

1                   **BELLSOUTH TELECOMMUNICATIONS, INC.**  
2                   **SURREBUTTAL TESTIMONY OF D. DAONNE CALDWELL**  
3                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**  
4                   **DOCKET NO. 960786-TL**  
5                   **AUGUST 20, 2001**

6  
7   **Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.**

8  
9   A. My name is D. Daonne Caldwell. My business address is 675 W. Peachtree St.,  
10   N.E., Atlanta, Georgia. I am a Director in the Finance Department of BellSouth  
11   Telecommunications, Inc. (hereinafter referred to as "BellSouth"). My area of  
12   responsibility relates to the development of economic costs.

13  
14   **Q. ARE YOU THE SAME D. DAONNE CALDWELL THAT PREVIOUSLY**  
15   **FILED TESTIMONY IN THIS DOCKET?**

16  
17   A. Yes. I filed direct testimony on May 31, 2001.

18  
19   **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

20  
21   A. My testimony responds to cost development issues raised in the testimony filed by  
22   WorldCom witness Greg Darnell.

23  
24   **Q. ON PAGE 7, MR. DARNELL STATES THAT THERE ARE "CHANGES**  
25   **[THAT] MUST BE MADE IN THE RATES APPROVED BY THE**

1       **COMMISSION IN THE UNE COST DOCKET IN ORDER FOR**  
2       **BELLSOUTH'S RATES TO BE COST-BASED.” (LINES 1-3) PLEASE**  
3       **COMMENT.**

4  
5    A. Mr. Darnell contends that BellSouth will not have cost-based rates until: (i)  
6       BellSouth has updated its UNE cost studies to replace its loading factor  
7       calculations, (ii) the Florida Public Service Commission (“Commission”) orders  
8       BellSouth to recalculate all UNE prices using a single network design, and (ii) the  
9       Commission orders BellSouth to make the other changes identified in the Joint  
10      Motion for Reconsideration and Clarification file by AT&T, WorldCom, Covad,  
11      and Z-Tel “that are necessary to make BellSouth’s rates TELRIC-compliant.”  
12      (Darnell Testimony, Page 7, Lines 4-13) This Commission has already reviewed  
13      and ruled on the two specific points to which Mr. Darnell points – loading factors  
14      and use of a single network design. Nothing in Mr. Darnell’s testimony provides  
15      any additional evidence that was not submitted and rejected in Docket No. 990649-  
16      TP. Mr. Darnell’s last point is so vague and unsupported that BellSouth cannot  
17      reasonably respond.

18  
19     In fact, Mr. Darnell’s testimony basically replicates the major arguments contained  
20     in the Joint Motion for Reconsideration and Clarification (“Joint Motion”). This  
21     Joint Motion requested reconsideration on the following points, each duplicated in  
22     Mr. Darnell’s testimony:

- 23       1) Use of Three Cost “Models”  
24       2) Use of In-plant Factors (Clarification of Relationship Between Costing for  
25       UNEs and USF Purposes)

1       3) Shared Cost Allocation

2       4) Drop Routing

3

4       Mr. Darnell threatens that if this Commission does not find in WorldCom's favor  
5       then BellSouth's cost study will not be TELRIC-compliant. I do not agree.

6

7       **Q. ON PAGE 7, MR. DARNELL ARGUES THAT "BELLSOUTH'S COST**  
8       **STUDIES MUST IMPLEMENT THE BOTTOMS-UP APPROACH**  
9       **BEFORE THEY CAN BE TELRIC-COMPLIANT." (LINES 15-17) IS HE**  
10       **CORRECT?**

11

12       A. No. The Federal Communications Commission's ("FCC's") TELRIC  
13       methodology does not prohibit the use of in-plant factors, as Mr. Darnell implies.  
14       BellSouth develops in-plant factors based on the relationship between investments  
15       and expenses. These factors are applied against "least-cost, forward-looking"  
16       investments. Therefore, the costs resulting from the use of in-plants are, by  
17       default, "least-cost, forward-looking" and thus, comport with the FCC's TELRIC  
18       principles.

19

20       Further, Mr. Darnell incorrectly concludes in his testimony, as WorldCom did in  
21       its Joint Motion, that: "the Commission accepted WorldCom/AT&T's position that  
22       it is more appropriate to develop 'bottoms-up' installed costs than to make use of  
23       linear loading factors." (Joint Motion, Page 6) Since this Commission has not  
24       reviewed the results of a cost study based on this approach, let alone ruled that the  
25       "bottoms-up" methodology is the most appropriate, it is difficult to see how Mr.

1 Darnell can reach this conclusion. It appears Mr. Darnell has already decided what  
2 the outcome will be once BellSouth fulfills this Commission's directive in Docket  
3 No. 990649-TP and re-files the loop study. It is my understanding that the  
4 Commission wanted additional evidence in order to make an informed ruling  
5 concerning the use of in-plants. When BellSouth submits the study with the  
6 alternative method, then a conclusion can be reached, not before as Mr. Darnell has  
7 done. Further, this Commission stated: "we find that the appropriate assumptions  
8 and inputs for the associated cable placement costs are those identified by  
9 BellSouth." (Order No. PSC-01-1181-FOF-TP, Page 190) The Florida  
10 Commission has asked for a "bottoms-up" approach to the development of costs in  
11 order to evaluate the differences in the two approaches, but currently the inputs and  
12 methodology used by BellSouth stand approved.

13

14 **Q. WILL A "BOTTOMS-UP METHOD NECESSARILY PRODUCE A MORE**  
15 **ACCURATE REFLECTION OF COST?**

16

17 A. No. In a "bottoms-up" approach, costs are added to the cable's material prices  
18 based on very specific activities that occur during cable placement and the  
19 probabilities of those activities occurring. Thus, this method requires that  
20 BellSouth expend time gathering data that is not readily available in order to  
21 populate the model. Besides being a time-consuming endeavor, the level of  
22 precision anticipated by the use of a bottoms-up approach is not realized. Many of  
23 the inputs, by necessity, would be based on subject matter expert opinion since  
24 actual data is not available at granular level required by the BellSouth

25

1     Telecommunications Loop Model<sup>®</sup> (“BSTLM”). For example, BellSouth is able  
2     to ascertain the per-foot cost of placing cable from existing contracts, but is unable  
3     to determine how often a particular activity occurs based on actual data.  
4     Specifically, BellSouth can determine that it costs \$X to bury one foot of cable  
5     based on actual data. BellSouth does not, however, have actual data to forecast  
6     how often sod must be cut and restored or how often cable must be bored under  
7     driveways or how these probabilities would differ between an urban and rural  
8     location. These inputs would need to be obtained from subject matter experts.  
9     Another item that is difficult to quantify is the specific cost of the exempt material  
10    associated with each provisioning activity. Exempt material identifies the cost of  
11    items that do not carry a unique identifier in BellSouth’s accounting records but  
12    are necessary to provision the element. For these reasons, the level of “accuracy”  
13    anticipated from the use of a bottoms-up approach versus the use of in-plant  
14    factors is not attainable. In addition, it is for these very reasons that telephone  
15    companies have traditionally used in-plant factors in cost development.

16

17   **Q. ON PAGES 8-13, MR. DARNELL CONTENDS THAT THE USE OF**  
18   **MULTIPLE SCENARIOS VIOLATES FCC TELRIC RULES. IS HE**  
19   **CORRECT?**

20

21   A. No. BellSouth understands the implications of the FCC’s rule 51.505(b) and fully  
22   adheres to the principles outlined by that rule. BellSouth considered the “total  
23   quantity of facilities” in each scenario; i.e., each scenario had the same overall line

24

---

25   <sup>®</sup> 1999INDETEC International and BellSouth Corporation All Rights  
Reserved

1 count. Thus, this modeling technique fulfilled the FCC's directive that "a  
2 reasonable projection of the sum of the total number of units" is considered.  
3 Additionally, this methodology is appropriate since BellSouth cannot anticipate the  
4 ultimate use for any particular loop. A loop delivering voice grade service today  
5 potentially can be utilized to provide digital service tomorrow. Contrary to Mr.  
6 Darnell's allegation on page 13, BellSouth does not assume a customer "will want  
7 BellSouth's retail voice service, an ALEC's UNE-P voice service, service provided  
8 by the BellSouth data affiliate, and DSL service provided by a data-ALEC using a  
9 DSL loop." (Lines 2-5, emphasis added) The operative word is not and, it is or. If  
10 the existing loop to the end-user has the technical specifications such that it can  
11 provide the loop under consideration (e.g. Unbundled Copper Loop – Non-Design  
12 ("UCL-ND")) then it is considered part of the universe.

13  
14 Additionally, BellSouth does not possess WorldCom's or any other ALEC's  
15 marketing plans. Thus, BellSouth cannot anticipate where ALEC customers will  
16 be located and what type of loop they will purchase. Mr. Darnell's "one-scenario"  
17 requirement adds no accuracy to the model's results since BellSouth cannot project  
18 where the particular loop will be located. Any attempt to assign a loop type to a  
19 specific customer location would be an exercise based on unsupportable and  
20 arbitrary assumptions. Thus, by assuming all customer locations are potential  
21 candidates for a particular unbundled loop, BellSouth has eliminated the random  
22 assignment process. Further, contrary to Mr. Darnell's assertions on page 13, the  
23 assumption that all customers can be converted to unbundled loops (or  
24 combinations) allows BellSouth to reflect economies of scale and scope. The  
25 universe is larger in BellSouth's proposal, thus, larger cables can be considered

1 and efficient network configurations can be established, which results in lower  
2 costs. For these reasons, Mr. Darnell's allegation is without merit.

3

4 **Q. WHAT WAS THIS COMMISSION'S FINDING WITH RESPECT TO THE**  
5 **USE OF MULTIPLE SCENARIOS?**

6

7 A. In its Order in Docket No. 990649-TP, pages 132-133, this Commission discusses  
8 the use of multiple scenarios, finding that "BellSouth's use of three distinct  
9 scenarios is reasonable for the purpose of this proceeding." (Order, page 133)  
10 Further, the purpose of Docket No. 990649-TP was to establish cost-based rates  
11 for unbundled network elements and combination of network elements. Mr.  
12 Darnell's arguments in this docket offer no new evidence that should alter the  
13 Commission's ruling on this issue.

14

15 **Q. MR. DARNELL ALSO ARGUES THAT CERTAIN "FIXED"**  
16 **INVESTMENTS, SUCH AS DIGITAL LOOP CARRIER ("DLC")**  
17 **COMMON EQUIPMENT AND FIBER CABLE SHOULD NOT BE**  
18 **ALLOCATED ON THE BASIS OF DS0 EQUIVALENTS. HE ARGUES**  
19 **THAT ALLOCATION SHOULD INSTEAD BE BASED ON PAIR**  
20 **EQUIVALENTS. (PAGES 14-15) DO YOU AGREE WITH THIS**  
21 **APPROACH?**

22

23 A. Absolutely not. The best approach of assigning investment of items, such as DLC  
24 common equipment and fiber facilities, is on the basis of DS0 equivalents. This  
25 methodology represents the most reasonable approach since the equipment in most

1 cases is actually sized based on DS0 equivalents. In fact, the BSTLM<sup>®</sup> uses DS0  
2 equivalents not only to assign “fixed” investments among services, but it also uses  
3 DS0 equivalents to size the equipment. If pair equivalents were used to assign the  
4 fixed costs, the capacity requirements of the DLC optical equipment would be  
5 inappropriately reduced. Therefore, pair equivalents are not a reasonable  
6 approach. To illustrate my point, a DS1 requires 24 DS0s or 2 pairs. Using 2 lines  
7 instead of 24 DS0s as input, the BSTLM would size the equipment to support only  
8 2 DS0s, not the 24 DS0s that are really required. The bottom line is that this  
9 adjustment proposed by Mr. Darnell understates the equipment requirements  
10 generated by the BSTLM and, therefore, understates the costs. For this reason  
11 alone, this Commission appropriately disregarded this argument in Docket No.  
12 990649-TP.

13

14 **Q. WHAT HAS THIS COMMISSION RULED WITH RESPECT TO THIS**  
15 **ISSUE?**

16

17 A. In its May 25, 2001 Order in Docket No. 990649-TP, this Commission found that:  
18 “[o]f the two factors, competitive impact or causal linkage, we believe that where  
19 possible, cost causal connections should get the nod when designing cost models.  
20 Thus, based on the evidence, we find that the BSTLM method of allocating shared  
21 investments based on DS0 equivalents is reasonable.” (Order No. PSC-01-1181-  
22 FOF-TP at page 134) In that docket, AT&T presented similar arguments currently  
23

---

24 <sup>®</sup> 1999 INDETEC International and BellSouth Corporation All Rights  
25 Reserved (BSTLM)

1 advanced by Mr. Darnell. Mr. Darnell does not provide any new evidence in this  
2 docket that should alter this Commission's ruling.

3

4 **Q. ON PAGE 15, MR. DARNELL STATES, HOWEVER, THAT IF THE**  
5 **COMMISSION DOES NOT ALTER ITS FINDING ON THIS ISSUE THAT**  
6 **THERE MAY BE AN "ADVERSE IMPACT ON COMPETITION." (LINE**  
7 **11) PLEASE COMMENT.**

8

9 A. Mr. Darnell uses a 2-wire facility "used to provide high-capacity T-1 service" as an  
10 example of a "high-capacity" offering that would be adversely impacted by  
11 BellSouth's methodology. T1 is a transmission system that employs two copper  
12 pairs (4 wires) and a particular line coding scheme called alternate mark inversion  
13 to send DS1 level signals across the network. Additionally, T1 employs repeaters  
14 spaced at 4,000 to 6,000-foot intervals to rebuild, or repeat, the T1 signals. In  
15 addition to using T1 for DS1 transport, HDSL or HDSL2, and many types of  
16 transmission rates for fiber optic multiplexers are used. Thus, a T-1 cannot be  
17 provided on a 2-wire facility, a 4-wire facility is required to handle the bandwidth.  
18 (HDSL transmission can be offered on a 2-wire facility, but Mr. Darnell did not  
19 discuss this element.) Further, T-1 is not a "service" as Mr. Darnell states; rather it  
20 is a transmission system used to provide DS1 signals. A comparison of DS1 rates  
21 charged by another ILEC (who has obtained 271 relief) for DS1 loops should put  
22 Mr. Darnell's argument into perspective and negate his "anti-competitive" claim.

23

24

25

|   |        |                |                 |
|---|--------|----------------|-----------------|
| 1 |        | <b>Florida</b> | <b>New York</b> |
| 2 | Zone 1 | \$69.22        | \$98.32         |
| 3 | Zone 2 | \$95.89        | \$98.32         |
| 4 | Zone 3 | \$181.38       | \$112.29        |
| 5 |        | 4W DS1         | 1.544 Mbps      |

6

7 (The Florida results reflect the Commission’s adjustments made in Docket No.  
8 990649-TP.) Florida’s rates obviously compare favorably with the results in New  
9 York. Florida’s Zone 1 rate, where the majority of Alternative Local Exchange  
10 Competitors (“ALECs”) will concentrate their efforts, is hardly at a level that will  
11 hamper competition. Again, Mr. Darnell’s attempt at re-litigating an issue that has  
12 been examined and resolved by this Commission should be dismissed.

13

14 The Joint Motion also discusses the risk of “anti-competitive” rates if the  
15 Commission does not reconsider its finding on this issue, citing ¶696 of the FCC’s  
16 First Report and Order and Florida Statutes Section 364. (Joint Motion, Page 9) As  
17 the chart above confirms, BellSouth’s rates are hardly “anti-competitive”.  
18 Additionally, the Commission appropriately recognized the interrelationship  
19 between the use of DS0s to size the equipment and the use of DS0s to allocate  
20 shared equipment costs.

21

22 **Q. ON PAGE 10, MR. DARNELL ALSO CRITICIZES BELL SOUTH’S USE**  
23 **OF UNIVERSAL DLC (“UDLC”) FOR UNBUNDLED LOOPS, A**  
24 **SENTIMENT BORROWED FROM THE JOINT MOTION AT PAGE 3. IS**  
25 **HE JUSTIFIED IN HIS CONTENTION?**

1

2 A. No. In its Third Report and Order, the FCC stated: “The local loop network  
3 element is defined as a transmission facility between a distribution frame (or its  
4 equivalent) in an incumbent LEC central office and the loop demarcation point at  
5 an end-user customer premises.” (§51.319(a)(1)) The FCC did not state that the  
6 loop is integrated into the switch. The distribution frame is the termination of the  
7 local loop, not the switch. This is exactly what the use of UDLC reflects.  
8 AT&T/MCI presented this same argument in the previous generic cost docket in  
9 Florida. The Commission did not accept the argument then, nor does Mr. Darnell  
10 offer any evidence that should cause this Commission to reconsider that decision  
11 now.

12

13 **Q. ON PAGE 13, MR. DARNELL CONTENDS THAT “DROP LENGTHS BE**  
14 **RECALCULATED BASED ON A DIFFERENT ROUTING**  
15 **ASSUMPTION.” WHAT WAS THE COMMISSION’S FINDING ON THIS**  
16 **ISSUE IN DOCKET NO. 990649-TP?**

17

18 A. Page 135 of the Order in Docket No. 990649-TP states: “Absent any clear  
19 understanding of why a distribution terminal should be in a lot corner, we find that  
20 BellSouth’s approach, which employs angled routing but implicitly assumes that  
21 some terminals are not in lot corners, is reasonable.” Mr. Darnell offers no  
22 evidence that should alter this finding.

23

24 **Q. MR. DARNELL ALLEGES THAT ALL OF THE MODIFICATIONS HE**  
25 **HAS OUTLINED MUST BE IMPLEMENTED IN ORDER TO “INCREASE**

1     **THE LIKELIHOOD OF BROAD SCALE COMPETITIVE LOCAL**  
2     **ENTRY.” (PAGE 15, LINES 20-21) PLEASE COMMENT.**

3

4     A. Since New York is one state where 271relief has been granted, it is assumed  
5     competition is viable in that state. Further, each of the adjustments Mr. Darnell  
6     proposes and contained in the Joint Motion impacts the recurring cost of the loop.  
7     Thus, a comparison to the UNE-P (2-wire analog loop/port combination), the  
8     vehicle most ALECs will use to compete in the residential market, is justified.

9

|    |              |                |                 |
|----|--------------|----------------|-----------------|
| 10 | <b>UNE-P</b> | <b>Florida</b> | <b>New York</b> |
| 11 | Zone 1       | \$11.89        | \$14.33         |
| 12 | Zone 2       | \$16.03        | \$14.99         |
| 13 | Zone 3       | \$29.33        | \$21.74         |

14

15     As this chart displays, BellSouth’s rates in Florida correlate closely with the rates  
16     charged by New York. This supports the rejection of the argument that further  
17     adjustments are necessary in order to become “TELRIC-compliant,” as Mr. Darnell  
18     contends.

19

20    **Q. ON PAGE 16, MR. DARNELL STATED THAT BELL SOUTH “FAILED TO**  
21    **FILE ITS COMPLETE BSTLM IN THIS PROCEEDING.” IS THIS**  
22    **TRUE?**

23

24    A. Yes. However, there are two excellent reasons why BellSouth did not re-file the  
25    entire model in this proceeding. First, the underlying data did not change from

1 what was filed in Docket No. 990649-TP. Second, if BellSouth had done so, the  
2 likelihood of the working version used in the generic docket being over-written is  
3 very high. If BellSouth supplied the entire model and the user loaded the new  
4 version onto a machine that stored the BSTLM from Docket No. 990649-TP, the  
5 older version would have been destroyed and all runs lost. BellSouth did not want  
6 to take the chance of this happening. Since BellSouth was only adding a new loop  
7 element (the unbundled copper loop non-designed ("UCL-ND")) it was felt  
8 providing only the files required to add this element would be sufficient.

9

10 **Q. WHAT ARE BELL SOUTH'S PLANS FOR REVISING COSTS TO**  
11 **INCORPORATE THE COMMISSION-ORDERED ADJUSTMENTS IN**  
12 **DOCKET NO. 990649-TP?**

13

14 A. A revised Exhibit DDC-1 is attached to my testimony. The costs contained in this  
15 revised exhibit reflect the applicable modifications resulting from this  
16 Commission's May 25, 2001 order in Docket No. 990649-TP. BellSouth was  
17 unable to review and implement the ordered modifications in time to meet the May  
18 31, 2001 filing date for direct testimony in this docket. This should alleviate Mr.  
19 Darnell's concern that BellSouth "fail[ed] to incorporate the decisions this  
20 Commission reached in its May 25, 2001 order." (Page 16, Lines 19-20) Let me  
21 point out that in my direct testimony, I acknowledged the fact the studies filed in  
22 this docket did not reflect the decisions made in Docket No. 990649-TP. As I  
23 stated; "the Commission should set rates in this docket for UCL-ND, line sharing  
24 and collocation with the understanding that applicable adjustments ordered in

25

1 Docket No. 990649-TP (and eventually Docket Nos. 981834-TP/990321-TP for  
2 collocation and the unspecified Line Sharing docket) can be incorporated....”

3

4 **Q. PLEASE EXPLAIN THE CHANGES THAT WERE MADE TO REFLECT**  
5 **THE COMMISSION’S MODIFICATIONS ORDERED IN DOCKET NO.**  
6 **990649-TP.**

7

8 A. Exhibit DDC-2 details the modifications BellSouth made to implement the intent  
9 of the Commission’s May 25<sup>th</sup> order in Docket No. 990649-TP. The major  
10 changes were to the Cost of Capital, Depreciation, Taxes, and Inflation  
11 (eliminated). This exhibit also explains how these changes were made in the cost  
12 study. Exhibit DDC-3 identifies the modifications made to the nonrecurring work  
13 times associated with Engineering Information and UCL-ND to reflect the  
14 Commission’s order. The work time input associated with collocation and line  
15 sharing has not been adjusted since these elements were not at issue in Docket No.  
16 990649-TP and thus, have not be reviewed. However, the modifications outlined  
17 in Exhibit DDC-2 are reflected in the revised collocation and line sharing costs.

18

19 Additionally, the deaveraged costs reflect the methodology outlined in the  
20 Commission’s order. Specifically, the wire center level costs were grouped into  
21 three zones in accordance with Appendix B of the order. These adjustments do not  
22 reflect BellSouth’s requested reconsideration items.

23

24 **Q. DO YOU HAVE A COMPARISON OF THE REVISED COSTS TO THOSE**  
25 **ORIGINALLY FILED?**

1

2 A. Yes. Exhibit DDC-4 compares the costs between the two sets of costs. The  
3 revised costs reflect the Commission-ordered modifications discussed previously.

4

5 **Q. IS BELL SOUTH ALSO FILING THE UCL-ND IN DOCKET NO. 990649-**  
6 **TP?**

7

8 A. Yes. BellSouth is planning on filing the UCL-ND element in the compliance run  
9 in Docket No. 990649-TP on September 25, 2001. All of the Commission-ordered  
10 adjustments will also be reflected in that filing. (BellSouth has requested  
11 Reconsideration and Clarification on several issues that if granted, will require  
12 another run to develop final rates. The Commission is currently scheduled to issue  
13 an order on October 8, 2001 on BellSouth's request.)

14

15 In its Order in Docket No. 990649-TP, this Commission required BellSouth to  
16 "file modified versions of its xDSL nonrecurring cost studies, which exclude the  
17 following: 1) the DLR, 2) a test point, and 3) order coordination." (Order, Page  
18 67) Additionally, this Commission stated that "the Data ALECs want a  
19 nondesigned xDSL-capable loop, they also want a guarantee that the loop will not  
20 be rolled to another facility. We find this to be a reasonable request; therefore,  
21 based on record, we find it appropriate to require BellSouth to provision an SL-1  
22 loop and guarantee not to roll it to another facility, or in other words, guarantee not  
23 to convert it to an alternative technology." (Order, Page 67) The UCL-ND fulfills  
24 all of these requirements. As I explained in my direct testimony, these loops do  
25 not go through the design process BellSouth utilizes to provision UCL-Short and

1 UCL-Long loops. Therefore, order coordination is not part of the provisioning  
2 process. Also, the UCL-ND loops are not provisioned with a test point and a  
3 Design Layout Record (“DLR”) will not be provided. Additionally, these loops are  
4 designated in such a way as to guarantee that they will not be “rolled” to other  
5 types of facilities. Even though the DLR is not provided with the UCL-ND loop,  
6 ALECs may request an Engineering Information document from BellSouth. This  
7 document provides loop make-up information, similar to a DLR. Thus, BellSouth  
8 will file cost for Engineering Information (incorporating Commission-ordered  
9 adjustments) with its compliance run in Docket No. 990649-TP.

10

11 As stated previously, the UCL-ND does not include a test point. ALECs, however,  
12 may desire a joint acceptance test to benchmark the transmission quality of the  
13 loop and to ensure compatibility with the xDSL service they wish to provide.  
14 These testing parameters include, but are not limited to, testing for non-loading,  
15 balance of pair, and continuity from the main distribution frame (“MDF”) to the  
16 network interface device (“NID”). BellSouth filed Testing Beyond Voice (A.19  
17 elements) previously in Docket No. 990649-TP. These costs, however, only  
18 considered testing a designed loop that had been conditioned. The adjusted loop  
19 testing elements also consider testing parameters for non-designed loops (SL1 or  
20 UCL-ND). These reduced A.19 costs will also be filed with BellSouth’s  
21 compliance filing in Docket No. 990649-TP.

22

23 **Q. MR. DARNELL STATES THAT “THERE IS NO RATIONAL NEED FOR**  
24 **A SEPARATE MONTHLY RECURRING RATE FOR SECURITY ACCESS**  
25 **SYSTEMS.” (PAGE 17, LINES 5-6) PLEASE COMMENT.**

A. Contrary to Mr. Darnell’s assertion there is support from both this Commission and from the Federal Communications Commission (“FCC”) for Security Access charges. The FCC addressed this issue in its First Report and Order and Further Notice of Proposed Rulemaking in CC Docket No. 98-147:

We conclude, based on the record, that incumbent LECs must allocate space preparation, **security measures**, and other collocation charges on a pro-rated basis so the first collocater in a particular incumbent premises will not be responsible for the entire cost of site preparation.

FCC Order at Paragraph 51, emphasis added.

In its order in Docket Nos. 981834-TP/990321-TP (Order No. PSC-00-0941-FOF-TP), this Commission specifically addressed how security access costs should be recovered:

We note that the ALECs addressed their concerns over security issues that not only benefit collocating parties, but also benefit the ILEC. Acknowledging those concerns, we shall require that when multiple collocators and the ILEC benefit from modifications or enhancements, the cost of such benefits or enhancements shall be allocated based on the amount of square feet used by the collocator or the ILEC, relative to the total useable square footage in the central office. (Page 88)

Thus, this Commission has recognized the fact that these costs are legitimate and that BellSouth is entitled to charge for them on a per square foot basis.

1 Mr. Darnell states that costs associated with Security Access are shared and  
2 common in nature. He then implies BellSouth “double recovers” these costs. (Page  
3 17) Neither statement is true. First, Security Access costs are not shared or  
4 common, they are directly caused by the need to install additional security measures  
5 in central offices where ALECs will collocate. Second, any cost that is directly  
6 identified in the study is excluded from the calculation of the shared and common  
7 factors.

8

9 **Q. MR. DARNELL CONCLUDES THAT SINCE BELL SOUTH SUBMITTED**  
10 **COSTS FOR CABLE RECORDS THEN “ALL COSTS OF**  
11 **COLLOCATION MUST BE ANALYZED” BY THIS COMMISSION. IS**  
12 **HE CORRECT?**

13

14 A. No. I am having a difficult time understanding Mr. Darnell’s logic. While I admit  
15 that BellSouth developed costs for Cable Records, something Mr. Darnell alleges  
16 was never charged, how can that action make all collocation costs suspect? First,  
17 contrary to Mr. Darnell’s assertion, it is my understanding that BellSouth did bill  
18 WorldCom for Cable Facility Records (“CFAs”). These costs were reflected in the  
19 Additional Engineering charges. The Cable Records charges filed in this  
20 proceeding were developed in order to provide ALECs standardized rates and to  
21 streamline the provisioning process. Second, the costs filed in this docket for  
22 Physical Collocation are consistent with the existing tariff approved by this  
23 Commission (E20 – Access Services Tariff). It is BellSouth’s understanding that  
24 this Commission will establish a separate docket to address the pricing of  
25 collocation elements and as I have stated in my direct testimony, BellSouth is

1 willing to incorporate the modifications ordered in that future docket into its cost-  
2 based rates. Further, the revised costs filed in this docket reflect the applicable  
3 modifications ordered in Docket No. 990649-TP.

4  
5 **Q. PLEASE BRIEFLY DESCRIBE THE WORK ASSOCIATED WITH THE**  
6 **CABLE RECORDS CHARGES.**

7  
8 A. The Cable Records charges reflect the costs associated with the work required to  
9 build cable records in BellSouth's systems. Since the collocater's certified vendor  
10 runs the cables (e.g., voice grade/ DS0 and DS1) from the collocation space to the  
11 distribution frame, these cables belong to the ALEC. The specific distribution  
12 frame termination locations, however, are required in order for the ALEC to place  
13 orders to cross-connect network elements (e.g., unbundled loops) to their  
14 collocated equipment.

15  
16 **Q. WHY IS IT APPROPRIATE FOR BELL SOUTH TO APPLY A**  
17 **NONRECURRING CHARGE FOR INPUTTING CABLE RECORDS FOR**  
18 **ALECS?**

19  
20 A. The only reason this work would be undertaken is to comply with an ALEC's  
21 request to collocate equipment in BellSouth's central office. In other words, the  
22 work is strictly driven by a collocation application and the subsequent need to  
23 input new information in current systems for the benefit of the collocater. The  
24 work is not associated with BellSouth's normal repair and maintenance of systems.

25

1 Since BellSouth performs this work solely at the request of an ALEC, BellSouth is  
2 entitled to recover the one-time costs associated with such work.

3

4 **Q. MR. DARNELL DISCUSSES BELLSOUTH'S LINE SPLITTING COSTS.**  
5 **PLEASE COMMENT.**

6

7 A. It appears that Mr. Darnell uses the terms Line Sharing and Line Splitting  
8 interchangeably. This is inappropriate since these are two distinct offerings. Line  
9 Sharing is an arrangement between BellSouth and an ALEC in which BellSouth  
10 retains the voice spectrum of the line and the ALEC uses the line's higher  
11 frequencies to provide data to the end user. In contrast, Line Splitting is an  
12 arrangement between two ALECs, i.e., BellSouth does not provide either voice or  
13 data to the end user.

14

15 BellSouth provisions Line Splitting by extending an unbundled xDSL-capable loop  
16 and an unbundled port to the collocation space of either the Voice ALEC or the  
17 Data ALEC. These carriers may then connect the loop and the port to an ALEC-  
18 owned splitter, thereby splitting the line themselves. The testimony of BellSouth  
19 witnesses Ms. Cox and Mr. Williams support BellSouth's contention that the  
20 ALEC and not BellSouth is obligated to provide the splitter. This Commission has  
21 addressed Line Splitting in the AT&T arbitration, Docket No. 00731-TP. In its  
22 order in that docket, this Commission ruled:

23

24 In order to facilitate 'line splitting,' BellSouth shall be obligated to  
25 provide an unbundled xDSL-capable loop terminated to a  
collocated splitter and DSLAM equipment, and unbundled circuit  
switching combined with shared transport at TELRIC rates.

1           However, BellSouth will **not** be required to provide the splitter in a  
2           line splitting arrangement.” (Emphasis added)

3           This Line Splitting arrangement would reflect a UNE loop and a UNE port being  
4           used to provide the ALEC’s end user with voice service. The high frequency  
5           portion of the loop would be available for data through the ALEC-provided  
6           splitter, which would be accessed via a cross-connection from the frame to the  
7           ALEC’s collocation space. A second cross-connection would return the voice  
8           signal from the splitter in the collocation space to the voice switch port. The  
9           applicable recurring and nonrecurring charges for this Line Splitting arrangement  
10          are: the unbundled loop rate, the unbundled port rate, and the rate for two  
11          collocation cross-connections. As I stated in my direct testimony: “The costs for  
12          line splitting are comprised of costs already identified in Docket Number 990649-  
13          TP [unbundled loop and unbundled port] and in the cost summary in Exhibit DDC-  
14          1 [collocation cross connects].”

15  
16          If the Line Splitting arrangement is a migration from an existing Line-Sharing  
17          arrangement, the applicable nonrecurring charge for this Line Splitting  
18          arrangement will be the nonrecurring charge for the loop-port combination. The  
19          recurring charge is the same as that discussed above: the unbundled loop rate, the  
20          unbundled port rate, and the rate for two collocation cross-connections. Again, the  
21          costs “are comprised of costs already identified in Docket Number 990649-TP  
22          [nonrecurring cost of a loop-port combination, unbundled loop and unbundled  
23          port] and in the cost summary in Exhibit DDC-1 [collocation cross connects].”

1     Therefore, the rates for Line Splitting are not independent rates, but rather are  
2     comprised of cost-based rates already established by (or pending before) this  
3     Commission. In other words, rates for additional unbundled network elements  
4     need not be decided in order to accommodate Line Splitting.

5  
6     **Q. ON PAGE 17, MR. DARNELL STATES “THE COST SUPPORT**  
7     **BELLSOUTH HAS FILED DOES NOT IDENTIFY THE LEVEL OF**  
8     **ANTICIPATED LINE SPLITTING DEMAND BELLSOUTH HAS USED IN**  
9     **THE DEVELOPMENT OF ITS LINE SPLITTER COSTS.” (LINES 23-25)**  
10    **IS THIS COMMENT RELEVANT?**

11  
12    A. No. Mr. Darnell implies that BellSouth’s cost study does not comply with  
13    “47C.F.R. 51.511(a) in the development of its line splitting rates.” (Page 18, Lines  
14    1-2) Since this is a flat-rated element, the applicable FCC rule mandates that the  
15    per unit cost of an element equals the forward-looking economic cost divided by a  
16    “the discrete number of elements (e.g. local loops or local switch ports) that the  
17    incumbent LEC uses or provides.” (FCC First Report and Order, §51.511(b)(1))  
18  
19    BellSouth currently has agreed to provide ALECs splitter systems in either 24 or  
20    96-line arrangements<sup>1</sup> for Line Sharing. In developing the costs for either  
21    arrangement, demand is not required for the cost calculation since the splitter  
22    system is not shared among a number of ALECs. The vendor sells the equipment  
23    as in multiples of 24 lines. The 96-line system and this corresponds to 4, 24-line

24  
25    

---

<sup>1</sup> An 8-line arrangement is also currently under development.

1 shelves. The cost for the 24-line arrangement reflects one shelf. Thus, projected  
2 demand for splitters is unnecessary and Mr. Darnell's implications should be  
3 disregarded.

4

5 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

6

7 A. Yes.

**UNE COST STUDIES**

**EXHIBIT DDC-1**

**REVISION 1**

**PUBLIC FILING**

# **FLORIDA DOCKET NO. 960786-TL**

## **SECTION 1**

### **EXECUTIVE SUMMARY**

#### **STATEMENT OF PURPOSE**

BellSouth Telecommunications, Inc. (BellSouth) is herewith filing revised Total Element Long Run Incremental Cost (TELRIC) studies, including shared and common costs, (i.e., the economic cost) ) for Collocation and Line Sharing Unbundled Network Elements (UNEs). These revisions were made to include the changes ordered by the Florida Public Service Commission in its Order dated May 25, 2001 in Docket No. 990649-TP.

#### **OVERVIEW**

Historically, BellSouth prepared Long Run Incremental Cost (LRIC) studies to support tariff prices for telecommunications services. The LRIC result, which considered only the volume sensitive costs, constituted the price floor for the service in question, and was one of a number of factors considered when establishing the price for a service. BellSouth also conducted Total Service Long Run Incremental Cost (TSLRIC) studies that addressed not only the volume sensitive costs but also considered the directly attributable volume insensitive costs. TSLRIC studies were used to ensure that the service was not being subsidized. With the advent of local competition as envisioned by the Telecommunications Act of 1996 (the Act), it became necessary for BellSouth to conduct cost studies to determine the costs associated with certain components or elements of its telecommunications network. BellSouth's TELRIC studies comply with the requirements of the Act and are in compliance with the FCC's as well as the Florida Public Service Commission's rules and regulations issued to implement the provisions of the Act.

#### **ORGANIZATION OF REMAINDER OF DOCUMENT**

- Section 1 - The remaining pages of Section 1 provide a flowchart of the TELRIC study process.
- Section 2 - Includes the Unbundled Element Cost Summary
- Section 3 - Includes an explanation of the TELRIC methodology, and the recurring and nonrecurring cost development process.
- Section 4 - Contains a description and explanation of the models and price calculators used.
- Section 5 - Describes each of the factors and loadings used in the studies and explains their development.
- Section 6 - Contains a description of the UNEs and an overview of the study process for each category of UNEs.

11/1/01

Unbundled Network Elements Cost Summary

| Study Name: |                                                                                                       | Florida Docket No 960786-TL - Revision 1 |           |                         |                       |                            |                     |                       |                            |         |  |
