I'm asked with regard to the facts of the case that -- to the extent that I'm involved from the state side and perspective and from what's evident in the files.

Q Did Mr. Scroggin talk to you about what you're going to talk about in trial?

A Not anything specific.

Q In general, what are you going to talk about?

A Whatever I'm asked. Like in this deposition if I'm given -- asked a question that's within the -- the rules are within the type of things that I'm doing with the facility, my involvement, then I'll be able to answer. If there's something beyond my knowledge, then I'll say I don't know.

Q You said that you talked with Mr. Scroggin on some occasions; is that correct?

A Yes. Mr. Scroggin and his associates came to our office several times in the past several years.

Q Did they ever tell you what they wanted you to talk about at trial?

A Not to my knowledge. They asked me to prepare this affidavit solely based on my knowledge of the facts from the file.

Q Did you bring any documents today to give to Mr. Scroggin?

A No. I just brought a copy of this from my personal use.

Q When was the last time you sent documents to Mr. Scroggin's office?

A The last time was several weeks ago where he left, I guess, this notice of the hearing or notice of depositions in our office and then I have to call his office and ask where should I send this. That was the piece.

But as far as any state documents, they came to our office. We provided them all our files and we did the same to the folks in EPA.

Q Prior to today, when was the last time you talked to Mr. Scroggin's office, Mr. Scroggin or anybody from his office?

A Really I believe I spoke yesterday with one of his associates who called me about today whether it was 9:00 o'clock or 10:00 o'clock.

Q Prior to that, when was the last time?

A The day before that on the same issue whether it's 9:00 o'clock or 10:00 o'clock.

Q Any other thing you talked about?

A No, nothing else.

Q Prior to that, when was the last time you talked?

A Prior to that it was with regard again to this hearing that Mr. Scroggin came with his associate and told me that I would be deposed in such and such date.

Q What did he talk about during that meeting?

A Basically the same issues with regard to -- most of the same issues you asked with regard to waste allocation in the FDEP's practice, our involvement in coordination with the EPA.

Q All right. How long did you talk with him?

A I didn't check the time but in a matter of probably an hour or so.

Q Was Miss Schaffner there with you?

A No, she wasn't.

We may have touched upon things such as I really don't understand why this is such a big case because the City of Cape Coral was a city which essentially they had the same circumstances. They were bogged down in the same planning process. They were forced to discharge secondary into the same river five times, six times more than the Waterway Estates. They were sued by the EPA. They settled for a nominal amount. We sued them also through a consent order and it came and went by and resolved.

In this situation, why is it so emotional where

it's a small facility, provides service to five, six thousand people, no more than that, and they're being sued for, you know, a nominal amount of fines or fees that has not hurt? That's positive to ask our staff or director in fact.

Q Are you aware that Florida Cities Water Company manages privately owned wastewater treatment facilities throughout the State of Florida?

A Yeah. It's a -- it's a utility company that has facilities elsewhere, I understand, in the state.

Q How many wastewater treatment plants does Cape Coral have?

A Cape Coral has two wastewater plants, a total of 14 million gallons and it's a city, so it's a government entity.

Q So, it's a not-for-profit organization; is that correct?

A Yes.

Q Do you have any opinion as to whether there's any synergistic effect to the fact that there -- that an entity which has more than one wastewater treatment facility is out of compliance on a continuous basis at the other three where that makes it a more or less severe action?

A If the utility owns, let's say, ten facilities

and all ten of them are not in compliance, that would be a good sign to say that this facility is really not paying much attention.

But if there are -- in our district we have three facilities that are domestic facilities that are operated by the Waterway Estates. One of them is one of the top sewage plants in our district. That's the south plant. The other one is about the average. It does have a little problem here and there and it doesn't -- and the other one is Waterway Estates.

Q And where does that rank?

A Waterway Estates, probably average just like any other facility.

Q Somewhere in the middle 700?

A Yeah. There are times where they are in full compliance. There are times they're not just like any other facility.

Q Shouldn't -- in your opinion, shouldn't the Waterway Estates plants strive to be more like its top performer?

A Every one of them, that's our expectation, they should whether it's private or public. In terms of private and public, we don't make a distinction that the state or a city or a Federal agency should not be meeting the rules. In fact, they should be setting examples for

others for the private entities.

Q The fact that Florida Cities Water Company, one of their facilities, is at the top as a top performer in your wastewater treatments plants, doesn't that indicate to you that Waterway Estates should also be a better performer than it is?

A It does. And they say that if it weren't for the intervention of the government and the planning process, they will have done that a long time ago.

Q So, if it weren't for the intervention of which government?

A The local governments, the state government and even the Federal government. That's what I hear.

Q That's what they tell you?

A That's what the perception of some of the staff is in our office, that if it wasn't that lack of planning on the part of the county, that the Florida Cities should have had an AWT permit just like in the south a long time back. But because of that uncertainty of the government, particularly the county, the commission, they were unable to make up their mind and got in trouble with the EPA and occasionally with us. We had considerable trouble with them and fined them when they were not in compliance.

MR. QUINN: Dr. Ahmadi, I want to thank you for your time here today. I have no more questions of

you.

Mr. Scroggin, do you have any questions?

CROSS-EXAMINATION

BY MR. SCROGGIN:

Q Dr. Ahmadi, it has been said that Florida Cities is such a bad company regarding its environmental compliance that it needs to be sent a message in the form of a high penalty in this case. Is that consistent with your experience since 1981 with facilities owned and operated by Florida Cities?

MR. QUINN: Objection.

Go ahead.

THE WITNESS: In general, that's very much inconsistent. In fact they have two water plants in our district, three sewage plants in our district and they are most of the time in compliance just like anybody else.

And the Waterway Estates is the only plant that they had some noncompliance around 1988-'89. And we took care of that with a consent order and temporary permits and the problem was corrected.

BY MR. SCROGGIN:

Q Dr. Ahmadi, are all of the facilities over which you have jurisdiction that are owned and operated by Florida Cities currently to the best of your knowledge in

substantial compliance with their regulatory requirements?

A Yes, all of them.

MR. SCROGGIN: I have no further questions of Dr. Ahmadi.

MR. QUINN: Just two questions to follow up.

REDIRECT EXAMINATION

BY MR. QUINN:

Q Are you familiar with the Barefoot Bay facility, which is owned by Florida Cities Water Company?

A No, not that well.

Q Are you familiar with the Caroway (phonetic) facility which was a facility owned and operated by Florida Cities Water Company?

A No. I've heard the names but that's it.

MR. QUINN: Okay. Dr. Ahmadi, I have no more questions again. Mr. Scroggin, I don't believe, has any more questions.

Miss Schaffner? Okay.

Sir, when the court reporter finishes transcribing this, you'll have an opportunity to read to make sure there's an accurate recitation of what happened here today and the deposition transcript will be forwarded to Miss Schaffner for you to look at.

THE WITNESS: Very good.

MR. QUINN: Okay. That being said, I'll conclude this deposition by saying thank you very much for your time and --

THE WITNESS: You're most welcome.

MR. QUINN: Thank you. The deposition is concluded.

(The deposition concluded at 11:43 a.m.)

STATE OF FLORIDA)
COUNTY OF COLLIER)

I, the undersigned authority, certify that Abdul Daqi Ahmadi, personally appeared before me and was duly sworn.

WITNESS my hand and official seal this 26 day of December, 1995.

Rose Marie Cychmistruk

OFFICIAL NOTARY SEAL
ROSE MARIE CYCHMISTRUK
NOTARY PUBLIC STATE OF FLORIDA
COMMISSION NO. CC234197
MY COMMISSION EXP. OCT. 20,1996

STATE OF FLORIDA)
COUNTY OF COLLIER)

I, Rose Marie Cychmistruk, Registered Professional Reporter, certify that I was authorized to and did stenographically report the deposition of Abdul Daqi Ahmadi; that a review of the transcript was requested; and the transcript is a true record of my stenographic notes.

I further certify that I am not a relative, employee, attorney, of counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 26 day of December, 1995.

Rose Marie Cychmistruk, RPR

THE COURT: All *right*. You may call your next witness, Mr. Baise.

MR. BAISE: Yes, Your Honor.

Defendant Florida Cities calls Dr. Abdul Ahmadi.

THE CLERK: Raise your right hand.

Thereupon,

ABDUL B. AHMADI,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

THE CLERK: Take a seat in the witness box, please.

State your name and spell the last for the record, please.

THE WITNESS: My name, Abdul B. Ahmadi, A-B-M-A-D-I.

DIRECT EXAMINATION

BY MR. BAISE:

Q. Good afternoon, Dr. Ahmadi.

A. Good afternoon, Mr. Baise.

Q. What is your occupation?

A. I'm a professional engineer in charge of the domestic wastewater, drinking water, industrial wastewater facilities for the State of Florida, South District.

Q. How long have you held that position?

A. I held that position since 1990.

Q. What positions have you held before 1990?

A. Prior to that, I was working with the same agency and I was in charge of the water program, which did include the domestic wastewater facilities.

Q. What is your education background, if any, post high school, Dr. Ahmadi?

A. I have a Bachelors of Science in Civil Engineering from the University of Kabul, Afghanistan. I have a Masters in Civil and Sanitary Engineering from the University of Cincinnati and a Ph.D in Environmental Engineering Sciences from the University of Florida.

Q. What are your responsibilities in your present position with the State of Florida?

A. Currently, I'm in charge of the permitting compliance and enforcement of State Rules as they apply to water facilities, which includes wastewater facilities, domestic, industrial and drinking water, surface waters and ground waters.

Q. Do you have additional training beyond your formal training in the field of environmental engineering?

A. I have attended several professional seminars, several dozen and attend one or two every year.

Q. What is your experience in interpreting State water law requirements?

A. I have extensive experience in that regard.

In 1981, upon graduation from the University of Florida, I joined the Department of Environmental Regulation as a Staff Engineer and my work primarily involved review of permit application for domestic wastewater and drinking water.

I remained in that position until 1983. At that time I passed the Professional Engineers Exam in the State of Florida and became a Registered Engineer and was promoted to the Chief of Permitting for the District.

In 1988 — I remained there until 1988, at that position, and in 1988, we had a reorganization and I was given some more responsibilities. And then in 19 — in addition to what I had. And then in 1990, we had yet another reorganization and I was given the current responsibilities.

Q. Could you speak just a little more slowly for the Court Reporter?

A. I certainly could. Thank you.

Q. Thank you.

Any additional current licenses or certifications you hold Dr. Ahmadi?

A. Yes, basically, the professional engineer's, and I do give lectures to the universities, professional groups, the DEP Staff on a statewide basis.

Q. How many people work for you, Dr. Ahmadi?

A. Currently, I have 33 people working for me, which comprises professional engineers, chemists, biologists, environmental scientists and managers.

Q. How is your office organized in terms of departments?

A. The State of Florida basically has divided the entire State into six districts and we are one of the six districts and it has seven counties. And we are located in Lee County, we have two branch offices, one in Marathon that handles Monroe County, the Florida Keys and one in northern part of Charlotte County, which handles the Charlotte Harbor area.

Q. Is Waterway Estates located in one of those counties?

A. Waterway Estates is located in Lee County, Florida.

Q. How is your personal office organized? If I'm not using the correct word — sections or department?

A. Yes, we have different sections in the Division of Water Facilities and we have a Domestic Wastewater Section, which is headed by a profession engineer who reports directly to me, and I have two professional engineers in that section and four engineers and five or six chemists, biologists-type people, inspectors.

And then we have an Industrial Wastewater Section that is the smallest in our district. We have three people there: two professional engineers, in fact, and one

Exh.— (ABA-2)

secretary.

And then I have a Drinking Water Section with five staff professional engineers and two non-professional engineers and two environmental specialists and one secretary.

And then an Ambient Surface Water Section. And then have I some people in the fields that report to us on compliance issues.

Q. What is an Ambient Water Section, I believe you said?

A. Those are the surface water monitorings on strategic locations periodically to see how the waters are doing.

Q. Is this to determine water quality?

A. Basically to determine water quality and they produce a biannual report to see how the waters have maintained their quality, whether they degraded or they got better or they remained the same.

Q. Do you publish a biannual report on the Caloosahatchee River?

A. Not on the Caloosahatchee River. They are primarily — the resources are limited for the State as is the case with most Governmental agencies. They are prioritizing other bodies of water which has more ecological significance and importance than the Caloosahatchee River water.

Primarily our points are in Charlotte County, in the

Charlotte Harbor area, and in the Marco Island area, Naples — Naples way. We do not have any monetary stations on the Caloosahatchee River.

Q. Again, speak slowly for the reporter, please.

Have you had an opportunity to teach any courses in environmental engineering or science or the area that you are —

A. Yes, I have. I graduated from the college, I was an Assistant Professor, prior to coming to the United States, and then I attended the University of Cincinnati for two years. Upon return back to Afghanistan, I taught there at the University in Kabul, Afghanistan until 1975.

I taught Public Health-Engineering, Wastewater Engineering, *Drinking Water Engineering* courses.

Then I came back to the United States for pursuing further studies and graduate studies at the University of Florida.

Q. Have you had an opportunity to publish in the field of environmental engineering?

A. Yes, I have several publications.

Q. Could you describe at least two or three of them for the Court, please?

A. My Master Thesis at the University of Cincinnati was on — included demands on natural and polluted waters. My Dissertation at the University of Florida was Aqueous

Activity of Metals and Corrosion Control, and secondly, two or three papers I coauthored on that subject.

I've given lectures at the Water Management Districts on ground water issues and have given lectures at the University of Florida this year, in fact, twice, on Wastewater and Drinking Water State-of-the-Art Technology.

Q. And Dr. Ahmadi, in the testimony we have had a Florida Statute mentioned on several occasion by the name of Grizzle-Figg. Are you familiar with what Grizzle-Figg is?

A. Yes. It's a legislative act that was passed in the State of Florida for a specific area. Generally when a rule is passed, it's statewide. In certain cases the resources demand that because of ecological significance and importance of a given body of water, the usual rules may not be sufficient, so they design specific rules for the specific geographical area.

The Grizzle-Figg Rule established the Tampa Bay and the Charlotte Harbor area, designated those two as the waters that need to be protected above and beyond what the rules apply to all other waters in the State. And any wastewater discharging to those two bodies of water must meet the highest standards before they discharge to those bodies of waters.

Q. Another Act that has been mentioned is the Indian River Lagoon Act. What is that?

A. That is parallel to the Grizzle-Figg Act, primarily in the Orlando area where the Indian River Lagoon is located. Because of the importance of that body of water, they created specific rules for the protection of that body of water. They are geographic specific, it applies from what point to what point, in which directions. If you're outside those limits, it does not have any relevance.

Q. When did you become familiar with the facility known as Waterway Estates discharging into a canal into the Caloosahatchee River, Dr. Ahmadi?

A. I guess since my starting with the DEP, maybe in the first year or so.

That was in 1981.

Q. Dr. Ahmadi, I would direct your attention to Florida Cities Exhibit Number 15.

Now, Dr. Ahmadi what is the State classification of the Caloosahatchee River in the vicinity of the Waterway Estates wastewater treatment plant?

A. The water there is classified as a class 3 body of water.

Q. What does that mean?

A. Basically all waters of the State are classified into five groups, class 1, class 2, class 3, class 4, and class 5. 1 is considered the most important water in terms of its use and that's considered potable water classification,

water used for drinking purposes. Now, it would be used as a source of drinking water, that's class 1.

Class 2 are the next higher class of water, which is used for propagation of shell fish and recreational uses.

Class 3 are generally all other waters that are not classified as 1 and 2. So, it's an intermediate in terms of quality.

Class 4 is agricultural waters, which the quality is really not that important, as long as there are no salts in them for agricultural uses.

Class 5 is industrial and a navigation waters.

Q. When you say class 4, agricultural, is that like agricultural canals?

A. Agricultural canals, irrigation water, yes, for growing plants and vegetables and trees and nurseries and so forth.

Q. Directing your attention to the exhibit I've had put in front of you, are you familiar with this document?

A. Yes, I am.

Q. What is this document?

A. This is the Lower Florida River Basin Water Quality Management Plan that DER created and published in December 1975.

Q. Have you read this document before?

A. I believe I've seen certain sections of it. Read

certain sections.

Q. Is this a State of Florida official publication?

A. Yes, it is.

MR. BAISE: Your Honor, I would move this document into evidence.

MR. QUINN: Your Honor, we had listed an objection of relevance in that this is a 1975 document. For that reason, we maintain that objection of relevance.

THE COURT: Okay.

MR. BAISE: May I speak to that, Your Honor?

THE COURT: Yes, sir.

MR. BAISE: Your Honor, this is the beginning of the story.

This is the document that lays out the beginning wasteload allocation for Waterway Estates.

It also describes that wasteload allocation, which was carried over into Federal permits, so it is clearly relevant to the background of there being a wasteload allocation in this case, and the fact that there never was a termination of the wasteload allocation, so we think it is quite relevant.

THE COURT: I'll overrule the objection.

It will be received.

BY MR. BAISE:

Q. Dr. Ahmadi, I would direct your attention to page

Roman Numeral I-18 entitled, Implications of Basin Plans for Local Units of Government.

Do you see that page with that title?

A. Yes.

Q. Directing your attention further down to the last paragraph on that page, do you see that paragraph, sir?

A. Yes. The one starts with, "in contrast"?

Q. Yes.

And directing your attention further down to the sixth line that begins on the right hand side, "in some cases," would you read that into the record, please?

A. In some cases water quality may be so sensitive to pollution that any discharge may result in a violation of State requirements for water quality. In these extreme cases, no discharge of pollutants to surface waters will be allowed and wastewater treatment plants which are currently discharging to surface waters will eventually be required to convert to a form of non-surface disposal such as land spreading.

Q. Thank you, Dr. Ahmadi.

I direct your attention further toward the back of the document to a page entitled, Roman Numeral III-242, entitled, Effluent Limitations-Load Allocations.

A. Yes.

Q. Do you find that page, Dr. Ahmadi?

A. Yes. Table 20.2 AA-12.

Q. Would you describe what this table means, Dr. Ahmadi?

A. This is a summary of the wasteload allocation or effluent limitations for five facilities that are contained on this table.

Q. And is Waterway Estates one of those facilities in 1975?

A. Yes, Waterway Estates is listed as the fourth facility.

Q. And what is the receiving water for the Waterway Estates in 1975?

A. The receiving water is designated as the Caloosahatchee River.

Q. And what are the load allocations for Waterway Estates in 1975?

A. The design capacity is 1.08 million gallons per day.

Q. What does "UCD" mean? Because that is a term that has not been defined in the Court, Dr. Ahmadi.

A. That's the ultimate oxygen demand, which is a pollution load, actually.

Q. Would that be I equivalent to biological oxygen demand today?

MR. QUINN: Objection, leading.

MR. BAISE: I was just seeking a clarification for the Court.

THE COURT: I'll overrule the objection.

Do you know?

BY MR. BAISE:

Q. Do you know, Dr. Ahmadi?

A. No, it's different.

THE COURT: Yes, sir.

MR. QUINN: Also, object that this witness is not an expert. He's not been qualified as an expert. This seems to require a little bit of expertise to answer that question, too, sir.

MR. BAISE: If he can't answer the question, that's fine.

MR. QUINN: Yes, sir.

Well, whether he can answer the question or not, he hasn't been qualified as an expert and this requires an expert opinion.

In order to be — a lay witness can't testify to expert opinions unless they're rationally based under Rule 701, and we haven't laid a foundation for him to give any of this stuff, sir.

THE COURT: Well, I don't know that it takes an expert opinion to testify as to whether UOD is a term that is equivalent to today's term or subsequent term of BOD.

Is that the question? Do you know that, sir?

THE WITNESS: It is defined on the bottom of this

page, Your Honor. UOD pounds per day equals the design flow of the plant times the —

THE COURT: It's your witness and your question, so —

MR. BAISE: Let's just — I'll drop the question. I was just doing it for the Court's clarification, since BOD and CBOD had been such a point of contention.

BY MR. BAISE:

Q. Dr. Ahmadi, in the second column it is noted that the Caloosahatchee River is the receiving water for Waterway Estates; is that correct?

A. Yes.

Q. Dr. Ahmadi, I would direct your attention to Roman Numeral III-227, please. I'm sorry. It's 229. My copy is barely —

A. Okay.

Q. It's entitled, 7, Load Allocations and Effluent Limitations. Do you see that page?

A. Yes, sir.

Q. And that's Roman III-229?

A. Yes.

Q. Dr. Ahmadi, would you read the paragraph beginning with the two words, "this segment"?

A. This segment contains the Caloosahatchee River from the W.P. Franklin Lock and Dam at Olga to its mouth at San

Carlos Bay, a distance of approximately 30 miles. Five wastewater treatment facilities (WTF) discharge directly to the river in the vicinity of Fort Myers and seven other facilities discharge to tributaries, as listed in Table 28.2 AA-6. The locations of the discharges are shown in figure 28.2 AA-4.

Q. So there are five facilities discharging directly to the Caloosahatchee; is that correct?

A. Right.

Q. Would you turn to page Roman III-207, please?

Do you see that page, Dr. Ahmadi?

A. Roman III-207?

Q. Yes.

A. Yes.

Q. Describe what that page represents, Dr. Ahmadi.

A. It is a Waste Source Inventory.

Q. And does it name Waterway Estates in one column?

A. Yes, Waterway Estates is listed here and is the fourth facility.

Q. And what is the receiving discharge point for the Caloosahatchee River?

A. The discharge point is listed as the Caloosahatchee River.

Q. I direct your attention down to the J. Colin English School. What is the discharge point for that facility?

A. Says canal to Powell Creek.

Q. Thank you.

Since you've worked for the Federal Department of Environmental Protection, Dr. Ahmadi, has the water quality of Caloosahatchee River improved or been degraded?

A. I've been working with the State of Florida and since I've been with the agency we have not documented any degradation in the water quality in the Caloosahatchee River.

Q. Are water quality standards met in the Caloosahatchee River in the area of the discharge of the Waterway Estates facility, Dr. Ahmadi?

A. Yes, sir.

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit 16.

And it's Plaintiff's 349, also, in evidence, Your Honor, depending on which notebook you have.

THE COURT: I've got it in the form of Defendant's Exhibit.

BY MR. BAISE:

Q. Dr. Ahmadi, what is a 208 Plan?

A. It is a facility's planning which will list what to be done with a facility in terms of treatment, expansion, design, future plans, effluent disposal.

Q. How do 208 Plans and regional facilities connect

together?
A. Generally with the passage of the Clean Water Act back in the early 70's, a lot of money became available to local facilities, particularly governmental entities, cities, counties and so fourth, to come up with a facilities plan and try to improve their wastewater treatment practices and operations and either eliminate discharges or improve treatment so they could lessen the impact on receiving waters under the NPDES Program.

A lot of money was available and in those 10 to 15 years some 50 billion dollars of Federal money was spent on that program. So this is in relation to that.

Q. Is this document prepared in part for a 201 Plan for a regional facility?

A. Yes.

Q. What regional facility was this document prepared for, Dr. Ahmadi?

MR. QUINN: Objection.

THE COURT: Just a moment.

MR. QUINN: Objection, sir.

I believe this goes beyond the actual personal knowledge. We've been talking about it for a while and it has not been offensive to the United States, but goes beyond the personal knowledge of Dr. Ahmadi.

He testified that he came to work — I believe he

testified that he came to work for the State in 1981, and this document was worked on before that.

I don't believe that he's testifying from his own personal knowledge, and he lacks personal knowledge to talk about it.

If what he's testifying about is an opinion, then it's an expert opinion and he hasn't been qualified to talk about that.

In addition, he can't even give an opinion on it because he does not have a personal perception of it at the time that it was done, sir.

MR. BAISE: May I respond?

THE COURT: Yes, sir.

BY MR. BAISE:

Q. Dr. Ahmadi, are you familiar with this document?

A. Yes, I am.

Q. Do you use this document in your work at — in your present position?

A. Yes, we do.

Q. Any reason to believe that this document is not a trustworthy document?

A. No, I have no doubt about it.

We work closely with our section in Tallahassee in production of these documents.

THE COURT: I'll overrule the objection.

It will be received.

BY MR. BAISE:

Q. Is this what is known as a planning document, Dr. Ahmadi?

THE COURT: It's already received.

You were objecting to his testimony?

MR. QUINN: Yes, sir.

THE COURT: I'll overrule the objection.

BY MR. BAISE:

Q. You may answer.

A. Yes, sir, it's a planning document.

Q. Are there any requirements in this document?

A. There are certain steps and plans for the future of the Lee County — the Waterway Estates plant is located on the northern side of Lee County. There are several facilities that were on the southern side. There was another plant on the north side, which was the Cape Coral — City of Cape Coral. The county at that time was planning to have a regional one or two facilities for the entire northern part and that plan did not become implemented.

Q. Dr. Ahmadi, I direct your attention to Florida Cities Exhibit 198.

Are you familiar with this document, Dr. Ahmadi?

A. Yes, I am.

Q. What is this document?

A. It's a letter that's written by the United States Environmental Protection Agency, Region IV, dated January 22, 1981, and signed by William Cloward, Chief of Permits Section.

Q. Who is CC'd on the document, Dr. Ahmadi?

A. Mr. Mickey Bryant of the Florida DER.

Q. Is that Florida DER your office?

A. Yes, the State DER, our predecessor agency of the DEP.

Q. Turning to page 2, with respect to this document, does it indicate what the receiving waters are to this —

MR. QUINN: Objection. I don't believe this document is in evidence, Your Honor, and I have AN objection as to this witness' competence to talk about this document.

THE COURT: All right.

MR. BAISE: May I comment on it?

THE COURT: Yes.

MR. BAISE: This is the permit from the United States. It is a document that has attached to it a reference to one of the documents we have just referred to, the 1975 study, which is the '75 study that gives the wasteload allocation, and I will get to that in just a moment. But he says he is familiar with this document, his office received it, he is —

THE COURT: Well, at this point are you offering it in evidence? Is that what you're going to do?

MR. BAISE: I'm going to get ready to offer it in evidence, Your Honor.

BY MR. BAISE:

Q. Dr. Ahmadi, have you read this document before?

A. Yes, I have.

Q. Have you read documents similar to this before?

A. Yes, in almost all surface water discharge cases.

Q. Do you review Federal NPDES draft permits and final permits in the normal course of your work?

A. Yes, if we are copied and receive a copy we review that.

THE COURT: Say again, please, sir.

THE WITNESS: Yes, if we are copied and it's sent to us, we review those documents.

MR. BAISE: I would move this into evidence, since it is a United States Environmental Protection Agency document, Your Honor. It's the draft permits into Florida Cities in 1981, on January 22nd, it has attached to it the draft EPA NPDES Permit, the permit limitations, and attached to that, of course, is the wasteload allocation. So, it is certainly an official document of the US EPA, to the best of our ability to determine it, and it was, to my knowledge, produced by EPA in our request for production of documents.

MR. QUINN: I have an objection to the introduction of the document through this witness.

This witness does not have personal knowledge of this particular document. He might have seen documents like this before.

My objection as stated in our earlier filings was relevance and I would renew that objection, as well.

THE COURT: Let me ask you this: Have you registered an objection regarding the authentication of this document?

MR. QUINN: No, sir, we did not, because we did not because we didn't know it was going to come in —

THE COURT: Excuse me?

MR. QUINN: If this came in through the proper witness — it's an authentic document, sir. We have no objection to its authenticity. We have an objection to using the document with this witness.

THE COURT: Well, the document — all right — and the objection that you have listed in your objections is relevancy?

MR. QUINN: Yes, sir.

THE COURT: All right.

MR. BAISE: My objection — excuse me, Your Honor.

THE COURT: Let me hear you on your objection regarding relevancy independent of this witness' testimony.

MR. QUINN: The relevance objection deals with the fact this is a 1981 draft document and our violations in

this case are talking about 1986, for this facility, sir.

THE COURT: Okay. Mr. Baise.

MR. BAISE: I find that somewhat disingenuous, Your Honor, whether or not the Government has gone back to —

THE COURT: Never mind whether you find it disingenuous, but tell me what your response is.

MR. BAISE: My response is, Your Honor, that this document is the only document the Government produced to us with respect to wasteload allocations in 1981, so you can track that 1981 wasteload allocation through '83, '86 and into the 90's.

And with regard to the actual permit that is given to the discharger, EPA does not attach the fact sheet to their final permit, and this particular fact sheet is the one that points out the wasteload allocation given to this facility in 1981, comes from the 1975 document. So, there is a history step-by-step of where the wasteload allocation comes from, and how it's incorporated into both the Federal and State permits. So, that's why it is relevant, Your Honor.

MR. EIRD: Your Honor, may I say something in support of Mr. Baise's position?

THE COURT: Yes, sir.

MR. EIRD: On the first day of trial we objected

to the introduction of the numerous Government documents that predated the violations at issue, and over objection I think hundreds of documents were admitted into evidence.

I think the Defendants should have the right to introduce historical documents that explain mitigation or lack of viability, and for those reasons, I would support Mr. Baise's position.

THE COURT: Okay. Anything further?

MR. QUINN: Nothing further, sir.

THE COURT: All right. I'll overrule the objection.

I'll receive the document in as 198.

BY MR. BAISE:

Q. Dr. Ahmadi, I direct your attention to page 12 — I'm sorry, it is a not numbered on your document, but count 12 pages to the page of the draft EPA permit dated January 22, 1981. The page is entitled, Final Effluent Limitations. And do you find that page?

A. Yes, sir.

Q. Do you find that page?

A. Yes, sir.

Q. Directing your attention to paragraph 5, would you read paragraph 5 into the record, please?

A. It says number 5: Final effluent limitations were derived from wasteload allocation given in Lower Florida

River Basin Water Quality Management Plan, page III-242.
Q. Is that the same Roman III-242 that you referred to in the 1975 document?
A. Yes, sir.
Q. Is this the wasteload allocation for the Florida Cities Waterway Estates facility located on the canal discharging into the Caloosahatchee River in 1981?
A. Yes, sir.
Q. Dr. Ahmadi, I direct your attention to Florida Cities Trial Exhibit Number 17.
This is already in evidence, Your Honor.
Do you have that document in front of you, Dr. Ahmadi?
A. Yes, sir.
Q. What is this document?
A. This is a State permit for the Waterway Estates to operate their facility and discharge their effluent to the Caloosahatchee River.
Q. Is there any zero discharge limitation in this permit, Dr. Ahmadi?
A. No, it authorized them to discharge.
Q. Would you turn to page 1 of 4? It would be the fourth page in on this document.
A. Yes, sir.
Q. Do you see that page?
A. Yes, sir.

Q. Department of Environmental Regulation letterhead?
A. Yes, sir.
Q. Would you read that paragraph starting with, "to operate" into the record?
THE COURT: Just a minute
MR. BAISE: Hold on, Dr. Ahmadi.
THE COURT: What page?
THE WITNESS: Page 1 of 4.
MR. BAISE: 1 of 4, but the fourth page in, Your Honor.
THE COURT: Okay.
BY MR. BAISE:
Q. Would you read that paragraph?
A. Yes, sir.
Q. Up to where it says, "location of the project." That's not necessary.
A. To operate a 1.080 million gallons per day contact stabilization process wastewater treatment facility with effluent to canal to the Caloosahatchee River located off project site.
Q. Is there anything in this document that says there's a zero discharge for this project into the canal to the Caloosahatchee River on April 2, 1981, Dr. Ahmadi?
A. No. This is their authorization to discharge to the river.

Q. Does this mean there's a wasteload allocation for this discharger to discharge into the canal, Dr. Ahmadi?
A. Yes, sir.
Q. Turning your attention to Defendant's Exhibit Number 2, Dr. Ahmadi.
By the way, did EPA ever challenge that permit that was issued in 1981?
A. No.
Q. EPA ever comment on that permit issued in 1981?
A. No.
Q. Turning your attention to Defendant's Exhibit Number 2, what is this document, Dr. Ahmadi?
And this is, also, in evidence, Your Honor.
A. Yes, this is State of Florida letter that's written and signed by Terry Cole, who was the assistant secretary at the time to Mr. Charles Jeter of the EPA.
Q. Are you familiar with this document?
A. Yes, I am.
Q. You worked with this document?
A. Yes.
Q. I direct your attention to page 9 of this document, Dr. Ahmadi. Page 9, Roman Numeral IV.
A. Okay.
Q. Would you read that first paragraph into the record, Dr. Ahmadi?

A. Roman Numeral IV: Approval of Wasteload Allocations. The EPA is required by 303 (d) of the Clean Water Act to review and approve/disapprove the allowable wasteload established by the State within 30 days after submission. An additional 30 days is allowed to make necessary revisions to disapprove identifications and loads. All final approvals of wasteload allocations are to be incorporated by the States into the water quality management plans through the continuing planning process required under 303 (e) of the Act.
Q. Do you have any knowledge as to whether or not the '81 wasteload allocations suggested by the planning document for the Caloosahatchee River was ever approved under this paragraph?
A. No, I don't. I think it was not approved.
Q. Thank you.
Turning to Defendant's Exhibit number 20, Dr. Ahmadi.
This, too, is in evidence, Your Honor.
Do you have number 20 in front of you?
A. Yes, sir.
Q. What is this document?
A. This is a State of Florida permit to operate the Waterway Estates facility.
Q. Is there any no discharge wasteload allocation in this document, Dr. Ahmadi?

A. No. Basically this says that the utility is allowed to discharge to the river, and this was issued on August 2, 1983.
Q. And what was the expiration date of this permit, Dr. Ahmadi?
A. It was the maximum five years to August 2, 1988.
Q. Did Waterway Estates have a wasteload allocation to discharge into the canal of the Caloosahatchee River in 1983?
A. Yes, the permit was for a 1.08 MGD contact stabilization process, wastewater treatment facility with effluent discharge to a canal to the Caloosahatchee River as depicted in drawings and documentation on file in this office.
Q. Did the Waterway Estates facility have a wasteload allocation discharge into the canal in 1984?
A. Yes, sir.
Q. In 1985?
A. Yes, sir, through this permit.
Q. 1986?
A. Yes, sir.
Q. 1987?
A. Yes, sir.
Q. 1988?
A. Till August of 2, 1988, yes, sir.

Q. Did the EPA comment on this permit?
A. No.
Q. Did EPA challenge this permit?
A. No.
Q. Did EPA work with the State of Florida on joint inspections of this facility?
A. Yes, sir.
Q. Did EPA ever raise this issue of not having a wasteload allocation to you or any of your staff?
A. No.
Q. Was this facility meeting water quality standards in 1983?
MR. QUINN: Objection.
THE WITNESS: Yes, sir.
THE COURT: Wait a minute.
MR. QUINN: I think that calls for an expert opinion.
THE COURT: Okay. It sounds like it to me.
MR. BAISE: May I comment?
THE COURT: Yes, sir.
MR. BAISE: The State of Florida and this office and this gentleman had the responsibility, Your Honor, for maintaining and achieving water quality standards. They developed data. He has individuals who develop data. They have to make conclusions all the time with regard to whether

or not each and every facility meets water quality standards.
If they do not need water quality standards, that's how you get into what we've been discussing, wasteload allocations. So, it's mean a fact question for him, not an expert opinion.
It is a situation that's clearly covered by 701, where a lay person has to have certain facts at his fingertips and disposal to come to conclusions. Clearly this data allows him to determine whether water quality standards are met.
THE COURT: Yes, sir.
MR. QUINN: I'm just saying, sir, this is an expert opinion. I still maintain it's an expert opinion. If they wanted to list him as an expert they could have done it. He's not an expert before the Court.
Whether something satisfies water quality standards or not is — the United States' position is that requires an expert opinion and for that reason we object.
THE COURT: Okay. Well, I'll overrule the objection.
You can answer the question.
THE WITNESS: The State of Florida —
BY MR. BAISE:
Q. I think you answered, but would you repeat your

answer, please?
A. The State of Florida is, through Chapter 403, Florida Statute, is required to deny a permit if they do not meet any water quality standards for any reasons. We are requiring all facilities to submit to us monthly operation reports —
THE COURT: What was your question "yes"?
THE WITNESS: Yes, the question is they have complied with the Rule and not —
THE COURT: You've answered the question, sir.
MR. BAISE: Thank you.
BY MR. BAISE:
Q. I'll repeat this question: Was the facility meeting water quality standards in 1984?
A. Yes, sir.
Q. '85?
A. Yes, sir.
Q. '86?
A. Yes, sir.
Q. '87?
A. Yes, sir.
Q. And '88?
A. Yes, sir.
Q. Thank you.
MR. QUINN: I just object to all that and move to

strike.

THE COURT: The same ruling. Deny the motion to strike.

BY MR. BAISE:

Q. Dr. Ahmadi, why did Florida DEP require in 1988 the Waterway Estates facility to move its discharge point to the middle of the Caloosahatchee River?

THE COURT: Did you say why?

MR. BAISE: Yes.

THE WITNESS: BY that time it became evident to the State that the planning is not going to be implemented for regional facility on the north side of the county, which included the Waterway Estates plant, and, also, because of the consistency and uniformity with other facilities, we requested that Waterway Estates' facility be upgraded to the advanced waste treatment and, also, relocate their discharge point.

Q. So you asked Waterway Estates to move its discharge point for consistency reasons?

THE WITNESS: Yes, sir.

MR. QUINN: Objection, leading.

THE COURT: Sustained.

MR. QUINN: Move to strike.

THE COURT: Granted.

BY MR. BAISE:

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 3.

Do you have that document in front of you, Dr. Ahmadi?

A. Yes, sir.

Q. This document is already in evidence, Your Honor.

Dr. Ahmadi, I'd like to draw your attention — first off, are you familiar with this document?

A. Yes, sir.

Q. I'd like to draw your attention to the fourth line of that document and have you read starting with the word "according."

A. According —

Q. Go ahead. I'll tell you when to stop.

A. According to this decision, EPA has authority, indeed a duty under section 301 (b) (1) (c), to interpret State Law and apply those limitations and conditions which it deems necessary to satisfy the requirements of State law. This is true in the absence of state certification; this is also true where EPA determines that the State has committed clear error in the certification, for example, where a State overlooks applicable State water quality standards.

Q. You can skip citing OGC and start with "however."

A. However, where there is no indication that the State has overlooked the standards or otherwise committed clear error, EPA must give deference to the State.

Q. Continue.

A. In short, if EPA and the State arrive at two different, but equally persuasive, interpretations of a standard, EPA should defer to the State's interpretation when included in a State certification.

Q. You can stop there and got to the last paragraph starting with the two words, "the question," please.

A. The question then arises as to what interpretation the Region should write into permits when there is no certification, but the State has expressed its interpretation in a State-issued permit.

Q. Continue.

A. This question arises because of Region IV's agreement with the State of Florida to consider State-issued permits as interpretation of the State Law in view of certifications.

Q. Would you turn to page 2 of this document dated December 26, 1985?

I'm not sure what the first word is on my copy. The printing is blotted out and I assume it's the same with Your Honor. I assume it means, the agreement. Mine is unclear.

Can you tell, Dr. Ahmadi?

A. The same with this, only the "e" is there. I assume it's "t-h."

The agreement should only be construed to require EPA

to impose in its permits the interpretation of State Law which the State has embodied in permits it has issued unless those State interpretations are clearly erroneous or EPA has a strong scientific or technological support for a different interpretation, such that EPA's interpretation is more persuasive than that of the State.

Q. Does this memorandum represent your understanding of the relationship between your office and Region IV EPA on handling permits?

A. Yes, sir.

Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 23.

This, too, is in evidence, Your Honor.

Dr. Ahmadi, what is this document dated June 30, 1986?

A. This is a notification of the NPDES Permit denial by EPA for the Waterway Estates.

Q. Are you familiar with this document?

A. Yes, sir.

Q. Have you seen this document before?

A. Yes, sir.

Q. Do you recall seeing it in 1986?

A. Yes, sir.

Q. Now, Dr. Ahmadi, I direct your attention to page 2 of the attached fact sheet. Go over to the fourth page. Do you see the page where it is numbered 2, 3, 4, 5, and 6?

A. Yes, sir.
Q. I direct your attention to paragraph 2, Proposed Effluent Limitations. Would you read those into the record please?
A. Number 2: Proposed Effluent Limitations. The final effluent limits for this facility to a canal to the Caloosahatchee River are no discharge.
Q. Paragraph 3, please.
A. Basis for Denial Effluent Limitations and Permit Conditions. The permit denial is based on a no discharge wasteload allocation developed by FDER on January 19, 1981. The terms and schedule for meeting the no discharge wasteload allocation will be set forth in the forthcoming administrative order.
Q. On June 30, 1986, Dr. Ahmadi, did the State of Florida have a no discharge allocation requirement for this project discharging into the canal into the Caloosahatchee River?
A. No, the State didn't have a no discharge. They were authorized to discharge by permit.
Q. Are these two paragraphs incorrect, Dr. Ahmadi?
MR. QUINN: Objection.
THE WITNESS: Yes —
THE COURT: Wait a minute. Wait a minute, sir.
MR. QUINN: Objection. That calls for an opinion. Calls for a legal conclusion and calls for an opinion from a

lay witness.
THE COURT: Well, I'll sustain the objection.
Go ahead.
Proceed.
BY MR. BAISE:
Q. Dr. Ahmadi, I direct your attention — well, strike that.
Dr. Ahmadi, in June of 1986, was the effluent from the Waterway Estates facility meeting State water quality standards?
A. Yes.
Q. Was it meeting Federal water quality standards?
A. It should have. Generally, the State requirements are stringent than the Federal.
Q. I beg your pardon. More stringent did you say?
A. Generally.
Q. Was this discharger, Waterway Estates, meeting its effluent limitations in June of 1986?
A. Yes, they were.
MR. QUINN: I object as to the qualification as to referencing State or Federal effluent limitations.
MR. BAISE: State.
THE COURT: State.
Same answer?
THE WITNESS: Yes, sir, State.

BY MR. BAISE:
Q. Would the Federal effluent limitations have been any different?
A. Generally, as I say, the Federals are less stringent than the State, in most cases.
Q. Federal standards are less stringent than the State's?
A. Yes, sir.
Q. Dr. Ahmadi, I direct your attention to Defendant's Exhibit Number 32.
Do you have that in front of you?
A. Yes, sir.
Q. Did there come a time when the State of Florida did request Waterway Estates to move its discharge from the canal to the Caloosahatchee River 6-foot contour line?
A. Yes, sir.
Q. Did Waterway Estates eventually move their discharge to the 6-foot contour line?
A. Yes, they did.
Q. What did they have to do in order to move their discharge to that contour line?
A. By Florida Statutes, they are required to obtain a permit from the State for upgrading the treatment and, also, extending the line from the point of discharge from the canal to the middle of the river.
Q. So, once they are ordered to move their discharge

pipe, they cannot just immediately start construction, even if they wanted to do so?
A. No, they can't.
Q. Directing your attention to this Exhibit 32, are you familiar with this document?
A. Yes, I am.
Q. Are you the Dr. Ahmadi referred to in the first paragraph?
A. Yes, sir.
Q. What discussions were you holding in approximately September of 19 with Mr. William Barrop and any other individuals regarding this project, Dr. Ahmadi, if you recall?
A. Yes, they were — Barrop was retained as the consultant for the Waterway Estates facility and the Florida Statutes require that for design of a facility a professional engineer, who is registered in the State, must apply for the permit, and we were discussing the operating of the plant to AWT.
Q. What role does your office or do you, personally, play with respect to approving a project for construction such as the one at Waterway Estates, Dr. Ahmadi?
A. The State Statutes clearly require application to the State and then, also, requires a timely review by the State of Florida DEP.

Q. What is a timely review?
A. The timely review is we are obligated to review the application within the first 30 days and then generate a letter for additional information.
Q. Do you routinely grant permission to start these projects within 30 days?
A. No. It's almost impossible in most cases, if there is a necessity for explanations or omissions and clarifications and so forth.
Q. Why is it next to impossible?
A. Because it's a complicated process. The design of a facility, the treatment units, the choice of the chemicals, the equipment, and all this has to be in compliance with the Rule and we should have been given reasonable assurances that that would work once it's constructed.
In order to reach that point, we have to correspond several times back and forth, until such time that we are satisfied that what's proposed is going to meet the intent of the Rule.
Q. You reviewed the plans and specifications for this project, Dr. Ahmadi?
A. I did review certain parts of the application, yes, sir.
Q. Can you give us some idea —
MR. QUINN: Withdrawn.

BY MR. BAISE:
Q. Can you describe the nature of this particular project?
A. Yes. The project is located in the middle of a residential area on a relatively tight site. There is not much room really to design and place structures.
Q. Why is that important?
A. It's important from the point of view of expanding the facility from the conventional treatment which was there to an advanced wastewater treatment. They were building more units, more capacity, more volumes, more pumps and they required a permit not only from us, but from other governmental entities, as well.
But as far as the DEP's responsibility is concerned, we are to make sure what they are proposing will achieve the end result.
Q. Did Florida Cities or its engineering consultants provide you the information you needed to make your decision on a timely basis?
A. Most of the time they did, yes, sir.
Q. Any time they did not?
A. No.
Q. Can you describe or do you know, Dr. Ahmadi, looking at the second paragraph of this letter, what options and alternatives are being discussed by Mr. Harrop in this

letter to Mr. French as a result of this conversation with you in, say, roughly September of 1988?
A. This the September 14, 1988 letter?
Q. Yes, it is.
A. Bill Harrop writes to Robert French of the Florida Cities Water Company and says, it is apparent from our recent discussion —
Q. You can't read. I was just asking you with regard to paragraph 2 about the options and alternatives that might have related to the conversation you had with these gentlemen.
A. The options were that they had to consider some other alternatives for the plant design. We were questioning that certain units were very similar to a conventional treatment and that necessitated an advanced waste treatment process design.
Q. Thank you, Dr. Ahmadi.
I direct your attention to a letter dated October 11th, 1988, Defendant's Exhibit Number 34, please.
A. Number 34?
Q. Yes. Defendant's Exhibit 34.
A. Goes from 32 to 53.
Q. Defendant's Exhibit, Trial Exhibit Number 34.
A. Sorry for that.
Q. Would you please identify this letter, Dr. Ahmadi?

A. Yes, sir. This is a letter written by the DEP to Robert French of Waterway Estates Utility by me and copied the consulting engineer and Tony Reeves, the vice-president.
Q. Can you summarize —
Your Honor, I would move this letter into evidence.
THE COURT: It will be received.
BY MR. BAISE:
Q. Could you summarize your concerns that were raised during your meeting with the Florida Cities official, Mr. French?
A. Primarily after consulting with our engineers, some ten issues that were relevant to this project, including irrigation/production, reliability, chambers, and flow equalization, and we told them those needed to be addressed before we could issue a permit.
Q. Can Florida Cities' engineer develop final plans and specifications until these ten items were specified?
A. No, they cannot.
Q. Why not?
A. Because they would be wasted. If we are not satisfied to give them a permit, they cannot do that. And if we object to it or if we deny their permit, it's a waste of resources and time.
Q. So Florida Cities and its engineer had to satisfy each and every one of these items?

THE COURT: Sir?

MR. QUINN: No. Sorry, sir.

BY MR. BAISE:

Q. How long did it take Florida Cities and its engineer to satisfy FDER's concerns, Dr. Ahmadi?

A. I believe from the time they applied for the permit until we issued, was close to nine months.

And that's not an unusually high time for these kind of projects.

Q. Dr. Ahmadi, I draw your attention to a letter dated November 1st, 1988, Florida Cities Exhibit Number 35.

A. Yes, sir.

Q. Are you familiar with this letter, Dr. Ahmadi?

A. Yes. This is a letter in response to the previous letter that we wrote to Florida Cities. Mr. French responded.

Q. And you're the Dr. Ahmadi in the addressee block?

A. Yes, sir.

MR. BAISE: Your Honor, I would move this Florida Cities Exhibit Number 35 into evidence.

THE COURT: It will be received.

BY MR. BAISE:

Q. In the interest of time, Dr. Ahmadi, could you summarize this document for the Court?

A. Mr. French indicated in this letter that they have

retained Mr. Barth, who is a well-known authority on wastewater process, that he would be reviewing their process.

Q. Who is Mr. Barth and why was he retained?

MR. QUINN: Objection.

BY MR. BAISE:

Q. Who is Mr. Barth?

A. He was a wastewater treatment processing engineer expert.

Q. Did you request Mr. Barth be retained?

A. No, we didn't. We, basically, told the utility that we need those ten concerns that are addressed in our letter adequately responded to, and their response was that they could hire a different consultant to review that aspect of the application.

Q. Was there anything Florida Cities or its consultant could do to speed up your review process, Dr. Ahmadi?

A. Could you repeat that?

Q. Was there anything Florida Cities or its consultant could have done to have speeded up your review process?

A. For a project of that size, that particular process, probably not.

Q. Dr. Ahmadi, did your office ever order Waterway Estates to cease discharging into the canal into the Caloosahatchee River?

A. No, we didn't.

Q. Why not?

A. There was several reasons. One, the Caloosahatchee River was studied by the State a couple of times and it maintained its quality. And second, the facilities that are currently discharging up to this date are well below their permitted design capacity, so they are -- the river is receiving half of its wasteload, actually, and that's another reason. And third, there was really no alternative.

Q. I direct your attention to Defendant's Exhibit Number 36.

Do you have that in front of you, Dr. Ahmadi?

A. Yes, sir.

Q. Please describe this document for the record, doctor.

A. This is also a letter that is written by Bob French of Florida Cities Water Company to the District Manager Phil Edwards on April 19, 1989.

Q. Who was Phil Edwards?

A. My supervisor and the district manager of the South District.

Q. Have you seen this letter before?

A. Yes, sir.

Q. Did you see it in April of 1989?

A. Yes, sir.

MR. BAISE: I move this into evidence, Your Honor.

MR. QUINN: Objection. We say this document is hearsay and hearsay within hearsay as to the attachments. We talked about this the other day.

The sequence of events and the proposed compliance schedule contain hearsay and hearsay within hearsay and the cover letter itself dated to Mr. Edwards contains hearsay.

MR. BAISE: May I respond?

THE COURT: Did I sustain your objection?

MR. BAISE: Yes, you did, and I withdraw the document because this is the one that had on it the stamp received and there was some concern about whether Mr. Acosta had gotten it out of Florida Cities' files, and the issue went off on the fact that this was stamped received April 21, 1989, South Florida District. And since Dr. Ahmadi said he saw it at the time it came in, he worked for Mr. Edwards, he reviewed the document at the time, and certainly represents the events as they were occurring at the time accurately and honestly.

MR. QUINN: I object to the characterization of how this letter sets out the events accurately and honestly. It does what it does and we think it's hearsay.

THE COURT: Okay. Well, let's talk about it a minute.

MR. BAISE: I would move, Your Honor, it comes in under 803-6.

THE COURT: As an exception to the hearsay rule?

MR. BAISE: Correct. Particularly in light of his testimony.

THE COURT: Well, do you want to tell me how this qualifies under the requirements of the rule as a business record?

MR. BAISE: It's certainly a memorandum or a record, it's acts and events that were made at or near the time, and information transmitted by a person with knowledge, who would have been Mr. French. The document was kept in the course of regular conducted business by the Florida DER office a indicated by the stamp, April 21, 1989, and the only thing Dr. Ahmadi has not testified to is whether or not it was the regular practice of that business to make a memorandum or report of this sort and keep it within the custodian of a qualified witness.

THE COURT: Well, how about that?

MR. BAISE: Dr. Ahmadi, are these records kept by a qualified custodian in your offices?

THE WITNESS: Yes, they are. In fact, we are required by Florida Statutes to permanently keep all permitting letter — documents.

THE COURT: Well, who does that? That is, who keeps the records?

THE WITNESS: The records are kept by the — we

have a file clark, Your Honor.

MR. BAISE: Five or file clark?

THE WITNESS: Uh-huh.

MR. BAISE: Excuse me.

MR. QUINN: We still submit that the exceptions requirements have not been met.

The recording of the acts, events, conditions, opinions or diagnoses have to be made at or near the time. You know, we don't know what Mr. French was talking about here, sir. Mr. French isn't here. That's why it's hearsay.

Dr. Ahmadi said file clarks, and if they wanted to get the document in as a business record, they could have brought the file clarks in.

We're not submitting that it's not authentic, we're just submitting that they haven't met the requirements under this aspect of the exception to the hearsay rule.

MR. BAISE: Your Honor, we were told about Judge Swartz we did not have to bring custodians forward to authenticate these documents and maintain — and to assure that they were maintained in the ordinary course of business at the offices, so seems to me that Judge Swartz has dealt with that issue.

MR. QUINN: I'm not objecting to authenticity, sir. They're probably authentic.

THE COURT: Just a moment.

MR. BAISE: Your Honor, there's an 11th Circuit case called Beech Aircraft where it's stated that the United States bear the burden of showing there's a lack of trustworthiness with regard to this document —

THE COURT: Now, that case deals with public records and reports under subsection 8, doesn't it?

MR. BAISE: I've just been given a note from someone who is looking and trying to provide me information, Your Honor.

THE COURT: Well, give me just a moment here.

Okay. I'm referring to the pretrial conference before Magistrate Judge Swartz on December 29th, 1995, referring to the list of custodian of records.

He says: I want those witnesses eliminated and I want any documents that they were to authenticate approved for the purpose of authentication and I need a supplement to this, and I will give you ten days to get it supplemented.

Mr. Bullock: Would Your Honor also consider that for any EPA documents?

The Court: That's both ways.

Mr. Bullock: Thank you.

The Court: All exhibits have got to be examined and this Court is going to get a supplement to this that says there's are no objections to authenticity unless there is a document that you absolutely contend is not a true

document.

So, the Court led counsel to believe that there would be no need to bring in a custodian of records.

We've been talking about a requirement of the business records as evidence, provision of 803, which requires a custodian of records to properly establish the document's authenticity and, of course, a custodian of records would be expected to satisfy some of the requirements of the business records as evidence provisions of 803 Sub 6.

Do you want to be heard on that?

MR. QUINN: No, sir. For purposes of this document, the United States will concede as to what the Court read about authenticity.

However, I will address some of the points of 803-6 and other hurdles that have to met. It has to be established that the document was made at or near the time, by or from information transmitted by a person with knowledge. We don't have anything here today, sir, about Mr. French's personal knowledge.

MR. BAISE: This would, also, qualify as a public record, as well, given the fact it's got this stamp on it and would qualify as an exception to hearsay under 8.

MR. QUINN: May I be heard on that?

THE COURT: Wait a minute. This — I think I

mentioned the other day that I don't think that this is the kind of a record that is contemplated under 8. This isn't a public record that can report -- just a moment, let me read this again.

(Pause.)

Subsection 8, public records and reports. Records, reports, statements or data compilations in any form of public offices or agencies setting forth, A, the activities of the office or agency, or, B, matters observed pursuant to duty imposed by law as to which matters there was a duty to report excluding, however, in criminal cases, matters observed by police officers and other law enforcement personnel, or, C, in civil actions and proceeding, and against the Government in criminal cases. Factual findings resulting from an investigation made pursuant to authority granted by law, and thus the sources of information or other circumstances indicate lack of trustworthiness.

MR. BAISE: B., Your Honor, I was referring to.

THE COURT: Sir?

MR. BAISE: B., matters observed pursuant to his duty imposed by law.

THE COURT: No, I don't believe that subparagraph 8 is applicable here. I disagree with you.

MR. BAISE: Okay.

THE COURT: And I don't believe that this record has been adequately qualified as a business record, so I'll sustain the objection.

BY MR. BAISE:

Q. Dr. Ahmadi, I drew your attention to Defendant's Exhibit Number 33.

A. Yes, sir.

Q. Do you have that document in front of you?

A. Yes, sir.

Q. This, too, is in evidence, Your Honor.

Please describe this document for the record, Dr. Ahmadi.

A. This is a September 14, 1988 letter that's written by William Harrop, Jr., P.E. of Source, Incorporated to Bob French with copy to Tony Reeves.

Q. And what is attached to this letter?

MR. QUINN: Can I have a clarification as to what document?

THE COURT: This is Exhibit 33.

MR. BAISE: Defendant's Trial Exhibit 33, State of Florida Permit, dated September 2th, 1988.

THE WITNESS: I'm sorry. I read the 32.

MR. QUINN: Thank you.

THE COURT: He was describing another document.

THE WITNESS: I was reading it erroneously.

BY MR. BAISE:

Q. What is attached to the letter sent by Mr. Phil Edwards?

A. I'm sorry. For the number 33 is State of Florida document dated September 29, 1983.

Q. Is it '88? It's hard to see.

A. Hard to read.

Q. What is attached to this letter of September 29th, 1988, Dr. Ahmadi?

A. The temporary permit, six pages.

Q. And could you please look to page 2 and describe what Florida Cities is to undertake, starting with paragraph or line 1 at the bottom of the page of 1 of 6?

A. Starting with 1, date?

Q. Yes.

Please summarize that for the record.

A. Date when planning is expect to be complete. It says completed.

Date when engineering will be complete. September 23, 1988.

Source of funds. Invested-owned utility.

Number 4, Date construction application will be submitted to upgrade or eliminate the existing plant. October 8, 1988,

Number 5, Date construction contract will be let.

January 9, 1989,

Number 6, Date construction will commence. February 1, 1989.

Number 7, Date construction is to be complete and so certified. May 1, 1990.

Number 8, Date that wastewater facilities will be certified "in compliance" with your permit. November 1, 1990.

Q. To your knowledge, was Florida Cities able to meet this November 1, 1990, deadline, Dr. Ahmadi?

A. Yes.

Q. Are you aware of any additional delays that Florida Cities met with regard to meeting this date of November 1, 1990?

A. There were some delays from zoning from Lee County and permitting from the Army Corps of Engineers.

Q. Is there any order to cease discharge from the Waterway Estates in this permit issued on September 29, 1988, from the State of Florida?

A. No.

Q. Turning your attention to the exhibit for the Defendant, Number 51.

Do you see this document of October 30, 1990?

A. Yes, sir.

Q. This, too, is in evidence, Your Honor.

Dr. Ahmadi, please look to paragraph 2 of this letter to Mr. Reeves, and please read that paragraph into the record.

A. The letter is signed by Mr. Phillip Edwards, Deputy Assistant Secretary, to A. A. Reeves. Please be advised that the subject permit is extended until September 1, 1992.

Q. Why was that necessary for this particular facility, Dr. Ahmadi?

A. This was necessary due to the delays that were beyond the control of the utility due to permitting and involvement of the different governmental entities.

MR. QUINN: Objection, move to strike, calls for opinion and goes beyond the actual personal knowledge of the witness, goes to opinion and expert opinion, as well, sir.

MR. BAISE: Do you have personal —

THE COURT: Well, I'll sustain the objection.

BY MR. BAISE:

Q. Do you have personal knowledge of this date, Dr. Ahmadi?

A. Yes, sir.

Q. And do you have personal knowledge as to why it was extended?

A. Yes. It was reasonable that there were delays that obviously they could not go ahead with construction without a permit from the appropriate agency, otherwise they get in

trouble for violation of the permit, or the activities that they engage in.

Q. And did Waterway Estates still have a wasteload allocation to discharge in the canal on October 30th, 1990?

A. Yes, sir, through this permit. Through the earlier permit.

Q. Dr. Ahmadi, did this discharge cause any environmental harm as they were discharging into the canal in the Caloosahatchee River in 1990?

A. No measurable harm.

MR. QUINN: Move to strike again.

THE COURT: Just a moment.

MR. QUINN: Objection, move to strike, that environmental harm calls for an expert opinion.

THE COURT: Sustained. And it will be stricken.

BY MR. BAISE:

Q. If this facility had remained discharging into the canal leading into the Caloosahatchee River, could it still be discharging and meeting water quality standards, State of Florida?

A. In my opinion, due to the other —

THE COURT: Wait a minute. Wait a minute.

Yes, sir.

MR. QUINN: Objection. He said, in his opinion, and that will elicit an expert response.

THE COURT: Read the question back to me, again, please.

MR. BAISE: I can rephrase the question, Your Honor, to speed it up.

THE COURT: All right.

BY MR. BAISE:

Q. Dr. Ahmadi, do you have any facts or any data that would suggest that Waterway Estates could still be discharging into the canal without causing water quality standards violations?

THE COURT: Yes or no? Do you have any facts?

THE WITNESS: No. We don't have any facts that — could you repeat that?

BY MR. BAISE:

Q. Do you have any facts showing any water quality harm in the canal in 1990?

A. No, we do not have any facts.

Q. Do you have any facts showing any environmental benefit by moving the pipe to the Caloosahatchee River in 1990?

A. No, we don't have that.

Q. In 1991?

A. No.

Q. 1992?

A. No.

Q. Therefore, could the facility still be discharging into the canal without violating water quality standards?

A. Yes.

MR. QUINN: Objection, move to strike. First, it calls for speculation, and second, speculation of an expert.

THE COURT: All right. Read the question back.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: I'll sustain the objection.

BY MR. BAISE:

Q. Did EPA comment on the permit that was issued by the State of Florida in 1988, Dr. Ahmadi?

A. No.

Q. Did EPA ever challenge that permit issued in 1988?

A. No, nobody did.

Q. And the Waterway Estates facility had a wasteload allocation to discharge in the canal up until it moved its pipe in 1991?

THE COURT: Don't lead the witness. This is your witness.

BY MR. BAISE:

Q. Dr. Ahmadi, was there ever a time that Waterway Estates did not have a wasteload allocation to discharge into the canal?

A. No, not from the State. All the time they did.

MR. BAISE: Thank you.

THE COURT: Is that all, Mr. Baise?

MR. BAISE: Yes, sir.

MR. HIRD: I have no questions for this witness.

THE COURT: Mr. Quinn.

CROSS-EXAMINATION

BY MR. QUINN:

Q. Good afternoon, Dr. Ahmadi. My name is Tony Quinn. I represent the United States.

A. Good afternoon.

Q. Sir, when did you first start with the Florida Department of Environmental Regulation?

A. That's the first place where I applied for a position and was interviewed. There were two positions and I was offered both of them.

Q. And what year — what date was that?

A. That was in September 1981.

Q. So when did you start work for FDER?

A. In September of 1981.

MR. QUINN: Your Honor, at this time the United States would move to strike all the testimony of Dr. Ahmadi which relates to his personal observations made on or before the date he started work in September of '81.

THE COURT: Motion denied.

BY MR. QUINN:

Q. Sir, prior to the delegation to Florida, NPDES Permits and State permits were different requirements, weren't they?

A. It was a parallel program, yes.

Q. But they were requirements that were separately enforcement, weren't they?

A. Yes.

Q. And prior to the delegation of the NPDES Program to Florida, a facility discharging pollutants to a surface water required both a State permit and a Federal NPDES Permit; is that correct?

A. Yes.

Q. Sir, in Florida, do permittees have a right to appeal a State permit denial?

A. Yes, they do.

Q. Are you familiar, now that Florida has been delegated the NPDES Program, are you aware whether permittees have a right to appeal permit denials?

A. Yes, we give them the point of entry, and on receipt of the permit they have certain amount of days to appeal for a permit, object to it if they dislike any of the conditions.

Q. So it's a permit appeal process; is that correct?

A. Yes.

Q. Sir, prior to the delegation of the NPDES Program to

the State of Florida, do you know whether permittees had the opportunity to appeal permit denials of NPDES Permits?

A. My understanding is that they would have.

Q. So, if a permittee thought that a permit was wrongfully denied, it could have appealed; is that correct?

A. Yes.

Q. Sir, you mentioned during your discussion with Mr. Baise the Cape Coral facility. My question deals with that facility.

Doesn't the Cape Coral facility currently have one hundred percent use of its effluent on land application?

A. No, it doesn't.

Q. Does it have any surface water discharge?

A. Yes, they do.

Q. Only during wet weather; isn't that correct?

A. Yes.

Q. Other than only during the wet weather discharge, Cape Coral has land application for its effluent in entirety; is that correct?

A. Yes. About three years ago the city, after several years of referendums and a lot of pros and cons, the citizens decided they are going to embark on a project that will deliver water to each home —

MR. QUINN: Objection. Move to strike everything after 'yes.'

THE COURT: All right. Stricken.

BY MR. QUINN:

Q. Sir, can you tell me what is the wet weather discharge storm event that allows the wet weather discharge?

A. Any time the land cannot accept effluent due to excessive rainfalls, such as this last year we had close to 75 inches of rain in our area, our part of the State, they are authorized to discharge their entire effluent or portion of to it the river.

Q. What is the trigger that allows them — withdrawn.

What is the triggering event or the triggering amount of rainfall that authorizes a surface water discharge from the Cape Coral facility, if you know?

A. We have an application rate of 2 inches per week. Anything above and beyond that will soak the land and the land will not accept it and create surface water runoff.

Q. Sir, is it the State of Florida's position — withdrawn.

Does the State of Florida encourage land use application for wastewater facilities?

A. Yes, we do.

Q. And does the State of Florida discourage surface water discharges?

A. Where we use as feasible, yes.

Q. Why does the State of Florida discourage surface water

discharges?
A. For two reasons: One is the conservation of the resource, it eliminates the need for additional potable water or ground water of high quality, and that's normally used for irrigation, it would be safe to be used for other purposes, and second, it will not be a direct discharge to a surface quarter stream.
Q. Because a direct discharge of pollutants to the water might have an environmental impact?
A. Well, it does — in fact, it could be debated both ways. If ground water is contaminated, it is extremely difficult to clean up that water. If surface water gets contaminated, due to the natural reactions, currents, and so forth, it is easier to get cleaned up.
Q. Do pollutants — withdrawn.
Does pollutants discharge to a surface water body have a tendency or a possibility of impacting environmentally on that water body?
A. It would, depending on what the pollutants are and what concentrations are.
The State Rules, all of them, allow certain amount of pollutants to be discharged to the ground water or to the surface waters.
Q. Thank you.
Sir, we talked a little bit about the 1981

Caloosahatchee Wasteload Allocation document. I'm not going to ask you any specifics about them, I'm just going to ask you in general about it.
You didn't write the 1981 Wasteload Allocation document, did you?
A. No, I didn't. We have a separate section in Tallahassee, which is the technical department and they do it for the entire state and they are headquartered in Tallahassee and we work closely with them.
MR. QUINN: Objection, move to strike everything after, "no, I did not."
THE COURT: I'll deny the motion to strike.
Go ahead.
BY MR. QUINN:
Q. Sir, all your knowledge about the purpose of the wasteload allocation document came after it was written; isn't that a fact?
A. After I joined the DEP, that was part of my job requirement, to review the Statutes and the Rules, Administrative Codes and implement those in the permitting process.
Q. So people told you about the wasteload allocation document at that time; is that right?
A. That was part of my job, as I said.
Q. Okay. Sir, does the Florida Department — withdrawn.

The Florida Department of Environmental Protection or the Florida Department of Environmental Regulation, I'm not sure exactly which one it's going to be based on the time, but either FDEP or FDER required that the Waterway Estates' outfall be moved to the 6-foot contour line because there was more dispersion of pollutants at that location; isn't that correct?
A. That was the premise for all of them, for all of the dischargers to that body of water.
Q. So we talked about a little bit about wasteload allocations, and we talked a little bit about permits on your direct examination.
A wasteload allocation is different than a permit, isn't it?
A. A permit is the authority to discharge and in that it contains certain conditions and under what conditions.
Q. And the wasteload allocation is a condition which is enforcible through a permit; isn't that correct?
A. If it has been determined that a facility is granted a specific wasteload, then that is contained in the permit and only enforcible if it's in the permit.
Q. So a wasteload allocation which is not in a permit is not enforceable; is that correct?
A. Right.
MR. QUINN: Excuse me, one moment, sir.

(Pause.)
BY MR. QUINN:
Q. I'd like to turn your attention, please, if I may, to Florida Cities Water Company Exhibit Number 32.
This was the document between Source and Mr. French that Dr. Ahmadi talked about a little bit, Your Honor.
Do you have the document in front of you, Dr. Ahmadi?
A. You said 34 or —
Q. I'm sorry. 32 is the one I'm talking about.
A. Yes, sir.
Q. Okay. Sir, with regard to your conversations with Florida Cities Water Company and Source Engineering, isn't it true that the Florida Department of Environmental Regulation needed to make requests — withdrawn.
Isn't it true the Florida Department of Environmental Regulation needed to make four requests for additional information regarding this project?
A. I'm not sure of the exact number, but there was several requests back and forth.
Q. On direct testimony you said, I believe in response to a question, that you didn't think there was anything that could be done to have sped up the review process; isn't that correct?
A. Yes, I said that it took approximately nine months and that's not an unusually long time.

Q. Sir, wouldn't submission of a complete and accurate application have speeded up the review process?

MR. BAISE: Objection to the characterization of accurate application. There's been no suggestion that there was an inaccurate application submitted here; only an application which, as he pointed out, there are always questions with regard to any application such as this, that is as complicated as this project was.

MR. QUINN: I'll rephrase the question, sir.

THE COURT: All right. I'm not requiring you to, but go ahead.

MR. QUINN: I think I will, just to save a little time.

BY MR. QUINN:

Q. Sir, wouldn't submission of a complete application the first time have speeded up the application review process?

A. It would, but it's not customary. As I said, in 99 percent of cases there is need for additional information in all such cases.

MR. QUINN: Objection, move to strike everything after "it would" as non-responsive.

THE COURT: Read it back to me, please.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: Denied.

BY MR. QUINN:

Q. Sir, in 99 percent of the cases are four additional information requests usually sent?

A. Yes, sir.

Q. Four times it is --

A. Four or more.

Q. Has the Department of Environmental Regulation ever requested that applicants do a better job in submitting applications the first time?

MR. BAISE: Objection. That's outside the scope of my direct.

THE COURT: Well, I don't know. I'm kind of curious, myself.

THE WITNESS: Well, the application on the very top says, in fact, that it should be fully executed and supporting documents given to us. But, there are a lot of factors to be considered; chemical, biological, process, equipment, and others, layout. Unless we are satisfied that the process they proposed will give us that degree of confidence that they will meet the standards, we will not be able really to decide on the merits of what has been proposed, and that's, as I said, customary in all such treatment process.

BY MR. QUINN:

Q. One final line of questions for you, Dr. Ahmadi.

Sir, are you familiar with something called the Anti-degradation Rule?

A. Yes, sir.

Q. Sir, if a wastewater treatment plant had a complete construction permit application with FDER before the effective date of the Anti-degradation Rule, isn't it a fact the required treatment levels set forth the Anti-degradation Rule would not be required?

MR. BAISE: Objection.

THE COURT: Wait, wait.

MR. BAISE: I certainly didn't bring the Anti-degradation Rule on direct, Your Honor.

MR. QUINN: He did not, but this goes to knowledge about the delays we've been talking about, so I believe it is within the scope.

In addition, the Anti-degradation Rule came up in earlier testimony as one of the mitigating factors.

THE COURT: I'll overrule the objection.

Do you remember the question, sir?

THE WITNESS: Yes. The Anti-degradation Rule, when it was passed, had a cut-off date. It was only applicable to future projects and expansion only. The expanded portion. This facility did not expand. The expansion that took place -- actually, there was an

expansion, but it was through reuse of land application. The facility was downgraded, in fact, as to discharge. It was 1.08 and came to 1.0 for the surface water discharge. The balance of that, which is 1.5, goes to land application and reuse.

BY MR. QUINN:

Q. So if the application for the upgrade of the Waterway Estates' treatment plant had been submitted and been deemed complete prior to the effective date of the Anti-degradation Rule, none of those requirements would have been applicable to that construction project; is that correct?

A. What requirements?

Q. The requirements of the Anti-degradation Rule.

A. There are no additional requirements under the anti-degradation that will be retroactively applied to a facility. Only to expansion or new construction.

Q. So my question goes to that, though, sir. If the application had been submitted after that cut-off date, then the Anti-degradation Rule could not have been applied retroactively to it; is that correct?

A. Yes. The anti-degradation is not an issue at all here because they did not expand the facility to discharge surface waters. The expansion is to land application reuse site.

MR. QUINN: Thank you.

I have no more questions, Dr. Ahmadi, sir.

THE WITNESS: Thank you.

THE COURT: Redirect.

REDIRECT EXAMINATION

BY MR. BAISE:

Q. Dr. Ahmadi, in talking about the Cape Coral facility, did I hear you correctly in saying it could discharge over if two inches of rain was received within a certain time period?

A. No, I said the rate of application of effluent on land for irrigation purposes is two inches per week. If we get, let's say, two or three inches per week of rain, then the land cannot accept any additional water.

Q. How frequently does this area receive two to three inches of rain per week?

A. In our part of the State, beginning in late May to October, it's 7, 8, 10 inches a week.

Q. How frequently, then, does Cape Coral discharge into the Caloosahatchee River?

A. As soon as the rain hits, they're partially starting discharge and sometimes one hundred percent discharge.

Q. I'm sorry. One hundred percent?

A. Right, of what they produce is discharged.

Q. How many gallons is that?

A. Currently they have to two facilities. They are

permitted for close to 14 million gallons.

Q. 14 million?

A. Yes, sir.

Q. How many gallons is Waterway Estates' discharge?

A. Waterway Estates discharge is limited to one million gallons, so it would be one over 14th of that or 7 percent.

Q. Regarding wasteload allocations, are those included in the Florida permits when they are issued, Dr. Ahmadi?

A. Yes. When the permits are issued, it lays out all the conditions, what they can and what they cannot do and what type of treatment they need to achieve.

Q. What other ways, if any, besides an operating permit, does FDER use to authorize discharges to surface waters?

MR. QUINN: Judge, I think this is beyond the scope of my cross examination.

THE COURT: Read the question back to me.

(Thereupon, the above-referred to portion of the testimony was read back by the Court Reporter as above recorded.)

THE COURT: Mr. Baise.

MR. BAISE: I was just going back to the Cape Coral situation, which has struck me as interesting when counsel drew out that Cape Coral could be discharging into the Caloosahatchee River --

THE COURT: I'll overrule it.

MR. BAISE: -- These enormous amounts --

THE COURT: I'll overrule it.

Go ahead

BY MR. BAISE:

Q. Do you understand the question, Dr. Ahmadi?

A. No, there's no other way, other than the permits.

Q. Dr. Ahmadi, how many private waste treatment companies or facilities do you work with?

A. Close to 700 in our district.

Q. Could you compare those facilities' performance with Waterway Estates' performance?

A. I not compare one to the other, but I have a generalized feeling --

THE COURT: I think this is beyond the scope.

MR. BAISE: I'll withdraw the question, Your Honor.

BY MR. BAISE:

Q. How many permit applications does your office review in a year's time, Dr. Ahmadi?

A. Only the facilities which I log in personally, and then assign it to the engineers. Close to one thousand per year.

Q. How many of those permit applications are granted upon the first application submitted to your office?

A. Some applications which are on the -- not the

process -- like the distribution system or collection system or pump station, those are simple. They could be complete, we could deny them right away or we could issue them right away. There's a different time limit of 30 days. So, if you exclude those, the others all of them would require, and some of them 1, 2, 3 years, in fact, to finalize.

MR. BAISE: Thank you very much.

THE COURT: All right.

We'll take a 15-minute recess.

(Thereupon, a brief recess was taken after which the following proceedings were had:)

COMPOSITE EXHIBIT NO. _____

DOCKET NO.: 971663-WS -- PETITION OF FLORIDA CITIES WATER COMPANY FOR LIMITED PROCEEDING TO RECOVER ENVIRONMENTAL LITIGATION COSTS FOR NORTH AND SOUTH FT. MYERS DIVISIONS IN LEE COUNTY AND BAREFOOT BAY DIVISION IN BREVARD COUNTY.

WITNESS: AHMADI
DIRECT

ON BEHALF OF: FCWC

DESCRIPTION:

1. Transcript of Deposition of Abdul Baqi Ahmadi taken on May 27, 1998
2. FCWC Response to Staff POD 1 - 10/12/90 letter from FCWC to FDER
3. FCWC Response to Staff POD 1 - 10/1/90 letter from FDER to FCWC
4. FCWC Response to Staff POD 1 - 6/5/90 letter from FDER to FCWC
5. FCWC Response to Staff POD 1 - 5/21/90 letter from FDER to FCWC
6. Ahmadi Late-filed depo Exhibit 3 from May 27, 1998 deposition
7. FCWC Response to Staff POD 1 - 4/1/81 FDER Waterway operating permit
8. Ahmadi Late-filed depo Exhibit 2 from May 27, 1998 deposition

PROFFERING PARTY: STAFF

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 971663-W EXHIBIT NO. 15
COMPANY/ WITNESS: Ahmadi - Staff
DATE: 8-12-98

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition of Florida Cities Water Company for limited proceeding to recover environmental litigation costs for North and South Ft. Myers Divisions in Lee County and Barefoot Bay Division in Brevard County.	)	Docket No. 971663-WS

DEPOSITION OF:	ABDUL BAQI AHMADI (Via Telephone)
TAKEN AT THE INSTANCE OF:	The Staff of the Florida Public Service Commission
PLACE:	FPSC Conference Room 362 Gerald L. Gunter Building 2540 Shumard Oak Boulevard Tallahassee, Florida
TIME:	Commenced at 1:05 p.m. Concluded at 2:05 p.m.
DATE:	Wednesday, May 27, 1998
REPORTED BY:	Lisa Girod Jones, RPR, RMR

WITNESS	PAGE
ABDUL BAQI AHMADI	
Examination by Ms. Gervasi	5
CERTIFICATE OF REPORTER	34

EXHIBITS

EXHIBIT NO.:	PAGE
1 - (Late-filed) Signed Consent Order Concerning the November 21, 1990 letter from Mr. Edwards to Mr. Reeves	17
2 - (Late-filed) Copy of Consent Order No. 88-0384	19
3 - (Late-filed) Date of EPA's First Request of State Certification from the DER for the Waterway 1986 NPDES permit renewal, and work sheet	25
4 - (Late-filed) 1-22-81 Letter Signed by William Cloward	29
5 - (Late-filed) April 2nd, 1981 DER Permit Issued to Waterway	30
6 - (Late-filed) Copy of Letter signed by Terry Cole of DER to Charles Jeter of EPA	31
7 - (Late-filed) DER's NPDES Certification Work Sheet for the 1981 NPDES Permit for Waterway Estates (Issuance date July 14th of 1981)	32

S T I P U L A T I O N S

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that objections, except as to the form of the question, are reserved until hearing in this causes; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

DEPOSITION

Whereupon,

ABDUL B. AHMADI

was called as a witness, having first been duly sworn to speak the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

MR. GATLIN: He's sworn.

MS. GERVASI: Mr. Gatlin, can we agree to the usual stipulations for the purposes this deposition?

MR. GATLIN: Yes.

DIRECT EXAMINATION

BY MS. GERVASI:

Q. Dr. Ahmadi, hi, I'm Rosanne Gervasi and I'm an attorney representing the Staff of the Florida Public Service Commission.

Would you please state your full name and business address for the record?

A. My name is Abdul Baqi Ahmadi, and I'm at 2295 Victoria Avenue, Fort Myers, Florida 33901.

Q. And Dr. Ahmadi, you have filed or caused to be filed some testimony and exhibits in the Public Service Commission docket concerning Florida Cities Water Company's petition to recover certain environmental litigation costs, correct?

A. Yes.

Q. I would like to ask you some questions on behalf of the Commission Staff relating to the testimony that you filed in that docket. If I ask you something that's unclear to you, would you please let me know, and I'll do what I can to rephrase the question to make it understandable. And if you need a break at any time, let me know, and we can go ahead and take a break whenever you need one.

Do you have with you a copy of your testimony and the prefiled exhibits that you filed in the docket?

MR. GATLIN: Yes, he does. I handed him one. He has a copy of the deposition.

THE WITNESS: Yes.

BY MS. GERVASI:

Q. Okay, and also the trial transcript that he prefiled?

A. Yes, he has that too.

Q. Great. Thank you. And you also have copies, or faxed copies that we just faxed to you of a couple of other documents that I'll be referring you to, Dr. Ahmadi, a little bit further on.

Let me first refer you, please, sir to Page 32 of your Exhibit ABA-1, your deposition transcript.

A. Okay.

Q. And beginning on Line 2, you state that DEP required the utility to expand or upgrade the Waterway

Estates plant to advanced wastewater treatment, correct?

A. Yes.

Q. And to move the outflow line to the middle of the Caloosahatchie River?

A. Right.

Q. When was that required? Do you know? Or do you recall?

A. I don't recall exactly. There was -- with the location down on the river, and it was decided many years prior to that, that any discharges that -- existing or will be expanding will be required to go to advanced waste treatment. And also to relocate -- if they are not discharging to the middle of the river, they are to relocate the discharge pipe.

Q. Was that sometime back in the -- would you say early eighties? Is that roughly the right time?

A. I don't have the exact date. You know, those dates kind of -- but they were much prior to when the actual work was done.

Q. Okay. Thank you.

A. You're welcome.

Q. Do you know whether DEP's requirement in that situation influenced in any way -- was influenced in any way by the EPA's 1986 denial of the utility's NPDES permit?

A. The DEP's requirement, no, it was independent of

the EPA's.

Q. Thank you.

A. You're welcome.

Q. Was the DEP's 1988 requirement to upgrade the plant and move the outflow line based in any way on any EPA compliance requirements?

A. No, that was the state, DEP's requirement, DER at the time.

THE REPORTER: I'm sorry, I didn't understand you.

THE WITNESS: I say that was the state requirement, the DEP. At that time we had DER, at that time, a different name.

BY MS. GERVASI:

Q. Thank you.

A. You're welcome.

Q. Now, if an NPDES permit had been granted for Waterway Estates in 1986, would the DEP still have required the utility to upgrade the -- to the advanced wastewater treatment and to relocate the outflow line?

A. Yeah, regardless of the NPDES, we were independently requiring surface water discharge permit from each facility discharging to the river. The decision was made for the AWT for all the discharges, and I believe there were two plants that were not at that time meeting the AWT standards, and the Waterway Estates plant was one of them.

Q. What was one of them, I'm sorry?

A. The Waterway Estates plant, the plant in question, I guess, the Florida Cities Water Company plant, was one of those two plants.

Q. Thank you.

A. You're welcome.

Q. Do you know if an NPDES permit had been granted for the utility in 1986, how long that permit would have been good for?

A. Generally I believe they are good for five years, unless it's shortened by the EPA, which they have that authority to do. And we have the same thing, we have a five-year permit maximum, but we can shorten the duration, depending on circumstances, to anything between six months, a year, or two years.

Q. Now if the NPDES permit had been granted in 1986, to your knowledge what would the EPA's involvement have been in the plant upgrading and outflow line relocation projects?

A. Could you state that once more?

Q. Sure. Assuming that -- if an NPDES permit had been granted in 1986 by the EPA, what would the EPA's involvement have been in the plant upgrading and outflow line relocation projects?

A. Generally when we issue a permit, we run that permit by them and provide them the copies. And when they

issue a permit, they share the information with us and ask if what they're including in the permit is okay with us.

Q. Would they have any -- would the EPA have any input in what the DEP's decision was in terms of the upgrade and the relocation of the line?

A. We have open communications, basically, with the federal government on issues of mutual interest and make sure that what we do does not conflict with their rules and what they do does not conflict with our rules. So the end result is the same.

MR. GATLIN: Rosanne, may I interrupt just a minute? The notary had a question that she thinks she needs to go back on the oath and ask a question about. Could we interrupt just a second and get that done?

MS. GERVASI: Sure, sure we can.

THE NOTARY: The oath that you read is not legal and binding. Could you raise your right hand? I haven't done this very much.

Sir, if you would raise your right hand. Do you solemnly swear to tell the truth, the whole truth and nothing but the truth?

THE WITNESS: Yes.

THE NOTARY: Good. I'm satisfied.

MR. GATLIN: Excuse us. Thank you.

MS. GERVASI: Thank you. And Dr. Ahmadi, can I

ask you to adopt your answers to all of the previous questions that you just asked me and to tell me that you still -- your answers are still the same even though you've just given your oath?

THE WITNESS: Yes.

BY MS. GERVASI:

Q. Thank you.

A. You're welcome.

Q. Going back to my last question about what EPA's involvement would have been, would the EPA have had any enforcement authority?

A. Yes, they have. They had the oversight authority on the state, I guess after the delegation. But they had the independent federal requirements authority before the delegation of the program to us.

Q. Would that have included enforcement authority over the construction of the outflow?

A. Yes. On anything that Florida Cities was doing --

THE REPORTER: I'm sorry, I can't understand you.

BY MS. GERVASI:

Q. Could you please repeat what you just said, Dr. Ahmadi?

A. Yes, I said that the federal government would have the authority on everything that Florida Cities Water Company was conducting in terms of surface water discharge.

Q. Okay. Do you know if the EPA ever required the utility to upgrade the Waterway plant to AWT, or to move its outflow line to the middle of the river?

A. No, I don't.

Q. Do you know whether the 1986 NPDES permit denial for Waterway was based primarily on a planning document, zero waste loading allocation to the river?

A. May have been. Not definitely positive, but it may have been based on that.

Q. Do you know what else it may have been based upon?

A. No, at that point of time, as I said, they were operating independent of the Florida DEP's requirement.

Q. Do you know if -- do you know what other -- let's see if somebody is trying to get on the line.

THE WITNESS: We have Nona Schaffner also from the DEP, our attorney, just joined us.

BY MS. GERVASI:

Q. Dr. Ahmadi, do you know what other criteria may have been used by the EPA to deny the NPDES permit?

A. No, I wouldn't know what criteria they used in the denial. As I said, they were independently operating from the state's requirements. We had a dual program of permitting. They were doing their permitting to meet the Clean Water Act provision and we were just doing the state

version of the permit.

Q. Okay, if you would please refer to Page 42 of your Exhibit ABA-1. And starting on Line 5, you're discussing the planning document, that the planning document also included a zero waste loading allocation for the City of Cape Coral?

A. Uh-huh.

Q. Is that right?

A. Yes.

Q. To your knowledge, did this cause any NPDES permitting problems for the city?

A. No. I believe the city acted prior to that time to go to the AWT.

Q. To go where?

A. To go to the advanced waste treatment prior to the Waterways setback.

Q. Dr. Ahmadi, did the City of Cape Coral have an NPDES permit?

A. At that point, yes.

Q. Was it influenced by the zero waste loading allocation?

A. Yes, all of the discharges to the Caloosahatchie River, including the City of Cape Coral and the Waterway Estates plant, were required to go to NPDES.

Q. Including the City of Cape Coral and including

Waterway, you said?

A. Uh-huh. We have five major discharges there to the river. Two of them are owned by the Florida Cities Water Company, and two by the City of Fort Myers, and one by the City of Cape Coral.

Q. Dr. Ahmadi, do you know why the DEP took action against -- I'm sorry, why the EPA took action against the city?

MR. GATLIN: Cape Coral, talking about?

MS. GERVASI: Correct, the City of Cape Coral.

THE WITNESS: They had the authority to take enforcement action whenever the rules are violated.

BY MS. GERVASI:

Q. Do you know what it was that they were enforcing?

A. If they had some conditions in the state permit, that those requirements and conditions were more stringent than the federal government, then the federal government is obligated to enforce our rules as well. I wouldn't know exactly what the situation was there.

Q. You don't know the specifics then?

A. Not at this time. One of the issues may have been just the AWT requirement and the extension of the line to the outflow line on the river. It's similar to the Waterway Estates plant.

Q. Did the City of Cape Coral have an outflow line

problem?

A. At one point in time, yes, I think I said earlier that there were two facilities that were not meeting the AWT standards, and those two, one of them was Cape Coral, one was the Waterway Estates plant.

Q. Was the City required to relocate the line, do you know?

A. Yes, they were.

Q. By whom?

A. By the DEP, the state.

Q. Do you know if the City encountered any construction or zoning problems that prevented it from meeting compliance deadlines?

A. No, I don't.

Q. Okay, one of the documents that we had faxed over to you just a little while ago is a letter from the DEP to -- from a Mr. Phillip Edwards of the DEP to Mr. Reeves. And attached to it is an unsigned copy of the DEP consent order. Do you have that in front of you?

A. Yes, I do.

Q. This was provided, or could you at least agree subject to check, that this was provided in response to the utility's -- in response to the Staff's request for production of documents, our first request for production of documents? And I wonder if -- do these materials look

familiar to you? Have you reviewed them before?

A. Well, that's proposed consent order. I recognize the signature of Mr. Edwards, and somebody else signed for him, but the rest of the material is just the proposed consent order.

Q. Did you say the rest of the material is a proposed consent order?

A. Yes, because it's not signed.

Q. Not finalized?

A. Yeah, not signed or certificated.

Q. Was the consent -- are you saying that the consent order was never entered into?

A. No, I am not saying that. At this point I am not aware, or I can't say without referring to the files whether there was a consent order, whether this was finalized or not.

Q. Could we ask as a late-filed exhibit for you to find that out and to provide us a copy of the signed consent order if there was one?

A. Sure.

Q. We'll go ahead and identify that as late-filed Exhibit No. 1, Signed Consent Order.

MR. GATLIN: Do you want it attached to the letter?

MS. GERVASI: Yes.

MR. GATLIN: From Phil Edwards, I guess?

MS. GERVASI: Yes.

MR. GATLIN: Dated on November 21st, 1990?

MS. GERVASI: Right, the signed consent order concerning the November 21, 1990 letter, let's say, from Mr. Edwards to Mr. Reeves. And that is if it exists. And if it doesn't exist, could you please give us that information, if you find that there was not a consent order that was entered into?

THE WITNESS: Sure.

MS. GERVASI: Thank you.

(Late-filed Exhibit No. 1 identified.)

BY MS. GERVASI:

Q. If you would please look at Page 2 of the unsigned consent order that you have a faxed copy of there, could you please read out loud Item No. 7 on Page 2?

A. Sure. "Respondent is in violation of Section 403.161 (1)(b), Florida Statutes, in that respondent failed to comply with paragraph ten of the Consent Order No. 88-0384, which required the construction of the wastewater treatment plant be complete and certified in compliance with all F.A.C. Rules and Florida Statutes regulating wastewater treatment facilities by November 1, 1990."

Q. Thank you. And if you would, please, sir, refer to Page 5 of that same document, the unsigned consent order,

and read out loud, if you would, the first sentence of Item No. 14.

A. "Respondent shall make payment of $15,000 to the Department of Environmental Regulation in order to settle the issues raised in the consent order."

Q. I'm sorry, that's all we needed you to read for that. Thank you. Do you know whether the utility paid that $15,000?

A. I would have to refer to the signed final consent order, I guess, to say for sure that they did.

Q. Okay. Do you know, or can you give us some background information as to why the DEP pursued a consent order agreement at that time and the fine?

A. Well, they had here that we had a consent order with them that required them to do certain things to the facility, and apparently they didn't do that, so we proposed another consent order to resolve the issues.

Q. Did you say there was another consent order after this one?

A. No, there was one before this. The one I read just earlier was statement no. -- Item No. 7, I believe.

Q. Okay, can we -- could you please provide us a copy of that earlier consent order?

A. I will search for it. It's Consent Order 88-0384.

Q. 0384, okay. Let's label that Late-filed Exhibit

No. 2, Copy of Consent Order No. 88-0384.

A. Uh-huh.

Q. Thank you.

(Late-filed Exhibit No. 2 identified.)

THE WITNESS: That consent order requires Florida Cities to complete all work by November 1, 1990, and apparently that wasn't the case. So then we proposed the other one, which is the unsigned copy in front of me.

BY MS. GERVASI:

Q. Do you know whether the DEP believed at that time that the construction delays -- that the construction delays at Waterway were unjustified? Hello?

A. Yes, probably, yes. I'm there.

Q. Okay, the line went dead for a second there. I wasn't sure.

A. It could be argued probably both ways. And there were some situations that were well within their capabilities to respond to requests for information, and in a timely manner, and there were, I think, others which were clearly beyond their ability to respond to it, such as zoning and other local government requirements.

Q. And what is your opinion on that, Dr. Ahmadi?

A. I have no opinion. And as I said, probably was both. You know, there were certain items that they could

have certainly expedited, the permitting process, and there were others which were beyond their control.

Q. Do you know whether the City of Cape Coral was ever fined by the DEP for missing compliance deadlines?

A. I don't know at this point. Normally if it's a noncompliance, and if they didn't do what the order -- they were ordered to do so, or agreed to do so, then we normally pursue those. But without referring to the file, I will be unable to tell you. We have several hundred facilities, and talking about ten years before this time. So it's difficult, really.

Q. I understand. In your experience with the EPA, do you know whether it's common practice for the EPA, in general, to deny permits such as these?

A. If it doesn't meet their authority and their rules, they have to have justification for issuance of permit.

Q. Do you have any knowledge of what happens when a utility challenges an EPA permit denial?

A. No, that's independent of our activity.

Q. Okay. So the DEP wouldn't get involved in an EPA permit challenge, permit denial challenge?

A. Unless you have subpoenaed or requested to do so. No, we normally don't want to get involved. That was an independent action by the federal government.

Q. Do you have any opinion as to -- as to whether if Florida Cities had challenged the EPA -- the 1986 EPA permit denial and shown that the utility did in fact have a waste load allocation, whether the EPA would have granted the NPDES permit?

A. No, that's something between the utility and EPA.

Q. Do you have an opinion as to -- well, strike that. Let me tell you and see if you'll agree that -- anyway subject to check, that Florida Cities incurred over $3 million in legal fees in litigating the EPA's complaint; and my question to you is do you have an opinion as to whether the utility would have incurred as much in legal fees had it initially challenged the 1986 permit denial?

A. I wouldn't have any idea on that, no opinion on it.

Q. Okay. Thank you. Okay, if you would, please, sir, refer to the other document that we faxed to you today, which we found in Mr. Baise's exhibits in Volume 5 of Mr. Baise's prefiled exhibits in the case, which is a copy of Connie Kagey's trial transcript from April the 3rd of 1996.

A. Which page?

Q. Page 145 of that trial transcript. Do you have that in front of you?

A. Yes.

seeing when did they request, and normally we do respond when we are requested for comment.

Q. Okay. Could you provide us that information as a late-filed exhibit?

MR. GATLIN: Which information now?

MS. GERVASI: Let me try to be real specific. As Late-filed Exhibit No. 3, what we would like to know is when did the EPA first request state certification from the DER for the Waterway NPDES -- 1986 NPDES permit renewal.

MR. GATLIN: When did the EPA first request certification?

THE WITNESS: In 1986.

MS. GERVASI: Right. We would also like to know when was it that the DER submitted its NPDES certification work sheet for that Waterway 1986 NPDES permit renewal.

MR. GATLIN: Okay.

MS. GERVASI: And if you could please provide us with a copy of the DER's NPDES certification work sheet for the Waterway Estates -- strike that -- I'm sorry, strike that.

MR. GATLIN: Okay.

MS. GERVASI: Strike that request.

MR. GATLIN: Strike the whole thing?

MS. GERVASI: No, just the last request about providing the copy of the certification work sheet.

MR. GATLIN: All right.

MS. GERVASI: But what we would like to know, as part of this request, a third thing is, regarding that Waterway 1986 NPDES permit renewal, did the DER waive state certification by not responding to the EPA within a certain time period? And if so, why?

MR. GATLIN: Is this something that can be determined? I have no idea.

THE WITNESS: I would have to, I guess, go to the file and -- for 1986 and see if that was requested from us in writing. And then if I can't locate that letter, then obviously cannot produce something which haven't been requested. Assuming they did request and we do have a copy, then normally, as I say, we do respond to those. If for some reason we failed to respond, then our agreement was that within 50 days of the request of the letter, if they don't hear from us, and after 60 days they could go ahead and take whatever action they think is appropriate, and that was considered a waiver for certification if you don't respond.

MS. GERVASI: Okay, thank you, Dr. Ahmadi. Anything you can find out in that regard would be appreciated, and if you can't find the documents,

please let us know that.

THE WITNESS: Sure.

(Late-filed Exhibit No. 3 identified.)

BY MS. GERVASI:

Q. If you would please refer now to your Exhibit ABA-2 on Page 143, at Lines 24 and 25 of Page 143, and then continuing on to Page 144, Lines 1 through 14, if you would take a moment to review those lines, please, sir?

A. Sure. (Pause)

Q. And let me know when you're completed with that.

A. Line 14, you said?

Q. Please, yes.

A. Okay, the writing is so small, I have to focus on it. Okay.

Q. Right, I have the same problem.

A. Okay.

Q. Now, evidently Waterway had a waste load allocation of 1.8 -- 1.08 million gallons per day in 1986; is that right?

A. Yes.

Q. And then on Page 152 of that same document, your Exhibit ABA-2, Lines 8 through 11, if you will just take a moment to read that. And here you're stating that the EPA's basis was -- for denying the Waterways in 1986 NPDES permit renewal was the no discharge waste load allocation developed

by the DEP on January 19th of 1981, correct?

A. Uh-huh.

Q. So assuming then that the EPA's basis for denying the Waterway 1986 NPDES permit renewal was the no discharge waste load allocation developed by the DEP?

A. Uh-huh.

Q. Why didn't the DEP, or then the DER, not take it upon itself to resolve this waste load allocation issue with the EPA in 1986? Do you know?

A. No. As I said, we had a separate permitting authority. They had their own permitting authority. And if we issue a permit to somebody, that doesn't mean that any other local or federal permits are not required. In fact, our permit is clear that this is only for this activity and it does not mean that you are exempt from other permitting jurisdictions.

Q. What we're wondering is, since the denial was evidently based on the DEP -- on DEP's -- what was it? -- January 19th, 1981 --

A. Waste load allocation.

Q. Right, thank you, waste load allocation. I guess we're wondering why the DEP wouldn't have become involved since it was based on a DEP decision.

A. Because we didn't know whether they were denied the permit or not, and even if you know, it's something

between the utility and the EPA. As I said we had two facilities that for some reason that are not -- were elected not to meet the waste allocation standards and requirements. One of them was City of Cape Coral. The other one was Florida Cities Waterway Estates. We had another plant on the southern parkway, for some reason they did do the AWT, they did extend the line, and it's an award winning plant. But for this one, again for reasons unknown to me, it looked like they were dragging their feet and not going to go ahead with the AWT process unless they were forced to.

Q. Okay. Thank you.

A. You're welcome.

Q. Now, on Page 135 of your Exhibit ABA-2, that same exhibit, Page 135, Lines 1 through 6. Are you there?

A. Yes, I am reading it.

Q. Okay, thank you.

A. We don't want to leave you there alone.

Q. Okay. Just let me know when you're ready.

A. Okay, I have a little of hard time reading some of the -- it's kind of -- I don't know the background information. It says -- it's a letter that's written by the United States. I don't know what the letter was written by them, in this one, I guess, until I get a chance to read the -- what's before that.

Q. Okay. Let's see.

A. January 22, 1980 something -- '83?

Q. 1981 it looks like.

A. 1981, and signed by William -- Conrad? -- chief of permit section.

Q. Looks like William, I don't know, Cloward, C-L-O-W-A-R-D.

A. And then who is --

Q. And then it says evidently --

A. The question is who is copied on the document?

Q. Right, looks like -- where is the copy part that was copied to Mr. -- looks like --

A. Mickey Brant of the Florida DER.

Q. Right. We're wondering if you could locate a copy of that letter and provide it to us. It looks like it was identified as Exhibit 198 at the federal trial according to Line 22 of Page 134 of the transcript.

MR. GATLIN: What would be the date on the letter? Or do we have any indication?

MS. GERVASI: Dated January 22nd of 1981.

MR. GATLIN: Okay.

THE WITNESS: That's my birthday.

MS. GERVASI: That was your birthday? You're very young then.

THE WITNESS: January 22.

MR. GATLIN: You should see him.

MS. GERVASI: Anyway, let's go ahead and label that as Late-filed Exhibit No. 4, copy of letter dated 1-22 of '81, signed by William Cloward. How is that?

THE WITNESS: That's fine. If we locate them in the file, we'll share it with you.

(Late-filed Exhibit No. 4 identified.)

BY MS. GERVASI:

Q. Now if you would please, sir, take a look at Pages 140 and 141 of that same exhibit, ABA-2.

A. The whole thing?

Q. Let's see. If you'll take a look at Line -- starting from Line 14 on Page 140 of that exhibit, and here you're discussing that DER issued Waterway a state permit to operate and discharge its effluent to the Caloosahatchie River via a canal, correct?

A. I'm reading.

Q. Okay.

A. Line 14 to where?

Q. Lines 14 through 17.

A. Through 17. Okay. It says, "What is this document?" The question was. The answer is, "This is a State permit for the Waterway Estates to operate their facility and discharge their effluent to the Caloosahatchie River."

Q. Right, and then if you'll move over to Page 141 of that exhibit, starting at Line 22 through 24.

A. The question is: "Is there anything in this document that says there is a zero discharge for this project into the canal to the Caloosahatchie River on April 2, 1980?"

Q. Looks like 1981.

A. 1981. Dr. Ahmadi answered, "No. This is their authorization to discharge to the river."

Q. Would that mean that there was a DER permit issued to Waterway dated April 2nd of 1981?

A. Yes. Not having the document in front of me, it appears that that was the case, that we have given them a permit to discharge to the Caloosahatchie River.

Q. Could we please ask for a copy of that DER permit as Late-filed Exhibit No. 5? That would be the April 2nd, 1981 DER Permit Issued to Waterway.

(Late-filed Exhibit No. 5 identified.)

BY MS. GERVASI:

Q. And then if you would look on Page 142, Lines 14 through 16 of Page 142 of the same exhibit, ABA-2.

A. Line 14 through --

Q. 14 through 16. And this concerns a letter written and signed by a Terry Cole of the DER to Mr. Charles -- is it Jeter of the EPA?

A. Uh-huh.

Q. There's no date on that letter. So it may be more difficult. But if you can locate it, could you provide us a copy of that as well?

A. The answer is: "Yes, this is a State of Florida letter that's written and signed by Terry Cole, who was the assistant secretary at the time to Mr. Charles Jeter of the EPA."

Q. Yes, please, sir.

A. What date was that?

Q. There is not a date referenced in the transcript, so I don't have one to give to you, but we'll just label it as late-filed Exhibit No. 6, Copy of Letter signed by Terry Cole of DER to Charles Jeter, J-E-T-E-R, of EPA.

MR. GATLIN: Does it refer to an exhibit number?

MS. GERVASI: Let's see, exhibit -- Defendants' Exhibit No. 2 from the federal trial.

MR. GATLIN: Let us take a crack at that and see if we can locate it.

MS. GERVASI: Thank you very much.

(Late-filed Exhibit No. 6 identified.)

BY MS. GERVASI:

Q. And then we have one final request for a document, and then I will be through, and that is, if you could, please, sir, provide us with DER's NPDES Certification Work

Sheet for the 1981 NPDES Permit for Waterway Estates, and I believe that the issuance date of that certification work sheet is July 14th of 1981?

MR. GATLIN: July 14th?

MS. GERVASI: Right. And that would be as Late-filed Exhibit No. 7.

(Late-filed Exhibit No. 7 identified.)

THE WITNESS: I'll search for those documents and see if we can locate them.

MS. GERVASI: Okay. Thank you very much. We appreciate that. And appreciate your time today and that concludes my questions for you.

Mr. Gatlin, do you have any questions?

MR. GATLIN: I have no questions.

MS. GERVASI: Do you want to read and sign?

THE WITNESS: Yes, I would like to probably read them, if possible.

MS. GERVASI: Sure. And can we establish a deadline for those late-filed exhibits? How long do you think you'll need to gather those up for us? Could you get them to us in two weeks? Is that enough time?

THE WITNESS: Probably. If we have them. But I'm going to be going tomorrow at 5:00, leaving the town actually, and come back on Monday. So this week is gone. Hopefully two weeks.

MS. GERVASI: Could you get them to us by the end of next week, two weeks from now?

THE WITNESS: Two weeks from now probably. What I'll do is, as soon as I locate them I'll give you a call and find out the method of counsel, whether he wants them mailed or faxed or --

MS. GERVASI: Okay. Thank you very much, Dr. Ahmadi. That concludes the deposition.

(Deposition concluded at 2:05 p.m.)

REPORTER'S DEPOSITION CERTIFICATE

Attention: **Philip R. Edwards**

Re: Lee County DW Waterway Estates Wastewater Treatment Plant OGC Case Number 88-0384

Dear Mr. Edwards:

I am in receipt of your correspondence dated October 1, 1990.

The file on the Waterway Estates Wastewater treatment plant project contains literally thousands of sheets of paper. I am not certain as to the extent of the "detail" that you require as justification for the circumstances beyond the control of Florida Cities Water Co. leading to the project delays.

I have had my staff, however construct the enclosed summary schedule as anticipated in the above referenced consent order and compared to the actual time of achieving the various milestones.

As you can see from this attachment, the major delays were caused by the following:

1. The engineering plans and specifications were to be completed by September 23rd, 1988. FCWC entered into a contract with Source, Inc. to provide these professional services on the project. Their proposed schedule for providing the Engineering plans and specifications, (engineering design) called for 221 days. This information was transmitted to FDER and utilized in the above referenced consent order of schedule. The actual duration of the preparation of engineering plans and specifications took 445 days from the start to the final acceptance of the documents as complete for an issuance of FDER construction permit. FCWC consistently applied pressure to Source, Inc., to deliver their services in accordance with the initial proposal. No activity under the control of FCWC could have resulted in a more timely performance on the part of our consultant.

2. The next major item of delay is the FDER review of the plans specifications and construction permit applications. The FDER review resulted in several requests for

FLORIDA CITIES WATER COMPANY
4 Swift Road, Suite 100
Sarasota, Florida 34231
P Box 21119 (34276-4119)
T Phone 813/925-3088

additional information. Each request for additional information was transmitted to the Engineer of record, Source, Inc. who indicated that they required a change order for providing this "unreasonable" additional information.

In addition to the problems associated with Source, Inc.'s provision of additional information, the FDER regulations changed during the design and permit review process. The anti-degradation rule was implemented requiring a technological and economic analysis of alternatives to surface discharge be completed on the Waterway Estates facility. This document was prepared by FCWC staff and submitted in as timely as basis as was practical. Furthermore, towards the end of the FDER review process, N. Ft. Myers Utility and Lee County both attempted to intervene in the issuance of a construction permit. After following several meetings, some of which included FDER staff and officials, both Lee County and No. Ft. Myers utility "backed off" allowing the issuance of a construction permit. The time allocated in the original consent order for the FDER construction permit review and issuance was 91 days. The actual duration was 290 days for a total delay, beyond the control of FCWC, of 199 days.

3. The final major project delay (100 days) occurred following the bid process for the Wastewater facility improvements. FCWC employed the services of Stone and Webster, Inc. (relieving the responsibility of Source, Inc.) to assist in the evaluation of the bids received by Cardinal Contractors, Inc. Extensive negotiations were required to specifically format the construction schedule and phasing resulting from the extremely tight construction [illegible]

4. Other milestones causing delays in the project schedule included a modification to the "fast track" plan of advertising for bids and a modification to the "fast track" plan of advertising for bids and opening the bids prior to he issuance of the FDER construction permit. This delay was necessitated by the uncertainty associated with the FDER review (See item No. 2 above for details.)

The final item which will cause a 26 day delay is the construction time negotiated with Cardinal Contractors for the construction of the plant facilities. 454 days were contemplated in the original consent order. The minimum construction time to substantial completion negotiated with Cardinal Contractors, Inc. is 480 days causing a 26 day delay in substantial completion of the project. Unit processes will, however, be placed in service as they are completed throughout the project. It is anticipated that water quality standards for the Waterway Estates plant will be met prior to the date of substantial completion.

FLORIDA CITIES WATER COMPANY

It is FCWC's position that the total 594 day anticipated delay in the Waterway Estates Wastewater treatment project has been caused by circumstances beyond the control of FCWC. FCWC staff performed every reasonable activity that could have been anticipated to meet the consent order schedule.

I will be pleased to meet with you at your convenience to further discuss this matter. If you have any questions, please do not hesitate to contact me.

Sincerely,

A.A. Reeves III

Re: Lee County - DW
Waterway Estates
Wastewater Treatment Plant
OGC Case No. 88-0384

Dear Mr. Reeves:

We are in receipt of your correspondence dated August 30, 1990.

During the meeting of August 24, 1990, Florida Cities Water Company agreed to provide information detailing "circumstances beyond your control" which will cause non-compliance with Consent Order OGC Case No. 88-0384.

The information provided does not detail what circumstances were beyond your control and the compliance date of November 1, 1990 stated in paragraph 10 in OGC Case No. 88-0384 will remain the same.

Please provide the Department with a detailed explanation as to the specific circumstances and the resulting number of days that caused Florida Cities Water Company to not meet the compliance dates contained in OGC Case No. 88-0384.

Once we receive this information, we can schedule a meeting to continue discussions on a new Consent Order.

If you have any questions, please contact Jim Grob at 813/332-6975.

Sincerely,

Philip R. Edwards
Deputy Assistant Secretary

RE: Lee County - DW
Waterway Estates WWTP
OGC Case No. 88-0384

Dear Mr. French:

Following is a brief summary of the meeting attended by yourself, James Elder and Department staff on June 1, 1990 in this office. This meeting was held to discuss issues relating to the referenced Consent Order. As you indicated in this meeting, FCWC will be unable to meet the final date of compliance scheduled in this Consent Order.

As related in this meeting the stance of the Department regarding this problem is that two courses of action are open. First, the existing Consent Order would simply be enforced with the stipulated penalties assessed until the conditions of the Consent Order are satisfied. The second alternative would be for a new Consent Order to be negotiated with a monetary settlement based on the documented delays caused by FCWC and the stipulated penalty in accordance with the terms of the existing Consent Order. The amount of this proposed penalty was computed to be $26,800.

It was also suggested that any schedule of compliance agreed to should coincide with that of any administrative order issued by the USEPA.

As we discussed, we would appreciate receiving your response to these proposals within the sixty (60) day time frame agreed upon, i.e. by the second week of August.

Sincerely,

Philip R. Edwards
Deputy Assistant Secretary

Re: Lee County - DW
Waterway Estates WWTP
OGC Case No. 88-0384
Permit No. DC36-165119
Permit No. DT36-152486

Dear Mr. Elder:

Your letter dated May 14, 1990 requesting modification of the referenced Consent Order and permits has been received and carefully reviewed.

Department files indicate that delays in permit processing were a result of FCWC failure to submit a timely application which was received more than seven months after the date FCWC had agreed to in the Consent Order.

Further, FCWC required an additional ten months to respond to a subsequent request for information because the application was incomplete. Also, the schedule proposed in your letter requires a 7 month longer time interval to completion than the original schedule. Because of the reasons stated above, we request that FCWC representatives attend a meeting in this office on May 29, 1990 at 10:00 AM to reconcile these problems, resolve the stipulated penalty issue, and establish a new schedule of compliance. Consent Order No. 88-0384 will have to be modified or a new Consent Order agreed to with an appropriate settlment.

Once this schedule is established, an application and fee for a new temporary operating permit may be submitted and an extension of the construction permit may be granted. The Department seeks to be cooperative and helpful in your efforts to resolve these problems.

Please contact Harley Young at 332-2667 if you require further information or if the date and time of this meeting conflicts with your schedule.

Sincerely,

Philip R. Edwards

Re: Lee County - DW
Waterway Estates WWTP

Dear Mr. Gatlin:

Enclosed please find two documents from our file that you requested. Unfortunately, we could not locate a DER NPDES certification worksheet for Waterway Estates in our files, nor we can find a letter of certification from this agency. If the agency did not respond within a specified time to EPA, that is considered a waiver of state certification.

If you have any questions, please feel free to contact me at (941) 332-6975.

Sincerely,

Abdul B. Ahmadi, Ph.D., P.E.
Water Facilities Administrator

Re: Request for State Certification
Intent to Deny, Florida Cities Water Company
NPDES Permit No. FL0030325

Dear Dr. Subramani:

The Environmental Protection Agency (EPA) issued a notice of intent to deny the above application for a National Pollutant Discharge Elimination System (NPDES) permit. The applicant has been given until July 16, 1986, to comment on our proposed action.

We are requesting State Certification on our proposed action. We will initiate the public notice process at the end of July. Supporting materials are enclosed.

In accordance with 40 C.F.R. 124.53(c), EPA cannot issue or deny NPDES permits until the State has either granted or denied certification, or waived its right to certify. Also in accordance with the regulations, the State will be deemed to have waived its right to certify unless that right is exercised within 60 days from the date of this letter unless EPA finds that unusual circumstances require a longer time for certification. EPA anticipates that in some cases certification cannot be provided within 60 days, therefore, if longer time is needed please advise us in writing of the nature of the delay and anticipated date when certification will be completed.

For further information, please contact Connie Kagey at 404/347-2150.

Sincerely yours,

John A. Harlar, Chief
Facilities Performance Branch

ATLANTA, GEORGIA 30365

JAN 2 2 1981

Florida Cities Water Company
Post Office Box 6459
1700 College Parkway
Ft. Myers, Florida 33901

Dear Sir:

The Environmental Protection Agency, Region IV, intends to issue a National Pollutant Discharge Elimination System (NPDES) permit in accordance with the Clean Water Act of 1977 to the above referenced facility in the near future.

The enclosed draft permit shows the proposed conditions to be incorporated as part of the NPDES permit. In order that you understand your responsibilities included in the provisions of this permit, particular attention should be given to the following sections:

1. Part I.A.: This section(s) contains listings of effluent characteristics, discharge limitations, and monitoring requirements. The effective dates for various requirements are listed.

2. Part I.B.: This section contains the schedule of compliance applicable to your facility. If your facility is presently in compliance, no schedule is included; if you have a schedule of compliance, please note Part I.B.2. which contains your responsibilities for reporting compliance requirements.

3. Part I.C.2.: This section contains your responsibilities for reporting monitoring results.

Comments relative to this draft permit are not required. If you wish to submit comments it is necessary that they be received in this office by February 12, 1981. If you have any questions concerning the enclosed conditions or the procedures associated with the permit program, please contact Ms. Jeanette Maulding of my staff at the above address.

Sincerely yours,

William H. Cloward

RE: Lee County - DW
Waterway Estates

Dear Mr. Reeves:

Enclosed is Permit Number DO36-7407, dated April 1, 1981 to operate the subject pollution source issued pursuant to Section 403, Florida Statutes.

Should you object to this permit, including any and all of the conditions contained therein, you may file an appropriate petition for administrative hearing. This petition must be filed within fourteen (14) days of the receipt of this letter. Further, the petition must conform to the requirements of Section 28-5.201, Florida Administrative Code, (see reverse side of this letter). The petition must be filed with the Office of General Counsel, Department of Environmental Regulation, Twin Towers Office Building, 2600 Blair Stone Road, Tallahassee, Florida 32301.

If no petition is filed within the prescribed time, you will be deemed to have accepted this permit and waived your right to request an administrative hearing on this matter.

Acceptance of the permit constitutes notice and agreement that the Department will periodically review this permit for compliance, including site inspections where applicable, and may initiate enforcement action for violation of the conditions and requirements thereof.

Sincerely,

Philip R. Edwards

RULES OF THE ADMINISTRATION COMMISSION
MODEL RULES OF PROCEDURE
CHAPTER 28-5
DECISIONS DETERMINING SUBSTANTIAL INTERESTS

PART II
FORMAL PROCEEDINGS

28-5.201 Initiation of Formal Proceedings.

(1) Initiation of formal proceedings shall be made by petition to the agency responsible for rendering final agency action. The term petition as used herein includes any application or other document which expresses a request for formal proceedings. Each petition should be printed, typewritten or otherwise duplicated in legible form on white paper of standard legal size. Unless printed, the impression shall be on one side of the paper only and lines shall be double-spaced and indented.

(2) All petitions filed under these rules should contain:

(a) The name and address of each agency affected and each agency's file or identification number, if known;

(b) The name and address of the petitioner or petitioners, and an explanation of how his/her substantial interests will be affected by the agency determination;

(c) A statement of when and how petitioner received notice of the agency decision or intent to render a decision;

(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;

(e) A concise statement of the ultimate facts alleged, as well as the rules and statutes which entitle the petitioner to relief;

(f) A demand for relief to which the petitioner deems himself entitled; and

(g) Other information which the petitioner contends is material.

****

A petition may be denied if the petitioner does not state adequately a material factual allegation, such as a substantial interest in the agency determination, or if the petition is untimely. (Section 28-5.201(3)(a), FAC)

PERMIT/CERTIFICATION NO. DO36-7407

COUNTY: Lee

PROJECT: Waterway Estates

This permit is issued under the provisions of Chapter 403, Florida Statutes, and Chapter 17-4, Florida Administrative Code. The above named applicant, hereinafter called Permittee, is hereby authorized to perform the work or operate the facility shown on the approved drawing(s), plans, documents, and specifications attached hereto and made a part hereof and specifically described as follows:

To operate a 1.080 MGD contact stabilization process wastewater treatment facilities with effluent to canal to Caloosahatchee River located off project site. Location of project is in 1667 Inlet Drive, N. Ft. Myers, Lee County, Latitude 26°38'17", Longitude 81°54'36". Description of property map on file in this office. Note: Exhibit (a & b).

DER FORM 17-1.122(63) 1/4 (1/80)

PERMIT NO.: DO36-7407
APPLICANT: A.A. Reeves
Florida Cities Water Company

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations, and restrictions set forth herein are "Permit Conditions:, and as such are binding upon the permittee and enforceable pursuant to the authority of Section 403.161(1), Florida Statutes. Permittee is hereby placed on notice that the department will review this permit periodically and may initiate court action for any violation of the "Permit Conditions" by the permittee, its agents, employees, servants or representatives.

2. This permit is valid only for the specific processes and operations indicated in the attached drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit shall constitute grounds for revocation and enforcement action by the department.

3. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in this permit, the permittee shall immediately notify and provide the department with the following information: (a) a description of and cause of non-compliance; and (b) the period of non-compliance, including exact dates and times; or, if not corrected, the anticipated time the non-compliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the non-compliance. The permittee shall be responsible for any and all damages which may result and may be subject to enforcement action by the department for penalties or revocation of this permit.

4. As provided in subsection 403.087(6), Florida Statutes, the issuance of this permit does not convey any vested rights or any exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state or local laws or regulations.

5. This permit is required to be posted in a conspicuous location at the work site or source during the entire period of construction or operation.

6. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, which are submitted to the department, may be used by the department as evidence in any enforcement case arising under the Florida Statutes or department rules, except where such use is proscribed by Section 403.111, F.S.

7. In the case of an operation permit, permittee agrees to comply with changes in department rules and Florida Statutes after a reasonable time for compliance, provided, however, the permittee does not waive any other rights granted by Florida Statutes or department rules.

8. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, plant, or aquatic life or property and penalities therefore caused by the construction or operation of this permitted source, nor does it allow the permittee to cause pollution in contravention of Florida Statutes and department rules, except where specifically authorized by an order from the department granting a variance or exception from department rules or state statutes.

9. This permit is not transferable. Upon sale or legal transfer of the property or facility covered by this permit, the permittee shall notify the department within thirty (30) days. The new owner must apply for a permit transfer within thirty (30) days. The permittee shall be liable for any non-compliance of the permitted source until the transferee applies for and receives a transfer of permit.

10. The permittee, by acceptance of this permit, specifically agrees to allow access to permitted source at reasonable times by department personnel presenting credentials for the purposes of inspection and testing to determine compliance with this permit and department rules.

11. This permit does not indicate a waiver of or approval of any other department permit that may be required for other aspects of the total project.

12. This permit conveys no title to land or water, nor constitutes state recognition or acknowledgement of title, and does not constitute authority for the reclamation of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the state. Only the Trustees of the Internal Improvement Trust Fund may express state opinion as to title.

13. This permit also constitutes:

[ ] Determination of Best Available Control Technology (BACT)
[ ] Determination of Prevention of Significant Deterioration (PSD)
[ ] Certification of Compliance with State Water Quality Standards (Section 401, PL 92-500)

PERMIT NO.: DO36-7407
APPLICANT: A.A. Reeves

SPECIFIC CONDITIONS:

1. Drawings, plans, documents or specifications submitted by the Permittee, not attached hereto, but retained on file at the South.Florida District Office, are made a part hereof.

2. Pursuant to the provisions contained in Chapter 17-6, Florida Administrative Code, the permittee will maintain 90% removal of BOD and SS in the treatment process and other provision of the Chapter regarding domestic wastewater treatment.

3. Pursuant to Chapter 17-19 the Permittee will follow the sampling schedule provided for the plant described as having a capacity of 1.080 MGD flow and submission of operating reports.

4. The chlorine residual in the effluent will be maintained at 0.5 ppm after at least fifteen (15) minutes contact.

DEPARTMENT OF ENVIRONMENTAL REGULATION

IN THE OFFICE OF THE
SOUTH FLORIDA DISTRICT

STATE OF FLORIDA DEPARTMENT OF ENVIRONMENTAL REGULATION Complainant, vs. FLORIDA CITIES WATER COMPANY (WATERWAYS ESTATES WASTEWATER TREATMENT PLANT) Respondent	)	OGC Case No. 88-0384

CONSENT ORDER

This Consent Order is entered into between the State of Florida, Department of Environmental Regulation (hereinafter "Department") and Florida Cities Water Company (Waterways Estates Wastewater Treatment Plant) (hereinafter "Respondent").

The Department finds but Respondent does not admit the following:

1. The Department of Environmental Regulation is the administrative agency of the State of Florida charged with the authority to administer and enforce Chapter 403, Florida Statutes (F.S.), and the rules promulgated thereunder in Florida Administrative Code (F:A.C.) Title 17.

2. Respondent is a "person" within the meaning of section 403.031(5) F.S.

3. Respondent owns, operates, and maintains a 1.08 MGD wastewater treatment plant (activated sludge process)

servicing certain portions of North Fort Myers. This plant is located off of Inlet Drive, North Fort Myers, Lee County, Florida. Latitude: 26° 38' 17" North, Longitude: 81° 54' 36" West.

4. Respondent is authorized to operate this facility under Permit Number DO36-72569, issued August 2, 1983 with expiration on August 2, 1988. This permit authorizes Respondent to discharge treated water to a canal which flows into the Caloosahatchee River.

5. On December 23, 1987 there was a major upset of the wastewater treatment plant. This unsettled condition caused the backwashable filters to clog and to be bypassed. Ultimately there was an alleged discharge of effluent exceeding total suspended solids concentration limitation from the treatment plant to the receiving surface waters. The upset condition and filter bypass continued until December 28, 1987.

6. Respondent has violated Florida Administrative Code (F.A.C.) Rules 17-4.130 and 17-6.130(1) which states that in the event the permittee is temporarily unable to comply with any permit conditions, the permittee is to notify the Department. Respondent did not provide timely notice to the Department.

7. It is the Department's position that by allowing the discharge of high levels of Total Suspended Solids Respondent has violated the established standards under F.A.C. Rule 17-7.040 which states that no solid wastes may be disposed of in any natural or artificial water body.

8. It is the Department's position that Respondent failed to comply with F.A.C. 17-19.050(1) which sets up the minimum sampling schedule for wastewater treatment plants.

Specifically Respondent did not sample the effluent from the treatment plant from December 22, 1987 through and including December 28, 1987.

9. Effluent from the treatment plant was sampled by the Department on December 24, 1987, after the upset of the wastewater treatment facility. Subsequent testing of the sample found it to be in violation of F.A.C. Rule 17-6.180(1)(b)2. Specifically, a value of 70 mg/l TSS on the sample was recorded. This exceeds the maximum allowable discharge limit of 60 mg/l.

The Department and Respondent having met to discuss the above and having reached a mutually agreeable settlement of the above referenced matters pursuant to F.A.C. Rule 17-103.110(3), it is therefore

AGREED AND ORDERED:

10. Respondent shall make modifications to the treatment plant to ensure that it will consistantly meet all applicable State standards. Respondent shall perform corrective actions within the time frames listed below:

	ACTION	DUE DATE
a.	Engineering plans and specifications completed	Sept. 23, 1988
b.	Construction permit application submitted to DER	October 3, 1988
c.	Advertising for construction bids	October 10, 1988
d.	Planning and zoning completion by all agencies	November 1, 1988
e.	Open bids	November 14, 1988
f.	Issue D.E.R. construction permit	January 2, 1989
g.	Award construction contract	January 9, 1989
h.	Start construction	February 1, 1989
i.	Complete construction	May 1, 1990
j.	Facilities certified in compliance	November 1, 1990

11. If the Department requests additional information in order to process the construction permit application, Respondent shall provide all reasonably requested information within thirty (30) days after receipt of such an information request.

12. Respondent shall within twenty-five (25) days after the effective date of this Consent Order evaluate whether or not sewage sludge is present in the canal adjacent to the wastewater treatment plant and develop a plan for its removal if sludge is found. Removal of this sludge will be done in accordance with all applicable local, state and federal rules and regulations and be completed within 120 days of the effective date of the appropriate permits.

13. If the Respondent fails to meet the compliance date of this Consent Order, the Respondent shall pay $100.00 per day until the actions required are completed. Acts of God and other delays due to circumstances beyond the control of the Respondent shall extend the completion date one day for each day of delay.

14. Respondent shall report any malfunctions which occur at its wastewater treatment facility in accordance with F.A.C. 17-4.130 and 17-6.130(1).

15. Respondent shall make payment of $20,180.00 to the Department of Environmental Regulation in settlement of the violations stated in this Consent Order. The amount shall be made payable to the "State of Florida Department of Environmental Regulation" and shall be submitted to 2269 Bay Street, Fort Myers, Florida 33901. Respondent has the option of proposing to the Department an alternative in kind service, which, if approved by

the Department, may be used to offset the monetary settlement. Any proposed in kind service must be submitted by Respondent within thirty (30) days after the effective date of this Order. The Department will notify Respondent within 20 days of whether or not a submitted proposal is acceptable. If a proposed in kind service is not approved by the Department the entire amount ($20,180.00) shall be paid within 60 days after the date of entry of this Order. For and in consideration of Respondent's complete and timely performance of the obligations agreed to in this Consent Order, the Department hereby waives its right to seek judicial imposition of additional civil penalties concerning the issues resolved by this Consent Order.

16. Persons not parties to this Consent Order whose substantial interests are affected by this Consent Order have a right, pursuant to Section 120.57, F.S., to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapter 17-103 and 28-5, F.A.C., and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, Florida 32399-2400, within 14 days of receipt of this notice. Failure to file petition within the 14 days constitutes a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, F.S.

17. Respondent waives its right to an administrative hearing on the terms of this Consent Order under Section 120.57, F.S., and its right to appeal this Consent Order pursuant to Section 120.68, F.S.

18. Entry of this Consent Order does not relieve Respondent of the need to comply with all applicable federal, state or local laws, regulations, or ordinances.

19. The terms and conditions set forth in this Consent Order may be enforced in a court of competent jurisdiction pursuant to Sections 120.69 and 403.121, F.S. Failure to comply with the terms of this Consent Order shall constitute a violation of Section 403.161(1)(b), F.S.

20. Respondent is fully aware that a violation of the terms of this Consent Order may subject Respondent to judicial imposition of damages, civil penalties up to $10,000 per offense and criminal penalties.

21. Respondent shall allow all authorized representatives of the Department access to the property at reasonable times for the purpose of determining compliance with the terms of this Consent Order and the rules of the Department.

22. The Department hereby expressly reserves the right to initiate appropriate legal action to prevent or prohibit future violations of applicable statutes or the rules promulgated thereunder not covered by the terms of this Consent Order.

23. No modification of the terms of this Consent Order shall be effective until reduced to writing and executed by both the Respondent and the Department.

24. All reports, plans, and data required by this Consent Order to be submitted to the Department should be sent to the Environmental Manager, Enforcement Section, 2269 Bay Street, Ft. Myers, Florida 33901.

25. This Consent Order is final agency action of the Department pursuant to Section 120.69, F.S., and F.A.C. Rule 17-103.110(3), and it is final and effective on the date filed with the Clerk of the Department unless a Petition for Administrative Hearing is filed in accordance with Chapter 120, F.S. Upon the timely filing of a petition this Consent Order will not be effective until further order of the Department.

DEPOSITION

Whereupon,

HUGH LARKIN, JR.

Was called as a witness, having first been duly sworn to speak the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

MR. GATLIN: I think as usual we'll stipulate -- we can stipulate to the usual stipulations?

MS. GERVASI: Yes.

MR. McLEAN: We'd like to read and sign, Ken.

EXAMINATION

BY MR. GATLIN:

Q. All right, would you please state your name and address?

A. My name is Hugh Larkin, Jr. My address is 15728 Farmington Road, Livonia, Michigan 48154.

Q. And you prepared for filing in this proceeding testimony on behalf of the Office of Public Counsel consisting of 23 pages?

A. Yes.

Q. Did you bring any documents with you that were work papers or documents that you referred to in preparing your testimony?

A. Just the -- what was referred to in the testimony itself.

Page 5

Q. And that would be --
A. Exhibits or court orders or -- I can't think of anything else, deposition transcripts.
Q. Only what were --
A. Referred to.
Q. And you had no independent work papers that you had?
A. No.
Q. In what areas do you consider yourself to be an expert?
A. Utility regulation, ratemaking.
Q. Would that include, I assume, accounting?
A. Accounting.
Q. Legal?
A. As far as it is necessary to interpret for ratemaking principles.
Q. Do you have any background in legal work?
A. No, I'm not a lawyer.
Q. Not a lawyer. Have you ever practiced law?
A. No.
Q. Have you had any experience in environmental regulation?
A. Some cases we've worked on have to do with environmental -- recovery of environmental costs in utility rates, particularly coal tars in the State of Indiana and

Page 6

other states, Illinois.
Q. Have you had any direct experience with dealing with environmental regulations, either on behalf or --
A. No.
Q. Have you had any experience with the Florida Department of Environmental Protection?
A. Other than as it comes up in water rate cases, I have not.
Q. You haven't had occasion to make yourself conversant with the DEP rules and regulations, have you?
A. Just a general understanding of how they work.
Q. And that would apply also to the United States Environmental Protection Agency? Would that be the same thing?
A. That's correct.
Q. Do you consider yourself an expert in environmental compliance regulation?
A. No.
Q. Do you have any experience in water and wastewater operations?
A. Just a general knowledge of how plants operate.
Q. But you've never had any responsibility for operating one?
A. No.
Q. Do you have any experience in obtaining financing

Page 7

for water and wastewater utilities?
A. No.
Q. Have you ever been employed by water or wastewater utilities?
A. No.
Q. Looks like there are about 250 rate cases that you list as having participated in in your resume attached to your testimony. Is that about right, 250 or so?
A. It might be 300, and it might be 275. It's somewhere around there.
Q. In any of those -- I assume you testified in those cases?
A. Some were settled. Some were withdrawn. There's a key in there which indicates which ones were settled and which ones were withdrawn or stipulated or whatever.
Q. To some point you participated in them, whether they were withdrawn or settled or went to hearing?
A. Right.
Q. Are any of them on behalf of the utility?
A. There are two cases in there where the Columbia Gas System was sued, and we represented the Columbia Gas System through their lawyers.
Q. Was that a ratemaking proceeding?
A. No, that was a civil suit.
Q. Related to what?

Page 8

A. Oh, one was the Columbia Gas System sold a distribution company to another entity. And the other entity said that the Columbia Gas System didn't disclose all the facts and sued them for recovery of some of the payments they made for purchase of the system.
The other suit related to the Reynolds Aluminum Company, which claimed that the Columbia Gas System was restraining trade by not allowing them to buy gas off of a transmission system rather than through the distribution network.
Q. Are any of them -- how many of them, or approximately how many of them were you employed by ratemaking authorities, such as the Public Service Commission?
A. I don't keep track of it that way, but maybe a quarter to half.
Q. Isn't it true that most of them you're testifying or working on behalf of the Office of Public Counsel or some similar type --
A. Some state agency that was appointed to represent the public interests, yes.
Q. Do you consider yourself an expert in the design and permitting and construction of a wastewater plant or water plant?
A. No.

Page 9

Q. How about in the maintenance and operations of water or wastewater plant?
A. I have some knowledge, but I wouldn't be an expert in it.
Q. You're not a licensed operator to operate a plant?
A. No.
Q. Nor have you had any training or experience to do that?
A. No.
Q. Do you know what the CWA is?
A. Clean Water Act.
Q. Are you familiar with that act?
A. Just from my experience in this case.
Q. How about the regulations under the CWA that have been adopted by EPA?
A. No, I am not.
Q. How about the statutory regulatory requirements pertaining to the construction and operation of a wastewater utility plant or system, any experience?
A. No, I have not had any experience.
Q. So you don't consider yourself an expert in those areas then, do you?
A. No. I don't think this case is about that.
Q. How did you arrive at the positions you take -- have taken in this case?

Page 10

A. Oh, I think they're fairly obvious. That --
Q. Let me re-ask the question. Are these the positions of the Office of Public Counsel of Florida?
A. Ask the question again. Are they --
Q. You testified of certain opinions and positions. Are those the opinions and positions of the Office of Public Counsel?
A. As far as I know, yes.
Q. Did you discuss it with them?
A. No, I write the testimony. I send it to them. They read it, and if they agree with it, they file it.
Q. So apparently they approved of it?
A. Yes.
Q. And we could assume then that these are the positions of the Office of Public Counsel?
A. Yes.
Q. Do you know of any Commission order, Florida Commission order I'm talking about, that is consistent with your testimony regarding retroactive ratemaking?
A. Well, I haven't looked for it, but -- in the orders, but that is retroactive ratemaking. I don't know of any Florida Commission order that would have done what the company is asking them to do. So that's the definition of retroactive ratemaking, as I've defined it in my testimony.
Q. I understand it's your definition. Do you know of a Florida Public Service Commission order that agrees with that definition?
A. I don't know of any, but I don't think that there's been any case that's ever been like this where somebody has accumulated several years of expenses and tried to recover them.
Q. So you don't know of a case?
A. No, I don't know of any case.
Q. Do you know of any case in any other condition that is consistent with your position on retroactive rate paying?
A. I don't know of any off the top of my head, but I'm sure there are many that are.
Q. Did you look at any in preparing your system?
A. No, because what the company is asking for fits that definition.
Q. You just know it without having to look at those cases?
A. Yes.
Q. How about court cases, did you look at any of those?
A. No.
Q. And you can't cite us a court case that supports your position?
A. No, because it is obviously retroactive

Page 11

Page 12

ratemaking.
Q. Don't need to look at a court case?
A. No, I know what the definition is. I know what it is.
Q. You just know what it is?
A. Right.
Q. On Page 3 of your testimony, on Line 7 you say the company did not and does not have an accounting order. Do you know of a Commission rule that requires such an order? Can you cite us to one?
A. I can't cite you to one, but that's generally the only way that you can defer expenses for consideration in a subsequent rate case, is to get an accounting order that allows you to do that.
Q. But you don't know of a rule that provides for that in Florida?
A. I don't know if there is or there isn't.
Q. You didn't look to see if there is?
A. No.
Q. You just think there ought to be an accounting order?
A. It has to be. You can't just say --
Q. Has to be why? That's what I'm asking.
A. It has to be because otherwise anybody could just accumulate any type of expense for any number of years and

Page 13

say, oh, we can go back and ask for this in a separate rate case because we want to. So there has to be some set of policies or rules that the Commission follows to ensure that they aren't constantly going back and retroactively looking at costs that have been incurred that -- and one of the ways is to have an accounting order.

Q. But you didn't look to see if there is such a rule in Florida?

A. No, I didn't.

Q. And you don't know if there is a rule?

A. I'm not sure whether there is or there isn't.

Q. But regardless of whether there's a rule or not, you think that's what ought to be done?

A. It should have been done.

Q. Is that an accounting principle?

A. That's a ratemaking principle.

Q. Can you cite me some authority? I understand you're an expert, but can you tell me Bonbright or a statute or rule?

A. I'm sure that there are rules and there may be a rule here in Florida. I don't know. But I know there are rules in other commissions at other states where you have to get accounting orders in order to treat something in a different way.

Q. What other states?

Page 14

A. I don't know off the top of my head. I would think that maybe Connecticut has one, but I'm not certain.

Q. And it's a commission rule?

A. It's a commission rule or a commission policy.

Q. Have you worked with that rule? Are you familiar with it?

A. Well, I've worked in other states where those rules apply. I just don't remember which states have those kinds of rules.

Q. As I gather from your testimony on this particular subject, what you envision is the company would come in and ask the Commission to allow the deferral of a set amount of expenses?

A. That the company would have to come before the Commission and say, we have an unusual situation that requires an unusual treatment that we think the ratepayer ought to pay for, and we want you to allow us to have an accounting rule that would allow us to defer these expenses. So that when we know what they are, we can subsequently bring it before the Commission for a decision.

Q. Would you have to know the amount of the expenses or just the proposition that you wish to defer the expenses?

A. You would have to know the type of expense and what you want to defer.

Q. But not the amount?

Page 15

A. And that's the reason why you wouldn't ask for it or have a rate case then, because you wouldn't know what it was.

Q. Do you know of a specific rule or a specific policy that was in effect when these expenses were being incurred that would require that?

A. No, I don't.

Q. On Line 21 of Page 3, there's the term "Accounting Order" in caps.

A. Yes.

Q. What do you mean by that?

A. I think we've been discussing that. It means a specific authority on the part of the Commission to allow the company to treat an expense in a different way.

Q. I take it from you capitalizing the A and the O in the order, that this is a known document of some kind, specific kind. Can you show me one or tell me about one?

A. I can tell you about one, that there are accounting orders issued by Public Service Commissions that tell utilities to treat certain things in a certain way. And those are called accounting orders.

Q. And is there -- do you know of a rule or provision that provides for an accounting order, as you describe on Line 21, in the Florida Commission?

A. I haven't looked, but I assume that there are such

Page 16

orders, authorized or issued.

Q. Do you know if there was a rule provision at anytime providing for such an accounting order since the time the company has been incurring these expenses?

A. I don't know.

Q. Can prudently incurred expense be recovered in rates?

A. If it's used and useful and prudently incurred it could be.

Q. In your testimony on Page 4, you indicate that a company ought not be allowed to recover fines and penalties.

A. Yes.

Q. You are aware that the company is not seeking to recover fines and penalties?

A. Yes.

Q. Are you saying that a company should not ever be allowed to recover its costs in defending claims of this nature even if there is no fine or penalty?

A. Well, I think you would have to look at the specific situation, but if there's a fine or penalty, and the expenditure was made in defending the company against the fine or penalty, that those expenditures related to that defense against the fine or penalty ought to file a fine or penalty, and that would be the responsibility of the

Page 17

stockholder.
Q. So even in this case, if the court had come out and said that the company is absolutely not guilty, no fine or penalty at all, and the government was wrong completely, you would not allow in this case the recovery of any of the litigation costs?
A. Well, I don't think we'd be here, because I think then you could apply to the court, as the company tried to, and get the court to say that the government --
Q. Let's assume that for some reason the court didn't agree with that position.
A. I guess I wouldn't accept that premise. I don't see how you could get the both cases, that you're completely innocent and you incurred $3 million in expenses, but then the government, or the judge said, well, we're still going to make you pay the legal fees.
Q. Now you're giving a legal opinion, aren't you?
A. No, that's my interpretation of what it is.
Q. Of what -- interpretation of what?
A. Of that factual situation that you just described.
Q. You think that if there had been no fine or penalty, that the company could have collected the litigation costs from the government?
A. Well, that's not the factual situation, but that's one of the things that the court considered, whether the

Page 18

government had maliciously prosecuted the company, and the court found that it hadn't.
Q. Well, I agree with what you're saying in part, but what I want to know is what circumstances would you allow a company to recover the litigation costs of litigation?
A. Well, I don't -- I would have to see the circumstances, but in this set of circumstances, I would not allow them to recover.
Q. And even if the court had said the company is not -- let's say the court said the company is not guilty of any violation, there's no fine and penalties, but the government did not act maliciously, would you allow the costs?
A. The government did not act maliciously.
Q. But there's no fine or penalty.
A. No fine or penalty, and we're not going to give you the legal fees?
Q. Right.
A. I can't imagine that situation occurring.
Q. Let's do imagine it. This is a hypothetical. In that situation would you --
A. I guess I would still come to the conclusion that that still was the management's responsibility because they were the ones that were brought to court for their operation of the plants. And I don't see how the ratepayer could be

Page 19

held responsible when they weren't operating the plants, aren't responsible for any proposed violation.
Q. How about if it was a car wreck and the company had litigation expenses?
A. It depends if that was an employee that the company had no control over and that the management had adequately supervised the employee and they did everything the management could do to avoid it, it might be legitimate, but I think you have to look at these things in each instance, but we're not talking about a liability that arises from an accident of a company vehicle. We're talking about a liability that arises because of an act of management.
You can't paint all of these things with a broad brush and say, okay, if one -- if they're entitled to recover legal fees for an employee that has an accident and injures somebody, then that means you paint every legal fee as legitimate recovery.
Q. Let's don't take it as though if you do it in an automobile accident you will recover in every instance. Let's just take the car accident by itself. The company has defended itself and now would you allow the recovery of litigation costs in rates in that instance?
A. If the company had legitimately managed its employees, if the accident was something that was not out of

Page 20

their control where they could have avoided it by taking some management steps, I would not allow it. But if it was a -- an accident where the brakes gave out and the truck was adequately maintained and they just gave out, went through a red light, struck somebody, that's not within the control of the management. But the violation of the Clean Water Act is within the control of the management.
Q. Now, are you going to let the court decide that, or are you going to look at it after the case as to whether the management had control or not?
A. Well I -- I think you look at these things after the fact because that's when they arise in a rate case.
Q. No, sir, I'm asking would you let -- if the court said the company is absolved, the company pays no liability, clean hands completely, do you second guess the court or would you accept the court's word in that?
A. Well, I'm -- I'm not trying to prejudge or rejudge what the court did. What I'm looking at is the expenses as they are flowing through rates. And that's what I'm concerned about.
Q. We agree on that.
A. Now, if the court rules that the company is not liable for an accident and they incurred legal fees, and it was not a liability that management could have avoided, I would have let those kinds of legal fees go through.

Page 21

Q. And recovered in rates?
A. And recovered in rates.
Q. You would have accepted the judgment of the court that there was no liability on the part of the company?
A. Given the facts you've described.
Q. Yes, I understand.
A. Which are unlike this case.
Q. I understand your position on that.
A. All right.
Q. But if we had that case, the hypothetical that we're talking about, and we were before the Commission, would you not undertake to second guess the court as to maybe the court was wrong, or maybe you know something that the company didn't have those brakes fixed, you wouldn't try to second guess the court?
A. Not unless there was evidence that showed that there was. If there was something in the records or something in the file that indicated some liability on the part of management, I wouldn't independently decide that you shouldn't recover the legal fees.
Q. But you would accept the judgment of the court?
A. If there was nothing in the files or in the judgment that indicated otherwise.
Q. You mean the court could say --
A. The court --

Page 22

Q. -- could say the brakes should have been kept better, but I still rule for the company, you would say, ought to recover that in rates?
A. I might say that, yes.
Q. So in that instance you would second guess the court?
A. In that instance I would say that that's a responsibility. I'm not second guessing the court. I'm telling the Commission, here's the principle that ought to apply for ratemaking and who ought to be responsible for these expenses. I'm not trying to reverse the judgment of the court. What I'm trying to do is say, here are the principles that ought to apply when you're setting rates.
Q. It wouldn't have mattered to you in this case, would it, if the court had said the only fine I'll levy against Florida Cities is $2, you would still say the company ought not recover the litigation expense?
A. Yes, and there's two reasons for that. The first is it's retroactive. The second is that violation of the Clean Water Act is clearly something management has control of. The ratepayer receives no benefit from the company violating it, the Clean Water Act.
Q. What if we had this case and the company was fined $1?
A. It doesn't matter the size of the fine.

Page 23

Q. All right. Okay. Doesn't matter. But let me continue my hypothetical.
A. Okay.
Q. And Florida Cities says, yeah, we violated it and we could have cured that violation. We could have invested a million dollars and we never would have violated that thing at all, they wouldn't have been in violation, but we thought it more prudent to pay the dollar fine. What do you think about that?
A. Well, I can't envision that that situation would arise, but, I mean, we can't make choices. The law is the law. You have to comply with it, and the law is there for a purpose and the purpose is to make sure the water quality stays at the level it should stay at. Regardless of whether the fine was a dollar or not, the company is required to comply with the law. And if the law said this is the quality it had to come up to, then you have to meet that quality.
Q. And there could be no controversy about the law, you don't think? It's very clear?
A. The law could be in controversy. But I don't think it was in this case. I think in this case the company was found to have violated the Clean Water Act in numerous instances, hundreds of instances.
Q. If the company were a municipal utility, who would

Page 24

pay the penalty and legal costs then, do you think?
A. Well, I don't know, but I assume that it would come out of the municipal funds.
Q. Do you have an opinion as to whether the municipality might pass those costs along in their rates?
A. They may or may not.
Q. Don't know? Could they?
A. It's possible, but it's just as likely that they would be embarrassed to tell ratepayers they're going to raise their rates because they violated a law. It's just as likely to --
Q. Raise the taxes?
A. Well, they would have to raise the water rates to get it through -- just as liable to take it out of their general fund and say nothing.
Q. What are the factors that a court must consider, a federal court must consider, in assessing the penalties for violations of the CWA?
A. Well, there are about 7 or 8 standards that the judge looked at.
Q. Do any of them provide that one of the things that ought to be considered is to -- as to how the legal expenses will be recovered?
A. No. But one of them was the ability to pay, which can be considered in conjunction with what the company has

Page 25

already incurred as legal expenses. So it isn't a direct standard, but it is an indirect consideration that I'm sure that the court takes into consideration.
Q. Why are you sure of that?
A. Because -- one of the attorneys raised it in the deposition of Mr. Allen. Why would he ask if he didn't care? The judge -- I don't know whether the judge read the deposition or not, but --
Q. Well, do you believe that deposition was before the judge?
A. It may have been. It may not have been.
Q. Do you know if it was ever introduced in court?
A. I don't know.
Q. So you don't know if the judge considered that or had it before him or not?
A. No.
Q. Your -- on Page 4, Lines 13 and 14. Let me read it. "Since the underlying principle of utility ratemaking is that the fines and penalties are the responsibility of management who work directly for the stockholders" -- and the part I want to ask you about is starting here -- "then any related expense such as legal fees should be treated in the same manner as the fine or penalty." That last part of that sentence is not consistent with the two Commission orders that you cite later on, is it?

Page 26

A. It's --
Q. They allow the legal --
A. They allowed minor amounts of legal fees, but as they pointed out, I don't think they really ever focused on the relationship between the fine and penalty and its relationship to the legal fees.
Q. They allowed the litigation expenses; did they not?
A. They allowed $453 in one case and I'm not sure what the amount was in the other case.
Q. But it was allowed, you agree?
A. Yes, but I don't agree that that sets a precedent.
Q. Because of the $453?
A. Because I don't think it was really a focused analysis by the Commission of what the disallowance of an expense is and the relationship of other related expenses are.
Q. The order that you quote on Page 10 says, "As the Commission previously concluded, the legal expenses incurred for defending fines from DEP and EPA could facilitate avoided or reduced amount of fines. Therefore, we find that no such adjustments are necessary to the test year expenses." Now that ruling was in rejection of your testimony in that case; was it not?
A. That ruling was opposite to what I recommended.

Page 27

Q. Right. And you say the Commission was not focused? What was it --
A. I don't think that they really considered $453 worthy of a lot of analysis in terms of what kind of precedent this might set or whether there should be a case where multi-million dollar decisions ought to be based on. I think the company said, well, we've got good compliance with the Clean Water Act and good relationships with the Florida Department of Pollution Control, and I think the Commission said, well, let's just give them the $453. That's my analysis of how they came to that decision.
Q. Who brought the issue up?
A. I did.
Q. If it was so small, why did you bring it up?
A. Because it's a principle.
Q. The principle involved?
A. Right.
Q. Right.
A. And I don't think they focused on the principle.
Q. I don't understand that. What do you mean by not focused. You mean they didn't understand the issue?
A. Yeah, I don't think they did understand the issue of disallowing an expense and allowing a related cost into rates.
Q. Well, you brought it up because of the principle?

Page 28

A. Right.
Q. And the Commission ruled on the principle?
A. No, they didn't.
Q. Well, they disallowed -- they did not allow your recommendation, they did not follow your recommendation?
A. Yeah, but the principle was not fully litigated nor articulated in that case.
Q. Well, you testified on it.
A. Yes, I testified.
Q. OPC filed a brief on it, didn't they?
A. Yeah.
Q. And the company disagreed with you. The company had a witness that disagreed with you, didn't they?
A. The company had a witness that disagreed.
Q. And the Commission had to look at what you said and the witness that said in opposition to you, and had to read OPC's brief and had to read the company's brief, and you say they weren't focused on it?
A. No, I don't think that they focused on the $453 expense.
Q. If it had been $5,000, would they have focused on it?
A. Probably not.
Q. How high would it have to be for them to get focused?

Page 29

A. I think it has to get into maybe a half million dollars.
Q. And then they would focus?
A. I think both they would have focused more on what issue --
Q. OPC --
A. And we would have focused more.
Q. And OPC would have filed a better brief on it, you think?
A. I'm not even sure it was mentioned in the brief.
Q. You would have given better testimony on it so they would focus on it?
A. If it was half a million dollars, we would have put several pages of testimony in it.
Q. So principles relate to how much money is involved?
A. It does in terms of the amount of litigation effort you put into it. You can't spend thousands of dollars on behalf of the ratepayer to save $453.
Q. How much can you spend to save $453?
A. I don't know, but whatever it was is the sentence or two I put in the testimony saying you ought not to allow this.
Q. And the Commission disagreed?
A. And the Commission didn't focus on it, in my

Page 30

opinion.
Q. You think intentionally they did not focus on it?
A. I think that the dollar amount was not of the magnitude that they would have thought very hard about it.
Q. They just saw the 450 and said, this is not worth fooling with?
A. I believe so.
Q. Were they careless, you think?
A. No.
Q. Was this Commission careless?
A. No.
Q. Whether they focused or not, in your opinion, you want them to change that principle that they adopted in that case?
A. I don't think they adopted a principle.
Q. The principle they followed?
A. Well, what I want them to do is to not follow that allowance and disallow these expenses.
Q. You want them to adopt a principle to disallow litigation expenses related to compliance of environmental rules and regulations?
A. No, I want them to --
Q. What's the principle you want them to follow?
A. I want them to disallow expenses, legal expenses associated with defending stockholders against fines and

Page 31

penalties. That's not compliance.
Q. So you want -- you don't want -- you want the Commission to say, we shall not allow litigation expenses in defending environmental actions for alleged violations?
A. I want the Commission to say where there's a legal expense associated with a fine or penalty that defends the stockholders against those fines or penalties, ratepayers should not be required to fund those expenses.
Q. And when you say stockholders, you're talking about in the -- like in this case where apparently DEP alleged that Florida Water Service had violated some rule, standard, statute, and if they come in and if Florida Water Service decides to litigate and oppose that allegation, you don't want that litigation expense to be recovered in rates?
A. State your question again. I'm not sure I followed.
Q. Sure. Florida Water Service, in the case that you testified in, had allegedly violated some DEP rule or statute or not meeting some standard. DEP filed litigation or some kind of claim against it. Florida Water Service decided to spend some money on legal fees to defend that, and apparently paid some fine. I don't know what.
A. $306.
Q. Now, the principle you want the Commission to

Page 32

adopt is, under those circumstances, Florida Water Service should not pass those expenses on to its ratepayers?
A. Well, I think you misstated the facts.
Q. Straighten me out then.
A. The facts are that Florida Cities Water Company did violate the Clean Water Act. It wasn't any --
Q. I'm talking about Florida Water Service.
A. Florida Water Service.
Q. Southern States Utilities.
A. Oh. Oh.
Q. I'm not talking about this case. I don't want to talk about Florida Cities. I want to talk about the $453.
MS. GERVASI: That's United Water, I believe.
MR. GATLIN: Okay. Thank you.
BY MR. GATLIN:
Q. I guess the next case is the other case you cited.
A. No, the other case was Leon.
Q. That's right.
A. Now, the question is, I don't want the Commission to allow expenses associated with defending the company against fines and penalties?
Q. Okay. Fair enough. That's the principle you want them to have?
A. Yeah.

Page 33

MR. MCLEAN: Ken, did you say that's the principal you want them to add?
MR. GATLIN: Have.
MR. MCLEAN: Which implies that, as a principle, something beyond the impact of this case?
MR. GATLIN: Impact of which case?
MR. MCLEAN: I have a minor concern here. You seem to be asking him about some policy that you -- that he would like to the Commission to adopt.
MR. GATLIN: That's exactly what my question --
MR. MCLEAN: As opposed to how he wants this case handled.
MR. GATLIN: I was talking about the principle, talking about the $453 principle.
MR. MCLEAN: I don't think the question has been put to him, and I'm not suggesting that you have to, but the record would seem to imply that he has some position about general procedures and general policies the Commission ought to have. I don't think he has any concerns outside this case, but --
MR. GATLIN: I think his testimony is contrary to that, because I think he says that this principle that was adopted in the United Water case, as I stand corrected, is not the one he agrees with.
MR. MCLEAN: I think his testimony stands for the

Page 34

way he wants this case handled. He may have some concerns outside that. I don't know. But I'm not sure that that question has been directly put, and I'm not sure it needs to, but I'm concerned that the record will -- this deposition will seem to indicate that he has some concern outside this case when I don't think that question has been fairly put.
MR. GATLIN: Well, I think the testimony clearly indicates that he does have some concern, and he thinks the principle ought to be that this Commission ought not allow litigation expenses in defending EPA litigation.
MR. MCLEAN: In this case.
MR. GATLIN: In any case. I think he wants that principle established by this commission.
MR. MCLEAN: If you think that's his position, that's what I'm doing. But I don't think your record is going to show it unless you ask the question.
MR. GATLIN: Now that you've been listening to Mr. McLean tell you what to testify to.
MR. MCLEAN: Let me respond --
BY MR. GATLIN:
Q. Do you think that ought to be the principle of the Commission -- or not the principle. The Commission ought to allow it or not allow it?

Page 35

A. The testimony focuses on this case.
Q. I know that.
A. And that's the case. But as a general rule in similar cases, in similar situations, I would say that the Commission ought to apply the principle --
Q. Same thing?
A. Same thing.
Q. Be consistent. Whether it's this case or Florida Water Service or United or --
A. That's correct.
Q. On the bottom of Page 4 of your testimony starting on Line 20, it goes over to the next page.
A. Starting on Line 20?
Q. Line 22, on Page 4. The gist of it, as I understand it, is that if a utility knows its going to be able to recover its litigation cost, it really doesn't have much incentive to comply with the Clean Water Act. Is that a fair summary?
A. No, I don't think it's a fair summary. It's dealing now in a general sense with the recovery of any legal fee for any fine or penalty, not specifically Clean Water Act.
Q. Okay.
A. If you violated the Fair Employment Act.
Q. Right.

Page 36

A. You discriminated, should you recover those legal fees if you're found guilty? And my answer would be no.
Q. Excuse me, I thought you were finished.
A. And what I am saying is that management has to be held responsible for its actions, and that includes the payment of the fine or penalty and any associated cost. And the associated cost would be the defense of those fines or penalties.
Q. And if they know they're going to recover them, as I understand your position, there's not the incentive to comply?
A. They would be less likely to comply.
Q. Do you have a court or commission opinion that reflects any kind of finding along that line?
A. No.
Q. Have you looked for one?
A. No. I think it's just the general common sense that would tell you that if I can recover my expenses, I'm -- regardless of what they are, regardless of my actions, I'm not going to be too concerned about what my actions are.
Q. If I agree to pay your legal expenses and fines, would you start running red lights?
A. Oh, I might. Who knows? I mean, you know that's not my nature. I am not in the habit of doing that. But if

Page 37

I were in a hurry going to the airport and --
Q. Old Gatlin will pay for it, I might as well run it?
A. -- and I want to make that flight, I might run it.
Q. But if it wasn't going to be paid, you would stop for the light?
A. I would think about stopping. I might be motivated enough that I would take the chance.
Q. Do you believe that if the Department of Justice or the EPA or the federal judge would have known that some of these expenses might have been passed on to the ratepayers, that they would have taken some steps to minimize the expenses?
A. They might or might not have. I don't know.
Q. You just don't know?
A. I just don't know.
Q. Do you have any court order or Commission opinion any place that indicates that that's been done before?
A. No.
Q. On Page 12, Line 18, you say it is your understanding that DEP and EPA doesn't order companies to make large system improvements.
A. Yes.
Q. What do you base your understanding on?
A. It's based on my experience here in Florida. I

Page 38

don't recall ever being in a case where water quality was an issue or that there were violations issued to a company that the violation said, you will construct such and such a plant. And I think that that's generally the way most rules and regulations work, that they state a rule and a quality and they leave it up to the company to decide how to comply with that rule or quality of water, water or wastewater.
Q. Your understanding, then, doesn't come from any study, it comes from hearing this kind of subject discussed in proceedings before the Public Service Commission?
A. Yes.
Q. On Page 15, Line 15?
A. Yes.
Q. The term there, "legally sanctioned," what do you mean by that?
A. Well, I don't think that the Florida Public Service Commission is authorized by statute or requirement to adjudicate the overzealous prosecution of the government. It's just not part of their mandate, and so they're not authorized to do that, even though this case kind of suggests that they ought to do that.
Q. When you say "legally sanctioned," you talk about, you don't believe there's a statute or rule that says they can do that?
A. Yes.

Page 39

Q. You're not talking about the Commission's authority to determine prudency, are you?
A. Well, you mean whether these expenses ought to be included within -- prudency doesn't fit my definition of whether expense ought to be included in rates.
Q. So -- but you recognize the Commission can determine prudency; do you not?
A. Well, what I'm trying to say is prudency is too narrow a term. I think it has to be used and useful and prudently incurred.
Q. Right, but you do recognize the Commission has authority to determine prudency?
A. They can look at expenses and determine whether they ought to be included in rates or not, if they're not retroactive.
Q. Have you looked at the Chapter 367 as to the authority of the Commission in determining whether to allow expenses in rates?
A. I probably have, but I didn't in this particular case.
Q. Okay. Referring now to your testimony -- back to Page 12. Your answer that starts on Line 18, I would like to call your attention to the sentence starting on Line 24, you say, "The environmental agencies either find the utility is or is not in compliance with the requirements of law. If

Page 40

these agencies are mistaken as to whether a particular wastewater treatment facility complied with the law, then normally the company's own engineers can prove the company's compliance with the requirements of law. No legal expense would be incurred since it would be a matter of testing to determine whether the utility complies or does not comply with the environmental requirements." End of quote.
Have you read the CWA?
A. Not in detail, no.
Q. You've reviewed it?
A. I've seen it, yes.
Q. Do you believe the act, the Clean Water Act, is so clear that a dispute between the EPA and a utility is rare?
A. No, I don't believe that, but I believe that there is an administrative process that those disputes can be settled through, which is -- would not require a lawsuit or --
Q. Just the engineers meeting and working it out?
A. Well, if they say that the water quality doesn't meet this standard, and you say it does, then to me that seems to be an issue of testing. And if they say you are discharging pollutants that -- into a waterway, that doesn't seem to me to be something that has to be litigated. That's something that you can test to see whether that's true or not.

Page 41

Q. Are traffic laws more complex than the CWA?
A. Probably not.
Q. Isn't there litigation under traffic laws?
A. Yes.
Q. Have you ever participated in a dispute resolution involving the CWA?
A. No.
Q. Are you saying that the act is so clear that these engineers can meet and resolve any dispute?
A. I'm saying that you get to a situation where the environmental agency says the water quality is -- doesn't meet this CWA standard and the company says the water quality does meet the CWA standard. I think that's a dispute that can be settled between engineers with testing.
Q. What about when the company's engineer comes back and says, we can't settle it. Is the company then to say, okay, you know, CWA and EPA, they're like the IRS, they're here to help us, and we know they're right, and we'll do what they say? Is that what you're suggesting?
A. What I'm suggesting is that after you get past this point, there is either a clear violation or there isn't a clear violation. And if you violate it, then that becomes the responsibility of management, and that's what I think happened in this instance.
Q. Well, do you know how many cases there have been

Page 42

under the CWA?
A. No.
Q. Do you know there have been a lot of them?
A. I'm not sure how many there have been.
Q. Did you know there's a specialty in the legal profession for handling these kind of cases?
A. Yes.
Q. What are they doing in all these other cases? What's going on?
A. Maybe they're all violations, and if they're violations, then the stockholders ought to bear the cost of those violations.
Q. The law is the law?
A. The law is the law.
Q. Always clear?
A. It's not always clear, but I don't think that this is a situation where there was a dispute about whether the company violated or not. The judgment clearly states, 269 violations at the -- this site, 1,038 violations at this site, and I think 238 at the other site. That's not a dispute about whether the company agreed to that. It seems that that was a consent judgment, that that's what the judge found, there was no trial about that. That's just what the court found was -- were the facts.
Q. And isn't one of the things the court considers

Page 43

under the CWA is whether the -- it was a violation that was harmful or extremely harmful?
A. Yes.
Q. Or not hardly harmful at all under that?
A. Yes.
Q. So there could be a dispute as to that, couldn't there?
A. Yes, and that's what the trial was about, as to how much of the penalty the company would pay. And that's what the --
Q. And in the instances where the court found that there was hardly any harm to the environment, the court lowered the fine, didn't it?
A. Yes.
Q. How about if the regulatory agency is demanding that a utility install certain facilities and the utility believes that less expensive facilities would do the job, would that be a controversy that would be litigated, you think, or could be?
A. Could be.
Q. Would you have any opposition to that?
A. It depends on what the situation was and whether it was retroactive ratemaking and whether it was -- they were found to violate the law. There were other circumstances that would have influenced that.

Page 44

Q. Hypothetical that I want to give you is a utility is -- thinks it's operating legally, and an agency, for what it thinks is good reason, says, no, we don't think you ought to have a gizmo that fills it four times, we think it ought to fill to six and a half times, and it's a pretty extremely expensive situation. Is this a situation where you think that it could be litigated to avoid that expensive cost and those costs passed on to the ratepayers?
A. It might be, but I don't know. It's not enough details and the situation is not clear from your example what a gizmo is.
Q. I'm not sure I know either.
Then is -- am I to learn that -- that legal representation is never necessary in these situations from your testimony?
A. No, I never said that.
Q. There are times then that litigation is necessary between a utility, for example, and the environmental regulatory agency?
A. It's possible.
Q. But you don't think it's very likely?
A. Well, depends on the situation. I don't think it's likely that you would incur $3.8 million of legal expenses in the run-of-the-mill compliance -- regulation and compliance --

Page 45

Q. How much can you --
A. Who knows?
Q. $453?
A. Could be $453.
Q. And -- but the principle would exclude that $453, wouldn't it?
A. If it was related to the defense of a fine or a penalty.
Q. Does a water or wastewater utility in a bankruptcy proceeding, in the midst of a bankruptcy proceeding, have the ability to raise capital?
A. It might, yeah. It probably could because --
Q. Excuse me?
A. Because like most bankrupt entities, a creditor would be looking at it from the standpoint of the discharge of all the other liabilities, or at least in abeyance. So like individual bankruptcies, you may declare an individual bankruptcy, and walk home and have 15 credit cards in the mail. People are willing to extend you credit because you're less of a risk than you were before the bankruptcy.
Q. So bankruptcy is a pretty good situation for a utility to be in?
A. Not necessarily, but your question was could they raise capital. And my answer was I think they probably could.

Page 46

Q. At the normal rate, market rate?
A. It depends on the situation of that particular bankrupt utility.
Q. Can you give me an example of where that has occurred?
A. I think that the railroad that I quote in my testimony, I think we raised -- they raised capital. They made capital improvements. They bought diesels. They repaired tracks. They did all of those things while they were in bankruptcy.
Q. How about a water or wastewater?
A. I don't see that that would make any difference.
Q. But you don't know of one?
A. I don't know of one, and that would even be a situation that would be more likely, because you have a service that is not -- that can't be curtailed, that can't be stopped. So you have a --
Q. Do you realize the EPA, or I'm sorry the DOJ in this case, did say it could be stopped, the service could be stopped?
A. I wasn't aware of that.
Q. Did you know that the DOJ informed Florida Cities just to stop the operation at Waterway Estates?
A. No, I wasn't aware of that.
MR. MCLEAN: Pardon me just for a moment. Ken,

Page 47

are you saying that that's what they said, or are you asking the witness if he knows that's what they said?
MR. GATLIN: That's a better question.
MR. MCLEAN: Then why don't we re-ask it, just assume that his answers would have been responsive to that.
MR. GATLIN: That's fine.
BY MR. GATLIN:
Q. But in the cases you've listed, or any other cases that you haven't listed that you've been involved in, you don't know of a situation where water and wastewater utilities has raised capital while in a bankruptcy?
A. I haven't any direct experience or knowledge.
Q. I kind of get the impression from what you said today and some of the stuff you said in the testimony that you don't think bankruptcy is that bad of a deal for this situation.
A. Well, it wouldn't be from the standpoint of the ratepayer. I don't think the ratepayer would have been harmed or benefited either way. I think the company stockholders and debt holders would have been.
Q. You feel the same way about bankruptcy as it relates to Larkins & Associates?
A. Well, unlikely that those guys would ever go bankrupt, but -- from the standpoint of what? Would we be

Page 48

better off?
Q. Lower rates. If you're bankrupt, according to your testimony, lower rates?
A. We don't have any assets or any liabilities, so I don't know what we would change.
Q. Is it your position or the position of OPC that maybe this ought to be the policy of this Commission, that bankruptcy would lower rates?
A. No. What I am saying is that the company has used that as a -- an argument to lay these expenses on to the ratepayer, and I am showing in my testimony that that is not -- that would not happen.
Q. You don't think it ought to be the position of this Commission that bankruptcy is good for utilities and ratepayers?
A. No, I don't think that that is -- and I didn't recommend that. What I am saying is that given the argument that your witness has made, they don't hold water, those arguments don't hold water.
Q. On Page 17, Line 23, you make the statement, "It is probable that other water and wastewater companies in the area would have taken over these facilities in a bankruptcy sale." What do you base that on?
A. Well, that's happened in other instances in Florida where there have been bankruptcies of smaller

Page 49

companies, and adjacent utilities have taken them over.
Q. Which ones do you know about?
A. There's one, and I can't think of the name of it, over by Jacksonville that occurred, and there may be others.
Q. Is there some procedure under the law that you're familiar with that that occurs?
A. No.
Q. Or how does it happen?
A. I don't know the exact circumstances. Maybe the Commission has something to do with it. I don't know.
Q. Does another utility have to take over the operation of that?
A. No.
Q. There's no requirement in law that you know of?
A. No.
Q. On Page 18, Line 15, you say, "If operators are not operating these systems to protect the public interest, this agency has the responsibility to take action to ensure that they do."
A. Right.
Q. What do you base that on?
A. It seems to me that the Florida Environmental Protection Agency does regularly monitor and test water and wastewater facilities. And it seems to me that they have the authority to go to court and take action against water

Page 50

utilities or wastewater utilities that aren't meeting the standards that should be met.
Q. You think they have the statutory authority to enforce those --
A. Regulations.
Q. That's all you're talking about there?
A. Yes.
Q. On Page 23, Line 14, there's the word "illegitimate." Do you mean illegal there, or what do you mean?
A. Well, I mean to me they're illegitimate to be included in rates. They're not --
Q. Not from a legal standpoint?
A. No.
Q. You're not expressing a legal opinion?
A. No.
Q. Thank you, Mr. Larkin. That's all I have.
A. Thank you.
MS. GERVASI: Can we take a five-minute break?
MR. GATLIN: Sure.
(Recess from 10:10 a.m. until 10:15 a.m.)
EXAMINATION
BY MS. GERVASI:
Q. Mr. Larkin, I want to give you a copy of a document that I'll refer to, and a few questions that I have

Page 51

for you. And if we could go ahead and mark that as Exhibit 1, deposition Exhibit 1.
(Exhibit No. 1 marked for identification.)
BY MS. GERVASI:
Q. Let me ask you, are you familiar with FAS 71, Financial Accounting Standard 71?
A. Yes.
Q. And this standard is entitled Accounting For The Effects of Certain Types of Regulation, correct?
A. Yes.
Q. Are statements of FAS considered Generally Accepted Accounting Principles, or GAAP, G-A-A-P?
A. Yes, for regulated utilities.
Q. Do you know whether Florida Cities Water Company is required to follow GAAP?
A. I would assume they were for their financial statements.
Q. Would you please turn to Page 4 of deposition Exhibit 1 under the heading General Standards of Accounting for the Effects of Regulation, paragraph 9.
Can you please go ahead and read this paragraph and then let us know what you think it means?
(Pause)
A. It means that a regulated company can capitalize an item which would be normally expensed in an accounting

Page 52

period based on an understanding or authority from the Commission that they can do that and that there will be revenues provided in rates equal at least to the capitalized cost.
Q. And the first sentence of paragraph 9 it says that rate actions of a regulator can provide reasonable assurance of the existence of an asset. Do you know how a regulator would provide reasonable assurance for a utility to capitalize something that would have otherwise been expensed?
A. They need to issue a rate order or an accounting order that would have allowed them to do that.
Q. Thank you. Now on Page 14 of your testimony, starting at Line 6, and here you're stating, and I'm just kind of paraphrasing, that it's your understanding that this utility was found to have violated the NPDES for unpermitted discharges at Waterway Estates, among other things, correct?
A. Uh-huh.
Q. Are you aware that the utility failed to challenge an NPDES permit denial letter issued by the EPA back in 1986?
A. Yes.
Q. Are you aware that the NPDES permit was required for the utility in order for it to be authorized under the Clean Water Act to continue to discharge into the

Caloosahatchie River?
A. Yes, that was my understanding.
Q. Are you aware that the utility continued to discharge into the Caloosahatchie even after its NPDES permit was denied?
A. Yes.
Q. If the Commission finds that the utility acted imprudently by failing to challenge that permit denial through EPA's administrative process, do you have an opinion as to whether the Commission should reduce the amount of recovery of the legal fees for that reason?
A. If they reject the real reason as retroactive, that would be another basis on which to conclude that expenses incurred after that were not appropriate.
Q. That all expenses incurred after that?
A. After that, yes, after the failure to challenge the administrative act or administrative decision.
Q. Okay. Thank you. That's all we have.
MR. GATLIN: Do you have any?
MR. McLEAN: No. I have none.

EXAMINATION

BY MR. GATLIN:

Q. What would have been the procedure if the company had challenged the proposed denial of the permit?
A. I assume that they would have gone up an

administrative decision-making process to different levels within the EPA to examine the denial of that permit.
Q. Do you know what the level of litigation expenses would have been?
A. No.
Q. You don't know if it would be less or more?
A. I have no idea.
MR. GATLIN: Thank you.
(Deposition concluded at 10:25 a.m.)

REPORTER'S DEPOSITION CERTIFICATE

STATE OF FLORIDA)
COUNTY OF LEON)

I, LISA GIROD JONES, Registered Professional Reporter, certify that I was authorized to and did stenographically report the above-styled deposition; that a review of the transcript WAS requested; and that the transcript is a true and complete record of my stenographic notes.

I further certify that I am not a relative, employee, attorney, or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 12th day of June 1998.

LISA GIROD JONES, RPR, RMR

FAS 71 Summary

This Statement provides guidance in preparing general purpose financial statements for most public utilities. Certain other companies with regulated operations that meet specified criteria are also covered.

In general, the type of regulation covered by this Statement permits rates (prices) to be set at levels intended to recover the estimated costs of providing regulated services or products, including the cost of capital (interest costs and a provision for earnings on shareholders' investments).

For a number of reasons, revenues intended to cover some costs are provided either before or after the costs are incurred. If regulation provides assurance that incurred costs will be recovered in the future, this Statement requires companies to capitalize those costs. If current recovery is provided for costs that are expected to be incurred in the future, this Statement requires companies to recognize those current receipts as liabilities.

This Statement also requires recognition, as costs of assets and increases in net income, of two types of allowable costs that include amounts not usually accepted as costs in the present accounting framework for nonregulated enterprises, as follows:

- If rates are based on allowable costs that include an allowance for the cost of funds used during construction (consisting of an equity component and a debt component), the company should capitalize and increase net income by the amount used for rate-making purposes--instead of capitalizing interest in accordance with FASB Statement No. 34, *Capitalization of Interest Cost.*
- If rates are based on allowable costs that include reasonable intercompany profits, the company should not eliminate those intercompany profits in its financial statements.

Pending completion of the Board's current project on accounting for income taxes, this Statement continues current practices of most utilities with respect to accounting for deferred income taxes. Accordingly, if the current income tax benefits (or costs) of timing differences are passed through to customers in current prices and it is probable that any resulting income taxes payable in future years will be recovered through future rates, the company should not record deferred income taxes resulting from those timing differences. However, the company should disclose the cumulative net amounts of timing differences for which deferred taxes have not been

Copyright 1997 Financial Accounting Standards Board

recorded.

This Statement may require that a cost be accounted for in a different manner from that required by another authoritative pronouncement. In that case, this Statement is to be followed because it reflects the economic effects of the rate-making process--effects not considered in other authoritative pronouncements. All other provisions of that other authoritative pronouncement apply to the regulated enterprise.

This Statement clarifies the application of certain other authoritative pronouncements, which is expected to result in at least two changes in general-purpose financial statements of certain public utilities. First, expected refunds of revenue collected in prior years will be charged to income in the period in which those refunds are first recognized. Second, leases will be classified (as capital or operating leases) in accordance with FASB Statement No. 13, *Accounting for Leases,* as amended. Because Statement 13 has not been applied by some utilities in the past, this Statement provides a four-year transition period before retroactive application of lease capitalization is required. Statement 13 provided a similar transition period for unregulated enterprises.

INTRODUCTION

FAS71, Par. 1

FAS71, Par. 1

1. Regulation of an enterprise's prices (hereinafter referred to as *rates*) is sometimes based on the enterprise's costs. Regulators use a variety of mechanisms to estimate a regulated enterprise's allowable costs,1(1) and they allow the enterprise to charge rates that are intended to produce revenue approximately equal to those allowable costs. Specific costs that are allowable for rate-making purposes result in revenue approximately equal to the costs.

FAS71, Par. 2

2. In most cases, allowable costs are used as a means of estimating costs of the period during which the rates will be in effect, and there is no intent to permit recovery of specific prior costs. The process is a way of setting prices--the results of the process are reported in general-purpose financial statements in accordance with the same accounting principles that are used by unregulated enterprises.

FAS71, Par. 3

3. Regulators sometimes include costs in allowable costs in a period other than the period in which the costs would be charged to expense by an unregulated enterprise. That procedure can create assets (future cash inflows that will result from the rate-making process), reduce assets (reductions of future cash inflows that will result from the rate-making process), or create liabilities (future cash outflows that will result from the rate-making process) for the regulated enterprise. For general-purpose financial reporting, an incurred cost for which a regulator permits recovery in a future period is accounted for like an incurred cost that is reimbursable under a cost-reimbursement-type contract.

FAS71, Par. 4

4. Accounting requirements that are not directly related to the economic effects of rate actions may be imposed on regulated businesses by orders of regulatory authorities and occasionally by court decisions or statutes. This does not necessarily mean that those accounting requirements conform with generally accepted accounting principles. For example, a regulatory authority may order an enterprise to capitalize2(2) and amortize a cost that would be charged to income currently by an unregulated enterprise. Unless capitalization of that cost is appropriate under this Statement, generally accepted accounting principles require the regulated enterprise to charge the cost to income currently.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Copyright 1997 Financial Accounting Standards Board

FAS71, Par. 5

Scope

FAS71, Par. 5
FAS71, Par. 5

5. This Statement applies to general-purpose external financial statements of an enterprise that has regulated operations that meet all of the following criteria:

a. The enterprise's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party regulator or by its own governing board empowered by statute or contract to establish rates that bind customers.3(3)
b. The regulated rates are designed to recover the specific enterprise's costs of providing the regulated services or products.
c. In view of the demand for the regulated services or products and the level of competition, direct and indirect, it is reasonable to assume that rates set at levels that will recover the enterprise's costs can be charged to and collected from customers. This criterion requires consideration of anticipated changes in levels of demand or competition during the recovery period for any capitalized costs.

FAS71, Par. 6

6. If some of an enterprise's operations are regulated and meet the criteria of paragraph 5, this Statement shall be applied to only that portion of the enterprise's operations.

FAS71, Par. 7

7. Authoritative accounting pronouncements that apply to enterprises in general also apply to regulated enterprises. However, enterprises subject to this Statement shall apply it instead of any conflicting provisions of standards in other authoritative pronouncements.4(4)

FAS71, Par. 8

8. This Statement does not apply to accounting for price controls that are imposed by governmental action in times of emergency, high inflation, or other unusual conditions. Nor does it cover accounting for contracts in general. However, if the terms of a contract between an enterprise and its customer are subject to regulation and the criteria of paragraph 5 are met with respect to that contract, this Statement shall apply.

General Standards of Accounting for the Effects of Regulation

FAS71, Par. 9
FAS71, Par. 9

◊◊◊9. Rate actions of a regulator can provide reasonable assurance of the existence of an asset. An enterprise shall capitalize all or part of an incurred cost5(5) that would otherwise be charged to expense if both of the following criteria are met:

a. It is probable6(6) that future revenue in an amount at least equal to the capitalized cost will result from inclusion of that cost in allowable costs for rate-making purposes.
b. Based on available evidence, the future revenue will be provided to permit recovery of the previously incurred cost rather than to provide for expected levels of similar future costs. If the revenue will be provided through an automatic rate-adjustment clause, this criterion requires that the regulator's intent clearly be to permit recovery of the previously incurred cost.

FAS71, Par. 10

◊10. Rate actions of a regulator can reduce or eliminate the value of an asset. ◊If a regulator excludes all or part of a cost from allowable costs and it is not probable that the cost will be included as an allowable cost in a future period, the cost cannot be expected to result in future

Copyright 1997 Financial Accounting Standards Board

revenue through the rate-making process. Accordingly, the carrying amount of any related asset shall be reduced to the extent that the asset has been impaired. Whether the asset has been impaired shall be judged the same as for enterprises in general.

FAS71, Par. 11

11. Rate actions of a regulator can impose a liability on a regulated enterprise. Such liabilities are usually obligations to the enterprise's customers. The following are the usual ways in which liabilities can be imposed and the resulting accounting:

a. A regulator may require refunds to customers.7(7) Refunds that meet the criteria of paragraph 8 (accrual of loss contingencies) of FASB Statement No. 5, *Accounting for Contingencies,* shall be recorded as liabilities and as reductions of revenue or as expenses of the regulated enterprise.

b. A regulator can provide current rates intended to recover costs that are expected to be incurred in the future with the understanding that if those costs are not incurred future rates will be reduced by corresponding amounts. If current rates are intended to recover such costs and the regulator requires the enterprise to remain accountable for any amounts charged pursuant to such rates and not yet expended for the intended purpose,8(8) the enterprise shall not recognize as revenues amounts charged pursuant to such rates. Those amounts shall be recognized as liabilities and taken to income only when the associated costs are incurred.

c. A regulator can require that a gain or other reduction of net allowable costs be given to customers over future periods. That would be accomplished, for rate-making purposes, by amortizing the gain or other reduction of net allowable costs over those future periods and reducing rates to reduce revenues in approximately the amount of the amortization. If a gain or other reduction of net allowable costs is to be amortized over future periods for rate-making purposes, the regulated enterprise shall not recognize that gain or other reduction of net allowable costs in income of the current period. Instead, it shall record it as a liability for future reductions of charges to customers that are expected to result.

FAS71, Par. 12

12. Actions of a regulator can eliminate a liability only if the liability was imposed by actions of the regulator.

FAS71, Par. 13

13. Appendix B illustrates the application of the general standards of accounting for the effects of regulation.

Specific Standards Derived from the General Standards

FAS71, Par. 14

FAS71, Par. 14

14. The following specific standards are derived from the general standards in paragraphs 9-12. The specific standards shall not be used as guidance for other applications of those general standards.

Allowance for Funds Used during Construction

FAS71, Par. 15

FAS71, Par. 15

15. In some cases, a regulator requires an enterprise subject to its authority to capitalize, as part of the cost of plant and equipment, the cost of financing construction as financed partially by borrowings and partially by equity. A computed interest cost and a designated cost of equity funds are capitalized, and net income for the current period is increased by a corresponding amount. After the construction is completed, the resulting capitalized cost is the basis for

Copyright 1997 Financial Accounting Standards Board

depreciation and unrecovered investment for rate-making purposes. In such cases, the amounts capitalized for rate-making purposes as part of the cost of acquiring the assets shall be capitalized for financial reporting purposes instead of the amount of interest that would be capitalized in accordance with FASB Statement No. 34, *Capitalization of Interest Cost.*9(9) The income statement shall include an item of other income, a reduction of interest expense, or both, in a manner that indicates the basis for the amount capitalized.

Intercompany Profit10(10)
FAS71, Par. 16
FAS71, Par. 16
16. Profit on sales to regulated affiliates shall not be eliminated in general-purpose financial statements11(11) if both of the following criteria are met:

a. The sales price is reasonable.
b. It is probable that, through the rate-making process, future revenue approximately equal to the sales price will result from the regulated affiliate's use of the products.

FAS71, Par. 17
17. The sales price usually shall be considered reasonable if the price is accepted or not challenged by the regulator that governs the regulated affiliate. Otherwise, reasonableness shall be considered in light of the circumstances. For example, reasonableness might be judged by the return on investment earned by the manufacturing or construction operations or by a comparison of the transfer prices with prices available from other sources.

Other Specific Standards
FAS71, Par. 18

Accounting for Income Taxes
FAS71, Par. 18
FAS71, Par. 18
18. Items of revenue and expense are sometimes taxable or deductible in periods other than the periods in which those items are recognized for financial reporting purposes. In some cases, a regulator does not include the income tax effect of certain transactions in allowable costs in the period in which the transactions are reported but includes income taxes related to those transactions in allowable costs in the period in which the taxes become payable. In such cases, if it is probable that income taxes payable in future years because of net reversal of timing differences will be recovered through rates based on taxes payable at that time, the enterprise shall record neither the deferred income taxes12(12) that result from those timing differences nor the related asset (the probable future benefits that will result from payment of the taxes). However, the enterprise shall disclose the cumulative net amount of income tax timing differences for which deferred income taxes have not been provided. That disclosure supplements the requirements of paragraph 63 of Opinion 11 for disclosure of operating loss carryforwards, significant amounts of other unused deductions or credits, and reasons for significant variations in the customary relationships between income tax expense and pretax accounting income. Except as provided in this paragraph, regulated enterprises shall apply the requirements of Opinion 11.

Other Disclosure
FAS71, Par. 19
FAS71, Par. 19
19. For refunds that are recognized in a period other than the period in which the related

Copyright 1997 Financial Accounting Standards Board

revenue was recognized and that have a material effect on net income, the enterprise shall disclose the effect on net income and indicate the years in which the related revenue was recognized. Such effect may be disclosed by including it, net of related income taxes, as a line item in the income statement. However, that item shall not be presented as an extraordinary item.

FAS71, Par. 20

20. In some cases, a regulator may permit an enterprise to include a cost that would be charged to expense by an unregulated enterprise as an allowable cost over a period of time by amortizing that cost for rate-making purposes, but the regulator does not include the unrecovered amount in the rate base. That procedure does not provide a return on investment during the recovery period. If recovery of such major costs is provided without a return on investment during the recovery period, the enterprise shall disclose the remaining amounts of such assets and the remaining recovery period applicable to them.

Amendments to Existing Pronouncements

FAS71, Par. 21

FAS71, Par. 21

21. Appendix A lists the amendments to existing pronouncements that result from this Statement.

Effective Date and Transition

FAS71, Par. 22

FAS71, Par. 22

22. This Statement shall be effective for fiscal years beginning after December 15, 1983. Earlier application is encouraged. Accounting changes adopted to conform to the provisions of this Statement shall be applied retroactively, except that:

a. Previously issued financial statements shall not be restated for changes in accounting for refunds.
b. Leases for which the inception13(13) is after December 31, 1982 shall be classified in accordance with FASB Statement No. 13, *Accounting for Leases,* in financial statements commencing with initial application of this Statement. Leases for which the inception of the lease is before January 1, 1983 may be classified as they would have been classified before this Statement was issued until fiscal years beginning after December 15, 1986. Commencing no later than the first fiscal year beginning after December 15, 1986, those leases shall be retroactively classified in accordance with Statement 13 as amended.

FAS71, Par. 23

23. If leases are not retroactively classified in accordance with Statement 13 in financial statements for fiscal years beginning after December 15, 1983 and before December 15, 1986 as permitted by paragraph 22(b), lessees shall disclose the amounts of additional capitalized leased assets and lease obligations that would be included in each balance sheet presented if Statement 13 had been applied retroactively.

FAS71, Par. 24

24. In the year that this Statement is first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per-share amounts14(14) for each year restated. If retroactive restatement of all years presented is not practicable, the financial statements shall be restated for as many consecutive years as is practicable, and the cumulative effect of applying this Statement shall be included in determining net income of the earliest year restated (not necessarily the earliest year presented). If it is not practicable to restate any prior year, the cumulative effect shall be included in net

Copyright 1997 Financial Accounting Standards Board

income in the year in which this Statement is first applied. (See ◊paragraph 20 of APB Opinion No. 20, *Accounting Changes.*) The effect on income before extraordinary items, net income, and related per-share amounts15(15) of applying this Statement in a year in which the cumulative effect is included in determining that year's net income shall be disclosed for that year.

The provisions of this Statement need not be applied to immaterial items.

FAS71 Dissent

Copyright 1997 Financial Accounting Standards Board

Endnotes

1 (Popup)
Footnote 1--The term *allowable costs* is used throughout this Statement to refer to all costs for which revenue is intended to provide recovery. Those costs can be actual or estimated. In that context, allowable costs include interest cost and amounts provided for earnings on shareholders' investments.

2 (Popup)
Footnote *2--Capitalize* is used in this Statement to indicate that the cost would be recorded as the cost of an asset. That procedure is often referred to as "deferring a cost," and the resulting asset is sometimes described as a "deferred cost."

3 (Popup)
Footnote 3--The appropriate structure for setting accounting standards for state and local governmental units is currently under discussion. The FASB is proposing no change with respect to the applicability or use of its pronouncements in the governmental area until that matter is resolved.

4 (Popup)
Footnote 4--For example, a regulator might authorize a regulated enterprise to incur a major research and development cost because the cost is expected to benefit future customers. The regulator might also direct that cost to be capitalized and amortized as an allowable cost over the period of expected benefit. If the criteria of paragraph 9 of this Statement were met, the enterprise would capitalize that cost even though FASB Statement No. 2, *Accounting for Research and Development Costs,* requires such costs to be charged to income currently. Statement 2 would still apply to accounting for other research and development costs of the regulated enterprise, as would the disclosure requirements of Statement 2.

5 (Popup)
Footnote 5--An incurred cost is "a cost arising from cash paid out or obligation to pay for an acquired asset or service, a loss from any cause that has been sustained and has been or must be paid for" (Eric L. Kohler, *A Dictionary for Accountants,* 5th ed. [Englewood Cliffs, N.J.: Prentice-Hall, Inc., 1975], p. 253).

6 (Popup)
Footnote 6-- The term *probable* is used in this Statement with its usual general meaning, rather than in a specific technical sense, and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved (*Webster's New World Dictionary of the American Language,* 2d college ed. [New York and Cleveland: World Publishing Company, 1972], p. 1132). That is the meaning referred to by FASB Concepts Statement No. 3, *Elements of Financial Statements of Business Enterprises.*

7 (Popup)
Footnote 7--Refunds can be paid to the customers who paid the amounts being refunded; however, they are usually provided to current customers by reducing current charges.

8 (Popup)

Copyright 1997 Financial Accounting Standards Board

Footnote 8--The usual mechanism used by regulators for this purpose is to require the regulated enterprise to record the anticipated cost as a liability in its regulatory accounting records.

9 (Popup)
Footnote 9--Statement 34 requires capitalization of interest cost on certain qualifying assets. The amount capitalized is the portion of the interest cost incurred during the period that theoretically could have been avoided if the expenditures had not been made.

10 (Popup)
Footnote 10--The term *intercompany profit* is used in this Statement to include both profits on sales from one company to another within a consolidated or affiliated group and profits on sales from one operation of a company to another operation of the same company.

11 (Popup)
Footnote 11--ARB No. 51, *Consolidated Financial Statements,* requires that profit on sales of assets remaining in the consolidated group be eliminated in consolidated financial statements. APB Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock,* effectively extends that requirement to affiliated entities reported on the equity method.

12 (Popup)
Footnote 12-- APB Opinion No. 11, *Accounting for Income Taxes,* requires comprehensive interperiod allocation of the income tax effect of timing differences, that is, differences between the timing of income or expense recognition in financial statements and in income tax returns.

13 (Popup)
Footnote 13--The inception of a lease is defined in FASB Statement No. 23, *Inception of the Lease.*

14 (Popup)
Footnote 14--The effect on related per-share amounts need not be disclosed if the enterprise does not disclose earnings per share.

15 (Popup)
Footnote 15--See footnote 14.

S T I P U L A T I O N S

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that objections, except as to the form of the question, are reserved until hearing in this causes; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

DEPOSITION

Whereupon,

PATRICIA W. MERCHANT

was called as a witness, having first been duly sworn to speak the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

MR. GATLIN: And I believe we'll stipulate to the appropriate matters relative to the objections and so forth.

MS. GERVASI: That's fine.

EXAMINATION

BY MR. GATLIN:

Q. Please state your name and address.

A. Patricia W. Merchant, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850.

Q. And you've offered testimony in this proceeding consisting of ten pages, dated June 19th, 1998?

A. Yes.

Q. What did you examine to look at to prepare this testimony?

A. I looked at the orders that are addressed in my testimony. I looked at my -- the form that I had from my prior testimony. I just adapted it to this testimony. So I really didn't look at the issues, but that's about it.

Q. So the testimony, was it on this subject, the

other testimony you looked at?

A. No, just the format.

Q. You looked at the resumes?

A. Yeah, and updated that.

Q. And so the orders that you mention in your testimony is what you looked at?

A. That's correct, and I have them here.

Q. Does the Commission and the Staff seriously consider issues raised in a proceeding?

A. I believe the Commission does and Staff does.

Q. Would it make any difference if it's raised by the Office of Public Counsel or not?

A. No.

Q. Would you still consider it?

A. All parties and Staff.

Q. Is there an amount of money that makes an issue more important than another and you would give more serious consideration to?

A. In some circumstances it might.

Q. If OPC raised an issue, would you -- relative to the issue in this case about the recovery of these costs, in prior cases has the Commission seriously considered those issues?

A. I'm confused with your question.

Q. Okay, let me take another run at it. There have

been other Commission cases that considered the recovery of litigation costs in environmental enforcement or compliance proceedings; is that true?

A. That's true.

Q. And has the OPC raised those issues in other cases?

A. In some cases they have.

Q. Did the Commission and the Staff seriously consider the issues as raised by the OPC in those cases?

A. I believe the Commission -- yes.

Q. Do you know of any threshold amount where the Commission or the Staff has that it gives more consideration to an issue, like this issue in this case, the recovery of litigation costs?

A. There's not an identified threshold.

Q. Look on Page 6 of your testimony, Line 10. The line reads: "To assume that the legal fees incurred for the three wastewater systems found in violation of the CWA are the shared burden of all water and noninvolved wastewater utilities is inappropriate." Is that pronounced in any Commission order? What does that sentence --

A. That statement is not.

Q. Is it based on any rule?

A. That's my opinion.

Q. Which rule is that? Which rule? That's your

opinion, not a rule? Is that it?

A. That's my opinion.

Q. And just to make sure it's clear, I could not find a Commission order or a Commission rule that makes that statement, could I, that you know of?

A. I don't think there's any rule of the Commission that even addresses the Clean Water Act.

Q. Line 13 of that same page, the next sentence on Page 6, "These legal fees are not a cost of providing water service, nor are they a cost of wastewater service to any of the other FCWC wastewater facilities not penalized." Now does that reflect something the Commission has said in an order or any other pronouncement of Commission policy?

A. I don't -- I know that the Commission addressed some of these legal fees in prior orders.

Q. Okay. But that particular statement there about not a cost of providing service, wastewater service or other wastewater facilities, is that -- is there any policy pronouncement by the Commission on that, that you know of, either in a rule or in a case?

A. Specifically to the legal fees incurred by Florida Cities for this litigation, no, other than the order where they removed the cases in the prior -- North Fort Myers, I believe -- rate case.

Q. Now you're referring to the litigation costs that

were capitalized for a couple of years?

A. Yes, sir.

Q. And the Company removed that from the North Fort Myers' investment; is that right?

A. That's correct.

Q. Back up the page on Page 6 -- well, the sentence starts on Line 7. The sense of the sentence is that the rates between Florida Cities Water systems are not uniform, and with the exception of the Lee County water rates. What significance to this case is the "not uniform" words?

A. They have stand alone rates. They calculate rates for each of the other systems, not the Lee County water, but for Barefoot Bay water and wastewater, they set separate rate base and separate rates, and they set separate rates for South Fort Myers wastewater or North Fort Myers wastewater and Golden Gate, when we had jurisdiction.

Q. But my question is, is what relevance is that? Is there some rule or Commission order that says the rates have to be uniform throughout a system before all the costs are applied to the whole system?

A. No.

Q. Other than the cases that you cite in your testimony and some other cases that we'll discuss later -- well, that's not a fair question.

To find the Commission's policy on the recovery of

litigation expenses relating to environmental costs, what would I look to?

A. To find their policy?

Q. Uh-huh.

A. I would look to past Commission orders.

Q. Is there any other place?

A. And rules, rules and statutes.

Q. Is there any rule or statute that you know of that pertains to this, or is relevant to the recovery of litigation costs?

A. There's a statute that says that costs should be reasonable and prudent to provide service. There are some rules on allocation of costs, but they're more minimum filing requirement allocation issues as opposed to application of how to allocate. There are a lot of policies where the Commission has addressed allocation issues. So that wouldn't be in the rules. And I can't think of any -- there might be a few more, but I can't think of any.

Q. Would you agree that there is no rule that specifically addresses the recovery of litigation expenses as is sought in this case?

A. Other than rate case expense?

Q. Right.

A. No.

Q. In the litigation in this case, Florida Cities was

faced with a penalty of $104 million. Should they have defended against that claim in your opinion?

A. I'm not expressing any opinion on that.

Q. You don't know? You're just not expressing an opinion? Do you know? You have one but not expressing it or -- which is it?

A. Can you restate the question one more time?

Q. Should Florida Cities have defended against the $104 million claim?

A. I think a utility has a right to defend themselves.

Q. Okay.

A. And I'm not -- I don't know -- I think if somebody brings litigation against you, I think you should defend yourself.

Q. Would a claim of $104 million have an adverse effect on Florida Cities Water Company, in your opinion?

A. I don't know if a claim would.

Q. If it was -- if it became a judgment.

A. Would a judgment?

Q. Yes.

A. I believe that that would impact the utility.

Q. In what way?

A. Specifically, I couldn't tell you what would happen.

Q. Would it have an adverse effect on them financially?

A. It could.

Q. You're familiar with Florida Cities Water Company generally, as to the financial situation of it?

A. In terms of regulatory annual reports and rate cases. To that extent, yes.

Q. If you were president of Florida Cities Water Company and you got a complaint from the United States government saying that you owed them $104 million, would you have defended the claim?

A. Assuming that I was in that position, I would defend.

Q. And that claim for $104 million was mitigated by that defense of that claim; was it not?

A. I'm --

Q. The claim of $104 million was mitigated by the defense of that claim? It went from $104 million to 309,000.

A. I agree with that, that it went from 104 million maximum to an actual fine -- excuse me, it went from 104 million possible to a penalty of around $300,000.

Q. And that's mitigation?

A. I don't know.

Q. You don't know if that's mitigation?

A. Legally, I don't know.

Q. Nonlegally, do you know?

A. I don't know if they would have ever been assessed $104 million. So I don't know if that really mitigated it or not.

Q. Do you know of anybody that does know that?

A. Where?

Q. You have to assume when you get -- if you get a complaint that wants $104 million in the complaint, that if you don't do anything, they might get the $104 million.

A. I don't know that.

Q. You don't know that?

A. No.

Q. Do you know if Florida Cities had not filed an answer to the complaint that the United States Government might have got a default judgment against Florida Cities for $104 million?

A. I don't know that.

Q. Would it -- do you agree that it would be wise for Florida Cities Water Company to take steps to avoid getting a judgment of $104 million against it?

A. I think that they should take prudent steps to avoid litigation and penalties and maintain compliance with environmental standards.

Q. Should they defend against a claim of

$104 million?

A. I beg your pardon?

Q. Should Florida Cities defend against a claim of $104 million?

A. If the shareholders were faced with that, I believe that they should defend.

Q. No, Florida Cities is what I'm asking you about, the company. The shareholders weren't named in the complaint.

A. I think that they should have a right to defend themselves.

Q. But you don't have an opinion as to whether they should?

A. No, I don't have an opinion on that.

Q. I have here Commission orders that deal with this subject. I have the ones that you mention.

A. Okay.

Q. I have the ones that Mr. Larkin mentioned. I have a couple that neither of you mentioned.

A. Okay.

Q. And I have the book with the full order in it. I have copied what I think is the relevant page, and you certainly are welcome to look at the book if you would like, but assuming -- and please check it if you would like -- this is a page out of -- I believe it's the first order you

cite, 1547.

May we have this identified as an exhibit?

(Exhibit No. 1 marked for identification.)

BY MR. GATLIN:

Q. This is Order No. PSC-97-1547-FOF-WS issued on December 10th, 1997, and I'm looking at Page 150 out of the FPSC Reporter. Look, if you will, down under the heading Legal Costs (Consent Order). Now, this is the first case that you cite in your testimony?

A. That's correct.

Q. Would you agree that the -- that a correct -- a correct reading of this is that the Commission never made any finding of prudency, but said the utility did not document the claim?

A. The order says the Commission had some concern about allowing recovery of the legal fees.

Q. Look at the second paragraph under the heading -- you see the citation of a Florida Power Corporation case?

A. The burden, the burden of proof.

Q. Then the next sentence, "Even if the legal fees were found prudent, we find that the utility has failed to meet its burden in that it failed to file supporting documentation to justify its requested legal expenses associated with the Consent Order."

A. That's correct.

Q. They did not make a finding of prudency in that case?

A. No, but they had concerns with it.

Q. But they did not proceed to make a finding of prudency because there was not a support in their opinion to justify such a finding?

A. That's correct.

Q. May we have this next one identified as Exhibit 2, which is Order No. PSC 93-0423-FOF-WS, Page 573 out of the PSC Reporters.

(Exhibit No. 2 marked for identification.)

BY MR. GATLIN:

Q. I think this is a second case cite, on Page 8, top of the page.

A. Yes.

Q. In this case, read this paragraph and see if you agree with me, the OPC witness Dismukes said that the legal fees associated with defending itself of DER fines and violations should be allowed since the fines themselves are nonrecoverable. Would you agree with that?

A. No, sir. That should be disallowed.

Q. Disallowed, right. That's what it says, should be disallowed. Okay.

Is that the same position, as you understand it, of OPC in this Florida Cities case?

A. It sounds consistent, part of it. Part of it.

Q. And the Commission ruled against the OPC on the recovery of the fees; is that correct?

A. I believe that in this case -- I don't believe that this is a -- based on the evidence in this case, when the Commission made its decision based on this evidence, that it supported that ratepayers benefit from the utility's defending itself. And if they succeed, rate base or other expenses may be lower.

Q. Which is the same position asserted by OPC in this case, in the Florida Cities case, isn't it, that the ratepayers don't benefit from the legal fees and don't benefit from the fines, and the fines ought to be paid by the shareholders and therefore the legal expenses should be also?

A. Are you talking about the Commission's decision?

Q. I'm talking about the position of OPC, the position OPC was arguing in this case.

A. OPC's position in this SSU case was that the legal fees were associated with fines, so therefore they should be nonrecoverable.

Q. And the Commission ruled that they in this case would be recoverable; is that true?

A. Yes, because if the utility succeeds in defending itself, rate base or other expenses might be lower.

Q. Right. Now the third case I wanted to direct your attention to is the third case you cite. I would like to identify this as Exhibit 3, Order PSC-93-1070-FOF-WS. I'm looking at Page 565 from the PSC reporter.

(Exhibit No. 3 marked for identification.)

BY MR. GATLIN:

Q. I assume you're familiar with this case?

A. Yes.

Q. And here again, the issue was raised by OPC that the litigation costs should not be allowed because the fines were disallowed; is that true?

A. That's correct.

Q. And the Commission ruled against OPC?

A. No. I correct myself. That is not true. She testified that they should be disallowed, but she recommended amortizing over four years and allowing one fourth of it.

Q. Would you read out loud the first sentence under Test Year Legal Expenses?

A. "OPC witness Dismukes testified that the utility's legal expenses should be disallowed to the extent that they relate to DER fines and violations."

Q. Doesn't that indicate to you that their position was that the litigation expenses ought to be disallowed, but if -- to that point; isn't that correct?

A. She goes on further to say that they couldn't segregate them out from other legal fees so her alternative was to amortize it.

Q. But their basic position was that the legal expenses should be disallowed for litigation costs related to DER fines and violations. Isn't the order correct?

A. Yes.

Q. And the Commission, over on the next page, on 566, in the paragraph second from the bottom, the sentence starts out, "The suggestion that legal costs should be disallowed..."

A. I beg your pardon?

Q. The Commission then did not disallow the expenses, did it?

A. No, they did not.

Q. Is there any suggestion in the ruling by the Commission in this order that the legal fees had to relate to maintenance or compliance with environmental regulations?

A. Maintenance?

Q. Yes.

A. You mean like --

Q. Let me strike that. Start all over. Is there any suggestion in the Commission's ruling that a condition for the allowance of the legal fees was that they were expended to maintain compliance with DEP or other environmental

regulations?

A. No, it's not specifically in there.

Q. In fact, what the Commission said is set forth in the second from the bottom paragraph on Page 566 when it says, "The suggestion of legal costs should be disallowed because they were incurred to defend the utility against alleged violations presupposes that the utility should acquiesce in all cases, whether or not fault exists. We agree with Ms. Teasley that litigation may be appropriate even when the imposition of a fine is a possibility, when compliance with the disputed regulation will create adverse economic consequences."

That's the standard the Commission used there, was if there were adverse economic consequences?

A. They go on -- excuse me.

Q. Go ahead.

A. Was that a question?

Q. Yeah. There was a question mark there somewhere.

A. Let me back up. Can you ask the question again?

Q. Yeah. What the Commission considered in allowing the litigation costs in this case was that for the Company not to contest the litigation could result in adverse economic consequences. Is that right? Is that correct? Do you agree with that?

A. That's part of what they said.

Q. All right. Tell me what else they said.

A. They also said, "On other occasions, payment of a fine pursuant to a consent order, even when 'guilt' is not admitted, may result in avoidance of further litigation costs that would be detrimental to a utility's financial condition. An absolute prohibition against recovery... where a fine may be imposed would be impractical."

Q. That doesn't dispute -- that just adds to what I just read. That doesn't dispute what we said, did it?

A. No, but I don't believe you can just say that without the other two sentences added on. That wouldn't be the Commission's position.

Q. So what do you think is the Commission's position? Tell me.

A. The whole paragraph.

Q. So what, there are two items in this then? You don't want to have a fine that would create adverse economic consequences, which would be a reason for the Company litigating, and another reason would be that payment to a -- payment of a fine pursuant to consent order may result in further -- I guess what they're saying is, on the other hand, you could pay a fine to avoid litigation expenses and that would be okay.

A. I think that they're giving you two -- they're saying, don't acquiesce, that if a utility always acquiesces

to a fine, that's not in their -- that could create adverse economic consequences. On other occasions, paying a fine, even when guilt is not admitted --

Q. Might be the most --

A. Might be prudent --

Q. Most practical thing?

A. Might be prudent for the company to do. And I believe this is on a case-by-case basis. I don't think this is an always in every circumstance.

Q. And what's the guide to a utility company as to when you ought to file a case to recover litigation expense or ask for it in a rate case, relative to environmental costs?

A. When they think that it's prudent to recover those costs.

Q. So if the Company thinks its prudent, they're justified in filing the case?

A. The Company can file a case whenever they believe that it's necessary.

Q. What I'm saying is, the utility -- a utility wants to know what the Commission's policy is. They don't want to just file a useless case. So what do they look at to say, maybe so, this is a good -- we ought to file it?

A. They could come in and ask for a declaratory statement, or they could file a request for a certain type

of treatment.

Q. Before they filed the case, come in and file for a declaratory statement before you file the case for recovery?

A. I'm not exactly sure of all the details of filing a declaratory statement, but I'm aware that those have been done in certain circumstances to get a position from the Commission up front.

As far as an accounting treatment, I think a company can file a motion, request a docket to be opened to consider an issue. I know that they've done that in the past, in several cases in the past.

Q. Well, wouldn't the company have to show the Commission or show evidence and testimony in those proceedings just like it's doing in this case?

A. It depends on the circumstance. They would have to make some type of showing to get approval from the Commission to do it.

Q. So at what point would they file the declaratory proceeding? Before filing this case -- filing a declaratory proceeding and then file a case like you've had filed in this docket?

A. If the Company had reasonable assurance that they were going to get recovery of it, they could defer the costs, and they could come in and ask for it as soon as the

cost ceased being incurred.

Q. Which is what Florida Cities did in this case?

A. No.

Q. What did they do?

A. They expensed the items and then came in and asked for recovery after that, after --

Q. Does that make a difference?

A. It might.

Q. It might. When might it?

A. We have several companies that have deferred costs and come in for rate cases, and in the middle of the rate case they're asking for amortization. I've got one right now that has -- they've deferred costs and they want to have recovery of them.

Q. But -- excuse me, let you finish.

A. I know we've had another case before where they expensed the cost and came back after the fact in a rate case, and those were disallowed.

Q. For what reason?

A. For retroactive ratemaking.

Q. What is that case?

A. Ortega, Ortega Utility.

Q. Now is that related to environmental litigation?

A. No, that was depreciation expense.

Q. And it had to do with recovery of past lost

depreciation, didn't it?

A. It had to do with depreciation expense that they had expensed off their books and reversed it.

Q. And not recovered in rates?

A. They had had a loss, they said, and they wrote off the depreciation expense. They booked it through accumulated depreciation, and then several years after that they decreased their accumulated depreciation because they said that they didn't recover their depreciation expense.

Q. That was the Company's proposal to the Commission, wasn't it?

A. That's correct.

Q. And the Commission said that you've already expensed that?

A. That's correct.

Q. And you've lost those funds and you can't go back and get them?

A. That's correct, because you should have filed -- they should have filed a rate case if they were losing money at that point in time.

Q. That's not the situation in this case, though. When would -- what would Florida Cities have done, filed a case every year, a rate case?

A. Deferred the cost or included it in the rate case that they had.

Q. That's an accounting principle, isn't it? That's not a ratemaking principle?

A. Deferring?

Q. As that being a reason whether to allow recovery. Is there a ratemaking principle somewhere that says you can't recover under those circumstances?

A. I'm not following the question.

Q. I think you're telling me accounting information. I'm asking about ratemaking information. Is there a ratemaking principle that says that you've got to defer the cost before you ever recover it later?

A. I think that the NARUC Uniform System of Accounts outlines items that you should expense and you should capitalize, and that that makes it a regulatory principle in that.

Q. Would you show me the one that would have required Florida Cities to defer it? Is that the word you're using?

A. Defer?

Q. Defer, in this situation.

A. Show me the what?

Q. You referred to a NARUC Uniform Account. Can you get it for me? Can you show it to me?

A. I don't have it with me. I don't know if it -- I think it talks in terms of expensing and capitalizing.

Q. What difference --

A. And deferred debits and deferred credits. The new Uniform System of Accounts talks about regulatory assets, but it doesn't talk about how you get approval of regulatory assets. It basically creates the account for the regulatory assets and regulatory liabilities.

Q. And complying with that accounting principle, in your opinion, suggests how the Commission ought to act in the recovery of those expenses or those costs?

A. I think that it's similar to other expenses, not necessarily only litigation expenses. I think that if you incurred salary expenses and you expensed them off and then came in for a rate case two years later and said, I never actually -- you know, I gave a raise to my employees two years ago, never came in for a rate case, but now I want to make up for that because we didn't ever recover that raise through our rates.

Q. And you think that's a similar situation to the situation we have in the application in this docket?

A. It's somewhat similar. They've expensed it off their books.

Q. So what does that tell you that the Commission ought to do as far as the recovery of those costs in this proceeding?

A. Specifically for Florida Cities?

Q. Yes. In this case, yes.

A. I'm not providing opinion testimony on that.

Q. Do you have an opinion?

A. I believe if they -- if the company wanted to recover those expenses, that if they believe that they could, that they would have deferred it and asked for recovery of it.

(Discussion off the record)

BY MR. GATLIN:

Q. What I would like to know if you could tell us -- well, are you suggesting there's something out there that said Florida Cities -- says that Florida Cities should have done something different than it did in order to collect -- in order to recover these expenses?

A. I'm not taking an opinion on it.

Q. Who is going to make the recommendation to the Commission relative to this case?

A. Connie McCaskill's Staff.

Q. Is that under the -- I'll call it the new organization, where there's a division of Staff as to the litigation part and as to the recommendation part?

A. Yes.

Q. And who does Connie McCaskill report to in the organization?

A. Greg Shafer.

Q. She has in the past reported to you; has she not?

A. No.

Q. Never?

A. Never.

Q. Is Greg Shafer an accountant?

A. No, I don't think so. I think he's an economist, but I'm not exactly sure.

Q. Is Connie McCaskill an accountant?

A. Yes, she's CPA.

Q. Right, I meant CPA.

(Exhibit No. 4 marked for identification.)

BY MR. GATLIN:

Q. Let me show you -- let's see. I'm not sure -- I don't believe you cite this case. It's the Gulf Power case. It's Order No. 97-1047-FOF-EU issued on September 5th, 1997. And I thought -- maybe you did recite this one. Sure you did.

A. Yes, I did.

Q. It's the one on Page 9. Now, looking at Page 61 of the FPSC Reporter, I believe that what you base your statement on is in the second full paragraph, the last sentence. Is that accurate?

A. Do you mean what am I quoting in my testimony?

Q. What are you relying on to make your statement that the Commission accepted a stipulation that legal expenses directly associated with environmental compliance

costs, et cetera, et cetera?

A. That same sentence above that. I'm paraphrasing those two sentences. The one that starts with "Legal expenses directly associated" and ends with the last sentence "on a case-by-case basis."

Q. Now this proceeding was pursuant to the Environmental Recovery Cost statute that applies to electric utility; was it not?

A. Yes, to the best of my knowledge.

Q. And the last word of that paragraph, clause, probably refers, does it not, to the clause for recovery in a tariff or in a rule or statute? Which does it --

A. I don't know.

Q. Don't know. Okay.

A. Cost recovery clause. I don't know how it's -- I don't know what their statutory or rule requirements are.

Q. Now the next one is the Southern Bell order. And it's -- I would like to identify it as Exhibit 5.

(Exhibit No. 5 marked for identification.)

BY MR. GATLIN:

Q. And that is Order No. 20162 issued on October 13th, 1988. And I'm referring to the Public Service Commission Reporter, Page 321. Now, would you agree that what you're relying on in your testimony when you refer to this, and make the statement that you do, is the last four

lines of the first full paragraph, last five lines, the sentence starts, We will also reduce the intrastate expenses by the amount there?

A. Yes.

Q. And that's all the information you had about that case?

A. That's right. I am just putting that in there to provide that for the Commission.

Q. Sure. Now there are two more cases. The next one is the United Water of Florida case, and it's Order No. PSC 97-0618-FOF-WS issued on May 30th, 1997. And may we have that identified as the next number exhibit.

(Exhibit No. 6 marked for identification.)

BY MR. GATLIN:

Q. Did you exclude that case for any particular reason from the cases you cited in the testimony?

A. No, I didn't on purpose exclude it, but it was already identified.

Q. By?

A. I believe the utility. And I can't --

Q. How about Mr. Larkin? How about OPC? Well, that's not important. Don't worry about it.

In this one Mr. Larkin testified as to the OPC position, and his position in that case was the same as it is in this Florida Cities case, is it not, that the legal

expenses ought not be allowed to be recovered?

A. He said that they were -- the ratepayers shouldn't be required to finance the violations as the expenses are unrelated to the provision of Water and Wastewater Service.

Q. Do you think that means that he's talking about disallowing the litigation fees?

A. Yes.

Q. And the Commission allowed the fees; did they not?

A. Yes.

Q. And the summary of the Commission's holding is over on Page 687, the second full paragraph from the top. Is that accurate?

A. Yes. It's the second full paragraph from the top of the page.

Q. And in that paragraph the Commission pointed out specifically that defending fines from DEP and EPA could facilitate avoided or a reduced amount of fines; is that true?

A. That's true. But I do believe that since these fees were of such small magnitude, that we did not go into much more detail into the individual expenses.

Q. So what does that mean? That this is not a good statement of the Commission policy?

A. Sure, I think it is. But I think that the Commission should look at it on a case-by-case basis, and I

don't think that this is a blanket approval of all legal fees incurred associated with fines should be allowed.

Q. It doesn't say that, does it?

A. No, it doesn't say that.

Q. It just says they should be allowed in this case?

A. In this case.

Q. But I thought we agreed earlier that the amount of money involved in the cost would not mean the Commission wouldn't give serious consideration to it, to the issue; is that true?

A. We did give serious consideration to the issue.

Q. But not as serious as if it had been more money?

A. I think had it been a higher magnitude, that we would have put -- there would have been more testimony and more --

Q. Think you would have gotten it to a different result?

A. I don't know. I don't know.

Q. You don't know?

A. I don't know.

Q. So the Commission didn't seriously consider it?

A. I'm not talking about this case.

Q. I'm talking about this case. This case only.

A. This case was only $163 -- 431, excuse me. I think they made a serious consideration in this case based

on the evidence in this record and the fact that it was $431.

Q. And the Commission said what its policy was?

A. Right.

Q. Was that Exhibit 6?

THE REPORTER: Yes.

MR. GATLIN: One more. And this will be Exhibit 7.

(Exhibit No. 7 marked for identification.)

BY MR. GATLIN:

Q. And this is the Lehigh case. It's Order No. PSC-93-0301-FOF-WS. And I'm looking at Page 795 of the PSC Reporter. And there's a section entitled Test Year Legal Expenses. And under that section, would you agree that the Commission said, "We find it appropriate to allow the utility to recover its legal expenses relating to permitting and compliance"?

A. That's correct.

Q. Was there any particular reason that you left this case out?

A. I believe that it was already identified.

Q. Now, we've been through seven cases. Were there any other cases that you've found that related to this question of a recovery of litigation expenses for environmental costs?

A. I didn't look any further than these cases.

Q. You were satisfied that in these seven cases you could find out what the Commission's policy was?

A. I felt that it was a wide range of their positions on legal fees, environmental legal fees.

Q. And you think these cases correctly stated the Commission's policy relative to the recovery of litigation expenses related to environmental questions?

A. In those specific cases.

Q. In these seven cases?

A. For those --

Q. We can look to those seven cases for the correct policy and know what the Commission's policy is relative to the recovery of litigation expenses?

A. I don't think that you can find exactly what the Commission would do in every single case in those seven cases. I think that based on the evidence in those cases, the Commission made a decision, based on that evidence, and the facts in that case, and they issued their opinion on that.

Q. Where else would you find the Commission's policy, other than in those seven cases?

A. There are a lot of issues that arise in cases that the Commission has never addressed before. So that just because the way you did it based on the facts in one

circumstance in one case, or several cases, may not necessarily mean that that's the way you should do it in the next case.

Q. Does it state the Commission's policy?

A. Does --

Q. Do those seven cases state the Commission's policy, up to the -- up to today? Let's put that in there. Up to today, does that state the Commission's policy?

A. On a case-by-case basis, I think that those are the -- that's the Commission's decision based on the evidence in that record on a case-by-case basis. I don't think that the circumstances are identical in every single case, and that it might state a general philosophy that the Commission believes is appropriate, but it does not specifically tell you exactly what to do in every single case.

Q. So the Commission does not have a policy relating to the recovery of litigation expenses for environmental costs? Is that correct?

A. If you're defining a policy as what you do in every single circumstance. No, I do not believe it does.

Q. The Commission does not have a policy?

A. If the circumstances are the same in every single case -- if the circumstances are the same from this case to the next case that we're looking at, I would say that you

would look to this case to see what to do exactly. But all of these cases have different facts and circumstances that vary. So you can't say from one case to the next that they're all consistent.

Q. So since the Commission doesn't have a rule relative to this that we can look to, we can only look to the Commission orders to find out what the policy is?

A. Or the statute.

Q. Is there a statute that says something about it?

A. Prudent and reasonable expenses.

Q. I'm relating it to the specific question that's for decision by the Commission in this case, and what I want to know is, I'm a utility, and I'm trying to figure out what the policy of the Commission is. Isn't it true that I would look at those seven cases to see what the Commission policy is?

A. I would think that you would look to see what they did in those cases to see if the circumstances that you had would be similar. But if they're not exactly similar, then you might have to vary from that. These were test year expenses in each of these cases.

Q. The Commission looks at each case without a policy?

A. There is not a policy for every single issue that's going to be addressed in every single rate case.

Q. Right. So there is not a policy other than the statute that you mentioned, that the Commission has, other than is stated in these rate orders?

A. There's not a what?

Q. Not a policy, other than what's stated in these rate orders, other than these orders that we've been talking about?

A. I think the Commission has a policy based on the statutory requirement to only allow prudent and reasonable expenses, and that they have to look in every single case, and it's the Company's burden to show that those expenses are prudent and reasonable, and that's what the Commission's policy is, is to allow those expenses if the utility can make that showing.

Q. So the Commission policy is not stated in those orders?

A. I think the Commission's action in those individual cases is stated in those orders.

Q. So we cannot learn policy from Commission orders; is that true?

A. You can look at past Commission orders and see what they've done in those past cases.

Q. But you can't learn policy from them? Is that true?

A. I believe that I've already answered that, but I

think that in every given case the circumstances can be different. So a policy is not going to apply in every single case. I don't think that the circumstances are the same in each of these cases. So it's not a consistent policy between each of the cases.

Q. Is that yes or no?

A. To what?

Q. No, you cannot find a Commission policy looking at these cases, or yes, you can find Commission policy looking at these cases?

A. I don't believe that the Commission has a policy established in these rules.

Q. All right. Okay.

A. In these orders, excuse me.

Q. So there's no policy, other than the statute that you mentioned? Follow the statute?

A. I think they have past Commission practice that they have in here, but not a stated policy.

Q. The Commission has practices, but not policies?

A. If you had a situation that would recur -- occur for every single utility in every single circumstance as to what to do, then you could have a rule that you could develop.

Q. So you don't have policy until you have a rule?

A. I think that you apply a case-by-case analysis to

each of the circumstances to make sure that you have prudent and reasonable expenses recovered through rates.

Q. That's what you look for is -- that's the test?

A. Right.

Q. Is there no other Commission policy?

A. I don't think that it's spelled out specifically in a policy.

Q. Okay. Looking at the Staff's prehearing statement.

A. I don't have that with me.

Q. Anybody have one?

MS. GERVASI: No. Here, we have one. Thank you.

BY MR. GATLIN:

Q. Are you familiar with the Staff's position of Issue 5 in your -- in the Staff's prehearing statement in this case?

A. I don't know.

Q. Well, how about taking a look at it and see if you --

A. Yes.

Q. Okay. Would it make any difference to your position there if all the wastewater systems had been investigated by DOJ at one time during the proceeding?

A. If they were, and the utility could show that the costs were incurred to maintain compliance and minimize or

avoid increased plant costs.

Q. Or penalties? That's a part of the principle, isn't it, in one of these cases?

A. To avoid penalties?

Q. Avoid high penalties and civil penalties, to litigate, to avoid high penalties?

A. If they were prudent in acting to lower costs to the customer, to provide service to the customer, and they can -- and the utility can show that, then I think that those costs should be allocated to them.

Q. Now, that statement you just made, is that the Commission policy or is that your opinion?

A. I can't remember what I just said.

(Record read)

A. And the question is?

Q. Is that your opinion or are you stating Commission policy?

A. That's my opinion, because I don't believe the Commission takes any -- has any policy that says how to allocate between Florida Cities' systems, specifically direct.

Q. So that would be determined in this case as to how to allocate them?

A. That's correct.

Q. But if the evidence shows that DOJ and EPA had all

the systems in Lee County and Sarasota and Hillsborough and Brevard County under investigation, and as the process went on it dropped some of them, would that make a difference to you in this position?

A. I would think that you would have to look at it to see if there were any other costs in those other systems that the company can show that were reduced. Then possibly some of those costs should be spread to the other wastewater systems.

Q. What was reduced was the amount of penalty. Is that not sufficient?

A. I don't know if there was actually a penalty reduced.

Q. Well, a United States Marshal walked into the Florida Cities Water Company and said, United States Government wants $104 million from you, and it ended up that the judge says, no, it's only $309,000. Didn't Florida Cities make some progress there?

A. The proposed penalty was lower. I don't know if it was the final penalty, 104 million.

Q. You don't know if the final penalty was 104 million?

A. I don't know if there was a final penalty of 104 million.

Q. The penalty in the complaint, the requested

penalty was 104 million. Did you know that?

A. The requested penalty was 104 million, but that was not the final penalty.

Q. But through the litigation, would you agree that Florida Cities got it reduced to $309,000?

A. No, I would say that they were fined $309,000.

Q. As opposed to 104 million, is what the government wanted; is that not true?

A. I believe that that was the government's proposed penalty. I don't know if it was the final penalty, the 104 million.

Q. Do you know the final penalty was 309-, $310,000?

A. Yes, somewhere in that range.

Q. And you know the proceeding when the amended complaint was filed was $104 million?

A. Up to $104 million.

Q. And did you know that pursuant to legal action taken by Florida Cities Water Company, that motions filed in the court, the judge reduced the exposure to some $50 million?

A. I was aware that at some point that it was lower.

Q. And that -- did you know that that was the result of Florida Cities Water Company's motions?

A. No.

Q. Well, if it was, and if you'll accept that it was,

isn't that a step that Florida Cities should have taken to try to reduce the proposed penalties?

A. I don't know.

Q. You don't -- one of these cases we looked at said that it was okay or appropriate for a company to defend itself to try to reduce penalties.

A. There was one case that said that. There was another case that they had to show that -- excuse me, that they otherwise avoided litigation costs. There were several different circumstances out there.

Q. The first one, is that an accurate representation of what the Commission said in one of those cases, that it was appropriate for the Company to defend itself so it could reduce the penalties?

A. In that case it was.

Q. That's right. That's what I'm asking. The Commission has said that in a case, hasn't it?

A. In that case, based on the evidence in that record.

Q. Sure. Sure. The Commission wouldn't rule against the evidence, would it?

A. They shouldn't, and I don't think they did.

Q. Issue 3 in the prehearing statement, Staff takes the position that Florida Cities Water Company should have protested the EPA's permit denial. Is that an accurate

statement?

A. That's true.

Q. What would have been the litigation cost if Florida Cities had protested the EPA proposal?

A. I don't know.

Q. Do you know of anybody that does know?

A. No.

Q. Have you seen anything offered in this record yet that would indicate that it would be any different than what it is in this situation?

A. No, but I don't think that I would not respond to a permit denial that was --

Q. I'm not asking whether you would respond or not. I'm asking you what would be the difference in the dollar amount.

A. I don't know that. I haven't seen anything that would show that.

Q. And you don't have anything to compare it with?

A. No.

Q. You can't say that if they protested it would cost less than what it did the other way?

A. The Company has not shown that, no.

Q. And nobody else has?

A. No.

Q. Are you or the Staff intending to try to determine

what the litigation costs would have been if the protest had been filed?

A. I am not.

Q. Do you know of anybody on the Staff that is?

A. No.

Q. Do you know of any way to determine it?

A. No.

Q. Do you know if the DOJ would have filed its enforcement action even if -- regardless of whether Florida Cities had filed a protest? Do you have any information on that?

A. No.

Q. Do you know of anybody that does?

A. No.

Q. Did the Staff conduct a survey of other Commissions regarding this question of allowance of the litigation expenses?

A. I believe they did.

Q. Did you participate in that?

A. No.

Q. Did you ever see the survey results?

A. No.

Q. You didn't ask to see them?

A. I saw one response that came out of it that had to do with some federal program which is called the Super Fund

program, which has another name for it, which I don't know the name of it, but the Super Fund is a completely different circumstance, and I don't know much about Super Fund.

Q. I'm curious as to why you didn't see what the results were. You just didn't think they were relevant or what?

A. I didn't really look at it. I know that the Super Fund is a --

Q. Is that the only response?

A. Oh no. No, there were a lot of responses.

Q. But you didn't look at other responses?

A. I looked at that one. There was -- I can't remember what the name of the program is, but -- I glanced at them. I didn't really study them, so I can't remember exactly what they said.

Q. Why didn't you do that? You didn't think it would be helpful, or what?

A. It was the day before my testimony was due to be filed, the afternoon at 5:00.

Q. So you didn't have time to look at it?

A. Right.

Q. Was there any computation of the results from that survey that anybody made in the Staff that you know of?

A. There may have been some, but I never got a copy of it or saw it. It wasn't done in my section.

Q. What would be the use made of that, I wonder. Do you know? Of the results of that survey? You don't know?

A. If it were helpful to the Commission, if they're comparable. I don't know. That was the idea.

Q. You don't plan to introduce them into the hearing?

A. I don't.

Q. Do you know of anybody that does?

A. I don't think we will.

Q. Is it your understanding that Florida Cities contends that it was the payment of the litigation expenses and costs that was a threat to its financial well being? Is that your understanding?

A. I beg your pardon?

Q. Is it your understanding that it was -- that it is Florida Cities' contention that the payment or the threat of the payment of the litigation expenses is what was a threat to the financial well being of Florida Cities Water Company?

A. Is it my opinion that --

Q. No, no. In this case has Florida Cities contended that it was the litigation expenses that was a threat to its financial well being?

A. No.

Q. It was the threat of the civil penalties is Florida Cities' contention; is it not?

A. That's their testimony.

Q. Is a threat of bankruptcy serious to a utility and its customers?

A. It could be, depending on how real it is, how imminent it is.

Q. Well, is bankruptcy serious to a utility's customers?

A. I would think that bankruptcy is serious in general.

Q. Okay. Did I identify seven exhibits?

THE REPORTER: Yes.

MR. GATLIN: That's all I have. Thank you.

MS. GERVASI: No questions. We would like to read and sign.

(Hearing deposition concluded at 2:20 p.m.)

REPORTER'S DEPOSITION CERTIFICATE

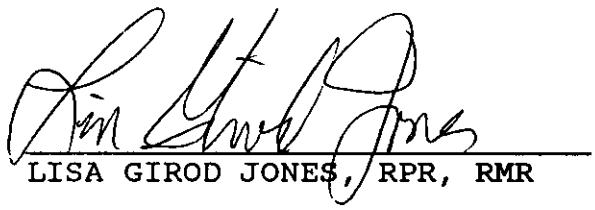
STATE OF FLORIDA)

COUNTY OF LEON)

I, LISA GIROD JONES, Registered Professional Reporter, certify that I was authorized to and did stenographically report the above-styled deposition; that a review of the transcript WAS requested; and that the transcript is a true and complete record of my stenographic notes.

I further certify that I am not a relative, employee, attorney, or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 13th day of July 1998.



LISA GIROD JONES, RPR, RMR

CERTIFICATE OF ADMINISTERING OATH

STATE OF FLORIDA)

COUNTY OF LEON)

I, LISA GIROD JONES, Registered Professional Reporter and Notary Public for the State of Florida;

DO HEREBY CERTIFY that the witness named herein personally appeared before me at the time and place designated and was duly sworn.

WITNESS MY HAND AND SEAL this 13th day of July, 1998, in the County of Leon, State of Florida.

Lisa Girod Jones, RPR, RMR
Notary Public, State of Florida

BONDED THRU TROY FAIN INSURANCE, INC.

not be needed. Therefore, given Betmar filed this application on May 1, 1997, we have determined that those services were not performed since the utility did not submit additional updated invoices associated with that $800. Therefore, we find it appropriate to allow $1,766 for the total engineering expenses, which is a reduction of $800 from the utility's request.

The utility has indicated in its filing that the amount for engineering expenses should be amortized over two years. However, we have determined that the amortization of these non-recurring expenses shall be in accordance with Rule 25-30.433(9), Florida Administrative Code. Rule 25-30.433(9), Florida Administrative Code, states:

> All non-recurring expenses shall be amortized over a 5-year period unless a shorter or longer period of time can be justified.

The utility did not provide justification for a shorter period of time. Therefore, the engineering expenses shall be amortized over 5 years in accordance with this rule. In addition, we find that the DEP permit application fee of $300 shall also be amortized over 5 years.

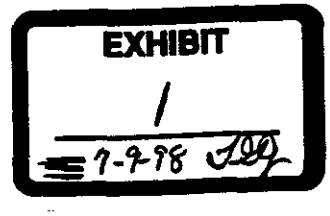
Legal Costs (Consent Order)

The utility has requested recovery of $1,245 for legal costs related to the DEP Consent Order. We have some concern allowing recovery of legal fees associated with the DEP Consent Order. Pursuant to the Consent Order, Betmar was fined in the amount of $6,900 for violations of DEP rules. The Consent Order stated Betmar had inadequate operator coverage in excess of two years, operated a corrosion control system without a permit, unapproved cross connections, several structural deficiencies and inadequate chlorine weighing devices.

Although we are approving some costs associated with the modification of the plant as required by the Consent Order, we are reluctant to allow recovery of legal fees associated with contesting the allegations of the Consent Order. The burden of proof in a Commission proceeding is always on a utility seeking a rate increase. Florida Power Corp. v. Creese, 413 So.2d, 1187, 1191 (Fla. 1982). Even if the legal fees were found prudent, we find that the utility has failed to meet its burden in that it failed to file supporting documentation to justify its requested legal expenses associated with the Consent Order. The utility's justification contained in its responses to our first data request was as follows:

> The legal costs of $1,245, shown in Section III, Pages 110-117 of the Limited Proceeding Application, are legitimate utility expenses which were incurred in connection with the Department of Environmental Protection Consent Order. As such, they are appropriate for recovery in this proceeding.

Based on the above, we find that the legal fees associated with the Consent Order were not justified. Therefore, the $1,245 for legal fees related to the DEP Consent Order are hereby denied.



Full Text Available Upon Request

sold utilities because those expenses have become non-recurring. We disagree with OPC's proposed adjustment to reduce bad debt expense because the allowance for bad debt expense is greater than accounts receivable over 60 days. The allocation process takes into account the fact that customers may repay the utility for outstanding sums.

Since the level of bad debt expense less adjustments for the sold systems and the amount owed by CSCCA is reasonable, we do not believe that a further reduction to the allowance is necessary. Bad debt expense associated with M&N, Deltona Gas, and CSCCA totals $61,950. We adjusted this amount by 62.26%; thus, the total reduction for filed systems is $38,570.

Test Year Legal Expenses

DER/EPA Fines

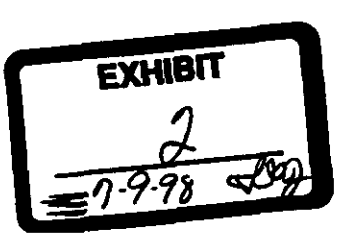
OPC witness Dismukes testified that legal fees associated with SSU's defending itself against DER fines and violations should be disallowed since the fines themselves are nonrecoverable. On cross-examination, however, Ms. Dismukes acknowledged that if the utility defends itself against DER action, the customers would benefit if rate base were lower because the utility did not have to make improvements. In its brief, OPC argues that these defense efforts accrue directly to the benefit of the stockholders just as the utility's avoidance of a fine does.

Utility witness Ludsen testified that not allowing SSU to recover expenses incurred in defending itself against the various regulatory entities would deny SSU a legitimately incurred cost of operating its systems. He further testified that knowledge of how DER operates is critical to the Commission's determination of the merit of this adjustment.

We believe that the evidence supports the contention that ratepayers benefit from the utility's defending itself in regulatory proceedings. If the utility succeeds in its efforts, rate base or other expenses may be lower. We, therefore, find it appropriate to allow the utility to recover legal fees associated with DER/EPA violations or fines.

Developer Agreements

Exhibit No. 53 contains the utility's response to OPC interrogatory no. 272. In this response, SSU asserted that legal fees regarding developer agreements should be allowed in test year



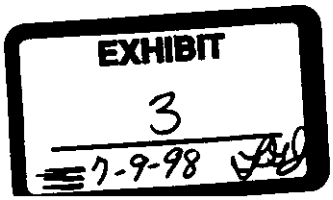
The record supports two adjustments. Accordingly, we have reduced bad debt expense by $703 to reflect the sale of the Deltona gas systems, and by $1,406 to reflect the end of the receivership of M&M Utilities. The $1,406 adjustment is Marco Island's allocated share of a $30,000 total company adjustment. We agree, however, with Ms. Kimball that the other proposed adjustments are not appropriate.

Test Year Legal Expenses

OPC witness Dismukes testified that the utility's legal expenses should be disallowed to the extent they relate to DER fines and violations. She argued that legal fees to defend the utility in such proceedings should be removed since the fines are recorded below-the-line. Because the utility could not separate legal fees to contest EPA (Environmental Protection Agency) or DER violations from other services related to the environment, she proposed eliminating all legal costs that could not be segregated. She also testified that no similar legal fees were incurred from 1988 to 1990. She, therefore, recommended eliminating $20,738 for such costs or, in the alternative, amortizing the subject payments over 4 years for a $15,554 reduction. Ms. Dismukes also recommended disallowing legal charges associated with legislation to establish the value of utilities under condemnation actions.

Utility witness Teasley rebutted Ms. Dismukes' proposed adjustments concerning these legal expenses. She testified that denying recovery of legal fees to oppose alleged violations by DER/EPA would thereby deny recovery of legitimately incurred costs of operation. She argued that denying recovery of legal fees simply because a fine was paid would have a chilling effect on the utility's willingness to dispute alleged violations, which could be detrimental to customers.

Ms. Teasley testified that Ms. Dismukes' experience did not reveal any dealings with DER/EPA or familiarity with their violation and enforcement measures. Such exposure was essential, she asserted, to evaluate the merit of Ms. Dismukes' proposed adjustment. She indicated that capitulation to all regulatory prescriptions would be costly for customers, and that denying recovery of legal fees might produce this adverse impact. In a more general sense, she testified that attorneys providing environmental-related services may also be involved in settlement of alleged violations, and legal costs in those situations are inexorably intermixed. She testified that while SSU did not admit



any violation during 1991, consent orders are sometimes accepted because further legal proceedings may be more costly, and that the Commission should not presume that such acquiescence denotes guilt.

Ms. Teasley disagreed with Ms. Dismukes' proposal that these legal costs should be amortized. She explained that while each separate legal proceeding has a certain finality, the utility will inevitably incur legal expenses every year in some other category. Ms. Teasley testified that legal expenses for the 1990 and 1991 calendar years were $116,838 and $109,057, respectively, that $240,447 was projected in 1992, and that the comparative test year provision for legal expenses was $122,701. She further testified that 1992 legal costs included substantial sums to resolve environmental issues, which she indicated should not be considered unusual given increased DER/EPA actions to enforce compliance with pertinent regulations.

Ms. Teasley also disagreed with Ms. Dismukes' proposal to remove legal expenses related to valuation of condemned utility systems. She explained that the disputed expenses were not lobbying expenses, as suggested by Ms. Dismukes, but, rather, expenses to research statutory protections that apply when local governments propose condemnation of utility facilities. She testified that such research had application to SSU in relation to discouraging condemnation of its own facilities.

Based upon evidence in the record, we have allowed the disputed legal costs. The test year provision for legal fees does not appear unusual when compared to similar expenses in other referenced periods. The suggestion that legal costs should be disallowed because they were incurred to defend the utility against alleged violations presupposes that the utility should acquiesce in all cases, whether or not fault exists. We agree with Ms. Teasley that litigation may be appropriate even when imposition of a fine is a possibility, when compliance with a disputed regulation will create adverse economic consequences. On other occasions, payment of a fine pursuant to a consent order, even when "guilt" is not admitted, may result in avoidance of further litigation costs that would be detrimental to a utility's financial condition. An absolute prohibition against recovery of legal fees in any proceeding where a fine may be imposed would be impractical.

Furthermore, we do not agree with OPC's proposal to disallow costs related to condemnation measures. We believe the utility is entitled to discover and, if necessary, promote those practical

measures that will prevent condemnation of its systems. Customers benefit from the economies of scale that are preserved when the utility protects its systems against condemnation. Accordingly, we have not reduced the utility's test year expenses.

Salaries Related to Gas Promotional Employees

OPC Witness Dismukes testified that test year expenses should be reduced to reflect wages and fringe benefits related to gas promotional activities. She testified that such removal was appropriate since other charges to promote gas sales are excluded. The utility did not rebut Ms. Dismukes' proposed adjustment. In fact, the utility agreed that a reduction of $842, or the allocated portion, was appropriate. The utility, however, did not submit any documentation that would demonstrate that the disputed expense was an allocated charge. Accordingly, since some reduction is appropriate, and no evidence was produced to show that the subject expense is allocated, we have reduced test year expenses by the $3,158 amount proposed by Ms. Dismukes.

MPL Organizational Development Charges

OPC witness Dismukes testified that SSU incurred $16,384 in expenses related to MPL's Organizational Development program during the test year. She testified that, based on what appeared to be a trend of declining monthly amounts and an absence of charges between May and August 1992, the reported expense seemed abnormal and nonrecurring. She recommended amortizing the $16,384 amount over 4 years.

Utility witness Kimball testified that the variation in monthly charges simply shows when MPL individuals are directly involved in SSU's organizational development activity. She testified that, typically, an MPL employee from Organizational Development will, upon request, visit SSU as it enters different phases of its development, that several months may pass without need for such assistance, but that this activity is an on going process. She testified that SSU's cost for calendar year 1992 was $11,363 and $11,967 was budgeted for 1993. Before 1991, the utility deferred organizational development costs for amortization over the period that presumably received a benefit, perhaps 12 to 18 months. Beginning in 1991, the utility reportedly recognized that these costs were recurring in nature and the charges were thereafter fully expensed. And, as a further reflection of that change, a $8,397 amount deferred in 1990 was expensed in 1991.

retainage on invoices from construction vendors to ensure contract performance to the extent that the company practices retainage of 10% on specific projects in the Environmental Cost Recovery Clause.

We approve as reasonable the parties' stipulation that an adjustment need not be made for the recording error made in SO_2 Allowances as reported in Audit Disclosure No. 2 of the Florida Public Service Commission's Environmental Compliance Cost Adjustment Audit Report for the Period Ended September 30, 1996. The error was due to inappropriate allocation of Plant Daniel's SO2 Allowances. The company has already made correcting entries for the error.

We approve as reasonable the parties' stipulation that Gulf Power recover legal expenses incurred to assure compliance with revisions to Clean Air Act Amendment Title V provisions through the Environmental Cost Recovery Clause. Legal expenses directly associated with environmental compliance activities approved by the Commission that are incurred in order to comply with "environmental laws or regulations," as defined by Florida Statutes, Chapter 366.8255, should be recovered through the Environmental Cost Recovery Clause. As stated in Order No. PSC-96-1171-FOF-EI dated September 18, 1996, "However, the Commission will continue to examine each such expenditure on a case-by-case basis in order to determine the prudence of its recovery through the clause."

We approve as reasonable the parties' stipulation that an adjustment need not be made for the O&M expenses reported in Audit Disclosure No. 4 of the Florida Public Service Commission's Environmental Compliance Cost Adjustment Audit Report for the Period Ended September 30, 1996. It is our understanding that the Company has made correcting entries, including any applicable interest, for these O&M expense items in June and July 1997.

In Order No PSC-95-0384-FOF-EI dated March 21, 1995, we approved "...only the meal costs incurred for an employee's own consumption while traveling on environmental cost recovery clause business" for recovery through the Environmental Cost Recovery Clause. In addition, the Company agreed in a letter dated February 2, 1995 (Staff Composite Exhibit for Gulf) to establish a policy not to recover these types of costs through the clause. Audit Disclosure No. 4 shows that meal costs were among the O&M items included for recovery and later adjusted by the Company.

Tampa Electric Company

We hereby defer the issue concerning whether an adjustment for SO_2 Allowances, if any, should be made to Tampa Electric Company's Environmental Cost Recovery Factor as a result of our decision in Docket No. 970171-EU to the August, 1998, Environmental Cost Recovery Clause hearing in order to implement our vote in that docket.

We approve as reasonable the parties' stipulation that an adjustment shall not be made for the expensing of a packing tower through the Environmental Cost Recovery Clause in 1996 which was purchased and charged to an inventory account in 1992 as reported in Audit Disclosure No. 1 of the Florida Public Service Commission's Environmental Compliance Cost Adjustment Audit Report for the period ended March 31, 1997. The packing tower is a consumable item that is held in inventory until used. It should be treated

EXHIBIT 4 1-998 DG

depreciation. This equates to $33,524,000 ($20,910,000) for 1988; $50,000,000 ($31,185,000) for 1989; and $156,000,000 ($97,297,000) for 1990.

We will reduce forecasted expenses for 1988, 1989 and 1990 by $337,000 per year ($210,187 per year on an NOI basis) to be recognized as adjustment relating to JDIC (investment tax credit) as required by Order No. 16257. We will also relieve Southern Bell of the booking of any further depreciation related to the intraLATA bill and keep surplus. Order No. 18404 puts the amount of the surplus at $5,248,000 for 1988; $7,584,000 for 1989; and $9,179,000 for 1990. Because these amounts were included in Southern Bell's budgeted revenues no additional adjustment is needed for 1988-1990 for these amounts. We will also reduce 1988 intrastate expenses by $1,733,754 ($1,081,000 on an NOI basis). These are expenses incurred in the settlement of antitrust cases. Southern Bell has not shown these expenses to be reasonable or to the benefit of Florida ratepayers.

The above adjustments require an interest and intercompany settlement adjustments to the NOI. Our totals for NOI appear as Attachment 2.

C. Capital Structure

Capital structure was a hotly-contested issue in this case. OPC and other intervenors urged that the Commission employ a hypothetical capital structure while Southern Bell argued that the Commission use the company's actual capital structure. For the reasons discussed below, we find that Southern Bell's actual capital structure with adjustments is reasonable and should be used for ratemaking purposes. This results in equity ratios of 60.5% for 1988; 60.94% for 1989 and 61.56% for 1990. Attachments 3, 4 and 5 reflect the numbers associated with these equity ratios for 1988, 1989 and 1990, respectively.

The intervenors in favor of a hypothetical capital structure argued that the actual capital structure contained too much equity, thus imposing an excessive revenue requirement on Southern Bell's ratepayers. In their view, such a capital structure subsidizes competitive ventures by Southern Bell's parent company. Despite these arguments, we do not find Southern Bell's actual capital structure unreasonable. Southern Bell's business risk has increased, requiring a higher equity ratio. A survey of other local exchange telephone companies showed equity ratios in excess of 60%. Imputing a lower equity ratio reduces the company's ability to earn on its actual capital structure. Imputing a lower equity ratio could also adversely affect the company's ability to react to changes in its operating environment and could possibly result in a lower bond rating for the company.

Southern Bell recently attained an AAA rating by Standard & Poor's and an Aaa rating by Moody's. Although we are encouraged by this move because it translates into an increased ability to secure financing at a lower cost, we intend to monitor the equity ratio closely in the future. If it later appears that the capital structure is imprudent in light of the current economic and operating environment, we have the authority to impute a capital structure.

We accept some of Southern Bell's prorata adjustments to balance the capital structure and rate base and reject others. We accept the prorata adjustments for excess plug-ins, plant under construction not in rate base, ENFIA and BellSouth

EXHIBIT

7-9-98

an increase of 5.13% results. Comparing these percentage increases for salaries and wages, Ms. DeRonne testified that the utility's increase to its 401k expenses is inconsistent. Further, Ms. DeRonne provided a comparison of the percentage change in 401k expenses beginning with 1992 through projected 1997. This comparison indicated that the 27.6% increase is also inconsistent with historical cost level increases.

In addition to the identified inconsistencies, in response to a discovery request, UWF indicated that the projected 401k expenses are based on 100% employee participation, while the actual participation level was only 86%. With respect to this information, Ms. DeRonne testified that it is unreasonable to assume 100% participation in UWF's 401k plan, as well as to consistently contribute at the maximum level allowed by the plan.

As a result of the inconsistencies between the increase in salaries and wages and the increase in 401k expenses, Ms. DeRonne proposed an adjustment to the test year level of employee savings plan expenses. She testified that there is a direct correlation between the level of salary and wage expenses and the employee savings plan costs. Therefore, Ms. DeRonne proposed to reduce 401k expenses by $4,665 and $8,292 for water and wastewater, respectively, which reflect her proposed increase in test year salaries and wages over the base year level.

In response to Ms. DeRonne's adjustments, Mr. Jost provided an updated calculation for test year 1997 401k expenses. Mr. Jost testified that the revised expense levels were based on the contribution levels of the current participants, applied to the corresponding 1997 test year wages. Exhibit No. 11 indicates revised test year expenses of $28,990 and $51,538 for water and wastewater operations, respectively. The utility's revisions reflect a reduction to expenses of $4,018 and $7,144 for water and wastewater, respectively.

Based on the evidence of record, it appears that the utility has overstated its projection of the 1997 level of employee savings expenses. According to Ms. DeRonne, there is a direct correlation between salaries and employee savings. Although we agree with her assessment to some degree, such as within a specific pay period, we believe that when looking at a two-year time frame, the correlation may not be as clear. Over a period of time, it is possible that employees' contribution levels may change, or that employees who previously did not contribute to the plan would decide to participate. Therefore, we disagree with Ms. DeRonne's proposal to calculate test year 401k expenses based on the increase in salaries from the base year forward. However, we find that based on the evidence of record, an adjustment to test year expenses is warranted. We find that it is reasonable to calculate the 1997 401k expense projection based on the current level of participating employees. Accordingly, we hereby reduce test year expenses by $4,018 and $7,144 for water and wastewater, respectively.

Legal Costs for Defense of EPA or DEP Violations

OPC witness Larkin identified expenses included in the base year related to legal fees incurred to defend EPA and DEP violations. He testified that the utility's ratepayers should not be required to finance such violations, as these expenses are unrelated to the provision of water and wastewater service. As such, Mr. Larkin proposed adjustments to

EXHIBIT
6
7-9-98

remove these expenses from the test year. By applying the 1996 and 1997 inflation factors to the base year amount of $431, he proposed to reduce water operations by $163 and wastewater operations by $290.

In its brief, UWF argued that the utility has a good record of compliance with environmental rules and regulations. In support of this statement, the utility referred to the testimony of an employee of the Department of Health and Rehabilitative Services (HRS) and two employees of DEP, who appeared on behalf of staff in this proceeding. In further support of UWF's position that these legal expenses should be allowed, in its brief, the utility referenced Order No. PSC-93-0301-FOF-WS. By that Order, the Commission determined that it was appropriate to allow legal expenses incurred for defense of DER (now DEP) and EPA fines, as these costs could serve to avoid or reduce fines, or eliminate or postpone large system improvements.

Although we find that fines associated with violations of DEP and EPA should be borne by the shareholders of the utility, we believe it is reasonable for UWF to recover the costs of defending such fines. As the Commission previously concluded, the legal expenses incurred for defending fines from DEP and EPA could facilitate avoided or a reduced amount of fines. Therefore, we find that no such adjustments are necessary to test year expenses.

Information Technology (I.T.) Project

As UWF witness Cleveland testified, and as reflected in the MFRs, UWF's Information Technology (I.T.) project provided for the development and implementation of new systems for Integrated Financial Management, Customer Service Information, and associated Technical Architecture projects. On rebuttal, utility witness Jost identified cost savings of $71,074 which represented anticipated cost savings for 1997 related to the new Customer Service Information system.

The evidence of record indicates that the savings were related to the removal of salaries and associated benefits of two customer service representative positions. Since we have found it appropriate to remove the salaries and associated benefits as addressed above, no further adjustments are necessary related to this issue.

Vehicle Leasing Expense

In the MFRs, the utility's test year level of transportation expense is indicated as $514,031. This amount represents an increase of $174,861 over the base year expense level. Utility witness Jost testified that UWF recently initiated a program of leasing vehicles. Mr. Jost indicated that the increase in transportation expenses is a reflection of the lease program being fully implemented in the test year.

On rebuttal, utility witness Sambamurthi testified that a wide variety of vehicles are required for UWF in order to operate its system. Vehicles such as dump trucks, heavy and light duty pick-up trucks, sedans, and vans are needed for the utility's various employees in order to oversee the facilities and to provide service throughout UWF's service area, which is located in three counties.

In its MFRs, the utility requested relocation expenses of $5,483. According to data contained in the utility's late-filed exhibit, SSU incurred relocation expenses of $59,167 during the test year. However, the same exhibit indicates that as of July 31, 1992, SSU's actual relocation expenses were $6,795. There is no other record evidence or testimony on the reasonableness of these expenses. OPC argues that the requested expenses are excessive in view of the actual expenses incurred in 1992.

Based on the foregoing, we find that the appropriate amount of relocation expense should be based on the actual 1992 expenses. Therefore, we have annualized the actual relocation expense incurred through July 31, 1992, averaged with the annual budgeted amount to derive an appropriate amount of relocation expense. Accordingly, we have reduced test year O&M by $1,681 and $1,316 for water and wastewater, respectively.

Test Year Legal Expenses

In the MFRs, a portion of the allocated A&G expenses included non-rate case related legal expenses. OPC offered no testimony in support of its position that this amount should be reduced by the amount allocated for defense of DER and Environmental Protection Agency (EPA) fines.

Utility witness Ludsen testified that Lehigh should pay its allocated share of legal expenses incurred in defending SSU systems from the various governmental entities that levy fines. Witness Ludsen further testified that negotiations which may avoid or reduce fines, or eliminate or postpone large improvements to systems, are included in this expense. He also testified that allocation of legal expenses maintains stable cost assignments to systems on a year-to-year basis.

Based on the foregoing, we find it appropriate to allow the utility to recover its legal expenses relating to permitting and compliance. Accordingly, no adjustment to legal expenses has been made.

Test Year Allocated Expenses

In an earlier portion of this Order, we determined the appropriate allocation method for these expenses. We also determined that no adjustment to these expenses for the utility's acquisition efforts was appropriate. Based on the foregoing, we

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that counsel present stipulate that the witness is the person he identified himself as; that objections, except as to the form of the question, are reserved until hearing in this cause; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

MR. VACCARO: We'll go ahead and take appearances. Tim Vaccaro on behalf of Florida Public Service Commission Staff.

MR. GATLIN: B. Kenneth Gatlin on behalf of Florida Cities Water Company.

MR. McLEAN: Harold McLean on behalf of the citizens of state of Florida.

MR. VACCARO: Before we get started, just one preliminary matter I want to ask Mr. Gatlin about. Normally we have the usual stipulations.

MR. GATLIN: Yes, that's fine. And we don't waive.

MR. VACCARO: Okay. We'll go ahead and get started.

- - - - -

GERALD ALLEN

was called as a witness telephonically and sworn to tell the truth by the notary present with the witness, testified as follows:

EXAMINATION

BY MR. VACCARO:

Q Mr. Allen, I want to refer you back to some prior rate cases involving Florida Cities. First of all, I'd like to look back to the application for a rate increase for the North Fort Myers division, which

was in Docket No. 910756-SU, which involved Waterway Estates. And what I'd like to ask you is Waterway Estates was required to upgrade its treatment facilities to advanced wastewater treatment, was it not?

A Yes.

Q Okay. And Florida Cities was also required to allocate its effluent outfall line; is that correct?

MR. GATLIN: Allocate it?

MR. VACCARO: I'm sorry. Relocate it.

Q **(By Mr. Vaccaro)** To relocate its effluent outfall line?

A Yes.

Q And subject to check, the amount to upgrade the AWT was approximately about $4.8 million; is that correct?

A That's in the range. I'm not certain of the number, but I believe that's in the range, yes.

Q Okay. Do you know how much it cost to relocate the effluent outfall line?

A No, I don't recall that cost.

Q Okay.

A I certainly did it but I just don't recall.

Q Okay. Subject to check, in that rate case

did the Commission determine the plant was 100% used and useful?

MR. GATLIN: When was the Order on that?

MR. VACCARO: This was July 1st, 1992, Order PSC-92-0594-FOF-SU.

MR. GATLIN: Could you just give us a reference in the Order where it says that, and maybe we can just do it that way.

MR. VACCARO: Okay. I'll go back and check myself here. Basically on Page 7 of the Order it says that "The Utility requested that its collection system be considered 100% used and useful in part because it was fully contributed --" oh, I'm sorry.

It says at the top "Based on the evidence in the record, we find that the treatment plant is 100% used and useful."

MR. GATLIN: Okay. If that's what the order says.

MR. McLEAN: Would you repeat the Order number? I'm sorry.

MR. VACCARO: That is 920594-FOF-SU. I'm sorry that I don't -- didn't get copies of these sent down to you. Things have been kind of hectic here. Our computers have been out for a couple of days and it's been a little hectic getting all of the questions

and everything put together, but I appreciate you bearing with us.

Q **(By Mr. Vaccaro)** And, subject to check, in that Order, Florida Cities was granted a 144.10% revenue increase for wastewater, and it's under the Revenue Requirement for Page 19.

A Again, I don't have the order, but if you have the Order there --

MR. GATLIN: Whatever the Order says. If you say that's what the order says --

WITNESS ALLEN: I will accept that.

Q **(By Mr. Vaccaro)** Well, assuming that that's the case, would you agree that the customers at Waterway Estates are paying the costs associated with bringing the wastewater treatment plant in compliance with the Clean Water Act?

A Well, at that particular time, yes, those improvements were -- some aspects of the improvements, at least, had to do with bringing the facility up to AWT standards and relocating the outfall.

I'm sure there were some other improvements that may not have fit that description of the purpose but -- probably some replacements and other things, but overall that is basically correct.

Q Okay. Are you aware of any reductions in

capital expenditures at Waterway Estates resulting from the EPA litigation?

A No, not as a direct result of that litigation.

Q Okay. So the EPA litigation did not reduce the amount of capital investment required by EPA and DEP for Waterway Estates then?

A Certainly not for that particular improvement, if I understand your question correctly.

Q Yes.

MR. GATLIN: That Florida Cities would have spent less, or less because of the litigation?

WITNESS ALLEN: I'm not sure I understand the question.

Q **(By Mr. Vaccaro)** Okay, I'm sorry. Basically that they would have spent less because of the litigation. That is not the case, is it? Or they did not spend less as a result of the litigation?

MR. GATLIN: On plant?

MR. VACCARO: On plant.

WITNESS ALLEN: No, because -- I don't think one could say that because the litigation actually followed the completion of those improvements.

The suit was filed in -- I believe after that case, in October or November the 1st, I believe,

1993, so the litigation didn't exist at the time.

Q (By Mr. Vaccaro) Okay. Now I'd like to refer you to another rate case which was the application for rate increase for the Barefoot Bay division, and the Order I'm looking at is PSC-961147-FOF-WS. And without having to get into too much details there, you would agree, would you not, that there were costs involved for AWT upgrades for Barefoot Bay?

A Yes.

Q And I think we're talking about close to $6 million?

A That sounds like the order of magnitude, yes.

Q Okay. And there was a rate increase in that case, correct, for wastewater?

A Yes.

Q Okay. And, again, would you say, regarding the Barefoot Bay customers, that those customers are also paying the costs associated with bringing the wastewater treatment plant into compliance with the Clean Water Act?

A Well, at least they are paying part of the cost because the entire facility was not deemed 100% used and useful, if I recall.

Q Okay. And, again, are you aware of any capital -- reductions in capital expenditures resulting from the EPA litigation for Barefoot Bay?

A No.

Q Okay. Now I'm going to change gears for a minute and talk about the facts surrounding the denial of the MPDES permit for Waterway Estates.

Is it true that Florida Cities conducted extensive discovery during that EPA litigation concerning the basis for the denial of the Waterway Estates MPDES permit?

A Florida Cities did conduct discovery. Whether I could -- perhaps it was intensive discovery.

Q Was that intensive or extensive? I said extensive. I don't know if that makes a big difference for you.

A Okay. I really don't know how to characterize it. I was not directly involved in -- I didn't visit any of the sites or assist any of the attorneys in that process, but I would say with respect to the EPA, Region 4 at least, it was probably extensive discovery.

Q Okay. Would you agree that that permit denial was an issue raised by Florida Cities during the EPA trial?

A It was an issue raised, but it's my understanding that the -- because of the Statute of Limitations that that was perhaps an issue in mitigation only. But, again, that's getting into a legal area that probably I don't have the expertise to comment on.

Q Let me refer you to your rebuttal testimony.

Actually, Mr. Allen, we've got somebody calling and I don't know if this is --

(Telephone rings in Tallahassee deposition room.)

WITNESS ALLEN: Sure.

MR. VACCARO: -- if it's related to our deposition or not.

(Discussion off the record.)

Q **(By Mr. Vaccaro)** I want to refer you to Page 9, Line 9, of your rebuttal testimony, where you basically state that "Even if Florida Cities had challenged the permit denial and prevailed, that the EPA would have required Florida Cities to immediately upgrade to AWT and relocate the outfall." Does that sound accurate to you?

A Yes.

Q Okay. If that's the case, then why did Florida Cities conduct discovery about the denial of

the permit?

A Well, again, you're asking me a question that probably should be directed toward the lawyers involved.

Q Okay.

A Because I'm not sure that it was totally understood by the lawyers exactly what went on in that regard.

Q All right. That's fine. Did Florida Cities have an operating permit from the federal DER in 19 -- I'm sorry, from the Florida DER in 1986 which permitted discharge?

A Yes.

Q Okay. And did the operating permit include any language requiring Florida Cities to upgrade the AWT and relocate the effluent outfall?

A Subject to checking the operating permit, I don't believe it did. I'm fairly confident it did not. I don't have it in front of me but I do not recollect that permit having any such requirements.

Q Okay. Thank you. That permit was issued in 1983 and expired in 1988. Does that sound correct?

A It sounds correct. I'm not sure when it was issued. I know it expired, I believe, in August of 1988.

Q Okay. Isn't it true that the Florida DER did not formally require that the Waterway treatment plant be upgraded to AWT until 1988 when the permit would expire?

A That is correct.

Q Okay. Would the EPA have required an upgrade AWT before the Florida DER formally required the upgrade in '88?

A Well, I can only respond to that by the action that the EPA ultimately took. And that was with the Second Consent Order, which was issued in, I believe, '89, did require -- actually it offered an option to cease the discharge or relocate the outfall and upgrade the plant.

Q Okay. But you said that was '89? In 1989?

A Well, subject to check, I can -- yes, 1989.

Q Okay. I want to refer you to Page 8 of your rebuttal testimony, Lines 20 through 22, I believe you basically indicate that "EPA's dissatisfaction arose over the timeliness of completing the work set forth in the action plan." Does that sound right?

A That is correct.

Q Okay. To what action plan are you referring?

A I'm referring to the -- either upgrading the

plant, relocating the outfall or otherwise ceasing the discharge.

Q Was that plan put in writing?

A I believe that in the administrative order, as well as the MPDES permit that was issued in 1989, included a schedule for completing these improvements. And that schedule called for the outfall to be relocated by August the 1st, 1991, and called for meeting the advanced wastewater treatment water quality standards by November 1st, 1991.

Q My understanding is that there were two administrative orders, a 1987 and a 1989?

A That is correct.

Q To which one are you referring?

A I'm referring to the 1989 administrative order. It's Order No. 89-109.

Q Okay. With that action plan, are we talking a time period of 1988 to 1992? I'm sorry, '89 to '92?

A Well, it had some milestones, I believe, in the schedule. I don't have that with me. That's exhibit MA-9, Mike Acosta's exhibit. I don't have that schedule in front of me. I can get it.

Q We can just look that up. Thank you.

Let's assume for the moment that EPA had granted the MPDES permit in 1986, isn't it true that

that permit would have expired in five years, or roughly 1991?

A Well, I'm not sure of the term of those permits, whether they were five years or six years, but --

Q Okay. That's fine. Let's just say assuming that permit had been granted, do you believe that DER state certification would have addressed the zero discharge requirement?

A Yes. I believe DEP's recommendations were set forth in certification worksheets that really gave the Company two options. One was to cease the discharge and go to a total reuse system for disposal or upgrade the plant to AWT standards and relocate the outfall.

Q That worksheet was prepared as a result of EPA's denial of the permit, wasn't it?

A There's some confusion regarding that worksheet. We can't -- the date on it is not -- the date on it is not legible. Again, one can presume that that worksheet was submitted in response to the proposed denial. At least based on the documents we have, we're uncertain of that. That's an assumption.

Q Okay. Would DER require treatment upgrade through this type of document as opposed to, say, a

permit renewal or a consent order?

MR. GATLIN: The document would be in the worksheet?

MR. VACCARO: I'm sorry, yes, the worksheet.

WITNESS ALLEN: Well, the DEP would have required that upon expiration, I believe, of the operating permit.

Q Okay.

A But again if we make the assumption that the worksheet was filed by the DEP with the EPA in response to the notice of tentative denial of the MPDES permit, then that would be the recommendation that the DEP was making to the EPA regarding the denial.

Q Okay. Assuming that the permit had been granted, okay, and we're looking at that permit not expiring for few years, whether it be '91 or '92, isn't it true that that would have given the utility additional time to evaluate land disposal options before the upgrade was required by DER?

A First, I don't believe that the EPA would have issued a permit unless it had those conditions that were requested by the DER, and that is to either cease the discharge or upgrade and relocate the outfall by September -- or by the expiration of the

DEP operating permit, which was August 19th, '88. I don't believe that the EPA would have overuled the DER in that regard.

Q But the DER, though, that was in response to the denial, was it not?

A Yes.

Q So don't we sort of have a Catch-22 going on there?

A Well, I'm not sure it's a Catch-22 because, again, if we make the assumption that the worksheet was filed in a timely fashion in response to the tentative denial, then I think we have to conclude that the DEP was supporting the denial, but with the caveat that the Company have two options with regard to the discharge -- well, either eliminate the discharge or upgrade and relocate the outfall.

Q Okay.

A So, continuing, had the MPDES permit been issued, I believe it would have contained those provisions.

Q Okay. Thank you. I'd like to talk a little about one of the topics that's come up in this case. It has to do with the Utility's position regarding potential bankruptcy that might have resulted from deteriorating service to the customers. That is the

Utility's position, isn't it?

MR. GATLIN: Well, I think that this witness hasn't testified to it.

MR. VACCARO: Okay.

MR. McLEAN: Did the witness say that?

MR. GATLIN: No, I said that.

MR. McLEAN: Is there an objection to the question?

MR. GATLIN: No. I was trying to be helpful. I think that this witness has not testified to bankruptcy, unless I'm wrong -- and, Mr. Allen, please correct me if I'm wrong about that.

WITNESS ALLEN: Counsel is correct in that regard. I don't believe I stated that the Company has gone into bankruptcy. I believe I stated that the Company would have been in financial peril.

Q **(By Mr. Vaccaro)** Okay. Even if you didn't testify to this, let me go ahead and pursue this questioning. If we have a problem we'll deal with it.

Being you operate the Utility, do you believe that bankruptcy would have resulted in deteriorating service to the customers?

A I believe it would have.

Q Okay. Could you provide some examples of that?

A Well, it's my understanding that in the case of bankruptcies, that first a utility's, or a company for that matter, credit line is -- drys up. It can no longer borrow funds, or it's extremely difficult to borrow funds. In order to be able to operate, its under the supervision of a bankruptcy court. And it constantly has to go to that court in order to determine who is going to get paid, how its revenues are going to be -- that are coming in, are going to be used. And I believe that because of the strangulation with respect to funding, that services would have suffered.

Q Do you think service would have been interrupted?

A I think that's possible. I wouldn't suggest that service would necessarily have been interrupted on a long term basis, but I think that it's possible that service could have been interrupted if something had occurred which could have caused an interruption of service, and large sums of money was required to remedy that situation, yes -- and the company could not get the funds, yes, I think there could have been interruption of service. I'm not suggesting over time that there would have been a long-term interruption, but certainly there could have been shorter term

interruptions.

Q Okay. Would the utility have deferred maintenance on its equipment under that scenario, under the bankruptcy scenario?

A Absolutely. But, again, assuming that it would be a simple case where it had to seek authority from the court to expend the revenues that were coming in.

Q And you think this would have immediately caused a problem?

A Well, I'm not suggesting it would have been a problem the next day, but I think that in a period of time it could have been a problem, a relatively short period of time.

Q Would the utility also have deferred its scheduled capital projects?

A Yes.

Q Okay.

A Unless it had the funds. Typically, again, the use of the funds are severely restricted under those proceedings. Furthermore, it certainly would not have the ability, except under extraordinary circumstances, to have borrowed funds.

Q Do you think that would have caused service problems then?

A Sure.

Q Okay. Are you aware of any method, or do you have any ideas on a method to quantify the benefit to the customers for the Utility not going into bankruptcy?

A Well, I'm not sure I can quantify it -- but, again, I'm not certain I know how to quantify it except to say I believe service, quality service would have suffered.

Q Okay. I'd like to ask you some questions. I realize these actually go to Mr. Baise's prefiled testimony but I'll ask you to bear with me for a moment.

Subject to check, in Mr. Baise's prefiled testimony he indicates that Florida Cities personnel handled a lot of the work required in response to the DOJ production of documents request from July and August of 1994 for the EPA litigation, including production of significant amounts of financial data from Florida Cities computer database. Does that sound correct to you?

A Yes.

Q Okay. And were all of the Florida Cities employees who performed this work compensated through their respective salaries?

A Yes.

Q Okay. Was this the case for all of the DOJ production of document requests?

A I'm not sure I understand the question, but, yes, all Florida Cities employees, to the best of my knowledge, were compensated whenever they were engaged in these activities.

Q Okay. That's fine. Was this -- were the salaries -- let me try it again. I'm getting a little tongue-tied here. Was the salary expense recovered by Florida Cities through its customers' rates?

A Well, I'm not certain. Again, it depends on whether or not the salaries were included in the test year for the previous rate case.

Q Okay.

A So I don't think you could really say that all of the salaries were recovered, and perhaps you could say they weren't. But you just wouldn't know. In addition, there could have been some overtime involved, which was extraordinary overtime that in all probability would not have been included in a test year for previous rate case.

Furthermore, because of the number of rate entities that we have, it would just be very difficult to judge that because we would be dealing with

multiple test years from the standpoint of those employees' expenses.

Q Okay.

A I might add that there was a lot of exempt employee time involved here and there would not have been overtime in those instances.

Q Excuse me for just one second. I'm conferring with a Staff member which is why you don't hear anything coming back across to you on the phone. (Pause)

Was there a specific account or accounting code that was used or designated in order to keep track of the time that was spent by the -- on the work performed by the Florida Cities' employees in connection with that case?

A Not to my knowledge.

Q Okay. I want to refer you back to your rebuttal testimony, Page 2, Lines 8 through 13. Where you state before the Court issued its judgment, memorandum, order, and the appeals process was final, that Florida Cities had no basis of predicting the outcome of the litigation, and, therefore, did not have a basis for seeking recovery prior to that time. Is that correct?

A That is correct.

Q Okay. Are you saying that before you knew the outcome of the litigation that it was not prudent or reasonable to recover any of these costs?

A No.

Q Okay. Is it your belief that you always have to know the exact amount when you come in for a rate relief?

A No, I don't necessarily believe that, but there are two factors related to the outcome. One is we didn't know what the total legal expenses would have been until the case was finally decided; all of the appeals had run. And furthermore, we did not know what the outcome would be from the standpoint of the Court's findings and rulings.

Q Let me ask you this: Isn't it correct that the Commission allows projections of expenses for rate proceedings?

A I believe in certain circumstances, yes.

Q Okay. Do you believe this would have been one of those circumstances?

A I don't know.

Q Well, did you have any doubt prior to filing the current application for the recovery of the litigation costs? Did you have any doubt that it would have been appropriate to seek recovery of those

fees?

A Would you restate the question?

Q Okay. Did you have any doubt prior to filing the current application that it would be appropriate to seek recovery of the legal fees?

A Well, I have no doubt based on, you know, advice from counsel and the other rate experts we had consulted.

Q Okay.

MR. McLEAN: I'm terribly sorry. Did the gentlemen say he had doubt or did not have doubt?

MR. VACCARO: You said you did not have doubt based on counsel; is that correct?

WITNESS ALLEN: That is correct. I did not have doubt after those consultations.

Q **(By Mr. Vaccaro)** Okay. If you didn't have a basis to seek recovery before the appeals process was final, what changed that made the cost prudent after the process was final?

A Well, I think the most important factor was the actual ruling of the court.

Q Okay. Is it correct that Florida Cities has filed regular rate cases for all but one of its water and wastewater systems since 1991?

A I'm not sure about that.

Q Okay.

A We have filed a number of rate cases.

Q Let me ask you this: Was the only system that you -- do you recall the Fort Myers system being the only one that has not come in for a rate case?

MR. GATLIN: Since?

MR. VACCARO: I'm sorry. Let me look at this again. I'm sorry about that. (Pause)

I'm talking about the Fort Myers water system. The only system you did not bring in for a rate case since 1991 was the Fort Myers water system that had been overearning for several years. Does that sound correct?

A That sounds correct, subject to check.

Q Okay.

A It sounds correct.

Q Is it correct that Florida Cities only asked for rate relief for its Golden Gate systems from 1986 until 1991?

A I'm not certain about that.

Q Okay. Let me ask you this: If Florida Cities had contested the EPA's denial of the Waterway MPDES permit in 1986, and incurred legal fees which the Company believed were reasonable and prudent, couldn't Florida Cities have asked for a recovery of

those legal fees either in a rate case or in a limited proceeding around that time?

A Well, I would have to consult with counsel in that regard. I presume under certain circumstances we could have, but, again, there are too many factors here for me to make a judgment without consulting with someone.

Q Okay.

A With an expert.

Q All right. I'm going to just change gears here and just ask you some general recovery questions.

Florida Cities was found in violation of the Clean Water Act. That's correct, isn't it?

A That is correct.

Q And the Court ruled that Florida Cities was not a prevailing party?

A Well, I believe that's correct under the federal rules and federal court cases regarding prevailing parties. But I think that in the context of, I guess, common sense, I think clearly the Company was a prevailing party.

Q Despite the wording of the Order, because --

A Again, the Order is based on the federal rules and federal law with respect to prevailing parties.

Q Okay. Assuming the federal rules and the federal law, do you believe that regardless of the circumstances, that all legal fees incurred by utilities associated with penalities are prudent and reasonable?

A Well, I think that's a hypothetical. I think it would depend on the circumstances involved.

Q Okay. I'm going to hit you up with a hypothetical here. Let's just assume for the moment that Florida Cities were to book nonutility income below the line for North Fort Myers' wastewater system from 1990 to 1997, okay? Now let's say there's a current rate case pending with a test year ended December 31st, 1998. And let's say that within that rate case the Commission has not -- let's say the Commission has not audited the utility's books between 1989 and 1997 until the current proceeding. And that the Commission now believes that this income should be recorded above the line as utility operating income. Are you following me?

A Well, I think so.

Q Okay. You think so or do you want me to repeat that or try and simplify it?

A Perhaps simplify it a bit.

Q We'll say the utility comes in for a rate

case in '98, and that until that rate case, the Commission hasn't audited the books for 1989 through '97, and they find some income in there that they believe should have been recorded above the line as utility operating income. And let's say it was nonutility income -- the company booked it as nonutility income below the line. Okay?

A Okay.

Q Would it be appropriate for the Commission to accumulate this income for those prior years and reduce rates to the customers in the current proceeding?

A I'm afraid I couldn't answer that. This is getting into an accounting area that I would need some expert advice before I could respond.

Q Okay. I'm going to scratch that then.

But I would like to ask you, referring back to your rebuttal testimony, this is in regards to some comments about one of the Staff witnesses, Tricia Merchant, and I'm referring to Page 3 -- I'm sorry, Page 10, Page 10 and 11, starting at the bottom of the page of Page 10, Line 21, and going over to Line 3 of the next page you talk about Ms. Merchant presenting her personal opinion regarding the criteria which the Commission should apply in arriving at its decision

regarding recovery. You indicate this is her personal opinion.

Are you aware that in past Commission proceedings that Ms. Merchant has been accepted as an expert in regulatory accounting?

A According to her resume, yes.

Q And subject to that, could you explain what you mean when you say that you believe that her opinion is her personal opinion as opposed to, say, expert opinion?

A Well, I asked counsel regarding the rules in which one would have to rely on to express those opinions, and I was advised that there were no rules of the Commission; no statutes which would support those opinions.

Q Okay. So that wouldn't then take into account possible prior experience on the part of Ms. Merchant? You're just talking, strictly referring to -- what did you say, I guess, rules and statutes?

A Yes.

Q Okay.

MR. VACCARO: Okay. I think I'm coming down the stretch here. One last set of questions.

And I'd like to refer you to your May 6th deposition taken by the Commission, and in particular

on Page 27, Lines 8 through 14.

MR. GATLIN: Do you have that with you, Gerald?

WITNESS ALLEN: Yes.

Q **(By Mr. Vaccaro)** I believe you state in there that the reasons shareholders are responsible for some of the litigation costs is because the court did assess penalties; is that correct?

A That's correct.

Q And you state, do you not, that another reason the shareholders were responsible for some of the cost is that the Company's $500,000 settlement offer would have been the burden of the shareholders?

A Yes.

Q If the Company settled to the DOJ's request for $5 million, would that also have been the shareholder's burden?

A I think that's a hypothetical question that can't be answered because the Company wouldn't have settled for $5 million.

Q Okay. Let's just assume that the Company did have to pay that $5 million, or for that matter for whatever reason had to pay the $104 million, the effect of that would be felt by the shareholders, would it not?

A That's correct.

Q Do you think it would have been fair for the ratepayers to pay the litigation costs that might have accompanied $104 million if the Company had been fined $104 million?

A Well, under those circumstances no one would have gotten paid.

Q Okay. Let me take you over to your direct testimony. Do you have that?

A Yes.

Q Okay. Please look at Page 42?

A Pardon me?

Q Please look at Page 42, Line 17, where, I believe, you state the rational basis for determining the amount that Florida Cities has justified in recovering is -- you set forth a comparison there. You compare the $5 million presented by the U. S. DOJ and the -- with the final judgment of $309,710 by the Court?

A Yes.

Q Okay. Now it's true, is it not, that neither of those penalties -- well, the 309,710 or the proposed $5 million would be recoverable by ratepayers; is that correct?

A That is correct.

Q Okay. That being the case, why is it rational or appropriate to use the ratio of two nonrecoverable amounts to determine how much to pass on to the ratepayers?

A The three important factors here are the offer the Company made to settle this case before suit was ever filed, the $500,000 that it offered to settle, and the firm offer of the DOJ of $5 million, and the finding of the Court in an amount that was less than the Company offered to settle before the suit was ever filed, before any substantial expenses had been sustained, and before the matter went any further. And I think that's significant, the fact that the Company offered to settle for an amount significantly greater than the finding of the Court. And I think that's what makes this a very special situation where the Company is due recovery of some of its expenses.

Q Okay. Let's look at this. The penalty was -- you came up with a 6% figure, did you not, for what the -- what should be attributed to the shareholders?

A Yes.

Q By comparing the 5 million and the 309,710; that's correct?

A Yes.

Q That's 6%?

A Yes.

Q That leaves 94% to contend with?

A Yes.

Q Do you think it's fair and reasonable for the ratepayers to bear 94% of the cost?

A Under the circumstances, yes.

Q Looking back to the requested penalty, and even the settlement offer, the shareholders would have been substantially harmed by the Company paying either of those amounts, wouldn't they?

A Certainly if the Company had been willing to pay those amounts.

Q And the Company defended itself in this case in order to lessen or eliminate the penalties, correct?

A Yes.

Q Okay. Otherwise, the penalties would have been absorbed by the shareholders?

A It depends on which penalties we're talking about. If we're talking about $104 million, it couldn't have been absorbed by the shareholders.

Q Okay. That would have pretty much wiped out their investment, correct?

A And then some.

Q Okay. So that's a -- a pretty heinous outcome, wouldn't it be?

A Yes.

Q So I guess what I'm getting at here is given the harm that could have fallen upon the shareholders, wouldn't some other allocation of the recovery be more appropriate, say 50/50?

A There's no rational basis for 50/50.

Q Okay. Could you elaborate on that?

A Well, I can't think of a rational basis for 50/50.

Q Well, considering that the litigation amounts kept the shareholders from basically having their investment wiped out, wouldn't that be rationale for splitting that?

A I don't know how.

Q Okay. Can you pardon me just one moment?

(Pause)

Q **(By Mr. Vaccaro)** Let me ask you one final question. You're basically saying you don't think there's a rational basis for a split of 50/50 here.

What if the Commission comes back, after reviewing all of the evidence in this case, and believes that the Company was not necessarily

reasonable and prudent with all of its actions in the litigation. And the Company decides that -- I'm sorry, the Commission decides that perhaps all of the recovery that the utility is seeking is not appropriate based on a potential finding that the Company did not act 100% prudently in this case.

Can you think of any other allocation method that would be appropriate under the circumstances?

A Well, I can't think, you know, of a rational basis. I know there are an infinite number of arbitrary bases but I can't think of a rational basis.

Q Okay. All right. Let me check real quick.

(Pause)

Yeah, that's all the questions I've got. Thank you.

MR. McLEAN: I have just a couple. I didn't clear that with you. Is that all right?

MR. GATLIN: Let me tell you, that's fine. The way we scheduled this, we've got John McClellan sitting by a phone and they are fixed with a court reporter out there to swear him in.

MR. McLEAN: I have no more than five minutes. I should have cleared it with you.

MR. GATLIN: That's all right. Go ahead.

EXAMINATION

BY MR. McLEAN:

Q Mr. Allen, Harold McLean representing the Citizens of the State of Florida.

A Hi.

Q How do you do, sir?

I understand that this petition deals with the system, Barefoot Bay and North Fort Myers and South Fort Myers, and that there is consideration about spreading some of these litigation costs over to the customers at Carrollwood; is that right?

A That is correct. In fact, this petition only seeks recovery of a part of the total amount the Company thinks that it should recover.

Q Yes, sir, understood. Are there other water and sewer systems owned in the state by Florida Cities?

A Yes.

Q Why are they not in the case?

A Because those systems are not under the jurisdiction of the Public Service Commission.

Q I see. And that's the reason why Hillsborough is not in as well?

A That's correct.

Q Now your spreading of the total cost which

you identified that you intend to spread, or recover, I should say, are to be recovered from the Hillsborough County residents as well, right?

A No. The amount that Florida Cities is seeking to recover does not include those amounts from Carrollwood, which is Hillsborough County, the Sarasota division, or the Golden Gate division in Collier County.

Q The total amount of litigation expenses is in the neighborhood of 3.8 million. Do I recall that correctly? Ball park figure?

A I'm referring to my direct testimony on Page 42.

Q Yes, sir.

A Line 14. The total amount that the Company is seeking to recover from all ratepayers and all jurisdictions is $3,589,386, plus rate case expense.

Q And about 2.5 million from regulated customers, so to speak; regulated by the PSC.

A Actually $2,265,000.

Q Okay. And that the balance of that, the rest, is all of that to be collected from Carrollwood, if you're successful, or is some of it to be collected from Golden Gate and the Sarasota division?

A It would be collected from all three:

Carrollwood, Golden Gate, and the Sarasota divisions.

Q I want to shift focus considerably and ask you referring -- focussing on Barefoot Bay, has Brevard County or any other governmental entity expressed any interest at any time, to the best of your knowledge, in acquiring Barefoot Bay either through condemnation, purchase or any other means?

A Well, recently there's been some expressions of interest in that regard.

Q How recently?

A Within the last -- well, since the very latter part of May.

Q Of this year?

A Of this year.

Q Was there any before that, to the best of your knowledge?

A Well -- and I don't remember exactly when, but it was following our rate case in Barefoot Bay, I was contacted by representatives from Brevard County regarding the potential acquisition of that system, the Barefoot Bay water and wastewater system. That's the only specific recollection I have of any one making such contacts.

Now, I might add, from time to time in recent years we have had correspondence from various

investment groups or companies. Basically, some of them are form letters inquiring if we were interested in selling utility systems. I have had from time to time general contacts, like a telephone call from someone making those kinds of inquiries. But as far as any specific inquiry regarding a specific system, that's the only recollection I have with respect to Barefoot Bay.

Q Is there any generic reason to which you can point that Florida Cities has not been interested in selling to any of these potential suitors?

A Well, it's just never been part of our long-term business plan to dispose of our utility properties.

Q And as you well know, this is associated -- this utility is associated with Avatar Development?

A Associated with Avatar Holdings.

Q Yes. Now, with respect to any of those entities that have made inquires to which you just referred, do you have any reason to doubt the credit worthiness of any of those entities or can you express any opinion as to their ability to raise money in the money market?

A No. I have no opinion.

Q Sure. You have no reason to doubt that

Brevard County could raise money to either buy or improve or operate your utility if it came to that?

A I don't have a opinion one way or the other. I would presume that if the County so chose, they could -- they could -- they would have the financial resources -- or could acquire the financial resources to buy the system.

Q Let's turn then to Lee County. That's the county in which both North and South Fort Myers are located -- the North Fort Myers and South Fort Myers divisions of your company are located?

A Yes.

Q Okay. Have you received any inquiry -- let me just ask you generically or generally the same question I asked with respect to Barefoot Bay. Have you had suitors in Lee County? Would your answer be about the same?

A It would be about the same. No one has come in and said, you know, here's an offer for these facilities -- Lee County or any other system for that matter -- and said we're prepared to acquire this at this price.

Q And the same question with respect to the credit worthiness or the ability of those companies or private entities or government entities to raise money

in the marketplace, you don't have a opinion --

A I don't have a opinion.

Q But you have no reason to doubt that they could raise money?

A Well, I would say that with respect to counties. I'm not sure I could say that with respect to, perhaps, some non-governmental entities that has made inquiries before.

Q If Lee County happened to get some utility out of bankruptcy court, you don't have any reason to believe they couldn't acquire the financing it would take to both operate, improve and accommodate growth in the utility, do you?

A I have no opinion regarding their financial resources. But on the other hand, I would believe that if they wanted to, they could.

Q I understand. I want to ask -- change focus again, if you please. This litigation began -- I think I heard you say in your response to Mr. Vaccaro -- began in 1992; is that correct?

A Actually the suit was filed in '93. Now we had contacts with the DOJ earlier than that and the EPA.

Q With respect to the $2.265 million that you wanted to recover from the regulated ratepayers, if

you'll permit that term, when did you begin to spend that money? What year?

A Well, I'm not certain, but -- I would have to see a schedule, but several years ago.

Q Do you know whether there is such a schedule presented by the Utility in their evidence?

A I believe that in Mr. Murphy's testimony there are some schedules. I'd have to get a copy of his testimony to verify. I know there are some schedules there and I believe that they are in date order.

Q Okay. I don't want to quiz you about a schedule you don't have. But I would like to know your general impression about that schedule. And we can all check it when the time comes.

But let's say during the year '93, '94, '95, '96, were those amounts spent on litigation somewhat similar for each year? In other words, were there like $200,000 each year, or whatever the number was -- I guess it would have to be more than that. But my question is, was it a varying amount, was it somewhat constant or do you recall?

A I don't recall.

Q Okay. Mr. Murphy would be the correct witness for such question, I suppose?

A That is correct.

Q Okay. Give me two seconds and I think that's about it. (Pause)

Oh. You referred -- you and Mr. Vaccaro discussed two terms that caught my attention: financial peril on the one hand and bankruptcy on the other. And I have the impression that financial peril could become -- if the fine from the EPA -- let's just say the federal government -- had become severe enough, obviously financial peril might have ripened into bankruptcy; is that correct?

A Yes.

Q And you're not taking -- there's probably a scale beginning with zero at which, of course, there would have been no consequences for the quality of service received by the customers, going all the way to something like $104 million where I think you and I agree that Florida Cities, as an entity, would probably not exist if they had to pay that $104 million, correct?

A Yes.

Q And that bankruptcy would probably occur somewhere along that scale, correct?

A That is correct.

Q Okay. Now, you said to Mr. Vaccaro that you

perceived that you never said that service would be terminated, although I think you did say that it might be very temporarily terminated, but that there would be a deterioration of service over some period of time; is that correct?

A That's correct.

Q And the deterioration of service, its severity would be determined by probably the amount of the fine or whether bankruptcy were involved and so forth, correct?

A Yes.

Q But you also said that you did not believe -- and correct me if I have the wrong impression -- that you did not believe that that would be a long-term deterioration. Do you recall that?

A Yes.

Q Did I state that correctly?

A Yes.

Q Okay. What sort of term could you predict that there would be deterioration of service?

A Well, I think the -- when I was referring to long term versus short term, I think that in a situation where there's a bankruptcy, you know, ultimately the issue -- the bankruptcy is resolved through some form or fashion, and I believe at that

point then normal full quality service could be restored.

Q Okay. And if in my earlier question if someone like Brevard County, for example, acquired Barefoot Bay, you have no reason to believe that that deterioration of service, if any, would continue beyond that date of acquisition, do you?

A I wouldn't say that it would necessarily cease on the day of acquisition. If we assumed that the purchaser, that the County, for example, had the appropriate financial resources, then I think that quality service would be restored, not instantly but over a period of time.

Q Okay. Just one last thought. You're seeking to collect this surcharge over a period of ten years, correct? Or whenever it's paid?

A Yes.

Q Was there any attempt to corrolate the length of time over which customers would suffer a deterioration of service with that ten years? Perhaps I asked that question backwards.

Does the time over which you expect the service to deteriorate drive the request to spread the costs over ten years?

A No, I didn't think there's any such

relationship.

Q The ten years is, in fact, an arbitrary number not based on any sort of rational basis; is that correct?

A Well, there is some rationale for the ten years. It was not exclusively arbitrary.

Q What were the considerations?

A Well, the normal -- as I understand it, the normal recovery of an expense like this would be over a shorter period of time. On the other hand, if we compared this to the recovery of depreciation on plant facilities which, you know, is a much longer period of time, ten years falls someplace in the middle.

Q Mr. McClellan says that this is a nonrecurring expense. Do you agree with that?

A I have no opinion from a ratemaking standpoint.

Q I see.

MR. McLEAN: Okay. I have no further questions. Thank you, Mr. Allen.

MR. GATLIN: I have no questions. We'll read.

MR. VACCARO: Okay.

MR. GATLIN: I think that's it.

WITNESS ALLEN: Thank you very much.

(Deposition concluded at 2:38 p.m.)

WITNESS

GARY H. BAISE
Examination by Ms. Gervasi 6

PROCEEDINGS

WITNESS BAISE: Mary Mitchell is here. She is the notary in the Langrock, Sperry law firm here in Middlebury, Vermont. So what is it you need her to do for me?

MS. GERVASI: Ms. Mitchell, could you please give me a fax number where I can fax the certificate of service -- certificate of oath rather to you so that you can fax it back to us?

MS. MITCHELL: Certainly. The number is area code 802-388-6149.

MS. GERVASI: 802 area code?

MS. MITCHELL: Yes.

MS. GERVASI: And then what are the next three digits?

MS. MITCHELL: 388-6149.

MS. GERVASI: Okay. Thank you. We'll send that to you, or fax that to you and give you, provide the fax number where you can fax it back if you would please.

MS. MITCHELL: Okay, sure.

MS. GERVASI: Thanks. And if you would just please go ahead and swear in the witness.

WITNESS BAISE: She doesn't have a form in front of her. Just swear to tell the truth, the whole truth

and nothing but the truth?

MS. GERVASI: Yeah, if she'll ask you to raise your right hand and swear to tell the truth, the whole truth and nothing but the truth, and that will do it.

WITNESS BAISE: I do.

MS. GERVASI: Great.

WITNESS BAISE: And she and I will sign it here in a second.

MS. GERVASI: Okay. That works.

Whereupon,

GARY H. BAISE

was called as a witness by the FPSC and, after being first duly sworn, was examined and testified as follows:

EXAMINATION

BY MS. GERVASI:

Q You're sworn now, Mr. Baise?

A I beg your pardon?

Q You are sworn now?

A Yes.

Q Okay. Could you please state your full name and business address for the record?

A Yes, my name is Gary H. Baise. I am a partner in the law firm of Baise, Miller and Freer. The address is 815 Connecticut Avenue, Suite 620, Washington, DC, 20006-4004.

Q Thank you.

MS. GERVASI: And before we go any further, I just want to make sure, can we stipulate to the usual --

MR. GATLIN: We can stipulate.

MS. GERVASI: Thank you.

BY MS. GERVASI (Continuing):

Q Mr. Baise, if you would please take a look at your direct, prefiled direct testimony and look on pages 11 and 12 if you would please, sir.

A Yes.

Q And here you're talking about, generally about the beginning of the discovery phase of the federal case, and you state that your team reviewed an enormous number of documents at the Florida DEP offices in an effort to prove that Waterway did have a wasteload allocation to discharge into the Caloosahatchee River; is that right?

A That's correct.

Q And on page 12 you state that you filed Freedom of Information Act inquiries with at least four of the EPA regional offices in order to obtain records to demonstrate

how rare it was to deny an NPDES permit?

A Correct.

Q This discovery process began, was it in 1993; is that right?

A It would have been in, say, July, August, I would recall, because I was retained in June of '93; so it would have been sometime in the summer of 1993.

Q Okay. Thank you.

And on page 14, this is also your direct testimony that I'm referring to.

A I'm at page 14.

Q You state that during March and April of 1994 your team filed additional requests to EPA regional offices regarding other NPDES permit denials, right?

A Correct.

Q Then on page 21 of your direct testimony --

A Yes.

Q -- you stated that during the months of May, June and July of '94 your team reviewed the documents produced by EPA in response to your requests for information on permit denials, right?

A Well, we had discovery as well as FOIA materials, so there are really two points made at the top of page 21.

Q Okay. From looking at this testimony it appears to us that a substantial amount of time was involved in

requesting and reviewing these documents. Is that a fair statement?

A That's correct.

Q How many people from your team were involved in requesting and reviewing these documents, EPA and DEP documents?

A Well, I was the one, of course, that requested them; but because we had substantial amounts of paperwork, there would have been myself, Mr. Scroggin, and I'd have to go back to the bills to see if there were other associates involved. It's my recollection that there would have been one or two associates involved, at least on a part-time basis.

Q Okay. Thank you.

Now also based on your direct testimony, and I can refer you to specific pages if you need me to, but you may be able to answer this question without referring to it, and you can let me know either way; but what we gleaned from it is that the primary purpose of Florida Cities Water Company's taking depositions of certain witnesses was to address the EPA's NPDES permitting process, including denials of such permits and the EPA's wasteload allocation process regarding NPDES permits; is that right?

A In part, yes.

Q And would that be true of, for witness John

Marlar?

A Yes, Mr. Marlar was the first person I deposed because I wanted to get a clear understanding of where EPA was coming from. As you will note, earlier in my testimony we had had meetings to try to settle this case before the complaint was filed with the Department of Justice counsel. We felt we were correct with regard to a number of assumptions we were making based on the documents we were seeing.

We felt if we could go to the most credible or one of the most credible sources in EPA with regard to permitting, wasteload allocations, water quality standards, the rareness of denial of a permit under the Clean Water Act program we might be able to convince Mr. Jacobs that he should settle the case for a much smaller sum than he was willing, obviously, to settle for at the time we were discussing settlement in June, July, August of '93.

Q Okay. Was that also a primary purpose of the taking of Mr. Peter McGarry's deposition?

A No, the purpose for taking Mr. McGarry's deposition was to determine why he had been so antagonistic towards employees of Florida Cities Water Company. Number 2, we had found documents in the EPA files suggesting that Mr. McGarry was the primary force in requesting an enforcement action be taken against Florida Cities.

Thirdly, I wanted to find out how much he knew about Ms. Kagey's egregious error in taking the permit away from Florida Cities illegally, which we clearly established that they did. I also wanted to see what he knew about that, and he didn't know very much, frankly. I had to go to other witnesses like Mr. Childress, Mr. Greenfield and others to show that Ms. Kagey had, indeed, violated EPA's own regulations; and you've probably seen that in some of our documents or in their depositions if you have them.

Q These types of areas that you are describing, don't they go to the issue of the permit denial?

A Yes, they do.

Q Okay. How about with Ms. Connie Kagey, is that also true for her, for the deposition that you took of her?

A Well, I wanted to show through Ms. Kagey that she had violated the law, and we did that. We also wanted to show how reckless her conduct had been in terms of denying this permit. I also wanted to show how little supervision had been undertaken with regard to the denial of this permit; and at the same time, of course, I'm trying to show how rare a permit denial is and how little supervision she had when undertaking such a momentous action.

Q Okay. And how about Mr. Bruce Barrett, did your questions also go to the issue of the permit denial?

A Absolutely permit denial, and I haven't looked at

his deposition in a long time, but I believe he is the gentleman who said, and I think we quote him in my testimony some place, that he saw no reason based on the records we had accumulated at the time we took his deposition as to why this permit should have been denied and taken away from Florida Cities Water Company.

Q Okay. Thank you.

And Mr. Roosevelt Childress?

A Roosevelt Childress was either Barrett's boss or worked immediately under Barrett; I just don't recall. He, too, had the possibility to have stopped this terrible mistake; and I believe his testimony too was Ms. Kagey exceeded EPA's guidelines, regulations, did not utilize proper procedures. And, of course, what I was trying to show is that she didn't have proper supervision; and I think Childress may have been her immediate supervisor, but I just cannot recall.

Q Okay. Thank you.

And then, finally, Mr. James Greenfield, were the questions directed to him also --

A Roughly the same. Again, all of these then would have had the opportunity had they been paying any attention to the switches at EPA what was going on. I believe I had documents at the time that had their signatures on the documents in addition to Ms. Kagey's, and none of them ever

said. Wait a minute, what's going on here? None of them ever made a call to Doctor Ahmadi or to any of the Florida, then DER people, I think they were called, to see whether there was a wasteload allocation because, at this time, we are, I believe, in possession of a document which shows that EPA had been notified maybe one month before Ms. Kagey acts that this facility has a wasteload allocation.

Q Okay. Thank you.

A And those gentlemen would have been the ones who should have been aware of this and have caught this mistake, this illegality, whatever you want to call it. Obviously I claim that EPA acted illegally, and I could prove that because there are only four reasons that the agency can take a permit away from a permitee, and those are set forth very clearly. The facts didn't justify taking this permit away in any way, shape or form, and these gentlemen after our -- through the deposition agreed with that.

Q Okay. Mr. Baise, you also state in your direct testimony that the utility took 22 depositions of 17 witnesses. Do you recall that?

A It was roughly that. I will rely on your characterization.

Q Okay. Do you know roughly how many other depositions address that issue of the EPA's NPDES

permitting process above and beyond the ones that I mentioned to you?

A Not without going back and looking at them. I don't think that many of the others did because there was a block of depositions I had to take to lock this up.

As I've stated, I think in my direct testimony, I was convinced based on the law and the regulations and then the testimony that once I had this nailed down we could go back to Mr. Jacobs and show that the agency had broken the law and that this case would settle virtually immediately. That's how I set up the deposition schedule, was to, one, go to Mr. Marler who, as I said earlier, is considered one of the experts on the Clean Water Act in the agency; and then after getting that framework set in place, go to these other people to show did the agency indeed violate its own regulations.

I thought after doing that -- in any other case I've ever been involved in, when you show that the agency has done something incorrect or illegal, generally the Justice Department will say, excuse me, and either withdraw the case -- I've had them withdraw cases in open court where I have proven error on their part. But after we took these depositions, we sat down with the EPA and Department of Justice counsel. They said they would certainly take the results of these depositions back. I remember speaking

to one EPA lawyer saying it seems to me the case is over. You can see that you violated the law. Give me a call when you are ready to sit down, and we will wrap this up and finish the settlement discussions. I never heard anything more from Ms. Henley.

Q Okay. So at least seven of the 17 witnesses that you deposed, and those being the ones that I mentioned earlier, were deposed on that line of questioning then, correct, and possibly others?

A I don't know what the number would be. I would have to go back and look at each one of those depositions to come to your conclusion that there were seven. With regard to some of these folks, there were other issues that I was attempting to get information on from them; but primarily, it was to show that the process operated in a certain fashion.

I know another point I was trying to establish with those folks, and that is, that the region had contracts with states on how the wasteload allocation process was to work; and I used one of these persons to get that contract exhibit into play and to bring that to their attention as well. The contract between the region and the state indicates that if you are going to have a wasteload allocation it must go through a very rigorous administrative procedure act proceeding, and I was able to

demonstrate that that had not occurred as well. That was very important. And I can't tell you, frankly, which witness or witnesses I used for that particular point, but that was a key point.

Q Okay. How about Doctor Ahmadi, did you depose him regarding the wasteload allocation and the Waterway permit?

A Actually we had numerous conversations with Doctor Ahmadi, and I'd have to go back and look at his deposition. Principally what I wanted from Doctor Ahmadi was his interaction with the Department of Justice lawyer, and I believe -- and I would ask for Mr. Bullock to be able to participate here -- I believe Doctor Ahmadi was called as a witness to be deposed by the Department of Justice, not us. He was our witness, but I don't think we moved to depose him.

Q Okay. Thank you.

MR. BULLOCK: That's correct.

MR. GATLIN: The deposition is part of Doctor Ahmadi's testimony.

MS. GERVASI: Okay. Thank you.

BY MS. GERVASI (Continuing):

Q Mr. Baise, isn't it correct, and this is from looking at your exhibits and the trial transcript, that in your opening statement at trial you stated that this whole

case was started on the basis of a mistake made by an EPA employee in 1986?

A That's correct. That's what we had established. Actually I wanted to use a little stronger terms, but I felt that I shouldn't do that with the judge at that point because I was reaching a conclusion that the conduct was unlawful; but at the time I characterized it as an egregious mistake.

Q And you also made that statement in a motion for summary judgment, correct?

A I think I made stronger assertions in the motion for summary judgment than that, but you have that in front of you. You know what I said. I just don't recall that. I certainly made strong assertions about EPA's conduct.

Q And the mistake you are referring to here is that the EPA improperly denied the Waterway Estates 1986 NPDES permit renewal, right?

A Clearly at the time it was more than a mistake; it was unlawful, period. They had no grounds upon which to deny the reissuance of an NPDES permit.

And I would correct that. In, I think it's one or more of your depositions, it comes across as M as in Mary permit. It's N as in Nancy or national.

Q Okay. Is it correct to say that a substantial amount of the utilities trial preparation was to prove that

the EPA improperly denied that Waterway permit in 1986?

A I don't know how to define substantial. Certainly we proved that early on, and that's one reason why the Department of Justice then started looking to justify its case. Early on, of course, they were looking at all of the facilities, but it became clear after they did hear about the depositions we had taken -- they were made aware because I felt I had nothing to hide on the company's part -- that the company was correct. It had been treated unlawfully here.

The Department of Justice decided to expand the focus of the case. Then they started focusing substantial efforts on discovery involving Barefoot Way, Carollwood, Fiesta Village, Golden Gate, South Gate, et cetera. So I want to say at some point the substantial effort was dealing with the other facilities rather than Waterway.

Q Can you give us an idea roughly what percentage of the trial preparation went to prove that the EPA improperly denied that Waterway NPDES permit?

A That I cannot do. I would have to go back and look at the bills, and even after looking at all the statements I'm not sure that I could carve out an exact percentage. I might be able to give a rough estimate, but certainly at this moment I could not give you even close characterization of the amount.

Q You couldn't tell me if it was closer to 50/50 than --

A No, I could not. I would have to -- as I said, I would have to go back and look at and examine three or four notebooks of billing statements to Florida Cities Water Company.

Q Okay. Would you say the substantial amount of the company's direct and cross examination went to prove that EPA improperly denied that Waterway permit in '86?

A No, I wouldn't say a substantial amount. I would say certainly a portion went to show that point in terms of mitigation. What we tried to put on as a positive case for the company was to show how well this company had performed, how unique and unusual it was to take away a permit when water quality standards are being met and the NPDES requirements are being met, the fact that there was no environmental harm caused by the operation of these facilities. In fact, I believe there was testimony from one witness -- it may have been Doctor Ahmadi -- that they wished that all of the discharges into the waters of the State of Florida came from secondary treatment plants rather than just runoff because the water quality, frankly, would be so much better.

So we spent a lot of time on water quality issues and educating the judge on, one, on how the Clean Water Act

works, how important water quality standards are, how you implement those water quality standards, and the fact that we were virtually nil or nonexistent in terms of our violations of water quality standards and virtually had no violations of our permits other than what you would call technical violations.

Q Okay. You did say, though, that [redacted] portion of the direct and cross examination time was spent to prove that that permit was denied improperly. Can you give us any idea of the size of that portion?

A Again, you would have to go back and look at the witnesses. For example, Doctor Ahmadi's time was certainly spent on explaining Florida's role, what he had done. He had told Mr. Jacobs that his theory of the case basically was wrong and the fact that this company was not violating water quality standards and the fact that the company could still be discharging in the same point, or at the same point if it had not decided to upgrade or increase the size of the discharge. Also, we wanted Doctor Ahmadi to point out the differences between the two permitting programs and to show the court that, frankly, this company was having to serve two masters here, a federal master and a state master; and you just have to start from Doctor Ahmadi and go backwards, I guess, to all of the other witnesses.

Mr. Bullock, for example, handled

Mr. Klingenstein who was the Department of Justice's lead witness, and our main effort there was to show that he had not done his homework, number 1; number 2, was not credible; and number 3, could not state with a reasonable degree of certainty that his views were correct. And I can't recall the other points, but certainly Mr. Klingenstein was on for, I think, a day or a day and a half out of the eight days. So that was not to show anything about the violation of the permit per se or the violation of water quality standards per se.

Q Well, you were the lead counsel though at trial, right?

A That's correct.

Q But you can't give us any idea at all of the percentage of time that was spent in direct and cross on litigating that issue of the permit denial?

A Oh, I could if I went back and looked at billing statements.

Q But you don't recall just off the top of your head?

A It would have to be an estimate because the bills are not broken out in that fashion. You would have to look at the hours, and it would be very difficult to do; but certainly some estimate, I suppose, could be put together.

Q But not today off the top of your head?

A Not today, no, I would not attempt to characterize a percentage off the top of my head today. For example, you have to go back and look at the number of witnesses that we had to bring on to demonstrate that the Department of Justice was just palpably wrong with regard to Barefoot Bay and Carollwood. We had a witness from Hillsborough County and several other witnesses just to deal with Barefoot Bay and Carollwood's factual situation. I cannot tell you just again right at this moment what the percentage of time would be with respect to those witnesses, but they took a certain amount of time; and that had nothing really to do with the permit at Waterway Estates.

Q Okay. Thank you.

Mr. Baise, if you will assume for a moment that the company had successfully challenged the EPA's denial of the Waterway Estates '86 NPDES permit and received an NPDES permit through an administrative challenge. Sometime in the latter part of 1986 or 1987, let's say, that the company received the permit after successfully challenging the denial. In your opinion, do you believe that the EPA or the DOJ would have still filed a complaint against the company with regard to Barefoot Bay and Carollwood?

A You would have to ask EPA about that. The only thing I can tell you where I have challenged permits after

they have been issued, the agency has vigorously fought the challenge. I did that for two paper companies, and I would say the expense there was roughly equivalent to what the expense was here in this case.

When EPA makes one of these decisions, you have to realize this, that so many people are involved initially in just sort of passing on the decision. Then they do not want it known that they made a mistake, and as a result, there is a momentum that gets started in the agency that allows these unlawful actions to occur. As a result, no one wants to make a decision; and frankly, they feel much more confortable, is my experience, in letting a court tell them that they were wrong because, if it really comes out that they made a mistake, obviously that hurts them in their promotion activities at the agency. So, therefore, once one of these decisions is made, it's virtually impossible to get it reversed without going through either an adjudicatory hearing, is what you're talking about initially here, if the permit had been initially challenged, and then you have to take it up to an appeals level if you lose.

Q Okay. Thank you.

Let me direct your attention to your rebuttal testimony for a moment. If you will take a look at page 11. Starting on line 14 you're stating that, "The fact

that the government's action was unreasonable, without merit or unwise is not in itself adequate to demonstrate bad faith as defined by the law."

A I'm still trying to find my --

Q I'm sorry. Take your time. Let me know when you get there.

A I've got Mike Murphy's. I've got Tim Allen's, and I know mine is here.

Okay. Now I've found it. What page, please?

Q Page 11.

A Yes. Line?

Q Starting at line 14.

A Correct.

Q You state that, "The fact that the government's action was unreasonable, without merit or unwise is not in itself adequate to demonstrate bad faith as defined by the law," right?

A Right.

Q Do you happen to have a copy of the court opinion that was rendered in that case?

A No, I do not.

Q Okay. That was attached as Exhibit GHB-101, and I have a copy of it here if you will permit me to read from that court opinion.

A Sure.

Q On page 10 of the court opinion, the court states: "Although the Defendants herein may have been greatly frustrated by being forced to mount a defense to claims that were later found to be barred by res judicata, the court notes that such a reaction by the Defendant does not compel the conclusion that the United States litigated in bad faith."

And then the court goes on to say that, "Even when federal courts have determined that a party's prosecution of a claim was unreasonable," and then there is a footnote there citing you to a separate case, "or unwise and without great concern for his adversary so as to greatly frustrate him," and there again, another footnote to another case, "they have still found that such behavior is not bad faith and is not litigation undertaken vexatiously, wantonly or for oppressive reasons," and then another citation to a case.

And what we are trying to determine, based on a reading of the language of the court order and a reading of your testimony, you're saying that it's a fact that the government's action was unreasonable, in your case, without merit or unwise, and we --

A I am saying that, and what the court did not have the advantage of here is having us go into a hearing and discovery to show how oppressive that the action was by the

Department of Justice. My view is if you had -- if we had brought a Bivins Action, for example, against Mr. Jacobs and others in the Department of Justice and EPA, we would have brought out the kind of data to show that their actions were unreasonable and vexatious.

Q Okay. So you would agree then that that fact is actually your opinion and not a factual finding made by the court in that case, right?

A Well, without having the court's language in front of me -- Clearly it did not find that the action undertaken by the Department of Justice was in bad faith because we clearly had argued that. But my only point to you, just as a trial lawyer, is that the facts were never discovered and no actions were taken pursuant to a Bivins Action to really demonstrate the bad faith and vexatiousness of the government's action here. I mean clearly when you have a situation where there is not a scintilla of a doubt as proven by the lady herself and her supervisors that she broke the law, that she broke EPA's regulations, she didn't follow EPA's regulations, and you have her supervisors saying that he can find no reason why this action was taken and the government proceeds with its case, something is wrong.

Q Okay. But it's not your legal opinion, is it, that the court found, made a factual finding that the

government's action was unreasonable, without merit or unwise?

A Oh, no, the government -- Certainly the court didn't find that, no.

Q Okay. Thank you.

Now I want to direct your attention to your earlier deposition, your May 20th deposition. I think you said you have the transcript there?

A Yes, I do.

Q On page 10.

A Yes, I'm at page 10.

Q Starting at line 6 you're stating that you believe that even if the company had brought the improper denial to the EPA's attention that they would not have changed their position, right?

A I brought this matter to EPA's and the Department of Justice's attention in general terms as early as July or August or September of '93, I think. If you go back and look at my billing statements, my prefiled testimony, it states there that Mr. Berz and I have these meetings with Mr. Jacobs and are telling him, one, it's extremely rare to take a permit away. Now at that point we didn't have all of the facts, but we clearly put the agency on notice and its counsel early on that this case was unusual and that they should not be pursuing it with the vigor that they

were pursuing it at the time.

Q What about at the time that the permit denial was issued, if the company had brought that to the EPA's attention by way of challenging the tentative denial, do you think that the EPA wouldn't have changed their position anyway, it wouldn't have mattered?

A It wouldn't have mattered. You've got the facts in front of you. We brought this material to EPA's attention, albeit later. They would not change their mind. What on earth would give one any confidence that had you brought it to their attention in January of 1987 that they would have done anything differently.

Q So you think then that the EPA would have demanded that the company relocate the outflow line and meet the nitrogen and toxicity limits anyway, right?

A Well, that's a lot of speculation. All I can tell you is that we begged, we pleaded, we laid documents before the agency's counsel, before its Department of Justice lawyer, and you can read these as well as I can, and any reasonable person with an ounce of common sense would have said an egregious error has been undertaken here, and let's stop this action now, these folks have been wronged; and even when we did that, they would not act.

For example, let me just tell you a little

story. We brought to the agency's attention that one part of its complaint was just dead wrong, number 1; number 2, that the agency had failed to turn over in discovery a document to us, which we probably should have proceeded but, again, being sensitive to costs here, we didn't go after them for violating discovery rules. But one of our people found, I think in our own files, a memorandum that said we were using the correct toxicity measuring device. We brought that to the agency's attention, and for the longest time they would not take that particular count out of their complaint. It was their own document. These people were so hardheaded that it was impossible to get them to deal with facts. That's why this company was forced into the position it was forced into.

I don't know how you deal with a mule without crushing its skull when it refuses to go the right direction. Frankly, that's what we had to do, is crush this mule's skull because these folks would not listen to reason. They would not even pay attention to their own documents.

Q Well, if you think or if the company thinks that the challenge would have been futile anyway had they gone the administrative route, wouldn't it follow then that the alternative -- really the only other alternative other than to challenge the denial would have been to comply with the

EPA requirements, no?

A I don't know what you're talking about EPA requirements. At this point EPA requirements would be to shut the whole facility down, cease and desist. Mr. Jacobs made that very clear. Shut it down. He told Mr. Berz and me that on several occasions. Your mistake was not shutting this facility down immediately. That just showed the level of intelligence that we were dealing with.

Q To shut down entirely, not to relocate the outflow line or to make the advanced --

A Shut it down. Very clear. Shut it down in light of the Tyson's food case. That was the case cited to us.

Q Okay. Mr. Baise, can we take a moment or two to go off the record. I would like to confer with the staff just for a few minutes.

A Sure. You bet.

(BRIEF RECESS)

BY MS. GERVASI (Continuing):

Q Mr. Baise.

A Yes, ma'am.

Q Thank you for your patience. Are you ready to go back on the record?

A I am.

Q Okay. Getting back to what we were discussing about the permit denial and after the permit was denied.

At that point the company was faced with having to find some way to satisfy EPA, right, without shutting down the plant? Obviously it didn't want to shut down the plant, right?

A Obviously it did not want to shut down the plant. I think EPA didn't care what they did other than stop discharging upon the ending of the permit, so primarily the company's interest, since it dealt with the State of Florida as its primary permit holder, was to deal with the State of Florida rather than EPA.

Q So then in response to the EPA denial, the company proceeded to correct the situation by meeting the DEP's requirements?

A Not requirements. They went, as I recall, virtually immediately, within a month or two, to start talking to people at DEP about what was going on and how to resolve their dilemma.

Q And what they came up with was a decision to relocate the outflow line and upgrade to AWT?

A That's correct, and then resubmit later on, when they had all of their state requirements in place, an application for a new NPDES permit to be granted by EPA.

Q And the company expected that by making those upgrades and improvements that that would have satisfied the EPA as well as the DEP?

A I assume that that was their conclusion. I'd have to go back and look at the documents and see whether they were able to reach that conclusion at that point.

Q Now on page 6 of your rebuttal, starting at line 15.

A Yes, I'm on page 6.

Q Starting at line 16, you say an example -- I guess an example of this type of activity is an EPA administrative order, Number 89-109 and NPDES certification worksheets that are exhibits MA-9 and MA-77

A Correct.

Q Which directed the company to construct the treatment and other facilities necessary to relocate the effluent outfall and meet specific water quality standards?

A Correct.

Q Okay. Now one of the allegations of the complaint filed by the DOJ was that Waterway was discharging without an NPDES permit, right?

A Correct.

Q And EPA issued an administrative order in 1987, it was May 11th of 1987, if you'll bear with me, subject to check, setting a deadline of November 30th of 1988 -- excuse me, September 30th of 1988, to meet all the final requirements?

A Or cease discharging.

Q Okay. Isn't --
A At the point where they had been discharging, as I --
Q Correct.
A As I recall the language.
Q Okay. Isn't it true that the EPA issued the company an NPDES permit with an effective date of November 1 of 1989? Subject to check, does that sound right?
A I think that is correct. I know they applied for an NPDES permit to discharge in the new location and it eventually was granted.
Q Okay. But the penalties for discharging without a permit were set for the period beginning October 1st of '88, which was the day after the company missed the deadline of the administrative order and ending through October 31st of '89, which was the day prior to the effective date of that NPDES permit, correct?
A I believe that is correct.
Q And the amount of the penalties for discharging without a permit came to $15,525; does that sound right?
A No, you must be talking about a state matter there. 15 thousand does not ring a bell in the context of EPA.
MR. GATLIN: You know, whatever the court order says. I think it spells it out.

Q Okay.
A Yeah, I just --
Q Okay. But the company wasn't fined for discharging without a permit between the time the permit was denied at the end of 1986 and the September 30th '88 EPA deadline to meet all the final requirements; is that right?
A Well, they thought about doing that, but they ran into something called the statute of limitations.
Q Okay. So it didn't happen?
A Didn't happen. In fact, a case came down, I think, while we were still discussing this matter because Mr. Jacobs, as I recall, wanted to go back to January, whatever the date was, 1987, to start the counting; and we pointed out that there had been a new case saying that you can only go back five years.
Q So did EPA actually attempt to assess penalties for that period?
A I don't think so, but I -- No, I don't think so.
Q Okay.
A Because, again, the statute of limitations was in play.
Q Okay. Now the bulk of the penalties in the case related to Waterway for failure to meet the nitrogen and

toxicity limits -- excuse me, the bulk of the penalties related to Waterway, right, and that was for failure to meet the nitrogen and toxicity limits set forth in the new permit?
A When you are talking about the bulk of the penalties, I'm not sure where you are starting from. The bulk of the penalties related to, one, discharging without a permit and discharging in the wrong location. Now that's one penalty. The second one is the actual penalty applied by the court where I think you may be correct. Are you talking about the court's imposition of a penalty?
MR. GATLIN: Of the 309 thousand dollars; is that what we're talking about?
MS. GERVASI: Right.
A You're starting with the 309 thousand rather then the 32 million?
BY MS. GERVASI (Continuing):
Q Right.
A Okay.
Q And we are saying 264 thousand of that it appears related to Waterway for failure to meet the nitrogen and toxicity limits.
A The vast majority of that, as I recall, was, yes, nitrogen and toxicity; but even that is broken down because on some of those penalties, rather than to spend the

enormous amount of legal time it was going to take to blow those out of the water, we stipulated that we would accept, I think it was the thousand dollar penalty per charge.
Q Isn't it true that the failure to meet those limits was related to insufficient treatment of the wastewater, do you know?
A With regard to toxicity, the answer to that is no, because what we found out, and I believe Ms. Harless can testify to this effect, that the -- one, when you are dealing with toxicity, you are dealing with testing of undiluted effluent. That undiluted effluent often times has runoff from pesticides in it, and it would appear that when there was mosquito spraying in the area the facility would fail to meet its toxicity limits. And the effort it would have taken to have proven that would have been enormous, and we just felt that it was not worth the effort.
Q Okay. How about --
A The fact is that there were these exceedences of the permit both from toxicity and nitrogen.
Q Well, tell me about the nitrogen. Was that --
A With regard to the nitrogen, again, you had a secondary treatment plant that actually was operating virtually at what the experts call, I think, tertiary level. It was removing something on the neighborhood of

70% of the nitrogen. To get to an AWT facility you must be removing roughly, I think it's 93 to 95% of the nitrogen. A secondary or tertiary plant will not do that.

But again, we demonstrate to the court how well Florida Cities was operating this facility. And there was a period of time after the permit was issued that we were not through with construction to get to the AWT status. It was that period of time that the court fined us for, and my recollection is that we accepted the government's proposed penalty on that.

Q Isn't it true that most, if not all, of the nitrogen and toxicity violations occurred before Waterway completed the upgrade to AWT?

A I would say that's roughly correct.

Q Wasn't it the DEP's remedy for meeting the nitrogen and toxicity limits, the upgrade to AWT? Was that the DEP's remedy for meeting those limits?

A I wouldn't say it's a remedy. The company had decided for the plant to continue operating we would have to go to AWT limits. It was doing extraordinarily well under its present operation, but it couldn't get to this 90 some odd percent removal which is the requirement, I believe, under Florida statute that you must meet if you are going to have an AWT facility and discharge into a water of the State of Florida.

Q *Do you believe that the -- is it your opinion* that the erroneous denial of the 1986 NPDES permit is a mitigating factor for the violations which occurred several years after the permit was denied?

A Absolutely. They would not have had to have gone to AWT if they had not sought to expand the size of the plant, so there would have been no AWT violations nor any AWT requirement. In fact, Doctor Ahmadi testified to that fact in trial, that had they not moved to increase the size of the facility they could still be there discharging, let's say, a million 80 thousand gallons to this day without AWT requirements.

That's what this mistake caused. This goes back to your question to me earlier about the millions and millions of dollars that were wastefully expended here. In fact if there is a problem, it should be -- the problem should be leveled against EPA for causing this particular issue and the Department of Justice.

Q Mr. Baise, it's our understanding that the DEP was requiring relocation of outflow and upgrade to AWT for *all companies that were discharging into surface waters; is* that right?

A No, that is not correct. It was a policy -- and if you talk to Doctor Ahmadi about it, I think he will tell you, and I have read his deposition, but I can't say that

I've read it closely enough to quote him with respect to your question. It clearly was the policy to move the dischargers from canals out into the river. You have to, again, remember where this facility was discharging. It virtually is on the edge of the Caloosahatchee River.

Doctor Ahmadi told us initially that he presumed that this was what I would call part and parcel of the Caloosahatchee, and he did say that as a policy in 1988 they would like to move everybody out to the middle of the river. But in terms of being able to have required these people to have moved out in the middle of the river, as I looked at the Florida Statutes and regulations at the time, they could not have required Florida Cities to have done so. Whether they would have done so just as a matter of good policy and being a good neighbor, I can't answer. I would assume that they would have done so.

And to add one other point to that, you have to go back and look at what the facts were with regard to water quality standards of the Caloosahatchee River. It was assumed that there were water quality standards problems. We asked Doctor Ahmadi to go review along with our expert, Mr. Randy Armstrong, who used to be with DEP, and examine the data from the river and the canal to the extent that they had -- or that inlet I would call it rather than a canal -- examine the data over the last, I

believe it was ten years. They could not find any water quality violations created by this facility, and I believe Doctor Ahmadi's testimony at trial was they couldn't tell any difference in water quality standards improvement or disimprovement from the moving of this pipe 26 hundred feet out into the river or had it remained right where it was. They would not have been able to detect any lowering of water quality standards or improvement of water quality standards.

Q Okay. If you'll look, again, at page 6 of your rebuttal testimony.

A Yes.

Q That same sentence that I read to you a few minutes ago starting on line 15, that exhibit MA-7 which directed the company to construct the treatment and other facilities necessary to relocate the effluent outfall and *to meet the water quality standards*?

A Correct.

Q Is it your opinion that that particular certification worksheet was a DEP requirement that the Waterway treatment facility be upgraded to AWT?

A Particularly this document is a requirement, but had you not had the mistake made by Ms. Kagey and EPA, this would not have been required.

Q Do you happen to know when that document was

prepared?
A The NPDES certification worksheet?
Q Correct.
A No, I don't think I would know that.
Q Do you know why it was prepared?
A Generally NPDES certification worksheets are prepared to show that the activity in question is not going to harm water quality standards and fit within the wasteload allocation or the TMDL, total maximum daily load, allowed into the stream because you have a stream that can absorb so many pollutants. EPA wants to know that whatever action it's taking will not harm the state's water quality standard. The state is responsible for enforcing the water quality standards, even though that standard has been approved by EPA; so both parties have to work here in harmony to make sure the water quality is protected so that is what that certification worksheet is all about as I recall it. It certifies that the activity you have approved certainly is not going to hurt water quality and hopefully will help it.
Q Mr. Baise, are you pretty familiar with the Florida DEP policies and procedures with regard to requiring utilities to upgrade their wastewater treatment facilities?
A Let's say I am familiar. I wouldn't say I'm

pretty familiar with it.
Q Are you aware that DEP, the Florida DEP typically requires wastewater treatment upgrades through a consent order?
A I am familiar with that, yes.
Q Do you know whether it's true that the DEP can also require a treatment upgrade when a wastewater operating permit is renewed?
A They certainly could require it if water quality standards were being violated or permit conditions were being violated. Part of it would depend on what the TMDL study showed and the wasteload allocations granted in the area showed as to whether or not they could require an upgrade to a particular facility. I mean the agency cannot act arbitrarily and capriciously and just say we want you to upgrade without showing mathematically why that is required and what result is going to be achieved as a result of that upgrade. Now what happens practically is, as you describe it, they issue an order; and most people wanting to get along with the state agency go ahead and do what they want.
Q Isn't it unusual for the DEP to require a treatment upgrade through an NPDES certification worksheet?
A I wouldn't know whether it is or not.
Q Do you know whether the EPA typically requires a

more restrictive limitation on effluent discharges than the states would generally require?
A No. The State of Florida is much more stringent than EPA. Let me give you an example. With regard to these facilities, EPA only requires in secondary treatment what is called the 85% removal standard. Florida, I believe, is 90 or 95% removal standard, that's number 1. Number 2, most NPDES permits issued by EPA do not have a limitation in there for P&N, or phosphorous and nitrogen, at the levels Florida has.
You have in Florida something called the Grizzle Fig Act, which basically wants to get the discharges of phosphorous and nitrogen out of all Florida water. That was becoming so prohibitively expensive the state had to amend its statute to allow these facilities to do what are called minimum negative impact studies. If you could do a minimum negative impact study and show that you would not impact the stream, then you could discharge into a water of the State of Florida. If you could not get a successful MNI study completed, then you had to stop your discharging into a water of the State of Florida. So Florida's rules are much more stringent than the federal EPA's rules.
Q Okay. Well, isn't it true that even if the state does require a more restrictive limitation on effluent discharges than what EPA requires minimally that the EPA

will follow the state's lead on that and require the state's more restrictive effluent limitation?
A If the state has put an end to their permit, EPA wants to make sure the state enforces its permits, if that's what you're saying.
Q Okay.
A And often times EPA will just mimic the state permit where it has dual permitting authority as you have here in Florida.
Q But you said that the EPA's requirement was 85%?
A Their secondary treatment standard is 85% removal.
Q Wouldn't that percentage have required an upgrade to AWT anyway?
A No. No, this facility was doing actually much better than 85% removal of its BOD and TSS material, and as I said earlier with regard to P&N, it was something in the 70% range. And with regard to some of the pollutants being discharged from Waterway Estates, I believe the testimony was that this facility was getting upward of 92, 93% removal of the pollutants.
Q Okay. Thank you.
Mr. Baise, approximately how many cases have you worked on concerning violations of the Clean Water Act by a wastewater utility?

A You mean utility cases or how many water cases have I worked on?
Q By a wastewater utility.
A Well, I'm working on one right now. City of New Albany, Indiana. I've worked on one for the City of Ft. Wayne, Indiana. Wastewater utility questions were raised in something called the West Side Highway Project, but that went more to inadequate EIS than it did violations of the permit per se.
Q Did any of those cases go to trial?
A West Way went to trial. Ft. Wayne did not go to trial. New Albany is about to go to trial.
Q Ft. Wayne settled before trial?
A Ft. Wayne settled, yeah.
Q For the EPA's southern region, are you aware of any other cases which have gone to trial which involve violations of the Clean Water Act by a wastewater utility?
A I would not be aware of -- Oh, in the southern region?
Q In the southern region.
A Yes, the Smithfield Hams case we talked about the other day involved a wastewater treatment facility.
Q Is that the only other one that you know of that has gone to trial in --
A No, the Dean Dairy case involves a wastewater

treatment facility. That's another case I'm involved in. I'd forgotten about that one.
Q What case is that again?
A Dean Dairy.
Q Could you spell that, please?
A Yes. Just United States versus D-e-a-n Dairy Company, or it may be Fairmont Foods. I forget just how the caption is titled.
Q Okay. Thank you.
A That's in Pennsylvania. But the Smithfield Foods case is in Virginia which would be, obviously, considered part of the southern part of the country.
Q Is that in EPA's region 4, do you know?
A No, that's in region 3.
Q Do you know if there have been any other cases in EPA region 4 that have gone to trial concerning the Clean Water Act and the --
A I do not know personally of that, but I know that there are a couple of cities in Georgia where the same sorts of cases have been filed. I think Columbus, Georgia, is one. There is another community in Florida where a similar action has been filed. The City of Palmetto has been sued by EPA. I think it went to motions practice, but I don't know whether it went to trial. I don't think it did. I think it was settled on a motion.

Q Okay. Thank you.
When did it first become clear to you, Mr. Baise, that many of the DOJ's actions in this particular federal case that's at issue here was without merit?
A Well, I'd have to rephrase your question. It certainly was without merit from the very beginning when I looked at the memoranda that had been prepared by the Vile, Gotchall (phonetics) law firm and saw that EPA was seeking a five-million-dollar fine, so that was virtually immediately.
Q Okay.
A Secondly, you look at the discussions Mr. Berz and I had with Mr. Jacobs. In essence we were saying almost from the beginning this case is without merit and should be settled for roughly a couple hundred -- or 250 thousand dollars, whatever the amount was at that time.
Q So you informed the company that you believed that the DOJ's prosecution was not justified from the very beginning of your involvement?
A Well, almost from the very beginning. I kept asking the executives to produce documents for me which would deal with this zero wasteload allocation issue. I had a meeting with the executives, which should show up in my billing statement fairly early on where I asked them if they were aware of whether the company had violated any one

of the four requirements in the EPA federal regulations which would allow EPA to take the permit away, and to a person -- Both the executives and the operating people could not answer that question. They felt they had not violated the regulations as I read them to them, and that's what started us off on the wasteload allocation hunt because I was aware that EPA had been cutting corners with regard to how it dealt with wasteload allocations, but my feelings didn't make any difference. I had to prove, and my team put together the case that proved that EPA had never had a zero wasteload allocation approved for this particular facility.
Ms. Kagey, as you see from my testimony, relied on a two-page document which was a regional study conducted back in 1980 or '81, which had as its purpose to build a huge regional facility in that area. Once that facility was built, all of the smaller facilities, of course, would feed into that; and quite naturally, all of them would have zero wasteload allocations. As Doctor Ahmadi pointed out, as other EPA officials pointed out, this was nothing more than a planning study which was called for by section 201, I think it was, of the Clean Water Act, which I had been intimately involved in when I was in the agency.
So once I got it figured out that there was no zero wasteload allocation, then we started down the trail

of finding was there a wasteload allocation given to this facility? And as you know from your reviewing the record, and Doctor Ahmadi helped us considerably, we were able to prove that this facility had a wasteload allocation from, I want to say 1975 forward, because if you look at my questioning of Doctor Ahmadi when he was on the witness stand, I think I asked him every year from the time this facility first was authorized to operate, if it had had a wasteload allocation, and he repeated yes, just to drive the point home to the court that this facility had always had a wasteload allocation and it was authorized by the State of Florida. And of course the coup de grace was EPA had this facility's wasteload allocation in its own file and never looked at it.

Q When did you first inform the company or advise the company that it was your opinion that the DOJ's prosecution was not justified?

A I would have to say it was sometime in late '93 that I would have said I thought that probably was the case. I'm conservative enough I probably would not have said I can assure you that this is the case, but Berz and I would not have been making the statements to Jacobs that we were making unless I felt pretty strongly about my ability to prove these points. But clearly in 1994 we went off on this extraordinary effort to prove the theory I had of the

case. So I had to have told them, I would say, sometime late '93. But certainly at the very beginning I made it clear that I could not find any evidence that they were in violation of those four requirements.

Q Okay. Thank you. Sir.

MS. GERVASI: We have no further questions and appreciate your time.

Mr. Gatlin, do you have questions?

MR. GATLIN: I don't have any questions, and we would like to read.

MS. GERVASI: Okay. That should conclude the deposition then.

Thank you very much, Mr. Baise.

(WHEREUPON, THE DEPOSITION WAS CONCLUDED)

By: Timtothy Vaccaro, Esq.
Gerald L. Gunter Building
2540 Shumard Oak Boulevard
Tallahassee, Florida 32399

JOHN D. McCLELLAN,

called as a witness herein, having been duly sworn by the Notary Public, was examined and testified as follows:

MR. VACCARO: Okay. Mr. Gatlin, do you agree to the usual stipulations?

MR. GATLIN: Yes, I do.

EXAMINATION

BY MR. VACCARO:

Q. Okay. Mr. McClellan, I want to refer you to your rebuttal testimony.

A. All right. I have it.

Q. All right. Go to page 2 beginning at line 25, and go over to page 3, line 6. I believe you discuss what retroactive ratemaking refers to, correct?

A. Correct.

Q. What's the basis of your opinion there?

A. A lot of years of experience, in looking at the question, is about the only answer I can give you. In fact, I don't think I've ever seen a formal definition of it.

Q. So it's basically your opinion?

A. Yes.

Q. And you referred to no court orders or legal

opinions or anything of that nature?

A. That's correct.

Q. Okay. Let me take you to a hypothetical here. If Mr. Allen comes in in 1998 for a rate case for North Ft. Myers' wastewater system, let's say the books show the income reported below the line for 1990 to 1997, and that during the rate proceeding the Commission takes the utility books and discovers this income should be recorded above the line as operating income. Do you think it's appropriate for the Commission to accumulate that income for those eight years and reduce rates to the customer in the current proceedings?

A. Well, that's a tough question. I'll qualify my answer. Let's assume that the company had been running substandard returns all those years and adding this money back that would leave them in a more or less substandard return, then I believe the answer is, no, you shouldn't bother.

If you reverse the situation, my answer might be different. Assume, then, the submarginal result for that entire period is due to the below-the-line treatment of revenues in which the operating revenues were misclassified or misassigned or misrecorded. These revenues, had they been recorded properly, would have put the company into an excess earning position. Now I think

you're making a pretty good case for going back and looking at them.

Q. Can you repeat that?

A. Given those conditions where the company's earnings were actually excessive and whether the recording was deferred or not, I think that would be indifferent. If the recording hid that fact, I don't think that's important. I think the Commission would certainly have a rational basis for looking at that as something to be corrected, not being retroactive ratemaking because of the nature of the event. Now, obviously that's not an absolute. It is an off-the-cuff opinion given the right circumstances.

Q. Okay.

A. It's not one that's going to be popular with my client, I suspect. I think that certainly it's a rational thing to look at and I would not consider that. That's my first reaction to that, given the circumstances of those revenues having produced excess earnings that would have gone back presumably in reduced rates to the customers. For the Commission to go in and correct the past, I probably could not argue that to be retroactive ratemaking. I think I have to bow out of that one.

Q. Let me take you over to FASB 71, which you reference in your testimony. Is it correct that that has

no bearing, that FASB 71 has no bearing on regulatory assets relating to retroactive ratemaking or not?

A. That's absolutely correct.

Q. All it says is that the Commission allows the cost to be regulatory assets and they can be booked as such?

A. Yes.

Q. How can the utility system be reasonably assured a future recovery?

A. That requires a lot of judgment and looking at various conditions, and sometimes it's very elusive.

Let me give you an example where it would be questionable. Assume that the State of Florida has for the last 50 years -- no, that's too long -- the last 25 years has been allowing companies to defer and recover damages from a major catastrophic event, such as a hurricane, and there were no storm damage reserves. Okay? Assume a hurricane comes through and knocks out a big piece of downtown Miami. The company incurs a ton of costs in restoring the system which have to be expensed under normal accounting procedures, but because of the way the Commission has dealt with storm damages in the past, I think the company can make a very strong case for deferring those costs on the presumption of recoverability under the Commission's normal regulatory

process. I think that would be an easy case to sustain for accounting purposes.

Q. What if those expenses were not deferred? Do you think they would be able to handle coming in and asking for recovery like Florida Cities has done?

A. Right. To do that, I was talking about the accounting process on the front side. Adding a deferral treatment when it happens wouldn't convince me one way or the other as to recoverability. Now, if they could get an accounting order in advance, I think that would give you another factor to support the accounting process.

Q. Okay.

A. I'm not sure it would do you that much good from the ratemaking process, because all the accounting orders I've seen have been qualified as to the subsequent ratemaking treatment.

Q. Let me take you over to page 10 of your testimony. I may have something else for you after this. Hold on.

Florida Cities had written off its litigation costs above the line?

A. Yes.

Q. Do you think that made any difference as far as this proceeding is concerned?

A. I don't see it as having any impact. It

would not affect my opinion one way or the other.

Q. I'd like to take you over to page 10 of your testimony where you talk about the cost of service standards.

A. Yes. I have Page 10.

Q. Page 10. Could you please explain what the cost-of-service standard is?

A. Well, in fairly simple terms, it's to provide or to measure the cost of the prudently incurred cost of doing business and setting rates that would produce revenues that would give you a reasonable opportunity of recovering such costs. It's basically -- A cost-of-service standard is a measure of prudently incurred costs.

Q. Where can cost of service standards be found?

A. I'm not sure I could give you an authoritative definition out of textbooks. A lot that I've seen have been applied for the last 40 years.

Q. Have you seen any reference to that in either Florida statutes or Florida administrative codes?

A. I don't recall having seen it. I don't know whether it's there or not. I think the Commission Orders are probably full of it. I know they used to be. I know I've seen it in plenty of Commission Orders in years

past, in terms of cost of service it was using.

Q. Anything you can put your finger on at the moment?

A. No. I haven't seen Commission Orders now in a number of years. It's general regulatory standards. Cost of service is a term that's been coined to measure the process by which regulators have traditionally set rates.

Q. Let's talk about the Florida statutes again. Are you aware of anywhere in the Florida statutes where it indicates that regulated utilities allowed the opportunity to recover costs in maintaining a financially healthy system?

A. I'm not sure it's in the statutes. I think it's been a standard process for many, many years.

Q. Let me take you over to -- Bear with me for one second. I want to make sure I've got this right.

A. Okay.

Q. Let's go over to page 10 of your rebuttal testimony at the very bottom.

A. I have page 10.

Q. Go over to the next page where you say that "The regulated utility is entitled to an opportunity to recover all costs prudently and legitimately incurred in providing efficient, reliable service to maintain a

financially healthy system"; does that sound about right?

A. That's precisely what I said, yes.

Q. Despite my garbling of it.

A. You got the words right.

Q. Okay. In your preparation for this case, did you consider whether Florida Cities Management acted prudently in avoiding its exposure to litigation prior to the DOJ's initiation of its litigation?

A. Based on my understanding of the development and the conditions, I think it was absolutely necessary that they do so, and prudent, yes.

Q. You think that they did avoid that exposure?

A. Well, I have to assume so. I don't know the legal process. If you sue me for $100 million and I choose not to oppose you, I assume I'm giving up a fight and you're going to get $100 million from my pocket.

Q. What you're saying is, you believe it was prudent for them to litigate the matter or avoid being hit with that fine and --

A. As a layman, they had no real choice.

Q. Let me back up to before the DOJ initiated litigation to where we're still at the NPDES permit denial.

A. Go ahead. I'm shaky with that area, but I'll try and stay with you.

Q. Okay. Do you think that the management acted prudently by not challenging that permit development?

A. I'm not sure what the circumstances were. I don't know the details.

Q. Prior to the DOJ litigation, did you investigate anything regarding the action of management?

A. I've read a good bit of material that other people have discussed, but I didn't really focus on it. I focused mainly on the facts relating to the litigation.

Q. Okay. Let me ask you this. With the DOJ litigation, the EPA litigation, basically Florida Cities paid roughly a $309,000 penalty, did it not?

A. That's correct.

Q. That was a penalty dealing with the Clean Water Act?

A. I think that's correct. CWA stands out as part of the language, and I think that stands for Clean Water Act.

Q. I realize you're not a lawyer, but technically paying for that penalty, the penalty of the Clean Water Act, essentially that is paying for a violation of law, is it not?

A. I think that technically that's true. I'm speaking from my understanding, and that's the way I

understand it, in any event.

Q. Do you believe that Florida Cities cost of defending itself for violation of law is a legitimate cost incurred in providing reasonable financial service?

A. I think it depends upon the circumstances. Although, I understand the Commission rule has been pretty much where you have to defend yourself against something you're convicted of, it's pretty hard to get reimbursed for. I think that's a standard Commission position, but I'm not sure of it.

Q. Do you believe it's fair for the ratepayers to pay the company's cost of defending itself when it violates the law?

A. I think it depends on the circumstances. I don't think there's a blanket. No, there is not. I can certainly tell you the circumstances where there should not be.

Let me give it to you this way as a layman and not from a legal point of view. I think that it is a circumstantial condition and has to be measured by the circumstances. If the people running the company are stealing money from the company and they get put in jail and that's illegal, then I would have one answer. If the company was found guilty of technical violations of an abstract, obscure something that doesn't make any sense,

but the courts may say, "Yeah, technically you're wrong. Therefore, you pay $2," I don't see that being imposed as an improper or bad act. Even so, I think the Commission would disallow that also.

I've given you my understanding. Of course, I'm not an authority on this.

Q. Do you have a copy of your deposition from May 15th when the Commission staff deposed you?

A. Yes. I'll have to go through some of my papers to find it. I know it's here.

Q. I'll be happy to give you --

A. Yes, I have it.

Q. Look at page 16.

A. Page 16?

Q. Page 16, line 7. It's a few lines before that where --

A. Okay. I have it.

Q. I guess basically what your testimony here is, is that you agree that had the company been financing the original amount requested by the DOJ and gone into bankruptcy, that the shareholders would have lost their entire benefits. Is that a correct, reasonable assumption?

A. Correct, yes.

Q. Given that fact, would it be fair to say

that the shareholders would have been harmed as much or more than the ratepayers under that scenario?

A. I will admit that, without question, the shareholders would have been harmed.

Q. Isn't the basis of the company's request to recover litigation costs is the fact that the ratepayers would have been harmed because of the financial consequences would have cost --

A. Can you repeat the question?

Q. The basis of the company's request to recover the litigation costs is the fact that the ratepayers would be harmed because of the financial consequences, correct?

A. Yes, sir, but that's only part of it and there may even be a secondary part. It's a legitimate cost of doing business. It's legitimatized by the fact it avoids ratepayer damages.

Q. Okay. So it's legitimatized by the fact that it would avoid ratepayer damages?

A. It's necessary to maintain the system provided for a lot of reasons, but I think ultimately the issue is, is this a prudently incurred cost and is it a legitimate cost for recovery in the cost of service process? As to that qualification, that characterizes my answer, absolutely.

Q. Well, let me back up a couple questions. I believe you agreed that if the company had been forced to pay the original requested fine, that the company would have gone into bankruptcy and that would have terribly affected the shareholders.

A. I'm not sure I said that it would go into bankruptcy. If it did, it certainly would have had a deep financial impact, and that would hurt people, yes.

Q. We'll drop the word "bankruptcy" and we'll go with "deep financial impact."

A. Yes, I'll certainly go with that.

Q. All right. Given the potential for harm to the shareholders, do you think that it's fair for the ratepayers to pay approximately 94 percent of the litigation costs?

A. Yes, sir, because it's a cost of service. I think who benefits the most or least is a secondary issue.

It's like if I chose to have an extra meter reader or safety inspector. I have to incur a cost, but I can produce a legitimate argument that I should incur that cost to avoid problems on the system. I would agree that the shareholder benefits from all the expenditures, but that's not the reason I should recover the cost of providing that safety inspector. It's because of the

cost of doing business. Whether the shareholder benefits, I think, is totally indifferent. I think the shareholder does, but I don't think it has any impact on whether or not the customer's cost recovery is appropriate.

Q. Other than the reduction of penalties, what other costs were reduced to the customers?

A. Well, the costs that would have been reduced to the customers are whatever costs that would have been incurred. I don't know what the costs would have been. I think you have a combination of imposed or higher costs to do business. Pressure on maintaining system quality of doing business would permeate the system both financially, I think, and operationally. I can't give you an absolute on it.

Q. Well, let me ask you this. Is it your understanding that utility commissions do not typically allow recovery of fines and penalties?

A. I think that's generally true, but I don't really have -- I don't recall a lot of instances, but I would not be at all surprised if that's the case.

Q. If neither the penalty of $309,000 or a potential $5 million settlement is recoverable from ratepayers, is it rational or appropriate to use a nonrecoverable amount to determine how much the

ratepayers should absorb?

A. I think that's perfectly appropriate. If you read my prior deposition, I didn't agree with that process. That's what the company did, but if you're trying to share the cost to carve out the cost of litigation which might be tagged along with a fine itself -- I think there may be several ways to do it and that's certainly one way -- you take the non-allowable and the allowable and you get the ratio of the two and work from there. There are various mechanical ways to do it. What you are trying to do is carve out some relationship between the fine that they ultimately had to pay and the cost that might be related to that fine and conclude, as the company did, that we will not seek to recover the fine and, therefore, we will carve out costs.

I presume this is what they did, and that could be related to the fine itself. The cost we avoided was the $100 million or whatever the fine was. We avoided substantial penalties. We maintained our system. Those were necessary costs. They were incurred in the process of doing business, and the company is seeking that they should be recovered, and I agree with that.

Q. Let me ask you this. Florida Cities comes in and requests a recovery of roughly $3.8 million in litigation costs.

A. All right. I think it's 3.6, but you're close.

Q. Okay. It's been a long day.

A. Actually, it's less than that. It's 2.2, I think. Go ahead.

Q. That's right. Don't mind me. Let's just say that when we go to hearing on this, the Commission decides that not all of the actions on the part of the company were prudent and reasonable. Okay?

A. All right.

Q. If that were the case, let's say the Commission decides, for example, that the fact that the company did not challenge the NPDES permit as not prudent and reasonable, do you think under that circumstance that the shareholders should bear some of the burden of the costs being recovered? Is there another way to allocate this other than all or nothing at all?

A. The answer to the question is, yes, I think I can make a good case for that. I think what you have here is a two-tiered thing. First, you allocate the costs that relate to fighting the battle and the 2.2 or 3.6 million, whatever reference you want to use to determine that that's the cost related to the recoverable cost. Now you look at the prudency of that cost and for some reason it's determined only half was prudently

incurred, for whatever reason, I think you just made a case for not allowing half of it. Now we're in a prudency measure, and I think it's perfectly legitimate as a basis for disallowance once that condition is established.

Q. Okay. Give me one second to recap and look at these questions I've got here and see if there's anything else I want to ask you.

A. Sure. No problem.

MR. VACCARO: Well, I've got no other questions. Thank you.

MR. McLEAN: This is Harold McClean, M-c-L-e-a-n, representing Citizens of The State of Florida.

EXAMINATION

BY MR. McLEAN:

Q. Mr. McClellan, you kind of set up a hypothetical with an extra meter reader or an additional meter reader, wasn't that what you said?

A. Well, I started with that and shifted over to an additional safety inspector, but it's the same principle.

Q. Let's go with that additional safety inspector. You stated that that service would be in the

best interest of the ratepayers and of the stockholders, presumably, correct?

A. I think that would be true, yes.

Q. The fundamental issue is whether that additional safety inspector is an expense prudently incurred in the production of the utility service, correct?

A. Yes, sir, I think that's a valid measure. Let me make one qualification which you might not have picked up.

When I said the key is that that is secondary, I wasn't talking about the customer benefits. I was talking about the stockholder benefits. The system functioning well does benefit the customer. There's no question about that, but it also benefits the stockholder. Now, the key is to make a system function most efficiently. I don't look at who benefits the most, whether it's the customer or shareholder. Although, I typically would think the customer would benefit the most. That's secondary, but to me it's a matter of whether or not the cost was prudently incurred and was reasonable to maintain the quality of service, et cetera.

Q. I want to get my fingers around exactly what it is you bring to this case. Let me ask it this way. When Florida Cities Water Company declined to challenge

the administrative permit, was that prudent or imprudent?

A. -- I don't know enough about the circumstances to even guess.

Q. What you bring to the case is, they tell you that it is prudent and you believe that, correct?

A. Well, that's part of it. Now, I've also looked at a lot of actions involving the litigation itself. I've seen the claim, the challenge. It was explained to me what was involved, what they did to oppose it. I have concluded that you didn't have any choice. I may be dead wrong, but that's my conclusion.

Q. The NPDES permit, you don't make an opinion to the Commission as to whether that was prudent or imprudent, correct?

A. That's correct. I don't really know what went on there.

Q. In order for you to recommend whether the expenses which flowed from failure to make that challenge, if any, in order for you to make any recommendations to the Commission about that limited issue, then you have to rely on what other people at FCWC tell you?

A. I'm not making any recommendation that that may have been a good move or a bad move by the company. I don't know if that was imprudent or --

Q. You can make a mistake that's entirely prudent given the circumstances under which you had to make the decision, right?

A. You got it.

Q. What I want to get to is, are there issues, are there behaviors of the utility, are there actions taken, actions foregone, that you personally advised the Commission were prudently done?

A. Yes. The litigation and defending itself against the lawsuit brought by the DOJ. To me, the company's action and defending itself against that claim was not just prudent, it was critical. It was absolutely necessary.

Q. You could look at an individual pleading filed by Mr. Baise and tell the Commission that, indeed, expenses associated with that particular invoice were prudently taken?

A. Quite easily by avoiding a heavy fine or attempting to avoid a heavy fine.

Q. Every document in every action taken by Mr. Baise was apparently prudent, in your opinion?

A. I'm talking about the scope of the case. I can't go into any particulars.

Q. You have to rely on what Florida Cities Water Company's employees tell you on the specific issue

of prudence before you can draw any conclusion about whether the act is prudent; is that correct?

A. No.

Q. So you have entered into an independent judgment that the actions taken, each of them which resulted in 2.265 million dollars, were prudently undertaken?

A. You qualified farther than I told you. I can't tell you each of them. I don't know what each of them were. I can tell you that the action was necessary. If you tell me that you can prove that only 2.1 million was necessary and disprove .1 million, I can't quarrel with you. I don't know whether that .1 is prudent or not. I don't know what you're talking about.

Q. Although you don't know what the individual constituents are, you know that when added up, they amount to a prudent activity undertaken, correct?

A. The action was prudent. I presume the costs reported for that action are correct. Therefore, I concluded that the costs were correct. I think if you wanted to have an absolute on this, that you would have to have a detailed audit just like you would of a plant addition. If you ask me if some facility added was prudent, I would tell you yes, unless I do an audit of every dollar. But going into that facility, I can't

defend every dollar. That does not change my conclusion on the facility. This litigation is exactly the same way.

Q. I would like you to criticize an impression which I have come by or disagree with, if you care to. My impression is that Florida Cities Water Company has told you that they undertook a prudent defense and that you plugged "prudent" into your judgment and say if it's prudent then it should be allowed. You do nothing else; is that correct?

A. That's not correct.

Q. Let me make sure I'm clear on this. What else is it that you do?

A. What do you mean, what else do I do? I don't understand that.

Q. Well, the company says it's prudent. Did you say to them, for example, "I'm going to set that aside and determine on my own whether it's prudent before I bring a sworn opinion to the Commission"? Did you do that?

A. I'm not -- You got me in an awkward position. I'm not sure what you're asking. Let me tell you what I did.

The company called me and told me what they did. I did not ask them if it was prudent. They did not

tell me that it was prudent. The word never came up. I looked at the documentation of the things they did and the costs and the totals that they incurred. I accepted the total figure as being the right figure. I don't know that it is or is not. Whether or not it is or isn't -- My conclusion is that "These are the conditions that you faced. These are the costs that you spent. I'm accepting your measure of the costs as being accurate." Given these circumstances, I concluded that this is not only prudent, but it's absolutely necessary. If you want to build more into my word "prudent," then that's where I come down.

Q. Okay. Thanks. I want to go to the hurricane fund. You told Mr. Vaccaro that if a catastrophic hurricane hit Florida and if the utility came forward to recover its expenses from that period, from a prior period -- Do you understand that question so far?

A. Yes.

Q. You said that you could make a pretty good case for recovery. My question is this. Upon what would you rely on for that opinion? Let me change the question a bit. I don't think that's what you said. I think you said that a pretty good case could be made under FASB 71, but there was some probability of recovery?

A. That was my point, yes.

Q. I would like to know upon what you base that measure of probability, putting the storm damage reserve fund aside.

A. What do you mean by "putting the storm damage reserve fund aside"?

Q. Well, in your answer to Mr. Vaccaro, you were the one who said, "Let's forget about the storm damage reserve for the moment."

A. I recreated the conditions. I think they probably still exist in Florida Power & Light. For a long time they had separate reserves they provided in advance rather than recoveries in arrears.

Now let's move to Florida Power Corporation. I don't think they have storm damage reserves. I assume they don't. I may be wrong. If they had some storm that knocked out half of St. Pete that incurred major costs in doing that that were all applied to getting that system back up and running, they were normally being expensed under FASB 71. If we can make the case that there is reasonable probability of recovery, we can defer those costs for accounting purposes. Now we can go to the Commission and try to get them recovered.

If we don't defer them for accounting purposes, for whatever reason, let's assume that

accounting decides that there's not enough probability to record it, so under accounting procedures you can't do so. I don't think that affects the company's right to an opportunity to recover the costs. That's an accounting measure.

Q. Yes. There was another question that Mr. Vaccaro asked you, and I think the spirit of the question was: Do accounting procedures and the method of recording things dictate whether particular expenses are allowable and/or non-allowable, and I think you said it does not, the circumstances control that, right?

A. I need to correct the way you phrased that. I think you were trying to say it right, but you said it wrong.

Accounting procedures are dictated independently. If it's a capitalizable item that has benefits over future periods, then you can make a case for it under the accounting principles. If an expense is attributable to the period for accounting purposes, and that would be going out and repairing half your system, if you had to repair half the system and there were no capital additions for accounting purposes, there would be an expense for ratemaking purposes. You may conclude that you need to recover that expense over time for a variety of reasons.

As to big impact rates, you don't know what they are until you finish and on and on and on. For ratemaking purposes, you spread it over time.

Q. You also concluded that if not undertaken prudently, it was not to be recovered at all, right?

A. Certainly.

Q. How you make that determination is not determined by accounting procedures, how the company booked expenses or capital expenditures, whatever, but the circumstances would suggest to the Commission a judgment of whether it was prudently incurred in the production of electrical service to the public, right?

A. I think we agree on that, yes.

Q. Good.

A. Let's simplify the facts. Accounting does not set ratemaking, even if it's a uniform system of cost accounting. Accounting does not set ratemaking. Ratemaking does set the accounting.

Q. We hope so. With that in mind, I want to return to FASB 71. I thought I heard you say Florida Power Corporation does not have storm damage reserves if a catastrophic hurricane occurs. I thought I heard you say something along the lines that you can make a case for booking the expenses above the line because you can point to some probability of recovery. Did I say that

correctly?

A. No. No. I can make a case for deferring the expenses, capitalizing expenses for future recovery based upon the conditions in Florida where storm damage costs have been allowed for recovery. I can make a real good case for that, I think. In fact, I don't have to produce an argument on that one. It's so common.

Q. From that experience, can you support other instances where the Commission has permitted it?

A. I think, yes, that would be an easy one under the accounting rules to support. There may be others which would be less easy.

Q. The question that you're trying to determine is how to book it and not whether it was permissible; is that correct?

A. Absolutely. FASB 71 is only an accounting measure. It has nothing to do with the ratemaking recoverability. Well, let me say that differently. It does not establish ratemaking treatment. It will only establish accounting treatment, and accepted ratemaking treatment is one of the factors going into the establishing of the accounting treatment. It's like one of those one-way streets. Accounting does not fix a ratemaker. It's a prime example of -- Let me broaden this just a little.

There have been a number of instances in the state where under the accounting rules in the state that the companies have capitalized major costs. Nuclear plants, for example, are capitalized. The accounting system doesn't give you an alternative to cost recording. The Commission disallowed a lot of investment costs, and things like nuclear plants are deemed to be imprudent. The accounting did not assure the ratemaking on the front side. There was a presumption of recovery; therefore, it was capitalized. That's a primary example of generally accepted accounting principles, not FASB 71.

Q. Are you done, Mr. McClellan?

A. Yes, I think so.

Q. Thank you, sir. In those instances where the company capitalized nuclear plants, did they not have to figure to the penny how much nuclear plants would have cost?

A. Absolutely. They capitalized as they incurred. They would capitalize them and the accounting system provided for treatment as contrasted to expensing as they incurred the cost.

Q. It takes about 10 to 15 years to build a nuclear plant, doesn't it?

A. It takes a good 10 years.

Q. Do you know how much exactly it cost when

they began that process of capitalizing it?

A. No. The uniform system didn't give them an option.

Q. The question is this. Did they know how much it was going to be to the penny when they began to capitalize it 10 years before it came on line?

A. They did not know, and it made no difference if they knew or not. They could not capitalize the future cost. They could only capitalize the incurred cost. That's precisely what the accounting rules dictated; that's not what they chose.

Q. Did they go to the Commission and ask for AFUDC a full 10 years before they knew exactly how much the nuclear plant was going to cost?

A. I don't know of any such occasion. The uniform system required them to capitalize, and they did not have to get permission.

Q. My question is: Do you know whether they ever asked for AFUDC from the Commission a full 10 years before they knew exactly how much the nuclear plant was going to cost them?

A. The answer is, no, they did not ask for it. I think that's what I told you.

Q. Why is it that they did not ask for it?

A. Because they didn't know how much the

nuclear plant was going to exactly cost. It had nothing to do with the AFUDC. The AFUDC is accumulated on incurred costs to date. Under the Commission rules, when a company builds a plant for $100 or builds a plant and spends $100 this year and $100 the next year, during the time of the expenditures, the costs are incurred and they then capitalize another cost. The company does not go to the Commission and request authority to do that any more than they go to the Commission and ask for authority to capitalize the labor and materials. It's part of the cost of building the plant. It's based on known costs, not anticipated costs.

Q. According to your testimony, Florida Cities Water Company could not have come to the Commission and asked for recovery of these expenses because they did not know how much help they were going to need?

A. That's right. You can't ask for something if you don't know what or how much you need.

Q. Could they have asked for what they expected to incur in the future on the projected costs?

A. I don't know about the projected expenditures. Now, asking for what you're going to incur as a matter of deferring the cost, I'm not sure I've ever seen anybody do that.

Q. That's not my question. In 1993, if they

came in and said, "We would like to recover $300,000 a year to offset this legal expense which we are now incurring and anticipate we will incur for the next five years. We would like to have that money be held subject to bond when this case is eventually concluded," could they have done that?

A. I assume they could have.

Q. Thank you, sir. I have one last question. I'm going to set up a hypothetical for you.

If we were going to file a petition that asks for new rates to be set such that the excess monies collected during 10 years will be refunded to customers, do you have any problem with?

A. Yeah. You can't go back and reset earning levels in the past, I don't think. My definition of a retroactive rate is when you apply rates, current projected rates, to obtain or to return, in your case, revenues to offset prior period excess earnings, to me that is retroactive ratemaking. That's as clear a case as I can make for it.

Q. Your answer was no?

A. I think the answer is, I don't think you can claim that. I think that would be retroactive ratemaking. I don't recall how your question was phrased. I don't know whether it was a yes or no.

MR. McLEAN: I have no further questions.

MR. VACCARO: I have no questions.

MR. GATLIN: We would like to read.

(The telephonic deposition concluded at 12:30 p.m.)

JOHN D. McCLELLAN

STATE OF ARIZONA)
) ss.
COUNTY OF MARICOPA)

I, JENNIFER SMITH, a Notary Public in and for the County of Maricopa, State of Arizona, do hereby certify that the foregoing witness was duly sworn to tell the truth; that the foregoing 35 pages constitute a full, true, and accurate transcript of all proceedings had in the foregoing matter, all done to the best of my skill and ability.

I FURTHER CERTIFY that I am not related to nor employed by any of the parties hereto, and have no interest in the outcome hereof.

WITNESS my hand and seal this 4th day of August, 1998.

JENNIFER SMITH
Notary Public

My Commission Expires:
May 17, 2001

EXHIBIT NO. _____

DOCKET NO.: 971663-WS -- PETITION OF FLORIDA CITIES WATER COMPANY FOR LIMITED PROCEEDING TO RECOVER ENVIRONMENTAL LITIGATION COSTS FOR NORTH AND SOUTH FT. MYERS DIVISIONS IN LEE COUNTY AND BAREFOOT BAY DIVISION IN BREVARD COUNTY.

WITNESS: MICHAEL MURPHY-REBUTTAL

ON BEHALF OF: Florida Cities Water Company

DESCRIPTION:
1. Responses to staff's 2nd request for Production of Documents, No. 9.
2. Responses to staff's 2nd request for interrogatories, Nos. 40 and 47.

PROFFERING PARTY: STAFF

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 971663-WS EXHIBIT NO. 22
COMPANY/ WITNESS: Staff
DATE: 8-12-98

COMMISSION STAFF'S SECOND SET OF PRODUCTION OF DOCUMENTS
TO FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

9. According to PAA Order NO. PSC-95-1360-FOF-SU, issued on November 2, 1995, and Final Order No. PSC-96-1133-FOF-SU, issued on September 10, 1996, the United States Department of Justice (DOJ), on behalf of the United States Environmental Protection Agency (EPA), filed a civil action against the utility. Legal expenses relating to this lawsuit were incurred during 1992, 1993, and part of 1994. The legal fees were capitalized as part of an expansion project on the North Fort Myers wastewater treatment plant. During 1994, the utility began expensing all additional legal fees pertaining to this lawsuit and reporting them below-the-line. The Commission found that the legal fees should be consistently treated as a below-the-line expense item and removed from plant in service.

   a. Please provide us with all of the accounting entries in 1992, 1993, and part of 1994, when the utility capitalized the legal fees.

   b. Please provide us with all of the accounting (or reverse) entries in 1994, when the utility removed the legal fees that were capitalized in 1992, 1993 and part of 1994.

   Response: (MM)

   a. Legal costs capitalized in 1992, 1993 and 1994 were initially recorded in Construction Work in Progress (CWIP) (NARUC account 105) for North Fort Myers Wastewater when incurred; Cash (NARUC account 131) was credited. These costs were transferred from Construction Work in Progress to Utility Plant in Service (UPIS) (NARUC account 101) for North Fort Myers Wastewater. A summary of the accounting entries booked each year is as follows:

COMMISSION STAFF'S SECOND SET OF PRODUCTION OF DOCUMENTS
TO FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

	DEBIT	CREDIT
1992:		
CWIP (105)	$16,643	
Cash (131)		$16,643
UPIS (101)	$16,643	
CWIP (105)		$16,643

	DEBIT	CREDIT
1993:		
CWIP (105)	$91,628	
Cash (131)		$91,628
UPIS (101)	$91,628	
CWIP (105)		$91,628

	DEBIT	CREDIT
1994:		
CWIP (105)	$102,463	
Cash (131)		$102,463
UPIS (101)	$102,463	
CWIP (105)		$102,463

b. In December 1995, FCWC removed the legal costs that were capitalized in 1992, 1993 and 1994 from UPIS for North Fort Myers wastewater and reclassified them to Miscellaneous Nonutility Expenses (NARUC account 426)as follows:

	DEBIT	CREDIT
DECEMBER 1995:		
UPIS (101)	$210,734	
Misc. Expenses (426)		$210,734

COMMISSION STAFF'S SECOND SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

INTERROGATORIES

40. According to PAA Order No. PSC-95-1360-FOF-SU, issued November 2, 1995, and Final Order No. PSC-96-1133-FOF-SU, issued September 10, 1996, the United States Department of Justice (DOJ), on behalf of the United States Environmental Protection Agency (EPA), filed a civil action against the utility. Legal expenses relating to this lawsuit were incurred during 1992, 1993, and part of 1994. The legal fees were capitalized as part of an expansion project on the North Fort Myers wastewater treatment plant. During 1994, the utility began expensing all additional legal fees pertaining to this lawsuit and reporting them below-the-line. The Commission found that the legal fees should be consistently treated as a below-the-line expense item and removed from plant in service.

a. Why did FCWC capitalize the litigation costs incurred in 1992, 1993 and part of 1994, as part of the expansion project on the North Fort Myers wastewater treatment plant?

b. Referring to interrogatory No. 40a, above, why did FCWC cease capitalizing these litigation costs and begin expensing them below-the-line in 1994?

c. Referring to interrogatory NO. 40a, above, were the amounts capitalized subsequently written off below-the-line or are they still recorded in plant?

d. Referring to interrogatory No. 40a, above, if the amounts were written off, when did FCWC write them off?

Response: (MM)

a. At the time legal costs incurred were capitalized, FCWC was not aware that the actions would lead to a lawsuit. Therefore these costs were viewed as costs associated with expansion of the North Fort Myers wastewater treatment plant and capitalized as part of the cost of expansion much as the Company capitalizes legal costs associated with permitting.

b. When FCWC became aware that the civil action filed by the DOJ resulted in a lawsuit, litigation costs incurred thereafter were considered costs incurred relative to the suit and were therefore expensed beginning in 1994. These costs were expensed because the Company did not know the magnitude or the ultimate outcome of the litigation.

c. As a result of Audit Disclosure No. 2 by PSC Auditors and findings noted in Docket No. 950387-SU, Order No. PSC-95-1360-FOF-SU issued November 2, 1995, all of the litigation costs capitalized in 1992, 1993 and 1994 aggregating $210,734 were adjusted out of utility plant in service (NARUC account 101) to expenses below-the-line (NARUC account 426) in December 1995.

d. As noted in the answer to interrogatory question 40 c. above, the litigation costs capitalized of $210,734 were adjusted below-the-line in December 1995.

COMMISSION STAFF'S SECOND SET OF INTERROGATORIES TO
FLORIDA CITIES WATER COMPANY
DOCKET NO. 971663-WS

47. With regard to John D. McClellan's Deposition Exhibit No.2, in 1993 and 1994, FCWC expensed the same amount of the legal expenses incurred in Case Number 93-281-CIV-FTM-21 for both book and tax purposes. In 1995, why did FCWC begin expensing different amounts of these legal expense for book and tax purposes?

Response: (MM)

In 1993 and 1994 FCWC treated legal expenses for both book and tax purposes on an accrual basis. In 1995 the Company believed it was more appropriate to deduct legal expense on a cash basis for tax purposes rather than on an accrual basis, thus creating a book / tax difference.
