Dear Ms. Bayo:

Enclosed for filing on behalf of MediaOne Fiber Technologies, Inc. ("MediaOne") and Hyperion Communications of Jacksonville, Inc. are an original and four (4) copies of the Articles of Amendment to the Articles of Incorporation of MediaOne, documenting its name change to Hyperion Communications of Jacksonville, Inc., a Florida Corporation. We respectfully request that the Commission issue an administrative order acknowledging the name change. In accordance with the instructions of Ms. Nancy Pruitt of your staff, we also are enclosing an original and four (4) copies of a revised price list reflecting the name change and adding new services.

By way of background, the name change of MediaOne to Hyperion completes the reorganization approved by this Commission on February 24, 1999, in Order No. PSC-99-0398-FOF-TP, in Docket No. 981894-TP. MediaOne is certificated in Florida as an alternative local exchange carrier under Certificate No. 2973.¹ The proposed changes to the price list will have no effect on service for existing MediaOne customers, except that both new and existing customers will benefit from the additional services not previously available.

These price list revisions are being filed with an issued date of May 24, 1999. The following revisions have been made:

- Sheet Nos. 1-43 have been revised to reflect the name change, a new issuing officer, and company address and new rules and regulations;

PRICE LIST FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the Price List. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th Revised Sheet 14 cancels the 3rd Revised Sheet 14. Because of various suspension periods, deferrals, etc. the Commission follows in their Price List approval process, the most current sheet number on file with the Commission is not always the Price List page in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
 - 2.1.
 - 2.1.1.
 - 2.1.1.A.
 - 2.1.1.A.1.
 - 2.1.1.A.1.(a).
 - 2.1.1.A.1.(a).I.
 - 2.1.1.A.1.(a).I.(i).
 - 2.1.1.A.1.(a).I.(i).(1).
- D. Check Sheets - When a Price List filing is made with the Commission, an updated check sheet accompanies the Price List filing. The check sheet lists the sheets contained in the Price List, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The Price List user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the Commission.

2.2 MINIMUM PERIOD OF SERVICE

The minimum period of service is one month except as otherwise provided in this Price List. The customer must pay the regular tarified rate for the service they subscribe to for the minimum period of service. If a customer disconnects service before the end of the minimum service period, that customer is responsible for paying the regular rates for the remainder of the minimum service period. When the service is moved within the same building, to another building on the same premises, or to a different premises entirely, the period of service at each location is accumulated to calculate if the customer has met the minimum period of service obligation.

If service is terminated before the end of the minimum period of service as a result of condemnation of property, damage to property requiring the premises to be abandoned, or by the death of the customer, the customer is not obligated to pay for service for the remainder of the minimum period.

If service is switched over to a new customer at the same premises after the first month's service, the minimum period of service requirements are assigned to the new customer if the new customer agrees in writing to accept them. For facilities not taken over by the new customer, the original customer is responsible for the remaining payment for the minimum service period in accordance with the terms under which the service was originally furnished.

2.3 PAYMENT FOR SERVICES RENDERED

2.3.1 Responsibility for All Charges

Any applicant for facilities or service may be required to sign an application form requesting the Company to furnish the facilities or service in accordance with the rates, charges, rules and regulations from time to time in force and effect. The customer is responsible for all local and toll calls originating from the customer's premises and for all calls charged to the customer's line where any person answering the customer's line agrees to accept such charge.

2.3.2 Deposits

Subject to special provisions as may be set forth below and in Sections 2.9 and 2.10 of this Price List, any applicant or customer whose financial responsibility is not established to the satisfaction of the Company may be required to deposit a sum up to an amount equal to the total of the estimated local service and intraLATA toll charges for up to two months for the facilities and service. If the minimum period of service for the requested facilities and service is more than one month, as specified in this Price List, the customer may also be required to deposit a sum up to an amount equal to the total charges for service for the minimum service period less any connection charge paid by the customer.

The fact that a deposit has been made shall in no way relieve the applicant or customer from complying with the Price List regulations for the prompt payment of bills on presentation. Each applicant from whom a deposit is collected will be given a certificate of deposit and circular containing the terms and conditions applicable to deposits, in accordance with the Rules and Regulations of the Commission pertaining to customer deposits.

Bills are due on the due date shown on the bill and are payable at any business office of the Company, by U.S. Mail, or at any location designated by the Company. If objection is not received by the Company within three months after the bill is rendered, the items and charges appearing thereon shall be determined to be correct and binding upon the customer. A bill will not be deemed correct and binding upon the customer if the Company has records on the basis of which an objection may be considered, or if the customer has in his or her possession such Company records. If objection results in a refund to the customer, such refund will be with interest at the greater of the unadjusted customer deposit rate or the applicable late payment rate, if any, for the service classification under which the customer was billed. Interest will be paid from the date when the customer overpayment was made, adjusted for any changes in the deposit rate or late payment rate, compounded monthly, until the overpayment is refunded. Notwithstanding the foregoing, no interest will be paid by the Company on customer overpayments that are refunded within 30 days after the overpayment is received by the Company.

Where an objection to the bill involves a superseded service order, the items and charges appearing on the bill shall be deemed to be correct and binding upon the customer if objection is not received by the Company within two months after the bill is rendered.

When a check which has been presented to the Company by a customer in payment for charges is returned by the bank, the customer shall be responsible for the payment of a Returned Check Charge of \$10.00.

Service will not be suspended or terminated unless the customer has been advised that a deferred payment plan can be arranged. 2.11 ALLOWANCES FOR INTERRUPTIONS IN SERVICE

Interruptions in service, which are not due to the negligence of, or non-compliance with the provisions of this Price List by the Customer, or the operation or malfunction of the facilities, power, or equipment provided by the Customer, will be credited to the Customer as set forth below for the part of the service that the interruption affects. A credit allowance will be made when an interruption occurs because of a failure of any component furnished by the Company under this Price List.

2.11.1 Credit for Interruptions

- a. An interruption period begins when the Customer reports a service, facility, or circuit to be interrupted and releases it for testing and repair. An interruption period ends when the service, facility, or circuit is operative. If the Customer reports a service, facility, or circuit to be inoperative but declines to release it for testing and repair, it is considered to be impaired, but not interrupted.
- b. For calculating credit allowances, every month is considered to have 30 days. A credit allowance is applied on a pro rata basis against the rates specified hereunder and is dependent upon the length of the interruption. Only those facilities on the interrupted portion of the circuit will receive a credit.
- c. A credit allowance will be given, upon request of the customer to the business office, for interruptions of 30 minutes or more. Credit allowances will be calculated as follows:
 - i. If interruption continues for less than 24 hours:
 - a. 1/30th of the monthly rate if it is the first interruption in the same billing period.
 - b. 2/30ths of the monthly rate if there was a previous interruption of at least 24 hours in the same billing period.

Section 5 - SUPPLEMENTAL SERVICES**5.1 CUSTOM CALLING SERVICE****5.1.1 General**

The features in this section are made available on an individual basis or as part of multiple feature packages. All features are provided subject to availability; features may not be available with all classes of service. Transmission levels may not be sufficient in all cases.

5.1.2 Description of Features**a. Three Way Conference, Consultation, Transfer**

The Three Way Calling feature allows a customer to add a third party to an existing two-way call and form a three-way call. The call must have been originated from outside the station group and terminate to a station within the station group. The Call Hold feature allows a customer to put any in-progress call on hold by flashing the switchhook and dialing a code. This frees the line to allow the customer to make an outgoing call to another number. Only one call per line can be on hold at a time. The third party cannot be added to the original call.

b. Call Forwarding

Call Forwarding, when activated, redirects attempted terminating calls to another customer-specific line. The customer may have to activate and deactivate the forwarding function and specify the desired terminating telephone number during each activation procedure. Call originating ability is not affected by Call Forwarding.

The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the customer with the Call Forwarding is billed for the forwarded leg of the call.

Call Forwarding - Variable allows the customer to choose to reroute incoming calls to another specified telephone number. The customer must activate and deactivate this feature.

c. Call Waiting(CW)/Cancel Call Waiting(CCW)

Call Waiting provides a tone signal to indicate to a customer already engaged in a telephone call that a second caller is attempting to dial in. It will also permit the customer to place the first call on hold, answer the second call and then alternate between both callers. Cancel Call Waiting (CCW) allows a Call Waiting (CW) customer to disable CW for the duration of an outgoing telephone call. CCW is activated (i.e., CW is disabled) by dialing a special code prior to placing a call, and is automatically deactivated when the customer disconnects from the call.

5.2.2 Description of Features

a. Call ID / Block Call ID

The Call ID feature allows a customer to see a caller's name and number previewed on a display screen before the call is answered allowing a customer to prioritize and or screen incoming calls. Call ID records the name, number, date and time of each incoming call -- including calls that aren't answered by the customer. Call ID service requires the use of specialized CPE not provided by the company. It is the responsibility of the customer to provide the necessary CPE.

b. Automatic Callback

The Automatic Callback feature allows a customer to automatically Callback the last number dialed. This is accomplished by the customer activating a code. The network periodically tests the busy/free status of the called line for up to 30 minutes until both lines are found free and then Callbacks the call for the customer.

The Automatic Callback feature also allows customers, having reached a busy number, to dial a code before hanging up. Automatic Callback feature then continues to try the busy number for up to 30 minutes until it becomes free. Once the busy line is free the call is automatically called back and the customer is notified of the connected call via a distinctive ring.

When a call is to a line in a MLHG, a regular hunt is performed starting at the station associated with the dialed number. It continues to the last station in the MLHG, then proceeds to the first station in the group and continues to hunt sequentially through the remaining lines in the group. Busy tone is returned if the original called station is reached without finding a station that is idle.

- e. Integrated Services Digital Network-Primary Rate Interface (ISDN-PRI)
Basic Rate Interface (ISDN-BRI)

(1) Description

ISDN is a single integrated digital telecommunications network architecture which provides for the simultaneous access, transmission and switching of voice data and image services via channelized transport facilities over a set of standard multipurpose user-network interfaces. PRI governs the connectivity between switching equipment (network or customer) and customer equipment and allows voice and data services, simultaneously while supporting circuit-switched and packet-switched connections.

The ISDN-PRI feature supports a 64 kb/s D-channel path between customer digital PBX equipment and the protocol handler in a PSU of the 5ESS(R) switch. This path is made up of a dedicated time slot between channel 24 on a digital facility interface (DFI) and the assigned protocol handler. This feature also provides the administration software for up to 23 B-channels associated with a D-channel in the same T1 facility (1.544 Mb/s for domestic). This interface supports both ISDN PBXs and host computers.

(i) Features

Call-by-Call Service - Provides the ability for the Dedicated B-channel(s) to be configured to access multiple tariffed services on a per-call basis. The customer premises equipment signals the local central office as to what type of services to access for each call.

The ISDN-BRI feature supports one 16 kb/s D-channel path between customer digital PBS equipment and the protocol handler in a PSU of the 5ESS(R) switch. This feature also provides the administration software for up to 2 B-channels associated with a D-channel in the same T1 facility (1.544 Mb/s for domestic). This interface supports both ISDN PBXs and host computers.

d. Digital Centrex-Type Service

Digital Centrex-type is a telephone service provided through the public switched telephone network (PSTN) via ISDN basic rate interface (BRI) lines. BRI provides a capability of up to three digital channels, two bearer (B) channels and 64 Kbps, and one data (D) channel at 16 Kbps. BRI is also commonly known as 2B+D. The B channels are capable of carrying voice, data, image, or video transmissions. The D Channel is used for out-of-band signaling or data transmission. Digital Centrex-type Service is provided via the central office (CO) of the local Telephone Company. An individualized dialing plan (IDP) is offered with digital Centrex-type service that incurs a common equipment charge. An IDP allows for four-digit dialing between Centrex-type stations defined within the same IDP group. Default features are provided through Digital Centrex-type service to the customer such as transfer and 3-way conference calling. Enhanced features are also available for an additional charge. These features are charged on a per feature basis. Digital Centrex-type service provides telephone system capabilities through the CO, eliminating the need for customer premise switching equipment.

Section 7 - BUSINESS NETWORK SWITCHED SERVICES (Cont'd)**7.2 SERVICE DESCRIPTIONS AND RATES (Cont'd)****7.2.5 Term Liability/Termination Charges**

Several of the services offered above are available at reduced prices if the Customer agrees at the time the order is placed to continued service for a specified period of time ("term"). If the Customer terminates service prior to the end of the term, in part or in whole, then termination charges may apply. If a customer disconnects service prior to the fulfillment of the term plan contracted, then a termination liability will be due to Company from Customer. The termination liability charge will be the difference between the monthly rate for the highest term period which could have been satisfied prior to service discontinuance and the monthly rate for the selected commitment period multiplied by the actual number of months the plan has been in effect. The monthly rates used for this calculation will be those in effect at the time the service is disconnected.

7.2.6 Integrated Services Digital Network - Basic Rate Interface (ISDN-BRI)

Integrated Services Digital Network (ISDN) is an international standard for dial-up digital transmission over a public telephone network. Its stated purpose is to deliver more bandwidth to the end user than analog by moving the signaling out of band and delivering a host of new services to users. The BRI, also known as 2B+D, consists of two bearer and one data channel. Each bearer channel represents a 64kbps channel and each data channel represents a 16 kbps signaling and control data stream. The B channels carry voice, data, image or videos. The D channel corrects any errors that may occur in the transmission, and makes it possible to carry on a conversation and work on the internet at the same time on the same line. Personal modems and fax machines use ISDN-BRI lines. This service is delivered over a T1 circuit and requires a T1 board.
