

March 18, 1999

Blanca Bayo, Director
Division of Records & Reporting
State of Florida
Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, FL 32399-0870

Dear Ms. Bayo:

Enclosed for filing are the original and ten (10) copies of Intermedia Communications Inc.'s responses to the Year 2000 Questionnaire.

Please acknowledge receipt of the transmittal by returning a date-stamped copy of the enclosed cover letter duplicate in the returned envelope provided for that purpose

Thank you for your assistant in this matter.

Sincerely,

J. Lans Chase
Senior Regulatory Analyst

March 18, 1999

Florida Public Service Commission
Betty Easley Conference Room, Room 152
4075 Espanade Way
Tallahassee, Florida

Dear Year 2000 Coordinator:

This letter is a Year 2000 readiness disclosure of Intermedia Communications, Inc. in accordance with The Year 2000 Information and Readiness Disclosure Act. Intermedia and its subsidiary companies, including DIGEX, LDS, National Telecom of Florida and Shared Technologies Fairchild, have been engaged in an ongoing Year 2000 Project since 1997 designed to address potential problems created by the millennium change. Specifically, Intermedia is doing the following:

1. A Program Management Office has been created to oversee the company's Year 2000 efforts and address compliance issues throughout the entire organization.
2. We have partnered with a national consulting firm with substantial experience in the Year 2000 issue to assist the company in its compliance activities.
3. We are reviewing hardware, software, middleware and firmware used in our computer and communications networks and other facilities in order to detect and address potential Year 2000 problems.
4. We are assessing and addressing our external business partners' status with respect to Year 2000 compliance.
5. We are actively testing network equipment, other hardware, internal software and vendor-supplied software for Year 2000 compliance.
6. We have developed and are executing contingency plans for retirement, replacement and/or remediation of components to resolve Year 2000 issues.

Based on our assessment of our operations, Intermedia has determined that it will be required to modify or replace portions of its software and hardware so that its systems will function properly with respect to dates in the year 2000 and thereafter. Intermedia presently believes that with modifications to existing software and conversions to new software and hardware, the Year 2000 issue should not pose significant operational

Year 2000 Readiness Disclosure

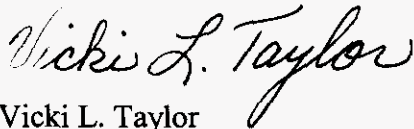

problems for its systems. However, there can be no assurance that all modifications and conversions will be successfully accomplished.

We are actively engaged in utilizing both internal and external resources to reprogram or replace, and test the software and hardware for Year 2000 compliance. Intermedia will not likely test all of its equipment and will rely upon vendor representations, if received, when tests are not conducted. There can be no assurance that any vendor representation will be accurate or complete. As of January 1999, the majority of this work has been completed. We presently expect to complete the remainder of this work by September 30, 1999.

For all of the foregoing reasons, Intermedia is taking the appropriate steps to address the issues created by the Year 2000 with significant emphasis on its own mission-critical systems. However, in light of the vast interconnection and interoperability of telecommunications networks worldwide, the ability of any telecommunications provider, including Intermedia, to provide service to its customers is dependent, to some degree, on the networks and systems of our suppliers and other carriers. For this reason, as noted above, Intermedia continues to work with its vendors and strategic business partners on the Year 2000 issue.

If you have any questions regarding our efforts, you may contact our Year 2000 Project Office at (813) 829-6981 or e-mail us at Year2000@Intermedia.com.

Sincerely,

A handwritten signature in cursive script that reads "Vicki L. Taylor".

Vicki L. Taylor
Director, Year 2000 Program Office

**Year 2000 Questions Prepared for the
Florida Public Service Commission**

**Year 2000 Readiness Workshop
Questions for All Local Exchange Companies
All Alternatives Local Exchange Companies
And All Interexchange Companies**

**Florida Public Service Commission
Betty Easley Conference Room, Room 152
4075 Espanade Way
Tallahassee, Florida**

1. Please see the **Appendix** for a detailed breakdown of Y2K Product Statistics by Business category.
2. We are actively engaged in utilizing both internal and external resources to reprogram or replace, and test the software and hardware for Year 2000 compliance. Intermedia will not likely test all of its equipment and will rely upon vendor representations, if received, when tests are not conducted. There can be no assurance that any vendor representation will be accurate or complete. As of January 1999, the majority of this work has been completed. We presently expect to complete the remainder of this work by September 30, 1999.
3. Below is an overview of Questions 3,4,6,7. Listed below this outline are problems that were encountered during some of these tasks. For additional information on completion dates of each Phase of the project, please refer to the **Appendix** for the Year 2000 Master Project Plan.
 - A) Information Technology Systems Percentage Complete (the Y2K product Statistics by Business Category chart in the Appendix is a more recent indication of the percentages.)
 1. Inventorying Systems that may be affected by the Year 2000 problem – 100%
 2. Year 2000 Assessment – 100%
 3. Planning – 100%
 4. Testing – 80%
 5. Finished – 77%
 - B) Embedded Systems
 1. Inventorying Systems that may be affected by the Year 2000 problem – 100%

2. Year 2000 Assessment – 100%
3. Planning – 100%
4. Testing - 90%
5. Finished – 63%

C) Network Elements

1. Inventorying Systems that may be affected by the Year 2000 problem – 100%
2. Year 2000 Assessment – 100%
3. Planning – 100%
4. Testing - 97%
5. Finished – 88%

The three greatest obstacles that our utility faces in becoming Year 2000 compliant by 1/1/2000 are:

- Vendor supplied products not being available. Our original target for compliance was December 31, 1998. At this time it has been pushed out, largely due to the fact that not all vendor products will be available at that time.
 - The inability to fully test all interoperability functions within shared networks. We have requested specific information from all of our business partners and carriers, but it is not possible to do testing with all of them.
 - The third obstacle Intermedia Communications faces is resourcing.
5. A report generated from Intermedia's Year 2000 repository is attached to this document. The Intermedia Year 2000 repository is an Access database that has been developed to capture hardware, software, and middleware that is located at Intermedia (including all subsidiaries).
 7. Intermedia has developed a standard Y2K testing checklist that can be used as a guideline for Y2K testing for any application. This has been included in the package.
 8. In an effort to address interoperability issues, Intermedia has contacted its strategic business partners to share information about their Year 2000 programs, and specifically any business critical products and services. This information will be gathered to resolve common issues and appease customer concerns. Intermedia is currently gathering this information.
 9. Intermedia has also obtained results from the Interoperability Testing Project conducted by the Telco Year 2000 Forum. The forum consists of the nation's top telecommunication providers and includes Bellcore. Many major systems and services were tested including Data/Transport Network Applications, E911

Emergency Service, Traffic Data Collection System, Alarm Surveillance Systems, etc. There were nine vendors whose products were represented in this Interoperability testing.

Over ninety-five percent of the tests performed by the Telco Year 2000 Forum passed as Year 2000 compliant. Of the small percentage that failed, the forum has reported that the vendors provided fixes. In a March 3rd news release, the Telco Year 2000 Forum reported that "Telephone call processing is expected to continue without major disruption in the new millennium..." Additional information and the test results are available at the Telco Year 2000 Forum's website at <http://209.100.134.90>.

10. Intermedia has been in contact with other network providers in order to obtain information on the status of their Year 2000 efforts. Intermedia has communicated with other network providers in an effort to find out whether they will be compliant by 1/1/2000. Intermedia is in the process of developing business continuity plans to help avoid severe impact on mission critical services.
11. Intermedia has established a standard hardware and software list. All hardware and software purchased must comply with this standard list of compliant products. Products must first be evaluated and tested for year 2000 compliance in order to be purchased, installed and implemented.
12. One of the major efforts of Intermedia's Year 2000 Project Office is communicating with ALL customers. Intermedia's Y2K Project Office decided back in 1997 that the best way to provide the best service to its customers was through direct correspondence with its customers. This is done through Year 2000 compliance and disclosure letters that are approved and signed by the Director of the Year 2000 Project Office.
13. Intermedia is actively producing a Business Continuity Plan to ensure that mission critical business processes remain operational in the event of a Year 2000 failure. Part of this plan is developing relationships with the Department of Emergency Services' Emergency Operations Center. Intermedia is currently developing procedures, such as disaster recovery and emergency management procedures that focus on recovery from catastrophic losses which might occur and impose severe limitations on an organization's normal operations. When a business problem is discovered, an alternate procedure (contingency) can be followed at a strategic point to satisfy business needs until a permanent solution can be found. If the continuity plan is correctly deployed, the organization may face little or no disruption.
14. Contingency Plans

The Year 2000 team is currently developing contingency plans for critical business systems. The contingency plans are scheduled to be completed in early 1999. Part of the contingency planning that will begin in early 1999 is planning for the bypass of failed equipment. At this time the network has a built in redundancy that rectifies the problem on failed equipment through re-routing. Training for employees in the event of service disruption will also be addressed in the contingency planning. We have communicated with our customers as needed regarding our Y2K compliance efforts. Standard letters, signed by the Director of the Year 2000 project, are sent to all customers inquiring on Intermedia's Y2K efforts. This includes customers in the following categories: health care facilities, banks, schools, local and state government entities, and other customers responsible for the provision of essential services. In some cases where a more detailed response is required, instead of a standard letter, the provided survey or questionnaire is completed with more detailed information.

Intermedia Communications is planning to develop disaster plans with other utilities and federal, regional, state, county, and local governments in the event of service disruptions.

Intermedia Year 2000 Compliance Checklist

Overview

The purpose of this checklist is to ensure that all Intermedia application software developed internally or supplied by a third party is quality assured for Year 2000 compliance. The document consists of 13 questions that need to be answered in full. At the end of the document is a Certification Summary of the answers which is signed by the Application System Manager responsible for the software. If certification cannot be achieved then application software should not be passed by the Quality Assurance function.

Test plans and test data should be designed so that the specific questions in this checklist can be addressed. To help with this task and to provide standard definitions the Intermedia Year 2000 Project Office has produced a number of documents including:

- Technical Definition of Year 2000 Compliance
- Year 2000 Test Data Development Procedures
- Year 2000 Acceptance Criteria

These documents are available on the Year 2000 Intranet page or direct from the Year 2000 Project (Ext.6981). The Project Office can also provide additional information.

System Identification

Application Name	ISR #	Application Description

1. Window of Time

Each application system has its own window of time, before and after the present date, in which it functions. Planning and scheduling systems work with dates that are weeks, months and sometimes years in the future. Likewise trend analysis systems and billing systems regularly reference data in the past. For your application system, indicate its window of time in years, plus and minus the present year.

<u># of Future Years</u>	<u># of Past Years</u>

2. Application System Operation - Operating System**3. Application System Operation - Hardware****4. Application System Operation - Vendor Package**

Have you tested that your application successfully operates on/with Year 2000 compliant versions of the operating system, hardware and any required vendor package, e.g. DBMS.

<u>Item</u>	<u>Name/Type</u>	<u>Tested(Y/N)</u>	<u>Pass/Fail</u>	<u>N/A</u>
Operating System				
Hardware				
Vendor Package				

5. Application Operation - Regression Test for Previously Existing Functionality

Have you run a full regression test to confirm that previous application functionality has not been compromised by the Year 2000 renovation?

<u>Item</u>	<u>Tested(Y/N)</u>	<u>Pass/Fail</u>
Regression Test for previously existing functionality		

6. Application Operation - Key Dates

Have you tested that your application system runs successfully on the following key dates?

<u>Dates</u>	<u>Tested(Y/N)</u>	<u>Pass/Fail</u>
a) December 31st, 1998		
b) January 1st, 1999		
c) September 1st, 1999		
d) September 9th, 1999		
e) December 31st 1999		
f) December 31st over mid-night into January 1st 2000		
g) January 1st, 2000 (is a Saturday)		
h) January 3rd, 2000 (first work day of Year 2000)		
i) February, 28th 2000		
j) February 29th 2000		
k) March 1st, 2000		
l) December 31st, 2000		
m) January 1st, 2001		
n) December 31st, 2027		

7. Other Date Usage

Have you verified and corrected if necessary the following conditions

<u>Question</u>	<u>Yes</u>	<u>No</u>	<u>N/A</u>
a) Dates embedded as parts of other fields.			
b) Dates are used as part of a sort key.			
c) Usage of values in date fields for special purposes that are not dates (e.g. using 99 to mean never expire).			
d) Date dependent activation or deactivation of passwords, accounts, commercial licenses.			
e) Date representation in an operating system's file system (creation dates and modification dates of files and directories.)			
f) Date dependent audit information.			
g) Date dependencies in encryption/decryption algorithms.			
h) Date dependent random number generators.			
i) Dates are initialized correctly.			
j) Dates used as part of a filename.			
k) Use of hard-coded dates.			
l) Data overflow where (base + offset) overflows storage.			

8. Leap Year

Does your application have a leap calculation routine? Does the application recognize and process Year 2000 as a leap year? Note: A leap year is any year that is divisible by 4, except if it is a century where it must be divisible by 400. For example, 1600 and 2000 are leap years, 1700, 1800, and 1900 are not.

<u>Question</u>	<u>Tested(Y/N)</u>	<u>Pass/Fail</u>	<u>N/A</u>
a) February 29, 2000 is recognized as a valid date.			
b) Julian date 00060 is recognized as February 29, 2000.			
c) Julian date 000366 is recognized as December 31 st , 2000.			
d) Arithmetic operations recognize Year 2000 as having 366 days			

9. Usage of Dates Externally

Internal application usage of dates and date fields must be clear and unambiguous in the context of systems which use them

Question	Yes	No	N/A
a) Display of dates is clear and unambiguous (the ability to correctly determine in which century a date belongs either by explicit display, i.e. 4-digit year, system or user inference)			
b) Printing of dates is clear and unambiguous			
c) Input of dates is clear and unambiguous			
d) Storage of dates is clear and unambiguous			

10. Date Field Type (4 digits)

11. Date Field Type (2 digits)

Describe the type of date fields used by the system, in either software or databases.

Question	Yes	No	N/A
a) Does the system use 4 digit year data fields?			
b) If it uses 4 digits, does the systems comply with ISO 8601? For example, YYYYMMDD, where YYYY = Year (numeric), MM = Month (numeric), DD = Day(numeric), or YYYYDDD for Julian (Ordinal).			
c) Does the system use 2 year data fields?			
d) If 2 digit, does the system use a sliding window technique to correctly infer the century?			
e) Do all input and output messages formats use 4-digit year data fields in compliance with ISO 8601?			
f) Will the system correctly interpret a message received with a 2 digit year?			
g) Will the system reject a message received with a 2-digit year?			

12. External Time Source Interaction

Question	Yes	No	N/A
Interaction between this application system and any other external time source, if existing, has been verified for correct operation.			

13. External Application System Interfaces

External interfaces have been identified and validated to correctly function for all dates.

Question	Yes	No	N/A
a) Each external interface has been identified and recorded in a database.			
b) Interaction between this application system and any other external time source, if existing, has been verified for correct operation.			
c) Shell script or scheduler that executes this application has been verified for correct operation.			
d) Administration software supports expiration dates for user accounts and passwords.			

Please indicate the status with regards to Year 2000 compliance reading each system you interface with. Options are, already compliant, being worked on, scheduled fix date, or status is unknown.

<u>Interfaced System name/Name of Interface</u>	<u>Comp.</u>	<u>Worked On</u>	<u>Sched. Fix Date</u>	<u>Unknown Status</u>

For each application system interface that exchanges date data, have you and the other Application System prime discussed and verified that you have implemented consistent Year 2000 corrections that will work for date data passed between your application systems.

Interfaced System name/Name of Interface	Full 4-digits or 2-digit Sliding Window	Verified	Not-Verified

CERTIFICATION SUMMARY

The table below summarizes the Year 2000 certification questions.

<u>Question</u>	<u>Yes, No, or N/A</u>	<u>Comments</u>
1. Window of time less than 100 years?		
2. Successful operation on Year 2000 compliant operating system?		
3. Successful operation on Year 2000 compliant hardware?		
4. Successful operation with all Year 2000 compliant vendor packages?		
5. Regression test indicates successful operation of all previously existing functionality?		
6. Successful operation on all key dates?		
7. All other date usage verified and corrected?		
8. Proper leap year calculation?		
9. Usage of external dates verified?		
10. Date field type 4-digit verified?		
11. Date field 2-digit sliding window verified?		
12. External time source interaction verified?		
13. All interfaces with other application verified as Year 2000 compliant?		

Year 2000 certification is dependent on either a 'YES' or N/A answer to all questions.

I certify that the information provided above is true and correct to the best of my knowledge and belief:
