Trial court abused its discretion in denying motion for temporary injunction; DER established that samples taken from treatment plants revealed violations of effluent standards; that plant was being operated without necessary permit from DER; that irreparable harm would flow from continued effluent violations at plants; that it lacked adequate remedy at law; that it had clear legal right to relief requested; and that injunction was in public interest. State, Dept. of Environmental Reg. v. Kaszyk, App., (3rd) 590 So. 2d 1010 (1991).

Where appellant appealed from final administrative order entered by appellee denying its petition for formal administrative hearing, contending that DER's decision that driveway under consideration qualified for agricultural exemption to dredge and fill permitting process was final agency action from which appellant could seek formal administrative hearing under § 120.57, court agreed and reversed and remanded for further proceedings. Friends of the Hatchineha v. State, Dept. of Environmental Regulation, App., (1st) 580 So. 2d 267 (1991).

It is apparent that legislature intended that no fine, forfeiture or penalty should be exacted against any citizen for violation of any provision of act, or for damages flowing from any act of pollution, unless and until such person was granted either an administrative or judicial hearing to determine nature and extent of damage of penalty to be exacted, and that civil liability was limited to $5,000 for each offense. Gardinier, Inc. v. Florida Department of Pollution Control, App., 300 So. 2d 75 (1974).

Emphasis of Air and Water Pollution Control Act is upon prevention and abatement, and legislative scheme is primarily directed toward reestablishing livable habitat for man and not the abatement or elimination of industries and governmental units which are guilty of polluting environment. St. Regis Paper Co. v. State By and Through Florida Air and Water Pollution Control Commission, App., 237 So. 2d 797 (1970).

Section 370.08(10), Florida Statutes, does not authorize the Department of Natural Resources to issue permits which would authorize the placing of poisons, drugs or other chemicals into the marine waters of the state for any purpose other than that of authorizing the capture of live marine species. Op. Atty. Gen., 075-287, Nov., 1975.

Public prosecutors are authorized to prosecute violations of § 403.161(3) in proper courts, but there does not exist either authority to seek criminal relief before Board of Department of Pollution Control or authority for public prosecutor to institute action for civil penalties pursuant to § 403.121(1)(b). Op. Atty. Gen., 072-239, August 2, 1972.

Any information obtained by the Florida air pollution control commission or the state board of health (from any source whatsoever) which directly related to air pollution might be used as the commission or board might deem proper in controlling or preventing air pollution in accordance with the provisions of this chapter. Op. Atty. Gen., 060-136, Aug. 12, 1960.

Nature of liability

Provisions of Ch. 403, regarding determination of liability and imposition and enforcement of fines and penalties are penal in nature, and must be strictly construed in favor of those sought to be regulated or penalized. Gardinier, Inc. v. Florida Department of Pollution Control, App., 300 So. 2d 75 (1974).

Notice

Before penalties contained in F. S. § 403.161, the Air and Water Pollution Control Act, can be imposed and alleged violator is entitled to notice and hearing before Commission as provided in F. S. § 403.121; once due process safeguards are met and Commission has determined that one or more violations have occurred, it is then free to initiate complaint seeking judicial imposition of penalties. State, Air & Water Pollution Control Com'n v. St. Regis Paper Co., 257 So. 2d 253 (1971).

Under Air and Water Pollution Control Act, requirement that Commission give notice of violation is condition precedent to any institution of proceeding by Commission in court of competent jurisdiction seeking civil or criminal penalties where continuing violation is charged predicated upon usual normal daily operation of alleged violator's business. St. Regis Paper Co. v. State By and Through Florida Air and Water Pollution Control Commission, App., 237 So. 2d 797 (1970).

Public records

Records of results of sampling and analysis of vegetation, air, etc., in the files of the Florida air pollution control commission for the state board of health insofar as they relate directly to air pollution, constitute public records and would be open to the public, and such public records may be used in private suits against a company. Op. Atty. Gen., 060-136, Aug. 12, 1960.

Validity

Section 403.161(3) purports to impose criminal liability upon acts or omissions done entirely without intent. This is too broad a condemnation in this instance and must fall. Balance of statute is complete in itself and consitutionally valid. Hence only part of statute penalizing mere negligent conduct is declared

variances submitted under the Florida Electrical Power Plant Siting Act, the Florida Transmission Line Siting Act or the Florida Industrial Siting Act, which shall be granted or denied at the discretion of the Governor and the Cabinet.

(4) The Department shall publish notice of intent in the Florida Administrative Weekly. The petitioner shall publish such notice in a newspaper of general circulation in the area affected by the proposed variance. Notice shall be in accordance with Rule 62-103.150, F.A.C., and shall read substantially as set forth in Rule 62-103.150(3), F.A.C.

(5) An application for a variance or exemption, pursuant to Section 403.854, Florida Statutes, of the Florida Safe Drinking Water Act, shall be in accordance with Rules 62-560.510 and .520, F.A.C. The variance provisions of Section 403.201, Florida Statutes, do not apply to the Florida Safe Drinking Water Act or rules promulgated thereunder.

(6) Relief from Department rules may also be granted pursuant to other specific rules, such as, but not limited to, Rules 62-302.800, 62-4.243, 62-520.500, .510, and .520, F.A.C.

Specific Authority: 120.53(1), F.S.
Law Implemented: 120.53(1), F.S.
History: New 2-6-78; Amended 7-8-82; Transferred from 17-1.57 and Amended 6-1-84, Formerly 17-103.100.

62-103.110 Administrative Enforcement Actions.

(1) Notice of Violation.

(a) A notice of violation is an appropriate initial administrative pleading which may be issued by the Department when, after investigation, it has reason to believe that a person has, or is presently engaged in an activity in violation of the provisions of Chapters 403, 373, 376 or 253, Florida Statutes, or Department rules. Such notice shall be served on the respondent(s) by actual delivery to; service of process on, in accordance with Florida Rules of Civil Procedure; or by certified mail, return receipt requested; and shall identify the provision of law, rule, or Department permit alleged to have been violated, and shall include a brief statement of the facts constituting such alleged violation.

(b) A notice of violation shall be issued by the Secretary, Assistant Secretary or District Manager. Unless a responsive pleading and request for a Section 120.57 administrative hearing is filed within twenty (20) days after service of the notice, or as otherwise provided by Rule 62-103.090, F.A.C. (Informal Conference), the notice of violation, and the allegations contained therein, shall

become binding and final, and the right to an administrative hearing shall be deemed waived.

(2) Orders for Corrective Action.

(a) Orders for corrective action may accompany and be served with a notice of violation upon the alleged violator of provisions of law, rule, or a Department permit. The orders shall include a description of remedial action, with implementing time-table, which is required, and set forth any damages, costs of investigation, or other demands the Department is authorized by law to recover. Unless a responsive pleading and request for a Section 120.57 administrative hearing is filed within twenty (20) days after service of the notice, or as otherwise provided by Rule 62-103.090, F.A.C. (Informal Conference), the orders for corrective action shall become final and effective, and shall constitute a final adjudication of the matters alleged, subject only to judicial review under Section 120.68, Florida Statutes.

(b) Orders for corrective action, which constitute final agency action, shall be enforceable pursuant to Sections 403.161(1)(b), 403.131, 403.412, 403.860, and 120.69, Florida Statutes.

(3) Consent Order.

A consent order is a final agency order wherein all parties and the Department, by negotiation, have arrived at a mutually acceptable resolution of alleged violations of law for the purpose of achieving full and expeditious compliance with Chapters 253, 403, 373 and 376, Florida Statutes, and Department rules promulgated thereunder. A consent order, executed by all parties to an enforcement action, shall have the same force and effect as a final order entered by the Department after a formal Section 120.57 administrative hearing and the submission of hearing officer's recommended order, and shall be enforced in like manner. The Secretary, or his authorized designee, may enter consent orders, copies of which shall be served on all parties. If a notice of violation is issued, in accordance with Rule 62-103.110, F.A.C., no consent order shall be entered until ten (10) days after the filing of the notice.

(4) Where the preparation of documents in response to administrative enforcement action requires the practice of professional engineering or professional geology as described in Chapter 471 or 492, F.S., the applicable portions of such documents shall be signed and sealed by the professional(s) who prepared or approved them.

Specific Authority: 120.53, 403.0877, F.S.
Law Implemented: 120.53, 403.0877, 471.005, 492.102, F.S.

ATTACHMENT B

programs will be reviewed by Division staff for consistency of format and content.

The Department in association with the EPA will provide periodic technical training courses to district and local program personnel in order to maintain the basic skills and knowledge necessary to implement a strong regulatory program.

Enforcement

The enforcement of the regulations governing surface water discharges has long been a departmental priority. The following section outlines the enforcement strategy for violations of the Department rules regulating discharges to surface waters and a pretreatment program.

A. The Department has had a point source permitting system, equivalent to the federal NPDES program, since 1969. During this time a strong enforcement program has developed and is outlined in the Department Enforcement Manual. The manual contains a set of guidelines for the enforcement of permit effluent limits and receiving water quality standards under Chapters 62-4, 62-25, 62-28, 62-302, 62-600, 62-601, 62-604, and 62-660, F.A.C. Under the Department rules, enforcement can also be pursued against dischargers to groundwater. There are several enforcement actions or procedures that may be used by the Department. These include:

1. Warning Letters: Warning letters (similar to EPA Notices of Violation) and other informal correspondence, such as phone calls and Noncompliance Letters, may be used to inform the alleged violator of the problem and request its correction. These letters are an optional step and may be omitted for more serious cases.

2. Notice of Violation: These are official formal pleadings which are similar to EPA Administrative Orders. A Notice of Violation contains findings of fact, conclusions of law, and orders for corrective action (compliance schedule). A respondent may request a formal

administrative hearing under Section 120.57, F.S. If no hearing is requested or after a formal hearing is held, a Final Order, which is a final adjudication on the matters alleged in the Notice of Violation, is issued. The Final Order may be appealed to a district court of appeal for judicial review under Section 120.68, F.S. Civil enforcement of Final Orders will be instituted pursuant to Sections 120.69, 403.121, 403.141(1), and 403.161, F.S., if necessary.

3. Consent Order: The Department and the alleged violator may mutually enter into an agreement spelling out the corrective measures to be undertaken and penalties to be paid. Consent Orders are enforced pursuant to Sections 120.69, 403.121, 403.141(1), and 403.161, F.S.

4. Civil Action: The Department can institute civil actions in a circuit court of competent jurisdiction for violations of department rules, statutes, orders, or permits under Sections 403.121, 403.131, 403.141, and 403.161, F.S. The Department may seek temporary and permanent injunctions and civil penalties against alleged violators to enforce compliance with Chapter 403, F.S., or Department rules, orders or permits; or to prevent irreparable injury to human health, safety, and welfare caused or threatened by any violation.

5. Criminal Action: Pursuant to Section 403.161, F.S., the Department may seek incarceration and criminal fines for causing pollution that harms or injures human health or welfare or the environment; for failure to obtain a required permit and for violations of the terms and conditions of an issued permit; and for knowingly making false statements, representations, or certifications in required forms, reports, or other documents

For the Department to maintain a clear and consistent enforcement approach, enforcement records will show a clear trail of inspection or records review, immediate notification of deficiencies, and prompt correction of these deficiencies or an aggressive enforcement action. Department enforcement actions are initiated and administered in the Department district offices, with technical and legal support (Office of General Counsel staff) from Tallahassee, until the formal enforcement

stage is reached. Formal actions are jointly administered between the district offices and the Office of General Counsel.

Although noncompliance letters or other informal action may be appropriate for some violations, it is expected that Notices of Violation (NOV), followed by Final Orders or Consent Orders, will be commonly used for reportable noncompliance. In those instances where an immediate and substantial risk of harm to the health, safety, and/or welfare of the public exists, or a substantial environmental threat exists, emergency administrative orders, temporary injunctions, or civil suits will be used as required under 40 CFR § 123.27(1)(e). Since resources are limited and inspections cannot be made at facilities as frequently as desired, the Department must rely, wherever feasible, on the facilities to submit conclusive evidence to indicate compliance. The burden of submitting conclusive evidence of compliance is on the facility, and it may consist of any reporting, documentation, or demonstration necessary to sufficiently satisfy the Department and preclude enforcement actions.

An enforcement coordinator, located in Tallahassee, coordinates district personnel, legal, and technical support. Following NPDES program delegation, the enforcement coordinator will provide oversight and ensure enforcement program consistency. In addition, the enforcement coordinator will act as liaison between Department district enforcement personnel and EPA enforcement personnel involved in joint enforcement actions and enforcement program oversight activities.

B. Department Enforcement Process

Upon discovery of a violation, enforcement options are selected based on the severity of the violation and the past compliance history of the permittee. For extremely severe violations that pose an immediate and substantial threat to human health or the environment, the Department may issue a unilateral administrative order under Section 120.59, F.S., or file a petition for a temporary injunction, followed by a civil lawsuit for damages. For violations not requiring immediate

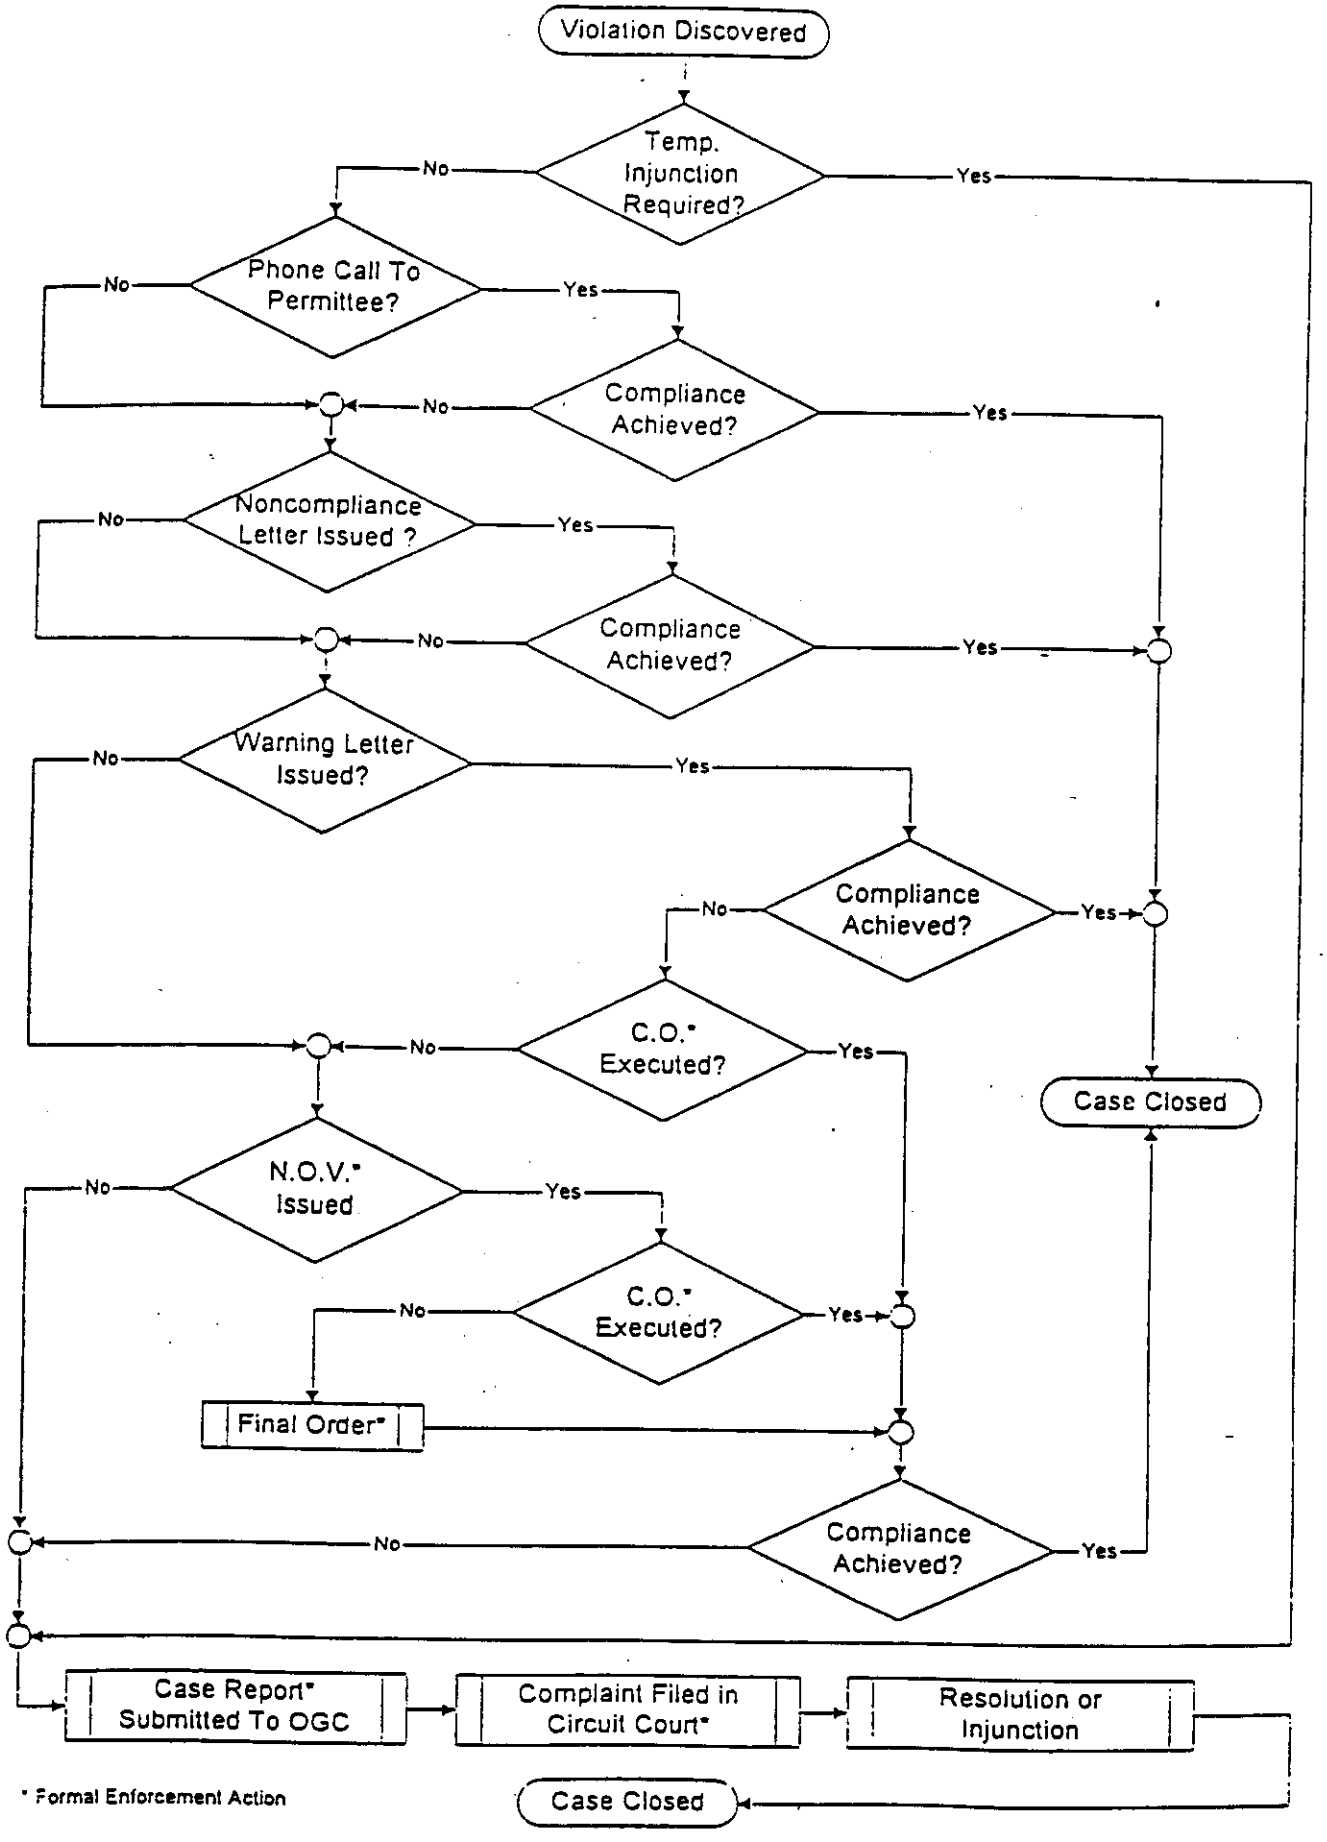
injunctive relief, a less formal approach is taken. For common minor violations, a phone call or noncompliance letter is used to notify the permittee of the noncompliance and request corrective action. If compliance is not achieved within the specified time frame (usually 30 days), a warning letter is issued. A typical warning letter gives the permittee 15 days to return to compliance or negotiate the terms for a Consent Order (CO).

If compliance is not achieved within the 15 days or a CO is not agreed to, a Notice of Violation (NOV) is issued. If compliance is not achieved according to the orders for corrective action, or if a CO is not entered, a Final Order is issued. The time lapse between the issuance of an NOV and a Final Order depends upon the response by the violator. Under Chapter 120, F.S., the violator may request an administrative hearing to adjudicate the issues raised by the NOV.

When requested, an administrative hearing under Section 120.57, F.S., is conducted by the Department of Management Services, Division of Administrative Hearings. The hearing schedule is set by the Hearing Officer assigned to the case. Upon completion of the hearing, receipt of a transcript if requested, and filing of proposed recommended orders, the Hearing Officer will submit a recommended order to the Secretary. The Secretary will issue a Final Order. The Final Order may be appealed to a district court of appeal for judicial review. If the violator challenges the authority of the Department to promulgate the rule which has been violated, a different type of hearing is held by the Division of Administrative Hearings. The violator may also raise a constitutional issue which is not within the purview of the Division of Administrative Hearings and which must be adjudicated in a circuit court of competent jurisdiction.

The majority of violations are resolved directly through informal actions or Consent Orders. Figure B-18 outlines the current Department civil enforcement process.

Figure B-18 FDEP Civil Enforcement Process



of the Florida Administrative Code authorize the Department to modify or revoke permits.

10. AUTHORITY TO ENFORCE THE PERMIT AND THE PERMIT PROGRAM.

State law provides authority to:

a. Abate violations of

(1) Requirements to obtain permits;

(2) Terms and conditions of issued permits;

(3) Effluent standards and limitations and water quality standards (including toxic effluent standards and pretreatment standards applicable to dischargers into publicly-owned treatment works); and

(4) Requirements for recording, reporting, monitoring, entry, inspection, and sampling;

b. Apply sanctions to enforce correction of violations described in paragraph (a) above, including the following:

(1) Injunctive relief, without the necessity of a prior revocation of the permit;

(2) Civil penalties;

(3) Criminal fines for willful or negligent violations; and

(4) Criminal fines against persons who knowingly make any false statement, representation, or certification in forms, notices, reports, or other documents required by the terms or conditions of any permit or otherwise required by the state as part of a recording, reporting, or monitoring requirement; and

c. Apply civil and criminal penalties and fines comparable to the maximum amounts recoverable under section 309 of the CWA or which represent an actual and substantial economic deterrent to the actions for which they are assessed or levied. Each day of continuing violation is a separate offense for which civil and criminal penalties and fines may be assessed.

FEDERAL AUTHORITY: CWA ss. 402(b)(7), 309, 304(a)(2)(C), 402(h), 504; 40 CFR ss. 123.26 and 123.27.

FLORIDA AUTHORITY:

ss. 120.69, 403.061(8), (14), and (31), 403.0885, 403.121, 403.131, 403.141, 403.161, Fla. Stat. (1993).

Rules 62-103.110, 62-103.190, Fla. Admin. Code.

REMARKS:

Sections 403.121(1) and (2), 403.141(1), and 403.161(2), (3), (4) and (5) of the Florida Statutes satisfy the federal enforcement requirements by authorizing the Department to seek penalties in a court of competent jurisdiction for each statutory offense for each day of violation. The Department directly seeks civil penalties and has authority to refer alleged criminal violations to the appropriate State Attorney to prosecute criminal offenses and obtain fines. Further, the Department General Counsel may be deputized by the appropriate State Attorney to appear in court and prosecute environmental crimes under chapter 403 on behalf of the State. The Department is not required to prove that a discharge causes pollution before bringing an enforcement action under Section 403.161, F.S. Section 403.161(1)(b) of the Florida Statutes provides that it shall be a violation of Chapter 403 and it is prohibited for any person to fail to obtain any permit required by Chapter 403 or by any rule. See Rule 62-620.300(1), Fla. Admin. Code. Therefore the Department need only show that a discharge will occur or has occurred in order to bring an enforcement action.

Finally, there is no conflict between section 403.085(2) of the Florida Statutes and enforcement provisions in sections 403.121 through 403.161 of the Florida Statutes. Section 403.085(2) is an outdated statute which provided for a penalty for sanitary sewage treatment plants which did not meet requirements deemed necessary by the Department by January 3, 1974. This statute does not preclude the Department from presently applying enforcement requirements in

sections 403.121 through 403.161, F.S., against such facilities.

11. PUBLIC PARTICIPATION

State law provides for adequate public participation in state enforcement proceedings. Under section 403.412(2) of the Florida Statutes, any citizen of the state may initiate an action for injunctive relief in circuit court against the Department and/or any alleged violator of pollution control laws or Department rules. State law allows intervention in any pending state enforcement proceeding by any citizen of the state. See Rule 1.230 Fla. R. Civ. P. Under sections 403.412(5) and 120.57(1) of the Florida Statutes, any citizen of the state or any substantially affected person may initiate an administrative proceeding or intervene in any Department administrative proceeding. See Rule 60Q-2.010, Fla. Admin. Code; Manasota-88, Inc. v. Department of Environmental Regulation, 441 So. 2d 1109 (Fla. 1st DCA 1983).

State law provides for adequate public participation in state permit proceedings. The Florida statutes allow the permit applicant, any substantially affected person or any citizen of the state to initiate a challenge or intervene in a challenge to a proposed Department permit decision. See Sections 120.57(1) and 403.412(5), Fla. Stat. (1993). Under sections 120.57(1) and (2) of the Florida Statutes full due process is accorded any person that files a petition for hearing and meets the applicable statutory criteria. The final decision under a section 120.57 administrative proceeding is subject to judicial review under section 120.68 of the Florida Statutes by a district court of appeal. This review is appellate in nature and the standard of review is governed by section 120.68 of the Florida Statutes and the Florida case law construing that section. Under section 403.90 of the Florida Statutes, a permit applicant affected by final agency action may initiate an action in circuit court for inverse condemnation. This statutory section allows the affected party to bring an inverse condemnation action without first having to exhaust available administrative remedies. See s. 403.90, Fla. Stat. (1993).

MEMORANDUM

TO: Don Scroggin and Gary Baise

FROM: Liz Poliner

DATE: July 7, 1995

RE: FCWC: Possibility of Bivens Claim

You have asked me to research whether Florida Cities could bring a Bivens-type action against individual EPA employees for their wrongful denial of an NPDES permit at the Waterway Estates site. This memorandum summarizes my preliminary research. I'm communicating my preliminary findings because it seems to me certain threshold matters may block such a claim. I would like to discuss these matters with you before doing more work on this issue. I emphasize the word "preliminary" because research regarding this type of action involves several complex constitutional sub-issues that should be more thoroughly researched should we decide to move forward.

1. Statutory Remedy

A Bivens claim recognizes a cause of action for private damages for unconstitutional conduct committed by a federal official acting under color of law. Bivens v. Six Unknown Named Agents of Federal Bureau of Narcotics, 403 U.S. 388 (1971). In addition to the threshold matter of there being a constitutional right in violation, a Bivens action cannot be sustained where an alternative means of obtaining redress exists. Stephens v. HHS, 901 F.2d 1571, 1577 (11th Cir.), cert. denied, 498 U.S. 998

(1990). Because the Clean Water Act (CWA) provides for judicial review of the agency's denial of a permit under CWA Section 509(b),[1] I want to discuss this issue first; it strikes me as the most serious initial hurdle.

In Schweiker v.. Chilicky, 487 U.S. 412, 413 (1988), the Supreme Court foreclosed additional remedies for alleged constitutional violations where "Congress has provided what it considers adequate remedial mechanisms for constitutional violations that may occur in the course of its administration." The Eleventh Circuit has followed Chilicky holding that "where a government program suggests that Congress has provided for adequate remedies for the constitutional violations that may occur in the course of the program's administration no additional Bivens remedies have been created." See Stephens, 901 F.2d at 1577; Todd v. Richards, No. 94-0377-CIV-ORL-18, 1995 U.S. Dist. Lexis 3561 (M.D. Fla. March 13, 1995); Rosado v. Curtis, No. 94-0059-CIV-ORL-18, 1995 U.S Dist. LEXIS 3241 (M.D. Fla. Feb. 27, 1995).

In Middlesex Country Sewage Authority v. National Sea Clammers Assoc., 435 U.S. 1 (1981), the Supreme Court held that there is no private right of action under the Federal Water Pollution Control Act (FWPCA) because of the existence of express

---

[1] This provision reads: "Review of the Administrator's action . . . in issuing or denying any permit . . . may be had by any interested person in the Circuit Court of Appeals of the United States for the Federal judicial district in which such person resides. . . . Any such application shall be made within 120 days from the date of such determination.

statutory remedies of judicial review under Section 509(b) and citizens suits under Section 505. Likewise, in Consolidated Edison v. N.Y. Dept. of Environmental Conservation, 726 F. Supp. 1404, 1409 (S.D.N.Y. 1989), the court ruled that there was no private right of action under the CWA.

When the Chilicky and Middlesex County holdings and their prodigy are taken into account, it seems likely that in an attempt to bring a Bivens claim Florida Cities would have to confront the argument that the CWA provides for judicial review of the permit denial in question and this review forecloses other private remedies for possible constitutional violations that occurred in the permit denial process. It seems to me that Florida Cities may not be able to overcome this hurdle and explain why it did not seek judicial review when it could have.

2. Constitutional Violation

The other threshold matter in raising a Bivens claim is the need to demonstrate a constitutional violation. My assumption is that Florida Cities would argue that its constitutional claim is a fifth amendment claim whereby either a deprivation of property or liberty has occurred without due process of law.

The matter of any deprivation occurring without procedural due process of law is discussed above. Again, I'm not sure how Florida Cities could argue it lacked due process when the statute itself provides for judicial review and the company did not take advantage of that review.

Still, assuming for purposes of argument that the company

got around this problem, it would have to demonstrate that it had a property or liberty interest at stake. My sense is that this, too, would be hard to establish.

To claim that the permit amounted to a property interest Florida Cities would need to demonstrate a "concrete entitlement secured by independent sources of law," i.e., sources outside of the Constitution itself. Bank of Jackson County v. Cherry, 980 F.2d 1362, 1367 (11th Cir.) cert. denied, 114 S. Ct. 71 (1993) (holding that a bank has no right to continued participation in a federal agricultural loan program). See also, Marine One, Inc. v. Manatee County, 898 F.2d 1490 (11th Cir. 1990) (holding that Florida law did not create a property right in a permit to perform activities on public land). But see Reserve, Ltd. v. Town of Longboat Key, 17 F.3d 1374 (11th Cir. 1994) (holding that a private landowner has a property right in a building permit "where the landowner possess a building permit and where the circumstances that give rise to the doctrine of equitable estoppel are present").

Nothing in the CWA speaks of a permit being a vested right or an entitlement. Moreover, Florida law makes clear that environmental permits are not vested rights. Specifically, Fla. Stat. Section 403.087(6), regarding permits for "a water pollution source" states that "a permit issued pursuant to this section shall not become a vested right in the permittee." Though the permit in question in the present case was to be issued by EPA and not the Florida DEP, this provision

nevertheless may indicate which way a Florida court will lean in determining whether a water discharge permit constitutes a property right.

As far as a liberty interest goes, there is the possibility that Florida Cities could argue that the denial of the permit affected its liberty interest in its reputation. However, to support such a claim Florida Cities would have to demonstrate a stigmatizing allegation, the dissemination or publication of that allegation, and the loss of some tangible interest due to the publication of the stigmatizing allegation. Bank of Jackson County v. Cherry, 980 F.2d at 1367. Again, my sense is that we do not have the facts to support such a claim. Other than a liberty interest in reputation, I'm not sure what other kind of liberty interest Florida Cities could argue for. I'd be interested to hear your ideas on this issue.

To the degree that Florida Cities is interested in a substantive due process argument, i.e., that the standard under which the permit was denied was arbitrary, unlawful, or discriminatory, it seems that the company would still have to face why it did not take advantage of the judicial review procedures where such concerns could be raised.

3. Defense of Government Immunity

Should Florida Cities make a Bivens claim, it can reasonably expect that the government officials in question would raise the defense of their qualified immunity from suit. This immunity was established in Harlow v. Fitzgerald, 457 U.S. 800, 818 (1982),

where the Supreme Court stated that government officials performing discretionary functions are generally shielded from liability for civil damages insofar as their conduct did not violate clearly established statutory or constitutional rights of which a reasonable person would have known. The court went on the state that the protection of the qualified immunity extends to all but the plainly incompetent or those who knowingly violate the law. See also Jordan v. Doe, 38 F.3rd 1559, 1565 (11th Cir. 1994) (quoting Harlow). In Childress v. Small Business Administration, 825 F.2d 1550, 1552 (11th Cir. 1987) the court explained that the contours of the rights must be sufficiently clear such that a reasonable official would understand that what he is doing violates that right, and that the relevant question is "the objective one of whether the officials could have believed their actions to be lawful in light of clearly established law and the information they possessed" (citing Anderson v. Creighton, 107 S. Ct. 3034 (1987)).

Thus, in addition to the issues of establishing a constitutional violation and confronting why Florida Cities did not seek judicial review of the permit denial when it could have, the company can also expect a defense of government immunity whereby the company would have to establish that the employees in question were either incompetent or knowingly violating a clearly established law. Perhaps Florida Cities feels it can establish incompetency. Nevertheless, such an argument is by no means incontrovertible.

MEMORANDUM

DATE: August 9, 1995

RE: Florida Cities: Review of Cases on weather NPDES Permit Supersedes Administrative Order

I've reviewed the cases you suggested that I read regarding whether an NPDES permit supersedes an administrative order and I have some thoughts on them.

It seems to me that Hawaii's Thousand Friends v. City of Honolulu, 821 F. Supp. 1368 (D. Ha. 1993), is distinguishable from our case. In Hawaii, the court ruled that because under CWA Section 1211(i)(1) POTWs had to meet secondary treatment effluent limitations by July 1, 1988, the contents of a 1995 administrative consent order between the city and the DOH (the state environmental agency), providing for lower effluent limitations than the secondary treatment limitations, could not be in effect after the statutory July 1, 1988 deadline. In effect the court ruled that the statute supersedes the consent order, not that the NPDES permit supersedes the consent order. See Id. at 1377 (paragraph 70) and 1393 (paragraph 37). To the degree that the AO in our case does not include provisions that violate the statute, as an extension of the AO did in Hawaii, our case is distinguishable. I think that we can argue that it's not clear how the Hawaii court would have ruled on the authority of the DOH to lower the effluent by a consent order if there had been no statutory conflict. Do you agree?

I understand that in Hawaii, the city could have been liable simply because it violated its NPDES permit. However, the court did not make its determination about the invalidity of the consent order on the ground that the permit superseded the consent order but rather on the ground that the consent order, beyond July 1988, violated the statute.

I also think that Citizen's for a Better Environment-CA. v. Union Oil Co., 861 F. Supp. 889 (N.D. CA 1994), is distinguishable. In that case the court ruled that "an administrative enforcement action by a state agency charged with enforcing the CWA that purports to extend a deadline specified in an NPDES permit for complying with the permit's discharge limits does not serve to suspend the permit's deadlines such that they may not be enforced through a citizen suit" (emphasis added). Id. at 903. In other words, the case speaks to the question of whether citizen suits can be maintained where an agency has extended a permit compliance deadline via an AO, and leaves open the question of whether an agency can sue for violation of a permit under these circumstances.

In discussing this issue, the court noted that under the CWA EPA can authorize extended compliance schedules in the course of compliance actions, and under state law the California state agency can do the same. Id. at 902. The court then asked:

> If such extended compliance schedules do not suspend the effect of limits and deadlines contained in NPDES permits such that the permit terms may still be enforced against the polluter through citizen suits, then what good are compliance actions and what meaning do their extended timetables have?

Id. (emphasis added). The phrasing of the question, zeroing in on enforcement through citizen suits, affirms a narrow reading of the case. Moreover, the court answered that "such orders constitute agreements by the issuing enforcement authority on how the authority--be it EPA or a state agency--plans to exercise its prosecutorial discretion." Id. Thus, even though such extensions within administrative orders do not act as shields against citizen suits, they nevertheless "serve a meaningful role in the CWA enforcement scheme." Id.

Perhaps we can use this language favorably. In other words, in our case, where EPA arguably authorized through an administrative order an extension of the deadline to comply with the latest permit terms, wasn't it making "an agreement" on "how it plans to exercise its prosecutorial discretion?" This strikes me as a de facto estoppel argument--what we've been looking for all along--but without the notorious, ineffective word "estoppel," and with the backing of precedent, to boot.

I also think that our case is distinguishable from Washington Public Interest Research Group v. Pendleton Woolen Mills, 11 F.3d 833 (9th Cir. 1993), which is cited in the Union Oil. Id. at 903 n.10. There, the court ruled that a citizen suit was not barred by CWA Section 309(g) because of a prior EPA enforcement compliance action that included an extended compliance schedule. The court concluded that such a bar would not be triggered unless EPA had conducted an administrative penalty action. Id. Again, the holding speaks to whether

citizen suits can be maintained under these circumstances. The holding did not address the issue of whether EPA, which granted the extension, could then turn around and sue for noncompliance of the permit.

U.S. v. Metropolitan District Commission, 23 ERC 1350 (D.Ma. 1985) strikes me as more troublesome, since it does involve a case where EPA is suing, but even here there seem to be points of distinction. First, with regard to the consent orders in question (a 1980 order and a 1994 order, both of which provided for effluent limits below those designated in the permit and both of which were drafted by EPA, the plaintiff in this case), language exists that indicates that the AOs are not meant to replace the permit. Specifically, the 1984 AO states: "compliance with such interim requirements, however, does not amount to compliance with the MDC's permit of the CWA and shall not preclude additional enforcement action by EPA. Any language in the August 9, 1980 Administrative Order which could be read as an authorization for the MDC to violate its permit or the CWA is rescinded."

The court further held that the 1980 AO, like the 1984 AO, did not "allow" the facility to violate its permit. It seems to me that in reaching this result, the court is stretching some. Indeed, the clause quoted above, included in the 1984 AO, indicates quite plainly that according to EPA the 1980 AO could very well have been taken to mean that up until the issuance of the 1984 AO, complying with the 1980 AO's terms, and its terms

alone, even if they differ from the permit, would be okay. As I read the court's opinion, it seems to me that the court is saying that the 1980 AO did not grant the facility the right to "indefinitely violate the limits set by th[e] Permit" (emphasis added). The court focussed on language in the 1980 AO that revealed that it was part of an effort by EPA to get the facility, ultimately, into compliance with the CWA. Thus, the court disagreed with the defendants who, in the court's words, "would remake what was patently a sword to compel compliance into a shield to protect themselves from liability."

In short, it seems that the court is arguing against the view that the 1980 AO indefinitely provided for a legal way to avoid the permit conditions. Nevertheless, while its terms were in effect, the 1980 AO stated that the defendant was to comply with a detailed implementation schedule meant to "bring all discharges of wastewater/stormwater into compliance with the act and with the interim effluent limitation set forth in the 1980 AO." Again, I would urge a narrow reading of the case, one that would grant the facility the right to be in compliance with the 1980 AO while its implementation schedule was in effect, but one that wouldn't protect the facility indefinitely from noncompliance with the permit. Interestingly, the violations noted in the back of the case include violations during the period of the 1980 AO, but the case makes clear that the defendant's self-monitoring reports revealed violations of both the permit and the 1980 AO. This factual finding leaves open the

question of how the court would have ruled on violations of the permit, but not of the 1980 AO.

In our case we have an AO that states plainly that it should not be considered a permit and that the order does not prevent further enforcement by EPA. This language unfortunately opens up the argument that EPA has made its prosecutorial intention clear, at least insofar as it never agreed not to engage in further enforcement. Nevertheless, our facts differ from the case above. In our case we have compliance with the AO, but violation of the newer permit. As mentioned above, it isn't clear that the Metropolitan court would have gone so far as to find liability in this situation and perhaps something could be made of this distinction.

I wonder about another argument altogether. In reading the cover letter to the AO in question, EPA makes it clear to Florida Cities that the AO itself is statutorily issued ("a Section 309 Order"). Therefore, it seems, violation of the order would constitute violation of the CWA. Indeed, such violation is punishable under Section 309. Do you think that we can argue that we are in a "catch 22" situation, where the terms of the AO and the permit conflict, and noncompliance with the AO means violation of the statute, and noncompliance with the permit also means violation of the statute? A weakness in this argument is that compliance with the earlier permit's effluent limitation is not mandated by the AO but, rather, allowed. But the practical ramifications of the provision result in just this paradox.

RE: Rule 11 and Section 1927 Sanctions

From the group of cases that Lance put together, I've set aside what I feel are the most helpful cases in figuring out whether to raise Rule 11 and/or Section 1927 abuses. My assumption is that we're looking to bring such sanctions against DOJ and possibly Kwan under Rule 11 for not inquiring into the nature of the previous settlements at Barefoot Bay and Carrolwood. Such an inquiry, we would argue, would have conclusively established that these claims were settled for whole periods of time. Moreover, sanctions could be considered for filing the complaint or other papers for an improper purpose under Rule 11 and/or Section 1927, i.e., harassment or vexatious multiplication of the proceedings. With regard to these claims my understanding is that we want to address the fact that DOJ keeps changing the number of claims being brought, and has yet to establish this number conclusively. My assessment that follows is based on these assumptions.

Rule 11 reads in pertinent part as follows:

> (b) Representations to Court. By presenting to the court (whether by signing filing, submitting, or later advocating) a pleading, written motion, or other paper, an attorney . . . is certifying that to the best of the person's knowledge, information, and belief, formed after an inquiry reasonable under the circumstances, --
>
> 1) it is not being presented for any improper purpose, such as to harass or to cause unnecessary delay or

needless increase in the cost of litigation;

. . .

3) the allegations and other factual contentions have evidentiary support or, if specifically so identified, are likely to have evidentiary support after a reasonable opportunity for further investigation or discovery.

Under Rule 11, an objective standard is used to determine whether a claim was brought for an improper purpose. U.S. v. Milam, 855 F.2d 739, 742 (11th Cir. 1988). That is to say, the test is not whether the party asking for sanctions feels harassed, but whether the purpose of a given claim was in fact to harass. Lewis v. Anclote Manor Hosp., Inc., 1990 U.S. Dist. LEXIS 20173 (M.D. Fla. 1990). See also Southmark Investment Group 86 v. Turner Dev. Corp., 140 F.R.D. 1, 2 (M.D. Fla. 1991) (holding that Rule 11 (and Section 1927) sanctions were insupportable where "Defendant failed to show that any specific portion of the Plaintiff's complaint, motions or other pleadings was not well grounded in law or fact, [and] that vague allegations of bad faith do not justify the imposition of sanctions"). My sense is that this would be a challenging claim for us to raise, despite the numbers issue, without having direct knowledge as to how the decision to sue Florida Cities was made.

28 U.S.C. Section 1927 reads as follows: "Any attorney . . . who so multiplies the proceedings in any case unreasonably and vexatiously may be required by the court to satisfy personally the excess costs, expenses, and attorney's fees reasonably incurred because of such conduct." Section 1927's standard is higher than Rule 11's and such sanctions are usually

reserved for egregious instances of bad faith on the part of counsel. Lewis v. Anclote Manor, 1990 U.S. Dist. LEXIS 20173 (M.D. Fla. 1990). As one court has stated, these sanctions apply to "serious and studied disregard for the orderly process of justice." Overnight Transportation Co. v. Chicago Industrial Tire Co. 697 F.2d 789, 795 (7th Cir. 1983). In other words, some evidence of subjective or objective bad faith must be shown, and such sanctions have been granted in instances where counsel has acted recklessly, such as raising a baseless claim despite notice of its frivolous nature, or showing indifference to statutes, rules, court orders, etc. Vandeventer v. Wabash Natl. Corp., 1995 U.D. Dist. LEXIS 10097 (N.D. In. 1995). See also Maluatea v. Suzuki Motor Co., 987 F.2d 1536, 1541 (11th Cir. 1993) (holding that Section 1927 sanctions were proper where the defendant covered up discoverable material thereby multiplying the proceedings unreasonably and vexatiously).

My sense--though I encourage you to disagree, i.e., there may be facts that I'm not considering--is that in the present case our facts are unlikely to meet this standard of egregious abuse. You might flip through the cases I've marked and see if you agree.

The reasonable inquiry requirement under Rule 11 strikes me as a more hopeful route, but, again, we'd need to be very careful about the facts. The test for a reasonable inquiry by the attorney is objective, i.e., was the inquiry reasonable under the circumstances viewed at the time at which the pleading was filed.

Lewis v. Anclote Manor Hosp., Inc., 1990 U.S. Dist. LEXIS 20173 (M.D. Fla. 1990). Where an attorney's inquiry is based on exclusive reliance on factual representations of the client, the court should consider these factors: 1): the availability of alternate sources of information; 2) the character of the client's knowledge, including whether it is firsthand or derivative in nature; 3) the plausibility of the client's account; 4) the history and duration of the relationship between the attorney and client; and 5) the extent to which the attorney questioned the client. Id.

As this standard applies to the present case, we would need to know whether DOJ relied exclusively on Kwan in bringing the additional claims against Barefoot Bay and Carrolwood. If so, was this reliance reasonable? Or did other evidence, like monitoring reports, provide prima facie support for the claims?

The way I read the timing requirement under Rule 11 is as follows. You must bring such as claim as soon as practicable. Typically, you should not have to wait for a judgment on the merits because if a claim is abusive, you should be able to see that abuse quite plainly without a judge telling you that this is the case. In other words, if we cannot decide whether the claims are abusive or not, if we must concede that there is some debate (however silly or vexing we might view that debate), then we should probably not be thinking about Rule 11 sanctions.

We could justify bringing a sanctions motions now, I think, if such a motion were based on the most recently discovered

evidence (like the Kwan deposition and the penalty assessment documents that you found). Otherwise, if the claim is really based on earlier evidence, the court would have reason to question why we failed to raise such a motion sooner.

RE: Summary of Cases Re: Claim Splitting

The following summarizes key cases involving claim splitting, a legal theory that may be useful in light of the recent decision, Borough of Ridgway. (See article, attached. I've had no luck getting hold of this case. Do we know someone who subscribes to ELR?) As used in the environmental area, claim splitting essentially refers to successive actions for additional damages relating to the same underlying harm or violation. The theory is similar to the CWA Section 309(g) argument, and it is a variation on res judicata. (When thinking about this theory, you might review my memorandum of February 28, 1995, "Preclusive Effect of State and Federal Enforcement Actions," which reviews case law involving the Section 309(g) statutory bar, constitutional mootness, res judicata, and double jeopardy.)

In terms of its applicability to our case, a central issue is whether we cam make the factual argument that our current claims are part of an earlier cause of action. To do this we would have to show that the past and present actions involve the same underlying set of circumstances and amount to one act of continuous noncompliance. In addition, the continuous character of the noncompliance must have been known to EPA upon bringing the original suit.

Cases

1. Borough of Ridgway, Pennsylvania (summary based on article in EPA Administrative Law Reporter--don't have case yet)

Held: EPA could not bring separate action (i.e., split claims) for CWA violations based on separate DMR reports because the reports were related to one continuous act of noncompliance. No separate complaints were allowed for "different, but connected, time periods in the same continuous or connected act of noncompliant discharge."

Issue for our case:
1. Do our facts support an argument for one act of continuous noncompliance?

2. Note: The above court rejected res judicata argument that 1990 consent decree between Borough and state barred present action: no identity of claims, since earlier decree involved different NPDES permit. Implication for us: do we have identity of claims?

2. U.S. v. Gurley, 43 F.3d 1188 (8th Cir. 1994)

Held: EPA barred under res judicata or claim preclusion from bringing cleanup action under CERCLA for same mess as earlier CWA action. EPA could and should have brought the CERCLA claims along with the CWA claims.

Rules:
1. res judicata: a final judgment on the merits bars further claims by parties or their privies based on the same cause of action, and such a judgment bars all claims that were or could have been brought.

2. "same cause of action" means "arising out of the same nucleus of operative facts." Are facts related in time, space, origin . . . ?

Issues for our case:
1. Same cause of action?
2. Could current claims have been brought earlier?
3. Does CWA allow for successive actions to recover further response costs like CERCLA, Section 113 (g)(2)? If so, this court would hold no claim splitting. (I don't there is such a provision. See CWA, Section 309.)

3. Prisco v. New York, 1992 U.S. Dist. LEXIS 5273 (April 22, 1992, S.D. NY).

Rule: claim splitting doctrine holds that "later action barred if claim could have been brought in one earlier action"

Same issues for our case as other cases above.

4. U.S. v. Citizens Utilities Co., 1993 U.S.Dist. LEXIS 10340 (July 28, 1993, N.D.Il.)

Held: Earlier proceedings before Il. court re NPDES permit variances did not bar current suit by EPA for enforcement of NPDES permit. Reasons: issues are distinct.

Rule: Res judicata or claim preclusion requires an identity of parties or privies, identity of causes of action, and final judgment on the merits.

Issue for our case: same as above--do we have an identity of claims?

5. Supporters to Oppose Pollution v. Heritage Group, 973 F.2d 1320 (7th Cir. 1992).

Held: Second RCRA suit (brought by citizen's group) was barred under claim preclusion because no new harm was alleged in second suit; the ongoing releases, which were the subject of the second suit, were known at the time of the original claim.

6. Borough of Ridgefield v. U.S. Army Corps of Engrs., 1990 U.S. Dist. LEXIS 17054 (D. N.J.)

Rule: Claim preclusion requires: 1) same wrong (same act and same demand for relief); 2) same theory of recovery; 3) same evidence; 4) material facts alleged are same.

Held: no preclusion because action to challenge permit from Corps not the same as action to overturn state permit. Different acts, and different statutes.

7. U.S. v. Mottolo, 695 F. Supp. 615 (D. N.H. 1988)
Claim splitting as characterized as bringing successive action for additional damages. (CERCLA case)

8. 1902 Atlantic Ltd. v. U.S., 1990 U.S. Cl. Ct., LEXIS 43 (1990)

3 elements of res judicata (claim preclusion)
--same parties
--same events underlying claim or substantial relationship
--did non-moving party have opportunity to fully litigate?

gable waters from a point source without a permit. Battelle admitted, or did not specifically deny, all elements except the discharge of pollutants.

Battelle asserted that (1) "no measurable pollutants" were discharged; (2) the discharge of pollutants, if any, was "in a theoretical or technical sense"; (3) it did not "add any measurable pollutants"; and (4) that what was discharged were "nondetectable quantities of pollutants." Its arguments were based on the company's assertion that any pollutants reflected in its discharge monitoring reports were those found in the intake water from the Halifax River, since its research did not involve the addition of any substance to the intake water; the water from the Halifax River is run through a sand filter, passes through two tanks (one containing concrete pipe samples and another containing metal strip samples), and is discharged back into the Halifax.

The RPO reviewed Battelle's previous permit applications, correspondence and DMRs to determine whether the research activity added pollutants to the Halifax River. The permit applications listed discharges of conventional, unconventional and toxic pollutants, and the supporting laboratory analyses reflected discharges above Halifax River background for chloride, turbidity, specific conductance, COD, cadmium and zinc. Battelle's expired permit contained pH as an effluent limit, with effluent pH levels reported at all times of operation, with and without an NPDES permit. Cadmium and boron, found in Battelle's effluent, were not found in samples of the intake water. Based on this preponderance of evidence, the RPO found that no genuine issue of material fact existed regarding the addition of pollutants by the research facility.

The RPO rejected Battelle's attempts to hypothesize other causes for the pollutants in its effluent (*e.g.*, impact of ocean tides) or to shift the burden to EPA to offer an explanation for any measurable changes. Citing *Natural Resources Defense Council v. Texaco Refining*, 719 F.Supp. 281 (D. Del. 1989), the RPO stated that the CWA legislative history clearly rejected certain defenses, such as sampling error, to enforcement under the CWA based on DMRs.

Having found that the evidence supported the conclusion that Battelle added pollutants to the Halifax River, the RPO did not reach the issue of whether the discharge of toxic pollutants in undetectable quantities constituted the discharge of pollutants within the meaning of the CWA.

Battelle argued that its process was analogous to a dam, did not "add" any pollutants to the navigable waters of the United States, and was thus exempt from NPDES requirements under the holding in *National Wildlife Federation v. Gorsuch*, 693 F.2d 156 (D.C. Cir. 1982). The RPO cited to other case law under similar factual circumstances, where the addition of substances to the water with "the intention of creating a partly chemical, partly physical reaction" brought the activity within the scope of the CWA NPDES requirement. Here, the RPO observed that Battelle intended to test the chemical reaction of sea water with concrete pipe and metal strips. Although the overall objective (reducing pollution from boat paints and surfaces) was "environmentally beneficial," the RPO found that this did not change the strict liability imposed under the CWA.

The RPO thus found that, as a matter of law, Battelle was liable under CWA § 301(a) for discharging pollutants without an NPDES permit. The appropriate civil penalty amount will be determined in a future proceeding.

* * *

CWA; CIVIL PENALTIES; NPDES PERMIT

In re Borough of Ridgway, Pennsylvania, Nos. CWA-III-127 and CWA-III-141 (EPA III RPO Kalkstein June 29, 1995)

Regional Presiding Officer Dismisses One of Two CWA Civil Penalty Cases Against Same Municipality, Finding That EPA Improperly Split Claims Arising Out of a Continuing Series of Violations

On June 29, 1995, Regional Presiding Officer Benjamin Kalkstein found that discharge monitoring reports (DMRs) filed by a municipality conclusively established violations of the municipality's NPDES permit for the dates alleged in two actions filed by Region III, but held that EPA had improperly split claims for continuing violations between the two enforcement actions; as a result of the claim-splitting, the court found that

 Copyright © 1995 Computer Law Reporter, Inc. All Rights Reserved.

the municipality was entitled to summary judgment as to its liability on the second action. The RPO found that at the time the Region filed the first action (which concerned permit violations through April 1994) it had already received the municipality's May 1994 DMR. Under case law, the Restatement (Second) of Judgments, and EPA guidance addressing the issue of claim-splitting in Clean Water Act enforcement cases, the RPO found, the Region should not have initiated the new action where the violations alleged in it could have been raised in the pending action.

The RPO recommended with respect to the second action that the Region withdraw the second administrative complaint with prejudice, and, granting summary judgment to the Region with respect to the first complaint, said that the appropriate amount of civil penalties would be determined in a future proceeding (see document section, *infra*).

Background

The Borough of Ridgway owns and operates a wastewater treatment plant in Elk County, Pennsylvania, which discharges pollutants to the Clarion River under an NPDES permit issued by the Pennsylvania Department of Environmental Resources (PaDER) on July 14, 1993.

EPA Region III filed two administrative complaints against the Borough seeking Class I civil penalties and alleging violations of the NPDES permit's effluent limitations. The first complaint alleged violations in January, February, March and April 1994, while the second complaint alleged violations in May, June, July and August 1994.

Each party moved for summary determination on the issue of liability and accelerated recommended decision in each case pursuant to EPA's Consolidated Rules of Procedure (40 C.F.R. proposed Part 28, § 28.25(a)), and opposed the other party's motion. The Borough filed a second motion for summary determination and accelerated recommended decision, raising issues unique to the second action.

The RPO's decision was based on the unconsolidated proceedings in both civil penalty actions, which involved identical parties and similar issues. The administrative record for the first case was supplemented by an information exchange, and both dockets contained numerous exhibits attached to the parties' motions and responses.

DMRs Are Conclusive Proof of Permit Violations

The discharge monitoring report (DMR) for April 1994 was not in the administrative record at the time the Region filed its motion for summary determination, but was submitted with the Region's second prehearing exchange. The RPO granted the Borough's motion to strike the April 1994 DMR from the record, thus precluding summary judgment on the Borough's liability for violations during that month.

The RPO found that the DMRs on the record were "clear evidence of Respondent's violations of the Permit, executed with required certifications as to accuracy by an authorized representative of the Respondent." Citing EPA and Third Circuit case law, the RPO stated that DMRs are treated as admissions of liability in CWA enforcement proceedings, thus rejecting the Borough's affidavits attempting to undercut the reliability of the DMR data. The RPO was not persuaded that EPA would consider the DMR information as inconclusive based on the Borough's affidavits, despite an EPA inspector's previous comments questioning the Borough's analytical procedures for total suspended solids (TSS) and 5-day carbonaceous biological oxygen demand ($CBOD_5$).

EPA Improperly Split Claims

The Borough argued that EPA had improperly split claims of continuing violations into two complaints, alleging that EPA had already received the May 1994 DMR (covered in the second complaint) when it filed the first complaint (ending with April 1994 violations). EPA did not deny this fact, and the RPO concluded that EPA did have knowledge of the continuing nature of the violations when it filed the first complaint.

The RPO reviewed case law, legal theory (including Restatement (Second) Judgments § 24 (1980)) and EPA policy (Guidance on "Claim-Splitting in Enforcement Actions Under the Clean Water Act", EPA Offices of Water and Enforcement, August 28, 1987) to conclude that the

 Copyright © 1995 Computer Law Reporter, Inc. All Rights Reserved.

"claim-splitting" and "claim-preclusion" doctrines precluded the initiation of a new action involving violations that could or should have been brought with the pending action (the first complaint). Since separate complaints would not be allowed for different effluent limitation violations shown in the same DMR, separate complaints for "different, but connected, time periods in the same continuous or connected act of noncompliant discharge" should not be allowed either. The RPO found that the noncomplying discharge would end, for purposes of triggering a second cause of action, when it became a complying discharge.

The RPO rejected EPA's claim that it could have brought a separate action for each month of noncompliance, since DMRs constitute separable proof. "[W]hen consecutively filed DMRs show substantially similar effluent violations, they are also proving continuous noncompliance, a much larger cause of action than that evidenced by any single DMR."

The RPO was also not persuaded by EPA counsel's arguments about the "cumbersome internal approval process" which discouraged delay in filing the administrative complaint to add additional violations as more noncomplying DMRs were received. Several options were available to EPA, the RPO noted: Class I administrative penalties (as were sought in the two complaints at issue); Class II administrative penalties; or civil judicial penalties.

The RPO found that the Borough was entitled to summary judgment as to its non-liability in the second complaint based on the claim-splitting doctrine, and recommended that the Regional Administrator withdraw the second administrative complaint with prejudice.

Miscellaneous Defenses Rejected

The municipality raised numerous legal and equitable defenses to the remaining claims, which were addressed briefly in the RPO's order.

The RPO found that EPA's letter notifying PaDER of the proposed civil penalty action and requesting the state's input satisfied the statutory requirement for consultation with the state, despite PaDER's lack of response.

The RPO rejected the Borough's argument that the effluent parameters of TSS, $CBOD_5$ and pH were not pollutants, citing *Chesapeake Bay Found. v. Bethlehem Steel Corp.*, 608 F.Supp. 440 (D. Md. 1985) for the proposition that any violation of an NPDES permit is a violation of the CWA.

The Borough's affidavits justifying the pH readings for March 1994 as an allowable excursion under the secondary treatment regulations (40 C.F.R. Part 133) did not raise a genuine issue of material fact, since the NPDES permit made no provision for pH excursions.

Similarly, the RPO rejected the Borough's reliance on the less stringent effluent limitations contained in 40 C.F.R. §§ 133.101(g) and 133.105 for facilities using trickling filter technology, holding that the effluent limits contained in the Borough's NPDES permit were controlling. The RPO also noted that each of the permit violations alleged by the Region in the administrative complaint also would have been violations of the less stringent regulatory effluent limits.

The RPO rejected the Borough's allegations of retaliatory enforcement, holding that the temporal proximity between the first administrative complaint and the Borough's invocation of administrative review rights regarding pretreatment disputes did not create a genuine issue of material fact. The RPO described as a "red herring" the Borough's complaints that EPA's inadequate enforcement against industrial users of its sewage treatment plant had caused the violations underlying EPA's complaint.

The RPO held that joinder of the Commonwealth of Pennsylvania was not required in CWA § 309(g) administrative penalty enforcement actions. The statute did require joinder in civil enforcement actions against municipalities under CWA § 309(b), in order to ensure that state restrictions on municipalities' ability to raise capital were adequately considered by the court. The RPO noted that the statutory cap for administrative civil penalties served the same fiscal restraint purpose as mandatory joinder in civil cases.

The Borough raised the equitable defenses of estoppel, res judicata, laches and unclean hands, relying on a January 1990 consent order and agreement between itself and PaDER. The RPO found that the 1990 consent agreement was not

 Copyright © 1995 Computer Law Reporter, Inc. All Rights Reserved.

sufficiently relevant to the current claims, since there was no identity of claims (it involved a different NPDES permit which predated EPA's current claims by several years), no identity of issues (it involved some, but not all, of the same effluent limitations), and no identity of parties.

The RPO rejected several additional defenses, stating that the facts underlying those defenses might be relevant in establishing a penalty amount. One such fact was the Borough's allegation that EPA affirmatively misled it by inducing investment in an expensive, long-term upgrade of its sewage system without providing federal grant funds, rather than encouraging the Borough to implement a less expensive, short-term fix that would have corrected the violations at issue. Similarly, the Borough's evidence regarding its efforts to comply with the permit and its dispute with EPA's calculation of the number of permit violations might be relevant factors in penalty calculation, but did not relieve the Borough of liability.

FEDERAL COURT DECISIONS

CLEAN AIR ACT; DETERMINATION OF STATUS AS A "MAJOR SOURCE"

Nat'l Mining Ass'n v. EPA, No. 95-1006 (D.C. Cir. July 21, 1995)

D.C. Circuit Rules EPA Overstepped Authority By Defining "Potential To Emit" To Include Federal but Exclude State and Local Emission Controls; Upholds Aggregation of All Hazardous Emissions Within a Plant in Deciding Whether It Is a "Major Source"

On July 21, 1995, a panel of the D.C. Circuit issued a per curiam opinion ruling upon several challenges to regulatory action of EPA in implementing the 1990 amendments to § 112 of the Clean Air Act. The panel held that EPA had overstepped its authority when it decided that in calculating a facility's "potential to emit" pollutants, pollution controls would only be considered if they were "federally enforceable" controls. The court held that EPA had failed to explain why state and locally imposed emission controls that are actually effective should not be considered in calculating the "potential to emit" toxics.

The panel rejected other challenges to EPA's action. It held that EPA properly chose to aggregate all hazardous air emissions within a plant site, rather than only those emissions from equipment in similar industrial categories, in determining whether the site was a "major source" under § 112. It also held that EPA properly chose to include "fugitive emissions" in a source's aggregate emissions in deciding whether a given site constitutes a "major source."

Background

In 1990, Congress overhauled the Clean Air Act, and among other things it revised § 112, which regulates emissions of hazardous air pollutants. The 1990 Amendments to § 112 established an initial list, which EPA may periodically revise, of 189 hazardous air pollutants. Section 112(c) requires EPA to publish a list of "categories and subcategories" of "major sources" and certain "area sources" that emit these pollutants. Section 112(d) requires EPA to promulgate emission standards for each listed category or subcategory of major sources and area sources.

The Act subjects "major sources" to potentially stricter standards that "area sources." As the panel explained:

> [M]ajor sources must comply with technology-based emission standards requiring the maximum degree of

MEMORANDUM

TO: Don Scroggin

FROM: Liz Poliner

DATE: October 6, 1995

RE: FCWC: Effect of Blizzard's and Landers' Declaration on Attorney-Client and Work-Product Privileges

You have asked me to research how the declarations of Kathleen Blizzard and Jay Landers, regarding previous settlements between Florida Cities and EPA for alleged violations of the CWA, affect EPA's access to discover other information about these events. Specifically, you have asked me to look into the relationship between these declarations and subsequent use of attorney-client or work-product privilege.

1. Attorney-Client Privilege

A. Definition

The attorney-client privilege protects disclosures that a client makes to his attorney, in confidence, for the purpose of securing legal advice or assistance. Cox v. Administrator United States, 17 F.3d 1386, 1414 (11th Cir. 1994), cert. denied, 115 S.Ct. 900 (1995); In re Hillsborough Holding Corp., 176 Bankr. 223, 241 (M.D. Fla. 1994). More specifically, proper invocation of the privilege requires the following:

> (1) the asserted holder of the privilege is or sought to become a client; (2) the person to whom the communication was made (a) is [a] member of a bar of a court, or his subordinates and (b) in connection with this communication is acting as a lawyer; (3) the communication relates to a fact of which the attorney was informed (a) by his client (b) without the presence of strangers (c) for the purpose of securing primarily either (i) an opinion on law or (ii) legal services or (iii) assistance in some legal proceeding, and not (d)

> for the purpose of committing a crime or tort; and (4) the privilege has been (a) claimed and (b) not waived by the client.

U.S. v. Noriega, 917 F.2d 1543, 1550 (11th Cir.) cert. denied, 498 U.S. 976 (1990).

When this definition is applied to the present situation regarding the settlement discussions between attorneys for Florida Cities and officials from EPA, an initial question is whether any particular communication falls within the narrow scope of the privilege. First, because the client is the holder of the privilege, not the attorney, and because the privilege protects client's communications, the privilege may not extend to any communication by Blizzard or Landers, unless such a communication would force disclosure of (1) Florida Cities' (2) protected communications. Cox 17 F.3rd at 1417.

Moreover, in the present situation the attorney-client privilege may not apply--to the extent that what is being asked of Blizzard and Landers involves inquiry into settlement discussions with EPA--because any communications made in the presence of third parties, rather than between the client and attorney alone, are not privileged. Hillsborough, 176 Bankr. at 241 ("It is well established that a communication between a lawyer and client is confidential only if it is not intended to be disclosed to third persons"). See also In re Consolidated Litigation Concerning International Harvester's Disposition of Wisconsin Steel, 666 F. Supp. 1148, 1156 (N.D. Il. 1987) ("Attorney-client communications made in the presence of third

parties are not privileged unless the third party's presence is consistent with an intention to keep the communications confidential . . . Similar principles apply where attorney-client communications, even though privileged originally, are disclosed to third parties").

B. Waiver

Because the client is the holder of the privilege, only the client can waive the privilege or an attorney acting under the authority of the client. Cox, 17 F.3rd at 1417. An actual waiver of the attorney-client privilege occurs when "a litigant places information protected by the privilege in issue through some affirmative act for his own benefit, and to allow the privilege to protect against disclosure of such information would be manifestly unfair to the opposing party." Id. This rule has been characterized by other jurisdictions as the "at issue" doctrine which is operative when "[a] party has asserted a claim or defense that he intends to prove by use of the privileged materials." Pittson Co. v. Allianz Ins. Co., 143 F.R.D. 66, 71 (D. N.J. 1992). Under this rule, privileged information cannot be reached, even when it pertains to matters at issue, unless the party seeking disclosure demonstrates a legitimate need for the privileged information, which includes a showing that there is no less intrusive way to secure the information. See Cox, 17 F.3rd at 1417; Pittson 143 F.R.D. at 71. See also Hillsborough, 176 Bankr. at 238 ("A party waives the attorney-client privilege . . . if that party 'injects' into the case an issue that in fairness

requires an examination of otherwise protected communications").

Generally, a voluntary disclosure of a privileged communication will act as a waiver of "all other disclosures on the same subject." See Wisconsin Steel, 666 F. Supp. at 1153.

As applied to the present situation, these rules suggest that the government could argue that Florida Cities waived any attorney-client privilege relating to statements between the company and its counsel about the settlement discussions when the company chose to place those settlement discussions at issue by raising them as a defense. Florida Cities could respond that raising the settlement discussions--which in and of themselves are not privileged--is not tantamount to waiving privileged disclosures. Moreover, to the degree that the government seeks discovery of any protected disclosures, the government would have to show how it would be prejudiced if it could not reach the information.

It should be noted that the attorney-client privilege applies to written as well as verbal disclosures, to the degree the other elements of the definition are met. For example, memoranda and briefs prepared by a client or attorney which do not reveal information supplied by the client in confidence to the attorney are not protected by the privilege (but may be protected under the work-product doctrine, discussed below). Republication Party, 136 F.R.D. 421, 428 (E.D. N.C. 1991). This means that the privilege does not apply to legal advice which could not arguably reveal a client's confidences, nor does it

extend to the protection of facts underlying any protected communications. Republican Party, 136 F.R.D. at 426; Amarin Plastics, Inc. v. Maryland Cup Corp., 116 F.R.D. 36, 41 (D. Ma. 1987).

In sum, the Blizzard and Landers declarations, and related information, may not be protected by the attorney-client privilege at all, insofar as such communications do not involve protected statements by the client to the counselors. To the degree that some requested information does call for the disclosure of attorney-client confidences, and to the degree there has been any waiver of privileged communications, the test would be whether the degree of prejudice suffered by the government warrants the disclosure of the protected information.

As a last point, it should be noted that the attorney-client privilege is a shield, blocking disclosure of protected information, for the purpose of encouraging full and frank communications between lawyers and clients. It is interpreted narrowly, so as to impede use of it as a sword, i.e., "a defendant may not use the privilege to prejudice his opponent's case or to disclose some selected communications for self-serving purposes." Cox, 17 F.3rd at 1417.

2. Work-Product Privilege

A. Definition

The work-product privilege is separate from and broader than the attorney client privilege. Republican Party, 136 F.R.D. at 429. Work-product does not protect client confidences; rather,

it seeks to shelter the mental processes of the attorney, "providing a privileged area where [s]he can analyze and prepare [her] client's case." Id. Specifically, the doctrine protects documents by or for a party or that party's representative, including his attorney, that reveal mental impressions and legal theories and were prepared in contemplation of litigation. Nadler v. U.S. Dept. of Justice, 955 F.2d 1479, 1491 (11th Cir. 1992) (citing Hickman v. Taylor, 329 U.S. 495, 509-10 (1947)); Auto Owners Ins. v. Totaltape, Inc., 135 F.R.D. 199, 201 (M.D. Fla. 1990).

Fed. R. Civ. Pro. 26(b)(3) governs the disclosure of work product. The rule states:

> [A] party may obtain discovery of documents and tangible things otherwise discoverable under subdivision (b)(1) of this rule and prepared in anticipation of litigation or for trial by or for another party or by or for that other party's representative (including [his] attorney . . .) only upon a showing that the party seeking discovery has substantial need of the materials in the preparation of the party's case and that the party is unable without undue hardship to obtain the substantial equivalent of the materials by other means. In ordering discovery of such materials when the required showing has been made, the court shall protect against disclosures of the mental impressions, conclusions, opinions, or legal theories of an attorney or other representative of a party concerning the litigation.

Rule 26(b)(3).

This rule has created two kinds of work-product. First, "fact work-product" consists of "documents and tangible things . . . prepared in anticipation of litigation or for trial" that do not contain mental impressions, conclusions, or opinions of

the attorney. U.S. v. Pepper's Steel & Alloys, Inc., 132 F.R.D. 695, 697 (S.D. Fla. 1990). The party seeking such discovery must meet Rule 26's twofold burden of showing a "substantial need" and "undue hardship" in obtaining the materials. Id; Castle v. Sangamo Weston, Inc., 744 F.2d 1464, 1466 (11th Cir. 1984); In re Grand Jury Proceedings, 73 F.R.D. 647, 653 (M.D. Fl. 1977). Nevertheless, the party resisting discovery bears the burden of demonstrating the applicability of the work-product doctrine in the first place. Auto Owners, 135 F.R.D. at 201. See also Republican Party, 136 F.R.D. at 429 (holding that the party seeking to assert the doctrine as a bar to discovery has the burden of establishing that the doctrine is applicable by establishing as to each document all the elements that trigger the protection). Facts gathered from the documents are not protected as "fact work-product." As Wright & Miller have stated, "[t]he courts have consistently held that the work product concept furnishes no shield against discovery . . . of the facts that the adverse party's lawyer has learned, or the persons from whom he has learned such facts, or the existence of nonexistence of documents, even though the documents themselves may not be subject to discovery." Federal Practice and Procedure: Civil, Section 2023.

Second, there is work-product consisting of "mental impressions, conclusions, opinions, or legal theories of an attorney or other representative of a party concerning the litigation." Pepper's Steel, 132 F.R.D. at 698. "Opinion work-

product" is absolutely immune from discovery. Id. See also, In re Grand Jury, 73 F.R.D. at 653. Compare, Republican Party, 136 F.R.D. at 429 (stating that opinion work-product enjoys a nearly absolute immunity and can be discovered only in very rare and extraordinary circumstances). Opinion work-product includes the writings of an attorney because these are her mental impressions. Id.

Under the work-product doctrine it seems likely that Blizzard and Landers could assert opinion work-product to the degree that information is being sought that includes their mental impressions, conclusions, opinions, or legal theories. Moreover, Florida Cities may find it possible to assert factual work-product regarding tangible items prepared in preparation of litigation, shifting the burden to the government to demonstrate prejudice and substantial need. An argument that Florida Cities could raise, if plausible, is that the requested documents would reveal no new facts than the declarations have already provided and therefore no prejudice exists.

Documents prepared for litigation other than the present action would still be protected under the doctrine. Republican Party, 136 F.R.D. at 430 (holding that work-product documents do not lose their protection in subsequent and unrelated litigation); In re Grand Jury, 73 F.R.D. at 653 ("It is not necessary to have foreseen the specific litigation in progress at the time the materials were prepared. . . . If they were prepared in anticipation of some likely litigation, or as an integral

preparation for trial, they are immune from discovery absent the requisite two-fold showing").

B. Waiver

The waiver doctrine for work-product provides that voluntary disclosure of work-product to an adversary waives the privilege. In re Steinhardt Partners, L.P., 9 F.3d 230, 235 (2nd Cir. 1993) (citing U.S. v. Nobles, 422 U.S. 225 (1975), and holding that a defendant's voluntary pre-discovery submission of a memorandum to the SEC, discussing the facts and issues in the case and relevant legal theories, waived a later claim of work product privilege when the memorandum was sought in discovery). The rationale behind this holding is that once a party allows an adversary to share the otherwise privileged thought processes of counsel, the need for the privilege disappears. Id. See also Florida House of Representatives v. U.S., 961 F.2d 941, 947 (11th Cir. 1992) (holding that, in the context of a FOIA action, the government did not waive privileged census data when it included in a public notice census estimates and the reasoning behind the estimates because the notice was not tantamount to actually revealing the privileged data).

In the present case, it is my understanding that we have not disclosed any tangible items to the government regarding the settlement except for the declarations. Therefore, our case can be distinguished from Steinhardt and likened to Florida House of Representatives. That is to say, to the degree that any notes or

other documents do in fact contain attorney work-product, we can still argue that these products fall under the privilege as articulated in Rule 26(b)(3). We would argue that merely referencing notes, as Blizzard does in her declaration, is not the same thing as voluntarily disclosing such notes and creating a waiver of the privilege. Moreover, Florida Cities could argue that to be required to make such a disclosure would be tantamount to forcing disclosure of Blizzard's thought processes, impressions, etc., which are immune from discovery absent a waiver.

FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

DEFENDANT FLORIDA CITIES WATER COMPANY'S MOTION FOR PARTIAL SUMMARY JUDGMENT AND REQUEST FOR ORAL ARGUMENT

Defendant Florida Cities Water Company ("Florida Cities") hereby moves, pursuant to Fed. R. Civ. P. 56, before this Court for an order granting summary judgment on its behalf as to the allegations contained paragraphs 16, 17, 18, 19, 20, 21, 22, 23, 28, 30, and 45 of Plaintiff's Second Amended Complaint. No genuine issues of material fact exist as to these allegations and therefore, Florida Cities is entitled to summary judgment as a matter of law. The grounds for this motion are set forth in the accompanying memorandum. Defendant contends that genuine issues of material fact exist regarding all remaining allegations of Plaintiff's Second Amended Complaint and these issues should be reserved for a full trial on

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

Florida Cities Water Company's Memorandum in Support of Its Motion for Partial Summary Judgment and in Response To Plaintiff's Motion for Partial Summary Judgment

Plaintiff has brought these actions alleging Clean Water Act ("CWA") violations at three small wastewater treatment facilities owned and operated by Florida Cities Water Company ("Florida Cities"): Barefoot Bay, Carrollwood, and Waterway Estates.[1] Although these facilities had state authorizations to discharge treated effluent at all times relevant to these causes of action, this case addresses certain alleged violations of the federal Clean Water Act, none of which involved any evidence of environmental harm. This Memorandum is filed in support of Florida Cities' Cross-Motion for Partial Summary Judgment. It is also filed in response to Plaintiff's Motion for Partial

[1] Plaintiff commenced this action on October 1, 1993, alleging violations of the Clean Water Act at Florida Cities' Waterway Estates sewage treatment facility. On March 30, 1995 Plaintiff added two additional Florida Cities's sewage treatment facilities, Barefoot Bay and Carrollwood. However, the issues were not fully joined as to these facilities until the Court's June 22, 1995 Order.

Summary Judgment, which is premature because it was filed before Florida Cities filed its Answer to the Second Amended Complaint, before Plaintiff produced any documents relating to Barefoot Bay and Carrollwood, and before Plaintiff designated and produced its key Rule 30(b)(6) witness for Waterway Estates and any of its Rule 30(b)(6) witnesses for Barefoot Bay and Carrollwood. Further, Plaintiff's summary judgment motion is premature because Plaintiff is unable to state the number of alleged violations with which Florida Cities is being charged. It is fundamental that Florida Cities has a right to know the charges it faces before it can respond meaningfully or present a defense.

The facts revealed during discovery regarding Barefoot Bay and Carrollwood demonstrate that Plaintiff has failed to review key documents in its own files or talk to its own employees with knowledge of the facts at issue. These documents and key employees' testimony demonstrate that Plaintiff failed to conduct a competent preliminary review and factual inquiry before filing this action. As specified in Florida Cities' Motion for Summary Judgment, the facts established through discovery demonstrate that no genuine issue of material fact exists as to a select number of these alleged violations, for which the Court should find no liability: discharge without a permit at the Barefoot Bay and Carrollwood wastewater treatment facilities (barred by 33 U.S.C. § 1319(g) (CWA § 309(g)), violations of the Administrative Order at Barefoot Bay, and permit violations at Barefoot Bay, Carrollwood, and Waterway Estates. In spite of the Environmental Protection Agency's ("EPA") admission that it has no evidence that Florida Cities' alleged actions caused any environmental harm and heedless of the facts contained in its own files and the testimony of its own witnesses,

Plaintiff continues to pursue multi-million dollar penalties in this action. Accordingly, Florida Cities is entitled to judgment as a matter of law as to these causes of action. Florida Cities' discovery has also established that the remaining claims present genuine issues of material fact which should be resolved at a trial on the merits of these issues.

I. STATEMENT OF THE FACTS

Florida Cities, a Florida corporation, owns and operates both drinking water treatment and wastewater treatment facilities serving communities in central and south Florida.[2] Florida Cities is regulated by local, state, and federal environmental authorities. At all times relevant to these actions, Barefoot Bay, Carrollwood, and Waterway Estates had state authorizations to discharge treated effluent and substantially met all applicable water quality standards and effluent limitations. All of the rates which Florida Cities charges its customers are regulated by the Florida Public Service Commission, except for the service areas located in Sarasota and Hillsborough Counties, in which the respective county commissions regulate rates.

II. LEGAL ANALYSIS

A. Standard for Summary Judgment

Summary judgment is appropriate only when no genuine issue of material fact exists and the moving party is entitled to judgment as a matter of law. Fed. R. Civ. P. 56(c). "As to materiality, the substantive law will identify which facts are material. Only disputes over facts that might affect the outcome of the suit under the governing

---

[2] A more complete statement of the facts regarding each facility is presented in the discussions of the specific facilities, *infra* part III.

law will properly preclude the entry of summary judgment." Anderson v. Liberty Lobby, Inc., 477 U.S. 242, 248 (1986). The moving party bears the burden of establishing the absence of dispute over material facts. Reynolds v. Bridgestone/Firestone, Inc., 989 F.2d 465, 469 (11th Cir. 1993). The Court must view the evidence presented in the light most favorable to the non-moving party. Clark v. Coats & Clark, Inc., 929 F.2d 604, 606 (11th Cir. 1991). Reasonable doubts about material facts are to be resolved in favor of the party opposing the motion for summary judgment. Reynolds, 989 F.2d at 469. If the moving party fails to meet its burden of establishing no genuine issue of material fact, its summary judgment motion will be denied. United States v. Four Parcels of Real Property, 941 F.2d 1428, 1437 (11th Cir. 1991).

Plaintiff is seeking summary judgment on "all violations alleged in its Revised Amended Complaint."[3] However, Plaintiff's Second Amended Complaint fails to state a specific number of CWA violations. Plaintiff's key witness, EPA environmental engineer Kenneth Kwan, calculated the number of alleged violations at issue in this case.[4] In its Answers to Defendant's First Interrogatories, served on April 28, 1995,[5]

---

[3] Pl.'s Mot. for Summ. J. at 4.

[4] Mr. Kwan has verified Plaintiff's Answers to Defendant's Interrogatories, has filed a "Declaration" in support of Plaintiff's Motion for Summary Judgment, has been listed as a person having knowledge of the facts surrounding this lawsuit, and has testified as one of Plaintiff's Rule 30(b)(6) witnesses. However, Mr. Kwan admits that he has no personal knowledge of the facts surrounding the CWA 309(g) settlements for Barefoot Bay and Carrollwood and made no effort to educate himself prior to attempting to calculate the number of violations at issue. See discussions of Barefoot Bay's and Carrollwood's alleged unpermitted discharges, infra.

[5] See Exhibit 1 (attached).

Plaintiff states that there are a total of 4,173 violations at issue. Subsequently, Plaintiff submitted Mr. Kwan's Declaration, dated June 15, 1995, in support of its Motion for Summary Judgment. In contrast to the Answers to Defendant's First Interrogatories, the Kwan Declaration and the attached tables reference, without any explanation for the discrepancy, 2,991 violations.[6] At his August 29-30, 1995 deposition (taken five months after the filing of the Second Amended Complaint and almost three months after the filing of Plaintiff's Motion for Summary Judgment), Mr. Kwan testified that Plaintiff is "still fine tuning the number."[7] Mr. Kwan further testified on August 29, 1995 that the final number of violations would not be known for "another month."[8]

In his testimony, Mr. Kwan stated:

> Q (By Mr. Scroggin) Are those recalculations still underway or have they finally reached a steady state constant value for each of the vio-- for each of the three facilities?
> Mr. Quinn: Objection.
> A We are still fine tuning the number.
> Q (By Mr. Scroggin) Do you have any estimate of when you think you'll know how many violations there were at these three facilities?
> Mr. Quinn: Objection.
> A I don't know; another month. We are still adding the numbers up.[9]

---

[6] On its own, this unexplained change would reduce the maximum penalty Plaintiff calculates for alleged violations from $104,325,000 to $74,775,000. Compare the tables found in Defendant's Ex. 1 (drafted by Mr. Kwan) with Plaintiff's Ex. C, F, and I (also drafted by Mr. Kwan and attached to his Declaration).

[7] Kwan Dep. at 151 l. 20; See Exhibit 2. See also Exhibit 45 (Condensed version of Kwan Video Deposition, with videotape excerpts marked) and Exhibit 46 (Videotape of Excerpts of Kwan Deposition).

[8] Kwan Dep. at 151 l. 25. See Exhibit 2 (attached). See also Exhibit 45 (Condensed version of Kwan Video Deposition, with videotape excerpts marked) and Exhibit 46 (Videotape of Excerpts of Kwan Deposition).

[9] Id. at l. 15-152 l. 1. See Exhibit 2 (attached). See also Exhibit 45 (Condensed (continued...)

Given the still-evolving status of Plaintiff's calculations of the violations that are the subject of Plaintiff's motion, Florida Cities contends that Plaintiff's Motion for Summary Judgment is premature.

B. The Clean Water Act

The federal Clean Water Act prohibits discharge of pollutants to waters of the United States unless authorized by a federal NPDES permit. 33 U.S.C. §§ 1311(a), 1342. In states such as Florida, where EPA issues and enforces the NPDES program, each permit requires state certification that the permit will fully satisfy state water quality standards (which EPA independently approves). NPDES permits usually contain, among other requirements, limitations on the discharge of specific pollutants. For a full discussion of the permitting and enforcement structure, see generally, U.S. v. CPS Chem. Co., 779 F. Supp. 437 (E.D. Ark. 1991).

III. CLAIMS AT ISSUE

A. Barefoot Bay

1. Alleged Unpermitted Discharges

Plaintiff alleges that Florida Cities discharged pollutants without a federal NPDES permit from April 1, 1990 until November 1, 1991 at its Barefoot Bay facility, located in Brevard County. This allegation has been made even though the discharge of treated effluent from the Barefoot Bay facility was authorized by the state and was already treated to a level that would remove more pollutants than would be required by the

---

[9](...continued)
version of Kwan Video Deposition, with videotape excerpts marked) and Exhibit 46 (Videotape of Excerpts of Kwan Deposition).

federal NPDES permit that was finally issued.[10] Florida Cities acknowledges that it did discharge without a federal NPDES permit into the Sebastian Creek during this period. However, this matter was settled by the Consent Agreement and Order Assessing Administrative Penalties No. CWA-IV 91-538 ("Consent Agreement") -- a conclusion supported by EPA's own administrative enforcement files and witnesses. The CWA specifically precludes EPA from seeking judicial or other enforcement of violations that have already been settled in EPA administrative enforcement proceedings that include payment of an administrative penalty. Under the CWA:

> Action taken by the Administrator or the Secretary, as the case may be, under this subsection shall not affect or limit the Administrator's or Secretary's authority to enforce any provision of this chapter; except that any violations-
>
> . . .
>
> > iii) for which the Administrator, the Secretary, or the State has issued a final order not subject to further judicial review and the violator has paid a penalty assessed under this subsection, or such comparable State law, as the case may be,
>
> shall not be the subject of a civil penalty action under subsection (d) of this section or section 1321(b) of this title or section 1365 of this title.

33 U.S.C. § 1319(g)(6) (CWA § 309(g)(6)). Because EPA's administrative record, as well as the testimony of EPA and Florida Cities' witnesses, demonstrate that the issue of discharge without a permit was for the entire period at issue, no genuine issue of material fact exists, and Florida Cities is entitled to summary judgment as a matter of law on Paragraph 16 of the Second Amended Complaint.

---

[10] See Pl.'s 30(b)(6) Dep. [Herwig] at 106 l. 17 - 109 l. 24 (hereafter "Herwig"). See Exhibit 3 (attached). The Barefoot Bay's level of treatment was superior to the standards of secondary treatment that were imposed in the final NPDES permit.

On September 14, 1989, EPA enforcement officer Roy Herwig visited Barefoot Bay and discovered that, although authorized to discharge into the Sebastian Creek by the Florida Department of Environmental Protection ("FDEP"), the facility did not have an NPDES permit.[11] On September 20, 1990, EPA issued an Administrative Order ("AO 90-106"), drafted by Mr. Herwig, that authorized discharge from the Barefoot Bay facility and established interim effluent limits for that discharge until a federal NPDES permit could be issued. On July 12, 1991, EPA initiated an enforcement action to address the years of discharge without a federal NPDES permit by this facility by issuing a Notice of Show Cause for discharge without an NPDES permit for "the period from September 14, 1989 until the present."[12] The Show Cause meeting was held on August 9, 1991.[13] Following this Show Cause meeting, Mr. Herwig drafted the EPA's Administrative Complaint and the Consent Agreement with the accompanying "Notes on the Proposed Penalty Assessment" ("Notes").[14]

---

[11] Inspection Report of September 14, 1989 by Roy Herwig. See Exhibit 4 (attached).

[12] The administrative record in this case for Barefoot Bay consists of (1) AO 90-106 (attached as Exhibit 5), (2) Notice of Show Cause (attached as Exhibit 6), (3) Notes on the Proposed Penalty Assessment (attached as Exhibit 7), (4) Administrative Complaint (attached as Exhibit 8), and (5) Consent Agreement and Order Assessing Administrative Penalties (attached as Exhibit 9).

[13] Herwig at 159 l. 2-18 (attached as Exhibit 10).

[14] Id. at 155 l. 10 (attached as Exhibit 11).
See Ex. 7. The Notes are prepared by the enforcement officer and are routed along with the Complaint for approval from the chain of command at EPA. The Notes then become part of the administrative record. EPA, Enforcement Management System (attached as Exhibit 12), Region IV 456 (1990) (hereafter "EMS"). The Notes provide the underlying justification of an enforcement officer's decision to penalize a company. In practice, the Notes are the only document that provides detailed analysis of EPA's penalty considerations. The Notes are prepared in every administrative penalty action.

These Notes outlined the nature of Florida Cities' alleged violations at Barefoot Bay, reviewed the statutory mitigation factors contained in CWA § 309(g)(3), and proposed a $6,000 penalty to settle the alleged violations of discharge without an NPDES permit. EPA issued an Administrative Complaint on September 25, 1991 and entered into the final Consent Agreement on November 6, 1991. The NPDES permit for Barefoot Bay became effective on November 1, 1991, one week prior to these negotiations.[15]

A thorough review of the complete administrative record establishes that both parties intended to settle all violations for discharge without an NPDES permit at Barefoot Bay, and that the Consent Agreement with its attached Notes did in fact settle all such matters, even though the Consent Agreement specifically references only the day of EPA's inspection, September 14, 1989. Plaintiff's Rule 30(b)(6) witness, Roy Herwig, testified that he was the author of the Notes, which are routinely prepared by the responsible EPA enforcement officer to explain the basis for EPA's proposed penalty amount.[16] Mr. Herwig was also the lead negotiator for EPA during the settlement negotiations, including the Show Cause hearing.[17] He testified that the Notes were reviewed by an EPA staff counsel;[18] that the purpose of the Notes, which

---

[15] Florida Cities had originally applied for a permit on February 28, 1990 (fully 19 months earlier). When asked, EPA cannot explain why the Agency took 19 months to issue this permit, nor can EPA explain why or how the Agency lost the permit application after acknowledging in writing its receipt and completeness. EPA's losing the permit application required Florida Cities to start the entire permitting process over again on June 6, 1990, by submitting still another application.

[16] See Herwig Dep. at 156 ll. 16-18 (attached as Exhibit 13).

[17] Id. at 159 ll. 11-14 (attached as Exhibit 10).

[18] Id. at ll. 19-25 (attached as Exhibit 10).

physically accompany the proposed Consent Agreement when the senior EPA official signs the proposed Consent Agreement, "is to memorialize what information we can for the public, related to how we disposed of a certain case so that six years later somebody will say why did you do this"[19]; and that all the statements in the Notes were correct.[20] In the Notes EPA carefully reviewed Florida Cities' actions in light of the statutory mitigation factors under CWA § 309(g)(3)[21] and found:

> Respondent operated a mobile home community known as Barefoot Bay which discharged treated wastewater to a drainage canal leading to the north prong of the Sebastian Creek, a water of the United States, without the benefit of a valid NPDES permit for the discharge during the period from 1985 to present.
>
> In September 1991, an NPDES permit was issued to Respondent. The effluent limitations contained in the permit are limitations that the facility would have been able to meet since 1985. Thus, the environmental harm was not any greater than if Respondent had had an NPDES permit.[22]

Through the use of its economic benefit computer model ("BEN"), EPA measured the benefit gained by Florida Cities from its failure to obtain an NPDES permit. The BEN model determined that Florida Cities' total economic gain from noncompliance

---

[19] Id. at 155 ll. 11-20 (attached as Exhibit 11).

[20] Id. at 156 l. 19-157 l. 2 (attached as Exhibit 13).

[21] Mitigation factors which the CWA requires EPA to consider in determining the amount of any administrative penalties are: (1) the nature, circumstances, extent and gravity of the violation, or violations, and with respect to the violator, (2) ability to pay, (3) any prior history of such violations, (4) the degree of culpability, (5) economic benefit or savings (if any) resulting from the violation, and (6) such other matters as justice may require. 33 U.S.C. § 1319(g)(3); CWA § 309(g)(3).

[22] Notes at 2.

during the period September 14, 1989 to September 11, 1991 was $73.00.[23] Under the category titled "Other matters that justice may require," EPA noted:

> The enforcement team considered the fact that Respondent has been working closely with the Florida Department of Environmental Regulation since 1985 to develop a solution to the problem. Since being contacted by EPA, Respondent has been very cooperative. Consideration was given to calculating liability on a daily basis beginning with the initial overflow in 1985. However, since the respondent had been working with DER and since the effluent being discharged would have met the limitations contained in the permit now being issued by EPA, it is believed that the true violation was limited to that of not applying for an NPDES permit.[24]

The Notes' "Summary" states "that the assessed penalty of $6,000 represents a fair and equitable application of the factors identified in CWA § 309(g)(3) of the Act in this case."[25] Mr. Herwig testified that he believed that some monetary fine was appropriate because "[Florida Cities] had been in noncompliance with the Clean Water Act since 1985 in that [it] did not have a permit" for discharges from the Barefoot Bay facility.[26] Read in its entirety, the administrative record shows that EPA considered all the days of discharge without an NPDES permit commencing in 1985 and ending on November 1, 1991.[27] Even after considering all these years of discharge without an

---

[23] Id.; Herwig at 151 l. 9-152 l. 2 (attached as Exhibit 14).

[24] Barefoot Bay Notes at 3 (emphasis added) (attached as Exhibit 7).

[25] Id.

[26] Herwig at 148 l. 25-149 l. 1 (attached as Exhibit 15).

[27] Michael Hom, Mr. Herwig's supervisor in 1991, stated that it is EPA's general policy to settle all violations of which EPA is aware at the settlement of administrative enforcement actions. See Dep. of Michael Hom at 46 ll. 16-19 (attached as Exhibit 16). Not only did EPA have concrete evidence of discharges on virtually all days between September 14, 1989 and November 6, 1991 (the date of the settlement), but the Agency also had the DMRs for AO 90-106, which disclosed exceedances of the AO's interim effluent limitations.

NPDES permit at Barefoot Bay, the Notes explain that EPA "believe[d] that the assessed penalty amount of $6,000.00 represent[ed] a fair and equitable application of the factors identified in § 309(g)(3) of the Act, to this case."[28]

Plaintiff argues that because the Consent Agreement is analogous to a contract, this Court may not look beyond the four corners of the document, no matter what the two parties intended or understood they were settling and no matter what explanatory documents accompanied the Consent Agreement when it was signed.[29] This argument, however, ignores the language of the Consent Agreement itself and the requirements of EPA's Enforcement Management System ("EMS").[30] The introductory paragraph to Section III of the Consent Agreement states that EPA has

---

[28] Notes at 3.

[29] Plaintiff argues that this matter has been addressed in the Court's Order denying Florida Cities' Motion for Partial Summary Judgment on the Waterway Estates facility. Plaintiff is in error. This issue was not addressed in Florida Cities' motion or in the Court's Order of June 21, 1991. Plaintiff raised this "contract defense" in its response to Florida Cities' Motion to Strike Paragraphs 15 through 39 of Plaintiff's Amended Complaint. In a companion order to the above referenced order of June 21, 1991, the Court denied Florida Cities' Motion to Strike. However, the Court's ruling was in the context of a Rule 12(f) motion on the sufficiency of the pleading. At that time, Florida Cities had not yet answered these allegations, EPA had not produced the administrative records for Barefoot Bay and Carrollwood, and no EPA witnesses relevant to these facilities had been deposed. Although EPA's current practice is to attach a copy of the entire administrative record with the Consent Agreement and Order Assessing Administrative Penalties, Florida Cities had no knowledge of the Notes On Proposed Penalty Assessment until EPA produced these documents in July, 1995, after the Court's order denying Florida Cities' Motion to Strike. Summary judgment is appropriate only after Defendant has had an opportunity to conduct discovery into important factual matters. Plaintiff's contention that it is entitled to summary judgment in the context of a Motion to Strike is therefore without merit.

[30] The EMS is an internal manual published by EPA. It provides guidelines to use in administering a proper penalty for a particular violation or set of violations. 50 Fed. Reg. 34648 (1985).

"taken into account" the factors enumerated in CWA § 309(g)(3). The only analysis of these factors in the administrative record is in the Notes, which demonstrate that the EPA's intention was to settle all outstanding violations for discharge without a federal NPDES permit. Mr. Herwig testified that although he referenced the September 14, 1989 date because that was the only date on which he personally witnessed a discharge at Barefoot Bay,[31] he believed, and EPA fully understood, that the facility was discharging on a daily or near-daily basis.[32] At the end of the negotiations, Mr. Herwig believed that the issue of discharge without an NPDES permit was fully resolved and "none of this would be revisited."[33] Mr. Herwig's understanding is bolstered by the affidavit of Kathleen L. Blizzard, counsel for Florida Cities at the Show Cause meeting. Ms. Blizzard states that at the end of the Show Cause meeting it was her understanding that all of the "discharge without a permit" violations were resolved and that this was EPA's understanding as well.[34] These facts suggest the clear inference that neither Mr. Kwan nor any member of the litigation team ever discussed with Mr. Herwig the facts of the Barefoot Bay settlement. In light of the complete administrative record, any other reading of the documents is unreasonable.

---

[31] Herwig at 152 l. 3-153 l. 3 (attached as Exhibit 14).

[32] Id. at 54 ll. 7-11 (attached as Exhibit 17).

[33] Id. at 90 ll. 13-14 (attached as Exhibit 18).

[34] Kathleen Blizzard, counsel for Florida Cities at the Barefoot Bay settlement, states in her Declaration that "it was my understanding that by execution of the Consent Agreement and Order Assessing Administrative Penalties . . . and payment of the agreed $6,000 penalty, EPA intended to resolve the matter of enforcement by EPA for the discharge until an NPDES permit could be issued." See Declaration of Kathleen Blizzard of September 8, 1995 (attached as Exhibit 19).

From a practical perspective, Plaintiff's "one-day" theory would result in the expenditure over several months of hundreds of man-hours and thousands of dollars by both EPA and Florida Cities to resolve only one day, out of several hundreds of days of discharge without an NPDES permit. According to Plaintiff's argument, once the single day's discharge without a permit on September 14, 1989 was resolved, EPA might have initiated the whole administrative enforcement process again and again for each sequential day of discharge, even though the parties were fully aware of all the days of discharge at issue. Because the time period between the drafting of the Administrative Complaint and the actual signing of the Consent Agreement for the first day consumed more than one month, Plaintiff's theory would require EPA to spend a minimum of several years to resolve all of the days of discharge without an NPDES permit, by which time the statute of limitations (5 years) would have expired.

Plaintiff's characterization of the facts and the administrative process is both impractical and unrealistic. Significantly, none of the EPA officials deposed can remember, despite their many years of experience with such matters, a single instance in which EPA has ever engaged in such a sequential resolution of daily violations known to all parties participating in the settlement. To the contrary, the administrative record for Barefoot Bay shows that both parties were fully aware of and considered all of the hundreds of days of violation in settling on the $6000 penalty. Read together, the administrative record, Mr. Herwig's testimony, and Ms. Blizzard's affidavit show that all of these violations were fully settled.

The principal support for Plaintiff's case is provided by the analysis, calculations, and testimony of Mr. Kwan. However, Mr. Kwan admits that he has no personal

knowledge of the settlements of "discharge without a permit" violations at Barefoot Bay.[35] Mr. Kwan was not the responsible enforcement officer at the time of the settlement.[36] The "discharge without a permit" violations were negotiated and settled between Florida Cities and Mr. Herwig's EPA team on November 6, 1991. However, Mr. Kwan has not inquired into Mr. Herwig's intent.[37] Although he has no personal knowledge of the events at issue, Mr. Kwan summarily rejected EPA's official determination in the Notes for the Barefoot Bay settlement and failed to consult with any member of EPA's negotiating team.

Mr. Kwan's surprising failure to verify his reinterpretations of the official EPA settlement documents constitutes a glaring lack of due diligence and borders on recklessness. When asked at his deposition why he failed to make any efforts to reconcile EPA's official determinations with his own personal interpretation of the facts surrounding the Barefoot Bay negotiations, Mr. Kwan testified:

> Q (By Mr. Scroggin) Did it occur to you to have a conversation with Mr. Herwig regarding his opinion since he was the enforcement officer that drafted this document and negotiated the settlement for EPA?
> Mr. Quinn: Objection.
> A Mr. Herwig is not on the litigation team.[38]

---

[35] Pl.'s 30(b)(6) Dep. [Kwan Vol. I] at 37 ll. 15-18 (hereafter "30(b)(6) Kwan") (attached as Exhibit 20).

[36] Roy Herwig had enforcement oversight of Barefoot Bay from late 1989 to early 1992. See Herwig at 14 l. 22 (attached as Exhibit 21); Deposition of Ken Kwan at 242, ll. 12-13 (attached as Exhibit 22). See generally Kwan Dep. at 374 ll. 20-25; see also Id. at 375 (attached as Exhibit 23).

[37] Kwan Dep. at 242 ll. 5-13 (attached as Exhibit 22), 259 l. 11 - 260 l. 21 (attached as Exhibit 24).

[38] Kwan Dep. at 262 ll. 4-9; see generally Kwan Dep. at 254-259, 263-267, 281- (continued...)

It is fundamental that Plaintiff base its allegations on known facts, not unsupported conjecture by Mr. Kwan four years after events in which he played no part. Mr. Herwig, not Mr. Kwan, is the enforcement officer for Barefoot Bay with knowledge of the violations and the settlement. Mr. Kwan's own testimony demonstrated that he is not qualified to determine whether the "discharge without a permit" violations had been settled, because he was not present at the settlement negotiations and he has made no inquiries of the persons who were present. Mr. Kwan's conclusions directly contradict findings in EPA's own administrative record and are not supported by the administrative record or any objective source.[39]

Plaintiff has failed to present credible evidence to refute EPA's own administrative record. Accordingly, pursuant to CWA § 309(g)(6), no genuine issue of material fact exists as to the allegations contained in Paragraph 16 of Plaintiff's Second Amended Complaint, and Florida Cities is entitled to judgment as a matter of law as to the 579 violations for discharge without a federal NPDES permit at Barefoot Bay.

2. **Alleged Violations of Barefoot Bay's AO 90-106**

Plaintiff has erroneously based this action for violations of a CWA § 309(a) order on the Administrator's authority in CWA § 309(b).[40] Significantly, neither CWA § 309(b) nor any other CWA section authorizes either administrative or judicial

---

[39] See Kwan Dep. at 95 l. 10, 97 ll. 4-9, 99 l. 10, 103-107, 235-245, 250-251 (all attached as Exhibit 26).

[40] Second Amended Complaint ¶ 1.

enforcement of violations of § 309(a) AOs. In spite of this lack of statutory authority, this complaint includes numerous allegations of violations of Barefoot Bay's AO 90-106. Plaintiff's novel theory alleging liability for the AO violations would result in the double counting of violations at this facility.[41]

In general, an NPDES permit acts as a "shield" to protect a discharger from liability as long as the discharges conform to the requirements and limitations contained in the permit. 33 U.S.C. § 1342(k).[42] The Eleventh Circuit has confirmed that individually enforceable effluent limitations may be imposed on a discharger only through the NPDES permitting process:

> As to effluent limitations, EPA can only authorize discharge to [surface waters], and could only impose an effluent limitation on a discharger, through the NPDES permitting process.

City of Sarasota v. EPA, 813 F.2d 1106, 1109 (11th Cir. 1987).[43] In Paragraphs 18-23 of the Second Amended Complaint, the United States has alleged effluent limitation violations, not of Barefoot Bay's NPDES permit, but of Barefoot Bay's administrative order.

---

[41] These violations are the same alleged violations for discharge without a permit discussed immediately above.

[42] See also Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., 1993 U.S. App. LEXIS 35911, 24 Envtl. L. Rep. 20122 (2d Cir. 1993).

[43] EPA must subject a draft NPDES permit to rigorous public and internal review before issuing a final permit. See 40 C.F.R. 122.1(e), 124.1 et seq. As part of this process, the permittee and members of the public have the opportunity to comment on the draft permit and any proposed effluent limitations it contains. Opportunity for notice and comment protects the rights of every interested party. The statute provides an opportunity for a party to appeal an effluent limitation contained in a permit. See 33 U.S.C. § 1369(b); CWA § 509(b).

As a complement to the NPDES system, administrative orders ("AOs") are "enforcement tools"[44] used to bring a discharger back into compliance with the CWA. An AO is a like a "sword." See United States v. Metropolitan Dist. Comm'n., 23 Env't Rep Cas. (BNA) 1350, 16 Envtl. L. Rep. 20621 (D. Mass. 1985). Therefore, before EPA issues an AO, EPA must determine that the discharger has violated the CWA. The purpose of an AO is always to address underlying violations of the CWA. Indeed, all that EPA may refer to DOJ for enforcement is the underlying violation of the CWA itself. The underlying violation falls within this Court's subject matter jurisdiction; violation of an AO falls outside this Court's subject matter jurisdiction.

Plaintiff relies on CWA § 309(b) as authority for EPA's referring AO violations to DOJ for judicial enforcement. However, there is no such authority under CWA § 309(b) for EPA to refer AO violations to DOJ for enforcement. Section 309(b) specifically limits the kinds of violations that EPA can refer to DOJ, as follows:

> The Administrator is authorized to commence a civil action for appropriate relief, including a permanent or temporary injunction for any violation for which he is authorized to issue a compliance order under subsection (a) of this section. Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance.

33 U.S.C. § 1319(b) (emphasis added). Thus, the subject matter jurisdiction of this Court is limited to considering allegations of CWA violations that are capable of being the underlying basis of an AO. If a permit violation or other CWA violation were the subject of a § 309(a) order, that violation would fall within the subject matter jurisdiction of this Court. But since a violation of a 309(a) order itself cannot be the

---

[44] 30(b)(6) Kwan Dep. Vol. III at 49 ll. 3-4 (attached as Exhibit 27).

underlying basis for another 309(a) order,[45] this Court does not have subject matter jurisdiction over such a violation, and the cause of action would be dismissed. In this case, Plaintiff has alleged in Paragraphs 18-23 violations of a § 309(a) order at Barefoot Bay. These allegations are outside the subject matter jurisdiction of this Court and should be dismissed.

CWA § 309(a)(3) provides the types of violations proper for an AO for a non-delegated state.[46] For a CWA § 309(a) administrative order to be issued, and for a case to be the subject matter of a civil referral under CWA § 309(b), a discharger must have violated section "1311, 1312, 1316, 1317, 1318, 1328, or 1345 . . . or is in violation of any permit condition or limitation implementing any of such sections in a permit under section 1342." 33 U.S.C. § 1319(a)(3) (referring to CWA sections). As the subsection goes on to state, the Administrator may issue an AO requiring such facility to comply, or she may bring a civil action. But the Administrator may not bring a civil action for a violation of a § 309(a) order.[47]

---

[45] See 33 U.S.C. § 1319(a); CWA §309(a).

[46] Prior to May 1, 1995, Florida was a "non-delegated state," meaning that Florida did not have NPDES permitting authority. However, Florida did have its own permitting and enforcement program, and Florida Cities was required to comply with the state, as well as federal, requirements.

[47] An AO cannot substitute for a permit or as a modification of a permit. Rather, CWA § 309(a) authorizes EPA to "specify a time for compliance," but does not allow EPA to incorporate into an AO interim effluent limitations that are independently enforceable. Thus, Plaintiff's reliance in the Second Amended Complaint on CWA § 309(a) for such enforcement authority for violations of interim effluent limits is misplaced. A CWA § 309(a) order is issued unilaterally by EPA without public notice and comment. Deposition of Michael Hom, EPA Enforcement Supervisor, at 55 l. 17 - 56 l. 2 (attached as Exhibit 29). This distinction between interim effluent limits in an AO and the effluent limits in an NPDES permit is reflected (continued...)

This reading of the statute is reflected in EPA's own internal guidelines. The EMS states:

> The Clean Water Act does not authorize the issuance of an AO for a violation of a previously issued AO nor may an administrative penalty order be issued for violation of an administrative order. Any successive AO issued must be based upon the underlying violations of the Act contained in the previous AO . . . .

EMS at 62 n.5.[48] Thus, a violation of a previous AO is not a ground for issuing another AO, nor is a violation of a previous AO a ground for civil referral.

Plaintiff's attempt to impose multiple daily liability (for discharge without a permit and for violations of effluent limits in an AO), instead of a single violation for each day's discharge without a permit, is not authorized by law. Therefore, this Court lacks subject matter jurisdiction over Paragraphs 18, 19, 20, 21, 22, and 23, and Defendant is entitled to summary judgment as a matter of law.

3. Alleged Violations of Barefoot Bay's NPDES Permit No. FL0042293

a. Test Method for Total Residual Chlorine

Plaintiff alleges that on a daily basis between November 1, 1991 and June 28, 1993 the Barefoot Bay facility used a test method for total residual chlorine ("TRC") not specified in NPDES permit FL0042293. However, both the plain language of the

---

[47](...continued)
by EPA's separation of enforcement activities from permit writing; permit writers, who develop effluent limitations for NPDES permits, must do so pursuant to rigorous procedures established by formal EPA regulations. 40 C.F.R. § 124.1 - 124.21.

[48] (Attached as Exhibit 25). Note 5 arises from the Enforcement Response Guide contained within the EMS. The Enforcement Response Guide provides proper responses for particular types of violations. The text of Note 5, which occurs on page 62, is referenced on page 56 under the heading for "Administrative Order Interim Limits." AO Interim Limits are the types of violations being asserted against the Barefoot Bay plant.

permit and the testimony of EPA's own Rule 30(b)(6) witness demonstrate that Florida Cities used one of the two methods allowed in its permit. Indeed, three EPA officials conducted a Performance Audit Inspection of Barefoot Bay on June 10, 1993 and noted in their report that the test method being used by the facility (DPD colorimetric) was approved by EPA's regulations.[49]

Although the permit language lists three test methods for TRC, the first two methods are subparts of the same alternative. The language at issue in Part I of Barefoot Bay's permit, entitled "Effluent Limitations and Monitoring Requirements," states:

> Testing for total residual chlorine (TRC) shall be conducted according to either the amperometric titration method, the low-level amperometric titration method (if compliance with a permit limitation of 0.20 mg/l or less is to be demonstrated), or the DPD colorimetric method as specified in Section 4500-Cl D., 4500-Cl E., or 4500-Cl G., respectively. Standard Methods for the Examination of Water and Wastewater, 17th Edition.[50]

NPDES Permit No. FL0042293. EPA's own 30(b)(6) designated witness for enforcement at Barefoot Bay (Mr. Herwig) acknowledged that the language of this permit provision was "hard to read."[51] While the language may be confusing, the grammatical structure ("either" . . . "or") makes clear that the choice is between two test methods, one of which has two subparts. During the time period in question, Florida Cities used the DPD colorimetric method to test for TRC and reported its test results to EPA on its DMRs. During this period EPA inspected Barefoot Bay and

---

[49] See Letter of July 18, 1993 from Antonio Quinones (EPA) to Florida Cities, attaching Performance Audit Inspection. Specifically, see pages L-2, L-3, and L-4 of the inspection report (all attached as Exhibit 30).

[50] See Plaintiff's Memorandum for Partial Summary Judgment, Exhibit B.

[51] Herwig at 119 l. 21; Id. at 122 ll. 2-6 (all attached as Exhibit 31).

noted no problems with Florida Cities' use of the DPD colorimetric method.[52] Accordingly, no genuine issue of material fact exists as to the allegations contained in Paragraph 28 of Plaintiff's Second Amended Complaint, and Florida Cities is entitled to judgment as a matter of law as to Paragraph 28 of the Second Amended Complaint.

b. Other Claims at Barefoot Bay

Florida Cities acknowledges that the DMRs filed with EPA reported some exceedances (values higher than the permit's effluent limitations) during the relevant time period for TRC, toxicity, and Biochemical Oxygen Demand ("BOD"). However, Florida Cities is unable to determine what appropriate legal defenses and mitigating circumstances are applicable until the government can determine the number of violations being alleged (which Mr. Kwan estimated would take "another month").[53] Accordingly, summary judgment is premature until Plaintiff can state with particularity the charges against Florida Cities. Moreover, at trial Florida Cities will present evidence of mitigating circumstances that should significantly reduce, or eliminate altogether, any applicable penalties.

B. Carrollwood

1. Alleged Unpermitted Discharges

Plaintiff alleges that the Carrollwood facility discharged effluent without a federal NPDES permit from August 1990 to June 1991. Florida Cities acknowledges that while it did discharge effluent into Sweetwater Creek between August 1990 and June

---

[52] See Note 49 and accompanying text.

[53] See Note 9 and accompanying text.

1991, it settled with EPA for these discharges in a Consent Agreement, dated April 19, 1991. Therefore, just as with Barefoot Bay, no genuine issue of material fact exists, and Florida Cities is entitled to judgment as a matter of law.

EPA issued Carrollwood's initial NPDES permit on August 15, 1975. In April of 1980 Florida Cities filed a timely application to renew its Carrollwood permit. Four years later EPA denied the renewal application, based on Florida's designation of Sweetwater Creek as a "no discharge area," which would have precluded Florida from providing to EPA the state certification required for EPA to renew Carrollwood's NPDES permit.[54] In November 1984, EPA issued AO 85-044, ordering Carrollwood to cease discharge into Sweetwater Creek by June 1987. EPA's Notes on the Carrollwood Consent Agreement state that "DER [now FDEP] issued Respondent Temporary Operating Permits (TOPs) throughout this time period allowing discharges into Sweetwater Creek, thereby not enforcing their [sic] own 'no discharge' rule."[55]

During the late 1970s and the 1980s, Florida Cities had been negotiating with Hillsborough County ("County") to connect Carrollwood to the Hillsborough facility. In June 1979 the County notified Florida Cities that connection to the facility would not be available until June 1983. This date was subsequently extended by the County to the spring of 1988 and then extended again to 1990. Hillsborough's 1990 offer at that

---

[54] EPA's Carrollwood Notes (attached as Exhibit 32) explain that the sole basis for EPA's failure to renew the NPDES permit was Florida's designation of the receiving waters of Sweetwater Creek as a "no discharge area." Such designation precluded Florida from providing the state certification necessary for EPA to renew Carrollwood's NPDES permit. The Notes make no mention of any other basis for EPA's failure to renew the permit.

[55] Carrollwood Notes at 1 (attached as Exhibit 32).

time included a capacity fee of over $5.5 million, which could have quadrupled the rates charged to customers.[56]

In 1987 the Florida legislature passed the Grizzle-Figg Act[57] which allowed discharge into Sweetwater Creek within certain limitations. In November 1989 Florida Cities applied to FDEP for a permit to construct an upgrade to Advanced Wastewater Treatment ("AWT")[58] at Carrollwood, which FDEP issued in July 1990. Following receipt of the FDEP construction permit -- a clear indication that Florida would no longer withhold the required state certification for an NPDES permit -- Florida Cities applied for an NPDES permit on July 31, 1990. EPA issued an Administrative Complaint to Florida Cities for CWA violations on September 25, 1990; two days later, it issued AO 90-100, which temporarily authorized discharge into Sweetwater Creek until an NPDES permit was issued. EPA issued NPDES permit No. FL0029319 for an AWT facility on April 19, 1991, effective July 1, 1991. During this period Florida Cities and Hillsborough County continued to negotiate, and they finally concluded a connection agreement on June 5, 1991. Throughout this time period, EPA

---

[56] In an attempt to find alternative methods of disposal of the effluent during this same period, Florida Cities investigated and sought permits for deep well injection, attempted to purchase surrounding citrus groves on which to spray effluent, negotiated with grove owners to receive effluent, and negotiated with area golf courses to supply effluent for irrigation. None of these options proved to be economically viable given the rate base constraints placed on Florida Cites by the Florida Public Service Commission ("PSC"). Throughout all relevant periods of time, Florida Cities continued to submit DMRs to both EPA and FDEP.

[57] Fla. Stat. ch. 403.086 (1987).

[58] AWT requires a level of treatment more stringent than the "secondary treatment" than is required of all wastewater treatment facilities discharging into Waters of the U.S. See 40 C.F.R. § 122.44.

personnel were kept fully apprised of these negotiations and were immediately informed when the connection agreement was reached. On January 6, 1992, Carrollwood connected with Hillsborough's facility, thereby ceasing any discharge into Sweetwater Creek. On March 6, 1992, EPA "inactivated" AO 90-100, informing Florida Cities that it was in compliance with the AO's terms.[59]

As with the Barefoot Bay proceedings, the Carrollwood administrative record consists of the Notice of Show Cause, Notes, Administrative Complaint, and Consent Agreement.[60] The Consent Agreement settled any unpermitted discharge claims at Carrollwood pursuant to CWA § 309(g)(3). In section III, the Consent Agreement states that EPA has considered the CWA § 309(g)(6) factors. The only examination of these factors in the administrative record is found in the Notes:

> The economic benefit realized by Respondent was computed by using the "BEN" model of calculating the economic benefit of noncompliance. The values entered into the BEN model are based upon the delayed capital savings which Respondent realized as a result of not submitting an NPDES permit application. The period of noncompliance used in the model was calculated from the first day of noncompliance, June 1987, up to the point of expected issuance of an NPDES permit, February 1991.[61] Using the BEN model, the estimated benefit of delayed compliance totals $ 203.00.

---

[59] Letter of March 3, 1992 from EPA to Florida Cities (attached as Exhibit 38).

[60] The administrative record in this case for Carrollwood consists of (1) AO 85-044 (attached as Exhibit 33) and AO 90-100 (attached as Exhibit 34), (2) Notice of Show Cause (attached as exhibit 35), (3) Notes on the Proposed Penalty Assessment (attached as Exhibit 32), (4) Administrative Complaint (attached as Exhibit 36), and 5) Consent Agreement and Order Assessing Administrative Penalties (attached as Exhibit 37).

[61] In fact, EPA did not issue the Carrollwood NPDES permit until May 28, 1991, with an effective date of July 1, 1991.

Notes 2 ¶ 4. In Paragraph 6 of the Notes, EPA stated that a penalty reduction was justified because Florida had modified state law to allow for discharge of AWT effluent into Sweetwater Creek. The plain language of the Notes establishes that the penalties were calculated for the entire period of discharge without a permit until the date of issuance of the permit (then estimated to be February 1991).[62]

Plaintiff contends that the Consent Agreement should be read in isolation and that it addresses only the period from June 1987 through July 1990. As noted above, this analysis is unrealistic and impractical. The parties entered into the Consent Agreement in April 1991, leaving an eight-month gap in EPA's enforcement. Joseph W. Landers, Jr., Florida Cities' counsel in the Carrollwood negotiations, has testified by affidavit that at the end of the Carrollwood negotiations, he understood that the parties intended to resolve fully the issue of discharge without a permit.[63] Thomas Plouff, one of EPA's principal negotiators of the Carrollwood settlement, testified that when the Consent Agreement was signed, the fact that there was a period of time in which Florida Cities would be discharging without a permit did not warrant an increase in the penalty assessed because "[t]he case was settled, long since settled."[64] Mr. Plouff chose the date ending liability for discharge without an NPDES permit from

---

[62] Both the Carrollwood Notes (attached as Exhibit 32) and the draft NPDES permit (attached as Exhibit 39) estimate the effective date of the final NPDES permit as February 1991. In fact, comments received on the draft permit delayed EPA's process, so that the permit became effective July 1, 1991.

[63] Declaration of Joseph W. Landers, Jr. (attached as Exhibit 40).

[64] Deposition of Thomas Plouff at 120 ll. 5-6 (attached as Exhibit 41).

Carrollwood as July 1990, because that was the date on which Florida Cities had applied for the permit.[65]

As with the Barefoot Bay allegations, Mr. Kwan again failed to check with EPA's Enforcement Officer who negotiated the Carrollwood settlement, Mr. Thomas Plouff,[66] with Florida Cities or to undertake any due diligence to verify his reinterpretation of the documents in this closed file for a facility that had ceased to discharge.[67] The entire administrative record demonstrates that the CWA § 309(g)(6) penalty paid by Florida Cities applied to the entire period of discharge without a permit. Therefore, no genuine issue of material fact exists, and Florida Cities is entitled to judgment as a matter of law as to Paragraph 30 of Plaintiff's Complaint.

2. Alleged Violations of Carrollwood's NPDES Permit No. FL0029319

EPA was fully aware when it issued NPDES Permit No. FL0029319, which required AWT at the Carrollwood facility, that Carrollwood was incapable of meeting these stringent AWT standards without constructing new treatment facilities. Mr. Kwan testified that, based on his eighteen years experience in such matters at EPA, such construction would routinely take one to four years. Further, when it issued the permit, EPA was also fully apprised that Florida Cities was near completion of the years-long negotiations with Hillsborough County to connect the discharge and

---

[65] Id. at 119 ll. 18-21 (attached as Exhibit 41).

[66] Mr. Plouff conducted a site inspection and negotiated the Carrollwood settlement for the discharge without a permit violations. See Deposition of Thomas Plouff at 57-59 (attached as Exhibit 42).

[67] Carrollwood connected with Hillsborough County on January 6, 1992 and the facility was subsequently physically dismantled and removed from the site.

eliminate any need for an NPDES permit. Indeed, once EPA issued the permit in April 1991, thus assuring that Florida Cities had an alternative to connecting to the Hillsborough facility, the County promptly dropped its demand for a $5.5 million capacity fee and concluded a connection agreement with Florida Cities on June 5, 1991. While these facts support mitigation of any penalties for violations of the AWT provisions of the permit (which EPA never sought to enforce until Plaintiff's litigation team recommended that Mr. Kwan resurrect this case and refer it to DOJ for enforcement),[68] Florida Cities acknowledges that some exceedances of the unachievable AWT standards did occur.

Florida Cities further acknowledges that the DMRs filed with EPA reported exceedances during the relevant time period because the plant, as EPA knew, was incapable of meeting stringent AWT standards. However, as with Barefoot Bay, EPA's Mr. Kwan is still "adding the numbers up"[69] regarding the number of alleged violations. Consequently, Florida Cities is unable to determine what appropriate legal defenses and mitigating circumstances are applicable until the government can decide the number of violations being alleged. Accordingly, summary judgment is premature until Plaintiff can state with particularity the charges against Florida Cities. Moreover,

---

[68] Q (By Mr. Scroggin) And the decision, Mr. Kwan, was the decision to make a referral of the Carrollwood case to the Department of Justice based on your recommendation?
A It is based on the recommendation of the litigation team.
Kwan Dep. at 372 (attached as Exhibit 23).

[69] Kwan Dep. at 152 (attached as Exhibit 2). See discussion in text, supra, at Note 9.

at trial Florida Cities will present evidence of mitigating circumstances that should significantly reduce, or eliminate altogether, any applicable penalties.

C. Waterway Estates

1. Alleged Unpermitted Discharges

Florida Cities has acknowledged that, although fully permitted by FDEP, it discharged secondarily treated effluent from its Waterway Estates sewage treatment facility into the Caloosahatchee River without a federal NPDES permit during the relevant time period. The Court is already aware that EPA erroneously rejected Florida Cities' 1986 application to renew the Waterway Estates' NPDES permit, thus creating by its own wrongful act the very absence of a federal permit that is now the subject of this case. Ultimately, EPA corrected its own error and issued a new permit for the Waterway Estates facility. The government should not be permitted to profit by obtaining penalties from Florida Cities for its own mistake.

2. Alleged Discharges to an Unpermitted Location

Plaintiff alleges that by discharging effluent from Waterway Estates into a tributary canal of the Caloosahatchee River, Florida Cities violated NPDES Permit No. FL0030325. However, the facts developed through discovery (including Plaintiff's own testimony and the testimony of the FDEP official responsible for this facility) and the relevant federal regulations establish that the plant's outfall was within the permitted area of discharge. Therefore, no genuine issue of material fact exists, and Florida Cities is entitled to a judgment in its favor as to the allegations of discharge to an unpermitted location.

NPDES Permit No. FL0030325, effective November 1, 1989, states that Waterway Estates is authorized to discharge into "receiving waters named Caloosahatchee River." Plaintiff's Complaint alleges that because the outfall of the plant discharged into the tributary canal between November 1, 1989 and July 14, 1991, Florida Cities violated the terms of its permit. Plaintiff bases this allegation on Mr. Kwan's Declaration, which alleges that NPDES permit No. FL0030325 authorizes discharge "to a point at the six (6) foot contour line in the Caloosahatchee River." Kwan Decl. ¶ 21. In Plaintiff's Answers to Defendant's First Interrogatories, which were verified by Mr. Kwan, Plaintiff claims that the permit "specified that they were to discharge the effluent from the Waterway Estates Treatment plant directly to six-foot [sic] contour line of the Caloosahatchee River, during the period alleged . . . ."[70] However, when Mr. Kwan was asked at the United States' 30(b)(6) deposition to identify where NPDES permit No. FL0030325 specifies that discharge must be directly to the six-foot contour line, he was unable to do so. In fact, there is no reference in NPDES permit No. FL0030325 specifying discharge to the six-foot contour line. The only reference to a discharge point found in the permit names the receiving waters simply as the "Caloosahatchee River."

Between November 1, 1989, and July 14, 1991, Florida Cities discharged effluent into a canal adjacent to the Caloosahatchee River. Dr. Abdul B. Ahmadi, Water Facilities Administrator of the FDEP, has testified by affidavit that "FDEP was aware of the physical location of the discharge point from the Waterway Estates facility into a tidally influenced canal to the Caloosahatchee River. This canal was considered part of

---

[70] Pl.'s Resp. to Def.'s First Interrogs. ¶ 45. See Ex. 1.

the Caloosahatchee River."[71] Plaintiff has presented no evidence to the contrary. Accordingly, Florida Cities was discharging in accordance with the plain meaning of the permit's language and is entitled to summary judgment as a matter of law.[72]

3. Alleged Violations of Waterway Estates' NPDES Permit No. FL0030325

Florida Cities acknowledges that the DMRs filed with EPA reported some exceedances for nitrogen (concentration and loading) and toxicity tests, during the relevant time period. However, as with Barefoot Bay and Carrollwood, the government still has not yet specifically identified the number of alleged violations. It is fundamental that Florida Cities has the right to know the charges it faces before it can respond meaningfully or present a defense. Accordingly, summary judgment is premature until Plaintiff can state with particularity the charges against Florida Cities. Moreover, at trial Florida Cities will present evidence of mitigating circumstances that should significantly reduce, or eliminate altogether, any applicable penalties.

---

[71] Ahmadi Aff. ¶ 11 (emphasis added) (attached as Exhibit 43).

[72] EPA's own regulations state that the discharge point in the canal is within the scope of the permit. EPA's own regulations state that the application form shall provide:

> (1) Outfall location. The latitude and longitude to the nearest 15 seconds [1500 feet] and the name of the receiving water.

40 CFR § 122.21(g). The canal is within 15 seconds of the location of the current, permitted Waterway Estates outfall.

IV. THE FIFTH AMENDMENT AND NEGATIVE INFERENCES

Plaintiff contends that "a number of key witnesses in this case have refused to testify on Fifth Amendment grounds,"[73] and implies that its prosecution of this case has somehow been thwarted because these witnesses have exercised their constitutional rights. Plaintiff argues that this Court should draw inferences from these witnesses's invocation of the Fifth Amendment that all of the violations at issue occurred as alleged in the Plaintiff's Complaint.[74]

Plaintiff's argument ignores several significant facts. First, Plaintiff has engaged in thorough and wide-ranging discovery against all three Florida Cities facilities for fifteen months before any witness invoked the Fifth Amendment. Second, Florida Cities has produced over 500,000 pages of documents, covering all three facilities. Additionally, Plaintiff has deposed seven Florida Cities officials, who testified fully under oath, for a total of eight days of testimony. These witnesses are:

- Julie Karleskint, Operations Manager, Florida Cities Water Company;
- Larry L. Good, Regional Manager for Sarasota Division and North Division, Florida Cities Water Company;

---

[73] Pl.'s Mot. for Summ. J. at 14.

[74] The Supreme Court has held that "the Fifth Amendment does not forbid adverse inferences against parties to civil actions when they refuse to testify in response to probative evidence offered against them: the Amendment 'does not preclude the inference where the privilege is claimed by a party to a civil cause.' 8 J. Wigmore, Evidence 439 (McNaughton rev. 1961)." Baxter v. Palmigiano, 425 U.S. 308, 318 (1976). Furthermore, "the inference is not required: it may be drawn, but it does not necessarily need to be drawn." Daniels v. Pipefitters' Association Local Union No. 597, 983 F.2d 800, 802 (7th Cir. 1993) (emphasis in original). In addition, no inference drawn through the invocation of the Fifth Amendment can form the sole basis of a judgment against a witness; it is a fact to be considered along with other facts. Director of the Office of Thrift Supervision v. Lopez, 960 F.2d 958, 965 (11th Cir. 1992); Koester v. American Republic Investments, 11 F.3d 818, 824 (8th Cir. 1993).

- William Sansbury, Division Manager, Barefoot Bay Division, Florida Cities Water Company;
- Glen Siler, Wastewater Operator, Barefoot Bay Plant, Florida Cities Water Company;
- Johnnie Overton, Senior Vice President, Florida Cities Water Company, 1992-94 (currently Executive Vice President and Chief Operating Officer, Avatar Utility Services, Inc.);
- Paul Bradtmiller, Executive Vice President and Chief Operating Officer, Florida Cities Water Company; and
- Jack Tompkins, former Operations Manager, Florida Cities Water Company.

Since the Supreme Court denied certiorari in United States v. Weitzenhoff, 35 F.3d 1275 (9th Cir. 1994), cert. denied, 115 S.Ct. 939 (1995),[75] Plaintiff has also deposed Leon Levy, Avatar Holdings Inc.'s Chairman of the Board of Directors and Edwin Jacobson, Chief Executive Officer of Avatar Holdings Inc. Both witnesses have testified fully in response to Plaintiff's questions. In addition, Plaintiff has conducted a series of site inspections at all three facilities, including two inspections of Waterway Estates. The document discovery, depositions, and inspections have provided Plaintiff a full and fair opportunity to discover all facts relevant to this suit.[76] Additionally, all evidence, including all inferences, must be viewed in the light most favorable to the

---

[75] The Ninth's Circuit's holding in Weitzenhoff dramatically changed the well-established legal standard of criminal liability for "knowing" violations of the CWA. Under Weitzenhoff, any violation of the CWA, regardless of the mitigating circumstances, can give rise to criminal felony liability. This result applies to anyone knowingly causing a discharge that results in any violation, even if that person believed in good faith that the facility was in compliance with the CWA.

[76] Florida Cities has repeatedly informed Plaintiff that the witnesses who have exercised their Fifth Amendment rights would testify in exchange for immunity from individual criminal prosecution under the CWA. Florida Cities has formally requested such immunity, but to date, Plaintiff has not responded to Florida Cities' request. The Department of Justice, unlike a private plaintiff, is uniquely empowered to grant this immunity and obtain both deposition and trial testimony from all of these witnesses. See letters exchanged between Don G. Scroggin and Daniel S. Jacobs (attached as Exhibit 44).

party opposing summary judgment, Florida Cities. In light of Plaintiff's sweeping and exhaustive discovery, this Court should decline to draw any adverse inferences and should instead rule on the actual facts of this case.

V. CONCLUSION

Based on the foregoing, Defendant Florida Cities should prevail on its Motion for Summary Judgment on: Paragraph 16 (Barefoot Bay discharge without a valid NPDES permit); Paragraphs 17, 18, 19, 20, 21, 22, 23 (Barefoot Bay effluent limitation violations of Administrative Order 90-106); Paragraph 28 (Barefoot Bay alleged violations for using the improper test method for total residual chlorine); Paragraph 30 (Carrollwood discharge without a valid NPDES permit); Paragraph 45 (Waterway Estates discharge at the wrong location) of the Second Amended Complaint. Plaintiff's Motion for Partial Summary Judgment should be denied.

Exhibit _____
Deposition summaries:

John Marlar, Branch Chief for the EPA's Environmental Compliance Branch. Mr. Marlar was questioned about the Clean Water Act's enforcement provisions. He explained the process for issuing Administrative Orders and Administrative Penalty Orders at length. He was also asked about the NPDES permit application process and the significance of state waste load allocations. Mr. Marlar was also questioned about the circumstances surrounding the denial of FCWC's permit renewal application and the basis for the denial.

James Greenfield, EPA Region IV Waste Load Allocation TMDL Coordinator. Mr. Greenfield was asked about his knowledge of the Clean Water Act. Specifically, he was questioned about section 303 of the Clean Water Act and the procedures it establishes for the EPA. He stated that EPA is required to utilize any state waste load allocations when developing NPDES permits. He further stated that in the FCWC situation, the EPA did not follow the section 303 procedures.

Roosevelt Childress, Designated Representative for the EPA. Mr. Childress was questioned about the EPA's decision to deny FCWC's permit renewal application. He stated that such a denial is uncommon. He stated that typically the EPA grants permit renewals if the state does not have a no discharge waste load allocation.

Fritz Wagener, Chief of the Water Quality Standards Section. Mr. Wagener was questioned about the process of evaluating state water quality standards.

Ken Kwan, EPA Environmental Engineer. Mr. Kwan was asked about his involvement with the Barefoot Bay and Carrollwood facilities. Specifically, he was questioned about he Administrative Orders issued to Carrollwood and Barefoot Bay.

Roger Pfaff, Acting Branch Chief for the Water Permits and Enforcement Branch. Mr. Pfaff was primarily questioned about EPA's enforcement procedures. Specifically, he was asked about the process for issuing Administrative Orders and Administrative Penalty Orders. He was also asked to address the relationship between an Administrative Order and an NPDES permit.

Roy Herwig, Environmental Engineer in the NPDES Enforcement Section. Mr. Herwig was questioned about the NPDES enforcement process and how it was carried out at the Barefoot Bay facility. He also described the sampling that was conducted at Barefoot Bay and the Administrative Order issued to the facility.

Thomas Plouff, Environmental Engineer. He was asked about his inspection of the Carrollwood facility and the subsequent enforcement action that was undertaken. Mr. Plouff was responsible for calculating the penalty levied against FCWC and he was asked about this process.

Michael Hom, Supervisory Environmental Engineer. Mr. Hom briefly described the process of issuing Administrative Orders and Administrative Penalty Orders. He was also questioned about the Administrative Order which was issued to the Barefoot Bay facility and his involvement with the process.

Exhibit _____

Depositions taken by the Department of Justice.

Edwin Jacobson, Chief Executive Officer of Avatar Holdings, Chicago Milwaukee Corporation and CMC Heartland. The Department of Justice questioned Mr. Jacobson about his duties and responsibilities as CEO of Avatar Holdings. Mr. Jacobson explained that he is not involved in overseeing the wastewater treatment facilities. He further explained that he had no knowledge of NPDES Permit violations at any of the facilities.

Leon Levy, Chairman of Avatar Holdings. The Department of Justice questioned the witness about his responsibilities at Avatar Holdings. He stated that he has little involvement with the Barefoot Bay facility and has very limited knowledge of the case. He is questioned about a number of internal memoranda of which he has no recollection. He is also asked about several Avatar Holdings Board Meetings which he attended. He had little or no recollection about these meetings.

Julie Karleskint, Environmental Engineer for Avatar Utilities. She was asked to describe her job duties and responsibilities. She was also asked to verify information on various reports and violation summaries. She was also questioned about the alternative of spray irrigation and the construction of an advanced waste water treatment plant.

Paul Bradtmiller, Executive Vice President for FCWC. He was asked about upgrades to the wastewater treatment facilities and the process of applying to the Public Service Commission for a rate increase.

Patrick Lehman, Engineer for Peace River/Manasota Regional Water Supply Authority. He was employed by FCWC from 1984-1989. He was asked about the work he did at FCWC; specifically he was questioned about the percolation ponds at Barefoot Bay. He was also asked about his knowledge of the NPDES permit renewal application and its subsequent denial. He responded to a series of questions about the Water Ways Estate facility and the Administrative Order issued to the facility.

Michael Murphy, Vice President and Chief Financial Officer for FCWC. The Department of Justice questioned this witness about his general job duties as CFO. He was asked about FCWC's financial condition, financial statements, loans, projected profits and the budget. He was also asked about FCWC's legal expenses and expenses associated with the rate case. He also responded to several questions about rate-making: the purpose of rate filings, their frequency, factors involved in the decision to file and whether FCWC's legal expenses are included in rate filings.

Randy Armstrong The Department of Justice questioned Mr. Armstrong about his opinions about the water quality around the Water Ways Estate facility. He was further questioned about a 1980 survey of water quality and the wasteload allocation that resulted from the survey. The deposition concluded with several questions about the discharge permit issued in 1981.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

DEFENDANT FLORIDA CITIES WATER COMPANY'S
THIRD INTERROGATORIES

Pursuant to Fed. R. Civ. P. 33, Florida Cities Water Company hereby serves its third set of interrogatories upon the Plaintiff, United States of America, and requests that they be answered in writing under oath within thirty days. (Numeration continues from the Defendant's Second Interrogatories.)

Interrogatory 22: Describe with specificity the review procedure used by EPA Region IV from 1990 to present (including modifications or changes to the procedure) to refer a wastewater treatment facility's CWA violations to the Department of Justice for civil litigation, including but not limited to the levels of officials involved, what officials need to approve a referral, and all types of documentation prepared along the process of a civil referral (for the types of documentation prepared, please include a list of the types of documentation prepared even if the specific contents may be protected by privilege).

Interrogatory 23: Who initiated the process to refer Barefoot Bay, Carrollwood, and Waterway Estates and through whose hands did each recommendation for referral pass before ultimate approval for referral to DOJ for civil litigation. (Include the name of the person, his/her title, and specific date of approval for each step along the chain of command needed to refer each facility to DOJ.)

Interrogatory 24: Describe any additional basis (other than those bases described in the Enforcement Management System) for recommending referral of a facility to the DOJ for civil litigation. (If the Enforcement Management System supplies the exhaustive list of bases for referral, please so state.)

Interrogatory 25: Describe all persons authorized to initiate the civil referral enforcement review process for a given wastewater treatment facility in EPA Region IV.

DEFENDANT FLORIDA CITIES WATER COMPANY'S
FOURTH REQUEST FOR PRODUCTION OF DOCUMENTS

Defendant Florida Cities Water Company ("FCWC"), pursuant to Rules 26 and 34 of the Federal Rules of Civil Procedure ("FRCP"), hereby requests that Plaintiff United States of America ("United States") produce and make available for inspection and copying, at a mutually agreeable location, the documents identified in this Request for Production of Documents ("Request for Production") that are within Plaintiff's possession, custody, or control, within thirty (30) days of the date of service of this Request for Production. Such production of documents shall be in accordance with the FRCP and the following instructions and definitions.

Definitions and Instructions

The Definitions and Instructions remain the same as in Defendant's Second Request for Production of Documents.

Documents Requested

1. All documents prepared by Environmental Protection Agency ("EPA") Region IV during the referral process to Department of Justice ("DOJ") for Barefoot Bay, Carrollwood, Waterway Estates. (If a document includes privileged information, please redact and produce the redacted copy for inspection.)

2. All documents used in preparing an enforcement matter for civil referral, including but not limited to any EPA or DOJ guidelines or documents describing the referral process.

3. A curriculum vitae for every expert Plaintiff intends to call as a witness at trial, including a list of civil cases in which each expert has previously testified or prepared a report.

4. All testimony of record, either in a judicial or administrative forum, within the past 4 years of every expert Plaintiff intends to call as a witness at trial.

5. All reports prepared by your expert witnesses, in either judicial or administrative forums, other than this action, during the previous ten years.

6. All publications authored by Plaintiff's experts within the past ten years.

7. All documents reflecting agreements between Plaintiff and Plaintiff's experts for the purpose of employing their services in this litigation.

8. All documents reflecting payment or compensation by the United States to Plaintiff's experts within the past ten years for services rendered.

9. All violation summary sheets prepared by the enforcement officers between 1985 and present for Barefoot Bay, Carrollwood, and Waterway Estates.

10. Any memoranda relating to Barefoot Bay, Carrollwood, and Waterway

Estates reviewed by the Regional Administrator (or such person with delegated authority for the Regional Administrator to give final approval of this referral) in approving the referral of this action to DOJ.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' FIFTH REQUEST FOR PRODUCTION OF DOCUMENTS TO FLORIDA CITIES WATER COMPANY, INC.

Plaintiff, the United States of America, pursuant to Rules 26 and 34 of the Federal Rules of Civil Procedure, requests Defendant Florida Cities Water Company, Inc. to produce and permit the United States to inspect and copy each of the following documents in defendant's possession, custody or control. These documents shall be produced on October 16, 1995 unless such time is modified by order of the Court or by counsel for the United States, at the offices of the U.S. Department of Justice, Environment and Natural Resources Division, 1425 New York Avenue, N.W., Washington, D.C., or at such other location as agreed upon by counsel for the United States.

INSTRUCTIONS

1. Unless otherwise indicated, these requests apply to all documents written, produced, drafted, or generated at any time up until the trial of this matter, but exclude documents already produced by Defendant Florida Cities Water Company in response to the United States' previous Requests for Production of Documents.

2. For each document produced, indicate on the document or in some other reasonable manner, the numbered request(s) to which it responds.

3. This request covers all documents in the possession, control or custody of defendant, its parent companies, sister companies, departments, divisions, directors, officers, employees, agents, servants, consultants, attorneys and assigns.

4. Words used in the plural shall also be taken to mean and include the singular. Words used in the singular shall also be taken to mean and include the plural. "Or" and "and" shall be construed either conjunctively or disjunctively to bring within the scope of these requests for production any documents that might otherwise be construed to be outside their scope. The past tense includes the present tense where the clear meaning is not distorted by change of tense.

5. If any document is withheld under any claim of privilege or exemption, furnish a list identifying each document for which the privilege or exemption is claimed, together with the following information:

(a) its title, or if it has no title, its subject matter;
(b) the date of origin;
(c) the author or addressor;
(d) the recipient(s) of all copies; and
(e) the basis upon which privilege or exemption is claimed.

6. Please produce the complete original exact copy of each document and, unless otherwise stated, each non-identical

copy (whether different from the original because of notes made on the copy or otherwise), including drafts, of each writing of every kind and description (together with all worksheets, support documents, and other relevant materials), whether inscribed by hand or mechanical, electronic, microfilm, photographic, or other means (such as by recording, film, tape or other medium) from which such information may be obtained.

DEFINITIONS

Unless otherwise indicated, the terms used in these Requests shall have the same meaning ascribed to them under the Clean Water Act.

In addition, unless otherwise stated, the following definitions shall apply to these discovery requests:

A. "Document" means any and all material that is written, printed, typed, photographed, recorded (electronically, magnetically, graphically or otherwise) or which is capable of being recorded in any form. It includes, but is not limited to, any logs of materials received, other logs, invoices, purchase orders, receipts, bills of lading, loading tickets, receiving tickets, shipping orders, inventories, letters and other correspondence, offers, contracts, agreements, bids, proposals, applications, licenses, permits, reports to government agencies, other reports, minutes of meetings, sales estimates, sales reports, memoranda, handwritten or other notes, calendar or diary entries, agendas, bulletins, graphs, charts, maps, photographs, drawings, data, price lists, lists of accounts, summaries,

telegraphs, teletypes, computer printouts, magnetic tapes, discs, microfilm, and microfiche.

B. "Relate(s)" or "relating to" means constituting, defining, containing, embodying, reflecting, identifying, stating, referring to, dealing with or in any way pertaining to.

REQUESTS

1. Complete audited financial statements of Florida Cities Water Company for 1994, including balance sheets, income statements, cash flow statements, and all accompanying footnotes, schedules, and explanations.

2. Complete monthly financial statements of Florida Cities Water Company for year-to-date 1995, including balance sheets, income statements, cash flow statements, and all accompanying footnotes, schedules, and explanations.

3. All documents relating to the daily flow of effluent from the Barefoot Bay facility for each day from July 1, 1990 through and including October 31, 1991.

4. All documents relating to the daily flow of influent to the Barefoot Bay facility for each day from July 1, 1990 through and including October 31, 1991.

5. All documents relating to negotiations between Florida Cities Water Company and EPA on the Consent Agreement and Order Assessing Administrative Penalties, Docket No. CWA-IV 91-538, dated November 6, 1991, including, but not limited to, all documents referenced in paragraph 9 of the Declaration of Kathleen L. Blizzard, Esquire, dated September 8, 1995, all

documents which Ms. Blizzard reviewed in preparing her Declaration, and all documents in the files of Hopping, Green, Sams, & Smith, P.A., relating to said negotiations.

6. All documents relating to negotiations between Florida Cities Water Company and EPA to settle violations of discharging from the Carrollwood facility without a valid NPDES permit, including, but not limited to, all documents which Joseph W. Landers, Jr., Esquire reviewed in preparing his Declaration, dated September 7, 1995, and all documents in the files of Landers & Parsons relating to said negotiations.

7. All documents relating to methods of disposal of the effluent from the Carrollwood facility other than by discharge into the Sweetwater Creek, including, but not limited to, all documents relating to negotiations between Florida Cities Water Company and Hillsborough County and/or the City of Tampa.

8. All documents relating to methods of disposal of the effluent from the Barefoot Bay facility, other than by discharge into the Sebastian Creek, including, but not limited to, all documents relating to the investigation of deep well injection, purchase of surrounding citrus groves on which to spray effluent, negotiations with grove owners to receive effluent, and negotiations with golf courses to supply effluent for irrigation.

9. All documents relating to methods of disposal of the effluent from the Waterway Estates facility, other than by discharge into the Caloosahatchee River.

10. All documents relating to the test method for total residual chlorine at the Barefoot Bay facility.

11. All documents relating to actual or potential environmental impact resulting from the discharges from the Carrollwood facility into the Sweetwater Creek.

12. All documents relating to actual or potential environmental impact resulting from the discharges from the Barefoot Bay facility into the canal leading to the Sebastian Creek.

13. All documents relating to actual or potential environmental impact resulting from the discharges from the Waterway Estates facility into the Caloosahatchee River.

14. All documents relating to payments for professional services made by Florida Cities Water Company to Kathleen L. Blizzard, Esquire, or to Hopping, Green, Sams, & Snith, P.A.

15. All documents relating to payments for professional services made by Florida Cities Water Company to Joseph W. Landers, Jr., Esquire, or to Landers & Parsons.

16. All documents relating to the location of the Waterway Estates' discharge point to the canal, including but not limited to all measurements of that location.

17. All documents relating to the location of the Waterway Estates' present discharge point to the Caloosahatchee River, including but not limited to all measurements of that location.

DATED: September 15, 1995

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

DEFENDANT FLORIDA CITIES WATER COMPANY'S
NOTICE OF DISPOSITIVE AUTHORITY

Defendant, Florida Cities Water Company, hereby notifies the Court of dispositive authority in favor of Defendants regarding Plaintiff's claims[1] at Barefoot Bay for unpermitted effluent discharges and interim effluent limitation violations of Administrative Order 90-106 and at Carrollwood for unpermitted effluent discharges. The authority is provided in the matter of *Borough of Ridgway, Pennsylvania, NPDES*

[1] Relevant documents are provided as exhibits in both Plaintiff's and Defendant's motions for summary judgment pending before the Court. DMRs for Barefoot Bay are supplied by Plaintiff's Exhibit D to its motion for partial summary judgment. The Administrative Complaint for Barefoot Bay dated September 25, 1991, and Consent Agreement and Order Assessing Administrative Penalties dated November 6, 1991 Bay are supplied by Defendant's Exhibits 8 and 9 to its motion for partial summary judgment. The Administrative Complaint dated September 25, 1990 for Carrollwood and Consent Agreement and Order Assessing Administrative Penalties dated April 19, 1991 are supplied as Defendant's Exhibits 36 and 37. Plaintiff has provided copies of the NPDES permits for Barefoot Bay and Carrollwood as Plaintiff's Exhibits B and E, respectively.

Permit No. PA0023213, CWA-III-127 and CWA-III-141, decided by a Regional Presiding Officer in EPA Region III on June 29, 1995. A copy is attached.

Borough of Ridgway, Pennsylvania, NPDES Permit No. PA0023213, CWA-III-127 and CWA-III-141 is dispositive authority in favor of Defendants for paragraphs 16, 17, 18, 19, 20, 21, 22, 23, and 30 of the Second Amended Complaint. Counsel has not been able to determine whether this matter has been appealed, but will apprise the Court as soon as it is able to do so.

Borough of Ridgway, a Clean Water Act case, stands for the proposition that Plaintiff is required to bring, pursuant to the "claim-splitting" and "claim-preclusion" doctrines, "all causes of action associated with a transaction or a series of related transactions in a single case in one forum." *Id.* at 16. The EPA administrative complaints against Florida Cities, allegedly covering one day for Barefoot Bay and 37 months for Carrollwood, represent a final determination by EPA which cannot be re-litigated in this forum. EPA had the knowledge and the opportunity to address all the claims in the paragraphs of the Second Amended Complaint listed above.at the time the administrative complaints were filed. Now EPA is attempting to re-visit its prior assessments against Barefoot Bay and Carrollwood, and according to this case, EPA cannot do so. EPA's own presiding officer has ruled against the agency in declaring that "once a transaction has been litigated between parties, those parties may not raise new causes of action involving that transaction in a new case in <u>any forum</u>." *Id.* (Emphasis added).

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION III
841 CHESTNUT BUILDING
PHILADELPHIA, PENNSYLVANIA 19107

IN THE MATTER OF:	:	
	:	DOCKET NOS. CWA-III-127
Borough of Ridgway,	:	CWA-III-141
Pennsylvania,	:	
	:	Proceedings to Assess Class I
	:	Civil Penalties Under
NPDES Permit No. PA0023213	:	Section 309(g) of the Clean
	:	Water Act, 33 U.S.C. § 1319(g)
RESPONDENT	:	

ORDER ON MOTIONS FOR SUMMARY DETERMINATION AND ACCELERATED RECOMMENDED DECISION

These are unconsolidated proceedings for the assessment of Class I administrative penalties under Subsection 309(g) of the Clean Water Act, 33 U.S.C. § 1319(g). The proceedings are governed by the Environmental Protection Agency's Proposed 40 C.F.R. Part 28--CONSOLIDATED RULES OF PRACTICE GOVERNING THE ADMINISTRATIVE ASSESSMENT OF CLASS I CIVIL PENALTIES UNDER THE CLEAN WATER ACT, THE COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION AND LIABILITY ACT, AND THE EMERGENCY PLANNING AND COMMUNITY RIGHT-TO-KNOW ACT, AND THE ADMINISTRATIVE ASSESSMENT OF CIVIL PENALTIES UNDER PART C OF THE SAFE DRINKING WATER ACT, 56 Fed. Reg. 28,996 (July 1, 1991), issued October 29, 1991 as superseding procedural guidance for Class I administrative penalty proceedings under Subsection 309(g) of the Clean Water Act, 33 U.S.C. § 1319(g) ("Consolidated Rules").

Under § 28.25(a) of the Consolidated Rules the parties have each moved for Summary Determination and Accelerated Recommended Decision in both cases. Each party opposes the other's motions. The Presiding Officer has permitted the parties to exceed the page limitations on documents set forth in § 28.8 of the Consolidated Rules. Because the parties are identical and the issues are closely similar in the cases, the Presiding Officer has allowed counsel to combine their respective filings and will rule on the motions together, indicating differences between the cases as appropriate. For example, Complainant first moved for Summary Determination and Accelerated Recommended Decision in Docket No. CWA-III-127; Respondent moved first in Docket No. CWA-III-141. In Docket CWA-III-141 Respondent has also filed a Second Motion for Summary Determination and Accelerated Determination, the grounds of which are inapplicable to Docket No. CWA-III-127. Complainant opposes this motion as well. The Presiding Officer held oral argument on this latter motion on June 19, 1995; all other motions are to be decided on the parties' briefs.

CLEAN WATER ACT LIABILITY

The Clean Water Act's basic prohibition against pollution is set forth in Subsection 301(a), 33 U.S.C. § 1311(a): "Except as in compliance with this section and sections 1312, 1316, 1317, 1328, 1342, and 1344 of this title, the discharge of any pollutant by any person shall be unlawful."

These two Administrative Complaints are brought under Subsection 309(g) of the Clean Water Act, 33 U.S.C. § 1319(g), which provides in relevant part: "Whenever on the basis of any information available the Administrator finds that any person has violated...any permit condition...in a permit issued under section 1342 of this title...by a State...the Administrator...may, after

consultation with the State in which the violation occurs, assess a Class I penalty...under this subsection."

Several of the elements of statutory liability were properly alleged by the Complainant and admitted by the Respondent, and these elements are therefore adopted as Recommended Findings of Fact and Conclusions of Law:

1. The Borough of Ridgway (Respondent), a person within the meaning of Section 502(5) of the Clean Water Act, 33 U.S.C. § 1362(5), owns and operates a wastewater treatment plant (Facility), located in Ridgway, Elk County, Pennsylvania, which discharges pollutants to the Clarion River. (Allegation 1. in the Administrative Complaints; Paragraph 1. in the Answers).

2. The Clarion River is a navigable water of the United States as set forth in Section 502(7) of the Act, 33 U.S.C. § 1362(7). Respondent is therefore subject to the provisions of the Act, 33 U.S.C. § 1251 et seq. (Allegation 2. in the Administrative Complaints; Paragraph 2. in the Answers).

3. On July 14, 1993, pursuant to Section 402 of the Act, 33 U.S.C. § 1342, and Pennsylvania's Clean Streams Law, as amended, 35 P.S. Section 691.1 et seq., the Pennsylvania Department of Environmental Resources (PADER) issued National Pollutant Discharge Elimination System Permit No., PA0221213 (Permit) to the Respondent for the discharge of pollutants from its Facility. The Permit expires on July 13, 1998. (Allegation 3. in the Administrative Complaints; Paragraph 3. in the Answers).

4. Part A, Page 2, of Respondent's Permit establishes certain specific effluent limitations for the discharge of pollutants from Outfall 001. (Allegation 4. in the Administrative Complaints; Paragraph 4. in the Answers).

5. Part B, Page 11, of the Permit requires Respondent to "...at all times maintain in good working order and properly operate all facilities and systems (and related appurtenances) for collection and treatment which are installed or used by the permittee for water pollution control and abatement to achieve compliance with the terms and conditions of the permit. Proper operation and maintenance includes but is not limited to effective performance based on designed facility removals..." (Allegation 5. in the Administrative Complaints; Paragraph 5. in the Answers).

Disputed Issues

Under § 28.25(a)(1) of the Consolidated Rules, summary determination as to liability allegations may be granted if there is no genuine issue of material fact presented by the administrative record and any exchange of information. There has been an information exchange in Docket No. CWA-III-121, but none has been ordered or conducted in Docket No. CWA-III-141. However, in both cases a good deal of relevant information has been introduced into the record in the form of exhibits attached to the parties' motions and responses.

An accelerated recommended decision may be granted if the Presiding Officer, having made a liability determination, also

determines that there is no compelling need for further fact-finding concerning remedy. If the Presiding Officer determines summarily some, but not all of the liability allegations, an interlocutory partial summary determination order may be issued with those determinations, narrowing the range of the issues in dispute for further proceedings. An accelerated recommended decision would not be appropriate under those circumstances.

COMPLAINANT'S CAUSES OF ACTION

In addition to the admitted elements of the Clean Water Act causes of action adopted above as recommended findings of fact and conclusions of law, the Administrative Complaints also contain allegations regarding Respondent's violations of the Permit and regarding Complainant's consultation with the Commonwealth of Pennsylvania sufficient to make out valid claims under § 309(g) of the Clean Water Act, 33 U.S.C. § 1319(g). If Respondent had raised no defenses, Complainant would be entitled to judgment as to liability as a matter of law because there would be no material issue of fact to determine as to liability. In its responses to the Administrative Complaints and in its other filings, Respondent has raised a great many issues pertaining to liability and to the proposed penalty assessment:

Consultation with Pennsylvania:

The Administrative Record in each action contains a clear copy of Complainant's correspondence with the Commonwealth in which Pennsylvania's input on the proposed penalty actions was solicited.

There is no evidence that the Commonwealth ever responded to this correspondence. Complainant's letters satisfy the statutory requirement of state consultation, and since Respondent has presented no evidence on this issue, there is no genuine issue of material fact to be determined at hearing on this point.

Parameters are not pollutants

Respondent argues that the effluent parameters of Total Suspended Solids (TSS), Carbonaceous Biochemical Oxygen Demand-5 day measure ($CBOD_5$) and pH are not pollutants within the statutory definition of the term, and that the Administrative Complaints do not state proper Clean Water Act claims in alleging discharges in excess of the Permit limitations on these effluent parameters. Complainant has alleged, and Respondent has admitted, the discharge of pollutants to the Clarion River (Recommended Finding No. 1, above). The Administrative Complaints also allege that Respondent failed to comply with terms and conditions of the Permit (Allegation No. 7). It is well established that "to violate a NPDES permit is to violate the Act." Chesapeake Bay Foundation v Bethlehem Steel Corporation, 608 F. Supp. 440, 451 (D. MD. 1985). The next question is: in what manner, if any, did Respondent violate the Permit?

Discharge Monitoring Reports

The Administrative Records include legible copies of Respondent's Discharge Monitoring Reports (DMRs) for certain of the months during which Complainant alleges that Respondent discharged

pollutants in violation of terms and conditions of the Permit. Although a copy of the DMR for April, 1994 was not in the record of Docket No. CWA-III-127 at the time of Complainant's Motion for Summary Determination and Accelerated Recommended Decision, Complainant introduced a copy of the missing DMR into the record with its Second Prehearing Exchange. Respondent filed a Motion to Strike Complainant's Second Prehearing Exchange, citing §§ 28.24(e)(1)(i) and 28.2(b)(15)(ii) of the Consolidated Rules. Complainant indicated it would not respond to Respondent's Motion to Strike, and so the Presiding Officer has granted the Motion and Respondent's April, 1994 DMR is no longer part of the Administrative Record in Docket No. CWA-III-127. Accordingly, there is no evidence in the record supporting Complainant's Motion for Summary Determination as to the alleged April, 1994 violations, so Complainant is not entitled to summary determination as to that month. There remains a genuine issue of material fact as to this allegation, to be decided after further proceedings.

The DMRs that are in the record are clear evidence of Respondent's violations of the Permit, executed with required certifications as to accuracy by an authorized representative of the Respondent. In Clean Water Act enforcement proceedings, DMRs are usually treated as admissions of liability. In the Matter of Battelle Memorial Institute, Inc., EPA Docket No. CWA-IV 94-509 (CWA § 309(g) Presiding Officer's Order Granting Complainant's Motion for Summary Determination of Liability and Denying

Respondent's Cross Motion for Summary Determination of Liability, dated June 1, 1995); Student Public Interest Research Group v Chemwaste Pacific, 618 F. Supp. 1369, 1129 (D. N.J. 1985); Student Public Interest Research Group v PD Oil & Chemical Storage, 627 F. Supp. 1074, 1080 (D. N.J. 1986); Student Public Interest Research Group v New Jersey Central Power & Light, 662 F. Supp. 103 (D. N.J. 1986); Public Interest Research Group v Yates Ind. (D. N.J. 1991); Public Interest Research Group v Rice, 774 F. Supp. 317, 325 (D. N.J. 1991).

Even where, as here, an NPDES permitee proffers affidavits with opinions purporting to undercut the reliability of information presented in DMRs (Buesink and Grafton affidavits of March 3 and March 6, 1995, as they relate to pH value for March, 1994, attached to Respondent's March 6, 1995 memorandum of law), summary judgment on liability is appropriate unless EPA would not consider the DMR information as conclusively showing permit violations. New Jersey Student Public Interest Research Group v Tennece Polymers, 602 F. Supp. 1398, 1408 (D. NJ 1985). Respondent has introduced some evidence that an EPA inspector questioned TSS and CBOD, analytical procedures during a February 13, 1995 inspection of Respondent's facility. (Buesink affidavit of March 3, 1995, attached to Respondent's March 6 filing; Schuller supplemental affidavit of April 28, 1995, attached to Respondent's May 1, 1995 filing). Complainant has not addressed the February 13, 1995 EPA inspection in its subsequent filings. Although they are not very remote in

time from the alleged violations, and may be of some probative value. the inspector's statements do not constitute an adequate indication that EPA would not consider the information in the earlier DMRs as conclusively showing permit violations. To the contrary. Complainant's position is that the DMRs do conclusively show permit violations.

In some courts, a strong showing of prevent faulty analysis, direct or reliable circumstantial evidence of reporting inaccuracies, may allow the drawing of an inference in favor of a non-moving party sufficient to raise a genuine issue of fact and so to defeat a motion of for summary judgment. Public Interest Research Group v Elf Atochem, 817 F. Supp. 1168, 1178 (D. NJ 1993). In other courts, a permittee "...may not now refute its own reports on the results of its testing...If an entity reports a pollution level in excess of the Permit limits, it is strictly liable, as Congress has manifested an intention that courts not reconsider the effluent discharge levels reported." Connecticut Fund for the Environment v Upjohn Co., 660 F. Supp. 1397, 1417 (D. Conn. 1987). In the latter case, evidence of reporting inaccuracies, while rejected for purposes of determining liability, were relevent to remedy.

Respondent has cited a case in which the judge declined to grant plaintiff's motion for summary judgement based upon the defendants's DMRs. In Friends of the Earth v Facet Enterprises, 618 F. Supp. 532 (N.D. N.Y. 1984). the court found that the

defendant had "offered a multitude of justifications for the alleged violations, along with convincing arguments why many of the alleged violations should not actually constitute violations (e.g. typographical mistakes in the DMRs)," but gave no details of the "justifications" or of the "convincing arguments." 618 F. Supp. at 536. Here there are neither justifications nor convincing arguments about the reliability of the data in the DMRs in the record, and the law in the Third Circuit, as demonstrated in the PIRG cases, leads to a result different from that reached by the court in the Facet Enterprises case.

Given the nature and quality of the evidence already in the record, this stage of the enforcement proceedings is not the proper point at which to consider Respondent's claim regarding the inaccuracies of DMRs. Chesapeake Bay Foundation v Bethlehem Steel Corporation, 608 F. Supp. 440, 452. The DMRs in the record entitle Complainant to summary determination as to the Permit violations they indicate as a matter of law.

Excursion

The secondary treatment regulation, 40 C.F.R. Part 133, contains a provision apparently allowing for an excursion from the pH limts of 6.0-9.0 if the publicly owned treatment works demonstrates that: (1) Inorganic chemicals are not added to the waste stream as part of the treatment process; and (2) contributions from industrial sources do not cause the pH of the effluent to be less than 6.0 or greater than 9.0. 40 C.F.R.

§ 133.102(c). With regard only to Docket No. CWA-III-127, Respondent made such a demonstration in evidence submitted for the record, relevant to the March, 1994 DMR that shows a pH level of 3.7. (Grafton affidavit of March 6, 1995; Buesink affidavit of March 3, 1995, both attached to Respondent's memorandum of March 6, 1995). The Permit contains no provision for pH excursions, and the Permit's terms and conditions are controlling in these enforcement proceedings. The affidavits raise no genuine issue of material fact, although they may pose an interesting technical question.[1]

Trickling filters

Respondent's facility utilizes trickling filter technogy, which EPA has recognized as having limited treatment capability. The secondary treatment regulation, 40 C.F.R. Part 133, sets forth effluent limitations less stringent for "facilities eligible for treatment equivalent to secondary treatment," typically those with trickling filter or waste stabilization pond technology. 40 C.F.R. §§ 133.101(g), 133.105. These less stringent effluent limitations are not in Respondent's NPDES permit. Further, comparison of the table showing alleged violations of the Permit in Docket No. CWA-III-127 (Exhibit 2 to Complainant's January 31, 1995 memorandum of law) with the the less stringent effluent limitations for

[1] The Permit also requires Respondent to take effluent samples at "Outfall 001 (after the chlorine contact tank)." Respondent's evidence shows that there is no such tank. (Buesink affidavit of March 3, 1995, attached to Respondent's submission of March 6, 1995.) Another interesting technical question posed, but no genuine issue of material fact is raised.

"facilities eligible for treatment equivalent to secondary treatment" in 40 C.F.R. § 133.105 shows that every violation alleged in Docket CWA-III-127 (excluding the April, 1994 alleged violation) would also have been a violation of the less stringent effluent limitations.[2] Respondent's trickling filters may be considered among the circumstances of the violation, but the evidence about them in the record does not raise a genuine issue of material fact as to liability.

Pretreatment

Pennsylvania does not administer the Pretreatment Program established under § 307 of the Clean Water Act, 33 U.S.C. § 1317, and 40 C.F.R. Part 403. Instead, EPA-Region III, through its Water Management Division Director, the Complainant in these actions, is responsible for assuring that the waters of the United States and publicly owned treatment works are protected from toxic water pollutants that may damage, interfere with or pass through those treatment works. As the pretreatment Control Authority, Complainant has regulatory and enforcement authority over publicly owned treatment works and over local Industrial Users who discharge pollutants to the sewers that convey their wastewaters to publicly owned treatment works. Complainant coordinates with PADER to incorporate Pretreatment Program implementation requirements into the NPDES permits of publicly owned treatment works.

[2] No comparison was made with the violations alleged in CWA-III-141 because the record does not contain a summary table of violations.

It is not uncommon for disagreements and disputes to break out among the Control Authority, PADER, a publicly owned treatment works and one or more of local Industrial Users, especially during the initial imposition of Pretreatment Program requirements in NPDES permits, local Industrial User permits or agreements and intermunicipal service contracts. These disputes may be resolved in various forums by negotiation, litigation or other forms of dispute resolution. It appears that such a dispute has arisen among the parties to these actions and PADER, and that it is well advanced toward resolution by negotiation. The Respondent avers that these actions were initiated by Complainant in retaliation for Respondent's invocation of administrative review rights in connection with Complainant's actions as pretreatment Control Authority, pointing to the temporal proximity of actions in the pretreatment dispute and the initiation of Docket No. CWA-III-127. A cynic might conclude that coincidence is the only way these events could have happened in such temporal proximity, but the fact of temporal proximity alone does not raise a genuine issue of material fact regarding retaliatory enforcement.

The alleged inadequacy of Complainant's enforcement of the Pretreatment Program requirements against Industrial Users connected to Respondent's sewer system is a red herring in these proceedings. Respondent does not contend that Industrial User discharges have caused the violations of the Permit involved in these cases. Instead, Respondent relies on findings made by EPA in

the context of its process of imposing a Pretreatment Program upon Respondent long before the discharges that are involved in these cases, to build its argument that EPA's allegedly inadequate Pretreatment Program enforcement constitutes a defense to liability. Evidence in the record regarding the enforcement of the Pretreatment Program does not raise a genuine issue of material fact.

Joinder of Pennsylvania

Respondent argues that § 309(a) of the Clean Water Act, 33 U.S.C. § 1319(a), requires the joinder of the Commonwealth of Pennsylvania as a party to these cases, and that Complainant's failure to join the Commonwealth as a party is a fatal defect in the cases. This argument fails to recognize the distinction between Clean Water Act civil enforcement actions under § 309(b) and administrative penalty enforcement actions under § 309(g). In civil judicial Clean Water Act actions involving municipalities, states are to be joined as parties to actions brought by the United States so that they may be ordered to pay any part of a judgment that a municipality is unable to pay due to state law. This requirement of § 309(e) makes good sense in civil judicial actions where the United States often must seek very expensive capital improvements to complex sewage treatment plants as injunctive relief, in addition to significant civil penalties. Many states have constitutional municipal debt ceilings or other legal restrictions on municipalities' ability to raise capital. In

§ 309(g) administrative penalty proceedings injunctive relief is not available and penalties are limited by a statutory cap ($25,000 in Class I proceedings such as these). The state role contemplated in § 309(a) is therefor not present in § 309(g), and Pennsylvania is not a necessary party in these cases.

Preclusion

The Administrative Complaints allege violations of Permit effluent limitations in January, February, March, April (Docket No. CWA-III-127), May, June, July and August (Docket No. CWA-III-141) of 1994. They describe Respondent's 8-month continuous noncompliance with the Permit. The respective DMRs are a chain of documents (one link, the DMR for April, 1994, is missing from the record) that are evidence of the continuity of Respondent's Clean Water Act noncompliance. While the DMRs are discrete documents, the noncomplying discharge is a continuous event, or at least a regular series of connected similar events. There is no break in the continuity of the discharge from one month to the next.

Respondent has raised the defense of "claim-splitting" in Docket No. CWA-III-141, alleging that Complainant had the May DMR in hand when it filed the Administrative Complaint in Docket No. CWA-III-127 on July 14, 1994. Complainant has not challenged the allegation, forthrightly acknowledging its probable truth. The May, 1994 DMR was not date-stamped upon receipt by Complainant. Respondent's evidence (April 20, 1995 Affidavit of John Frederick) that the DMR was mailed more than five weeks before the filing of

Docket No. CWA-III-127, supports the allegation. Complainant asserts that at the time Docket No. CWA-III-127 was filed, Complainant was assessing Respondent's "trend" of discharges on a four-month periodic basis, and therefore was not at all focussed on the May DMR when it filed the administrative complaint in Docket No. CWA-III-127. The preponderence of the evidence in the record supports a finding that, focussed or not, Complainant had the May, 1994 DMR in hand when it filed the first Administrative Complaint.

The "claim-splitting" and "claim-preclusion" doctrines would preclude the initiation of a new action involving causes of action that could or should have been brought with a pending action. These doctrines operate to force litigants to bring all causes of action associated with a transaction or a series of related transactions in a single case in one forum. Thus, pending litigation in one forum precludes a new action involving the same parties and causes of action in the same forum or in a second forum, and once a transaction has been litigated between parties, those parties may not raise new causes of action involving that transaction in a new case in any forum.

Complainant overemphasizes the significance of the DMRs in suggesting that it would be allowable to have brought a separate action for each month of noncompliance: "EPA would have been perfectly within the realm of its enforcement discretion to file sequential penalty actions for each month's violations on a monthly basis." Complainant's May 12, 1995 Memorandum of Law in Response

to Respondent's Second Motion for Summary Determination etc. at 3. Complainant apparently assumes that the discreteness of the evidence supporting its claim, and the potential independence of its causes of action allow it to determine the scope of its claims as coterminous with its evidence. "One of the tests laid down for the purpose of determining whether or not the causes of action should have been joined in one suit is whether the evidence necessary to prove one cause of action would establish the other. Crimm v Talyandi, 4 McCord, 28." [Quoted in Stark v Starr, 94 U.S. 477, 485 (1876)]. DMR evidence is important in most NPDES cases, and DMRs can prove separately actionable claims of NPDES permit violations. But when consecutively filed DMRs show substantially similar effluent violations, they are also proving continuous noncompliance, a much larger cause of action than that evidenced by any single DMR. "A plaintiff's claim consists of all rights against a particular defendant with respect to all or any part of a transaction, or a series of connected transactions, out of which the action arose'." Alyeska Pipeline Service Co. v United States, 231 Ct. Cl. 560, 688 F.2d 765, 769 (1982), quoting Container Transportation International, Inc. v United States, 199 Ct. Cl. 713, 718, 488 F.2d 926, 929 (1970). New evidence of an ongoing release of a hazardous waste, known at the time the first action was initiated, does not support the initiation of a second action. Supporters to Stop Pollution v Heritage Group, 973 F. 2d 1320, 1326 (Seventh Cir. 1992). In an administrative penalty action under the

Toxic Substances Control Act, 15 U.S.C. § 2601 et seq., an EPA Administrative Law Judge rejected a respondent's claim-splitting argument, noting differences in the section of the statute, in the manner in which the alleged violations were discovered and in the manner in which the Complainant brought the claims. Kerr Chemical and Mineral Corporation, EPA Docket No. TSCA-8(a)-88-0228, Initial Decision dated April 15, 1991. On appeal to the Environmental Appeals Board, Judge Vanderheyden's decision was affirmed. [TSCA Appeal 92-4, Final Decision dated February 24, 1993].

Although caselaw cited by the parties in their briefs was instructive, neither counsel nor the Presiding Officer have been able to identify cases precisely on point. Counsel for Respondent has cited to Restatement (Second) Judgments § 24 (1988), which puts the issue in clearer perspective:

> (a) The present trend is to see claim in factual terms and to make it coterminous with the transaction...the transaction is the basic of the litigation unit or entity which may not be split...
>
> (d) When a defendant is accused of...acts which though occurring over a period of time were substantially of the same sort and similarly motivated, fairness to the defendant as well as the public convenience may require that they be dealt with in the same action...
>
> (g)...The rule stated in this section as to splitting a claim is applicable although the first action is brought in a court which has no jurisdiction to give a judgment for more than a designated amount...

In Restatement terms, the "transaction" in these cases was the noncomplying discharge, an ongoing event. The DMRs are evidence of

the several Permit violations alleged: monthly and weekly TSS and CBOD, loading and concentration limits, and, for March, 1994, a pH "excursion" below the minimum allowable. Respondent is accused of these violations, which though occuring over a period of time, are substantially of the same sort and similarly motivated, and thus constitute a "claim," so they ought all to have been brought in the same action.

Separate administrative complaints for different effluent limitation violations shown in the Nine DMR would not be allowed; neither should separate complaints for different, but connected, time periods in the same continuous or connected act of noncompliant discharge be allowed. Nor should Complainant be allowed to bring more than one action involving continuous noncompliance were it to exercise its enforcement discretion and allege only violations documented in DMRs for every other month during an extended period. Of course, Complainant *may* not successfully assert that the striking of the April, 1994 DMR from the record in Docket No. CWA-III-127 "breaks the chain" so as to allow a second action with all later-submitted DMRs. Where does the "claim" end? With Respondent's complying discharge the transaction is completed. The records in these matters do not indicate whether Respondent has come into compliance.

Complainant had knowledge that the transaction was not completed when it filed the Administrative Complaint in Docket No. CWA-III-127: the May, 1994 DMR showed the continuation of the

noncompliant discharge. Counsel for Complainant alludes to the "cumbersome internal approval process imposed by EPA" as if it were some form of unstoppable enforcement juggernaut that precluded any reevaluation of its strategy upon receipt of the May DMR. But no claim would have been lost by delaying and rethinking the filing of the Administrative Complaint. To the contrary, it is the juggernaut that caused the loss of a part of Complainant's claim.

Complainant must bring all its Clean Water Act penalty claims arising out of the Respondent's continuous noncompliance with the Permit in a single action. As Respondent points out, several options were available to Complainant: Class I administrative penalties, Class II administrative penalties and civil judicial penalties. It is not for the Presiding Officer to indicate a preferred forum: Agency guidance and the enforcement chain of command presumably determine the forum as a matter of strategy. As counsel for Respondent noted during oral argument, EPA policy addressed claim-splitting in the administrative penalty context:

> ...EPA will be on the strongest legal ground by avoiding simultaneous administrative penalty actions against a single violator. Should EPA initiate separate administrative penalty actions for different sets of past violations by one violator, EPA may have to rebut the argument that it has split its claims in order to circumvent the Act's $125,000 cap on administrative penalties...

GUIDANCE ON "CLAIM-SPLITTING" IN ENFORCEMENT ACTIONS UNDER THE CLEAN WATER ACT, EPA Offices of Water and Enforcement, August 28, 1987.

If Complainant discovers it has selected a forum that cannot accommodate its claims due to jurisdictional limitations, it may be procedurally possible to switch the forum, depending on the stage of the proceeding and the cooperation of the opposing party. But Complainant cannot force a switch, because Complainant was the one who selected the forum. Supporters to Common Pollution v Heritage Group, 973 F. 2d 1235.

In Docket No. CWA-III-141, Respondent's 12th affirmative defense cites Section 309(g)(6)(A) of the Clean Water Act, 33 U.S.C. § 1319(g)(6)(A), as a basis for precluding Complainant from filing an action. That provision operates to preclude civil (judicial) penalty actions under § 309(d) and § 505 (citizen suits), and civil or administrative penalties under § 311(b), (relating to oil and hazardous substance liabilities) for violations subject to diligently prosecuted enforcement under § 309(g). In light of the discussion regarding "claim-splitting," this affirmative defense appears moot; in any event counsel for Respondent has not adequately articulated a legal theory that would present an genuine issue of material fact, so it will not be considered further.

As a matter of law, Respondent is entitled to summary determination as to liability and an accelerated recommended decision in Docket No. CWA-III-141; the Presiding Officer will recommend that the Regional Administrator withdraw the Administrative Complaint with prejudice.

Equitable defenses

Respondent's estoppel, res judicata, laches and unclean hands equitable defenses hinge in large part on the relevance of a January, 1990 Consent Order and Agreement between Respondent and the Pennsylvania Department of Environmental Resources (PADER), which was based on Respondent's violation of the Pennsylvania Clean Streams Law, 35 P.S. §§ 691.1 et seq., during 1988 and 1989. That action involved a different NPDES permit, since the permit involved in these actions was issued in July of 1993. Presumably, there was Clean Water Act liability as well as Pennsylvania Clean Streams Law liability under the prior permit because violation of a NPDES permit is a violation of both Pennsylvania and Federal law. The Pennsylvania action involved some, but not all, of the effluent parameters involved in these cases. There is no identity of claims, an inadequate identity of issues and no identity of parties between the present cases and the 1990 PADER action. The Pennsylvania case, also based primarily upon Respondent's DMRs, involved TSS and Biochemical Oxygen Demand (BOD) violations in 1988 and 1989, fecal coliform violations in 1988, failure to submit DMRs in 1988 and 1989, and failure to submit lifestation operational reports in 1988 and 1989. Thus, the claims PADER pursued predated Complainant's claims by several years, were brought under different statutory authority, and involved different terms of a different NPDES permit. PADER obtained both injunctive relief and a civil penalty in its 1990 action; in these cases Complainant may seek

only penalties. While PADER does administer the NPDES in Pennsylvania under EPA oversight, PADER is not Complainant's agent in any sense; Complainant could not have become a party to the PADER action; and the Consent Order and Agreement was, by its own terms, an Order of the Department. It was not an adjudication that resulted from litigation but rather t e outcome of negotiation. The 1988 PADER action may be relevant to assessment of a penalty (the statute requires consideration of 'prior such violations' in assessing a penalty), but it gives rise to no defense in these Federal actions.

Respondent also argues that Complainant affirmatively misled Respondent in correspondence while Respondent was negotiating the Consent Order and Agreement with PADER during 1989, inducing Respondent to pursue an expensive, long-term upgrade of the sewage treatment plant rather than a less expensive, short-term fix that might have avoided the violations involved in these cases. An objective reading of this correspondence does not support this argument, however, this matter, too, may be considered in connection with a penalty assessment.

Respondent apparently never benefitted from an EPA construction grant under Title II of the Clean Water Act. The funds appropriated by Congess for Title II are allocated among the states according to legislative direction, and each state prioritizes projects in need on its own. Grant funding is not a consideration in determining liability under the Clean Water Act.

It may be a penalty consideration.

Respondent has also introduced evidence of its efforts to comply with the Permit, and evidence that the sewage treatment plant is well operated and maintained. These matters could not constitute a defense to liability because the Clean Water Act is a strict liability statute. They may be considered in connection with penalty assessment, however.

Finally, Respondent disputes the manner in which Complainant has calculated the number of alleged Permit violations. Complainant has countered with arguments and explanations regarding the proposed penalties. As a general matter, these matters do not raise a genuine issue of material fact, and are more appropriate for legal argument at a later stage of the proceeding. Several comments are in order, however.

First, Respondent is gravely mistaken in asserting that 'this matter addresses a maximum penalty liability of $ 200 per month of violation.' (Respondent's March 6, 1995 memorandum of law, at p. 27, footnote 30). The statutory maximum penalty in a Class I Clean Water Act action is $25,000. The 'per violation' maximum is $10,000. Accordingly, if three or more violations are alleged, maximum penalty liability is $25,000. Complainant has no power to limit liability except by limiting the number of violations alleged in the Administrative Complaint. The penalty proposal in the Administrative Complaint is not an assessment, regardless of its characterization by the Complainant ('EPA elects to assess a penalty

for violation of one monthly average limitation per parameter per month." Complainant's April 7, 1995 memorandum of law at p. 23). The penalty assessment, if there is to be one, will be performed by the Regional Administrator, following the submission of the Presiding Officer's recommendation. It will be based upon the record, and thus may be influenced by the arguments advanced by the parties, but it will not be limited by anything but the statute.

ORDER

Complainant's Motion for Summary Determination in Docket No. CWA-III-137 is GRANTED except as to the month of April, 1994; Respondent's Second Motion for Summary Determination and Accelerated Recommended Decision in Docket No. CWA-III-141 is GRANTED. All other aspects of these motions are DENIED.

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.
_____/

CASE NO. 93-281-CIV-FTM-21

DENNIS J. GETMAN
RECEIVED
NOV 27 1995
LEGAL DEPT.

ORDER

This cause comes before the Court on three pending motions: (1) United States' Motion for Partial Summary Judgment (Dkt. 130) and Avatar Holdings Inc.'s and Florida Cities Water Company's responses (Dkts. 171 & 174) in opposition thereto; (2) Avatar Holdings, Inc.'s Motion for Partial Judgment on the Pleadings (Dkt. 169) and the United States' response (Dkt. 183) in opposition thereto; (3) Florida Cities Water Company's Motion for Partial Summary Judgment (Dkt. 173) and the United States' response (Dkt. 179) in opposition thereto.

BACKGROUND

This is a civil action brought on behalf of the Environmental Protection Agency (EPA) pursuant to section 309(b) of the Clean Water Act ("the Act"), 33 U.S.C. § 1319(b), for civil penalties for violations of section 301 of the Act, 33 U.S.C. § 1311, and for violations of the conditions and limitations of National Pollutant Discharge Elimination System (NPDES) permits issued by EPA pursuant to section 402 of the Act, 33 U.S.C. § 1342. The discharge of wastewater, or effluent, into the waters of the United States requires the authorization of, and

the compliance with the terms and conditions of an NPDES permit. Defendant Florida Cities Water Company ("Florida Cities") operates several wastewater treatment plants in Florida, and Defendant Avatar Holdings, Inc. ("Avatar Holdings") is Florida Cities' parent company.

Three wastewater treatment plants are the subject of this action. The alleged violations include the following: (1) discharging without an NPDES permit (Barefoot Bay, Carrollwood, and Waterway Estates); (2) violation of an EPA Administrative Order (Barefoot Bay); (3) discharging at an unpermitted location (Waterway Estates); (4) exceeding NPDES effluent limitations (all three facilities); and (5) failure of toxicity tests required by an NPDES permit (Barefoot Bay and Waterway Estates).

SUMMARY JUDGMENT STANDARD

The Court will enter summary judgment only if the evidence shows "that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." Fed. R. Civ. P. 56(c). On the issue of materiality, "the substantive law will identify which facts are material." Anderson v. Liberty Lobby, Inc., 477 U.S. 242, 248 (1986). Material facts are those over which disputes "might affect the outcome of the suit under the governing law." Id. at 248.

The movant bears the burden of establishing the absence of dispute over material facts. Reynolds v. Bridgestone/Firestone, Inc., 989 F.2d 465, 469 (11th Cir. 1993). Where the party opposing the summary judgment motion has the burden of proof at trial, the moving party must either point out to the Court specific portions of the record which show that the nonmoving party cannot prevail at trial, or introduce affirmative evidence negating the opposing party's case. United States v. Four Parcels of Real Property, 941 F.2d 1428, 1438 (11th Cir. 1991). Where

AO 72A
(Rev. 8/82)

the moving party has the burden of proof at trial, "that party must show *affirmatively* the absence of a genuine issue of material fact: it 'must support its motion with credible evidence...that would entitle it to a directed verdict if not controverted at trial.'" United States v. Four Parcels of Real Property, 941 F.2d 1428, 1438 (11th Cir. 1991), citing Celotex Corp. v. Carrett, 477 U.S. 317, 331 (1986).

In determining whether the party seeking summary judgment has met its initial burden, the Court must view the evidence and factual inferences therefrom in the light most favorable to the opposing party. Clark v. Coats & Clark, Inc., 929 F.2d 604, 606 (11th Cir. 1991). Any reasonable doubts about the facts are to be resolved in favor of the party opposing the motion for summary judgment. Reynolds, 989 F.2d at 469. If the moving party does not meet its burden, the motion for summary judgment will be denied. Four Parcels of Real Property, 941 F.2d at 1437. Where the moving party meets its initial burden, the burden shifts "to the non-moving party to demonstrate that there is indeed a material issue of fact that precludes summary judgment." Clark, 929 F.2d at 608.

DISCUSSION

I. Barefoot Bay

A. Unpermitted Discharges

Plaintiff asserts that in order to establish liability in this action, Plaintiff need only show that Florida Cities is (1) a person that, (2) discharged a pollutant into navigable waters, (3) from a point source, and that (4) Florida Cities had no permit for the discharge or, as applicable, that the discharge violated the terms of an NPDES permit or administrative order. Plaintiff indicates that it has established the first three prongs through Florida Cities' admissions on the record.

AO 72A
(Rev. 8/82)

Further, Plaintiff urges the Court to draw inferences that violations were committed as alleged and that Avatar Holdings actually controlled Florida Cities' environmental practices from the fact that several witnesses, including high-ranking past and present managers and officers of both Defendants,[1] have refused to testify on Fifth Amendment grounds. The Court notes, however, that as pointed out in Florida Cities' response, even where an inference is drawn from invocation of the Fifth Amendment, such an inference cannot form the sole basis of a judgment against the witness; rather, it is to be considered in conjunction with other evidence. See Baxter v. Palmigiano, 425 U.S. 308, 318 (1976)(holding that "the Fifth Amendment does not forbid adverse inferences against parties to civil actions when they refuse to testify in response to probative evidence offered against them"); Director of Office of Thrift Supervision v. Lopez, 960 F.2d 958, 965 (11th Cir. 1992)(holding that the adverse inference cannot form the sole basis of a judgment against the witness).

Plaintiff asserts that it is entitled to summary judgment on the basis that Defendants discharged effluent from Barefoot Bay into the Sebastian River during the period on or about July 1, 1990 to October 31, 1991 even though Florida Cities did not have an NPDES permit. Because these discharges occurred daily, Plaintiff asserts they account for 488 violations.[2]

---

[1]The Plaintiff refers here to the Depositions of: James Elder (former Florida Cities Engineering Manager), March 6, 1995); Lawrence Wilkov (former Avatar Holdings President), March 7, 1995; Gerald S. Allen (Avatar Utilities Executive Vice-President), March 27, 1995; Antone A. Reeves (former Florida Cities Executive Vice-President/General Counsel), May 1, 1995; Robert Gordon (Avatar Utilities President), May 1, 1995.

[2]Plaintiff explains in footnote 21 to its memorandum in opposition to Florida Cities' second motion for partial summary judgment that the number of unpermitted discharges at Barefoot Bay needed to be recalculated because the statute of limitations cutoff date was uncertain until the Court permitted the United States to file its Second Amended Complaint and ruled on whether its allegations would relate back to March 31, 1995, the date on which the the initial proposed Amended Complaint was received by the Court. Because the Second Amended Complaint was filed on June 27, 1995 (and in light of the fact that the Court denied the request that the allegations relate back), Plaintiff states that it has calculated unpermitted discharge days at Barefoot Bay dating back five years from that date, or July 1, (continued...)

AO 72A
(Rev. 8/82)

Florida Cities acknowledges the unpermitted discharges into Sebastian Creek. However, Florida Cities asserts that the matter was settled by the Consent Agreement and Order Assessing Administrative Penalties No. CWA-IV 91-538, dated November 6, 1991, and that EPA's administrative enforcement files and witnesses indicate that the Consent Agreement encompassed all the unpermitted discharges. Florida Cities asserts that the Clean Water Act precludes the EPA from seeking judicial or other enforcement of violations that have already been settled in EPA administrative enforcement proceedings that included payment of an administrative penalty.

In support of its argument, Florida Cities states that on July 12, 1991, EPA initiated an enforcement action to address the years of discharge without a federal NPDES permit by issuing a Notice of Show Cause for discharge without an NPDES permit for "the period from September 14, 1989 until the present." A Show Cause meeting was held on August 9, 1991. EPA enforcement officer Roy Herwig then drafted EPA's Administrative Complaint and the Consent Agreement with the accompanying "Notes on the Proposed Penalty Assessment" ("Notes"). Florida Cities asserts that a thorough review of the complete administrative record establishes that both parties intended to settle all violations for discharge without an NPDES permit at Barefoot Bay, and that the Consent Agreement with its attached Notes did in fact settle all such matters, even though the Consent Agreement specifically references only the day of EPA's inspection, September 14, 1989. Florida Cities points out various portions of the Notes, including a statement that the environmental harm resulting from unpermitted discharges from Barefoot Bay was not any greater than if Florida Cities had had an NPDES permit and a portion of the

[3](...continued)
1990. The number of total violations at Barefoot Bay has also been reduced to subtract prior alleged violations of testing method requirements.

AO 72A
(Rev. 8/82)

"Summary" stating that "the assessed penalty of $6,000 represents a fair and equitable application of the factors identified in § 309(g)(3) of the Act." Florida Cities further asserts that the only analysis of the factors in § 309(g)(3) in the administrative record is in the Notes, which, Florida Cities maintains, demonstrate that the EPA's intention was to settle all outstanding violations for discharge without an NPDES permit. Additionally, Florida Cities points out that Mr. Herwig testified that, at the end of the negotiations, he believed that the issue of discharge without a permit was fully resolved and "none of this would be revisited." Florida Cities states that Mr. Herwig's understanding is bolstered by the affidavit of Kathleen L. Blizzard, counsel for Florida Cities at the Show Cause meeting. In an affidavit she states that at the end of the Show Cause meeting, it was her understanding and EPA's understanding that all of the "discharge without a permit" violations were resolved.

Florida Cities also asserts that Mr. Kenneth Kwan, the EPA Environmental Engineer upon whose testimony Plaintiff relies, shows a lack of due diligence and recklessness in that Mr. Kwan did not reconcile his determinations with those of Mr. Herwig's EPA team. Florida Cities maintains that Mr. Kwan is not qualified to determine whether the "discharge without a permit" violations had been settled, because he was not present at the settlement negotiations and he made no inquiries of the persons who were present. Additionally, Florida Cities asserts that, from a practical perspective, Plaintiff's "one-day" theory would result in expenditure over several months of hundreds of man-hours and thousands of dollars by both EPA and Florida Cities to resolve only one day out of several hundreds of days of discharge without an NPDES permit.

Prior to the date on which the pending motions for summary judgment were ripe for decision by the Court, Florida Cities filed a Notice of Dispositive Authority (Dkt. 199) and

AO 72A
(Rev. 8/82)

submitted a copy of Borough of Ridgway, Pennsylvania, NPDES Permit No. PA0023213. Florida Cities asserts that this Clean Water Act case, decided by a Regional Presiding Officer in EPA Region III on June 29, 1995,[3] is dispositive authority in favor of Defendants for paragraphs 16, 17, 18, 19, 20, 21, 22, 23 and 30[4] of the Second Amended Complaint. Florida Cities asserts that Borough of Ridgway stands for the proposition that Plaintiff is required to bring, pursuant to the "claim-splitting" and "claim preclusion" doctrines, "all causes of action associated with a transaction or a series of related transactions in a single case in one forum." Id. at 16. Florida Cities thus argues that the EPA administrative complaints[5] against Florida Cities, allegedly covering one day for Barefoot Bay and 37 months for Carrollwood (discussed below), represent a final determination by EPA which cannot be relitigated in this forum. Florida Cities asserts that EPA had the knowledge and opportunity to address all the claims in the above referred paragraphs of the Second Amended Complaint at the time the administrative complaints were filed. Florida Cities therefore asserts that EPA's claims should have been raised in the administrative enforcement proceedings, and EPA is now precluded from asserting those claims.

---

[3]Subsequent to filing its Notice of Dispositive Authority, Florida Cities filed a Notice (Dkt. 200) indicating that Borough of Ridgway, Pennsylvania, NPDES Permit No. PA0023213 was appealed to the Environmental Appeals Board (EAB) on July 19, 1995, and oral argument was heard by the EAB on September 27, 1995. Florida Cities further indicated that no decision had been issued by the EAB as of November 1, 1995.

[4]Paragraph 16 asserts the claim that Defendants discharged pollutants from Barefoot Bay without an NPDES permit from July 1, 1990 to October 31, 1991. Paragraphs 17-23 assert the claims that Defendants violated EPA Administrative Order 90-106. In paragraph 30, Plaintiff claims that from August 1990 to June 1991, Defendants discharged pollutants from Carrollwood without an NPDES permit.

[5]The Court assumes that Florida Cities seeks to incorporate the Consent Agreements.

AO 72A
(Rev. 8/82)

In a footnote, Florida Cities asserts, and the Court agrees, that this issue was not addressed in Florida Cities' first motion for partial summary judgment or in the Court's June 21, 1995 Order on the first motion for partial summary judgment (Dkt. 127). Florida Cities states that Plaintiff argued in its response to Florida Cities' Motion to Strike Paragraphs 15 through 39 of Plaintiff's Amended Complaint that the Consent Agreement is analogous to a contract and, therefore, that the Court may not look beyond the four corners of the document.[6] In a companion Order (Dkt. 126) to the above referenced Order of June 21, 1995, the Court denied Florida Cities' motion to strike. However, Florida Cities points out that the Court's ruling on the motion to strike was in the context of a Rule 12(f) motion on the sufficiency of the evidence. Florida Cities asserts that it had no knowledge of the Notes until after the Court's Order denying Florida Cities' motion to strike. It asserts that summary judgment is appropriate only after Defendant has had an opportunity to conduct discovery into important factual matters. It asserts, and the Court agrees, that Plaintiff cannot be granted summary judgment in the context of a motion to strike.

In its response to Florida Cities' motion for partial summary judgment,[7] Plaintiff maintains that the issue of whether Florida Cities has already been penalized administratively for discharges from Barefoot Bay and Carrollwood without an NPDES permit have already been briefed and adjudicated by the Court in its June 21, 1995 Order (Dkt. 126) and that the Court's ruling on this issue now constitutes the law of the case. Similarly, in its response to Florida

[6]The Court notes that it addressed Plaintiff's argument in the context of its Motion for Reconsideration of Court's Order on Amendment of Complaint, which the Court ruled upon in one of the June 21, 1995 Orders.(Dkt. 126).

[7]Plaintiff states that although all of the claims for which Florida Cities seeks summary judgment have already been fully briefed by Plaintiff in its own motion for partial summary judgment, it responded for the limited purpose of rebutting Florida Cities' arguments.

AO 72A
(Rev. 8/82)

Cities' Notice of Dispositive Authority, Plaintiff states that the Court rejected Florida Cities' argument in support of preclusion of the claims for unlawful discharges of pollutants from Barefoot Bay and Carrollwood in its June 21, 1995 Order (Dkt. 126). The Court disagrees, however, and finds that the parties' arguments and the Court's prior decision were in the context of whether certain paragraphs of the proposed Amended Complaint were futile and therefore should not have been allowed to be included in the Plaintiff's Amended Complaint and in the context of the Court's reconsideration of its prior decision not to permit the amendments to the Complaint. Because the Court ultimately decided to permit the amendments, but did not grant Plaintiff summary judgment on them, Plaintiff's argument that the Court's decision constitutes the law of the case is without merit.[8]

In its response to the substance of Florida Cities' argument on the effect of the EPA's administrative penalties, Plaintiff points out that, as noted in its earlier brief, it is axiomatic that "since consent decrees and orders have many of the attributes of ordinary contracts, they should be construed basically as contracts. . . .", citing United States v. ITT Continental Baking Co., 420 U.S. 223, 236 (1975). Further, Plaintiff asserts that, under contract law, the terms of an unambiguous contract are exclusively contained within the four corners of the document itself, and "the instrument must be construed as it is written," citing ITT Continental, 420 U.S. at 236.[9] Plaintiff also asserts that the Notes and testimony of EPA officials and the declarations

[8]The Court notes Plaintiff's request that if the Court considers the substantive merits of this issue, that the Court refer to Plaintiff's Memorandum in Support of its Motion for Reconsideration of Court's Order on Amendment of Complaint (Dkt. 87), which Plaintiff incorporates pursuant to Rule 10(c), Fed. R. Civ. P.

[9]Plaintiff argues that the language of the Consent Agreement makes clear that it only resolved the illegal discharge occurring on September 14, 1989. Paragraphs II.4, III.2, and IV.1 of the Consent Agreement provide:

(continued...)

AO 72A
(Rev. 8/82)

of Florida Cities' outside counsel who negotiated the agreements are irrelevant as a matter of law because the agreements themselves are unambiguous. Further, Plaintiff points out the absence of a reference to any express statement by EPA that it would not penalize Florida Cities further for the violations not covered by the agreements. Plaintiff maintains that, taken in its true light, the evidence tends to show how Florida Cities misled EPA into applying minimal administrative fines for the limited violations that were covered. Additionally, Plaintiff asserts that the Notes form no part of the agreements, but rather are simply routine explanations of the settlements written by the enforcement officer to internally document that the penalty being assessed conforms to the factors prescribed by the statute. Plaintiff asserts that the evidence indicates that the EPA intended to preserve its right in the settlement documents in the event it later determined that further enforcement action was warranted. It points to Mr. Herwig's statement in his deposition that "in case it didn't work out, the regional counsel had provided the language to allow us to revisit those things should it become necessary in the future." (Dkt. 174, Exh. 18).

Plaintiff also argues in response to Florida Cities' Notice of Dispositive Authority that claims for violations at Barefoot Bay are not precluded by the doctrine of res judicata or the

---

[9](...continued)

> Respondent has violated Section 301(a) of the Act, 33 U.S.C. Section 1311(a), by discharging pollutants into waters of the United States without a valid NPDES permit issued pursuant to Section 402 of the Act (33 U.S.C. 1342), **on September 14, 1989** from its Barefoot Bay WWTP into a drainage canal leading to the Sebastian River. . .
>
> Florida Cities Water Company **shall pay $6,000.00 for its past violations** of the Clean Water Act **cited above** . . .
>
> **This Consent Agreement and Order represents full monetary settlement** of the proposed administrative penalties sought by EPA **for the underlying violations as alleged in the Complaint.**

(Dkt. 87, Exh. A, Emphasis added). Plaintiff argues that in light of the provision in Title 33 U.S.C. § 1319(d) for a civil penalty for each day of a violation, the above language indicates that the penalty assessed was limited to the violation cited in the Consent Agreement.

AO 72A
(Rev. 8/82)

holding in Borough of Ridgway. Plaintiff states that the doctrine of res judicata bars a subsequent suit if four elements are present: (1) a final judgment on the merits rendered in the previous suit; (2) the judgment was rendered by a court of competent jurisdiction; (3) the parties or those in privity with them are identical in both cases; and (4) the same cause of action is involved in both cases, citing Thomas v. Evans, 880 F.2d 1235, 1240 (11th Cir. 1989). To prove that the fourth element, the same cause of action, is not satisfied, Plaintiff relies upon its prior argument in the record that the claims in this action are different from those alleged in the prior administrative proceedings. Further, Plaintiff argues that section 309 authorizes the United States to enforce a federal or state permit through a variety of administrative, civil and criminal mechanisms and that section 309(g)(6), 33 U.S.C. § 1319(g)(6), only precludes subsequent civil action for violations already covered by an administrative order. Finally, Plaintiff asserts that the facts and procedural record of Borough of Ridgway are so different from the instant case that it is inapplicable herein. Plaintiff states that in Borough of Ridgway, EPA brought two consecutive administrative actions for similar NPDES permit violations occurring from January through April 1994 and then from May through August 1994. Plaintiff asserts that in contrast, in the instant case, the United States brought administrative actions which were settled and then filed a judicial action to recover penalties for violations not settled but rather expressly reserved.

The Court finds that Plaintiff's claim in paragraph 16 for discharge from Barefoot Bay without an NPDES permit could have been raised in the prior administrative proceeding and are now barred by the doctrine of res judicata. It is clear that the principle of res judicata applies to consent decrees as well as to ordinary judgments entered by a court. United States v. Jefferson County, 720 F.2d 1511, 1517 (11th Cir. 1983). Plaintiff has not argued or set forth

AO 72A
(Rev. 8/82)

any evidence indicating that the allegations of discharge without an NPDES permit could not have been raised in the prior administrative proceedings. In fact, the Notes indicate that at the time the Consent Agreement was entered, Plaintiff was fully aware of the claims it now seeks to assert. (Dkt. 174, Exh. 7).[10] Further, the Seventh Circuit has found, in considering alleged violations of the Resource Conservation and Recovery Act, that ongoing releases known at the time of the initial suit do not constitute "new wrongs" such that they are not barred by preclusion principles. Supporters to Oppose Pollution, Inc. v. Heritage Group, 973 F.2d 1320, 1326 (7th Cir. 1992). The Court stated, "[t]hat the size of the release is better known now than then takes us nowhere; new evidence of injury differs from a new wrong." Id. at 1326 (citations omitted). Thus, because the Court finds that Plaintiff could have asserted the claims for discharging from Barefoot Bay without an NPDES permit in the prior administrative proceeding, res judicata bars the assertion of those claims herein. Federated Dep't Stores v. Moitie, 452 U.S. 394, 398 (1981)(holding that res judicata bars parties from relitigating issues that were or could have been raised in the first action).

B. AO 90-106

On September 26, 1990, EPA issued an administrative order, AO 90-106, for discharging without a permit, requiring Florida Cities to meet prescribed interim effluent limitations while

[10]The Court does not agree with Florida Cities' argument, however, that the Notes are part of or should be incorporated into the Consent Agreement. As noted by the Eleventh Circuit, the "scope of a consent decree must be discerned within its four corners, and not by reference to what might satisfy the purposes of one of the parties to it." Paradise v. Prescott, 767 F.2d 1514, 1525 (11th Cir. 1985)(citations omitted). Thus, viewing the Consent Agreement within its four corners, the Court finds there is no indication that the Notes are part of or are incorporated into the Consent Agreement. The mere fact that Section III of the Consent Agreement states that the EPA has taken into account the factors in § 309(g)(3) of the Clean Water Act does not constitute an express incorporation of the Notes which provide an analysis of the § 309(g)(3) factors. Further, because the Court looks at the four corners of the Consent Agreement and because the contract is not ambiguous, the opinions of counsel who negotiated the Consent Agreement regarding the scope of the Consent Agreement are not relevant.

AO 72A
(Rev. 8/82)

its permit application was pending. Plaintiff asserts that from September 26, 1990 until October 31, 1991, Florida Cities regularly exceeded the administrative order's effluent limits. Plaintiff further states that according to Florida Cities' Discharge Monitoring Reports ("DMRs"), there were twenty-nine violations of the administrative order. Additionally, Plaintiff argues that any notion that the limits in the administrative order were inappropriate is negated by the fact that they mirror the limits of the subsequent permit and by the fact that Florida Cities never objected to the limits in the administrative order or permit.

In its Notice of Dispositive Authority, Florida Cities asserts that the claims for violations of AO 90-106 in paragraphs 17-23 are barred by res judicata based on the arguments set forth above. The Court agrees that res judicata bars these claims which could have been raised in the prior administrative proceedings on the same basis as set forth in the Court's analysis above.[11]

---

[11]The Court notes that Florida Cities' argument in its response to Plaintiff's motion for summary judgment on the AO 90-106 claims is without merit. Florida Cities asserts that neither § 309(b) of the Clean Water Act nor any other section authorizes administrative or judicial enforcement of violations of § 309(a) administrative orders, as such would result in double counting of all violations. Florida Cities asserts that § 309(b) limits the kinds of violations that EPA can refer to the Department of Justice as follows:

> The Administrator is authorized to commence a civil action for appropriate relief, including a permanent or temporary injunction for any violation for which he is authorized to issue a compliance order under subsection (a) of this section. Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance.

33 U.S.C. § 1319(b). Further, Florida Cities argues that the violation of a § 309(a) order cannot be the underlying basis for another § 309(a) order based on both the statutory structure and the EPA's internal guidelines, the Enforcement Management System (EMS). Florida Cities urges the Court to give a strict reading to the language of § 309(a)(3), which sets forth the types of violations that are proper for an administrative order to be issued and for a case to be the subject matter of civil referral under § 309(b). Section 309(a)(3) provides that a discharger must have violated "section 1311, 1312, 1316, 1317, 1318, 1328, or 1345 . . . or is in violation of any permit condition or limitation implementing any of such sections in a permit under section 1342." 33 U.S.C. § 1319(a)(3)(emphasis added). Further, the EMS guidelines state:

> The Clean Water Act does not authorize the issuance of an AO for a violation of a previously issued AO nor may an administrative penalty order be issued for violation of an administrative (continued...)

C. NPDES Violations

Plaintiff next alleges that since November 1, 1991, the effective date of Barefoot Bay's NPDES Permit No. FL0042293, Florida Cities has repeatedly violated the permit's conditions and limitations. According to Florida Cities' DMRs, there were a total of 182 exceedances of the Total Residual Chlorine (TRC) limitation and three separate toxicity test failures.[12] Additionally, Plaintiff asserts that based on Florida Cities' manager's testimony, there were 79 violations of biochemical oxygen demand (BOD). Plaintiff asserts that Florida Cities is estopped from challenging the data it submitted on its DMRs. Further, Plaintiff argues that Florida Cities' argument that the permit limits were written for a more advanced plant and that it would have met the permit limits were it not for delays caused by regulatory agencies in issuing other permits necessary for making improvements is without merit. Plaintiff asserts that § 509(b) of the Clean Water Act, 33 U.S.C. § 1369(b), prohibits Florida Cities from challenging the permit limits in the context of an enforcement action.

Florida Cities acknowledges that the DMRs reported some exceedances for TRC toxicity and BOD. Florida Cities asserts, however, that it is unable to determine what appropriate legal

---

[11](...continued)
order. Any successive AO issued must be based upon the underlying violations of the Act contained in the previous AO. . . .

EMS at 62 n.5. (Dkt. 174, Exh. 28). Based upon the above quoted passages, Florida Cities maintains that this Court does not have subject matter jurisdiction over a violation of an administrative order.

The Court finds, however, that § 309(d) provides a means by which the EPA can penalize for violations of its administrative orders. Title 33 U.S.C. § 1319(d) affords deterrent effect by explicitly providing for a civil penalty not to exceed $25,000 per day for violations of "any order issued by the Administrator under subsection (a) of this section." Subsection (d) therefore nullifies any ambiguity in 33 U.S.C. § 1319(b) regarding the ability to seek penalties for administrative order violations.

[12]The United States indicated in its response to Florida Cities' motion for partial summary judgment that it withdraws paragraph 28 of the Second Amended Complaint alleging TRC test method violations.

AO 72A
(Rev. 8/82)

defenses and mitigating circumstances are applicable until the government determines the exact number of violations being alleged. It asserts that summary judgment is premature until Plaintiff can state the charges against Florida Cities with particularity.

In response, Plaintiff asserts that it has repeatedly quantified all of the violations. First, it asserts that in its Second Amended Complaint, it alleged, based on Florida Cities' own DMRs, each of the permit violations by facility, by parameter, by month, and by year. Second, Plaintiff states that it supplied extensive tables of violations and numbers of days of the violations in discovery responses. Third, Plaintiff states that Mr. Kwan again tallied the violations in a sworn declaration, referencing slightly revised versions of the same tables which were submitted as exhibits to the Plaintiff's motion for partial summary judgment.

The Court finds that Florida Cities has not sustained its burden of establishing that a material issue of fact exists. Pursuant to 33 U.S.C. § 1369(b), Florida Cities is prohibited from challenging the permit limits in this Court in the context of an enforcement action.[13] Further, the Court finds that Plaintiff's violations have been clearly set forth. From the allegations in the Second Amended Complaint, the Responses to the Defendant's First Interrogatories, and Mr. Kwan's first calculation of the number of violations, Florida Cities had sufficient notice of the

[13]Title 33 U.S.C. § 1369(b)(1) and (2) provide in pertinent part:

> (1) Review of the Administrator's action . . . in approving or promulgating any effluent limitation or other limitation under section 1342(b) of this title, . . . in issuing or denying any permit under section 1342 of this title . . . may be had by any interested person in the Circuit Court of Appeals of the United States for the Federal judicial district in which such person resides or transacts business which is directly affected by such action upon application by such person. Any such application shall be made within 120 days from the date of such determination, approval, promulgation, issuance or denial. . . .
>
> (2) Action of the Administrator with respect to which review could have been obtained under paragraph (1) of this subsection shall not be subject to judicial review in any civil or criminal proceeding for enforcement.

AO 72A
(Rev. 8/82)

types of violations and the general numbers of each violation that the Plaintiff was alleging. On September 22, 1995, Plaintiff filed its response to Florida Cities' motion for partial summary judgment and the accompanying final calculation of the number of violations in the Amended Declaration of Kenneth Kwan. (Dkt. 179, Exh. K). Mr. Kwan's declaration sets forth a total of 264 NPDES violations, which Mr. Kwan states includes 182 TRC limitation violations and 3 toxicity test failures. From the Plaintiff's motion for partial summary judgment, it is clear that the remaining 79 violations of the alleged total 264 NPDES violations are BOD violations. Florida Cities has not set forth any evidence challenging the testimony of Mr. Kwan or his calculation of 264 total NPDES violations at Barefoot Bay. Therefore, the Plaintiff is entitled to summary judgment with respect to these NPDES violations.

II. Carrollwood

A. Unpermitted Discharges

Plaintiff asserts that it is uncontested that during the period August 1990 to June 30, 1991, Florida Cities did not have an NPDES permit to discharge from the Carrollwood Plant into Sweetwater Creek. Further, it asserts that it is uncontested that notwithstanding the absence of the permit, Florida Cities continued to discharge on a daily basis during that time. Plaintiff maintains that there are 334 violations for Florida Cities' daily discharges during the period of August 1990 to June 1991. Additionally, Plaintiff opposes Florida Cities' defense that it has already paid an administrative penalty for the unpermitted discharge in question on the same basis that Plaintiff asserted with respect to Barefoot Bay.[14]

[14]Plaintiff again asks the Court to view the Consent Agreement applicable to Carrollwood within its four corners and to find that it only resolved the illegal discharges occurring during the period of June 1987 through July 1990. Paragraphs II.4 and III.2 of the Consent Agreement provide:

(continued...)

AO 72A
(Rev. 8/82)

Although Florida Cities acknowledges that it discharged effluent into Sweetwater Creek between August 1990 and June 1991, it asserts that it settled that matter with the EPA in the Consent Agreement and Order Assessing Administrative Penalties, No. CWA-IV 90-542, dated April 19, 1991. It states that, as with the Barefoot Bay proceedings, the Carrollwood administrative record consists of the Notice of Show Cause, Notes, Administrative Complaint, and Consent Agreement. It asserts that the Consent Agreement settled any unpermitted discharge claims at Carrollwood pursuant to § 309(g)(3) of the Clean Water Act, and it relies upon arguments similar to those it asserted in connection with the alleged unpermitted discharges from Barefoot Bay. Additionally, in its Notice of Dispositive Authority, Florida Cities asserts, on the same basis as asserted with respect to unpermitted discharges from Barefoot Bay, that it is entitled to summary judgment on Plaintiff's claim that Defendants discharged pollutants from Carrollwood without an NPDES permit from August 1990 to June 1991. The Court agrees that the claims of unpermitted discharges could have been raised in the prior administrative proceedings and that Florida Cities is therefore entitled to summary judgment on those claims which are barred by res judicata.

---

[14](...continued)

> Respondent has violated Section 301(a) of the Act, 33 U.S.C. Section 1311(a), by discharging pollutants into waters of the United States without a valid NPDES permit issued pursuant to Section 402 of the Act, 33 U.S.C. Section 1342, **during the period of June 1987 through July 1990**.. . .
>
> Florida Cities Water Company **shall pay $15,000 for its past violations** of the Clean Water Act **cited above** . . . .

(Dkt. 87, Exh. C, Emphasis added).

AO 72A
(Rev. 8/82)

B. NPDES Violations

Plaintiff states that for the six months following July 1, 1991, the date on which NPDES Permit No. FL0029319 for Carrollwood took effect, Florida Cities violated nearly every one of the permit's effluent parameters. Plaintiff asserts that, based on Florida Cities' DMRs, there were a total of 234 separate violations of the Phosphorus, CBOD, Nitrogen, Chlorine, and Fecal Coliform limits. Plaintiff asserts that Florida Cities may not now challenge the permit limits, having failed to exercise that right at the appropriate time and in the appropriate forum.

Florida Cities acknowledges that exceedances of the Advanced Wastewater Treatment (AWT) standards did occur and that the DMRs reported exceedances during the relevant time period. Florida Cities asserts, however, that when EPA issued NPDES Permit No. FL0029319, it was fully aware that Carrollwood was incapable of meeting the stringent AWT standards without constructing new treatment facilities. Florida Cities further asserts that its efforts to improve the Carrollwood discharge situation support mitigation of any penalties for violations of the AWT provisions of the permit. Additionally, Florida Cities asserts that, as with Barefoot Bay, Mr. Kwan is still adding up the number of alleged violations, and summary judgment is therefore premature.

The Court finds, however, that Florida Cities has not demonstrated the existence of a material issue of fact. The Court incorporates its finding above that 33 U.S.C. § 1369(b) prohibits Florida Cities from challenging the permit limits in the context of an enforcement action. Further, the Plaintiff's allegations of Florida Cities' permit violations at Carrollwood are unambiguous. Mr. Kwan's estimation of the number of NPDES violations has remained

AO 72A
(Rev. 8/82)

constant: 234 violations. Because Florida Cities has not set forth any evidence challenging the existence of these 234 violations, Plaintiff is entitled to summary judgment.

III. Waterway Estates

A. Unpermitted Discharges

Plaintiff first points out that Florida Cities has admitted that it continued to discharge from the Waterway Estates Plant from January 9, 1987 until October 31, 1989 despite the EPA's final permit denial, which took effect on January 9, 1987. Plaintiff therefore alleges in paragraph 43 of the Second Amended Complaint that Defendants discharged without an NPDES permit during the period of October 1, 1988 to October 31, 1989,[15] which Plaintiff asserts, accounts for 396 violations.

Florida Cities asserts, as in its first motion for partial summary judgment, that the EPA erroneously rejected Florida Cities' 1986 application to renew the Waterway Estates' NPDES permit, thus creating by its own wrongful act the very absence of a federal permit that is now the subject of this case. Further, Florida Cities acknowledges that it discharged effluent from Waterway Estates into the Caloosahatchee River without an NPDES permit. Florida Cities asserts, however, that the government should not be permitted to profit by obtaining penalties from Florida Cities for its own mistake.

The Court has already considered Florida Cities' arguments, however, in Florida Cities' first motion for partial summary judgment and found them to be without merit. Florida Cities has not set forth any factual or legal basis for the Court to set aside its June 21, 1995 Order

[15]The United States explains that it has alleged violations beginning on October 1, 1988 because the Complaint in this action was filed on October 1, 1993, and the statute of limitations thus arguably bars claims before October 1, 1988.

AO 72A
(Rev. 8/82)

(Dkt. 127) ruling upon that issue. Therefore, the Court's prior determination in favor of Plaintiff is incorporated herein.

B. Discharges to Unpermitted Location

Plaintiff indicates that on November 1, 1989, EPA reissued permit No. FL0030325 for Waterway Estates. The permit required Florida Cities to discharge directly to the Caloosahatchee River rather than to a tributary canal of the Caloosahatchee River. Plaintiff asserts that Defendants continued to discharge to a canal with knowledge that it was an unpermitted location. Plaintiff alleges in paragraph 45 that Defendants discharged pollutants to an unpermitted location between November 1, 1989 and July 14, 1991. Plaintiff maintains that because each day of discharge is a separate violation, there were a total of 621 violations[16].

In response, Florida Cities points out that NPDES Permit No. FL0030325, effective November 1, 1989, states that Waterway Estates is authorized to discharge into "receiving waters named Caloosahatchee River." Florida Cities asserts that the relevant federal regulations establish that the plant's outfall was within the permitted area of discharge. Florida Cities notes that although Mr. Kwan has stated that the permit authorizes discharge "to a point at the six (6) foot contour line in the Caloosahatchee River," there is no reference in NPDES Permit No. FL0030325 specifying discharge to the six-foot contour line. It asserts that the only reference to a discharge point names the receiving waters simply as the "Caloosahatchee River." Further, Florida Cities points out that Dr. Abdul B. Ahmadi, Water Facilities Administrator of the Florida Department of Environmental Protection ("FDEP"), has testified by affidavit that FDEP was aware of the physical location of the discharge point from Waterway Estates into a canal, and

[16]Plaintiff relies upon the calculations and adjustments for mathematical errors of Mr. Kenneth Kwan, an EPA Environmental Engineer. (Dkt. 179, Exh. K).

AO 72A
(Rev. 8/82)

that "[t]his canal was considered part of the Caloosahatchee River." Florida Cities asserts that Plaintiff has presented no evidence to the contrary of Dr. Ahmadi's statement and that Florida Cities is therefore entitled to summary judgment.

In footnote 72 of its memorandum, Florida Cities sets forth its argument based on EPA's regulations. It states that EPA's regulations provide that the application form shall provide:

> (1) Outfall location. The latitude and longitude to the nearest 15 seconds [1500 feet] and the name of the receiving water.

40 C.F.R. 122.21(g). Florida Cities then states that the canal is within 15 seconds of the location of the present permitted Waterway Estates outfall.

Plaintiff replies that three critical documents clearly indicate that there was no ambiguity as to where Florida Cities was authorized to discharge. First, on page three and on a topographic map attached to Florida Cities' permit application, EPA Form 3510-1, the discharge point is the Caloosahatchee River at a specified latitude and longitude which corresponds to the six-foot contour line of the River. (Dkt. 179, Exh. K). Second, Attachment A to the Fact Sheet of the EPA's draft permit is the identical map submitted by Florida Cities with its permit application showing the location of the discharge at the six-foot contour line. Plaintiff notes that the first page of the Fact sheet under item 1.d lists the receiving water as the Caloosahatchee River and states, "For a sketch showing the location of the discharge, see Attachment A." (Dkt. 179, Exh. L). The third document is the final permit and the page entitled "Amendment to the Fact Sheet at the Time of Final Permit Issuance," on which the permit writer noted any changes to the permit from the draft to the final permit. (Dkt. 179, Exh. M). Plaintiff points out that on the amendment, the discharge point was not changed. Plaintiff argues that although the final permit designates the receiving waters as simply the Caloosahatchee River and does not contain

AO 72A
(Rev. 8/82)

the map, there can be no question that the permit was issued with the explicit understanding that the discharge point was the six-foot contour line of the River itself. Additionally, Plaintiff points out the Florida Cities' own Operations Manager, Jack Tompkins, has stated that he knew that the canal was an unpermitted location. (Dkt. 140). Plaintiff also asserts that the fact that an FDEP employee considered the canal part of the River is immaterial to this federal action to enforce a federal permit and that reliance on the FDEP employee's opinion is somewhat a contradiction in view of FDER's prior requirement that Florida Cities move the discharge from the canal to the six-foot control line.[17]

In response to Florida Cities' argument in footnote 72 based on EPA's regulations, Plaintiff first asserts that the regulation cited by Florida Cities, 40 C.F.R. § 122.21(g), is irrelevant for two reasons: (1) the regulation, by its own terms, relates only to "manufacturing, commercial, mining, and silvicultural dischargers," not to wastewater treatment plants; and (2) the regulation simply requires, for certain types of permits, the identification of the outfall location within a specified range and does not authorize a permittee to discharge anywhere within that range. Plaintiff further asserts that Florida Cities' argument is factually incorrect. It asserts that the distance from the actual discharge point (the old outfall location in the canal) to the permitted discharge point (the present outfall location) is approximately 2,650 linear feet.

---

[17]Plaintiff points out that Dr. Ahmadi stated:

> FDEP granted on April 1, 1981 (DO36-7407) and on August 2, 1983 (DO36-72569) discharge operation permits for discharge of 1.08 MGD of effluent from the WWE facility "to a canal to the Caloosahatchee River." Neither of these two operation permits required "no discharge" from the facility, nor did either permit require relocating the outfall to the six foot contour line of the River. On September 23, 1988 FDEP granted the WWE [Waterway Estates] facility a temporary operation permit (DT36-152486), which did require relocation of the outfall to the six foot contour line of the river and upgrading of the facility to AWT.

(Dkt. 174, Exh. 43).

AO 72A
(Rev. 8/82)

Further, it points out that, based on Florida Cities' calculations, the distance from the old outfall location in the canal to the intersection with the River was 511 feet, which means that the distance from the intersection to the six-foot contour line was 2,139 feet (2,650 - 511), not 1500 feet or less. Additionally, Plaintiff asserts that written communications between Defendants and their counsel show that Florida Cities' counsel knew, or should have known, that the statement that "the canal is within 15 seconds of the location of the current permitted outfall" is untrue.

The Court agrees that the canal was not a permitted area of discharge and that Plaintiff is entitled to summary judgment on this issue. First, in none of the three documents cited by Plaintiff — the permit application, the draft permit, or the final permit — is discharge into a canal of the River mentioned. Rather, the documents provide for discharge into the River itself. Further, the fact that the amendment page to the final permit did not mention the discharge location is significant in light of the permitting process. Before the draft permit is made into a final permit, there is a public comment period during which any interested party may submit written comments on the draft permit and may request a public hearing. 40 C.F.R. § 124.11. After consideration of any comments, the EPA takes final action on the application. 40 C.F.R. § 124.15. Because there was no objection to or discussion regarding the discharge location at the six-foot contour line during the permitting process, and in light of the absence of the discharge location on the amendment page to the final permit, the Court finds that the final permit was issued with the understanding that the discharge point was at the six-foot contour line. Additionally, the FDEP employee's statement that he considered the canal to be part of the River is not sufficient evidence to support Florida Cities' burden in response to Plaintiff's motion for partial summary judgment, particularly in light of the Florida Cities manager's statement that he

AO 72A
(Rev. 8/82)

knew the canal was an unpermitted location. Moreover, the EPA regulation cited by Florida Cities is irrelevant to the facts of this case.

C. NPDES Violations

Florida Cities acknowledges that the DMRs reported some exceedances for nitrogen (concentration and loading) and toxicity tests during the relevant time period. It asserts, however, that as with Barefoot Bay and Carrollwood, Plaintiff still has not specifically identified the number of alleged violations. Florida Cities therefore asserts that summary judgment is premature.

Plaintiff indicates that based on Florida Cities' DMRs, there were 21 violations of the Total Nitrogen limitations (concentration and loading) and three toxicity test failures. Based on Mr. Kwan's calculations which contain an adjustment for a reporting error, however, Plaintiff maintains that there are 18 Total Nitrogen violations and three toxicity test failures. Plaintiff again asserts that Florida Cities' defense that delays in upgrading its plant resulted in its not beginning advanced water treatment until April 3, 1992 is not a valid defense. Further, Plaintiff maintains that because the particular violations of federal law alleged by Plaintiff in this action have never been the subject of a state administrative order or penalties, Plaintiff is not barred from bringing those claims.

The Court again finds that Florida Cities has failed to present any evidence challenging the evidence of Plaintiff which establishes the NPDES violations. Plaintiff is therefore entitled to summary judgment on this issue.

AO 72A
(Rev. 8/82)

II. Avatar Holdings

A. Parent Company Liability

Plaintiff argues that Avatar Holdings, Inc. ("Avatar Holdings") should be held directly liable as a parent company of Florida Cities based in large part upon the authority of Jacksonville Electric Auth. v. Bernuth Corp., 996 F.2d 1107 (11th Cir. 1993). In Bernuth, the Eleventh Circuit stated that a parent corporation may be held liable as an "operator" under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) "only when it 'exercises actual and pervasive control of the subsidiary to the extent of actually involving itself in the daily operations of the subsidiary. Actual involvement in decisions regarding the disposal of hazardous substances is a sufficient, but not a necessary, condition to the imposition of operator liability.'" Id. at 1110, quoting Jacksonville Electric Auth. v. Eppinger & Russell Co., 776 F.Supp. 1542, 1547-47 (M.D.Fla. 1991). Plaintiff asserts that Judge Moore's analysis in Eppinger and Russell was based on three CERCLA cases which should apply to this Clean Water Act action: United States v. Fleet Factors Corp., 901 F.2d 1550 (11th Cir. 1990), cert. denied, 498 U.S. 1046 (1991); Riverside Mkt. Dev. Corp. v. Int'l Bldg. Products, Inc., 931 F.2d 327, 330 (5th Cir. 1991), cert. denied, 502 U.S. 1004 (1991), and United States v. Kayser-Roth Corp., 910 F.2d 24, 26-27 (1st Cir. 1990), cert. denied, 498 U.S. 1084 (1991). Plaintiff submits that based on facts developed in discovery, Avatar Holdings must be held directly liable under the Bernuth test for the violations alleged in this case on the basis of its actual and pervasive control of the environmental practices of Florida Cities. Plaintiff asserts that the evidence indicates that Avatar Holdings exercises tight control over both Florida Cities and other Avatar companies which are linked in a chain leading to Avatar Holdings.

AO 72A
(Rev. 8/82)

In response,[18] Avatar Holdings first points out that Plaintiff does not offer any precedent for parent corporate liability under § 309 of the Clean Water Act, 33 U.S.C. § 1319. Avatar Holdings asserts that, instead, Plaintiff improperly relies on case law construing "operator" liability under § 107(a) of CERCLA, 42 U.S.C. § 9607(a). Avatar Holdings states that § 107(a) of CERCLA imposes the obligation to pay for the cleanup of a release of a hazardous substance on a person who has the status of an operator of a facility, regardless of whether that person's action caused the release. By contrast, § 309(d) of the Clean Water Act imposes a penalty on "a person who violates" a Clean Water Act requirement. Avatar Holdings asserts that it is well established that § 309(d) requires a showing that the alleged violator actively directed or caused the violation, citing United States v. Lambert, 589 F.Supp. 366, 374 (M.D. Fla. 1984)(holding that the wife, as co-owner of the polluted property, was not an appropriate target of civil penalties because she had not "actively directed or caused" the violations). Thus, Avatar Holdings asserts that the Clean Water Act requires a demonstration that the defendant caused the violation.

Avatar Holdings further asserts that the limitation of § 309(d) civil penalties to persons actively causing a violation is evident on the face of the Clean Water Act in contrast to CERCLA. Avatar Holdings points out that the Clean Water Act contains two different provisions for monetary sanctions against violators: (1) § 309, 33 U.S.C. § 1319,[19] which authorizes punitive criminal and civil penalties against "[a]ny person who violates" certain sections of the Clean Water Act, including violation of the NPDES permit scheme, and (2) §

[18]Avatar Holdings states that its memorandum addresses solely the issue of corporate parent liability and that it relies on and incorporates by reference the Florida Cities' memorandum addressing the alleged underlying violations.

[19]33 U.S.C. § 1319 (c) and (d).

AO 72A
(Rev. 8/82)

311, 33 U.S.C. § 1321 (f), which authorizes remedial assessments of cleanup costs up to fifty million dollars against any "owner or operator" of a facility which discharges oil or other hazardous substances in violation of the Clean Water Act. Avatar Holdings asserts that by drawing this distinction, Congress evinced a desire to reserve § 309's punitive sanctions to persons, individual or corporate, who, in the Lambert court's terms, "actively directed or caused" the violation, and a desire to impose § 311's primarily cost-recovery liability on the broader basis of status on owners and operators of polluting facilities, regardless of whether they directly acted to cause the violation. Further, Avatar Holdings states that when CERCLA, a remedial statute, was enacted, Congress explicitly adopted the same owner or operator standard of liability as the standard under § 311 of the Clean Water Act, the predominantly remedial section of the Clean Water Act. Avatar Holdings asserts that by selecting for CERCLA the scope of liability provided by the remedial provisions of § 311 of the Clean Water Act, Congress opted out of the more limited scope of liability embodied in the penalty provisions of § 309(d). It therefore asserts that the scope of liability created under § 309 of the Clean Water Act cannot now be defined based on CERCLA "owner or operator" precedents without nullifying Congressional intent. Thus, it maintains that for the Plaintiff to prevail on its motion, it must show based on undisputed evidence that Avatar Holdings actively directed or caused the alleged Clean Water Act violations.

Additionally, Avatar Holdings asserts that even if the Bernuth CERCLA standard applied, that standard is narrowly construed. It refers to language in Bernuth indicating that a court must find "more than just indicia of a parent-subsidiary relationship," and "more than merely complete ownership and the concomitant general authority or ability to control that comes with

AO 72A
(Rev. 8/82)

ownership." 996 F.2d at 1110-1111, citing United States v. Kayser-Roth Corp., 910 F.2d 24, 27 (1st Cir. 1990). Parent corporation liability requires that the parent "exercise[] actual and pervasive control of the subsidiary to the extent of actually involving itself in the daily operations of the subsidiary." Id. at 1110. Further, Avatar Holdings asserts that as the parent company in Bernuth was found to be "in an entirely different business than that of the subsidiary" and not liable, Avatar Holdings is analogously a diversified holding company engaged in capital management, not a water treatment operating company. Avatar Holdings notes that all but one of the cases cited by Bernuth resulted in a finding of no parent company liability and the one exception is cited for the proposition that parent company liability is "not the usual case." Id. at 1110. It also notes that since the Eleventh Circuit's decision in Bernuth, the Sixth Circuit, in United States v. Cordova Chemical Co., 59 F.3d 584, 590-591 (6th Cir. 1995), rejected application of a nebulous control test which created a threat of unlimited liability and adopted a similarly narrow standard of parent company liability, holding that "a parent corporation incurs operator liability pursuant to section 107(a)(2) of CERCLA, only when the requirements necessary to pierce the corporate veil are met" by reference to the requirements imposed by state law.

The Court agrees with the analysis of Avatar Holdings. First, although the Eleventh Circuit recognized the possibility of parent company liability in Bernuth, the Court construed such liability narrowly and did not in fact find parent company liability in that case. Further, the Eleventh Circuit has not found that the parent company liability conceived of in Bernuth under CERCLA extends to the Clean Water Act, and this Court believes that the Eleventh Circuit would not likely do so. The Court finds that in light of the language with respect to a person

AO 72A
(Rev. 8/82)

liable under § 309(d) of the Clean Water Act ("[a]ny person who violates"), the mere fact of being a parent exercising control over a violating subsidiary does not properly subject the parent company to liability. As explained above, Congress did not use the same "operator or owner" language in § 309(d) of the Clean Water Act as Congress used in § 311 of the Clean Water Act and in § 9607(a) of CERCLA, and it was under that section of CERCLA that the Eleventh Circuit held that parent company liability was possible. Further, Plaintiff has not cited, nor has this Court found, any authority for parent company liability under the Clean Water Act on the basis of the parent's actual and pervasive control of the subsidiary. The Court therefore finds that, in order for Avatar Holdings to be held liable for a violation of the Clean Water Act by Florida Cities, Avatar Holdings itself must have acted in such a way that it may be considered a "person who violates" under § 309(d) of the Clean Water Act, through such actions as directing or causing the violations, or exercising actual and pervasive control of Florida Cities to the extent of actually being involved in the daily operations of Florida Cities. See Bernuth, 996 F.2d at 1110.

B. Avatar Holdings' Role

Plaintiff's memorandum discusses and relies upon evidence which Plaintiff asserts shows that Avatar Holdings, either directly or through Avatar Utilities, Inc. ("Avatar Utilities"), exercises tight control over Florida Cities. Plaintiff asserts that Avatar Holdings' Board members, referred to as "Senior Management in New York," actively manage Florida Cities. Plaintiff points out several facts concerning the relationship between the companies, such as that Florida Cities' executive vice-president, Paul Bradtmiller, reports directly to Gerald Allen, the executive vice-president of Avatar Utilities, whose office is upstairs from Mr. Bradtmiller's

AO 72A
(Rev. 8/82)

office. Plaintiff also sets forth evidence indicating that Florida Cities, Avatar Utilities, and Avatar Holdings communicate with each other regarding environmental compliance questions. Further, Plaintiff points out that Florida Cities relies on "Avatar's 'Environmental Assurance Plan'" and has relied on "Avatar" to conduct environmental audits.

With respect to Barefoot Bay, Plaintiff asserts that Robert Gordon, the Avatar Utilities president, was aware that the Barefoot Bay percolation ponds were improperly overflowing into the canal and that he notified Avatar Holdings officials of the problem and his intended solution. (Dkt. 142, Exh. 474).[20] Plaintiff notes that Larry Wilkov, Avatar Holdings' former president, was personally advised of the opportunity to buy more land which could have provided options for ending the unpermitted discharge from Barefoot Bay. (Dkt. 142, Exh. 475). Plaintiff asserts that the several memoranda show that Avatar Utilities and Avatar Holdings officials conducted various studies of alternative discharge options at Barefoot Bay. (Dkt. 146, Exh. 758; Dkt. 143, Exh. 541; Dkt. 145, Exhs. 704 & 706; Dkt. 142, Exhs. 476 & 477). Additionally, Plaintiff asserts that Florida Cities should be deemed Avatar Holdings' alter ego in light of the attempt in 1990-91 to acquire the Micco Groves adjacent to Barefoot Bay for disposal of Barefoot Bay effluent, an effort which Plaintiff states involved several Avatar Holdings' officials. Plaintiff maintains that Avatar Holdings developed and expanded Barefoot Bay and declined opportunities to eliminate the unpermitted discharges, thereby knowingly increasing their volume.

Although the above evidence relied upon by Plaintiff tends to show involvement by Avatar Holdings in decisions regarding disposal of pollutants, the Court finds that the evidence and argument set forth by Avatar Holdings demonstrate the existence of a genuine issue of

[20]In a footnote, Plaintiff states that testimony on Robert Gordon's memorandum has been limited by virtue of the fact that Mr. Gordon and two of its recipients have pled the Fifth Amendment and one of its recipients has died.

AO 72A
(Rev. 8/82)

material fact as to whether Avatar Holdings' actions are sufficient to satisfy the legal standard for parent company liability. Avatar Holdings first states that it is a diversified company with approximately 40 direct and indirect subsidiaries engaged in a variety of business operations including home construction, vacation ownership, resort operations, retail land sales, property management, as well as water and wastewater utilities operations, with the principal emphasis in the real estate industry. It asserts that in the utility arena, Avatar Holdings plays a very limited role, and that due to downsizing, Avatar Utilities is a subsidiary which is the parent for the two remaining utility subsidiaries: Florida Cities and Poinciana. Further, although Plaintiff uses the term "Avatar," Avatar Holdings contends there is a distinction between the subsidiaries and the more diverse parent corporation. Avatar Holdings points out that Florida Cities relies on Avatar Utilities' environmental audit program rather than an Avatar Holdings program and that Avatar Holdings does not have its own audit program. (Dkt. 172, Exh. U). Further, it emphasizes that neither Mr. Gordon nor Mr. Allen hold positions with Avatar Holdings, but rather with Avatar Utilities. Avatar Holdings also argues that the fact that its officials approved construction contract awards merely proves that it engaged in normal financial oversight of its subsidiaries. Additionally, it asserts that the testimony of Julie Karleskint, operations manager of Florida Cities, demonstrates that expenditures for purposes of regulatory compliance are authorized at the operations level of the subsidiary. (Dkt. 172, Exh. V). Particularly with respect to Barefoot Bay, Avatar Holdings argues that the correspondence and the memoranda cited by Plaintiff are advisory and that none of the evidence demonstrates that an Avatar Holdings official instructed, advised, or counseled Florida Cities not to apply for a federal permit or to discharge the pollutants at Barefoot Bay as described in the Second Amended Complaint.

AO 72A
(Rev. 8/82)

In light of the above evidence relied upon by Avatar Holdings, the Court finds that Avatar Holdings has raised a genuine issue of material fact as to whether its actions satisfy the legal standard for parent liability. The Court notes that it is unclear from the evidence herein whether it was Avatar Holdings or Avatar Utilities, if either, that controlled Florida Cities' environmental decisions. Further, Avatar Holdings has raised a valid argument that the actions, inactions, statements, and decisions of Avatar Holdings officials may be viewed as within the normal responsibilities of a parent to its subsidiary. The Court also notes that there is no clear evidence that Avatar Holdings has directly caused or directed the alleged violations at Barefoot Bay.

Next, Plaintiff asserts that with respect to Carrollwood, Avatar officials were aware that Florida cities was operating the Carrollwood plant without a permit. It cites an August 6, 1984 memorandum from Gordon to John Sladkus, Avatar Holdings executive vice-president, in which Gordon stated, "We intend to write the EPA and inform them of our negotiations with the County and attempt to have them reconsider their position. If they refuse, I believe our only alternative is to fight their mandate through the courts." (Dkt. 142, Exh. 489). Further, Plaintiff states that in 1989, a "conward"[21] was signed authorizing the advanced wastewater treatment plant, which prompted an exchange of memoranda between Gordon and Peter Sharp, a member of the executive committee of Avatar Holdings Board of Directors. (Dkt. 146, Exh. 762).

[21] Although it is not clear from the parties' pleadings what the meaning of "conward" is, the Court notes that Avatar Holdings has stated that the conward demonstrates that Avatar Holdings signed off on the finances for significant improvements and that it does not show that Avatar Holdings authorized or caused any of the violations. (Dkt. 171).

AO 72A
(Rev. 8/82)

The Court finds that the above evidence relied upon by Plaintiff, although perhaps probative, does not establish that there is no genuine issue of material fact regarding Avatar Holdings' directing or causing the alleged Clean Water Act violations. Further, the documents cited by Plaintiff pre-date the violations alleged in the Second Amended Complaint.

Finally, with respect to Waterway Estates, Plaintiff asserts that Avatar officials were aware of the violations pertaining to Waterway Estates and made critical decisions relating to compliance. Plaintiff first notes a letter from Gordon to several "Avatar" officials stating, "The EPA wants the company to either discontinue discharging effluent to a canal which ultimately goes to the Caloosahatchee River or to improve the treatment to AWT and seek a wasteload allocation to the Caloosahatchee." (Dkt. 145, Exh. 732). Plaintiff also notes other correspondence from Gordon to Avatar Holdings officials, including a copy of EPA's compliance order and a copy of an engineering report on the feasibility of disposing of wastewater at Waterway Estates. (Dkt. 145, Exh. 733; Dkt. 146, Exh. 765). Plaintiff states that ultimately "Avatar" decided to upgrade Waterway Estates rather than to contract with another private wastewater treatment company. Plaintiff asserts that in so doing "Avatar" knowingly decided to continue discharging from the Waterway Estates into the Caloosahatchee via the canal. Plaintiff asserts that said decision is memorialized in a letter from Gordon to the Avatar Chairman of the Board, Leon Levy. (Dkt. 146, Exh. 772). Additionally, Plaintiff cites a letter from Dennis Getman, "the Avatar Holdings Executive Vice-President/General Counsel," to Allen in which Mr. Getman suggested a strategy for EPA's enforcement actions resulting from violations. (Dkt. 139, Exh. 273).

AO 72A
(Rev. 8/82)

The Court again finds that the above evidence relied upon by Plaintiff, although perhaps probative, does not establish that there is no genuine issue of material fact regarding Avatar Holdings' directing or causing the alleged Clean Water Act violations.

C. Avatar Holdings' Motion for Partial Judgment on the Pleadings

Avatar Holdings moves the Court pursuant to Rule 12(c), Federal Rules of Civil Procedure for judgment on the pleadings and for the Court to bar all allegations against Avatar Holdings that date back more than five years. This action commenced on October 1, 1993 when Plaintiff filed the civil action against Florida Cities for alleged violations at Waterway Estates. On March 31, 1995, Plaintiff filed a motion (Dkt. 56) for leave to file an Amended Complaint to add a new party and a proposed Amended Complaint. On April 26, 1995, the Court considered the Plaintiff's motion and granted Plaintiff leave to file a Revised Amended Complaint not including two paragraphs in the proposed Amended Complaint (Dkt. 78). On May 5, 1995, Plaintiff filed the Revised Amended Complaint (Dkt. 82) which added allegations regarding two new sites, Barefoot Bay and Carrollwood, and added a new party, Avatar Holdings. On May 15, 1995, Plaintiff filed a motion for reconsideration of the Court's Order not permitting two paragraphs in the proposed Amended Complaint, and the Court ruled in favor of Plaintiff (Dkt. 126) and directed Plaintiff to file a Second Amended Complaint. On June 27, 1995, Plaintiff filed a motion (Dkt. 47) seeking to have the Clerk file its Second Amended Complaint (Dkt. 161) nunc pro tunc as of March 31, 1995, the date the Plaintiff first sought to amend the Complaint. The Court denied the Plaintiff's motion to file nunc pro tunc in its July 18, 1995 Order (Dkt. 158).

AO 72A
(Rev. 8/82)

Avatar Holdings first asserts that claims against it based on alleged discharges prior to May 5, 1990, the date the Revised Amended Complaint was filed, are barred by the five year limitations period under 28 U.S.C. § 2462. Avatar Holdings asserts that the statute of limitations in 28 U.S.C. § 2462 applies due to the absence of a relevant statute of limitations provision in the Clean Water Act. Title 28 U.S.C. § 2462 provides in part:

> Except as otherwise provided by Act of Congress, an action, suit or proceeding for the enforcement of any civil fine, penalty, or forfeiture, pecuniary or otherwise, shall not be entertained unless commenced within five years from the date when the claim first accrued . . . .

Avatar Holdings notes that the court's decision in 3M Company (Minnesota Min. and Mfg.) v. Browner, 17 F.3d 1453 (D.C. Cir. 1994), indicates that, based on precedent from the Supreme Court and other federal courts, a claim first accrues under the statute at the date the violation occurred, rather than the date of the discovery of the violation. Thus, insofar as paragraphs 16, 43, and 45 of the Second Amended Complaint contain allegations occurring prior to May 5, 1990, see Paragraph 16 (referring to a period of alleged discharge "on or about April 1, 1990 to October 31, 1991"); Paragraph 43 (referring to a period of alleged discharge "on or about October 1, 1988 to October 31, 1989"); Paragraph 45 (referring to a period "on or about November 1, 1989 to July 14, 1991"), Avatar Holdings seeks partial judgment on the pleadings on the basis that those portions of the paragraphs are barred by the statute of limitations.[22]

[22]Additionally, Avatar Holdings argues, as it argued in its opposition to the motion to file the Second Amended Complaint nunc pro tunc, that the allegations in paragraphs 16, 43, and 45 against Avatar Holdings, a newly added party, do not relate back to the date of the original pleading under the "relation-back" doctrine of Rule 15(c), Federal Rules of Civil Procedure. It asserts that the overwhelming weight of federal authority establishes that relation back is not permissible where, as here, there has been no mistake of identification or misnomer of the added party. The Court notes that it denied the Plaintiff's motion to file the Second Amended Complaint nunc pro tunc in its July 18, 1995 Order (Dkt. 158).

AO 72A
(Rev. 8/82)

In response, Plaintiff asserts that all of its claims are timely and that Avatar Holdings' motion for judgment on the pleadings should be denied. Plaintiff asserts that the claims now at issue in the Second Amended Complaint are identical to those set forth in the Amended Complaint, which Plaintiff sought to have filed on March 31, 1995. Plaintiff asserts that although the Court denied its motion to file the Second Amended Complaint nunc pro tunc, because the Plaintiff was barred by Local Rule 3.01(b) from responding to Avatar Holdings' opposition to its motion, Plaintiff now requests the Court to consider its arguments which were not proffered in its very brief memorandum accompanying the motion to file nunc pro tunc. Further, Plaintiff requests the Court to hold that the Second Amended Complaint be deemed filed as of March 31, 1995 for claims relating to Barefoot Bay and Carrollwood and as of October 1, 1993 for claims relating to the Waterway Estates facility.

Plaintiff in essence requests that the Court reconsider its ruling on the Plaintiff's motion to file the Second Amended Complaint nunc pro tunc. Plaintiff now seeks to raise arguments in support of a nunc pro tunc filing which it had the full and fair opportunity to raise in connection with its motion, but chose not to raise. Nor did Plaintiff move the Court to permit it to file a reply to Avatar Holdings' response or move the Court to reconsider its denial of the motion to file nunc pro tunc. Further, in the Plaintiff's response to Avatar Holdings' motion for judgment on the pleadings presently before the Court, Plaintiff has not shown good cause for its failure to raise its arguments at the appropriate time. The Court also notes that Plaintiff has not opposed Avatar Holdings' motion for judgment on the pleadings on any basis other than that the Second Amended Complaint should be deemed to have been filed nunc pro tunc. Therefore, as this Court has not permitted the Second Amended Complaint to be filed nunc pro tunc, and

AO 72A
(Rev. 8/82)

because both the parties assert and the Court agrees that 28 U.S.C. § 2462 provides the applicable statute of limitations, Avatar Holdings is entitled to partial judgment on the pleadings as provided below.

Upon consideration of the foregoing, it is hereby **ORDERED and ADJUDGED** that:

(1) United States' Motion for Partial Summary Judgment (Dkt. 130) is **GRANTED IN PART and DENIED IN PART.** With respect to Defendant Florida Cities, the motion is **GRANTED** as to the claims for NPDES violations at Barefoot Bay and Carrollwood and all the claims at Waterway Estates; the motion is otherwise **DENIED** as to Florida Cities. With respect to Defendant Avatar Holdings, the motion is **DENIED.**

(2) Avatar Holdings, Inc.'s Motion for Partial Judgment on the Pleadings (Dkt. 169) is **GRANTED.** Avatar Holdings is entitled to judgment in its favor on the following allegations:

(a) Allegations against Avatar Holdings in Paragraph 16 based on alleged discharges during the period on or about April 1, 1990 to May 5, 1990.

(b) All allegations against Avatar Holdings in Paragraph 43.

(c) Allegations against Avatar Holdings in Paragraph 45 based on alleged discharges during the period on or about November 1, 1989 to May 5, 1990.

(3) Florida Cities Water Company's Motion for Partial Summary Judgment (Dkt. 173) is **GRANTED IN PART and DENIED IN PART.** The motion is **GRANTED** as to the allegations in paragraphs 16-23 and 30 of the Second Amended Complaint. The motion is otherwise **DENIED.**

AO 72A
(Rev. 8/82)

DONE AND ORDERED, at Tampa, Florida, this 22nd day of November, 1995.

RALPH W. NIMMONS, JR.
UNITED STATES DISTRICT JUDGE

Re: U.S. v. Florida Cities Water Company and Avatar Holdings Inc.
Package of Exhibit list, deposition designations, and counter-stipulations.

Dear Mr. Quinn:

Enclosed with this package please find:

1) Florida Cities' exhibit list;

2) Florida Cities' deposition designations;

3) Florida Cities counter-proposals regarding Plaintiff's proposed stipulations.

We have forwarded hard copies of the exhibit list and of the deposition designations. We have enclosed both a hard copy (in the form of a letter) and a copy on a Word Perfect 5.1 disk. I left a voice-mail message for you earlier today to discuss whether you wished the other documents on disk but I have not heard any response from you or anyone from your office. Please also note that although Florida Cities has offered deposition designations, it still reserves the right to present these witnesses in person at trial.

This package is being hand delivered to you and a copy of this letter is being faxed. Receipt of this fax indicates that the courier is in the process of delivering the hard copies.

Thank you for your attention in this matter. Please telephone if you need any additional information in this matter.

With kind personal regards I am,

Sincerely,

Alexander M. Bullock

UNITED STATES' DEPOSITION EXHIBIT LIST

GHB

Exh #	Description
1	Notice of Deposition Upon Oral Examination: Julie Karleskint 04/12/94
2	Letter from Susan Hollingsworth, Lee County Board of County Commissioners to Neale Montgomery, attorney for Florida Cities Water Company (FCWC) 08/04/88
3	Letter from FCWC to Office of General Counsel, FDER, re: request for extension of time to file petition undated
4	FCWC Customer Complaint Summary Log various dates
5	Facsimile from R. Ytterberg to Reeves, Tompkins and Karleskint re DER conference 02/15/91
6	Memo from R. Ytterberg to Tony Reeves re: DER conference 02/15/91
7	Memo from Julie Karleskint to Gerald Allen re: Impact of regulations on FCWC 11/18/91
8	Memo from Julie Karleskint to FCWC employees re: Sampling and reporting protocol 11/18/91
9	Letter from R. Ytterberg to Harley Young, FDER, re: Bringing Waterway Estates in to compliance 09/08/92
10	Minutes of managers meeting FCWC 09/10/92
11	Letter Julie Karleskint to Ken Kwan re: Amended Consent Order and Final order for Waterway Estates 02/20/92
12	Memo from Julie Karleskint to Bradtmiller re: Meeting with FDER concerning Waterway Estates 04/01/92
13	Letter from Julie Karleskint to Ken Kwan re: Biological treatment Unit No. 2 04/21/92
14	Letter from Paul Bradtmiller to Philip Edwards, FDER, re: Extension of time for information submittal 04/22/92
15	Letter from Julie Karleskint to Richard Redemann, Florida Public Service Commission, re: Application for amendment of certificate 06/12/92
16	Memorandum from Susanne G. to Julie Karleskint re: Waterway Estates AWWTP test results 07/07/92
17	Work Order from Florida Cities for installation of fan 9/92

Exh #	Description
18	Letter from Julie Karleskint to Philip Edwards re: fluctuations in effluent TSS 12/22/92
19	Memorandum from Robert Dick to Julie Karleskint re: deficiencies found during EPA and DER compliance inspection 06/30/93
20	Amended Notice of Deposition for Larry Good 09/30/94
21	Letter from Jack Ravan, EPA, to Garrison Long, FCWC, re: Forwarding the NPDES permit for Carrollwood facility 06/30/75
22	Chart of Carrollwood Village capacity alternatives 1978-1985
23	Letter from Bruce Kennedy, Dept. of Waste Water to A. A. Reeves, FCWC re: Connection of Carrollwood WWTP to County WW System 06/28/83
24	Memorandum from A. A. Reeves, FCWC to file re: Modification of the conditions to FCWC's Temporary Operating Permit 08/23/83
25	Letter from W. K. Hennessey, DER to A. A. Reeves, FCWC, re: Modification of permit conditions 08/08/83
26	Letter from Larry Good, FCWC to Elton Smith, City of Tampa, re: Possibility of connecting Carrollwood Sewer System to the City's 08/23/83
27	Letter from Larry Good, FCWC to Jeff Hayden re: Spray Irrigation for Auila Golf & Country Club 12/07/83
28	Memorandum from Larry Good, FCWC to File re: connection of FCWC sewer system with the City's 12/12/83
29	Letter from William Schafer, City of Tampa, to Larry Good, FCWC re: Three possible locations for FCWC to hook up to the city's sewer system 12/29/83
30	Letter from Larry Good, FCWC to William Schafer, City of Tampa, re: Requesting reason for submitting company financial information to the city 09/09/84
31	Report-Preliminary Review and Evaluation of Existing Percolation Ponds and Off-Site Disposal Areas For Carrollwood Wastewater Treatment Facility 01/24/84
32	Letter from Kathryn Cowdery, Esq. to Edwin Copeland, Division of Public Works, re: FCWC hook-up with the Hillsborough County system 03/01/84

Exh #	Description
56	Letter from Kathryn Cowdery, Esq. to Larry Good, FCWC re: Status of FCWC's connection to the county for wastewater treatment 09/05/86
57	Letter from Kathryn Cowdery, Esq. to Tony Cleveland, DER, re: Unreasonable time deadlines which is the subject of Florida Cities Water Company v DER 10/30/86
58	Letter from Kathryn Cowdery, Esq. to Ken Kwan, EPA re: The status of FCWC's efforts to connect the Carrollwood facility to the County of Hillsborough 02/24/87
59	Letter from Paul Bradtmiller, FCWC to Roger Stewart, Hillsborough County EPA, re: Forwarding the final agreement for the transfer of wastewater flow from Carrollwood to Hillsborough County 06/24/91
60	Letter from Paul Bradtmiller, FCWC to Michael McWeeny, Hillsborough County Public Utilities, re: Demand for payment of stipulated penalties for violations of the Consent Order from EPA and FDER 02/28/92
61	Letter from Michael Spence, Dyer, Riddle, Mills & Precourt, to Rick Garrity, FDER re: Forwarding the plan for the abandonment of the Carrollwood WWTP 04/09/92
62	Letter from Julie Karleskint, FCWC to Sandi Brooks, Hillsborough County EPA, re: Forwarding the contract for sludge hauling from the polishing ponds 12/03/92
63	FCWC Balance Sheet: Capital Investment Differential Between Construction of an AWT Plant at Carrollwood and the Interconnection With the County undated
64	Letter From Michael Acosta, FCWC to Bruce Goldstein, Esq. re: Summary of costs incurred by FCWC for removal of residuals and cleaning of tanks 06/28/93
65	Memorandum from Johnnie Overton, FCWC re: Errors in Monthly Operating Reports 03/28/94
66	Letter from Larry Good, FCWC, to Lee Miller, FDER, re: Recommendations for a solution for effluent disposal at Barefoot Bay 01/20/84
67	Sequence of Events for the Barefoot Bay WWTP Effluent Disposal 08/13/91
68	FCWC Barefoot Bay Division Chart of Wastewater and Canal Discharge undated

Exh #	Description
33	Letter from Larry Good, FCWC to Edwin Copeland, Division of Public Works, re: Forwarding an application for waste water service and franchise map 04/12/84
34	Letter from Larry Good, FCWC to Edwin Copeland, Division of Public Works, re: FCWC hook-up to City's sewer system 06/04/84
35	Letter from Edwin Copeland, Division of Public Works, to Larry Good, FCWC, re: Connection of the Carrollwood Sewer System into the Hillsborough County System 06/07/84
36	Letter from Larry Good, FCWC to Edwin Copeland, Division of Public Works, re: Status of the connection location and time frame of the hook-up of FCWC to the City sewer system 08/07/84
37	Letter from Bruce Kennedy, Hillsborough County, to Larry Good, FCWC, re: Necessity of a formal agreement between the County and FCWC for FCWC's tie-in to the County's system 09/06/84
38	Letter from A. A. Reeves, FCWC to Bruce Kennedy, Hillsborough County re: Request for information regarding connection to the County's system 10/16/84
39	Letter From Larry Good, FCWC to Bruce Kennedy, Hillsborough County, re: Connection of the Carrollwood Wastewater system to the Hillsborough County system 12/07/84
40	Letter from A. A. Reeves to Kathryn Cowdery, Esq. re: Problem with the EPA compliance schedule 12/20/84
41	Letter from Kathryn Cowdery, Esq. to Paul Traina, EPA, re: Modification to Administrative Order No. 85-044(wsss) 09/09/85
42	Letter from A. A. Reeves, FCWC to Paul Traina, EPA, re: Possible cessation of FCWC discharge into the Sweetwater Creek by June, 1987 09/29/85
43	Letter from Larry Good, FCWC to Bruce Kennedy, Hillsborough County, re: Status of application to connect to the county system and inquiry in the status of the study of FCWC's system 03/19/85
44	Letter from Kathryn Cowdery, Esq. to Larry Good, FCWC, re: Notices of public hearings related to the DER priority list 07/30/85

Exh #	Description
45	Letter from Kathryn Cowdery, Esq. to Larry Good, FCWC, re: 1986 priority list for wastewater treatment works as it relates to Carrollwood transmission facility project 08/09/85
46	Memorandum from Larry Good to file re: Moratorium on new sewer connections in the Carrollwood area 08/14/85
47	Memorandum from KGWC (Kathryn Cowdery) to file re: Meeting with Hillsborough County Utilities Department to discuss connection agreement terms 08/21/85
48	Letter from Kathryn Cowdery, Esq. to Robert Alban, Hillsborough Co. Utilities Department re: August 19th meeting to discuss the connection of the Carrollwood facility to Dale Mabry Plant 08/21/85
49	Letter from Kathryn Cowdery, Esq. to Onci Kelada, Hillsborough Co. Dept of Wastewater Utilities, re: The taking out of service of the Carrollwood plant, payment for construction and facility appraisal 09/05/85
50	Letter from Kathryn Cowdery, Esq. to Michael McWeeny, Utilities Department, re: Alternative hook-up ideas for the Carrollwood plant 09/24/85
51	Letter from Kathryn Cowdery, Esq. to Larry Good, FCWC re: Connecting to the County, EPA deadline to cease discharging to Sweetwater Creek and the FCWC administrative case 11/13/85
52	Letter from Kathryn Cowdery, Esq. to Scott Stevens, Hillsborough County Dept. of Water and Wastewater Utilities, re: FCWC application for connection to County 03/25/86
53	Letter from Kathryn Cowdery, Esq. to Scott Stevens, Hillsborough County Department of Water and Wastewater Utilities, re: Procedure to be used in the review of the FCWC Application for Water and/or Wastewater Service 04/17/86
54	Letter from Kathryn Cowdery, Esq. to Larry Good , FCWC, re: Review of the request for wastewater service from the county 04/24/86
55	Letter from Kathryn Cowdery, Esq. to Larry Good, FCWC re: Status of the application for Wastewater treatment at Hillsborough County 05/14/86

Exh #	Description
69	FCWC Work Order for Clearing, minor regrading and berm repairs 02/24/93
70	Newspaper editorial entitled, "Sewage Problems" undated
71	Letter from Ray Cunningham, EPA to Paul Bradtmiller, FCWC, re: Forwarding NPDES Permit for Barefoot Bay WWTP 09/16/91
72	Letter from Leslie Shannon, Chem Hill, to Gerald Allen, Avatar, re: Summary of the Barefoot Bay Status Report, estimate of construction costs 05/31/89
73	Memorandum from Gerald Allen to file re: Meeting with manager of Brevard Groves to discuss using effluent discharge for irrigation of orange groves 08/01/89
74	Amended Notice of Deposition Upon Oral Examination: William Sansbury 09/30/94
75	Attachment 2A Existing Treatment Units, Barefoot Bay Wastewater Treatment Plant
76	Map of Barefoot Bay WWTP Modifications
77	Map of FCWC Barefoot Bay Spray Irrigation Alternatives
78	FCWC Barefoot Bay Division Wastewater and Canal Discharge
79	Facsimile from Johnnie Overton to Gerald Allen re: attached letter to Kathleen Blizzard, Gerald Allen, Larry Good, and Doug Young about effluent discharge figures at the Barefoot Bay canal 12/21/92
80	Letter from Roosevelt Childress, EPA to A. A. Reeves, FCWC re: Forwarding an application for an NPDES permit 05/30/90
81	Memorandum from William Sansbury, FCWC, to Paul Bradtmiller re: Sand Dragon proposal 04/25/91
82	Memorandum from Jack Tompkins, FCWC, to Bill Sansbury re: Barefoot Bay Water and Wastewater Operations, visit report 06/28/91
83	Hand drawing of ponds and pond drain lines undated
84	Fax from Paul Bradtmiller to Bill Sansbury, forwarding memorandum from Julie Karleskint to Bradtmiller, FCWC, re: comments to Barefoot Bay draft NPDES permit 08/20/91
85	FCWC/BFB Wastewater daily DO readings Jan.-July 1994

Exh #	Description
86	Wastewater Treatment Plant Operations Manual undated
87	Memorandum from William Sansbury, FCWC, to Paul Bradtmiller re: telephone conversation with Peter Dentice about permit for spray irrigation site 10/31/91
88	Hand drawing of swell at grade undated
89	Memorandum from William Sansbury, FCWC, to Paul Bradtmiller re: DER, BCMC inspection visit to spray irrigation site 10/29/91
90	Memorandum from William Sansbury to Barefoot Bay Operators and Field Crew, FCWC, re: spray site irrigation practice procedures 10/15/92
91	Handwritten memorandum from Glen Siler to Bill Sansbury re: Mr. Good's visit to SIS and plant 01/05/93
92	Handwritten memorandum from Glen Siler to Bill Sansbury re: Mr. Good's visit to SIS and plant undated
93	Memorandum from William Sansbury, FCWC, to file re: Spray Irrigation Site Discharge incident on April 17 04/27/92
94	Hand drawing of overflows at 40 acre SIS and storm water pond in 1992 undated
95	Letter from William Sansbury, FCWC, to Peter Dentice, FDER, re: Spray Irrigation Site overflow incident on April 17 04/29/92
96	Memorandum from W. Michael Sansbury, FCWC, to Julia Karleskint re: overflow incident from the 40 acre Spray Irrigation Site on October 11 10/15/92
97	Letter from William Sansbury, FCWC, to Christine Ferraro, FDER, re: minor overflow incident at the 40 acre spray site of the Barefoot Bay Wastewater Treatment Facility on October 11 10/14/92
98	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for May 1993 for Barefoot Bay Wastewater Treatment Plant, plus results of toxicity testing for January-June 1993 06/28/93
99	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for January 1993 for Barefoot Bay Wastewater Treatment Plant 02/26/93

Exh #	Description
100	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for February 1993 for Barefoot Bay Wastewater Treatment Plant 03/24/93
101	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for February 1994 for Barefoot Bay Wastewater Treatment Plant 03/22/94
102	Letter from Susan M. Rodgers L., Bio Lab of Florida, to Bill Sansbury, FCWC, re: summary of results of bioassay testing for the Barefoot Bay Wastewater Treatment Plant required by NPDES permit 07/09/92
103	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for March 1993 for Barefoot Bay Wastewater Treatment Plant 04/26/93
104	Letter from Johnnie M. Overton, FCWC, to James Scarborough, EPA Region IV, re: enclosing monthly Discharge Monitoring Report for June 1993 for Barefoot Bay Wastewater Treatment Plant 07/27/93
105	Memorandum from William Sansbury, FCWC, to Johnnie Overton and Larry Good re: summary of meeting on 40 acre spray irrigation site operation procedure (attached memo from William Sansbury to Barefoot Bay Operators and field crew, re: spray site irrigation practice procedures) 01/05/93
106	Test results, parameters, permit limits, and explanations for testing done at Barefoot Bay, Golden Gate, Gulf Gate, Southgate, Waterway Estates for various months from 1988 to 1993 undated
107	Meeting Agenda re: company policy pertaining to compliance with environmental regulations and permits 01/13/93
108	Warning Letter from A. Alexander, FDER, to Paul Bradtmiller, FCWC, re: warning of violation of Florida Statutes at the Barefoot Bay Mobile Home Park, STP 12/18/92
109	Memorandum from William Sansbury, FCWC, to Johnnie Overton and Larry Good re: 40 acre spray irrigation flows and enclosed Flow Analysis Report 10/29/93

Exh #	Description
110	Letter from A. Alexander, FDER, to Johnnie Overton, FCWC, re: enforcement action through issuance of warning letter is rescinded 02/11/93
111	Letter from Carlos Rivero-deAguilar, FDER, to Paul Bradtmiller, FCWC, re: FDER's position on necessity of Class I reliability for public access spray irrigation of the proposed Herndon Golf Course 03/22/93
112	Memorandum from Paul Bradtmiller, FCWC, to Gerald Allen re: Historical Wastewater Flows at Barefoot Bay WWTP, attached Table 4-D, discharge of 90 degree V-notch weirs 01/09/92
113	Letter from Julie Karleskint, FCWC, to Christine Ferraro, FDEP, re: requesting a temporary increase in design capacity for the Barefoot Bay 40 Acre Spray Irrigation System Permit 11/12/93
114	Letter from Julie Karleskint, FCWC, to Yvonne Martin, EPA Region IV, re: actions taken in response to Performance Audit Inspection Report 11/15/93
115	there is no Exhibit 115
116	Memorandum from William Sansbury, FCWC, to Johnnie Overton and Larry Good re: EPA PAI response 11/01/93
117	Memorandum from William Sansbury, FCWC, to Julie Karleskint re: attached calculations for BOD effluent 12/15/93
118	Fax from Paul Bradtmiller to Larry Good and William Sansbury re: chart of Barefoot Bay Wastewater Treatment and Disposal Options, 10/21/93 11/18/93
119	Memorandum from Julie Karleskint, FCWC, to Gerald Allen re: Reuse of Reclaimed Water on Citrus Groves, attached Recommended Limits for Constituents in Reclaimed Water for Irrigation 01/07/94
120	FCWC Wastewater Treatment Plant Upsets/Sewage Spills, overflow from excessive rainfall at BFB 06/20/94
121	Notice of Deposition Upon Oral Examination: Glen Siler 09/30/94
122	FCWC Barefoot Bay Wastewater Treatment Plant, Plant Flow Diagram, Existing Treatment Units, with markings by deponent undated

Exh #	Description
123	FCWC Barefoot Bay Wastewater Treatment Plant, Plant Flow Diagram, Existing Treatment Units, with markings by deponent undated
124	Barefoot Bay Wastewater Treatment Plant diagram of digestors and aerations, capacities undated
125	FCWC Wastewater Plant Barefoot Bay, Observation of Process Problems (handwritten) 03/12/92
126	Handwritten notes by Glen Siler re: reasons for sampling and suggestions undated
127	FCWC Barefoot Bay Wastewater Plant Flow Meter Readings, MLSS readings, CL2 SO2 Weights and Feed, Equipment Hour Meter Readings and Run Hours, Lab Bench Sheet Raw South Aerator Pre SO2, DO readings, and Maintenance Check List February 1994
128	FCWC Wastewater Plant Flow, CL2, and PH Readings, Canal Discharge and Irrigation, MLSS readings, Lab Bench Sheet Raw South Aerator Pre SO2, Plant Flow, Equipment Hour Meter Readings and Run Hours, DO readings, CL2 SO2 Weights and Feed, Maintenance Check List June 1994
129	FCWC Wastewater Plant Flow, CL2, and PH Readings, Canal Discharge and Irrigation, MLSS readings, Lab Bench Sheet Raw South Aerator Pre SO2, Plant Flow, Equipment Hour Meter Readings and Run Hours, DO readings, CL2 SO2 Weights and Feed, Maintenance Check List July 1994
130	Memorandum from William Sansbury, FCWC, to Glen Siler re: items discussed during meeting concerning the plant operations at Barefoot Bay WWTP 04/01/93
131	Handwritten memorandum from Glen Siler to Bill Sansbury re: wind socks, supply and cost undated
132	Handwritten memorandum from Glen Siler to Bill Sansbury re: cost figures for CL2 titrator undated
133	Handwritten memorandum from Glen Siler to Bill Sansbury re: June activities report 06/30/93
134	Handwritten memorandum from Glen Siler to Bill Sansbury re: April activities report 05/03/93
135	Memorandum from William Sansbury, FCWC, to Johnnie Overton and Julie Karleskint re: attached memorandum from Glen Siler about DO's and potential violation of permits 03/09/93

Exh #	Description
136	Handwritten memorandum from Glen Siler to Bill Sansbury re: irrigation field, 12-month rolling average 10/28/93
137	Notice of Deposition Upon Oral Examination: Johnnie Overton 11/01/94
138	FCWC Sarasota Division EAP - Key Personnel Chart 03/04/91
139	EPA Region IV Authorization to Discharge Under NPDES, permit granted to Barefoot Bay WWTP 09/16/91
140	EPA Region IV Authorization to Discharge Under NPDES, modification to permit granted to Barefoot Bay WWTP 03/28/94
141	Letter from Antonio Quinones, EPA Region IV, to Johnnie Overton, FCWC, re: enclosed Performance Audit Inspection report conducted at Barefoot Bay Wastewater Treatment Plant on June 10 1993
142	Discharge Monitoring Reports for Barefoot Bay WWTP for September-October 1992
143	Discharge Monitoring Reports for Barefoot Bay WWTP for October 1992

326	Letter from Jack Tompkins, FCWC, to John Marlar, EPA Region IV, re: progress report for work at Waterway Estates Advanced Wastewater Treatment Facility 02/21/91
327	Letter from Jack Tompkins, FCWC, to Donald Mullaney, Cardinal Contractors, Inc., re: summary of meeting to discuss schedule for completion of items related to compliance with Final Effluent Limitations at Waterway Estates WWTP 02/26/91
328	Letter from Jack Tompkins, FCWC, to Donald Mullaney, Cardinal Contractors, Inc., re: summary of meeting to discuss schedule for completion of items related to compliance with Final Effluent Limitations at Waterway Estates WWTP, with note to Gary "See me ASAP" and attached progress schedule and budget report 02/26/91
329	Letter from Jack Tompkins, FCWC, to Donald Mullaney, Cardinal Contractors, Inc., re: summary of meeting to discuss schedule for completion of items related to compliance with Final Effluent Limitations at Waterway Estates WWTP, with note to Bob "See me ASAP" 02/26/91
330	Letter from Donald Mullaney, Cardinal Contractors, Inc., to Jack Tompkins, FCWC, re: revised schedule for chemical feed activities at the Waterway Estates WWTP 03/01/91
331	Letter from Jack Tompkins, FCWC, to Kenneth Kwan, EPA Region IV, re: enclosed detailed chronology of the Waterway Estates Advanced WWTP Project 03/01/91
332	Letter from Paul Bradtmiller, FCWC, to Peter McGarry, EPA Region IV, re: corrective actions taken in response to EPA's notice of violation 03/14/91
333	Letter from Jack Tompkins, FCWC, to Donald Mullaney, Cardinal Contractors, Inc., re: summarize meeting to discuss schedule for projects prepared by Cardinal Contractors 04/01/91
334	Memorandum from Jack Tompkins to file re: meeting with EPA to discuss Waterway Estates Advanced WWT Facility construction project and permitting requirements as modified by Administrative Order 04/08/91
335	Memorandum from J. Tompkins, FCWC, to P. Bradtmiller re: Waterway Estates WWTP Outfall line is near completion, installation of sulfunator, price proposal, draft letter to DER 05/17/91

Exh #	Description
336	Memorandum from Jack Tompkins, FCWC, to Paul Bradtmiller re: comments to draft letter to DER concerning construction at Waterway Estates WWTP 05/31/91
337	Memorandum from Jack Tompkins to Paul Bradtmiller re: responding to Section 308 Information Request for Waterway Estates WWTP 05/29/91
338	Sequence of Events for the Waterway Estates WWTP Expansion 06/03/91
339	Letter from James Elder, FCWC, to Don Mullaney, Cardinal Contractors, Inc., re: comments to items discussed at meeting concerning Waterway Estates WWTP expansion 06/10/91
340	Memorandum from Jack Tompkins to Paul Bradtmiller re: meeting the nutrient removal requirements under the NPDES permit at Waterway Estates WWTP 06/28/91
341	Letter from Jack Tompkins, FCWC, to Dan Broome, Dyer, Riddle, Mills and Precourt, Inc., re: enclosed information to assist in completion of Waterway Estates WWTP expansion 07/29/91
342	Letter from Paul Bradtmiller, FCWC, to Kenneth Kwan, EPA Region IV, re; enclosing documents concerning costs and completion schedule for Waterway Estates WWTP upgrade project 08/26/91
343	Discharge Monitoring Report for Barefoot Bay WWTP for October 1990
344	Discharge Monitoring Report for Barefoot Bay WWTP for November 1990
345	Discharge Monitoring Report for Barefoot Bay WWTP for January 1991
346	Discharge Monitoring Report for Barefoot Bay WWTP for February 1991
347	Memorandum from Gerald Allen, Avatar Utilities, to file re: summary of FCWC/FDER meeting to discuss alternatives to deep well injection of wastewater effluent at Barefoot Bay 09/07/89
348	Facsimile from James Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jack Tompkins, FCWC, re: attached schedule and cost estimates for alternative pumping to a restricted access spray irrigation site 09/22/89

Exh #	Description
349	Letter from Francis Cheung, Ardaman & Associates, Inc., to Jack Tompkins, FCWC, re: preliminary findings for proposed spray irrigation site for reclaimed water in Brevard County 09/22/89
350	Fax copy of letter from Francis Cheung, Ardaman & Associates, Inc., to Jack Tompkins, FCWC, re: preliminary findings for proposed spray irrigation site for reclaimed water in Brevard County, unsigned 09/22/89
351	Letter from James Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jack Tompkins, FCWC, re: findings and recommendations for required modifications to Barefoot Bay WWTP in order to provide treated effluent for restricted public access spray irrigation 09/25/89
352	there is no Exhibit 352
353	Memorandum from Jack Tompkins, FCWC, to G. Allen re: alternatives for reuse of Barefoot Bay WWTP effluent, cost estimates 09/25/89
354	Letter from Jack Tompkins, FCWC, to John Burnett, Brevard Groves, Inc., re: flow and volume requirements to provide freeze protection for crops 10/11/89
355	Memorandum from Jack Tompkins, FCWC, to file re: proposed reuse options presented to Brevard Groves 11/08/89
356	Memorandum from Jack Tompkins, FCWC, to Gerald Allen and A.A. Reeves re: Barefoot Bay spray irrigation status and other project concerns 10/12/89
357	Letter from James Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jack Tompkins, FCWC, re: information about proposed irrigation sites for the Barefoot Bay effluent disposal system 11/03/89
358	Memorandum from Jack Tompkins, FCWC, to A.A. Reeves and G. Allen re: cost estimates for transportation of wastewater from the Hearndon Tract to Barefoot Bay WWTP and back, upgrades for public access disposal, restricted access disposal, and deep well injection 11/08/89
359	Memorandum from Jack Tompkins, FCWC, to A.A. Reeves and G. Allen re: summary of meeting with St. John's River Water Management District to discuss various options for effluent disposal of wastewater 11/14/89

Exh #	Description
360	Letter from James Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jack Tompkins, FCWC, re: water balance analyses performed for various alternatives for the Barefoot Bay effluent disposal system expansion 11/30/89
361	Letter from Jack Tompkins, FCWC, to Richard Levin, St. John's River Water Management District, re: request for extension of time to complete technical and economic analysis on use of reclaimed water at Barefoot Bay facilities 12/04/89
362	Letter from A.A. Reeves, III, FCWC, to A. Alexander, FDER, re: events which have caused problems for FCWC in acquiring the 300-acre tract of property in Brevard County 02/27/90
363	Memorandum from Steve Rosenbaum, FCWC, to Jack Tompkins re: flow cycles in the Barefoot Bay water and wastewater systems 12/10/90
364	Facsimile of memorandum from J. Tompkins, FCWC, to G. Allen re: draft response to the Administrative Order for the Barefoot Bay WWT Facility 10/09/90
365	Facsimile of memorandum from J. Tompkins, FCWC, to D. Getman and G. Allen re: revised draft response to Administrative Order for the Barefoot Bay WWT Facility 10/15/90
366	Letter from Jack Tompkins, FCWC, to James Christopher, Hartman and Associates, re: enclosed analysis of water and wastewater flows at Barefoot Bay from 1/86 to 11/90 12/19/90
367	Letter from Roger Pfaff, EPA Region IV, to Jack Tompkins, re: Notice to Show Cause for violations at the Barefoot Bay WWTP 07/16/91
368	Facsimile from Bridget Crawford, EPA Region IV, to Jack Tompkins re: enclosed letter from Joseph Carroll, Fish and Wildlife Service (DOI), to Roosevelt Childress, EPA Region IV, re: comments to proposed permit for the Barefoot Bay WWTP 07/31/91
369	Memorandum from Dennis Getman, Avatar, to Gerald Allen, A.A. Reeves, III, Jack Tompkins, and Jay Landers re: meeting at EPA to discuss the Carrollwood WWTP and pending construction 08/01/90

Exh #	Description
370	Memorandum from Jack Tompkins, FCWC, to A. Reeves, R. French, G. Allen, D. Getman, and J. Landers re: enforcement action by FDER for the Carrollwood facilities, draft Consent Order Agreement 09/14/90
371	Memorandum from Jack Tompkins, FCWC, to G. Allen, A. Reeves, R. French, J. Landers, and D. Getman re: discussion with EPA about draft permit and enforcement action for the Carrollwood facilities 10/10/90
372	Letter from G.J. Thabaraj, FDER, to Jack Tompkins, FCWC, re: requested extension of the construction permit for the Carrollwood WWTP will not be processed while a Consent Order for negotiated settlement of violations are in progress 10/22/90
373	Memorandum from J. Tompkins to G. Allen, J. Landers, D. Getman, A. Reeves, and R. French re: discussion with EPA about Carrollwood NPDES Permit Application and need to modify the permit 11/05/90
374	Letter from Jack Tompkins, FCWC, to Michael McWeeny, Hillsborough County Public Utilities Department, re: proposed fees for connection of Carrollwood Wastewater System to Hillsborough County's system 12/26/90
375	Letter from Jack Tompkins, FCWC, to John Marlar, EPA Region IV, re: progress report on the Carrollwood Advanced WWT Project 12/27/90
376	Letter from Jack Tompkins, FCWC, to Leslie Schaugaard, Hillsborough County Environmental Protection Commission, re: proposed Consent Order and possibility of connecting the Carrollwood Wastewater System to Hillsborough County's system 01/24/91
377	Letter from Jack Tompkins, FCWC, to Leslie Schaugaard, Hillsborough County Environmental Protection Commission, re: signed Consent Agreement and continuing negotiations to connect the Carrollwood Wastewater System to Hillsborough County's system 01/30/91
378	Amended Notice of Deposition Upon Oral Examination: James Elder 02/23/95
379	Notice from James Elder, declining to answer and invoke 5th Amendment rights upon advice of counsel 03/06/95
380	Affirmation of James A. Elder re: discussions with DOJ about this case 07/14/94

Exh #	Description
381	Letter from O.H. Moss, Moss-Kelley, Inc., to James A. Elder, FCWC, re: review and comments to the denitrification filter for Waterway Estates WWTP 02/20/90
382	Letter from James A. Elder, FCWC, to Philip Edwards, FDER, re: attached prints showing changes made to drawing by Source, Inc. for the Waterway Estates WWTP 03/29/90
383	Letter from Keith A. Pickle, Cardinal Contractors, Inc., to Jim Elder, FCWC, re: bid clarification for the Waterway Estates WWTP expansion project 04/17/90
384	Letter from Philip Edwards, FDER, to James Elder, FCWC, re: response to proposed changes to original design prints for construction permit for expansion of Waterway Estates WWTP 04/17/90
385	Letter from Philip Edwards, FDER, to James Elder, FCWC, re: response to request for modification of Consent Order and permits for the Waterway Estates WWTP 05/21/90
386	Letter from James Elder, FCWC, to James Elliot, Source Inc., re: concerns with attached letter from Source Inc. to FDER and the status of the project at Waterway Estates WWTP 05/22/90
387	Memorandum from Robert French, FCWC, to Waterway Estates WWTP file re: summary of June 1st meeting with FDER to discuss potential compliance action by FDER to the consent order for the Waterway Estates WWTP 06/06/90
388	Handwritten notes from telephone conference with Jim Elder re: schedule and status of projects 06/25/90
389	Letter from James Elder, FCWC, to Kenneth Kwan, EPA Region IV, re: reasons for not meeting the construction start date and requesting a new construction start date for the Waterway Estates WWTP modifications 07/03/90
390	Letter from James Elder, FCWC, to R.G. James, Stone & Webster Environmental Services, re: setting a construction cost negotiating meeting and intent to retain the firm for engineering services at the Waterway Estates WWTP facility 07/12/90

Exh #	Description
391	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Jim Elder, FCWC, re: portions of the Waterway Estates WWTP project will be in operation by projected dates 08/06/90
392	Letter from Don Haumann, Stone & Webster Environmental Services, to FCWC, re: schedule for completion of design review for Waterway Estates WWTP 08/15/90
393	Letter from James Elder, FCWC, to Bill McDevitt, Cardinal Contractors, Inc., re: official notice to proceed on Waterway Estates WWTP expansion 08/24/90
394	Letter from William J. McDevitt, Cardinal Contractors, Inc., re: attached executed contracts and Payment Bond for the Waterway Estates WWTP expansion and modifications 08/24/90
395	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: bond must be posted and the Notice of Commencement issued before Notice to Proceed is accepted; attached Lee County Commercial Plans Review Packet 08/28/90
396	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: FCWC must fill out and return the attached concurrency application to obtain the Building Permit from Lee County for the Waterway Estates WWTP project 09/05/90
397	Draft letter from James Elder to Don Haumann, Stone & Webster Engineering Corp., re: requesting Stone & Webster to send a response letter to Cardinal Contractors based on certain facts concerning the Waterway Estates WWTP project 09/10/90
398	Letter from Keith A. Pickle, Cardinal Contractors, Inc., to James Elder, FCWC, re: FCWC's need to file a Notice of Commencement for the Waterway Estates WWTP expansion 09/13/90
399	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: events which transpired in pursuing the building permit for the Waterway Estates WWTP expansion 09/14/90
400	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: requesting investigation of status of concurrency approval and the Notice of Commencement for the Waterway Estates WWTP expansion 09/20/90

Exh #	Description
401	Letter from James Elder, FCWC, to Keith Pickle, Cardinal Contractors, Inc., re: not recommending the proposed request for an extension of the contract start date for the Waterway Estates WWTP modifications 09/20/90
402	Letter from Keith Pickle, Cardinal Contractors, Inc., to James Elder, FCWC, re: disagreeing with FCWC on validity of time extension claims concerning the Notice of Commencement for the Waterway Estates WWTP expansion project 09/24/90
403	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: status of the review by Lee County Concurrency Management Division for the Waterway Estates WWTP expansion project 09/25/90
404	Letter from James Elder, FCWC, to Don Haumann, Stone & Webster Engineering, Inc., re: requesting advise concerning disagreement with Cardinal Contractors on validity of time extension claim on the Waterway Estates WWTP project 09/26/90
405	Letter from James Elder, FCWC, to Pat McAlister, Department of Concurrency Management, re: attached South Florida Water Management District permit exemption for the Waterway Estates WWTP project and concurrency review application 09/26/90
406	Letter from James Elder, FCWC, to Mike Carrol, Department of Concurrency Management, re: confirming that FCWC has the available capacity to supply wastewater and water service to the Waterway Estates WWTP 10/08/90
407	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: receipt of Lee County Concurrency Department's approval letter and plan to proceed with the building permit application process for the Waterway Estates WWTP 10/10/90
408	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: disagreeing with Stone & Webster's determination that any claim is unfounded concerning the Notice of Commencement for the Waterway Estates WWTP project 10/10/90

Exh #	Description
409	Letter from Michael Carroll, Lee County Board of Commissioners, to A.A. Reeves, FCWC, re: operating permit for the Waterway Estates WWTP is about to expire 10/10/90
410	Letter from James Elder, FCWC, to Don Haumann, Stone & Webster Engineering Corp., re: requesting advise concerning points of disagreement between FCWC and Cardinal Contractors on the Notice to Proceed date and request for time extension 10/11/90
411	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: confirming position on certain issues concerning permits for the Waterway Estates WWTP project 10/11/90
412	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: requesting FCWC address the items listed in attached letter from Lee County Code Enforcement and furnish sets of drawings in order to resubmit for the building permit for the Waterway Estates WWTP 10/29/90
413	Letter from Don Haumann, Stone & Webster Environmental Services, to James Elder, FCWC, and Don T. Mullaney, Cardinal Contractors, Inc., re: reasons for determination that Cardinal Contractors' request for time extension is not valid 10/29/90
414	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to Don Haumann, Stone & Webster Engineering, re: items pending review and request for additional information on other items concerning the Waterway Estates WWTP 10/29/90
415	Letter from Keith A. Pickle, Cardinal Contractors, Inc., to FCWC, re: status of delay in starting the Waterway Estates WWTP project and plans to proceed 11/02/90
416	Handwritten memo from James Elder to file re: phone conversation with Keith Pickle of Cardinal Contractors requesting meeting to discuss the contract date and price for the Waterway Estates WWTP project 11/07/90
417	Letter from Keith A. Pickle, Cardinal Contractors, Inc. to Tony Reeves, FCWC, re: review of issues and major problems discussed at Nov. 12th meeting concerning the Waterway Estates WWTP expansion project 11/14/90

Exh #	Description
418	Cardinal Contractor, Inc. Meeting Minutes, recapping discussion of Waterway Estates WWTP expansion 11/19/90
419	Letter from James Elder, FCWC, to James P. Elliot, Source Inc., re: attached signed copies of proposal for services at the Waterway Estates WWTP 11/20/90
420	Letter from Keith A. Pickle, Cardinal Contractors, Inc., to Tony Reeves, FCWC, re: claim for extended overhead costs for the Waterway Estates WWTP project 11/28/90
421	Letter from Joseph H. Burgess, Anchor Engineering, to James Elder, FCWC, re: electrical questions to the information received concerning the Waterway Estates WWTP 11/30/90
422	Letter from Joseph H. Burgess, Anchor Engineering, to James Elder, FCWC, re: proposal for professional engineering services and scope of project for electrical designs for revisions to the Waterway Estates WWTP (signed and accepted by James Elder on 12/04/90) 11/30/90
423	Memorandum from Jim Elder to file re: synopsis of meeting with Lee County Building and Codes concerning the Waterway Estates WWTP 12/06/90
424	Change Order Request, extending overhead and additional time for obtaining building permit for the Waterway Estates WWTP 12/20/90
425	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: concern over slowness in review of shop drawings 02/06/91
426	Letter from Don Haumann, Stone & Webster Environmental Services, to James Elder, FCWC, re: recommending approval of the enclosed shop drawing package for ultraviolet disinfection systems 03/16/91
427	Billing invoice from Stone & Webster Engineering Corp. to James Elder, FCWC, re: construction engineering services for Waterway Estates WWTP upgrade 05/24/91
428	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: discrepancies in contract drawings from those approved by Lee County, plans to be conformed 04/12/91

Exh #	Description
429	Letter from Geoffrey K. Hart, Stone & Webster Environmental Services, to James Elder, FCWC, re: Kelly Brother, Inc.'s request for additional compensation is not allowed under the contract 04/12/91
430	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: cost quotations for Waterway Estates WWTP project 04/19/91
431	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: requesting status reports for unreturned submittals 04/22/91
432	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: delay in completing work due to no response from FCWC concerning change orders 04/22/91
433	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: requesting immediate return of shop drawings for the Waterway Estates WWTP 05/06/91
434	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: review of items discussed at meeting concerning submittals for the Waterway Estates WWTP 05/07/91
435	Letter from James Elder, FCWC, to Don Mullaney, Cardinal Contractors, Inc., re: comments in response to recent phone conversation and letters concerning modifications at the Waterway Estates WWTP 05/21/91
436	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: delays and recover time for the Waterway Estates WWTP project, requesting information 07/22/91
437	Letter from Thomas Hempstead, Stone & Webster Engineering Corp., to James Elder, FCWC, re: additional questions for FCWC on the Waterway Estates WWTP expansion project 07/22/91
438	Letter from Donald T. Mullaney, Cardinal Contractors, Inc., to James Elder, FCWC, re: requesting status of certain submittals 10/10/91
439	Facsimile from Jim Elder, FCWC, to Mark Kaiser, Limno-Tech, re: attached FDER memorandum concerning recommendations about the AWT effluent discharge at Carrollwood WWTP 11/17/89

Exh #	Description
440	Letter from James Elder, FCWC, to Ed Snipes, FDER, re: awaiting an answer to FCWC's request for a wasteload allocation for discharge into Sweetwater Creek at Carrollwood WWTP 11/15/89
441	Letter from James Elder, FCWC, to J. Thabaraj, FDER, re: submitting construction permit application and fee for upgrade project at Carrollwood WWTP 11/15/89
442	Letter from Michael S. Hickey, FDER, to Robert H. French, FCWC, re: determination that reasonable assurances have not been provided as to minimum negative impact from discharges at Carrollwood WWTP 11/20/89
443	Memorandum from Jim Elder, FCWC, to file re: review of meeting to discuss Minimal Negative Impact Study by Limno-Tech for discharges into Sweetwater Creek 11/20/89
444	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jim Elder, FCWC, re: requesting sampling on wastewater to obtain values for design purposes for project at Carrollwood WWTP 12/18/89
445	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to Jim Elder, FCWC, re: invitation to contractor bidders for upgrade project at Carrollwood WWTP 07/26/90
446	Letter from Daniel L. Allen, Dyer, Riddle, Mills & Precourt, Inc., to Bob French, FCWC, re: construction plans and specifications for the Carrollwood Advanced WWTP 09/10/90
447	Letter from James Elder, FCWC, to John T. Marlar, EPA Region IV, re: submitting discharge monitoring report and progress report on bids for the project at Carrollwood 11/20/90
448	Conward project proposal (# 1058), approved for construction of modifications at Carrollwood WWTP 12/11/90
449	Facsimile from Jim Elder, FCWC, to Gerald Allen re: attached cost estimate for connection to Hillsborough County 12/13/90
450	Letter from Randy Mears, Hillsborough County Environmental Protection Commission, to James Elder re: site plans submitted for Carrollwood WWTP upgrade disapproved 12/26/90

Exh #	Description
451	Letter from James Elder, FCWC, to Chuck Hammett, Dyer, Riddle, Mills & Precourt, re: attached check and signed EPC Wetland Delineation Application form 01/04/91
452	Letter from James Elder, FCWC, to Roger P. Stewart, Hillsborough County Environmental Protection Commission, re: delay in start of construction date at the Carrollwood WWTP due to wetlands on the site, which are required to be field delineated 01/07/91
453	Letter from Charles E. Hammett, Jr., Dyer, Riddle, Mills & Precourt, to Patricia Frantz, Environmental Protection Commission, re: transmitting items requested concerning upgrade project and wetlands delineation at Carrollwood WWTP 01/07/91
454	Facsimile from Jim Broome, Dyer, Riddle, Mills & Precourt, Inc., to Jim Elder re: wetlands proposal and EPC site development review for Carrollwood WWTP, fire department project review 01/14/91
455	Letter from James N. Broome, Dyer, Riddle, Mills & Precourt, Inc., to James Elder, FCWC, re: revised Change Order #1 with modifications from Wharton-Smith, Inc. for the AWT upgrade at Carrollwood WWTP 01/21/91
456	Letter from James Elder, FCWC, to John T. Marlar, EPA Region IV, re: interim progress report, options considered 02/19/91
457	Facsimile from Jim Broome, Dyer, Riddle, Mills & Precourt, Inc., to Jim Elder re: enclosed bid proposals for the Carrollwood WWTP AWT upgrade 02/22/91
458	Memorandum from Durwood (Horak), FCWC, to file re: review of meeting with Hillsborough County Utility to discuss time frame for a hook-up 02/22/91
459	Memorandum from Jim Elder, FCWC, to A.A. Reeves and P. Bradtmiller re: review of meeting with Dyer, Riddle, Mills & Precourt concerning right-of-way construction permit for Carrollwood Wastewater Collection System connection to Hillsborough County 06/06/91
460	FDER Domestic Wastewater Collection/Transmission Systems Certification of Completion of Construction of Carrollwood wastewater booster pump station and force main approved 12/13/91

Exh #	Description
461	Letter from Travis Williams, Travis Williams Construction Company, Inc., to James Elder, FCWC, re: proposed construction and completion of wastewater 12" force main and booster pumping station at Carrollwood 09/24/91
462	Letter from James Elder, FCWC, to Michael R. Spence, Dyer, Riddle, Mills & Precourt, Inc., re: formal Notice to Proceed with the Carrollwood WWTP Abandonment Plan 11/12/91
463	Memorandum from Durwood (Horak), FCWC, to file re: postponement of start-up of repump station and interconnection 01/03/92
464	Letter from James E. Christopher, Hartman & Associates, Inc., to Jim Elder, FCWC, re: wastewater flow projections for the Barefoot Bay development based on historical wastewater flow data and historical active residential customer data 01/02/91
465	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to J. Elder, D. Getman, R. Gordon, and A. Reeves, re: permit application for wastewater effluent disposal at Barefoot Bay and analysis of alternatives 02/19/91
466	Memorandum from Jim Elder, FCWC, to Gerald Allen re: decision to submit a five-year construction permit for the land application system and storage ponds for Barefoot Bay effluent disposal 02/26/91
467	Letter from James E. Christopher, Hartman & Associates, Inc., to Jim Elder, FCWC, re: enclosed summary of bids received for the Barefoot Bay Spray Irrigation System project 07/08/91
468	Amended Notice of Deposition Upon Oral Examination: Lawrence Wilkov 02/23/95
469	Avatar Utilities Inc., Written Consent of Sole Shareholder, electing Lawrence Wilkov as director company 09/13/84
470	Written Consent in Lieu of Meeting of the Sole Stockholder of Avatar Utilities Inc., removing Lawrence Wilkov as director of company 02/02/94
471	Stockholder's Consent to Corporate Action without a Meeting, electing Lawrence Wilkov as director of FCWC and other corporations 09/13/84

Exh #	Description

473	Avatar Holdings Inc. SEC Quarterly Report Form 10-Q for period ending June 30, 1994
474	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to John Sladkus re: disposal of effluent leaching from the percolation ponds at the Barefoot Bay WWTP 06/22/84
475	Memorandum from Granville R. Ramsey, Avatar, to Larry Wilkov re: offer to sell bulk land adjacent to Barefoot Bay 06/13/85
476	Memorandum from John Sladkus to Larry Wilkov re: meeting to review qualifications of companies to perform engineering services at the Hearndon property 07/27/89
477	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to Peter Sharp and Larry Wilkov re: updates of several Avatar projects, including the Barefoot Bay deep well injection process 08/16/89
478	Memorandum from Gerald S. Allen, Avatar Utilities Inc. to file re: review of meeting with FDER staff to discuss alternatives to deep well injection of wastewater effluent at Barefoot Bay 09/07/89
479	Letter from Dennis J. Getman, Avatar Properties Inc., to Pan American Bank, re: interest in making offer to acquire property in Brevard County covered by the Trustee, attached Purchase and Sale Agreement 01/02/90
480	Letter from Dennis J. Getman, Avatar, to Jeff Barrow, Ben Hill Griffin Inc., re: purchase offer for Micco Grove property in Brevard County 04/02/90
481	Memorandum from Auldith Jordan, Avatar, to Lawrence Wilkov re: wastewater disposal alternatives to deep well injection at Barefoot Bay, cost analyses 05/15/90
482	Memorandum from Auldith Jordan, Avatar, to Lawrence Wilkov re: wastewater disposal alternatives to deep well injection at Barefoot Bay, cost analyses 05/15/90

Exh #	Description
483	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to R. French, D. Getman, R. Gordon, A.A. Reeves, III, P. Sharp, J. Sladkus, and L. Wilkov, re: summary of meeting with FDER to discuss wastewater disposal alternatives to deep well injection at Barefoot Bay 07/06/90
484	Review of Telephonic Board of Directors Meeting of FCWC re: deep injection and land application options 09/24/90
485	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Larry Wilkov re: review of options for wastewater treatment and disposal for the Hearndon PUD 11/20/92
486	Memorandum from Barefoot Bay Development Corporation to Larry Wilkov re: attached report from Brevard County Board of County Commissioners on effluent disposal study 01/18/93
487	Memorandum from Gerald Allen, Avatar Utilities Inc., to Larry Wilkov and Georgia Metcalf re: proposal to FDER for construction of a part of the Hearndon Wastewater Plant was unacceptable, preliminary cost estimates 02/08/93
488	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Ed Jacobson and Larry Wilkov re: present value analysis of options for wastewater treatment at Barefoot Bay 10/22/93
489	Memorandum from Robert Gordon, Avatar Utilities Inc., to John Sladkus re: EPA's denial of FCWC's application for an extension of Temporary Operating Permit for the Carrollwood WWTP 08/06/84
490	Conward project proposal (# 995-4-096), approved for Waterway Estates WTP expansion and improvements, add raw water main 05/20/84
491	Conward project proposal (# 995-5-067), approved for Waterway Estates WTP Filter Backwash Piping Modification 06/85
492	Conward project proposal (# 995-4-071), approved for WWTP Percolation Ponds at Barefoot Bay 06/18/85
493	Conward project proposal (# 046), approved for WWTP Rapid Infiltration Basins Load Test at Barefoot Bay 04/28/86
494	Conward project proposal (# 190), approved for Waterway Estates WWTP engineering study 02/27/87

Exh #	Description
495	Conward project proposal (# 193), approved for Hearndon Site Golf Course Effluent Irrigation Study 03/02/87
496	Conward project proposal (# 347), approved for Renovation of Wastewater Pumping Station Nos. S-27, S-31, and N-2 12/22/87
497	Conward project proposal (# 351), approved for 0.5 MG Ground Storage Reservoir and Booster Pumping Station at Barefoot Bay 12/29/87
498	Conward project proposal (# 363), approved for South Gate/Gulf Gate AWTs Dechlorination System 01/27/88
499	Conward project proposal (# 366), approved for Waterway Estates WWTP Expansion 01/27/88
500	Conward project proposal (# 373), approved for Moody Road Waterline Extension - NFM 02/11/88
501	Conward project proposal (# 393), approved for Well Nos. 7 and 8 Raw Water Main at Barefoot Bay 04/14/88
502	Conward project proposal (# 425), approved for Cypress Lake Drive Water and Wastewater Main Relocations 05/23/88
503	Conward project proposal (# 387), approved for Fort Myers Beach 16" Water Main Extension Phase I 03/29/88
504	Conward project proposal (# 388), approved for Fort Myers Beach Water Main Replacements - Phase VI 03/29/88
505	Conward project proposal (# 415), approved for Water Main Extensions in Iona Area - South Fort Myers 04/03/88
506	Conward project proposal (# 441), approved for South Estero Blvd. 16" Waterline Extension Phase II - South Fort Myers 06/14/88
507	Conward project proposal (# 470), approved for 16" Water Main Extension on S. Estero Blvd. 08/11/88
508	Conward project proposal (# 540), approved for Engineering Service for Gulf Gate Drive Force Main and Five Lift Stations 12/07/88
509	Conward project proposal (# 534), approved for Installation Pump, Motor, and Raw Water at Green Meadows Well Nos. 8 and 8A 12/05/88

Exh #	Description
510	Conward project proposal (# 542), approved for College Parkway Utility Relocations U.S. 41 to South Point Boulevard 12/13/88
511	Conward project proposal (# 567), approved for Gulf Gate/South Gate AWT Plants Emergency Generators 01/24/89
512	Conward project proposal (# 584), approved for College Parkway Force Main Relocation 02/10/89
513	Conward project proposal (# 589), approved for College Parkway Water Main and Force Main Relocation 02/10/89
514	Conward project proposal (# 616), approved for Fort Myers Beach Water Main Replacements - Phase VII 03/08/89
515	Conward project proposal (# 630), unsigned, for Replacement of Lighting Mixer In Flow Equalization Tank at Sarasota 03/29/89
516	Conward project proposal (# 636), approved for engineering and hydrogeologic services at Proposed Landfill Site H in Lee County 04/11/89
517	Conward project proposal (# 647), approved for Fort Myers Beach Water Main Replacements - Phase VI 04/25/89
518	Conward project proposal (# 645), approved for Renovate Wastewater Pumping Station No. 1190 (Bispham) 04/24/89
519	Conward project proposal (# 708), approved for Replacement of Grit Removal Equipment at Gulf Gate and South Gate AWT plants 08/07/89
520	Conward project proposal (# 709), approved for Emergency Power Generators for Gulf Gate and South Gate AWT plants 08/07/89
521	Conward project proposal (# 720), approved for Construction of Fort Myers Beach Water Main Replacements - Phase VII 08/17/89
522	Conward project proposal (# 728), approved for Waterway Estates WTP Upgrade and Expansion - Engineering Services 09/20/89
523	Conward project proposal (# 729), approved for Renovation of Wastewater Pumping Station Nos. 3690 (Zayre) & 3640 (Riviera) 09/08/89

Exh #	Description
524	Conward project proposal (# 730), approved for Construction of South US 41 Gravity Sewer System and Pumping Station 09/07/89
525	Conward project proposal (# 802), approved for Gulf Gate Drive Force Main Replacement, budget reports 01/10/90
526	Conward project proposal (# 831), approved for Barefoot Bay Effluent Disposal System Expansion, budget report 02/01/90
527	Conward project proposal (# 875), approved for Renovation of Wastewater Pumping Stations Nos. N-21, S-40, and S-48, budget report 03/12/90
528	Conward project proposal (# 966), unsigned, for engineering services at Waterway Estates Wastewater Treatment Facility, budget report 07/23/90
529	Conward project proposal (# 995), unsigned, for boundary survey at Barefoot Bay WWTP 09/05/90
530	Conward project proposal (# 1020), approved for Water Treatment Plant Improvements at Barefoot Bay 10/23/90
531	Conward project proposal (# 1031), approved for Toxicity Reduction Evaluation at South Gate and Gulf Gate AWT Plants, budget report 11/07/90
532	Conward project proposal (# 1220), unsigned, for Effluent Disposal System Expansion at Barefoot Bay; Conward project proposal (# 1205), approved for Effluent Disposal System Expansion at Barefoot Bay, budget report 10/21/91
533	Conward project proposal (# 1111), approved for Gulf Gate and South Gate AWT Plants Toxicity Reduction Evaluation Phase I, budget report 08/22/91
534	Conward project proposal (# 1343), approved for North Fort Myers Force Main Improvements 08/18/92
535	Conward project proposal (# 1379), approved for BTU #2 Diffuser Drop Pipe Modification at Waterway Estates WWTP 10/21/92
536	Conward project proposal (# 1385), approved for Lime Slurry System for Sludge Stabilization at Gulf Gate and South Gate AWT Plants, budget report 10/30/92

Exh #	Description
537	Conward project proposal (# 1400), unsigned, for additional engineering and construction services for the Waterway Estates WWTP Expansion 11/30/92
538	Conward project proposal (# 1607), unsigned, for Waterway Estates WTP Backwash Storage and Recovery Tank construction 11/19/92
539	Notice from Lawrence Wilkov, declining to answer and invoke 5th Amendment rights upon advice of counsel 03/06/95
540	Notice of Deposition Upon Oral Examination: Gerald S. Allen 03/13/95
541	Letter from Leslie B. Shannon, CH2M Hill, to Robert C. French, FCWC, re: additional services provided for the Barefoot Bay Reuse Plan 06/29/89
542	Facsimile from Robert French, FCWC, to Gerald Allen, re: enclosed notes on proposed modifications at Barefoot Bay WWTP 06/08/89
543	Memorandum from Gerald S. Allen to John Sladkus re: summary of CH2M Hill presentation on the deep well injection system at Barefoot Bay 06/09/89
543-A	Facsimile from Gerald Allen, Avatar Utilities Inc., to Tony Reeves re: enclosed draft Deep Well Injection Alternatives 09/05/89
544	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to A.A. Reeves, III re: summary of overall plan for developing an alternative wastewater effluent disposal proposal to FDER 09/07/89
544-A	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to A.A. Reeves re: concerns about wastewater land application proposal for Barefoot Bay 10/26/89
545	Wastewater Disposal Alternatives to Deep Well Injection, Barefoot Bay; prepared by Gerald S. Allen 11/22/89
546	Facsimile from Jim Elder, FCWC, to Gerald Allen, re: cost breakdown for the Barefoot Bay effluent disposal system expansion engineering increase 09/10/91
547	Memorandum from Robert French, FCWC, to Gerald Allen, re: proposed schedules for alternatives suggested for disposal of Barefoot Bay WWTP effluent 09/04/90

Exh #	Description
548	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Bob French, re: revisions to schedule for the Barefoot Bay Land Application Project 10/04/90
548-A	Memorandum from Gerald S. Allen to J. Elder, D. Getman, R. Gordon, and A. Reeves re: permit application for wastewater effluent disposal at Barefoot Bay and analysis of alternatives 02/19/91
549	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis J. Getman re: proposed acquisition of easements from Brevard Groves for the Barefoot Bay Land Application System 07/29/91
550	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: Expert Testimony, HSWMR, Barefoot Bay Permit Hearing Proceedings 09/24/91
551	Letter from Gerald S. Allen, Avatar Utilities Inc., to Kathleen Blizzard, Hopping, Boyd, Green & Sams, re: newspaper article - Barefoot Effluent Disposal proposal 10/01/91
552	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to A.A. Reeves re: historical wastewater flows at Barefoot Bay WWTP and the malfunctioning totalizer on the Stevens Float Recorder 10/03/91
553	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to A.A. Reeves re: water quality monitoring procedures 10/03/91
554	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: comments to the draft action plan for meter calibration 10/07/91
555	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis J. Getman re: completion of the Sanitary Sewer Service Capacity Reservation Certificate for the Hearndon PUD 10/24/91
556	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: effort to locate the phosphorus analysis records for the Sarasota Division and keeping them on file as required by EPA 11/21/91
557	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to H. Bennetts, P. Bradtmiller, L. Bultman, J. Harrison, L. Hensley re: evaluation of regulatory impact on capital and operating expenditures 11/22/91

Exh #	Description
558	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: returning Conward proposal for resubmittal for miscellaneous painting and repair at Gulf Gate WWTP 12/09/91
559	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Jim Elder re: protection of electronic equipment enclosures at the Waterway Estates WWTP 12/09/91
560	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: proceed with the redrafted amendment - FDER/Hillsborough County Consent Order No. 6571 12/13/91
561	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller and Kathleen Blizzard re: Eminent Domain Petition refiling schedule, Barefoot Bay 08/19/92
562	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: current status of engineering contract with Hartman & Associates for the Barefoot Bay WWTP Effluent Disposal System 09/29/92
563	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: comments to draft scopes of work for master plans for capital improvements 09/30/92
564	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Doug Young re: cost options for the development plans for the Hearndon PUD permitting wastewater treatment at Barefoot Bay WWTP 11/09/92
565	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis J. Getman re: comments on the draft reclaimed water use contract for Barefoot Bay 09/01/93
566	Fax memorandum from Gerald S. Allen, Avatar Utilities Inc., to Julie Karleskint re: draft inserts to contract form for reuse of reclaimed water on citrus groves 01/06/94
567	Conward project proposal (# 629), approved for engineering services to design Carrollwood Advanced WWTP, cost proposal summary 03/31/89
567-A	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to John Eckart and Tony Reeves re: enclosed Summary of Rate Case Activity 11/03/89

Exh #	Description
568	Conward project proposal (# 915), approved for providing additional stream modeling and information to FDER to demonstrate "Minimal Negative Impact" for the Carrollwood AWTP discharge into Sweetwater Creek, budget report 05/03/90
569	Letter from A.A. Reeves, III, FCWC, to Leanne Moore, EPA Region IV, re: offering information on the Carrollwood WWT Facility as requested at the 07/31/90 meeting 08/24/90
570	Letter from Jack W. Tompkins, FCWC, to Martha Hunter, EPA Region IV, re: comments on the proposed permit for the Carrollwood WWTP 10/08/90
571	Memorandum from Julie Karleskint, Avatar Utilities Inc., to Gerald Allen re: summary of visit to Carrollwood WWTP and responses to recommendations 12/26/90
571-A	Memorandum from Julie Karleskint, Avatar Utilities Inc., to Gerald Allen re: summary of follow-up visit to Carrollwood WWTP and progress 12/28/90
572	Memorandum from Paul H. Bradtmiller, FCWC, to A.A. Reeves, III re: available options to construction of force main at Carrollwood AWT plant 03/26/91
572-A	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to file re: summary of meeting with Hillsborough County officials to discuss proposed agreement for the treatment and disposal of wastewater effluent from the Carrollwood Wastewater System 03/28/91
573	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: unacceptable points and options for the Carrollwood Settlement Proposal 07/07/92
574	Memorandum from Gerald Allen, Avatar Utilities Inc., to Robert B. Gordon re: comments to the proposed Consent Order for the Waterway Estates WWTP 05/16/88
575	Memorandum from Peter Sharp to John Sladkus re: concerns about costs for upgrades and expansion of the Waterway Estates WWTP; attached memorandum from Gerald S. Allen, Avatar Utilities Inc., to John Sladkus, dated 10/06/89, re: improvements to the Waterway Estates water system 10/02/89
576	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to John Sladkus re: comments on Conward proposal #940 for improvements at Waterway Estates WWTP 06/05/90

Exh #	Description
577	Memorandum from Robert French, FCWC, to Gerald Allen re: Special Reporting Requirements for filing of Waterway Estates WWTP monthly reports with FDER and EPA 06/07/90
578	Memorandum from Alan DeBoy, Avatar Utilities Inc., to Gerald Allen and Julie Karleskint re: EPA regulations published in the Federal Register 07/10/90
579	Letter from Larry E. Griggs, FCWC, to John T. Marlar, EPA Region IV, re: progress report for construction done by Cardinal Construction Company at Waterway Estates WWTP, Notice of Permit 01/22/91
580	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis J. Getman re: enclosed Information Request letter from EPA and show cause hearing 05/20/91
581	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to files re: summary of FCWC/EPA Show Cause Hearing on Waterway Estates WWTP NPDES permit violations 06/19/91
582	Memorandum from Gerald Allen, Avatar Utilities Inc., to Peter Sharp re: status report on rebuilding the Waterway Estates WWTP and the Show Cause Hearing with EPA 07/02/91
583	Letter from Paul Bradtmiller, FCWC, to Peter T. McGarry, EPA Region IV, re: authorization from FDER to place the new outfall into service at Waterway Estates WWTP 07/17/91
584	Supplemental Direct Testimony of Gerald S. Allen, Exhibit GSA-1, Milestone Dates Relative to Upgrading Waterway Estates WWTP undated
585	Supplemental Direct Testimony of Gerald S. Allen, Exhibit GSA-2, Excerpts from ESE's Preliminary Engineering Report, Waterway Estates WWTP August 1987
586	Letter from Cindy L. Bartin, Landers & Parsons, to Gerald Allen, Avatar Utilities, re: enclosed copy of the Clean Water Act Penalty Policy for Civil Settlement Negotiations 05/07/92
587	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis J. Getman re: material submitted to EPA by Alston and Bird on the plant reconstruction project at the Waterway Estates WWTP 05/27/92

Exh #	Description
588	Letter from Roger B. Ytterberg, FCWC, to Tony Pellicer, Lee County Division of Water Resources, re: revised draft permits for wastewater effluent discharge permit for Waterway Estates AWTP 07/22/92
589	Memorandum from Gerald S. Allen to Paul Bradtmiller re: review of preliminary engineering design reports for Waterway Estates and Golden Gate WWTPs 07/23/92
590	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Paul Bradtmiller re: further analysis to be completed on claim for additional services by Stone and Webster Engineering Corporation 08/19/92
591	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Robert B. Gordon re: compliance with EPA regulations governing the discharge of treatment wastewater effluent to streams requiring chronic toxicity evaluations 09/28/92
592	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to files re: summary of issues discussed at meeting with EPA and DOJ officials concerning violations and penalties at the Waterway Estates WWTP 12/22/92
593	Facsimile from Don G. Scroggin, Jenner & Block, to Gerald S. Allen, Avatar Holdings, re: attached memorandum regarding suggested conference call to discuss the status of Waterway Estates EPA matter and evidence undermining EPA's denial of the permit renewal 08/09/93
594	Notice from Gerald Allen, declining to answer and invoke 5th Amendment rights upon advice of counsel undated
595	Subpoena and Notice of Deposition Upon Oral Examination: Anthony Reeves 03/13/95
596	Conward project proposal (# 995-3-108), unsigned, for investigation and design of land application effluent disposal systems for Golden Gate and Barefoot Bay WWTPs, cost estimate 09/01/83
597	Memorandum from A.A. Reeves III, Avatar Utilities Inc. of Florida, to R.B. Gordon re: investigation of alternatives for disposal of effluent for the Barefoot Bay WWTP, cost estimates 06/18/84
598	Conward project proposal (unnumbered), unsigned, for investigation of soil and hydrogeologic conditions on the Barefoot Bay Percolation Ponds 08/13/84

Exh #	Description
599	Memorandum from P.J. Lehman, Avatar Utilities Inc. of Florida, to R.B. Gordon re: summary of effluent disposal alternatives at Barefoot Bay WWTP and construction cost estimates 03/04/85
600	Letter from Patrick J. Lehman, Avatar Utilities Inc. of Florida, to W.M. Bostwick, Jr., St. John's River District Department of Environmental Regulation, re: investigation of alternative effluent disposal methods at the Barefoot Bay WWTP, cost summary 04/19/85
601	Letter from Gerald C. Hartman, Dyer, Riddle, Mills & Precourt, Inc., to A.A. Reeves, III, Avatar Utilities of Florida, Inc., re: project milestone dates for use in land closing activities at Barefoot Bay 07/09/85
602	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to A.A. Reeves, III, Avatar Utilities of Florida, Inc., re: enclosed preliminary engineering design for Barefoot Bay WWTP, scope of services 08/05/85
603	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to A.A. Reeves, III, Avatar Utilities, Inc. of Florida, re: status of construction permit application for the Barefoot Bay WWTP expansion submitted to FDER 09/19/85
604	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to A.A. Reeves, III, Avatar Utilities Inc. of Florida, re: status report of Barefoot Bay WWTP expansion project 01/13/86
605	Letter from A. Alexander, FDER, to A.A. Reeves, Avatar Utilities, Inc. of Florida, re: Warning Notice for presently operating in violation at Barefoot Bay 01/29/86
606	Letter from James E. Christopher, Dyer, Riddle, Mills & Precourt, Inc., to A.A. Reeves, III, Poinciana Utilities Inc., re: bi-weekly project status report for Barefoot Bay WWTP 03/03/86 attached weekly project update letter from 02/04/86
607	Consent Order entered between FDER and FCWC for payment of penalties for violations at the Barefoot Bay sewage treatment plant 10/18/88
608	Letter from Kathryn G.W. Cowdery, Gatlin, Woods, Carlson & Cowdery, to Pat Lehman, FCWC, re: comments regarding FCWC's potential liability and EPA action as a result of Show Cause Meeting 06/22/88

Exh #	Description
609	Memorandum from Robert French, FCWC, to Robert Gordon re: enclosed projected schedule dates for Carrollwood AWT discharge into Sweetwater Creek and the Barefoot Bay deep well injection system 11/23/88
610	Conward project proposal (unnumbered), unsigned, for removal of existing trees, brush, weeds, and sludge from percolation ponds at Barefoot Bay 10/25/89
611	Letter from Patrick J. Lehman, FCWC, to Alex Alexander, FDER, re: engineering report for construction of deep injection well at Barefoot Bay WWTP 02/15/89
612	Memorandum from Robert H. French, FCWC, to file re: follow-up analysis to the bioassay prepared by FDER on the Barefoot Bay WWTP effluent sample 04/26/89
613	Facsimile from Leslie B. Shannon, CH2M Hill, to A.A. Reeves, III, FCWC, re: enclosed letter concerning cost estimate for irrigating the golf course with reclaimed water from the Barefoot Bay WWTP 06/06/89
614	Letter from Leslie B. Shannon, CH2M Hill, to A.A. Reeves, III, FCWC, re: status of Barefoot Bay water reuse and conservation plan, work outside of scope 06/08/89
615	Memorandum from Paul Cadieu, FCWC, to A.A. Reeves, III re: summary of meeting with manager of Cavalier Groves to discuss reuse water from wastewater plant for their orange groves 06/14/89
616	Letter from A.A. Reeves, III, FCWC, to D.E. "Bleu" Wallace, Hillsborough County Public Utilities Department, re: response to customer inquiry about rate increase 07/26/89
617	Letter from Robert H. French, FCWC, to George Gionis, FDER, re: notice of delay in schedule of construction of the injection well system at Barefoot Bay, target completion dates 08/01/89
618	Letter from Leslie B. Shannon, CH2M Hill, to John Armstrong, FDER, re: responses to request for additional information on items concerning the test injection well at Barefoot Bay WWTP 09/12/89
619	Letter from A.A. Reeves, III, FCWC, to Carlos Rivero De Aguilar, FDER, re: proposal for effluent disposal at the Barefoot Bay wastewater facilities 09/25/89

Exh #	Description
620	Memorandum from Jack W. Tompkins, FCWC, to file re: proposed reuse options presented to Brevard Groves 11/08/89
621	Letter from A.A. Reeves, III, FCWC, to Carlos Rivero De Aguilar, FDER, re: proposed modified schedule for the Barefoot Bay land application system 11/02/89
622	Memorandum from Jack Tompkins, FCWC, to A.A. Reeves and G. Allen re: cost estimates for transportation of wastewater from the Hearndon Tract to Barefoot Bay WWTP and back, upgrades for public access disposal, restricted access disposal, and deep well injection 11/08/89
623	Letter from A. Alexander, FDER, to A.A. Reeves, FCWC, re: notice to re-establish compliance with the Consent Order by explaining progress made toward deep well injection implementation at Barefoot Bay 03/19/90
624	Letter from A.A. Reeves, III, FCWC, to A. Alexander, FDER, re: pursuit of land acquisition for reuse of reclaimed water and continuing efforts on the deep well injection project at the Barefoot Bay WWTP 03/29/90
625	Letter from Dannise T. Kemp, St. John's River Water Management District, to A.A. Reeves, III, FCWC, re: notice of intent to recommend denial of permit application for Barefoot Bay WWTP 06/04/90
626	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to R. French, D. Getman, R. Gordon, A.A. Reeves, III, P. Sharp, J. Sladkus, and L. Wilkov, re: summary of meeting with FDER to discuss wastewater disposal alternatives to deep well injection at Barefoot Bay 07/06/90
627	Letter from A.A. Reeves, III, FCWC, to A. Alexander, FDER, re: activities undertaken to assure continued compliance with the Consent Order regarding the deep injection well permit and land application alternative 07/26/90
628	Letter from Kathleen Blizzard, Hopping, Boyd, Green & Sams, to Richard Levin, St. Johns River Water Management District, re: request to amend the technical staff report for the water conservation and reuse permit application 09/07/90

Exh #	Description
629	Letter from John T. Marlar, EPA Region IV, to A.A. Reeves, III, FCWC, re: notice of violation and Administrative Order Pursuant to Section 309 of the Clean Water Act for Barefoot Bay Mobile Home Park 09/26/90
630	Memorandum from Julie Karleskint, Avatar Utilities Inc., to Gerald Allen re: review of visit to Barefoot Bay WWTP to evaluate compliance with the FDER consent order and the EPA Administrative Order 02/06/91
631	Letter from James E. Christopher, Hartman & Associates, Inc., to Christianne Ferraro, FDER, re: submitting the permitting package for proposed expansion of the Barefoot Bay WWTP effluent disposal system 03/18/91
632	Letter from Pamela J. Fetterman, Sarasota County Government, to A.A. Reeves, III, FCWC, re: notice of violation at the sludge land application site 07/08/91
633	Handwritten notes of telephone conference with Tony Reeves re: status of bypass of percolator ponds at Barefoot Bay 06/21/91 attached handwritten notes of telephone conference with Tony Reeves re: discharges into the canal at Barefoot Bay 07/02/91
634	Memorandum from W.G. Lee, FCWC, to file re: Carrollwood WWTP Treatment Requirements as a result of not being able to connect to the Hillsborough County Northwest Regional STP 07/12/79
635	Letter from C.A. Osborne, FCWC, to E.G. Snipes, FDER, re: application to renew the Temporary Operating Permit for the Carrollwood Sewage Treatment Plant 03/06/80
636	Memorandum from A.A. Reeves, III, FCWC, to file re: response to FDER's modifying conditions to the Carrollwood WWTP Temporary Operating Permit 08/23/83
637	Letter from Kathryn G.W. Cowdery, Madigan, Parker, Gatlin, Swedmark & Skelding, to Charles Gary Stevens, FDER, re: proposed modifications to conditions of permit for the Carrollwood plant 02/22/84
638	Letter from Robert F. McGhee, EPA Region IV, to A.A. Reeves, III, FCWC, re: tentatively concluding that the application for an NPDES permit should be denied, Statement of Basis for this decision, and proposal of an Administrative Order 07/30/84

Exh #	Description
639	Letter from Paul J. Traina, EPA Region IV, to A.A. Reeves, III, FCWC, re: notification of denial of the NPDES permit application 09/27/84
640	Draft letter from Kathryn G.W. Cowdery to Michael McWeeny, Utilities Department, re: negotiations for a connection agreement with Hillsborough County for the Carrollwood facility 04/24/86
641	Letter from Michael W. McWeeny, County of Hillsborough, to A.A. Reeves, III, FCWC, re: review of application for wastewater service for the Carrollwood facility, conditions for approval 06/03/86
642	Letter from Michael W. McWeeny, County of Hillsborough, to A.A. Reeves, III, FCWC, re: review of application for wastewater service for the Carrollwood facility, conditions for approval; Attachment "Y" 06/03/86
643	Memorandum from Dennis J. Getman, Avatar, to Robert Gordon re: comments to the proposed "Amended Franchise Ordinance" 10/05/87
644	Letter from B. Kenneth Gatlin, Gatlin, Woods, Carlson & Cowdery, to A.A. Reeves, III, FCWC, re: review of meeting with Hillsborough County staff to discuss proposed revision of the County water and sewer regulatory ordinance 02/16/88
645	Letter from B. Kenneth Gatlin, Gatlin, Woods, Carlson & Cowdery, to A.A. Reeves, III, FCWC, re: adopted water and sewer utilities Ordinance by the Board of Commissioners of Hillsborough County 08/19/88
646	Letter from Patrick J. Lehman, FCWC, to Dr. Richard D. Garrity, FDER, re: initiating minimal impact studies on Sweetwater Creek in order to obtain a surface water discharge permit for the Carrollwood WWTP 11/01/88
647	Memorandum from Robert French, FCWC, to Robert Gordon re: enclosed projected schedule dates for Carrollwood AWT discharge into Sweetwater Creek and the Barefoot Bay deep well injection system 11/23/88
648	Letter from B. Kenneth Gatlin, Gatlin, Woods, Carlson & Cowdery, to D.E. Wallace, Public Utilities Department, re: comments to the proposed standard utility franchise agreement provisions 01/19/89

Exh #	Description
649	Letter from Patrick J. Lehman, FCWC, to Peter T. McGarry, EPA Region IV, re: deficiencies listed as a result of the EPA Compliance Evaluation Inspection at the Carrollwood WWTP have been remedied 02/10/89
650	Letter from Byron W. Bartlett, Hillsborough County Environmental Protection Commission, to A.A. Reeves, III, re: review of monthly operating reports reveals violations of the permit 02/22/89
651	Notices of Alleged Violation from Hillsborough County Environmental Protection Commission, sent to A.A. Reeves, III 02/22/89
652	Conward project proposal (# 156), approved for engineering design and preparation for connection of Carrollwood WWTP force main to Hillsborough County 12/16/86
653	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to John Eckart and Tony Reeves re: enclosed Summary of Rate Case Activity 11/03/89
654	Letter from Michael W. McWeeny, Hillsborough County Board of County Commissioners, to A.A. Reeves, FCWC, re: flow cannot be accepted until Florida Cities accepts the point of connection and connection costs established by the County 07/27/90
655	Letter from Susan J. Rollins, EPA Region IV, to A.A. Reeves, FCWC, re: Notice of Proposed Assessment of a Civil Penalty and Administrative Complaint for various violations 09/25/90
656	Letter from John T. Marlar, EPA Region IV, to A.A. Reeves, FCWC, re: notice of violation and Administrative Order Pursuant to Section 309 of the Clean Water Act for Carrollwood Subdivision 09/27/90
657	Memorandum from J. Tompkins to G. Allen, A. Reeves, R. French, J. Landers, and D. Getman re: response to NPDES draft permit for Carrollwood 10/10/90
658	Memorandum from A.A. Reeves, III, to Jack Tompkins and Durwood Horak re: attached EPA Diagnostic Evaluation report of Carrollwood WWTP 11/30/90
659	Hillsborough County Board of County Commissioners Agenda Item Cover Sheet from Management Team/Municipal Services to the Board of County Commissioners re: bulk wastewater services, FCWC, recommending amendment to County Ordinance 02/14/91

Exh #	Description
660	Memorandum from Durwood (Horak), FCWC, to file re: review of meeting with Hillsborough County Utility to discuss time frame for a hook-up 02/22/91
661	Fax memorandum from Paul Bradtmiller, FCWC, to Robert Gordon and Gerald Allen re: cost estimate comparison between construction of an AWT plant at Carrollwood and connecting to the Hillsborough County WWT system 03/20/91
662	Memorandum from A.A. Reeves, III, FCWC, to Gerald Allen, Durwood Horak, Joe Schifano, and Larry Dasynski re: enclosed copy of original executed agreement between Hillsborough County and FCWC for wastewater treatment services 06/17/91
663	Letter from Mohammad Nozari, Hillsborough County Environmental Protection Commission, to A.A. Reeves, III, FCWC, re: certificate of completion of construction final approval for Carrollwood Wastewater Pump Station and Forcemain 01/02/92
664	Letter from Kathryn G.W. Cowdery, Gatlin, Woods & Carlson, to Scott Stevens, Hillsborough County Department of Water and Wastewater Utilities, re: sending a copy of the application for water and/or wastewater service 03/25/86
665	Letter from A.A. Reeves, III, FCWC, to Connie A. Kagey, EPA Region IV, re: requesting extension of time to answer EPA's questions concerning necessary engineering studies for the NPDES permit for Waterway Estates 07/09/86
666	Memorandum from P.J. Lehman, FCWC, to A.A. Reeves, III re: summary of meeting with FDER to discuss EPA's denial of the NPDES permit for Waterway Estates WWTP 08/10/86
667	Letter from Bruce R. Barrett, EPA Region IV, to A.A. Reeves, III, FCWC, re: notification of denial of the NPDES permit application at the Waterway Estates WWTP 12/08/86
668	Letter from Martin S. Friedman, Myers, Kenin, Levinson & Richards, to A.A. Reeves, III, FCWC, re: outline of agreement with North Fort Myers Utility, Inc., to provide bulk sewer service to FCWC 02/02/87

Exh #	Description
669	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to A.A. Reeves and Robert French re: questions regarding items from the Waterway Estates WWTP Preliminary Engineering Report 08/31/87
670	Memorandum from Robert French, FCWC, to Tony Reeves re: review of Waterway Estates WWTP expansion Preliminary Engineering draft report 09/23/87
671	Memorandum from Robert French, FCWC, to Tony Reeves re: review of Waterway Estates WWTP expansion Preliminary Engineering draft report 09/23/87
672	Memorandum from Robert French, FCWC, to Tony Reeves re: review of Waterway Estates WWTP expansion Preliminary Engineering draft report 10/27/87
673	Memorandum from A.A. Reeves, III, FCWC, to R.B. Gordon re: review and recommendations of the various alternatives to wastewater treatment plant discharge problem at Waterway Estates WWTP 11/05/87
674	Letter from Patrick J. Lehman, FCWC, to Ron Blackburn, FDER, re: best alternative for effluent disposal at Waterway Estates WWTP is to discharge into the Caloosahatchee River 12/01/87
675	FDER Permit for operation of the Waterway Estates STP 09/23/88
676	Letter from Philip R. Edwards, FDER, to A.A. Reeves, III, FCWC, re: enclosed permit to temporarily operate the Waterway Estates sewer treatment facility 09/29/88
677	Letter from William E. Sundstrom, Rose, Sundstrom & Bentley, to Tony Reeves, FCWC, re: construction of the advance wastewater treatment unit at the Waterway Estates plant and cost concerns 11/17/88
678	Letter from William D. Harrop, Jr., Source, Inc., to Anthony A. Reeves, III, FCWC, re: need for a change order to the engineering services contract for the expansion of the wastewater treatment and disposal facilities at Waterway Estates 11/22/88
679	Letter from James P. Elliott, Source, Inc., to A.A. Reeves, III, re: update on design status of Waterway Estates WWTP project 02/15/89
680	Letter from Robert H. French, FCWC, to James P. Elliott, Source, Inc., re: review of analysis and authorization to proceed with foundation designs at Waterway Estates WWTP 03/02/89

Exh #	Description
681	Letter from William D. Harrop, Jr., Source, Inc., to Anthony A. Reeves, III, FCWC, re: items of concern with the plan review comments which need to be resolved 03/07/89
682	Letter from James P. Elliott, Source, Inc., to Robert H. French, FCWC, re: proposal of engineering services to complete construction of friction piling at Waterway Estates WWTP 03/07/89
683	Letter from Robert H. French, FCWC, to William Harrop, Jr., Source, Inc., re: information requested from Tetra Engineering Systems for completion of construction plans at Waterway Estates WWTP 03/08/89
684	Letter from Robert H. French, FCWC, to William D. Harrop, Jr., Source, Inc., re: itinerary for resolving issues after reviewing documents on the Waterway Estates WWTP 03/08/89
685	Letter from William D. Harrop, Jr., Source, Inc., to A.A. Reeves, FCWC, re: preliminary site plan for the Waterway Estates WWTP project 03/10/89
686	Letter from Robert H. French, FCWC, to William Harrop, Jr., Source, Inc., re: responding to correspondence concerning the Waterway Estates WWTP upgrade project and guidance for how to proceed 03/13/89
687	Letter (first page only) from FCWC to William Harrop, Jr., Source, Inc., re: compromise resolution to request for additional engineering services for Waterway Estates WWTP 03/14/89
688	Letter from James P. Elliott, Source, Inc., to Robert H. French, FCWC, re: additional engineering services to be provided at Waterway Estates WWTP 03/21/89
689	Letter from William D. Harrop, Jr., Source, Inc., to Robert H. French, FCWC, re: forwarding outfall sewer dredge and fill permit application package for review and signature 03/31/89
690	Letter from Bruce R. Barrett, EPA Region IV, to A.A. Reeves, III, FCWC, re: continuing non-compliance of Clean Water Act and Administrative Order at the Waterway Estates facility, request for information 03/30/89

Exh #	Description
691	Conward project proposal (unnumbered), unsigned, for engineering services for subaqueous outfall sewer easement and flow equalization at Waterway Estates WWTP 03/31/89
692	Letter from Peter T. McGarry, EPA Region IV, to A.A. Reeves, FCWC, re: notice of violation of NPDES permit at Waterway Estates WWTP 05/16/89
693	Letter from Priscilla Oliver, EPA Region IV, to A.A. Reeves, FCWC, re: deficiencies noted during EPA-State Compliance Evaluation Inspection at Waterway Estates WWTP 06/21/89
694	Letter from William D. Harrop, Jr., Source, Inc., to Philip R. Edwards, FDER, re: plans and specifications for the Waterway Estates WWTP project have been revised and will be submitted for review 08/14/89
695	Letter from William D. Harrop, Jr., Source, Inc., to Philip R. Edwards, FDER, re: submitting copies of revised plans and specifications for the Waterway Estates WWTP project for review 08/16/89
696	Letter from William D. Harrop, Jr., Source, Inc., to Robert French, FCWC, re: attached FDER permit to install the outfall sewer line into the Caloosahatchee River at the Waterway Estates WWTP 09/14/89
697	Letter from A.A. Reeves, III, FCWC, to Jack Shenkman, North Fort Myers Utilities, Inc., re: studies and analysis show that upgrades and expansion of the Waterway Estates WWTP serves the best interests of customers 10/05/89
698	FDER Permit for operation of the Waterway Estates STP 01/22/90
699	Letter from William E. Sundstrom, Rose, Sundstrom & Bentley, to A.A. Reeves, FCWC, re: summary of key issues discussed at meeting concerning the possible interconnection of Waterway Estates sewage treatment collection system and the North Fort Myers Utility treatment and disposal system 02/05/90
700	Letter from A.A. Reeves, III, FCWC, to Phillip Edwards, FDER, re: requesting extension of expiration date for construction permit for the new Advanced WWTP at Waterway Estates 10/25/90

Exh #	Description
701	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to A.A. Reeves re: requesting course of action to be taken concerning the EPA Administrative Order for the Waterway Estates WWTP 02/15/91
702	Notice from Tony Reeves, declining to answer and invoke 5th Amendment rights upon advice of counsel undated
703	Notice of Deposition Upon Oral Examination: Dennis Getman 03/01/95
703-A	Notice from Dennis Getman, declining to answer and invoke 5th Amendment rights upon advice of counsel undated
704	Handwritten notes of Utility meeting involving L. Wilkov, P. Kleinerman, B. Gordon, J. Sladkus, Rod, and D. Getman 06/13/89
705	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to Peter Sharp and Larry Wilkov, re: Avatar Utilities - General, Barefoot Bay Deep Well Injection 08/21/89
706	Memorandum from Gerald S. Allen, Avatar Utilities Inc., to Dennis Getman, Peter Kleinerman, Leon Levy, David Rosso, Peter Sharp, John Sladkus, and Larry Wilkov re: Wastewater Disposal Alternatives - Barefoot Bay 11/27/89
707	Letter from Dennis J. Getman, Avatar, to Nancy Hargadon, Sun Bank Trust Department, re: Purchase Offer - Property in Trust 02/26/90
708	Letter from Dennis J. Getman, Avatar, to Jeff Barrow, Ben Hill Griffin Inc., Purchase Offer - Micco Grove Acreage in Brevard County, Florida 05/10/90
709	Memorandum from Dennis J. Getman, Avatar, to file re: Avatar Properties Inc./Avatar Utilities Inc. - Possible Purchase of Micco Grove Acreage in Brevard County, Florida 06/14/90
710	Memorandum from Robert B. Gordon, Avatar Utilities Inc., to Dennis Getman re: Avatar Properties/Avatar Utilities Inc. - Possible Purchase of Micco Grove Acreage in Brevard County, Florida 06/15/90

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC. and FLORIDA CITIES WATER COMPANY, INC., Defendants.	)	CIVIL ACTION NO. 93-281-CIV-FTM-21

JOINT PRETRIAL STATEMENT

a. Basis of federal jurisdiction

This Court has jurisdiction over the subject matter of this action under 28 U.S.C. §§ 1331, 1345, and 1355, and section 309(b) of the Clean Water Act, 33 U.S.C. § 1319(b).

b. Nature of the case

This is a civil action brought on behalf of the Administrator of the U.S. Environmental Protection Agency ("EPA") pursuant to section 309(b) of the Clean Water Act ("the Act"), 33 U.S.C. § 1319(b), for civil penalties for violations of section 301 of the Act, 33 U.S.C. § 1311, and of the conditions and limitations of National Pollutant Discharge Elimination System ("NPDES") permits issued by EPA pursuant to section 402 of the Act, 33 U.S.C. § 1342.

Defendant Florida Cities Water Company ("Florida Cities") is currently the NPDES permit holder for a total of six wastewater treatment plants in operation in Florida. Defendant Avatar Holdings, Inc. is Florida Cities' parent company. Defendants

collect and treat wastewater from their customers and discharge the treated wastewater ("effluent") on a daily basis into the waters of the United States. The wastewater discharges contain pollutants which may not be discharged into waters of the United States unless authorized by, and under the terms and conditions of, an NPDES permit.

Three of Defendants' plants, one of which is no longer in operation, are the subject of this law suit. The violations alleged include the following: (1) discharging without an NPDES permit (Barefoot Bay, Carrollwood, and Waterway Estates); (2) violation of an EPA Administrative Order (Barefoot Bay); (3) discharging at an unpermitted location (Waterway Estates); (4) exceeding NPDES effluent limitations (all three facilities); (5) failure to monitor specified effluent parameters as required by an NPDES permit (Barefoot Bay); and (6) failure of toxicity tests required by an NPDES permit (Barefoot Bay and Waterway Estates).

The Court has granted the United States summary judgment on liability as to Defendant Florida Cities on all of the United States' claims for violations at Waterway Estates, as well as the claims for NPDES permit violations at Barefoot Bay and Carrollwood. The Court has granted Florida Cities summary judgment on the claims for unpermitted discharges at Barefoot Bay and Carrollwood and for EPA Administrative Order violations at Barefoot Bay. The Court has denied the United States summary judgment on all claims as to Defendant Avatar Holdings, and has

granted Avatar Holdings' Motion for Judgment on the Pleadings for claims (or parts of claims) for violations which took place prior to May 5, 1990.

c. Statement of each party's case

United States

As noted above, the Court has already found Florida Cities to be liable for all of the NPDES permit violations alleged at all three plants, as well as for unpermitted discharges and discharges to an unpermitted location at Waterway Estates. Avatar Holdings should be held liable for all of these violations as well as the unpermitted discharges at Barefoot Bay and Carrollwood, because, as Florida Cities' parent company, Avatar either directed or caused these violations or directly and pervasively controlled Florida Cities' environmental practices.

The penalty provisions of the Clean Water Act are set out in section 309(d) of the Act, 33 U.S.C. § 1319(d). The seminal case interpreting section 309(d) is a recent Eleventh Circuit opinion, Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128 (11th Cir. 1990). Applying the section 309(d) penalty factors as required by Tyson Foods leads to the following conclusions: the violations were serious, Avatar derived a substantial economic benefit from the violations although Florida Cities itself did not; there is a long history of such violations; there were limited good-faith efforts to comply; and each Defendant can afford to pay a substantial civil penalty.

Avatar Holdings

Avatar Holdings Inc. ("Avatar Holdings"), the indirect corporate parent of Florida Cities Water Company ("Florida Cities"), is not liable for any of the remaining violations alleged in the government's Second Amended Complaint. Avatar Holdings has not directed or caused any of the alleged violations nor has it ever exercised actual or pervasive control over the daily operations of Florida Cities. As the ultimate corporate parent, Avatar Holdings has engaged solely in the normal financial oversight of its subsidiaries, as is required of a publicly held company.

Avatar Holdings' diverse corporate picture demonstrates that it is not involved in the daily operations of its indirect utility subsidiary. Avatar Holdings is a diversified company which now has approximately 40 direct and indirect subsidiaries engaged in a variety of business operations including home construction, vacation ownership, resort operations, retail land sales, property management, commercial and industrial development as well as water and wastewater utilities operations. The principal emphasis in Avatar Holdings' business has always been the real estate industry. The utility business is only a minor part of Avatar Holdings' affairs, in which it plays a very limited role.

Moreover, there are a chain of intermediary companies between Avatar Holdings and Florida Cities. Avatar Holdings is the parent of Avatar Utilities Inc. ("Avatar Utilities") which in

turn is the parent of Consolidated Water Company ("Consolidated"). Consolidated is the parent of FCWC Holdings Inc. ("FCWC Holdings") which in turn is the parent of Florida Cities. Avatar Utilities manages the utilities operations, including the operations of Florida Cities. Avatar Utilities, Consolidated, and FCWC Holdings have not been made parties to this case.

With respect to the allegations regarding unpermitted discharges at the Barefoot Bay Wastewater Treatment Plant, in particular, Avatar Holdings will present facts that refute the government's contentions that Avatar Holdings "caused" the unpermitted discharges as part of a plot to expand homes and reap profits through its indirect subsidiary, Barefoot Bay Development Corporation. Barefoot Bay Development Corporation (which is not a party to this case) is a subsidiary of Avatar Properties Inc. (which is not a party to this case) which in turn is a subsidiary of Avatar Holdings. There is no link between the modest home sales of the Barefoot Bay Development Corporation with the alleged Clean Water Act violations.

Even if the government could prove that Avatar Holdings directed or caused the alleged violations, Avatar Holdings is still not liable for the government's allegations of unpermitted discharges at Barefoot Bay or Carrollwood. Avatar Holdings is entitled to the benefit of the prior settlements and agreements between the government and Florida Cities and would be in privity with Florida Cities for the purposes of the doctrine of res

judicata. The Court, in its Order dated November 22, 1995, found that the doctrine of res judicata barred the government's claims in Paragraphs 16-23 and 30 of the Second Amended Complaint against Florida Cities by virtue of prior governmental actions, orders, and consent agreements.

Further, even if the government could prove that Avatar Holdings is liable for the remaining allegations in the Second Amended Complaint, the government would be entitled (if at all) to a minimal penalty because there has been no economic benefit to Avatar Holdings as a result of the alleged violations nor has there been, as the government admitted, any actual environmental harm.

Florida Cities

Following the Court's November 22, 1995 Order, the only issues to be decided at trial relevant to Florida Cities are the amounts of any civil penalty which may be assessed by the Court for Florida Cities' violations of the Clean Water Act ("CWA"). Florida Cities Water Company ("Florida Cities") is prepared to go forward with the mitigation phase of this trial. Florida Cities will present evidence, pursuant to 33 U.S.C. § 1319(d), (CWA § 309(d)), which establishes that any violations of the CWA at issue were minor and any penalty assessed by the Court should be minimal.

Three categories of violations will be discussed at trial.

a) Discharge without a permit at the Waterway Estates wastewater treatment plant ("Waterway Estates");

b) Discharge into an unpermitted location at Waterway Estates from November 1, 1989 to July 14, 1991;

c) Permit exceedances at Waterway Estates, Barefoot Bay wastewater treatment plant ("Barefoot Bay") and Carrollwood wastewater treatment plant ("Carrollwood").

Section 309(d) of the CWA lists the following factors which the Court shall consider in determining the amount of a civil penalty:

a) the seriousness of the violation or violations;

b) the economic benefit (if any) resulting from the violation;

c) any history of such violations;

d) any good-faith efforts to comply with the applicable requirements;

e) the economic impact of the penalty on the violator;

f) and such other factors as justice may require.

Plaintiff has already acknowledged that it has no evidence that any of Florida Cities' actions caused environmental harm at any of the three facilities. Each of these facilities was authorized to discharge secondarily treated effluent pursuant to rigorous regulation by the state of Florida. The evidence will also establish that, as a publicly regulated utility, Florida Cities received no economic benefit from any CWA violations. The EPA's own documents demonstrate that Florida Cities cooperated in good faith in attempting to resolve any problem or dispute with the Agency. The evidence will also establish that even a modest

penalty would cause a severe economic impact upon Florida Cities.

Under the category of "such other factors as justice may require" Florida Cities will also demonstrate that this entire action is the result of the Environmental Protection Agency's failure to follow its own regulations in that EPA improperly rejected the permit renewal application for Waterways Estates. Once EPA's mistake was discovered, Plaintiff sought to include the Barefoot Bay and Carrollwood facilities, in an attempt to bolster its case, even though EPA had already either settled these prior violations or determined not to undertake any enforcement actions. In light of the total circumstances surrounding this case, Florida Cities has acted in an environmentally responsible manner and should only be assessed a minimum penalty.

d. Exhibit Lists

Due to the volume of their exhibits, the United States and Florida Cities have appended their exhibit lists hereto, and request the Court's permission to submit revised lists with notations of all objections on December 22, 1995.

United States

The United States' exhibit list was compiled largely prior to the Court's November 22, 1995 Order. The United States anticipates that, as a result of that order, it will reduce substantially the number of exhibits. Further, because Defendants declined to identify their witnesses until November 17, 1995 (when ordered to do so by the Court) the United States

has been unable to date to depose these witnesses, with the result that some additional exhibits may need to be added to the list.

Avatar Holdings

With respect to a list of deposition exhibits, Avatar Holdings incorporates the list provided by Florida Cities on December 1, 1995.

As to other exhibits, Avatar Holdings incorporates the list of exhibits provided by Florida Cities on December 4, 1995 and hereby supplements that list as follows:

Defendant Avatar Holdings Exhibit 1: 1994 Annual Report of Avatar Holdings Inc.

Defendant Avatar Holdings Exhibit 2: By-Laws of Avatar Holdings Inc. (As Amended and Restated-March 24, 1994)

Defendant Avatar Holdings Exhibit 3: Three Page Memorandum from Robert B. Gordon to Leon Levy Re: North Fort Myers Utilities Inc. dated November 27, 1991 (Bates ##LL000244-246); One Page Memorandum from Peter Sharp to Lawrence Wilkov Re: North Fort Myers Utilities dated November 20, 1991 (Bates#LL000247) Enclosing One Page Letter from Martin Baker to Peter Sharp Re: Purchase of Water Utility Lee County, Florida (Bates#LL00249).

Defendant Avatar Holdings Exhibit 4: United States' Supplemental Responses to Defendant Avatar Holdings' First Set of Interrogatories to Plaintiff United States of America dated November 17, 1995.

f. Expert Witnesses

United States

Mark Klingenstein
SAIC
255 West Spring Valley Avenue
Maywood, NJ 07607

Mr. Klingenstein is expected to testify, without limitation, regarding 1) the purpose of the National Pollutant Discharge Elimination System (NPDES); 2) the seriousness of the violations; 3) Defendants' history of non-compliance; 4) Defendants' good-faith efforts (or lack thereof) to comply with the applicable requirements, including the failure to pursue courses of action available to Defendants which would have permitted them to have complied with the applicable requirements, including alternative wastewater treatment and disposal options.

1. The substance of Mr. Klingenstein's expected testimony relating to the first category will include, without limitation, his opinion of the following:

The National Pollutant Discharge Elimination System (NPDES) was designed to restore the quality of the Nation's waterways by reducing, if not eliminating, pollution of these waters. The system requires every facility which discharges wastewater to obtain a permit that covers each discharge location. These permits include various numerical effluent limitations which limit the amounts and concentrations of pollutants that a facility may discharge to a permitted receiving water. In determining whether a permit should be issued and, if so, what limitations if should contain, the system considers the effect of the discharge of pollutants at a designated location to a given waterbody, taking into account the conditions and characteristics of the waterbody itself as well as any other discharges to it.

2. The substance of Mr. Klingenstein's expected testimony relating to the second category will include, without limitation, his opinion of the following:

> Defendants have committed serious violations of the Clean Water Act and NPDES permits issued thereunder. Defendants' wholesale failure to even apply for an NPDES permit at Barefoot Bay, and their failures to cease discharges at Carrollwood and Waterway Estates upon the revocation of their permits, particularly in view of available alternative treatment and disposal options, are particularly serious. The discharge from the Waterway Estates plant at an unpermitted location is also very serious. The other violations range from moderately serious to serious.
>
> Defendants' violations had the potential to cause environmental harm to aquatic life in the water bodies to which their plants discharged in violation of the Act and/or NPDES permits.

3. The substance of Mr. Klingenstein's expected testimony relating to the third category will include, without limitation, his opinion of the following:

> Defendants have a significant history of non-compliance both with respect to federal and state requirements. The unpermitted discharges, in particular, date back to at least the early 1980s at Barefoot Bay, 1984 at Carrollwood, and 1987 at Waterway Estates.

4. The substance of Mr. Klingenstein's expected testimony relating to the fourth category will include, without limitation, his opinion of the following:

> Options were available which would have allowed Defendants to comply with the applicable requirements at all three of the facilities. Yet, they failed to avail themselves of those options, and continued instead to operate while in violation for extended periods of time. Available options included the following:
>
> Land disposal options were available at Barefoot Bay dating back to the early 1980s when the percolation ponds began to overflow.
>
> The City of Tampa was prepared to accept the wastewater from the Carrollwood customers as early as 1984, when the permit was revoked.
>
> North Fort Myers Utilities was prepared to accept the wastewater from the Waterway Estates Plant as early as August 1989, i.e., before the period of unpermitted discharges alleged in the Second Amended Complaint.
>
> There were also extended delays in taking measures to comply with permit requirements at all three facilities. At Carrollwood, Defendants were issued a permit in 1991 with the understanding that the facility would be upgraded to an advanced wastewater treatment system. Yet, because Defendants never upgraded the plant, they were incapable of meeting the permit requirements. At Waterway Estates, Defendants delayed implementing changes in a timely manner to the plant

and discharge location which were required in order to comply with the permit.

Eileen Zimmer
U.S. Department of Justice
600 E Street, N.W.
Washington, D.C. 20530

Ms. Zimmer is expected to testify, without limitation, regarding the economic benefit resulting from the Defendants' violations and the economic impact of penalties on the violators.

The substance of Ms. Zimmer's testimony is expected to focus, without limitation on two areas: 1) the profits realized by Defendants through their operation of unpermitted facilities and/or facilities operating in violation of their permits and 2) the financial ability of each of Defendants to pay a civil penalty for the violations. The substance of Ms. Zimmer's expected testimony relating to the first category will include, without limitation, her opinion of the following:

1. The profits realized at Barefoot Bay through the sale and/or development of lots during the period when Defendants discharged from the Barefoot Bay plant without an NPDES permit (i.e., approximately November 1, 1981 to October 31, 1991) and the profits realized through the operation of the Barefoot Bay treatment plant during the same period of time;

2. The profits realized through the operation of the Carrollwood treatment plant during the period when Defendants discharged without an NPDES permit (i.e., approximately November 1, 1984 to June 30, 1991); and

3. The profits realized through the operation of the Carrollwood treatment plant during the period when Defendants discharged without an NPDES permit (i.e., approximately January 9, 1987 to October 31, 1989), discharged at an unpermitted location (i.e., approximately November 1, 1989 to July 14, 1991) and discharged in violation of its NPDES permit (July 1991 to April 1992 and June 1992);

The substance of Ms. Zimmer's expected testimony relating to the second category will include, without limitation, her opinion of the following:

> Based on her review of its financial records, Florida Cities is able to afford a penalty of $7.5 million.
>
> Based on her review of its financial records, Avatar Holdings is able to afford a penalty of $15.2 million.

The expert reports of Mr. Klingenstein and Ms. Zimmer are being filed herewith.

Avatar Holdings

Avatar Holdings will use and rely on the expert witnesses identified by Florida Cities. Avatar Holdings hereby incorporates the list of expert witnesses and summaries provided by Florida Cities.

Florida Cities

1. **James A. Miller**
   Audit Partner
   Ernst & Young LLP.
   Suite 3900
   200 S. Biscayne Blvd.
   Miami, FL 33131

Mr. Miller is expected to testify, without limitation, regarding 1) the profitability realized at Barefoot Bay Development Corporation("Barefoot Bay") through the sale and development of lots from approximately November 1, 1981 to October 31, 1991 and 2) the appropriateness of the income and expense components included in Avatar's accounting and financial measurements of Barefoot Bay's profitability.

The substance of Mr. Miller's expected testimony relating to the second category will include, without limitation, his opinion of the following:

> Based upon his review of financial records, the appropriateness of Barefoot Bay's profitability related to the sale and development of lots as presented in its financial statements for the period November 1, 1981 to October 1, 1991.
>
> The appropriateness of accounting and financial measurement procedures used by Avatar in determining the aforementioned profitability of Barefoot Bay with respect to accepted industry and accounting practices.

2. **Roger C. Hartung**
Weston & Associates
2692 Gravel Dr.
Ft. Worth, Tx. 76118-6904

Mr. Hartung's testimony will address EPA's general practices and procedures and internal Agency guidance regarding permitting and enforcement matters under the Clean Water Act. His testimony will address the relationship and interactions between environmental regulatory authorities of non-delegated states and EPA. It will also address wasteload allocation approvals, TMDL development and approvals, permitting requirements and permit writing, enforcement of administrative orders, enforcement of federal NPDES permits, and interpretations of EPA's permitting and enforcement guidance documents and memoranda.

3. **Douglas G. Smith, P.E.**
Senior Partner
Regional Environmental Manager
Black & Veatch
Suite 960
2701 North Rocky Point Drive
Tampa, Florida 33607-5924

Mr. Smith is expected to testify, without limitation, regarding 1) Historical effectiveness and compliance of the Waterway Estates Wastewater Treatment Plant; 2) Actual environmental effect of the violations involving the Waterway Estates Plant; and, 3) The timeliness of the schedule by which Defendant pursued compliance with the regulations involving the Waterway Estates Plant, including the appropriateness of the compliance alternative selected by defendant. The substance of Mr. Smith's testimony relating to the first category will include, without limitation, his opinion on his assessment of Defendant's consistency in maintaining and operating Waterway Estates in an effective and environmentally responsible manner - particularly as demonstrated by the plant's historical record regarding compliance with NPDES requirements both before and after the upgrade constructed in 1992.

The substance of Mr. Smith's testimony relating to the second category will include, without limitation, his opinion on the occurrence of environmental damage suffered by the Caloosahatchee River as a result of the alleged violations.

The substance of Mr. Smith's testimony relating to the third category will include, without limitation, his opinion of the prudence of Defendant's evaluation and selection of a compliance alternative. The assessment will consider the Defendant's multiple responsibilities as a privately owned utility. Additionally, Mr. Smith will assess the schedule by which Defendant pursued compliance with EPA regulations through

successful completion of the selected compliance alternative.

Mr. Smith is expected to testify, without limitation, regarding 1) wastewater treatment plant performance; 2) the characteristics and typical performance of secondary wastewater treatment plants; 3) the characteristics and typical performance advanced wastewater treatment (AWT) plants; and 4) the characteristics and typical performance of the Barefoot Bay wastewater treatment plant.

The substance of Mr. Smith's expected testimony relating to the first category will include, without limitation, his opinion on the following:

> Engineers can design wastewater treatment plants to provide virtually any level of treatment, and the level of treatment provided at any particular location is normally established by permit limitations.

The substance of Mr. Smith's expected testimony relating to the second category will include, without limitation, his opinion on the following:

> Secondary wastewater treatment plants are designed to remove common sewage pollutants (biochemical oxygen demand, total suspended solids, bacteria), and a number of treatment processes are available for these purposes. The typical performance results in effective and reliable removal of a high percentage of these pollutants.

The substance of Mr. Smith's expected testimony relating to the third category will include, without limitation, his opinion on the following:

> Advanced wastewater treatment (AWT) plants are designed to remove common sewage pollutants as well as nutrients (biochemical oxygen demand, total suspended solids, bacteria, nitrogen,

> phosphorous), and a number of treatment processes are commonly used for these purposes. The typical performance results in effective and reliable removal of a high percentage of these pollutants.

The substance of Mr. Smith's expected testimony relating to the fourth category will include, without limitation, his opinion on the following:

> The Barefoot Bay wastewater treatment plant was initially designed, constructed and operated as a secondary treatment plant; and its performance was consistent with its design. The holding ponds which received the plant effluent were not intended to be part of the treatment process.

Mr. Smith is expected to testify, without limitation, regarding 1) wastewater treatment plant performance; 2) the characteristics and typical performance of secondary wastewater treatment plants; 3) the characteristics and typical performance of advanced wastewater treatment (AWT) plants; and 4) the characteristics and typical performance of the Carrollwood wastewater treatment plant.

The substance of Mr. Smith's expected testimony relating to the first category will include, without limitation, his opinion on the following:

> Engineers can design wastewater treatment plants to provide virtually any level of treatment, and the level of treatment provided at any particular location is normally established by permit limitations.

The substance of Mr. Smith's expected testimony relating to the second category will include, without limitation, his opinion on the following:

> Secondary wastewater treatment plants are designed to remove common sewage pollutants (biochemical

> oxygen demand, total suspended solids, bacteria), and a number of treatment processes are available for these purposes. The typical performance results in effective and reliable removal of a high percentage of these pollutants.

The substance of Mr. Smith's expected testimony relating to the third category will include, without limitation, his opinion on the following:

> Advanced wastewater treatment (AWT) plants are designed to remove common sewage pollutants as well as nutrients (biochemical oxygen demand, total suspended solids, bacteria, nitrogen, phosphorous), and a number of treatment processes are commonly used for these purposes. The typical performance results in effective and reliable removal of a high percentage of these pollutants.

The substance of Mr. Smith's expected testimony relating to the fourth category will include, without limitation, his opinion on the following:

> The Carrollwood wastewater treatment plant was initially designed, constructed and operated as a secondary treatment plant; and its performance was consistent with its design.

Mr. Smith will also address any issues not covered by the above list of topics that Mr. Klingenstein is expected to address.

4. **Keith Cardey**
460 Oriole
Elmhurst, Illinois 60126

Mr. Cardey is expected to testify that the defendant did not profit from the delay in the construction of the Advanced Wastewater Treatment processes or from alleged noncompliance at the Waterways Estates, Carrollwood, or Barefoot Bay facilities.

The substance of the testimony is that Florida Cities Water Company is a public utility under the jurisdiction of the Florida Public Service Commission (FPSC) that exercises authority on, among other things, rates, accounting, area served, and quality of service. In setting rates, the FPSC includes as one element of cost a fair return on the investment in utility plant providing the service as shown by the following formula:

Return (operating income) = Rate Base (Investment) x Rate of Return (%)

With the delay in construction of the Advanced Wastewater Treatment facilities, there is no investment in such facilities during the delay, thus no increase in operating income. The increase in operating income only materializes once the AWT facilities are providing service and the Florida Public Service Commission authorizes the Company to increase its rates. If advanced wastewater treatment facilities had been constructed earlier, net operating income would have risen.

Mr. Cardey is also expected to address any issues not addressed by the above list of topics that Ms. Zimmer addresses.

5. **Randall L. Armstrong**
The Phoenix Environmental Group, Inc.
2916 E. Park Avenue
Tallahassee, FL 32301

Mr. Armstrong is expected to testify, without limitation, regarding 1) the historical water quality of the Caloosahatchee River and 2) the existence (or lack thereof) of water quality data indicating any impact of any discharges to surface waters from the Waterway Estates wastewater treatment plant.

With respect to the first category, Mr. Armstrong is expected to testify, without limitation, that a review of water quality data contained in the Environmental Protection Agency Storage and Retrieval System (STORET) was conducted by him. The STORET computer system, which in Florida is operated by the Florida Department of Environmental Protection (DEP), is generally recognized (and has been designated by the State Legislature) as the primary repository for all such data on water quality in Florida. A review of data contained in the STORET system for the period of record December 7, 1982 to March 14, 1994 revealed that water quality in the Caloosahatchee River in the vicinity of the Waterways Estates wastewater treatment facility for four (4) key parameters that are indicative of the overall "health" of an estuary was generally good. Furthermore, no significant trends for those key parameters were evident which would indicate that water quality was either declining or improving during that period.

Mr. Armstrong also analyzed data in intensive survey documents prepared by DEP, and will express his opinions on the significance of that data.

Mr. Armstrong's testimony with regard to the second category will include, without limitation, his opinion relating to the lack of available data concerning water quality impacts directly attributable to the Waterway Estates discharge of treated effluent. Mr. Armstrong is expected to testify that, for the data sources described above, no data were located which resulted

from sampling in or around the previous Waterway Estates discharge. Therefore, no conclusions can be reached concerning the impacts of such discharge on adjacent waters.

g. Penalty Amount sought by United States

Based on the penalty factors set out in section 309(d) of the Clean Water Act, 33 U.S.C. § 1319(d), and the guidance set forth in Tyson Foods, the United States respectfully requests that the Court impose a penalty not to exceed $25,000 per day for each violation. Under the rationale se forth in Tyson Foods, it is the defendants' duty to establish that the maximum penalty authorized by the statute is warranted through application of the Statutory factors. The United States believes that: the violations were serious, Avatar derived a substantial economic benefit from the violations (although Florida Cities itself did not); there is a long history of such violations; there were limited good-faith efforts to comply; and each defendant can afford to pay a penalty of $7,500,000.

h. Depositions to be offered in evidence at trial

United States

Avatar Holdings

Avatar Holdings incorporates the list of depositions to be offered provided by Florida Cities on December 4, 1995. Avatar Holdings supplements that list as follows:

Avatar Holdings may offer excerpts from Mr. Leon Levy's deposition testimony from August 24, 1995 if he is unavailable for trial:

Pages 26-30, 34, 38-46, 47-49, 54, 64-66, 70-73, 86-89, 98.

Avatar Holdings reserves the right to use excerpts from Mr. Leon Levy's deposition testimony from December 6, 1995 if he is unavailable for trial.

Florida Cities

Florida Cities has appended its list of deposition designations hereto. Although Florida Cities has offered deposition designations, it still reserves the right to present these witnesses in person at trial.

i. Admitted Facts

The United States and Florida Cities agree to the following:

1. As of 1983, there were approximately 2,000 units in the Barefoot Bay development, resulting in a flow of approximately 200,000 gallons of wastewater per day to the Barefoot Bay wastewater treatment plant.

Avatar Holdings does not agree to the foregoing.

j. Applicable Principles of Law on which there is agreement

The United States and Florida Cities agree to the following:

1. Under the Clean Water Act and Atlantic States Legal Foundation v. Tyson Foods, each defendant is subject to a civil penalty not to exceed $25,000 per day for each violation. Under the Clean Water Act and Atlantic States Legal Foundation v. Tyson Foods, the Court shall consider each factor listed in § 309(d) in assessing the civil penalty.

Avatar Holdings does not agree to the foregoing.

k. Issues of fact remaining to be litigated

United States

The factual issues that remain to be litigated are those relating to Avatar Holdings' liability and penalty for the violations alleged in the Second Amended Complaint (excluding those barred by the Court's November 22, 1995 Order), and those relating to Florida Cities' penalty for the violations for which the Court has found Florida Cities to be liable.

Avatar Holdings

The following facts remain to be litigated: (1) whether Avatar Holdings directed or caused the remaining alleged violations; (2) whether Avatar Holdings received an economic benefit from the alleged violations; and (3) whether Avatar Holdings has an ability to pay a substantial penalty.

Florida Cities

The only issues of fact remaining to be litigated is what mitigating factors are present and how these factors will reduce the imposition of maximum statutory penalties for these Clean Water Act violations.

l. Issues of law remaining for the Court's determination

United States

The United States urges the Court, in the context of the evidence to be introduced at trial, to reconsider the standard it has articulated for imposing liability on a parent company under the Clean Water Act. In particular, the United States respectfully submits that it is necessary and sufficient either

for the parent to have directed or caused the violations or for there to have been pervasive control by the parent company of environmental matters directly related to the violations alleged, but not that such control have been exercised on a daily basis.

Avatar Holdings

* It is Avatar Holdings' understanding that it is entitled to the benefit of the Court's order dated November 22, 1995 with respect to the holding that certain claims against Florida Cities are barred by the doctrine of res judicata. To the extent the government disagrees with this understanding, it is an issue to be determined by the Court.

* Another issue to be determined by the Court relates to the inadmissibility of testimony regarding alleged "wrongful profits" as inconsistent with an economic benefit analysis mandated by the applicable case law, the regulations, and the Clean Water Act.

Florida Cities

1. Whether the calculation of economic benefit should be limited by the allegations in the complaint and the applicable statute of limitations.
2. Whether a "wrongful profits" analysis is relevant to a civil enforcement action under the Clean Water Act.
3. Whether penalties for Clean Water violations can be imposed on the discharger's parent company instead of on the discharger itself.
4. Whether penalties for Clean Water Act violations can be imposed both on the discharger and again on the discharger's

parent company, thus producing double the statutory maximum for any such violation.

m. Disagreements as to the Federal Rules

The parties have not identified any such disagreements at this time.

n. Motions or other matters which require action by the Court

The following motions are pending at this time: Avatar Holdings' Objection to the Order of the Magistrate Judge; United States' Motion for an Order Permitting Discovery of Late-Named Witnesses.

United States

The United States identifies the following additional matters requiring action by the Court at this time.

1. In view of the Court's November 22, 1995 Order adjudicating many of the issues in this case, the United States proposes that the Court limit the trial of this action to one week by imposing the following limitations on the Plaintiff and Defendants (in the aggregate):

Opening and closing	1 hour (total)
Direct examination of witnesses:	10 hours
Cross examination of witnesses:	5 hours

2. The United States calls to the Court's attention that the Defendants are in violation of the Court's November 13, 1995 Order by 1) failing to serve full and complete answers to the United States' interrogatories; 2) failing to produce responsive documents from the Getman, Wilkov, and Jacobson files; 3) failing

to produce the documents reviewed or relied upon by its expert Douglas Smith; and 4) failing to supply an affidavit from the company which stores Mr. Levy's files.

Avatar Holdings

As of the date of the filing of this Statement, the only outstanding motion is Avatar Holdings' Objection to the Order of the Magistrate Judge filed on November 17, 1995.

Florida Cities

Florida Cities knows of one pending motions for the Court's attention at this time: Avatar Holding's Objection to the Order of the Magistrate Judge filed on November 17, 1995.

Florida Cities and Avatar Holdings responds to the two issues raised above by the United States as follows:

1. Neither defendant agrees to any of the United States' proposed restrictions given in the United States' response to paragraph 1 regarding length of trial or division of time at trial among the three parties. Plaintiff has brought an action which involves three separate wastewater treatment plants covering a combined total of over forty years of Florida Cities' history. Under CWA § 309(d) defendants have the right to offer and will offer extensive mitigation evidence which will place any violations in context. Given Plaintiff's contention that it may still litigate all issues against Avatar Holdings and given the large number of years involved, and defendants' statutory right to present a full and complete evidence of mitigation Plaintiff's proposed limitations are unreasonable.

2. Defendants have fully complied with the Court's November 13, 1995 Order and responds to the issues raised by the United States in paragraph 2 above as follows:

(1) Defendants have served extensive and complete answers to Plaintiff's interrogatories. At the November 28, 1995 Pretrial Meeting, attended by all parties, and by letter Florida Cities requested that counsel for Plaintiff identify which interrogatory responses it believed to be inadequate. Plaintiff's counsel refused to identify any allegedly inadequate responses.

(2) Mr. Wilkov and Mr. Jacobson have never been officers, directors, or employees of Florida Cites. In response to Plaintiff's previous Request for Production, Florida Cites requested that Avatar Holdings search the files of Mr. Wilkov, Mr. Jacobson, and Mr. Getman. Avatar Holdings has searched the files of these individuals. Mr. Wilkov is no longer employed by Avatar Holdings. All responsive, non-privileged documents from the available files of these individuals were produced. Although it believes that it has produced all responsive documents, Avatar Holdings has offered to search again the files of Mr. Getman and Mr. Jacobson and any files of Mr. Wilkov remaining in Avatar Holdings' possession. Avatar Holdings has not agreed to search Mr. Jacobson's files present in his Chicago offices. Mr. Jacobson testified that he does not keep Avatar Holdings files in his Chicago offices. Mr. Jacobson uses his Chicago offices in connection with his duties as CEO of three unrelated companies.

Florida Cities has no additional documents which are responsive to these requests.

(3) Douglas Smith documents - All of the documents reviewed by Florida Cities' expert witnesses in preparation of their expert reports have been provided to Plaintiff. By letter dated July 14, 1995, Florida Cities produced hundreds of pages of documents which Mr. Smith and his associates used in preparation of his report. Any other documents which Mr. Smith or his associates reviewed had previously been produced to Plaintiff.

Exhibit_____(GHB-66)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

MEMORANDUM IN OPPOSITION TO PLAINTIFF'S MOTION FOR AN ORDER PERMITTING DISCOVERY OF DEFENDANTS' LATE-NAMED WITNESSES AND FOR EXPEDITED CONSIDERATION

Plaintiff has moved to reopen discovery in this action to depose the following witnesses: Larry Griggs, Mike Acosta, Juanita Kerrigan, Georgia Metcalf, Chuck Hill, and Michael McWeeny. Florida Cities Water Company ("Florida Cities") objects to Plaintiff's motion to reopen discovery, except for Mr. McWeeny . Plaintiff either itself identified or was on notice during the discovery period that each of these individuals were knowledgeable persons. Plaintiff elected not to depose these individuals during the appropriate time period. Given the length of time that Plaintiff has known of these individuals and the impending trial date, Plaintiff should not be allowed to profit from its own delay and have additional discovery less than one month before trial.[1]

[1] As the Court is aware, this is Plaintiff's second attempt to reopen deposition discovery. At the November 3, 1995 motion hearing, the Court granted Plaintiff the right to depose Florida Cities' expert witness Roger Hartung on or before November 27, 1995. In compliance with the Court's order Florida Cities delivered a copy of Mr. Hartung's report to Plaintiff's counsel on November 10, 1995 and made Mr. Hartung available for deposition.

In its "Answers to Defendant's Interrogatories", dated April 28, 1995, Plaintiff identified three of these witnesses (Griggs, Acosta, and Kerrigan) as "persons who have knowledge of facts which support any allegation of the Complaint . . . ." Mr. Griggs is a former employee of Florida Cities. During the summer Plaintiff's counsel discussed deposing Mr. Griggs but never made any further attempt to notice his deposition.[2]

Mr. Acosta is employed by Florida Cities as Manager, Engineering and Construction. During the discovery period Plaintiff noticed the deposition of Mike Acosta. Subsequently Plaintiff withdrew voluntarily Mr. Acosta's deposition notice. Plaintiff should not now be allowed to claim surprise or allege that Mr. Acosta was a "late named" witness.

On October 5, 1995 -- 30 days before the end of discovery -- Florida Cities supplemented its "Disclosure of Core Information" listing Chuck Hill as a knowledgeable person. Despite this notice, Plaintiff has made no effort to depose Mr. Hill until this current motion. Plaintiff had full opportunity to depose Mr. Hill, but without explanation failed to do so during the appropriate period.

Florida Cities also objects to reopen discovery to depose Ms. Kerrigan (an employee of Avatar Holdings Inc.) and Ms. Metcalf (an employee of Barefoot Bay Development

---

Plaintiff scheduled a tentative deposition date of November 27, 1995, but Plaintiff failed to actually go forward with the deposition.

[2] Between May 3, 1995 and October 3, 1995 Plaintiff conducted only two days of affirmative deposition discovery. On June 26, 1995 Plaintiff deposed Edwin Jacobson, Chief Executive Officer of Avatar Holdings Inc.. On August 24, 1995 Plaintiff deposed Leon Levy, Chairman of the Board of Avatar Holdings Inc. and Leonard Sladkus. Plaintiff made no serious effort to take other depositions until October 2, 1995, thirty-four days before the cut-off for deposition discovery. Given its failure to and delay in conducting deposition discovery during the period covered by Judge Nimmons' scheduling order, Plaintiff should not now be given the opportunity for additional discovery that it should have conducted at the proper time.

Corporation) and joins in the arguments raised by Avatar Holdings in its responsive brief. In addition, Florida Cities notes that Plaintiff's April 28, 1995 Interrogatory Responses listed Ms. Kerrigan as a "person with knowledge", indicating that Ms. Kerrigan is by no means a surprise witness. Ms. Metcalf executed an affidavit which was served upon Plaintiff on September 9, 1995, giving Plaintiff ample notice if it wished to depose Ms Metcalf during the discovery period.

Finally, Florida Cities has no objection to going forward with the depositions of Mr. McWeeny, provided that the depositions are scheduled at a time and place convenient to the witnesses and to all counsel.

CONCLUSION

Florida Cities respectfully requests that this Court enter an order allowing Plaintiff motion to depose Mr. McWeeny but denying Plaintiff's motion to depose any additional witnesses. Plaintiff was on sufficient notice as to the remaining witnesses that it should have undertaken discovery as to these witnesses during the discovery period. Plaintiff should not now be allowed to profit from its delay more than one month after discovery has closed and less than one month before trial.

Respectfully submitted,

Defendants.
_____/

O R D E R

This Cause is before the Court on the United States' Motion for an Order Permitting Discovery of Defendants' Late-Named Witnesses and for Expedited Consideration (Doc. 213). The Court has carefully reviewed the motion and the responses thereto. The Government is requesting that this Court re-open discovery so that the Government may take the deposition of certain late-named witnesses, namely Mike Acosta, Michael McWeeny, Chuck Hill, Juanita Kerrigan, and Georgia Metcalf. According to the defendants' responses, all of these witnesses with the exception of Michael McWeeny were known to the Government well before the discovery cut-off.

Therefore, it is hereby ORDERED:

That the Motion for an Order Permitting Discovery of Defendants' Late-Named Witnesses (Doc. 213) is hereby GRANTED to the extent that the Government may take the deposition of Michael McWeeny at a time and place that is convenient to the

deponent and opposing counsel but no later than December 31, 1995. In all other respects, the motion is DENIED.

That the Motion for Expedited Consideration (Doc. 213) is moot.

DONE and ORDERED in Chambers, Port Myers, Florida, this 8th day of December, 1995.

ORDER

This Cause is before the Court on the United States' Motion for an Order Permitting Discovery of Defendants' Late-Named Witnesses and for Expedited Consideration (Doc. 213). The Court has carefully reviewed the motion and the responses thereto. The Government is requesting that this Court re-open discovery so that the Government may take the deposition of certain late-named witnesses, namely Mike Acosta, Michael McWeeny, Chuck Hill, Juanita Kerrigan, and Georgia Metcalf. According to the defendants' responses, all of these witnesses with the exception of Michael McWeeny were known to the Government well before the discovery cut-off.

Therefore, it is hereby ORDERED:

That the Motion for an Order Permitting Discovery of Defendants' Late-Named Witnesses (Doc. 213) is hereby GRANTED to the extent that the Government may take the deposition of Michael McWeeny at a time and place that is convenient to the

deponent and opposing counsel but no later than December 31, 1995. In all other respects, the motion is DENIED.

That the Motion for Expedited Consideration (Doc. 213) is moot.

DONE and ORDERED in Chambers, Fort Myers, Florida, this 8th day of December, 1995.

GEORGE T. SWARTZ
UNITED STATES MAGISTRATE JUDGE

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' MOTION FOR EXPEDITED RECONSIDERATION OF THE COURT'S RULING ON RES JUDICATA AND IN REPLY TO AVATAR HOLDINGS' MOTION FOR CLARIFICATION OF THE COURT'S ORDER

Plaintiff, the United States of America, pursuant to Rule 60(b)(6) of the Federal Rules of Civil Procedure, respectfully moves this Court for expedited reconsideration of its November 22, 1995 Order. As grounds for this Motion, the United States respectfully refers the Court to the Memorandum in Support of the United States' Motion for Expedited Reconsideration of the Court's Ruling on Res Judicata and in Reply to Avatar Holdings' Motion for Clarification of the Court's Order, which is filed herewith.

UNITED STATES' MEMORANDUM IN SUPPORT OF ITS MOTION FOR EXPEDITED RECONSIDERATION OF THE COURT'S RULING ON RES JUDICATA AND IN REPLY TO AVATAR HOLDINGS' MOTION FOR CLARIFICATION OF THE COURT'S ORDER

INTRODUCTION

In its November 22, 1995 Order, the Court held that the United States' claims against Florida Cities for unpermitted discharges from the Barefoot Bay and Carrollwood wastewater treatment plants, as well as the Administrative Order violations at Barefoot Bay, are barred by the doctrine of res judicata. The United States moves for reconsideration of that holding, while Avatar Holdings moves for clarification of the order. Both parties also move for expedited consideration.

The United States contends that the claims in question are not barred by res judicata and that it is entitled to summary judgment on those claims as against Florida Cities. If the Court agrees, there is no need to reach Avatar's motion.

DISCUSSION

I. Res Judicata

The question of whether res judicata applies to bar the claims in question is a complicated question of law which

requires close examination.[1] While the United States does not take issue with the general principles the Court articulates in its November 22, 1995 Order, under applicable case law, those general principles must be limited in their specific application to the facts of this case. In the final analysis, that application should result in a finding that the claims are not precluded.

In order for the doctrine of res judicata to apply to preclude a future claim, all of the following four elements must be satisfied: (1) a final judgment on the merits was rendered in the previous suit; (2) the judgment was rendered by a court of competent jurisdiction; (3) the parties, or those in privity with them, are identical in both cases; and (4) the same cause of action is involved in both cases. Migra v. Warren City School District Board of Education, 465 U.S. 75, 77 n. 1 (1984). (Citations omitted). Thomas v. Evans, 880 F.2d 1235, 1240 (11th Cir. 1989). See also Lowe v. Telesat Cablevision Inc., 825 F. Supp. 1000, 1002 (M.D. Fla. 1993). The party asserting res judicata bears the burden of establishing that it applies. American Federation of Gov't Employees v. Federal Labor Relations Authority, 835 F.2d 1458, 1463 (D.C. Cir. 1987).

First, res judicata does not apply in this case because there was no final judgment on the merits by a court of competent

---

[1] Because Florida Cities failed to raise res judicata in its summary judgment brief, and raised it only in cursory terms in a subsequent "Notice of Dispositive Authority," the Court received limited briefing on this complex issue.

jurisdiction. While an administrative order, under some circumstances, can be the basis for future claim preclusion, those circumstances are not present in the instant case. As the Eleventh Circuit noted in Texas Employers' Insurance Association v. Jackson, 862 F.2d 491, 501 (11th Cir. 1988) quoting at length with approval the Restatement (Second) Judgments § 26(1)(c), a distinction must be made between proceedings in courts and administrative agencies, and particularly between the authority of the different tribunals.[2] As the Third Circuit has noted, in order to constitute a "court of competent jurisdiction," the administrative "tribunal must have the power to accord relief which is the substantial equivalent to that available to the EPA in federal courts." Baughman v. Bradford Coal Co., Inc., 592 F.2d 215 (3rd Cir. 1979) (Clean Air Act).

The distinction between EPA's authority and the Court's is vital in this case, because under its administrative authority under the Clean Water Act, 33 U.S.C. § 1319(g)(2)(A), EPA can only impose a penalty of up to $10,000 per violation, with a maximum of $25,000,[3] whereas in a civil judicial action, it can

---

[2] "'Section 26(1)(c) provides that preclusion is inapplicable to that part of a claim that is a possible basis for a second action where 'the plaintiff was unable to rely on a certain theory of the case or to seek a certain remedy or form of relief in the first action because of limitations on the competency of the [tribunal].'" Jackson, 862 F.2d at 502 quoting Restatement (Second) Judgments.

[3] These are the statutory limits for "Class I" administrative penalties, the type of penalties sought in the respective administrative complaints for the Barefoot Bay and Carrollwood violations. See Exhibits B and D to United States' earlier Motion for Reconsideration.

seek penalties of up to $25,000 per day for each violation, 33 U.S.C. § 1319(d), with no maximum. In other words, the total statutory maximum in an administrative action is equivalent only to the statutory maximum for only one violation in a civil judicial action. EPA simply does not administrative authority even remotely equivalent to the Court's.

Furthermore, the discovery procedures in an EPA administrative proceeding are vastly different from those available in a civil judicial action. This distinction is of particular significance in the instant case because, as the United States has previously argued, this case was expanded to include the Barefoot Bay and Carrollwood facilities after extensive discovery revealed an ongoing pattern and practice of Clean Water Act violations, including unpermitted discharges at three facilities, as well as the role of the parent company in those violations. Such discovery simply was not available under the earlier administrative proceedings.[4]

In short, because of the vast limits on the nature of administrative proceedings under the Clean Water Act, EPA should not be considered a "court of competent jurisdiction" for res judicata purposes. Moreover, to hold that it is, and that its orders have preclusive effect on future civil judicial actions, would be directly contrary to the intent of Congress in granting the limited authority to EPA to proceed administratively under

---

[4] For example, there is no deposition authority in Clean Water Act administrative proceedings.

narrowly prescribed conditions, and thereby reduce the number of civil judicial actions brought in the federal district courts. In this case, the Act worked as it should in the sense that EPA brought limited administrative actions against Florida Cities, reserving at all times it right to bring a full-blown civil action if the circumstances so warranted. When its graduated approach proved ineffective in curbing Florida Cities' violations, it resorted, as it should, to federal district court.[5] When that action finally revealed the full nature and extent of Florida Cities' violations, as well as Avatar's involvement, the case was expanded to include violations for which they had not previously been penalized.

Second, the claims brought in the instant action simply do not constitute the same cause of action for res judicata purposes because the consent judgments in the two administrative proceedings unambiguously state the precise claim being settled. "The preclusive effect of a settlement is measured by the intent of the parties to the settlement." Greenberg v. Board of Governors of the Federal Reserve System, 968 F.2d 164, 168 (2d Cir. 1992). As previously held by this Court, the settlements

---

[5] Such a graduated approach to enforcement is entirely consistent with the discretion that the United States has to employ a wide range of mechanisms to enforce the Act. The flexible enforcement scheme includes criminal remedies, civil injunctions, civil judicial penalties, two classes of administrative penalty orders, administrative compliance orders, and emergency powers. See United States Environmental Protection Agency v. City of Green Forest, Arkansas, 921 F.2d 1394, 1399 (8th Cir. 1990), cert. denied, 502 U.S. 956 (1991). See generally 33 U.S.C. §§ 1319 and 1364.

unambiguously encompassed only the unpermitted discharges on the days specified in the agreements themselves, and their scopes are to be discerned within their four corners.[6]

Because the consent judgment are unambiguous as to what claims are being settled, the United States contends that there can be no preclusive effect other than with respect to the violations which were expressly settled. Moreover, under Eleventh Circuit law, the only additional claims that arguably

---

[6] In its Order of June 21, 1995 on this issue, the Court held as follows:

> Upon careful review of the relevant pleadings and exhibits, the Court finds....Section 1319(g)(6)(A)(iii) provides that only violations that are expressly resolved in a final administrative order, and for which the violator has paid a penalty, may not be the subject of a subsequent judicial proceeding for civil penalties. 33 U.S.C. § 1319(g)(6)(A)(iii). Each day that illegal conduct continues constitutes a separate day of violation and may be penalized separately. 33 U.S.C. § 1319(d); Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., 897 F.2d 1128, 1138-39 (11th Cir. 1990)....Further, the Court finds unpersuasive Florida Cities' argument that the timing of the Consent Agreements indicates that they were in complete settlement of all past alleged violations. **The language of the Consent Agreement is clear as to which violations are covered: those on September 14, 1989 at Barefoot Bay and June 1987-July 1990 at Carrollwood. Had the parties intended the Consent Agreements to reflect a full settlement of all claims, then the specific paragraphs in the Consent Agreement should have indicated those claims were covered.**

Order, June 21, 1995, pp 5-6 [emphasis added]; Order, November 22, 1995, p. 12 n.10.

Pursuant to Rule 10(c), Fed. R. Civ. P., the United States incorporates herein the arguments it made on this issue in its Memorandum in Support of its Motion for Reconsideration of Court's Order on Amendment of Complaint, as well as its Opposition to Florida Cities' Second Motion for Summary Judgment.

can be considered precluded by the earlier administrative proceedings in addition to those specified in the consent judgment are those that occurred before the administrative complaints were filed:

> [W]e do not believe that the res judicata preclusion of claims that 'could have been brought' in earlier litigation includes claims which arise after the original pleading is filed in the earlier litigation. Instead we believe that, for res judicata purposes, claims that 'could have been brought' are claims in existence at the time the original complaint is filed or claims actually asserted by supplemental pleadings or otherwise in an earlier action.

Manning v. City of Auburn, 953 F.2d 1355, 1360 (11th Cir. 1992) [emphasis original]. The Administrative Complaint relating to the Barefoot Bay unpermitted discharges was filed on September 25, 1991. See Exhibit B to United States' Motion for Reconsideration of Court's Order on Amendment of Complaint. Thus, at a minimum, the part of United States' claim in the instant action that alleges unpermitted discharges after that date must survive.[7] The Administrative Complaint relating to the Carrollwood unpermitted discharges was filed on September 15, 1990. See Id., Exhibit D. Thus, at a minimum, the part of United States' claim in the instant action that alleges unpermitted discharges after that date must survive.[8]

Finally, because, under the Clean Water Act, each day of an unpermitted discharge or effluent violation is a separate

---

[7] Paragraph 16 of the United States' Second Amended Complaint alleges that these violations continued through October 31, 1991.

[8] Paragraph 30 of the United States' Second Amended Complaint alleges that these violations continued through June 1991.

violation, 33 U.S.C. § 1319(d), Atlantic States Legal Foundation v. Tyson Foods, 897 F.2d 1128, 1139-40 (11th Cir. 1990), each violation constitutes a separate cause of action. Moreover, the administrative penalty provisions of the Act itself clearly provide for a limited preclusive effect: "Action taken by the Administrator ... under this subsection shall not affect or limit the Administrator's ... authority to enforce any provision of this chapter" except for any violation which has been the subject of an administrative order. 33 U.S.C. § 1319(g)(6).[9] Thus, the express language of the Clean Water Act, as construed by the Eleventh Circuit, must preempt common law res judicata notions to the extent that they are otherwise found to apply. See Restatement (Second) Judgments § 83 ("An adjudicative determination of a claim by an administrative tribunal does not preclude relitigation in another tribunal of the same or a related claim based on the same transaction if the scheme of remedies permits assertion of the second claim notwithstanding the adjudication of the first claim.")

---

[9] The legislative history of the 1987 amendments to the Clean Water Act make clear the limited nature of the preclusion:

> [Section 309(g)(6) does not apply] to an action for civil penalties for a violation of the same requirement of the Act that is not being addressed administratively for a past violation of another pollutant parameter (even one resulting from the same discharge which is the subject of the administrative civil penalty proceeding).

Conference Report 99-1004, 99th Cong., 2d Sess. (October 15, 1986).

II. Privity

Because res judicata does not bar the claims at issue, it is not necessary for the Court to reach Avatar Holdings' argument that, on the basis of its alleged privity with Florida Cities, it too is immune from these claims. In any event, the irony of Avatar's argument should be addressed. Having vigorously denied liability for the violations alleged in the Second Amended Complaint by distancing itself from Florida Cities, Avatar now seeks to benefit by its status as parent company to avoid liability.

In its November 22, 1995 Order, the Court set the standard that the United States must meet to demonstrate parent company liability in the instant case as follows:

> [I]n order for Avatar Holdings to be held liable for a violation of the Clean Water Act by Florida Cities, Avatar Holdings itself must have acted in such a way that it may be considered a "person who violates" under § 309(d) of the Clean Water Act, through such actions as directing or causing the violations, or exercising actual and pervasive control of Florida Cities to the extent of actually being involved in the daily operations of Florida Cities.

Order, November 22, 1995, p. 29.

As noted in its Motion for Summary Judgment, the United States' theory of the case against Avatar Holdings is that it continued to develop its Barefoot Bay property by selling and marketing lots knowing that each new home would strain the treatment plant's capacity and contribute to an unpermitted discharge into the Sebastian River. The United States alleges that Avatar Holdings thereby violated the Clean Water Act by

directly causing the violations alleged in the Second Amended Complaint with respect to Barefoot Bay.[10] Because the United States' theory with respect to Avatar Holdings' liability for the Barefoot Bay violations is based on direct liability and the United States does not rely on Avatar Holdings' status as Florida Cities' parent company, there can be no privity with respect to these claims.

The United States' claims against Avatar Holdings for the unpermitted discharge claims at Carrollwood, on the other hand, are based on Avatar's pervasive control of Florida Cities. Thus, if the Court finds that the Carrollwood unpermitted discharge claims against Florida Cities are barred by res judicata, sufficient privity may exist to bar those claims against Avatar Holdings as well.

CONCLUSION

The Court should reinstate the Barefoot Bay and Carrollwood unpermitted discharge claims as well as the Administrative Order violations at Barefoot Bay against Florida Cities because they are not barred by res judicata. Summary judgment should be entered in favor of the United States on those claims, at least

---

[10] It was apparent from the deposition testimony of Avatar Holdings' Chairman of the Board, Leon Levy, on December 6, 1995 [transcript pending], that Avatar Holdings was well aware in 1980 when it first acquired the Barefoot Bay property that its previous developers were known for developing land without proper sewage. The unpermitted discharges appear to have begun at about the same time, and continued for over a decade.

with respect to Florida Cities.

CIVIL ACTION NO.
93-281-CIV-FTM-21

UNITED STATES' MOTION AND MEMORANDUM FOR CONTINUANCE OF TRIAL AND EXTENSIONS OF TIME IN LIGHT OF LAPSE IN APPROPRIATIONS

Counsel for Plaintiff, United States of America, acting at the request and on behalf of the Administrator of the United States Environmental Protection Agency, hereby moves for a continuance of the trial, set to commence during the Court's January 2, 1996 Trial Term, and extension of other deadlines. The reasons for this request are as follows:

(1) Pursuant to the Court's Order of July 18, 1995, the trial is set for the January 1996 trial term.

(2) Pursuant to the Order Limiting Time for Completion of Discovery and Scheduling of Final Pretrial Conference, entered February 27, 1995, as amended by the Court's Order of July 18, 1995, the parties are required to file and serve a Trial Brief or Trial Memorandum and Proposed Findings of Fact and Conclusions of Law not later than December 28, 1995.

(3) As set forth in paragraph (d) of the Joint Pretrial Statement, the United States and Florida Cities requested the

Court's permission to submit revised exhibit lists with notations of all objections on December 22, 1995.

(4) As the Court is aware, on December 18, 1995, the Office of Management and Budget directed Executive Agencies including the Department of Justice to modify their operations in response to a lapse of appropriations as of midnight on December 15, 1995. Agencies without current appropriations are nonetheless authorized to conduct certain activities, such as those necessarily implied by statute, those necessary for the President to discharge his Constitutional duties, and those necessary to protect life and property.

(5) We are committed to meeting all applicable court deadlines. However, in light of the budget situation, we believe that it is appropriate for the Court to grant a reasonable extension of time for the upcoming deadlines. If this budget situation persists for an extended period, we may seek an additional extension of time.

(6) We therefore move the Court to modify the scheduling orders as follows:

(a) Continue the Trial currently set for the January 1996 trial term until the February 1996 trial term.

(b) Extend the deadline for submission of the Trial Briefs or Trial Memoranda and Proposed Findings of Fact and Conclusions of Law from December 28, 1995 to January 26, 1996.

(c) Extend the deadline for submission of revised exhibit lists with notations of all objections to January 12, 1996.

(7) We regret the inconvenience to the Court caused by the lapse in appropriations.

DATED: December 18, 1995

CLERK U.S. DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
TAMPA, FLORIDA

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA

Plaintiff,

V.

CASE NO. 93-281-CIV-FTM-21

AVATAR HOLDINGS, INC., and
FLORIDA CITIES WATER COMPANY,

Defendants.

ORDER

This cause comes before the Court on several motions: (1) Avatar Holdings' Motion for Clarification of the Court's Order (Dkt. 225) and Plaintiff's reply (Dkt. 230) thereto; (2) Avatar Holdings' Motion for Emergency Consideration (Dkt. 227); (3) United States' Motion for Expedited Reconsideration of the Court's Ruling on Res Judicata (Dkt. 230); and (4) United States' Motion for Continuance of Trial and Extension of Time in Light of Lapse in Appropriations (Dkt. 232), and Defendants' Joint Response in opposition thereto.

I. Motion for Reconsideration

Plaintiff requests this Court to reconsider that portion of the Court's November 22, 1995 Order (Dkt. 212) finding that the allegations in paragraphs 16-23 and 30 of the Second Amended

Complaint are barred by res judicata.[1] Plaintiff first argues that res judicata does not apply to this case because the second element of the doctrine of res judicata, that the previous judgment was rendered by a court of competent jurisdiction, is lacking in this case.[2] Plaintiff argues that a distinction must be made between the administrative agency's authority and the Court's authority to adjudicate Clean Water Act claims due to differences in maximum penalties that may be ordered and differences in discovery procedures for the two proceedings. The Court notes that, prior to ruling on the parties' motions for summary judgment, it directed Plaintiff to file a response to Defendant's Notice of Dispositive Authority. In its response, Plaintiff did not indicate that the second element was lacking but rather argued that the fourth element, that the same cause of action is involved in both cases, was lacking; however, the Court rejected Plaintiff's argument. Secondly, Plaintiff reiterates its argument, which was set forth in its response to Defendant's Notice of Dispositive Authority, that the claims at issue do not constitute the same cause of action for res judicata purposes because the consent judgments in the two administrative proceeds clearly state the specific claims that were settled.

Although the Federal Rules of Civil Procedure make no mention of a motion for rehearing or reconsideration, such a motion finds some support in federal practice and may in some circumstances perform a valuable function. A motion to reconsider is:

---

[1]Paragraph 16 asserts the claim that Defendants discharged pollutants from Barefoot Bay without an NPDES permit from July 1, 1990 to October 31, 1991. Paragraphs 17-23 assert the claims that Defendants violated EPA Administrative Order 90-106. In paragraph 30, Plaintiff claims that from August to June 1991, Defendants discharged pollutants from Carrollwood without an NPDES permit.

[2]The doctrine of res judicata bars a subsequent suit if four elements are present: (1) a final judgment on the merits; (2) the judgment was rendered by a court of competent jurisdiction; (3) the parties or those in privity with them are identical in both cases; and (4) the same cause of action is involved in both cases. Thomas v. Evans, 880 F.2d 1235, 1240 (11th Cir. 1989).

> appropriate where, for example, the court has patently misunderstood a party, or has made a decision outside the adversarial issues presented to the court by the parties, or has made an error not of reasoning but of apprehension. A further basis for a motion to reconsider would be a controlling or significant change in the law or facts since the submission of the issue to the court. Such problems rarely arise and the motion to reconsider should be equally rare. . . [A] motion for reconsideration does not provide an opportunity simply to reargue an issue the Court has once determined.

Times Newspapers, Ltd. v. Times Publishing Co., 1993 WL 120614 at *9 (M.D. Fla. Feb. 16, 1993)(citations omitted). Further the Eleventh Circuit has stated, "A district court's denial of reconsideration is especially soundly exercised when the party has failed to articulate any reason for the failure to raise an issue at an earlier stage in the litigation." Lussier v. Dugger, 904 F.2d 661, 667 (11th Cir. 1990)(citation omitted). The Plaintiff's motion for reconsideration is an attempt to reargue the same issues that the Court already has considered. The Court finds that the Plaintiff's memorandum, in large part, is a reargument of Plaintiff's position as set forth in its response to the Notice of Dispositive Authority and, further, that Plaintiff has not contended and cannot contend that the other proffered arguments were not available for use in opposing the Defendant's Notice of Dispositive Authority and accompanying memorandum. Notwithstanding the above, the Court has reviewed the Plaintiff's additional arguments and finds them unpersuasive regarding the Court's previous ruling on the applicability of res judicata to the claims at issue.

II. Motion for Clarification

Avatar Holdings requests that the Court clarify its November 22, 1995 Order to indicate that the doctrine of res judicata, which the Court held applies to the claims against Florida Cities in paragraphs 16-23 and 30 of the Second Amended Complaint, applies with equal force to Avatar Holdings. Avatar Holdings asserts that the language of the Court's Order concerning the

A
AB27

res judicata issue encompasses Avatar Holdings, as the Court stated that the Plaintiff "has not argued or set forth any evidence indicating that the allegations [in paragraphs 16-23 and 30] could not have been raised in the prior administrative proceedings," which proceedings were against only Florida Cities. Avatar Holdings points out that the Court noted in its Order that "Avatar Holdings . . . relies on and incorporates by reference the Florida Cities' memorandum addressing the alleged underlying violations." Further, Avatar Holdings points out that the Court found that all four elements of res judicata were present, including the third element that the parties or those in privity with them are identical in both cases. Thomas v. Evans, 880 F.2d 1235, 1240 (11th Cir. 1989)(Emph. added). Avatar Holdings thus argues that, by relying on Thomas and acknowledging that Avatar Holdings relied upon Florida Cities' memorandum, the Court implicitly recognized that Avatar Holdings, as a party in privity with Florida Cities, was also protected by the res judicata doctrine. Moreover, Avatar Holdings asserts that the overwhelming weight of federal authority supports its position that a party cannot allege that a parent corporation is liable for the actions of its subsidiary under a theory that the parent controlled the subsidiary and, at the same time, deny that the parent corporation is in privity with the subsidiary for the purpose of res judicata.

In response, Plaintiff states for the first time that its theory of the case against Avatar Holdings is that Avatar Holdings violated the Clean Water Act by its efforts to develop Barefoot Bay and that its theory with respect to Avatar Holdings' liability for the Barefoot Bay violations is based on direct liability rather than parent company liability. Plaintiff further states, however, that the claims against Avatar Holdings for the alleged violations at Carrollwood are based on Avatar Holdings' pervasive control of Florida Cities and, therefore, if the Court upholds its

ruling that the Carrollwood claims are barred by res judicata as to Florida Cities, said claims are likely barred against Avatar Holdings as well.

With respect to the claims at issue at Barefoot Bay, the Court finds that at no time prior to the Plaintiff's instant response to the motion for clarification has the United States asserted that the claims against Avatar Holdings were based on direct liability, such as in the Second Amended Complaint or in its Motion for Reconsideration of the Court's Order on Amendment of Complaint. Significantly, in its memorandum in support of its motion for summary judgment, Plaintiff clearly states that liability is asserted against Avatar Holdings as a "parent," and Plaintiff further argues that Avatar Holdings should be held liable under the Jacksonville Electric test[3] for parent company liability. (Dkt. 164, p. 18). Further, Plaintiff indicates in said memorandum that its examples of Avatar Holdings' actions "serve[] to illustrate that Florida Cities Water Company is merely Avatar Holdings' alter ego." (Dkt. 164, p. 27). The Court finds that in its motion for summary judgment and throughout this case, Plaintiff has argued that Avatar Holdings should be held liable as a parent. The Court therefore agrees with Avatar Holdings' position that Plaintiff may not now be permitted to argue that Avatar Holdings is liable for the actions of its subsidiary under a theory of parent control of its subsidiary and, at the same time, assert that although it is a parent corporation, it is not in privity with the subsidiary for the purpose of res judicata. See Mercer v. Honda Motor Co., 551 F.Supp. 233, 235 (M.D.Fla. 1982); Robinson v. Volkswagenwerk AG, 56 F.3d 1268, 1275 (10th Cir. 1995); Fontura Dev. Corp. v. Centex, 761 F.2d 33, 43-44 (1st Cir.), cert. denied, 474 U.S. 850 (1985). Further, the Court agrees with Avatar Holdings' analysis that the Court's November 22, 1995 Order

[3]Jacksonville Electric Authority v. Eppinger and Russell Co., 996 F.2d 1107 (11th Cir. 1993).

implicitly found that the claims barred by res judicata were barred as against Avatar Holdings.

III. Motion for Continuance of Trial

Plaintiff moves the Court to continue the Trial, currently set for the January 1996 trial term, to the February 1996 trial term and to extend the deadline for submission of Trial Briefs or Trial Memoranda and Proposed Findings of Fact and Conclusions of Law. Plaintiff states that on December 18, 1995 the Office of Management and Budget directed Executive Agencies, including the Department of Justice, to modify their operations in response to a lapse of appropriations as of midnight on December 15, 1995. Plaintiff nevertheless states that "We are committed to meeting all applicable deadlines." Plaintiff does not indicate that the lapse of appropriations in any way hinders Plaintiff from being ready for a January trial, nor does Plaintiff set forth any other good cause for a continuance of the trial date. Nevertheless, it appears that, based upon the Court's calendar and other commitments and time constraints, this case cannot be reached sooner than January 16, 1996.

Upon consideration of the foregoing, it is hereby **ORDERED** and **ADJUDGED** that:

(1) Avatar Holdings' Motion for Clarification of the Court's Order (Dkt. 225) is **GRANTED**, and the Court's November 22, 1995 Order is **CLARIFIED** insofar as the doctrine of res judicata bars Plaintiff from pursuing the claims in paragraphs 16-23 and 30 of the Second Amended Complaint against Avatar Holdings.

(2) Avatar Holdings' Motion for Emergency Consideration (Dkt. 227) is **GRANTED**.

(3) United States' Motion for Expedited Reconsideration of the Court's Ruling on Res Judicata (Dkt. 230) is **DENIED**.

A82

(4) United States' Motion for Continuance of Trial and Extension of Time in Light of Lapse in Appropriations (Dkt. 232) is DENIED; except, however, that the trial of this case shall not commence prior to January 16, 1996.

DONE AND ORDERED, at Tampa, Florida, this 21st day of December, 1995.

RALPH W. NIMMONS, JR.
UNITED STATES DISTRICT JUDGE

Copies to: Counsel of record

FLORIDA CITIES WATER COMPANY	)	
and	)	
AVATAR HOLDINGS INC.,	)	
	)	
Defendants.	)	
	)	

Defendant Florida Cities Water Company's
Proposed Findings of Fact and Conclusions of Law

Defendant, Florida Cities Water Company hereby submits its Proposed Findings of Fact and Conclusions of Law pursuant to the Court's February 27, 1995 order. Florida Cities believes that trial in the matter will demonstrate that the Court should substantially mitigate the statutory maximum penalty, and should impose a nominal monetary penalty on Florida Cities for the violations of the Clean Water Act.

I. Florida Cities Water Company's Proposed Findings of Fact

The Parties

1. Defendant, Florida Cities Water Company, is a utility monopoly, incorporated in the State of Florida. Florida Cities owns and operates six wastewater treatment plants in Florida. Three of Florida Cities' wastewater treatment plants are subjects in this case: Barefoot Bay, Carrollwood, and Waterway Estates.

2. The pending action was born out of a citizen's suit styled North Fort Myers Homeowner's Association v. Florida Cities Water Company, brought in United States District Court in the Middle District of Florida for violations of the Clean Water Act at Waterway Estates. Notice of the citizen's suit was provided to EPA under provisions of the CWA. The citizen's suit against Waterway Estates was eventually dismissed for lack of prosecution. Although alleging violations of the CWA, the underlying gravamen was to prevent Waterway Estates from providing wastewater treatment service to the HUD-sponsored Barrett Park development project. There were several contacts between counsel for the North Fort Myers Homeowner's Association and EPA enforcement officer Ken Kwan.

3. The Barefoot Bay, Carrollwood, and Waterway Estates plants provide necessary wastewater treatment service to residential areas. Without this wastewater treatment, human health and the environment would become endangered.

4. Florida Cities Water Company is a utility monopoly providing investor-owned utility service within a protected franchise area. Being a monopoly, Florida Cities' rates and service are regulated by the Florida Public Service Commission ("FPSC"). FPSC insures

that Florida Cities' revenue and profit level is reasonable. If Florida Cities Water Company's profits exceed the FPSC's authorized level, the FPSC will order a rate reduction.

5. Florida Cities does not have the freedom to increase its service rates at will. Whenever an increase in rates is required, it must petition the FPSC to do so. Florida Cities will petition when profits have decreased to an unacceptable level. FPSC will determine whether an increase in rates is justified.

6. The only way that Florida Cities can increase its profits is to make capital investments and build plant. However, Florida Cities cannot capitalize on its investments until construction is completed because Florida Cities has to incur financing costs as the plant is being built. Extending the construction time increases financing costs without allowing for a rate increase from the FPSC. Therefore, there is no economic incentive to delay construction projects.

7. Increased costs are always accompanied by an application to the FPSC for a rate increase. However, the FPSC will only allow pass through to rate payers of those costs that have been prudently incurred. The FPSC does not allow the pass through of environmental penalties into the rate base. Therefore, there is no incentive to avoid environmental compliance and no economic benefit for delaying capital expenditures necessary to come into compliance.

8. Prior to May 1, 1995, dischargers were required to be permitted by both the EPA and the Florida Department of Environmental Protection (formerly "Florida Department of Environmental Regulation"). At all times relevant to this action, Florida Cities complied

with the requirements and authorizations of the FDEP.

Waterway Estates

9. The Waterway Estates Wastewater Treatment Plant is owned and operated by Florida Cities Water Company and is located in Lee County, Florida. Since July 14, 1991, Waterway Estates has discharged treated effluent to the Caloosahatchee River, a class III water of the State of Florida. Prior to July 14, 1991, Waterway Estates discharged treated effluent into a canal which led to the Caloosahatchee River 500 feet away. Until April 1992, Waterway Estates provided secondary wastewater treatment. On April 1992, Waterway Estates began providing advanced wastewater treatment. Waterway Estates discharges approximately 1,000,000 gallons per day.

10. This Court's Order of November 22, 1995 finds that Waterway Estates has exceeded NPDES permit FL0030325 in the following respects for a total of 1038 Clean Water Act violations:

    a. 396 violations for discharge without a NPDES permit between October 1, 1988 and October 31, 1989;

    b. 621 violations for discharging into a canal, a previously permitted discharge location, instead of to the 6-foot contour line of the Caloosahatchee River, between November 1, 1989 and July 14, 1991;

    c. 18 violations of total nitrogen loading and concentration; and

    d. 3 toxicity test violations.

11. In 1981 EPA granted Waterway Estates a NPDES for the surface water discharge of treated effluent to the Caloosahatchee River. Waterway Estates applied for a renewal of

that permit in May 1986.

12. On January 7, 1987, EPA denied Waterway Estates NPDES permit renewal application based upon a 1981 technical document prepared by the FDER. According to EPA, the 1981 FDER technical document represented that Waterway Estates had a zero discharge wasteload allocation, i.e. Waterway Estates would not be allowed to continue its discharge to the Caloosahatchee River. On May 9, 1986, FDER sent a letter to EPA informing EPA that Waterway Estates did in fact have a wasteload allocation. Even with this letter in its possession, EPA denied the permit application in January 1987.

13. The 1981 technical document was a planning document and was not intended to designate the Caloosahatchee River as a water quality limited stream segment. Therefore, EPA's basis in denying the 1986 NPDES permit renewal application is improper.

14. The FDER has declared the wasteload allocation for Florida Cities Waterway Estates was for planning purposes and never incorporated into any state operating permit.

15. The code of federal regulations sets fourth four specific criteria upon which EPA can terminate or refuse to renew a NPDES permit. These criteria were not met.

16. The improper permit denial directly caused Waterway Estates to be in violation of the CWA for discharge without a NPDES permit. Had EPA properly renewed the 1986 permit application, Waterway Estates would not have been in violation. Florida Cities did not challenge the permit denial.

17. In 1986, Waterway Estates possessed a FDER operating permit which authorized the discharge of pollutants to a canal which empties into the Caloosahatchee River.

18. Immediately after EPA's 1987 denial of the NPDES permit application, EPA issued

administrative order 87-085 which was subsequently replaced by administrative order 89-109. Administrative orders 87-085 and 89-109 contained compliance schedules and interim effluent limitations.

19. In December 1987, Florida Cities applied to FDER for a wasteload allocation at the 6-foot contour line of the Caloosahatchee River. The wasteload allocation was granted in early 1989. Once the wasteload allocation was granted, Florida Cities applied to EPA for a NPDES permit. NPDES permit number FL0030325 was issued September 29, 1989 and became effective November 1, 1989. For the first time, EPA was imposing nitrogen limitations and toxicity testing requirements on the Waterway Estates facility.

20. In 1988, FDER issued temporary operating permit DT36-152486 which contained construction deadlines and effluent limitations. These effluent limitations would require Waterway Estates to upgrade its facility to advanced wastewater treatment. However, FDER did not issue a construction permit for the construction upgrade until March 1, 1990, and the Army Corps of Engineers did not issue their construction permit until April 1990. In October 1990, the FDER construction permit was extended to September 1992.

21. The outfall to the six-foot contour line of the Caloosahatchee River was operational on July 14, 1991, ahead of the deadlines established in both the state construction permit and EPA administrative order 89-109.

22. Administrative Order 89-109 set a final compliance date of October 1, 1991 for meeting the effluent limitations in the 1989 NPDES permit.

23. Waterway Estates began providing advanced wastewater treatment in April 1992. AWT removes nitrogen from the effluent and provided capability to meet the nitrogen limits in

the permit. Between November 1, 1989 and April 1992, Waterway Estates was meeting the effluent limitations contained in the 1981 NPDES permit, as was required by Administrative Order 89-109.

24. Once construction began, the Waterway Estates upgrade took less than 2 years to complete. A project of this type normally takes between 2 and 3 years to complete.

25. Between 1989 and 1992, Florida Cities had provided status reports and updates to EPA on a regular basis. Whenever EPA requested information, Florida Cities supplied it in a timely and candid fashion. Florida Cities did not hide any information from EPA.

Carrollwood

26. The Carrollwood Wastewater Treatment Plant was owned and operated by Florida Cities Water Company, until the plant was demolished on late 1992. Carrollwood was located in Hillsborough County, Florida. The Carrollwood Plant discharged treated effluent into Sweetwater Creek, a class III water of the State of Florida. Roughly 40,000 feet from Carrollwood, Sweetwater Creek empties into Old Tampa Bay. Until January 1992 when the facility was removed from operation, Carrollwood provided secondary wastewater treatment to a residential community and discharged approximately 450,000 gallons per day of secondarily treated effluent.

27. This Court's Order of November 22, 1995 finds that Carrollwood has exceeded NPDES permit FL0029319 for a total of 234 Clean Water Act violations for phosphorous, chlorine, nitrogen, CBOD, and fecal coliform.

28. In August 1983, the Carrollwood plant was required by the State of Florida to interconnect with the Hillsborough County system. However, at that time, Hillsborough

County was not projected to have available capacity until late 1985.

29. Even though Florida Cities was required by its FDEP permit to connect with Hillsborough County, Florida Cities investigated options for re-use at a nearby golf course and for interconnection with the City of Tampa wastewater system. Neither of these options were available or reasonable for Florida Cities to pursue, and the options were not approved by the FDEP permit.

30. Over the course of the next eight years, Hillsborough County repeatedly extended its projections of available capacity for Florida Cities' Carrollwood service area.

31. Hillsborough County did not have capacity to treat Carrollwood's service area and did not make capacity available until 1991.

32. On June 5, 1991, Florida Cities and Hillsborough County reached an agreement whereby Hillsborough County would treat the wastewater from Carrollwood's service area.

33. Between 1982 and 1991, Florida Cities continually pursued Hillsborough County for an interconnection agreement for the treatment of wastewater from Carrollwood's service area, pursuant to the requirements of the 1983 and 1988 FDEP operating permits.

34. In late 1988, the state of Florida passed the Grizzle-Figg bill which created an exception to the no new discharge policy of the Wilson-Grizzle Act of 1972 (repealed in 1981) upon a showing of "minimal negative impact." In 1989, Florida Cities commissioned Limno-Tech, Inc. to perform an environmental impact study of the Carrollwood discharge on Sweetwater Creek. The Limno-Tech study indicated that Carrollwood's discharge would have a minimal negative impact on Sweetwater Creek. The study was completed in late 1989, and amended from time to time until mid-1990. This study

would act as the basis for the state to certify a NPDES permit for the Carrollwood facility.

35. In April 1988, FDER issued Carrollwood an operating permit to the Carrollwood facility. The April 1988 operating permit required Florida Cities to connect to the Hillsborough County system or construction and advanced wastewater treatment facility by October 1, 1990. This state operating permit would expire by its terms on October 1, 1990.

36. As a result of the Limno-Tech minimal impact study, Florida Cities sought bids from outside contractors for construction of an AWT facility at Carrollwood. The FDER issued Florida Cities a construction permit for an AWT facility at Carrollwood in July 1990. About the same time in July 1990, Hillsborough County indicated that it would make capacity available for Carrollwood, but that Florida Cities would have to accept Hillsborough County's connection point and connection cost. The state imposed October 1, 1990 deadline for interconnection or AWT construction was imminent, and Florida Cities re-applied for another operating permit. The permit application was denied, but Florida Cities and FDER entered into a consent order in January 1991 re-incorporating the effluent limitations of the April 1988 operating permit.

37. The January 1991 state consent order extended until April 1992 the construction schedule deadline for interconnection to Hillsborough County or completion of AWT. The consent order also required Florida Cities to continue to operate the wastewater treatment plant in accordance with the 1988 effluent limitations.

38. Florida Cities notified EPA of a tentative interconnection agreement with Hillsborough County on April 1, 1991. In its April 1 letter to EPA, Florida Cities requested that the

effluent limitations in the January 1991 FDER consent order be incorporated as interim limits in the soon to be issued NPDES permit.

39. Another formal notification of the interconnection agreement with Hillsborough County was given to EPA on June 24, 1991. On June 24, 1991, Florida Cities requested relief from the terms of the NPDES permit and alternatively requested that the sampling and monitoring terms of EPA Administrative Order 90-100 remain in effect until the discharge to Sweetwater Creek ceased. Florida Cities continued to make the same request regarding the terms of AO 90-100 for each month between June 1991 and January 1992.

40. As a result of the interconnection agreement with Hillsborough County, Florida Cities abandoned its plans to pursue the construction of an advanced wastewater treatment facility at Carrollwood. The facility would have cost Florida Cities customers $4.4 million and would have taken a significant period of time to construct. By contrast, interconnection with Hillsborough County would cost customers only $1.5 million and would take less time to construct.

41. Between July 1, 1991 and January 6, 1992, Carrollwood complied with the sampling and monitoring requirements of Administrative Order 90-100.

42. Carrollwood's discharge to Sweetwater Creek ceased on January 6, 1992 as a result of the interconnection with Hillsborough County, which connection had been required since 1983.

43. On March 6, 1992 Administrative Order 90-100 was inactivated for compliance therewith.

44. Between July 1, 1991 and January 6, 1992 the Carrollwood facility routinely met or exceeded the performance standards for conventional pollutants and met the effluent limitations and monitoring requirements of the active administrative orders. The level of treatment required by the July 1, 1991 NPDES permit FL0029319 reflected increased treatment requirements for phosphorous and nitrogen which were unattainable by the existing plant.

45. In late 1990, EPA Region IV determined that the Carrollwood discharges had caused "a lack of severe environmental harm" to Sweetwater Creek.

46. Florida Cities was required to interconnect to Hillsborough County but was delayed by forces outside of its control.

Barefoot Bay

47. The Barefoot Bay Wastewater Treatment Plant ("Barefoot Bay") is owned and operated by Florida Cities Water Company. Barefoot Bay is located in Brevard County, Florida. Barefoot Bay discharges treated effluent into an agricultural drainage canal which leads to the Sebastian River, a Class III water of the State of Florida, approximately 1 mile downstream. Barefoot Bay provides secondary wastewater treatment to a residential community and is currently undergoing a plant modification to provide advanced wastewater treatment. Barefoot Bay discharges approximately 600,000 gallons per day.

48. This Court's Order of November 22, 1995 finds that Barefoot Bay has exceeded NPDES permit FL0042293 in the following respects for a total of 264 Clean Water Act violations:

a. 182 violations of the total residual chlorine limitation between September

1992 and March 1993;

b. 3 chronic toxicity test failures in September-October 1992, May 1993, and February 1994;

c. 79 violations for failure to report biochemical oxygen demand on a weekly basis between November 1991 and June 1993, and twice in November 1993.

49. The Barefoot Bay plant utilizes two holding/percolation ponds which have capacity to store a volume equivalent to 20 days of treatment plant operations.

50. In September 1992, Barefoot Bay purchased and put into use a new Hach DPD DR-100 chlorine tester. Prior to September 1992, Barefoot Bay had been testing for total residual chlorine with an older Hach colorimeter.

51. The DPD DR-100 is a C.F.R./EPA approved method for testing chlorine limits of 0.01milligrams per liter ("mg/l"). 40 C.F.R. § 136.3, Table 1B. However, EPA guidance acknowledges that the DPD DR-100 colorimeter is inaccurate below levels of 0.1 mg/l. To account for this inaccuracy, EPA guidance allows dischargers who test for total residual chlorine with the DPD DR-100 colorimeter to report measurements below 0.1 mg/l as "ND" or non-detectable. Between September 1992 and March 1993, Florida Cities reported chlorine residuals at or below 0.1 mg/l. Had Florida Cities reported "ND" instead of an actual number, Florida Cities would have been in compliance with the Clean Water Act.

52. Once Florida Cities reported chlorine residuals at Barefoot Bay, Florida Cities took immediate action to investigate and eliminate the chlorine by installing a sulfur dioxide

feed. Sulfur dioxide (SO_2), when combined with the chlorine residual, reacts immediately to eliminate chlorine. However, an SO_2 feed system must be approved and permitted by the FDER. After initial reporting of chlorine in September 1992, Florida Cities applied to FDER for an SO_2 construction permit around November 15, 1992. The SO_2 feed system was eventually constructed, permitted, and placed into service by March 3, 1993.

53. The SO_2 feed system cost Florida Cities approximately $1500.00.

54. Chronic toxicity is a test parameter that is applied when there exists no low-flow dilution of effluent under critical conditions. Chronic toxicity measures both the rate of survival as well as the growth rate of a particular test species. Acute toxicity measures only the rate of survival. Chronic toxicity is a more stringent test than acute toxicity, and is very difficult to pass.

55. The most common result of chronic toxicity failures is the result of ammonia in the effluent. Ammonia is made of nitrogen and hydrogen (NH_3). When organic matter decomposes, ammonia is produced. Ammonia can be toxic to other organisms, unless the treatment plant has the capability to remove nitrogen from the effluent.

56. Secondary treatment does not provide for nitrogen or phosphorous (collectively known as "nutrients") removal from effluent. Advanced wastewater treatment does provide for nutrient removal from effluent.

57. No evidence establishes that failure to pass the chronic toxicity test is a direct result of Barefoot Bay's failure to implement wastewater treatment processes. Rather, Barefoot Bay was not designed to remove nitrogen, and Barefoot Bay plant was able to pass the

chronic toxicity test without being upgraded to advanced wastewater treatment.

58. Barefoot Bay has been able to pass some chronic toxicity tests because the plant began super-aerating and nitrifying the effluent in 1992. Although this process cannot accurately predict nutrient removal levels, super-aeration and nitrification has worked at least part of the time at Barefoot Bay. Barefoot Bay has continued to super-aerate and nitrify since 1992

59. The Code of Federal Regulations acknowledges that a carbonaceous biochemical oxygen demand parameter ("$CBOD_5$") may be substituted for a regular biochemical oxygen demand ("BOD_5") parameter. 40 C.F.R. § 133.102.

60. BOD_5 and $CBOD_5$ are closely related. However, $CBOD_5$ is a more accurate indicator of wastewater treatment plant performance.

61. Florida Cities realized as a result of a compliance inspection performed on June 10, 1993 by EPA that Florida Cities had been reporting $CBOD_5$ levels instead of BOD_5 levels. Florida Cities should have been reporting BOD_5 levels on its DMRs to EPA as required in the permit.

62. Between November 1991 and November 1993 FDER required Barefoot Bay to monitor $CBOD_5$.

63. At all times between November 1991 and November 1993, Barefoot Bay was complying with state-imposed CBOD levels. In addition at all times between November 1991 and November 1993, Barefoot Bay would have been in compliance with the CBOD levels imposed in March 1994. The EPA imposed CBOD levels of 30 mg/l monthly average and 60 mg/l daily maximum.

64. In October 1993, Barefoot Bay applied to EPA for a modification of NPDES permit FL0042293 to allow monitoring for $CBOD_5$ instead of BOD_5. EPA granted the modification request for permit FL0042293 on March 28, 1994. At all times between November 1991 and November 1993, Barefoot Bay would have been in compliance with the subsequent modification of the Barefoot Bay permit for $CBOD_5$ testing.

EPA Guidance

65. EPA has extensive guidance on enforcement of the Clean Water Act. EPA uses an enforcement response hierarchy ranging from a mere telephone call to civil or criminal judicial actions. Administrative orders fall in the middle of the enforcement hierarchy. Administrative orders are issued under some conditions when a facility is not in compliance with the Clean Water Act. Administrative orders are injunctive in nature and provide dates by which a discharging facility must come into compliance. When a NPDES permit and an administrative order exist concurrently, the administrative order takes precedence for purposes of measuring a facilities compliance. Legally, an administrative order is an enforcement action, but in practical terms, EPA uses administrative orders as de facto modifications of permit limits. In essence, administrative orders act to lessen the seriousness of a particular violation.

66. Administrative orders are ended in one of three ways: either by an inactivation letter from EPA or by the issuance of a subsequent administrative order or by an administrative order's own terms.

67. EPA must assure that state water quality standards are maintained. EPA's National

Pollutant Discharge Elimination System ("NPDES") permit program uses effluent limitations in each NPDES permit to limit the pollutants from causing water quality standards violations. Effluent limitations are developed by three methods approved by EPA. The three methods are: effluent limitations guidelines, water quality considerations, and best professional judgment.

68. Effluent limitation guidelines are scientifically derived and when used in an NPDES permit are called technology-based limits. If these effluent limitations are deemed sufficient to protect approved state water quality standards then EPA does not need a more stringent limitation in the NPDES permit.

69. If the effluent limitation guideline is insufficient to protect state water quality standards, then more specific limits, more stringent than effluent limitations, must be developed by the NPDES permit writer to protect water quality standards. This water quality based limitation must then be used in the discharger's NPDES permit.

70. EPA's water quality based limitation must be based on an EPA and state approved wasteload allocation for the receiving water. EPA and Florida entered into an agreement as to the approval process of wasteload allocations for Florida waters. Allowable wasteload discharges for streams in Florida must be approved or disapproved, pursuant to the agreement, not later than 30 days after submission from Florida to EPA's Region IV. EPA admits it never approved or disapproved the wasteload allocation for Florida Cities' Waterway Estates facility. Such inaction by EPA Region IV constitutes a violation of the agreement which follows the requirements of the Clean Water Act.

71. Wasteload allocations are allocations of a receiving water's capacity to handle pollution

to a particular discharger. Individual states establish total maximum daily loads ("TMDL") that will be used for a develop particular discharger's wasteload allocation ("WLA"). TMDLs and WLAs are required to go through a formal administrative approval process so that they may be made into requirements, not merely recommendations.

72. The NPDES permitting system allows a point source to discharge any pollutant without limit, save for those pollutants expressly limited by a NPDES permit. To determine the exact particular requirements imposed upon a discharger, a Court must look only so far as the NPDES permit.

73. NPDES permit writing is restrained in certain respects. EPA must give deference to the judgment of a state regulatory agency unless EPA determines the state has committed clear error or where a state overlooks applicable state water quality standards.

74. EPA Region IV's agreement with the State of Florida requires EPA to impose in its NPDES permits the interpretation of state law which Florida has embodied in FDER permits unless FDER's interpretations are clearly erroneous or EPA has strong scientific or technological support for a different interpretation.

75. If EPA disagrees with Florida's permit requirements and interpretations, EPA must write into the NPDES permit the reason(s) why the FDER permit is clearly in error. No NPDES permit in this case contains any determination that an FDER permit is clearly in error.

II. Florida Cities Water Company's Proposed Conclusions of Law

1. Any and all conclusions of law included in the foregoing findings of fact are adopted herein.

2. This Court has subject matter jurisdiction over the claims for relief set forth in the Second Amended Complaint pursuant to 33 U.S.C. § 1319(b) and 28 U.S.C. §§ 1331, 1345, 1355.

3. Venue is proper in this judicial district, and Defendants do not dispute venue. See Defendants' answers to Second Amended Complaint.

4. The Clean Water Act ("CWA") was enacted by Congress in 1972 with the express objective of restoring and maintaining the chemical, physical, and biological integrity of the Nation's waters. 33 U.S.C. § 1251(a); Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1391 (D. Haw. 1993).

5. Defendants, Florida Cities Water Company and Avatar Holdings Inc., qualify as "person[s]" under the CWA, 33 U.S.C. § 1362.

6. As to all matters of liability alleged in the Second Amended Complaint, the Court has previously decided liability matters in an order dated November 22, 1995, 93-281-CIV-FTM-21 (Dkt. 232) and in a clarification dated December 21, 1995, 93-281-CIV-FTM-21 (Dkt. 234).

7. Pursuant to 33 U.S.C. § 1319(d) of the CWA, Florida Cities is liable for civil penalties under the Clean Water Act. In determining the amount of a civil penalty the court is required to consider each of the following factors:

    a. the seriousness of the violation or violations;

b. the economic benefit (if any) resulting from the violation;
c. any history of such violations;
d. any good-faith efforts to comply with the applicable requirements;
e. the economic impact of the penalty on the violator;
f. and such other matters as justice may require.

33 U.S.C. § 1319(d); Atlantic States Legal Foundation v. Tyson Foods, Inc., 897 F.2d 1128, 1140-41 (11th Cir. 1990). The existence of any one of these factors can mitigate against the imposition of the statutory maximum penalty.

8. First, the Court needs to determine the maximum fine for which Florida Cities may be liable. Tyson Foods at 1142. The Court determines the maximum civil penalty in a CWA case by (1) determining the categories of violations, (2) adding up the number of daily violations in each category, (3) totaling the violations in each category, and (4) multiplying this total by $25,000. Hawaii's Thousand Friends at 1395. Second, if the Court decides to reduce the maximum fine, it should reduce the fine in accordance with the factors spelled out in 33 U.S.C. § 1319(d), and the Court should clearly indicate the weight it gives to each of the factors in the statute and the factual findings that support its conclusions. Tyson Foods at 1142.

9. The court may refer to EPA's internal penalty policy for guidance to interpret and assess penalties, but the Court's primary focus should be on the statutory framework of 33 U.S.C. § 1319(d). Tyson Foods at 1142; see also Chemical Manufacturers Ass'n v. Natural Resources Defense Council, Inc., 470 U.S. 116, 125, 84 L.Ed.2d 90, 105 S.Ct. 1102 (1985) ("[the] view of the agency charged with administering the statute is entitled to considerable deference"); Friends of the Earth, Inc. v. Laidlaw Environmental Services, Inc., 890 F.Supp 470 (D. S.C. 1995).

10. The final determination of the appropriate civil penalty is within the sound discretion of the trial court. Hawaii's Thousand Friends at 1395.

11. In evaluating the seriousness of the violations, the Court may evaluate several indicators, including the number of violations, the duration of noncompliance, the significance of the violation (the degree of exceedance and the relative importance of the provision violated), and the actual or potential harm to human health and the environment. Hawaii's Thousand Friends at 1383.

12. Large violations or exceedances do not necessarily mandate that a Court cannot reduce the maximum penalty. United States v. Roll Coater, Inc., 1991 U.S. Dist. Lexis 8790 at 10. "Serious," as used in the CWA, means more than the amount of pollutant over that authorized by regulations, and lack of environmental damage significantly mitigates the seriousness of the violation when calculating penalties. Roll Coater at 11; Atlantic States Legal Foundation v. Universal Tool & Stamping Co., Inc., 786 F.Supp. 743 (N.D. Ind. 1992).

13. The purpose of the economic benefit is to quantify the economic benefit received as a result of delaying capital expenditures necessary to come into compliance with the CWA. Hawaii's Thousand Friends at 1387. The implication of the economic benefit component is that unless the discharger is fined an amount at least as great as the economic gain in not complying with the regulations, the statute serves little deterrent value, but the Court's consideration of the other 309(d) factors can reduce the imposed penalty below the calculated economic benefit. Roll Coater at 12.

14. In determining economic benefit due to delayed compliance, it is unjust to penalize a

discharger for a time period not considered by the Court when calculating the maximum statutory penalty. Roll Coater at 14. In addition, the Court should not penalize a Company for incurring more costs than those necessary to come into compliance with the Act. Roll Coater at 15.

15. The history of violations refers to previous violations not related to the instant litigation. Roll Coater at 16. Florida Cities has paid penalties to EPA for discharge without a permit at Barefoot Bay and Carrollwood. The total of the Barefoot Bay and Carrollwood penalties amounted to $21,000 dollars and covered an aggregate of over 8 years of discharge without a permit violations, approximately 2900 days. These penalties average to be roughly $7.00 per day.

16. Good faith efforts to comply with the CWA includes matters such as the difficulty of compliance and actions of a state environmental agency. Roll Coater at 18; United States v. Edison Co., 725 F.Supp. 928, 933 (N.D. Ohio 1989)(good faith adherence to Ohio EPA's directives and guidance as well as possible lack of effective communication between Ohio EPA and the United States EPA mitigates against a substantial penalty). Moreover, the CWA takes into consideration that if a defendant can demonstrate that it has been proceeding in a good faith attempt to come into compliance with the CWA, then credit is given under the "good faith" mitigation factor. Universal Tool & Stamping Co. at 751-52.

17. A discharger's good faith reliance on EPA interim standards must be a significant mitigation factor in assessing a penalty. Hawaii's Thousand Friends at 1396. Compliance with interim effluent limitations and construction schedules will significantly

mitigate a penalty.

18. Interim measures taken by a discharger geared towards pollution control are evidence of good faith. Roll Coater at 22; Universal Tool & Stamping at 753.

19. Such other matters as justice might require is a catch-all consideration for the court. "The fact that a violator is 'without fault' in committing violations of the CWA does not absolve the violator from penalties, although it may mitigate the amount of penalties assessed." Hawaii's Thousand Friends v. City and County of Honolulu, 821 F.Supp. 1368, 1391 (D. Haw. 1993) (citations omitted).

Waterway Estates

20. The violations of the CWA at Waterway Estates are not serious. Plaintiff admits that it has no evidence of any environmental harm as a result of the Waterway Estates discharges. The violations of discharge without a permit were directly caused by EPA's own mistake. Absent EPA's mistake, no violation of discharging without a permit at Waterway Estates would have occurred. Likewise, Waterway Estates' discharge to the canal is not serious. By its own Administrative Order 89-109, EPA indicated that Waterway Estates could continue to discharge to the canal until August 1, 1991. Waterway Estates ceased discharge to the canal on July 14, 1991, two weeks ahead of the schedule in the administrative order. The nitrogen exceedence are not serious. Waterway Estates was constructing an advanced wastewater treatment facility, and failed to meet the construction deadline by 6 months. Since AWT has been operational at Waterway Estates, no further nitrogen exceedences have occurred. Because the violations are not serious at Waterway Estates, Florida Cities is entitled to significant

mitigation of any penalty.

21. Florida Cities has not derived any economic benefit from the delayed capital expenditures at Waterway Estates. As the statute implies, there is no requirement that an economic benefit exist in conjunction with violations of the CWA. Florida Cities is a fully regulated utility that derives economic benefit from making capital expenditures, not from delaying them. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to lack of economic benefit derived from these violations at Waterway Estates.

22. Florida Cities does not have any history of violations for discharge without a permit, or discharge at the wrong location, or nitrogen or toxicity exceedances at Waterway Estates. Therefore, Florida Cities is entitled to significant mitigation of any penalty due to this factor.

23. Florida Cities has made considerable good-faith efforts to comply with the applicable requirements at Waterway Estates. Upon denial of their NPDES permit in 1987, Florida Cities sought a wasteload allocation from FDER. FDER did not approve the new WLA until late 1988. Florida Cities applied for and received their new NPDES permit by late 1989. The discharge to the canal required several permits and caused several logistical problems. Yet, Florida Cities completed the construction of the new outfall by July 1991, ahead of the schedule in EPA's Administrative Order 89-109.

24. At all times between October 1, 1988 and June 1992, Waterway Estates was complying with the directives of the FDER. FDER had extended the Waterway Estates construction deadline until September 1992 and the compliance deadline until June 1993. Florida

Cities easily met these construction criteria and their reliance on FDER directives will substantially mitigate the penalty.

Carrollwood

25. The NPDES violations at Carrollwood are not serious. The Plaintiff admits that it has no evidence of any environmental harm as a result of the Carrollwood discharges to Sweetwater Creek. In 1988 and 1989, Florida Cities commissioned an environmental study that demonstrated the discharges would have a minimal impact on Sweetwater Creek. Carrollwood achieved the same level of performance between July 1991 and January 1992. The only reason a violation occurred is a direct result of the issuance of an AWT permit for a facility that was designed to provide secondary treatment. However, EPA had issued an administrative order that provided relief from the permit's limits. Although the administrative order is not legally a modification of a permit, EPA Region IV uses administrative orders as modifications of permits for purposes of tracking compliance with the CWA. Carrollwood did not violate the terms of administrative order. Due to the seriousness of the violations Florida Cities is entitled to significant mitigation of the penalty.

26. Florida Cities has not derived any economic benefit from the delayed capital expenditures at Carrollwood. As the statute implies, there is no requirement that an economic benefit exist in conjunction with violations of the CWA. Florida Cities is fully regulated utility that derives economic benefit from making capital expenditures, not from delaying them. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to lack of economic benefit derived from these violations at Carrollwood.

27. Florida Cities does not have a history of effluent limit violations. Carrollwood was designed to provide secondary wastewater treatment and performed at that level. Between July 1991 and January 1992 Carrollwood routinely met secondary treatment levels and often met AWT treatment levels, even though the plant was not designed for that level of treatment. Because Carrollwood does not have a history of effluent limit violations, the penalty will be substantially mitigated.

28. Florida Cities has engaged in numerous good-faith efforts to comply with the requirements of the CWA. Since 1983, Carrollwood was required to interconnect its facility with Hillsborough County pursuant to state permit requirements. Hillsborough County could not provide wastewater treatment service to the Carrollwood franchise area until 1991. Florida Cities engaged environmental studies to determine whether an alternative existed to the interconnection requirement. Once it was determined that an alternative existed and Florida Cities could construct an AWT facility, Florida Cities pursued that option in conjunction with their pursuit of Hillsborough County. Florida Cities expended great time and resources to pursue two options that would protect the environment. Due to Florida Cities great efforts to comply with the CWA, the penalty will be substantially mitigated.

29. At all times between July 1991 and January 1992, Carrollwood was in compliance with state directives. FDER authorized Carrollwood to operate at secondary treatment levels until April 1992, at which time Carrollwood would raise its treatment to AWT. Florida Cities' reliance on state directives will substantially mitigate any penalty.

Barefoot Bay

30. The NPDES violations at Barefoot Bay are not serious. There is no showing that any environmental harm has resulted from the Barefoot Bay chlorine, toxicity, or BOD violations, and indeed the Plaintiff admits that it has no evidence of any environmental harm. The violations were of short duration, and were not of a type that should pose any great risk to the environment. The Barefoot Bay outfall is located more than a mile from class III waters, and environmental pollution, if any, would dissipate over that distance. In addition, EPA's own inspection officer, Roy Herwig, determined that no actual environmental harm had occurred as a result of the Barefoot Bay's discharges prior to November 1, 1991. The discharges after Mr. Herwig's assessment did not change, and this Court should not substitute its assessment in place of Mr. Herwig's. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to the seriousness of the violations.

21. Florida Cities has not derived any economic benefit from the delayed capital expenditures at Barefoot Bay. As the statute implies, there is no requirement that an economic benefit exist in conjunction with violations of the CWA. Florida Cities is fully regulated utility that derives economic benefit from making capital expenditures, not from delaying them. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to lack of economic benefit derived from these violations.

22. Florida Cities does not have a history of TRC, toxicity, or BOD violations at Barefoot Bay. Therefore, Florida Cities is entitled to significant mitigation of the penalty due lack of history for these violations.

23. Florida Cities has repeatedly engaged in good-faith efforts to comply with the applicable requirements of the CWA and has engaged in good-faith dealings with EPA. Florida Cities has promptly notified EPA of effluent violations in their DMRs. Upon first report of a TRC violation, Florida Cities notified EPA and undertook an investigation of the problem. Each month, Florida Cities provided a progress update in their DMR cover letters. A solution to the TRC violation was implemented within a matter of months even though there might not have been any actual problem with TRC to begin with. Regarding the toxicity problem, the Barefoot Bay plant was not originally constructed to remove nitrogen from the effluent, but has been able to meet some of the toxicity requirements. For the BOD/CBOD problem, Barefoot Bay applied for an NPDES permit modification to allow testing for CBOD once it was discovered that CBOD had been reported to EPA. Barefoot Bay would have been meeting the CBOD limitations between November 1991 and November 1993; conversely, had Barefoot Bay been reporting BOD values, Barefoot Bay would have been in compliance with the BOD limitations contained in the permit. Therefore, Florida Cities is entitled to significant mitigation of the penalty due to their good faith efforts to comply with the requirements of the CWA.

24. At all times relevant to this action, Barefoot Bay has been under stringent state environmental regulation and has pursued the ultimate elimination of discharges to the agricultural canal. Florida Cities' reliance on and compliance with state directives further mitigates the penalty.

25. Any substantial penalty would significantly impact Florida Cities on-going efforts to protect the environment. Florida Cities budgets large amounts of resources for capital

improvements to upgrade and maintain their wastewater treatment plants. In addition, Florida Cities must finance all construction projects before those costs can be passed through to the ratepayer. Because a significant penalty would impact necessary capital improvements geared towards protecting the environment, the penalty will be mitigated.

26. Upon consideration of the factors enumerated in § 309(d) fort all three Florida Cities facilities in this case, this Court will impose only a nominal penalty for the violations of the Clean Water Act.

Exhibit_____(GHB-71)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION 96 JAN -2 AM 10: 03

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

PRETRIAL BRIEF OF FLORIDA CITIES WATER COMPANY

At trial Florida Cities Water Company ("Florida Cities" or "FCWC") will present extensive evidence of mitigation regarding all violations of the Clean Water Act ("CWA") at issue. During all relevant time periods Florida Cities cooperated with and was within the regulatory regime of both the United States Environmental Protection Agency ("EPA") and the Florida Department of Environmental Protection ("FDEP").[1/] None of the violations at issue caused any environmental harm or placed Florida's surface waters at risk. The evidence to be presented at trial will prove that Florida Cities consistently cooperated in good faith with EPA, FDEP, and local regulators. When viewed in accordance with the CWA's penalty mitigation factors, this evidence will establish that any penalty assessed by this Court should be de minimis.

[1/] Prior to 1991, the Florida Department of Environmental Protection ("FDEP") was known as the Florida Department of Environmental Regulation ("FDER"). Throughout this brief FDEP should be read to mean either FDEP or its predecessor agency, FDER, depending on the relevant time period.

STATEMENT OF THE LAW

Congress set forth a specific procedure to determine the amount of any civil judicial penalty assessed under the CWA. As articulated in Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc. 897 F.2d 1128, 1142 (11th Cir. 1990):

> [The Court] should first determine the maximum fine for which [a defendant] may be held liable. If it chooses not to impose the maximum, it must reduce the fine in accordance with the factors spelled out in section 1319(d), clearly indicating the weight it gives each of the factors in the statute and the factual findings that support its conclusions.

Thus, the amount of the penalty is within the discretion of the trial court. Id.; Hawaii's Thousand Friends v. City and County of Honolulu, 821 F. Supp. 1368 (D. Haw. 1993).

Section 1319(d), (CWA § 309(d)), sets forth the following factors which the Court shall consider:

a) the seriousness of the violation or violations;
b) the economic benefit (if any) resulting from the violation:
c) any history of such violations;
d) any good-faith efforts to comply with the applicable requirements;
e) the economic impact of the penalty on the violator;
f) and such other factors as justice may require.

As discussed more fully below, applying each of these factors to the violations at issue establishes that Florida Cities should be subject to only a minimum fine.

STATEMENT OF THE FACTS

This litigation concerns events at three wastewater treatment plants ("WWTPs") owned and operated by Florida Cities: Waterway Estates (near Fort Myers), Carrollwood (near Tampa), and Barefoot Bay (near Sebastian). Wastewater treatment plants are typically classified by the level of treatment applied to the incoming sewage. EPA and the state of

Florida have established the minimum (and most common) level of treatment as "secondary," meaning, inter alia, removal of at least 85% of conventional pollutants (total suspended solids. biochemical oxygen demand, fecal coliform, pH, and oil and grease) as well as removal of most bacteria.[2/]

All discharges to surface waters of the U.S. require a NPDES[3/] permit issued either directly by EPA or by a state to which EPA has delegated NPDES permitting authority (a "delegated" state). Between 1975 and 1995 Florida was one of the few "non-delegated" states under the CWA, which means Florida had not yet reached a formal agreement with EPA to administer the CWA permitting or enforcement functions for Florida waters. The practical impact of Florida's non-delegated status was that dischargers were required to undergo dual permitting and dual enforcement processes for each discharge: first a stringent permitting program administered by FDEP pursuant to state law, and second a largely duplicative (and frequently less stringent) NPDES permitting program administered by EPA's regional office in Atlanta, Georgia. EPA acknowledges that Florida maintains rigorous oversight of discharges into the state's surface waters and, in most instances, Florida's regulations are more strict than EPA's own regulations.

[2/] Such secondary treatment also removes approximately one half of total nitrogen and total phosphorus, which may act as nutrients in the receiving water. "Tertiary" treatment plants typically remove from 90 to 95 percent of conventional pollutants, and advanced wastewater treatment ("AWT") plants remove 97 percent of conventional sewage pollutants, as well as over 90 percent of nitrogen and phosphorous.

[3/] The CWA prohibits discharges to waters of the United States without a permit, the most common of which is granted under the National Pollutant Elimination Discharge System ("NPDES"), for which EPA is ultimately responsible. 33 U.S.C. § 1342, CWA § 402.

WATERWAY ESTATES

A) Discharge Without a Permit

Florida Cities has operated its Waterway Estates wastewater treatment plant ("Waterway Estates") under an NPDES permit since 1975, shortly after passage of the CWA first required such permits. At all times relevant to this case, discharges from Waterway Estates have been fully authorized by FDEP. Further, at all relevant times, both EPA and FDEP have overseen the operations at Waterway Estates with the full-blown regulatory regimes each agency imposes on a regulated facility. These regulatory regimes include requiring the submission by FCWC of monthly discharge monitoring reports ("DMRs") to EPA and monthly operating reports ("MORs") to FDEP giving detailed analyses of the effluent from Waterway Estates; regular inspections by each regulatory agency; and regular and routine contact between both regulatory agencies and the persons responsible for operating the facility. Indeed, except for the formality of having a document entitled "NPDES" permit in FCWC's files, there was no substantive difference in the facility's operations under EPA's authority or under FDEP's, nor did the day-to-day relationship of FCWC's operators differ in dealing with EPA or FDEP. Always, there were stringent and detailed regulatory requirements (such as interim effluent limitations) from each agency regarding the facility's operations, and at all relevant times the facility was in substantial compliance with those requirements.

EPA granted an NPDES permit for Waterway Estates effective August 15, 1975 (NPDES Permit No. FL0030325) and renewed this permit effective September 24, 1981 (FL0030325). Florida Cities applied for what should have been a routine renewal of this

NPDES permit on May 9, 1986. However, EPA Region IV permit writer Connie Kagey improperly denied the Florida Cities application, based on her erroneous and careless determination that FDEP had required, by issuing a "no discharge" waste load allocation ("WLA")[4/] in a 1981 FDEP planning document, that Waterway Estates cease discharging effluent into the Caloosahatchee River. Once the existing federal NPDES permit expired in January 1987 Florida Cities entered into Administrative Order 87-085 whereby EPA authorized Waterway Estates to continue discharging effluent under the terms of the now expired NPDES permit. Moreover, during this period Florida Cities continued to submit DMRs to EPA (and MORs to FDEP) and to work closely with both EPA and FDEP to find alternatives to discharge. During this period Waterway Estates was fully authorized by Florida to discharge into the Caloosahatchee River via a canal, and the facility was in substantial compliance with all of its state requirements.

Florida Cities received NPDES permit No. FL0030325 for Waterway Estates on September 29, 1989. The effluent limitations in this permit were for an AWT facility, whose more stringent effluent limitations EPA fully understood Waterway Estates could not physically satisfy until Waterway Estates upgraded its facility by constructing a new AWT plant. Such construction by necessity occurred while Waterway Estates continued to operate the existing secondary plant on the same small construction site where the AWT plant was being built. This complex feat was accomplished while remaining in substantial compliance

---

[4/] A waste load allocation is defined as that portion of a receiving water's loading capacity allowed to one of its present or future dischargers. "Loading Capacity" is the amount of pollution that a water body can receive and still maintain water quality standards. 40 C.F.R. §§ 130.2(f), 130.2(h) (1993).

with the secondary requirements throughout the construction period. At the same time EPA issued another administrative order, AO 89-109, which contained a construction schedule for construction of an AWT facility, a construction schedule for moving the plant outfall to the six foot contour line in the Caloosahatchee River, and interim secondary treatment effluent limits until the AWT construction was completed.

As noted above, CWA 309(d) lists six mitigation factors which this Court shall consider in determining any penalty. At trial, Florida Cities will present evidence addressing each of these factors, as summarized below.

1) Seriousness of the Violations

Plaintiff has already admitted that it has no evidence of environmental harm which occurred from discharge without a permit at Waterway Estates. (Plaintiff's Responses to Avatar Holdings' Second Set of Interrogatories, Number 3.) Additionally, Plaintiff has presented no credible evidence of any risk of harm which might have resulted from the discharge without a permit. This lack of risk of harm is further bolstered by the following factors.

First, EPA issued two administrative orders which authorized Florida Cities to continue to discharge secondarily treated effluent from January 1987 to October 1991. Although EPA could have placed higher limitations on the effluent, both of these administrative orders mandated that Waterway Estates meet the same effluent limitations as were contained in the facility's 1981 NPDES permit. EPA neither sought to enjoin Florida Cities from discharging secondarily treated effluent from Waterway Estates nor demanded that Florida Cities reduce the volume of its discharge. There is no indication in EPA's administrative record pointing to

any concern about the possibility of increased risk of environmental harm from the continuing secondarily treated discharges during the construction period.

Second, the secondary discharge from Waterway Estates was continuously authorized at all relevant times under FDEP permits and consent orders, which also contained strict effluent guidelines. At trial, FDEP officials Dr. Abdul Ahmadi (Administrator of Water Facilities, FDEP South District) and Ronald Blackburn (District Manager, FDEP South District) will testify that FDEP has no evidence that the treated effluent discharged from Waterway Estates caused any violations of Florida's water quality standards for the Caloosahatchee River.

2) Economic Benefit

The rates charged for treatment of wastewater by Florida Cities' are regulated by the Florida Public Services Commission ("PSC") or in certain jurisdictions within Florida by the county equivalent of the PSC. In order for a publicly regulated utility to obtain any return on its capital investments, the cost of these investments must be included in the utility's rate base. Any change in the rate base must be approved by the PSC which insures that FCWC's revenue and profit level are reasonable and "prudent." The PSC rate approval process mandates that any capital expenditure to be included in the utility's rate base must be reasonable. Until a capital improvement is "used and useful," a utility cannot include the cost of the capital improvement in the company's rate base.

The PSC's regulation of Florida Cities rates and profit margin sharply distinguishes this case from CWA cases involving private manufacturing or other industrial dischargers. In those cases, a defendant can receive immediate economic benefit from non-compliance with

the CWA by such methods as delayed capital expenditure or other costs of compliance. In contrast, a regulated utility such as Florida Cities will be guaranteed no return on its investment until improvements are included in the utility's rate base. Under this arrangement an investor-owned, private monopoly utility such as Florida Cities has no incentive to delay capital expenditures for environmental compliance. Unlike the majority of the private sector, a regulated private utility is guaranteed a return on its investment in environmental compliance but it must demonstrate to the PSC that its expenditures were reasonable.

In the present case Florida Cities will demonstrate that it did not receive any economic benefit as a result of discharging without an NPDES permit. During the 1987-1989 period at issue, Waterway Estates continued to discharge pursuant to the same effluent limitations and operated the plant in the same manner as when the NPDES permit was fully in effect. When it received its 1989 NPDES permit and accompanying AO, the facility was allowed to discharge at the same treatment levels as under the previous permit. Given that it could not include any costs of upgrading to AWT until these costs were included in the rate base, Florida Cities did not benefit from discharge without a permit.[5/]

3) History of Violations

There is no history of violations at the Waterway Estates facility which would support the imposition of any penalties. EPA's denial of Florida Cities' 1986 renewal application was

---

[5/] EPA's own calculations found in the Notes on Proposed Penalty Assessment at Barefoot Bay and Carrollwood demonstrate the Agency's valuation of discharge without a permit. Using its own economic benefit computer model ("BEN model"), EPA valued the discharge without a permit violations at Barefoot Bay to be $73.00 and $203.00 at Carrollwood. Given the facts surrounding Ms. Kagey's denial of the 1986 permit application, any economic benefit derived from the period between 1987 and 1989 should be de minimis.

based solely on EPA's misinterpretation of the 1981 WLA planning document issue and not on any history of violations. Additionally, the DMRs for Waterway Estates demonstrate that the facility consistently met and exceeded its treatment requirements. In contrast to the misleading image Plaintiff paints of Waterway Estates's discharging without a permit as a wanton disregard for the environmental authorities, Waterway Estates was always within the regulatory framework of both EPA's NPDES program and FDEP's stringent regulatory program. Florida Cities submitted monthly DMRs to EPA and worked closely with EPA and with FDEP during all relevant periods. During this time, EPA never raised any concerns about the manner in which Florida Cities had been operating Waterway Estates. Nor did EPA point to any history of violations during the 1986 permit denial process or during the 1988-1989 application process.

4) Good Faith Efforts To Comply with the Regulations

Once Florida Cities received the denial of its renewal application, it immediately began working with EPA in an attempt to find alternatives to discharging. Both Florida and EPA officials have testified and will testify that Florida Cities acted in good faith in finding alternatives to discharge.

5) Economic Impact of a Penalty upon Florida Cities

At trial Florida Cities will demonstrate that the company does not have the ability to pay a large penalty. As noted above, Florida Cities' rates, profit margin, and rate of return is regulated by the Florida PSC. Over the last several years the company has expended large amounts of capital to upgrade several of its facilities to AWT status. Until these improvements are completed the financial costs cannot be included in the rate base. The cost

of carrying these long-term capital improvements has placed a significant drain on the company's resources. Even Plaintiff's financial expert witness, Eileen Zimmer, acknowledges that Florida Cities has a negative net income for the last several years. The evidence which supports these factors will demonstrate that Florida Cities is unable to withstand a large penalty.

6) Other Factors which Justice May Require.

EPA's own regulations list only four reasons why the agency may terminate an NPDES permit:

1) noncompliance by the permittee with any condition of the permit;

2) the permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time;

3) a determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification or termination; or

4) a change in any condition that requires either a temporary or permanent reduction or elimination of any discharge or sludge use or disposal practice controlled by the permit (for example, plant closure or termination of discharge by connection to a POTW).

EPA failed to base its permit denial on any of these factors. In her deposition Ms. Kagey testified that she determined that Florida Cities did not have a wasteload allocation to discharge into the Caloosahatchee River. She based this determination on her review of a January 1981 FDEP study entitled "Caloosahatchee River Wasteload Allocation Documentation, Lee County, Water Quality Technical Series: Volume 2, Number 52" ("1981 WLA study"). But the 1981 study was merely a planning document which contained several

scenarios for future discharges to the Caloosahatchee River, and the "no discharge" scenario for Waterway Estates was never incorporated into a legal requirement in the facility's federal or state permits until EPA's mistaken 1986 denial of the NPDES permit renewal. To the contrary, for several years after 1981 Florida Cities had express authorization from both EPA and FDEP to discharge effluent from its Waterway Estates facility to the Caloosahatchee River via a canal. The fact that both FDEP and EPA granted discharge permits to Waterway Estates after publication of the 1981 WLA study demonstrates conclusively that neither EPA nor FDEP considered the 1981 WLA study to be a legal requirement.

In the 30(b)(6) deposition of the United States, both James Greenfield (EPA Region IV Wasteload Allocation\TMDL coordinator) and Roosevelt Childress (EPA Region IV Permit Section Chief) testified that Ms. Kagey improperly denied Florida Cities' permit renewal application and that she failed to follow EPA's regulations and guidelines as set forth in the Permit Writers' Guidelines. In her own deposition Ms. Kagey admitted that she never checked any other documentation or discussed the wasteload allocation with anyone else in Region IV. Instead, she recklessly denied Florida Cities application and set off a chain of events which have ultimately resulted in this lawsuit. Because Florida Cities lost its permit through no fault of its own, was completely regulated by EPA and FDEP during the entire time it did not have a permit, and received another discharge permit in 1989, the company should not be assessed any more than a de minimis penalty for these purely technical violations for which there is no risk of environmental harm.

B) **Discharge to an Unpermitted Location**

When Waterway Estates was constructed, the plant's outfall discharged to a tidally influenced canal adjacent to the Caloosahatchee River. This outfall was approved as the discharge point in both the 1975 and 1981 NPDES permits and the 1981, 1983, and 1988 FDEP permits. During the 1980s, FDEP began to require facilities which were discharging into the Caloosahatchee River and which were seeking to expand their capacity to move their outfalls to the middle of the river. In order to approve Florida Cities' 1989 NPDES permit, FDEP required that the plant outfall be moved to the six foot contour line in the Caloosahatchee River. (NPDES Permit FL0030325 was the first order which required Florida Cities to move the plant outfall.)

As discussed supra, EPA issued AO 89-109 on September 26, 1989. This AO authorized Florida Cities to continue to discharge into the canal until the outfall was relocated and set a construction schedule which mandated that the plant outfall must be operating at the six foot contour line by August 1, 1991. Despite construction delays caused by unexpected problems with rock in the river bottom, the outfall was in place and operating on July 14, 1991, over two weeks ahead the construction schedule contained in AO 89-109. Now Plaintiff seeks to recover $15,750,000.00 in penalties for discharge into the canal during the time when the AO 89-109 contemplated construction of the new outfall and authorized discharge at the old location in the canal. However, applying the CWA's six mitigation factors demonstrates that at best the Court should assess a minimal penalty.

1) Seriousness of the Violation

These violations are, at most, minor paper violations of NPDES Permit FL0030325. This permit, along with AO 89-109, contained the first EPA requirement for Florida Cities to move the outfall. As noted above, AO 89-109 contained a construction schedule for relocating the outfall. EPA, which had full control over the contents of the AO, never raised any concerns about the length of the construction schedule and was aware that Florida Cities completed, ahead of the construction schedule's deadline, the extension of the outfall to change the discharge location. Indeed, EPA never expressed any concerns at all about the process of moving the outfall until this lawsuit was brought.

2) Economic Benefit Caused by Non-compliance

At trial, Florida Cities will demonstrate that it gained no economic benefit from these violations. While there was technical non-compliance with the permit's implied discharge location, the company was discharging in accordance with EPA's AO 89-109. Once the company received NPDES Permit FL0030325 it immediately sought to begin construction of the new outfall. As noted above, Florida Cities exceeded EPA's construction schedule, placing the new outfall in service over two weeks ahead of schedule. Because Florida Cities met the requirements of AO 89-109, it received no economic benefit from these permit violations.

3) History of Violations, and 4) Good Faith Efforts To Comply with Regulations

Florida Cities does not have any history of such violations at this facility. The first requirement to move the outfall was contained in the 1989 NPDES # FL0030325. Both the 1975 and the 1981 NPDES permits allowed the facility to discharge into the drainage canal.

When it granted the 1989 permit, EPA was aware that the outfall must be moved from the drainage canal to the six foot contour line and provided a corresponding construction schedule, which was met by Florida Cities. This effort conclusively demonstrates Florida Cities' good faith.

CARROLLWOOD

A) Permit Exceedances

Florida Cities' Carrollwood wastewater treatment plant, which was located in Hillsborough County, began operation in the mid-1960s and was taken out of service on January 6, 1992. The plant was constructed as a secondary treatment facility and it discharged secondarily treated effluent into Sweetwater Creek. The violations at issue occurred between July 1991 and January 1992, during a period of time when the facility was being taken out of service. In order to place these violations into perspective, it is necessary to briefly review the facts surrounding Carrollwood's permit history.

In 1972 Hillsborough County ordered that Carrollwood be upgraded to achieve a treatment level of at least 90 percent of most pollutants, a treatment standard higher than ordinary secondary treatment facilities.[6/] Florida Cities completed this upgrade in 1975 and received an EPC permit which was valid until 1978. (Florida Cities also received its initial federal NPDES permit in 1975.) The EPC renewed the Carrollwood permit in 1978, but ordered Carrollwood to cease discharge by 1980 and connect with a county-owned regional

---

[6/] The Hillsborough County Environmental Protection Commission ("EPC") has responsibility to act in the place of FDEP for issuing and enforcing the state's permitting program for discharges to surface waters.

wastewater facility. However, when Florida Cities applied to the Hillsborough County Public Utilities Commission to connect with a county facility, the County responded that it would not have capacity to accept the Carrollwood influent until 1983.

The County's inability to allow Carrollwood to connect with a county facility left Florida Cities in a regulatory dilemma. Carrollwood's NPDES permit was set to expire in 1980. Florida Cities submitted a timely renewal application.[7/] As part of the permit approval process, EPA was required to seek state certification of the permit. Hillsborough County had ordered Carrollwood to connect with one of its facilities but at that time in 1980 the county could not provide capacity to treat Carrollwood's influent. Additionally, FDEP could not certify the permit. To further complicate matters, in 1972 the Florida legislature enacted the Wilson-Grizzle Act which barred future discharges into water bodies such as Sweetwater Creek. As a result, FDEP could not grant a wasteload allocation to Carrollwood to discharge into Sweetwater Creek and could not certify for EPA the 1980 NPDES permit application. In September of 1984 EPA denied Florida Cities NPDES permit renewal application.[8/] After EPA denied Carrollwood's renewal permit application, EPA issued AO 85-044 which authorized Florida Cities to continue to discharge into Sweetwater Creek until June 1987. Florida Cities also received FDEP authorizations to continue discharge to Sweetwater Creek until an alternative could be found.

[7/] EPA's regulations state that filing a timely permit renewal application allows the applicant to continue to discharge in accordance with the previous permit limitations until the application is accepted or rejected.

[8/] Between the date of the renewal application in 1980 and the date of the denial of the renewal application in September 1984, the terms of the 1975 NPDES applied under 40 C.F.R. § 122.6.

During the 1980s Florida Cities explored several options to the proposed connection with a Hillsborough County facility. For example, in 1983 Florida Cities negotiated with the City of Tampa and explored nearby reuse options to provide discharge alternatives, even though the 1983 and 1988 FDEP permits specifically required interconnection with Hillsborough County. The evidence presented at trial will demonstrate that an interconnection with the Tampa treatment plant was not economically feasible and would not have been considered reasonable by the PSC. Interconnection with Tampa would have required that Florida Cities' construct a 2.5 mile "forced main" pipeline and add capacity fees to the rate base. Florida Cities determined that these charges would not have been in the best interest of its customers, even in the unlikely event that the PSC approved them. Florida Cities also explored irrigation reuse on golf courses and in residential subdivisions. Neither of these options proved to be viable. Florida Cities pursued these other options even though it was unclear that any alternative would be approved other than what was expressly written into the state permit.

In 1987, the Florida legislature enacted the Grizzle-Figg act, which created an exception to FDEP's no-discharge policy.[9/] While Florida Cities continued to request connection with Hillsborough County which would completely eliminate any discharge, it also began the process of seeking approval to construct an AWT facility at Carrollwood, in order to preserve the new option of discharging under Grizzle-Figg. The Grizzle-Figg Act required potential dischargers to perform a study to determine the impact of AWT discharge on the

---

9/ Even though the statutory requirement for no discharge contained in the Wilson-Grizzle Act had been rescinded in 1980, FDEP retained a strong policy preference that discouraged surface water discharges and encouraged reuse.

designated receiving waters and to prove that the discharge would have a "minimal negative impact" upon the receiving waters if continued discharge were to be allowed.

Florida Cities hired Limno-Tech, Inc. to perform the environmental study on Sweetwater Creek. Limno-Tech received approval from FDEP for its plan, conducted the survey, and submitted the results to FDEP in June of 1989. FDEP asked for additional studies to be performed. Limno-Tech performed the supplemental studies and forwarded them to FDEP. FDEP approved the study on October 20, 1989 but informed Florida Cities that the final approval must come from Hillsborough County. Florida Cities applied for a state-granted AWT permit on November 9, 1989. FDEP, in conjunction with Hillsborough County, did not issue the construction permit for the AWT upgrade until July 30, 1990. (Florida Cities had already placed the project out for construction bids on July 26, 1990.) The company received the final bids on February 20, 1991. Once Florida Cities finally received its state approval the company was able to reapply for an NPDES permit.

Meanwhile, during the time that Florida Cities pursued AWT discharge, it continued to seek a connection agreement with Hillsborough County. In June of 1986, Hillsborough informed Florida Cities that it would not have capacity at any of its available facilities until at least the spring of 1988. On March 8, 1988 Hillsborough County informed the company in writing that it would not have capacity at any of its facilities until 1990.[10/] The county also gave notice for the first time that it would assess a capacity (connection) fee of $5 million.

[10/] Hillsborough's master wastewater treatment plan changed periodically throughout the 1980s as a result of changes in construction funding. During this period the county designated at least three different facilities for potential connection before finally choosing the Dale Mabry as the receiving facility.

For the 1000 customers at Carrollwood, this would have meant a charge of $5000 each, which would have translated into approximately $100 per month. Despite Florida Cities continued negotiations and objections to this extraordinarily high fee, Hillsborough County refused to drop the fee. In addition to the capacity fee, Florida Cities would be required to bear the cost of constructing the forced main pipeline to the Hillsborough facility. Together, these significant costs made the deal unacceptable to Florida Cities, particularly since it was unlikely that the PSC would have approved the extraordinary capacity fee.

In February of 1991 Hillsborough contacted Florida Cities about connection at the Dale Mabry station. After negotiations and intervention from the Hillsborough County Commission the county agreed to drop the $5 million connection fee. The county also agreed to pay for the majority of the costs of the force main pipeline which would connect Carrollwood to the designated Hillsborough facility. Once the significant obstacles of the capacity fee and construction costs were removed by Hillsborough County, the lengthy negotiations concluded within two months. An agreement in principle was reached by April 1991, and a formal interconnection agreement was signed with Hillsborough County on June 6, 1991. The forced main pipeline was constructed and became operational by January 6, 1992.

Throughout the 1980s, EPA was aware of Florida Cities' ongoing efforts to find alternatives to discharge. After the Carrollwood NPDES permit expired in 1984, EPA issued AO 85-044 which authorized continued secondary treatment discharge until June 1987. Pursuant to the administrative order, Florida Cities continued to file DMRs, and the facility was subject to regular EPA inspections, just as if it were under an NPDES permit. Florida Cities also continued to keep EPA apprised of the company's progress in finding a solution.

On July 30, 1990 FDEP issued a construction permit for an AWT facility, which permit was required if Florida Cities were to pursue the option of building an AWT facility in compliance with Grizzle-Figg. Florida Cities applied for an NPDES permit the next day. Recognizing Florida Cities' progress and its good faith efforts to resolve the problem, EPA issued AO 90-100 in September 1990, which authorized Carrollwood to continue to discharge secondary effluent from the facility.

Finally, recognizing that FDEP would only certify a permit for an AWT facility, in April 1991 EPA issued NPDES permit #FL0029319 which became effective on July 1, 1991 and required AWT. EPA issued this permit for an AWT facility even though the agency knew that it was physically impossible for Carrollwood to comply with AWT treatment standards until AWT construction was completed. EPA also knew that Florida Cities was discharging secondarily treated effluent, preparing to construct an AWT facility, and negotiating to connect with Hillsborough County. As early as April 1, 1991 -- immediately after an agreement had been reached with Hillsborough County -- Florida Cities requested relief from the effluent limitations of the forthcoming NPDES permit. Florida Cities repeatedly requested that the interim effluent limits and monitoring requirements of the AO remain in effect during the interconnection construction period. EPA's response to these repeated requests was to leave AO 90-100 (which authorized secondary treatment) active until March 1992, two months after the interconnection with Hillsborough had occurred and the discharge had ceased.

As discussed below, when the CWA's mitigation factors are applied to these facts, Florida Cities is confident that the Court will find any penalty to be de minimis.

1) Seriousness of the Violation

As with the other violations at issue, EPA admits that it has no evidence of environmental harm for these violations. Significantly, these violations are of the AWT standards in the new AWT permit, not violations of the secondary standards in AO-90-100. Although the plant was able to meet the AWT treatment levels in some instances, in general the plant was unable to meet these levels consistently. Had either EPA, FDEP, or EPC been concerned about any increased risk of harm from these discharges, any of these agencies could have withheld authorization to discharge. However, from July 1990 through January 6, 1991 each of these agencies continued to authorize Carrollwood to discharge secondarily treated effluent into Sweetwater Creek, which demonstrates that these regulatory agencies saw no risk of harm from the discharges.

2) Economic Benefit

Florida Cities respectfully refers the Court to its discussion of economic benefit contained in the Waterway Estates section which addresses regulated private utilities and rate base issues. Additionally, at trial Florida Cities will establish that it spent hundreds of thousands of dollars seeking alternatives to discharge at Carrollwood which it will never be able to recover through the rate base. These costs include the various Limno-Tech studies and associated costs as well as other engineering costs for these various alternatives. Thus, not only did Florida Cities fail to benefit from any noncompliance, it actually lost money in its vigorous efforts to respond to the regulatory dilemma created not by Florida Cities, but by the complex interactions of the various federal and state agencies.

3) History of Violations

The evidence is clear that there is no history of violations of AWT standards at the Carrollwood facility prior to the issuance of the AWT NPDES permit for the secondary treatment facility in 1991.

4) Good Faith Efforts To Comply with the Regulations

Florida Cities made good faith efforts to comply with the requirements of its NPDES permit and was able to meet the effluent limitations on some occasions. Moreover, at all times Florida Cities complied with the requirements of AO 90-100, which EPA kept active during the time that EPA knew the secondary treatment facility could not possible meet the new permit's AWT limits. EPA kept AO 90-100 in effect until March 6, 1992 when it informed Florida Cities that the company had fully complied with the administrative order and the Agency was "inactivating" the order.

5) Economic Impact of a Penalty upon Florida Cities

Florida Cities respectfully refers the Court to the discussion of this factor contained in the Waterway Estates section of this brief.

6) Other Factors which Justice may Require

The history of Carrollwood demonstrates that Florida Cities made every effort to resolve problems resulting from the discharge. As noted above, the actual NPDES violations were for a level of treatment beyond the physical capacity of the plant. No environmental harm occurred, EPA never sought to enjoin and discharge, and the plant was taken out of service six months after the NPDES permit was granted. Significantly, Plaintiff raised these

violations for the first time only in 1995 and now seeks to recover millions of dollars in penalties. The evidence will demonstrate that any penalty assessed should be de minimis.

BAREFOOT BAY

Florida Cities has operated the Barefoot Bay Wastewater Treatment Plant ("Barefoot Bay") since the early 1980's. Barefoot Bay has been fully authorized by the FDEP to discharge pollutants into an agricultural drainage ditch that leads to the Sebastian River roughly one mile downstream. On November 1, 1991 EPA issued to Barefoot Bay NPDES permit FL0042293 with certain effluent limitations. This Court has determined a total of 264 CWA violations at Barefoot Bay for violating the total residual chlorine limits (TRC"), toxicity failures, and reporting carbonaceous biochemical oxygen demand ("CBOD") instead of biochemical oxygen demand ("BOD"). Looked at in light of the CWA's mitigation factors, any penalty for these violations should be minimal.

1) Seriousness of the Violations

Plaintiff admits that it has no evidence of environmental harm which occurred from the violations at Barefoot Bay. (Plaintiff's Answers to Avatar's Second Set of Interrogatories, Number 3). Additionally, Plaintiff has presented no evidence of any risk of harm which might have resulted from the discharges at Barefoot Bay.

None of the violations at Barefoot Bay are serious. Beginning in September, 1992 the Barefoot Bay plant replaced its old DPD colorimeter with a new DPD colorimeter. Although the DPD colorimeter is approved by the Code of Federal Regulations and specifically allowed in the NPDES permit by EPA, the method is not accurate at levels below 0.1 milligrams per liter (mg/l). Indeed, in its own guidance, EPA recognizes the fact that the DPD colorimeter is

inaccurate below 0.1 milligrams per liter. Thus, compliance with the NPDES permit's limit of 0.01 mg/l could not physically be determined with accuracy by the very test method EPA had approved. To address this inconsistency, EPA has provided guidance instructing the discharger in these circumstances to report any measurements at or below 0.1 mg/l as "non-detect" or "ND." Thus, measurements using the DPD colorimetric method at or below 0.1 mg/l could have been properly reported as "ND" and been in full compliance with the NPDES permit limit of 0.01 mg/l. Significantly, during the period of time at issue (between September 1992 and April 1993), Barefoot Bay's measured values using this test method were at or below 0.1 mg/l. Had Florida Cities been informed by the EPA regulators of the Agency's own guidance, this guidance would have rendered these TRC "violations" as full compliance with the permit. For whatever reasons, EPA failed to communicate to Florida Cities this critical information regarding how to report such low readings on the DPD colorimeter, and Florida Cities' conscientious reporting of the numerical reading of this device resulted in its reporting incorrectly on its DMRs that TRC violations had occurred. Had Florida Cities been in possession of the EPA guidance, it would have reported "ND" for each of the TRC violations, and the TRC violations would not be before this court. The fact that Barefoot Bay could have reported "ND" or "non-detect" and been in compliance with its permit and the CWA demonstrates the minimal nature of these violations.

Likewise, the chronic toxicity violations are not serious. The chronic toxicity failures frequently occur as a result of nitrogen in the effluent in the form of either ammonia, nitrates or nitrites. Barefoot Bay's secondary treatment facility was not designed to remove any nitrogen, nor did EPA require nitrogen limits in the facility's NPDES permit. Thus, there is

some conflict between allowing nitrogen in the effluent, but limiting the consequent toxicity. Additionally, the chronic toxicity test is an extremely rigorous test, measuring both growth rate and mortality in the test species. What is surprising is the fact that Barefoot Bay was able to pass the toxicity test on several occasions, which is a testament to Barefoot Bay's diligent operations.

The BOD/CBOD violations are also not serious. The Code of Federal Regulations allows a facility to report CBOD instead of BOD. 40 C.F.R. § 133.102. The FDEP had required CBOD to be reported instead of BOD. The laboratory hired by Barefoot Bay measured CBOD, but mistakenly reported the results as "BOD." Both EPA and FDEP agreed that the CBOD results were in fact more appropriate, even though EPA's permit required the older measurement. After the mistaken reporting came to light, Barefoot Bay applied for a modification to its permit to report CBOD instead of BOD, just as FDEP required. EPA granted this modification in March 1994, thus recognizing that the CBOD numbers reported all along by Barefoot Bay were in fact the appropriate measurement parameter for this facility. Had the modified permit limits been in place earlier than March 1994, Barefoot Bay would have been in compliance with those limits. Thus, Barefoot Bay was at all times in full compliance with the CBOD limits that EPA determined, upon examination, were appropriate to have been imposed in the first place. There was no environmental harm from these violations. EPA just brought the requirements of its NPDES permit into conformity with those already in place from FDEP.

2) Economic Benefit

Florida Cities received no economic benefit as a result of the violations at Barefoot Bay for the same reasons stated above. The PSC retains full authority to regulate Florida Cities' rates and rates of return because Florida Cities is a utility monopoly. Free market industry is not regulated in this manner and may benefit from delaying compliance expenditures. Because the PSC will not include costs in the rate base until after a construction project is completed, there is no economic benefit for the delay of construction projects.

3) History of Violations

There is no history of violations for TRC, toxicity, or misreporting of CBOD measurements at Barefoot Bay. Barefoot Bay has paid penalties to EPA for discharge without a permit at Barefoot Bay. The fine was $6000 for roughly 5-years of discharge without a permit. In assessing this penalty, EPA indicated that the discharges had not caused any environmental harm and would have been in compliance with an NPDES permit, had one been in effect..

At all times since the mid-1980's, the Barefoot Bay plant has had authority from the State of Florida to discharge pollutants to the agricultural drainage canal. The state has required Barefoot Bay to investigate many options to cease the discharge, and Florida Cities has complied with those requirements. However, no option has proven feasible, and Florida Cities is now constructing an AWT facility at Barefoot Bay until the planned cessation of discharge through total reuse occurs by the required date of 1997.

4) Good Faith Efforts to Comply with the Regulations

Florida Cities has always dealt in good faith to comply with the CWA. For example, upon discovery of the TRC exceedance, Barefoot Bay identified and solved the problem within a matter of months. Likewise, upon discovery of a toxicity failure, Barefoot Bay has been super-aerating ("nitrifying") the effluent in a frequently successful effort to eliminate the nitrogen, even though the plant is not designed with that capability. Finally, upon discovery of the misreporting of CBOD, Barefoot Bay applied for a modification to the NPDES permit, which was granted in March 1994.

Not only has Florida Cities always dealt openly and in good faith with EPA, Florida Cities has also expended significant efforts and resources to investigate options so that all discharge to the canal can cease. Florida Cities has always been open and candid with EPA about the requirements imposed by the State of Florida.

5) Economic Impact of the Penalty upon Florida Cities

As stated above, Florida Cities does not have the ability to pay a significant penalty because of its recent capital improvements to its wastewater treatment plants. Because many of these capital improvements are not completed, the costs have not been passed through to the rate-payers. Florida Cities has had to finance large construction costs without reimbursement. Any further drain on the economic resources would hamper the company's ability to invest in capital improvements designed to protect the environment.

6) Other Factors which Justice Might Require

Throughout the relevant time periods, Barefoot Bay has been in compliance with the directives and authorizations of the FDEP. These authorizations have imposed effluent

limitations and protected the environment. Moreover, Florida Cities has expended great sums of money investigating the possibility of alternative disposal options in order to cease the discharge. In each instance, an approved alternative became hindered by sources outside of Florida Cities' control. Florida Cities should not be penalized for pursuing an option that was hampered by third party interference.

CONCLUSION

Although this Court has found Florida Cities liable for various violations of the Clean Water Act, the evidence at trial will demonstrate that at each facility in question, mitigating circumstances will significantly reduce the imposition of monetary penalties.

DEFENDANTS FLORIDA CITIES WATER COMPANY'S AND AVATAR HOLDINGS INC.'S JOINT MOTION IN LIMINE TO EXCLUDE THE TESTIMONY AND REPORT OF MARK J. KLINGENSTEIN

Please take notice that the Defendants Florida Cities Water Company ("Florida Cities") and Avatar Holdings Inc. ("Avatar Holdings") hereby file this motion in limine to exclude the report and testimony of Plaintiff's expert witness, Mark Klingenstein. Mr. Klingenstein's opinions, as expressed in his October 13, 1995 report and as set forth in his October 23, 1995 deposition, fail to meet the standard for expert opinions as set forth in Daubert v. Merrell Dow Pharmaceuticals, Inc., 113 S. Ct. 2786 (1993), in that these opinions are not stated to a reasonable degree of scientific certainty, are based upon flawed premises, and lack any factual or evidentiary bases. These opinions do not serve to assist the Court in understanding the evidence at trial. Therefore, the defendants respectfully request

that this Court grant this joint motion and exclude Mr. Klingenstein's report and any testimony based upon this report from the evidence presented at trial.

Respectfully submitted,

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS INC., Defendants.	)	CIVIL ACTION NO.: 93-281-CIV-FTM-21

DEFENDANTS FLORIDA CITIES WATER COMPANY'S AND AVATAR HOLDINGS INC.'S MEMORANDUM IN SUPPORT OF THEIR MOTION IN LIMINE TO EXCLUDE THE TESTIMONY AND REPORT OF MARK J. KLINGENSTEIN

Introduction

Defendants Florida Cities Water Company ("Florida Cities") and Avatar Holdings Inc. ("Avatar Holdings") submit this memorandum of law in support of their joint motion in limine to exclude the testimony and report of Mark J. Klingenstein. Mr. Klingenstein's report and his testimony fail to meet the standard for admissible expert testimony under the Federal Rules of Evidence and caselaw. Mr. Klingenstein is unable to state his opinions to a reasonable degree of scientific or engineering certainty, his opinions are based upon flawed and circular logical premises, and his opinions lack any factual or evidentiary basis. Consequently, Mr. Klingenstein's report and testimony fail the fundamental, threshold test required of expert testimony in that they do not serve to assist the Court in understanding the

evidence at trial. Mr. Klingenstein's report and his testimony are inherently unreliable and therefore this evidence should be barred.

Background

This case was brought by Plaintiff against Florida Cities and Avatar Holdings for Clean Water Act ("CWA") violations at three wastewater treatment facilities: Waterway Estates, Barefoot Bay, and Carrollwood. Plaintiff seeks civil penalties for the CWA violations under 33 U.S.C. § 1311(d) (CWA § 309(d)). In its orders of November 22 and December 21, 1995, this Court barred under the doctrine of res judicata all claims against both defendants for unpermitted discharges at Barefoot Bay and Carrollwood and for violations of the administrative order at Barefoot Bay. Additionally, the Court ruled that all claims against Avatar Holdings arising prior to May 5, 1995 are barred against Avatar Holdings by the applicable statute of limitations.

Mr. Klingenstein, who is an environmental engineer with the consulting firm of Science Applications International Corporation in Maywood, New Jersey, was retained by EPA to provide expert testimony in the present case. Mr. Klingenstein's report ("Report," produced to Defendants on October 13, 1995 and attached as Exhibit 1) contains opinions addressing 1) "the history and causes of that history, of FCWC's violation of the CWA and its NPDES permits at each facility; 2) the seriousness of FCWC's violations; and 3) the efforts made by FCWC, and those that should have been made by FCWC, to comply with the CWA and applicable NPDES permit limitations and requirements." Report at 1. The report concludes that Florida Cities operated the three wastewater treatment plants without valid NPDES permits for a "cumulative total" of "almost two decades." Report at 22. These violations are called "egregious" and "entirely avoidable." Id. Mr. Klingenstein

similarly finds the alleged NPDES permit violations to be "serious" and "largely avoidable." Id. Ultimately, Mr. Klingenstein concludes that "the only plausible explanation for FCWC's violations" is its "lack of respect for the CWA and the environment." Id. (emphasis added). However, as set forth below, Mr. Klingenstein's opinions fail to meet the requisite standard for expert opinions and are based solely upon shallow, conclusory analysis.

Legal Analysis

A. Standard for Admission of Expert Testimony

Pursuant to Fed. Rule Evid. 702, expert testimony is admissible to the degree it is helpful to the trier of fact in understanding the evidence. As Rule 702 states:

> If scientific, technical or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, a witness qualified as an expert by knowledge, skill, experience, training, or education, may testify thereto in the form of an opinion or otherwise.

In Daubert v. Merrell Dow Pharmaceuticals, Inc., 113 S. Ct. 2786, 2795 (1993), the Supreme Court held that expert testimony must be both reliable and relevant for it to be deemed admissible, and it is the trial court's responsibility to screen such evidence.[1] Contrary to the standard set forth in Daubert, Mr. Klingenstein's report and testimony contain irrelevant or baseless opinions that serve no useful purpose for the trier of fact. Large portions of his report address CWA allegations that have been dismissed and are no longer relevant to the issues in question. Moreover, Mr. Klingenstein's purported opinions

---

[1] In terms of reliability, an expert opinion must be supported by appropriate validation. Id. In terms of relevance, an expert opinion must "assist the trier of fact to understand the evidence or to determine a fact in issue" and must be able to be properly applied to the facts in issue. Id. The Eleventh Circuit has ruled that the admissibility of expert testimony is to be determined under the standards articulated in Daubert. Christopher v. Cutter Laboratories, 53 F.3d 1184 (11th Cir. 1995); U.S. v. Lee, 25 F.3d 997 (11th Cir. 1994).

on matters still at issue are unreliable because his opinions: 1) are not stated to the testimonial standard required for expert testimony. 2) are dubious because they are based on conjecture, erroneous, or unproven facts, and 3) are dubious because they are based on either unreliable scientific methodology or no methodology at all.

In sum, Mr. Klingenstein's testimony consists of a multitude of individually unreliable or irrelevant opinions that together form the basis of his ultimate opinion. When viewed in its totality, his opinions are especially misleading to the trier of fact and fail to meet the standard of admissibility for expert testimony.

B. Questionable Scientific Method

Under the standard articulated in Daubert, 113 S. Ct. at 2795, to the degree an expert's opinion is "scientific," the opinion must be based on reasoning or methodology underlying the testimony that is scientifically valid and that has in fact been properly applied to the facts in question. Moreover, scientific opinions must "speak in terms of probabilities instead of possibilities." Thomas v. Fag Bearings Corp., 846 F.Supp. 1382, 1394 (W.D. Mo. 1994) ("A scientific opinion that cannot establish a probability cannot be the basis on which a reasonable juror can find in favor of a proposition").

Mr. Klingenstein's testimony falls far short of this standard for scientific opinions. Overall, the testimony includes different kinds of opinions. Some are opinions of Florida Cities' operating procedures and, while within the scope of expert testimony, are not scientific in nature. Other opinions estimate the amount of environmental damage caused by the waste streams in question and are scientific in scope. Yet these opinions state mere possibilities rather than probabilities, and the bases for such opinions, if mentioned at all, are

dubious. At his deposition, and in his report, Mr. Klingenstein was unable to testify as to a reasonable degree of scientific certainty with regard to these opinions. Because such statements are inherently unreliable, and do not include an explanation of how the possibilities were derived, these statements should be excluded.

Examples of such statements include:

> • "FCWC's violations of the residual chlorine limits in its [Barefoot Bay] permit are particularly significant in light of the concern of the U.S. Fish and Wildlife regarding the endangered wood stork." Report at 12.

When questioned about the relationship between the Barefoot Bay permit exceedences and the wood stork, Klingenstein conceded he could not say with any reasonable degree of certainty that such a relationship existed. Kling. Dep. Tr. at 108.

> • "FCWC's exceedances of the toxicity limits likewise indicates that the plant's effluent had a toxic characteristic; this by definition increases the likelihood that the discharge negatively impacted organisms in the receiving water." Report at 12.

This statement speaks only to possibilities and not to any opinion to a reasonable degree of scientific certainty. Mr. Klingenstein's opinion is not based on any specific analysis of the relevant effluent data but rather it is merely a conclusion based upon circular reasoning.

> • "If FCWC had upgraded the Barefoot Bay plant to AWT status the toxicity violations might have been eliminated. Improvements in operation and maintenance . . . would have reduced the likelihood of the residual chlorine violations." Report at 18.

As with other sections of his opinion, Mr. Klingenstein states these opinions as mere possibilities and not probabilities. He points to no evidence which indicates that poor plant performance caused these violations. These statements are at best mere speculation which

does not meet the standards of scientific validity and certainty. Moreover, Florida Cities' permit did not require upgrade to AWT. Mr. Klingenstein's speculation that some hypothetical plant other than the plant which was permitted by EPA and FDEP might have satisfied the toxicity standard is therefore wholly irrelevant.

C. No Support or Misleading Support for Opinions

Mr. Klingenstein's report and accompanying testimony should also be barred because many of his opinions are not based on any identifiable methodology, analytical support, or logical reasoning. In order to determine the reliability of Mr. Klingenstein's opinions the Court must know the underlying basis of his opinions and what reasoning processes were used in forming the opinion. See U.S. v. 0.161 Acres of Land, more or less, 837 F.2d 1036, 1040 (11th Cir. 1988) ("An expert's testimony as to the value of condemned property is admissible provided the expert states the assumptions on which his opinion is based") (emphasis added).

Other courts have typically excluded expert testimony where the opinion is merely conclusive and lacks any basis in evidence. See Carrol v. Litton Systems, Inc., 1995 U.S. App. LEXIS 2015 (4th Cir. 1995) (upholding the exclusion of expert evidence when an expert failed to offer support for his conclusion); Viterbo v. The Dow Chemical Co., 826 F.2d 420, 422 (5th Cir. 1987) ("If an opinion is fundamentally unsupported, then it offers no expert assistance to the jury"); Thomas v. Fag Bearings Corp., 846 F.Supp. at 1393 ("Opinions of an expert need not be accepted when they are based on nothing more than personal opinion or belief").

Additionally, this Court should exclude elements of the Klingenstein testimony under Fed. R. Evid. 403 as being unfairly prejudicial, causing confusion, and being misleading. "Evidence is prejudicial under Rule 403 where it appeals to an illegitimate basis for persuasion, and thereby goes beyond proving the fact or issue it is offered to prove." 0.161 Acres, 837 F.2d at 1041. Following this line of thought, this Court must be skeptical of expert opinion not only where there is no support demonstrating the basis of that opinion, but also where the reasoning process is demonstrably illogical.

Mr. Klingenstein's opinion and testimony are also unreliable because of their transparent bias. "Without more than credentials and a subjective opinion, an expert's testimony that 'it is so' is not admissible." Viterbo, 826 F.2d at 423 (citing Perry v. U.S., 755 F.2d 888 (11th Cir. 1985).

The following examples demonstrate the inherent unreliability of Mr. Klingenstein's opinion.

> • "It appears that the Whole Effluent Toxicity Violations may have been partially due to pesticides in the plants [sic] effluent, and to the plant's disinfection practices." Report at 6.

This statement does not state its basis; moreover, at deposition Mr. Klingenstein conceded that he did not know if a laboratory had ever in fact detected pesticides at the plant in issue. Kling. Dep. Tr. at 76.

> • "FCWC's exceedances [at Waterway Estates] . . . appear to have been largely due to . . . construction-related factors. Incomplete nitrogen removal is a possible specific cause." Report at 10.

Mr. Klingenstein offers no basis for this statement: he does not identify what "construction-related factors" caused the delay, and he does not state any opinion to a reasonable degree of scientific certainty.

> • "FCWC's violation of the [Barefoot Bay] permit limits is significant in that the limits were intended to minimize the harm caused by the discharge into threatened water bodies until its termination by July 1995." Report at 12.

The conclusion that the violation at issue is "significant" is based purely on circular reasoning in that the goal of the permitting process and the individual limits contained in the permit limits justify Mr. Klingenstein's conclusion. Mr. Klingenstein does not rely upon any scientific data regarding the effluent itself or the receiving waterbody.

> • "The violation of the NPDES permit limits demonstrates that the continued discharge from the Carrollwood plant was not of sufficient quality to have a 'minimum negative impact.'" Report at 13.

This conclusion is also based on circular reasoning in that Mr. Klingenstein adopts a goal of the permitting process to rationalize his conclusion. Moreover, the next sentence is unsupported: "In particular, the frequent violations of the phosphorous and nitrogen limits resulted in the plant being an unacceptable nutrient load on the Upper Sweetwater Creek." Mr. Klingenstein ignores the fact that Carrollwood was also discharging pursuant to a corresponding EPA administrative order and FDEP consent orders which allowed secondary treatment. He identifies no specific data which supports this statement by linking the effluent from Carrollwood to any negative impact upon the receiving waters or quantifying the term "unacceptable nutrient load."

> • "This failure led to the plant performing below its capability . . ." Report at 13.

Mr. Klingenstein fails to identify how Carrollwood's failure to meet AWT effluent limitations is linked to the performance capability of a secondary treatment plant. In fact, he fails to define the phrase "below its capability." At his deposition Mr. Klingenstein used the term vaguely and admitted that he had not reviewed the plant's performance against its own design criteria. Kling. Dep. Tr. at 112.[2/] Therefore, the statement is confusing and misleading.

> • "Violation of the NPDES total nitrogen limit [at Waterway Estates] is significant in that even though the outfall had moved as of July 1991, the nutrient load to the receiving water was still above that determined by FDEP to be necessary for the protection of the Caloosahatchee." Report at 15.

Mr. Klingenstein categorizes these violations as "significant" only because these were violations of AWT standards, and not based upon any objective review of the effluent data or data regarding the river's water quality. Additionally, he fails to consider that Waterway

---

[2/] The deposition transcript cited reads as follows:

Q. What do you mean by the plant performing below its capability there in that paragraph?

A. I mean its capability of operating as best it possibly could have been.

Q. Was it being operated so as to comply with secondary treatment standards, to your knowledge?

A. At what point in time?

Q. During the ten years prior to its decommissioning?

A. Not having carried out in the sense of analysis, if memory serves me, that it had a history of noncompliance over the course of that ten years.

Q. Do the words below its capability mean less than secondary treatment?

A. Not in all cases.

Q. What else does it mean besides less than secondary treatment?

A. It means as taken at face value below the capability of the plant as operated. Even if that capability is better than secondary treatment, being operated as best it can be.

Q. In your judgment, did the Carrollwood facility perform worse that it was designed to perform?

A. I have not carried out an analysis of the plant's performance against the original designed criteria of that plant.

Estates was still authorized by FDEP to discharge secondarily treated effluent during this period of time. Mr. Klingenstein's circular reasoning provides no substantive information that would assist the Court in understanding the issues at trial. At his deposition Mr. Klingenstein testified that it was "possible," not probable, that the level of nutrient loading acceptable to FDEP had been exceeded. Because he was unable to testify to a probable violation of Florida's nutrient loading levels, his opinion regarding the seriousness of the violations is, at best, speculative. Kling. Dep. Tr. at 122.

> • "Overall, FCWC's unpermitted discharges and discharge at an unpermitted location [at Waterway Estates] constituted extremely serious violations of the CWA, in that those violations entirely circumvented the intent of the NPDES program." Report at 15.

This conclusion is not based upon any scientific analysis but merely upon Mr. Klingenstein's circular reasoning that because these NPDES violations exist, they are, therefore, "extremely serious" violations. A violation of the CWA is not "serious" simply because it is a violation--if that were true the CWA's requirement that this Court must consider the "seriousness of the violations" would be meaningless. The factual circumstances of the violation, not the mere existence of the violation, are to be considered to evaluate the seriousness of the violation. But this Mr. Klingenstein's report does not do. Mr. Klingenstein fails to take into account the fact that Waterway Estates was always authorized to discharge by FDEP and discharged under EPA administrative orders between 1987 and 1989. Mr. Klingenstein also ignores the fact that EPA did not order Florida Cities to move the outfall until 1989 and that the company met EPA's construction schedule as contained in the corresponding administrative order. Mr. Klingenstein's selective reading of the facts further demonstrates the pervasive bias present in his report and in his testimony.

* "FCWC operated three wastewater treatment plants without valid NPDES permits for a cumulative total of almost two decades. These egregious violations were entirely avoidable." Report at 22.

Mr. Klingenstein's use of the phrase "cumulative total" is misleading. Each of these facilities has its own distinct history. A "cumulative total" which does not explain or take into account the individual facility's history does not, in and of itself, support the conclusion that the violations were "egregious." This conclusion is patently subjective. It is followed by the factually incorrect overstatement that all violations were "entirely" avoidable. The entire statement demonstrates Mr. Klingenstein's bias in his analysis.

* "The only plausible explanation for FCWC's violations is that FCWC lacked respect for the CWA and the environment." Report at 22.

This conclusory statement is not the proper subject of an expert opinion. It is purely argumentative language which offers no guidance for the Court, but merely reflects the level and caliber of objective, scientific analysis which Mr. Klingenstein undertook in formulating his opinions.

In sum, the examples discussed above demonstrate that because the Klingenstein report contains statements that lack support and thereby do not provide the Court with a means for evaluating their reliability, these statements should be inadmissible. Moreover, because the report contains numerous instances of illogical reasoning, the opinions based on such reasoning are inherently unreliable and should be deemed inadmissible. Finally, because the report is obviously biased--an analysis that merely affirms a preconceived opinion--the report as a totality should be held to be inadmissible.

D. Opinions based on Erroneous Factual Assumptions

The Eleventh Circuit has ruled that when an expert opinion is based on erroneous facts it is to be excluded. U.S. v. 0.161 Acres of Land, more or less, 837 F.2d at 1040 ("Where an expert's testimony amounts to no more than a mere guess or speculation, a court should exclude his testimony . . . [b]ut where the expert's testimony has a reasonable factual basis, a court should not exclude it"). Because the Klingenstein report contains numerous factual assertions that are either erroneous or speculative, the opinions drawn from these facts are inherently unreliable and should be found inadmissible. The following examples demonstrate the unfounded and conclusory nature of Mr. Klingenstein's report.

> • "FCWC's Carrollwood Plant violated its permit limits, following the issuance of the NPDES permit in May 1991, largely due to the inadequacy of the technology in place at the plant." Report at 8.

This conclusion fails to take into consideration the fact that the permit was specifically written for an AWT facility, even though the permit writers knew that Carrollwood was a secondary treatment facility and even though EPA has acknowledged it fully understood that Carrollwood was a secondary treatment plant which would not be able to meet the AWT permit limits. Kling. Dep. Tr. at 82-83.

> * "In my opinion, the unpermitted discharge [at Waterway Estates] took place because FCWC failed to take seriously the requirement that it cease discharging at the Caloosahatchee River by the effective date of the permit denial." Report at 9.

This statement assumes erroneously the fact that FCWC was somehow aware of EPA's reasons for denial of the 1986 NPDES permit renewal application before the denial actually occurred such that FCWC could have taken action ahead of time to avoid the discharging at issue. Additionally, Mr. Klingenstein fails to explain how Florida Cities could

have developed alternatives to discharge between the time of the tentative permit denial and the final permit denial. Kling. Dep. Tr. at 86-87.

> • "The limitations in the permit which became effective on November 1, 1989 were as follows . . ." Report at 9.

This section of Mr. Klingenstein's analysis erroneously assumes that the permit limitations were the only federal CWA limitations imposed on the facility and fails to include consideration of the administrative order in effect at this time. Kling. Dep. Tr. at 93-94.

> • "FCWC needed to upgrade its treatment facility if it was to meet the limitations of its May 1991 permit [relating to Carrollwood]. It should have begun its upgrade in a timely fashion, so that it could comply with the permit when it became effective." Report at 20.

This statement demonstrates Mr. Klingenstein's failure to consider the impact of Florida law on Florida Cities' discharge alternatives, his failure to consider that Carrollwood was required by state permit to connect with a Hillsborough County facility, and his failure to consider the company's ongoing efforts to pursue alternatives to discharge.

> • "[North Fort Myers Utilities] indicated that it was willing to accept FCWC's flow and that it would have the capacity to do so by mid-1988. Furthermore, its letters also indicate that cost should not have prevented FCWC from connecting to NFMU. Had this option been seriously pursued by FCWC I believe that the transfer of flow and the cessation of canal discharge would have been possible in 1988, even given negotiations starting in 1987.
>
> Following receipt of EPA's permit denial in December 1986, FCWC carried out limited talks with NFMU, but FCWC rejected this option, in spite of continued interest and incentives from NFMU. Report at 21.

Mr. Klingenstein did not undertake any analysis of the actual costs to Florida Cities, or to its customers, associated with connecting to the North Fort Myers treatment facility. He does not offer any analysis of whether the Florida Public Service Commission (PSC) would have found these costs to be prudent. Mr. Klingenstein failed to make any

comparison between the costs of upgrading Waterway Estates and the cost to connect to North Fort Myers. At his deposition, Mr. Klingenstein admitted that he did not know whether the North Fort Myers' deep injection well was permitted--a requirement for this option to be viable. Kling. Dep. Tr. at 128-129. Additionally he relied only upon North Fort Myers' representations that it had the capacity to accept influent from Waterway Estates, rather than any independent analysis. Id.

* "FCWC could have avoided discharge to an unpermitted location [at Waterway Estates] by extending the outfall in a timely manner." Report at 21.

This statement fails to acknowledge the fact that such an extension would have required meeting numerous federal, state, and local regulatory requirements authorizing such an extension, and that such regulatory requirements would have taken a significant period of time to fulfill. Kling. Dep. Tr. at 132. Moreover, the statement fails to account for the fact that Florida Cities met the construction schedule as set forth in EPA's administrative order 89-109, which authorized discharge into the canal until August 1, 1991.

E. Irrelevant Opinions

In its Orders of November 22 and December 21, 1995, this Court ruled that Plaintiff's claims against Florida Cities and Avatar Holdings for unpermitted discharges at Barefoot Bay and Carrollwood, and for violations of the administrative order at Barefoot Bay, were barred by the doctrine of res judicata. The Klingenstein report, which was submitted prior to the Court's orders, contains numerous opinions addressing these dismissed allegations. See Klingenstein Report at 3-5, 6-7, 11-13, 16-18, 19-20. These opinions are irrelevant to the remaining violations at issue. More importantly, however, because these

opinions form part of the basis for Mr. Klingenstein's ultimate opinion, that opinion is inherently unreliable.

F. Overall Effect and Ultimate Opinion

In large part Mr. Klingenstein's testimony does not consist of helpful objective opinions, as required of a legitimate expert witness, but misleading, subjective statements. The overall effect is nothing short of telling the Court what conclusion to reach in this case, without setting forth the methodology upon which the Court might rely to reach any particular conclusion. Such a tactic, however, is precluded under the Federal Rules of Evidence. As the comments to Rule 704 make clear, an opinion that is tantamount to a verdict is inadmissible. The comment states:

> Under Rules 701 and 702, opinions must be helpful to the trier of fact, and Rule 403 provides for exclusion of evidence which wastes time. These provisions afford ample assurances against the admission of opinions which would merely tell the jury [or court] what result to reach, somewhat in the manner of the oath-helpers of an earlier day.

The Klingenstein report amounts to his "telling the [court] what result to reach." The report attempts to substitute expert testimony for the Court's own analytical process. As the comment notes, such opinions are merely a waste of the Court's time.

Conclusion

Mr. Klingenstein's report is biased, based upon shallow, suspect, or simply nonexistent analysis, and does not serve to assist the trier of fact. As demonstrated above, Mr. Klingenstein's opinions are frequently based on wrong, incomplete, or speculative facts. Moreover, the report repeatedly fails to demonstrate how Mr. Klingenstein has established the cause and effect relationships he asserts. Rather, he seeks to establish such relationships

through the use of illogical reasoning or through sheer speculation. When the cumulative effect of the individual statements is considered, together with the irrelevance of much of the report, the helpfulness of the testimony diminishes further. For all these reasons, Florida Cities and Avatar Holdings respectfully request that this Court grant their motion to exclude the expert report and testimony of Mark. J. Klingenstein.

Respectfully submitted,

By: _____

DEPOSITION OF MARK J. KLINGENSTEIN

Taken before Elsie Eaton, Notary Public for the State of Florida at Large, pursuant to Notice of Taking Deposition filed in the above cause.

EXHIBIT 2

option is needed.

Q. In determining whether or not an option is viable, do you consider the state or local permitting that might be required in order to implement an option?

A. I would consider that part of the technical viability.

Q. I direct your attention to Page 8 of your report, and after discussion of the exceedance at the Carrollwood facility, listing of them, the statement is made that the violations of permit limits following issuance of the NPDES permit in May of 1991 was largely due to the inadequacy of the technology in place at the plant; is that correct?

A. I believe that is a correct reading.

Q. What do you mean by inadequacy of the technology in place at the plant?

A. Of course, the Carrollwood plant was not there at the time I visited the site. So based on available records, my understanding of what the Carrollwood plant consisted of was basically a secondary plant with followed by a pond, and that, in my opinion, a plant of that general design would be unlikely to consistently achieve compliance with the limits that were included in the 1991 permit.

Q. That is because the limits in the 1991 permit applicable to the AWT facilities, rather than one that is secondary treatment?

MR. JACOBS: Objection to the extent the question calls for a legal conclusion by use of the word applicable. Also, I object to use of that term as vague and ambiguous.

A. I would certainly characterize those limits as being of a nature, of a magnitude or of a level, and for parameters such that I would expect a different configuration treatment plant would be necessary in order to consistently meet them.

Q. Would the AWT facilities, in your judgment, be expected consistently to meet these standards in the 1991 permit?

A. Assuming it was properly designed and depending on how you characterize AWT in the common use of the parlance for AWT, I would say that it would certainly be much more likely.

Q. The next section in this report deals with the Waterway Estates facility. I direct your attention to the last paragraph on Page 8, which discussed the denial of the NPDES permit renewal for the Waterway Estates facility in 1986, and states in the second sentence the basis for this denial was

Q. Could you tell me please what Florida Cities Water Company should have done when it was notified by the EPA in July of 1986 of the EPA's intent to deny the permit that would have reflected its taking seriously to the requirement it cease discharge?

A. Given that the wasteload allocation study had taken place in 1981, the fact that that was released following its completion, if I was in Florida Cities' position, I would have begun moving sometime prior to that to begin addressing the problem, based on the fact that stated wasteload allocation study, which is necessary for renewal of the permit clearly indicated there was not going to be a wasteload allocation for plants at the time it was discharging.

Q. Is it your opinion that Florida Cities was aware of this 1981 wasteload allocation prior to July of 1986?

A. I would expect they would have been.

Q. Can you tell me what the basis of that speculation is?

A. I would assume that they would have been aware that the survey was being carried out and would have been informed that the wasteload

allocation that was going to be carried out.

Q. Can you tell me the basis of your assumption that Florida Cities would have been aware that a survey was being carried out?

A. Simply that it would be in their best interest to maintain awareness of that sort of thing.

Q. Assuming for purposes of my question that Waterway Estates was not aware of the 1981 wasteload allocation until it was notified by the EPA of the agency's intent to deny the permit in July of 1986, what were the options, in your judgment, of Florida Cities, in other words, to take seriously the requirement that it cease discharge to the Caloosahatchee River?

A. Using that assumption, which was the Florida Cities, assuming that Florida Cities had no prior knowledge of that wasteload allocation that its first notification was intended denial notification from EPA, I would assume that they would make all possible efforts, immediately and aggressively investigate and pursue all available discharge options.

Q. Can you tell me what those alternatives might include?

entitled Violations of Permit Limits. It says limitations in the permit became effective November 1st, 1989. Are you aware of the administrative order that was in effect in 1989 for the Waterway Estates facility?

A. Whose administrative order?

Q. EPA's administrative order.

A. I am aware there were administrative orders.

Q. Did you review those administrative orders in determining when the limitations of the permit became effective?

MR. JACOBS: Read that question back.

(Whereupon, the pending question was read back by the court reporter.)

MR. JACOBS: Objection. Call for a legal conclusion.

A. No, Mr. --

MR. JACOBS: Assumes facts not in evidence.

BY MR. SCROGGIN:

Q. Have you, in fact, reviewed the administrative orders --

MR. JACOBS: Objection. Asked and answered.

BY MR. SCROGGIN:

Q. -- at the Waterway Estates facility?

MR. JACOBS: Objection. Asked and answered.

A. Yes, I have seen those administrative orders. I have not reviewed them in that context.

BY MR. SCROGGIN:

Q. On Page 10 of this report there are listed whole effluent toxicity. I am referring to the Waterway Estates facility and referring to violation of permit limits. There are listed violations of whole effluent toxicity for January, February, March, April, May, and June of 1992; is that correct?

A. Yes.

Q. That is of violations?

A. Yes. Well, six months, yes.

Q. Are you aware of testing requirements for whole effluent toxicity at the Waterway Estates facility?

A. That it is a requirement specified that the degrees that are lethal to 50 percent of the test organisms, in effect, must be greater than 100 percent concentration.

Q. Are you aware of how often testing for whole effluent toxicity is required in the NPDES

Q. And the second?

A. As well.

Q. All three of these, in your judgment, could be due either to ponds or the plant or both?

A. All three of these would contribute to the improvement of the performance of the plant and a reduction in problems that might have been the result of either problems in the mechanical plant or the pond.

Q. Now I will refer you to Page 21, which deals with Waterway Estates, and the section of Discharge Without a Permit.

MR. JACOBS: Counselor, if we go to a new section, I request we take just a quick break.

(Whereupon, a recess was had off the record.)

BY MR. SCROGGIN:

Q. I would like to direct your attention to Page 20 of the report, the section dealing with Waterway Estates and the options available that would allow Waterway Estates number of options to cease its discharge. The top page, 21, first part, deals with the connection with Fort Meyers utilities. Are you aware what kind of treatment system the North Fort Meyers facility had that would

have accepted the flow from the Waterways Estates facility?

A. I am not aware of the specific characteristics of that, other than, I believe, it disposed of most of its waste water by reuse, with a deep well as a back-up.

Q. Do you know when the deep well was permitted at the North Fort Meyers?

A. I don't specifically know when the deep well was permitted, no.

Q. Would it have been required that a deep well be permitted at the time of the hookup in order for this to be a viable option?

MR. JACOBS: Objection to the extent that question calls for a legal conclusion.

A. I don't know about that, Counselor. I do know North Fort Meyers characterizes that they had the capacity available in mid 1988.

BY MR. SCROGGIN:

Q. In your judgment, would that mean they have acquired all the amicable permits that would be required for the operation of the treatment facility to accept the flow from Waterway Estates?

A. That would certainly be the indication.

Q. Another option listed is spray irrigation;

Discharge to an Unpermitted Location, and the bottom of Page 21, the statement, "FCWC could have avoided discharge to an unpermitted location by extending the outfall in a timely manner."

Are you familiar with the regulatory approvals that are required in order to construct and extend the outflow of the Waterway Estates facility?

A. I am aware that permitting was required by the State of Florida, permitting was required from the U.S. Army Corp. Permitting was required, ultimately, from U.S. OPA, as well. If I recall correctly, some County permitting was required, construction related permitting was required.

Q. Is it your conclusion, based upon your review of all those requirements, that Florida Cities could have complied with all of those regulatory requirements in a more timely manner in order to move the outflow?

A. The records seem rather consistently to indicate Florida Cities could have initiated the processes earlier, and in making submissions, and perhaps they had could have been more complete or more careful in making those submissions, or if their consulting engineers were more careful, they

A. That actually would go to two pockets. One, if in fact there was a pesticide component, I would expect there would be partial association of that with solids in the plant's AWT status, I would expect further removal of solids might very well have had a corresponding impact and pesticides, therefore, toxicity.

Likewise, if toxicity was related to, for instance, ammonia in the plant's effluent, I would expect to upgrade to AWT if incorporated nitrogen removal would have had an impact on toxicity.

Q. Do you know if a laboratory, in fact, ever detected pesticides in this plant's influent?

A. I don't recall whether the document specifically referred to influent or -- I cannot recall the context.

Q. Can you tell me what experience you had with respect to whole effluent toxicity from such facilities?

A. The whole effluent toxicity tests has been incorporated into NPDES, and the State performs sometime now. And for a number of years, I have been directly and indirectly responsible for a program whereby we carry out inspections, as my company carries out inspections at the NPDES

Q. What do you mean by the plant performing below its capability there in that paragraph?

A. I mean its capability of operating as best it possibly could have been.

Q. Was it being operated so as to comply with secondary treatment standards, to your knowledge?

A. At what point in time?

Q. During the ten years prior to its decommissioning?

A. Not having carried out in the sense of analysis, if memory serves me, that it had a history of noncompliance over the course of that ten years.

Q. Do the words below its capability mean less than secondary treatment?

A. Not in all cases.

Q. What else does it mean besides less than secondary treatment?

A. It means as taken at face value below the capability of the plant as operated. Even if that capability is better than secondary treatment, being operated as best it can be.

Q. In your judgment, did the Carrollwood facility perform worse than it was designed to perform?

A. I have not carried out an analysis of the

mischaracterized the Witness' statement in the report.

BY MR. SCROGGIN:

Q. I will reword. Can you tell me the basis for the statement that the nutrient loads to the receiving water was still above that determined by the FDEP to be necessary for the protection of the Caloosahatchee

A. In carrying out wasteload allocations, the FDER had, in effect, determined what portion of each discharge, what portion of the available load was to be allocated to each discharge, and in making that determination, came up with the load factors that were ultimately used to develop the permit limits.

Q. Does this statement mean that, in your judgment, the load of nutrients to the Caloosahatchee River considered acceptable by the FDER had been exceeded?

A. Certainly when you exceed your permit limits, there is that possibility.

Q. But is that your interpretation with respect to the load of the river itself, not permit limits? Does the statement mean the nutrient load to the receiving water determined to be acceptable

Q. Let me read it again. This is with reference to the total residual chlorine limitation, sentence 23, "Failure to comply with this limitation certainly increased the risk of continued discharge impacting the endangered wood stork, as well as other aquatic organisms."

Have I read it correctly, now?

A. Yes.

Q. Can you say with a reasonable degree of scientific certainty there was, in fact, an impact on endangered wood storks posed by TRC exceedances at the Barefoot Bay facility?

A. Not with certainty.

Q. I will move on to Page 13, if I might. I am referring to the section that deals with Carrollwood and the subsection of discharge without a permit, and the last paragraph before the section labeled NPDES Permit Violations, FCWC discharge contributed to the depletion of oxygen levels and increased nutrients levels in the Sweetwater Creek downstream of discharge."

Given the condition of the Sweetwater Creek, is it likely that the Carrollwood plant effluent negatively impacted the creek? I will ask you, again, a similar question: Can you state with

ANALYSIS OF CLEAN WATER ACT VIOLATIONS BY FLORIDA CITIES WATER COMPANY, INC.

EXHIBIT 1

I. INTRODUCTION

I am a Senior Environmental Engineer with Science Applications International Corporation, located in Maywood, New Jersey. A copy of my current resume is attached to this report (Attachment A).

I have been retained by the United States to provide expert opinions on Clean Water Act (CWA) and National Pollutant Discharge Elimination System (NPDES) permit violations at three Florida Cities Water Company (FCWC) facilities: the Barefoot Bay Wastewater Treatment Plant in Barefoot Bay, Brevard County, Florida; the former Carrollwood Wastewater Treatment Plant in Tampa, Hillsborough County, Florida; and the Waterway Estates Wastewater Treatment Plant in North Ft. Myers, Lee County, Florida. I have been asked to offer opinions on 1) the history, and the causes of that history, of FCWC's violation of the CWA and its NPDES permits at each facility; 2) the seriousness of FCWC's violations; and 3) the efforts made by FCWC, and those that should have been made by FCWC, to comply with the CWA and applicable NPDES permit limitations and requirements.

My time in this case has been billed to the Government at an hourly rate of $97.80. I receive a straight salary from SAIC, and my personal compensation does not vary with the hours that I bill to this matter.

Cases on which I have provided testimony under deposition or in court in the preceding four years are as follows: U.S. vs. Weitzenhoff, et al (9/91), U.S. vs. TARACORP (1/93), and U.S. vs. Gulf Chemical (5/94).

In developing my opinions and in preparing this report, I reviewed various documents from US Environmental Protection Agency (EPA) , Florida Department of Environmental Protection (FDEP) (formerly the Department of Environmental Regulation or FDER), Hillsborough County Environmental Protection Commission (HCEPC), and AVATAR and FCWC files (Attachment B presents a listing of the files and documents reviewed). I also carried out inspections of the three FCWC facilities during the week of December 20, 1994; photographs (Attachment C) and a videotape taken during those inspections are attached to my report. Some of the opinions offered in this report may change, and additional opinions may be offered if additional information and data is reviewed.

II. BACKGROUND

Wastewater treatment plants use a variety of technologies to remove pollutants from wastewater so that it can be safely discharged to surface water, groundwater, or be reused. To ensure that human health and the environment are protected, and that each discharger treats its wastewater appropriately prior to discharge to surface waters, the CWA established the NPDES permit system. Under the NPDES system, every potential discharger must apply for and receive a permit prior to discharging. By requiring receipt of a permit prior to discharge, the NPDES system allows EPA to determine whether a receiving water has the capacity to assimilate a pollutant discharge, and if so, at what particular point in the water body and for what quantities of particular pollutants.

FCWC, a subsidiary of Avatar Holding, Inc., owns and operates eleven wastewater collection and treatment systems in Florida. FCWC discharged to surface waters for years without a permit at three of these facilities (See Exhibits 1,2, and 3 for the general location of these facilities), and when its discharges were permitted, those discharges often exceeded the limitations contained in the applicable

NPDES permits.

Barefoot Bay

The Barefoot Bay Development is a 5,000 lot mobile/modular home residential community which was developed by Avatar in the early 1970s. The original wastewater treatment plant consisted of an activated sludge system (a form of treatment which uses bacteria to breakdown and remove pollutants), with chlorine disinfection and disposal to on-site percolation ponds.

Percolation ponds are large unlined basins into which the treated wastewater is discharged. The treated wastewater percolates down through the bottom of the basin into the earth. Percolation pond disposal ordinarily does not require an NPDES permit because it does not result in a surface water discharge. At Barefoot Bay the two percolation ponds appear to have been designed to overflow via a pipe to a nearby drainage canal. This canal flows to the North Prong of the Sebastian River, which in turn discharges to the Indian River Lagoon. Both are considered to be threatened water bodies.

As development of Barefoot Bay took place and wastewater flow consequently increased, the capacity of the percolation ponds was exceeded. This led to regular, and soon continuous discharge from the ponds to the canal. These discharges to the canal (and hence to the Sebastian River and Indian River Lagoon) began no later than 1980, and continued unpermitted until 1991. In addition to its unpermitted discharge of wastewater, FCWC also violated the limitations in an AO and the NPDES permit. It is my understanding that at the present time, FCWC continues to discharge approximately one half million gallons per day to the canal.

Carrollwood

FCWC acquired the Carrollwood service area in 1965. As of 1990, the Carrollwood Service Area included between 3,500 and 3,900 residents.

Wastewater from the residences in this area was treated at the Carrollwood Wastewater Treatment Plant and discharged to the Sweetwater Creek until January 1992, when the wastewater was routed to the Hillsborough County collection system for treatment at the County's treatment plant. FCWC held a NPDES permit for this discharge until October 1984, when EPA denied the Company's NPDES permit. FCWC then discharged daily without a permit until July 1, 1991 when a NPDES permit was again issued. From July 1, 1991 until the tie-in to the Hillsborough County collection system in January 1992, FCWC regularly violated a number of the permit limitations.

Waterway Estates

The Waterway Estates Service Area was acquired by FCWC in 1967. The population served has increased from approximately 3,000 in the mid-1970s to approximately 9,000 in the early 1990's.

Until 1991, the Waterway Estates plant discharged to a canal which is tributary to the Caloosahatchee River, at a point approximately 800 feet from the mouth of the canal on the Caloosahatchee River. In 1991 FCWC undertook an upgrade of the plant, and extended its outfall some 2,600 feet into the Caloosahatchee River to the 6 foot mean depth contour line. The outfall extension was put in service in July 1991, and the upgrade was completed by early 1993.

From January 9, 1987 until November 1, 1989, 1989, FCWC discharged daily from the Waterway Estates treatment plant without a NPDES permit. From the issuance of a NPDES permit effective November 1, 1989, until July 1991, FCWC discharged at an unpermitted location. Furthermore, FCWC violated the limitations contained in the NPDES permit.

III. OPINIONS:

At each of the three plants which are the subject of this report, FCWC has failed to comply with the CWA requirement that all discharges to surface water must be permitted; also, FCWC frequently violated the conditions and limitations in its NPDES permits (when obtained) and in an AO.

1. HISTORY AND CAUSES OF CWA, AO AND NPDES PERMIT VIOLATIONS

Barefoot Bay

FCWC discharged wastewater from the Barefoot Bay Wastewater Treatment Plant to surface water without a permit, and violated the conditions and limitations contained in an EPA Administrative Order (AO) and in the NPDES permit.

i) ***Discharge Without a Permit:***

FCWC discharged to surface waters without a NPDES permit from the Barefoot Bay Wastewater Treatment Plant beginning no later than 1980 and continuing to November 1, 1991. A chronology developed by FCWC for Barefoot Bay indicates that FCWC was aware of problems in the percolation ponds operation as early as 1981, and in deposition, L. Good of FCWC indicated that overflows to the canal were occurring daily by 1983. Furthermore, a purchase request dated 9/1/83 for engineering studies of land application disposal at Barefoot Bay noted that "the existing percolation ponds in Barefoot Bay are not adequate to accommodate existing and future discharge". Sewage flow from the Barefoot Bay Development to FCWC's Treatment Plant increased through the 1980s. In his deposition, L.Good indicated that flow to the canal in 1983 was 100,000 to 150,000 gallons per day. A 1985 Barefoot Bay Effluent Disposal Study noted that **"effluent is being discharged from the ponds to surface waters in violation of existing permits"**. As that study shows, the population in Barefoot Bay grew throughout the 1980's; flow to the treatment plant, and discharge to the canal both grew as well.

Based on FCWC's own information, the average discharge to the canal, by year, was as follows:

Year	Average Flow, gallons per day
1987	502,000(August through December)
1988	348,000
1989	375,000
1990	421,000
1991	518,000

In spite of having a known, unpermitted discharge to surface water since the early 1980's, FCWC failed to apply for an NPDES permit for the discharge to the canal, as required by EPA regulations (40 CFR Part 122.21), until 1990.

EPA issued an NPDES permit for FCWC's discharge which became effective on November 1, 1991 and required cessation of discharge to the canal by June 30, 1995.

ii) **Violations of Administrative Order Limits:**

On September 26, 1990, USEPA issued an AO, which included the following interim limits:

Parameter	Mo. Average (mg/l)	Daily Max.(mg/l)
BOD	20 mg/l	30 mg/l
TSS	20 mg/l	30 mg/l
Fecal Coli.	200 /100 ml	400 /100 ml
pH 6 - 8.5		
D.O minimum 5 mg/l		

A summary of FCWC's violations of the AO limits is as follows:

BOD, Monthly Average Limit:October 1990

BOD, Daily Maximum Limit: October 1990

TSS Daily Maximum: November 1990, January 1991, February 1991, March 1991, April 1991, May 1991, June 1991

Fecal Coliform Daily Max.: October 1990, November 1990, October 1991

D.O. Minimum Limit: May 1991

pH Range: November 1990

As can be seen from above, FCWC experienced at least one violation of the AO in 9 of the 12 months the AO limits were in effect.

The Barefoot Bay Wastewater Treatment Plant's AO limit exceedances appear to have been the result of poor operations and inadequate staffing. FDEP inspections in the late 1980's noted poor operations, including solids loss from the clarifier, treatment units in need of maintenance, and no certified operator at plant (as required by FDEP). Solids loss is often the result of inadequate control of the activated sludge process, and directly results in TSS and BOD violations. A December 10, 1989 Brevard County inspection noted sludge carryover from the clarifier, solids accumulated in the chlorine contact tank, and weeds and dirt at the top of the chlorine contact tank.

An April 25, 1991 FCWC internal memo described the accumulation of sand in the bottom of the treatment units. The memo notes that in some spots the sand was 5 feet deep. Furthermore,

the memo estimated total loss of treatment unit volume of "20%", and opined that this condition "contributed to short circuiting and loss of aeration detention time".

Shortcomings in FCWC's attention to proper operations and staffing of the plant were also described in a memo from J. Karleskint to G. Allen, dated April 22, 1991 following a visit to the Barefoot Bay Plant. Karleskint found that "the wastewater treatment plant is not consistently meeting the effluent limits the past month" (apparently March 1991). This was attributed to staffing difficulties. "The Division has been utilizing the water operators at the wastewater plant due to insufficient staffing." In that same memo, Karleskint also noted a "need to optimize the treatment process and develop a standard operating procedure for the treatment plant."

Lack of a standard operating procedure is a significant failing for an activated sludge treatment system. Any plant so operated may experience intermittent loss of biological solids (the mass of bacteria in the activated sludge process). These solids are directly reflected in the effluent TSS concentrations, and in the BOD_5 concentrations as well (solids exert a biological oxygen demand). Likewise, solids accumulations in the chlorine contact chamber will negatively impact disinfection, resulting in violations of the fecal coliform limits.

FCWC appears to believe that many of the AO violations were the result of pond operating characteristics. To the extent that was true, it likewise reflects poor operation of the ponds.

In summary, the violations of the AO could have been eliminated if plant operations and maintenance had been improved. Overall, the violations of the AO were the result of FCWC's failure to cease discharging in a timely manner.

iii) **Violations of NPDES Permit Limits:**

The NPDES permit which became effective on November 1, 1991, included the following limitations on the discharge to the canal:

Parameter	Annual Avg.	Mo. Avg.	Daily Max.
BOD	20 mg/l	30 mg/l	60 mg/l
TSS	20 mg/l	30 mg/l	60 mg/l
Fecal Coli.	200 /100 ml	-	800 /100 ml
Tot. Res. Cl			0.2*/0.01
pH 6 - 8.5			
Whole Effluent Toxicity: NOEC > 100%			

* During first 3 months the permit was in effect

A summary of FCWC's exceedances of the NPDES permit limits is as follows:

Whole Effluent Toxicity: September 1992, October 1992, May 1993, February 1994

Total Residual Chlorine

Daily Max.: September 1992, October 1992, November 1992, December 1992, January 1993, February 1993, March 1993

FCWC also failed to report BOD_5 as required by its permit. Instead, FCWC incorrectly reported $CBOD_5$ data as BOD_5 data on its DMRs from November 1991 through June 1993, and in November 1993.

As can be seen from above, FCWC experienced at least one violation of its NPDES permit in 9 of the first 17 months the permit was in effect.

It appears that the Whole Effluent Toxicity Violations may have been partially due to pesticides in the plants influent, and to the plant's disinfection practices. If the plant been upgraded to Advanced Wastewater Treatment (AWT) status, compliance with the toxicity limits might have been achieved (AWT treatment provides for higher levels of removal of certain pollutants).

Total residual chlorine limitation violations were likely at least in part the result of either limitations in the chlorination and/or dechlorination chemical feed systems, the manner in which those systems were operated, or delays in the installation of such systems.

Overall, the violations of the permit were also the result of FCWC's failure to cease discharging in a timely manner.

Carrollwood

FCWC operated the Carrollwood Wastewater Treatment Plant for years without an NPDES permit. When such a permit was obtained, FCWC then violated the specific limitations contained in that permit.

i) **Discharge Without a Permit:**

FCWC operated the Carrollwood Wastewater Treatment Plant with a surface water discharge, without an NPDES permit from November 1, 1984 until July 1, 1991. Throughout this period, FCWC discharged to the Upper Sweetwater Creek on a daily basis.

EPA issued FCWC a NPDES permit in 1975. In October 1979, FDEP informed FCWC that there was zero wasteload allocation for the Carrollwood Plant in Sweetwater Creek. Despite having knowledge that Sweetwater Creek had no capacity to accept its discharge, in May 1980 FCWC applied to EPA for an NPDES permit for its surface water discharge. In a July 30, 1984 letter to FCWC, EPA tentatively denied the permit. The basis for the denial was the 1979 FDEP finding of no wasteload allocation at the point of discharge. EPA formally denied the permit in a letter dated September 27, 1984.

State legislation, known as Grizzle-Figg, took effect in 1987, allowing dischargers to certain water bodies with limited or no wasteload allocation to petition for discharge permits if a "Minimum Negative Impact" (MNI) could be demonstrated and if AWT treatment was provided. FCWC submitted an MNI Report in June 1988 to FDEP. FDEP initially notified FCWC of its intent to deny FCWC's petition for MNI status, but later agreed to grant such status following the submission of additional information.

In July 1990, FCWC applied again to EPA for an NPDES permit. On May 28, 1991, EPA issued

a NPDES Permit for the Carrollwood Plant, which became effective July 1, 1991. The Carrollwood plant discharged under this permit (but not in compliance with its limits, as is discussed below) until January 1992 when the plant was taken off line and all flow was diverted to Hillsborough County's wastewater treatment plant. FCWC discharged without a permit at its Carrollwood Wastewater Treatment Facility for so long because FCWC refused to make suitable arrangements to cease its discharge. Instead, FCWC was determined to connect to Hillsborough County, but failed to obtain a firm commitment from the County to accept the Carrollwood wastewater until 1991.

FCWC had viable options available that would have allowed it to cease the Carrollwood surface water discharge, but FCWC failed to seriously pursue those options.

ii) **Violations of Permit Limits:**

EPA issued a NPDES Permit for the Carrollwood Plant which became effective July 1, 1991. This permit included the following discharge limitations:

Parameter	Annual Avg.	Mo. Avg.	Daily Max.
CBOD,	-	3.0 mg/l	4.8 mg/l
TSS	5 mg/l	6.25 mg/l	10.0 mg/l
Tot. Phos.	1.0 mg/l	1.25 mg/l	2.0 mg/l
Tot. Nitrogen	3.0 mg/l	3.75 mg/l	6.0 mg/l
Ammonia Nitrogen	-	-	0.3 mg/l*
Fecal Coli.	-	0/100 ml**	25 /100 ml
Tot. Res. Cl			0.01 mg/l

pH 6 - 8.5
D.O minimum 6.0 mg/l

* After February 1, 1993
** No more than 25 % may exceed in a 30 day period.

A summary of FCWC's exceedances of the NPDES permit limits is as follows:

CBOD, Monthly Average Limit:	October 1991
CBOD, Daily Maximum Limit:	July 1991, October 1991
TSS Monthly Average:	October 1991, November 1991, December 1991
TSS Daily Maximum:	October 1991, November 1991, December 1991
Tot. Nitrogen Monthly Average Limit:	July 1991, September 1991, October 1991, November 1991
Tot. Nitrogen Daily Maximum Limit:	July 1991, September 1991, November 1991

Tot. Phosphorus Monthly Average Limit:	July 1991, August 1991, September 1991, October 1991, November 1991
Tot. Phosphorus Daily Maximum Limit:	July 1991, August 1991, September 1991, October 1991, November 1991
Fecal Coliform Daily Max.:	July 1991, August 1991, October 1991
Tot. Residual Chlorine Daily Max.:	July 1991, August 1991, September 1991, October 1991, November 1991, December 1991

As can be seen from above, FCWC experienced at least one violation of its NPDES permit in every month the permit was in effect, prior to cessation of discharge.

FCWC's Carrollwood Plant violated its permit limits, following the issuance of the NPDES permit in May 1991, largely due to the inadequacy of the technology in place at the plant. The Carrollwood WWTP was an activated sludge plant with a polishing pond. A plant of this general design would be unlikely to consistently achieve the limits for $CBOD_5$ and TSS contained in the May 1991 permit. Furthermore, plants of this type are not designed to effect phosphorus and nitrogen removal; thus it is equally unlikely that the plant could have met the limits for those parameters.

Overall, the violations of the permit were the result of FCWC's failure to cease discharging in a timely manner.

Waterway Estates

FCWC discharged from the Waterway Estates Plant for almost 3 years without a NPDES permit. Once FCWC obtained a permit, it continued to discharge at an unpermitted location, and committed a number of permit violations.

i) **Discharge Without a Permit:**

USEPA issued FCWC an NPDES Permit for the Waterway Estates Plant; effective from September 24, 1981 to September 24, 1986. During this period of time the effluent from FCWC's plant was discharged to a canal leading to the Caloosahatchee River. This permit named the Caloosahatchee River as the receiving waters.

On May 9, 1986 FCWC applied for renewal of the Waterway Estates NPDES Permit. On June 30, 1986 EPA responded with a tentative denial. The basis for this denial was the 1981 Wasteload Allocation Study by FDEP which had concluded that no discharge allocation existed for the canal. On December 8, 1986 EPA issued a formal denial of the Waterway Estates permit which was effective January 9, 1987. In spite of the denial, FCWC continued to discharge without a permit on a daily basis from the Waterway Estates Plant to the canal until a new NPDES permit authorizing it to do so took effect November 1, 1989.

In my opinion, the unpermitted discharge took place because FCWC failed to take seriously the requirement that it cease discharging to the Caloosahatchee River by the effective date of the permit denial. FCWC did not aggressively pursue a solution, even though at least two solutions were available. Rather, FCWC seems to have assumed that it would fail to meet deadlines and that extensions would be granted by the regulatory agencies.

Furthermore, FCWC failed to avail themselves of the opportunity to connect to the North Fort Myers Utility Company (NFMU), an available option which would have allowed cessation of discharge prior to August 1988. Correspondence after this date indicates that FCWC decided that plant upgrade and relocation of the outfall were the best choice, nominally for cost reasons; however, the assertion that cost prevented FCWC from connecting to NFMU is not consistent with the record. NFMU indicated that it could provide service to Waterway Estates for $3.6 million or less (competitive with FCWC's actual costs on the upgrade and outfall extension). A November 27, 1991 FCWC memo from Gordon to Levy provides an indication of another possible motivation for FCWC's rejection of NFMU's offer. NFMU's financial health and need to sell capacity was discussed, and a recent balance sheet for the utility was attached. It appears that FCWC did not want to yield its customers to its competitor.

ii) **Discharge at an Unpermitted Location:**

From the effective date of the permit, November 1, 1989, until July 1991, FCWC discharged at an unpermitted location. The permit provided for discharge at the 6 foot contour line in the Caloosahatchee River from its effective date, and FCWC's discharge continued into the canal until the new outfall was put in service in July 1991. The two points are approximately one half mile apart, the old point was approximately 800 feet up a relatively narrow canal, while the new point is over 500 yards out in the broad Caloosahatchee River. The continued discharge at an unpermitted location was the result of FCWC's failure to act in a timely fashion.

FCWC could have extended its outfall in a more timely fashion. FCWC's failure to do so was the result of its apparent reluctance to press forward to a solution with all possible speed. FCWC moved too slowly in accomplishing virtually all necessary aspects of the project.

As noted above, EPA tentatively denied the permit in June 1986, and formally denied the permit in December 1986. A FCWC consultant recommended upgrade and extension of the outfall as the best alternative in August 1987. In spite of all this, FCWC didn't select a contractor to carry out the extension until 1990, and didn't complete the extension of the outfall until July 1991.

iii) **Violations of Permit Limits:**

The limitations in the permit which became effective on November 1, 1989 were as follows:

Parameter	Annual Avg.	Mo. Avg.	Daily Max.
BOD_5	20.0 mg/l	30.0 mg/l	60.0 mg/l
TSS	20.0 mg/l	30.0 mg/l	60.0 mg/l
Tot. Phosphorus	-	0.5 mg/l / 4.2 lb/d	-
Tot. Nitrogen	-	3.0 mg/l / 25.0 lb/d	-
Fecal Coliform	200/100 ml		800/100 ml
pH 6 - 8.5			
D.O minimum 5.0 mg/l			
Whole Effluent Tox: LD_{50} - > 100%			

A summary of FCWC's exceedances of the NPDES permit limits is as follows:

Whole Effluent Toxicity: January 1992, February 1992, March 1992, April 1992, May 1992, June 1992

Total Nitrogen Mo. Avg.: July 1991, August 1991, September 1991, October 1991, November 1991, December 1991, January 1992, February 1992, March 1992

FCWC's exceedances of the Whole Effluent Toxicity limits appear to have been largely due to less-than-optimal treatment caused by construction-related factors (during construction only one biological unit was online for a period of time). Incomplete nitrogen removal is a possible specific cause.

The cause of the total nitrogen limit violations was FCWC's failure to complete the plant upgrade in a timely fashion. The second biological treatment unit went online in March 1992, and while other construction continued after that date, it is apparent that construction-related plant limitations played a major role in FCWC not meeting the nitrogen permit limit.

2. SERIOUSNESS OF FCWC's VIOLATIONS:

FCWC's violations were serious both from the standpoint of general disregard for compliance with the CWA and the NPDES system, and for the site-specific threat posed by each individual discharge.

The CWA specifically requires the permitting of all point discharges so that EPA can limit pollutant loads to levels that the water body can assimilate without suffering unacceptable degradation. Discharge without a permit totally precludes EPA's control of a pollutant load to the receiving waters. For this reason, the requirement to permit is a very important component of the CWA. Likewise, if dischargers exceed the limitations in their permits, unacceptable degradation of the receiving waters is also possible. In either case, the goal of the CWA, to protect and restore the Nation's waters, is compromised.

Barefoot Bay

i) Discharge Without a Permit:

FCWC's discharge at Barefoot Bay without a permit posed a threat to water quality on general grounds for the reasons described above. However, the Barefoot Bay unpermitted discharge was made even more serious by the sensitive nature of the receiving waters.

The Florida legislature enacted the Surface Water Improvement and Management Act in 1987 to address the degradation of a number of surface water systems in the State of Florida; one of the threatened water bodies identified within the Act was the Indian River Lagoon system.

To provide guidance for efforts to restore the Indian River Lagoon, the Indian River Lagoon Surface Water Improvement (SWIM) Plan (updated September 1994) was developed. This Plan rated the various sub-basins in the system as to "criticality" on the basis of degradation and environmental significance. The Sebastion River Watershed, to which Barefoot Bay WWTP discharges, was ranked as one of the three (out of 19) most critical areas in the Indian River Lagoon System. This is an indication of the sensitivity of Barefoot Bays' receiving waters, and the likelihood that Barefoot Bays' unpermitted discharge contributed to the degradation of its receiving waters.

In fact, the state of the Indian River Lagoon was such that in 1990, a bill was passed which both prohibited new sewage treatment discharges into the Indian River Lagoon system, and required the elimination of existing sewage discharges by July 1, 1995. The elimination of all sewage discharges into the Lagoon System was deemed important enough that only three limited exceptions were allowed.

In Barefoot Bay's case, its receiving water , the North Prong of the Sebastian River, is identified by the September 1994 Plan (in Appendix B) as not meeting its designated water quality (Class III) standards. The Plan assumes that all wastewater treatment plants discharging to the Indian River System will be halted, and it specifically identifies the Barefoot Bay WWTP discharge as contributing to the nutrient load problem, and as being halted as part of the solution to that problem.

The Barefoot Bay unpermitted discharge was, in light of the above considerations, a serious violation of the CWA. It contributed pollutants of concern to water bodies recognized as seriously threatened, and therefore contributed to the degradation of those water bodies.

ii) Administrative Order Violations:

FCWC's violations of the BOD_5 and TSS limits means that not only was the Barefoot Bay a discharge into an overloaded water body, but that discharge was of poor quality as well. As such, it contributed more pollutant load to the North Prong of the Sebastian River, and to the Indian River Lagoon than it would if it had met those limits. Likewise violations of pH and minimum D.O. can have significant impacts on aquatic organisms in the receiving waters.

Violations of the fecal coliform limits are always a concern in that these limits exist primarily to protect human health. The Indian River Lagoon system is used for recreational purposes, and

discharges into it which are improperly disinfected pose a threat to human health.

FCWC's violation of the AO limits is significant in that the AO limits were intended to minimize the harm caused by an unpermitted discharge into threatened water bodies.

iii) **NPDES Permit Violations:**

FCWC's violations of the residual chlorine limits in its permit are particularly significant in light of the concern of U.S. Fish and Wildlife regarding the endangered wood stork, which was identified by U.S. Fish and Wildlife as frequenting the Barefoot Bay area. A June 7, 1991 memo by the U.S. Fish & Wildlife Service, commenting on the Barefoot Bay WWTP NPDES Permit, recommended no direct discharge. The Fish & Wildlife Service noted that the endangered wood stork favors the Barefoot Bay area, and was of the opinion that any chlorinated discharge into the canal would negatively impact fisheries in the canal, and thus the wood stork. It appears that Barefoot Bay's discharge to the canal was chlorinated from is inception until sometime after 1990, when dechlorination was instituted.

The NPDES permit issued in September 1991 (which it should be remembered included a requirement that the Barefoot Bay discharge be halted by July 1995) included a Total Residual Chlorine limitation. FCWC's failure to comply with this limitation certainly increased the risk of the continued discharge impacting the endangered wood stork, as well as of other aquatic organisms. FCWC's exceedances of the toxicity limits likewise indicates that the plant's effluent had a toxic characteristic; this by definition increases the likelihood that the discharge negatively impacted organisms in the receiving waters.

FCWC's violation of the permit limits is significant in that the limits were intended to minimize the harm caused by the discharge into threatened water bodies until its termination by July 1995 (as specified by the permit) .

Carrollwood

The Carrollwood Plant posed a serious threat to Sweetwater Creek both in a general sense (again due to its disregard for the CWA) and because of the nature of its receiving waters and the discharge's own characteristics.

i) **Discharge Without a Permit:**

The Upper Sweetwater Creek is a small, slow moving water body. The critical low flow used to assess assimilative capacity was identified by FDEP as zero (0) cubic feet per second. This means that under the minimum flow conditions considered in determining a water body's assimilative capacity, the stream is virtually still. This makes the stream very sensitive to any discharge into it, since there is no flow to disperse the discharge and its pollutant load.

In fact, a 1979 Intensive Survey conducted by FDEP in March of 1979 showed measurable total phosphorus and total nitrogen concentration increases downstream of the Carrollwood outfall. Furthermore, this survey was carried out under less than worst case conditions. It is likely that the Carrollwood discharge nutrient load (nitrogen and phosphorous) negatively impacted

Sweetwater Creek.

Given the Creek's limited flow, and considering the small size of the creek at the Carrollwood discharge point, it is very likely that any discharge having any significant BOD_5 load would result in a decrease in dissolved oxygen in the creek (by definition, BOD_5 includes any pollutant which acts as a food for bacteria and results in biochemical use of oxygen in the receiving water). It is significant that in considering FCWC's petition, FDEP considered dropping effluent BOD_5s for a hypothetical, upgraded Carrollwood Plant from 5 mg/l to 3 mg/l was viewed by FDEP as significant in discharge's ability to have "no significant impact".

The monitoring carried out as part of the LTI "Minimum Negative Impact" Study revealed D.O. concentration decreases, and phosphorus and nitrogen concentration increases downstream of the Carrollwood outfall.

FCWC's discharge contributed to the depletion of oxygen levels and increased nutrient levels in the Sweetwater Creek downstream of the discharge. Given the condition of the Sweetwater Creek, it is likely that the Carrollwood Plant's effluent negatively impacted the creek.

ii) **NPDES Permit Violations:**

The violation of the NPDES permit limits demonstrates that the continued discharge from the Carrollwood Plant was not of sufficient quality to have a "minimum negative impact" on the receiving stream. In particular, the frequent violations of the phosphorous and nitrogen limits resulted in the plant being an unacceptable nutrient load on the Upper Sweetwater Creek.

FCWC also failed to properly operate and maintain the plant during the ten years prior to its decommissioning. This failure led to the plant performing below its capability, exacerbating the impact of its discharge into a threatened surface water. Evidence of these failures is provided by numerous inspection reports detailing the findings of HCEPC inspectors. Examples of their findings include:

- HCEPC inspections in 1973, 1974, 1975, 1976, 1979, 1980, and 1983 noted operational deficiencies, problems with record keeping, and a lack of process control.

- A May 7, 1987 inspection found the plant's condition, and FCWC's operations "unacceptable". The plant was described as "in disrepair".

- On March 27, 1990 HCEPC carried out an inspection of the plant and once again sewage overflow was evident. HCEPC rated operation and maintenance of the facility unsatisfactory.

- In August 1990, HCEPC again found poor operations.

In December of 1990, FCWC Engineer J. Karleskint inspected the Carrollwood Plant. Her memo report describing her finding noted that the plant failed to report all monitoring data, that an unapproved analytical method was used for residual chlorine testing, and that the plant was lacking effective process control.

Poor process control directly and negatively impacts the consistency of effluent $CBOD_5$ and TSS concentrations in an activated sludge treatment plant's effluent. Furthermore, even in a plant not designed to remove nutrients, proper operation will generally result in lower effluent phosphorus and nitrogen levels. FCWC's failure to properly operate and maintain the Carrollwood plant therefore directly contributed to its violations of its NPDES permit. I believe that FCWC allowed these conditions to persist because they had long before considered the plant to be "abandoned".

An August 1990 inspection by HCEPC also noted that FCWC had significantly dropped the pond level. In addition to impacting pond performance, HCEPC also was concerned that this action would result in the scouring of accumulated solids and the release of large amounts of solids (TSS) to Sweetwater Creek. In a slow-moving body of water such as Sweetwater Creek, these solids would accumulate on the bottom around the outfall, where they would exert oxygen demand (lowering oxygen levels) and directly impact bottom-dwelling and bottom-feeding organisms.

FCWC's numerous violations of the permit limits are significant; until it was taken out of service in January 1992, the plant's discharge continued to negatively impact Sweetwater Creek.

Waterway Estates

i) Discharge Without a Permit:

The unpermitted discharge from the Waterway Estates Plant had a negative impact on the canal into which it discharged and the Caloosahatchee River in the immediate area of the canal's mouth into the River.

FDEP's January 1981 Caloosahatchee River Wasteload Allocation Documentation presents the results of a detailed modelling effort which utilized data collected during an intensive survey effort carried out on the river by FDEP in March 1980. The 1981 WLA focused on what impact, if any, effluent discharge would have on the concentration of total nitrogen and total phosphorus both within the entire system and in the vicinity of each discharger. The 1981 WLA found that as a whole, the River was unacceptably impacted by nutrients from dischargers, and that upgrades to AWT were necessary to prevent unacceptable nutrient build up in the estuary.

The 1981 WLA also found that "The Waterway Estates STP, although discharging only about 10% of the flow of the Fort Myers Central STP, still demonstrated localized buildups". This is the result of the low long term net flow from the estuary, and the configuration of the river in the area of the Waterway Estates discharge (the river averages less than one meter deep for almost 1000 feet out from the mouth of the canal).

The July 1990 Draft Caloosahatchee River Wasteload Allocation Documentation presents the results of a detailed modelling effort which utilized data collected during an intensive survey effort carried out on the river by FDEP in 1987 - 1988. This second WLA resulted in findings and conclusions consistent with those of the 1981 WLA. In particular, Section 5.0 Conclusions noted:

> "Maps of localized effects show that the areas around the City of Cape Coral and

> Waterway Estates outfalls as being heavily impacted by their discharge. Higher nutrient concentrations and resultant increases in chlorophyll-a concentrations occur within the area of the present discharges. Design runs which relocate the existing discharges to beyond the six foot contours alleviate these problems. Thus, the City of Cape Coral and Waterway Estates should relocate their point(s) of discharge to beyond the six foot contour line."

From the above, it is clear that the Waterway Estates discharge had a negative impact on its receiving waters.

ii) **Discharge at an Unpermitted Location:**

Even after FCWC received an NPDES permit in 1989, its Waterway Estates discharge continued to negatively impact the canal and the Caloosahatchee by the mouth of the canal, because the discharge point was not timely relocated. As summarized by the 1981 WLA:

> "For present design flows, nutrient removal to AWT levels of 3 mg/l total nitrogen and 1 mg/l total (phosphorus) is required to prevent excessive nutrient loading to the estuary. Additionally, only the Ft. Myers South outfall is located in an area that did not result in localized build-up of nutrients. The other dischargers (Ft. Myers Central, Cape Coral, and Waterway Estates) besides needing to upgrade to nutrient removal, would also need to relocate their outfalls."

Thus, the 1981 WLA clearly identified the need to relocate the outfall to protect the river. FCWC's failure to do so was a serious violation.

iii) **NPDES Permit Violations:**

Violation of the NPDES total nitrogen limit is significant in that even though the outfall had been moved as of July 1991, the nutrient load to the receiving water was still above that determined by FDEP to be necessary for protection of the Caloosahatchee.

Exceedance of the toxicity limit by Waterway Estates resulted in the discharge of wastewater with toxic characteristics into the Caloosahatchee River. Given the esturine nature and low flow through the River, this would make these exceedances of the toxicity limit more likely to negatively impact aquatic life in the proximity of the outfall.

Overall, FCWC's unpermitted discharges and discharge at an unpermitted location constituted extremely serious violations of the CWA, in that those violations entirely circumvented the intent of the NPDES program. Likewise, FCWC's numerous violations of AO and permit limitations constitute serious violations, as they are the result of discharges which repeatedly failed to be of sufficient quality to protect FCWC's receiving waters.

3. EFFORTS REQUIRED FOR COMPLIANCE

FCWC had the means to eliminate its unpermitted surface water discharges at each of the three plants discussed in this report in a timely fashion. Furthermore, FCWC also had the means to eliminate its other violations. FCWC simply failed to take the necessary measures to insure timely compliance. Three timelines (Attachment D) present FCWC's efforts to pursue various available options.

Barefoot Bay

i) Discharge Without a Permit:

FCWC had a number of viable options available that could have been implemented to address the unpermitted discharge at Barefoot Bay. These were:

i) Build Sufficient Percolation Ponds - FCWC could have purchased sufficient acreage to have constructed additional percolation ponds to accommodate the entire plant flows. Detailed investigations and load tests would have been necessary to evaluate the loadings possible on any one site, or a combination of sites, but with over 3,000 acres of orange groves within 1.5 miles of the plant, sufficient land could certainly have been acquired to construct ponds of sufficient size to accommodate the entire plant flow.

Ponds offered FCWC several advantages. FCWC could have purchased the necessary land as early as 1984 (the record clearly indicates that land was available). As noted by FCWC's November 1992 report "Reclaimed Water Reuse: Disposal Alternatives, Barefoot Bay Wastewater Treatment Plant", the pond option was both "technically and environmentally feasible".

FCWC's attempts to improve its existing ponds, and its efforts to utilize additional ponds were limited. After initial investigations in the early 1980's of means to improve the performance of the existing ponds, FCWC began, in 1985, to investigate the possibility of building larger percolation ponds, but gave up on the concept after investigating the capacities of a limited number of potential sites. An August 20, 1987 FDEP memo from M. Swearingen to File noted that P. Lehman of FCWC had indicated to him that ponds were not pursued for cost reasons.

ii) Construct a Deep Well - FCWC could have constructed a deep injection well for disposal of its effluent. In spite of FCWC's concerns regarding well reliability, there were seven deep wells in operation in the Barefoot Bay area in the late 1980's. Deep well injection therefore constituted a feasible option for FCWC. In fact, a paper examining deep well use at Barefoot Bay by CH_2M-Hill noted that:

> "Barefoot Bay does have certain advantages. The site is in southern Brevard, closer to the area of the state where there is a proven track record [with deep wells]. The site is also situated between two existing sites (GPU-Port Malabar and Hercules) with good operational histories. No nearby faults have been reported in the literature, that might be a cause for concern with the regulatory

agencies".

In spite of deep wells offering a possible solution, FCWC failed to aggressively pursue deep well injection. In March 1988, FCWC began to pursue permits for the construction of a deep well injection system. FCWC never got beyond the preliminary evaluation stage with deep wells, due to concerns about potential well failures, and cost. In spite of these concerns, I can find little evidence of FCWC investigating the reports of problems with local deep wells, or any indication that studies had revealed any likelihood of problems with FCWC's proposed well site.

iii) Develop Spray Irrigation Capability - I believe that FCWC could have instituted spray irrigation on property owned by others or on property purchased by FCWC. I believe that by assuming a substantial portion of the costs of on-site improvements necessary for effluent reuse, by providing grove owners some relief from liability associated with effluent use, and by dropping the issue of effluent valuation (fees), FCWC would have found grove owners more receptive to the use of effluent. Alternately, if FCWC had moved expeditiously, and with less fixation on cost saving, to acquire land, spray irrigation could have provided the means to dispose of all of the Barefoot Bay effluent.

FCWC's efforts to implement spray irrigation were hampered by FCWC's concentration on cost minimization. In March 1988, FCWC began to study the possibility of using a 40 acre site adjacent to the plant as a spray field. A January 1989 report by Ardaman & Assoc. determined the capacity of the 40 acre field was less than plant flow.

In 1989, FCWC appears to have contacted the major grove owners in the Barefoot Bay area regarding the possibility of reuse. At first, FCWC appears to have concentrated on the possibility of providing treated effluent to the groves rather than on land acquisition. Apparently this effort was not well received by the grove owners due to reluctance on FCWC's part to address the grove owners' financial and liability issues. It appears that FCWC attempted to have the grove owners bear all costs for the onsite modifications needed to accommodate effluent reuse, and that FCWC was unwilling to assume much liability related to effluent use on crops.

FCWC's initial efforts to purchase land were similarly unsuccessful due to ineffective negotiation with the land owners. Nonetheless, local properties were for sale. For example, when FCWC met with Brevard Groves in August 1989, Brevard wanted FCWC to purchase land and then lease the land back to Brevard. Also, Micco Groves was reportedly for sale in August 1989. I believe that FCWC would have been much more likely to have negotiated reuse agreements with one or more grove owners, had it been willing to assume more liability regarding the issue of treated effluent, and more of the cost to modify irrigation systems, and if it had not pressed for compensation for the effluent.

A FCWC memo from A. Reeves to G. Allen dated September 7, 1989, noted that a 100 acre tract owned by Cavalier Properties was available, and that Cavalier had indicated possible interest in selling 360 acres on the north side of Micco Road. By September 1989 FCWC was considering a 300 acre site (part of Micco Groves) just north of the Barefoot Bay Wastewater Treatment Plant. In February 1990, FCWC made an offer to

Micco Groves on the 300 acre site, and in March 1990 FCWC began operation of the 40 acre site as a spray field. In September 1990, FCWC began to pursue eminent domain proceedings to acquire the Micco 300 acre site. In February 1992, FCWC became aware of a 300 acre site owned by H & S Groves which was available; FCWC ultimately entered into a contract to purchase this property in June 1995.

I believe that FCWC's attempts to address its unpermitted discharge were entirely inadequate. FCWC failed to apply for an NPDES permit for the discharge until early 1990, years after the discharge had commenced. FCWC's attempts to eliminate the discharge were similarly inadequate, both in terms of timeliness, and in FCWC's failure to follow such efforts it did make through to completion. FCWC wasted years by indecision, and by placing financial concerns above elimination of the unpermitted discharge, and by failing to take timely advantage of available alternatives.

ii) **AO Violations:**

FCWC could have reduced or eliminated its violations of the AO at Barefoot Bay due to operational deficiencies as follows:

- Provide improved operational control. Activated sludge plants are a complex and sophisticated treatment systems which do not run themselves. A process control strategy geared to the specific plant's characteristics is a must.

- Improve maintenance. Wastewater treatment plants are extremely tough on equipment, even that designed for use in such a severe environment. As such, adequate maintenance is absolutely necessary if treatment reliability is to be maintained.

- Provide adequate, qualified staff. Adequate numbers of certified staff should have been in place to accommodate normal workforce fluctuations. This is particularly important at remote locations such as Barefoot Bay.

Finally, FCWC could have eliminated all AO violations by the timely cessation of discharge.

Not until 1991 is there any sign of FCWC recognizing that problems existed at the plant, and there is little evidence of efforts on FCWC's part to address those problems.

iii) **Permit Violations:**

If FCWC had upgraded the Barefoot Bay Plant to AWT status the toxicity violations might have been eliminated. Improvements in operation and maintenance, as detailed above, would have reduced the likelihood of the residual chlorine violations. Again, FCWC could have eliminated all permit violations by the timely cessation of discharge.

FCWC did not upgrade the Barefoot Bay Plant in a timely fashion, and was likewise slow to implement meaningful improvements in operations. When an FCWC audit finally identified shortcomings in the Barefoot Bay operation, many of the identified problems were not followed up on for over a year.

Carrollwood

I) **Discharge Without a Permit:**

FCWC had several options available which would have allowed it to cease discharge in a timely manner. These options were as follows:

- FCWC could have pursued a connection to the Tampa collection system. Unlike Hillsborough County, which was a highly uncertain option, Tampa in December 1983 indicated that it had available capacity, and identified three points of connection, one of which was available at that time. Furthermore, FCWC was aware of the "Tampa" option since the late 1970s. Thus, FCWC could have connected to Tampa before it lost its permit, thereby avoiding all the violations.

  In spite of receiving a positive response from Tampa, FCWC failed to follow through on this option. This may have been due to the need to construct a force main of between 10,000 and 15,000 feet (depending on which point of connection to Tampa's system would be used), as compared to the approximately 3000 feet of forcemain actually constructed by FCWC to connect to Hillsborough County.

  Instead, FCWC elected to rely on the possibility of connection to Hillsborough County, even though FCWC could not secure either an agreement or a firm date on which capacity would be available from Hillsborough County.

- Spray irrigation was also an option available to FCWC. FCWC appears to have carried out only preliminary evaluations of this option.

- FCWC could have constructed sufficient percolation pond capacity to handle the Carrollwood flow. A study conducted by Jammal & Associates in 1984 considered the capacity of the plant's existing percolation pond, and of 6 other potential pond sites located in the general area of the Carrollwood Plant. Jammal & Associates estimated that one of the sites considered was large enough to accommodate all of the plant flow and it appeared likely that any two of the remaining sites would have handled the total plant flow.

- Deep well injection was also an option for disposing of the Carrollwood flow. There is no indication in the record of FCWC seriously considering this option.

- Upgrade to AWT was not a viable option until the Grizzle-Figg legislation took effect in 1987. If, however FCWC had aggressively pursued this option, it is my estimate that they could have made a first submission to FDEP for Minimum Negative Impact status as early as mid 1988 (instead of June 1989). Furthermore, if that first effort had been more complete, it is possible that FCWC could have been in a position to begin construction in 1989.

FCWC responded slowly to this opportunity, so that at the time diversion to Hillsborough County took place in January 1992 (4 years and 6 months later), FCWC had not begun construction on a plant upgrade.

FCWC was well aware in 1979 that they needed to halt the Carrollwood discharge. In October 1979, FCWC received Wasteload Allocation information from FDEP, including a cover memo which noted "the WLA provides for no discharge to the receiving waters". This should have provided FCWC with ample time to assure that the discharge was halted prior to the denial of the permit; however, FCWC's efforts to halt its unpermitted discharge were not timely.

ii) **NPDES Permit Violations:**

FCWC needed to upgrade its treatment facility if it was to meet the limitations of its May 1991 permit. It should have begun its upgrade in a timely fashion, so that it could comply with the permit when it became effective. FCWC was well aware that upgrade of its plant would be required when it applied for the permit. Alternately, had FCWC halted its discharge in a timely fashion, it would have avoided all NPDES permit violations.

Waterway Estates

FCWC had options available which would have allowed the cessation of the unpermitted discharge into the canal, the discharge at the unpermitted location and the discharge in violation of the permit limits.

i) **Discharge Without a Permit:**

FCWC had several options available that would have allowed it to cease its unpermitted discharge in a timely manner. These are as follows:

- Extension of Outfall and AWT upgrade. FCWC demonstrated the viability of this option by actually carrying it out. Given that FDEP's 1981 Wasteload Allocation Study determined that the Waterway Estates plant needed to be upgraded and its outfall relocated, if discharge to the Caloosahatchee River was to be continued, these measures should have been completed prior to application for permit renewal. It is clear that had FCWC begun to take positive steps earlier than 1988, the upgrade and outfall extension could have been completed earlier.

  FCWC elected to pursue the AWT upgrade and outfall extension, and did that in a less than expeditious manner. In November 1987, FCWC (A. Reeves) recognized the need to begin to implement a solution; a November 5, 1987 internal memo notes the need to select an approach, request a Wasteload Allocation from FDEP, and begin obtaining necessary permits and approvals. In December 1987, FCWC finally requested the WLA, and in 1988, FCWC retained an engineer and began design of the plant upgrade and outfall extension. The extension of the outfall was finally put in service in July 1991 and the plant upgrade completed by February 1993.

- Connection to North Fort Myers Utilities. NFMU indicated that it was willing to accept FCWC's flow and that it would have capacity to do so by mid-1988. Furthermore, its letters also indicate that cost should not have prevented FCWC from connecting to NFMU. Had this option been seriously pursued by FCWC I believe that transfer of flow and cessation of the canal discharge would have been possible in 1988, even given negotiations starting in 1987.

  Following receipt of EPA's permit denial in December 1986, FCWC carried out limited talks with NFMU, but FCWC rejected this option, in spite of continued interest and incentives from NFMU.

- Spray Irrigation. When, in 1989 FCWC was required to evaluate reuse under the "Anti-Degradation Rule", FCWC appears to have readily identified two golf courses capable of accepting AWT treated effluent. Presumably, similar opportunities for reuse existed earlier; these might have been discovered had FCWC seriously investigated the use of spray irrigation as a means of halting the canal discharge, however FCWC never seriously pursued spray irrigation as an option.

- Percolation Pond Discharge. FCWC could have constructed adequately sized percolation ponds to handle the Waterway Estates flow. Upgrade to AWT would not have been required, and permitting should not have been overly burdensome. Sufficient land to accommodate the necessary ponds and to provide buffer zones from neighbors would have been needed. The exact acreage needed would depend on both the flow and the hydrogeology of the site, or sites, considered.

- Deep Well Injection. FCWC could have installed a deep injection well. FCWC did briefly consider such an option, but failed to pursue it, on the basis of cost relative to the AWT/outfall extension option. It should be noted that North Fort Myers Utility has a deep injection well which it developed as a backup disposal options; this demonstrates that FCWC would have been likely to have been technically successful in developing a well.

FCWC had several options available that would have allowed the timely cessation of its unpermitted discharge. FCWC failed to seriously pursue most of these options, and those efforts it did make were not timely.

ii) Discharge To An Unpermitted Location:

FCWC could have avoided discharge to an unpermitted location by extending the outfall in a timely manner. By failing to even begin the construction of the outfall extension until December 1990, FCWC ensured that it would continue to discharge to the canal after the effective date of the permit. Finally, in July 1991 the new outfall was completed and discharge diverted to the new outfall.

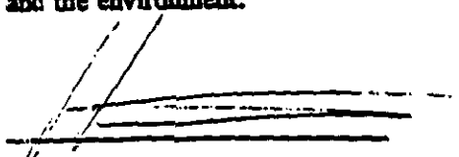
iii) **Permit Violations:**

Similarly, permit violations at the Waterway Estates Plant could have been avoided by timely completion of the upgrade of the plant to AWT status. Not only did FCWC fail to complete the upgrade by the effective date of the permit, but meaningful startup of the upgrade construction did not begin until after February 1991.

4. CONCLUSION

FCWC operated three wastewater treatment plants without valid NPDES permits for a cumulative total of almost two decades. These egregious violations were entirely avoidable. Similarly, FCWC committed AO and NPDES permit violations at these three plants which spanned a total of four years. These serious violations were also largely avoidable.

FCWC is a sophisticated company which operates in a heavily regulated industry. Such a firm should have had knowledge, resources, and the sense of responsibility to comply with the CWA and its NPDES permits. The only plausible explanation for FCWC's violations is that FCWC lacked respect for the CWA and the environment.



10-13-95

Mark J. Klingenstein, P.E. Dated

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' MOTION IN LIMINE

Both in the interests of fairness and expediency, and for the reasons set forth in the accompanying memorandum, the United States moves the Court for an order limiting the trial of this matter in the following respects:

1. The trial of this action is subject to the following limitations on each side (i.e., on the Defendants in the aggregate):

Opening and closing	1/2 hour each
Direct examination of witnesses:	10 hours
Cross examination of witnesses:	5 hours

2. Evidence relating to the Waterway Estates permit denial may not be introduced at trial, and the testimony by Connie Kagey, Bruce Barrett, James Greenfield, and Roosevelt Childress is excluded.

3. Evidence relating to the terms of the following EPA administrative orders issued by EPA to Florida Cities may not be introduced at trial: 1. Consent Agreement and Order Assessing Administrative Penalties No. CWA-IV 91-538 (Barefoot Bay); 2.

Administrative Order AO 90-106 (Barefoot Bay); 3. Consent Agreement and Order Assessing Administrative Penalties, No. CWA-IV 90-542 (Carrollwood). Testimony from Thomas Plouff and Roy Herwig of EPA concerning their calculation of administrative penalties for the violations set forth in those Orders may not be introduced at trial.

4. Douglas Smith and Roger Hartung are disqualified as expert witnesses.

5. Juanita Kerrigan, Georgia Metcalf, Michael Acosta, and John Sladkus are barred from testifying at trial.

5. Evidence that seeks to blame third parties for the violations may not be introduced at trial.

Respectfully submitted,

LOIS J. SCHIFFER
Assistant Attorney General
Environment and Natural Resources Division
U.S. Department of Justice

Daniel S. Jacobs
Trial Attorney

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY, INC., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

UNITED STATES' MEMORANDUM IN SUPPORT OF ITS MOTION IN LIMINE

By Order of November 22, 1995, the Court granted the United States summary judgment on liability as to Defendant Florida Cities on all of the United States' claims for violations at Waterway Estates, as well as the claims for NPDES permit violations at Barefoot Bay and Carrollwood.[1] The issues remaining for trial are Avatar's liability for those violations as Florida Cities' parent company, and the amount the Defendants should be penalized for the violations. As a result of the limited issues of fact and law remaining in this bench trial, as well as certain Florida Cities tactics which would result in prejudice to the United States, the trial should be limited in the following ways.

[1] The Court has granted the Defendants summary judgment on the claims for unpermitted discharges at Barefoot Bay and Carrollwood and for EPA Administrative Order violations at Barefoot Bay. The Court has denied the United States summary judgment on all claims as to Defendant Avatar Holdings, and has granted Avatar Holdings' Motion for Judgment on the Pleadings for claims (or parts of claims) for violations which took place prior to May 5, 1990.

I. Limitation on Length of Trial

Trial time should not exceed more than five court days. Because Florida Cities' liability has already been established and the United States' proof of Avatar Holdings' liability rests primarily on documentary evidence as a result of the unavailability of knowledgeable and high-ranking past and present Avatar Holdings officials to testify on the basis of their assertion of their Fifth Amendment rights, trial testimony on liability issues is expected to be very limited. Furthermore, as the United States noted in its Trial Memorandum, there are no genuine issues of material fact which would preclude the Court from assessing a civil penalty against Florida Cities based on the present record. The United States respectfully proposes that the Court limit the trial of this action to five court days by imposing the following limitations on each side (i.e., on the Defendants in the aggregate):

Opening and closing	1/2 hour each
Direct examination of witnesses:	10 hours
Cross examination of witnesses:	5 hours

II. Limitations on Evidence and Witnesses

Based upon its Pretrial Brief, it is clear that Florida Cities intends to raise arguments at trial that are immaterial to any issues remaining in the case. These arguments can only serve to confuse the issues and waste the Court's time. Accordingly, the United States requests that this Court issue an order excluding any evidence on such issues, and excluding the testimony of the witnesses who will testify to them. It is also

readily apparent at this time that Florida Cities has engaged in unfair tactics designed to result in a trial by surprise. The Court should eliminate the prejudice by excluding the witnesses whose testimony is intended to be a surprise.

A. Waterway Estates Permit Denial

It is clear that Florida Cities intends to argue, for the third time, that EPA improperly denied the company's request for a renewal of its NPDES permit in June 1986. Florida Cities contends that EPA's actions in denying the permit are appropriately considered under the "history of violations" and "other factors" criteria set forth in Section 309(d) of the Act, 33 U.S.C. § 1319(d).

This Court has already considered Florida Cities' arguments on this issue twice previously, and should exclude any evidence or testimony on this issue during the penalty assessment phase of the trial. Florida Cities first raised this argument in its Motion for Partial Summary Judgment, in which it argued that EPA's permit denial was void ab initio because of its allegedly erroneous conclusion that a wasteload allocation did not exist for the plant. On June 21, 1995, this Court denied Florida Cities' Motion on this issue, declining to permit it to circumvent the statutory bar set forth in section 509(b)(1) of the Clean Water Act, 33 U.S.C. § 1369(b)(1), holding as follows:

> Section 509(b)(1) contains a ninety-day "statute of limitations" for challenging any action of the Administrator that falls within its terms. Complementing this provision, section 509(b)(2), 33 U.S.C. § 1369(b)(2) (1976), provides that "[a]ction of the Administrator with respect to which review could

> have been obtained under [section 509(b)(1)] shall not be subject to judicial review in any civil and criminal proceeding for enforcement." Under these two provisions, one who wishes to challenge an action of the Administrator must, if the action is held to be within the categories of section 509(b)(1), do so within ninety days or lose forever the right to do so, even though that action might eventually result in the imposition of severe civil or criminal penalties.

Order, June 21, 1995, at 5 (emphasis in original), citing Natural Resources Defense Council v. Environmental Protection Agency, 673 F.2d 400, 406 (D.C. Cir. 1982). Florida Cities had ample opportunity to challenge EPA's permit denial, but failed to do so.

Notwithstanding the Court's June 21, 1995 Order, Florida Cities then sought to raise this argument again in its defense to the United States' Motion for Summary Judgment on the related unpermitted discharge claims from Waterway Estates, and the Court again held that there was no merit to Florida Cities' position. See Order of November 22, 1995, at 19.

Florida Cities clearly intends to raise still new arguments about the permit denial at trial. See Florida Cities Pretrial Brief at 10-11. These are precisely the kind of arguments that Florida Cities could have raised in a timely permit challenge. Allowing Florida Cities to put EPA's permit denial "on trial" almost a decade later would fly in the face of the section 509 bar to judicial review.[2] As this Court previously recognized,

---

[2] Nor should Florida Cities be permitted to take vengeance at trial on the staff level EPA permitting official assigned to review the permit renewal application, as Florida Cities' Pretrial Brief suggests it will. Its brief is riddled with

(continued...)

Florida Cities has lost "forever" its ability to challenge EPA's decision. The Court should not allow Florida Cities to obtain through the back door review of an issue that is clearly precluded by statute.[3]

Accordingly, the United States respectfully requests that this Court issue an Order precluding Florida Cities from raising the permit denial at trial. If the Court grants this request, then it should also exclude any testimony by Connie Kagey, Bruce Barrett, James Greenfield, and Roosevelt Childress, the EPA permitting officials whom Florida Cities has listed as witnesses.

---

[2](...continued)
claims that Ms. Kagey behaved "carelessly" and "recklessly" in denying the permit, while also sanctimoniously claiming that it lost the permit "through no fault of its own." Brief at 11. The blame is misplaced. Ms. Kagey herself gave Florida Cities five months notice, before forwarding the official denial to the duly delegated EPA officials for final agency action. Florida Cities neither objected then, or after the final denial, and, as a matter of law, simply cannot be heard to object now. Moreover, as the United States has previously argued, the permit denial was entirely appropriate.

[3] Florida Cities argues that the facts surrounding EPA's permit denial are appropriately considered under the "catch-all" criterion in Section 309(d), i.e., "such other factors as justice may require." There is no "injustice" to precluding an issue that is expressly precluded by the statute itself, particularly in a situation such as this. Florida Cities got not one, but two separate notices from EPA that permit denial was imminent, but failed to act. These notices clearly explained the consequences of not challenging a permit denial. Moreover, this is not a situation in which an unrepresented individual was caught unawares by an obscure provision of the statute. Florida Cities was at all times represented by sophisticated legal counsel.

In short, there is no injustice to excluding evidence on EPA's permit denial. Indeed, allowing such evidence at this time represents an injustice to the statute, as well as to EPA.

B. Administrative Orders at Barefoot Bay and Carrollwood

This Court has already granted summary judgment to Florida Cities and Avatar on the United States' unpermitted discharge claims at Barefoot Bay and Carrollwood, and claims for violations of interim effluent limits set forth in an administrative order at Barefoot Bay. The Court held that principles of res judicata prevented the United States from relitigating any issues that were actually resolved, or that could have been resolved in the above referenced administrative orders. Because the Court has ruled that all claims affected by these administrative orders have been resolved, any evidence concerning the terms of the orders is immaterial to any issue remaining in the case. This includes testimony that goes to the issue of why EPA assessed the administrative penalties that it did in those settlements. Accordingly, Florida Cities should be precluded from introducing testimony from Thomas Plouff and Roy Herwig of EPA concerning their calculation of administrative penalties for the violations set forth in the Orders.

C. Florida Cities' Expert Witnesses

Florida Cities has named five expert witnesses in this case, two of whom the United States requests be disqualified.[4]

---

[4] See Joint Pretrial Statement filed December 7, 1995. The United States has named two expert witnesses. Avatar Holdings states that it "will use and rely on the expert witnesses identified by Florida Cities."

1. Douglas Smith

The United States moves to disqualify Douglas Smith as an expert witness in this case for several reasons. First, on January 3, 1996, after the trial term in which trial of this case is set had already begun, Florida Cities provided notice to the United States that its primary engineering expert witness, Douglas Smith, had significantly expanded the bases of his testimony. The January 3, 1996 notice provided, in pertinent part, as follows:

> Florida Cities hereby informs Plaintiff that since his deposition Douglas Smith has further reviewed documents forming the basis of his expert report and expert opinion in this litigation and has also personally visited the Waterway Estates Wastewater Treatment Plant and the Barefoot Bay Wastewater Treatment Plant, the location of the former Carrollwood Wastewater Treatment Plant, and the environs of each of these facilities. His observations and further analysis may form a further basis for his testimony at trial.

Letter from Don G. Scroggin to Daniel S. Jacobs, January 3, 1996.

Florida Cities' actions clearly violate Rule 26(a)(2) Fed. R. Civ. P., which governs the disclosure of expert testimony. Rule 26(a)(2)(B) provides that "[e]xcept as otherwise stipulated or directed by the court," a party that intends to rely on an expert shall produce a report that contains "a complete statement of all opinions to be expressed and the basis and reasons therefor." (emphasis added). Mr. Smith's report was submitted to the United States on October 13, 1995, and he was deposed on October 30, 1995 at the United States' expense. Under Rule 26(a)(2), Florida Cities is simply not entitled to expand or revise at will after that time, the bases for his testimony.

Moreover, Florida Cities has not even suggested, let alone demonstrated, that there are extraordinary circumstances or new information not known at the time of Mr. Smith's report and deposition that justify a deviation from the rule. Nor can it make such a suggestion since Florida Cities had ample opportunity to prepare Mr. Smith for deposition, and to ensure that he reviewed the appropriate documents and made the necessary site visits to testify.

The timing of Florida Cities' notice is also particularly suspect. Discovery closed in this matter on November 4, 1995, (see Order, July 18, 1995) and trial has been set for the Court's January 1996 term (although not to begin before January 16, 1996). Florida Cities failed to advise counsel for the United States of these new circumstances at the November 28, 1995 meeting of counsel to discuss preparation of the Joint Pretrial Statement mandated by the Court's scheduling order, failed to raise the matter in the Joint Pretrial Order itself, filed December 7, 1995, and failed to raise the matter at the December 12 and December 28, 1995 Pretrial Conferences before Magistrate Judge Swartz.[5]

Florida Cities' good faith is making this last-minute disclosure is also particularly questionable since it has been

---

[5] Notwithstanding an immediate request by the United States upon receipt of the January 3, 1995 notice, Florida Cities has not disclosed when Mr. Smith reviewed the documents or travelled to three different counties to inspect the plants/environs. Nor has Florida Cities given any reason for Mr. Smith's additional work or any indication of what additional materials Mr. Smith has reviewed and what additional opinions he has reached.

apparent for some time that documents Mr. Smith and his staff reviewed and relied upon in preparation of his report and testimony had not been produced in advance of his deposition, as required by a document request. Indeed, notwithstanding the Magistrate Judge's November 13, 1995 Order requiring Florida Cities to produce by November 17, 1995, "all documents reviewed or relied upon by its designated expert witnesses for purposes of expert discovery," not until January 4, 1996, did Florida Cities produce many of these documents, and it is readily apparent to the United States that it is still withholding some such documents.

There is yet another reason to disqualify Mr. Smith as an expert witness in this matter. Both in his expert reports and in his resume submitted to the United States pursuant to Rule 26(b)(2)(B), Mr. Smith represented himself as a "Professional Engineer." In fact, while Mr. Smith at one time was a Registered Professional Engineer in the State of Florida, the United States has learned that his registration lapsed in October 1994 for failure of payment of dues, and had not been reinstated by the time of his report. Accordingly, Mr. Smith's signature on his expert reports in this case constitutes a violation of section 471.003(1) F.S.A. which provides that "[n]o person other than a duly registered engineer shall . . . use the name or title of 'registered engineer' or any other title [or] designation . . .

tending to indicate that such person holds an active registration as an engineer in this state." [emphasis added].[6]

Such tactics clearly should not be countenanced and warrant disqualifying the expert witness, as the Court held in disqualifying an expert witness for untimely disclosure in Simplex, Inc. v. Diversified Energy Systems Inc., 847 F.2d 1290 (7th Cir. 1988):

> Our rules of civil procedure are designed to facilitate the complete disclosure of all relevant information before trial in order to eliminate unfair surprise and ultimately promote accurate and just decisions.

847 F.2d at 1291.

While Florida Cities has offered that the United States may redepose Mr. Smith, discovery closed long ago, and should not drag on at the eleventh hour due to Florida Cities' unexplained violation of the rule.[7] Hence, he should be disqualified.

---

[6] Moreover, Smith's deposition testimony on the subject of the status of his registration was less than forthcoming. First, he testified that he was registered in the State of Florida. After being presented with his resume in which he represents he is registered in Florida and Colorado, he testified that the information in it was accurate, but upon further questioning stated that he was "inactive" in the State of Colorado. When pressed about the status of his Florida registration, he finally conceded that he didn't know if it was current. See attached pages of transcript and resume (Exhibit 878).

[7] Even if the Court grants Defendants' unopposed motion for a continuance based on a key witness' unavailability due to sudden illness, discovery should not be reopened to accommodate Florida Cities' malfeasance. As the Court held in Harris v. Steelweld Equipment Co. Inc., 869 F.2d 396, 399 (8th Cir. 1989), "[a]lthough it may appear that appellees would not be prejudiced by disclosure of this expert witness at such a late date because the case was taken off the trial docket and rest for trial, ... discovery was completed and the case was to remain in the same posture when it would ultimately be reached for trial."

2. Roger Hartung

This Court should also strike Roger C. Hartung as an expert witness in this matter. In the Joint Pretrial Statement, Florida Cities summarized the substance of Mr. Hartung's testimony as follows:

> Mr. Hartung's testimony will address EPA's general practices and procedures and internal Agency guidance regarding permitting and enforcement matters under the Clean Water Act. His testimony will address the relationship and interactions between environmental regulatory authorities of non-delegated states and EPA. It will also address wasteload allocation approvals, TMDL development and approvals, permitting requirements and permit writing, enforcement of administrative orders, enforcement of federal NPDES permits, and interpretations of EPA's permitting and enforcement guidance documents and memoranda.

None of this proposed testimony is the least bit relevant to the penalty Florida Cities must pay in this case. Because Mr. Hartung cannot opine authoritatively upon any issue remaining in the case, he should be disqualified as an expert witness. Daubert v.Merrell Dow Pharmaceuticals, 113 S. Ct. 2786 (1993).

D. Company witnesses

In the Joint Pretrial Statement, the United States lists a total of six witnesses whom it expects to call at trial: two EPA officials, one Avatar official, one former Florida Cities official, and two non-party witnesses (exclusive of record custodians whom the United States will only need to call if Defendants fail to stipulate to the authenticity of documents). Avatar Holdings lists five Avatar officials, as well as one additional "possible" Avatar official, and one "possible" former Avatar official who has previously declined to testify on Fifth

Amendment grounds. Florida Cities lists a total of 28 witnesses, but has subsequently notified the United States that it intends to actually call 18 of these at trial. The United States respectfully requests that the Court bar from testifying any of Defendants' employees whom the United States has not had the opportunity to depose, and bar from testifying the former Avatar official who declined to testify at his deposition on Fifth Amendment grounds.

The Defendants have had the opportunity to take the depositions of all of the United States' witnesses: four of these witnesses have actually been deposed, and Defendants have declined to take the other two who are non-party witnesses. The United States has not had the opportunity to depose two of the Avatar officials listed because they were not disclosed to the United States as witnesses until after discovery had closed.[8] Similarly, the United States has not had the opportunity to depose one of the Florida Cities officials because he was not disclosed to the United States as a witness until after discovery had closed.[9]

The United States is prepared to go forward at trial not having deposed non-party witnesses because they presumably will be available for interviews. Both Avatar and Florida Cities have

---

[8] These individuals are Juanita Kerrigan, an Avatar Holdings officer, and Georgia Metcalf, a Barefoot Bay Development Corporation (Avatar subsidiary) officer.

[9] This individual is Michael Acosta, a Florida Cities vice-president.

expressly declined to make the three employee-witnesses in question available for depositions or interviews. The United States went to some effort to attempt before the discovery deadline to determine which employees Defendants would call at trial, only to have the efforts rebuffed.[10] If the United States is not to be afforded the opportunity to speak with these individuals, in fairness, Defendants ought not to be able to call them as witnesses, since their testimony will be a surprise, through no fault of the United States.[11]

Avatar Holdings states in the Joint Pretrial Statement that it intends to call John Sladkus, a former Avatar Holdings official, if he chooses to waive his Fifth Amendment rights. Now that discovery has closed, no witness who previously declined to

---

[10] See attached transcript of meeting of counsel memorializing that the United States sought specifically to determine whether Michael Acosta would be a witness, and cancelled his deposition after Florida Cities declined to provide that information.

[11] The United States notes that the Magistrate Judge has already ruled that notwithstanding the notice of the witnesses after the close of discovery, the United States could not depose any individuals whom it was previously aware had knowledge of facts relating to the case. In all fairness, however, there were over 100 potential witnesses in this action, and the United States simply could not be expected to predict who would be Defendants' witnesses, and certainly not which of Defendants' own employees they would chose to call at trial. Moreover, Defendants declined subsequent to the Magistrate Judge's ruling to make their employee-witnesses available for interviews. Thus, there are additional grounds at this point in time to cure the prejudice. If the United States is to be deprived of access to their testimony before trial, Defendants should be deprived of their testimony at trial.

testify on Fifth Amendment grounds should be permitted to give surprise testimony at trial.[12]

E. Delays in Compliance Caused by Third Parties

Florida Cities has repeated argued in this case that its violations were beyond its control, placing the blame on its own contractors, as well as federal, state, and local government officials. Any such argument should be precluded as a matter or law. The Clean Water Act is a strict liability statute. See, e.g., Connecticut Fund for Environment, Inc. v. Upjohn Co., 660 F. Supp. 1397, 1409 (D. Conn. 1987); United States v. Town of Lowell, 637 F. Supp. 254, 258 (M.D. Pa. 1986). Moreover, as one Court has noted, "[t]he burden is on the polluter to comply with the Clean Water Act", not on the contractors it hires or some governmental entity. United States v. City of Menominee, 727 F. Supp 1110, 1122 (W.D. Mich. 1989).

Under this case law, Florida Cities had a duty to retain qualified contractors to perform necessary remedial measures. It also had a duty to ensure that any contractual disputes were resolved immediately so as to minimize any period of noncompliance. Finally, it had a duty to ensure that it allowed the responsible government agencies sufficient time in which to act on the company's proposals. Florida Cities alone is responsible for its violations and should not be allowed to "point the finger" at others in an attempt to mitigate the

---

[12] One of Defendants' witnesses, Gerald Allen, declined to testify on Fifth Amendment grounds, but prior to the close of discovery changed his mind and was deposed without objection.

penalty.[13] Accordingly, the Court should exclude any evidence that seeks to blame third parties for the violations.

CONCLUSION

Both in the interests of fairness and expediency, the Court should enter an order limiting the trial of this matter in the following respects:

1. The trial of this action is subject to the following limitations on each side (i.e., on the Defendants in the aggregate):

Opening and closing	1/2 hour each
Direct examination of witnesses:	10 hours
Cross examination of witnesses:	5 hours

2. Evidence relating to the Waterway Estates permit denial may not be introduced at trial, and the testimony by Connie Kagey, Bruce Barrett, James Greenfield, and Roosevelt Childress is excluded.

3. Evidence relating to the terms of the following EPA administrative orders issued by EPA to Florida Cities may not be introduced at trial: 1. Consent Agreement and Order Assessing Administrative Penalties No. CWA-IV 91-538 (Barefoot Bay); 2. Administrative Order AO 90-106 (Barefoot Bay); 3. Consent Agreement and Order Assessing Administrative Penalties, No. CWA-IV 90-542 (Carrollwood). Testimony from Thomas Plouff and Roy Herwig of EPA concerning their calculation of administrative

[13] There has been no counterclaim or third-party claims filed in this action.

penalties for the violations set forth in those Orders may not be introduced at trial.

4. Douglas Smith and Roger Hartung are disqualified as expert witnesses.

5. Juanita Kerrigan, Georgia Metcalf, Michael Acosta, and John Sladkus are barred from testifying at trial.

5. Evidence that seeks to blame third parties for the violations may not be introduced at trial.

Respectfully submitted,

ORIGINAL

worked for Black & Veatch since that time.

Q And what is his position with Black & Veatch?

A He's what we would call a project engineer. Both he and Mr. Jernigan are registered engineers in the State of Florida.

Q What about you, sir, are you a registered engineer in the State of Florida?

A Yes, I am.

(WHEREUPON, Exhibit 878 is marked for identification purposes.)

Q (By Mr. Jacobs) I'm handing you Exhibit 878, sir. Do you recognize that?

A Yes, I do.

Q Would you identify it for the record, please.

A It's an abbreviated resume or biodata for me.

Q You say it's abbreviated. Is there a more complete version?

A Yes. We create several versions from time to time. This has an abbreviated number of projects for which I've been responsible. It does list most of my -- it lists all of my educational credentials and most of my publications.

Q Do you know why an abbreviated version was submitted to us?

A No. Just other than we have a number of

different versions and it appears that this was the one that was given.

Q Would you review that, please, sir, and tell me if it's accurate.

A For the information here it's certainly accurate, yes.

Q You said you were a registered engineer in the State of Florida. What other professional licenses do you have?

A I was formerly registered in the State of Colorado as a professional engineer. It's on inactive status now.

Q But your Florida license is current?

A It's generally current. I'm not -- you know, I don't know exactly what -- if my dues are paid up or exactly where that stands.

Q You do or you don't know, Mr. Smith?

A I don't know.

Q Do you know that your license expired in October 1994?

A No, I didn't know that.

Q You know your license number in the State of Florida?

A I think it's 43782, something like that.

Q Do you have a license number PE0043134?

A Could be. I'm not certain.

Q Mr. Smith, you said that these reports were prepared under your general supervision or direction and that you personally signed them. Had you, before you signed them, reviewed a draft of each of these reports?

A Yes, I had.

Q Did you comment on the drafts?

A I did.

Q Were changes then made according to those comments?

A Yes, they were.

Q And during the course of the preparation of any of the drafts for the final versions of these three reports -- Exhibits 875 and 876 and 877 -- did you have occasion to review any documents?

A I believe that I reviewed just compilations of information that was compiled by my staff as part of the reports. I did review the Complaint, reviewed -- I'm trying to think if there's any other documents. Nothing sticks out in my mind of any particular documents I reviewed.

Q You are sure, though, that you reviewed what you've characterized as compilations of information compiled by your staff; is that correct?

A That's correct.

DOUGLAS G. SMITH, P.E.
PARTNER-IN-CHARGE

EXPERIENCE:

Mr. Smith is a Senior Partner and the Southeast Regional Manager for Environmental Services for Black & Veatch. Since joining Black & Veatch in 1980, Mr. Smith's duties have focused on management of facilities, financial studies, and major capital improvements in connection with solid waste, wastewater and water treatment, and conveyance systems. In addition to his training as a professional engineer, Mr. Smith holds a Juris Doctor from the University of Denver, College of Law.

As Partner-In-Charge of Black & Veatch Environmental Enterprises, he is responsible for all engineer-construct projects of the firm undertaken in the environmental disciplines.

RELATED PROJECT EXPERIENCE

Project, Client, and Location	Position	Responsibilities
WASTEWATER		
Southwest Regional WWTP, Manatee County Public Services, Bradenton, FL.	Partner-In-Charge	Evaluated and prepared a report on a digester foaming problem at the plant site. Determined sludge gas mixing technique and existing sludge gas compressors to be inadequate for optimal operation. Recommended modifications to rectify the situation and provide for future monitoring of sludge gas distribution.
Western Regional Wastewater Treatment Plant Modifications, City of Daytona Beach, Daytona Beach, FL.	Partner-In-Charge	Evaluated and designed modifications to provide nitrogen and phosphorus removal to meet new effluent limits of 3 mg/L nitrogen and 1 mg/L phosphorus. Conversion from mechanical aeration system to a diffused aeration system.
SW 137 Avenue Force Main, Miami-Dade Water and Sewer Department, Miami, FL.	Partner-In-Charge	Performed route selection, design, permitting, and construction phase services for 11 miles of 36- to 72-inch PCCP force main.
Southwest, North, and Southeast WWTPs, Manatee County Public Services, Bradenton, FL.	Partner-In-Charge	Developed sludge management plan to ensure continued compliance with EPA 40 CFR Part 503 and Chapter 17-640, F.A.C. regulations. The long-term alternative evaluated for further treatment included composting and alkaline stabilization.

UNITED STATES DISTRICT COURT
MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA

Plaintiff,

v.

AVATAR HOLDINGS, INC., and FLORIDA CITIES WATER COMPANY

Defendant.

Case No.: 93-281-CIV-FTM-21

Washington, D.C.

Tuesday, November 28, 1995

The COURT-ORDERED MEETING OF COUNSEL was held at the law offices of Weil, Gotshal & Manges, P.C., 1615 L Street, Suite 700, Room 8/B, Northwest, Washington, D.C. 20036, commencing at 10:36 a.m.

witnesses?

MR. JACOBS: I'm not going to have those discussions with you now, sir.

MR. BULLOCK: So you're refusing to answer that question. I'm just putting on the record that I asked the question and you refused to answer.

MR. JACOBS: You know this is a meeting of counsel. It's not a deposition, Mr. Bullock and Mr. Baise, but you can put whatever you want on the record. It's here for you to do that if you want to use it that way.

MR. HIRD: May I ask one additional question? I noticed the name of Mr. Acosta. My understanding is Mr. Acosta's deposition was noticed by the government and then withdrawn; is that correct?

MR. JACOBS: Are you asking me?

MR. HIRD: Yes.

MR. JACOBS: Oh, I had a discussion with Mr. High. I said, "Well, I only need to take his deposition if he's going to be a witness. Can you tell me?" And Mr. High said, "I can't tell you that." So, Mr. High, please feel free to speak up if I'm misrepresenting the conversation.

MR. HIRD: But did you not withdraw a previous

notice of this deposition?

MR. JACOBS: I believe, based on the fact that no one would tell me that he was going to be a witness, we said no, we're not going to go forward. And if what you're asking me, Mr. Hird, is does that position still hold --

MR. HIRD: I'm not asking for your position. I'm just asking for the fact whether he was noticed as a deponent and then the government withdrew the notice, that's all I'm asking for.

MR. JACOBS: I believe that you're correct in that regard. And I'm explaining that, based on the discussion with Mr. High, I had no way of knowing he would be a witness.

MR. HIRD: And, at the time you had no way of knowing he would be a witness, you made the decision to withdraw the notice.

MR. JACOBS: That is, to the best of my recollection, correct, Mr. Hird, that based on Mr. High's representation that he could not represent whether Mr. Acosta would be a witness or not, that I withdrew the notice.

Mr. High.

MR. HIGH: I believe that to be correct.

MR. JACOBS: Thank you, sir.

Exhibit_____(GHB-74)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY, et al., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

DEFENDANTS' JOINT MOTION IN LIMINE TO EXCLUDE THE TESTIMONY AND REPORT OF EILEEN ZIMMER

Defendants Avatar Holdings Inc. ("Avatar Holdings") and Florida Cities Water Company ("Florida Cities") hereby submit this motion in limine to exclude the testimony and report of the government's expert witness, Ms. Eileen Zimmer, on the grounds that her testimony and report regarding penalty assessment are clearly inadmissible.

Under the evidentiary standards enunciated by the United States Supreme Court in Daubert v. Merrell Dow Pharmaceuticals, Inc., 113 S. Ct. 2786 (1993), Zimmer's testimony and report must be excluded, on five separate bases. First, Zimmer calculates the alleged wrongful profits associated with the government's claims for which the Court has already granted judgment in favor of the defendants -- the alleged unpermitted discharges at

the Barefoot Bay and Carrollwood treatment plants. Second, Zimmer bases her penalty recommendations on the profits earned by Avatar Holdings and Barefoot Bay Development Corporation, rather than the costs that Florida Cities allegedly avoided, as required by the Clean Water Act. Third, Zimmer includes in her calculation profits earned by Barefoot Bay Development Corporation, an entity that is not a party to this lawsuit. Fourth, Zimmer primarily analyzes profits allegedly associeated with purported violations that occurred beyond the statute of limitations. Fifth, Zimmer makes methodological errors and improper assumptions that make her testimony misleading and unhelpful to this Court.

In support of this motion, defendants submit the attached memorandum and two exhibits. Exhibit A is a copy of Zimmer's expert witness reports, Exhibit B consists of relevant excerpts from Zimmer's deposition, and Exhibit C is an excerpt from the deposition of Kenneth Kwan.

For the foregoing reasons and the reasons stated in the attached memorandum, Eileen Zimmer's testimony and report should be excluded.

Respectfully submitted,

David R. Berz

FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. FLORIDA CITIES WATER COMPANY, et al., Defendants.	CIVIL ACTION NO. 93-281-CIV-FTM-21

DEFENDANTS' JOINT MEMORANDUM IN SUPPORT OF THEIR MOTION IN LIMINE TO EXCLUDE THE TESTIMONY AND REPORT OF EILEEN ZIMMER

Defendants Avatar Holdings Inc. ("Avatar Holdings") and Florida Cities Water Company ("Florida Cities") hereby submit this memorandum of law in support of their motion in limine to exclude the testimony and report of the government's expert witness, Ms. Eileen Zimmer, on the grounds that her testimony and report regarding penalty assessment are clearly inadmissible.

Under the evidentiary standards enunciated by the United States Supreme Court in Daubert v. Merrell Dow Pharmaceuticals, Inc., 113 S. Ct. 2786 (1993), Zimmer's testimony and report must be excluded, on five separate bases. First, Zimmer calculates the

alleged wrongful profits associated with the government's claims for which the Court has already granted judgment in favor of the defendants -- the alleged unpermitted discharges at the Barefoot Bay and Carrollwood treatment plants. Second, Zimmer bases her penalty recommendations on the profits earned by Avatar Holdings and Barefoot Bay Development Corporation, rather than the costs that Florida Cities allegedly avoided, as required by the Clean Water Act. Third, Zimmer includes in her calculation profits earned by Barefoot Bay Development Corporation, an entity that is not a party to this lawsuit. Fourth, Zimmer primarily analyzes results allegedly related to purported violations that occurred beyond the statute of limitations. Fifth, Zimmer makes numerous methodological errors and improper assumptions that make her testimony misleading and unhelpful to this Court.

I. Background

On October 31, 1993, the government instituted this action against Florida Cities for the alleged Clean Water Act violations at one Florida Cities' facility, Waterways Estates Wastewater Treatment Plant ("Waterways Estates"). On May 5, 1995, the government added allegations regarding two other Florida Cities' facilities, Barefoot Bay Wastewater Treatment Plant ("Barefoot Bay") and Carrollwood Wastewater Treatment Plant ("Carrollwood"), and added Avatar Holdings, Florida Cities' indirect corporate parent, as a party, alleging that Avatar Holdings "directly controls" the environmental compliance practices of Florida Cities, and is therefore liable for the acts or omissions of its subsidiary. See Second Amended Complaint ¶ 6 ("Complaint").

The government seeks penalties for the alleged violations under section 309(d) of the Clean Water Act, 33 U.S.C. § 1319(d). This Court has previously ruled that the government's claims against both defendants with respect to unpermitted discharges at Barefoot Bay and Carrollwood are barred by the doctrine of res judicata. Orders of November 22 and December 21, 1995. This Court has also ruled that all claims against Avatar Holdings arising prior to May 5, 1995 are barred against Avatar Holdings by the applicable statute of limitations. Order of November 22, 1995.

II. Ms. Zimmer and her Report

On October 13, 1995, the government's expert witness regarding penalty assessment, Eileen Zimmer, a Senior Financial Analyst for the Corporate Financing Unit (Antitrust Division) of the Department of Justice, submitted a Report entitled "Analysis of Wrongful Profits and Ability to Pay in U.S. v. Florida Cities Water Co." (the "Report"), attached as Exhibit A. The stated goal of this Report is "to quantify wrongful profits realized by Avatar Holdings, Inc. (Avatar) through its Barefoot Bay Development Corporation (Barefoot Development) operations and by Florida Cities Water Company [Florida Cities or FCWC] . . . ; and to determine the ability of Avatar and [Florida Cities] to pay a civil penalty for alleged violations of the Clean Water Act."

The Report analyzed the "wrongful profits" allegedly realized by Avatar Holdings "through its Barefoot Bay Development Corporation and by Florida Cities Water Company." Zimmer Report at i. The Report first analyzes the so-called "wrongful profits"

realized by these entities by (1) taking the pre-tax income of Florida Cities at each facility and of Barefoot Bay Development Corporation; (2) estimating the post-tax income of these entities by assuming that each facility was liable for income taxes levied at the same rate as paid by Florida Cities; and (3) determining the "net present value" of these profits by determining how much these profits would be worth in constant 1995 dollars if one assumed that the funds were invested at three different interest rates: 6% ("which is represented to be FCWC's after tax average cost of debt assuming a 100% debt capitalization"); 11.3% ("which is the rate recommended by E.P.A. to be used in economic benefit calculations"); and 15% ("which approximates FCWC's cost of equity assuming a 100% equity capitalization"). Zimmer Report at 1-2.

The Zimmer Report concludes that the total profits earned by these entities between 1981 and 1991, expressed in constant 1995 dollars, ranged from approximately $7.1 to $15.2 million, depending upon the interest rate used to derive the net present value of the allegedly wrongful profits. Id. at 7. Most significantly, all of these profits derive from the mobile home development by Barefoot Bay Development Corporation;[1] if the profits from this land development were not included, Florida Cities' utility operations actually lost money at these facilities throughout the period-- $159,538 (at an assumed discount rate of 6%),

---

1. Id.; see Zim. Dep. Tr. at 93 ("Q. If you exclude Barefoot Bay Development Corporation from these numbers, can you tell me whether there would be a wrongful profit realized at Florida Cities Water Company? A. There would be a negative wrongful profit.") (answer by Zimmer). Relevant excerpts from the transcripts of the deposition of Eileen Zimmer are attached as Exhibit B.

$169,086 (at an assumed discount rate of 11.3%), or $158,247 (at an assumed discount rate of 15%).

The Report next analyzes whether Florida Cities and Avatar Holdings can pay "the maximum amount of estimated alleged wrongful profits calculated in [this report]." Id. at 10. Based upon her analysis of the balance sheets of each company, Zimmer concludes that Florida Cities could afford to pay a fine of as much as $7.5 million, spread over five years, id. at 9, and that Avatar Holdings could pay a fine of $7.1 to $15.2 million, payable in one year. Id.

As demonstrated more fully below, this Report and any testimony relating to this Report are clearly inadmissible.

III. Zimmer's Testimony and Report are Inadmissible Under the Standards Established by the Supreme Court in *Daubert v. Merrell Dow Pharmaceuticals, Inc.*

A. The Legal Framework Established by *Daubert* and Rule 702

In Daubert v. Merrell Dow Pharmaceuticals, Inc., 113 S.Ct. 2786 (1993), the Supreme Court established new rules detailing when expert testimony should be excluded. The issue in Daubert was the proper standard for the acceptance of expert testimony and reports under Rule 702 of the Federal Rules of Evidence, which provides that "[i]f scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue," then an expert "may testify thereto." Fed. R. Evid. 702. As numerous courts subsequently have noted, the Supreme Court's reasoning applies to

expert testimony in general, including economic testimony and reports.[2] Accordingly, the principles established in Daubert provide the relevant framework to determine whether the Zimmer Report and the testimony of Zimmer herself are admissible.

The Daubert Court identified two concerns that must be satisfied before expert testimony can be submitted to the trier of fact. First, the methodology underlying the proposed testimony must be rigorous enough that its conclusions will be helpful to the trier of fact; that is, the "[p]roposed testimony must be supported by appropriate validation -- i.e., 'good grounds.'" Id. at 2795. The trial court accordingly must conduct "a preliminary assessment of whether the reasoning or methodology underlying the testimony is scientifically valid." Id. If the expert testimony proffered is "not based on reliable foundations and thus would be of no aid to the finder of fact," then the evidence is inadmissible.[3]

Second, the proposed testimony must "'assist the trier of fact to understand the evidence or to determine a fact in issue.'" Daubert, 113 S.Ct. at 2795 (quoting Fed. R. Evid. 702). The primary purpose of this second inquiry is to ensure that there is a good "fit"

---

2. See, e.g., In re Aluminum Phosphide Antitrust Litig., 893 F. Supp. 1497 (D. Kan. 1995) (applying Daubert principles to an economic report of pricing practices); Lieu v. Korean Air Lines Co., Ltd., No. 84 Civ. 0690 (PNL), 1993 WL 478,343 (S.D.N.Y. Nov. 16, 1993), (applying Daubert principles to estimates of future growth of Taiwanese economy and estimates of future wages); Newport Ltd. v. Sears, Roebuck & Co., Civ. Act. No. 86-2319, 1995 WL 328,158 (E.D. La. 1995) (applying Daubert factors to analysis of lost profits).

3. United States v. 14.38 Acres, 884 F. Supp. 224, 227 (N.D. Miss. 1995); accord Pomella v. Regency Coach Lines, Ltd., 899 F. Supp. 335, 340 (E.D. Mich. 1995) (ruling expert testimony inadmissible because the expert had not adequately established the coefficient of friction between the tires and the road under the conditions in question).

between the testimony offered and a relevant issue in the case, id., and that "the reasoning properly can be applied to the facts in issue." The testimony is not admissible unless it provides helpful insight into a fact that is legally relevant to the case; "[e]xpert testimony which does not relate to any issue in the case is not relevant and, ergo, nonhelpful."[4]

In short, the trial court is to act as a "gatekeeper,"[5] determining "at the outset"[6] of the trial whether the proffered expert testimony is methodologically sound and relevant.[7] If the proffered testimony fails to satisfy either of these tests, then the court must exclude it. Daubert, 113 S.Ct. at 2796.

B. Zimmer's Testimony and Report Are Not Admissible Because They Do Not Relate to Any Issue in This Case"

1. Zimmer Calculates the Alleged "Wrongful Profits" Related to Claims Barred by the Doctrine of Res Judicata

In her Report, Zimmer calculates the alleged "wrongful profits" of Avatar Holdings and Florida Cities with respect to the alleged unpermitted discharges at Barefoot Bay (from November 1, 1981 to October 31, 1991) and at Carrollwood (from November 1,

4. Id. (quoting 3 Weinstein & Berger ¶ 702[02], pp. 708-12).

5. Id.; see also, In re Paoli R.R. Yard PCB Litig., 35 F.3d 717, 748 (3d Cir. 1994) ("Daubert makes clear for the first time at the Supreme Court level that courts have to play a gatekeeping role with regard to experts.").

6. Id. at 2796.

7. Id. at 2798 (Rehnquist, C.J., concurring in part and dissenting in part); see also Bradley v. Brown, 42 F.3d 434, 437 (7th Cir. 1994) ("the Court specifically recognized the 'gatekeeping function' of the district court").

1984 to June 30, 1991).[8] Report at pp. 3, 5-6. Moreover, in calculating the "wrongful profits" at Barefoot Bay, Zimmer does not limit her calculation to the profits of Florida Cities -- actually a loss ranging between $259,414 and $436,915, depending on the interest rate applied. Rather, Zimmer also includes the profits realized by the Barefoot Bay Development Corporation selling lots and mobile homes during the same period, which she calculates between $7.1 and $15.2 million. Report, at pp. 5-6.

The Court has previously ruled in its Orders of November 22, 1995 and December 21, 1995, that these claims are barred by the doctrine of res judicata. Therefore, Zimmer's testimony about the "wrongful profits" associated with these claims does not relate to any issue in this case. Accordingly, Zimmer's testimony and her report should be excluded on these issues.

2. Zimmer's "Wrongful Profits" Analysis is Not Relevant to the Calculation of Economic Benefit

Section 309(d) of the Clean Water Act states that "[a]ny person who violates" certain provisions of the Clean Water Act is subject to a civil penalty. 33 U.S.C. § 1319(d). One of the factors the court must consider when assessing a civil penalty is "the economic benefit (if any) resulting from the violation." Id.

The Zimmer Report analyzes the "wrongful profits" earned by Florida Cities, Avatar Holdings, and Barefoot Bay Development Corporation, ostensibly to determine this

8. See Zim. Dep. Tr. at 22 ("A wrongful profit is in this particular case profits earned by the three facilities at Florida Cities and the Barefoot Bay Development Corporation during the period where they did not have the proper permits in place.")

economic benefit. This Report, the government asserts, is relevant because these companies could not have operated but for the alleged Clean Water Act violations, and, hence, would not have earned any profits. Thus, according to the government's position, the economic benefit of the alleged violations is equal to any profits that these companies earned while they were operating in violation of the Clean Water Act.

The government's current position flies in the face of two decades of consistent government policy and judicial decisions. Both the government and the courts have always defined "economic benefit" as being equal to the present-day value of the avoided costs, not the profits earned during the period of non-compliance. EPA's manual for its BEN Computer Model, which EPA developed to determine the economic benefit of a Clean Water Act violation,[9] EPA's RCRA Civil Penalty Releases,[10] and EPA's Enforcement Policy Releases all have calculated economic benefit in terms of costs avoided or delayed during non-compliance, not profits earned. EPA's Enforcement Policy Releases expressly state that "the economic advantage to be derived from noncompliance is the ability to delay making the

---

9. Environmental Protection Agency, Guidance for Calculating the Economic Benefit of Noncompliance for a Civil Penalty Assessment 2-4 (1984); see Student Public Interest Research Group of New Jersey, Inc. v. Monsanto, Civ. No. 83-2040, 1988 WL 156,691 (D.N.J. Mar. 24, 1988) (noting that the parties agreed that the EPA normally used the BEN programs estimate of costs avoided to determine the "economic benefit" of noncompliance).

10. Environmental Protection Agency, 1990 Revised RCRA Civil Penalty Policy 26-30 (1990).

expenditures necessary to achieve compliance."[11] Indeed, Kenneth Kwan, the EPA enforcement officer for this case, testified at his deposition that the method for calculating economic benefit involved determining "the captial cost . . . required to meet the permit or the Clean Water Act requirements." Kwan Dep Tr. at 161 (attached as Exhibit C).

More significantly, numerous courts, have analyzed economic benefit" under the Clear Water Act to be the present-day value of any costs avoided by noncompliance.[12] Thus, there is no support in the case law for the government's assumption that any profits earned by these companies are an economic benefit under the Clean Water Act. As the Eleventh Circuit held in Atlantic States Legal Foundation v. Tyson Foods, the economic benefit under the Clean Water Act is the present-day value of the costs avoided by any

---

11. Environmental Protection Agency, Policy on Civil Penalties: EPA General Enforcement Policy #GM-21 (1984).

12. For example, in Friends of the Earth v. Laidlaw Envtl. Servs., 890 F. Supp. 470 (D.S.C. 1995), the court cited the EPA's BEN User's Manual as stating that the "concept of alternative investment; that is, the amount the violator would normally expect to make by not investing in pollution control, is the basis for calculating the economic benefit of noncompliance." The court accordingly concluded, based upon this authority, that "[e]conomic benefit is the after-tax present value of avoided or delayed expenditures on necessary pollution control measures." Id.; see also Proffitt v. Lower Bucks County Joint Mun. Auth., 1988 U.S. Dist. LEXIS 4381 (May 12, 1988) (approving the use of BEN, "the computer software package used by EPA or civil penalty calculations," in which "[t]he economic benefit was calculated as the difference in the net present value of cash flows if compliance had been achieved on time, and the cash flows resulting from delayed compliance."); Student Public Interest Research Group of New Jersey, Inc. v. Monsanto, Civ. A. No. 83-2040, 1988 WL 156,691 (D.N.J. Mar. 24, 1988) (disallowing testimony of expert witness, in part because "no witness attempted to utilize the BEN computer program which plaintiffs conceded would be utilized by the EPA");

untimely compliance.[13] This holding is well within the mainstream of Clean Water Act jurisprudence, which defines

> [e]conomic benefit [as] the after-tax present value of avoided or delayed expenditures on necessary pollution control measures. Economic benefit represents the opportunity a polluter had to earn a return on funds that should have been spent to purchase, operate, and maintain appropriate pollution control devices. To determine a company's economic benefit from noncompliance with its permit, one must compare the company's cash flows associated with the delayed permit compliance measures to what those cash flows would have been if the company had obtained the necessary pollution control equipment on time.

Friends of the Earth v. Laidlaw Envtl Servs., 890 F. Supp. 470 (D.S.C. 1995).

Virtually every other court that has considered the issue has concurred in this analysis of the economic benefit component of a penalty.[14] In fact, the courts have stated

---

13. Atlantic States Legal Found. v. Tyson Foods, 897 F.2d 1128, 1141 (11th Cir. 1990) (noting that "economic benefit" is equal to savings "in operation and maintenance expenses by operating without utilizing the technology and employees necessary to comply with its permit"); see Atlantic States Legal Found. v. Universal Tool, 796 F. Supp. 743, 751 (N.D. Ind. 1992).

14. See, e.g., Public Interest Research Group of New Jersey, Inc. v. Powell Duffryn Terminals, Inc., 913 F.2d 64, 79 (3d Cir. 1990) (estimating economic benefit not as profits during period of violation, but rather as avoided cost of hauling tainted wastewater to treatment facility); Public Interest Research Group of New Jersey, Inc. v. Magnesium Elektron, Inc., 1995 WL 461,252 at *12 (D.N.J. 1995) (upholding testimony of plaintiffs' economics expert "that economic benefit should be calculated by determining the after-tax present value of the expenditures the company avoided or delayed by not complying"; court also noted that the expert had "testified that that methodology is virtually identical to the methodology used by the EPA"; Proffitt v. Lower Bucks County Joint Mun. Auth., Civ. Act. No. 86-7220, 1988 U.S. Dist. LEXIS 4381, at *15 (May 12, 1988).

that even in cases in which the offending facility did not hold the required permit -- and hence was not entitled to operate at all -- the proper measure of damages still was the avoided costs of complying with the Act.[15] The case law, in other words, uniformly rejects the Government's current position that the economic benefit of noncompliance is every dollar of profits earned during the period of noncompliance.[16]

The only contrary authority to this consistently applied definition of "economic benefit" is found in the recently issued "Revised Interim Clean Water Act Settlement Penalty Policy" (Interim Settlement Policy), which the EPA issued on February 28, 1995. The Interim Settlement Policy generally embraces the BEN Model and the long-standing EPA policy of defining economic benefit as the costs of noncompliance. The policy does, however, state that "[i]n some cases, the BEN model may not be an appropriate methodology

---

15. See, e.g., United States v. Roll Coater, Inc., Cause No. IP 89-828 C, 1991 U.S. Dist. LEXIS 8790 (S.D. Ind. Mar. 22, 1991) (calculating economic benefit, where company exceeded average monthly limits by more than one thousand percent, as costs of avoided compliance); United States v. Confederate Acres S. & S. Drainage System, 767 F. Supp. 834, 839 (W.D. Ky. 1990) (holding that the economic benefit of operating without a permit was equal to the amount saved).

16. So far as defendants are aware, there are no cases in which a court has allowed the EPA to calculate the amount of the economic benefit based upon "wrongful" profits. This also appears to be the same conclusion that Zimmer has reached. See Zim. Dep. Tr. at 84 ("Q. . . . [H]ave you ever seen a wrongful profits analysis done before in an environmental law context? A. No, I don't think so."). In an early case, United States v. Reserve Mining Co., 412 F. Supp. 705, 709 (D. Minn.), aff'd, 543 F. 2d 1210 (8th Cir. 1976), the court referred to the defendant's "profits" in considering a penalty under the Clean Water Act, but described those profits as the money saved by choosing a "less costly" but illegal discharge alternative, not as the money made by the company during the period of non-compliance. Thus, Reserve Mining is consistent with the later cases defining economic benefit.

for estimating economic benefit or will not capture the full scope of the economic benefit." Interim Settlement Policy at 5. The Interim Settlement Policy only provides one example in which it would be appropriate to use a "wrongful profits analysis" -- a "privately-owned regulated utility." Id.

This Interim Settlement Policy does not provide sufficient support to rehabilitate Zimmer's analysis. First, the reference to a "wrongful profits analysis" is contrary to over two decades of EPA practice and court decisions, which have consistently defined economic benefit to mean the costs saved or delayed due to noncompliance, not the profits made during the period of noncompliance. Indeed, in the single sentence mentioning a "wrongful profits analysis," the Interim Settlement Policy provide no legal or economic support for this approach. Second, the only utility involved in this case, Florida Cities, actually lost money during the period of noncompliance. There is no support in this policy for applying the wrongful profits analysis to a land sales company such as Barefoot Bay Development Corporation.

In short, the overwhelming weight of authority is that the economic benefit of noncompliance is the costs avoided by that noncompliance. Despite the weight of this authority, Zimmer admitted that she never made "any attempt . . . to quantify the costs of bringing this facility into compliance with the Clean Water Act." Zim. Dep. Tr. at 26-27. Zimmer also admitted that she never calculated the costs of compliance or considered whether there were alternative facilities that could have been used to comply with the Act. Id. at 43-

44. Rather, the Report instead attempts to quantify a figure that is irrelevant to the litigation -- the amount of profits earned by Barefoot Bay Development Corporation -- while ignoring the true issue -- the absence of any economic benefit to the defendants from the alleged violations of the Clean Water Act.

The irrelevance of this Report and Zimmer's testimony to any real issue in this case mandates their exclusion. As the Supreme Court stated in Daubert, "[e]xpert testimony which does not relate to any issue in the case is not relevant and, ergo, nonhelpful."[17] Zimmer's testimony and Report are not relevant "for purposes of the case,"[18] and therefore this must be excluded at the "outset"[19] for failing to "advance the trier of fact's understanding of a material issue in the case."[20]

17. Id. (quoting 3 Weinstein & Berger ¶ 702[02], pp. 708-12); see id. at 2796 ("'An additional consideration under Rule 702 -- and another aspect of relevancy -- is whether expert testimony proffered in the case is sufficiently tied to the facts of the case that it will aid the jury in resolving a factual dispute.'") (quoting United States v. Downing, 753 F.2d 1224, 1242 (3d Cir. 1985)).

18. See, e.g., In re Paoli R.R. Yard PCB Litig., 35 F.3d 717, 743 (3d Cir. 1994) ("even if an expert's proposed testimony constitutes scientific knowledge, his or her testimony will be excluded if it is not scientific knowledge for purposes of the case"); Cavallo v. Star Enter., 892 F. Supp. 756, 761 (E.D. Va. 1995) (same).

19. Daubert, 113 S.Ct. at 2796.

20. Cavallo v. Star Enter., 892 F. Supp. 756, 761 (E.D. Va. 1995) ("not only must the opinion be scientifically valid, or reliable, but it must also advance the trier of fact's understanding of a material issue in the case.").

C. The Methodological Flaws in Zimmer's Testimony and Report Make Her Analysis Unreliable

1. Zimmer Improperly Includes "Wrongful Profits" with Respect to Violations Alleged to Occur Beyond the Statute of Limitations

This Court in its November 22, 1995 order ruled that all allegations against Avatar Holdings based on alleged discharges from Florida Cities' facilities occurring prior to May 5, 1990, are barred by the five year statute of limitations under 28 U.S.C. § 2462. Similarly, the statute of limitations protects Florida Cities from claims relating to Barefoot Bay and Carrollwood before May 5, 1990, and from claims relating to Waterways Estates before October 31, 1988.

Zimmer's "wrongful profits" analysis, however, reaches far beyond the statute of limitations, and even the Complaint, and calculates the profitability of three facilities and the Barefoot Bay Development Corporation during the following periods:

(1) Carrollwood Wastewater Treatment Plant, from November 1, 1984, through June 30, 1991;

(2) the Waterway Estates Wastewater Treatment plant, from January 9, 1987 through June 1992;

(3) the Barefoot Bay Wastewater Treatment plant, from November 1, 1981, through October 31, 1991;

(4) the Barefoot Bay Development Corporation, from November 1, 1981, through October 31, 1991.[21]

21. Zimmer Report at i; see Zim Dep. Tr. 19.

With respect to Carrollwood, Zimmer's calculation period included almost six years beyond the applicable statute of limitations. For Waterways Estates, Zimmer included three years beyond the limitations period applicable to claims against Avatar Holdings. Astonishingly, with respect to the Barefoot Bay facility and the Barefoot Bay Development Corporation, Zimmer's calculations included almost nine years beyond the limitations period.

As Zimmer acknowledged, if these erroneously included periods were removed from the analysis, the purported "wrongful" profits calculated in the Report "would be reduced." Zim. Dep. Tr. at 91-93. Because the vast majority of the time period analyzed by the Zimmer Report falls beyond the statute of limitations, the Report is inherently incapable of providing any meaningful insight into the economic benefit that accrued to the defendants.[22]

2. Zimmer Improperly Includes Profits Earned by a Company that Did Not Discharge Pollutants and is Not Named in the Complaint

Section 309(d) of the Clean Water Act imposes a penalty on "a person who violates" the Act. 33 U.S.C. § 1319(d). As this court has stated, this requirement cannot be read to impose liability on someone who has not "actively directed or caused the illegal [act]." United States v. Lambert, 589 F. Supp. 366, 374 (M.D. Fla. 1984).

22. See, e.g., Hein v. Merck & Co., Inc., 868 F. Supp. 230, 233 (M.D. Tenn. 1994) (rejecting expert testimony in part because "[t]here are . . . critical errors in the assumptions and methodology of the three models used" that made it impossible to extract useful information).

Plaintiff's Second Amended Complaint only names Florida Cities and Avatar Holdings as defendants,[23] and nowhere alleges any Clean Water Act violations on the part of Barefoot Bay Development Corporation, id. at ¶¶ 15-48. Accordingly, there is no rational basis to connect the profits earned by that company to the conduct complained of in this case. The only connection between Barefoot Bay Development Corporation and the alleged violations is that both Barefoot Bay Development Corporation and Florida Cities are indirect subsidiaries of Avatar Holdings. Barefoot Bay Development Corporation neither owns, nor is owned by, Florida Cities, and Barefoot Bay Development Corporation does not "direct" or "control" the discharges of Florida Cities. Barefoot Bay Development Corporation is not a party in this case and there are no facts, or even allegations in the Complaint, that Avatar Holdings is the alter ego of Barefoot Bay Development Corporation. Thus, the amount of profits earned by Barefoot Development Corporation, regardless of their level, simply is irrelevant to this case.[24]

By submitting this Report, the government has attempted to make an end run around the Federal Rules of Civil Procedure and the Due Process Clause, in effect making Barefoot Bay Development Corporation a party to this case without ever filing a complaint against it. As the Act establishes, however, Barefoot Bay Development Corporation cannot be

---

23. The Complaint names Avatar as a defendant solely in its capacity as an overseer "acting through" Florida Cities. Id. at ¶ 6.

24. For additional reasons why these entities are not part of this case, see Defendant Avatar Holdings Inc.'s Memorandum of Law in Opposition to Motion for Summary Judgment dated Sept. 9, 1995.

held liable for any alleged discharges unless it is demonstrated to have "actively directed or caused" the discharges. Because the Government has failed to allege, let alone prove, that Barefoot Bay Development Corporation caused Florida Cities' discharges, it would be improper for this Court to allow the government to implicate that company under the guise of allowing Zimmer to calculate its "wrongful profits."

3. Zimmer Improperly Calculates the Profits Allegedly Attributed to Barefoot Bay Development Corporation

Finally, even if it were correct to include in the analysis the profits from Barefoot Bay Development Corporation (which constitutes the entire net profit calculated by Zimmer), the Zimmer Report does not properly account for these profits, further undermining whatever credibility it may have.

Zimmer attributes all profits earned by Barefoot Development between November 1, 1981, through October 31, 1991, as being "wrongful."[25] What Zimmer's analysis ignores, however, is that Barefoot Bay Development Corporation earned money by the one-time sale and development of a fixed supply of land; if Barefoot Bay Development Corporation had simply held onto its lots until November 1, 1991, after the Barefoot Bay Treatment plant had received its permit, it could have sold its lots at that time without incurring any "wrongful profits." In other words, even if the wrongful profit analysis were valid any "wrongful profit" made was not equal to the total profits made, but rather to the

25. See Zim. Dep. Tr. at 37 ("What this [Report] assumes is that without the proper permits in place that these operations should not have been operating during the time periods, so that all profits earned were wrongful profits.").

incremental profit that Barefoot Bay Development Corporation received by selling land prior to November 1, 1991. See Zim Dep. Tr. at 37-38. Obviously this amount is far less than the total profits made by Barefoot Bay Development Corporation prior to that time, which Zimmer uses in her report.

This fundamental error makes it impossible to determine what portion of the profits that the analyzed entities earned by not delaying land sales. Thus, even if it were proper to calculate the amount of "wrongful" profits involved in this case, Zimmer's report and testimony still would not be admissible.

Conclusion

The limitations of the Zimmer's analysis render her testimony and report incapable of playing an informative role in this case. Zimmer calculates "wrongful profits" with respect to claims that are barred by the doctrine of res judicata and the statute of limitations. Zimmer equates "wrongful profits" with purported economic benefit, while ignoring consistent judicial decisions and EPA policies of defining economic benefit to mean delayed or avoided costs. Zimmer includes profits made at companies that had no connection with the alleged violations. Even if one were, contrary to all authority, to accept the scope of her analysis, the Court still would have to exclude her testimony and report because Zimmer improperly calculates the "wrongful" profits that she purports to analyze.

Any one of these errors is sufficient to mandate the exclusion of Zimmer's testimony and report, for "Daubert's requirement that the expert testify to scientific knowledge

-- conclusions supported by good grounds for each step in the analysis -- means that any step that renders the analysis unreliable under the Daubert factors renders the expert's testimony inadmissible."[26] Zimmer's analysis which includes significant errors and omissions at well nigh every step along the way, accordingly is inadmissible under the Federal Rules of Evidence.

In light of the above, Defendants respectfully request that Eileen Zimmer's testimony and Report be excluded.

Respectfully submitted,

RE: United States v. Florida Cities Water Company, et al. No. 93-281-CIV-FTM-21

Dear Bob:

I have been authorized to forward to you the following settlement proposal with respect to the above-captioned case. Defendants are prepared to offer $600,000 for a complete settlement of all matters raised in the complaint, as amended. The payment would be made in three annual installments of $200,000, with the first payment due within 30 days of entry of a notice of settlement and order of dismissal by the Court.

We would appreciate your response at the earliest possible time. I can be reached today in our New York Office at 212-310-8019, and I will be in the Washington office all day tomorrow.

Based on your last voice mail message to me, of course, feel free to discuss this proposal with the appropriate department officials.

Very truly yours,

David R. Berz

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

THE DEPUTY CLERK: Case Number 93-281, Civil, Fort Myers, 21(D), United States of America versus Florida Cities Water Company and Avatar Holdings, Incorporated.

Counsel, please state your names for the record.

THE COURT: Just a moment.

Let me have lead counsel to introduce themselves, and lead counsel can introduce the other people at counsel table with him.

MR. JACOBS: Good morning, Your Honor. Daniel Jacobs, U.S. Department of Justice, representing the United States.

With me today is my co-counsel Tony Quinn also with the U.S. Department of Justice and Gwen Fitz-Henley, Associate Regional Counsel, United States Environmental Protection Agency, Region 4.

THE COURT: All right. Now, my Courtroom Deputy wrote down the name Robert Homiak and John Moore as well.

MR. JACOBS: They are present, Your Honor. Mr. Moore is right over here. He's a paralegal. Mr. Homiak is right over here. He's an attorney.

THE COURT: All right. Thank you.

MR. BAISE: Good morning, Your Honor. My name is Gary Baise. I represent the Defendant Florida Cities Water Company, and I am accompanied by Mr. Alex Bullock, who will

be assisting me, Mr. Lance High and Mr. Donald Scroggin on the defense team for Florida Cities Water Company.

THE COURT: Thank you.

MR. BAISE: Also we have with us the general counsel, Mr. Dennis Getman.

THE COURT: All right. Just a moment.

G-E-T-M-A-N?

MR. BAISE: Yes, sir.

THE COURT: All right.

MR. BAISE: And Mr. Gerald Allen, executive vice-president of Florida Cities Water Company.

THE COURT: Gerald Allen --

MR. BAISE: Allen, yes.

THE COURT: -- A-L-L-E-N.

Vice-president?

MR. BAISE: Executive vice president.

THE COURT: President?

MR. BAISE: Yes, sir, executive vice-president.

THE COURT: All right. Thank you.

MR. HIRD: Good morning, Your Honor. I'm David Hird representing Avatar Holdings, Inc. With me is Joanne Tsotsos.

THE COURT: All right. Thank you.

All right. This case is scheduled for trial commencing this morning. The Court has allotted 30 minutes

for the Plaintiff and 30 minutes for the Defendants for opening statements.

Counsel for Plaintiff ready to proceed?

MR. JACOBS: Yes, Your Honor.

THE COURT: Counsel for the Defendants ready to proceed?

MR. BAISE: Yes, Your Honor, for Florida Cities.

MR. HIRD: Yes, Your Honor.

THE COURT: All right. Then who will be presenting the opening statement for the United States?

MR. JACOBS: With your permission, I will, Your Honor.

THE COURT: All right. You may proceed, Mr. Jacobs.

MR. JACOBS: May it please the Court.

THE COURT: Yes, sir.

MR. JACOBS: Your Honor, unlike my diminutive co-counsel Mr. Quinn, I'm not lucky enough to come from the State of Florida. And where Mr. Quinn and I both hail from now, Washington, D.C., there are more pigeons than gators, more Red Skins than Seminoles and Buccaneers, for that matter. But whether it's been to visit family, work on this case, or to flock south like birds to get away from the harsh winter we have had up north, I have been lucky enough to spend a considerable amount of time in Florida.

Page 5

On one of my trips, I accompanied Mr. Klingenstein, our wastewater treatment expert, on visits to the three wastewater treatment plants that are the subject of this case.

We flew into Tampa, coming in across the Tampa Bay. We started at the site of the old Carrollwood plant from which you can see the Sweetwater Creek.

We then drove down to Fort Myers, crossing the Caloosahatchee River to get to the Waterway Estates plant.

Finally, we crossed the state and the Indian River to get to Barefoot Bay.

Your Honor, we'd like to invite you to take that same trip. You won't even have to leave the bench because we have it all right here in a video and photos which we'd like to introduce during Mr. Klingenstein's testimony.

Your Honor, as you know, the Court has already found that the Florida Cities Water Company has unlawfully polluted the Sebastian River at a point just a couple of miles from the Indian River; has unlawfully polluted the Sweetwater Creek a short distance from where it leads into Tampa Bay and has unlawfully polluted the Caloosahatchee River.

As you also know, the purpose of this trial is solely to determine how much the Florida Cities Water Company should be fined for polluting those water bodies and

Page 6

whether, if so -- and if so, how much its parent company, Avatar Holdings, should be fined for those same violations.

Thus, there are, I dare say, two fairly straightforward issues at this trial: Florida Cities' penalty and Avatar Holdings' liability and penalty.

Your Honor, when Congress passed the Clean Water Act in 1972, it issued a report that said, and I quote, No one has the right to pollute.

Since that time, Federal Judges have referred to that edict in decisions rendered in cases brought both by the Federal Government and private citizens to enforce the Act.

THE COURT: Mr. Jacobs, let me stop you just a moment. Did I say 20 minutes or 30 minutes to the side?

MR. JACOBS: You said 30, Your Honor.

THE COURT: All right. I meant 30. But somehow or the other, I was thinking I said 20. It is 30 minutes. Go ahead.

MR. JACOBS: Despite the fact that Congress and the courts have made it clear that no one has the right to pollute, the evidence will show that the Defendants have acted as if they have that right.

The Eleventh Circuit, in Atlantic States Legal Foundation versus Tyson Foods, has essentially said that if someone is unable to operate in compliance with the law, it

Page 7

should not operate until it is prepared to do so in compliance with the law. The evidence will show that the Defendants have ignored that mandate as well.

Your Honor, the Environmental Protection Agency, represented by the Department of Justice, is charged with enforcing the Act. The agency enforces the Act under its own administrative authority and, in the most serious cases, asks the Justice Department to bring a civil action in Federal Court. The vast majority of these are settled. You are presiding over one of the important exceptions.

In determining the amount of the civil penalty to be imposed for violations of the Clean Water Act, the Act itself provides that the Court shall consider the seriousness of the violations, the economic benefit, if any, resulting from the violations; any history of such violations; any good faith efforts to comply with the applicable requirements; the economic impact of the penalty on the violator, and such other matters as justice may require.

Your Honor, Mr. Klingenstein will address three of these factors. Ms. Zimmer, our financial expert, will address, as I understand the Court's ruling from this morning, just one of the other factors.

Based on over 15 years of experience in the field of wastewater treatment, Mr. Klingenstein will testify about

Page 8

the seriousness of the violations, the history of past violations and the efforts, or lack thereof, to comply with the law.

Based on over 12 years of experience in the field of financial analysis, Ms. Zimmer will discuss the economic benefit -- well, forgive me. She will not discuss the economic benefit, as I understand the Court's order from this morning, but she will discuss the economic impact of the penalty on the violators.

As an introduction to his testimony, Mr. Klingenstein will offer some brief background about the National Pollutant Discharge Elimination System, the NPDES, as it is known, and how the system is designed to prevent harm to the environment, and he will then narrate the video tour, if you will, of the three plants.

Next, Mr. Klingenstein will describe the violations themselves. He will address three of the statutory penalty factors: Seriousness, history and compliance efforts.

There were four types of violations in this case. There were 396 days of unpermitted discharges; that is, 396 days on which the Waterway Estates plant discharged pollutants into the Caloosahatchee River without an NPDES permit at all.

There were 621 days of discharges at an

Page 9

unpermitted location; that is, 621 days on which the Waterway Estates plant discharged pollutants into a boat canal which leads to the Caloosahatchee River instead of into the middle of the river itself.

And there were the equivalent of 1,042 days, cumulatively, on which a plant violated its NPDES permit by discharging pollutants in excess of an effluent limitation.

I say "equivalent" because some of the violations were monthly average violations for which the penalty legally, under Tyson Foods, is the equivalent of the number of days in the month in which they were committed.

And finally, there were 79 days on which the Barefoot Bay plant failed to monitor its effluent as required by its NPDES permit.

Mr. Klingenstein will explain how each of these violations was serious with the exception of the monitoring violations, which in this case were less serious, and will explain each of the serious -- excuse me -- will explain how each of the serious violations had the potential, at least, of harming the environment.

Next, Mr. Klingenstein will describe the history of past violations explaining their seriousness and the relationship between the past violations and the present violations.

The unpermitted discharges date from 1980 to 1991

Page 10

at Barefoot Bay, over a decade; from 1984 to 1992 at Carrollwood, and from 1986 to 1989 at Waterway Estates, a cumulative total of over two decades of unlawful pollution.

Finally, Mr. Klingenstein will testify about the various alternatives that were available to Defendants to comply with the law if they chose to do so.

The evidence will show that at each of the plants, there was at least one alternative that was readily available, reasonable and viable that would have afforded immediate compliance with the law.

The evidence will show that at each of the plants, the Defendants chose not to avail themselves of at least one readily available, reasonable and viable alternative and instead to operate in violation of the law.

At the Barefoot Bay plant, which serviced Barefoot Bay, an Avatar development, the discharge into the Sebastian River could have been completely eliminated by any one of three means: Percolation ponds, spray irrigation and deep well injection. Alternatively, Defendants could have constructed an advanced wastewater treatment plant so that they could meet the limits in their permit.

At Carrollwood, the discharge into the Sweetwater Creek could have been completely eliminated by connecting the wastewater to the nearby City of Tampa system.

Mr. Bill Schafer, the Director of Planning for

Page 11

Tampa's Department of Sanitary Sewers, will testify that the City was ready and willing to have that connection.

Alternatively, Defendants could have constructed an advanced wastewater treatment plant to meet the limits of their NPDES permit.

At Waterway Estates, the discharge to the canal and to the Caloosahatchee River could have been completely eliminated by connecting the system to the nearby North Fort Myers system.

Mr. Jack Schenkman, the chief executive officer of North Fort Myers Utilities, will testify that he was ready and willing to have that connection.

Alternatively, Defendants could have timely constructed an advanced wastewater treatment plant and timely moved the discharge point from the canal to the six foot contour line of the river itself as required by the permit that was later issued.

One question the Government will seek to address at trial is why these Defendants did not avail themselves of the alternatives that would have resulted in compliance with the law. Why didn't they do the right thing?

And, Your Honor, the Government has been hearing excuses for roughly a decade on this subject, and I rather suspect that during the course of trial, these same excuses will come up again.

Page 12

I will also note that six individuals who could perhaps best explain why have all pled the Fifth Amendment, including Mr. Getman, who is here today, I understand, as a general counsel, but also serves as a vice-president of Avatar Holdings.

While these individuals have all pled the Fifth Amendment, they have left a trail, a long paper trail, which in their absence must speak for them.

The documentary evidence will show that these companies either did not want to make the necessary investment it would take to comply with the law, or did not want to lose an investment by shutting down a plant.

At Barefoot Bay, they wanted the plant not only to service existing lots connected to the system, they wanted it to service additional connections and even wanted it to be available, if necessary, to service another development they intended to build right next door.

At Carrollwood, they were reluctant to shut the plant down whether by connecting to the Tampa or, for that matter, the Hillsborough County system. These were, after all, their competitors in a sense; and connecting to these systems meant turning over profits to the competitors.

At Waterway Estates, shutting down the plant also meant connecting to a competitor, in this case a privately-owned system with no surface water discharge.

Page 13

In addition to not wanting to lose their investments, the Defendants had additional overriding concern that any additional investments they made in the form of improvements to their plants could be recovered through the rate making process, that is, passed through to their customers. The evidence will show that these two investment concerns trumped all other considerations.

Now, the investment concerns lead to the second issue in the case: The liability of Avatar Holdings for the violations. The Court will recall that in its November summary judgment ruling, the Court held that while there was evidence which, and I quote, tends to show involvement in decisions regarding disposal of pollutants, unquote, and which is, and I quote again, perhaps probative, unquote, there was at that time a genuine issue of material fact as to Avatar Holdings' liability.

The evidence at the time, in addition to new evidence in the form of documents from the files of Avatar Holdings' past and present officers, produced only in and after November when the Court ruled and after the close of discovery and after Avatar Holdings was ordered by the Magistrate Judge in this case to produce these documents, this evidence, Your Honor, will demonstrate that Avatar Holdings was pervasively involved in the environmental affairs of Florida Cities, including critical

Page 14

decision-making relating to the violations for which Florida Cities has already been held liable. This critical decision-making is directly linked to Avatar's concern over its investments.

One Avatar Holdings witness with relevant knowledge is available, and the United States will call him to testify as an adverse witness. Leon Levy, the chairman of the board of Avatar Holdings, will provide important historical background about Avatar dating back to its inception in 1980.

There are a number of key witnesses, however, with critical knowledge relating to Avatar Holdings' liability whom the United States would call to testify but for the fact that these witnesses are unavailable because they have asserted their Fifth Amendment right against self-incrimination.

While the documentary evidence now available, standing alone, should establish Avatar Holdings' liability by a preponderance of the evidence, adverse inferences may be drawn from the missing evidence and together with the available evidence establish Avatar Holdings' liability.

As for the ability to pay, Ms. Zimmer will testify that while neither Defendant made much of a profit from operating the three wastewater treatment plants -- I'm sorry. You have excluded, I understand, Your Honor, the

Page 15

profits --

THE COURT: Correct.

MR. JACOBS: -- at Barefoot Bay. I'll skip over that part.

Ms. Zimmer will testify to the Defendants' ability to pay a penalty, and she will testify that each of the Defendants can afford to pay a penalty in excess of $7.5 million without adverse impact.

Your Honor, in the Tyson Foods case, the Eleventh Circuit has spelled out the methodology to be followed in calculating penalties. The point of departure is the statutory maximum penalty, which in this case is $53,450,000. That's roughly $6.7 million for the Barefoot Bay violations, $14.7 million for the Carrollwood violations, and $32 million, roughly, for the Waterway Estates violations. Under Tyson Foods, the Court then takes into consideration the other listed factors as well as any other factors the Court deems appropriate.

Now, $53,450,000 is an astronomical sum. And it is rare, although not unheard of, for a court to award the statutory maximum. Just last year, the statutory maximum was awarded in a Clean Water Act case in New Jersey: Public Research Group of New Jersey versus Magnesium Electron, 40 ERC 1917, Federal District Court of New Jersey, 1995.

The United States respectively suggests, when the

Page 16

Court applies the Clean Water Act penalty factors, as well as the principles enunciated in Tyson Foods to the facts of this case, that the following fines are both appropriate and fair: A fine of $5,000 per day for the unpermitted discharges for a total of $1,980,000; a fine of $3,000 per day for the discharges at an unpermitted location for a total of $1.8 million; a fine of $1,000 per day for the permit effluent violations for a total of $937,000; and a fine of $500 per day for the permit monitoring violations for a total of $39,500.

Your Honor, in Tyson Foods, the Eleventh Circuit made clear that the penalties to be imposed on violators of the Clean Water Act are designed in part to punish them for their non compliance and to serve the goal of retribution; to impose a sufficiently high penalty that polluters will see that they must follow the law and cannot consider a penalty just another business cost, a cost to be weighed against investment concerns. We respectfully suggest that the penalty we propose is needed to serve the important goal of deterrence.

Your Honor, I began my opening statement by referring to the Clean Water Act, the NPDES system, the Sebastian and Indian Rivers, the Sweetwater Creek, the Tamp Bay and the Caloosahatchee River, and I will close on the same note.

Page 17

This case is about the violation of laws and regulations designed to protect water bodies such as these, water bodies the Defendants have unlawfully polluted, apparently with little fear of punishment or only the fear of a little punishment.

On behalf of the United States, I hope that we can demonstrate to the Court's satisfaction that they were wrong.

Thank you, Your Honor.

THE COURT: Mr. Hird.

MR. HIRD: Your Honor, before I begin, during the course of the trial, Florida Cities will go first before Avatar Holdings, but we would ask your indulgence in the opening statement to reverse the order.

THE COURT: Yes, sir.

MR. HIRD: I will go for approximately ten minutes and my colleague, Mr. Baise, will go for 20 minutes.

THE COURT: All right.

MR. HIRD: Good morning, Your Honor.

In this case, the Government is asking this Court to be the first in the country to hold a parent corporation liable under the Clean Water Act for the acts of the subsidiaries.

In essence, what the Government is asking the Court to do --

Page 18

THE COURT: The first time they have asked, or the first time it's been done?

MR. HIRD: I don't know if they have asked before, but no other court has done it. And I haven't seen any other cases. There may have been cases settled that I'm not aware of. I asked the Government for information about this, and they did not provide it.

In essence, what the Government is asking this Court to do is to double count penalties by considering Avatar Holdings and Florida Cities as if they were one person for liability and two people for penalties so that the Government can collect twice on the same claims.

But the evidence in this case will not support the finding that Avatar Holdings is liable under the Clean Water Act, let alone justify the unprecedented result of double counting penalties.

At the outset, let's consider what's left of the Government's original case against Avatar Holdings. Gone from the Government's case are the claims of unpermitted discharges at Barefoot Bay or at Carrollwood; and with respect to Avatar Holdings, gone is also the claim of unpermitted discharge at Waterway Estates.

What's left is the Government's claim that Avatar Holdings somehow caused or directed Florida Cities to violate certain very technical parameters in its permit and

Page 19

to claim that somehow Avatar Holdings was involved in the selection of the discharge location for the Waterway Estates plant after the statute of limitations cutoff date of May 4th, 1990.

The Court has ruled that for the Government to prevail on any of these claims, it must shows that Avatar Holdings caused or directed Florida Cities to violate the Clean Water Act, or that Avatar Holdings exercise actual and pervasive control of Florida Cities on a daily basis.

Evidence presented at this trial will not make those showings. Indeed, the Government has already admitted as much in its pretrial brief. In its brief, the Government stated that it would ask this Court to reconsider the standard of parent corporation liability. In essence, Your Honor, the Government's case against Avatar Holdings here today is one extended motion for reconsideration.

What is Avatar Holdings? What does it do and who runs it? Avatar Holdings, as the name suggests, is a holding company. It has officers and directors but no employees. Each of its major subsidiaries has its own management.

As the parent corporation, Avatar Holdings only exercises the normal oversight of its subsidiaries that a public company is required to do to satisfy its obligations to its shareholders.

Page 20

Avatar Holdings' officers approve major expenditures by its subsidiaries and are consulted when its subsidiaries face major business issues.

As you will hear from Edwin Jacobson, Avatar Holdings' president, Avatar Holdings is a diversified company with over 60 subsidiaries. Each of these subsidiaries is separately established.

There is no evidence of improper transfers of funds or assets among the different companies. Rather, the Government's case is based merely on routine communications between parent and subsidiary on business and financial matters. But this routine business and financial oversight is completely consistent with the parent corporation's responsibilities to its shareholders and does not constitute actual and pervasive control, certainly not on a daily basis.

Avatar Holdings' principal business is real estate. Through its real estate subsidiaries, Avatar Holdings builds homes, sells developed lots, operates resorts and time-share properties, and generally manages and sells real estate.

In contrast to its extensive real estate activities, Avatar Holdings' utilities subsidiaries represent a much smaller part of its business. In fact, Avatar Holdings sold off most of its utility operations in

Page 21

1993. This is not consistent with Mr. Jacobs' statement that Avatar Holdings was interested in preserving its investments.

In the utility group, Florida Cities Water Company is a fourth tier subsidiary separated from Avatar Holdings by three intervening subsidiaries. One of these companies, Avatar Utilities, has the responsibility to supervise the other utility companies.

Throughout this trial, the Government will attempt to obscure the distinction between Avatar Holdings and Avatar Utilities, but this is a red herring. Avatar Holdings is a separate company from Avatar Utilities, and its chief officers, the chief officers of Avatar Utilities, president Robert Gordon and vice-president Gerald Allen, have never been officers, directors or employees of Avatar Holdings.

Your Honor, Avatar Holdings came into existence in 1980 when a company formerly known as General Acceptance Corporation emerged from bankruptcy with a new name, new owners, new directors, new executives. The new name was Avatar Holdings.

The new owners included Leon Levy and Peter Sharp who invested in the new company because they believed in the future of real estate in Florida.

Leon Levy served as the chairman of the board of

Page 22

Avatar Holdings since 1981. Mr. Levy's involvement in the company's affairs is primarily focused on strategic financial planning.

Mr. Levy was a partner in the investment firm of Oppenheimer and Company. He created the Oppenheimer Fund which was the first mutual fund in the country and now has assets of over $40 billion. He is now chairman of the board of the Oppenheimer Fund.

In addition, Mr. Levy is extensively involved in major scholarly and philanthropic organizations, but he is not involved in the day-to-day operations of Florida Cities Water Company. And he didn't do anything to cause or direct any of Florida Cities' wastewater treatment plant to violate the Clean Water Act.

The Government plans to call Mr. Levy and make him its star witness in the case against Avatar Holdings. We welcome the opportunity for the Government -- for the Court to hear Mr. Levy testify and learn just how wrong the Government is.

Your Honor, Peter Sharp served as chairman of the executive committee of Avatar Holdings' board of directors. He was a respected and highly successful real estate investor. He owned numerous buildings in New York, including the Carlisle Hotel.

The Court will not hear from Mr. Sharp and that's

Page 23

not because he took the Fifth Amendment. Mr. Sharp died in April 1992 after a long bout with cancer. In his absence, the Government will try to paint Mr. Sharp as a corporate villain.

However, the evidence will show that although Mr. Sharp was interested in all aspects of Avatar Holdings' business and was a meticulous businessman, he did not cause or direct Florida Cities to exceed any permit limits, and he did not involve himself in Florida Cities' operations on a daily basis.

There is no basis for the Government's accusations against this highly respected man who was dying from cancer while many of the alleged violations are supposed to have occurred.

The original board of directors of Avatar Holdings were appointed in 1980 by Bankruptcy Judge Britton who oversaw the reorganization of General Acceptance Corp.

Judge Britton appointed some very distinguished men to the board, and other distinguished men joined later: Jeffrey Hazard, a nationally known expert on legal ethics, who has taught at Yale and the University of Pennsylvania, appointed by Judge Britton; J. Edward Houston, a former Federal Bankruptcy Judge appointed by Judge Britton; Henry King Stanford, the former president of the University of Miami and the University of Georgia, appointed by Judge

Page 24

Britton; Martin Myerson, the former president of the University of Pennsylvania; and Leon Candle, a distinguished professor at Northwestern University.

Some of these directors, including Jeffrey Hazard, J. Edward Houston, Martin Myerson and Leon Candle, served on the audit committee of Avatar Holdings' board of directors.

The Government will ask this Court to infer that Avatar Holdings caused violations of the Clean Water Act because its utility subsidiaries implemented environmental audit program and made reports about that program to the parent corporation's board of directors.

In essence, the Government would ask this Court to hold the parent corporation liable if it encourages its subsidiary to create and implement an environmental audit program but hold blameless the parent corporation that simply ignores these issues.

What makes the Government's position particularly absurd in this case is that the utility company reports to the parent company's audit committee concerned the progress of the audit program generally, not specific findings relating to any facility.

In other words, the audit committee was told that environmental audits were underway and when they would be completed, but the audit committee was not told about any of the audit findings concerning compliance at Barefoot Bay,

Page 25

Carrollwood, Waterway Estates or any other plant. These matters were for the subsidiaries' responsibility.

Your Honor, Mr. Jacobs has alluded to the Fifth -- to the taking of the Fifth Amendment, and I think he will probably try to make his case against Avatar Holdings exclusively on that basis.

There were only three witnesses associated with Avatar Holdings who have taken the Fifth Amendment in this case: One, Mr. Lawrence Wilkov, had not only resigned from Avatar Holdings at the time the deposition was taken, but had started a lawsuit against Avatar Holdings. Moreover, Mr. Wilkov was deposed prior to the Government's adding Avatar Holdings to the case.

Another, Mr. John Sladkus, had retired in 1991 and was deposed in mid 1995; had no association with Avatar Holdings or no employment with Avatar Holdings at that time.

The third was Mr. Dennis Getman. Mr. Dennis Getman has also a role in Florida Cities. And Mr. Getman was an attorney. No specific questions were asked. Many of the questions would have been objected to on the grounds of attorney/client privilege.

In the face of this, the Government has taken the deposition for two days of Leon Levy, has taken the deposition of Edwin Jacobson, the president of the company, and Charles McNairy, the vice-president. And Juanita

Page 26

Kerrigan, the secretary of the company, was originally identified as a witness to testify at this trial.

There is no basis for the Government to use the Fifth Amendment inference in exchange -- in lieu of evidence that it was unable to get through massive document discovery and extensive depositions. There is no basis to hold Avatar Holdings liable in this case.

Thank you, Your Honor.

THE COURT: Mr. Baise.

MR. BAISE: Thank you, Your Honor.

Good morning. My name is Gary Baise. I'm a partner in the law firm of Baise and Miller in Washington, D.C., and I represent the Defendant Florida Cities Water Company.

We are pleased to be here this morning, Your Honor, to talk about a Clean Water Act case. As Government counsel has pointed out, the Clean Water Act does have a strict liability portion of the statute that makes virtually any violation of the Clean Water Act strictly liable and up to $25,000 a day. The fact is, that's not what we're here to talk about in this case.

The Clean Water Act also addresses the point of mitigation. This case is simply about applying common sense to a penalty under the Clean Water Act, common sense.

The Government has alleged in its interrogatories

Page 27

that this case is worth up to $104 million. It also said just this morning that it's worth $53 million. Again, we think this demonstrates the Government's inability to be able to get its facts straight.

With regard to what the Court has already found with regard to liability, the number is still a staggering number, $38 million, but not $53 million, as stated by Mr. Jacobs.

In the Government's pretrial brief, they said they wanted $4.8 million in fines with respect to this company. The fact is, as the Court might expect, there have been numerous settlement discussions trying to bring this matter to a close.

But given the record and the fact that this company has an outstanding record with regard to dealing with environmental issues in the State of Florida, has met exceedingly stringent environmental standards in the State of Florida and for the United States, we felt that number is much too high. Therefore, we want the Court to hear our views with regard to the six penalty factors that Mr. Jacobs has already laid out.

There are two stories here, Your Honor: One of a polluter; the other of a company trying to meet exceedingly stringent and meeting exceedingly stringent water quality standards that were applied by both the Federal Government

Page 28

and EPA.

The point is, Your Honor, there was no actual environmental harm here. The Government admits this. They talk about polluting, a loaded word. No one likes polluters in our society, but the fact is, we're talking about human waste sewage treatment plants. We're talking about facilities that, if they are shut down, create public health hazards. This is a company that's in the business of protecting the environment, Your Honor, not shutting down facilities and creating environmental problems.

Two stories: One of a polluter, one of a company that is dealing with standards, dealing with numerous regulatory agencies both at the Federal and State and local level; and at all times, Your Honor, at all times during the time in question here, these three facilities were under the very strict control of the State of Florida's environmental department.

There are six factors that this Court is going to have to weigh in terms of assessing the fine against this company. They have been laid out for Your Honor. One is seriousness. And in the seriousness component, you look at the number of violations -- and we will address the number of violations both at Waterway Estates, Carrollwood and Barefoot Bay -- and you look at the duration: How long did those violations continue to occur? And what was the actual

Page 29

public health or environmental harm? Obviously, we feel about this point very strongly, and the Court should take that into considerable consideration with regard to levying any particular penalty in this case.

History. Waterway Estates, this is a facility that we'll point out in just a moment that always had NPDES permits up until 1986 until the mistake that we allege occurred.

The same at Carrollwood. It had permits until the permit was denied by EPA in 1984.

So, there is a period of time, but there are reasons, there are explanations with regard to what was going on in the complicated world of statutes and regulations and how this company was trying to comply with those in the 1980's, Your Honor.

You're going to find, as the Government has admitted, no actual environmental harm. This is not a company, Your Honor, these are not three facilities, Your Honor, that were discharging raw, untreated human waste.

They were not discharging chemical substances into the water of the State of Florida that were hazardous to your health, hazardous to drinking, hazardous to recreation. That's not what we are talking about.

The Government uses the word "polluted." I think the Court is going to be surprised to find out how well run

Page 30

the three facilities in question were all during this period.

Good faith. This company has undertaken enormous efforts in working with the State of Florida and also with EPA in keeping it apprised with respect to what it was doing at all three of these facilities all during this period of time in question.

Economic benefit. The Court has already ruled on that issue to some extent, but the Government also admits there was no economic benefit derived by not complying with the law here, Your Honor.

In fact, with a regulated utility, the sooner you can spend the money, the sooner you can get it into the rate base.

Economic impact, any economic impact, in terms of a fine would be substantial, and you will hear testimony and evidence with respect to the impact of a fine on a regulated utility's borrowing capacity. Utilities live on their ability to borrow money. Fines make it difficult for them to borrow that money.

And such other factors as justice may require.

This Court has read from the very first time I filed a motion for summary judgment here on void ab initio that we believe that the Government made a mistake, and this whole case was started on the basis of a mistake made by an

Page 31

EPA employee in 1986.

We believe that very strongly. We think the evidence will demonstrate that a mistake was made; that EPA did not follow its own statute. It didn't follow its on regulation. And it didn't even follow a contract, Your Honor, that we will introduce into evidence between the State of Florida and EPA with regard to how these waste load allocations that Your Honor has read about are incorporated into law.

So, Your Honor, we believe on the basis of fact that there is no actual environmental harm here and the fact that there was due diligence and good faith exercised by this company, that the fine should be exceedingly small, and I will come up with a number with respect to what that fine should be in just a moment.

A word about the Clean Water Act. You're going to hear a great deal about acronyms, like water quality standards, WQS's, or NPDES permits, or administrative orders.

Just a short summary on the Clean Water Act and what we're talking about here today. The Government says we are a polluter. The Clean Water Act starts out with a touchstone, something called water quality standards. The State and EPA get together and they determine what should be the water quality standard for the waters of the State of

Page 32

Florida, or any other state, for drinking capacity, for recreation, for a number of other uses. Water quality standards are developed by the State, approved by the State and they go off to EPA.

EPA then reviews these water quality standards and approves those water quality standards, and that's the touchstone. Are you in compliance with water quality standard of the State? Number two: How do you enforce that water quality standard? You do it through a permit system, the NPDES permit system that Mr. Jacobs mentioned a moment ago. That permit assures that those water quality standards are met.

That permit then has three different methods by which it may be enforced. You have a technology base limit that will go in that permit. You will have a water quality base limit that will go in that permit, or you can use what's called a best professional judgment, which is not applicable here.

The technology base limit, which goes into most permits, is just end of the pipe technology. You put that on the end of the pipe at a sewage treatment plant and you assume that that will meet that water quality standard.

In some water bodies that's not good enough. You have to say to all of the dischargers on that water body: If we put on technology, we still have a water quality

Page 33

standard violation, or problem, or potential problem, so we ask all of the dischargers on that water body to agree to a waste load allocation, or limit the load you're putting in to that stream segment. That's the water quality based waste load allocation that is the subject and what we believe started this whole case.

Then those permits are written, public noticed and then enforced. They can be enforced and administered both by the State and by the Federal Government.

In Florida Cities' situation, we had a two track system because the State of Florida and EPA could not agree on delegation of this program. So, this company had to have an EPA permit and had to have a State permit with both of them enforcing that water quality standard, both of them. That's how the program is inextricably linked.

So, you had to have two pieces of paper to protect the water quality of the State of Florida. And that's what the -- in one case we always had the State of Florida piece of paper, or authorization, to discharge. We didn't always have the piece of paper from the Federal Government, and there are reasons for that.

Waterway Estates, over a thousand violations, as pointed out by counsel here, the fact is, those started, we believe, on the basis of a mistake, Your Honor.

Starting in 1975, this particular facility had a

Page 34

waste load allocation and it had an NPDES permit. In 1980, it reapplied to EPA and it got an NPDES permit based on a waste load allocation.

In 1986, Ms. Kagey, an EPA employee, picks up a document that was a planning document the Court will hear a great deal about. This planning document was developed in 1981. It was developed even before EPA granted them an NPDES permit. This particular planning document was for a regional sewage treatment facility. This facility was never built, but it did say in that document, No waste load allocation for Waterway Estates. But it's a planning document.

The State of Florida, after that, never applied that planning document. The State of Florida issued a permit in 1981, again in 1983, and again in 1988. They always said this particular facility had a waste load allocation. The Government, in its findings of fact and law, say there was no waste load allocation here. That is just patently wrong, Your Honor.

There will be State of Florida officials testifying that there was a waste load allocation for the permit in 1981, '83 and '86, in the permit for Waterway Estates.

The Government says that we didn't have one based on a 1981 document. They are just wrong. That waste load

Page 35

allocation has to go through a very specific approval process at EPA. It can't just be plucked out of a planning document in '81 and put into a permit in '86.

Think about it, Your Honor. We're talking about a public health facility here that the Government is saying shut it down, cease discharging. That makes no common sense. And that's what this case is about is common sense.

In 1986, after this permit is taken away -- in fact, there are only four reasons you can take a party's permit away, Your Honor, four reasons -- not one of them was met in this case.

So, we don't think the Government can come in at this point and say, Just because we made a mistake and you guys didn't appeal, that we can fine you millions of dollars. We think that's just patently wrong. That's why we're here today. That's why, frankly, we're pleased to be here today.

It's just not proper for the Government to take its mistake and say because you didn't catch us, we're going to fine you millions of dollars for that.

That's why we want to bring all the facts to the Court's attention with regard to mitigation on this fact, that there was no environmental harm here, and you had good faith in trying to come into compliance with the fact that the Government took our NPDES permit away.

Page 36

It started in 1986. You're going to hear a great deal about, Well, it took them too long even after we took their permit away. And we think we can demonstrate conclusively, Your Honor, that they broke the law.

Let's set that aside for a moment. Let's look at our good faith efforts in trying to get our NPDES permit back. While all at the same time the State of Florida is issuing us a permit enforcing the same water quality standard, at the same time, 1986, they take our permit away in December. It's effective in January of 1987.

In 1987, this company goes out and hires an engineering firm to look at the alternatives. Mr. Klingenstein is going to address the fact we didn't choose the alternatives he would have chosen, but the fact is, this company, being a small company, Florida Cities, went out and hired an expert to tell us what to do. We've lost our permit. The Government says we can't discharge anymore.

Florida Cities goes and talks to the State. The State says, Well, you've got to figure out something. And what they did is they looked at alternatives and said, Okay, we will move our discharge pipe from the canal out into the Caloosahatchee River.

So, in '87, you have a contractor looking at the alternatives, turns in a report in about September of 1987.

Page 37

The company looks at those alternatives, makes a decision at the end of 1987, says, Okay, we will build an advanced waste treatment facility. We will go up one notch; we will take phosphorous and nitrogen out of the water, as the Government wants.

So, in 1988, another contractor is hired to do the final plans and specifications. What the Government does not seem to recognize, Your Honor, is when you build something today, you have to go through an enormous permitting process. One of those permitting levels was Lee County.

Within about four months after the engineering firm is hired in 1988, it comes up with its preliminary plans. It takes them to Lee County, or Florida Cities takes them to Lee County.

Lee County takes approximately ten months, Your Honor, to approve a number of variances and development orders. We're talking about 1988, and it takes ten months. It goes over to April of 1989, until Lee County signs off on this.

Then at the same time, the engineering firm has been hired -- now, remember in 1988, about February of 1988 -- it also has to get approvals from the State of Florida, Florida's Department of Environment. It does so. That takes almost 20 months, 20. From July of 1988 to March

Page 38

of 1990, we're trying to come into compliance.

At the same time, water quality standards are not being violated, Your Honor. We're in compliance with the old permit that we had. We're in compliance with the Florida permits. And the Government is accusing us of being sort of a blatant polluter? That's not fair. That's not common sense, Your Honor.

Then -- but you will never hear the Government talk about this -- we had a third level of permitting we had to go through, the Army Corps of Engineers.

Again, in 1989, the engineering firm has finished with its plans. You have to go get a permit to put this pipe out into the middle of the Caloosahatchee River. It takes one year and four days, Your Honor, to get that permit. It only took us 16 months to build this whole project. One year and four days.

Did the EPA do anything to help us out there? You bet your boots they didn't. In fact, they even wrote letters questioning whether or not the pipe should go out in the river.

So, one year and four days the Army Corps of Engineers held this particular project up, Your Honor. In April of 1990, finally, the Army Corps of Engineers grants a permit. This company immediately hires -- or goes out and seeks bids for a contractor to build this facility. It

Page 39

reviews the contracts, hires a contractor in August of 1990.

The contractor, once again, has to get permits from Lee County. It goes in, gets the permits, and finally in December of 1990, December, we're able to start construction.

The pipeline was put in in six months, Your Honor. It took 16 months to build the facility. There's deposition testimony that says it takes three to five years to build these advanced waste treatment plants.

So, instead of being fined a huge amount when the environment was not harmed, no actual harm to the environment, and always meeting Florida's very strict secondary treatment standards -- in fact, Your Honor, those standards set by the State of Florida are more strict than the ones set by EPA. The EPA would want 85 percent of the material taken out of the sewage that comes in the sewage treatment plant. The State of Florida says, No, we want better, 90 percent.

And the evidence will show, Your Honor, that this company not only was doing 90 percent, like at Carrollwood, Waterway Estates, oftentimes they were taking out 91, 95, 97 percent of the human waste that was in the sewage and in the effluent going back into the waters of the United States.

So, this is not a polluter as suggested by Mr. Jacobs, Your Honor. This is a company that knew its

Page 40

environmental obligations, a company that has to build homes, and a company, when it does build these homes, knows that it has to protect the environment, and it did so.

Carrollwood. It's interesting that Mr. Jacobs would say, Your Honor, that they should have gone ahead and built advanced waste treatment facilities earlier at Carrollwood, should have done it earlier.

Then there was a period of time we did not have an NPDES permit there when the EPA turned us down in 1984 because of some State reasons. In 1979, Your Honor, there will be testimony from this company that it asked the State of Florida to build an advanced waste treatment facility at Carrollwood. You know what? The State of Florida said no, we want you to hook up to Hillsborough County. And they said that in '79.

In 1983, this company says, Say, we have an NPDES permit that's going to run out. We filed for a renewal, but we don't think the Government is going to renew it. We need to hook up. Hillsborough County says, We will take you, but we can't take you now.

In fact, you heard Mr. Jacobs say this morning, the City of Tampa had an alternative available. You could have hooked up 15,000 feet away, roughly three miles.

The only problem, Your Honor, is the Government, once again, hasn't checked its fact like its earlier number

Page 41

here this morning. The fact is, we had a State of Florida permit requiring us to hook up to Hillsborough County at the very time, the very time the Government is telling us, Oh, you've got to go hook up to City of Tampa. That requirement continues up until 1988. There's a State statute passed which says, Well, in these waters you may be able to put in an advanced waste treatment plant. The company says okay, we'll try to build an advanced waste treatment facility. Immediately goes out and starts doing the studies. Gets up until July 1990 and says, Okay, we think we can build this new plant. It applies for an EPA permit in July of 1990. In July of 1991, EPA finally issues them a permit. And lo and behold, Hillsborough County, in about February of 1991, says, Well, we think maybe, we think maybe you can finally hook up.

I mean, Your Honor, here's a company that was having to deal with State and local requirements. EPA and the Department of Justice do not seem to either want to recognize that, accept the facts as what they are. That's why we're here to talk about mitigation. That's why we're here to talk about good faith. That's why we're here to talk about seriousness.

You're going to have State of Florida officials, Your Honor, coming in here and testifying with regard to Waterway Estates and telling you there were no -- there was

Page 42

no environmental harm; that this facility always had a waste load allocation.

You're going to have former Florida officials saying that there was no environmental impact with regard to these discharges at Carrollwood. In fact, here was a facility that was taking out about 95 to 97 percent of its pollutants. That doesn't strike us, Your Honor, as a gross polluter.

Carrollwood. The Government knew we didn't have a permit there, and Your Honor has already ruled with regard to liability on past violations. But the fact is, it's instructive. In fact, it's instructive to look at their witness list and who they do not have here. Do they have the enforcement people here who actually looked at Carrollwood? Do they have the enforcement people here who looked at Barefoot Bay and the fact that there were not permits there? This is not a surprise to these folks, Your Honor.

At Carrollwood, the Government knew from June of 1987 until April of 1991 we didn't have an NPDES permit. They knew what the reasons were from the State of Florida, but they also knew the lack of environmental harm, environmental impact. So, we had, Your Honor, 37 months, 1,125 days when we did not have an NPDES permit at Carrollwood.

Page 43

And EPA's own people, the people who were closest to this, Your Honor, wrote up an order -- and it was attached to our motion for summary judgment -- $15,000 for that period of time, or $13 a day. That's what people at EPA felt the harm was.

And in terms of economic benefit the company derived by not having this permit at the time, what did EPA say that the economic benefit was for all of that period of time for this company? $270. $13 a day for not having the permit, $270 economic benefit. And they don't even have that person coming down here to testify because they know what that person would say. They know they can't make their case with regard to Carrollwood or Barefoot Bay, for that matter, Barefoot Bay.

The remaining charges --

THE COURT: Your time has expired, Mr. Baise. You're a couple of minutes over, as a matter of fact. Go ahead and wrap up.

MR. BAISE: Okay. Barefoot Bay, Your Honor, three charges. Even there, the Government didn't pay attention to what the facts are. We have a memorandum we will introduce into evidence that will point out that on chlorine, which is the issue in question here, if the Government would just follow its own rules, we would not have any chlorine violations at Barefoot Bay. And with the BOD, CBOD issue,

Page 44

they have already acknowledged that that is not a problem.

So, in the final analysis, we appreciate the opportunity to be here and we believe the evidence will show no environmental harm.

Thank you.

THE COURT: All right, sir.

Mr. Jacobs, you may call your first witness.

MR. JACOBS: Yes, Your Honor.

Before we do, the Government would like to invoke Rule 615 to bar all fact witnesses from the courtroom during testimony.

THE COURT: All right. The witness exclusionary -- yes, sir.

MR. BULLOCK: Your Honor, good morning. I'm Alex Bullock.

Mr. Gerald Allen is here this morning as the designated corporate representative, and we would respectfully request he be allowed to stay in his role as corporate representative.

Additionally, Mr. Randall Armstrong has been designated as an expert witness in this case. He has been deposed as such. We would respectfully request under the rules that he be allowed to remain as well.

MR. JACOBS: Your Honor, I have no problem with excepting the expert witnesses, but I understand that

Page 45

Mr. Armstrong is both an expert witness and a fact witness, based on Mr. Baise's reference to Mr. Armstrong as a fact witness in his opening statement. I'm not sure how the Court would like to handle that. But if he's a fact witness, I don't think he's allowed to be exempted.

THE COURT: That's Mr. Armstrong?

MR. BULLOCK: Mr. Armstrong. The vast majority of Mr. Armstrong's testimony is going to be as an expert witness on the water quality issues and water quality standards at the Waterway Estates facility.

He will be a limited fact witness because he was an employee of the Florida Department of Environmental Regulation during the time where the 1981 alleged waste load allocation was written. But the vast majority of his testimony will be as an expert.

THE COURT: Well, if we get to any particularly sensitive fact portion of the evidence, I might entertain a request by Mr. Jacobs to ask that he be excused, but I'm going to permit Mr. Armstrong to remain in the courtroom and to not be excluded.

All right. Except for --

MR. HIRD: Your Honor, although there is not a designated representative for Avatar Holdings present today, during certain portions of the trial, either Mr. Leon Levy or Mr. Edwin Jacobson will be sitting and present as a

Page 46

designated representative, and I would designate the one at the time that that occurs. Both have been --

THE COURT: At the time that --

MR. HIRD: -- that they are present.

MR. JACOBS: Just for clarification, you're going to designate one or the other, or both?

MR. HIRD: One or the over, not both. We recognize that under the rules I can only have one.

THE COURT: All right. There will come a time, then, where one of them will be here, and you're going to designate which one.

MR. HIRD: That's correct.

THE COURT: All right.

MR. JACOBS: Your Honor, we will designate just one; and when he arrives, we'll advise him accordingly.

THE COURT: All right.

All right. Are there any witnesses in the courtroom other than those the Court has excluded from the rule of witness sequestration?

All right. Then, counsel, it will be up to the -- up to counsel to inform their respective witnesses that except for the time that they are in the courtroom testifying, they will be required to remain outside and available to be called to testify.

And also, of course, it means that the witnesses

Page 47

must not discuss their testimony or the facts of the case with each other. And the sole exception to that is, of course, that they may discuss their testimony with any of the attorneys involved in this case.

All right. Call your first witness.

MR. JACOBS: Your Honor, the United States calls Mark Klingenstein.

Your Honor, while Mr. Klingenstein is taking the stand, I'd like to ask the Court's permission to move in a PVN and VCR unit.

THE COURT: Yes, sir.

By the way, who is Mr. Armstrong?

(Mr. Armstrong stood briefly.)

THE COURT: Okay.

MR. JACOBS: Your Honor, while we are setting up, I may raise another procedural matter.

With the Court's permission, rather than hand each witness each exhibit, since the exhibits are so voluminous, we have taken the liberty of making a complete set both for the Court and the witness.

THE COURT: Yes, sir.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand.

Do you solemnly swear that the testimony you shall give in this cause shall be the truth, the whole truth, and

Page 48

nothing but the truth, so help you God?

THE WITNESS: Yes, I do.

THE DEPUTY CLERK: Take the witness stand.

State your name for the record and spell your last name.

THE WITNESS: My name is Mark James Klingenstein, K-L-I-N-G-E-N-S-T-E-I-N.

MR. BAISE: Your Honor, may I address a point while counsel is setting up?

I don't believe we have been served with their exhibit list at this point.

THE COURT: Okay.

MR. JACOBS: I'm sorry, Your Honor. I didn't hear counsel --

MR. BAISE: The exhibit list, you --

THE COURT: He says he hasn't been served with your exhibit list.

MR. BAISE: The exhibit list this morning --

MR. JACOBS: I think we intended to give you not only an exhibit list but a complete set of your own exhibits.

THE COURT: Well --

MR. JACOBS: Did you not receive them?

THE COURT: All right. Have you got an exhibit list for counsel?

Page 49

MR. BAISE: We do not have it.
(Pause.)
MR. BAISE: Thank you, Your Honor.
MR. JACOBS: Where would the Court prefer to have the television set up? There's no jury so --
THE COURT: Probably about right where you are.
Now, is that the only monitor you have? Counsel is going to need to see it also.
MR. BULLOCK: Your Honor, would you have any objection if I stand and watch it?
THE COURT: You can position yourselves anywhere that you can see. If we can place that where everybody can see it from where they are sitting, all the better. I don't know whether we can do that or not. You'll have to go back farther with that, I suppose, that way.
MR. BAISE: Your Honor, may I address the Court?
THE COURT: Yes.
MR. BAISE: One thing would be helpful in terms of glare, which you do not probably have, is if these drapes could be unloosened and just come across. Is that possible?
THE COURT: I don't know that they can be.
MR. BAISE: That would take the glare off.
THE COURT: We can try it. Ms. Cole, please see if you can take care of that.
Let me pause for just a second and see where we

Page 50

are procedurally as far as the order of proof here. The Government is going to be going first, and then we'll proceed with what, Florida Cities and then Avatar? Have you all discussed --
MR. HIRD: Yes, Your Honor.
THE COURT: -- how you want to proceed?
MR. HIRD: That's our intended order of proof.
THE COURT: All right. Okay.

- - -

Thereupon,

MARK JAMES KLINGENSTEIN,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. JACOBS:

Q. Mr. Klingenstein, would you state your full name for the record, please?
A. Mark James Klingenstein.
Q. How are you employed, sir?
A. I'm employed by Science Applications International Corporation, or SAIC. SAIC is a large technical consulting firm, a major portion of which provides environmental engineering and environmental science consulting services.
Q. What's your title at SAIC?

Page 51

A. I actually have two titles: I'm an assistant vice-president and a senior environmental engineer.
Q. How long have you been employed with SAIC?
A. Approximately 15 years.
Q. And would you tell the Court, please, what kind of work you have done there?
A. Most of the work that I have done at SAIC has involved environmental engineering and environmental science projects and, in particular, has involved NPDES and Clean Water Act technical issues for a variety of different clients.
Q. You have done some work, have you, in the field of wastewater treatment and water pollution control?
A. Yes. And in particular, I am in charge of a portion of SAIC that provides Clean Water Act and other -- primarily Clean Water Act case support and litigation support activities.
THE COURT: You need to pull that microphone closer to your lips, if you would, Mr. Klingenstein.
THE WITNESS: Surely, Your Honor.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, did you attend college?
A. Yes. I have a degree in civil engineering from Drexel University that was awarded in 1979 and a masters in civil as well from Stevens Institute of Technology that was awarded in 1989.

Page 52

Q. Just for clarification's sake, when you say a "masters in civil," you mean masters in civil engineering?
A. Yes, indeed.
Q. Are you a licensed professional engineer?
A. Yes, I am. I'm licensed in the states of New Jersey, Indiana and Arizona.
Q. Approximately how many wastewater treatment plants have you personally visited?
A. I have been to -- over the last 15 years, I have personally visited -- certainly in the low hundreds number of wastewater treatment plants that I have been to.
Q. And approximately how many inspections have you either personally conducted of these wastewater treatment plants or personally supervised?
A. Under an EPA work assignment that I used to manage -- and it's now managed by one of my subordinates -- I have had either direct involvement in or oversight on literally -- I don't know -- 700, 800 wastewater inspections.
Q. Are you familiar with the National Pollutant Discharge Elimination System, otherwise known as the NPDES?
A. Yes, indeed. Under the Clean Water Act, the NPDES system provides for control of facilities that discharge pollutants into surface waters.
The NPDES program in particular requires that a facility obtain an NPDES permit prior to beginning to

Page 53

discharge wastewater into a surface water.
This system provides for control of these discharges and allows the regulatory agencies, be that EPA or the State agencies, to exercise control in the amounts of pollutants that are discharged into any given water body so as to protect the quality of that water body.
Q. Do you serve as an instructor for SAIC's training program for EPA and State NPDES compliance inspectors?
A. Yes, I do. SAIC has had a work assignment under one of its contracts with the U.S. EPA for the last several years under which we provide instruction to NPDES compliance inspectors, both EPA and State, and I have served as an instructor in a number of different training sessions that we provide under that contract.
Q. Do you have any experience with designing wastewater treatment plants or upgrading wastewater treatment plants?
A. Yes, I have. I have been involved in the design and upgrade of a number of plants.
Q. Have you previously testified as an expert in the field of wastewater treatment?
A. Yes. I have provided testimony on something between, I would say, six and 12 different cases.
Q. And have these been Federal cases?
A. Yes, they have.
Q. I'd like to refer you at this time to Government

Page 54

Exhibit 597-A.
MR. JACOBS: May I approach, Your Honor?
THE COURT: Yes, sir.
By the way, I know that our rules of protocol require that any time a lawyer wants to approach the witness that you specifically each time ask the Court for permission. You won't need to do that, none of the attorneys.
MR. JACOBS: Thank you, sir.
And we will set up, with the Court's permission, notebooks for the witnesses as well to cut down on the time.
BY MR. JACOBS:
Q. Mr. Klingenstein, I've handed you Exhibit 597. If you would flip to 597-A, would you tell the Court if you recognize that, please, sir?
A. Yes, I do. This is the expert report that I prepared as part of my support on this matter.
Q. 597 is the expert report, is that correct?
A. Yes, it is.
Q. And 597-A is what, sir? That would be Attachment A.
A. That would be a copy of my resume.
Q. And would you tell the Court whether that copy of your resume is accurate? Does it accurately reflect your credentials, your qualifications and your background, sir?
A. Yes, it does, with the exception of the fact that, as

Page 55

I mentioned, I'm also now licensed in the State of Arizona, a license of which was just granted in the last several weeks.
Q. So, that would be in addition to --
A. That would be in addition to on Page 6 of 7 of that exhibit.
Q. Thank you.
MR. JACOBS: Your Honor, at this time I would respectfully move the Court to accept Mr. Klingenstein as an expert witness in the field of wastewater treatment.
THE COURT: Any objection?
MR. BULLOCK: If the Court please, Your Honor, we would have no objection to his designation as -- from a technical point of view in wastewater treatment.
However, as I understand from Mr. Jacobs' opening statement, Mr. Klingenstein is also going to offer opinions about the history of the violations and the compliance history of Florida Cities.
Mr. Klingenstein was not designated as any of the 30(b)(6) witnesses from the Environmental Protection Agency who would provide testimony on that issue.
Also, we would object from a technical -- as a technical background, he should be limited to engineering and technical testimony as opposed to motivations of Florida Cities for the decisions that it made, its business

Page 56

judgment, anything related to regulatory issues other than NPDES issues.
Mr. Klingenstein has not been a Region 4 of EPA or any EPA employee. He was not involved in the actual enforcement matters before this Court. He never actually investigated the alleged violations at the time, and now he's attempting to speak after the fact on investigations which he did not personally participate in.
MR. JACOBS: Your Honor, it's my understanding, if I may respond at this time, that the Court ruled in this morning's order that the witness could address the history of the violations.
THE COURT: The objections will be overruled. He'll be permitted to testify as an expert as tendered.
BY MR. JACOBS:
Q. Mr. Klingenstein, did you have occasion to visit the wastewater treatment plants that are the subject of this case?
A. Yes, I did. In the week of December 20, 1994, I had the opportunity to pay a visit to the Barefoot Bay wastewater treatment plant in Brevard County; the site of the former Carrollwood wastewater treatment plant, and the Waterway Estates plant in North Fort Myers.
Q. Did you make a videotape and take photographs during these visits?

Page 57

A. Yes, I did, the photographs of which are attached to my expert report and video as well.
Q. And did you have occasion as well to review documents that relate to the three plants?
A. Yes, I did. I had the opportunity to review a rather substantial amount of documents that related to the situation at each of these plants.
Q. It does include documents from the files of the United States Environmental Protection Agency?
A. Yes, it did.
Q. Did these documents include documents from the files of Avatar Holdings?
A. Yes.
Q. And the files of Florida Cities Water Company?
A. Yes.
Q. And the files of the Florida Department of Environmental Protection or, as it was previously known, Regulation?
A. Yes.
Q. The Hillsborough County Environmental Protection Commission files?
A. Yes.
Q. And files from the City of Tampa?
A. Yes.
Q. Any others that you can think of that I have not

Page 58

touched upon?
A. None that come to mind.
Q. Okay. Now, making reference to the Government's exhibit list, are you able to identify the documents on that list that you reviewed?
A. Yes, I can.
Q. Would you, for the record, review or, rather, read into the record the Government exhibits that appear on that list that you personally reviewed and relied upon in forming your opinions here today, sir?
A. Surely. And these are Government Exhibit list numbers 1 through 8, 11 through 20, 22, 23, 24, 26 through 37, 39 through 41, 43 through 47, 49, 50, 54 through 57, 59 through 61, 63, 64, 66 through 74, 76 through 79, 84 through 119, 122 through 126, 128 through 155, 157 through 170, 172 through 195, 198 through 200, 202, 204 through 252, 254 through 272, 274 through 282, 284 through 289, 291 through 302, 304 through 345, 348 through 350, 353 through 355, 357, 358, 361 through 363, 365 through 382, 384, 385, 388 through 402, 402 through 419, 421 through 461 --
Q. I'm sorry. Let me stop you for a minute. Did you say 402 through 419?
A. No. I'm sorry. That was 388 through 402, 404 through 419, 421 through 461, 463, 464, 466 through 482, 484 through 495, 498 through 501, 503, 504, 507, 509 through 512, 516

Page 59

through 520, 523 through 525, 529, 530, 534, 536,538 through 541, 543 through 545, 549, 550, 556, 559,561 through 567, 569, 570, 572 through 575, 577, 580 through 582, 586 through 592, 597.
Q. Thank you.
Now, Mr. Klingenstein, could you tell me, did you personally review these documents before you prepared your report?
A. Yes.
Q. Did you also have the opportunity before you prepared your report to conduct any interviews of persons with knowledge relating to the violations at the three plants?
A. Yes, I did.
Q. Did you also before preparing your report have the opportunity to attend the depositions of any fact witnesses with knowledge relating to the violations at the three plants?
A. Yes. I attended the depositions of a number of individuals.
Q. And did you have the opportunity before preparing your report to review the transcripts of depositions of persons with knowledge relating to the violations at the three plants?
A. Yes. I had that opportunity as well.
Q. Now, we've made reference a couple of times so far to

Page 60

your report, Mr. Klingenstein. Did you personally prepare that report?
A. Yes, I did.
Q. And does that report state your personal opinions relating to the violations at the three plants and the other matters that you have addressed therein?
A. Yes, it does.
Q. And again, for the record, is Government Exhibit 9 -- I'm sorry -- 597 that report?
A. Yes, it is.
Q. In forming the opinions that you have formed in this case and in that report, have you relied upon the information that you have just described in response to my questions?
A. Yes, I did.
Q. Mr. Klingenstein, would you be good enough to explain in brief the NPDES system and particularly the significance of the NPDES permitting process?
A. Well, the NPDES – as I mentioned previously, the NPDES system was put in place under the auspices of the Clean Water Act in order to provide for the control of discharges to surface waters. It's in my mind sort of the keystone of the entire Clean Water Act in terms of the ability to control pollutant discharges into surface waters.
The NPDES permit system allows the regulatory bodies

Page 61

to specifically control and monitor the amounts of various pollutants that are discharged into each individual surface water body.

By doing this, it allows for the proper control of the amounts of pollutants that are discharged into these surface waters so that the quality of the surface waters can be protected.

Q. Thank you.

What are effluent parameters?

A. Effluent parameters, or effluent pollutant parameters, are specific typically chemical parameters -- but in some cases other measures of effluent quality -- that are included into an NPDES permit in which the permittee is typically required to monitor and report to the regulatory body, be that EPA or the State.

Q. And what other conditions and limitations are characteristically found in these NPDES permits?

A. There may be specific requirements to carry out certain measures, to implement certain measures, to upgrade a plant, for instance. In the case of the Barefoot Bay plant, the 1991 permit specifically required, in fact, that the discharge be ceased by a date certain. So, there can be that sort of specific requirement as well included in a permit.

Q. And what about point of discharge, is --

Page 62

A. Oh, very specifically. The point of discharge is typically identified on the cover page of the NPDES permit.

Q. And in the application process, is the point of discharge also, generally speaking, described?

A. Yes. The permittee is required to identify where they are going to discharge, because the NPDES permit process and the control of pollutant discharge to a surface water not only requires that the regulatory agency know what body of water the facility intends to discharge to, but very often needs to know very specifically within that water body where the discharge is intended since that may have bearing on the ability of the water body to assimilate the discharge at that particular point.

Q. Okay. Would you describe in layman's terms what assimilation of a discharge means? Why is it so important that a discharge be at a particular point in a particular water body?

A. Well, a particular water body, for instance, may have portions of the water body that are well mixed and that, therefore, have the ability to receive a certain amount of pollutant load and, in effect, deal with that pollutant load, whereas other parts of that water body that might not be very well mixed, that might be stagnant, that might be sort of off to the side, so to speak, as far as circulation in that water body would go -- those portions of the water

Page 63

body wouldn't necessarily have the ability to receive the same amount of pollutant load as the previously described better mixed part of the water body.

Q. Okay. Would you describe in layman's terms what you mean when you say "mixed"?

A. Well, if you have got a -- if you have got a large, relatively deep, fast-flowing river, it's going to be a well mixed body of water. Anything that's discharged into it is going to be pretty rapidly dissipated throughout the entire body of water.

On the other hand, if you have, say, a very shallow area of a very broad, slow-flowing river, a discharge into that area might be, in fact, very poorly mixed, and so you would tend not to dissipate pollutants. They would tend to stay at the point of discharge.

Q. And is it possible to have a river that is, say, relatively deep in the middle and well mixed in the middle but -- and, therefore, relatively able to assimilate a discharge in the middle at the points where there are relatively strong flow, but the opposite is true, say, along the banks of the river?

A. Certainly.

Q. Now, NPDES permits, are these always issued by EPA, or are they sometimes issued by a state agency?

A. They can be issued by either EPA or by a state agency

Page 64

or in some cases by both.

Q. And under what circumstances does a state issue a Federal NPDES permit?

A. A state will issue an NPDES permit as opposed to a state permit when it's been granted what's known as delegation. This is when the agency has delegated the authority to carry out this function to the state agency.

Q. And can you tell the Court whether at any point in time the Federal agency, that is to say, EPA delegated the NPDES permitting responsibility to a State of Florida agency?

A. Yes. I believe they did last year, 1995.

Q. Okay. And prior to that time, it was exclusively the function of the U.S. EPA to issue Federal NPDES permits in the State of Florida, is that correct, sir?

A. Yes, that is correct.

Q. How does a potential discharger obtain an NPDES permit?

A. The discharger will fill out an application form and submit it to U.S. EPA. This application will require the potential discharger to provide certain information, and then the agency will take that under consideration.

There is a process that provides for public notice and allows for the potential discharger to take exception to a draft permit such as that's issued by the agency.

Page 65

Q. And typically in the application form, does the discharger have to specify with some specificity, in fact, where exactly in a particular water body the discharge will take place?
A. Yes. They are required to provide coordinates and to describe the location of the discharge.
Q. And once the application has been submitted, does the potential discharger generally continue to have contact with EPA prior to final action on the permit based on your experience?
A. Yes. That's been my experience.
Q. And are there a set of regulations that govern this interaction and the rights of the various parties?
A. Yes, and they are incorporated within the Code of Federal Regulations, 40 C.F.R., Part 124.
Q. And does EPA generally under those regulations, in fact, prepare a draft of the permit conditions or denial, as the case might be?
A. I'm sorry. Make that available to the potential permittee? Yes.
Q. In draft form.
A. Yes.
Q. And then does the permittee, or potential permittee, as you have described it, have the opportunity to comment on the draft permit?

Page 66

A. Yes.
Q. And then assuming that the draft proceeds to a final action, does the permittee or any interested party subsequently again have the opportunity to make its comments known to the agency?
A. Yes.
Q. And do you know whether a potential permittee can, in fact, request a public hearing?
A. Yes, they certainly can.
THE COURT: Did you say a potential permittee can request a public hearing? Is that what you said?
THE WITNESS: I believe, in response to the question, was that an individual -- a facility that has applied for a permit has the ability and it's -- and one has been issued that they take exception to, the ability is there to request a hearing.
THE COURT: To request a hearing --
THE WITNESS: Yes.
THE COURT: -- not a public hearing?
MR. JACOBS: I would have to check, honestly. I think it would --
THE COURT: Well, go ahead. Go ahead. That's --
MR. JACOBS: It might well be open to the public.
The cite is 40 C.F.R., Section 124.74: Following EPA's final action, any interested party may request an

Page 67

evidentiary hearing. That's following the final action.
And 40 C.F.R., Section 124.13: Any person, including an applicant, who wishes to contest the draft permit or denial is obliged to raise such issues during the public comment period.
THE COURT: All right. Well, go ahead.
MR. JACOBS: Thank you, sir.
BY MR. JACOBS:
Q. Mr. Klingenstein, what is a waste load allocation?
A. A waste load allocation is the result of a process whereby the ability of a body of water to receive pollutants is analyzed and, if you would, divvied up between the various dischargers and potential dischargers into that body of water and on some basis of typically fairness and equitable distribution of that ability to discharge across the various dischargers, and then that waste load allocation becomes typically the basis for the limitations that are incorporated in the various dischargers' permits.
Q. And what is the importance of the waste load allocation in terms of the NPDES permitting process?
A. Well, the waste load allocation determines what pollutant parameters and what pollutant -- what amounts of each pollutant parameter can be put into a permit and still provide for the protection of the quality of the water body.
Q. And again, does the location of the discharge point

Page 68

play a role in the waste load allocation process?
A. Yes.
Q. And what is a zero waste load allocation?
A. Much as the name implies, that's a determination that for this particular -- or a particular discharger at a particular point of discharge, there is -- a determination has been made that there is no ability to assimilate or receive pollutant load at that point.
Q. Mr. Klingenstein, I'd like to now direct your attention to the Barefoot Bay plant itself. And with any luck, I'm going to start the video, and I'll ask you, if you would, both to narrate the video and describe the plant, the surroundings of the plant, and the discharge means, as well as highlight anything else that you see that you think the Court might be interested in.
A. Surely.
THE COURT: Yes, sir?
MR. BULLOCK: Your Honor, we would object to any kind of narrative presentation unless there's some -- first of all, some format as to it, whether or not it separates liability, environmental harm.
I am given the impression from Mr. Jacobs' question to Mr. Klingenstein that he's basically just going to spend a couple of hours narrating the tape. We would object to that.

Page 69

MR. JACOBS: It's 15 minutes. I'm not –
THE COURT: Well, I think the tape needs to be identified. Has it been identified as yet?
MR. JACOBS: It is an exhibit, and forgive me if I haven't identified it.
THE COURT: Yes. I don't know what I'm about to see here. I know he's going to narrate it if I overrule the objection, but I think the witness ought to identify what it is here and –
MR. JACOBS: I apologize. We will, Your Honor.
It's Government 505, Your Honor.
THE COURT: Well, you want to have the witness identify what Government 505 is?
(The videotape started to play.)
BY MR. JACOBS:
Q. Mr. Klingenstein, can you identify this video that's been playing for a moment now?
A. Yes. Government 505 is a videotape that was made during my week of December 20 visit to both the Barefoot Bay and the Waterway Estates treatment plants.
MR. BULLOCK: Your Honor, the videotape itself had no narrative and so, therefore, we in our – have no objections filed on our objection list. However, there is no foundation that's been laid that this actually goes to the amount of the penalty there should be on the violations

Page 70

which are still at issue here today.
We would request the Court limit the narration, or whatever testimony that Mr. Klingenstein is providing, to those issues such as BOD, CBOD reporting, the TRC issues and toxicity issues at Barefoot Bay, not as to some broad, general liability issues of whatever site –
MR. HIRD: Your Honor, we join in the objection.
THE COURT: All right. Well, your objection will be overruled. Proceed.
THE WITNESS: This is the entrance to the Barefoot Bay plant. We had previously just seen a few shots as we were driving through the Barefoot Bay development which is, I believe, about a 5,000 unit modular home development, as I had also previously mentioned, located in Brevard County.
The Barefoot Bay plant is what's typically described as a package type plant. This is, again, at the time of my December 20, 1994, inspection. I do understand the plant may have undergone over the past year modification.
Nonetheless, in this type of plant –
THE COURT: "The past year," you mean since that time?
THE WITNESS: Since this time that there has been some modification at the plant.
THE COURT: All right. Go ahead.

Page 71

THE WITNESS: This is a type of plant whereby all of the -- or the most of the major functions, treatment functions, take place within one consolidated unit. This would be what was known as -- what is known as a secondary wastewater treatment plant that provides for the removal of pollutants primarily through biological treatment, biological treatment being, in effect, an acceleration of what happens in nature, by providing a large mass of microorganisms and providing sufficient aeration, sufficient oxygen to those microorganisms.
In effect, what happens in nature is greatly accelerated and the pollutant load is removed from the wastewater. These are views taken down into the wastewater treatment plant from a catwalk up on the top of it.
This is a fairly commonly used type of treatment system found throughout the United States. And looking out from the -- looking out from the top of the treatment plant, we're looking at some of the areas surrounding the plant. The plant is surrounded by, I want to say, in the neighborhood of three to 4,000 acres of citrus groves in the immediate area surrounding the plant.
Again, these are just views down within this consolidated treatment unit, different portions of the plant. It's pretty typical of what one would expect to see in a secondary treatment plant.

Page 72

This plant, however, unlike many plants, was not originally intended to discharge its wastewater to a body of water, to a surface water. This plant was originally intended to discharge all of its wastewater into two large permeable bottom ponds known as percolation ponds. The wastewater would be discharged into these ponds and would then percolate down into the water table.
This plant also was equipped with an overflow from those percolation ponds and was using that overflow as its primary point of discharge at the time that we carried out this inspection.
These are the portions of the system that deal with the waste microorganisms that are generated as a result of this treatment process.
BY MR. JACOBS:
Q. Mr. Klingenstein, you mentioned the design of the plant. Was it also designed to be a spray irrigation disposal system?
A. I've seen mention of some -- these, by the way, are the percolation ponds themselves. I've seen mention of some original inclination to look to spray irrigation, and there may have been a pipe originally installed that may have been intended to connect to some spray irrigation site, but I see no record of any spray irrigation being in place up until the relatively recent past. And that, in fact, would be

Page 73

that 40-acre spray irrigation field that we're looking at behind those microwave antennas.

This is one of the plant operators just carrying out some routine work, routine maintenance at the plant.

Those two black devices sitting there behind him are what are known as automatic samplers. These are the types of devices that are typically used to collect the wastewater samples both from a process control standpoint and specifically to collect the samples that are necessary in order to carry out the monitoring that's required under an NPDES permit.

This is looking down at the -- at one of the flow measuring devices within the treatment plant. This would be what's known as a V-notch weir that utilizes a device known as a flow recorder, in this case I believe one made by a company -- a firm by the name of Stevens, that utilizes a float to measure the level in that well behind that weir and, therefore, generates information regarding both instantaneous flow and total amounts of flow that have come out of a particular plant. These are, again, pretty widely used.

It's a storage tank and -- water storage tank, and here we're looking out at some of the grove land out beyond the plant site; quite an extensive bit of grove property completely surrounding the plant.

Page 74

Actually, that is grove that is immediately adjoining the plant. I believe that's looking to the west in this view.

This is the final contact tank, aeration tank, where wastewater is passing through prior to flow through the overflow line, which is coming from the far right-hand corner, is where the overflow from that -- from the plant is going, out to the -- out to the receiving stream.

And this is also where dechlorination would be taking place. And, in fact, I believe that small hut there is labeled SO-2, which is a chemical used by many facilities to remove chlorine residual prior to its discharge.

And also that pump, I believe, that we've just panned across takes the wastewater that's pumped out to the 40-acre site.

This is a view looking back from across the road outside the plant following basically the track of the line that discharges out from the plant into the canal, then panning down the bank to the point of discharge.

And that's looking down directly on the discharge. That's the line jutting out that the discharge is taking place through. If I recall, that's probably eight to ten -- perhaps a ten-inch line discharging.

Q. About how much flow is coming out at one time, can you tell, Mr. Klingenstein?

Page 75

A. Well, at the point where we carried out the inspection, the plant average daily flow is probably in the neighborhood, if I recall correctly, of about a half a million gallons a day.

Q. That's the rate of this flow at this point, 500,000 gallons a day, roughly?

A. Roughly, give or take. It might actually be a bit more given that it was in midday. You tend to have flow be a bit higher during the middle part of the day.

And that's just a view through the underbrush out into the canal. We should have another view in just a moment taken from a little bit farther down looking down along the canal.

Again, this would have been originally intended to be an overflow from the ponds rather than a primary point of discharge for this plant.

Q. Are you climbing down the hill now?

A. Actually, I think I'm climbing back up, as I recall. I almost didn't make it back up.

And that's trying to look out through the underbrush across the canal. You see it's a relatively narrow canal at that point.

This is just a large borrow pit on the site that I suspect was used as a source of material during the construction of -- in the local area, and then looking out

Page 76

now towards the entrance to the 40-acre site.

Q. And again, that 40-acre site was --

A. This is a spray irrigation site that was originally purchased, I want to say, in the mid '80's, but was put into service, I believe, in March 1990 as a spray irrigation site and handles, if I recall correctly, something in the neighborhood of 90,000 gallons a day of wastewater flow. This is a view out -- these are views out on the 40-acre site.

Q. Now, it looks very wet. Is it actually in use during wet weather?

A. Wet weather will limit your ability to utilize spray irrigation sites. The capacity of the site to accept the wastewater is obviously reduced by the load from the rain fall.

That's part of the irrigation system. There are a number of hydrants located along the center line in the field.

Q. So, if you used the ponds that we've seen and you used the spray irrigation site and you have enough of both, then do you need a surface water discharge?

A. Assuming they are adequately sized, no, no, you would not.

And this is the entrance to one of the groves that immediately adjoins the plant site. Again, quite extensive

acreage that surrounds this site.

And then this just pans back looking at the plant itself.

And this was taken down a bit east of the plant, I believe, looking back up towards the west, looking towards the -- looking towards the point of discharge into the canal, which is not really visible, terribly visible in this shot, but would be up along the upper or the right-hand bank.

Q. That's roughly how far from the Sebastian River and the Indian River?

A. Several miles.

And, again, looking back up that canal.

THE COURT: Let's take a 15-minute recess.

(A recess was taken.)

MR. JACOBS: Thank Your, Honor.
BY MR. JACOBS:
Q. Mr. Klingenstein, during your inspection of the Barefoot Bay Plant, did you also have occasion to take photographs?
A. Yes, I did. These photographs are included as an attachment to my expert report and I believe they are included as Attachment C to that report.
Q. And are they numbered within your report, sir?
A. Yes, they are.
Q. And would you identify the ones that relate to the Barefoot Bay Plant?
A. Yes. That would be back starting with photograph number 91 and running all the way through 130, the Barefoot Bay Plant, and the surrounding area, the canal.
Q. And are there additionally photographs of the outfall?
A. Yes, indeed, there are. Photographs of the outfall would be in, I believe, the beginning with 118, 119 and 120 and 121.
Q. And what about of the canal leading to the Sebastian River?
A. There would be photographs of the canal 129 and 130, are both photographs of the canal itself.
MR. JACOBS: Your Honor, I'd like to proffer the original photographs at this time.

THE COURT: All right. You can offer those in evidence.
MR. JACOBS: What we thought we would do is move the evidence all in at one time, since there are very, very few of the exhibits are objected to, if that suits the Court.
THE COURT: Well, all at one time?
Are you talking about subsequently or now?
MR. JACOBS: Subsequently, Your Honor.
What I wanted to do now is make sure the Court had the pictures.
THE COURT: All right.
BY MR. JACOBS:
Q. Mr. Klingenstein, could you identify the location of Barefoot Bay Plant on the topographical map?
A. Yes.
If I might approach that, Your Honor?
THE COURT: Yes, or we do have a pointer, if you prefer to stay at the microphone.
THE WITNESS: Whichever you prefer.
THE COURT: Would you get the pointer for him, please?
BY MR. JACOBS:
Q. For the record, Mr. Klingenstein, that topographical map is an exhibit to your report; is that correct?

A. Yes, that is correct.
Q. Would you identify it for the record?
A. That is included as an attachment to my report and that would be included as the first listed exhibits preceding the attachments to the report, one of three topographical maps.
Q. Thank you, sir.
A. The Barefoot Bay Plant is located in this general area and down here, and see the surrounding area and the Indian River Lagoon up to the northeast.
Q. Is there a scale on the map so you could actually address exactly or within reason how many miles the point of discharge is from the Sebastian River and the Indian River?
A. Yes, there is. The scale -- the scale would be roughly two inches -- a little over two inches to a mile.
Q. From the Sebastian?
A. I'm sorry. The actual scale of distance for anyone looking at the map, a mile and a half, two miles.
Q. From the Sebastian River?
A. I'm sorry. No. From the Indian River Lagoon.
Q. I see. Okay.
About how far is the outfall from the Sebastian River?
A. Again, several miles, although the Sebastian River, the flow is down, is to the south off the map.
Q. Mr. Klingenstein, as you know, the Court has already

found that there were a total of 264 NPDES permit violations at the Barefoot Bay Plant.
I'd like to focus you first on the toxicity violations.Now, we've alleged, and the Court has held that there were three toxicity violations.
Your Honor, subsequently the Defendant's did their own count and came up with eight toxicity violations, some of which occurred, not most of which occurred subsequently to the filing of the complaint, as well as subsequent to the filing of the summary judgment motion, and for the purposes of the case, we will stipulate that there were eight.
THE COURT: Just a moment.
MR. BULLOCK: Objection, Your Honor, if the Court please, we believe there are three violations at issue here, and we object to any stipulation or indication that there are other than three.
THE COURT: All right. There's no stipulation.
MR. JACOBS: One moment, Your Honor.
THE COURT: Yes, sir.
MR. JACOBS: We'll be moving into evidence certain of the Defendant's discovery responses, but at this point in time I'd like to direct the Court's attention to the Defendant Florida Cities Water Company's Amended Revised Responses to Plaintiff's First and Second Interrogatories, page 19, question 26, the number of days of toxicity

violations, eight. If it's not a stipulation, it's an admission.

MR. BULLOCK: Your Honor, I believe that the question is answered with the number of exceedences. The second thing is the complaint has only pled three violations. Your Honor's only found three violations. And when we answered the interrogatories the question was whether or not we objected to using the term "violations" and said that we would refer to them as exceedences. The Second Amended Complaint reads, and Your Honor found in summary, September, October, '92, May '93 —

THE COURT: What are you reading from now?

The order?

MR. BULLOCK: Page six of the Second Amended Complaint, paragraph 26.

MR. BIRD: Your Honor, just so it's fair, no violations have been found against Avatar Holdings and, therefore, we will not stipulate to any.

MR. JACOBS: There's no finding of liability as opposed to Avatar.

THE COURT: Right.

MR. JACOBS: I'll read the question into the record.

State the number of days of each type of violation. Answer: No objection, eight. And there wasn't

any reference to exceedences.

I'm happy to share it with counsel. I didn't think this would be a point of issue. I apologize to take the Court's time at this point.

We can get back to this, if you prefer. We decided to use their numbers.

I think Mr. Klingenstein could testify that there were a couple of dozen. We didn't want to start having an issue about liability when everything was already bound in terms of liability, so we used their number.

THE COURT: Well, you put in evidence whatever supports — if it's an answer to interrogatory, you put that in evidence. And if there's a dispute as to the number, I'll deal with it.

MR. JACOBS: Thank you, Your Honor.

BY MR. JACOBS:

Q. Now, focusing on the toxicity violations, Mr. Klingenstein, and without respect to the number for the moment, could you tell the Court, first of all, what is toxicity?

A. Toxicity in this case, or whole effluent toxicity, is a means of measuring or monitoring whether or not an effluent has a toxic effect, without specifically looking at the cause of that toxic effect, rather than monitoring particular pollutant parameters. The whole effluent

toxicity provides for the taking an effluent and in a testing situation subjecting test organisms to that effluent to see if, in fact, either acute or chronic toxic effects, which would be very short term, various serious or perhaps less serious, but longer term effects occur in those organisms and it, therefore, provides a way to look at whether or not an effluent poses a danger to creatures in the receiving waters without requiring a facility to test for every possible chemical compound that might cause a toxic reaction since that would be prohibitive.

Q. Now, based on Florida Cities' own tests, their own toxicity tests, what percentage of time would you say that the discharge from the Barefoot Bay Plant to the Sebastian River has had toxic characteristics?

A. Well, Florida Cities, at least as expounded in my expert report, we showed whole effluent toxicity exceedances during three separate periods. Given the period of time for which that pollutant parameter was in effect — certainly three, in effect. It would be the ratio three to the entire number of months that the permit limit was in effect, assuming we're not counting the violations that occurred in 1995 or at least the exceedances that occurred in 1995.

Q. Well, since we haven't quite resolved that issue yet, give me a percentage based on three and a percentage based on eight.

A. Well, certainly three and, again, at the time we looked at these, I believe it was out of 17 months, so certainly say 20 percent of the time.

Q. Based on three?

A. Based on three.

Q. And based on eight?

A. Based on eight, obviously, of course, that would be for more than the 17 — the original 17-month period that I looked at the exceedences, but that would, nonetheless, that would certainly increase it probably more to like 25 percent or so.

Q. Okay. To what do you attribute these violations?

A. These violations were certainly possibly the result of a — what I'll call an outside chemical compound. For instance, pesticides could have been present in the Barefoot Bay effluent, but given the nature of the treatment plant, that being basically a secondary treatment plant, I would certainly say there's a fair chance that it was the effect of ammonia in the plant's effluent.

Q. Do you consider these, in your professional opinion, to be serious violations?

A. Yes, I do.

Q. Why?

A. The plant discharge to canal that leads to the Sebastian River, ultimately that leads to the Indian River

Lagoon, Indian River Lagoon in particular was addressed as part of the Surface Water Improvement and Management Act that was passed by Florida in order to, in fact, address concerns about degradation and threats to significant water bodies within the State. In fact, what's known as the SWIM Plan that was developed for the Indian River Lagoon System specifically identified both the Sebastian and the Indian River Lagoon as being threatened water bodies that were being negatively impacted by nutrient load and, therefore, could be considered stressed water systems.

Q. Let me focus you in on a few of the terms you've used, sir.

First of all, the SWIM Plan, what is that?

A. Surface Water Improvement and Management Act.

Q. And that plan or study was conducted by whom?

A. It was put together by a number of different organizations that are involved in the oversight of the Indian River Lagoon System, Water Management Districts, the State, et cetera.

Q. And you did refer and rely upon that data, did you, in forming your conclusion relating to environmental harm?

A. Yes, I did.

Q. What exhibit is that, sir?

A. That would, in fact, be Exhibit 249, and perhaps if we could refer to that?

Q. By all means.

A. In particular, referring to Exhibit 249, chapter 2, identified as Major Problems and Major Issues Within the System, the next to last paragraph on the page indicates because of its physical characteristics the Indian River Lagoon System is naturally susceptible to nutrient over-enrichment in turbid conditions --

THE COURT: Go slower for the Court reporter, please, when you are reading.

THE WITNESS: Surely.

Continued high nutrient and suspended matter loadings from anthropogenic sources threatens to transform the microphyte-based system through a phytoplankton-based system with damaging effects on estrin resources. There are indications that nutrient over-enrichment and excessive turbidity are already occurring in portions of the lagoon system. The most profound of these indications is the apparent loss of sea grass beds near urbanized watersheds.

MR. BULLOCK: If the Court please, Your Honor, I'm not sure exactly how to approach an objection on this exhibit, if the Government is not yet moving to put it into evidence, but the document is a 1994 document occurring long after the vast majority of all violations at issue, so we would raise the objection to the relevancy as to time of the document and relevancy to the issues that he's testifying

to.

THE COURT: All right. Well, he's read from the document. It's not in evidence. So, I'll sustain the objection at this point since it's not in evidence.

Well, now wait a minute.

Are you basing the testimony that you've elicited from this witness upon the document?

MR. JACOBS: Yes, Judge.

THE COURT: Well, why are you not required to have the document in evidence before you can have him read from it?

MR. JACOBS: I'll be happy to move it into evidence at this time, Your Honor.

THE COURT: Okay. Well, you want to address his objection to it?

MR. JACOBS: Your Honor, I think the fact that it came out in '94, doesn't mean it doesn't cover the prior 10 or 15 years worth of information, but I'll be happy to voir dire the witness on the subject of the study.

THE COURT: All right. Briefly.

BY MR. JACOBS:

Q. Mr. Klingenstein, could you outline the study and the period of time that it covers, please, in terms of the water quality of the Sebastian River and the Indian River?

A. Well, as I mentioned, the actual act was passed, I

believe, in 1987. I believe the first version of this was put out in 1990, and the 1994 is, in effect, a revision or an update of the previous version of the SWIM Plan, and in general, what it's talking about is the overall condition of the Indian River Lagoon System and the problems that exist in that system. Certainly, some of the references -- specific references to problems in the system go back to the mid 80's.

THE COURT: All right.

Anything further, counsel?

MR. BULLOCK: I'll renew the objection on that basis, Your Honor.

THE COURT: All right. I'll overrule the objection. It will be received as Exhibit 249.

All right. Let's move on.

BY MR. JACOBS:

Q. Now, Mr. Klingenstein, any other portions of the report that you relied upon and would like to call to the Court's attention with respect to the conditions of these water bodies?

A. One particular, on page 11, the second bulleted reference, Domestic and industrial wastewater treatment plants discharge fresh water and pollutants in potentially harmful qualities into the Indian River Lagoon, which is a reference to Hand, et al, in 1986.

And then from, I believe, one of the appendices, page 29, which is table 5, and that follows in chapter 4, the ranking of targeted Indian River Lagoon problem areas. It's, I think, particularly significant to note that the Sebastian River watershed, which shows two sub-basin numbers 2H and 3A, that would be the two prongs of the Sebastian River, particularly notes that the watershed is listed as a critical highest level of concern watershed.

So, not only is the Indian River lagoon overall of concern, and of enough concern that this quite complex plan and program has been put in place to try and protect it and protect and restore its integrity, but that the Sebastian River watershed is particularly singled out as being a critical watershed within the overall system.

Q. Is the canal that the Barefoot Bay Plant discharges into, does that canal lead into this Sebastian River watershed which you've said has received this highest critical ranking?

A. Yes, it does.

Q. Now, moving back for a moment to your testimony relating to the toxic characteristics of the discharge, would you tell the Court which Government exhibits you relied upon in drawing your conclusions with respect to the toxic characteristics of the discharge?

A. That would be with regard to, I believe it is US

Exhibit number 1, which is the summary of violations and all of the DMR's for Barefoot Bay which support that summary.

Q. Okay. Now, these DMR's are 142, 230, 240 and 254; is that correct, sir?

A. I believe so, yes.

MR. JACOBS: I'd like to move those into evidence. These are admissions by the — these are the Defendant, Florida Cities', own reports, qualify as admissions.

THE COURT: Exhibit 1 and what?

MR. JACOBS: 142, 230, 240, and 254.

THE COURT: All right. They'll be received without objection.

MR. BULLOCK: Your Honor, the only objection we will note for the record is that the versions of the discharge volume reports that were provided as Plaintiff's exhibits, we would contend are incomplete. The company was under a duty to provide a cover letter with the discharge volume reports. Those are included in our copies of those reports, which we have also listed, and we would stipulate to the admissibility, assuming that the cover letter which went with the discharge report is substituted as an exhibit.

MR. JACOBS: Your Honor, the forms themselves are stand-alone exhibits. I would certainly not object to counsel's introducing the cover letters during his part of the case, but I don't need them during my part of the case.

THE COURT: All right. I'll overrule the objection,

They will be received. That's 142, 230, 240 and 254.

BY MR. JACOBS:

Q. Moving on, now, Mr. Klingenstein, to the total residual chlorine violations or TRC violations. Would you describe those, please, for the Court?

A. Well, one of the requirements for a wastewater treatment plant in order to protect human health is to affect disinfection; that is, to kill any pathogenic organisms that might exist in the wastewater prior to its discharge, and the most commonly used disinfectant is chlorine, certainly across the United States at this point, and in order to protect the receiving water, it has been realized one needs to limit the amount of this material that's discharged out into the receiving water since its very qualities that make it a good disinfectant also make it quite toxic. These are violations of the limit that was in the Barefoot Bay permit for total residual chlorine.

Q. To what do you attribute these violations, sir?

A. In particular, to the lack of a system or mechanism to effectively control the residual chlorine in the plant's discharge. And, in fact, such a system was put in place, I believe, in about — in or about March, 1993.

Q. So you're saying the absence of the system was the cause of the violations?

A. Certainly it's technically possible to try and control chlorine without such a system, but barring either effective control or the installation of such a system, yes.

Q. And after the system was installed, were there such violations?

A. Not to my knowledge.

Q. Now, would you describe the seriousness of these violations, please, sir?

A. I think they were, likewise, quite serious. These were taking place into, again, the Sebastian River and ultimately into the Indian River Lagoon, but what's potentially at least as significant from the standpoint of these discharges is they were taking place into an area that had been identified as being a habitat for an endangered species known as the Wood Stork and, in fact, US Fish and Wildlife had particularly identified concerns about the impact of a chlorinated discharge on this habitat.

Q. On what date are you relying in this respect, sir?

A. That was a — that was on with regard to a letter that is included as US Exhibit 179, which was a letter from, I believe, Bridgett Crawford. And that covered a memo that covered a letter from Mr. Joseph Carol from the Fish and Wildlife surface to USEPA.

MR. JACOBS: I'd like to move 179 into evidence, Your Honor.

THE COURT: It will be received.

MR. JACOBS: Thank you.

BY MR. JACOBS:

Q. Now, this letter, does it make reference to an endangered species, sir?

A. Yes, it does.

Q. And does that data — the data upon which you based your conclusion in part that these violations were serious, that an endangered species might have been affected by the excess chlorine in the discharge?

A. Yes. What would have happened would have been that the — its habitat would have been impacted, i.e., smaller organisms in the receiving stream would have potentially been impacted and perhaps reduced available feeding opportunities for the endangered species.

Q. I'd like next to move on to the monitoring violations, but before I do, I'd like to make sure we've covered all of the exhibits that you have relied upon in any way in drawing your conclusions with respect to the seriousness of the harm, or potential seriousness of the harm caused by both the TRC violations and the toxicity violations. Were there any additional documents, sir, that you relied upon at all?

A. Well, 224, US 224, Government 224 was a, in fact, a

discharge monitoring report for the Barefoot Bay Plant for, I believe, January 1993. And it specifically notes that a — the ongoing installation of the SO2 feed system that, in fact, we observed when we took the video tour of the plant.

Q. So, it's on that exhibit that you relied on your opinion that prior to that time the company had not installed the necessary system to address these TRC problems; is that correct?

A. That's correct.

MR. JACOBS: Move 224 into evidence, Your Honor.

THE COURT: It will be received.

BY MR. JACOBS:

Q. We've traced on the map, I think, the route of the discharge. Did you use Exhibit 76 to trace the drainage into the Indian River Lagoon, Mr. Klingenstein?

A. Yes, I did.

MR. JACOBS: Move that into evidence, Your Honor.

THE COURT: What was that; 76?

MR. JACOBS: Yes, sir.

THE COURT: All right. It will be received.

BY MR. JACOBS:

Q. Any other exhibits that you've relied upon, sir, in any way in drawing these conclusions?

A. Those would be the main ones.

Q. Thank you.

Let's move on briefly to the monitoring violations which the Court has held Florida Cities liable for. Would you describe these, sir?

A. Florida Cities, for a period of time, reported CBOD as BOD. BOD is — or biochemical oxygen demand subscript 5 is a measure of the oxygen demand exerted by a wastewater or any sample, and it's meant to provide a measure for how much oxygen demand that wastewater will exert when it's discharged out into a receiving stream.

CBOD is a measure of what's known as carbonaceous BOD, and it is a modification of the BOD test. A material is added to preclude the exertion of the oxygen demand by a certain class of organisms, particularly those that are, in fact, in effect exerting that demand by breaking down ammonia. During a period of time, Florida Cities reported this information incorrectly.

Q. And do you consider these — let me ask you first, to what do you attribute these violations?

A. Failure to correctly report — to monitor as required and as required by the permit, and then to report accurately the data that was being reported.

Q. So, the data values didn't match the permit parameters; is that fair to say?

A. Yes.

Q. Is that a serious violation in general?

A. In general, it's — I take that to be —

MR. BULLOCK: Objection.

THE COURT: Just a moment, please.

MR. BULLOCK: Your Honor, there's no indication in the section of Mr. Klingenstein's report that deals with the seriousness of violations of Barefoot Bay to address BOD and CBOD.

MR. JACOBS: Probably because he's about to conclude that they were —

THE COURT: Wait, wait.

MR. JACOBS: I'm sorry.

THE COURT: He's not through yet.

MR. BULLOCK: I object to any testimony at all from this witness on that basis.

THE COURT: On the basis that his report does not address the seriousness of violations?

MR. BULLOCK: At all.

THE COURT: Sir?

MR. BULLOCK: It does not address the seriousness of those violations at all.

THE COURT: Of those violations?

MR. BULLOCK: CBOD, BOD reporting issue that counsel just asked Mr. Klingenstein.

THE COURT: Now you can talk. Yes, sir.

MR. JACOBS: I'm establishing it. In this case

these violations were not considered to be serious, so —
THE COURT: Apparently he's objecting.
MR. BULLOCK: Based on counsel's representation, I will withdraw the objection.
THE COURT: Okay. I thought you would.
Go ahead.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, did you draw a conclusion whether in this particular case these types of violations were serious?
A. In this case, I think these were less serious violations.
MR. BULLOCK: Your Honor, again —
THE COURT: Less serious as opposed to non-serious; is that your objection?
MR. BULLOCK: That's correct.
THE COURT: I'll, also, sustain your objection.
MR. BULLOCK: Thank you, Your Honor.
MR. JACOBS: It's come to my attention, Your Honor, that Mr. Roger Pfaff has entered the Courtroom, and in strict compliance with the Court's earlier instructions, Mr. Pfaff is our designated representative of the EPA, he's Chief of Compliance for the United States EPA Region 4. I'd like to introduce him at this time.
THE COURT: His name again is what?

MR. JACOBS: Mr. Roger Pfaff, P-F-A-F-F.
THE COURT: He's the designated representative for the Government?
MR. JACOBS: Yes, Your Honor.
THE COURT: All right. Thank you.
BY MR. JACOBS:
Q. Mr. Klingenstein, did you have occasion to review the history of the Clean Water Act violations at the Barefoot Bay Plant?
A. Yes, I did.
Q. And based on your review of the relevant data, when did the Barefoot Bay Plant begin discharging to the Sebastian River?
A. Based on —
MR. HIRD: I'd like to render an objection at this time. I think the Government is getting into claims that have already been resolved by the Court's Order res adjudicata and I think we should be focused on the remaining alleged violations.
MR. JACOBS: Judge, I think you already ruled this morning that Mr. Klingenstein could —
THE COURT: I believe I did. I believe I did. Where in my order?
MR. JACOBS: Bottom of page 6, sir.
THE COURT: Yes, sir. I'll overrule the

objection.
BY MR. JACOBS:
Q. Mr. Klingenstein, just to recap, you did have the occasion to review the history of the Clean Water Act violations at the Barefoot Bay Plant?
A. Yes, I did.
Q. And based on that review, sir, relevant data, when did the Barefoot Bay Plant begin discharging to the Sebastian River?
A. Based on the review of the available data, I would estimate in the time frame of 1980, would have been when overflows would have started to have occurred on the Barefoot Bay Plant.
Q. What data, sir, did you look at to draw this conclusion?
A. If we could, in fact, refer to US Government Exhibit number 30?
Q. By all means.
(Pause.)
MR. JACOBS: Your Honor, while this exhibit is coming to the witness's attention, I'd like to move it into evidence.
THE COURT: It will be received.
MR. JACOBS: Excuse me, sir.
Counsel just wanted to make sure he had the right

exhibit and he does.
THE COURT: All right.
MR. JACOBS: Now, could you — Your Honor, you have 30 in front of you? If not, we'll get it to you.
THE COURT: No, I don't. Am I supposed to have a notebook with exhibits?
MR. JACOBS: Yes. I apologize. I thought we had —
THE COURT: I've got a notebook of Avatar's trial exhibits.
No, I don't have a notebook with your exhibits.
MR. JACOBS: I apologize.
May I have a moment, sir?
THE COURT: Yes, sir.
(Pause.)
MR. JACOBS: We could stack them here and deliver them one-by-one.
THE COURT: Good. Do that.
What do I need right now?
MR. JACOBS: 30.
THE COURT: Volume 30 or Exhibit 30?
MR. JACOBS: Exhibit 30, sir.
THE COURT: What volume is that?
MR. JACOBS: Should be 1. Right here, sir.
MR. HIRD: Your Honor, the Government has given

Counsel for Florida Cities a copy of the exhibits in binders, but has given us a whole set in boxes, so it will be difficult for us to locate the Government's exhibit of a particular exhibit. We'll try to make our best effort.

MR. JACOBS: I apologize. If that's the case, and if we get ahead of you, Mr. Hird, let me know and I'll slow down.

MR. HIRD: Okay.

THE COURT: I don't want to slow down for that.

If you need to — if you need to provide the mechanics of getting this case tried in the time that has been allotted for it, then you all need to put your heads together and let's make the arrangements that are necessary to do that.

MR. JACOBS: I apologize. I didn't understand. I thought we had given them both loose-leaf. Perhaps they could look on with one another in the meantime.

THE COURT: I'll put this with those others.

BY MR. JACOBS:

Q. Now, Mr. Klingenstein — thank you, Your Honor.

Mr. Klingenstein, would you explain the significance of the flow data and how you relied upon it in forming your conclusion that the unpermitted discharges at Barefoot Bay actually started in 1980?

A. Well, if you look at Table 1, which is entitled,

Barefoot Bay WWTP Historical Flow Data, that chart provides data for years 1980 through 1984, and in looking at the fifth column over, which is entitled, Annual Average WW Flow, Wastewater Flow, that's in MGD or million gallons per day, you can see that in 1980 we look at a flow of 126,000 gallons per day or .126 million gallons per day. Likewise, in 1983, we're looking at a flow of .214 or 214,000 gallons per day. And in deposition testimony, Mr. Larry Good had explained that by 1983, overflow was in the range of 100 to 150 gallons per day. And based on that testimony, and based on the ratio of the flows between 1983 and 1980, it's, I think, a very logical conclusion by 1980 we were experiencing at least some overflows from the Barefoot Bay Plant.

Q. Could you explain, please, Mr. Klingenstein, the connection between the service connections and the discharges starting in '80?

A. Well, as you can see, in 1980, we had approximately 1,144 service connections and the flow was 126,000 per day, and as those service numbers — number of service connections increases the magnitude of the discharge, likewise, increases or in this case the magnitude of the overall wastewater plant flow increases and there is, obviously, a direct connection between the number of service connections, as you add service connections you add

wastewater flow to the plant and, therefore, would, likewise, add to the overflow from the plant.

Q. And where did the percolation ponds that we saw in the video fit in at this point in time?

A. Well, Mr. Good had characterized them as having a capacity of probably less than 50,000 gallons per day at this point in time. Certainly later data that we've seen has indicated they did not accept very much flow at all. And so, in effect, they were constituting probably a relatively small portion of the overall plant discharge.

Q. So, using as an example, again, 1980, the far right column, maximum flow, wastewater flow, that's 285,000 gallons per day; is that correct?

A. Yes, that would be the maximum flow on any one day within the year.

Q. And what is your opinion as to how much of that flow the percolation ponds could accommodate at that point in time?

A. Well, it's difficult to say with certainty exactly how much. As I said, Mr. Good had characterized them as being able to accept less than 50,000, but even if we were generous and said they could accept 100,000 gallons at that point in time, you would still have had on a given day 185,000 gallon discharge of wastewater to the canal and ultimately to Sebastian and the Indian River lagoon.

Q. And, then, as we look down the chart from 1980 to 1984 do the connections increase?

A. Yes.

Q. And the flow concomitantly increases; is that correct?

A. Yes.

Q. And is it, also, fair to say, then, that these unpermitted discharges to the Sebastian River are increasing?

A. Yes.

Q. Now, do you know, sir, at what point in time, if any, an NPDES permit was first issued which allowed discharges to the Sebastian River from the Barefoot Bay Plant?

A. Yes, I believe a permit was issued in 9/91, that provided for — became effective, rather, in, I believe, November, 1991.

Q. Became effective in November, 1991?

A. I believe.

Q. And I believe you noted this earlier in the course of the background information that you provided on permitting, but were there any special conditions or contingencies in the Barefoot Bay permit that you know of?

A. Yes, that permit required the cessation of discharge by 1995 from the Barefoot Bay Plant.

MR. JACOBS: A moment, Your Honor?

THE COURT: Yes, sir.

(Pause.)
BY MR. JACOBS:
Q. Directing your attention to Exhibit 185, do you recognize that, sir, as the permit?
A. Yes, I do.
Q. Would you point out the specific condition that related to ceasing the discharge from this plant?
A. That would be on page Roman Numeral I-4 under B, Schedule of Compliance, second item, Discharge 001, Cease Discharge Schedule and shows a series of reports of progress each on December 31st of years '91, '92, '93 and '94.
THE COURT: What page are you on?
THE WITNESS: I'm sorry, sir. This is on page Roman Numeral I-4.
MR. JACOBS: Should be the fifth page of the exhibit.
THE COURT: I got it. Go ahead.
THE WITNESS: And finally the last line, Cease Discharge, June 30, 1995.
BY MR. JACOBS:
Q. Is this an unusual permit condition, to your experience, sir?
A. To specifically require the cessation of discharge, yes, that is somewhat unusual.
Q. Do you have an opinion as to why such a condition

would be put in the permit of this nature?
MR. HIRD: Objection, calls for speculation on decisions of other persons.
THE COURT: Do you have an opinion?
THE WITNESS: I have an opinion, Your Honor.
THE COURT: You do have an opinion? That was his question as to whether or not you have an opinion.
THE WITNESS: Yes.
THE COURT: What is the opinion based on?
MR. JACOBS: His experience, sir.
THE COURT: I'm asking him.
MR. JACOBS: Excuse me.
THE WITNESS: My knowledge of the circumstances surrounding the situation at the Barefoot Bay Plant.
THE COURT: I'll overrule the objection.
Go ahead.
THE WITNESS: My belief is that it was put in place because the discharge had existed for some time as an unpermitted discharge and that given the specific requirements to eliminate, by State of Florida law, to eliminate discharges to the Indian River Lagoon System, that it was an appropriate inclusion in the permit.
BY MR. JACOBS:
Q. In your opinion, would the cease discharge provisions essentially enable the permittee to find alternatives to his

surface water discharge? Would that be the purpose?
A. Certainly, yes, to encourage them to do that.
Q. Encourage or require?
A. Well, require.
Q. Now, in your opinion, sir, based on the data that we spoke about and the date of issuance of the permit, for how many years were there unpermitted discharges from the Barefoot Bay Plant?
A. It would be appear to be about 11 years.
Q. How serious is that?
A. I think that's very serious.
Q. Now, sir, to your knowledge, at any point in time did EPA issue an administrative order to Florida Cities to require it to monitor its discharge and comply with certainly effluent limitations?
A. Yes, I believe in 1990, such an order was issued.
Q. Do you recognize Government Exhibit 145 as that administrative order?
A. Yes.
MR. JACOBS: Your Honor, I'd like to move 145 and 185 into evidence at this time.
THE COURT: They will be received.
BY MR. JACOBS:
Q. Now, in your opinion, Mr. Klingenstein, what was the purpose of the administrative order?

A. In my opinion, the purpose of the administrative order was to begin monitoring of the plant's discharge and to provide a mechanism to oversee the transition to a status where ultimately the permit would be issued that would require cessation of discharge.
Q. Mr. Klingenstein, does an administrative order substitute for a permit in terms of authorizing the discharge?
A. No, it does not.
Q. In fact, does this particular permit contain or — sorry — does this particular administrative order contain language that it is not, in fact, a permit?
A. Yes. Page 4 at the bottom, under item number 9, this order does not operate an NPDES permit and nothing contained herein shall be construed as preventing prosecution for the violations cited in this order, for violations of the order itself, or for any other violations of the Act.
Q. Now, did you have occasion to review whether the administrative order was violated?
A. Yes, I did.
Q. And what was your conclusion, sir?
A. That, yes, it was violated, as well.
Q. And on what data did you base those conclusions?
A. Likewise, the summary violations and DMR's for the Barefoot Bay Plant.

MR. JACOBS: Your Honor, all of these DMR's are located in these light-blue covered volumes that we presented for summary judgment purposes, and I believe we might have an extra set. We don't have an extra set, so I'll have to ask another moment to give you the Government Exhibit numbers for those, if I may.

(Pause.)

THE COURT: We'll be in recess until 1:15.

THE MARSHAL: All rise.

The Court will be in recess until 1:15.

(Thereupon, a luncheon recess was taken, after which the following proceedings were had:)

THE COURT: All right, Mr. Jacobs, you may proceed.

MR. JACOBS: Good afternoon, Your Honor.

I apologize about the confusion with the exhibits this morning. We did a little more homework over lunch. I have one correction to make, with the Court's permission.

THE COURT: All right.

MR. JACOBS: We'd ask the Court to admit Exhibit 76, the map of the drainage to the Indian River Lagoon basin. 76 was the deposition number. The trial exhibit number is 4. So, we'd ask that you admit 4, please sir.

THE COURT: All right. Exhibit 4 will be introduced instead of 76, did you say?

MR. JACOBS: Yes, sir.

THE COURT: All right.

MR. JACOBS: Secondly, I now have at my fingertips the exhibit numbers for the discharge monitoring reports commonly known as DMR's for Barefoot Bay. Those are 146, 151, 154, 157, 163, 166, 169, 170, 187.

THE COURT: What?

MR. JACOBS: 187. 207, 208, 210, 213, 218, 220, 224, 225, 226, 227, 230, 232, 244. And I'd like to move those into evidence at this time, as well, sir.

THE COURT: All right. They'll be received.

BY MR. JACOBS:

Q. Now, Mr. Klingenstein, did you have occasion to review these discharge monitoring reports for the Barefoot Bay facility?

A. Yes, I did.

Q. Did you come to a conclusion as to whether the administrative order that we earlier discussed was violated?

A. Yes, I did.

Q. And what conclusion was that, sir?

A. That it was violated.

Q. And for what effluent parameters?

A. It was violated for BOD monthly average and daily maximum limit for TSS, and for fecal coliform, for DO, the minimum limit, and PH range.

Q. And can you tell me how serious those violations are, please, sir?

A. I view those as serious, as well.

Q. What do you base that opinion, sir?

A. Well, the administrative order was placed on the facility that was — had been previously discharging without a permit to bodies of water that were considered to be threatened, and so violation of these limits by definition means that an excessive amount of pollutants is going out into bodies of water that are of concern.

Q. Now, Mr. Klingenstein, can you tell me, in your opinion, whether there is any relationship between what I'll call the past violations, that is to say, the unpermitted discharge violations and the administrative order violations and what I'll call the present violations, that is to say, the NPDES permit effluent violations?

A. Yes, there is a connection. The connection, in my mind, would be that if, in fact, the discharge had been halted sometime prior to those violations taking place, no violations would have occurred. If the facility had found an alternative discharge mode, those violations would not have taken place.

Q. In your opinion, sir, with the exception of the monitoring violations which we've described as being less serious, did the violations past and present, all have the

potential for causing environmental harm to the Sebastian and Indian Rivers?

A. Yes, I believe so.

Q. Now, is there anything that could have been done to insure that the present violations did not take place?

A. Well, as I've mentioned, if, in fact, an alternative discharge mode had been identified, the discharge would have been halted, and by definition, no violations would have been possible. In fact, there were a number of different options that were available to Florida Cities, and if we could refer to the exhibit that's up on the easel, a number of different options presented themselves.

The first of these would be percolation ponds. In about 1985, Florida Cities was looking at both the need to potentially improve the performance of their existing pond — ponds, I'm sorry, and potentially to secure all additional percolation pond capacity.

MR. JACOBS: Let me interrupt you for a moment, as long as you're referring to the exhibit.

For the record, that would be Exhibit 597-D as in David, 1.

BY MR. JACOBS:

Q. Now, was this exhibit compiled either by you or under your supervision, sir?

A. Yes, it was.

MR. JACOBS: Move that into evidence at this time, sir.

THE COURT: It will be received.

BY MR. JACOBS:

Q. Go ahead, Mr. Klingenstein.

A. As you can see, looking at the exhibit, in fact, in late 1985, Florida Cities did secure a 40-acre site, and that would be the 40-acre site we saw that's now in use as a spray irrigation field. They investigated the possibility of putting percolation ponds on that site. I believe two different trials were run to evaluate the capacity of that site. Florida Cities, I believe, also, looked at at least one other site as a possibility for accepting percolation ponds.

The sites that were evaluated did not have the capacity to accept the entire plant flow, and so no percolation ponds were ever built or put into service.

Another opportunity that presented itself was spray irrigation.

Q. Let me stop you for a moment, if I may, with the Court's permission, before we move on to a different alternative.

The first line of 597-D-1 represents the percolation pond options; is that correct, sir?

A. Yes, it is.

Q. And how would this option or alternative have solved the problem?

A. Well, if adequate percolation ponds had been constructed, large enough percolation ponds had been constructed to accept the entire plant flow, the plant discharge would have been halted, and by definition, the violations could not have taken place.

Q. And there would have been no discharge?

A. Would have been no discharge to the river, so there would have been no violations.

Q. Would you tell me, sir — you said that two options or two different pieces of land or parcels of land were looked at. Could you tell me whether there were any other parcels or pieces of land in these, what you've described as the 3,000 or so acres roughly in the area that were looked at, for the purpose of percolation ponds, at this particular point in time that you've described?

A. There's, as you've alluded to, there's something in the neighborhood of 3,000 to 4,000 acres of grove land surrounding the Barefoot Bay Plant. Documents that I've reviewed in the course of looking at the Barefoot Bay situation, had indicated that a number of different parcels at different points in time were available for sale or at least talked about as potentially being available for sale and that possibly could have provided adequate acreage to

install percolation ponds.

Q. Can you tell me, sir, whether there was any technical or technological reason why additional percolation ponds could not have been used to dispose of the effluent?

A. As long as a site of sufficient size to accommodate a sufficiently large pond or series of ponds was procured and sufficient ponds were put in place, no, I can't see any reason that ponds could not have been used to dispose of the effluent.

Q. If your opinion, was there sufficient acreage in the vicinity to provide sufficient land capacity for such ponds?

A. Yes.

Q. How much land, in your opinion, would have been required to construct adequate ponds?

A. It certainly would depend on the individual percolation characteristics of a particular piece of property, but just by way of example, the two tests that were run on the 40-acre site, as I recall, showed capacities of — first test showed a rather low capacity, and I believe the second test showed a somewhat higher capacity, in the range of perhaps 300,000 gallons, but certainly a site of probably 250 to 300 acres would have provided more than adequate capacity, assuming decent perc and characteristics.

Q. Okay. What other options were available, sir?

A. Well, spray irrigation. This is where the — rather

than putting the plant's effluent into a pond with a permeable bottom and allowing it to percolate down, an irrigation system is put in place. That's, in fact, what we saw a video of and have looked at photos of at the Barefoot Bay Plant on the 40-acre site.

By procuring a large enough parcel of land and putting in place an irrigation system, the entire plant flow could be disposed of through irrigation, rather than through discharge to the receiving stream.

And, likewise, back in the '84, '85 time frame, Florida Cities, also, was aware of the possibility of spray irrigation and did begin to look into that option, particularly through starting in about 1987, they started looking into what parcels of land might be available to utilize for spray irrigation, but it was not until rather recently that a parcel, to my understanding, was secured, and at this point my understanding is that the plant is now on track to be into a spray irrigation site in 1997.

Q. Let me take you back for a moment to the percolation ponds. Did Florida Cities ever acquire any additional or ever construct any additional percolation ponds beyond the two that were in existence at the time that the plant was designed?

A. No.

Q. And when was the first time that spray irrigation was

introduced as a means of effluent disposal at Barefoot Bay?
A. It was in March of 1990.
Q. At that point, what was the capacity of the spray irrigation site that was introduced?
A. I believe, based on a investigation of the site by one of their consultants, it was determined that the site had a capacity of about 90,000 gallons a day.
Q. And in order to eliminate the unpermitted surface discharge in March of 1990, how much capacity did they need?
A. Roughly, give or take, about a half a million gallons.
Q. So, they were about 400,000 gallons a day short?
A. Give or take, yes.
Q. How much land would have been required to use spray irrigation to dispose of all of the effluent at that point in time?
A. Probably, again, in the range of about 300 acres and I believe 300 -- slightly over 300 acres is the size of the site that has been procured to put in place the spray irrigation system.
Q. And instead they bought a parcel that was how many acres?
A. About 320, roughly.
Q. No, I'm sorry. I'm going back to the previous site.
A. Oh, the smaller site is a 40-acre site.
Q. 40 acres. Okay.

Please continue, sir.
A. Another possibility is deep well injection. Deep well injection is a system whereby a deep well is drilled down into a permeable layer and in order for this to be approved, this permeable layer has to be confined or separated from any other layers, geologic layers, which might include or contain drinking water. And the wastewater is injected down this well into this layer and is disposed of in that manner.
Florida Cities was, likewise, aware of that option back in 1984, but seems to have really seriously begun to look at deep wells in the 1989 time frame. Review of documents indicated that there were some concerns about performance of wells in the area, but these appear -- these concerns appear not to -- these concerns appear not to have been researched in great detail, and at no time was the well ever constructed.
Q. Could you tell me, sir, was there any technological or technical reason why a deep well could not have been constructed, in your opinion?
A. No.
Q. Could you tell me, sir, whether there was any technical or technological reason why, in your opinion, spray irrigation could not earlier have been fully implemented as a disposal means to eliminate the unpermitted discharge?

THE COURT: Are you talking about spray or are you talking about deep well now?
MR. JACOBS: I switched, because I --
THE COURT: Okay.
MR. JACOBS: I'm sorry, sir. I went back to --
THE COURT: Okay.
MR. JACOBS: -- spray.
THE COURT: I just wanted to make sure I knew what you were talking about.
THE WITNESS: No, I can see no reason it couldn't have been.
BY MR. JACOBS:
Q. Now, let me ask you, what documentation you relied upon in forming your conclusions about all three of these alternatives that would have resulted, as you say, in total cessation of the unpermitted discharge?
A. These documents included Government Exhibits numbers 16, 180, 34, 16, 30, 79, 102, 16, 63, 137.
MR. JACOBS: Your Honor, I'd like to move all those exhibits into evidence at this time.
THE COURT: They'll be received.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, focusing on the permit effluent violations, aside from totally eliminating the discharge, what other means was there, if any, to comply with the

permit effluent limitations?
A. Certainly upgrade of the plant to what's known as AWT or Advanced Wastewater Treatment standards would have most likely eliminated those violations, as well.
Q. Do you know whether the Defendants made any efforts to build such a plant?
A. It's my understanding that, in fact, upgrade to AWT may have taken place subsequent to my inspection of the plant in December of 1994.
Q. But not before?
A. No.
Q. Could you tell me, sir, in your opinion, whether there was either any technical or technological reason that the Defendants could not have built an advanced wastewater treatment plant in time to comply with the limits in their NPDES permit?
A. No.
Q. I'd like to direct your attention now, sir, to the Carrollwood plant.
MR. JACOBS: Your Honor, we don't have a video of the plant because it no longer exists, but we do have some photos of the site itself.
And Mr. Klingenstein, I wonder if you could, using those photographs, references to those photographs, describe the plant as it existed?

A. The photographs are numbers 2 through 14 that deal with Carrollwood and the Carrollwood site and its collection system.

Photographs 2 and 3 provide a -- are just an overview of the pump station that has been built on site that now conveys wastewater from the Carrollwood system to the Hillsborough County system; 4 is a view, as are 5 and 6, of the mechanical equipment in that pump station; 7 and 8 provide a view of the former plant site, and 7 with a bit of a view of the Sweetwater Creek, as well; and 9 and 10, 11 and 12 provide views of the Sweetwater Creek itself as it passes through the site; 13 and 14 are of a small pump station in the Carrollwood collection system.

MR. JACOBS: With the Court's permission, I'm going to put the topographical map up that has the Carrollwood area on it. This map is an attachment to Mr. Klingenstein's report, which is exhibit 597.

Mr. Klingenstein, I wonder if you can identify the location of the old Carrollwood plant on the topographical map?

A. Yes. It would have been in that general area.

Q. The record will reflect the witness is identifying the right hand side of the map, roughly 50 to 55 percent down from the bottom, all the way to the far right.

A. And, of course, as you mentioned, the Carrollwood

plant was not in existence at the time of our inspection, however, my understanding, for the record, is the Carrollwood plant was a secondary-type wastewater treatment plant.

Q. As opposed to an advanced wastewater treatment plant?

A. Yes. Followed by a pond with discharge from the pond through a chlorine content chamber.

Q. Discharged where?

A. To the Sweetwater Creek.

Q. And from there the Sweetwater Creek flows to where?

A. Ultimately to Tampa Bay.

Q. Now, Mr. Klingenstein, the Court has already held that there were 234 NPDES permit violations at the Carrollwood plant. Would you describe these violations, please?

A. There were violations of the BOD and TSS limits, both monthly and daily, monthly average and daily maximums; there were violations of the total nitrogen, monthly and average -- I'm sorry -- monthly average and daily maximum limits, and the total phosphorous, monthly average and daily maximum limits; violations of the fecal coliform limits and violations of the total residual chlorine daily max.

Q. Did you have occasion to review the NPDES permit for the Carrollwood plant?

A. Yes, I did.

MR. JACOBS: Your Honor, that's Exhibit 326. We

move that into evidence at this time.

THE COURT: It will be received.

BY MR. JACOBS:

Q. Mr. Klingenstein, did you, also, have occasion to review the discharge monitoring reports for the Carrollwood plant?

A. Yes, I did.

MR. JACOBS: Your Honor, these are exhibits 331, 332, 335, 336, 337 and 338 -- and 338. I'd like to move these into evidence at this time.

MR. BULLOCK: If the Court please, we would renew our objection to the DMR's, unless they contain the cover letter that was required to go with the DMR.

THE COURT: Okay. You have those, I assume?

MR. BULLOCK: That's correct.

THE COURT: Okay. I'll overrule the objection, deny your request.

They'll be received.

Did you say -- what was the last number; 338 or 339?

MR. JACOBS: 338, Your Honor.

THE COURT: All right.

BY MR. JACOBS:

Q. Mr. Klingenstein, to what do you attribute these violations?

A. Primarily to the technology that was in place at the plant.

Q. Could you be more specific?

A. Well, in particular, looking at the nitrogen and phosphorous limits, that a plant that was not an AWT plant would be very unlikely to be able to consistently meet the limits that were included in the Carrollwood permit.

Q. In your opinion, are these violations serious?

A. Yes, I believe they were. These were discharges to a small stream, the quality of which was of concern, and that ultimately led to Tampa Bay, a body of water that was, also, of concern from a quality standpoint, and particularly with regard to nutrient load.

Q. You've mentioned nutrient load a couple times. I wonder if you could describe what that means in layman's terms, please?

A. Well, in particular, the pollutant parameters, nitrogen and phosphorous are considered to represent nutrients, if you will, to water bodies that allow for the growth of certain types of organisms and allow for the exertion of oxygen demand by various organisms in the water body.

A commonly heard term in laymen's circles is eutrophication, and in particular, these pollutants are limited in order to prevent degradation of water bodies.

Q. Now, did you review any data that led you to the conclusion that the Sweetwater Creek and Tampa Bay were potentially seriously impacted?
A. Yes, I did.
Q. And what data was that, sir?
A. One particular, the Government Exhibit 294, which was the Minimum Negative Impact Report by Florida Cities consultant LTI or Limno-Tech supported the position that upgrade to AWT was necessary in order to avoid more than a minimum negative impact on the receiving stream.
MR. JACOBS: Move 294 into evidence, sir. That's the Limno-Tech Report prepared by the Florida Cities Water Company's contractor.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, did you have occasion to review whether there was a history of Clean Water Act violations at the Carrollwood plant?
A. Yes, I did.
Q. What was your conclusion?
A. That, in fact, there had been violations, that the facility had operated for some time without a permit, since 1984, until a permit was issued for the facility in 1991.
And, then, that there were a series of violations until the plant was taken off line and flow was transferred

to the Hillsborough County system.
Q. At what record or records did you rely upon in terms of drawing your conclusions with regard to the history of past violations at Carrollwood?
A. The things that I reviewed and relied upon included Government Exhibits numbers 269, 270, 272, 326 and 341.
MR. JACOBS: With the Court's permission, I would move those exhibits into evidence at this time.
THE COURT: They'll be received.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, did you reach a conclusion as to whether the past violations were serious?
A. Yes, I did, and that was that, yes, they were serious.
Q. And, again, for what reason?
A. They were discharges either without a permit or in excess of a permit into bodies of water that were considered to be threatened and, therefore, by definition, had to be considered serious.
Q. Would you describe the relationship between the past violations, that is to say, the unpermitted discharge violations and the present violations, that is to say, the NPDES permit violations?
A. Well, again, much as with Barefoot Bay, if, in fact, the discharge had been eliminated through implementation of one of several options, by definition, no violations could

have taken place since the discharge, itself, would have been eliminated.
Q. Now, what, if anything, could have been done to prevent the current violations?
A. Well, there were a number of options available to Florida Cities at the Carrollwood plant. Not the -- thank you. First of which, was, in fact, connection to Hillsborough County, which, in fact, is the option that was ultimately implemented.
Q. Let me stop you for a second just to identify the record to reflect that you're now making reference to Exhibit 597-D as in David, 2. Is this, again, a chart prepared either by you or under your supervision, sir?
A. Yes, it was.
Q. And what does it depict?
A. This depicts a number of different options that were available to Florida Cities that could have eliminated the discharge and eliminated, therefore, the violations, first of which was connection to Hillsborough County. Florida Cities, the record indicates, that Florida Cities had had contact with Hillsborough County since the -- at least the late 1970's, attempting to secure a commitment to connect.
There was a periodic contact back and forth between Florida Cities -- from Florida Cities with the county, and in a number of instances, the county indicated that they, in

fact, could not provide firm dates for connection. And in particular, a number of those would be numbers -- Government Exhibits number 263 and 278.
MR. JACOBS: Move those into evidence at this time, Your Honor.
THE COURT: 263 and 278?
MR. JACOBS: Yes, Your Honor.
THE COURT: They'll be received.
MR. JACOBS: Also, move into evidence at this time, the chart that Mr. Klingenstein testified was put together at his instruction, 597-D-2.
THE COURT: D as in dog?
MR. JACOBS: Yes, sir.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Mr. Klingenstein, you said that there was no firm commitment ever made by Hillsborough County or did there come a time when Hillsborough County and the company did reach an agreement?
A. Yes, they ultimately did reach an agreement and in January of 1992, the flow was diverted over to Hillsborough County.
Q. And when did the unpermitted discharges begin?
A. The permit was denied, I believe, in 1984.
Q. Was there another available alternative or was there

an alternative that was, indeed, available in 1984, that would have permitted the cessation of the discharge?
A. Yes, I believe so. There was the possibility that they could have connected to another system, rather than to Hillsborough County's, and the one that appears to have been most available was Tampa, and, in fact, the company did contact Tampa and received a reply from Tampa, and I believe in December of 1983, that specifically identified potential points of connection to the system, and that, in particular, identified one of those points of connection as being available at that time.
Q. Do you recall how far away that point was?
A. I believe it was about 15,000 feet.
Q. So, roughly, three miles away?
A. About three miles, yeah.
Q. Was there any technological or technical reason, in your opinion, that would have precluded the connection to the Tampa system at this point in time?
A. None that I'm aware of.
Q. Were there any other alternatives available that would have resulted in preventing these unpermitted discharges?
A. Yes, I believe that both spray irrigation or the use of percolation ponds would have been a possibility. And Government Exhibit 261 is a report, preliminary review and evaluation of existing percolation ponds and off-site

disposal areas for Carrollwood Wastewater Treatment Facility, dated 1/24/84, that was -- documents the results of a preliminary study by a firm by the name of Jamal.
Q. Did Jamal do this particular study at the request of Florida Cities Water Company?
A. Apparently so, yes.
Q. They were, in fact, its contractor for this study?
A. Yes, that's what it appears to be.
MR. JACOBS: Move 261 into evidence, Your Honor.
THE COURT: It will be received.
MR. BULLOCK: Your Honor, a quick question.
(Conferring with Mr. Jacobs.)
MR. BULLOCK: Your Honor, the question is, on the exhibit list we were given, 261 is another document.
MR. JACOBS: I'll check that, if I may.
I think my distinguished co-counsel is correct. Should be 268, not 261.
THE COURT: All right. Then 268 and not 261 will be received.
You had down 261, or did you have 268?
THE WITNESS: No, I had 261, Your Honor. It should be 268. 268 is the correct document.
THE COURT: All right.
BY MR. JACOBS:
Q. Mr. Klingenstein, did you have occasion to refer to

261?
A. I'm sorry. 261 or 268?
MR. JACOBS: I'm back to 261 for another purpose now.
THE COURT: The real 261.
THE WITNESS: The real 261.
MR. JACOBS: Thank you, Judge.
THE WITNESS: Yes, in fact, I did.
BY MR. JACOBS:
Q. And for what reason, sir?
A. That was a document that was reviewed in the course of reviewing the Carrollwood file. And it was one that, in fact, was a memo from a Mr. W. G. Lee to file on Florida Cities Water Company letterhead, that, in fact, and I'm reading from the document, we've established the fact that it would be impractical and impossible for Florida Cities Carrollwood Wastewater Treatment Plant to connect to the Hillsborough County Northwest Regional STP. I have written to Ed Snipes of the Tampa Office of the DER requesting a change in the requirement of our topic.
MR. JACOBS: Okay. I'll move 261 into evidence at this time, Your Honor.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Now, you've testified that and as represented on the

timeline from 1979 through 1991, you said there was and I'm quoting from the exhibit itself, 597-D-2, you said, there's sporadic contact with the county regarding connection, but no firm commitment reached or received and no agreement negotiated. Was there a technical or technological reason why connection to the Carrollwood system during this point in time could not have been implemented?
A. A connection from the Carrollwood system to Hillsborough County, no, that connection could not be made. By all of Hillsborough County's representations, they did not have adequate capacity.
Q. But Tampa did?
A. Yes.
Q. Any technical or technological reasons why spray irrigation and percolation ponds could not have been used to eliminate the discharge from the Carrollwood plant?
A. No, and in particular, referring to Exhibit 268, a number of sites were evaluated for percolation pond use and one site was evaluated for use as spray irrigation and that would have been a golf course, and the estimated capacity of the sites were such that one site was found to have more than adequate capacity to handle the entire plant flow, and the remainder of the sites were found to have not sufficient capacity in any one of the sites to handle the entire plant flow, but rather substantial capacities.

Q. Now, aside from ceasing the discharge entirely, would it have been possible to otherwise comply with the permit that was issued in July 1991, for Carrollwood?

A. If, in fact, a plant upgrade had been in place at that time such that the plant was at AWT status.

Q. Then the plant could have complied with its permit; is that what you're saying?

A. Yes, that's true.

Q. And was there any technical or technological reason why such a plant could not have been built in time to comply with the NPDES permit?

A. No, there's no technological reason such a plant couldn't be built.

Q. In terms of your opinions that you've drawn with respect to the AWT plant at Carrollwood, are there any documents or data that you've relied upon, sir?

A. Again, Exhibit 294, 298, 300 and 302.

MR. JACOBS: I'd like to move those into evidence at this time, Your Honor?

THE COURT: They'll be received.

BY MR. JACOBS:

Q. Turning your attention now, Mr. Klingenstein, to the Waterway Estates Plant, I'm going to, with the Court's permission, activate the video of the plant and ask you to narrate it and at that time to describe the plant and

treatment design.

And this is the same exhibit, Your Honor.

THE COURT: Same exhibit?

MR. JACOBS: Yes.

THE COURT: Okay.

(Video tape playing.)

THE WITNESS: The Waterway Estates Wastewater Treatment Plant in contrast to the Barefoot Bay Plant was, at the time of our inspection in December of 1994, had been upgraded to an AWT status and, in fact, its outfall had been relocated from the canal into which it originally discharged out into the Caloosahatchee River.

These are views as we're passing into the plant, the mechanical equipment through which the wastewater enters the plant and is distributed up into the various treatment units. Also, I believe, we're looking directly at the site of a large equalization basin. This is a unit that provides for a dampening effect, if you will, of flows into the plant. And, again, this plant is what's known as an AWT configuration. And in this case, the plant consists of basically two of the types of package units that we've seen, of the single unit we've seen at the Barefoot Bay, modified somewhat. That's one of them there in the background, and then looking over on the other one, right there.

THE COURT: When did you say this was constructed?

THE WITNESS: Well, I can't tell you the date of the very original construction, Your Honor, but the upgrade took place —

THE COURT: The upgrade.

THE WITNESS: The upgrade took place in the early 1990's.

THE COURT: All right.

MR. JACOBS: Go ahead.

THE WITNESS: Again, still looking down into one of the treatment units, in this case the equalization basin. And we should soon see the — as we pan across, no, still panning across the top of the treatment units. Again, these are consolidated package-type units that provide for both biological treatment and for separation of solids, as well. They combine a number of different treatment units into one steel unit, hence the name, package unit. And separation of solids, particular biological solids takes place in the center of that unit. And these types of treatment systems are, in general, very widely used throughout the United States, in particular for smaller plants, as opposed to larger plants that would tend to have large in-ground concrete tankage.

Looking down around the various units and that's the sludge-holding tank in which the removed solids are aerated.

I believe we're looking now down on top of the denitrification units, and which, I believe, there were three of.

And then we should pan over to the disinfection unit. In this case, this plant, rather than using chlorine to disinfect, uses ultraviolet light to effect the disinfection, in the channels underneath that grating in that concrete structure.

And this is the boat yard that immediately adjoins the plant proper. And then the plant office and laboratory.

This is looking out into the canal, which surrounds the plant.

And panning around now, should be panning around out toward the canal to which the plant formerly discharged and, in fact, right there we'd be looking at the point into the canal where the discharge had formerly taken place.

And now panning out along the canal and looking out into the Caloosahatchee.

Now, the outfall discharges quite a ways out into that — a ways out into that river some — I believe the total extension length of the outfall was some 2500 or 2600 feet and about 800 feet up the canal.

Q. Is that where that gentleman was pointing to the old outfall?

A. That would be the old outfall. And would have come

right out from the plant right into the canal there.

You can see it's quite a quist or quiescent body of water in the body canal.

Q. What do you mean by quist or quiescent?

A. Well, it's being a canal as opposed to a river or stream, it, by definition, doesn't have any tremendous amount of flow through it, it's just sort of a quiet body of water, and so anything that's discharged into it is going to have a bit more of a tendency to stay there than to be mixed and ultimately be flushed out.

That's looking back up the canal from, I believe, from the boat yard next to the treatment plant.

And now looking out into the Caloosahatchee. And the outfall, I believe, follows the — you can't see it there, may get a better view, but the outfall follows the boat channel out into the middle of the Caloosahatchee to the 6-foot contour line, which is the point at which the river is on average 6-foot deep, follows out along the boat channel, out into the center of the river.

And this is another view, I believe — this view was taken from the property across from the plant, looking at there — looking at actually the — in the foreground, the original point of discharge, and at the same time we would be looking out along the new discharge line, as well.

Q. Now we're back?

A. That's finished.

(End of video.)

Q. Mr. Klingenstein, are there, also, photographs that you took during your inspection of the Waterway Estates Plant?

A. Yes, there are. Those photographs would begin on — with photograph number 71, which begins with the picture of the facility sign. Photograph 72, 73, 74, 75 and 76 are of treatment units in the plant. 77 is a view of the disinfection unit, the UV disinfection unit. 78 would be of the denitrification unit — units. 79 and 80 are, again, views of the treatment units, as are 81 and 82, 83. 84 would be the truck loading station. Again, 85, looking over the denitrification system. 86, again, the disinfection unit, the UV disinfection unit. 87 is a view looking down at the original point of discharge into the canal. 88 and 89 and 90 are views out into the Caloosahatchee River.

Q. I believe we have a topographical map of that area, as well. I wonder if you could point out the location of the plant on the topographical map?

Which, again, is an exhibit to Mr. Klingenstein's report, Your Honor.

THE WITNESS: The discharge would have taken place from the plant and was located in the region.

MR. JACOBS: Let the record reflect that the

witness is pointing to the lower right hand quadrant of the exhibit, along the banks of the Caloosahatchee River, as depicted on the exhibit.

BY MR. JACOBS:

Q. Mr. Klingenstein, the Court has already held that as alleged in the Government's Complaint, the Waterway Estates Plant discharged without a permit from October 1, 1988, until October 31st, 1989. That's 396 days of violations.

Did you have occasion to review whether there was a history of unpermitted discharges before October 1, 1988?

A. Yes, I did.

Q. And what conclusion did you reach, sir?

A. That, in fact, there had been a discharge without a permit since, I believe, January of 1987.

Q. And what data did you rely upon to draw that conclusion, sir?

A. That was, in particular, Government Exhibit Document 354 and 361.

MR. JACOBS: I'd like to move 354 and 361 into evidence.

THE COURT: They'll be received.

BY MR. JACOBS:

Q. When did the unpermitted discharges actually begin, Mr. Klingenstein?

A. At the point in time at which the permit was denied by

USEPA.

Q. Was that January?

A. I believe effective January 1987.

Q. Thank you.

The Court has, also, held that it was unlawful for Florida Cities to discharge to the boat canal that you pointed out both in the video and the photo or photos, and that on each day during the period November 1st, 1989 to July 14th, 1991, that is to say, 621 days, the Waterway Estates Plant discharged to the boat canal, instead of to the 6-foot contour line of the river.

MR. HIRD: Your Honor, so the record is clear, and I just want to do this once, so we don't have to interrupt the witness' testimony. I want it understood that with respect to the claims of discharge without a permit, that those claims are — that Avatar Holdings has summary judgments on those claims and, therefore, the evidence will not be admitted with respect to liability about that. And when Mr. Jacobs asked the witness about the number of days of discharging in the wrong location, Avatar Holdings has a judgment in its favor on certain of those days prior to May 4th, 1990. With that understanding, that's understood, I would not further object to the witness' testimony.

THE COURT: Your objection is that as to those violations which I've granted judgment in your favor, that

there should be no evidence presented, and you want a standing objection in that respect?

MR. HIRD: Yes, Your Honor.

THE COURT: Okay, all right. I think that's reasonable. I think that's a pretty well defined area of objection and I -- if we get to a point where you think there might -- the record might be unclear in that respect, then feel free to voice your objection.

MR. HIRD: Thank you.

BY MR. JACOBS:

Q. Mr. Klingenstein, can you first explain what the difference is between the discharging to the boat canal and discharging to the 6-foot contour line of the river, itself?

A. Well, the difference is the discharge to the boat canal is taking place into a narrow, poorly mixed and with very low flow, part of the -- not even actually part of the river, but canal that is tributary to the river, whereas the discharge to the 6-foot contour line gets the discharge out into the best mixed part of the Caloosahatchee River. And so, by definition, it provides for a much better dispersal of pollutant load and, therefore, takes advantage of the river's ability to handle that pollutant load.

Q. Were any studies done, to your knowledge, of the difference between these two discharge points?

A. Yes, there was a document that has been listed as the

1981 Wasteload Allocation Study, and it is titled, Caloosahatchee River Wasteload Allocation Document, Lee County, January, 1981, which is Government Exhibit 349.

Q. And what pertinent parts of that study would you draw to our attention, sir?

A. Several. First would be on what should be page 10, although I believe the page number is missing on this copy. First would be the second paragraph, Waterway Estates STP, although discharging only about 10 percent of the flow of the Fort Myers Central STP still demonstrated localized build-ups.

Q. Let's start with STP, sir. What does that mean?

A. Sewage treatment plant.

Q. What is localized build-ups means?

A. Well, what that means is what the effort is -- the study is doing is looking at the tendency for effluent concentration to build up in the area of a particular discharge. This is going to -- this will give you an idea, will give the regulatory body an idea as to whether or not the particular level of nutrient discharge is going to be acceptable or if the nutrient levels will build up to a point where they would become a concern.

Q. You mentioned regulatory body. Who published this study?

A. This was published by the State of Florida.

MR. JACOBS: I'd like to move 349 into evidence at this time, Your Honor.

THE COURT: It will be received.

BY MR. JACOBS:

Q. Any other portions of Exhibit 349 that you would like to draw to our attention that served as a foundation for your conclusions, sir?

A. On page 12, the last paragraph, there is a mention that the Waterway Estates Treatment Plant was eliminated from further modeling due to the assumed tie-in to the Cape Coral Facility and the assumed impracticality of upgrading to AWT and relocating the outfall for such a small flow.

Q. Any other portions of this report that you would like to bring to the Court's attention?

A. One page, that same page 10, actually two paragraphs down, the fouth paragraph, beginning in the middle of the paragraph, the other dischargers, parentheses, Fort Myers Central, Cape coral and Waterway Estates, besides needing to upgrade to nutrient removal, would also need to relocate their outfalls.

Q. What does "upgrade to nutrient removal" mean?

A. In particular, would be to put in place AWT treatment.

Q. Advanced wastewater treatment?

A. Yes.

Q. Okay. And this study was performed at what time, sir?

A. The actual document was published in January of 1981.

Q. Presumably the study took place somewhat prior to that?

A. Somewhat prior to that, and I believe it was based on monitoring that took place in the late 1970's and perhaps as late as 1980.

Q. To what cause or causes do you attribute the unpermitted discharges and the discharges at the unpermitted locations, Mr. Klingenstein, in your opinion?

A. Failure to either eliminate the discharge or to upgrade the plant and relocate the outfall.

Q. In your opinion, were these violations serious?

A. Yes, I believe they were.

Q. And on what data do you base this opinion?

A. Again, on Government Exhibit 349, Government Exhibit 422. Primarily those two.

Q. Anything in 422 that you would like to call to the Court's attention?

If not, would you just identify it for the record?

A. No, we could certainly call something to the Court's attention.

422 is the Caloosahatchee River water quality based effluent limitations document.

MR. BULLOCK: Objection. Is 422 in evidence?

MR. JACOBS: I'll move it in at this time.

THE COURT: Okay. It will be received.
THE WITNESS: On page --
THE COURT: Do you have a question you want to ask him?
MR. JACOBS: Yes. He was about to speak, I think.
THE COURT: What was your question?
MR. JACOBS: The question was, any particular information in 422 that you would like to bring to the Court's attention?
MR. BULLOCK: Your Honor --
THE COURT: That's kind of open-ended.
Why don't you ask him a question that means something here?
MR. JACOBS: Very well, sir.
BY MR. JACOBS:
Q. Mr. Klingenstein, you said that you've relied in part on Government Exhibit 422 in terms of coming to the conclusion that the unpermitted discharges and the discharges to the improper location were serious, and you said that there were portions of 422 that you relied upon to draw that conclusion.
What particular portions of 422 did you rely upon to draw that conclusion?
A. Well, if we look at page 15, the fourth paragraph on that page, in the middle of that paragraph, the shallows

near the Waterway Estates outfall were most impacted as levels greater than 20 micrograms per liter were recorded.
Likewise, on page 16, design runs for relocating the City of Cape Coral and Waterway Estates discharges to beyond the 6-foot contour line reduced their impacts considerably.
Q. Let's take them one at time and put them in layman's terms, please, starting on page 15 in the middle of the fourth paragraph on the page.
A. On page 15, what it's referring to is that, in fact, because the area at the point of discharge, the old point of discharge for the Waterway Estates Plant was poorly mixed, this study projected pretty severe impacts on that area because the effluent would not be dispersed and, in particular, what's being referred to here is levels of chlorophyl A, which is a measure of changes that are potentially occurring in the plant population, if you would, the aquatic plant population in the estuary.
Q. Now, flipping to page 16, the second full paragraph, I believe, is where you highlighted the portion you relied upon. Would you put that in layman's terms, as well?
A. That's basically saying, if you take the outfall and run a line out to the 6-foot contour out into the deep part of the Caloosahatchee River, you'll reduce that -- you'll very significantly reduce that impact, you'll get the effluent out of that poorly mixed, quiet area, out into the

bulk of the river, if you will.
THE COURT: That's the first full paragraph, page 16?
THE WITNESS: Yes, sir.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, did you, also, have the opportunity to examine the permit effluent violations that the Court has held took place from July 1991, to March of 1992 at the Waterway Estates Plant?
A. Yes, I did.
Q. And would you describe these violations, please?
A. These were violations of whole effluent toxicity and total nitrogen limits.
Q. And what data did you review in coming to those conclusions?
A. Both the summary of violations and the underlying DMR's.
Q. And what about the permit for the plant?
A. Yes, sir, I reviewed that, as well.
MR. JACOBS: At this time, Your Honor, I'd like to move the permit into evidence. That's Exhibit 399.
Mr. Klingenstein, you reviewed the DMR's, did you?
THE WITNESS: Yes, I did.
THE COURT: I will receive Exhibit 399.
MR. JACOBS: Thank you, Your Honor.

And the DMR's are Exhibits 454, 458, 460, 461, 464, 467, 469, 470, 471, 472, 473 and 477.
I'd ask the Court to accept those exhibits into evidence at this time, as well, please.
THE COURT: They'll be received.
MR. BULLOCK: If the Court please, the same objection for the record as to the cover pages.
THE COURT: To the cover letter? All right. Same ruling. I'll overrule the objection.
They'll be received.
BY MR. JACOBS:
Q. Mr. Klingenstein, do you have an opinion as to the seriousness of the permit effluent violations at the Waterway Estates Plant?
A. Yes, I believe they were serious.
Q. And why is that?
A. There were discharges in excess of the permit limits to a water body, that even though the outfall had been relocated, was still one that was considered to be threatened and, therefore, of concern.
Q. And what data did you rely upon, if any, to form that conclusion?
A. Again, both of the previously cited 349 and 422.
Q. Now, Mr. Klingenstein, did you have the opportunity to review what alternatives, if any, the Defendants could have

pursued to prevent the violations at the Waterway Estates Plant?
A. Yes, I did.
Q. What opinions, if any, did you draw?
A. That there were a number of options that were available to Florida Cities to address those violations.
Q. Making reference as you see fit, Mr. Klingenstein, to exhibit 597-D as in dog, 3 — let me ask you first, do you recognize this exhibit?
A. Yes, I do.
Q. Would you identify it for the record?
A. This is a timeline for various discharge alternatives for the Waterway Estates Plant. It was prepared under my direction.
Q. What alternatives existed at this plant, sir?
A. Well, first, much as with the Carrollwood plant, connection to another utility was a possibility.
In this case, a private utility, North Port Myers Utility was, in fact, contacted by Florida Cities, but no agreement was reached with North Port Myers. It did appear that North Port Myers had the capacity to accept wastewater from the Waterway Estates Plant at some time in mid 1988.
Q. Was that a technically and technological feasible alternative?
A. Yes.

Q. And the North Port Myers Utilities, do you know what method of discharge they used for their effluent?
A. I believe they have a non-surface water discharge that, I believe, uses spray irrigation and has a deep well, as well.
Q. Is there any surface water discharge, then, from this plant to the Caloosahatchee?
A. From the North Port Myers Utility? No, not to my knowledge.
Q. Any technical or technological reason why connecting to the North Port Myers Utility Plant was not an option at this time?
A. No.
Q. When, in 1988, did it become an option, to your knowledge?
A. Mid 1988. I believe, August 1988.
Q. Were there any other alternatives available to the Defendants to preclude the violations at the Waterway Estates Plant?
A. Certainly either deep well injection or land application would have been possibilities. These appear not to have been investigated to any great degree, and, in particular, seems to be born out by US Exhibit or Government Exhibit 371.
Q. Did you rely on any particular portions of Government

Exhibit 371?
A. Yes, I did.
MR. JACOBS: I'd like to move 371 into evidence at this time.
THE COURT: It will be received.
MR. JACOBS: I think you might have it on the bench, Your Honor.
THE COURT: All right.
MR. JACOBS: Do you, also, have it, Mr. Klingenstein?
THE WITNESS: Yes.
THE COURT: Did you offer 597-D-3? I don't think you did. Did you intend to offer it?
MR. JACOBS: I do, Your Honor. Thank you.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Now, what portion or portions of 371 did you rely upon, Mr. Klingenstein?
A. There in the last full paragraph on the first page of this document, beneath the line, total project costs, there is a line that begins, there are two other alternatives that were not explored in adequate detail within the ESE preliminary engineering report. ESE did evaluate in a very preliminary nature the costs and time constraints with deep well injection, and goes on to describe the use of deep well

injection.
Q. What's "ESE," Mr. Klingenstein?
A. ESE was one of Florida Cities' consultants.
Q. And who wrote this memorandum?
A. This memo was written by a Mr. Robert French to Mr. Tony Reeves, and it's dated October 27th, 1987.
MR. JACOBS: For the record, both of these witnesses are unavailable. Mr. Reeves pled the Fifth Amendment and Mr. French now resides in Australia.
BY MR. JACOBS:
Q. Mr. Klingenstein, is it your interpretation that Mr. French is taking issue with the ESE report?
MR. BULLOCK: If the Court please, Your Honor, leading.
THE COURT: Just a moment.
Well, it is, but I'm going to permit it. I'll overrule it.
THE WITNESS: Certainly seems to be saying that the alternatives, the two alternatives he's referring to were looked at only in a very preliminary fashion.
BY MR. JACOBS:
Q. Any other portions of Exhibit 371 that you've relied upon, in particular?
A. On page — the second page — I'm sorry — perhaps — on the bottom of the third page is apparently a wrap-up, to

a certain degree, that begins, as we've discussed there are numerous pros and cons for each of the alternatives evaluated. Deep well injection permitting is time consuming and until the well's installed and tested there's no guarantee the expenditure will be rewarded —

THE COURT: You're going a little bit fast.

THE WITNESS: I'm sorry, sir.

Deep well injection permitting is time consuming and until the well's installed and tested there's no guarantee the expenditure will be rewarded as an anticipated. ANT facility proposed by ESE utilizes latest technology available to conserve space and — it's difficult to read because it's punched through — effect a degree of treatment required for discharge for the Caloosahatchee River. Connection to the North Port Myers Utility System involves potential recovery —

THE COURT: You know, you're going to wear out my Court reporter here.

THE WITNESS: Yes, sir.

THE COURT: A little bit slower.

THE WITNESS: Connection to the North Port Myers Utility System involves the potential recovery of some of our expenditures through pay back agreements, as well as salvage value of the property where the existing Waterway Estates Plant is located. On the downside, Florida Cities

Water Company users would be required to pay the fees required for the operation and maintenance and capital expenditures of Florida Cities Water Company, as well as the user charges of $2.62 per thousand gallons to North Port Myers Utilities.

And, then, the final paragraph explains how Florida Cities Water Company employees had identified a different alternative than identified by ESE, which involved the upgrade of the facility through the utilization of an existing treatment unit coming, I believe, from the Fiesta Village Treatment Plant, and the — one of the particular advantages that was cited, and this is in the second to last full paragraph on that page, is the existing treatment units which are currently inactive at the Fiesta Village Plant could be maintained in the overall company rate base, and most importantly, capital cost is less than any of the other alternatives evaluated. Based on these advantages we would recommend that this alternative be pursued as the most cost effective option available.

BY MR. JACOBS:

Q. Can you tell me, Mr. Klingenstein, was that memorandum written at a time when the unpermitted discharges had already begun?

A. Yes, it was.

Q. Did you see any reference in this memorandum to

compliance with the law?

A. No.

Q. Let's now focus on the discharges to the wrong location, the boat canal.

How far did the Defendants have to move the discharge in order to have the outfall point at the 6-foot contour line instead of on the shore of the boat canal as you've depicted?

A. I believe the total length of the new outfall was something in the order of 2600 feet.

Q. Were there any technological or technical reasons which prevented the Defendants from moving the discharge point by the effective date of the permit, which was November 1st, 1989?

MR. HIRD: Your Honor, I'd like to object to the form and the use of the word "Defendants" as it assumes Avatar Holdings had obligation and responsibility to do that. To that extent it assumes facts not in evidence and I would like him to rephrase the questions to refer to Florida Cities.

MR. JACOBS: Your Honor, even with Mr. Hird's own statements, some of the discharges at the wrong location are still in existence with respect to Avatar Holdings, so I think I'm entitled to certainly — I respect his earlier objection with respect to the unpermitted discharges, but

there are some discharges at the location —

THE COURT: I'll overrule the objection.

BY MR. JACOBS:

Q. Do you recall the question, sir?

A. No. If you could repeat it, please?

Q. Were there any technological or technical reasons which prevented the Defendants from moving the discharge point by the effective date of the new permit, November 1st, 1989?

A. No.

Q. Turning now to the effluent violations at the Waterway Estates Plant, what, if anything, could have been done to prevent these violations?

A. Again, if either one of these options had been put in place to eliminate the discharge or if, in fact, the plant had been upgraded and the outfall relocated in a more timely fashion, then the violations would have most likely been avoided.

Q. And in your opinion, is there any technical or technological reasons why the upgrade in outfall could not have been moved in a timely fashion?

A. No.

Q. Going back to Exhibit 597-D-3, you mentioned, I believe, that North Port Myers uses the deep well injection and also uses spray irrigation. On D-3 you've referenced a

land application. I just want to clarify; is land application another word for spray irrigation?
A. Yes, it is.
Q. Did you rely on any data or documentation in terms of your conclusion that deep well injection and land application could have been used at Waterway Estates?
A. Certainly, that previously cited Government Exhibit 371.
Q. Do you have an understanding as to whether Florida Cities permit renewal was denied in 1986?
A. Yes, I do.
Q. And what is your understanding?
A. That, in fact, it was denied in 1986, effective, I believe, as I stated previously, January 1987.
Q. And do you have any knowledge as to when they applied for the permit or the renewal of the permit, they indicated where the intended outfall would be?
A. At the time that the — that they applied, that the permit renewal was denied, I believe the indication was that they was to discharge into the canal.
Q. Do you have an understanding as to whether they represented at the time they applied for the permit renewal that they would be upgrading to AWT standards?
A. That I do not recall.
Q. Now, did you have occasion to review the process by

which Florida Cities and Avatar Holdings did eventually begin the construction of the AWT plant and the movement of the outfall —

MR. HIRD: Objection. It assumes Avatar Holdings began the construction and there's no evidence that Avatar Holdings would be involved with the construction.

MR. JACOBS: There will be.

THE COURT: Well, does he know that? Does this witness know that?

MR. JACOBS: That's a fair distinction.

THE COURT: I'll sustain the objection at this point.

BY MR. JACOBS:

Q. I could ask the witness, do you have any knowledge as to whether Avatar Holdings was involved in the process through which the plant was upgraded to AWT standards and the outfall was moved?
A. Only to the extent that it —

MR. HIRD: I'd like to object. It calls for hearsay if it's not personal knowledge. This is not where he's testifying as an expert. He's being asked to testify as to personal knowledge of involvement in a company in a construction project, and clearly is not — is outside the scope of his expertise and, therefore, I think it's —

THE COURT: I don't know — he's not being offered as

a witness for the purpose of implicating Avatar, I don't believe, and so I'm going to ask that you try to skirt that area —

MR. JACOBS: I will try, Your Honor.

THE COURT: — and avoid that area.

BY MR. JACOBS:

Q. Now, Mr. Klingenstein, did you have the occasion to review the step-by-step process that Florida Cities Water Company engaged in, in upgrading the plant to AWT standards and moving the outfall?
A. Yes, I did.
Q. And are you able to say in what year Florida Cities actually did start that process?
A. Well, the process itself began in 1987, or appears to have begun in 1987, when preliminary engineering was carried out and this resulted in the generation of a preliminary engineering report in mid 1987.

Florida Cities appears to have made a decision on what option to pursue at the end of 1987, and then began the process of hiring an engineer to carry out the detailed design of the plant.

Ultimately, the selection of an engineer and the award of a notice to proceed did not occur until, if I recall correctly, mid 1990, and once the contractor was able to get on site and all of the necessary paperwork and permitting

had been completed, actual construction took place in '91, and substantially was done in mid '92, with final sign-off, I believe, by the State, early in 1993.
Q. Tell me, again, the process started when?
A. Process started in 1987.
Q. Do you know what month?
A. Certainly, it appears that in early 1987, perhaps February, Florida Cities was taking the actions necessary to hire a preliminary engineering firm.
Q. Mr. Klingenstein, were you present at the deposition testimony of the Florida Cities Water Company technical expert, Mr. Douglas Smith?
A. Yes, I was.

THE COURT: Just a moment.

MR. BULLOCK: Your Honor, this timeline is not a part of Mr. Klingenstein's report, it was not produced to the Defendants until last week. I had come to Florida to prepare, and I didn't see this until over the weekend and we object to this and object to it being produced and used so late in time.

MR. HIRD: Join in the objection, Your Honor.

MR. JACOBS: Your Honor, this, indeed, is not part of Mr. Klingenstein's report. This is a graphic drawn from their expert's report, and I have questions about Mr. Smith's testimony that I would like to ask

Mr. Klingenstein his opinion of. And the graphic was designed in order to illustrate both Mr. Smith's testimony and Mr. Klingenstein's testimony, some of which will coincide, and the purpose of the exhibit is to highlight where the experts agree and where they don't, for what it's worth.

MR. BULLOCK: Sounds like from that representation that Mr. Klingenstein has somewhat expanded the basis of the report after discovery is closed and after he's prepared his own record.

Again, we didn't see this until last week, were unaware of it, and if he's going to ask his opinion from it, regardless of whether or not it's in the report, it's going to go to the basis of his expert testimony, which is then being expanded and we move for its exclusion.

THE COURT: You're asking this -- you're asking your expert to opine with respect to the opinions of the opposing expert; correct?

MR. JACOBS: Yes, Your Honor, which I believe the opposing expert will have the opportunity to do, since he'll be called.

THE COURT: Is he going to do that?

MR. JACOBS: He did in deposition testimony.

THE COURT: I mean, is that -- is that a part of -- well, you know, what's good for the goose is good for the

gander. I'm just trying to look ahead now and see where we are going with this --

MR. BULLOCK: Your Honor --

THE COURT: In other words, are you going to be attempting to elicit testimony from your expert, which seeks to comment upon this -- Mr. Klingenstein's testimony? And if it is not a part of your expert's report and so forth, then I assume the same objection would be applicable.

I'm just trying to determine where we are going.

MR. JACOBS: I'll stipulate if they're not going to comment on my -- if they're not going to have their expert testify about my expert's testimony, I'll withdraw the exhibit and this line of questioning.

MR. BULLOCK: The Court's indulgence for just a second, Your Honor?

(Pause.)

Your Honor, Mr. Smith is not going to do any comparison of his testimony to Mr. Klingenstein's testimony. He's going to talk about the steps that were necessary to go through this process, but he's not going to do any comparison of those numbers compared to Mr. Klingenstein's testimony or his chart.

THE COURT: Okay. I think you should be restricted to his report and the exhibits that be -- the documents that he's already testified or which he referred

to in his report, so I'm going to sustain the objection.

MR. JACOBS: I understand.

We'll withdraw the exhibit at this time, reserve the right to reintroduce it during Mr. Smith's testimony.

MR. BULLOCK: Your Honor, if Mr. Jacobs intends to ask Mr. Smith comparison questions on cross-examination, I want the report to be clear so that there was no indication that we were somehow misleading the Court. Mr. Smith -- Mr. Jacobs asked Mr. Smith those questions on cross-examination. That's a different ball game.

THE COURT: Well, if he -- okay. If he asks questions of Mr. Smith, that opens the door to -- well --

MR. BULLOCK: I'll withdraw that, Your Honor.

THE COURT: Go ahead.

BY MR. JACOBS:

Q. Mr. Klingenstein, did you have occasion to review step-by-step the process whereby the Florida Cities Water Company upgraded the plant and moved the outfall?

A. Yes, I did.

Q. Did you have occasion to reach a conclusion as to whether that process proceeded as quickly as possible?

A. Yes, I did. My conclusion was that while the construction itself as in once ground was broken did take place in a fairly expeditious manner, that the process of deciding what option would be pursued and the process of

selection of engineers and the process of completing the necessary permit applications in an effective manner was somewhat slower than it could have been and resulted in delays in the completion of the project.

Q. Are you aware of when EPA actually notified the Florida Cities Water Company of the intended denial of the '86 permit application?

A. Yes, I believe it was in mid 1986.

Q. And are you aware how much time it took Florida Cities Water Company to decide what they were going to do about that?

A. Well, by all accounts it wasn't until very late in 1987, I would say basically December 1987, before it appears a decision was made as to specifically what solution would be put in place.

Q. And that's where Government Exhibit 371 comes into play, they're evaluating the options; is that correct?

A. Yes.

Q. And when was the construction completed and the outfall moved?

A. The outfall was moved in mid 1991. Substantial completion of construction at the plant was apparently -- I want to say somewhere in the March -- April, rather, to June time frame of 1992. And then the last bits were finished up in late 1992, and State sign-off took place in '93, I

believe, February, 1993.
Q. So, is it fair to say that by roughly April of '92, Florida Cities was in compliance with the NPDES permit that was issued when?
A. Yes, that is a fair statement, they were in compliance with the permit that had become effective in November of 1989.
Q. That date is represented on 597-D-3?
A. Yes.
Q. And you've represented the in-service date of the 6-foot contour line on the exhibit, as well?
A. Yes, I believe we have.
It is in 1991.
Q. And I see you have represented that in February of '93, the company, that is to say, Florida Cities Water Company has certified that the AWT upgrade is complete; is that correct?
A. That was, yes, that was the State certification process, that the construction project was completed.
Q. Now, in your opinion, sir, did this all take an appropriate length of time?
A. No. I believe this took more time than it should have.
Q. And where were the delays, in your opinion?
A. I believe the delays were in the process of deciding

on what option to pursue, there were delays in the negotiation with contractors and with the engineering firms as to responsibilities, particularly the engineering firms, and there were delays that appear to have resulted from incomplete -- well, inadequate completion of permit applications or the application for construction permits.
Q. And on what data or documentation do you base these conclusions, sir?
A. Government Exhibits 363, 367, again 371, 372, 374, 375, 391, 406, 411, 412, 418, 424, 425, 431, 437, 442, 443, 444, 456, 475.
MR. JACOBS: Move those exhibits into evidence at this time, please, Your Honor.
MR. HIRD: Your Honor, with all indulgence, Mr. Klingenstein read those exhibits so quickly, and I don't think we were able to get them all down.
THE COURT: All right.
Ms. Cole, did you get all those?
MR. JACOBS: I'll be happy to read them back.
THE COURT: Why don't we have Ms. Cole do it and that way we can check and make sure the Court has them right, too.
THE CLERK: 363, 367, 371 which has already been admitted, 372, 374, 375, 391, 406, 411, 412, 418, 424, 425, 431, 437, 442, 443, 444, 456, and 475. Is.

MR. HIRD: Could we have a moment to check the exhibit list to see if there's any objection?
THE COURT: Yes.
(Pause.)
MR. BULLOCK: Florida Cities has no objection.
MR. HIRD: Avatar has no objections.
THE COURT: All right. They'll be received.
BY MR. JACOBS:
Q. Mr. Klingenstein, in your opinion, when could this process have actually started?
A. Well, specifically, this process could have started as soon as Florida Cities became aware of the fact that they were not going to be allowed to continue to discharge into the canal. Given the fact that the 1981 wasteload allocation process took place and identified the need for movement of the outfall -- relocation of the outfall, and even though a zero wasteload allocation was put forth in that document, because there was the presumption at that point in time that Florida Cities was going to tie in with Cape Coral into a regional facility.
When it became apparent that that regional facility was not going to be constructed and that Florida Cities would need to continue to discharge on their own, I would assume at that point in time Florida Cities would have wanted to have proceeded to begin to identify what option or

options they had and which one they needed to pursue in order to address their situation.
Q. And what was that point and time, what year, to your knowledge, did it become apparent that the regional facility was not going to be built?
A. Based on the documents I've seen, it seems like 1982 or 1983, the regional facility was becoming very unlikely.
MR. JACOBS: Your Honor, Mr. Klingenstein has testified that he's relied on summaries of violations. These are summaries that have already been filed in the context of the summary judgment papers, but I would like to move them into evidence at this point. They are Government Exhibits 1, 255, and --
THE COURT: Wait a minute. You have them here?
MR. JACOBS: Yes, sir.
THE COURT: The same as these other exhibits, you are just saying that they were previously relied upon?
MR. JACOBS: Yes.
THE COURT: Okay. Go ahead.
MR. JACOBS: Government 1, 255 and 348.
MR. BULLOCK: If the Court please, Your Honor, these were attached to Government's summary judgment motion and prepared by an EPA employee, and we object to any information that would have appeared that Mr. Kwan, the EPA employee who prepared these documents, would have put in

there that would not have been on DMR's, just numbers of violations.

If Plaintiff wants to produce Mr. Kwan to go through his own tables, that's fine, but relying on this other documentation without his own personal knowledge of these days of violations, which do not appear in the information which Florida Cities filed with EPA, we would believe would be outside the scope that Mr. Klingenstein would testify.

MR. JACOBS: Your Honor, if I may?

THE COURT: Yes, sir.

MR. JACOBS: First of all, with respect to Government Exhibit 1, there's been no exception or objection noted by the Defendants. Likewise, with 255, based on my list, and likewise, with 348.

MR. BULLOCK: Your Honor, we have no objections as to those columns which list issues such as date, parameter, monthly average and daily maximum, reported exceedents and column entitled agent. We do object to the columns that are headed, do not report, actual exceedents and quote "penalty days".

THE COURT: All right. Just a minute.

I'm looking for Florida Cities' objections to Plaintiff's exhibits. Do you have that —

THE CLERK: Yes, sir, I gave you a copy.

THE COURT: I don't see that.

THE CLERK: Government's objection?

THE COURT: No, I'm talking about Florida Cities objections to the United States' Exhibits. I've got a whole room of stuff that was furnished this morning, but I don't have — somebody direct me to the list of objections that Florida Cities has made to the exhibits of the United States.

MR. JACOBS: Your Honor, I'd be happy to loan you mine for a moment.

THE COURT: Missed it again. Just a minute.

MR. JACOBS: I've got Avatar's, as well.

Well, I've got Avatar's.

THE COURT: Let me see the Florida Cities'.

MR. BULLOCK: Your Honor, let me hand up a copy. I'll withdraw my objection.

THE COURT: All right. Do you have an extra copy?

MR. BULLOCK: Extra copy?

THE COURT: I don't know why I didn't have a copy unless it wasn't submitted.

THE CLERK: Do you have the original for filing?

MR. BULLOCK: We'll file it and give it to you. I'll withdraw as to those.

THE COURT: All right. 1, 255 and 348 will be received.

Do you have something — did you intend to pass up this letter?

MR. BULLOCK: I'm sorry, Your Honor. No, I do not.

THE COURT: All right.

MR. JACOBS: At this time, Your Honor, we have introduced a number of pieces of Mr. Klingenstein's report at one time or another, but at this time we'd like to move 597 into evidence in its entirety.

THE COURT: It will be received.

MR. JACOBS: Thank you.

And finally, we have focused specifically at different points in Mr. Klingenstein's testimony on particular exhibits, but as you may recall, we started out by asking him to list all of the exhibits that he relied upon in any way, form or fashion and I would like to move all of those into evidence with the exception, obviously, of the ones that we've addressed already.

MR. HIRD: Your Honor, this is, obviously, I think it would make sense if he gave us the list of numbers and during the break we can look at them and come back and see.

THE COURT: I don't know what you are offering. I would have to go back. We would all have to go back to the numbers that he's listed, so I think that — I think his request is reasonable.

MR. JACOBS: Understood. We kept track. We'll be happy to go down the remaining ones at the Court's pleasure.

THE COURT: We're going to take a 15-minute recess and we'll break and you can get started.

Are you through?

MR. JACOBS: With the exception of that, yes, sir, with Mr. Klingenstein at this time.

THE COURT: All right. You're through with his direct?

MR. JACOBS: Yes, sir.

THE COURT: All right. Well, then, perhaps this would be a good time to take 15 minutes.

THE MARSHAL: All rise. We'll be in recess for 15 minutes.

(Thereupon, a brief recess was taken, after which the following proceedings were had:)

Page 174

MR. HIRD: Your Honor, during the recess, we attempted to go through the exhibit list. There appear to be several hundred exhibits that Mr. Jacobs is attempting to move into evidence at this time. It would take a long time for us to go through them on a one-by-one basis.

Accordingly, we proposed to the government that we continue with the examination, and by the morning of the next trial day, we can indicate whether this has been resolved and how it has been resolved. The government has asked instead that we go by one by one through each exhibit.

MR. JACOBS: I agree to a certain extent it's cumbersome, but I think it's timely in the sense that the witness has touched upon a number of the exhibits and a number of the --

THE COURT: Well, now, wait a minute. Are you talking about exhibits that he referred to at the beginning of his testimony?

MR. JACOBS: Yes, sir.

THE COURT: That wasn't several hundred, was it? Or was it?

MR. JACOBS: I didn't think they were that long. And they were a series, so I don't think it was that long a process.

THE COURT: Well, maybe -- I quit writing at one point. So --

Page 175

MR. JACOBS: What we've done during the break is we've broken that list down into a subset of the ones that have not already been admitted. And I would just propose that I read those into evidence. There are not that many objections to these exhibits, according to the objection list submitted by the defendants. I just think it's as good a time as any to go through them.

THE COURT: How long is that going to take?

MR. JACOBS: Depending on the number of objections -- I told the court reporter I would read slowly -- but I think I can get through it in seven or eight minutes.

THE COURT: You can get through within seven or eight minutes?

MR. JACOBS: The list, yes, sir.

THE COURT: The list? I'm talking about totally.

MR. JACOBS: I can't forecast the number of objections, but many of them appear from the defendants' objection list to be unobjectionable.

THE COURT: Well, I'm not going to do that now. Well, let me think just a minute.

Well, let's go ahead and -- I want to see how this is going to go first. All right. You offer what?

MR. JACOBS: The government offers Exhibits 2, 3, 5, 6 --

THE COURT: Well, now, wait a minute --

Page 176

MR. HIRD: Your Honor, with respect to Exhibit 3, it's a newspaper editorial entitled "Sewage Problems." It is undated. We would object. It's hearsay and irrelevant.

THE COURT: All right. The first one that is objected to is 3?

You've offered what, 2?

MR. JACOBS: 2, yes, sir; 2 and then 3.

THE COURT: Well, 2 will be received.

(Government's Exhibit Number 2 was received into evidence.)

THE COURT: All right. They're offering 3, and there's an objection.

MR. JACOBS: Your Honor, if it would help save some time, we'll just withdraw 3.

THE COURT: Good. Next?

MR. JACOBS: 5.

THE COURT: It will be received -- well, wait a minute. If I'm going too fast, let me know.

MR. JACOBS: 6.

THE COURT: 5 will be received.

(Government's Exhibit Number 5 was received into evidence.)

THE COURT: 6 will be received.

(Government's Exhibit Number 6 was received into evidence.)

Page 177

MR. JACOBS: 7.

MR. HIRD: Objection, handwritten notes, undated. It's not clear the origin or the source of the relationship with the documents. So hearsay objection as well as relating to potentially barred claims or barred claims.

MR. BULLOCK: We would also join on relevance, Your Honor.

MR. JACOBS: Judge, these would clearly come from the defendant or -- Florida Cities' files. I can't tell you at the moment whether Florida Cities' files are --

MR. BULLOCK: Your Honor, if I may, while Mr. Jacobs is looking and so that the record is clear, may we have a standing objection to all of these based on our earlier objection that these cover issues that you've already ruled on?

And I understand that Your Honor has already ruled, and I just want to make sure that we've preserved on the record having an objection to these documents on that basis --

THE COURT: On what basis?

MR. BULLOCK: The basis that these cover liability issues which you've already ruled upon in your earlier --

THE COURT: In other words, as to those documents and testimony that relate to violations which the Court has ruled in your favor on --

MR. BULLOCK: Correct.

Page 178

THE COURT: -- as far as the plaintiff being able to assert substantive violations.
MR. BULLOCK: That is correct.
THE COURT: All right.
MR. BULLOCK: And we would object, Your Honor, that they're totally irrelevant to the remainder of this case. We understand the Court's ruling and the basis of the plaintiff's offering them. I just want to make sure that our right to object is preserved on the record.
THE COURT: Yes. But, now, if there are documents -- I don't know how an appellate court is going to be able to determine -- if you don't make an objection to a particular document, I don't know how the appellate court is going to divine that that is something that necessarily relates -- well, I guess if it's clear that it relates to a violation that has -- for which the Court has found in your favor, then there's no problem.
If there's any gray area as to whether that document falls in that category, you're running a risk, I suppose, of waiving your right to object.
I'm perfectly agreeable to giving you a standing objection on the basis that you've indicated where it is clear that the testimony or the document relates only to violations that the Court has ruled in favor of the defendants on.
MR. BULLOCK: Your Honor, my only concern was I

Page 179

didn't want to sound like the Popping Jake coming up every five minutes making the same objection. If there's a way around it, fine. If not, then I will make --
THE COURT: Well, I hope there's a way around it.
MR. HIRD: Well, Your Honor, may I suggest that we just use a one- -- and we'll join in -- a one- or two-sentence code word?
THE COURT: A code?
MR. HIRD: A code word, "standard objection" or something like that?
THE COURT: How about Code 1?
MR. HIRD: Code 1? All right.
THE COURT: And we all know what we're talking about.
MR. JACOBS: Your Honor, I would point out if it's of help that the Court has indeed, as we all know, found for one or more of the defendants on certain of the claims that were in our second amended complaint, but the Court has equally found in its order of this morning that we are entitled to introduce history --
THE COURT: Well, I know that. I know that. And that's why I'm overruling their objection. They just want to preserve the record.
MR. BULLOCK: Well, Your Honor, let me make sure -- my understanding of the motions in limine and overruling the

Page 180

objections to the motions in limine, I have to -- in order to preserve the objection, I have to at least renew it on the record. And I'd rather not be caught in a situation where, you know, I am not renewing that.
THE COURT: Well, I understand. And I'm not prepared to advise you that you don't have an obligation to do that.
All right. So that's Code 1. All right.
So you have a standing -- well --
MR. BULLOCK: I at least have a truncated objection.
THE COURT: Yeah, you have a truncated objection.
MR. HIRD: And can we assume, Your Honor, so I don't have to jump up as well, that whenever he says Code 1, he's saying it for me as well?
THE COURT: Yes, yes. You can join in -- or you don't need to join in on the Code 1 objections. You will be deemed to have objected also unless you opt out of any individual objection. Okay.
All right. I have Exhibit 5. That's received. What's your next one, Exhibit 6?
THE CLERK: 6 was received.
MR. JACOBS: In that case, 7 --
THE COURT: Wait. Wait. Wait a minute. Did I receive 6?
THE CLERK: Yes, sir.

Page 181

MR. BULLOCK: And that was subject to a Code 1 objection.
MR. JACOBS: 6 was?
THE COURT: All right. Yes. 6 is received. Next?
MR. JACOBS: 7 were the handwritten notes which come from, I believe, based on the Bates stamp, an Avatar Holdings former officer.
MR. BULLOCK: The same objection, Your Honor.
MR. HIRD: Excuse me, Your Honor. May I consult?
(Discussion off the record.)
MR. HIRD: Your Honor, is this the initials JAC, if I may ask counsel?
MR. JACOBS: No. The Bates numbers appear to be from what we would call the Sharp documents.
MR. HIRD: Okay. Your Honor, we would object. This was from Mr. Sharp's personal office and not from Avatar Holdings' files. Mr. Jacobs subpoenaed Mr. Sharp's files individually after we indicated that we had no possession, custody, or control of those files.
MR. JACOBS: Mr. Sharp, if I might say, was the president, the chairman of the executive committee of the board of directors of Avatar Holdings and held numerous other positions with Avatar Holdings itself for an extended period of time.
I wouldn't by any means concede that this was a

Page 182

personal document. I would say that it was not produced by Avatar Holdings, which is why we subpoenaed it from Mr. Sharp's real estate company in New York.

THE COURT: All right. What is the objection that has been recorded?

MR. HIRD: There are several objections. One is hearsay. We don't have a -- we can't indicate that this is a regular --

THE COURT: Sustained.

MR. BULLOCK: Your Honor, I promise this is the last time I'm going to do this, which may be famous last words.

Back to Exhibit Number 6, Exhibit Number 6 carries information about several Florida Cities facilities which are not at issue in this lawsuit. And that would be an additional relevancy objection which we would make.

THE COURT: All right. Overruled.

MR. JACOBS: I hate to go back to 6 too, but neither party stated an objection to 6.

THE COURT: Well, as it stands right now, I've ruled in your favor. Do you want me to reconsider?

MR. JACOBS: No, Your Honor. Thank you. I'll move on quickly.

8.

MR. HIRD: The same objection as to 7, Your Honor.

MR. JACOBS: I would stipulate that the same facts

Page 183

apply, Your Honor.

THE COURT: All right. Sustained.

MR. JACOBS: 11.

MR. HIRD: Your Honor, I would -- first of all, there's a Code 1 objection. But I'd like to register a distinctly separate Avatar Holdings objection. We --

THE COURT: All right. Now, don't give me any objections other than what you've got in your objections for which you have --

MR. HIRD: This is in my objections, Your Honor.

THE COURT: All right.

MR. HIRD: And the separate objection is we object with respect to any document that may be used to prove Avatar Holdings' liability, that any document generated before the statute of limitations be used for that purpose.

We believe that numerous of the documents that are relied on in Mr. Klingenstein's report are documents that relate to a period before the statute of limitations.

Mr. Klingenstein has been allowed to talk about the history of violations, but not about Avatar Holdings' liability. And therefore, we think the documents that were generated prior to the statute of limitations should not be admitted with respect to the issue of Avatar Holdings' liability.

THE COURT: Okay. Well, I don't -- while -- I don't

Page 184

think that the fact that certain claims may be barred by the period of limitations, that that necessarily means that all activities and conduct which tends to show the relationship between parent and subsidiary are necessarily inadmissible.

MR. HIRD: I don't disagree with you, but I think it should be only on the evidence that relates to the specific time period and the specific violation at issue.

What the government is attempting to do with some of these exhibits -- I can certainly deal with it -- is to attempt to say well, there was a connection between Avatar Holdings and Florida Cities on some matter back in 1983 or whatever, therefore you should assume from that that Avatar Holdings caused the violations in 1991-92.

And I think what we're dealing with here is a wide range of very broad documents that have nothing to do with the specific violations that are left in the case against Avatar Holdings. And I think we're dealing with approximately a hundred documents.

MR. JACOBS: Your Honor, the story starts in 1980, and this is a 1983 document. And it relates directly to Avatar Holdings' role in the violations at Barefoot Bay.

THE COURT: Okay. Well, I think your objection is well stated. But I think for the reasons that I've indicated, I'm going to allow the document in, and I'll overrule your objection.

Page 185

MR. HIRD: Your Honor, for simplicity, can I call this Code 2?

THE COURT: Code 2? Sure.

(Government's Exhibit Number 11 was received into evidence.)

MR. JACOBS: 12.

THE COURT: I'll have to pass along this technique to the author of the manual for complex litigation.

MR. HIRD: Code 1 and Code 2, I believe, Your Honor.

THE COURT: On what exhibit?

MR. HIRD: 12.

THE COURT: 12? Okay. Overruled.

(Government's Exhibit Number 12 was received into evidence.)

MR. JACOBS: 13.

MR. HIRD: Code 1 and Code 2.

THE COURT: You can remain seated for these purposes.

Code what?

MR. HIRD: Code 1 and Code 2.

THE COURT: Okay. Overruled.

(Government's Exhibit Number 13 was received into evidence.)

MR. JACOBS: 14.

THE COURT: When I say overruled, they'll be

Page 186

received.
What's the next number?
MR. JACOBS: 14, Your Honor.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 14 was received into evidence.)
MR. JACOBS: 15.
MR. HIRD: Code 2, Your Honor.
MR. BULLOCK: Code 1 as well, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 15 was received into evidence.)
MR. JACOBS: 17.
MR. HIRD: Code 1 and Code 2, Your Honor.
MR. BULLOCK: Code 1 as well, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 17 was received into evidence.)
MR. JACOBS: 18.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 18 was received into evidence.)
MR. JACOBS: 19.

Page 187

MR. HIRD: Code 1 and Code 2, Your Honor.
MR. BULLOCK: Code 1, Your Honor.
THE COURT: Okay. Mr. Bullock, do you want to incorporate by reference --
MR. BULLOCK: That would be fine.
THE COURT: – or adopt cocounsel so only one of you will need to object?
MR. BULLOCK: Thank you.
THE COURT: Overruled.
(Government's Exhibit Number 19 was received into evidence.)
MR. JACOBS: 20.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 20 was received into evidence.)
MR. JACOBS: 22.
MR. HIRD: Code 1 and Code 2 again, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 22 was received into evidence.)
MR. JACOBS: 23.
MR. HIRD: Code 1 and Code 2 again, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 23 was received into

Page 188

evidence.)
MR. JACOBS: 24.
MR. HIRD: Once again, Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibit Number was 24 received into evidence.)
MR. JACOBS: 26.
MR. HIRD: Once again Code 1 and Code 2, Your Honor.
THE COURT: Maybe we ought to have a Code 3 that if you're silent – no. Okay.
Overruled.
(Government's Exhibit Number 26 was received into evidence.)
MR. JACOBS: 27.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 27 was received into evidence.)
MR. JACOBS: 28.
MR. HIRD: Code 1, Code 2, and also a question about relevance. This relates to a potential purchase of property that was never purchased during the time period or never developed during the time period of the alleged violations.
It is a nonstarter, never raised to admit -- actually, it was, rather, during the time period of violations

Page 189

that Your Honor has already ruled in favor of the defendant. So it is way beyond the relevance of anything in the case or anything with respect to the history of violations.
Hearndon Properties was never developed; nothing was done; there was no homes attached from it; there was no pollution at that property. It's totally irrelevant.
MR. JACOBS: May I, Your Honor?
THE COURT: Yes, sir.
MR. JACOBS: This is a very important and revealing document. It reflect the prospective purchase of the neighboring site, one of the areas that Mr. Klingenstein referred to as being a possibility for disposal of effluent, whether by spray irrigation or percolation ponds or, for that matter, deep well.
And in fact, Avatar Holdings went ahead and purchased this property but never used it for effluent disposal purposes. It's highly relevant and highly revealing.
THE COURT: Overruled.
(Government's Exhibit Number 28 was received into evidence.)
MR. JACOBS: 29.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 29 was received into evidence.)

Page 190

MR. JACOBS: 31.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 31 was received into evidence.)
MR. JACOBS: 32.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 32 was received into evidence.)
MR. JACOBS: 33.
MR. HIRD: Once again, Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibit Number 33 was received into evidence.)
MR. JACOBS: 36.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 36 was received into evidence.)
MR. JACOBS: 37.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 37 was received into evidence.)

Page 191

MR. JACOBS: 39.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 39 was received into evidence.)
MR. JACOBS: 40.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 40 was received into evidence.)
MR. JACOBS: 41.
MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 41 was received into evidence.)
MR. JACOBS: 43 through 47.
MR. HIRD: Each of these again is Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibits Numbers 43 through 47 were received into evidence.)
MR. JACOBS: 49.
MR. HIRD: Once again, Your Honor, Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibit Number 49 was received into evidence.)

Page 192

MR. JACOBS: 50.
MR. HIRD: Once again, Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 50 was received into evidence.)
MR. JACOBS: 54 to 57.
MR. HIRD: Once again, Code 1 and Code 2. And I would also -- 55 and 56 relate to Hearndon, and I renew my objections on those two about that issue.
THE COURT: All right. Overruled.
(Government's Exhibits Numbers 54 through 57 were received into evidence.)
MR. JACOBS: 59.
MR. HIRD: Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibit Number 59 was received into evidence.)
MR. JACOBS: 61.
MR. HIRD: Again, Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 61 was received into evidence.)
MR. JACOBS: 64.

Page 193

MR. HIRD: Code 1 and Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibit Number 64 was received into evidence.)
MR. JACOBS: 66 through 74.
MR. HIRD: Code 1 and Code 2 with respect to all of them.
THE COURT: Overruled.
(Government's Exhibits Numbers 66 through 74 were received into evidence.)
MR. JACOBS: 76 through 78.
MR. HIRD: These are all Code 2, Your Honor.
THE COURT: Overruled.
(Government's Exhibits Numbers 76 through 78 were received into evidence.)
MR. JACOBS: 84 to 101.
THE COURT: Just a moment, please.
All right.
MR. HIRD: Code 1 and Code 2 for all of them, Your Honor, except for 97, which is a Code 2 only.
THE COURT: All right.
MR. BULLOCK: Your Honor, as to 84 and 87, that would be also in a position of hearsay objection. Those contain two newspaper articles.
THE COURT: This is 84 and what?

Page 194

MR. BULLOCK: And 87.
MR. JACOBS: Would you like me to respond, Your Honor?
THE COURT: Yes.
MR. JACOBS: 84 is not simply a newspaper article, as was the case with the earlier newspaper article that I withdrew. This one has a distinct cover memo attached from an Avatar Utilities officer to an Avatar Holdings officer, copied to another Avatar Holdings officer. So to characterize it simply as a newspaper article is somewhat incomplete.
THE COURT: What about 87?
MR. JACOBS: 87 is simply a newspaper article, but it contains the handwritten name of an Avatar Holdings officer in the upper right-hand corner, FYI J. Sladkus, an Avatar Holdings officer. And based on the Bates number, it came from the files of Peter Sharp and Company, an Avatar Holdings officer.
MR. HIRD: I join in my colleague's objection to hearsay with respect to these two documents.
MR. JACOBS: And I can't bring Mr. Sladkus here today because he's pled the Fifth Amendment. Mr. Sharp is deceased.
THE COURT: You got that from taking Mr. Sharp's deposition?
MR. JACOBS: No. Mr. Sharp is deceased. We

Page 195

subpoenaed the records of Peter Sharp and Company, a real estate company in New York, which apparently had the files of the Avatar Holdings records that Mr. Sharp kept at that office. And that's how we got this document, to the best of my recollection.
THE COURT: I'll overrule the objections.
(Government's Exhibits Numbers 84 through 101 were received into evidence.)
MR. JACOBS: 103 to 115.
MR. HIRD: Your Honor, 103 to 108 are Code 1 and Code 2. 109 is Code 2. 110 through 115 are Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibits Numbers 103 through 115 were received into evidence.)
MR. JACOBS: 117 to 119.
MR. HIRD: All three, Your Honor, are Code 1 and Code 2.
THE COURT: Overruled.
(Government's Exhibits Numbers 117 through 119 were received into evidence.)
MR. JACOBS: 122 to 126.
MR. HIRD: 122 through 124 are Code 1 and Code 2. 125 is Code 1 only, as is 126.
THE COURT: All right. Overruled.

Page 196

(Government's Exhibits Numbers 122 through 126 were received into evidence.)
MR. JACOBS: 128 to 136.
MR. HIRD: No objection, Your Honor, to 128. 129 is Code 1. There is also an objection that this was a privileged document that was inadvertently produced, and we therefore would call it back. A similar objection relates to 130, which is also a Code 1.
THE COURT: 130, is that a privilege objection also?
MR. HIRD: Yes, Your Honor. 129 and 130 were both privileged documents inadvertently produced, as is 136.
THE COURT: Are you talking about attorney-client?
MR. HIRD: Attorney-client privilege, Your Honor.
THE COURT: Has this been the subject of dispute?
MR. JACOBS: It has been, Your Honor, but it has never been raised before the magistrate. And I'm happy to address the issue if the Court would like to hear me at this time on that issue.
There are roughly 99 documents that have been objected to on the basis of inadvertent production that are now claimed to be privileged that were not claimed to be privileged at the time of their production. I'm happy to address the matter if the Court wishes me to be heard on it.
THE COURT: Well, the last one of these that I had, the magistrate judge ruled on the issues regarding privilege,

Page 197

and I'm wondering why this is just now coming before the Court.
These documents were, I gather, produced, but there is a claim that they were produced inadvertently. And how come this hasn't surfaced before now?
MR. JACOBS: I'd be happy – I can't answer that question because I think it behooves the defendant to explain why they did not bring this before the magistrate. I can certainly address the facts surrounding what they're calling the inadvertent production if you care to hear it, Your Honor.
THE COURT: Well, I want to start -- I want to know what the -- I want an answer to my question as to procedurally why we're at this point now during the trial of the case. Isn't there something that would have needed to be done, such as a motion to retrieve the documents -- was there a motion filed?
MR. BULLOCK: If the Court please, Your Honor, I can address some of these issues. But just so that the record is clear, Mr. Scroggin was involved in some of the correspondence back and forth. He will address the issue as well. So let me pass to him since he's an eyewitness. I just want to make sure that that doesn't become a question.
MR. SCROGGIN: Your Honor, this is an issue that arose early on in the discovery process, which has involved at least three rounds of producing hundreds of thousands of

Page 198

pages.

We were apprised by the Department of Justice early on that the Department of Justice wished us to respond promptly to their document requests, which Florida Cities at that time made every effort to do.

We informed the Department of Justice that in light of our prompt response, there might be some documents from the five or six different offices from which these documents were culled that inadvertently would be privileged. And we asked at that time that if any such documents were inadvertently produced, they be returned.

We had, at least according to my understanding, an informal but unwritten agreement that we would return such documents. In fact, from that first document production, Mr. Jacobs did in fact return a couple of documents with a smile kindly to me, pursuant to what I had understood was an ongoing agreement.

I wrote Mr. Jacobs, returning to him also a document that clearly was privileged and inadvertently produced by the government and in that letter memorialized what was Florida Cities' understanding of the ongoing agreement, that inadvertently documents produced in good faith in order to respond promptly, providing hundreds of thousands of pages of documents, would be returned rather than slow the process down, which would have involved weeks, perhaps a month or more

Page 199

of more careful review.

At this time we have requested and continue to request, when these documents have been produced in depositions, their return.

We are informed by the United States' representative and counsel that that agreement is no longer in effect or by their understanding was never in effect.

And that is not our understanding, and we have continued to the present moment to request the return of those documents which are clearly privileged.

THE COURT: Mr. Jacobs.

MR. JACOBS: Your Honor, if I may, we have gone through a number of rounds of document discovery. And in the first round I did, as Mr. Scroggin described, as a matter of courtesy and without even his request, hand him back documents that in my mind had been inadvertently produced. And there were a few of these. That was the first request for production of documents.

The second request for production of documents, we attempted to negotiate with Mr. Scroggin an agreement with respect to inadvertently produced documents. It was our position that it wasn't the -- the onus was not on the government to be screening these documents, the onus was on the defendant.

And we sent -- or, rather, Mr. Scroggin sent us a

Page 200

letter July 13th, 1994 -- which I would be happy to pass forward -- suggesting an agreement with respect -- a formal agreement with respect to the return of inadvertently produced documents without limitation.

And our response on July 22nd of 1994 was again, we can't be screening your documents, but in good faith, we'll return the first ten that you inadvertently produced, no questions asked. All you have to do is sign on the dotted line.

We didn't sign on his dotted line because it didn't want to be unlimited -- we didn't want the agreement to be unlimited. We didn't want to screen his documents.

He didn't sign on our dotted line apparently because he didn't want it to be limited to ten. So I dare say at the time that the --

THE COURT: What year was this?

MR. JACOBS: 1994, Your Honor.

At the time that they responded to our formal document request, which was Document Request Number 2, they submitted a formal response on July 18th, 1994, at which time there was no agreement whatsoever.

In fact, as we learn in first-year contracts, there was no meeting of the minds. There had been negotiation and absolutely no meeting of the minds.

The response came in. And what it said was you can

Page 201

come visit our six facilities, and we will produce for inspection and marking for copying as they are kept in the ordinary course of business inter alia all requested nonprivileged documents in defendant's possession, custody, and control. Defendant will present plaintiff with indexes of privileged documents at the time of inspection at the respective production sites or as soon thereafter as practicable.

That was July 18th, 1994.

On July 22nd, 1994, after verbal discussion with Mr. Scroggin, we set out a schedule for visiting these six facilities. The defendants suggested we come to six different facilities across the state of Florida, as it has the right to do, as opposed to accumulating the documents in a central location. And we began to inspect and mark the documents.

The system that had been set up was that we would take those little yellow stickums, and we'd flag the documents that we'd want copied at our expense, and the defendant would subsequently copy the documents and send them to us.

Now, at none of these six facilities that we went to visit did we receive a privilege list.

THE COURT: Just a moment.

(Discussion off the record.)

THE COURT: Go ahead.

MR. JACOBS: As I said, these inspections began on

Page 202

July 28th, 1994, and carried through into early August. And no privilege lists were produced, notwithstanding that the promise in the formal response dated July 18th -- that is to say, ten days before the first inspection began of the documents -- that such lists would be forthcoming.

We then, as I say, marked these documents for copying and awaited their copying at our expense in Washington. And ultimately, the documents were delivered to us copied in Washington, including, of course, the ones that the defendant now claims to be privileged.

We then, beginning in October of 1994, began to use the documents that we had inspected, marked, and had copied over the summer of '94. We began to use these at depositions and, I might add, without objection. And we did not even receive a privilege list until after we started to introduce these documents without objection at deposition. In fact, the privilege list didn't come in until April of '95.

This matter has never been raised with the magistrate, notwithstanding our many discovery disputes with the magistrate.

And I would call the Court's attention to Clifford Ray versus Cutter Laboratories, 746 F. Supp. 86, a published opinion by Judge Kovachevich of this court in which Judge Kovachevich adopts what's known as the majority rule as enunciated in Hartford Fire Insurance Company versus Garvey,

Page 203

109 FRD 323, the majority rule, she says, quote unquote, on inadvertent production.

The factors to be considered are: one, the reasonableness of the precautions to prevent inadvertent disclosure.

In this instance, Your Honor, I believe there were no precautions whatsoever taken. While I cannot personally say that I would agree that all 99 of these documents are privileged, some of them do bear markings that suggest that they would be, somewhat bold markings in from one to three places, suggesting that even the most superficial screening would have developed or divulged at least the suggestion that these were privileged and that they should be withheld or at least deserving of some careful scrutiny.

Number two, Judge Kovachevich says --

THE COURT: Excuse me just a moment.

Mr. Klingenstein, why don't you just step down? This is going to take a while. You can just have a seat out in the audience.

THE WITNESS: Thank you very much, Your Honor.

(The witness descended from the witness stand.)

MR. JACOBS: The second factor in the majority test as Judge Kovachevich has adopted it is the time taken to rectify the error.

I would suggest that first of all, the defendant had

Page 204

two bites at the apple. If it didn't want to screen it before it released them or before it produced them, it certainly could have screened them once we selected some of those very documents that it now claims are privileged before it boxed them up and sent them to us in Washington.

And, of course, we selected these documents beginning in late July and continuing into early August of '94. And as I stated, the privilege list didn't come out until roughly nine months later. So I dare say that the first two tests under Judge Kovachevich's ruling are -- simply cannot be met by the defendant.

Judge Kovachevich's third factor is the scope of discovery. Admittedly, the scope of discovery in this case has been rather vast.

Four, the extent of the disclosure. Well, this was not one in a million or one in a thousand. This was in the course of I would say clearly thousands of documents, roughly 5 to 10 percent of the documents that they're now claiming they produced are privileged. So I think the extent is rather dramatic.

And then finally, the overriding issue of fairness is what Judge Kovachevich calls the fifth factor in the majority rule.

Well, I think fairness would dictate that if there was some sort of emergency, some sort of immediate request

Page 205

that the documents be returned, that perhaps it would be unfair at this point in time.

But as the Court has noted, we're hearing for the first time at trial in the context of objections to an exhibit list that these documents are privileged.

And there were sporadic objections at depositions to some of these documents, but only after the documents had been used numerous times previously without objection at depositions. These same documents were used as evidence in the summary judgment proceedings. And the Court's order on that matter came out, as the Court knows, in November of '95.

So I dare say that I don't think at this point in time there is a fairness question that should take precedence over any of the other factors that Judge Kovachevich sets out in her ruling.

If the defendants wanted to wait until trial to raise this issue, I dare suggest perhaps their last opportunity might have been in the context of a motion in limine so that we were not faced in the middle of Mr. Klingenstein's testimony with this issue.

I might emphasize that many of these documents were authored or received by Mr. Getman, who has been introduced as the in-house counsel for Avatar Holdings, but in fact also serves in the capacity as -- has also served as vice president, senior vice president, and executive vice president

Page 206

at Avatar Holdings.
And in another context, when we came to a discovery dispute before the magistrate judge with respect to whether those documents had to be produced at all -- the ones that had not yet been produced, that is -- the magistrate judge noted in particular that just because Mr. Getman happened to have a law degree doesn't mean such documents were privileged.
MR. HIRD: Your Honor, may I respond to that last point? There is evidence that you will hear that Mr. Getman --
THE COURT: Yes, you may. Now you can respond.
MR. HIRD: I apologize, Your Honor.
THE COURT: Because I ordinarily don't allow counsel to interrupt someone in the process of making an argument, what is it that you've got to tell me right now before I recognize you when he gets through?
MR. HIRD: I apologize, Your Honor. I assumed he had just concluded --
THE COURT: Are you finished?
MR. JACOBS: No, Your Honor, but I will sum up quickly.
THE COURT: I'll recognize you in just a moment.
MR. HIRD: Thank you, Your Honor.
MR. JACOBS: Just to sum up, to go through the factors set out by Judge Kovachevich under the Cutter Labs

Page 207

test, reasonableness of precautions, there were apparently no precautions taken. The documents were produced en masse, apparently without any screening. They were produced by counsel himself.
Secondly, time taken to rectify. Over eight months.
Third, scope of discovery. Admittedly, large. But there were numerous discovery requests, document requests. I think this was only one of five.
Four, these were not isolated incidents. These were many, many documents. And we had not been successful; we had distinctly not negotiated any agreement that would cover the production of inadvertently disclosed documents.
And finally, fairness, these documents have already been used in evidence at depositions; they were used in pretrial practice; they were listed as trial exhibits; these lists were filed.
We had two pretrials with the magistrate in December, and these issues were not raised with the magistrate. These issues were not raised in a motion in limine. And in any event, we don't necessarily concede that many of these documents are privileged under any set of circumstances.
THE COURT: Okay. Thank you.
Mr. Hird.
MR. HIRD: Yes. I want -- I think Mr. Scroggin will

Page 208

respond on the discovery request, but I just want to deal with one question.
Mr. Jacobs mentioned that Mr. Getman holds the title of executive vice president of Avatar Holdings. As Your Honor will hear in testimony, that is a title to reflect his status in the company, but not a title with any additional business obligations of significance. Mr. Getman's function is as general counsel. And I did not want that factual representation to go without response.
THE COURT: All right, sir.
MR. HIRD: And Mr. Scroggin will respond to the -- or Mr. Bullock. I apologize.
THE COURT: Yes, Mr. Bullock.
MR. BULLOCK: Your Honor, first of all, let me put the scope of the discovery in context -- shall I use the podium?
THE COURT: Yes.
MR. JACOBS: It will take me a moment.
THE COURT: Okay.
MR. BULLOCK: Thank you, Your Honor. I apologize for not having used the podium before.
Let me put the issue of the scope of discovery into context. There were approximately a million pages of documents made available, of which is our understanding the plaintiff copied or produced to them somewhere between a half

Page 209

a million and 600,000 pages of documents.
Mr. Jacobs commented to the fact that these were at five different facilities. Under Florida law, a number of these documents cannot be taken off of the premises. So that's why the discovery was made, for example, logs --
THE COURT: I'm not concerned about the number of places. Go ahead.
MR. BULLOCK: All right, sir. And so the scope of discovery is huge. But the amount of documents that we're actually talking about is very small. There were objections made to the use of these documents at some of the depositions. Some of the depositions, there weren't any objections made. But the point of the matter is --
THE COURT: Well, let me ask you this: Was there ever any motion filed to retrieve inadvertently disclosed privileged documents?
MR. BULLOCK: No, Your Honor, there wasn't. I wanted to address that. I didn't want to -- it's a delicate question because --
THE COURT: All right.
MR. BULLOCK: -- Your Honor, at some point in time, when it comes to motions practice, you have to make a judgment call about whether you're motioning the Court to death or not. And there's a fair argument that in this case we came awfully close.

Page 210

And I think that we knew that we would have the right to list this as an objection in the joint pretrial statement in the objections to the exhibits that were listed in the joint pretrial statement.

Quite frankly, I thought that some of the objections would be addressed by the magistrate judge before now. In fact, he preserved all of those objections for you to hear at trial. But in terms -- that's when we first raised those in a formal sense.

THE COURT: Well, it seems to me that the inadvertent disclosure of privileged documents is -- it is a unique matter which should be treated differently from simply an ordinary objection that may be made as an exhibit is offered into evidence.

And I think that one of the factors, it seems to me, that should be weighed and considered by the Court is the timeliness of the efforts by the party claiming the privilege to rectify that inadvertent disclosure.

But go ahead.

MR. BULLOCK: That's all, Your Honor. Thank you.

THE COURT: Mr. Scroggin, did you want to respond further?

MR. SCROGGIN: I would only add, Your Honor, that --

THE COURT: Yeah, go to the microphone, please, sir.

MR. SCROGGIN: -- at the time of this discovery, the

Page 211

scope of this case had been enlarged from one facility, Waterway Estates, to over five facilities.

We were told by the Department of Justice that the -- it was urgent on their behalf that we show good faith and cooperate.

Florida Cities made every effort to show good faith and cooperate. We believed that we had an understanding. We believe today that that understanding has not been honored.

It was simply a question in our minds of whether at this point Florida Cities should be somehow penalized for its prompt and complete cooperation throughout this discovery process.

And our position is that Florida Cities should not be punished for that full and open disclosure of its files in order to expedite rather than to hinder and to delay the production process.

THE COURT: Excuse me just a moment, please.

(Discussion off the record.)

THE COURT: Were you through, Mr. Scroggin?

MR. SCROGGIN: Yes, Your Honor.

THE COURT: Okay. Thank you.

All right. Give me just a moment, please.

Counsel, Mr. Scroggin, Mr. Jacobs made a certain proffer of the sequence of events that occurred. And what I would ask is whether there is anything about that proffer by

Page 212

Mr. Jacobs, including the representation regarding the letters, that is inaccurate.

MR. SCROGGIN: Yes, sir, it is. He did indeed proffer in his letter that he would return the first ten documents. Since my clear understanding and Florida Cities' clear understanding was that it would not be limited to ten, but, in response to our full cooperation, we would have all such documents returned, and since we had in good faith returned theirs and we thought we had all of the ones that had been inadvertently produced returned to us, we simply did not respond. We did not wish to limit them to ten.

We believed we had an agreement, and we believed also that in light of the new discovery rules and in light of our belief that this Court should not be burdened with discovery disputes at each step, but that Florida Cities, believing it had nothing to hide, should cooperate fully and promptly with the government.

And as you've noticed, Your Honor, there is no mention of delay or lack of cooperation in the statement from the government because there was none.

We did not accept their offer because we believed we had already concluded a deal informally -- not in writing -- not to retain documents that had been inadvertently produced in good faith in order to expedite the discovery process.

THE COURT: All right. Well, based -- yes, sir.

Page 213

MR. JACOBS: I have the two significant letters if the Court would --

THE COURT: Do you want to show them to counsel?

MR. JACOBS: One is the July 13th, 1994 letter from Mr. Scroggin proposing a joint discovery stipulation regarding privileged documents and inadvertent production, asking us to sign on the dotted line, again July 13th, 1994; our response on July 22nd, 1994, no, we can't agree with that, but we propose this ten-document limit if you'll sign ours. And --

THE COURT: All right. If you want to show them to counsel and if you want to offer them for purposes of this proceeding.

Any objection to the Court receiving those for purposes of this issue?

MR. BULLOCK: None, Your Honor, with the caveat that as Mr. Scroggin said earlier, you know, the context of these letters we believed was an attempt to change an already preexisting agreement. So the letters speak for themselves, and we have no objection to the Court reading them.

THE COURT: All right. The Court will receive those as -- let's call them Court's Exhibits A and B for purposes of this issue here.

MR. JACOBS: In chronological order, sir?

THE COURT: Yeah, chronological order, so that A will be -- what's the date of that letter?

Page 214

THE CLERK: July 13th is the first one, and then July 22nd.
THE COURT: All right. The July 13th letter will be A, and the other one will be B.
(Court's Exhibits A and B were received into evidence.)
THE COURT: Let me see them, please.
MR. JACOBS: Judge, I might also offer the defendant's response to the United States' second request for production of documents that represents that the defendant will present the plaintiff with the privilege list at the time of inspection at the respective production sites or, quote, as soon thereafter as practicable.
THE COURT: Show it to counsel.
(Mr. Jacobs tendered a document to counsel.)
MR. BULLOCK: If the Court please, Your Honor, it's our discovery response, and we would have no objection.
THE COURT: All right. It will be received as Court's Exhibit C for purposes of this issue.
(Court's Exhibit C was received into evidence.)
THE COURT: Now, what part of this defendant's response to the United States' second request for production of documents -- this is a 22-page document, and I need to be directed to those portions that are relevant to this issue.
MR. JACOBS: I think, Your Honor, just the first two

Page 215

pages where the --
THE COURT: That was my impression as to what you were offering that for.
MR. JACOBS: Yes, Your Honor, where they set out as far as their concern the mode of production, their system that we followed, that we would mark the ones we'd like copied, which is what I said gave them sort of a second bite at the apple.
Between the time of marking the documents and the time that they themselves copied them and sent us the copies, they had another opportunity to screen, a second opportunity to screen, if you will.
MR. SCROGGIN: May I be heard, Your Honor?
THE COURT: All right. Mr. Scroggin.
MR. SCROGGIN: Your Honor, I would point out that during the production, the production involved easily over a million pages of documents, of which four to six hundred thousand were actually copied and sent to the Department of Justice.
At the time of these productions, Your Honor, there was only one facility in the case. Four facilities had documents that were produced. The cost of this massive document production was believed by Florida Cities to be prohibitive, without even knowing what -- the charges that might be brought against these other four facilities.

Page 216

Waterway Estates only was in the case at that time. We opened freely our files at the other facilities pursuant to the request of the Department of Justice.
It was only after a year or virtually a year of such production that the charges were brought against the other facilities and Florida Cities had a clue as to which documents, if any, might be of interest to the government or even what charges might be brought against the other facilities.
The question, in Florida Cities' judgment, boils down again to whether it should be punished for its cooperation in producing documents under circumstances where it had no notice of what the charges might be against these facilities and where it believed the cost of a full-blown document production would be prohibitive.
THE COURT: Yes, sir.
MR. JACOBS: Your Honor, I don't want to drag on unnecessarily. But the first discovery dispute that arose before the magistrate in this case had to do with the scope of discovery, and in particular, whether the government could have discovery as to these other facilities, because it is true that we named just Waterway Estates at first.
That particular issue was brought up by the defendant Florida Cities in front of the magistrate in the context of a motion for a protective order which was denied.

Page 217

Magistrate Judge Swartz ruled that we could discover information about the other facilities. And --
THE COURT: When was that?
MR. JACOBS: That was April 18th, 1994, Your Honor, before the very first deposition.
So the suggestion that there was a lot of cooperation in terms of discovery is something we might take some issue with. But certainly this issue, there was a distinct effort on the part of Florida Cities to preclude deposition into the other facilities, and that the magistrate judge distinctly ruled that we could get into those other facilities. And it was subsequent to that that we submitted our second request for production of documents.
THE COURT: All right. Just a moment.
All right. The Court has reviewed these exhibits which have been received for purposes of this -- determining this issue.
A very significant consideration that weighs heavily with the Court with respect to this claimed inadvertent disclosure of privileged documents is the lack of any significant effort on the part of the defendant to protect privileged materials from inadvertent disclosure.
I understand that the scope of discovery in this case has been broad and that there has been extensive disclosure, but it is incumbent upon a party who may -- a

Page 218

person or party who may have a privilege of this nature to engage in reasonable and necessary precautions to protect that privilege.

Moreover, although this particular factor is not determinative, it does appear that the documents have from time to time been used without objection in depositions.

The Court further is of the view that while it certainly doesn't want to invite any more motion practice than has already been involved in this case, this is the type of issue that is peculiarly appropriate for what I would suggest would be an immediate motion for the Court to order the return of inadvertently disclosed documents, assuming that the recipient of those documents or opposing counsel or party refuses to return them.

That simply was not done in this case. And I appreciate the indications of counsel that perhaps they were trying to spare the Court's patience with respect to increasing the already considerable motion practice in this case.

The last one of these that I had, there was such a motion which was determined initially by the magistrate judge. And if I recall correctly, the Court entertained an appeal from the magistrate judge's order in that case well in advance of the trial.

And with respect to the issue of fairness, I am not

Page 219

persuaded that there is any overriding issue of fairness that militates in favor of the Court's at this point recognizing the privilege.

And so the Court will find and does hereby find that whatever privilege may have existed, attorney-client privilege that may have existed with respect to these documents has been waived.

What document numbers are these?

THE CLERK: The objection was 129 and 130.

MR. JACOBS: We would ask the defendants to assert which ones they're claiming fall into these in case they've added --

MR. HIRD: Your Honor, we have these marked in our objections, and we'll make a list as we move through the objections, turn it into -- I hate to say this, but -- Code 3?

THE COURT: All right. Well, I've run out of time because I had a sentencing scheduled for 4:00 which I moved back to 4:45 so I could try to squeeze as much time for this trial, and then I have a meeting at five o'clock.

So we're going to need to recess this case at this time. We'll plan to reconvene at nine o'clock on Wednesday morning. Anything further?

MR. JACOBS: No, Your Honor.

MR. BULLOCK: Your Honor, is nine o'clock the normal starting time that you --

Page 220

THE COURT: That's the normal. Do you have a suggestion?

MR. BULLOCK: I just wanted to say we would be willing to -- if the Court wanted to know whether we could be back earlier, we would be glad to do that as well.

THE COURT: Do you mean earlier?

MR. BULLOCK: Earlier in the day or later in the evening.

THE COURT: Just a moment.

MR. JACOBS: Judge, we're happy to stick with nine if that's the --

(Discussion off the record.)

MR. JACOBS: We don't have quite the staff as you'll see that the defendants have.

THE COURT: We'll start at 8:30 on Wednesday morning. I have a sentencing at four o'clock, but I'll move that back as close to five as I can. So we'll convene at 8:30 Wednesday morning.

All right. I'll reconvene in here for the sentencing in just two minutes.

(Thereupon, at 4:57 p.m. these proceedings were recessed, to be reconvened on Wednesday, March 26, 1996, at 8:30 a.m.)

PROCEEDINGS

THE COURT: Good morning.

All right. I think we're ready to proceed. Where is Mr. Jacobs?

MR. QUINN: Mr. Jacobs is on his way, Your Honor, but I'm going to carry on with the exhibits.

THE COURT: All right.

MR. QUINN: Avatar Holdings prepared over the night a stipulation which I'm in the process of reviewing. It seems to list all of the documents which we listed seriatim yesterday.

The stipulation puts in the Code 1, Code 2 and Code 3 objections. I believe it is acceptable.

It merely states that the objections are indicated in the following manner and that there are a few exhibits that the Government seeks to admit through the testimony of Mark Klingenstein that are not the subject of this stipulation. Defendants will raise the individual objections to these exhibits on Wednesday, today. These exhibits are identified as Government's Exhibits 172, 350, 510, 511 and 512.

I believe this stipulation is acceptable, so we can proceed with those five objections, Your Honor, and address those documents rather than the whole list that we had the other day. Maybe it will save some time.

MR. HIRD: Your Honor, we prepared this over night in order to save time.

I just want to note for the record that in addition to the exhibits that were admitted on Monday, the Government is seeking through Mr. Klingenstein to get in a total of 331 additional exhibits.

We have noted our objections for the record. We think a lot of these exhibits go way beyond the history of the violations and the information Mr. Klingenstein needed in order to state in his reports.

And we want to make very clear our sense that we feel that it is inappropriate for these exhibits to come in this way.

I'm sorry, Your Honor. I gather you're having trouble hearing me?

THE COURT: Well, I have heard you. I --

THE COURT SECURITY OFFICER: The court reporter has to hear you.

MR. QUINN: With the Court's permission, Mr. Jacobs is going to sign off on the stipulation and then we can address those five exhibits right now. We'll handle distributing these at the next break, Your Honor.

THE COURT: All right.

MR. QUINN: The next exhibit is Exhibit Number 172.

MR. HIRD: Your Honor, this exhibit appears to be handwritten notes. It does not appear to be an express business record, and I think our objection to this exhibit has to do with hearsay.

THE COURT: All right.

MR. JACOBS: Good morning, Your Honor.

THE COURT: Good morning.

By the way, the jackhammer will terminate at 9:00 o'clock, as I understand it.

MR. JACOBS: Thank you, Your Honor. I apologize for running a little late this morning.

This is a business record --

THE COURT: Is or is not?

MR. JACOBS: It is a business record from Florida Cities' own files.

THE COURT: I need to see the exhibit, please.

(Pause.)

MR. JACOBS: Just looking at the Bates number, this was produced by Florida Cities. It is a business record. It reflects a telephone conversation with the then executive vice-president of Florida Cities, Tony Reeves, if you look at the top of the exhibit.

THE COURT: Who is Tony Reeves?

MR. JACOBS: The former executive vice-president of Florida Cities who pled the Fifth Amendment.

Page 5

THE COURT: I'll overrule the objections and receive Exhibit 172.

MR. HIRD: The next exhibit, Your Honor, is Exhibit 350. Your Honor, this is a memorandum concerning the Florida Cities Fiesta Village wastewater treatment plant. That's not a facility in this case, and our objection is that it's irrelevant.

MR. JACOBS: Judge, it's not the first page of the memorandum, per se, but the attachment which contains important admissions by Florida Cities with respect to their knowledge of matters specifically relating to a waste load allocation at the Waterway Estates plant.

THE COURT: That was what number, 350?

MR. HIRD: 350, Your Honor.

THE COURT: 350.

MR. JACOBS: And the reference to Waterway Estates is on Page 3 of the exhibit.

Again, Exhibit 350, Page 3, you'll see references right up at Paragraph 7 to Waterway Estates. Then you'll see a reference in Paragraph 8 to the Caloosahatchee waste load allocation documentation which Mr. Klingenstein referred to in his testimony and, again, another reference in Paragraph 8 to Waterway Estates, so it's highly relevant.

THE COURT: Say that again. I just got the exhibit.

Page 6

MR. JACOBS: I'm sorry, Your Honor.

Exhibit 350 --

THE COURT: Right.

MR. JACOBS: -- directing the Court's attention, if I may, to Page 3, Paragraphs 6 and 8 in particular, both reference the Waterway Estates plant. So does Page 4, for that matter.

The document references the waste load allocation study performed by the State of Florida in 1981 that Mr. Klingenstein referred to yesterday in his testimony.

THE COURT: Yes, sir?

MR. BULLOCK: If the Court please, Your Honor, this has somehow been represented as a document which Florida Cities admits knowing that it had no waste load allocation. We object to that characterization of the document. We don't believe the document says that. The document...

THE COURT REPORTER: Judge, could counsel go to the microphone? I'm having a very difficult time hearing them.

THE COURT: Mr. Miracle is having a difficult time. Is the microphone working at your table? No?

I tell you what, do we have the portable microphone? Do we have the portable, hand-held microphone?

THE DEPUTY CLERK: Yes, sir.

Page 7

THE COURT SECURITY OFFICER: It's working now.

THE COURT: It's working? All right.

MR. JACOBS: Your Honor, I might also say this: This is a petition of the Florida Cities Water Company, again, directing the Court's attention not to the cover page, but this was a publicly filed document apparently with Florida Department of Environmental Regulation. It's the petition itself signed by Florida Cities' own counsel that we ask be entered into evidence.

If the objection is specifically to Page 1, I could perhaps understand the basis of the objection, but not to a publicly filed document.

THE COURT: Mr. Bullock?

MR. BULLOCK: May I speak to that, Your Honor?

THE COURT: Yes, sir.

MR. BULLOCK: Your Honor, let me, first of all, refer you to Paragraph 8 on Page 3, the parenthetical that says, Except that the Respondent did not model its Caloosahatchee River waste load allocation documentation because of the assumed tie-in to Cape Coral, and the rest of the document -- the rest of the assumptions that are in that parenthetical.

If that parenthetical is removed -- which, in fact, what happened is, there was no tie-in to the Cape Coral facility, then the assumptions which follow are

Page 8

incorrect, so what happened is the design conditions for -- or the underlying purpose for Waterway Estates not being included in the 1981 document didn't happen, so there is no evidence from this or from any document that Florida Cities lost its 1981 waste load allocation.

MR. JACOBS: Your Honor, he's arguing the merits. We would obviously have a different interpretation. The objection is relevancy. It relates directly to Waterway Estates. It's a publicly filed document. It's written by Florida Cities' own counsel.

THE COURT: All right. I'm going to sustain the objection as to the first page of this document, which is a memorandum. I'll receive the balance of it.

MR. HIRD: Your Honor, the last three exhibits are 510, 511 and 512 and they are all -- they are very similar. These are statements from depositions in which witnesses took the Fifth Amendment.

Our objection is we can't -- A, it's irrelevant and, B, we can't understand how this has anything to do with Mr. Klingenstein's opinion and how this would shape his views as to the seriousness of the violation or any other issue by looking at pages where individuals asserted their Fifth Amendment rights.

MR. JACOBS: In a civil case --

THE COURT: Wait, wait, wait.

Page 9

MR. JACOBS: I'm sorry, Your Honor.
THE COURT: Are you through?
MR. HIRD: I'm not finished.
Your Honor, the Court, while Mr. Jacobs --
THE COURT: I'll tell you what, I'll call on you -- I'll determine when counsel is through, and then I'll call on you, then you can start speaking.
MR. JACOBS: Yes, sir.
MR. HIRD: Mr. Jacobs may argue that you're entitled to draw an inference -- and we have a dispute with that -- but there is no question that Mr. Klingenstein has no particular power to draw an inference.
And the idea that he was somehow influenced by people taking their Fifth Amendment in his expert opinion is absurd.
THE COURT: All right. Just a moment.
Now, the exhibits we're talking about are 510, 511 --
MR. HIRD: -- 511 and 512.
THE COURT: -- 511 and 512.
All right. Just a moment.
(Pause.)
THE COURT: All right. Mr. Jacobs?
MR. JACOBS: Well, Your Honor, this is a civil matter in which adverse inferences, as the Court is well

Page 10

aware, can be drawn from the invocation by the Defendant's officers of the Fifth Amendment.
If the specific objection is to introducing it in the context of Mr. Klingenstein's testimony, we would be happy to reintroduce it during the testimony, or the lack of testimony, of the individuals who --
THE COURT: Well, I'm inclined to agree with Mr. Hird at least as to introducing these exhibits in connection with Mr. Klingenstein's testimony. We can address the balance of the objections if and when you proffer those exhibits again. But I'll sustain the objection at this point.
By the way, just so I'll understand, 510, 511 and 512 in my notebook simply state the -- make the statement, Upon the advice of counsel, I respectfully decline to answer and invoke my rights under the Fifth Amendment.
You're obviously saying that this pertains to a certain witness' invoking a Fifth Amendment privilege, and one cannot tell from looking at the exhibit in my notebook as to who is asserting that. I can't tell anything from this. That's just for future reference, I guess, but that's what's in my notebook.
MR. JACOBS: Yes, Your Honor.
The witness list itself will identify 510 as the statement of Gerald Allen, 511 as --

Page 11

THE COURT: Well, you see, the witness list is not really an exhibit as such. It's an aid. So, any exhibits that we've got in here need to stand on their own. That's for future reference --
MR. JACOBS: Thank you, Your Honor.
THE COURT: -- in this case.
MR. HIRD: Your Honor, if I may, just to make the record complete, we have a further objection with respect to 510, the statement of Mr. Allen. Mr. Allen ultimately did testify in deposition and will be a trial witness in this case.
THE COURT: Mr. Allen, did you say?
MR. HIRD: Yes, sir.
THE COURT: Okay.
All right. Are we ready for Mr. Klingenstein to retake the witness stand?
MR. JACOBS: Yes, Your Honor.
THE COURT: All right.
Yes, sir. You may proceed.
MR. JACOBS: Your Honor, no further questions of Mr. Klingenstein at this time.
THE COURT: All right. Mr. Bullock, you may cross-examine.
MR. BULLOCK: Thank you, Your Honor. Good morning.

Page 12

MARK JAMES KLINGENSTEIN,
being previously duly sworn, testified as follows:
CROSS EXAMINATION
BY MR. BULLOCK:
Q. Good morning, Mr. Klingenstein.
A. Good morning.
Q. Mr. Klingenstein, as I believe you testified in your direct testimony, you are currently employed by SAIC, is that correct?
A. Yes, that is.
Q. SAIC, for the most part, exists to provide expert witness and other services to EPA and DOJ, is that correct?
A. SAIC as an entity exists to provide a variety of high-tech consulting services to a variety of both Government and private clients.
Q. And one of your major clients is, in fact, EPA and another is DOJ, is that correct?
A. They are certainly very significant clients.
Q. As a matter of fact, your current duties include working on work assignments in which SAIC provides expert witness services to EPA and DOJ, is that correct?
A. Yes, that is correct.
Q. And you have previously managed a group of about 20 individuals all of whom are dedicated to providing expert witness and related services to EPA and DOJ, is that

Page 13

correct?
A. Expert witness services and other services related to U.S. EPA programs.
Q. Including enforcement actions, enforcement services?
A. Yes.
Q. All right. In the calendar year 1995, can you tell me how much of your time was spent working for EPA and DOJ on these work assignments?
(Pause.)
A. I couldn't tell you exactly. Certainly more than 50 percent of my time.
Q. And can you tell me how much in billable time you, yourself, generated for SAIC working on work assignments for EPA and DOJ?
A. I would assume that would be the same answer, which would be more than 50 percent of my time, which we work a 40-hour work.
Q. Can you tell me in dollar figures how much that was billed to EPA and/or DOJ?
A. Not off the top of my head.
Q. Can you give me a ballpark estimate?
A. Well, the billing rate -- my billing rate would be approximately 94, $95, $96 an hour, so that fraction of a year times $96.
Q. Okay. Now, you are also a vice-president, an

Page 14

assistant vice-president of SAIC?
A. Yes, an assistant vice-president.
Q. And as part of that, you would consider yourself part of management of SAIC?
A. Yes, that's true.
Q. All right. And can you tell me in dollar figures how much the enforcement unit that you used to manage generated for SAIC in 1995 as a result of working for EPA and DOJ?
A. Well, I didn't -- the portion of the company that's doing actual enforcement work, under my direction last year, we did just about a million dollars worth of work.
Q. Okay. Was that a similar figure for 1994?
A. Pretty close, roughly.
Q. Okay. How many times in the past five years have you worked as an expert witness or a consultant on behalf of a defendant in an environmental enforcement action?
A. I'm sorry, counsel. What do you mean "how many times"?
Q. How many times in the last five years have you been employed as an expert witness or a consultant on behalf of a defendant in an environmental enforcement action?
A. You mean how many different actions?
Q. How many contracts have you performed in which you have provided expert witness or expert consultant services for a defendant in an environmental enforcement action?

A. Well, in terms of contracts, it would b
one contract with EPA and one contract v
Department of Justice.
THE COURT: With a defendant, did you say.
MR. BULLOCK: With a defendant.
THE WITNESS: I'm sorry, sir. I --
MR. JACOBS: I'm sorry. For clarification, is it for the Defendant? I thought Mr. Bullock first asked --
THE COURT: I think he said "a defendant." Did you mean any defendant?
MR. BULLOCK: I meant any Defendant.
THE WITNESS: I'm sorry, sir. Did you mean working for the Defendant?
BY MR. BULLOCK:
Q. That's correct.
A. None.
Q. Thank you.
THE COURT: And that's any defendant, not just the Defendants in this case, is what his question pertains to. You understood that?
THE WITNESS: Yes. Thank you.
BY MR. BULLOCK:
Q. Let me refer you, if you have it in front of you, to your resume which is attached to the back of your report. You, on Page 2 of 7 --

Page 16

MR. BULLOCK: Your Honor, I believe it is Appendix A.
THE COURT: I've got it.
BY MR. BULLOCK:
Q. Mr. Klingenstein, you list a number of cases in which you have provided expert support. That would be the third paragraph down.
A. Yes.
Q. All right. Fort Smith, Arkansas, what type of case was that?
A. That was a Clean Water Act case.
Q. And who was the defendant?
A. Was the City of Fort Smith, Arkansas.
Q. A municipal facility?
A. Yes.
Q. The PennTech Paper Company, I assume, was a manufacturing facility?
A. Yes, that's correct.
Q. Menominee Paper was a manufacturing facility?
A. It was a manufacturing facility, but the case involved the Menominee municipal case -- facility as well.
Q. The Tyson's Chicken case was a manufacturing facility, correct?
A. Yes, that's correct.
Q. The Purnell Sausage and Gorton's of Gloucester, both

Page 17

of those were manufacturing facilities?
A. Yes, they were.
Q. O'Donell-Usen, what was that case?
A. That's a manufacturer.
Q. Okay. Terra Haute, Indiana?
A. Is a municipal facility.
Q. Winchester, Kentucky?
A. Was municipal.
Q. Okay. Hawaii Kai -- I'm not going to begin to pronounce that -- but Hawaii Kai?
A. Hawaii Kai. That is a municipal facility.
Q. All right. Bunnell?
A. Is a municipal facility.
Q. And Metro Dade Citizens Authority?
A. Involved the authority in Miami.
Q. All right. Taracorp?
A. It is an industrial facility.
Q. Gulf Chemical?
A. It's an industrial.
Q. And Jefferson County?
A. Is municipal involving the county authority.
Q. All right. You have never been employed by a privately owned, publicly regulated utility, have you?
A. I was employed by the City of Philadelphia while I was an intern in school.

Page 18

Q. Okay. Is the City of Philadelphia owned privately?
A. Oh, I'm sorry, sir. No.
Q. Okay. So, the answer to my question is, you have never been employed by a privately owned, publicly regulated utility?
A. No.
Q. All right. Have you ever provided consulting services for a privately owned, publicly regulated utility?
A. No, I don't believe so.
Q. All right. You have never designed a plant for a privately owned, publicly regulated utility?
A. No.
Q. All right. You have never sought to permit a facility like -- which is a privately owned, publicly regulated utility, correct?
A. That's correct.
Q. All right. And that would include any facility -- you have never permitted a facility in the state of Florida, is that correct?
A. That is correct.
Q. All right. You're not an engineer licensed in the State of Florida, are you?
A. No, I'm not.
Q. All right. Do you hold any operator licenses in the State of Florida for plant operations?
A. No, I do not.
Q. Do you hold any licenses for pl
state or political subdivision in the
A. No, I do not.
Q. Have you ever in any way over
a facility for a privately owned, pu
utility?
A. No, I have not.
Q. Have you ever provided any engineering or consulting services for any company who is regulated by the Florida Public Service Commission?
A. No, I have not.
Q. All right. And isn't it true that you really have no knowledge of the procedures and practices of the Florida Public Service Commission?
A. I have knowledge of their procedures based on the documents that I have reviewed as a result of my involvement in this particular case.
Q. Can you tell me which documents that involve the Public Service Commission you have reviewed?
A. Primarily correspondence that -- from Florida Cities, parties either to various outside entities, such as the State of Florida, or internal documents that have discussed Public Service Commission issues.
Q. Have you reviewed any of the statutes or regulations

Page 20

which govern the Florida Public Service Commission?
MR. JACOBS: Objection, Your Honor; beyond the scope of direct on the Public Service Commission.
THE COURT: Overruled.
THE WITNESS: No.
BY MR. BULLOCK:
Q. Have you reviewed any communication between Florida Cities and the Public Service Commission, or vice versa?
(Pause.)
A. That I can't recall.
Q. Let me turn now and ask you, what experience have you had performing modeling studies of river flows in the State of Florida?
A. None.
Q. You testified on Monday that you had interviewed EPA Region 4 employees about this case, is that correct?
(Pause.)
A. I don't specifically recall saying that on Monday.
Q. I believe you testified that you interviewed some EPA employees, isn't that correct?
A. My point, counsel, is I don't recall specifically whether EPA employees were identified as opposed to other individuals.
Q. Well, let me ask you this way, then: Have you ever interviewed any EPA Region 4 employees about -- well, we'll

Page 21

start with Waterway Estates -- and the claims that surround Waterway Estates?
A. I have had conversations with EPA Region 4 employees.
Q. About Waterway Estates?
A. Yes.
Q. Okay. Can you tell me who they were?
A. Mr. Ken Kwan and Ms. Gwen Fitz-Henley and Mr. Roger Pfaff.
Q. Let me turn with you now and talk about the 1981 waste load allocation study. In your report on Page 14, you have stated that the river was unacceptably impacted by nutrients from dischargers, the third paragraph up from the bottom.
A. Yes.
Q. Isn't it true, Mr. Klingenstein, that there is no actual data which supports this statement?
THE COURT: What paragraph? What does it start with?
MR. BULLOCK: FDEP's January 1981 Caloosahatchee River...
THE COURT: All right.
MR. BULLOCK: And, Your Honor, it is the last sentence of that paragraph.
THE COURT: All right.
THE WITNESS: My interpretation of the waste load allocation document was that the Florida agency was of the

Page 22

opinion that the overall nutrient loads to the river were a concern.
BY MR. BULLOCK:
Q. My question, Mr. Klingenstein, is, isn't it true that there is no actual data which supports this conclusion in your report?
(Pause.)
A. My belief is that the State agency came to this conclusion based on data available to them.
Q. Okay. And what data have you reviewed that support your conclusion that the river was unacceptably impacted?
A. Well, certainly even up through the present 1994 305(b) Florida State Water Quality Study, there are notations made that there is concern on the part of the State based on data from the last -- well, since, I believe, 1989 -- that there are still unacceptable nutrient loads to the river.
Q. All right. Well, let's go through some of this, then. The 1981 study, that was a modeling study, wasn't it?
A. Yes.
Q. All right. The 1990 study which was based on the 1989 information that you just spoke of was also a modeling study, wasn't it?
A. Yes, it was.
Q. Isn't it true, Mr. Klingenstein, that modeling is

Page 23

merely an attempt to predict possible impacts based upon certain assumptions of future water quality conditions under assumed scenarios of water flows, treatment and disposal options used in the river?
A. Not entirely to the extent that it doesn't necessarily have to be modeling future, at some far, distant point in time. A modeling effort is carried out typically using available data to calibrate the model, in effect to make the model as carefully represent as possible conditions in the river, and then a variety of different scenarios can be modeled. Both existing scenarios can be modeled as well as future or predicted scenarios.
MR. BULLOCK: Your Honor, I'm going to be referring to Plaintiff's Exhibit 349, or we have marked it as Florida Cities' Exhibit 16.
THE COURT: 349 is in evidence?
MR. BULLOCK: And I'll be glad to hand a copy of that, if you would like. It's our 16.
THE COURT: Same as Plaintiff's 349?
MR. BULLOCK: That is correct, Your Honor.
THE COURT: All right.
MR. JACOBS: Just for the record, Your Honor, it's not exactly the same.
THE COURT: All right.
MR. JACOBS: The first page is not the same.

Page 24

MR. BULLOCK: We'll be glad to give you our copy of Plaintiff's 349. The substance of the document is the same.
MR. JACOBS: I suspect that would be the case, Your Honor.
THE COURT: All right. Well, go ahead.
MR. BULLOCK: Thank you, Your Honor.
THE COURT: 349 is in evidence. And if he refers to something that's not in evidence, you can point it out.
MR. JACOBS: Thank you.
BY MR. BULLOCK:
Q. Mr. Klingenstein, who was this study prepared for?
A. I'm sorry, sir. Who was it prepared for?
Q. Who was it prepared for?
(Pause.)
Q. Well, let me move on a little bit. Let me refer you to the second paragraph of Page 1, beginning "These allocations." Isn't it true that this document was prepared for the Fort Myers District Office of the Florida Department of Environmental Regulation?
A. Yes, that would be the indication of that paragraph.
Q. All right. Who is it in the FDER or which section in the FDER actually issues discharge permits for the State of Florida?
A. I couldn't give you their formal name.

Page 25

Q. Okay. Do you know whether or not the discharge permits are issued from Tallahassee or from the regional offices?
A. I could not tell you.
Q. All right. Well, assume with me, then, that the district offices are the offices which issue the discharge permits. Under that scenario, then, this would have been -- the language in the paragraph which I just pointed out to you indicates that this study was generated due to pending requests for permits from -- at the Fort Myers office?
MR. JACOBS: Objection, Your Honor. I think this is an improper hypothetical for this witness. He's already testified he doesn't have personal knowledge of exactly which offices prepare these.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry. Could you repeat the question?
BY MR. BULLOCK:
Q. Assume with me, then, that the regional offices are the offices which issue the discharge permits; then the language of this document -- isn't it true that this document states that it was generated for the regional offices in preparation or due to pending requests for permit renewals?
A. Given that hypothetical, that would be the implication

Page 26

of that paragraph, yes.
Q. All right. Let's turn now to the study. I asked you a minute ago about the different scenarios -- whether or not modeling was based on assumed scenarios. You would agree with me that modeling is based on assumed scenarios, is that correct?
A. I agree that modeling can be based on assumed scenarios, but it can also be based on actual scenarios.
Q. All right. In real life, many of these assumed scenarios are unlikely to occur, is that correct?
A. That, I guess, would depend on what particular situation you were modeling, how likely the scenarios are to occur.
Q. Well, the 1981 study that we're looking at, the modeling study was based upon the predictions of certain design conditions simulated by DER in their computer program, isn't that correct?
A. Yes.
Q. Okay.
MR. BULLOCK: Your Honor, I realize we keep flipping back and forth between DER and DEP -- and I know that is a little confusing -- but during this time it was FDER, and I think early -- in the early '90's it became FDEP, so I may say the same thing.
BY MR. BULLOCK:

Page 27

Q. One of the design conditions of this study, Mr. Klingenstein, was that all four facilities in this area of the river were all discharging at full capacity simultaneously?
A. Yes, I believe that's true.
THE COURT: Just a moment, please.
I'm looking for Plaintiff's 349.
(Pause.)
THE COURT: Go ahead.
BY MR. BULLOCK:
Q. If I might, Mr. Klingenstein, let me ask the question again: Isn't it true that the design conditions of this study were based upon the presumption that all four of the facilities in this area of the river were all discharging at full capacity simultaneously?
A. Yes, I believe it was.
Q. All right. Just as an aside, Mr. Klingenstein, how much time did you actually spend in reviewing this report -- in reviewing this study to generate your report?
A. I couldn't tell you an exact amount of time.
Q. Isn't it true, Mr. Klingenstein, that during the projected time of this study, that these -- the four facilities which discharge into this portion of the Caloosahatchee River never discharged at full capacity simultaneously?

Page 28

A. Well, I haven't reviewed data for all of these facilities, so I couldn't answer that question for all the facilities.
Q. All right. So, the answer to the question is, you don't know whether or not they discharged to full capacity simultaneously between 1980 and 1990?
A. As I said, I have not reviewed data for all the other facilities.
THE COURT: And so you don't know --
THE WITNESS: I do not know.
THE COURT: -- because you haven't reviewed, correct?
THE WITNESS: Yes. Yes.
THE COURT: All right.
BY MR. BULLOCK:
Q. Have you reviewed data from Waterway Estates?
A. Yes, I have.
Q. And what years of data did you review?
A. I've reviewed flow data -- I couldn't tell you every specific year -- but from the period of time of this study up until the present.
Q. And Waterway Estates never discharged at full capacity, did it?
A. That's correct.
Q. All right. So, in a sense, one -- right away, we can

Page 29

tell that one of the four design criteria for this modeling study never occurred?
(Pause.)
A. Well, the actual flows were not as high as the number that was used for this particular scenario, no; that's correct.
Q. Thank you.
You rely, on the bottom of Page 14 of your report, the 1990 study --
MR. BULLOCK: That is Plaintiff's 422, Your Honor.
THE COURT: Are you basically through with 349?
MR. BULLOCK: Your Honor, no, sir. You might want to keep it close.
THE COURT: Okay.
BY MR. BULLOCK:
Q. Mr. Klingenstein, you rely on the 1990 study for confirmation of the 1981 study in your report?
A. Yes.
Q. Okay. In fact, the 1990 study is another computer model, isn't that correct?
A. It reports the results of another modeling effort, yes.
Q. And the modeling effort in the 1990 study is -- actually, the 1990 study is a model of proposed expansions of all of the discharges on the Caloosahatchee River?

Page 30

A. I don't recall whether expansion of every one was proposed.
Q. How much time did you spend reviewing the 1990 study in preparing your report?
A. Again, I couldn't give you an exact figure.
Q. Okay. The 1990 study is assumed on all of the dischargers discharging at full capacity, isn't that correct?
(Pause.)
A. I know that the specific discharge assumptions were made in the report; without that document in front of me and having the ability to refer to it and compare that to the design capacity of each of those plants at that point in time...
Q. Okay.
MR. BULLOCK: Your Honor, what I have is the Defendant's exhibit that I can hand him. It's in evidence as a Plaintiff's exhibit. It's Plaintiff's 422.
THE COURT: All right. Hand me up Plaintiff's 422.
That's also Defendant's exhibit what?
MR. BULLOCK: I'm sorry. It is not a Plaintiff's exhibit.
THE COURT: Okay. Okay.
MR. JACOBS: I'm sorry to interrupt, Your Honor.

Page 31

For the record, are we looking at Plaintiff's 422?
MR. BULLOCK: That's correct.
MR. JACOBS: Thank you.
Does the witness have it in front of him?
THE WITNESS: I'm sorry. No, I don't.
THE COURT: What's the question?
MR. BULLOCK: Your Honor, I'm asking him whether or not the 1990 study was based on the -- whether or not any of the -- the 1990 study was based on assumptions that all of these facilities were discharging at full capacity.
THE COURT: Okay.
THE WITNESS: That appears to be true.
BY MR. BULLOCK:
Q. And, again, I believe you said that you have no knowledge of whether or not in fact these facilities have discharged at full capacity between 1990 and today?
A. I'm sorry. Could you repeat that?
Q. I said, I believe you have said earlier that you have no knowledge of whether or not the four facilities modeled in this study actually discharged at full capacity from 1990 until today?
A. Other than having seen some flow data for Waterway Estates...
Q. Has Waterway Estates ever discharged at full capacity between 1990 and today?

Page 32

A. Certainly recalling the data, its average flow has been below its capacity.
Q. Okay. The answer to the question is, you don't even know whether Waterway Estates or not has ever discharged at full capacity, correct?
A. Well, the answer is, I can't recall each individual day's data to say with certainty that on any one day it may not have reached its capacity flow, but its average flow has been below its capacity flow.
Q. So, you don't know?
THE COURT: I think I understand his answer. Go ahead.
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Isn't it true that your testimony as to risk of harm of discharges from the Waterway Estates facility is based upon computer studies of information -- excuse me -- computer studies of situations which, in fact, never came to pass?
A. My opinion as to the potential for harm came from a combination of the findings of these studies and the specific information that they provided about the flow characteristics in the Caloosahatchee River particularly in the area of the Waterway Estates discharge and from my professional opinion based on having inspected the facility,

Page 33

having seen the characteristics of that canal and what the likelihood was of the effluent building up in that canal.
Q. My question was -- and let me rephrase it slightly, then -- in part, your opinion is based on these computer models and the reports generated as a result of these computer models, correct?
A. Yes, that's correct.
Q. You can't say whether or not the situations that are forecast in -- or the presumptions that these computer models are based upon actually happened, can you?
A. In terms of having seen data in that canal, no. To my knowledge, such data doesn't exist.
Q. Okay. The data exists about what that flow was for all four facilities, doesn't it, Mr. Klingenstein?
A. Yes.
Q. All right. You haven't looked at that data for all four facilities that discharge in -- that this study is based upon, have you?
A. I have certainly possibly seen some data, but I have not looked at it in detail.
Q. All right. So, you can't say whether or not the predictions that the model predicts actually occurred because you don't know whether or not the scenarios assumed in the model ever existed or not, correct?
A. I believe that certain characteristics indicated by

Page 34

the model, particularly the build-up of effluent in the area of the Waterway Estates, occurred regardless of whether or not those plants discharged at exactly the flows that were put forth in this model.
Q. But the data -- but you haven't reviewed the data to support the model?
A. I have reviewed data regarding water quality in the river.
Q. You have testified that you believe the 1981 study provides a zero discharge for Waterway Estates, is that correct?
A. I believe those are the exact words from the document itself.
Q. All right. In the same document, the study also suggests that the company should build a new outfall for the plant, isn't that correct?
A. I believe there's mention of the fact that the outfall would need to be relocated.
Q. All right. Isn't there a logical disconnect here between a zero waste load allocation and then demanding that the company build an outfall for a plant that has a zero -- a new outfall for a plant that has a zero waste load allocation?
MR. JACOBS: Objection to the mischaracterization of the document.

Page 35

THE COURT: Overruled.
THE WITNESS: My read on the document was, and continues to be, that in carrying out the study, the State of Florida looked at the technical need to relocate the outfall and then, based on its understanding of what Florida Cities' intentions were, i.e., to tie in to a regional facility with Cape Coral, decided not to continue the modeling effort looking at the relocated outfall and so, therefore, assumed that no waste load allocation would go to the Waterway Estates facility because it would be tied in to the Cape Coral plant.
BY MR. BULLOCK:
Q. In fact, the next year, in 1982, that Cape Coral plant was cancelled or was never built, is that correct?
A. I don't know if it was in exactly 1982, but it seems in the 1982, 1983 time frame, that agreement fell apart.
Q. So, that scenario didn't occur either, did it?
A. No, apparently not.
Q. All right. Are you familiar with the State of Florida's laws and regulations that address permitting for facilities such as the Waterway Estates plant?
A. No, not in any detail.
Q. Can you tell me whether or not this document was binding upon the Fort Myers office in its ability to grant a permit to the Waterway Estates facility?

Page 36

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion, Your Honor.
MR. BULLOCK: Your Honor, he has --
THE COURT: Well, I'll permit him to answer the question, if he knows. Overruled.
THE WITNESS: No, I don't know.
BY MR. BULLOCK:
Q. In fact, later in 1981, isn't it true that the Fort Myers office of the FDER granted permission to continue discharging at the Waterway Estates facility after the 1981 waste load allocation study was published?
A. I believe a permit was issued.
MR. BULLOCK: If I may, I would like to show the witness Defendant's Trial Exhibit Number 17.
BY MR. BULLOCK:
Q. Let me refer you to what would be the third page of Exhibit 17. Isn't it true that this is a State of Florida DER operation permit for Waterway Estates?
A. Yes, it is.
Q. And the date of issuance is 1981 -- excuse me -- April 1, 1981?
A. Yes, it is.
Q. All right. And the next page, which is at the bottom of the page, set forth as Number 1 of 4?
A. Yes.

Page 37

Q. This page authorizes Florida Cities to operate a 1.08 MGD wastewater treatment plant to discharge effluent to the Caloosahatchee River – into a canal to the Caloosahatchee River, is that correct?
A. That is what is written there, yes.
Q. Didn't EPA also grant a permit to discharge to Waterway Estates in 1981?
A. I believe it was in 1981.
Q. Let me show you Defendant's Trial Exhibit, Florida Cities, Number 18 and refer you to the second page of that exhibit.
Isn't this a permit to discharge – an NPDES permit to discharge for Waterway Estates?
A. Yes, it is.
Q. Okay. Isn't it true that in 1983, the Florida Department of Environmental Regulation renewed the Waterway Estates discharge permit?
A. Yes, I believe that's true.
Q. Let me refer you to Defendant Florida Cities' Trial Exhibit Number 20 and refer you to Page 2 of that exhibit. Again, this is authorization to operate a 1.08 million gallons a day treatment facility and to discharge into the canal which leads to the Caloosahatchee River, correct?
A. Yes, that is true.
MR. BULLOCK: Your Honor, we would move

Page 38

Defendant's 17, 18 and 20 into evidence.
MR. JACOBS: No objection, Your Honor.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Referring to Exhibit 20, can you tell me what the expiration date of Exhibit 20 is? And I'm referring to Page 4 of 5.
A. All of the pages would indicate an expiration date of August 2, 1988.
Q. Thank you.
In investigating this claim, Mr. Klingenstein, you had access to the files of EPA Region 4 --
A. Yes.
Q. -- is that correct?
You had access to the materials put forth in discovery by Florida Cities, is that correct?
A. Yes, that is correct.
Q. You have worked on enforcement inspections of facilities for NPDES compliance, have you not?
A. Yes, I have.
Q. All right. Let me ask you to look at Florida Cities' Trial Exhibit 199. Can you identify what type of document 199 is?
A. 199 is what would be known as a CEI, or compliance evaluation inspection report.

Page 39

Q. All right. Was this report done jointly with the Florida Department of Environmental Regulation?
A. Yes, it was.
Q. All right. And let me refer you to Page 2 of 4 in the actual document.
A. I'm sorry. That would be Page 2 of 4 of the form itself?
Q. That's correct.
And on Line F -- excuse me -- Line G, would you read Line G?
A. Number and location of discharge points are as described in the permit.
Q. And the answer which was checked off?
A. Was "yes."
Q. All right. And would you read Line H?
A. Correct name and location of receiving waters.
Q. And that was checked off as a "yes" as well?
A. Yes.
Q. Is it unusual to have joint State and Federal inspections?
A. It's not uncommon.
MR. BULLOCK: Your Honor, we would move that Defendant's 199, Florida Cities, be moved in evidence.
MR. JACOBS: No objection, Your Honor.
THE COURT: It will be received.

Page 40

Why don't we have an understanding that if there is no objection, you need not say anything. And I'll pause for a moment to --
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Mr. Klingenstein, let me refer you to Florida Cities' Exhibit 200. Could you tell the Court what 200 is?
A. 200 is another compliance evaluation inspection report.
Q. And this was done jointly by FDER and EPA?
A. Yes, it was.
Q. All right. Let me refer you to Section C of the second page of this exhibit. And under the heading Effluent slash Receiving Waters, what grade was that given?
MR. JACOBS: Your Honor, this hasn't been moved into evidence yet. We object to questioning the witness about the document.
THE COURT: Correct.
MR. BULLOCK: I'm sorry, Your Honor. I would move for Defendant's 200 to be --
MR. JACOBS: Here we would object, Your Honor. The document is incomplete. There should be an attachment to it, as we understand it. The objection then would be based on Federal Rule of Evidence 106. We believe it's irrelevant. The objection would be based on Federal Rule of

Page 41

Evidence 402. We believe it's hearsay, and the objection would be based on Rule 802. Hearsay within hearsay, Rule 805.

MR. BULLOCK: Your Honor, it's my understanding this document was produced out of EPA's own compliance files. The document clearly states what it is.

The attachments which are attached to it have no bearing on the issue that it's being offered for. We sought this document in discovery requests, and this is a document which was produced to us.

THE COURT: I'll overrule the objections. If the Government wants to at a later time offer the balance of this for any purpose, the Court will entertain that at that time.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you again to Section C and the sub question that addresses Effluent slash Receiving Waters. What mark was that given?

A. An "S."

Q. And "S" under the key code means?

A. Is listed as being equal to satisfactory.

Q. And under Section C, satisfactory is the highest grade that can be given?

A. Yes.

Q. Thank you.

Page 42

Isn't it true, Mr. Klingenstein, that at any time during the 1980's, the Florida Department of Environmental Regulation could have withdrawn its permission for Florida Cities to discharge from Waterway Estates?

A. I can't speak on behalf of FDER, FDEP.

Q. In preparing your opinion or preparing to testify, did you interview any FDER or now FDEP officials?

A. Yes, I did speak to a number of them.

Q. Do you remember who you spoke to?

A. I certainly recall speaking to Mr. Ron Blackburn, and I believe I also spoke to a former FDER employee which would have been Mr. Bruce DeGrove.

Q. Okay. You had characterized Florida Cities' discharge without a permit between 1987 and 1989 as serious violations. The seriousness of those violations is based purely upon the fact that they didn't have an NPDES permit during that period, isn't that correct?

A. And my belief that discharge was taking place at the wrong level of treatment and to the wrong location.

Q. Again, the issues about the wrong level of treatment are based on the 1981 study and your analysis of that study, isn't that correct?

A. And my understanding and belief on what would have been the impacts of that secondary discharge on the particular point of discharge.

Page 43

Q. All right. You have no data which points out that, in fact, that area was actually impacted, do you not?

A. I have not seen data. In fact, I believe your Mr. Smith in his report did, in fact, refer to some data that might have existed that indicated there were impacts in that area of discharge.

Q. But you'll defer to Mr. Smith's testimony on that, won't you?

A. I have not seen data for the canal.

Q. In fact, isn't it true that the Plaintiff has admitted that there is no -- that they have no evidence of environmental harm?

THE COURT: Well, now, wait a minute -- well, go ahead.

MR. JACOBS: I'll object to the extent that the question calls for a legal conclusion here.

THE COURT: Yes. You know, the Plaintiff is the United States, and I think I'll sustain the objection, at least as framed.

BY MR. BULLOCK:

Q. Did you assist the Plaintiff in preparing any of its discovery requests -- responses to its discovery requests?

MR. JACOBS: Objection to the extent that the question invades the attorney work product privilege. Mr. Klingenstein served both as an expert witness and also

Page 44

as an expert trial consultant. The work that he did with respect to -- in his capacity, rather, as an expert trial consultant I believe would be protected.

MR. BULLOCK: Your Honor, I have not asked him the content of any work or conversation.

THE COURT: I'll overrule the objection at this point.

Ask the question again.

BY MR. BULLOCK:

Q. Mr. Klingenstein, did you participate in responding to any of the discovery requests which were propounded to the Plaintiff?

(Pause.)

A. Yes.

Q. All right. Have you read the actual discovery responses which the United States filed in this case?

MR. JACOBS: Objection, Your Honor. There have been numerous responses. If counsel could possibly pinpoint one or two for the witness so the record is accurate...

MR. BULLOCK: Sure. I'll be glad to.

BY MR. BULLOCK:

Q. Either the United States' responses to Avatar Holdings' second set of interrogatories, or responses to Florida Cities' interrogatories.

A. I believe I may have read portions of one or both, but

Page 45

I could not tell you specifically.
Q. Okay. Isn't it true that in the United States' responses to the Defendant Avatar Holdings' second set of interrogatories and in response to the Defendant Florida Cities' interrogatories, the United States has stated that --
MR. BULLOCK: Your Honor, may I withdraw that?
THE COURT: Yes, sir.
MR. BULLOCK: Just a moment, please, Your Honor.
(Pause.)
MR. BULLOCK: Let me withdraw that question, Your Honor, and ask it in a different way.
BY MR. BULLOCK:
Q. Isn't it true that in responses to Avatar Holdings' second set of interrogatories, the United States responded that it was aware of only potential and not actual harm or damage?
MR. JACOBS: Could I ask that the witness be shown the document before he responds?
THE COURT: I think that's fair.
MR. BULLOCK: This would be Avatar Holdings' Trial Exhibit Number 8.
MR. HIRD: Your Honor, I believe there's an exhibit book for the witness that we can provide for our exhibits so that we don't need to take it out of the binder.

Page 46

THE COURT: All right. That's one binder?
MR. HIRD: Yes. We have one binder.
THE COURT: All right. Here it is.
What number is that?
MR. BULLOCK: Number 8.
MR. JACOBS: Your Honor, I might assist in moving things along. The Government has, indeed, stipulated that we do not have evidence of actual environmental harm. The theory of our case is that there is the potential for environmental harm, and that was the substance of the testimony yesterday, if that's helpful to...
THE COURT: All right. Well, if that's helpful, fine.
MR. BULLOCK: I'll accept that stipulation and move on, Your Honor.
THE COURT: Okay.
BY MR. BULLOCK:
Q. Let me refer you to Page 1 of your report, the first paragraph under Section 2, Background, the last sentence where you said, By requiring receipt of a permit prior to discharge, the NPDES system allows EPA to determine whether a receiving water has the capacity to assimilate a pollutant discharge and, if so, at what particular point in the water body and for what quantities of particular pollutants. Is that correct?

Page 47

A. Yes, that's the word.
Q. All right. And the other point is, it allows EPA to know exactly what dischargers are in the various waters of the United States and what the substance of their discharge is?
A. That's the intent of the system, yes.
Q. Okay. Between January 1987 and November '89, isn't it true that the Waterway Estates facility remained within the EPA regulatory framework?
MR. JACOBS: Objection; vague.
THE COURT: What was your objection? Objection what?
MR. JACOBS: Vagueness, Your Honor.
THE WITNESS: In what sense, sir?
THE COURT: Wait.
You said "date"?
MR. BULLOCK: No, Your Honor. My question --
THE COURT: I'm sorry, I didn't understand what the -- you said objection what?
MR. JACOBS: On the grounds of vagueness, Your Honor. The question is vague and ambiguous.
THE COURT: Oh, vague, vague. I'm sorry, I didn't understand that. I thought you said "date." Vague.
All right. What was the question, please?
MR. BULLOCK: Your Honor, the question was,

Page 48

between January 1987 and November of '89, wasn't the Waterway Estates facility still within the regulatory framework of the EPA, of the NPDES system?
THE COURT: I'll overrule the objection.
Can you answer that?
THE WITNESS: My response would be, in what sense, sir?
BY MR. BULLOCK:
Q. Well, every month they sent in a discharge monitoring report, didn't they?
A. That's my belief.
Q. All right. And the facility was under an administrative order or a series of administrative orders issued by EPA, isn't that correct?
A. Yes.
Q. All right. So, every month EPA knew what was being discharged into the Caloosahatchee River, didn't it?
MR. JACOBS: During what period of time?
THE COURT: All right. Can you be more specific?
BY MR. BULLOCK:
Q. Between January '87 and November '89.
A. I can't speak for EPA's knowledge.
Q. Well, you said you believed they received discharge monitoring reports, isn't that correct?
(Pause.)

Page 49

A. That -- I'll correct myself. I'm not sure.
Q. Okay. In general, a discharge monitoring report is the method by which EPA learns what a discharger is actually discharging through its effluent, correct?
A. Yes, that's correct.
Q. All right. So, if the evidence demonstrates that Florida Cities continued to submit discharge monitoring reports to EPA during the period of time from January '87 through November of '89, you would agree that EPA knew what was being discharged and the effluent?
MR. JACOBS: Your Honor, compound; calls for speculation. The witness has said he doesn't know whether the DMR's were submitted during that period. He testified yesterday that he reviewed the ones where violations were indicated, but he hasn't testified that he's reviewed all of the DMR's so --
THE COURT: Well, he's asking him in a sense a hypothetical. This is an expert witness. I'm going to allow him that latitude. I'll overrule the objection.
Do you remember the question?
THE WITNESS: If you could repeat it, please?
BY MR. BULLOCK:
Q. Certainly.
Assuming with me that the evidence indicates that Florida Cities submitted discharge monitoring reports to EPA

Page 50

Region 4 between January 1987 and November 1989, EPA would have been aware of the substances reported as being discharged in the effluent, correct?
A. Again, if such reports were submitted, EPA would have received them. I can't speak for who within EPA would have been aware of that information.
Q. Okay. Who normally receives discharge monitoring reports, Mr. Klingenstein; what branch of the EPA?
A. Typically, the compliance branch.
Q. Okay. And so here, the compliance branch of EPA Region 4 would have received any discharge monitoring reports sent by Florida Cities, correct?
A. I would have assumed, but I can't speak for Region 4's compliance branch.
Q. Have you ever interviewed anyone in EPA Region 4's compliance branch regarding this lawsuit?
MR. JACOBS: Asked and answered, Your Honor.
THE COURT: Overruled. Go ahead.
THE WITNESS: My only recollection of specific discussions with regard to this case has been with Mr. Kwan and Ms. Fitz-Henley.
BY MR. BULLOCK:
Q. Mr. Kwan works for which branch?
A. I believe he's in enforcement.
Q. All right. And is enforcement different than

Page 51

compliance in Region 4?
A. I can't speak to Region 4's exact organization.
Q. And Ms. Fitz-Henley is one of the legal counsel for EPA Region 4?
A. Yes.
Q. All right. It was within EPA's power to shorten the period of time that Florida Cities was discharging secondarily treated effluent, was it not?
MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.
THE COURT: Read the question back, Mr. Miracle.
(Record read back.)
THE COURT: Overruled.
THE WITNESS: I can't speak for EPA's particular control of that situation.
BY MR. BULLOCK:
Q. They had the authority to grant administrative orders and permits, didn't they?
A. Yes.
Q. And in the administrative orders, at some point in time they could have said, You will cease secondary discharge, correct?
MR. JACOBS: Same objection, Your Honor.
THE COURT: Overruled.
THE WITNESS: That would be my expectation that

Page 52

they could.
BY MR. BULLOCK:
Q. Have you reviewed the administrative orders relevant to Waterway Estates between 1987 and 1991?
A. I have looked at those orders.
Q. All right. In fact, those orders authorize discharge at secondary levels until October 1, 1991, or until the outfall was moved, isn't that correct?
MR. JACOBS: Objection, Your Honor. If he's going to be asked to discuss the administrative orders, first of all, I would ask that they be presented.
Secondly, I take strong issue to the word "authorize." That word does not appear in the administrative orders, and I'll object on the grounds that the question therefore calls for a legal conclusion.
MR. BULLOCK: Your Honor, I'll withdraw that and rephrase it.
BY MR. BULLOCK:
Q. Let me first refer you to Defendant's 28. Let me then refer you to Page 3 of Exhibit 28, Page 3 of the actual administrative order.
Paragraph 2 states --
THE COURT: Have you reviewed this order?
THE WITNESS: Yes, I have, sir.
THE COURT: Okay. Go ahead.

Page 53

BY MR. BULLOCK:
Q. Paragraph 2 states that this should be in no way considered a permit to discharge. However, if the Respondent does discharge to the waters of the United States in violations of the Act, the Respondent's discharge of treated wastewater shall at least comply with the effluent limitations monitoring schedule and other requirements contained in its previous permit.
Is that an accurate depiction of the document?
MR. JACOBS: I'm sorry. It's incomplete.
Paragraph 2 starts with, This should in no way be considered a permit to discharge. However...
MR. BULLOCK: I believe I read that, Your Honor.
THE COURT: I don't recall whether you did or not.
BY MR. BULLOCK:
Q. The point of my question, Mr. Klingenstein, is, EPA didn't have to state that the Respondent should at least comply with secondary discharge if it continued to discharge, did it?
(Pause.)
A. Could you repeat the question, counsel?
THE COURT: Do you want it read back, or do you want to repeat it?
MR. BULLOCK: I'll repeat it, Your Honor.
BY MR. BULLOCK:

Page 54

Q. EPA did not have to include this provision which stated that the facility should at least continue -- if it was going to discharge, should at least continue to comply with the effluent limitations monitoring schedules and other requirements of its previous permit?
A. Well, without offering a legal opinion as to whether this has to be included, I think EPA included this to specifically make the point that this does not operate as a permit.
Q. My question was, they didn't have to put the language in there about secondary treatment, correct?
A. When you say "secondary treatment," with regard to its previous permit?
Q. Correct.
You're familiar with the previous permits, are you not?
A. I have reviewed its permit.
Q. All right. Those are secondary treatment permits, are they not?
A. As I recall.
Q. All right. Let me refer you to Defendant Florida Cities' 195.
MR. BULLOCK: Your Honor, while he's doing that, I would move Exhibit 28 into evidence.
THE COURT: It will be received.

Page 55

BY MR. BULLOCK:
Q. Mr. Klingenstein, have you reviewed Exhibit 195 previously?
A. Yes, I have.
Q. All right. Let me refer you to Page 4 of the administrative order itself, Paragraph 2. Paragraph 2 contains the same language that was found in the previous exhibit, isn't that correct?
A. Yes, that is.
Q. All right. And, again, you have been involved in a number of EPA enforcement actions, correct?
A. Yes, I have.
Q. All right. EPA could have directed the company to shut down and cease secondary discharge, couldn't it?
MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.
THE COURT: I'll permit him to answer it if he can. Overruled.
THE WITNESS: EPA could have directed them to do such a thing.
BY MR. BULLOCK:
Q. Exhibit 195 also contains a construction schedule, does it not?
A. Yes, it does.
Q. And this was a construction schedule to construct an

Page 56

AWT, or an advanced wastewater treatment facility, correct?
A. And to relocate the outfall.
Q. And to relocate the outfall, isn't that correct?
A. Yes, it is.
Q. All right. So, at the time EPA issued this order, isn't it correct that EPA knew that the facility was continuing to discharge secondarily treated effluent?
A. Yes.
Q. And you have reviewed discharge monitoring reports between 1989 and 1991, have you not?
A. Yes, I have.
Q. All right. And those discharge monitoring reports came out of the files of EPA Region 4?
A. Yes.
Q. So, it's clear in your mind that EPA Region 4 was informed as to the character and the constituents of the effluent?
A. Yes.
Q. EPA did not require the advanced wastewater treatment plant to be completed under the schedule in this administrative order until September of 1991, isn't that correct?
A. I believe the date of compliance shown is October 1.
Q. October 1.
If EPA had thought that there was a serious risk of

Page 57

environmental harm from continued secondary discharge between 1989 and 1991, it was within their authority to shorten this construction schedule?
A. I cannot speak to the process that generated this construction schedule.
Q. Okay. The State of Florida actually has in a sense the front line on developing water quality standards, is that correct?
A. Within the State of Florida.
Q. Yes. And we're talking in this case only about the State of Florida, correct?
A. Yes.
Q. The State of Florida continued to authorize this, to continue secondary discharge, until September of 1992, isn't that correct?
A. I believe that's correct.
Q. All right. If the State of Florida had had serious concerns about continued discharge of secondarily treated effluent, they could have ordered the cessation prior to September of 1992, isn't that correct?
A. Again, not being able to speak for the State of Florida, but I would expect they would have had the ability under their State permitting system.
Q. Okay. Does EPA independently establish water quality standards for the State of Florida?

Page 58

(Pause.)
A. Not that I'm aware of.
Q. Okay. So, if it's done through EPA at all, it's done in conjunction with the State of Florida?
A. That's my understanding.
Q. All right. Let me ask you to assume with me that before May of 1986, there was no requirement to cease discharge of secondarily treated effluent into the canal adjacent to the Caloosahatchee River.
Under that scenario, isn't it true that Florida Cities had no technically available option to cease discharge by January of 1987?
A. I'm sorry. Your start date was --
Q. -- was May of '86.
A. If, in fact, their first notice of needing to cease discharge was May of 1986, it would have been very difficult to cease discharge by January of 1987.
Q. What technically feasible options would have been available?
A. Probably the most technically feasible would have been to connect to another authority.
Q. And was there another authority available between May of 1986 and January of 1987?
A. Not that I'm aware of.
Q. All right.

Page 59

MR. BULLOCK: Your Honor, at this time I would also move Defendant's 195 into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Do you know whether or not EPA ever challenged Florida's granting of the Waterway Estates permits in 1981, 1983 or 1988?
A. I'm not aware of whether such a challenge took place.
Q. All right. In fact, if there was no technically feasible alternative to discharge available to Florida Cities in January of '87, isn't it true that they could not cease discharging?
A. It would have been basically impractical.
Q. As a matter of fact, it would have been a public health hazard, wouldn't it?
A. Unless some alternate means of disposal was provided.
Q. Okay. We're assuming that -- first of all, you haven't identified an alternative that was available during that period of time, isn't that correct?
A. I have identified alternatives that were available during that period of time. The question I believe you had asked, sir, was whether if, in fact, their first notice took place in mid 1986, whether that alternative could have been implemented by January 1987.
Q. That's correct.

Page 60

A. That's a different question.
Q. And the answer to that question was no, it couldn't?
A. Would be difficult.
Q. All right. You have not been able to identify any alternative that, in fact, was available under the scenario that I proposed to you in January of '87?
A. The other possibility would have potentially been if a spray irrigation site could have been identified, an agreement made and wastewater transported to that spray irrigation site.
Q. Again, you have not identified any area where, in fact, that could have occurred between May of '86, January of '87, correct?
A. I have not seen documentation that would show me such an option existed within that six-month period that would have -- that could have been implemented within that six-month period.
Q. All right. Florida Cities operates Waterway Estate under a franchise agreement with Lee County, isn't that correct?
A. I believe that's correct, yes.
Q. Florida Cities provides wastewater treatment pursuant to permission from the Florida Public Service Commission, isn't that correct?
A. Yes, that is correct.

Page 61

Q. Well, to have ceased to provide treatment in January of 1987 would have been a violation of its franchise and its agreements with the Public Service Commission, isn't that correct?
A. I have not reviewed those agreements in detail, so I couldn't speak to that.
Q. All right. And isn't it true that ceasing to discharge with no viable alternative would have -- in January of '87, under the scenario that I have given you, would have created a public health hazard?
A. Again, without an alternative form of handling the wastewater, in effect, to shut the plant off, yes.
Q. Okay. I believe you testified that you had access to all of the materials which Florida Cities produced through discovery?
MR. JACOBS: Objection to the extent that the question mischaracterizes the witness' previous testimony. He said all of the documents, which there are hundreds of thousands of --
THE COURT: All right. Well, rephrase the question.
MR. BULLOCK: I'll withdraw it.
BY MR. BULLOCK:
Q. Were you given free rein to look at whatever discovery materials were in the possession of the Plaintiff which had

Page 62

been produced by Florida Cities?
A. No, I was not given free rein.
Q. Were you not allowed to look at some material?
A. Materials were sent to me for review.
Q. Okay. And is that the normal method that you as an expert witness use is you rely on someone else's judgment as to what you need to review to generate your opinion?
MR. JACOBS: Objection to the extent that this particular witness -- he's not asking this particular witness what he did; he's asking about expert witnesses in general, common procedures, and I don't know that this witness is qualified to answer that.
THE COURT: Well, I don't know. I think he can examine him concerning his customary mode of operation in playing a role in the determination of what documentation he may need, so I think that falls basically within proper cross.
MR. JACOBS: I understood the question to refer to expert witness testimony in general, not particular -- not this particular witness. I have no problem with examination regarding this particular witness' mode of operation.
THE COURT: Yes, I think we need to limit it to his --
MR. BULLOCK: Yes, Your Honor, and I intended it to be limited that way.

Page 63

THE COURT: Okay.
BY MR. BULLOCK:
Q. Is it normal for someone else to select what you review when you're rendering an expert opinion?
A. To the extent that in many of the cases we work on, files and documents for our review are provided to us rather than us going into and myself going into either EPA or State offices and, in effect, going through the State or the EPA files to look for materials.
Likewise, we rarely receive discovery materials directly as part of our support on a case. So, I would say no, having -- being sent materials is fairly common.
Q. Did you ask to see any other materials other than what was provided to you?
A. Certainly at various points in times, conversations took place where I -- where we asked whether certain materials were available, I'm sure.
Q. All right. Do you remember what additional information was forwarded to you?
A. No.
Q. Okay. Who selected the information that was sent to you?
A. I couldn't specifically say.
Q. Okay. Who signed the cover letter that came to you?
A. A certain amount of material was received from

Page 64

Mr. Jacobs; certain material was received from Mr. Kwan.
Q. Anybody else?
A. I'm trying to recall. I believe some of the materials that I received were signed by Mr. Bartlett.
Q. By Mr. --
A. -- Byron Bartlett. I believe that was materials received from the County.
Q. All right. Who did you have phone conversations with about whether or not other information existed?
A. Probably Mr. Jacobs and Mr. Kwan.
Q. Did you review the Environmental Sciences and Engineering August 1987 report to Florida Cities?
A. That would have been the preliminary engineering report?
Q. Correct.
A. Yes.
Q. Okay. The ESE report examined various options, isn't that true?
A. Yes, that is true.
Q. And these were options regarding how -- what would -- how the Waterway Estates effluent would be disposed of, isn't that correct?
A. Yes.
Q. All right. Let me refer you to the report which is Florida Cities' Trial Exhibit 194.

Page 65

Let me first ask you, this is the report we've referred to a few minutes ago?
A. Yes, this appears to be it.
Q. And you reviewed this in preparation of providing your opinion on behalf of the Plaintiff?
A. Yes.
Q. All right.
MR. BULLOCK: Your Honor, I would move that Florida Cities' 194 be moved into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Let me first discuss the issue of spray fields and/or percolation ponds.
First of all, the Waterway Estates facility is in a residential district, is it not?
A. Yes, it is.
Q. Do you have any opinion about how large a percolation pond, or ponds, would have been required to handle the Waterway Estates effluent?
A. Without seeing specific percolation tests for the area, in other words, for the soil characteristics of the area, I couldn't give you an estimate.
Q. Have you performed any tests yourself?
A. No.
Q. You are not, by background, a hydrogeologist, are you?

Page 66

A. No, I'm not.
Q. And you have no particular experience with the hydrogeology in Florida, do you?
A. No.
Q. Now, let me refer you to Page 6.6 of the exhibit, the ESE report.
MR. BULLOCK: Your Honor, the page numbers are in the upper right-hand corner.
Your Honor, can I hand this to the Clerk? I didn't know if you wanted her to have a copy of it or not.
THE COURT: Yes.
MR. BULLOCK: Okay.
I just handed a copy of the report to his Law Clerk.
MR. JACOBS: It's an additional copy of the same --
MR. BULLOCK: Of the ESE report. It's the same exhibit.
THE COURT: So that you won't think that there is some impropriety here, I asked a few minutes ago for retrieval of a duplicate copy of a report so that my Law Clerk could follow along, Ms. Lasso, and that's what he was offering to do.
So, if you have an extra copy, if we're going to spend any time on a document, I would appreciate it, if

Page 67

there is a spare document that is convenient, or if there are duplicates, Plaintiff's and Defendant's, then you can go ahead and tender another copy so we can follow along -- so she can follow along as well.
MR. BULLOCK: And I saw that, Your Honor; that's why I went ahead --
THE COURT: I understand.
Apparently Mr. Jacobs didn't understand that.
MR. JACOBS: No, I didn't understand.
THE COURT: I wanted to make sure that there was no suggestion of any impropriety there.
MR. JACOBS: I didn't think there was, Your Honor; I just wanted to know what was going on.
THE COURT: Right.
MR. JACOBS: Thanks.
BY MR. BULLOCK:
Q. Referring again to Page 6.6, ESE did calculations for the size, number and configuration of percolation ponds that would be necessary at Waterway Estates, isn't that correct?
A. Yes, that is correct.
Q. Okay. And the pond system required, according to ESE's calculations, 140 acres, isn't that correct?
A. Yes.
Q. And as you said a minute ago, you haven't performed any alternative calculations, isn't that correct?

Page 68

A. Yes, that is correct.
Q. All right. You testified that Florida Cities could have -- excuse me.
Your report on Page 21 states that Florida Cities could have constructed adequately-sized percolation ponds to handle the Waterway Estates flow.
Is that a correct reading of page -- that portion of Page 21?
A. Yes, that's a correct reading.
Q. All right. Isn't it true that ESE found that there was not adequate acreage available for the Waterway Estates facility to build percolation ponds?
A. Well, ESE found that there was not adequate acreage, as the report describes, within the service area. So, my interpretation of the report was that the limits of the investigation was, in fact, the Waterway Estates service area itself, and not the areas surrounding the service area.
So, not finding myself limited to that particular area, I did not see a reason to believe that there was not the possibility of an area outside that immediate service area for construction.
Q. But you didn't investigate to determine where that land might be, did you?
A. I did not carry out an investigation to specifically identify what pieces of property might have been available

Page 69

at that point in time.
Q. Okay. Do you know what the closest piece of property that might have been available at that time was?
A. No, I do not.
Q. So, you don't have any idea about how far away from the plant these ponds would have been?
A. No, because, again, Florida Cities and its consultants didn't apparently carry out such an investigation, or at least I have not seen documents to that effect, so no, I did not have that information available.
Q. All right. Are you aware of whether or not there are any Lee County ordinances that would be relevant to percolation ponds in a residential district?
A. I'm not specifically aware of what Lee County's ordinances are in that regard, no.
Q. All right. Are you aware of any FDER regulations regarding perc ponds in a residential district?
A. Excuse me. To the extent that there are certain requirements to protect the public as far as buffer zones and that sort of thing.
Q. Okay. Do you know how large the buffer zone would have to be?
A. It would depend on the size of the pond and the characteristics of the wastewater, I believe, put into it; but I couldn't tell you exactly what buffer zone would be

Page 70

required.
Q. You stated that permitting should not have been overly burdensome. I believe you just testified a minute ago that you're not aware of what the Lee County requirements would have been to permit this facility, are you?
A. Not specifically, but that was my belief.
Q. Okay. So, you really don't have any basis for your opinion that permitting this facility would or would not be burdensome, isn't that correct?
A. That was based only on the understanding of fairly widespread use of ponds in Florida, and those ponds being located in -- or in relatively close proximity to residential areas.
Q. But as to this particular permitting, you don't have any basis for this statement?
A. Other than that just stated.
Q. Aren't most percolation ponds right on the site of a treatment facility?
A. I couldn't speak for "most percolation ponds." Those I have seen have been.
Q. In your general experience, they have been?
A. Yes, in my experience.
Q. And how far away from a plant is it practical to have a percolation pond?
(Pause.)

Page 71

A. Depending on the characteristics of the terrain, a pond could be located quite some distance, since the terrain would tend to influence pumping costs.
In an area such as Florida where, in fact, the land is quite flat, I wouldn't see any reason that such a pond couldn't be located a number of miles away.
Q. That would require construction of a forced main between the plant and the pond?
A. Yes.
Q. All right. And you would have to construct a forced main at Waterway Estates through a residential neighborhood, wouldn't you?
A. Yes.
Q. Which would require other permits, would it not?
A. Yes.
Q. You have no opinion as to how much building perc ponds at Waterway Estates during this period of time would have cost, do you?
A. I have not carried out such a detailed estimate, no.
Q. You indicated that Florida Cities, in your words, on Page 21 appeared to have readily identified two golf courses capable of accepting AWT treatment effluent. And, again, that's in the second bullet point on Page 21.
A. Yes, I see that.
MR. BULLOCK: Your Honor, we have another copy of

Page 72

this report. I don't know if we should hand one up for your Clerk or --
THE COURT: That would be helpful.
You're talking about this witness' report, Mr. Klingenstein's report?
MR. HIRD: Your Honor, the copy that's being handed up is mine, and I would hope that -- and the tabs are tabs that I have put on it, so I hope that I could retrieve it for my cross.
THE COURT: Yes, sir. Certainly.
MR. JACOBS: Your Honor, if Mr. Hird needs his -- all the originals are in a box, I believe, at the hands of the Deputy Clerk, or thereabouts, and if the Law Clerk wants to make reference to those, we'll be happy to fetch them.
MR. HIRD: I have no problem with her using it now, Your Honor. It's just when I do my cross, I will need it.
THE COURT: Okay. Thank you.
Ignore the stickies, Maria.
THE LAW CLERK: Okay.
MR. BULLOCK: That would be better than trying to read my handwriting, Your Honor.
MR. JACOBS: No objection to the stickies, Your Honor.
THE COURT: Okay.

Page 73

BY MR. BULLOCK:
Q. Let me refer you in the next series of questions to Page 6.5 of the ESE study.
First of all, in order to discharge treated effluent onto a golf course, wouldn't Florida Cities have had to build an AWT upgrade at Waterway Estates anyway?
A. Yes.
Q. Now, ESE identifies on Page 6.5 two golf courses: El Rio, which is a 30-acre golf course, and Lochmore, which is an 18-hole track of 93 acres, is that correct?
A. Yes.
Q. All right. ESE goes on to note in the middle of the page, the last sentence of that middle paragraph, During dry weather, the golf courses apply approximately 200,000 gallons a day on Lochmore and 50,000 gallons a day on El Rio. Isn't that correct?
A. Yes, that is.
Q. All right. Do you have any opinion about how much they apply when it rains?
A. They would apply less.
Q. As a matter of fact, they may not apply anything at all on rainy days, isn't that correct?
A. That's entirely possible.
Q. Now, the minimum area of land needed to handle the Waterway Estates plant, according to ESE, was 220 acres,

Page 74

which includes 180 acres of wet area, five acres of storage, and a 35-acre buffer zone, isn't that correct?
A. Yes.
Q. The golf courses together only add up to 123 acres, if my math is right?
A. Yes, that's correct.
Q. All right. And that is approximately a hundred acres less than the land that was actually needed, isn't that correct?
A. Yes, that is.
Q. All right. And that would not have allowed discharge every day particularly during wet weather, isn't that correct?
A. That is correct.
Q. All right. So, these two golf courses together would have been inadequate to handle spray irrigation from Waterway Estates, isn't that correct?
A. Yes, that is correct.
Q. All right. The other area identified was identified as a 159-acre tract owned by Gerald and Mary Moody, isn't that correct?
A. Yes.
Q. And isn't it true that ESE approached the Moody family about selling this land?
A. That's the characterization of the report.

Page 75

Q. And isn't it true that the Moodys were not interested in purchasing that land?
MR. JACOBS: Objection. The witness can testify from the report, but he can't testify as to facts about whether ESE approached the Moody family. He has no basis.
THE COURT: Well, I don't know whether he does or not. He may have talked to those people and may have formed the basis of his report. If he hadn't, he can testify.
MR. BULLOCK: I'll withdraw the question, Your Honor, and ask it again.
THE COURT: All right.
BY MR. BULLOCK:
Q. Mr. Klingenstein, did you ever talk to the Moody family?
A. No, I did not.
Q. All right. And does the report indicate that ESE talked to the Moody family?
A. The report indicates that Florida Cities talked to the Moody family.
Q. Okay. And does the report indicate whether or not the Moody family was interested in selling the property?
A. It indicates – would indicate that they were not.
Q. Okay. 159 acres would have been inadequate to handle the discharge from Waterway Estates, wouldn't it?
A. It would appear to have been, yes.

Page 76

Q. All right. Because even during extremely dry weather, 159 acres was below the minimum of 220, correct?
A. Yes.
Q. And it would have been even less effective during wet weather?
THE COURT: Is that correct?
THE WITNESS: Yes, that would be correct.
THE COURT: You need to put your questions in the form of questions.
MR. BULLOCK: Yes, sir.
THE COURT: Let's take a ten-minute recess.
(A recess was taken.)

MR. HIRD: Your Honor.
THE COURT: Yes, sir.
MR. HIRD: Before Mr. Bullock resumes, Avatar Holdings would designate as its corporate representative Mr. Leon Levy. When he comes in the Courtroom, I will identify him. He should be in some time today.
THE COURT: Very well. Thank you.
All right, Mr. Bullock.
MR. BULLOCK: Thank you, Your Honor.
BY MR. BULLOCK:
Q. Going back to page 6.5 of the ESE study, you stated that Florida Cities never seriously pursued spray irrigation as an option on page 21 of your report.
Isn't it true that the ESE report presented sufficient information for Florida Cities to have determined that spray irrigation was not a viable option for the Waterway Estates Facility?
A. Based on my review of the report, I did not glean sufficient information to ascertain that other sites were not available, particularly those outside of the Waterway Estates service area, and that if such sites were available, whether or not they would be practical to use.
Q. Okay.
So you didn't do any research on that yourself either?
A. Not as to what was available at that point in time, no.

Q. All right.
Nor did you do any research or calculation about how much it would have cost to move the effluent from outside of the service area on a spray field or golf course; you don't have any opinion about that, do you?
A. Well, that would depend. Such cost would depend on the particular location of the site identified, so without specific sites being identified, it would not be practical to carry out such an evaluation.
Q. Okay.
I believe I may have asked this earlier, let me ask specifically, the next topic we want to discuss about is do deep well injection -- have you ever attempted to permit a deep well in the State of Florida?
A. No, I've not.
Q. Have you undertaken any research about the hydrology in the Lee County area as to its suitability for deep wells?
A. To the extent that I have had conversations with FDER personnel with regard to -- with regard to that possibility.
Q. Can a deep well be used as a primary disposal of treated effluent?
A. I believe reuse, surface reuse is also typically required.
Q. If -- all right.
Is deep well -- if you have a deep well as a primary

source of discharge, do you have to have an additional deep well as a backup in Florida?
A. I don't believe that specifically a second deep well has to be installed.
Q. All right.
Let me refer you to page 6.7 and the word "underground injection." Would you read the heading, first two sentences, please.
A. Underground injection at the WTP requires two, one, parentheses, one MGD capacity class one effluent disposal wells. The second injection well will serve as a backup as required by the FDER.
Q. This paragraph goes on to say that FDER is presently favorable toward deep wells, correct?
A. Yes, it does.
Q. All right.
This paragraph goes on to say that the public opinion in North Fort Myers would likely be strongly opposed to deep wells, does it not?
A. That is the report's characterization.
Q. All right.
The report also characterizes the South Florida Water Management District as being somewhat concerned about the proliferation of deep wells in this area of Florida, isn't that correct?

A. That is the report's characterization.
Q. And this concern is characterized because the South Florida Water Management District was concerned about, that the water injected in the deep wells is basically a non-recoverable resource, correct?
A. Yes.
Q. All right.
What is the South Florida Water Management District?
A. It is one of the local water management districts within Florida.
Q. And can you tell me what regulatory authority it has?
A. I believe such authority is as granted to it by the State.
Q. Have you reviewed in fact what regulatory authority is granted to the water management districts?
A. I know I'm not fully aware of all of its regulatory authority.
Q. All right.
And you indicated that reuse was a requirement when deep wells were involved, is that correct?
A. I believe some form of backup or some form of firm disposal is a requirement.
Q. Okay.
And that would be in case the deep well failed?
A. I believe so.

Q. All right.
And who would have required the reuse?
A. I would believe it would be likely the water management district.
Q. All right.
And the reuse would have required sufficient backup to handle the capacity of the plant?
A. Yes.
Q. And ESE has already identified that according to their report -- let me start over again.
Isn't it true ESE was unable to find any suitable discharge for surface water or, in this instance, for spray such as spray fields, golf courses, et cetera?
MR. JACOBS: Objection, it's one thing again to ask him to testify about the report, but when he gets into exactly the underlying investigation that ESE or ESE might not have done, I believe it's beyond the scope of this witness' expert testimony.
THE COURT: Well, I'll overrule the objection. If he doesn't know, he doesn't know.
THE WITNESS: Not having a contact with ESE with regard to what investigations they might have carried out, I would say only given the limitations that are of the investigation.
BY MR. BULLOCK:

Q. Isn't it true in their report that their report states they were unable to find adequate spray irrigation pockets?
A. I believe the way the report characterizes it, these were the particular locations that were identified within the service area.
Q. The facts indicated that that area was inadequate for the discharge of the capacity of the plant, isn't that correct?
A. That those sites that were identified were inadequate, yes.
Q. Okay.
You also -- strike that.
Isn't it true, Mr. Klingenstein, there was no State requirement to upgrade Waterway Estates to an advanced wastewater treatment plant until 1988?
A. I believe there was a State requirement for them to upgrade the plant by 1988.
Q. And where do you find that requirement?
A. I believe there may have been a requirement in the previous permit.
Q. Which permit would that have been?
A. I couldn't say for certain.
Q. You have reviewed the 1981 State permit, have you not?
A. I'm sorry.
Q. Earlier to this morning, we reviewed the 1981 FDER permit for Waterway Estates, correct?

A. Yes, we did.
Q. And we reviewed the 1983 permit for Waterway Estates issued by FDER, correct?
A. Yes, we did.
Q. Let me refer you to Trial Exhibit 33 which is the 1983 permit which we've already looked at before. I'm sorry, I told you the wrong number.
Let me refer you to Exhibit 20 which is the 1983 permit. You have Exhibit 20 in front of you?
A. Hold on.
Q. Florida Cities Exhibit 20?
A. Hold on for a minute.
Q. Would you take a minute and identify for me where in the 1983 permit there is a requirement for Waterway Estates to upgrade to advanced wastewater treatment.
A. No, there's no requirement.
Q. Let me show you -- let me ask you to look at Exhibit 17 which was the 1981 permit, and ask you whether or not you can find a requirement in the '81 permit to upgrade AWT?
A. No, there was no requirement.
Q. Let me refer you then -- strike that.
First, isn't it true then there was no requirement before 1988 from the State of Florida for the Waterway Estates Plant to be upgraded to advanced wastewater treatment?
A. I can't answer that from memory.

Q. All right.
Let me refer you to Exhibit 33 which is the 1988 State permit. Let me refer you to actually the second page of the exhibit, it's entitled page 1 of 6. This is the first permit -- excuse me -- isn't this the first permit that requires an upgrade to advanced wastewater treatment?
A. This permit does require upgrade to advanced wastewater treatment.
MR. BULLOCK: We would move Defendants' 33 in evidence.
THE COURT: It'll be received.
BY MR. BULLOCK:
Q. Let me also refer you to Defendant Florida Cities' 51. Can you identify Exhibit 51?
A. Yes, this is -- this is covered by cover letter October 30, 1990, and it is apparently an extension of the Waterway Estates permit.
Q. And this extension grants an extension, isn't it true, this extension grants an extension of the construction of AWT until September 1, 1992?
A. The permit was extended until September 1, 1992.
MR. HIRD: The corporate representative of Avatar Holdings, Mr. Leon Levy, is now present.
THE COURT: Yes, sir.
BY MR. BULLOCK:

Q. Now, are you aware of any other permits issued by the State of Florida to Waterway Estates between 1983 and 1988?

THE COURT: Would you ask that question again, please.

BY MR. BULLOCK:

Q. All right.

Sir, we have looked at the permits, Mr. Klingenstein, 1981, 1983, 1988 and 1990. Are you aware of any other permits between 1980 and 1990 from the State of Florida to the Waterway Estates Facility?

A. Not that I'm aware of.

Q. All right.

MR. BULLOCK: Your Honor, we would move that Florida Cities' 51 be admitted in evidence.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Isn't it true, Mr. Klingenstein, that you're unaware of any other requirement of the State of Florida to upgrade the Waterway Estates Treatment Plant, AWT, other than the 1988 and 1990 permits?

A. Trying to refresh my memory as to whether there was another State requirement; perhaps under an order to have this take place by the end of the term of the permit which expired in 1988.

Q. But in fact, you don't remember whether or not that

existed or not as you sit here today, do you?

A. At this moment, I do not recall.

Q. Let me refer to what has already been admitted in evidence as Florida Cities' Exhibit 195. Let me refer you to page three of the administrative order.

Isn't it true that paragraph one on page 3 of this exhibit contains a construction schedule for the construction of an advanced wastewater treatment plant at Waterway Estates?

A. Yes, it does.

Q. All right.

Are you aware of any earlier requirement other than this administrative order from EPA which required the construction of an AWT facility at Waterway Estates?

A. Not that I'm aware of.

Q. On page 21 of your report, you have stated that Florida Cities could have avoided discharge to an unpermitted location by extending the outfall in a timely manner; that would be the bottom paragraph.

A. Yes, that's correct.

Q. All right.

Isn't it true that Exhibit 195 contained the first requirement from EPA to Florida Cities to move the outfall at Waterway Estates?

A. Florida Cities' first notification of the need to address their situation would have come, in my mind, when the Cape

Coral Facility became non-reality and they should have recognized the need to have addressed their situation and put in place measures to have allowed them to discharge at the proper location.

MR. BULLOCK: Your Honor, I move to strike as non-responsive.

THE COURT: Ask the question again.

BY MR. BULLOCK:

Q. Isn't it true that the first requirement from the Environmental Protection Agency to Florida Cities to move the outfall of the Waterway Estates Plant occurred in Exhibit 195?

THE COURT: I'll grant your request and strike the answer.

THE WITNESS: Certainly with regard to notification from EPA, in my mind, the tentative denial of the permit and the basis for that denial should have put Florida Cities on notice that they had need to take action and, in fact, correspondence indicates such that Florida Cities was aware at that point to the need to take such action.

MR. BULLOCK: I would also move to strike, too, there is no requirement in the 1986 permit denial.

THE COURT: I'll let it stand for what it's worth.

BY MR. BULLOCK:

Q. Okay.

Did any of the earlier administrative orders issued by

EPA in 1987 and 1988 order Florida Cities to move the outfall?

A. I would need to refresh my memory by looking at those orders.

Q. As you sit here today, though, you can't remember whether or not they did or not.

A. As I said, I need to see those orders to refresh my memory.

Q. Let me refer you to Florida Cities' Exhibit 23. Could you identify Exhibit 23?

A. This is a letter dated June 30, 1986. It is to Mr. Patrick Layman and it's from Ms. Connie Kagey and it is a letter that is entitled NPDES Permit Denial, Waterway Estates, NPDES Permit Number.

Q. Can you identify where in this document there is the language that directs Florida Cities to move its outfall?

A. There is not language specifically requiring Florida Cities to move its outfall.

Q. So my question which we go back to is, isn't it true that the September 26th administrative order, September 26, 1989 administrative order, which is 89-109, is the first requirement from the Environmental Protection Agency for Florida Cities to move the outfall; yes or no?

MR. JACOBS: Again, Your Honor, I'd ask that the witness be permitted to look at all the administrative orders and not skip over some.

THE COURT: Well, if he needs to, if he has to do so, then I'll permit him to do so.

THE WITNESS: I would like to see the additional administrative orders, if I could.

(Pause.)

THE COURT: You're -- never mind.

BY MR. BULLOCK:

Q. Let me refer first --

THE COURT: You don't recall at this time; is that correct?

THE WITNESS: Yes, Your Honor.

THE COURT: All right.

Now if you want to, on redirect, to present him with those documents, you can. I think that is a better way to handle it at this point.

MR. BULLOCK: Your Honor, may we refer him to the documents? I'll handle it either way.

THE COURT: Your -- I'll permit you to do that if you want to.

MR. BULLOCK: I don't want to hold us up needlessly.

THE COURT: Okay.

BY MR. BULLOCK:

Q. Let me refer you first to Florida Cities' Exhibit 28 and then Exhibit 52, and ask you if in those documents you find any direction for Florida Cities to move the outfall of this

facility?

MR. JACOBS: Your Honor, objection to 52. It's one page of -- it's just one page, doesn't seem to be complete.

THE COURT: Well, he's asking him to -- well -- I don't know. What is 52? That's not in evidence, is that correct?

MR. BULLOCK: Not yet, Your Honor.

Your Honor, 52 is an amendment to Exhibit 28.

MR. JACOBS: I'll withdraw the objection with the understanding that it's incomplete, if that would assist in moving things along.

MR. BULLOCK: Your Honor, it's also Plaintiff's 382.

THE COURT: One page?

MR. BULLOCK: That I do not know, but our Exhibit 52 is their 382.

THE COURT: Well, take a look at Plaintiff's 382 and see what we have got because what I have in my binder is one page of what purports to be an amendment to the order.

MR. JACOBS: Your Honor, I withdraw the objection.

THE COURT: All right.

Do we have a question on the floor?

BY MR. BULLOCK:

Q. Is there anything in the '87 administrative order or the amendment thereto which directs Florida Cities to move the outfall of this facility?

A. Certainly not with regard to 52, not on that page and there's nothing in Defendants' Exhibit 28 that specifically requires the movement of an outfall or relocation of outfall.

MR. BULLOCK: Your Honor, I would note for the record the Plaintiff's version of this exhibit is also one page, I believe.

THE COURT: Okay.

I think that is why he withdrew his objection.

BY MR. BULLOCK:

Q. Isn't it true that the 89-109 administrative order gave Florida Cities until August 1, 1991 to complete the construction of the outfall?

A. I believe that was the date. We have unfortunately taken that exhibit away. Yes, I recall that was the date.

Q. Okay.

A. I'm sorry, that was the completion of outfall or upgraded facility.

Q. Completion of outfall?

A. Could I see that again, please.

Q. Exhibit 195.

A. I believe the date complete construction ceased discharge at current location, August 1, 1991.

Q. Isn't it true that the outfall was completed and put into service on July 14, 1991?

A. I recall it was in July of 1991, yes.

Q. All right.

That would be ahead of the schedule put forth in Exhibit 195, the construction schedule?

A. That would be ahead of that date.

Q. Isn't it true that in order to move the outfall, Florida Cities had to have a Section 404 Dredge and Fill Permit from the Army Corps of Engineers?

A. Yes.

Q. All right.

And in your experience, would it ever be possible for a construction project such as the Waterway Estates outfall to be moved to the six foot contour line without a Section 404 Permit?

A. I'm not aware of how that would be done.

Q. Isn't it true that Florida Cities filed for a dredge and fill permit on April 7, 1989?

A. I can't recall the date that they filed.

Q. Isn't it true that the Corps of Engineers did not grant this permit until April 11, 1990?

A. I believe it was in April, 1990, that if memory serves.

Q. Let me refer you to Exhibit 42, Florida Cities'. Would you identify Exhibit 42?

A. It is a letter from the Department of Army enclosing the construction permit with notice of authorization.

MR. BULLOCK: Your Honor, we would move Exhibit 42 in

evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true that Florida Cities was required to obtain building permits from Lee County before it began construction on either the AWT upgrade or the plant outfall?

A. Yes, that was true.

Q. Are you aware of how many permits the Florida Cities Waterway Estates Project had to obtain in order to construct the outfall and upgrade the plant?

A. I couldn't give you an exact number.

Q. Okay.

Do you know how many different permitting facilities Florida Cities had to apply to to obtain permits to construct the outfall and upgrade the plant?

A. I'm aware they had to get the permitting through the Army Corps of Engineers for the outfall, State permit and county permit.

Q. Do you know which county permit?

A. No, I'm sorry. County permits, in other words, that was a permit required from the county.

Q. Do you know how many permits from the county were required?

A. No, no, I do not.

Q. If you assume with me that the first requirement to move

the plant outfall came on September 26, 1989, isn't it true that it was physically and legally impossible to move this outfall by November 1, 1989?

MR. JACOBS: Objection, calls for a legal conclusion.

THE COURT: I'll permit him to answer it if he knows.

THE WITNESS: I'm sorry, your starting date was again?

BY MR. BULLOCK:

Q. If you assume with me the first time Florida Cities was required by the Environmental Protection Agency to move the outfall was September 26, 1989, wasn't it both physically and legally impossible to have the outfall moved by November 1, 1989, the effective date of the NPDES permit?

A. Assuming that no action had been taken on Florida Cities up to that point in time, yes, that would have been very unlikely.

Q. Are you familiar when Florida Cities applied to Lee County for a zoning variance to expand the building for the AWT construction?

A. I would need to refresh my memory on that, Counsel.

Q. Okay.

But as you sit here today, you're not aware of it?

A. Not the exact date, no.

Q. Did you review the Lee County applications for zoning variances?

A. I don't know if I reviewed the entire applications.

Q. All right.

Are you aware of when Florida Cities applied for a development ordinance exemption?

A. I would also need to refresh my memory.

Q. Do you even know what a development ordinance exemption is?

A. It is obviously exemption that is granted by that particular body with regard to certain ordinances involving facilities that are being built within the particular area, but I can't tell you specifically what is being exempted.

Q. You're just speculating as to what those are, is that correct?

A. In fact, I'm not speculating as to what those are.

Q. You've never filed any permit applications or anything like that, though, have you, in Lee County?

A. No, I have not.

Q. Are you aware of whether or not Florida Cities could have started construction of the AWT upgrade or the plant outfall before they received permission from Lee County?

A. I believe it needed Lee County's permission.

Q. Let's move now to the permits, exceedences of the NPDES permit. Isn't it true that the only parameters which were actually exceeded after the plant outfall was moved was nitrogen from August through April of the next year?

A. I believe, if I recall, yes, it was nitrogen violations.

Q. In fact, Florida Cities was meeting the other removal of the other pollutants in the effluent at AWT levels, isn't that correct?

A. I believe they were complying with their other permit requirements.

Q. And isn't it true that even during the interim in which there were actual exceedences of nitrogen, the Florida Cities had raised its level of nitrogen removal above secondary treatment levels.

A. I'm sorry, could you repeat that?

Q. Isn't it true that between August of '90 and April -- August '91 and August -- April of 92, that even though there were nitrogen exceedences, Florida Cities had raised the level of nitrogen removal in its effluent to above secondary treatment levels?

A. I believe there was an improvement in nitrogen removal.

Q. The answer to the question is yes?

A. Yes.

Q. The effluent limitations that were in effect between November 1, 1989 and August of '91 were contained in the administrative order that you've looked at earlier which would be Exhibit 195?

A. I'm sorry, that was within -- between which two dates?

Q. November 1, '89 -- or excuse me, it would be September 26, '89 through August of '91?

A. That should be true.
Q. All right.
And isn't it true there were no violations of these administrative order effluent limitations?
A. Yes, I believe that was true.
Q. All right.
Isn't it true that the State of Florida through the FDER allowed Waterway Estates to discharge secondary treatment levels until September of 1992?
A. I would need to go back and again refresh my memory on that document as to the specific date, but --
Q. Well, we looked earlier at the 1988 and 1990 State permits, correct?
A. Correct.
Q. And the 1988 and '90 State permits contained construction schedules, do they not?
A. Correct.
Q. And the 1990 permit was an extension of the construction deadlines, correct?
A. Yes, it was.
Q. Let me refer you to Exhibit 51. Isn't it true that Exhibit 51 in fact extends the construction schedule until September 1, 1992?
A. Yes. The subject permit was extended until September 1, 1992.

Q. In reviewing the decisions that Florida Cities made regarding the Waterway Estates Wastewater Treatment Plant, isn't it true that you don't take into account any consideration that Florida Cities was required to make regarding the Public Service Commission of the State of Florida?
A. No, I would not say that is true.
Q. Okay.
What considerations do you refer to in your report regarding the Florida Public Service Commission?
A. I don't recall whether I specifically made reference to the Florida Public Service Commission in my report.
Q. And I believe you testified this morning that the only information that you reviewed regarding the Florida Public Service Commission was correspondence back and from Florida Cities, I believe, to FDER; I'm not sure that I remember exactly the characterization.
A. Correspondence regarding issues regarding the Florida Public Service Commission.
Q. But you never reviewed any correspondence regarding the Florida Public Service Commission?
A. No, I believe I said I reviewed --
Q. I'm sorry.
A. Yeah.
Q. I'm sorry, let me withdraw that, sir.

You never reviewed any correspondence between Florida Cities and the Public Service Commission?
A. I can't tell you that. I don't recall exactly whether it was included correspondence between the Florida Public Service Commission and Florida Cities.
Q. Do you know whether or not the Florida Public Service Commission ever ruled on the prudency of Florida Cities' decision to expand the -- upgrade the AWT and the corresponding construction?
A. I'm aware of documents that discussed or indicated some testimony had been given at rate hearings, so I would assume there is likelihood that they did.
Q. Okay.
And you don't know the outcome?
A. I don't know the exact outcome, no.
Q. All right.
Earlier in your testimony, we reviewed some of the other cases that are listed in your resume for cases that you previously provided either expert testimony or consulting, and I believe that a number of those involved manufacturing facilities, isn't that correct?
A. Yes, it is.
Q. A manufacturing facility has different financial considerations than a privately owned publicly regulated utility, does it not?

A. I would say it has some that are similar and some that are different?
Q. All right.
And one of the -- how would you distinguish the differences?
MR. JACOBS: He's not being offered as an expert for purposes as it goes into finances. They objected when I got into that with him.
MR. BULLOCK: Your Honor, he's offered opinions about the motivations of why the company did or did not undertake certain activity. He's offered motivational opinions about whether or not the company was following the Clean Water Act and why it was and why it wasn't. I believe that --
THE COURT: All right.
What is it you're seeking to elicit from him now?
MR. BULLOCK: Shall I rephrase the question?
THE COURT: Yeah.
BY MR. BULLOCK:
Q. All right.
Isn't it true, Mr. Klingenstein, that a manufacturing facility -- that it behooves a manufacturing facility to not spend money on upgrades for environmental related construction?
THE COURT: All right.
I'll permit him to answer that.
THE WITNESS: I don't know that I would completely

agree with that.

THE COURT: Well, now, I think we're getting a little afield here. Now you have questioned him regarding his experience in some of the instances in which he has performed consulting services which relate to other than public/privately owned wastewater treatment facilities. But I think we're getting a little afield here. You want to be heard any further on this?

MR. BULLOCK: Your Honor, my only comment would be that he is offering opinions as to why Florida Cities made certain decisions and I would like to investigate whether or not he knows the differences between regulated utilities and the other types of facilities that he's investigated to determine whether or not his assumptions on why certain decisions were made are valid.

THE COURT: Yes, sir.

MR. JACOBS: The assumptions he made and the question I posed yesterday had to do with technology and whether an option was technologically feasible. I didn't get into this area of analyzing the difference between a publicly operated wastewater treatment plant, a privately upgraded wastewater treatment plant. We just didn't open the doors to those types of questions, Your Honor.

MR. BULLOCK: Your Honor, there are several references in his opinion.

THE COURT: Well, I'm going to allow it for what it's worth and if you want to get into it further on redirect, Mr. Jacobs, you can.

All right, go ahead.

BY MR. BULLOCK:

Q. Mr. Klingenstein, isn't it true that the only way that a regulated utility can earn a return on investments is to have that included in its rate base -- capital investment included in its rate base?

A. I would assume with the exception of any investment they might make that they might be able to later sell for profit, perhaps, but I would assume that in terms of when they own the investment, it would need to be on a rate base.

Q. So that isn't it true then that there is no benefit from an avoid cost of not spending money on capital expenditures for environmental protection?

A. Again, to the extent that I'm qualified to answer the question, my understanding of the process is that such an entity has to go to its regulatory body and in effect obtain approval for the inclusion of that expenditure in the rate base and that there is often concern on the part of such an entity as to whether or not the particular expenditure will be found appropriate for inclusion in the rate base.

And to the extent that an expenditure would be made, say that would be more expensive, but would be more timely and

therefore would meet a particular deadline, but would end up resulting in a higher cost to be passed along to the users, those in the rate base.

I would assume there is a risk that that additional cost might have to be borne by the company itself.

Q. But you would agree with me that the company's legitimate concern is that the Public Service Commission find that its expenditure is to be prudent?

A. I'm certain from a business standpoint, not being qualified as an expert in business matters, but as a business matter, I would assume it's of concern to them.

Q. Thank you.

Let's turn now to the Carrollwood facility. Did you interview anyone at EPA Region IV about Carrollwood?

A. Mr. Ken Kwan.

Q. And did Mr. Kwan state whether or not he had investigated the Carrollwood Facility during the period of time at issue in this lawsuit?

A. I can't remember specifically whether he used the word "investigated," but we discussed the facility.

Q. Did he indicate to you whether or not he had visited the Carrollwood Facility while it was in operation?

A. That I don't recall.

Q. Did you interview Mr. Thomas Pfaff?

A. No, I don't believe Thomas Pfaff and I have ever spoken

about Carrollwood.

Q. The NPDES permit which was effective July 1, 1991 for Carrollwood was an advanced wastewater treatment facility, correct?

A. The permit limits that it included would typically be expected to require an AWT Plant in order to meet them.

Q. Have you ever seen a secondary plant with the limitations contained in the July 1, 1991 permit?

A. Not that I recall.

Q. All right.

Isn't it true that it would be technically impossible for a secondary treatment plant to consistently meet all of the parameters in the July 1, 1991 permit?

A. Would certainly be very unlikely.

Q. Isn't it true that between July 1, 1991 and January, 1992, the Carrollwood Plant in fact met some of the limitations, particularly those for total suspended soilient and biological oxygen demand?

A. Yes. As I recall, they did meet some of those.

Q. Are you familiar with the measures which Florida Cities took which enabled the plant to meet some of the 1991 effluent limitations in that permit?

A. I don't recall which specific measures they took.

Q. Okay.

Do you know of any data which demonstrates that the

discharges from the Carrollwood Plant between July 1, '91 and January, 1992, caused any environmental harm to Sweetwater Creek?

A. Certainly I've seen data that I believe is from the -- what's known as the STORET System, that looks at the data from I believe mid-1989 through 1994 and splitting that data at the point in time at which the discharge was ceased.

There are noticeable reductions in both phosphorus and nitrogen load in the creek, these from a point several miles downstream from the site of the treatment plant.

Q. And have you made a survey of what other dischargers discharge into this particular body of water?

A. As I recall from the description in Florida Cities' contractor's report, LTI, I don't believe there were any substantial discharges.

Q. There was nine point source runoff in this area?

A. I would suspect there would be some, yes.

Q. This in fact is a heavily urbanized area, is it not?

A. Fairly well developed.

Q. Okay.

Are you able to, sir, with a reasonable degree of scientific certainty, more probably than not, that you can trace the effects you found in the STORET data specifically to the Carrollwood Plant?

A. Not specifically.

Q. Okay.

When did EPA first require Florida Cities to build an AWT Plant at Carrollwood?

A. I can't recall from memory when the first actual requirement to construct might have taken place.

Q. Isn't it true that the first -- strike that. Let me start over again.

Isn't it true that before the July 1, '91 NPDES permits, EPA never took any action which mandated an upgrade to AWT at Carrollwood?

A. As I said, I can't recall.

Q. So your answer actually is no?

A. Well, certainly I can't recall.

Q. Carrollwood had received -- and isn't it true that Carrollwood received an NPDES permit in 1975?

A. I believe that is true, yes.

Q. Isn't it true that between 1975 and January, 1992, the Carrollwood Facility was always authorized to discharge by the State of Florida?

A. I believe the facility operated under a series of permits.

Q. So the answer to my question is yes?

A. Yes.

Q. And are you aware of the Wilson-Grizzle Legislation in Florida?

A. To a certain degree.

Q. And what is your understanding of Wilson-Grizzle?

A. My understanding -- actually my understanding probably relates more to I think what is described as Grizzle-Figg.

Q. My question is about Wilson-Grizzle?

A. Other than being aware that I believe it predated Grizzle-Figg, not in detail.

Q. You don't know the specifics of that legislation?

A. No, not the specifics of that.

Q. Did Florida Cities apply for a renewal of its State discharge permit in 1979?

A. I would assume they did, but I would need to be refreshed as to the specifics of that application.

Q. Okay.

And did the State in fact grant a renewal?

A. That is my recollection.

Q. All right.

Isn't it true that at some point in time in 1979, FDER required that in the future, Florida Cities connect the Carrollwood Plant to a Hillsborough County Plant at a subsequent date?

A. Again, as I said, I recall that there was a reissuance, but I would need to have my recollection refreshed.

Q. Are you aware of whether or not in 1979 there was adequate capacity in any Hillsborough County Facility to accept

the Carrollwood flow?

A. My recollection based on correspondence between Hillsborough County and Florida Cities is no, there was not.

Q. And isn't it true that Hillsborough County is different from other sections of Florida in that Florida has delegated some of FDER's responsibility to Hillsborough County?

A. I couldn't speak for all the sections of Florida. That is apparently the case in Hillsborough.

Q. Let me refer you to Defendants' Exhibit 94. Have you located Exhibit 94?

A. Yes, I have.

Q. Would you identify it, please?

A. It's a letter dated February 14, 1983, to a Mr. A. A. Reeves, and it is on Hillsborough County Environmental Protection Commission letterhead. It's from a William J. Harper. It is a letter that basically states that Florida Department of Environmental Regulation Permit TP29-29206 requires connection to the Carrollwood Wastewater Treatment Plant to the Hillsborough County System by June 30, 1983.

MR. BULLOCK: Your Honor, I would move Defendants' 94.

THE COURT: Be received.

BY MR. BULLOCK:

Q. In fact, to your knowledge, was there capacity in the Hillsborough System by June 30, 1983?

A. Based on correspondence I see, no.
Q. Florida Cities -- let's back up a second.
Florida Cities applied to renew its NPDES permit in 1980, is that correct?
A. 1980 or 1979.
Q. 1980 --
A. Again, I need to have my recollection refreshed.
Q. All right.
Isn't it true that in order for EPA to issue a NPDES permit in a non-delegated State such as Florida, EPA must obtain State certification of the permit?
A. That is my understanding, yes, that's how the system works.
Q. All right.
And to your knowledge, was Florida able to certify --
A. I'm sorry, which year?
Q. Let me finish my question.
A. I'm sorry.
Q. To your knowledge, was Florida able to certify the 1980 application to renew the NPDES permit?
A. I've not seen such or I don't recall anyway seeing such certification, but I understand that a permit was issued.
Q. You understand the 1980 NPDES permit was issued?
A. There was a permit.
Q. Isn't it true that actually that permit application was

denied in 1984?
A. Yes.
Q. All right.
And in fact, wasn't it denied because the State would not certify the permit?
A. If I recall correctly, yes.
Q. Now, you testified that Florida Cities had another option in 1983 to divert the effluent coming into the Carrollwood Plant, is that correct?
A. Yes.
Q. That would be with the City of Tampa, correct?
A. Yes.
Q. And the City of Tampa -- isn't it true that the City of Tampa identified a connection point into its system at approximately fifteen thousand feet from the Carrollwood Plant?
A. I believe they identified three connections, but the fifteen thousand foot connection was available at that time.
Q. Okay.
And fifteen thousand feet is approximately three miles?
A. Yes, sir.
Q. Have you calculated what the cost would have been to build a three mile force plant?
A. I have not carried a detailed calculation of that cost.
Q. Have you visited the area in which the Carrollwood Plant was located?

A. Yes, I believe as I've indicated in my direct testimony we did visit the site of the former plant.
Q. Would you identify the surroundings of the Carrollwood Plant?
A. A residential area.
Q. Is it a relatively upscaled residential area?
MR. JACOBS: Relevancy, Your Honor.
THE WITNESS: I can't --
THE COURT: Wait, wait, wait, wait.
THE WITNESS: I'm sorry.
THE COURT: What's the relevancy?
MR. BULLOCK: Your Honor, during the direct, they were discussing whether or not there were alternatives available. One of the alternatives would have been apparently not drive a three mile force main through a residential --
THE COURT: Overruled. You remember the question?
MR. JACOBS: I'm sorry, I wanted to make my objection a little bit clearer. My point was that there is no -- the point is it's not relevant whether this was an upscale community or not in terms of putting a force main through it. That's the relevancy part of my objection.
THE COURT: I understand. Overruled.
BY MR. BULLOCK:
Q. I'm sorry, the answer to the question was?
A. Could you repeat it.

Q. Was this a relatively upscaled neighborhood?
A. Other than having a general impression of it being a relatively pleasant area, I don't have a particular memory of what type of housing was in there.
Q. Have you performed any calculations about the costs of land condemnation or eminent domain proceedings or easements which Florida Cities would have needed to receive to build a three mile force main?
A. No, I have not.
Q. Do you have any idea what permitting requirements Florida Cities would have had to undertake to build a three mile force main through Carrollwood?
A. Well, certainly construction permits would have been required probably from both local and county.
Q. The City of Tampa was going to charge a connection fee for each of the hookups from -- excuse me -- connection fee of a certain figure per household that discharged into the Carrollwood System, isn't that correct?
A. Yes, I believe that was correct.
Q. And in fact, isn't it true that the tentative figure from the City of Tampa to the Carrollwood Facility was approximately eight hundred --
A. I'm sorry, how much?
Q. Was approximately eight hundred dollars per customer?
A. I recall hearing that figure.

Q. All right.
Isn't it true there would have been other fees as well as the connection fee?
A. I would assume, yes.
Q. All right.
Do you have a complete figure about how much it would have cost to construct a force main and hookup to the City of Tampa?
A. No.
Q. Isn't it true that Florida Cities would have had to submit this proposal to the Florida Public Service Commission or -- excuse me -- or to the Hillsborough County equivalent of the Public Service Commission?
A. I would assume they would have.
Q. All right.
And in that submittal, wouldn't Florida Cities have been required to demonstrate that hooking into Tampa would have been a prudent decision?
A. To the extent that they would have been able to recover the cost as opposed to pay for it out of their own pocket, I believe so, yes.
Q. All right.
During the 1980s, did Hillsborough County ever develop adequate capacity to accept the Carrollwood effluent?
A. Based on the representation in the correspondence, no.

Q. All right.
You have testified that there were other options which the company could have used as disposal methods at Carrollwood, correct?
A. Yes.
Q. All right.
One of the options was percolation ponds. Have you performed any calculation as to how large the percolation ponds would have been required at Carrollwood?
A. No, not independent.
Q. Have you performed any investigation of whether or not there was adequate land in the area at Carrollwood to build percolation ponds?
A. I've not, beyond what I have seen in the 1980 Jamal Report which I believe was entered yesterday.
Q. Did you yourself perform any hydrogeologic studies to determine whether or not there were any suitable sites for percolation ponds?
A. No.
Q. Is the Carrollwood residential subdivision densely populated?
A. I believe it's a reasonably well developed area.
Q. All right.
Do you know how much vacant land was in the area immediately around the plant during the 1980s?

A. Not beyond that which was characterized in the 1984 report.
Q. And how much did the '84 report state?
A. It identified a number of potential sites that had been looked at. It was not inclusive as to whether they were the only available sites in the area.
Q. I believe you identified there were some golf courses which would have -- which the company could have connected to the discharge effluent?
A. I believe the 1984 report looked at one golf course.
Q. Do you know whether or not these facilities were already accepting effluent from other locations?
A. That I can't recall.
Q. Okay.
Again, a golf course can only accept the maximum load during dry weather, isn't that correct?
A. Yes, that is true.
Q. And during wet weather, there would need to be other resources, correct, for disposal?
A. I would assume either storage -- adequate storage or other disposal objectives.
Q. Was there adequate storage available at the Carrollwood Facility?
A. Certainly not as it was constructed.
Q. And in order to discharge effluent to the golf courses,

that would have required AWT treatment?
A. Yes.
Q. Are you aware of whether or not Florida Cities requested permission in 1979 to construct an AWT Plant at the Carrollwood Facility?
A. I would need my memory refreshed as to whether they specifically requested permission to construct.
Q. As you sit there today, you have -- you can't answer one way or the other?
A. I have a recollection there may have been some discussion about AWT, but I can't recall whether they specifically requested the permission to construct.
MR. BULLOCK: The Court's indulgence just a second, Your Honor.
BY MR. BULLOCK:
Q. What materials were made available to you regarding the enforcement issues at Carrollwood?
A. Files from USEPA and files from Hillsborough County. I don't recall whether separate FDER files were reviewed.
Q. All right.
Let me refer you to Florida Cities Trial Exhibit 201.
A. I'm sorry, this is 200, I'm sorry.
MR. BULLOCK: Your Honor, is it in --
THE COURT: No, I don't have that volume.
THE CLERK: That's the one you just gave me.

THE COURT: I thought that went to 200. I thought you said 201.

THE CLERK: It goes to 202.

THE COURT: Oh, I'm sorry.

Well, okay.

(Brief Pause.)

MR. BULLOCK: This is the official copy, it's 201.

THE COURT: Yeah, I have 201.

MR. BULLOCK: I'm sorry.

THE COURT: I didn't think I did. I thought it just went through 200, but I found it now. Thank you.

BY MR. BULLOCK:

Q. Mr. Klingenstein, would you identify Exhibit 201?

A. This is entitled notes on the proposed penalty assessment and it appears to be undated.

MR. JACOBS: Objection to the use of the exhibit before it's been received in evidence, if in fact it is.

THE COURT: Well, hasn't been offered yet. It may well be offered, but I don't know, he hasn't.

BY MR. BULLOCK:

Q. Were you provided the -- we've discussed briefly what you looked at regarding Carrollwood. Were you provided the entire enforcement file for the Carrollwood Enforcement Facility?

A. I was provided materials from the enforcement file. I don't know if I was provided the entire enforcement file.

Q. One of the important aspects in the enforcement file would be the reports from the individuals from EPA that you actually investigated who actually investigated the facility, is that correct?

A. Certainly, yes.

Q. And I believe we established earlier that you never saw this facility when it was in operation, correct?

A. Yes, that is correct.

MR. BULLOCK: Your Honor, we would move Defendants' Trial Number 201 into evidence, the notes and proposed penalty and assessment which were produced from the Plaintiff's own enforcement files.

MR. JACOBS: Your Honor, here we would object on a couple of bases. First of all, the notes appear to be incomplete. Secondly, the Court already found in its November 22nd, 1995 order that the consent agreement that was entered into between EPA and Defendant Florida Cities with respect to the previous violation at the Carrollwood Plant, that that consent agreement should be construed within its four corners. I'm reading from page 12, footnote ten of the Court's November 22nd, 1995 order.

And I further quote, thus the consent agreement, within its four corners, the Court finds there's no indication that the notes are part of or are incorporated into the consent agreement, so, we would say they're irrelevant.

MR. BULLOCK: Your Honor, this was part of the Carrollwood Enforcement File which was produced pursuant to discovery, it was produced from EPA Region IV's own files. I believe that alone qualifies under Rule 803(a) as a public report.

THE COURT: This was in whose enforcement file?

MR. BULLOCK: EPA's Enforcement File for Carrollwood. Judge Swartz had directed that -- basically the tone of his order was that we would not have any authentication questions and he struck all the custodian of records as witnesses. I don't believe there's any argument that this is actually the document that was contained in the enforcement file regarding Carrollwood that the Government produced pursuant to discovery.

THE COURT: Yes, sir.

MR. JACOBS: Judge, I'm not arguing the document is not authentic, I'm arguing that the Court has already found it to be irrelevant and I'm also arguing that the document is incomplete.

Again, the Court found that the notes are -- there's no indication that the notes are a part of or are incorporated into the consent agreement and it's the consent agreement that is relevant and not any internal notes written by an EPA employee that related to whether or not the agency should accept the consent agreement.

MR. BULLOCK: Your Honor, this is not being offered

to somewhat contradict the consent agreement. Mr. Klingenstein has testified that in some part his opinion is based on his review of the EPA files which would include the enforcement files that came from Region IV.

THE COURT: I agree. I'll overrule the objection. Be received over objection.

BY MR. BULLOCK:

Q. Let me refer you to page 2 of this exhibit, and ask you to read paragraph six under other matters that justice may require.

A. Other matters that justice may require; penalty reduction is justified due to the re-evaluation of wasteload allocation by the State of Florida indicating discharges permissible under stringent requirements. In July, 1987, Grizzle-Figg Legislation became effective allowing discharges to certain streams provided specific conditions were met. The Grizzle-Figg provisions are applicable to Sweetwater Creek and the DER has modified its wasteload allocation to allow for discharges into the Sweetwater Creek. In 1988, Respondent retained and consultants conducted a minimum negative impact study.

Would you like me to continue.

Q. Yes.

A. The study indicated that discharges could be allowed but with stringent effluent limitations imposed to discharger. And

wastewater treatment -- I'm sorry -- and application was submitted to DER for construction of an advanced wastewater treatment AWT upgrade in November, 1989.

In July, 1990, DER issued Respondent a construction permit for the construction. On July 31, 1990, Respondent submitted an application for an NPDES permit. EPA plans to issue an NPDES permit to Respondent.

Q. Would you also read paragraph four under economic benefit?

A. The economic benefit realized by Respondent was --

THE COURT: Just a moment.

MR. JACOBS: I'll object again, beyond the scope of the witness' not being offered as an economic benefit expert, again technology and technological, but not economic benefit.

MR. BULLOCK: Your Honor, he's testifying as to the seriousness of violations. One of the issues under serious violation would be what kind of avoid cost or what kinds of economic benefit were gained from this.

THE COURT: He hasn't been offered as an expert in that area nor has he testified.

MR. BULLOCK: I'll withdraw it, Your Honor.

THE COURT: All right.

Let's recess for lunch. We'll reconvene at 1:15.

(Thereupon, a luncheon recess was taken.)

All right, Mr. Bullock.

MR. BULLOCK: Good afternoon, Your Honor.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Defendants' 97. Could you identify this document, please?

A. This is --

MR. JACOBS: I'd object to the request that the witness be asked to identify documents. There's been no foundation laid that he has seen it before and should know how to identify it.

THE COURT: Can you identify this exhibit?

BY MR. BULLOCK:

Q. Mr. Klingenstein, can you identify Exhibit D-97?

A. Certainly on the basis of appearance and contents. I don't know whether I recall I specifically read the document or not.

Q. If you will turn to page 2 which is an attachment, isn't it true this -- strike this first.

What does this document purport to be?

A. By its appearance, it's a modification of the permit for the Carrollwood Plant from FDER.

Q. And if you would turn the page and see subparagraph A; isn't it true this states the connection from the Carrollwood Plant should be made to the Hillsborough County Dale Mabry System?

A. Yes, it does.

MR. BULLOCK: Your Honor, I would move D-97 into evidence?

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Let me refer you to Florida Cities' Exhibit 96. Are you familiar with this document?

A. Yes, I am.

Q. And would you identify what this document is?

A. This is a letter dated June 28, 1983, to Mr. A. A. Reeves. It's on County of Hillsborough letterhead and it's signed by Mr. Bruce E. Kennedy and the subject is connection of Carrollwood WWTP to County WW System.

Q. And this letter indicates that Hillsborough County did not have adequate capacity to accept the Carrollwood effluent, is that correct?

A. Yes, that is correct.

MR. BULLOCK: I would move D-96 into evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Defendants' 108. Have you reviewed this document before?

A. Yes, I have.

Q. All right.

And would you identify for the record what the document is?

A. This is a -- this is a permit from the State of Florida Department of Environmental Regulation, date of issue, 4-5-88, for the Carrollwood S-DWTP.

Q. And that would be the Carrollwood Wastewater Treatment Plant?

A. Yes.

Q. And page 2 of this exhibit sets forth specific limits for the effluent, is that correct?

A. Yes, it does.

Q. And those are secondary limits?

A. If you mean under paragraph four, yes, they would be consistent with the secondary plant's performance.

MR. BULLOCK: I would move D-108 in.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me direct you to D-125, and ask you if you've ever seen this exhibit?

A. Yes, I have.

Q. And would you identify what this exhibit is?

A. This is a letter on the Board of County Commissioners, Hillsborough County, Florida, Office of the County Administrator letterhead, and it is a letter dated July 27, 1990, it's to Mr. A. A. Reeves, and it is from Mr. Michael W. McSweeny.

Q. And it has no subject listed?

THE COURT: I'm sorry, you looking at Defendants' 125?
THE WITNESS: I'm sorry, I believe that was --
THE COURT: Letter dated July 27, 1990?
THE WITNESS: I believe so.
THE COURT: Okay.
MR. BULLOCK: I'm sorry, Your Honor, we were intending to put in the 1990 permit to construct.
THE COURT: Well, my 125, apparently Mr. Klingenstein's is just what he described.
MR. BULLOCK: Until we can identify it, let me withdraw that line of questioning.
BY MR. BULLOCK:
Q. You testified this morning that you, Mr. Klingenstein, that you were familiar with the Grizzle-Figg Legislation?
A. To a degree, yes.
Q. Okay.
What is your understanding of the purpose of Grizzle-Figg Legislation?
A. My understanding of its purpose was to -- is that its purpose was to allow for the discharge of effluent from wastewater treatment plants to certain bodies of water as long as certain conditions were met, those conditions being a certain level of treatment and minimum negative impact being demonstrated.
Q. Do you know when Grizzle-Figg was passed?

A. My belief is 1987.
Q. All right.
Prior to that time, excuse me -- let me start over again.
Do you know what water bodies Grizzle-Figg affected?
A. Not, I can't recall inclusively.
Q. Isn't it true that prior to the passage of Grizzle-Figg, Florida Cities would have been unable to build an AWT Plant?
A. It's my understanding that Grizzle-Figg is the piece of legislation that enabled them to, so that would be my understanding.
Q. Okay.
And isn't it true that once Grizzle-Figg was passed, Florida Cities requested that they be allowed to build an AWT Plant at Carrollwood?
A. Yes, that's my understanding.
Q. And isn't it true that the FDEP required that a minimum negative impact study be performed?
A. Yes, they did.
Q. All right.
And was that study in fact performed?
A. Yes, it was.
Q. All right.
Let me refer you to exhibit -- Defendants' Exhibit 116, and ask you if you've seen this study before?
A. Yes, I have.

Q. And would you identify the study for the record?
A. Well, this is a cover letter from Florida Cities Water Company dated June 19, 1989 to Florida Department of Environmental Regulation from Mr. Robert French and it is to the attention of Mr. Bruce DeGrove, environmental supervisor, and it is a letter, cover letter transmitting the results of a minimum negative impact study.
Q. You have in fact reviewed the minimum negative impact study that is attached, isn't that true?
A. Yes, that is true.
Q. This is what is known as a Limno-Tech Study?
A. Yes.
MR. BULLOCK: Your Honor, we would move Defendants' 116 in evidence?
MR. JACOBS: The only part of that I'd object to is the cover page, Your Honor. He's reviewed the report, I'm not sure he's seen the cover page which is hearsay.
BY MR. BULLOCK::
Q. Have you in fact reviewed the cover page?
A. Yes, I have seen the cover letter.
MR. JACOBS: Withdraw the objection.
THE COURT: It will be received, 116.
BY MR. BULLOCK:
Q. Florida eventually accepted the minimum negative study that Limno-Tech put forth, isn't that correct?

A. Yes.
Q. And on that basis, Florida Cities was issued a construction permit to construct an AWT Facility.
A. Yes, after certain concerns, initial concerns were satisfied, yes.
Q. Isn't it true also that in 1988, Hillsborough County informed Florida Cities that it would have available capacity in 1990?
A. I'm sorry, that was in which year.
Q. 1988?
A. I believe there was correspondence from Hillsborough in that year regarding when capacity would be available. I would need to refresh my memory as to exactly what year they represented.
Q. You have read correspondence, though, the 1988 correspondence informing them?
A. I recall reading correspondence in that timeframe that discussed when capacity might be available, but I don't recall specifics as to exactly when.
Q. Let me refer you to Defendants' 106. Have you seen this document before?
A. Yes, I believe so.
Q. And this is a document we were speaking of a few minutes ago from 1988?
A. Certainly possibly one of them.

MR. BULLOCK: Your Honor, I move Defendants' 106 in evidence?

THE COURT: Be received.

BY MR. BULLOCK:

Q. Let me refer you to page 2 of this exhibit. Isn't it true that page 2 contains a capacity fee of approximately five point five million dollars?

A. Yes, it does.

Q. And that would be divided among the twelve hundred customers of Carrollwood?

MR. JACOBS: Objection, lack of foundation as to the number of customers.

THE COURT: Well, I don't know whether he knows or not to testify to that. I'll overrule the objection at this point.

BY MR. BULLOCK:

Q. Mr. Klingenstein, have you reviewed data about how many customers the Carrollwood Plant served?

A. I certainly have, but I can't recall exactly what that number was.

Q. All right.

Would you disagree -- assume hypothetically that the plant served approximately twelve hundred customers.

A. Yes.

Q. You would then divide the capacity fee among -- the five

point five million dollars among the customers of the plant?

MR. JACOBS: Same objection, Your Honor.

THE COURT: Okay, well --

MR. JACOBS: Or slightly similar to the improper hypothetical at this point. Not offered again for the financial reasons, but for technological reasons.

THE COURT: If there's no evidence regarding the number of customers, I think it is vulnerable to objection. I'll sustain the objection.

BY MR. BULLOCK:

Q. All right.

May I also then refer you, Mr. Klingenstein, to Exhibit D-125. And let me ask you, are you familiar with this document?

A. Yes, I am.

Q. And would you identify what this document is?

A. This would be the July 27, 1990 letter that had been previously identified from on Board of County Commissioners, Hillsborough County, Florida, letterhead, from Mr. Michael McWeeny to Mr. A. A. Reeves.

Q. All right.

Isn't it true this document states that the Hillsborough -- the capacity for Carrollwood to hook into the Hillsborough System would be available during the first quarter of 1991 -- excuse me, sometime after the first quarter of 1991?

A. Yes, it does.

Q. All right.

THE COURT: During the first quarter of 1991; isn't that what it says?

MR. BULLOCK: Well, it's expected to be commissioned during the first quarter of 1991, then after the startup capacity, would be --

THE COURT: Oh, okay.

BY MR. BULLOCK:

Q. Isn't it true then, Mr. Klingenstein, that the first time that Hillsborough County would have had capacity to accept the Carrollwood -- I guess the technical term is influent, would have been sometime after -- during or after the first quarter of 1991?

A. That is my understanding based on a review of the documents and the correspondence.

MR. BULLOCK: I would move Defendants' 125 in evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true, Mr. Klingenstein, that Florida Cities in fact applied for an AWT Permit at the Carrollwood Facility sometime in June or July of 1990?

A. In that timeframe.

Q. All right.

Let me refer you to Defendants' 126. Have you reviewed this document before?

A. I don't recall that I have specifically seen this document.

Q. Can you identify what this document is?

A. Its covered by a letter dated July 31, 1990, it's addressed, one, Florida Cities Water Company, and addressed to NPDES Permit Section, Environmental Protection Agency, and it is signed by Mr. Jack Tompkins and the subject is Carrollwood WWTP NPDES Permit Number FL0029319.

Q. Is this form an application form for an NPDES permit?

A. Yes, it is.

MR. BULLOCK: Your Honor, I would move D-126 in evidence.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Let me refer you to Defendant Florida Cities' 129, Mr. Klingenstein, and ask you if you have seen this document before?

A. I believe so.

Q. All right.

And isn't it a letter from Florida Cities to EPA advising EPA that it could not meet the limitations contained in the draft permit -- I'm sorry -- I should -- continues to say as the plant was presently construed?

A. Yes.
Q. Isn't it true this letter also requests that interim limitations be established that would allow the plant to continue to operate until AWT Plant was brought on line?
A. Yes, it does.
Q. And doesn't it also state that the plant would not be in operation until January of 1992?
A. Yes, that is the date stated.
Q. Let me refer you next to Defendants' 131.

MR. BULLOCK: Your Honor, while he's looking at that, may I move Defendants' 129 into evidence?

MR. JACOBS: Your Honor, we'd object on the basis of the grounds that it's a letter -- purports to be a letter to EPA, but it doesn't have an EPA receipt stamp and it's not signed, so I'm not sure it ever was sent.

MR. BULLOCK: Your Honor, it's listed as Plaintiff's 311. If they would have more preference to use it, we'll be glad to move theirs in evidence as well.

MR. JACOBS: One moment.

Objection is withdrawn.

THE COURT: It'll be received.

MR. BY BULLOCK:
Q. Mr. Klingenstein, have you seen Exhibit 131 before?
A. Yes, I have.
Q. And would you identify the letter and what's attached to

it?
A. It is a letter to Ms. Martha Hunter, it's on Florida Cities' Water Company letterhead, it is from Jack Tompkins, and it is regarding the NPDES Permit for the Carrollwood Wastewater Treatment Plant.
Q. Isn't it true this letter again points out that the draft permit is for AWT limitations and that the company would not be able to meet those limitations at the Carrollwood Facility until January, 1992?
A. Yes.

MR. BULLOCK: Your Honor, we would move Defendants' 131 into evidence?

THE COURT: Be received.

BY MR. BULLOCK:
Q. Let me ask you next to look at Defendant Florida Cities' 132. Have you seen 132 before?
A. I believe so.
Q. Let me refer you to page 3 of 11 in Exhibit 132, paragraph eight. Let me refer you to what is the sixth line down in paragraph eight, beginning with this consent order, and ask you to read that sentence?
A. This consent order authorizes and requires Respondent to continue to operate the WWTP.

THE COURT: Continue to what; operate?

THE WITNESS: I'm sorry, to continue to operate.

THE COURT: You're on paragraph --

THE WITNESS: I'm sorry, this is --

MR. BULLOCK: Your Honor.

THE COURT: You're on paragraph eight, page 3 of 11?

MR. BULLOCK: Yes, sir.

THE WITNESS: I believe I was on the sixth line down, Your Honor.

THE COURT: Oh, one, two, three, four, five, six, okay. I was on the first line.

BY MR. BULLOCK:
Q. If you would begin to read that sentence again?
A. Surely. This consent order authorizes and requires Respondent to continue to operate the WWTP in compliance with T.O.P. until such time as the new AWT WWTP is constructed and placed into service.
Q. And since environmental law is filled with an abundance of acronyms, WWTP means?
A. Wastewater Treatment Plant.
Q. And isn't it true TOP means the State Temporary Operating Permit?
A. Yes.

MR. BULLOCK: Your Honor, we would move 132 into evidence?

THE COURT: Be received.

MR. JACOBS: I'm sorry, Your Honor, again, this is an

unsigned document, it's -- the last two pages of the exhibit have numerous signature lines, there's not a signature. This could conceivably be a draft of a consent order that was negotiated between the parties, neither of which was the Federal Government.

MR. BULLOCK: We'll be glad to pull from the files a copy, the signed order and substitute it.

THE COURT: Okay.

Or you can show it to counsel and see that that satisfies him, either way.

MR. JACOBS: I have 132, I have just been handed another 132. The objection is that 132 is not signed, and again, it's a consent order presumably negotiated between two parties and neither of which is the Federal Government.

THE COURT: Well, we're talking about identification, authentication and I thought that the Magistrate Judge talked to you guys about that, at least I asked him to at the pre-trial conference.

MR. BULLOCK: Yes, Your Honor, he did.

MR. JACOBS: He did, and we objected, but with all candor, we objected on relevancy grounds and we did not object on authenticity grounds.

MR. BULLOCK: Your Honor, I have a copy of --

MR. JACOBS: It's not relevant because it's not signed, I suppose would be another way to look at it.

THE COURT: It's not relevant because it's not signed. Well, that's -- I'm not real impressed with that backdoor approach.

MR. JACOBS: I'm not sure I am anymore myself, Your Honor.

MR. BULLOCK: I'll be glad to hand this copy of the signed permit to Mr. Jacobs if he wants to review it.

THE COURT: All right.

MR. JACOBS: I'd be happy to accept counsel's representation this is an exact copy that he's just handed me of 132, except for the fact that it's been signed.

THE COURT: Well --

MR. JACOBS: But it doesn't appear to be --

THE COURT: I tell you what, I'm going to receive it subject to some later problem with that document and you can study it and compare it, but --

MR. JACOBS: Just on a short comparison, it's not the same document by any means.

THE COURT: Not the same?

MR. JACOBS: No, sir.

THE COURT: Well, okay, I'm going to reserve ruling on that. I'll sustain the objection at this point. If you want to try to move it later on after you have had a chance to look at it further, we'll see about it.

MR. BULLOCK: Thank you, Your Honor.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to Exhibit Number 135, and ask you if you have seen this document before?

A. Yes, I believe I have.

Q. And can you identify the document?

A. It's a letter dated March 1, 1991, on the Florida Cities Water Company letterhead, it's to Ms. Martha Hunter from Mr. Paul Bradtmiller and it is a revised draft of the Carrollwood Wastewater Treatment Plant.

MR. BULLOCK: Your Honor, we would move Defendants' 135.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true this letter is another request from Florida Cities to EPA to adopt the interim limits between establishing a consent order between FDEP and Florida Cities which would in a sense be secondary limits?

A. This letter does request that the interim limits established in the consent order between EPA and Florida Cities be included.

Q. Let me ask you to look at 137 and ask you if you have seen that?

A. I believe -- I'm sorry, I believe I've seen this.

MR. BULLOCK: Your Honor, we would move Defendants' 137 into evidence.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Just to save some time, Mr. Klingenstein, isn't this letter also a request for EPA to continue secondary treatment levels at Carrollwood?

A. The letter again requests the interim limits be incorporated.

Q. Let me refer you to Defendants' 139. Have you seen this document before?

A. Yes, I believe I've seen this.

Q. All right.

Would you identify it, please?

A. This is a letter dated May 20th, 1991. It's on Florida Cities Water Company letterhead to John T. Marlar, it is from Mr. Paul Bradtmiller and it's re, Carrollwood Advanced Wastewater Treatment Plant, Administrative Order Number 90-100, and then gives the NPDES permit number.

MR. BULLOCK: Your Honor, we would move Defendants' 139.

THE COURT: Be received.

BY MR. BULLOCK:

Q. Isn't it true this letter informs EPA that in fact Florida Cities has completed an agreement with the Hillsborough County Public Utilities Department to connect Carrollwood to the Hillsborough County Facility?

A. Certainly, the letter indicates that negotiations had been completed and that the agreement was scheduled to be, I suppose, reviewed for approval by the County Commissioners.

MR. BULLOCK: Your Honor, I'm getting ready to move into a different area, just so the record is complete. If you want to address at this time, Mr. Baise and Mr. High have reviewed the document that we had the disagreement over earlier, the State Consent Order, and it is identical in fact to the exhibit that we proferred earlier save for the fact this one actually is signed. There are two exhibits attached to it which are State permits which are already into evidence.

MR. JACOBS: Well, that's what made them different as I quickly saw that 132 had eleven pages and they handed me something with roughly thirty or thirty-five. I was able to tell the Court it wasn't the same document. I didn't compare it, perhaps counsel, if I might suggest, would like to remove from the one he's saying is the signed version, the additional pages, then I would have no objection to 132 if it's identical. I'm not trying to belabor the issue, I'm trying to advance.

MR. BULLOCK: I'll be glad to submit pages one through eleven of this report.

THE COURT: All right.

Want to show it to counsel.

MR. JACOBS: I can't review all eleven pages, but I'll be happy to accept Mr. Baise's representation it's

identical, so if he makes that representation, I will.

MR. BAISE: I make that representation, Your Honor.

MR. JACOBS: I withdraw the objection.

THE COURT: Defendants' 132 will be received.

MR. BULLOCK: Your Honor, may we substitute the version of it at a later time so Mr. Jacobs can make a copy of this?

THE COURT: Yes, sir.

BY MR. BULLOCK:

Q. Let me ask you to look next at Defendants' 140, and ask you if you've seen this document before?

A. Yes, I have.

Q. And could you identify it?

A. It's dated, I'm sorry, May 28, 1991, it is on U. S. Environmental Protection Agency, Region IV letterhead to Mr. Paul Bradtmiller, Senior Vice President, Florida Cities Water Company, it is signed by Mr. W. Ray Cunningham, and it is re, final issuance of NPDES Permit Number FL0029319, Carrollwood WWTP, and it covers the NPDES permit.

Q. And the permit is attached to it, is it not?

A. Yes.

MR. BULLOCK: Your Honor, we would move Defendants' 140 into evidence.

THE COURT: It will be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer to what I believe is the tenth page of that exhibit. Isn't it true this is identified as the amendment to the statement of the basis at the time of issuance of this permit?

A. Yes, it is.

Q. Let me refer you to paragraph two and actually -- excuse me -- sub heading two and the two paragraphs which fall under public comment and ask you to read those two paragraphs?

A. And in April 1, 1991, letter was received from Florida Cities Water Company FCWC. In this letter, FCWC requested that the interim limits established in the consent order of February 4, 1991 entered into by FCWC with the Environmental Protection Commission of Hillsborough County and the State of Florida, Department of Environmental Regulation be incorporated into this permit. This request is a compliance matter. A copy of the letter was given to Thomas Pfaff and the compliance section. On April 8th, 1991, the compliance section will address the request after final issuance of this permit.

Would you like me to continue, sir?

Q. That's fine, thank you.

Let me refer you next to Defendants' 142.

Have you seen this document before?

A. Yes, I believe I have.

Q. Would you identify it for the record?

A. It is a letter on Florida Cities Water Company letterhead

dated June 24, 1991. It's addressed to Mr. Michael Hom, the Environmental Protection Agency. It's signed by Mr. Paul Bradtmiller, and the subject is NPDES Permit Number FL0029319, Administrative Order Number 90-100, Carrollwood Wastewater Treatment Facility.

Q. Isn't it true this is also a request from the company for relief from the AWT limits and a new permit?

A. Yes.

Q. All right.

And isn't it true that this letter states that it was written pursuant to discussions with Thomas Pfaff of the EPA Enforcement Staff?

A. That's the indication.

Q. All right.

MR. BULLOCK: Your Honor, the next series of exhibits are 147, 148, 150, 151 and 154. These are the discharge monitoring reports for the Carrollwood Facility. The DMR's are already in evidence. If you remember on Monday we objected, they did not have the cover letters attached. I don't know exactly how you want me to approach these. I'd like to move the DMR's with the cover letters into evidence.

THE COURT: Any objection?

MR. JACOBS: No, Your Honor. I said on Monday if you wanted to introduce the cover letters, I have no objection and I stand by that.

THE COURT: All right.

Do each one of them have a cover letter; is that what you're saying?

MR. BULLOCK: That's correct, each of those exhibit numbers that I read to you have cover letters attached to them.

THE COURT: So you're offering them individually?

MR. BULLOCK: Yes.

THE COURT: Are the numbers you just indicated?

MR. BULLOCK: That's correct.

THE COURT: Say again, please.

MR. BULLOCK: 147, 148, 150, 151, 154.

THE COURT: All right.

Then they'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me ask you to look very briefly at the first page of each of those exhibits and tell me if you've ever seen them before?

MR. BULLOCK: Your Honor, I would also include Exhibit 152 which is also a DMR with a cover letter attached.

THE COURT: All right, will be received.

THE WITNESS: I don't recall whether I've seen the cover letters.

BY MR. BULLOCK:

Q. All right.

Isn't it true these cover letters informed EPA that they

will be transferring the wastewater flow from the Carrollwood Plant to Hillsborough County in late December or early -- well they will be transferring it and that they will request a cancellation of their NPDES permit or --

MR. JACOBS: Could I ask counsel to rephrase, I think that was vague.

THE COURT: Well --

MR. JACOBS: He started down one track and switched. I'm not sure the record will reflect --

THE COURT: Well, just restate the question, if you would.

BY MR. BULLOCK:

Q. Mr. Klingenstein, isn't it correct that each of these cover letters informed EPA that Hillsborough County -- that Carrollwood will connect with Hillsborough County and that Florida Cities will seek a revocation of its NPDES Permit?

A. Well, certainly Exhibit 147 does, 148 does --

Q. Isn't it true, Mr. Klingenstein --

THE COURT: Wait, he's not through.

THE WITNESS: And 150 does.

THE COURT: Okay.

THE WITNESS: As does 151.

THE COURT: You through?

THE WITNESS: I'm sorry, was 151 the last of those that you asked me to look at?

BY MR. BULLOCK:

Q. 152 and 154?

A. Yes, 152 as does 154.

Q. Mr. Klingenstein, isn't it true that the Administrative Order 90-100 remained in effect until March 3rd, 1992?

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.

THE COURT: Okay.

Well, if you know, I'll overrule the objection. Do you know?

THE WITNESS: No, I couldn't tell you.

BY MR. BULLOCK:

Q. Let me refer to Florida Cities Exhibit 156. Have you seen this document before?

A. Yes, I believe I have.

Q. I believe you testified earlier that the effluent limitations in 90-100 were in fact secondary treatment limits, is that correct?

A. I believe that was what we said, yes.

Q. And let me ask you to read the first paragraph of Exhibit 156?

A. This is the cover letter?

Q. That is correct?

A. Dear Mr. Bradtmiller, we are in receipt of your February 10, 1992 correspondence regarding the closure of the above

mentioned facility. This is to advise you Administrative Order Number 90-100 parentheses WKS issued on September 27, 1990, has been complied with and placed in an inactive status.

Q. Mr. Klingenstein, isn't it true that you have reviewed the enforcement history in EPA Region IV of the Carrollwood Facility?

A. I've reviewed documents from the enforcement file.

Q. Isn't it true that no enforcement action against Carrollwood was taken for the violations of the permit between July 1, '91, through January, 92, until this lawsuit was amended in April of '95?

A. I'm not aware of any.

Q. Thank you.

MR. BULLOCK: Let me move 156 in evidence, Your Honor.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let's turn now to Barefoot Bay. Did you interview anyone at EPA Region IV about the enforcement history of the Barefoot Bay Facility?

A. I believe I spoke to Mr. Kwan.

Q. Did you speak to anyone else?

A. Not that I recall.

Q. So you did not speak with Roy Herwig, is that correct?

A. Not with regard to Barefoot Bay.

Q. Do you know who Roy Herwig is ?

A. Yes, I know Roy Herwig.

Q. Who is Roy Herwig?

A. He's an employee of EPA Region IV.

Q. And to your knowledge, was Mr. Herwig involved in the enforcement actions at Barefoot Bay?

A. I've seen Mr. Herwig's name mentioned in the correspondence.

Q. Do you recall what documents you reviewed from the EPA Region IV enforcement files in preparation of your report?

A. Not specifically. I mean, there were quite a number.

Q. Let me refer you to Florida Cities' 202, and ask you if you've ever seen this document?

MR. JACOBS: Just for the record, Your Honor, forgive the interruption, but apparently we had a renumbered exhibit list yesterday, sorry, Monday, at the beginning of Court, and until now, it's matched up with the Government's objections that were submitted to the Court by exhibit by exhibit.

At this point, it no longer matches because the list was shortened, so I'm happy to try and keep up, but it might take me a moment longer to look at the exhibit because I no longer have the current list and the Court's list is no longer current because as I say, the Defendants gave us a new list Monday morning which was the time we submitted our list to the Court with our objections, not before.

MR. BULLOCK: Your Honor, I might respond by saying that this previously has been listed, we have identified that Exhibit 202 was formerly Florida Cities' 498 and that the Plaintiffs objected to this on the grounds of irrelevancy and offers to compromise.

MR. JACOBS: Well, Counsel did indicate that it was formerly 498 which will help us, but the objections aren't listed on the new list, so I think perhaps we've got to do a new list for the Court.

Now we have new numbers. I'm thinking both in terms of my own problem in keeping up as well as the Court's in making sure it has a current version of the Government's objections which it no longer does. I don't know how many these are, Mr. Bullock. If there's only a few, we perhaps can work through it.

MR. BULLOCK: I believe there are four; is that correct, four?

MR. JACOBS: I yield to the Court on that issue. We'll do a new list or --

THE COURT: Now, does this -- what effect, Mr. Bullock, does this new list have on it the list of objections that the United States has now?

MR. BULLOCK: Your Honor, the only difference between my list, I mean, the difference would be that we added at the end of the list Exhibits 199, 200, 201 and 202. Those were

previously identified to the Government as exhibits that we intended to use at trial. Those were previously identified with the trial exhibit number and the Government has filed objections as far as I'm able to tell to only one of those. As I say, it only involves four documents and we can easily give Mr. Jacobs the prior exhibit numbers right now.

MR. JACOBS: May I just inquire with respect to the additional exhibits, your list now goes up to 202. We objected up to 519. Have you, with the exception of those four, withdrawn all the remaining ones following 202?

MR. BULLOCK: Your Honor, we have provided, pursuant to the Court's order, a copy of our exhibit list with the exhibits that we intend to put in on our direct case. We reserve the right, I believe, as did all parties to put in documents for cross examination or rebuttal purposes, and so -- but in terms of the -- and I'll be glad to have Mr. High, who actually negotiated this with Mr. Quinn, discuss this matter if the Court sees fit. Again, we're talking about four documents that we can identify right now to counsel for the Plaintiff.

MR. JACOBS: Your Honor, we certainly endeavored to put on our list every single document we intended to use here for purposes of direct or cross examination so we wouldn't get into a situation like this again. If it's only four, we'll work with the Defendants. I would like to have a representation as to whether they have withdrawn everything after 202, and

then perhaps we can move on.

THE COURT: Take a fifteen minute recess, work it out, gentlemen.

(Thereupon, a brief recess was taken.)

Okay, we all set?

MR. BULLOCK: That's correct, Your Honor.

Your Honor, we have discussed this on the break, we have identified, in fact, there are only four exhibits that were added to the end of the list, two of them the Government has no objection to.

The third one is Exhibit 201 which you have already admitted into evidence over their objection and a fourth one is 202 which we're offering now and they filed the same objection. They were previously identified with other numbers on them.

The only reason we moved them in is the Court's order directed us to put them in sequential number and when we were removing exhibits, we changed the numbers so they would continue to be in sequential number and have identified that for Plaintiff's counsel.

MR. JACOBS: And Your Honor, we appreciate counsel for the Defendant working with us on this and indeed, I think he's accurately represented there's only one that remains now and that is the newly numbered 202 for clarification, though again, one matter that I had raised before we recessed briefly was what happened to the three hundred or so exhibits after 199

and I just want to make sure they're not going to resurface as cross examination exhibits.

MR. BULLOCK: Your Honor, in our submission in the joint pre-trial statement, we stated that we listed the documents which we would put forth in our direct case and we reserved the right to use other documents for rebuttal and cross examination and this is the first objection I've heard to that inclusion in the joint pre-trial order.

MR. JACOBS: Judge, we endeavored, on the other hand, we understood the arrangement to be that we list every conceivable document, both for everyone's own convenience as well as the Court in our exhibit list.

MR. BULLOCK: Your Honor.

MR. JACOBS: We understood that to be our obligation and that is what we've done and I'm just trying to make sure we're not going to have any surprises. We've begun at 200, are we going to go back up to 500? I didn't realize we were down to 200 until Monday and going back up to 500. I'd rather know now than again to take the time of the Court on an individual basis when they start popping up and with new numbers.

THE COURT: All right.

You had a list of five hundred and some odd exhibits?

MR. BULLOCK: That's correct, Your Honor. We had attempted to come up with a -- we came up with a list of five hundred exhibits that were submitted with a revised joint

will be transferring the wastewater flow from the Carrollwood Plant to Hillsborough County in late December or early -- well they will be transferring it and that they will request a cancellation of their NPDES permit or --

MR. JACOBS: Could I ask counsel to rephrase, I think that was vague.

THE COURT: Well --

MR. JACOBS: He started down one track and switched. I'm not sure the record will reflect --

THE COURT: Well, just restate the question, if you would.

BY MR. BULLOCK:

Q. Mr. Klingenstein, isn't it correct that each of these cover letters informed EPA that Hillsborough County -- that Carrollwood will connect with Hillsborough County and that Florida Cities will seek a revocation of its NPDES Permit?

A. Well, certainly Exhibit 147 does, 148 does --

Q. Isn't it true, Mr. Klingenstein --

THE COURT: Wait, he's not through.

THE WITNESS: And 150 does.

THE COURT: Okay.

THE WITNESS: As does 151.

THE COURT: You through?

THE WITNESS: I'm sorry, was 151 the last of those that you asked me to look at?

BY MR. BULLOCK:

Q. 152 and 154?

A. Yes, 152 as does 154.

Q. Mr. Klingenstein, isn't it true that the Administrative Order 90-100 remained in effect until March 3rd, 1992?

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.

THE COURT: Okay.

Well, if you know, I'll overrule the objection. Do you know?

THE WITNESS: No, I couldn't tell you.

BY MR. BULLOCK:

Q. Let me refer to Florida Cities Exhibit 156. Have you seen this document before?

A. Yes, I believe I have.

Q. I believe you testified earlier that the effluent limitations in 90-100 were in fact secondary treatment limits, is that correct?

A. I believe that was what we said, yes.

Q. And let me ask you to read the first paragraph of Exhibit 156?

A. This is the cover letter?

Q. That is correct?

A. Dear Mr. Bradtmiller, we are in receipt of your February 10, 1992 correspondence regarding the closure of the above

mentioned facility. This is to advise you Administrative Order Number 90-100 parentheses WKS issued on September 27, 1990, has been complied with and placed in an inactive status.

Q. Mr. Klingenstein, isn't it true that you have reviewed the enforcement history in EPA Region IV of the Carrollwood Facility?

A. I've reviewed documents from the enforcement file.

Q. Isn't it true that no enforcement action against Carrollwood was taken for the violations of the permit between July 1, '91, through January, 92, until this lawsuit was amended in April of '95?

A. I'm not aware of any.

Q. Thank you.

MR. BULLOCK: Let me move 156 in evidence, Your Honor.

THE COURT: It'll be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let's turn now to Barefoot Bay. Did you interview anyone at EPA Region IV about the enforcement history of the Barefoot Bay Facility?

A. I believe I spoke to Mr. Kwan.

Q. Did you speak to anyone else?

A. Not that I recall.

Q. So you did not speak with Roy Herwig, is that correct?

A. Not with regard to Barefoot Bay.

Q. Do you know who Roy Herwig is ?

A. Yes, I know Roy Herwig.

Q. Who is Roy Herwig?

A. He's an employee of EPA Region IV.

If it's only four, we'll work with the Defendants. I would like to have a representation as to whether they have withdrawn everything after 202, and

then perhaps we can move on.

THE COURT: Take a fifteen minute recess, work it out, gentlemen.

(Thereupon, a brief recess was taken.)

Okay, we all set?

MR. BULLOCK: That's correct, Your Honor.

Your Honor, we have discussed this on the break, we have identified, in fact, there are only four exhibits that were added to the end of the list, two of them the Government has no objection to.

The third one is Exhibit 201 which you have already admitted into evidence over their objection and a fourth one is 202 which we're offering now and they filed the same objection. They were previously identified with other numbers on them.

The only reason we moved them in is the Court's order directed us to put them in sequential number and when we were removing exhibits, we changed the numbers so they would continue to be in sequential number and have identified that for Plaintiff's counsel.

MR. JACOBS: And Your Honor, we appreciate counsel for the Defendant working with us on this and indeed, I think he's accurately represented there's only one that remains now and that is the newly numbered 202 for clarification, though again, one matter that I had raised before we recessed briefly was what happened to the three hundred or so exhibits after 199

and I just want to make sure they're not going to resurface as cross examination exhibits.

MR. BULLOCK: Your Honor, in our submission in the joint pre-trial statement, we stated that we listed the documents which we would put forth in our direct case and we reserved the right to use other documents for rebuttal and cross examination and this is the first objection I've heard to that inclusion in the joint pre-trial order.

MR. JACOBS: Judge, we endeavored, on the other hand, we understood the arrangement to be that we list every conceivable document, both for everyone's own convenience as well as the Court in our exhibit list.

MR. BULLOCK: Your Honor.

MR. JACOBS: We understood that to be our obligation and that is what we've done and I'm just trying to make sure we're not going to have any surprises. We've begun at 200, are we going to go back up to 500? I didn't realize we were down to 200 until Monday and going back up to 500. I'd rather know now than again to take the time of the Court on an individual basis when they start popping up and with new numbers.

THE COURT: All right.

You had a list of five hundred and some odd exhibits?

MR. BULLOCK: That's correct, Your Honor. We had attempted to come up with a -- we came up with a list of five hundred exhibits that were submitted with a revised joint

pre-trial statement in January.

Subsequent to that list, we made an effort, because we knew the time was going to be precious in this trial, to get them down to as minimum number as possible and the documents that we were going to use on our direct case and so that is where the new 202 list came on Monday.

THE COURT: Are you saying that you have no obligation to list documents that you intend to use on cross examination, that you only have the obligation to list exhibits that you intend to introduce in your case in chief? That is not -- that is not proper.

MR. BULLOCK: May I beg the Court's indulgence just a second?

THE COURT: Yes.

MR. JACOBS: Judge, if I -- forgive me.

MR. BULLOCK: Your Honor, as for cross examination, we would agree that we would be bound by the 202 list. As for rebuttal, I believe that is a different issue. If there is surprise, we would have no way to identify those documents in advance.

THE COURT: Well, that is another issue, I think. Yes, sir.

MR. JACOBS: Judge, again, it's my understanding and I'm always the Plaintiff in these cases, that the Plaintiff gets rebuttal case, but not necessarily the Defendant, but in

any event, in the Court's February 27th, 1995 order setting out what the pre-trial -- the joint pre-trial statement to be filed with the Clerk of the Court shall contain, paragraph eight, item D as in dog, a list of all exhibits with notation of all objections thereto. There is no --

THE COURT: All exhibits what? Read it to me.

MR. JACOBS: Paragraph eight, no later than three work days prior to the date set for the pre-trial conference of which -- by the way, there were two before the Magistrate Judge, one in early --

THE COURT: I know that.

MR. JACOBS: Okay, sir. The parties file their joint pre-trial statement with the Clerk of the Court with a, quote, courtesy copy, unquote, so marked.

THE COURT: I know, just read to me that paragraph.

MR. JACOBS: Subparagraph d, lower case d as in dog, a list of all exhibits and Rule 5.04, exhibit substitutes to be offered at trial with notation of all objections thereto. That is verbatim.

THE COURT: All right.

MR. BULLOCK: That was the five hundred list, Your Honor.

THE COURT: That was the five hundred?

MR. BULLOCK: That we filed.

THE COURT: Yeah. Okay.

Well, and that was furnished to Plaintiff's counsel?

MR. BULLOCK: That's correct.

THE COURT: When?

MR. BULLOCK: That was furnished I believe January 14th or 15th.

THE COURT: And the new list that Mr. Jacobs is referring to?

That was a pared down list that was furnished on Monday morning?

MR. BULLOCK: That is correct.

MR. JACOBS: My interpretation would be that the requirements would still hold, they would need to list all exhibits that they intend to introduce at trial. We're happy to see fewer, but again --

THE COURT: All right. Well --

MR. BULLOCK: I don't mean to belabor this point, Your Honor, but in at least two different occasions in front of the Magistrate, Mr. Jacobs made extensive comments and arguments about the length of our exhibit list, so we have on a number of occasions attempted to cull through these documents to lower --

THE COURT: You had seventeen hundred and some odd at one point, didn't you?

MR. BULLOCK: That's correct, Your Honor, that was before you issued either of the Summary Judgment orders and so

after that, we have been -- we have been aggressively and in some instances frantically paring them down. We recognized that's too much as well and we got them down to --

THE COURT: Well, you're saying that it's possible that you want to reserve the right -- let's see, you're Defendants, so you've got -- you don't have rebuttal.

MR. BULLOCK: Well --

THE COURT: Go ahead.

MR. BULLOCK: Your Honor, this is one of those unusual cases where we bear the burden of mitigation.

THE COURT: Well, okay.

And so, if any of the exhibits, hopefully not, but if any of the exhibits among those other three hundred and some odd are offered, then I'll hear the objection at the time. They may not be. Hopefully not.

MR. BULLOCK: Thank you, Your Honor.

THE COURT: All right.

All right, let's proceed.

MR. BULLOCK: Your Honor, I believe that I had moved Defendants' 202 into evidence.

THE COURT: All right.

MR. JACOBS: We object. Again, this would be -- these are additional notes. Same objection as the other notes. I know the Court's already ruled on them.

THE COURT: 201, I think. All right. The Court

will, for the sake of consistency, at least, overrule the objection to 202, and the Court will base its ruling on the same ruling as 201. Be received.

BY MR. BULLOCK:

Q. Mr. Klingenstein, is there a reason why you didn't speak to Mr. Herwig about his investigation of Barefoot Bay?

A. Other than he did not speak to me, no, none that I can identify.

Q. Well, you were engaged to form an expert opinion about this case, isn't that correct?

A. Yes, that is correct.

Q. Mr. Herwig is the only EPA official who investigated this case during the time period at issue to your knowledge, isn't that correct?

A. As I said, I've seen his name in the records, so I certainly have knowledge that he had some involvement.

Q. Okay.

Is there a reason then why you didn't feel it was necessary in formulating an opinion to learn the facts from the actual investigating agent of EPA Region IV?

MR. JACOBS: Objection, assumes facts not in evidence. There's no indication Mr. Herwig was the investigating agent for this facility. At this point in time, he's written some notes?

THE COURT: Sustained.

Ask your next question.

BY MR. BULLOCK:

Q. All right.

Would you refer to page 3 of the notes on proposed planning assessment. Would you read that for the Court, please?

A. Surely. The entire page?

Q. Excuse me, would you read paragraph six for the Court, please?

A. Sure. The enforcement team considered the fact that Respondent has been working closely with the Florida Department of Environmental Regulation since 1985 to develop a solution to the problem. Since being contacted by EPA, Respondent has been very cooperative. Consideration was given to calculating liability on a daily basis beginning with the initial overflow in 1985.

However, since the Respondent has been working with DER and since the effluent being discharged would have met the limitations contained in the permit now being issued by EPA, it is believed that the true violation was limited to that of not applying for an NPDES permit.

Q. EPA Region IV issued an administrative order for Barefoot Bay, isn't that correct?

A. Yes, I believe that is correct.

Q. And in fact, you have testified about violation of the

effluent limitation in that administrative order, isn't that correct?

A. Yes, it is.

Q. EPA issued a final NPDES permit in November of 1991, isn't that correct?

A. I'm not sure the issuance was in November of 1991. I believe the effective date was 1991, November, 1991.

Q. All right.

And isn't it true that the effluent limitations in the final permit were different than those contained in the administrative order, isn't that correct?

A. Yes, as I recall.

Q. Let me refer you to Plaintiff's 145, and also at the same time, Defendants' Exhibit 192. Are you familiar with those two documents?

A. Yes, I am.

Q. And I believe you did testify that the limits in the final permit were different than in the administrative order, isn't that correct?

A. Yes.

Q. All right.

And have you performed any comparisons of the exceedences which occurred of the administrative order to determine whether or not they would have been exceedences of the final permit limits?

A. Not that I specifically recall, no.

Q. Do you know where the final permit limit numbers were derived from?

A. Since I was not involved in the development of the permit nor have I seen the files that related to the development of the permit, no, I couldn't speak to where specifically each of those numbers came from.

Q. If the evidence shows that in fact the effluent, the exceedence levels would not have been -- exceedences, excuse me. Let me start over again.

If the evidence shows that the effluent would have passed the limitations in the permit as opposed during the period of time covered by the administrative order, would that lessen the seriousness of the violation of the administrative order?

A. From a technical standpoint, it would depend on the bases of each of the relative numbers.

Q. Okay.

And again, the State of Florida is taking the lead in determining water quality standards; isn't that correct?

A. Yes.

Q. When we played the videotape that you shot of the Barefoot Bay Plant, isn't it true that it showed a number of citrus groves in the area?

A. Yes.

Q. Were there other agricultural activity in the area?

A. I would expect so.
Q. And isn't it true that these facilities would be using agricultural chemicals?
A. I would expect they would.
Q. And isn't it true that some of these chemicals would eventually make their way into the canal and into the Sebastian River?
A. Yes.
Q. And isn't it true nine point source pollution such as agricultural runoff is one of the greater dangers on the Sebastian River?
A. Yes.
Q. And in fact, on Monday, you referred to Plaintiff's Exhibit 249 which is the SWIM document, the Surface Water Improvement Management Plan?
A. Yes.
Q. Let me refer to that document and ask you to look again at page 11. Mr. Jacobs asked you to read the second bullet point on page 11 about domestic and industrial wastewater treatment plants on Monday, is that correct?
A. I don't recall whether he specifically requested that I read that bulleted item.
Q. Isn't it true the first bullet point discusses runoff from residential and commercial property, storm water discharges?

A. Yes, it does.
Q. All right.
And these are also serious problems for the Sebastian River and Indian River Lagoon?
THE COURT: You asking him or telling him?
BY MR. BULLOCK:
Q. Isn't it true these are also serious problems?
A. Yes.
Q. The third bullet point addresses the problem -- isn't it true the third bullet point addressed the operation of marinas and boatyards as serious problems for the Indian River Lagoon?
A. Yes, it does.
Q. And this includes discharges of heavy metals, hydrocarbons and raw sewage, isn't that correct?
A. Yes, that's what is characterized, that's right.
Q. And secondarily treated effluent does not include raw sewage, does it?
A. It should not if there are no by-passes.
Q. One of the NPDES permit violations you discussed was toxicity, is that correct?
A. Yes, correct.
Q. And isn't it true that toxicity involves subjecting certain test species to one hundred percent effluent in a laboratory?
A. Yes.

Q. All right.
Toxicity testing in and of itself, isn't it true, it is not a test of the effluent as it inter -- reacts with the receiving water?
A. It's intended to provide an indication of whether or not that effluent has the capacity to provide toxic -- to cause toxic effects in organisms in the receiving water.
Q. My question was, though, isn't it true it is not -- it does not address the actual way in which the effluent reacts with the receiving water?
A. Well, as I said, it's intended to provide a measure of what will happen to the organisms in the receiving water when it's discharged there.
Q. It's done in the laboratory, isn't it?
A. Yes, yes.
Q. One of the other violations involved total residual chlorine?
A. Yes.
Q. And I believe you testified yesterday that chlorine is used to disinfect effluent in one of the final stages of treatment?
A. Yes.
Q. Isn't it true during the period of time involving the TRC exceedences at issue, Florida Cities was using an EPA approved method to test for total residual chlorine?

A. My recollection was that there was an issue regarding which method was used versus which method should have been used.
Q. Are you aware that the Plaintiff has withdrawn that allegation in this case?
A. Yes, I am.
Q. All right.
Are you familiar with EPA Region IV's policy on how to report total residual chlorine levels in discharge monitoring reports for facilities in Florida depending upon the various test methods used?
MR. JACOBS: Objection, assumes facts not in evidence. That is to say that EPA Region IV reporting procedures are any different from the rest of the --
THE COURT: Read the question back.
(Thereupon, the record was read back.)
Overruled.
THE WITNESS: I'm aware there is language in the permit or at least I've seen language in permits to that effect.
BY MR. BULLOCK:
Q. Okay.
Let me ask you to refer to Defendant Florida Cities' Exhibit 158.
THE COURT: I've got it, I just need to purge my

bench here.

Okay.

BY MR. BULLOCK:

Q. Are you familiar with this document?

A. No, I'm not.

Q. Would you identify the document?

MR. JACOBS: Objection, how can he identify it if he's not familiar with it, Your Honor.

MR. BULLOCK: If I may, Your Honor.

THE COURT: Well, yeah. You know, technically the question is inappropriate. If he doesn't know what the document is, he can't identify it. If you're asking him truly for the purpose of identification, yeah, go ahead.

MR. BULLOCK: Your Honor, this is a document which was produced by EPA's files pursuant to a document production. It's on United States Environmental Protection Agency letterhead, and my purpose in asking him to identify it was merely to identify what the title of the document was on the records.

THE COURT: Well, all right.

You can ask him that question.

BY MR. BULLOCK:

Q. Can you identify or state for us what the title of the document is?

A. It's on United States Environmental Protection Agency,

apparently memo paper, dated April 11, 1986, and it appears to be entitled Region IV NPDES Permits, Chlorine Strategy.

MR. BULLOCK: Your Honor, I would move Defendants' 158 in evidence.

MR. JACOBS: Objection, Your Honor, hearsay and relevancy.

THE COURT: Hearsay and relevancy. Let me hear your relevancy.

MR. JACOBS: I'm seeing this for the first time as well as Mr. Klingenstein. Look at the date, it's April, 1986, the violation --

THE COURT: Now wait a minute, you're saying this document was not produced or rather was not disclosed to you? You're not --

MR. JACOBS: No, oh, no, that I'm not saying, Your Honor.

THE COURT: All right.

MR. JACOBS: I'm saying I've just scanned this, this very moment, which is not an excuse, because it has been produced earlier.

THE COURT: What's the relevance?

MR. JACOBS: The point is that it's dated April, '86. There is no foundation laid that it's in that. Then it refers to a policy or strategy, as I read the title, there's no evidence that it applies at the point in time that the

violations took place which is after November of 1991 which is over five and a half years later, and as I scanned the document, the bottom of page 4 speaks in terms of a July 1, 1988 deadline, so again, I'm drawing conclusions from a quick glance at the document, but it seems to relate to a policy or practice or strategy that might have been in effect between '86 and '88 and not after November, '91 which is when the violations in question took place.

MR. BULLOCK: Your Honor, the document again was found in EPA's own files.

THE COURT: All right.

Well, I'll assume that.

We're talking about relevancy.

MR. BULLOCK: The relevancy is, Your Honor, this is a document that demonstrates how or its guidance to permit riders on dealing with the issue in Florida which has a particularly sensitive issue regarding residual chlorine and EPA and Florida have contracted agreements about issues such as permitting and residual chlorine and this document is a guidance to permit riders on how to address the issue on permits in Florida, TRC testing under various test methods.

THE COURT: Okay.

Other objections?

MR. JACOBS: Yes, Your Honor. Again, if it was an instruction to a permit rider, I'm not sure that the foundation

has been laid. Again, the permit was written in 1991, five and a half years later there is no indication that this policy was in effect at that time and therefore, I would say it's irrelevant.

MR. BULLOCK: Well, Your Honor --

THE COURT: All right.

I'll overrule the objections and receive it for what it's worth.

MR. BULLOCK: Thank you, Your Honor.

THE COURT: Don't thank me, just move on.

MR. BULLOCK: That's -- all right.

BY MR. BULLOCK:

Q. Mr. Klingenstein, let me refer you to page four, the second paragraph which begins with the NPDES permit conditions. Have you read the paragraph?

A. Yes, I have.

THE COURT: Which paragraph?

MR. BULLOCK: I'm sorry, the second paragraph, Your Honor?

THE COURT: All right.

BY MR. BULLOCK:

Q. Referring also to Defendants' 192 which is the 1991 permit, isn't it true that the 1991 permit allowed Florida Cities to use the DPD colorimetric method to test for total residual color that's found on page I-2 of the permit?

A. Not in my interpretation of that paragraph.
Q. In fact, Mr. Klingenstein, the Government has withdrawn its claim that -- isn't it a fact that the Government has withdrawn its claim as to the propriety of which test method was used?
MR. JACOBS: I object, asked and answered.
THE COURT: Is that the same question you elicited from him before?
MR. BULLOCK: Well, Your Honor, he testified that in a fashion, Your Honor, but asked in a different context, he's --
THE COURT: All right, all right, I'll overrule the objection. Let's get going.
BY MR. BULLOCK:
Q. Well, assume with me, Mr. Klingenstein, that the DPD colorimetric test method was in fact permitted under the permit. In the next series of questions, I'll ask you to follow that assumption. What was the -- isn't it true that the NPDES permit required a TRC residual level of .01?
A. Yes.
Q. And this was in effect based on concerns from the State of Florida?
A. Yes.
Q. All right.
Isn't it true that the EPA guidance in the 1986 document

that you're looking at states that the EPA knew that the DPD colorimetric method was not sensitive enough to detect chlorine down to a .01 level?
A. Yes.
Q. And therefore in those cases, the permittee need only report non-detectable using one of those tests to be considered in compliance, isn't that correct?
THE COURT: That's not non-detectable, it's not detectable.
BY MR. BULLOCK:
Q. Not detectable?
A. That's the indication in Exhibit 158.
Q. And assume with me for purposes of hypothetical that Florida Cities was not informed of this requirement or this method of reporting. If they were using the DPD colorimetric method, wouldn't in fact some of the TRC violations be false reports, false positives and in fact should have been reported as non-detect?
A. That would depend on what detection limit Florida Cities was receiving in the DPD test.
Q. But in fact if they were not receiving down to .01, isn't it true that this EPA memo states that they should be told to check off non-detect -- not detect?
A. What the memo is indicating is that if in fact you're at or below your detection limit, then you would put non-detect --

not-detect.
Q. And under those assumptions, isn't it true that some of the TRC exceedances that were reported could in fact be false positives.
A. Again, that would depend on specifically what detection limit you were achieving.
Q. But it is possible those were false positives; yes or no?
A. It is possible.
Q. Let's look at some of the alternatives which you listed as possibilities at Barefoot Bay for alternative discharge.
Have you investigated what land was available to be purchased for percolation ponds in the Barefoot Bay area?
A. To the extent that I have seen documents in the file that indicated that various parcels of land were discussed as being potentially available for sale.
Q. Are you aware of the cost per acre of that property?
A. Some of those documents included costs.
Q. All right.
Have you yourself personally investigated the cost of the land?
A. Independent of those documents?
Q. Correct?
A. No.
Q. You have no independent opinion then as to reasonable cost of land in Brevard County for agricultural land which

could be purchased for percolation ponds?
A. No.
Q. You have no opinion as to what price the Florida Public Service Commission would have found to be prudent, isn't that correct?
A. No.
Q. All right.
You testified on Monday that the company built two test ponds on what's been referred to as the forty acre site, but those ponds lacked sufficient capacity to accept all the plant's effluent, isn't that correct?
A. Yes.
Q. Isn't it true that in fact the company determined that the hydrogeological conditions in the Barefoot Bay area were not suitable for percolation ponds?
A. I would characterize it that the company investigated the capacity of a limited number of sites and based on the inadequate capacity of those sites decided to abandon pursuit of percolation ponds.
Q. But you haven't done the research to determine in fact whether or not any sites in the area were suitable for percolation ponds?
A. It's my opinion want of sufficient size might have been.
Q. What do you base that opinion on?
A. The fact that the company was percolating a certain

amount of wastewater through an existing size pond. They did carry out tests on-site that demonstrated percolation capacity of some fixed capacity or a given size of a piece of property and therefore that a proportionately larger site would be expected to likely provide the necessary capacity.

Q. So that's based on your review of documents in this case?

A. Of actual tests carried out by Florida Cities' consultants.

Q. Those were documents in this case?

A. Yes.

Q. But isn't it true that Florida Cities determined that percolation ponds were not a viable option in Barefoot Bay?

A. It's my opinion that Florida Cities decided not to pursue percolation ponds. I can't speak as to what all of their motivations were.

Q. Do you know what requirements were necessary to permit the percolation ponds in Brevard County, Florida?

A. I'm not aware of all of the State of Florida's requirements, however, I assume that Florida Cities was since they had previously done so.

Q. So the answer to the question is, you're not aware of the permitting requirements for percolation ponds in Brevard County, correct?

A. I can't say I know all of them, no.

Q. Which requirements are you familiar with?

A. Well, certainly that the pond would have to have adequate capacity to accept the plant's flow and be concerned with protection of ground water quality.

Q. Which permitting agency requires that?

A. Well, that would probably be FDER, certainly.

Q. But you're not really familiar with FDER permitting requirements for perk ponds, are you?

A. Not in detail.

Q. All right.

You're not familiar in detail with the requirements for Brevard County, are you?

A. No.

Q. Isn't it true that the Florida Department of Environmental Regulation agreed with Florida Cities' analysis of the perk pond option and directed the company to look at other discharge options?

A. I recall from the correspondence that the Florida Department of Environmental Regulation agreed with the position to not pursue putting percolation ponds on the sites that had been previously put forth or had been looked at by Florida Cities. I can't say whether they would have not agreed to a percolation pond on another site.

Q. Let's turn to the spray field option. You testified that the company started looking at the option of spray fields in 1987, but did not purchase any land until recently, is that

correct?

A. Yes.

Q. Isn't it true that on a number of occasions, Florida Cities contacted grove owners in the area about providing effluent for various groves for spray irrigation?

A. Yes.

Q. Isn't it true that -- strike that. Let me back up.

Would AWT have been required for discharge into spray irrigation?

A. Depending on what land you were spraying on to.

Q. Okay.

What land would secondary effluent have been allowed to be sprayed on?

A. Wholly owned land, I believe, without any food crop on it?

Q. If it was owned by Florida Cities but had food crop on it, it would require AWT?

A. Yes.

Q. And isn't it true that if it was owned by other owners, and was growing food crops, it would be -- the effluent should be treated to AWT levels?

A. That's my understanding.

Q. Isn't it true that Florida Cities was unable to find other owners of groves who would accept the spray effluent?

A. Florida Cities, based on my review of the documents,

Florida Cities spoke to a number of grove owners, however, financial issues seemed to continue to stand in the way of them being able to reach an agreement.

Q. Isn't it true that they could not find other grove owners to take the spray effluent, Mr. Klingenstein?

MR. JACOBS: Objection, Your Honor, to the extent that he's asking again for a matter of fact, not a matter that he's gleaned from documents.

THE COURT: I'll overrule the objection.

THE WITNESS: Certainly, history bears out that they did not end up in an agreement with any other grove owners.

BY MR. BULLOCK:

Q. You reviewed a number of pieces of correspondence back and forth between Florida Cities and various grove owners, correct?

A. Yes.

Q. And Florida Cities was unable to -- that correspondence indicated that Florida Cities was unable to come to any agreement with these grove owners, correct?

A. With the grove owners they were in contact with, yes.

Q. What was the financial reasons you referred to a minute ago?

A. That I recall, issues regarding the cost of on-site development on the groves which would be improvements to the irrigation systems, to allow distribution of wastewater,

storage facilities on-site, cost of the wastewater itself that Florida Cities was interested in charging the grove owners for the actual wastewater. Those sort of issues.

Q. Isn't it a fact that the Public Service Commission mandated that Florida Cities charge for effluent?

MR. JACOBS: Objection, calls for speculation, facts not in evidence.

THE COURT: Well, I don't know whether he knows that or not.

BY; MR. BULLOCK:

Q. Do you know whether or not Florida Cities was mandated to charge for its effluent by the Public Service Commission?

A. I would say I don't know whether or not the Florida Cities Public Service Commission -- I'm not aware that there was something that would have prevented Florida Cities from providing the effluent to the grove owners at no cost, if they had been willing to assume that cost.

Q. Okay.

The answer to the question is, you don't know whether or not the EPA mandated that Florida Cities charge for its effluent; yes or no?

A. No, I'm not aware of anything that specifically required Florida Cities to charge.

Q. So, if they did require that, it would be news to you?

THE COURT: Well, go on to your next question.

Let's pause for change of Reporters.

(Thereupon, there was a change in Court Reporters.)

Page 179

CONTINUED CROSS-EXAMINATION
BY MR. BULLOCK:
Q. Isn't it true that Florida Cities actually initiated an eminent domain proceeding to obtain grove land for spray irrigation in the Barefoot Bay area?
A. Yes, I am aware that such an action was taken.
Q. Isn't it true that a group of adjacent landowners intervened in that proceedings and appealed the issue to the Florida Court of Appeals?
A. Yes, I am aware of that.
Q. And didn't that stay the eminent domain proceedings?
A. Yes, it did.
Q. Isn't it true that FDER continued to authorize the company to discharge surface water and directed that the company continue to look at other alternatives following the eminent domain proceeding, if you know?
A. I believe that's true.
Q. All right. Let's turn to the deep well injection option. You testified that Florida Cities did not look into deep well injection seriously until 1989; is that correct?
A. Yes.
Q. And, again, we've -- you've testified earlier that you don't have any particular experience with deep wells in the state of Florida, correct?
A. That's correct.

Page 180

Q. Are you familiar with the permitting process for deep wells vis-a-vis Brevard County?
A. Just to the extent that I am from this case.
Q. And what Brevard County requirements are you aware of?
A. Well, I am aware of the requirement specifically to go through the water district.
Q. All right. Would there be county-specific permits as opposed to the water district permits to your knowledge?
A. That I can't say.
Q. Have you researched the performance of other deep wells in the Brevard County area?
A. To the extent that I followed that issue through the documents that have been available.
Q. Have you performed any independent research yourself?
A. On?
Q. Deep well performance in Brevard County.
A. I had one conversation with a Florida Department of Environmental Regulation employee with regard to performance of wells.
Q. And who was that?
A. I cannot recall the name offhand. That was some time ago.
Q. Have you reviewed the operating data from any other deep well in Brevard County?
A. No, I've not.

Page 181

Q. Isn't it true that the St. Johns River Water Management District would govern permitting of deep wells in Brevard County?
A. They have an involvement in it.
Q. Okay. Did you interview anyone at the St. Johns River Water Management District about their policies on deep well injection?
A. No, I did not.
Q. All right. Didn't Florida Cities actually apply for permits for deep well?
A. Yes, they did.
Q. And isn't it true that Florida Cities could not have proceeded with the construction of deep wells without the permission of the St. Johns River Water Management District?
A. That's my understanding.
Q. The NPDES permit violations at issue, let me move back to those just a second. Between the date of those violations -- excuse me. Let me start over again.
Were there any enforcement actions taken by EPA on those violations prior to the Barefoot Bay facility being added to this lawsuit in April of 1995?
A. Not that I can recall, not that I'm aware of.
Q. Mr. Klingenstein, I have a few brief questions back on Waterway Estates that I omitted, and I will move through those very briefly.

Page 182

One of the other options which you had identified was a connection to the North Fort Myers Utility?
A. Yes.
Q. All right. And in your report -- excuse me. Let me add -- North Fort Myers' capacity is based upon spray fields and deep well injection; is that correct?
A. Yes, that's correct.
Q. All right. Do you know how many deep wells North Fort Myers had?
A. No, I'm not aware of the exact number.
Q. Do you know the cost of connecting to North Fort Myers?
A. I've seen documents that have included various discussions of what the costs might be.
Q. Have you yourself performed any calculations about the cost of connection to the North Fort Myers compared to the actual construction of the AWT plant?
A. No, I've not.
Q. In the 1981 and 1990 studies -- let me refer you to the 1990 waste load allocation study, which is in evidence as Plaintiff's 422. Let me refer you specifically to page 17, the third paragraph. The last sentence of the third paragraph reads, "This is the same recommendation made in the 1981 model document (WQTS, Volume II, Number 52)."
Isn't it true that the recommendation that they were referring to is moving the point of discharge? Is that

Page 183

correct?
A. Yes.
Q. And the term used in this 1990 study is "recommendation" and not "requirement"; isn't that correct?
A. The document uses the word "recommendation."
MR. BULLOCK: Your Honor, that completes my cross.
There are about four or five documents which we would request to move into evidence which we've discussed: Florida Cities Number 23, which is the NPDES Permit Denial in '86.
No objection?
MR. JACOBS: No objection.
THE COURT: All right. It will be received.
(Florida Cities Exhibit Number 23 received in evidence.)
MR. BULLOCK: The next one, Your Honor, would be 33, which is the letter re: Lee County Waterway Estates temporary operating permit.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: Okay. Be received.
(Florida Cities Exhibit Number 33 received in evidence.)
MR. BULLOCK: 52, which is the amendment to Section 309, I believe you ruled on that already, and the Government objected and then withdrew its objection.

Page 184

MR. JACOBS: I agree, Your Honor.
THE COURT: Okay. Be received.
(Florida Cities Exhibit Number 52 received in evidence.)
MR. BULLOCK: 142, which is a letter regarding the Carrollwood NPDES permits requesting relief in the permit, I believe you had already ruled on that as well.
MR. JACOBS: (Indicates affirmatively.)
MR. BULLOCK: Your Honor, I believe that the record will indicate that you already admitted these, although Ms. Cole indicated to us that she had not written them down or didn't have --
THE COURT: 142 was not actually offered. I don't know whether it was an oversight.
MR. BULLOCK: I'm sorry. It's my fault, then, Your Honor, and I would offer it at this time.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: It will be received.
(Florida Cities Exhibit Number 142 received in evidence.)
MR. BULLOCK: And 192, the final issue of the NPDES permit for Barefoot Bay.
MR. JACOBS: (Indicates affirmatively.)
THE COURT: Okay. It will be received.
(Florida Cities Exhibit Number 192 received in

Page 185

evidence.)
MR. BULLOCK: The only other matter, Your Honor, we now have copies of Exhibit 132, which was the Hillsborough County consent order. Mr. Jacobs had raised the question that the copy he had seen earlier didn't have -- was not executed. We now have copies of all of it sufficient for everyone of the actual document. We'd just like to substitute that.
THE COURT: All right. That's 132.
Okay. Mr. Bullock, are you through?
MR. BULLOCK: I am, Your Honor.
THE COURT: Okay. Mr. Hird?
MR. HIRD: Thank you, Your Honor.
If we may, I'd like to retrieve my copy of the report.
THE COURT: Yes, sir.
MR. HIRD: But we have a substitute copy we will give to the law clerk.
THE COURT: All right. Thank you.
CROSS-EXAMINATION
BY MR. HIRD:
Q. Good afternoon, Mr. Klingenstein.
A. Good afternoon.
Q. You testified when questioned by Mr. Bullock that SAIC's annual billings to EPA and DOJ for enforcement matters was approximately $1 million in the last two years; is that

Page 186

correct?
A. Approximately a million dollars each year I believe was the testimony.
Q. I'd like you to look at the first page of your resume in the bottom paragraph. Do you see a reference there, sir, that billings were approximately $2 million per year?
A. Yes. That was for those two years.
Q. Thank you. Now, Mr. Klingenstein, if I -- on pages 4 and 7 -- or pages 4 and 5 of your resume you describe your experience with treatment system design and operation; is that correct?
A. Yes.
Q. And you describe being involved in the construction of three facilities on those two pages; is that correct?
A. Yes.
Q. And those include, one, metal finishing facility and, two, electroplating facilities; is that correct?
A. Yes.
Q. Now, the pollutants that come from metal finishing and electroplating facilities are different in nature and kind than those that come from domestic sewage facilities; isn't that correct?
A. Yes.
Q. And the treatment technology used to remove those pollutants from the waters is completely different from that

Page 187

that's used for domestic sewage; is that correct?
A. There are certainly significant differences.
Q. Well, you use principally ion exchange to remove metals from these facilities. Wouldn't that be correct?
A. You could. You --
Q. And you don't use ion exchange --
THE COURT: Wait. Wait. Wait.
MR. HIRD: I'm sorry.
THE COURT: Had you finished?
THE WITNESS: You could use ion exchange. You could use precipitation technologies. There are a variety of technologies that could be used.
BY MR. HIRD:
Q. And those technologies are not used with domestic wastewater sewage; is that correct?
A. Typically not.
Q. Now, Mr. Klingenstein, you identified yourself as an engineer when you began your examination; is that correct?
A. Yes.
Q. And you were qualified as an expert in wastewater treatment; is that correct?
A. Yes.
Q. You don't have any training as a psychiatrist or a psychologist, do you?
A. None whatsoever.

Page 188

Q. And you're not an expert here testifying here about human behavior or human motivation, are you?
A. That's not my understanding.
Q. Okay. I'd like you to turn to page 9 of your report, if you would.
A. I'm sorry. Which page?
Q. Page 9. Do you have that page, sir?
A. Yes, I do.
Q. Could you read the first full paragraph – I'm sorry. It's the second full paragraph beginning "furthermore."
A. "Furthermore, FCWC failed to avail themselves of the opportunity to connect to the North Fort Myers Utility Company, NFMU, an available option which would have allowed cessation of discharge prior to August 1988. Correspondence after this date indicates that FCWC decided that the plant upgrade and relocation of the outfall were the best choice nominally for cost reasons.
"However, the assertion that cost prevented FCWC from connecting to NFMU is not consistent with the record. NFMU indicated that it would provide service to Waterway Estates for 3.6 million or less (competitive with FCWC's actual costs on the upgrade and outfall extension)."
THE COURT: What page are we on?
THE WITNESS: I'm sorry. Page 9 of the report, sir.
MR. HIRD: Page 9, Your Honor, of his report.

Page 189

THE COURT: And what paragraph?
MR. HIRD: The paragraph that begins "furthermore." I believe it's the second.
THE COURT: Okay. Okay. Go ahead.
THE WITNESS: "A November 27, 1991 FCWC memo from Gordon to Levy provides an indication of another possible motivation for FCWC's rejection of NFMU's offer. NFMU's financial health and need to sell capacity was discussed, and a recent balance sheet for the utility was attached. It appears that FCWC did not want to yield its customers to its competitor."
BY MR. HIRD:
Q. Now, here you're writing about Florida Cities' motivation, aren't you? Isn't that correct? You're writing about what you consider Florida Cities' motivation to be?
A. I would be offering an opinion there as to a potential reason for why such a connection was not made.
Q. And you've just testified previously that you're not trained to speak as an expert about motivation; is that correct?
MR. JACOBS: He said he wasn't a psychiatrist.
THE COURT: Well, all right. Let's move on. I've got that point.
MR. HIRD: All right.
BY MR. HIRD:

Page 190

Q. Well, let me explore this issue with you. I'd like to have you take a look at Government's Exhibit Number 466, if you would. And at the same time would you get a copy of Avatar Holdings' Exhibit Number 3, please?
THE COURT: I missed your last question, Mr. Hird. What was that?
MR. HIRD: I'm going to ask him questions, Your Honor, about Government Exhibit 466 and Avatar Holdings Exhibit 3.
BY MR. HIRD:
Q. Do you have those in front of you, sir?
A. I have one of them. I'm sorry. And the other one was your Exhibit 3?
Q. Do you have Exhibit 466 in front of you, sir?
A. I have 466 in front of me, and I have your Exhibit 3.
Q. Okay. First I'd like to ask you whether 466 is the November 27, 1991 memo that you're referring to on page 9.
A. Yes, it is.
Q. And then looking at Exhibit 3 I'd like to ask you whether the first three pages of Avatar Holdings Exhibit 3 correspond to Exhibit 466 from the Government.
THE COURT: You mean are identical?
MR. HIRD: Are identical.
THE WITNESS: They certainly appear to be.
MR. JACOBS: Just for the record, they have

Page 191

different Bates numbers, but I'll agree in substance they are. The Bates numbers may or may not --

BY MR. HIRD:

Q. Now --

MR. JACOBS: I'm sorry. Also on the top of Avatar 3 there's a handwritten notation "file."

THE COURT: All right. Go ahead.

BY MR. HIRD:

Q. Now, Mr. Klingenstein, this memo to which you refer to is written on November 27, 1991. That's correct?

A. Yes.

Q. I believe you testified that the negotiations between Florida Cities and North Fort Myers occurred in mid-1988; is that correct?

A. In the late 1980s.

Q. So this is written two to three years after those negotiations were over.

THE COURT: Is that correct?

THE WITNESS: Yes.

BY MR. HIRD:

Q. Now, you offer your opinion that because this document 466 includes references to North Fort Myers' financial health and the need to sell capacity and included a balance sheet that Florida Cities was concerned that it did not want to yield its customers to its competitors; is that right?

Page 192

A. Yes.

Q. I'd like you to look at the first page of 466 and the corresponding first page of Exhibit 3. Do you see a line that says "ref"?

A. Yes.

Q. And subpart B in that says, "B, memorandum dated 11/20/91, Sharp to Wilkov"?

A. Yes.

Q. Okay. Could you turn to the fourth page of Avatar Holdings Exhibit 3? Do you have that, sir?

A. Yes, I do.

Q. Does that appear to be a memorandum from Peter Sharp to Lawrence Wilkov dated November 20, 1991?

MR. JACOBS: Objection, lack of foundation. He hasn't established that the witness has seen this document yet.

MR. HIRD: Your Honor, this document -- I don't believe the witness has. However, this document comes from Mr. Levy's files and is a business record.

I am going to be using it for Mr. Klingenstein in the nature of impeachment, so therefore I think I can appropriately question Mr. Klingenstein about it. I will be offering it through Mr. Levy.

THE COURT: Well, how do you plan to impeach the witness on the basis of a document that he's not seen before?

Page 193

MR. HIRD: I am attempting to show him that there is another cause that would supplant his opinion as to why the Florida Cities -- why this memorandum was written and that this memorandum has nothing to do with the cause that he attributes to it.

THE COURT: Well, I don't know -- I think maybe you might be able to ask him questions of a hypothetical nature at this point.

MR. HIRD: All right, Your Honor.

THE COURT: But I'm going to sustain the objection to the document at this point.

MR. HIRD: Then I will move to a hypothetical.

BY MR. HIRD:

Q. Let me ask you to assume that sometime shortly before the November 27th, 1991 letter was written that North Fort Myers Utility had approached Avatar Holdings and expressed an interest in Avatar Holdings or one of its subsidiaries to purchase North Fort Myers Utility, either the whole thing or an interest.

Can you make that assumption with me?

A. If you ask me to, yes.

Q. Now, if you make that assumption, wouldn't it be reasonable for a memo to be prepared that discussed North Fort Myers Utility's financial health?

A. Yes.

Page 194

Q. And wouldn't it be reasonable to discuss the need to -- North Fort Myers Utility's need to sell capacity?

A. Yes.

Q. And wouldn't it be reasonable to include a balance sheet?

A. Yes.

Q. And wouldn't this provide another explanation different from the one in your report as for why the November 27th, 1991 memo was written?

A. Yes.

Q. All right. Turning back to the November 27th, 1991 memo -- or, rather, for a moment let's turn back to your report. I believe when Mr. Bullock questioned you, he asked you whether you compared the cost of connecting to North Fort Myers to the cost of building an upgrade and the outfall extension; is that correct?

A. Yes, I believe he asked me that.

Q. And you said that you didn't compare it.

A. I believe I said I had not carried out my own detailed independent analysis of that.

Q. I see. But in this paragraph you seem to indicate that you believe the two costs were comparable; is that correct?

A. I believe I was referring to a piece of correspondence that had specifically offered a summation of what the cost would have been.

Q. Do you know if that summation of the cost included tax

Page 195

gross-up?
A. No, I do not.
Q. *Do you know what tax gross-up is?*
A. No, I do not.
Q. Now, if you take a look at Exhibit 466, which has been referenced in your letter – in your report, rather, 466, do you see in the middle of the middle paragraph on the first page the phrase "the tax gross-up impact made the connection uneconomic compared to upgrading our existing plant"? Do you see that phrase?
A. Yes, I do.
Q. And you were unable to interpret that phrase because you didn't know what tax gross-up is; is that correct?
A. I interpreted it to the extent that it was an indication that there was some tax-related cost that was being identified as having had an impact on the cost.
Q. And further down in 466 is the statement "being unable to reach an agreement that made economic sense – the gross-up was the killer – Florida Cities turned its attention to upgrading its existing wastewater treatment facility." Do you see that?
A. Yes, I see that.
Q. So at least in the view of this letter the tax gross-up was something that made a difference in terms of Florida Cities' decision here; is that correct?

Page 196

A. Apparently in the view of the writer.
Q. But you don't know what difference it was and how it impacted the comparative costs?
A. Not at this point, no.
Q. I'd like you to turn to the second page of 466. That shows the balance sheet for National Fort Myers Utilities (sic) that you referred to in your report; is that correct?
A. Yes.
Q. And it shows a negative number for equity capital of $3,995,000 in the year 1990; is that correct?
A. It appears to, yes.
Q. And moving down the page, in the year 1990 it shows a net loss of 1,479,000; is that correct?
A. Yes, it does.
Q. And turning to the last page of 466, there is the statement -- in the paragraph beginning "obviously," there is the statement, "Obviously without a bailout by the county, North Fort Myers Utilities' future appears bleak." Do you see that?
A. Yes, I do.
Q. Now, in considering whether to hook up to North Fort Myers in 1988, would it have been reasonable for Florida Cities to consider the financial condition of North Fort Myers?
A. Yes.

Page 197

Q. And it would not be a good solution for Florida Cities to hook up to a facility that was in danger of floundering because of financial reasons; is that correct?
A. Well, unless their hooking up made a difference in the condition of that entity.
Q. Now, you have talked about a Mr. Ken Kwan at several times during your examination. Mr. Kwan is the EPA enforcement lead for this case; is that correct?
A. Yes.
Q. And he is the -- he's an engineer by training; isn't that correct?
A. Yes, I believe that's so.
Q. And he is the person who is responsible on behalf of EPA for making the technical decisions with respect to this case; is that correct?
A. I wouldn't want to characterize who makes the decisions for EPA.
Q. But he is the staff -- the front-line person, the first-line person with respect to technical issues in this case; is that correct?
A. He's been my primary point of contact in this case within EPA.
Q. Are you testifying under a contract with EPA or the justice department for this case?
MR. JACOBS: Objection, relevancy.

Page 198

THE COURT: Overruled.
THE WITNESS: EPA.
BY MR. HIRD:
Q. And do you have a contract officer in connection with that contract?
A. Within our company or within EPA?
Q. Within EPA.
A. Yes.
Q. And do you have a project officer within EPA with respect to this particular task order?
A. Yes.
Q. And is Mr. Kwan the project officer?
A. No.
Q. Now, I'd like to have you take a look at Exhibit 494, if you would.
MR. HIRD: This is Government Exhibit 494, Your Honor.
THE COURT: Yeah. I'm assuming that you don't have 494 exhibits.
MR. HIRD: We have only one book, Your Honor.
THE COURT: Yeah.
MR. HIRD: Do you have that in front of you, Your Honor?
THE COURT: I have 494.
THE WITNESS: Yes, I do too.

Page 199

BY MR. HIRD:
Q. This is one of the documents you relied on in your report, is it not?
A. I've seen this document, yes.
Q. Okay. This document refers to a meeting between EPA and the Department of Justice on one hand and representatives of Florida Cities and Avatar Utilities on the other, does it not?
A. Yes, it does refer to a meeting that took place.
Q. And this meeting took place on December 22nd, 1992; is that correct?
A. Well, I believe the meeting took place on December 16.
Q. I'm sorry. It took place on December 16th, and the memo is dated December 22nd; is that correct?
A. Yes, that appears to be correct.
Q. Okay. Now, at this meeting representing the Government was Mr. Jacobs; is that correct?
A. Representing the U.S. Department of Justice apparently, yes.
Q. And representing EPA was someone named Gwen Eason; is that correct?
A. Yes.
Q. Is that the same person as Gwen Fitz-Henley?
A. Yes.
Q. Also representing the Government at this meeting was Mr. Ken Kwan.

Page 200

A. Yes, that appears to have been correct.
Q. And this was a meeting about the Waterway Estates claims in this case; is that correct?
A. Yes.
Q. Okay. Now, at that meeting, if you go down to the first -- to the paragraph that has one line, about the middle of the first page, it says, "Ms. Eason stated the violations were as follows." Do you see that?
A. Yes.
Q. And those are essentially the Waterway Estates violations that are in this case; is that correct?
A. Without matching exact dates, yes.
Q. Well, it's actually a little broader because the alleged violations here start June 1988 and the complaint starts November 1, 1988; is that right?
A. I believe so.
Q. And then if you go down the next block, it says, "Ms. Eason stated the penalties are based on the following factors." Do you see that?
A. Yes.
Q. And the first factor is seriousness of violation; is that correct?
A. Yes.
Q. And, Mr. Klingenstein, you're here testifying about seriousness of violation; isn't that correct?

Page 201

A. That's correct.
Q. Now, on the next page you see a calculation of various dollar figures; is that correct?
A. Yes.
Q. And I'd like you to go down way towards the bottom of the calculation. You see a figure called gravity component seriousness.
A. Yes.
Q. Do you see that?
A. Yes.
Q. And what figure is that?
A. $407,000.
Q. And if you go back up to the heading of the paragraph, that states, "Mr. Kwan showed the calculations pertaining to the settlement model as follows"; is that right?
A. I'm sorry. Where is this exactly?
Q. Up at the --
A. Oh, I'm sorry. Just above that.
Q. Yeah.
A. Yes, I see that.
Q. So Mr. Kwan expressed at this meeting that the seriousness of the violations was worth to the agency $407,000; is that correct?
A. That's what this memo reflects.
Q. Now, you were here when Mr. Jacobs gave his opening

Page 202

argument on Monday?
A. Yes, I was.
Q. And Mr. Jacobs asked this Court for $1.9 million with respect to the claims of unpermitted discharge. Do you recall that?
A. Yes, I do.
Q. And that's almost five times the $407,000 figure in this letter.
THE COURT: Well, don't examine the witness on the basis of an opening statement by counsel. I won't permit that.
MR. HIRD: All right.
Your Honor, I have no further questions of the witness.
THE COURT: Redirect?
MR. JACOBS: Very briefly, Your Honor, with your permission.
THE COURT: Don't say "very briefly" unless you mean it now.
MR. JACOBS: I mean it, Your Honor.
THE COURT: Oh, good.
MR. JACOBS: First thing this morning we spoke of a stipulation. And we did submit it to Ms. Cole, but I understand that we have not technically moved into evidence all of the exhibits in the joint stipulation that has been

Page 203

signed by all three parties and submitted to the Court. And I'd like to do so at this time.

THE COURT: All right. Okay. I have the joint stipulation which I have reviewed, and the Court will permit over the objections which are reflected in the joint stipulation as Codes 1, 2, and 3 the exhibits that are set forth in Attachment A to that joint stipulation. I don't think that we will need to go through verbally all of those. I think you've got a record of that here in your joint stipulation.

And Ms. Cole can -- she's not here right now, but I'll instruct her to make note of that on the -- where she records the exhibits that are received.

All right.

REDIRECT EXAMINATION

BY MR. JACOBS:

Q. Mr. Klingenstein --

THE COURT: Now, that's of course with the exception of -- well, those exceptions are noted in the last paragraph of the joint stipulation which we've already addressed.

All right. Go ahead.

BY MR. JACOBS:

Q. Mr. Klingenstein, you spent some time with Mr. Bullock on the subject of when Florida Cities was on notice of the need to upgrade the plant and move the outfall, and you went

Page 204

through some documents with him. In your opinion, sir, when was Florida Cities Water Company first on notice of the need to upgrade the plant at Waterway Estates, that is, and move the outfall?

A. Well, in my opinion, Florida Cities' first indication that they would need to do something about that treatment plant was when in fact the 1981 waste load allocation study was completed and a zero waste load allocation was found for the plant based on the assumption that it was going to tie into the Cape Coral Regional Facility.

When that regional facility, the arrangement in effect fell apart, in my opinion Florida Cities should have been on notice that -- given that it was clear from the document that in fact no waste load allocation would be found to exist at the existing point of discharge for the existing level of treatment, some action would need to be taken. So back in that time frame, in the time frame when that fell apart, 1982, 1983.

Q. I see. Now, the waste load allocation study was what year?

A. 1981.

Q. And then continuing down the time line, so to speak, when did the concept of the regional plant fall through?

A. The documents that I've seen would seem to indicate that it was in the 1982-1983 time frame when that arrangement fell

Page 205

apart apparently due to cutbacks in federal funding.

Q. Now, assuming for whatever reason they were not on notice in 1981 or 1982 or 1983 of the need to upgrade the Waterway Estates plant and move the outfall, what milestone, if you will, would you next identify in terms of the notice that they received of the need to upgrade the plant and move the outfall?

A. Well, certainly a very formal notice would be the tentative denial of the permit.

Q. And would that be Florida Cities Exhibit 23?

A. If I could refer to it.

Yes, and that's dated June 30th, 1986.

Q. Very well. And was there any additional notice after that to Florida Cities that they needed to upgrade the plant and move the outfall?

A. Well, certainly they also received the formal denial at the end of the year that became effective in January of 1987.

Q. And would that be Florida Cities Exhibit 27?

A. Yes, which is dated December 8, 1986. Both of those documents indicate that there is no permit either going to be issued or issued for the discharge at that particular location for that particular discharge. The logical conclusion is that an additional -- rather, an alternative point and type of discharge is necessary or zero discharge is necessary.

Q. Now, Mr. Bullock also went through a series of

Page 206

administrative orders, known as AO's, with you at Waterway Estates, the first of which was Defendant's or Florida Cities' Exhibit 28. Would you take a look at that, please, sir?

A. Yes. That's dated May 11, 1987.

Q. Directing your attention to the second page of the administrative order itself, which is the third page of the exhibit, would you tell me what, if anything, the agency ordered Florida Cities to do with respect to its discharge?

A. Under item number 1, it specifically says that "Respondent shall cease discharging pollutants to waters of the United States at the earliest date practicable but not later than September 30, 1988. The Respondent shall report on progress toward meeting this compliance date as follows."

And then a two-column table of activities and due dates is provided that provides for a series of progress reports, the start of construction, completion of construction, and then the meeting of the final requirements to cease discharge.

Q. And that means cease discharge at the present location; is that correct?

A. Certainly there would not be anything that would preclude the application for the right to discharge at another location or with another type of discharge.

MR. BULLOCK: If the Court please, objection. The document speaks for itself as to what it means, and I would

Page 207

object to his interpretation which on the face of it appears to be outside of the scope of the meaning of the language of the document.

THE COURT: I'll overrule the objection.

BY MR. JACOBS:

Q. Had you finished your answer, Mr. Klingenstein?

A. Yes.

Q. Now, in your opinion, sir, was this order in schedule set forth in paragraph 1 of the administrative order, Florida Cities Exhibit 28, complied with?

A. No, it was not.

Q. Directing your attention to paragraph 2 of the same exhibit.

A. On page 3?

Q. Yes, sir. Does that paragraph give any indication with respect to whether this administrative order can be considered an NPDES permit?

A. Yes, it specifically reads, "This should in no way be considered a permit to discharge."

Q. Now, if the paragraph continues that "The Respondent does discharge to the waters of the United States in violation of the act," this administrative order provides that what needs to happen?

A. "The Respondent's discharge of treated wastewater shall at least comply with the effluent limitations, monitoring

Page 208

schedule and other requirements contained in its previous permit."

Q. Now, Mr. Bullock also directed your attention to a subsequent administrative order, Defendant's or Florida Cities' 195. Can I direct your attention to that administrative order, please?

THE COURT: Don't give me another one, please. I'll just do my best. Thank you very much, though.

THE WITNESS: Yes.

BY MR. JACOBS:

Q. First of all, is there an indication in Defendant's Exhibit 195, which is the September '89 administrative order, as to whether or not that administrative order constitutes an NPDES permit?

A. Yes, on page 4 there is the same language in paragraph 2 that this should in no way be considered a permit to discharge.

Q. And is there also a construction schedule set out in this administrative order?

A. Yes, on page 3 under paragraph number 1 there is a schedule listed at the bottom of the page, again a two-column table activities and due dates with start construction on May 1, 1990, complete construction and cease discharge at the current location August 1, 1991, and comply with NPDES requirements at permitted location by October 1, 1991.

Page 209

Q. And were any of these requirements violated?

A. Yes. Construction of the complete upgrade was not completed by the October 1, 1991 date.

Q. You mean the compliance with the NPDES permit requirements was not completed by October 1, 1991?

A. By October 1, 1991. The completion of all construction was not completed by August 1, 1991.

Q. Those are two separate requirements; is that correct?

A. Yes.

Q. And it's your testimony that both were violated?

A. Yes.

Q. Now, finally Mr. Bullock brought to your attention Defendant's or Florida Cities' Exhibit 52, the one-page, as it were, administrative order which substituted new dates for some of these milestones.

Again, is there a reference in this particular order as to whether this order excuses compliance with the Clean Water Act --

A. I --

Q. -- or an NPDES permit?

A. I'm sorry. I don't have it in front of me.

Q. I'm sorry. This is Defendant's 74. Oh, it has two -- I'm sorry. It's Defendant's 52 for trial purposes. It was Deposition 74.

A. Yes.

Page 210

Q. And what is the indication in that respect, sir?

A. There is again a construction schedule provided, again a two-column table showing activities and due dates, start construction February 1, 1989, complete construction May 1, 1990, and meet final requirements by ceasing discharge November 1, 1990.

Q. And these are new dates, are they, substituted dates for the previous order? Is that correct?

A. For the order that preceded this as opposed to the order that we just looked at.

Q. Is there one we haven't looked at to your knowledge that was in between?

A. Well, I'm sorry. Could we refer back to the previous one? What was the number of the previous one?

THE COURT: Is that 195?

MR. JACOBS: 195. Thank you, Judge.

BY MR. JACOBS:

Q. And before that we referred to 28 so perhaps I could rephrase the question and ask you to testify as to which previous administrative order this one-page administrative order amends.

A. Well, this one would amend 87-085.

Q. By setting out later dates; is that correct?

A. Setting out later dates, yes, as opposed to the dates that were in the --

Page 211

Q. Now, while it sets out later –
THE COURT: Wait. Wait. Wait.
Were you through?
THE WITNESS: Just as opposed to the dates that were in the one that we had previously reviewed.
MR. JACOBS: Sorry.
BY MR. JACOBS:
Q. Now, looking at the bottom of 52 again, you said the order sets out new dates. Does the order excuse compliance with the previous order with the NPDES permit or with the Clean Water Act?
A. Paragraph 6 notes that "Nothing in this order shall be construed to prevent further enforcement of the violation stated herein, nor shall it preclude institution of administrative penalties or civil litigation based on violations of the Clean Water Act."
Q. Thank you. Moving on to Carrollwood, Mr. Bullock called your attention to Exhibit 201, which were these notes written by an EPA staffer describing the history of compliance and/or lack thereof at Carrollwood. I'd like to direct your attention to the bottom of page 2 of the exhibit.
THE COURT: Now, you're talking about Defendant Florida Cities 201, correct?
MR. JACOBS: Yes, sir. Thank you.
BY MR. JACOBS:

Page 212

Q. The bottom of page 2, end of paragraph 6, of Defendant Florida Cities 201, "An application was submitted to DER for a construction of an Advanced Wastewater Treatment, AWT, upgrade in November 1989. In July 1990 DER issued Respondent a construction permit for the construction. On July 31st, 1991 Respondent submitted an application for an NPDES permit. EPA plans to issue an NPDES permit to the Respondent."
A. Yes, I see that.
THE COURT: Did he read that correctly?
THE WITNESS: Yes.
THE COURT: Okay.
BY MR. JACOBS:
Q. Now, Mr. Klingenstein, can you tell me whether you have an opinion as to whether one could draw an inference from that statement that the NPDES permit that EPA planned to issue was based on the construction of an AWT plant by Florida Cities Water Company?
A. Yes, that's the inference.
Q. Now, directing your attention to Florida Cities Exhibit 97, I believe Mr. Bullock directed your attention to page 2 of the exhibit to subparagraph A. I'd like you to look at subparagraph D, as in "dog," and E, as in "Ethel."
Would you read D, first of all, into the record?
A. "If an agreement with Hillsborough County is not made by the deadline in B, the permittee shall submit a construction

Page 213

application to provide an alternate effluent disposal method by July 1, 1984." Paragraph –
Q. Mr. – I'm sorry?
A. Paragraph E –
Q. Let me stop you at D, if I may. Now, do you know whether an agreement was reached between Florida Cities Water Company and Hillsborough County by July 1st, 1984?
A. Yes, I am aware that no agreement, such agreement was reached.
Q. In fact, when was the agreement reached?
A. The agreement was not reached until I believe mid-1991, the year prior to the disconnection, or, rather, the connection to Hillsborough County and the taking off line of the Carrollwood plant.
Q. So is it a fair inference from this state document that under the circumstances the permittee – that is, the state of Florida Cities Water Company – needed to submit a construction application to provide an alternate effluent disposal method by July 1, 1984?
A. That would appear to be the requirement of this modification of the permit.
Q. And now would you take a look at subparagraph E, as in "Ethel"?
A. Yes.
Q. And would you read that into the record, please?

Page 214

A. "The discharge to Sweetwater Creek shall cease no later than January 1, 1985."
Q. When did the discharge to the Sweetwater Creek cease?
A. When the connection was made to Hillsborough County in very early 1992.
Q. Seven years later?
A. Yes.
Q. Now, Mr. Bullock has brought to your attention a couple of documents reflecting correspondence between Florida Cities Water Company and the Hillsborough County with respect to a potential connection.
Based on your testimony yesterday, approximately how many pieces of such correspondence did you review in addition to the few that Mr. Bullock called to your attention?
A. I can't recall the exact number, but it's something between a half dozen and a dozen I would say.
MR. JACOBS: One moment, Your Honor.
THE COURT: Okay.
BY MR. JACOBS:
Q. Mr. Klingenstein, based on your review of the correspondence between Florida Cities and Hillsborough County over the span of the seven or eight years, can you tell me whether there was any commitment given by Hillsborough County to hooking up the Florida Cities Carrollwood system?
A. Based on my review of the correspondence, I didn't see

Page 215

what I would have considered to be anything approaching a commitment until 1991 when in fact an agreement was reached.
Q. Thank you. Did you see any documents that suggested that there could actually be a no guarantee of a connection?
A. Certainly there were a couple of documents, couple of letters that indicated concerns on Hillsborough County's part about being able to provide capacity certainly by a particular date.
Q. Did you see any indication that Hillsborough County encouraged Florida Cities Water Company to pursue alternative means of providing wastewater service given the deadline imposed on them by EPA?
A. No. Certainly there was at least one mention in a Hillsborough County letter that perhaps Florida Cities should pursue other options. And, frankly, I took the fact that Hillsborough County apparently lost one of Florida Cities' applications and that it had to be resubmitted some period of time later as an indication that they were not strongly encouraging such a connection.
Q. Directing your attention to Government Exhibit 263, would you look at the second full paragraph? I take it you've seen this document before, sir?
A. Yes, I have.
Q. Would you look at the second full paragraph, please, and read that into the record?

Page 216

A. "We understand that the Department of Environmental Regulation has requested that your facility be taken out of service and wastewater disposal service provided by Hillsborough County. However, we do not see this as a realistic possibility at this time or in the near future."
THE COURT: Was that not previously read?
MR. JACOBS: I don't think that paragraph was.
THE COURT: Okay. It just sounded kind of familiar.
MR. JACOBS: The document looked a little –
THE COURT: I don't want you to repeat anything. Okay.
Did you read that?
THE WITNESS: I don't know, Your Honor. I've read so much.
THE COURT: Okay. Go ahead. Move on.
BY MR. JACOBS:
Q. Directing your attention now to Government Exhibit 278 and in particular to page 2, have you previously examined this exhibit, sir?
A. Yes, I have.
Q. And in paragraph 2 of page 2 of Exhibit 278, does the indication or suggestion appear from Hillsborough County that Florida Cities pursue alternative means other than connecting to Hillsborough County?
A. There is a notation "the department would have no

Page 217

objection to Florida Cities pursuing alternative means of providing wastewater service for this development given the deadline" –
THE COURT: Wait. Wait. Wait.
THE WITNESS: Oh, I'm sorry.
THE COURT: A little fast for the Reporter.
THE WITNESS: Let me read that over.
"The department would have no objection to Florida Cities pursuing alternative means of providing wastewater service for this development given the deadline imposed on them by EPA."
BY MR. JACOBS:
Q. And what deadline was that, sir, if you know?
A. I'm sorry. What date?
Q. What deadline?
A. Oh, the deadline to cease discharge to the creek.
Q. Under an administrative order?
A. Yes.
Q. And do you recall what that deadline was?
A. I can't recall at this point which deadline.
Q. Now, Mr. Bullock also brought to your attention the permit application for the Carrollwood facility, did he not? I believe that was Defendant Florida Cities 126.
And I believe you said you've seen that previously; is that correct?

Page 218

A. Actually I don't – I couldn't say whether I had seen that as I recall.
Q. I stand corrected. Are you familiar with reviewing these types of applications?
A. I'm familiar with these types of applications, yes.
Q. Okay.
A. I've not reviewed them for EPA in terms of submitted, but I'm familiar with reviewing them in the course of working with facilities.
Q. Very well. Directing your attention to the fifth page of the exhibit – again, this is Defendant Florida Cities 126, and this would be the fourth page of the application itself. Is there an indication in the application – is there an indication by the Florida Cities Water Company as to whether it intends to upgrade the Carrollwood plant?
A. Yes. Under –
Q. And what is that indication?
A. Under item 6, "treatment system," which requests the applicant to describe briefly any treatment systems used or to be used. "In general an Advanced Wastewater Treatment, AWT, System designed to comply with the Grizzle-Figg legislation by employing the following treatment technologies: screening, grit removal, flow equalization, biological treatment using the Orbal oxidation ditch process, clarification, tertiary filtration, chlorination, de-chlorination, and post-aeration."

Page 219

Q. Now, to your knowledge, sir, an EPA NPDES permit was issued based on this application; is that correct?
A. Yes, it was.
Q. And, in fact, that permit did require treatment of the effluent to AWT standards; is that correct?
A. Yes, it did.
Q. And is it a fair inference to be drawn that the permit was actually issued based on the representation in the application that the plant would be upgraded to AWT standards?
A. Yes, that is.
Q. Now, Mr. Bullock also asked you to look at Defendant Florida Cities Exhibit 156, and I wonder if you could take a look at that now, please.
A. Yes.
Q. And I believe he referred you to a paragraph that reflected that the administrative order had been placed in an inactive status; is that correct?
A. Yes.
Q. Now, by the time the administrative order had been placed in an inactive status, had the NPDES permit already been issued?
A. Yes, it had.
Q. In fact, when did that permit take effect?
A. I believe July 1991.
Q. And this deactivation, as it were, took place when?

Page 220

A. I believe it's dated March 3rd, 1992.
Q. In your professional opinion, sir, was the administrative order previously issued superseded by the NPDES permit that took effect in November 1991?
MR. BULLOCK: If the Court please --
THE COURT: Just a moment.
MR. BULLOCK: I don't believe this is a proper subject for his testimony if he's testifying about what an agency action does or doesn't do. He's not an agency employee. He doesn't know the purpose or the motivation behind sending that letter. He can look at the letter, but in terms of why it was done, the basis of doing it, is outside the scope of expert testimony.
MR. JACOBS: Your Honor, it's rebuttal, and I think they've well opened the door in terms of interpreting EPA documents.
MR. BULLOCK: Your Honor, there is an EPA official here who's sitting --
THE COURT: I'll sustain the objection.
MR. BULLOCK: Thank you.
BY MR. JACOBS:
Q. Finally, turning to Barefoot Bay, Mr. Klingenstein, Mr. Bullock also directed your attention to Government Exhibit 145, the administrative order for the Barefoot Bay facility, and I wonder if you could take a look at that again, please, sir.

Page 221

A. Yes, I have that.
Q. Thank you. Could you tell me if there's language in this administrative order as to whether or not it constitutes a permit?
MR. BULLOCK: If the Court please, Your Honor, he went into this on direct, and he's asked the exact same whether or not --
THE COURT: Sounds familiar to me. I'll sustain the objection.
MR. JACOBS: Very well.
BY MR. JACOBS:
Q. Mr. Klingenstein, in your professional opinion, what is the purpose of these administrative orders at each of the three facilities?
MR. BULLOCK: If the Court please, Your Honor, same objection.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Directing your attention now to Defendant Florida Cities Exhibit 192, I think you previously identified this as the Barefoot Bay permit issued in September of '91 effective November of '91; is that correct, sir?
A. Yes.
Q. Now, Mr. Bullock brought to your attention an internal

Page 222

EPA document as I recall dating back to '95 -- or -- sorry -- '85 that related to permit requirements for the testing for total residual chlorine. Do you recall that?
A. Yes.
Q. Now, does the permit itself instruct the permittee on the methods that are to be used both to measure and to report total residual chlorine?
A. Yes.
Q. And where does the permit do that?
A. On page Roman numeral I-2 which is within part 1, and it's under item number 2.
MR. JACOBS: Thank you, sir. No further questions at this time.
MR. BULLOCK: If I promise to be brief, Your Honor, and live up to it?
THE COURT: Well, I -- this is going to have to truly be legitimate recross. What are the areas that you want to --
MR. BULLOCK: Two questions, Your Honor. Excuse me. Two areas, Your Honor. I would like to address issues raised regarding the 1986 permit denial, the Administrative Order 87-085, and I want to ask him about -- a question about a letter of correspondence with Hillsborough County regarding --
THE COURT: I'll permit limited recross, but let's be very brief.

Page 223

RECROSS-EXAMINATION

BY MR. BULLOCK:

Q. Mr. Klingenstein, Mr. Jacobs asked you about the tentative denial of the '86 permit application in Exhibit 23. There's nothing in either the tentative denial or -- isn't it true that there's nothing either in the tentative denial or the formal denial in Exhibit 27 which directs upgrade to AWT?

A. There's nothing that specifically directs upgrade to AWT, that's correct.

Q. Let me also ask you to look at 87-085, which is Exhibit 28. Mr. Jacobs asked you to read paragraph 1 on page 2. The language in paragraph 1, page 2, isn't it true that this language states that "the Respondent shall cease discharging pollutants to the waters of the United States at the earliest date practical but no later than September 30, 1988"? Is that correct?

A. Yes, that's the language.

Q. There is no requirement in this order to begin constructing an AWT facility, is there?

A. No, there's no specific requirement to construct an AWT.

Q. And, in fact, EPA for whatever reason did not believe that at this point in time Florida Cities had the authorization to discharge into the waters of the United States; is that correct?

A. My interpretation would be that they did not have

Page 224

authorization to discharge into the waters of the United States at a particular place.

Q. And where is that stated? Is that stated in the '86 -- excuse me. Let me withdraw that.

Can you point out where that is in the '86 tentative denial?

A. Well, a denial denies a permit application.

Q. Okay. Would --

A. I'm sorry. An applicant applies to discharge a particular wastewater flow with certain characteristics at a certain place.

Q. Well, the denial has to state a basis of a denial, does it not?

A. My experience, typically they do, yes, they do include a reason for denial.

Q. Is there a -- let me refer you to page 2 of Exhibit 23, page 2 of the actual -- of the fact sheet. Excuse me.

The basis for the final effluent limits and permit conditions do not say anything about -- isn't it true that that does not say anything about whether or not there was a waste load allocation developed for the canal in 1981?

A. Only to the extent that that same document on the previous page lists receiving water as Caloosahatchee River via a canal.

Q. Isn't it true that the first time there was any

Page 225

requirement, any formal official requirement from the Environmental Protection Agency to Florida Cities Water Company regarding AWT construction was in September 26, 1989?

A. Certainly based on our review of documents today, that's the first document that I recall seeing that's specifically from EPA that specifically required AWT in writing in the document.

Q. So the answer to my question is yes?

A. Yes.

Q. Let me turn with you to Carrollwood briefly. Exhibit 272, which would be *Plaintiff's* 272 --

A. I'm sorry. That was 272?

Q. Correct. That would be the letter from Hillsborough County to Florida Cities in 1986. Is that correct?

A. No, this is -- I'm sorry. This is Government 272?

Q. Yes.

A. I'm looking at Government 272, which is dated September 27, 1984. It's a U.S. EPA letter from Paul Traina.

Q. I'm sorry. I may have written the wrong number down.

Well, I can ask you this question because you just recently looked at the document. Mr. Jacobs showed you a document from Hillsborough County in 1986 stating that the county did not have the capacity to accept the effluent and the county would have no objections to the company looking at other options. Do you remember that?

Page 226

A. Yes.

Q. All right. In fact, that letter came from the Hillsborough County Department of Sanitary Services; isn't that correct?

A. I'd have to look at the document again.

MR. JACOBS: We can stipulate to that if it would help.

MR. BULLOCK: Thank you.

BY MR. BULLOCK:

Q. Isn't it true that the Department of Sanitary Services is not the governing body for discharge permits in Hillsborough County?

A. My understanding, it is the Hillsborough County EPC would be.

Q. So the Sanitary Services could not excuse any condition of a Hillsborough County Environmental Protection Commission permit or an FDER permit, could it?

A. I would expect not.

MR. BULLOCK: Thank you.

THE COURT: Okay. Thank you, sir. You may step down.

THE WITNESS: Thank you, Your Honor.

(Mr. Klingenstein was excused.)

THE COURT: I think we'll go till 5:30 this evening. And we've been here for over two hours, so let's take a

Page 227

ten-minute recess.
(Recess taken.)
THE COURT: Sorry. I had an emergency.
Okay. Call your next witness.
MR. JACOBS: Your Honor, the United States calls Jack Schenkman.
While he's taking the stand, Your Honor, my questions of Mr. Schenkman will be very brief, and I understand that to be the case with both of the defendants as well.
Mr. Schenkman was kind enough to fly up from Miami on Monday and again today, so we're going to I think mutually agree to finish him today. And we'll try to do that by 5:30 within the Court's specifications.
THE COURT: All right.
THE CLERK: Raise your right hand.
(Whereupon Jack Schenkman was duly sworn.)
THE CLERK: Take a seat in the witness box.
State your name and spell the last for the record, please.
THE WITNESS: Jack Schenkman, S-c-h-e-n-k-m-a-n.
THE CLERK: Thank you.
DIRECT EXAMINATION
BY MR. JACOBS:
Q. Good afternoon, sir. And thank you for coming, and I

Page 228

apologize for the inconvenience.
Would you tell me how you're employed, please.
A. I'm the chairman of the board of North Fort Myers Utility.
Q. And that's in Fort Myers, Florida?
A. Yes, it is.
Q. And how long have you been affiliated with North Fort Myers Utilities?
A. I started at North Fort Myers Utility from the beginning, and it was about I would say around ten, 11 years ago.
Q. And does North Fort Myers Utilities operate a wastewater treatment plant?
A. Yes, it does.
Q. When was this plant first placed in service?
A. Let's see. About 1985, '84, something like that.
Q. Mr. Schenkman, do you recall executing a declaration in this case back in November?
A. Yes, I do.
Q. Would it refresh your recollection to have that handy?
A. Surely.
MR. JACOBS: Your Honor, may I?
THE COURT: Yes, sir.
THE WITNESS: Thank you.
BY MR. JACOBS:
Q. Now, making reference to your declaration as you see fit,

Page 229

sir, could you tell me what the capacity of the North Fort Myers Utilities Wastewater Treatment Plant is?
A. Two million gallons per day.
Q. And when did the plant have that capacity?
A. We had it -- we really started to build it in beginning of '87. By '88 we had it resolved, finished.
Q. And so when was the plant first placed in service?
A. The plant was placed in service before that in -- North Fort Myers Utility was near Old Bridge Village, which is one of my communities, and then I moved it to a 40-acre site, which it is in today, and we built a two-million-gallon facility at that time.
Q. And, again, with reference to your declaration, if you need to, sir, at what point in time did you have the two-million-gallon capacity?
A. 1987.
Q. Take a look at paragraph 2. Does that refresh your recollection as to when the two-million --
A. Yes, yes.
Q. All right. Just for the record, when did the plant have the two-million-gallons-per-day capacity?
A. From 1987 on.
Q. All right. Paragraph 2 you say, "North Fort Myers Utilities Wastewater Treatment Plant, which has a capacity of two million gallons per day, was first placed in service on

Page 230

August 27th, 1988."
A. That's true. But in 1987 it was under construction.
Q. Okay. I understand. You began construction in '87, and it was complete and ready to go in August of '88; is that correct?
A. That is correct.
Q. Now, can you tell me, Mr. Schenkman, what method the plant uses to dispose of its treated effluent?
A. Well, we send treated effluent to golf courses, public grounds, and so forth. It's all reuse.
Q. It's all reuse?
A. Everything is for reuse.
Q. So you do or you don't have any discharge to a surface water?
A. No, we don't. We also have a two-million-gallon deep well into the boulder zone in case of unusual weather so that we don't flood the streets.
Q. Or the golf course?
A. Or golf courses that might not be able to take the excess water we have.
Q. So in wet weather your backup is the deep well; is that correct?
A. That's correct.
Q. Now, Mr. Schenkman, at any point in time did you have discussions with representatives of the Florida Cities Water

Page 231

Company relative to providing wastewater treatment service to wastewater from the Waterway Estates facility?
A. I think some discussions began about 1987, and we offered to service them if they wanted to come in to us.
Q. And did your attorney actually conduct those negotiations --
A. That is correct.
Q. -- at your instruction?
A. That is correct.
Q. And did he copy you on the correspondence?
A. Yes, he did.
Q. Directing your attention now to Government Exhibit 362, which will be brought to you, Mr. Schenkman, is this a piece of correspondence that your attorney wrote?
A. That is correct.
Q. At your instruction?
A. That's right.
Q. And in this letter, Exhibit 362, does your attorney on your behalf offer to provide bulk sewer service to Florida Cities Water Company for the Waterway Estates plant?
A. That is right.
Q. And the date on this letter, sir?
A. Let me see. February 2nd, 1987.
Q. Was an agreement reached in February of '87?
A. No, we never did reach agreement with them. We made the

Page 232

offer.
Q. And just focusing on this offer for the moment, I see there's a signature line on the bottom of page 2 I take it that was never signed, meaning an agreement was not reached; is that correct?
A. That is correct.
Q. And is that because the offer was not accepted?
A. That is right.
Q. Now, were there subsequent negotiations?
A. Yes. They talked about it after. And we gave them a figure at the time. And then there was further discussions, but they never accepted us.

MR. JACOBS: Okay. Before we move on to the next piece of correspondence, Your Honor, I'd like to move 362 into evidence.

THE COURT: Be received.

(Government Exhibit Number 362 received in evidence.)

BY MR. JACOBS:

Q. Now, Mr. Schenkman, I'd like to direct your attention to Government Exhibit 385. Do you recognize Government Exhibit 385, sir?
A. Yes, yes, I do.
Q. And would you identify it, please, for the record?
A. It was dated November the 17th, 1988.

Page 233

Q. And, again, is this a letter from your attorney written on your behalf with respect to the same subject?
A. That is correct.

MR. JACOBS: Move 385 into evidence, please.

THE COURT: Will be received.

(Government Exhibit Number 385 received in evidence.)

BY MR. JACOBS:

Q. Now, Mr. Schenkman, in this particular November '88 letter, are you essentially lowering your price for the connection?
A. Yes, we did at that time to help out as much as we could to Florida Cities.
Q. You wanted to help them out. Did you also want to make a deal, Mr. Schenkman?

MR. BULLOCK: If the Court please, Your Honor, I know he's trying to rush to get through, but he is kind of bordering on leading a little bit, and we would object to it.

THE COURT: Okay. Well, try not to lead too much.

BY MR. JACOBS:

Q. Mr. Schenkman, let me direct your attention to the second full paragraph on the first page of Exhibit 385. Do you see that?
A. Yes, I do.
Q. Could you read that first sentence of the second full

Page 234

paragraph, please?
A. "Jack recently indicated that he could provide capacity at the same point on Pondella Road for a total of three-million-two primarily because of his willingness to utilize tax losses for the benefit of the deal which losses he could otherwise utilize on consolidation and other operations."
Q. Okay. That was paragraph 3. I wonder if I could ask you to read the first sentence of paragraph 2.
A. "Although Jack fully appreciates your intent to go forward with the construction of the advanced wastewater treatment unit on your Waterway Estates plant, I am reminded of our earlier discussion wherein you indicated to me that the possible interconnection" --

MR. BULLOCK: Objection.

THE COURT: Just a moment.

Sir?

MR. BULLOCK: Objection, hearsay.

THE COURT: I received this in evidence.

MR. BULLOCK: All right. I'll withdraw that.

THE COURT: Go ahead.

BY MR. JACOBS:

Q. "I am reminded."
A. "I am reminded of our earlier discussion wherein you indicated to me the possible interconnection into North Fort

Page 235

Myers Utility is simply a matter of dollars. The last time we discussed this matter, North Fort Myers Utility offered you one million gallon per day of capacity for three-million-seven and estimated it would cost an additional 800,000 to extend its lines to a point of interconnection on Pondella Road for a total cost of 4.5 million.

"Mr. Schenkman agreed to reduce that price somewhat, but you calculated your internal cost at an additional approximately 1.8 or 1.9 million."

Q. Okay. Now, moving on to the top of page 2 of the same exhibit, could you read just the last sentence of that first paragraph beginning with "therefore"?

A. Wait a minute. I lost you.

Q. Just flip the page.

A. Okay.

Q. And start on the top, first full paragraph but the second full sentence beginning with "therefore."

A. I first got to find it.

Q. May I approach?

THE WITNESS: Would you show me where it is? Where is he talking about?

Oh. "Therefore we extended the offer" --

THE COURT: No. Wait. Wait. Wait.

THE WITNESS: "Therefore we extend" --

THE COURT: Wait. Wait. "Therefore he extends,"

Page 236

right?

THE WITNESS: You're right, sir. I'm sorry.

THE COURT: The court reporter is taking this down. I don't want an error.

THE WITNESS: "Therefore he extends an offer to build lines and provide one million gallons of capacity to the designated point under Pondella Road for 3.2 million subject of course to negotiation of the appropriate contract to us to do so."

BY MR. JACOBS:

Q. Okay. Now, looking down two paragraphs, there is a representation by the author of the letter, Mr. Sundstrom -- and he is your attorney; is that correct?

A. That is correct.

Q. -- that you, Mr. Schenkman -- I'm sorry. -- that "Mr. Reeves and Bob French have consistently told Jack Schenkman and me," meaning Mr. Sundstrom, "that you would prefer to come to North Fort Myers Utilities as a permanent and final solution, but that, as aforesaid, it is simply a 'matter of dollars.'"

Do you recollect, Mr. Schenkman, that that is what in fact got in the way of reaching an agreement? Was it a matter of dollars?

A. That is correct, sir.

MR. BULLOCK: Objection.

Page 237

THE COURT: Wait. Wait. Wait a minute.

MR. BULLOCK: He's now being asked -- my impression of the question was that Mr. Schenkman is being asked what Mr. Sundstrom's understanding was of what Mr. Reeves and Mr. French were saying. I think, while I understand that the letter is in evidence, the subsequent questions beyond that are calling for hearsay.

THE COURT: Well, I'll overrule the objection.

BY MR. JACOBS:

Q. Let me ask it again, Mr. Schenkman. Did you hear from both Mr. Reeves and Mr. French -- do you remember who Mr. Reeves is at the time?

A. Yes, yes, I do.

Q. Did he work for Florida Cities Water Company?

A. At that time he did.

Q. Okay. And Mr. French, did he work for Florida Cities Water Company at that time?

A. Yes, he did.

Q. And did you hear from them that they would come to North Fort Myers Utilities --

THE COURT: Well, now, this is your witness. Don't lead him.

MR. JACOBS: I'm sorry, sir.

BY MR. JACOBS:

Q. The representation in the letter that these gentlemen

Page 238

told you that they would prefer to come to North Fort Myers Utilities as a permanent and final solution but that it was simply a matter of dollars that prevented them from coming, is that an accurate statement, Mr. Schenkman?

A. That is correct.

Q. Now, do you recall how you came up with the $3.2 million figure?

A. Well, that's what our cost was to go up to Pondella Road.

Q. Can you recollect whether Florida Cities ever represented to you what it would cost them to upgrade their plant and move their outfall and thereby continue their discharge as opposed to hooking up to your facility?

A. I wasn't privy. I heard rumors, but I wasn't privy to them telling me what it cost.

Q. Let me direct your attention then now to Exhibit 397. Is this again, Mr. Schenkman -- well, let me ask you this.

Can you identify 397?

A. Yes, I can.

Q. Would you, please?

A. Yes, dated September 25th, 1989.

Q. And who's this letter written to and by whom?

A. It was written Bill Sundstrom, Rose, Sundstrom & Bentley, to Florida Cities Water Company, attention to Mr. Tony Reeves at the time.

Q. And you're a recipient of a cc of this letter, are you,

Page 239

sir?
A. Yes, yes, I was.
MR. JACOBS: Move –
THE COURT: Just a moment.
MR. BULLOCK: Objection, Your Honor, hearsay. The document contains representations of Mr. Sundstrom's conversations with the Department of Environmental Regulation employees and what the employees said, and it's Mr. Sundstrom's characterizations of those conversations.
THE COURT: Okay. Yes, sir?
MR. JACOBS: I'm sorry. Did you sustain?
THE COURT: No, no. Do you want to be heard on that?
MR. JACOBS: Well, first of all, Your Honor, there's no objection to the exhibit on the objection list, and I'll move it into evidence on that basis at this time.
MR. BULLOCK: I'll withdraw it.
THE COURT: Be received.
(Government Exhibit Number 397 received in evidence.)
BY MR. JACOBS:
Q. Now, Mr. Schenkman, directing your attention to the bottom of the first page of the exhibit beginning with "North Fort Myers Utilities has capacity now permitted and in service to provide raw sewage treatment and disposal sufficient for

Page 240

the Waterway Estates district of Florida Cities Water Company" -- or, to be precise, "FCWC" – through the end of that paragraph which reads, "NFMU has offered to provide sewage treatment and disposal services to FCWC for the same capacity at approximately the same or slightly less than that cost," can you tell me whether in trying to make a deal, as you said you did, with Florida Cities Water Company you essentially tried to give them a price that was lower than the price or cost that they would expend as represented to you to upgrade the plant and move the outfall?
THE COURT: Just a moment.
MR. BULLOCK: Question is leading.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Mr. Schenkman, do you recall receiving any information from Florida Cities that related to the cost of moving the outfall and upgrading the plant?
A. I don't know what that cost was, but we at that time offered them some tax advantages losses that we had that they -- that would be advantageous to them.
Q. Can you tell me whether Florida Cities Water Company accepted your September 25th, 1989 offer?
A. No, they didn't.
Q. And did you come to an understanding as to why?
A. They believed they felt that they can do it for less cost

Page 241

than what we offered.
THE COURT: Any further questions?
MR. JACOBS: Just one more document, Your Honor, if I could direct the witness's attention to Government 408.
BY MR. JACOBS:
Q. Do you have 408 in front of you, sir?
A. Yes, I do.
Q. Do you recognize that, and, if so, could you identify it, please?
A. Yes. It was written February the 5th, 1990 addressed to Mr. Reeves from Florida Cities Water Company.
Q. And it was written by whom, sir?
A. It was written by -- let me see the back of it -- William Sundstrom.
Q. Is that your attorney?
A. Yes, he is.
Q. And did you receive a cc of this letter?
A. Yes, I did.
Q. At or about the time that it was written?
A. That's correct.
MR. JACOBS: I'd move 408 into evidence, sir.
THE COURT: Be received.
(Government Exhibit Number 408 received in evidence.)
BY MR. JACOBS:

Page 242

Q. Now, Mr. Schenkman, in Exhibit 408 do you again offer to make a deal with Florida Cities Water Company to connect the Waterway Estates plant?
A. Yes, we did.
Q. And was that offer accepted?
A. No.
Q. And did you in this February 5th, 1990 communication again drop the price?
A. I think we went down to three-million-two. I'm going to try to –
Q. Take your time, sir.
Let me direct your attention to paragraph 1 on the first page. Does that help, Mr. Schenkman, to refresh your recollection, first page of Exhibit 408?
A. Yes. "North Fort Myers Utility would commit to sell a million gallons of sewage treatment in an effluent disposal capacity to Florida Cities for a firm price of 2,470,000 or 2.47 – $2.47 per gallon."
Q. Are you again dropping the price here, sir?
A. I think it was dropped a little bit at the time.
Q. And directing your attention to paragraph 3 to refresh your recollection, if you need to, did you also offer to construct the necessary sewage transference lines either at your own cost or at the county's cost to the point of connection?

Page 243

A. I think the way it reads -- and let me read it for you exactly because it's back to 1990. "Additionally, it is anticipated that the county would finance and construct all of the transference lines from the existing Waterway Estates plant to North Fort Myers Utility lines. Should you desire, North Fort Myers would commit to construct the remainder of the lines from interconnection of 41 and Pondella Road to the Waterway Estates plant as a recoverable investment as another option available to FCWC."
Q. And moving on, flipping the page now and starting with paragraph 4, did you also offer to finance the investment for Florida Cities Water Company?
A. That is correct. "North Fort Myers Utility would agree to finance the FCWC investment at its outstanding tax exempt rate of 8 percent with an amortization period not to exceed ten years."
Q. And now focusing your attention on the bottom of the page, same page, the second page of the exhibit, last paragraph, can you tell me, Mr. Schenkman, whether at this point in time you still had sufficient capacity to take the Waterway Estates effluent?
A. We did.
Q. Okay. And can you tell me, then, from the point in time of this first offer in February of '87 through February of 1990, over those three years did you at all times have the

Page 244

capacity to accommodate the Waterway Estates effluent?
A. Yes, we did.
Q. And was a deal ever reached?
A. No.
MR. JACOBS: Thank you. No further questions.
THE COURT: Mr. Bullock?
CROSS-EXAMINATION
BY MR. BULLOCK:
Q. Good afternoon, Mr. Schenkman.
A. Good afternoon.
Q. How are you? Nice to see you again.
Mr. Jacobs just asked you whether or not at all times between February of '87 and February of '90 did you have capacity to accept the Waterway Estates effluent. Isn't it true that you didn't have capacity until August of 1988 based on your own declaration?
A. Well, we had at that time capacity for 700 -- when we first started to construct, 700,000. By the time we would have hooked up we would have had capacity to take more than a million.
Q. But you didn't have completion of the two-million-dollar facility -- I mean two-million-gallon facility until August 27, 1988.
A. But we had the capacity to handle everything you had at the time which was -- we offered 700,000, and we had it at the

Page 245

time. And the time we would have connected the lines we would have had all the capacity you needed.
Q. Okay. The Waterway Estates plant was permitted for 1.08 million gallons a day, was it not? Isn't that true?
A. I don't know what they were permitted for at the time. I don't know what Waterway Estates had.
Q. All right. Isn't it true that they would have to find capacity for their -- the entire projected capacity of 1.08 MGD?
A. No, no. At the time when we made that offer we would have been completely finished at the time that lines were interconnected and hooked up.
Q. But my question was -- Mr. Jacobs' question to you was did you have the capacity in February of '87.
A. When we first discussed it --
THE COURT: Did you have the capacity in February of '87? That's his question.
THE WITNESS: February '87, no, I only had for 700,000.
BY MR. BULLOCK:
Q. How many deep wells does your facility have?
A. We have one deep well.
Q. Okay. How many -- what is the capacity of the spray field?
A. In the deep well?

Page 246

Q. No, the spray field.
A. The spray field?
Q. Yes.
A. Oh, we can send a million and a half, two million gallons in the spray field.
Q. All right. And then what is the capacity of the deep well?
A. Couple million gallons, two, three million gallons.
Q. Do you use the spray field and the deep well at the same time?
A. No. The only time we use the deep well, if there's heavy rain that the spray fields cannot take it, then we send it to a deep well. Otherwise we try to save as much as the water we can for the -- keep the aquifer intact.
Q. Mr. Jacobs asked you to look at what was Government's Exhibit 408, which is the February 5th, 1990 letter.
A. Okay. I'm looking at it. What did you want?
THE COURT: Just a moment.
BY MR. BULLOCK:
Q. Isn't it true that in February of 1990 Florida Cities was well on its way to constructing the AWT plant at Waterway Estates?
A. I don't know what Florida Cities had or didn't have. I didn't get into their affairs.
Q. Well, if you assume with me that they were well on their

Page 247

way to building an AWT plant -- excuse me -- to permitting and designing an AWT plant, let's assume that, would it have made sense to stop at that point in time and hook into your facility?

MR. JACOBS: Objection, calls for speculation.

MR. BULLOCK: I'll withdraw the question, Your Honor.

THE COURT: I'll overrule.

THE WITNESS: I can't speak for Florida Cities.

BY MR. BULLOCK:

Q. All right. Did you offer in your February 1990 letter to reimburse Florida Cities for any of the engineering or design costs that it would have already incurred in designing an AWT facility to Waterway Estates?

A. Not to my knowledge.

MR. BULLOCK: Thank you, Mr. Schenkman.

THE COURT: Give me just a moment, Mr. Hird.

Go ahead, Mr. Hird.

MR. HIRD: Thank you, Your Honor.

CROSS-EXAMINATON

BY MR. HIRD:

Q. Good afternoon, Mr. Schenkman.

A. Afternoon.

Q. You I believe testified that the total capacity of North Fort Myers would be two million gallons per day; is that

Page 248

correct?

A. That's correct.

Q. And in the period that we're talking about, the late 1980s, when you first began operations, you only had commitments for about half of that; is that correct?

A. Less than half.

Q. Less than half. And in terms of getting a rate established from the Public Service Commission, isn't that rate based on the used capacity?

MR. JACOBS: Objection, beyond the scope.

THE WITNESS: I don't know.

THE COURT: Just a moment. I'll overrule the objection.

Do you know? Do you know, sir?

THE WITNESS: No, I don't know.

BY MR. HIRD:

Q. You don't?

A. No.

Q. You don't know whether the rate is based on the used capacity as opposed to the --

A. No, I don't.

Q. -- potential capacity? Okay.

Now, were you operating in the period of the late '80s in the red or in the black?

A. We haven't made a profit really, even today, that is, in

Page 249

the utility business. But we keep growing and growing and growing, and the assets keep growing with it.

Q. So you were operating in the red; is that correct?

A. Yes.

Q. Now, if you would turn to Exhibit 385, if you would.

THE COURT: Plaintiff's?

MR. HIRD: I'm sorry. Government Exhibit 385.

BY MR. HIRD:

Q. Do you have that in front of you, sir?

A. I don't know. The gentleman will tell me.

Q. Do you have that, sir?

A. I have it in front of me.

Q. Okay. If you'd look at the second paragraph -- and I believe you read this language with Mr. Jacobs -- it says, "The last time we discussed this matter, NFMU offered one million gallons per day of capacity for 3.7 million and estimated that it would cost an additional 800,000 to extend its lines to a point of interconnection for a total cost of 4.5 million." Do you see that?

A. Yes, I do.

Q. And then you see the next sentence, "Mr. Schenkman agreed to reduce the price somewhat, but you calculated that your internal costs at an additional approximately 1.8 or 1.9 million." Do you see that?

A. Yes, I do.

Page 250

Q. So if you add those together at that point in time, the cost to Florida Cities would be somewhere in the neighborhood of 6.3, 6.4 million; is that correct?

A. I don't know what the cost would be to Florida Cities.

Q. Well, you would have to add the 4.5 plus the 1.9, would you not, because of the internal cost that Florida Cities would bear?

A. Yeah, but, you see, we were using tax benefits that I would -- we wouldn't be spending any more than 4.5 on the job.

Q. But you see --

A. So what it would cost Florida Cities is really -- I wasn't aware of or --

Q. But your lawyer was aware that it would cost between 1.8 and 1.9 million additional, wasn't he? Didn't he say your internal costs would be an additional 1.8 or 1.9 million?

A. Yeah, that's correct.

Q. So if you add that to the 4.5, you get a total of approximately 6.4; is that correct?

A. Go ahead.

Q. Now, if you reduce the price here to 3.2 million --

A. That is correct.

Q. -- that would still mean the total cost to Florida Cities would be about 5.9 million; isn't that correct?

MR. JACOBS: Calls for speculation, Your Honor.

THE WITNESS: I'm not that --

Page 251

THE COURT: Overruled.
THE WITNESS: -- familiar with the cost to Florida Cities because I don't run their books. I don't know.
BY MR. HIRD:
Q. But you recognize there's an internal cost to Florida Cities that's not reflected in your offer; is that correct?
A. I wouldn't have the internal cost of Florida Cities in my offer at any time. I wouldn't know what -- how you run your company.
Q. You've indicated you don't know what the internal cost is, but if the internal cost was 1.8 or 1.9, that would be a factor in making this option, the option of connecting to North Fort Myers, more expensive, would it not?
A. That's a guesswork. I wouldn't know.
Q. But you recognize that there would be some internal cost to Florida Cities, but you don't know what --
A. Possibly.
Q. And do you have reason to disagree with your lawyer's estimate of 1.8, 1.9?
A. No. No, I don't.
Q. Okay. Now, in order to connect to North Fort Myers, Florida Cities would have to build a pipeline connection; is that correct?
A. That is correct.
Q. And Florida Cities would have to contribute that as

Page 252

property in kind to North Fort Myers; is that correct?
A. I believe so.
Q. And Florida Cities -- and that would be taxable income to North Fort Myers, isn't that correct, that contribution?
A. I imagine so.
Q. And Florida Cities would have to pay the tax --
A. No.
Q. -- on that contribution.
A. No, not really because we had a tax losses and benefits that we can pick up so it would save the money for Florida Cities.
Q. So you believe that that tax would not have to be --
A. That's correct.
Q. But you -- Mr. Schenkman, you indicated that you were operating in the red at this time.
A. That's right.
Q. And if Florida Cities had made this deal, it would have helped you a good deal; is that correct?
A. To some degree.
Q. Did there come a time in 1991 that you made a proposal to Avatar Holdings or its subsidiaries to buy an interest in North Fort Myers?
A. Not to my knowledge.
Q. Did you ever -- do you know a man named Arnold Sheven?
A. I heard of him, but I don't know him.

Page 253

Q. You don't know him?
A. (Indicates negatively.)
Q. You never contacted a lawyer with the law firm of Stroock, Stroock & Lavan?
A. I didn't.
MR. HIRD: Your Honor, I'd like to show the witness a portion of Exhibit -- of Avatar Holdings Exhibit 3 to see if it refreshes his recollection.
THE COURT: All right.
BY MR. HIRD:
Q. I'd like to show you the last page of Avatar Holdings Exhibit 3.
A. Sure.
Q. Would you read that to yourself, sir?
MR. JACOBS: Objection, no foundation.
THE WITNESS: Want me to read the whole thing?
THE COURT: Well, he showed him a document, and he's going to ask him to read it to himself to see if that refreshes his recollection regarding his last question, I guess.
MR. JACOBS: Which I would add, Your Honor, I think was beyond the scope of direct, well beyond the scope of direct.
MR. HIRD: Me?
THE COURT: Yeah.

Page 254

MR. HIRD: I think this is clearly within the scope of direct because we're talking about the connections between Florida Cities and North Fort Myers. And he's gone through the history, and there's another stage in the history that he hasn't gotten to.
MR. JACOBS: This is 1991. This is a November 1991 document, and the --
THE COURT: I'll sustain the objection, beyond the scope.
MR. HIRD: I have no more questions, Your Honor.
THE COURT: You don't have any redirect, do you?
MR. JACOBS: No, Your Honor, I do not.
THE COURT: All right. We'll reconvene at 8:45 tomorrow morning. We'll be in recess.
(Adjourned at 5:55 p.m.)

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Thursday, March 28, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Testoni

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

PROCEEDINGS

THE COURT: Good morning.

All right. Mr. Jacobs, you may call your next witness.

MR. JACOBS: Thank you, Your Honor.

The United States calls William Schafer.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand.

Do you solemnly swear that the testimony you shall give in this cause shall be the truth, the whole truth, and nothing but the truth, so help you God?

THE WITNESS: I do.

THE DEPUTY CLERK: Take the witness stand.

State your name for the record and spell your last name.

THE WITNESS: My name is Bill Schafer, S-C-H-A-F-E-R.

- - -

Thereupon,

BILL SCHAFER,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. JACOBS:

Page 3

Q. Good morning, Mr. Schafer.
A. Good morning.
Q. I understand you have been under subpoena since Monday. And while you are here in Tampa, I apologize for the lack of certainty as to when you would be called precisely, and we appreciate your yielding to Mr. Schenkman yesterday so he could get back to Miami.
Would you state, please, how you are employed?
A. I'm Head of Planning for the Sanitary Sewer Department of the City of Tampa.
Q. And for how long have you been employed in that capacity, sir?
A. Fifteen years.
Q. And would you describe, please, your responsibilities as Head of Planning in the Department of Sanitary Sewers?
A. My primary responsibility is to deal with expansions over our system and our plant to make sure we have enough capacity to add new development.
Q. And did there come a time when the City of Tampa expanded its wastewater treatment plant?
A. Yeah. The plant was – the last major expansion was in 1978; we went to 60 million gallons a day. We're now doing another one.
Q. In 1983, sir, approximately how much capacity remained of the 60 million gallons that you expanded to in '78?

Page 4

A. About ten million gallons a day.
Q. Now, did there come a time when Florida Cities Water Company contacted the City of Tampa to inquire about the possibility of connecting its Carrollwood sewer system to the City of Tampa sewer system in order to eliminate the Carrollwood plant?
A. Yes.
Q. And do you recall, sir, when that was?
A. It was in 1983.
Q. Directing your attention to Government Exhibit 266, would you identify Exhibit 266, please?
A. It's a letter to Elton Smith, who was the director of our department at that time, from Larry Good, who was the regional manager for Florida Cities Water Company.
Q. And can you testify that this letter was, in fact, received by your department, sir?
A. Yes, it was.
Q. And to your recollection, does this letter represent the contact that you said took place in 1983 to inquire about the possibility of the connection from Carrollwood to the City of Tampa system?
A. Yes.
Q. To your recollection, sir, did Florida Cities representatives subsequently meet with representatives of the City of Tampa Department of Sanitary Sewers to actually

Page 5

discuss the possibility of the connection of Carrollwood to the City of Tampa system?
A. Yes, they did.
Q. And do you know, sir, when that took place, that meeting?
A. It was sometime in the fall of '83, I think. It was after this letter.
Q. Okay. You are welcome to refer to your declaration that's, I believe, been provided to you, if you would like to pinpoint the date.
MR. JACOBS: And for the record, the declaration has been filed with the Court and has been provided to opposing counsel.
THE WITNESS: I don't have it. It's back with that stuff you took when I sat down. It should be right on top.
BY MR. JACOBS:
Q. Handing the witness his declaration filed with the Court on December 28th, 1995, and directing his attention to Paragraph 3, does that refresh your recollection, sir, with respect to at what point in time the meeting took place between the representatives of your department and the representatives of Florida Cities Water Company on the matter of the connection of the Carrollwood plant to the Tampa plant?

Page 6

A. Yes. It was October of that month -- of that year.
Q. And that year is 1983, sir?
A. '83, that's right.
Q. Did you subsequently, sir, on behalf of the City of Tampa write a letter to the Florida Cities Water Company describing the options available for connection of the Carrollwood system to the City of Tampa system?
A. Yes, I did.
Q. Directing your attention to Government Exhibit 525 at this time, sir, are you able to identify Exhibit 525?
A. Yes.
Q. Would you do so, please?
A. It's a letter from me to Mr. Good outlining the points of connection and some other -- and requesting additional information from them in order to proceed.
Q. And is that your signature on the bottom of Page 2 of Exhibit 525?
A. Yes, it is.
Q. And did you write and sign this letter on or about December 29th, 1983?
A. Yes.
Q. And in this letter, sir, how many different connection points do you propose as possibilities for the connection?
A. Three.
Q. And is there one in particular that you favored at the

Page 7

time?
A. The third one at 131st Street and Rome Boulevard.
Q. Directing your attention to Paragraph 3 of the letter, doesn't it say 131st and North Boulevard?
A. I'm sorry. What did I say? That's what I meant.
Q. I thought you said Rome.
A. Oh, I'm sorry. No, it's North Boulevard.
Q. Okay. And why did the City of Tampa favor that connection point, sir?
A. At that time, that was the only connection point available that was ready to go without any additional improvements on our part.
The other two that we had discussed all required additional downstream improvements.
Q. I see.
When you say "ready to go," does that mean -- what do you mean by that, sir?
A. It was in the ground; all they needed to do was run a line and connect to it and they were connected.
Q. It was immediately available?
A. Correct. And there was capacity in it.
Q. And the distance of the line that would need to be run was how long, sir?
A. 15,000 feet.
Q. Approximately three miles?

Page 8

A. About.
Q. Mr. Schafer, did Florida Cities actually subsequently request a connection from its Carrollwood system to the City of Tampa system?
A. No. The response -- I got a response from them, but it did not really request the connection. It just wanted to know what we needed -- I had asked for additional information, and they wanted to know why we needed that.
Q. The additional information you asked for, is that the information that you referred to on Page 2 of Exhibit 525?
A. Yes.
Q. And to your recollection, they responded how?
A. They wanted to know why I needed it, but they didn't go beyond that.
Q. Any subsequent contacts, to your knowledge?
A. No.
Q. Again, any subsequent actual request to connect the Carrollwood system to the City of Tampa system?
A. Not until some years later when they contacted me again to see if those options were still available.
Q. Do you recall when that was, sir?
(Pause.)
A. It was '86; '85 or '86.
Q. Directing your attention to Paragraph 5 of your declaration, does that refresh your recollection as to which

Page 9

year it was exactly?
(Pause.)
A. No. I have it in my notes, but that doesn't -- that just tells me it was '86 that the capacity was available again, but I don't -- I thought it was '86 that they called me again, or that they contacted us again.
Q. To the best of your recollection, they contacted you in '86 --
A. Yes.
Q. -- again.
And at the point that they contacted you again, did you then have capacity?
A. No, we did not.
Q. Why not?
A. Two things: One was that during that period, we had an increase in growth of development, and a lot of new projects came on line that we had committed -- that we had to commit to.
And we also had increases in ground water because of heavy rain, and the two things combined, it brought us -- the actual connected plus the committed unconnected brought us close to the 60 million gallon a day capacity. And we were under -- we had received notification from the Environmental Protection Commission that any additional connections to our system at that time would not be

Page 10

permitted.
Q. And this was in 1986?
A. That was '86.
Q. Now, did there subsequently come a time when you did have additional capacity that became available --
A. Yes.
Q. -- at your system?
And when was that, sir?
A. Within about two years of that time.
Q. So, is it fair to say from '83 to '86, you had capacity; from '86 to '88, you did not but --
A. Yes.
Q. -- subsequent to '88 you did?
A. Yes.
Q. Thank you, Mr. Schafer.
MR. JACOBS: No further questions.
THE COURT: Okay. Mr. Bullock?
CROSS EXAMINATION
BY MR. BULLOCK:
Q. Mr. Schafer, good morning. I'm Alex Bullock.
A. Good morning.
Q. Mr. Schafer, have you ever been a Hillsborough County employee?
A. No, I have not.
Q. All right. Referring to the December 29, 1983,

Page 11

letter, which is Exhibit 525 --
THE COURT: That wasn't offered, was it?
MR. BULLOCK: Oh, I'm sorry.
MR. JACOBS: Your Honor, it's already in evidence.
THE DEPUTY CLERK: It is.
THE COURT: Oh, it is? Okay. Excuse me. Both of those are --
MR. JACOBS: Yes, Your Honor, that's my understanding.
THE COURT: All right.
BY MR. BULLOCK:
Q. Mr. Schafer, when you met with the folks from Florida Cities first in October, you didn't give them a firm figure on the cost to connect at that point in time, did you?
A. No.
Q. All right. You gave them at some point in time a ballpark figure of a connection fee, which would have been approximately $800 a customer?
A. We gave them that number as kind of the maximum fee, but nobody knew at that time if that's actually what it would be. It was just a "Here's the most you'll probably have to pay" kind of number.
Q. In fact, this would have been the largest connection that the City of Tampa -- one of the largest connections that the City of Tampa would have undertaken at that time,

Page 12

isn't that correct?
A. I don't know. I would have to go back and look at my records.
Q. Carrollwood is not in the City of Tampa, is it?
A. No.
Q. All right. You have testified earlier that the connection location was about 15,000 feet from the Carrollwood plant?
A. Right.
Q. All right. Florida Cities would have been responsible for constructing the forced main that connected the plant to your system, isn't that correct?
A. That's correct.
Q. All right. Do you know whether or not Carrollwood ever hooked up into another system?
A. I understand that they eventually hooked up into the County system.
Q. All right. And do you know who paid the bill -- the forced main to hook them up into the County system?
A. No, I do not.
Q. All right. The Carrollwood area is a residential subdivision?
A. Uh-huh.
Q. Okay. I need for you to say "yes" or "no" so the court reporter can take that down.

Page 13

A. Yes.
Q. Thank you.
Building the forced main to connect to Tampa would have required Florida Cities itself to construct a forced main through the residential area, isn't that correct?
A. It would not -- I'm sorry. It would not have required them to construct a forced main through their residential area. It would have been through parts of the City, some parts of which are residential.
Q. All right. That would have required them to develop some -- the cost of going through residential areas and paying for disturbing roads and trees and issues like that?
A. Yeah, the normal costs of construction.
Q. All right. Do you have any opinion as to the cost of the construction of that forced main?
A. At that time, my best guess would have been a -- roughly, if you take two and a half times the cost of the size of the pipe in dollars and, say, that's your per foot cost, that generally takes care of the excavation and the restoration and any other thing that goes along with it.
Q. Would they have had to obtain building permits and construction permits from Hillsborough County?
A. They would have had to get permits from us, from Hillsborough County, and any state or -- any state or Federal roads that they would go through, they would also

Page 14

have to get permits from them.
Q. All right. In your December 29 letter that we have referred to, Exhibit 525, you did not give -- isn't it true that you did not give them a hard final cost?
A. No, I did not.
Q. Okay. You referred to some correspondence between Larry -- between Florida Cities when they wrote back to -- wanting to know why you needed additional financial information about the company?
A. That's correct.
Q. Isn't it true that in that letter, they also asked you to provide a connection fee figure so that they could evaluate the option further?
A. That's correct.
Q. All right. And did you ever provide a firm connection fee?
A. No, because we -- we needed the financial information to come up with the connection fee number, and we never got it. It was kind of a Catch-22.
Q. Okay. Why did you need the financial information on the company to determine a connection fee?
A. The main reason that we requested that was that we wanted -- two things, really -- one, to find out if they were financially stable; and if we did connect them, would they still be around ten years from now, or would we have to

Page 15

take over that system.
The other was, did they have any assets which might be usable as a capacity fee.
Q. Even without that information, isn't it true that you could have given them a figure that would have allowed them to -- a firm figure that would have allowed them to compare and develop whether or not that was a viable option?
A. They could have had the $800 a unit figure at any time.
Q. Okay. As a regulated utility, at least in Hillsborough County, Florida Cities' rates are governed by Hillsborough County's version of the Public Service Commission?
A. That's my understanding, yes.
Q. And the Hillsborough County Public Service Commission, or whatever the technical name of it is, would have had to pass on the prudency of that decision, isn't that correct?
MR. JACOBS: Objection; beyond the scope, Your Honor.
THE COURT: I think it is. I'll sustain the objection.
BY MR. BULLOCK:
Q. Mr. Schafer, isn't it really true that in terms of this dispute, you don't really have a dog in this fight?
A. I'm sorry?

Page 16

Q. You don't really have a dog in this fight about -- between EPA and Florida Cities, isn't that correct?
A. No, I don't.
Q. All right. And when you negotiated with -- you've negotiated a number of contracts dealing with a tie-in or connections to Tampa's system, isn't that correct?
A. That's correct.
Q. And when you were negotiating with Florida Cities, isn't it true that you believed that Florida Cities was negotiating with Tampa in good faith?
A. I had no way of knowing. I presumed that they would. I wouldn't have wasted time with them if I thought otherwise.
Q. You have negotiated with other people enough to determine whether or not you can figure if somebody is negotiating in good faith?
A. I think so.
Q. All right. Do you know how large a forced main they would have had to build?
A. I think it was a ten-inch forced main. But just off the top of my head, I don't recall. I've got it in my notes; it's there.
Q. All right. So, your estimation on calculating the forced main would be two and a half times the cost of per foot of a ten-inch pipe; is that how you would have

Page 17

calculated it?
A. Yeah, at that time. Now it's a whole lot more, but...
Q. Okay. As a matter of fact, the cost of that had gone up in the mid '80's, isn't that correct?
A. The cost of construction?
Q. Yes.
A. I can't say that one way or the other. It's all -- usually it's a function of how much -- how busy the contractors are, and I would presume at that time they got -- they were busier, so probably it did.
Q. And by mid to late 1980's, the cost of any connection fee with Tampa would have gone up as well?
A. The cost did not increase until 1987.
Q. All right. And that's when the City -- you testified the City had additional capacity?
A. Yes.
Q. All right. Thank you.
THE COURT: I thought you said you didn't have additional capacity until '88. Was it '87 or '88?
THE WITNESS: It was '88. You're right, Your Honor.
MR. BULLOCK: Thank you, Your Honor.
THE COURT: Okay. Mr. Hird?
MR. HIRD: Very briefly, Your Honor.
CROSS EXAMINATION

Page 18

BY MR. HIRD:
Q. Mr. Schafer, you said that you got additional capacity in 1988, is that correct?
A. Yes.
Q. And you didn't have it earlier in '86?
A. Correct.
Q. Did you ever have any communication with Florida Cities about that additional capacity?
A. No.
Q. Thank you.
THE COURT: Any redirect?
MR. JACOBS: Only one very brief question.
THE COURT: Okay.
REDIRECT EXAMINATION
BY MR. JACOBS:
Q. Mr. Schafer, you said that you didn't have a dog in the fight. I wonder if I could ask you, was it in the interests of your department to make a deal with Florida Cities to connect when you had that ten million gallon capacity?
Do you understand the question?
A. Yeah, I understand the question.
My answer is probably no.
Q. It was not in the City of Tampa's interest to --
A. No -- mainly the problem is that Florida Cities'

Page 19

franchise is outside of our service area. And theoretically, our capacity is reserved for our service area.
We were really only interested in that connection because there was some environmental problems involved and it was a good thing to do if we could do it.
Q. Did you want to make the deal?
A. At the time, yes.
Q. Thank you.
MR. JACOBS: No further questions.
THE COURT: Thank you, sir. You may step down.
THE WITNESS: Thank you.
THE COURT: Call your next witness.
MR. JACOBS: The United States calls Leon Levy.
THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand.
Do you solemnly swear that the testimony you shall give in this cause shall be the truth, the whole truth, and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take the witness stand.
MR. HIRD: Your Honor, before Mr. Levy begins his testimony, I would like to bring a procedural matter to the Court's attention.
Mr. Levy is chairman of the board of Avatar

Page 20

Holdings. We intend to call him in our case in chief. I had proposed to the Government that we allow the Government to begin examination of Mr. Levy; and when my turn comes, for me both to include the cross examination and my direct so that Mr. Levy will only have to testify one time. I believe this will serve the interests of judicial economy.
This will also be beneficial for Mr. Levy who resides in New York. He came here on a special chartered plane from Eleuthera in the Bahamas.
He is under the care of a cardiologist who he expects to see in New York in the next few days. He's also undergoing a series of root canal operations in New York.
I think both for Mr. Levy's interests and the interests of judicial economy, this is the proper thing to do.
I was surprised yesterday to learn that the Government would not accede to this request.
MR. JACOBS: Your Honor, Mr. Levy has been designated as the representative of the party entitling him to be in court the entire time of trial, first of all.
Second of all, there was not just one but two motions for protective orders filed by Avatar Holdings in which they maintained that Mr. Levy had no relevant information whatsoever to the case.
So, to hear now that Mr. Hird wants to call him as

Page 21

a witness in the middle of our case in chief, which we had expected to complete yesterday, I think is a bit of a disruption to our case.

And with all due respect to the needs of Mr. Levy, we have had witnesses waiting for days now to testify, and we will have more witnesses that they have asked us to put on standby.

And while I sympathize with this particular witness' needs, there are many people's needs here that need to be met, and we really would like to stick with our direct and then Mr. Hird's cross. And if Mr. Hird feels the need to call Mr. Levy again in his case, which I understand follows Florida Cities' case, we would have no objection to him recalling Mr. Levy at that time.

THE COURT: Well, you wouldn't be in a position to object to calling him anyhow.

How long would you intend to be, Mr. Hird?

MR. HIRD: I imagine -- my straight direct, right now, I would imagine, will go between half an hour and 45 minutes. When I see Mr. Jacobs cover whatever he's going to cover, I imagine that would cut down substantially my direct.

THE COURT: Well, I'll take that under submission. We'll get through the direct examination and see where we are at that time.

Page 22

MR. HIRD: Thank you, Your Honor.

THE DEPUTY CLERK: State your name and spell your last for the record, please.

THE WITNESS: Leon Levy, L-E-V-Y.

- - -

Thereupon,

LEON LEVY,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. JACOBS:

Q. Mr. Levy, first of all, there was a reference to a cardiology problem. I asked you at your deposition whether there was any medical reason why your deposition should not go forward. Do you recall mentioning this cardiology problem?

A. I don't remember whether I did or not, but I think at that particular time, being in New York and I didn't have any appointments with a cardiologist, I would have seen no reason why I shouldn't have gone forward.

It just so happened that I did have an appointment -- and I hate to discuss medical reasons in court; it's somehow like getting undressed -- but I did have an appointment with my cardiologist, which I have cancelled for today, but --

Page 23

Q. But not --

A. -- but I'm fine right now.

Q. Is there any urgent need for you to see your cardiologist this week, sir?

A. I don't think there's an urgent need.

Q. Now, how are you employed, sir?

A. I'm a partner of Odyssey Partners, which is the successor of Oppenheimer and Company, and is an investment partnership. And I'm also involved in a number of non-for-profit organizations which consume a great deal of time.

Q. Do you have any relationship to a company called Avatar Holdings?

A. I'm chairman of the board.

Q. And Mr. Hird represented that you reside in New York. From your deposition testimony, you reside in New York City at a place called Sutton Place, is that correct?

A. That is correct.

Q. And you also have a personal residence in Westchester County, New York, is that correct?

A. That is also correct.

Q. And you, in addition, have a residence, again, that Mr. Hird referred to in the Bahamas, is that correct, sir?

A. That is also correct.

Q. You do not reside nor have you ever resided in the

Page 24

State of Florida, is that correct?

A. That is also correct.

Q. And you have never maintained an office --

A. Only, I might add, with one exception: At the Government's suggestion, during the war, at Camp Blanding for a good while.

Q. And you have never maintained an office in the State of Florida, have you, sir?

A. No, I have not.

Q. But you do maintain an office in New York City, is that correct?

A. Yes, I do.

Q. And that office is at the offices of Odyssey Partners?

A. Right.

Q. And you don't have any other offices anywhere, is that correct?

A. That is also correct.

Q. So, when you conduct Avatar business, you conduct it from your Odyssey Partners office, is that correct, sir?

A. That is generally correct.

Q. Now, Mr. Levy, you have testified under oath on a number of occasions in a number of different matters, isn't that right?

A. Yes, I have.

Q. In fact, you have given your deposition some 25 to 30

Page 25

times, roughly, is that correct?
A. I really don't remember. That sounds as if it might be a fair estimate. I don't know.
Q. Do you recall whether that was exactly the estimate you gave at your deposition?
A. No, I don't recall.
Q. Okay. Let me direct your attention to Page 7 --
THE COURT: What does it matter? What does it matter?
MR. JACOBS: I'm sorry, sir?
THE COURT: Does it really matter?
MR. JACOBS: No. Okay. We'll move on.
THE COURT: Yes.
BY MR. JACOBS:
Q. You do, sir, recall giving your deposition in this particular matter on October 24th, 1995, and December 6th, 1995, both times in New York City, is that correct, sir?
A. Yes, I do.
Q. And would you tell the Court, please, whether you testified truthfully on both of those occasions?
A. I -- to the best of my ability.
Q. And prior to giving your deposition, on June 7th, 1995, you executed a declaration under penalty of perjury in this matter, isn't that correct?
A. I believe so.

Page 26

Q. And you do recall that the context in which you executed that declaration was a motion to -- motion for a protective order filed on behalf of Avatar Holdings to preclude your testimony on the grounds that you had nothing to do with Avatar Holdings, is that correct?
MR. HIRD: Objection; that's a mischaracterization.
MR. JACOBS: I'll rephrase.
BY MR. JACOBS:
Q. Do you recall, sir, that in that declaration you said, I reside and work in the State of New York. I am fully occupied with work that is unrelated to the affairs of Avatar Holdings?
A. Well, I think that is correct; but like everything else, there's a slight ambiguity there.
Q. I'm sorry. Let me make sure that the record is clear.
Have I correctly represented your statement in the declaration? And I'm happy to bring it up to you.
A. Well, if you tell me that that's what it says, I -- that's fine with me. But nevertheless, I mean, I am fully occupied with the work at Odyssey.
And I also should add that -- well, I don't know when work stops and ends and I spend a great deal more time than maybe a working day.
And, moreover, Avatar is an investment of ours at

Page 27

Odyssey, and so I work on that in New York.
Q. Well, let me ask you this, sir: Is it or is it not true that you are fully occupied with work that is unrelated to the affairs of Avatar Holdings?
A. Fully occupied? I guess it's not entirely true.
Q. In fact, at your deposition, did you not state that you spent 15 to 20 percent of your time on matters related to Avatar Holdings and its subsidiaries?
A. I might have. That's a pretty rough estimate because I don't keep time records.
Q. Would you agree that that's your testimony, sir?
A. Yes, I would.
Q. And didn't you at that time say that the statement in which you said, I am fully occupied with work that is unrelated to the affairs of Avatar Holdings, was a false statement?
A. It might have been not entirely correct.
MR. JACBOS: I'd like the witness to look at his deposition testimony, Pages 123 to 124.
THE COURT: Let me see what we're doing here procedurally, now. You're entitled, as I understand it, to offer the deposition testimony of an adverse party witness.
Now, if that's your purpose, and that is to offer during your case in chief the testimony -- deposition testimony of an adverse party witness, you just do that; you

Page 28

don't call the witness to the witness stand and confront him with the testimony that you want the Court to consider.
Now, if the witness testifies to something different -- if you call the witness and he testifies to something differently, then you can confront him with his deposition. I don't understand procedurally this approach here.
MR. JACOBS: Well, if the witness told me one thing at his deposition and he's telling you something else, Your Honor, I --
THE COURT: Well, you haven't even elicited any -- you know, you haven't asked him substantive questions as yet for -- and if his response is different from his affidavit or from his deposition, then you can confront him with his affidavit or his deposition or, as I say, alternatively, since he's a party in this case, he -- I believe he would qualify as a party where you could use his deposition as substantive evidence. But let's try to adhere to -- unless I have misstated what the proper procedure is on these matters...
MR. JACOBS: These are admittedly not substantive questions, or questions that don't go to substance. They really go to bias, Your Honor --
THE COURT: Well --
MR. JACOBS: -- and credibility.

Page 29

THE COURT: Yes. But, you see, he hasn't been offered --

MR. HIRD: Your Honor, Mr. Levy is obviously testifying as an adverse witness, and clearly his sympathies are with Avatar Holdings. I don't think Mr. Jacobs needs to labor this to demonstrate any sort of bias.

MR. JACOBS: Let me try and move on.

THE COURT: Yes, let's do that.

BY MR. JACOBS:

Q. Let me ask you, Mr. Levy, how much time did you spend on matters related to Avatar Holdings and its subsidiaries?

A. Again, I'd say -- look, I come down every -- eight times a year to board meetings at Avatar. Very occasionally I will come down, oh, I would say, once every several years when there's not a board meeting, and the annual meetings; and I get reports from Avatar in the mail. And occasionally I talk on the telephone to the chief executive about the real estate business.

It's hard to quantify and be particularly specific about something which, to me, is more amorphous.

Q. In fact, Mr. Levy, with the exception of your work with Odyssey Partners, Avatar Holdings takes up more of your time than any of your other business endeavors, isn't that correct, sir?

A. Well, business endeavors -- I spend a great deal of

Page 30

time with the Institute for Advanced Studies where the chairman just became head of the World Bank and asked me to take over for him.

And I also spent a great deal of time at the Jerome Levy Institute, which is an economic research institute of which I'm president. Where the time is greater, I don't know. If I kept time sheets, I would be able to tell you, but I don't.

Q. Do you recall that at your deposition you testified that, quote, I spend the majority of my time on Odyssey Partner matters?

THE COURT: Do you all want a reference to the -- if you're not interested in slowing down for the page and --

MR. HIRD: I'm trying to avoid slowing everything down; but if this continues this way, I guess we would need references to any deposition pages.

THE COURT: Okay. Well, at such time as you want to assert your rights in that respect -- ordinarily, I require that counsel will -- if they are impeaching a witness or attempting to with a deposition ask a witness -- remind him of his deposition, Do you recall giving the following answer to the following question, page number, line number and so forth.

MR. JACOBS: Very well.

BY MR. JACOBS:

Page 31

Q. Mr. Levy, directing your attention to the deposition you gave on August 24th, 1995, in New York, and in particular to Page 73 -- and a copy is being given to you and an original will be provided to the Court --

THE COURT: Well, I'm not requiring that. If you want to do that, that's fine but --

MR. JACOBS: I want you to be able to follow along if you --

THE COURT: Well, I know, but I'm not requiring that you do that with the witness either. That's not part of my requirements. But if you want to do that, that's all right.

BY MR. JACOBS:

Q. On Page 73, Line 4, Question: If we could go down the list of the organizations with which you're presently affiliated, Mr. Levy, would you tell me what percentage of your time you spend on matters relating to your affiliation with Odyssey Partners --

A. Right.

Q. -- would you read your answer, sir, please?

A. Well, I might answer that by saying I spend a majority of my time on Odyssey Partner matters. And after that would come Avatar, and the others don't take up much time except that some of the non-for-profit organizations do. They truly take up most of the time, the Institute for Advanced

Page 32

Study and the Jerome Levy Institute.

Q. Thank you.

THE COURT: For future reference, Mr. Jacobs, you can ask him, Do you recall giving the following answer to the following question? And you read the question and you read the answer. And then you can ask him if he recalls giving that answer.

MR. JACOBS: Thank you, Your Honor.

THE COURT: All right.

BY MR. JACOBS:

Q. Mr. Levy, as chairman of the board of Avatar Holdings, do you consider yourself responsible for ensuring that Avatar Holdings and its subsidiaries comply with Federal laws and regulations?

A. Well, I certainly consider myself responsible for seeing that they are an ethically and morally run company.

I think the question you put to me is more of a legal question than a -- so far as the ethics and the morals, I feel very strongly about that.

As far as how you answer a question like that or what its legal implications are, I just cannot answer it.

Q. Well, Mr. Levy, who at Avatar Holdings, if anyone, is the officer whose duties it would be to ensure that Avatar Holdings and its subsidiaries operate in compliance with Federal laws and regulations?

Page 33

A. Our chief legal officer and executive vice-president is Dennis Getman, who has been with the company for quite a number of years.
Q. Do you know how long, sir?
A. I would think about 15 years -- I may be mistaken -- but almost as long as I have.
Q. Now, Mr. Levy, in 1980, you and Peter Sharp acquired what was then known as GAC Corporation, isn't that right?
A. We acquired an interest in the bonds of GAC; and in a reorganization plan, the bondholders received a considerable amount of stock. But at that time we did not -- we -- and today -- we never had a majority of the stock.
Judge Britton, who is a Federal Judge in Miami, did something which I was told was unusual in a bankruptcy case, because the various parties of interest suggested directors, and Judge Britton discarded all of their suggestions and appointed a number of directors of his choosing.
I might say he did very well, I think, aside from myself or Peter Sharp, but that's for others to decide.
Q. You said you didn't have a majority of stock. Did you have a controlling interest, sir?
MR. HIRD: Object to the characterization of --
THE WITNESS: It became --
THE COURT: Wait, wait, wait.
THE WITNESS: Well, as it became --

Page 34

THE COURT: When an objection is made, Mr. Levy, you just wait until I rule on the objection.
THE WITNESS: I'm sorry.
MR. HIRD: I think this calls for a conclusion. If Mr. Jacobs wants to ask what percentage he controls, he can -- he owns, he can do that; but "controlling" is a subjective term.
MR. JACOBS: "Controlling," I think, is a term of art in Mr. Levy's profession.
THE COURT: All right. I'll overrule the objection, if he can answer it.
You can go ahead and answer the question, if you remember it. Do you remember the question?
THE WITNESS: Yes.
I think in a sense, Judge Britton appointed Peter Sharp -- I forget what appointment he gave Peter Sharp -- someone else was appointed chairman of the board at the time by the Judge. And after about a year, he retired and I became chairman of the board.
BY MR. JACOBS:
Q. And at that time Mr. Sharp became the chief executive officer, is that correct?
A. Yes, he was chairman of the executive committee at that time.
Q. And between you and Mr. Sharp, did you all have a

Page 35

controlling interest in Avatar Holdings?
A. Well, I guess in the -- I guess you might say we did.
Q. Now, you mentioned Peter Sharp. Who was Peter Sharp?
A. Peter Sharp was a fellow who was born here in Florida and his parents were in the hotel business, in the real estate business.
He subsequently became a good friend of mine. He went to Princeton where he studied medieval French.
THE COURT: Do you want to know all of this? Are you wanting to elicit this?
MR. JACOBS: I'm trying not to interrupt the witness in midstream.
I think some of it is relevant, actually.
THE COURT: All right. Go ahead.
THE WITNESS: And then he moved to New York, after having lived in different places, where he managed some family hotels, and finally he settled in New York.
BY MR. JACOBS:
Q. And did he become a successful real estate businessman in New York?
A. Yes, he was.
Q. And did you come to know him pretty well? You said he became a friend.
A. Yes, I knew him quite well.
Q. And in addition to being chief executive officer of

Page 36

Avatar Holdings, Mr. Sharp also served as the chief operating officer, is that correct?
A. I don't believe -- he was chairman -- well, he was chairman of the executive committee. I forget whether he was chief operating officer or not.
These titles are always rather fuzzy. In different companies they mean different things.
Q. What does it mean at your company, Avatar Holdings?
A. Well, the chief operating officer today, for example, would be Mr. Jacobson.
Q. Let me ask you this: Until Mr. Jacobson became the chief operating officer, was Mr. Sharp essentially the chief operating officer?
A. He may have been in title -- and I just don't remember -- I think -- he was chairman of the executive committee, but he was mostly concerned with very broad issues.
MR. JACOBS: Move to strike, Your Honor.
THE WITNESS: I'm sorry?
MR. JACOBS: Move to strike about the nature of the issues he was concerned with being broad; move to strike as non responsive.
THE COURT: I'll deny your motion. Let's move on.
BY MR. JACOBS:
Q. Directing your attention to Government Exhibit 518,

Page 37

Mr. Levy –
A. All right.
MR. BIRD: Could you give us a moment, Your Honor, to pull this?
THE COURT: Yes.
(Pause.)
BY MR. JACOBS:
Q. – and in particular to Page 15 of the exhibit –
THE COURT: Just a moment.
(Pause.)
THE COURT: Okay. All right.
THE WITNESS: All right.
BY MR. JACOBS:
Q. Do you see the name "Peter Sharp" on Page 15?
A. Yes, I do.
Q. Could you tell me what position he held at this time with Avatar?
A. Chief executive officer and chief operating officer, director, chairman of the executive committee of the board.
Q. And what was the first title? I'm afraid, perhaps, that I overlapped with your answer.
A. Well, you didn't say in 1980. This is, I think, the original 10-K, or whatever, that the company filed. Subsequently, there were a number of other people who became president and perhaps chief operating officer and –

Page 38

THE COURT: He asked you what your –
THE WITNESS: I'm sorry?
THE COURT: He said chief executive officer.
MR. JACOBS: Right, and I'm afraid that – the first item that's listed is president, and I can't tell whether he said that or –
THE COURT: Are you asking him to –
THE WITNESS: He was president –
THE COURT: Wait a minute.
Are you asking him to read what's on that exhibit?
MR. JACOBS: Yes, Your Honor.
THE COURT: Would you read what that says, please, sir?
THE WITNESS: Yes, sir. Thank you.
President and chief executive officer and chief operating officer, director, chairman of the executive committee of the board.
BY MR. JACOBS:
Q. And did he serve in all these capacities at the time that this 10-K form, as you have identified it, was filed with the Securities and Exchange Commission?
A. I assume he did, yes.
Q. Now, Mr. Sharp, after you and he acquired the controlling interest of Avatar Holdings, Mr. Sharp even moved to Florida – he moved to Florida, did he not, when

Page 39

you first acquired the company?
A. Yes, he did.
Q. And he took an apartment in Coral Gables, right?
A. That is correct.
Q. So that he could work at the Avatar Holdings offices which are, in fact, in Coral Gables, is that correct?
A. That's so. I think he – right. Whether his home was in Coral Gables or was near there is – would be irrelevant, I guess.
Q. Okay. And, in fact, he stayed in Florida for the first two years after you and he acquired the controlling interest, isn't that correct?
A. Yeah. I seem to – as best I remember.
Q. And after that time, he went back to New York City where he worked out of his offices at Peter Sharp and Company, is that correct?
A. That's correct.
Q. And the business he did which related to Avatar Holdings, to your knowledge, when he was in New York, he did out of those Peter Sharp and Company offices, is that correct?
A. That is correct.
Q. And New York City is where he resided after he returned from Florida after those first two years, is that right?

Page 40

A. That is also right.
Q. Now, although you said, Mr. Levy, that presidents – other presidents were subsequently appointed, Mr. Sharp remained the chief executive officer of the company until 1990, isn't that true?
A. I believe that is true.
Q. And he remained the chairman of the executive committee of the board until 1991; is that not correct?
A. Yes, that is correct.
Q. Now, Mr. Sharp was a very wealthy man, wasn't he?
A. Yes, he was.
Q. In fact, he was on the Forbes list of the 500 richest men in the United States, is that correct?
A. Four hundred.
Q. And perhaps I should be more politically correct: Richest people.
A. Right.
Q. Now, Mr. Sharp was a micro manager, wasn't he, Mr. Levy?
A. He was a what?
Q. Micro manager.
A. No. He was very curious in that regard, by the way, because he had the ability –
THE COURT: Okay. He said "no." He answered your question.

Page 41

THE WITNESS: I'm sorry, I --
THE COURT: Ask your next question.
BY MR. JACOBS:
Q. Well, didn't he personally get involved in quite a variety of issues that related to Avatar Holdings and its subsidiaries?
A. His choices of what he got involved in was rather eccentric.
Q. Let me ask you this: When he got a memo or a letter about a given issue, didn't he go through it meticulously?
A. He often did.
Q. In fact, the example you gave me at your deposition was that if he got a legal brief from his lawyers, he would go through 80 pages and correct it for grammar and spelling and other less important details as much as for substance, is that correct?
A. He has been known to do that.
Q. And Mr. Sharp was very much in charge of any project he actually did -- I'm sorry, I'm going to start again.
Mr. Sharp was very much involved -- very much in charge of any project he got involved with at Avatar Holdings, wasn't he?
A. Yes. I would emphasize what he got involved with.
Q. That was the question.
A. Yes.

Page 42

Q. Now, knowing Mr. Sharp as well as you do, Mr. Levy, would you say that when Mr. Sharp said something, he meant what he said?
A. Yes. I would say he was an honorable man.
Q. Is that a "yes"? When he said something, he meant what he said?
A. Yes.
Q. And he was very used to giving orders, wasn't he?
A. Yes, he was.
Q. And when Mr. Sharp gave an order, he expected it to be carried out, didn't he?
A. He generally did.
Q. Did anyone at Avatar Holdings have the authority to countermand one of Mr. Sharp's orders?
A. I -- you know, that's a very complicated question. I would have to say not to my knowledge.
Q. And a man in Mr. Sharp's position, he wasn't really used to taking many orders, was he?
A. Well, I guess not, but...
Q. In fact, Mr. Sharp didn't really like to be told what to do, did he, Mr. Levy?
MR. HIRD: Objection. I have been letting some of these questions go forward, but this goes way beyond the scope, talking about general characterization of the individual. If Mr. Jacobs wants to talk about specific

Page 43

actions of Mr. Sharp, I think he needs to --
THE COURT: I think he covered this pretty well. Let's move on.
MR. JACOBS: Yes, sir.
BY MR. JACOBS:
Q. Now, at a point in time Mr. Sharp became ill, is that correct, Mr. Levy?
A. That is so.
Q. And he passed away in April of 1992, is that correct?
A. That is correct.
Q. With the exception of the time during which Mr. Sharp was ill, though, he was, in fact, for the entire period or entire course of his affiliation with Avatar Holdings in essence its chief executive officer, is that correct?
MR. HIRD: Objection, Your Honor; this was asked and answered. Mr. Jacobs has asked about when Mr. Sharp resigned as chief executive officer.
THE COURT: Sustained. Sustained. Let's move on.
BY MR. JACOBS:
Q. Moving on now, Mr. Levy, who was John Sladkus?
A. John Sladkus was a Czech who immigrated to the United States, became a citizen, and is an engineer.
Q. And did he have any relationship, business relationship with Mr. Sharp?
A. He worked with Peter Sharp fairly closely.

Page 44

Q. And he supervised engineering on Mr. Sharp's projects, including Avatar Holdings' projects, isn't that right?
A. Yes, he did.
Q. And do you happen to recall whether Mr. Sharp was an officer of Avatar Holdings?
THE COURT: Mr. Sladkus, you mean?
MR. JACOBS: Yes. Thank you, Your Honor.
THE WITNESS: I don't recall. He might well have been.
BY MR. JACOBS:
Q. Directing your attention to Government Exhibit 519, could you identify Government Exhibit 519, sir?
A. It is meetings of the -- minutes of the annual meeting of the board of directors of Avatar Holdings, held on May 14th, 1981, at 11:00 o'clock at the annual meeting of shareholders. I left out some -- the rest of...
MR. JACOBS: One moment, Your Honor.
THE WITNESS: I'm sorry?
MR. JACOBS: I was talking to the Judge, Mr. Levy.
(Pause.)
MR. JACOBS: Judge, with your indulgence, I want to move back and move 547 into evidence. I think that's one of the few we've referred to that had not yet been moved into evidence.
MR. HIRD: I'm sorry, Your Honor. I don't believe

Page 45

547 is one that has been discussed with this witness. If you can give me a moment so I can take a look at it...
(Pause.)
MR. HIRD: We have no objection.
MR. JACOBS: Likewise 551.
I'm sorry, Your Honor, I didn't give you a chance to rule.
THE COURT: 547 will be received.
MR. JACOBS: 551.
MR. HIRD: No objection.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Now, Mr. Levy, redirecting your attention to Exhibit 519, Page 4, do these minutes refresh your recollection as to whether Mr. Sladkus had an official position with Avatar Holdings?
A. Yes, it does. He did at that time.
Q. And what was that position, sir?
A. He was executive vice-president, land and utility operations.
Q. To your knowledge, did Mr. Sladkus hold that position throughout his entire affiliation with Avatar Holdings?
A. I really don't know without having the records.
Q. Now, Mr. Sladkus had quite a lot of responsibility with Avatar Holdings, didn't he, sir?

Page 46

A. Yes, he did.
MR. HIRD: Objection, Your Honor. The witness has previously testified he didn't know what Mr. Sladkus' position was.
THE COURT: I'll overrule the objection.
You can answer the question.
THE WITNESS: When this company emerged from bankruptcy, there was $160 million of mandated work that the previous management had not completed and which the Court or the Federal Trade Commission ordered to be done. Mr. Sladkus was in charge of the completion of this mandated work.
BY MR. JACOBS:
Q. In fact, Mr. Sladkus was the only one, in addition to you and Mr. Sharp, who had the authority to sign checks over $100,000 on behalf of any Avatar entity, isn't that correct, sir?
A. I accept that. I don't remember that, but I accept it.
Q. Is that a "yes"?
A. I'm sorry?
Q. Is that – I need –
THE COURT: Do you know or not know?
THE WITNESS: I don't know.
BY MR. JACOBS:

Page 47

Q. Directing your attention, then, to Exhibit 526, can you identify Exhibit 526, sir?
A. It's the minutes of the board of directors of Avatar Holding held on Friday, January 27th, 1984.
MR. JACOBS: Move 526 into evidence.
THE WITNESS: I beg your pardon?
THE COURT: It will be received.
MR. JACOBS: I'm talking to the Judge, Mr. Levy.
THE WITNESS: I'm sorry.
BY MR. JACOBS:
Q. Now, directing your attention, please, to Page 10 of Exhibit 526 and in particular to the second full paragraph on Page 10, doesn't that paragraph say that only you, Mr. Sharp and Mr. Sladkus have the authority to sign checks in the amounts of $100,000 or more?
A. Yes, it does say that.
Q. And does that then refresh your recollection as to whether only the three of you had that authority?
A. Well, I accept it as it's written.
Q. Any reason to believe it's not true?
A. No, no reason not to believe it.
Q. Turning your attention now to Mr. Lawrence Wilkov, could you tell the Court who Lawrence Wilkov is?
A. Mr. Lawrence Wilkov eventually became the president, chief operating officer of Avatar.

Page 48

Q. Do you know when he became the president?
A. I can't tell the date without seeing some --
Q. Does 1984 sound correct?
A. Yeah, that sounds right.
Q. Will you accept that?
A. I would gladly accept that.
Q. Okay. And then he became the chief executive officer beginning in 1990; would you accept that?
A. I would completely accept that.
MR. JACOBS: Move 526 into evidence which documents 1984 as the date for Mr. Wilkov joining the company.
THE COURT: All right. What number?
MR. JACOBS: 526.
THE COURT: That's already been received.
MR. JACOBS: I'm sorry. 551, which references the 1990 date when he became chief executive officer.
THE COURT: That's already been received.
MR. JACOBS: I'm sorry, Your Honor. I've got my exhibits out of order.
BY MR. JACOBS:
Q. Now, Mr. Wilkov's offices were in Coral Gables, is that correct?
A. That is correct, at the headquarters of the company.
Q. And he remained with the company until he got into a

Page 49

major disagreement with Edwin Jacobson, is that correct?
A. Well, you can put it that way.
Q. Now, Mr. Jacobson came on board in 1992 as a member of the board of directors and chairman of the executive committee of the board, is that correct?
A. That is correct.
MR. HIRD: Objection. Mr. Jacobson may have come on -- assumed the two roles at different times, and I think the question is misleading.
MR. JACOBS: The question wasn't meant to be misleading. Let me try it again, for the record.
THE COURT: Okay.
BY MR. JACOBS:
Q. Mr. Jacobson came on board in 1992 as director and chairman of the executive committee of the board, correct?
A. I believe that is --
MR. HIRD: Objection again. Mr. Jacobson, I believe, came on as director and subsequently in that year became chairman of the board.
THE COURT: Are you going to testify, or are you going to let this witness testify? I mean --
MR. HIRD: I think the question is misleading.
THE COURT: I don't think it is.
You know, this is a grown man. If he knows, he knows. If he doesn't, he doesn't. And if he testifies to

Page 50

something that is not accurate, you'll have him on cross examination. Now let's move on.
BY MR. JACOBS:
Q. Mr. Levy, do you know the answer? Do you need the question repeated?
A. No, I understand the question.
I believe he became -- to the best of my memory, he became chairman of the executive committee.
Q. Of the board of directors in 1992, is that correct, sir?
A. Yes, in 1992.
Q. And then he became president of the company in what year?
A. I would have to refresh my recollection as to the times.
Q. But it was subsequent to 1992, is that correct?
A. Yes.
Q. Now, as a result of the disagreement, as we've described it, with Mr. Wilkov, Mr. -- I'm sorry -- with Mr. Jacobson, Mr. Wilkov subsequently left the company, correct?
A. That is correct.
Q. And then he sued Avatar Holdings, Odyssey Partners and Mr. Jacobson over this employment dispute, correct?
A. That is right.

Page 51

Q. And that suit was settled for $1 million, is that correct?
A. That is right.
Q. Let's turn back to your acquisition with Mr. Sharp of GAC which you renamed Avatar.
Is it fair to say you did rename it "Avatar," Mr. Levy?
A. It was renamed "Avatar," you might say.
Q. And was that your idea or Mr. Sharp's or --
A. No, it was neither of our ideas.
Q. Why did it get renamed "Avatar"?
A. Well, GAC seemed an inappropriate name at the time. It had all sorts of connotations about defaulted debt and all the other things that a company in bankruptcy has.
And it was also originally named after a finance company in Harrisburg, Pennsylvania, which had nothing to do with what the company was now doing.
Q. Why was the name "Avatar" picked? What does "Avatar" mean?
A. Actually, the then treasurer of the company came up with the name of "Avatar," and it means reborn, or from the ashes, like a phoenix. It was a literary allusion.
Q. Now, you and Mr. Sharp acquired GAC primarily for the land, is that correct?
A. Well, we acquired it as you would acquire any company:

Page 52

For all of the assets minus all of the liabilities. And you would give more weight to some than others. And the land was obviously a principal consideration.
Q. Were the utility holdings an additional consideration?
A. Relative to the entire assets of the company, they would not have been very important at that time.
Q. Now, the original owners of the company were the Rosen brothers, is that correct?
A. That is correct.
MR. JACOBS: Move 253 into evidence.
MR. HIRD: Your Honor, I object to 253. 253 is a memo prepared by a gentleman who joined Avatar Holdings in 1995. It was done with the -- his own musings as to what may have happened to Avatar -- to the preexisting company prior to 1980.
The memo has nothing -- is not based on personal experience, is not based on anything that anyone in the management post bankruptcy had done. It was simply language by a gentleman who joined the company 15 years after the bankruptcy speculating as to what happened before the bankruptcy.
MR. JACOBS: Your Honor, may I respond?
THE COURT: Yes, sir.
MR. JACOBS: First of all, it's a business record of Avatar Holdings.

Page 53

Secondly, it contains Mr. Levy's handwritten notation on the top, and that was his testimony at his deposition.

Third, it's a historical narrative point by point of the history of the company. And Mr. Hird can certainly use his time on cross examination to dispute this history; but, otherwise, Mr. Levy has already testified in deposition that the history is correct.

THE COURT: All right. What do your objections say that you --

MR. HIRD: My objection, Your Honor, is this is not a business record. It's --

THE COURT: Is this what your recorded objections say?

MR. HIRD: Number one, it's not a business record.

Number two, Your Honor, it's not an admission.

Number three, the individual who prepared it had no personal knowledge and was not even involved in the company at the time.

Moreover, the activities of General Acceptance Corporation prior to 1980, before the bankruptcy, has nothing to do with not only the Avatar Holdings post 1980 but the violations at issue in this case which date from 1990.

So, it's totally irrelevant. It's hearsay; it's

Page 54

irrelevant; it's not an admission by a party opponent.

MR. JACOBS: Judge, there's no objection on their list.

MR. HIRD: Yes, there is. 253: Irrelevant; hearsay within hearsay.

MR. JACOBS: I'm holding Avatar Holdings' objections to Government exhibits, unless it's a superseded company --

MR. HIRD: That's way old. That's because you renumbered the exhibits, and we had to redo our objections.

Here you go. 253, there are the objections.

MR. JACOBS: Thank you.

May I respond to the objections?

THE COURT: Yes, sir.

MR. JACOBS: Your Honor, do you have the exhibit in front of you?

THE COURT: No, I don't have the exhibit.

MR. JACOBS: Let's get the exhibit.

(Pause.)

MR. JACOBS: We think it's on the bench.

THE COURT: 253?

MR. JACOBS: Yes, Judge.

THE COURT: Yes.

MR. JACOBS: Your Honor, there's testimony by Mr. Levy --

Page 55

THE COURT: Well, give me just a moment.

MR. JACOBS: I'm sorry, sir.

(Pause.)

THE COURT: Yes, Mr. Jacobs?

MR. JACOBS: It's a business record. Mr. Levy testified at his deposition that the author --

THE COURT: Well, now, don't tell me about what he testified during his deposition.

MR. JACOBS: It's a business record. It's an admission --

THE COURT: How do we know it's a business record?

MR. JACOBS: It comes from Mr. Levy's files. That's his handwriting at the top. He testified that that's his file, the handwriting.

Milton Dresner is a director of Avatar Holdings. He's recounting a history of Avatar Holdings, which is very relevant to the issues in this case, particularly Paragraph 3: The owners were quick to install roads without sewer and water.

MR. HIRD: Your Honor, if I may respond for a moment?

THE COURT: Are you through, Mr. Jacobs?

MR. JACOBS: I'm sorry, sir?

THE COURT: Are you through?

MR. JACOBS: Yes.

Page 56

THE COURT: Yes, sir?

MR. HIRD: Your Honor, to be a business record, a document has to be prepared at or near the time of the events. This is Mr. Dresner's memo done on July 15th, 19-- July 7th, 1995. Mr. Dresner joined Avatar Holdings in 1995. He is writing about events that precede 1980.

THE COURT: I agree. I don't think it qualifies as a business record. I'll sustain the objection.

BY MR. JACOBS:

Q. Mr. Levy, the Rosen brothers were the original owners of the company, is that correct?

A. To the best of my knowledge, yes.

Q. And to the best of your knowledge, they were hustlers, is that correct?

MR. HIRD: Objection, Your Honor. I think this goes to relevance. Mr. Levy has testified that he acquired -- he and Mr. Sharp became involved in Avatar Holdings in 1980 when it emerged from bankruptcy. The violation was in 1991. This isn't even a history of violations. This goes back to a different set of owners that were removed by the Bankruptcy Court and has nothing to do with this case.

THE COURT: Yes, sir?

MR. JACOBS: This is the beginning of a story, 1980, and I'm attempting to establish, as I did at

Page 57

Mr. Levy's deposition, that when Mr. Levy and Mr. Sharp took over this company, they knew what they were getting into in terms of the previous owners being hustlers -- and that's the word that appears in the deposition transcript -- and that they, in fact, were known to install roads without sewer and water. And the inadequacy of sewer facilities at Barefoot Bay is a major part of this case. And there is direct knowledge of this testimony by Mr. Levy based on his direct knowledge of these facts at his deposition.

MR. HIRD: Your Honor, if I may briefly respond, Mr. Levy has just testified this morning that Judge Britton ordered Avatar Holdings install $160 million worth of improvements to the properties in the new company. This is ancient, ancient history.

What's happening here is an effort to tar the company that was reinvented in 1980 with its history of prior owners before the time, and it's totally irrelevant to violations that don't start until 1990 at the earliest with respect to --

THE COURT: I'll sustain the objection.

BY MR. JACOBS:

Q. Mr. Levy, do you have knowledge of whether the Rosen brothers made a practice of selling land which did not have sewer and water service?

MR. HIRD: Same objection, Your Honor.

Page 58

THE COURT: Sustained.

MR. JACOBS: Your Honor, may I address --

THE COURT: No, sir. Let's move on.

MR. JACOBS: Okay.

BY MR. JACOBS:

Q. Now, in addition to the land, when you acquired GAC, you acquired significant water and wastewater utility holdings as well, is that correct?

A. That is correct.

Q. And these utility holdings included valuable holdings both in the mid-west and Florida, is that correct?

A. That is right.

Q. And one of these properties was Barefoot Bay, is that correct?

A. I believe so, yes.

Q. And Avatar acquired both the Barefoot Bay development and the Barefoot Bay wastewater treatment plant, is that correct?

A. I believe so. We acquired so many properties at that time, including a very complicated title insurance company, CATV systems and whatever. So, on any of the specifics, my memory is not necessarily accurate.

Q. Let me ask you this, moving from the past to the relative present, Mr. Levy: In 1990, did Avatar Holdings' utility operations represent a significant portion of the

Page 59

company's total business?

A. What is the "significant portion"? Yes, I guess it did, depending on how you define "significant portion."

Q. Isn't that the way Avatar Holdings characterized the holdings in its 10-K statement for that year?

A. Yeah, I guess it was.

Q. And that included 15 wastewater treatment plants, is that correct, sir?

A. If that's the number, that's right.

I say, if that is the proper number, that is -- I'll -- if you tell me that, I will agree; I accept that.

Q. You don't quarrel --

A. No, I don't quarrel.

Q. And including Barefoot Bay, is that correct?

A. Correct.

Q. Now, the water and wastewater utilities continued to play a large role in Avatar Holdings' business until it sold off the mid-west utilities in 1993 for approximately $60 million, is that correct?

A. That is correct.

Q. When you acquired Avatar, it had significant land holdings in Florida, correct?

A. That is correct as well.

Q. And these included Barefoot Bay?

A. Yes.

Page 60

Q. And a number of other land holdings?

A. Right.

Q. Now, you visited a number of these land holdings, isn't that right, sir?

A. Yes, sir.

Q. And you visited a number of these wastewater treatment plants, isn't that correct, sir?

A. I visited mostly water utilities. The only ones I remember having visited were in the mid-west.

Q. You don't recall having visited wastewater treatment plants?

A. No, I don't.

Q. Mr. Levy, at your deposition, I asked you, So you have been to some wastewater treatment --

MR. HIRD: Excuse me, Your Honor. Could he refer to the page and volume?

THE COURT: Yes, sir.

MR. JACOBS: By all means. This is the August 24th, 1995, deposition, in New York City, Page 65, Line 17.

Question --

THE COURT: Wait, wait, wait. Let him find it.

(Pause.)

THE COURT: Okay. Did you give the following answers to the following questions? Go ahead.

BY MR. JACOBS:

Page 61

Q. Mr. Levy, did you give the following answers to the following questions? Question, Line 17: So, you have been to some wastewater treatment plants?
Answer: Yes.
A. Yes, that is true. The only ones I remember, though, were in the mid-west.
Q. But they were not just water --
A. No, they were wastewater treatment plants.
Q. And you said you visited a number of land holdings, but you never visited Barefoot Bay, is that correct?
A. I don't recall having visited Barefoot Bay.
Q. And the reason you didn't visit Barefoot Bay is because as an investor, it was worth a lot less to you than these other land holdings, is that correct?
A. That's right. We had a great deal of scattered land in Florida and most of the --
THE COURT: He answered "yes." He answered "yes."
THE WITNESS: Yes.
MR. JACOBS: I'm happy to move on, but I don't want to be interrupting --
THE COURT: No, no, I understand, but he's answered your question, so you can go ahead and ask your next question. He said "yes."
BY MR. JACOBS:
Q. What kind of housing is there at Barefoot Bay,

Page 62

Mr. Levy?
A. I'm told it's manufactured housing.
Q. Drawing on a word we used -- or that was used yesterday, is that upscale housing, Mr. Levy?
MR. HIRD: Objection. The witness has testified that he's never been to Barefoot Bay. In answer to the last question, he said he was told it's manufactured. I don't know how he can answer that question based on personal knowledge.
THE COURT: Overruled.
THE WITNESS: No, it is not upscale.
BY MR. JACOBS:
Q. Now, you didn't visit the Barefoot Bay, Carrollwood or Waterway Estates treatment plants, is that correct?
A. That is correct.
Q. That's because they were small investments for you, correct?
A. Relatively small in relation to the company.
Q. That's why you didn't visit them, is that correct?
A. Well, that would certainly have been a major reason.
Q. Mr. Levy, do you recall that at the July 27th, 1984, Avatar Holdings board of directors meeting, Mr. Wilkov, the president at the time of the company, reminded the board that, quote, The Department of Environmental Regulation has been imposing stricter requirements and that in his opinion,

Page 63

developmental growth within certain areas will depend heavily upon the availability of water and sewer facilities?
A. I'm sure that's true.
Q. As a member of the Avatar Holdings board of directors, Mr. Levy, you did receive -- you did receive a briefing on wastewater treatment, did you not?
A. Yes, we did.
Q. In fact, by late 1985, you had received a briefing not only on wastewater treatment in general, but on a particular plant called Fiesta Village which at that point in time was in the planning stage, is that correct?
A. I believe it was around that time, yes.
Q. And at that particular same Avatar board of directors meeting, a brochure was distributed entitled Nature's Way: How Wastewater Treatment Works for You, is that correct?
A. I don't recall that, but I will accept that.
Q. Now, Mr. Levy, who is Robert Gordon?
A. Robert Gordon is president of Avatar Utilities.
Q. And how long has he been with Avatar?
A. He was with the company going all the way back, I believe, certainly before I became involved.
Q. So, before 1980?
A. Yes.
Q. But it wasn't Avatar Utilities back then, was it?
A. No. It couldn't have been Avatar Utilities. I guess

Page 64

it was Consolidated Water.
Q. Turning now to the Barefoot Bay facility, Mr. Levy, did there come some point in time when you became aware that there was a problem with the disposal of the wastewater at Barefoot Bay?
A. Yes, I believe there was.
Q. And do you recall when you became aware of that problem?
A. No, I do not.
MR. JACOBS: Move 21 into evidence at this time.
MR. HIRD: Your Honor, if you would give us a moment?
THE COURT: Yes, sir.
(Pause.)
MR. HIRD: No objection, Your Honor.
THE COURT: It will be received.
MR. JACOBS: Move 25 into evidence.
(Pause.)
MR. HIRD: No objection.
THE COURT: It will be received.
BY MR. JACOBS:
Q. Mr. Levy, directing your attention to Exhibit 25 --
A. Right.
Q. -- do you have that in front of you?
A. Yes, I do.

Page 65

Q. Would you identify it, please?
A. It's the minutes of the board of directors meeting on November 30, 1984.
Q. Directing your attention to Page 4 of Exhibit 25, do the minutes of this November 30th, 1984, board meeting refresh your recollection with respect to the date on which the Barefoot Bay effluent disposal problem came to your attention?
A. Well, it says what it says. I think the document speaks for itself.
THE COURT: Well, whether you think it speaks for itself or not, does it refresh your recollection? That's the question.
THE WITNESS: Let's see. We're on page -- this is Exhibit 25?
MR. JACOBS: Yes, sir, Page 4.
THE WITNESS: Page 4.
THE COURT: Why don't you ask him the question again. It's been a while.
BY MR. JACOBS:
Q. Looking at Page 4 of these November 30th, 1984, board meeting minutes, can you tell me whether the minutes refresh your recollection as to in what year you personally became aware of the problem with the disposal of the effluent from the Barefoot Bay wastewater treatment plant?

Page 66

A. Well, my honest answer has to be that, of course, I accept what it says here, but I cannot say that I remember at the time and it doesn't jog something in my memory that reminds --
THE COURT: Okay. He's answered your question.
BY MR. JACOBS:
Q. You have no reason to doubt -- let me ask you this --
A. No, I have no reason to doubt it.
Q. Okay. And you did sign these minutes, didn't you, on Page 9, Mr. Levy?
A. Right. No, I have no reason to doubt them.
Q. That you became aware in 1984 of these problems --
A. Correct.
Q. -- is that correct, sir?
A. Yes, sir.
MR. HIRD: Objection. I don't think that was his testimony. His testimony is that he signed this and that this says what it says; but he has no memory of the specific issue.
THE COURT: Well, I think that's a different matter. I'll overrule the objection.
BY MR. JACOBS:
Q. Now, Mr. Levy, can you tell me what, if anything, was done about these problems at the Barefoot Bay wastewater treatment plant, say, between 1984 and 1987?

Page 67

MR. HIRD: Objection. It's not clear what problems are being discussed. He just asked what he -- whether he has any recollection of this issue being raised. I'm not sure --
THE COURT: Well, if he has a difficult time understanding what problems there were, then he can say that and he won't be able to answer the question, but I'll overrule your objection.
THE WITNESS: Will you repeat your question, please?
THE COURT: Read the question back, Mr. Miracle.
(Record read back.)
THE WITNESS: I'm afraid I cannot.
BY MR. JACOBS:
Q. Okay. Now, at the January 30th, 1987, meeting of the Avatar Holdings board of directors, you received another report on this same problem, did you not, sir?
A. I would have to look at those minutes.
Q. Very well. Government Exhibit 53 will be directed to your attention.
MR. JACOBS: Your Honor, may I move 351 into evidence while he's looking at that, the minutes?
MR. HIRD: No objection.
THE COURT: 351?
MR. JACOBS: Yes, sir.

Page 68

THE COURT: All right. It will be received.
MR. JACOBS: And while he's looking, can I move 53 in, also minutes?
MR. HIRD: No objection.
THE COURT: It will be received.
THE WITNESS: Your question was -- excuse me.
THE COURT: I don't think he's asked -- you haven't asked a question yet, have you? You asked him to turn to Exhibit 53, correct?
MR. JACOBS: That was the last thing I did.
BY MR. JACOBS:
Q. The question was, before that, at this January 30th, 1987, meeting of the board of directors of Avatar Holdings, you received another report on the Barefoot Bay effluent disposal problem, is that correct, sir?
A. So it says in the minutes, yes. I believe the -- I'm sure they are correct.
Q. In fact, at that meeting, Mr. Wilkov, the president, reported that under consideration is extending the option to purchase property contiguous to the Barefoot Bay subdivision, the purpose being to determine if the soil tests positive for spray irrigation.
He advised that the 40 acres previously acquired by Avatar Utilities for such purpose had proven unsuitable for percolation ponds and a damage claim against the testing

Page 69

engineer is being considered.
He also advised that if the optioned property tests positive, we would construct a golf course on approximately 80 acres and develop the remaining 190 acres for home sites.
A. Right.
Q. Do you recall whether Mr. Wilkov gave that report at the meeting, sir?
A. My memory just doesn't work that I can remember him giving the report, but I'm sure he did if it says so.
Q. And you did sign these minutes on Page 8, sir?
A. And I certainly signed the minutes.
Q. Now, you personally continued to receive reports on this problem, did you not, sir?
A. I assume that if the reports were sent, I would receive them.
Q. All right. Let me direct your attention to Exhibit 61.
A. Right.
Q. Do you have that in front of you, sir?
A. Yes, I do.
Q. Do you see your name in the upper right-hand corner, handwritten; C.C.: Leon Levy? Can you make that out?
A. Oh, yeah.
Q. Okay. Now, this is a report -- the cover memo, anyway, is a report from John Sladkus to Peter Sharp, is

Page 70

that correct?
A. That is correct.
Q. And it attaches a memo from Robert Gordon to the file, is that correct?
A. It says: Enclosure: Robert -- Bob Gordon's memo of 2-10-88. The following page -- yes, it's Robert Gordon to the file.
Q. Now, Mr. Gordon's memo has to do with the meeting that he had with DER, is that correct?
A. Yes, the Orlando Department of Environmental Regulations. That's correct.
Q. In fact, this meeting Mr. Gordon represents as being held on February 9th, 1988, is that correct?
A. That's what he represents.
Q. And the purpose of the meeting which takes place in the Orlando Department of Environmental Regulation office is to discuss the proposed consent order recommended by the Orlando DER office in August 1987, is that correct?
A. That is apparently correct.
Q. And the consent order, according to Mr. Gordon, as originally drafted, basically required the company to eliminate the discharge from the Barefoot Bay wastewater treatment plant to a nearby canal and imposed a moratorium on additional connections to the system until there was a final resolve of the effluent disposal problem.

Page 71

The company countered with a recommended consent order whereby the company would request approval of the surface water discharge; would institute monitoring of the nearby canal to determine the level of treatment to meet water quality standards; would proceed to make any necessary changes to its treatment process to meet water quality criteria even if this meant converting the existing plant to advanced wastewater technology, is that correct?
A. That's what it says, and there's no reason not to believe it.
Q. And Mr. Gordon further represents that the meeting opened up with Mr. Alexander of the DER indicating that the discharge into the canal had gone on for over three years without an apparent resolve of the problem in the near future, and he wanted action now.
George Gioia, G-I-O-N-I-S, the Orlando DER enforcement officer, stated that it was their position that the consent order as proposed by the DER should be executed. And in order to discontinue the existing discharge to the canal, the company should proceed with construction of the percolation basins on the new 40-acre site.
Have I accurately represented that portion of the memo, sir?
A. Yes, you have.
Q. Continuing on, Mr. Landers, the Florida Cities Water

Page 72

Company attorney, proceeded to -- and I have added that in for the Court's benefit -- proceeded to explain that building the ponds did not solve any problem in that the ponds would not have sufficient capacity to eliminate the entire current discharge. If the surface water discharge was approved, building of the ponds would be a complete waste of time.
THE COURT: Of money.
MR. JACOBS: Thank you.
BY MR. JACOBS:
Q. Although the existing outfall was illegal, there was no reason why the DER could not approve a temporary discharge permit while the testing was going on.
Have I accurately represented that paragraph, as the Judge corrected me?
A. Yes, you have.
Q. After private discussion by the two parties -- I'm skipping down a little ways -- the company proposed the following: The company would enter into a consent order which would not contain a moratorium; would agree to immediately construct a spray irrigation system on the 40-acre site; and proceed to design and construct a deep well.
This proposal was generally accepted by Mr. Alexander, although expressing some reservation about the continued

Page 73

connection of additional customers to the system.
We also indicated that we needed our board approval before the consent order could be executed.
Did I accurately represent –
A. Yes, you accurately read it.
Q. Now, moving from Mr. Gordon's memo to the shorter memo which is the first page of Exhibit 61, Mr. Sladkus tells Mr. Sharp that he's – first of all, in Paragraph 1 – and I'll try and paraphrase this to save time – that he's sending along a copy of Mr. Gordon's memo, is that correct?
A. That is correct.
Q. And he essentially paraphrases the memo in the following four paragraphs. Although he's numbered the paragraphs 2, 3, 3 and 4, there are a total of five paragraphs, is that correct?
A. Right.
Q. And he's outlined there the cost of the deep well system in Paragraph 3, is that correct?
A. This is on –
Q. In the first Paragraph 3, on that first page, Exhibit 61?
A. The deep well system – oh, yes, $2 million. Right.
Q. Okay. And he also says, quote, We have confidence that it will be effective because there are a number of deep wells in the area. Correct?

Page 74

A. Right.
Q. And then he goes on to say, In addition, if successful, it will solve our Barefoot Bay problem once and for all?
A. That is correct.
Q. And I continue to quote, And finally, we really don't have any alternative. Did I accurately read that part –
A. Yes, you did.
Q. – of Paragraph 3?
Now, backing up to Paragraph 2, the proposed resolution is as follows: We would immediately spray irrigate on the 40-acre Hearndon property.
Now, we haven't touched upon that yet, Mr. Levy. What is the 40-acre Hearndon property?
A. I really can't answer that without being –
Q. Refreshed?
A. – refreshed.
Q. Okay. I can perhaps do that later.
We would also proceed with the design and subsequent construction of a deep well system. Correct?
A. That's what it says.
Q. The spray irrigation will pose no significant expense since we have spare traveling irrigators on Plant Number 2 in Poinciana, is that correct?
A. That's what it says.

Page 75

Q. What's Plant Number 2 in Poinciana, Mr. Levy?
A. I just don't know.
Q. What's Poinciana?
A. Poinciana is a large development outside of Orlando, or Kissimmee.
Q. I'm sorry?
A. Near Kissimmee.
Q. And do you know who owns that development?
A. We do.
Q. Meaning Avatar Holdings?
A. Avatar Holding, yes.
Q. So, is it fair to say that based on Mr. Sladkus' memo here that the irrigators are going to be moved from Poinciana's wastewater treatment plant over to the Barefoot Bay treatment plant?
THE COURT: Just a moment.
MR. HIRD: Objection; no personal knowledge.
THE COURT: I'll overrule the objection – well, no, I'll sustain the objection to the form of the question, whether it's fair to say, particularly in the context of his previous responses. I'll sustain the objection.
BY MR. JACOBS:
Q. Is Mr. Sladkus here proposing that the irrigators be moved from another Avatar facility, Mr. Levy?
A. That apparently seems to be what he's saying, yes.

Page 76

Q. Now, moving down to what I'll call the second paragraph 3, which is actually the fourth paragraph, Mr. Sladkus says: As you will note in the memo, Bob made a tentative commitment subject to the board's approval.
Is "Bob" referring to Bob Gordon here?
A. I assume that's right, yes.
Q. And then he says, Meaning, of course, your consent to the above. Do you know what that means?
A. I assume that it – Peter Sharp was the chief executive and that Sladkus wanted to be sure that Peter agreed with what Bob's commitment was.
Q. And Peter Sharp here is essentially the board as far as Mr. Sladkus is concerned, is that correct?
MR. HIRD: Your Honor, objection. It's not clear the board of which company. We have several companies that could be involved: Florida Cities, Avatar Utilities, Avatar Holdings.
THE COURT: Well, he can explain that if – overruled.
You want the question read back, sir, or do you remember the question?
THE WITNESS: Well, yes. I guess that Peter was the chairman of the executive committee. And I believe at that time he was the chief executive officer of the company, and he would act for the – as chief executive officer.

Page 77

(The witness' microphone fell on the floor.)
THE WITNESS: They never gave me any mechanical problems to work on with that company.
THE COURT: Why don't you let Mr. Doherty place the microphone where it needs to be, Mr. Levy. If you have problems with it, you call on Mr. Doherty here who is our mechanical engineer.
THE WITNESS: All right. Thank you.
Well, Peter -- first of all, normally, I guess in most companies, in between board meetings, the executive committee and the chairman of the executive committee acts for the board. I believe that it's that way with Avatar.
BY MR. JACOBS:
Q. Okay. I think you answered my previous question. Let me ask you another one, Mr. Levy. You referred to the company and Mr. Sharp's role, or roles, in the company. What company and what board were you referring to?
A. Well, I was referring -- there are so many different companies here, and each question would have to have its own answer.
Q. Right. Now, the question refers to actually your previous response: Peter Sharp, he was chairman of the executive committee of what company?
A. He was chairman of the executive committee of Avatar, but don't forget --

Page 78

Q. Avatar Holdings?
A. Avatar Holdings.
But you must be careful, because I am on the board of Avatar Holdings and have had very little to do with the utility companies, so my frame of reference would be Avatar Holdings whether --
MR. JACOBS: Move to strike, Your Honor.
THE COURT: Overruled; denied.
Go ahead. Ask your next question.
BY MR. JACOBS:
Q. In what I have called the second Paragraph 3, Bob made a tentative commitment subject to the board's approval. In this context, what board are we talking about, sir?
A. I can't tell.
Q. He says, Meaning, of course, your consent to the above, referring to Mr. Sharp. Do you know whether Mr. Sharp served on the board of any other Avatar entities?
A. No, I don't. I mean, he may have. I just don't know.
Q. Mr. Levy, directing your attention now to Government Exhibit 80, do you recognize this?
A. Yes, I do.
Q. Would you identify it, please?
A. It's the annual utility operations review meeting dated January 20, 1989. And there's an enclosure which seems to be the agenda for the meeting -- which is the

Page 79

agenda for the meeting.
MR. JACOBS: Move Exhibit 80 into evidence, if you will, Your Honor.
MR. HIRD: Your Honor, this witness -- this would still be subject to our objections for matters relating to barred claims and issues that preceded the statute of limitations, so I would like to preserve those objections for the record.
I would also like to state, with respect to any questioning on such documents, I wonder if we could have a standing objection with respect to those issues so we don't have to raise them with respect to specific questions.
THE COURT: Very well.
The Court will adhere to its previous rulings and will overrule your objections as to Government's Exhibit 80, and you will have the standing objection as you requested.
MR. JACOBS: Proceed, Your Honor?
THE COURT: Yes, sir.
BY MR. JACOBS:
Q. Mr. Levy, you did receive a copy of this, did you not?
A. Yes.
Q. In fact, that's your handwriting on it, correct?
A. I think it is. I'm sure, yes.
THE COURT: Let's take a ten-minute recess.
(A recess was taken.)

Page 80

THE COURT: Mr. Jacobs.
MR. JACOBS: Thank you, Your Honor.
BY MR. JACOBS:
Q. Mr. Levy, do you still have Trial Exhibit 80 in front of you?
A. Exhibit 80?
Q. Yes, sir?
A. Just let me check. Here it is, 80. Yes, Mr. Jacobs.
Q. And you did receive a copy of this memorandum at or about the time that it was written, correct?
A. Yes, I believe so.
Q. January 20, 1989?
A. Right.
Q. And it advises you of an upcoming utility meeting, did it not?
A. Yes, it does.
Q. And one of the items it advises you of is the agenda on a major construction project at Barefoot Bay, is that correct?
A. Yes, that's correct.
Q. Item number nine and the major construction project under item number nine for Barefoot Bay is deep well disposal system, is that correct?
A. That's correct.
Q. What is a deep well disposal system?
A. Well, it's a well that goes I guess below the surface

Page 81

water and you put effluent into the deep -- into the deep well.
Q. So you do understand that it's used for disposal of effluent?
A. Yes, I understand that.
Q. And the other major construction project listed is the Waterway Estates Wastewater Treatment Plant, is that correct?
A. Yes, that's correct.
Q. Now, do you recall whether at some later point in time the concept of a deep well for the Barefoot Bay effluent was rejected?
A. I don't recall that either way.
Q. Directing your attention then to Exhibit 96, do you have that in front of you, sir?
A. That is the one that begins with Ohio Suburban Water Company, Peter Sharp from Robert Gordon, August 16th?
Q. Yes. You're looking down into the text. If you could refer to the caption to identify it, sir.
A. Right.
Q. Is it from Gordon to Sharp and Wilkov?
A. It is, indeed.
Q. And subject, Avatar Utilities, general?
A. Correct.
Q. And the date is August 16, 1989?
A. That's correct.
Q. And you're the recipient of this memorandum, is that

Page 82

correct, sir?
A. Yes, I am.
Q. Directing your attention to page 3 of the exhibit. The first paragraph reads, the further the company gets into the deep well injection process, the more uncertain the whole process becomes. What company is this?
A. I assume that's Avatar Utilities. I don't know for a fact.
Q. All right, sir. The DER is demanding more and more testing and monitoring system design while at the same time expressing concern that the, quote, geology in Brevard County is properly understood and in at least one area of the county appears to be unsuitable for class one injection wells. The company's confidence level for success is expanding.
Did I accurately read that?
A. You accurately read that, Mr. Jacobs.
Q. And then he goes on to say, they're looking at spray irrigation at the time, is that correct?
A. That's correct.
Q. And he's advising the recipients of this memo that among other possibilities, he's looking at the possibility of acquiring orange groves on which to spray the effluent instead of constructing the deep well, is that correct?
A. That seems to be what he recommends or suggests we explore.

Page 83

Q. And he's even telling you he's thinking of going into the citrus business, isn't he? If you look at the second paragraph from the bottom of page 3.
A. Yes, well I think that would be not a recommendation to go into the citrus business, but if we go into the buying of the place to put the affluent, we would have to be in the citrus business and find out what it's about.
Q. Now I think you said "affluent," did you mean a effluent?
A. Right, right, excuse me.
Q. The other recipients of this memo, sir, are Mr. Allen, Mr. Getman, Mr. Kleinerman and Mr. Sladkus. Would you identify Mr. Allen, please?
A. Yes. Gerald Allen is the second person in Avatar Utilities.
Q. And Mr. Getman I believe you identified. What about Mr. Kleinerman?
A. Mr. Kleinerman was the chief financial officer of the company at that time.
Q. And for clarification, which company are we discussing?
A. He was chief financial officer of Avatar, but he may have also been chief financial officer of Avatar Utilities, GLU -
Q. Mr. Levy, do you mean Avatar Holdings?
A. Well, depends on context.
Q. What context did you mean the last answer?
A. My last answer, since I'm thinking in terms of Avatar

Page 84

since they're the people I work for, I would be most of the time thinking in terms of Avatar, but that is not a legal thought, that's merely a colloquial identification.
Q. When you identify Mr. Kleinerman as being an officer of Avatar, did you mean Mr. Kleinerman as an officer of Avatar Holdings?
A. He was an officer of Avatar Holdings.
Q. At the time of this memorandum, sir?
A. He also may have been an –
THE COURT: His question is at the time of this memorandum was he an officer of Avatar Holdings.
THE WITNESS: Yes, he was.
THE COURT: And you said he was also what?
THE WITNESS: He also may have been an officer of Avatar Utilities or whatever.
MR. JACOBS: Move to strike as speculation.
THE COURT: Overruled, denied.
BY MR. JACOBS:
Q. Now, if Mr. Gordon on behalf of Avatar Utilities wants to go ahead and build the deep well, whose approval does he need?
A. Well, the stock of Avatar Utilities was owned by Avatar Holdings, and which might have given him very, very broad discretion, but I think it's a matter of policy, you would notify the largest stockholder if you had a major expenditure in view.

Page 85

Q. Well, didn't we already establish that anything over a hundred thousand, you, Mr. Sharp or Mr. Sladkus had to personally approve?
A. We established that for signing checks at one particular time. I don't think it suggests anything more than that.
Q. Well, is it your testimony that Mr. Gordon did not require Mr. Wilkov and/or Mr. Sharp's approval in order to expend the funds that would be necessary either for the deep well or the spray irrigation?
A. I don't think I testified on that one way or another.
Q. Okay.
Do you have an understanding one way or another with respect to that?
A. I would think he would probably, as a matter of policy, discussed it with Mr. Sharp or –
Q. And sought Mr. Sharp's approval?
A. And sought that.
Q. Directing your attention now to Government Exhibit 97, sir, if you would. Do you have that in front of you, sir?
A. Yes, I do.
Q. And in this memorandum, Mr. Gordon – or rather Mr. Gordon writes this memorandum five days after he wrote the previous one that we discussed, correct, which was Exhibit –
A. Why I'll take your word for it.
Q. I'm sorry, correction, Trial Exhibit 97?

Page 86

A. Uh-huh. (Indicating affirmatively.)
Q. So he's written 97 five days after 96, is that correct?
A. Well, is that date? Want me to check it or shall I take your word for it? I'd rather take your word for it, Mr. Jacobs.
Q. If you'll accept it, I'm sure the Court would.
MR. HIRD: We'll stipulate it was written five days later.
THE WITNESS: Right.
THE COURT: Thank you.
BY MR. JACOBS:
Q. And this second memorandum, Trial Exhibit 97, also relates to the possibility of an acquisition of an orange grove in the vicinity of the Barefoot Bay Plant to be used for effluent disposal, is that correct?
A. That's correct.
Q. And this memorandum is again written from Mr. Gordon to Mr. Sharp with copies to Mr. Allen, Mr. Getman, Mr. Kleinerman, Mr. Levy and Mr. Sladkus?
A. That is correct.
Q. Now, do you recall receiving on or about November 27th, 1989, a rather extensive report authored by Mr. Allen on the subject to alternatives to deep well injection?
A. I don't recall receiving it, but as I think you asked me in my pre-trial examination, I don't have a very good memory

Page 87

for all of those things.
Q. Directing your attention to Government Exhibit 115.
A. Right.
Q. Does 115 refresh your recollection with respect to whether or not you were the recipient of an extensive report from Mr. Allen on the subject of wastewater disposal alternatives to deep well injection at Barefoot Bay?
A. I accept it, I did receive it, Mr. Jacobs. I don't think you're misleading me by putting in.
Q. I'm sorry, I didn't hear you.
A. I don't think I would be misled by having somebody putting this in and ask me whether I received it if I hadn't received it.
Q. I'll stipulate to that, and can I ask you, sir, did you recall receiving it at or about the time that it was written and it's dated November 27, 1989?
A. Well, I would agree that I would have received it at that time.
Q. Directing your attention on the top of page 3, Mr. Allen represents that there are approximately three thousand –
THE COURT: Page 3 of what?
MR. JACOBS: I'm sorry, sir, same exhibit.
MR. HIRD: My exhibit of 115 is one page.
THE COURT: Yeah, there's only one page in Exhibit 115 in my notebook.

Page 88

MR. JACOBS: Uh, we might have consolidated 114 and 115. I suspect that 115 is the cover page for the report or cover memorandum for the report which is actually –

THE COURT: 114 in my book is Wastewater Disposal Alternatives to Deep Well Injection.

MR. JACOBS: Right, that would be the report that was transmitted by cover memorandum, Exhibit 115.

THE COURT: All right.

MR. JACOBS: I'm sorry for the confusion. Why don't we look at 114 since that appears to be the correct –

THE COURT: You want him to turn to –

MR. JACOBS: Page 3.

THE COURT: Three.

BY MR. JACOBS:

Q. And in the event we've not moved 114, I think we moved 114 already into evidence, yes, we have, so there is no problem there.

Now, Mr. Levy, directing your attention to the second full paragraph on page 3 of Exhibit 114, Mr. Allen represents that there are approximately three thousand acres of orange groves located within one point five miles of the Barefoot Bay Wastewater Treatment Plant.

A. Where on page 3 of exhibit?

Q. 114?

A. Right, yes, I'm with you.

Page 89

Q. Now, moving down to the third full paragraph on this same page of Exhibit 114, there is a discussion in that paragraph of consummating *reuse agreements with the orange grove owner.*

A. Right.

Q. Mr. Levy, do you know what reuse means in that context?

A. I can surmise, but that would be – I don't know for a fact.

Q. Just give me your best understanding if you would then, sir?

MR. HIRD: Calls for speculation.

THE COURT: Well –

THE WITNESS: I would think –

THE COURT: Wait, wait, wait, wait.

THE WITNESS: I'm sorry.

THE COURT: Well, just a minute, just a minute. You said you would be surmising. Well, let's go ahead and give us that and I may strike it. It's how knowledgeable he appears to be. I'll overrule the objection.

THE WITNESS: I think it only means they would, after they were finished with whatever irrigation purposes or water purposes, that the orange groves would be returned to the original owner.

MR. JACOBS: I would stipulate to striking the response.

THE COURT: Well, they may withdraw the motion at

Page 90

this point.

All right, do you adhere to your motion or your objection?

MR. HIRD: I adhere to my objection because the answer simply demonstrates that the –

THE COURT: You withdraw the objection?

MR. HIRD: I adhere to it.

THE COURT: Adhere to the objection, all right. It will be sustained, and I'll strike the witness' answer, his response.

BY MR. JACOBS:

Q. Now, Mr. Allen also kept you personally apprised of certain EPA regulations, did he not, sir?

A. Not particularly, no.

Q. May I direct your attention then to Exhibit 548. Do you recognize Exhibit 548, Mr. Levy?

A. Well, I can't say I recall having seen it, but I'm sure I did and I notice my handwriting on top of it.

Q. Is that handwriting that says file?

A. Yes.

Q. And you're on the distribution list on page 2, is that correct?

A. Yes, I am.

MR. JACOBS: Move 548 into evidence.

MR. HIRD: Your Honor, we object at this time, on

Page 91

grounds previously stated, also irrelevant. This deals with drinking water treatment standards, has nothing to do with wastewater treatment. Avatar Holdings ran drinking water – I'm sorry – Florida Cities and other Avatar Utilities subsidiaries ran water treatment systems to provide drinking water. Avatar Utilities and Florida Cities also ran water treatment plants providing drinking water and this rule deals with drinking water regulations.

MR. JACOBS: Your Honor, indeed it does, but the question was, did Mr. Allen keep you apprised of certain EPA regulations. It was more general, it was not specific.

THE COURT: I'll overrule the objection. Be received.

THE WITNESS: Apparently he did, and occasionally whether he did it systematically or frequently or rarely, I cannot tell you.

BY MR. JACOBS:

Q. Mr. Levy, now directing your attention to the Waterway Estates Wastewater Treatment Plant, do you recall being privy to the issue of Florida Cities' acquisition of the entire Lee County water and wastewater utilities system?

A. No, I don't recall it now.

Q. Directing your attention to Government Exhibit 384.

A. All right.

Q. Just to be sure, does this exhibit have three pages,

Page 92

Mr. Levy?
A. Yes, it does.
Q. And is the first page a memorandum from Mr. Sharp to Mr. Gordon?
A. Yes, it is.
Q. And does it attach a memorandum from Mr. Gordon to Mr. Sharp and Mr. Wilkov on which you're listed as a cc?
A. Yes, it does.
Q. Do either of these memorandums refresh your recollection to whether it was Florida Cities' goal to acquire the entire Lee County Water and Wastewater Utility System?
A. No more than merely the statement as it says here. That may have been a brainstorm of Peter's on that day or he may have been serious, I don't know.
MR. JACOBS: Non-responsive, move to strike. I asked him if it refreshed his recollection about the objective, I didn't ask him anything about whether it was serious or not.
THE COURT: Oh, I'll leave it in and I'll deny your request.
BY MR. JACOBS:
Q. Now, Mr. Sharp is saying that Florida Cities' long term objective should be to own the entire Lee County system, that is, the County's facilities as well as the City's, is that correct?
A. That's what he said.

Page 93

THE COURT: Just a moment.
MR. HIRD: Your Honor, although the second part of this Exhibit appears to be copied to Mr. Levy, there is no evidence that the first page has been -- ever came to Mr. Levy's attention, therefore I object to him being questioned without having personal knowledge.
THE COURT: Yes.
MR. JACOBS: It's hard to know exactly what he's seeing and what he hasn't seen because he testified that he throws a lot of documents away, and he's also testified that his recollection isn't very good, so I think it's fair to ask him about --
THE COURT: When did he testify he's thrown a lot of documents away? I may have missed that.
MR. JACOBS: No, I'm sorry, Your Honor, he did that in a deposition. I can --
THE COURT: Don't tell me what he said in a deposition.
MR. JACOBS: I can go through that. I'll voir dire him on this if that will assist the process.
THE COURT: I'll overrule the objection and receive it.
BY MR. JACOBS:
Q. Now Mr. Levy, Mr. Sharp says that the Florida Cities Water Company's long term objectives should be to own the

Page 94

entire Lee County system, that is the county's facilities as well as the city's, is that correct?
A. That's what it says.
Q. To your knowledge, did anyone ever countermand that objective?
A. No, not to my knowledge. I don't know. I'll leave it at that.
Q. Now, Mr. Levy, shutting down one of Florida Cities Lee County Wastewater Treatment Plants would not have been consistent with that objective, would it have been?
A. Well, he doesn't say it was an objective. It said it should have been an objective. I think he means that as a subject for discussion. I mean that's my interpretation, but he doesn't say it's an objective.
Q. He says Florida Cities' long term objective should be to own --
A. He doesn't say it's --
THE COURT: Wait, wait, wait, wait, wait, let him finish his question before you start answering.
BY MR. JACOBS:
Q. Mr. Sharp says, Florida Cities' long term objective should be to own the entire Lee County system, that is, the county's facility as well as the city's, is that correct?
A. That is correct.
Q. Now, to shut down one of the Florida Cities Wastewater

Page 95

Treatment Plants in Lee County is not consistent with that objective, is it?
A. Well, but there is -- I have a problem with the language because I don't know whether subjective should be there. You're talking about a -- well, look, I'm quibbling.
THE COURT: What did you say, sir?
THE WITNESS: I say, it would not be -- I'm not so sure that was an objective of Peter Sharp's, even from his language, which is all I have here, because when he said should be, that does not to me indicate an objective. That is like will be or is or it's something else.
BY MR. JACOBS:
Q. So, you're testimony is you're not sure whether this is -- strike that. I'll go back to my other question then.
Assuming that Mr. Sharp is stating that the objective should be and he is stating that the objective should be to own the entire Lee County system, isn't it true that shutting down one of Florida Cities' plants would not be consistent with that objective?
THE WITNESS: As far as the city's plants?
THE COURT: Just a moment.
MR. HIRD: Asked and answered, Your Honor.
THE COURT: Well, we got an answer of sorts. Let's try it again. Go ahead, see if you can answer it. Answer the question.

Page 96

THE WITNESS: Florida Cities –
THE COURT: Assuming that that is just an assumption.
THE WITNESS: No, no, Florida Cities is in Lee County.
BY MR. JACOBS:
Q. I think the Court can take judicial notice of the fact that the Waterway Estates Plant is in Lee County.
A. All right.
On that assumption, yes, you're right, it is inconsistent with acquiring all of the Lee County systems.
Q. Shutting down the Waterway Estates Plant would be inconsistent with the objective of owning the entire Lee County system, is that correct?
A. That is correct.
Q. In fact, the exact opposite is true, right? Rather than shutting down a plant, acquiring another plant would be consistent with that same objective, correct?
A. I think unless I were aware of all the circumstances surrounding it, I couldn't – I couldn't certify that – agree with that necessarily.
Q. Well, assuming that the objective is to acquire the entire system, acquiring another plant would be consistent with that objective, correct?
A. Well, might have been duplication.
MR. BULLOCK: If the Court please, he's actually

Page 97

going – the basis of my objection is Mr. Levy's I believe testified that he doesn't have the factual background to understand what the Lee County system was and if we want to get into how many plants were in Lee County, how many customers they were going to treat, whether the plants they were going to buy or the plants they were going to shut done switched the same customers to other plants, that's a different story, but this hypothetical is getting way out of what the witness already testified he has any substantive knowledge or the ability to base an intelligent answer on the facts of that hypothetical.
THE COURT: Mr. Jacobs?
MR. JACOBS: Well, Your Honor, I think we finally got an answer to the question of what the objective was and I'm just taking it one step further and he's an intelligent man and he's the chairman of the board of the company and I think I'm establishing that.
THE COURT: I'll overrule the objection. I'll permit him to answer this question and let's move on.
THE WITNESS: Could you read that back to me, please?
(Record read back.)
And I suggest I cannot answer that because I don't know whether the other plant – closing down another plant wouldn't duplicate, might possibly expedite the acquiring of the system. Maybe one is duplicative of another. I just don't

Page 98

have enough information to be able to answer that.
MR. JACOBS: Your Honor, I respectively move to strike the answer as non-responsive. It is one thing to say he doesn't know, but he went on to speculate that shutting down might be –
THE COURT: Motion denied, ask your next question.
BY MR. JACOBS:
Q. Mr. Levy, are you aware that at the time Mr. Sharp and Mr. Gordon are exchanging these memoranda and the issue of acquiring all of the Lee County Waste – sorry, Wastewater and Wastewater Utilities is on the table that Florida Cities is discharging in the Caloosahatchee River without a permit?
A. No, I was not aware of that.
Q. Mr. Levy, isn't it true that over ten years ago, the Avatar Holdings' Board of Directors was concerned about potential liability for environmental violations?
A. That is certainly true.
Q. In fact, that issue came up at the January 30th, 1986 meeting of the audit committee of Avatar Holdings Board of Directors, isn't that correct?
A. That is correct.
MR. HIRD: Your Honor, I object. There's been no establishment that Mr. Levy served on the audit committee, so he cannot – this is going beyond his personal knowledge.
THE COURT: Well, I don't know whether it is or not.

Page 99

He may have personal knowledge.
MR. JACOBS: He already answer it.
THE COURT: What was his answer?
MR. JACOBS: Correct.
THE COURT: Well, ask your next question.
BY MR. JACOBS:
Q. In fact, isn't it true that the minutes of the March 20, 1986 audit committee meeting reflect that Mr. Getman, Mr. Gordon and Mr. Sladkus had met with Mr. David Berz, Esquire, an environmental attorney with Avatar general counsel Weil, Gotshal & Manges and that the purpose of that meeting was to discuss Mr. Berz' review and a settlement of the utility company's potential liability exposure and that Mr. Getman expressed Mr. Berz' opinion that the existing corporate structure and operating procedures provide adequate liability protection against an attempt to, quote, pierce the corporate veil, but that further assessments would be made?
MR. HIRD: If he's reading from an exhibit, can we have the exhibit number?
THE COURT: Yeah. I think the appropriate way to do that is let's get to the exhibit that you're reading from.
MR. JACOBS: By all means, Judge. I apologize. I'm trying to move things along. It's Government's Exhibit 353 and it is already in evidence.
May I inquire as to whether Ms. Cole has recorded

Page 100

this as being in evidence, 353?
THE CLERK: No, it's not.
MR. JACOBS: Move 353 into evidence.
MR. HIRD: Your Honor, we do not object.
THE COURT: Be received.
MR. JACOBS: Move 48 in evidence, if it's not in evidence.
MR. HIRD: What is 48?
MR. JACOBS: Also minutes. These are both minutes. Have they been accepted, Your Honor?
MR. HIRD: I'm trying to find 48. No objection to 48.
THE COURT: All right.
353 and 48 will be received.
BY MR. JACOBS:
Q. Let's look at 48 for a moment, Mr. Levy.
A. That's Exhibit 48. I don't think I have that here?
Q. We'll get it for you in just a moment.
A. I have it.
Q. Now, Mr. Levy, can you identify Exhibit 48?
A. Well, I see I have it in front of me, yes.
Q. Can you?
A. It's the minutes, oh, I'm sorry, it's the minutes of the meeting of the board held on Friday, March 21st, 1986.
Q. And is your signature on page 10? This is again Exhibit

Page 101

48, for the record.
A. Yes, that is my signature.
Q. And then is there an Exhibit A attached to these minutes, sir, following page 10?
A. Well, there's some minutes of the audit committee, yes, Exhibit A, something wrote in pen, yes, that's right.
Q. So the audit committee minutes are an exhibit to the minutes of the entire board of Avatar Holdings, is that correct?
A. They certainly were at this time if Exhibit A was written at this same time as the rest were when they were attached.
Q. Look at page 4 of the audit committee minutes.
MR. JACOBS: And while the witness is doing that, can I just ask for a stipulation, to speed things up, from Avatar Holdings, that in fact, and perhaps Ms. Tsotsos can speak to this, that the minutes of the Avatar Holdings Audit Committee or rather the Audit Committee of the Board of Directors of Avatar Holdings are in fact exhibits in the minutes --
THE COURT: Why don't you consult with -- if you're asking for a stipulation, my rule is to not request that in the present of the trier of the facts?
MR. JACOBS: Forgive me, sir.
THE COURT: Or within the trier of the facts' hearing.
MR. HIRD: Your Honor, we'll stipulate that the audit committee minutes are exhibits to the minutes of the board

Page 102

meeting. We'll not stipulate that Mr. Levy was in attendance at the audit committee meeting.
MR. JACOBS: I didn't go as far as that, all I wanted to be clear is --
THE COURT: Is the format?
MR. JACOBS: Yes, sir.
THE COURT: All right.
MR. JACOBS:
Q. Now, look at page 4 of the audit committee minutes, Mr. Levy?
A. Page 4 of the audit committee minutes?
Q. That would be three pages back from the end of the exhibit.
A. This is Exhibit 48?
Q. Yes, sir.
A. Right.
Q. Mr. Gordon indicated David Berz, Esquire, an environmental attorney with Avatar's general counsel --
THE COURT: You're reading now?
MR. JACOBS: YES.
THE COURT: Right.
MR. JACOBS: Yes, sir.
THE WITNESS: This is what page of that audit committee meeting?
THE COURT: Page 4.

Page 103

BY MR. JACOBS:
Q. Page 4, Mr. Levy, first full paragraph. I'm going to read it again to speed things along.
Mr. Gordon indicated that David Berz, Esquire, an environmental attorney with Avatar's general counsel, Weil, Gotshal & Manges, had been contacted requesting his assistance in assessing the utility company's environmental liability exposure with recommendation to limit said exposure, if any.
Did I accurately read that paragraph?
A. Yes, you did.
Q. Now, turning your attention to Exhibit 353, do you recognize that, sir?
A. That is minutes of a meeting of the Board of Directors held on May 29th, 1986.
Q. And you signed those minutes on page 8, did you not, sir?
A. Yes, I did.
Q. And attachment, it's an Exhibit A, which represents the minutes of the meeting of the audit committee of the Board of Directors of Avatar Holdings on March 20, 1986, correct?
A. Yes, they seem to be attached.
Q. And could I direct your attention, please, to page 4 of the audit committee notes, and again, that would be for your convenience, sir, four pages back from the end of the exhibit?
A. Right, I have it in front of me.
Q. And I'm going to read into the record the second full

Page 104

paragraph.
Mr. Getman reported that he, Mr. Gordon, and Mr. John K. Sladkus had met with David Berz, an environmental attorney with Weil, Gotshal & Manges, in Washington, DC, to discuss Mr. Berz' review and a settlement of the utility company's potential liability. Mr. Getman expressed Mr. Berz' opinion that the existing corporate structure and operating procedures provide adequate liability protection against an attempt to, quote, pierce the corporate veil, unquote. But that further assessments would be made.
Did I accurately read that paragraph, sir?
A. Yes, you did, Mr. Jacobs.
Q. Now, directing your attention to Government Exhibit 356, which I'll move into evidence at this time.
THE WITNESS: Is that the –
THE COURT: Will be received.
THE WITNESS: That is the minutes of the board meeting of Wednesday, July 30, 1986?
BY MR. JACOBS:
Q. And you signed those minutes, sir?
A. Yes, I did.
Q. Now, Mr. Levy, the majority of these minutes are devoted to environmental matters, is that correct?
A. I would have to read them in order to be able to answer that.

Page 105

Q. Fair enough.
THE COURT: What are you referring to? You're referring to –
MR. JACOBS: To 3 –
THE COURT: What exhibit?
MR. JACOBS: 356, sir.
THE COURT: 356. Well, we're not going to wait for him to read it. He can scan them if he wants to. We're not going to wait for him to read it.
MR. JACOBS: Fair enough.
BY MR. JACOBS:
Q. Let me see if I can put it a different way, Mr. Levy. Isn't it true that a majority of these meetings related to environmental issues, including –
A. Oh, this meeting, I would agree with, yes, I thought you were asking me in general if the minutes of the board refer to environmental matters.
Q. No, I'm just asking you about this meeting, sir?
A. Yes.
Q. Mr. Levy, were you personally concerned at any time that Avatar Holdings might be called to account for the environmental violations of Florida Cities?
A. I was concerned about everything that Avatar Utilities did, but I felt the people in the water companies were very conscientious and that they would, as you have to rely on other

Page 106

people, I felt comfortable relying on them.
Q. Mr. Levy, Avatar is a public trade corporation, isn't that right?
A. That's correct.
Q. And you have a large stake in Avatar Holdings, do you not?
A. That is also correct.
Q. In fact, no one has a larger stake, isn't that right?
A. That is true.
Q. In fact, you beneficially own over twenty-five percent of the stock, isn't that true?
A. No, that's not true.
Q. Directing your attention to Exhibit 591.
A. I'm afraid, Mr. Jacobs, you're probably including all of the stock the Odyssey partners own of which I'm merely one partner.
Q. 591 is already in evidence. It's a 1994 10-Q statement filed with the Securities and Exchange Commission?
A. Which page would you like me to turn to, Mr. Jacobs?
Q. I'd like you to turn to the schedule 14-A information towards the back of the document which lists the principal stockholders.
MR. HIRD: Are you talking about page 14, Exhibit A?
MR. JACOBS: No, it's a computer printout. That's why I'm struggling.

Page 107

BY MR. JACOBS:
Q. Let me refer you to Avatar Holdings Exhibit 1, which is the annual report.
MR. HIRD: This contains the same information.
THE COURT: Okay.
Let's move along.
MR. JACOBS: I'm sorry, Your Honor, I'm trying to convert a computer printout into a hard copy of the SEC statement. With the Court's permission, I'll read the footnote that I have in mind. I'll just ask the witness if he agrees. Is that permissible?
MR. HIRD: Which page does the footnote appear on the printout?
MR. JACOBS: I can show it to counsel in the computer version.
THE COURT: All right.
It's all right, fellas, just get on with it.
BY MR. JACOBS:
Q. Mr. Levy, footnote one under principal stockholders and security ownership of management represents that Mr. Levy, Mr. Nash – let me read it. Mr. Levy, Jack Nash, Steve in Bussen-Mayer, Joshua Nash, by virtue of being general partners of Odyssey, share voting and dispositive power with respect to the common stock owned by Odyssey, and accordingly, may each be deemed to own beneficially the common stock owned by Odyssey.

Page 108

Do you agree with that statement?
A. Well, I am sure it's legally correct, but in layman's language, obviously all four of us did not own the same block of stock.
Q. The question was whether you beneficially own over twenty-five percent of the stock of Avatar Holdings?
A. Well --
Q. Using the definition, if you will, which is the definition or footnote from the SEC statement?
A. It's the SEC statement, I guess I have to accept that, but --
Q. Thank you.
And the next largest owner is an investment group which owns less than twenty percent, is that correct?
A. That's correct.
Q. Would you tell me, sir, as such a large stockholder in this company, would a multi-million dollar penalty against Avatar Holdings have an economic impact on you?
MR. HIRD: Objection. Are you talking about on Mr. Levy, personally, or on the company, or on Odyssey Partners. I need to know before the question is answered. I think it's vague. It should be clarified.
THE COURT: You need to clarify your question.
THE WITNESS: The question related to?
THE COURT: Wait, wait, wait.

Page 109

MR. JACOBS: Whether a penalty, a multi-million dollar penalty against Avatar Holdings would have an economic impact on the witness.
THE WITNESS: Yes, it would have an economic impact.
MR. JACOBS: Why?
THE WITNESS: Well, obviously --
THE COURT: Wait, wait, wait, wait, you have an objection?
MR. HIRD: I object to relevance, Your Honor, why the impact on the individual witness would -- what relevance does it have?
THE COURT: Yes, the issue is economic impact on the Defendant. I'll sustain the objection.
THE WITNESS: I mean, if it lost a dollar --
THE COURT: Wait, wait, wait, wait. I'll sustain the objection.
MR. JACOBS: No further questions.
THE COURT: Mr. Hird, you have -- I've taken under submission your request to be permitted to, at the conclusion of your cross examination, to present testimony that you would present over and above any testimony that you would elicit on cross examination of this witness.
MR. HIRD: Your Honor, actually, I think much of what Mr. Jacobs has questioned the witness about covers topics in my direct examination. I think there may be one or two areas in

Page 110

which we might get an objection as to scope and what I would suggest is to go through, because I think Mr. Jacobs has shortened my examination tremendously and I think if I could go --
THE COURT: I hope so, I hope so.
MR. JACOBS: I was trying to, Your Honor.
MR. HIRD: And do that, I think we would make it simpler. If Mr. Jacobs has an objection as to scope at that time, we can deal with it.
THE COURT: All right, All right.

CROSS EXAMINATION

BY MR. HIRD:
Q. Mr. Levy, Mr. Jacobs questioned you about the organization that you worked for, Odyssey Partners. Does Odyssey Partners have any relationship with Oppenheimer and Company?
A. Oppenheimer and Company was started by, among others, the partners of --
THE COURT: Well, is the answer to that yes or no and then you can explain.
THE WITNESS: The answer is no, okay.
BY MR. HIRD:
Q. What is Oppenheimer? Is Odyssey a successor in any way to Oppenheimer?
A. It is a successor. It has a historical relationship, but

Page 111

no current relationship?
Q. Could you explain that historical relationship?
A. Yes. Some of the partners of Oppenheimer -- of Odyssey started Oppenheimer and Company or were there at the very beginning. And many years later, the partners of Oppenheimer decided to sell Oppenheimer and Company, the partnership, and retain the proceeds and other assets of Oppenheimer and became an investment partnership and we called ourselves Odyssey because the buyers of Oppenheimer felt they were entitled, quite properly, to the name of the brokerage and the investment firm.
Q. And were you one of the original partners of Oppenheimer, sir?
A. I became a partner about a year after -- less than a year after the firm started?
Q. About when was that?
A. 1951.
Q. And when you worked for Oppenheimer, did you have any involvement in the Oppenheimer Fund?
A. Yes, I started the Oppenheimer Fund, Inc.
Q. And could you tell us what the Oppenheimer Fund was, please, sir?
A. The Oppenheimer Fund was a mutual fund. It was more of a hitch fund, actually, but it was a fund.
Q. Do you still have relationship with the Oppenheimer Fund?

Page 112

A. Yes, I'm chairman of the board.
Q. And when the Oppenheimer Fund started, about how much money did the fund have in terms of assets?
A. About two million dollars.
Q. And how much does it have today, sir?
A. Oh, the group -- it's now a group of several different funds. It has about forty billion.
Q. Was the Oppenheimer Fund the first such mutual fund in America?
A. It had many distinct qualities about it which may have made it certainly among the first, but I don't --
Q. Now, when Mr. Jacobs asked you about how you spent your time, you mentioned that you worked for many not for profit organizations. Can you identify those organizations, please?
A. Yes. I work for the Institute for Advanced Studies down in Princeton.
Q. And what does that do?
A. It has four divisions. I'll make it very brief. That's where Einstein worked, that's where the people who interpret the Hubble Telescope photographs work. They work in abstract math and abstract physics and also in history.
Q. What position do you have with the organization, sir?
A. I'm vice chairman of the board when the chairman of the board is on leave.
Q. So you're acting chairman at this point?

Page 113

A. I'm active chairman.
Q. What other not-for-profit organizations do you work for, sir?
MR. JACOBS: I object, beyond the scope, relevance.
THE COURT: Wait, wait, I will overrule the objection.
THE WITNESS: I'm treasurer of the Institute for Advanced Studies as well as I work for the Guggenheim Foundation and the Guggenheim Awards and I'm chairman of that finance commission, I work for the Jerome Levy Institute, I'm president, and that's an economic research institute.
BY MR. HIRD:
Q. Any others, sir?
A. I'm sure there are, but, yes, the Rockefeller Institute in New York. I'm on the finance committee and board of directors of trustees.
Q. Do you have any training in the operation of wastewater treatment plants?
A. No, I do not.
Q. Do you own any -- have you ever operated wastewater treatment plants?
A. No, I certainly haven't.
Q. Do you have any background or training in the utility business?
A. None, except as looking in the financial statements of

Page 114

utilities.
Q. Now, in your position as chairman of the board of Avatar Holdings, what is the nature of your responsibilities?
A. I would say overall strategy and I would also think for certain times of financial decisions.
Q. What is your role with respect to the business of Avatar Holdings' subsidiaries?
A. I'm not really involved in the operating decision in the businesses.
Q. What is your involvement with the operation of Florida Cities Water Company?
A. Virtually nothing.
Q. Does the Avatar Holdings Board of Directors ever handle the day-to-day operations of the Florida Cities Water Company?
A. No, they do not.
Q. Now, you've seen a number of board minutes in this Court in Mr. Jacobs's examination. How often does the Avatar Holdings Board of Directors meet?
A. About eight times a year.
Q. And you preside at those meetings?
A. Yes, I do.
Q. Are you a member of the audit committee of Avatar Holdings' Board of Directors?
A. No, I'm not.
Q. Is anyone associated with the management of Avatar

Page 115

Holdings a member of the audit committee?
A. No, they are not.
Q. Who comprises the audit committee?
A. Oh, gee, I have to refresh my memory on that. I think it's Martin Myerson and --
MR. HIRD: Your Honor, I withdraw the question at the time. I'll show him the exhibit later that will help him refresh his recollection.
BY MR. HIRD:
Q. Have you ever been an officer, director or employee of Florida Cities Water Company?
A. No, I have not.
Q. Have you ever attended a Florida Cities board meeting?
A. No, I have not.
Q. Now, Mr. Jacobs showed you some correspondence which came to your attention -- I'm sorry -- correspondence which you acknowledged that you received. Can you describe your practice in receiving correspondence? How do you treat correspondence when it comes into your office?
A. Yes. Depending upon its nature, I read it carefully or glance at it or other kinds of material that comes from Avatar, I might even discard without looking at it if there would be --
Q. So, how you treat a piece of correspondence depends on the nature of the subject matter?
A. Exactly.

Page 116

Q. Do you get more in a week than you could read?
A. Yes, I do.
Q. And what would your -- how would you treat a document that came to your office with respect to Avatar Holdings Utility business?
A. I think it would depend on the nature of the document.
Q. Well, what document would you read seriously and perhaps keep?
A. Well, I would be very interested in documents that suggested serious regulatory problems or suggested serious investment possibilities or commitments or you just have to make a subjective judgment as to the import on the entire operation on both the utilities and on the company itself as to how much time you would spend on the document. It's like allocating time for anything else.
Q. And how would you treat documents that dealt with technical aspects of utility operation at a particular plant?
A. I would have felt I could add very little to that. I would have difficulty understanding most of it, so I would probably not read any technical discussions of the water Utilities.
Q. Now, Mr. Jacobs asked you a number of questions about Peter Sharp. Did Mr. Sharp have any background experience in the utility industry before becoming --
A. Not to my knowledge, he had none.

Page 117

Q. Now, when you and Mr. Sharp acquired Avatar Holdings or required a significant interest in Avatar Holdings back in 1980, did you acquire it in order to obtain interest in real estate or to obtain a utility business?
A. We were interested in real estate.
Q. Why were you interested in real estate at that time?
A. Because prior to the whole exercise, Peter Sharp and I had a long conversation one day where Peter figured he owned enough real estate in New York and would like to own more real estate in the sun belt, and we looked at a number of companies that operated in the sun belt and owned land and finally we came across GAC.
Q. Now, when you and Mr. Sharp acquired an interest in GAC, you were appointed to the Board of Directors by Judge Britton?
A. That is correct?
Q. And who selected the original directors?
A. Oh, Jeff Hazard and Bill Porter recently resigned of the original directors appointed by the Judge.
Q. That was my question, Mr. Levy. Were the original directors appointed by the Judge?
A. A number of original directors were appointed by the Judge, yes.
Q. And was Mr. Jeffrey Hazard one of those?
A. He was among those, yes.
Q. Who is Mr. Hazard?

Page 118

A. He is a Professor at Yale Law School who was in charge of -- whose fame, and that I think is fair, is in the field of legal ethics.
Q. And did Mr. hazard serve as a director?
A. He did, for many years.
Q. Did he serve on the audit committee of the board?
A. I believe he did, yes.
Q. Was a Henry King Stanford appointed?
A. Yes, he was also appointed by Judge Britton.
Q. Who was Mr. Stanford?
A. He was president of the University of Miami for a great many years. Very distinguished gentleman.
Q. Was an Edward Houston appointed?
A. Yes, he was.
Q. Who is Mr. Houston?
A. Mr. Houston, I think, I believe was a Federal Judge in Fort Lauderdale.
Q. And did Mr. Houston serve on the Board of Directors?
A. Yes, he did, for quite a number of years?
Q. Did he serve on the audit committee?
A. I believe he did, yes. I think he was chairman of the audit committee.
Q. Was a William Porter appointed?
A. Yes, he was appointed also by Judge Britton, as was Mr. Houston.

Page 119

Q. And did Mr. Porter serve on the audit committee?
A. Yes, he did.
Q. Did a Martin Myerson become a director of Avatar Holdings?
A. That was sometime later, yes, he did.
Q. What was Mr. Myers background?
A. President of the University of Pennsylvania. He was Provost out in California.
Q. And did Mr. Myerson serve on the audit committee?
A. Yes, he did, still does.
Q. Did a Leon Kendall join the Board of Directors?
A. Yes, Lee Kendall did, indeed.
Q. And what was his background?
A. He was chairman of Magic which was the first mortgage insurance company, the earliest mortgage insurance company before that or after that. He was chairman of the SIA, the Security Industry Association, which represented all of the interest in the security business, and he's now a Professor at the University -- North Western University.
Q. Did Mr. Kendall serve on the audit committee?
A. He still does.
Q. And now, you had testified that Mr. Sharp came down to Florida the first couple years after Avatar Holdings emerged from bankruptcy, is that correct?
A. That is correct.

Page 120

Q. But he moved back to New York, is that correct?
A. That is also correct.
Q. Would that be in approximately 1982?
A. I think around that time.
Q. And from that time forward, Mr. Sharp never lived in Florida, is that correct?
A. That is correct, he visited Florida, but he didn't live in Florida.
Q. And you testified that Mr. Sharp is dead, is that correct?
A. Yes.
Q. And that he died in April of 1992?
A. Yes, that's right.
Q. What was the cause of his death, sir?
A. Cancer, lymph cancer.
Q. Do you know whether if he was ill for a long period of time?
A. Well, he was visibly ill, as much as he would go to the hospital over a few years. If I may, it was my instinct, every year he went out to the Mayo Clinic. He was a very quiet and private person. I think he had instincts that he was ill for much longer than he would let on.
Q. Now, sometime before his death, Mr. Sharp resigned as chief executive officer, *is that correct*?
A. That is correct.

Page 121

Q. And I think Mr. Jacobs asked you whether that occurred about 1990?
A. I think about then.
Q. Now, there were some questions concerning Mr. Sladkus?
A. Right.
Q. And you identified Mr. Sladkus when Mr. Jacobs showed you an exhibit that refreshed your recollection that Mr. Sladkus was an executive vice president of Avatar Holdings?
A. Right.
Q. Do you know whether Mr. Sladkus ever resigned that position?
A. Whether he did? I believe he did, yes.
Q. Do you recall when?
A. No, I don't.
Q. I'd like to show the witness Avatar Holdings' Exhibit 17.
Mr. Levy, do these appear to be board minutes of Avatar Holdings, Incorporated?
A. Yes, they do.
Q. And were these board minutes at the time that you were chairman of the board?
A. If you tell me what period this covers, to save time. What period?
THE COURT: It's a meeting?
MR. HIRD: it's Exhibit 17.
MR. JACOBS: Judge, to save time, we'd stipulate

Page 122

Mr. Sladkus resigned from the position of executive vice president of the land and utility operations as effective January 1st, *1991, if that's helpful.*
MR. HIRD: That's what I was attempting to elicit.
THE COURT: Okay, very good.
MR. JACOBS: But not from his affiliation – any other affiliation he might have held with the company subsequent to that time.
BY MR. HIRD:
Q. Now, you mentioned – now what was Mr. Sladkus' background?
A. He was an engineer.
Q. Do you know whether – excuse me.
Do you know whether his engineering expertise was in the nature of wastewater treatment or some other specialty?
A. I think he was a civil engineer. He built things, he supervised the building when Peter would build an office building or what-have-you, among other things.
Q. Was his experience in the construction industry?
A. I think so because we used to refer to the mandated work that we talked about before as horizontal engineering, when you had them put in the roads and whatever that was ordered by the Corp and the Federal Trade Commission and Sladkus spent a great deal of time working on that.
Q. All right.

Page 123

Where did Mr. Sladkus maintain his office?
A. I believe he maintained his office in the same building as Peter Sharp maintained his office, in New York.
Q. Did Mr. Sladkus apprise Sharp on projects that were unrelated to Avatar Holdings?
A. He certainly did, yes.
Q. To your knowledge, did Mr. Sladkus ever have an office in Florida?
A. Not to my knowledge.
Q. Was Mr. Sladkus a director of Avatar Holdings?
A. No, he is not, nor was he.
Q. Now, you had been questioned *a little bit about* Mr. Wilkov?
A. Correct.
Q. Was Mr. Wilkov a member of the audit committee of Avatar Holdings?
A. No, he was not.
Q. Was Mr. Sharp?
A. No.
Q. What was Mr. Wilkov's background?
A. I believe he was in the real estate business up in New York and then he moved to Florida and he acted as an independent and then he joined Avatar.
Q. And did he have any experience in the utility business?
A. Not to my knowledge.

Page 124

Q. You also discussed Mr. Getman who was identified as general counsel of Avatar Holdings, is that correct?
A. That is correct.
Q. What are Mr. Getman's responsibilities?
A. Well, Mr. Getman is responsible for overlooking, overseeing all of the legal aspects of the family of companies in the Avatar family.
Q. Do you know whether Mr. Getman also holds the title of executive vice president of Avatar Holdings?
A. Yes, he does.
Q. Does that title involve any duties in addition to his role as general counsel?
A. Yes, I believe it does.
Q. Do you know what those duties are?
A. I couldn't enumerate them.
Q. Does he have business responsibilities?
A. Yes, he does.
Q. Does he have business responsibility with respect to the utility operations?
A. Well, I don't know -- I really don't know since I couldn't enumerate and outline exactly what his responsibilities are.
Q. Would Jacobson know what Mr. Getman's business responsibilities would be?
MR. JACOBS: Objection.

Page 125

THE COURT: You can ask him if he knows, whether he would be in a position to know. I think that question would be legitimate, so rephrase your question. Overrule the objection.
BY MR. HIRD:
Q. Would Mr. Jacobson be in a position to know what those business responsibilities would be?
A. I can't see how.
Q. Now, you were asked some questions about Barefoot Bay and I believe you indicated that Barefoot Bay was one of the properties that was acquired when Avatar Holdings --
A. Yes, that was among the properties in Avatar Holdings from the GAC.
Q. Was this considered one of the major real estate properties?
A. No, it was not.
Q. Why not?
A. 'Cause its size possibility, potential, all of the other measures that you would use to measure one property as against another and the impact it would have on the company as a whole was not as great by a long shot as a Hoover Island, Poinciana, King Cal.
Q. Did you visit the major properties of Avatar Holdings?
A. Several times?
Q. Did you ever visit Barefoot Bay?
A. No, I never did.

Page 126

Q. Now Mr. Jacobs asked you whether you ever visited wastewater utilities. How often have you visited wastewater utilities owned by Avatar Holdings or its subsidiaries?
A. Oh, gosh, aside from when we first acquired the company and I went out in the midwest and visited most of the utilities that we had in the midwest, I would say almost never. The only familiarity I had was in a presentation to which Bob Gordon made at Fiesta which was an advanced wastewater plant that we built in Lee County, I believe.
Q. But you never visited Fiesta Village?
A. No, I never visited Fiesta Village.
Q. So you only visited some utilities in the midwest at the time that you first became involved with Avatar Holdings?
A. That's correct.
Q. You never visited Barefoot Bay Treatment Plant?
A. No.
Q. And you never visited the Carrollwood Treatment Plant?
A. No.
Q. And you never visited the Waterway Estates Treatment Plant?
A. No.
Q. Now, you were asked some questions about Robert Gordon. Does Mr. Gordon have any position with Avatar Holdings?
A. No.
Q. How many times a year do you speak with Mr. Gordon?

Page 127

A. Maybe two or three, at the most. Perhaps maybe we run into each other by accident. We'll be very friendly as we are, but I don't see him.
Q. You were also asked some questions about Gerald Allen. Does Mr. Allen have any positions with Avatar Holdings?
A. No, he does not.
Q. How many times a year do you speak with Mr. Allen?
A. Maybe I see him two or three times a year, at the most.
THE COURT: I assume you have some more?
MR. HIRD: I have some more, and Your Honor, actually it would be -- I can be in a better position after the break.
THE COURT: All right.
This would be a good time to recess for lunch. We'll reconvene at 1:15.
(Thereupon, a luncheon recess was taken.)
All right, Mr. Hird.
MR. JACOBS: Pardon me, may I be heard on one procedural matter with respect to tomorrow's schedule, with the Court's permission? Mr. Quinn and I have 5:00 p.m. flights which are apparently the last non-stop flights to Washington, and I just don't know if that's acceptable to the Court. I wanted to find out.
THE COURT: How are you going to be here and there at the same time?
MR. JACOBS: That's the point. If I'm going to be

Page 128

here, I'm not going to be on the 5:00 p.m. flight.
THE COURT: Well, let me see just a minute. Well, I have two sentencings tomorrow afternoon that were originally scheduled for 4:00 o'clock that I had moved back to 4:45, and those will be probably fairly lengthy sentencings, and I don't plan to be here Friday night, so we may be able to accommodate you.
MR. JACOBS: That would be great. Thank you, so much, Your Honor, and we'll cut it very close. If you want to go to 3:30 or 3:45, we'll take our chances getting out there by 5:00.
THE COURT: Probably will want to go till at least 3:45.
MR. JACOBS: All right, sir. but I've got a 5:00 o'clock flight.
THE COURT: Okay.
MR. JACOBS: It's 3:45.
THE COURT: You want to be heard?
MR. HIRD: Your Honor, defense counsel I believe is going to be here for the duration.
MR. BAISE: We're here for the duration, Your Honor, and we hadn't planned on returning over the weekend.
MR. HIRD: And we're prepared to go to however late Your Honor wishes.
THE COURT: Well, I'll tell you what, you know, I got

Page 129

some other balls in the air, too, and as a matter of fact, some things that have kept me awfully busy, and I'm here for the duration, not just this case, but if I want to continue in this position, Judges have to pace themselves, too, but which brings up the subject of where are we in this case? I have an estimate from the Government of several days, whatever it was, and the Defendants estimated eight days.
MR. BAISE: That is correct, Your Honor.
THE COURT: Where are we in that estimate?
MR. JACOBS: Judge, we estimated a maximum of five Court days. As you recall, we actually set out a potential scheme on how to split those five days up. The last penalty trial that we had was finished in three days, that includes both sides. We had anticipated completing our case in chief yesterday. We now anticipate, based on the length of the cross examination of Mr. Klingenstein, we'll complete our case in chief this afternoon.
MR. BAISE: With respect to Florida Cities, Your Honor, we have approximately seventeen witnesses that we need to call in light of the evidence that's been brought forth. We're going to do our very best to push that group into next week and it's going to be very difficult to do and we understand that.
MR. HIRD: On behalf of Avatar Holdings, assuming that Mr. Levy does not have to come back, which at this point I

Page 130

think is probably the case, we have, I think, two witnesses, I imagine would be completed in about two hours.
MR. JACOBS: Judge, these are reductions from the list. If counsel could share with us their revised list, we'd sure appreciate it. This is nineteen instead of twenty-six.
MR. BAISE: I may have mispoken, counsel, it's either seventeen or nineteen. I have to look at the list, Your Honor.
THE COURT: Well, why don't we -- why don't you cooperate with each other to the extent of keeping each other abreast of the witnesses that you intend to call so we can try and move this thing along as expeditiously as possible.
MR. BAISE: We have been doing that, Your Honor. I find no difficulty in terms of working with Government counsel in terms of them keeping us apprised of their witnesses. In fact, we were just talking here a few moments ago about how to fill in the rest of today, assuming under the best of circumstances that they finish their case and we finish our cross, we have an hour or so left this afternoon, how can we fill that in productively. We're making arrangements, one of my colleagues has been attempting to make arrangements to pull in a gentleman that will talk about the Carrollwood situation for maybe the last hour, hour and a half this afternoon, if we have that amount of time.
MR. JACOBS: The agreement was, though, we exchange a day ahead of time not only who was going to be expected to be

Page 131

called the next day, but the order, and so far, it seems like the Defendants are not sticking with the order which is making our job a little bit tougher and we really did endeavor to get our precise number down way ahead of time as well as our order.
MR. BAISE: One of the reasons, Your Honor, that it has been somewhat difficult to keep that order is the length of time that direct and cross examination has been taking. Obviously, we have an order in which we would like to present our case, so what I'm, at the present time trying to do is fill in, if there's any time left this afternoon, with the gentleman who can deal with our Carrollwood situation so we can start with on direct cleanly tomorrow.
THE COURT: All right.
Well, we're going to move on now.
MR. BAISE: Thank you.
THE COURT: I think that Ms. Cole, I'm sure she told you that Tuesday I have to be in Jacksonville, that's not going to be a Court day.
MR. BAISE: Yes, she did.
THE COURT: I also have a two week trial calendar commencing a week from Monday in Jacksonville which I've committed to, so we'll move on now, okay.
MR. JACOBS: Can we plan on our flights for tomorrow? Will you be able to terminate by 3:45?
THE COURT: We'll do that.

Page 132

MR. JACOBS: Thank you, sir.
MR. HIRD: Your Honor, just to correct something, I said I mentioned two witnesses, in reality it's three, but one witness will be called during Florida Cities' examination, I will question him with respect to my case in chief.
MR. JACOBS: So we understand, who?
MR. HIRD: Gerald Allen. I've already told Mr. Quinn.
THE COURT: All right, proceed.
BY MR. HIRD:
Q. All right.
Mr. Levy, could you take a look at Government Exhibit 80, please?
A. Thank you.
Q. Mr. Levy, I believe Mr. Jacobs questioned you about Government Exhibit 80 and you identified it as a cover memo and the agenda?
A. Yes, that's correct.
Q. I'm sorry, I hadn't finished, I was waiting for Judge Nimmons to get the document.
THE COURT: Okay.
BY MR. HIRD:
Q. I believe when Mr. Jacobs questioned you about Exhibit 80, you identified this as a cover letter and agenda for an annual utilities operation meeting, is that correct?

Page 133

A. That is correct.
Q. And these annual meetings, they occur once a year?
A. If that often.
Q. Did you ever attend any of these annual utility operation meetings?
A. I think I attended one.
Q. But did you miss most of them?
A. Yes, sir.
Q. Why did you decide not to go to those meetings?
A. Well actually, if the meetings followed a regular board meeting, I would probably have attended it unless I had to be somewhere else.
Q. But you wouldn't go specially?
A. I wouldn't have gone specially.
Q. Okay.
If you could turn for a moment to Government Exhibit 61, please.
A. Yes, sir.
Q. Mr. Jacobs asked you a number of questions about Government Exhibit 61. I'd like to ask you a more basic question. Do you ever remember reading this exhibit, this document at the time it was dated?
A. Well, as I mentioned before, I don't remember reading it, but I wouldn't say that I didn't read it either.
Q. You were asked questions about disposal of effluent at

Page 134

Barefoot Bay. Is that an area about which you felt specially qualified?
A. No, it was not.
Q. Would it be your practice to deal with that issue directly or to leave it to others within Avatar Holdings or its subsidiaries to deal with such an issue?
A. I would normally always leave it to others in the subsidiary to deal with.
Q. Now, with respect to the attachment, the attachment refers to a meeting between Florida Cities Water Company and the Florida Department of Environmental Regulation, is that correct?
A. Yes, sir.
Q. Based on your review of the attachment, does it appear anyone attended that meeting on behalf of Avatar Holdings?
A. I'm sorry?
Q. Did anyone attend that meeting on behalf of Avatar Holdings?
A. Not to my knowledge.
Q. Did Avatar Holdings ever direct Florida Cities what to do with the effluent at Barefoot Bay?
A. Not as far as I know, sir.
Q. I'd like to have you look at Exhibit 384, please, government Exhibit 384.
A. Yes.

Page 135

Q. This is a document about which Mr. Jacobs questioned you. In particular, he asked you about the first paragraph 384. Can you read the second one, please, for the record?
A. What?
Q. Second paragraph of the first page.
A. Right.
Q. Could you read it aloud, please.
A. We should be trying to work out an agreement either to purchase now or to operate or lease the facilities with the right to purchase sometime in the future, preferably at a price fixed now.
Q. So, to the extent Mr. Sharp was suggesting that Florida Cities acquire Lee County's utility systems, he was talking about purchasing or leasing other systems, is that correct?
A. That seems to be the case.
Q. So, the control of Lee County Utility Systems could have been obtained by simply leasing or buying other utilities regardless of whether Waterway Estates continued to operate?
A. That is correct.
Q. I'd like to have you take a look at Government Exhibits 96 and 97, if you would, sir.
A. Yes, Mr. Hird.
Q. Now, Government Exhibit 96 is a memo entitled Avatar Utilities, general, is that not true?
A. That is correct.

Page 136

Q. And this memo refers to various different aspects of Avatar Utilities' operation, not just Barefoot Bay?
A. that is so.
Q. And that includes Avatar Utilities operations in the midwest, is that correct?
A. That's right.
Q. Did Avatar Utilities -- I think you alluded to this briefly, but was there a sale of Avatar Utilities' midwest operations?
A. Yes, there was.
Q. And does Avatar Utilities have any operations now outside the State of Florida?
A. It has a small operation in Arizona, very small.
Q. But previously, it was in what states?
A. It was in Ohio, Indiana, Michigan.
Q. Would Missouri be one?
A. Missouri, yes.
Q. And all of those operations were sold?
A. Right.
Q. And did that result in reduction in the number of employees that Avatar Utilities had?
A. Well, it certainly would have, certainly in the field.
Q. About when did that sale occur?
A. I think it occurred in '92 or '93, but I want to refresh my memory before I --

Page 137

Q. Now, exhibit -- the portion of Exhibit 96 that deals with Barefoot Bay, and Exhibit 97, both mention the possible purchase of orange groves; do you see that, sir?
A. Yes, I saw that.
Q. Would this have been a different business for Avatar Holdings?
A. Well, I don't think we owned any orange groves, but it would not have, in a sense, I guess the technical answer would be, yes, but it wasn't was so widely different from what we were doing. We had sod farms and other agricultural interests incident to whatever else we were doing.
Q. Now if a subsidiary was thinking of a new business venture, is that the kind of thing that would be brought to the attention of you or either Mr. Sharp?
A. Yes, if it was major, going into a new direction, that would have been brought to our attention.
Q. I'd like you to take a look at Government Exhibit 114 and 115, if you would, sir.
A. 114.
Q. 114 and 115.
A. Yes, sir.
Q. Are those in that book?
THE COURT: You have them?
THE WITNESS: I have the Exhibit. Did you ask me a question, I'm sorry?

Page 138

BY MR. HIRD:
Q. No, I didn't know if you had it yet.
A. I'm sorry.
Q. Exhibit 115 is a cover letter and Exhibit 114 is the memo from Mr. Allen about wastewater disposal alternatives, deep well injection at Barefoot Bay. Do you see those documents?
A. Yes, I do.
Q. All right.
Is this memo, 114 -- first of all, do you have a recollection of actually reading 114 at the time it was sent to you?
A. No, I don't have a recollection, no.
Q. Is the topic that 114 is discussing in the area of your responsibility and expertise?
A. No, it is not.
Q. And you testified I believe that you get a lot of things during the course of your affairs that you don't have time to read, is that correct?
A. That is correct.
Q. Mr. Levy, does Avatar Holdings control Florida Cities' operations on a daily basis?
A. No, it does not.
Q. Does it control the operations of any of its individual plants on a daily basis?
A. No, it does not.

Page 139

MR. HIRD: Your Honor, at this time, I'd like to move into evidence certain exhibits that have been designated as annual reports or board minutes of Avatar Holdings. I have discussed it with counsel during the break and I believe there are no objections.
MR. JACOBS: Well, what you said during the break was that some of them were incomplete. I said as long as they were complete, I have no objections.
MR. HIRD: I will give you the complete ones, Your Honor, and then to the extent any of these exhibits are incomplete, we have complete copies that can be substituted.
Exhibit 1 Avatar Holdings' 1994 annual report.
THE COURT: Wait a minute. All right.
Exhibit 1.
MR. HIRD: Avatar Holdings' Exhibit 1.
MR. JACOBS: Can counsel represent whether it's complete?
MR. HIRD: Yes, it is.
MR. JACOBS: No objection.
THE COURT: Be received.
MR. HIRD: Exhibit 10, Avatar Holdings' minutes of a board of directors meeting dated September 24, 1980 is complete.
THE COURT: It'll be received.
MR. HIRD: Exhibit 11, Avatar Holdings' minutes of a

Page 140

board of directors, dated 10-23-1980.
MR. JACOBS: Complete.
MR. HIRD: Complete.
THE COURT: Be received.
MR. HIRD: Exhibit 15, Avatar Holdings' minutes of a board of directors dated January 1 -- 25, 1990.
MR. JACOBS: Complete?
MR. HIRD: Complete.
THE COURT: Be received.
MR. HIRD: 17, Avatar Holdings' board meeting, date, January 1, 1931 -- January 31, 1991, complete.
THE COURT: Be received.
MR. HIRD: Exhibit 18, Avatar Holdings' board minutes dated 6-15-92, this is complete.
THE COURT: Be received.
MR. HIRD: Your Honor, the following exhibits we have in excerpted form. We do have complete copies to the Government if he wishes to see them. The Government had the full opportunity to review all of Avatar Holdings' board minutes, so we are offering them in their excerpted form. If that is not acceptable to the Government, we can replace the completed form. Exhibit 21.
THE COURT: This is among those now that you're talking about?
MR. HIRD: Pardon?

Page 141

THE COURT: This 21 is among those you're talking about?
MR. HIRD: Yes, the ones that I'm going to read are all of this variety.
MR. JACOBS: 21, in at least the version that was provided to us by Avatar Holdings, are not minutes of board meetings, they purport to be minutes of the audit committee meeting.
MR. HIRD: As Mr. Jacobs already established, the audit committee meetings are an exhibit to the board meeting. We do have the board minutes to which they were attached that can be provided as well to the Government if it's unacceptable for that reason.
MR. JACOBS: It is unacceptable if it's incomplete. If it's complete without the minutes of the board meeting, I think we established it is not complete.
MR. HIRD: We have the board minutes with us, we can attach that. The substance of what we wish to have it for is the audit committee minutes so we can have it admitted, either in its excerpted form or its whole form.
THE COURT: Well, do I already have the minutes; do we already have the minutes of the board meeting in evidence?
MR. HIRD: No, we do not, Your Honor. I can produce them, they can be authenticated through Mr. Levy or some other means. We simply -- and Mr. Jacobs personally was able to see

Page 142

the entire board minutes.
THE COURT: Well --
MR. JACOBS: It's true, I'm sorry, Your Honor.
THE COURT: All right.
We have documents here. The documents are -- these are exhibits that objections have been made to them. Now, what objections have been made by the Government with respect to this excerpted Exhibit 21?
MR. JACOBS: Incomplete under rule of evidence Rule 106.
THE COURT: Incomplete, well --
MR. HIRD: Federal Rule 106 is not an absolute bar. It simply provides the other party has the right to introduce the rest of the document. We can have the document entered as the audit committee minutes only or we have here that can be substituted the exhibit with the board minutes attached. In order not to clutter up the Court's record, I did not want to put in a longer document simply to get what was relevant which was the smaller portion.
THE COURT: How many of these do we have like this?
MR. HIRD: There's only four that we particularly wish to see added on. That's 21, 23, 24 and 25.
THE COURT: All right.
Well, let's go ahead and put the -- make it complete, satisfy the Government and can we do that sometime during the

Page 143

recess?
MR. HIRD: I can do that during the break, Your Honor, if we don't need Mr. Levy to authenticate the documents.
THE COURT: Okay.
MR. HIRD: There's only one other exhibit that I'd like Mr. Levy to authenticate, it's probably the only examination I think that is beyond the scope of what we have, if I may do that, it would --
THE COURT: Go ahead, ask your question.
BY MR. HIRD:
Q. Okay.
Mr. Levy, can you look at Avatar Holdings' Exhibit 3? Do you have that in front of you?
A. Yes, I do.
Q. Is that your marking file in the corner?
A. Yes, that's my marking, Mr. Hird.
Q. And if you could turn to the fourth page of the exhibit, see the words "call Bob Gordon" written in handwriting?
A. Yes.
Q. Is that your handwriting?
A. That is indeed my handwriting.
Q. Do these documents comprising Exhibit 3 come from your office?
A. Yes, I believe they do.
Q. Are these records that you keep in the ordinary course of

Page 144

your business as chairman of the board of Avatar Holdings?
A. Yes, although they would be probably filed in a warehouse sometime after about two years.
MR. HIRD: Your Honor, I move that Exhibit 3 be admitted in evidence.
MR. JACOBS: Your Honor?
THE COURT: Yes.
MR. JACOBS: May I be heard? Mr. Hird represented in open Court these were Mr. Levy's personal records and were not the documents, the business records of Avatar Holdings. I've just heard him say the opposite. He told the Magistrate that these were not produced to us as Avatar Holdings' records because they were Mr. Levy's personal records, at which point in time we had to go subpoena Mr. Levy. So to hear him now say these are Avatar Holdings' business records is somewhat inconsistent. We object. It's got to go one way or the other.
MR. HIRD: May I reply, Your Honor?
THE COURT: Yes.
MR. HIRD: I indicated that these were not records of Avatar Holding Company per se. What I've asked Mr. Levy today is whether these are business records that he keeps in the course of his duties as chairman of the board of Avatar Holdings. These are not from the official files of Avatar Holdings, but they were from the files that Mr. Levy keeps personally in connection with his responsibilities as Avatar

Page 145

Holdings Board of Directors, so I think the statements were consistent, but this is not from an official Avatar Holdings' file, but it is from the business files that he keeps for himself.
MR. JACOBS: Can't have it both ways, Your Honor. If he keeps them as Avatar Holdings' files, then they're Avatar Holdings' records. He's the chairman of the board of Avatar Holdings. Mr. Hird has argued repeatedly in pleadings and in open Court that these particular records were Mr. Levy's personal records.
Exhibit 3 also seems to contain three separate documents and would appear to be hearsay and hearsay within hearsay, certainly with respect to the second two.
MR. HIRD: Your Honor, I believe with respect to the second document, Mr. Levy identified that it was his handwriting on the documents, with respect to the third, it is clearly the document that is referred to and incorporated in the second.
THE COURT: I'm going to overrule and receive it.
MR. HIRD: Thank you, Your Honor.
Mr. Levy, thank you very much, I have no more questions.
And, Your Honor, with this inquiry, I don't believe I will need to bring Mr. Levy back.
THE COURT: All right.

Page 146

Okay.
Redirect.
MR. JACOBS: No redirect, Your Honor.
THE COURT: All right.
You have no redirect?
MR. BULLOCK: No.
THE COURT: Thank you very much, you may step down.
THE WITNESS: Thank you very much, sir.
THE COURT: Call your next witness.
MR. JACOBS: Your Honor, at this point in time, the United States would call James Elder, Dennis Getman, Robert B. Gordon, Anton A. Reeves, III, John K. Sladkus and Lawrence Wilkov. All of these six individuals have refused to answer any substantive questions in this matter at deposition on the grounds that their responses would incriminate them and have asserted their Fifth Amendment Right not the respond. The depositions themselves are, I would proffer, the deposition testimony of these witnesses at this time as recorded on page 34 of the revised joint pre-trial statement. In addition, I would like to make an offer of proof.
THE COURT: What page?
MR. JACOBS: Page 34, Your Honor, joint pre-trial statement.
THE COURT: Yes.
MR. JACOBS: And in addition, I would make an offer

Page 147

of proof in lieu of the testimony of the witnesses who pled the Fifth Amendment because it's a bench trial. I've put it in writing and would like to submit it to the Court with the Court's permission.
MR. HIRD: Your Honor, I don't think we have seen this offer of proof.
THE COURT: Well, show it to counsel before you show it to me.
MR. JACOBS: I've got copies for counsel, sir, and the original.
THE COURT: Before you show it -- well, just hand it to the Clerk. Now, you're offering -- you're offering these portions of the depositions of the six witnesses that you named?
MR. JACOBS: Yes.
THE COURT: Which is set forth on page 34 of the joint pre-trial statement?
MR. JACOBS: Yes, Your Honor.
THE COURT: All right.
First of all, is there any objection to those portions of the depositions?
MR. BULLOCK: Your Honor, I would note, first of all, the Government has never attempted to list these people as witnesses in the joint pre-trial statement or anything filed or delivered to us subsequent to the joint pre-trial statement.

Page 148

MR. JACOBS: Your Honor -- sorry.
THE COURT: Wait a minute.
MR. BULLOCK: We would also object under relevance of offering these portions of the depositions.
THE COURT: Now, let's take one thing at a time. If this is a list of depositions that the Government as indicated intends to introduce at trial, correct, depositions to be offered in evidence at trial?
MR. JACOBS: Yes, Your Honor.
THE COURT: I don't understand your first objection, counsel.
MR. BULLOCK: In the context of, if he is at the present time going to argue that he would call these people in his case in chief had he not -- had they not pled the Fifth Amendment, we've never had any notice of the fact he would have called these people in his case in chief. He didn't list those as potential witnesses in the pre-trial statement.
THE COURT: Well, wait a minute. He's listed their depositions and certain pages and lines. I don't follow you.
MR. JACOBS: I might add, if I may.
MR. BULLOCK: Some of these people, in fact --
MR. JACOBS: I've also listed on page 15, I specifically stated in the same pre-trial statement that I would have called those witnesses but for the fact that they asserted the Fifth Amendment at deposition.

Page 149

MR. BULLOCK: I withdraw that.
MR. HIRD: I would like to make a specific -- with respect to one of the individuals, John Sladkus, who we had initially indicated might be one of our witnesses, the Government objected to John Sladkus being on our witness list, so therefore I don't think the Government can thereby offer information concerning Mr. Sladkus' potential testimony.
THE COURT: Well, the Government objected to Mr. Sladkus being on your witness list?
MR. HIRD: That's correct, Your Honor.
MR. JACOBS: Only --
THE COURT: And was that ruled upon?
MR. HIRD: Ultimately, Mr. Sladkus' name was withdrawn. Actually, Your Honor, I think you probably did rule upon it in your order last Monday because it was briefed. We indicated --
THE COURT: You indicated in your response what?
MR. HIRD: Mr. Sladkus had been withdrawn.
MR. JACOBS: I believe the Court therefore ruled that issue is moot because Mr. Hird had withdrawn him as a witness.
THE COURT: Yeah. What was the issue?
MR. JACOBS: The issue was Mr. Hird listed Mr. Sladkus as a witness when we had deposed Mr. Sladkus. He asserted the Fifth Amendment Right, and therefore didn't testify. The Government's position was, well, if he's going to

Page 150

testify at trial, he has to be deposed first, and discovery had already closed, so we said that Mr. Hird couldn't call him as a witness. And therefore, Mr. Hird withdrew him from the witness list and the Court, as I recall Monday's order, said the issue was moot.
THE COURT: I did, I said the issue was moot because they had removed him from the witness list. That's what I said.
MR. HIRD: Yes, but we had no indication Mr. Sladkus would be treated as a witness by the Government.
THE COURT: He's been listed.
MR. HIRD: Not by the Government.
THE COURT: Yes, he has. Oh, okay, maybe -- well, he is on page 34, his deposition.
MR. HIRD: I mean as a live witness.
MR. JACOBS: On Plaintiff's page 15, I said I would have listed all the witnesses, but for the fact they asserted their Fifth Amendment Rights at deposition. Especially notes the United States would call the witnesses who have asserted the Fifth Amendment at deposition, see section H, infra, which is indeed page 34. I believe I preserved the right in two places.
THE COURT: Okay, Mr. Bullock.
MR. BULLOCK: Your Honor, I have another separate objection, but I didn't want to interrupt.

Page 151

THE COURT: Yeah.
MR. BULLOCK: Your Honor, we had -- this is the first time that the -- at least Florida Cities has seen the offer of proof. I'm a little confused because as I understand --
THE COURT: Well now, wait just a minute. As I understand it, the Government has asked to introduce these depositions, that is not a separate issue.
MR. BULLOCK: Well, Your Honor, the offer of proof includes putting the depositions in. It's not clear whether just the depositions are going in. Mr. Jacobs also attached a number of exhibits to these depositions. It's not clear, I have not had the opportunity to figure out whether or not he's trying to include the exhibits which were attached to these depositions to bring them in as well.
THE COURT: Let me see the -- well, have you -- this is a thirty-five page document here. Have you tendered this to counsel before?
MR. JACOBS: Not before today, Your Honor. This is part of our case in chief, and as far as we're concerned, they're entitled to rebut it in their cases and we've offered it in in fairness to allow them to.
MR. HIRD: Your Honor, we have substantial objections to the offer of proof. I don't know whether you want to deal with that now or whether you want to deal just specifically with the depositions, but and we're prepared to deal with it,

Page 152

whichever sequence you want.
THE COURT: Well, I don't understand what this -- what is this document?
MR. JACOBS: This is my -- the Government's proffer, Your Honor, of what we would be able to show were these witnesses to testify.
THE COURT: They have not?
MR. JACOBS: They have refused to testify in response to any substantive questions.
THE COURT: Well, how do you determine what they would testify to?
MR. JACOBS: Based on the documentation. We asked the Court to draw adverse inferences in this civil matter through the documents. As I said in any opening statement, these witnesses did not testify, they have that right, but the Government has the right to ask the Court to draw adverse inferences from the failure to testify, and as I said in my opening statement, they've left a long paper trail and essentially what I've done for the Court here is taken the Court through the paper trail and suggested the adverse inferences that should be drawn.
MR. HIRD: Your Honor, two points --
THE COURT: Well now, just a minute.
MR. HIRD: Sorry, Your Honor.
THE COURT: Is this not more in the form of you're

Page 153

asking the Court, number one, assuming the Court receives in evidence those portions of the depositions wherein these witnesses take the Fifth Amendment and, of course, this is predicated, this offer or this document here is predicated on that, that is -- you're arguing what inferences the Court may draw from these various witnesses taking the Fifth Amendment during their depositions.
Now, is this not more in the form of arguments regarding reasonable inferences based upon the evidence that comes before the Court, including the claims of the Fifth Amendment than it is any separate items? This is not -- this is not evidence here, these are your arguments regarding the inferences the Court may legitimately draw based upon the evidence that is before the Court, including the claims of the Fifth Amendment.
MR. JACOBS: Yes, and based on the evidence that there are another perhaps twelve to fifteen documents that I would move into evidence at this time. The point is that at this point in the case, I would be calling six adverse witnesses, and I would be showing -- essentially, I would be showing the Court essentially through the testimony of those witnesses, as you saw me run Mr. Levy through certain documents, I would be introducing certain evidence. Because these individuals have refused to testify in a civil case, adverse inferences may be drawn. I'm simply setting forth here

Page 154

in this document and at this point in my case in chief what I would expect to be able to prove through the testimony of those witnesses, particularly the testimony of the Avatar witnesses, Mr. Getman, Mr. Gordon, Mr. Sladkus, Mr. Wilkov.
MR. HIRD: Your Honor, Mr. Bullock will go first.
THE COURT: Mr. Bullock.
MR. BULLOCK: Your Honor, a couple of issues. First of all, we're actually double checking the transcripts right now. I do not believe that at least in some of these depositions, Mr. Jacobs actually propounded questions to the witnesses, the answers of which he's now trying to infer negative because they took the Fifth Amendment.
Secondly, for example, I refer you to page 2 of this document where he starts out a listing of Avatar Holdings' key players, including Peter Sharp, a New York City real estate tycoon who took a close personal interest in his investment. Obviously, Mr. Sharp's deceased. I don't know if Mr. Jacobs' trying to put evidence in because he can't get hold of Mr. Sharp, but at this point in the case, basically to turn in a brief where he's basically writing the testimony these people I think is highly improper and not a legitimate offer of proof.
MR. JACOBS: If it's just --
MR. HIRD: May --
THE COURT: Sir?
MR. HIRD: Following the points of Mr. Bullock, in

Page 155

none of these instances were there any specific questions asked in the ten or fifteen minutes, these deposition ended on page 10 or 12, so there were no specific questions asked.
With respect to the documents, as the Court has seen, the substantial number of documents that were admitted into evidence, Mr. Jacobs can argue whatever inferences he can for those documents, but specific questions were not propounded to these witnesses.
Mr. Sharp, as Mr. Bullock said, was dead, so he shouldn't be included in this, and is the first person mentioned in this list, and beyond the -- with respect to Avatar Holdings, in particular, two of the individuals who are recited were former employees. Mr. Wilkov has not only left the company at the time he was deposed, but he had filed suit against the company in connection with his termination. Moreover, he was deposed before Avatar Holdings was even in the case.
Mr. Sladkus, as you have just seen, left the company in 1991 and was deposed over the summer of 1995. Mr. Getman who was the third individual was deposed both for Florida Cities and Avatar Holdings, but is an attorney, and many of the specific questions would have been objected to on the grounds of the attorney/client privilege.
What we have here is an effort to embellish on inferences that he would have the Court draw from the

Page 156

documents. We have here a post trial brief that is rephrased as an offer of proof and we think this document is wholly illegitimate under the circumstances. We also don't think that any adverse inference should be drawn against Avatar Holdings because as you heard, we had the chairman of the board testify. He's been able to depose the president, the vice president of financial operations, he would have been able to depose the secretary, Ms. Kerrigan, if he called her in time. We have substantial officers of Avatar Holdings to testify.

Thank you, Your Honor.

MR. JACOBS: Your Honor, on the point of depositions, I forgive Mr. Hird. I believe he was only present at one of these six. I forgive him for saying that I didn't ask substantive questions because I did. And in fact, there were stipulations made that these witnesses would refuse to answer any substantive questions and the pattern that I followed was I went through each facility and I asked questions about each facility, I handed over literally dozens if not in some cases over a hundred documents and asked them if they recognized them and I went through a series of questions, a litany, if you will, and to each question the witness asserted his Fifth Amendment Rights. In fact, in each instance, you'll recall yesterday we saw a sample of a cue card, if you will, that said I respectfully decline to answer. In fact, each of these witnesses would state their name and their address and I think

Page 157

that was about it. When I got to how are you employed, that is when they started asserting the Fifth Amendment Right.

And then I went through my litany relating to each facility. I proffered the documents that I would have asked them about. Those documents are attached to the depositions. The depositions have already been filed with the exhibits.

So I think I've got my record here that I would have had the opportunity to elicit substantial testimony from these witnesses. And all I'm doing now in my case in chief is making an offer of proof of what I could prove at this point in my case in chief if these witnesses took the stand and testified. And in a civil matter, I believe I'm entitled to make that offer.

THE COURT: Now, you've cited Jacksonville Electric versus Bermooth. Where is the body of law that deals with the inferences that may be drawn in a civil case from the Defendant – a witness invoking the Fifth Amendment privilege?

MR. JACOBS: A moment, Your Honor, I think I have it.

In the United States trial memorandum, page 16. First of all, footnote seventeen, we set out again the –

THE COURT: Just a moment.

MR. JACOBS: Sorry.

THE COURT: What page?

MR. JACOBS: Page 16 of the Government's trial memorandum. We set out in footnote seventeen the record of the

Page 158

deposition testimony.

THE COURT: Right.

MR. JACOBS: Those individuals who pled the Fifth Amendment.

THE COURT: Right.

MR. JACOBS: And then at the bottom of the same page, we suggest the adverse inference.

THE COURT: Right.

MR. JACOBS: And the body of law following.

THE COURT: Okay.

MR. JACOBS: Your Honor, this is not an attempt at surprise. To the contrary, we're right to argue this later on, perhaps in post trial briefs. It might be said the Defendants had not had an opportunity to respond. By offering this at this point in time, I think the Defendants are in fact advantaged by being able to rebut to the extent that they're capable of my offer in the context of their cases.

And in particular, this document, as I said, relates mostly to the inferences to be drawn from the failure of the Avatar witnesses to testify, and based on Mr. Hird's request that the Avatar Holdings part of the case follow the Florida Cities part of the case which is expected, based on what we heard just after the recess to be much more lengthy, seventeen or nineteen witnesses as opposed to two, I think that will give Avatar Holdings sufficient time to address these adverse

Page 159

inferences that we've suggested. There is no surprise intended and there is no unfairness intended.

THE COURT: Okay.

MR. SCROGGIN: May Florida Cities be heard?

THE COURT: Sir?

MR. SCROGGIN: May Florida Cities address the issues raised by –

THE COURT: I thought you had? Who is doing that; both of you now?

MR. BULLOCK: Your Honor, the only difference would be is in case the Court had any question about the actual deposition, Mr. Scroggin was at the deposition, also has copies of –

THE COURT: All right.

MR. SCROGGIN: Thank you, Your Honor. I was present I believe at each one of the depositions at which the Fifth Amendment was asserted. I can state personally that the procedures for these was essentially in an assembly line process wherein on some occasions hundreds of documents were introduced without being identified other than by number. No questions were propounded regarding each of the exhibits that were produced, and indeed, several of these Fifth Amendment depositions took an hour, sometimes less, at two or three times were scheduled for a single morning. In one instance, counsel for the United States asked that we simply accept a boxful of

Page 160

documents without seeing what was in the box as though those would appear later as exhibits for the deposition.

We insisted they be taken out of the box and at least numbered, but they were neither reviewed, identified or discussed. And in most instances, specific questions other than the broadest of questions regarding the names of facilities were propounded, sometimes a dozen questions and the deposition was over.

Florida Cities' position would be that the inferences were not set up in a manner because the questions were not propounded in a manner that would allow any inference to be draw.

MR. HIRD: Your Honor, may I speak for Avatar?

THE COURT: Wait a minute, wait a minute.

MR. SCROGGIN: And finally, Your Honor, I would point out both the president, Mr. Gerald Allen and vice president, Mr. Paul Bradtmiller of Florida Cities have indeed agreed to testify and have waived their Fifth Amendment Rights.

MR. JACOBS: Your Honor, may I be heard on the matter of depositions?

THE COURT: Yes.

MR. JACOBS: Your Honor, these exhibits were actually pre-marked at the request of Florida Cities to expedite the process. They wanted their witnesses not to be humiliated, they wanted to be able to come in quickly, assert their rights

Page 161

and leave. We accommodated their request in that respect. In each deposition, I suggest that you will see that I've asked questions about each facility, substantive questions about each facility. When I handed the documents over, they were identified by exhibit number and the first question was, do you recognize any of the documents and the response was, I refuse to respond on the grounds of the Fifth Amendment, what you saw on that cue card yesterday, and at that point, I entertained a stipulation by Florida Cities' counsel that the witness would take the Fifth Amendment in response to any substantive question.

And at that point, I think I've set my record clear. There is nothing more to be done. I don't think I need to spend two days with each witness on each exhibit. I think the record shows clearly that the witness refused to testify beyond, as I say, his name and address.

THE COURT: All right, Mr. Hird.

MR. HIRD: Your Honor, looking quickly at this offer of proof which is, as we said, we've just seen, Mr. Jacobs wishes to draw adverse witness inference from five individuals, the first is Peter Sharp. Peter Sharp is dead. I don't think there is any adverse inference that can be drawn from a man being unable to testify because he's dead. The second is John Sladkus as the Court has heard, recently –

THE COURT: Well now, just a minute. What's the name

Page 162

of the first?

MR. HIRD: Peter Sharp.

THE COURT: Sharp. He could have been called as an adverse witness?

MR. JACOBS: Except he's deceased.

THE COURT: I understand that.

MR. JACOBS: He's unavailable.

MR. HIRD: He died in 1992. So there's no –

THE COURT: Now, the Government sought to take his deposition?

MR. HIRD: no, Your Honor, no.

MR. JACOBS: He was already deceased.

THE COURT: He was already deceased.

MR. JACOBS: Which I think makes him unavailable.

MR. HIRD: I don't think leads to an adverse witness inference.

MR. JACOBS: Perhaps not an adverse inference, certainly an inference from the paper trail, again the documentation.

THE COURT: Go ahead.

MR. HIRD: Okay.

I'm going to skip to Mr. Wilkov and go back to Sladkus. Mr. Wilkov was deposed at a time when he was no longer employed by Avatar Holdings. He had filed a lawsuit against Avatar Holdings and he was deposed before Avatar

Page 163

Holdings was a party in this case.

THE COURT: His name is what?

MR. HIRD: Lawrence Wilkov.

THE COURT: All right.

MR. HIRD: W-I-L-K-O-V. Fifth Circuit recognized the problem in the case of FDIC versus Fidelity and Deposit Company of Maryland, 45 F 3rd, 969, it's a 1995 decision, indicating that a problem in drawing inferences where you have a disgruntled ex-employee who may invoke the privilege to hurt his former employer. Here, we have a situation where an employee who obviously left under bad circumstances that caused him to sue his employer. The deposition itself was not taken a at time Avatar Holdings is in the case. It's inappropriate to draw an inference from that.

Mr. Sladkus, John Sladkus was deposed in the summer of 1995. Mr. Sladkus resigned from his connection with Avatar Holdings in 1991. He is therefore a former employee, although he – I would not characterize him as a disgruntled former employee. I think this period of separation is so long that it's inappropriate to draw the inference with respect Mr. Sladkus.

There are two more individuals, one is Robert Gordon. You've heard the testimony today that Robert Gordon has never been an employee, officer or director of Avatar Holdings. He is president of Avatar Utilities. But he has no employment

Page 164

relationship with Avatar Holdings, therefore it is wholly inappropriate to draw the inference.

The last individual is Dennis Getman who holds the position of being general counsel to both Avatar Holdings and Florida Cities and was originally called, I believe, his deposition was noticed I believe at the time when Florida Cities was the only Defendant in the case. Had there been full questioning of Mr. Getman, there may have been numerous legitimate invocations of the attorney/client privilege since Mr. Getman's role is as general counsel, the two entities.

In this situation, Your Honor, Avatar Holdings' chairman of the board has just been – has just testified. The president, Edward Jacobson was deposed and will testify. Charles McNairy, the vice president for financial matters, was deposed and will testify. Juanita Kerrigan, the secretary of the corporation signed interrogatory responses, was originally on our witness list, been dropped, we don't believe she's necessary, but she would have been able to testify.

To draw these inferences we think is illegitimate and I would point out that the reason why these witnesses invoked the Fifth Amendment had to do with the scope of the Weisenoff case which it has been brought to your attention earlier which indicated that very broad criminal liability rule in connection with the criminal enforcement of the Clean Water Act. Prior to that case, there was a general perception that a knowing

Page 165

violation of the Clean Water Act required you to know that what you were doing was a violation of the Act itself. That case said no, in order to be criminally liable, all the Government has to prove is that you know what you did.

And certain individuals in the wake of that case made their personal decision to take the Fifth Amendment, including Mr. Sladkus and Mr. Wilkov, at that point and with no assertion of Avatar Holdings, and therefore, had ever reason to put personal considerations ahead of company considerations, so under the circumstances, we think it's highly I believe appropriate to draw these inferences.

If the Government believes that there is such a clear document trail, he has those documents in evidence, he can ask this Court to draw what inferences he wants, but to make up this inference just out of documents I think is illegitimate under the facts of this case where so many Avatar Holdings' employees have testified and the few – and the two or three that haven't were not employees at the time they were deposed, one employee is dead and the last one is a special case and general counsel and could have invoked the attorney/client privilege.

MR. JACOBS: May I, Your Honor, briefly?

THE COURT: Yes.

MR. JACOBS: With respect to Mr. Getman who is executive vice president according to Mr. Levy's own testimony

Page 166

this morning, the other point of Mr. Levy's testimony was Mr. Getman has been with Avatar Holdings back almost as far as Mr. Levy has been. Likewise, Mr. Gordon preceded Mr. Levy in terms of his affiliation with Avatar Utilities or whatever it was known before it became Avatar.

And finally, Mr. Sladkus, as you heard Mr. Levy, was one of three individuals in addition to Mr. Levy and Mr. Sharp that had the authority to expend funds over one hundred thousand dollars. It is true that Mr. Jacobson, the present president of Avatar Holdings, has testified. It is also true based on Mr. Levy's testimony that Mr. Jacobson did not become affiliated with the company until 1992.

Essentially, the people who are being offered by Avatar Holdings as willing witnesses here are the people who either came in after the fact or, as Mr. Levy is maintaining, has no recollection or knowledge of the violation.

We would be able to establish through this offer of proof and the documents that it references that the three individuals, Mr. Getman, Mr. Gordon and Mr. Sladkus were highly knowledgeable of the violation, highly involved on behalf of Avatar Holdings in decision-making directly relating to these violations.

THE COURT: All right.

Yes, sir.

MR. BULLOCK: Would Your Honor consider a request to

Page 167

take this under advisement till we can at least provide some kind of legal memorandum on the validity of this?

THE COURT: Did you address this in your trial memorandum?

MR. BULLOCK: No, Your Honor. We addressed the overall Fifth Amendment issue in the Summary Judgment. We have not addressed the propriety of the offer of proof in this context nor has either side actually submitted the actual testimony, copies of the depositions.

MR. JACOBS: We filed them, Your Honor.

THE COURT: All right.

Well, I don't think it would be appropriate for the Court to draw any inferences from the deposition of Lawrence Wilkov who is no longer with Avatar and indeed demonstrated some – certainly had no – well, demonstrated hostility by the fact he himself filed suit against Avatar.

As far as Sharp is concerned, I don't know, I don't understand how the Government is entitled, if I understand correctly, he was never deposed, he died before he was ever deposed. I don't know how you can assert the same rationale for drawing inferences against Avatar by reason of his unavailability at trial. Talk to me a little bit about that.

MR. JACOBS: Well, by all means, I don't think we have the same right under the line of cases that I cited to in my trial memorandum because he did not assert the Fifth

Page 168

Amendment. He is unavailable by definition. And therefore, we can suggest inferences from the documents that he's left behind. But I don't think we –

THE COURT: Yeah, yeah, that's argument. I mean, that's – you'd be able to do that or at least argue it.

MR. JACOBS: The reason for the introduction to Mr. Sharp actually at the beginning of the document is just to put in prospective some of the other exhibits that are cited in the offer of proof because so many of them went from Sharp to Sladkus, as you have seen this morning, through Wilkov or Sharp to Wilkov and Sladkus, and/or to Levy or Gordon to Sharp. And if it was just that particular portion of the document, I'd be happy to have the Court accept the document with excising the section on Peter Sharp. That again is on the bottom of page 2 and ends on the top of page 4, because I think I've elicited that information through Mr. Levy, so I'd be happy to have that stricken from the document if the concern is that he does not fall into the same category as the witnesses who plead the Fifth Amendment which I would concede in terms of adverse inferences.

THE COURT: Well, okay, I'm going to permit counsel for the Defendants to brief this issue and I'll take this under advisement, and I need to know, the Government is offering the depositions of which of these persons again; they're listed on page 34?

Page 169

MR. JACOBS: Yes, sir. James Elder, Dennis Getman, Robert Gordon, Anton A. Reeves, III, John K. Sladkus and Lawrence Wilkov.

THE COURT: I've already ruled on Lawrence Wilkov. I'm not going to -- I'm not going to allow that deposition, sir.

MR. HIRD: That was the clarification that I was standing to ask you about because I thought you had. I wasn't certain.

THE COURT: Now, now you were going to offer into evidence documents?

MR. JACOBS: Yes, Your Honor. Government's 16.

THE COURT: Well, how many of these are we talking about?

MR. JACOBS: It's a very short list.

THE COURT: You said very briefly yesterday afternoon, too, so you better -- they will be. How many are there?

MR. JACOBS: Yes, Judge.

(Brief Pause.)

Thirty-three, Your Honor.

THE COURT: Thirty-three?

MR. JACOBS: And I can't tell you how many --

THE COURT: Brief is relative -- short is relative, isn't it?

Page 170

MR. JACOBS: I'm not sure there will be objections to that many, although I can't speak to that.

Is 16 in already?

THE CLERK: Yes.

THE COURT: See, there are only thirty-two now.

MR. JACOBS: Briefer than I thought.

Is 26 and 30, are they in also? I think they might be?

THE CLERK: 26 and 30, yes.

MR. JACOBS: And 34 is as well, is it not?

THE CLERK: Yes.

MR. JACOBS: I'm sorry, I didn't do my homework. 38 is as well?

THE CLERK: No.

MR. JACOBS: Move 38 in.

MR. HIRD: Your Honor, once again, 38 is subject to, I guess, code one and code two objections.

THE COURT: All right.

Overruled, it will be received.

MR. JACOBS: 51 I believe is already in.

THE CLERK: No.

MR. JACOBS: Forgive me. Then I'll move 51.

MR. HIRD: We have no objection to 51.

THE COURT: Be received.

MR. JACOBS: 52.

Page 171

MR. HIRD: I believe 52 is in.

THE CLERK: No.

MR. HIRD: This also is a code one and code two objection, Your Honor.

THE COURT: All right.

It'll be received.

MR. JACOBS: 58.

MR. HIRD: This is Avatar Holdings, we have no objection.

THE COURT: Be received.

MR. JACOBS: 65.

MR. HIRD: We have no objection.

THE COURT: Be received.

MR. JACOBS: 81.

MR. HIRD: This has a code one and code two objection, Your Honor.

THE COURT: All right. It will be received.

MR. JACOBS: 82.

MR. HIRD: Code one and code two objection, Your Honor.

THE COURT: It'll be received.

MR. JACOBS: 83.

MR. HIRD: Code one and code two objection, Your Honor.

THE COURT: Will be received.

Page 172

MR. JACOBS: I believe 99 is in.
THE CLERK: Yes.
MR. JACOBS: I believe 156 is in.
THE CLERK: Yes.
MR. JACOBS: Is 156 in?
THE CLERK: Yes.
THE COURT: All right.
MR. JACOBS: 196.
MR. HIRD: We have no objection.
THE COURT: Be received.
MR. JACOBS: 201.
THE COURT: I thought that was in.
THE CLERK: No, it's not.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 203.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 273, these are minutes.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 383.
MR. HIRD: Your Honor, this is a code two objection.
THE COURT: All right. Overruled, it will be received.

Page 173

MR. JACOBS: 386.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 403.
MR. HIRD: This is a code two objection, Your Honor.
THE COURT: Overruled, be received.
MR. JACOBS: 462.
MR. HIRD: We have no objection to that one.
THE COURT: Received.
MR. JACOBS: 496.
MR. HIRD: We have no objection to that one.
THE COURT: Be received.
MR. JACOBS: 497.
MR. HIRD: No objection to that one.
THE COURT: Received.
MR. JACOBS: 513.
MR. HIRD: Your Honor, this is Mr. Sladkus' statement invoking the Fifth Amendment. I believe that is what you just took under advisement.
MR. JACOBS: I believe that is the cue sheet.
THE COURT: Cue sheet, oh yeah.
MR. JACOBS: If the Court wants to consider that with the offer of proof.
THE COURT: Yeah, that's going to be within the parameter of what I'm inviting counsel to brief. Okay, so I'll take that under advisement.

Page 174

MR. JACOBS: Likewise, 515, it's another cue sheet.
MR. HIRD: I believe that's on Wilkov. I think you already ruled on Mr. Wilkov.
THE COURT: Yes, I have. That is Wilkov's?
MR. HIRD: Yes.
THE COURT: Okay, well -- is that Wilkov?
MR. QUINN: 515 is Lawrence Wilkov.
THE COURT: Yes, I'll sustain it.
MR. JACOBS: 515, it's a cue sheet for Mr. Elder.
MR. BULLOCK: Your Honor, wouldn't that also be the scope of the -- wouldn't that also be within the scope of what you are holding in abeyance?
THE COURT: Yes.
MR. BULLOCK: Thank you.
THE COURT: Reserve on that.
MR. JACOBS: 522, these are minutes.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 521, also minutes, I believe.
MR. HIRD: No objection.
THE COURT: Be, received.
MR. JACOBS: 546, this is an annual report, 1990, of Avatar Holdings.
MR. HIRD: No objection.

Page 175

THE COURT: Be received.
MR. JACOBS: 560.
MR. HIRD: No objection.
THE COURT: Be received.
MR. JACOBS: 568.
MR. HIRD: No objection.
THE COURT: Received.
MR. JACOBS: 579.
MR. HIRD: No objection.
THE COURT: Received.
Isn't that thirty-three?
MR. JACOBS: I'm sorry, sir?
THE COURT: Haven't we gotten past thirty-three ir the exhibits?
MR. JACOBS: I'm on my last one.
THE COURT: Good.
MR. JACOBS: I'll count them and let you know if I was wrong again.
THE COURT: No. You got one more?
MR. JACOBS: 593 should be the last one, sir.
MR. HIRD: I'm sorry, 593?
THE COURT: 593.
MR. JACOBS: Yes.
MR. HIRD: We have no objection.
THE COURT: Be received.

Page 176

Okay.
I need to give counsel a time within which you'll be expected to address these issues here. I guess it comes -- it'll probably come as no surprise to you I'm probably not going to announce my ruling at the end of this case. I don't anticipate doing that. Frankly, the only reason why I would suggest that the Court has to have your response right away would be for the Court to rule on a motion made at the close of the Plaintiff's case which may be coming shortly, but when can you have your responses ready?
MR. HIRD: May we confer, Your Honor?
THE COURT: Yes, sir.
(Brief pause.)
MR. BULLOCK: Your Honor, would the Court consider Wednesday?
THE COURT: You want to be heard?
MR. JACOBS: Will we have the opportunity after Wednesday to respond? I don't mind if the Court wants to take the matter under submission. You don't expect to rule before the end of the case as I understand what the Court just said.
THE COURT: Yeah.
MR. JACOBS: We can do it in the context of --
THE COURT: Really, what we're talking about here --
MR. JACOBS: Do you want to do this in the context of post trial briefs? I have no problem with that, Your Honor.

Page 177

THE COURT: Well, that might be the best way to handle it.
MR. HIRD: Your Honor, Avatar Holdings was contemplating a Rule 52-C motion at the time that the Government finishes its case and if it's inconvenient for the Court, obviously we'll deal with it, but it had been our hope to put that motion forward in that way, hopefully.
Avatar Holdings had been planning a Rule 52-C motion when the Government finishes its case. We don't believe the Government has proven liability against Avatar Holdings. Obviously this is an issue that needs to be resolved before, that if the Court is more comfortable with doing it in the scope of post trial briefs, we obviously exceed to the Court, however, we don't intend to pursue a motion that the Court does not feel it's prepared to deal with, but if there's any matter which we can schedule so our 52-C motion can be considered and perhaps avoids us to unnecessarily produce witnesses, we would appreciate it.
MR. JACOBS: I'm not sure what he just proposed. If this is helpful, we probably have in evidence roughly five hundred documents already, many of which we would argue will establish Avatar Holdings' liability. If that relates to his upcoming motion, we just haven't had a chance to argue it. We argue some of these obviously in the offer of proof and again, in fairness, we really did intend the other side to rebut this

Page 178

in their case through evidence that they can present. They're sort of in control of the cards here because they have been able to pick which witnesses testify and which don't. It's a luxury we haven't had in terms of calling their witnesses.
THE COURT: Well, let me consider that and let you know by the end of the day how I think we ought to best handle this issue. When we first started talking about this and when I heard Mr. Jacobs talking about the number of exhibits, the exhibits are coming in and there is no uncertainty with respect to the exhibits themselves, I'm not talking about the cue cards here, and so, there is no uncertainty anymore regarding those exhibits. The only issue is as to which if any of these witnesses who have pled the Fifth Amendment is the Court going to permit the Government to rely upon adverse -- that is adverse to the Defendant's inferences.
MR. HIRD: And also what inferences can be drawn, Your Honor.
THE COURT: And what inferences can be drawn.
MR. JACOBS: Your Honor, again, there was no unfairness intended and if they want to rebut the offer during their cases or even in their post trial brief, I have no problem with that. In a sense, I've shown my hand as opposed to waiting till that point in time.
THE COURT: All right.
Well, Mr. Hird, frankly what the Court may wind up

Page 179

doing and likely will be doing is reserving ruling on your motion that you'll be making at the close of the Government's case and so I don't think that you're going to be prejudiced by the Court's providing for post trial motions or memoranda addressing this particular issue, but I'll hear you on your motion at the close of the Plaintiff's case and I haven't set that in concrete as yet.
MR. HIRD: Yes, Your Honor.
MR. BULLOCK: Your Honor, just one other point, two other points, just briefly. As you know, we have not had a chance to read this document. It's unclear from this document, at least a cursory review, as to how many of these documents are offered as proof inferences against which specific proposed witnesses or these individuals that the Plaintiff is trying to claim the Court should draw an adverse inference from. And I don't know if that's something you want to -- if you wanted to look at the documents this afternoon and see if that addressed any of the issues or not. And the other question is whether or not this is a brief of some sort and we could be excused from the Court's page limit as well since this is thirty-five pages as I assume it's either ten or fifteen pages over the Court's page limit for a brief.
MR. JACOBS: Your Honor, we stopped at thirty-five based on the precedent that you set earlier in this case when we submitted something in excess of thirty-five and you

Page 180

departed back to thirty-five and that is why we stopped at thirty-five here. There was, as I said before, fifteen years history to cover.

THE COURT: Well now, let me – let me make sure I understand. The Court is being asked to draw certain inferences from the invocation of the Fifth Amendment by these various witnesses. And are the – is the Government – well, let me see.

MR. BULLOCK: Your Honor, I may be able to point you to –

THE COURT: Yes.

MR. BULLOCK: You look, for example, at page 34, there is a footnote which lists the whole slew of documents that the Government's claiming. These are other trial exhibits which support further the inferences suggested, but it's not identified which documents against which individuals to draw what inferences against which companies.

MR. JACOBS: Judge, this document relates almost exclusively to the liability of Avatar Holdings. I'm not sure we – only peripherally do we have adverse inferences with respect to Florida Cities for what that is worth.

THE COURT: Is that clear from your written submission?

MR. JACOBS: I think it should be, Your Honor. I perhaps can enlighten upon that.

Page 181

THE COURT: All right, I tell you what, Counsel, you'll have a greater opportunity to absorb this document. We have spent a considerable amount of time on this this afternoon, and I think that you know I don't have to necessarily put it in concrete this afternoon as to how we're going to deal with this. I think after you have had an opportunity to assimilate this, we can perhaps address procedurally how we best ought to approach this.

This is a fairly unusual situation here and frankly, I'm groping a little bit at this point and I don't doubt that in a civil case that certain inferences may be drawn by reason of a witness who is associated with a party in the case invoking the Fifth Amendment. But, just how far that can go, and I don't know at this point, so, I'll let you know when – I'll not require a response sooner than Wednesday, and may extend that further. So, perhaps we'll discuss it further in the morning. Okay.

Call your next witness.

MR. QUINN: Yes, Your Honor. The United States calls Ms. Eileen Zimmer.

Thereupon,

EILEEN ZIMMER,

having first been duly sworn to tell the truth, the whole truth, and nothing but the truth, was examined and testified as follows:

Page 182

THE CLERK: Take a seat in the witness stand. State your name and spell your last name for the record, please.

THE WITNESS: My name is Eileen Zimmer, Z-I-M-M-E-R.

DIRECT EXAMINATION

BY MR. QUINN:

Q. Thank you. Good afternoon, Ms. Zimmer.

A. Good afternoon.

MR. QUINN: Your Honor, we would like to make an offer of proof in light of the Court's ruling, it will not be long.

Were Ms. Zimmer allowed to testify as to the wrongful profits analysis, she would testify to those areas as set forth in parts one and three of United States Exhibit for identification 598.

BY MR. QUINN:

Q. Ms. Zimmer, where do you work?

A. I work for the Antitrust Division of the Department of Justice?

Q. What is your title at the United States Department of Justice, Antitrust Division?

A. I'm a senior financial analyst with the Corporate Finance Department.

Q. As senior financial analyst with the Corporate Finance Department, which unit did you work for?

A. Corporate Finance Unit.

Page 183

Q. As senior financial analyst with that unit, did you analyze wrongful profits and ability to pay in this case?

A. Yes, I did.

Q. Have you prepared an expert report in this action?

A. Yes, I have.

Q. And I'd like the witness to be shown Exhibit 598, please.

My question is going to be is that your report when you get to it.

A. Yes, it looks like it is.

Q. Have you formed an opinion as to the ability of Florida Cities Water Company to pay a civil penalty in this case?

A. Yes, I have.

Q. Have you formed an opinion as to the economic impact of payment of a civil penalty on Florida Cities Water Company?

A. Yes, I have.

Q. Have you formed an opinion as to the ability of Avatar Holdings, Incorporated to pay a civil penalty in this case?

A. Yes, I have.

Q. And have you formed an opinion as to the economic impact of payment of a civil penalty on Avatar Holdings, Incorporated?

A. Yes, I have.

Q. Can I ask you some questions about your background as a financial analyst, Ms. Zimmer?

Where did you earn your undergraduate degree?

A. I earned it at Penn State University.

Page 184

Q. Which year?
A. 1976.
Q. Do you also have a Masters degree in business administration?
A. Yes, I do.
Q. And where did you get that?
A. From the George Washington University.
Q. And when did you get that?
A. In 1978.
Q. Have you taken any other graduate courses?
A. No, I haven't.
Q. And are you a certified financial analyst?
A. I'm a chartered financial analyst.
Q. Excuse me. Can you tell me what the requirements are to become a chartered financial analyst?
A. The chartered financial analyst program or CFA program is a program, is a three year course of study that covers a range of business disciplines including accounting, economic quantitative analysis, fixed incomes securities, equities, security analysis, and there's an ethics portion, and in addition, there is a three year experience requirement.
Q. Is this a self-study program, Ms. Zimmer?
A. It can be a self-study program. There's also courses, there is a national professional agency that runs the CFA program and each regional area such as for instance Washington,

Page 185

DC, has a regional chapter and they run review courses.
Q. Did you complete the required course work, Ms. Zimmer?
A. Yes, I did.
Q. When did you do that?
A. 1991?
Q. Did you complete the experience requirements?
A. Yes, I did.
Q. About how many chartered financial analysts are there in the United States?
A. I'm not sure of the exact number, but it's somewhere in the range of about thirty-five thousand.
Q. Can you tell he how does a chartered financial analyst differ from a certified public accountant?
A. A certified public accountant or a CPA is a professional accreditation in the acting field. The CFA program is a professional accreditation in, as I said, it covers a broader range of business disciplines.
Q. Have you taught any seminars in the field of financial analysis?
A. Within the Department of Justice, I have taught a few seminars for the various divisions within the Department and the AUSA's.
Q. And what areas were those seminars?
A. It was in understanding financial statements, bankruptcy and evaluating a company's ability to pay.

Page 186

Q. Ms. Zimmer, could you please briefly describe your employment history?
A. Yes. After I graduated, from Penn State, I worked as a statistician at the Census Bureau, U. S. Bureau of the Census, and then I went and obtained my MBA from the George Washington University. After I graduated, I worked for about a year for Washington Gas Light Company which is a public utility in the DC area. And after that, I worked for the Federal Energy Regulatory Commission for about five years. And after that, I started my job with the Department of Justice. I've been at Justice for twelve years.
Q. And has all that time been in the Antitrust Division?
A. Yes.
Q. Thank you. Can you please briefly describe your experience in determining a company's ability to pay a civil penalty in separate cases?
A. Well, I have twelve years of experience at Justice in doing that type of analysis, over twelve years.
Q. About how many cases or companies have you analyzed to determine their ability to pay a civil penalty?
A. I don't have an exact count, but it's hundreds of cases.
Q. And other than corporations, have you also analyzed other entities' ability to pay civil penalties?
A. Yes.
Q. That would still be within the same hundreds of cases?

Page 187

A. Right.
Q. Thank you. Can you please tell me a little bit about the work that you did in the U. S. versus Heater Boil Company and Sonny Wayne Mash? What was the work for?
A. That was in an ability to pay, that was for a sentencing hearing.
Q. And when was that?
A. I'm not -- I think it was in 1993, but I'm not sure. It's listed on my CV. It was antitrust price fixing sentencing hearing.
Q. About how many cases have you analyzed ability to pay in antitrust cases?
A. I really don't know. The number I gave previously included ability to pay cases in all of the divisions.
Q. And which of those divisions, please.
A. The Antitrust Division, the Civil Division and what is now known as the Environment and Natural Resources Division.
Q. Do you sometimes do analysis when the United States is a Defendant in a case?
A. Yes. Do you mean for ability to pay?
Q. Yes?
A. No.
Q. Do you sometimes testify when the United States is a Defendant, though?
THE COURT: You mean for the United States?

Page 188

BY MR. QUINN:
Q. For the United States. Withdrawn.
Do you ever do work in cases in which the United States is a Defendant?
A. Yes, I do.
Q. Thank you. And have you ever determined a company's economic benefit from non-compliance with a law or regulation?
A. Yes, I have.
Q. About how many times over the course of your twelve years?
A. The cases that I've worked on determining economic benefit were environmental cases and I have testified at my deposition that I had three cases that I worked on, three cases with regards to that.
Q. Have you ever analyzed wrongful profits which inured as a result of a violation of law or regulation?
MR. HIRD: Your Honor, I do believe we're getting to the point where it has been ruled on on our motion in limine.
THE COURT: Appears so.
MR. QUINN: I withdraw the question.
Your Honor, at this time, I'd proffer Ms. Eileen Zimmer as an expert witness in the area of financial analysis.
THE COURT: Okay, proceed.
BY MR. QUINN:
Q. Ms. Zimmer, could you please tell me what economic

Page 189

benefit means?
A. Economic benefit --
MR. HIRD: Your Honor, what I'm concerned about, we've set forth in our brief what we understood the law to be in economic benefits. You accepted our view, Magistrate Swartz endorsed it. That's fine. if this is another argument as to why wrongful profits should be used, I would object.
MR. QUINN: Your Honor, this is not another argument about wrongful profits. I'm merely getting into some definitions about what economic benefit is.
THE COURT: All right.
MR. HIRD: Also, I would like to point out there is nothing in her expert witness report about economic benefit other than wrongful profits analysis and therefore if they're going to substitute some additional numbers about economic benefit, we would most intensely object.
MR. QUINN: Ms. Zimmer is not going to talk about any numbers, Your Honor.
THE COURT: All right.
BY MR. QUINN:
Q. My question was, can you tell me what does economic benefits mean in your opinion, Ms. Zimmer?
MR. HIRD: Objection, Your Honor, are we talking under the Clean Water Act or talking generally?
MR. QUINN: I withdraw the gentleman.

Page 190

BY MR. QUINN:
Q. Under the Clean Water Act, what does the term economic benefit mean to you?
MR. HIRD: Objection, calls for a legal conclusion.
THE COURT: I'll overrule the objection. I'm not sure where we are going with this right now, but go ahead and answer the question.
THE WITNESS: In my opinion, economic benefit is the gain derived by an entity as a result of not being in compliance with a law. I guess in your example, it's the Clean Water Act.
BY MR. QUINN:
Q. Have you ever heard of the United States EPA's Ben Model?
A. Yes, I have.
Q. What is it, please?
A. The Ben Model is a computer model or program that was designed to be – I'll use the term, "user friendly," simple, easy to use. It's a computer program which calculates the economic benefit from delayed costs of compliance.
THE COURT: Wait just a minute. I'm trying to recall now, but my recollection of reviewing her report in dealing with pre-trial motions was that her opinions regarding economic benefits is centered on wrongful profits.
MR. QUINN: That is correct, just wrongful profits.
THE COURT: All right, now. I believe that what is

Page 191

carved out or what is left legitimately for her to testify to has to do with Defendants' ability to pay.
MR. QUINN: Yes, Your Honor. I'm trying to lay a foundation for a subsequent witness as to the Ben Model.
MR. HIRD: Your Honor, I would object because I think what they're attempting to do is put in evidence of economic benefit through the Ben Model which is a more traditional method of doing it which they did not produce in their expert testimony, did not give us before trial. The only calculations of economic benefit that they gave us was wrongful profit. Apparently what they're trying to do is Mr. Pfaff is their only witness left and now to do an economic Ben Model calculation is something that's never been disclosed to us in this case.
THE COURT: Where has she included in her report reference on the Ben Model?
MR. QUINN: Does not have any anything in her report with regard to the Ben Model. However, she did discuss it upon inquiry during her deposition.
THE WITNESS: In my report.
MR. HIRD: In her deposition, we asked her, Mr. High particularly, about the Ben Model, pointed out she hadn't used the accepted method for calculating the economic benefit and at that point, she had only produced wrongful profits analysis and forgone what is the traditional technique.
THE COURT: She's not going to be permitted to

Page 192

testify concerning anything that is not in her report.
MR. QUINN: Thank Your, Honor. I'll move on.
BY MR. QUINN:
Q. Moving to the area of about to pay, Ms. Zimmer; Ms. Zimmer, did you analyze the financial condition of Florida Cities Water Company with respect to its ability to pay a civil penalty in this case?
A. Yes, I did.
Q. How did you analyze the financial condition of Florida Cities?
A. I reviewed the documents produced by the Defendants here, the which include the financial statements from 1981 for my reports. I had the financial statements from 1981 through 1993. In addition, I attended the deposition of Mr. Murphy, the CFO of Florida Cities. But that deposition was after my report.
Q. Did you -- you said you reviewed documents. I'd like to show you three exhibits, please, United States Exhibit 583, 584, 585. Could you please tell me whether you reviewed Exhibit 583 in preparation of your expert opinion?
A. Yes, I did.
MR. QUINN: Your Honor, I would --
THE WITNESS: Uh, can I clarify my answer?
BY MR. QUINN:
Q. Please?

Page 193

A. Are we talking about Florida Cities Water Company?
Q. I'm talking -- I'll withdraw the question.
In review, in preparing your expert opinion as to Florida Cities' and Avatar Holdings' ability to pay, did you review United States Exhibit 583 for identification?
A. Yes, I did.
MR. QUINN: Your Honor, I would move United States Exhibit 583 into evidence.
MR. HIRD: Your Honor, Exhibit 583 seems to be excerpts from Avatar Holdings' Exhibit 1 which is already in evidence and on that basis, we have no objection.
THE COURT: Be received.
BY MR. QUINN:
Q. Ms. Zimmer, did you review again portions of the Avatar Holdings Exhibit 584 for identification?
MR. HIRD: Mr. Quinn, I appear not to have a copy of Exhibit 584 in the notebook that you gave me.
MR. QUINN: I apologize.
MR. HIRD: Is that your annual report?
MR. QUINN: Portions of it.
MR. JACOBS: You want to see portions?
MR. HIRD: It might be easier to just use Exhibit 1.
MR. QUINN: I'm not going to refer to these documents at all, Your Honor. I wanted to identify them for the record and move them in evidence. Ms. Zimmer, if she needs to, will

Page 194

have them at her disposal.
MR. HIRD: You're representing that's another excerpt of Avatar Holdings' Exhibit 1?
MR. QUINN: My representation is that Exhibit 584 is a different excerpt of the same annual report, Your Honor.
THE COURT: Okay. Be received.
BY MR. QUINN:
Q. Thank you. Turn to page, hopefully there will be an exhibit there to United States Exhibit 585 for identification. Can did you review that exhibit, Ms. Zimmer?
A. Yes.
Q. Could you please tell me what it is?
A. It's the audited financial statements for Florida Cities Water Company for December 31st, 1993.
MR. QUINN: We're going to move the next book -- like you to take a look at Exhibits 591, 594, 595 and 596, and I'm going to ask you the same questions. With regard to United States Exhibit for identification 591, have you seen -- did you rely upon that exhibit?
A. Yes, I have.
Q. With regard to United States Exhibit 594 for identification, did you rely upon that exhibit, Ms. Zimmer?
A. 594?
Q. Yes.
A. For my report, are you talking about for my report?

Page 195

Q. For your ability to pay analysis only.
A. For my ability to pay analysis, yes, I did rely on 594.
MR. QUINN: Your Honor, I would move United States Exhibit 594 for identification into evidence, please.
MR. HIGH: no objection.
THE COURT: It'll be received.
BY MR. QUINN:
Q. Did you rely upon 595 for your financial analysis?
A. Yes, I did.
MR. QUINN: Your Honor, I would move United States Exhibit 595 into evidence at this time, please.
THE COURT: Be received.
BY MR. QUINN:
Q. Ms. Zimmer, would you please look at one last exhibit, Exhibit 596 for identification. Did you rely upon 596?
A. Yes.
Q. What is 596, please?
A. It's a SEC 10-Q quarterly report for the three month period ending September 30, 1995.
MR. QUINN: Your Honor, at this time, I'd like to move United States Exhibit 596 for identification into evidence.
THE COURT: It'll be received.
BY MR. QUINN:
Q. Ms. Zimmer, do you have an expert opinion as to Florida

Page 196

Cities Water Company's ability to pay a penalty in this case?
A. Yes, I do.
Q. What is your expert opinion on that?
A. My opinion is that Florida Cities Water Company has the ability to pay an amount up to seven and a half million dollars.
Q. And do you have an expert opinion as to the economic impact that payment of a civil penalty of up to seven and a half million dollars would have on Florida Cities Water Company?
A. Yes, I do.
Q. And what is that opinion, please?
A. My opinion is that a seven and a half million dollar amount would not have a material adverse affect on the company.
Q. Ms. Zimmer, you also stated earlier that you analyzed the financial condition of Avatar Holdings with respect to its ability to pay a civil penalty in this case, is that correct?
A. Yes, I did.
Q. Could you please tell me what you did do to go about analyzing the financial condition of Avatar Holdings?
A. Avatar is a public company, so I reviewed the filings that the company made with the SEC, and I also had a financial data base with printout information on public companies that is based on the SEC filing.
Q. What is the data base you had?

Page 197

A. The Standards and Poors Compustat Data Base.
Q. Ms. Zimmer, you did you attend any deposition of any chief financial officers?
A. Yes, I did.
Q. And?
A. The CFO of Avatar Holdings, Mr. McNairy.
Q. Ms. Zimmer, in your experience, do balance sheets of companies always accurately reflect the true value of a company?
A. A balance sheets reflect the accounting amount for the assets, the liabilities and the net worth of the company in terms of market value or the value, the total net worth or the total equity that's listed on a balance sheet. That number may or may not be reflective of a company's true market value.
Q. Ms. Zimmer, do you have an expert opinion as to Avatar Holdings ability to pay a civil penalty in this action?
A. Yes, I do.
Q. And what is that opinion, please?
A. My opinion is that Avatar can afford to pay a penalty up to fifteen million dollars.
Q. Ms. Zimmer, do you have an expert opinion as to the economic impact that payment of a penalty of up to fifteen million dollars would have on Avatar Holdings?
A. Yes, I do.
Q. And what is that opinion?

Page 198

A. My opinion is that a payment of fifteen million dollars would not have a material adverse affect to the company.
MR. QUINN: Thank you, Your Honor. I have no more questions.
THE COURT: Okay.
MR. HIGH: Your Honor, may name is Lance High, I represent the Defendant Florida Cities.
THE COURT: Yes, you may proceed.
CROSS EXAMINATION
BY MR. HIGH:
Q. Good afternoon, Ms. Zimmer.
A. Good afternoon.
Q. Ms. Zimmer, you testified that you've always worked for the U. S. Government from 1978, 1979; is that correct?
A. Yes.
Q. Have you ever given any expert testimony for any entity other than the U. S. Government?
A. No.
Q. Ms. Zimmer, what percentage of time do you spend performing ability to pay analyses for the privately owned, publicly regulated utilities in your position with the Department of Justice?
A. Very little.
Q. Would that be less than ten percent of your time?
A. Yes, sir, certainly.

Page 199

Q. Have you ever performed an ability to pay analysis for a company that is regulated by the Florida Public Service Commission?
A. No, I have not.
Q. Ms. Zimmer, would you turn to page 8 of your report, please?
A. Could you tell me what the exhibit number is?
Q. I believe it's Plaintiff's 597 -- 598.
THE COURT: What page?
MR. HIGH: Page 8, please, Your Honor.
THE WITNESS: 585?
BY MR. HIGH:
Q. 598, Ms. Zimmer.
A. Okay.
Q. Ms. Zimmer, you conclude on page 8 in the second paragraph that liquidity as represented by its current ratio and working capital is poor; is that for Florida Cities?
A. Yes, Florida Cities Water Company.
Q. And current ratio is the ratio of current assets to current liabilities, correct?
A. Yes, it is.
Q. And it's meant to be somewhat of a Litmus test for short term obligations, is that correct?
A. Typically, yes.
Q. And the results of that current ratio tell you that the

Page 200

working capital is poor, correct?
A. Yes.
Q. That means there's no free, access money just floating around in some bank account, correct?
A. That's one portion of liquidity.
Q. And then you go on to state, Ms. Zimmer, equity has been established since 1991, correct?
A. Yes, I do.
Q. And that long term debt has increased over that period of time, correct?
A. Yes.
Q. So for that period of time that you analyzed since 1991 through 1993, at least the equity to debt ratio, that has fallen, hasn't it?
A. I don't have those amounts specifically on this page. I think they're in a later exhibit.
Q. Well, in reaching that conclusion, Ms. Zimmer, didn't you analyze Florida Cities' financial statement?
A. Yes, I did.
Q. For the years 1989 through 1993?
A. Yes, I did. I'm just looking for the exhibit that has that balance sheet which is in Exhibit 4, just to check my answer before I give it. And the answer is that it has been declining somewhat, but it is basically stable.
Q. And the equity to debt ratio is another Litmus test,

Page 201

isn't it, about the financial situation?
A. It's another financial indicator.
Q. And over this period of time, it's been somewhat diluted, the equity has been stable and debt has increased, correct?
A. I'm not exactly sure what the question is. Could you repeat the question?
Q. The question is, Ms. Zimmer, over the period of time that you analyzed, the equity to debt ratio has been somewhat diluted, isn't that correct?
A. Well, actually when you're looking at the long term debt for the company, it went down in 1993,, in 1990 it was, just to use numbers, it's twenty-three and a half, I'm looking at the long term debt, long term debt as twenty-three and a half million, it went down in '91, it went up in '92, and went down again in '93. In terms of comparing a long term debt to total capitalization ratio, that ratio has actually improved somewhat in '93, but it's basically stable over the period.
Q. But you conclude, don't you, Ms. Zimmer, that equity has been stable, but long term debt has increased somewhat?
A. Over the years that I compared, it has increased, it went down in '93, it's changed in '94.
Q. Ms. Zimmer, would you turn to page 2, Plaintiff's Exhibit I believe it's 594, please?
A. Okay.
Q. And that indicates and would you -- I'm sorry, would you

Page 202

turn to page 2 of that exhibit, please. I believe it would be the third page of the document, page 2.
A. Okay.
Q. And that's the page titled capitalization liability, isn't that correct?
A. I have it.
Q. And you say, Ms. Zimmer, long term debt has decreased between 1993 and 1994, is that correct?
A. No, I didn't. This financial statement indicates that the long term debt in '94 has gone down.
Q. That's right. It's gone down. Would you look a little bit below that under current liabilities, Ms. Zimmer?
A. Okay.
Q. What has happened to notes payable between 1993 and 1994?
A. Notes payable went up in '94 as compared to '93.
Q. And by how much did it go up?
A. About one point six million dollars.
Q. And accounts payable, how much did that go up between 1993 and 1994?
A. Oh, about a million dollars.
Q. And how much did the amount due to parent company affiliates go up between 1993 and 1994?
A. That went up about one point six million.
Q. So even though long term debt has been decreased by about one point five million dollars, short term liabilities have

Page 203

gone up by about six million, isn't that correct?
A. Actually, the number's more like four point three. I'm looking at the total current liability number.
Q. But the fact of the matter is liabilities have gone up by about four point three million?
A. Yes.
Q. Liabilities are debts, are they not?
A. They're obligations of the company.
Q. And the company must pay those obligations?
A. Well, you see, it depends. Mr. Murphy in his deposition specifically addressed the two million dollars that Florida Cities Water Company obtained in a loan from an affiliate. I think it was Consolidated Water Company, and he stated during his deposition he does not expect that Florida Cities would have to pay that back.
Q. Did you interview anybody from Consolidated Water Company?
A. No, I didn't.
Q. Did you investigate any of the loan terms between Consolidated Water company and Florida Cities Water Company?
A. We deposed Mr. Murphy in terms of seeing the actual loan document. No, I have not seen the loan document if there is a loan document.
Q. So other than Mr. Murphy's testimony, you have no independent basis?

Page 204

A. No, but Mr. Murphy is the CFO of the company of Florida Cities.
Q. But you yourself have no independent basis for saying Florida Cities Water Company will not have to pay the two million dollars?
A. The significance is Mr. Murphy is CFO of Florida Cities Water Company and the statement in his deposition.
Q. But you have no independent basis other than that statement?
MR. QUINN: Objection, Your Honor, asked and answered.
THE WITNESS: Right.
THE COURT: Sustained.
BY MR. HIGH:
Q. Ms. Zimmer, let's go back to your report, page 8, please. The next paragraph where we --
A. I forgot the number of the exhibit.
Q. 597.
A. Okay.
Q. Plaintiff's 597?
A. I think it's 598.
Q. 598, I'm sorry.
A. What page, please?
Q. Page 8.
A. Okay.
Q. Ms. Zimmer, you go on to state in the next paragraph, the

Page 205

third paragraph down, that earnings have declined over the period analyzed for Florida Cities Water Company, is that correct?
A. Yes, in the period covered in my report, yes.
Q. And then you state that revenues are increasing, but at a lower rate than costs, correct?
A. Yes.
Q. So costs are outpacing revenues?
A. During the period that is contained in my report, yes.
Q. You state then, Ms. Zimmer, capital expenditures have decreased over the period, correct?
A. Yes.
Q. Do you know what the capital expenditures for Florida Cities Water Company will be in the next five years?
A. That is another area that we deposed Mr. Murphy on, and he explained that during 1995, 1994 and 1995, Florida Cities Water had implemented a large capital expansion, capital expenditure program, but that he expected capital expenditures from 1996 forward for the next few years to be at light levels was the term he used.
Q. Do you know how much or what light levels means or is that the only basis for your opinion?
A. During his deposition, we deposed him and asked him what the capital expenditures in the five year plan were budgeted for, and he addressed that they had gone through this major

Page 206

capital expenditure program and they did not expect that their cash needs nor capital expenditures would be very -- would be significant in the next few years.
Q. But you don't know what significant is, do you, Ms. Zimmer?
A. He could not remember the actual numbers in the budget, and he was in -- the company was in the process of developing the next set of projections.
Q. You haven't seen those projections, have you?
A. No, I haven't.
Q. Those projections are not a part of your opinion, is that correct?
A. Right.
Q. And so if those projections are higher than what Mr. Murphy recalled, then that would affect your conclusions in this ability to pay analysis, is that correct?
A. It would depend on what those typically -- typically that's done during an interview and I can ask Mr. Murphy what the capital expenditures are for and whether or not there's any possibility or the likelihood that any of the capital expenditures could be delayed for a few years.
Q. But the fact of the matter is you don't know what the capital expenditures and capital budgets are for the next five years?
A. No, I do not.

Page 207

Q. Ms. Zimmer, you go on to state that their eighteen thousand shares of preferred stock will be retired annually between 1997 and 2001?
A. I see that.
Q. Do you know what the liquidation of those shares is?
A. Could I refer to the footnote in the financial statements?
Q. Yes, ma'am.
A. The liquidation value is stated at a hundred dollars per share.
Q. One hundred dollars liquidation value, is that what you said?
A. One hundred dollars per share.
Q. And is that an annual obligation of one point eight million dollars per share between 1997 and 2001, is that correct?
A. That's stated in the footnotes to the financial statements.
Q. And that is an obligation that Florida Cities Water Company will have to pay, correct?
A. It's an obligation that the company has; depends on the terms of the preferred stock.
Q. And it says in the financial statement that 18 thousand shares per year will be liquidated at a hundred dollars per share?

A. That's a liquidation schedule disclosed in the financial statement.
Q. So their one point eight million dollars obligation enters into your analysis?
A. The preferred stock liquidation and preferred stock dividend did enter into my analysis, yes, sir.
Q. You assume, Ms. Zimmer, don't you, that the preferred stock dividends will not be paid during this period of time that Florida Cities might be paying a penalty, is that correct?
A. What I assumed is that preferred stock dividend payments could be deferred?
THE COURT: We need to change Reporters. We'll take just a couple minutes. We'll be at ease.
(Thereupon, a ten minute recess was taken.)

Page 209

CONTINUED CROSS-EXAMINATION

BY MR. HIGH:

Q. Ms. Zimmer, I believe when we left off you stated that the preferred dividends would not be made during this five-year period for Florida Cities would be paying 1 to 1.5 million a year; is that correct?

A. What I assumed is that the preferred dividend payments would not be made. When we deposed Mr. Murphy, who, again, is the CFO of Florida Cities Water Company, we asked him who owned those preferred shares, and he mentioned that Florida Cities' immediate parent, FCWC Holdings, Inc., held the preferred shares.

In the footnote to the Florida Cities financial statements, it explains that in 1991 a certain amount of common stock shares were converted to preferred shares.

Q. And, Ms. Zimmer, aren't you assuming that the preferred shares of Florida Cities Water Company Holdings are owned by an Avatar-related entity? Isn't that correct?

A. I'm not making that assumption. What I'm making the assumption -- the assumption I'm making is that the preferred stock of Florida Cities Water Company is owned by its immediate parent, FCWC Holdings, Inc., and that assumption is based on Mr. Murphy's deposition testimony.

Q. And have you investigated the preferred stock shares, the agreement, or the terms of the preferred stock? Strike that.

Page 210

Let me start over.

Have you investigated -- in your analysis of this ability to pay, have you investigated the terms of the preferred stock?

A. During Mr. Murphy's deposition, we asked him what the specific terms of the preferred stock were, and he could not remember. They are -- some of the terms are disclosed in a footnote to the financial statements, but other terms such as -- for instance, some types of preferred stock when dividends are not paid, they just accumulate.

Q. Have --

A. Those details Mr. Murphy did not know.

Q. Ms. Zimmer, have you independently investigated the terms of the preferred stock?

THE COURT: You mean other than what she just testified?

BY MR. HIGH:

Q. Other than what you just testified to, Ms. Zimmer.

A. No.

Q. Ms. Zimmer, what would happen if Florida Cities Water Company defaulted on its preferred stock obligations?

A. It depends on the terms of the preferred. If it's owned by its immediate parent, it's very unlikely that an immediate parent would exercise whatever the default provisions are. There may be no default provisions. Also, as I said

Page 211

previously, the unpaid dividends may just accrue.

Q. Ms. Zimmer, isn't it also equally as likely that the credit rating of Florida Cities Water Company would be affected by a default on its preferred stock?

A. It depends. It's possible. It may or may not be affected.

Q. Assume for me that Florida Cities Water Company cannot opt out of this obligation to pay preferred stock dividends. Wouldn't that affect Florida Cities Water Company's ability to go to the market and borrow money?

A. It may or -- it depends on how Florida Cities goes to the -- when you say "go to the market," you're not talking about a public debt issuance, I assume. I assume you're talking about going to a bank or some private placement or something like that.

Q. Yes, ma'am.

A. It depends on the term of the debt. If there's security offered, depending on whatever security is offered, it may -- what I'm saying is it may or may not affect it.

Q. Ms. Zimmer, do you know whether there are any assets free to be offered as security?

A. May I refer to the financial statement for a moment?

THE COURT: Yes.

THE WITNESS: The problem with answering that question is when you look on the financial statements, they do

Page 212

have first mortgage bonds which indicate that those are secured. But during our deposition with Mr. Murphy, he indicated that the company was in the process of refinancing and obtaining an additional long-term debt financing of $18 million. Some of that would be used to pay the 1995 capital expenditures, which I was previously discussing, and some of it would be used to pay back existing debt.

So at that time it had not yet been entered into, so that would certainly have an effect on the current security or unencumbered assets, depending upon whatever that -- whatever happened.

BY MR. HIGH:

Q. Ms. Zimmer, I believe the question was do you know whether there are any plant assets free to be offered as security.

A. At this time, no.

Could I also offer a clarification?

THE COURT: Yes.

THE WITNESS: We're talking about obtaining additional borrowing. One of the other areas that Mr. Murphy mentioned in his deposition was the existence of a line of credit that Avatar Utilities, Inc. had, and he mentioned that Florida Cities Water Company was able to borrow from Avatar Utilities on that line. He mentioned that they never had, but that they were able to.

Page 213

And the 1994 10-K for Avatar indicates that the -- and also the deposition of Mr. McNairy, who at that time at least was the CFO of Avatar Holdings, indicated that the $15 million unsecured line of credit that Avatar -- that is listed in Avatar Holdings' 1994 10-K was a 15 million line of credit that Avatar Utilities had. And in that 10-K they cite that the unused portion was 8.2 million.

MR. HIGH: One moment, please, Your Honor.

THE COURT: Yes.

BY MR. HIGH:

Q. Ms. Zimmer, do you know whether Avatar Utilities is a defendant in this case?

A. I don't know for sure. I don't think it is.

Q. And you don't know whether Avatar Utilities or Avatar Holdings would be able to loan 1 to $1.5 million per year to Florida Cities Water Company; isn't that correct?

A. What I was referring to, I actually made a reference to it in my report, the possibility that Florida Cities could borrow the full amount from Avatar, and then they would -- they wouldn't have to borrow 1 and a half, 1 million to 1 and a half per year. They could borrow the entire amount up front. So it wouldn't be an annual borrowing.

Q. And I'll leave the issue of whether Avatar Holdings would be willing to offer that to Mr. Hird.

Ms. Zimmer, you concluded that it's unlikely that

Page 214

Florida Cities Water Company would be able to borrow money from a bank to pay this penalty; isn't that correct?

A. Typically that's often the case with companies. And in this instance it's probably likely that they could not borrow.

Q. And that's because banks like to lend money to income-generating activities; isn't that correct?

A. Right.

Q. So really the only instance or the only availability of $7 and a half million would have to come from Avatar Holdings; isn't that correct?

A. Well, actually when we're talking about Florida Cities Water Company's ability to pay, looking at their ability to generate income and a cash flow and using the guidance that Mr. Murphy gave in his deposition with regard to the fact that he expected future earnings for the company for the next few years out into the future to be in the one-and-a-half- to two-million-dollar range, plus he expected capital expenditures to be light, what I took from that was if you make the assumption that capital expenditures equal depreciation, which for Florida Cities is about let's say -- is about $3 million, the excess of cash flow, just looking at cash flow being depreciation plus earnings, the earnings would be available to fund a payment to the government.

If there were any other cash needs that the company may have, they had other options available, such as borrowing

Page 215

on this Avatar -- against this Avatar -- going to Avatar Utilities to borrow against their working capital line.

Q. And you don't know what the capital expenditures are in the future; you don't know whether they will equal the depreciation expense, do you?

A. No. But I made that assumption, and it's -- typically or generally speaking, it's an often-made assumption in analysis like this.

Mr. Murphy himself said that capital expenditures would be light, and that's in comparison -- I took that to be as in comparison to historical levels. And historical levels -- you can look in my report -- range from somewhere like 2 million to 7 -- I think 7 million was the 1994 or 5 amount, which, as Mr. Murphy explained, was due to an unusual capital expenditure program at Florida Cities.

Q. And isn't it a fact, Ms. Zimmer, that capital expenditures for the period of time you analyzed have always been greater than net income?

A. I didn't look at that specifically.

Q. Well, doesn't that mean, Ms. Zimmer, that Florida Cities Water Company has not been funding capital expenditures merely from operating activities?

A. Right, that's what that would mean.

Q. That means they've been borrowing the money for capital expenditures; isn't that correct?

Page 216

A. No, not necessarily. Depreciation is -- when you're looking at net income, that's after depreciation. And depreciation is a non-cash expense, so you add that back.

Q. But you don't know, Ms. Zimmer, whether the capital expenditures have been greater or less than depreciation over this period of time; isn't that correct?

A. If you look at page 8 of my report, you can see the bottom line on the earnings indicator chart lists the capital expenditures over those years compared, and there's a -- the third line is the net income line.

Depreciation you can find in Exhibit 1 to my report. The fourth line down, for the period 1981 through 1993, you can see that it -- it's in the $2 million range for '93. It was 2 and a half million for '94. It was somewhere in the range of around $3 million.

I did have nine-month statements for '95, which are produced in late 1995, and that had nine-month figures for the year 1995 ending September 30th. And it indicated that depreciation levels were somewhat higher than that in '94, which I previously stated were listed on the financial statements at about 3 million. It also indicated that net earnings for the company for the first nine months of '95 were a little bit higher than net earnings for the first nine months of '94.

And when you look at the 1994 statements, you'll see

Page 217

that net earnings included an accounting charge for expenses related to this case. They took a $1.3 million charge for the litigation costs relating to this case.

In addition, and as Mr. Murphy testified in his deposition, there were expenses actually incurred in 1994 for litigation costs relating to this case. The reason I mention that is that those are non-recurring costs. And when you add those non-recurring costs back to the earnings of the company, since Mr. Murphy said that the operating earnings of the company would be somewhat -- would be stable but somewhat increasing due to inflation and minor rate increases that they would probably likely apply for in the future, you can see that actually the company is generating increasing earnings.

Q. And the fact of the matter is, Ms. Zimmer, isn't it, that in the future the company also has recurring one-time costs such as preferred dividend liquidation obligations? Isn't that correct?

A. Well, we already talked about the preferred dividend obligations. The way I factored that in was that Mr. Murphy told or testified that the preferred stock was owned by its immediate parent, FCWC Holdings, so that it was -- my assumption was that those deferred dividend payments and redemption rights could be extended.

Q. And that's an assumption that you make --

A. Yes.

Page 218

Q. -- isn't that correct?

A. Yes.

Q. Ms. Zimmer, did you know whether a penalty in this case is tax deductible?

A. I don't -- typically we don't take a position with regard to the tax deductibility of a civil penalty payment.

Q. Isn't it a fact, Ms. Zimmer, that the tax deductibility does not exist for a penalty?

MR. QUINN: Objection, Your Honor. This goes beyond the scope and also conflicts with the statement of the witness that the United States doesn't take the position.

MR. HIRD: Your Honor, that may be the statement of the witness, but in any dealing that I've had with the United States in this and other cases, they take the position.

If the United States is taking a different position now, it would be interesting to know that.

THE WITNESS: Can I --

THE COURT: Well, I'm going to overrule the objection and permit the question.

Do you remember the question?

THE WITNESS: No, I don't.

BY MR. HIGH:

Q. Isn't it a fact, Ms. Zimmer, that a penalty in this case is not tax deductible?

A. Typically in my analysis I assume that it is

Page 219

nondeductible.

Q. And so in order to pay a $1.5 million penalty per year, Florida Cities would have to increase its revenues by about $2.2 million per year; isn't that correct?

A. Well, the -- you're assuming a 40 percent tax rate?

Q. Assuming 40 percent, yes, ma'am.

A. That's one way to look at it. The way I did it was I looked at the earnings history of the company, looked at what the future earnings would likely be, primarily basing my opinion on that. Nobody has a crystal ball, but I used Mr. Murphy's judgment that he expressed during his deposition. He is the CFO of the company, and I used his guidance, because he is the CFO of the company, and looked at what future cash needs would be. He expressed that they would be light in the next few years, so I kept capital expenditures to depreciation levels.

They could fund capital expenditures through depreciation, and then any excess would be used to pay a civil penalty. And that's on a net income basis after taxes.

And, for instance, looking at 1994, their ability to generate earnings -- I think their net income was 1.3 million, but as I mentioned earlier, that includes a $1.3 million charge for litigation expenses relating to this case. And then in addition, there were other -- there was at least $284,000 of litigation costs relating to this case, and

Page 220

Mr. Murphy testified that the 1994 amount was higher than the 284,000. So that is also a non-recurring expense which should be added back.

And I'm assuming that future earnings are at least equal to those of '94 and probably higher because, as I indicated when I was looking at the 1995 first nine months' unaudited statements that were provided in late '95 and they have a comparison for the first nine months of '95 to the first nine months of '94, it indicated for '95 that net earnings were higher than '94.

Q. Do you recall exactly how much higher?

A. It wasn't a large increase, but it was higher.

Q. So just a little --

A. A few percentage points, yes.

Q. Just a little bit higher?

A. Yes.

Q. And in this analysis you're assuming that net income or the -- strike that.

You're assuming the capital expenditures can be funded through depreciation; isn't that correct?

A. Basically, yes.

Q. And that if capital expenditures happen to go up in the future, then Florida Cities would have to borrow the money; isn't that correct?

A. When you look at the -- keeping with 1994 net earnings,

Page 221

those net earnings --
THE COURT: Can you answer that yes or no and then explain your answer, or can you do that?
THE WITNESS: Could you ask the question again? I'm sorry. I forgot what the question was.
BY MR. HIGH:
Q. If you assume -- your assumption is that capital expenditures will be funded through depreciation, correct?
A. Yes.
Q. And that if capital expenditures then go up, Florida Cities would have to borrow the money, correct?
A. It depends by how much capital expenditures go, how much they increase by.
THE WITNESS: Should I explain that?
THE COURT: If you need to.
THE WITNESS: Okay.
THE COURT: Briefly.
THE WITNESS: Looking at '94 net income, it's 1.3 million. They had a 1.3 million charge for these litigation expenses. You add that back, that's 2.6. Plus they had some pretax expenses for litigation expenses relating to this case. I'm not exactly sure how much that is, but it's at least 284,000. But those have to be put on an after-tax basis.
So let's just stick with the 2.6. That's the net income that's reflected on the '94 income statement, plus the

Page 222

1.3 charge, which is a non-cash order, a non-recurring expense. That's 2.6. If you pay a million or a million and a half to the government, there's a little bit left over. So if capital -- it allows capital expenditures to go up by the difference. Anything in excess would have to be borrowed.
BY MR. HIGH:
Q. Ms. Zimmer, you've referred a lot to Mr. Murphy's deposition. Did that deposition in any way affect your conclusions in this report?
A. No. That deposition occurred after the report. But this report is also based on information up through 1993, and Mr. Murphy had the use of the 1994 statement.
Q. And in this report you conclude that Florida Cities, if it were to pay the penalty, would have to borrow it from an Avatar-related entity, correct, pay the penalty up front?
A. No, I presented that as an option. The conclusion of my report listed on page 9 indicates that based on that information that Florida Cities could pay a million to a million and a half per year. However, if they were able to borrow from an Avatar-related entity, the -- and I'm assuming if they were able to borrow the full amount, they could pay the full amount up front.
Q. And the 7 and a half million up front would have to come from an Avatar-related entity, correct?
A. That's expressed in this report, yes.

Page 223

Q. So the answer is yes, Ms. Zimmer?
A. Could you ask the question again just so I get the exact wording?
Q. Sure.
THE COURT: You want it read back, or do you want to restate it?
MR. HIGH: I'll restate it, Your Honor.
BY MR. HIGH:
Q. Ms. Zimmer, your conclusion is that if Florida Cities were to pay a $7 and a half million penalty, it would have to come from an Avatar-related entity, correct?
A. If they were to be -- if they could -- if they had to pay it up front immediately.
Q. So your answer is yes?
A. Yes.
MR. HIGH: Thank you. No further questions, Your Honor.
THE COURT: Mr. Hird?
CROSS-EXAMINATION
BY MR. HIRD:
Q. Good afternoon, Ms. Zimmer.
A. Good afternoon.
Q. You indicated that you are a chartered financial analyst; is that correct?
A. Yes.

Page 224

Q. And you try to make a distinction between that and a CPA, a certified public accountant; is that right?
A. Yes.
Q. One of the distinctions that you didn't make between them is the nature of the body that certifies or charters them; is that correct?
A. Yes, they're chartered or certified by different bodies.
Q. And aren't certified public accountants certified by state agencies?
A. Yes.
Q. Governmental bodies; is that correct?
A. Actually I'm not a CPA, so I -- I do know they have to be state certified. I don't know which body does it.
Q. And chartered financial analysts are not certified by state agencies; is that correct?
A. Correct.
Q. Or by federal agencies?
A. Correct.
Q. Isn't it true that to be a chartered financial analyst you simply get a charter from a trade organization of chartered financial analysts?
A. It's the Association for Investment Management Research. I don't know if that's a trade organization. It's a --
Q. But that's not a governmental or regulatory agency?
A. No, it is not.

Page 225

Q. Okay. Thank you. Mr. High asked you a couple of questions about the preferred dividend on Florida Cities -- I'm sorry. Excuse me.

Mr. High asked you some questions about the preferred stock that's owned in Florida Cities by FCC Holdings, and you said that you assumed that the dividend on that preferred stock wouldn't have had to be paid because the parent corporation owned that -- owned Florida Cities; is that correct?

A. What I assumed is that those payments could be deferred or extended because it is owned by its immediate parent.

Q. Well, do you know that there is preferred stock in Florida -- in FCC Holdings? Do you know that preferred stock exists in FCC Holdings?

A. I assume --

Q. FCWC Holdings.

MR. HIRD: I'm sorry, Your Honor.

BY MR. HIRD:

Q. Let me ask the question again. Are you aware that the immediate parent of Florida Cities Water Company, FCC - FCWC Holdings, has its own preferred stock?

A. No, I'm not aware of that. I assume they have the preferred stock of Florida Cities Water Company, but you're talking about a different --

Q. That there is preferred stock in FCWC Holdings; that it

Page 226

has itself issued preferred stock.

A. No, I'm not aware.

Q. And you're not aware that that preferred stock is owned by Allstate Insurance; is that correct?

A. No, I'm not aware.

Q. And you're not aware that the payment that Florida Cities will make on its preferred stock to its parent, FCC Holdings, will then be repaid by FCWC Holdings to its preferred shareholder, Allstate Insurance; is that correct?

A. Could you say that one more time?

MR. HIRD: Your Honor, may it help if I could illustrate it on the blackboard?

THE COURT: Yeah, you can write your question on there graphically.

MR. HIRD: Do we have any chalk?

THE COURT: Well, now, that's asking a little much. We're supposed to.

You've got all colors except white it looks like.

BY MR. HIRD:

Q. Okay. You have said that Florida Cities has preferred stock. And assume -- and you understand that Florida Cities' preferred stock is owned by FCWC Holdings; is that right?

A. Right.

Q. That's the immediate parent of Florida Cities.

A. Right.

Page 227

Q. Now, you are unaware that FCC Holdings has its own preferred stock.

A. Right.

Q. And you are unaware that that preferred stock is owned by Allstate Insurance; is that correct?

A. Right.

Q. And you're unaware that when Florida Cities will pay its dividend on its preferred stock that FCWC Holdings will then turn around and pay its dividend on its preferred stock to Allstate Insurance; is that correct?

A. That's correct.

Q. Thank you. I'd like you to turn to Avatar Holdings Exhibit 1, if you would.

MR. HIRD: Bob?

THE WITNESS: He said Exhibit 1.

Okay.

BY MR. HIRD:

Q. Ms. Zimmer, this is the 1994 annual report of Avatar Holdings. You indicated in your testimony that you viewed at least excerpts of the report. Did you view the whole annual report?

A. Yes, I had.

Q. Okay. I'd like you to turn to page 39, if you would.

A. Okay.

Q. I'm waiting till both you and the Court have that.

Page 228

THE COURT: My page numbers are partially --

MR. HIRD: It's the second to last page in the exhibit.

THE COURT: I've got it now.

MR. HIRD: It's headed "Five-Year Comparison of Selective Financial Data."

BY MR. HIRD:

Q. Can you see line 2 of this chart, "loss (income from continuing operations before extraordinary item and changes in method of accounting)"? Do you see that?

A. Yes, I do.

Q. This is the five-year comparison of losses and gains in Avatar Holdings, is it not?

A. Yes.

Q. Okay. Let's start with the year 1990. That shows an $11,132,000 gain; is that correct?

A. It shows an $11,132,000 income.

Q. Income. I'm sorry. You testified that you attended the deposition of Charles McNairy, chief financial officer of Avatar Holdings; is that right?

A. Yes.

Q. Didn't he testify in that deposition that this gain was due to a one-time sale of land assets owned by Avatar Holdings in California?

A. I remember the one time. I don't remember where they

Page 229

were located.
Q. But that this gain was due to a one-time sale of certain assets?
A. Yes.
Q. And that absent this gain there would have been a loss in that year; is that correct?
A. Yes.
Q. All right. 1991 we have it shows a loss of 8,635,000; is that correct?
A. That's what this indicates, yes.
Q. 1992 there was a loss of 4,342,000 before extraordinary items; is that correct?
A. That's correct.
Q. And there was an extraordinary item loss of 2,402,000; is that correct?
A. Yes.
Q. Now, in 1993 we have -- there's a gain of 5,474,000; is that right?
A. That's right.
Q. And in Mr. McNairy's deposition, didn't he testify that that was the year of the sale of the Midwest Utilities?
A. Yes, he did.
Q. And that without that sale there would have been a loss?
A. Yes, he testified to that.
Q. Okay. 1994 we have a loss of $14,621,000; is that

Page 230

correct?
A. That's correct.
Q. All right. Keep that in front of you, and if you could also -- keep a finger in that point and, if you could, also turn to Exhibit Number 9, Avatar Holdings Exhibit Number 9.
Do you have that in front of you, ma'am?
A. Yes, I do.
Q. This is the Avatar Holdings 10-Q for the third quarter of calendar year 1995?
A. Yes, it is.
Q. And that's through at least the beginning of October of 1995; is that correct?
A. It's through September 30th.
Q. Through September 30th. I'm sorry. I apologize. This is a document that you reviewed as well in preparation to testify; is that correct?
A. Yes.
MR. HIRD: Your Honor, I move in evidence Avatar Holdings Exhibit 9.
MR. QUINN: No objection, Your Honor.
THE COURT: Will be received.
(Avatar Holdings Exhibit Number 9 received in evidence.)
BY MR. HIRD:
Q. Turn to page 4, if you would, in Avatar Holdings Exhibit

Page 231

9.
THE COURT: What page?
MR. HIRD: Page 4.
BY MR. HIRD:
Q. Do you have that in front of you, ma'am?
A. Yes, I do.
Q. And if you look down on the list, nine months for 1975, loss before income -- I'm sorry -- net loss, do you see that?
A. Yes, I do.
THE COURT: 1995.
BY MR. HIRD:
Q. 1995 net loss. So for the first three quarters of 1995 Avatar Holdings had a net loss of 5,444,000; is that correct?
A. That's correct.
Q. And in the corresponding five months in nine months in 1994 its loss was 6,077,000; is that correct?
A. Yes.
Q. But its ultimate loss for the year in 1994 was 14,621,000, is that right, if you go back to Exhibit 1, page 39?
A. You're talking about '94?
Q. '94.
A. Yes.
Q. So you would expect, would you not, that the loss for the final year of 1994 -- 1995 would be significantly greater than

Page 232

5,444,000? Is that right?
A. No, that is not correct.
Q. You don't know of any particular event that would have shown a short-term gain in the last three months of 1995 --
MR. QUINN: Objection.
BY MR. HIRD:
Q. -- for Avatar Holdings?
MR. QUINN: Objection, Your Honor. This calls for information that was requested during the course of discovery and had not been provided. I object to any questions that deal with information that was accumulated after Ms. Zimmer wrote her report and that has not been produced by the defendants, if there's any change, material change, in economic circumstances.
MR. HIRD: I'm not asking -- I'm not offering evidence. I'm asking for an opinion whether she expects the sudden upturn in the company based on what she's seen.
MR. QUINN: Your Honor, she hasn't seen anything because they haven't given her anything.
MR. HIRD: She's seen over five years of history of the company.
THE COURT: Well, I'll sustain the objection.
MR. HIRD: Okay.
BY MR. HIRD:
Q. All right. Is it fair to say that the history of Avatar

Page 233

Holdings absent the two extraordinary asset sales in '90 and '93, the economic history from 1990 to the end of the third quarter in 1995, has been one of continuous losses?
A. They've had net losses on their financial statements.
Q. Continuously throughout that period essentially?
A. Except for those two years.
Q. And those two years the gains were only due to extraordinary asset sales.
A. Yes.
Q. And not to usual operations.
THE COURT: Is that right?
BY MR. HIRD:
Q. Is that right?
A. Yes.
Q. Okay. Ms. Zimmer, you've indicated that Avatar Holdings can pay $15 million –
A. Yes, sir.
Q. – in penalties?
From what assets can Avatar Holdings make that payment?
A. Avatar has an investment portfolio listed on their balance sheet, and it's comprised of – you mentioned the 1993 sale of the Midwest Utilities. In 1993 they sold the Midwest Utilities for about $60 million, and they took a $20 million gain on that on their books. The $60 million, it's reflected

Page 234

in their 1994 annual statement or its 10-K that those proceeds were put into an investment account that is used in part to secure certain lines of credit that Mr. McNairy testified were for the Avatar Properties, the real estate operations.
Q. So that the --
A. And --
Q. That investment portfolio is securing lines of credit against which Avatar Properties has already invested -- borrowed; is that right?
A. The 1994 --
Q. Excuse me, Ms. Zimmer. Can you answer yes or no before you go into your explanation?
A. Yes. And the explanation is is that part of those securities are securing the Avatar Property lines of credit. The foot -- the annual report in the SEC 10-K annual report as of '94 stated that approximately 45 million of the -- it was somewhere in the range of $50 million of assets in the investment portfolio were providing security to about 31, $32 million of Avatar Property lines of credit.
Q. And that's the 1994 report which is already over a year old; is that correct?
A. Correct.
MR. QUINN: Objection. Move to strike the last question; move to strike the last response. Again, this is information about being over a year old.

Page 235

Your Honor, she would have done more work if she had the information.
MR. HIRD: Your Honor, this witness has information that is current through the third quarter of the past calendar year. And to indicate that that was a year old at this point given the time period when that would have come out is not anything in any way restrictive on information that she would have had after that point. She's testifying about information she's seen since then.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry. Was there a question?
THE COURT: No, you answered it.
BY MR. HIRD:
Q. You answered the question.
Have you analyzed in any way Avatar Holdings – or strike that.
Of this investment portfolio that we're discussing, is it held by Avatar Holdings or Avatar Properties?
A. At this point I'm not sure who owns it. It's listed in the consolidated Avatar Holdings financial statements. And Mr. McNairy, who's the CFO of Avatar Holdings, mentioned that that investment portfolio is used as in part, as I explained earlier, you know, security for Avatar Properties lines of credit.
Q. Didn't he also testify that it was in fact a portfolio

Page 236

held by Avatar Properties?
A. I don't remember that. He may have. I don't remember.
Q. So you just don't remember. But you have no information to say that that's untrue; you just don't remember?
A. I just don't remember.
Q. Assume with me that it is held by Avatar Properties. Avatar Properties is not a defendant in this case; is that correct?
A. What I understand is that Avatar Holdings is a defendant and Florida Cities Water Company is a defendant.
Q. And so your understanding is that Avatar Properties is not a defendant; is that correct?
A. Yes.
Q. And is it also your understanding that Avatar Properties is in the real estate business and not the utility business?
A. Yes.
Q. And that Avatar Properties has no direct connection with Florida Cities except that they're both subsidiaries of Avatar Holdings?
A. It's my understanding that they're both subsidiaries of Avatar Holdings. I don't have any other information to --
Q. But you have no other information about any connection between Avatar Properties --
MR. QUINN: Objection.
BY MR. HIRD:

Page 237

Q. – and Florida Cities?
THE COURT: Just a moment.
MR. QUINN: Objection. We've covered this. This has been asked and answered, Your Honor.
THE COURT: Sustained.
BY MR. HIRD:
Q. Would you reasonably expect this investment portfolio to be subject to management fees?
A. I think Mr. McNairy testified that there are two third-party managers of the investment portfolio, and so yes.
Q. And so they would pay management fees, and those would be expected in the ordinary course; is that correct?
A. Yes.
Q. And that would reduce the amount of money available in those portfolios; is that correct?
A. It depends on how the accounting is done. For instance, if you – just using – if you have a million-dollar portfolio and you have fees of let's say 100,000 and yet you earn 200,000, you have a net hundred-thousand-dollar gain.
Q. But that would reduce it beyond getting the – realizing the full 200,000 gain in your example; is that right?
A. Yes.
Q. Okay. Now, assuming that Avatar Holdings holds this portfolio, as a property company would it reasonably – would you reasonably expect it to have property taxes to pay?

Page 238

A. I'm not sure if your question -- I thought you said if Avatar Holdings holds the --
Q. I'm sorry. Let me strike that. I made an error.
Assuming that this portfolio is held by Avatar Properties as a property company, a real estate company, wouldn't real estate taxes be a recurring cost?
A. It doesn't matter if they hold a portfolio or not. I would normally expect a real estate company to have to pay property -- that owns real estate to have to pay property taxes.
Q. And wouldn't it use available assets to it to pay property taxes?
A. I would expect it would.
Q. And if it paid property taxes from that portfolio, wouldn't that reduce the amount in the portfolio?
A. Again, it depends on what the earnings from the portfolio are or were.
Q. In your report, Ms. Zimmer, you say that Florida Cities can pay 1.5 million without borrowing, but it can pay up to 7 million, 7 and a half million if it borrows from Avatar Holdings; is that correct?
MR. QUINN: Objection, Your Honor. Again, we've covered this a number of times.
MR. HIRD: I'm sorry. I think this was asked on Mr. High's questioning, and I'm asking some further -- I'm

Page 239

introducing a new topic.
THE COURT: I'm going to allow him to get into it, but only for the purpose of bringing out anything additional.
Of course, don't repeat anything unless it's –
MR. HIRD: I'm not repeating.
THE COURT: – necessary to get into some aspect of it.
MR. HIRD: I'm not repeating, Your Honor. I'm asking about a different issue.
THE COURT: All right.
MR. HIRD: I'm asking – Mr. High explored this question from a Florida Cities perspective, and I'm exploring it from an Avatar Holdings.
THE COURT: Go ahead.
BY MR. HIRD:
Q. If Avatar Holdings were to lend Florida Cities the additional money, how would it get paid back?
A. It depends on whatever the terms were that Avatar Holdings agreed – you know, they would have an agreement between Florida Cities and Avatar. They could spread payments over – you know, there would be an amortization.
Q. But wouldn't it be paid back out of money that would have otherwise gone from Florida Cities to Avatar Holdings as dividends?
A. I think – well, I think Florida Cities pays its parent

Page 240

dividends, Florida Cities Holdings. Are you talking about eventually it goes up to Avatar Holdings?
Q. Yes.
A. Well, any excess, it would be paid in interest and principal repayment rather than it would take away from dividend.
Q. It would take away –
A. The ability to pay dividends, yes.
Q. It would take away from the dividends. So ultimately the money would come out of Avatar Holdings' pocket, and it would not be repaid because the dividend income it would otherwise get would be lost; is that right?
A. They would not – it would prohibit Florida Cities from paying that amount in dividends. I'm not sure I'm following --
Q. And that would have been money that Avatar Holdings might otherwise get in dividends; is that right?
A. Yes, that's an option, that the company could pay it in dividends instead.
Q. So functionally if Florida Cities is assessed a penalty of more than 1.5 million and it borrows the excess from Avatar Holdings, that extra money really comes from Avatar Holdings' pocket, right?
A. Well, it's financed through Avatar. I assumed in my report Avatar Utilities. If you want to assume Avatar

Page 241

Holdings, that's fine.
Q. So it would in fact come from Avatar?
A. It would be financed by its parent or its ultimate parent. But Florida Cities would be paying it back through earnings over however many years out the loan went.
Q. And if this Court – let's assume for the moment that this Court found Avatar Holdings not liable. If a payment was assessed against Florida Cities for an amount above 1.5 million that required Avatar Holdings to lend the money to Florida Cities, wouldn't Avatar Holdings essentially be paying a penalty for liability it didn't have?
MR. QUINN: Objection. This calls for a legal conclusion and speculation.
THE COURT: Sustained. Sustained.
BY MR. HIRD:
Q. Let me ask another question, then. You've said that in addition to the seven – to Florida Cities paying this penalty that Avatar Holdings can pay its own penalty of up to 15 million; is that right?
A. Are you talking about in addition?
Q. Well, you said that Avatar Holdings can pay a penalty of up to 15 million.
A. Right.
Q. If this Court were to assess $7 and a half million penalties against Avatar Holdings and Florida Cities,

Page 242

wouldn't – strike that.
You just testified that anything above 1.5 million that would be assessed against Florida Cities would come from Avatar Holdings or some other Avatar-related entity; is that right?
A. No, I don't think I testified to that. I testified that if payments were to be made up front, it could be made if its parent, some parent above Florida Cities Water, were willing to loan the money or finance the payment to Florida Cities.
Q. If those payments were being made in that manner and that parent was Avatar Holdings and Avatar Holdings would be assessed its own penalty, wouldn't Avatar Holdings functionally be paying twice for the same violation?
MR. QUINN: Objection. Again, it calls for speculation and a legal conclusion.
THE COURT: Sustained.
MR. HIRD: I have no more questions, Your Honor.
THE COURT: Redirect?
MR. QUINN: Your Honor, two items, and we can move on.
Your Honor, at this time I move United States Exhibit 585 into evidence. I neglected to earlier.
And also with regard to Ms. –
THE COURT: Wait. Wait. Wait.
MR. QUINN: I'm sorry.

Page 243

THE COURT: That's 585?
MR. QUINN: Yes, sir.
THE COURT: All right. Do we know which one we're talking about here?
MR. QUINN: It was one of the documents Ms. Zimmer reviewed.
THE COURT: All right. It will be received.
(United States Exhibit Number 585 received in evidence.)
MR. QUINN: Your Honor, with regard to Exhibit 598 – that is the expert report of Ms. Zimmer – in light of the Court's ruling, I would only like to move portions of it in and mark for identification the remaining portions that deal with wrongful profits.
Your Honor, I would like to move into evidence Exhibit 598 only Part 2.
THE COURT: Okay. That will be received.
MR. QUINN: I would also like to move into evidence Exhibit 598-A.
THE COURT: 598-A?
MR. QUINN: Yes, which is an –
MR. HIRD: Excuse me, Your Honor.
THE COURT: Just a moment.
MR. QUINN: 598-A is an attachment to Ms. Zimmer's report. It was just broken out. It's Attachment 1 or Exhibit

Page 244

1.
MR. HIRD: What does it have on its attachment?
THE COURT: You mean exhibit or -- no.
MR. HIRD: No objection.
THE COURT: Wait a minute. I haven't found it. 598-A?
MR. QUINN: Yes, sir.
THE COURT: Oh, is that a separately -- or is that an attachment?
MR. QUINN: It was an attachment to the original report, Your Honor.
THE COURT: Oh, I see. I see. Well, that's –
MR. QUINN: But it's a separately-marked exhibit. There are certain other ones –
THE COURT: All right. It's not indexed with a tab, but it is -- it's on a page which it has typewritten "Exhibit 1," and then the tab is Government Exhibit 598-A. And that's what you're talking about?
MR. QUINN: Yes, Your Honor.
THE COURT: Okay.
MR. QUINN: I would like 598-B and C to be marked only for identification. I will not move those.
I will move, however, Exhibit 598-D, 598-E, and 598-F into evidence, please.
MR. HIRD: We don't object, Your Honor.

Page 245

THE COURT: Sir?
MR. HIRD: We don't object.
THE COURT: Okay. Well, let me find them here and make sure we know what we're talking about.
You're offering D?
MR. QUINN: E and F, Your Honor.
THE COURT: D, E, and F?
MR. QUINN: Yes, sir.
THE COURT: All right. They'll be received.
MR. QUINN: Thank you.
Your Honor, we have no more questions of Ms. Zimmer.
THE COURT: All right. Thank you, ma'am. You may step down.
THE WITNESS: Thank you.
(Ms. Zimmer was excused.)
MR. QUINN: Your Honor, for purposes of the remainder of the day, United States has one remaining witness, which I believe will take ten minutes on direct examination, after which we have two ministerial items moving some depositions in and some interrogatories in. I don't know how long the cross-examination is going to go.
After we've done that we rest, so what would you prefer, Your Honor?
THE COURT: Well, I have a sentencing that's -- is the defendant here? Is he incarcerated?

Page 246

THE CLERK: Yes.
THE COURT: Okay. Are the lawyers here?
THE BAILIFF: Everybody's here, Your Honor.
THE COURT: Okay.
THE BAILIFF: I don't see the Government, Your Honor, but the defendant is here and his attorney is here.
THE COURT: What is the urgency, if any, with respect to the witness? Is there any urgency?
MR. QUINN: Oh, no, none. We just want instead of leaving him hanging overnight --
THE COURT: Sure.
MR. QUINN: We can move the ministerial stuff now if you're waiting for the other. Or we can come back after.
Your Honor, there's no urgency with regard to the witness.
THE COURT: Okay. Let's --
THE BAILIFF: Everybody's present.
THE COURT: Let's take the ministerial stuff.
MR. QUINN: Yes, Your Honor.
THE COURT: And then I think we're going to have to recess for the evening.
MR. QUINN: Your Honor, ministerial item number 1 deals with answers to interrogatories. United States would move the following exhibits in. And Mr. Moore will pass them on to the defendant. These are answers by the defendants.

Page 247

The first item is the March 30th, 1995 document Florida Cities' Answers to the United States' First Set of Interrogatories and the Correction to Florida Cities' Answers to the United States' First Set of Interrogatories. We'd like to move those into evidence, Your Honor.
THE CLERK: What number?
MR. QUINN: Should I continue on down the list, or would you like to take these one by one?
THE COURT: Take them one by one.
MR. QUINN: Okay.
THE COURT: Are these marked?
THE CLERK: What exhibit --
MR. QUINN: I'm sorry?
THE COURT: Are these marked?
MR. QUINN: As exhibits?
THE COURT: Yes.
MR. QUINN: They are not marked as exhibits, Your Honor.
THE COURT: All right. They'll be received.
MR. QUINN: Thank you. The next item is the November 22nd, 1995 Florida Cities' Amended Revised Responses to Plaintiff's First and Second Interrogatories.
THE COURT: Okay. They'll be received.
MR. QUINN: Your Honor, the next item is the June 8th, 1995 Defendant Florida City Water Company Answer to

Page 248

Plaintiff's Second Set of Interrogatories.
THE COURT: They will be received.
MR. QUINN: The next item is the June 9th, 1995 Defendant Florida Cities Water Company Answer to Plaintiff's First Request for Admissions.
THE COURT: Received.
MR. QUINN: The next item is the June 9th, 1995 Defendant Avatar Holding, Incorporated Objections and Answers to United States' First Request for Admissions.
THE COURT: Received.
MR. QUINN: The next item is the June 15th, 1995 Defendant Florida City Water Company's Answers to Plaintiff's Second Request for Admissions.
THE COURT: Received.
MR. QUINN: And the final discovery item is the July 14th, 1995 Defendant Florida City Water Company's Answers to Plaintiff's Third Set of Interrogatories.
THE COURT: Be received.
MR. QUINN: The final ministerial item, Your Honor, deals with the movement of -- I'd like to move in certain deposition transcript portions. These have been set out in our pretrial memorandum located at page 32, 33, 34 -- the joint pretrial statement. Excuse me. The revised joint pretrial statement, Your Honor, pages 32, 33, and 34.
THE COURT: Well, now, 34 is the one we were talking

Page 249

about earlier.
MR. QUINN: I'm sorry. The top of 34, Your Honor. It continues over for Ms. Karleskint.
THE COURT: Karleskint?
MR. QUINN: Yes, sir. And then --
THE COURT: Well, now, wait a minute.
MR. BAISE: Your Honor, a point of clarification, is the Government moving in the deposition of Gerald Allen?
THE COURT: Of who?
MR. BAISE: Gerald Allen.
MR. QUINN: Yes, we are, Your Honor.
MR. BAISE: Gerald Allen's going to be testifying, though. He's available.
MR. QUINN: Your Honor, we can use depositions for a -- deposition of a party for any purpose.
MR. BAISE: You can use it to impeach, but he's going to be here to testify. That's best evidence.
MR. QUINN: Your Honor, we can use it for any purpose according to the Federal Rules of Civil Procedure.
THE COURT: All right. Now, is this a party?
MR. JACOBS: Party officer.
THE COURT: Party officer?
MR. QUINN: Yes, sir.
THE COURT: Yeah, that can be used.
Now, what you're proposing to do is to introduce

Page 250

these and have me read them at some time during my leisure, or are you going to read them?
MR. JACOBS: May I address that, Your Honor?
THE COURT: Yes, sir.
MR. JACOBS: The intention was to put them into evidence and then, as with the 500 documents, it's not our concept that you would read all of them at your leisure but that perhaps we would call your attention to particular documents and particular portions of testimony in post-trial proceedings.
THE COURT: Well, let me tell you, I've been burned on this sort of thing before where during non-jury trials counsel have dumped depositions on the Court instead of reading them during the trial of the case, and it becomes quite burdensome.
MR. JACOBS: We -- I think it's our intention to cover, as we have with Mr. Levy, for example, most of the material that took place in the deposition with the witness, if he is being called in fact by the defendant or one of the defendants.
Although they propose to call 26 witnesses, by my present count anyway, in the next five days, I'm not sure they're going to get to all of them. I don't want to risk, of course, their not getting to some of them and my not moving into evidence deposition portions. And as the rules provide

Page 251

for parties, officer, or managing agent, we are entitled to use their statements in their deposition for any purpose.
So I can certainly represent to the Court that there's no intention to in any way mislead the Court here. We want to preserve our right to have this material in evidence for the record.
MR. BULLOCK: Your Honor, let me address a couple of different issues. First of all, as to page 32 of the March 27, 1995 deposition of Gerald Allen -- as you will recall, Mr. Allen is here as the corporate representative of Florida Cities -- which is a deposition in which Mr. Allen took the Fifth Amendment, Mr. Allen subsequently changed his mind and testified for two full days and will be one of our witnesses.
I'm not sure whether this falls under the offer of proof from earlier this afternoon. I'm not really sure that it's relevant if the witness in fact is -- has been deposed and will testify.
THE COURT: Well, this deposition of March 27, 1995, this is the one in which he did not testify?
MR. BULLOCK: Chose not to testify, Your Honor.
THE COURT: Now, you're addressing right now only that deposition?
MR. BULLOCK: That is correct, on this point.
THE COURT: Well, it seems to me that -- seems to me that that particular deposition would fall under the Court's

Page 252

reserved ruling, wouldn't it, Mr. Jacobs?
MR. JACOBS: Well, perhaps the inferences to be drawn from the deposition, but under Rule 32(a)(2), the deposition of a party or of anyone who at the time of the taking the deposition was an officer, director, or managing agent --
THE COURT: Well, I understand that. I don't think there's any issue as far as I'm concerned as far as the Court -- or your entitlement to present the deposition of a party and any officer and so forth.
What we're talking about now is whether that particular deposition doesn't fall within the Court's reserved ruling with respect to that grouping on page 34 of the revised joint pretrial statement.
MR. JACOBS: Perhaps I misunderstood the Court's ruling in that respect. Mr. Wilkov, there was a distinction made because he was a former officer. And I understood the Court to be taking under advisement the issue of the effect of the pleading of the Fifth Amendment by these witnesses. I did not understand -- and perhaps that was my mistake -- that we had -- I didn't understand that we had at that point in time in the discussion actually moved these depositions into evidence, which is what --
THE COURT: Well, you were offering the ones on page 34 into evidence, and the Court has reserved ruling on that.

Page 253

Now, I announced that I was sustaining the objection to Mr. Wilkov for the reasons that I mentioned.

But it seems to me that at this point at least I'm going to put the deposition of Mr. Allen dated March 27, 1995 in the same category and reserve on that.

MR. BULLOCK: Your Honor, I would add as a supplemental point to that, it's my understanding of Mr. Jacobs' argument is that because he was unable to depose the individuals we discussed early this afternoon he ought to be able to draw the inference. In fact, he's been able to depose Mr. Allen for two days, and so I'm not sure -- that to me is another and a separate argument on our behalf that this particular deposition shouldn't be included.

MR. JACOBS: I'm not asking that adverse inferences be drawn from Mr. Allen's prior failure to testify or his prior assertion of the right to testify. As you can see, he went on to testify. I've got --

THE COURT: Well, then why do you want the March 27, '95 deposition in evidence, then?

MR. JACOBS: I think I'm entitled to have it in evidence, and I'm interested in why there was a change, frankly, Your Honor. And I don't want to get into that too much, but there was obviously a change of heart of some sort, which I'd like to discuss with Mr. Allen when he takes the stand.

Page 254

MR. BULLOCK: Your Honor, he actually asked Mr. Allen that question in his deposition, and Mr. Allen answered it.

MR. JACOBS: Well, I still think I can ask him when he gets to the stand.

THE COURT: Well, all right. I'm inclined to believe that notwithstanding the fact that a witness originally may take the Fifth Amendment and not submit to deposition, if you're able -- if he changes his mind and does take -- you do take his deposition later on, although I think that you may very well be entitled to inquire as to why the change of heart, I'm not sure that the deposition, the original deposition, is admissible.

I will -- I'll reserve ruling on that, that issue.

MR. JACOBS: Very well. And --

THE COURT: Which when you do brief this subject that we've been talking about, which was precipitated by our discussion regarding page 34, you can treat that as well.

MR. BULLOCK: Your Honor, as on page 33 -- Your Honor, he is offering the deposition of Julie Karleskint. I don't believe and don't know exactly how the Court would define an officer or director. I don't believe Ms. Karleskint has ever been an officer or director of Florida Cities Water Company.

MR. JACOBS: If I may, Your Honor, he's left out

Page 255

"managing agent." And her title is operations manager, so we think she falls under the rule.

MR. BULLOCK: Your Honor, Florida Cities would contend that she is a staff person, not someone that rises to that level.

THE COURT: Well --

MR. BULLOCK: Your Honor, we'll withdraw that.

THE COURT: Okay. All right.

MR. HIRD: Your Honor, on page 34 I don't know which ones are being admitted. Are you stopping with Ms. Karleskint?

THE COURT: Yes.

MR. HIRD: Okay.

MR. JACOBS: For clarification, then, is the Court accepting --

THE COURT: Yeah, I guess so.

MR. JACOBS: -- Mr. Tompkins, Mr. --

THE COURT: Who, Tompkins?

MR. JACOBS: Is the first one, Jack W. Tompkins.

THE COURT: Yes.

MR. JACOBS: Gerald Allen on November 13th, '95 --

THE COURT: Yes.

MR. JACOBS: -- and December 15th, '95?

THE COURT: Yes.

MR. JACOBS: Paul Bradtmiller, November 18th, '94

Page 256

and November 21st, '94?

THE COURT: Yes.

MR. JACOBS: Julie Karleskint on April 21st, '94 and October 2nd, '95 as well as --

THE COURT: Yes.

MR. JACOBS: -- October 16th, '95?

THE COURT: Yes.

MR. JACOBS: Thank you, Your Honor.

MR. BULLOCK: Your Honor, as a procedural matter -- and I almost hate to bring this up --

THE COURT: Then don't.

MR. BULLOCK: But unfortunately I think I have to.

In terms of objections to the questions that were in the depositions --

THE COURT: Okay. If there are objections, then you can read them just as if the witness is testifying.

MR. BULLOCK: Okay.

THE COURT: You see, that's the thing that I do not want to get saddled with later on.

MR. JACOBS: I think I took all of these that you've accepted without exception. And I believe that Mr. Scroggin was present at all of them, and I think that -- and Mr. Scroggin can correct me if I'm out of turn -- I think there were relatively few objections. I believe Mr. Baise was present for one day of Mr. Bradtmiller, but otherwise

Page 257

Mr. Scroggin was present. So, again, I don't --
THE COURT: They're going to go on the record here in this courtroom. You can read them, and I'll hear the objections as they --
MR. JACOBS: You --
THE COURT: I don't know when we'll finish this trial.
MR. JACOBS: Judge, you want us to read the lines that there are objections to?
MR. BULLOCK: Your Honor, my understanding of the Federal Rules is that all objections save as to the form of the question are reserved until the time the deposition will be used.
MR. JACOBS: There was no stipulation to that effect, Your Honor.
MR. BULLOCK: That's the operating basis of the Federal Rules.
THE COURT: Okay. We're through for the day, gentlemen. I'll see you at 8:45 tomorrow morning.
MR. JACOBS: Judge, what was your ruling with respect to these --
THE COURT: Those depositions?
MR. JACOBS: Yes, sir.
THE COURT: Yeah. You're going to be permitted to have them read. That's my ruling. And I'll hear the

Page 258

objections as they're read.
MR. JACOBS: And if there are -- I'm trying to get to expedite matters. If there are -- as I say, most of these questions and answers were not objected to. Can they be accepted, then, as such and we'll just read the lines that are objected to with the objections, or we'll just waive those and take them right out if we don't think they're that important? Again, I'm trying to move things along.
THE COURT: Well --
MR. JACOBS: Because if the Court accepts that proposal, I think we could probably get through this in, at most, an hour, all of them.
MR. BULLOCK: Your Honor, these depositions were taken under the understanding they were pursuant to the Federal Rules, and our position is that that's the Federal Rules that all the objections save as to the form are preserved. I don't believe that requires --
THE COURT: Now, wait a minute. Sit down. Sit down.
Did not the order, the pretrial order or the scheduling order, or the local rule require that any objections to any depositions that are listed be set forth in the joint pretrial statement?
MR. JACOBS: I have it handy if it would help the Court, Your Honor.

Page 259

THE COURT: The scheduling order provides that the joint pretrial -- or the pretrial statement shall -- let's see. This is subparagraph -- well, paragraph 8-H. A list of all depositions to be offered into evidence at trial, as distinguished from possible use for impeachment, including a designation of the pages and lines to be offered from each deposition.
Well, I was under the impression that the order required all objections to any portions of the deposition designated be set forth in the pretrial statement. Not so.
MR. JACOBS: Judge, again, if I can be helpful, there were very few objections. I don't think this is going to be a problem.
I would be willing to meet with counsel and either remove from our proposal the questions that were objected to, excise them and offer the rest, or just read the few lines where there are objections and ask the Court to rule.
And, again, my best estimate would be that would take no longer than an hour.
MR. BULLOCK: Your Honor, the point is, the Federal Rules allow us to preserve all objections. That is the underlying assumption that we've used in these depositions and --
THE COURT: Well, and that's -- I was telling you that I was under the impression that I descended further than

Page 260

that, and I know now to amend my scheduling order.
Go ahead.
MR. BULLOCK: I was just going to make a point that there was no understanding that the defendant, this defendant, was waiving that. I believe Mr. Hird can speak that there was no understanding that Avatar Holdings was waiving that.
As a matter of fact, Ms. Tsosos just handed me a copy of Mr. Levy's deposition, which clearly says it was taken pursuant to Federal Rules and they're not waiving objections.
MR. JACOBS: We didn't offer Mr. Levy, sir.
THE COURT: Sir?
MR. JACOBS: We didn't offer Mr. Levy. He's here.
MR. BULLOCK: There has to be agreement of all counsel that you would waive that.
THE COURT: Okay. Well, Mr. Bullock has posited that objections, unless they are as to form, are not waived.
MR. BULLOCK: That's correct.
THE COURT: And that sounds right to me. I think that's correct. And I'll be traveling on that assumption.
Mr. Jacobs, is that not your understanding of the Federal Rule?
MR. JACOBS: It wasn't my understanding, Your Honor, unless there's a stipulation, which there was never at any of these depositions.
THE COURT: A stipulation of what?

MR. JACOBS: By the parties that objections would be preserved. It was my understanding --

THE COURT: Well, now, you know, it's historically always been the case, as far as I recall, that while you must object as to the form of the question at a deposition, else run the risk of waiving those kinds of objections, that you don't waive the right to object to questions other than as to form.

Now, historically that's always been the case, I think. I mean that's -- as I get older, I know that when I -- the more dogmatic I am, the more I step on my own toes.

But, now, if you can disabuse me of that with some authority, then so be it. But I'm afraid that counsel for the defendants have a legitimate point here when they say that they will be entitled to raise objections to these depositions that are being offered on bases other than as to form unless they have raised the objections as to form during the deposition.

So that's what it appears at this point, so we'll proceed to hear your depositions in the morning. And we can have them read, and if somehow or other you can avoid the scenario that I think all of us see might occur, more power to you. But I will be here to hear these depositions tomorrow, however long it may take to read these excerpts.

So anything else?

We'll reconvene at 8:45 tomorrow morning, and we'll plan to recess at 3:45 tomorrow afternoon.

MR. JACOBS: Thank you, sir.

(Adjourned at 5:10 p.m.)

CERTIFICATE

I hereby certify that the foregoing is an accurate transcription of proceedings in the above-entitled matter.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Friday, March 29, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tsotsos

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scroggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

THE COURT: Good morning.

Okay. Are we ready to proceed?

MR. JACOBS: Your Honor, with your permission, I would like to address the issue that we left off with yesterday which had to do with reading in portions of depositions that the Government listed in its part of the joint pretrial statement.

I recall the Judge mentioning that he anticipated taking under advisement any Rule 52 motion. With that in mind, what I would propose -- and I'm cautiously optimistic that this will at least alleviate a great number of these depositions; and if not, certainly a great number of the lines of the depositions that we would need to have read into the record -- I would like to withdraw our proposal that we read those into the record now and reserve the right to do so in our case on rebuttal, if need be.

I suspect that most of the information that we seek to have entered into evidence through the depositions we will be able to elicit through the witnesses that Defendants advised us that they will be calling.

THE COURT: Well, you can do that, of course, if it's proper rebuttal. I mean, you don't have to reserve your right to do that.

MR. JACOBS: The only one exception is one

witness, Mr. Tompkins, is unavailable beyond the subpoena power of the Court since he resides in Nashville, Tennessee, so that -- but he's the only witness of the ones we've listed who did not take the Fifth Amendment who the Defendants are not also anticipating calling.

And I will personally commit to going through that particular deposition before our case on rebuttal and excising out any information that we could really do without by that point in our case so that, again, I'm cautiously optimistic that we could get through this all in an hour at the end of the case, if need be.

THE COURT: Mr. Bullock?

MR. BULLOCK: If the Court please. Good morning, Your Honor.

THE COURT: Good morning.

MR. BULLOCK: A couple of points on that issue. First of all, I looked at some case law in the library last night. There is authority within the Court's discretion for you to exclude depositions which are being offered to be read in if you find that the evidence would be cumulative or duplicative. And I would be delighted to hand the Court the authority and give a copy of that to counsel as well.

That even though the Plaintiff may have a right to read that in, you in your discretion may exclude that if you find it, I believe, duplicative, cumbersome or if it would

interfere with the time in which the case would be tried.

I would also note that Mr. Tompkins, the witness who Mr. Jacobs just spoke about, at the time of the taking of the deposition was not an officer, director or manager of Florida Cities Water Company.

Rule 32(a)(2) says that the deposition must be of an officer, director, managing agent at the time of the taking of the deposition. So, we would object to Mr. Tompkins' deposition being offered in that manner.

MR. JACOBS: Are you through?

MR. BULLOCK: I would note that the authority that I have cited is also found in Wright and Miller, in Volume 8-A, Section 2145. And if the Court pleases, I'll be glad to hand that up and to serve copies to counsel.

THE COURT: Okay.

MR. JACOBS: While he's doing that, may I respond just briefly --

THE COURT: Yes, sir.

MR. JACOBS: -- on Mr. Tompkins?

We do not seek to have the deposition testimony of Mr. Tompkins read pursuant to 32(a)(2). We seek to have the deposition testimony of Mr. Tompkins read pursuant to Rule 32(a)(3) which provides, under Subsection B, that the witness is at a greater distance than one hundred miles from the place of trial or hearing.

Page 5

Like I said, he's in Nashville, and I would ask the Court to take judicial recognition that Nashville is more than a hundred miles from here.

THE COURT: Okay. Mr. Bullock, what about that? He's not offering it under 32(a)(2).

MR. BULLOCK: Your Honor, if that -- my impression was as of last night, Your Honor, it was under 32(a)(2). If that's what he represents, that's -- in my mind it's a totally different ball game.

And, Your Honor, if he submits the deposition, we, of course, would reserve the right to offer other sections of the deposition as well.

Let me also, Your Honor, suggest an additional alternative in the event that the Court does not want to exclude under the authority...

THE COURT: All right. Well, right now, we're only talking about Tompkins. As I see the scenario that has been painted by Mr. Jacobs, he's not going to be offering any of this deposition testimony during his case in chief with the possible exception of Mr. Tompkins.

MR. JACOBS: I'd even hold off on that, Your Honor. I'm going to offer nothing now.

THE COURT: I know, I know, but what -- my understanding is that with respect to all depositions except Tompkins, Mr. Jacobs is proposing to be willing to only

Page 6

offer those depositions that he would seek to offer on rebuttal, if any. They would, of course, need to properly be rebuttal.

With respect to Tompkins, I suppose he's asking the Court -- if I'm misreading you, Mr. Jacobs, let me know -- I suppose you were asking the Court for leave to permit you to evaluate the Tompkins deposition and augment your direct case with so much of his deposition testimony as you wish to do after the conclusion of the Defendants' cases. Is that what you're asking?

MR. JACOBS: I'm not sure I'm going to need to do that, no. Actually, I -- I'm sorry I didn't make myself clear.

We've already designated certain lines --

THE COURT: Yes.

MR. JACOBS: -- and what I said I would commit to do is try and cut back on those lines.

THE COURT: On rebuttal?

MR. JACOBS: Yes, sir.

THE COURT: But only on rebuttal?

MR. JACOBS: Yes, sir.

MR. BULLOCK: And, Your Honor, subject to his establishing that this is, in fact, proper rebuttal...

THE COURT: Well, that's what I'm saying: He'll have to -- he's not going to be able to reopen his case, as

Page 7

it were, with these depositions. He's going to step back and be willing to take the chance that he'll be able to cover what he can by cross examination. And then if there are some minimal matters -- hopefully minimal, if any -- that he feels that he needs to present on rebuttal, proper rebuttal, through these depositions, then he'll seek to do so.

MR. BULLOCK: This is just as to Mr. Tompkins' deposition?

THE COURT: No. I --

MR. JACOBS: The only qualification that I mentioned earlier is if there's a 52 -- my understanding is, the Court is going to take any 52 motion under advisement until the close of all of the evidence.

THE COURT: Well, I said I probably would be doing that, but what has that got to do with this?

MR. JACOBS: That's the one reservation that I have about making this proposal to move things along. There are some lines that will relate to Avatar Holdings' liability. And I'm happy to read those in, again, at the end of the evidence, but I don't want my case thrown out when I rest my case in chief because I haven't read those lines in.

THE COURT: Well, you're presenting your case as to both Florida Cities Water and Avatar, and you will be

Page 8

closing pretty soon --

MR. JACOBS: Within an hour, I hope.

THE COURT: -- so I don't understand where the Tompkins deposition has any -- what that has to do with the Rule 52 motion and whether the Court reserves on that or rules on it.

MR. JACOBS: No, that would have to do only with two of the three witnesses that come under 32(a)(2) and these are witnesses -- the Company's own employees.

THE COURT: Well, yes, but if you present either, you know, depositions under (a)(2) or (3)(b), they are going to need to come in in your case in chief unless they are proper rebuttal.

MR. JACOBS: I understand.

MR. HIRD: Your Honor, may I speak to this issue for a moment? The two witnesses that he's referring to, I believe, are Mr. Allen and Ms. Karleskint. While they may be officers or managing agents of Florida Cities, they are not of Avatar Holdings, so I don't think they come in against Avatar Holdings under that rubric.

We do intend -- Your Honor may defer ruling on the Rule 52(c) motion, but we do intend to make one on behalf of Avatar Holdings at the close of Plaintiff's case in chief.

THE COURT: Yes. That's not surprising.

All right.

Page 9

Which, incidentally, that last quote or that last statement could be misconstrued. I didn't mean anything by that; I'm meaning that that's almost always done. I'm not commenting on anybody's case here.

Okay. Whether you all are clear or not, I think I'm clear, and so we'll just move on at this point.

MR. JACOBS: Thank you, Your Honor.

THE COURT: Call your next witness.

MR. QUINN: Your Honor, the United States calls Roger Pfaff.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.

Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?

THE WITNESS: Yes.

MR. HIGH: Your Honor, I have one issue to raise before Mr. Pfaff begins his testimony.

Yesterday, counsel tried to lay a foundation through expert witness Eileen Zimmer about the economic benefit model. I expect that counsel will try and do that today through Mr. Pfaff.

I would call the Court's attention to United States' supplemental responses to Defendant's first interrogatories served on November 17th where the

Page 10

interrogatory was, Identify all persons who you intend to call as fact witnesses at any hearing or trial or other proceeding; state the subject matter on which the witness is expected to testify and summarize the facts to which each witness is expected to testify.

They identified Mr. Pfaff, and they identified Mr. Pfaff to testify to the nature and number of Defendant's violations at Barefoot Bay and Carrollwood and Waterway Estates and to the enforcement history at each of those facilities.

So, to the extent that Mr. Pfaff is going to testify about economic benefit, I would ask that his testimony be limited.

In addition, Defendants served 30(b)(6) notices of deposition on the Plaintiff, and one of the paragraphs, Paragraph 38, stated: Any economic analyses performed by EPA to assess the economic benefit the company gained for alleged instances of non compliance of Barefoot Bay, Carrollwood and Waterway Estates, and the United States designated Mr. Kenneth Kwan to speak to that.

So, again, to the extent that Mr. Pfaff is going to talk about economic benefit, I would ask that his testimony be limited.

MR. HIRD: Your Honor, we join in the objection.

We would also like to point out that Ms. Zimmer

Page 11

was the only expert designated with respect to economic benefit. The only economic benefit analysis that was provided to the Defendants was Ms. Zimmer's report which this Court has struck in appropriate part.

THE COURT: All right. Mr. Quinn?

MR. QUINN: Yes, Your Honor. If I may, I'd like to address the 30(b)(6) issue first.

The United States -- counsel correctly states the United States did not designate Roger Pfaff as the United States' designee for that purpose.

Under Rule 30(b)(6), we are entitled to designate any person who consents to testify on that behalf. The fact that we didn't designate Roger Pfaff for purposes of testifying about economic benefit at that time does not prohibit him from testifying at a later point in time.

The mere fact that his deposition was noticed and we put him up -- or the agency's deposition was noticed and we put up Mr. Pfaff to testify about an area doesn't mean he can't testify about another area.

THE COURT: All right. Well, what about the other argument?

MR. QUINN: The answers to interrogatories, counsel correctly read the response. Mr. Pfaff will not be putting up anything new today. He'll be testifying about -- the portion that he'll be testifying about comes within that

Page 12

area of enforcement history. There will be one document that we will use with Mr. Pfaff, and that document was done during the course of enforcement history.

And then as to the expert issue, the United States will present -- the testimony of Mr. Pfaff is not expert testimony at this point. What we're trying to elicit from him will not require expert opinions, because we are limited; he didn't write a report and we didn't list him as an expert.

THE COURT: Well, you'll be precluded from eliciting any expert testimony on economic benefit from this witness.

MR. QUINN: Yes, sir.

THE COURT: All right. To that extent, I will sustain any anticipated objection; but, of course, Mr. High, if you perceive that that's being violated, you, of course, have the right to object at the appropriate time.

All right. You may proceed.

MR. QUINN: Thank you, Your Honor.

- - -

Thereupon,

ROGER PFAFF,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

Page 13

DIRECT EXAMINATION
BY MR. QUINN:
Q. Mr. Pfaff, where do you work?
A. At the U.S. Environmental Protection Agency in Atlanta.
Q. What is your title with the United States Environmental Protection Agency in Atlanta?
A. I'm chief of the Enforcement Section and the Water Management Division.
Q. When you say "Atlanta," do you mean Region 4?
A. Yes. That's the Region 4 office.
Q. How long have you been chief of the Enforcement Section, Water Management Division, at Region 4?
A. Six years.
Q. Sir, what is the BEN model?
A. It's a mathematical model used to compute the economic benefit of delayed or avoided costs of compliance with environmental laws.
Q. Can you tell me briefly what are delayed costs of --
MR. HIGH: Your Honor, I would object.
MR. HIRD: Objection, Your Honor.
MR. HIGH: This is getting into what the benefit model is.
MR. QUINN: This is a fact, Your Honor; this is not expert testimony.

Page 14

MR. HIRD: Your Honor, the Plaintiff proffered testimony on economic benefit using one methodology. He is now -- they are now presenting economic benefit testimony using a completely different methodology.
THE COURT: What's the purpose of his testimony if it's not to attempt to elicit from him testimony regarding economic benefit?
MR. QUINN: Your Honor, an exhibit has been entered and he is going to explain that exhibit.
THE COURT: What is the exhibit?
MR. QUINN: 494, Your Honor.
THE COURT: What is that exhibit?
MR. QUINN: It is an exhibit which has -- it's a memorandum with some attachments.
And, Your Honor, I also add that in your order of Monday, the Court agreed that in the instant case economic benefit should be analyzed as the present day value of costs avoided by non compliance rather than profits earned during the period of non compliance, from Page 3 of that order; and also on Page 4 of that order, the Court notes that Kenneth Kwan --
THE COURT: Would you sit down?
Gentlemen, I asked my -- I'm getting a little crotchety, I guess -- and I apologize for that -- but my rule in this courtroom is only one of you standing at one

Page 15

time. It's distracting to me when somebody else gets up while somebody is speaking.
As you know, I probably give attorneys more leeway in speaking than I should, but please don't get up until the other person has finished.
Go ahead.
MR. QUINN: Yes, Your Honor. I was reading from Page 4. Mr. Kwan testified at deposition that the method for calculating economic benefit involved analysis of the capital cost that is required to meet the permit or the Clean Water Act requirements as well as additional operations and maintenance expenses that are required to come in compliance.
On Exhibit 494, on the bottom -- it's numbered 733 and 734 -- are numbers which do that. And I am merely asking -- going to ask Mr. Pfaff to elucidate on those two pages.
And it does not -- my opinion is, and the United States' position is, this does not require a rocket scientist or expert testimony.
THE COURT: Okay, Mr. Hird.
MR. HIRD: Your Honor, this is an economic analysis. And although there is a model that's being used, it's a model that has been devised by EPA based on economic assumptions and economic analysis.

Page 16

I agree that the analysis of avoided costs is the accurate way to measure economic benefit, but there are a lot of assumptions that go into this model that affect the ultimate result, assumptions as to what the costs were, assumptions as to what the delay factor is, all sorts of things that one would cross-examine an expert witness about.
We don't have a designated expert witness whose deposition we could take because the witness that was designated used a different methodology. We deposed that individual. We explained how the methodology was wrong, and there was a motion to limit it.
So, what they are doing now is saying Mr. Pfaff is a fact witness because he, you know, may have turned the dials in the BEN model. In fact, he did not do it.
So, I don't think it's within his personal knowledge as to this particular calculation, these particular results. And they are using him as a pseudo expert.
THE COURT: Is 494 in evidence?
THE DEPUTY CLERK: Yes, sir.
MR. HIRD: 494 is in evidence; that is correct, Your Honor.
THE COURT: What are you going to offer in evidence through him?
MR. QUINN: Just 494, Your Honor. That's it.

Page 17

THE COURT: Which is already in evidence?
MR. QUINN: Yes. I'm just going to have him talk about those two pages, sir.
If I may add, Your Honor, these types of numbers are run for every case that EPA handles in the Clean Water Act.
THE COURT: Well, I'll hear his testimony and take under submission the objections, and you can renew your objections after I have heard his testimony.
MR. HIRD: Your Honor, may we also object at certain points as we go through on lack of personal knowledge?
THE COURT: Yes, sir.
MR. HIRD: Thank you.
THE COURT: You may proceed.
BY MR. QUINN:
Q. Mr. Pfaff, could you please turn to United States Exhibit 494, and I'd like to direct your attention to Page 733 and 734 as Bates stamped on the bottom. That's about the fourth and fifth pages in.
A. All right.
Q. Mr. Pfaff, what do these pages show?
MR. HIRD: Objection, Your Honor. Counsel has not shown that Mr. Pfaff prepared these pages or how he is otherwise familiar with them.

Page 18

THE COURT: Okay. Overruled.
THE WITNESS: They are two outputs of -- an output of two BEN runs for the Waterway Estates facility, one showing the economic benefit of not employing the wastewater treatment plant, and the other one for not moving the outfall in a timely manner.
THE COURT: Tell me what a BEN run is. I have read about it, but you need to elicit from him what a BEN run is.
MR. QUINN: Yes, Your Honor.
BY MR. QUINN:
Q. What's the BEN model used for at EPA?
THE COURT: Or BEN model.
THE WITNESS: The BEN model is used to calculate the economic benefit of the avoided or delayed costs of compliance with environmental laws, and these are computer outputs from runs made using that model.
THE COURT: You know, somewhere along the line this model that somebody has devised to determine economic benefit and to establish economic benefit -- you're saying that this can be established without anyone testifying as an expert.
MR. QUINN: Yes, Your Honor, we are at this point.
THE COURT: Ordinarily, you have somebody give testimony of economic benefit, come in and talk about the

Page 19

BEN model and what it means and how it was devised and why it has credibility.
MR. QUINN: Your Honor, I can't tell you what we've done before because I'm not aware that we get this far in a whole lot of cases, so I can't tell you that, sir. But I'll be happy to look it up and get back to you.
THE COURT: I'm concerned about -- you know, the Court has precluded you, rightly or wrongly, from bringing in the expert that you have designated to testify regarding economic benefit who has used a wrongful profits analysis, and then you bring somebody else in to testify regarding economic benefit and tell me that there is no expert testimony that is needed, that he can just look at an exhibit, which is a so-called "BEN run," and breathe credibility and life into that exhibit. It sounds like an end run to me.
MR. QUINN: Your Honor, I apologize if it appears to be an end run. The United States' position is that this document is in evidence, and there is nobody to say what it is.
THE COURT: Well, you know, there are documents that come into evidence in massive document cases that may be meaningless if there is not someone who can properly interpret those documents; and it seems to me that the person to properly interpret a BEN run is going to have to

Page 20

be an expert.
MR. QUINN: Your Honor, I respectfully disagree that an expert is required to do this, particularly because of the fact that at EPA and under Mr. Pfaff's supervision, runs like these are calculated all the time. They are --
THE COURT: All right. Go ahead.
MR. QUINN: I'm sorry. They are periodically done by engineers. It is correct that certain assumptions are made. The assumptions that are made are not being proffered at this point in time, just merely what that document says, and that's all I'm trying to do through this witness, Your Honor.
THE COURT: The purpose for this is to establish economic benefit?
MR. QUINN: Yes, Your Honor. We're trying to put a number on the table.
THE COURT: Yes, I know you are.
Well, go ahead and we'll see where we go.
MR. QUINN: Thank you, sir.
BY MR. QUINN:
Q. I think my last question was, can you tell me what Page 733 shows with regard to whether it was pollution control equipment or the relocation of the outfall? Can you tell me which one 733 is?
A. 733 is the pollution control equipment.

Page 21

Q. What is 734?
A. The relocation of the outfall.
Q. What does Page 733 of United States Exhibit494 conclude about the economic benefit of delayed compliance for the failure to upgrade pollution control equipment as calculated by the BEN model?
MR. HIGH: Your Honor, I would object to lack of personal knowledge.
MR. HIRD: I join in the objection.
MR. QUINN: I will withdraw that question.
BY MR. QUINN:
Q. Do you know what Page 733 of U.S. 494 concludes about the economic benefit of delayed compliance?
MR. HIRD: Same objection, Your Honor, as well as our continuing one.
THE COURT: Well, I'll overrule the specific objection at this point.
Go ahead.
THE WITNESS: Yes.
BY MR. QUINN:
Q. What does Page 733 of United States Exhibit494 conclude about the economic benefit of delayed compliance regarding the pollution control equipment as calculated by the BEN model?
A. It shows that as of March of 1993, it would be

Page 22

$3,089,000.
Q. Sir, do you know what Page 734 of United States Exhibit 494 concludes about the economic benefit of delayed compliance for relocation of the outfall as calculated by the BEN model?
A. Yes.
Q. And what does 734 of United States Exhibit 494 conclude about the economic benefit of delayed compliance as calculated by the BEN model?
A. That as of March of 1993, it is $226,018.
Q. Thank you.
MR. QUINN: No more questions, Your Honor.
MR. HIGH: Your Honor, I move to strike Mr. Pfaff's testimony.
THE COURT: I'm going to grant the motion. I think it would be necessary for the Government to come in and have someone testify as to what the BEN model is, why it has credibility; and of necessity I think that would have to be a person who would qualify as an expert witness, Mr. Quinn.
MR. QUINN: Yes, Your Honor.
THE COURT: All right. I'll grant the motion to strike for those reasons.
MR. QUINN: And we have no more questions for Mr. Pfaff.

Page 23

THE COURT: Thank you, sir. You may step down.
MR. QUINN: Your Honor, the United States rests.
MR. HIRD: Your Honor, just before the United States rests, if I may, there were four exhibits that were tendered yesterday that were tendered in incomplete form, and the Court instructed that if we had complete versions of them, they would be admitted.
We have provided them to counsel for the Government. I have copies for the Court and personal copies for Your Honor.
THE COURT: All right. Have you shown them to counsel?
MR. HIRD: Yes, sir. I believe Ms. Tsotsos, my colleague, has shown them.
We would like to have them --
MR. JACOBS: If you will just identify them for the record, I don't think we'll have --
THE COURT: Right. What are the numbers?
MR. HIRD: These were Avatar Holdings' Exhibits 21, 23, 24 and 25.
MR. QUINN: We have no objection, Your Honor.
THE COURT: All right. Those are being tendered by Mr. Hird. And as I understand it, those will replace the originals.
Do we have the first ones that were --

Page 24

MR. HIRD: Yes, Your Honor.
THE COURT: The originals?
MR. HIRD: Yes, or the incomplete versions.
THE COURT: Incomplete versions.
And so you have got hard copies of those, and those will be returned to, I guess, Mr. Hird.
THE DEPUTY CLERK: Yes, sir.
THE COURT: All right.
MR. HIRD: Your Honor, are those documents received?
THE COURT: Yes.
MR. HIRD: Thank you, Your Honor.
MR. QUINN: Now we rest, Your Honor.
THE COURT: Okay. These are just copies here that you handed to me?
MR. HIRD: Yes, Your Honor. Those are personal courtesy copies.
MR. BAISE: Your Honor, before the Defendant Florida Cities starts its case, I would like to defer to Mr. Hird for a motion, Your Honor.
THE COURT: All right, sir. Mr. Hird?
MR. HIRD: Thank you, Your Honor.
Your Honor, at this time Defendant Avatar Holdings would like to move the Court for a judgment on partial findings under Rule 52(c) of the Federal Rules of Civil

Page 25

Procedure.

In the Court's decision on summary judgment, it established the standard for holding a parent company liable for the Clean Water Act violations of its subsidiary, and that is that there had to be evidence showing that the parent corporation caused or directed violations or exercised actual and pervasive control of the subsidiaries to the extent of actually being involved in Florida Cities' daily -- Florida Cities' operations on a daily basis. So, in other words, we had to either actually control or direct the violation or be integrally involved everyday in the subsidiary. There has been no evidence that shows an every-day involvement of the parent corporation in the subsidiary.

THE COURT: Well, now, wait a minute. Are you saying that the Plaintiff -- the Government has to show evidence of some activity each day?

MR. HIRD: I'm reading your opinion -- from your opinion, Your Honor. You stated --

THE COURT: I think you read too much into that opinion.

Now, read back to me the portion that you're talking about.

MR. HIRD: Exercising actual and pervasive control of Florida Cities to the extent of being actually involved

Page 26

in Florida Cities' operations on a daily basis.

THE COURT: Well, you're not saying that the Government has to come in and put on evidence that the Defendant did something each day?

MR. HIRD: Not that the Defendant caused violations each day, but we're talking about -- what I understood you were saying about daily operations was that the companies would be so integrally involved that every day -- that even the most routine decisions would be made at the senior corporate management of the parent corporation.

THE COURT: Okay. Go ahead.

MR. HIRD: That level of control has not been shown by any of the evidence presented to date. There has not been the evidence of control on the everyday, the routine basis, the ordinary activity level.

Now, the other possibility that Your Honor left open, and the possibility which is consistent with the Lambert case decided by this Court, is the -- is a finding that the parent company caused or directed the underlying violations.

And let's look at what's left truly of the Government's case against Avatar Holdings. What's left at -- we'll start with Carrollwood. At Carrollwood, what's left is the Government's allegations that in this narrow window of time, the last six months of 1991, there were

Page 27

violations of the permit for the Carrollwood plant, the advanced wastewater treatment permit that was issued to a secondary treatment plant.

The Government basically alleges that if Florida Cities had done things faster or had tied in to the City of Tampa, those violations wouldn't have occurred.

You heard Mr. Schafer testify yesterday. He didn't testify in any way of any communications with Avatar Holdings. There's no indication that Avatar Holdings had anything to do with any activity relating to those violations within that narrow six-month window.

Indeed, the Court found in its earlier decision that there was very little evidence concerning Avatar Holdings' involvement at Carrollwood in any period later than 1984, and there is very little even at the 1984 level. Nothing else has come in to make a difference.

With respect to Waterway Estates, what we have left at Waterway Estates is the Court granted our motion on statute of limitations. We have the tail end of the Government's claims of discharge in the wrong location and we have a few alleged permit violations afterwards.

The Government's case against Avatar Holdings with respect to Waterway Estates is that somehow Avatar Holdings had a grand conspiracy to buy -- to acquire all of the wastewater treatment facilities in Lee County and,

Page 28

therefore, stubbornly made its subsidiary continue to violate rather than shut down and tie in to North Fort Myers. Yet, you have seen that Avatar Holdings had an opportunity to buy North Fort Myers in 1991 and didn't act on it. So, there's really no evidence that Avatar Holdings somehow caused those violations.

With respect to Barefoot Bay, the Government has been able because -- to get into evidence some 255 documents going back approximately ten years before the alleged violation at Barefoot Bay.

But what do we have at Barefoot Bay? We have violations of reporting biological oxygen demand as carbonaceous biological oxygen demand, which is simply a question of which test was used and which reports were done. There's nothing that Avatar Holdings could have done to cause that.

We have total residual chlorine violations, and I think Mr. Klingenstein testified that what happened was chlorine was added at the end of the process to disinfect the wastewater stream, and an allegation is made that not enough chlorine was taken out, again, before it was discharged. And we have these three toxicity test violations which essentially are species in the laboratory reacting to whole effluent, reacting in such a way that is adverse to health.

Page 29

There is this ten-year history that is being offered to say that somehow the ten-year -- the activities of Avatar Holdings caused these very, very technical violations. But when you look at the ten-year history, all that's going on there is there is discussions of long-term alternatives by the subsidiary as to how they are going to deal with long-term discharge situations.

And since these discussions necessarily involve major issues and major expenses, they are brought to the attention of the parent corporation. And the parent corporation people ask questions and get involved. But there's no indication that Florida Cities came and said, We're going to violate our toxicity tests unless you, Avatar Holdings, do "X". And Avatar Holdings did not do "X."

There's no indication of anybody at Avatar Holdings coming into any of these plants and fiddling with the valves and somehow changing the discharge.

This is a stretch. What you're dealing with is very, very technical violations of permit, and yet you're claiming that long-term planning activities that go back ten years somehow result in very technical violations of the permit ten years later. It is pushing the Clean Water Act way beyond its scope.

Your Honor, we, of course, will respond to the Government's offer of proof with respect to the Fifth

Page 30

Amendment, but I'd like to just discuss the five individuals who are mentioned there.

One is Mr. Sharp who, as you know, died in April 1992. I don't think the Government is entitled to any adverse inference from a witness who died before they filed the complaint. Mr. Sharp was dying of cancer during the last years of his life and resigned as chief executive officer in 1990. That's before the violations alleged against Avatar Holdings occurred.

Mr. Wilkov you have already struck, Your Honor, for this.

Robert Gordon was identified yesterday by Leon Levy as the president of Avatar Utilities. He's not an officer, director, employee of Avatar Holdings, and there's absolutely no reason why his taking the Fifth Amendment should in any way be imputed to another company.

You're left with John Sladkus and Dennis Getman. Mr. Sladkus retired the beginning of 1991. That was testified to yesterday. The violations here alleged against Avatar Holdings begin at the earliest May 4th, 1990, so the overlap is minuscule. In fact, at Barefoot Bay and Carrollwood, the alleged violations do not begin before Mr. Sladkus was gone.

Mr. Sladkus was deposed five -- four-and-a-half years after he had resigned from Avatar Holdings. This is

Page 31

not someone who we control; this is someone who made a personal decision. It's inappropriate, we believe, under the circumstances to read anything into that inference.

Finally, there's Mr. Getman. Mr. Getman is general counsel both of Avatar Holdings and Florida Cities. He was noticed at the time before Avatar Holdings was in the case, and he could have responded to -- and had he not taken the Fifth Amendment, many of the questions would have been objected to under the attorney/client privilege.

In contrast, we have witnesses who have testified -- you have heard Mr. Levy. There are many, many documents that the Government has put into place. The Government cannot make up for the lack of evidence by these adverse inferences.

The Government wants to argue from these -- from the documents that are in place -- it obviously has the right to do so -- but these documents cannot be augmented or reinterpreted or reinvented through the specter of witnesses who have taken the Fifth Amendment.

Your Honor, what we have here is a lot of smoke that is disguising the fact that there really is not a case against the parent company. In fact, the only reason why the parent company is here was brought out yesterday in the questioning of Ms. Zimmer. Florida Cities does not have the ability to pay the penalty that the Government would ask

Page 32

from this court. And that's the sole reason why Avatar Holdings is in this case.

Your Honor, I request respectfully that you grant Avatar Holdings' judgment on -- partial -- on partial findings in our favor.

THE COURT: Okay. Let me hear argument from the Government in response, Mr. Jacobs, and then I'll hear from Florida Cities Water Company.

MR. JACOBS: Your Honor, the Court ruled in its November 22nd, 1995, order that in order for Avatar Holdings to be held liable, it must have acted in such a way that it should be a person who violates, quote, unquote, under Section 309(d) of the Clean Water Act.

The Court noted in the same decision that there was both probative evidence in at least two, if not three, of the facilities indicating that decisions were made by the parent company relating to the violations in the complaint.

As I noted in my opening statement, far more additional evidence has surfaced since that motion was adjudicated. In fact, much of the evidence that is now in evidence was not even available to the Government until the close of discovery.

You heard some references yesterday, I believe, to the documents that came from Mr. Levy's files not being Avatar Holdings' records; they were Mr. Levy's personal

Page 33

files. So, they were not produced in a timely fashion.
Likewise with Mr. Sharp, there was an argument made that the documents that Mr. Sharp generated and maintained were his personal records and not those of the Company's and so much of these -- much of this evidence wasn't even available to the Government until the close of discovery.
The evidence -- and there are now approximately 500 documents in evidence -- and that evidence establishes that through its officers, Avatar Holdings was actually involved in critical decisions relating to the proven violations.
I'm not talking about the past unpermitted discharge violations at Barefoot Bay and Carrollwood; I'm talking about all of the violations that the Court has already found took place.
Under the Bernuth case, such involvement is, quote, a sufficient condition, unquote, for the imposition of liability.
Moreover, Avatar Holdings caused or directed the violations -- that's the standard that the Court put in its November 22nd, 1995, order -- by failing to direct and authorize actions that would have resulted either in the cessation of the discharge or the timely construction of advanced wastewater treatment facilities at each of the

Page 34

three plants.
We have introduced expert testimony to the effect that the alternatives that would have prevented the violations were either a number of cease discharge alternatives or the construction of advanced wastewater treatment facilities.
Avatar Holdings' officers were involved in all of these decisions. Avatar Holdings' officers and directors exercised actual and pervasive control over Florida Cities' environmental practices.
I was struck by Mr. Hird's opening statement when he said -- and I remember the Court interrupted him -- the Government has never come in and sued a parent company before. And that's absolutely false. We sue the parent company under the Clean Water Act when the parent company is liable. This is not a case of new impression whatsoever. And, in fact, in open court before the Magistrate, we gave a citation to Mr. Hird of another case in which that was done, a published case, United States versus Menominee Paper Company. And then we also gave Mr. Hird a list of 750 or so Clean Water Act cases on file in Federal Courts throughout the country in all of the EPA regions, a number of which included cases in which we named the parent company.
It's not the least bit unusual; we only do it when we think the parent company is liable.

Page 35

THE COURT: Is there a reported case in which you have successfully sued a parent company?
MR. JACOBS: There is a reported case in which we successfully sued the parent company, United States versus Menominee Paper Company and Bell Packaging, and the public -- I'll get the citation. I believe it's in one of my pretrial submissions.
That was a summary judgment decision, and essentially the subsidiary conceded liability both by the subsidiary and the parent. So, I'm not sure to what extent in that particular decision the Court analyzes the standard to be applied. In any event, the case is 727 F.Supp. 1110, Western District of Michigan, 1989.
As I say, because the point was conceded, I'm not sure how much discussion of that particular issue there is in that particular reported decision; but that was a case where we did sue the parent company and successfully so.
THE COURT: All right.
MR. JACOBS: Moving on to the individual facilities. As I've said before and as we established through the testimony of Leon Levy, the story here starts in 1980. And Mr. Levy's testimony was simply an introduction to what we would have established through these witnesses who took the Fifth Amendment.
And I do not suggest that we -- there need to be

Page 36

an adverse inference drawn from Mr. Sharp's unavailability. I'm not legally entitled to an adverse inference obviously from his unavailability. But we are entitled to draw -- or ask the Court to draw inferences from the documents that he wrote or that he received and from the instructions that he gave. And Mr. Levy testified that when Mr. Sharp gave an instruction, he expected it to be followed. And Mr. Levy testified that as far as he knew, nobody countermanded Mr. Sharp's orders.
And the documents will demonstrate -- and as I've outlined in the offer of proof and as we heard from Mr. Levy yesterday in conjunction with one particular exhibit, Mr. Sharp's objective was to take over the entire Lee County system. There was no way when he stated that objective in that memorandum that his subordinates, whether they be an Avatar Holdings subordinate who worked directly with him up in New York at his real estate company, who also held an Avatar Holdings vice-president position -- John Sladkus -- there was no way they are going to go back and tell Mr. Sharp that they are going to sell the Waterway Estate franchise, or that they are going to connect the Waterway Estates franchise to Mr. Schenkman's facility when Mr. Sharp said, We want to take over all the private franchises in the area and all the municipal and county systems as well; we want to own the whole system.

Page 37

Now, that was way back in the mid '80's. The fact that much, much later in 1991 there was a decision made that they didn't want to buy Mr. Schenkman's facility because Mr. Schenkman, as they pointed out, was in the red, that doesn't mean that they have changed their objective any.

Now, at Barefoot Bay, which I point out -- and I know this has come out repeatedly in evidence -- this was an Avatar development entirely. And the board itself was repeatedly involved, repeatedly involved. And Mr. Sharp was repeatedly involved, and Mr. Sladkus oversaw the project as Mr. Sharp's engineer, what to do about the disposal of the effluent.

The evidence yesterday was that in 1984, it was clear that the board of directors of Avatar Holdings knew they had a problem with the disposal of that effluent, a problem that they had not even solved as we sit here today, as far as I know. While the plant is under construction, it's still not completed. A decade later, still not completed.

And had they built the plant that they are now building way back when, none of those violations -- none of the violations that the Court has already held took place would have taken place, and that's true at all three of these facilities.

If the plant -- this company, or these companies,

Page 38

don't have the right to pollute. But if they go through the proper permitting procedures and they are permitted to discharge into a water body, then they may discharge into a water body.

It's not as if we're not allowing them to conduct their business. Nobody said, You can't discharge into any of these water bodies, which they could conceivably have said as regulatory bodies. They said, Either you're going to have to stop discharging; or if you're going to continue to discharge, you're going to have to meet -- you're going to have to apply for the permit and you're going to have to meet the permit limits.

And to do that, they had to build three advanced wastewater treatment plants, technology that was available as far back as 1970. Long before this case started, advanced wastewater treatment plants existed.

And those judgment calls were not being made by the subsidiary; those judgment calls were being made by the parent company.

And the fact that I cannot put Mr. Getman on the stand -- every time they mention Mr. Getman, they call him general counsel. Every time I mention Mr. Getman, I call him vice-president of the company. He served as vice-president, senior vice-president, and now he serves as executive vice-president.

Page 39

And he's made many, many, many business decisions that have nothing to do with the legal counsel that he may or may not have given to Avatar Holdings or any of the subsidiaries.

And there was no assertion of attorney/client privilege or attorney work product at his deposition. He just took the Fifth Amendment.

There was no motion before the Magistrate to preclude him from testifying on the grounds that he was an attorney. And the Magistrate has expressly held, in conjunction with requiring the production of documents from Mr. Getman's files, that just because he happened to have a law degree and a title as general counsel didn't mean that the documents weren't subject to discovery.

Now, we are handicapped by virtue of the fact that the Defendants can select which witnesses they put on the stand and testify and which are going to assert the Fifth Amendment. We have no control over that.

And it just happens to be that the ones who testify -- the only person who testified who goes back to 1980, who has knowledge -- had only slight knowledge, admittedly -- and that was Mr. Levy.

The other people in the know, Mr. Gordon, who predated Mr. Levy, took the Fifth Amendment. Mr. Getman, who started in the early '80's, took the Fifth Amendment.

Page 40

Mr. Sladkus, who started in the early '80's, took the Fifth Amendment.

And there's a reference to other Avatar Holdings' officers testifying -- and that's true -- Mr. Jacobson, who didn't come along until '92; and the financial officers who presumably were not involved in the technical engineering decisions.

Now, Mr. Sladkus was an engineer. He was the one who was calling the shots directly under Mr. Sharp's direction up in New York.

And I dare say there are over a hundred documents that have Sharp and Sladkus' name on them directly relating to what to do about the effluent at Barefoot Bay. This was a problem they knew about in the early '80's and continued to be a problem, I dare say, through Mr. Sharp's death and Mr. Sladkus' resignation, which took place at approximately the same time.

So, I dare suggest that there is far enough -- far more than enough evidence to establish already at this point in time Avatar Holdings' liability for the violations.

Thank you, sir.

THE COURT: All right. Mr. Baise?

MR. BAISE: Your Honor, may I address the Court?

THE COURT: Yes, sir.

MR. BAISE: Two points, Your Honor, I would like

Page 41

to bring to your attention. Government counsel has made a great deal with regard to witnesses of Florida Cities not testifying and some of them taking the Fifth Amendment.

Mr. Allen, of course, is one that you have been told about that did take the Fifth Amendment and will be testifying.

The reason I think it's important to bring to the Court's attention the fact that this whole issue arose has been alluded to on one occasion, and that is something called the Weitzenhoff case. When the Supreme Court refused certiorari with respect to that case coming out of the Ninth Circuit, I brought that case to all of the individuals' attention and asked them to take that case into consideration, consult with their own counsel with respect to what that case indicated. They did, and did so. Some chose to testify; some chose not to testify.

It all arose because the Weitzenhoff decision -- which a number of individuals commented on the area -- I believe it's an incorrect decision -- but the fact is, people have to draw their own conclusions with respect to what Weitzenhoff said. Weitzenhoff is very broad with regard to its potential liability.

So, we would suggest to the Court that, one, it review the Weitzenhoff case and take that into account.

Number two, counsel continues to suggest from the

Page 42

Government that these facilities did not have permits. They did not have the Federal permit; that is correct. But at all times they were discharging with State permits. That's number one.

Number two, these facilities were meeting the very high levels of secondary treatment, and I do not want to leave in the Court's mind that there was any discharge of raw or untreated waste during this particular period of time. And that obviously will come out in our direct case. Those are the only points I would like to make, Your Honor.

Thank you.

THE COURT: All right.

MR. HIRD: Your Honor, if I can have just one minute -- I literally mean just one minute.

THE COURT: Okay. You can have brief rebuttal.

MR. HIRD: First of all, Your Honor, the U.S. v. Menominee Paper decision had no discussion of corporate parent liability. We looked at that case when Mr. Jacobs brought it to our attention.

Secondly, Your Honor, Mr. Getman's deposition lasted for, I believe, a total of eight pages. No specific questions were asked to which the attorney/client privilege could have been raised.

But finally, I want to say, the most important thing I heard in Mr. Jacobs' statements was he's accusing

Page 43

Avatar Holdings of failing to take action to sufficiently direct the violations. And here's where I think Mr. Jacobs has confused the standards.

What he's asking the Court to do is assume that Avatar Holdings had a duty to act because certain information came up the chain and then our -- find Avatar Holdings liable because it didn't act. That's not the way it works.

Subsidiaries tell parent corporations about what they do. What has to be found to hold a parent corporation liable is the parent corporation reaching down and directing the subsidiary to do or not do something which the subsidiary would otherwise do or not do. That is not shown.

What Mr. Jacobs is saying is Avatar Holdings is liable for its inaction because it didn't do this, that or the other thing; putting aside the merits of what we did or what we didn't do or what Florida Cities did or didn't do, which Mr. Baise will get to. You can't prove pervasive control by inadequate supervision, and that's essentially what Mr. Jacobs is arguing.

Thank you, Your Honor.

THE COURT: All right. The Court is going to reserve ruling on the Rule 52 motions.

Florida Cities Water will go first, correct?

MR. BAISE: Yes, Your Honor.

Page 44

THE COURT: All right. Mr. Baise, you may call your first witness.

MR. BAISE: Your Honor, we are going to have to take a couple of our witnesses out of order because some of them have travel plans, particularly Mr. McWeeny, who will be the first individual to testify.

He will be testifying with regard to the Carrollwood facility and dealing with some of the points that have been raised with the Government. So, we would ask the Court's indulgence to allow us to take him out of order that we had suggested to the Government that we would follow.

THE COURT: All right, sir.

MR. BAISE: Thank you.

MR. BULLOCK: If the Court please, Your Honor, we would call Michael McWeeny.

THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.

Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?

THE WITNESS: I do.

THE DEPUTY CLERK: Take a seat in the witness stand.

State your name and spell your last for the

Page 45

record, please.
THE WITNESS: Michael W. McWeeny; M-C capital W-E-E-N-Y.
- - -
Thereupon,
MICHAEL W. McWEENY,
a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:
DIRECT EXAMINATION
BY MR. BULLOCK:
Q. Mr. McWeeny, good morning.
Would you state your position, please?
A. I'm the director of the Hillsborough County Department of Public Utilities.
Q. All right. What is your responsibility in that position?
A. To manage that portion of County Government providing the water and wastewater service to about 95,000 customers in unincorporated Hillsborough County.
Q. And how long have you been in this position?
A. Approximately ten years.
Q. All right. When did you join Hillsborough County?
A. I became an employee of Hillsborough County in June 1985.

Page 46

Q. All right. Who was your predecessor?
A. Prior to me coming to the Hillsborough County Utilities Department, we had an interim director, Bruce Olvin. Prior to him, the last permanent director was Bruce Kennedy.
Q. All right. Do you know how long Mr. Kennedy was in his position?
A. I believe Mr. Kennedy was the director for about three-and-a-half years.
Q. All right. Let me refer you, first of all, Mr. McWeeny, to Florida Cities' Trial Exhibit 96. Have you seen this document before?
A. Yes, I have.
Q. Can you identify it for the record?
A. Yes. It is a letter dated June 28th, 1983, from Bruce Kennedy to Mr. A.A. Reeves, III, at Florida Cities Water Company.
MR. BULLOCK: Your Honor, we would move Defendant's 96 into evidence.
THE DEPUTY CLERK: It's in.
MR. BULLOCK: I'm sorry. Thank you.
THE COURT: It will be received.
THE DEPUTY CLERK: It's already in.
THE COURT: Beg your pardon?
THE DEPUTY CLERK: It's already in.

Page 47

THE COURT: Already in. Okay.
Go ahead.
BY MR. BULLOCK:
Q. Mr. McWeeny, let me refer you to the first paragraph, the sentence that begins with, We anticipate.
A. Yes.
Q. Would you read that sentence, please?
A. We anticipate a time frame of late 1985 at the earliest before we could consider providing service.
Q. All right. When you joined Hillsborough County in 1985, did the system have capacity to accept the effluent from the Carrollwood plant?
A. We did not have capacity in the system at that time, no.
Q. All right. Let me ask you to flip a couple of exhibits to Defendant's Exhibit 99. Have you seen this document before?
A. Yes, I have.
Q. Would you identify it for the record?
A. It is a letter dated September 6, 1984, from Bruce Kennedy to Mr. L.L. Good of Florida Cities Water Company.
MR. BULLOCK: Your Honor, we would move Defendant Florida Cities' 99.
THE COURT: It will be received.
MR. BULLOCK: Thank you.

Page 48

BY MR. BULLOCK:
Q. Let me refer you to the second paragraph of that letter; and about the fourth line down, the sentence begins, The latest projected date.
A. Yes, sir.
Q. Would you read that, please?
A. The latest projected date for having the expanded plant in service is June 1987.
Q. All right. Let me ask you to also read the following sentence.
A. In addition, the identification of the point of connection to the County's system is dependent upon the completion of a master wastewater transmission plan for northwest Hillsborough County, tentatively anticipated to be completed by mid 1985.
Q. Okay. Was the plan completed by mid 1985?
A. There were numerous plans that were developed for the Hillsborough County wastewater system. I believe the master plan was actually presented in early 1986.
Q. All right. Do you know approximately how many plans there were for Hillsborough County?
A. I believe there were probably three or four iterations of master plans within the 1985 to 1990 time frame.
Q. Was there capacity available to accept the Carrollwood effluent in 1987?

Page 49

A. There was not.
Q. All right. And can you tell us why the date for the capacity was continuing to be pushed back?
A. Yes. Hillsborough County, in 1985, when I became the director, August of '85 when I became the director, was in a situation where our wastewater treatment plants were pushing their permitted capacities. We did not have capacity for new development, and we were not meeting our permit criteria.

We initiated a significant capital improvement program in 1986 wherein we borrowed approximately $367 million to expand and upgrade our utilities system. That was a significant capital improvement program, far larger than anything the County had ever done before.

As we began to undertake those capital improvements, we experienced our earliest -- our earliest scheduling as being a little optimistic, and we were not able to complete those projects as we initially scheduled them.
Q. When you indicated a minute ago that you were not meeting your permit criteria, what regulatory body permitted your facilities?
A. Our permits were through the Florida Department of Environmental Regulation and EPA.
Q. All right. Let me ask you to turn to Florida Cities' Exhibit 103. Are you familiar with this document?

Page 50

A. Yes, I am.
Q. Would you identify it for the record?
A. Yes. It is a letter that I signed addressed to Mr. A.A. Reeves, III, vice-president of Florida Cities, dated June 3, 1986.

MR. BULLOCK: Your Honor, we would move Florida Cities' 103.

THE COURT: It will be received.

MR. BULLOCK: Thank you.

BY MR. BULLOCK:
Q. You wrote this letter, Mr. McWeeny, is that correct?
A. My staff wrote it and then I signed it.
Q. What was the purpose of this letter?
A. The purpose of this letter was to establish the parameters for connection of the wastewater service from the Carrollwood subdivision, Florida Cities Water Company, to Hillsborough County.
Q. And did you identify whether or not a connection fee would be necessary? And I'll refer you to Page 3.
A. Yes. On Page 3, in Section B, we do have a statement regarding fees and charges saying that all of the fees and charges be calculated and collected pursuant to County ordinance.
Q. Did you require Florida Cities to submit an application?

Page 51

A. An application was required, yes, sir.
Q. All right. Did you identify a specific plant that the County was building which would allow the system to have capacity?
A. Yes. In Page 1, the last paragraph, I identified that we anticipated capacity would be available when we brought the Sheldon Road wastewater treatment plant on line. That's the plant we currently call the Northwest Plant.
Q. Okay. In 1986, when did you anticipate that the Northwest Plant, or the Sheldon Road plant, would be on line?

(Pause.)
A. I don't believe that in this letter we identified the specific date that that particular plant would be on line.
Q. Okay. Did you identify a date in which you believed that there would be sufficient capacity anywhere in the system?

(Pause.)
A. We did identify that we thought the River Oaks Plant would be expanded by spring of 1988 and that we -- that would make capacity available.
Q. Okay. Was the River Oaks Plant expanded by 1988?
A. The River Oaks Plant was undergoing expansion from about 1985 through about 1988.
Q. Did those expansions, in fact, provide sufficient

Page 52

capacity to accept the Carrollwood effluent?
A. While the River Oaks Plant would have had capacity to accept the flow, the River Oaks Plant is a significant distance from the Carrollwood area, service area; and there was not infrastructure to take the wastewater from that area to the River Oaks Plant.
Q. Let me refer you next to Exhibit 106. Are you familiar with this document?
A. Yes, sir.
Q. And would you identify it for the record?
A. It is a letter dated March 8, 1988, addressed to Mr. Dale Ernsburger, P.E., of Reynolds, Smith and Hill signed by myself.

MR. BULLOCK: Your Honor, I believe 106 is already in evidence.

THE DEPUTY CLERK: Yes, it is.

BY MR. BULLOCK:
Q. What was the purpose of writing this letter, Mr. McWeeny?
A. The purpose of this letter is to provide a preliminary review of the plans for the connection of the service area to the County system and to identify the fees that would be required.
Q. Is this the first time that the County was able to identify any fee specifically?

Page 53

A. I believe this is the first time that we communicated in writing what we had calculated the fees to be.
Q. All right. What did you calculate the connection fee to be?
A. $5.5 million.
Q. All right. And what made up the connection fee?
A. The connection fee is the fee that the County charges to recover the capital cost of the facilities needed to provide the service, including the transmission facilities to bring the wastewater to the plant for treatment, the treatment plant itself, and the effluent disposal and sludge disposal facilities.
Q. Did this $5.5 million figure include any costs that Florida Cities would have to undertake to connect to the plant?
A. It did not include the cost of the connection itself. This was just to pay for the existing facilities that would be utilized.
Q. All right. Were you able to identify a time in which capacity would be available?
(Pause.)
A. In this letter, we indicated that the application for service would be put on a priority list and the capacity would be -- correction -- the applicant would be notified when the capacity was available. We did not in this letter

Page 54

indicate when that would be.
Q. Did Florida Cities question the $5.5 million connection fee?
A. As I recall, they did have considerable objection to the five-and-a-half million dollar fee.
Q. Your office -- let me start over again.
Does your office permit privately-owned wastewater treatment facilities in Hillsborough County?
A. We do not.
Q. All right. Do you have any control over the permitted -- the terms of the permits that these facilities would receive?
A. We do not.
Q. Did you continue to negotiate with Florida Cities regarding the connection fee?
A. As I recall, we had several conversations, but it essentially dropped because we could not reach resolution.
The capacity fees are not a negotiable item in our normal administrative activity.
Q. Did the negotiations pick up at a subsequent time?
A. Subsequently, the negotiations did pick up.
Q. And do you know why they picked up?
A. It is -- I have no personal knowledge other than we were --
MR. QUINN: Objection.

Page 55

THE COURT: Sustained.
BY MR. BULLOCK:
Q. Was the County contacted by Florida Cities to continue negotiations?
A. It is my understanding that we were.
Q. All right. And do you know when these negotiations picked up again?
A. I believe that would have been in 1990.
Q. Were any other parties involved in the negotiations?
A. I believe only the County staff and one of the County Commissioners and representatives of Florida Cities were involved.
Q. All right. Let me refer you to Defendant's 125. Are you familiar with this document?
A. Yes, I am.
Q. And would you identify it for the record?
A. It is a letter dated July 27, 1990, to Mr. A.A. Reeves of Florida Cities Water Company signed by myself.
Q. All right.
MR. BULLOCK: Your Honor, 125 is already in evidence.
THE COURT: Okay.
BY MR. BULLOCK:
Q. What was the purpose of this letter, Mr. McWeeny?
A. This was a response to a question posed by Mr. Reeves

Page 56

regarding the scheduling of the completion of County capacity that could provide service to Florida Cities.
Q. All right. When did the County anticipate that capacity would be available?
A. We identified in this letter that capacity would be available -- anticipated to be available in the first quarter of '91, 1991.
Q. And, in fact, did capacity become available during that time?
A. Capacity did become available, yes.
Q. Let me ask you to refer to Defendant's 141, which is in the next volume. Mr. McWeeny, are you familiar with this document?
A. Yes, I am.
Q. And would you identify it for the record, please?
A. This document is the transmittal letter and an agreement between Hillsborough County and Florida Cities to provide wastewater service.
MR. BULLOCK: Your Honor, I would move Defendant's 141 into evidence.
THE COURT: It will be received.
BY MR. BULLOCK:
Q. Mr. McWeeny, could you identify the day this agreement was entered into?
A. The date of the agreement is June 5, 1991.

Page 57

Q. Okay. Does this agreement reflect whether or not the capacity fee would actually be levied by the County?
(Pause.)
A. The agreement does not require the payment of a capacity fee.
Q. All right. Under the terms of this agreement, who is to bear the cost of construction of the forced main which would have been needed to connect Carrollwood to Hillsborough County?
A. A point of connection was identified, and the County bore the costs up to the point of connection, essentially west of the point of connection, between there and our wastewater plant; and Florida Cities picked up the cost of the infrastructure up to the point of connection.
Q. Whose forced main was longer, Florida Cities' or the one the County would construct?
A. I don't recall the answer to that.
Q. All right. Does the agreement address any penalties for construction delays?
A. Yes, it did.
Q. Okay. And what does the agreement reflect regarding the payment of any penalties for construction delays?
A. If the County were responsible for construction delays and not making the connection by the date certain, the County would be responsible for those penalties.

Page 58

Q. All right. And what was the date certain in this agreement?
A. I believe the date certain was, from memory, December 31st, 1991.
Q. Okay. Are you aware of when the connection actually occurred?
A. I believe it was five or six days later than that.
Q. All right. Are you aware of the distance between the connection point and the Carrollwood facility?
A. Generally, but I do not know the specific number of feet or miles.
Q. All right. Mr. McWeeny, did the County, in fact, pay any penalties for construction delays?
A. Yes, we did.
Q. Thank you, Mr. McWeeny.
MS. TSOTSOS: Your Honor, Avatar Holdings has no questions of this witness.
THE COURT: All right. Mr. Quinn?
MR. QUINN: Yes, Your Honor. I will be brief, and I do mean brief.

CROSS EXAMINATION

BY MR. QUINN:
Q. Good morning, Mr. McWeeny. My name is Tony Quinn. I'm counsel for the United States.
Mr. McWeeny, your understanding is that Florida

Page 59

Cities -- is it your understanding that Florida Cities Water Company was under an order to cease discharge to the Sweetwater Creek?
A. It was my understanding they were under an order to either cease discharge or to upgrade their effluent to meet the advanced waste treatment standards.
Q. But during your course of dealings since 1985 with Florida Cities Water Company, you didn't detect any sense of urgency to their dealings, did you?
A. I don't know how to measure a sense of urgency. Certainly I think they were anxious or interested in compliance, but I don't know how to define a sense of urgency.
Q. Sir, do you remember giving a deposition in this case?
A. Yes.
Q. I'll refer to Page 33, Lines 12 through 18.
Sir, do you remember the question being asked, In your dealings with Florida City with respect to connecting to Carrollwood, to the County, did you get the idea that the Company had a sense of urgency to the connection?
And your answer to that question was: I don't recall one way or the other any sense of that urgency.
Do you remember that?
A. Yes, generally.
Q. Okay. Well, does that -- I mean, you just stated now

Page 60

you don't know how to --
THE COURT: Well, he's answered your question and I have his previous answer and I've got this answer. Let's move on.
MR. QUINN: Thank you.
BY MR. QUINN:
Q. Sir, during your course of dealings with Florida Cities Water Company, did Hillsborough County ever lead Florida Cities down the path that a connection would be forthcoming immediately?
A. I don't believe that in any of our communication with them we indicated that capacity would be immediately available.
I believe that we did indicate that capacity was anticipated to be available when certain plant construction was completed, but we did not guarantee a date or an immediacy.
Q. So, you just told them the truth as to what the circumstances were and how those circumstances changed, didn't you?
A. Yes, sir.
Q. Prior to June of 1985 when you joined Hillsborough County, there was capacity at the Dale Mabry Plant, wasn't there?
A. I think that the amount of capacity that was available

Page 61

at any of the facilities in that time frame was under some question. And, in fact, one of the first things that I did as the Utilities Director was to determine that I could not sign off on the certifications that capacity was available at our treatment facilities. And shortly thereafter, the regulatory agencies placed us under a moratorium until we could clarify the amount of commitments and flow at our facilities.

Q. How about prior to you coming on in June of '85, do you know whether adequate capacity existed at the Hillsborough County plants?

A. I do not know.

Q. Okay. Sir, you have mentioned during direct testimony that a County Commissioner was involved in negotiations in 1990. Why was a County Commissioner involved in the negotiations with Florida Cities?

A. Hillsborough County is organized under a system of commissioners where we have four district commissioners and three at-large commissioners.

The commissioner that was involved, I believe, was Commissioner Iorio, and that was her district and I believe that she was representing her constituents.

Q. In the course of your dealings with privately-owned wastewater treatment plants, is it unusual for -- withdrawn.

How many times has a commissioner been involved in

Page 62

negotiations?

A. This is the only agreement that we have of this type, but generally commissioners are not involved in the administration.

Q. So, is it safe to say that this is, to your recollection, one of the only times that a commissioner was involved in negotiations with Hillsborough County and a privately-owned wastewater treatment plant?

A. Yes.

Q. Sir, at any time subsequent to you coming on in 1985, June, did Florida Cities make a commitment to tie in to the Dale Mabry Plant? Did they make a written commitment?

A. I don't recall any commitment to make a connection until we entered into the June 5, 1990, agreement.

Q. Okay. Subsequent to June of '85 and prior to the agreement, did Florida Cities ever agree to pay for the construction of necessary transmission piping or pumping equipment?

A. The only commitment or agreement we have is the June 5 agreement.

Q. Sir, do you know if Florida Cities had made a commitment to tie in to the Dale Mabry Plant in June of1985 and had agreed to construct the necessary transmission piping and pump stations, whether they would have been put on that priority list you mentioned during direct testimony?

Page 63

A. If they had made the application after August of 1985 when I became the director, I would not have been able to sign off that there was capacity. Whether my predecessors would have signed off, I cannot say.

Q. So, do you know whether if they had done -- withdrawn.

Do you know whether if they had made those commitments prior to you becoming director, whether or not a connection would have been allowed?

A. I don't know the answer to that.

Q. Do you know whether it's possible?

A. I think that it would depend on whether the regulatory agencies at that time would have considered us having been over-committed in our capacity, and I don't know how they would have evaluated that.

Q. Sir, during the time you have been with Hillsborough County, have you ever not had an NPDES permit for any of your plants?

A. We have currently, I believe, nine major wastewater plants, several of which do not have NPDES permits.

Q. Is that because of the delegation to the State of Florida?

A. No. That's because they don't have discharges.

Q. Okay. Let me rephrase my question. Since June of 1985, did any of the plants under your direction which had discharges ever not have NPDES permits?

Page 64

A. The only one that comes to mind as not having a discharge -- an NPDES permit is the South County Treatment Plant which had an NPDES permit which was rescinded to a zero discharge NPDES permit.

Although we had NPDES permits at several of our facilities, we did have consent orders and consent decrees with both EPA and DER regarding restrictions to some of those discharges.

Q. And Hillsborough County considers administrative orders and permits to be important documents, don't they?

A. Absolutely.

Q. And you wouldn't not apply for one, would you?

A. I'm sorry, I didn't hear the question.

Q. You would not fail to apply to renew a permit, would you?

A. Not knowingly. We might by accident miss a date, but we would not knowingly fail to permit a plant.

Q. During the time that you were on board since 1985 to present, have you ever accidentally failed to reapply for a permit when necessary?

A. I don't recall that we have.

Q. Sir, with regard to the plants that don't have surface water discharges, what do they do with the effluent?

A. The effluent is reused for irrigation or some other type of reuse.

Page 65

Q. Are there holding ponds?
A. Many of our plants have holding ponds.
Q. Sir, are there also deep well injection places?
A. Hillsborough County has no deep well injection for effluent disposal.
Q. About how many ponds do you currently have?
(Pause.)
A. I believe that we only use percolation ponds for effluent disposal – I take that back. We have one plant currently in operation that uses percolation ponds for effluent disposal. We have lined ponds at several facilities that are used for holding reclaimed water for future reuse.
Q. Sir, prior to Exhibit 106, which was the agreement we were talking about a little bit further on, did Florida Cities Water Company ever ask Hillsborough County for a cost to tie in to the plant?
A. They did ask us through the application process what would be the conditions for the connection. Our preliminary plan review, which was one of the exhibits previously discussed, identified the capacity fees and a point of connection.
The normal approach is that the applicant is responsible for the infrastructure up to the point of connection.

Page 66

Q. Is that what happened in this case?
A. That was not what happened in this case. In this case, we entered into a separate specific agreement that identified a point of connection. And based on that point of connection, the infrastructure up to the point of connection was provided by Florida Cities and beyond the point of connection by the County.
Q. Would you say that was unusual in this circumstance for the County?
A. It was only unusual in that we had a separate agreement rather than just using the preliminary plant approval letter.
Q. Thank you, sir.
MR. QUINN: I have no more questions. Thank you.
MR. BULLOCK: Nothing, Your Honor. Thank you.
THE COURT: Thank you, sir. You may step down.
Call your next witness.
MR. BAISE: Your Honor, Mr. Don Scroggin will call our next witness.
THE COURT: Okay.
MR. SCROGGIN: Florida Cities calls Mr. Douglas Smith.
THE DEPUTY CLERK: Come forward and be sworn. Raise your right hand, please.
Do you solemnly swear that the testimony you are about to give in this cause will be the truth, the whole truth and nothing but the truth, so help you God?
THE WITNESS: I do.
THE DEPUTY CLERK: Take a seat in the witness stand.
State your name and spell your last for the record, please.
THE WITNESS: My name is Douglas G. Smith, S-M-I-T-H.

- - -

Thereupon,

DOUGLAS G. SMITH,

a witness, having been duly sworn to speak the truth, the whole truth and nothing but the truth, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. SCROGGIN:
Q. Good morning, Mr. Smith.
A. Good morning.
Q. Would you please state your name and current position?
A. Douglas G. Smith, senior partner and regional environmental manager for Black & Veatch.
Q. How long have you been employed at Black & Veatch?
A. Just over 16 years.
Q. Can you tell us what Black & Veatch is?

Page 67

Page 68

A. Black and Veatch is a large engineering construction partnership founded some 81 years ago headquartered in Kansas City, Missouri, engaged in providing engineering and construction management and related services in the energy, environment and facilities business around the world. We have about 6,600 employees and do about $1.2 billion worth of business each year.
Q. Would you please tell me what college degree you hold?
A. I have an undergraduate degree, a bachelor of science, in civil engineering with an emphasis in sanitary engineering. I received that in 1971 from Kansas State University in Manhattan, Kansas.
And after that, I received a masters of science in civil engineering, essentially sanitary engineering, from the University of Colorado in Boulder; finished my work there in 1974 and the degree was conferred, I think, in 1975.
Then I have a juris doctor degree from the University of Denver College of Law, received that in 1989.
Q. Can you tell me what training you have relevant to the construction of wastewater treatment facilities?
A. Most of the training I have received has been pretty much on-the-job training. I began in the construction business in 1967 right out of high school and continued it essentially in some regard or another to the present time.

Page 69

I'm currently vice-president of our construction company, Black and Veatch Construction, Incorporated, where we engage in the construction of municipal water and wastewater treatment plants.

And during the 29 years since I first engaged in construction business, I have seen all kinds of construction activities regarding water and wastewater treatment plants for mostly what we would call municipal owners.

Q. Can you tell me if you have any other professional training?

A. We, in the engineering practices, have a number of informal and more formal training seminars and conferences and educational activities we take part of during the years.

I have attended or taken part in terms of either giving papers or participating in these educational activities essentially before even my undergraduate degree was completed, probably, say, beginning 1970 through the present time. And I probably averaged four or five of those kind of conferences or seminars each year, so probably in excess of a hundred such training sessions, generally focused in the sanitary engineering field, which has been the main focus of my vocation for the 25 years.

Q. Has this professional training related to the operation of wastewater treatment facilities?

A. Some of that has. As part of my early career, I was

Page 70

engaged directly in the operation of wastewater treatment facilities, and so I attended a great number of those. During the 1970's, that was a big focus.

After the 1970's, when I went to Black and Veatch in the consulting engineering business, I probably put less emphasis on just construction -- excuse me -- on operation-related activities; but that was always a part of these technical conferences and seminars that we attend -- that I attended.

Q. What was your first full-time job after college?

A. I began as chief of the sanitation branch for the Department of Army at Fort Riley, Kansas. I had responsibility for four wastewater treatment plants and three water systems, a couple of swimming pools and a landfill. Essentially I was the responsible operator for those plants; make sure they had to meet certain discharge requirements in the State of Kansas. And we then had operational -- I had operational responsibility, maintenance, those kind of things. And I did that until I returned to graduate school.

Q. What was your next full-time employment?

A. After completion of my graduate work at the University of Colorado, I began work for the City of Boulder, Colorado, and there I was first hired as assistant sewer division director and quickly moved to the sewer division director

Page 71

and then as public utilities director for the City of Boulder and at each of those levels had responsibility for the sewer division, which was all the sewer collection system, sanitary sewers, two sewage treatment plants, the largest of which was about 16 MGD; and then as public utilities director had responsibility for drinking water treatment, two surface water treatment plants which was -- one was about 50 MGD and the other was about 12 MGD, and then wastewater treatment, and then as well the storm water utility, which Boulder had one of the first storm water utilities in the U.S., and that was until I left there in 1979.

Q. You used the term "MGD." Can you tell us what "MGD" means?

A. That's a term representing the flow or capacity of one of these treatments plants. It stands for million gallons per day.

Q. Can you tell us what your next employment and responsibilities were?

A. I left the City in 1979 and for a few months worked for another consulting engineering firm, Hennings, Durman, Richardson in Phoenix, Arizona, and then was employed by Black and Veatch in late 1979 until the current time.

And during that period both with HDR and subsequently with Black and Veatch, I was first senior project manager in

Page 72

charge of large water and wastewater treatment plant construction -- design and construction projects, related feasibility studies, water quality studies, management studies in terms of financing improvements and implementing them. And then on into the late '80's -- excuse me.

With Black and Veatch, I was hired in Denver and was part of the Denver office there until 1989 when I moved to Florida and had responsibility for the Florida operations of Black and Veatch.

Q. Can you tell me how many years' experience and training you have relating to the construction and design of wastewater treatment facilities in total?

A. Essentially, I'd certainly represent more than 25 years, since my undergraduate degree, and through that entire time the focus has been on wastewater treatment.

Q. How many years' experience do you have regarding the operations of wastewater treatment facilities?

A. Certainly the focus of my ten years in the 1970's, from early '72 when I was employed by the Department of Army until I left the City of Boulder in '79, operations was a big focus of mine.

However, even in the early '80's, through the mid 1980's, one of my principal projects I was involved with was the upgrading of the Denver Metropolitan Wastewater Reclamation District's central plant. It's a 185 MGD plant.

Page 73

And I was very involved with looking at operations through that time, so I'd say probably on the order of 15 years.
Q. What experience do you have relating to the assessment of the impacts of the operations of such wastewater treatment facilities?
A. I assume you mean impacts on receiving waters?
Q. Yes, sir, the environmental impacts on receiving waters from the operation of wastewater treatment facilities.
A. While I was in Boulder, specifically we had two wastewater treatment plants discharging to Boulder Creek, which was a high-quality, front-range stream, trout stream, in the upper reaches, and so there's a great deal of concern about the impacts of wastewater treatment flows on that water body. And I was involved directly in sampling and assessing the impacts of those discharges on that creek and in trying to figure out what ways we could improve the quality of effluent and diminish the impacts on the creek. That was through the '70's and the improvements were – some improvements were built during the '70's and some later.
Then in the '80's, my focus was on Segment 15 of the South Platte River, which is the receiving waters of the Metropolitan Denver Disposal District's Plant, and we looked a great deal at flora and fauna in that reach of the stream and assessed impacts of water quality, particularly looking

Page 74

at dissolved oxygen conditions and ammonia discharges, impacts on ammonia on the fish species in the creek -- in the river.
Q. Have your experiences included the analysis and review of water quality data from receiving waters?
A. Right. Certainly in my graduate program, I actually did the sampling and testing and had to work those hours in the laboratory to actually know how to do the tests. After that point, essentially people worked for me that did it. We had laboratories in Boulder that performed those water quality analyses, and we did a great deal of working -- compilation of data and analyzing data and trying to determine what that data meant as to what kind of impacts were on the stream or what we could do to mitigate those impacts.
Q. What experience specifically in the State of Florida do you have regarding the construction of wastewater treatment facilities and the operations of wastewater treatment facilities in the State of Florida?
A. As I mentioned, I came to Florida in 1989 and during that time --
THE COURT: Let's stop there a moment. Let's take a ten-minute recess.
(A recess was taken.)

Page 75

THE COURT: Okay, Mr. Scroggin.
MR. SCROGGIN: Yes, Your Honor.
BY MR. SCROGGIN:
Q. Mr. Smith, can you tell me what national recognitions if any you've received for your experience in the areas of operations and construction of wastewater treatment facilities?
A. Well, probably the most important national recognition I've had is that of being accepted as a diplomate of the Academy of Environmental Engineers.
This Academy has been formed to recognize achievements and qualifications of those engaged in the practice of water, wastewater and air pollution engineering and it's a fairly vigorous examination and admittance procedure, and I was examined and admitted in 1989 and 1990.
Initially, I think it was '89 when I completed my application process and 1990 when I was interviewed and subsequently elected into the Academy and it's a fairly select group of a small number of what would be known as sanitary engineers with considerable experience in the field and recognized by their peers as such.
Q. You've testified you have experience relating to construction and operation of wastewater treatment facilities in the State of Florida.
I'm going to ask you now what experience if any do you have regarding the assessment of the environmental impacts in

Page 76

the State of Florida of wastewater treatment facilities?
A. You asked me that question, I didn't get to answer it, though, earlier. I don't know if you want me to answer that now regarding experience in the State.
Q. Yes, sir.
A. Particularly with wastewater treatment plants operation and construction, I've been involved with treatment plants in Pensacola, the Main Street Plant, which is about 20 MGD and the Avondale Plant which is now going to eight million gallons per day, the City of Tallahassee Treatment Plants, both of which have a combined capacity of about 25 MGD, City of Tampa, Hooker's Point, Howard F. Curen Plant, which is I think about 65 MGD, being expanded to 88 MGD, on down to the City of Manatee County Southwest Plant, Waterway Estates Plant, Caloosahatchee River, Fiesta Village, over to Fort Myers over to the Reedy Creek Plant for Disney World which is about an 8 MGD Plant, City of Daytona Beach, Western Regional Plant there which is 10 MGD. I might have missed a couple.
That's most of them I have been involved with regarding assessment of capacity, performance operations and recommendation for constructed improvements to change their treatment systems into the future.
Then your next question was which ones --
THE COURT: Wait a minute.
MR. JACOBS: I object. I let it go the first time,

Page 77

but I think it's a little improper for the witness --
THE COURT: Sustained, sustained.
BY MR. SCOGGIN:
Q. Mr. Smith, approximately how many such projects in the State of Florida have you been involved with?
A. I'd say at least fifteen to twenty treatment plants in individual projects, would probably be more than that 'cause there's multiple projects associated with individual plants, so --
Q. And how many such projects nationally have you been involved with?
A. Goodness, certainly more than a hundred, with probably fifty to a hundred treatment plants as individual plants that I've had projects associated with them.
Q. Have you published articles in professional journals?
A. Yes, published probably thirty to forty professional articles in journals and have presented those articles in addition to or presentations, probably another seventy-five presentations at conferences, technical symposiums.
Q. Can you tell me if you hold a professional license in the State of Florida?
A. Yes. I'm a registered engineer, professional engineer in the State of Florida, I think it's license number 43134, and licensed engineer in the State of Colorado. And since I left there, I essentially put it on inactive status, but I would

Page 78

become licensed again by just paying my dues back there.
MR. SCROGGIN: Your Honor, I could continue asking questions of this witness regarding his qualifications, but in order to save time and move forward, I would proffer this witness as an expert witness to this Court at this time in the areas of the construction and design of wastewater treatment facilities; second, in the area of operations of those wastewater treatment facilities; third, the environmental impacts of the operations of such facilities on the receiving waters and the associated environs; and finally, in the areas of analysis and review of water quality data.
THE COURT: Yes, sir.
MR. JACOBS: Opportunity to voir dire the witness, please?
THE COURT: All right.
You may voir dire.
You think he may not be qualified? Well, go ahead.
MR. JACOBS: I think he's not properly before the Court as an expert in this case, so, yes, the voir dire relates exactly to that subject sir.
THE COURT: All right.
VOIR DIRE EXAMINATION
BY MR. JACOBS:
Q. Mr. Smith, you signed three expert reports relating to three wastewater treatment plants at issue in this case,

Page 79

correct?
A. That's correct.
Q. But you didn't actually write any one of these three reports, did you?
A. I don't know what you mean by actually "write."
Q. Mr. Smith, do you recall that you were deposed in this matter on October 30, 1995, at the United States Attorney's Office here in Tampa?
A. Yes, sir, I do.
Q. Reading from page 7, line twenty-three of the deposition -- transcript of that deposition; Mr. Smith, who wrote these reports. That's the question I'm reading, sir, and your answer was, they're prepared by our firm and there were two principal authors, Dr. Barcus Jernigan and Andy Westfall.
I ask you again, sir, isn't it correct that you did not write --
THE COURT: No, ask him -- ask him if he gave those answers to those questions.
MR. JACOBS: I'm sorry, sir, forgive me.
BY MR. JACOBS:
Q. Did you give those answers?
A. Yes, I did.
THE COURT: Go ahead.
BY MR. JACOBS:
Q. Now, referring to page 8, line seven, but you didn't

Page 80

write them -- question, but you didn't write them, is that correct. Answer, line eight, no, I did not.
Sir, did you give that answer?
A. Testimony at deposition says yes, I believe I did.
Q. Page 8, line fifteen, question, and did you rely on the work of Dr. Jernigan and Mr. Westfall in terms of the preparation of these reports, line eighteen, answer, yes I did.
Do you recall giving that answer, sir?
MR. SCROGGIN: Your Honor?
THE WITNESS: Yes.
THE COURT: Just a moment, sir.
MR. SCROGGIN: Your Honor, I would object to this line of questioning which may be appropriate for cross examination of the witness or indeed weight to be given the evidence that he will present.
I would suggest, however, that it's not related to his qualifications as an expert and I proferred him as an expert in this case based on his qualifications to render an expert opinion, not the merits of that opinion and not the weight that this Court would give it. I would suggest counsel seeks to argue a cross examination issue more than a qualification.
THE COURT: Overruled, go ahead.
BY MR. JACOBS:
Q. Now, in terms of what information you personally

Page 81

reviewed, Mr. Smith, prior to giving your deposition in October, isn't it true that aside from reviewing the Government's complaint, you never personally reviewed any documents whatsoever except for a few compilations compiled by your staff?
A. I reviewed drawings and data that we had taken from the files from Florida Cities Water Company. I looked at, I think, I believe I said miscellaneous DMR's and MOR's, that's discharge monitoring reports and monthly operating reports.
I did not look at them in great detail or try to correlate at that point, and yes, those documents were then transcribed or the results from those documents were transcribed to graph compilations and presented in a report. I looked at some, I don't know if I said maps, and certainly some memoranda, schedules, things like that, construction documents; reviewed those, yes.
Q. I'm referring now to your deposition, sir, again page 12, line twelve, and during the course of the preparation of --
THE COURT: Ask him if he made the following answers to the following questions.
BY MR. JACOBS:
Q. And, sir, I'm asking if you made the following answers to the follow questions at the time of your deposition. And during the course of the preparation of any of the drafts of the final versions of these three reports, Exhibits 875 and 876

Page 82

and 877, and those for the Court's reference were the deposition exhibit numbers; did you have the occasion to review any documents. That is the question.
Now, sir, my question to you is, did you give the following answer, I believe that I reviewed just compilations of information that was compiled by my staff as part of the reports. I did review the complaint. I'm trying to think if there's any other documents. Nothing sticks out in my mind, any particular documents I reviewed.
Did you give that answer, sir?
A. Yes, I did.
Q. Do you recall that I then asked you the following question, are you sure, though, and I'm referring to page 12, line twenty-two, you're sure, though, that you reviewed what you have characterized as compilations of information compiled by your staff, is that correct, and the answer. I'm asking you whether you gave that answer, is that correct?
A. Yes, compilations included such things as excerpts and copies, that's right.
MR. JACOBS: Move to strike his last answer, sir, as non-responsive.
THE COURT: Denied.
BY MR. JACOBS:
Q. Then, do you recall, sir, that I asked you, and I'm referring to page 13, line five of the deposition, and about

Page 83

how voluminous were these compilations for each plant. Do you recall, sir, giving the following answer, and I'm referring to page 13, line seven, these are like tables or a series of tables and graphs or of data points, sequence of dates, that kind of information. Do you recall giving that answer, sir?
A. Yes, I do.
Q. I see you looking down, are you looking at the transcript?
A. No, I'm just concentrating. Thank you.
Q. Okay, fine.
A. And those questions are asked in the narrow context of formal documents, we're talking about MOR's and DMR's and NPDES permits. We actual have books of three or four inches thick of information that is backup to the reports.
Q. Right. And I didn't ask you that, sir.
A. Okay.
Q. You said "we," you mean Black and Beach has all that information?
A. That's right.
Q. Let me be very clear. I'm asking you what you personally reviewed?
A. That's what I was saying.
Q. You're not saying you personally reviewed all those notebooks before your deposition?
A. We had a project notebook, that's essentially that, yes.

Page 84

THE COURT: Proceed counsel, let's move on.
MR. JACOBS: I need to be able to distinguish and for the witness to understand that I'm inquiring not into what --
THE COURT: Just ask the question.
BY MR. JACOBS:
Q. Okay, sir.
Now, the next question relates again to the compilations. Question on page --
THE COURT: No, no, no, I tell you what, just ask him a question and if you have got something there that is in conflict with what he testifies here before me, then you can ask him the question as to what he testified to earlier. But ask him a question now, don't be asking -- don't be reading from the deposition until he says something that you think is inconsistent with what he is testifying to here?
BY MR. JACOBS:
Q. Okay.
The compilations, Mr. Smith, how voluminous were they?
A. The compilations that you asked me about in the deposition were compilations of data points from MOR's to DMR's. We have compilations of data from the project file that is in a notebook that was --
Q. I'm just asking you about the compilation?
MR. BAISE: Objection, Mr. Jacobs continues to interrupt the witness while he is answering.

Page 85

THE COURT: Sustained. Finish your answer.
THE WITNESS: I don't want to mislead anybody. We have a projects file that is part of a backup of a written report which includes data, memos, historical information. It's about a three or four inch notebook. I reviewed that.
And then you had asked me during the deposition very specifically as I recall about administrative orders, NPDES permits, MOR's, DMR's, and those I had not reviewed very closely, and that is the compilation of data points I spoke of that we had reduced to graphs which were included in the report, so I wanted to distinguish what we're talking about here.
THE COURT: All right, go ahead.
BY MR. JACOBS:
Q. I'm asking you whether you reviewed all those voluminous notebooks. My question to you now, sir, is it your testimony today, prior to your deposition you reviewed all those voluminous notebooks containing all that information you just referenced; you personally, sir?
A. There is one notebook, and I briefed through it prior to the testimony, obviously not enough, 'cause I didn't have all the facts in my mind.
Q. Now, let me go back to the earlier question, the compilations of data that you reviewed and you testified to at your deposition.

Page 86

How voluminous was that information, the compilations?
A. The compilations of data are essentially data points off MOR's, DMR's relating to specific effluent limit or effluent quality standards. They appear on OMR's, MOR's, DMR's at multiple places, so it's taking a point off of one month and putting it on a graph. So what I saw were graphs with those data points, and so talking about a few pages of graphs, that kind of thing. That's the compilations.
Q. Okay.
Now, aside from compilations that you've mentioned that were a few pages each that you've said were compilations of DMR and MOR information, and aside from the complaint, and aside from drafts of these reports that were prepared by others, isn't it true that prior to your deposition, you did not review any other data relating to this case?
A. Drafts of the reports, there are also some maps and diagrams, layouts of facilities, those kind of things that's in the backup, we didn't end up putting them in the final report. I think other than that, that's generally correct. I had not reviewed -- as I recall, the question was aimed at had I reviewed the NPDES permits. I had not at that time.
Q. Okay.
So you think there might have been in addition to what I just outlined, the DMR's, MOR's, the drafts that were prepared by your staff and the compilations of a few pages, you think

Page 87

you might have also reviewed a couple maps?
A. Yes, we had maps in the file.
Q. I understand. You didn't -- you don't recall mentioning that at the deposition, but you do think you reviewed those prior to the deposition, is that correct?
A. I believe it is. I know it's part of the notebook. I know I looked at the notebook a lot more since then.
Q. So you're not sure whether you reviewed the maps before the deposition or since the deposition?
A. I believe I did look at them before. I know I've studied them since.
Q. Okay.
Aside from the information we've just gone over, the maps, the DMR's, MOR's, the draft reports and complaint, you did not review any other data related to this case prior to your deposition, is that correct, sir?
A. That wasn't in the reports, that's correct.
Q. Right, I included the reports in the question?
A. Yeah, I think that is right.
Q. Okay, thank you.
THE COURT: You through?
MR. JACOBS: Just a moment, Your Honor, if I may.
BY MR. JACOBS.
Q. And isn't it true that prior to your deposition, these compilations were not provided to the Government?

Page 88

A. As I say, the compilations came right off the documents you had in your possession, so they were -- they were just data points off of the MOR's, DMR's.
Q. Sir, I'm not asking you about the DMR's or MOR's, I'm asking you about compilations that were put together by your staff. Isn't it true they were not provided to the Government prior to your deposition?
A. They were on the graphs that were in the reports, so it was data put from a column kind of thing to the graph.
Q. Are you testifying that the compilations are in the reports just as they were as you reviewed them or they're exactly the same as in the reports?
A. They changed form from the numerical statistics, if you will, to that of being on a graph, so I don't think we -- well, we didn't publish the compilations as part of the report, we published the graphs, so -- and that's what we used to prepare the graphs.
Q. Okay.
So you did not give the Government the compilations?
MR. BAISE: Objection, this has been asked and answered about three times, now the fourth time.
THE COURT: Well, I don't know, I'll overrule the objection. Let's go ahead.
THE WITNESS: The columns of data were not given to, as far as I know, they weren't in the report, thus, you did not

Page 89

have them before our deposition -- before my deposition.
BY MR. JACOBS:
Q. I'm not sure I heard you; they were not in the report and you did not provide them prior to the deposition, is that your answer is, sir?
A. That is what I said, yes.
Q. And prior to your deposition, sir, you had never visited in the context of your services as an expert witness in this case any of the three plants, is that correct?
A. In the context of expert witness, that is correct.
Q. And the only preparation you did for your deposition, for the deposition itself, was to review the three reports written by your staff and highlight them in preparation for your testimony, isn't that correct?
A. That's correct.
MR. JACOBS: Your Honor, in your Monday, March 25th, 1996 order at the bottom of page 4, you ruled, quote, so that there would be no misunderstanding, Mr. Smith will not be permitted to give testimony based upon documents or information not relied upon to generate his report, nor will he be permitted to give testimony based on his subsequent visits to the facility sites.
The testimony elicited from this witness establishes that he did not write the reports, that he did not review or rely on any documents or information in preparation of the

Page 90

reports with the exception of the DMR's and MOR's, and with the exception of data compilations, and by the way, those were not provided either, to your knowledge, Mr. Smith, were the particular DMR's and MOR's that you reviewed, were those particular ones provided to the Government prior to your deposition?
THE WITNESS: We just had copies of them, so I don't know if they were.
MR. JACOBS: Okay.
And he's testified that the data compilations were not provided to the Government prior to his deposition as required by Rule 26(a)2, and that the only documents he personally reviewed prior to his deposition to prepare were the reports themselves.
The United States, therefore, moves on the basis of the Court's rulings on the bottom of page 4 of its March 25th, 1996 order, to exclude the testimony of Mr. Smith.
MR. SCOGGIN: May I respond, Your Honor?
THE COURT: Let me find the order. What page?
MR. JACOBS: Page 4, sir.
THE COURT: Just a moment.
MR. JACOBS: And we'd be relying in part, of course, on 26(a)2(b) which relates to the disclosure of expert testimony which I see the Court also refers to on page 4.
THE COURT: Just a moment.

Page 91

(Brief pause.)
All right.
MR. SCROGGIN: May I respond?
THE COURT: Yes. Go to the microphone, please.
MR. SCROGGIN: Referring to your order, Your Honor, on page 4, the order reads, Mr. Smith will not be permitted to give testimony based upon documents or information not relied upon to generate his report, nor will he be permitted to give testimony based on his subsequent visits to the facility sites.
We will not ask Mr. Smith to give testimony regarding any information not relied upon to generate his report, nor will he be asked any questions regarding the facility site visits that he subsequently made after his deposition.
The purpose of an expert witness is to assist the trier of fact in understanding technical complexities in a case such as this. We believe that this expert witness satisfies that requirement. I would, if I might, clarify with the witness, I had a line of questions that I was going to ask him regarding the preparation of the report, if that would help.
THE COURT: Go ahead, go ahead.
MR. SCOGGIN: I will not read from the deposition, I will simply ask the witness the same questions that were asked at the closure of the deposition, but were not read by Mr. Jacobs.
MR. JACOBS: Can we have a clarification, who asked

Page 92

the questions?
MR. SCROGGIN: I asked the questions at the end of the deposition. If I may, I will ask the witness unless you want to hear the deposition.
THE COURT: Go ahead.
BY MR. SCROGGIN:
Q. Mr. Smith, you worked with others in the preparation of your report?
A. That's correct.
Q. Did you work with others in the preparation of your report?
A. Yes, we did, I did.
Q. Were you personally involved in every phase of the analysis and preparation of these expert reports?
A. Yes, I was, from the moment we were engaged until the reports were actually published.
Q. Did you personally supervise and oversee the work of any staff member who was working under you?
A. Yes, I did.
Q. There has been much talk of the compilation of data. What exactly were these compilations of data; did they contain any new information not already in your report or already produced to the United States?
A. Not that I'm aware. The information was simply presented in a different form in the report than it was in our --

Page 93

essentially our data extractions that are compilations we had before then.
Q. Can you explain what you mean by "different form"?
A. For instance, on the information regarding the discharge monitoring reports and monthly operating reports, we would have a month and then a corresponding column, the actual effluent quality associated with that, so for like for May of 1991, you'd have BOD, 4.8 and TSS 3.2 and right on across the form, so that would be -- that would be like a compilation we had of a series of those. Those were then -- that's what we had in 'cause that's what we took it off, the MOR's, DMR's, we took those and put them in the report then, and on a graph, and so we've got graphs that have the exact same information, it just has on one ordinate of the graph it has date and time, on the other ordinate of the graph it has the relative magnitude of what that parameter was.
The other thing was that of dates and schedules, and so we had listed dates and schedules. We ended up putting in bar charts and that kind of thing in the charts.
Q. Do these compilations contain data or analyses of data?
A. It's simply data.
Q. Were they anything more than rearrangement of data that appeared in the charts that are part of your report?
A. No.
Q. Can you tell me if you received drafts of your expert

Page 94

report as they were in preparation?
A. Yes. We worked through them in kind of a stage at a time trying to establish first data and make sure we had a picture of things correct, and so Barcus Jernigan and Andy Westfall were working directly with me, they would write them and they would send them to me and I would mark them up and get on the phone, we'd be in conference or conference calls and go over the things it said and say -- I'd tell them, oh, I believe that something was different or changed or a different opinion of what they had written and we would modify that based on my direction. And we worked out each stage through the preparation of the report until the final report was completed.
Q. Can you tell me approximately how many contacts, personally, you had with your staff members during the preparation of these reports?
A. Oh, dozens. I mean, we began -- I think we were engaged in May of 1995, the report was completed in October, so five months. Certainly dozens of meetings and a couple dozen, twenty meetings. I don't know, something like that perhaps.
Q. Can you tell me what questions you asked of your staff in response to the drafts you received?
A. I might ask clarifying questions on the data, the text that was written, where did they get it or did we know about something else that made that raise a question on it, so I wanted to know more about that.

Page 95

I may have asked based on my own background I would have thought something different, could they defend where we were going with this thought interaction, just like that, just collegial development, pretty normal practice for us. I mean, I'm a large firm, we're always working as teams and nobody ever just writes a report by themselves.

MR. JACOBS: Objection, move to strike.

THE COURT: Denied.

MR. SCROGGIN:

Q. What changes did you make in the draft reports that you received from your team members?

A. Generally, I would get the reports and blueline them, things that, you know, I thought was the wrong conclusion or maybe a conclusion that should have a different approach to it.

Obviously, the facts – I relied on my team for the facts and examination of those facts in the files is very tedious and time consuming which is not appropriate for me to be involved with, and so I just asked them where they got that stuff, that kind of thing.

Q. Is this team approach that you've described different from the approach you use in servicing other clients on similar projects?

A. No. I mean, that's the way we do business. We are – we have project teams, that's the essence of every project is a project team to balance the views of different people.

Page 96

THE COURT: Okay.

You've answered his question.

BY MR. SCROGGIN:

Q. What steps did you take to assure that errors were not made in the transcription of data by your team members?

A. We had checks within the team and then we had clerical checking as for transcription purposes so we didn't make mistakes. We did make some and I think Mr. Jacobs pointed it out, our bibliography had a couple errors. Certainly, that's what we try to do. It's a little difficult because of the confidential nature of the work. We didn't make it available to very many within the firm.

Q. Do you take personal responsibility for all of the conclusions and analyses in your expert reports?

A. Yes, I do.

Q. And has your opinion expressed from those reports changed since the time of your deposition in any way?

A. No, they have not.

MR. SCROGGIN: Your Honor, I would renew my motion for proffering Mr. Smith as an expert witness and in the areas I've already enumerated in this case.

THE COURT: Okay.

Mr. Jacobs, you want to be heard any further?

MR. JACOBS: Very briefly, Your Honor.

BY MR. JACOBS:

Page 97

Q. Mr. Smith, Mr. Scroggin asked you about these drafts you reviewed.

THE COURT: No, no, I'm not talking about testimony, I'm talking about argument.

MR. JACOBS: Oh. I don't have anything further, Your Honor. No argument, Your Honor. Thanks.

THE COURT: All right.

Well, your testimony – well, I guess I should ask counsel this.

Mr. Scroggin, this Court in its order provided that Mr. Smith would not be permitted to give testimony based upon documents or information not relied upon to generate his report.

MR. SCROGGIN: That is correct, Your Honor. We have no expectation of asking him any question regarding the compilation or other documents that –

THE COURT: Mr. Smith, will you be rendering any opinions or testimony based upon any documents or information not relied upon to generate your report or reports?

THE WITNESS: No, sir, I won't.

THE COURT: Will your testimony be based even in part on subsequent visits to the facility sites?

THE WITNESS: No, sir.

THE COURT: Okay.

I'll overrule the objection, I'll permit him to

Page 98

testify over objection.

BY MR. SCROGGIN:

Q. Mr. Smith, when were you retained as an expert witness in this case and by whom?

A. May of 1995, by Gabeler, Baise and Miller.

Q. Can you tell me the scope of inquiry that was given to you for your expert work?

A. In general, it was the three treatment plants. First emphasis was Waterway Estates. We were asked to look at the improvements that were made at the plant and had they taken a reasonable amount of time, and we looked at the effluent discharges, both during the time that the complaint was made and whether those discharges had any impacts or what the impacts might be on the receiving waters.

And then we looked at Barefoot Bay and asked similar kinds of questions about the treatment plant and what would be expected from the treatment plant and looked at the discharge and its impact on the receiving waters, what those impacts might be.

And then finally at Carrollwood Village, similar questions.

Q. Who personally was your contact for your retention as an expert witness?

A. I spoke with you, Mr. Scroggin, and we developed really our scope and idea of what we were going to perform.

Page 99

Q. What instructions were you given regarding the conclusions that you should reach in performing your analysis?
A. Well, we talked about wanting to maintain our objectivity and it was very important that our firm report what we saw and what we opined of our own basis of fact and that, you know, we were to render our judgment as an independent engineer and that was what we were to write.
Q. Did you in fact prepare expert reports for the three facilities; Barefoot Bay, Carrollwood and Waterway Estates, that are in issue in this litigation?
A. Yes, we did, a report for each one of the plants.
Q. Mr. Smith, are you familiar through your twenty-five years of experience with the design and operation of a general secondary treatment wastewater treatment facility?
A. Yes, I am.
MR. SCROGGIN: Your Honor, I would ask the indulgence of the Court in allowing Mr. Smith to go to the drawing board and to assist his testimony to speed the process, if we might, by his drawing --
THE COURT: Sure.
BY MR. SCROGGIN:
Q. I will ask you, sir, would you please draw and describe the operations of a general generic secondary treatment wastewater treatment facility?
A. Yes.

Page 100

Q. I'll ask you to do that, sir.
MR. JACOBS: Your Honor, may I move a little closer?
THE COURT: Sure.
THE WITNESS: Your Honor, we have domestic sewerage coming in from a sewage collection system. We generally look at this sewerage in regards to about three parameters; one is BOD, the other is TSS.
BOD is biochemical oxygen demand, and TSS. These are kind of the measures of how strong this sewerage is coming into the plant. For domestic sewerage, these typically are about two hundred parts per million of BOD and about a hundred and fifty parts per million to take suspended solids into a plant.
Sewerage comes in through a sewer line, gravity or pumped, and may first receive some general screening to take out any large items, rags and debris, wood, things like that. And that is scraped off on a screen, that is usually manually removed or with a machine, and then it goes into what we call a complete mixed activated --
THE COURT: Why don't you pivot that whole thing, that way you can move back. You can see how --
THE WITNESS: Now, that is --
THE COURT: Move back a little bit.
MR. JACOBS: Do you mind if I get a little closer to see?
THE COURT: Uh, I don't mind. I tell you what, just

Page 101

--
MR. JACOBS: We can look at it during the break, perhaps if you want to keep it there, Your Honor.
THE COURT: All right, go ahead.
THE WITNESS: This next stage of treatment is really where the work is done and you have the sewerage that comes in about two hundred parts per million, that's essentially raw sewerage that comes into the plant, comes into the activated sludge basin.
And in this basin, essentially all we're doing is adding air and that's added in various means, but essentially mixed with the sewerage and residents of the sewerage, micro-organisms, and begin growing and create what we call mixed liquor, which is eventually a biomass that consumes this BOD. It's the food for these micro-organisms.
They start growing with the help of air and changes this stuff that comes in as raw effluent from essentially sanitary waste from our houses, from restaurants, those kinds of places, is mixed, these bugs consume it, and then we take the bugs, this whole mixed volume now completely mixed and biogenous into a settling tank which we then separate the liquid from these bugs, essentially dead bugs and some that are still living, and this is separated out, the liquid then goes out and that becomes essentially the effluent which is discharged.

Page 102

The most important thing in a treatment plant is this return stream of what we call return activated sludge which is this microbial population that we're going to take back in to help start up the process. And we take off what we call waste activated sludge, the removal of those, and that right there is probably the single most important part of operating a wastewater plant is the waste activated sludge, how was that taken off and how is the age of that taken off.
The other aspect --
THE COURT: How is the what taken off?
THE WITNESS: The age of those bugs, how long they have been in the system.
THE COURT: Okay.
THE WITNESS: The other aspect that is very important is that of air, how much air you add to the process. If you can control these two things, that is essentially how you control the stream of the plant, the wasting of the sludge, the return of it, and thus, the air, so those are very important.
And this effluent which comes off the weir of this settling basin, then we usually add chlorine to and then in some cases, we take the chlorine -- the chlorine is added to disinfect the effluent, to kill disease-forming bacteria that might be in there.
Those bacteria may come in, they're called fecal-coliform, and they come in in the millions and by the

Page 103

time they go through the treatment plant, they're down here after chlorination to maybe, I think the standards are generally two hundred or four hundred, two hundred on an average basis, four hundred on a particular basis by the time it goes through the process.

So you've seen, we've taken out millions down to a very small number. That's a measure of how safe it is for public health purposes. This whole idea is for public health. Now, after the chlorine is added because chlorine is also a -- not only does it kill these kind of bugs, it has negative impact on other living things in the environment.

We add things such as sulphur dioxide to remove the chlorine. It's done its work, it's killed the bugs, now we have to, before it goes into the receiving waters over here, let's make it safe, and so then it's discharged. And that is generally a secondary treatment plant in general form.

So, air wasting, and the effluent from this plant, the BOD and TSS that comes in is usually removed at about 85 percent, yielding an effluent that is like thirty parts per million of BOD, and on the order of twenty to thirty parts per million of total suspended solids.

Now again, just to characterize this for you, Your Honor, total suspended solids are essentially if you took this effluent and put it through a coffee filter, the stuff remaining on the coffee filter is twenty to thirty parts per

Page 104

million, so one part of -- out of a liter would be what that is.

In the BOD, the test that's done for this is essentially, it's a measurement of how much oxygen like this air with this stuff, this food in this effluent consumed if were put in the stream, and it's very important because back when we were first discovering about these things in the stream, we looked at when sewerage was added to a stream, we saw that down the stream aways, we'd see a depression in the dissolved oxygen. The stream would use up it's dissolved oxygen to essentially do the same thing we now do in this tank.

That became of great concern and we figured it's about a five day period this happened and, thus, the test is called the BOD-5. That's what we're concerned about.

So, we put this sample in a bottle, we put it in an incubator, a certain time, and measure how much oxygen is consumed within that bottle and that's the measurement and that is something that has been around since early in the Twentieth Century. That's become now our standard of measurement. Really just measures the amount of organic matter to oxygen inducing impact. That's a general secondary treatment.

THE COURT: Okay.

MR. SCROGGIN: Your Honor, may the witness remain at the board as I ask my next question?

THE COURT: Yes.

Page 105

BY MR. SCROGGIN:

Q. Mr. Smith, what is raw sewerage?

A. Raw sewerage is that which is untreated and collected in the residential or commercial collection system, so it includes sanitary waste from households and residences and commercial establishments, includes gray water from like washing machines and floor drains, and that's generally it.

Q. Can you tell me the breakdown of raw sewerage between water and pollutants?

A. Well, two hundred parts per million means that two hundred parts of stuff in this million parts of water, so it's like ninety-nine point eight percent water and point two percent, or yeah, point two percent stuff.

Q. What is a part per million? Can you give us an example of a part per million?

A. Well, it's -- we're trying to figure this out. What would be a good way? It's actually equal to about one drop, like an eyedropper in thirteen gallons, and just calculate that out, and roughly to -- so you think of it as one drop in your gas tank which is like thirteen or fifteen gallons, that's the idea, that's the concentration of if one part per million is this, so twenty parts would be twenty drops in a gas tank or that kind of thing.

Q. What is BOD?

A. Well, that's what I was discussing a little bit earlier.

Page 106

BOD is biochemical oxygen demand. It's the amount of oxygen consumed by these micro-organisms from -- in a confined space where they can't get any other oxygen over a five day period.

Q. Your chart shows BOD two hundred parts per million after treatment. What is the BOD?

A. It comes in at about two hundred, exits under secondary treatment at about thirty.

Q. What is TSS?

A. That is the filterable fines that you can take out on a filter that is like a coffee filter, and that which is remaining, evaporated and weighed, and that is the TSS, total suspended solids.

Q. Your chart shows TSS and raw sewerage. It's approximately --

A. One hundred fifty parts per million coming in and it goes out at somewhere, twenty to thirty parts per million.

Q. Therefore, can you tell me, secondary treatment removes approximately what percentage of the BOD from the raw sewerage that comes into the treatment facility?

A. It's generally accepted about 85 percent. In fact, we used to define it that way, 85 percent removal with secondary treatment.

Q. Is there a higher level of treatment than secondary treatment?

A. Yes. Actually a couple different levels, but the next

Page 107

level would be tertiary treatment. And tertiary treatment is essentially taking this flow to the next level, removal of BOD and TSS, trying to get it down to much lower levels of BOD and TSS. And that would be by using other methods.

A couple of methods may be to add additional tankage on here or actually a separate tank where you would have had more aerated micro-organisms or you could add a filter where you would actually -- a seine filter much like is used in drinking water treatment to remove the fines and with those fines you would take out some associated BOD, and so you might see with the tertiary treatment BOD and TSS removal up to 95 percent, so down to less than ten, ten, or something less than that.

Q. And is there a higher level of purification of sewerage than the tertiary treatment you just described?

A. Right. The next level from tertiary, again this is secondary --

MR. SCROGGIN: I don't mean to interrupt the witness, may I ask Your Honor that his chart be marked for identification only as Florida Cities' 203?

THE COURT: Mark anything you want to for identification.

THE WITNESS: The third one would be what we called advanced waste treatment, AWT, and the focus of advanced waste treatment is now is a shift. It's something that is developed as we've advanced our treatment technologies and advanced waste

Page 108

treatment is focused now on removal of nutrients. Nutrients are carbon, nitrogen and phosphorus.

Carbon we mostly remove because carbon is what is associated with BOD, biochemical oxygen demands, is mostly in carbonaceous form, that's carbon which is found everywhere in the atmosphere. Nitrogen now is of concern. Nitrogen comes in in domestic sewerage, mostly in the form of urea. It's converted from urea, organic nitrogen into usually ammonia, it's hydrolized into ammonia in the treatment process, and some of it actually may be changed to nitrate, another form of nitrogen. The key here is --

THE COURT: The first, is that what they call ammonical nitrogen?

THE WITNESS: Yes, ammonia, yes, that's correct, sir.

THE COURT: Contrasted with that, I got into this fertilizer case I had one time, contrasting nitrate nitrogen with ammonical.

THE WITNESS: That's correct, sir.

THE COURT: Okay.

THE WITNESS: These three are of concern, because these are the basic --

THE COURT: Nitrate nitrogen breaks down more readily, does it not.

THE WITNESS: Well, ammonia nitrogen requires oxygen to break it down. Nitrate nitrogen already has oxygen with it

Page 109

so it facilitates its breakdown because the breakdown then takes nitrogen to nitrate gas and right out into the atmosphere.

THE COURT: Okay.

THE WITNESS: The last one is phosphorus and it is of concern because each one of these are basic building blocks of essentially all life forms, certainly plant life. And of concern quite directly is we're concerned about growing algae in receiving waters.

So if we can limit these elements, the algae won't grow, we won't get algae falling out into the receiving waters which then is called putrification and can actually affect the water quality.

So the idea is if you control this advanced waste treatment, you can control the quality of the receiving water. So that's the focus of advanced waste treatment.

Now, what actually happens may be again carbon and nitrogen is treated in this basin here, again, by micro-organisms, and essentially it requires more air, the sludge age has to be older, takes longer because that which removes the nitrogen takes longer, the micro-organisms are slower to act, they're not as fast and not as relatively strong within the environment.

The phosphorus is usually removed by chemical precipitation and you add chemicals here in the solids liquid

Page 110

separation and that chemical ties up the phosphorus, it settles out with the sludge and is removed and so then we take the phosphorus out.

So that is generally advanced waste treatment and it may have standards. Generally accepted standards in Florida are five parts of BOD, five parts of suspended solids, three parts of nitrogen and one part of phosphorus. Again these are parts per million, one drop to thirteen gallons.

BY MR. SCROGGIN:

Q. Mr. Smith, you first described secondary treatment and your testimony was that secondary treatment removes 85 percent of CBOD and TSS. Can you tell me what does the effluent from a secondary treatment facility look like?

A. Well, the effluent from a secondary plant would have on the order of thirty parts of BOD and twenty to thirty parts of suspended solids. The total nitrogen is probably on the order of fifteen to twenty parts per million and the total phosphorus is six to eight parts per million.

Q. What color is the effluent from a secondary treatment plant, the first one that you described?

A. It's generally colorless, unless there's color in the drinking water that you use, which we have in Florida some places, but generally it's colorless, fairly clear, when you look at it, it's fairly clear to look at, probably doesn't sparkle, doesn't have that sparkling look you see in real clean

Page 111

water.
Q. What is, in your experience, the level of treatment that most sewerage treatment facilities in the United States have?
A. By far, most of them are secondary treatment plants.
Q. Approximately what percentage of the facilities in the country based on your experience would have either tertiary or advanced wastewater treatment?
A. It's a very small percent. I'd hate to put a number on it. Certainly, on the order of maybe less than ten percent of the plants in the U. S.
Q. And with advanced wastewater treatment, can you tell me the color and characteristics of the effluent from the facility you've just finally described, the most advanced wastewater treatment facility?
A. It would be very sparkling, actually look very clear. If we have used filters to remove some of the solids, it would be very clear, sparkling. It may still have color with it because there's really nothing in the treatment plant to remove color, but essentially looking at it, it looks like a fresh stream.
Q. Why are nitrogen and phosphorus of environmental concern in a secondary treatment facility's effluent?
A. Why are they or aren't they?
Q. Why are nitrogen and phosphorus of potential environmental concern in the effluent from a secondary treatment facility?

Page 112

A. Well, generally, they haven't been a concern in secondary treatment and they're not regulated or concerned of -- the effluent isn't an issue. When it becomes an issue, the issue is that of being this building block and affecting the receiving waters for the purpose of growing algae, and the algae being an indicator of water quality and impact.
But there is another reason for nitrogen, and particularly the ammonia part of nitrogen. Actually, in many more plants than are receiving this kind of treatment, this 5,5,3,1, which this is total nitrogen, there's many more plants concerned with ammonia, because ammonia has an impact on fish in the River.
And so we're often asked to remove just the ammonia part or convert it to nitrate rather than leave it in the ammonia form because the ammonia in its unionized state is harmful to fish, can be harmful to some fish.
Q. Does that mean that effluent from a secondary effluent facility in Florida is harmful to fish?
MR. JACOBS: Objection, leading.
THE COURT: Overruled.
THE WITNESS: It can have an impact on fish, yes, but generally it's mitigated by the amount of water diluted with or the type of receiving water that is going into that kind of thing.
BY MR. SCROGGIN:

Page 113

Q. Can you tell me the role if any that chlorine plays in the effluents from secondary and advanced wastewater treatment facilities?
A. Well, I mentioned chlorine is introduced as a bactericide to kill the bacteria that are there in the effluent and that's very important from a public health standpoint. In fact, that's how we got started into sewerage treatment early in the century was to remove the disease-causing bacteria, that was the big issue.
So chlorine has been with us for sometime and it's an effective bactericide. It's been used in our drinking water, our swimming pools, very important. In fact, the levels that we added here are about the same that we add to our drinking water that we drink.
Now, what we've discovered is that we add this chlorine, is very effective, but now you've discharged that before it's mixed and has a chance to interact with the environs in the creek or whatever that receiving water is. It may actually -- there's some species that actually find that as a toxic is the word, but really what it is, they find it unfriendly. They came up, the fish was swimming up to this area which has chlorine in it, they'd get like a buzz and turn around and go the other way, so it creates an area which they would not like to inhabit.
Based on that, we started in the '80's, started looking

Page 114

at trying to remove that chlorine and towards the end of the '80's, it became a standard to remove the chlorine with the addition of sulphur dioxide. It's essentially just another chemical to add in, it's essentially an anti-chlorine chemical. And we add that to remove the chlorine, happens instantaneously upon mixing.
THE COURT: What do you get when you mix chlorine with sulphur dioxide?
THE WITNESS: You get a chlorioxide, it's essentially harmless. And sulphur dissolves, and so this just --
THE COURT: Is that SO-2, is that a very odorous --
THE WITNESS: It's a gas that you add.
THE COURT: Very odorous?
THE WITNESS: That's hydrogen sulfide is what you're thinking of, that stinks like rotten eggs.
THE COURT: Yes, that's it.
THE WITNESS: This is SO-2, is really, and so, we add that, it undos what the chlorine did, is discharged, then it has no harm, and those fish then that might not want to get into the zone now can swim through freely.
BY MR. SCROGGIN:
Q. I'd like to turn now, Mr. Smith, and you may take the witness chair with the Court's permission, to the three facilities that are at issue in this case, and I will ask you first, the flows of raw sewerage into these three facilities

Page 115

which are Barefoot Bay, Carrollwood and Waterway Estates, and ask you, I will then ask you to compare, but I'll first ask you the flows?
A. The flow at Barefoot Bay, I think the period in question is about point five million gallons per day or half of a million gallons per day.
Q. How does that compare, sir, with the other facilities that you have had personal responsibility for with respect to the magnitude of flow?
A. Well, it's a very small plant, it's a pea-shooter plant we'd call it. It's compared to like the City of Tampa has sixty-five million gallons per day or a hundred thirty times as much, just finishing a project in Nevada that's eighty-eight million gallons a day, Denver was a hundred and eighty-five million gallons, so it's very small, not atypical in Florida to have small plants like that.
Q. What was the flow at Waterway Estates?
A. Waterway Estates is just under one million gallons per day.
Q. And at Carrollwood, sir?
A. I believe it's right around a half million gallons per day.
Q. In your experience, is the flow parameter of interest in evaluating environmental impacts of an operating wastewater treatment facility?

Page 116

A. Oh certainly, flow is very important because it's related to how much of an impact it has on receiving water because of the affects of dilution.
Q. Did you analyze the operations and environmental impacts of the Barefoot Bay Facility as part of your expert analysis?
A. I didn't analyze the operations. What I looked at is the results which indicate how it was operated and then, yes, we looked at that and we looked at the impacts in terms of the receiving water at Barefoot Bay which is the Satia Canal.
Q. And did you prepare an expert report for this litigation reviewing plant treatment capability of effluent quality at the Barefoot Bay Facility?
A. Yes, we did.
Q. And I would ask that the witness be shown Florida Cities' Exhibit Number 183. And I will ask you, sir, is this the expert report that you prepared pursuant to the instructions and retention you described for this litigation analyzing the Barefoot Bay Facility?
A. Yes, it is.
MR. SCROGGIN: Your Honor, I would move Florida Cities' 183 in evidence.
MR. JACOBS: Objection, Your Honor. This is hearsay. He didn't prepare the report. I've established that already on voir dire and the report is not automatically admissible under Rule 702. It is hearsay under 801(3), and I have additional

Page 117

authority. Engebretsen versus Fairchild Aircraft, E-N-G-R-B-R-E-T-S-E-N, 21 F 3rd, 721.
The witness has testified that the reports were not prepared by him, that the underlying data was not prepared by him. And I therefore think that under the authority of the case as stated and in particular, at 21 F 3rd, 728, the reports are inadmissible as evidence.
MR. SCROGGIN: May I respond, Your Honor?
THE COURT: Yes.
MR. SCROGGIN: Your Honor, the witness has testified that he personally supervised every phase of the preparation of these reports, including the analysis that underlies them. He says in his testimony, which we'll be happy to read back, but the Court has heard it today, that he takes personal responsibility for every word in these reports. And that he personally oversaw their preparation and the analysis upon which they relied.
We would ask the Court to accept them into evidence.
THE COURT: I'll overrule the objection. 183 will be received.
BY MR. SCROGGIN:
Q. Mr. Smith, would you please describe the Barefoot Bay Facility.
MR. SCROGGIN: And I might again ask the indulgence of the Court, if we could, Your Honor. I trust there would be no

Page 118

objection from the United States if we would use their own exhibit of the Barefoot Bay area as a map. I would ask that that which is --
THE COURT: You can use anything that is in evidence. Is that in evidence?
MR. SCROGGIN: It is already in evidence, Your Honor. It is attachment number one, Mark Klingenstein's expert report, and it is a geographic map of the Barefoot Bay area.
MR. BULLOCK: I have an extra copy of the report. I don't know if I should refer it to the Court.
THE COURT: All right.
THE WITNESS: I'm sorry, is there a question, Mr. Scroggin?
MR. SCROGGIN:. May I please ask that the written chart be removed so we can see the map more clearly, just tear off the page, it's been marked already as our exhibit number 203. It can be flipped over so the map is clearer.
THE COURT: You want to hand him the pointer from over in the corner there. He's got it.
BY MR. SCROGGIN:
Q. Mr. Smith, would you please describe the location of the Barefoot Bay Facility and its environs, and you may feel free to use the map at this time.
A. The facility is located adjacent to the Barefoot Bay development which is in southern Brevard County, southeast

Page 119

Brevard County.
THE COURT: Why don't you have a seat over there in the jury box, take those things out of chair there, Mr. Jacobs, and you can have a seat right there.
MR. JACOBS: I always get excluded from the jury, normally.
THE COURT: Well, this will be a rare privilege for you. You can pretend like you're trying the facts, okay.
THE WITNESS: Okay.
I'm not exactly familiar with this map, but I think it's – I get somewhere, it's right along Micco Road which is right here. And I think -- I don't know what version this, I believe the plant and development is right along in here, general area, maybe over here. I'm not sure if this is the development or the orange groves. It's in an area of citrus groves, southern Brevard County. I'm not sure that is the exact place or I'll be honest, I can't tell from this map.
BY MR. SCROGGIN:
Q. Have you reviewed your own map of this area?
A. Right, and I'm not sure which version this is. Seems like the one I have has a little different demarcation of the development actually, so --
Q. Based upon your previous review of maps of the Barefoot Bay area in preparation of your expert report, would you describe the location of the Barefoot Bay Facility and the

Page 120

route of the discharge from that facility?
A. Right. The plant discharges into this drainage canal which is essentially across the road from the plant and the site goes down –
MR. JACOBS: Objection, he's relying on his visit at this point in time. That is how he knows exactly where that drainage ditch is because he previously testified he hadn't visited the plant.
MR. SCROGGIN: Your Honor, he just testified he relied upon a map and schematic diagram of the plant in determining its location and environs, not his visit, I'm not asking him about his visit.
THE COURT: You relying on your visit?
THE WITNESS: I don't want to kid anybody, obviously the visit –
THE COURT: Don't, don't, I don't want him testifying concerning anything that he observed with respect to that visit after his deposition. I already ruled on that.
MR. SCROGGIN: Yes, Your Honor.
MR. JACOBS: Forgive me, I am going to move to strike some of the earlier testimony. It's now apparent to me that he couldn't have pinpointed the location as precisely as he did until after his deposition because in the deposition, he testified it was somewhere in Brevard County. That was all he could say, so I'm going to move to strike all of his testimony

Page 121

about the location of the plant.
BY MR. SCROGGIN:
Q. Mr. Smith, did you review a map of the area of the Barefoot Bay Facility?
THE COURT: All right.
Let me reserve on that. Go ahead and ask him.
BY MR. SCOGGIN.
Q. Sorry. Did you review a map of the Barefoot Bay area in preparing your expert report?
A. Yes, I did, and I think I, in the deposition, testified to that fact.
Q. May I ask you please, to remove the Government exhibit of that map and draw your own map based upon information that you had reviewed prior to your deposition in preparing your expert report.
A. The general forms of areas of interest are the Indian River Lagoon, Sebastian River, the north prong of the Sebastian River, and then this – the Barefoot Bay Plant and Barefoot Bay development.
And essentially, the plant discharges to a drainage canal which drains in general areas which is indicated on the map as citrus groves and flows down to this north prong of the Sebastian River.
And I think if you look at the map, it's on the order of -- this distance is on the order of three to four miles from

Page 122

the point in which the plant discharges to the point which goes --
MR. JACOBS: Objection, there is no map in this report, there was no map provided to the Government prior to the deposition. Again, he's out of bounds, Your Honor.
THE COURT: Out of bounds?
MR. JACOBS: Out of bounds of the terms of your order. He's relying on information clearly reviewed subsequent to the deposition and/or his visit to the plant.
MR. SCROGGIN: Your Honor, he's testified that his – the map he's drawing is based upon information, maps that he reviewed prior to his deposition, any and all such maps.
THE COURT: Ask him that.
BY MR. SCROGGIN:
Q. I will, Your Honor.
Mr. Smith, is the map you're drawing based upon information and documents that you reviewed prior to your deposition and relied upon in preparing your expert report for the Barefoot Bay Facility?
A. Yes. We had had copies of USGA maps, USGA quad maps like this, similiar fashion.
Q. Is your testimony based upon your personal recollection of that review of those maps?
THE COURT: Just a moment, please.
BY MR. SCROGGIN:

Page 123

Q. How far, Mr. Smith, is the distance from the discharge of the Barefoot Bay Facility to the north prong of the Sebastian River.

THE COURT: I'm going to overrule the objection, the last objection that was made and the motion to strike and the immediately preceding one as well. Go ahead.

THE WITNESS: As I said, I think it's about three to four miles. If you look on the map, again, look at our report, the description I just gave orally is essentially the same description that I gave that is given in the report on page 6 of the Barefoot Bay report.

BY MR. SCROGGIN:

Q. Go ahead.

A. And so the drainage canal, there's a drainage canal, goes down, that's about three or four miles, then the River is, north prong of the Sebastian River is not very long, I don't believe, and then again into the Indian River Lagoon, this is a shorter distance than that, this distance here.

Q. The three to four miles along the canal, can you describe that canal?

A. It's a drainage canal which it has been -- the purpose of it is to drain the citrus area there, that's it use and purpose, so that it has upland characteristics for use for citrus groves.

So it drains the storm water from those groves, and thus,

Page 124

that's what is the receiving water for this sewerage treatment plant. I don't want to get into the particulars of the canal because I'm afraid I'd step over the line there, so I'd rather not.

Q. Yes, sir, I was only asking you the length of the canal based on your review.

A. Right, it's a man-made canal. Trapezoidal section kind of thing.

Q. Can you tell me, sir, what happens to polluntants such as chlorine residuals and ammonia that you said are present in secondarily treated effluent as they travel down such a canal?

A. Well, first with chlorine, as I said, it's a bactericide and an occident, so once it gets -- it wants to be consumed and wants to oxidize, so when it gets into the receiving water, it does its thing, and as soon as it does that, it's used up. It becomes essentially harmless.

So once it is in the mixing zone and it touches things that it can oxidize, then it essentially is used up and neutral.

So beyond a fairly short distance within the receiving water, depending on the flow, I would expect that you would find very little evidence of any chlorine that might have been in there.

Q. What is a short distance compared to three or four miles?

A. You know, fifty, hundred, two hundred yards, something

Page 125

like that. Depending on flows. Obviously with more flow, the distance would be shorter. And you're talking about a flow of either -- the effluent from the plant is a half MGD or it's like point seven five cubic feet per second, and I don't know what the flow in the canal is, but -- well, enough said there.

Then you asked about ammonia. Ammonia undergoes then the biological processes that may have occurred within the treatment plant and again it is a function of dilution, and the information we had received that was actually water quality monitoring done in this canal showed that total nitrogen concentrations in the canal were very low, on the order of one part per million, very low concentration, so we should say ammonia is even lower than that because its -- total nitrogen is all the different forms of nitrogen in the stream.

Q. Would you be able to give a more precise answer about the distance over which a polhutant such as residual chlorine would have an impact if you were to see a video of the Barefoot Bay Facilities outfall?

A. If it showed the channel and, you know, I could estimate the flow of the channel, it probably would help, yes.

MR. SCROGGIN: Your Honor, I would bear the Court's indulgence, I would ask the Court's permission, would ask perhaps after the lunch break the witness be allowed to view the United States' video, only the very brief section that relates to the outfall at Barefoot Bay.

Page 126

This is an expert witness who can evaluate it in front of the Court, and we would suggest that would assist the trier of fact in understanding the impact that is in question. That is with the Court's permission, I would ask the cooperation of the United States in being able to use their exhibit this afternoon for no more than a two or three minute excerpt from the video at which he could answer the question with more precision since it is this question that relates directly to the environmental harm or potential for harm that might have been caused by the outfall effluent at Barefoot Bay.

MR. JACOBS: Judge, we're happy to make the video available. My understanding is it's in evidence and he's allowed to rely upon it if he wants.

I might point out they've had the video which was made in December of '94 and they've certainly had a chance to show it to Mr. Smith, but I can't object to them showing it to him again if he hadn't seen it.

THE COURT: Okay.

All right, I think we're going to go ahead and take a recess till five minutes after 1:00 o'clock.

(Thereupon, a luncheon recess was taken.)

Page 127

THE COURT: Mr. Scroggin.
MR. SCROGGIN: Your Honor, during the lunch break, we procured a copy of the Government's exhibit videotape. And with the Court's permission, I would like to play us a portion of the videotape that, according to the testimony of the United States' expert, shows the outfall at the Barefoot Bay facility, which is one of the facilities located here.
THE COURT: All right.
MR. SCROGGIN: I have turned, Your Honor, the video so that it faces the witness, since he has not seen this video before. And I will --
THE COURT: Okay. Does that video have a number, exhibit number?
MR. JACOBS: I want to say 505, Your Honor.
THE COURT: Okay. That's all right.
MR. SCROGGIN: This is the road in front of the Barefoot Bay facility and the outfall, according to the testimony of the Government's expert. For the record, it is the Government's Exhibit 505, the videotape we are watching. And the counter on the tape begins at, approximately, 11 -- excuse me, approximately, 10:50. I believe it was set to zero when we started the tape in the beginning, just for reference, on this particular tape counter.
It's, approximately, one or two more minutes, Your

Page 128

Honor.
THE COURT: Okay.
MR. SCROGGIN: That's the end of the section, Your Honor, dealing with the outfall.
CONTINUED DIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Mr. Smith, after viewing that brief videotape of the outfall and the receiving water, Satilli Canal, at the Barefoot Bay facility as identified by the Government's expert, do you have any opinion based on your experience regarding the flow of the canal or its size?
A. Just looking at it, the flow looked to be coming out of -- it's on the order of a half MGD, depending on what time of day it was. It could vary a little bit. It appeared to be probably 16-inch pipe -- 12- to 16-inch diameter pipe. It's free falling into the stream there, although it's apparent that the water level has been up near the outfall at times, because the vegetation is stripped around there, around the outfall where the pipe is actually coming out.
It's hard to tell how wide it was, but looking at it just trying to get a sense of it, it's obviously more than 10 feet, less than 20, something like that. I didn't get any sense of depth at all. If you assumed it was a foot deep -- which I'd guess at least it's a foot deep based on the plunge pool that was exhibited by the flow from the sewage plant.

Page 129

A foot deep, 15 feet deep across, even a triangular section, would probably yield seven and a half feet in flow. And we're talking about flow that's about a tenth of that, so -- but that's a rough approximation based on a limited view of that. So, something on the order of ten-to-one flow dilution.
Q. Based on a ten-to-one flow dilution of the outfall in the Satilli Canal, do you have any opinion regarding the impact of Barefoot Bay's discharges on the Satilli Canal?
MR. JACOBS: Objection, Your Honor. He's going beyond the scope of this report. This data that he's just speculated or roughly estimated is not on the report, and I don't think he can now rely upon it to answer the question.
THE COURT: Okay. Sustained.
BY MR. SCROGGIN:
Q. Would you anticipate -- have you reviewed, Mr. Smith, the characteristics of the effluent at Barefoot Bay?
A. Yes, we have.
Q. And in your judgment, can you tell me what impacts, if any, might be expected from those discharges into the receiving water canal?
A. Well, in the period in question, the plant is discharging very well-treated secondary sewage, which I'd expect very little impact, if any discernible impact. Looking at the water quality data that was provided, some sampling in the canal,

Page 130

looks that the water quality is reasonably good. It's not a real high water quality receiving stream, and there's not much impact from the plant.
Q. What do you mean by very highly-treated secondary effluent?
A. Well, as I mentioned earlier, the secondary treatment would expect treatment to something like 30 milligrams per liter of BOD in that order. And we're seeing effluent here of half that amount, on the order of 15 milligrams per liter BOD, so -- something over 90 percent removal of BOD in suspended solids. So, it's doing a very good job of secondary treatment.
Q. In preparing your expert report, did you review the exceedances noted for failure to report BOD in the discharge monitoring reports turned into EPA for this facility during the period of November 1991 through November 1993?
A. Yes, we did.
Q. And did you reach any conclusion regarding the environmental impact, if any, of those failures to report BOD on the discharge monitoring reports?
MR. JACOBS: Objection, Your Honor. This has been a pattern. The question has been "have you," and the response has been "we." And I'm going to object on the grounds of vagueness, because we can't tell from the question whether Mr. Scroggin is asking Mr. Smith whether he personally did this

Page 131

type of review or analysis or whether his firm did. And I think that distinction is important for the purposes as I annunciated earlier.

MR. SCROGGIN: May I respond, Your Honor?

THE COURT: I'll overrule the objection. You'll have him on cross.

THE WITNESS: Yes. We looked at it. Generally, as I recall, the tests that were being performed were actually carbonaceous BOD tests, and they were reporting what we call a CBOD. Indeed the permit was asking for BOD, and the exceedances then were being based on the fact that it was CBOD rather than BOD.

BY MR. SCROGGIN:

Q. In preparing your analysis, did you prepare a chart summarizing the trends of BOD or CBOD at Barefoot Bay during this period of time and the effluent from this treatment facility?

A. Yes, we did.

Q. I would ask, please -- we have an enlargement of one of the charts that are contained in the expert report -- the expert's report for Barefoot Bay. It's simply an enlargement for Florida Cities Exhibit 183.

Mr. Smith, can you describe what this chart presents?

A. Yes, sir. This top line is -- first, just as I mentioned earlier, this represents typical raw sewage, the strength of

Page 132

raw sewage, the BOD strength. Then it goes on to show the actual BOD strength. So, it's fairly what we call weak sewage coming into the plant. It looks like an average of maybe 125 to 150 milligrams per liter.

This diamond here is what's shown as the -- was in the order -- administrative order or the permit conditions as to effluent limits, 20 or 30 parts per million. And then the diamonds are the actual plant effluent reported, and I think that's where they were actually reporting numbers that were samples taken as CBOD and reporting them as BOD.

Q. Can you explain the difference that would be expected between the measured values for CBOD and BOD from this effluent during this period of time?

A. Well, it's interesting. This is a question that really was never an issue in years past in the sanitary engineering business, because CBOD was kind of all of BOD. You put this stuff -- diluted it into a bottle. You measured the amount of oxygen that was used up, and all the oxygen made the BOD.

Well, as we started going to higher and higher levels of treatment, it turns out that these -- as I showed you on that earlier chart -- the bugs that take up the nitrogen are not as strong as those that take up the carbon, and so it takes longer for them to do their thing.

And so, what's happened is, we've cleaned up the effluent more and more. There's not as much carbon for these

Page 133

bugs to consume. So, they consume all the carbon, and then they start consuming nitrogen. They convert ammonia to nitrate, and that exerts oxygen demand.

Well, what's happened is that in these very high quality effluents, such as we're seeing down here with discharges in the teens or ten, or somewhere in that range, at parts per million, it uses up all the carbon, exerts that demand. And then it starts using up the ammonia and exerts another demand, which we then call nitrogenous oxygen demand.

So, a plant operator is interested for his own treatment purposes in the carbonaceous demand, what's this plant doing, because that's what he's most interested in. But it does impact what the reported value is. But as I said, the work is first done by the carbonaceous microorganisms and then the nitrogenous.

So, what we see here in this graph is actually the reported CBOD values, because there's been an inhibitor added to the sample that doesn't let the nitrogenous microorganisms actually do their work. On the lower values, the impact of not having added that inhibitor could be greater, could be maybe as much as 25 percent more. So, if you had ten parts per million of CBOD, if you looked at total BOD, that may be as high as 12 or 13 parts.

If you were up higher than that, then the impact would be less, because it had to consume more carbon. It

Page 134

didn't have as much time for the nitrogen to be consumed. But from -- during the entire period up -- we've reported here through 6 of '93. Through this period here, this would never have exceeded effluent limitations, thus from that standpoint would not have impacted the environment any more than what was permitted by the permit.

Q. Mr. Smith, the Court has found that Florida Cities did incorrectly report CBOD values when the permit required reporting BOD values.

My question to you, sir, is can you tell from your analysis whether or not Florida Cities' effluent would have complied with the permit's limits during the time in question?

A. Well, that's what I was saying. In these areas here, the effluent reported as CBOD is very, very low. So, even that influence of NOD, Nitrogenous Oxygen Demand, would be, you know, relatively small, some on the order of 25 percent greater than what was reported.

If you added 25 percent to every one of those values, you're still well below the permit limits. Again, it's a very good effluent for that plant.

Q. During this period of time, sir, how many exceedances based on your analysis would Florida Cities had reported if they had been measuring and reporting correctly BOD instead of CBOD?

A. The only one we saw was early in the period, very early in

Page 135

the period, and I -- and that's this one spike here. Could you --
Q. But the period of time to which I'm referring you is November of '91 through November of '93. Let me phrase my question again, if I might, sir.
A. Okay.
Q. And that is, during the period of time of relevance to this litigation, November '91 through November '93, how many exceedances would Florida Cities have reported on the DMRs to EPA if they had been correctly measuring CBOD instead of BOD based upon your analysis?
MR. JACOBS: Objection. Asked and answered.
THE COURT: Overruled.
THE WITNESS: There would be no exceedances.
BY MR. SCROGGIN:
Q. No exceedances at all, sir?
A. No.
Q. I'd like to turn to the exceedances that are reported in the violations that have been found for total residual chlorine at the Barefoot Bay facility. I'm going to ask you, sir, can you tell me what levels of total residual chlorine the water quality standards of the state of Florida require in the final outfall from a sewage treatment facility?
MR. JACOBS: Objection. Relevancy. We're talking about a federal permit. There's no allegations of violations

Page 136

of the state permit.
THE COURT: Overruled.
THE WITNESS: It varies to application. Sometimes as high as .5 parts per million and as low as 003 for total residual chlorine. No detectable limit.
BY MR. SCROGGIN:
Q. Do you know, sir, what the specific permit limit was in the federal NPDES permit for total residual chlorine for this facility during the time of September 1992 through March of 1993?
A. I believe it was no detectable -- what do they call it -- no detectable trace or no detectable measurement.
Q. Do you know if the total -- do you know, in fact, what the -- what total residual chlorine values were reported by Florida Cities during this period of time?
A. I think we have that in the report. I'd have to look at that to be able to identify them. In looking again at the report, essentially .01 was the standard, which is essentially not below detectable levels. I don't recall what the actual limit -- what they were actually -- the numbers were.
Q. Well, the Court has already found that they reported numbers higher than .01 and, therefore, that there were exceedances reported on the DMRs. And the DMRs are -- have already been introduced into evidence.
Can you tell me, sir, what the -- what environmental

Page 137

impact, if any, you would anticipate from levels of chlorine residual between .01 parts per million and one part per million?
A. Well, again, chlorine is a bioside of an oxidant, and so when it's introduced into the receiving water, it's going to want to oxidize things. And it will be quickly diluted from the flow of the stream depending on the relative flow. That dilution, along with its active oxidizing strength, would dissipate within fairly short order, again based on the mixing zone of that stream.
Q. Would there be any impact, based upon your analysis of total residual chlorine, by the time the flow of the Satilli Canal reached the north prong of the Sebastian River, which you testified is, approximately, three or four miles away?
A. I would expect it to be dissipated well before it got to the Sebastian Creek.
Q. And can you tell me what you mean by "dissipated"? Does that mean with respect to the magnitude of environmental impact?
A. Right. Dissipated is that it's used up, and it has no oxidizing. It's the HCL -- HOCL. The hydrochloride ion is what is active, and that will essentially be used up, hydrochloride ion, and that this would be gone. And there may be chlorides left in the water, but -- and the impact would essentially, again, be in the mixing zone. It would be one of

Page 138

discouraging certain species that may be sensitive to this level of chlorine from entering that mixing zone.
Q. And would the impact downstream of the discharge from the Barefoot Bay facility, before it reached the north prong of the Sebastian River, be detectable?
A. Would the impact be detectable?
Q. The impact of total residual chlorine.
A. No.
Q. You stated that the permit limit is 0.1 parts per million. Your previous testimony was that one part per million is one drop in the 13 gallons. Can you tell us what one tenth of a part per million is?
A. It would be one tenth of a drop in 13 gallons. It's a very small amount.
Q. Do you have experience in evaluating the impacts of total residual chlorine on receiving water environments?
A. Yes, I do.
Q. Can you tell me what impacts, if any, you would anticipate from the discharge from the Barefoot Bay facility at levels of .1 to one part per million?
A. Again, it would be a very minor confined impact to the mixing zone area until it's dissipated. That could be confirmed by field measurement. But from what we've seen, the impacts would be fairly minor compared to -- this is a drainage canal. Depending on what species are there -- they've already

Page 139

become accustomed to not swimming into this zone, and essentially it just -- it would be a barrier to some movement in the stream in that area.
Q. You testified earlier that the outfall you viewed in the videotape was above the surface water of the receiving water, the surface of the receiving water. Does that have any impact on the level of total residual chlorine that the outfall would realize in the receiving water?
A. Well, there would be some -- just some off gases from any of the chlorine, just vaporization of it, stripping. The biggest impact is that the water is free falling, and there's some aeration going on. And so, it's making an aerobic environment and, you know, mixed well.
Q. And does that mean that the impact in the receiving water would be higher or lower than if the outfall were under the surface water?
A. I would expect it -- the mixing -- it promotes mixing, and mixing is important to dissipate the chlorine to diminish the amount of impact it would have.
Q. Can you compare the levels of total residual chlorine in the Barefoot Bay effluent with normal drinking water in the state of Florida?
A. Well, drinking water would normally be -- have a chlorine residual of anywhere from one to two parts per million when it leaves the water plant and always has to have a residual in the

Page 140

distribution system. So, if you turn on the tap at your house, you would have chlorine in the tap so that it would oxidize the bacteria in the pipes.
MR. JACOBS: Objection. Goes beyond the scope of the report. Move to strike. He's not been qualified as an expert in water or water treatment or water distribution, and I don't believe any of this was in the report.
MR. SCROGGIN: May I respond, Your Honor?
THE COURT: Yes.
MR. SCROGGIN: He has testified that he has experience in water and wastewater treatment. And certainly with respect to the seriousness of the violation, the comparison to other environmental waters such as drinking water is relevant.
THE COURT: Overruled.
BY MR. SCROGGIN:
Q. I would ask you, sir, can you compare the levels of total residual chlorine, that is, how many times the total residual chlorine is there in drinking water compared to the levels in the effluent from the Barefoot Bay water treatment facility during this period of time?
A. Well, anywhere from ten times to -- or two times to ten times or 20 times, as much in drinking water as there would be in the effluent going into this canal.
Q. And did you reach any expert opinion about the expected

Page 141

environmental impacts on the Satilli Canal from these TRC exceedances?
A. Yes, we did.
Q. And what was that?
A. We found it to be no measurable impact on the canal.
Q. And did you reach that conclusion with a reasonable degree of scientific certainty to state that there were no impacts on the canal?
A. Yes, we did -- I did.
MR. JACOBS: Misstated the witness's prior testimony that -- the prior testimony was measurable impact, and Mr. Scroggin asked him to confirm that there was no impact. And I think there's a difference between measurable and no impact.
THE COURT: You'll have him on cross. Overruled.
BY MR. SCROGGIN:
Q. I'd like to turn, sir, to the toxicity exceedances at the Barefoot Bay facility and ask you if -- first of all, do you have any experience in -- with respect to the use of toxicity tests to measure effluent?
A. Yes, I do.
Q. And what is that experience?
A. Well, the whole effluent toxicity test is a fairly new measurement of effluent strength and effluent conditions, quality if you will. The idea is that you take effluent in its -- the whole effluent, if you will, a hundred percent

Page 142

effluent, and you subject some fairly fragile organisms to living in this whole effluent.
And the idea is to see if these very fragile organisms can live in the whole effluent, such that if it can, then that's good effluent. And if can't, then there may be some reason to look further into the effluent itself. It was an idea, a test that came about, to pick up the impacts of some difficult-to-measure compounds in wastewater treatment plants and effluent.
One of the offshoots of it, however, was that -- what we found was that all of the species, which are generally fat head minnows or silver side minnows or fleas -- or water fleas and shrimp, are also very susceptible to ammonia, which is ubiquitous in wastewater that has not been treated to advanced treatment methods.
And so, when it first came out in the late '80s as a test, then everybody that didn't remove ammonia failed the whole effluent toxicity test. So, we've been struggling with how to use it. It's a difficult test to use and now has become a standard for those with advanced waste treatment, that you need to pass that test.
Q. Is it more common in your experience to have whole effluent toxicity tests for advanced wastewater treatment, AWT facilities, than it is for secondary facilities?
A. Yes.

Page 143

Q. Is whole effluent toxicity testing designed to measure actual toxic impacts in the environment?
A. No. The idea is that you take these very fragile organisms, which may or may not live in the receiving waters that you're discharging to, and see can these very fragile organisms live in this effluent all by itself. And if they can, then good. That means that most everything in the stream will live there, too. If it can't, then again you move upstream and see if there's some things you need to remove.
Q. Where are the whole effluent toxicity tests performed if they're not based upon actual observations of the environment?
A. It's a laboratory test under controlled environment and conditions and with repeatable methods and procedures so that you can do them over and be assured of not introducing any other error into the test.
Q. What are those controlled conditions in the laboratory for a whole effluent toxicity test?
A. I couldn't recite them all, Mr. Scroggin.
Q. Do you know, for example, what concentration of effluent is used for the testing done at the Barefoot Bay facility?
A. Well, generally whole effluent – the idea is that it's a hundred percent effluent that this organism needs to live in.
Q. Is any consideration taken of dilution in the environment that actually occurs in doing whole effluent toxicity testing in the laboratory?

Page 144

A. Generally not. Although, there's some that are actually – there's some testing done to see what the dilution is in allowing it to live in that condition. But for the testing purposes, it's a hundred percent effluent.
Q. Do you know or have any opinion what caused the toxicity test – whole effluent toxicity test failures of the Barefoot Bay facility during this period of time?
A. Most assuredly I'd say it was ammonia.
Q. And on what do you base that opinion?
A. Well, a couple things. One is, that's what we have found historically in the municipal treatment plants, is ammonia is the thing that causes us to fail. But more specifically on this plant, we've got a period in which it failed the test. We put in some advanced waste treatment, which removed ammonia, and then it passed the test. And the treatment that took place really wouldn't have removed anything else that might have been there, other than some solids or – because they filtered it, and they took out the nitrogen.
And so, there isn't any – you know, still microbial treatment, still bugs doing the same thing. It's just giving them a little longer to do it. So, generally I'd say ammonia is the key thing. I mean, you took out the ammonia, and it passed the test.
Q. Based upon your experience, would you anticipate that the effluent from a well-run secondary treatment facility would

Page 145

have sufficient ammonia to fail these new whole effluent toxicity tests that you've described?
A. Yes.
Q. Are you aware of the quality of the effluent during the time of interest for this litigation at Barefoot Bay? Was it, in fact, secondarily-treated effluent?
A. Yes, it was.
Q. And did you conclude with a reasonable degree of scientific certainty that the most likely cause of the failures of the whole effluent toxicity testing at Barefoot Bay was the presence of ammonia in the effluent?
A. That's correct. We did.
Q. Did your analysis reach any conclusions regarding the environmental impact with respect to the whole effluent toxicity test failures?
A. The plant had been discharging this effluent for some time, and whatever was occurring in the canal was pretty much their status quo. So, there's no impact from that – continued during this period from November of '90 through '93, no additional impact at all from not passing those tests.
Q. The record in this case, sir, will – according to EPA is that there has been continuous discharge from this facility since 1983. My question to you is, would you have anticipated, based on your judgment, to have seen some measurable impact after that length of time of operation of this facility?

Page 146

MR. JACOBS: Objection to the extent the question mischaracterizes the Government's position. He said continuous discharges since 1983. The testimony was that they began in 1980.
MR. SCROGGIN: I will be glad to amend my question to 1980.
THE COURT: All right.
BY MR. SCROGGIN:
Q. Assuming that there had been continuous discharge of this facility, as the Government has stated, since 1980, would you anticipate finding environmental impacts pursuant to your analysis?
A. Well, again, the water quality monitoring that we saw from '88 to '93, I think it was, by Bionomics indicated the total nitrogen in the canal was quite low, on the order of one or two parts per million. So, I would suspect that the ammonia fraction of that is quite low. And generally we're concerned with the – actually the unionized portion of ammonia that affects fish and these organisms. So, I would expect very, very little impact and probably not measurable, probably not – probably not there.
Q. I'd like now to move to the Carrollwood facility. But before I move to the Carrollwood facility, I will ask you, can you state the conclusion that you've just given with a reasonable degree of scientific certainty?

Page 147

A. Yes.
Q. I'd like now to move to the Carrollwood facility and the exceedances which the Court has already found are violations for CBOD: fecal coliform, nitrogen, phosphorous, TRC, Total Residual Chlorine, and Total Suspended Solids, TSS.
Are you familiar with the Carrollwood facility, Mr. Smith?
A. Only by historical reference. It's gone, and I didn't visit it before it was gone.
Q. Do you know the flow from the Carrollwood facility?
A. Yes. It's on the order of .5 MGD.
Q. And based upon your experience, how does that rank among sewage treatment facilities? Is it large or small, or can you describe its flow in terms of magnitude?
A. Again, it's a very small residential plant serving an area of old Carrollwood there, essentially residential and some commercial connections, fairly small.
Q. Do you know for over what period of time the Carrollwood facility had the violations that are alleged in this case, for how long a period of time?
A. I don't remember exactly the number of months, but until they achieved their connection. It's from the period in which they got a permit -- because it was very low permit values based on AWT -- until the time which they ceased discharging. So, during that period they had exceedances.

Page 148

Q. You said that it was a very low permit. Can you describe the -- based upon the review you did for your expert report, what kind of permit did Carrollwood have during the period from July 1991 through December 1991?
MR. JACOBS: Objection. He said he hadn't reviewed the permit in preparation of his expert report.
BY MR. SCROGGIN:
Q. Do you know, sir, if --
MR. SCROGGIN: May I ask him the question, Your Honor, does he know what kind of permit?
THE COURT: All right. Yes.
THE WITNESS: Okay. I would characterize it as an AWT -- the effluent limits are like AWT permit limits because they're very low and generally conform with what we know as the Grizzle-Figg Standards on the west coast. All of Tampa Bay is -- anything that discharges into it generally is 5531. I think the actual number was 4.8 per BOD at Carrollwood: three of solids and three of total nitrogen and one of total phosphorous.
BY MR. SCROGGIN:
Q. The discharge monitor reports of the Carrollwood facility, do they contain both the measured values and the permit limits for any particular parameter?
A. Right. That's the way the columns are set up on the reports.

Page 149

Q. And you did review the information from the DMRs with respect to the Carrollwood facility?
A. Right. And we plotted those on the graphs, as well.
Q. Can you tell me if you reached any opinion regarding why there were these exceedances at the Carrollwood facility?
A. It was a permit -- the standards are for a plant that is an advanced waste treatment plant, and the Carrollwood plant was essentially a good secondary plant.
Q. You said that Carrollwood is a good secondary plant. Would you anticipate that any good secondary plant would have violations such as those that occurred at Carrollwood if it had the permit limits that were imposed on Carrollwood during this six-month period?
A. Oh, absolutely. I mean, the Carrollwood plant actually did remarkably well, in terms of almost meeting some of the permit limits. Despite it being simply a secondary plant, it had an extraordinary performance record based on those standards.
Q. For some months the Court has found there was not a violation from the Carrollwood plant during this six-month period for TSS. You've testified that the permit limits were for an AWT facility. Would that include the permit limit for TSS?
MR. JACOBS: Objection to the extent that counsel is mischaracterizing the Court's ruling.

Page 150

THE COURT: What was your question? That the Court had found that there were not --
MR. SCROGGIN: During the six-month period, Your Honor, from July 1991 through December 1991, for Total Suspended Solids, TSS, and CBOD, Carbonaceous Biochemical Oxygen Demands, there are no violations. And my question to him is --
THE COURT: Wait a minute. There are no violations. Now, was this -- you need to refresh my recollection. Was this based -- what was this finding of the Court based on?
MR. SCROGGIN: The Court's summary judgment order in this case found violations for the Carrollwood facility during the period July 1991 through December 1991 for the parameters that I discussed: CBOD, fecal coliform, nitrogen, phosphorous, TRC, and TSS, but not for every month. Some months there are no violations for TSS and CBOD.
And my question to the witness is whether he would have expected a normal secondary plant to have violated every month.
THE COURT: Well, you can ask him that, but don't characterize my order.
MR. SCROGGIN: Yes, sir.
BY MR. SCROGGIN:
Q. Would you anticipate a well-run, good secondary plant to have violated these parameters every month if it had the

Page 151

permit limits that were given to the Carrollwood facility?
A. Yes, I would.
Q. And did you reach any conclusion as to how the Carrollwood plant was able to achieve the higher advanced wastewater treatment limits, the more stringent advanced wastewater treatment limits for TSS and CBOD, at least for some months during this six-month period?
A. Well, yes. I looked at it, and there's a couple of things they could do to optimize the operation in terms of the aeration and how that works. And the more you aerated, the more you treat this sewage within controlled periods, you can actually get better solids/liquids separation. And then they also had a holding pond at the end of it.

And assuming they didn't have any algal growth in the holding pond, they could actually get some additional clarification there to where there are very good treatment. And so, assuming they -- obviously they must have had sufficient aeration capacity and clarification to get down to very low numbers.
Q. Based upon your experience with operations of sewage treatment facilities, can you tell whether -- how would you rate the operation it was able to achieve, at least for some months on at least two parameters the more stringent limits of AWT, when the facility is a secondary facility?
A. Again, really it was extraordinary treatment that was

Page 152

being provided by that plant, because it was not intended for that kind of limit.
Q. Extraordinary in which way, sir? Is it extraordinarily good --
A. Extraordinarily good.
Q. --or extraordinarily bad?
A. Extraordinarily good.
Q. Did you reach any conclusion regarding the seriousness of environmental impacts during this six-month period when the Carrollwood facility operated as a secondary facility with an AWT permit? Did you reach any conclusion regarding the environmental impacts of these exceedances?
A. Of the BOD and TSS?
Q. Yes, sir.
A. Our conclusion was it would be essentially not measurable, very little impact on the receiving waters.
Q. And on what do you base that conclusion?
A. Well, the permit limits are written, again, to essentially minimize impact, really on the receiving waters of Tampa Bay. And in this area, this is very high quality treatment, and we would suspect background levels of BOD from just surface runoff to be in the order of what we're seeing from the treatment plant.
Q. And did you reach this conclusion with a reasonable degree of scientific certainty?

Page 153

A. Yes.
Q. You've addressed CBOD and TSS. Can you tell me what your assessment of the seriousness of the environmental impact was from the violations of fecal coliform?
A. Well, as I remember, the standards here were essentially zero on fecal coliform. So, if they had any fecal -- which the only way you can get down to zero or 2.2 part -- or 2.2 colonies under the most probable number test is essentially through filtration, and they were not providing filtration. And so, I would not be surprised at all that they would exceed it greater than that for fecal coliform.
Q. And I'll ask you the same question, sir. Did you reach any conclusion regarding the seriousness of the environmental impact regarding the nitrogen and phosphorous exceedances for the Carrollwood facility during this six-month period?
A. Nitrogen -- it seems that there weren't many tests available of nitrogen and phosphorous. But those we had, again ammonia was -- nitrogen is much lower than we would have expected from a secondary plant, that they're obviously achieving some level of nitrification. Nitrification is changing ammonia to nitrate with additional oxidation.

And so, obviously they were getting some of that, and that's what I would expect given the high quality of effluent they were achieving from the treatment process. So, it's much less than what we would expect from a secondary plant

Page 154

obviously, but it still exceeded the permit, because it was written from AWT plant.
Q. I'm sorry, sir. You said much less. You mean the environmental impact was much less than you would anticipate from a secondary --
A. The amount of ammonia or amount of nitrogen in the effluent was much less than I would have expected from a typical secondary plant. The amount of environmental impact -- again without looking at direct water quality information, I would suspect that it would be a very minor amount of impact from ammonia in that stream.
Q. And did you reach that conclusion with a reasonable degree of scientific certainty?
A. Yes.
Q. I'd like to move on to the Waterway Estates facility, which has exceedances for toxicity and nitrogen and violations for discharge to the wrong location and discharge without a permit.

Are you familiar, sir, with the Waterway Estates facility?
A. Yes.
Q. Did you visit the Waterway Estates facility before your deposition?
A. Yes. Not inside the fence, though.

THE COURT: What did you say?

Page 155

THE WITNESS: I visited, but not inside the fence.
THE COURT: Oh.
THE WITNESS: I told Mr. Jacobs that I viewed through the windshield.
BY MR. SCROGGIN:
Q. Are you familiar with the environs of the Waterway Estates facility on land?
A. Generally, yes.
Q. Are you familiar with the hydrological area around the Waterway Estates facility? And by that I mean are you familiar with the water area, as opposed to the land area, around the Waterway Estates facility?
A. Yes. I mean, it's on a drainage canal adjacent to the Caloosahatchee River. You know, there's marine -- some kind of marine facilities on each side of it, boat docks and whatnot, boat -- boat barns, that kind of thing.
Q. Do you know the flow from the Waterway Estates facility?
A. As I recall, it's just under one million gallons per day during the period of interest.
Q. And do you know the flow of the Caloosahatchee River, the receiving water for which this facility was permitted?
A. I think we reported values in our report of greater than a thousand million gallons per day at the upstream gauging station, upstream of the discharge.
MR. SCROGGIN: With the Court's permission, I would

Page 156

like to ask the witness, please, based upon the work that he's done for his expert report, to draw the Waterway Estates facility, which has an unusual location. I would ask, if I might, please, to have the diagram that the witness has already done with respect to the Barefoot Bay facility marked for identification only as Florida Cities 204. And --
THE COURT: Well, you're going to need to make sure it's marked, if you want to do that. It's counsel's responsibility to premark all exhibits.
MR. SCROGGIN: Okay. We can mark it right now, Your Honor, if that's agreeable to the Court.
THE COURT: But my clerk's not doing that.
MR. SCROGGIN: Okay.
THE COURT: You need to do the leg work or have it done by one of your people.
MR. SCROGGIN: I'd like to mark for identification the witness's diagram of the Barefoot Bay facility as Florida Cities 204 for identification.
THE COURT: Put "For ID" on there, if you would. All right.
MR. SCROGGIN: With the Court's permission, I would like to ask the witness to step down and --
THE COURT: You can step down.
MR. SCROGGIN: -- draw the layout of the Waterway Estates facility and its nearby environs.

Page 157

MR. JACOBS: Objection to the extent that it goes beyond the report and relies on his visit to the facility itself as opposed to the drive-by windshield view.
THE COURT: Well, let's only have the drive-by windshield view without relying upon your subsequent visit, and I'll overrule the objection otherwise.
THE WITNESS: I'll limit it to outside the plant itself. The Caloosahatchee River flows -- it's kind of -- north is going this way. The plant is located on a little drainage canal that I would guess was built to allow this area to be developed for residential purposes and to allow boat access up and down.
The plant is located right on the canal. There's, as I recall, some other kind of canal and kind of an island that's built out there. There's a restaurant here and a boat barn, and it seems like there's a boat -- something else -- a boat yard over here, and this is "boat barn," "restaurant." Canals kind of go various ways, and the plant is kind of sandwiched in.
I essentially drove up to that point and stopped and looked through the windshield at the plant. That was my windshield tour, and I went back out. So, I think that's a fair collection of what it was. This is the plant here.
BY MR. SCROGGIN:
Q. Can you tell me, sir, how does the size, the land

Page 158

area size of the Waterway Estates facility, compare to other facilities with which you are familiar?
A. It's a very tight site, very small, probably less than an acre.
Q. And are there any implications regarding the difficulty or ease of operation of a facility located on a small site?
A. Well, operationally it's not too hard. I mean, actually things are very close together, nice and compact. But it is a very tight site to try to put all the pieces of a treatment plant on it.
Q. In a moment we'll discuss your analysis of the steps described in your report for constructing -- undertaking a construction project on such a site.
And I'll ask you now, are there implications for constructing a new facility on a site of this size that are -- that distinguish it from other sewage treatment facility sites?
A. Well, the plant improvements, as I recall, were something in excess of $2 million. And if you can imagine trying to build a house on less than a one-acre site and spending more than a million dollars or $2 million on the house and yet staying in the existing house that's also on the site -- that's kind of a sense of it. It's very compact, very difficult logistically to try to build something on that site, so -- it's a very difficult site to try to do anything with.
Q. Do you know where the discharge from the Waterway Estates

Page 159

facility occurred from the time it was built until July 1991?
A. I believe it just went straight up from the plant into the canal, right here.
Q. Do you know the size of that canal?
A. It's probably 30 – I don't know. 40 feet across, something like that, just a typical boat canal, drainage canal kind of thing, access up into residential areas.
Q. Have you seen similar boat canals elsewhere in Florida?
A. Right. We have them down in South Tampa, all along the Tampa Bay, lots of them, kind of finger canals that go up and allow boat access to slip docks right up by the house. That's the kind of facilities that were built here, as well. So, you know, 30, 40 feet across, probably enough depth so that the boats can get in and out of there.
Q. Do you know whether this canal is tidally influenced or has its own independent flow of water?
A. I think we reported in our report that it is tidally influenced.
Q. Do you know how far the discharge point was from the edge of the Caloosahatchee River?
A. Well, as I mentioned, it goes from – here's the discharge – or was the discharge. The river goes down past the boat barn, and there's another kind of canal that comes in here, and I don't know really where that goes. There's a little island barrier out here, and then the main river is out

Page 160

here. I don't know. It's probably a good five iron, at least. I'd say a couple hundred yards, maybe, 180 yards.
Q. Do you know the level of treatment that the Waterway Estates facility achieved during the period of time of relevance to this litigation, which would be from July – I'm sorry – from November 1989 through April 1992?
A. Again, it's a secondary plant actually providing something a little greater than secondary treatment. They were actually providing some nitrogen removal in the plant through its operation.
Q. Does that mean that the effluent – or can you tell me, sir, how you would compare the effluent from the Waterway Estates facility with other secondary-treated facilities with which you have experience?
A. Well, it would be better effluent. As I recall, it also had filters on it at different times, and so the filters would provide even less in the way of solids and BOD. That wouldn't affect nitrogen and phosphorous generally, but it was a well-operated secondary plant achieving some nitrogen removal and excellent BOD and SS removal – TSS.
Q. Do you know of any limitations on the area of the Caloosahatchee River into which this facility was discharging regarding nitrogen and phosphorous?
A. Well, the concern at Caloosahatchee was that you would not discharge too much nutrients, again, to cause the provocation

Page 161

of algae. And so, there were measurements taken and work done by the Department of Environmental Regulation at the time to try to determine how much they could put in and develop those amounts. And so, there was concerns about nitrogen and phosphorous going in, because, again, the idea – the basic building blocks of algae – you don't want to formal algae in the river.

MR. SCROGGIN: With the Court's permission, I would like to have the witness refer to a blowup of – which is Exhibit No. 92 from the expert report that has been prepared.

BY MR. SCROGGIN:

Q. I'll ask you, sir, did you prepare this chart as part of the expert report that you – perhaps I should preface that by saying did you prepare a report for the Waterway Estates facility regarding these exceedances and their environmental impacts?
A. Yes, we did.
Q. And is this chart one of the charts that you prepared in your analysis for this facility?
A. Yes, it is.
Q. I would refer you to Florida Cities Exhibit No. 92, which I would like to show the witness at this time. I'll ask you, sir, is this the expert report that you prepared for the Waterway Estates facility?
A. Yes, it is.

Page 162

MR. SCROGGIN: I would ask that Florida Cities Exhibit No. 92 be moved into evidence.

MR. JACOBS: Same objection, Your Honor.

THE COURT: Okay. Overruled. It will be received.

(Florida Exhibit No. 92 was received into evidence.)

BY MR. SCROGGIN:

Q. Sir, can you explain this chart, which is from page 24 of your expert report and marked as Exhibit 92 – can you read the title and explain this chart to us, please, for the Waterway Estates facility?
A. The title of the chart is "Nitrogen Discharge To The River," and that's the Caloosahatchee River.

THE WITNESS: If I could, Your Honor.

THE COURT: Yes.

THE WITNESS: The chart is just to indicate the impact in terms of the amount of nitrogen being discharged from this plant into the Caloosahatchee River. There have been some work done to develop how much nitrogen could the river accept and not grow too much algae so as to create an environmental harm. And that number was up here in excess of 1200 pounds of nitrogen per year. Then it –

THE COURT: That's the threshold –

THE WITNESS: Pounds per day.

THE COURT: That's the threshold at which algae would develop?

Page 163

THE WITNESS: That's the threshold at which the amount of algae would be an impact. So, they wanted to keep it below that. So, they actually set a limit and said, "Okay. We'll allocate the amount of waste that can be put into the stream to be something on the order of a thousand fifty pounds of nitrogen per day." And so, they allowed the -- they divided this up and gave it to the various treatment plants to say, "You can discharge so much, the total of which can't be more than that," because once it gets more than that -- this is just a safety factor, if you will. And there could be other future things. They want to reserve it for a number of reasons they want to do.

The standard which was given to Florida Cities was actually 25 pounds per day, and that's essentially equal to one million gallons of flow and three parts per million of the nitrogen, total nitrogen in effluent. So, if you multiply it out, it's about 25 pounds per day of this total of over a thousand.

As you can see, these diamonds then are essentially the actual amount of discharge of nitrogen by the plant: less than 200, a hundred. And this goes from 90 through 92, a high of over 200 and clear down here, essentially zero, and again generally around a hundred pounds, which indicates that they were probably discharging about 12 parts of nitrogen rather than three.

Page 164

Again, putting it in perspective, it's this much of a total allocation of this much. And so, there's a great deal more capacity in the river than what was being used up by Florida Cities.

Q. Can you tell me from your chart whether or not Waterway Estates was meeting its permit limits for nitrogen during this period from August 1, 1992 on?

A. Generally it wasn't. There may have been one or two times that -- it looks like there's one or two times that it was meeting the limit.

Q. And can you compare the magnitude of the actual nitrogen in the effluent from Waterway Estates with respect to the total potential loading that you described for the river itself?

A. Well, again, the -- on the order of a hundred pounds per day is what Florida Cities -- again, about 12 parts per million over a capacity of a thousand seventy-five. So, they were about a tenth, perhaps, of the capacity of the river in terms of their discharge.

Q. You talked about the capacity of the river and dividing up the capacity of the river. Is that a wasteload allocation?

A. Yes. That's what -- essentially what's the capacity of this river to accept discharges, and then we allocate that capacity to various treatment plants based on relative size and other configurations. And that's allocating waste load, if you will, how much waste you each can contribute to the stream.

Page 165

And their allocation was quite small, only 25 pounds. They were in excess of their allocation. But compared to the whole, it's a very small amount.

Q. Does a wasteload allocation already consider the other discharges on the river?

A. Yes. That's part of the -- generally what they would do -- because this is -- you know, this is forever essential. I mean, a stream isn't going to change much. So, I would suspect that the existing -- this is allowing for future capacity in these plants. And so, in the ultimate kind of build-out, it could not exceed that number, but under current situations, it's much less than that.

Q. You testified that one of the consequences of an effluent containing more nitrogen might be producing algae. Is algae a serious environmental problem?

A. Well, it's an undesirable, if you will. It's not a threat to public health. It's not a threat to, you know, welfare or anything like that, but it's an undesirable. It could discolor the water. If there's too much of it, it actually can accumulate and affect other organisms which depend on clean bottomed rivers and so forth or -- not be covered up by the algae, that kind of thing.

Q. Do you know if there ever were observed any such discoloration of the water or algae problems in the Caloosahatchee River based upon your analysis?

Page 166

THE COURT: Just a minute.

MR. JACOBS: Objection. Hearsay.

THE COURT: I'll overrule the objection.

THE WITNESS: It's my understanding from work that was done by DER in about 1990, as I recall, they measure essentially chlorophyll-A from the algae. And they're fairly low concentrations, on the order of 15 or 16 micrograms per liter, with as high of about 19 micrograms per liter near the discharge.

BY MR. SCROGGIN:

Q. Were any of these measured values of chlorophyll-A in your judgment attributable to the Waterway Estates discharge?

A. Yes. I believe the spike from 15 to 19 is probably the result of the plant. It was taken near the -- up near the plant in the boundary of the Caloosahatchee River.

Q. Do you know if, in fact, there's any data that you considered in preparing your report that demonstrate any actual environmental harm attributable to the operation of the Waterway Estates facility?

A. Well, the work that was done at that time indicated they actually expected something on the order of 25 micrograms per liter and that this was much less than expected, that they had overestimated the impact by as much as a third, so that the plant had very little impact and certainly not that which was intolerable.

Page 167

Q. Did your report analyze the impacts regarding the relocation of the outfall from the canal to the six-foot contraline of the Caloosahatchee River?
A. Yes, we did.
Q. And what conclusions did you reach about the environmental impacts of that change in the outfall's location?
A. We said that it would -- I would say that it would have an improved -- it would improve the water quality generally, because it introduced the flow at a point which was getting very good mixing and dilution at the deepest point and probably the fastest point in the river and -- yes.
Q. Are you aware of any data that actually demonstrated an improvement in the water quality of the Caloosahatchee River during -- before and after the relocation of the outfall?
A. No.
Q. Do you know if there were any impact at all on the Caloosahatchee River attributable to the relocation of the outfall?
A. I'm sorry. Did you say any data or any impact?
Q. Any data of any impacts attributable to the relocation of the outfall at Waterway Estates.
A. I don't recall any right off, no. I mean, our judgment was one more of intuitive engineering judgment, to move it out to the mixing zone, that you're going to get better mixing and less of an impact on the river.

Page 168

Q. But did you analyze any data showing a lessening of impact on the river?
MR. JACOBS: Objection. Asked and answered. That's the third time.
THE COURT: Sustained.
BY MR. SCROGGIN:
Q. I'd like to move on to the exceedances for toxicity and nitrogen at the Waterway Estates facility and ask you, sir, if you have any opinion regarding the seriousness of these exceedances for toxicity of the Waterway Estates facility?
A. Much the same testimony as I made on the Barefoot Bay plant. Again, this is toxicity related generally ammonia in the effluent, that this plant did not remove all of the ammonia until it was upgraded. And after it was upgraded, it met the whole effluent toxicity test after it was up and running and in good shape.
So, it was our judgment and my judgment that indeed it was related to the ammonia, the toxicity was, and its failure to meet those tests.
Q. What kind of effluent was the Waterway Estates putting out during the period time of the toxicity failures? That would be from -- the toxicity failures are reported in February through June of 1992.
A. Generally it was very good secondary treatment. Again, it was secondary treatment with some filtration, but not complete

Page 169

nitrification. Now, as I recall, the plant was put on line in about April, and it took them a little while to get the nitrification up and running and everything clicking. I don't recall when the last violation was, if it was June. And then after that, they begin meeting the whole effluent toxicity standard, after they got the plant fine-tuned and running properly.
Q. Based on your experience, would you anticipate that a facility upgrading from secondary to AWT such as the Waterway Estates would be able to achieve passage of the toxicity test after the completion of that upgrade?
A. Yes, I do.
Q. And can you tell me regarding the nitrogen exceedances if you have -- if you reached any conclusion regarding the cause of the nitrogen exceedances of the Waterway Estates facility during the period of time of this litigation, which is July '91 through April -- March of '92?
A. Again, the plant was generally not designed for complete nitrogen removal. They had levels of three parts per million, which is very, very low. And so, then they put in additional treatment methods, and they were able to get down below three. And so, they couldn't meet the standard because they didn't have the right treatment methods in place.
Q. Did the effluent coming from the Waterway Estates facility change during the period of time in question, to your

Page 170

knowledge?
Let me rephrase the question. Was there any change other than the improvement of the effluent during this period of time, to your knowledge, and based on your analysis?
MR. JACOBS: Objection. Assumes fact not in evidence, that is, to say the improvement of the effluent.
MR. SCROGGIN: Your Honor, he's testified that the effluent improved during this period of time.
THE COURT: Overrule the objection. Answer the question.
THE WITNESS: There would be no other reason for the improvement of the effluent quality except for the upgraded plant. There was no change in the influent, and the treatment processes were essentially the same that had been in place for some time. And so, the effluent quality changed when the new improvements were put in place.
BY MR. SCROGGIN:
Q. Did you reach any conclusion regarding the environmental impact of the toxicity and nitrogen exceedances from the Waterway Estates facility?
A. Very little impact on the Caloosahatchee River. I mean, obviously whether it's measurable or not in terms of -- you could maybe measure it in a water quality fashion, but in terms of environmental impact or other fish or other living organisms impacted, I don't think you can measure it.

Page 171

Q. Did you reach that conclusion with a reasonable degree of scientific certainty?
A. Yes.
Q. One of the issues in this litigation is the length of time it took the Waterway Estates facility to upgrade from better-than-secondary effluent, as you testified, to the still cleaner advanced wastewater treatment. And I will ask you did you review the steps that a facility such as the Waterway Estates facility owned by Florida Cities took in order to achieve that upgrade from better than secondary to the still cleaner advanced wastewater treatment?
MR. JACOBS: Objection. Twice he's characterized the effluent as still cleaner, and that's a value judgment that's not in evidence.
MR. SCROGGIN: I believe, Your Honor, that he testified that the AWT effluent was still cleaner, but I'd be happy to ask him that question, if that would clarify it.
THE COURT: All right. Ask him that question.
BY MR. SCROGGIN:
Q. Is the advanced wastewater treatment that the Waterway Estates facility achieved still cleaner than the better than secondary with which they began?
A. Yes. The upgrade allowed them to take out the nutrients of nitrogen and phosphorous. It continued to lower the BOD and suspended solids. And so, yes. It was very high quality

Page 172

advanced waste treatments and able to meet the whole effluent toxicity test, as well.
Q. I will try to rephrase my question that I started with. And, that is, did you review the steps that a facility such as the Waterway Estates facility owned by Florida Cities Water Company would undertake in order to achieve this upgrade from better than secondary to the still cleaner advanced wastewater treatment facility?
A. Yes, I did.
Q. In your experience of the last 25 years, can you tell us how long such an upgrade might take for a facility such as this?
A. Well, it varies by wide margins. It varies largely because of the kind of permits that may be required. It's fairly predictable to estimate how much time goes from kind of figuring out the original idea and what options you have and preparing the engineering drawings and all that. That's fairly straightaway. But then once you get into the permitting realm, it becomes very difficult and unpredictable. There's other forces over which you as an engineer designer or an owner have no control.
MR. SCROGGIN: With the Court's permission, I would like to ask the witness if he would please go to the drawing board and describe those steps that are required for a facility such as Florida Cities Waterway Estates facility to upgrade

Page 173

from better than secondary to the still cleaner advanced wastewater treatment that they achieved.
THE COURT: Yes, sir.
THE WITNESS: Well, the owner was given essentially a new target. This is the new level of treatment that you're required to meet, essentially a new mission. So, there are a number of steps it has to do to get there. So, first of all, you have the mission defined, and that's the AWT. So, we begin through the process.
First of all, you have to figure out how am I going to do this. So, the first thing you do is evaluate alternatives and -- alternative ways of how I could do that, which would be -- generally what we've come to know what's the most economical, what's the most efficient way of getting there. In order to do that, the water company or an owner like that -- whether it's a municipality or water company -- would have to try to gain the expertise of outside firms to help them to do that evaluation.
So, they have to find and contract and engage this outside firm to develop this alternative evaluation. And from that, they would then interact and come to some agreement. And out of that would come then what is selected option. So, now we have a mission, and now we have an option of how we're going to actually accomplish our mission.
The next step then is, okay, this is kind of a

Page 174

concept. Now we have to take this concept and put it into bricks and mortar, concrete and steel. How do we actually put this project in place? So, the next step is some kind of preliminary design document that's going to start putting this together. Again, this requires outside expertise generally from a municipality or water company to do.
They would, again, go out and find and contract and engage some firm, engineering firm, to perform these tasks, and they would complete this preliminary design document. This allows the company or utility to then start planning from a capital point of view costs and so forth, how they're going to accommodate this and timing and so forth.
The next step would be then the detailed design and contract documents. These are the actual plans and specifications from which a contractor would erect and build these facilities. Now, in this case, they may continue to use the same engineer that was doing this part, if they performed satisfactorily. They may have to go out and get a new one. That's at the option of the owner. Generally we'd like to think if we were doing it we'd do a good job and we'd keep on going through.
The fourth step then begins where things start getting sticky, because this begins the permitting phase. During these steps, you have pretty much control of what's going on as the engineer, the owner, what's on the drawings and

Page 175

what's being prepared. Now at the permitting phase we start going out to others, to third parties, to see what indeed is being done.

The first permit that is very important is the FDEP or FDER – depending what time – what the department's called – permit to construct. And that allows the state to look at these drawings and see is it really – is what you've designed going to accomplish your mission. That's really the essence of it. And they'll take their judgment and their experience and look at it and see how you got there.

And generally that permitting process takes a fair amount of time. You fill out the permit. You do your job. You send it in. They have about 30 days, I believe, by regulation to reply, and generally that reply is in the form of some kind of question, clarification. You have 30 days to reply to that. They have another 30 days. So, you're kind of out about three months to even – to have a chance. And when there's other issues involved, it often creates other problems, and that may take quite a long time.

In this case, the other permit that was of difficulty was what we called the Corps of Engineers 404 Permit. This is a permit associated with building a pipeline in the Caloosahatchee River. Generally when we're doing a project like this, we get what's called a Nationwide 404 permit. The Corps of Engineers have said, "If you're going in general

Page 176

places, we can review your application. We'll give you a *permit, not a problem, 30, 60 days.*"

In this case, we're going to a major drainage way, a major river, the Caloosahatchee River, and we're going out in the middle of it. So, now we've got navigation issues and all the other kind of problems. The Corps of Engineers are notorious for getting bogged into their bureaucracy and taking a very long time for this permit.

MR. JACOBS: Objection. Move to strike. No foundation and way beyond the report, the notoriousness of a U.S. Government agency, Army of Corps Engineers.

THE COURT: I'll deny your motion. Go ahead.

THE WITNESS: Other permits that we may have to get include the – what we call the SWFWMD permit, Southwest Florida Water Management District. That relates to storm water drainage on the site and changes, increases of impervious area, where that's to be drained. We have the local permits for development and meeting concurrency requirements, those kind of things.

All that's done before you even have done anything about engaging a contract. You don't have a contractor yet. This is just preliminaries to that. So, this is very difficult to guestimate in terms of planning. We've seen it from 30, 60, 90 days to take well over a year. And this is a – this is part of Florida's – developing projects in Florida. It's very

Page 177

typical of Florida.

From that point, assuming you have been granted those permits, then you'd move ahead to step five, which is actually the bidding of the project. And that's where we take these drawings and specifications. We send it out to the world of general contractors, and we ask them to bid the project: How much will it cost to meet what is going to be done here, and how long will it take you?

Those bids take on the order of 90 days to advertise the bids, to accept the responses, to check out the credibility of those, and then to move ahead. So, it's a minimum – kind of a 90-day period for that bid, unless there's some problems with it: Exceptions taken, they can't meet the contract documents, something like that.

Once that is done and the contract is awarded, the next permit is one that's obtained by the contractor, and that's generally the local building permit. And that's a permit that will go to the local agency, whether it's the county or the city in which the plant is located. And because most cities or counties don't look at sewage plants very often, they often have to engage in outside parties to help them review these plans and specifications.

It's not unusual then for that to take an extra bit of time and have that review done, check to make sure everything meets the codes and requirements. And then a

Page 178

building permit would be issued, and that permit would be going to the contractor, the general contractor who is going to build this plant. Now, he can actually begin construction and start building this project according to plans and specifications that has a construction period during which time he's actually putting in the concrete and steel that was described in the drawings.

And then at the end of that time would be a turnover period, a commissioning period, in which the owner would begin operating the plant with the new facilities and trying to get it up to speed to make sure it's meeting those requirements. There would be final permit sign-offs based on the completion of these activities. Essentially all of the permits would have to be certified by either the engineer on the site or the contractor or the owner to say that indeed those things that were promised to be done had been done and those certifications would be complete in this process.

BY MR. SCROGGIN:

Q. Mr. Smith, in describing the permits that are required in Southwest Florida, did you mean that Southwest Florida to include the permits that are required in Lee County?

A. Yes, yes. The area generally from Tampa, Sarasota, Manatee, Lee County.

Q. And can you tell me on, approximately, how many projects in Florida you have been associated with that have had to go

Page 179

through such steps for facilities like the – such as the Waterway Estates facility?
A. Actual treatment plant upgrades, we've probably done a dozen or so in Florida, in this general area, all the way up the coast.
Q. And did you review the length of time that it took the Florida Cities Water Company to go through these steps in performing your analysis?
A. Yes, we did.
Q. Did you reach any conclusion regarding whether or not Florida Cities completed the project in a timely fashion or not?
A. Yes, I did. I looked at the times and determined there was a fairly large amount of time that it took when the project was really out of the control of Florida Cities, and that was an exceeding long time. The actual work that was done was done in a reasonable amount of time for the work that was in the scope of that job, both in the design and construction phases and that, you know, it was a reasonable amount of time for the project.
Q. Mr. Smith, I'd like to turn your attention, please, to the Government's – United States Exhibit No. 597, which is the expert report from Mr. Mark Klingenstein, the United States Government – the United States' expert witness in this case.
MR. SCROGGIN: And I'll ask if the witness could

Page 180

please be shown that exhibit.
MR. JACOBS: Your Honor, it's my recollection on Monday that we sort of had an agreement that they weren't going to ask – we weren't going to ask Mr. Klingenstein about Mr. Smith's report, and they weren't going to ask Mr. Smith about Mr. Klingenstein's report.
THE COURT: That's my recollection.
MR. HIRD: Your Honor –
THE COURT: There's been a lot of water over the dam. I guess that's – no pun intended.
MR. BULLOCK: May I have just a second?
THE COURT: Yes, sir.
MR. BULLOCK: Thank you.
MR. SCROGGIN: Thank you, Your Honor, for your indulgence. We will be happy not to have him refer to the report, but simply to ask him a brief series of questions regarding these facilities, if that is consistent with the agreement that was reached.
THE COURT: You'd be happy to ask him questions regarding these facilities?
MR. SCROGGIN: I would like to – I have probably four questions, Your Honor, that I would like to ask him to determine whether or not he agrees with certain conclusions without reference to where those conclusions come from.
MR. JACOBS: It sounds like a back door to me, Your

Page 181

Honor.
THE COURT: It sounds like a back door.
MR. SCROGGIN: Then I'll withdraw the request, Your Honor, and –
THE COURT: No. I agree – I agree with the United States on that. My recollection is that this was discussed at the inception of the case. And I think that you would be accomplishing the same way – the same thing by doing it in this fashion as you would otherwise. So, I'll sustain the objection.
MR. SCROGGIN: That ends my direct examination of this witness.
Excuse me, Your Honor. There is one of the – Mr. Smith's expert reports which I would ask to move into evidence and have him view, if I might, before I end my direct examination, and that is the Florida Cities Exhibit No. 157, which while we discussed it I failed to have him identify and move into evidence. And if I might have him look at Florida Cities Exhibit No. 157, which is the Florida Cities –
THE COURT: Has he got it in front of him?
MR. SCROGGIN: He will in one second, Your Honor.
THE COURT: Okay.
BY MR. SCROGGIN:
Q. I'm going to ask you, sir, is this the expert report that you prepared for Florida Cities regarding the Carrollwood

Page 182

facility?
A. Yes, it is.
MR. SCROGGIN: And I would ask that it be moved into evidence, Your Honor.
MR. JACOBS: Same objection, Your Honor.
THE COURT: Same ruling. I'll overrule the objection. It will be received as Defendant's 157, Defendant Florida Cities 157.
(Florida Cities Exhibit No. 157 was received into evidence.)
MR. SCROGGIN: May I also ask, Your Honor, that the last two pages that the witness has drawn on the chart be marked for identification, No. 205 and 206 for the second page.
THE COURT: All right. Go ahead and mark it.
What we'll need to do is use the exhibit identification tags that you apparently – your associate has there.
MR. HIRD: We're preparing, Your Honor.
THE COURT: Yeah. Okay.
All right. Mr. Jacobs.
MR. SCROGGIN: Your Honor –
THE COURT: Just a moment.
THE WITNESS: Could we take a short break for restroom?
THE COURT: I think we need a – yes, sir.

Page 183

MR. HIRD: I have a few questions for this witness. I don't know whether you want the Co-Defendant to go before Mr. Jacobs or after. I have, approximately, five minutes.

THE COURT: You have five minutes. Okay. Well, we'll take Mr. Hird first, and then we'll take you, Mr. Jacobs. And we need to take a -- what time is it? Well, we'll go ahead and take a ten-minute recess.

(Brief recess taken.)

THE COURT: Okay. Mr. Hird.

MR. HIRD: Thank you, Your Honor.

DIRECT EXAMINATION

BY MR. HIRD:

Q. Mr. Smith, I believe you testified when you were describing the operations of the sewage treatment plant that in certain plants chlorine is added as a disinfectant toward the end of the process. Do I remember correctly?

A. Yes. That's correct.

Q. Is that the case at the Barefoot Bay treatment plant?

A. Yes.

Q. Now, turning to the exceedances of total residual chlorine at Barefoot Bay, is the chlorine in those exceedances -- was that due to the chlorine added after the process, or was that due to anything in the sewage from the homes of the residents of the Barefoot Bay development?

A. It would be from the chlorine added after the process.

Page 184

MR. HIRD: Thank you, Mr. Smith.

Thank you, Your Honor.

THE COURT: Mr. Jacobs.

CROSS-EXAMINATION

BY MR. JACOBS:

Q. Good afternoon, Mr. Smith.

A. Good afternoon, sir.

Q. Isn't it true that the Barefoot Bay plant was designed with the intention of disposing of the total effluent through percolation ponds and a spray irrigation system?

A. Yes, it is.

Q. And when was the plant designed?

A. Somewhere early -- late '70s, early '80s, I believe. Put into operation around 1980, I think, something like that. Let me think.

Q. That's your best recollection?

A. It may have been earlier. I'd have to look at a report to make sure of the actual dates was the dates we started looking at that kind of thing.

Q. Without looking at the Black & Veach report, you don't know when the plant was designed?

A. Beyond -- prior to that time, no. I can't remember if it was -- it may have been put in operation late '60s. What I remember is the operation of the percolation basins in the early '80s and not functioning in about '83 or so. So, that's

Page 185

1 the time frame I'm remembering.
2 Q. And the plant, again, to the best of your recollection,
3 was designed when?
4 A. I don't remember exactly what time it was. As I say, it
5 could have been late '60s, early '70s. That's where I'm not
6 sure if it started operation then or if I'm thinking when it
7 actually -- in the early '80s when the perc ponds ceased
8 working very well.
9 Q. Okay. And by "perc ponds," you do mean percolation ponds,
10 correct?
11 A. I mean percolation basins that are located on the plant
12 site, yes.
13 Q. And as far as the Black & Veach investigation is
14 concerned, in the Black & Veach report, you've concluded that
15 there were two percolation ponds; is that correct?
16 A. That's correct.
17 Q. And isn't it true that these two percolation ponds at peak
18 performance could only handle a hundred thousand gallons per
19 day?
20 A. I think on the order of a hundred. I think it may have
21 been something more than that, up to maybe 150 or a hundred,
22 but in that range. That's correct.
23 Q. Are you speculating?
24 A. No. I think that it's not real clear what they did
25 handle, because the water level varies in the ponds. So, the

Page 186

1 actual through-put of the ponds is a hard thing to quantify.
2 Q. Might it equally -- is it equally true that they might
3 have been able to accommodate less than a hundred thousand?
4 A. Well, that's what I was saying, yes. The water level
5 rises and falls in there. That's correct.
6 Q. Now, you just testified that the plant was designed to
7 have percolation ponds and a spray irrigation system, correct?
8 A. Yes. That's what you asked me.
9 Q. Okay. And now, isn't it true, though, that a spray
10 irrigation system was not ever put in place at that plant until
11 March of 1990?
12 A. That may be true. I know that the spray irrigation has
13 been used at the plant, and it's a fairly small site. Whether
14 it was in the original design or not I'm not sure.
15 Q. Well, you said it was in the original design. What I'm
16 asking you is whether the -- to the best of your knowledge,
17 sir, when was that design actually first implemented?
18 A. Well, first, I didn't ever use the term "original design"
19 until just now, and the plant as originally designed only had
20 two perc ponds. The spray irrigation system was added because
21 of the perc ponds not being sufficient. When was that put in
22 place -- I'll take your word that it was 1990.
23 Q. You have no understanding of any spray irrigation system
24 ever being installed at Barefoot Bay prior to March of 1990; is
25 that correct?

Page 187

A. No. I don't have any understanding of that.
Q. And isn't it true that the spray irrigation system that was put in place in March of 1990 was a 40-acre site, which at, again, peak performance could accommodate 90,000 gallons of effluent a day in dry weather conditions?
A. It's a 40-acre site, and yes, I believe that's generally the amount of flow. It would largely depend on the way it was operated.
Q. And it would also depend, wouldn't it, on weather conditions?
A. Yes.
Q. In fact, it could not be operated at all if it was wet weather conditions, isn't that right, sir?
A. It would be unfavorable to operate it, right.
Q. Now, isn't it also true that in 1990, the same year when the spray irrigation system was first put in place, that the effluent flow from the plant was in the 421,000-gallons-per-day range?
A. It was certainly in the range greater than 400,000, yes.
Q. So, the spray irrigation system that was installed was not sufficient to eliminate the discharge to the Sebastian River; isn't that correct, in 1990?
A. That's correct.
Q. And isn't it also correct that there was no NPDES permit at that facility until 1991?

Page 188

A. Yes. I believe that's true.
Q. Now, isn't it also true that because the Barefoot Bay plant was a secondary treatment plant it was incapable of removing sufficient ammonia to regularly pass toxicity tests?
A. Yes. That's correct.
Q. So, since at least 1980 the discharge from the Barefoot Bay plant was bound to fail a sizable number of toxicity tests; is that correct?
MR. SCROGGIN: Objection, Your Honor, with respect to the time of these toxicity tests to which counsel referred.
MR. JACOBS: His report goes back actually to pre-1980, to the design days.
THE COURT: I'll overrule the objection.
BY MR. JACOBS:
Q. Do you recall the question, sir?
THE COURT: Do you remember the question?
THE WITNESS: Yes. Actually whole effluent toxicity tests didn't really come in to play until late in the '80s. So, it wouldn't mean much to have them back in the early '80s. It was a developing technology.
BY MR. JACOBS:
Q. Well, starting from the time that toxicity tests were put in permits, would you say that the Barefoot Bay plant was bound to fail such tests because it was a secondary treatment plant?
MR. SCROGGIN: Objection, Your Honor. Calls for speculation.
MR. JACOBS: Professional opinion.
THE COURT: Well, I'll allow him to answer it for whatever it's worth, if you can.
Can you answer that?
THE WITNESS: Yes. I mean, the issue is that this plant doesn't treat -- doesn't remove ammonia, doesn't change ammonia to nitrate. And as such, as long as it discharges ammonia, it's going to fail whole effluent toxicity tests. That's correct.
BY MR. JACOBS:
Q. Now, to have prevented the toxicity violation, isn't it true the company either needed to upgrade the plant to AWT standards or find an alternative source of discharge other than surface water?
A. To prevent the failure of those tests? Is that what you said at the beginning?
Q. Yes, sir.
A. Yes.
Q. Now, AWT plants existed as far back as the 1970s; isn't that right, sir?
A. The earliest plants were built in Lake Tahoe in the late -- middle '60s, late '60s. And then in terms of really being in place at any large use was kind of mid '70s to late '70s.

Page 189

Page 190

Q. All right. So, there was no technological reason, was there, sir, why the company could not have built an AWT plant at Barefoot Bay before November 1991, correct?
A. That's correct.
Q. And with respect to finding an alternative source of discharge other than surface water, alternatives that could have been pursued were building additional percolation ponds, building a deep well, or using spray irrigation, correct?
A. Those are all alternative disposal methods. That's correct.
Q. But you did not examine any such alternative that the company had available to it in the 1980s, correct?
MR. SCROGGIN: Your Honor, this goes beyond the scope of the direct and also the scope of his report, which does not discuss alternatives.
THE COURT: Which did not discuss alternatives?
MR. SCROGGIN: Yes, sir.
THE COURT: The objection is that examination of the witness regarding alternatives is outside the scope of the report and the direct examination; is that correct?
MR. SCROGGIN: Yes, sir.
MR. JACOBS: Your Honor, what I'm seeking to establish is, in fact, he didn't look at any of the alternatives. So, I'm not sure there's any inconsistency here. I'm confirming that neither he, nor his staff, nor the

Page 191

report even looked at any of these other alternatives.
THE COURT: Well, I'll overrule the objection. Go ahead.
THE WITNESS: That's correct. We didn't look at alternatives. It wasn't part of our charge.
BY MR. JACOBS:
Q. You said it wasn't part of your charge.
A. Right. Like mission, your scope.
THE COURT: What he was hired to do.
THE WITNESS: Right.
THE COURT: Isn't that what you meant?
THE WITNESS: Yes, sir.
BY MR. JACOBS:
Q. Hired by the lawyers?
A. That's correct. We were retained by the law firm of Gabeler, Baise & Miller.
Q. And the scope that they gave you was -- did not include looking at the cease discharge alternatives in the 1980s; is that correct?
A. They asked us to look at the effluent quality and its potential impacts on the receiving waters and then the exceedances that occurred.
Q. I'm not quite sure I got an answer. Let me ask you again. Your charge, as you put it, or your scope did not include in the scope -- or the charge given to you by the

Page 192

lawyers that hired you in this case, did not include examining any of the potential cease discharge alternatives at Barefoot Bay in the 1980s, correct?
A. I believe that's true. We did not look at alternatives.
Q. Now, Mr. --
THE COURT: So, don't examine him any further on that. That would be beyond the scope.
MR. JACOBS: No. That was it.
BY MR. JACOBS:
Q. Now, Mr. Smith, you state that ammonia is known to be toxic to certain species of aquatic life, correct?
A. That's correct.
Q. And in the Black & Veach report on Barefoot Bay, you essentially conclude, do you not, that the apparent toxicity of the effluent would not have had an effect on the organisms in the receiving stream because the effluent had the same toxic characteristics for years; is that correct?
A. That same ammonia for years, yes.
Q. Well, are we saying the same thing, toxic characteristics? I thought you said on direct that the toxic characteristics are attributable to the ammonia?
A. In the whole effluent toxicity test. I mean, really confined to that very specific test on very fragile species, it's toxic. To characterize ammonia as toxic is just not correct.

Page 193

Q. I didn't say it was toxic. I'm using the phrase "toxic characteristics." Isn't that what a toxicity test tests for, toxic characteristics of effluent? Isn't that fair?
A. It's a very narrow test meant to look at its toxicity on very fragile species that could be indicators of some compound in the effluent that may need additional treatment, so -- but ammonia itself, to say it's a toxic compound -- that's what I'm disagreeing with. I don't think I've said that and certainly don't intend to say that.
Q. I didn't use the word ammonia in the --
THE COURT: All right. Just ask your next question.
MR. JACOBS: All right, sir.
BY MR. JACOBS:
Q. In essence, isn't it true that you're saying that any aquatic life that would have been affected by the toxic characteristics of the effluent would have been affected not by these particular violations but by earlier unpermitted discharges?
A. Yes.
Q. Now, moving on to the total residual chlorine violations. Isn't it true that neither you, nor your Black & Veach staff, nor your report expressed an opinion on the possibility of endangered species being affected by the total residual chlorine violations at Barefoot Bay?
A. No. We did not express an opinion as to endangered

Page 194

species.
Q. Moving now to the BOD versus the CBOD violations, the monitoring violations. Mr. Smith, these are both tests that -- both of these tests, rather, test the biochemical oxygen demand, correct?
A. That's correct.
Q. But they are two different tests which at any given time would likely result in different values; is that correct?
A. Two different tests, the CBOD test and a BOD test?
Q. BOD and CBOD, what you discussed on direct.
A. Right. I mean, they're different tests, and they measure different things.
Q. And would result in different values, correct?
A. Perhaps, if they're different. I mean, there may not be an NOD. There may not be any difference between CBOD and BOD. It may be exactly the same thing.
Q. In your professional opinion, what's the most likely scenario, that they're going to come out the same or not?
A. It depends on the concentration of BOD in the water and the microorganisms in the water. A very high quality effluent -- below 30, below 20 parts per liter of BOD -- you'll see the influence of nitrogenous oxygen demand.
At higher concentrations, certainly in raw influent, you'd not see any impact of NOD, because it's much stronger, and you wouldn't have any population to incur that NOD. So,

Page 195

it's only in the highly-treated flow that you're even going to see an impact like that.
Q. I see. And tell me, is the Barefoot Bay highly-treated flow?
A. Yes.
Q. Okay. So then in the -- narrowing my question to the Barefoot Bay context, these are two different tests which at any given time would likely result in different values; is that correct, sir?
A. Yes.
Q. Now, moving on to your findings with respect to water quality. Isn't it true that in the Black & Veach report on Barefoot Bay you say that the water quality of the drainage canal into the Barefoot Bay -- into which the Barefoot Bay plant discharges is only "fair"?
A. I think that's the term we used, is fair.
MR. SCROGGIN: Your Honor, is there a page reference to the page in which counsel is reading?
THE COURT: Is this from his report that you're talking about?
MR. JACOBS: Do you want me to look it up, or should I move on?
THE COURT: Well --
MR. JACOBS: I'm trying to finish. I don't think --
THE COURT: Yeah. I don't think --

Page 196

MR. JACOBS: It's page 6, if that's helpful.
THE WITNESS: The first quality is talking about DO and whatnot in there. It says "fair." That's what it says.
THE COURT: If you're going to read from the report, if you would inform counsel what page.
MR. JACOBS: Fair enough, Your Honor.
BY MR. SCROGGIN:
Q. Now, Mr. Smith, is it fair to say that you have no opinion as to whether the water in the canal met water quality standards during the period 1988 to 1993?
A. Well, we have some of the data that was taken by Bionomics on that canal. I'm not sure as I know what the water quality standards would be on that canal. I recall that the data we had was water of pretty good quality. The reason we said "fair," I think, was related to the dissolved oxygen levels, which seemed to be depressed at different times. We weren't sure of why. The data didn't look real good in that regard, reliable good.
Q. Mr. Smith, I'm going to ask you a question that I asked -- I'm going to read a question that I asked you in your deposition, and then I'm going to ask you -- then I'm going to read the answer and ask you if that is the answer you gave. The question appears on page 85, line 1 of your deposition and reads as follows: "So, you have no opinion as we sit here today as to whether the quality of the water in the Sebastian

Page 197

Creek and the drainage canal leading to the creek meets water quality standards or met water quality standards during this five-year period?"
Answer, line 6: "That's correct."
Is that the answer you recall giving, sir?
A. Oh, absolutely. It was Sebastian Creek.
Q. Moving on to the Carrollwood facility, you are aware, are you not, sir, that in 1979 the state of Florida determined that there should be no discharge from the Carrollwood plant into the Sweetwater Creek, correct?
A. I am aware of that. Yes.
Q. And you're aware that at that point in time the state of Florida was interested in reducing the amount of pollution going into the Tampa Bay, correct?
A. Yes.
Q. In particular the nutrient load, correct?
A. Yes.
Q. Which means nitrogen and phosphorous; is that also correct?
A. That's correct.
Q. And those are some of the pollutants that come from wastewater treatment plants, correct?
A. Yes. That is correct.
Q. And, in fact, the discharge from the Carrollwood plant was having an impact on the nutrient load in Tampa Bay, was it not?

Page 198

A. Yes. It had an impact.
Q. Now, you are aware, sir, that in 1984 EPA denied Florida Cities NPDES permit renewal application to discharge into the Sweetwater Creek?
A. Yes.
Q. And that the Carrollwood plant continued to discharge in the Sweetwater Creek without an NPDES permit until 1991, correct?
A. That's correct.
Q. And you are also aware, sir, that when in 1991 EPA issued another NPDES permit for the Carrollwood plant effective July 1991, it required that the effluent being discharged from the plant into the Sweetwater Creek be treated at advanced wastewater treatment levels, correct?
A. That's correct.
Q. Now, requiring advanced wastewater treatment, or as we've said, AWT treatment, is a way of minimizing nutrient load, is it not?
A. That's correct.
Q. And in so doing, protecting the Tampa Bay, correct?
A. That's correct.
Q. Now, it's also true, isn't it, sir, that the violations that took place at the Carrollwood plant took place because the effluent was not being treated at AWT levels, correct?
A. The plant was not an AWT plant. In fact, the treatment

Page 199

that it was performing was actually comparable to AWT for a number of parameters, even though the plant was not intended to be an AWT plant. It did -- I think the exceedances were in nitrogen and phosphorous and fecal coliform.

MR. JACOBS: Move to strike as nonresponsive, Your Honor. I asked him about the violations, and he's focusing on the nonviolations?

THE COURT: Denied.

BY MR. JACOBS:

Q. Let me ask you this, sir. The violations that took place at the Carrollwood plant took place because the effluent was not being treated at AWT levels, correct?

A. That's correct.

Q. And these violations resulted in a nutrient load to the Tampa Bay above the levels that had been permitted; isn't that correct, sir?

A. Yes. That's correct.

Q. Now, let's talk about the Sweetwater Creek for a moment. This is a relatively small body of water, is it not?

A. Right. I think six and a half MGD is the average annual flow.

Q. That's the average annual flow, but isn't it true, in fact, that during the time that the Carrollwood plant operated, the only flow in the Sweetwater Creek at the point of the discharge was the discharge itself?

Page 200

A. No. That's not correct.

Q. Would that statement be correct during dry weather conditions?

A. It could be in dry weather conditions. It's a drainage canal, and so there are times obviously when it rains it's not going to be the only thing. And it heads waters in Island Lipsey Lake. So, it overflows from the lake into the canal, and that depends a large part on rainfall and other run-off conditions. So, when it's dry, it well could be that there's no flow upstream of the plant.

Q. And no flow downstream except for the effluent itself?

A. For a period. I mean, it's in an urban area, so there's all kinds of run-off that impacts this. This is a drainage canal, and it drains all of urban Carrollwood. So, when someone is watering their lawn in a dry period, the run-off would end up in the creek.

Q. Again, I'm going to read from your deposition testimony, sir. The question which appears on page 114, line 18 is, "When you have a stream with essentially zero flow during dry weather, what does that tell you about what's in the stream when the plant is discharging to it in dry weather?"

Answer, line 22: "It's pretty much effluent. I would say 100 percent at the point where it goes in."

Is that the answer you gave at your deposition?

A. Yeah. That was not particularly the Sweetwater Creek.

Page 201

But you said if there's a creek with no flow in it.

Q. And is Sweetwater Creek different?

A. Yes. I mean, the -- it's a drainage canal, and there's essentially always a certain amount of water in that canal. It drains a lake and the surrounding urban area.

Q. Are you saying that Sweetwater Creek is not typical of a small creek?

A. There are small creeks in urban areas. Yes. It's typical of a small creek in an urban area, which drains groundwater and which drains surface water.

Q. And on page 5 of your report or the Black & Veach report, don't you say the flow is essentially zero?

A. There are times of the year when it's essentially zero. That's what we said.

Q. And at those times isn't the flow essentially just the effluent from the plant?

A. At the point of introduction.

Q. Yes. At the point of introduction it is essentially just the flow from the plant; is that correct?

A. At the point of introduction it's essentially the flow from the plant. Correct.

Q. Now, the permit limit at Carrollwood for total residual chlorine was .01 milligrams per liter, correct?

A. I believe that's true.

Q. And the TRC levels during the latter half of 1991 were in

Page 202

the 1.6 to 2.8 milligrams per liter range, correct?

A. I don't recall those numbers exactly. I'd have to --

Q. Would you like to look at the DMRs?

A. That would be fine, or a report.

MR. SCROGGIN: Your Honor, if I may suggest, Florida Cities would have no objection to the Government using its own summary tables from the -- that have a list of these values, only in the interest of speeding up this process, rather than using the actual DMRs, which are hard to read.

THE COURT: Okay. You want to do that, Mr. Jacobs?

MR. JACOBS: I appreciate the suggestion. I think that we do have these handy tables that are on file with the Court. They were filed at the time of the summary judgment proceedings. And I've asked Mr. Moore to look to see if we have an extra set for the Court to refer to, as well.

THE COURT: Well, okay. Don't hold up on that. If you find one, fine. Don't worry about it.

MR. SCROGGIN: May I ask, Your Honor, if he does decide to use these tables that they be marked as an exhibit.

THE COURT: Well, no. They're not an exhibit. They were a part of the summary judgment process, but they're not a trial exhibit.

MR. JACOBS: I think we did put them in, because Mr. Klingenstein relied upon them, so --

THE COURT: Oh, you did put them in as trial

Page 203

exhibits?
MR. JACOBS: Yes, sir.
MR. SCROGGIN: Then I would ask that he use the one that's already been put in as the exhibit.
MR. JACOBS: That would not expedite things, but we could just look for it, or you could just stipulate those were the values, 1.6 to 2.8, Mr. Scroggin.
Would you like to just take a quick look?
THE CLERK: What was the exhibit number, and I can get it out of the box over here?
MR. SCROGGIN: Your Honor, I have no objection to using our DMRs which have been submitted in as exhibits, their tables or their DMRs. We'd just ask they use something that's been submitted.
THE COURT: Okay. Whatever you all want to do let's work it out. I'm not -- whatever will be most expeditious. If there is an exhibit in evidence that can be utilized for that purpose, then find it.
MR. JACOBS: The summary that Mr. Scroggin kindly suggested that we use is, in fact, the Government 255, which has been moved into evidence and accepted. And I would direct the witness's attention to Government Exhibit 255.
THE WITNESS: Yes, sir, I have it.
BY MR. JACOBS:
Q. And the question, sir, is isn't it true that the TRC

Page 204

levels during the latter half of 1991 at Carrollwood were in the 1.6 to 2.8 milligrams per liter range?
A. Well, the one that's shown here is 2.5 and 2.0, 1.6, 1.8.
Q. Did you see the 2.8 November '91?
MR. SCROGGIN: Objection, Your Honor. November '91 is not -- no. I'm sorry. I withdraw the objection.
THE WITNESS: Yes, sir, I did. 2.8, there it is.
BY MR. JACOBS:
Q. Okay. Is it fair to say that's the high end of the range and 1.6 is the low end?
A. That looks to be the case.
Q. So, the TRC levels were anywhere from 160 times the permit limit to 280 times the permit limit, correct?
A. That's correct.
Q. And these violations occurred literally every day; isn't that right, sir?
A. These are reported as daily maximums, yes. So, it's hard to tell what was within it. That was the daily max.
Q. These were daily violations, correct?
A. Right.
Q. But you essentially conclude that these violations would not have caused any serious effect on organisms in the Sweetwater Creek because the chlorine levels of the effluent had always been that high; isn't that right?
A. The impact on the stream, as I've discussed earlier, is

Page 205

going to be fairly closely tied to the mixing zone and the oxidation of this chlorine. Certainly if there's no water upstream of the plant, there's nothing to impact in terms of the aquatic organisms there.
Q. Well, what about when there is water in the stream and there are aquatic organisms, then they'll be impacted by the higher chlorine?
A. I would say that it would create a barrier for them. They would probably not penetrate this zone of high chlorine.
Q. Okay. So, when you say there would be a barrier, that means the aquatic life would stay away from that area of the stream; is that correct?
A. That's correct.
Q. Now, isn't it true that the effluent at Carrollwood, rather, was not being treated at AWT levels during this point in time because an AWT plant had not been built?
A. Again, I'd say some parts of it was receiving treatment equal to AWT, but again to -- you're correct as to nitrogen, phosphorous, and chlorine, because --
Q. Now --
A. Because it was not built -- the rest of your question. It was not a plant built to treat that. Yes.
Q. So, in a couple of areas, it was providing the equivalent of AWT treatment, but in all the rest of the areas it was not; is that correct?

Page 206

A. That's correct. Yes.
Q. Okay. Now, Mr. Smith, there was no technological reason why an AWT plant could not have been built by July 1991, was there?
A. No.
Q. And these violations could have been avoided either by building an AWT plant or by ceasing the discharge; isn't that also correct?
A. Yes. That's correct.
Q. Now, if the city of Tampa had the capacity to accommodate the Carrollwood plant's effluent in 1984, that would have been a good alternative to discharging to the Sweetwater Creek; isn't that right, sir?
MR. SCROGGIN: Your Honor, I object. This is clearly beyond the scope of the direct examination. It is nowhere contained in his report.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Is it true, Mr. Smith, then that you didn't look at the possibility of connecting to the city of Tampa in your report?
MR. SCROGGIN: Same objection, Your Honor.
THE COURT: Sustained.
MR. JACOBS: I'm asking him if he covered that in his report, which is in evidence.
THE COURT: Well -- all right. You didn't cover that

Page 207

in your report?
THE WITNESS: No. We didn't get to that.
THE COURT: All right.
BY MR. JACOBS:
Q. You didn't personally cover it, but somebody else at Black & Veach did cover that in the report; isn't that correct, sir?
A. I don't recall that, Mr. Jacobs. But if it's in there, if it's in black and white, then obviously I'm in error.
Q. In your deposition, I asked you on page 125, line 14, "Did somebody else at Black & Veach do that" – and I should back up a question, obviously, to put that question into context. The question on at line 6 is – and I'm paraphrasing for the moment – "did you look at the alternatives that existed during the period 1984 to 1991 that the company could have employed to cease the discharge?"
THE COURT: Could have what?
MR. JACOBS: "could have employed to cease the discharge."
MR. SCROGGIN: Objection, Your Honor. Outside the scope of direct.
MR. JACOBS: It's in the report, Your Honor. The report is in evidence.
THE COURT: The report is in evidence, so – and you presented the – put the report into evidence. And I think, yeah, that's obviously something that the Court can consider.

Page 208

So, it's fair game for cross-examination. Overruled.
BY MR. JACOBS:
Q. Your answer at line 10 was "Okay." Do you recall that?
A. I'm sorry. You're asking with regard -- alternatives or to the city of Tampa in particular? I'm sorry.
Q. Well, starting with alternatives in general.
A. Right.
Q. And you answered "Okay" at line 10. Do you recall that?
A. Right. I do.
Q. And then I -- the next question was, "You personally, Mr. Smith?"
Answer: "Did I personally look at those alternatives? No."
Did you recall giving that answer?
A. I do recall that. Yes.
Q. "Did somebody else at Black & Veach do that" -- question.
Answer: "Yes."
Do you recall saying "Yes" to that question?
A. Yes, I do.
Q. Next page, 126, question on line 1: "Now, what were these alternatives, Mr. Smith?"
Answer: "We list them on page 27 of the report."
Do you recall giving that answer, sir?
A. I don't recall it, but if you're reading my deposition, I

Page 209

must have said it.
Q. And continuing with the same answer: "It includes underground injections, deep well, land application to spray fields, percolation ponds, urban irrigation, discharge to an adjoining utility."
Do you recall giving that answer, sir?
A. Something like that, right.
Q. Which -- and the next question is, "Which adjoining utilities were examined with respect to this last option, Mr. Smith?"
And your next answer was, "The city of Tampa and Hillsborough County."
Do you recall giving that answer, sir?
A. Again, I don't recall it, but I believe that's true.
Q. Now, Mr. Smith, if the city of Tampa had the capacity to accommodate the Carrollwood plant's effluent in 1984, that would have been a good alternative to discharging to the Sweetwater Creek; isn't that right?
A. It certainly would have been one to examine and see what the conditions for a connection would be.
Q. Would you agree with me that it would have been a good alternative?
A. Good in what respect, sir?
MR. SCROGGIN: Objection, Your Honor, to the characterization of good.

Page 210

THE COURT: Well, I'll overrule the objection to that.
THE WITNESS: It was good in terms of it would -- it would be good in that it would meet the discharge permits, yes. Good as to whether it was economical, I don't know.
BY MR. JACOBS:
Q. Now, back in 1983, Florida Cities also retained a contractor to study other possible alternatives, such as percolation ponds, spray irrigation, and deep well injection, correct?
A. I'm sorry. What was the date again?
Q. 1983.
A. Okay.
Q. Is that correct?
A. We reported those dates, yes, in the report. I'm not – I don't have them right at the tip of my tongue.
Q. And that was the Jamal Study; is that correct?
A. Yes. I believe that's true.
Q. Now, there was no technological reason why one of these alternatives could not have been implemented; isn't that correct, sir?
A. Technology -- can it be done physically? Yes. Some of this could physically have been done.
Q. Turning your attention now to the Waterway Estates plant. Mr. Smith, in your 25 years working in the field of wastewater

Page 211

treatment, you've either studied or reviewed dozens of wastewater treatment plants; isn't that correct, sir?
A. That's correct.
Q. But in all of your 25 years of experience in this field, aside from Florida Cities, you have never had a client that operated a wastewater treatment plant and discharged into surface waters without an NPDES permit, have you?
A. Not without a permit. I've had clients that have had permits that have been in dispute, but they've had permits.
Q. But you never had a client –
A. That flat didn't have a permit, no.
Q. Aside from Florida Cities; is that correct?
A. That's correct.
Q. Now, the Waterway Estates plant discharges into the Caloosahatchee River; is that correct, sir?
A. It does today, yes.
Q. And you are aware, sir, that a 1990 study conducted by Florida Department of Environmental Regulation which looked at actual measurements of water quality in the vicinity of the Waterway Estates discharge point, revealed that with the treatment levels provided at the time the concentration of algae was about 10 percent higher than target values considered to be satisfactory, correct?
A. No. I think it was actually lower than the values that were predicted under the model, as I recall. It seems that the

Page 212

actual measurements were like 15 to 19 micrograms per liter. And they had targeted numbers of like 24 or 25. Again, that's my recollection.
Q. Directing your attention to the Black & Veach report, which has been marked and entered into evidence as Defendant's 92, sir, page 5, last paragraph about two-thirds of the way down.
A. I'm sorry. Page 5?
Q. Yes, sir. Last paragraph, starting with the word "however." Could you read that sentence aloud, please, sir?
A. "However" – let me just go ahead and read the paragraph to myself so I can understand the context.
THE COURT: Sure.
MR. JACOBS: Judge, while he's doing that, I've consulted with my co-counsel – and I'm not sure what your schedule is, but we'll both volunteer to miss our flights to get done with this witness. I've got maybe another half an hour. And I feel badly making that offer since you were kind enough to indulge my previous request.
THE COURT: Well, you know, I have built my schedule around what – I've got two sentencings starting at four o'clock.
MR. JACOBS: It's your pleasure, Your Honor. I'll pick it up Monday morning. I mean that. It's your pleasure.
MR. SCROGGIN: Your Honor, I will have some

Page 213

redirect. I would try to keep it brief, but I'll have some redirect based upon his cross-examination.
MR. JACOBS: Maybe we should pick it up Monday morning then.
THE COURT: Yeah, I think so. I wish had I known that.
MR. JACOBS: I'm sorry. We had hoped to be –
THE COURT: Well, we can go until four o'clock, but at four o'clock I'm going to have to –
MR. JACOBS: We'll probably miss the plane.
THE COURT: Oh, all right. Now, I set this schedule in part to accommodate my sentencings, but also you had – if you haven't canceled your flight – we're going to have to carry this over until Monday anyhow.
MR. JACOBS: Yes. That's the point.
THE COURT: I had planned on recessing at 3:45 preparatory to my four o'clock sentencings and also in line with your flight schedule.
MR. JACOBS: And I appreciate that. I thought perhaps we'd finish and –
THE COURT: Well, apparently we're not going to be able to.
MR. JACOBS: I agree, sir. I'm sorry.
THE WITNESS: Should I go ahead and answer your question, Mr. Jacobs?

Page 214

THE COURT: Why don't you do that?
THE WITNESS: I've got it in my mind, and I want to get it out.
THE COURT: Grab that thought.
THE WITNESS: Let me just – I'll read your sentence, and I'll tell you where the discrepancy is. "However, actual measurements of water quality in the vicinity of the Waterway Estates discharge points revealed that the treatment levels provided at that time, the concentration of algae, was about 10 percent higher than target values considered to be satisfactory."
Now, what I'm reporting to you, Mr. Jacobs, is that they had also looked at predicting what the impacts of secondary treatment would be, and they had predicted actually that the impact would be much greater than it was. So, you're correct in that it was higher than what they wanted in the stream based on AWT treatments, but it was lower than what they expected from what would have been a secondary plant.
BY MR. JACOBS:
Q. Could you just read the last sentence – I'm sorry – the following sentence, and then I'll be through for the moment?
A. Sure. "It was concluded by FDER that moving the point of discharge would improve the quality of the river" – "of the water in the Waterway Estates canals and in the Caloosahatchee River in the vicinity of the canals and the discharge."

MR. JACOBS: Thank you.
MR. SCROGGIN: Your Honor, may I ask if he's going to finish that sentence that he read the one sentence that follows?
MR. JACOBS: Maybe on his redirect.
THE COURT: Beg your pardon?
MR. JACOBS: I would suggest he could redirect on that issue.
THE COURT: Read that what?
MR. JACOBS: He's asking -- he's now asking that the witness read other portions of the report, and I'm suggesting that that take place during the redirect.
THE COURT: Well, in fairness, it ought to be read now. And, of course, that's a fact issue that I would have to determine, and I don't frankly want to have to pause to do that. So, would you kindly read that, Mr. Jacobs?
MR. JACOBS: The following sentence?
THE COURT: What is it, the following sentence?
MR. SCROGGIN: The sentence begins with the word -- it follows the sentence that was just read -- "Improvements."
THE COURT: Or the witness can read that.
Would you read that?
THE WITNESS: "improvements of this magnitude would be imperceptible and would be expected to take place gradually over many months."

BY MR. JACOBS:
Q. When you say "imperceptible," you mean to the naked eye?
A. In terms of trying to measure it. Obviously they were measured at 10 percent, so -- would not be seen. That's correct.
Q. But it would be expected to take place over a number of months?
A. That's correct.
MR. JACOBS: Thank you.
THE COURT: Okay. Then we will be in recess until 8:45 Monday morning.
(Court adjourned at 3:47 p.m.)

CERTIFICATE

I hereby certify that the foregoing is an accurate transcription of proceedings in the above-entitled matter.

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF FLORIDA
FORT MYERS DIVISION

UNITED STATES OF AMERICA,
Plaintiff,
vs.
FLORIDA CITIES WATER COMPANY and AVATAR HOLDINGS, INC.,
Defendants.

Case No. 93-281-CIV-FTM-21

Monday, April 1, 1996
Tampa, Florida

TRANSCRIPT OF NON-JURY TRIAL
BEFORE THE HONORABLE RALPH W. NIMMONS, JR.,
UNITED STATES DISTRICT JUDGE

Appearances of Counsel:

For the Plaintiff: Mr. Daniel S. Jacobs
Mr. T. Anthony Quinn
Ms. Gwendolen Fitz-Henley

For Defendant Avatar: Mr. David B. Hird
Ms. Joanne Tastas

For Defendant Florida Cities: Mr. Gary H. Baise
Mr. Alexander M. Bullock
Mr. Lance High
Mr. Don G. Scruggin

Reported by: Dennis Miracle
Official Court Reporter

PROCEEDINGS

April 1, 1996

******

THE COURT: Morning.

Okay.

Let's see, we had Mr. Smith on the witness stand. Mr. Smith, you can resume. Where is he?

MR. BULLOCK: He's outside, Your Honor.

MR. JACOBS: Your Honor, I just want to thank you on behalf of Mr. Quinn and I. We made our flights and due to the deluge of springbreakers, had we missed those, we never would have gotten home, without exaggeration. I do appreciate it.

THE COURT: Yes, indeed.

All right.

We're on cross examination, you may proceed, Mr. Jacobs.

MR. JACOBS: Thank you, Your Honor.

CROSS EXAMINATION CONTINUING

BY MR. JACOBS:

Q. Good morning, Mr. Smith?

A. Morning, Mr. Jacobs.

Q. Mr. Smith, you're relying on your reports for your testimony, are you not, sir?

A. Yes.

Q. Now, in preparing these reports, Dr. Jernigan and Mr. Westfall reviewed dozens of documents which they relied upon in turn in preparing the reports, is that correct?

A. That's correct.

Q. With the exception of documents that you mentioned on Friday that you personally reviewed prior to your deposition and prior to the preparation of the report, you personally reviewed no other documents prior to your deposition and prior to preparation of the report, is that correct, sir?

A. It's hard to be exclusive on that, Mr. Jacobs. I'm not sure – no other documents, in particular reference to the case or this matter? I mean, you know, it's a very broad kind of question.

Q. Well, implicit at least from my prospective in the question was, documents related to the case, sir?

A. What I reviewed in particular were our project notebooks and, in particular, our report, various DMR's and OMR's and some various memoranda that had been prepared by the company, those kind of documents. This is the business of sanitary engineering. I'm always reviewing documents that have information, technical matters, that certainly have interest to this case, that are always, you know, a part of my daily routine. And I don't want to mislead you to think I don't read things that might impact my thinking on the case just because it wasn't listed or something.

Q. Right. Let me try again.

With the exception of those few documents that you've again just named, DMR's, OMR's, these compilations, the Government's complaint, before your deposition and before the preparation of the report, you personally prepared no – you personally reviewed no other documents, correct, sir?

A. Mr. Klingenstein's report I think was in that group. I don't know if that counts as being one of the things, but I did review his report.

Q. That's fine. Anything else that comes to your mind now, sir?

A. Did I say there were some drawings and whatnot of existing plants? Right, I think that is it.

Q. Okay, thank you.

Now, you were retained to serve as an expert witness in this case in May of 1995, is that correct, sir?

A. Yes.

Q. And your firm is being paid how much to serve in that capacity?

A. We are retained on an hourly rate basis, so there's no set amount. It's based on how much work we do.

Q. Well, let me cut to the grist. Roughly how much has your firm made so far from serving as an expert witness in this case. Let me clarify. I mean for your services, Dr. Jernigan and Mr. Westfall and anybody else, for that matter, on your staff.

Page 5

A. I think we've billed --
THE COURT: You mean accrued, accrued or actually been paid as yet?
BY MR. JACOBS:
Q. Fair enough. Accrued. I assume they're getting paid timely. Accrued is a better question. Thank you, sir.
A. What I can tell you, Mr. Jacobs, how much we have been billed -- how much we billed the law firm, I think it's on the order of forty thousand dollars.
Q. Okay.
Now, you and your firm have worked for Florida Cities for years, haven't you, sir?
A. We've worked for them I think for four years, maybe five.
Q. And they're a good client, aren't they?
A. They are a client. They are not -- I don't know what you mean by "good." You know, that's a -- they're -- we have a good relationship with this client, yes.
Q. You do recall at your deposition I asked you the same question and you responded, yes, they're a good client?
A. Right. I'm not sure what your inferring, so I don't know what the good modifier -- we have a good relationship with this client, Mr. Jacobs.
Q. Well, they paid you nearly half a million dollars in the last four or five years, isn't that correct, sir?
A. We have billed them for services in that amount. Of

Page 6

course, in prospective, we bill other clients probably thirty million dollars in that same period.
Q. I didn't ask you that, I asked you this client. Roughly half a million dollars in the last four or five years?
A. That's correct.
Q. Now, turning your attention back to Waterway Estates, where we left off on Friday. In terms of a water body's ability to assimilate a pollutant discharge, the greater the dispersion and dissipation, the greater the ability of the water body assimilate the pollutant discharge, correct, sir?
A. It would certainly happen much more quickly and with less immediate impacts. I don't know that it affects its overall capacity.
Q. Let me ask you this. Conditions in most parts of the Caloosahatchee River are unfavorable for the dispersion and dissipation of effluent, isn't that right, sir?
A. No, I wouldn't agree with that.
Q. Do you have your report in front of you?
A. No, sir, I don't.
Q. Directing your attention to the Black and Beach Report, Defendant's 92, in that case, please, in particular, page 28.
A. I'm sorry; page 28?
Q. Yes, sir. Of the Black and Beach Report, third paragraph, last sentence. Would you read that into the record, please, and just as a preamble to the first two paragraphs,

Page 7

describe the Caloosahatchee River.
A. Says these conditions are unfavorable for the -- speaking of the conditions in the Caloosahatchee -- are unfavorable for the dispersion and dissipation of the effluent from the Waterway Estates --
THE COURT: A little bit slower for the Court Reporter.
THE WITNESS: I'm sorry.
THE COURT: Would you read that again, a little slower.
THE WITNESS: Certainly. Speaking of the conditions in the Caloosahatchee River, these conditions are unfavorable for the dispersion and dissipation of the effluent from the Waterway Estates Plant.
BY MR. JACOBS:
Q. Thank you.
Now, conditions at the shoreline are particularly poor, are they not, sir?
A. I believe that is what that paragraph was about, actually.
Q. But would agree?
A. Yes.
Q. Okay.
Now, the flow in this river is slow or non-existent at the shoreline, isn't that right, sir?

Page 8

A. It's slow and it's tightly influenced, actually goes up and down at times.
Q. Correct or not correct; it's slow or non-existent, the flow, at the shoreline?
A. Correct.
Q. Now, when you have slow or non-existent velocity or flow, you have got unfavorable conditions for the dispersion and dissipation of effluent, isn't that correct, sir?
A. That is what we're reporting, yes.
Q. Okay.
And you agree with your own report, right?
A. Yes, sir, I do.
Q. Okay.
And the conditions in the canal, the boat canal where the previous outfall was, are even more unfavorable than the shoreline for the dispersion and dissipation of the effluent, isn't that right, sir?
A. As a relative matter, yes.
Q. The conditions, to summarize, for such dispersion and dissipation are least favorable in the canal, a little bit better right along the shoreline and best out in the middle of the river, using your term, "relatively speak," isn't that right, sir?
A. That's correct, Mr. Jacobs.
Q. In fact, Mr. Smith, didn't modeling by FDER show the best

Page 9

environmental protection of the river was afforded by a discharge to the six foot contour line of the river as opposed to a discharge to the canal?
A. There is absolutely no question about that, Mr. Jacobs. That is the best place for dispersion and dissipation of the effluent.
Q. And you do not debate, sir, as a matter of sound engineering principles, that a discharge to the six foot contour line of the river would therefore afford better environmental protection than a discharge to the canal?
A. There is no question about that.
Q. And would you therefore say as a matter of sound engineering principles that when FDER decided the discharge location should be moved to afford maximum environmental protection, it was making a correct decision?
A. Correct is a value-laden term, sir. I don't know correct -- what you're trying to say.
Q. Well, you're an engineer, you have been qualified as an engineer, from an engineering and environmental engineering standpoint?
A. Correct would be discharging into the canal, Mr. Jacobs. You could correct -- what we're saying is -- what you have described is the most environmentally protective manner would be the six foot contour line, but there's many things involved in that; permitting a pipeline, putting a pipeline in the

Page 10

middle of the river, across the river, building the pipe.
Q. The question -- let me read you back the question again.
It related to affording maximum environmental protection. That is the hypothetical, sir, that's the objective. If that is what FDER had in mind when it decided that the discharge location should be moved to afford maximum environmental protection, then it made the correct decision, is that right?
A. That's right.
Q. Now, Mr. Smith, the purpose of mixing, which you discussed in your eloquent, I almost want to say seminar, Friday morning with the illustrations that I was trying to following, the purpose of mixing is to maximize the water quality, isn't that right, sir?
A. Yes, that's correct.
Q. So then the requirement that the discharge point be the six foot contour line maximized water quality?
A. Yes, for those conditions, that's right.
Q. And while you might not be able to see an improvement in water quality with the naked I on a day-to-day basis, it was virtually certain that water quality would improve over time as a result of the relocation of the outfall, correct?
A. Absolutely right. In fact, probably improved the moment it was mixed out there in terms of the local water quality.
Q. In terms of what he call or the FDER report calls localized impacts?

Page 11

A. That's correct.
Q. Now, until April, 1992, the effluent discharged from the Waterway Estates Plant was only secondarily treated, correct?
A. Actually it was an advanced secondary plant, removing much more than a normal secondary plant, but not yet AWT.
Q. Okay, fair enough. Let me ask just make sure I understand your answer to my question, it was still secondary treatment, even if it was slightly more?
A. It was not AWT, it was greater than secondary.
Q. It was greater than secondary?
A. Oh yes. It was filter. There was much of the nitrogen removed. It was much better than secondary effluent.
Q. So would you call it sophisticated secondary?
A. I'd call it advanced secondary; something of that effect.
Q. But certainly not AWT?
A. Not AWT.
Q. Okay.
Now, isn't it even more important to discharge at the optimal point in terms of water quality when you have got effluent which is only secondarily treated?
A. If that is your goal, sir, to minimize the impacts on the receiving waters, it would -- that would be a better -- that would be a better environmental choice to do that, yes.
Q. Okay.
Now in 1981, the State determined the Waterway Estates

Page 12

Plant would have no wasteload allocation, isn't that correct?
A. I'm sorry, who determined that?
Q. The State of Florida.
MR. SCROGGIN: Objection, Your Honor, this is assuming a fact not in evidence?
THE COURT: Well, if he knows. Do you know that to be a fact?
THE WITNESS: We reported some of those things, Your Honor, but --
THE COURT: I'll overrule the objection.
BY MR. JACOBS:
Q. Do you need to hear the question again, sir?
A. Yes, please.
Q. In 1981, the State of Florida determine the Waterway Estates Plant would have no wasteload allocation, correct?
A. There's some dispute about that, but there's -- there was some issues about that. I think we reported that there was -- the work was going on about the wasteload allocation, it was unclear about whether Florida Cities had or had not one.
Q. But your report said there was none, isn't that correct?
A. That is what I've just said. I said we reported there wasn't one, but there was some dispute about that.
Q. Okay.
But -- I'll move on.
Now, between the time in 1981 that the State, according

Page 13

to your own report determined the Waterway Estates would have no wasteload allocation and December 1 of 1987, as far as you know, there was no request for a wasteload allocation, isn't that correct?
A. Not to my knowledge, sir.
Q. Directing your attention to your deposition testimony page 174, question line fifteen, I'm going to read the question and ask you if you gave the following answer, sir. Question, now between the time – that time, referring back to 1981, and 1987, did you and your staff, for that matter, find any evidence of a request for a wasteload allocation.
Mr. Smith, did you give the following answer, not that we've made note of here and not that I know of here today?
A. I think that is just what I said wasn't it? Same thing. Same question; or did I miss something.
THE COURT: Yeah, did I miss something? What was his answer that you're seeking to impeach him from this prior?
MR. JACOBS: The previous question was essentially the same and I don't think he gave the correct answer. I don't think the answer was consistent with the deposition answer.
THE WITNESS: I thought I said I didn't know of any just right now and I thought that is what that you read?
THE COURT: Well, go ahead.
MR. JACOBS As long as that is what he said, I'll just move on.

Page 14

BY MR. JACOBS:
Q. On December 1st, 1987, Florida Cities Water Company requested a wasteload allocation, correct?
A. Right. That was – yeah, they were also looking permits and all that, too, yeah. Okay.
Q. And you attribute the fact that Florida Cities Water Company waited until December 1, 1987, to apply for a wasteload allocation to their evaluation of various alternatives, correct?
A. Right. And I think there was some misunderstandings I mentioned earlier about whether they had one or didn't have one or whether the plant was to be joined to another regional plant, all those other things you'll get into later, I'm sure.
Q. Now, after Florida Cities evaluated these alternatives, they chose to continue their discharge, upgrade the plant and relocate the outfall, is that correct, Mr. Smith?
A. That's correct.
Q. Now this alternative they chose was not the fastest compliance alternative, was it, Mr. Smith?
A. There appeared to be a faster opportunity, yes.
Q. Now, couldn't the violations at Waterway Estates all have been avoid simply by connecting the Waterway Estates effluent to another system?
A. If it could have been worked out?
Q. Is that a yes?

Page 15

A. Yes, if it could have been worked out, yes.
Q. From a technical prospective?
A. Yes.
Q. You did not personally examine the possibility that the Waterway Estates Plant could have connected to the North Fort Myers Utility Wastewater System before any of these violations alleged in the second amended complaint took place, did you, Mr. Smith?
A. No, all we've done is review memoranda.
Q. And in fact, you don't have an opinion as to whether the Waterway Estates Plant should have connected to the North Fort Myers Wastewater System before any of these violations took place, correct?
A. I think we reported in our report that the cost was excessive and I believe that is we talked about in my deposition that we reported it was an excessive cost, but at the time, I did not know exactly what the cost was.
Q. You reported that the company considered it an excessive cost, isn't that right, sir?
A. Yes, sir.
Q. You didn't personally in your report say that the cost was excessive, correct?
A. I thought that was the term we used, but I'd have to look.
Q. Well, make reference to your report, if you'd like, but

Page 16

my understanding was in your report and in your deposition testimony, you did not express an opinion as to whether they should have connected, you might have expressed a historical narrative about how the company considered the cost to be excessive, am I right?
A. I think that is a fair judgment on it.
Q. All right.
Now, you don't have an opinion as to how much it would have cost to connect to the North Fort Myers system, do you, Mr. Smith, you personally?
A. I do.
Q. You do?
A. Yes. I didn't in my deposition, Mr. Jacobs, you're right.
Q. All right.
So you didn't at the time of your deposition, but you do now?
A. Right.
MR. JACOBS: In that case, sir, I move that he not be allowed to express that opinion.
THE COURT: Well, he hasn't given it yet, you haven't asked him for it, nobody's asking for it, so you don't need a motion?
BY MR. JACOBS:
Q. Now, when you say in your report that the North Fort

Page 17

Myers option, quote, proved to be infeasible due to high costs, page 38, you really mean to say, and I think we covered this already, the company decided that the cost was too high, correct?
A. The company did decide and in our review, we thought the same.
Q. Now, you don't say that in your report or your deposition though, do you, sir?
A. As I told you, I didn't say it in my deposition. I thought we used the term "excessive," and that's what I'm recalling, Mr. Jacobs.
Q. Directing your attention to your deposition testimony, page 227, line twenty, I asked you the question, on page 38 up at the top, Mr. Smith, you draw the conclusion that the connection to North Fort Myers Utilities proved to be infeasible due to high cost.
Let me ask you first, is this a question of your repeating the company's opinion that the cost was too high to the company or are you drawing your own conclusion here as an expert that the cost was too high. Answer, do you recall, sir, giving this answer, no, this was our review of the ESE report and the company's review of that. So it be – we weren't expressing what our thoughts were as to what was too high or not too high. Correct, is that your answer?
A. I believe that is true.

Page 18

Q. Mr. Smith, are you aware that the North Fort Myers System uses spray irrigation and deep well injection with no surface water discharge?
A. I think I'm aware of that. Certainly the deep well I was aware.
Q. And you're aware they have no surface water discharge?
A. Yes, sir, I was aware of that.
Q. Now, your report or the Black and Beach Report evaluates how much time it took Florida Cities to upgrade the Waterway Estates Treatment Plant, correct?
A. That's right.
Q. And the report suggests how much time was anticipated for each task and how much time each task actually took, correct?
A. That's right.
Q. And you do that in table one on page 35, correct, sir?
A. Yes, that's right.
Q. And some of the tasks took longer than Black and Beach thought was normal under the circumstances, correct?
A. That's right.
Q. Now, what you mean by quote "anticipated" duration in table one on page 35 of your report is Black and Beach's opinion of what you thought it would take, correct?
A. We thought it was a reasonable amount of time without undue interruptions.
Q. And some of the delays that took place are attributable

Page 19

to Florida Cities and/or its contractors it hired for the project, isn't that correct?
A. Some were, yes.
Q. In fact, sir, all of the delays under preliminary engineering in your table one are attributable either to Florida Cities and/or its contractors, correct?
A. You're using the term "delay," I don't know what you have in mind about delay.
Q. Okay, let me see if I can help you there. Your table as I'm sure you will recall and you can refer to it as you see fit, sir, sets up two columns; anticipated duration and actual duration. So, I'm referring to delay and we can use a more scientific word such as deviation if you're more comfortable with it to represent the difference between the time for each task or series of tasks?
A. How about the difference between anticipated and actual?
Q. You'd like me to use the word "difference"?
A. Delay is kind of a majority word, Mr. Jacobs, and I guess what I'm saying, we set out an anticipated time and then we had an actual time.
Q. Can we compromise and just use deviation?
A. That would be great.
Q. Okay.
More scientific perhaps.
A. Less majority.

Page 20

Q. All of these deviations under preliminary engineering in your table one are attributable either to Florida Cities and or its contractors, correct?
A. That is correct.
Q. Now, moving down to the detailed design, quote, unquote, section of your table one, these deviations in the preparation and issuance of the RFP are in fact attributable to Florida Cities, correct?
A. That's correct.
Q. And the, quote, consultant designs facility, quote, unquote, line item, do you see that?
A. I certainly do.
Q. Most of those delays were attributable to either Florida Cities or its consultants, correct?
A. Yes, it's part of their control.
Q. Okay.
Now, most of the contractor delays are attributable to Source Engineering which did the design, correct?
A. No, I don't think I'd agreed with that. Say that again. I heard you to say most of the contractor delays.
Q. Well, okay, maybe I should be more specific.
Source Engineering did the design, right?
A. Yes.
Q. And I'm sorry, 'cause I've -- my outline keeps saying delays and I've agreed to use deviations and I'm not trying to

Page 21

slip you up here, I'm going to try to hold true to my bargain.
The deviations between the anticipated time and actual time under design are attributable to Source Engineering, is that correct.
A. Well, actually, no I don't think they're all attributable to Source, there are some disputes between the company and Source about their scope and amending their scope and those kind of things, so, no, I think it's jointly held.
Q. Okay, between the company and Source, not all Source's fault?
A. No, it's just normal business transactions.
Q. I think my question was poorly phrased. I think that what I'm trying to establish is that Source did the preliminary design and to the extent there was a contractor deviation or a deviation for which this contractor was responsible as opposed to the company, that contractor was Source, is that correct?
A. And consultant is the word we use, that's why you through me. Contractor implies to me general contractor, so –
Q. I've been with the Government too long. We always use contractor. Okay.
Mr. Smith, moving right along, based on your twenty-five years experience in this field, and particularly your familiarity with engineering firms in the Tampa area, Mr. Smith, you would not have selected source to do this job, would you?

Page 22

A. I probably wouldn't have, no.
Q. In fact, you would have recommended someone else?
A. Probably would have.
Q. And there are many firms in this area that could have done this kind of project, aren't there?
A. Yes, including Source. I mean they were capable. I didn't say they weren't capable just because I wouldn't have chosen them?
Q. Fair enough. But there were firms with greater capabilities in wastewater treatment design in this area than Source?
A. Yes, I would agree with that.
Q. Okay.
Now continuing on down your table to your construction section. The line item that reads, quote, contractors prepare stroke submit bids, unquote. The delay there is attributable to the contractor, correct?
A. No.
Q. No. To the consultant?
A. Usually, what happens there, there are some questions regarding the bid raised by the contractors or issues that have raised during the bidding period, and so the owner or the engineer has to extend the bidding period and that is more than likely what happened during this period. The contractors is actually bound by contract to bid whatever period the owner and

Page 23

engineering allow him to bid, so the contractor really has no control over that time, it's the engineer or the owner that control that time.
Q. So that delays either the contractor or consultant or the company, correct?
A. The consultant or the company.
Q. Okay.
Finally, your line item that reads, quote, the contractor achieves substantial compliance, unquote. Here again, the delay is a attributable in part at least to the contractor, correct?
MR. SCOGGIN: Your Honor, Counsel keep using the term "delay," I think we agreed to use the term "deviation".
MR. JACOBS: I stand corrected for what it's worth.
BY MR. JACOBS:
Q. If I slip, Mr. Smith, and say delay because it's Monday morning and I'm looking at my outline, I do mean deviation.
A. Thank you, I understand that, it's clear. The contractor achieves substantial completion is the term, Mr. Jacobs, and there are a number of things that impinged upon his schedule there, and certainly he had charge of it. As I tried to describe, this is a very difficult construction site.
Q. I understand that, and that had to do with the size, if I followed your talk on Friday?
A. That's correct?

Page 24

Q. Right. Now when he starts out the contractor knows that's a problem 'cause presumably he goes to the site and takes a look, right?
A. Yes.
Q. Just like we did in the video and Mr. Klingenstein said that's a pretty lot of stuff on just a little site, right?
A. Great deal.
Q. Okay, so then that's something perhaps he can anticipate if he just takes a look in advance; is that fair?
A. Usually, unfortunately, you're giving a contract – given a contract that has a firm completion date such as this one which is given by an order, and the contractor really has no opportunity to negotiate it or disagree with it before he bids the job. He takes the bid, often knowing he's unable to meet that deadline and is going to need to work it out during the period of the contract. Not at all unusual.
Q. Would you agree that before he signs the contract with the completion date that he would normally go take a look at the site?
A. Oh, probably required, in fact.
Q. Okay.
Now, Mr. Smith, if a client came to your firm in Tampa with the project such as the Waterway Estates upgrade and considered the project urgent and was willing to pay a premium to have the project expedited, would you in fact attempt to

Page 25

accommodate the client?
A. Yes, we would.
Q. And your timetable would be adjusted accordingly?
A. On those things over which we had control, yes.
Q. In fact, at your deposition, I gave you the same hypothetical question, didn't I?
A. Right.
Q. And what I called and I think we agreed to call the expedited or fast track, quote, unquote, timetable and you then proceeded to elaborate on table one by essentially in your deposition testimony suggesting how long each task would have taken under the expedited or fast track timetable, correct?
A. Right, I remember it well, Mr. Jacobs.
THE COURT: Are you seeking to impeach him based upon his deposition testimony?
MR. JACOBS: Not at all, I'm setting up –
THE COURT: All right. Well, let's – there's no other purpose for harkening back to the deposition testimony. I got enough here in open Court without having to deal with – unless it's impeachment.
MR. JACOBS: No, sir, it was really just to – a lead into the next exhibit.
THE COURT: All right, go ahead.
MR. JACOBS: And the next question, more than anything else. That was not an attempt at impeachment.

Page 26

THE COURT: All right.
BY MR. JACOBS:
Q. Directing your attention now to Exhibit 508, Mr. Smith, and does –
MR. JACOBS: Just for the record, this is Government Exhibit 508. I've got terrible eyesight, can I get a little closer?
MR. SCOGGIN: Your Honor, we have objected to the use of this exhibit, it was only made available to us last week. We've never seen it before, was not part of the exhibits presented by the United States as part of this –
MR. JACOBS: Judge, actually it was a couple of weeks ago. What we did as we were preparing for trial, and in particular, preparing to examine Mr. Smith and trying to understand his own table, was what we've done here is illustrate his own table, table one from his report, and the deposition testimony which is why I used that as the lead into this questioning. So, I don't think there's anything unfair here. We're not submitting that exhibit for our own expert to testify to, all we've done is illustrate Mr. Smith's own report and his own table and his own testimony and –
THE COURT: You're not offering that in evidence then?
MR. JACOBS: Well, if he confirms that each of –
THE COURT: Well, it was not timely produced, was it,

Page 27

the exhibit?
MR. JACOBS: Well, normally for an expert, you'd product the exhibit at the time you produce his report, but again, this is the adverse expert's testimony and report we're seeking to illustrate after his report and testimony. I don't think there's anything unfair. If he testifies that it's inaccurate, that it doesn't accurately illustrate his own report and his own testimony, then I would –
THE COURT: I'll permit you to use it in a demonstrative manner, but whether I'm going to allow that in as an exhibit is problematic to be received as an exhibit as such.
MR. JACOBS: Very well, sir.
BY MR. JACOBS:
Q. Mr. Smith, would you take a look at what has been marked for identification so far as Exhibit 508?
A. Yes, I am.
Q. And feel free to refer to your table one which I see you have in front of you. Have we – starting from the bottom –
THE COURT: Just a moment. Do we have that microphone that goes around the neck, because he needs both of his hands, I think. There we go. Just put that around your neck. I think everybody can hear you. Assuming it's working.
MR. JACOBS: I could speak up if need be.
THE COURT: Never mind, never mind. Can't get it

Page 28

working. Okay, go ahead.
MR. JACOBS: You keep the pointer.
MR. SCOGGIN: Your Honor, may we move to see the chart?
THE COURT: Yes, sir.
BY MR. JACOBS:
Q. Now, we both have a pointer.
Now, starting from the – let's start with the middle line, the anticipated construction schedule and for no other reason than it is the first column in your table one, is that correct?
A. That's correct.
Q. Have we accurately represented your time line for anticipated construction?
A. It looks to be generally in conformance. Obviously, I'm not going to check every detail of it, but generally, it represents our table, but we would have said anticipated would be, yes, that's correct.
Q. Now moving down to your next column, is in fact actual construction schedule, is that correct?
A. Correct.
Q. And have we there again accurately illustrated your own second column of table one.
A. Looks pretty much in conformance, Mr. Jacobs?
Q. Okay. Now this next one might be a little bit tougher.

Page 29

What we have done on the top row is we've tried to illustrate your deposition testimony about the expedited or fast track schedule. Can you recall whether we've accurately done so?
A. I wouldn't know without going back and adding up all the days that we talked about in my deposition. Of course, as you recall from that time, this was a very unlikely scenario, but I'm kind of at your mercy.
THE COURT: Mr. Jacobs, you have a habit of smiling in a manner that indicates incredulity when a witness responds in certain ways. That's very distracting to me. And it's unbecoming and you may not even realize you're doing it, but you do it, and I don't want it anymore.
MR. JACOBS: Yes, sir, and I apologize, it's not intended in any disrespectful manner.
THE COURT: Well, what it is, it's a comment, unstated comment by the advocate on the witness' testimony.
MR. JACOBS: Fair enough.
THE COURT: Go ahead.
MR. JACOBS: I apologize.
BY MR. JACOBS:
Q. Well, let's go item by item then perhaps.
It's my recollection that you said in terms of in preparing the RFP had to be done under fast track in seven days, is that correct?
A. Mr. Jacobs, I mean, unless I wanted to look at my

Page 30

deposition testimony, I'm kind of at your mercy on this. I don't recall all the dates, I do recall our exchange that on that October 31st day, but that's all, or 30th, whatever date it was.
Q. And on the second item, consultant prepares and submits proposals, do you recall saying that could be done in fourteen to twenty days?
A. Yes.
Q. And insofar as SCWC, evaluating, selecting, negotiating and awarding the contract, you recall that you said that could be done in thirty days?
THE COURT: Well now, you're asking him to recall what he said on his deposition, sir, is that correct?
MR. JACOBS: Yes.
THE COURT: Mr. Jacobs?
MR. JACOBS: Yes.
THE COURT: How is that -- as I told you a few moments ago, I will permit you to impeach his testimony with his prior deposition. But, from a standpoint of substantive evidence, I'm not going to permit that, and frankly, I think that is one of the things that is wrong with that exhibit there. Go ahead.
BY MR. JACOBS:
Q. Let me take the point and rework the question, if I may.
Under FCWC prepares, issues RFP, under a fast track scenario, sir, could that be done in seven days?
A. Yes.
Q. Consultants prepare stroke submit proposals. Under your own fast track scenario, could that be done in fourteen to twenty days?
A. Yes.
Q. FCWC evaluates, selects, negotiates, awards contract. Under your own fast track scenario, could that be done in thirty days?
A. Yes.
Q. Consultant performs study, submits report. Under your own fast track scenario, could that be done in ninety days?
A. Is that possible, yes.
Q. FCWC evaluates report, selects alternative. Under your own fast track scenario, could that be done in thirty days?
A. Thirty days would be certainly expedited, right.
Q. But within reason under --
A. It's possible.
Q. Moving down to the next line item and section. FCWC prepares, issues RFP for design services. Could that be done under a fast track in ten days?
A. That would be a real stretch, but assuming they had prepared for it ahead of time, yes.
Q. Consultant prepares stroke submits proposal. Could that be done in twenty-one days?

Page 31

Page 32

A. Yes.
Q. FCWC evaluates, selects, negotiates, awards contract. Could that be done in forty-five days?
A. Yes.
Q. Consultant designs facility, submits permit aps -- that's applications?
A. That's correct.
Q. To FDER. Could that be done under your fast track scenario in a hundred and eighty days.
A. That would be a real push, but yes.
Q. Under permitting, could you go any faster than your anticipated duration?
A. As it turns out, you can't go that fast, Mr. Jacobs. I just did this under fast track and it took us two hundred and seventy-three days instead of two hundred and eighty-nine.
Q. So your anticipated duration is equivalent to a fast track in your own table here?
A. It's probably unrealistic optimism as it turns out.
Q. 'Cause you just did another one subsequent.
A. Just did one like this plant that took two hundred and seventy-three days. We were hammered on it all the way.
Q. After you did this report?
A. After I did the same kind of workup. Oh, after this report?
Q. Yes.

Page 33

A. Right.
Q. So you're relating an experience that took place after this report?
A. Oh, no, no, the work was done prior to the report being submitted, yes. You mean, we're talking about this report right here, the expert report for Waterway Estates?
Q. Yes, sir?
A. Yes, it was done prior to that.
Q. Okay.
But you agree at your deposition that the anticipated duration time 30/30/30/90?
A. Right.
Q. Was the fast track?
A. That was the best you could do, that's right, assuming everything hit. All I'm saying, even that is optimistic.
Q. Now finally, under construction, FCWC reproduces, advertises under the fast track, that could be done in thirty-seven days in conjunction with the contractors prepare and submit bids, correct?
A. That is possible.
Q. FCWC evaluates, bids, awards contracts or contract. That could be done in sixty days under the fast track?
A. Right.
Q. FCWC issues notice to proceed. That could be done in fourteen days under the fast track, correct?

Page 34

A. Right.
Q. And finally, contractor achieves substantial completion that could be done even under a fast track in four hundred and eighty days that you anticipated it would take, correct?
A. We thought that was a very aggressive schedule.
Q. So, you didn't change that?
A. Didn't change that.
Q. Right, okay.
Now, having gone through the schedule from table one in association with your deposition testimony, is it fair to say that we have accurately illustrated the fast track scenario or the expedited construction schedule from your own testimony?
MR. SCROGGIN: Objection, Your Honor, the term "expedited" is not the term that was used in questioning the witness. Fast track and expedited are not necessarily the same.
MR. JACOBS: I think they're both used. We could look into that matter.
THE COURT: I'll overrule the objection. Overruled.
THE WITNESS: Mr. Jacobs, it appears that you have accurately squished together all those dates, put them end to end, and as you recall in our deposition, I said that's pretty much impossible. There may be segments of this that you can do and sustain that kind of effort, but to do it all at once is really a misrepresentation. You cannot achieve that schedule

Page 35

without – just under normal circumstances, and this takes no account for permitting agency interruptions or interventions, but those – that chart that you have accurately adds up all those dates.
BY MR. JACOBS:
Q. In your own –
A. I believe what you have done in that way is correct.
Q. Okay.
MR. JACOBS: Your Honor, now I move 508 into evidence, please.
MR. SCROGGIN: Objection, Your Honor. We've stated for the record already our objection as to the use of this exhibit.
THE COURT: Sustained.
BY MR. JACOBS:
Q. Mr. Smith, are you aware that Florida Cities actually received a notice of intent to deny the permit renewal back in June of 1986.
A. Yes, I believe that is right. Seems like they applied, they were noticed in April, so that makes sense. I'm not sure of the exact dates. But that sounds correct.
Q. Now, using 508 for illustrative purposes only, your table starts, table one, with EPA denying the permit in 1986, correct?
A. That's correct.

Page 36

Q. So, if they new in June of '86 that EPA intended to deny the permit, hypothetically, they could have gotten started under any of these time lines back in June of '86, is that correct, sir?
A. Hypothetically, that's correct, sir.
Q. Now, whether you got started in June of '86 or December of '86, under expedited schedule, you finished before July '91, isn't that correct?
A. Yes, again with the caveats we discussed already.
Q. And now, which is the bigger project, upgrading the plant or relocating the outfall?
A. Construction project, Mr. Jacobs?
Q. Yes.
A. The construction activity associated with the plant would be more difficult. Permitting we thought would be more difficult for the line.
THE COURT: Say that again. I'm not sure I understand you.
THE WITNESS: The physical construction activity we think is more -- would take longer with the plant than the line, but the line required a 404 permit from the Corps of Engineers. That's a very long lead time. We thought it would be less to get a permit for the plant which is an FDER permit.
THE COURT: Okay.
BY MR. JACOBS:

Page 37

Q. In point of fact, the contract with Source to design the relocation of the outfall was awarded in February of 1988 at the same time as the contract with Source to design the AWT plant, correct?
A. I believe that is right, as part of the same contract, but I'd have to exhume that again to confirm it.
Q. February '87, both contracts?
A. February '88.
Q. '88, February '88.
A. February 29th, yeah.
Q. Both contracts for the --
A. I believe that is right. Right.
Q. And the outfall had been relocated by July of '91, correct?
A. Yes, physically in place.
Q. But not before?
A. It was right -- July -- just ahead of July 1, it seems or June 30th, or something like that it was completed. Maybe it was an August deadline that was done in July. That may be what it was, Mr. Jacobs. I'm looking for those exact dates. I didn't find the exact date. Was done that summer in July, yes.
Q. Okay.
A. Pipeline was complete.
Q. Now, under expedited schedule, could the outfall have been relocated by March of 1990, as well?

Page 38

A. Well, the big problem with that schedule, Mr. Jacobs, it took a year to get a 404 permit. There is no inclusion of that here in that schedule.
Q. The 404 permit, that is what kind of permit?
A. That is a fill -- you asking me -- fill and dredge permit within the waters of the United States covered by Public Law 92500, Section 404, administered by the Corps of Engineers, yes.
Q. This is the same Corps of Engineers that you referred to on Friday as a notoriously slow agency?
A. It is one and the same.
Q. Okay.
If it's notoriously slow, does that suggest, and you know it's notoriously slow, does that suggest you put the permit application in at the first possible instance?
A. You can't apply for the permit until you have your design completed.
Q. And, does that suggest that you do your design at the first possible instance so you can get this permit into the infamously notoriously slow agency?
A. Notorious is my word, Mr. Jacobs, infamous is yours. And you would apply for it as soon as you had the design complete and knew that that was your selected alternative. You have to work through your selected alternatives to make sure you're going to discharge to the six foot *contour* point in the river.

Page 39

Once you have that, you proceed with the design, complete your design and, yes, then you would submit your application for permit.
Q. But if you know you have to do all these other things in order to get the 404 permit from the notoriously slow Army Corps of Engineers --
THE COURT: forget the "notoriously slow." I have heard that enough. Just -- I understand what he's testified to on slowness of that agency. Just refer to the Corps of Engineers?
MR. JACOBS: Okay. Let me just move on, skip the Corps of Engineers.
THE COURT: Good.
BY MR. JACOBS:
Q. Since we heard enough about it.
If you know in June of '86 that EPA intends to deny the permit, then you could start all those design and other mechanisms that you need to complete before you applied for the Army Corps of Engineers permit six months earlier, is that correct?
A. If the company chose to move ahead, based on the preliminary intent, you could have moved to schedule ahead, that's right. Again, you still have to go through the steps of choosing alternatives, on and on.
Q. Well, assuming we start six months earlier, under the

Page 40

expedited construction schedule, is it fair to say you could ended six months earlier?
A. You could have ended six months earlier than whatever your schedule was. I wouldn't want to imply you could end six months earlier than March of 1990. 'Cause again, I think that's unrealistic in that it doesn't have time for permitting.
Q. Well, your expedited schedule did have time for permitting if you look back at table one as you elaborated upon again.
A. It had one hundred eighty days for the DER permit, doesn't have a year for the Corps of Engineers' permit, nor as we have found out, much longer time for DER?
Q. And the DER permit took a little extra time because DER wasn't satisfied with some of the information that the company had given it, *is* that correct?
A. There was a dispute and they had to understand exactly what the company was proposing.
Q. They asked -- DER asked for additional information, isn't that correct?
A. They certainly did.
Q. And it took some time for the company to get the additional information to FDER; isn't that right?
A. That's typically interchange with that agency.
Q. In fact, the company had a dispute with its contractor over whether -- or consultant over who was going to provide

Page 41

that information and whether the company had to pay the consultant to provide that information, isn't that correct?
A. That is part of scoping the job and understanding whether that in the scope or not.
THE COURT: Yeah, but his question is whether that's correct or not.
THE WITNESS: Yes, that's correct.
BY MR. JACOBS:
Q. Now, I posed a hypothetical that the company knows in June of '86 that they're going to get this permit renewal denied. If the company knows in 1981 that it doesn't have a wasteload allocation to discharge to the canal and it's going to have to relocate the outfall and upgrade the AWT standards to 1981, is it possible to complete these projects under any scenario by 1986?
A. If you start --
MR. SCOGGIN: Objection, Your Honor, question assumes a fact not in evidence.
MR. JACOBS: It's a hypothetical.
THE COURT: I'll overrule the objection.
THE WITNESS: I'm sorry, Mr. Jacobs, you said if you know in 1981 that you don't have wasteload allocation?
BY MR. JACOBS:
Q. If you know in '81 that you're going to have to upgrade your plant and relocate your outfall to get your NPDES permit

Page 42

renewed when it comes up for renewal in '86, you have got five years, isn't that right?
A. Right.
Q. And under any of these scenarios, expedited, anticipated or actual, you could complete the project, correct?
A. I think that is a reasonable time, although the only caution I'd give you is this -- the technology is changing, the technology that was proposed and caused part of the delays here with DER actually was because technology was changing. You're at the very front-end of when the kind of treatment technology was being put in place in Florida, and you'd actually have been kind of ahead of your time. Might have taken longer just to get it through. That's the only caveat I'd give you there, but it's kind of a raw time line, you'd think five years would be about the right time.
Q. It's just coming in Florida in the early '80's, but it had been out in -- out in Reno in that -- by 1970, is that right?
A. It was in -- Lake Tahoe was kind of a test demonstration site in the early '70's's. Again, not taking -- these are very stringent standards and unusually applied here in Florida and not widely applied throughout taught the U. S. and we're on the cutting edge in the early 1980's?
Q. Any reason you know of that Florida has these more stringent standards?

Page 43

A. Legislative fiat.
Q. Now, same hypothetical, if you know in 1982 that the possibility of a regional wastewater treatment plant for that Waterway Estates Plant had considered tying into -- if you knew that plant had fallen through in '82, could you complete the process under any scenario by '86?
A. That would be very difficult, I think.
Q. Four years?
A. Four years. Again, with new technology, selecting alternatives that really could buy off on, you're seven or eight years ahead of what actually happened and when it happened the DER had a great deal of difficulty with the technology questions.
Q. Under your anticipated schedule, it took about four years, isn't that right?
A. Right, but now you've moved it up in time, in history, so now we've got issues that have not yet been addressed by the regulators, and we've got to struggle with those more in terms. That's all I'm saying.
Q. It might have taken four years, might have taken a little bit more because there were new issues, is that what you're saying?
A. Right, exactly.
Q. Now, there were two types of NPDES permit violations at the Waterway Estates Plant; nitrogen and toxicity, correct?

Page 44

A. That is correct.
Q. And you do agree do you not that these violations would not have taken place had the plant been upgraded by the time the new NPDES permit took effect, correct?
A. That is correct.
Q. And you do agree do you not that the toxicity violations had an impact on water quality, isn't that right?
A. No, I don't believe that is true. Toxicity test violations had an impact; I don't think so, there's no connection there.
Q. Directing your attention to your deposition testimony, again I'll read you a question, and I'll ask you if you gave the following answer. Page ten, sorry, page 210, line thirteen, question, and from that you concluded that toxicity was not a serious problem with the Waterway Estates Plant. Answer, right. Question, when you say it's not a serious problem, would you say that -- would you say it was a problem but it just wasn't serious, or are you saying it wasn't a problem at all? Did you give the following answer, sir? In terms of water quality impacts, it has some water quality impact, obviously. Its nutrients in the water, and the ammonia is also nutrient contributing to the nitrogen load, so it has some impact. Do you remember giving that answer, sir?
A. Yes, I do.
Q. Next page I asked you, line one --

Page 45

THE COURT: Let me ask the witness, just for clarification so I understand. How does that answer differ from the one that you gave a moment ago?

THE WITNESS: If you remember, Your Honor, the toxicity test is this business with this fragile organism in the water, so it's ammonia that impacts that organism. The question was, does the toxicity test connect to impaired water quality. That is what Mr. Jacobs was asking me. Toxicity test really goes to this fragile species, not to the water quality. That is what I was trying to ascertain.

THE COURT: All right.

MR. SCROGGIN: Your Honor, I would object to the extracting of the answer of the witness out of context and ask that the remainder of his answer be read into the record as well.

THE COURT: Any objection to doing that as well, Mr. Jacobs?

MR. JACOBS: If you prefer, Your Honor, as opposed to on cross examination.

THE COURT: I think it would be more helpful to me to have it done now.

MR. JACOBS: Fine, fine. If I might elaborate, the theme is, from what I understand Mr. Smith's testimony, he's saying you can't necessarily extrapolate from the laboratory test?

Page 46

THE COURT: You're not testifying, don't characterize his testimony. That can be done in argument or if you want to clarify it, you can ask further questions.

BY MR. JACOBS:

Q. Let he ask you this for clarification sake, Mr. Smith. You're saying that the federally mandated toxicity test because they're done in a laboratory aren't necessarily an indicator of toxicity in a given water body, is that what you're saying?

A. That was part of it. Again, it's toxicity as to this given species which may or may not inhabit the Caloosahatchee River. What you asked me is a water quality question. I see those as separate questions.

THE COURT: Go ahead and ask – read the balance of that.

BY MR. JACOBS:

Q. The balance of the answer to the question, when you say it's not a serious problem, would you say it was a problem, but it just wasn't serious, or are you saying it wasn't a problem at all. I'll read your full answer without extraction and ask you if that's the answer you recall giving.

In terms of water quality impacts, it has some water quality impact, obviously its nutrients in the water and the ammonia is also a nutient contributing to the nitrogen loading, so it has some impact, how great an impact, again it's a very small amount of nutrients, a few pounds, in a river that is one thousand times larger than its flow; is that your complete answer?

A. That sounds correct, yes, sir.

Q. Now, starting again at the top of page 211, question one, so you're saying it had some impact, but a small impact; do you recall saying right?

A. Yes.

Q. And line four, question, and so it might have been a problem, but not a serious one. Is that a fair way to characterize your testimony. Answer, do you recall saying, pretty close. I'm not going to say it's a problem. That's what I'm weaseling on is the problem issue. It has some impact. Whether it's a problem now, and then I am embarrassed to say I interrupt you, and I say, question, I see. You're not willing to say whether it was a problem, you, and then you interrupt me and you give the answer, that is kind of a judgment for regulators to make, not for me. Do you recall giving that answer, sir?

A. I don't actually recall all that exchange, I remember parts of it, but it's in the deposition and it must have been said.

Q. Just a few more questions. Mr. Smith, starting with another one on toxicity, do you know the difference between a major municipal and a domestic wastewater treatment plant and a minor?

Page 47

Page 48

A. Is that a Federal designation or something you're asking me, or you asking me to determine what's a major and a minor? I'm not sure I understand you.

Q. Are you aware of the way those terms are used in – for Federal permitting process?

A. No, I don't know the cutoff between major and minor for Federal permitting purposes, I do not know that, Mr. Jacobs.

Q. Okay.

Are you aware that seventy-six percent of major municipal and domestic wastewater treatment permits in the State of Florida have whole effluent toxicity limit. Seventy-six percent of – I'm sorry?

THE COURT: Read that – sir?

MR. SCROGGIN: I'm just objecting to the time period the question refers to?

THE COURT: Would you state the question again or I can have it read back.

MR. JACOBS: I'll try to state it again.

BY MR. JACOBS:

Q. Are you aware, sir, that in the State of Florida, seventy-six percent of NPDES permits covering major municipal and domestic wastewater treatment plants have whole effluent toxicity limits?

THE COURT: What period are we talking about?

MR. JACOBS: The present?

Page 49

THE COURT: Present.
THE WITNESS: Could be, Mr. Jacobs, I don't know surface water discharges. I assume.
BY MR. JACOBS:
Q. Sure.
A. (Witness indicating affirmatively.)
Q. And are you aware that these whole effluent toxicity limits that are put in NPDES permits are put in when there is a reasonable potential that a water quality standard will be violated without such a limit?
THE COURT: Now just a moment.
MR. SCROGGIN: Objection, Your Honor, this witness is not purported to be an expert on permitting reasons for inclusion in the permits of certain limitations?
MR. JACOBS: He was put forth in four different categories. I dare say this would fall under at least one of them.
THE COURT: Well, I'll stretch the point and overrule the objection, receive it for what it's worth.
You remember the question?
Read it back.
(Record read back.)
THE WITNESS: Yes, I'm aware of that, although it's in dispute by several dischargers.
MR. JACOBS: No further questions, thank you, sir.

Page 50

THE COURT: Okay.
Redirect, Mr. Scroggin.
MR. SCROGGIN:: Yes, Your Honor.
REDIRECT EXAMINATION
BY MR. SCROGGIN:
Q. Mr. Smith, during your cross examination on Friday, you were asked whether or not you had investigated the alternatives for the Barefoot Bay Facility discharge. And I would ask you, sir, you were asked specifically whether you had looked at building percolation ponds, deep wells, spray irrigation and other alternatives, to the surface water discharge at Barefoot Bay. Do you recall that exchange?
A. Yes.
Q. And I ask you, sir, your response was, no, that was not included in your mission. I would ask you, sir, do you have experience as a real estate appraiser, and are you experienced in such matters appraising property for potential acquisition?
MR. JACOBS: Objection, that is clearly outside the scope of his expert testimony?
THE COURT: You're not going to be eliciting testimony from him as to values?
MR. SCROGGIN: No, sir, I'm not. I'm simply establishing this is clearly outside the scope of his expertise for which he was offered.
THE COURT: I'll overrule the objection. You may

Page 51

answer the question.
THE WITNESS: No, I'm not experienced in that.
BY MR. SCROGGIN?
Q. Do you have any personal knowledge regarding the availability of property near the Barefoot Bay Wastewater Treatment Facility that might be suitable for spray irrigation fields or other alternatives?
A. No, I'm not personally aware of it.
Q. You were also asked a question regarding the impact of the Barefoot Bay effluent potentially on endangered species such as the endangered Wood Stork. And this question related to the impact of residual chlorine in the outfall. Do you recall that?
A. Yes.
Q. You also testified on Friday that the residual chlorine in drinking water was several times higher than that of the Barefoot Bay effluent, is that correct?
A. Yes, I believe that is right.
Q. Do you have any opinion, sir, regarding what impact if any there would be on endangered species if the Barefoot Bay Facility were discharging drinking water instead of treated secondary effluent?
MR. JACOBS: Objection.
THE COURT: Overruled.
THE WITNESS: Well, if -- regarding chlorine, I mean

Page 52

whether it's drinking water or sewerage, the chlorine still has the same affect on the receiving waters, so it would be worse to discharge drinking water with the high chlorine residual than it would sewerage.
BY MR. SCROGGIN:
Q. And would you anticipate that there would in fact be any impact on endangered species near Barefoot Bay for the discharge of drinking water?
MR. JACOBS: Objection, goes beyond the scope of his testimony and his report.
MR. SCROGGIN: I would suggest, Your Honor, it does not go beyond the scope of the cross examination which specifically suggested there would be an impact on the endangered Wood Stork and from the residual chlorine in the effluent. I'm simply asking him to compare that testimony and response to the cross examination question with his earlier direct testimony comparing the effluent to drinking water.
MR. JACOBS: Judge, he said had no opinion. He's not trying to elicit an opinion.
THE COURT: I'll overrule the objection. You can answer that.
THE WITNESS: Well, again, as to the chlorine, the chlorine residual would be higher I would suspect from drinking water in the stream, and would have the same kind of impact on the stream in terms of the barrier for certain aquatic species.

Page 53

Some species will swim through the zone, there's others that are more fragile that won't actually impact it. The more residual just takes longer before it would dissipate as it would move down the stream. As I say, the level that was given in the effluent actually reported as discharge is pretty small and as I think I testified Friday, would probably be dissipated in a matter of a few hundred yards downstream, so I mean, you're talking about a canal that goes three or four miles before it gets to the north prong of the Sebastian River, so there's a lot of room for Wood Storks to go in, but I'm not an expert on Wood Storks, so I don't know.

Q. Are you aware of whether or not the Setilic Island to which the Barefoot Bay discharges, is itself listed as an endangered or protected water body?

A. I'm not aware. I think the Indian River Lagoon is the only one of that group that is.

Q. By the time effluent reached the protected Indian River Lagoon, would you anticipate any impact at all from the chlorine residual in the Barefoot Bay's discharge?

A. No.

Q. Would you have the same answer even if that -- the chlorine residual in the Barefoot Bay discharge were several times higher, even as high as that in drinking water?

A. Yes, same opinion.

Q. I'd like to turn if I could to the Carrollwood Facility.

Page 54

You were questioned on Friday about the sources of pollution into Tampa Bay. And I would ask you, sir, if you know what pollutants are of concern to Tampa Bay that gives rise to it being a protected water body?

A. Well, certainly carbon, nitrogen and phosphorus are all of concern.

Q. And what are the sources of those pollutants; carbon, nitrogen and phosphorus, into Tampa Bay?

A. Any number of sources. Regulated sources include several sewerage treatment plants, principally the Howard F. Curen Plant which is operated by the City of Tampa, which has permitted discharge of some sixty-five or sixty-six MGD, and probably -- well, I'd have to calculate the number, hundred thousand pounds of nitrogen permitted from that facility.

But there is also a great deal in our case, unusually we handle a lot of fertilizer on the docks at the Port, that's another source of concern for nutrient loading into the Bay, and it's carefully monitored and try to keep clean.

Q. I'm sorry.

A. And then also, typical storm water runoff from urban areas from irrigated lawns that have been fertilized and wash nutrients into the receiving waters, eventually into Tampa Bay.

Q. Can you compare the magnitude between the regulated point sources of such discharges and the other non-point sources in the -- that would be resulting in pollution in the Tampa Bay

Page 55

area?

A. I don't have firsthand knowledge, Mr. Scroggin, of that. It would be a generalization.

Q. Do you know if -- do you have any estimate at all or any relative comparison of discharges from wastewater treatment facilities versus all of the other sources of pollutants in Tampa Bay?

A. I don't. I do know that we've taken out -- we've controlled the point sources from the wastewater treatment plants and we've seen that noticeable impact of improvement in the Bay over the last ten years, and so generally we consider that the non-point source pollution coming from runoff is greater than point sources, but in this case, because of the concentrated discharges that we have, I'm not sure that generalization holds true.

Q. Among the regulated point sources, the wastewater treatment facilities in the bay area, can you rank the Carrollwood Facility among the others?

A. It has to be near the bottom.

MR. JACOBS: Objection.

THE COURT: Just a moment, sir.

MR. JACOBS: I'm sorry, this goes beyond the scope of his report and deposition testimony.

THE COURT: Sustained.

BY MR. SCROGGIN:

Page 56

Q. With respect to the three facilities at Barefoot Bay, Mr. Smith, Carrollwood and Waterway Estates, you were asked on Friday for each of these facilities whether or not the pollution from each would have been lessened had they upgraded to an advanced wastewater treatment and your response, I believe, was yes, the pollution would have been reduced had they been upgraded to AWT. And I would simply ask you, first, with respect to the Barefoot Bay Facility, is it correct that the Barefoot Bay Facility began before its current upgrade, that the effluent from the Barefoot Bay Facility was cleaner than secondary and that it was eventually upgraded to the still cleaner advanced wastewater treatment?

A. Yes. It was cleaner than secondary, it had generally very high removals of BOD and suspended solids and achieved some nitrogen removal. So, yes, it was a very well treated secondary effluent.

MR. JACOBS: Your Honor, this sounds very familiar from his Friday direct testimony for what that is worth.

THE COURT: Well, it sounds familiar to me, and please don't have him restate what he's already stated.

MR. SCROGGIN: Yes, Your Honor.

BY MR. SCROGGIN:

Q. There's been a lot of discussion in your testimony regarding discharges into small water bodies such as the canal at Barefoot Bay, Sweetwater Creek and Carrollwood and the canal

Page 57

at Waterway Estates. And I would ask you, sir, are there certain conditions under which the health of the water in the small receiving water bodies is actually improved by the discharge of secondary treatment, at least with respect to some measures of the health on receiving water?

MR. JACOBS: Objection, goes beyond the scope of his report, his deposition testimony and the examination that I examined him on.

MR. SCROGGIN: Your Honor, the cross examination specifically directed the witness' attention to the impact on the small receiving water bodies of the pollution with the implication that it was always a negative impact. I'm simply asking the witness if that impact is in fact always negative.

THE COURT: I'll overrule the objection. You can answer that.

THE WITNESS: With respect to Barefoot Bay, that canal has probably got water in it all the time and, you know, even at the worst condition, I'd suspect there's quite a bit of dilution in whatever impact it's going to have, it's going to have. There's always water there. I don't think there's -- increment of additional water is probably inconsequential from the Barefoot Bay Plant.

At Carrollwood on the Sweetwater Creek, there are periods during the year in which the creek water is regulated upstream, and so there is very little if any water in the creek

Page 58

upstream. In that case, putting water in that is of relatively high quality is actually going to assist some of the vegetation and aquatic life in the stream downstream. It's not a deterrent to all he aquatic life, just some that are more fragile. Under most conditions, though, that is again a fifteen to one dilution under average conditions in that creek.

In the case of Waterways Estates, it's just imperceptible. That canal, the mass of water in that canal versus what is coming out of the plant is pretty small. I mean, it's certainly not doing anything to enhance the water quality there because there's lots of water there.

Q. A significant portion of the questioning on Friday and today has dealt with what can be done technologically or physically, and I'll ask you, sir, have you ever in your years of experience dealing with the construction and operations of wastewater treatment facilities, had clients who had no cost constraints, who simply asked you the question of what was physically possible as opposed to what was practical or feasible?

A. I have had some that thought they had no cost constraints until they encountered what the real costs were and there's always constraints of some kind on cost.

Q. Do you in your work as a consultant assisting municipalities and companies in constructing and building wastewater treatment facilities, ever plan a project without

Page 59

any consideration of the cost?

A. No, that is usually the most important consideration, along with meeting your mission.

Q. Are you -- do you have any familiarity with EPA's funding of certain wastewater treatment facilities in the United States and in Florida?

A. Yes, I do.

MR. JACOBS: Objection, this is beyond the scope.

THE COURT: Sustained.

BY MR. SCROGGIN:

Q. You stated today, sir, that environmental protection would be maximized at the six foot contour line with respect to the Waterway Estates Facility. Is that based on data or on modeling?

A. Based generally on intuition largely, Mr. Scroggin, in that you're going to get the best mixing and deepest segmented and highest velocity of the stream, and so, that is more of an engineering judgment, engineering intuition on my part. I think in modeling, that was done, was unable to show a real increase in water quality.

Q. You made a similar statement today regarding the six foot contour line being the spot in the river that would maximize the water quality. I would ask you the same question with respect to that answer, was that answer based upon data you reviewed or upon your intuition or modeling.

Page 60

A. It's again, based on my general understanding of effluent dispersion and dissipation. I've done a fair amount of work in that area and modeling, those things, so I have a good sense of what makes it work and in that case, I think that would be the optimal place of discharge.

Q. You were asked several questions today regarding wasteload allocations, whether or not the Waterway Estates Facility had a wasteload allocation, what its role was in the permitting process. I'll ask you, sir, do you have expertise in the development and use of wasteload allocations for permitting purposes in Florida?

A. I have done a fair amount of work in wasteload allocations. I've not been involved in wasteload allocations in Florida.

Q. Have you any expertise regarding the legal requirements of wasteload allocations to be used in effluent limitations in the State permits?

A. Not in Florida, no.

Q. And were you asked to perform any such analysis in preparing your expert report for this case?

A. No.

Q. You were asked several questions today regarding the deviation from the anticipated schedule for the construction projects, the construction of moving the outfall and the upgrade to AWT at the Waterway Estates Facility. You were

Page 61

asked in particular whether or not you had ever in your experience had a client tell you that the matter was urgent and offered to pay a premium. And I ask you, sir, do you have any knowledge or experience regarding how the Florida Public Service's Commission would view the prudency of paying premiums for urgent projects?

MR. JACOBS: Objection, goes beyond the scope. Also calls for speculation.

THE COURT: I'll overrule the objection.

Do you know? What is -- do you know?

MR. SCROGGIN: Do you have -- you want me to ask the question be read back?

THE COURT: Read the question back -- well, let me hear it 'cause I'm not sure I remember all of it.

(Record read back.)

Do you have a view, yes or no?

THE WITNESS: Yes or no? Yes, I would have a view.

THE COURT: Okay.

BY MR. SCROGGIN:

Q. Do you know whether or not the premiums paid for urgent projects are routinely approved by the Public Service Commission?

MR. JACOBS: Same objection, goes beyond the scope and calls for speculation.

THE COURT: I'll overrule the objection.

Page 62

THE WITNESS: I don't know about premiums, per se. What I know is that the Public Service Commission looks with excruciating detail at all the costs the company incurs and wants to include in the rate base. That is what I have personal experience with this company.

THE COURT: I'm recede from my previous ruling and sustain the objection and the answer will be stricken.

BY MR. SCROGGIN:

Q. Finally, Mr. Smith, you were asked several questions regarding the table in your expert report for -- regarding Waterway Estates which is Florida Cities' Exhibit Number 92, which has been entered into evidence, and on page 35 of that report, you have listed anticipated duration of days, actual duration of days, and date completed. You were asked several questions about a new column that does not appear on this table. That was characterized as the fast track. And for each one of the entries, you had a shorter period of time than that that is either the anticipated or the actual duration. And I'd ask you, sir, have you ever, in fact, in your experience seen one of those entries in the fast track achieved in practice?

A. One of the entries, you mean one line?

Q. A single one, such as the --

A. Yes.

Q. Very first one, a single entry in one of the rows; have you ever seen that small number of days actually achieved in

Page 63

practice for one of the items of the many on the list?

A. I would say it's true for every item by itself.

Q. And have you ever seen a project that requires all of these steps in fact achieve such a small number of days for each one of the many steps?

A. No, I haven't.

Q. Have you ever used the term "expedited schedule" for any of the projects that you have yourself been involved with?

A. Yes.

Q. You think it's fair to call an idealized small number of days for each one of these steps expedited; is that a fair characterization for the smallest number of days added together end to end that you have ever seen for each one of these many steps?

A. Well, what we would -- to look at a fast track or expedited schedule, we would look at the schedule in whole and some things are going to be short and others are going to be long, but we look at the schedule in the continuum and certainly we have dealt with fast track schedules.

Q. Have you ever achieved a schedule in fact for a project such that each one of the entries of these many steps was at its absolute minimum value in the column that you characterize as fast track?

A. No.

Q. Have you ever in your many years of experience known any

Page 64

other engineer who has ever been able to achieve an end to end minimization of each of the time required for each one of these steps for a complex project such as this?

MR. JACOBS: Objection, hearsay, calls for speculation.

THE COURT: Overruled.

THE WITNESS: Not that comes to mind right now, no.

BY MR. SCROGGIN:

Q. Do you think that such an idealized minimum time schedule is realistic in any sense?

A. No.

Q. Finally, the construction schedule was discussed in some detail today. I'll ask you, sir, do you know when in fact the -- or let me ask you a preliminary question first, if I might.

The date -- does the construction schedule depend in part on the date that the company knows that it in fact has no choice but to begin construction and move the outfall and by that, sir, I mean, does the beginning date for all of these many steps depend in part on a decision by the company that it must initiate the first step and begin the construction process?

A. Well, not only construction, but the entire investigation process. I mean, that was what Mr. Jacobs was going to. At some point, the company has to decide to go or not -- or to wait.

Page 65

Q. And you were asked the question regarding how long would it have taken the company had they made that initial decision to upgrade the outfall, upgrade the plant and move the outfall in 1981, actually, sir, do know the date on which in fact Waterway Estates was formally for the first time required to upgrade to AWT and move its outfall as opposed to pursuing any other alternative?

MR. JACOBS: Objection to the extent that the question calls for a legal conclusion.

THE COURT: Overruled.

THE WITNESS: Well, we had official denial listed as 8 December, '86.

BY MR. SCROGGIN:

Q. But that official denial, are you – do you know the language that is used in the official denial; does the official denial require an upgrade to AWT in moving the outfall or does it require ceasing discharge?

A. I don't recall right now, Mr. Scroggin.

Q. Assuming for purposes of my question that the 1986 denial only requires ceasing discharge without naming the alternative to be chosen to achieve that cessation of discharge in the canal. Do you know the date on which the company was formally required to move the outfall and upgrade?

A. I don't other than obviously they had agreements with the regulators based on the schedules that were negotiated, had

Page 66

that agreement with the regulators, so other than those dates which are embodied in the actual orders.

Q. Assuming for purposes of my last question that the first date on which Florida Cities was formally required to upgrade the plant and move the outfall was in late 1988 in the State permit, would that potentially shift from 1986 to 1988, the beginning date for the gaining of permits and construction processes?

MR. JACOBS: Object, beyond the scope. He didn't review those documents prior to his deposition, the State permits or administrative orders. I think that has been established.

MR. SCROGGIN: May I address that Your Honor?

THE COURT: Yes.
