CERTIFICATE OF REPORTER 1922

P R O C E E D I N G S

(Transcript continues in sequence from Volume 11.)

Thereupon,

GREG DARNELL

continues his testimony under oath from Volume 11 as follows:

CHAIRMAN JACOBS: Now, that's better. Let's see. We were about -- I think he -- had you finished your summary? We didn't get started even, did we?

MR. MELSON: He was just in the middle of his -- well, he was at the beginning of his summary, actually.

CHAIRMAN JACOBS: Okay. Go right ahead, Mr. Darnell.

THE WITNESS: Okay. Thank you.

As I saying before lunch, the big picture why you don't have residential competition in Florida is because the UNE rates for voice grade loops are way too high.

The Telecommunications Act of 1996 stated that UNE rates must be based on cost, but only provided a very brief explanation on how cost should be defined and left it up to the FCC to determine

detailed pricing rules. The FCC determined that the price for UNEs must be set equal to the total element long-run incremental cost, plus a reasonable allocation of forward-looking common costs. TELRIC is required to be calculated based on, and I quote, the forward-looking cost over the long run of the total quantity of the facilities and functions directly attributable to, or reasonably identifiable as incremental to, such elements calculated taking as a given the incumbent LEC's provision of other elements. And it's that last portion of that FCC rule that I will get into later.

The methodology used by BellSouth in this UNE cost docket and approved by this Commission violates this fundamental FCC requirement. For example, the rates established for BellSouth's voice loops do not take into account BellSouth's provision of digital loops.

BellSouth used three different network scenarios designed to develop UNE rates. These three different scenarios, that approach to pricing, the determination of the rate for UNE-P was based on a technology called integrated digital loop carrier. IDLC, as it is referred to, is used by BellSouth today and provides efficiencies both in network design and

network management. These efficiencies lead to reductions in both recurring and nonrecurring costs. However, in the determination of the rate for DSL-capable loops, IDLC was not included in the network design. An all-copper network design was assumed by BellSouth.

By using these three network scenarios, the rates established by BellSouth's UNEs do not take as a given BellSouth's provision of other elements. And as such, the economies of scale and scope that BellSouth enjoys by offering the entire range of elements is ignored.

In this Commission's order in the UNE cost docket, you recognized this problem. And I quote, "It appears to us that a single unified network design is most appropriate. However, we believe this goal is not attainable based on the record." In essence, what you've stated here is you would like to comply with the rules, but you cannot, based on the record BellSouth put before you.

In this proceeding, the Commission should not reward BellSouth for its failure to comply with the rules and take another step in the wrong direction by supporting BellSouth's attempt to get its carrot, LD entry, before it has complied with the stick, the

law.

Another FCC rule violation occurred in the manner in which BellSouth determined its demand for UNEs. It didn't. Amazingly, in the development of certain UNE rates, BellSouth did not estimate, forecast, or in any way determine the total demand for the network element.

FCC Rule 51.511(a) requires that the per unit price for an element must be equal to the TELRIC divided by a reasonable projection of BellSouth and ALEC demand for that element. Since BellSouth makes no attempt to estimate demand for certain loops, it is impossible for the costing methodology used by BellSouth to comply with this rule.

In the development of UNE pricing, BellSouth determines the cost of UNEs by assuming all customers will want the service using many different types of loops. While this technique covers BellSouth in terms of creating rates high enough to cover BellSouth's cost should all these customers actually want all these types of loops, this technique also creates a total cost that exceeds the total cost BellSouth will incur to serve the actual demand.

Under the TELRIC rules defined by the FCC, the sum of the parts must equal the whole. That is,

the rates for network elements times the demand for all the network elements must equal the cost of the whole network. Under BellSouth's multiple-scenario costing approach, the sum of the parts times the actual demand do not equal the total cost BellSouth will incur. BellSouth's costing methodology ignores the economies of scale and scope and is a contributing factor why ALECs cannot use UNEs to effectively compete with BellSouth.

If you want to know why residential competition has not developed in BellSouth Florida territory, the first place to look at is the methodology chosen by BellSouth to develop UNE rates. That being said, even a fundamentally and legally flawed costing methodology can result in rates that approximate TELRIC, that is, if you adjust the inputs. As such, we must look at the specific ratemaking and input errors that must be addressed by this Commission.

One of these items is currently being addressed in the Commission's further investigation in what is being called the 120-day filing. This item is the loading factors that BellSouth used in its determination of materials investment. These loading factors account for approximately one-half of

BellSouth's loop rate. Given the vast importance of these loading factors, BellSouth UNEs cannot be considered to be cost-based and compliant with checklist item 2 at least until the 120-day proceeding is completed.

Another item that must be addressed is how inflation is accounted for in the determination of investment. On October 2nd, this Commission adopted a staff recommendation that reinstated disallowed inflation factors from BellSouth's UNE rate development. Through this action, BellSouth's UNE rates now take into account the impact of specific inflation twice. The bottom line effect of this action was to substantially raise all UNE rates.

The current BellSouth UNE-P loop rate in Florida is now 21% higher than the UNE-P loop rate in Georgia. BellSouth UNE rates should be lower in Florida than they are in Georgia, not 21% higher. This is because on a per unit basis, it costs BellSouth less to provide telecommunications service in Florida than it costs them to provide service in Georgia.

Another issue I would like to address is all these pricing matters that BellSouth has attempted to put in this 271 review. The purpose of a 271

review is to allow BellSouth to obtain interLATA authority after they have demonstrated the markets are open to competition. It should not be used to introduce items for the first time.

In this proceeding, BellSouth introduced new physical collocation elements, line sharing, and a new loop offering called non-designed unbundled copper loop. While I highlight in my testimony some of the potential problems with BellSouth's rate proposal for these elements, I was unable to conduct a thorough review of the BellSouth filing. The review I was able to complete led me to the conclusion that BellSouth had not filed its complete loop model in this proceeding, and because of that, a full analysis could not be done of BellSouth's new loop offering in this case.

UNE pricing issues should be addressed by the Commission in the UNE cost docket, not in a 271 proceeding. Resolving these issues in the cost docket will not delay BellSouth's 271 agenda, because the BellSouth application cannot be considered to be compliant with checklist item 2 until the resolution of that proceeding anyway.

The final issue I want to address is BellSouth's refusal to provide its DSL service in

combination with an ALEC's UNE voice service. This is unreasonable discrimination. It creates an unnecessary barrier to competitive local entry by preventing voice ALECs from offering service to the growing number of customers that want DSL service. Checklist item 2 requires BellSouth to provide nondiscriminatory access. BellSouth is discriminating.

That concludes my summary.

MR. MELSON: Mr. Darnell is tendered for cross.

CHAIRMAN JACOBS: Mr. Edenfield.

MR. EDENFIELD: Thank you, Mr. Chairman.

CROSS EXAMINATION

BY MR. EDENFIELD:

Q Good afternoon, Mr. Darnell. How are you?

A Good afternoon.

Q I'm going to try to get you out of here pretty quickly. Hopefully you can catch a decent flight.

Your testimony covers a couple of topics. One is cost, and the other is this provision of DSL over UNE-P. Do I understand that to be correct generally?

A Yes.

Q Okay. On the cost issues, did MCI have the opportunity to participate in the Commission's most recent UNE docket?

A Yes, we did.

Q Did you in fact participate in that docket?

A Yes, we did.

Q Have you appealed the Commission's decision from that docket?

A Yes, we have.

Q Okay. Now, let's turn to this UNE-P issue, the DSL over UNE-P. Will you agree with me that earlier this year, MCI and BellSouth had an arbitration in front of this Commission over a number of issues?

A Yes, we did.

Q Did you participate in that arbitration?

A My company did. I did not personally.

Q Okay. Are you aware that this issue of DSL over UNE-P was an issue in that arbitration?

A I'm not personally aware of that, but it probably was, because we have been bringing it up in all states, so I imagine it was in Florida as well.

Q Let me take a second and hand you an excerpt from the Commission's order. And for the record, this is Docket No. 00069 -- 649. I can't even

read, dash TP, issued March 30, 2001. And I'll represent to you that this is the final order on arbitration from BellSouth and MCI's most recent arbitration.

If you will take a second and look over what I've handed you, specifically, if you would look on page -- feel free to take a second and look at the whole thing if you like. What I'm going to ask you about is on page 51. If you'll look up in the upper left-hand corner, you'll see the page numbers. Look on page 51 under where it says "Decision." And I'm going to ask you something about the first and the third paragraphs that appear there on -- I'm sorry, under "Decision." The first paragraph is on 51, and the third paragraph is on page 52.

A Was there a question?

Q Yes. Have you had a chance to read that?

A Yes.

Q Will you agree with me that what the Commission did in the MCI arbitration was determine that BellSouth is not obligated to provide DSL when MCI is providing UNE-P to that same customer?

A Well, I will agree with you that the Commission found that under the FCC's rules, there is not a requirement for BellSouth to do that. What I am

saying is that the Commission should exceed the FCC rules and do what's in the business interests of the consumers of Florida.

Q Take a look on page 52. About halfway down in that paragraph, will you agree that the Commission has said, "We believe the FCC requires BellSouth to provide line sharing only over loops where BellSouth is the voice provider. If WorldCom purchases the UNE-P, WorldCom becomes the voice provider over that loop-port combination. Therefore, BellSouth is no longer required to provide line sharing over that loop-port combination." That was the ruling of this Commission on March 30, 2001.

A Right. The ruling was, they believe the FCC requires. What I'm saying is this Commission should require BellSouth to do something more than what the minimum requirements of the FCC require.

Q Did the Commission have that opportunity during this arbitration to actually require more?

A I don't know. It wasn't a 271 issue then. This is an issue whether or not BellSouth is giving nondiscriminatory access.

Q Well, you mentioned --

A And it's a 271 issue now, so the fact that you are discriminating becomes -- it should be brought

into consideration in this proceeding.

Q I'm sorry. I didn't mean to talk over you there.

You say it was not a 271 issue. Certainly by this time it was a 271 issue in Texas, which was an issue that was raised by AT&T and possibly MCI in the Texas 271 decision. Would you agree with that?

A I believe it was at least in part, maybe not the exact same -- I don't know the exact thing -- the whole thing about the Texas 271 proceeding. I do know that this issue, maybe not in the exact frame, was addressed in the Texas proceeding.

Q You would agree with me that the FCC released its order on the Texas 271 application on June 30th, 2000?

A Yes.

Q And would you agree with me that in this order, the FCC stated that it was not a 271 requirement for Southwestern Bell to provide DSL service when the voice customer was being served via UNE-P?

A I would agree that the FCC said in the context of that application that that one provision was not sufficient to stop the Texas 271 application. I would not agree that the FCC did that without

looking at all the other items in that application and how Southwestern Bell was treating ALECs in general in Texas in terms of the way it's doing its marketing and the way the ALECs are required to do their marketing. So I'm saying the situation could be very different here in Florida, and this Commission should take that into account.

Q Would you accept subject to check that in paragraph 330 of the FCC's Texas 271 order released June 30th, 2000, in CC Docket No. 00-65, that the FCC held that, "We reject AT&T's argument that we should deny this application on the basis of SWBT's decision to deny its xDSL service to customers who choose to obtain their voice service from a competitor that is using the UNE-P. Under our rules, the incumbent LEC has no obligation to provide xDSL service over this UNE-P carrier loop." Would you agree with me that that's what -- subject to check, that that's what the FCC held in that order?

A Yes, I would agree with you subject to check. And also, that order says in and of itself sufficient to reject. As I said before --

Q Thank you. I have no further questions. I'm sorry.

A As I said before, the whole thing needs to

be considered, the situation at hand.

MR. EDENFIELD: I'm sorry. I really didn't mean to talk over you.

I have no more questions for Mr. Darnell.

I have a copy of this order if any of the Commissioners would like it. I have the excerpt.

CHAIRMAN JACOBS: Would anybody like it? No, thank you.

Staff.

MS. BANKS: Yes. Thank you.

CROSS EXAMINATION

BY MS. BANKS:

Q Good afternoon, Mr. Darnell.

A Good afternoon.

Q I'm Felicia Banks, and I will be asking you some questions on behalf of the Commission staff.

I wanted to know if you have a copy of the supplemental rebuttal testimony that you filed on October 5th.

A Yes, I do.

Q And if you could just reference page 2.

A Yes.

Q And I'm actually looking at lines 14 through 16.

A Uh-huh.

Q And there you state that this Commission's decision on inflation on reconsideration of its May 2000 UNE order increased rates for UNEs by about 8.5%. Is that correct?

A That's correct.

Q Is this 8.5% increase overall for all UNEs requiring rates?

A No. I believe it varies, depending upon the amount of the material price. So it's a percentage application to the amount of the material price, so it probably varies across the board. It did raise all elements that have material investment, because the inflation factor is applied to material investments. So this is -- in particular, in reference to the loop, for example, it is a $1.23 increase to the average loop cost for UNE-P.

Q Okay. If you could just elaborate on that percentage calculation, how it's derived.

A Okay. The cost of capital is applied on a percentage basis. You maybe chose 10% cost of capital, whatever it is in Florida. That is applied to the material prices that come out of BellSouth's different cost models that develop the investment amounts. Then the TPI inflation factors are also applied to that same amount. So depending upon the

size of the first number, the impact of a percentage on that first number may be different.

Q Okay. And you just referenced -- you stated that the average UNE-P loop cost increased by $1.23; correct?

A That's the UNE-P loop cost, yes.

Q Okay.

A That's the average cost.

Q Okay. If you could just tell me what your working definition is of a UNE-P loop.

A That was P.1.1, the element. It's the loop you use to provide voice service to customers in combination with the analog switch port.

Q Okay.

A That was derived by basically backing into -- the UNE-P loop rate is deaveraged. Start there. They have three zones. There's a certain price for Zone 1. I know what the weighting factor was before that was applied to the average cost that created the deaveraged rates, so I backed into what then -- took the Zone 1 rate divided by the factor and got to what the average cost is approximately. This is an approximation, 8.5%. It could be off by a few pennies.

Q Okay. Could you just tell me too what the

rates would sum, that total that you itemize on line 16 of that same page, the 15.14 figure?

A I'm sorry. I don't have that with me. All I would have had to have done was taken the Zone 1 price in the Commission's order and divided it by .8545, which was the old weighting factor that was used to derive the old Zone 1 price from the average cost.

Q Okay. Looking on that same page, Mr. Darnell, at lines 22 through 23 --

A Okay.

Q You state that the Georgia Commission established an average UNE-P loop cost for BellSouth of 12.55 in March of 2000; is that correct?

A That is correct.

Q Okay. Did the Georgia cost study use the BellSouth loop model of the BSTLM?

A No, it did not to derive that rate. They used a statistical sample of their network design and then costed out that network design to arrive at their loop cost in Georgia. Georgia is currently undergoing another proceeding to address loop prices using BSTLM.

Q Okay. Do you know the average loop --

CHAIRMAN JACOBS: Excuse me. So there's a second study being done in Georgia, cost study?

THE WITNESS: Yes. Right now there is, yes.

CHAIRMAN JACOBS: Thank you.

BY MS. BANKS:

Q So do you know the average loop plant that underlies the 12.55 rate?

A I used to. I don't off the top of my head remember that.

Q Okay. Does the 12.55 rate reflect the use of the telephone plant indices or the TPIs?

A I don't recall if they are in the cost calculator in Georgia or not, whether or not there is an additional TPI applied on top of cost of capital in Georgia or not. I don't remember.

Q Okay. Turning over to page --

A I would be happy to check it out for you. I have all that stuff if you would like me to look for it. It's buried in my boxes in my office.

Q That's okay for purposes of this.

Turning over to page 3 of your supplemental rebuttal testimony --

A Yes.

Q And I'm looking at lines 12 --

A Yes.

Q -- through 13. And there you state that

BellSouth has a population density of 176 households per square mile in Florida; is that correct?

A That's correct.

Q Okay. Can you just tell me where this statistic is derived?

A Yes. We have a business analysis group within MCI that obtains information from a number of vendors to ascertain the density and what it's going to cost us in terms of our marketing efforts to enter a marketplace. So one of the things we need to know is how many people are going to be within the scope of our advertising, and we have contracted out and hired these people to give us the data to -- let me see. The name of the company is -- Claritas is one of the companies that gives us the information.

And they take the number of households, and then they frame that into the structure that has been created in each state in terms of the deaveraged rate zones. But an overall average number that our marketing folks determined was 176 in Florida, and then in Georgia it was 85.

Q Okay. On that same page, Mr. Darnell, does the cost study that underlies the 12.55 Georgia rate reflect a population density of 85 households per square mile?

A Well, that's a pretty broad question. Let me try to answer it this way. I don't believe the 12.55 loop rate in Georgia is probably directly attributable to anything.

Let me explain that. As I said before in my summary, you can arrive at a result that approximates TELRIC without doing the methodology right by just adjusting the inputs, and that adjusting is a broad word. And the Georgia Commission adjusted the inputs in BellSouth's cost study.

I still don't believe that Georgia has got it down to what TELRIC is, but the fact that Georgia is significantly lower than Florida illustrates the magnitude that Florida has gotten it wrong.

Q Okay. Looking at page 8 -- I'm sorry. Lines 18 through 21 of that same page 3, you state that both the Georgia and Florida UNE-P loop rates exceed TELRIC, but Florida is just worse because you say it exceeds the TELRIC by a greater amount than the Georgia rate. Mr. Darnell, if you could, tell me if there is a UNE-P loop rate set in any BellSouth state that you consider to be TELRIC compliant.

A Not at the current time, no.

Q Would your answer be the same for any BOC in this country?

A Well, I'm not too familiar with all of them, but I'm aware of some loop rates in the old Ameritech territory that are actually very low that would be in the ballpark of what TELRIC should be.

So -- I'm not familiar with the studies. I haven't done an analysis of those studies, so I can't tell you exactly what TELRIC should be in Michigan or Illinois, but if those numbers were brought to Florida, we would be in the ballpark, because they have about a seven or eight dollar --

CHAIRMAN JACOBS: How about Pennsylvania? Are you familiar with Pennsylvania?

THE WITNESS: I didn't do the cost analysis for Verizon states, no, sir.

CHAIRMAN JACOBS: Okay. Thank you.

BY MS. BANKS:

Q Turning over to page 4, and I'm looking at lines 3 through 4, you assert that a TELRIC compliant UNE-P loop rate for Florida would be less than $7; is that correct?

A That's correct.

Q And what is your source for this $7 figure?

A The source of that $7 figure is taking BellSouth's loop model and looking at what the output would be if you use inputs that are forward-looking

and not BellSouth's embedded inputs.

For example, the inputs that you're addressing in the 120-day proceeding, those loading factors account for one-half of the rate. Those loading factors and the details behind those loading factors were never addressed by anybody. And that's no fault of this Commission. It's probably more fault of mine, because I didn't have the resources to depose and dig into all those factors.

But there are literally hundreds of factors being applied to material prices that we have not yet even seen any support for yet. Maybe we will in the 120-day filing. Maybe we'll be able to get into that. But those factors amount to one-half of the rate that we haven't even looked at yet.

And I know those factors to be -- I believe those factors to be a method to take a material price coming out of the loop model, or whatever model generates the investment. And BellSouth knows what the answer is, Z, what they want it to be, X times something must equal Z. They solve for Y in order to create Z, and Y is those loading factors.

That number, because it drives so much investment, must be looked at. BellSouth's testimony in the UNE cost case basically says that that's

exactly what they're doing, we are solving for -- solving for other information. They don't directly say it's their books of accounts or their embedded cost, but we don't know what it is.

CHAIRMAN JACOBS: You weren't here when Ms. -- I think it was Ms. Cox or Ms. Caldwell. I quite frankly cannot recall, but I asked one of them a question about the TPI. You talked about the TPI here in your testimony. Were you here when they testified?

THE WITNESS: I was not here for Ms. Cox's testimony, but I am familiar with the rebuttal of my position.

CHAIRMAN JACOBS: Okay. And there were two aspects of it. One goes to the point that you raise, which has to do with whether or not inflation has been double-counted.

But the other idea goes to whether or not -- and this is the point I want to ask you. It would occur to me that in a forward-looking methodology, we're capturing the benefits of economies and efficiencies and technological advancement. Do you have any kind of view or thoughts about to what extent the studies that we have in front of us now capture those kinds of factors?

THE WITNESS: Well, you have the same model

run three different ways right now to generate the investment for the loop. So to that extent, you have tripled the amount of investment you probably need to be looking at, but then again you're dividing it by a different -- the wrong amount of demand as well. So I'm not saying the rates -- the amount of investment is tripled. I'm just saying we don't know what the whole cost of the network is.

CHAIRMAN JACOBS: One of the examples -- it's kind of foggy right now, but I think one of the examples, one of those scenarios essentially develops a network that has all copper loops in it.

THE WITNESS: Yes, sir.

CHAIRMAN JACOBS: I'm not sure which scenario it is.

THE WITNESS: It's called the copper scenario.

CHAIRMAN JACOBS: Okay. So the thought occurs to me that in that scenario, we don't have the benefit of any of the digital technology.

THE WITNESS: That's correct, sir.

CHAIRMAN JACOBS: But I don't know that that means we don't -- so then does that mean that we have not captured the economies that are derived from that technology in our final numbers, or are those

economies captured in another way?

THE WITNESS: Some of the economies are not captured. Now, by BellSouth's method of costing, what I tried to explain in my summary, to cost out a network to all parties that could ever possibly want a copper loop like they have done in the copper-only scenario generates a total investment amount that is sufficient to create a rate that would cover Bell should everybody in Florida want to be served only on a copper loop. That's not going to happen.

It's the mismatch of doing it -- that's not to say -- like I say, it's not to say we have tripled the investment. What it hasn't done is calculated the efficiencies of doing the two things together, and that's what we've lost.

CHAIRMAN JACOBS: Okay.

THE WITNESS: So they've captured some efficiencies, but they've missed the efficiencies of doing both copper loops and fiber loops and high capacity loops as one.

CHAIRMAN JACOBS: And the confluence of the three scenarios doesn't do that?

THE WITNESS: No, sir. No, not -- it would only be done if you costed out the whole network and all the demand at once and tried to cost that whole

network, what is going to be needed to serve all demand, both CLEC and -- both ALEC and BellSouth demand combined at one time, find out what the cost of that network is, and then decide how much each element should contribute towards the recovery of that network.

CHAIRMAN JACOBS: Okay. Thank you.

BY MS. BANKS:

Q Mr. Darnell, on page 5, and I'm beginning at line 13, reading through 15, you contend the application of a nominal cost of capital to all investment and the application of specific TPIs on specific equipment double-counts of the effects of specific inflation; correct?

A That's correct.

Q Mr. Darnell, wasn't this the same argument presented to this Commission in the BellSouth hearings in the generic UNE docket?

A I believe it is -- the foundation is the same argument. I've tried to state it here in a clearer manner so that maybe everybody can understand it this time.

The nominal cost of capital -- a bank does not -- when it's loaning money to BellSouth does not say, "I'm not going to look at how much their

inflation is going to be on their equipment." Of course, a bank takes into account the inflation on Bell's equipment in determining the amount of the loan to BellSouth. So in that, because we've used that nominal cost of debt and the nominal cost of equity to create the nominal cost of capital, we have included the cost of inflation in that cost of capital.

What Bell does then is, they take that nominal cost of capital and then apply another specific inflation for TPI on certain types of materials. I contend that those certain types of materials, the banks know about those certain types of materials, so it has already been taken into account. By doing it both ways, you either have said the nominal cost of capital is wrong and you need a new TPI, or you're double-counting.

Q But didn't this Commission reject that assertion that you made?

A I believe in the reconsideration they have changed their view, changed their original view and rejected it, yes.

Q Okay.

COMMISSIONER JABER: I think he said earlier that we didn't understand it.

THE WITNESS: That's what I was trying

to --

COMMISSIONER JABER: I got it. It didn't go over us.

THE WITNESS: Okay.

COMMISSIONER JABER: Staff was over there silently giggling.

BY MS. BANKS:

Q Mr. Darnell, if you would, turn to page 6. And here you have identified a table that contains ADUF, access daily usage file, and ODUF, optional daily usage file, charges for Florida and Georgia; is that correct?

A That is correct.

Q Could you tell me where the values in each of these three columns came from?

A Okay. The values in the current columns are the values that were last approved by this Commission. The values in the second column are the values that BellSouth has just proposed in its 120-day filing in Florida. And the values in the third column, the Georgia proposed rates, are the values that BellSouth proposed in a Georgia filing on October the 1st.

Q Okay. Are the sources from where you pulled the values filed in this proceeding?

A The sources? No, they're not. These are not in this proceeding, the sources.

Q Okay. On that same page beginning at line 16, you state that, "BellSouth then develops its daily usage file charges by contending that it has and will incur additional incremental costs, i.e., above embedded cost, due to the creation of systems to provide daily usage file information to ALECs. As such, BellSouth's cost study development for daily usage file information is founded on the flawed premise that TELRIC equals embedded cost minus nothing plus incremental cost."

Mr. Darnell, isn't it true that BellSouth has not filed cost studies for daily usage files in this proceeding?

A Not in this proceeding. These are -- well, that's correct, yes.

Q Okay. Is there anything in this proceeding that has been filed that would substantiate your claim?

A Not in this proceeding. That's part of the problem we're having doing a cost case in a 271 proceeding without any documentation. If we're going to do a cost case, we ought to have the information in the proceeding.

Q Okay. Changing gears just a little bit, I want to go back to a statement you made during your opening statement, and you referenced that -- you identified certain UNEs -- the rates for certain UNEs should not be addressed in this docket. And I wanted to know, do you think that this Commission should consider setting rates for any UNEs in this docket?

A No, ma'am, I don't believe they should set rates for UNEs for the first time in a 271 review. I believe a 271 review is for a review, not for establishment of new things.

MS. BANKS: Thank you, Mr. Darnell. That concludes staff's cross.

CHAIRMAN JACOBS: Commissioners.

COMMISSIONER JABER: Even for the line sharing? You would not want us to establish a price for line sharing?

THE WITNESS: Well, Your Honor, no, I would not, not in a 271 proceeding. I would love to have a better rate and new procedures for line sharing. But I think the introduction of new evidence after the fact creates a problem in these proceedings that can't be managed, and we should be doing -- looking at what was filed on day one and evaluating that information. Supplementing the record after the fact until I get it

right is not what 271 is about. It's about is the market open to competition, not what's the minimum can I do to get you to say yes.

COMMISSIONER JABER: And your position would be the same for those collocation elements that we have not already established?

THE WITNESS: That's correct.

COMMISSIONER JABER: Okay.

CHAIRMAN JACOBS: Redirect.

REDIRECT EXAMINATION

BY MR. MELSON:

Q Just a couple, Mr. Darnell, on this last line of questions about the ADUF and ODUF rates. Just to be clear, the column that's labeled "Florida Current" on page 6 of your testimony are the rates that were contained in the staff recommendation on reconsideration of the UNE cost docket that the Commission approved in early October?

A Yes.

Q You were asked a few questions. I believe Mr. Edenfield asked you to read to yourself a portion of a Texas 271 order. Was that order issued prior to the FCC's reconsideration of its line sharing order?

A Yes, it was.

Q And was it issued prior to the Ascent I and

II decisions that dealt with line sharing and line splitting issues?

A I'm sorry. I don't know.

Q Would you accept it subject to check?

(Laughter.)

MR. MELSON: I think Commissioner Jaber has asked us to brief the effect of those decisions. We can handle it that way.

CHAIRMAN JACOBS: Oh, crafty, crafty.

BY MR. MELSON:

Q Which I guess leads me to my last couple of questions, and it also relates to something I think we've been invited to brief, which is to what extent in this proceeding should the Commission use prior FCC 271 orders as a Bible and say, yes, BellSouth has or has not done what the FCC has required in previous cases, and to what extent can the Commission look at actions it believes should be taken before it can judge that the Florida market is open to competition. And while that will be briefed from a legal point of view, do you have a policy point of view on that?

A Yes, I do, actually.

The FCC has the luxury of being in D.C. with no customers that are beating on their door for problems with local service. They can set out minimum

standards that are minimum standards. You have to do what you believe is best for the consumers in your districts and in your state. Therefore, you should look at the conditions in your state and have to answer to, I believe, a higher authority, the customer, than the FCC has to answer to.

So I believe that this Commission can look at those FCC rules and decisions and see what the minimum standards are, but they should recognize that they are the minimum standards.

MR. MELSON: That's all I've got. Thank you, Mr. Darnell.

I would move Exhibit 49.

CHAIRMAN JACOBS: Without objection, show Exhibit 49 is admitted.

(Exhibit 49 was received into evidence.)

CHAIRMAN JACOBS: Thank you. You're excused, Mr. Darnell.

Danger zone.

COMMISSIONER JABER: Is someone going to give a marker to Ms. Kaufman again?

CHAIRMAN JACOBS: I'm sorry. You may proceed.

MS. KAUFMAN: Florida Competitive Carriers Association would call Mr. Joe Gillan, and Mr. Gillan

has already been sworn.

CHAIRMAN JACOBS: Very well.

Thereupon,

JOSEPH GILLAN

was called as a witness on behalf of the Florida Competitive Carriers Association and, having been duly sworn, testified as follows:

DIRECT EXAMINATION

BY MS. KAUFMAN:

Q Mr. Gillan, would you state your name and business address for the record, please.

A Joseph Gillan, P.O. Box 541038, Orlando, Florida 32854.

Q And on whose behalf are you testifying in this proceeding?

A The Florida Competitive Carriers Association.

Q Mr. Gillan, did you cause 27 pages of rebuttal testimony to be filed in this proceeding?

A Yes.

Q And do you have any changes or corrections to that testimony?

A Yes, I do.

Q Would you give them to us now, please.

A Yes. And before I take you to them

specifically, let me give a small preamble. In the time since my testimony was filed, some new information came to light from a couple of sources, principally BellSouth's rebuttal testimony, which updated a number of their numbers and indicated that some information that they had filed at the FCC was in error. So unfortunately, if I take the new information that BellSouth has presented in their rebuttal testimony and flow it through to every part of my testimony, we would be here most of the afternoon making changes. So with your indulgence, I would like to just make changes to the key points, because the reality here is, while the numbers all get changed somewhat, the basic conclusions do not. But there are a couple of areas where I think that the changes should be incorporated.

The first change would be on Exhibit JPG-1.

Q Mr. Gillan, if I could interrupt you, let's do the testimony changes first and then move to the exhibits.

A Yes, Ollie.

Page 12, there's a typo on line 11. Where it indicates BellSouth's total operating revenues in Florida during 2000 were roughly 1.4 billion, that

should be 4.1 billion.

And then secondly, on page 22, line 6, instead of 438 million annually, it should be 274 million. And on line 19, the $5.50 per month should be $3.34 per month.

Q With those corrections, Mr. Gillan, if I asked you the questions in your prefiled testimony today, would your answers be the same?

A Yes.

MS. KAUFMAN: Mr. Chairman, with those amendments, I would ask that Mr. Gillan's prefiled testimony be inserted in the record as though read.

CHAIRMAN JACOBS: Without objection, show Mr. Gillan's testimony is entered into the record as though read.

I. Introduction And Witness Qualification

Q. Please state your name, business address and occupation.

A. My name is Joseph Gillan. My business address is P. O. Box 541038, Orlando, Florida 32854. I am an economist with a consulting practice specializing in telecommunications.

Q. Please briefly outline your educational background and related experience.

A. I am a graduate of the University of Wyoming where I received B.A. and M.A. degrees in economics. From 1980 to 1985, I was on the staff of the Illinois Commerce Commission where I had responsibility for the policy analysis of issues created by the emergence of competition in regulated markets, in particular the telecommunications industry. While at the Commission, I served on the staff subcommittee for the NARUC Communications Committee and was appointed to the Research Advisory Council overseeing the National Regulatory Research Institute.

In 1985, I left the Commission to join U.S. Switch, a venture firm organized to develop interexchange access networks in partnership with independent local telephone companies. At the end of 1986, I resigned my position of Vice

President-Marketing/ Strategic Planning to begin a consulting practice. Over the past twenty years, I have provided testimony before more than 35 state commissions (including Florida), four state legislatures, the Commerce Committee of the United States Senate, and the Federal/State Joint Board on Separations Reform. I currently serve on the Advisory Council to New Mexico State University's Center for Regulation.

Q. On whose behalf are you testifying?

A. I am testifying on behalf of the Florida Competitive Carriers Association (FCCA). FCCA is a broad coalition of carriers and their representative associations committed to bringing the full range of competitive services to consumers and businesses in the Southeast, including Florida.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my testimony is to provide rebuttal to the testimony of BellSouth witness Cynthia K. Cox and to affidavit of Victor K. Wakeling, attached as Exhibit CKC-4 to Ms. Cox's testimony. By giving the Commission an overview of competitive conditions in the Florida local exchange market. I will also address the competitive harm that would occur if BellSouth prematurely receives authorization to provide interLATA services in Florida. BellSouth's assertion in

its testimony that local competition in the Florida market is meaningful – much less "irreversible" – is contradicted by the facts. Local competition in Florida remains nascent, in large measure due to the success of BellSouth's obstructionist tactics over the past five years.

Before BellSouth is granted permission to offer interLATA services in Florida, the Commission must confirm that BellSouth provides entrants access to its network on terms that are nondiscriminatory and cost-based. The most telling evidence in this regard should be the emergence of measurable and meaningful local competition. However, as I explain in more detail below, the observed level of competition in Florida does not support such a finding for a number of reasons, including the rates charged by BellSouth for network elements, as well as BellSouth's provisioning policies and practices.

Not only does the level of competition *today* not justify BellSouth's claim that it has opened its markets to entry, the most likely effect of BellSouth gaining interLATA authority would be for it to gain even greater dominance in the *future*. Unless entrants are assured nondiscriminatory access to the inherited network, only BellSouth will be positioned to offer packages that combine local service with other products (such as Internet access and long distance) broadly across the market. BellSouth evidentially agrees, for its CEO has been quoted as predicting that BellSouth would quickly win "in the 25 to 30 percent market share range,"

with a "quick couple of billion" flowing to the bottom line as profit (*See* "BellSouth Remains Confident, But Cautious About Growth," Atlanta Journal and Constitution, June 3, 2001).

Granting BellSouth interLATA authority will increase its market position at the very *same* time that the Act's sole financial incentive to comply with its market opening provisions is removed. It is critical, therefore, that the Commission establish the means to prevent backsliding, where compliance has been achieved. Of course, the most effective means to such an end would be to place BellSouth's retail operations on the identical footing as any other ALEC through a structural solution. In the absence of a permanent solution that would correct BellSouth's underlying incentives, however, the Commission should establish administrative remedies to curb anticompetitive conduct to the extent possible.

Q. Please summarize the principal conclusions of your testimony.

A. The principal conclusions of my testimony are that:

* BellSouth exaggerates the level of local competition in Florida, ignoring critical trends and limitations that affect each of the three entry strategies: resale, UNEs and ALEC facilities.

* Resale activity offers little probative value because evidence suggests it is neither viable nor irreversible. The evidence suggests that resold lines in Florida have declined approximately 30% *just in the first quarter of 2001.*

* UNE-based competition is beginning to emerge, but is still roughly only 2.0% of the market (at most). UNE-share is the most critical measure of Section 271 compliance because UNEs *are* the nondiscriminatory access to the existing network that is the focal point of the federal Act.

* BellSouth's UNE rates preclude UNE-based competition in Florida. In fact, not even BellSouth could profitably offer local service if required to lease UNEs at the rates that it charges competitors.

* BellSouth's estimate of facilities-based activity ignores the unique traffic pattern for many ALECs that indicates only limited competition for a select customer segment.

* BellSouth has offered no evidence concerning its ability to support the resale of advanced services, as required by the *Ascent Decision* (Association of Communications Enterprises v. FCC, 235 F.3d 662 (D.C. Cir. 2001).

II. Competitive Conditions in the Florida Local Market

Q. What should be the starting point of the Commission's review in this docket?

A. The starting point of the Commission's analysis should be a review of the actual level of competition in Florida. It is BellSouth's obligation is to provide "actual evidence demonstrating ... *present compliance* with the statutory conditions for entry, instead of prospective evidence that is contingent on future behavior." Present compliance is the clear and established standard for review of regional Bell operating company compliance with the Act (*See In the Matter of the Application of Ameritech Michigan Pursuant to Section 271 of the Communications Act of 1934, as amended, to Provide In-Region, InterLATA Services In Michigan*, Memorandum Opinion and Order, Docket 97-137, ¶55, August 19, 1997). Actual commercial activity offers the most important measure of compliance because such competition is the goal of the Competitive Checklist itself. Where the observed level of competition *contradicts* BellSouth's claims as here, however, the Commission must begin its investigation with a healthy dose of skepticism.

Q. Have you reviewed BellSouth's claims regarding the level of local competition in Florida?

A. Yes. Importantly, BellSouth's empirical estimates of competition are inconsistent with other evidence, while its anecdotal information relies heavily on the early (and presumptive) announcements by ALECs that have either experienced financial difficulty or deployed technologies that fell well short of expectations. Far from illustrating a competitive local marketplace in Florida, the underlying data demonstrates that the promise of a competitive local market in Florida remains an elusive goal.

Q. Please summarize BellSouth's claims concerning the level of local competition in Florida.

A. According to BellSouth, significant competitive activity is occurring using each of the three basic entry strategies: resale, unbundled network elements (either alone or in combination), and ALEC facilities. Exhibit No. ___ JPG-1 summarizes BellSouth's claims regarding local entry under each of these strategies. (The term "facilities-based" is frequently used in the BellSouth testimony to include lines served by the lease of facilities as network elements, it is more useful to consider each strategy separately. Accordingly, Exhibit No. ___ JPG-1 separately lists UNEs from lines served exclusively over ALEC facilities.)

Based on these statistics -- and a number of anecdotal observations -- BellSouth claims that competition in Florida is not only "economically viable," but "irreversible" as well. As I explain below, however, it is important to understand the trends affecting each of these entry strategies, as well as whether BellSouth's claims are reasonable in light of other information. When scrutinized more carefully, it is clear that BellSouth's claims are exaggerated and that the existing level of competition does more to challenge BellSouth's assertions than confirm its compliance.

Q. Does BellSouth's analysis provide an accurate portrayal concerning the "economic viability" and "irreversibility" of entry?

A. No. First, it is important to appreciate that the majority of the competition that BellSouth points to – accepting, for the moment, BellSouth's data – consists of the ALEC-deployed facilities. In the area where BellSouth's Section 271 compliance is most critical – that is, offering nondiscriminatory access to its inherited network (i.e., UNEs) – competitive market share remains quite small. Moreover, BellSouth's analysis offers no information concerning trends impacting competition.

Exhibit JPG-2 documents the trend in competition in Florida (under resale and UNEs) that BellSouth has reported periodically. As Exhibit No.___ JPG-2

illustrates, resale competition is declining rapidly, and at a rate far faster than gains in either UNE-P or loops individually. The number of resold lines declined by roughly 30% *in just the first quarter alone*. Nearly 25% of the competitive activity that BellSouth claims exists – and an even greater percentage of the *actual* competition once proper adjustments are made to BellSouth's estimate of facilities-based entry – are based on an entry strategy that is not only not irreversible, it is in full reverse already.

Q, Why is resale in decline?

A. There are clearly a number of explanations for the vanishing resale-based competitor. First, there are the unattractive economics. With only a small margin between the wholesale and retail rate, most carriers that experimented with resale either moved to a different strategy or fell into bankruptcy. Further, what negligible margins exist now may be subject to further reduction in light of the Eight Circuit Court of Appeals vacation of the FCC's avoidable cost methodology.

Moreover, resale neither permits a carrier to innovate, or effectively offer integrated local/long-distance packages. This latter limitation on service-resale arises because BellSouth continues to assess access charges on the reseller's lines.

As a result, the reseller is limited in the toll rates it may offer because it must pay access on each of its customer's long distance calls to BellSouth.

Q. Does the level of UNE-based competition indicate that Florida's local market is irreversibly open to competition as BellSouth claims?

A. No. First, it is clear that UNE-based entry is the most likely path to bring competitive benefits to the average Florida consumer or small business. UNE combinations, in particular, hold the most promise in this regard. UNE volumes are also critical because UNEs are the means by which carriers obtain nondiscriminatory access to the existing network to offer services in competition with BellSouth. To date, however, UNE-based competition in Florida is only just beginning to make any headway.

Q. What share have UNE-based forms of entry accomplished in Florida?

A. The two most prevalent forms of UNE-based entry are UNE-Loops (combined with an ALEC-provided local switch) and UNE-Platform (loop combined with unbundled local switching). As shown in Exhibit No.__ JPG-3, UNE-based entry has achieved roughly a 1.5% market penetration in Florida after more than five years of competition, once *all* of the appropriate BellSouth lines are included in the analysis.

Q. Why did you compute the market share in Exhibit No. __ JPG-3 by comparing ALEC lines to BellSouth's switched lines alone, as well as to BellSouth's total lines?

A. BellSouth appears to have computed each of the market share statistics in its testimony by comparing the ALECs' *total* lines to BellSouth's *switched access* lines alone. This calculation inflates the ALECs' share by sharply reducing the number of lines served by BellSouth, excluding from the analysis so-called "special access" lines. The "special access line" label is largely a consequence of the interLATA line-of-business restriction that BellSouth seeks to have removed in this proceeding.

In simple terms, customers make two types of calls: local calls and long distance calls. Many larger customers separate these calls between two types of connections – so called "switched access lines" (for calls that BellSouth can handle), and "special access lines" (for calls that BellSouth cannot). This distinction, however, does not fundamentally change the service the customer is receiving, it only changes which carrier (BellSouth or a long distance company) terminates the call. Significantly, ALECs typically offer integrated services that render any distinction between "switched" and "special" lines irrelevant – ALEC lines are *both* "switched" and "special" because they handle both local and long distance calls. Consequently, to accurately compare ALEC lines to BellSouth

lines requires that *all* of BellSouth's lines be included, with the result being a ALEC market share (using UNEs) of approximately 1.5%.

Q. Are there other measures that quantify the degree of UNE-based competition?

A. Yes. Exhibit No.___ JPG-3 provides an additional measure to place the level of UNE-based competition in perspective. During 2000, BellSouth derived approximately $57 million in annual revenue from the lease of UNEs to competitive entrants in Florida. In comparison, BellSouth's total operating revenues in Florida during 2000 were roughly $1.4 billion. Thus, the lease of UNEs provided only 1.4% of BellSouth's revenues in Florida as recently as just last year.

Q. Why do you believe that UNE-based competition has failed to develop in Florida?

A. There are a number of reasons why UNE-based competition has failed to develop. The first is quite simply that the rates charged to lease network elements in Florida are high. As I explain in more detail later in my testimony, not even *BellSouth* could afford to offer service in Florida if it had to lease UNEs from itself to do so.

Second, BellSouth has been very slow to provide access to network combinations, delaying the availability of this important strategy until February of last year. (*See* BellSouth Ex Parte, Federal Communications Commission, CC Docket 96-98, October 13, 2000). Consequently, even the most fundamental forms of UNE-based competition – that is, entry using the UNE-Platform – was delayed for approximately four years by BellSouth's refusal to honor its legal obligation.

Moreover, as I discuss in more detail below, BellSouth continues to oppose granting entrants access to new combinations of network elements, for no reason other than the disruption such a policy can impose on ALEC operations, increasing the competitor's cost and decreasing its quality. The compounding effect of BellSouth's high prices, intransigence, and threatening behavior have together frustrated the development of UNE-based competition in Florida (as elsewhere).

Q. Have you also reviewed BellSouth's estimate of the level of competition using the third and final entry strategy, i.e., the exclusive use of ALEC facilities?

A. Yes, and my analysis demonstrates that BellSouth has significantly overstated this form of competition as well. BellSouth claims that ALECs serve between 363,567 and 480,790 lines over their own facilities. If even *one* of these estimates

were accurate, then BellSouth should be able to confirm such a sizeable ALEC share by the number of interconnection trunks between itself and ALECs, as well as the traffic volumes exchanged between them.

Q. Have you attempted to estimate the number of facilities-based lines using these interconnection statistics?

A. Yes. Exhibit No.___ JPG-4 estimates the level of facilities-based competition based on the number of interconnection trunks and their usage, adjusted to remove the unique traffic characteristics of ISP customers. It is well understood that ALECs have been successful marketing to this particular customer group, but it is important that this limited success with a single customer segment not distort an understanding of their market share overall. The ISP customer segment was unique, entering the market with substantial initial needs at precisely the same time as ALECs. As such, success in this customer segment does not answer the more fundamental question as to how ALECs are faring attempting to win a share of BellSouth's established customer base. Moreover, the barriers that ALECs must overcome to serve the more geographically distributed base of established customers gives greater insight to the true extent of local competition than their success serving ISPs.

Q. What interconnection statistics did you evaluate to estimate the facilities-based share of this more conventional market?

A. First, I computed ALEC market share by comparing ALEC originated minutes (as measured over the interconnection trunks to BellSouth) to BellSouth's originated minutes. This calculation (shown on Exhibit No. __ JPG-4) indicates that ALEC facilities-based market share stands at roughly 1.7%. This share calculation would overstate the ALECs' actual facilities-based share, however, because it would also include traffic from UNE-Loops. UNE-Loops connect directly to an ALEC switch and would send traffic through interconnection trunks in the same manner as a facilities-based line. Even ignoring this overstatement, however, it is clear that the level of facilities-based competition in Florida remains quite small.

Second, I attempted to estimate the number of facilities-based lines using a methodology quite similar to that of BellSouth – that is, by looking at the number of interconnection trunks. To eliminate the effect of ISP customers, however, the analysis: (1) reduced the number of interconnection trunks by the number of trunks used to serve terminating traffic, (2) converted the trunks to lines, and (3) subtracted the number of UNE-Loop arrangements to avoid double counting. There is certainly some uncertainty as to what factor to use to convert trunks to lines. BellSouth's analysis uses a 1-to-1 ratio. Exhibit No.__ JPG-4 presents the results from two conversion ratios, both substantially more aggressive than that

used by BellSouth: a 4-to-1 ratio and a 10-to-1 ratio. Even with the much higher ratio of 10-to-1, however, ALEC facilities-based market share would only be approximately 2.2% of the market.

Finally, I computed the number of lines implied by the ALECs' originating minutes, assuming that ALEC lines had the same average usage characteristics as BellSouth lines. This calculation estimates roughly 116,000 ALEC lines served by ALEC switches, which means it would include lines served using UNE Loops (and therefore overstates ALEC facilities-based share).

While it is admittedly difficult to determine precisely the number of lines served by ALECs over their own facilities using publicly available information, none of the interconnection measures supports the level claimed by BellSouth. Rather, the maximum level of facilities-based competition (adjusted for activity that is likely to be ISP related) is approximately 2%.

Q. Based on these trends and data ignored by BellSouth, have you prepared a corrected estimate of ALEC market share in Florida?

A. Yes. Exhibit No.___ JPG-5 summarizes the estimated ALEC share after (1) adjusting for the unique traffic pattern of certain ALEC customers, (2) updating the resale and UNE data based on Mr. Milner's testimony, and (3) including all of

BellSouth's lines in the analysis. This corrected analysis indicates an ALEC share in the range of 3.7% to 5.5%.

Q. Do you have any other evidence that confirms your estimate that ALEC market share in Florida is in the range you estimate (i.e., roughly half of what BellSouth claims)?

A. Yes. The above analysis simply measures local activity in "lines." The FCC recently released its statistics on local competition (Local Competition Report, May 2001) that quantifies – or, as I explain below, *partially* quantifies – competitive activity on the basis of "voice grade equivalents." Voice Grade Equivalents (VGEs) are a larger measure than lines because they are adjusted to reflect the different capacity capabilities of different types of "line." Because of the growing popularity of higher capacity digital services, voice grade equivalent measures capacity in 64kbps (i.e., the capacity needed for a single voice connection) increments.

Because of the way that the FCC tabulated/collected ILEC data, however, the Local Competition Report essentially compares <u>all</u> of the ALEC voice grade equivalent lines to <u>only</u> the ILECs' switched access lines, thereby ignoring the ILECs' special access lines as well as their voice-grade equivalent. Because many of the ILECs' higher capacity services are sold as "special access," the

FCC's analysis eliminated most of the ILECs' higher capacity services. Exhibit No.___ JPG-6 demonstrates that this results in a substantial under-counting of ILEC "lines," even before these lines are converted to "voice grade equivalents."

Because ALECs do not generally draw the same distinctions in their offerings as the ILEC – for instance, ALECs typically offer integrated products that blur any distinction between switched and special access – there is no evidence to indicate that not all ALEC lines have been counted (and counted as voice grade equivalents) in the FCC's report. It is possible, however, to estimate BellSouth's voice-grade equivalents in Florida using regionwide data that BellSouth has previously made available with its quarterly earnings announcements. Exhibit No.__ JPG-6 converts BellSouth's Florida lines to a Florida-specific VGE estimate, a calculation that indicates that ALEC market share once both ALEC and BellSouth statistics are placed on an equivalent footing – that is, the comparison measures voice grade equivalents (VGEs) – is approximately 6.5%.

Q. Are there any other claims regarding local competition made by BellSouth that you would like to address?

A. Yes. In addition to inflating its "quantified" estimate of local competition, BellSouth also exaggerates the potential for future technologies to bring additional competition. For instance, consider the prominence that BellSouth

places on Lucent's "PathStar" technology (Wakeling Affidavit, page 18, emphasis in BellSouth):

> Network Telephone ...will deploy Lucent's PathStar Access Server ... The PathStar solution will enable service providers to **deliver eight or more telephony subscriber lines and high-speed data services over a single unbundled local loop.**

Remarkably, BellSouth points to this technology, even though it is well known that Lucent has abandoned the project. The Commission should place little weight on *predictions* of competitive activity – predictions that have disappointed investors as well as policymakers.

III. More Needs to Be Done

Q. Are there additional actions needed to bring the benefits of local competition more broadly to Florida consumers?

A. Yes. As I explain below, the Florida Commission should place particular emphasis on establishing cost-based rates for UNEs, requiring BellSouth to provision UNEs in most efficient manner possible, and adopting measures to prevent backsliding.

Q. Is there evidence to demonstrate that BellSouth's UNE prices are not cost-based?

A. Yes. To provide a benchmark for comparison, I estimated what BellSouth's financial results would look like (for 2000), assuming that it was required to lease UNEs to offer its conventional switched services (i.e., local service and access). The analysis assumes that BellSouth offered service leasing the UNE-Platform, with the average UNE-P cost developed assuming 1,000 local minutes, 50 intraLATA toll minutes and 200 interLATA toll minutes (with 290 local calls and 45 toll/access calls) per month. Based on BellSouth's ARMIS data detailing BellSouth' local calling and Dial Equipment Minutes, these would appear to be conservative assumptions for an average user.

As detailed in Exhibit No. ___ JPG-7, and again based on BellSouth's actual ARMIS data for 2000, I constructed an estimate of BellSouth's Florida operating income assuming that BellSouth's actual levels of customer and corporate operations expense were unchanged, with its network cost replaced by the cost to lease the UNE-Platform. Because BellSouth would be leasing UNEs rather than owning the network, the analysis does not include any expense for depreciation, or any plant-related operating costs.

As shown in Exhibit No.__ JPG-7, BellSouth's "UNE-self" would have run squarely in the red, even though it actually enjoyed a net income of more than $1.8 billion. Clearly, if *BellSouth* could not even operate in Florida if required to lease the existing network, it should not be surprising that ALECs have failed to achieve any significant competitive gains.

Furthermore, because the above analysis does not include any of the costs that it would incur to order UNEs, the Exhibit provides a conservative estimate of the expenses that BellSouth would actually incur if it attempted to compete leasing network elements from itself. For instance, the analysis does not include the substantial non-recurring costs that would be incurred each year to serve new lines and migrated customers. It is also useful to understand that the analysis in Exhibit 7assumes that BellSouth does not cannibalize its retail revenues by offering selective discounts or special promotions. As the Commission is aware, BellSouth is offering lower prices to some customers, such as those it "wins back" from ALECs. Between the additional charges that were not included, and the potentially lower revenues that BellSouth would evidentially accept from its *favored* customers, the projected net income in Exhibit 7 likely overstates what BellSouth would actually obtain.

Q. Can you provide an example of a UNE-rate that is not plausibly cost-based?

A. Yes. As an illustration, consider the rates that BellSouth proposes to impose simply to *provide* the call detail records needed for billing. These rates are ODUF (for the provision of daily usage files) and ADUF (for the provision of access usage files) and would appear to apply on a per-message basis. Applying these charges to BellSouth's reported calling volumes in Florida for 2000 produces a "cost" simply for the usage information of $438 million annually. See Exhibit No. __ (JPG-8).

Q. Are BellSouth's proposed charges for daily usage files out-of-line with the rates charged by other RBOCs?

A. Yes. Also shown in Exhibit No. ___ JPG-8 is a table comparing BellSouth's Florida rates to the rates charged by Ameritech (Michigan) and Qwest (Arizona), as well as the average monthly cost per switched access line resulting from these charges (based on Florida usage data). The practical effect of this inflated charge is that any ALEC requiring daily usage information to bill its customers, or audit its UNE bills (or perhaps even comply with CALEA obligations) would see its costs increase – and, therefore, would need to increase its rates to end-users – by more than $5.50 per month just to obtain billing information. Given that the UNE-Platform is the network arrangement used by carriers offering competitive services to the typical analog customer, it is no wonder that so little competition has developed in Florida.

Q. In addition to pricing, what other actions should the Commission take to foster local competition?

A. I recommend that the Commission remain focused on three areas. First, the Commission should make clear BellSouth's obligation to fully support UNEs, including its obligation to provide access to any UNE combination – including so-called "new combinations" – that it ordinarily provides to itself. Second, the Commission must make sure that xDSL services are available for resale under wholesale-arrangements. Finally, the Commission should evaluate additional measures to assure that the market remains competitive in a post-271 environment by investigating structural remedies to BellSouth's conflicted incentives, in addition to its review of performance measures.

Q. What action should the Commission take concerning BellSouth's obligation to support "new" combinations of network elements?

A. Local competition depends upon *efficient* provisioning systems structured to minimize cost and accommodate volume. As the Commission is aware, BellSouth refuses to combine network elements that it ordinarily combines for itself, thereby increasing costs and decreasing carrier reliability. Consumers will never benefit from policies that make local competition more complex, more

cumbersome and more expensive. If the Commission wants local competition – particularly local competition for smaller customers -- then it must be committed to policies that make entry more simple and cost-effective.

Q. Why is the issue of "new" combinations so important?

A. The simple answer is that consumers and businesses frequently add lines and change locations. If this process is made complex and expensive, then BellSouth will successfully disadvantage its rivals by increasing the cost of competitive alternatives. Consider the following statistics. According to the US Census, nearly 16% of the population moved in 1998 (Source: Geographic Mobility Update, US Census Bureau, June 2000). In addition, businesses are constantly adding and deleting locations. Census data for Florida indicates that nearly 27% of all business locations open or close in a year. Any strategy that artificially inflates the cost to serve such a mobile population – and this is the clear intent of BellSouth's proposal to refuse offering "new combinations" – will harm both competition and consumers.

Q. If BellSouth will not combine elements for entrants, how does it propose new entrants would serve such customers?

A. As I understand BellSouth's proposal, BellSouth would construct new "combination areas" in its central offices for the sole purpose of relegating ALEC "combinations" to these areas. Rather than simply combining elements for entrants at those points in the network (such as existing cross-connect frames) that BellSouth has established for precisely this purpose, BellSouth is proposing to create new environments where entrants would do the same work. Under BellSouth's proposal, entrants would combine elements in collocation space, or use assembly "rooms" or "points" specially constructed for this purpose. These additional steps – creating the assembly room/point, and then extending requested elements via new facilities and additional cross-connections – does nothing but create increased cost and additional points of potential failure.

Importantly, even BellSouth itself would do "more combining" by cross-connecting the requested elements to the facilities necessary to extend the elements to the ALEC, not to mention the cost -- in time, money and space – to create the associated "assembly areas." Expending resources for the sole purpose of achieving a less reliable and more costly environment is a wasteful exercise that can find no support in economics, common sense or sound policy.

I would also note that there is no evidence that such alternatives are useable by entrants. To my knowledge, these options lie dormant in other states where they have been offered. For instance, while Verizon provided assembly rooms and

assembly points in New York, it has acknowledged that "[o]nly one [competing carrier] made any use of this offering in New York, and that use . . . has been discontinued." (See Memorandum Opinion and Order, Federal Communications Commission CC Docket 01-9, April 16, 2001, footnote 390). Moreover, no RBOC has successfully obtained interLATA authority without at least a voluntary commitment to combine for entrants those elements that it ordinarily combines for itself.

Q. What action should the Commission take with respect to BellSouth's obligation to support the resale of advanced data services?

A. As indicated earlier, the *Ascent Decision* makes clear that BellSouth must permit the resale of its advanced data services at a wholesale discount. BellSouth has not shown through commercial usage or other information, however, that it is prepared to honor this obligation. The Commission should require that BellSouth fully document its ability to support the resale of advanced services such as xDSL.

Q. Should the Commission prepare to take additional measures, even if it (ultimately) endorses BellSouth's application for interLATA authority?

A. Yes. It is important to appreciate that the Commission's oversight does not end with a 271 application – indeed, quite the opposite, the Commission should expect enforcement issues to become even *more* pronounced. The fundamental assumption of the Telecommunications Act is that incumbent LECs (such as BellSouth) would ultimately establish "normal" supplier-customer relationships with ALECs. The reality has demonstrated, however, that BellSouth's conflicting incentives as supplier and competitor preclude such a relationship from forming. As a result, the Commission must be prepared to increase its vigilance and regulatory oversight – or, more simply, adopt a structural approach that would align BellSouth's incentives with the Commission's objective of a competitive local market.

Q. Does this conclude your testimony?

A. Yes.

BY MS. KAUFMAN:

Q Mr. Gillan, you have eight exhibits; correct?

A That is correct.

MS. KAUFMAN: Mr. Chairman, could I have a number for those? We can make them a composite.

CHAIRMAN JACOBS: Exhibit 50.

(Exhibit 50 was marked for identification.)

BY MS. KAUFMAN:

Q And, Mr. Gillan, you have a number of changes to those exhibits; correct?

A I have a few.

Q Okay. If you would tell us those, please.

A On Exhibit JPG-1, where it says "Relative ALEC share," to update that to reflect BellSouth's revised numbers, the market share for resale should be 2.5%, not 2.6%; the market share for unbundled network elements should be 2.1%, not 2.2; and the market share for other facilities should be 5.5, not 5.7, for a total market share of 10.1.

The other change based on newer information from BellSouth would be to Exhibit JPG-8.

This week in North Carolina, BellSouth filed rebuttal testimony that indicated or clarified their rate application rules for how they bill ALECs

for billing information. That rebuttal testimony, which they didn't include in the rebuttal testimony filed here, but I'm presuming that once they figured out their own rate application, they're going to hold to it in Florida as well as North Carolina.

This chart on the table on the top, the number of minutes shown for terminating local should be zero, which would reduce the annual cost in the lower right-hand corner from 438 million to 274,573,120, which would mean in Florida the average cost that BellSouth would impose on a UNE-P entrant just for the billing information drops from $5.53 to $3.34.

And then the final change, based not on BellSouth's new information, but based on additional research I have done since this testimony was filed, the bottom table -- and I'll explain this a little bit more in my summary. On Exhibit JPG-4, which deals with attempting to estimate how many lines ALECs serve using their own facilities or their own switches, in the bottom table I derive the number of lines that ALECs serve on their own switches by basically looking at the minutes that ALECs originate in Florida and divide that by the average usage for an average customer. I have -- to be as conservative as

possible, to estimate as high a market share of these regular customers as possible, I found an average usage for Florida from BellSouth's universal service filing at the FCC of 1,140 minutes. So substituting for 1,458 the value 1,140 would produce an estimate of CLEC lines, ALEC lines of 148,902 instead of 116,429.

In addition, on this exhibit I would like to strike the table that appears immediately before that, which attempts to estimate the same piece of information by, instead of looking at how many minutes ALECs have, but how many circuits they have between BellSouth and themselves. I concluded after looking at this data for a variety of states that there's simply no reliable way to get a sense of ALEC market share looking only at the size of the connections between them and BellSouth.

Q So on JPG-4, the Commission should strike the table called "Facilities-Based ALEC Estimate"; correct?

A Based on interconnection trunks.

Q Okay. Does that conclude the changes to your exhibits?

A Yes, it does.

Q Thank you. Have you prepared a summary of your testimony, Mr. Gillan?

A Yes, I have.

Q Okay. If you would give it as soon as I put the board up here.

A Okay.

MS. KAUFMAN: And, Commissioners and Counsel for BellSouth, this is the same information that appears on JPG-1 that Mr. Gillan revised with the deletion of the middle two columns.

BY MS. KAUFMAN:

Q If you would give your summary.

A Yes. Good afternoon. And I'll try and keep it brief and actually focused on the main point, which is fundamentally, in my mind, this chart is the report card. It's the report card of is this Act working, is BellSouth making the things available for people to compete in Florida, because this chart is what they say is happening in the marketplace.

Now, to a large extent I'll agree with some of these numbers, and I'll disagree with one of them, and I'll explain to you why. But the reason I think this is fundamentally important to you is that at the end of the day, it's not the FCC that's going to make the local market competitive, and it is certainly not the FCC -- the minimal application of FCC rules isn't going to make the market competitive. It's only going

to happen if this Commission makes that its policy objective and makes sure that the things that are necessary for that existing network to be shared actually get implemented.

According to BellSouth, the report card it has given itself for the past five and half years is that ALECs have 10% of the marketplace. Well, let's look at each one of these individually.

Resale. BellSouth says resale is a thriving business in Florida, although they would agree and the rebuttal testimony points out that it's flat. There hasn't been any significant icrease in resale. It reached 2-1/2% of the market, and then like those heart monitors in the ER, it flat-lined. Well, just like the heart monitor that flat-lines, when you have a competitive marketplace that gets a 2-1/2% share and flat-lines, that's death. Resale has 2-1/2% in Florida, and it isn't going anywhere else.

Network elements BellSouth says has 2.1% of the market. That's an absolutely critical statistic, because the whole core point of the Telecommunications Act was to recognize that BellSouth has a 125-year head start by developing that existing network that they developed during a period of protected government regulation. And the Telecom Act basically gave them a

deal: We'll let you offer long distance if you take the economies of scale and scope in this inherited network and you make them available to other people so that not just you can offer services in these states on that network, but that others can as well. The way that network is supposed to be made available to the rest of this industry is through the use of unbundled network elements. That's how we get, CLECs get access to those economies of scale and scope.

This report card says after five and a half years with supposedly equal access to this existing network resource, the entire CLEC community has achieved a cumulative market share of 2.1%. There is no economic measure or rational common-sense explanation for that other than nondiscrimination isn't there. That is a failing grade.

Finally, BellSouth says ALECs have more than half -- or have 5-1/2% of the market using their own switches -- their own facilities, with their own facilities, excuse me, because they could be using some UNEs with their switches. That is the one number I'll disagree with them on. And the fundamental reason I'll disagree with them on it is because I believe all their statistics are distorted by the presence of information service providers and the

limited gains, or maybe even the dramatic gains that CLECs have had serving that one type of customer, because while nobody can measure precisely and get the information and know exactly what that number is, we really have one great source of information to judge how many customers, regular everyday conventional customers the ALECs serve out there on those networks, because when those ALECs serve those customers, they interconnect with BellSouth.

Now, you can look at that interconnection pipe between the ALEC world and BellSouth, and you can use that information to try and get a sense of, well, what are the ALECs providing. By and large, the difference I have with BellSouth is that BellSouth likes to look at that pipe and make a big deal of how big is the pipe, how many circuits does it have, and then try and convert those circuits to some estimate of the number of lines these ALECs serve.

The difference between their view and mine is, I believe it's more important to look inside that pipe and see how much traffic is going across it, and which direction is it flowing. And when you look inside that pipe and look at the traffic, you can make a simplified assumption that the traffic that is coming from the ALECs, that's coming from their

customers, that represents traffic from conventional users, the types of people that are the residential marketplace, are the small business marketplace, that get phone service so they can make phone calls.

So you can look at those minutes that come from those ALECs and just say, "If there's this many minutes coming over to BellSouth from these ALEC networks, what kind of average -- how many average users do they have over there?" Because all the minutes that come from BellSouth and go to those ALECs, most of those minutes are going to be to Internet service providers. And there's no question that the ALEC community has been successful in that customer segment.

But it seems to me that the bottom line of what -- the public policy you should be trying to achieve and what you should be judging this Act on is, are regular residential, regular small business, regular business customers getting competitive choice. And when you look at the minutes that come from those ALECs to BellSouth and you simply say, "How many average users do those minutes represent," that market share drops from 5-1/2% to roughly 0.5 or 0.6%. It's trivial.

And so the question that you want answered

is, how much competition do I have for regular Florida consumers? You can add up 2-1/2, 2.1, and 0.6 and come up with about 5.7%. And my main point of my testimony is to tell you, after five and a half years, if that's all you've got, you've got problems that you need to solve before you take the one thing, the one reason BellSouth has to listen to what you want them to do.

That concludes my summary.

COMMISSIONER JABER: Mr. Gillan, I'm not clear on something you said. What percentage of those percentages can we attribute to market share in the residential section? We don't know that; right?

THE WITNESS: I didn't try to split it between business and res. I was just really looking at what percentage of this represents typical phone services sold to typical consumers, whether they're residence or business, analog services, not digital data services, but just analog services. And I was attributing all the resale, all the UNEs. And that's probably an overstatement in the UNEs. And then based on the minutes we saw, it turns out the other facilities would add about another half to six-tenths of a percentage point.

COMMISSIONER JABER: But you're suggesting

that one of the tests we should apply is what percentage of the residential Florida market is being served by ALECs.

THE WITNESS: I wouldn't use the word "residential," quite frankly. I would use the word "analog market," the conventional market, because in my mind -- it's not just in my mind. It's not just residential customers that ALECs are having a hard time serving. It's anyone who's got a few copper phone lines. It has been absolutely shown that the only viable way to serve those customers is through a UNE-P arrangement, and that would be true for residential customers. In Florida today, basically 99.9% of the residential customers fall in that category.

But if you go look at the business market, it's about 75% of the business lines too. You know, if you ride down Apalachee Parkway and look at all those businesses, those people are just as hard to serve as residential customers, because from a telephony point of view, they look about the same. They've got a couple of phone lines. They don't need a DS1 with full stream-in video. They buy phone service. And that part of the market is the part of the market that you have to get competition into, or

this whole thing crashes.

MS. KAUFMAN: Mr. Gillan is available for cross examination.

CHAIRMAN JACOBS: Very well. Ms. Foshee.

MS. FOSHEE: BellSouth has no questions for this witness.

CHAIRMAN JACOBS: Staff.

CROSS EXAMINATION

BY MS. HELTON:

Q Good afternoon, Mr. Gillan. I'm Mary Anne Helton. I'm an attorney here on the staff.

A Good afternoon.

Q Under Section 271(c)(1)(A) of the Federal Act, which has been termed Track A, do you know whether there is any requirement for BellSouth to demonstrate that there is more than one facilities-based ALEC that provides service to residential and business subscribers?

A By the FCC? No, I don't think so. I think by what Congress intended, I would answer that question yes. If you look at the congressional history on Track A, it's pretty clear that they wanted that there so that there would be a commercial test to help the State Commission decide that the competitive checklist is being met. In my mind, I don't see how

you can determine that BellSouth has done all the things they were supposed to do under the competitive checklist if all you had was one facilities-based provider serving a few lines.

But I will acknowledge that the FCC has taken a very narrow interpretation. You can meet Track A, according to the FCC, without there being any significant competition.

I guess the question for the Florida Commission is, do you want to see this satisfied without there being any competition in Florida, because that's the outcome you're going to have to live with.

CHAIRMAN JACOBS: One of the things that -- this may be a question I may need to ask for some broader input on, but let me pose this to you. One of the things that -- in my meetings with the people who are testing OSS and so forth, they raised that very question. When you look at what your OSS test results should look like, you should have some idea of what manner of competition is possible and prevalent in your marketplace. And when I went back and thought about it, I came up with -- well, I decided I didn't even know that much.

Now, what do we do to ascertain -- I mean,

we have dueling figures, I think you can agree, right now.

THE WITNESS: No, actually, I don't think you do have dueling figures. I think you have a difference of what weight you should give different information. I mean, the 2-1/2% on resale, I'm not going to dispute it. We shouldn't -- I mean, Bell knows how many resale lines it has out there.

What Bell will tell you is 2-1/2% shows that resale is working. I'm going to tell you, when you have an entry strategy that peaks at 2-1/2% and flat-lines, it isn't working. And all you have to do is go through every press announcement for the past five years that says "resale" in it, and the first five press announcements you'll read in the 1996 time frame were, "Carrier announces resale agreement with Bell. Carrier announces resale agreement with Bell," and then starting in about late '97 and '98, the press announcements will always say, "Carrier abandons resale strategy. Carrier abandons resale strategy. Reseller goes bankrupt."

The fact that there's 2-1/2% market share in resale, you don't have a dispute about the number. You have a dispute as to whether you should attach any significance to it. It isn't going to get better.

It's only going to get worse. So, you know, if that's what you're happy with, then there's nothing I can do. If you're unhappy with the amount of competition, don't look for a solution there.

The same with UNEs. The only place -- and even with facilities. I'm not disputing BellSouth's data when I tell you that the data shows that for regular conventional customersm there's about a half a percent to six-tenths of a percent market share. That's their data, the number of minutes they see from ALECs divided by what average usage is. There's not a dispute on facts. It's just a dispute on interpretation.

CHAIRMAN JACOBS: Here's my primary concern. If as a matter of policy we're saying that we want to enunciate priorities for promotion of competition in this state -- and the theory I think that I've heard throughout this proceeding is that we ought to be focusing on facilities-based, and perhaps ensuring that UNE-P is there as well.

What then must I do, and then what then must I give great consideration to doing to ensure that there's reasonable access to the elements that accommodate those forms of entry? Because I think there's -- in fact, I think the other side of the

argument on your position on resale is that it's a flat line of business, and that is what is counter to that argument, that when we look at these numbers, is that that's nonstart as a business model, long-term, long-term sustainable business model.

THE WITNESS: Well, short-term. I mean --

CHAIRMAN JACOBS: But setting aside that for a moment, let's stick with what we've heard here, and that is that any reasonable person looking at this marketplace has to consider that their long-term entries are in facilities-based and perhaps UNE-Ps.

THE WITNESS: Well, yeah. If I could just make one -- I would say that it's going to be in UNEs and facilities-based.

CHAIRMAN JACOBS: Okay.

THE WITNESS: And the reason I make that distinction is because as a practical matter, in the world we live right now, nobody has found, I think, a viable strategy of duplicating their network to provide service to analog customers, basic phone customers, whether they're business or residence. And as a practical matter, that's in Florida today something like 95% of the lines.

Now, people are beginning to develop facilities to go to digital customers, and so you're

going to see sort of a split here. But the two things you have to keep your eye on, I think, are making UNEs available, which is in my mind what the Act was all about. That was the fundamental tradeoff. Bell gets long distance authority when it lets this network be used by other people, using this network as UNEs, and then as people come into the market, they'll slowly develop facilities.

What do I think you have to do? To be perfect -- to try and put it in a nutshell, there has been one constant theme from BellSouth, either their witnesses when they're sitting here talking to you, or their lawyers when they're cross-examining the witnesses. And that theme has always been, either from the witness, "The FCC doesn't make me do that," or from BellSouth cross-examining people saying, "Isn't it true the FCC doesn't make me do that?" And the answer to a lot of these questions is, yeah, the FCC doesn't make BellSouth do many of the things that we're here telling you need to be done for competition.

That's a problem. The FCC rules are a national minimum that basically have shown that if all you do is what the FCC says needs to be done -- first, I don't know why you have the jobs and want these jobs

if that's all you're here to do, is what the FCC tells you to do. And secondly, this is the outcome you're going to get.

And when you look at competition in Texas, it's the way it is because the Texas Commission said to SBC, "I don't care what the FCC tells me. That's the minimum. I'm going to sit here and make judgments as to what I think makes sense to make competition move forward, and I'm going to do it." So the conditions in Texas are very different. The same with New York, same with Illinois, same with Michigan.

The first thing I think the Commission has to do is break into a mindset that says, I'm going to judge every one of these issues from the perspective of what makes sense to move competition, and then only at the end, I'm going to ask somebody, if I do this, is it above the FCC minimum, because that, quite frankly, is what it's going to take. And this is going to happen on a state-by-state basis, quite obviously, but that's how this ball is going to move forward. The FCC minimums are not going to produce very much local competition, and it's going to produce almost no competition for the vast majority of citizens that are either residence or small business.

And that I think would be a mammoth public

policy failure if the only people who end up with competition are people who have some advanced services need or some high speed data need, but that all the rest of these regular users get no choices.

CHAIRMAN JACOBS: Now, do we continue to measure what competition there is by the mere presence of companies or access lines, or is there some other measure -- let me be more specific than that. Should we be looking at revenues per line or something like that?

THE WITNESS: No, I don't think you should be looking at revenues per line to judge -- for the report card. I think the report card -- UNEs is not a bad -- they sort of measure themselves when they come back with access lines.

When you try to measure how people are doing deploying their own facilities to companies, it seems to me the most useful measure of how that is growing is looking at the minutes that are flowing from those companies back into the phone network, because as they sign up customers, then -- by definition, as they sign up customers, then those customers will make phone calls, and the minutes that come back to BellSouth will give you a pretty reasonable measure of how are they growing.

And those should be the two -- in my mind, the two parameters you should focus on the most, UNEs, because it will tell you how open is this network, you know, because if it's really open, if every one of these ALECs really can use that network in the same way BellSouth can use it, there's no way that after six years all these ALECs can only end up with 2% of the market. And then the second parameter of those minutes, it's going to give you a sense of, all right, as these networks are developing, are they starting to build out to conventional phone customers, customers that make phone calls.

CHAIRMAN JACOBS: Thank you.

BY MS. HELTON:

Q Would you agree that Section 271(c)(a)(A) imposes no requirement on BellSouth to demonstrate that facility-based ALECs have some minimum level of market share?

A I would agree that the FCC has interpreted it that way, yes.

Q Is it correct that one of your criticisms of BellSouth's market share calculations is that the calculations exclude special access lines?

A Yes, that's one of my criticisms. It's not reflected in this table at all. For the purposes

of this table, I didn't include that. But, yes, that's one of my criticisms, is that they understate their own share of the market.

Q Are you aware that alternative access vendors or AAVs were authorized by the Commission to begin operating on January the 1st, 1992?

A Yes. I'm also aware that to my knowledge, they basically all failed.

Q Are you aware that in Florida, AAVs were first authorized to provide private line and special access in competition with the LECs?

A Yes. They never succeeded at it, but, yes, I'm aware of that.

Q Do you agree that there were no competing providers of switched services until ALECs were authorized to operate effective January the 1st, 1996?

A There were no authorized providers of switched services prior to that date, yes.

Q If ALECs are the first competing providers of switched services, do you agree that the incremental effect of ALECs could be estimated by calculating the ALECs' share of switched access lines?

A Not, not -- the words "switched access line" is a term of art that generally applies to the ILEC. Most ALECs, all of their lines are switched

access lines in some sense for them.

No, no. Here's the problem. An ALEC would consider all of the lines it uses to connect to an ISP as a switched access line in that sense. And without getting into a big dispute of whether ISPs are end users -- you know, I don't want to go there. I mean, I'll recognize that, and you should recognize that there has been success in that unique customer segment. And if you count lines that go between an ALEC to AOL in the same way that you count lines that go between that ALEC to small business customers or residential customers, you're going to reach the wrong conclusion about what's happening in the marketplace, because it's going to look like a lot more things are happening, when in fact what you've got is a whole bunch of success serving ISPs and almost nothing happening for those other customers. And they're very different customers, even though the ALEC would call them both a switched access line.

Q I'm sure you're familiar with BellSouth's contention that in states in which the RBOC has received 271 authority, the level of competition has increased.

A Yes.

Q You mentioned a little while ago, I think

in your dialogue with Chairman Jacobs, New York and Texas.

A Yes.

Q Well, with regard to those two states, do you know what the basic level rates were at the time 271 approval was received, or do you have any knowledge of that?

A Well, I have some knowledge of it, but, you know, it's -- you can't really answer the question, I think. There's like not a number I can tell you that says that the basic rate in New York was this and the basic rate in Texas was that, because, quite frankly, New York and Texas, as both New Yorkers and Texans would probably tell you, are quite different.

In New York, everybody is on measured rate plans. Bell Atlantic had, or NYNEX had very unusual plans, things like you rounded up to the nearest three-minute increment. I mean, the way you bought local exchange service in the State of New York was very different than the way you would buy local exchange service in the State of Texas, which was much more characterized by flat rate plans with optional calling to buy into much larger areas. So it's very difficult to contrast them that way.

I can tell you that the difference between

the results in Texas and New York have nothing to do with the 271. But beyond that, it would be difficult to try and characterize for you the exact financial parameters.

Q Do you have any knowledge as to whether the Texas rates are similar to Florida's rates?

A They would be closer in structure to Florida than they would be to New York. The principal difference between Texas, the results in Texas and the results you're seeing in Florida, quite frankly, the resale numbers are about the same. The use of UNE loops is about the same as a percentage. Texas and Florida look about the same in those two areas. The complete difference is UNE-P. Texas held SBC's feet to the fire to make UNE-P available in meaningful ways. BellSouth is still playing games.

Q Do you have any knowledge as to the retail rate levels for Texas?

A Not in a way that would prove useful to you.

MS. HELTON: We have no further questions. Thank you, Mr. Gillan.

CHAIRMAN JACOBS: Commissioners?

COMMISSIONER DEASON: I have a question. Mr. Gillan, this is the report card, and I assume

you're indicating it's a failing report card, or a D-minus anyway.

THE WITNESS: Okay.

COMMISSIONER DEASON: I don't know. What grade would you give it?

THE WITNESS: It's a failing report card. And I don't mean that you're failing so much as the whole process has failed, and we've got to figure out a different way of running this process.

COMMISSIONER DEASON: What would be a passing report card?

THE WITNESS: Something that was maybe three or four times that level for UNEs. Facilities are going to grow slowly. I mean, there's nothing that you or anybody can do about the rate of facilities growth.

I take that back. There are things that you could do by collocation and other things, but that is going to grow relatively slowly.

The part of this that I find the most troubling is the UNEs, because that was supposed -- that was the whole core of the Act. That was, we recognize that all you new guys are going to take a long time to build your networks, so we're going to let you use the inherited network. I mean, that was

what it was about. And that's where BellSouth is failing the most. That inherited network is still an exclusive network.

COMMISSIONER DEASON: Do you agree with Mr. Darnell that on the subject of UNEs, the most fundamental item or most fundamental aspect of the success of UNEs is the prices? Do you agree with that? I'm not trying to mischaracterize his testimony, but I understood that that was one of the points he made.

THE WITNESS: That's a big -- that is a part of it. A big part of it is provisioning, how easy it is to use it, can I actually build a business case where when a customer comes up and says, "Gee, I like your service. I want another line," you can actually get a second line as opposed to going through some Rube Goldberg system to get it connected and changed. I mean, there's provisioning issues, but pricing is certainly a large part of it.

And it takes very odd forms, Commissioner. I mean, it's not just the loop price. There's the switch price. There's all these layers to this. There's this rate that is gaining prominence now, this rate for just getting the information from Bell to be able to know the calls your customer made. I mean, on

average, $3 a month just to get billing records, to know the calls your customer made? I mean, why is there even a charge? They knew how many calls your customer made because they billed the ALEC for the usage of the switch. Now they're going to charge you again to get the records so that you know how many calls your customer made?

It doesn't make -- you know, there's just so many layers to this, but certainly pricing and the cost effect is one of them.

COMMISSIONER DEASON: Is it your position that we have misapplied the TELRIC standard and that UNE prices are too high?

THE WITNESS: You know, Commissioner, I wasn't in those cost cases, so I'm not in a position to tell you that you misapplied the standard. But I am in a position to kind of look at the results that came out and try to figure out are these plausible, and certainly are they anywhere comparable to what I'm seeing in other places where competition is starting to take root.

And I have a hard -- when I did this analysis that's in my testimony, where basically I took away all of BellSouth's costs to run and maintain the network and then just substituted in that they

leased UNE-P and found that their profitability disappeared -- you know, even Dr. Taylor told you. I mean, Dr. Taylor's testimony was quite clear. He said, "Boy, if that analysis is right, then these rates can't be TELRIC."

Now, he doesn't really explain -- he never says why my analysis wouldn't be right. I'll admit that it's simplistic. But, you know, on an order of magnitude, it paints the picture of a problem. And even he acknowledged that if the analysis is right, the rates can't be right, there's something wrong here.

Now, since I wasn't in the cost case, Commissioner, I'm not in a position to tell you --

COMMISSIONER DEASON: Well, I guess --

THE WITNESS: -- where it went wrong, but it went wrong somehow.

COMMISSIONER DEASON: I guess the -- and I'm not trying to get into a debate with any specifics. I'm trying to look at it at a very high level. Is it possible that we have applied the TELRIC standard correctly and those are the correct rates, and that that's just the economics of the telephone business in this country, and that's what's going to result by applying that standard?

THE WITNESS: No, that's the one outcome I know is impossible, because if that were true, then BellSouth is in as deep trouble as us, because BellSouth is using that network, and they've got all the customers. And if that really is the cost of that network, then they can't make money either.

Now, that's where I conclude that there's just something fundamentally broken here, because if I were just here to tell you that I've concluded my clients can't make money at these rates, then we could argue about, well, gee, maybe my clients are inefficient or something else. But this is supposed to be we all get the same cost of that existing network, and there's just no way in the world that everyone else who buys this network and pays these rates gets 2% of the market and/or goes bankrupt, and they serve the rest -- you know, they have all the rest of the customers and they're making a lot of money. There's something fundamentally wrong on that. So something went wrong somewhere.

Some of it is easy spot. You know, some of it, like this DUF rate, that's just ridiculous.

COMMISSIONER DEASON: Well, let me ask you this. Is it our -- in your opinion, is it our job as Commissioners to ensure that there's competition and

that we have a certain penetration rate, or is it our job to make sure that TELRIC is set correctly and that service is being, TELRIC -- I'm sorry, UNEs are being provided in a nondiscriminatory manner, and a lot of it depends upon the efficiencies of people that enter the market and how they perform?

THE WITNESS: I think in a perfect -- I think in a theoretical world, your job is clearly to set the rates at cost and make sure they're being provisioned correctly. But I also think that the best measure of that is that you see competition, because I don't believe --

COMMISSIONER DEASON: Well, now, there's a big debate in this whole -- in this state, and probably the country as whole, you know, do -- in education, you know, you teach children the tests so that they score well. I mean, if we wanted to score well on this report card, I mean, in an absolute -- what we would do is, somebody that came into the state and said, "We want to do business," we would say, "Sure. Show us your business plan," and we would say, "What rates do you need to get a 10% market share?" and we would just set UNE rates at that.

That's not what we're trying to do. That's being discriminatory in favor of the competitor. And

where do we draw the balance?

THE WITNESS: Well, Commissioner, using your education analogy, if you teach a class of a hundred kids and you give a test and every single kid failed, then you can't draw the conclusion that it was only the students' problem. You know, maybe the class wasn't being taught right, or maybe the information wasn't being tested right.

I'm not trying to tell you to promote false competition, but you've got a situation here where today Sprint, or yesterday Sprint laid off 7,500 people and effectively killed their local -- their out of -- you know, their local exchange entry. You've got a situation where local telephone companies can't figure out how to provide local telephone service in each other's territories.

When you have that situation, when you have these results and you have situations where none of these people even touch each other, then you've got a failure that goes beyond, gee, should I just set the cost right and let the market figure it out, because that's a situation where something is fundamentally broken here.

The theory is that these things are being made available to us on the same terms that they're

being made available to them. And I recognize that if you do that, even in a perfect world, they're going to be -- you know, the Abbott and Costello Phone Company is going to show up, and they're going to fail. You've got a situation where every -- nobody is succeeding at this. And that to me is just such compelling evidence that I can't fall back on something that says, well, everything else is right, but there's something else that's causing this problem, not when this is the core thing.

And it's happening in precisely the market that I would think that you all would be the most concerned about. It's all those regular phone customers, all those analog customers.

COMMISSIONER DEASON: We're here in the context of a 271 proceeding, so is it your position then that we should continue denying 271 authority to BellSouth until they have, you know, 25% -- a 25% market share, or 50, or 70, whatever -- what standard do we apply to 271 approval?

THE WITNESS: And I think here's what I believe to be the fundamental -- I think that question highlights what I believe to be the fundamental mistake the FCC made when they reached that decision that there's no market share test in Track A.

The answer to the question that you just asked or what I'm reading into it is, I don't believe that there's a single subjective metric that I can put up here, like when CLECs have 25% of the market, then they get long distance, because I do believe -- I don't believe that the Act contemplated you holding them off until a particular market result was achieved, except I do believe that Track A was intended, and the congressional -- you know, the history supports this. It was intended for you to have an actual market experience to help you judge when nondiscriminatory access has been provided.

And just as it would be arbitrary, I think, for me to tell you to wait until ALECs have 25% of the market, I think it's equally arbitrary for a Commission to grant a 271 application in the face of this kind of evidence that there's a fundamental problem. Somewhere between this collapse and ALECs have a large market share, you know, the Commission has to apply discretion.

But I have a hard time looking at this information, this 2% of the market, and believing that discretion -- that that discretion includes looking at this and saying they must have made this network available to everybody on nondiscriminatory terms. It

just doesn't sound -- it just doesn't sound plausible to me that they could be complying with the checklist, and all the money that has been spent by people trying to enter this marketplace, and this is where you're at.

COMMISSIONER DEASON: In your opinion, how much of these numbers are affected by customers who are just satisfied with BellSouth and they don't really care to change, they've gotten relatively good service for the last 25 years, and they don't want to go with a startup company, no matter if it is a 25% discount and whether they give good service or not? It seems to me there's a certain reluctance on a large proportion of the market, potential market out there who just don't want to be bothered with trying to -- they're happy with the way things are. And is that a problem we need to overcome, or the customer rules and if that's what they want, that's what they get?

THE WITNESS: I'm sure that there's part of that. Okay? But on the other hand, I don't believe that all those people moved to Florida, because if that were the problem, then I could go to Texas and I would see the same result. And I don't see the same result in Texas. I see from January of 2000 to June 2001, 1.2 million Texans left SBC and went to a

competitor using UNE-P, and another 150,000 moved using UNE loop. I see New Yorkers -- there's 3 million New Yorkers today that have switched to local -- you know, switched to local exchange carriers.

If the problem -- if it's customer inertia, then I would have seen resale die out at 2-1/2% before people -- because they couldn't get customers. Nobody quit reselling because they couldn't get customers. They quit reselling because they could get customers, and then they lost money for every customer they had. I've yet to meet an ALEC where there fundamental problem is nobody will use me. It's being able to provide service in a way that is sustainable and profitable.

But even there, that can't be impossible if this network is being made available to every ALEC on the same basis that BellSouth uses it.

COMMISSIONER JABER: Mr. Gillan, on that point, what are the local rates in Texas and in New York in comparison to Florida's local rates?

THE WITNESS: This is the answer that I'm not -- that I can't do off the top of my head.

Well, no --

COMMISSIONER JABER: Are they higher?

THE WITNESS: You know, here -- I'll give

you an example, BellSouth's Complete Choice package. I think that's what you call it, Complete Choice Custom something, their everything-for-one-price package. They currently have a market share of that product of about a third, so that's a -- you know, that's a major residential product. They charge 30 -- I think it's $35 a month plus a SLC. I believe that that price -- based on my memory, that price is basically comparable to the similar type of product in New York and in Texas.

COMMISSIONER JABER: Yes, but that doesn't really help me, because in packaging, there are elements, pieces parts that might be higher cost than others. I'm just thinking your basic local service in this state versus New York or Texas.

THE WITNESS: The problem I have is -- the reason I don't know that information is because nobody buys that thing that you're asking me about, and so nobody in the competitive sector really spends a lot of time just focusing on that. I mean, BellSouth -- in any state, only about 5% of the people, maybe 5 to 10% of the people are actually in that product category, so it's everything else.

COMMISSIONER JABER: Well, Mr. Gillan, I guess it's important to me. And just in listening to

you respond to Commissioner Deason, if I am trying to find where the market share is and where it needs to be before we consider giving BellSouth long distance, I'm trying to figure out when it will ever be better for the ALECs in terms of competition in the local market.

To the degree that it costs more, regardless of what pricing scheme we use for a loop and a port and all of the other things combined to provide your basic local service, to the degree those kinds of combinations are higher than your BellSouth local service, then why would any competitive business go into the residential local market? As much as I would like to see that happen, I'm also looking at the ALEC strategy and realizing you're going where the money is.

THE WITNESS: No, no, Commissioner, that's actually not where they're headed, because the highest revenue per line product you find is the small business guy, okay, the guy with two, three, five analog lines. That's the highest value proposition out there in revenue per line. That's where their rates are the highest. But you don't see measurably higher competition there, because it's the same problem as serving res. And the residential customers

-- you have carriers, TalkAmerica, you've got Z-Tel, you have other carriers that are going into residential markets. Nobody -- it's not a question of what is just the flat rate, basic local rate. It is what is the average revenue I can expect from these customers. Okay?

Now, I think in New York, quite frankly, it's higher than in Florida on an average revenue basis. In Texas, for major customer groups, you know, like the people who buy that Complete Choice package, I don't think there's a significant difference.

Certainly for the business customer, the failure of competition isn't because those people aren't paying high enough rates. Your rates are high. The SLC that the FCC imposes on them is high. That's a big chunk of money. But the problem we see is all those analog lines are difficult to serve, because the only strategy is UNE-P, and I know it, and BellSouth knows it. You know, and BellSouth wouldn't be so worried about making UNE-P viable if they didn't know that that's what works.

COMMISSIONER JABER: And I apologize. I didn't mean to interrupt you, Commissioner. I just wanted to --

COMMISSIONER DEASON: That's okay.

COMMISSIONER JABER: In terms of logistics, Mr. Gillan, you testified earlier that the FCC standards are the minimum standards, and there's nothing that would prevent Florida from imposing higher standards to effectuate a higher competitive market share in the local market. And it occurred to me that what you might also be saying is that you can approve 271 after a showing that those minimum standards have been met, but in doing that, you could also impose higher standards and higher requirements, but it's not necessarily because Florida wants to impose higher standards that that would be a reason to deny 271. Both things can happen.

THE WITNESS: Yes, that's a fair statement.

COMMISSIONER JABER: Okay. So this Commission could find it appropriate to grant 271 because those minimum standards have been met, but in addition to that, we might want to look at what additional requirements are necessary to effectuate a better competitive market in local.

THE WITNESS: Yes. I think you used the term "appropriate." Just to rephrase it so that it's in my words, I would say as a legal matter, you could approve a 271 application based on satisfying the national minimums, but then also conclude that in

addition to those, BellSouth must do XYZ, and on.

COMMISSIONER JABER: Okay. Now, let's say we take that approach. What would the additional requirements be specifically, because I want to make sure this is a complete record. I want to have options in this record. And let's say we're interested in approving 271 because the record reflects that the minimum standards have been met, but we want to impose additional requirements. To satisfy the concerns that you have in particular, specifically what are those additional requirements?

THE WITNESS: I can give you a partial list that would be, you know, the number one ones on my Hit Parade, but I would also conclude that by telling you you need more input on that specific question from other people with experience in different areas.

The number one things that I think you would have to do, focusing exclusively on how to make competition come into the conventional markets, would be: All of BellSouth's games on new combinations must end, that BellSouth has to supply entrants existing combinations and any combination that it ordinarily combines for itself, whether or not it's already put together, and that they must do so on a cost-based rate. For instance, Illinois yesterday adopted a rate

of $1.02 for that -- for those activities, to either migrate a line to a UNE-P provider or to put together a new loop and switch-port combination and deliver it to an entrant.

I would say that you need to address -- you need to fix BellSouth's use of its xDSL position to re-entrench its monopoly in the voice market, and that would mean that you would have to tell them that they are not permitted to stop, you know, disconnect a customer's xDSL service just because the customer took its voice service to a different provider, that they have to continue to offer xDSL to that customer without any interruption, without any change in rates, without anything else.

Moreover, I think you should make sure that they offer -- they install and operationalize splitters on any UNE-P line work if a customer wants to add data service, either from BellSouth's xDSL service or from some other vendor, so that customers in Florida can easily take advantage of that technology.

I would make them get rid of any charge for the daily usage feed until they can come back and come up with a plausible explanation why they need to sell us the information they use to bill us.

I think those would be like the top four on my list. There's a fifth one that I'm just not sure how to present to you a suggestion how to get out of this box, and that is, there's a problem here with your prices, you know. And it took a long time to get us to this point where we have this problem in terms of hearings and procedures and our lack of compelling resources to convince you of other rates, but at some point you have to figure out -- you have to put in place here a process where those rates can be addressed. I just, quite frankly, sitting here am at a loss to tell you how to do it as part of this immediately.

COMMISSIONER JABER: Okay. Let me --

THE WITNESS: And just so that I can go sit down without people like stabbing me, let me put on the record that I am not recommending that you do these things and grant their 271 application. However, if you feel compelled to move the 271 application forward despite some of the things people have said here, it's very important that that action recognize that things are not very good in Florida and that you're going to be taking steps to fix them both immediately -- you know, my preference is obviously before you give them 271.

And there's a very practical reason for that. Their own CEO has said, "Hey, we're going to get 25 or 30% of the long distance market and put a couple of billion quick dollars on the bottom line." And that's a real incentive for them to do what you want them to do. Once that incentive is gone and they look like GTE, it's going to be a lot harder for you to get them to do anything you want them to do.

COMMISSIONER JABER: Mr. Gillan, let me ask you some more questions to again make sure that we've covered everything.

To the degree we want to revisit prices after we are done with 271, after we're done -- let's assume they get approval. Is there anything in the Act or in state law that you know of that would prohibit us from revisiting prices?

CHAIRMAN JACOBS: If I may --

THE WITNESS: No, although I'll give you a caveat. I've learned a lot of regulatory law over my lifetime. I'm a lot weaker in contract law. So the only -- the area that I'm not sure about is whether -- is how those new prices would easily be incorporated into interconnection agreements in those instances where interconnection agreements are the deciding document of the rates these carriers pay each other.

I just haven't thought through in my own mind how does that new -- how does that decision then get reflected in those interconnection agreements, because you have to obviously make sure that the new rates get reflected in all those interconnection agreements.

COMMISSIONER JABER: In states that have approved 271, there continues to be an arbitration process and interconnection agreements that are filed with state commissions; right?

THE WITNESS: Yes, yes. In fact, one of the reasons, though, that I think New York has been so successful is -- and this is true actually of Texas as well.

This Commission has gone down the more traditional path of one-on-one arbitration, which is unbelievably inefficient for the competitive side of the industry, because it means, you know, Sprint puts on an entire case, MCI puts on an entire case, AT&T, you know. It's also inefficient for you, because it means you get to sit through the arguments once, twice, three times, and now four.

Both of those states have found ways to make those decisions reached in more comprehensive ways so that all the parties can participate in a single proceeding and bring their full resources to

bear to the issues in front of those commissions.

New York's focus has tended to require that Bell Atlantic have a tariff that makes all of its interconnection services available to it. So while there are some carriers operating in New York that use interconnection agreements, many carriers also simply subscribe to the tariff, and in that way the industry was able to help that -- the tariff be litigated instead of doing everything one on one.

New York -- or Texas used what they call mega-arbitrations where all the parties came in. And they're, in fact, currently looking at taking care of some UNE-P issues in a proceeding in Texas that they just consolidated a bunch of parties' applications.

You know, quite frankly, I think one of the things you have to think about is fundamentally changing how you've implemented this Act, because the resources for one-on-one arbitration, they aren't there anymore. Well, they aren't there anymore on this side of the table. And, quite frankly, I don't think they enjoy litigating everything multiple times either.

COMMISSIONER JABER: So to the degree an issue has been litigated, the result is incorporated in some tariff, and that's the language that is

incorporated into future interconnection agreements.

THE WITNESS: Yes, as a practical matter. In New York they use a tariff, and in Texas they have sort of a model interconnection agreement called the T2I that people -- it's one of the interconnection agreements you can opt into. And many of the carriers that operate in Texas opt into that agreement.

COMMISSIONER JABER: Okay. Let me just ask you a few more questions before I lose the thoughts.

We've heard a lot of testimony on line cards and using line cards to collocate in remote terminals. And the analogy I used was that it was similar to a floppy disk in a computer. Would you -- assuming we approve 271, would you recommend that that be an additional requirement to allow the use of line cards in remote terminals?

THE WITNESS: I'm hesitating. Actually, I thought -- when I was here, I thought I heard two things from the people who brought that issue to you. The first one was, given the way the ILEC's network operates, if the ALEC wants to create an xDSL service, the only efficient way is to put a line card in. And so I think from that perspective, that would be a good step forward.

But then the other thing they were saying was, I would also perhaps even prefer that BellSouth put the line card in, but then sell me as a UNE the data capability from the end user all the way back to my network so that I don't have to try and go out and put in those line cards, because the problem that they were trying to articulate to you was fundamentally, when you're small, you can only put your investment in a few concentrated locations. Even having to put investment in end offices is problematic. In this state, there's like 200 of those. It's more efficient I think in the remote terminal situation if you're willing to use the technology that the ILEC has deployed. You would rather have them put it in the 12,000 remote terminals and then make it available to everybody on a shared basis.

I mean, to me, that was what -- again, that was what the Act was about. There are parts of this network where there are just really large economies of scale and scope, and the Act said they're not Bell's anymore, they're everybody's. Now, Bell gets to use them, obviously, but they have to share them now. And in exchange, they get long distance authority and other things.

COMMISSIONER JABER: Okay.

COMMISSIONER DEASON: Was it your understanding that was part of BellSouth's business plan, to use that type technology in their network?

THE WITNESS: I mean, it's my understanding now listening to the witnesses that had focused on that that's what Bell had deployed. I actually was not aware that they had deployed so extensively NGLC technology in the 12,000 remotes and how they -- that's where they put out the xDS -- or the data equipment. But that was --

COMMISSIONER DEASON: I thought that we had testimony that they were going to be using the DSLAM technology as opposed to line cards.

THE WITNESS: There was one gentleman who indicated -- but, you know, it really doesn't change the issue, because the reality is, if BellSouth has designed its fiber to reach out that far, that there are now instead of 200 end offices, there are 12,000 nodes that this has to go to, whether BellSouth ended up putting like technology you put a card in or a DSLAM out there, I still think the -- what I heard the ALECs say, their first choice is, they want access to that technology, because they're not in a position to go to 12,000 locations.

But I'm caveating that to the extent that

they put in those line cards, I know there are some companies who feel that there are different line cards they would want to use. And I'm of the opinion that when things aren't working well, you try more things.

COMMISSIONER JABER: All right. So you would have -- to the degree we find a mechanism that would allow a sharing of BellSouth's line card, you would be amenable to paying some sort of share for using that line card?

THE WITNESS: Yes. I mean, to me, that was all that TELRIC really was. I mean, I don't even like using the word, cost-based rate. I mean, we're not asking -- this isn't a communistic society, but it is -- we want to share on an equal basis.

COMMISSIONER JABER: All right. And my final question relates to -- in Ms. Cox's testimony and Ms. Caldwell's testimony, there were three recommendations for establishing prices. One was collocation for the elements that we had not earlier established collocation prices for, and the second was line sharing, and the third escapes me at the moment.

To the degree we have everything we need in this docket to establish those prices, would you recommend that we do that? And again, this is in the spirit of additional requirements.

THE WITNESS: The only problem I have is that -- here's my concern. I'm not familiar with the complete record in this case, but I don't recall -- I know that you have information from Bell as to what they think those rates would be. I don't believe that the other side has had a chance to actually tell you what they think those rates should be. And so I'm very -- given that, I'm extremely cautious about telling you to do anything with those things, because I don't know what the rates are, I don't know how they were developed, and I -- but my impression is that our side has not had a chance to examine those cost studies.

CHAIRMAN JACOBS: Any other questions, Commissioners? Redirect.

MS. KAUFMAN: I have no redirect.

CHAIRMAN JACOBS: And we have one exhibit, Exhibit 50. Without --

MS. KAUFMAN: Yes.

CHAIRMAN JACOBS: -- objection, show Exhibit 50 is admitted.

(Exhibit 50 was received into evidence.)

CHAIRMAN JACOBS: Thank you.

THE WITNESS: Thank you very much.

CHAIRMAN JACOBS: Before you leave,

Commissioners, there are two issues that came up that I'm wondering do we want to have the parties address. One was a question that -- I think you asked about rates around the states. Is that something we want to have specifically addressed?

COMMISSIONER JABER: I've asked questions about local rates between New York, Texas, and Florida. Mr. Gillan, is that something that you could prepare as a late-filed exhibit, some sort of comparison?

THE WITNESS: Could I make the following suggestion? How about I prepare as a late-filed exhibit the average revenue per line in those three states, because in my mind, that's more relevant. I mean, how you come up with that average revenue is far less critical than what the average level of the revenue is, because the rate structure questions -- I mean, the rates -- you know, the product here isn't going to be the same as the product there. There's no way for me to collapse it into something that would be meaningful to you.

COMMISSIONER JABER: I understand.

MS. HELTON: Commissioner Jaber --

COMMISSIONER JABER: Mr. Chairman, this is really not something that I -- no. I really don't

feel like I need it. It was --

CHAIRMAN JACOBS: Okay. Never mind. Sounded like it was going to cause a bit more consternation than it would be use -- than it would have been useful anyway.

Ms. Keating.

MS. KEATING: There was the other issue of the phrasing of the issue regarding -- to be briefed about the Commission's role.

CHAIRMAN JACOBS: Right.

MS. KEATING: And I don't think we got a --

CHAIRMAN JACOBS: Thank you. You're excused, Mr. Gillan.

THE WITNESS: Thank you.

CHAIRMAN JACOBS: Yes. Did we clear that up?

MS. KEATING: I actually came up with two alternatives, and it really depends upon I guess the specifics and the angle that you were intending the parties to focus on. I could throw those both out there and see if you want to choose one or both.

CHAIRMAN JACOBS: You want to clear that up now? I think it was your issue, Commissioner Deason.

COMMISSIONER DEASON: Let's hear it. I mean, I had a simple one, you know, is the Florida

Commission a patsy of the FCC?

MR. MELSON: No, sir.

MS. KEATING: How about --

MS. WHITE: We can all answer that now.

CHAIRMAN JACOBS: The problem is the "yes" part of it.

MS. KEATING: Well, the first option, actually, Mr. Commissioner, was: In rendering its recommendation on BellSouth's 271 application, to what extent, if any, is the State Commission constrained by prior FCC decisions?

The second option was: In rendering its decision on BellSouth's 271 application, what is the nature of the Commission's consultative role?

COMMISSIONER DEASON: I'm open to hear from the parties if they have any input.

MR. EDENFIELD: The second one would be our --

MR. MELSON: Second.

MS. WHITE: Second.

MS. FOSHEE: Second.

MR. EDENFIELD: Second.

MS. KAUFMAN: Well, we have agreement.

COMMISSIONER DEASON: Hey, we have agreement.

MR. EDENFIELD: Democracy in action.

CHAIRMAN JACOBS: We have a winner?

MS. KAUFMAN: Could Ms. Keating just --

COMMISSIONER DEASON: Listen, if the parties can agree on something, I'm for it.

MS. KEATING: You wanted to hear it again?

MS. KAUFMAN: Yes, please. I didn't write in down until we decided which one.

MS. KEATING: In rendering its recommendation on BellSouth's 271 application, what is the nature of the Commission's consultative role?

COMMISSIONER DEASON: I think that's broader, and it leaves it to the parties to flesh that out the way they see fit, if the Commissioners are okay with that.

COMMISSIONER JABER: I like the second one.

CHAIRMAN JACOBS: I'm good with that too. Second it is.

I'm sorry. Ms. White?

MR. EDENFIELD: Wasn't there something Commissioner Jaber wanted briefed? It was on the Ascent decision, but wasn't there something else earlier that you had asked?

COMMISSIONER JABER: If there was, you

should have said something right away.

MS. MCNULTY: Commissioner Jaber, my notes indicate you just wanted a brief on the Ascent I and II decisions.

COMMISSIONER JABER: Thank you, Ms. McNulty.

MR. MELSON: I believe you had also asked where other states had imposed requirements above the FCC minimum, what type of proceedings had they done those in.

CHAIRMAN JACOBS: That was one I remembered.

COMMISSIONER JABER: Could that be covered in the same issue?

MR. MELSON: I think it could be covered in the same issue.

MS. WHITE: I think so. I also had in my notes what Commissions did in the BellSouth region regarding combos of UNEs that were not already combined. I had that next to your name, Commissioner Jaber.

COMMISSIONER JABER: The transcript will speak for itself.

MS. WHITE: And not wanting to irritate the Prehearing Officer in this matter, Commissioner

Deason, we talked about this at the prehearing a little bit. Since we have a couple of extra things to brief, I thought I would get in a request for a few extra pages of the brief if I could do that without making you mad.

COMMISSIONER DEASON: I'll defer to the Chairman.

MS. WHITE: We have 60 pages, I think, for the brief.

CHAIRMAN JACOBS: That's the limit now? That's the traditional limit; right?

MS. WHITE: No. Actually, the traditional I think --

MS. KEATING: Forty.

MS. WHITE: -- is 40 or 50.

CHAIRMAN JACOBS: Forty or 50?

COMMISSIONER DEASON: I'm -- seriously, whatever -- it doesn't matter to me.

MS. WHITE: Well, I won't tell you what they wanted, but I would ask for another five or ten pages.

CHAIRMAN JACOBS: Staff? You guys have got to read it.

MS. WHITE: That's true.

CHAIRMAN JACOBS: Well, we'll read it too,

but --

COMMISSIONER JABER: Well, so do we.

CHAIRMAN JACOBS: You know, this is one of those deals where, you know, the more you give, the more it's used. I'll say five. Make it 65, 65 pages. That's enough.

MS. WHITE: Thank you. And I do have one other question. The late-filed exhibits, I know BellSouth has five of those, and I think a couple other parties have one or two. I believe we can get those filed by next Friday if that's acceptable.

MS. KEATING: That was actually --

MS. WHITE: I don't know if you want to put a date on that or not.

MS. KEATING: I was going to recommend the 29th, but --

MS. WHITE: That's fine with us.

MS. KEATING: If the Friday --

CHAIRMAN JACOBS: If the 29th works --

MS. WHITE: That would be wonderful.

CHAIRMAN JACOBS: Let's say the 29th. And when are the scheduling dates?

MS. KEATING: The date for briefs is November 6th.

But before you wrap up, I'm not real sure

that Mr. Argenbright's testimony was ever actually moved into the record. There was a mention of the stipulation, but I'm not sure it was done.

CHAIRMAN JACOBS: Oh, right. And the other --

MR. MELSON: Thank you.

CHAIRMAN JACOBS: There were two, his testimony and the other exhibits of Mr. Gray. We only moved in 10 with his testimony, and I thought that the others were going to go in with Mr. --

MR. MELSON: Milner.

CHAIRMAN JACOBS: Milner. And I do not recall that we -- you all requested that? I didn't mark it. I just thought about that a moment ago.

MS. WHITE: I'm sorry. We did a composite on all of Milner's, and that was --

CHAIRMAN JACOBS: You probably did and I just didn't hear. I heard WKM-1 through 13 plus Attachments A through F.

MS. WHITE: I know. That was No. 33, Attachment A through F, and 1 through 13 of the exhibits.

CHAIRMAN JACOBS: Okay. I did get that then.

MR. MELSON: WorldCom would ask that

Mr. Argenbright's rebuttal testimony consisting of 42 pages be inserted into the record as though read.

CHAIRMAN JACOBS: Without objection, show Mr. Argenbright's testimony is entered into the record as though read.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

REBUTTAL TESTIMONY OF MARK ARGENBRIGHT

ON BEHALF OF MCI WORLDCOM

DOCKET NO. 960786-TL

JULY 20, 2001

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Mark E. Argenbright. My business address is Six Concourse Parkway, Suite 3200, Atlanta, Georgia 30328.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by WorldCom, Inc. in the Law and Public Policy group and hold the position of Senior Staff Specialist, State Regulatory Policy. In my current position, I assist in the development and coordination of WorldCom's regulatory and public policy initiatives for the company's domestic operations. These responsibilities require that I work closely with our state regulatory groups across the various states, including Florida.

Q. PLEASE SUMMARIZE YOUR TELECOMMUNICATIONS BACKGROUND AND EDUCATION.

A. My previous position within WorldCom was Senior Manager, Regulatory Analysis, in which I was responsible for performing regulatory analysis in support of a wide range of company activities. Prior to that, I was employed by the Anchorage Telephone Utility (now known as Alaska Communications Systems) as a Senior Regulatory Analyst and American Network, Inc. as a Tariff

Specialist. I have worked in the telecommunications industry for sixteen years, with the majority of my positions in the area of regulatory affairs. I received a Bachelor of Science Degree in Business Administration from the University of Montana in 1980.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to show that BellSouth in Florida does not currently provide interconnection in accordance with the requirements of checklist item (i) [Issue 2 in this proceeding]; that BellSouth does not currently provide unbundled local transport in accordance with the requirements of checklist item (v) [Issue 6 in this proceeding]; and that BellSouth does not currently provide reciprocal compensation in accordance with the requirements of checklist item (xiii) [Issue 14 in this proceeding]. In this regard, I will respond to the testimony of BellSouth witnesses Cox and Milner, who erroneously claim that BellSouth meets these checklist requirements.

Q. DO YOU OR ANY OTHER WORLDCOM WITNESSES ADDRESS ISSUES RELATED TO BELLSOUTH'S OPERATIONS SUPPORT SYSTEMS?

A. No. Based on the Commission's ruling that OSS issues, including commercial performance data, will be considered through the KPMG third-party OSS test and a workshop process, WorldCom has not filed OSS testimony in this proceeding. We have, however, filed affidavits of Sherry Lichtenberg in the third-party test portion of this docket which detail some of the OSS problems

that WorldCom has experienced in connection with its launch of residential service in Georgia and continuing problems with the implementation of BellSouth's change management process. Just as Ms. Cox says that BellSouth's performance data will be provided in separate filing as part of KPMG's Commercial Data Review (Direct at 5), WorldCom will submit updated commercial performance data in that portion of this docket as its Georgia entry continues.

Issue 2: Does BellSouth currently provide interconnection in accordance with the requirements of Sections 251(c)(2) and 252(d)(1) of the Telecommunications Act of 1996, pursuant to Section 271(c)(2)(B)(i) and applicable rules promulgated by the FCC?

(f) Has BellSouth satisfied other associated requirements, if any, for this issue?

Q. DOES BELLSOUTH CURRENTLY PROVIDE INTERCONNECTION IN ACCORDANCE WITH THE REQUIREMENTS OF THE TELECOMMUNICATIONS ACT OF 1996 ("ACT")?

A. No. BellSouth does not currently provide interconnection in accordance with the requirements of the Act. Specifically:

(1) While BellSouth has been ordered to permit interconnection at a single point of interconnection ("POI") in each LATA, BellSouth still seeks to impose on ALECs the financial responsibility for transporting traffic that originates from other BellSouth local calling areas within the LATA to the POI.

I will refer to this as the "point of interconnection" issue.

(2) While BellSouth will interconnect with ALECs for the exchange of traffic, BellSouth seeks to require ALECs to establish unnecessary and inefficient interconnection trunking arrangements in order to separate local, intraLATA toll and transit traffic onto separate trunk groups. I will refer to this as the "trunk fragmentation" issue.

(3) While BellSouth will interconnect with ALECs for the exchange of traffic, BellSouth refuses to allow ALECs who desire to serve as providers of terminating access service to route access traffic to BellSouth end offices over the same trunk groups used to terminate local traffic. I will refer to this as the "tandem provider" issue.

Q. HAS THE COMMISSION PREVIOUSLY CONSIDERED ANY OF THESE ISSUES IN OTHER DOCKETS?

A. Yes. The Commission considered the point of interconnection (POI) issue in the WorldCom/BellSouth arbitration (Docket No. 000649-TP) and ruled that BellSouth is required to permit WorldCom to interconnect at a single POI in each LATA. However, the Commission deferred the issue of financial responsibility for such traffic to Phase II of Docket No. 000075-TP. Unless and until the Commission rules (or BellSouth agrees) that BellSouth is required to bear the financial responsibility for delivering all of its traffic originating within the LATA to the ALEC's single POI, BellSouth will not have met its obligation under Section 251(c)(2)(D) of the Act to provide interconnection on terms and conditions that are just, reasonable and nondiscriminatory.

The Commission likewise considered the trunk fragmentation issue and the tandem provider issue in the WorldCom/BellSouth arbitration and ruled that BellSouth would be permitted, for purposes of the parties' Interconnection Agreement, to fragment local, intraLATA toll and transit traffic onto different trunk groups and to refuse to allow WorldCom to terminate access traffic to BellSouth end offices over the trunk groups that are established for local interconnection purposes. BellSouth's failure to implement efficient trunking arrangements nevertheless precludes it from meeting the requirements of this checklist item for Section 271 purposes, even if the Commission has not affirmatively required BellSouth to implement such efficient practices in the context of prior arbitration proceedings.

POINT OF INTERCONNECTION ISSUE

Q. WHAT DOES IT MEAN TO "INTERCONNECT" ALEC AND ILEC NETWORKS?

A. Construction of a local network by an ALEC means nothing unless that network can be interconnected seamlessly with the ILEC's network and with the networks of other telecommunications carriers. In the context of my testimony, interconnection means the linking of networks. The point at which an ALEC's local network physically connects to the ILEC's network is called the point of interconnection, or "POI."

The POI plays a critical role in interconnection. From a financial perspective, the POI represents the "financial demarcation" -- the point where the ALEC's network ends and the ILEC's "transport and termination" charges

begin and visa versa. From an engineering perspective, there are a variety of things that must happen at the POI to make interconnection seamless and complete.

Q. WHAT IS BELLSOUTH'S OBLIGATION TO ESTABLISH INTERCONNECTION ARRANGEMENTS WITH ALECs?

A. Section 251(c)(2) of the Act provides that an ILEC has the "duty to provide, for the facilities and equipment of any requesting telecommunications carrier, interconnection with the local exchange carrier's network . . . at any technically feasible point within the carrier's network." BellSouth thus must allow a requesting carrier to interconnect at any technically feasible point.

The FCC explained the interconnection obligation in Paragraph 172 of its Local Competition Order, stating:

> The interconnection obligation of section 251(c)(2) . . . allows competing carriers to choose the most efficient points at which to *exchange traffic* with incumbent LECs, thereby lowering the competing carrier's costs of, among other things, transport and termination of traffic.

In re Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, CC Docket No. 96-98, *First Report and Order,* FCC-96-325 at ¶172 (rel. August 8, 1996) ("Local Competition Order") (emphasis added). The FCC also stated that "[o]f course, requesting carriers have the right to select points of interconnection at which to exchange traffic with an incumbent LEC under section 251(c)(2)." Local Competition Order ¶ 220, n.464. Because ALECs have the right to choose the point where the parties exchange traffic, ALECs have the right to select the POI for both the ALEC's

originating traffic and for BellSouth's originating traffic.

Q. HOW HAS THE FCC ADDRESSED THIS INTERCONNECTION OBLIGATION IN ITS PRIOR SECTION 271 ORDERS?

A. In Paragraph 77 of its Texas 271 Order, the FCC ruled that an ALEC may choose to interconnect with an ILEC at a single point in each LATA. The FCC explained that:

> Section 251, and our implementing rules, require an incumbent LEC to allow a competitive LEC to interconnect at any technically feasible point. This means that a competitive LEC has the option to interconnect at only one technically feasible point in each LATA.

In the Matter of Application by SBC Communications Inc. et al. to Provide In-Region, InterLATA Services In Texas, CC Docket No. 00-65, *Memorandum Opinion and Order,* FCC 00-238 at ¶ 77 (rel. June 30, 2000) ("Texas 271 Order").

Q. HAS THE FCC ADDRESSED THE PARTIES' FINANCIAL RESPONSIBILITIES FOR DELIVERING LOCAL TRAFFIC TO THE DESIGNATED POI?

A. Yes, that responsibility is addressed both in the FCC Rules and in several FCC orders. FCC Rule 51.703(b) provides that "[a] LEC may not assess charges on any other telecommunications carrier for local telecommunications traffic that originates on the LEC's network."

In its decision earlier this year in the Kansas/Oklahoma 271 proceeding, the FCC confirmed that its decision in the Texas 271 Order to allow a single point of interconnection per LATA did not "change an incumbent LEC's

reciprocal compensation obligations under our current rules." *In the Matter of Joint Application by SBC Communications Inc., et al. for Provision of In-Region, InterLATA Services in Kansas and Oklahoma,* CC Docket No. 00-217, *Memorandum Opinion and Order* at ¶235 (rel. January 22, 2001) ("Kansas/Oklahoma 271 Order"). The FCC noted, for example, that "these rules preclude an incumbent LEC from charging carriers for local traffic that originates on the incumbent LEC's network." *Id.* Thus, not only may an ALEC establish a single POI in each LATA, it may do so without being required to build, lease, or otherwise pay for facilities on BellSouth's side of the POI.

Q. ARE THERE ANY OTHER FCC ORDERS THAT ADDRESS THE RESPONSIBILITY OF A CARRIER TO DELIVER ITS ORIGINATING TRAFFIC TO A CO-CARRIER FOR TERMINATION?

A. Yes. The FCC places the responsibility for costs associated with originating traffic on the carrier that originates the call when the originated traffic must be delivered to another carrier's network for completion. This responsibility includes the facilities necessary to deliver the call to a co-carrier's network. The FCC addressed this point in *In re: TSR Wireless, LLC, et al v. U.S. West, et. al.*, Memorandum Opinion and Order, File Nos. E-98-13, E-98-15, E-98-16, E-98-17, E-98-18 (rel. June 21, 2000) ("TSR Wireless Order"). The TSR Wireless Order sets forth the framework by which carriers recover costs incurred in carrying both originating and terminating traffic. The FCC describes the obligations of a carrier when its customers originate traffic as follows:

> The Local Competition Order requires a carrier to pay the cost of facilities used to deliver traffic originated by that carrier to the

> network of its co-carrier, who then terminates that traffic and bills the originating carrier for termination compensation. In essence, the originating carrier holds itself out as being capable of transmitting a telephone call to any end-user, and is responsible for paying the cost of delivering the call to the network of the co-carrier who will then terminate the call. Under the Commission's regulations, the cost of the facilities used to deliver this traffic is the originating carrier's responsibility, because these facilities are part of the originating carrier's network. The originating carrier recovers the costs of these facilities through the rates it charges its own customers for making calls. This regime represents "rules of the road" under which all carriers operate, and which make it possible for one company's customer to call any other customer even if that customer is served by another telephone company.

TSR Wireless Order ¶ 34.

Q. THE FCC HAS RECENTLY ISSUED A NOTICE OF PROPOSED RULEMAKING TO ADDRESS THE DEVELOPMENT OF A UNIFIED INTERCARRIER COMPENSATION REGIME. DOES ANYTHING IN THIS NOTICE AFFECT BELLSOUTH'S FINANCIAL RESPONSIBILITY FOR TRANSPORTING TRAFFIC ORIGINATED ON ITS NETWORK TO THE POI?

A. No. The Notice of Proposed Rulemaking begins "a fundamental reexamination of all currently regulated forms of intercarrier compensation" and seeks comment on "the feasibility of a bill-and-keep approach for such a unified regime." *In the Matter of Developing a Unified Intercarrier Compensation Regime*, CC Docket No. 01-92, *Notice of Proposed Rulemaking* at ¶ 1 (rel. April 27, 2001) ("Intercarrier Compensation NPRM"). While the FCC seeks comments on whether the single POI per LATA rule and the current division of financial responsibility should continue to apply under a future bill-and-keep regime, the FCC actually reaffirms BellSouth's obligation, under current rules,

to deliver traffic to the POI at its own cost, in stating as follows:

> Our current reciprocal compensation rules preclude an ILEC from charging carriers for local traffic that originates on the ILEC's network.
>
> Intercarrier Compensation NPRM, ¶ 112 and footnote 180)

Q. HAS THIS COMMISSION ADDRESSED BELLSOUTH'S INTERCONNECTION OBLIGATION?

A. Yes, up to a point. In the WorldCom/BellSouth arbitration, the Commission said:

> [W]e find that WorldCom, as the requesting carrier, has the exclusive right pursuant to the Act, the FCC's Local Competition Order and FCC regulations, to designate the network point (or points) of interconnection at any technically feasible point for the mutual exchange of traffic.

In re: Petition by MCImetro for Arbitration with BellSouth, Docket No. 000649-TP, Final Order issued March 30, 2001 at page 81 ("WorldCom/BellSouth Arbitration Order"). However, the Commission found that the record in the arbitration proceeding was inadequate to resolve the issue of financial responsibility for delivery of traffic to the POI, and noted that these issues were to be addressed in its generic docket on reciprocal compensation. *Id.* at 82.

Q. WHAT POSITION HAS BELLSOUTH TAKEN ON THIS ISSUE IN THE PHASE II OF THE GENERIC DOCKET ON RECIPROCAL COMPENSATION?

A. BellSouth has continued to maintain the same position that it took in the WorldCom/BellSouth arbitration. BellSouth contends that unless an ALEC establishes a POI in each BellSouth local calling area in which the ALEC has

customers, the ALEC is financially responsible for transporting traffic that originates on BellSouth's network from those local calling areas to the POI. *See* Direct Testimony of John A. Ruscilli in Docket 000075-TP (Phase II) at pages 13-26. As pointed out in the testimony sponsored in that docket by various competitive carriers, BellSouth's position is wrong as a matter of law and unwise as a matter of policy.

Q. HOW WILL THE RESOLUTION OF THIS ISSUE IN DOCKET NO. 000075-TP AFFECT BELLSOUTH'S 271 APPLICATION?

A. BellSouth's obligation under federal law to deliver originating traffic, at its own cost, to the ALEC-designated POI is clear. The Commission should therefore rule in favor of the ALECs, and against BellSouth, in the generic docket on reciprocal compensation. Regardless of the Commission's ruling, however, BellSouth will not satisfy the requirements of checklist item (i), and will not be entitled to Section 271 relief, unless and until it accepts its obligation to deliver traffic to the POI at its own expense and incorporates that obligation into its Interconnection Agreements and its Statement of Generally Available Terms and Conditions (SGAT).

TRUNK FRAGMENTATION ISSUE

Q. CAN YOU PLEASE PROVIDE AN OVERVIEW OF WHAT YOU HAVE DESCRIBED AS THE TRUNK FRAGMENTATION ISSUE?

A. Yes. Once networks are physically connected, it is necessary from an engineering perspective to partition the interconnection facilities into various types of trunk groups required to carry the different types of interconnection

traffic. Based on our experience, the most efficient way to segregate that traffic is as follows:

- A separate trunk group for local traffic, non-equal access intraLATA interexchange (toll) traffic, and local transit traffic to other LECs.
- A separate trunk group for equal access interLATA or intraLATA interexchange traffic that transits the ILEC network.
- Separate trunks connecting the ALECs switch to each 911/E911 tandem.
- A separate trunk group connecting the ALEC's switch to BellSouth's operator service center.
- A separate trunk group connecting the ALEC's switch to the BellSouth directory assistance center if the ALEC is purchasing BellSouth's unbundled directory assistance service.

Q. DOES BELLSOUTH DISPUTE THIS TRUNKING SCHEME?

A. Yes, in part. With respect to the first type of trunk group, BellSouth takes the position that it is necessary to "fragment" the traffic by separating local and intraLATA toll traffic from local transit traffic.

Q. WHAT IS THE PROBLEM WITH BELLSOUTH'S POSITION?

A. First, there is no technical requirement to segregate local, intraLATA toll, and transit traffic on separate trunk groups. BellSouth has available what it calls "super group" trunks than can accommodate local, intraLATA toll, and transit traffic on a single trunk group. Second, because of engineering efficiencies, it is often more efficient to "pack" a trunk group with both local traffic, intraLATA toll, and transit traffic than to require separate trunk groups for each type of

traffic. Because these types of traffic are "rated" differently, the receiving carrier would either have to have a way to discern the jurisdiction of the traffic (for example, calling party number or "CPN") or would have to rely on reporting by the sending carrier, via a percent local usage (PLU) or similar reporting mechanism.

Q. HAS THIS COMMISSION PREVIOUSLY ADDRESSED THIS ISSUE?

A. Yes. In the WorldCom/BellSouth arbitration, the Commission permitted BellSouth to require WorldCom to separate transit traffic from local and intraLATA traffic when interconnecting with BellSouth's network. WorldCom/BST Arbitration Order at page 87.

Q. IF THE COMMISSION HAS PREVIOUSLY RULED ON THIS QUESTION, WHY IS WORLDCOM RAISING IT AGAIN AS AN ISSUE IN THIS 271 DOCKET?

A. Checklist item (i) requires BellSouth to provide interconnection in accordance with the requirements of Sections 251(c)(2) and 252(d)(1). Under Section 251(c)(2)(D), interconnection must be provided "on rates, terms and conditions that are just, reasonable and nondiscriminatory." When BellSouth has super group trunks available that are capable of carrying local, intraLATA toll and transit traffic on the same trunk group, it is unjust and unreasonable for BellSouth to insist on using a less efficient form of interconnection that fragments such traffic. That inefficiency translates into unnecessary, increased costs for the ALEC who interconnects with BellSouth. Unless and until BellSouth agrees to exchange local, intraLATA toll and transit traffic with an

ALEC over a single trunk group, and incorporates that requirement into its Interconnection Agreements and SGAT, BellSouth will not have satisfied its obligations under checklist item (i).

TANDEM PROVIDER ISSUE

Q. PLEASE PROVIDE AN OVERVIEW OF WHAT YOU HAVE CALLED THE TANDEM PROVIDER ISSUE.

A. This issue involves the question of whether an ALEC will be permitted to route terminating switched access traffic directly to BellSouth end offices over local interconnection trunks, or whether it will be required to deliver such traffic to BellSouth at BellSouth access tandems over access trunks.

Q. WHY DOES IT MATTER HOW AN ALEC IS PERMITTED TO DELIVER TERMINATING SWITCHED ACCESS TRAFFIC?

A. Assume that an ALEC (such as WorldCom) wants to compete with BellSouth for providing terminating access service to interexchange carriers (IXCs). In this situation, an IXC could route its terminating traffic to a WorldCom tandem switch, from which WorldCom could terminate the call directly (if the called party were a WorldCom local customer) or could deliver the call to BellSouth's end office switch for termination (if the called party were a BellSouth local customer). In the case of a call to a BellSouth customer, BellSouth would be entitled to bill the IXC for the end office switching component of access charges, and WorldCom would be entitled to bill the IXC for the tandem switching and transport components.

If, however, WorldCom is not permitted to route terminating access traffic directly to BellSouth's end offices, but instead must send such traffic to BellSouth's access tandem via switched access trunks, then WorldCom is foreclosed from providing a competitive access service -- since BellSouth will always perform the tandem switching and transport functions, and will be entitled to bill the IXC for those services.

Q. WHY DOES BELLSOUTH INSIST THAT TERMINATING ACCESS TRAFFIC BE DELIVERED TO ITS ACCESS TANDEM VIA ACCESS TRUNKS?

A. BellSouth claims that if an ALEC is allowed to deliver terminating switched access traffic to BellSouth end offices over local interconnection trunks, then BellSouth will not have the information necessary to identify and bill the appropriate IXC for its end office switching services.

Q. IS THIS A VALID CONCERN?

A. Yes and no. Clearly BellSouth must get the information necessary to bill the IXC for BellSouth's portion of the access charges. However, that information can be provided by the ALEC to BellSouth in standard EMI format. This is exactly the same way that BellSouth provides the ALEC with the data necessary for the ALEC to bill the IXC for end office switching when BellSouth delivers terminating access traffic bound for an ALEC customer. If an ALEC is willing and able to provide EMI records on a reciprocal basis, there is no reason for BellSouth to refuse to permit this traffic to be delivered directly to its end office switches other than a desire to foreclose competition.

Q. HAS THE COMMISSION PREVIOUSLY CONSIDERED THIS QUESTION?

A. Yes. In the WorldCom/BellSouth arbitration, the Commission permitted BellSouth to require WorldCom to deliver all terminating switched access traffic to BellSouth over switched access trunks to BellSouth's access tandem. WorldCom/BST Arbitration Order at page 98. The Commission's decision to impose this requirement was the result of its concern over BellSouth's ability to properly bill IXCs for its share of switched access charges if access and local traffic were commingled on the same trunk groups.

Q. IF THE COMMISSION HAS PREVIOUSLY RULED ON THIS QUESTION, WHY IS WORLDCOM RAISING IT AGAIN AS AN ISSUE IN THIS 271 DOCKET?

A. As I previously stated, BellSouth is required under Section 251(c)(2)(D) to provide interconnection "on rates, terms and conditions that are just, reasonable and nondiscriminatory." When BellSouth is technically capable of accepting access traffic at its end office switches over local interconnection trunks, and an ALEC is technically capable of providing BellSouth, in industry standard format, with the information necessary to properly bill for such calls, it is discriminatory for BellSouth to require that such traffic be delivered instead via access trunks to its access tandem. This is particularly true when the result of such a requirement is that BellSouth retains a monopoly over the provision of terminating switched access service. Unless and until BellSouth agrees to allow ALECs to deliver such traffic directly to its end offices via local interconnection

trunks, and incorporates that requirement into its Interconnection Agreements and SGAT, BellSouth will not have satisfied its obligations under checklist item (i).

SUMMARY - CHECKLIST ITEM (i)

Q. WHAT ACTION SHOULD THE COMMISSION TAKE WITH RESPECT TO CHECKLIST ITEM (i)?

A. For the reasons set forth above, the Commission should find that BellSouth does not currently meet its obligation to provide interconnection in accordance with the requirements of Sections 252(c)(2) and 252(d)(1), and thus fails to satisfy checklist item (i).

Issue 6: Does BellSouth currently provide local transport on the trunk side of a wireline local exchange carrier switch unbundled from local switching or other services, pursuant to Section 271(c(2)(B)(v) and applicable rules promulgated by the FCC?

(b) Has BellSouth satisfied all other associated requirements, if any, for this item?

Q. DOES BELLSOUTH CURRENTLY PROVIDE UNBUNDLED LOCAL TRANSPORT IN ACCORDANCE WITH THE REQUIREMENTS OF THE ACT AND THE FCC RULES?

A. No. BellSouth does not currently provide unbundled local transport in accordance with the requirements of the Act and the FCC rules. Specifically, BellSouth does not provide, as an unbundled network element (UNE), dedicated

transport that (i) connects two points on an ALECs network (such as two switches, a network node and a switch, or two network nodes), or (ii) connects a point on an ALEC's network to a point on the network of a different ALEC, even where the facilities to provide such UNEs are currently in place. BellSouth thus fails both checklist item (v) relating to unbundled local transport and checklist item (ii) which requires nondiscriminatory access to all unbundled network elements.

Q. DID THE COMMISSION PREVIOUSLY RULE IN THE WORLDCOM/BELLSOUTH ARBITRATION (DOCKET NO. 000649-TP) THAT BELLSOUTH WAS NOT REQUIRED TO PROVIDE DEDICATED TRANSPORT IN THESE SITUATIONS?

A. Yes. However, WorldCom believes that BellSouth is clearly required by the Act and the FCC rules to provide unbundled transport in these situations, and BellSouth's failure to provide that transport -- for whatever reason -- prevents BellSouth from meeting the requirements of checklist item (v) for Section 271 purposes.

Q. WHAT FCC REQUIREMENTS APPLY TO THIS ISSUE?

A. FCC Rule 51.319(d) requires BellSouth to provide nondiscriminatory access to interoffice transmission facilities on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service. Dedicated transport is defined as

> incumbent LEC transmission facilities, including all technically feasible capacity-related services including, but not limited to, DS1, DS3 and OCn levels, dedicated to a particular customer or carrier, that provide telecommunications between wire centers

> owned by incumbent LECs or requesting telecommunications carriers, or between switches owned by incumbent LECs or requesting telecommunications carriers.

47 C.F.R. § 51.319(d)(1)(A). BellSouth is required to "[p]rovide all technically feasible transmission facilities, features, functions, and capabilities that the requesting telecommunications carrier could use to provide telecommunications services." 47 C.F.R. § 51.319(d)(2)(B). Further, BellSouth must permit a requesting carrier to connect unbundled interoffice transmission facilities to equipment designated by the requesting carrier. 47 C.F.R. § 51.319(d)(2)(C).

BellSouth's unbundling obligation "extends *throughout* its ubiquitous transport network." *In the Matter of Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, CC Docket No. 96-98, *Third Report and Order and Fourth Further Notice of Proposed Rulemaking*, FCC 99-238 at ¶ 324 (emphasis added) ("UNE Remand Order"). Thus, BellSouth is not required to build new transport facilities to meet specific requests by ALECs for point-to-point service, but it is required to provide unbundled service where it has facilities in place.

Q. WHAT IS WORLDCOM'S POSITION REGARDING THE EXTENT OF BELLSOUTH'S OBLIGATION TO PROVIDE UNBUNDLED TRANSPORT?

A. WorldCom's position is that where BellSouth has dedicated interoffice transmission facilities currently in place, it is required to provide such facilities on an unbundled basis to the locations and equipment designated by WorldCom, including network nodes connected to WorldCom wire centers and switches and

to the wire centers and switches of other requesting carriers.

Q. WHAT IS BELLSOUTH'S POSITION REGARDING ITS OBLIGATION?

A. BellSouth contends that it is required to provide dedicated transport only between BellSouth switches/wire centers and WorldCom switches/wire centers even if it has facilities in place to other locations that WorldCom wishes to connect.

Q. WHY DOES WORLDCOM NEED BELLSOUTH TO PROVIDE DEDICATED TRANSPORT TO POINTS THAT ARE NOT IN BELLSOUTH OR WORLDCOM WIRE CENTERS OR END OFFICES?

A. WorldCom's local networks utilize a very different architecture than the ILECs' networks. WorldCom does not have a "hub and spoke" architecture that connects all the loops (or "spokes") at various wire centers. Rather, WorldCom's "local loops" ride fiber optic SONET rings and can traverse several serving wire center territories to get between a customer and the serving switch. These "loops" can be routed through several transport nodes within WorldCom's network to connect the customer to the switch. The SONET rings that connect the switching node to the transport nodes (which then link to the separate SONET rings that terminate in the customer premise) act in a similar way to BellSouth's common transport. In other words, because of the way WorldCom's network is configured, it will often be most efficient to link transport nodes, which are WorldCom's traffic aggregation points, to BellSouth dedicated transport rather than making the link at the WorldCom switch.

Q. IS WORLDCOM'S APPROACH CONSISTENT WITH THE UNE REMAND ORDER?

A. Yes. In rejecting ILEC claims that unbundled transport should not be made available because competitive alternatives are available, the FCC noted that

> [t]he competitive alternatives that are available along limited point-to-point routes do not necessarily allow competitive LECs to connect their collocation arrangements or switching nodes according to the needs of their individual network designs. These carriers also require dedicated transport to deliver traffic *from their own traffic aggregation points* to the incumbent LECs network for purposes of interconnection.

UNE Remand Order, ¶ 346 (emphasis added)

BellSouth transmission facilities currently run to many nodes (traffic aggregation points) on WorldCom's network. These facilities are part of BellSouth's existing ubiquitous network. There is no legitimate reason for BellSouth's refusal to provide transport to locations that are currently part of its existing transport network.

Q. WHY DOES WORLDCOM NEED BELLSOUTH TO PROVIDE DEDICATED TRANSPORT BETWEEN WORLDCOM AND THIRD PARTY CARRIERS?

A. BellSouth typically will have transport facilities connecting its switches both to WorldCom locations and to locations of third party carriers with whom WorldCom needs to interconnect. In such cases, it frequently will be more efficient for WorldCom to obtain dedicated transport from BellSouth than to construct its own new transport facilities.

Q. IS BELLSOUTH REQUIRED TO PROVIDE DEDICATED TRANSPORT

TO THIRD PARTY CARRIERS WITH WHICH BELLSOUTH IS INTERCONNECTED?

A. Yes. As I previously noted, the FCC has required ILECs to provide dedicated transport throughout their networks. UNE Remand Order, ¶ 324. In addition, the FCC's rules require BellSouth to provide transmission facilities to the locations of all requesting telecommunications carriers. The FCC's definition of dedicated transport applies to the provision of telecommunications between wire centers and switches of ILECs or "requesting telecommunications carriers." 47 C.F.R. § 51.319(d)(1). "Requesting telecommunications carriers" in this context means all requesting carriers with whom BellSouth is interconnected, not just a single requesting carrier. The reason is that BellSouth's transport network is ubiquitous and BellSouth typically will have transport facilities in place to all requesting telecommunications carriers

Q. DO YOU HAVE ANY SUPPORT FOR WORLDCOM'S INTERPRETATION THAT USE OF THE PHRASE "REQUESTING TELECOMMUNICATIONS CARRIERS" REQUIRES BELLSOUTH TO CONNECT THE LOCATIONS OF TWO DIFFERENT CARRIERS?

A. Yes, this is the conclusion reached by the Texas PUC regarding Southwestern Bell's unbundling obligation for dedicated transport in Docket 18117: Complaint of MCI Telecommunications Corporation and MCIMetro Access Transmission Service, Inc. against SWBT for Violation of Commission Order in Docket Nos. 16285 and 17587 Regarding Provisioning of Unbundled Dedicated Transport.

Q. BELLSOUTH HAS PREVIOUSLY RELIED ON PARAGRAPH 440 OF

THE LOCAL COMPETITION ORDER TO SUPPORT ITS POSITION THAT IT IS NOT REQUIRED TO PROVIDE TRANSPORT TO OTHER CARRIERS' LOCATIONS. DO YOU AGREE?

A. No. The FCC's rules are not as restrictive as BellSouth has claimed. For example, paragraph 440 of the Local Competition Order mentions a number of locations to which BellSouth must provide unbundled transport. One of those locations, for instance, is an IXC's point of presence. In this case, the FCC has clearly indicated that an ALEC is entitled to order unbundled transport to connect to another carrier, an IXC.

SUMMARY - CHECKLIST ITEM (v)

Q. WHAT ACTION SHOULD THE COMMISSION TAKE WITH RESPECT TO CHECKLIST ITEMS (ii) and (v)?

A. For the reasons set forth above, the Commission should find that BellSouth does not currently meet its obligation to provide nondiscriminatory access to the dedicated transport network element, and thus fails to satisfy both checklist items.

Issue 14: In Order PSC-97-1459-FOF-TP, issued November 19, 1997, the Commission found that BellSouth met the requirements of Section 271(c)(2)(B)(xiii) of the Communications Act of 1934, as amended by the Telecommunications Act of 1996. Does BellSouth currently provide reciprocal compensation arrangements in accordance with the requirements of Section 252(d)(2) of the Telecommunications Act of 1996,

pursuant to Section 271(c)(2)(B)(xiii) and applicable rules promulgated by the FCC?

Q. DOES BELLSOUTH CURRENTLY PROVIDE RECIPROCAL COMPENSATION ARRANGEMENTS IN ACCORDANCE WITH THE REQUIREMENTS OF THE ACT AND FCC RULES?

A. No. BellSouth does not currently provide reciprocal compensation in accordance with the requirements of the Act. Specifically:

(1) BellSouth does not pay reciprocal compensation at the tandem interconnection rate to ALECs that do not operate a traditional tandem switch, but who nevertheless utilize a switch that serves a geographic area comparable to that served by a BellSouth tandem switch. I will refer to this as the "tandem interconnection" issue.

(2) BellSouth has not agreed to pay reciprocal compensation in situations in which an ALEC provides a competitive foreign exchange (FX) service by assigning NXXs to a customer with a physical location outside the rate center in which the NXX is homed. I will refer to this as the "FX" issue.

Q. WHAT WEIGHT SHOULD THE COMMISSION GIVE TO ITS FINDING IN THE PRIOR 271 PROCEEDING THAT BELLSOUTH MET THE REQUIREMENTS OF THIS CHECKLIST ITEM?

A. It should give that finding no weight with respect to the two items raised above. Since the time of the prior order, the FCC's rules related to the tandem interconnection issue have been reinstated by the courts and clarified by the FCC. The FX issue -- which has been raised by BellSouth in a number of recent

arbitration proceedings -- had not been raised prior to the earlier hearings in this docket. Thus neither of these issues has previously been considered by the Commission in the context of an application for 271 relief.

Q. HAS THE COMMISSION PREVIOUSLY CONSIDERED THESE ISSUES IN OTHER DOCKETS?

A. Yes, but they are not yet definitively resolved. The Commission considered both the tandem interconnection issue and the FX issue in the WorldCom/BellSouth arbitration (Docket No. 000649-TP) and accepted the parties' stipulation to defer these issue to Phase II of Docket No. 000075-TP. Unless and until the Commission rules (or BellSouth agrees) that BellSouth is required to pay compensation at the tandem interconnection based solely on the geographic reach of an ALEC's switch, BellSouth will not have met its obligation under Section 252(d)(2) of the Act to provide reciprocal compensation on just and reasonable terms and conditions.

Similarly, unless and until the Commission rules (or BellSouth agrees) that ALECs are permitted to assign NPA/NXXs to end users located outside the rate center in which the NPA/NXX is homed, and that BellSouth is required to pay reciprocal compensation on local calls to such numbers, BellSouth will not have met its obligation under Section 252(d)(2) of the Act to provide reciprocal compensation on just and reasonable terms and conditions.

TANDEM INTERCONNECTION ISSUE

Q. AS A THRESHOLD MATTER, WHAT IS BELLSOUTH'S OBLIGATION TO COMPENSATE ALECS FOR THE USE OF THEIR NETWORKS TO

TERMINATE LOCAL TRAFFIC?

A. Section 251(b)(5) of the Act imposes on each local exchange carrier "[t]he duty to establish reciprocal compensation arrangements for the transport and termination of telecommunications." Section 252(d)(2)(A) of the Act further provides as follows:

> For the purposes of compliance by an incumbent local exchange carrier with section 251(b)(5), a State commission shall not consider the terms and conditions for reciprocal compensation to be just and reasonable unless –
>
> (i) such terms and conditions provide for the mutual and reciprocal recovery by each carrier of costs associated with the transport and termination on each carrier's network facilities of calls that originate on the network facilities of the other carrier; and
>
> (ii) such terms and conditions determine such costs on the basis of a reasonable approximation of the additional costs of terminating such calls.

Q. GIVEN THAT THERE IS TO A RECIPROCAL COMPENSATION OBLIGATION FOR TRANSPORT AND TERMINATION, HAS THE FCC ADDRESSED THE LEVEL OF COMPENSATION THAT IS TO BE APPLIED?

A. Yes. After establishing how reciprocal compensation rates would be determined for ILECs, the FCC turned to the question of what rates should apply to ALECs. The FCC concluded in Paragraph 1085 of the Local Competition Order that the ILECs' reciprocal compensation rates should be adopted as the "presumptive proxy" for the ALEC's rates -- in other words, the rates were required to be the same. The only exception to this rule arises when an ALEC establishes that its transport and termination costs are higher than those of the ILEC. Local

Competition Order, ¶ 1089; FCC Rule 51.711(b).

Q. WHAT REASONS DID THE FCC GIVE FOR ORDERING SYMMETRICAL TREATMENT?

A. The FCC provided a number of reasons for ordering symmetrical treatment, including the following:

> Typically the ILEC and ALEC will be providing service in the same geographic area, so their forward-looking costs should be the same in most cases. Local Competition Order, ¶ 1085.
>
> Imposing symmetrical rates would not reduce carriers' incentives to minimize their internal costs. ALECs would have the correct incentives to minimize their costs because their termination revenues would not vary directly with changes in their costs. At the same time, ILECs would have the incentive to reduce their costs because they could be expected to transport and terminate much more traffic originating on their own networks than on ALEC's networks. Thus, even assuming ILEC cost reductions were immediately translated into lower transport and termination rates, any reduction in reciprocal compensation revenues would be more than offset by having a more cost-effective network. Local Competition Order, ¶ 1086.
>
> Symmetrical rates might reduce ILEC's ability to use their bargaining power to negotiate high termination rates for themselves and low termination rates for ALECs. Local Competition Order, ¶ 1087.

Q. WHAT DID THE FCC CONCLUDE CONCERNING SYMMETRY OF TANDEM INTERCONNECTION RATES?

A. The FCC stated the following in paragraph 1090 of the Local Competition Order:

> We find that the "additional costs" incurred by a LEC when transporting and terminating a call that originated on a competing carrier's network are likely to vary depending on whether tandem switching is involved. We, therefore, conclude that states may establish transport and termination rates in the arbitration process that vary according to whether the traffic is routed through a

> tandem switch or directly to the end-office switch. In such event, states shall also consider whether new technologies (e.g., fiber ring or wireless networks) perform functions similar to those performed by an incumbent LEC's tandem switch and thus, whether some or all calls terminating on the new entrant's network should be priced the same as the sum of transport and termination via the incumbent LEC's tandem switch. *Where the interconnecting carrier's switch serves a geographic area comparable to that served by the incumbent LEC's tandem switch, the appropriate proxy for the interconnecting carrier's additional costs is the LEC tandem interconnection rate.*
>
> (Emphasis added)

Q. PLEASE EXPLAIN WHAT THIS LANGUAGE MEANS IN PRACTICAL TERMS.

A. The FCC reached three conclusions. First, it is appropriate to establish an additional rate for ILECs when they use a tandem switch in the transport and termination of ALECs' local traffic. Second, states may consider whether some or all calls terminated by an ALEC may be priced at that higher rate if the ALEC uses alternative technologies or architectures to perform functions similar to those performed by the ILEC's tandem switch. Third, the higher rate *must* be applied when the ALEC's switch serves a geographic comparable to that served by the ILEC's tandem switch.

Q. DOES THE FCC'S CODIFICATION OF THIS PRINCIPLE CONFIRM YOUR READING OF THE LOCAL COMPETITION ORDER?

A. Yes, it confirms my analysis. FCC Rule 51.711(a) provides as follows:

> Rates for transport and termination of local telecommunications traffic shall be symmetrical, except as provided in paragraphs (b) and (c) of this section. [These exceptions do not apply here.]
>
> (1) For purposes of this subpart, symmetrical rates are rates that a carrier other than an incumbent LEC assesses upon an

> incumbent LEC for transport and termination of local telecommunications traffic equal to those that the incumbent LEC assesses upon the other carrier for the same services.
>
> (2) In cases where both parties are incumbent LECs, or neither party is an incumbent LEC, a state commission shall establish the symmetrical rates for transport and termination based on the larger carrier's forward-looking costs.
>
> (3) *Where the switch of a carrier other than an incumbent LEC serves a geographic area comparable to the area served by the incumbent LEC's tandem switch, the appropriate rate for the carrier other than an incumbent LEC is the incumbent LEC's tandem interconnection rate.*
>
> (Emphasis added)

The FCC could not have been more clear. The geographic comparability rule was adopted without exception or qualification.

Q. HAS THE FCC RECENTLY READDRESSED THIS ISSUE?

A. Yes. In Paragraph 105 of the Intercarrier Compensation NPRM released on April 24, 2001, the FCC put to rest claims by carriers such as BellSouth that Rule 51.711 applies a two-prong "both-and" test for entitlement to compensation at the tandem interconnection rate:

> In addition, section 51.711(a)(3) of the Commission's rules requires only that the comparable geographic area test be met before carriers are entitled to the tandem interconnection rate for local call termination. *Although there has been some confusion stemming from additional language in the text of the Local Competition Order regarding functional equivalency* [¶1090], section 51.711(3) is clear in requiring only a geographic area test. Therefore we confirm that a carrier demonstrating that its switch serves "a geographic area comparable to that served by the incumbent LEC's tandem switch" is entitled to the tandem interconnection rate to terminate local telecommunications traffic on its network.

Intercarrier Compensation NPRM, ¶ 105.

In addition, the Ninth Circuit Court of Appeals reached the same conclusion in an opinion issued on July 3 of this year. *U.S. West Communications, Inc. v. Washington Utilities and Transportation Commission*, ___ F.3d ___ (9th Cir. July 3, 2001).

Q. HAS BELLSOUTH'S POSITION CHANGED IN LIGHT OF THE RECENT REAFFIRMATION BY THE FCC THAT ITS RULE ESTABLISHES AN "EITHER-OR" TEST?

A. It appears that it has. If I correctly understood Mr. Ruscilli's updated testimony in Phase II of Docket No. 000075-TP, BellSouth now concedes that the FCC rule requires BellSouth to compensate ALECs at the tandem interconnection rate upon demonstration by the ALEC that its switch serves a geographic area comparable to that served by BellSouth's tandem. The issue will now become what constitutes a comparable geographic area. To date, however, BellSouth has not amended its interconnection agreements or its Statement of Generally Available Terms and Conditions to reflect its obligation to pay compensation at the tandem rate based on geographic comparability. Unless and until it does so, BellSouth will not satisfy the requirements of checklist item (xiii), and will not be entitled to Section 271 relief.

FX ISSUE

Q. PLEASE BRIEFLY DESCRIBE WHAT THE FX ISSUE INVOLVES.

A. The FX issue has also been characterized as an issue relating to an ALEC's right to assign NPA/NXX codes to end users located outside the rate center in which

the NPA/NXX is homed. The fundamental issues have been framed in Phase II of Docket No. 000075-TP as:

> 15. (a) Under what conditions, if any, should carriers be permitted to assign NPA/NXX codes to end users outside the rate center in which the NPA/NXX is homed?
>
> (b) Should the intercarrier compensation mechanism for calls to these NPA/NXXs be based on the physical location of the customer, the rate center to which the NPA/NXX is home, or some other criterion.

Q. IF THE COMMISSION IS ADDRESSING THESE ISSUES IN PHASE II OF DOCKET NO. 000075-TP, WHY IS WORLDCOM RAISING THEM AGAIN IN THIS 271 PROCEEDING?

A. WorldCom is raising the FX issue in this proceeding because BellSouth is clearly required by the Act and FCC Rules to pay reciprocal compensation for the termination of local calls, including local calls made to NPA/NXXs that the ALEC may have assigned to non-ISP customers who may be physically located outside the rate center to which the NPA/NXX is homed. Unless and until that obligation is reflected in BellSouth's Interconnection Agreements and SGAT, it will not satisfy checklist item (xiii).

Q. WHY DID YOU QUALIFY THE PRIOR ANSWER BY LIMITING IT TO CALLS TO "NON-ISP" CUSTOMERS?

A. I limited the response because the FCC recently ruled that calls to ISPs are "information access services" which are not subject to the reciprocal compensation provisions of the Act and has established an interim compensation mechanism for such calls. That compensation mechanism will become effective on June 14, 2001, and will continue for thirty-six months, or

until further FCC action, whichever is later. *In the Matters of Implementation of the Local Competition Provisions in the Telecommunications Act of 1999 and Intercarrier Compensation for ISP-Bound Traffic,* CC Docket Nos. 96-98 and 99-68, *Order on Remand and Report and Order*, FCC 01-131, ¶¶ 3-8 (ISP Remand Order). The issue of a permanent compensation mechanism for such ISP-bound traffic will be considered as part of the rulemaking the FCC initiated on April 27, 2001 regarding development of a unified intercarrier compensation regime. *See*, Intercarrier Compensation NPRM.

Q. RECOGNIZING THAT THE AMOUNT OF TRAFFIC AFFECTED BY THIS ISSUE HAS BEEN NARROWED BY THE FCC'S RECENT RULING RELATED TO ISP-BOUND TRAFFIC, PLEASE SUMMARIZE WORLDCOM'S POSITION ON THIS ISSUE.

A. WorldCom's position is that (a) ALECs should be permitted to offer competitive FX service by assigning NPA/NXXs to end users who may be physically located outside the rate center in which the NPA/NXX is homed, and (b) ALECs are entitled to receive reciprocal compensation for local calls originated by BellSouth and terminated to such (non-ISP) end users.

Q. WHAT IS BELLSOUTH'S POSITION ON THIS ISSUE?

A. As I understand BellSouth witness Ruscilli's testimony in Docket No. 000075-TP, BellSouth's current position is that it does not object to ALECs assigning NPA/NXXs and providing FX service in the manner I described. However, BellSouth (a) would require the ALEC to identify NPA/NXXs which are assigned to customers located outside of the rate center in which they are

homed, (b) would refuse to pay reciprocal compensation for local calls to such numbers, and (c) would bill the ALEC for originating switched access charges as if such calls were toll calls.

Q. DO BELLSOUTH'S OWN ACTIONS INDICATE THAT THE TRUE NATURE OF FX TRAFFIC IS THAT OF LOCAL AND NOT TOLL?

A. Yes. As discussed below, this traffic has historically been treated by the industry as local. This includes BellSouth's own treatment of this traffic. Mr. Ruscilli noted in Docket No. 000075-TP that BellSouth has recently built a database "of all existing BellSouth FX numbers" and intends to use this database to "prevent billing of reciprocal compensation." Thus, over the many years that BellSouth has been offering FX service (until this database was created on February 23, 2001), BellSouth has been quite confident that FX traffic was local and treated it as such.

BellSouth, through it database gymnastics, is attempting to turn on its head the true local nature of this traffic. This effort is an improper attempt to isolate traffic in such a manner as to prohibit competitors from encroaching on BellSouth's FX market. BellSouth's position would require ALEC's to route local traffic as toll, and to bill BellSouth originating access charges for local calls that are destined for the FX numbers contained in BellSouth's database. To date, BellSouth has not indicated that its database would be available to ALECs for such illogical purposes.

BellSouth should not be allowed to avoid its reciprocal compensation responsibilities associated with this traffic by creating its own unconventional

methods and procedures and attempting to unilaterally impose them on the entire industry.

Q. HAS A COMMISSION COMMENTED ON BELLSOUTH'S CREATION OF SUCH A DATABASE?

A. Yes. The Kentucky Public Service Commission, in finding that "...foreign exchange and virtual NXX services should be considered local traffic when the customer is physically located within the same LATA as the calling area with which the telephone number is associated." (March 14, 2001 Order, Case No. 2000-404, Level 3 Communications LLC Arbitration with BellSouth Telecommunications, Inc.), addressed the issue of BellSouth's treatment of FX traffic and the need for a database. On these points the Kentucky Commission found as follows:

> BellSouth agrees that it rates such foreign exchange traffic as local traffic for retail purposes. These calls are billed to customers as local traffic. If they were treated differently here, BellSouth would be required to track all phone numbers that are foreign exchange or virtual NXX type service and remove these from what would otherwise be considered local calls for which reciprocal compensation is due. This practice would be **unreasonable** given the historical treatment of foreign exchange traffic as local traffic
>
> [emphasis added]

Obviously, just because BellSouth has gone to the unprecedented effort of creating a database of its FX numbers, does not mean that its position is any more appropriate or reasonable. In fact, the Kentucky Commission correctly found just the opposite.

Q. WHAT IS THE BASIS FOR WORLDCOM'S POSITION THAT

RECIPROCAL COMPENSATION IS DUE FOR THIS FX-TYPE TRAFFIC?

A. I will address this issue along the following lines:

- Foreign Exchange Service is a telecommunications service that has been available for years and is simply a response to customer demand for dial tone in an exchange separate from the customer's physical location.
- ALECs can provide FX service by assigning an NPA/NXX in the desired exchange to a customer who is physically located outside the rate center in which the NPA/NXX is homed.
- The ALECs' offering of FX service provides a competitive alternative to BellSouth's FX service.
- Treatment of FX traffic as "local" is consistent with industry precedent.
- Failure to treat ALEC-provided FX as local, consistent with the local treatment of BellSouth's FX service, will eliminate competition for FX service.

Q. WHAT IS FOREIGN EXCHANGE SERVICE?

A. Foreign exchange ("FX") service involves providing service to a customer physically located outside the rate center to which his or her NPA/NXX is assigned. For example, if an ALEC customer in Miami is assigned an NPA/NXX from the Key West rate center, that customer is receiving a foreign exchange service. Customers located in Key West may call the ALEC customer's foreign exchange number and that call will be treated as a local call. This example holds true if BellSouth assigns the Key West NPA/NXX to the

Miami customer.

Q. WHY DO SUBSCRIBERS WANT FX SERVICE?

A. Generally, users of FX service want to establish a local business presence in an area beyond their physical location. And, because being able to be reached via a local telephone call is an integral part of a business' "presence," this typically corresponds with that FX subscriber's desire to serve its customers that are located beyond the local calling area where the business is located. For example, a floral shop located in Miami may desire a local presence in Key West. While that floral shop may have the ability to accept and fulfill orders for the delivery of flowers in Key West, it may not have the ability to actually open a store in Key West. However, customers in Key West are more likely to call a florist with a local Key West telephone number, not just because it is a local call, but also because there may be an expectation on the part of the caller that a "local" florist would best be able to fulfill the need for a delivery of flowers in Key West.

Q. IN YOUR EXAMPLE, COULDN'T THAT FLORAL SHOP SIMPLY SUBSCRIBE TO AN 800 NUMBER TO EXTEND ITS PRESENCE?

A. No. First, as I mentioned, there is the calling party's perception as to the local nature of the service being offered. When dialing a Key West FX telephone number the calling party may not even be aware that the shop is actually located in Miami. Second, while the 800 number would expand the "reach" of the Miami floral shop it would expand it well beyond the Key West calling area and most likely beyond the capabilities of the floral shop to provide service. Use of

an FX service only allows local calling from the Key West local calling area whereas an 800 number would provide local calling from a much larger area such as the entire LATA or state of Florida.

Q. GIVEN THIS DEMAND FOR FX SERVICE, HOW HAS THE MARKET RESPONDED?

A. Both ALECs and ILECs have made FX service offerings available and actively compete for customers for FX service. Of course ILECs, as the monopoly local providers, were "first" to offer FX service. BellSouth's traditional FX offering is described in its General Subscriber Service Tariff for Florida at A9.1.1 (A) as follows:

> Foreign Exchange service is exchange service furnished to a subscriber from an exchange other than the one from which the subscriber would normally be served, allowing subscribers to have local presence and two-way communications in an exchange different from their own.

Just as with the ALECs' FX offerings, when BellSouth provides retail FX service, NPA/NXXs are assigned to end users located outside the local calling area of the rate center with which the NPA/NXX has been associated, and the jurisdiction (i.e., local vs. toll) of traffic delivered from the foreign exchange to the end user is determined as if the end user were physically located in the foreign exchange. Simply, the jurisdiction of the call is determined by comparing the called and calling party's NPA/NXXs, regardless of the physical location of the customers.

Q. HOW WOULD BELLSOUTH'S POSITION ON THE ALECS OFFERING OF FX SERVICES AFFECT THE COMPETITION YOU DESCRIBE?

A. BellSouth has proposed to classify ALECs' FX services as toll service and to impose access charges. Adoption of this position effectively would prohibit ALECs from offering FX service in competition with BellSouth. Because this proposal is anti-competitive, limits choices available to consumers, and is inconsistent with the notion of parity, the benefits of competition would be eliminated. These negative consequences would take place because adoption of BellSouth's position would raise the ALECs cost of providing a competitive service to a level that would effectively eliminate the ALEC's ability to offer a competing FX service.

Q. PLEASE EXPLAIN.

A. If BellSouth were permitted to apply switched access charges to ALECs' FX traffic, such above-cost pricing ultimately would make the offering of competitive alternatives by ALECs infeasible. This would limit BellSouth's end users to BellSouth's FX service. The California Commission has recognized the anti-competitive effects of applying access charges to a ALEC's FX service:

> The rating of a call, therefore, should be consistently determined based upon the designated NXX prefix. Abandoning the linkage between NXX prefix and rate center designation could undermine the ability of customers to discern whether a given NXX prefix will result in toll charges or not. Likewise, the service expectations of the called party (i.e., ISPs) would be undermined by imposing toll charges on such calls since customers of the ISPs would be precluded from reaching them through a local call. Consequently, the billing of toll charges for Internet access, which is designed to be local, could render an ISP's service prohibitively expensive, thus limiting the competitive choices for Internet access, particularly in rural areas.

Order Instituting Rulemaking on the Commission's Own Motion Into Competition for Local Exchange Service, Rulemaking 95-04-043 at 26

(California PUC, Sept. 2, 1999) ("California Order"). As the California Commission recognized, the retail offering of FX service and its associated rating (as a local call) based on the rate centers associated with the assigned NXXs must be applied to FX offerings from ALECs. Failure to do so distorts the way in which a ALEC can make a competitive FX offering available and, as described above, would in fact eliminate competition for this increasingly important service.

Q. HOW CAN THE BENEFITS OF A COMPETITIVE MARKET FOR FX SERVICE BE MAINTAINED?

A. For ALECs to be able to offer a competitive alternative to the BellSouth FX service offerings, the traffic associated with FX service must be classified as "local" just as BellSouth classifies its own FX traffic as local.

Q. IS THERE AN INDUSTRY STANDARD PRACTICE THAT, APPLIED TO FX TRAFFIC, WOULD RESULT IN THE CLASSIFICATION OF FX TRAFFIC AS LOCAL?

A. Yes. As indicated above relative to BellSouth's treatment of its own FX traffic, whether a call is local or not depends on the NPA/NXX dialed, not the physical location of the customer. Jurisdiction of traffic is properly determined by comparing the rate centers associated with the originating and terminating NPA/NXXs for any given call, not the physical location of the end-users. Comparison of the rate centers associated with the calling and called NPA/NXXs is consistent with how the jurisdiction of traffic and the applicability of toll charges are determined within the industry today.

Q. SHOULD RECIPROCAL COMPENSATION APPLY TO FOREIGN EXCHANGE TRAFFIC?

A. Yes. As discussed above, this traffic is appropriately classified as local. Therefore, reciprocal compensation should be applicable. This is consistent with the purpose of reciprocal compensation, to compensate the terminating carrier for the costs associated with the termination of local traffic that originates on another carrier's network.

On this point the Michigan Public Service Commission in its Order on the application of reciprocal compensation to foreign exchange service made this finding:

> The Commission rejects the proposal to reclassify FX calls as non-local for reciprocal compensation purposes. Ameritech Michigan has not explained whether, or how, the means of routing a call placed by one LEC's customer to another LEC's point of interconnection affects the costs that the second LEC necessarily incurs to terminate the call.

Michigan Order at 10. (In the matter of the Application of Ameritech Michigan to revise its reciprocal compensation rates and rate structure and to exempt foreign exchange service from payment of reciprocal compensation, Case No. U-12696, Opinion and Order dated January 23, 2001) Just as the method for determining the jurisdiction of FX traffic must be applied equally and consistently between ILECs and ALECs, so too must the obligation remain with the originating carrier to compensate the terminating carrier for the termination of FX traffic.

Q. IS AN ALEC'S OFFERING OF FX SERVICE CONSISTENT WITH THE FCC'S RULES REGARDING POINTS OF INTERCONNECTION AND

RESPONSIBILITY FOR TRANSPORT?

A. Yes. As discussed above, the FCC has made clear that an ALEC is allowed to select the point of interconnection and may establish one or more such POIs in a single LATA. Additionally, each carrier is responsible for delivering local traffic to the designated POI(s). An ALEC's offering of FX service does not place any additional burdens on the ILEC. The costs to the ILEC for transporting traffic to the POI are the same whether or not the call is an FX call. The ALEC's FX offerings do not require the ILEC to perform any additional functions or meet any additional obligations other than those called for in the FCC's rules with regard to POI and transport requirements.

Q. WHAT SHOULD THIS COMMISSION DO WITH REGARD TO THE FX ISSUE?

A. Hopefully, based on the record in Docket No. 000075-TP, the Commission will determine that no restrictions should be placed on a carrier's ability to assign NPA/NXXs to customers physically located outside the rate center in which the number is homed and will further determine that reciprocal compensation is payable on local calls to such numbers (other than ISP-bound traffic). Regardless of the Commission's ruling, however, BellSouth will not satisfy the requirements of checklist item (xiii), and will not be entitled to Section 271 relief, unless and until it accepts its obligation to pay reciprocal compensation on such calls and incorporates that obligation into its Interconnection Agreements and its Statement of Generally Available Terms and Conditions (SGAT).

SUMMARY - CHECKLIST ITEM (xiii)

Q. WHAT ACTION SHOULD THE COMMISSION TAKE WITH RESPECT TO CHECKLIST ITEM (xiii)?

A. For the reasons stated above, the Commission should find that BellSouth has failed to satisfy its obligation to provide reciprocal compensation unless and until BellSouth accepts its obligations with respect to payment of the tandem interconnection rate and payment of reciprocal compensation on calls to "FX" numbers.

Q. DOES THAT CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

MR. MELSON: And he had no exhibits.

CHAIRMAN JACOBS: No exhibits. Very well. Anything else?

MS. KEATING: Could I ask for a check on one other thing?

CHAIRMAN JACOBS: All right.

MS. KEATING: This goes back to the Composite Exhibit No. 2 that there was a question about additional information that had not been provided by BellSouth. I'm not sure that we ever went back and moved that into the record.

CHAIRMAN JACOBS: I checked it. Yes, you did, because, remember, you came back later and said -- I think you were going to extract whatever the questionable part was.

MS. KEATING: Okay. Thank you.

CHAIRMAN JACOBS: And let me just make sure quickly here that I have everything except the late-fileds.

Done. Very well. Anything else?

COMMISSIONER JABER: Mr. Chairman, I just wanted to take an opportunity to commend the parties for their professionalism, their patience, and just their overall handling of this entire proceeding. And staff, I don't want to leave staff out. Obviously, I

don't know what we're going to do, but I know that the decision will be made easily because the parties are professional and this proceeding has been a good one. Thank you.

COMMISSIONER DEASON: I'm disappointed you left off the Prehearing Officer.

MR. MELSON: We couldn't have done it without you.

COMMISSIONER JABER: But you know you're in my heart, so --

CHAIRMAN JACOBS: We do owe a great debt of thanks to the Prehearing Officer.

COMMISSIONER JABER: Yes, absolutely.

CHAIRMAN JACOBS: And I'm sure there was one noted exception to your comments.

COMMISSIONER JABER: Mr. Edenfield?

CHAIRMAN JACOBS: No.

COMMISSIONER JABER: Then I don't know --

CHAIRMAN JACOBS: How could you forget? There was one that even topped Mr. Edenfield, and that was --

COMMISSIONER JABER: Marshall Criser. Marshall Criser.

CHAIRMAN JACOBS: No, he was only a silent participant. This was the exchange between

Ms. Kaufman and Dr. Taylor, a moment that shall live in infamy, it appears.

(Laughter.)

CHAIRMAN JACOBS: Well, you came in second. You came in second.

With that, I want to echo those comments. This had been very useful and very instructive, and I think our decision will be made very -- it was very helpful to provide this. And with that, thank you all, and we are adjourned.

(Proceedings concluded at 3:05 p.m.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA)
COUNTY OF LEON)

I, MARY ALLEN NEEL, do hereby certify that a hearing was heard and the time and place herein stated in Docket No. 960786A-TL.

IT IS FURTHER CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript constitutes a true transcription of my notes of said proceeding.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorneys or counsel connected with the action, nor am I financially interested in the action.

DATED THIS 21st day of October, 2001.

MARY ALLEN NEEL, RPR
100 Salem Court
Tallahassee, Florida 32301
(850) 878-2221

EXHIBIT NO. _____

DOCKET NO.: 960786a-TP

WITNESS: Stip-1

PARTY: BellSouth

DESCRIPTION:

1. Responses to Staff's 1st Set of Interrogatories, Items 1-5 - pp. 1-11
2. Responses to Staff's 2nd Set of Interrogatories, Items 6-15 - pp. 12-38
3. Responses to Staff's 3rd Set of Interrogatories, Items 16-45 - pp. 39-108
4. Responses to Staff's 4th Set of Interrogatories, Items 46-64 - pp. 109-138
5. Response to Staff's 1st Request for Production of Documents Items 1-4 - pp. 139-140 (CD Response to item 4 not copied)

PROFFERING PARTY: STAFF

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 960786A-TL EXHIBIT NO. 1
COMPANY/ WITNESS. FPSC Staff
DATE: 10-11 9:12:38

I.D. # Stip-1

REQUEST: For the purposes of the following interrogatories, please refer to the affidavit of Linda M. Kinsey and Exhibit LMK-1 regarding BellSouth's License Arrangement for Rights of Way (ROW), Conduits, and Pole Attachments.

(a) Regarding Section 26 of BellSouth's License Arrangement for ROW, Conduits, and Pole Attachments, please describe the process to renew this agreement once an initial term has expired.

(b) Please identify the number of BellSouth License Arrangements for ROW, Conduits, and Pole Attachments that have been cancelled since January 1, 1997, because of non-occupancy, or to be more specific, "...because of failure to attach or place facilities within the 1 year timeframe."

(c) If the response to (b) is positive, please describe BellSouth's procedure with respect to providing the affected company notice that their "space becomes available for others to use and the license is cancelled."

RESPONSE:

(a) As negotiated by BellSouth's Competitive Structures Provisioning Center (CSPC), the standard agreement for poles, conduits, etc. states "Unless sooner terminated as herein provided, this Agreement shall continue in effect for a term of one (1) year from the date hereof and thereafter from year to year until either party hereto terminates this Agreement by giving the other party at least ninety (90) days prior written notice thereof. Such ninety (90) days notice of termination may be given to take effect at the end of the original one (1) year period or any time thereafter."

The agreement is viewed as a perpetual agreement after the "initial" term. No action is required by either party for the agreement to continue in effect if so desired by either party. The above language provides for the situation if either party desires to terminate the agreement.

RESPONSE: (Cont.)

b) There have not been any "BellSouth License Agreements ... because of failure to attach or place facilities within the 1 year timeframe." This is not what is addressed in the agreement. The Agreement refers to terminating an application (a request for a specific placement of facilities by the respective owner in a certain geographic location) after approval by BellSouth that has not been undertaken within the 1-year period.

An application is defined in the agreement as "The process of requesting information related to records, Pole and/or Conduit availability, or make-ready requirements for BellSouth owned or controlled Facilities. Each Application is limited in size to a maximum of (1) 100 consecutive Poles or (2) 10 consecutive Manhole sections or 5000 feet, whichever is greater. The Application includes (but is not limited to) request for records, records investigation and/or a field investigation, and Make-Ready Work."

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For the purposes of the following interrogatory, please refer to Linda M. Kinsey's affidavit regarding the Implementation of License Agreements in Florida.

(a) At page11, Ms. Kinsey states the following:

> "There have been no denials of CLEC requests for access to BellSouth structures where BellSouth has existing facilities (either poles, ducts or conduit)."

Please identify the number of CLEC requests that have been denied since January 1, 1997, because of exhausted facilities.

(b) If the response to (a) is positive, please describe BellSouth's procedure to address the exhausted facility, or facilities.

RESPONSE:

a) There are no records maintained tracking the information requested.

b) BellSouth, per the Telecom Act, has no responsibility to provide access to structures (poles or conduit) when the capacity does not exist. This is the reasoning for the response to (a) of this request. Anyone requesting structures (conduit) where capacity has been exhausted may build their own conduit and connect to existing BellSouth manholes.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For the purposes of the following interrogatories, please refer to AT&T witness Judy Wheeler's rebuttal testimony regarding BellSouth's Local Exchange Navigation System (LENS).

(a) Specifically responding to witness Wheeler's testimony at page 9, lines 5-7, please explain the process of how an ALEC "can electronically populate fields" in the same or similar manner as BellSouth.

(b) If the response to (a) is negative, is BellSouth developing an enhancement to LENS to facilitate "electronically populate[d] fields," and if so, when will it be available?

RESPONSE:

(a) Judy Wheeler's rebuttal testimony says, *"Conversely, the systems BellSouth uses for its own retail operations have the capability to receive and transmit customer data internally. As a result, BellSouth's systems can electronically populate fields in BellSouth's own retail orders with customer data with little or no manual input."*
An ALEC can integrate its own internal OSS with BellSouth's TAG and EDI interfaces. In accordance with the FCC's requirements, BellSouth currently provides ALECs with all the specifications necessary for integrating the BellSouth interfaces, as well as the same data stream of customer information that BellSouth provides to its own retail units. An ALEC may integrate ordering and pre-ordering functions by integrating the TAG pre-ordering interface with the EDI ordering interface, or by integrating TAG pre-ordering with TAG ordering. ALECs interested in integrating the pre-ordering and ordering systems with their own internal systems must, of course, have their own internal OSS, and have responsibility for that integration.

RESPONSE: (Cont.)

By requiring BellSouth to provide "the specifications necessary to instruct competing carriers on how to modify or design their systems in a manner that will enable them to communicate with the BOC's legacy systems and any interfaces utilized by the BOC for such access," it is clear that the FCC intended that the ALECs, not BellSouth, would perform the necessary integration as stated in the Ameritech Michigan Order, paragraph 137.

The interfaces for ALECs provide non-discriminatory access to the pre-ordering, ordering, and provisioning information and functions in BellSouth's OSS, while also allowing the ALECs to develop their own customer service systems, including their own pricing, packaging, sales, and customer account recommendations. By using the integratable interfaces, ALECs can customize their own marketing and sales support systems to perform functions such as automatic telephone numbers selection, PIC/LPIC searches, and credit checks (after contracting with a third party credit reporting agency). Integratable interfaces allow ALECs to design the appearance and "feel" of their marketing and sales support systems as they see fit; this is one of the advantages of integration and machine-to-machine interfaces. Because these ALECs' marketing and sales support systems integrate the electronic interfaces with the ALECs' own internal OSS, ALECs can use information obtained via the electronic interfaces to build their own databases, such as databases of their own local customer service records.

(b) Change Request 0369 will provide "parsing" of customer information, which will standardize how fields are parsed from the (CSR) Customer Service Record. This feature is scheduled for 1st quarter 2002. Parsing will enhance the ALEC's ability to "electronically populate fields" derived from their developed customer database to their EDI or TAG interface.

RESPONSE: (Cont.)

Because BellSouth recognizes that there are ALECs that have decided not to use integratable machine-to-machine interfaces, BellSouth, therefore, offers ALECs RoboTAG™ and Local Exchange Navigation System (LENS).

Currently pending in Bellsouth's Change Control is CR0371, which request address validation to be conducted on the main account number versus the populated end user address fields for Request Types "E" (Resale) and "M" (Port Loop Combinations) for Migrations, Activity Types V, P, and Q, Line Number Activity of N (New). This feature will reduce the population of end user address fields for the ALEC and should reduce format errors that can cause clarifications.

RESPONSE PROVIDED BY: Ronald Pate
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For the purposes of the following interrogatory, please refer to AT&T witness Judy Wheeler's rebuttal testimony regarding number porting, page 11, lines 21-24.

(a) What is the operational status of a customer's number during the four business days while awaiting the completion of the number porting process/

(b) Is the customer able to place and receive calls? Please explain your answer.

RESPONSE: a) The operation status of a customer's number during the four-day number porting process is that the number is fully operational.

b) Yes, the customer is able to place and receive calls. The only activity on the end user's number is the trigger, which prepares the AIN in the switch for porting. This is transparent to the end user's service.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For the purposes of the following interrogatories, please refer to AT&T witness Judy Wheeler's rebuttal testimony regarding the BellSouth's LENS, page 17, lines 1-10.

(a) Please identify and explain the reasons why an ALEC order could be subject to a "clarification notice for incorrect customer information," even though the information used to populate the order was derived from a BellSouth source.

(b) Please identify the types of, and how quickly are justifications provided to an ALEC when an order is "rejected?"

(c) If the response to (b) is positive, and assuming that an ALEC can expeditiously corrects the fault on an order, is BellSouth able to expedite the processing of the LSR to avoid further delay? Please explain your answer.

(d) If the response to (b) is negative, is BellSouth developing an enhancement to LENS to facilitate providing a concise justification for "rejected" orders, and if so, when will it be available?

RESPONSE: AT&T witness Judy Wheeler's rebuttal testimony regarding the BellSouth's LENS, page 17, lines 1-10, says; *"Yes. As I have already testified, AT&T Broadband visually verifies customer information through BellSouth's LENS to ensure that the customer information submitted by AT&T Broadband on the LSR matches the information BellSouth has. Nevertheless, BellSouth often issues rejections or clarification notices for allegedly incorrect customer information, even though that information was already verified with BellSouth's own customer service records. These mistakes are unnecessary and cause significant delays. AT&T Broadcast must divert resources to determine why on LSR has been rejected (even though there is no basis for such rejection) and must resubmit the order."*

RESPONSE: (Cont.)

(a) For clarification purposes, AT&T Broadband is not submitting their LSRs through LENS, but rather issuing their LSRs through their machine-to-machine Electronic Data Interchange ("EDI") ordering interface. EDI allows ALECS to access the same ordering and provisioning OSS accessed by RNS and ROS for BellSouth. EDI follows the industry standard protocol (EDI) for ordering and the industry standard Ordering and Billing Forum ("OBF") guidelines for LSRs.

For a complete list of reasons why an ALEC could be subject to a "clarification notice for incorrect customer information, please see section (b) of this response. Some common examples are;

- AT&T Broadband's representatives could have incorrectly viewed or interpreted the current (CSR) Customer Service Record. For example they could be viewing a CSR that is marked across the top of the CSR as "Final" for billing for various reasons. Two such reasons could be from porting the telephone number or from a former customer other than the Broadband current customer.
- If AT&T Broadband is using LENS to view the CSR as Wheeler describes, then their representatives would have to type that data into their EDI ordering interface. Their data entry could have errors or omissions.
- AT&T Broadband's representatives may have made an error interpreting the Business Rules applicable to the product and services they are requesting. Such as with UNE P, some products and services are not applicable that maybe applicable with Resale. AT&T would have to apply those applicable business rules for either UNE P or Resale.

(b) By no means should AT&T receive a rejection or clarification without an error message and AT&T has presented no evidence that such has actually occurred. An error code provides the justification for the rejection. For a description of error codes & meanings, see LSR Error Messages under Statusing at:
http://www.interconnection.bellsouth.com/guides/index.html
Also, please refer to the CD Rom provided in respones to Staff's Request for Production No. 4.

RESPONSE: (Cont.)

Below is an explanation of the error categories. Rejects and Auto-clarifications are returned by the Ordering interface. These errors are too severe for processing. An LSR may complete this initial editing, but cannot continue electronic processing without manual assistance from the LCSC, which is the ERR/LCSC classification. A partial frame of the LSR Error Messages follows the category description.

BellSouth ENCORE System
Local Service Request (LSR) Error Messages (TCIF 9)
Final Version for Release 9.4 – July 27, 2001
Column 1 – Error Code – This column contains the number of the error message that is returned to the user.
Column 2 – Sev Type – This column contains the severity of the error.
REJ/FATAL – Errors classified as "REJECTS" or "FATAL" will be returned to the CLECs and a new LSR should be sent with the error corrected.
ERR/LCSC (LCSC Review) – Errors in this classification are sent to the LCSC for review. The LCSC will determine whether they can correct it. If they cannot, the CLEC will have to return a supplement with the corrected information.
AUTO CLAR(Auto Clarification) – Errors in this category will be returned to the CLECs and a supplement will have to be sent with the corrected information.
Column 3 – Error Message Text – This is the error message that is returned.
Changes in messages are in bold face.
As of Date: June 02, 2001 **BellSouth ENCORE System** Final Version Release 9.2.1
Local Service Request Error Message (TCIF 9)

Error Sev
Code Type Error Message Text **Changes in Bold**
E2375 REJ/FATAL LOCNUM= WSOP MUST BE V OR BLANK
G7215 AUTO CLAR UNE - CABLE ID IS MISSING ON LSR
G7220 AUTO CLAR UNE - DATA FOR CA AND PR FIDS ARE MISSING ON LSR
G7225 AUTO CLAR USOC= IS MISSING
G7230 AUTO CLAR REFERENCE OF CALL OPTION NOT VALID ON THIS ACCOUNT ACTIVITY TYPE
G7235 AUTO CLAR 10 DIGIT TN REQUIRED WITH USOC/FID=

RESPONSE: (Cont.)

Furthermore, if the LSR was submitted electronically, but fell out for manual processing, and was subsequently clarified by the LCSC the LCSC will type additional verbiage if necessary for resolution. These are the errors coded 1000 included in the monthly PMAP reports.

Also, AT&T Broadband's raw data provided in the PMAP reports monthly on the web include their errors. AT&T Broadband may review and discuss its ordering performance for flow through improvements with their BellSouth Customer Support Manager, not the LCSC.

As to how *quickly* justifications are provided for an LSR that is rejected, please view the Monthly State Summary (MSS) Reports on BellSouth's website at:
www.interconnection.bellsouth.com/mss/index.html
These reports reflect BellSouth's benchmarks in regard to reject responsiveness.

(c) The BellSouth Business Rules for Local Ordering found at:
http://www.interconnection.bellsouth.com/guides/html/leo.html
states, that when ordering electronically, errors will be returned to the ALEC by the ordering interface. Errors will require a supplemental LSR. In all cases, the original due date must be reviewed to ensure that the changes requested do not negatively impact the original desired due date. If the modifications result in a longer due date interval, a new desired due date should be noted. Requests for service cannot be processed until a complete and accurate LSR has been received. ALEC delays in providing the required information will negatively impact the timely provisioning of service.

(d) The LSR Error messages apply to LSRs submitted through LENS, EDI, TAG, or RoboTAG.

RESPONSE PROVIDED BY: Ronald Pate
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For purposes of the following interrogatories, please refer to the rebuttal testimony of WorldCom's witness Argenbright, at p. 15, lines 15-23.

a) Does BellSouth commingle local and access traffic onto a single trunk group when delivering traffic to ALECs?

b) If BellSouth commingles local and access traffic onto a single trunk group, what inter-carrier format/protocol is used to delineate the traffic for billing purposes?

c) If BellSouth commingles local and access traffic onto a single trunk group, what are the technical limitations that preclude an ALEC for using BellSouth's protocol so that the ALEC may commingle traffic?

RESPONSE: a)Yes, BellSouth commingles local and access traffic onto a single trunk group, but only on groups to and from BellSouth access tandems.

b) BellSouth uses a cellular Type 2A interconnection interface that utilizes inband multifrequency trunk signaling and trunk address signaling protocols or a cellular Type 2A with Signaling System 7 ("SS7") interconnection interface that utilizes SS7 signaling.

For greater detail on the application of Type 2A interfaces, see Telcordia Technologies SR-2275, *Telcordia Notes on the Networks*, Section 15.6.3, and GR-145-CORE, *Compatibility Information for Interconnection of a Wireless Services Provider and a Local Exchange Carrier Network,* Section 2.4.

c) The only technical limitation that would preclude an ALEC from commingling local and access traffic onto a single trunk group to a BellSouth access tandem would be when the ALEC switch does not support the required interface protocols. Since these protocols are standard for modern switches, this limitation is not likely to occur.

However, there is no interface protocol that supports an ALEC commingling local and access traffic to BellSouth end offices. With available protocols, there is no way for BellSouth to identify on terminating calls the service provider originating the call, ALEC or interexchange carrier, and thus which provider should be billed.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
BellSouth Telecommunications, Inc.
675 West Peachtree Street, NE
Atlanta, Georgia 30375

REQUEST: For purposes of the following interrogatories, please refer to BellSouth's witness W. Keith Milner's direct testimony regarding Line Class Codes, at p. 81, lines 1-10.

a) What are the total number of Line Class Codes (LCC) available for each switch type used in Florida?

b) What percentage of LCC availability does BellSouth typically use for itself for each switch type used in Florida?

c) Does BellSouth allow Feature Group D (FGD) signaling for ALEC interconnection trunks at an end-office? If not, what is BellSouth's position on offering FGD for ALEC interconnection trunks at an end-office?

d) Does BellSouth provide signaling protocol conversions for ALECs on an end office level?

RESPONSE: a) Line Class Code stated capacity by each switch vendor is as follows:

1AESS	1,024
5ESS	46,656*
EWSD	16,383
DMS 100/200	32,000
DMS 100	32,000

*Limitations, such as available memory, may prevent the use of the stated capacity for Line Class Codes.

b) BellSouth's current average utilization by switch type for LCCs based on the above stated capacities is approximately:

1AESS	15.0%
5ESS	1.84%
EWSD	5.49%
DMS100/200	.7%
DMS100	.7%

c) Yes.

d) It is not clear what is meant by "signaling protocol conversions...on an end office level", however, it appears this is related to the provisioning of dedicated trunking from the end office necessary to support the customized routing discussed in Mr. Milner's testimony. On that basis, BellSouth provides numerous, standard signaling protocols for dedicated trunk groups, the choice of which is dependent on the trunk group application and the requirements of the ALEC ordering the associated service. No conversion of signaling is required to provide the customized routing of calls to these trunks.

RESPONSE PROVIDED BY: W. KEITH MILNER
Senior Director
BellSouth Telecommunications, Inc.
675 West Peachtree Street, NE
Atlanta, Georgia 30375

REQUEST: For purposes of the following interrogatories, please refer to BellSouth's witness W. Keith Milner's direct testimony addressing Line Class Codes, at p. 82, lines 6-20.

a) Does the one routing pattern per region/state referred to in BellSouth's testimony as a default routing pattern when no code is entered on an LSR?

b) Are the Line Class Codes available on a per switch basis in any format that an LAEC may readily access?

c) What method does BellSouth's retail side use to access Line Class Codes?

RESPONSE: a) Yes. To explain in another way, the single Operator Services/Directory Assistance ("OS/DA") routing pattern may be viewed as a Customized Default option. This default pattern routes all ALEC OS/DA calls originated from a customer in an end office where BellSouth is providing the local switching for that ALEC and where the ALEC has requested only a single customized OS/DA routing option. Calls shall be routed to that option by BellSouth following the submission of the ALEC's Local Service Request ("LSR") without the need for the ALEC to provide any indication of the routing on the LSR. All ALEC originated OS/DA calls default to this customized routing option unless otherwise specified on the LSR. LCCs are still established in each ALEC designated end office, but are not required on the LSR to meet the default option provisioning process.

If an ALEC has requested multiple customized OS/DA routing options in an end office and the appropriate LCCs have been established, the ALEC will provide an indicator in the form of a five character Selective Routing Code ("SRC") behind the ZSRC Field Identifier ("FID") in the Feature Detail section of the LSR when ordering. The SRC shall identify, among other things, the specific OS/DA branding routing to be used (Unbranded, Custom Branded, Self Branded) to apply to the line. The SRC

identifier may be the same for all end offices in a state or BellSouth region.

b) No, and they are not necessary for ordering OS/DA selective call routing when the ALEC uses the Selective Call Routing Using Line Class Codes ("SCR-LCC") Version 3 documentation found at www.interconnection.bellsouth.com/guides under Unbundled Network Element ("UNE"), updated on 8/29/01. This is because an SRC instead of an LCC is required on the LSR as described in "a" above. SRCs are provided on form RF-3605 (CLEC Selective Routing Service Inquiry) by the requesting ALEC during the pre-ordering process. The defining and programming of corresponding LCCs if they are not already programmed in the serving switch is also covered during the pre-ordering process.

c) BellSouth retail does not access Line Class Codes for Selective Routing as only a single routing pattern is used for handling its end user's OS/DA calls. That single routing pattern directs such calls to BellSouth's OS/DA platform.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
BellSouth Telecommunications, Inc.
675 West Peachtree Street, NE
Atlanta, Georgia 30375

REQUEST: Please provide a list of all dockets presently before or previously considered by the Florida Public Service Commission regarding disputes over BellSouth's payment of reciprocal compensation. For each docket identified, please include the following information:

a) Please provide the docket number and date the docket was opened.

b) Please identify the particular ALEC or ALECs involved.

c) Please include a brief description of the circumstances surrounding the dispute.

d) Please stat the final resolution of the dispute, including whether the matter was resolved through settlement.

RESPONSE: 1. a) 971478-TP/980184-TP/980495-TP/980499-TP; Opened November 12, 1997; Consolidated April 21, 1998

b) WorldCom Technologies, Inc.

Teleport Communications Group, Inc./TCG South Florida

Intermedia Communications, Inc.

MCImetro Access Transmission Services, Inc.

c) Each complaint addressed whether the parties' interconnection agreements required the parties to compensate each other for transport and termination of traffic to Internet Service Providers.

d) The FPSC ruled that, under the terms of the agreements at issue and for the purpose of reciprocal compensation requirements, ISP-bound traffic should be treated as local. This decision was appealed by BellSouth to the U.S. District Court for the Northern District of Florida.

2. a) 981008-TP; Opened August 6, 1998

b) American Communication Services of Jacksonville, Inc. d/b/a e.spire Communications, Inc. and ACSI Local Switched Services, Inc. d/b/a e.spire Communications, Inc.

c) The complaint addressed whether the parties' interconnection agreement required the parties to compensate each other for transport and termination of traffic to Internet Service Providers.

d) The FPSC ruled that the parties intended that calls originated by an end user of one and terminated to an ISP of the other would be rated and billed as local calls.

3. a) 990691-TP; Opened May 27, 1999

b) ICG Telecom Group, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The first issue was whether ISP-bound traffic should be defined as local traffic for the purposes of the reciprocal compensation obligations of the agreement. The second issue was whether ICG was entitled to compensation for tandem switching.

d) The FPSC ruled that the parties should continue to operate under the terms of the existing interconnection agreement as it related to ISP-bound traffic until the FCC issued a "...final ruling on whether ISP-bound traffic should be defined as local and whether reciprocal compensation is due for this traffic." The FPSC ruled that ICG was entitled to be compensated at the end office switching rate.

4. a) 990750-TP; Opened June 11, 1999

b) ITC^DeltaCom Communications, Inc. d/b/a ITC^DeltaCom

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The first issue was whether reciprocal compensation was due for

all calls, including ISP-bound traffic, routed over local trunks. The second issue was the proper rate for reciprocal compensation.

d) The FPSC ruled that the parties should continue to operate under the terms of the existing interconnection agreement as it related to ISP-bound traffic until the FCC issued a "...final ruling on whether ISP-bound traffic should be defined as local and whether reciprocal compensation is due for this traffic." The FPSC ruled that the proper rate for reciprocal compensation should continue to be $0.009 per mou. The parties reached a settlement on the issue of reciprocal compensation.

5. a) 990874-TP; Opened July 2, 1999

b) US LEC of Florida Inc.

c) US LEC alleged that the parties intended to include ISP-bound traffic in the reciprocal compensation obligation of the interconnection agreement.

d) The parties have asked for a continuance.

6. a) 991220-TP; Opened August 26, 1999

b) Global NAPs, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The first issue was whether ISP-bound traffic should be defined as local traffic for the purposes of the reciprocal compensation obligations of the agreement or otherwise compensated. The second issue was the appropriate rate for reciprocal compensation for local and ISP-bound traffic.

d) The FPSC ruled that, for purposes of reciprocal compensation under this agreement, ISP-bound traffic would be treated as local traffic. The reciprocal compensation rates for local traffic would be $0.00125 for tandem switching and $0.002 for end office switching. For ISP-bound traffic, the reciprocal compensation rates

would be $0.00125 for tandem switching and $0.00128 for end office switching. The parties agreed to use a single rate of $0.00128 for all local and ISP-bound traffic for a period of six months from the effective date of the FCC's *ISP Remand Order*. The rates after that date will be consistent with that order.

7. a) 991267-TP; Opened August 31, 1999

   b) Global NAPs, Inc.

   c) Global NAPs adopted the DeltaCom Agreement dated July 1, 1997, and subsequently filed a complaint with the FPSC alleging that compensation was due for ISP-bound traffic.

   d) The FPSC ruled that compensation was due for ISP-bound traffic at the rates set forth in the Agreement for local traffic. This decision is currently on appeal with the U.S. District Court for the Northern District of Florida.

8. a) 991534-TP; Opened October 8, 1999

   b) Intermedia Communications, Inc.

   c) The primary issue in this case was the rate that should be used to bill for reciprocal compensation. The original interconnection agreement called for reciprocal compensation for all local traffic to be billed at a composite rate of $0.01056 per minute of use. The parties signed an Amendment to include multiple tandem access in the interconnection agreement. BellSouth's position was that the Amendment required that reciprocal compensation for all local traffic be billed at the new elemental rates established in the Amendment. Intermedia's position was that the Amendment required that reciprocal compensation for all local traffic be billed at the composite rate unless Intermedia ordered multiple tandem access, in which case elemental rates apply.

d) The FPSC ruled that elemental rates should apply for all reciprocal compensation regardless of whether Intermedia order multiple tandem access. This decision was appealed by Intermedia to the U.S. District Court for the Northern District of Florida. Intermedia later voluntarily withdrew its appeal as part of a settlement agreement on all local interconnection issues between the parties.

9. a) 991605-TP; Opened October 15, 1999

b) Time Warner Telecom of Florida, L.P.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The arbitration issue in this case was the definition of local traffic for purposes of reciprocal compensation.

d) The parties settled this arbitration on February 25, 2000.

10. a) 991838-TP; Opened December 7, 1999

b) BlueStar Networks, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issue in this case was whether the parties should be required to adopt bill and keep for transport and termination of local, intraLATA and interLATA voice traffic for the purposes of reciprocal compensation.

d) The parties settled this arbitration on March 2, 2000.

11. a) 991854-TP; Opened December 7, 1999

b) Intermedia Communications, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The first issue was whether ISP-bound traffic should be defined as

d) local traffic for the purposes of the reciprocal compensation obligations of the agreement. The second issue was whether Intermedia was entitled to compensation for tandem switching.

e) The FPSC ruled that the parties should continue to operate under the terms of the existing interconnection agreement as it related to ISP-bound traffic until the FCC issued a "...final ruling on whether ISP-bound traffic should be defined as local and whether reciprocal compensation is due for this traffic." The FPSC ruled that ICG was entitled to be compensated at the end office switching rate. BellSouth appealed this ruling to the U.S. District Court for Northern

f) District of Florida, but withdrew it later as part of a larger settlement with Intermedia on all local interconnection issues.

12.a) 991946-TP; Opened December 17, 1999

b) ITC^DeltaCom Communications, Inc.

c) The issue in this case was if the agreement between the parties required the parties to compensate each other for ISP-bound traffic as local traffic.

d) The FPSC ruled that, under the terms of the agreement, reciprocal compensation was due for ISP-bound traffic. BellSouth filed a Motion for Reconsideration, but the parties settled their differences and DeltaCom withdrew the compliant prior to the FPSC ruling on the Motion for Reconsideration.

13.a) 000713-TP; Opened June 16, 2000

b) AT&T Communications of the Southern States, Inc. d/b/a AT&T

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issues in this case were: (1) whether calls to Internet

service providers should be treated as local traffic for the purposes of reciprocal compensation; (2) whether AT&T local calls that use BellSouth's switching UNE should be subject to "bill and keep" compensation arrangement, even though reciprocal compensation will be paid for terminating local calls not using BellSouth's UNE switch; (3) what the appropriate treatment of outbound voice calls over internet protocol ("IP") telephony should be as it pertains to reciprocal compensation; (4) when calculating Percent Local Usage (PLU) for purposes of reciprocal compensation, should AT&T be allowed to report the traffic on a monthly, rather than quarterly, basis; and (5) what the proper parameters sufficient to prevent fraudulent billing for reciprocal compensation should be.

d) The parties stipulated and moved Items(1) and (3) above to Docket No. 000075-TP. The parties settled Items (2), (4) and (5) above prior to the hearing.

14.a) 000075-TP; Opened May 24, 2000

b) MCImetro Access Transmission Services LLC and MCI WorldCom Communications, Inc.
Allegiance Telecom
Sprint-Florida, Inc.
Supra Telecom
US LEC of Florida, Inc.
GTE Florida Incorporated
Intermedia Communications, Inc.
e.spire Communications, Inc.
AT&T Communications of the Southern States, Inc.
Orlando Telephone Company
Level 2 Communications, LLC
Cox Communications
Focal Communications Corporation
XO Communications, Inc.
KMC Telecom, Inc.

c) This is the generic docket on reciprocal compensation.

d) This docket is open at this time.

15. a) 000084-TP; Opened January 25, 2000

b) US LEC of Florida, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issues in the case were: 1) the appropriate reciprocal compensation rate; 2) whether ISP-bound traffic would be considered local traffic for compensation purposes or otherwise compensated for; 3) if US LEC could assign NPA-NXXs wherever it chose so long as it could provide information detailing whether reciprocal compensation or access charges should be exchanged for the traffic; 4) if the parties should be required to report the portion of the Percent Local Usage factor attributable to dial-up ISP-bound traffic; and 5) if US LEC was entitled to be compensated for tandem switching.

d) The docket was closed on March 15, 2001, and US LEC adopted the Agreement between BellSouth and Intermedia.

16. a) 000636-TP; Opened May 24, 2000

b) Sprint Communications Company Limited Partnership

c) The complaint addressed whether the parties' interconnection agreement required the parties to compensate each other for transport and termination of traffic to Internet Service Providers.

d) Sprint voluntarily withdrew its complaint as part of a larger settlement between the parties.

17. a) 000649-TP; Opened May 26, 2000

b) MCImetro Access Transmission Services LLC and MCI WorldCom Communications, Inc.

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The first

issue was whether wireless traffic should be treated as transit traffic or land-line traffic for routing and billing purposes. The second issue was the definition of IP and IP Telephony. The third issue was the proper billing of transit traffic. The fourth issue was the whether ISP-bound traffic should be included in the reciprocal compensation obligations of the interconnection agreement. The fifth issue was when MCI is entitled to compensation at the tandem rate.

d) On the first issue, the FPSC ruled that, for billing purposes, wireless Type 1 traffic should be treated as BellSouth's own land-line traffic since this traffic is indistinguishable and, for the time being, wireless Type 2a traffic should be treated like Type 1 traffic. On the second and fifth issues, the parties agreed to not include either parties' position pending the outcome of the generic docket on reciprocal compensation.

On the third issue, the FPSC ruled that the terminating carrier should directly bill the originating carrier for transit traffic and the transiting carrier should directly bill the originating carrier a transiting fee. On the fourth issue, the FPSC ruled that, for purposes of reciprocal compensation under this agreement, ISP-bound traffic would be treated as local traffic. The parties are still finalizing the agreement based on the FPSC's decision.

18. a) 000907-TP; Opened July 21, 2000

b) Level 3 Communications, LLC

c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issues in this case were whether ISP-bound traffic and IP Telephony should be considered local traffic for purposes of the reciprocal compensation obligations of the agreement.

d) The parties settled these issues prior to hearing.

19. a) 001568-TP; Opened October 18, 2000

    b) Adelphia Business Solutions Investment, LLC and Adelphia Business Solutions of Jacksonville, Inc.

    c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issues in this case were whether IP Telephony and ISP-bound traffic should be considered local traffic for purposes of the reciprocal compensation obligations of the agreement. Another issue was if Adelphia was entitled to compensation at the tandem rate if its switch served a comparable area.

    d) The parties resolved their differences before the case went to hearing.

20. a) 001810-TP; Opened December 20, 2000

    b) TCG South Florida and Teleport Communications Group

    c) TCG claims that ISP-bound traffic is subject to reciprocal compensation under the terms of the second interconnection agreement between the parties.

    d) The FPSC is considering this case.

21. a) 010098-TP; Opened January 24, 2001

    b) Florida Digital Network, Inc.

    c) This case was an arbitration of the terms of a new interconnection agreement between the parties. The issues in this case were the appropriate reciprocal compensation rates and whether ISP-bound traffic was subject to reciprocal compensation.

    d) The parties worked out their differences on this issue prior to the hearing.

RESPONSE PROVIDED BY: Shelley Walls
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For this request, please refer to the direct testimony of BellSouth's witness Cox, at page 104, lines 17-19.

a) Please explain what is meant by "grand fathered" services.

b) Please list examples of "grand fathered" services.

RESPONSE:

(a) As concluded by the FCC's First Report and Order, at paragraph 966, grandfathered services are defined as:

> "...'grandfathering' of existing customers, *i.e.*, allowing current end users of the terminated service to continue to purchase the service at least for a limited time."

The FCC further concluded, at paragraph 968, that:

> "...grandfathered customers – subscribers to the service being withdrawn who are allowed by an incumbent LEC to continue purchasing services –"

The FPSC concluded, at page 41, in its December 31, 1996 AT&T Arbitration Order, that:

> "[t]he FCC's Rules and Order require that IILECs [sic] offer wholesale rates for existing grandfathered services to resellers for the purpose of serving those grandfathered customers."

The terms and conditions of the resale of grandfathered services is contained in BellSouth's SGAT, Section XIV, pages 26-29.

Section 251(c)(4)(A) and (B) of the Act requires:

> (A) to offer for resale at wholesale rates any telecommunications services that the carrier provides at retail to subscribers who are not telecommunications carriers; and
> (B) not to prohibit, and not to impose unreasonable or discriminatory conditions or limitations on, the resale of such

telecommunications service, except that a State commission may, consistent with regulations prescribed by the Commission under this section, prohibit a reseller that obtains at wholesale rates a telecommunications service that is available at retail only to a category of subscribers from offering such service to a different category of subscribers.

b) "Examples" of grandfathered services in Florida are:

Basic Local Exchange Service
- Optional Extended Area Service
- Message Rate Service
- Rotary Service
- CourtesyComplete* Service
- Outgoing Only Service
- BellSouth Business Choice* Package
- BellSouth® Complete Choice® For Business Package

Two-Point Service
Saver® Service Options
Advanced Intelligent Network (AIN) Services
- ZipCONNECT* Service

Integrated Services Digital Network (ISDN)
- ISDN – Business Service
- ISDN – Residence Service

See Section A100, of the attached General Subscriber Service Tariff -- Table of Contents, for a detailed listing of obsolete service offerings in Florida.

RESPONSE PROVIDED BY: Kathy Blake
Manager – State Regulatory
36M66 – 675 W. Peachtree St. NE
Atlanta, Georgia

REQUEST: For this request, please refer to the direct testimony of BellSouth's witness Williams, page 19, lines 13-15.

a) Please explain why the loop and port cannot be provided in combination.

RESPONSE: A UNE-P is a combined loop and port. The loop and port are combined in BellSouth's network. A UNE-P does not require any additional elements nor does UNE-P require collocation. When a CLEC wins a voice customer from BellSouth and migrates the voice service to UNE-P, no wiring changes are required. When a carrier with a UNE-P combination enters into a Line Splitting arrangement with another carrier, however, the loop that had been serving the customer is no longer combined with the port. Instead, central office work is performed to remove the cross-connection between the loop and port. A cross-connection is made to connect the loop to a collocated splitter, which the CLEC owns. The splitter separates the frequency used to provide the voice service from the frequency used to provide the data services. From there, another cross-connection is used to carry the voice signal from the splitter to the port on the switch, while the data signal is carried on the CLEC's data network. Thus, the loop and port are no longer combined but, rather, separated by two collocation cross-connections and a piece of CLEC provided equipment. In a Line Splitting arrangement, the UNE-P is replaced by a UNE loop, port, and two collocation cross connections.

RESPONSE PROVIDED BY: Thomas G. Williams
Product Manager, Line Sharing
and Line Splitting
3535 Colonnade Parkway
Birmingham, Alabama 35243

REQUEST: For purposes of the following interrogatories, please refer to AT&T Communications' witness Turner's rebuttal testimony regarding Next Generation Digital Loop Carrier (NGDLC) at page 9, lines 6-17.

a) Has BellSouth deployed any NGDLC systems in Florida? If so, please identify how many units have been deployed?

b) What percentage of loops does BellSouth serve using an Integrated Digital Loop Carriers (IDLC) system?

c) What percentage of loops does BellSouth serve using a NGDLC system?

d) When BellSouth serves a new facility/community via an NGDLC or IDLC system, assuming there is no copper plant to the NGDLC or IDLC unit serving the facility/neighborhood, please explain how an ALEC could serve those customers via UNEs?

e) Does BellSouth offer xDSL services to its retail customers over fiber? If so, what type of remote terminal does BellSouth use to provision the services.

f) Does BellSouth plan to offer xDSL services to its retail customers over fiber? If so, what is BellSouth's target date for offering these services?

RESPONSE:

a) BellSouth has deployed 10,270 NGDLC systems in Florida. The following are the pair gain types considered for the purposes of this study.
   a. 96dis, discs, idiscs, idist, iltsp2, iltst, iltst, ldiscs, lltsp2, ltsp2
b) The percentage of loops served via IDLC systems in Florida is 32.08 percent.
c) The percentage of loops served via NGDLC in Florida is 9/67 percent. (This percentage may differ from information given in other interrogatories. OSPE recently found a counting problem

in the software counting NGDLC served lines. The software was counting multiplexer pairs as NGDLC.)

d) Assuming there is no copper plant to the NGDLC or IDLC unit serving the facility/neighborhood, an ALEC could serve those customers via UNEs by one of the following seven (7) alternatives:

Alternative 1: Where the loops are served by Next Generation Digital Loop Carrier (NGDLC) systems, BellSouth will "groom" the integrated loops to form a virtual Remote Terminal (RT) set-up for universal service (that is, a terminal which can accommodate both switched and private line circuits). "Grooming" is the process of arranging certain loops (in the input stage of the NGDLC) in such a way that discrete groups of multiplexed loops may be assigned to transmission facilities (in the output stage of the NGDLC). Both of the NGDLC systems currently approved for use in the BellSouth network have "grooming" capabilities.

Alternative 2: BellSouth will remove the loop distribution pair from the IDLC and re-terminate the pair to spare universal digital loop carrier equipment in the loop feeder route or Carrier Serving Area (CSA).

Alternative 3: BellSouth will remove the loop distribution pair from the IDLC and re-terminate the pair to utilize spare capacity of existing Integrated Network Access (INA) systems or other existing IDLC that terminates on digital cross-connection system (DCS) equipment. BellSouth will thereby route the requested unbundled loop channel to a channel bank where it can be de-multiplexed for delivery to the requesting ALEC or for termination in a DLC channel bank that is the central office for concentration and subsequent delivery to the requesting ALEC.

Alternative 4: When IDLC terminates at a peripheral capable of serving "side-door/hairpin" capabilities, BellSouth

will utilize this switch functionality. The loop will remain terminated directly into the switch while the "side-door/hairpin" capabilities allow the loop to be provided individually to the requesting CLP.

Alternative 5: If a given IDLC system is not served by a switch peripheral that is capable of side-door/hairpin functionality, BellSouth will move the IDLC system to switch peripheral equipment that is side-door capable.

Alternative 6: BellSouth will install and activate new UDLC facilities or NGDLC facilities and then move the requested loop from the IDLC to these new facilities. In the case of UDLC, if growth will trigger activation of additional capacity within two years, BellSouth will activate new UDLC capacity to the distribution area. In the case of NGDLC, if channel banks are available for growth in the CSA, BellSouth will activate NGDLC unless the DLC enclosure is a cabinet already wired for older vintage DLC systems.

Alternative 7: When it is expected that growth will not create the need for additional capacity within the next two years, BellSouth will convert some existing IDLC capacity to UDLC.

e) BellSouth uses fiber for the backbone feeder facility to multiplexers that provide DS3 service to BST Remote DSLAMS. Currently the xDSL service is not dependent on the type of Digital Loop Carrier remote terminal. The BellSouth xDSL service is ultimately offered on a copper drop to the end customer. BellSouth's remote DSLAM shelves are made by Alcatel. (Morgan Barnes)

f) BellSouth uses fiber for the backbone feeder facility to multiplexers that provide DS3 service to the Remote DSLAMS. Currently the xDSL service is not dependent on the type of Digital Loop Carrier remote terminal. There are Marconi products being tested now that will offer an xDSL service over the fiber-to-the-curb facilities. The BellSouth xDSL service is

ultimately offered on a copper drop to the end customer. Deployment is expected in 4Q 2001. (Morgan Barnes)

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street, NE
Atlanta, GA 30374

REQUEST: For purposes of the following interrogatory, please refer to AT&T Communications' witness Turner's rebuttal testimony regarding Integrated splitter/DSLAM cards at page 29.

a) Does BellSouth restrict ALECs from collocating integrated splitter/DSLAM cards at a remote terminal? If so, why? In your response, please identify any pertinent federal or state statutes, rule, or decision.

RESPONSE: Yes. The line card to which Mr. Turner refers provides not only voice functions but Digital Subscriber Line Access Multiplexer ("DSLAM") functions as well. The FCC has defined the DSLAM as part of the packet switching network. Further, the FCC has declined to impose a duty that BellSouth unbundle its packet switching network except in extremely limited cases, cases that do not exist in Florida.

The FCC has defined the DSLAM as one element in a packet switching network. The FCC has also said that incumbents are not required, unless four conditions are met, to provide unbundled packet switching. FCC Rule 51.319.

In addition to other viable alternatives to the dual-purpose line cards, the ALEC's request fails to satisfy the other aspects of the FCC's impairment standard. For example, requiring BellSouth to provide dual-purpose line cards would not promote "facilities-based competition, investment, and innovation," since it would eliminate any incentive for ALECs to deploy any facilities outside of the central office. *See* 47 CFR § 51.317(c)(2). Furthermore, allowing ALECs to place line cards in BellSouth's DLC systems is administratively impractical. *See* 47 CFR § 51.317(c)(5).

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
BellSouth Telecommunications, Inc.
675 West Peachtree Street, NE
Atlanta, Georgia 30375

REQUEST: For purposes of the following interrogatories, please refer to New South Communication's witness Beasley's rebuttal testimony regarding collocation power provisioning at page 3, lines 1-20.

a) Does BellSouth provide power in only 10, 15, 30, 45, 60, and 225 amp increments? If not, at what increments does BellSouth offer power?

b) If BellSouth only provides power in 10, 15, 30, 45, 60, and 225 amp increments, are these specific increments due to equipment manufacturers' limitations? If not, what are these limitations based upon?

RESPONSE: No. BellSouth provides DC power in any fuse size that fuse manufacturers make in the 10-amp to 60-amp range, and any achievable combination thereof, for power from BellSouth's BDFB ("Battery Distribution Fuse Board") to the collocator's space (which can either be placed to each piece of collocated equipment or directly to the collocator's own BDFB on a fuse-to-fuse basis).

However, if a collocator requests DC power directly from BellSouth's main power board to a BDFB that is located in the collocator's space, then BellSouth will provide a standard 225-amp power feed from the main power board to the collocator's BDFB. The 225-amp protection device is the only size supported by BellSouth in this type of arrangement.

b) Not applicable.

RESPONSE PROVIDED BY: Lynne Brewer
Manager
675 West Peachtree Street, NE
Atlanta, GA 30375

REQUEST: For purposes of the flowing interrogatories, please refer to AT&T Communications's witness Bradbury's rebuttal testimony regarding customized routing at page 9, lines 6-17.

a) What is/are the name(s) of the document(s) or database(s) that BellSouth's ALEC representatives use to translate/input ALEC customized routing information into BellSouth's system?

b) When an ALEC submits an order with a line class code, what percentage of these orders fall out for manual processing? Please explain.

c) What procedures does BellSouth have in place for ALECs to define a LCC prior to establishing an actual customer at a particular office?

RESPONSE: a) The document BellSouth uses is the RF-3605, CLEC Selective Routing Service Inquiry and Selective Routing Ordering Document, to assign CLEC-specific Line Class Codes (LCCs) and Selective Routing Codes (SRCs) according to the CLEC's request. The database LCCs are assigned and populated into the LCCAM database by BellSouth and built into the appropriate switches. The database the CLEC-specific SRCs are loaded into is P/SIMS – Product/Services Inventory Management System, which is used to validate SRCs during the ordering process.

b) The ALEC should not submit an order with a line class code.

BellSouth fully intends this service to be mechanical with no fallout to the LCSC. This service has not been ordered in a live environment, therefore, no data is available.

c) Please refer to the CLEC Information Package, "Selective Call Routing Using Line Class Codes" for a thorough description of the procedures, located on BellSouth's Interconnection website at:

http://www.interconnection.bellsouth.com/products/html/unes.html

The CLEC submits to its Account Team representative the CLEC Selective Routing Service Inquiry and CLEC Selective Routing Ordering Document (RF-3605) requesting Selective Call Routing using Line Class Codes for OS/DA branding and the establishment of CLEC-specific LCCs and SRCs. Upon the confirmation of LCC availability, the establishment of trunking, if necessary, and the assignment of CLEC-specific LCCs and SRCs, the CLEC Selective Routing Ordering Document is returned to the CLEC informing the CLEC of its assigned SRCs.

RESPONSE PROVIDED BY: Ronald Pate
Director
675 West Peachtree Street, NE
Atlanta, GA 30375

REQUEST:

a) Please identify the specific items of equipment included in the Supporting Equipment and Power factor.

b) For each item identified in response to (a), please identify what percent of the Supporting Equipment and Power factor it represents.

RESPONSE:

a) The Supporting Equipment and Power (SE&P) factors are developed utilizing an annual extract from the Central Office Equipment Monthly Allocation Process (COMAP). In COMAP, central office equipment is assigned to functional categories based on ECNDR (Equipment Category Number Detailed Regulatory) codes. Based on the ECNDR codes, Supporting Equipment includes items of equipment such as distributing frames, miscellaneous equipment, tools & test sets, circuit test equipment, and radio test equipment. Power includes stationary engine alternators, portable engine alternators, and other non-specific types of power equipment.

b) Due to technical limitations, BellSouth is only able to provide the percent relationships requested on a cumulative basis as of end of year (EOY) 2000 (SE&P factors in question were based on EOY1998 data). COMAP is an accumulation process that utilizes inputs from PICS/DCPR (Plug-In Control System/Detailed Continuing Property Records) and Asset Management and processes that data on a monthly basis. Each monthly processing cycle is a year-to-date (YTD) accumulation that overlays and replaces the previous month's YTD accumulation. Likewise, the COMAP annual process accumulates a calendar year's worth of data that overlays and replaces the previous year's accumulation. Therefore, at any point in time BellSouth can only go back to the end of the previous year to recreate the detail ECNDR coded data.

The percent relationships shown in the attachment response to POD Item No. 14 for EOY2000 should be reasonable approximations of the percent relationships that existed at the end of 1998.

RESPONSE PROVIDED BY:

Charles Lee
Director
3535 Colonnade Parkway
Birmingham, Alabama 35243

REQUEST: Referring to the line sharing cost study:

a) Please identify the number of cables assumed in the study.

b) Please identify the length of the cables assumed in the study.

c) Please identify the cost of each cable identified in response to (a).

d) Please identify the basis for the assumptions that underlie the responses to (a) and (b).

e) Please identify the manufacturer(s) of each component in the study.

f) Please identify the element in the study provides a standard interface designed to offer competitive carriers the opportunity for physical access for loop testing purposes.

RESPONSE: a) BellSouth's Line Sharing Cost Study assumed three 100-pair cables.

b) The cost study assumes three cables for an average length of seventy-five feet each. Previous representations have stated the average length as 150 feet. This does not require a change in the cost study because BellSouth is charged the same price for such cables when the length is between 0 and 150 feet.

c) Each cable costs $121.67. (Total cost for cables = $365/3 cables)

d) This assumption was based on the way BellSouth thought the vendor would wire the splitter equipment. The length is based on the average distance from the frame where the splitters appear to the ALEC common area, which is the first choice for splitter shelf placement.

e) The manufacturer of each component is:

Component	Manufacturer
MDF	Avaya (formerly Lucent)
Connecting Block	Avaya (formerly Lucent)
Splitter Bay	Avaya (formerly Lucent)
Splitter - Siecor	*Corning (formerly Siecor) and Microphase
Test Access Shelf	Corning (formerly Siecor)
Bay Shelf	**Corning (formerly Siecor) and Microphase
Connectorized Cable	Manufacturer is unknown to BellSouth. The EF&I vendor provides the connectorized cable.

*Assumes this is the Splitter Card
**Assumes this is the Splitter Shelf

RESPONSE: (Continued)

f) The bantam test jack provides a standard interface for ALECs for physical access for loop testing purposes.

RESPONSE PROVIDED BY: a) through d) and f) supplied by: Reginald Starks, Director
675 West Peachtree Street
Atlanta, Georgia 30375

e) supplied by: Gil Delara

675 West Peachtree Street
Atlanta, Georgia 30375
and
Gary Tennyson
Sr. Member, Technical Staff
1885 Data Drive
Hoover, AL 35244

REQUEST:

a) Please identify the amount of time that it will take BellSouth to perform the central office work to provision a line shared loop.

b) To the extent not indicated in response to (a), please identify the discrete tasks required to be performed, the time each such task takes, and the employee level who performs the task.

RESPONSE:

a) The central office work group time in the FL cost study is 25 minutes for the first install, 12 minutes for the first disconnect, 10 minutes for each additional install and 5 minutes for each additional disconnect per line activation. These times do not reflect any LST (line and station transfer) work times.

b) The work activities are as follows:
Connect 1st line – Print Order, Pre-Test Circuit, Wire, Test Circuit, Update Dispatch System
Connect Additional lines – Pre-Test Circuit, Wire, Test Circuit
Disconnect 1st line – Print Order, Pre-Test Circuit, Wire Removal, Update Dispatch System
Disconnect Additional lines - Pre-Test Circuit, Wire Removal

The level of the employee that performs these tasks is a wage scale 32.

RESPONSE PROVIDED BY:

Dan Stinson
Specialist
675 West Peachtree Street
Atlanta, Georgia 30375

REQUEST: Referring to bates stamped page 1813:

a) For each of the work groups shown on lines 12-21, 24-33, and 37-39, please identify the specific work activities and functions performed.

b) For each of the specific work activities and functions identified in (a), please identify the work times involved and identify the number of individuals involved in performing the functions.

c) Referring to lines 41-62, please explain on what basis the nonrecurring additives in *column L are incurred or assessed.*

RESPONSE: a) See Attachment No. 1.

b) See above response to a). For Corporate Real Estate & Services there are four (4) individuals involved in performing the functions identified in a). Two (2) people in Florida perform the INAC function. For each of the following work centers: PCM, CCM, OSPE and CSCM; there is one person involved in performing these tasks. The ATCC consists of four entities: Regional Account Team Collocation Managers (10), Billing Specialists (6), Application Processing and Support (7) and Clerical Support (1).

c) An average cost is developed using the costs shown on lines 41 - 62 and is included in the cable installation per cable installed cost.

PHYSICAL COLLOCATION Application Fee - Initial & Subsequent

ATCC - Account Team Collocation Coordinator
Initial receipt and review - 3 hours
Initial review of an application and discussion with applicant
Explanation of application contents and its impact to the overall project with applicant
Includes any clarification of application information necessary for the interdepartmental coordinators
Review of Physical Collocation Agreement - 2 hours
Review of applicant's specific terms, conditions and rates for physical collocation
Clarification of physical agreement terms and conditions for evaluation of their impact specific to the project
Identification of impacting terms and conditions to interdepartmental coordinators (for example, unique time frames)
Processing of Application - 2 hours
Identify Interdepartmental coordinators by name; address, office telephone number and fax telephone number specific to selected location
Assign a reference number
Request service order issuance for establishing a Billing Account Number (BAN)
Process application payment to BellSouth billing center
Prepare and distribution cover list and identify any critical concerns relating to the particular application
Review the application determining final acceptance of a Bona Fide Application (include correct prepaid fee, correct listing of equipment data, wiring requirements, signatures, etc.)
Assemble the Bona Fide Application Package for distribution to the Interdepartmental Coordinators
Update Master database for corporate compliance reporting
Gathering Response Data - 2 hours
Respond to questions from the Interdepartmental Coordinators and review the responses for clarification
Preparation and Distribution of Response - 2 hours
Update response information from the Interdepartmental Coordinators and prepare a response for the customer
Review of terms, conditions, rates, and translation of Interdepartmental response data into written contract commitments
Prepare written response and cover letter
Determine expiration date to place Bona Fide Firm Order
Assemble response package (including cover letter, response, BSTEI-1-P forms for placing Bona Fide Firm Order, listings of BellSouth Certified Vendors)

ATCC/Clerical - 1 hour
Clerical time for distribution of the application to the field and distribution of the hard copy of the response to the customer.

Customer Point of Contact - 0.5 hour
Receive and review Fee Processing Request form
Verify customer credit information
Manually enter Access Service Request (ASR) with customer information
Query mechanized system for Billing Account Number assignment
Generate Service Order Work Aid (SOWA) and enter the appropriate application information
Issue service order to establish billing account for processing the Application Fee
Follow up to ensure completion of service order
Disconnect 0.03 hours

Interexchange Network Access Coordinator (INAC) - 20 hours initial; 15 hours subsequent
Receive and evaluate inquiry
Contact Area provisioning team, if required
Initiate & facilitate follow-up planning meetings with Area work groups & customer, if required
Work with the Area team to develop the plan, establish tentative schedules and identify major construction items that will affect critical dates
Serve as technical consultant to Area Provisioning team, Account Team coordinator and customer for identification and resolution of issues
Interface with Regulatory and Collocation Project Team for policy development and issue resolution
Receive inquiry response data from Area team
Analyze data, determine project schedule, and evaluate cost data for reasonableness
Resolve Network issues
Review response data and notify Account Team Coordinator that inquiry is complete.

Common Systems Capacity Management (CSCM) - 8 hours initial; 5 hours subsequent
Review application for space, power and cabling requirements
Perform site visit to verify space availability and inspect space conditions
Coordinate space selection and preparation requirements with Property and Services Management
Coordinate cable and power requirements with Circuit and Power Capacity Management
Complete application response data related to above items

Circuit Capacity Management (CCM) - 8 hours initial; 5 hours subsequent
Receive and review Service Inquiry
Interface with INAC and account team to discuss application
Interface with CSCM and other network groups to discuss application

Outside Plant Engineering - 0.5 hour
Determine availability of duct space, research options for point of interconnect and submit inquiry response.

CRES - Corporate Real Estate & Support - 1.25 hour initial; 0.625 hour subsequent
Program Manager (JG-58) - 0.25 hour (initial application)
0.125 hour (subsequent application)
Act as single point of contact for questions, dates and information
Approve work request

Facility Planner (JG-58) - 0.25 hour (initial application)
0.125 hour (subsequent application)
Review drawings of the facility requested
With Network, determine availability and location of Collocation space in CO

Application Tracking Mgr. (JG-58) - 0.5 hour (initial application)
0.25 hour (subsequent application)
Receive inquiry and enter tracking data to system
Monitor timely response to INAC
Interact with other CRES team members on responses
Project Administrator - (JG-55) - 0.25 hour (initial application)
0.125 hour (subsequent application)

Enter work request that is required to authorize consultants to determine estimates
Establish authority number and route for approval

Power Capacity Manager -1 hour
Evaluate and plan for power requirements for the ALEC

CABLE INSTALLATION

Common Systems Capacity Management - 4 hours
Coordinate with OSP Construction to plan riser cable installation

Outside Plant Engineering - 7.5 hours
Meet w/collocator to determine point of interconnect - 2 hours
Prepare work prints - 5.5 hours (work times itemized below)
- Create cable/pair for assignment - 0.5 hour
- Prepare inventory for collocator cable - 1.5 hours
- Draft work order for OSP construction - 2 hours
- Schedule work order for OSP construction - 0.75 hour
- Coordinate w/Master Contractor for manhole entry - 0.75 hour

Disconnect 0.4 hour

Outside Plant Construction - 16 hours
Work area protection, place and remove - 0.5 hour x 2 people = 1 hour
Place pull wire - 1 hour x 2 people = 2 hours
Pull cable into building - 1 hour x 2 people = 2 hours
Splice cable - 5 hours
Testing - 1 hour
Place & rack cable in CO - 3 hours
Travel time - 2 hours
Disconnect 0.4 hour
The disconnect time provides for updating databases in the central office to reflect vacant facilities caused by the collocator disconnecting its facilities.

REQUEST: Referring to bates stamped page 1814:

a) For each of the work groups shown on lines 56-62, 65-71, 74-82, 85-92, 95-97, 101-103, 106-108, and 111-118, please identify the specific work activities and functions performed.

b) For each of the specific work activities and functions identified in (a), please identify the work times involved and identify the number of individuals involved in performing the functions.

c) Referring to line 55, please explain the purpose of this value and how it is considered in the cost analysis.

RESPONSE: a) See Attachment No. 1.

b) See above response to a). One individual per work center is required to perform the functions.

c) The purpose of the value, 70%, on line 55 is to develop the weighted work time/cost for connecting to a non design or design circuit. Seventy percent of the time it will be a design circuit. Design circuits require circuit provisioning work center time. The additional time to perform this activity is developed on Work Paper H.1.9 NRC (Bates stamped page 1823).

RESPONSE PROVIDED BY:

a) and c) supplied by:
Reg Starks
Director
675 West Peachtree Street
Atlanta, Georgia

b) supplied by:
Ron Kummer
Manager
601 W. Chestnut Street
Louisville, KY

These work functions are those associated with the provisioning of the entire UNE Loop, and are used by the Cost Matters group to reflect Physical Collocation Cross Connect activity that is only a portion of the UNE Loop provisioning.

REQUEST: Referring to bates stamped page 1815:

a) For each of the work groups shown on lines 121-128, 137-139, 144-145, 149-152, 161-163, please identify the specific work activities and functions performed.

b) For each of the specific work activities and functions identified in (a), please identify the work times involved and identify the number of individuals involved in performing the functions.

c) Referring to line 131, does this entry mean that it is assumed that it will take a total of one hour to activate a new security access card?

d) If the response to (c) is negative, please explain to what this one hour pertains.

e) Referring to line 132, please identify any documents that support the number of cards assumed to be issued per request.

f) Referring to lines 133 and 134, please identify any documents that support the values shown herein.

g) Referring to lines 137 and 138, please explain the difference between the labor time and activities for New Access Card versus Activate New Card.

h) Referring to line 139, does this entry mean that on average it takes approximately 26 minutes to resolve a problem associated with issuing a new security access card?

i) If the response to (h) is negative, please explain how to interpret line 139.

j) Referring to line 139, please describe the types of problems that may be encountered in issuing a security access card.

k) Referring to line 140, does this entry mean that in 26% of instances, problems will be encountered that on average take 26 minutes to resolve?

l) If the response to (k) is negative, please explain line 140 should be interpreted.

m) Referring to, e.g., line 133, column D, please describe the functions performed by Property & Services Management.

n) Referring to lines 144 and 149, please identify any documents that support the value shown herein.

o) Referring to lines 143, please describe the kinds of administrative changes that may be made to a security access card.

RESPONSE:

a) See Attachment No. 1

b) See above response to a). One individual per work center is required to perform the functions, plus vendor involvement in providing security card access.

c) No.

d) Referring to line 131, the entry is the total time per request. It is assumed that there will be an average of five cards per request. The result for this work center is twelve minutes to activate a new card.

e) A study to determine the number of cards to be issued per request was not conducted. Instead, the personnel receiving the requests were interviewed, and it was determined that an average of five (5) cards were applied for per request.

f) Material cost of $3.10 per access card was provided by Siemens, the vendor for the card access system. A memo received from Siemens amended the cost for cards through March 2001 to be $3.60. Postage cost per access card of $2.97 is the actual cost for shipping the cards UPS ground. Access Management ships the ALECs access cards by UPS to enable tracking of the orders, and to ensure that the 30-day turnaround time commitment to fill orders to ALECs is met.

g) The contract labor cost of 0.50 for new access cards (line 137) covers the costs necessary to verify building access levels, and enter required data into the system to create a new card. Access cards are not activated when shipped to the ALECs. The contract labor cost of 0.25 to activate new cards (line 138) covers the activation costs for new cards when acknowledgement forms are received from the ALECs. Access Management reiterates the verification process before activating acknowledged cards.

h) Yes. However, a problem associated with issuing a new security access card only occurs 25% of the time. This percent occurrence is factored into the cost development.

i) Not applicable. See above response to h).

j) The types of problems that may be encountered in issuing a new security access card are:

- The person may already have an active card – BellSouth must investigate that the person still has it or what has happened to it, i.e., lost. If the card is lost the person must request & follow up with a letter describing incident.
- Access requested and the ALEC is not showing up on the physical location list.
- ALEC requests access for a vendor that is not on the BellSouth Certified Vendor list.
- Incomplete request form (RF-2906C)
- ALEC referred to Security for not acknowledging previously requested cards/keys.
- Approval signature is not an authorized principle of ALEC company.
- ALEC path to space has not been properly identified.

k) That is a correct assumption except that the number on line 140 is 25% instead of 26 %.

l) Not applicable. See above response to k).

m) Corporate Real Estate & Services (CRES) [formerly Property & Services Management] is the source for this information. The actual work is performed by contract labor and includes the following:

- Removing request from fax, sorting by ALEC and stamping by date received
- Reviewing form RF-2906c (ALEC and ALEC Certified Supplier Access Request and Acknowledgement Form) for accuracy and verifying through several sources that the information provided is complete/correct.
- Verifying that the ALEC has a firm order with BellSouth to grant access.
- Converting CLLI code or address to GLC (geographic locator code) for data to be compatible with the card access system.
- Checking ALEC path information for each requested building.
- Verifying access levels and building access levels for new ALECs or for existing ALECs requesting access to additional buildings. This complex process provides ALECs access to specific buildings.
- Issuing cards and preparing signature acknowledgement forms that are mailed with the cards.
- Activating cards upon receipt of signed acknowledgement forms
- Problem resolution.

It is not unusual for an RF-2906c (ALEC and ALEC Certified Supplier Access Request and Acknowledgement Form) submitted by a ALEC to list access to hundreds of buildings within BellSouth's nine state region.

n) See above response to a).

o) The kinds of administrative changes that may be made to a security access card are appending, transferring, and deactivating existing access cards and replacing lost/stolen cards. The functions performed include:

- Removing request from fax, sorting by ALEC, and stamping by date received
- Reviewing form RF-2906c for accuracy and verifying through several sources that the information provided is complete/correct.
- Verifying that the ALEC has a firm order with BellSouth to grant access.
- Converting CLLI code or address to GLC (geographic locator code) for data to be compatible with the card access system.
- Checking ALEC path information for each requested building.

- Verifying that requesting party has an active card in the system and if the cardholder is in possession of the card.
- Inputting/appending data into the system. This requires input into various fields to provide ALECs access to additional specified buildings.

Access Management

1. New Card/Key Issue = 30 minutes/request
   a. Receive and validate fax/mail request
   b. Verify all information correct
   c. Look up individual in system to see if they have a card/key
   d. Verify access level or key cuts are available
   e. Build access level if it does not exist
   f. Scan new card to obtain internal access number or generate key serial #
   g. Input card in system in the inactive mode or send key request to Best
   h. Mail card in individual (name, ext. card # & acknowledgment) envelope
   i. Place requests in pending file until acknowledgment is received
   j. Two weeks follow up on acknowledgment
   k. Forward to Security two weeks later if acknowledgment not received

2. Append or Transfer Card/Key = 20 minutes/request
   a. Same as a, b, c, d, and e in 1 above
   b. Update card and initialize system
   c. Complete paper work

3. Lost or Replacement Card/Key = 30 minutes/request
   a. Same as a in 1 above
   b. Verification of lost letter for security
   c. Deactivate old card
   d. Same as d, e, f, g, h, i, j, and k in 1 above

4. Activate or Deactivate a Card = 15 minutes/request
   a. Receive acknowledgment or request with reason for deactivation
   b. Same as a and b in 1 above
   c. Same as b and c in 2 above
   d. Same as c in 3 above

5. Additional Considerations
   a. Report generation for access activity = 15 minutes/request
   b. Troubleshooting host or individual card/key problems = 30 minutes/problem
   c. Follow up and handling incomplete request forms = 30 minutes/incomplete form
   d. Working host/building related communication problems = 60 minutes/problem
   e. Maintain individual ALEC access level database = 10 minutes/ALEC/building
   f. Tracking order status with Fed Ex/UPS/Best = 20 minutes/request
   g. Maintain requests received and pending files = 10 minutes/request
   h. Maintain ALEC key serial # data base = 10 minutes/key

REQUEST: Referring to bates stamped page 1819, please indicate on what basis the average manhole contract labor cost is stated (e.g., is it per manhole accessed/opened, etc.).

RESPONSE: The average manhole contract labor cost is stated per manhole access per each cable installed with the assumption there will only be one manhole accessed.

RESPONSE PROVIDED BY:

Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

REQUEST: Referring to bates stamped page 1816, line 20, please explain how the cable length was determined (e.g., measured from what point to what point).

RESPONSE: Bates stamped page 1816, line 20, addresses support structure for ALEC owned entrance/riser cable. 400 feet is an engineering estimate of the average cable length from the building cable entrance to floor space within the CO buildings that is available for physical collocated equipment. This estimate was also based upon expectations that collocation would predominantly occur in metro and large urban CO buildings.

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to bates stamped page 1816, line 21:

a) Please describe how the cable capacity of the cable support structure was determined.

b) Does this value represent the number of cables that can be contained in the cable support structure?

c) If the response to (b) is affirmative, what size cables were assumed?

d) If the response to (b) is negative, please explain what this value represents.

RESPONSE: a) Bates stamped page 1816, line 21, addresses the estimated riser cable capacity of the cable support structure between the CO building cable entrance and floor space within the CO buildings which is available for physical collocated equipment. The stated capacity is based upon the use of 5-inch cable rack used primarily for ALEC riser cable support. BellSouth engineering standards limit cable rack pile-up on a 5-inch cable rack to a height of 5 inches or a theoretical maximum cable rack cross-sectional area of 25 sq. in. The maximum physical fill of a full cable rack is estimated at 70% of the total cross-sectional area. The average ALEC owned riser cable diameter is estimated at 0.75 inches. The maximum capacity of a 5-inch rack, given the above standards and assumptions is approximately 30 cables.

b) Yes, this value represents the cable capacity of the support structure based upon the cable rack support structure and cable size assumptions reflected above. The installation of smaller or larger diameter cables will increase or decrease the capacity of the support structure. ALECs are responsible for providing these cables. They are not restricted to the size identified in the above assumptions.

c) A diameter of 0.75 inches as described above.

d) N/A

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to bates stamped page 1816, line 64, please explain how the cable length was determined (e.g., measured from what point to what point).

RESPONSE: Bates stamped page 1816, line 64, addresses the length of cable rack required to support DS1 connection cable between collocated equipment and the BellSouth network. 300 feet is an engineering estimate of the average cable rack length between floor space within the CO buildings that is available for physical collocated equipment and the BellSouth DS1 digital cross-connect (DSX) equipment frames. This estimate was also based upon expectations that collocation would predominantly occur in metro and large urban CO buildings.

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to bates stamped page 1817, lines 79 and 84, please explain the rationale for applying a utilization factor to collocation cage construction.

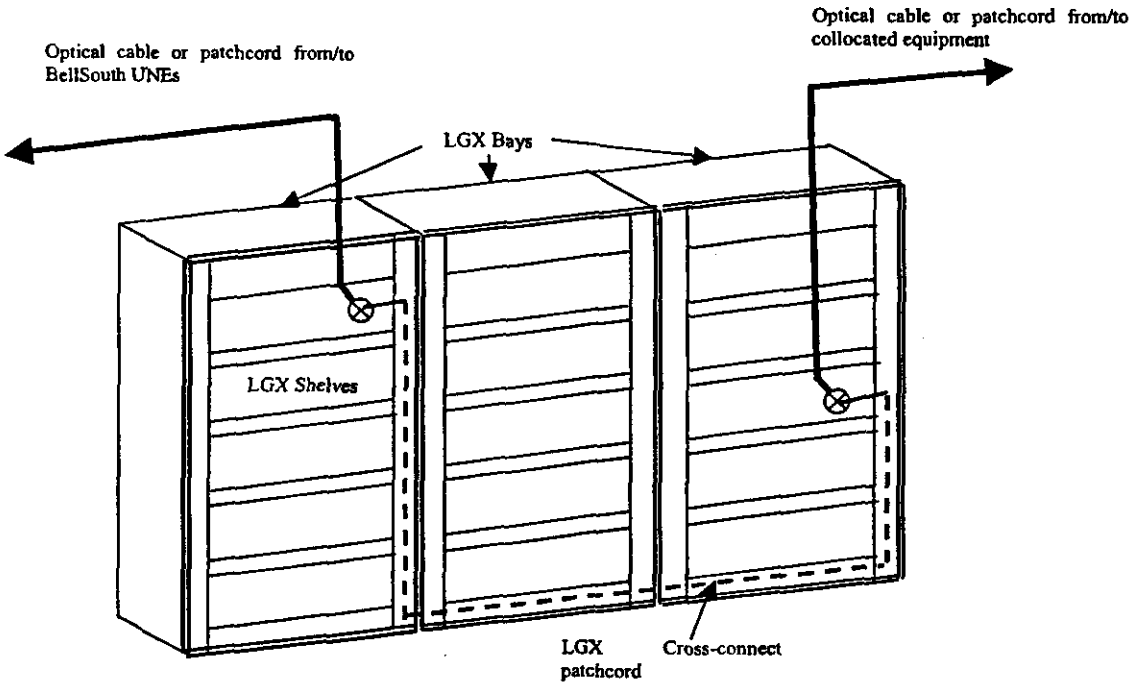
RESPONSE: BellSouth builds multiple cages at one time in order to gain economies of scale and to be able to offer cages at a lower cost. The utilization represents the average space used.

RESPONSE PROVIDED BY: Reginald Starks
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Referring to bates stamped page 1817, line 87 and 91, please describe a LGX bay a LGX shelf, and explain their functions.

RESPONSE: Bates stamped page 1817, line 87 and 91, address LGX bays and panels which are used to terminate and cross connect ALEC collocated optical equipment to BellSouth optical UNEs (Unbundled Network Elements). An LGX shelf provides the physical termination (connector) for optical cable and/or patchcords from/to optical telecommunications equipment and outside plant fiber cable. LGX bays are equipment racks designed to mount the LGX shelves and manage optical cross-connect patchcords between the LGX shelves. See following sketch.

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243



REQUEST: Referring to bates stamped page 1817, line 118:

a) Please explain why it is assumed that two card reader access systems are installed per central office.

b) Is it assumed that these two card readers will be used solely by collocators in the central office?

c) If the response to (b) is affirmative, please explain the rationale for this assumption.

d) If the response to (b) is negative, please identify where in the company's filing the costs of these readers are shared by collocators and the company.

RESPONSE: a) The data supplied is for a standard or average Card Access System, which is one system with two access card readers (covering two doors). This is based on an average building size of 21,673 sq ft. Smaller buildings would have one access card reader, while larger buildings could have three or more, depending again on size/number of floors.

b) Card Access is a complete security system that records all entrants into a building and is not used for collocation only.

c) Not applicable. See above response to b).

d) The cost of the two card readers is divided by the average assignable square footage in the central office (BST & Collocator space). The cost is recovered per square foot used.

RESPONSE PROVIDED BY:

b)-d) supplied by:
Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

a) supplied by:
Ron Kummer
Manager
601 W. Chestnut Street
Louisville, KY

REQUEST: Referring to bates stamped page 1817, line 120:

a) Is this assumed value the average floor space in a central office that it is available for all forms of physical collocation?

b) If the response to (a) is negative, please explain how to interpret this value.

RESPONSE: a) No.

b) This value is the average assignable floor space that is available for all occupants, both BellSouth and the ALECs in Florida, in a central office.

RESPONSE PROVIDED BY: Ron Kummer
Manager
601 West Chestnut Street
Louisville, Kentucky 40203

REQUEST: Referring to bates stamped page 1817, lines 122 and 123:

a) Please describe the specific project management tasks for which 3.5 hours are required per central office.

b) Please explain why an (apparently) high level employee is required to perform these tasks.

RESPONSE: a) Project management activities associated with processing a request for a new card reader system at a central office are:

- Receive collocation application and determine if a new card reader system is needed.
- Assign card reader project to a consultant.
- Coordinate card reader installation project with affected parties (i.e., consultant, facility manger, central office supervisor, and capacity manager) to determine path of travel for collocators, number of doors where readers are required, which doors to place readers on, location of control panel, power source for system (i.e. AC or DC), interior keying scheme, and project scope and schedule.
- Review and approve authorization for card reader system installation.
- Order network transport line.
- Monitor, track, and report progress of project.
- Perform field inspections as needed.
- Obtain subsequent approvals, if additional costs are incurred
- Coordinate turn-up of system with network installers and Siemens
- Review invoices.
- Close out project.

b) These rates include professional project management and construction management services performed by Parsons Communications Group, Inc. and associated architectural/engineering design services. These rates are commensurate with comparable services in the industry.

RESPONSE PROVIDED BY: Ron Kummer
Manager
601 West Chestnut Street
Louisville, Kentucky 40203

REQUEST: Referring to bates stamped page 1818, line 128:

a) Does this card reader access software serve all of the BellSouth region?

b) If the response to (a) is negative, please explain on what basis this software is incurred.

c) Please identify the software vendor.

d) Please describe the specific functions performed by this software.

RESPONSE: a) Yes, the Card Reader Access System software serves the entire BellSouth Region.

b) N/A

c) The software vendor for the system is Info Graphic Systems

d) The centralized host processor interfaces with individual building Auxiliary Control Units (ACUs) and card readers. Local ACUs store security clearances for a building. Access cards swiped over the card reader signal the control unit, authorize entry and activate the door latch. The centralized host processor uploads data daily from all ACUs and downloads any changes or updates in security clearances to the ACUs in nightly batch processing. Read-out capability is available the next day for prior day's activity.

RESPONSE PROVIDED BY: a) and b) supplied by: Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

c) and d) supplied by: Ron Kummer
Manager
601 West Chestnut Street
Louisville, Kentucky 40203

REQUEST: Referring to bates stamped page 1818, line 134:

a) Please describe the specific activities performed for co modification for space preparation that underlie this element.

b) By way of clarification, is this value attributable to the average cost per square foot of preparing conditioned space?

c) If the response to (b) is negative, please explain the purpose of this value.

RESPONSE: a) The construction costs for CO modifications required for space preparation include materials and labor for electrical, mechanical and general construction and permitting. Asbestos abatement costs are included. Other costs include architectural design and engineering fees, project management fees, construction management fees and contractor fees.

b) Yes, this value is attributable to the average cost per spare foot of preparing conditioned space.

c) N/A

RESPONSE PROVIDED BY: Ron Kummer
Manager
601 West Chestnut Street
Louisville, Kentucky 40203

REQUEST: Referring to bates stamped page 1818, line 138:

a) Please describe the specific activities performed for cageless common systems modification space preparation that underlie this element.

b) Please describe what accounts for the cost of cageless common systems modification space preparation being greater than the cost of CO modification space preparation.

RESPONSE: Bates stamped page 1818, line 138, "Common Systems Modifications", addresses the average cost/sq. ft. to install *all* telecommunications plant infrastructure required to support the collocated equipment in cageless collocation floor space.

a) The activities performed for cageless common systems modifications space preparation include:
   1) Equipment line-up and cross-aisle cable rack for copper transmission cable
   2) Equipment line-up and cross-aisle cable rack for power cable
   3) Equipment line-up and cross aisle fiber duct
   4) Cable rack support hardware and stanchions
   5) AC power conduit and feeder wiring for collocated equipment rack appliance outlets
   6) Low level frame and aisle lighting
   7) Main aisle (feeder) and equipment lineup framework (green wire) grounding conductors
   8) Cable hole establishment

b) CO modifications and cageless common systems modifications are two distinct space preparation activities which precludes any practical comparison of costs. CO modifications include all *building* related modifications required to prepare the collocation floor space as described in Interrogatory No. 32. Common systems modifications, as described above, include all *telecommunications plant infrastructure* modifications required to prepare cageless collocation floor space. The cost of the modifications is based upon the average cost/sq. ft. incurred by BellSouth when performing each type of work.

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to bates stamped page 1818, line 141:

a) Please describe the specific activities performed for caged common systems modification space preparation that underlie this element.

b) Please describe what accounts for the differences in the costs of caged and cageless common systems modification space preparation.

RESPONSE: Bates stamped page 1818, line 141, "Common Systems Modifications", addresses the average cost per cage to install all telecommunications plant infrastructure required to interconnect the caged collocation space to the BellSouth network.

a) The activities performed for cageless common systems modifications space preparation include:
   1) Interconnecting cable rack for copper transmission cable
   2) Interconnecting cable rack for power cable
   3) Interconnecting fiber duct
   4) Cable rack support hardware and stanchions
   5) Main aisle (feeder) and interconnecting (green wire) grounding conductors
   6) Cable hole establishment

b) BellSouth configures cageless collocation floor space in the same manner that floor space is configured for BellSouth equipment. The floor space is prepared and assigned to maintain standard CO telecom equipment rack lineups. This practice achieves the most efficient use of the available floor space within the CO. This practice also requires that all telecom equipment, whether Bellsouth or ALEC owned, share the *telecommunications plant infrastructure* support elements described in Interrogatory Item No. 33 a). For example, lineup cable rack is shared by all of the equipment racks installed in the lineup. Upon completion of the common systems modifications by BellSouth, the only work required of the ALEC is to install the collocated equipment racks and the required transmission, power and ground cables to interconnect to BellSouth's network

RESPONSE: (Cont'd)

With caged collocation space, the configuration and utilization of the floor space within the cage is totally controlled by the ALEC. As such, BellSouth does not perform the common systems modifications within the caged space. This work must be performed by the ALEC's contractor in accordance with the ALEC's specifications. BellSouth provides all common system modifications outside of the caged space required to interconnect the caged floor space with the BellSouth network.

Since the cageless collocation floor space is configured to provide *all* of the *telecommunications plant infrastructure* support elements required by the collocated equipment it is more costly than the CO modifications provided to interconnect caged collocation space.

RESPONSE PROVIDED BY: Tom Weber
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to bates stamped page 1846:

a) Please provide a description of a DS1 POT bay, a DS1 POT bay shelf, and a DS1 POT bay module.

b) Are the circuit capacities shown on lines 12, 17 and 22 on a per DS1 basis?

c) If the response to (b) is negative, please indicate on what basis these circuit capacities are stated.

RESPONSE: a) For purposes of this explanation, the term "POT" is a generic term that stands for "Point Of Termination". When associated with physical collocated equipment, the POT consists of a physical interconnection device used to establish the demarcation between BellSouth network equipment and collocated equipment.

BellSouth utilizes Lucent Digital Interconnect/Cross-Connect Interface (DIXI) equipment for DS1 POTs. A DS1 POT shelf is the equivalent of a DIXI Interconnect Panel. Each shelf or panel can be used to mount up to 21 DS1 modules (DIXI connecting blocks). Each DS1 module has the capacity to interconnect four DS1 circuits between collocated equipment and the BellSouth Network. The DS1 modules may also be used by both BellSouth and the ALECs as a circuit test access point. A DS1 POT Bay is a generic telecom equipment rack that is used to mount the DS1 POT shelves.

b) Circuit capacities reflected on lines 12, 17 and 22 reflect the DS1 circuit capacities of one DS1 POT bay, one DS1 POT shelf and one DS1 POT module, respectively.

Adjacent Physical Collocation - Application Cost

Account Team Collocation Coordinator (ATCC) – 11 hours

Initiation of Application

- Initial review of the application in order to validate integrity of data & discussion with applicant.
- Explanation of application contents and its impact to the overall project with applicant includes any clarification of application information necessary for the interdepartmental coordinators.

Review of Adjacent Physical Collocation Agreement

- Review of applicant's specific terms, conditions and rates for adjacent collocation.
- Clarification of agreement terms & conditions for evaluation of their impact specific to the project.
- Identification of impacting terms & conditions to interdepartmental coordinators, i.e. unique time frames.
- Identify interdepartmental coordinators by name, address, office, phone & fax number specific to selected location.
- Assign a reference number.
- Request service order issuance for establishing a Billing Account Number (BAN).
- Process application payment to BellSouth billing center.
- Prepare & distribute cover list & identify any critical concerns relating to the particular application.
- Review the application determining final acceptance of a Bona Fide Application (include correct prepaid fee, correct listing of equipment data, wiring requirements, signatures, etc.)
- Assemble the Bona Fide Application Package for distribution to the interdepartmental coordinators.
- Update Master database for corporate compliance reporting.

Gathering Response Data

- Respond to questions from the Interdepartmental Coordinators and review the responses. for clarification. For example, the ATCC will need to verify the response provided by the interdepartmental team matches the terms of the ALEC's agreement.

Preparation and Distribution of the Response

- Update response information from the Interdepartmental Coordinators & prepare response for customer.
- Review terms, conditions, rates & translation of Interdepartmental response data into written contract commitments.
- Prepare written response and cover letter.
- Determine expiration date to place Bona Fide Order.
- Assemble response package (including cover letter, response, BSTEI-1-P forms for placing Bona Fide Firm Order, listings of BellSouth Certified Vendors) ATCC.

Account Team Collocation Clerical (ATCC) – 1 hour

- Clerical time for distribution of the application to the field and distribution of the hard copy of response To the customer.

Customer Point of Contact - .50 hour

- Receive and review Fee Processing Request Form.
- Verify customer credit information.
- Manually enter Access Service Request (ASR) with customer information.
- Query mechanized system for Billing Account Number assignment.
- Generate Service Order Work Aid (SOWA) and enter the appropriate application information.
- Issue service order to establish billing account for processing the Application Fee.
- Follow up to ensure completion of service order.

Interexchange Network Access Coordinator (INAC) –10 hours

- Receive and evaluate inquiry.
- Contact Area provisioning team, if required.
- Initiate and facilitate follow-up planning meetings with Area work groups & customer, if required.
- Work with the Area team to develop the plan, establish tentative schedules and identify major construction items that will affect critical dates.
- Serve as technical consultant to Area Provisioning team, Account Team Coordinator & customer for identification and resolution of issues.
- Interface with Regulatory & Collocation Project Team for policy development & issue resolution.
- Receive inquiry response data from Area team.
- Analyze data and determine project schedule Resolve Network issues.
- Review response data and notify Account Team Coordinator that inquiry is complete.

Power Capacity Management (PCM) – 1 hour

- Review request & determine what work is needed in order to ensure sufficient power capacity exists based on application.

Circuit Capacity Management (CCM) – 8 hours

- Receive and review Service Inquiry.
- Interface with INAC and account team to discuss and respond to application.
- Interface with CSCM and other network groups to discuss and respond to application.

Outside Plant Engineering (OSPE) –3 hours

- Determine availability of duct space, research options for point of interconnection & submit inquiry response
- Evaluate manhole access.
- Assessment of cable entrance facilities.

Parsons Engineering - $1013

- Perform survey and cost estimate for ALEC response.

Corporate Real Estate Services (CRES) - .75 hours JG58

- Act as a single point of contact for questions, dates & information from ATCC & Parsons Engineering for building related work requirements
- Approve work request.

- Review drawings of the facility requested to determine current condition.
- Receive inquiry and enter tacking data to system.
- Monitor timely response to INAC.
- Interact with other CRES team members on responses.

Corporate Real Estate Services (CRES) - .125 hours (JG 55)

- Enter work request which is required to authorize our consultants to determine estimates.
- Establish authority number and route for approval.

Common Systems Capacity Management (CSCM) – 5 hours

- Review application for power and cabling requirements.
- Perform site visit to verify cable infrastructure conditions.
- Coordinate requirements with Property & Services Management.
- Coordinate cable and power requirements with Circuit and Power Capacity Manager.
- Complete application response data related to above items.

REQUEST: Referring to bates stamped page 1896:

a) For each of the work groups shown on these pages, please identify the specific work activities and functions performed:

b) For each of the specific work activities and functions identified in (a), please identify the work times involved and identify the number of individuals involved in performing the functions.

RESPONSE: a) See Attachment No. 1.

b) See above response to a).

Network Provisioning	32XX	Outside Plant Engineering	1.0000	0.0000
Review requirements of application. Input data into LOC CLLI 32 to obtain CLLI. Respond to application.				

96

REQUEST: Referring to bates stamped page 1897:

a) Please describe the differences between a cabinet, a hut, and CEV.

b) Referring to the probabilities of occurrence shown lines 18, 25, and 32, is it the company's opinion that the likelihood of each type of collocation is equal?

c) If the response to (b) is negative, please explain the assumed probabilities.

d) Referring to lines 13, 20, and 27, please describe each of the assumed configurations and the major investment components incurred.

RESPONSE: a) The "Remote Terminal Housing – Cabinet" referenced is a sheet metal electronics enclosure containing six equipment bays with approximately 48 inches of equipment space each. These cabinets are designed to provide technicians access to the equipment in the cabinet by opening doors that expose all of the available equipment space. The technician does not stand inside the cabinet to access equipment. BellSouth specifications for equipment placed in these cabinets require an operating temperature range of –40°C to +65°C.

The "Remote Terminal Housing - Hut" referenced is a pre-fabricated concrete building containing seventeen equipment bays with approximately 84 inches of equipment space each. Equipment space inside these buildings is accessed by technicians walking inside the building. These buildings are heated and cooled to maintain temperatures within a safe range for technicians to work inside them. The target high temperature for this range is 30°C.

The "Remote Terminal Housing – CEV" referenced is a controlled environmental vault buried in the ground containing fifteen equipment bays with approximately 84 inches of equipment space each. Access to the equipment space is provided by entering through a hatch in the top of the CEV. These CEVs are heated and cooled to maintain temperatures within a safe range for technicians to work inside them. The target high temperature for this range is 30°C.

RESPONSE: (Cont'd)

From the descriptions above, it can be seen that the major differences in these enclosures is the amount of equipment space that they contain and the temperature ranges on the inside of these enclosures.

b) Yes.

c) Not applicable. See above response to (b.

d) Listed below are the assumed configurations and investment components:

Line No.	Assumed Configuration & Investment Component
13	Remote Terminal Housing – Mesa 6 Cabinet
20	Remote Terminal Housing– Maxi Hut
27	Remote Terminal Housing – 6' x 24' CEV

In addition, see POD Item No. 37.

RESPONSE PROVIDED BY: a) supplied by: John Jackson
Sr. Member Technical Staff
3535 Colonnade Parkway
Birmingham, AL 35243

b), c), d) supplied by: Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

REQUEST: Referring to bates stamped page 1914:

a) For each of the work groups shown on these pages, please identify the specific work activities and functions performed.

b) For each of the specific work activities and functions identified in (a), please identify the work times involved and identify the number of individuals involved in performing the functions.

c) Referring to lines 28-32, please identify the meaning of the abbreviation "LST."

RESPONSE: a) See Attachment No. 1.

b) See Attachment No. 1.The cost study assumes that one individual is involved with each of these functions.

c) LST stands for line and station transfer.

RESPONSE PROVIDED BY:

Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

J.4.1 & J.4.2 - Line Sharing Splitter - per Splitter System - 96 & 24 Line Capacity

COSMOS/ Switch Group - 4 hours install, 2 hours disconnect
Activities consist of inputting the splitter in inventory. This activity is not part of the routine database work.

Circuit Capacity Management - 3 hours install, 3 hours disconnect
Activities consist of receiving the splitter order from customer from CRSG, respond to CRSG as to splitter equipment availability, order equipment through normal processes, initiate equipment inventory, initiate cable/pair inventory, respond to CRSG for customer splitter identification, monitor fill (not customer fill but BellSouth spare when new orders come in)

Complex Resale Support Group - 1.41 hours install, 1.41 hours disconnect
Activities include receiving order from ALEC, print and email, log into tracking system, assemble printed documents, prepare folder and hand off to CCM, review and verify data, prepare handoff, close order and file

J.4.3 - Line Sharing Splitter - per Line Activation in the Central Office

Circuit Capacity Management - 0.0833 hours install and disconnect first, 0.0208 install and disconnect additional
Review order and resolve discrepancies

Assignment Facility Inventory Group -0.0467 hours install & disconnect, first and additional
Activities include resolving errors from order fallout, building facility inventory in FACS and handling facility maintenance changes

Work Management Center - 0.05 hours install and disconnect, first and additional
Activities include monitoring of the workload, loading work to the CO technicians for dispatch and subsequent closeouts of the assigned work

CO Install & Maintenance - Circuit and Facility - 0.4167 hours install first, 0.2 hours disconnect first, 0.1667 hours install additional and 0.0833 disconnect additional
Activities include reviewing orders, connecting and disconnecting customer lines inside the central office, performing testing and administrative activities

In addition to the above work groups, is the installation and maintenance group is associated with the LST function. The total weighted time for an LST is 0.2347 hours to change first and 0.2047 hours to change additional.

Installation and Maintenance - 0.15 install first, 0.1 install additional, no disconnect (included in time shown above)
Activities are receiving the task and interpreting it, making the line and station transfer (when required) test to make sure the transfer worked properly and close out the task.

J.4.4 - Line Sharing Splitter per Subsequent Activity per Line Rearrangement

Assignment Facility Inventory Group - 0.0467 hours rearrange first and additional
Activities include resolving errors from order fallout, building facility inventory in FACS and handling facility maintenance changes

Work Management Center - .1 hour rearrange first and additional
Activities include monitoring of the workload, loading work to the CO technicians for dispatch and subsequent closeouts of the assigned work

CO Install & Maintenance - Circuit and Facility 0.6167 hours rearrange first and 0.25 hours additional
Activities include reviewing orders, connecting and disconnecting customer lines inside the central office, performing testing and administrative activities

J.4.6 - Line Sharing Splitter

Circuit Capacity Management - 1 hour install 0.25 hours disconnect
Activities consist of receiving the splitter information from CRSG, initiate cable/pair inventory

Complex Resale Support Group - 1.41 hours install and 1.41 hours disconnect
Activities include receiving order from ALEC, print and email, log into tracking system, assemble printed documents, prepare folder and hand off to CCM, review and verify data, prepare handoff, close order and file

J.4.7 - Line Sharing Splitter - per ALEC/DLEC Owned Splitter in the Central Office

COSMOS/Switch Group -1.5 hours first and 0.25 hours disconnect
Activities consist of building the splitter/cable record in groups of 24 lines in the COSMOS/Switch system

REQUEST: Referring to bates stamped page 1915:

a) Referring to line 16, please explain what is meant by "3 terms on MDF/line."

b) Referring to line 16, where it indicates that 300 are required, please explain what are required.

c) Please explain the difference between the distributing frame (line 12) and the splitter bay (line 22).

d) To the extent not described in response to Staff's Request for the Production of Documents No. 325, please describe in detail the specific splitter and test jack configuration that underlies the company's cost study.

e) Please identify the source for the utilization projections on lines 14, 19, 24, and 29.

f) Referring to line 21, please identify the line capacity for a connecting block.

g) Referring to J.4.1, please provide a schematic that explains why four connecting blocks are required.

RESPONSE: a) 3 terms on MDF/line means that there are three terminations (terms) on the splitter side of the main distributing frame (MDF) per end user line. There is one for the central office switch voice connection, one for data and one for the outside plant loop.

b) This is the number of terminations from the splitter to the connecting blocks on the MDF. A 96-line splitter uses 288 terminations and displaces 12 terminations to equal 300 MDF terminations.

c) The distributing frame is a frame assembly with 6 verticals. The verticals on the frame hold the connecting blocks that provide for circuit terminations. The splitter bay is a stand-alone piece of equipment that measures 23 inches by 7 feet. The bay holds the splitter shelf and splitter.

d) The test access jack is intended to give uninhibited access to test the cable and pair. See Attachment 1 and 2.

RESPONSE: (Continued)

e) The utilization projections are Subject Matter Expert estimates based on the projected demand.

f) A connecting block has a capacity for 100 2-wire terminations.

g) See the schematic provided as Attachment No. 3.

REQUEST: Referring to bates stamped page 1916, line 40, please identify the source for the assumption of eight splitter shelves per bay.

RESPONSE: Based on the size bay, it has a capacity for eight splitter shelves with each having a corresponding test shelf.

RESPONSE PROVIDED BY:

Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

REQUEST:

a) For all nonrecurring cost elements filed in this proceeding, please indicate for which elements a time and motion study exists.

b) For those nonrecurring cost elements for which a time and motion study does not exist, or was not relied on, did BellSouth rely on estimates provided by subject matter experts (SMEs)?

c) If the response to (b) is affirmative, for each nonrecurring element for which relied on SMEs as the source for study inputs, identify the SME who provided the study inputs.

d) If the response to (b) is not affirmative, please identify the basis for the work times and activities reflected in the company's nonrecurring cost studies.

RESPONSE:

a) There are no time and motion studies to support the collocation or line sharing cost elements filed in this proceeding.

Multiple work groups are contained within the two loop-related elements (UCL-ND and EI). The I&M/SSI&M (Installation & Maintenance) work group is the only group whose data is based on a time and motion study. The study is called the BellSouth Network Services Provisioning Work Time Data originally studied in 11/92 and updated in 11/94.

b) Yes.

c) See Attachment No. 1.

d) Not applicable. See above response to (c.

REQUEST: Beginning at page 4, line 4 of his direct testimony, witness Milner refers to the number of trunks interconnecting BellSouth's network with the networks of ALECs. For each of the following types of trunks, please provide the number that were provisioned in Florida, as well as in BellSouth's nine-state region, for each month from June 30, 2000, through June 30, 2001.

(a) Interconnecting trunks.

(b) Interconnecting two-way trunks.

RESPONSE: Please see the following table and chart. Please note that Mr. Milner's testimony addressed ALEC's switches to BellSouth's switches. Accordingly, the attached information is provided for trunk groups from ALEC's switches to BellSouth's switches.

CLEC to BellSouth Interconnection Trunks Trunks in Service				
Month	Total Interconnection Trunks		2-Way Interconnection Trunks	
	Florida	BellSouth	Florida	BellSouth
June-00	97,911	314,255	33,433	124,805

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street, NE
Atlanta, GA 30375-0700

REQUEST: Beginning at page 5, line 5 of his direct testimony, witness Milner refers to the number of physical and virtual collocation arrangements that have been completed with ALECs. Please provide the number of each of the following items provisioned to ALECs in Florida, as well as in BellSouth's nine-state region, for each month from June 30, 2000, through June 30, 2001.

(a) The number of physical collocation arrangements.

(b) The number of ALECs with whom physical collocation arrangements have been completed.

(c) The number of different central offices in which physical collocation arrangements have been established with ALECs.

(d) The number of virtual collocation arrangements completed.

(e) The number of ALECs with whom virtual collocation arrangements have been completed.

(f) The number of different central offices in which virtual collocation arrangements have been established with ALECs.

RESPONSE: (a) The following table shows the number of new physical collocation arrangements completed by BellSouth in Florida and in the entire 9 state BellSouth region (BS) during each month from June 2000 through June 2001:

	6/00	7/00	8/00	9/00	10/00	11/00	12/00	1/01	2/01	3/01	4/01	5/01	6/01

Senior Director
675 West Peachtree Street, NE
Atlanta, GA 30375-0700

REQUEST: Beginning at page 11, line 19 of his direct testimony, witness Milner refers to databases and associated signaling that have been provisioned to ALECs. For each of the following, provide a response for Florida, as well as for BellSouth's nine-state region, from June 20, 2000, through June 30, 2001.

(a) Number of ALECs directly connected to BellSouth's signaling network.

(b) Number of Calling Name (CNAM) database customers.

(c) Number of queries to the Line Information Database (LIDB).

(d) Number of queries to the Toll Free Number Database.

RESPONSE: (a)

	Florida	BellSouth
In service as of 6/20/00	16	35
In service as of 6/30/01	18	45
Difference	2	10

(b) The CNAM database is a regional database.

As of 6/20/00	90 customers
As of 6/30/01	99 customers
Difference	9 customers

(c) LIDB queries are only available as a BellSouth total:
291,227,672

(d) Data available 6/1/00 – 5/31/01:
Florida – 2,831,958,724 BellSouth – 10,680,481,628

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street, NE
Atlanta, GA 30375-0700

REQUEST: Beginning at page 12, line 16 of his direct testimony, witness Milner refers to Interim and Local Number portability that have been provisioned to ALECs. For each of the following, please provide a response for Florida and for BellSouth's nine-state region from June 20, 2000, through June 30, 2001.

(a) Number of lines ported using Interim Number Portability (INP).

(b) Number of lines ported using Line Number Portability (LNP).

(c) Number of business directory numbers ported using LNP.

(d) Number of residential directory numbers ported using LNP.

RESPONSE:

(a) As of 6/20/00	Florida	BellSouth

RESPONSE PROVIDED BY:

Keith Milner
Senior Director
675 West Peachtree Street, NE
Atlanta, GA 30375-0700

REQUEST: Beginning at page 13, line 24 of his direct testimony, witness Milner refers to units of retail telecommunications services being resold by ALECs. Please provide the number of units being resold in Florida and in BellSouth's nine-state region from June 20, 2000, through June 30, 2001.

RESPONSE:

	Florida	BellSouth
In service as of 6/20/00	477,482	2,301,213
In service as of 6/30/01	1,163,814	3,204,959
Difference	686,332	903,746

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street, NE
Atlanta, GA 30375-0700

REQUEST: In each MSA where BellSouth provides EELs, does BellSouth also provide unbundled local switching?

(a) If the response is affirmative, under what circumstances is such switching provided?

(b) If there are circumstances in which BellSouth does not provide unbundled local switching, under what circumstances does this occur? Please explain in detail.

(c) When did BellSouth discontinue provisioning of unbundled local switching under any such circumstances?

RESPONSE: (a) Yes. In the Top 8 MSAs where BellSouth provides new and convertible EELs, BellSouth does provide unbundled local switching. If the end user is within Zone 1 of the Top 8 MSA and has 4 or more DS0 equivalent lines, unbundled local switching is provided at market rates. If the end user has less than 4 DS0 equivalent lines within Zone 1 of a Top 8 MSA, unbundled local switching is provided at Public Service Commission ordered rates.

(b) The only circumstance in which BellSouth does not provide unbundled local switching to an ALEC where the ALEC would be otherwise entitled to unbundled local switching is if the ALEC's contract does not contain the proper rates, terms and conditions.

(c) BellSouth has not discontinued the provisioning of unbundled local switching where the situation warrants the provision of unbundled local switching asset forth in (a).

RESPONSE PROVIDED BY: Jim Maziarz
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: For each MSA in which EELs are provided, please provide the number of EELs provisioned for each month from June 30, 2000 to June 30, 2001.

RESPONSE PROVIDED BY: Michael Hurst
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Has any ALEC requested and been denied provisioning of local switching from BellSouth in any MSA where EELs are provided? If the response is affirmative, please provide the date of the occurrence and describe the circumstances.

RESPONSE: Yes. ALECs have been denied the provisioning of unbundled local switching in any MSA where BellSouth provides new and convertible EELs, if the appropriate rates, terms and conditions have not been contained in the ALEC's contract. BellSouth has not retained and therefore cannot provide the dates of such occurrences.

RESPONSE PROVIDED BY: Jim Maziarz
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Has any ALEC requested and been denied provisioning of local switching from BellSouth in any MSA where EELs are not provided? If the response is affirmative, please provide the date of the occurrence and describe the circumstances.

RESPONSE: Yes. ALECs have been denied the provisioning of unbundled local switching in any MSA where new EELs are not provided, if the appropriate rates, terms and conditions have not been contained in the ALEC's contract. BellSouth has not retained and therefore cannot provide the dates of such occurrences.

RESPONSE PROVIDED BY: Jim Maziarz
Manager
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: For purposes of the following request, please refer to the surrebuttal testimony of BellSouth witness Caldwell, page 5, lines 1-15.

(a) Please identify which of these data were required to be assembled for use in the model submitted by the company in Docket No. 980696-TP.

(b) Please identify the subject matter experts who were consulted to determine specific inputs for use in the "bottoms-up" study, and identify the inputs that each provided values.

(c) Referring to lines 12-14, is it being asserted here that the desired level of accuracy through use of a bottoms-up approach is unattainable and thus in-plant factors are both preferable and more accurate?

(d) If the response to (c) is not affirmative, please clarify how to interpret this sentence.

RESPONSE: (a) While the "bottoms up" approach in the BSTLM© filed on September 24, 2001 required many additional detailed inputs, the items identified in Caldwell's surrebuttal testimony on page 5, lines 1-5 that were required to be assembled include:

- per foot cost of placing cable – assembled from existing contracts between BellSouth and its outside plant contractors in Florida

- "how often a particular activity occurs" - used Benchmark Cost Proxy Model inputs values concurred in by BellSouth subject matter experts as reasonable estimates of activity in BellSouth in various density environments and terrain types and previously approved by the Commission in the Florida Universal Service Docket.

BellSouth Telecommunications Loop Model-
© 1999 INDETEC International and
BellSouth Corporation
All rights reserved

RESPONSE: (Continued)

(b) The subject Matter Experts consulted to determine specific inputs for the "bottoms up" study were:

Terry Small – BellSouth personnel installation and splicing times
Rob Friar – Outside Plant contractor costs

(c) The desired level of accuracy that some parties might expect from a "bottoms up" approach may be unattainable if the Commission, or other parties, expect the "bottoms up" approach to produce much more accurate results than the previous filings from BellSouth. In any cost study, the accuracy of results is defined by the accuracy of the inputs. As BellSouth witness Caldwell's surrebuttal testimony Page 5, Lines 1-5 indicates, inevitably some of the data required for a "bottoms up" approach must be estimated since no data exists for some of the inputs. While these estimates are based on BellSouth's most knowledgeable subject matter experts, they may be no more accurate than the factual relationships derived from BellSouth's books that form the basis for in-plant factors and other loading factors used in the previous filing. However, if the Commission decides to use the "bottoms up" approach, the input values estimated by BellSouth's subject matter experts, and included in the September 24, 2001 filing, represent the very best estimate of costs. Accuracy should not be confused with precision. While the "bottoms up" approach may be more "precise" in that it uses a very large number of very specific inputs, the results of that analysis may be no more accurate than the previous filings.

(d) See above response to (c).

RESPONSE PROVIDED BY:

Robert McKnight
Director
3535 Colonnade Parkway
Birmingham, Alabama 35243

REQUEST: For purposes of the following request, please refer to the surrebuttal testimony of BellSouth witness Caldwell, page 14, lines 12-17.

(a) Are any of the work groups whose work times were adjusted in Docket No. 990649-TP, also involved in performing any of the nonrecurring activities that underlie the nonrecurring charges proposed in this proceeding for line sharing and collocation?

(b) If the response to (a) is affirmative, please explain why these work times were not adjusted in the line sharing and collocation nonrecurring cost studies submitted in this proceeding.

(c) If the response to (a) is affirmative, for those work groups whose work times were adjusted in Docket No. 990649-TP, please identify where those same work groups appear in the company's line sharing and collocation cost studies in this proceeding.

RESPONSE: (a) Yes. For line sharing, the following work groups, that were specifically identified in Docket No. 990649-TP, are involved: Complex Resale Support Group, Assignment Facility Inventory Group, Work Management Center, and C. O. Installation and Maintenance. For collocation, the work groups, specifically identified in Docket No. 990649-TP, are: Circuit Provisioning Group, Work Management Center, C. O. Installation and Maintenance, and Assignment Facility Inventory Group.

(b) The work times were not adjusted because these specific cost elements were not addressed in Docket No. 990649-TP. Hence, the activities of these work groups in provisioning line sharing and collocation were not reviewed by the Commission.

(c) See Attachment No. 1.

RESPONSE PROVIDED BY:

Daonne Caldwell
Director
675 West Peachtree Street
Atlanta, Georgia 30375

For Line Sharing, the work groups appear as follows:

REQUEST: Referring to BellSouth witness Caldwell's surrebuttal testimony, page 16, lines 3-5, please explain how the manner in which UCL-ND loops are designated guarantees they will not be rolled to a different type of facility.

RESPONSE: BellSouth's xDSL-capable loops, including the UCL-ND, are identified by the use of unique Network Channel (NC) and Network Channel Interface (NCI) codes. These codes tell the BellSouth technicians that these loops are required to be provisioned on, and must remain on, copper-only facilities.

Voice grade loops will work properly on all types of facilities and do not have to be limited to copper-only facilities. Therefore, voice grade loops use different codes to indicate that they may be rolled off copper and onto other type facilities such as fiber and/or Digital Loop Carrier systems.

RESPONSE PROVIDED BY:

Jerry Latham
Manager
Interconnection Marketing
3535 Colonnade Parkway
Birmingham, AL 35243

REQUEST: Referring to BellSouth witness Caldwell's surrebuttal testimony, page 18, lines 5-7, please:

(a) identify the amount of security-related costs that are explicitly excluded from the calculation of shared and common costs; and

(b) identify specifically where this amount is computed in the company's filing.

RESPONSE: (a) Security access costs related to the central office building card reader units are included (although, not separately identified) in Accounts 2121 Buildings or 6121 Land & Buildings Expense, and are excluded (along with the related portion of Account 2111 Land) from any shared or common cost factor. All COE Building costs are assigned to unique cost pools/sub pools relating to COE buildings based on the cost attribution principles specified in the Cost Allocation Manual (CAM) approved by the FCC. These COE Building costs are assigned (by the Shared and Common Cost Application) directly to a unique cost category entitled "COE Land and Building". Thus, the costs in these cost pools/sub pools are excluded from being classified as either a common or shared cost.

Security access costs related to the software that operates the central office building card reader units is included in Account 2690.4000 Software RTU-General Purpose Computers. Account 2690.4000 is included in the development of shared and common costs. At the time that shared and common factors were initially developed for Docket No. 990649-TP, collocation was specifically excluded from consideration. Thus, BellSouth inadvertently failed to specifically remove the software costs associated with the card reader from the shared and common cost factors. However, if the cost of the software associated with security access card readers was removed from the development of shared and common costs, no impact on the shared and common cost factors would be seen. Attachment No. 1 provides a spreadsheet that recalculates both the shared digital switching factor and the common factor assuming that the entire amount of software cost identified in the study had been removed. This is an extremely conservative approach since the amounts related to Account

RESPONSE: (Continued)

2690.4000 would have been allocated across shared, common, retail, and other wholesale functions. As indicated by the attached computations, the common factor remains at 6.24% and the digital switching shared factor remains at 0.0185. This attachment contains proprietary information and is subject to nondisclosure provisions.

(b) See above response to (a).

RESPONSE PROVIDED BY:

Charles V. Lee, Jr.
Director
3535 Colonnade Parkway
Birmingham, Alabama 35243

REQUEST: Referring to BellSouth witness Caldwell's surrebuttal testimony, page 19, lines 8-14.

(a) Please identify the specific BellSouth systems to which changes must be made associated with cable records.

(b) Please identify the discrete activities and work times related to modifying the systems identified in response to (a). (To the extent this information is specifically contained in the company's filing, please identify where in the filing this material is located.)

RESPONSE: (a) The systems in which these cable records are maintained are as follows:

VG/DS0 - COSMOS/Switch
DS1, DS3, fiber - TIRKS

The frame terminations assigned to and associated with these cable records are maintained in databases that are kept locally. Some of these databases are mechanized and some are manual depending on the individual state and turf vendor arrangements and the type of termination.

(b) See Attachment No. 1.

BELLSOUTH RESPONSE TO

STAFF'S 1ST DOCUMENT REQUEST

REQUEST No. 1: Please produce any and all documents that support your answer in Interrogatory 1(a).

RESPONSE: Please see Exhibit LMK-1 of Linda M. Kinsey's affidavit filed in this docket.

REQUEST No. 2: Please produce any and all documents that support your answer in Interrogatory 1 (c).

RESPONSE: Please see BellSouth's response to Request for Production No. 1.

REQUEST No. 3: Please produce any and all documents that support your answer in Interrogatory 2(b).

RESPONSE: Please see BellSouth's response to Request for Production No. 1.

REQUEST No. 4: Please produce any and all documents that support your answer in Interrogatory 5(b).

RESPONSE: Please refer to BellSouth's response to Interrogatory No. 5 (b). The "LSR Error Messages" and the "Florida-Monthly State Summary" are being provided on CD-ROM.

BELLSOUTH RESPONSE TO

STAFF'S SECOND REQUEST FOR DOCUMENTS

REQUEST NO. 5: Please provide copies of BellSouth's responses to AT&T's First Set of Interrogatories in the North Carolina 271 docket, NCUC Docket No. P-55, Sub 1022.

RESPONSE: See attached CD containing BellSouth's responses to AT&T's 1st, 2nd and 3rd Set of Interrogatories and 1st Request for Production of Documents.

REQUEST NO 6: Please provide copies of BellSouth's responses to AT&T's Second Set of Interrogatories in the North Carolina 271 docket, NCUC Docket No. P-55, Sub 1022.

RESPONSE: See response to Request No. 5

REQUEST NO. 7: Please provide copies of BellSouth's responses to AT&T's Third Set of Interrogatories in the North Carolina 271 docket, NCUC Docket No. P-55, Sub 1022.

RESPONSE: See response to Request No. 5.

REQUEST NO. 8: Please provide copies of BellSouth's responses to AT&T's First Request for Production of Documents, in the North Carolina 271 docket, NCUC Docket No. P-55, Sub 1022.

RESPONSE: See response to Request No. 5.

REQUEST NO. 9: Please provide copies of any and all documents that support BellSouth's response to Staff's Second Set of Interrogatories, No. 7 (a).

RESPONSE: No documents exist in response to this Interrogatory

REQUEST NO. 10: Please provide copies of any and all documents that support BellSouth's response to Staff's Second Set of Interrogatories, No. 8 (b).

RESPONSE: No documents exist in response to this Interrogatory.

REQUEST NO. 11: Please provide copies of any and all documents that support BellSouth's response to Staff's Second Set of Interrogatories, No. 13 (a).

RESPONSE: See attachments FCC Rule 51.319 and 47 CFR § 51.317 (c)(2) and (c) (5).

TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION--(CONTINUED)

PART 51--INTERCONNECTION--Table of Contents

Subpart D--Additional Obligations of Incumbent Local Exchange Carriers

Sec. 51.319 Specific unbundling requirements.

(a) Local loop and subloop. An incumbent LEC shall provide nondiscriminatory access, in accordance with Sec. 51.311 and section 251(c)(3) of the Act, to the local loop and subloop, including inside wiring owned by the incumbent LEC, on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service.

(1) Local loop. The local loop network element is defined as a transmission facility between a distribution frame (or its equivalent) in an incumbent LEC central office and the loop demarcation point at an end-user customer premises, including inside wire owned by the incumbent LEC. The local loop network element includes all features, functions, and capabilities of such transmission facility. Those features, functions, and capabilities include, but are not limited to, dark fiber, attached electronics (except those electronics used for the provision of advanced services, such as Digital Subscriber Line Access Multiplexers), and line conditioning. The local loop includes, but is not limited to, DS1, DS3, fiber, and other high capacity loops. The requirements in this section relating to dark fiber are not effective until May 17, 2000.

[[Page 34]]

(2) Subloop. The subloop network element is defined as any portion of the loop that is technically feasible to access at terminals in the incumbent LEC's outside plant, including inside wire. An accessible terminal is any point on the loop where technicians can access the wire or fiber within the cable without removing a splice case to reach the wire or fiber within. Such points may include, but are not limited to, the pole or pedestal, the network interface device, the minimum point of entry, the single point of interconnection, the main distribution frame, the remote terminal, and the feeder/distribution interface. The requirements in this section relating to subloops and inside wire are not effective until May 17, 2000.

(i) Inside wire. Inside wire is defined as all loop plant owned by the incumbent LEC on end-user customer premises as far as the point of demarcation as defined in Sec. 68.3 of this chapter, including the loop plant near the end-user customer premises. Carriers may access the inside wire subloop at any technically feasible point including, but not limited to, the network interface device, the minimum point of entry, the single point of interconnection, the pedestal, or the pole.

(ii) Technical feasibility. If parties are unable to reach agreement, pursuant to voluntary negotiations, as to whether it is technically feasible, or whether sufficient space is available, to unbundle the subloop at the point where a carrier requests, the incumbent LEC shall have the burden of demonstrating to the state, pursuant to state arbitration proceedings under section 252 of the Act, that there is not sufficient space available, or that it is not technically feasible, to unbundle the subloop at the point requested.

(iii) Best practices. Once one state has determined that it is technically feasible to unbundle subloops at a designated point, an incumbent LEC in any state shall have the burden of demonstrating, pursuant to state arbitration proceedings under section 252 of the Act, that it is not technically feasible, or that sufficient space is not available, to unbundle its own loops at such a point.

(iv) Rules for collocation. Access to the subloop is subject to the Commission's collocation rules at Secs. 51.321 through 51.323.

(v) Single point of interconnection. The incumbent LEC shall provide a single point of interconnection at multi-unit premises that is suitable for use by multiple carriers. This obligation is in addition to the incumbent LEC's obligation to provide nondiscriminatory access to subloops at any technically feasible point. If parties are unable to negotiate terms and conditions regarding a single point of interconnection, issues in dispute, including compensation of the incumbent LEC under forward-looking pricing principles, shall be resolved under the dispute resolution processes in section 252 of the Act.

(3) Line conditioning. The incumbent LEC shall condition lines required to be unbundled under this section wherever a competitor requests, whether or not the incumbent LEC offers advanced services to the end-user customer on that loop.

(i) Line conditioning is defined as the removal from the loop of any devices that may diminish the capability of the loop to deliver high-speed switched wireline telecommunications capability, including xDSL service. Such devices include, but are not limited to, bridge taps, low pass filters, and range extenders.

(ii) Incumbent LECs shall recover the cost of line conditioning from the requesting telecommunications carrier in accordance with the Commission's forward-looking pricing principles promulgated pursuant to section 252(d)(1) of the Act.

(iii) Incumbent LECs shall recover the cost of line conditioning from the requesting telecommunications carrier in compliance with rules governing nonrecurring costs in Sec. 51.507 (e).

(iv) In so far as it is technically feasible, the incumbent LEC shall test and report trouble for all the features, functions, and capabilities of conditioned lines, and may not restrict testing to voice-transmission only.

(b) Network interface device. An incumbent LEC shall provide nondiscriminatory access, in accordance with Sec. 51.311 and section 251(c)(3) of the Act, to the network interface device on

[[Page 35]]

an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service. The network interface device network element is defined as any means of interconnection of end-user customer premises wiring to the incumbent LEC's distribution plant, such as a cross connect device used for that purpose. An incumbent LEC shall permit a requesting telecommunications carrier to connect its own loop facilities to on-premises wiring through the incumbent LEC's network interface device, or at any other technically feasible point.

(c) Switching capability. An incumbent LEC shall provide nondiscriminatory access, in accordance with Sec. 51.311 and section 251(c)(3) of the Act, to local circuit switching capability and local tandem switching capability on an unbundled basis, except as set forth in Sec. 51.319(c)(2), to any requesting telecommunications carrier for the provision of a telecommunications service. An incumbent LEC shall be required to provide nondiscriminatory access in accordance with Sec. 51.311 and section 251(c)(3) of the Act to packet switching capability on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service only in the limited circumstance described in Sec. 51.319(c)(4).

(1) Local circuit switching capability, including tandem switching capability. The local circuit switching capability network element is

defined as:

(i) Line-side facilities, which include, but are not limited to, the connection between a loop termination at a main distribution frame and a switch line card;

(ii) Trunk-side facilities, which include, but are not limited to, the connection between trunk termination at a trunk-side cross-connect panel and a switch trunk card; and

(iii) All features, functions and capabilities of the switch, which include, but are not limited to:

(A) The basic switching function of connecting lines to lines, lines to trunks, trunks to lines, and trunks to trunks, as well as the same basic capabilities made available to the incumbent LEC's customers, such as a telephone number, white page listing and dial tone, and

(B) All other features that the switch is capable of providing, including but not limited to, customer calling, customer local area signaling service features, and Centrex, as well as any technically feasible customized routing functions provided by the switch.

(2) Notwithstanding the incumbent LEC's general duty to unbundle local circuit switching, an incumbent LEC shall not be required to unbundle local circuit switching for requesting telecommunications carriers when the requesting telecommunications carrier serves end-users with four or more voice grade (DS0) equivalents or lines, provided that the incumbent LEC provides nondiscriminatory access to combinations of unbundled loops and transport (also known as the ``Enhanced Extended Link'') throughout Density Zone 1, and the incumbent LEC's local circuit switches are located in:

(i) The top 50 Metropolitan Statistical Areas as set forth in Appendix B of the Third Report and Order and Fourth Further Notice of Proposed Rulemaking in CC Docket No. 96-98, and

(ii) In Density Zone 1, as defined in Sec. 69.123 of this chapter on January 1, 1999.

(3) Local tandem switching capability. The tandem switching capability network element is defined as:

(i) Trunk-connect facilities, which include, but are not limited to, the connection between trunk termination at a cross connect panel and switch trunk card;

(ii) The basic switch trunk function of connecting trunks to trunks; and

(iii) The functions that are centralized in tandem switches (as distinguished from separate end office switches), including but not limited, to call recording, the routing of calls to operator services, and signaling conversion features.

(4) Packet switching capability. (i) The packet switching capability network element is defined as the basic packet switching function of routing or forwarding packets, frames, cells or other data units based on address or other routing information contained in the packets, frames, cells or other data

[[Page 36]]

units, and the functions that are performed by Digital Subscriber Line Access Multiplexers, including but not limited to:

(ii) The ability to terminate copper customer loops (which includes both a low band voice channel and a high-band data channel, or solely a data channel);

(iii) The ability to forward the voice channels, if present, to a circuit switch or multiple circuit switches;

(iv) The ability to extract data units from the data channels on the loops, and

(v) The ability to combine data units from multiple loops onto one or more trunks connecting to a packet switch or packet switches.

(5) An incumbent LEC shall be required to provide nondiscriminatory access to unbundled packet switching capability only where each of the following conditions are satisfied. The requirements in this section relating to packet switching are not effective until May 17, 2000.

(i) The incumbent LEC has deployed digital loop carrier systems, including but not limited to, integrated digital loop carrier or universal digital loop carrier systems; or has deployed any other system in which fiber optic facilities replace copper facilities in the distribution section (e.g., end office to remote terminal, pedestal or environmentally controlled vault);

(ii) There are no spare copper loops capable of supporting xDSL services the requesting carrier seeks to offer;

(iii) The incumbent LEC has not permitted a requesting carrier to deploy a Digital Subscriber Line Access multiplexer in the remote terminal, pedestal or environmentally controlled vault or other interconnection point, nor has the requesting carrier obtained a virtual collocation arrangement at these subloop interconnection points as defined by paragraph (b) of this section; and

(iv) The incumbent LEC has deployed packet switching capability for its own use.

(d) Interoffice transmission facilities. An incumbent LEC shall provide nondiscriminatory access, in accordance with Sec. 51.311 and section 251(c)(3) of the Act, to interoffice transmission facilities on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service. The requirements in this section relating to dark fiber transport are not effective until May 17, 2000.

(1) Interoffice transmission facility network elements include:

(i) Dedicated transport, defined as incumbent LEC transmission facilities, including all technically feasible capacity-related services including, but not limited to, DS1, DS3 and OCn levels, dedicated to a particular customer or carrier, that provide telecommunications between wire centers owned by incumbent LECs or requesting telecommunications carriers, or between switches owned by incumbent LECs or requesting telecommunications carriers;

(ii) Dark fiber transport, defined as incumbent LEC optical transmission facilities without attached multiplexing, aggregation or other electronics;

(iii) Shared transport, defined as transmission facilities shared by more than one carrier, including the incumbent LEC, between end office switches, between end office switches and tandem switches, and between tandem switches, in the incumbent LEC network.

(2) The incumbent LEC shall:

(i) Provide a requesting telecommunications carrier exclusive use of interoffice transmission facilities dedicated to a particular customer or carrier, or use the features, functions, and capabilities of interoffice transmission facilities shared by more than one customer or carrier.

(ii) Provide all technically feasible transmission facilities, features, functions, and capabilities that the requesting telecommunications carrier could use to provide telecommunications services;

(iii) Permit, to the extent technically feasible, a requesting telecommunications carrier to connect such interoffice facilities to equipment designated by the requesting telecommunications carrier, including but not limited to, the requesting telecommunications carrier's collocated facilities; and

[[Page 37]]

(iv) Permit, to the extent technically feasible, a requesting telecommunications carrier to obtain the functionality provided by the incumbent LEC's digital cross-connect systems in the same manner that the incumbent LEC provides such functionality to interexchange carriers.

(e) Signaling networks and call-related databases. An incumbent LEC shall provide nondiscriminatory access, in accordance with Sec. 51.311 and section 251(c)(3) of the Act, to signaling networks, call-related databases, and service management systems on an unbundled basis to any requesting telecommunications carrier for the provision of a

telecommunications service.

(1) Signaling networks. Signaling networks include, but are not limited to, signaling links and signaling transfer points.

(i) When a requesting telecommunications carrier purchases unbundled switching capability from an incumbent LEC, the incumbent LEC shall provide access from that switch in the same manner in which it obtains such access itself.

(ii) An incumbent LEC shall provide a requesting telecommunications carrier with its own switching facilities access to the incumbent LEC's signaling network for each of the requesting telecommunications carrier's switches. This connection shall be made in the same manner as an incumbent LEC connects one of its own switches to a signaling transfer point.

(2) Call-related databases. Call-related databases are defined as databases, other than operations support systems, that are used in signaling networks for billing and collection, or the transmission, routing, or other provision of a telecommunications service.

(i) For purposes of switch query and database response through a signaling network, an incumbent LEC shall provide access to its call-related databases, including but not limited to, the Calling Name Database, 911 Database, E911 Database, Line Information Database, Toll Free Calling Database, Advanced Intelligent Network Databases, and downstream number portability databases by means of physical access at the signaling transfer point linked to the unbundled databases. The requirements in this section relating to the Calling Name Database, 911 Database, and E911 Database are not effective until May 17, 2000.

(ii) Notwithstanding the incumbent LEC's general duty to unbundle call-related databases, an incumbent LEC shall not be required to unbundle the services created in the AIN platform and architecture that qualify for proprietary treatment.

(iii) An incumbent LEC shall allow a requesting telecommunications carrier that has purchased an incumbent LEC's local switching capability to use the incumbent LEC's service control point element in the same manner, and via the same signaling links, as the incumbent LEC itself.

(iv) An incumbent LEC shall allow a requesting telecommunications carrier that has deployed its own switch, and has linked that switch to an incumbent LEC's signaling system, to gain access to the incumbent LEC's service control point in a manner that allows the requesting carrier to provide any call-related database-supported services to customers served by the requesting telecommunications carrier's switch.

(v) An incumbent LEC shall provide a requesting telecommunications carrier with access to call-related databases in a manner that complies with section 222 of the Act.

(3) Service management systems:

(i) A service management system is defined as a computer database or system not part of the public switched network that, among other things:

(A) Interconnects to the service control point and sends to that service control point the information and call processing instructions needed for a network switch to process and complete a telephone call; and

(B) Provides telecommunications carriers with the capability of entering and storing data regarding the processing and completing of a telephone call.

(ii) An incumbent LEC shall provide a requesting telecommunications carrier with the information necessary to enter correctly, or format for entry, the information relevant for input into the incumbent LEC's service management system.

[[Page 38]]

(iii) An incumbent LEC shall provide a requesting telecommunications carrier the same access to design, create, test, and deploy Advanced Intelligent Network-based services at the service management system, through a service creation environment, that the incumbent LEC provides to itself.

(iv) An incumbent LEC shall provide a requesting telecommunications carrier access to service management systems in a manner that complies with section 222 of the Act.

(f) Operator services and directory assistance. An incumbent LEC shall provide nondiscriminatory access in accordance with Sec. 51.311 and section 251(c)(3) of the Act to operator services and directory assistance on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service only where the incumbent LEC does not provide the requesting telecommunications carrier with customized routing or a compatible signaling protocol. Operator services are any automatic or live assistance to a consumer to arrange for billing or completion, or both, of a telephone call. Directory assistance is a service that allows subscribers to retrieve telephone numbers of other subscribers.

(g) Operations support systems. An incumbent LEC shall provide nondiscriminatory access in accordance with Sec. 51.311 and section 251(c)(3) of the Act to operations support systems on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service. Operations support system functions consist of pre-ordering, ordering, provisioning, maintenance and repair, and billing functions supported by an incumbent LEC's databases and information. An incumbent LEC, as part of its duty to provide access to the pre-ordering function, must provide the requesting carrier with nondiscriminatory access to the same detailed information about the loop that is available to the incumbent LEC. The requirements in this section relating to loop qualification information are not effective until May 17, 2000.

(h) High frequency portion of the loop.

(1) The high frequency portion of the loop network element is defined as the frequency range above the voiceband on a copper loop facility that is being used to carry analog circuit-switched voiceband transmissions.

(2) An incumbent LEC shall provide nondiscriminatory access in accordance with Sec. 51.311 of these rules and section 251(c)(3) of the Act to the high frequency portion of a loop to any requesting telecommunications carrier for the provision of a telecommunications service conforming with Sec. 51.230 of these rules.

(3) An incumbent LEC shall only provide a requesting carrier with access to the high frequency portion of the loop if the incumbent LEC is providing, and continues to provide, analog circuit-switched voiceband services on the particular loop for which the requesting carrier seeks access.

(4) Control of the loop and splitter functionality. In situations where a requesting carrier is obtaining access to the high frequency portion of the loop, the incumbent LEC may maintain control over the loop and splitter equipment and functions, and shall provide to requesting carriers loop and splitter functionality that is compatible with any transmission technology that the requesting carrier seeks to deploy using the high frequency portion of the loop, as defined in this subsection, provided that such transmission technology is presumed to be deployable pursuant to Sec. 51.230.

(5) Loop conditioning. (i) An incumbent LEC must condition loops to enable requesting carriers to access the high frequency portion of the loop spectrum, in accordance with Secs. 51.319(a)(3), and 51.319(h)(1). If the incumbent LEC seeks compensation from the requesting carrier for line conditioning, the requesting carrier has the option of refusing, in whole, or in part, to have the line conditioned, and a requesting carrier's refusal of some or all aspects of line conditioning will not diminish its right of access to the high frequency portion of the loop.

(ii) Where conditioning the loop will significantly degrade, as defined in Sec. 51.233, the voiceband services that the incumbent LEC is currently providing over that loop, the incumbent LEC must either:

[[Page 39]]

(A) Locate another loop that has been or can be conditioned, migrate the incumbent LEC's voiceband service to that loop, and provide the requesting carrier with access to the high frequency portion of the alternative loop; or

(B) Make a showing to the relevant state commission that the original loop cannot be conditioned without significantly degrading voiceband services on that loop, as defined in Sec. 51.233, and that there is no adjacent or alternative loop available that can be conditioned or to which the customer's voiceband service can be moved to enable line sharing.

(iii) If the relevant State commission concludes that a loop cannot be conditioned without significantly degrading the voiceband service, the incumbent LEC cannot then or subsequently condition that loop to provide advanced services to its own customers without first making available to any requesting carrier the high frequency portion of the newly-conditioned loop.

(6) Digital loop carrier systems. Incumbent LECs must provide to requesting carriers unbundled access to the high frequency portion of the loop at the remote terminal as well as the central office, pursuant to Sec. 51.319(a)(2) and Sec. 51.319(h)(1).

(7) Maintenance, repair, and testing. (i) Incumbent LECs must provide, on a nondiscriminatory basis, physical loop test access points to requesting carriers at the splitter, through a cross-connection to the competitor's collocation space, or through a standardized interface, such as an intermediate distribution frame or a test access server, for the purposes of loop testing, maintenance, and repair activities.

(ii) An incumbent seeking to utilize an alternative physical access methodology may request approval to do so from the relevant state commission, but must show that the proposed alternative method is reasonable, nondiscriminatory, and will not disadvantage a requesting carrier's ability to perform loop or service testing, maintenance or repair.

TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION--(CONTINUED)

PART 51--INTERCONNECTION--Table of Contents

Subpart D--Additional Obligations of Incumbent Local Exchange Carriers

Sec. 51.317 Standards for requiring the unbundling of network elements.

(a) Proprietary network elements. A network element shall be considered to be proprietary if an incumbent LEC can demonstrate that it has invested resources to develop proprietary information or functionalities that are protected by patent, copyright or trade secret law. The Commission shall undertake the following analysis to determine whether a proprietary network element should be made available for purposes of section 251(c)(3) of the Act:

(1) Determine whether access to the proprietary network element is ``necessary.'' A network element is ``necessary'' if, taking into consideration the availability of alternative elements outside the incumbent LEC's network, including self-provisioning by a requesting carrier or acquiring an alternative from a third-party supplier, lack of access to the network element precludes a requesting telecommunications carrier from providing the services that it seeks to offer. If access is ``necessary,'' then, subject to any consideration of the factors set forth under paragraph (c) of this section, the Commission may require the unbundling of such proprietary network element.

(2) In the event that such access is not ``necessary,'' the Commission may require unbundling subject to any consideration of the factors set forth under paragraph (c) of this section if it is determined that:

(i) The incumbent LEC has implemented only a minor modification to the network element in order to qualify for proprietary treatment;

(ii) The information or functionality that is proprietary in nature does not differentiate the incumbent LEC's services from the requesting carrier's services; or

(iii) Lack of access to such element would jeopardize the goals of the 1996 Act.

(b) Non-proprietary network elements. The Commission shall undertake the following analysis to determine whether a non-proprietary network element should be made available for purposes of section 251(c)(3) of the Act:

(1) Determine whether lack of access to a non-proprietary network element ``impairs'' a carrier's ability to provide the service it seeks to offer. A requesting carrier's ability to provide service is ``impaired'' if, taking into consideration the availability of alternative elements outside the incumbent LEC's network, including self-provisioning by a requesting carrier or acquiring an alternative from a third-party supplier, lack of access to that element materially diminishes a requesting carrier's ability to provide the services it seeks

[[Page 33]]

to offer. The Commission will consider the totality of the circumstances to determine whether an alternative to the incumbent LEC's network element is available in such a manner that a requesting carrier can

provide service using the alternative. If the Commission determines that lack of access to an element ``impairs'' a requesting carrier's ability to provide service, it may require the unbundling of that element, subject to any consideration of the factors set forth under section 51.317(c).

(2) In considering whether lack of access to a network element materially diminishes a requesting carrier's ability to provide service, the Commission shall consider the extent to which alternatives in the market are available as a practical, economic, and operational matter. The Commission will rely upon the following factors to determine whether alternative network elements are available as a practical, economic, and operational matter:

(i) Cost, including all costs that requesting carriers may incur when using the alternative element to provide the services it seeks to offer;

(ii) Timeliness, including the time associated with entering a market as well as the time to expand service to more customers;

(iii) Quality;

(iv) Ubiquity, including whether the alternatives are available ubiquitously;

(v) Impact on network operations.

(3) In determining whether to require the unbundling of any network element under this rule, the Commission may also consider the following additional factors:

(i) Whether unbundling of a network element promotes the rapid introduction of competition;

(ii) Whether unbundling of a network element promotes facilities-based competition, investment, and innovation;

(iii) Whether unbundling of a network element promotes reduced regulation;

(iv) Whether unbundling of a network element provides certainty to requesting carriers regarding the availability of the element;

(v) Whether unbundling of a network element is administratively practical to apply.

(4) If an incumbent LEC is required to provide nondiscriminatory access to a network element in accordance with Sec. 51.311 and section 251(c)(3) of the Act under Sec. 51.319 of this section or any applicable Commission Order, no state commission shall have authority to determine that such access is not required. A state commission must comply with the standards set forth in this Sec. 51.317 when considering whether to require the unbundling of additional network elements. With respect to any network element which a state commission has required to be unbundled under this Sec. 51.317, the state commission retains the authority to subsequently determine, in accordance with the requirements of this rule, that such network element need no longer be unbundled.

Introduction and Scope

This Product Information Package provides the CLEC with a product description and ordering information to be used for ordering Selective Call Routing Using Line Class Codes. For purposes of this document, the term CLEC refers to either the Reseller or the UNE Port Competitive Local Exchange Carrier.

For general ordering instructions and information on completing the Local Service Request (LSR) and the Access Service Request (ASR), the CLEC should refer to the business rules and associated guides found on the BellSouth Interconnection Web site.

The information contained in this document is subject to change. BellSouth will notify CLECs of such changes via the established CLEC Notification Process.

Please contact your BellSouth Account Manager if you have any questions about the information contained herein.

Revisions

Version 3

Version 3 completely replaces version two and contains major revisions to both the content and format of the document.

Version 2

Under Ordering Information, the BellSouth Default branding paragraph has been revised to more clearly indicate that the ZSRC FID should be floated behind the "Basic Class of Service" USOC. In the same paragraph, further explanation was provided for ordering complex services and UNE port/loop combinations. When ordering these products, the ZRSC FID must be floated behind the "Line Class of Service" USOC.

Product Name

Selective Call Routing Using Line Class Codes

Service Description

BellSouth's Operator Services and Directory Assistance (OS/DA) Branding feature provides definable announcements to the CLEC and its end users prior to placing them in queue or connecting them to an available operator or automated operator system. BellSouth also provides an unbranded option. With this option, there is no mention of a specific company brand name when an end user is being connected to the operator.

Selective Call Routing using Line Class Codes (SCR-LCC) service allows the CLEC's OS/DA, 1 or 0+Local NPA 555-1212, and 1+411 type calls to be routed to the applicable OS/DA platform. Depending upon the CLEC's request, BellSouth's SCR-LCC service supports three types of branding: Custom Branding, Unbranding, and Self-Branding. There are also two default branding options. There are three main components of this service, the first of which is the line class code. The line class code directs the switch to apply certain characteristics to the line and provides specific routing instructions for OS/DA calls. The second component is the Selective Routing Code (SRC). SRCs are used during ordering to define which OS/DA branding will be applied to the line. Finally, trunks actually transport the calls from the originating switch to the designated OS/DA platform.

Custom Branding

This platform allows the CLEC to route its end user traffic to a Custom Branded trunk group and from there to the BellSouth TOPS (Traffic Operator Position System) tandem. With Custom Branding, the end users will hear the CLEC's own branded name when using BellSouth Operator Service.

Self-Branding

This platform also allows the CLEC to route end user traffic to a Custom Branded trunk group as described above. However, instead of the traffic going to BellSouth's TOPS tandem, this option sends calls to the Point of Presence (POP) location associated with an alternative service provider or with the CLEC's own Operator Services. In other words, the CLEC selecting this option will have an alternative service provider or its own operators handling OS/DA calls.

Unbranding

This platform allows the CLEC to route its end user traffic to an unbranded trunk group. BellSouth Operator Services shall handle these calls, but no company brand name shall be identified.

Selective Call Routing Using Line Class Codes

BellSouth Branding

BellSouth Branding is an OS/DA branding option and is applied to all resale and UNE-P lines if specific OS/DA branding has not been established. It also applies when the CLEC has established specific OS/DA branding, has not selected a customized default, and does not provide SRCs on the ordering document. BellSouth Branding is the standard OS/DA branding default. This option will result in BellSouth handling the OS/DA traffic and the end user will hear the BellSouth name prior to connecting them to the operator or operator system.

Customized Default Branding

The CLEC may choose to have a Customized Default Routing Plan. This plan routes all of the CLEC's OS/DA traffic to a single specific OS/DA branding option that has been designated as the default. The benefit of this option is that the CLEC can order it without having to place specific instructions on the service request.

Service Components

Line Class Codes (LCC)

As the name implies, a critical component of SCR-LCC service is the line class code. The line class code is used in BellSouth central offices to provide certain line characteristics including call blocking/restrictions, optional dialing plans, and multiline hunting arrangements. The line class codes associated with Selective Call Routing service are uniquely programmed to route the CLEC's originated OS/DA calls to the designated OS/DA platform.

Note that SCR-LCC service is only available if line class code capacity exists within the BellSouth end office switches that will serve the CLEC's customers. If the end office serves multiple NPAs, a unique line class code is required for each NPA. Similarly, if the end office serves multiple rate areas, a unique line class code is required for each rate area.

Selective Routing Codes (SRC)

Selective Routing Codes are used to indicate the specific type of OS/DA branding and which line class codes apply to a specific end user. The SRCs are provided by BellSouth and must be included on the LSR as described in the Ordering Guidelines Section. Note that SRCs are not required with Customized Default Branding.

Trunks

The third component of SCR-LCC service is trunks. Trunks are bundled into trunk groups that may be dedicated or shared. The CLEC is responsible for ordering trunks through the normal ASR process. The trunking requirements associated with SCR-LCC service are as follows:

- Custom Branding Option: Requires CLEC dedicated trunking between each end office where SCR-LCC has been established and the BellSouth TOPS tandem

- Self-Branding Option: Requires CLEC dedicated trunking between each end office where SCR-LCC has been established and the POP location of the alternative service provider or the CLEC's Operator Services

- Unbranding: Shared trunk groups will be provided by BellSouth

Pre-Ordering Guidelines

Availability

Selective Call Routing Using Line Class Codes service calls for specific language in the Interconnection Agreement. The CLEC should contact its Account Team to verify that the language is included in the agreement, or to add the language if necessary. In addition, this service is available on a first come, first served basis and can only be offered if the line class code capacity exists in the BellSouth switch or switches from which the CLEC will serve its end users.

Pre-Ordering Documents

There are three pre-ordering documents associated with SCR-LCC service. These documents are described below, and they are located in the back of this information package.

1. CLEC Selective Routing Service Inquiry
2. CLEC Selective Routing Ordering Document
3. Selective Routing End Office Detail Information

1. CLEC Selective Routing Service Inquiry

The CLEC notifies BellSouth of its intent to order SCR-LCC for OS/DA Branding by submitting the CLEC Selective Routing Service Inquiry form to its BellSouth Account Team. The form may be submitted via fax, email, US mail, or express delivery service. On this form, the CLEC must populate the following information: the desired due date, contact information, form issuance date, CLLI codes of the BellSouth end offices where SCR will be established, the NPA that will be affected by SCR, and the quantity of Line Class Codes desired for that CLLI/NPA combination. If the CLEC needs multiple NPAs in a CLLI to be affected by SCR, each CLLI/NPA combination must be listed on an individual line and each will require a unique Line Class Code.

The number of Line Class Codes to be listed on the Service Inquiry form will be determined upon completion of the CLEC Selective Routing Ordering Document, as described below.

2. CLEC Selective Routing Ordering Document

This form must be completed and submitted to the CLEC's Account Team along with the CLEC Selective Routing Service Inquiry. This form must be provided for *each* BellSouth end office where the CLEC desires SCR-LCC. In addition to the CLEC's contact information and end office CLLI code and state, the following fields must be completed:

1. **Option** – This field identifies the call blocking/restriction (CREX) option desired for the Line Class Code. Each option requires its own unique Line Class Code. Refer to the tables on page 3 for the possible choices. If no CREX option is requested, the Line Class Codes will not be established.

2. **NPA** – This field identifies the desired NPA to be affected by SCR-LCC. Each NPA per CLLI requires its own line on this form in order to obtain a unique Line Class Code.

3. **Line Class** – This field identifies the Line Class of Service that will be affected by SCR-LCC. Refer to page 4 for possible selections. POTS should be selected for Residential and Business unbundled ports, port/loop switched combinations and UNE-P.

4. **ODP (Optional Dialing Plan) (Y/N)** – BellSouth provisioned optional dialing plans require unique Line Class Codes. If the CLEC desires SCR-LCC for products that include optional dialing plans, then "Yes" should be populated in this field. If not, then "No" should be populated and the SCR-LCC will affect only basic dialing plans.

5. **Flat/Meas (Flat or Measured Service)** – This field identifies whether the service is flat rated or measured rated. Separate Line Class Codes are required for each option. Unbundled ports, switched port/loop combinations and UNE-P are measured services. Resale, however, may be a measured or flat service. For example, Resellers desiring SCR-LCC on a resold 1FR must request flat rated Line Class Codes. Additionally, measured Line Class Codes may be used for measured Resale services and unbundled ports, switched port/loop combinations and UNE-P.

6. **MLH Hunt (Multi-line Hunting) (Y/N)** – Multi-line Hunting requires unique Line Class Codes *in 5E switches*. If Multi-line Hunting is desired, select "Yes." If it is not, select "No." If both options are desired, then separate lines will need to be completed. If the applicable BellSouth switch is not a 5E, then completing this field is not necessary.

7. **0- Brand 1/2/3/4** – This field allows the CLEC to select the level of 0- branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded.

8. **DA Brand 1/2/3/4** - This field allows the CLEC to select the level of DA branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded.

9. **0+ Local Brand 1/2/3/4** - This field allows the CLEC to select the level of 0+ Local

branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded. 0+ intralata toll calls and 0+ interlata toll calls shall be routed to the end user's LPIC'd and PIC'd carriers respectively.

10. **611 Customized Routing** – This field allows the CLEC to select SCR to its own platform for its end user dialed 611 calls. 611 represents BellSouth's repair line for retail users in the states of Georgia, Florida, North Carolina and South Carolina. This capability is only offered in these states and applies only to Self Branding OS/DA. Select "Yes" if 611 SCR is desired and "No" if it is not.

11. **Default Branding** - Within this field, select either BellSouth or Customized for each Line Class of Service. Note that if no branding option is indicated on the LSR, then BellSouth Branding is the default. T

Each line completed on the CLEC Selective Routing Ordering Document results in a unique Line Class Code. The sum of the Line Class Codes for each CLLI should be populated accordingly on the CLEC Selective Routing Service Inquiry.

After the CLEC returns these two forms to the BellSouth Account Team, BellSouth will determine whether or not the end office switches have the capacity to support the quantity of Line Class Codes being requested. If so, the ordering process will move forward. If the CLEC is requesting Custom Branding or Self Branding OS/DA options, the next step is for the CLEC to order dedicated OS/DA trunking. These trunks will be ordered via the normal ASR ordering process. The trunks will run from the applicable BellSouth end offices to the designated operator services platform. They should be provisioned with MOSS signaling. Because the line class codes must be directed to specific trunk groups, it is important that the trunks have been ordered *prior to* the Line Class Codes being built. This sequence of events also allows the line class codes to be tested for proper routing.

3. Selective Routing End Office Detail Information Form

The Selective Routing End Office Detail Information Form must be completed and submitted to the Account Team after trunks have been established, if applicable. On this form, the CLEC should list a two to six digit code for 0-, 0+ Local, DA and 611 for each CLLI/NPA combination must be listed on this form. This information is necessary in order for BellSouth to direct the appropriate Lines Class Codes to the appropriate trunk groups.

Once the Line Class Codes have been established, BellSouth will provide the CLEC with the Selective Routing Codes used in each CLLI for each option by returning the CLEC Selective Routing Ordering Document.

Ordering Guidelines

BellSouth Default Branding

Although specific OS/DA branding may have been established via SCR-LCC, the BellSouth Default Branding option will apply when OS/DA branding instructions *have not* been populated on the LSR. In order to receive the desired and established OS/DA branding, the Selective Routing Code (SRC) must be shown on the LSR. As mentioned previously, the Account Team provides the CLEC with the Selective Routing Code after the pre-ordering documents have been received and processed by BellSouth. Below is the information needed to correctly populate the SRC on the Local Service Request.

1. The Basic Class of Service/Line Class of Service USOC is shown in the FEATURE field of the LSR. The CLEC should populate ZSRC one space and then the actual SRC code in the FEATURE DETAIL field that follows the FEATURE field. In the example below, the x's represent a five digit SRC. The example shows one space after the C and before the first x.

   Example: **FEATURE** 1FR
   FEATURE DETAIL ZSRC xxxxx

2. For *non-complex* resale services, the FEATURE field is populated with the Basic Class of Service USOC. For *complex services* and *UNE Port/Loop switched combinations*, the FEATURE field is populated with the Line Class of Service USOC. The above example shows a non-complex service.

Customized Default Branding

Customized Default Branding allows a CLEC to select a single specific OS/DA branding option and such branding shall be provided without specific OS/DA branding instructions on the LSR. In other words, BellSouth will provision Customized Default Branding by modifying its own internal systems rather than by following instructions submitted on the LSR. The service interval for this option is three to six months per request. The CLEC should contact its Account Team for assistance with establishing intervals and pricing associated with this request.

Billing Information

The CLEC should be aware of the following points concerning billing:

- In order to bill for Selective Call Routing Using Line Class Codes, the CLEC must have a facility based OCN and Q-account number in place. If these numbers are not already established, the CLEC should contact its Account Team for assistance.

- BellSouth Billing Account establishment rules require an OS/DA Branding option for each Master Q Account. If multiple branding options are associated with one Master Q Account, the bill phrase as well as the branding information on the CSR shall reflect the branding option listed on the Master Q Account. The CLEC should refer to the Selective Routing Codes on the CSR to identify the exact type of branding.

Pricing

The charges for this service are contained in the Interconnection Agreement. The CLEC should refer to this agreement along with the appropriate tariffs for the specific prices associated with UNE products. Some of the charges associated with SCR-LCC service are as follows:

- There is a nonrecurring charge for the establishment of each Line Class Code in each BellSouth central office.

- When BellSouth Operator Services provides Unbranded or Custom Branded OS/DA routing, *and* the basic product is an unbundled port, unbundled port/loop switch combination, or UNE-P, there are monthly recurring usage charges that will apply.

- When Self-Branded OS/DA is used in conjunction with the products listed above, there is also a flat rate end office switching charge that will apply.

- There is a nonrecurring set-up charge to establish Customized Default Branding. The amount of this charge will be determined on a case-by-case basis.

WATS	Wide Access Telephone Service
PSTG	Prestige
CENTREX	Centrex Like Service

Note: Only one Line Class can be selected per CLEC LCC.

REQUEST: Please provide all work papers and documents that support your response to Interrogatories 16 (a) and 16 (b).

RESPONSE: Attachment No. 1 was developed from an extract of end-of-year (EOY) 2000 COMAP (Central Office Monthly Allocation Process) data specifically to detail Supporting Equipment and Power assignments. The ECNDR (Equipment Category Number Detailed Regulatory) code descriptions displayed at the end of the attachment were compiled from the latest ECNDR code table. The EOY 1998 summary lines that follow each asset category are provided as references to the specific vintage of Supporting Equipment and Power factor development that is the subject of these interrogatories and production of document requests.

RESPONSE PROVIDED BY: Charles Lee
Director
3535 Colonnade Parkway
Birmingham, Alabama 35243

REQUEST: Please provide diagrams and associated descriptions that demonstrates the specific network configuration that it is assumed for each of the line sharing rate elements.

RESPONSE: See Attachment Nos. 1 and 2.

RESPONSE PROVIDED BY: Reginald Starks
Director
675 West Peachtree Street
Atlanta, Georgia 30375

ATTACHMENT ONE
(One Page)

3.0 Architecture

The Line Sharing UNE will unbundle the high-frequency portion of the local loop and make it available to CLEC customers. The CLEC will have access at any technically feasible interconnection point in the loop. CLECs will utilize this UNE to provide xDSL-like service to end-user customers, while the voice portion will continue to be provided by BellSouth.

Network elements consist of the high frequency range of a copper loop, the Network Interface Device (NID), and the splitter system. Line sharing requires that an unloaded, 2-wire copper loop serve the end user. An unloaded loop is a copper loop with no low-pass filters, range extenders, or similar devices. The CLEC's meet point is the point of termination for CLECs or the toll main distributing frame. BellSouth will use jumpers to connect the CLECs connecting block to the splitter. The splitter will route the high frequency portion of the circuit to the CLECs xDSL equipment in their collocation space. Line sharing is provided on locally switched POTS lines. A passive signal filter is installed at the customer's premises as CPE and is the responsibility of the customer (or CLEC). In some instances a splitter could be used at the end user's location. The CO splitter directs the voiceband signals through a pair of copper wires to the switch, and the digital traffic though another pair of copper wires to the xDSL equipment in the CLEC's collocation space and attached to the CLEC's packet-switched network.

Atlanta, Georgia 30375

REQUEST: Referring to the company's line sharing cost study contained in Exhibit DDC-1, please provide a copy of the splitter shelf manufacturer's recommendation for the number of splitter shelves per splitter bay.

RESPONSE: The manufacturers of the splitter shelves currently used in BellSouth do not make such a recommendation. Instead, the dimensions of the shelves themselves are provided. From this, BellSouth determines the number of splitter shelves that a bay can accommodate, given the height of the bay.

RESPONSE PROVIDED BY: Gary Tennyson
Senior Member, Technical Staff
1884 Data Drive
Hoover, AL 35244

REQUEST: Please provide those documents provided by BellSouth in response to Covad's First Request for the Production of Documents, No. 18 in Docket No. 001797-TP.

RESPONSE: See Attachment No. 1. Documents responsive to this request are considered proprietary by BellSouth and are being provided to the Florida Public Service Commission Staff pursuant to the non-disclosure agreement executed by the parties.

RESPONSE PROVIDED BY: Johna Randa
675 West Peachtree Street, NE
Atlanta, Georgia 30375

REQUEST: Please provide those documents provided by BellSouth in response to Covad's First Request for the Production of Documents, Nos. 32 and 33, in Docket No. 001797-TP.

RESPONSE: See Attachment Nos. 1, 2, 3 and 4. (Attachment 1 and 2 are being provided on CD-Rom). Documents responsive to this request are considered proprietary by BellSouth and are being provided to the Florida Public Service Commission Staff pursuant to the non-disclosure agreement executed by the parties.

RESPONSE PROVIDED BY: Johna Randa

Atlanta, GA 30375

EXHIBIT NO. _____

DOCKET NO.: 960786a-TP

WITNESS: Stip-2

PARTY: BellSouth

DESCRIPTION:

1. **Responses to FDN's 1st Request for the Production of Documents dated June 5, 2001, Items 1-12 - pp. 1-7**

2. **Responses to FDN's 1st Set of Interrogatories, dated June 5, 2001 Items 1-51 - pp. 8-64**

3. **Response to FDN's 1st Set of Interrogatories, dated September 6, 2001, Item 1 - p. 65**

4. **Response to FDN's 1st Request for the Production of Documents date September 6, 2001, Item 1 - p. 66**

5. **Response to FDN's 1st Request for Admissions, Items 1-11 - pp. 67-77**

PROFFERING PARTY: STAFF

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 960786A-TP EXHIBIT NO. 2
COMPANY/ WITNESS. FPSC Staff
DATE: 10-11 & 12-01

I.D. # Stip-2

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s Entry Into InterLATA Services Pursuant to Section 271 Of the Federal Telecommunications Act Of Act of 1996.	)	Docket No. 960786-TL Filed: June 5, 2001

BELLSOUTH TELECOMMUNICATIONS, INC.'S RESPONSES TO FLORIDA DIGITAL NETWORK'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND FIRST SET OF INTERROGATORIES

BellSouth Telecommunications, Inc., ("BellSouth") hereby makes the following responses to Florida Digital Network's ("FDN") First Request for Production of Documents and First Set of Interrogatories:

DOCUMENT REQUESTS

REQUEST NO. 1: With respect to expert and other witnesses, and for anyone who assisted in preparing testimony for filing on behalf of you in this docket, please provide copies of all studies, work papers, source materials and other supporting documents developed in the course of forming the positions and conclusions put forth in the testimony and cost studies.

RESPONSE: Please see all documents provided in Response to these Requests for Production.

REQUEST NO. 2: To the extent not directly requested below, please provide any available documentation supporting your answers to Florida Digital's First Set of Interrogatories.

RESPONSE: Please see all documents provided in Response to these Requests for Production.

REQUEST NO. 3: Provide documentation supporting your responses to Florida Digital Interrogatories requesting information on the following. The following requests include information on current and planned deployments:

a. BellSouth provisioning of xDSL services in Florida, including any plans to make BellSouth provided xDSL services available to CLECs;

b. the number of central offices in Florida;

c. the number and kind of remote terminals BellSouth has deployed in Florida;

d. the percentage of BellSouth access lines in Florida that are served by all-fiber loops;

e. the percentage of BellSouth access lines in Florida that are served by fiber-fed copper loops and the ability of these loops to support xDSL transmission;

f. BellSouth's deployment of DSLAMs in remote terminal facilities;

g. whether BellSouth has deployed a NGDLC or other DSL-related equipment at or adjacent to any remote terminal or other structure in Florida;

h. the percentage of access lines in Florida served by the remote terminals identified in the previous DR;

i. description of any planned or deployed NGDLCs, including a description of the specific equipment and how that equipment will provide ISDN and DSL services;

j. whether BellSouth owns, or has deployed, any Optical Concentration Devices or any other ATM switching equipment in Florida;

k. description of any planned deployment of Marconi advanced optical fiber interface equipment or other similar equipment to deliver ATM or other broadband services in Florida or in the BellSouth nine-state region;

l. BellSouth's policy regarding placement by a CLEC of its own line cards in BellSouth remote terminals to connect to BellSouth's NGDLCs.

RESPONSE:

3a) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

3b) Documents responsive to this request are being provided.

3c) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement

3d) Please refer to BellSouth's Response to FDN's Data Requests, Item No. 5.

3e) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement. Additionally, please refer to BellSouth's response to FDN's Data Requests, Item No. 16.

3f) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

3g) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

3h) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

3i) Please refer to BellSouth's Response to POD Nos. 6 and 7.

3j) Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

3k) Please refer to BellSouth's Response to POD Nos. 6 and 7.

31) Documents responsive to this request are being provided.

REQUEST NO. 4: Please provide copies of any guidelines or other document related to the fulfillment of orders for unbundled voice-grade loops by CLECs where BellSouth has deployed digital loop carriers.

RESPONSE: Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

REQUEST NO. 5: Please provide any documentation related to any commitment made by BellSouth to any federal, state or local agencies or governments to deploy a certain level of broadband services in any part of Florida?

RESPONSE: Please refer to BellSouth's Response to FDN's Interrogatories, Item No. 28.

REQUEST NO. 6: Please provide a copy of any documentation or instructions provided to vendors or other third-parties for the design of BellSouth NGDLCs. This request applies both to Florida-specific documents and to any documents that are not Florida-specific but which apply in Florida.

RESPONSE: Documents responsive to this request are considered proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

REQUEST NO. 7: Provide a copy of any engineering instructions or guidelines provided to BellSouth personnel for the deployment and/or utilization of NGDLCs.

RESPONSE: See BellSouth's response to Request for Production of Documents, Item No. 6.

REQUEST NO. 8: Please provide any documentation describing or related to the maintenance and repair functions and processes by which CLECs such as FDN are required to report service trouble to BellSouth.

RESPONSE: Documents responsive to this request are being provided.

REQUEST NO. 9: Please provide any documentation describing or related to the process by which BellSouth responds to trouble reports submitted by CLECs and the procedures by which BellSouth closes CLEC trouble tickets. Provide any and all similar documentation related to the processes by which BellSouth performs the same functions for its retail customers.

RESPONSE: Documents responsive to this request are considered proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

REQUEST NO. 10: Please provide any documentation describing or related to the provisioning of move orders (a) for CLEC customers, and (b) for BellSouth retail customers, including any and all documentation related to the issues raised in Florida Digital's Interrogatories 33-40.

RESPONSE: Documents responsive to this request are considered proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement. Additionally, refer to the responses referenced in BellSouth's Responses to FDN's Interrogatories Nos. 33-40

REQUEST NO. 11: Please provide any documentation describing or related to procedures used to test dial tone, pull jumpers, tag lines, or other related provisioning activities at any physical point in the local loop.

RESPONSE: Documents responsive to this request are considered proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

REQUEST NO. 12: Please provide any documentation describing or related to procedures used to engineer new service or move orders for (a) CLEC and (b) BellSouth retail orders. Distinguish between procedures used for (i) SL1 and (ii) SL2 loops.

RESPONSE: Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement. Additionally, please refer to BellSouth's response to Request for Production of Documents, Item No. 4 and BellSouth's Response to FDN Interrogatories Nos. 33-36 and 47-49.

REQUEST: Identify each person, including experts, that BellSouth may designate to testify in this proceeding, and each person who may support such witness in preparing testimony and, separately for each such person, state generally the facts about which that person has knowledge.

RESPONSE: BellSouth objects to this request as being overly broad except to the extent that it seeks the identity of BellSouth's witnesses who will testify in this proceeding. In preparing testimony, BellSouth's witnesses rely on a variety of subject matter experts, attorneys and general support personnel, the identification of whom is not relevant to any of the issues raised in this proceeding. BellSouth further objects to this Request to the extent that it seeks to require BellSouth to divulge information regarding the pre-filed testimony of any BellSouth witness at any date earlier than the date that such testimony must actually be pre-filed.

REQUEST: How many DSL customers does BST have in Florida? How many of these customers were added during the first quarter of 2001?

RESPONSE: As of the end of April 2001, BellSouth had 133,015 wholesale and retail high-speed data subscribers in the State of Florida, 43,291 of which were added in the first quarter 2001.

RESPONSE PROVIDED BY: Eric Fogle
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: How many central offices does BellSouth have in Florida?

RESPONSE: 196.

RESPONSE PROVIDED BY: Wayne Tubaugh
Manager
150 S Monroe
Tallahassee, FL

REQUEST: How many remote terminals does BellSouth have in Florida?

(a) Of these, how many are Cabinets?
(b) Huts?
(c) Controlled Environmental Vaults?

RESPONSE: As of 5/23/01, BellSouth had 12,037 remote terminals in Florida. This figure includes BellSouth equipment housed on customer premises. These 12, 037 remote terminals include: (a) 10,011 are cabinets; (b) 466 are huts (includes CECs); and (c) 429 are CEVs.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What percentage of BellSouth's access lines in Florida are served by all-fiber loops?

RESPONSE: Less than 100 of BellSouth's access lines in Florida are served by loops consisting entirely of fiber to the NID. Any such access lines remain from "all fiber" trials BellSouth conducted in Florida. BellSouth is no longer deploying any loops consisting entirely of fiber to the NID.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What percentage of BellSouth's access lines in Florida are served by fiber-fed copper loops?

RESPONSE: Approximately 61%.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Of these fiber-fed loops, what percentage of these lines pass through Digital Loop Carrier Facilities?

RESPONSE: All of the access lines referenced in BellSouth's response to Item No. 6 pass through Digital Loop Carrier facilities.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Of these fiber-fed loops, what percentage of these lines could support xDSL transmission?

RESPONSE: All of BellSouth's access lines in Florida that are served by fiber-fed copper loops could support xDSL transmission if the design of the copper loop conforms to standard Carrier Serving Area (CSA) design, if there are no interferences that might inhibit xDSL transmission, and if DSLAM equipment is available at the remote terminal. The exact number of such loops that meet each of these three criteria is unknown.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: On the fiber portions of these loops, state whether voice signals are carried over fiber facilities that are also used to carry voice signals from other end-users, through the use of Time Division Multiplexing or other technology.

RESPONSE: The voice signals from the end-users served by the access lines referenced un BellSouth's response to Item No. 6 are multiplexed, through the use of Time Division Multiplexing, onto the fibers that serve the remote terminal.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What percentage of BellSouth's xDSL customers in Florida, including the customers of any BellSouth affiliate, are served by fiber-fed loops?

RESPONSE: Approximately 57%.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Has BellSouth deployed a DSLAM at any remote terminal in Florida?

(a) If so, where and how many?

RESPONSE: Please see BellSouth's response to Request for Production of Documents, Item No. 3 (f) and (g).

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Has BellSouth deployed a NGDLC or any other DSL-related equipment at or adjacent to any remote terminal or other structure in Florida?

(a) If so, please state the number of remote terminals where such equipment has been deployed.

(b) What percentage of BellSouth's access lines in Florida are served by these remote terminals?

RESPONSE: Not all NGDLC are DSL capable. The remote terminals referenced in BellSouth's response to Item No. 11 are DSL capable. In addition, as of 5/23/01, 102 remote terminals in Florida with MX or PC-Data technology were DSL capable.

(b) The remote terminals referenced in response to part (a) above serve approximately 24% of the BellSouth's total access lines in Florida.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: In addition to any remote terminal deployments included in your answer to the preceding question, in how many remote terminals does BellSouth plan to deploy NGDLCs or other DSL-related equipment by the end of 2002? If data for the end of 2002 is not available, please provide any other projections that are available.

RESPONSE: Although BellSouth plans to deploy DSL-related equipment at or adjacent to additional remote terminals in the future, the placement of such equipment is determined on an individual, site-specific basis. Because potential sites can and do change due to site conditions, BellSouth cannot state how many sites it plans to add over the next 18 months. A six month schedule, however, is available at www.bellsouth.com/products/spa/adsl.html

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What percentage of BellSouth's access lines in Florida would be served by these remote terminals?

RESPONSE: BellSouth does not know. Please see BellSouth's response to Item No. 13.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Identify the vendor, make and model of any NGDLC which BellSouth has deployed or plans to deploy in Florida.

RESPONSE: See BellSouth's response to Item No. 16.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Please provide a detailed description of any planned or deployed NGDLCs, including a description of the specific equipment and how that equipment will provide ISDN and DSL services.

RESPONSE: This information is considered proprietary and will be provided subject to the terms of the appropriate non-dislcosure agreement.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Does BellSouth own, or has it deployed, any Optical Concentration Devices or any other ATM switching equipment in Florida?

RESPONSE: BellSouth does not own or deploy any facility it refers to as a "Optical Concentration Device," and it does not know what kind of device this is. BellSouth has deployed ATM packet switches in some of its central office in Florida.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Explain the existing or planned deployment by BellSouth of Marconi advanced optical fiber interface equipment or other similar equipment to deliver ATM or other broadband services in Florida.

(a) If deployment has not been made by BellSouth in Florida and/or if Florida-specific information is not available, respond to the question as it applies in BellSouth's nine-state region generally.

RESPONSE: Please refer to BellSouth's response to Item No. 16.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the specific equipment used, how the equipment will be integrated with other parts of the BellSouth network, and how the equipment will be used to provide IDSN and xDSL services.

RESPONSE: Please see BellSouth's response to Item No. 18.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Has BellSouth or any affiliate ever, for any period of time, provided xDSL services to an end-user who concurrently subscribed to local exchange telecommunications service provided by a CLEC that provides service over BellSouth facilities by (1) resale, (2) UNE-P, or (3) unbundled loops? Please answer separately for each of the three options.

RESPONSE: BellSouth provides xDSL services to end users who concurrently subscribe to local exchange telecommunications service that a CLEC is providing over BellSouth facilities by way of resale.

BellSouth does not intend to provide xDSL services to end-users who concurrently subscribe to local exchange telecommunications service that a CLEC provides over BellSouth facilities by way of UNE-P. At one time, BellSouth did not have edits in place to prevent this, and some sales of this type did erroneously occur. BellSouth is in the process of correcting these situations by providing the CLECs with the option of converting the voice service to BellSouth resale service. If the CLEC decides not to accept this option, BellSouth will remove the xDSL service.

BellSouth does not provide xDSL services to end-users who concurrently subscribe to local exchange telecommunications service that a CLEC provides over unbundled loop facilities it purchases from BellSouth.

RESPONSE PROVIDED BY:

Tommy G. Williams
Sr. Product Manager
3535 Colonnade Pkwy
Birmingham, AL

Erick F. Gamble
Product Manager
3535 Colonnade Pkwy
Birmingham, AL

REQUEST: Has BellSouth or any affiliate ever, for any period of time, provided wholesale xDSL services to a CLEC or ISP, or other wholesale provider that are to be combined with local exchange telecommunications service provided by a CLEC that provides service over BellSouth facilities by (1) resale, (2) UNE-P, or (3) unbundled loops? Please answer separately for each of the options.

RESPONSE: BellSouth provides wholesale xDSL services to CLECs, ISPs, and other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC is providing over BellSouth facilities by way of resale.

BellSouth does not intend to provide wholesale xDSL services to CLECs, ISPs, other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC provides over BellSouth facilities by way of UNE-P. At one time, BellSouth did not have edits in place to prevent this, and some sales of this type did erroneously occur. BellSouth is in the process of correcting these situations by providing the CLECs, the ISPs, and/or the other wholesale providers with the option of converting the voice service to BellSouth resale service. If the provider decides not to accept this option, BellSouth will remove the xDSL service.

BellSouth does not provide wholesale xDSL services to CLECs, ISPs, or other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC provides over unbundled loop facilities it purchases from BellSouth.

RESPONSE PROVIDED BY:

Tommy G. Williams
Sr. Product Manager
3535 Colonnade Pkwy
Birmingham, AL

Erick F. Gamble
Product Manager
3535 Colonnade Pkwy
Birmingham, AL

REQUEST: Has BellSouth given any consideration to the development or offering of a product that would enable a CLEC to purchase wholesale voice and ADSL service to be provided to end-users who are connected to BellSouth central offices via fiber-fed loops? This question would include, but is not limited to, any service that would be similar to SBC's Wholesale Broadband Service and Verizon's draft Packet at Remote Terminal Service "PARTS" service.

(a) A copy of the SBC service offering is attached as Exhibit 1. Would BellSouth be willing to provide CLECs with a product offering similar to the SBC offering? If not, why not?

RESPONSE: BellSouth allows CLECs to purchase BellSouth resold voice service and BellSouth Wholesale ADSL service to be provided to end-users who are connected to BellSouth central offices via fiber-fed loops where the loop serving the end user meets the BellSouth Wholesale ADSL technical requirements.

BellSouth is not familiar with Verizon's draft Packet at Remote Terminal Service "PARTS" service and, therefore cannot respond to this request as it relates to that service. Regarding SBC's service, it is BellSouth's understanding that BellSouth's equipment is not compatible with that architecture. It should be noted that all current BellSouth solutions require a dedicated copper loop from the Remote Terminal to the Network Interface Device (NID).

RESPONSE: (Cont.)

BellSouth's architecture currently meets all BellSouth's needs and fully complies with all FCC Line Sharing and Line Splitting mandates. BellSouth, therefore, is not currently considering other alternatives.

RESPONSE PROVIDED BY:

Tommy G. Williams
Sr. Product Manager
3535 Colonnade Pkwy
Birmingham, AL

Erick F. Gamble
Product Manager
3535 Colonnade Pkwy
Birmingham, AL

REQUEST: Explain all permutations used by BellSouth to fulfill orders for unbundled voice-grade loops by CLECs where BellSouth has deployed digital loop carriers. Provide a copy of any guidelines that are provided to BellSouth employees or agents to process and execute such orders.

RESPONSE: BellSouth provides CLECs the following eight options:

Alternative 1: If sufficient physical copper pairs are available, BellSouth will reassign the loop from the IDLC system to a physical copper pair.

Alternative 2: Where the loops are served by Next Generation Digital Loop Carrier (NGDLC) systems, BellSouth will "groom" the integrated loops to form a virtual Remote Terminal (RT) set-up for universal service (that is, a terminal which can accommodate both switched and private line circuits). "Grooming" is the process of arranging certain loops (in the input stage of the NGDLC) in such a way that discrete groups of multiplexed loops may be assigned to transmission facilities (in the output stage of the NGDLC). Both of the NGDLC systems currently approved for use in the BellSouth network have "grooming" capabilities.

Alternative 3: BellSouth will remove the loop distribution pair from the IDLC and re-terminate the pair to either a spare metallic loop feeder pair (copper pair) or to spare universal digital loop carrier equipment in the loop feeder route or Carrier Serving Area (CSA). For two-wire ISDN loops, the universal digital loop carrier facilities will be made available through the use of Conklin BRITEmux or Fitel-PMX 8uMux equipment.

Alternative 4: BellSouth will remove the loop distribution pair from the IDLC and re-terminate the pair to utilize spare capacity of existing Integrated Network Access (INA) systems or other existing IDLC that terminates on digital cross-connection system (DCS) equipment. BellSouth will thereby route the requested unbundled loop channel to a channel bank where it can be de-multiplexed for delivery to the requesting CLP or for termination in a DLC channel bank that is the central office for concentration and subsequent delivery to the requesting CLP.

RESPONSE: (Cont.)

Alternative 5: When IDLC terminates at a peripheral capable of serving "side-door/hairpin" capabilities, BellSouth will utilize this switch functionality. The loop will remain terminated directly into the switch while the "side-door/hairpin" capabilities allow the loop to be provided individually to the requesting CLP.

Alternative 6: If a given IDLC system is not served by a switch peripheral that is capable of side-door/hairpin functionality, BellSouth will move the IDLC system to switch peripheral equipment that is side-door capable.

Alternative 7: BellSouth will install and activate new UDLC facilities or NGDLC facilities and then move the requested loop from the IDLC to these new facilities. In the case of UDLC, if growth will trigger activation of additional capacity within two years, BellSouth will activate new UDLC capacity to the distribution area. In the case of NGDLC, if channel banks are available for growth in the CSA, BellSouth will activate NGDLC unless the DLC enclosure is a cabinet already wired for older vintage DLC systems.

Alternative 8: When it is expected that growth will not create the need for additional capacity within the next two years, BellSouth will convert some existing IDLC capacity to UDLC.

Because certain circuits cannot be supported through an IDLC system in those instances where NGDLC is installed, BellSouth normally reserves some NGDLC capacity to support those special service circuits (both its own and those of CLPs) through a universal DLC arrangement based on site-specific forecasts. BellSouth does not reserve loops served by NGDLC for its own purposes, and does not restrict CLP access to BellSouth loops. BellSouth will construct the facilities necessary to provide unbundled loops to requesting CLPs in the small number of cases in which none of these methods is viable through the special construction process.

Please see POD # 4 for documents that support this response

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

BellSouth Telecommunications, Inc.
FPSC Dkt No. 960786-TL
Florida Digital's 1st Set of Interrogatories
May 16, 2001
Issue No. 1 Item No. 24
Page 1 of 1

REQUEST: Among the loops ordered by CLECs for the provision of voice service, are any of these loops provisioned over fiber-fed copper subloops?

RESPONSE: Yes.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Set forth the number of competitive local exchange carriers that have collocated DSLAMs or other DSL equipment inside or adjacent to BellSouth's remote terminals in Florida.

RESPONSE: There are none. BellSouth has not received any requests from competitive local exchange carriers to collocate DSLAMs or other DSL equipment inside or adjacent to BellSouth's remote terminals in Florida.

RESPONSE PROVIDED BY:

Tommy G. Williams
Sr. Product Manager
(205) 977-0056

Erick F. Gamble
Product Manager
(205) 977-7410

REQUEST: How many DSL lines are competitive carriers provisioning in Florida, to BellSouth's knowledge?

RESPONSE: BellSouth objects to this Request to the extent that it responding to it would require BellSouth to engage in speculation and to the extent that responding to it would require BellSouth to divulge customer proprietary network information. Subject to, and without waiving that objection, BellSouth responds that it does not know how many DSL lines competitive carriers are provisioning in Florida.

REQUEST: Please state BellSouth's policy regarding placement by a CLEC of its own line cards in BellSouth remote terminals to connect to BellSouth's NGDLCs.

RESPONSE: Please refer to BellSouth's response to Request for Production of Documents, Item No. 3 (l).

RESPONSE PROVIDED BY: Gary Tennyson

REQUEST: Describe the maintenance and repair functions and processes by which CLECs such as FDN are required to report trouble to BellSouth.

RESPONSE: Please refer to the Operational Understanding that has been provided in response to POD # 8.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the process by which BellSouth responds to trouble reports and closes trouble tickets for its own customers.

RESPONSE:

Generally speaking the process is as follows:

A. The customer calls the centralized Repair Service (either the Residence Repair Service or the Business Repair Service depending on class of service.)
B. Among other things, the Repair Service Attendant attempts to obtain necessary information such as customer name and address, telephone numbers being reported, details of the trouble, and access information, and the Attendant attempts to assign an appointment.
C. The telephone line is automatically tested by the Mechanized Loop Test system.
D. Based on the trouble reported and the results of the mechanized test, the trouble is automatically routed, based on system logic tables, to one of several other automated systems. They include, but are not limited to, the dispatch system, automated re-test, or a live screener position for additional testing and analysis.
E. If the trouble is statused for dispatch, it is put in queue for automated pick-up by a technician. The technician repairs, provides a status to the customer, and closes the trouble.
F. If it is sent to an automated system, the trouble is re-tested and either sent to the dispatch pool or, if appropriated, customer close out is attempted.

RESPONSE: (Cont.)

G. If the trouble cannot be tested or the automated logic cannot route the trouble to one of the above mentioned destinations, it is sent to a live 'screener' position. A Maintenance Administrator will attempt to perform additional tests or get additional information to better determine where the trouble should be routed.

Please also see BellSouth's response to Request for Production of Documents, Item No. 9.

RESPONSE PROVIDED BY:

Jim P. Smith
WMC Staff Support

REQUEST: State whether BellSouth clears trouble reports submitted by CLECs without receiving verification from the complaining CLEC that the trouble reported by the customer has actually been resolved.

RESPONSE: No. For designed loops, the BellSouth CWINS center contacts the CLEC in order to notify it that the trouble has been resolved, no trouble has been found in the BellSouth network, the trouble appears to be in the CLEC network, or the trouble is toward the customer side of the network interface. Additionally, BellSouth will cooperatively test at close out with the CLEC to ensure trouble resolution where troubles were cleared in the BellSouth network.

For non-designed loops, a BellSouth field technician will advise the CLEC that the trouble has been resolved, no trouble has been found in the BellSouth network, the trouble appears to be in the CLEC network, or the trouble is toward the customer side of the network interface. The technician will notify and/or test with a CLEC to ensure trouble resolution where troubles were cleared in the BellSouth network.

See POD #9.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the process whereby BellSouth clears trouble reports submitted by its own end user customers. In particular, state whether BellSouth verifies with its end user customer that the complained-of trouble has been resolved before clearing the trouble report.

RESPONSE: In general, the process is the same as described in the response to Item No. 30. Generally, attempts are made, either mechanically as in the case of automated systems where there is no dispatch, or by human contact in the case of a dispatched trouble, to advise the customer of trouble resolution where troubles were cleared in the BellSouth network.

RESPONSE PROVIDED BY:
Jim P. Smith
WMC Staff Support

REQUEST: Describe the processes and procedures associated with implementing a move order: (a) submitted by a BellSouth customer, and (b) submitted by a CLEC customer.

RESPONSE: The processes are essentially the same and are generally described as follows.

Moving within the same serving wire center:

Retail customer — Service orders are issued to disconnect the old facility and to install the new facility. On the due date a central office jumper is removed from the old facility and rerun and terminated to the new facility serving the new address. Pre-service tests are conducted to ensure wiring is completed to the new location. If the new facility is connected through to the customer premises, no field dispatch is required to turn up service and no customer notification of completion of the work is provided. If the facility is not connected through, a field dispatch is required to connect facilities to the new location. The customer is advised of work completion by the field technician. The customer's telephone number stays the same.

CLEC end user. — Service orders are issued to disconnect the old facility and to install the new facility. On the due date a central office jumper is removed from the old BellSouth facility, (this jumper runs from the CLEC collocation point of presence to the BellSouth cable pair) and rerun to the BellSouth cable pair serving the new end user address. Pre-service tests are conducted to ensure wiring is completed to the new location. If the new facility is connected through to the customer premises, no field dispatch is required to turn up service. CLEC completion notice is provided electronically if submitted electronically, or if submitted manually, the completion notice is provided by accessing the CLEC Service Order Status Report via the web. Additionally, the CLEC is notified by BellSouth of wire-work completion to allow for CLEC acceptance of the loop. If the facility is not connected through, a field dispatch is required to connect facilities to the new location.

RESPONSE: (Cont.)

Work completion notice is as previously described. Additionally the BellSouth technician would advise the CLEC of field completion and allow for acceptance of the service via a telephone call to the CLEC provisioning center. The customer's telephone number stays the same.

Moving to another serving wire center:

Retail Customer: Service orders are issued to disconnect the service at the old serving wire center and install service at the new serving wire center. On the due date, service at the old serving wire center is disconnected and the old number placed on intercept referral. The service is installed at the new serving wire center with a new telephone number. Pre-service tests are conducted to ensure wiring is completed to the new location. If the new facility is connected through to the customer premises, no field dispatch is required to turn up service and no customer notification of completion of the work is provided. If the facility is not connected through, a field dispatch is required to connect facilities to the new location. The customer is advised by the field technician of work completion. The customer's telephone number changes.

CLEC end user: Service orders are issued to disconnect service at the old serving wire center and to install service at the new serving wire center. On the due date, wiring is removed from the CLEC collocation point of presence at the old serving wire center, which is connected to the BellSouth cable pair serving the old end user location. Wiring is installed at the new serving wire center that connects the CLEC collocation point of presence to the BellSouth cable pair serving the new end user address. Pre-service tests are conducted to ensure wiring is completed to the new location. If the new facility is connected through to the customer premises, no field dispatch is required to turn up service.

RESPONSE: (Cont.)

CLEC completion notice is provided electronically if submitted electronically, or if submitted manually, by accessing the CLEC Service Order Status Report via the web. Additionally, the CLEC is notified by BellSouth of wire-work completion to allow for CLEC acceptance of the loop. If the facility is not connected through, a field dispatch is required to connect facilities to the new location. Work completion notice is as previously described, additionally the BellSouth technician would advise the CLEC of field completion and allow for acceptance of the service via a telephone call to the CLEC provisioning center.

The CLEC end user would retain their old telephone number assuming the CLEC continues to serve the end user from the same CLEC switch.

See POD #10

RESPONSE PROVIDED BY:

Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the differences between implementing a move order and turning-up new service. Distinguish between the steps for move orders (a) submitted by a BellSouth customer, and (b) submitted by a CLEC customer.

RESPONSE: The steps are the same as for move orders except no disconnect of facilities at the old location is required and no disconnect order is required.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What is the provisioning interval for provisioning move orders : (a) submitted by a BellSouth customer, and (b) submitted by a CLEC customer?

RESPONSE: Please see the "Products and Services Interval Guide" included in POD # 2. BellSouth's standards retail intervals are the same as the resale intervals listed in this guide.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the process BellSouth follows for engineering move orders. Describe the process for orders: (a) submitted by a BellSouth customer, and (b) submitted by a CLEC for one of its customers.

RESPONSE: There is no difference between the way a move order for a CLEC's end user and a move order for a BST end user is processed. The CLEC, for example, will place an order to switch service from the old location to the new location. This will involve a disconnect at the old location and a connect at the new location. The service orders will be written and will flow to LFACS. LFACS will assign the order for service at the new location. If no facilities are available, the service order will drop to OSPE. OSPE will examine the facilities available and attempt to provide facilities for the order. The same process applies to move order for BST's end users

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: At what point in provisioning a move order submitted by a CLEC does BellSouth engineer the order?

RESPONSE: Please see BellSouth's response to Request No. 37. As explained in that response, the loop facilities are assigned after the service order is written and sent to LFACS. The LFACS system will assign the facilities.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: At what point in provisioning a move order submitted does BellSouth engineer orders submitted by its own retail customers?

RESPONSE: Please see BellSouth's response to Request No: 37. As explained in that response, the loop facilities are assigned after the service order is written and sent to LFACS. The LFACS system will assign the facilities.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the statistical data that is available for assessing BellSouth performance in provisioning move orders (a) for itself, (b) for all CLECs, and (c) for Florida Digital in particular.

RESPONSE: BellSouth objects to this interrogatory on the grounds that BellSouth does not disaggregate provisioning intervals specific to move orders as requested by Florida Digital. Instead, new connect orders and move orders (the "T" portion of a "T&F" order) are aggregated together since this there is no operational difference in the way they are provisioned. Subject to, and without waiving this objection, BellSouth responds that a comprehensive document titled Service Quality Measurements is located at **https://pmap.bellsouth.com** . This document describes, in detail, the performance metrics available to Florida Digital. This document can be downloaded from the "Help" location on the main menu. This is a secure site and if Florida Digital does not currently have the necessary logon and password to access this site, they may obtain it through their local BellSouth Account Team.

RESPONSE PROVIDED BY: Dave Coon
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Please provide move order provisioning intervals: (a) for BellSouth's own retail customers, (b) for all CLECs, and (c) for Florida Digital.

RESPONSE: This information is available on the web site referenced in BellSouth's Response to Item No. 39.

RESPONSE PROVIDED BY: Dave Coon
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What, if any, procedure is used to identify a line with BellSouth provided dial tone?

RESPONSE: In general, BellSouth identifies a line with BellSouth-provided dial tone by the telephone number of the line. BellSouth is able to identify the number on a particular loop by the Automatic Number Announcement (ANAC) feature of the switch.

See POD #11

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What, if any, procedure is used to identify a line with served (sic) by a CLEC?

RESPONSE: BellSouth identifies a CLEC line by a circuit identification number. BellSouth will tag a circuit when a field dispatch is required to provision the loop. If a field dispatch is not required to provision the loop, the circuit will be tagged on the next repair or provisioning visit to the end user location impacting the specific loop. A CLEC may request a dispatch to tag a loop where BellSouth determines a dispatch is not required, by paying for the dispatch on a time and material basis. Identification of the telephone number on a CLEC line with CLEC supplied dial tone can be identified for a loop by utilizing the ANAC of the CLEC switch just as BellSouth can as described in interrogatory 41.

See POD # 11.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Does BellSouth have a procedure in place for testing for dial tone prior to pulling any jumpers (tagged or untagged) at any point in the local loop?

RESPONSE: Yes. A field technician should monitor the line for dial tone or conversation prior to pulling jumpers. Additionally, for conversions, the Central Office technician (for CO only conversions) and/or the field tech (for field work or field work and CO conversions) should monitor the line prior to removing or moving jumpers.

See POD # 11.

RESPONSE PROVIDED BY:

Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Is a CLEC order engineered before or after BellSouth issues a Firm Order Confirmation ("FOC")?

RESPONSE: BellSouth's FOC is a firm order confirmation, meaning the order has been entered into BellSouth's legacy ordering system. The provisioning process, including the engineering of a service request, does not start until the order is entered into BellSouth's legacy ordering system.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What actions does BellSouth take if, after issuing a FOC due date, BellSouth discovers that a line cannot be provisioned by the FOC due-date?

RESPONSE: If BellSouth cannot provision a line by the FOC due-date because of lack of facilities prior to the due date (PF), the CLEC receives electronic notification of the PF condition if the order was submitted electronically. If the order was submitted manually, the CLEC receives PF notification via the PF report accessible via the Internet.

If BellSouth cannot provision a line by the FOC due-date because of lack of facilities on the due date, the CWINs will notify the CLED if a designed loop is involved, and the technician will notify the CLEC if a non-designed loop is involved.

If BellSouth cannot provision a line by the FOC due-date because of BellSouth's work load, the appropriate center (CWINS or Work Management) or field employee will notify the CLEC.

If BellSouth cannot provision a line by the FOC due-date because of the CLEC end user's action or inaction, BellSouth will notify the CLEC.

See POD#2

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Under what circumstances does BellSouth dispatch a service technician when provisioning service to a new customer?

RESPONSE: BellSouth dispatches a service technician when provisioning service to a new customer when the facility is not connected through to the end user serving address and/or when additional premises wiring work is requested by the end user.

See POD #10

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the dial tone testing that BellSouth does for its own retail customers for (a) SL1 and (b) SL2 loops.

RESPONSE: BellSouth cannot respond to this Request because it does not classify loops serving its own retail customers as either SL1 or SL2.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: State whether BellSouth internally employs the distinction between lines known to CLECs as "SL-1" and "SL-2." If so, does BellSouth employ the same terminology? Please provide any related documentation.

RESPONSE: See response to interrogatory #47. Additionally, refer to the document labeled "Category of Trouble Reports Classes of Service Measured" provided for POD #2.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the procedures BellSouth employs in responding to its own customers "trouble" reports. State whether different procedures are employed for (1) lines served through fiber feeder remote facilities (SL-2) lines, or (2) continuous copper lines (SL-1 lines). Provide any documentation that is related to or supports your answer.

RESPONSE: Please see BellSouth's response to Item Nos. 30, 47 and 48.

RESPONSE PROVIDED BY:

Jim P. Smith
WMC Staff Support

REQUEST: When BellSouth "wins back" a CLEC customer, describe the provisioning process involved with placing the customer on the BellSouth network, including any line tagging and testing, and verification that the service is properly provisioned. Explain how these processes differ from those followed when a CLEC wins a customer previously served by BellSouth.

RESPONSE: When BellSouth wins a customer from a CLEC, field-work is not required to provision the service. Prior to the due date, BellSouth performs the appropriate processes to prepare to port the customer's number from the CLEC to BellSouth, to verify the correct loop serving the end user, and to test for dialtone. On the due date, BellSouth disconnects the jumper from the CLEC collocation point connected to the loop servicing the end user and terminates the jumper to the BellSouth switch. BellSouth does not notify the end user that service has been installed. In these instances the service order is completed on the due date and the end user is advised upfront at order negotiation that service should be working by 5pm on the due date. Please see the "Port-in Port back process". Additionally please refer to the flow chart CLEC to BellSouth End – User migration.

RESPONSE PROVIDED BY: Darrell Grimmett
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: If FDN were to fully fund a BellSouth-employed frame attendant, what costs does BellSouth maintain should be included in the charge to FDN? What costs should be eliminated from the UNE-loop provisioning charges to avoid double recovery?

RESPONSE: The annual cost for Network to employ a Wage Scale 24, Frame Attendent is $77, 976, including PB&T, supervision, indirect administration travel, impact, and training. This does not include corporate loadings for finance, human resources, legal and regulatory type corporate expense.

The TELRIC labor rate for JFC 431X, which includes a frame attendant, is $42.04. For nonrecurring activities, this cost is recovered in various loop and collocation elements. The exact amounts would depend on the specific elements under consideration.

The recurring loop cost studies include the installation costs of an MDF and a test point. Both items utilize in-plants factors to provide for the placement costs for this equipment in the CO.

REQUEST: Using both methods described in the affidavit of Mr. Victor Wakeling, state by month for each month for the year 2001, the total number of ALEC lines in Florida and the number of FDN lines.

RESPONSE: Mr. Wakeling prepares estimates of CLEC lines using the two methods, specifically in support of, and only in those months associated with, formal regulatory filings for approval for provision of interLATA. For Florida in 2001, currently, Mr. Wakeling has only prepared the CLEC data used in his affidavit, which used February 2001 data.

However, FDN publicly acknowledged having over 50,000 business lines in service and adding approximately 1,000 customers a month in a June 14, 2001 FDN news release retrieved from its web site. Thecount of 911 Listings for FDN at the end of May in BellSouth's extract of Florida CLECs' 911 listings was totally consistent with FDN's amount referenced above. BellSouth also used FDN's 911 listings for its line estimates under both methods in the affidavit. BellSouth believes its estimate of FDN's lines is accurate to the extent that FDN fulfills its legal obligation to maintain 911 listings for its customers.

RESPONSE PROVIDED BY: Victor Wakeling

REQUEST: Provide all documents referring or relating to projected or actual market share results from BellSouth winback programs in Florida.

RESPONSE:

BellSouth objects to this Request on the grounds that it is not relevant and not reasonably calculated to lead to the discovery of admissible evidence. Winback programs are not within the scope of section 271 of the Telecommunications Act and therefore not relevant to this proceeding.

REQUEST: BellSouth authenticates the attached documents, and the attached documents are correct and accurate copies of the originals.

RESPONSE:

Admitted

BellSouth authenticates the attached documents, and the attached documents are correct and accurate copies of the originals.

RESPONSE PROVIDED BY: Eric Fogle
Tommy G. Williams
Linda Kinsey

REQUEST: The statements in the attached documents are true, correct and accurate.

RESPONSE:

Admitted

The statements in the attached documents are true, correct and accurate.

RESPONSE PROVIDED BY: Eric Fogle
Tommy Williams

REQUEST: The attached documents include examples of BellSouth Telecommunications, Inc.'s advertisements of its Fast Access® Internet Service to prospective retail end users in Florida.

RESPONSE:

Admitted

The attached documents include examples of BellSouth Telecommunications, Inc.'s advertisements of its FastAccess® Internet Service to prospective retail end users in Florida.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications, Inc. advertises its Fast Access® Internet Service to prospective retail end users in Florida.

RESPONSE:

Admitted

BellSouth Telecommunications, Inc. advertises its FastAccess® Internet Service to prospective retail end users in Florida.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: For retail end users receiving both voice service and Fast Access® Internet Service from BellSouth Telecommunications, Inc, the retail end user receives one bill that includes charges for both services.

RESPONSE:

Denied

For retail end users receiving both voice service and BellSouth FastAccess® Internet Service from BellSouth Telecommunications, Inc, the retail end user **may** receive one bill that includes charges for both services. End users may elect to bill via their credit card.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications, Inc. offers price packages for its Fast Access® Internet Service purchased with its voice service to retail end users in Florida.

RESPONSE:

Denied

BellSouth Telecommunications, Inc. **does not offer** price packages for its FastAccess® Internet Service purchased with its **basic** voice service to retail end users in Florida. Price discounts on FastAccess® are available in connection with complete choice.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: Where BellSouth Telecommunications, Inc. provides Fast Access® Internet Service to retail end users in Florida, BellSouth Telecommunications Inc. owns, operates and maintains the loop, the DLSAM, the packet transport facilities and the ATM switching facilities.

RESPONSE:

Admitted

BellSouth Telecommunications Inc. owns, operates and maintains the loop, the DSLAM, the packet transport facilities and the ATM switching facilities for all regulated DSL services purchased by network service providers, including FastAccess®.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications Inc. provides the customer service and customer billing and collection support functions for customer receiving BellSouth Telecommunications, Inc.'s Fast Access® Internet Service in Florida.

RESPONSE:

Denied

While BellSouth Telecommunications Inc. provides certain customer service and customer billing and collection support functions, BellSouth.net, Inc. also performs certain customer service and customer billing and collection support functions for customers receiving FastAccess® on behalf of BellSouth Telecommunications. Thus, it is not accurate to say that BellSouth Telecommunications Inc. provides all customer service and customer billing and collection support functions.

RESPONSE PROVIDED BY: Clyde Greene

REQUEST: BellSouth Telecommunications Inc. acquires xDSL service from itself, which it combines with Internet access services to form the product known as BellSouth Telecommunications, Inc.'s Fast Access® Internet Services.

RESPONSE:

Admitted

BellSouth Telecommunications Inc. acquires xDSL service from itself, which it combines with Internet access services to form the product known as BellSouth Telecommunications, Inc.'s Fast Access® Internet Services.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: ALECs provide xDSL service for no more than approximately 1,000 access lines in BellSouth territory in Florida.

RESPONSE:

Denied.

In Florida, as of the end of August 2001, ALECs provide xDSL service as follows:

Line Sharing	1,114
IDSL	3,785
ADSL	4,890
HDSL	156
UCL - Designed	755
UCL – Non-designed	25
TOTAL	10,725

RESPONSE PROVIDED BY:

Jerry Latham	Tommy G. Williams
Sr. Product Manager	Sr. Product Manager

REQUEST: None of the ALEC xDSL lines referenced in the foregoing request are served through either fiber-fed or copper-fed DLC BellSouth remote terminal facilities.

RESPONSE:

Denied.

Well over 1,300 of the lines identified in the foregoing response are served through either fiber-fed or copper-fed DLC BellSouth remote terminal facilities.

Additionally, it should be noted that the BellSouth hosted Line Sharing Collaborative has recently welcomed several new members who have expressed significant interest in Line Sharing via collocation at the Remote Terminal. These data ALECs have already started submitting applications for Remote Terminal collocation in order for them to be able to collocate their DSLAMs and provide xDSL services to their end users.

Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe any differences in the analysis, methods, and procedures described in Interrogatory 6, 7 and 8 from the analysis, methods, and procedures BellSouth uses to augment access tandem trunk(s) or trunk groups.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 108, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: What is the ratio of tandem to end office trunks (tandem completing field) that BellSouth expects to add when CLP interconnection trunks are added from the CLP switch to a BellSouth Tandem.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 109, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe in detail BellSouth's process for determining why and when it disconnects interconnection trunks.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 110, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: From the time period November 1, 2000 to the present, please describe:

1) how many separate times BellSouth disconnected interconnection trunks in Florida. This includes reducing the size of existing trunk groups by disconnecting members of the trunk group;

2) in what specific locations did BellSouth disconnect interconnection trunks in Florida;

3) in the above instances, how many days prior to the disconnect did BellSouth notify AT&T that the disconnect would occur; and

4) in how many of these instances did BellSouth await a response from AT&T that the disconnect was appropriate?

RESPONSE: BellSouth is still in the process of compiling the information for this request, and will provide no later than August 14, 2001.

REQUEST: Describe the methods, procedures, and processes BellSouth uses with ALECs for preventing a customer from being without local telephone service during and just after BellSouth "ports" that customer's telephone number.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 112, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the root cause of loss of inbound service, and/or partial loss of inbound service, on calls from BST customers to AT&T customers. Specifically, this problem involves the loss of the ability for some BST customers to place calls to some AT&T business and residence customers after the AT&T customer has been ported from BST. Please describe all root causes for both residential and business customers.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 113, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the solutions that BST is pursuing to eliminate the problems described in Interrogatory No. 14 above.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 114, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: How many ALEC customers lost the ability to receive calls from some or all BellSouth customers? Identify separately for each month during 2001, including and up to the present month in which you answer these Interrogatories.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 115, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the analysis, methods, procedures, and processes BellSouth uses to reassign telephone numbers.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 116, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the analysis, methods, procedures, and processes BellSouth uses with customers who have DID service behind a PBX so that when that customer ports numbers from BellSouth to an ALEC such DID service continues uninterrupted.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 117, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the analysis, methods, procedures, and processes BellSouth uses when it is porting less than all of a customer's telephone numbers to an ALEC.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 118, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe the analysis, methods, procedures, and processes BellSouth uses to prevent duplicate billing of customers who have moved or transferred their local telephone service to an ALEC and describe the process BellSouth follows to correct this type of duplicate billing.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 119, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: David Scollard
Manager
600 N 19th Street
Birmingham, AL 35303

REQUEST: Describe any problems BellSouth has experienced in providing accurate calling party information when it ports a number to an ALEC.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 120, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Identify the nature of the "fix" BellSouth proposes to address any calling party information problem referred to in Interrogatory No. 21 above, and identify the dates by which this "fix" will be tested and ready for use in each of the states in BellSouth's region.

RESPONSE: Please see BellSouth's response to AT&T's 1st Set of Interrogatories, Item No. 121 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022. Also, see updated attachment.

RESPONSE PROVIDED BY: W. Keith Milner

REQUEST: Describe in detail, with examples, how BellSouth is calculating the information used to populate the Trunk Group Performance - Aggregate report that is produced each month. This should include a description of the types of trunks used in the calculation, the method of calculating the blocking on each trunk, and the mathematical calculations used to aggregate trunk blocking amongst trunks for a particular hour.

RESPONSE: Please refer to BellSouth's Supplemental response to AT&T's First Set of Interrogatories, Item No. 122, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Al Varner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe in detail how the SEEM Analog/Benchmarks for the Trunk Group Performance measure is calculated. Include in this description the types of trunk groups evaluated, the way in which each trunk group is evaluated, and the mathematical method of aggregating trunk group results.

RESPONSE: Please refer to BellSouth's Supplemental response to AT&T's First Set of Interrogatories, Item No. 123, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Al Varner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Describe BellSouth's rationale for proposing that the SEEM measure for trunk group performance should be based on a 0.5% difference in blockage in any two hour period in 24 hours.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 124, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Al Varner
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Identify the number of service center employees (by facility) who handle help requests related to Local Number Portability problems and state the hours during which such employees are present at the facility.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 126, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Senior Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: What process or mechanism does BellSouth's system use to identify UNE-Loop related orders?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 127, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Ron Pate
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: What process does BellSouth use to ensure that the loop facility, porting, facility disconnect, personnel dispatch and other internal components of an order are updated with subsequent and supplemental information pertaining to related orders?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 128, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Please state all methods and procedures related to calls answered by BellSouth's Local Carrier Services Center ("LCSC") as well as methods and procedures related to calls answered by BellSouth's Retail Service Centers ("RSCs") and calls answered by BellSouth's Business Service Centers ("BSCs").

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 129, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Please state BellSouth's methods and procedures as well as provide any and all data used to calculate BellSouth's Hot Cut Start Time.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 130, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: How does BellSouth treat its own orders for maintenance relating to erroneously disconnected end users of BellSouth? (i.e. does BellSouth repair erroneously disconnected BellSouth end-users through a BellSouth maintenance request or is BellSouth retail required to send in a new order to fix or repair BellSouth's erroneously disconnected BellSouth end-user?)

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 131, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: How does BellSouth treat an ALEC's order for maintenance relating to erroneously disconnected end users of the ALEC? (i.e. does BellSouth repair erroneously disconnected ALEC end-users through a maintenance request that takes 24 hours or does BellSouth require an ALEC to send in an entirely new order to fix or repair the ALEC's erroneously disconnected ALEC end-user?)

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 132, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: What is the minimum required amount of amperage an ALEC collocator must order for a physical collocation cage?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 134, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Explain whether and how the minimum amount of amperage is different depending on whether the ALEC is powering individual equipment bays versus powering the ALEC's Battery Distribution Fuse Bay ("BDFB").

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 135, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: When an ALEC power request causes BellSouth to augment its physical power plant, what percentage or total cost does BellSouth allocate to ALECs on a non-recurring and recurring basis?

RESPONSE: The percentage is based on minimal drain in amps requested by the ALEC divided by the total output of power plant. Recurring costs are based on a cost per breaker amp as outlined in the ALEC's contract. This is pursuant to FCC order. The Florida Public Service Commission, in its Order No. PSC-98-0604-FOF-TP, Dockets Nos. 960757-TP, 960833-TP,and 960846-TP, approved BellSouth's rate structure consisting of a single recurring charge per ampere. Rates per ampere approved were $6.95 per amp for physical and $6.95 per amp for virtual collocation.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Please refer to Interrogatory No. 35. Are the non-recurring charges associated with the augment charged to the ALEC that caused the augment or are they allocated to all prospective collocators. What is the basis for any allocation used?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 137, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Please identify charges assessed made by BellSouth to AT&T for cable under USOC PE1PM (cable) at the following Florida collocation sites: BCRTFLBT, BCRTFLMA, DRBHFLMA, DYBHFLMA, FTLDFLCY, FTLDFLJA, FTLDFLMR, FTLDFLOZ, FTLDFLPL, GSVLFLMA, HLWDFLMA, HLWDFLPE, HLWDFLWH, JCVLFLCL, JCVLFLSJ, MIAMFLAE, MIAMFLAP, MIAMFLCA, MIAMFLGR, MIAMFLHL, MIAMFLPB,MIAMFLPL, MIAMFLRR, MIAMFLWM, ORLDFLSA, ORLDFLAP, ORLDFLMA, ORLDFLPC, ORLDFLPH, PMBHFLFE, PMBHFLMA, PNSCFLBL, PRRNFLMA, SNFRFLMA, WPBHFLAN, WPBHFLGR, WPBHFLHH. Please identify what this recurring charge is for. If it is for power cable, please identify for each location, if the cable is feeding power from a BellSouth BDFB or directly from the power equipment room.

RESPONSE: PE1PM is a cable support structure USOC and is a recurring charge per entrance facility. It covers the cost of cable racks and supports in cable vaults. In Florida, AT&T presently pays BellSouth $22.94 per cable for cable support structures

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: When BellSouth requires a collocator to physically provision a collocation cage, how much additional recurring or non-recurring cost does BellSouth charge the ALEC for cross-connects when the ALEC collocator has provisioned his own physical cross-connects? Why does BellSouth charge for these cross-connects that are initially provisioned and provided for by the ALEC collocator?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 139, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Does BellSouth have electronic OSS for line splitting? If not, describe the steps for manual order for line splitting, including time frames for acknowledgement, FOC and provisioning from FOC for line splitting; and when does BellSouth expect to have electronic OSS for line splitting?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 140, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Ron Pate
Director
675 W. Peachtree Street

3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Will BellSouth provide the splitter for an ALEC to serve a new customer through line splitting? If not, why not?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 145, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Tommy Williams
Manager
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Does BellSouth provide the splitter for ALECs to engage in line sharing with BellSouth?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 146, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Tommy Williams
Manager
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: When and under what circumstances did BellSouth first determine that an ALEC UNE-P customer lost dial tone upon conversion from BellSouth service to ALEC UNE-P service due to BellSouth's working a "D" (disconnect or termination) order but not working the related "N" (conversion) order?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 147, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub 1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: On what date did BellSouth undertake to form a task team to address the loss of dial tone incidents described in Interrogatory No. 46 by developing or generating a new single C- order" (change order) process for UNE-P conversions? Identify the members of the team and the team leader.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 148 in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Describe the action plan or steps and the timeline for the development or generation of a new "single C order" process as described in Interrogatory 47. Identify any documents comprising, relating or referring to the action plan or steps described in the preceding sentence.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 149, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Is it BellSouth's practice to send out a completion notice on a conversion from BellSouth service to an ALEC UNE-P service before all orders involved in the conversion are completed by BellSouth? If not, describe BellSouth's policy and practice in this regard.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 150, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Ron Pate
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Does BellSouth intend to recognize loss of dial tone as a maintenance issue? If so, when?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 152, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY:

Ken Ainsworth
Director
675 West Peachtree St
Atlant'a, GA 30375

REQUEST: Explain why BellSouth does not treat loss of dial tone incidents as described in Interrogatory No. 50 as a maintenance issue to be handled by a BellSouth maintenance center personnel.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 151, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: When converting a customer from BellSouth to an ALEC using UNE-P, is BellSouth using the same facilities or does BellSouth move the customer's service from one facility to another? If moved, why does BellSouth change the facility used?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 153, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: When an ALEC reports a loss of dial tone incident on a UNE-P order to BellSouth, BellSouth dispatches a service technician to resolve the problem. For what reason is the service technician dispatched and what tasks does the technician perform?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 154, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Are UNE-P customers who were on IDLC facilities prior to their conversion to a CLP UNE-P left on the existing facilities or are they changed to universal or copper facilities before or at the time of the conversion?

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 155, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Please describe BellSouth's "strategic direction and goals" as that phrase is used in Mr. Ainsworth's Rebuttal Testimony filed on June 19, Docket No. 25835, and how "ROS" fails to meet such direction and goals.

RESPONSE: Please refer to BellSouth's response to AT&T's First Set of Interrogatories, Item No. 159, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Please provide any data available on call defects per million that would include all lost calls, for reasons of blocking, outages, etc. Provide this information segmented by call defects per million for ALEC calls and defects per million for calls within the BellSouth network. Provide this data in the most disaggregated form available, by month.

RESPONSE: Please refer to BellSouth's response to AT&T's Second Set of Interrogatories, Item No. 1, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Please provide trunk by trunk blocking data for all ALEC trunks that had call blocking over 2% during the months of January, February, March, April, May and June 2001. For the protection of proprietary information, the names of individual ALECs should be redacted.

RESPONSE: Please refer to BellSouth's response to AT&T's Second Set of Interrogatories, Item No. 3, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Please identify all of the access tandems in Florida and in each state in BellSouth region by CLLI codes and English identifiers. Give the tandem completing fields for each switch, listing all trunk groups to each end office, the size of the trunk group and the types of traffic on each.

RESPONSE: Please refer to BellSouth's response to AT&T's Second Set of Interrogatories, Item No. 4, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: Please identify all of the local tandems in Florida and in each state in BellSouth region by CLLI codes and English identifiers. Give the tandem completing fields for each switch, listing all trunk groups to each end office, the size of the trunk group and the types of traffic on each.

RESPONSE: Please refer to BellSouth's response to AT&T's Second Set of Interrogatories, Item No.5, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: W. Keith Milner
Senior Director
675 West Peachtree St
Atlanta, GA 30375

REQUEST: For Florida and each of the BellSouth states, please provide the average cabling distance that exists between BellSouth's BDFBs and the collocation areas that they serve.

RESPONSE: Please refer to BellSouth's response to AT&T's Third Set of Interrogatories, Item No. 1, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: For Florida and each of the BellSouth states, please indicate whether any interconnection arrangements in Florida between BellSouth interconnection frames and collocation arrangements require repeaters. If so, please indicate the central office and the transmission rate for which the repeaters are required (DS1 or DS3).

RESPONSE: In Florida, repeaters have not been required for the interconnection of any DS1 or DS3 circuits from collocation arrangements to BellSouth interconnection frames.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Please provide any standard collocation interconnection agreement terms and conditions that BellSouth uses for its interconnection agreements with Alternative Local Exchange Carriers in Florida.

RESPONSE: Please refer to BellSouth's response to AT&T's Third Set of Interrogatories, Item No. 3, in the North Carolina 271 docket, NCUC Dkt. No. P-55, Sub1022.

RESPONSE PROVIDED BY: A. Wayne Gray
Director
675 W. Peachtree Street
Atlanta, GA 30375

REQUEST: Explain BellSouth's policy or procedure, and the basis therefore, for limiting the number of :PONs" about which an ALEC representative may inquire during a single telephone contact with a BellSouth LCSC service representative.

RESPONSE: The Service Representative is to handle no more than 5 issues per call into the Center. The customers are continuing to work as they speak to the Service Representative. As they continue to input orders they continue to get issues or questions. The Service Representatives could spend hours on one call. This keeps the callers on hold from being able to get an answer.

RESPONSE PROVIDED BY: Ken Ainsworth
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Explain BellSouth's policy or procedure for reclaiming a telephone number already in use by an ALEC customer where the ALEC, at the time the customer switched local telephone service from BellSouth to such ALEC and ported the customer's main telephone number, did not switch over that customer's "distinctive ring" telephone number.

RESPONSE: BellSouth's policy for reclaiming the "distinctive ring" number is no different than the reclaiming policy for any other number. A consumer number will be held for ninety (90) days and a small business number will be held for one year after the number has been disconnected. During these timeframes, the number can be reclaimed by the previous customer.

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: State whether BellSouth initiates local telephone service for BellSouth customers on Sundays. On Saturdays?

RESPONSE: BellSouth initiates local telephone service of a flow-through nature on both Saturday and Sunday. BellSouth does not on a regional basis initiate telephone service in those cases that require a field visit on Saturday or Sunday.

RESPONSE PROVIDED BY: Brad Coleman
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Explain what (if any) procedures BellSouth has in place in order to provision an ALEC access terminal at Florida Multiple dwelling units ("MDUs") within 5 calendar days of a request by any ALEC that such access terminal be established.

RESPONSE: BellSouth does not have procedures developed to provision an ALEC access terminal at Multiple Dwelling Units ("MDUs") within five (5) calendar days of a request.

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Explain what (if any) procedures BellSouth has in place to unbundle its INC and NTW at MDUs and relinquish the first wire pair to an ALEC, where BellSouth is not using such first pair to provision service.

RESPONSE: The procedures are documented in the Ubundled Sub-Loop Distribution CLEC Information Package and the Unbundled Network Terminating Wire ("UNTW") CLEC Information Package located on the Interconnection Services web site at http://www.interconnection.bellsouth.com/products/html/unes.html

RESPONSE PROVIDED BY: Keith Milner
Senior Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Identify all BellSouth facilities used in provisioning service of MDUs that are available for access or use by any ALEC affiliated with BellSouth.

RESPONSE: Available immediately for all ALECs, whether affiliated with BellSouth or not, are the following:

Unbundled Network Interface Device ("NID") - Stand-alone NID is available if an ALEC needs a stand alone NID.

Unbundled Sub-Loop Distribution - This element originates at the BellSouth crossbox and terminates on the BellSouth NID for the end customer.

Unbundled Sub-Loop Intra-Building Network Cable -This element originates at the BellSouth crossbox in the building main equipment room and terminates on the BellSouth NID for the end customer.

Unbundled Network Terminating Wire ("NTW") - This element originates at the BellSouth access terminal placed for ALEC access to NTW and ends at the NID in the end customer's location.

RESPONSE PROVIDED BY:

Keith Milner
Senior Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Identify the process by which any ALEC affiliated with BellSouth gains access to and use of any BellSouth facilities to provision service to customer in MDUs.

RESPONSE: Any ALEC, whether affiliated with BellSouth or not, may provision services to customers in MDUs through the available UNE offerings.

RESPONSE PROVIDED BY:

Keith Milner
Senior Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Explain the process for provisioning telephone service to a new BellSouth customer residing in a Florida MDU, including whether any BellSouth technician must make a service call to such MDU in order to provision service, and the average length of time to provision service to such MDU customer from the time that the customer first places an order with BellSouth. If there are any variations in the process, explain the procedure for a typical provisioning of service and explain what factor(s) create an atypical provisioning of service.

RESPONSE:

In general the order/provisioning flow is as follows:

1. A new BellSouth retail customer calls the Residence Service Center requesting service at a specific MDU address.
2. The service representative enters the request into the service order system and a service order is issued.
3. Based on the service order information and address, the facility assignment system attempts to assign an available facility to the address. If the assigned facility is a pair already connected to the unit, the service order will not require a technician to visit the location (unless additional work such as jacks are required). In this arrangement, the order flows through without manual intervention and service is provided in approximately 1 day. If the assignment is to a vacant facility not already connected to the unit, a field technician is dispatched to the premise and service is usually established within 5 days.
4. If the assignment system finds no facilities available, an assignment specialist or an Outside Plant Engineer intervene to resolve the shortage and allocate a facility to the premise.

RESPONSE: (Cont.)

The use of 'typical' vs. 'atypical' is dependent upon the geographic area. Throughout the region, BellSouth attempts to connect facilities to individual units prior to a customer requesting service, making this the desired "typical" arrangement. However, whether or not pairs are connected through to a specific unit within a MDU, which eliminates the necessity of a field technician being dispatched, depends on factors such as:

1. Subscriber growth in the area
2. Availability of spare facilities in the specific area
3. Condition of the physical plant in the specific area
4. The number of lines allocated per unit within the specific area

RESPONSE PROVIDED BY:

Keith M. Futrell, Specialist – Network Operations Staff –I&M

Jeff McKinney, Director – Wholesale Performance Improvement

REQUEST: Identify how many orders BellSouth requires for an ALEC to convert UNE-P which is being used only for voice service to line splitting.

RESPONSE: One. Currently, BellSouth has a manual ordering process available to ALECs for the conversion of UNE-P into the discrete elements necessary to provide an end user data service over the high frequency spectrum of a UNE loop and port, when the ALEC provides its own splitter and DSLAM.

Manual ordering process is available today. Electronic ordering will be available December 2001.

RESPONSE PROVIDED BY: Tommy Williams
Manager
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Explain whether BellSouth has business rules that provide information on line splitting. If so, when did BellSouth create such business rules? When were such business rules first available to ALECs?

RESPONSE: Yes. BellSouth has business rules for line splitting. The BellSouth Business Rules for Local Ordering (BBRLO) were made available to CLECs June 29, 2001 as indicated in the BellSouth Carrier Notification SN91082422, dated May 31, 2001 referencing the business rules that may be found at: http://www.interconnection.bellsouth.com/guides/index.html.

RESPONSE PROVIDED BY: Tommy Williams
Manager
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Explain whether USOCs are required to order line splitting. If what is such USOC? When did BellSouth create such USOC for line splitting.

RESPONSE: No. CLECs order line splitting by submitting an LSR. Once received, the BellSouth Complex Resale Support Group (CRSG) takes the information contained on the LSR, and based on the information on the existing UNE-P account being converted to line splitting, will enter the appropriate USOCs for the stand alone loop, stand alone port, and the two new collocation cross connects.

RESPONSE PROVIDED BY: Tommy Williams
Manager
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Explain whether BellSouth or any entity affiliated with BellSouth provides stand alone DSL transport to end user residential customers at retail. If so, provide the name of the affiliate or company that provides this service.

RESPONSE: BellSouth provides DSL transport to ISPs, NSPs and CLECs under the FCC Wholesale Tariff, but not to end-user Residential Customers.

RESPONSE PROVIDED BY: Jeanette Anderson,
BellSouth Consumer Broadband Marketing Manager

REQUEST: Explain whether BellSouth or any entity affiliated with BellSouth provides stand alone DSL transport to end-user business customers at retail. If so, provide the name of the affiliate or company that provides this service.

RESPONSE: At this time, BellSouth does not offer a stand alone DSL transport to end-user business customers at retail. We have the wholesale business class offering where the customer purchases their own ATM and is their own Network Service Provider.

BellSouth.Net was looking at offering a retail version of business class DSL with speeds such as 192K x 192K, 384K x 384K, and 768K x 512K. This offering has been put on hold until late fourth quarter or early 2002. We are not certain if this would be considered stand alone or if BellSouth.Net would be the ISP.

BellSouth does not provide stand-alone DSL transport to end-users. BellSouth DSL requires termination of the DSL circuit on a customer owned or designated ATM circuit within the LATA.

RESPONSE PROVIDED BY: ERIC FOGLE/BROADBAND ACC

REQUEST: Provide the total number of BellSouth lines in use in the State of Florida, including switched and special access lines.

RESPONSE:

FL IAS Local Channels	Apr-01
Switched Access	1,414
Special Access	8,216
Total:	9,630

RESPONSE PROVIDED BY: Steve Bigelow
Director
3535 Colonnade Pkwy
Birmingham, AL 35243

REQUEST: Provide the total number of ALEC lines in use in the State of Florida.

RESPONSE: ALECs do not provide such information to BellSouth. BellSouth has no information on ALEC's lines outside of its own Florida service area.

RESPONSE PROVIDED BY: Vic Wakeling
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Identify and describe all "win-back" or other BellSouth programs designed to encourage or persuade ALEC customers to switch their local telephone service from an ALEC to BellSouth, for the period January 1, 2000 to the present. Identify the number of ALEC customers who have switched their service to BellSouth after being contacted through such program(s) for the period January 1, 2000 to the present. Also provide a copy of any and all documents referring or relating to such "win-back" program(s).

RESPONSE: Please see BellSouth's Objections filed July 30, 3001 in this docket.

REQUEST: Identify and describe any BellSouth policies, procedures, or practices, for the period January 1, 2000 to the present, regarding any actions to be undertaken by any BellSouth employee who learns that a BellSouth customer plans to switch its local telephone service from BellSouth to any ALEC, which have as their direct, indirect, or intended effect to delay provisioning of telephone service to such customer. Also provide a copy of any and all documents referring to any such policies, procedures, or practices.

RESPONSE: Please see BellSouth's Objections filed July 30, 3001 in this docket.

REQUEST: Identify and describe any bonus, award, or other compensation programs, policies, or practices, from January 1, 2000 to the present, by which BellSouth provides any consideration or remuneration to BellSouth employees or any third party resulting from (a) a decision by an ALEC customer to switch its local telephone service from an ALEC to BellSouth, or (b) a decision to retain BellSouth service by a BellSouth customer which has announced its intention to switch local telephone service from BellSouth to an ALEC.

RESPONSE: Please see BellSouth's Objections filed July 30, 3001 in this docket.

REQUEST: Identify and describe all marketing programs, policies, procedures, strategies, or proposals, from January 1, 2000 to the present, referring or relating to target markets consisting or comprised of ALEC customers.

RESPONSE: Please see BellSouth's Objections filed July 30, 3001 in this docket.

REQUEST: Identify and describe any programs, policies, procedures, practices, strategic plans, proposals, of BellSouth or any affiliate to increase or maintain BellSouth's market share of local telephone service in any state or region.

RESPONSE: Please see BellSouth's Objections filed July 30, 3001 in this docket.

REQUEST: Identify, by Interrogatory number, the individual(s) who prepared, or assisted substantively (as opposed to clerical assistance) in preparing, your responses to these Interrogatories.

RESPONSE: Please see "RESPONSE PROVIDED BY" on each Interrogatory.

REQUEST: All reports, data, analysis, or other documents that describe, refer, or relate to BellSouth's procedures for augmenting interconnection trunk groups, including policies and/or engineering standards used for making the determination to augment.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 37 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: All Trunk Group Service Detail for all ALEC trunks that had blocking in excess of 3% during the months January 2001 through June 2001 in the State of Florida. Please provide this information in electronic form on an Excel spreadsheet or equivalent.

RESPONSE: Documents responsive to this request are proprietary and will be produced pursuant to the execution of an appropriate non-disclosure agreement.

REQUEST: All detailed WAFA logs for interconnection trunks provisioned to AT&T during the months January 2001 through June 2001, including both BellSouth Managed and ALEC Managed trunks. Please provide this information in electronic form, such as an Excel spreadsheet, if possible.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 39 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: All standard work unit volume graphs of the BellSouth Local Carrier Services Center ("LCSC") for the latest 12 months.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 40 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: All Service Center Call Data, including Call Management System Reports, timeliness information, call abandonment rates, hold time range/median/mode and raw data, related to provisioning service to customers of ALECs.

RESPONSE: Please see BellSouth's supplemental response to AT&T's 1st Request for Production of Documents, Item No. 43 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: All documents identifying the group or department that reviews work performed by LCSC representatives to ensure the accuracy of the issued order based on the information submitted by ALECs in the "local service request" ("LSR"). Also produce all documents referring or relating to the methods, procedures, policies, and workpapers of such reviewing group of department.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 41 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

BellSouth Telecommunications, Inc.
FPSC Dkt No 960786-TL
AT&T's 1st Request for Production
of Documents
July 18, 2001
Item No. 7

REQUEST: All training materials and procedure manuals/documents provided to and/or used by LCSC service representatives.

RESPONSE: BellSouth's training materials and work instructions for the LCSC service representatives are housed in electronic format in the Training Database and in the CDIA. BellSouth will make this available to a representative from AT&T if they wish to view this documentation from one of the LCSC locations.

REQUEST: All documents referring or relating to "Method One" and "Method Two" as described on pages 6 and 10 of the Affidavit of Victor K. Wakeling dated May 29, 2001, in this Docket.

RESPONSE: See attached CD.

REQUEST: All documents relied on by Mr. Wakeling in generating the results of his "Method One" and "Method Two" studies described in his May 29, 2001 Affidavit.

RESPONSE: See BellSouth's response to AT&T's 1st Request for Production, Item No. 8.

REQUEST: All documents that refute or support the statement contained on page 2 of Mr. Wakeling's May 29, 2001 affidavit that "The data demonstrate that competition in Florida's local exchange market is economically viable, rapidly expanding, irreversible, and serving the public interest."

RESPONSE: See BellSouth's response to AT&T's 1st Request for Production, Item No. 8.

REQUEST: All documents relating or referring to loss of dial tone incidents in the year 2001 involving ALEC UNE-P customers.

RESPONSE: Responsive documents are being provided.

Additional information is available at the UNE-P Users Group Website: http://www.interconnection.bellsouth.com/notifications/usergroups/html/unep.html

REQUEST: All documents relating or referring to UNE-P User Group Meetings in which loss of dial tone incidents were discussed.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 51 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: All documents relating or referring to any action plan or steps and the timeline for the development or generation of a new "single C-order" (change order) process for UNE-P conversions.

RESPONSE: Please see BellSouth's response to AT&T's 1st Request for Production of Documents, Item No. 52 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: Please provide floor plans for at least three central offices in Miami, Florida that contain collocation, including a floor plan for the entire central office including the BellSouth telecommunications area and the collocation areas. Further, please ensure that the frame placements in the central office are labeled with the type of equipment that is located in those areas.

RESPONSE: These documents are considered proprietary and will be made available at a mutually agreeable time at BellSouth offices located at 675 West Peachtree Street, Atlanta, GA 30375, subject to the execution of an appropriate non-disclosure agreement.

BellSouth Telecommunications, Inc.
FPSC Dkt No 960786-TL
AT&T's 1st Request for Production
of Documents
July 18, 2001
Item No. 15
Page 1 of 1

REQUEST: All documents specifying the engineering guidelines used by BellSouth in planning and utilizing the telecommunication space within its central offices in Florida and each of the BellSouth states, including but not limited to information outlining how various pieces of telecommunications equipment, including interconnection frames, power, transport, and switching equipment, are related to one another within the central office from a space planning standpoint.

RESPONSE: Please see BellSouth's response to AT&T's 3rd Request for Production of Documents, Item No. 2 in the North Carolina 271 docket, Dkt No. P-55, Sub 1022.

REQUEST: Please provide a tour of any three central offices within the Miami, Florida area that contain collocation arrangements. The tour should permit escorted access to the collocation arrangement, interconnection frames, power equipment used for collocation, and the cable vault.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001. Also, please see BellSouth's response to AT&T's 1st Request for Production, Item No. 14.

REQUEST: All documents establishing any procedures, standards, or guidelines for BellSouth's interaction with any ALEC affiliated with BellSouth, including but not limited to, provisioning of service to or porting of telephone numbers for customers of any such ALEC.

RESPONSE: BellSouth is still in the process of determining whether there are any documents responsive to this request. To the extent documents exist, BellSouth will either provide the documents, or make them available for inspection, no later than August 14, 2001.

REQUEST: All documents referring or relating to BellSouth's policies or procedures for reclaiming a telephone number already in use by an ALEC customer where the ALEC, at the time such customer switched local telephone service from BellSouth to such ALEC, did not port such customer's "distinctive ring" telephone number.

RESPONSE: BellSouth is still in the process of determining whether there are any documents responsive to this request. To the extent documents exist, BellSouth will either provide the documents, or make them available for inspection, no later than August 14, 2001.

of Documents
July 18, 2001
Item No. 19
Page 1 of 1

REQUEST: All documents referring or relating to any actual, contemplated, or proposed procedures by BellSouth to provision an ALEC access terminal in a Florida multiple dwelling unit ("MDU") within 5 calendar days of a request by any ALEC that such access terminal be established.

RESPONSE: See BellSouth's response to AT&T's 1st Set of Interrogatories, Item No. 66.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed procedures by BellSouth to unbundle its INC and NTW at Florida MDUs and relinquish the first NTW pair to an ALEC, where BellSouth is not using the first pair to provision service.

RESPONSE: See BellSouth's response to AT&T's 1st Set of Interrogatories, Item No. 67. Documentation is available on the Interconnection Services web site at http://www.interconnection.bellsouth.com/products/html/unes.html

REQUEST: All documents referring or relating to any BellSouth facilities used in the provisioning of service to customers residing in Florida MDUs that are made available for access or use by any ALEC affiliated with BellSouth.

RESPONSE: Documentation is available on the Interconnection Services web site at http://www.interconnection.bellsouth.com/products/html/unes.html

REQUEST: All documents referring or relating to the procedures by which any ALEC affiliated with BellSouth gains access to or use of BellSouth facilities to provision service to customers residing in Florida MDUs.

RESPONSE: Documentation is available on the Interconnection Services web site at http://www.interconnection.bellsouth.com/products/html/unes.html

REQUEST: All documents referring or relating to any actual, contemplated, or proposed policies, procedures, or practices regarding initiation of local telephone service for customers of ALECs, or porting of telephone numbers to or from customers of ALECs, in Sundays.

RESPONSE: There are no documents responsive to this request.

REQUEST: All documents regarding conversion of a UNE-P which is being used only for voice service to line splitting.

RESPONSE: Responsive documents are being provided.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed policies, procedures, or practices regarding provisioning by BellSouth or any affiliate of stand alone DSL transport to end-user residential or business customers.

RESPONSE: There are no documents responsive to this request. See BellSouth's response to AT&T Interrogatory, Item Nos. 74 and 75.

REQUEST: All documents referring or relating to any "win-back" or other BellSouth programs designed to encourage or persuade ALEC customers, or customers who have indicated an intent to switch local telephone service to an ALEC, to switch their local telephone service from an ALEC to BellSouth or to maintain local telephone service with BellSouth.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any BellSouth policies, procedures, or practices regarding any actions to be undertaken by any BellSouth employee who learns that a BellSouth customer plans to switch its local telephone service from BellSouth to any ALEC, which have as their direct, indirect, or intended effect to delay provisioning of telephone service to such customer.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any bonuses, awards, or other compensation provided to any BellSouth employee or any third party resulting from (a) a decision by an ALEC customer to switch its local telephone service from an ALEC to BellSouth, or (b) a decision to retain BellSouth service by a BellSouth customer which has announced its intention to switch local telephone service from BellSouth to an ALEC.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any actual or proposed marketing programs, policies, procedures, strategies, or proposals referring or relating to target markets consisting or comprised of ALEC customers.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All interconnection agreements with any ALEC affiliated with BellSouth.

RESPONSE: Responsive documents are being provided.

REQUEST: All minutes of any meeting of the board of directors of BellSouth or any affiliated entity referring or relating to Section 271 of the Communications Act of 1934, or referring or relating to AT&T or any of its subsidiaries or affiliates.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed programs, policies, procedures, practices, or strategic plans of BellSouth or any affiliate to increase or maintain BellSouth' market share of local telephone service.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed economic studies of the demand or market for local telephone services in Florida.

RESPONSE: Please see BellSouth's Objections file July 30, 2001.

REQUEST: All documents referring or relating to pricing levels set by BellSouth for ALECs, or pricing levels to BellSouth customers who have switched, or announce an intent to switch, their local telephone service from an ALEC to BellSouth.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed "below-cost" pricing levels set by BellSouth for ALECs, or pricing levels to BellSouth customers who have switched, or announce an intent to switch, their local telephone service from an ALEC to BellSouth.

RESPONSE: Please see BellSouth's Objections filed July 30, 2001.

REQUEST: All documents referring or relating to any actual, contemplated, or proposed analysis of competition in the local telephone service market in Florida.

RESPONSE: Documents responsive to this request are proprietary and will be provided pursuant to the execution of the appropriate non-disclosure agreement.

REQUEST: All documents relied upon in responding to AT&T's July 18, 2001, First Set of Interrogatories to BellSouth in this Docket.

RESPONSE: There are no documents responsive to this request beyond those already provided in the responses herein and the responses to the Interrogatories.

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	)	Docket No. 960786-TL

AT&T COMMUNICATIONS OF THE SOUTHERN STATES, INC.'S RESPONSES TO STAFF'S FIRST SET OF INTERROGATORIES (NOS. 1 - 6)

INTERROGATORIES

INTERROGATORY No. 1: For this request, please refer to the rebuttal testimony of AT&T witness Berger, page 6. lines 8-9. Please list each FCC guideline that you believe BellSouth fails to meet. Please include in your list the specific FCC Order Number, Rule, or other citation where the guideline is found.

ANSWER: The FCC has provided guidance on the RBOC's obligation to provide hot cuts in several orders[1]:

- Section 271(c)(2)(B) of the Act requires a Regional Bell Operating Company ("RBOC") to comply with the number portability regulations adopted by the FCC pursuant to section 251. 47 U.S.C. § 271(c)(2)(B)(xi). Section 251(b)(2) requires all LECs "to provide, to the extent technically feasible, number portability in accordance with requirements prescribed by the Commission." 47 U.S.C. § 251(b)(2). *See* Memorandum Opinion and Order, ***In the Matter***

[1] AT&T's testimony was not intended to create or describe a formal distinction between "expectations" and "guidelines." Accordingly, AT&T's answer reflects no such distinction and responds to both Interrogatory No. 1 and Interrogatory No. 2.

DOCUMENT NUMBER-DATE
11035 SEP-5 0
FPSC-COMMISSION CLERK

of Joint Application by SBC Communications Inc., Southwestern Bell Tel. Co., and Southwestern Bell Communications Services, Inc. (d/b/a Southwestern Bell Long Distance) for Provision of In-Region, InterLATA Services in Kansas and Oklahoma, FCC 01-29 CC Docket No. 00-217 App. B ¶ 7 (rel. January 22, 2001) (*"SWBT Kansas Oklahoma Order"*).

- Any long-term number portability method must "support existing network services, features, or capabilities, such as emergency services, CLASS features, operator and directory assistance services, and intercept capabilities" 47 C.F.R. § 52.23(a)(1) and "does not result in any degradation in service quality or network reliability when customers switch carriers." 47 C.F.R. § 52.23(a)(5).
- The FCC has explained that, to satisfy the checklist requirements, an RBOC must demonstrate that "it provisions hot cuts in sufficient quantities, at an acceptable level of quality, and with a minimum of service disruption." Memorandum Opinion and Order, *Application by Bell Atlantic New York for Authorization Under Section 271 of the Communication Act To Provide In-Region, InterLATA Service in the State of New York,* CC Dkt. No. 99-295, FCC 99-404, 1999 WL 1243135 (rel. Dec. 22, 1999) ¶ 291 (*"Bell Atlantic New York Order"*).
- An RBOC "must demonstrate that it provides unbundled loops through hot cuts 'in a manner that offers an efficient competitor a meaningful opportunity to compete.'" *SWBT Kansas Oklahoma Order* ¶ 199.
- An RBOC is required to provide "hot cuts in a timely manner, at an acceptable level of quality, with minimal service disruption, and with a minimum number of troubles following

installation." Memorandum and Order, *Application of Verizon New England Inc., Bell Atlantic Communications, Inc. (d/b/a Verizon Long Distance), NYNEX Long Distance Company (d/b/a Verizon Enterprise Solutions) and Verizon Global Networks, Inc., For Authorization to Provide In-Region, InterLATA Services in Massachusetts*, Before the Federal Communications Commission, CC Docket NO. 01-9, FCC 01-130 (rel. April 16, 2001) ¶ 159 (*"Verizon Massachusetts Order"*).

- A BOC "must demonstrate that it can coordinate number portability with loop cutovers in a reasonable amount of time and with minimum service disruption." *In the Matter of Application of BellSouth Corporation, et al. for Provision of In-Region, InterLATA Services in Louisiana*, CC Docket No. 98-121, Memorandum Opinion and Order, FCC 98-271 (rel. Oct. 13, 1998) ¶ 279.
- BellSouth must provide number portability in a manner that allows users to retain existing telephone numbers "'without impairment of quality, reliability, or convenience.'" *Bell Atlantic New York Order* ¶ 367 (citation omitted).
- "The ability of a BOC to provision working, trouble-free loops through hot cuts is critically important in light of the substantial risk that a defective hot cut will result in competing carrier customers experiencing service outages for more than a brief period." Memorandum Report and Order, *Application by SBC Communications Inc., Southwestern Bell Telephone Company, And Southwestern Bell Communications Services, Inc. d/b/a Southwestern Bell Long Distance Pursuant to Section 271 of the Telecommunications Act of 1996 To Provide In-Region, InterLATA Services In Texas*, CC Dkt. No. 00-65, (rel. June 30, 2000) ¶ 256.

- In reviewing Section 271 applications, the FCC has stated that it is "looking for patterns of systematic performance disparities that have resulted in competitive harm or otherwise denied competing carriers a meaningful opportunity to compete." *Verizon Massachusetts Order* ¶ 122.
- The FCC has observed that proper coordination of the hot cut between the Bell Operating Company and the CLEC is "critical because problems with the cutover could result in an extended service disruption for the customer." *Bell Atlantic New York Order* ¶ 291 n.925.

INTERROGATORY No. 2: For this request, please refer to the rebuttal testimony of AT&T witness Berger, page 6, lines 8-9. Please list each FCC expectation that you believe BellSouth fails to meet. Please include in your list the specific FCC Order Number, Rule, or other citation where the expectation is found.

ANSWER: Please see AT&T's Response to Interrogatory No. 1.

INTERROGATORY No. 3: For this request, please refer to the rebuttal testimony of AT&T witness Berger, page 14, footnote 12. Please specifically identify each BellSouth witness who testified, the jurisdiction in which they testified, and the docket number in which they testified that processing of a partially-mechanized order generally takes less than one hour.

ANSWER: BellSouth witnesses Ken L. Ainsworth and Ronald M. Pate testified that the

processing of the components of a partially-mechanized order generally takes less than one hour before the Alabama Public Service Commission, Docket No. 25835. Before the South Carolina Public Service Commission, Docket No. 2001-209-C, Mr. Ainsworth qualified his prior answer to add that processing of extremely complex partially-mechanized orders can take longer than one hour.

INTERROGATORY No. 4: For this request, please refer to the rebuttal testimony of AT&T witness Berger, page 17, lines 14-19. Does AT&T currently have access to BellSouth's LFACs database?

ANSWER: No.

INTERROGATORY No. 5: According to the rebuttal testimony of AT&T witness Berger, page 19, lines 7-8, AT&T and BellSouth disagree on the appropriate start and stop times for the physical connection of the loop during the hot cut process. Please explain in detail why this disagreement should be addressed in a 271 proceeding rather than a complaint or arbitration proceeding.

ANSWER: The referenced disagreement between AT&T and BellSouth is an example of BellSouth's efforts, despite the existence of the parties' Memorandum of Understanding, to impair the ability of AT&T to provide seamless transitions to AT&T local service. BellSouth's

proposal effectively eliminates AT&T's ability to provide hot cuts to meet the needs of customers. Performance of predictable and reliable hot cuts is essential to the ability of ALECs to compete. Moreover, the FCC has stated that Section 271 requires BellSouth to provide hot cuts with a minimum of service disruption to the customer. AT&T cannot complete the work on the hot cut until AT&T receives notification from BellSouth that it has completed its work. Until the work is completed, a customer's service is impaired. Accordingly, BellSouth's efforts to eliminate date-and time-specific hot cuts, which illustrate BellSouth's unwillingness to provide AT&T nondiscriminatory access that complies with checklist items four and eleven, are appropriately part of this Section 271 proceeding.

INTERROGATORY No. 6: In the rebuttal testimony of AT&T witness Berger, page 22, lines 8-14, it is asserted that BellSouth reserves prompt service restoration for its own customers, which AT&T believes violates the Act's parity requirement and pro-competitive policies. Has AT&T filed a complaint regarding this alleged violation? If so, please list each jurisdiction in which a complaint has been filed, and include the date the complaint was filed and, if available, the resolution of the complaint.

ANSWER: No, AT&T has not filed a complaint regarding this matter. As Ms. Berger mentions in her testimony, AT&T's consideration of whether to initiate regulatory proceedings in response to various BellSouth violations has been made substantially more complicated by BellSouth's policy not to participate in business-to-business negotiations with AT&T regarding

issues AT&T has raised in any regulatory forum. AT&T brings the service restoration disparity to the attention of the Commission in the Section 271 context as an example of BellSouth's failure to provide the nondiscriminatory service required under the Act.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	DOCKET NO. 960786-TL FILED: September 27, 2001

AT&T'S RESPONSES TO STAFF'S SECOND SET OF INTERROGATORIES (NOS. 7-9)

Pursuant to Rule 1.340, Florida Rules of Civil Procedure, AT&T Communications of the Southern States, Inc.; AT&T Broadband Phone of Florida, LLC; and TCG South Florida, Inc. (hereinafter "AT&T") respond to the Staff's Second Set of Interrogatories (Nos. 7-9). These responses are provided pursuant to the Rules of Civil Procedure and within the time period set out in Order Nos. PSC-01-0832-PCO-TL and PSC-01-1291-PCO-TL.

INTERROGATORIES

7. Refer to the rebuttal testimony of Witness Guepe, page 24 through 28, where he discusses provisioning of UNEs within the top 50 MSAs. Witness Guepe argues that FCC rule 319(c) only applies to each separate customer location. To your knowledge, has the Florida Public Service Commission interpreted rule 319(c) in a manner consistent with the recommendation of witness Guepe? If so, list the orders, including the date of issuance, that support your position.

RESPONSE: To AT&T's knowledge, the Florida Public Service Commission has not interpreted rule 319(c) in a manner consistent with the recommendation of witness Guepe.

8. Concerning the testimony discussed in question no. 7, have any other states interpreted

FCC rule 319(c) in a manner consistent with the recommendation of witness Guepe? If so, list the orders, including the state and date of issuance, that support your position.

RESPONSE: AT&T is not aware of any state decisions that apply FCC rule 319(c) on a per location basis as advocated by AT&T. It has only become clear recently that the ILECs have chosen to interpret the FCC ruling in a cramped and anticompetitive manner as BellSouth has. AT&T has sought clarification by the FCC on a national basis, thereby circumventing the need to engage in a state-by-state litigation of the issue with potentially inconsistent result. As a result, the issue was not generally taken to arbitration until earlier this year when it seemed that a clarification might not be promptly forthcoming from the FCC. This issue is also currently before the FCC in CC Docket No. 00-251 *In the Matter of Petition of AT&T Communications of Virginia, Inc., Pursuant to Section 252(e)(5) of the Communications Act, for Preemption of the Jurisdiction of the Virginia State Corporation Commission Regarding Interconnection Disputes with Verizon-Virginia, Inc.*

9. For purposes of the following interrogatory, please refer to AT&T witness Turner, p.28, lines 16 thru p.29 lines 23. If BellSouth permits ALECs to install integrated splitter/Digital Subscriber Line Access Multiplexer ("DSLAM") cards into its Next Generation Digital Loop Carrier systems, would it be AT&T's position that BellSouth satisfied its obligations, pursuant to the Line Sharing Reconsideration Order? If not, please explain.

RESPONSE: Providing ALECs with the ability to install integrated splitter/Digital Subscriber Line Access Multiplexer ("DSLAM") cards alone would not satisfy BellSouth's obligations pursuant to the Line Sharing Reconsideration Order. First, Mr. Turner outlines other requirements associated with Next Generation Digital Loop Carrier ("NGDLC") systems such as the requirement that these systems be unbundled to provide the connectivity from the NGDLC back into the central office both for data and voice connectivity and the requirement of providing unbundled access to the cards themselves to provide ALECs with the same capabilities as BellSouth. Second, there are other requirements in the Line Sharing Reconsideration Order and the related Line Sharing Order related to OSS deployment that BellSouth has yet to implement related to Line Splitting.

The bottom line is that, at present, BellSouth's only offered alternatives are: (1) for ALECs to collocate at the remote terminal to access the copper feeder from the remote terminal out to the customers' premises – an alternative that is totally unacceptable from cost, accessibility, and aesthetic perspectives; or (2) for ALECs to utilize parallel copper loops, where available – an alternative that is totally unacceptable from a performance perspective in that these loops will not provide equivalent capabilities to the loops available through NGDLC.

DOCUMENTS REQUESTED

1. Please provide a copy of any orders listed in your response to Interrogatories 7 and 8.

Response: NA

Respectfully filed this 27th day of September, 2001.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	DOCKET NO. 960786-A-TL FILED: October 2, 2001

AT&T'S REVISED RESPONSE TO STAFF'S SECOND SET OF INTERROGATORIES (NO. 7)

AT&T hereby revises its response to Staff's Second Set of Interrogatories (No. 7), pursuant to Order No. PSC-01-1951-FOF-TP, *In re: Petition by AT&T Communications of the Southern States, Inc. d/b/a AT&T for arbitration of certain terms and conditions of a proposed agreement with BellSouth Telecommunications, Inc. pursuant to 47 U.S.C. Section 252,* dated September 28, 2001.

INTERROGATORIES

7. Refer to the rebuttal testimony of Witness Guepe, page 24 through 28, where he discusses provisioning of UNEs within the top 50 MSAs. Witness Guepe argues that FCC rule 319(c) only applies to each separate customer location. To your knowledge, has the Florida Public Service Commission interpreted rule 319(c) in a manner consistent with the recommendation of witness Guepe? If so, list the orders, including the date of issuance, that support your position.

RESPONSE: Florida Public Service Commission has interpreted rule 319(c) consistent with the recommendation of witness Guepe. On September 28, 2001 the FPSC issued Order No. PSC-01-1951-FOF-TP which, among other items, corrected an error in the Commission's Order issued June 28, 2001 on this issue in the AT&T – BellSouth Arbitration case. On page 6 of this Order, the Commission states that its June 28 Order should have read: "Therefore, we find that BellSouth will not be allowed to aggregate lines provided to multiple locations of a single customer, within the same

MSA, to restrict AT&T's ability to purchase local circuit switching at UNE rate to serve any of the lines of that customer."

DOCUMENTS REQUESTED

1. Please provide a copy of any orders listed in your response to Interrogatories 7 and 8.

Response: See attached FPSC Order No. PSC-01-1951-FOF-TP (Exhibit A).

CERTIFICATE OF REPORTER 129

S T I P U L A T I O N

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that objections, except as to the form of the question, are reserved until hearing in this cause; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record. conversations are with the consentof the deponent.

PROCEEDINGS

MS. KEATING: Let's go ahead and take appearances.

MS. WHITE: Nancy White with BellSouth Telecommunications, and also in the room with us is Bernard Shell and Maryrose Sirianni.

MR. MELSON: Rick Melson for WorldCom. And also here is Donna McNulty who is going to be leaving momentarily, but may rejoin us later.

MS. WHITE: We'll miss her while she is gone.

MR. MELSON: Full disclosure.

MS. KEATING: And Beth Keating for Commission staff. And with me is David Dowds and Felicia Banks. And can we all agree to the usual stipulations?

MS. WHITE: Yes.

- - - - -

D. DAONNE CALDWELL

was called as a witness on behalf of BellSouth Telecommunications and, having been duly sworn, testified as follows:

DIRECT EXAMINATION

BY MS. KEATING:

Q Good morning, Ms. Caldwell. If you would, I would like for you to state your name for the record.

A Doris Daonne Caldwell.

Q And by whom are you employed?

A BellSouth Telecommunications.

Q And what is your position with BellSouth?

A I am a director in the finance department.

Q And how long have you held that position?

A The actual position I am in now, probably about a little over three years, I think.

Q And you have filed testimony in this docket, is that correct?

A Yes, I have.

Q And in this docket you are sponsoring cost studies, correct?

A Correct.

Q And one of the cost studies that you are sponsoring is for a two-wire unbundled copper loop, correct?

A Correct. Unbundled copper loop nondesigned.

Q Okay. Well, could you give me a brief description of this UNE loop?

A Yes. First of all, the unbundled copper loop means that it is composed of 100 percent copper. The offering is to allow the CLECs to have an unbundled copper loop that is unlimited in length. That means we do not restrict it to, as in some of our cases like our loops we restrict it to 18,000 feet, this is a nonrestricted loop length.

However, we know it will be used for xDSL service, so therefore in order for a service to work on copper, it has to

have a specified length. So we use, in our cost study, a 24 kilofeet as our measurement for the loop length. So, what we do is when we run the model we look at all loops that are within 24 kilofeet of the CO, and then we consider all the locations to be 100 percent copper. So that is the physical makeup of the loop. And it is a nonloaded loop, so it will support xDSL service.

The nondesigned portion deals with the nonrecurring. And by this we mean there would not be a test point on the loop, we will not provide a detailed layout record, which we call the DLR. Sometimes referred to that you will hear that as the designed layout record, but they are both the same thing. So we do not provide a DLR and we do not design the circuit. We treat it just like it is, very similar to our SL-1 loop, which is our Service Level 1 loop as far as providing the service. So when the cost is determined for the nonrecurring, it is very similar to the SL-1.

Q Well, is the recurring cost of the UCL nondesigned loop, is it hire or lower than an ADSL loop?

A Let me double-check that. Did I bring the final results? I believe it is slightly higher because of the 24 kilofeet. I would have to double-check the results just to be positive. But if it is, the difference is the ADSL loop has an 18 kilofeet maximum length, whereas the unbundled copper loop nondesigned has a 24. So it should be a little bit higher, but

not significantly higher.

Q Is that something that perhaps you could check on on a break and we can come back to, or --

A If I can't get it on break -- my problem is I didn't bring the results from the full cost docket. I don't know if we have a copy here somewhere, or whatever, but --

MS. WHITE: Do you want to go off the record for a second?

(Off the record.)

BY MS. KEATING:

Q If you would, maybe when we go on break if you would check on that, and then we will come back to that question.

A Okay.

Q Going back to, you know, how the two-wire UCL nondesigned, exactly what it is, could you explain maybe a little more how that differs from an SL-1 and an SL-2 loop?

A First of all, let's take the SL-1. An SL-1 is going to be any loop in the network. And it is typically a voice grade offering, which means it will work on digital loop carrier. So when you design the SL-1 loop, what you are doing is looking at all the customers, possible customers for a two-wire analog voice grade loop in your network. And so, therefore, you have some that could be as far as 30 miles from the CO. So that loop is a combination of copper fed loops within 12 kilofeet and loops beyond 12 kilofeet served on a

combination of fiber feeder and digital loop carrier with copper distribution. So it's a much larger universe of all of your customers for your SL-1.

Now, another thing just to remember is the SL-1 relates to BellSouth offerings of, say for instance, a residence or business loop, single-line loop. The SL-2 is just like the SL-1 except it is designed and it has a test point associated with it. So that is the difference there. Now, the unbundled copper loop nondesigned is an xDSL capable loop. It is still copper because it comes all the way from the CO, so it is 100 percent copper, but it will handle xDSL services.

Whereas an SL-1, since it is composed of copper and fiber, it will not always support xDSL service, because xDSL doesn't work on fiber-fed DLC. You need a copper only. And that is probably the biggest difference between that. Again, when we do the offering, we do not restrict the overall loop length, but we know it doesn't work beyond 24,000 feet. That is supported by our engineers and also in testimony from various parties throughout our nine states, anywhere from 21 to 24, so we went with the 24.

Q Well, is the recurring cost of a UCL nondesigned loop higher or lower than an SL-1 loop?

A The UCL nondesigned is normally going to be lower than an SL-1 because it is copper only with a restricted length. You are not going to have the electronics for all long

loops. I don't have those numbers with me, but in every state I have looked at I do know that that is the situation.

Q So it is only the electronics that account for that difference in the recurring costs?

A It is the electronics plus the fact that your copper -- you are using only a maximum of 24 kilofeet of copper.

Q Well, did this Commission set a rate for this type of UNE loop in its May 25th, 2001 order in Docket 990649?

A No, it did not. Because at that point in time BellSouth had not developed this offering. This offering came about at a later date as a result of meetings with CLECs. I can't speak to all the product management decisions. But in meeting with the CLECs and providing what they wanted, they wanted a copper loop of unlimited length that would serve them. They also wanted one that was nondesigned. And in -- I can't quote the order, but if you will let me just paraphrase, an the order from the Commission in the UNE docket, the one we are talking about, they wanted us to offer a nondesigned type of xDSL capable loop, so we feel this offers -- excuse me, this offering responds to that request.

And also I have filed this cost study in the compliance filing in response to the Commission's order to tell us to do that. So it will be -- it is filed in that docket, which I believe is a continuation of the UNE docket that we are

filing costs and we will have hearings on, I believe, in January.

Q Okay. Could you give me a time frame when the cost study actually was developed?

A Probably -- I would have to go back and double-check, but it was in -- let's see, this is September. I can't remember the exact date. It was in the mid part of the year when we started doing it, studying it in the various states. Because I have filed this in the generic cost dockets that followed Florida in some of the other states. We did it with a supplemental filing, but those dockets had not had hearings yet. So I think it is probably about mid-year, sometime in that time frame.

Q Okay. But it was post-Commission order in Docket 990649?

A Yes, the cost study for Florida.

Q Okay. And you said that you are filing it in the UNE docket?

A Yes.

Q If the Commission is going to be dealing with this in the UNE docket, could you explain why it is being filed in this docket, as well?

A I think that it may be just a timing issue as to when it got filed, because -- and, again, I can't speak legally to what you can do in each docket. So my understanding is that we

had the UNE docket, we had hearings and an order was issued. And at that point in time, we didn't know that we were going to be able to file the unbundled copper loop nondesigned in the UNE docket because I was not aware of the full extension that would go into a second phase. So in order to get the costs before the Commission for them to review, we chose to file it in the 271 docket to complete all the costs that we had.

However, after the Commission did issue an order and rule that we needed to provide an xDSL capable loop that was nondesigned, then we felt that was appropriate to file it in the UNE docket because that was an answer to that request from the Commission order from the Commission. So that is how it got in both dockets.

Q Okay. Well, since it is now in both dockets, to what extent do you believe it needs to be actually addressed in this docket?

A I'm not really sure exactly if the Commission needs to set a rate here because that is more of a policy decision from BellSouth as to what to require in the entire 271 hearing, so I can't answer if it should be really studied here. I think that is more of a policy question. I can say that the information though that I did file, we did file the loop study and all the backup, so it will be the same in both dockets for review. The only difference will be that in the UNE docket we were required to go back and look at cable installation and

placements on a per unit basis rather than using our in-plant factors, so that is the costs that will be included in the UNE docket for this particular loop.

Q Okay. And you did not include that in your filing in this docket?

A No, because that was not an issue here.

Q If I could now get you to look at your Exhibit 1.

A Uh-huh.

Q And I'm looking at Page 5, I believe it is. We need a larger table for this. I will just stand up for a second, because we don't -- I don't necessarily need to -- and I am looking at your revised.

A Yes, ma'am.

Q The element that I'm looking at is A.1.8. Let's see. And it is engineering information for a two-wire analog voice grade loop?

A Correct.

Q What sort of engineering information will a CLEC receive if it orders this element?

A Basically that will be the detailed layout record. Since we did not include the ability to get that in the two-wire unbundled copper loop nondesigned, the thought was that if they wanted it, because some of them still -- in other words, they would want to buy the unbundled copper loop nondesigned, but for reasons they may want the DLR also, we

just provided that as an option for them to get, but that is what it would be.

Q I have to confess, I'm not all that clear on what is in the DLR. Could you explain that a little bit?

A Yes. Basically, it's if you are looking at a physical loop and you are starting at the central office and you are going to the customer's premises, what you are looking at is the physical makeup of that loop as it goes along. Say, for instance, that loop leaves the main distributing frame, let's just make it a copper loop for ease here, and it comes out of the CO, and let's say it goes in a 900 pair 26 gauge cable for 1,000 feet. Then it may change to a 400 pair, 24 gauge cable for 300 feet. Depending on what type -- if it had load coils on it, it would show a load coil was there. The physical makeup of that loop.

If you are leaving the CO and all of this is going to be fiber, it shows it as fiber. All of this would be from the main distributing frame or from the frame out to the digital loop carrier, then it would show that it had digital loop carrier and then show the makeup of the loop. So it is physically what the facilities are. And what that tells the CLEC is that, okay, I know that that loop has so much 26 gauge copper, so much 24 gauge copper, it has load coils, it has digital loop carrier. It tells them what they need to know as far as the physical makeup of the loop.

Q And how is that information actually provided to the CLEC?

A I can't remember if we are going to give them an electronic version. I believe -- it depends on how -- well, let me backup. This is when they buy the engineering information which BellSouth is going to be pulling the data and providing it. There is also the ability for the CLEC to access their mechanized loop makeup system, and they can actually pull the information mechanized. So this would be an option to that. So this is going to be more or less when BellSouth does a manual. And normally I believe this is either -- normally faxed to them, but I would have to double-check on that to see if there is any other method of moving it. But we have physically gone into the records and developed the layout ourselves.

Q Could we get a late-filed exhibit just confirming if the information is provided in other means in addition to a fax?

A Okay.

MS. KEATING: This would be Late-filed Deposition Exhibit 1.

MS. WHITE: A.1.8?

MS. KEATING: Uh-huh.

(Late-filed Exhibit 1 marked for identification.)

BY MS. KEATING:

Q Okay. On this same topic, how does the information that is provided through this rate element differ from the information that a CLEC can obtain by using BellSouth's electronic loop makeup element?

A Basically it's the same. This would be an option that they could use rather than using the mechanized loop makeup.

Q Why would the CLEC choose one or the other?

A One or the other could be some CLECs do not have the interfaces to get to the information, the electronic interfaces to get to our databases. That is one of the reasons they choose to do it from a manual standpoint.

Q Looking on this same page and on the next page, I'm seeing recurring and nonrecurring charges for various forms of collocation.

A Okay.

Q And I'm referring now to Element H.1.1, and I believe that one is actually on Page 5. That is physical collocation application initial?

A Yes.

Q Could you just give me an overview of what activities are involved in that?

A Okay. And also I want to point out that I have determined that some of the activities have changed since we originally filed the cost study. And I have actually prepared

a little handout for you all today to show you where those elements would change. So, I want to do that, but also I would like to look at the data request because we gave a fairly detailed explanation in the data request. I think that was Number 19.

Q From staff?

A From staff. It would be your third set, Number 19.

Q And you're saying that your answer would now change from what was provided in that?

A Yes. And I prepared a handout so everybody could see the numbers per the application.

MS. KEATING: Let's mark this as a deposition exhibit, it will be Number 2.

(Exhibit 2 marked for identification.)

THE WITNESS: In response to staff's third, it is really Items Number A and B. It is very detailed as to basically what the application fee does in terms of the hours that were provided in the original cost study. And just looking at that, basically what you have is you have an account team that is going to deal with the CLEC to receive the application in which they are asking for space and what they need. And then from that it is coordinated through our department to see if there is space available, see if we can provide them what they need.

The issue that we have determined is when this cost

study was originally done, this was almost entirely manual, that none of this was mechanized at all. And since this time, I believe in about March of 2001, BellSouth instituted something called the electronic application, that works -- a lot of it is actually done through E-mail. But what the electronic application, the purpose of it was just to give them a vehicle to submit the application. But since the conception and when we started back in March, we determined that, well, there is a lot of other things downstream that we can improve, too.

So basically what happens is it impacts -- as you can look on my sheet, it impacts two major centers. For the application fee it is going to impact the ATCC, which is the account team collocation coordinator, and then it is going to impact the INAC, which is really the -- it's called the interexchange network access coordinator. That's the one that basically deals with the customer and coordinates all the work activities. So this plan has decreased the manual hours significantly. The ATCC was 11 hours, now it is 6.5 hours.

The clerical has completely been eliminated because that would have been work for inputting into the system. It is going to be mechanized now. And then the INAC has decreased from 20 to 3 hours. And I ran the study to give you an impact of what the cost results will be. It will decrease the file costs from $3,539.57 to $2,467.29.

Q What led you to take another look at these, was there anything in particular?

A Well, we are doing -- well, a couple of things. First of all, when we do the studies and start to gather data sometimes something will come to our attention. We have also been filing generic cost dockets in the various states, so we have been gathering information. And it was brought to our cost people's attention that we can now lower these times.

MS. KEATING: What I want to see is if we can get an update of your response to our Interrogatory 19, which broke down -- and this will be Late-filed Deposition Exhibit 3, and it would be, I guess, just a breakdown of the work times.

MS. WHITE: Really it would be a Revised Number 19, the revised response to Number 19 of staff's third set of interrogatories?

MS. KEATING: Right.

(Late-filed Exhibit 3 marked for identification.)

BY MS. KEATING:

Q Okay. In addition to physical collocation, I see in here that you are also offering something called assembly point collocation. What is that?

A Assembly point is an offering that we make that is an alternative to them having to physically or virtually collocate. And what it basically does, if you think about they are going to purchase a loop, a CLEC would purchase a loop and

a CLEC would purchase a port. And both of those terminate on BellSouth's main distributing frame. What the assembly point does is it a separate frame, a portion that we have identified that we will take the loop to and the port to where they can physically cross-connect it.

And that assembly point is still in BellSouth's space, et cetera, they don't have to buy space and power and all of that. They simply are going to buy the cable to get from the main frame to that distribution frame and then the termination is on that distribution frame. And it is just an alternative that BellSouth decided to offer for people who did not want to physically collocate and it allows them to buy everything from BellSouth and then just connect the facilities there.

Q Okay. Well, why would a CLEC choose assembly point collocation as opposed to virtual collocation?

A I think the real issue is that in terms of, virtual is like they are going to -- even though we are going to maintain the equipment, they are going to place their own types of equipment and things of that type. Whereas this is I think you are looking to more -- they can place electronics, they can place equipment to take loops and convert it to a DS-1 and send it on out to the rest of their network. That is a more extensive offering. Whereas this would just be maybe for small and small offices where they just had a few loops, a few ports,

things of that type where they didn't want to go to the expense of collocation. And it's optional, it's nothing that they would have to do, it's just another offering that we are providing for them.

Q And when did BellSouth first offer assembly point collocation?

A It has been well over --

Q Let me make that clear, in Florida.

A I can't remember if it was in the collocation tariff offering or not. I would have to double-check on that. Normally, you know, I do the costs so I know when it is rolled out in the various states, and I have provided this cost in numerous states. I would have to double-check to see if we provided it in the collocation tariff or not. My understanding is it is an offering in the interconnection agreements though, and has been for well over a year.

Q Is that something that you could check on on a break?

A I think so.

Q Okay. We will come back to that. Has any CLEC in Florida subscribed to assembly point collocation?

A I do not believe so.

Q If BellSouth chose to combine UNEs on behalf of a CLEC, would there be any need for assembly point collocation?

A No. You would have -- a combined UNE would be all win BellSouth's main frame.

Q All right. Going back to your exhibit, I'm looking at rate Element H.3.1, and this is on Page 5?

A Yes.

Q Down at the bottom. This is assembly point two-wire cross-connects, and there is a recurring cost of .8851?

A Correct.

Q Could you explain for me exactly on what basis a CLEC would be charged that rate? When would that be incurred?

A The recurring would be charged for the fact that -- okay. Let me back up. Say for instance -- I have to do this by an example. They have purchased a loop and they have purchased a port, all right. The assembly point is really for the purpose of the CLEC being able to physically combine them together, okay. And they would be doing the combining work. So all they would buy would be a two-wire cross-connect that says I want -- from assembly point collocation I want the ability to do a cross-connect. So they buy a two-wire cross-connect. And what that gets them is the cable and the structure and the positions on the frame for the cable to take the loop over and the port over and then they can physically do the work at that point. So it is the recurring costs associated with that cable and that termination on the frame. So as long as they want that connection to stay in place or they want to do that connection, they would pay this monthly cost of the 88 cents.

Q So just to see if I'm clear, so it is essentially on a per cross-connect basis?

A Correct.

Q And the costs that are associated that are being recovered by this charge, it is for the cable?

A It is for the cable and the rack and the termination on the main frame. I know in a deposition it is not easy to see from a picture, but if you will permit me and let me just draw something I think it will make a little bit better sense and I will try to say what I'm doing.

MS. WHITE: You better put it on a piece of paper because you might have to attach it to it.

THE WITNESS: Again, this is just a higher level structure, but this is kind of how I think of it from a cost standpoint. And, again, I'm not doing it to scale or anything of that type, just to get the concept of what we are doing here.

Let's just say this is BellSouth's -- and I'm just drawing a rectangular block. This is BellSouth's main distributing frame, okay. And on that frame we could have a loop -- I will do this upside down, I may have to do it again. But I could have a loop that comes in and terminates, and then I could have a termination of a port which normally comes from the opposite side, and I could have a port that terminates.

What the assembly point allows them to do, whether or

not it is physically on some port of this frame or another stand-alone frame, the costs are going to be done basically the same, is it says, okay, dislocate a distributing frame that is for the sole purpose of the CLECs combining these items. So what I have in the cost study is cable that actually goes from this frame, and you have cable and racking and then you have terminations on the frame for this cable, and so there is recurring costs associated with this cable. Normally if it was dealing with copper it is about 100 pair, you have a small amount of cost associated with the racking support that it is in, and then you have a physical termination for these facilities on this loop, excuse me, on this distributing frame.

And what the cost does is it takes the cost of all of this, and say that was for 100 pair, and it does a capacity on it so it expresses it on a per two-wire cross-connect. So that is the physical cost that is in the rate element. I think that may help a little bit.

MS. KEATING: I think we would like to --

MS. WHITE: Do we need to attach that?

MS. KEATING: Yes, you are just one step ahead of me. This will be Deposition Exhibit 4, diagram of costs recovered by H.3.1. You are a much better artist than I am.

(Deposition Exhibit 4 marked for identification.)

BY MS. KEATING:

Q Okay. Let's see. The next item I want to look at is

H.4, which is adjacent collocation. Now as I understand it, adjacent collocation is normally where an ILEC doesn't have space actually in the office, but does have a space that is available outside the office where a CLEC can collocate and it's at a CO, it is land that is owned or controlled by the ILEC, is that correct?

A Correct.

Q In Element H.4.1, which is adjacent collocation space costs per square foot, I see a recurring rate of .1568. Is that rate assessed on a per square foot basis, how is that assessed?

A It is per square foot of land.

Q And what costs is that designed to recover?

A It is designed to recover the cost of the land itself. Say, for instance, you're outside the CO and they are basically going to need, say, 100 square feet to put all of their equipment, as an example. It would be that land space. And it is the recovery of the cost of that land that we are looking at.

Q The next element is H.4.2, and that is adjacent collocation electrical facility cost per linear foot. There is a recurring cost of $4.87. Is that charge associated with BellSouth providing some sort of power cable from the central office out to the CLEC's facilities?

A Yes. It is actually the electrical cable and the

conduit that it runs that is going to transmit the AC power. So it is basically an extremely long and fancy extension cord, I guess, to some degree.

Q Okay. And does it matter whether the power transmitted over that is AC or DC?

A Oh, definitely. This is an AC power cord to transmit the AC power.

Q Okay. If I could get you now to look at the next page of your exhibit, Page 6. And I'm looking at Element H.4.9.

A Okay.

Q And this is the application costs for adjacent collocation?

A Correct.

Q Under installation nonrecurring, an amount of $2,985.99 is shown?

A Correct.

Q What costs are included in that amount?

A I will point out that in terms of H.4.9 on the sheet I originally handed out, we have, again, recognized that the INAC time has decreased, so it's going to lower it by about $300. But in terms of the adjacent collocation, it is similar in terms of the physical collocation application fee in the CO in that it deals with the CLEC based on what they need, what space is required, what they are going to use the facility for.

So it is all the coordination effort and being sure that there is space -- and when I'm talking space here, I mean there is land available and that we can use it. Because there are such things as whether or not they are permitted to be -- you know, we are permitted to have things outside the CO. There are a lot of legal requirements I'm not real familiar with. But that would be all looked at in that application cost before we told them, yes, you can do it and they said yes, we want it.

Q Well, that brings me to two questions. When you say legal requirements, does that include like attorneys costs?

A No, it would be our individual people. I'm sorry, we just have records that would say, all right, this piece of land is outside this CO, and it has certain restrictions on it, that's what I mean. But, no, there is not attorney fees in it.

Q Okay. And, you know, you talk about coordination, what kind of coordination is involved in that?

A All right. Well, first of all, you have the CLEC and their request, but then you have the central office personnel that is looking at the central office facilities, the groups and engineers to see what will we need to do in placing the cable. So it's those type of personnel that are talking to them.

MS. KEATING: Since you have revised H.4.9, I would also like to ask for a revised update to -- I believe it is staff's third set of interrogatories Number 39A and B, which is

the breakdown of the work times. And this would be Late-filed Deposition Exhibit 5, and this is revised response to staff's third set of interrogatories Numbers 39A and B.

(Late-filed Deposition Exhibit 5 marked for identification.)

BY MS. KEATING:

Q Going back to the same rate element, H.4.9, there is also a cost of .9094 shown under disconnect nonrecurring. Did that change?

A No, the disconnect did not change.

Q Could you explain what that amount is associated with?

A Normally, it is specifications in the record. Let me double-check that data response to see if there is additional information there. Could I ask one clarification? On the late-filed that we just asked to be updated, you said it was 39?

Q I believe so. Let me let you take a look at what we have to make sure it's not something different.

MS. WHITE: Maybe we had better go off the record for a second.

(Off the record.)

BY MS. KEATING:

Q Okay. We are back on the record. You have located what you were looking for?

A Yes, I have. It has to do with the Attachment 2 to 39A and B. Give me just a moment. I thought this actually had it detailed as to exactly which one of these centers, but the disconnect time is associated with basically updating the records. It is normally done by the capacity management people so that we know what is located at each one of our COs so our records are clear. And it is just removing the information from the record showing that the adjacent collocation is no longer there.

Q Does this occur when a CLEC withdraws an application?

A No. This would be -- yes, when it actually -- wait a minute. No. Wait a minute, let me backup on that. The application cost is only assessed when the application is basically fulfilled and which they actually are going to get space. So this disconnect is going to occur at the point in time when they removed their collocation. So it is a disconnect at the time of the collocation, and we are removing the information from our records. That's how that is, yes.

Q And that is all -- the only activities actually involved in that are going into the system and removing the information?

A Correct.

Q Could you explain a little bit about what is involved in that?

A I don't know if I'm going to know enough details

about all the records. But at each one of your central office locations, because you can see this is not very much time, basically we are going to have a record that says where each collocator is located, what their space is, and at that location where they are not -- in this case they would have adjacent collocation. Also, now, you will see we are going to disconnect some of the costs associated with the cross-connects, but this would just be cleaning out the records to show that that land is free now, it is no longer available, it is no longer used by that CLEC, it's that type of cost.

Q When did BellSouth first offer adjacent collocation in Florida?

A I believe adjacent collocation is a function or was prescribed in the FCC's 319 UNE remand. I believe it was a requirement of the UNE remand. So basically in the time it took us to roll out the service. We haven't -- at this point I don't believe we have any customers associated with it, but we have been offering it for several months, I know. I will have to double-check the amount of time, I don't know exactly when we would have said you can start buying this.

Q And when you say you don't have any customers, do you mean in Florida or in the whole BellSouth region?

A To the best of my knowledge we don't have any in the whole BellSouth region at this point, but I'm not absolutely sure on that one.

Q Well, the next form of collocation on Page 6 of your exhibit is physical collocation in a remote terminal?

A Uh-huh.

Q Could you tell me what kind of structures constitute a remote terminal?

A The remote terminal is going to be one of three things. When you say remote terminal that means you have electronics, digital loop carrier located in the field, and so those electronics go into normally three types of structures.

One of them is going to be a cabinet which is just like a metal structure that has bays for installing your plug-ins in it. The other one is going to be a hut in which you have normally a concrete pad and you have a little building built on it that has normally -- in most cases some type of heating and cooling, but definitely has power depending on the size of the hut. And that would be where you would have a larger amount of electronics. And then in your urban areas you would have CEVs, which are your controlled environmental vaults, which are your underground locations. And they have to be controlled environmental because you can't have water and you have to have the right amount of, you know, environment for the electronics to continue to work. And that would be in the underground environment.

So those are the three type structures that you would have and what remote collocation is are physical collocation in

the remote. That is going to provide the CLEC the ability to use one of the bays inside the cabinet, or a bay inside the hut, or a bay inside the CEV for their own electronics.

Q And the charges that are identified here apply equally in either of those three situations?

A Yes. We looked at the three different costs and then we weighted those three costs to come up with one number.

Q Do you know if BellSouth has or would offer virtual collocation in a remote terminal?

A My understanding is we would.

Q Looking now at the next element, which is H.6.3, security access key?

A Yes.

Q There was a nonrecurring charge of $26.45?

A Uh-huh.

Q Is that charge associated with actually providing the CLEC with a key to a remote terminal?

A Yes, it basically is the key. The cost is made up of the key itself and the postage or whatever, you know, however we distribute it to them. And also there is some cost in there for your administration so we know who has the key. And a lot of that is done by a contracting firm that manages all of that information, but that is what that cost is. And that is on a per key basis.

Q When you say key, we are just talking about a regular

old metal key or a electronic security card?

A In this case this is a physical metal key that unlocks the cabinet or unlocks the door in the hut.

Q Okay. And what exactly -- you're saying the charges cover the key itself and postage. Is there anything else?

A The only other cost is going to be the cost associated with the administration of getting the information, what you need, who do we deliver it to, and being sure from a security standpoint we are sending it to the right person. So that is like the administrative or maintenance of the process is included in that.

Q And when you deliver these keys, do you send it just by U.S. Postal Service, or how do you send it?

A Well, I know the cost given to me was a postal rate. I don't know if is like federal insured or whatever, but the cost input is a postal rate for delivery of the key.

Q Do you know how many remote terminals BellSouth has in the State of Florida?

A No, I do not.

Q Would you accept subject to check that BellSouth has indicated in another docket before this Commission that it has approximately 12,000 remote terminals in Florida?

A Yes.

Q Well, is it BellSouth's position that for every BellSouth remote terminal in the State of Florida, that remote

terminal needs to be locked or otherwise secured?

A As far as the overall security issues and how BellSouth handles it, someone else will possibly need to answer that. I believe Mr. Milner is in this case, he may know those details. My understanding from working with the costs is, yes, we do secure our cabinets where we have the electronics for our own -- I mean, we do not want people in there.

Q Well, do you happen to know if there is a written policy regarding that?

A I wouldn't know, but I believe Mr. Milner would, because that is in the network area.

Q Okay. Well, just for purposes of assuming, if not all remote terminals are required to be locked, would that same security access key charge apply just to those that are locked, or is it one that -- is it a charge that is applied across the board?

A I guess the way I would have to answer that is the cost is developed assuming you are going to deliver them a key. My understanding is that we do lock the equipment, so therefore they would need one at every location. But as to the policy and exactly how, I do not know. You know, if we didn't lock it and there was a reason we didn't, then that would have to be considered. But I do believe that we do lock them.

Q Okay. And are you aware of any CLECs that are collocated with BellSouth in remote terminals in Florida?

A Not at this time, I don't believe.

Q And when did BellSouth first offer RT collocation in Florida?

A I'm trying to remember if RT collocation is a function of the UNE 319 remand or if it is the advanced services order, but it is all a function of that period of time. And my understanding is, you know, when we get the costs ready and they are UNEs we are offering, we are rolling them out as fast as we can. I can't give you an exact date, though.

Q Well, moving on a little bit, I notice you did not file a cost study for virtual collocation, correct?

A Correct.

Q And why is that?

A Well, my understanding is on virtual collocation that there were rates set in -- I think that is in the first of my testimony, I would have to look back, but there were rates already set by the Commission for virtual collocation. And since virtual was governed under those rates and they are very similar as far as policy and procedures associated with the federal offering of virtual, we didn't feel that we really needed -- they are not going to change.

However, there are a lot of changes and new things that have come up in the physical world since any costs were filed for collocation before the Florida Commission. So for physical we have filed new elements and we have looked at some

existing costs and updated/revised them. Virtual we just didn't see that much of a change in it. And so all their rates have already been set.

Q Okay. Now, I would like to move on to the line sharing rate element. And the first one I want to look at is J.4.6, and I believe that is still on the same page. For this first one, J.4.6 there is a nonrecurring charge of $105.35, and this is for line sharing per CLEC/DLEC owned splitter in the central office per LSOD. What does LSOD standing for?

A Line sharing order document.

Q What is that?

A Basically, it is a document that is generated that says that there is -- a splitter has been ordered by the CLEC and placed in their collocation space. It is to tell BellSouth that, you know, they have a splitter and they are going to require a number of pairs for terminating that splitter on the main frame.

Q So this is just essentially an application, it's just a document?

A It's like a form that would be completed and filled out as far as the work, you know, I'm trying to think if I have actually seen one. Well, I haven't actually seen one of the forms. It is going to require, it is going have on it certain information as to the number of cables and pairs that they are going to need to terminate on the frame, so it's like a format

to BellSouth to tell them how to assign the pairs, in other words.

Q Is this a document that we could obtain as a late-filed exhibit?

A As far as I know we should able to get an example of one.

MS. KEATING: Do you know whether that is a confidential --

MS. WHITE: I have no idea. I really don't know, but we will look into it.

MS. KEATING: I would like to ask for an LSOD as Late-filed Deposition Exhibit 6.

(Late-filed Deposition Exhibit 6 marked for identification.)

BY MS. KEATING:

Q Could you explain a little bit more, though, about the costs that are actually recovered through J.4.6?

A Yes. I would like to look at the cost study because this will help me a little bit to remember.

THE WITNESS: Well, this might be a good time to take a break, because I need a minute to find this form.

(Recess.)

BY MS. KEATING:

Q I think where we left off is we were talking about what costs were actually being covered by J.4.6?

A Yes.

Q And could you give me a little more specificity on that?

A Okay. We talked about the LSOD, or the line sharing order document, and basically some of the information that is going to be on that document is the number of pairs that the collocator -- because they are a collocator now -- is attaching to their splitter. And what this is is for putting information into BellSouth's inventory systems that identify the pairs on the frame as splitter pairs. Because down the road you could have a maintenance problem. You have got to know which pair is for a splitter. It is connected to their splitter, it is not just a collocated spare.

Also, when they are ordering -- they being the CLEC -- when they are ordering through the electronic process to connect pairs, this gives the information that we need to know which pair to connect it to in their collocated number. And when these pairs are input into the system, you input -- like if it is 100 pairs, you are putting in a range of 100 pairs, or a range of 24, and that is what is driving the cost as to what you are working with.

And that is what the information is is to get the information into our COSMOS and SWITCH, which are our databases associated with our switching, and any engineering information associated with a cable pair itself from the collocated space

to the main frame. And that is the type costs you're talking about here.

Q And are any of these things activities that a CLEC could elect to do for itself?

A Not in this case. Because this is the pairs that are on the main distributing frame, BellSouth's main distributing frame. I can't remember, you have something called a CFA, which I believe stands for circuit facility assignment. And we have to put that into our information systems that says, okay, on the frame this connecting block with this particular pair belongs to this CLEC and it is a splitter pair. So that when the order is issued to connect a loop to that pair, we are getting it to the right pair.

And that information is all in BellSouth's systems, in our inventory, in our work. It is not in any of the CLEC records. And, of course, we tell them what CFA we assign it to, because we give it back to them for their own assignment purposes. So they do get the information back. But that is where it is in our particular databases.

Q Well, similarly, for Element J.4.7 --

A Yes.

Q -- if the CLEC actually provides the splitter, what are the activities that BellSouth performs that the costs are recovered through J.4.7?

A It's the same type cost I was talking about. This

would be the cost associated with the actual pair itself. These two items kind of go together. So, I kind of discussed all the work in one category, but those are the items associated with the activities into our system.

Q Well, could you explain maybe a little bit more, I'm not sure I'm real clear on exactly what recurring and nonrecurring rate elements a CLEC is going to be charged when BellSouth provides the splitter? And perhaps I could just give you an analogy. Maybe that would help a little.

A Okay. I was just trying to find my sheets I had the rest of my elements on. Go ahead.

Q Assume I am a CLEC, and I order a 96-line splitter, and initially I want 47 of those lines activated. What would BellSouth charge me?

A And BellSouth is going to own the splitter?

Q Right.

A Okay. So the first thing would be the splitter itself, which is J.4.1, so that would be the recurring cost that would then be occurred on a monthly basis for that splitter, and then you would have the nonrecurring of $345 that would be associated with the provisioning of the splitter, okay. Then you are going to activate 47 lines. So that would be J.4.3, which is a per line activation in a CO. You have a -- and it is not listed on this cost sheet, but it should be. And really Ms. Cox filed a rate sheet. We have a 61 cents per

line recurring that the parties have agreed to, so that would be on a per line basis that they would pay on a per month. So you would have 47 times that. And then the per line, the first would be $33.83, and then you would have 46 additional ones at 19.37.

Q Go back to that last -- the first one?

A Okay. The nonrecurring is set up with the first and additional, so you are ordering 47 all at the same time. So the first line that you activate the cost is $33.83, that is J.4.3. And then for each additional one, so would you have 46 additional, you would have $19.37. Again, that is associated with J.4.3.

Q Well, suppose a week later I call BellSouth and I want to activate an additional 23 lines. What would I be charged?

A All right. You would be charged the monthly 61 cents for each one of those lines, and you would also be charged the subsequent activity per line arrangement. So, the first one that you put in then would be 29.96, and you ordered 23 additional?

Q 23 additional.

A So then you would have 22 times $14.96.

Q I would not be charged the J.4.3?

A No.

Q Okay.

A You are charged J.4.4 because that is subsequent activity, meaning you have already got the splitter in place and this is adding lines to that splitter. So you can see the costs are a little less, some efficiency.

Q Okay. Now, I would like to ask you to look at your surrebuttal testimony?

A Okay.

Q And let's start out on Page 15, and looking around Line 18.

A Uh-huh.

Q Or starting there. And in this section you say that the UCL-ND fulfills all of these requirements. When you are talking about requirements, exactly what are you referring to? And in giving me your response, if you could also explain how the UCL-ND fulfills the requirement.

A Okay. All right. In looking at the Commission's order, our understanding is that you wanted a nondesigned loop that would be used as xDSL capable and that loop should not include a DLR, it should not include a test point, and there is no order coordination. Those were the three things that was actually specified in terms of the nonrecurring. So what the unbundled copper loop nondesigned does is those items are not included in that loop, so that is how I felt it met those requirements.

It says here that the next thing was that, therefore,

based on the record we find it appropriate for BellSouth to provision an SL-1 loop and guarantee not to roll it to another facilities, or, in other words, guarantee not to convert it to an alternative technology.

Well, the SL-1, since it is really a combination of copper and fiber, and the xDSL capable loop is going to have to be a copper-only loop, we felt that that subset of the SL-1 would meet this requirement because the unbundled copper loop nondesigned will not be rolled. It is on copper and it will remain on copper. So that was the cost response to that issue.

Q Staying on the same page --

A Uh-huh.

Q -- and on the same subject, you indicate that the copper loop nondesigned doesn't go through the same design process as the short or the long loops?

A Correct.

Q Could you explain a little bit about what design processes the UCL short and long loops actually go through?

A Okay. The unbundled copper loop long and short all are going to have a test point associated with it which picks up a small amount of additional recurring cost. But in the designing process we basically go into our records, we assign that piece of equipment, we do a detailed makeup of that loop so that we know exactly -- we, BellSouth, know exactly what is in that loop, and we also are going to test on that loop. We

are going to dispatch to the field 100 percent of the time and do an end-to-end test on that loop to be sure we know -- I think some of our witnesses have referred to it as the base transmission level. In other words, what is that loop, the day we turn it up to the CLEC, what is the transmission level that that loop will support and maintain. And that is the starting point.

And that is all part of the design process so that we know exactly what that loop is when we give it to the CLEC and that is in the design. Now, the unbundled copper loop nondesigned in contrast to that does not do an end-to-end test, it does not include the test point, and we do not do the DLR.

Q And on Page 16 you indicate that the nondesigned loops won't be rolled to an alternative technology. How does BellSouth designate these loops to make sure that they won't be rolled?

A I'm not going to be able to answer that. I just know that in our records we somehow indicate that loop -- I don't know if -- I believe Mr. Pate is in 271, so he could answer that. He would be the only person I know of. Or possibly Mr. Latham as the product manager, he may know also, and I believe he filed. The one thing I do know about it, since -- I don't know how it is physically done, but I do know that by having the unbundled copper loop nondesigned have its own special USOC, then when it goes into our systems it is handled

differently than a regular voice grade service loop that we have. So I know that is the starting point, but that is the limit of my knowledge there.

Q Okay. Going back to the UCL short and long loops, is the same designation process used for both of those?

MS. WHITE: You mean the designation that it not be rolled to another facility?

MS. KEATING: Right.

THE WITNESS: It is not rolled and it does carry a special USOC for it. So the starting would be the same. Exactly how it is downstream systems, that would be a Mr. Pate or possibly Mr. Latham question.

BY MS. KEATING:

Q But it is your understanding that it is the USOC code that would --

A The USOC is what drives it. I know by having a special USOC it allows us to do some different information.

Q Okay. On this same page you discuss that though a nondesigned loop doesn't come with a test point, an ALEC may wish to have BellSouth conduct testing on these loops. And then you go on to say on Line 20 that the A.19 test elements from the UNE docket were for designed loops, but BellSouth will be submitting new loop testing elements shortly in the 120-day filing in the UNE docket.

A Yes.

Q Could you explain for me exactly what is involved in testing a designed loop as opposed to testing a nondesigned loop?

A Okay. And, again, I'm not going to know the extreme details, but I will try my best in terms of what I know about the cost. The original A19 that was filed was -- it was actually called loop testing beyond voice, and that was a function that we were ordered by the 319 UNE remand to file. And any loop that had data on it, anything over and above voice we anticipated that it would be some type of a designed circuit which meant we had certain records on it and we would have the designed information. In terms of the -- excuse me, and one more comment on that is it has very strict, you know, parameters as to what you are looking for because you have the designed requirements.

In terms of what we are offering now is we have changed the name to call it joint acceptance testing in which we would be testing both, either a designed or a nondesigned, in which we could actually be working with the CLEC at the same point in time. So we wouldn't necessarily require all of those parameter design data that we have. And you will see a little bit lower costs associated with this and different technicians actually performing the work. So that is the real difference, I think.

Q Is the costs that you are hoping -- you are hoping to

eliminate the difference in the costs?

A We are just going to have one rate element and say it is for both and the cost will go down from what was filed in the original cost docket.

Q But in the actual processes of testing a designed loop versus a nondesigned loop, is there really any difference?

A Yes, there is. One of the things is it has to do -- one thing is to the type technicians that is working on it. When you are working with any type of a special service, we have our special technicians that actually carry a higher labor rate because they are trained to handle the more sophisticated services, so that is one of the issues that you see.

The other issue, I think, is in terms of just the actual requirements and what you will be needing to look at in terms of the parameters on the design circuit. But that is the knowledge that I have of it.

Q Turning now to Page 19 of your surrebuttal, and I'm looking at Lines 8 through 14. You indicate that BellSouth's proposed cable records charges pertain to the work required to build cable records in BellSouth's system. How do you build a cable record?

A I'm thinking of the different systems. I think the first thing let me start with, it gets back some to the issue of when I talked about line sharing before. Associated with the cable pairs on the main frame we are going to have

identified with each one of those cable pairs where it terminates on the main frame and what it is supposed -- you know, information about that pair and what it is supposed to be used for. And we build that information into our SWITCH or COSMOS databases, which are our switching databases that says this pair on the main frame belongs to this collocator and it is connected to -- it gives it that CFA, the circuit facility assignment, it gives it that information to know where that particular pair is located.

We also build the information downstream into any of our systems where we would need that information for maintenance purposes in the future. Any system that would have that cable pair identified, and I'm afraid I'm not going to be able to name those sitting here today.

Q Well, do you know in the process of building these records is it mainly a data entry type process or does this require actual physical involvement with the --

A The cable records is mainly associated with building the databases and getting the data entry. But there is coordination with the central office forces because you are going to have to be sure that the pairs get assigned correctly on the main frame at the point in time in which they are assigned. This is not the physical running of the jumpers and tying the pairs down, I don't want to say that. I'm just saying there is some -- it's more than sitting at a computer

and just typing these numbers in.

Because what happens is you have got to be sure that the range in that system that says these 100 pairs on this frame belongs to CLEC A, that we have those correctly identified in all of our records. And sometimes it requires coordination with the central office forces to be sure that they are in there. But that is the main part.

Q Do you know which BellSouth witness would know which systems these cable records need to be built in?

A I'm not sure. I believe Mr. Gray testifies on collocation. He might -- I think that would probably be the best person to ask.

Q Does BellSouth routinely charge its own retail customers for recordkeeping costs associated with the customer's facilities?

A The costs what we have with any of our rates would be just the costs that we have in some of our nonrecurring for setting up the information. We don't have anything that is as extensive as this because this is entirely different, but we do have the costs for nonrecurring for identifying on our systems.

Q So, yes, you do charge retail customers?

A Yes. Let me be very clear about that. It is developed in our cost studies. As you know, a lot of our rates are set -- like residence and business rates are all set through the Commission. So, yes, but I do identify it in the

cost.

Q Okay. And these are -- how are these recovered, through the basic?

A Basic nonrecurring. We have costs associated there for updating some of our systems.

Q If I could get you now to look at the bottom of Page 22 of your surrebuttal. There is a footnote, it says an eight-line arrangement is also currently development. Do you know when this arrangement is going to be made available?

A I'm trying to think exactly how this is done. The eight-line arrangement came as a result of an xDSL docket on costs and issues that we had in Georgia. And there was an agreement with the CLECs and BellSouth on certain things that we would provide going forward. And one of the things that we were looking at was this eight-line arrangement.

My understanding is that once that agreement was worked out, it would also be available in all other states. And my understanding is that we are ready at this point in time to -- I don't know if we have any customers yet, but we are working with, I know, Covad in Georgia on that eight-line arrangement. So I would say I believe it is available now.

Q In Florida?

A Yes. As a result of that settlement agreement it will be rolled into all the interconnection agreements.

Q Okay. But you are not aware of any customers in

Florida?

A At this point I'm not.

Q Well, I just want to understand maybe a little bit more about what exactly this eight-line arrangement does. Will this allow an ALEC to order essentially a third of a 24-line splitter?

A Yes.

Q Okay. Is there a separate vendor that BellSouth will be obtaining?

A No, not for this particular -- not just in order to get the eight port. The way the -- I think we have or are in the process of looking at different vendors, and I believe in some of the database responses you will see some of the comments about that. But that is not a result of this. My understanding is you have a 96 splitter, which was one of the standard sizes. I think now they actually go up to 144. But they are all in increments of, say, 24. Well, this is just taking another subset off the 24. So you should be able to use the same splitter to do the activity, you are just selling them a smaller portion of that splitter.

Q Before I move on my next set of questioning, let me go back to your revisions to the collocation work times.

A Yes.

Q And I believe you are going to be providing a Late-filed Exhibit 3 and 5 that shows the breakdown of the work

times. Those would be revisions to staff interrogatories.

A Correct.

Q I don't believe, and you can correct me if I'm wrong, but I don't believe we actually served interrogatories on H.1.46 and H.1.45. If we could get a breakdown of the revised work times for those, as well, I would like to ask for that as a separate late-filed deposition exhibit, and that would be Number 6?

MS. WHITE: Seven.

THE WITNESS: Excuse me. On 19A and B, which you have asked us to revise, my answer shows the physical collocation application fee initial and subsequent, so that would take care of 1.1 and 1.46 in that late-filed.

MS. KEATING: Okay.

THE WITNESS: And then -- no, you did not ask for the firm order, so that would be another one.

MS. KEATING: Okay. Then we will revise that request to make Late-filed Deposition Exhibit 7 the breakdown of the revised work time for H.1.45.

(Late-filed Exhibit 7 marked for identification.)

MS. WHITE: Before you go ahead, I know you have had Ms. Caldwell to check a couple of things on break, and I didn't know whether you wanted to deal with those now before you move to another topic or --

BY MS. KEATING:

Q Did you have an opportunity to --

A Yes. If I have everything, if I understand some of your questions.

Q I think the first thing that you were going to check on was what accounts for the difference in the recurring cost between a UCL nondesigned loop and an ADSL loop?

A The question was whether or not the costs were lower or higher.

Q Okay.

A And the only thing I had available with me was the actual staff rates that were a September 6th attachment, and it shows for like ADSL -- and you really need to compare Zone 1 to get a feeling for this -- that ADSL Zone 1 is $11.52. That would be the Commission-approved rate in this filing. For the unbundled copper loop nondesigned, Zone 1 is $14.14. That would be our filed rate in the revised which indicates our interpretation of all the Commission ordered adjustments. So those would be the ones you compare.

And that follows true exactly what I had said, that the unbundled copper loop nondesigned due to its length is going to be a little bit greater in cost. When you move into Zones 2 and 3, though, that does not continue to hold true. Zone 2 it does, but in Zone 3 it doesn't. And I believe what causes the situation to not to hold there is just simply due to the small numbers of loops that you are going to have. Because

you don't have that many -- you know, in that small additional distance from 18 to 24 kilofeet, you don't have enough loops to swing Zone 3. But Zones 1 and 2 fall exactly the way I thought they should.

Q And I think the next one we were coming back to, first the assembly point collocation in Florida --

A Uh-huh.

Q -- and when BellSouth was first offering that in Florida?

A All right. I looked at the tariff, the assembly point is not in the tariff, however, from some notes we have or that I have in my source with me, is the offering was made available in 1999 at that point in time, and it is available upon request in all states. It would be offered in the interconnection agreements, or if a state was to have an SGAT. But I don't believe Florida had one, so that wouldn't be appropriate there, but upon request since mid-1999.

Q How did BellSouth make 1999 CLECs aware that that was an available option?

A Normally we post it on the website, and then I will send out information. Also a large number of the CLECs would have been aware of the assembly point because it was a topic of one of the hearings in Georgia. Georgia had a combination docket in which it was discussed extensively. So I think that is also just one of the places they heard about it. But my

understanding is it was posted on the website.

I think there is one other issue, you asked me about the adjacent collocation and I was going to see if it was in the tariff. It was, and I have with me the April 12, 2000 effective tariff for Florida, and the adjacent collocation is listed in there. And we know that it was actually made available in mid-1999 as a result of the advanced services order. I think I was a little confused as to if it was 319 or advanced services.

Q Now, is that something that you also would have made CLECs aware of by putting it on the website?

A Yes.

Q Do you know if, in fact, BellSouth did put both the availability of assembly point collocation and adjacent collocation on the website?

A No, I'm not familiar with that.

Q My next set of questions have to do with the engineering information element. And instead of going -- I'm pulling out the three books again. I have got copies here. This is the September filing and this is starting with Bates Stamp 001792, and this is from your revised exhibit. And where I'm looking is on -- specifically on the Bates Stamp Page 001795, and looking in Lines 6 and 7 there is a reference to an activity performed by the address of facility inventory group. Could you describe for me what kinds of activities this group

actually does?

A The address of facility inventory group has access to really our database that tells them like this address, this telephone number where this cable and pair are assigned, so that is their purpose. And they get involved whenever there is going to be a need for some work associated with another group downstream. In other words, it says on here like puts order in PF, that means that there is not facilities available.

In other words, when the pair was going to be assigned, there wasn't a pair available to give to this customer. So what the AFIG does is it recognizes this. The order drops out of the electronic system to them, they see that it needs to be PF'd, and then they send it on to the SAC system. So that is what is associated with this time.

Q Where is the AFIG group located? Are they in Florida, Atlanta, Birmingham?

A I know we have numerous AFIGs. I believe there is one in Atlanta for sure. Possibly one in Georgia -- I can't answer that because the orders, you know, go through various groups. I just don't know.

Q But there isn't one for every central office?

A Oh, no. They would handle multiple areas. I just don't know how large those areas are. Whereas if you look at maybe Florida you may have an AFIG or may actually have two because it is a large state with a lot of lines. But then you

move to a smaller state, they may only have one group handle multiples. I just don't know for this center.

Q Okay. Well, I'm trying to understand a little bit more about what AFIG does. Who would they actually receive the order for engineering information from?

A Normally, they are looking at -- look over at Column E -- F. You are talking about the percent of time the engineering information is not in LFACS, okay? What happens is for pulling engineering information you are not really assigning cable and pairs, that was my example of the AFIG. What you are really looking for here is the information is in LFACS, it is in a mechanized form, so it can be pulled out, all right.

What happens is this order is processing downstream. It gets to LFACS, there is no way to pull the information because that pair is not there. So it physically drops out through our mechanized systems and goes to the AFIG group, so it's like a computer sends it to them and says, okay, for this particular order, engineering information is not in LFACS. I need you to send it to engineering or the SAC center, which is the service advocacy center, send it to engineering and have them pull a manual makeup. So that is what the AFIG is doing. They are that group that keeps this through the flow and they are only handling it 20 percent of the time, when it falls out to them. So that is how it really gets to them. It gets to

them from the computer system as a fallout order.

Q Okay. But it electronically falls out to them?

A Correct.

Q And when they send it on to the -- I believe you said the SAC?

A Uh-huh.

Q How does it go from AFIG to SAC?

A They are going to send it through our corporate network, so it goes electronically to them. Look at the -- Line 12, which is talking about the clerk in the SAC center, basically they are going to get the order and they are going to pull it -- when it comes to them they pull it off a printer, so it's going to them through our corporate network to them.

Q Okay. So it is electronically sent from AFIG to SAC, but it is essentially sent to a printer that prints out a hard copy and that's when SAC picks it up?

A Right. Because this work in the SAC center is manual physical work where an engineer is going to have to go in and actually pull physical records to get the data.

Q Well, let's talk a little bit more about SAC, then. Line 13 of this same page, I'm sorry, indicates that someone does an investigation and look-up. In what systems does this person actually do the investigation and look-up?

A The service advocacy center has access to -- it's going to have access to LFACS, which is our facility assignment

control system, and it is also going to have some other databases like some of our corporate facilities, et cetera. But at this point this order has dropped out, meaning it is not in LFACS. So what the engineer will probably do at that point is going to look into LFACS to see, you know, has anything been missed or something of that type.

And then in most of our states, and if Florida is one of them, you are going to have physical paper records that they have to go to. And when it says like on Line 14, pulls, that means they are going in and looking up the information and writing it down on a sheet of paper and then it is transferred back into LFACS into the system and sent on. But that is what these two things are together. They investigate the order and says, okay, this is looking for an engineering information on this particular cable and pair. It's not there, I mean, check to be sure if anything has been missed and then, no, it's not there, we need to go ahead and pull the information and transmit it on. And that work activity is here.

Q So when they pull the information, are they going to like a file cabinet and running through files to find the appropriate file, is that the kind of activity that you are talking about?

A Yes. And I'm speaking from my experience now, on how as an engineer and how I would have done this. In the office an engineer responsible for an exchange, a wire center is going

to have records that we call our plants, our plant location records -- or plats, excuse me. And what that basically is going to tell them is when I talked earlier about the detail makeup, it tells them every bit of information about that cable and pair. And what you do is you physically start at the central office, find that cable and pair, and then you trace it through that paper copy to see where it actually extends.

And if there has been any jobs or anything worked, you have to follow up on that to be sure you get the right information. But in most cases that is going to be at this point a manual activity. I mean, at this point it is a manual activity because it wasn't in our mechanized records already.

Q And these plats, they are all located in the same office of SAC?

A There is a master copy somewhere, but every engineering office has their own set of records. So it may not be actually in the center, they may actually -- and there is not anything noted here of having to do it separately, but they may actually have to contact one of the field personnel engineers for some information. But we didn't go into that type of detail here, we just talked about it from the SAC center standpoint.

Q And when they would contact a field engineer, they would just call them up?

A Usually.

Q Well, who is ENDI, E-N-D-I?

A I was afraid you were going to ask me that one, because I can't remember. I don't know that one, sorry. It is a mechanized type center that we -- I mean mechanized type process, but I don't know what it stands for.

Q Do you know what they do?

A Well, I don't think it's like I group. In fact, I know it's not a group. It's a process to get it back into the system to flow the information back so it can be delivered to the CLEC, but I cannot remember what it stands for. But it's not a center, it's not a group, it's just a process.

Q Well, on Line 14 you have got pulls EI and releases order to ENDI which generates the EI to the CLEC. By generates the EI to the CLEC, does that mean that ENDI submits an engineering information report to the CLEC?

A Yes. That is the process, the mechanized process it goes through to get it back to the CLEC.

Q Okay. Do you know -- well, who is ENDI or what it is, is that something you could check on on a break perhaps?

A Yes, I could find out.

Q Okay. We may come back to that one.

A It's like a computer system, and I can't --

Q All right. Moving on to my next group. What I've got here are some of your supporting work papers for the UCL nondesigned nonrecurring cost study. And to save space, I've

got some more copies here. You can thank Mr. Dowds for that one. And the pages that I'm looking at namely are Bates Stamped 001797 through 001805, but where I would like to start out first is on Page 1798. And this is labelled unbundled copper loops nondesigned, and then it is calculator input form. Okay. Looking on Line 18, it shows an amount of .2642 for subscriber line testing. What does this item pertain to?

A That is general costs associated with testing on any loop. We assign it to every individual loop, it is developed from the account. So if you go into the general -- I can't remember the exact account number, but if you go into the accounts you can identify costs in the accounts that is associated with what they call subscriber line testing, which means testing of the loops into the field, and that is the cost that is calculated on a per loop basis, and looking at Florida here.

Q And that is for all loops?

A Yes. We assign this number to every one of the loops.

Q Okay. Do you know which accounts they apply to?

A You mean which accounts it is actually derived from?

Q Uh-huh.

A I don't know sitting here today, but there should be a calculation in the cost study for this particular worksheet. That number is calculated somewhere, I would have to find it.

Q Okay. Maybe we can come back to that and maybe on a break if you can check --

A Okay.

Q -- and see if you can refer us to that?

A Okay.

Q The next page I would like for you to look at is Bates Stamped 001803. And at Line 27 under I&M activity it says test for NID and TAGS loop. How does this activity differ from subscriber line testing?

A This activity is testing that is associated with the provisioning in a service order. And in terms of subscriber line testing that is an account where it is booked for the costs that are on a routine basis where we routinely test the plant, because there are constantly ways we test on a routine basis. So that is the real difference. This is service order related testing.

Q And when you say service order related testing, that is only if there is maintenance that needs to be done?

A No. This service order is when a service is actually being installed. So at the time of installation, we are going to be testing this particular loop and it has to do with the dispatch rate when we dispatch out there. So 38 percent of the time we are going to perform this activity. When I say that it is service order related, that means it is identified uniquely as associated with the time of the installation of the loop.

The subscriber line testing is more of a general on-going routine maintenance testing that we do on the loops going forward.

Q So you can have a charge for both subscriber line testing and for this?

A Correct.

Q All right. I would like for you to look back, again, to Bates Stamped Page 001798.

A Okay.

Q And I apologize for jumping around just a little bit.

A Okay.

Q And the line I would like for you to look at is 19, and there is the amount for network terminating wire of .1638?

A Correct.

Q What is this item, and why is it necessary to include it in the recurring costs for this loop?

A This is the cost associated with network terminating wire. And in looking at the loop model, the way the loop model develops cost, it is going to develop cost all the way from the central office to the terminating NID. It does not have a unique entry in it for the network terminating wire, which the best example of network terminating wire is you are in a garden apartment, you're coming up to the serving terminal of that garden apartment and then you have the pairs that branch out to each one of those apartments. That is your network terminating

wire. And that network terminating wire is not identified as a unique capital account to BellSouth. It is just kind of like expense dollars, we have a lot of dollars there associated with the installation and the on-going maintenance of this account.

So what we do is we develop on a per loop basis, we look at the account data, and again there would be a worksheet in the study that shows where we looked at the accounts for how much we installed, how much we spent maintaining, how much we retired, and then we develop on a year basis, it is representative going forward, we look at that year and determine -- and, I'm sorry, I can't remember at one time we were going three years and averaging. I would have to look at the study to be sure. And then divide it by the total number of loops. So you get this 17 cents -- or, excuse me, 16 cents is really the cost associated with the on-going maintenance and any type cost we have for network terminating wire on a per loop basis.

Now, not every loop has network terminating wire, so we took that into account. When we did our division by the number of loops, we looked at the accounts and divided by all loops so that it would be -- you wouldn't be overrecovering because you don't have it on every loop, so it is weighted so that it doesn't do that.

Q Okay. So you are saying that every loop wouldn't have this on there, but is every loop going to get this charge?

A That is correct, because you are building an average loop into the network.

Q If I could jump around a little bit again and get you to look back to Page 001802. There is a reference on Line 13 to -- well, actually it's the whole column, the customer wholesale interconnection network services, CWINS?

A CWINS.

Q CWINS. That's a new one on me.

A Yes, it is.

Q Is this a new work group?

A CWINS is the renaming of the UNE center, the unbundled network element center.

Q On Line 16 it states that UNE-C contacts customer and completes order. How does this differ from CWINS?

A It is CWINS. We just made a mistake on that line. UNE-C and CWINS are the same center, so on Line 16 and on Line 17 that is really CWINS.

Q Okay. If I could get you now to turn to Page 1803. Let me ask this, is there any particular relevance to the name change?

A I have no idea why they changed the name.

Q Okay. Well, over on 1803 and Line 26 it states travel resolution at cross box. Could you describe for me the types of activities that are involved in that?

A I can only give a general description of what might

could happen, I can't give the real details. In terms of, say, you have got to the cross box and maybe the pair that you were going to use was a defective pair, or there was something wrong with the connector or protector, they would have to be changed out. Something physically in the box is not correct, and so that is the type of trouble resolution that you would be dealing with. These are like changing out a piece of equipment or getting a new cable and pair assigned, something of that type. That is kind of like in general what would happen.

Q Something where you would actually have to send someone out?

A Oh, yes. In trouble resolution 100 percent of the time you are going to have to send somebody there to repair it. But you will notice here that this is only going to happen in Line I, 30 percent of the time, when we are actually dispatching, which is J, which is 38 percent. So both of those possibilities are taken into consideration.

Q So what the probability percentage shows is that -- is it that a third of the time an additional 45 minutes of labor would be necessary for the installation of the nondesigned loop?

A No, not quite that. First of all, you have got a dispatch rate of 38 percent. So that is applied first. So it is 38 percent of 45 minutes. And then it is 30 percent of that. So if you multiply the 30 times the 38 percent that

gives you the approximate percentage of it being out there.

Q Well, I have to confess to not being a math whiz, so you are saying 30 percent of the 38 percent of the 45 minutes?

A Yes.

Q And the 38 percent that is the dispatch rate --

A Yes.

Q -- could you just explain a little bit more about what that takes into account?

A All right. The 38 percent will be the same number that was filed in the UNE cost docket associated with the SL-1. What that is it comes from a service order report that shows the amount of dispatch that BellSouth actually is dispatching on the combination of all their residence and business customers. So we are assuming that the unbundled copper loop would be like that. In other words, we don't know exactly what we are going to have to dispatch, this is a new offering, but we think it will be like our residence and business offerings, so we use the 38 percent.

So that means I would never be at the cross box unless I was being dispatched by the technician, this I&M technician. That they would only have a probability of being at that cross box 38 percent of the time when they are out there. So then when they get there, 30 percent of the time when they get there they find a trouble. And so when we talked about it I just quickly did the math, it's somewhere about 11

percent of the time and the study you would have the 45 minutes.

Q Okay. Looking down to Line 24. Or up, actually. It says places removes cross-connect at box, at cross box. It shows that this takes 16 minutes for an initial installation, which occurs 100 percent of the time, but requires a dispatch only 38 percent of the time.

A Okay.

Q And, again, confessing that I'm not a math whiz, does that mean that 62 percent of the time a technician is not dispatched from the CO, but is already in the field performing other assignments?

A You're right on the 62 percent of the time, but there is no dispatch. But there is no cost associated with that. Let me explain, let me go back to this dispatch again, because I don't think I made that clear. On this loop we will only dispatch 38 percent of the time. And normally that is because there is not a facility out there already connected. So, I've got to dispatch somebody out there to do the connection. That's where the 100 percent of the time comes in.

So what that says is for the first loop, it takes me 16 minutes to go to the cross box, open the cross box, and connect my first loop. That is only going to happen in my cost study 38 percent of the time. I don't have to worry about that other 62, that is not included anywhere in there. It's just

this 38. And then if they do two loops at the same time, then it would be 16 times .38 for the first loop, and then for the additional -- this happens to be the same in this particular case, it will be 16 minutes for the second.

Q Okay. So does that mean that 16 percent of the time or 62 percent of the time a UCL-ND is connected through?

MS. WHITE: Without a dispatch?

MS. KEATING: Right.

THE WITNESS: Yes.

MS. KEATING: I think we are through with the math questions now.

(Off-the-record discussion.)

BY MS. KEATING:

Q The next set of questions that I have for you are going to refer to some of your responses to staff's interrogatories. And did you bring a copy of those with you?

MS. WHITE: Which set?

MS. KEATING: Third set.

THE WITNESS: I have a draft set that may not be the final, so I might could work from them. Or if you have them -- okay. We can just how close they are.

BY MS. KEATING:

Q The first one I'm looking at here is in response to Interrogatory 18. If you will look at that and see if they look fairly similar.

A It looks like I have a completed one on this one.

Q Well, response to Part A indicates that it will take 25 minutes for an initial install to provision the line shared loop.

Could you show me where in your Exhibit DDC-1 we could find the 25 minute amount or whatever items are combined to get that 25 minutes?

A In the cost study on Bates Stamp Page 1913, Line 33, is J.4.3. Let me be sure I've got the right one here. Excuse me, my paper slipped. It is Line 32 for Element J.4.3. It is the CO install and maintenance field circuits. And under first install it has .4167, which should be the 25 minutes, and then I checked the 12 minutes for the disconnect of .2, so those should be the numbers associated with that. Now, that is the input to the calculator, so there should be one more detail sheet. Give me one second. Yes, if you look on the next page, which is 1914, Line 27, again, you will see those same numbers, which is the input sheet.

Q You said Line 27?

A 27, yes.

Q Referring to that same response, for Item B you have got the work activities that are listed here, but there aren't the discreet tasks that are associated with those work activities. And I was wondering if you can direct us to where in DDC-1 those activities might be identified?

A DDC-1 is not going to have any more information than this data request.

Q It will not have the work times?

A Okay. All right. For instance, the connect first line, that is referring to the 25 minutes above there. So the 25 minutes is what is in DDC-1. I do not have a breakdown of time for print order, pretest circuit, wire, test circuit.

Q Do you have that anywhere?

A No, I do not.

Q Is that something that can be calculated?

A This information that is provided in this data response, the individual who provided this response would have to break down that number to those minutes. If he has information, I just don't know.

Q Let's see. I would like to refer you now to your response to Interrogatory Number 19. And in this request we asked you for specific work times and functions performed for physical collocation. In Attachment 1 to your response to this, it looks like there are quite a number of work groups involved. And, first of all, can you tell me exactly how many work groups are involved, and this is just in the processing of that application?

A In counting them, I would say you have eight. The ATC clerical is just a clerical function within the ATCC, which is your account team. And then each one of these others is

going to be a group of individuals that handles the separate items.

Q Could you tell me what each of these work groups does in the processing of an application?

A I'm not going to be really able to expand any more than is in the data request. That is really more information than I know.

Q Okay. Do you know who might know it?

A Well, maybe I need a clarification on the question.

Q How these work groups interact in processing an application? What are their primary -- what is each work group's primary responsibility, and how does that fit into the processing of an application?

MS. WHITE: I'm not objecting to the question, but I think that is what this attachment does. It says what each of the groups does. So I guess I'm a little confused about how what you are asking is different. The work flow?

MS. KEATING: I guess how the application flows. I mean, when does it -- when it comes in, what does the first group do and then at what point exactly do they hand it off to the next one? That kind of thing. The work flow, yes.

MS. WHITE: We will provide something.

THE WITNESS: Yes. Maybe we could provide something on that, because I can't answer that one.

MS. KEATING: Okay. Make that 8, Late-Filed

Deposition Exhibit, and this will be work flow for physical collocation application.

(Late-filed Deposition Exhibit 8 marked for identification.)

BY MS. KEATING:

Q Okay. Staying on this same response, on Page 2 of the attachment, and I'm looking at the first group, the INAC. It shows that they expend 20 hours on the application and they do ten functions. Do you know how that is broken down?

A No. This was -- I just know this was very -- when the 20 hours was done it was very labor, manual intensive. But that number has changed and we will be providing the revision on that. Now the time is only three hours. So it is --

Q Okay. The revision from 20 to three hours, is that for each task or is the ultimate amount three?

A That is the ultimate amount. Some of these tasks will be decreased more than others. Because remember this is -- I think I mentioned earlier that this is associated with the electronic application, so there are certain of these items that would be reduced more.

Q Looking at the same page on the circuit capacity management group, it looks like they expend eight hours on an initial application, and it shows here that they spend time with -- they receive and review the service inquiry, interface with INAC, and interface with CSCM, is that correct?

A Correct.

Q Okay. By receive and review the service inquiry, is that just receiving the application?

A Yes, it would be the application requirement. The application which contains the requirements that would be needed in the central office.

Q And they just review it for errors, or when they review it what actually do they do?

A No, I think -- circuit capacity management is associated with the central office, the switching, the main frames, that type information. When I was talking earlier about where the pairs were going to terminate on the frame, so what they would be looking at is what is really required from a central office standpoint for what they are responsible for. So when they are reviewing it they are actually looking at what would be requirements for them to provide.

MR. MELSON: Stan or Jim, we hear you typing.

MR. GREER: Sorry.

BY MS. KEATING:

Q And when the CCM interfaces with INAC and CSCM, what do they discuss?

A Again, this is going to be just my understanding of what is being discussed here is in order to get the application and space turned up in all the same point in time and have everything ready, it is more or less a coordination among the

groups. You have got the people over here, which is the common systems capacity management, that is the people that is looking at the power and the space and those types things. And then you have got the INAC that is mainly interfacing with the customers as to what their needs are. And then you have the switching that is looking at what BellSouth needs to provide off their main frame.

So it is the interfacing of those groups coordinating that everything can be done in that central office and made available to the CLEC to meet their requirements. So that is the type of thing they discuss. And schedules and things of that type.

Q And when they are doing this coordinating, is this just by phone or --

A A lot of it is just by phone. In fact, I believe in this case most of it is by phone. They don't really have the meetings anymore.

Q Okay. Going back to the review service inquiry?

A Uh-huh.

Q When that is being done, what information do they gather and then who does that information go to? You were saying, I believe, that the information they gather is who is going to need to do what and when, that kind of thing?

A Right. Okay. I think at this point when we are talking about the circuit capacity management, it was what they

need to do. Because this is the group that is actually going to be looking at the switching information and getting that type data. So they are looking at for themselves what they need to do.

Q So does each group get the service inquiry, and then each individual group has to look at it to determine what their responsibilities are; there is not one group that looks at it and assigns responsibility?

A Each group is going to look at their needs, but -- and I can't remember which one, I think this account team collocation coordinator, they are going to actually coordinate it to be sure that everything is done and everybody is looking at the right information.

Q Which group was that, the account --

A I think it is the ATCC, account team collocation coordinator. And then we had the INAC that works with them, too. Maybe we could explain that in a data request, because I'm not -- in your late-filed when we do the flow, let me explain that there because I'm just not real sure on exactly who is the main group. But it is controlled so everybody gets done on time.

Q Okay. All right. I would like to ask you a little bit about your response to our Interrogatory Number 42, and I'm going to be mainly looking at Attachment 1 to that response. First off, could you explain to me what a line and station

transfer is?

A It is a physical activity in the -- usually it is done in the field, it can also be done in the central office, in which you have a cable that is working on one pair and you are going to actually just transfer it to another physical facility. You normally see this done in the unbundled copper loop nondesign world is a good example when you are going to have somebody on copper only. Well, they may actually -- at this point in time that customer may be working or they may not be a copper pair, they may be working on carrier. So you could shift them to an all copper loop. So that's what you call line and station transfer. Just shifting from one type facility to another or one cable pair to another.

Q Okay. Near the bottom of the first page of Attachment 1, there is a reference, the line is CO install and maintenance circuit and facility, and right next to that is a .4167 hours installed first. And this is the amount of time this is required for the CO I&M to do a per line activation activities, such as, I guess, reviewing the order and connecting and disconnecting lines, is that correct?

A The connecting and test. It is the 25 minutes we talked about in that other data request.

Q Okay. All right. And how did the connecting and disconnecting of lines here differ from those associated with a line and station transfer?

A Let me check something on a work paper. In terms of the installation, the pair, basically what you are doing here is you are going to be running a jumper on the frame in which you are going to be running it from the incoming, the loop and connecting it from a line sharing environment to the splitter, okay. So it is the cost of -- that is what you are actually installing. What this is saying is that if that cable and pair has to be changed, in other words, that identification is not going to work, there is going to be other work centers.

And that was what I was looking at Page 1914, because you will see that there is -- when it says it's an LST, it is going to pick up an engineering, it is going to pick up some more central office, it is going to pick up the AFIG, and it is going to pick up the I&M in the field. Because normally a line and station transfer is more than just changing a pair in the central office, you have got to correct all of your inventory records, and many times you actually have to dispatch somebody to the field to do some work. So it is picking up additional cost at a time in which you have to do a line and station transfer to make it work. So I think that is the difference.

This work is the work that -- the first 25 minutes is the work that is going to require us to do the loop. The line and station transfer is talking about additional time involved when there is a line and station transfer involved.

Q And that is additional time on top of the .4167

hours?

A Yes.

Q Okay. In what circumstances do you have to do a line and station transfer to provide line sharing?

A I can only think of just like some examples, I don't know all the cases. For line sharing you may not can use loaded cable, so sometimes you will switch to a different cable and pair that is nonloaded. You have got to be sure that you are dealing with a facility that will handle xDSL service. So sometimes that requires it being transferred off. These are switched to an all copper if there is all copper, or being assured that the right facilities are there to serve it. And in this, since you are doing line sharing out of the central office, you are going to be working with copper, so that is predominately, I think, when you would have a line and station transfer.

Q Can you give me an estimate of the percentage of time that a line and station transfer has to be done?

A I'm not sure I can give you the full percentage, but just looking there is -- it shows here that, again, working on Page 1914, it shows that about 10 percent. For instance, it says LST engineering is 15 minutes 10 percent of the time. So it looks to me like it has included 10 percent for these activities. And, again, that would be Lines 28 through 32. It's written in Column B, as in boy.

Q Okay. And still looking under the CO install and maintenance circuit facility section on this page, and in the last line of this section it indicates that the time for line and station transfer is a weighted time, is that correct? Am I reading that right?

A Total weighted time is .2347, yes.

Q Do you know how that weighted time is derived?

A No, I can't address this in the data request. I can only address what is in the cost study on Pages 28 through 32, which gives you a little bit more detail.

MS. WHITE: You mean Lines 28 through 32?

THE WITNESS: Yes, Lines 28 through 32. Because it gives you for each one of these centers the amount of time. I'm sorry, I can't come back to that number, but the ones that are in the cost study are clearly identified, I just can't get back to that number.

BY MS. KEATING:

Q But the numbers in the cost study should add up to the .2347?

A Yes. I don't know why they don't unless there is something I'm missing here in just looking at them, but --

Q Okay. Now, looking at the last item on this page, installation and maintenance. Is that associated with testing to ensure the line and station transfer works correctly?

A Excuse me, could you repeat that one?

Q The installation and maintenance, is that checking to make sure the line and station transfer works correctly?

A Yes. And that is listed on Lines 31 and 32 of the cost study.

Q Okay. So this should only occur whenever a line and transfer --

A Correct, 10 percent of the time. And I believe that is probably why it can't add up to the numbers because my numbers have the 10 percent applied to them, so I'm coming out a little low.

Q Okay. All right. Now the next few questions have to do with some confidential responses to the third set of discovery requests to BellSouth. I don't need the confidential number, I'm just asking for clarification of some of the numbers. And I believe, I guess everybody in the room -- the first one I'm going to refer you to is response to our Request for Production of Document Number 20, and this is Attachment 1 to that response.

A Okay.

Q The column that I'm looking at is the first -- well, the column marked location?

A Yes.

Q And underneath the Florida entries -- I don't need to know the value -- but could you tell me what the national average cost square foot represents?

A Well, first of all, this wasn't really something we used. We don't look at the national average. But if you look at -- and I can't remember the name. It has since changed names, it used to be called RS means. When you look at a building cost and you look at labor costs and they would say, okay, to construct a building in Florida, for instance, it was 80 percent of the national average to construct it on the national average.

So, whereas I think New York used to be like a high cost, it would be 125 percent or whatever. So that is what these numbers are doing. The city cost index column just tells what -- if you were going to take the cost that is included for actual dollars that was spent in Florida and convert that to a national average, then that is how the national average would be. So you can see that the city cost index in this case for your first central office you will notice the Florida cost is lower than the national average, that is where the percent comes into play. All this is doing is just taking the dollars and dividing by the index to bring it up to the national average.

Q Okay. Well, the next line is Florida average cost index?

A Yes. That would just be the -- I see, I was just talking about the total national average cost, I'm sorry. When you're talking about this national average cost per square

foot, that would be based on, like I said, the number is converted to a national average and then just expressed divided by the square footage. When you are looking at the index that is, again, just the average of the city cost indexes, and then the investment per square foot, I'm not sure about that one because we really didn't use that one. We used the average cost per square foot, which is based on the actual Florida dollars divided by the square foot.

Q Okay. So the cost per square foot that is identified here, is that what was used in H.1.6?

A Yes, it is.

Q Okay. My next questions have to do with your responses to our POD Number 22. And I'm looking, again, at Attachment 1 to that response?

A Okay.

Q And, again, I don't need the numbers. This refers to the total power plant construction cost?

A Yes.

Q Is that correct?

A Yes.

Q Let me see if I can find it. What does that number represent in that first column?

A The total plant construction?

Q Uh-huh.

A All right. What this is actually -- this was

developed by the power engineer, and they are looking at if you were going to construct a power plant to provide a certain -- and they wanted to do it on a per amp when it is finished -- is what it would cost you to construct a power plant to provide power for the central office. It includes the things that are necessary in terms of like the generator, the batteries, the boards, everything to construct a power plant to provide the service.

So, basically if you look at the far right, in fact, this was actually done in terms of the CLECs, you can see the number of amps that this particular power plant was associated with. So what we used on the study was the handwritten number. You see the plant only number? Okay, that basically was given to us to represent the dollars necessary to provide power to the CLEC to run their equipment. In other words, to get it from the generator all the way over, okay, to their termination. And then it is multiplied by the 1.5. That is not proprietary. It is multiplied by 1.5 to convert it to -- excuse me, divided by 1.5 to convert it to fused. And then that is the number that is used in the cost study.

Q The number right underneath the total power plant construction?

MS. WHITE: Where did the total power plant construction number come from?

THE WITNESS: That came from the power engineer as

to -- I'm trying to think if this was the actual cost of the construction or if this was a number he worked up as an estimated number.

MS. KEATING: If we could just get maybe a late-filed that identifies what the amount in the column total power plant construction, where it comes from. And this would be Late-Filed Deposition Exhibit 9.

(Late-filed Deposition Exhibit 9 marked for identification.)

MS. KEATING: And I'm trying to think of a good title. Total power plant construction derivation or clarification. And if you could include in that response -- you don't know what period of time this amount covers?

THE WITNESS: No, I do not.

MS. KEATING: If you could include in that response, identify the period of time that is covered by that amount. The next column -- I'm sorry, the last column, total CLEC requested DC amps. Do you know what the amount in that column represents?

THE WITNESS: No, not really.

MS. KEATING: Could we perhaps incorporate that into -- perhaps we should broaden the title then. Clarification of response to POD Number 22, and include in that also what period of time that amount covers, as well.

MS. KEATING: The only thing I have left is the one

item that we were going to come back to, 76?

MS. WHITE: ENDI?

MS. KEATING: Yes.

MS. WHITE: What ENDI stands for?

MS. KEATING: Uh-huh.

MR. MELSON: Engineering network data interface.

MS. KEATING: That's probably right. Well, if we could get some confirmation of Mr. Melson's testimony.

(Laughter.)

MS. WHITE: Do you want to take a break?

(Lunch recess.)

MS. KEATING: Let's go back on the record.

BY MS. KEATING:

Q I just wanted to go back to the question that we had discussed earlier, what is ENDI? Did you find out an answer to that?

A No. I have an outstanding phone call, but I haven't got an answer yet.

MS. KEATING: Okay. I tell you what, if we could just maybe get a real short Late-Filed Deposition Exhibit 10, which is essentially what is the ENDI.

And with that, thank you, Ms. Caldwell. That's all that staff has today.

THE WITNESS: Thank you.

(Late-filed Exhibit 10 marked for identification and

subsequently withdrawn.)

CROSS EXAMINATION

BY MR. MELSON:

Q Ms. Caldwell, Rick Melson representing WorldCom. I'm going to have a few follow-ups to some questions staff had, and then I'm going to hop around a little bit.

Do you have a copy of your depo Exhibit 2, which was your revised nonrecurring work time charges?

A Yes.

Q I was looking at H.1.6, physical collocation application cost initial, and then H.1.46, physical collocation application cost subsequent. And I am looking at the revised installed work times and wondering if you can explain why the ATCC center time is larger on the subsequent application than it is on the initial application?

A No, I'm afraid not. I can't.

Q Okay. I'm going to look at your Exhibit DDC-4, which is probably the same information on some other things we looked at today. It is the originally filed and revised rates for the various UNEs that you are proposing rates for in this proceeding?

A Right.

Q If you turn to Page 3 of that, I believe staff asked you some questions about J.4.3, which is per line activation in the central office?

A Okay.

Q If I understood you correctly, you said that Bell is now proposing a recurring rate for that of 61 cents, is that correct?

A Yes.

Q And what is the basis for that recurring rate?

A The recurring rate is a cost associated with -- it is predominately the software cost for line sharing. And as a result of the Georgia xDSL docket in which we were prepared to file cost studies, it was discussed with the parties that since we at that point in time had not fully implemented all of the electronic costs associated with line sharing, that we would substitute a rate. And it was 61 cents what was agreed upon by the parties, and then that would be the rate that we would charge throughout the region until a point in time in which we were able to get our cost studies completed, and that we had everything up and operational.

Q So at this point there is no cost study or cost support in this proceeding for the 61 cents?

A That is correct.

Q And when the parties -- did the parties affirmatively agree to that 61-cent rate in Georgia?

A I don't know in terms of exactly the full process, but there was a settlement reached in which that number was in the settlement.

Q Were there any other numbers in the settlement that were reduced from what BellSouth had proposed in that proceeding?

A I can't answer in terms of the settlement, but the Commission eventually issued an order. And part of that order was for us to negotiate and agree on some of the rates. So the Commission would have issued ordered rates that were lower than some of the rates that we filed.

Q Okay. So this 61-cent agreement may have been the result of some give and take on other line sharing?

A No, sir. The 61 cents was agreed to prior to the Commission ever issuing that order. It was actually -- the xDSL docket had several issues associated with it in Georgia, and one of those issues, of course, was line sharing. And this was like a component of it. So we agreed with the parties to solve -- excuse me, to resolve that issue so it never was heard by the Commission. So that was kind of like the first step. And then the next step was the Commission hearing the case and ruling on the other costs.

Q You were asked a question by staff as to the situation in which the J.4.3, nonrecurring charge for line activation would apply, and the situation under which J.4.4, the per subsequent activity would apply. If I understood your testimony correctly, it was that the per line activation, J.4.3, applies to any lines activated at the time of the

initially splitter order, did I understand that right?

A Yes, that is my understanding.

Q Okay. So if I activate -- if I ask to install a 96 line splitter but don't request that any lines be activated initially, I would pay the $345.17 under J.4.1, and that is the only nonrecurring charge I would pay at that time?

A Right.

Q Now, if a week later I asked for all 96 lines to be activated, which charges would I pay at that time, J.4.3 or the J.4.4?

A I believe it is the J.4.3, because that is the activation that is to establish the first line to ever work in that splitter. And then you are installing lines for the first time in that splitter. And then later on, you may come back and rearrange or change the lines. That is really what you are talking about in terms of -- mainly that is what you see in a line rearrangement. Not necessarily adding, you could be changing lines around, as well.

Q So it would be your understanding that if I ordered the splitter and asked for one line to be activated on day one, I would pay the J.4.1 plus the 33.83. And then if I asked for 95 lines to be activated on day two, I would jump down and pay the J.4.4 rates, is that correct?

A That is my understanding.

Q Okay. On DDC -- this same exhibit, DDC-4, Page 1 of

4. The zones under A.13.12 for the two-wire UCL nondesign, are those the same density zones that were approved by the Commission in the UNE cost docket or are these based on the density zones that BellSouth proposed in that docket?

A The revised numbers should be the numbers based on the way the Commission ordered the zones to be done.

Q Let's turn to the second page of this on assembly point. And you drew a little picture, I believe, that has been marked as Deposition Exhibit 4 of connections -- basically, an example of extending a loop and a port from BellSouth's main distributing frame to a separate assembly point frame so that a CLEC on that second frame can cross-connect a loop and a port, is that what the diagram showed?

A Correct.

Q In that situation, how many -- of combining one loop with one port, how many two-wire cross-connect rate elements apply? Is there one for the loop and one for the port, or is their only a single cross-connect with the two extensions?

A The rates are set up as a single cross-connect for the two extension.

Q So the 22.48 nonrecurring charge would cover the extension of both the loop cross-connect and the port cross-connect?

A Correct.

Q Assume that the carrier -- assume that a carrier

wanted to connect an unbundled loop and an unbundled port, but it didn't use the assembly point arrangement, it had a collocation space in the central office and wanted to perform the cross-connect in its collocation space. Can you tell me in the rates that have been filed in this proceeding what rate elements would apply to that extension of the loop and port to the collocation space?

A All right. There is H.1.9.

Q All right.

A There is a recurring rate and a nonrecurring rate associated with the two-wire cross-connect. So you would buy two of those, one to take the loop over, one to take the port over.

Q In the collocation situation, why do you buy one to take the loop over and one to take the port over and in the assembly point you only buy one?

A I think it has to do mainly with just the way the physical structure was designed for the assembly point. I mean, when we set this up, the assembly point was supposed to be the two-wire cross-connect to physically give you a location at this point.

Q Let me ask this. I noticed the nonrecurring charge in H.3.1 for the assembly point two-wire cross-connect is exactly the same as in the H.1.9, the physical collocation cross-connect. But am I understanding that the same number of

wires being run, I pay twice as much in the physical collocation situation as I do in the assembly point situation?

A I apologize, I'm a little confused here, too. Because I was looking at the cost, and the way the cost was set up and structured is it was supposed to be on a per cross-connect. However, the costs that would underlie this number would be the cost of running a jumper on the frame. So it is possible that when we looked at the assembly point that we didn't pick up enough jumpers on that frame is what it looks like to me. But that was the way the structure was supposed to be done.

I am absolutely positive about the collocation physical in the two-wire cross-connect because that is -- it is done on a per activated pair as you come in from the collocated space, so I know that that is the way that is done. And the cost that is in that to run the cross-connect is basically what makes up that $22.48. And you would cross-connect on a per two-wire that you ordered. It looks to me like in terms of my assembly point it could be that I have either misinterpreted the application of that element, or that we have understated the cost on that element.

Q Well, let me talk for a minute about the physical collocation situation just to see that I understand.

A Yes.

Q In that situation you are essentially making a

connection -- to extend a loop to the collocation space you are making a connection from the main distributing frame into the collocation cage. You are extending a tie cable of some sort?

A Okay. Yes, I know, but what I'm going to say is that the way it is set up you have a main distributing frame and the cross-connect, the two-wire cross-connect, basically what you have coming from the collocated space is we have a cable support structure. And then the actual cable itself belongs to the CLEC, the CLEC runs that cable through their vendor, and installs it on our main frame, okay? That is the -- I think it's two cents. So all you are really recovering in that recurring is the cable racking itself. And that is where we take into consideration the average number of cables that can go in, et cetera.

The cost for the nonrecurring is you are not really ordering things in combination. The concept is you are ordering, say, 100 loops. So when you do 100 loops, this $22.48 is the cost associated with the activity to get that loop from its termination on the main distributing frame to the collocated pair that appears on the main frame.

Q So it's a jumper just on the main distributing frame?

A On the main distributing frame, correct.

Q All right. And you would have one jumper on the main distributing frame associated with the loop, and then another jumper on the main distributing frame associated with the port?

A Correct.

Q All right. Let's look at -- I'm still trying to understand. Let's look at the recurring charge again for the two-wire cross-connect. In the physical collocation situation that is essentially the monthly carrying cost of the jumper and the cable rack?

A It's just the cable rack. The jumper is insignificant.

Q Okay. What is the -- and that is 2-1/2 cents, 2.6 cents. What does the 88-1/2 cents represent in the assembly point arrangement?

A It is going to represent the rack that goes in as well as the cable, because we are physically placing the cable itself. So it takes into -- it is more investment because BellSouth owns this cable.

Q As opposed to the collocation situation in which the CLECs owns the cable?

A Correct.

Q All right. Assume that I am a CLEC that serves customers with loop/port combinations. I would need to make use of a collocation arrangement or an assembly point arrangement if I wanted to provide service to a customer who is not currently receiving service from BellSouth, is that a fair statement of BellSouth's position?

A That is my understanding.

Q If I ordered a UNE platform loop/port combination for a customer who was taking existing service from BellSouth, it was a migration from BellSouth to the CLEC, what nonrecurring charge applies in that situation?

A It's going to be the UNE-P rate that is not actually filed in this docket. That was filed in the original UNE docket and the Commission set rates for it. It would be the switch as is UNE-P, which I believe it is on P.1.1.

Q All right. And that is the rate that you are -- which you are proposing the Commission find to be TELRIC compliant for 271 purposes, is that right?

A Yes.

Q My understanding is BellSouth has also taken the position that in situations where it is not obligated to connect a loop and port, that it is willing to negotiate a market rate to do that work, is that your understanding?

A I know that that is the policy. I don't know all the full status of it, but, yes, I am aware of that one.

Q Do you know what that market rate would be?

A I do not.

Q Do you know if there is any witness in this proceeding who might know?

A Who would actually know the rate? Ms. Cox.

Q Okay. Now, in the rates for adjacent collocation, you did not develop a rate for DC power to an adjacent

collocation space, is that correct?

A That is correct.

Q Are you aware that in Florida the Commission in at least one arbitration has required BellSouth to offer DC power to adjacent collocation space in certain circumstances?

A I was not aware that that was in Florida. I do know that we have been ordered to provide DC power and that our power people are working on methods and procedures and how they are going to do that. They do not have the information available at this point for me to do a cost study.

Q So at this point you don't have a rate developed for DC power?

A That is correct.

Q You are familiar with the FCC's TELRIC pricing rules?

A Yes.

Q And if I understand your position, it is that the cost studies that were filed in the UNE cost docket and the additional cost studies that were filed in this docket comply with the applicable FCC TELRIC rules, is that correct?

A Correct.

Q Do you have a copy of Rule 51.511(a) somewhere in your materials?

A Okay.

Q And I would like to focus on the portion of 51.511(a) which essentially defines the per unit cost of an element. It

says it is calculated by dividing the forward-looking economic cost divided by a reasonable projection of the sum of the total number of units of the element that the incumbent LEC is likely to provide to requesting telecommunications carriers and total number of units of the element the incumbent LEC is likely to use in offering its own services. In your development of a cost study, how do you apply that standard for determining the per unit cost?

A Our cost studies are really done in two categories, one in which you would look at -- this is more or less looking at demand. So you would be looking at the number of possible facilities that you would need in the -- say, for instance, the outside plant world.

In some of the other studies rather than doing it just on pure demand, you would do it on a capacity cost, which gets you to the same results by not -- you don't really need to know all the demand associated with some of those items. For instance, like a main distributing frame or something of that type, you can use just a capacity and express it on a per unit. But those are the two ways that we do look at that.

Q All right. Now, actually if you look under (b)(1) it says with respect to elements that an incumbent LEC offers on a flat rate basis, the number of units is defined as a discreet number of elements that the incumbent LEC uses or provides. Does your -- you made a distinction between the situation which

you actually forecast demand and which you use a capacity based measure. Do you use both measures for items that are required to be priced under Subsection (b)(1) of the rule?

A Basically, what they list here is in terms of like your local loops and your switch ports. In terms of the loops, we look at all the customer locations that exist in BellSouth today, so that would be looking at the projected demand. And in terms of the switch, we look at all of the existing switches and we have also taken information from the loop as to -- information such as how many of those would be served on a carrier beyond 12 kilofeet. So we use that in terms of the switch. We also use some capacity components on certain portions of a switch. But even with capacity you get back to the same unit answer.

Q Are you aware of that one of the disagreements between WorldCom and BellSouth in the UNE cost proceeding was the propriety of using a three-scenario approach to the development of loop costs?

A Yes, I am.

Q And when you used the three-scenario approach, it is my understanding that you essentially performed one study that was used to price all copper DSL capable loops, used a second scenario that was used to price UNE combinations, loop/port combinations, and a third study that was used to price UNE stand-alone loops, is that correct?

A Correct.

Q In the DSL study, did you project a total combined BellSouth and CLEC demand for DSL capable loops?

A I feel that I did, because I looked at the possibility that every loop could be -- is a possible xDSL customer.

Q And in the loop/port, the combo study, did you determine the combined demand of BellSouth and CLECs for loops served over integrated digital loop carrier?

A Yes, it would have been all demand.

Q Would all demand -- would all potential demand be served over IDLC, or would some portion of that demand be served over other types of facilities?

A Well, in that particular scenario, you have loops that are still going to be on copper, so that is included in there. If it is on carrier, it is going to be on integrated digital loop carrier, because it is looking at that customer being a potential switched customer.

Q In fact -- well, let me take the next step. In your BST 2000 study, did you identify the total projected BellSouth and CLEC demand for loops, carrier loops that would not use IDLC?

A Yes. It would be -- again, you have a copper issue and then if it is on, if the loop is on digit loop carrier we consider that to be universal or nonintegrated digital loop

carrier. And, again, every loop in the network was considered in that demand.

Q So you considered some loops that, in fact, in a forward-looking network would not be provided over UDLC, is that correct?

A Yes. In fact, in reality they might be provisioned just like when you do a forward-looking design, it might be provisioned over copper in reality, but we would have converted it to digital loop carrier. So in that particular scenario, we considered the possibility that every customer would be a stand-alone loop or a possibility of an unbundled loop.

Q So in that study your projected demand for unbundled loops equaled 100 percent of the loops in your network?

A In terms of the voice grade loops in DS-1 and below, yes, we did look at that. Every customer location that was served by our loop was considered, correct.

Q And is that, in fact, BellSouth's projection of what the demand for unbundled loops will be?

A In terms of what is actually going to be provisioned, no, because it's not going be 100 percent. But I think in terms of the availability to model the possibility that every customer could be an unbundled CLEC loop, that is the way the cost model needed to be run to recognize that. And by using the total demand you have considered everything appropriately.

Q If I looked at all three studies combined, the total

loop demand is three times the total number of loops in BellSouth's network, is that a fair statement?

A Yes, if you looked at the three scenarios. Because in each scenario it would consider a possibility of a loop being used one way or the other.

Q Let me talk for a minute about the allocation of shared costs in your loop cost study, and the issue is whether they should be allocated on a DS-0 equivalent basis or on a per pair basis. Are you familiar with that issue?

A Yes, I am.

Q If I understand correctly, in your UNE cost study, you allocated those costs on a DS-0 equivalent basis, is that right?

A Yes, we did.

Q And under that methodology a DS-1 loop gets allocated 24 times as much shared cost as a two-wire voice grade loop, is that right?

A In terms of such things as the electronics, that would be true.

Q What portions of the shared costs were allocated on the DS-0 equivalent basis?

A Predominantly what is very clear in the model is the electronics where you have the cabinet and the shared electronics, that is the clearest view. In terms of the way we actually developed the model, we looked at -- we used a loading

factor for our pole and conduit loading, which I believe is two of the terms that is referred to in terms of shared, in those we assign those on a per dollar of investment, so it's not a clear DS-0 equivalent, but it would probably be more related to that than on a per pair basis.

Q And if I understand correctly, one of the rationales for using the DS-0 equivalent as an allocator is that that was the basis used in the study to size the underlying equipment, is that correct?

A That is correct.

Q Is it possible to perform -- would it be possible to perform the cost study in a way that sized facilities based on DS-0 equivalents, but then allocated the shared costs on a per pair basis?

A In terms of the model, there might be something that could be done, but that would be an inappropriate way to especially allocate the electronics. Because you size them for DS-0 equivalent and say, for instance, if you were using a DS-1 out of a digital loop carrier system, it is going to use 24 time slots. So regardless, trying to size that on a two pair would be inappropriate because that is not cost causative.

Q Are the time slots dedicated to a particular circuit or facility?

A The time slots can be -- in the new systems it acts as a time slot interchanger, so they are not dedicated, but at

one point in time you can only use a certain number of them. So you can never exceed the capacity of that system. So if you placed a DS-1 working in there, usually using a HDSL plug, then it is going to take 24 time slots worth of the commons and 24 time slots worth of the fiber back to the CO.

Q Let me ask then would it be possible to run the cost model in a way that sized facilities based on the number of pairs instead of sizing it based on DS-0 equivalents?

A I'm not a pure modeling expert, but knowing my knowledge of cost and how the network works, I do not believe you can size electronics on per pairs appropriately because it is cost driven by the DS-0 equivalent.

Q Were you involved in the preparation of any cost studies for the Georgia universal service fund proceeding?

A I was responsible for some of the inputs into the model, I never really actually ran the model itself.

Q Is it true that in that proceeding BellSouth allocated these shared costs on a per pair basis?

A It has been a long time since I looked at that study. Again, my emphasis was on the individual components of the -- you know, like how much the cable cost, those type inputs, and we used the HCPM that was designed by the FCC. Something in my mind triggers pair equivalents, but I just can't remember exactly how that model works right now.

Q Well, assume that in the Georgia USF proceeding it

was done, the allocations were made on a pair equivalent basis?

A Uh-huh.

Q Do you have any understanding of the rationale for using a pair equivalent basis in a USF proceeding and using a DS-0 equivalent basis in a UNE cost proceeding?

A No, not really. The only thing that I would -- that comes to mind to kind of question me is the difference in the way we actually handled the model. In the BSTLM that we filed in Florida and we are filing in the other states, we are still using our loading factors for our pole and conduit. Whereas in the HCPM it bills the poles and conduit, and that is how the model was developed. So in that environment you could look at maybe the poles and the conduit more on a per pair basis. I do not remember how the HCPM handled the electronics, and that would be my biggest concern about using that method, but I can't remember right now.

Q In the 120-day filing that was made yesterday where certain loading factors -- if my understanding is correct, certain loading factors were eliminated from the modeling. Were the pole and conduit loading factors eliminated or do those continue to be handled through this loading factor approach, or did the model bill them?

A The model is going to bill the pole and conduit.

Q So in that situation in your 120-day filing, did you allocate the pole and conduit costs on a per pair basis or a

DS-0 equivalent basis?

A My understanding is we are still allocating on a DS-0. Because when Mr. Stegeman who works on the model, when it was looked at it, it is actually still sizing all the plant on the DS-0 equivalent.

Q Sizing poles and conduits on a DS-0 equivalent?

A Because it sizes the entire plant, and it places the poles and conduit as necessary. In other words, it's how it sizes the cable.

Q Is there any other witness in this Florida 271 proceeding who would be familiar with the USF cost study and modeling that was filed in Georgia?

A I don't believe so.

Q Who would be the person within BellSouth most familiar with that model?

A In BellSouth, possibly Bob McKnight, who works in our loop model. But when we filed in Georgia we hired Jim Stegeman as our consultant to handle the model and help with supporting the model. But, Bill McKnight, you know, does pull the information down from the website and run the model. Pull the data. He provides me information for the model, I know that.

Q All right. Let me change topics for a minute. In your rebuttal testimony, you compare New York unbundled loop rates to Florida unbundled loop rates. And I guess my question is what conclusion do you believe the Commission should draw

from that comparison?

A In looking at that we were responding to the fact that some of our rates were felt to be very anticompetitive, so we were showing that in a state where we know that 271 has been approved and where there is competition, that it is not so such the exact value of the number, but the relationship of the number would be irrelevant. Like New York is a very -- if you look at the -- now, I am familiar with the federal results and the HCPM. If you look at say, for instance, you are going to find out that New York is a very low cost state. Florida is not going to be extremely high, but it is going to be normally a little bit higher than New York. So it is that relationship is what I wanted the Commission to look at in terms of the values of those numbers.

Q Let's turn for a minute to Page 12 of your testimony. Do you know in New York how the density zones, three density zones would apply?

A No, I do not know how the three density zones for the UNEs were laid out. I do know that I have looked at the -- or through Mr. Stegeman has looked at the density in the HCPM, and New York is a very dense state across the board.

Q Do you know what percentage of the lines in New York would fall in Density Zone 1?

A I don't have that data with me. I think we did get that information from the FCC, but I don't have it.

Q Do you know what percentage of the loops in Florida fall in Density Zone 1?

A No. Ms. Cox has that information.

Q I take it then if I asked you the same question about relative percentages in Density Zones 2 and 3 in the two states, you wouldn't have that information, either?

A No.

Q Okay. In reaching the conclusion that you do from the consideration of the UNE costs, did you consider the prevailing retail rates for residential or single line business service in Florida as compared to New York?

A No, I just looked at just the relationship of the final numbers.

Q All right. Can you describe for me the -- I'm going to call it the drop length assumption. The drop routing assumption that was used in producing the UNE loop cost numbers you are advocating in this proceeding?

A I mentioned it at a very high level in my testimony in discussion mainly from the results of the Commission's order, because that was discussed in the UNE docket by Mr. Stegeman more than anything else. My understanding -- I can't find it right now.

Q Page 11.

A My understanding at the high level is that -- I will have to think back to all the discussion on this -- is that

when the model actually bills the drop length, it looks at placing a distribution terminal and then from that terminal extending cable to the NID locations at each individual house. And rather than go -- my understanding that it is at the corner of the lot and it will go across, that we actually send it at an angle across the lot rather than just at a straight -- having each individual point at the corner of each lot. But that is the limit of my knowledge. It was in Mr. Stegeman's testimony, I just don't remember.

Q So, your basis essentially for disagreeing with Mr. Darnell is what you have set out here on Page 11, you are relying on the Commission's order?

A Yes.

Q And you really haven't made any independent analysis of the drop length debate?

A As far as me personally, no. That was handled by Mr. Stegeman in the UNE docket testimony.

Q And he is not testifying at this time?

A No.

Q Back on your DDC-4, which is your pricing exhibit -- let me see if I can find what I'm looking for. H.7, the collocation cable records, and we can ignore the disconnect piece of this, but could you walk me through the connect pieces of H.7.1 through H.7.6, and tell me in what situation each one of those rate elements applies?

A Let me look at my cost sheet, because I was looking at this last night. Okay. H.7.1 would be -- I guess I should first say that these records are going to be -- I mean, these elements are going to be more than one applied to a single collocation arrangement. For instance, if the voice grade cable -- say you were going to put in 100 pair voice grade cable.

Q Okay.

A Then you are going to pay H.7.1, which is the collocation cable record per request, then you are going to pay the H.7.3, which is for 100 pair. So that would be for the voice grade DS-0 per 100 pair. So if you put in 100 pair you would pay that once, if you put in 200 you would pay that twice, et cetera. If you were putting in a DS-1, you would still put in the H.7.1, you would also be charged the H.7.4. And I should have said, excuse me, on the 100 pair, the H.7.2.

Q So let me see if I understand. I obtain a collocation space from BellSouth, and I say I want to run 100 DS-0s, voice grade DS-0s and 10 DS-1s. When that cabling is complete, is that the time that BellSouth provides these cable records?

A Yes. Once we know that the pair is identified on the frame and we give back to you in these cable records, I mentioned earlier today the circuit facility assignment, so that you know where your pair is assigned so that you can then

issue electronic orders.

Q So if that was the situation, I had established collocation space, I order 100 voice grade loops and 10 DS-1s, I pay $1,388.18 for the request?

A Right.

Q I pay $597.70 one time for the voice grade loops?

A Correct.

Q I pay $8.79 for the 100 individual records?

A Right.

Q And I pay 10 times the H.7.4 for my 10 DS-1 records?

A Correct, because it's a T-1 tie, right.

Q I come back a month later and order another 10 DS-1s, what do I pay at that point?

A You are coming back later?

Q Right.

A Okay. Look at the note -- oh, I'm sorry, that's why I wanted to see the cost sheet. Instead of being first in additional on this nonrecurring, that is really initial and subsequent.

Q Okay.

A So this would be a subsequent request. So you would pay the $892 for the subsequent request, and then -- well, the DS-1s are still at 411, there is no savings on that.

Q Okay. So every time I augment the number of cables running to my collocation space, I will incur the H.7.1 cost

plus whatever other cost is applicable for the particular cables I added?

A Yes, on a subsequent basis.

Q Now, if in my initial request I had not 100 voice grade loops, but 200, do I pay the H.7.2 just a single time?

A It's a 200-pair cable?

Q Well, I have ordered 200 voice grade loops, I don't know how you provisioned it. Does it make a difference?

A Yes, it does.

Q Okay.

A Because, in fact, the CLEC would know, because remember I was talking about running those cross-connects, you run your own cable now. Excuse me, the CLEC puts in their cable. So if they put in a 100-pair cable, that is one scenario, or they can put in a 200-pair cable or larger. So that is where you get the cable effect. Does that make sense?

Q So if I put in two 100-pair cables, I would pay two of the H.7.2s. If I put in a single 200-pair cable, I would pay one of them. It is per cable?

A Yes, it is per cable. Right.

Q And what cost is included in that per cable charge?

A I don't know if I can get into the detail. Let me see. Okay. (Pause.) Your question was on the per cable record?

Q Right.

A Okay. The per cable record is, we have it defined in our cost study in terms of the engineering costs associated with it and the predominant cost in there is going to be associated with the circuit capacity management, which is the group that is going to identify the cable pairs on the frame. That is predominately what is happening on the per cable basis.

Q So whether it is a 100-pair cable or a 600-pair cable it costs the same to -- for that work effort.

A For that work effort. Because what they do is they identify the pairs in a range. So you go in and you can identify a 100-pair range or you can identify a 200-pair range, and it really, the cost is the same to do the range.

Q What is the work activity underlying H.7.1, the per request?

A I can't answer that. It is circuit capacity management. I can answer that from a cost study, but the details on what they do I cannot answer.

Q Do you know why it costs less for a subsequent request than for an initial request?

A No, I'm afraid not. I can't answer that.

Q If I understood your written testimony correctly, your rebuttal, these costs were previously included somewhere else or collected through some other rate element, is that correct?

A Yes. It was something called additional engineering.

It was actually, I believe, filed in the collocation tariff in Florida as an example. And what that is, additional engineering is, it is charged on a per hour of work we do. Like if it takes 20 hours to do it or 40 hours, whatever, we would charge the CLEC based on that.

Q And the preparation and furnishing of cable facility assignments was done on a per hour basis?

A Under that additional engineering. So it would be like -- I don't want to imply that we would charge you like -- it was a job. Like we would do 10 hours worth of work, or 20 hours and then charge you that number times a labor rate. Does that make sense?

Q Right. And that additional engineering charge was incurred every time there were additional cable facilities installed between the collocation space and the BellSouth frame?

A I'm not sure exactly how it was always applied. It should follow closely with the structure that was provided to me to cost out that I've got right here today.

Q Do you have a witness in this case who would know how those charges under the existing tariff, in fact, are being applied or were applied?

A Mr. Gray might, because he is the witness for collocation. He is responsible, I know, for implementation. He might know that in detail.

Q With the exception of the UCL-ND, the physical collocation and the line splitting, you are basically relying on the rates that have been set in the UNE cost docket, is that right?

A That is correct.

Q Are you aware of any rates set in that docket that are based on faulty assumptions that ought to be updated?

A The only thing I would say is that -- these weren't in that docket, I revised these today. I mentioned in the testimony, we talked about it today, A19 has been corrected. In the filing that we made on the 25th, yesterday -- okay, the 24th -- there were several of the -- several, I would say three or four of the work centers associated with the nonrecurring where we have seen a decrease that would have put it below what the Commission ordered. So we did file those rates and asked for the Commission to consider. They were not extensive, but we did recognize that. So that would be -- I wouldn't say that was a faulty assumption, but information has changed since it was originally filed.

Q In your filing yesterday, did you propose any change to the A. or O. rates?

A I'm getting my states confused here. Yes, we did. We had recognized that in the demand data that was originally filed in Florida, that that has significantly changed. So we have filed the DUF elements that were impacted by that demand

change, so that was also in that filing, and in the cover letter we explained that. The real reason the demand has changed from what we can tell it was the opening up of the market to the UNE-P, so we had a lot more UNE-Ps, and then you would have more ADUFs. So, yes, we did file those numbers.

Q For the elements that were effected, did you see the same percentage reduction in your Florida filing that you saw in your Alabama and South Carolina filings?

A It would have been on the same line, but I don't want to make the statement that it was an exact percentage. The reason being remember in Alabama and Louisiana and those states when I made the supplemental I was still working under proposed rates without any Commission adjustments, so this would have been on Commission adjusted. And so I don't think the percentages are going to lay down exactly, but you will see the decrease in the number.

Q Well, let me ask this, is the underlying change in demand based on Florida-specific data, or is it based on region wide experience?

A That ADUF is based on, I believe, total regional demand because it is across all the systems and switches.

Q And do you recall the vintage of the demand data that was used in your Alabama and South Carolina revisions?

A I can't remember that.

Q Let me ask you what may be a simpler question. Is

the vintage of the data used in your Florida revision the same as that vintage or is it more recent data?

A It should be the same vintage for that time study.

Q ADUF information is essentially access usage information, is that correct?

A That is correct.

Q Does BellSouth exchange access usage data with independent telephone companies, other incumbent LECs?

A Yes. With independents there is a meet point billing type arrangement with them.

Q In that situation, does BellSouth make any charge for the access usage data?

A My understanding is we do not charge for that because it is an exchange of records. They provide us access data, we provide them access data, so nobody pays anybody, it's that type of an arrangement.

Q At Page 3 of your testimony, of your surrebuttal you talk about the application of in-plant factors to determine some expenses. Can you give me just a brief explanation of what an in-plant factor is and how it works?

A Yes. Let's say, for instance, you are going to install an aerial cable and the cost of the in-plant is going to recognize the cost that when it is applied to the material you pay so much per dollar for the material on a linear foot, but then it costs money to engineer the job, to get the cable

in place, to actually physically place the cable, and also to splice the cable, get it ready to provide service. So the in-plant takes into consideration those type costs.

So let's say, for instance, I don't know what it is for aerial cable, let's just say it was 4. So that would say that for every dollar of investment that I'm going to have associated with aerial cable, then by the time it is closed out to the books with all of these additional costs, in this particular case I use 4, it would be $4. And there is an important thing to note in the in-plant factor, it also picks up such things as sales tax, small terminals, exempt material, things that are not identified uniquely in every job. And that is what the in-plant counts for. And that would be done on a field reporting code basis.

Q So in developing the total investment you take a material cost and then multiply it by an in-plant factor to develop a total installed cost?

A Correct.

Q Does the relationship of -- I don't know how to ask the question. Let me think for a second. Does the relationship of the cost capture the in-plant factor to the dollar of investment change over time?

A Yes, it can.

Q And what can cause it to change?

A One of the things could be your labor cost in terms

of labor, changes in the way you actually physically may do some of the functions would be two examples.

Q Do changes in technology effect -- potentially effect the in-plant factor?

A Not really, because it's done by field reporting code. So copper is copper. You may add a new technology, like at one time we added fiber.

Q On Page 17 and 18 of your surrebuttal -- I guess actually Page 18. I'm reading from Lines 3 to 7, you say, "First, security access costs are not shared or common, they are directly caused by the need to install additional security measures in central offices where ALECs will collocate." Let me ask prior to the advent of collocation, did BellSouth have security costs associated with some of its central offices?

A Yes, I believe they did.

Q And in the pre-collocation environment were those security costs treated as shared or common costs?

A In terms of any cost studies that I had done, I never even considered those type costs. It was just not something that I had looked at because I was not really looking at space in a building.

Q In a post-collocation environment in the cost studies that you do today, do you explicitly remove any costs associated with preexisting security systems?

A I'm trying to think what factor they would be in.

Wait a minute. The predominant cost is associated with card reader and that type system, that card reader gets charged to our building account. And when we do our cost studies, I know that it is explicitly removed from any shared and common calculation going forward because it is associated with a central office land and buildings accounts. Really central office buildings. It is not uniquely removed from that COE building account.

Q Okay. Two questions. Since it is not removed from the COE building account, what effect does that have on the costs that are calculated for any of your UNEs?

A The only place that the building account is going to be used is when it is used as a loading factor. Say, for instance, on the switching. That factor, I can't say that I have looked at it to be absolutely -- to know what the level of that number is. I just can't answer that.

Q You say it is explicitly removed from shared and common costs, I understand that.

A Yes.

Q And is that the cost of new security systems that is explicitly removed, or is it the cost of existing systems, or both?

A Both.

Q Where in your cost study would I look to see that adjustment?

A It would be in the shared and common calculation. And I said earlier that those card readers are included in COE, central office equipment land and buildings, there is an adjustment in the model for all COE land and building is removed. So when you remove the lump sum you automatically get this amount.

MR. MELSON: Let me look at my notes for a moment. I am either done or about done.

(Off the record.)

MS. WHITE: Late-filed Exhibit 10, you asked what ENDI stands for, and we have that information now if you would like to have it.

MR. MELSON: Why don't you share it with us?

MS. KEATING: Sure.

THE WITNESS: Enhanced network delivery initiative.

MS. WHITE: You were wrong.

MR. MELSON: I didn't even get one piece of it right.

MS. KEATING: Thank you. We will withdraw our request then for Late-Filed Deposition Exhibit 10.

(Off the record briefly.)

MR. MELSON: That's all I've got. Thank you very much.

MS. WHITE: Jim, do you have any questions?

MR. LAMOUREUX: Yes, just a quick question. Just one second.

CROSS EXAMINATION

BY MR. LAMOUREUX:

Q Hello. I just have a couple of quick questions on the comparison with the New York rates that you have in your surrebuttal testimony?

A Yes.

Q I think it's on Page 14 of your surrebuttal. We may have some pagination difficulties, but the part in your surrebuttal where you compare UNE-P rates for Florida and New York in three zones. Are you with me?

A Yes.

Q Now, I want to be clear, when you say UNE-P, specifically what you mean are rates for loops and ports, is that correct?

A A combined loop and port.

Q Right. Would you agree with me, though, that it is necessary to buy other rate elements to be able to actually use UNE-P and provide service using UNE-P?

A In terms of the usage components associated with switching.

Q Right. So there would be a usage sensitive rate element for switching that you would also have to buy?

A Yes.

Q And you would probably also have to buy the usage files, the DUF files in order to be able to bill access to

IXCs, correct?

A In order to bill the access, yes.

Q So what I'm trying to find out is have you done a complete comparison of the rates in New York and the rates in Florida for all of the rate elements that you would have to buy in order to be able to use UNE-P to provide service in New York versus Florida?

A I have done the switching components. And BellSouth switching rates are, you know, fairly low across the nation. I have not done the DUF, I have not looked at the New York tariff to see the rates associated with that.

Q Just out of curiosity, if you had done switching, why is that not included in the comparison you have in your testimony?

A Really, I just didn't think about it. Normally, the loops and the ports are the big questions. And switching in my discussions in looking at the rates was never a big issue, so I just really didn't think about it.

Q Okay. Can you tell me where you got rates for the column with the New York rates in terms of like a date and a docket number for an order or something?

A I can't give you sitting here today the date or the docket number, but New York has a tariff that was posted on the website that has the rates for the loop and port, and that is the information we use. We used the tariff itself.

Q So you did not use any information coming out of the current on-going UNE cost proceeding in New York?

A No. We used the rates that are in effect now.

MR. LAMOUREUX: That's all I have.

MS. WHITE: Thank you. I have nothing. Beth, do you have anything?

MS. KEATING: No. Let's just set a time to get the remaining nine late-fileds.

Thank you very much. And that concludes this deposition.

(The deposition concluded at 2:35 p.m.)

INAC: Interexchange Netowrk Access Coordinator

#2

REQUEST: Provide the revised response to Item No. 19 of the Staffs 3rd Set of Interrogatories in this proceeding.

RESPONSE: See Attachment No. 1.

RESPONSE PROVIDED BY:

Daonne Caldwell
Director
675 West Peachtree Street
Atlanta, Georgia 30375

PHYSICAL COLLOCATION Application Fee - Initial & Subsequent

ATCC - Account Team Collocation Coordinator - 6.5 hours initial & 7.5 hours subsequent

Initial receipt and review- 2 hours initial & subsequent
- Initial review of an application and discussion with applicant
- Explanation of application contents and its impact to the overall project with applicant
- Includes any clarification of application information necessary for the interdepartmental coordinators

Review of Physical Collocation Agreement – 1 hour initial subsequent
- Review of applicant's specific terms, conditions and rates for physical collocation
- Clarification of physical agreement terms and conditions for evaluation of their impact specific to the project
- Identification of impacting terms and conditions to interdepartmental coordinators (for example, unique time frames)

Processing of Application – 0.5 hour initial & subsequent
- Request service order issuance for establishing a Billing Account Number (BAN)

Gathering Response Data – 1 hour initial & 2 hours subsequent
- Respond to questions from the Interdepartmental Coordinators and review the responses for clarification

Preparation and Distribution of Response – 2 hours initial & subsequent
- Update response information from the Interdepartmental Coordinators and prepare a response for the customer
- Review of terms, conditions and rates and translation of Interdepartmental response data into written contract commitments
- Prepare written response and cover letter
- Determine expiration date to place Bona Fide Firm Order
- Assemble response package (including cover letter, response, BSTEI-1-P forms for placing Bona Fide Firm Order, listings of BellSouth Certified Vendors)

Customer Point of Contact - 0.5 hour
- Receive and review Fee Processing Request form
- Verify customer credit information
- Manually enter Access Service Request (ASR) with customer information
- Query mechanized system for Billing Account Number assignment
- Generate Service Order Work Aid (SOWA) and enter the appropriate application information
- Issue service order to establish billing account for processing the Application Fee
- Follow up to ensure completion of service order

Disconnect 0.03 hours

Interexchange Network Access Coordinator (INAC) - 3 hours initial; 2 hours subsequent

- Receive and evaluate inquiry* (see note)
- Contact Area provisioning team, if required* (see note)
- Initiate & facilitate follow-up planning meetings with Area work groups & customer, if required (0.5 hr. initial only)
- Work with the Area team to develop the plan, establish tentative schedules and identify major construction items that will affect critical dates (0.5 hrs. initial and subsequent)
- Serve as technical consultant to Area Provisioning team, Account Team coordinator and customer for identification and resolution of issues (1 hr. initial and 0.5 hr. subsequent)
- Interface with Regulatory and Collocation Project Team for policy development and issue resolution* (see note)
- Receive inquiry response data from Area team* (see note)
- Analyze data and determine project schedule* (see note)
- Resolve Network issues* (see note)
- Review response data and notify Account Team Coordinator that inquiry is complete* (see note)

*Note: Total estimated time for items marked is one hour for both initial and subsequent

Common Systems Capacity Management (CSCM) - 8 hours initial; 5 hours subsequent

- Review application for space, power and cabling requirements
- Perform site visit to verify space availability and inspect space conditions
- Coordinate space selection and preparation requirements with Property and Services Management
- Coordinate cable and power requirements with Circuit and Power Capacity Management
- Complete application response data related to above items

Circuit Capacity Management (CCM) - 8 hours initial; 5 hours subsequent

- Receive and review Service Inquiry
- Interface with INAC and account team to discuss application
- Interface with CSCM and other network groups to discuss application

Outside Plant Engineering - 0.5 hour

- Determine availability of duct space, research options for point of interconnect and submit inquiry response

CRES - Corporate Real Estate & Support - 1.25 hour initial; 0.625 hour subsequent

Program Manager (JG-58) - 0.25 hour (initial application); 0.125 hour (subsequent application)

- Act as single point of contact for questions, dates and information
- Approve work request

Facility Planner (JG-58) - 0.25 hour (initial application); 0.125 hour (subsequent application)

- Review drawings of the facility requested
- With Network, determine availability and location of Collocation space in CO

Application Tracking Mgr. (JG-58) - 0.5 hour (initial application); 0.25 hour (subsequent application)

Receive inquiry and enter tracking data to system
Monitor timely response to INAC
Interact with other CRES team members on responses

Project Administrator (JG-55) - 0.25 hour (initial application); 0.125 hour (subsequent application)

Enter work request that is required to authorize consultants to determine estimates
Establish authority number and route for approval

Power Capacity Manager -1 hour

Evaluate and plan for power requirements for the CLEC

CABLE INSTALLATION

Common Systems Capacity Management - 4 hours
Coordinate with OSP Construction to plan riser cable installation

Outside Plant Engineering - 7.5 hours

Meet w/collocator to determine point of interconnect - 2 hours
Prepare work prints - 5.5 hours (work times itemized below)

- Create cable/pair for assignment - 0.5 hour
- Prepare inventory for collocator cable - 1.5 hours
- Draft work order for OSP construction - 2 hours
- Schedule work order for OSP construction - 0.75 hour
- Coordinate w/Master Contractor for manhole entry - 0.75 hour

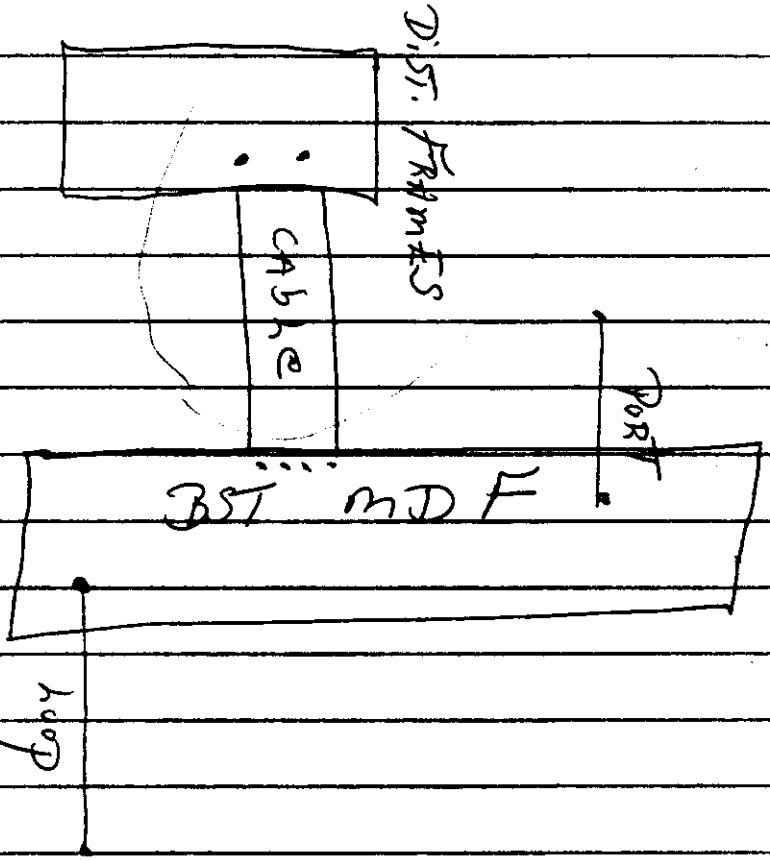
Disconnect 0.4 hour

Outside Plant Construction - 16 hours
Work area protection, place and remove - 0.5 hour x 2 people = 1 hour
Place pull wire - 1 hour x 2 people = 2 hours
Pull cable into building - 1 hour x 2 people = 2 hours
Splice cable - 5 hours
Testing - 1 hour
Place & rack cable in CO - 3 hours
Travel time - 2 hours
Disconnect 0.4 hour
The disconnect time provides for updating databases in the central office to reflect vacant facilities caused by the collocator disconnecting its facilities.

CALDWELL DEPOSITION EXHIBIT.

Diagram of Costs Recovered Dep. 4

H, 3. 1



REQUEST: Provide the revised response to Item Nos. 39(a) and (b) of the Staffs 3rd Set of Interrogatories in this proceeding.

RESPONSE: See Attachment No. 1.

RESPONSE PROVIDED BY:

Daonne Caldwell
Director
675 West Peachtree Street
Atlanta, Georgia 30375

Adjacent Physical Collocation - Application Cost

Account Team Collocation Coordinator (ATCC) - 11 hours

Initiation of Application

- Initial review of the application in order to validate integrity of data & discussion with applicant.
- Explanation of application contents and its impact to the overall project with applicant includes any clarification of application information necessary for the interdepartmental coordinators.

Review of Adjacent Physical Collocation Agreement

- Review of applicants specific terms, conditions and rates for adjacent collocation.
- Clarification of agreement terms & conditions for evaluation of their impact specific to the project.
- Identification of impacting terms & conditions to interdepartmental coordinators, i.e. unique time frames.
- Identify interdepartmental coordinators by name, address, office, phone & fax number specific to Selected location.
- Assign a reference number.
- Request service order issuance for establishing a Billing Account Number (BAN).
- Process application payment to BellSouth billing center.
- Prepare & distribute cover list & identify any critical concerns relating to the particular application.
- Review the application determining final acceptance of a Bona Fide Application (include correct prepaid fee, correct listing of equipment data, wiring requirements, signatures, etc.)
- Assemble the Bona Fide Application Package for distribution to the interdepartmental coordinators.
- Update Master database for corporate compliance reporting.

Gathering Response Data

- Respond to questions from the Interdepartmental Coordinators and review the responses for clarification. For example, the ATCC will need to verify the response provided by the interdepartmental team matches the terms of the CLEC's agreement.

Preparation and Distribution of the Response

- Update response information from the Interdepartmental Coordinators & prepare response for customer.
- Review terms, conditions, rates & translation of Interdepartmental response data into written contract commitments.
- Prepare written response and cover letter.
- Determine expiration date to place Bona Fide Order.
- Assemble response package (including cover letter, response, BSTEI-1 -P forms for placing Bona Fide Firm Order, listings of BellSouth Certified Vendors) ATCC.

Account Team Collocation Clerical (ATCC) - 1 hour

- Clerical time for distribution of the application to the field and distribution of the hard copy of response to the customer.

Customer Point of Contact - ½ hour

- . Receive and review Fee Processing Request Form.
- . Verify customer credit information.
- . Manually enter Access Service Request (ASR) with customer information
- . Query mechanized system for Billing Account Number assignment.
- . Generate Service Order Work Aid (SOWA) and enter the appropriate application information.
- . Issue service order to establish billing account for processing the Application Fee.
- . Follow up to ensure completion of service order.

Interexchange Network Access Coordinator (INAC) - 3 hours

- . Receive and evaluate inquiry.* (see note)
- . Contact Area provisioning team, if required. * (see note)
- . Initiate and facilitate follow-up planning meetings with Area work groups & customer, if required. (0.5 hr)
- . Work with the Area team to develop the plan. establish tentative schedules and identify major construction items that will affect critical dates. (0.5 hr)
- . Serve as technical consultant to Area Provisioning team, Account Team Coordinator & customer for identification and resolution of issues. (0.5 hr)
- . Interface with Regulatory & Collocation Project Team for policy development & issue resolution.* (see note)
- . Receive inquiry response data from Area team.* (see note)
- . Analyze data and determine project schedule Resolve Network issues. (0.5 hr)
- . Review response data and notify Account Team Coordinator that inquiry is complete.* (see note)

*Note: Total estimated time for items marked is one hour

Power Capacity Management (PCM) - 1 hour

- . Review request & determine what work is needed in order to ensure sufficient power capacity exists based on application.

Circuit Capacity Management (CCM) - 8 hours

- . Receive and review Service Inquiry.
- . Interface with INAC and account team to discuss and respond to application.
- . Interface with CSCM and other network groups to discuss and respond to application.

Outside Plant Engineering (OSPE) -3 hours

- . Determine availability of duct space, research options for point of interconnection & submit inquiry response
- . Evaluate manhole access.
- . Assessment of cable entrance facilities.

Parsons Engineering - $1013

- . Perform survey and cost estimate for CLEC response.

Corporate Real Estate Services (CRES) - .75 hours JG58

- . Act as a single point of contact for questions, dates & information from ATCC & Parsons Engineering for building related work requirements
- . Approve work request.
- . Review drawings of the facility requested to determine current condition.
- . Receive inquiry and enter tacking data to system.
- . Monitor timely response to INAC.
- . Interact with other CRES team members on responses.

Corporate Real Estate Services (CRES) - .125 hours (JG 55)

- . Enter work request which is required to authorize our consultants to determine estimates.
- . Establish authority number and route for approval.

Common Systems Capacity Management (CSCM) = 5 hours

- . Review application for power and cabling requirements.
- . Perform site visit to verify cable infrastructure conditions.
- . Coordinate requirements with Property & Services Management.
- . Coordinate cable and power requirements with Circuit and Power Capacity Manager.
- . Complete application response data related to above items.

REQUEST: Provide a copy of a line sharing order document.

Firm Order Processing for Physical Collocation

Interexchange Network Access Coordinator (INAC) – 5 hours

Receive firm order* (see note)
Schedule and chair coordination meeting/conference call with collocator and area provisioning team (1.5 hrs)
Establish project critical dates* (see note)
Monitor project progress, verify that critical dates are met, coordinate schedule changes, when required (1 hr.)
Serve as technical consultant to area provisioning team, account team collocation coordinator and customer for identification and resolution of issues (1.5 hrs.)
Receive project closeout documents, such as the Space Acceptance form and forward to account team collocation coordinator* (see note)
Receive and review firm order response data from area team and notify account team collocation coordinator that inquiry is complete* (see note)

Total estimated time for items marked is one hour

Customer Point of Contact – ½ hour

- Receive and review fee
- Processing request form
- Verify customer credit information
- Manually enter access service request (ASR) with customer information
- Query mechanization system for billing account number assignment
- Generate service order work aid and enter the appropriate application information
- Issue service order to establish billing account for processing the application fee
- Follow up to ensure completion of service order

REQUEST: Provide a chart depicting the workflow for a physical collocation application.

RESPONSE: See Attachment No. 1.

BellSouth Telecommunications Inc.
FPSC Docket No. 960786-TL
Caldwell Late Filed Deposition
Exhibit 8
Attachment No. 1
Page 1 of 1

REQUEST: Identify the source of the number for the total power plant construction listed in Item No. 22 of the Staffs 3rd set of PODs of this proceeding and state what period of time this amount covers. Also identify source of the number for total CLEC requested DC amps and state what period of time this amount covers.

RESPONSE: The number for the total power plant construction came from a regional study of collocation power construction projects. The vintage of this data is late 1999 and early 2000. The number for the total CLEC requested DC amps came from the same study and same time period. To develop a forward-looking investment per amp, BellSouth started with actual investment dollars from projects throughout the region, including Florida. Costs that should not apply on a forward-looking basis, such as power cabling, were removed.

RESPONSE PROVIDED BY: Daonne Caldwell
Director
675 West Peachtree Street
Atlanta, Georgia 30375

REQUEST: What does EnDI stand for and what does it do?

RESPONSE EnDI stands for Enhanced Delivery Initiative. EnDI is a system that reduces the manual processes required to deliver information to ALECs. It provides automatic notification to the ALEC regarding the completion of provisioning activities

S T I P U L A T I O N

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that the requirement that a notary be present with the deponent was not waived; that counsel present stipulate that the witness is the person he identified himself as; that objections, except as to the form of the question, are reserved until hearing in this cause; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

PROCEEDINGS

MS. KEATING: Do we have a notary to go ahead and swear in the witness?

(Witness sworn.)

MS. KEATING: Let's go ahead and take appearances.

This is Beth Keating appearing for Commission staff.

MS. FOSHEE: Lisa Foshee on behalf of BellSouth Telecommunications.

MS. VANEK: Traci Vanek on behalf of AT&T.

MR. FEIL: Matt Feil, Florida Digital Network.

MS. KAUFMAN: Vicki Gordon Kaufman on behalf of the Florida Competitive Carriers Association.

MR. CAMPEN: This is Henry Campen on behalf of US LEC, Time Warner Telecom, NuVox, and XO Communications.

MR. MELSON: Rick Melson on behalf of WorldCom.

MS. KEATING: And can we all agree to the usual stipulations?

MS. FOSHEE: Yes on behalf of BellSouth.

MS. VANEK: Yes for AT&T.

MR. CAMPEN: Yes.

MR. FEIL: This is Matt Feil. Yes.

MR. MELSON: Yes.

Thereupon,

W. KEITH MILNER

was called as a witness on behalf of BellSouth

Telecommunications, and having been duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MS. KEATING:

Q Good morning, Mr. Milner.

A Good morning.

Q I hadn't heard you yet this morning, so I was --

A Well, I'm here.

Q I was starting to wonder a little bit. If you would, please go ahead and state your name for the record?

A Yes. My name is W. Keith Milner. I am employed by BellSouth Telecommunications as Senior Director, Interconnection Services.

Q And how long have you been employed in that capacity?

A In the position I hold now, since February of 1996.

Q Okay. Well, the main area that I want to look at today is in your rebuttal testimony.

A Okay.

Q And the issue I would like to talk to you a little bit about is the blockage situations.

A You mean trunk blockage?

Q Yes.

A Okay.

Q I would like to start out by referring you to Pages 4 through 5 of your rebuttal testimony.

A Okay. I'm there.

Q And there you are talking about BellSouth's planned trunk servicing and forecasting processes?

A Yes.

Q How often does BellSouth accept ALEC forecasts?

A As often as they provide them to us. We do our own forecasting. We formalize it a couple of times a year. But we are constantly in the process of reviewing the underlying data and seeing how accurate our forecasts are. Generally, we would like to see forecast information from ALECs at least once, and preferably twice a year. But at any time they are willing to provide us information we are willing to incorporate it into our forecast.

Q Okay. So there is no defined period of time?

A No.

Q Okay. Do you ever ask ALECs for forecasts?

A Yes, we have.

Q Okay. How often?

A I'm not sure if there is a certain period or a certain frequency by which we ask. We generally discuss our forecasting process with ALECs. And, again, you know, ask them to provide us input whenever they feel that situations have changed, but at least once a year and preferably more than that.

Q Is there any particular situation that would trigger

BellSouth to ask an ALEC for a forecast?

A The topic of forecasting is often discussed in the context of negotiating the interconnection agreement. Beyond that, I'm not sure that there is a particular trigger point, no.

Q Okay. What type of forecast submitted by an ALEC would trigger demand trunk servicing?

A Well, I'm not sure if I understand your question. Let me take a run at it and you tell me if I'm on the right track.

Q Okay.

A As I discuss here on this page about what demand trunk servicing is, is responding to unanticipated traffic demand. Forecast traffic demand is part of what we call planned trunk servicing, so it's not really appropriate to mix those two things.

If we are talking about demand servicing, we are really talking about a situation where something has changed that at least BellSouth did not anticipate and may impact the quantity of trunks that are required to deliver an acceptable grade of service. So trunk forecasts are really an artifact, I guess you would say, of the planned trunk servicing process rather than responding to unanticipated situations.

Q Okay. Well, I guess I'm just a little confused by the sentence starting on Line 18. You're saying that demand

trunk servicing is used for unplanned demand, right?

A Yes.

Q Okay. But I guess I was just reading the sentence starting on Line 18 where you say demand trunk servicing is initiated when there is a consistent need for trunk augmentation over a period of time?

A Okay. Well, really the clause that follows that is really what I was talking to. In other words, we do not build our trunk network to cover any and all eventualities. Those things that in hindsight are determined to be oddball situations, things that you would not expect to recur, we don't build our network to accommodate those.

So that's really what I was talking about in that sentence, is that what we do respond to are when there are changes in the traffic patterns that we expect to continue, then we will invoke demand trunk servicing to put the right number of trunks in. On the other hand, isolated incidences that you don't expect to recur you would not augment trunk groups necessarily in anticipation of that situation recurring.

Q Okay. But just to make sure I've got this straight, but still demand trunk servicing is not considered -- you are not meeting planned demand, it is just you see over a period of time that there is a periodic increase, but it's not necessarily planned? I guess I'm just not quite --

A Okay. Let me give you an example. Let's say that --

well, let's look at BellSouth's own forecast. Let's say that BellSouth has forecast that between its network and a certain CLEC's network that we need 100 trunks to ensure the proper grade of service. And we review that forecast and the ALEC involved says, yes, we think that is about right. Let's say that the ALEC's business plans are quite a bit more successful than they had anticipated, meaning they are bringing a lot more customers onto their network a lot faster than they thought. So instead of needing 100 trunks this year, now we need 150, let's say. That's what we are talking about.

The forecast would have been for 100 trunks. And had everyone's plans worked out the way we all thought, then 100 trunks would have been adequate. The unanticipated part is that the ALEC's customers are coming onto their network faster or earlier than either they or we thought, and we need to do something about that to ensure a proper grade of service. And that is the context of demand trunk servicing that is discussed herein.

Now, as a follow on so that, I mean, obviously we and the ALEC involved would revise our forecasts taking into consideration that situation and, you know, adjust our forecasts accordingly.

Q Okay. Well, that helps a lot, I appreciate it.

A Certainly.

Q I would like to refer you now then to Page 6 of your

rebuttal.

A Did you say 6?

Q Uh-huh.

A Okay.

Q And there you are discussing a situation that you had with NewSouth on the Macon trunk group?

A Yes.

Q And if I understand this correctly, BellSouth is saying that the blockage only occurred on May 21st, is that correct?

A Yes.

Q Okay. Was there any trunk activity on that trunk group in the weeks leading up to the 21st that would have led BellSouth to believe that this might -- this blockage might occur on the trunk?

A No, there was not. In fact, that is really the point of my comments here is that BellSouth cannot know in advance of an ALEC's business plans and what customers it brings onto its network, how big those customers are, how much traffic on the network will result from those customers being on the network. So, in this case only NewSouth could have known about the possible trunk blockage situation absent its telling BellSouth more about what its business plans were.

Q Well, does BellSouth keep trunk activity reports?

A Yes, we do.

Q Would you have monitored those reports?

A Yes, we do, and we did. But those reports would have told us nothing about what NewSouth was going to do in the future.

Q Okay. Well, what I would like to see is if we could get a copy of the trunk activity report for the month of May on that trunk. Is it broken down as far as ALEC traffic, are those reports --

A Well, I can get you the trunk -- yes, our trunk history report for that trunk group, and it would be whatever traffic is on that group. In some cases, and I will have to go back and look at this particular one, but in a lot of cases the trunk group carries not only traffic from BellSouth's end user customers, but from other ALECs, as well, in the context of what we call transit traffic.

So if an ALEC interconnects its network to BellSouth's at a tandem switch, then very often you will find that that trunk group from the tandem switch to the ALEC switch carries a variety of different traffic. Not only from BellSouth customers but from independent companies, other ALECs, intraLATA toll traffic. So what we will see on the trunking report is the gross amount of traffic. It will not be broken down by jurisdiction or by originating party. But we can -- we certainly do have those reports and we will be glad to share them.

Q I think I would like to go ahead and ask for that as Late-filed Deposition Exhibit 1.

A Okay.

Q And that can just be titled Macon trunk activity report from May 2001.

(Late-filed Exhibit 1 marked for identification.)

BY MS. KEATING:

Q Okay. Next I would like to refer you to Page 31 of your testimony.

A Okay, I'm there.

Q Where you're talking about OLNS.

A Yes.

Q Could you explain, how does OLNS work?

A Okay. Well, let me start at sort of the high level view and then we will get as deep into it as you would like. OLNS, originating line number screening, is a functionality that we equip at our operator services platforms rather than in our end office or tandem switches.

Generally, here is how it works. The ALEC agrees that it will send its traffic -- well, let me start over just a minute. There are two ways ALECs might use this service. Let me use the simpler situation first. Let's say that an ALEC has its own end office switches. The ALEC could establish a trunk group from its switch to BellSouth's operator platform. I should have also said that as a predicate the ALEC has decided

that it wants to use BellSouth's operators to handle its operator traffic rather than some other provider. So in that case the ALEC would provide -- has its own switch, and we establish a trunk group between that switch and our operator platform.

The ALEC would point its operator calls to that trunk group, and when an end user places a call, his call would go from the ALEC's network to BellSouth's operator platform over that trunk group. And one of the things that would be transmitted along with the conversation that ultimately ensues is the automatic number identification, the ANI of the calling customer.

Once the call arrives at the BellSouth operator platform, that ANI is looked up into a database, a query is made of a database. And then on the basis of that, in other words, it looks up that number and says this customer, for example, might be NewSouth's end user and then the call is placed in a queue such that the operator answers that with the appropriate -- the appropriate branding is applied, and the BellSouth operator who is acting on behalf of the ALEC handles the call according to the ALEC's preferences. So that is one way that OLNS is used.

The other way is in the context of where the ALEC does not have its own switch, but instead uses BellSouth's switch for its end users either in the context of resale, or

unbundled local switching, or the so-called UNE-P. In that case, the calls from both BellSouth's end users and the ALEC's end users go over a single trunk group between the BellSouth end office and the BellSouth operator platform. And, again, once the calls arrive at the operator platform, this database look up is made based -- again, based on the ANI, and a determination made as to how to brand the call and into which queue the call might be placed and things of that nature.

So basically it moves the branding decision from the end office, which could be done via customized routing, for example, it moves that decision from the end office switch to the platform where the call is actually going to be answered. Now, that's kind of a high level view. You know, we can get deeper into how the calls are actually processed, but basically that is, you know, at a high level view that is how OLNS works.

Q Well, let me just see if I understood you correctly. ALECs do not have to have UNE-P to subscribe to OLNS?

A No.

Q Okay.

A An ALEC might have its own switch but want to use BellSouth's operator platform. More commonly we expect that this would be used in the context of either resale, or UNE-P, or just straight unbundled local switching.

Q Why would it be more commonly used in those situations?

A Well, because there are already means for -- if the ALEC has its own switch, then it can choose other platforms besides BellSouth to which its operator calls will be sent. So the ALEC can make economic decisions about which service provider it wants to answer its customers' operator calls. So, there is the possibility that ALECs will choose an operator services provider other than BellSouth.

So OLNS is really a form of providing for custom branding, not for custom routing. And the difference, I mean, is that if an ALEC chooses OLNS, that is a decision that they have chosen BellSouth as the provider of their operator services. By comparison, customized routing, the ALEC may choose to, let's say, use the UNE-P provided via BellSouth's switch, but rather than those calls be sent to BellSouth's operator platform, the calls instead are sent to the ALEC's choice of platform for answering.

Q Is there a cost difference if the call is routed to the ALEC's platform versus BellSouth's?

A Well, we'll have to dive down into the details here for a second. The ability to choose platforms is a function of customized routing, not OLNS. But to answer your question, no, there is not a difference in cost for customized routing whether the calls are sent to one platform or another. That choice is effected in the translations in the switches. In other words, the ALEC would decide whose platform. And whether

that platform is BellSouth's or somebody else's, the cost for customized routing would be the same. Now, there might be a difference in price between what BellSouth charges for its operator services, that is for call answering, versus what a third party might charge for its operator services, and that is the economic decision that I alluded to earlier that the ALEC might make. It might compare what it could acquire operator services from BellSouth to what it could acquire those same operator services from another provider.

Q How many routing options does OLNS provide?

A Well, in terms of -- again, OLNS is really not a form of customized routing. There is some routing internal to the switch, that is calls will be placed into a certain queue based on the class of service, the choice of branding or not branding, that sort of thing.

The choices that the ALEC really makes regarding OLNS are choices related to how the call is going to be branded; that is, will the call be answered with the ALEC's brand, with no brand, or absent all of that, even absent OLNS with BellSouth's brand. So the choices relate more to choice of branding than choice of routes.

Q Okay. So if I'm getting this straight, that is the main advantage is the branding issue?

A Well, no, that's not really the main advantage. Both customized routing and OLNS allow for custom branding.

Customized routing also allows choice of routes and choice of platform where the calls will be answered. ALECs, in my opinion -- I have not heard this from an ALEC, but I would believe that they would prefer OLNS for at least one reason. First, that the trunk group over which the ALEC's calls will be transported is the same trunk group as is used to transport calls from BellSouth's end users.

So one advantage of OLNS is that there are -- it allows the use of common or shared trunk groups rather that dedicated -- rather than dedicated trunk groups which is often required with customized routing. So in that way the costs of the transport are shared between BellSouth and any ALEC that uses OLNS between the end office switch and the operator platform. I think that is the primary advantage from the ALEC standpoint.

MS. KEATING: Well, thank you, Mr. Milner. That is actually all that staff has.

THE WITNESS: Okay. Thank you.

MS. KEATING: Anyone else?

MS. VANEK: Yes. This is Traci Vanek from AT&T, and I have a few questions. If I may go next, I guess.

CROSS EXAMINATION

BY MS. VANEK:

Q Mr. Milner, I would like to talk to you first about a little bit more trunking. Just to go back to the beginning,

trunks carry calls from switch to switch within the network, correct?

A Yes, ma'am.

Q And they go together in what we call trunk groups, right?

A That is correct.

Q Okay. And these trunk groups have differing capacities to carry smaller or larger numbers of simultaneous calls, is that right?

A Yes, generally based on the quantity of individual trunks in the group, yes.

Q Okay. And final trunk group is a term for a trunk group that when the number of calls reaches full capacity there is no overflow, so the next call is blocked, correct?

A Let me make just one very minor change. The number of simultaneous calls.

Q Simultaneous calls?

A Yes. When the number of simultaneous calls equals the quantity of trunks in that group, let's say 100, when the 101st call comes into a final group, there is no other trunk group that that call will be offered to and so that 101st call will be blocked.

Q And if there was a 102nd, 103rd, 104th call all at that same time, simultaneous calls, they would be blocked as well, correct?

A Yes, that's right.

Q If the same customer called -- dialed a number and was blocked, got a fast busy, or a recorded message and hung up and immediately dialed again and the trunk is still at capacity, that customer would be blocked again, is that correct?

A That is correct.

Q Okay. BellSouth, as I understand it, produces two different reports reflecting trunk blockage, the trunk group service report SQM, and the trunk group -- is it trunk group blockage report, is that correct?

A I've got one of those here before me, I'm not sure what the older one is. The newer one, the one that BellSouth recommends is called trunk group performance.

Q Trunk group performance. Okay, thank you for correcting me. And to my understanding the old one is the trunk group service report SQM, is that your understanding?

A I think you're right. I'm not sure of the exact title, but that is sort of the vernacular we have used for that report, yes.

Q And the trunk group service report SQM reflects blockage of trunk groups while the trunk group performance report that you just referenced reflects an average of blocking across all the network of BellSouth or CLEC trunks, is that correct?

A No. Wait a minute, I think we are talking about two different things suddenly.

Q Okay. Well, show me where I went wrong.

A Okay. And I'm going to back up just a pace, because you said -- I think in your earlier question you asked me about trunk group servicing reports. There are really, I guess, three different kinds of reports. For quite a long time, long before the advent of local competition, we had what we called trunk servicing reports. And those reports were generated on an individual trunk group by trunk group basis and showed the amount of carried load, a calculation made in some cases of what the offered load was and the amount of the calls that were blocked during a specific period of time, normally an hour. So, we produced those reports on a trunk group by trunk group basis for a very long time.

Now that is a lot of reports, because basically every trunk group in our network is reported on via a trunk servicing report. When we are comparing the service that BellSouth provides to itself versus provided to an ALEC, then we have had two different reports, both of which report in the aggregate, however. And that is the two that I started out my answer, but your question led me to believe you might interested in those other reports that report on a trunk group by trunk group basis.

Q And what are the names of those two reports that you

started out your answer?

A Well, I'm not sure that -- one of them, the one that BellSouth endorses for making that comparison between the service we provide to ourselves and the service provided to ALECs is the so-called trunk group performance report.

Q Okay. I believe the other one -- unfortunately with the distance I can't show you what I'm talking about, but in other depositions and proceedings there has been a report called a trunk group service report SQM, it says that along the top of the page.

A Okay.

Q And that was what I was referring to --

A Okay.

Q -- as the second report, just so we are clear on that.

A Okay. Well, just to make doubly so, if it is the report that shows so-called ALEC responsible trunk groups and BellSouth responsible trunk groups?

Q Yes, sir.

A Okay. I am familiar with that report. And that is not what I was referring to earlier on a trunk group by trunk group trunk servicing report that we have prepared for years and years.

Q Okay. Thank you for clearing that up.

A Okay.

Q Is it true that in every Section 271 application that the FCC has considered it analyzed trunk blocking by looking at whether the ALEC trunk groups exceeded blocking thresholds more frequently than the BellSouth trunk groups?

A Yes.

Q The trunk group performance report that you referred to, as I understand it, includes an average of blocking across all of the trunks in the network for BellSouth --

A That's right.

Q -- versus all of the ALEC trunks in the network, is that correct?

A Yes.

Q So the average blocking of ALEC trunk groups used in the measure includes both BellSouth administered and ALEC administered trunk groups, is that correct?

A On the new report, yes.

Q Okay.

A And what it does is makes a comparison between those two categories of trunk groups and looks at the difference in blocking that occurred in a given hour. And looks to see if the difference between the blocking incurred on behalf of the CLEC -- I mean the ALEC rather, and BellSouth is statistically significant or not.

Q So I am interested in how it gets to that number. It's an average blocking of, for example, all the ALEC trunk

groups in the network at the same time. It takes blocking on various ones and averages them together, correct?

A That's a good question, and I am hesitant to answer precisely because I know that there was a proposed change and I'm not sure if it is in the measurement set for Florida or not. What we recommend is that you not look at just the simple average of all the trunk group performance levels for this reason: Let's say there are only two trunk groups in the network, one blocked at zero percent and one blocked at 50 percent. If you average those together, you would say that the average blockage over all the trunk groups, that is both of them, was 25 percent.

However, if you looked at the number of -- either the number of trunks involved in those two trunk groups or the number of calls offered, you might come to a completely different conclusion. For example, let's say that the trunk group that blocked 50 percent has one trunk in it whereas the trunk group that blocked zero percent has 10,000 trunks in it. So what we suggest is that instead of just averaging the percentages, that you actually build up the base of number of calls across all the trunk groups, add up all the calls blocked, and divide those numbers rather than just averaging the averages.

Q So let me make sure I understand. What you are saying is if you did a simple average, if there is a higher

level of consistent blocking over the threshold in one trunk group, that wouldn't necessarily be revealed by the report, correct?

A That is correct, because it may not be statistically important. Again, I know my example is, you know, not necessarily realistic, comparing a trunk group with one trunk with one with 10,000 in it. But my point is this, you need to look beyond just the percent blockage on a trunk group. You need to look at a number of factors. One is how many calls were implicated, you know, or how many calls were offered, how many were actually blocked, and what was the contribution to that blockage situation by BellSouth, what was the contribution to that situation from the ALEC involved.

Q And how long has BellSouth been reporting the trunk group performance report?

A Oh, well, let's see, I'm not sure if I can answer from -- I have a report here that I had pulled yesterday. It shows information back to August of last year, but I'm not sure exactly -- let me check my notes real quick like. We started producing -- I'm seeing a note to myself here. We started producing in this format around June of 2000.

Q So you said, I believe, that you are not certain whether this measure reflects the simple average that you said has this problem of potentially hiding blocking in a given trunk group or whether it is some other more complicated

average that you were just discussing, is that correct, that you are not sure which it is reporting?

A No, I'm just saying there is another refinement to this to automatically exclude certain situations and that is the part I'm not sure of. The new report has -- well, first of all, let me describe the exclusions. It excludes any trunk groups for which the data was not valid, it excludes situations where duplicate information was offered to the process. These are the specific exclusions that relate to ALEC contributions that I mentioned a minute ago.

If it is the ALEC's network or its equipment that failed, then we exclude that situation. If it was the ALEC's refusal or delaying of increasing or augmenting trunk groups that caused the problem, then we exclude that. And then finally, the third biggest exclusion is that if there was a significant increase in the traffic volume which the ALEC did not convey to BellSouth within a reasonable time frame, then we exclude that trunk group, as well.

Q Okay. To get back to the average question, I want to be very clear. If I go and look at the reported data from two months ago under this trunk group performance measure, am I going to get the simple average that you discussed in which high level consistent blocking over the threshold in one trunk group would not necessarily appear?

A No, you're not. What you are going to get instead is

an aggregation of all the offered calls, an aggregation of all the blocked calls, and one percent blockage based on those two sums rather than an average of individual trunk group percent blocking.

Q So what you are saying is what is reported is more of a weighted average as you were discussing before, the number of -- you had your two trunk example, one trunk you were saying could have just one -- or one trunk group, excuse me, could have just one trunk in it and you were going to sort of weight the average comparing how many trunks were actually experiencing blocking. And you think that is what is being reported now?

A Yes, that is a better way to say it. The older report that we produced did not do that. It just added up all the trunk groups that were above a certain blockage threshold and counted those and then figured the percent on the quantity of trunk groups, not on the percentage of number of calls.

Q Okay. Now I'm confused about this weighted average idea, because when I looked at the responses to AT&T's discovery in Florida, which referred actually back to AT&T's discovery responses in North Carolina, the response I believe was to -- let's see, North Carolina Interrogatory Number 122. There is no indication there that there is a weighted average. It looks like a simple average to me. And I admit I'm not a mathematician, so perhaps you could point me to that?

A Well, let me -- well, the use of the term weighting is one that you and I just came up with while we discussed this. What was the number again, I've got some of our data requests here?

Q North Carolina Interrogatory Number 122. I believe it was a supplemental response.

A Let me see if I've got that one here.

Q Filed on June 25th.

A Whoops. I've got -- no, unfortunately I don't have that here. I've got up through 121, which was the last one that -- I was involved with that one. You said 122?

Q I did say 122.

A I don't have that one here.

MS. FOSHEE: Traci, if you want to talk about that, you can fax it over to us and maybe just move on with your questions while we are waiting for it. But I would like him to have it in front of him if you are going to ask him about it.

MS. VANEK: Well, I understand. And I actually had not intended to ask him about it, because my understanding was that the more complicated mathematics answers were provided by a different witness. But since we started getting into this whole weighted or -- our term weighted average was the only reason I brought it up. If you think it is better for a different witness, then I can hold it for that.

MS. FOSHEE: It's totally up to you. Mr. Milner is

here and welcome to talk about it, I would just like him to have the response in front of him.

MS. VANEK: Okay. All right. Well, I will move on and then actually I don't have anyone in the room with me to fax it, so perhaps I can return to this while maybe other people have questions, if that meets with everyone's approval for efficiency's sake.

BY MR. VANEK:

Q Okay. Next topic. The next generation digital loop carrier that is discussed in your direct testimony.

A Okay.

Q Let's see, I believe in previous depositions you said that BellSouth is increasingly moving to this technology, is that correct?

A Yes, over time.

Q And one of the things that NGDLC allows you to do is to provision over a partial fiber loop both voice service and data service, is that correct?

A Well, in some cases it does. NGDLC must be equipped with additional equipment such as what some have called a dual purpose line card to allow what you just described. In other words, NGDLC for the most part -- well, we started introducing NGDLC because of the economic advantages that it gave us over other forms of digital loop carrier.

A fairly recent development was that the

functionality of a so-called digital subscriber line access multiplexer, or DSLAM, could be incorporated into the NGDLC by the addition of those dual purpose cards and some other common equipment. And that would allow DSL service and voice service to be handled in the manner you described; that is, with fiber-optic cable in the loop feeder part and copper cable in the loop distribution part.

Q So if I understand what you are saying then, the NGDLC technology lets BellSouth run fiber from, say, the central office or the switch to a remote terminal and then that connects to copper that goes to the customer's house, is that correct?

A Well, yes, NGDLC does that. But other forms of DLC can also be, as we said, fiber fed. The biggest difference in NGDLC over the older forms of DLC is that it has part of a switch in the middle of it which uncouples the relationship between the part that runs from the DLC to your house from the part -- the transport facilities that run from the NGDLC back to the central office.

Let me say that a different way. With other forms there was a direct correlation between the input stage coming in from your house and the output stage of the DLC going forward to the central office. NGDLC uncouples that arrangement and allows separate facilities to be run such that some of the loops from the DLC back to the houses could be put

on transport facilities to the central office while other houses have their loops put on different transport facilities.

Q So if I can try to understand the technology part of it a little bit better, if you have a loop that is fiber part of the way, and it is copper for the short distance at the end from the remote terminal to the house, isn't it true that you can run higher speed data services over it than if you had a loop that was copper all the way to the switch, is that true?

A No, not without the special cards that we talked about, these dual purpose line cards. In fact, without the dual purpose line cards the highest throughput that you can create in that situation is 64 kilobits, and that is because the information is put into channels on the fiber-optic facility going forward from the DLC to the central office in 64 kilobit per second envelopes.

So, I will agree with you that once you add this other equipment you can get higher speeds, but without that additional equipment you are at the same throughput capacity on an individual loop basis that you were, you know, before.

Q What is the highest throughput on an individual copper loop?

A Well, is it all copper?

Q Yes, 100 percent copper.

A Who knows. Speeds of greater than one and a half million bits per second are being transmitted right now over

all copper loops compared to a maximum of 64 kilobits, 64,000 bits per second with the DLC that we use right now without the inclusion of those other, you know, that other equipment.

Q So if you do include the other equipment, what is the maximum throughput then?

A Well, I would expect it to be the same as the all-copper loop, because then the throughput is a function of the speed of the modems on either end of the loop and the capacity of the DSLAM, not of the DLC.

Q And when you have 100 percent copper that has, you said, 1.5 million bits of throughput --

A And higher, yes.

Q -- and higher, do you have any length limitations on that, does the signal degrade over distance?

A Oh, absolutely. Yes. On an all-copper loop, the throughput is a function of the gauge of wire, the length of the wire and the presence or absence of some other devices like load coils and bridge taps. But, yes, there is a direct correlation between the length of the loop and the maximum amount of throughput.

Q Well, let's talk about an example of a loop that is 16,000 feet of copper, all copper, and compare that to a loop that is 12,000 feet of fiber and 4,000 feet of copper. Which one of those two loops would have a higher throughput?

A Without that additional equipment we talked about,

the 16,000-foot copper loop would.

Q What about with the additional equipment?

A Then I would expect that the rates would be the same. In other words, what you are doing is moving the DSLAM from the central office out to the remote terminal. So all other things being equal, one should put that DSLAM between the 12,000 feet of fiber and the 4,000 feet of copper. I would expect that the throughput would be very similar to what you would see on an all-copper loop that is 16,000 feet long.

Q So the fact that it is only 4,000 feet of copper in the combination loop doesn't make it faster than the 16,000 feet copper loop?

A Well, it may or may not. That's why I said that the limitation becomes a function of the DSLAM rather than of the copper loop. Yes, I mean obviously with 4,000 feet of copper if you have got a DSLAM that can operate at a higher speed, then that becomes the limiting -- you know, that becomes the limiting criteria as to what the ultimate throughput might be.

Q I believe in BellSouth's response to staff's Interrogatory 12, Part C, do you have those with you?

A I have some of those. Generally, I have the ones that I provided the response to, but let me look and see.

Q I'm not certain, let me check if this is one of yours. I believe it was.

A It was staff's, did you say?

Q It is staff's. And it does not say that you provided the response. So if you do not -- it's a topic that is covered in your testimony, but it does not say that you provided this response.

A Okay. Well, what was the question posed?

Q Item Number 12C states in response, the percentage of loops served via NGDLC in Florida is 9/67 percent, and I wanted to determine whether that was potentially an error that should say 9.67 percent?

A Oh. I would say just very probably, because the amount of NGDLC in most states in BellSouth's region is in the single digit percentages. So that probably is a typo and should say 9 point whatever the last part was. If you will give me the number again I will verify that and we will make sure.

Q Item Number 12, Part C. It's staff's second set of interrogatories. I'm sorry, I didn't say that the first time.

A I'm pretty sure that is just a typo.

Q Well, the next -- if you would turn to it, I would appreciate it. The next sentence says --

A Well, I don't have it.

Q Oh, you don't. Okay. Well, then --

A Okay.

Q The next sentence -- I will read it to you and if you are not familiar with it, we can move on -- says in

parentheses, this percentage may differ from information given in other interrogatories. OSPE recently found accounting problem in the software accounting NGDLC serving the line, the software was counting multiplexer pairs as NGDLC. Is that a topic that you are familiar with?

A Yes.

Q This error, if I understand it, counting multiplexer pairs as NGDLC would result in overestimating NGDLC served lines, is that correct?

A It would, yes.

Q So we would expect the previously disclosed potentially erroneous data to be inflated or too high, is that correct?

A I would expect so, unless there were other countervailing problems, but, yes.

Q Well, that's what I'm looking for, because in BellSouth's response to AT&T's interrogatory it gave an estimate of 8.36 percent lines on NGDLC in Florida. And if this were -- if the difference were related to this counting multiplexer pairs as NGDLC error that is described in response to staff's interrogatories, I would have expected it to be higher, but it's lower, and I wondered if there is a reason for that discrepancy that you could explain?

A Not just on the face of it. If the data was captured for the same date, I would expect for the answers to be the

same. If you will give me the AT&T interrogatory, I can look into it and see. If that had the same counting problem or something, I just don't know on the face of it.

Q It is AT&T's Interrogatory 42. And BellSouth's response was dated August 7th, I believe.

A Okay. And what we will do is compare the answer that BellSouth provided there with staff's second set, and it was 122, is that right?

Q 12.

A I'm sorry, 12C.

Q Yes, sir. And if you need to supplement your response to AT&T's interrogatory that would be helpful.

A Okay.

Q Thank you. Moving on to the topic of oddball codes.

A Yes.

Q Are you aware that BellSouth provides service to retail customers in Florida through the 930 NXX code?

A Yes. I believe 930 is the code used for mass calling, am I correct on that?

Q Well, you would have to tell me. My understanding is that 930 is an NXX code for the uniform access number.

A Oh, I'm sorry. 930?

Q 930.

A We will need to talk some more. Most of the -- well, the code that BellSouth uses for access to its business office

and things like that is the 780 code. So I would have to see what the 930 code in Florida was used for.

Q Okay. Well, if subject to check it turns out that 930 is as I just represented, an NXX code for the uniform access number --

A Can you tell me what you mean by uniform access?

Q I am actually reading from a Florida order that says that BellSouth claimed that five of these codes, including 930 is a regional oddball code. And that 440 and 930 are NXX codes for the uniform access number which is a tariff that provides customers with uniform business line number for client access to the customer service. And I can fax this around if that would be helpful.

A Okay. Well, let me see if I can shed some light. We have codes that are used -- well, there are really two ways of using it. One is with our operator platform, the other way is with our advanced intelligent network such that a retail customer can advertise to its clients a single telephone number and that is the number they dial regardless of, you know, where they are calling from.

For example, a pizza delivery service might acquire this service from BellSouth and advertise a number throughout the State of Florida for its pizza delivery service. And so wherever you are in BellSouth's region, if you dial that number your call is routed to the nearest Pizza Hut, let's say, if

that is the customer.

Q And that is what this uniform business line telephone number means?

A No, I'm not saying that, I'm just describing that -- I don't know the meaning of that phrase uniform access. I'm just saying that we have got services where we spread a certain NXX code across a wide terrain and then we use switched translations in other parts of our network to determine how to route that call.

Q Well, taking the example that you have just offered then, if that customer decided to leave BellSouth and change service providers to an ALEC, would that customer be able to port that number?

A I don't know the answer to that. I just don't know.

Q Okay.

A Let me see if I can think through that. Well, I guess it depends. In one case I can see a way that you can do that. If the determination is made, of how to route the call is made in BellSouth's advanced intelligent network, then the call, the number could be ported. If it uses the operator services method, it probably could not be.

Q Moving on to the last area, AT&T and BellSouth signed a memorandum of understanding on April 16th, 2001, is that correct?

A Regarding hot cuts, yes.

Q Yes. In the memorandum of understanding, BellSouth agreed to provide AT&T with realtime electronic access to its LFACS system, is that correct?

A That is my understanding, yes.

Q Has BellSouth provided AT&T with realtime electronic access to LFACS?

A I have not checked in the last couple of weeks, but the last time I did check the answer was no, the work is in progress to provide that access, but that that work was not complete.

MS. VANEK: Okay. That's all I have. I don't know how we want to handle logistically for me to fax around this response to the interrogatory. It's going to take a few minutes, because my copy is not a clean copy and will need to be cleaned up. And I should probably get fax numbers from people who want it. Lisa, you need it, right?

MS. FOSHEE: Yes.

MS. VANEK: And what is your fax number?

MS. FOSHEE: (404)529-5122.

MS. VANEK: And, Beth, do you guys have that or do you need it?

MS. KEATING: We've got it.

MS. VANEK: Okay. Does anybody else want it?

MR. FEIL: I do not.

MR. CAMPEN: I do not.

MR. MELSON: No.

MS. VANEK: Okay. Well, if you all will give me a moment's indulgence to hand this off to somebody, I will return and we can, I guess, continue with somebody else's questions, is that appropriate?

MS. KAUFMAN: Do you want us to wait on you, Traci, is that what you are saying?

MS. FOSHEE: No, why don't we go on with someone else's questions, and we can come back to her. That is acceptable to us.

MS. VANEK: That's fine with me. Okay, I will go do that. Thank you.

MS. KAUFMAN: This is Vicki. Could I go next?

MR. MELSON: Yes.

MS. KAUFMAN: I didn't know if we had some formal order or not.

MS. KEATING: No, I think it's pretty informal.

CROSS EXAMINATION

BY MS. KAUFMAN:

Q Mr. Milner, this is Vicki Kaufman. I wanted to go back to where Ms. Keating started her questions of you in regard to the forecasting process.

A Yes.

Q And if my notes are correct, she asked you how often ALECs can provide you with forecasts, and I think you said

whenever they like, or as often as they like, but certainly you would prefer them to provide those forecasts at least once or twice a year?

A Yes. In some cases we have actually got language in interconnection agreements that is more specific than that, but, yes.

Q Okay. And when an ALEC provides you with a forecast, what do you do with it? Do you incorporate it into your plans for trunk augmentation or what use do you make of it, if any?

A The use we make of it, since we are talking about forecast information -- well, let me back up a pace. If there is a call blockage situation then forecasts is not the right way to handle that, because the forecasting process is more staged and takes longer. If there is a blocking problem, the parties should get together as quickly as possible to work out how to resolve that.

But, exchanging forecasts, you asked what BellSouth does with that, BellSouth takes the ALEC's forecast and eventually blends that with its own information and updates its own trunk forecast a couple of times a year.

Q So let me see if I understand what you said. You said that when an ALEC provides you with a forecast of what they think their needs are going to be in the future, there is no relationship between that and dealing with an upcoming blockage situation?

A Well, what do you mean by upcoming? If we already have a blockage situation, then the appropriate remedy is for the parties to agree as to how to augment the trunk group or reroute traffic to relieve that situation. Trunk forecasts are exchanged such that we can buy additional equipment, have it installed in our central offices before there is actually a need that arises for it. So a forecast is used for the planning process, not for the day-to-day servicing problems that might arise.

Q Well, in the situation with NewSouth that you were discussing with Ms. Keating at the beginning of the deposition, it is correct, isn't it, that they provided you with a forecast, for example, in that Macon trunk group that you talked about, that showed that there was need for additional trunks there prior to the actual blockage situation arising?

A Yes. But the forecast generally talks about large periods of time. What did not happen was that NewSouth did not inform BellSouth that it had a large customer that it was going to bring onto its network that was going to overload that situation, that was going to overload that trunk group, rather.

Q And you don't think that that large customer was accounted for in the forecast, for example, in the Macon situation that they provided you in January of that year?

A It may very well have been. But the problem is that you don't service trunk groups on a day-to-day or week-to-week

basis from the forecast. The forecast is used generally to provide the right amount of equipment in central offices. The trunk servicing process -- and the interconnection agreement between NewSouth and BellSouth talks about this -- calls for much more frequent exchange of information where either party suspects that the traffic loads carried are going to change abruptly and to give each other notice of that.

Q Okay. But I guess my point is and I just want to be clear on this, you are not disputing that in January NewSouth provided you with information that showed that they were forecasting the need for additional trunks there, and that there was no -- that augmentation, let's say, wasn't done until sometime long after that?

A I am not disputing that NewSouth provided forecast information. What I am saying in my testimony is that there have been cases where NewSouth knew that the traffic volumes were going to change abruptly and did not so inform BellSouth. The trunk groups became overloaded and we scrambled to fix those problems.

Q Right. I think I understand what you're saying, and the only point I'm trying to make is that when you received their forecast long before those situations occurred, included in their forecast was obviously their plans or their ideas in regard to how many trunks they were going to be needing down the road. And that is something, if I understood your answer,

that you fold into a larger forecast that you do sometime in the future?

A That's right. But if I recall the language of our interconnection agreement with NewSouth, it calls for NewSouth to inform BellSouth of when large changes in the carried load or the offered load will occur.

Q And what you are saying is that the provision of their forecast, you don't consider that to be notification?

A Yes, that is my point.

Q So, what is NewSouth supposed to do? They are supposed to pick up the phone and call somebody and say, hey, we need X more trunks. We told you that in our forecast and now we are telling you again that we need them?

A That's one way to do it, yes. Now, if the traffic is coming from NewSouth's network to BellSouth's network, then it can simply send an access service request which is the trunk order from NewSouth to BellSouth, and say we need to augment the trunk group that runs from our switch to yours.

On the other hand, let's say that NewSouth anticipates that most of the calling from that new customer would run from BellSouth, that is, BellSouth's end users would call those new NewSouth customers much more often than the new NewSouth customers would call BellSouth's customers, then NewSouth should say to BellSouth either by phone call initiated or, you know, hopefully something more formal than that, but we

are going to bring on new customers on this date, we anticipate this amount of new traffic load to result, and you need to beef up your trunk group from your network, BellSouth, to NewSouth.

Q How far ahead would you like NewSouth to do that?

A Well, you know, a good rule of thumb is 30 days or so in that sometimes if facilities are not there it may take awhile to figure out what to do with the traffic. You know, not months and months, but, you know, at least some number of weeks to a month, I would say.

Q Okay. So in that Macon situation, they provided their forecast, I think, January, it was at the end of January. So that was too soon for them to let you know they needed the trunks. They should have done it, say, at the beginning of May, is that what you're saying?

A No, that's not what I'm saying. The forecast is not the vehicle to service trunk groups on a day-to-day basis by.

Q Okay. So let me just -- I want to stop you there. So you don't use that forecast in order to decide how many trunk groups to provision?

A No, I'm not saying that, either. The forecast contains very useful information, but it is useful in the parties going out and buying the right amount of transmission facilities and the right amount of switching equipment to have in place when individual needs arise. That is the forecasting and planning process.

NewSouth may make additions to its switch one time a year. And when it does that, it will most likely use trunk forecasts as part of that planning and provisioning process. That is a separate process from looking at traffic data on a day-to-day, week-to-week, month-to-month basis and saying have I got the right number of circuits installed right now or not. The forecast may say next year we are going to need 200 trunks. That doesn't mean that you turn all of those 200 trunks up at the first time that you are going to -- the first time you realize that.

Instead, what you do is look at the load on a routine basis, you know, generally monthly or so, and figure out whether you have got the right number of trunks in service right now. Which, you know, let's say that next year there is going to need to be 200, so NewSouth would buy that many trunks or more and the equipment switch for that, likewise BellSouth would make sure it had that many. But the trunk servicing process would look at the actual load and say right now there is 100 trunks in that group, is that adequate or not. The forecast says next year we are going to need 200, but you don't put all 200 in service until you need them.

The trunk servicing process is what looks at the traffic volumes day-to-day, week-to-week, month-to-month and says, do we have the right number in service right now? If the answer is yes, then you go on and you don't, you know, increase

that until you think you need to.

Q Okay. Well, my understanding is -- not to belabor the NewSouth situation -- but on January 31st they forecast the need for 72 trunks in the second quarter, which is not years and years, or even a year, or even six months into the future. It's pretty immediate. It's a little longer than the 30 days I think that you referenced, but it's pretty close in time.

A Okay.

Q And if I'm understanding BellSouth's position on this it is that that is not sufficient for you to go forward with the augmentation, that NewSouth needs to do something additional in that regard to let you know that they are going have upcoming needs in the near future.

A Yes. And what the parties need to do is to negotiate a specific date on which the trunk group quantities are going to change, either up or down. In other words --

Q A specific month and day like, you know, May 22nd or whatever the day was?

A Yes. Ultimately one party is going to send its access service request to the other and it's going to say I would like to increase from 50 trunks to 75 trunks on this date. The receiving party would send back the firm order confirmation, would agree with that data or would offer another one.

So, right now let's say there are 50 trunks in the

group. BellSouth can increase the number on its end from 50 to 100. But if NewSouth doesn't at the time increase from 50 to 100, there are still only 50 trunks in that group. So that is the cooperative nature of the servicing situation. And, yes, it does have -- I mean, ultimately that work has got to be timed very closely such that both parties finish that work on the same day.

MS. KAUFMAN: Thank you, Mr. Milner. That's all I have.

THE WITNESS: Thank you.

MR. MELSON: This is Rick Melson. Anybody care if I go next?

CROSS EXAMINATION

BY MR. MELSON:

Q Mr. Milner, I'm going to hop around a little bit. You talk in your testimony about OLNS being deployed in Florida, completion of deployment by June 11th of this year, did that happen?

A Actually I believe it happened on June 19, not June 11.

Q All right. In your description to Ms. Keating this morning, you were describing when a carrier uses OLNS -- and let me use WorldCom as an example -- and WorldCom is using OLNS and wants its operator service calls handled by BellSouth but branded as WorldCom. Do you understand that situation?

A Yes. But let me ask a clarifying question, though. Is WorldCom using its own switches or is it using UNE-P?

Q Let's say it is using UNE-P.

A Okay, I'm with you.

Q Assume there are two simultaneous calls to the BellSouth operator services platform, one from a WorldCom customer served by UNE-P and one from a BellSouth customer?

A Okay.

Q Do both of those go out and get looked up in the database?

A Yes, sir.

Q After the database look-up, do they both go into the same queue?

A Well, let's see what we mean by queue. There is a queue, let's say -- well, you said that WorldCom wanted its calls branded with WorldCom's brand?

Q Correct.

A If by that you mean that a certain little announcement or tone will be played, you know, what some people call sparkle tone in AT&T's case, if you mean that, there is a queue to get just to that announcement. But then there is also a queue to get to the live operator. So for the application of the brand -- for the application of the brand they actually temporarily go into a separate queue just to hear the tone played or the short announcement played.

Beyond that, though, presuming that all other things are equal and that WorldCom's calls are meant to go to the same operator -- well, that no other special treatment is going to be applied, then, yes, they would go into the same queue waiting on a live operator to answer. That is WorldCom's calls and BellSouth's calls would go into the same queues for operators.

Q And then when they get to the live operator, does the live operator answer with a particular brand or does the operator just say, may I help you?

A It depends on the ALEC's preference. It is possible that an icon comes up on the operator's screen that the OLNS would put there that the operator could say, you know, a script something like, thank you for calling WorldCom, may I help you? Other ALECs have chosen not to have it branded that way, but instead play that little short announcement I mentioned such that when the call gets to the operator, the operator just says may I help you.

Q Let me ask this, for the call from the BellSouth customer, how is that branded? What does the BellSouth -- does that go to what you call a sparkle tone or does that go directly to an operator?

A I am not positive, Mr. Melson. I think that it goes to the playing of that short announcement and then the operator just says, may I help you. I'm pretty sure that's right.

Q If an ALEC wanted that little icon to appear on the operator's screen so that the operator could say, you know, this is WorldCom, may I help you, would that type of call have to go into a separate queue from a call placed by a BellSouth customer?

A Again, when we say queue are we talking about the queue that goes to the live operator?

Q Yes.

A No, it doesn't have to go into a separate queue.

Q So once -- if there is no sparkle tone, then the calls all go into the same queue to a live operator, is that what you are telling me?

A Yes.

Q And if there is a sparkle tone, after the sparkle tone they all go into a single queue?

A Yes.

Q All right.

A And then the icon -- there is another icon that says that that short announcement failed, and say this, so it's pretty flexible in the way the calls may be treated.

Q All right. You discussed at several places in your direct testimony a single point of contact that has been set up to handle NXX code activation issues?

A Yes, sir.

Q And I believe you indicate that since its inception

through the date of your testimony it had been involved in resolving some 400 customer-related routing problems?

A Yes.

Q What is a customer-related routing problem in that context?

A Well, it could be -- the problem could be a number of different things. For example, all of the service providers whose switches should have opened a certain code on a certain date didn't do so, and so you need some quick action to get the code open because now there are actually, you know, live customers being served by that code. That's one example. Or that certain switches were programmed wrong and that it is sending calls to the wrong switch. Just a number of different problems.

You know, another problem might be that the ALEC switch was not ready on the date that it announced to the world that it would be ready, and that other temporary measures had to be taken to make sure the calls flowed as they should. So it's a lot of different situations.

Q Do you have any breakdown of that 400-odd problems as to how many were problems caused by an ALEC, how many were problems in the BellSouth side?

A No, sir, I have not seen a breakdown of that type.

Q Do you have any more current information on the number of NXX codes activations that have taken place and the

associated number of problems that made their way to your single point of contact?

A No, I don't have fresher information. What I do is contact the director of that center and they query, you know, their paper records and give me an answer. But, no, I don't have fresher information than that.

Q All right. At a couple of places in your testimony you talk about volume of resale units?

A Yes, sir.

Q And just so I'm clear, if I am a customer served -- being served on a resale basis and I have a residential line and three custom calling features, does that count as four units for purposes of your total?

A Yes, sir, it would.

Q Could you turn to Page 2 of your rebuttal testimony?

A Okay, I'm there.

Q And I've got a few questions for you about what Mr. Argenbright refers to as trunk fragmentation and about the supergroup option that you referred to on Page 2 of your rebuttal testimony.

A Okay.

Q If a carrier elects to use a supergroup, could you enumerate for me all the various types of traffic that can be handled in that single supergroup?

A Yes. I give kind of a high level view of that in the

part of that sentence on Line 17, but the supergroup allows the exchange of local and intraLATA toll traffic. Now, local in that context should be traffic from BellSouth's end users, from another ALEC's end users, or from independent local exchange carriers, all of that being local traffic. From BellSouth's view it would be the traffic originated by BellSouth's end users, as well as transit traffic, as well as intraLATA toll traffic.

Q Would it also include any transit access traffic, interLATA transit traffic?

A Yes. If you look down on the remainder on Lines, I guess, 18 and 19, the second part talks about exactly that, the exchange of local, interLATA or interLATA transit traffic.

Q Let me tell you the problem I'm having with that sentence and the problem I'm having with my understanding of what the supergroup does. There are two ways to read that sentence, frankly, and the first one is that you could put local and intraLATA traffic on a single trunk group.

A Correct.

Q The first half of the sentence, and then the second half of the sentence, you could put local, intraLATA, and interLATA transit traffic on a single trunk group, but you still would have two trunk groups involved, one handling local and intraLATA and one handling all types of transit traffic.

A Yes, that's right. Yes.

Q Is that what you are saying or are you saying that local, intraLATA, local transit, intraLATA traffic, and interLATA traffic can all go on one trunk group?

A No, sir, I'm talking about two different trunk groups here.

Q All right.

A You might mix local and intraLATA toll between BellSouth's switch and an ALEC switch over one trunk group or for the second trunk group you could mix local, intraLATA, or interLATA transit traffic over a single trunk group. So when I introduce the word transit traffic, no, I'm not talking about traffic from BellSouth's end users.

Q Okay. If I understand correctly, even with a supergroup BellSouth does not put any transit traffic on the same trunk group with its own local and intraLATA, is that correct?

A Say that again, please. I believe the answer to be yes, but I just want to make sure I have the question correct.

Q Okay. Is transit -- even in a supergroup context, is all transit traffic always on a separate trunk group from BellSouth customer local and intraLATA traffic?

A Yes, that is my understanding.

Q So to the extent Mr. Argenbright's testimony goes to the requirement to separate transit traffic from other traffic, the supergroup option does not, would not resolve that concern?

A It may not, that's right.

Q Are you aware of a recent FCC order -- and I apologize, I'm not sure I know the date, I believe it was July -- regarding the types of equipment that can be collocated in a central office?

A I'm generally aware of that order, yes.

Q Has BellSouth proposed any change to its SGAT to reflect the change in the FCC's requirement?

A Not one that I have seen. You may be aware that BellSouth did not agree with the FCC's findings and has filed either a petition for reconsideration, I believe that's what we did, regarding that very issue. But I don't believe that at this moment the SGAT has been revised to recognize the requirement of that. Further, I don't think that the FCC's order is effective yet, but I think that is where the situation sits right now.

Q All right. You talk in your testimony about a new offering that is available to enable ALECs to combine network elements called the assembly point, are you familiar with that testimony?

A Yes, sir.

Q Does BellSouth have assembly point language included today in any interconnection agreements in Florida?

A I don't know the answer one way or either, Mr. Melson.

Q All right. I believe you do have assembly point language in your SGAT, is that correct?

A Yes. I know that it is there, yes.

Q Okay. But that SGAT is not yet effective, is that right?

A I don't know the answer to that.

Q Do you know if a carrier came to you today and said I want to take service under your SGAT, whether BellSouth would permit that or not?

A Yes, I believe we would. I think you're asking me some questions about how an ALEC would avail itself of using the assembly point. I mean, probably the -- well, one way at least, I was going to say the simplest way, but one way at least would be if the interconnection agreement did not, you know, have that provision in it, to modify the interconnection agreement such that it did. The assembly point itself is a rather straightforward kind of arrangement. It's basically just a distributing frame.

Q Can you -- assume I am an ALEC and I want to combine an unbundled loop from BellSouth with unbundled local switching. And unfortunately this is a new customer for whom BellSouth does not have -- is not currently providing service.

A Okay.

Q My understanding in that situation is BellSouth would not provide the UNE-P, is that correct?

A That is correct.

Q Assume that I wanted to use the assembly point arrangement, would you describe for me physically how that loop and that switching UNE get connected?

A Sure. I will start out fairly high and then we will dive down as deep as we need to. In that situation, the ALEC would send to BellSouth two different local service requests, one for the loop and one for the port. Both of those UNEs would be extended from BellSouth's part of the network to this distributing frame, which we call the assembly point.

So the loop and the port would be terminated to this distributing frame, BellSouth would notify the ALEC as to when that work was completed, and then the ALEC would send its technician to that central office and would connect those two UNEs together.

Q Okay. Physically how is the loop extended to the distributing frame?

A We would place cables from one of our distributing frames to the assembly point and tie that cable down at the time we installed the assembly point. That cable would be terminated in a connector block at the assembly point. And then at the time, let's say that BellSouth provided the unbundled loop, BellSouth would make connections from its main distributing frame over to that cable that runs to the assembly point, would make those cross-connections such that the loop is

now extended from BellSouth's main distributing frame over to the assembly point. Then BellSouth would make cross-connections on its main distributing frame to either that same cable or another cable that runs from the main distributing frame to the assembly point such that the unbundled switch port is extended over to the assembly point.

And then we would inform the requesting ALEC of the appearances on the assembly point that the loop and the switch appeared such that the ALEC would send its technician, who would run jumpers between those two places on the assembly point, thus connecting the loop and the port.

Q So if I am visualizing correctly, I've got an unbundled local loop coming into an appearance on the main distributing frame, I've got a jumper from that point on the main distributing frame to another point on the main distributing frame?

A You're correct.

Q From that point there is a cable running to this assembly point?

A Yes, sir.

Q There is a jumper installed by the ALEC from one point on the assembly point frame to a different point on the assembly point frame?

A Correct.

Q From the second point on the assembly point frame

there is a cable back to the main distributing frame?

A Correct.

Q And there is a jumper on the main distributing frame to connect to a switch port?

A That's right. Very good.

Q Now, if BellSouth were providing that -- using that same loop and that same switch port to serve an existing customer, am I correct that it would simply be one jumper on the main distributing frame to connect the loop to the port?

A Ordinarily so. There are some cases where there might be more than one because of the fact that switch ports did not all appear at the main distributing frame, but rather had to go through intermediate frames. But generally, yes, one jumper connecting the loop and the port. Beyond the main distributing frame, though, there are other cables that run from the main distributing frame to intermediate frames and then to the switching equipment itself.

Q And those connections would be the same under either scenario, BellSouth providing the service, or BellSouth running everything out to an assembly point?

A Yes, that's right. Another comparison is that the number of cross-connections with the assembly point is the same number of cross-connections for collocation as far as BellSouth is concerned in that instead of tie cables that would run from BellSouth's frame to the collocation arrangement, instead the

tie cables run to this assembly point. So the number of cross-connections and cables involved for the assembly point should be the same as in the context of collocation.

Q Now, you have -- BellSouth has proposed rates for assembly points in this proceeding, is that correct?

A That is my understanding, yes.

Q Do you happen to know what those rates are, or is that something we should talk with Ms. Caldwell about?

A I would ask you to refer that to Ms. Caldwell. I don't know how the -- I don't know what the rates are. I mean, I know generally what things are involved in creating and using the assembly point, but I don't know the rates that were developed.

Q Okay. In the BellSouth region is any CLEC using an assembly point arrangement today?

A Not to my knowledge, no.

Q Have you forecast any demand for assembly point arrangements?

A No. The assembly point, as I pointed out a little earlier, is a pretty straightforward device. It's just either a separate distributing frame or a part of the distributing frame just to where you will -- BellSouth will deliver these unbundled network elements. So I don't know necessarily know that a separate forecast, you know, would be all that useful given the simplicity of the device we're talking about.

Q At other places in your testimony you talk about the fact that distribution frame connector blocks are -- I won't say a scarce resource, but a finite resource. Do you recall that testimony?

A Yes. I mean, ultimately there might be an ultimate size the distributing frame might be, limited by the amount of space available in the building and the size of the building. So, yes, like most things in the world it has a finite limit to it, but fortunately we have been very successful in never reaching that finite limit, and as a result not serving customers because of a shortage of distributing frame space.

Q Let me ask this, if I understand correctly the assembly point arrangement uses more connector blocks on the main distributing frame than if BellSouth were providing service to the customer itself, is that correct?

A Yes, because there is a connector block to which that tie cable is punched down. In other words, you don't -- the tie cable running between the main distributing frame and the assembly point is terminated on both ends in these connector blocks.

Q Okay. And so there are actually two additional connector blocks used on the main distributing frame in the assembly point arrangement that we just described, one for the loop and one for the switch port?

A Well, no, not necessarily. I used that as just

convenience just to say that it, you know, that they might be in two different places. They could very well be on the same block. In other words, it's just copper pairs between the main distributing frame and the assembly point. So I just said visualize it as two different blocks, one for the loop, one for the port. And we would make that decision as to whether to use one block or more than one block based on the volume of what the, you know, what we thought the CLEC -- or the ALEC, rather, might want to acquire.

Q How many cables can be connected to one connector block?

A Well, there are a number of different sized connector blocks, so it all depends. From as few as 50 pairs to 100, let's say, would be fairly common.

Q You state in your testimony that BellSouth makes UNEs available at Commission approved rates. Are the rates that the Commission approved in the recent generic UNE cost docket included today in any interconnection agreements?

A I don't know the answer to that.

Q So when you say BellSouth makes UNEs available at Commission approved rates, do you mean the most recently approved rates or do you mean some prior approved rates?

A Well, I mean both. Your question was do they appear right now in any particular interconnection agreement and that is the part of the question that I say that I don't know.

Q All right. In your testimony you state that BellSouth will work cooperatively to implement line splitting, do you recall that testimony?

A Yes, sir.

Q Is there any line splitting taking place in Florida today?

A Not to my knowledge, no.

Q Is there any line splitting taking place anywhere in the BellSouth region today?

A None that I know of, no.

MR. MELSON: That's all I've got. Thank you, Mr. Milner.

THE WITNESS: Thank you, sir.

MR. FEIL: This is Matt Feil. I'll go next if that is okay with everybody else.

MS. KEATING: Matt, actually could we take about a five minute break?

MR. FEIL: Sure.

MS. KEATING: And I'll just leave the line up.

MR. FEIL: And I'm going to come off and then dial back up.

MR. CAMPEN: Beth, this is Henry Campen. I don't have any questions, so I may not rejoin.

MS. KEATING: Okay. Lisa, is that all right with you all?

MS. FOSHEE: Yes, that's fine. And just so everybody knows, we got Tracy's fax, so we will be ready to go to finish her up whenever everyone else is ready.

MS. KEATING: Okay. See you back in five.

(Recess.)

MR. FEIL: I'm ready when everybody else is.

MS. KEATING: Is Mr. Milner back?

MS. FOSHEE: We're ready.

MS. KEATING: Okay.

CROSS EXAMINATION

BY MR. FEIL:

Q Mr. Milner, my name is Matt Feil. I'm an attorney with Florida Digital Network. I have a cold, so if you don't understand my question, or I interrupt you with coughing or sneezing, we may have to repeat things.

A That's fine.

Q The first thing I wanted to ask you about -- and I'm going to be jumping about from topic to topic. The first thing I wanted to ask you about was something that Ms. Bennett (sic) for AT&T touched upon, and that was what she called the oddball code, and she also referred to the 930 NXX exchange, or, excuse me, NXX code?

A Yes, sir.

Q Does the 930 NXX code have -- or service have a term of art associated with it, is it a service that BellSouth has

labeled and sells to customers?

A If there is I'm not real clear from this. What I have here is the information that she just faxed over and the phrase uniform access appears in here and it uses that label for this 930 code. But apart from this, I'm not sure if there is another -- if there is another phrase or another service market we use with that or not.

Here is why I'm hesitant, we have got a couple of retail services that sort of have the same effect but work in different ways and they carry two different names. One is called ZipConnect (phonetic), which is referenced in this part of the order that she faxed over and, in fact, I think the 203 code is the code that is used for ZipConnect.

Q Mr. Milner, could I interrupt you for a second. I wanted to make sure Ms. Bennett (sic) was back on the line?

A Okay.

MS. VANEK: I am, I'm here.

MR. FEIL: Okay. I just wanted to make sure. Go ahead, Mr. Milner, I'm sorry to interrupt.

THE WITNESS: That's all right. So, 203 is for the ZipConnect service. The other service that provides generally the same kind of functionality, we have a service market called UNISERV, U-N-I-S-E-R-V. And my hesitation is that I'm not sure if this phrase uniform access is a reference to our UNISERV service or to something else. So from what I have here, I just

can't tell.
BY MR. FEIL:
Q Well, you said the NXX code for the ZipConnect service was 203?
A Yes, sir.
Q And you said for uniform access or what you believe uniform access was 930?
A According to this order, yes.
Q Are there any other NXX codes that are associated with either the ZipConnect, or uniform access, or UNISERV services?
A Let me look. That is the only one that is named in this order for ZipConnect was 203. Let me just scan these pages because it -- okay, it says that there are two NXX codes that are used for the uniform access number, the 930 code that we talked about and another code, 440. So those are the two that this order refers to as being used for uniform access.
Q So you don't know whether or not there are any others in addition to those -- well, I guess list of three, 203, 440, and 930?
A Well, do you mean for use in conjunction with uniform access?
Q Or ZipConnect.
A Well, I think that's all for those two purposes. Those two codes that we just talked about for uniform access,

930 and 440, and 203 for ZipConnect.

Q And you are not aware of any others?

A Not used for those two services. This part of the order talks about other codes, such as the 780 code, which is what BellSouth provides access to its official services such as business offices and the like over. So actually there are five codes in here that this order refers to as regional oddball codes rather than national oddball codes. And collectively they are 780, 203, 204, 440, and 930. So five codes altogether.

Q Okay. And how did you describe the 78 (sic) code, you said that was for access to official services?

A Yes, what traditionally we have called BellSouth official service. So from anywhere in the state you might dial 780 plus four numbers to reach BellSouth's business office.

Q Okay. With regard to the question Ms. Bennett (sic) asked you regarding portability for 930, I want to make sure I understood your answer. I thought at first you said you didn't know whether or not a 930 telephone number was portable and then you said, well, it may be if advanced intelligent network were involved, but it may not be if advanced intelligent network was not involved?

A Yes.

Q Could you explain your answer again. I'm not sure I understood it when you gave it the first time.

A Okay. I'll try, and I still can't be conclusive in my answer. But this service, for example, ZipConnect I believe is our advanced intelligent network based service that allows a single -- you know, a customer to have a single telephone number. And it is my belief that the number is either portable or might be made portable with the AIN solution. The other solution, this service we call UNISERV uses a different platform, and I don't believe that that number would be portable. And even with the AIN service, I'm not sure that as we sit here today it could be ported. There may be other work that would need to be done.

Q All right. I mean, is it safe to say that if an ALEC has a request from a customer who has a 930 NXX code that the ALEC should assume that that number is not portable?

A That's a reasonable conclusion, yes. Sitting here without looking at all the details of those two services, I can't say conclusively, but, yes, I think that is a reasonable conclusion.

Q Do you know whether or not an ALEC customer, an ALEC end user can call a 930 number and have the call completed?

A Yes, presuming that some work is done in the ALEC's network, yes. Well, let me qualify that answer. Two situations; if the ALEC is a reseller, then the answer is yes without any work being done. If the ALEC uses UNEs to effect its service, the answer is still yes. If the ALEC has its own

switch, then that is when the ALEC would need to do some work in its network to cause the routing to the right places. But, yes.

Q So you are saying an ALEC that used it's own switch would have to add additional equipment or modify its switch and routing in order to complete a call from one of its end users to a 930 number?

A That's right. It might, for example, have to establish a trunk group from its switch to BellSouth's operator platform where this UNISERV functionality resides. In other cases, it might have to translate these codes such that the calls are put on certain trunk groups and sent to BellSouth over those trunk groups.

Q Okay.

A Just for clarity, the document that I was looking at is the Florida Commission's Order PSC-01-1484-PCO-TL, which was issued July 16 of this year.

Q Okay, thank you. If a customer is calling a 930 NXX number -- if the customer was calling from an area where ten digit dialing is mandatory, do you know whether or not the customer would have to dial the ten digits?

A I would -- yes, I would believe so. Generally, BellSouth's use of these codes in its own network requires that in places where we have got ten digit dialing that you add the area code in front of one of these numbers.

Q Thank you. I'm going to hop around now in your testimony in a few different areas and hopefully I won't be more than five to ten minutes. Referring to Page 14 of your testimony, Lines --

A I'm sorry, are we in direct?

Q I'm sorry, rebuttal.

A Okay. Page 14?

Q Yes. Page 14, Lines 4 through 11. I just have a generic question of sorts.

A Okay, I'm with you.

Q Is it correct to say that BellSouth does not do a facilities check before issuing an FOC?

A That is correct, yes.

Q On Page -- actually starting at the bottom of Page 14 and through Page 16 where you are addressing AT&T's testimony regarding hot cuts?

A Yes, sir.

Q Is your testimony pertaining to loops ordered as SL-1s, or SL-2s, or both?

A Well, this part just talks about hot cuts in general, so it could be either of those, or both.

Q Okay. On Page 21, I guess, beginning toward the end of Line 6 -- and I'm still in your rebuttal testimony.

A Okay.

Q I'm a little bit confused about the process you are

describing here where a loop is converted from, I guess, a home run copper loop to a fiber fed DLC situation?

A Yes, sir.

Q Could you walk me through what changes BellSouth would make to the LFACS database in a case where a loop is converted from a copper loop to a fiber fed DLC?

A Okay. This is a working loop that we are talking about?

Q Yes, sir.

A Okay. In LFACS changes would be made to describe the parts of that loop that have changed. That is, the fact that the formerly used copper in the loop feeder, that is the part from the central office to the DLC remote terminal, is no longer used, but instead it would show the association of this loop with the DLC equipment and then the loop feeder.

What this paragraph is talking about is that unless BellSouth has made a decision to abandon the copper facilities that run from the central office to the DLC, then those facilities remain inventoried in LFACS. In other words, just because we put DLC and fiber-optics between the central office and the remote terminal does not mean that we automatically remove the copper facilities from the central office to the remote terminal from our database. And, in fact, it is a conscious decision that either the -- that that copper loop feeder is no longer workable, or we are going to salvage it or

whatever. Unless an overt decision like that is made then the copper facilities are still inventoried in LFACS.

Q For example, those feeder facilities may be retained there as spare copper if needed at some other point in time?

A Exactly. And so let's say that a given -- all the customers in that cross section let's say have been moved onto the DLC. But just for simplicity let's say that at the time that was done there were no DSL customers served by that part of the copper. Let's say the next month a customer wants DSL service but is served now by DLC. The original copper facilities from the DLC to the central office are still in place, and so we could take that customer's loop distribution pair, that is the part that runs from the DLC to the premises, take it off the DLC and tie it back to that copper facility that runs forward to the central office. So, yes, we could still make use of those copper facilities forwarded to the central office if they are still suitable.

Q Now, if the facilities were in the mechanized basis -- excuse me, in the database that ALECs can access through a mechanized system, when you made the change the change would also be to the database?

A Yes, sir.

Q Which we could access, or ALECs could access on a mechanized basis?

A That's correct. If you looked up a given telephone

or a given customer's telephone number or loop in LFACS, you would you see the currently serving arrangement, which would include the DLC.

Q Okay. And then if the currently serving arrangement was changed, that would also be -- that change would also be made in the database? In other words, it doesn't go to a manual process when the change is made?

A That's right. LFACS is the database and it's a mechanized process.

Q So if the information was not in LFACS for the currently serving loop to begin with, if it was only available to ALECs manually at the time the conversion was made, would it also be only available manually or do you update the LFACS database to include the information when the conversion is made?

A That's a good question, because I'm not sure if I'm the right one to answer that or not. Mr. Pate would probably be a better one to ask. Let me see if I can -- I can answer part of that and let me say it this way. All of the loops that BellSouth uses are inventoried in LFACS. For some loops there is more information than from others, and so I think when you say -- well, your question sort of suggested to me that you mean to ask when you make this change to DLC, do you automatically populate all of this other information that you might have at that same time. If that was your question, I

don't know, and that's a good question for Mr. Pate.

Q All right. Thank you.

A But what I do know is that when we change, you know, when we change from an all copper loop to one that uses DLC, all the information about the DLC is populated into LFACS at the time we make that conversion.

Q When the conversion is made, do you know typically how long it would take for the LFACS to be updated?

A Not precisely. I mean, the LFACS database is updated, you know, very often. At least one time a day, so we're not talking about a great deal of time difference between when an event occurs and when it is referenced, you know, correctly in LFACS. But I'm not sure if that is, you know, measured in the entire day, or if it is batched just one time per day, or if it might be more frequently than that, like several times a day, I just don't know.

Q All right. Page 24 of your rebuttal testimony, Line 19.

A 24 did you say?

Q Yes, sir. Page 24, Line 19.

A Okay.

Q You say -- well, actually the sentence begins at Line 17, but you say cases that does not exist in Florida, I assume you meant to say do not exist?

A You're right. My grammar is not what it should be on

that.

Q It was just a typo. Is what you are saying basically here that the four conditions of the FCC orders/rule do not come into play because no ALEC has requested collocation at a remote terminal in Florida?

A That's only one of the four. Let me see if I can run them all down.

Q Well, I know what the four are, but isn't that the applicable criteria as to why there is no or are no cases in Florida?

A No. My statement here is that all four of the conditions that the FCC talked about in its order have not been met in Florida. That is, you know, the facilities involved, digit loop carrier, BellSouth has provided its own DSLAM in a given situation, there is not room for the ALEC to provide its own DSLAM at that same location. So I'm saying that the combination of all four of those criteria, which is what would trigger a requirement for BellSouth to provide unbundled packet switching have not been met in Florida.

Q Is it correct to say that no ALEC has applied for collocation of a DSLAM at a remote terminal in Florida?

A That is most likely the case. The last time I checked -- and I have to admit that was some weeks ago -- that was the case. So it may very well be that as of this moment ALECs have not requested to deploy their DSLAMs in a remote

terminal. That is entirely possible.

Q Okay. On Page 27 at the bottom, beginning at Line 23?

A Page 27?

Q Yes, Page 27, Line 23.

A Okay, yes.

Q You are referring to two -- excuse me, you referred to two PSC dockets. The first was the docket you referred to, 990691, the ICG case, are you familiar with that?

A Yes, sir.

Q Okay. And the second is 991854, that is the Intermedia arbitration case, correct?

A I believe you're right, yes.

Q Okay. Is it fair to say that the FPSC basically parroted the FCC orders and rule regarding packet switching at that time -- or, excuse me, that packet switching did not have to be unbundled in most cases?

A I don't know if I would characterize what the PSC did as parroting the FCC. I think they came to a conclusion that was consistent with what the FCC had ordered in its advanced services order, yes.

Q In other words, then, would you agree with me that in neither case did the ALEC present proof of whether or not the impair standard was met in order to create a new UNE for unbundled packet switching?

A In those two cases I believe you're right, yes.

MR. FEIL: And I believe that's all I have. And I hope I didn't mess up anything Ms. Bennett (sic) wanted to ask about the oddball codes. But that's all I had. Thank you.

THE WITNESS: Thank you, sir.

MS. VANEK: Does anybody else have any questions? This is Traci Vanek. All right. Well, I don't, either, actually. So after all of that, thank you, Mr. Milner. I appreciate your time.

THE WITNESS: Thank you, ma'am.

MS. KEATING: Lisa, could we set up a time to get that late-filed deposition exhibit?

MS. FOSHEE: Absolutely. What do you think is a realistic time?

THE WITNESS: Was that Beth speaking?

MS. KEATING: Yes.

THE WITNESS: Beth, I don't think it's going to take us very long. If you can give us a few days, though, just in case there is something I'm not aware of. I think what was asked for was just the trunking report on that trunk group for the month of May.

MS. KEATING: How about --

MS. FOSHEE: Next Wednesday?

MS. KEATING: Next Wednesday or Thursday would be fine.

THE WITNESS: Let's go with Thursday, because I have got to be in another state for a couple of days next week. So Thursday would work out well for me if that's okay.

MS. KEATING: Thank you.

THE WITNESS: Certainly.

MS. KEATING: And that concludes this deposition. Thanks.

(The deposition concluded at 12:08 p.m.)

TELEPHONIC DEPOSITION OF:	A. WAYNE GRAY Located in Atlanta, Georgia
TAKEN AT THE INSTANCE OF:	The Staff of the Florida Public Service Commission
CONDUCTED FROM:	Gerald L. Gunter Building Room 362 2540 Shumard Oak Boulevard Tallahassee, Florida
TIME:	Commenced at 1:30 p.m. Concluded at 2:15 p.m.
DATE:	Tuesday, September 11, 2001
REPORTED BY:	KORETTA E. FLEMING, RPR Official FPSC Reporter

APPEARANCES:

ANDREW SHORE, 675 W. Peachtree Street, Suite 4300, Atlanta, Georgia 30375, appearing on behalf of BellSouth Telecommunications, Inc., participating telephonically.

DONNA McNULTY, 325 John Knox Road, The Atrium, Suite 105, Tallahassee, Florida 32303-4131, appearing on behalf of Worldcom, Inc., participating telephonically.

MATTHEW FEIL, 390 North Orange Avenue, Suite 2000, Orlando, Florida 32801, appearing on behalf of Florida Digital Network, participating telephonically.

SUZANNE OCKLEBERRY, 1200 Peachtree Street, Suite 8017, Atlanta, Georgia 30309, appearing on behalf of AT&T, participating telephonically.

BENJAMIN FINCHER, 3100 Cumberland Circle, Cumberland Center II, Atlanta, Georgia 30339-5940, appearing on behalf of Sprint, participating telephonically.

BETH KEATING and FELICIA BANKS, FPSC Division of Legal Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, appearing on behalf of the Commission Staff.

ALSO PRESENT: STEVE TURNER, Consultant for AT&T, participating telephonically; CAYCE HINTON and DAVID DOWDS, Division of Competitive Services, appearing on behalf of the Commission Staff.

MISCELLANEOUS

Stipulation	4
Errata Sheet	30
Certificate of Reporter	31

S T I P U L A T I O N

IT IS STIPULATED that this deposition was taken pursuant to Notice in accordance with the applicable Florida Rules of Civil Procedure; that counsel present stipulate that the witness, A. WAYNE GRAY, is the person he identified himself as; that objections, except as to the form of the question, are reserved until hearing in this case; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

PROCEEDINGS

MS. KEATING: First, I'd like to begin and make sure that everyone agrees that the usual stipulations will apply. Are those all right, Mr. Shore?

MR. SHORE: That's great.

SPEAKER: I'm sorry, what stipulation did you refer to, Beth?

MS. KEATING: The usual stipulations, reading and signing is not waived, everyone agrees that the witness on the phone is witness Gray, objections, except as to form, are reserved for the hearing.

SPEAKER: All right. Thank you.

MS. KEATING: And could we go ahead and take appearances?

MR. SHORE: This is Andrew Shore at BellSouth representing BellSouth and I have Mr. Gray, the witness, with me.

MS. KEATING: And this is Beth Keating appearing for Commission Staff. And let's start with those that are in the room with us.

MS. McNULTY: Donna McNulty from Worldcom.

MS. KEATING: And back to those on the phone.

MR. FEIL: Matt Feil with Florida Digital Network.

MS. OCKLEBERRY: Susie Ockleberry with AT&T.

MR. FINCHER: Ben Fincher with Sprint.

MS. KEATING: Okay.

A. WAYNE GRAY

was called as a witness telephonically and, having been duly sworn by a notary public, testified as follows:

DIRECT EXAMINATION

BY MS. KEATING:

Q Witness Gray, would you please state your name, for the record?

Q It's A. Wayne Gray.

Q And by whom are you employed?

A BellSouth.

Q In what capacity?

A Director for Collocation of BellSouth in our Network Services Organization.

Q Now, how long have you been employed in that capacity?

A Since November 1999.

Q Mr. Gray, my questions are mainly going to address the testimony that -- your Surrebuttal Testimony. I'm not really looking at your affidavit. And primarily, what I'd like to do is get some clarification regarding your statements on Page 5 of your testimony. And what I want to find out is under what circumstances and in what manner BellSouth provides various types of collocation at remote terminals.

A Okay.

Q Okay? Now, may an ALEC choose direct access collocation within any of BellSouth's remote terminals?

A I'm not sure what you mean by direct access.

Q I think that's the same thing that's also been referred to as physical internal collocation.

A Okay, yes, definitely. We offer collocation in remote terminals, basically, under the same rules we do in central offices, so all the different types of collocation are available.

Q Okay. And are they available at all remote terminals?

A Space being available, yes, they are.

Q Okay. Now, in remote terminals where BellSouth has a DSLAM installed, is that remote terminal climate-controlled?

A Not necessarily, it could be in a cabinet, and cabinets are not climate-controlled. It could be in a CEV, which in some cases are.

Q Okay. Is it technically feasible to segregate and secure an ILEC's equipment from an ALEC's equipment within a BellSouth remote terminal?

A No, it's not. The remote terminals are very small in nature, and there's no way to segregate or secure our equipment from the CLEC equipment.

Q Is that true for all remote terminals or all BellSouth remote terminals?

A To my knowledge, yes.

Q Okay. Now, when BellSouth constructs a new remote terminal, does BellSouth consider possible future ALEC collocation needs?

A I'm not sure. I haven't been involved in placing new remote terminals, so I'm not sure of the answer to that.

Q Do you know who would know the answer to that?

A I could find out.

Q Okay. What I'd like to do is ask you for a late-filed deposition exhibit, simply identifying whether BellSouth considers possible future ALEC collocation needs when it constructs a new remote terminal. I'd also like that exhibit to explain the process by which BellSouth identifies those needs.

A Okay.

Q And this would be late-filed deposition Exhibit 1, and, I believe, we can just title it, "Construction of New Remote Terminals."

A Okay, we'll do that.

(Late-Filed Deposition Exhibit 1 identified for the record.)

BY MS. KEATING:

Q Next I just want you to clarify for me, will BellSouth unbundle packet switching at a remote terminal when there's no space for an ALEC's DSLAM in the remote terminal?

A Yeah. Under the FCC requirements, if BellSouth has its own DSLAM place in that remote terminal, then, yes, we will unbundle the packet if we cannot accommodate the collocation.

Q Could you just explain how that would work?

A Again, I'm not sure how it would work. I'm not even sure if we've set up the process and procedures to do that yet.

Q All right. What I'd like you to do, then, I'd like a second late-filed deposition exhibit and, if you would, explain the process by which BellSouth would unbundle packet switching at a remote terminal.

A Okay.

Q And that would be late-filed deposition Exhibit 2, and it could just be identified as "Unbundling of Packet Switching at RTs." Okay?

A Yes, ma'am.

(Late-Filed Deposition Exhibit 2 identified for the record.)

BY MS. KEATING:

Q All right. Next, if you would, just describe for me the situations where BellSouth would not allow an ALEC to collocate within a remote terminal.

A Well, the only case that would be, would be where we physically have no space available. It's very similar to central office collocation. If there's no space available, then we would have to file a waiver for that remote terminal

site. Other than that, we would allow collocation. And even in the case where we're out of space, we would still allow virtual collocation and, again, adjacent.

Q Can DSLAMs be installed in all BellSouth remote terminals?

A Space permitting, I would believe so.

Q You don't see any technical difficulties with that?

A I'm not aware of any.

Q If an ALEC were to ask to install a DSLAM in a BellSouth remote terminal where BellSouth didn't already have its own DSLAM there, how would BellSouth respond to that request?

A That's a collocation request, and we would follow the rules for collocation which says that within ten -- or in Florida in 15 days we would respond whether space is available, and if there's space available, then the CLEC would submit an order for collocation. Whether it's a DSLAM or not doesn't matter, it's collocation.

Q Okay. Well, are you familiar with the testimony of AT&T witness Turner?

A Yes, ma'am, I am.

Q Okay. In his Rebuttal, witness Turner contends that BellSouth refuses to allow ALECs to use the integrated splitter card. Can you explain for me what an integrated splitter card is?

A I believe, what Mr. Turner is referring to is a card that plugs into our NGDLC equipment. And what he's asking is for AT&T to have the option of plugging a circuit pack into BellSouth equipment and that's not -- you know, that's not something that we allow. That's not collocation. That's comingling plug-ins in existing equipment, and that's something that we just can't accommodate.

Q From a technical perspective, you can't accommodate it or from a policy perspective you can't accommodate it?

A It's a security safety issue. When you have more than one organization plugging circuit packs and equipment and removing them and pulling them out when they go defective and so forth you have service outage possibility. It's just not feasible from a maintenance standpoint to allow that. I mean, it becomes very dangerous from the aspect of customer service.

Q Are there any technical impediments other than safety issues?

A Well, yeah. Whoever puts the plug-in in the circuit -- you know, plug-ins can go in the equipment to provide the service if they're designed to do that. The whole issue is comingling of equipment and problems associated with that.

Q If AT&T were to provide the card, would you allow them to place it at the remote terminal?

A Not in ours. Not in our NGDLC equipment, no.

Q How is that different from virtual collocation?

A In virtual collocation, BellSouth maintains -- installs and maintains the card. It's not -- the CLEC isn't actually out there doing the work. They're hiring BellSouth to do it for them in virtual collocation.

Q What if AT&T were to allow BellSouth to install and provide maintenance on the card?

A Then, we've got virtual collocation, and that's not the same as physical collocation.

Q Okay. I'd like to change subjects just a little bit and talk about billing for power.

A Yes, ma'am.

Q I'm looking now at Page 40 of your testimony where you reference the Florida Commission's decision regarding billing for power on a fused amp versus load amp basis?

A Yes, ma'am.

Q Is it correct that ALECs must submit an equipment list when installing equipment in a central office?

A They have to tell us the type, yes. They tell us the type of equipment they're installing.

Q And do the equipment specifications generally outline the maximum current draw of the ALEC's equipment?

A The nominal drain is usually part of equipment specifications, yes.

Q Could you explain what nominal draw or nominal drain is?

A It's basically the average -- average current drain of the equipment.

Q Well, typically, what would the nominal drain be?

A There's no such thing as a typical. Our BDSBs are designed anywhere to be fused anywhere from 10 to 60 amps, so basic telephone equipment runs anywhere between, you know, 10 and 60 amps. Of course, you fuse it at 1 1/2 times the drain, so it just varies depending on what type of equipment it is.

Q Well, suppose it were fused for 13 amps.

A If it were fused for 13, then you would -- it's a factor of .67, so you would apply to it to take it down to whatever -- I don't have a calculator on me, but I guess, that's around 10 amps; is that right? That's less than 10 amps. Ten amps would be 15, so it would be 8 or 9.

Q Okay. Well, if equipment is rated for 13 amps, does BellSouth still require the ALEC to pay for 20 amps?

A No, no. If equipment's rated at 13 amps, then it would be fused at 1 1/2 times that, but as I mentioned in my testimony, when we actually calculate the rate we apply a factor to take it back down to the nominal drain when we bill it. That's covered on Page -- let me see if I can find it for you, Page 43 of my Surrebuttal.

Q Okay. If I could get you to look back at Page 41 of your Surrebuttal. Could you explain whether BellSouth offers the BDFB power supply at all of its central offices?

A The phone rang in the middle of your question, could you --

Q Sure. Hello?

MR. SHORE: We're here.

MS. KEATING: We didn't lose you?

THE WITNESS: No, we're here.

BY MS. KEATING:

Q Okay. I was asking you to look back at Page 41 of your Surrebuttal.

A Okay.

Q And I'm just wondering if you can explain whether BellSouth offers the BDFB power supply at all its central offices?

A Yes, we do. That's part of our standard collocation arrangement.

Q Okay. Could you then explain the technical and logistical differences of a BDFB power supply versus an A and B feed?

A A BDFB is a fused -- it's similar to the fuse panel that's on your house or the breaker box that's on your house. It's just simply a place to distribute power. You know, in your home you've got a breaker box that has breakers in it that feed the lights and the outlets in your house. That's what a BDFB is. It's got fuse positions. And the equipment is powered from those fused positions.

Now, most central office equipment has both. When you talk about A and B feeds, most central office equipment has A and B feed, so they've got redundant power feeds to them. And that's what the A and B feeds are. The A and B feeds are the actual -- it's like the actual plug that you plug in from your lamp to the wall socket.

Q Well, which do you use which for? I mean, what does the BDFB apply to and what does the A and B feed apply to?

A The A and B feed is like the power cord going to the appliance and the BDFB is like the fuse panel or the circuit breaker panel in your house.

Q Okay. All right. Now, if I can get you to look over on Page 42 of your testimony in Lines 18 through 19.

A Okay.

Q I'd just like you to explain what are the increments of fuses that BellSouth offers between 10 and 60 amps.

A Whatever the CLEC can buy from a power distribution house; in other words, there are no increments. The BDFB takes any fuse size that you can buy between 60 -- between 10 and 60 amps.

Q Okay. Well, I'm looking now at your testimony on Pages 47 through 48 where you address why BellSouth uses a 225-amp fuse.

A Yes, ma'am.

Q If you would, for purposes of this question, just

assume that within an ALEC's collocation space the racks total fusing equals 120 amps. If BellSouth uses a 225-amp fuse to feed the ALEC's collocation space, would BellSouth bill the ALEC for 120 amps or 225 amps?

A The billing's based on the 225-amp power feed that fuse from our power board. They can, however, fuse from a BDFB and get exactly what they need.

Q What would be involved in fusing from a BDFB as opposed from the power board?

A Just running the cable to the BDFB instead of the power board and then making sure that you don't exceed the power ratings of the BDFB.

Q Are there additional costs involved in running from the BDFB as opposed to the power board?

A Probably there are. I would think that there would be a cut in the rates that we have in Florida, there would probably be some recovery of the BDFB; whereas, if they went straight to the power board, then the BellSouth BDFB isn't in there, so, yeah, there would be some recovery for the BDFB.

Q What's the difference between a BDFB and a power board such --

A To draw the scenario to your house again, if you -- I don't know if you've ever looked in your actual breaker box, but in your breaker box you've got a bunch of breakers, typically, 15 to 20 amps feeding all the lights and all in your

house, and then there may be a 45 or 60-amp breaker that feeds your oven or stove. Then, on the very top of that breaker box is the main breaker for the house, which is typically a 200-amp breaker. In the average home it could be a 400-amp breaker.

The power board is essentially that main breaker to the house, so all the BDFBs are powered from the power board through where all of the power that distributes in the central office distributes from. Does that make sense? It's not intended for individual items of equipment to be powered from the power board. The power board is simply there to distribute the power from the power room to the BDFBs throughout the central office.

MS. KEATING: Well, thank you, Mr. Gray. I promised you that we'd be short. I think that's all that Staff has. I'll turn it over to whoever wants to be next.

MS. McNULTY: This is Donna McNulty. If you don't mind, I'll go next.

CROSS EXAMINATION

BY MS. McNULTY:

Q Good afternoon, Mr. Gray. The first topic I'm going to cover is adjacent collocation. When an ALEC collocates to the central office, BellSouth makes DC power available to that collocator; is that correct?

A That's correct.

Q And that's because, generally, telecommunications

equipment runs on DC power; is that correct?

A That's correct.

Q And BellSouth also makes DC power available when the CLEC collocates at a remote terminal; is that correct?

A When they collocate inside a remote terminal, because we have -- we feed the remote terminal with AC, and then we convert it inside the remote terminal to DC.

Q So, the answer's yes?

A Yes.

Q And BellSouth makes adjacent collocation available when space is legitimately exhausted within a BellSouth central office; is that right?

A That's correct.

Q On Page 11 of your affidavit regarding adjacent collocation you state the following: "At the ALEC's option and where the local authority having jurisdiction permits, BellSouth will provide an AC power source in accordance with the requirements of the National Electric Code and access to physical collocation services subject to the same nondiscriminatory requirements as applicable to any other physical collocation arrangement"; do you recall that?

A What page were you on again? I'm sorry.

Q I have it on Page 11.

A Okay.

Q It's near the bottom, begins on paragraph 23.

A Okay. Yes, ma'am.

Q Are you saying that for adjacent collocation in Florida, BellSouth will only provide AC power, not DC power to the ALEC?

A No. In the -- I believe, it's the MCI arbitration, the Commission ruled that BellSouth -- I think, I actually have the actual words here. "BellSouth shall be required to provide DC power to Worldcom's adjacent collocation space at Worldcom's request where local ordinance do not prohibit; however, Worldcom must provide the appropriate direct current cabling certified for outside use." So, we will comply with that Order.

Q Since you have read the Order, part of the rationale is, isn't it, that the Florida Commission found that providing AC power to adjacent collocation space is discriminatory, and that was why they ordered Bell to provide DC power; is that correct?

A I'm not sure of that at all.

Q Could you please turn to Page 115 of that Order?

A I have it.

Q Do you have it? Of the collocation Order from May 11th?

A I'm on Page 115, okay.

Q Do you want to review that and see if that's, indeed, what the Order says?

MR. SHORE: Do you want him to read part of the Order for the record?

MS. McNULTY: Sure.

A Okay. It does say more, "We are persuaded that providing AC power to an adjacent collocation space is discriminatory."

BY MS. McNULTY:

Q Okay. If any other ALEC in Florida wants BellSouth to provide DC power to it in adjacent collocation situations where local ordinances do not prohibit, will BellSouth provide DC power to that ALEC?

A The answer is under the same terms as the MCI -- as the MCI arbitration were; that is, that the CLEC has to provide the cable, the answer's yes. BellSouth's total issue here is not that we don't want to do this; it's that we don't think there's such cable that will carry that load that's rated for outside use.

So, what the Commission ordered was that if the CLEC could find such cable that was rated for outside use that would carry the load that BellSouth should be required to provide DC power to the adjacent site, and we'll comply with that for whatever CLEC can find that cable.

Q Thank you, Mr. Gray.

On Page 2 of your affidavit, you state that "In Florida, BellSouth provides physical collocation through either

BellSouth's Florida Access Services BellSouth tariff, Section E-20 or through negotiated interconnection agreements"; do you recall that?

A Yes, ma'am.

Q You also mention that "Over the years, BellSouth has developed a standard interconnection agreement that it offers, basically, to all parties when it negotiates; is that true?

A Yes. That's our starting point that we start on negotiations, but then the -- you know, then the negotiation with the CLEC, we'd negotiate off that agreement.

Q And in that standard interconnection agreement you state that it contains cost-based rates, terms and conditions by which BellSouth provides central office physical collocation; do you recall that?

A Yes.

Q Those cost-based rates to which you refer for physical collocation, are those rates that BellSouth has determined to be cost-based rather than the Commission?

A Actually, the rates for each day will be determined in UNE generic cost hearings by the state. I believe, in the case of Florida, the Commission has established collocation rates in their Phase 2 cost docket.

Q Oh, really? That's kind of news to me.

A Or they will. I'm sorry, they haven't yet, but they will.

Q Okay.

A What will happen is the rates that are in the standard agreement will be adjusted based on the rates that the Commission decides.

Q But currently, as they are today, in this standard interconnection or any negotiated interconnection agreement, the Commission has not determined those rates to be cost-based; is that correct, in Florida?

A Not to my knowledge.

MS. McNULTY: Thank you. Worldcom has no further questions.

MS. KEATING: Next.

MR. FEIL: This is Matt Feil with Florida Digital. I'll go next.

CROSS EXAMINATION

BY MR. FEIL:

Q Good afternoon, Mr. Gray, a few quick questions.

The first is with regard to BellSouth's remote terminals in the state of Florida. Have you personally reviewed the space availability for all the remotes that are located in the state of Florida?

A No, I have not.

Q Is there any sort of survey that would indicate to you what space is available at all the remotes in the state of Florida?

A No, there's not.

Q I think, you made allusion earlier to the fact that there are, basically, three different types of remotes, CEVs, huts, and cabinets; is that a fair statement?

A Those are three types, right.

Q Are those the three predominant types in Florida?

A Yes.

Q And of those three, would you agree with me that cabinets are the most predominant of the three?

A Yes.

Q And is it fair to say that cabinets are generally the smallest of the three types that I've given?

A Yes.

Q I want to get some clarification about the terms and conditions available for adjacent collocation for remote terminals. Hypothetically, and maybe this will help if you can sort of walk me through what happens when or if an ALEC requested collocation at a remote terminal; let's say, I'm an ALEC, I make a request for collocation at a remote terminal. At this particular remote BellSouth does have a DSLAM there, but space is exhausted. Generally, what terms and conditions does BellSouth make available for adjacent collocation at that remote?

A Space is exhausted in the remote terminal. And regardless of whether we have a DSLAM, if you want adjacent

collocation, then the terms and conditions for adjacent collocation, as spelled out in your interconnection agreement or in our standard agreement, which is attached to the SGAT that's on file or that's part of this docket or as you'll find in the tariff, applies.

Q So, you're saying there's no special terms or conditions that apply for adjacent collocation just because of that, is that a remote?

A No, it's the same terms and conditions that apply, regardless whether it's remote.

MR. FEIL: Okay. One moment, if you wouldn't mind. I'll make sure I've got everything covered here.

MR. FEIL: All right. That's all I have. Thank you.

THE WITNESS: Thank you.

MS. KEATING: Does anyone else have any questions?

MR. FINCHER: This is Ben Fincher with Sprint, and I have just a couple.

CROSS EXAMINATION

BY MR. FINCHER:

Q Mr. Gray you refer to a standard interconnection agreement that BellSouth had. Is that the same as your SGAT?

A Yes, sir. The terms and conditions that are -- actually, our standard agreement is a document that we use to negotiate from. We have it posted on our web site so that everyone can see it. It's -- a CLEC could actually adopt the

standard agreement as their interconnection agreement, either as part of their overall interconnection agreement or as a separate collocation agreement, but as it is, or more frequently, in fact, always what typically happens is a CLEC negotiates with us for a CLEC-specific interconnection agreement, but we would start our negotiation based on the terms in that standard agreement. That just lays out where our starting point -- and, I believe, that standard agreement is attached to the SGAT as another option for CLECs once the Commission approves the SGAT, then you can buy collocation from BellSouth, either -- in Florida either from CLEC-specific interconnection agreement, the SGAT, or tariff.

Q Okay. Now, upon approval of the SGAT by the Commission would the standard agreement go away or would that be incorporated into the SGAT in some way or how does that work?

A That's actually incorporated into the SGAT.

Q Okay. On Page 13 of your testimony at Lines 2 and 3, you say that "BellSouth does not provide collocation pursuant to the Collocation Handbook." What's the purpose of the Collocation Handbook, if you don't provide collocation pursuant to the handbook?

A The handbook is just as it's named, it's a handbook, it's a guide. It's really most valuable to CLECs when they're first getting in the business with us, and it explains how

BellSouth prefers to provide collocation. But it's just that, it's a guide, it's a handbook. It does not set any binding terms and conditions at all.

Q You admit in here it's not a legally-binding document. Is it incorporated in any way by reference into any of the interconnection agreements?

A No, in fact, it's the opposite. The Collocation Handbook actually refers you to your interconnection agreement for the terms and conditions.

Q Okay. On Page 21 of your testimony at Line 14 you talk about the fact that the Collocation Handbook is not a legally-binding document by which BellSouth provides collocation, you talk about making changes in the handbook or revising the handbook based on FCC or rules and orders. Are corresponding changes made in the interconnection agreements or do you just make the changes in the handbook?

A The handbook, we like to keep as up to date as possible. Of course, it lags the standard agreement somewhat, but when we issue the handbook, then we try to keep it up to date so the CLECs know how to do business with us. I believe, it's updated quarterly, maybe.

The interconnection agreements, though, they're binding agreements between us and the CLECs or ALECs, and we cannot change that without negotiating a change. So, for instance, we've got this new fourth order coming out from the

FCC. I think, it becomes effective on the 19th of September. So, where we have interconnection agreements with the CLECs, we can't just change that without the CLEC negotiating the change with us. But what will happen is the CLECs that want to incorporate those changes from the fourth order, then they can come to us and say we want to do that.

And then, what BellSouth will do, we'll negotiate either a letter of agreement or an update to the interconnection agreement to incorporate those terms. What we'd like to do is restrict those negotiations to just the fourth order issues, but if the CLEC wants to add something else in there, then we will consider that, but the important thing would be to meet the order and negotiate just based on the order from our standpoint.

Q So, when you change the Collocation Handbook based on an FCC order, if BellSouth -- you could use the interconnection agreement to see a change has to be made, then you approach the CLEC or ALEC to negotiate a change based on that order?

A No, actually, it's the other way around. We would expect the CLEC to approach us if they want to change. Let me also mention that our newer interconnection agreements that we signed since about March have a clause in them that says when a new order comes out that it becomes automatically part of the agreement.

And so, if you have a newer agreement since March or

April, I think, of this year then that clause is probably in there, and the provisions of the new FCC or state order would become automatic, but for any interconnection agreement before that, the CLEC would actually come to us and say I want to negotiate this change.

Q Okay. And BellSouth would not initiate the change?

A No. Typically, we would want the CLEC to do that, because we have -- you know, we have hundreds of interconnection agreements, and we're just not sure which CLECs would want the change and which won't, so it's more efficient for us to ask the CLEC to ask for the change, if they need it.

MR. FINCHER: Okay, thank you. That's all I have.

MS. KEATING: AT&T?

MS. OCKLEBERRY: No questions.

MS. KEATING: Is there anyone else? Thank you, Mr. Gray. We appreciate it. Mr. Shore, could we set up a time for when those late-filed deposition exhibits will be provided?

MR. SHORE: Sure. Let me talk to the witness and just figure out how quickly he can try to hunt down this information. It sounds like he needs to do some running around to get some answers. As I understand it, there haven't been any requests in Florida. Does a week meet ya'll's needs okay?

MS. KEATING: Yeah, if he can get it to us by the 20th, that will be fine.

MR. SHORE: Certainly by the 20. If we anticipate

any problems, which I don't, but if we run into any, I'll let you know certainly well in advance of that, and we can talk about it, but I'm sure the 20th will work out fine.

MS. KEATING: Okay, great, we appreciate it.

MR. SHORE: Okay. Well, thank ya'll.

MS. KEATING: Thank you. Anybody have anything else? Thanks. Goodbye.

(Deposition concluded at 2:15 p.m.)

CONSTRUCTION OF NEW REMOTE TERMINALS ("RTs")

INTERROGATORY: Does BellSouth consider the collocation needs of the ALECs when placing new Remote Terminals ("RTs") in Florida? If so, explain the process by which BellSouth would include the ALEC's collocation needs.

RESPONSE: No. BellSouth does not currently consider the collocation needs of the ALECs when placing new Remote Terminals ("RTs") in Florida. Since the ALECs have not submitted any Remote Terminal collocation forecasts to BellSouth in Florida (or in any of the other BellSouth states), BellSouth has no way of determining what the appropriate space requirements will be for remote site collocation or at what RTs the ALECs are interested in collocating. Furthermore, as of this date, BellSouth has received no ALEC requests for collocation at any of its RTs in Florida.

RESPONSE PROVIDED BY: A. Wayne Gray
Director – Collocation
Network Planning and Support
BellSouth Telecommunications, Inc.

Atlanta, Georgia 30375

UNBUNDLING OF PACKET SWITCHING AT REMOTE TERMINALS ("RTs")

INTERROGATORY: Explain the process by which BellSouth would unbundle packet switching at the Remote Terminal.

RESPONSE: BellSouth would be required to unbundle packet switching at the Remote Terminal ("RT") under very limited circumstances. When BellSouth provides its own ADSL service where DLC is deployed, BellSouth must place Digital Subscriber Line Access Multiplexer ("DSLAM") equipment at the DLC location. Through the collocation process, an ALEC that wants to provide xDSL where DLC is deployed can also collocate DSLAM equipment at the BellSouth DLC RT sites. This allows the ALEC to provide the high speed data access in the same manner as BellSouth. BellSouth will attempt in good faith to accommodate any ALEC requesting such collocation access at a BellSouth DLC RT site that contains a BellSouth DSLAM. Upon an ALEC's request for collocation of a DSLAM inside a BellSouth RT where BellSouth has placed a DSLAM, BellSouth will first determine the availability of space. If no space is available, BellSouth will determine whether space can be made available by moving its own equipment or by reengineering its network in order to accommodate the ALEC's collocation request. If BellSouth cannot accommodate either of these options, BellSouth will look at the possibility of installing a new remote terminal at the requested location, at BellSouth's expense, to accommodate the ALEC's request for collocation space. In the unlikely event that all of the above options are infeasible and BellSouth is unable to accommodate the ALEC's request for collocation space, BellSouth will unbundle its packet switching

UNBUNDLING OF PACKET SWITCHING AT REMOTE TERMINALS ("RTs")
(Continued)

RESPONSE (Cont'd):

functionality at the requested RT pursuant to FCC requirements.

BellSouth has not finalized the process by which it would unbundle packet switching at the RT. BellSouth has initiated the process of developing its unbundled packet switching product and the procedures for providing this product to ALECs. Because the conditions that must be met for BellSouth to have to unbundle packet switching at an RT have never occurred and do not seem likely to occur in the near future, BellSouth has not finalized the process to unbundle packet switching at the RT. Instead, BellSouth has devoted its resources to developing other products in demand by ALECs. BellSouth has performed enough work to determine how it would unbundle packet switching at the RT and is confident that it could do so if and when the conditions that would require BellSouth to unbundled packet switching are met.

AFFIDAVIT OF
VICTOR K. WAKELING, CFA, CMA
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.

STATE OF GEORGIA
COUNTY OF FULTON

I, Victor K. Wakeling, being of lawful age and duly sworn upon my oath, depose and state:

I. PROFESSIONAL AND EDUCATIONAL BACKGROUND

1. My name is Victor K. Wakeling. I am employed by BellSouth Telecommunications, Inc. (BellSouth) as a Manager for Competitive Analysis in the BellSouth Federal Regulatory Department. My business address is 675 West Peachtree Street, Room 38L64, Atlanta, Georgia 30375.

2. I began my career with Bell of Pennsylvania in 1979 and transferred to Southern Bell in 1981 as an Assistant Manager in the Business Research group in Atlanta. In that position, my duties primarily concerned econometric analysis of customer demand and pricing. In 1988, I transferred to the Southern Bell Telephone Comptrollers group as Manager-Budget Analyst.

3. My present assignment, Manager–BellSouth Federal Regulatory Group, began in 1992 as Docket Manager for Interstate Price Cap Regulation. In that position, I focus primarily on economic issues under Price Cap regulation. In March 2000, I assumed the additional responsibility of monitoring and analyzing local competition within the BellSouth region for regulatory purposes.

4. In June of 1973, I received two Bachelor of Arts Degrees with Distinction, in Economics and Political Science, from the Pennsylvania State University, State College, Pennsylvania. I completed an MBA with emphasis in Finance in 1989 at Georgia State University, Atlanta, Georgia. In 1991, the Association for Investment Management and Research awarded me a Chartered Financial Analyst (CFA) certification. In 1992, the Institute of Management Accountants awarded me the Certified Management Accountant (CMA) designation. Since 1994, I have taught more than twenty undergraduate or graduate courses in economics or finance as an adjunct and visiting professor at Kennesaw State University and the University of the West Indies. I have also presented several professional education seminars for the Atlanta Society of Financial Analysts.

II. INTRODUCTION AND PURPOSE OF AFFIDAVIT

5. The purpose of this affidavit is to describe the current status of local exchange service competition within BellSouth's wireline local service area in Florida, with particular emphasis on facilities-based providers. This information that I present provides empirical proof that BellSouth has satisfied the Track A of Section 271 of the Telecommunications Act of 1996 (the "Act").[1] The data demonstrate that competition in Florida's local exchange market is economically viable, irreversible, and serving the public interest.

[1] The Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996), Section 271 (c) (1) (A)

6. The affidavit exhibits provided with the public version of this filing contain public information relating to local competition. The Florida Public Service Commission's ("FPSC") report "Alphabetic Listing of Regulated Telecommunications Companies: Alternative Local Exchange" as of May 17, 2001, is provided as Exhibit VW-1.[2] The FPSC's three reports on BellSouth interconnection agreements, i.e., negotiated, adoptions and arbitrations, is provided as Exhibit VW-2.[3] The Federal Communications Commission ("FCC") report "Local Telephone Competition: Status as of December 31, 2000" ("FCC Competition Report") is provided as Exhibit VW-3.[4] The FPSC staffs' "Competition in Telecommunications Markets in Florida" ("Florida Competition Study") is attached as Exhibit VW-4.[5] Five exhibits, VW-5, VW-6, VW-7, VW-8 and VW-10, contain confidential and sensitive competitive proprietary information regarding individual CLECs in Florida. In the public filing, these exhibits are filed with the confidential information redacted. In addition, the complete exhibits containing confidential information are being filed under seal.

7. As discussed in more detail below, the local market in BellSouth's service area in Florida is irreversibly open to competition. Numerous carriers are currently providing facilities-based service to business and residential customers in Florida, thereby proving that

[2] available at http://www.floridapsc.com/mcd/TALX.html , as retrieved on May 19, 2001

[3] available at http://www.floridapsc.com/local-compet/documents/bst050101.pdf for the negotiated agreements, at http://www.floridapsc.com/local-compet/documents/bstadopt050101.pdf for the adopted agreements and at http://www.floridapsc.com/local-compet/documents/bstarb050101.pdf for the arbitrated agreements.

[4] Released May 21, 2001. Local providers (including CLECs serving over 10,000 lines in a state) file data twice a year under the FCC's local competition and broadband gathering program (FCC Form 477) that was adopted in March 2000 to assist in implementing the pro-competitive, deregulatory provisions of the Act.

[5] Released December 2000 by the FPSC's Division of Competitive Services to satisfy the statutory requirements of section 364.386, Florida Statutes to provide a report on "the status of competition in the telecommunications industry" to the Governor and Legislature.

BellSouth satisfies the "Track A" requirements of section 271 of the Act. Moreover, local competition in Florida is firmly rooted, as the evidence shows:

a. At the end of February, 2001, CLECs served over 835,000 lines in BellSouth's service area in Florida, which is approximately 11.3% of the total local access lines. *See* Table 1 and Exhibit VW-5.

b. BellSouth's conservative "Method One" estimate of 11.3% is moderately above the national average 9.3% CLEC line share at the end of 2000 that the CLECs' Association for Local Telecommunications Services ("ALTS") projects in its most recent annual report. [6]

c. The Association for Local Telecommunications Services ("ALTS") identifies Florida, like New York and Texas, as among the eight states with the greatest number ("41 or more") of facilities-based CLECs operating.[7] Exhibit VW-5 and VW-7 indicate over 50 facilities-based CLECs operating in February 2001. The FCC Competition Report at Table 7 shows Florida tied for third in the US with the number of large CLECs reporting. *See* Exhibit VW-3.

d. Total facilities-based CLEC lines, based on the E911 Listings that CLECs themselves enter in the emergency notification database for BellSouth's area, have grown at an approximate 80% annual rate over the last six months, August 2000 to February 2001.

e. From 1996 through May 2001, BellSouth has entered into approved interconnection, resale and/or collocation agreements with over 500 FPSC-certificated carriers. *See* Exhibit VW-2.

f. CLECs' existing collocation arrangements allow them to serve more than 90% of BellSouth's residential and business access lines. BellSouth has completed more than 1,600 collocation requests for CLECs, in over 130 of BellSouth's wire centers as of March 2001. *See* Exhibit VW-10.

g. As the FCC reported, 94% of Florida's zip code areas have one or more CLECs providing service, and nearly half of the zip code areas have six or more CLECs providing service. Exhibit VW-3 at Table 12.

h. CLECs have committed millions of dollars to deploy state-of-the-art facilities across BellSouth's area, including switching capacity, intra-city fiber rings, and inter-city fiber

---

[6] *ALTS' Annual Report on the State of the Local Telecom Industry, 2001* released March, 2001, available at <http://www.alts.org> at page 11. ALTS reported: "As of the 3Q00, CLECs held 8.2% of the local telecommunications market in terms of access lines. If the 2000 trend continues, CLECs can reasonably be expected to hold 9.3% of total access lines as of the 4Q00."

routes.[8]

III. LOCAL COMPETITION IN FLORIDA

A. CLECs' Lines in the Local Market – External Surveys

8. Local competition is thriving in Florida. Indeed, Florida is fourth in the nation in terms of end-user lines served by CLECs.[9] The FCC Competition Report reveals that, as of December 31, 2000, 19 large CLECs alone served over 1 million access lines in Florida.[10]

9. In December 2000, the FPSC's Division of Competitive Services released a report that also found substantial competition in Florida. The FPSC Competition Study (Exhibit VW-4) reflects information collected from CLECs as of June 30, 2000. The FPSC Competition Study at pages 23 and 55, respectively concludes:

a. "Since the 1999 report, Florida has seen continued increases in competitive entry, focused predominantly in the business sector. As of June 30, 2000, 362 ALECs were certificated in Florida, with 91 reporting they were serving 710,617 access lines. By contrast, the 1999 report found 80 companies serving 555,172 access lines."

b. "Competition has not bypassed the residential markets, based on the information available in this report. The number of residential access lines held by ALECs increased by more than 100 percent since last year's report."

Additionally, with much of their fiber backbone and end-user service facilities in place, local service competitors can now focus on their large addressable market.

- "Going forward, much more of the spending will be discretionary and tied to revenue and demand visibility, which manifests itself in lighting a network or adding capacity as opposed to just building a foundation of a network." [11]

---

[8] The ALTS 2001 annual report at page 20 indicates that CLECs have invested $56 billion in infrastructure nationally since 1997.

[9] FCC Local Competition Report at Table 6 (Exhibit VW-3).

[10] Ibid, Table 6. The FCC Local Competition Report shows that the 19 large CLECs reporting accounted for 8.3% of Florida end-user lines.

[11] *Grubman's State of the Union*, Solomon Smith Barney Telecommunications Services, March 21, 2001 at 10.

- "In making a 'depth' vs. 'breadth' decision, management will now focus on penetrating existing markets deeper to save capital and leverage existing infrastructure investment."[12]

- "Approximately 80%, or $59 billion worth, of the SME (small/medium enterprise) market totaling $69 billion of revenue in 2000 is addressable by existing competitive business models." [13] (Text in parentheses added)

B. BellSouth's Estimates of Local Competition

10. BellSouth will present two methods of estimating the local lines that CLECs serve in its area. These methods generate two conservative estimates of the number of lines CLECs serve on a facilities basis.[14]

11. In Method One, BellSouth identifies, from various reliable sources, [15] the number of CLEC E911 Listings, Unbundled Network Elements ("UNE") including UNE loops and UNE platforms ("UNE-Ps"), and interconnection trunks ("IC Trunks"), whenever data were available. *See* Exhibit VW-7. These data are organized into three categories. The three categories considered to estimate each CLEC's total facilities-based lines are first, the E911 Listings category -- the sum of residence and business E911 listings; second, the UNE category -- the total of UNE loops and UNE-Ps (loop/port combinations); and third, the interconnection trunk category -- the total number of interconnection trunks. These categories contain data that provide a reasonable basis to estimate facilities-based CLEC lines.

---

[12] *XOXO: 1Q Rpt'd; Scaled back Plan Ann'd*, released 7:10am EDT April 27, 2001, Credit Suisse First Boston (Mark Kastan) at 2. XOXO is the symbol for XO Communications, formerly NextLink Communications.

[13] *Competitive Telecom Services: Sizing up the CLECs*, David Barden et. al., J.P. Morgan Securities Equity Research, March 30, 2001 at 2.

[14] The actual count of resold local access lines does not need to be estimated because it is available directly from BellSouth's billing systems.

[15] See Facilities-based Line Estimate Methodology, Exhibit VW-9, fn. 1.

12. Data do not exist for every category for every CLEC because CLECs are competing with a variety of approaches. CLECs pursue different mixes of target markets, e.g., large business market, small/medium business market, and the residential and small business market. Diversity in target markets translates to different network approaches, e.g., traditional switched service or data-centric, either alone or in various combinations. The convergence of communications services finds a mix of next-generation packet networks such as Asynchronous Transfer Mode or Internet Protocol being overlaid or interfacing with the traditional circuit switched network. Because of these differing facilities-based approaches, data exist in only one category for almost one-third of the CLECs competing in BellSouth's area in Florida. For example, seven CLECs have data only for UNE-Ps. *See* Exhibit VW-7. In such cases, the data from that single category is used for the estimate of lines.

13. Within this conservative approach under Method One, BellSouth first selects the highest total from among the three categories as its estimate of <u>total</u> facilities-based lines for each CLEC. After estimating each CLEC's total facility-based lines, BellSouth then determines the business/residential split for those lines. In many cases, no further analysis is necessary to create that estimate because the category itself breaks down the CLEC line total by business and residential lines, e.g., E911 Listings and UNE–Ps. *See* Exhibits VW-7 or VW-8. When the category selected shows only total lines, e.g., interconnection trunks, BellSouth determines the number of business lines by subtracting from the total the residential lines indicated from the CLEC's other data, if any. If no evidence of residential lines for a CLEC is present, all the lines are treated as business. This approach acknowledges the fact that CLECs, in general, target the business market first. Exhibit VW-9 contains additional information on the indicators of facilities-based lines.

14. BellSouth's Method One approach is conservative in at least two major ways. First, BellSouth does not increase its estimate of total lines by adding across data categories although it would be reasonable to do so in certain cases. Second, when IC trunks are the basis for the estimate of total facilities-based lines, BellSouth assumes a very conservative 1-line-to-1-trunk ratio. BellSouth's estimates are also conservative with regards to the residential facilities-based share of total CLEC lines. For example, some CLECs focus on providing high-speed Internet access over DSL using UNE loops. BellSouth's systems do not identify residence or business UNE loops separately. Absent clear indications from the data of the number of residential lines, all of the UNE loops are treated as business class. [16]

15. Data from BellSouth's information systems indicate that, as of February 2001, 123 CLECs were each serving 40 or more local lines in BellSouth's service area in Florida. *See* Exhibit VW-5. Overall, BellSouth estimates that competing carriers provide local service to more than 835,404 lines, or approximately 11.3% of the total local lines in BellSouth's area. See Table 1 below.

---

[16] ALTS 2001: "With residences continuing to migrate from dial-up Internet access to broadband, analysts predict an explosion in residential broadband revenues. From only $1 billion in 1999, residential broadband revenues will exceed $13 billion in 2004." at 34.

TABLE 1 CLEC Lines in BellSouth's service area in Florida

CLEC PROVIDERS	Number Of CLECs	**RESIDENCE** Lines	**BUSINESS** Lines	**Total Lines**
FACILITIES-BASED	56	19,322 Resale 128,627 Facilities-Based	83,088 Resale 514,814 Facilities-Based	**102,410 Resale** **643,441 Facilities-Based**
RESALE – ONLY	67	72,731	16,822	**89,553 Resale**
CLEC TOTAL	**123**	**220,680**	**614,724**	**835,404**
TOTAL LINES		4,938,667	2,477,543	7,416,210
% of Lines		**4.5 %**	**24.8 %**	**11.3 %** [17]

Table 1 includes aggregate line totals for 56 carriers that are competing on a facilities-basis. Approximately three-quarters of the total lines – 643,441 – are served by CLECs using their own facilities, either exclusively or in combination with BellSouth UNEs and/or UNE-Ps. Many of these facilities-based lines – 128,627 – serve residential customers. Also, as of February 2001, 67 resale-only CLECs, each serving 40 or more lines, were providing a total of 89,553 access lines in BellSouth's Florida service area. Table 1 also shows that 72,731 of these were residential lines and 16,822 were business lines. Exhibit VW–5 lists the 67 resale-only CLECs that serve at least 40 lines in BellSouth's area in Florida and their number of lines by residence or business class of service.

[17] CLEC line % based on CLEC lines divided by total lines. Total lines equals sum of CLEC lines plus BellSouth local access lines.

16. BellSouth's Method Two is the same as one approach presented in the joint Kansas and Oklahoma 271 filings.[18] This estimate is based on just two categories – facilities-based CLECs' E911 Listings and UNE-Ps. *See* Exhibit VW-8. Facilities-based carriers themselves are responsible for making entries in the E911 database. Because facilities-based carriers make these entries themselves and because these entries are critical to the purposes served by the maintenance of the database, BellSouth has every reason to believe that an E911 listing represents a facilities-based line. However, the E911 database does not capture all lines served by competing carriers on a facilities-basis. For example, when a facilities-based CLEC provides service over the UNE-P, BellSouth provides switching and maintains the E911 listing just as BellSouth does for resold lines. *See* Affidavit of Valerie Sapp at Para. 10. Therefore, the number of CLEC UNE-Ps needs to be added to the CLEC E911 Listings for a more complete estimate of total lines. In addition, E911 listings understate the number of lines used by many businesses, such as when a business uses a PBX and lists only a single number in the database or for in-dial only service. An estimate of facilities-based lines for 45 CLECs under this even more conservative Method Two appears in Table 2 below.

17. Table 2 relies upon E911 Listings and/or UNE-P data extant for 45 facilities-based CLECs (as opposed to the 56 CLECs included in Table 1 when other data such as UNE loops and interconnection trunks are considered). *See* VW-6. Using these data, BellSouth estimates that CLECs are serving 526,218 facilities-based lines. These 45 facilities-based CLECs also serve 102,407 resold lines. When the lines from the 67 resale-only CLECs are included, the overall total of CLEC lines becomes 718,178, which translates to 9.8% of the

[18] Joint Affidavit of J. Gary Smith and Mark Johnson, Application of SBC Communications, Inc. for Provision of In-Region, InterLATA Services in Kansas and Oklahoma, Tables 2 and 3 at pp. 6-7.

local access lines in BellSouth's area.

TABLE 2 Estimate using E911 Listings and UNE-Ps for facility-based lines

CLEC PROVIDERS	Number of CLECs	**RESIDENCE** Lines	**BUSINESS** Lines	**Total Lines**
FACILITIES-BASED **E911 Listings + UNE-P**	45	19,322 Resale 128,629 Facilities-Based	83,085 Resale 397,589 Facilities-Based	**102,407 Resale** **526,218 Facilities-Based**
RESALE – ONLY	67	72,731	16,822	**89,553 Resale**
CLEC TOTAL	**112**	220,682	497,496	**718,178**
TOTAL LINES		4,938,669	2,360,315	7,298,984
% of Lines		**4.5 %**	**21.1 %**	**9.8 %**

18. Among the dozens of facilities-based CLECs in Florida are AccessOne, e.spire, Florida Digital Network , Intermedia, MediaOne, Mpower and (MCI)WorldCom. Each of these carriers has an approved interconnection agreement with BellSouth, are certified CLECs, and each provides facilities-based service to either (or both) business and residential customers. *See* Exhibit VW-1 and VW-2. Indeed, these carriers alone serve approximately 190,000 business lines and 116,000 residential lines on a facilities basis. Although for purposes of Track A, BellSouth relies upon all of the carriers identified in this affidavit and its attachments and exhibits, these carriers alone establish that BellSouth is providing "access and interconnection" to "unaffiliated competing providers" of facilities-based "telephone exchange service . . . to residential and business subscribers." Therefore, BellSouth meets the requirements of Track A. *See* 47 U.S.C. § 271(c)(1)(A).

C. Corroboration of CLEC facilities-based local service

19. Table 3 below is an extract from Table 3.2 of the FPSC Competition Study. Of the 56 facility-based CLECs identified under BellSouth's "Method One" in Exhibit VW-5, 39 were listed in Table 3.2 of the FPSC Competition Study.[19] Table 3 sets forth the FPSC staff summary of the CLECs' own responses to the most recent annual FPSC Competition Survey concerning their classes of customer, methods of service, and geographic areas served. The entries below are exact representations from Table 3.2 of the FPSC Competition Study display (including blank entries). Labels for "Method" in FPSC Table 3.2 show "resale," "facilities," "UNE,", "DSL" or "combination." BellSouth's own data show that the "combination" label refers to a carrier that uses both resale and its own facilities or UNE loops or UNE-Ps.[20] FPSC Table 3.2 supports BellSouth's evidence demonstrating that numerous CLECs are using facilities to serve both business and residential customers.

[19] The FPSC Competition Study at page 25 indicates that as of June 30, 2000 362 ALECs were certificated in Florida, 178 responses were received and 91 were providing service in Florida.

[20] Of course, for purposes of meeting Track A requirements, in addition to owned facilities, the FCC has determined that UNE loops and UNE-P qualify as facilities.

D. CLECs' Provide Service Broadly over BellSouth's Area

20. The breadth of competition in Florida is significant, as shown in Table 3.5 of the FPSC Competition Study (Exhibit VW-4). FPSC Table 3.5 indicates that while CLECs are most prevalent in high-density local exchanges, CLECs are also competing in BellSouth exchanges that serve lower line densities. The FPSC Competition Study indicates that effectively all of BellSouth's residential and business customers have one or more alternative local service providers in their area when access lines are totaled over BellSouth's exchanges. Moreover, using this same FPSC Table 3.5 and matching lines served to exchanges, almost 97% of BellSouth's residential lines and 84% of BellSouth's business access lines have *three or more* CLECs competing for their local service. [21]

E. CLEC Collocation is Extensive

21. CLEC collocations are a powerful indicator of the extent of local competition in a given area: where a CLEC is collocated, it has at least "the potential to serve many more customers through the leasing of UNEs."[22] CLECs themselves recognize the value of collocation as well:

a. "Mpower made significant progress in continuing its aggressive build-out of one of the largest facilities-based voice and data networks in the country. The company ended the quarter with 537 revenue ready central office collocations and 9 switches in service.... Its network footprint now reaches 28 major metropolitan areas, which represents an addressable market in excess of 21 million lines."[23]

b. "The addressable market in Allegiance's 36 target cities is estimated at 31 million

---

[21] The FPSC Table 3.5 is associated with the survey of Florida's CLECs as of the end of June 2000. The BellSouth percent of lines cross-referenced to Table 3.5 reflects the October 2000 distribution of BellSouth access lines. FPSC Table 3.5 presents its information based on local exchanges. CLEC Collocation information provided later in this affidavit presents wire center detail.

[22] *Development of Competition in Local Telephone Markets,* Report to the Subcommittee on Antitrust, Business Rights and Competition, Committee on the Judiciary, U.S. Senate, January 2000, GAO/RCED-00-38 at 19.

[23] Mpower Communications reports Record Second Quarter 2000 Results, "Investor Information: Quarterly Statements", Aug. 3, 2000, retrieved Aug. 14, 2000 <http://www.mpowercom.com/corpinfo/fnews/news080300.htm>.

business lines (57% of US businesses). . . . Allegiance has 552 collocations and plans to reach 990 by the end of 2001."[24]

c. "The SuperState initiative is FDN's (Florida Digital Network's) plan for total market development in Florida. When the project is complete in the first quarter of 2001, FDN expects that it will be able to serve 85 percent of all small and medium sized businesses in the state, and will have potential connections to over 7.5 million access lines."[25] (Text in parenthesis added.).

22. As of March 2001, BellSouth had completed collocation arrangements with over 50 CLECs in Florida, and had completed one or more CLEC collocations in 136 wire centers. *See* Exhibit VW-10. Completed collocations numbered 1,640. Not surprisingly, CLECs are collocated heavily in the BellSouth exchanges with the highest line volume. Collocations in the 26 BellSouth wire centers with the most completed collocations enable numerous CLECs to address 25% and 33% respectively of BellSouth's residence and business access lines on a facilities basis. Completed collocations in the top 51 wire centers based on completions allows CLECs to address approximately 52% of BellSouth's combined residential lines and business access lines. Overall, collocations that BellSouth has completed allow CLECs to address, on a facilities basis, approximately 94% of BellSouth's total access lines in Florida. *See* Exhibit VW– 10.

1 to 7 Completed each 87th – 136th Wire Centers	**166**	18 %	16 %
Collocations Completed	**1,640**	**93 %**	**96 %**

F. CLEC Investment Indicates that Competition is Irreversible

23. The sunk cost of CLEC investment in local competition in Florida provides additional assurance that Florida consumers have, and will continue to have, alternatives for local exchange service. As CLECs themselves have explained, they have already invested millions of dollars in developing fiber access and transport facilities and switching capabilities, and in establishing facilities-based operations throughout Florida:

a. "PaeTec's network strategy is based on a 'smart-build' network that combines leased local fiber, transmission facilities, and unbundled service components with switches PaeTec owns and operates."[26]

b. "Allegiance is employing an evolving 'smart-build' model that involves connecting its own Lucent 5ESS switches (which are installed in the CO) to the ILEC tandem switches and IXC (interexchange or long distance) carrier POPs (points of presence) by leasing trunking facilities from ILECs and CLECs."[27]

[26] PaeTec Communications: Corporate profile Dec. 26, 2000.

< http://www.paetec.com/family/comm/comm_profile.html>.

[27] "ALGX: Pledging Allegiance – Initiating Coverage with a Buy Rating," Robertson Stephens news release, Oct. 11, 2000.

c. "FDN (Florida Digital Network) is building networks in Florida's six largest cities, each using the same serving strategy. A core 'Hub' will house a Class 5 central office switching system and be connected by fiber optic cable to the nearby ILEC tandem. The FDN owned fiber cable is being installed in existing ILEC conduit . . . . FDN intends to lease 100 or 200 sq. ft. "Co-location cages" within the ILEC wire centers to allow access to unbundled loops. Remote switching equipment will be installed within these co-locations and will provide dial tone on these unbundled loops."[28] (Text in parenthesis added.)

d. "ITC^Deltacom .....provides integrated telecommunications and technology solutions to businesses in the southern United States.....The Company operates 37 branch offices in nine states, and its 10-state fiber optic network of approximately 9,730 miles, reaches approximately 150 points of presence. ITC^Deltacom has interconnection agreements with BellSouth, ...for resale and access to unbundled network elements and is a certified Competitive Local Exchange Carrier (CLEC) in ..... and all nine BellSouth states."[29]

24. Facilities-based CLECs have built high capacity state-of-the-art transmission facilities utilizing fiber optic cable that currently service the business district of major Florida metropolitan areas. As another example, KMC Telecom currently serves Brevard, Daytona Beach, Fort Myers, Greater Pinellas, Pensacola, Sarasota and Tallahassee, Florida.[30] CLECs are increasingly using the newest technologies, e.g., voice-over-DSL (VoDSL), "softswitch" IP and microwave systems, to offer integrated communications services on a cost-effective basis. By equipping broadband networks with gateways to the public switched telephone network, CLECs provide facilities-based local exchange services to their customers. Network Telephone, a CLEC with an approved interconnection agreement with BellSouth and certified in Florida, is one example:

---

[28] Florida Digital Network – *Network*, <http://www.floridadigital.net/company/network.cfm> July 28, 2000.

[29] *ITC^Deltacom Report First Quarter 2001 Results*, May 2, 2001 retrieved May 16, 2001 from <http://www.itcdeltacom.com/investor_financial.html>.

[30] "In each of its local markets, KMC invests in a network infrastructure that is designed to reach approximately 80% of the business access lines through either a direct connection or unbundled network elements leased from the ILEC. KMC generally lays up to 25 miles of advanced fiber-optic local SONET networks in each market." Retrieved May 12, 2001 from <http://www.kmctelecom.com/company/index.cfm.cfm>

a. "Network Telephone, a competitive local exchange carrier (CLEC) based in Pensacola, Fla., will deploy Lucent's PathStar Access Server ™ with Copper Mountain's CopperEdge DSL Concentrators and CopperRocket ™ Integrated Access Devices to provide voice, data and high-speed Internet access over DSL (digital subscriber line) to business customers in nine states across the Southeast US. ...We believe this voice over DSL (VoDSL) solution will provide us a cutting-edge multi-service network. The PathStar ™ solution will enable service providers to **deliver eight or more telephony subscriber lines and high-speed data services over a single unbundled local loop.**" [31] (Emphasis added)

25. As shown in Tables 1 and 2 above, BellSouth conservatively estimates that CLECs are serving approximately 4.5% of the residential lines in BellSouth's area in Florida. Although most CLECs are targeting the business segment and deploying the latest technologies to serve metropolitan areas first, the prospects for benefits to residential consumers are very good. Increased choices for consumers are evident from the numerous CLECs offering residential service in Florida. The telephone directories, upon CLEC request, are required to include contact information for CLECs serving their areas. For example, the directory for Brooksville lists nineteen different competing residential local service providers, the Cedar Key directory lists twenty-six, the Chipley directory lists twenty-five, the Dunnellon directory lists twenty-eight, and the Fernandina Beach directory lists twenty-six competitors. Additional directory examples of the number of CLECs listed offering residential service include Florida Keys - 28, Green Cove Springs - 21, Havana - 24, Lake City - 25 and Palatka - 17. Finally, the ALTS Annual Report for 2001 addresses the current state of competitive development: "The business wireline market is one of the most attractive markets for many CLECs. To raise capital and build their networks, CLECs must target customers that offer the greatest rate of return. This strategy is consistent with how the Bell system originally

[31] Network Telephone Selects Lucent Technologies and Copper Mountain Networks to Deploy DSL, Press Release July 20, 1999, available at <http://www.networktelephone.net/press.html>. NTC's PowerLine DSL™ is offered in

erected its network, first to serve highly concentrated areas .... Such high-volume clients enable CLECs to take advantage of geographic concentration and network scalability. As the industry matures, we will see a greater push into residential markets further expanding the benefits of competition." [32]

IV. OTHER TYPES OF LOCAL SERVICE COMPETITION

26. **A. Cable Telephony**

By equipping their networks with switching capability, cable companies provide competitive local exchange services to both business and residential customers passed by their hybrid fiber/coax network. MediaOne is already providing facilities-based local service in Florida, and other cable companies can be expected to do the same.[33] Cable facilities, such as those of Time Warner, have also expedited and provided cost economies benefiting telephony competition.[34] The investment firm, Dresdner Kleinwort Wasserstein, recently reported: [35]

- "Cable telephony (CT) has demonstrated successful penetration rates in the limited areas where CATV companies (AT&T, Cox) have pushed forward deployment. Others are waiting for VoIP to become viable before deployment."

- "Cox and AT&T have demonstrated initial success .....that has racked up one million customers out of eight million households with available service, a 12.5% penetration

---

over 50 cities in Florida.

[32] ALTS 2001, at 10.

[33] The AT&T Broadband web site recently showed residential Digital Telephone available in the Jacksonville, Florida area (10 Zip codes specified) and Pompano Beach, Florida area (12 Zip codes specified). "Service Availability and Pricing," retrieved March 8, 2001 (showing Jacksonville) from http://www.mediaone.com/countrywide/products_services/telephone/teleph7.htm and (showing Pompano Beach) from http://www.mediaone.com/countrywide/products_services/telephone/teleph8.htm, respectively.

[34] *Time Warner Telecom Profile* ,from Busines.com[SM] retrieved Jan. 6, 2001 from <http://www.business.com/telecommunications/.... clec/time_warner_telecom/profile/> "In addition, the company benefits from its strategic relationship with Time Warner Cable (TW Cable) both through access to local right-of-way and construction cost sharing. As a result, the company's networks have been constructed primarily through licensing the use of fiber capacity from TW Cable."

[35] *DKWR: Cable Telephony*, US Telecom Services Industry, May 21, 2001, Analysts Bruce Roberts and Steve Delucia.

rate."

- "Cox believes that without CT, they would attain a 60% video market share..... In multi-dwelling residential complexes (MDUs), the addition of CT has an astounding impact on cable TV video penetration. .....Cox is achieving up to a 90% cable TV penetration when bundled with Cox CT in the context of a bundled discount price. ....and in new MDUs, 95% of Cox video customers take Cox telephone service."

B. PCS Providers

The price, grade of service, transmission quality, and available coverage areas of wireless based communications have improved dramatically to the point that, for an increasing number of users, wireless services offer real competition to traditional wireline communications. WorldCom concurs, stating: "Secondly, from a market perspective, it is undeniable that wireless services function as effective substitutes for both local and toll calls carried over wireline networks." [36]

V. CONCLUSION

27. This affidavit demonstrates that BellSouth meets the Track A requirement of Section 271(c)(1)(A) of the Telecommunication Act and shows that the Florida Commission, the FCC, BellSouth, and the CLEC industry have been successful in bringing competitive choices to the people of Florida. CLECs have invested, and continue to invest, millions of dollars in their own facilities. The level of competition demonstrates that BellSouth has provided CLECs access to its network facilities and services in order to enable them to deliver services over their own network facilities; over their own network facilities in combination with elements of BellSouth's network; and through the resale of BellSouth-provided service offerings. Competition is healthy, growing and irreversible.

28. This concludes my affidavit.

FEDERAL COMMUNICATIONS COMMISSION RELEASES LATEST DATA ON LOCAL TELEPHONE COMPETITION

Total Lines Reported by New Entrants Climbed to 16.4 Million

Washington, D.C. – The Federal Communications Commission (FCC) today released summary statistics of its latest data on local telephone service competition in the United States. Providers file such data twice a year under the Commission's local competition and broadband data gathering program. This program was adopted in March 2000 to assist the Commission in its efforts to monitor and further implement the pro-competitive, deregulatory provisions of the Telecommunications Act of 1996.

The information released today was filed by qualifying providers on March 1, 2001, and reflects data as of December 31, 2000. Noteworthy data include:

1. **New Entrant Phone Lines Continue Robust Increases**
   - CLECs reported about 16.4 million (or 8.5%) of the approximately 194 million nationwide local telephone lines in service to end-user customers at the end of the year 2000, compared to 8.3 million (or 4.4% of nationwide lines) at the end of 1999.
   - CLEC market share grew 93% over the one-year period of January to December 2000.
2. **States with Long Distance Approval Show Greatest Competitive Activity**
   - CLECs captured 20% of the market in the State of New York – the most of any state. CLECs reported 2.8 million lines in New York, compared to 1.2 million lines the prior year – an increase of over 130%, from the time the FCC granted Verizon's long distance application in New York in December 1999 to December 2000.
   - CLECs captured 12% of the market in Texas, gaining over a half-a-million (644,980) end-user lines in the six months since the Commission authorized SBC's long distance application in Texas – an increase of over 60% in customer lines since June of 2000.
   - CLEC market share in New York and Texas (the two states that had 271 approval during the reporting period ending in December 2000) are over 135% and 45% higher than the national average, respectively.

-- more --

3. **Residential vs. Business Competition**
   - About 60% of CLEC local telephone lines served medium and large business, institutional, and government customers. By contrast, almost 20% of incumbent local exchange carrier (ILEC) lines served medium and large business customers.

   - CLECs served 4.6% of the residential and small business customers at the end of the year 2000, compared to 2.3% for the year ago period.

   - CLEC share of the residential and small business customer market grew nearly 45% during the six-month period of June 2000 to December 2000.

4. **Mode of Competitive Entry and Other Data**
   - CLECs provided about 35% of their end-user customer lines over their own local loop facilities. Incumbent telephone companies provided about 6.8 million resale lines as of the end of the year 2000, compared to about 5.7 million lines six months earlier, and they provided about 5.3 million UNE loops as of the end of the year 2000, an increase of 62% during the six months.

   - At least one CLEC was serving customers in 56% of the nation's zip codes at the end of the year 2000.

   - About 88% of United States households reside in these zip codes. CLECs reported lines in all states except Hawaii, and also in the District of Columbia and Puerto Rico.

   - The 77 providers of mobile wireless telephone services that reported information served over 101 million subscribers at the end of the year 2000, compared to about 91 million subscribers at the end of the prior six months period.

As additional information becomes available, it will be routinely posted on the Commission's Internet site. The Commission recently accepted comments on whether certain modifications should be made to the reporting system.

The data summary is available in the FCC's Reference Information Center, Courtyard Level, 445 12th Street, S.W., Washington, D.C. Call International Transcription Services, Inc. (ITS) at (202) 857-3800 to purchase a copy. The data summary can also be downloaded from the **FCC-State Link** Internet site at <www.fcc.gov/ccb/stats>.

Local Telephone Competition: Status as of December 31, 2000

We present here summary statistics of the latest data on local telephone services competition in the United States as reported in the Commission's local competition and broadband data gathering program (FCC Form 477). The summary statistics provide a snapshot of local telephone service competition and state-specific mobile wireless telephone subscribership as of December 31, 2000.[1]

Based on the latest information now available, readers can draw the following broad conclusions:

- Competitive local exchange carriers (CLECs) reported 16.4 million (or 8.5%) of the approximately 194 million nationwide local telephone lines that were in service to end-user customers at the end of the year 2000, compared to 12.7 million (or 6.7% of nationwide lines) six months earlier. This represents a 29% growth in CLEC market size during the second half of the year 2000. See Table 1.

- About 60% of CLEC local telephone lines served medium and large business, institutional, and government customers at the end of the year 2000. By contrast, about 20% of incumbent local exchange carrier (ILEC) local telephone lines served such customers. See Table 2.

- CLECs reported providing about 35% of end-user customer lines over their own local loop facilities at the end of the year 2000.[2] To serve the remainder of their end-user lines, CLECs resell the

---

[1] Qualifying carriers reported data for December 31, 2000 in filings due on March 1, 2001. (Qualification status is determined separately for each state. If a carrier has at least 10,000 local telephone lines in service in a state, it must file local telephone data for that state.) Earlier FCC Form 477 filings reported data as of December 31, 1999 and as of June 30, 2000. *See* Federal Communications Commission, Common Carrier Bureau, Industry Analysis Division, *Local Telephone Competition at the New Millennium* (rel. Aug. 2000) and *Local Telephone Competition: Status as of June 30, 2000* (rel. Dec. 2000), available at <www.fcc.gov/ccb/stats>. During this data gathering program, qualifying service providers will file FCC Form 477 each year on March 1 (reporting data for the preceding December 31) and September 1 (reporting data for June 30 of the same year). An updated FCC Form 477, and Instructions for that particular form, for each specific round of the data collection may be downloaded from the FCC Forms website at <www.fcc.gov/formpage.html>. FCC Form 477 replaced a previous, voluntary data gathering program which was administered by the Common Carrier Bureau. *See Local Competition and Broadband Reporting*, CC Docket No. 99-301, Notice of Proposed Rulemaking, 14 FCC Rcd 18106 (rel. Oct. 22, 1999).

[2] A reporting carrier should own the "last mile" of wire, cable, or optical fiber that connects to the end-user premises (or own the equivalent fixed wireless facility) if it reports providing the local telephone line over its own facilities. In general, local exchange and exchange access lines provisioned over facilities (other than dark fiber) and services obtained from another carrier are not the reporting carrier's "own facilities" for purposes of this data collection, irrespective of whether those facilities or services are obtained under interconnection arrangements, under tariff, or by other means. In particular, owning the switch that provides dialtone (and other services) over a UNE loop leased from another carrier does not qualify a line as being provisioned over the reporting carrier's own facilities. We believe the reports of at least some CLECs are not consistent with these directions, and we expect such providers to report data more accurately as they gain experience with the program. We also expect that there may be some need (continued....)

services of other carriers or use unbundled network element (UNE) loops that they lease from other carriers.[3] See Table 3.

- ILECs reported providing about 6.8 million lines to other carriers on a resale basis at the end of the year 2000, compared to about 5.7 million lines six months earlier. The number of UNE loops that ILECs reported providing to other carriers increased more rapidly, by 62%, to a total of about 5.3 million.[4] See Table 4.

- Considering the technology deployed in the "last few feet" to the end-user customer's premises, about 1% of nationwide local telephone lines in service at the end of the year 2000, or about 1.2 million lines, terminated at the end-user customer's premises over coaxial cable facilities. Less than 1% of lines terminated over fixed wireless facilities. See Table 5.

- The Commission's data collection program provides information about CLEC local telephone lines (and the CLEC share of total end-user lines in service) in individual states. Relatively large numbers of CLEC lines are associated with the more populous states.[5] With respect to the calculated CLEC *share* of local telephone lines in service, however, relatively large values are reported for some less populous states, such as Kansas, Louisiana, and Minnesota, as well as for some more populous states, such as New York and Texas. See Table 6.

- At least one CLEC reported providing service in the District of Columbia, in Puerto Rico, and in all states except Hawaii. Four or more CLECs reported serving customers in 34 states and the

(Continued from previous page)
for further clarification and adjustment of the reporting system. The Commission recently accepted comments on whether modifications should be made to this data collection. *See Local Competition and Broadband Deployment*, CC Docket No. 99-301, Second Notice of Proposed Rulemaking (rel. Jan. 19, 2001).

[3] UNE loops, as we use the term here, includes UNE loops leased from an ILEC on a stand-alone basis and also UNE loops leased in combination with UNE switching or with any other unbundled network element. For definitions of the various unbundled network elements, *see Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, CC Docket 96-98, Third Report and Order and Fourth Further Notice of Proposed Rulemaking, 15 FCC Rcd 3696, 3932-3952 (rel. Nov. 5, 1999).

[4] The numbers reported by ILECs may be slightly understated because smaller carriers are not required to report data. However, as the reporting ILECs account for about 98% of all ILEC lines, the understatement should not be large. (All ILECs, whether or not they normally report to the FCC, provide data on the number of telephone lines served to the National Exchange Carrier Association for use in conjunction with the Commission's universal service mechanism.) We are less certain about the extent to which comparable lines as reported by CLECs are understated as a result of the state-specific reporting threshold, but we expect such understatement to be larger, on a percentage basis, than for ILECs.

[5] The first and second largest numbers of CLEC lines are reported for New York and Texas which are, respectively, the third and second most populous states. The most populous state, California, has the third largest number of CLEC lines reported.

District of Columbia.[6] See Table 7.

- The percentage of total CLEC end-user lines serving residential and small business customers varies among the states, and is generally lower than the corresponding ILEC percentage.[7] See Table 8.

- By comparison to the roughly 194 million fixed-facility[8] local telephone lines serving end-user customers, the 77 providers of mobile wireless telephone services that reported information served about 101 million subscribers at the end of the year 2000.[9] About 9% of these subscribers received their service via a mobile telephone service reseller. See Table 9.

- The Commission's data collection program requires CLECs and ILECs to identify each zip code in which the provider serves at least one customer.[10] As of December 31, 2000, at least one CLEC was serving customers in 56% of the nation's zip codes. About 88% of United States households reside in these zip codes. Moreover, multiple carriers report providing local telephone service in the major population centers of the country. See Table 10, Table 11, and the map that follows Table 11.

---

[6] In the Form 477 due March 1, 2001, 165 ILECs filed a total of 331 state-specific reports on their local telephone service and 86 CLECs filed a total of 369 reports. Of these, 13 ILEC reports and 53 CLEC reports were from carriers that had fewer than 10,000 lines in a particular state and were thus voluntary. Qualifying carriers were required to report services in the fifty states, District of Columbia, Puerto Rico, and Virgin Islands. Carriers were invited, but not required, to make voluntary submissions for American Samoa, Guam, and the Northern Mariana Islands. No such voluntary submissions were received.

[7] The smallest difference occurs in New York (67% for ILECs and 63% for CLECs).

[8] That is, voice telephone lines provided by means of wireline or fixed wireless technology.

[9] Facilities-based providers with fewer than 10,000 mobile wireless telephone service subscribers in a state (measured by revenue-generating handsets in service) are not required to report. A facilities-based mobile wireless telephone service provider serves subscribers using spectrum licenses that it owns or manages.

[10] CLECs and ILECs are required to report, for states in which they have at least 10,000 local telephone lines in service, lists of zip codes where they have subscribers. Providers of mobile wireless telephone service do not report zip codes.

- In Florida, Georgia, New York, and Texas, at least one-quarter of the zip codes have seven or more reporting CLECs. By contrast, 8% of nationwide zip codes have seven or more reporting CLECs. See Table 12.

As other information from FCC Form 477 becomes available, it will be routinely posted on the Commission's Internet site. We invite users of the information presented in this statistical summary to provide suggestions for improved data collection and analysis by:

- Using the attached customer response form,
- E-mailing comments to eburton@fcc.gov,
- Calling the Industry Analysis Division at (202) 418-0940, or
- Participating in any formal proceedings undertaken by the Commission to solicit comments for improvement of FCC Form 477.

Customer Response

Publication: *Local Telephone Competition: Status as of December 31, 2000*

You can help us provide the best possible information to the public by completing this form and returning it to the Industry Analysis Division of the FCC's Common Carrier Bureau.

1. Please check the category that best describes you:
   - ____ press
   - ____ current telecommunications carrier
   - ____ potential telecommunications carrier
   - ____ business customer evaluating vendors/service options
   - ____ consultant, law firm, lobbyist
   - ____ other business customer
   - ____ academic/student
   - ____ residential customer
   - ____ FCC employee
   - ____ other federal government employee
   - ____ state or local government employee
   - ____ Other (please specify) _____

2.

Please rate the report:	Excellent	Good	Satisfactory	Poor	No opinion
Data accuracy	(_)	(_)	(_)	(_)	(_)
Data presentation	(_)	(_)	(_)	(_)	(_)
Timeliness of data	(_)	(_)	(_)	(_)	(_)
Completeness of data	(_)	(_)	(_)	(_)	(_)
Text clarity	(_)	(_)	(_)	(_)	(_)
Completeness of text	(_)	(_)	(_)	(_)	(_)

3.

Overall, how do you rate this report?	Excellent	Good	Satisfactory	Poor	No opinion
	(_)	(_)	(_)	(_)	(_)

4. How can this report be improved?

_____

_____

_____

5. May we contact you to discuss possible improvements?

   Name:

   Telephone #:

To discuss the information in this report contact: call 202-418-0940 or for users of TTY equipment, call (202) 418-0484

UNE-P User Group

BellSouth-CLEC User Groups

The next UNE-P User Group meeting will be during the CLEC Inforum at the Hilton Hotel-Downtown in Atlanta, GA on **July 17.**

255 Courtland Street NE
404-659-2000
1:30am-4:30pm

If you are not planning to come to Atlanta for this meeting, you may still join and actively participate. A conference bridge will be established to allow your participation. You may join by calling in on bridge number **205-970-3743** access code **6484.**

Attendees are responsible for their own hotel accommodations. In order to confirm your attendance or attendance at the meeting either by physical attendance or attendance by conference bridge, please contact Ellen Shepard via e-mail at ellen.m.shepard@bellsouth.com. Or call Ellen at **770-936-3754** by **July 10, 2001** so that we may accommodate your seating and break time food requirements. Let us know how many **UNE-P** people will be attending for your company. Please provide the following information for all attendees when you call or e-mail Ellen:

- Name of attendee
- Job title or function
- Name of company
- Contact telephone number and email address

UNE-P User Group - Rules of Engagement

BellSouth-CLEC User Groups

Unless otherwise specified, these meetings will take place via Conference Bridge. When appropriate and convenient for the CLEC, the CLEC members may attend in person in Atlanta, Georgia at BellSouth Executive Conference Center or at the designated meeting location.

Membership will be comprised of representatives from each participating CLEC and BellSouth companies. The User Group will be open to all CLECs who do business in BellSouth region. CLECs must either be using UNE-P or in the negotiation phase for using the product.

The User Group is not meant to replace, supercede or impose on the existing Change Control Process, activity with the Account Team, Training, CSM or other established process for issue resolution or new business activity.Each company may bring or add on the conference call the number of participants necessary to represent their position. BST recommends three (3) to five (5) CLEC participants. If the number of participants grow to be unmanageable, CLECs and BellSouth will revisit the issues of representation to apply some restrictions.

Each meeting will begin with a roll call to take attendance.

Attorneys are NOT invited to participate so that the sessions are kept at a business operations-level. This is not a forum for legal and regulatory issues. During roll call if any attorneys are on the conference call or in attendance, they will be asked to disconnect themselves from the meeting.

Each member must provide the name of a back-up representative who will take his or her place in case the original member is unable to participate in a workshop. This will allow some continuity of knowledge in the organization. Meeting minutes will be provided one (1) week after the workshop. This should keep representatives and their designees informed and up-to-date for participation.

SCOPE

- The scope of the User Group will include:
- Business Processes
- Ordering and Provisioning

- Network Operations
- Maintenance and Repair
- Billing
- Other

The scope of the UNE-P User Group will not include:

- Change Control Issues
- BonaFide or New Business Requests
- Contractual Agreements
- Testing Support (i.e. Negotiating/coordinating test agreements and dates)
- Pricing
- Products other than UNE-P
- Legal and Regulatory Issues

REQUIREMENTS FOR PARTICIPATION

The minimum requirements for participation in the UNE-P User Group electronically are:

- Word 6.0 or greater
- Excel 5.0 or greater
- Internet E-mail address
- Web access

FORMAT OF USER GROUP WORKSHOP

The workshops will be 1/2 day long depending on the subject matter and the number of issues to be discussed. The Facilitator will summarize each day's activities and clearly outline the structure for the next meeting.

Unless otherwise specified, the workshops will begin at 8:30 AM EST and end at 12:30 PM EST.

RESPONSIBILITIES

BellSouth Responsibilities:

- Facilitate meeting.
- Collect issues submitted by CLECs.
- Develop the meeting agenda and determine logistics.
- Compile meeting minutes.
- Develop and maintain action plan. The action plan will show status of each issue, date opened, date closed, pending, expected resolution date, etc.
- Post meeting minutes and action plan on web site one (1) week after the meeting.

CLECs Responsibilities:

- Access web site for meeting notice
- Submit issues and documentation via e-mail (two weeks in advance of meeting)
- Attend and participate in meetings
- Provide name, title, address, email address and contact telephone numbers for all participants
- Review User Group site and download documents as necessary www.interconnection.bellsouth.com/notifications/usergroups/

DOCUMENTATION

Agenda items must be submitted to the facilitator via e-mail two (2) weeks prior to the scheduled meeting. CLECs and BST must provide their issues in writing to the Facilitator via email. The Facilitator will compile all the lists, develop a working agenda and return to all members one (1) week before the meeting.

Each CLEC should bring examples to the workshop that will support the issue that they raise. For example:

- PON #
- date of trouble
- name of customer affected
- circuit #

Workshop documentation will contain membership rules, action plans, contact lists, updated process flows and minutes of each meeting.

Join Us for the

3rd Annual 2001 Summer CLEC Inforum

July 15 - 17, 2001
Atlanta Hilton & Towers
Atlanta, Georgia

Amidst the tightening capital markets and increasingly competitive environment, BellSouth has devoted its 3rd Annual 2001 Summer CLEC Inforum to providing you with information on how to improve operational efficiency.

In addition to networking opportunities with your BellSouth account executive, BellSouth subject matter experts and your peers, valuable educational workshops and sessions are planned. The sessions will provide you with the latest information on BellSouth products, Operational Support Systems, sales and marketing initiatives and Operational issues.

Plus, there will be several exhibit tables designed to give you the opportunity to talk one-on-one with Subject Matter Experts in several areas such as the Complex Resale Support Group, Product Management and CLEC Training.

Make the commitment today to BellSouth by planning to join your CLEC peers at BellSouth's 3rd Annual Summer CLEC Inforum.

BellSouth Line Sharing Collaboratives

Welcome/Menu

WELCOME:
Welcome to the BellSouth®/ Data CLEC (DLEC) Line Sharing Collaboratives Web Pages. This site has been developed for the benefit of participating DLEC members by providing an easily accessible and current source of information and links relating to the specific BellSouth / DLEC Collaborative and the BellSouth Line Sharing offering.

WHAT IS A LINE SHARING COLLABORATIVE:
A Line Sharing Collaborative is a regularly scheduled meeting between BellSouth and participating DLECs. During these meetings, the DLECs and BellSouth work together to develop, with the mutual agreement to, the processes and procedures required to implement Line Sharing in order to meet the requirements of the FCC 3rd Report and Order in CC Docket No. 98-147 and 4th Report and Order in CC Docket No. 96-98, released December 9, 1999 (Line Sharing Order).

WHERE / WHEN DO THESE COLLABORATIVES MEET:
Each collaborative meets in the BellSouth Center located in Atlanta, GA at 675 W. Peachtree St., and has a conference bridge available. For more information regarding meetings, suggested transportation, accommodations, parking, dress, etc., **CLICK HERE**.

WHAT COLLABORATIVES ARE CURRENTLY ESTABLISHED:
To obtain additional information regarding specific collaboratives, CLICK on the desired Line Sharing Collaborative listed below.

These sites contain documents and links to the latest information, previous meeting minutes, and other pertinent information. Some information will be static, while other information may change on a quarterly, monthly or weekly basis.

Currently there are three (3) active collaboratives, as follows:

1. **CENTRAL OFFICE (CO) BASED - BELLSOUTH OWNED SPLITTER**
   BellSouth owns the splitter located in the Central Office.

2. **CO BASED - DLEC OWNED SPLITTER**
   DLEC owns the splitter located in its collocation area.

3. **REMOTE SITE (RS) BASED - BELLSOUTH OWNED SPLITTER**
   BellSouth owns the splitter located at a Remote Site.

FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 960786-TP

EXHIBIT CKC-10

BellSouth's Win Back Review
Recommendations and Implementation

During the early part of 2001, BellSouth received complaints from competitive carriers ("CLECs") addressing certain aspects of BellSouth's win back and retention programs. The complaints can be placed in two basic categories: disparagement of CLECs; and misuse of wholesale information.

Following receipt of these complaints, BellSouth Senior Management took three related steps: (1) all outbound (telemarketing and direct mail) win back programs were temporarily suspended; (2) a review of these programs (the "Review") was commenced to ensure that BellSouth policies and guidelines were being followed; and (3) a formal process was adopted for identifying and handling any subsequent CLEC complaints related to BellSouth's marketing and sales practices.

The Review team found (a) that there was no evidence of systematic wrongdoing; (b) no evidence of improper systems links; (b) that clear policies regarding use of information found in BellSouth's systems and sales and marketing were clearly established; and (c) that these policies were generally understood in the field.

The Review team, based upon their work, recommended to Senior Management that seven steps be taken by BellSouth to address perceived gaps in the implementation of the Company's policies. The seven Recommendations (the "Recommendations") were:

- Strengthen vendor management – reassess and modify its management of third party vendors engaged in telesales or telemarketing of BellSouth's products and services. While certain aspects of BellSouth had clearly articulated and well developed policies and procedures addressing this activity, these best practices had not been standardized for all third parties engaged in the activity.
- Strengthen "non-disparagement" policy – The principle underlying BellSouth's policy is that we should engage in "positive selling"- emphasize BellSouth's strengths, not the competition's weaknesses. Given BellSouth's position in the market, it was recommended that a policy be adopted that requires strict adherence to the "positive selling" approach, even if the sales activity restricted does not violate any applicable law or regulation.
- Enhance CPNI training – BellSouth's current CPNI training does a good job in regards to BellSouth's responsibilities with respect to information concerning end user customers. That was the primary focus of action by the FCC. Further, the wholesale service organization has an appropriate understanding of the confidentiality of the information it has concerning other carriers. It was recommended that the retail CPNI coverage be

expanded to include a more detailed explanation of BellSouth's duties and responsibilities in connection with "wholesale information."

- Set competitive information boundaries – While information should be provided to BellSouth personnel regarding the status of the telecommunications industry, it was recommended that a uniformity of use be required to ensure that only appropriate material is provided and that clear instruction and guidance is provided regarding the material's use.
- Educate staff on acceptable systems use – BellSouth has a clear policy prohibiting access to IT systems without an approved business need. It was recommended that employees be periodically and systematically reminded of their responsibilities regarding this access.
- Enhance systems access controls – It was recommended that a formal process be adopted to assess systems access for new, transferred, or promoted employees.
- Enhance quality assurance program – Periodic reinforcement, monitoring, and auditing of the training provided to employees and sales representatives is critical to long term compliance with legal requirements and to the success of the corporation. It was recommended that these functions be assumed by the Customer Markets Compliance organization.

Senior Management accepted these Recommendations and an implementation team (the "Implementation Team") was formed. The team adopted a uniform six-step approach to each of the Recommendations. This approach provided the structure necessary to effectively operationalize the recommendations.

To address the recommendations regarding the non-disparagement policy; the CPNI training; the competitive information boundaries; and the acceptable systems use, the Implementation Team developed a modular yet integrated training program entitled the "Competitive Landscape Operating Requirements. The training will be conducted in two phases. The first phase will include all BellSouth and third party personnel that will be engaged in outbound marketing of BellSouth's win back programs. The second phase will cover all other BellSouth customer contact personnel and employees that support these groups.

The modular training consists of sections covering BellSouth's Fair Competition Policy; CPNI and Wholesale Information; Access to BellSouth's IT Systems; and Dissemination and Use of Competitive Information. The substance of the training includes but is not limited to:

- Definition of BellSouth's positive selling approach and the prohibition on negative selling. Training and reinforcement of the requirement that customers who are also competitors must be treated fairly and not be disadvantaged.

- BellSouth's policy to protect all proprietary information belonging to or in the control of BellSouth, including without limitation, information about all of its customers, both carrier and end user.
- Instruction regarding the appropriate uses of individually identifiable Wholesale information and confirmation that Wholesale information cannot be accessed or used for any purpose related to the sale or promotion of any BellSouth product or service.
- The prohibition on BellSouth personnel accessing any BellSouth IT systems unless there is a legitimate and authorized business purpose for such access.
- Training regarding the dissemination and use of competitive information including circumstances under which it is appropriate and inappropriate to disseminate and use such information.
- Information regarding and the communication of the instructions and limitations of use that must accompany the dissemination of competitive information.
- Training regarding the handling and use of confidential information

To address the Recommendation regarding vendor management, BellSouth has adopted a uniform approach to training, managing, and monitoring all third party sales representatives involved in telesales and telemarketing activity on behalf of BellSouth. The core components include a standardized training course for all BellSouth personnel responsible for the management of third party telesales and telemarketing vendors; a telesales checklist utilized in connection with both the orientation of new telesales and telemarketing vendors and in the roll out of any new product, service or program sold by such vendors; standard contract provisions addressing monitoring, training, and compliance obligations; and a certification process for use with new telesales and telemarketing vendors and with the roll out of any new product, service or program sold by such vendors. The certification process includes both product training and sales tactics training and will be used to reinforce BellSouth's policies concerning non-disparagement and positive selling.

In order to address the Recommendation regarding enhancement of system access controls, BellSouth has adopted a process for monitoring and approving continued systems access for all newly hired employees and transferred and promoted employees. Each receiving manager of a new employee and transferred or promoted employee is required to conduct a review of the systems to which the new, transferred or promoted employee requires access in order to perform in the employee's new position. Access to only those systems will be provided and, if applicable, access to other systems will be removed. Longer term, BellSouth plans to institute a IT systems-based approach to managing and monitoring systems access.

To address the Recommendation regarding the enhancement of the quality assurance program, BellSouth will utilize the Compliance structure

currently in place. The compliance structure will be enhanced to include special attention to the Competitive Landscape Mandatory Guidelines and the Dissemination and Use of Competitive Information guidelines. Additionally, ongoing monitoring by the Compliance structure will ensure that annual training on the guidelines will occur. Further the Internal Audit organization will conduct periodic audits of the Compliance obligations to further ensure continued compliance with BellSouth policies.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	)	Docket No. 960786-TL

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	)	Docket No. 960786-TL

FLORIDA DIGITAL NETWORK, INC.'S FIRST SET OF REQUEST FOR ADMISSIONS TO BELLSOUTH TELECOMMUNICATIONS, INC. (1 – 11)

Florida Digital Network, Inc., ("FDN") pursuant to Rule 28-106.206, Florida Administrative Code, and Rule 1.370, Florida Rules of Civil Procedure, hereby serves its First Set of Request for Admissions to BellSouth Telecommunications, Inc. ("BellSouth") and demands BellSouth admit or deny the statements set forth herein below.

DEFINITIONS

1. "BellSouth" means BellSouth Telecommunications, Inc. and its parents, subsidiaries, and affiliates, their present and former officers, employees, agents, representatives, directors, and all other persons acting or purporting to act on behalf of BellSouth.

2. The terms "you" and "your" refer to BellSouth.

3. "Florida Digital Network" or "FDN" means Florida Digital Network, Inc., and its subsidiaries and affiliates, their present and former officers, employees, agents,

directors, and all other persons acting or purporting to act on behalf of Florida Digital Network, Inc.

4. "Winback" means any and all BellSouth programs for promotional prices offered or to be offered to customers who have changed or will be changing from BellSouth to another local service provider or to customers served from BellSouth wire centers in competitive situations and any other BellSouth discounts or reductions to or waivers or rebates of rates or charges offered or to be offered to and designed to retain or regain customers to BellSouth services. "Winback" includes, as the context of a question may require, every aspect of implementing such programs from pricing formulation to order execution, including but not limited to pricing, tariffing, marketing, advertising, sales, and provisioning.

5. The term "person" means any natural person, corporation, corporate division, partnership, other unincorporated association, trust, government agency, or entity.

6. The term "document" shall have the broadest possible meaning under applicable law. "Document" means every writing or record of every type and description that is in the possession, custody or control of BellSouth, including, but not limited to, correspondence, memoranda, drafts, workpapers, summaries, stenographic or handwritten notes, studies, publications, books, pamphlets, reports, surveys, minutes or statistical compilations, computer and other electronic records or tapes or printouts, including, but not limited to, electronic mail files; and copies of such writings or records containing any commentary or notation whatsoever that does not appear in the original. The term "document" further includes, by way of illustration and not limitation, schedules,

progress schedules, time logs, drawings, computer disks, charts projections, time tables, summaries of other documents, minutes, surveys, work sheets, drawings, comparisons, evaluations, laboratory and testing reports, telephone call records, personal diaries, calendars, personal notebooks, personal reading files, transcripts, witness statements and indices.

7. The term "referring or relating to" means any oral, graphic, demonstrative, telephonic, verbal, electronic, written or other conveyance of information, including, but not limited to, conversations, telecommunications and documents.

8. The term "referring or relating to" means consisting of, containing, mentioning, suggesting, reflecting, concerning, regarding, summarizing, analyzing, discussing, involving, dealing with, emanating from, directed at, pertaining to in any way, or in any way logically or factually connected or associated with the matter discussed.

9. "And" and "or" as used herein shall be construed both conjunctively and disjunctively and each shall include the other whenever such construction will serve to bring within the scope of these discovery requests and information what would not otherwise not be brought within their scope.

10. The singular as used herein shall include the plural and the masculine gender shall include the feminine and the neuter.

11. Acronyms: "ALEC" means alternate local exchange carrier, "CSR" means customer service records, "LSR" means local service request, "x-DSL" means any of the varieties of digital subscriber line services, "ATM" means asynchronous transfer mode, "DLC" means digital loop carrier.

12. For reference purposes, please note that the attached documents, referenced in the first three admissions below, were admitted into the record in FPSC Docket No. 010098.

ADMISSIONS

1. BellSouth authenticates the attached documents, and the attached documents are correct and accurate copies of the originals.

2. The statements in the attached documents are true, correct and accurate.

3. The attached documents include examples of BellSouth Telecommunications, Inc.'s advertisements of its Fast Access ® Internet Service to prospective retail end users.

4. BellSouth Telecommunications, Inc. advertises its Fast Access ® Internet Service to prospective retail end users in Florida.

5 For retail end users receiving both voice service and Fast Access ® Internet Service from BellSouth Telecommunications, Inc, the retail end user receives one bill that includes charges for both services.

6. BellSouth Telecommunications, Inc. offers price packages for its Fast Access ® Internet Service purchased with its voice service to retail end users in Florida.

7. Where BellSouth Telecommunications, Inc. provides Fast Access ® Internet Service to retail end users in Florida, BellSouth Telecommunications Inc. owns, operates and maintains the loop, the DLSAM, the packet transport facilities and the ATM switching facilities.

8. BellSouth Telecommunications Inc. provides the customer service and customer billing and collection support functions for customer receiving BellSouth Telecommunications, Inc.'s Fast Access ® Internet Service in Florida.

9. BellSouth Telecommunications Inc. acquires xDSL service from itself, which it combines with Internet access services to form the product known as BellSouth Telecommunications, Inc.'s Fast Access ® Internet Service.

10. ALECs provide xDSL service for no more than approximately 1,000 access lines in BellSouth territory in Florida.

11. None of the ALEC xDSL lines referenced in the foregoing request are served through either fiber-fed or copper-fed DLC BellSouth remote terminal facilities.

Dated this 6 day of Sept 2001.

BellSouth Telecommunications, Inc.
FPSC Dkt No. 010098-TP
Florida Digital's 1st Set of Interrogatories
May 7, 2001
Issue No. 1 Item No. 2

REQUEST: How many DSL customers does BST have in Florida? How many of these customers were added during the first quarter of 2001?

RESPONSE: As of the end of April 2001, BellSouth had 133,015 wholesale and retail high-speed data subscribers in the State of Florida, 43,291 of which were added in the first quarter 2001.

RESPONSE PROVIDED BY: Eric Fogle
675 West Peachtree Street
Atlanta, GA 30375

11

BellSouth Telecommunications, Inc.
FPSC Dkt No. 010098-TP
Florida Digital's 1st Set of Interrogatories
May 7, 2001
Issue No. 1 Item No. 3

REQUEST: How many central offices does BellSouth have in Florida?

RESPONSE: 196.

RESPONSE PROVIDED BY: Wayne Tubaugh
Manager
150 S Monroe
Tallahassee, FL

12

REQUEST: How many remote terminals does BellSouth have in Florida?

(a) Of these, how many are Cabinets?
(b) Huts?
(c) Controlled Environmental Vaults?

RESPONSE: As of 5/23/01, BellSouth had 12,037 remote terminals in Florida. This figure includes BellSouth equipment housed on customer premises. These 12, 037 remote terminals include: (a) 10,011 are cabinets; (b) 466 are huts (includes CECs); and (c) 429 are CEVs.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: What percentage of BellSouth's access lines in Florida are served by fiber-fed copper loops?

RESPONSE: Approximately 61%.

RESPONSE PROVIDED BY: Linda Kinsey
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Has BellSouth or any affiliate ever, for any period of time, provided xDSL services to an end-user who concurrently subscribed to local exchange telecommunications service provided by a CLEC that provides service over BellSouth facilities by (1) resale, (2) UNE-P, or (3) unbundled loops? Please answer separately for each of the three options.

RESPONSE: BellSouth provides xDSL services to end users who concurrently subscribe to local exchange telecommunications service that a CLEC is providing over BellSouth facilities by way of resale.

BellSouth does not intend to provide xDSL services to end-users who concurrently subscribe to local exchange telecommunications service that a CLEC provides over BellSouth facilities by way of UNE-P. At one time, BellSouth did not have edits in place to prevent this, and some sales of this type did erroneously occur. BellSouth is in the process of correcting these situations by providing the CLECs with the option of converting the voice service to BellSouth resale service. If the CLEC decides not to accept this option, BellSouth will remove the xDSL service.

BellSouth does not provide xDSL services to end-users who concurrently subscribe to local exchange telecommunications service that a CLEC provides over unbundled loop facilities it purchases from BellSouth.

RESPONSE PROVIDED BY:

Tommy G. Williams

REQUEST: Has BellSouth or any affiliate ever, for any period of time, provided wholesale xDSL services to a CLEC or ISP, or other wholesale provider that are to be combined with local exchange telecommunications service provided by a CLEC that provides service over BellSouth facilities by (1) resale, (2) UNE-P, or (3) unbundled loops? Please answer separately for each of the options.

RESPONSE: BellSouth provides wholesale xDSL services to CLECs, ISPs, and other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC is providing over BellSouth facilities by way of resale.

BellSouth does not intend to provide wholesale xDSL services to CLECs, ISPs, other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC provides over BellSouth facilities by way of UNE-P. At one time, BellSouth did not have edits in place to prevent this, and some sales of this type did erroneously occur. BellSouth is in the process of correcting these situations by providing the CLECs, the ISPs, and/or the other wholesale providers with the option of converting the voice service to BellSouth resale service. If the provider decides not to accept this option, BellSouth will remove the xDSL service.

BellSouth does not provide wholesale xDSL services to CLECs, ISPs, or other wholesale providers that are to be combined with local exchange telecommunications service that a CLEC provides over unbundled loop facilities it purchases from BellSouth.

REQUEST: State whether any negotiations were conducted between BellSouth's ISP affiliate and BellSouth Telecommunications for the provision of high speed DSL service to BellSouth's ISP affiliate and for the advertising, maintenance, billing and customer care functions for Fast Access Service. Provide all documents related to those negotiations

RESPONSE: BellSouth objects to the term "ISP affiliate" on the grounds that it is vague and overly broad.

Subject to, and without waiving this objection, BellSouth responds that BellSouth Telecommunications, Inc. ("BST") is a wholly owned subsidiary of BellSouth Corporation. BellSouth.net Inc. (BellSouth.net) is also a wholly owned subsidiary of BellSouth Corporation. BST has no ownership in BellSouth.net Inc. BellSouth.net Inc. provides equipment and professional services under contract to BST. BellSouth.net also provides Internet-related services for other BellSouth Corporation affiliated companies. BellSouth.net Inc. provides services only to BellSouth Corporation affiliates. It does not provide services to any retail customer.

BellSouth.net provides, under contract, both equipment and professional services to BST. The equipment includes items such as routers and servers that comprise the "information services" equipment required by BST to provide the unregulated Internet service to BST's retail customers. BellSouth.net also provides professional services such as the engineering required to determine the configuration of this equipment, the development of "web" pages, and the workforce that operates the equipment. The easiest way to understand the function of BellSouth.net is to think of it as a vendor that provides BST with the equipment and professional services that enable BST to provide an enhanced information service to retail customers as BellSouth FastAccess ADSL.

RESPONSE: (Cont.)

BST, therefore, is the provider of Fast Access ADSL service, and it simply does not negotiate with itself for advertising, maintenance, billing, and customer care functions. BST uses its tariffed, wholesale DSL service (and accounts for the cost of this service at the tariffed rates in accordance with applicable FCC requirements) to provide its Fast Access ADSL service, and to the extent that any support functions related to that service are provided by a BellSouth affiliate, BST accounts for such functions in accordance with applicable cost allocation rules that have been approved by the FCC and the Florida Public Service Commission.

RESPONSE PROVIDED BY: Tom Lohman
Director
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: State whether BellSouth provides (i) customer service, (ii) billing, (iii) advertising, and (iv) maintenance services to BellSouth's ISP affiliate. If the answer to any of the previous subparts is yes, state whether other similarly situated, unaffiliated ISPs may enter into comparable arrangements with BellSouth and whether any other ISPs have done so. Identify the authority (e.g., tariff, contract, etc.) pursuant to which BellSouth's ISP affiliate obtains any such services and the authority by which unaffiliated ISPs may enter into similar arrangements. Provide copies of, or a URL link to, all relevant documents.

RESPONSE: Please see BellSouth's response to Item No. 68.

Re: Docket No. 001332-TL (xDSL Tariff)

Dear Ms. Bayó:

It has come to my attention that I misspoke during the February 6, 2001 agenda. During the argument on the above captioned matter, I made certain statements concerning the relationship between BellSouth Telecommunications, Inc. and BellSouth.net Inc., and the role of BellSouth.net Inc. in the deployment of ADSL service that were incorrect. In order to ensure a complete and accurate understanding, I submit the following:

BellSouth.net Inc. provides services only to companies that are affiliates of BellSouth Corporation, including BellSouth Telecommunications, Inc. BellSouth.net Inc. does not provide services to end users. BellSouth.net Inc. facilitates and supports BellSouth Telecommunications, Inc.'s provision of FastAccess® ADSL Internet service. BellSouth Telecommunications, Inc. provides its Internet services (including FastAccess® service) to its retail customers pursuant to the Federal Communication Commission's definition of enhanced or information services. BellSouth Telecommunications, Inc. generally markets its low speed, dial-up Internet services to its customers under the name BellSouth Internet Service, and it's high-speed, ADSL-based Internet services to customers under the name BellSouth FastAccess service. Some of the confusion may be attributable to the fact that BellSouth Internet Service was formerly marketed under the brand name "BellSouth.net® Internet Service." At the time, BellSouth.net was thus the name of both the

DOCUMENT NUMBER-DATE
04582 APR 13 ⊏
FPSC-RECORDS/REPORTING

99

Internet service and the name of the separate affiliate that assisted BellSouth Telecommunications, Inc. in providing that Internet service. BellSouth.net Inc. is not, and never has been, an Internet Service Provider. Rather, BellSouth Telecommunications, Inc. is the Internet service provider that provides the service now known as BellSouth Internet Service and formerly known as BellSouth.net® Internet Service.

I regret any inconvenience and confusion this may have caused.

Sincerely,

Nancy B. White

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s entry into interLATA services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	)	Docket No. 960786-TL

FLORIDA DIGITAL NETWORK, INC.'S FIRST SET OF REQUEST FOR PRODUCTION OF DOCUMENTS TO BELLSOUTH TELECOMMUNICATIONS, INC. (1)

Florida Digital Network, Inc., ("FDN") pursuant to Rule 28-106.206, Florida Administrative Code, and Rule 1.350, Florida Rules of Civil Procedure, hereby serves its First Set of Request for Production of Documents to BellSouth Telecommunications, Inc. ("BellSouth") and request that the following documents be provided or made available for inspection and copying at a mutually agreeable location on or before the due date of this discovery.

DEFINITIONS

1. "BellSouth" means BellSouth Telecommunications, Inc. and its parents, subsidiaries, and affiliates, their present and former officers, employees, agents, representatives, directors, and all other persons acting or purporting to act on behalf of BellSouth.

2. The terms "you" and "your" refer to BellSouth.

3. "Florida Digital Network" or "FDN" means Florida Digital Network, Inc., and its subsidiaries and affiliates, their present and former officers, employees, agents,

directors, and all other persons acting or purporting to act on behalf of Florida Digital Network, Inc.

4. "Winback" means any and all BellSouth programs for promotional prices offered or to be offered to customers who have changed or will be changing from BellSouth to another local service provider or to customers served from BellSouth wire centers in competitive situations and any other BellSouth discounts or reductions to or waivers or rebates of rates or charges offered or to be offered to and designed to retain or regain customers to BellSouth services. "Winback" includes, as the context of a question may require, every aspect of implementing such programs from pricing formulation to order execution, including but not limited to pricing, tariffing, marketing, advertising, sales, and provisioning.

5. The term "person" means any natural person, corporation, corporate division, partnership, other unincorporated association, trust, government agency, or entity.

6. The term "document" shall have the broadest possible meaning under applicable law. "Document" means every writing or record of every type and description that is in the possession, custody or control of BellSouth, including, but not limited to, correspondence, memoranda, drafts, workpapers, summaries, stenographic or handwritten notes, studies, publications, books, pamphlets, reports, surveys, minutes or statistical compilations, computer and other electronic records or tapes or printouts, including, but not limited to, electronic mail files; and copies of such writings or records containing any commentary or notation whatsoever that does not appear in the original. The term "document" further includes, by way of illustration and not limitation, schedules,

98

progress schedules, time logs, drawings, computer disks, charts projections, time tables, summaries of other documents, minutes, surveys, work sheets, drawings, comparisons, evaluations, laboratory and testing reports, telephone call records, personal diaries, calendars, personal notebooks, personal reading files, transcripts, witness statements and indices.

7. The term "referring or relating to" means any oral, graphic, demonstrative, telephonic, verbal, electronic, written or other conveyance of information, including, but not limited to, conversations, telecommunications and documents.

8. The term "referring or relating to" means consisting of, containing, mentioning, suggesting, reflecting, concerning, regarding, summarizing, analyzing, discussing, involving, dealing with, emanating from, directed at, pertaining to in any way, or in any way logically or factually connected or associated with the matter discussed.

9. "And" and "or" as used herein shall be construed both conjunctively and disjunctively and each shall include the other whenever such construction will serve to bring within the scope of these discovery requests and information what would not otherwise not be brought within their scope.

10. The singular as used herein shall include the plural and the masculine gender shall include the feminine and the neuter.

INSTRUCTIONS

1. If you contend that a document in response to any document request may be withheld under the attorney-client privilege, the attorney work product doctrine or any other privilege or basis, please state the following with respect to each such document in

order to explain the basis for the claim of privilege and to permit adjudication of the propriety of that claim:

a) the privilege asserted and its basis;

b) the nature of the information withheld;

c) the subject matter of the document, except to the extent that you claim it is privileged.

2. These discovery requests are to be answered with reference to all information in your possession, custody or control or reasonably available to you. These discovery requests are intended to include requests for information which is physically within BellSouth's possession, custody or control as well as in the possession, custody or control of BellSouth's agents, attorneys, or other third parties from which such documents may be obtained.

3. If any document request cannot be fully complied with, comply to the extent possible and specify the reasons for your inability to comply fully.

DOCUMENT REQUESTS

1. Provide all documents referring or relating to projected or actual market share results from BellSouth winback programs in Florida.

30

Dated this 6 day of Sep. 2001.

7. The term "referring or relating to" means any oral, graphic, demonstrative, telephonic, verbal, electronic, written or other conveyance of information, including, but not limited to, conversations, telecommunications and documents.

8. The term "referring or relating to" means consisting of, containing, mentioning, suggesting, reflecting, concerning, regarding, summarizing, analyzing, discussing, involving, dealing with, emanating from, directed at, pertaining to in any way, or in any way logically or factually connected or associated with the matter discussed.

9. "And" and "or" as used herein shall be construed both conjunctively and disjunctively and each shall include the other whenever such construction will serve to bring within the scope of these discovery requests and information that would not otherwise not be brought within their scope.

10. The singular as used herein shall include the plural and the masculine gender shall include the feminine and the neuter.

11. "Identify" or "identifying" or "identification" when used in reference to a natural person means to state:

a) the full legal name of the person;

b) the name, title and employer of the person at the time in question;

c) the present or last known employer of such person;

d) the present or last known home and business addresses of the person; and

e) the present home address.

12. "Identify" or "identifying" or "identification" when used in reference to a person other than a natural person means to state:

a) the full name of the person and any names under which it conducts business;

b) the present or last known address of the person; and

c) the present or last known telephone number of the person.

13. "Identify" or "identifying" or "identification" when used in reference to a document means to provide with respect to each document requested to be identified by these discovery requests a description of the document that is sufficient for purposes of a request to produce or a subpoena duces tecum, including the following:

a) the type of document (e.g., letter, memorandum, etc.);

b) the date of the document;

c) the title or label of the document;

d) the Bates number or other identifier used to number the document for use in litigation;

e) the identity of the originator;

f) the identity of each person to whom it was sent;

g) the identity of each person to whom a copy or copies were sent;

h) a summary of the contents of the document;

i) the name and last known address of each person who presently has possession, custody or control of the document; and

j) if any such document was, but is no longer, in your possession, custody or control or is no longer in existence, state whether it: (1) is missing or lost; (2) has been destroyed; or (3) has been transferred voluntarily or involuntarily, and, if so, state the circumstances surrounding the authorization for each such disposition and the date of such disposition.

14. "Identify," "identifying" or "identity" when used in reference to a communications means to state the date of the communications, whether the communication was written or oral, the identity of all parties and witnesses to the communication, the substance of what was said and/or transpired and, if written, the identity of the document(s) containing or referring to the communication.

GENERAL INSTRUCTIONS

1. If you contend that any response to any interrogatory may be withheld under the attorney-client privilege, the attorney work product doctrine or any other privilege or basis, please state the following with respect to each such response in order to explain the basis for the claim of privilege and to permit adjudication of the propriety of that claim:

a) the privilege asserted and its basis;

b) the nature of the information withheld;

c) the subject matter of the document, except to the

extent that you claim it is privileged.

2. These discovery requests are to be answered with reference to all information in your possession, custody or control or reasonably available to you. These discovery requests are intended to include requests for information which is physically within BellSouth's possession, custody or control as well as in the possession, custody or control of BellSouth's agents, attorneys, or other third parties from which such documents may be obtained.

3. If any interrogatory cannot be answered in full, answer to the extent possible and specify the reasons for your inability to answer fully.

4. For each interrogatory, provide the name of the company witness(es) or employee(s) responsible for compiling and providing the information contained in each answer.

5. Acronyms: "ALEC" means alternate local exchange carrier, "CSR" means customer service records, "LSR" means local service request, "x-DSL" means any of the varieties of digital subscriber line services, "ATM" means asynchronous transfer mode.

INTERROGATORIES

1. Using both methods described in the affidavit of Mr. Victor Wakeling, state by month for each month for the year 2001, the total number of ALEC lines in Florida and the number of FDN lines.

Dated this 6 day of Sep. 2001.

Fred J. McCallum

REQUEST: Using both methods described in the affidavit of Mr. Victor Wakeling, state by month for each month for the year 2001, the total number of ALEC lines in Florida and the number of FDN lines.

RESPONSE: Mr. Wakeling prepares estimates of CLEC lines using the two methods, specifically in support of, and only in those months associated with, formal regulatory filings for approval for provision of interLATA. For Florida in 2001, currently, Mr. Wakeling has only prepared the CLEC data used in his affidavit, which used February 2001 data.

However, FDN publicly acknowledged having over 50,000 business lines in service and adding approximately 1,000 customers a month in a June 14, 2001 FDN news release retrieved from its web site. Thecount of 911 Listings for FDN at the end of May in BellSouth's extract of Florida CLECs' 911 listings was totally consistent with FDN's amount referenced above. BellSouth also used FDN's 911 listings for its line estimates under both methods in the affidavit. BellSouth believes its estimate of FDN's lines is accurate to the extent that FDN fulfills its legal obligation to maintain 911 listings for its customers.

RESPONSE PROVIDED BY: Victor Wakeling

41

REQUEST: Provide all documents referring or relating to projected or actual market share results from BellSouth winback programs in Florida.

RESPONSE:

BellSouth objects to this Request on the grounds that it is not relevant and not reasonably calculated to lead to the discovery of admissible evidence. Winback programs are not within the scope of section 271 of the Telecommunications Act and therefore not relevant to this proceeding.

REQUEST: BellSouth authenticates the attached documents, and the attached documents are correct and accurate copies of the originals.

RESPONSE:

Admitted

BellSouth authenticates the attached documents, and the attached documents are correct and accurate copies of the originals.

RESPONSE PROVIDED BY: Eric Fogle
Tommy G. Williams
Linda Kinsey

REQUEST: The statements in the attached documents are true, correct and accurate.

RESPONSE:

Admitted

The statements in the attached documents are true, correct and accurate.

RESPONSE PROVIDED BY: Eric Fogle
Tommy Williams
Linda Kinsey

REQUEST: The attached documents include examples of BellSouth Telecommunications, Inc.'s advertisements of its Fast Access® Internet Service to prospective retail end users in Florida.

RESPONSE:

Admitted

The attached documents include examples of BellSouth Telecommunications, Inc.'s advertisements of its FastAccess® Internet Service to prospective retail end users in Florida.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications, Inc. advertises its Fast Access® Internet Service to prospective retail end users in Florida.

RESPONSE:

Admitted

BellSouth Telecommunications, Inc. advertises its FastAccess® Internet Service to prospective retail end users in Florida.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: For retail end users receiving both voice service and Fast Access® Internet Service from BellSouth Telecommunications, Inc, the retail end user receives one bill that includes charges for both services.

RESPONSE:

Denied

For retail end users receiving both voice service and BellSouth FastAccess® Internet Service from BellSouth Telecommunications, Inc, the retail end user **may** receive one bill that includes charges for both services. End users may elect to bill via their credit card.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications, Inc. offers price packages for its Fast Access® Internet Service purchased with its voice service to retail end users in Florida.

RESPONSE:

Denied

BellSouth Telecommunications, Inc. **does not offer** price packages for its FastAccess® Internet Service purchased with its **basic** voice service to retail end users in Florida. Price discounts on FastAccess® are available in connection with complete choice.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: Where BellSouth Telecommunications, Inc. provides Fast Access® Internet Service to retail end users in Florida, BellSouth Telecommunications Inc. owns, operates and maintains the loop, the DLSAM, the packet transport facilities and the ATM switching facilities.

RESPONSE:

Admitted

BellSouth Telecommunications Inc. owns, operates and maintains the loop, the DSLAM, the packet transport facilities and the ATM switching facilities for all regulated DSL services purchased by network service providers, including FastAccess®.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: BellSouth Telecommunications Inc. provides the customer service and customer billing and collection support functions for customer receiving BellSouth Telecommunications, Inc.'s Fast Access® Internet Service in Florida.

RESPONSE:

Denied

While BellSouth Telecommunications Inc. provides certain customer service and customer billing and collection support functions, BellSouth.net, Inc. also performs certain customer service and customer billing and collection support functions for customers receiving FastAccess® on behalf of BellSouth Telecommunications. Thus, it is not accurate to say that BellSouth Telecommunications Inc. provides all customer service and customer billing and collection support functions.

RESPONSE PROVIDED BY: Clyde Greene

SD

REQUEST: BellSouth Telecommunications Inc. acquires xDSL service from itself, which it combines with Internet access services to form the product known as BellSouth Telecommunications, Inc.'s Fast Access® Internet Services.

RESPONSE:

Admitted

BellSouth Telecommunications Inc. acquires xDSL service from itself, which it combines with Internet access services to form the product known as BellSouth Telecommunications, Inc.'s Fast Access® Internet Services.

RESPONSE PROVIDED BY: Eric Fogle

REQUEST: ALECs provide xDSL service for no more than approximately 1,000 access lines in BellSouth territory in Florida.

RESPONSE:

Denied.

In Florida, as of the end of August 2001, ALECs provide xDSL service as follows:

Line Sharing	1,114
IDSL	3,785
ADSL	4,890
HDSL	156
UCL - Designed	755
UCL – Non-designed	25
TOTAL	10,725

RESPONSE PROVIDED BY:

Jerry Latham	Tommy G. Williams
Sr. Product Manager	Sr. Product Manager

REQUEST: None of the ALEC xDSL lines referenced in the foregoing request are served through either fiber-fed or copper-fed DLC BellSouth remote terminal facilities.

RESPONSE:

Denied.

Well over 1,300 of the lines identified in the foregoing response are served through either fiber-fed or copper-fed DLC BellSouth remote terminal facilities.

Additionally, it should be noted that the BellSouth hosted Line Sharing Collaborative has recently welcomed several new members who have expressed significant interest in Line Sharing via collocation at the Remote Terminal. These data ALECs have already started submitting applications for Remote Terminal collocation in order for them to be able to collocate their DSLAMs and provide xDSL services to their end users.

RESPONSE PROVIDED BY: Tommy G. Williams
Sr. Product Manager

DATE: 10-17-98-01

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s Entry Into InterLATA Services Pursuant to Section 271 Of the Federal Telecommunications Act Of Act of 1996.	)	Docket No. 960786-TL Filed: June 11, 2001

BELLSOUTH TELECOMMUNICATIONS, INC.'S RESPONSES AND OBJECTIONS TO THE FLORIDA COMPETITIVE CARRIER'S ASSOCIATION'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS AND FIRST SET OF INTERROGATORIES

BellSouth Telecommunications, Inc. ("BellSouth"), pursuant to Rule 28-106.206, Florida Administrative Code, and Rules 1.340 and 1.280, Florida Rules of Civil Procedure, hereby files the following Responses and Objections to the Florida Competitive Carrier's Association's ("FCCA") First Set of Interrogatories and First Request for Production of Documents dated May 21, 2001.

GENERAL OBJECTIONS

1. BellSouth objects to the interrogatories and requests to the extent they seek to impose an obligation on BellSouth to respond on behalf of subsidiaries, affiliates, or other persons that are not parties to this case on the grounds that such interrogatories and requests are overly broad, unduly burdensome, oppressive, and not permitted by applicable discovery rules.

2. BellSouth objects to the interrogatories and requests to the extent they are intended to apply to matters other than Florida intrastate operations subject to the jurisdiction of the Commission. BellSouth objects to such

interrogatories and requests as being irrelevant, overly broad, unduly burdensome, and oppressive.

3. BellSouth objects to each and every interrogatory and request and instruction to the extent that such requests or instruction calls for information that is exempt from discovery by virtue of the attorney-client privilege, work product privilege, or other applicable privilege.

4. BellSouth objects to each and every interrogatory and request insofar as the interrogatories and requests are vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of these interrogatories and requests. Any answers provided by BellSouth in response to the interrogatories and requests will be provided subject to, and without waiver of, the foregoing objection.

5. BellSouth objects to each and every interrogatory and request insofar as it is not reasonably calculated to lead to the discovery of admissible evidence and is not relevant to the subject matter of this action. BellSouth will attempt to note in its responses each instance where this objection applies.

6. BellSouth objects to providing information to the extent that such information is already in the public record before the Commission.

7. BellSouth objects to FCCA's discovery requests, instructions and definitions, insofar as they seek to impose obligations on BellSouth that exceed the requirements of the Florida Rules of Civil Procedure or Florida Law.

8. BellSouth objects to each and every interrogatory and request, insofar as any of them are unduly burdensome, expensive, oppressive, or excessively time consuming as written.

9. BellSouth is a large corporation with employees located in many different locations in Florida and in other states. In the course of its business, BellSouth creates countless documents that are not subject to Commission or FCC retention of records requirements. These documents are kept in numerous locations that are frequently moved from site to site as employees change jobs or as the business is reorganized. Therefore, it is possible that not every document has been identified in response to these requests. BellSouth will conduct a search of those files that are reasonably expected to contain the requested information. To the extent that the requests purport to require more, BellSouth objects on the grounds that compliance would impose an undue burden or expense.

RESPONSES

BellSouth responds to the specific requests as follows:

FCCA's 1st REQUEST FOR DOCUMENTS

REQUEST NO. 1: Provide each Form 477 filed by BellSouth with the FCC for Florida and for each other state in the BellSouth region.

RESPONSE: Subject to BellSouth's General Objections, BellSouth's most recent Form 477 for the state of Florida is being provided.

REQUEST NO. 2: Provide each cost study supporting all charges for:

a. optional daily usage files
b. access daily usage files
c. enhanced optional daily usage files

RESPONSE: See BellSouth's cost study filed August 16, 2000 in the Florida Generic Cost Docket No. 990649-TP for the requested cost studies. The UNE numbers for the referenced elements are as follows:

L.0 ACCESS DAILY USAGE FILE (ADUF)
L.1.1 ADUF, Message Processing, per message
L.1.2 ADUF, Message Distribution, Per Magnetic Tape Provisioned
L.1.3 ADUF, Data Transmission (Connect:Direct) per message

M. 1 ENHANCED OPTIONAL DAILY USAGE FILE
M.1.1 Enhanced Optional Daily Usage File, Message Processing, per message

M.2.0 OPTIONAL DAILY USAGE FILE
M.2.1 Optional Daily Usage File, Recording, per message
M.2.2 Optional Daily Usage File, Message Processing, per message
M.2.3 Optional Daily Usage File, Message Processing, per Magnetic Tape Provisioned
M.2.4 Optional Daily Usage File, Data Transmission (Connect:Direct), per Message

Cover Page - Name & Contact Information

All filers must complete this section. File data as of: December 31, 2000

1. Filing Status: Meet broadband and local competition thresholds
2. Company: BellSouth Telecommunications, Inc.

3. Indicate the category that best describes the operations covered by this filing.
   Wireline Local Exchange Carrier

4. Filers must report separate data for ILEC and non-ILEC operations.
   Use the following drop-down box to indicate whether this worksheet contains data for ILEC or for non-ILEC operations.
   ILEC operations

5. Use the following drop-down box to select your company, parent or controlling entity name. Select "not shown" if it is not in the list. See instructions Section IV-B-1 for information on preparing file names.
   BellSouth Corporation

   If you selected "not shown" above, then provide the following:

   Name of company, parent or controlling entity.

6. State. Florida

7. Contact person (person who prepared the data contained below).
   Cathy Forbes

8. Contact person telephone number and e-mail address.
   phone: 404-927-1437
   e-mail: Cathy.Forbes@BellSouth.com

9. Indicate whether this is an original or revised filing.
   Original Filing

10. Indicate whether you request non-disclosure of some or all of the information in this file because you believe that this information is privileged and confidential and public disclosure of such information would likely cause substantial harm to the competitive position of the filer.
    All data in this report may be made public

11. If you requested non-disclosure in line 10, indicate if this is your complete or redacted file.
    Click and select from drop-down list

Please review instructions before completing form.

Reminders:

1) Virus check your floppy diskettes or compact disk before you mail them.

2) Use the correct version of the form. If you are not filing data for December 31, 2000, then obtain the correct version from www.fcc.gov/broadband/data/forms.

3) You may not insert or delete columns or rows, move cells, or edit text or numbers outside the cells provided for data entries. Files that cannot be opened in EXCEL97, files whose structure has been altered, and files with improper names will be returned for refiling.

4) If you have questions about the form, contact the Common Carrier Bureau, Industry Analysis Division at (202) 418-0940; via e-mail at 477INFO@fcc.gov; or via TTY at (202) 418-0484.

5) You must include a Certification statement signed by an officer of your company. A single statement will cover all files included on the diskette.

6) If you request non-disclosure of some data, you must file a public version of the form with such information redacted. See Sections IV-B and IV-C of the instructions for information on preparing a redacted file.

7) Name your files as specified in section IV.B.1 of the instructions. To assist you, complete this Cover Page to generate an "example" name, below. Replace the character "#" in this example name with a sequence number as specified in the instructions. This number should be "1" unless using "1" would cause you to submit more than one file with the identical file name.

Example: FLT#D00BellSouth Telecommunications, Inc. .XLS

OMB NO: 3060-0816
EXPIRATION DATE: 11/30/2003

BellSouth Telecommunications, Inc. ILEC operations for Florida December 31, 2000 1

Complete Part I if you and all affiliates (including commonly controlled entities) provide 250 or more broadband lines or wireless channels in the state over your own facilities or over lines you provisioned as broadband. See instructions for definitions of "own facilities", "broadband", "end user", and "residential and small business".

If you provide data in Part I, you must provide in Part V a list containing the 5-digit zip codes of the end-user locations in which you provide the broadband services reported herein. See instructions.

Data as of December 31, 2000

A. Lines and wireless channels of broadband service that you provided over your own facilities, or over UNE loops or other lines and wireless channels that you obtained from other service providers and equipped as broadband, categorized by technology at the end-user location.

	(a) Total one-way and two-way (full) broadband lines and wireless channels	Percentages of lines and wireless channels reported in (a)				
		(b) % of (a) used by residential & small business customers	(c) % of (a) provided over your own facilities	(d) % of (a) provided (i.e. billed directly) to end users	(e) % of (a) providing customers greater than 200 kbps in both directions	(f) % of (a) providing customers greater than 2 mbps in both directions
I - 1. Asymmetric xDSL.	89,724		100%	84%	100%	0%
I - 2. Other traditional wireline including symmetric xDSL.	47,492	0%	100%	8%	100%	0%
I - 3. Coaxial carrier systems including hybrid fiber-coaxial systems.						
I - 4. Optical carrier (fiber to the end user).	7,227	0%	100%	31%	100%	63%
I - 5. Satellite.						
I - 6. Terrestrial wireless fixed.						
I - 7. Terrestrial wireless mobile.						
I - 8. All other technologies, such as distribution over electric power lines.						

BellSouth Telecommunications, Inc. ILEC operations for Florida December 31, 2000

Complete Part II if you and all affiliates (including commonly controlled entities) provide 10,000 or more voice-grade equivalent lines or wireless voice-grade equivalent channels used for local exchange or exchange access service in the state. See instructions for definitions of "voice telephone service", "voice-grade equivalent lines", "residential and small business", "owned facilities", "COLO switching centers", and "end users".

If you provide data in Part II, you must provide in Part V a list containing the 5-digit zip codes of the end-user locations in which you provide the wireline or fixed wireless voice grade services reported herein. See instructions.

Data as of December 31, 2000

	(a) Total voice-grade equivalent lines and voice-grade equivalent wireless channels in service	Percentages of lines and wireless channels reported in (a) (b) % of (a) used for residential & small business service	(c) % of (a) provided over your own facilities	(d) % of (a) provided over UNE loops	(e) % of (a) in ILEC COLO switching centers
A. Voice telephone service provided to end users.					
II - 1. Total lines and channels you provided to end users.	6,358,600	89%	100%	0%	89%
B. Voice telephone service provided to other communications carriers, categorized by:					
II - 2. Lines and channels that you provided under a Total Service Resale arrangement. See instructions.	252,874		100%		85%
II - 3. Lines and channels you provided under other resale arrangements, such as resold centrex.					

C. UNE loops, special access lines, and those private lines that connect to carriers, categorized by:	(a) Total lines and wireless channels				
II - 4. Lines and channels that you provided under a UNE loop arrangement, where you do not provide switching for the line.	92,328				100%
II - 5. Lines and channels that you provided under a UNE loop arrangement, where you also provided switching for the line.	50,089				92%
II - 6. Special access lines not provided as broadband and private lines that connect an end-user premises to a telecommunications common carrier and is not provided as broadband.	31,766		100%	0%	96%

		Percentage of channels reported in (a), carried over the following types of facilities categorized by the technology used in the part of the line or wireless channel at the end-user location		
D. Total wireline voice-grade equivalent lines & fixed wireless voice-grade equivalent channels in service.		(f) cable coaxial	(g) wireless	(h) all other including traditional wireline
II - 7. Total lines and channels provided. [line II-1+line II-2 + line II-3]	6,611,474			100%

REQUEST: For the period reported in each Form 477 filed with the FCC, identify the number of unbundled loops by:

a. Analog loops
b. DS-1 unbundled loops
c. DS-3 unbundled loops

RESPONSE: Subject to BellSouth's General Objections, see BellSouth's response to FCCA's First Request for Production of Documents, Item No. 1.

RESPONSE PROVIDED BY: Cathy Forbes
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: For each period reported in each Form 477 filed with the FCC, provide the number of voice grade equivalent lines BellSouth provided to end users in Florida.

RESPONSE: Subject to BellSouth's General Objections, see BellSouth's response to FCCA's First Request for Production of Documents, Item No. 1.

RESPONSE PROVIDED BY: Cathy Forbes
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Provide, by quarter, the total number of minutes exchanged with ALECs from 1996 to the present.

RESPONSE: Subject to BellSouth's General Objections, the total number of minutes exchanged with ALECs is not available for 1996 or 1997. Please see below for 1998 to the present.

	1998	1999	2000	2001
1st Qtr	5059	52,647	154,068	155,296
2nd Qtr	15,567	51,422	150,141	N/A
3rd Qtr	41,759	102,736	215,875	N/A
4th Qtr	132,995	133,708	163,149	N/A

RESPONSE PROVIDED BY: Chuck Blackburn
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Provide, by quarter, the total number of local, intraLATA and interLATA minutes originated by BellSouth customers in Florida from 1996 to the present.

RESPONSE: The information requested is not available. Specifically, BellSouth does not track originating local, intraLATA or interLATA minutes as a routine part of the management of the business. BellSouth does track total originating and terminating MOUs for intrastate interLATA. The following numbers are for the state of Florida:

	1996	1997	1998	1999	2000	2001
1st Qtr	1,626,146	1,841,695	2,053,687	2,266,309	2,305,420	2,328,104
2nd Qtr	1,646,268	1,941,992	2,114,626	2,243,920	2,227,031	
3rd Qtr	1,634613	1,932,023	2,180,836	2,344,405	2,215,066	
4th Qtr	1,724,436	1,986,809	2,074,788	2,217,072	2,151,428	

RESPONSE PROVIDED BY: Eugene Glenn
Manager
675 West Peachtree Street
Atlanta, GA 303075

REQUEST: Provide the number of EELs (combinations involving loops and transport with and without multiplexing) that BellSouth had provisioned in Florida at year end 2000. Break down this information by number of DS1s and number of DS1s to DS3s multiplexed.

RESPONSE: By year end 2000 BellSouth had provisioned in Florida 1189 EELs (54 DS0; 1135 DS1; 0 DS3).

RESPONSE PROVIDED BY: Greg Beck
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Identify precisely how each of BellSouth's charges for optional daily usage files are applied. Is BellSouth currently assessing these charges. If yes, when did BellSouth begin to apply these charges?

RESPONSE: Each day the Daily Usage File process accumulates the volumes of messages and magnetic tapes sent to each ALEC for the three interfaces (ODUF, ADUF and EODUF). At the end of the month, entries are made in the "Other Charges and Credits" section of the appropriate invoice for each ALEC based on the rates for the customer and the accumulated volumes. The following rate elements are billed, as appropriate:

- ADUF Message Processing per Message
- ADUF Transmission (Connect:Direct) per message
- EODUF Message Processing per Message
- ODUF Recording per Message (Facility Based only)
- ODUF Message Processing per message
- ODUF Message Processing, per Magnetic Tape Provisioned
- ODUF Data Transmission (Connect:Direct) per message

BellSouth is currently assessing each of these elements as it has been, with the exception of the EODUF Message Processing charge, since mid-1998. Message processing charges for EODUF began in late-1998 as that product was made available for ALEC use.

RESPONSE PROVIDED BY: David Scollard
Manager
675 West Peachtree Street
Atlanta, GA 30375

REQUEST: Does BellSouth support any particular expedited dispute resolution procedure? If so, describe in detail that procedure.

RESPONSE: BellSouth participates in dispute resolution procedures as required by various regulatory bodies for certain circumstances. However, initially disputes should be escalated within each company to the person who has ultimate authority for the subject matter in an effort to achieve a resolution. If the dispute cannot be resolved between the companies, then either party to the dispute may file a formal complaint with the Commission.

RESPONSE PROVIDED BY: Cindy Cox
Director
675 West Peachtree Street
Atlanta, GA 30375

Respectfully submitted this 11th day of June, 2001.

FLORIDA DOCKET NO. 960786
SECTION 1
EXECUTIVE SUMMARY

STATEMENT OF PURPOSE

BellSouth Telecommunications, Inc. (BellSouth) is herewith filing revised Total Element Long Run Incremental Cost (TELRIC) studies, including shared and common costs, (i.e., the economic cost)) for Collocation and Line Sharing Unbundled Network Elements (UNEs). These revisions were made to include the changes ordered by the Florida Public Service Commission in its Order dated May 25, 2001 in Docket No. 990649-TP.

OVERVIEW

Historically, BellSouth prepared Long Run Incremental Cost (LRIC) studies to support tariff prices for telecommunications services. The LRIC result, which considered only the volume sensitive costs, constituted the price floor for the service in question, and was one of a number of factors considered when establishing the price for a service. BellSouth also conducted Total Service Long Run Incremental Cost (TSLRIC) studies that addressed not only the volume sensitive costs but also considered the directly attributable volume insensitive costs. TSLRIC studies were used to ensure that the service was not being subsidized. With the advent of local competition as envisioned by the Telecommunications Act of 1996 (the Act), it became necessary for BellSouth to conduct cost studies to determine the costs associated with certain components or elements of its telecommunications network. BellSouth's TELRIC studies comply with the requirements of the Act and are in compliance with the FCC's as well as the Florida Public Service Commission's rules and regulations issued to implement the provisions of the Act.

ORGANIZATION OF REMAINDER OF DOCUMENT

Section 1 - The remaining pages of Section 1 provide a flowchart of the TELRIC study process.
Section 2 Includes the Unbundled Element Cost Summary
Section 3 - Includes an explanation of the TELRIC methodology, and the recurring and nonrecurring cost development process.
Section 4 - Contains a description and explanation of the models and price calculators used.
Section 5 - Describes each of the factors and loadings used in the studies and explains their development.
Section 6 - Contains a description of the UNEs and an overview of the study process for each category of UNEs.

Unbundled Network Elements Cost Summary
