CALCULATOR INPUT FORM - NONRECURRING LABOR TIMES

Instructions:

1. Use this worksheet to record nonrecurring labor times to be input into the Calculator calculations.
2. All amounts shown are per unit (e.g., per call, per loop, per MOU).
3. Input data, by Cost Element, leaving no blank lines. On next row after last line of data, type *END in Cost Element Column.*
4. All data on this form should be cell-referenced to study workpapers.
5. Do NOT change columns, headings, sheet name.
6. Use columns F & G when cost element has a single nonrecurring cost; use columns H, I, J, & K for elements with a first and additional nonrecurring cost; use columns L, M, N & O for elements with an initial and subsequent nonrecurring cost.
7. Input Cost Element Life (in months) on first *row of data for each cost element. It is not necessary to repeat on each line.*

REVISED

IMPLEMENTING FPSC 05/25/01 ORDERED CHANGES

From a factors and labor rates perspective, in order to comply with the FPSC 05/25/01 order in Docket No. 990649-TP, the following steps were taken:

Cost Of Money & Depreciation Life Prescriptions

In the Capital Cost Calculator, make the following changes:

Change Cost of Money from 11.25 to 10.24
Change Cost of Equity from 14.08 to 12.20
Change Cost of Debt from 7.00 to 7.30
Change Combined Income Tax Rate from 38.71 to 38.57
Change Aerial Cable Metallic-Bldg Entr Life from 15 to 18
Change Aerial Cable Metallic-Other Life from 15 to 18
Change Buried Cable Metallic Life from 15 to 18
Change Digital Electronic Switching Life from 10 to 13
Change Submarine Cable Metallic Life from 15 to 18
Change Underground Cable Metallic Life from 14 to 23

Flow through Capital Cost Changes To The Shared & Common Cost Application and save as a scenario.

Operating Tax Rate Prescriptions

In the BellSouth Cost Calculator (Global factors section), override the existing UNE Gross Receipts Tax Factor of 0.0017 with 0.0015. In the BellSouth Shared & Common Cost Application, utilizing the "Edit Inputs" feature, override the BST regional Ad Valorem Tax Rate of 0.009265 with .009515 (FL specific) and save as a scenario.

Zero Inflation Adjustments

Expense Projections

Utilizing the "EXPPRJ00.xls" workbook, set the 'Inflation rates' for 1999-2002 to zero (0.0) for all states and for BST. Re-develop average 2000-2002 expenses by account for both FL and for BST.

Import the average 2000-2002 expenses by account for FL and for BST to the "PLSP99EY.XLS" workbook. Import the average 2000-2002 expenses by account for BST to the "EXPDVF00.xls" workbook and re-develop Expense Development Factors.

Investment Projections

Utilizing the "INVPRJ00.xls" workbook, set the "Curr Cost /Book Cost" ratios to one (1.0) and re-develop average 2000-2002 investment levels for BST. Import the average 2000-2002 investment levels for BST to the "INVDVF00.xls" workbook and re-develop Investment Development Factors.

Plant Specific Factors (incl Land & Bldg and Pole & Conduit loadings)

Utilizing the "PLSP99EY.xls" workbook, set the "Curr Cost /Book Cost" ratios to one (1.0) for FL and for BST and re-develop Plant Specific Expense factors (including Pole & Conduit loadings and Land & Building loadings) for both FL and for BST. In the BellSouth Cost Calculator (Annual Cost Factors section), override the existing Plant Specific Expense factors with the newly developed factors. In the BellSouth Cost Calculator (Loadings section), override the existing Pole & Conduit and Land & Building loadings with the newly developed loadings.

Investment Inflation Factors

In the BellSouth Cost Calculator (Miscellaneous factors section), override the existing Inflation factors for FL with one (1.0).

Labor Rates

Utilizing the "INFL FACTOR" worksheet of the "99Lab.xls" workbook, override the existing inflation factors for 1999-2002 (i.e., 1.032000, 1.067088, 1.104436, & 1.143091) with factors equaling one (1.000000) and re-develop the labor rates. In the BellSouth Cost Calculator (Labor Rates section), override the existing labor rates with the newly developed labor rates.

Shared & Common Cost Factors

Open the Shared and Common Cost Application and utilizing the "Edit Inputs" feature, override the existing Expense Development Factors and Investment Development Factors with the re-developed factors from the re-developed "EXPDVF00.xls" and "INVDVF00.xls" workbooks. Run the model, save the results, and apply the changes to the BellSouth Cost Calculator.

STATE OF NEW YORK
PUBLIC SERVICE COMMISSION

CASE 98-C-1357 - Proceeding on Motion of the Commission to Examine New York Telephone Company's Rates for Unbundled Network Elements.

SECOND ERRATA NOTICE

(Issued June 6, 2001)

Staff's ongoing review of the rates it calculated on the basis of the recommended decision issued in this proceeding on May 16, 2001 (set forth in Appendix C, Schedule 1 to that recommended decision) has disclosed several additional errors beyond those corrected in the previously issued errata notice and in the CD-ROM made available to requesting parties. Most of the errors are minor in their impacts, but three have more material effects.

A corrected List of rates is set forth in Attachment 1 to this notice, as a revised Appendix C, Schedule 1. Attachment 2 to this notice briefly describes the errors and how they were corrected; the first three items listed there are the most significant in their effects.

Explanation of Errors Discovered By Staff

In the CD-ROM Distributed to Requesting Parties

1. To reflect the full impact of all the recommended adjustments, the Link Cost Calculator in workpaper part A, sections 1-4 must be rerun after the files for the applicable ACF's have been opened and updated.

2. Adjustment 1 to the Annual Cost Factors shown on Recommended Decision, Appendix C, schedule 3, page 1 was not reflected.

3. The analog ports material investment adjustment factor for the "Manhattan Zone" was inadvertently used for the "Rest of State" zone on line 0.5, column C of Workpaper part B-1, section 1, page 3.

4. The recommended forward-looking adjustment factor (FLC) of 75% was inadvertently rounded to 80% in workpaper, part H, section 1, which develops the land and buildings loading factors.

5. When reflecting the recommended wholesale adverting adjustment, the "Total Direct Expenses" in column B on line 19 of workpaper part H, section 3.12.1, page 5 includes the amount in column A of line 3 but should have included the amount in column B of line 3.

6. Workpaper part H, Section 3.14.4, page 1, shows the development of the annual expense for leased investments used in developing "Other Support and Investment Costs". The 7.4% debt cost rate Staff used is the recommended forward-looking debt cost rate. The 7% embedded debt cost rate used by Verizon in that workpaper and not challenged by any of the parties should have been used.

7. Workpaper part H, section 3.14.8 "develops Land and Building annual ongoing expenses, drives expenses to COE (central office equipment), Other Support, and Corporate Support." The formula in column d of line 14 of that workpaper (the amount in line 13, column c times 5.04%) was inadvertently deleted.

Description of Errors Discovered By Staff

In the CD-ROM Distributed to Requesting Parties

8. Workpaper part H, section 2.3, page 1 provides the "Capital Cost Factor Input Variables" used in Verizon's study. The "Future Net Salvage" for buildings on 11 should be -1% rather than +1%.

9. The $15.90 rate listed as "Verizon Proposed" for "2-Wire Analog Link DS-O-Density Zone 1a" has been revised to the $15.44 shown on rebuttal Exhibit Part AH-1, page 1, line 7 for Zone 1a.

BellSouth Telecommunications, Inc.
Florida Public Service Commission
Docket No. 960786A- TL
Hearing Exhibit No. 20

REQUEST: Provide the recurring and nonrecurring rates for OLNS.

RESPONSE: BellSouth does not have a rate for Originating Line Number Screening (OLNS). BellSouth does have rates for customized branding via OLNS.

OLNS is a method of providing customized branding for Operator Assistance (OA) and Directory Assistance (DA). OLNS provides a means of making information available to the Operator Services (OS)/DA platform about the end user originating a telephone call. This information may be used to determine information such as an end user's local service provider and that local service provider's branding preferences.

The rates for customized branding via OLNS are provided in BellSouth's Interconnection Agreements. The current rates are furnished in Attachment No. 1.

August 29, 2001

Ms. Denise Berger
AT&T
Room 12256
1200 Peachtree Street, NE
Atlanta, Georgia 30309

Dear Denise:

This is in response to your July 24 and August 17, 2001 emails regarding the problems reported with the telephone numbers associated with AT&T's end user, [redacted], and your questions concerning the telephone number reassignment issues.

In your August 17, 2001 email you summarized the troubles that had been reported by AT&T on July 24, August 1, and August 15, 2001, regarding the following telephone numbers assigned to [redacted]:

[redacted]

BellSouth's investigation revealed that the problems associated with the above telephone numbers have been resolved and AT&T's customer should have been receiving and sending calls as of August 21, 2001. The attached matrix details the reported problems on the specific telephone numbers.

In your August 17, 2001 email you also summarized the issues and requested verification of ownership of the blocks of telephone numbers listed below.

[redacted]

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 960786A-TP EXHIBIT NO. 21
COMPANY/ WITNESS: AT&T
DATE: 10-17-01

21

The telephone numbers shown are associated with AT&T, with the exception of [redacted] Also on August 21, 2001 BellSouth identified records errors and made corrections to 30 additional numbers within the Direct Inward Dialing (DID) block of telephone numbers [redacted] through [redacted]. Your August 17, 2001 email questioned why you were advised that the telephone numbers worked properly and then days later the telephone numbers were not working properly. This is a result of the process not being followed by BellSouth for handling the reassignment of these DID numbers. Each aspect of the process must be followed to ensure that the problems are resolved completely.

In this end user's situation, and with other ported DID numbers, the lead telephone number in the blocks of 20 telephone numbers were appropriately addressed, however, a software problem caused telephone numbers within the DID blocks of 20 telephone numbers to be inappropriately addressed in BellSouth systems. Following this occurrence the additional 19 telephone numbers remained in BellSouth's switch translations as well as in the Application for Telephone Number Load, Administration and Selection (ATLAS), BellSouth's telephone number assignment database. If this occurs the telephone numbers could become subject to reassignment. Until a software solution is available, BellSouth has implemented a manual process to ensure that the ported DID numbers are appropriately handled in BellSouth system updates. The appropriate BellSouth employees have been re-covered, so the problem should not recur.

As clarification, telephone numbers [redacted] through [redacted], which you identified as DID numbers in your July 24, 2001 email, are actually Primary Rate Interface (PRI) lines. Those telephone ranges are [redacted]. These numbers were not affected by the DID porting problem. Any problems associated with these numbers should be reported to BellSouth Repair as you indicated in your email dated August 17, 2001. The DID numbers in the [redacted] series are [redacted] and [redacted]. These blocks of telephone numbers as well as all of the other DID numbers have been reviewed for the port out Field Identifier (FID) to ensure that these numbers are not available for reassignment.

As stated above, telephone number [redacted], which you attribute to [redacted] in your July 24, 2001 email, is assigned to another customer. However, further investigation identified the numbers [redacted] through [redacted] as ported DID numbers to [redacted]. This group of numbers was also reviewed to ensure appropriate handling in BellSouth systems.

The issue addressed in the North Carolina testimony is a software problem that prevents proper handling of ported DID telephone number blocks. The software problem is the root cause of the trouble identified in your July 24 and August 17, 2001 emails. The account team is aware of your concerns and will continue to provide AT&T with information as it becomes available. As previously communicated, BellSouth

completed an investigation of all ported numbers, including the DID blocks of telephone numbers.

I trust this letter satisfies your concerns with this matter. If you have additional questions, please feel free to contact me.

Sincerely,

John Burris

cc: Jan Flint

Ms. Denise Berger
AT&T
Room 12256
1200 Peachtree Street, NE
Atlanta, Georgia 30309

Dear Denise:

This is in response to your email dated September 4, 2001, concerning additional inquiries related to the telephone number reassignment issue. Your email also referenced an earlier response from BellSouth dated August 29, 2001 and the impact of the telephone number reassignment issue on AT&T's customer [redacted]. Following are BellSouth's responses to AT&T's questions.

BellSouth Software Solution Implementation:

BellSouth's tentatively scheduled timeline to complete installation of software to prevent telephone number reassignment is third quarter 2002.

Verification of Entire Universe of AT&T LNS Direct-Inward Dialing (DID) Ported Numbers:

BellSouth has not yet completed the examination of all telephone numbers assigned to AT&T or TCG. As the numbers are examined, necessary modifications are made to alleviate telephone number reassignments. These modifications were detailed in BellSouth's response dated August 29, 2001. AT&T's customer, [redacted], was impacted by this system problem due to an oversight in checking these numbers. All telephone numbers for [redacted] have been examined and modified, as appropriate. Details of the examination and modification on the [redacted] account were also provided in BellSouth's August 29, 2001 letter.

I trust the above information satisfies your concern regarding this matter. Please contact me at 770-492-7590 if you have additional questions.

Sincerely,

Jan Burriss

BellSouth Unbundled Digital Loops

Service Description

The UDL will be a dedicated digital transmission facility from BST's MDF to a customer's premises. This facility will allow the end user to send and receive traffic that utilize technologies liike ISDN; Enhanced Electronic (EE) capabilities such as HDSL/ADSL; and high capacity services such as DS-1 when the loop is connected to the proper packet/circuit switch. This facility will include a Network Interface Device (NID) at the customer's location for the purpose of connecting the loop to the customer's inside wire. The UDLs can be configured as 2-wire ISDN (2W/I); 2-wire UDC (2W/UDC); 2-wire ADSL-capable; 4-wire DS1 & ISDN (4W/DI); 2-wire HDSL capable; 4-wire HDSL capable facilities & 4-wire DS0 level loops. It should be noted that on the xDSL-capable loops that BST does not provide the Enhanced Electronics such as the DSLAM.

Features and Benefits

UDL will be a designed circuit and BST will provide a Design Layout Record (DLR). BST will issue a Firm Order Confirmation ("FOC") within 48 hours after receipt of the valid LSR and a DLR to the ordering party within 5 business days after the FOC, upon review of and in response to the ordering party's LSR, to begin the provisioning process.

BST will perform these repair functions during normal work hours (e.g. 8 am to 5 pm local time). If the CLEC requests that BST repair a trouble after normal working hours, the CLEC will be billed the appropriate overtime charges associated with this type request.

For all UDLs, except the 2W-UDC, BST will perform order coordination (OC) activities associated with an existing circuit that requires a coordinated conversion. In these cases, BST will coordinate the "turn-up" of the new circuit; the use of Remote Call Forwarding (if needed); and disconnect orders in order to minimize the disruption of an existing circuit. BST will not perform these activities on new circuits that do not require a coordinated conversion.

Performance Standards

Digital Loops may be provided via metallic facilities, DLC, or both. The insertion loss of the metallic facility, measured at 28 kHz between 135 ohm terminations, shall be less than 40 db.

The UDL-4W/D0 is offered in three performance levels: 19.2K and below; 56K and 64K. The CLEC must specify on the LSR which type of 4W/D0 that is to be utilized so that the loop criteria can be properly aligned with the intended service.

The interface at the CLEC is a 4-wire interface, described as a DS0A interface in Bellcore TA-TSY-000077, Digital Channel Banks- Requirements for Dataport Channel Unit Functions.

Basic Rate Access ISDN and UDC loops may be provided via metallic facilities, DLC, or both. The insertion loss of the metallic facility, measured at 40 kHz, shall be less than 42 db. No dc specifications are supported. ISDN loops provisioned via copper will support IDSL service, however, some ISDN loops provisioned via DLC will not. Therefore, if the CLEC wants to ensure IDSL service, the UDC loop must be

ordered to ensure proper configuration when DLCs are employed.

UDC loops are ISDN loops that are configured for data only applications such as IDSL, etc.. They may be provisioned over copper, and in some cases may be provisioned through a DLC system.

BST will ensure that UDC loops are provisioned on compatible slots within DLC systems to ensure data compatibility. UDC loops are intended to support a CLEC's IDSL service but is not guaranteed to do so.

The interface at both the CLEC and the Network Interface is a 2W interface as defined in ANSI T1.601-1992, ISDN Basic Access Interface for use on Metallic Loops for Applications on the Network Side of the NT.

Asymmetric Digital Subscriber Line (ADSL) Metallic Interface is a 2W-ADSL (sometimes called a 2W-EE) consisting of metallic facilities only. These facilities will be provided with no DLC, load coils or repeaters. These loops will conform to the RRD guidelines as described in Committee T1 Technical Report No. 28 Bit Rate performance on theses loops are dependent upon the Customer Premises Equipment (CPE), therefore, BST does not guarantee a particular bit rate associated with these loops.

High-bit rate Digital Subscriber Lines (HDSL) is a transport technology that can be either 2 or 4 wire circuits and are ordered as 2W/HDSL or 4W/HDSL (sometimes called 2W-EE or 4W-EE). The loop facility consists of only metallic facilities and will be provisioned according to CSA guidelines as described in Committee T1 Technical Report No. 28. These loops typically will be less than 9000 feet in length (including no more than 2,500 ft. of bridged tap/end section). Bit Rate performance on theses loops are dependent upon the Customer Premises Equipment (CPE), therefore, BST does not guarantee a particular bit rate associated with these loops.

The signal applied at either interface shall meet the following specifications:

- The average signal power shall not exceed +15.0 dBm across 100 Ω.
- The Power Spectral Density shall not exceed -38 dBm/Hz from 0 Hz to 196 kHz, -89 dB/decade attenuation from -38 dBm/Hz at 196 kHz to -118 dBm/Hz at 1.96 MHz, and -118 dBm/Hz above 1.96 MHz. This requirement shall be met when measured with a 100 Ω termination.

The HDSL loop facilities consist of only metallic facilities meeting CSA design guidelines as documented in Committee T1 Technical Report No. 28. The dc resistance of a single wire pair should not exceed 850 Ω.

Ordering Process

UDL are ordered via an LSR, which is issued through the LCSC.

Where facilities are available, BST will install 1 to 5 UDLs, except 2W-ISDN and 2W-UDC, within a 5-7 business days interval. The 2W-ISDN and 2W-UDC loops will have a 12 business day provisioning interval (for 1 to 5 loops) to accommodate for their unique needs such as the appropriate DLC plugs.

Introduction & Scope

This Product Information Package is intended to provide to CLECs a product description and general ordering information specific to the UNE described herein. Detailed ordering guidelines are provided in documents located on the BellSouth Interconnection Web site.

The information contained in this document is subject to change. BellSouth will provide notification of changes to the document through the CLEC Notification Process.

Please contact your BellSouth Account Manager, if you have any questions about the information contained herein.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Revisions

Version 4

1) Page 1 – "Version 4" replaces "Version 3".
2) **Footnote** on each page – date changed from "8/25/00" to "10/13/00" and "Version 3" changed to "Version 4".
3) **Service Order Requirements** section – ***LSR form sub-section:***
   - Added "Project" under the **LSR Field**
   - Under the "**Information Required**" column added "If Unbundled Loop Modification is ordered, populate with the following:
     - ULMLC – for Load Coil removal
     - ULMBT – for Bridge Tap removal
     - ULMBTLC – for Load Coil and Bridge Tap removal"

Version 3

1) Page 1 – "Version 3" replaces "Version 2".
2) **Footnote** on each page – date changed from 7/25/00 to 8/25/00 and Version 2 changed to Version 3.
3) **Service Capabilities** section, first paragraph, second sentence – replaced "DLSAM" with "DSLAM".
4) **Technical Requirements** section, **ADSL compatible loop** sub-section, first paragraph, second sentence – reference to Committee T1 Technical Report No. 28 changed to Bellcore SR-TSV-002275.
5) **Network Configuration** section – replaced "BST" with "BellSouth".
6) **Service Order Requirements** section:
   - ***LSR form sub-section*** – first paragraph, deleted Ordering and Billing Forum (OBF) guidelines reference and replace with **BellSouth Ordering Guide for CLECs** (Local Service Ordering Guidelines, version 2 (LSOGv2)) or the **BellSouth Business Rules for Local Ordering** (Local Service Ordering Guidelines, version 4 (LSOGv4)).
   - ***LSR form sub-section*** – first paragraph, deleted last sentence
   - ***Service Inquiry (SI) form sub-section*** – added first sentence – "A Service Inquiry is required, dependent on the ordering scenarios described in the **Ordering & Provisioning**

section, for ordering an ADSL/HDSL compatible loop."

7) **Service Inquiry Form** – added "click here to download" under the heading **Service Inquiry Form** which allows the CLEC to download the SI to a usable format for CLEC preparation.

8) Added an **Acronyms** section.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Revisions (continued)

Version 2

1) The version 1 **Ordering and Provisioning** section was replaced with a new **Ordering and Provisioning** section that contains three ordering scenarios.

2) The **Rate Elements and USOCs** section was updated to reflect description changes in the existing elements and to add new elements:

Old Element	New Description/Element
2 Wire Unbundled ADSL Compatible Loop	2 Wire Unbundled ADSL compatible loop, includes manual service inquiry and facility reservation
NA	2 Wire Unbundled ADSL compatible loop, without manual service inquiry and facility reservation
2 Wire Unbundled HDSL Compatible Loop	2 Wire Unbundled HDSL compatible loop, includes manual service inquiry and facility reservation
NA	2 Wire Unbundled HDSL compatible loop, without manual service inquiry and facility reservation
4 Wire Unbundled HDSL Compatible Loop	4 Wire Unbundled HDSL compatible loop, includes manual service inquiry and facility reservation
NA	4 Wire Unbundled HDSL compatible loop, without manual service inquiry and facility reservation

3) In the **Service Order Requirements** section, additional clarification provided on "NCI at CLEC" codes format and a note added for 4 Wire HDSL:

> "0" is a numeric zero character
> Orders for 4 Wire HDSL must include two CLEC cable and pairs on the LSR

4) Old **Service Inquiry (SI) Form** (revised: 2/29/00) and **SI Preparation** replaced with new **Service Inquiry** (revised: 7/21/00) and **Instructions for Preparing Service Inquiry.**

BellSouth Unbundled ADSL/HDSL Compatible Loops

Service Description

The Unbundled Asymmetrical Digital Subscriber Line (ADSL) or the High Bit Rate Digital Subscriber Line (HDSL) compatible loop is a dedicated digital transmission facility from BellSouth's Main Distribution Frame (MDF) to an end-user's premises. These loops will allow the end user to send and receive traffic that utilize the Enhanced Electronic (EE) capabilities for HDSL or ADSL when the loop is connected to the CLEC's appropriate equipment. The loop facility will include a Network Interface Device (NID) or equivalent demarcation point at the end-user's location for the purpose of connecting the loop to the customer's inside wire.

BellSouth offers the following:

2 Wire ADSL compatible loop
2 Wire HDSL compatible loop
4 Wire HDSL compatible loop

Service Capabilities

BellSouth will only provide the loop facilities with these offerings. BellSouth does not provide the Enhanced Electronics such as the Digital Subscriber Line Access Multiplexer (DSLAM) or any other electronics with the unbundled ADSL or HDSL compatible loops.

The ADSL/HDSL compatible loops will be designed circuits and are provisioned with test points. BellSouth will provide a Design Layout Record (DLR).

BellSouth will perform installation testing (other than switch-based) that is needed to ensure the loop meets the specifications of **BellSouth's Technical Reference 73600** (TR73600).

BellSouth will perform order coordination (OC) activities associated with Number Portability and/or disconnect orders. OC is intended to convert an existing customer to a new local service provider using the ADSL/HDSL compatible loops in a manner that minimizes the end-user's dial-tone interruption. BellSouth will notify the CLEC of the appropriate conversion time and will then perform the work within the negotiated interval.

If the CLEC requests work after normal working hours, overtime rates will apply for work outside of 8:00 a.m. to 5:00 p.m. local time.

If the CLEC's end user has existing service with BellSouth that utilizes a digital quality loop, and wants to change local service providers, BellSouth will attempt to reuse the end user's existing loop.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Technical Requirements

ADSL compatible loop

The ADSL compatible loop is a two wire metallic facility only. If the loop is available, it will be provided with no Digital Loop Carrier (DLC), load coils or repeaters. These loops will conform to the Revised Resistance Design (RRD) guidelines for non-loaded facilities as described in Bellcore SR-TSV-002275. The loop facility will consist of a loop 18kft or less which may include 6kft of bridge tap with a resistance of 1300 ohms or less if the loop is available.

Where the loop facility does not meet ADSL compatible loop specifications and it is determined that the loop can be modified to meet these specifications, the CLEC may request BellSouth's **Unbundled Loop Modification (ULM)**. In these situations and as a chargeable option, BellSouth will use the ULM process to modify the loop facility to ADSL compatible loop specifications. Additionally, the ULM product can be utilized to remove any bridged tap sections as requested by the CLEC. The rates for ULM are in addition to the ADSL loop rate.

BellSouth does not guarantee a particular bit rate associated with these loops. The transmission and bit rate speed of ADSL type services is dependent on the CLEC's equipment.

ADSL compatible loops will meet the parameters specified in **BellSouth TR73600**.

HDSL compatible loop

High-bit rate Digital Subscriber Line (HDSL) is a transport technology that can utilize a 2 or 4 Wire circuit. The HDSL compatible loop can be ordered as a 2 Wire or 4 Wire HDSL compatible loop. The loop facility consists of only metallic facilities and will be provisioned according to CSA guidelines as described in Committee T1 Technical Report No. 28. These loops include no more than 2500 feet of bridge tap/end section with a resistance of 850 ohms or less.

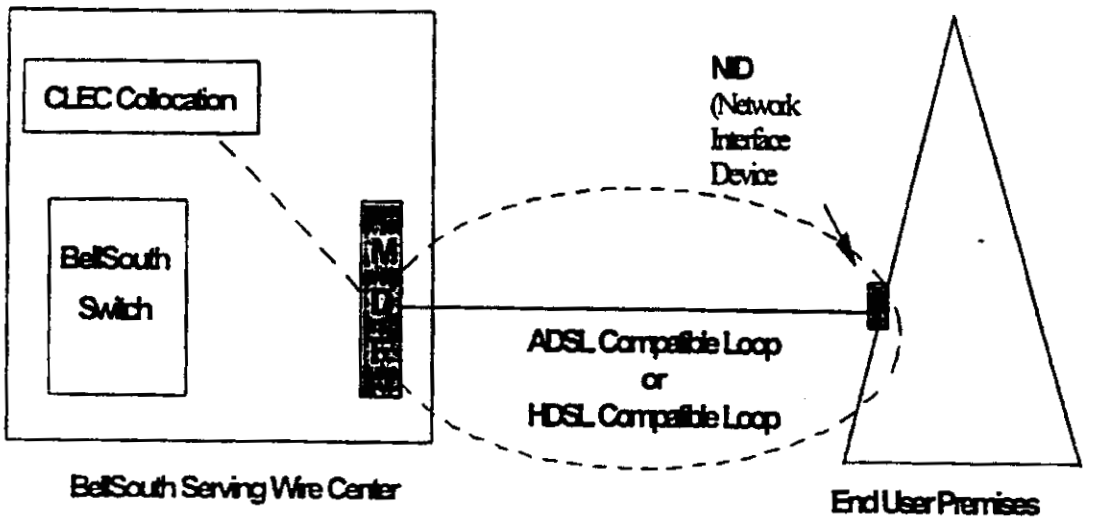
Where the loop facility does not meet HDSL compatible loop specifications and it is determined that the loop can be modified to meet these specifications, the CLEC may request BellSouth's ULM. In these situations and as a chargeable option, BellSouth will use the ULM process to modify the loop facility to HDSL compatible loop specifications. Additionally, the ULM product can be utilized to remove any bridged tap sections that are requested by the CLEC. The rates for ULM are in addition to the HDSL loop rate.

BellSouth does not guarantee a particular bit rate associated with these loops. The bit rate speed is dependent upon the CLEC's equipment.

HDSL compatible loops will meet the parameters specified in **BellSouth TR73600**.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Network Configuration



Ordering & Provisioning

This section will describe ordering scenarios available to the CLEC for ADSL or HDSL compatible loop ordering. It is important to note that it is now possible for a CLEC to obtain Loop Make-up (LMU) prior to placing an order for an ADSL or HDSL loop. This option will be referred to as "prior LMU".

There is a key distinction in the "with prior LMU" and the "without prior LMU" scenario. "With prior LMU" indicates that LMU was ordered and obtained by the CLEC prior to placing the ADSL or HDSL loop order; whereas "without prior LMU" indicates that the LMU look-up and facility reservation function will be handled *as part of* the loop ordering process. Lastly, Service Inquiry (SI) forms for LMU are distinct and separate from the SI forms required in the submission of a CLEC's ADSL or HDSL loop service order.

The LMU with Facility Reservation Number (FRN) option enables the CLEC to receive LMU and reserve a loop facility. This allows the CLEC a limited time span *(4 days)* to place an ADSL or HDSL loop order using the pre-order LMU. For additional detail regarding the LMU/FRN process, refer to the **LMU Product Package**.

If a prior LMU/FRN is obtained, the CLEC may use the FRN facility once it later submits a Local Service Request (LSR) to order an ADSL or HDSL loop. However, it should be noted that the specific loop type (ADSL or HDSL) ordered on the LSR must match the specifications of the facility for which prior LMU/FRN has been requested. BellSouth will use best efforts to assign the reserved facility on which the CLEC has obtained the FRN. If the loop type the CLEC has ordered on the LSR form does not match the reserved facility, the provisioning system will not use the reserved facility. Instead, the provisioning system will automatically override the FRN and attempt to assign a facility that does match the specifications of the loop type ordered. For information regarding the technical specifications refer to the Technical Requirements section of this document or to the **BellSouth TR73600.**

The sub-sections on the following pages describe the various ordering scenarios:

BellSouth Unbundled ADSL/HDSL Compatible Loops

Ordering & Provisioning (continued)

Loop Order with prior Loop Make-Up (LMU) and Facility Reservation Number (FRN)

The CLEC in this scenario would have requested a LMU with FRN prior to placing an order for the ADSL or HDSL compatible loop. In this scenario the CLEC does not require and is not ordering Unbundled Loop Modification (ULM) on requested loop facility. The non-recurring rate for the loop in this scenario excludes the cost of the manual service inquiry LMU and FRN since the CLEC has previously paid for the LMU with FRN.

Steps

1. CLEC requests and receives LMU/FRN through the **LMU process.**
2. CLEC prepares and sends a Local Service Request (LSR) form w/FRN to the Local Carrier Service Center (LCSC). CLEC must specify the loop type (ADSL or HDSL) on the LSR.
3. Once a complete and correct LSR has been processed, the LCSC will forward a Firm Order Confirmation (FOC) to the CLEC.
4. The requested loop type will be provisioned through the ordering and provisioning systems according to the targeted intervals stated in the Interval section.

Loop Order with prior LMU & FRN and with Unbundled Loop Modification (ULM)

This scenario is for an ADSL or HDSL compatible loop for which the CLEC is requesting ***ULM***. The CLEC would have also requested a LMU with FRN prior to requesting the loop with ULM. The non-recurring rate for the loop in this scenario excludes the cost of the manual service inquiry LMU and FRN since the CLEC has previously paid for the LMU with FRN. Rates for ULM will be charged to the CLEC as separate rate elements.

Steps

1. CLEC requests and receives LMU/FRN through the **LMU process.**
2. CLEC prepares a firm order Service Inquiry (SI) and must specify the loop type, the required modifications and the FRN of the facility which requires modification.
3. CLEC prepares the LSR for the requested loop type with FRN.
4. CLEC sends the SI and LSR to its BellSouth CRSG/Account Team Representative.
5. CRSG/Account Team Representative holds the LSR and sends the SI to Outside Plant Engineering (OSPE).
6. OSPE issues an engineering job for the requested ULMs and determines an estimated completion date (ECD) for completing the modifications.
7. OSPE forwards the SI with ULM ECD to the CRSG/Account Team Representative.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Ordering & Provisioning (continued)

8. CRSG/Account Team Representative notifies the CLEC of the ULM ECD.
9. When ULM is complete, OPSE notifies the CRSG/Account Team Representative who in turn notifies the CLEC.
10. CRSG/Account Team Representative forwards the SI and the LSR to the LCSC.
11. If the LSR is complete and correct the LCSC will process the order for the loop, bill the ULM and issue an FOC to the CLEC.
12. The requested loop type will be provisioned through the ordering & provisioning systems according to the targeted intervals stated in the Interval section of this document.

Loop Order without prior LMU & FRN

This scenario is for an ADSL or HDSL compatible loop and the CLEC has not requested prior LMU & FRN. The non-recurring rate for the loop in this scenario will include the cost of the manual service inquiry and FRN.

Steps

1. CLEC prepares a firm order SI and LSR for a specific loop type (ADSL or HDSL).
2. CLEC sends the SI and LSR to its BellSouth CRSG/Account Team Representative.
3. CRSG/Account Team Representative holds the LSR and sends the SI to Outside Plant Engineering (OSPE).
4. **If the requested loop type facility is available**, OSPE completes the SI with the FRN facility and sends the SI back to the CRSG/Account Team Representative. **(proceed to step 10)**
5. **If the requested loop facility is not available but can be provided with modifications,** OSPE will indicate on the SI that the facility is not available but could be provided with a job for Unbundled Loop Modification (ULM). OSPE will return the SI to the CRSG/Account Team Representative. **(proceed to step 7)**
6. **If the requested loop type facility is not available and cannot be provided with modifications**, refer to the **Note** below.
7. The CRSG/Account Team Representative forwards the SI to the CLEC for the CLEC's approval for Unbundled Loop Modification (ULM). CLEC will indicate its approval for ULM by placing a check (✓) for ULM-LC and ULM-BT on the SI and then return the SI to CRSG/Account Team Representative.
8. The SI is returned to OSPE who will initiate a job for Unbundled Loop Modification. OSPE will provide the job number and estimated completion date (ECD) on the SI and return the SI to the CRSG/Account team.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Ordering & Provisioning (continued)

9. The OSPE job will do the loop modifications necessary to bring the loop facility to design standards for the requested loop type. The job will also include a FRN for the facility to be modified if the pair being modified is a spare pair.
10. Once the job is complete, OSPE will send the completed SI with job completion date to the CRSG/Account Team Representative.
11. CRSG/Account Team Representative forwards the SI & LSR to the LCSC.
12. If the LSR is complete and correct, the LCSC will process the order and issue an FOC to the CLEC.
13. The requested loop type will be provisioned through the ordering & provisioning systems according to the targeted intervals stated in the Interval section of this document.

Note: There may be several reasons for the unavailability of compatible facilities for the loop type being ordered by the CLEC. The OSPE will indicate which reason applies on the Service Inquiry (SI). Below is a brief synopsis of those reasons. For additional information regarding possible options to remedy the "facility unavailable" situation, please contact your BellSouth CRSG/Account Team Representative.

- **Facilities are out of range** – OSPE will indicate why the loop is out of range and cannot be provided on the SI. If the facility would qualify for a different loop type, the possible loop type will also be indicated. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC.

- **No compatible facilities/available by a job** – OSPE indicates that the facilities will be made available by a job and Special Construction (SC) is not applicable. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC. The SI will state an estimated completion date (ECD). The job will be completed before the service orders are issued.

- **No compatible facilities/available w/SC** – OSPE indicates that the facilities could be made available by a job and Special Construction (SC) is applicable. OSPE will describe the SC work in the comments section of the SI. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC. CLEC can then make the decision whether or not to pursue the SC process. If the CLEC decides to move forward with the SC process, the CLEC will be responsible for costs associated with BellSouth providing the quote and for the costs of implementing the SC job.

- **No compatible facilities/available with LST/CDP** – OPSE indicates that the facilities may be made available through Line and Station Transfers (LSTs) or by clearing a defective pair (CDP). OSPE will include remarks in the "comments" section of the SI that the facilities are not immediately available but an attempt will be made to make facilities available via cuts (LSTs) or CDP. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Service Order Requirements

Local Service Request (LSR) form

The CLEC will complete a Local Service Request (LSR) form according to the **BellSouth Ordering Guide for CLECs** (Local Service Ordering Guidelines, version 2 (LSOGv2)) or the **BellSouth Business Rules for Local Ordering** (Local Service Ordering Guidelines, version 4 (LSOGv4)).
The following information that is unique to ADSL/HDSL is also required on the LSR:

LSR Field	Information Required			
NC/NCI	**Loop Type**	**NC**	**NCI* at CLEC**	**SEC NCI * at End User**
	2 Wire ADSL	LXR-	02QB9.00A	02DU9.00A
	2 Wire HDSL	LXC-	02QB9.00H	02DU9.00H
	4 Wire HDSL**	LXC-	04QB9.00H	04DU9.00H
RMKS	FRN (if Loop Make-up and FRN ordered prior to placing loop order)			
Project	If Unbundled Loop Modification is ordered, populate with the following* • ULMLC – for Load Coil removal • ULMBT – for Bridge Tap removal • ULMBTLC – for Load Coil and Bridge Tap removal			

* "0" is a numeric zero character
** Orders for 4 Wire HDSL must include two CLEC cable and pairs on the LSR.

Service Inquiry (SI) form

A Service Inquiry is required, dependent on the ordering scenarios described in the **Ordering & Provisioning** section, for ordering an ADSL/HDSL compatible loop. See attached **"Service Inquiry"** and **"Instructions for Preparing Service Inquiry"** section for preparation instructions.

LSR & SI Transmittal

- CLEC sends the firm order SI and a LSR to a CRSG/Account Team Representative.
- The primary method of submission to the CRSG is through email. Refer to **"Guidelines for Interfacing with the CRSG UNE Group"** section for the submission requirements.
- CLEC should contact its BellSouth Account Team Representative for additional information regarding transmittal of SI and LSR if CRSG Representative is not known.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Rate Elements & USOCs

Rates for ADSL and HDSL compatible loops will need to be included in your contract. Rates may be interim and subject to true-up pending approval of final rates by the respective State Commissions. Commission orders will specify the dates back to which true-ups are applicable.

Rate Element	USOC
2 Wire Unbundled ADSL compatible loop, includes manual service inquiry and facility reservation	UAL2X
2 Wire Unbundled ADSL compatible loop, without manual service inquiry and facility reservation	UAL2W
2 Wire Unbundled HDSL compatible loop, includes manual service inquiry and facility reservation	UHL2X
2 Wire Unbundled HDSL compatible loop, without manual service inquiry and facility reservation	UHL2W
4 Wire Unbundled HDSL compatible loop, includes manual service inquiry and facility reservation	UHL4X
4 Wire Unbundled HDSL compatible loop, without manual service inquiry and facility reservation	UHL4W
Order Coordination – Time Specific (per order)	OCOSL

Other Non-Recurring Charges

Expedite Charge – applies if CLEC requests order interval of less than five days.

Manual Service Order – applies if order is manually submitted and electronic ordering is available

Order Cancellation – applies if the CLEC cancels an order. This charge is for work associated with provisioning either ADSL or HDSL loop pairs at the time the CLEC cancels an order.

Service Order Modification Charge – Applies if the CLEC modifies a service order after the Firm Order Confirmation has been issued.

Overtime Charge – Applies for work requested outside of normal working hours.

Time & Material – Applies for dispatch out if "no trouble found"

BellSouth Unbundled ADSL/HDSL Compatible Loops

Intervals

Where facilities are available and after any ULM request and/or SI process has been completed, it is expected that BellSouth will provision these loops after the receipt of an accurate LSR and SI within the following targeted intervals:

Loops	Intervals	FOC
1-5 Loops	7 business days	2 business days
6-14 Loops	10 business days	3 business days
15 + Loops	Handled on a project basis, intervals to be negotiated	

Maintenance & Repair Procedures

The CLEC is responsible for testing and pre-screening any trouble conditions to make sure the trouble is with ADSL/HDSL compatible loop pair before calling BellSouth. If the CLEC's testing isolates the repair problem to BellSouth's unbundled loop, the CLEC should notify the Unbundled Network Element (UNE) Center. The target interval for maintenance resolution is 24 hours from the time the trouble is reported to the UNE center.

The CLEC must provide the following information to UNE Center when reporting a repair problem:

- ADSL/HDSL pair Circuit ID
- Description of the trouble

If BellSouth dispatches a technician on a CLEC reported trouble call and no ADSL /HDSL loop trouble is found, BellSouth will charge the CLEC for time spent on the dispatch and for time spent testing the ADSL or HDSL compatible loop.

BellSouth Unbundled ADSL/HDSL Compatible Loops

Contract Specific Provisions

Before any ADSL/HDSL compatible loop can be ordered, the CLEC must have an Interconnection Agreement that includes terms, conditions and rates for each loop type that is being requested. This agreement must be in effect for all states where the CLEC plans to order these unbundled loops.

The information contained herein applies to the ADSL/HDSL compatible loop general offering and is part the standard BellSouth agreement. The general offering is in accordance with BellSouth policies, procedures and regulatory obligations as well as the Standard Interconnection Agreement.

The general offering does not address specific contract issues within a CLEC's Interconnection Agreement that may be different from the general offering. Where specific contract issues differ from the information provided here, the contract provisions will prevail for the term of the specific CLEC Interconnection Agreement. Otherwise, the general offering provisions will apply.

Service Inquiry

General Information:

UDL-2W/ADSL, UDL-2W/HDSL, UDL-4W/HDSL or UCL Service Inquiry

SI # (PON Num.)_____ Firm Order _____ Change _____ Cancel _____

Negotiator _____

CRSG EMAIL ADDRESS: (CRSG UNE/m5,mail5a) Negotiator Telephone Number _____

Customer Information:

CLEC Name _____ Customer Contact/Telephone number

_____

Service Address _____ Local Serving Central Office _____

_____ Number of lines requested[1]

_____

_____ Due Date/Requested Service Date

_____

(To be filled out by Account team/CRSG should SC job be required)

Does the CLEC agree to SC quote billing? _____YES (OSPE will prepare SC quote) _____NO (OSPE will take no further action)

Date CLEC contacted about SC quote billing:_____

Actual Completion Date of OSPE EWO: _____(OSPE to fill out and return to CRSG when EWO completes for options 3 & 4.)

[1] Indicate the number of loops requested. Fill out one "CLEC Loop Request" section for each loop requested. Use Page 2 of SI for this purpose.

CLEC Loop Request: (CLEC requests the following loops to the above address with the indicated Loop Modifications:

_____Check here if this is a conversion of existing service. Existing Telephone Number: _____

	Provide this loop	Provide ULM-LC[2]	Provide ULM-BT[2]	Existing CLEC FRNs[3]
UDL-2W/ADSL	_____	_____	_____	_____
UDL-2W/HDSL	_____	_____	_____	_____
UDL-4W/HDSL	_____	_____	_____	_____
UCL/S-2W	_____	_____	_____	_____
UCL/S-4W	_____	_____	_____	_____
UCL/L-2W	_____	_____	_____	_____
UCL/L-4W	_____	_____	_____	_____

[2] Checking off ULM-LC will remove all load coils, checking ULM-BT will remove sufficient BT to bring the loop to loop specifications as published in TR73600. The CLEC may request that specific bridged taps be removed in the "Comments" section. The CLEC can use the makeup previously supplied via manual or mechanized process to indicate which taps to remove.

[3] The CLEC will provide the FRNs previously obtained for loops to be modified. Four wire loops will have two FRNs. If this field is filled in the CLEC is requesting loop modifications to pairs previously reserved. OSPE will respond with number #3 below, possibly with #4 if SC is applicable.

Outside Plant Engineering Facility Reservation Pass: One of the following five selections must be filled out:

1. _____ YES OSP Facilities are Available/reserved for 10 days FRN:_____

   Cable and Pair(s) _____

2. _____NO CANNOT PROVIDE. Check here if facilities are out of design range or in an area where copper pairs are not available and cannot be provided.

3. _____**NOT Available but can be provided with a job, no special construction.** Job Number: _____

   What is the expected completion date (ECD): _____

4. _____**NOT Available but can be provided with a job, special construction is applicable.**[4]

5. _____Facilities are not immediately available, will supply by one of the following: _____CDP _____LST

   (List facilities involved in Comments section if available)

[4] Provide a description of the work required in the "Comments" section. The CLEC can use this information to determine if they want to pursue a quote of SC charges. If the CLEC agrees to the SC quote billing conditions, OSPE will return an "Authorization Letter" which will contain a detailed description of the work and the total billable amount. The completion interval and job number will be supplied on the job quote.

Comments (describe work required on job, exceptions, etc.)

BellSouth Unbundled ADSL/HDSL Compatible Loops

Instructions for Preparing Service Inquiry

Below are the fields of information the CLEC must provide when preparing the ADSL/HDSL Service Inquiry (SI). Unless otherwise noted, there are no restrictions regarding length of fields or alpha/numeric makeup of required information.

General Information

- SI# (PON Number)
- Check (✓) if Firm Order, Change or Cancel
- Negotiator Name (BellSouth CRSG/Account Team Representative)
- Negotiator's Tel Number

Customer Information

- CLEC Company Name
- Service Address**
- Customer Contact/Telephone number (CLEC contact)
- Local Serving Central Office (eight character CLLI for Central Office)
- Number of Lines requested
- Due Date/Requested Service Date

  **NOTE: End user's full and complete mailing service address, which would include any dept/floor/suite/room/apartment number, as well as, the U.S. postal zip code

CLEC Loop Request

- Check (✓) if a conversion
- Existing Telephone Number/Circuit ID – provide if conversion is checked
- Check (✓) each loop type requested. If multiple loops are requested, fill out one "CLEC Loop Request" section for each loop requested. Check ULM-LC if removal of load coils is requested.
- Check (✓) ULM-BT if removal of bridged tap is requested (BellSouth will remove BT(s) to meet ADSL or HDSL specifications; or the CLEC may request a specific BT removal by can indicating the specific BTs to be removed in the **Comments** section.)

Instructions for Preparing Service Inquiry *(continued)*

Below is information provided by BellSouth on the SI:

Customer Information

CRSG/Account Team Representative will fill out the Special Construction (SC) fields (if necessary) depending on SC action decided by the CLEC.

Outside Plant Engineering Facility (OSPE) Reservation Pass

If facilities are available, OSPE will check (✓) off item one (1) in this section and populate (FRN) (if the CLEC has not provided FRN previously obtained from Loop Make-Up request).

If facilities are not available, OSPE will check (✓) appropriate item number.

If facilities are not available but can be provided with Unbundled Loop Modification (ULM), OSPE will check (✓) item number 3 and provide an estimated completion date. OSPE will indicate ULM is required and provide an FRN in the **Comments** section. (SI will be returned to the CRSG/Acct. Team for the CLEC to approve ULM)

BellSouth Unbundled ADSL/HDSL Compatible Loops

Guidelines for Interfacing with the CRSG UNE Group

For Email Transactions

- In order to serve customers as efficiently as possible, the CLEC should communicate with the CRSG UNE Group via email, whenever possible. New orders, CLEC initiated corrections, and clarification responses should be submitted via email.
- The CRSG UNE Group email address is crsg.une@bridge.bellsouth.com.
- When submitting the request via email, submit only 1 PON (SI & LSR) per mail message
- Use the following guidelines in formatting the email subject header:

PON 12345 UNE NEW	for a new UNE order
PON 12345 LSOD NEW	new Line Share Splitter request
PON 12345 CORRECTION	for a CLEC initiated correction or update
PON 12345 CLARIFICATION RESPONSE	for a clarification response
PON 12345 STATUS	for a status request

For Facsimile Transactions

- Requests submitted via facsimile should be sent to 800-365-8108
- The following guidelines should be used for requests submitted via facsimile:
  - The request must be type written
  - A transmittal cover page must be used
  - The transmittal cover should include
    - PON Number(s)
    - Total number of pages transmitted
    - Contact information

BellSouth Unbundled Copper Loop

Introduction & Scope

This Product Information Package is intended to provide to CLECs a product description and general ordering information specific to the UNE described herein. Detailed ordering guidelines are provided in documents located on the BellSouth Interconnection Web site.

The information contained in this document is subject to change. BellSouth will provide notification of changes to the document through the CLEC Notification Process.

Please contact your BellSouth Account Manager, if you have any questions about the information contained herein.

Revisions

Version 3

1) Page 1 – "Version 3" replaces "Version 2".
2) **Footnote** on each page – date changed from "8/25/00" to "10/13/00" and "Version 2" changed to "Version 3".
3) **Service Order Requirements** section – ***LSR form*** *sub-section:*
   - Added "Project" under the **LSR Field**
   - Under the "**Information Required**" column added "If Unbundled Loop Modification is ordered, populate with the following:
     - ULMLC – for Load Coil removal
     - ULMBT – for Bridge Tap removal
     - ULMBTLC – for Load Coil and Bridge Tap removal"

Version 2

1. Page 1 – added "Version 2".
2. **Footnote** on each page – date changed from 3/10/00 to 8/25/00. Deleted "UCLpkg.doc" and added "Version 2".
3. The version 1 **Ordering and Provisioning** and **Service Inquiry (SI) Process** sections were replaced with a new **Ordering and Provisioning** section that contains three ordering scenarios.
4. **Service Order Requirements section:**
   - ***LSR form sub-section*** – In first paragraph, deleted Ordering and Billing Forum (OBF) guidelines reference and replace with "**BellSouth Ordering Guide for CLECs** (LSOGv2) or the **BellSouth Business Rules for Local Ordering** (LSOGv4))".
   - ***LSR form sub-section*** – In first paragraph, deleted last sentence.
   - ***LSR form sub-section*** – second paragraph, added clarification for "NCI at CLEC" and "SEC NCI at End User" codes format:

     "0" is a numeric zero character

     ** "O" is an alpha (letter O)
   - ***LSR form sub-section*** – second paragraph, under LSR Field, added additional field "RMKS". Under Information Required, added "FRN (if Loop Make-up and FRN ordered prior to placing loop order)".
5. **Rate Elements and USOCs** section -- updated to reflect description changes in the existing elements and to add new elements:

BellSouth Unbundled Copper Loop

Old Element	New Description/Element	USOC
2 Wire Unbundled Copper Loop/S, ≤ 18kft	2 Wire UCL/S, ≤ 18kft, includes manual service inquiry and facility reservation	UCLPB
NA	2 Wire UCL/S, ≤ 18kft, without manual service inquiry and facility reservation	UCLPW
4 Wire Unbundled Copper Loop/S, ≤ 18kft	4 Wire UCL/S, ≤ 18kft, includes manual service inquiry and facility reservation	UCL4S
NA	4 Wire UCL/S, ≤ 18kft, without manual service inquiry and facility reservation	UCL4W
2 Wire Unbundled Copper Loop/L, > 18kft	2 Wire UCL/L, > 18kft, includes manual service inquiry and facility reservation	UCL2L
NA	2 Wire UCL/L, > 18kft, without manual service inquiry and facility reservation	UCL2W
4 Wire Unbundled Copper Loop/L, > 18kft	4 Wire UCL/L, > 18kft, includes manual service inquiry and facility reservation	UCL4L
NA	4 Wire UCL/L, > 18kft, without manual service inquiry and facility reservation	UCL4O

Revisions (continued)

6. **Service Inquiry (SI) Form** (revised: 2/29/00) and **SI Preparation** replaced with new **Service Inquiry** (revised: 7/21/00) and **Instructions for Preparing Service Inquiry.**

7. Added an **Acronyms** section

BellSouth Unbundled Copper Loop

Service Description

The Unbundled Copper Loop is a dedicated metallic transmission facility from BellSouth's Main Distribution Frame (MDF) to a customer's premises. This loop is commonly referred to as a "dry copper" loop because it does not have any intervening equipment such as load coils, repeaters, etc., between the end user premises and the Serving Wire Center (SWC). BellSouth offers 2 & 4 Wire UCL/S (Short) and 2 & 4 Wire UCL/L (Long). The UCL/S is any Resistance Design (RD) copper loop that is less than or equal to 18 kilofeet (kft). The UCL/L will be any copper loop that is longer than 18kft.

These loops are not intended to support any particular service and may be utilized by the CLEC to provide a wide-range of telecommunications services so long as those services do not adversely effect BellSouth's network. This facility will include a Network Interface Device (NID) or equivalent demarcation point at the end-user's customer's location for the purpose of connecting the loop to the customer's inside wire.

Service Capabilities

BellSouth will only provide the loop facilities with these offerings.

UCL loops will be designed circuits and are provisioned with test points. BellSouth will provide a Design Layout Record (DLR).

BellSouth will perform installation testing (other than switch-based) that is needed to ensure the loop meets the specifications of **BellSouth's TR73600**.

At the CLEC's option and for an additional charge, BellSouth will perform order coordination (OC) activities associated with Number Portability and/or disconnect orders. OC is intended to convert an existing customer to a new local service provider using the UCL in a manner that minimizes the end-user's dial-tone interruption. BellSouth will notify the CLEC of the appropriate conversion time and will then perform the work within the negotiated interval.

If the CLEC requests work after normal working hours, overtime rates will apply for work outside of 8:00 a.m. to 5:00 p.m. local time

If the CLEC's end user has existing service with BellSouth that utilizes a compatible copper loop, and wants to change local service providers, BellSouth will attempt to reuse the end user's existing loop.

BellSouth Unbundled Copper Loop

Technical Requirements

The UCL/S will be a Resistance Design (RD) loop of 1300 ohms or less and will consist of non-loaded copper with a total length of 18 kft or less. In addition, up to 6 kft of bridged tap may be included on the loop facility.

The UCL/L is a loop of up to 2800 ohms and will consist of non-loaded copper with a total length greater than 18 kft. In addition, up to 12 kft of bridged tap may be included on the loop facility. All copper loops longer than 18kft within BellSouth's network typically will have load coils or other intervening equipment. Therefore, the CLEC may have to request Unbundled Loop Modification (ULM).

For a CLEC requested loop facility that does not meet UCL specifications and it is determined that the loop can be modified to meet these specifications, the CLEC may request that BellSouth's **Unbundled Loop Modification (ULM).** In these situations and as a chargeable option, BellSouth will use the ULM process to modify the requested loop facility to UCL specifications. Additionally, the ULM product must be utilized to remove any bridged tap sections that are requested by the CLEC. The rates for ULM are in addition to the UCL rate.

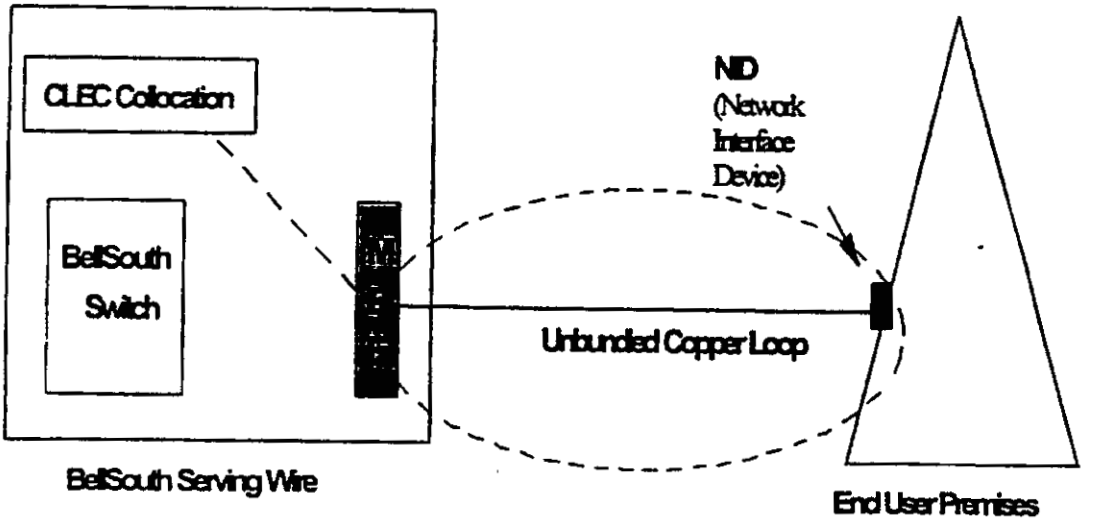
BellSouth will only ensure that the UCL has electrical continuity and provides balance relative to tip and ring.

These loops are not designed or intended to provide any particular service. The loop may be attached to a variety of equipment both at the CLEC's collocation space and the end user premises. BellSouth does not guarantee a particular bit rate associated with these loops.

UCL will meet the parameters specified in **Technical Reference (TR) 73600.**

BellSouth Unbundled Copper Loop

Network Configuration



Ordering & Provisioning

This section will describe ordering scenarios available to the CLEC for UCL ordering. It is important to note that it is now possible for a CLEC to obtain Loop Make-up (LMU) prior to placing an order for a UCL. This option will be referred to as "prior LMU".

There is a key distinction in the "with prior LMU" and the "without prior LMU" scenario. "With prior LMU" indicates that LMU was ordered and obtained by the CLEC prior to placing the UCL order; whereas "without prior LMU" indicates that the LMU look-up and facility reservation function will be handled *as part of* the loop ordering process. Lastly, Service Inquiry (SI) forms for LMU are distinct and separate from the SI forms required in the submission of a CLEC's UCL service order.

The LMU with Facility Reservation Number (FRN) option enables the CLEC to receive LMU and reserve a loop facility. This allows the CLEC a limited time span *(4 days)* to place an UCL order using the pre-order LMU. For additional detail regarding the LMU/FRN process, refer to the **LMU Product Package.**

If a prior LMU/FRN is obtained, the CLEC may use the FRN facility once it later submits a Local Service Request (LSR) to order a UCL. However, it should be noted that the specific loop type ordered on the LSR must match the specifications of the facility for which prior LMU/FRN has been requested. BellSouth will use best efforts to assign the reserved facility on which the CLEC has obtained the FRN. If the loop type the CLEC has ordered on the LSR form does not match the reserved facility, the provisioning system will not use the reserved facility. Instead, the provisioning system will automatically override the FRN and attempt to assign a facility that does match the specifications of the loop type ordered. For information regarding the technical specifications refer to the Technical Requirements section of this document or to the **BellSouth TR73600.**

The sub-sections on the following pages describe the various ordering scenarios:

BellSouth Unbundled Copper Loop

Ordering & Provisioning (continued)

Loop Order with prior Loop Make-Up (LMU) and Facility Reservation Number (FRN)

The CLEC in this scenario would have requested a LMU with FRN prior to placing an order for the UCL. In this scenario the CLEC does not require and is not ordering Unbundled Loop Modification (ULM) on the requested loop facility. The non-recurring rate for the UCL in this scenario excludes the cost of the manual service inquiry LMU and FRN since the CLEC has previously paid for the LMU with FRN.

Steps

1. CLEC requests and receives LMU/FRN through the **LMU process.**
2. CLEC prepares and sends a Local Service Request (LSR) form w/FRN to the Local Carrier Service Center (LCSC). CLEC must specify UCL on the LSR.
3. Once a complete and correct LSR has been processed, the LCSC will forward a Firm Order Confirmation (FOC) to the CLEC.
4. The requested loop type will be provisioned through the ordering and provisioning systems according to the targeted intervals stated in the Interval section.

Loop Order with prior LMU & FRN and with Unbundled Loop Modification (ULM)

This scenario is for a UCL for which the CLEC is requesting ***ULM***. The CLEC would have also requested a LMU with FRN prior to requesting the loop with ULM. The non-recurring rate for the loop in this scenario excludes the cost of the manual service inquiry LMU and FRN since the CLEC has previously paid for the LMU with FRN. Rates for ULM will be charged to the CLEC as separate rate elements.

Steps

1. CLEC requests and receives LMU/FRN through the **LMU process.**
2. CLEC prepares a firm order Service Inquiry (SI) and must specify UCL, the required modifications and the FRN of the facility which requires modification.
3. CLEC prepares the LSR for the requested loop type with FRN.
4. CLEC sends the SI and LSR to its BellSouth CRSG/Account Team Representative.
5. CRSG/Account Team Representative holds the LSR and sends the SI to Outside Plant Engineering (OSPE).
6. OSPE issues an engineering job for the requested Alms and determines an estimated completion date (ECD) for completing the modifications.
7. OSPE forwards the SI with ULM ECD to the CRSG/Account Team Representative.

BellSouth Unbundled Copper Loop

Ordering & Provisioning (continued)

8. CRSG/Account Team Representative notifies the CLEC of the ULM ECD.
9. When ULM is complete, OPSE notifies the CRSG/Account Team Representative who in turn notifies the CLEC.
10. CRSG/Account Team Representative forwards the SI and the LSR to the LCSC.
11. If the LSR is complete and correct the LCSC will process the order for the loop, bill the ULM and issue an FOC to the CLEC.
12. The requested loop type will be provisioned through the ordering & provisioning systems according to the targeted intervals stated in the Interval section of this document.

Loop Order without prior LMU & FRN

This scenario is for a UCL and the CLEC has not requested prior LMU & FRN. The non-recurring rate for the loop in this scenario will include the cost of the manual service inquiry and FRN.

Steps

1. CLEC prepares a firm order SI and LSR for a UCL.
2. CLEC sends the SI and LSR to its BellSouth CRSG/Account Team Representative.
3. CRSG/Account Team Representative holds the LSR and sends the SI to Outside Plant Engineering (OSPE).
4. **If thy UCL facility is available,** OSPE completes the SI with the FRN facility and sends the SI back to the CRSG/Account Team Representative. **(proceed to step 10)**
5. **If the UCL facility is not available but can be provided with modifications,** OSPE will indicate on the SI that the facility is not available but could be provided with a job for Unbundled Loop Modification (ULM). OSPE will return the SI to the CRSG/Account Team Representative. **(proceed to step 7)**
6. **If the requested loop type facility is not available and cannot be provided with modifications,** refer to the **Note** below.
7. The CRSG/Account Team Representative forwards the SI to the CLEC for the CLEC's approval for Unbundled Loop Modification (ULM). CLEC will indicate its approval for ULM by placing a check (✓) for ULM-LC and ULM-BT on the SI and then return the SI to CRSG/Account Team Representative.
8. The SI is returned to OSPE who will initiate a job for Unbundled Loop Modification. OSPE will provide the job number and estimated completion date (ECD) on the SI and return the SI to the CRSG/Account team.

BellSouth Unbundled Copper Loop

Ordering & Provisioning (continued)

9. The OSPE job will do the loop modifications necessary to bring the loop facility to design standards for a UCL. The job will also include a FRN for the facility to be modified if the pair being modified is a spare pair.
10. Once the job is complete, OSPE will send the completed SI with job completion date to the CRSG/Account Team Representative.
11. CRSG/Account Team Representative forwards the SI & LSR to the LCSC.
12. If the LSR is complete and correct, the LCSC will process the order and issue an FOC to the CLEC.
13. The UCL will be provisioned through the ordering & provisioning systems according to the targeted intervals stated in the Interval section of this document.

Note: There may be several reasons for the unavailability of compatible facilities for the loop type being ordered by the CLEC. The OSPE will indicate which reason applies on the Service Inquiry (SI). Below is a brief synopsis of those reasons. For additional information regarding possible options to remedy the "facility unavailable" situation, please contact your BellSouth CRSG/Account Team Representative.

- **Facilities are out of range** – OSPE will indicate why the loop is out of range and cannot be provided on the SI. If the facility would qualify for a different loop type, the possible loop type will also be indicated. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC.

- **No compatible facilities/available by a job** – OSPE indicates that the facilities will be made available by a job and Special Construction (SC) is not applicable. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC. The SI will state an estimated completion date (ECD). The job will be completed before the service orders are issued.

- **No compatible facilities/available w/SC** – OSPE indicates that the facilities could be made available by a job and Special Construction (SC) is applicable. OSPE will describe the SC work in the comments section of the SI. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC. CLEC can then make the decision whether or not to pursue the SC process. If the CLEC decides to move forward with the SC process, the CLEC will be responsible for costs associated with BellSouth providing the quote and for the costs of implementing the SC job.

- **No compatible facilities/available with LST/CDP** – OPSE indicates that the facilities may be made available through Line and Station Transfers (LSTs) or by clearing a defective pair (CDP). OSPE will include remarks in the "comments" section of the SI that the facilities are not immediately available but an attempt will be made to make facilities available via cuts (LSTs) or CDP. The SI will be returned to the CRSG/Account Team Representative to advise the CLEC.

BellSouth Unbundled Copper Loop

Service Order Requirements

Local Service Request (LSR) form

The CLEC will complete a Local Service Request (LSR) form according to the **BellSouth Ordering Guide for CLECs** (LSOGv2) or the **BellSouth Business Rules for Local Ordering** (LSOGv4).

The following information that is unique to UCL is also required on the LSR:

LSR Field	Information Required			
NC/NCI	**Loop Type**	**NC**	**NCI at CLEC***	**SEC NCI at End User***
	2 Wire UCL/S (≤ 18 kft)	LX-N	02QC3.OOF	02NO2
	4 Wire UCL/S (≤ 18 kft)	LX-N	04QC3.OOF	04NO2
	2 Wire UCL/L (> 18 kft)	LX--	02QC3.OOF	02NO2
	4 Wire UCL/L (> 18 kft)	LX--	04QC3.OOF	04NO2
RMKS	FRN (if Loop Make-up and FRN ordered prior to placing loop order)			
Project	If Unbundled Loop Modification is ordered, populate with the following: • ULMLC – for Load Coil removal • ULMBT – for Bridge Tap removal • ULMBTLC – for Load Coil and Bridge Tap removal			

* "0" is a numeric zero character
* "O" is an alpha (letter O)

Service Inquiry (SI) form

A Service Inquiry is required, dependent on the ordering scenarios described in the **Ordering & Provisioning** section, for ordering a UCL. See attached **"Service Inquiry"** and **"Instructions for Preparing Service Inquiry"** section for preparation instructions.

LSR & SI Transmittal

- CLEC sends the firm order SI and a LSR to a CRSG/Account Team Representative.
- The primary method of submission to the CRSG is through email. Refer to **"Guidelines for Interfacing with the CRSG UNE Group"** section for the submission requirements.
- CLEC should contact its BellSouth Account Team Representative for additional information regarding transmittal of SI and LSR if CRSG Representative is not known.

BellSouth Unbundled Copper Loop

BellSouth Unbundled Copper Loop

Rate Elements & USOCs

Rates for UCLs will need to be included in your contract. Rates may be interim and subject to true-up pending approval of final rates by the respective State Commissions. Commission orders will specify the dates back to which true-ups are applicable.

Rate Element	USOC
2 Wire UCL/S ≤ 18kft, includes manual service inquiry and facility reservation	UCLPB
2 Wire UCL/S ≤ 18kft, without manual service inquiry and facility reservation	UCLPW
4 Wire UCL/S ≤ 18kft, includes manual service inquiry and facility reservation	UCL4S
4 Wire UCL/S ≤ 18kft, without manual service inquiry and facility reservation	UCL4W
2 Wire UCL/L > 18kft, includes manual service inquiry and facility reservation	UCL2L
2 Wire UCL/L > 18kft, without manual service inquiry and facility reservation	UCL2W
4 Wire UCL/L > 18kft, includes manual service inquiry and facility reservation	UCL4L
4 Wire UCL/L > 18kft, without manual service inquiry and facility reservation	UCL4O
Order Coordination (per loop)	UCLMC

Other Non-Recurring Charges

Manual Service Order -- applies if order is manually submitted and electronic ordering is available.

Order Cancellation – applies if the CLEC cancels an order. This charge is for work associated with provisioning UCL pairs at the time the CLEC cancels an order.

Service Order Modification Charge – applies if the CLEC modifies a service order after the Firm Order Confirmation has been issued.

Overtime Charge – applies for work requested outside of normal working hours.

Time & Material – applies for dispatch out if "no trouble found"

BellSouth Unbundled Copper Loop

Intervals

Where facilities are available and after any ULM request and/or SI process has been completed, it is expected that BellSouth will provision these loops after the receipt of an accurate LSR and SI within the following targeted intervals:

Loops	Intervals	FOC
1-5 Loops	7 business days	2 business days
6-14 Loops	10 business days	3 business days
15 + Loops	Handled on a project basis, intervals to be negotiated	

Maintenance & Repair Procedures

The CLEC is responsible for testing and pre-screening any trouble conditions to make sure the trouble is with the UCL pair before calling BellSouth. If the CLEC's testing isolates the repair problem to BellSouth's unbundled loop, the CLEC should notify the Unbundled Network Element (UNE) Center. The target interval for maintenance resolution is 24 hours from the time the trouble is reported to the UNE center.

The CLEC must provide the following information to UNE Center when reporting a repair problem:

- UCL pair Circuit ID
- Description of the trouble

If BellSouth dispatches a technician on a CLEC reported trouble call and no UCL trouble is found, BellSouth will charge the CLEC for time spent on the dispatch and for time spent testing the UCL.

BellSouth Unbundled Copper Loop

Contract Specific Provisions

Before any UCL loop can be ordered, the CLEC must have an Interconnection Agreement that includes terms, conditions and rates for each loop type that is being requested. This agreement must be in effect for all states where the CLEC plans to order these unbundled loops.

The information contained herein applies to the UCL general offering and is part the standard BellSouth agreement. The general offering is in accordance with BellSouth policies, procedures and regulatory obligations as well as the Standard Interconnection Agreement.

The general offering does not address specific contract issues within a CLEC's Interconnection Agreement that may be different from the general offering. Where specific contract issues differ from the information provided here, the contract provisions will prevail for the term of the specific CLEC Interconnection Agreement. Otherwise, the general offering provisions will apply.

Service Inquiry

General Information:

UDL-2W/ADSL, UDL-2W/HDSL, UDL-4W/HDSL or UCL Service Inquiry

SI # (PON Num.)_____ Firm Order _____ Change ____ Cancel _____

Negotiator _____

CRSG EMAIL ADDRESS: (CRSG UNE/m5,mail5a) Negotiator Telephone Number _____

Customer Information:

CLEC Name _____ Customer Contact/Telephone number

_____

Service Address _____ Local Serving Central Office _____

_____ Number of lines requested[1]

_____

_____ Due Date/Requested Service Date

_____

(To be filled out by Account team/CRSG should SC job be required)

Does the CLEC agree to SC quote billing? _____YES (OSPE will prepare SC quote) _____NO (OSPE will take no further action)

Date CLEC contacted about SC quote billing:_____

Actual Completion Date of OSPE EWO: _____(OSPE to fill out and return to CRSG when EWO completes for options 3 & 4.)

[1] Indicate the number of loops requested. Fill out one "CLEC Loop Request" section for each loop requested. Use Page 2 of SI for this purpose.

CLEC Loop Request: (CLEC requests the following loops to the above address with the indicated Loop Modifications:

_____Check here if this is a conversion of existing service. Existing Telephone Number: _____

	Provide this loop	Provide ULM-LC[2]	Provide ULM-BT[2]	Existing CLEC FRNs[3]
UDL-2W/ADSL	_____	_____	_____	_____
UDL-2W/HDSL	_____	_____	_____	_____
UDL-4W/HDSL	_____	_____	_____	_____
UCL/S-2W	_____	_____	_____	_____
UCL/S-4W	_____	_____	_____	_____
UCL/L-2W	_____	_____	_____	_____
UCL/L-4W	_____	_____	_____	_____

[2] Checking off ULM-LC will remove all load coils, checking ULM-BT will remove sufficient BT to bring the loop to loop specifications as published in TR73600. The CLEC may request that specific bridged taps be removed in the "Comments" section. The CLEC can use the makeup previously supplied via manual or mechanized process to indicate which taps to remove.

[3] The CLEC will provide the FRNs previously obtained for loops to be modified. Four wire loops will have two FRNs. If this field is filled in the CLEC is requesting loop modifications to pairs previously reserved. OSPE will respond with number #3 below, possibly with #4 if SC is applicable.

Outside Plant Engineering Facility Reservation Pass: One of the following five selections must be filled out:

1. _____ YES OSP Facilities are Available/reserved for 10 days FRN:_____

   Cable and Pair(s) _____

2. _____NO CANNOT PROVIDE. Check here if facilities are out of design range or in an area where copper pairs are not available and cannot be provided.

3. _____**NOT Available but can be provided with a job, no special construction.** Job Number:

   _____

   What is the expected completion date (ECD): _____

4. _____**NOT Available but can be provided with a job, special construction is applicable.**[4]

5. _____Facilities are not immediately available, will supply by one of the following: _____CDP ____LST

   (List facilities involved in Comments section if available)

[4] Provide a description of the work required in the "Comments" section. The CLEC can use this information to determine if they want to pursue a quote of SC charges. If the CLEC agrees to the SC quote billing conditions, OSPE will return an "Authorization Letter" which will contain a detailed description of the work and the total billable amount. The completion interval and job number will be supplied on the job quote.

Comments (describe work required on job, exceptions, etc.)

BellSouth Unbundled Copper Loop

Instructions for Preparing Service Inquiry

Below are the fields of information the CLEC must provide when preparing the UCL Service Inquiry (SI). Unless otherwise noted, there are no restrictions regarding length of fields or alpha/numeric makeup of required information.

General Information

- SI# (PON Number)
- Check (✓) if Firm Order, Change or Cancel
- Negotiator Name (BellSouth CRSG/Account Team Representative)
- Negotiator's Tel Number

Customer Information

- CLEC Company Name
- Service Address**
- Customer Contact/Telephone number (CLEC contact)
- Local Serving Central Office (eight character CLLI for Central Office)
- Number of Lines requested
- Due Date/Requested Service Date

**NOTE: End user's full and complete mailing service address, which would include any dept/floor/suite/room/apartment number, as well as, the U.S. postal zip code

CLEC Loop Request

- Check (✓) if a conversion
- Existing Telephone Number/Circuit ID – provide if conversion is checked
- Check (✓) each loop type requested. If multiple loops are requested, fill out one "CLEC Loop Request" section for each loop requested. Check ULM-LC if removal of load coils is requested.
- Check (✓) ULM-BT if removal of bridged tap (BT) is requested (BellSouth will remove BT(s) to meet UCL or HDSL specifications; or the CLEC may request a specific BT removal by can indicating the specific BTs to be removed in the **Comments** section.)

BellSouth Unbundled Copper Loop

Instructions for Preparing Service Inquiry *(continued)*

Below is information provided by BellSouth on the SI:

Customer Information

CRSG/Account Team Representative will fill out the Special Construction (SC) fields (if necessary) depending on SC action decided by the CLEC.

Outside Plant Engineering Facility (OSPE) Reservation Pass

If facilities are available, OSPE will check (✓) off item one (1) in this section and populate (FRN) (if the CLEC has not provided FRN previously obtained from Loop Make-Up request).

If facilities are not available, OSPE will check (✓) appropriate item number.

If facilities are not available but can be provided with Unbundled Loop Modification (ULM), OSPE will check (✓) item number 3 and provide an estimated completion date. OSPE will indicate ULM is required and provide an FRN in the **Comments** section. (SI will be returned to the CRSG/Acct. Team for the CLEC to approve ULM)

BellSouth Unbundled Copper Loop

Guidelines for Interfacing with the CRSG UNE Group

For Email Transactions

- In order to serve customers as efficiently as possible, the CLEC should communicate with the CRSG UNE Group via email, whenever possible. New orders, CLEC initiated corrections, and clarification responses should be submitted via email.
- The CRSG UNE Group email address is crsg.une@bridge.bellsouth.com.
- When submitting the request via email, submit only 1 PON (SI & LSR) per mail message
- Use the following guidelines in formatting the email subject header:

PON 12345 UNE NEW	for a new UNE order
PON 12345 LSOD NEW	new Line Share Splitter request
PON 12345 CORRECTION	for a CLEC initiated correction or update
PON 12345 CLARIFICATION RESPONSE	for a clarification response
PON 12345 STATUS	for a status request

For Facsimile Transactions

- Requests submitted via facsimile should be sent to 800-365-8108
- The following guidelines should be used for requests submitted via facsimile:
  - The request must be type written
  - A transmittal cover page must be used
  - The transmittal cover should include
    - PON Number(s)
    - Total number of pages transmitted
    - Contact information

BellSouth Unbundled Copper Loop

Acronyms

ADSL	Asymmetrical Digital Subscriber Line
CDP	Clear Defective Pair
CLEC	Competitive Local Exchange Carrier
CLLI	Common Language Location Identifier
CRSG	Complex Resale Support Group

BellSouth Unbundled Copper Loop – Non-Designed

Introduction & Scope

This Product Information Package is intended to provide to CLECs a product description and general ordering information specific to the UNE described herein. Detailed ordering guidelines are provided in documents on the BellSouth Interconnection web site.

The information contained in this document is subject to change. BellSouth will provide notification of changes to the document through the Carrier Notification Process.

Please contact your BellSouth Account Manager if you have any questions about the information contained herein.

BellSouth Unbundled Copper Loop – Non-Designed

Service Description

Unbundled Copper Loop – Non-Designed (UCL-ND) will be provisioned as a dedicated 2- wire metallic transmission facility from BellSouth's Main Distribution Frame (MDF) to a customer's premises (including the NID).

UCL-ND will be a "**dry copper**" facility in that it will not have any intervening equipment such as load coils, repeaters, or Digital Access Main Lines ("DAMLs"). The UCL-ND loop may contain bridge tap of up to 6 Kft (exclusive of the loop length between the end user's premises and Serving Wire Center (SWC). UCL-ND typically will be 1300 Ohms resistance and in most cases will not exceed 18 Kft (18,000) feet in length, although UCL-ND will not have a specific length limitation. For loops less than 18 Kft and with less than 1300 Ohms resistance, the loop will provide a voice grade transmission channel suitable for loop start signaling and the transport of analog voice grade signals. UCL-ND will not be designed and will not be provisioned with either a Design Layout Record (DLR) or a test point.

If no compatible BellSouth facilities are available, the CLEC may utilize BellSouth's existing electronic Unbundled Loop Make-Up (LMU) process to screen and reserve facilities. If the CLEC uses the above process, they must provide the RESID/FRN information in the REMARKS section of the paper LSR (Local Service Request) form.

The CLEC may use BellSouth's Unbundled Loop Modification (ULM) process to remove bridge tap and or load coils from copper facilities in order to condition them as UCL-ND loops. Therefore, some loops that would not qualify as UCL-ND could be transformed into loops that do qualify by using the ULM process. The CLEC would send a request for the UCL-ND loop and any ULM requests, business as usual. These loops are are not intended to support any particular service s and may be utilized by the CLEC to provide a wide range of telecommunications services so long as these services comply with industry standards and do not adversely affect BellSouth's network.

CLEC may request, for an additional non-recurring charge, an Engineering Information (EI) document from BellSouth, which provides loop make up information, similar to a Design Lay Out Record (DLR). The CLEC must have the UCL-ND and EI in their CLEC contract, before they submit an order for these items. If not in the CLEC contract, the CLEC must contact their BellSouth negotiator to amend their contract.

BellSouth Unbundled Copper Loop – Non-Designed

Service Capabilities

UCL-ND will be terminated at the Central Office (CO) in the following manner:

1. They will be delivered to the CLEC at their collocation space via a cross - connect. This cross-connect element will be provisioned out of the Collocation offering. Once this connection is made, the CLEC will provide the equipment and/or transport needed to provide the desired service to their end user.

2. If either of these loops is already connected to another UNE (Unbundled Network Element) (e.g., interoffice transport, unbundled local switching, etc.) they may remain connected to that element if the CLEC orders a combined UNE that includes the UCL-ND. BellSouth will not combine UCL-ND with any other UNE if the UCL-ND is not already combined with that element.

Once the service order has been processed via the (Local Carrier Service Center) LCSC Service Rep or via Electronic Interface, the service order will flow to Address and Facility Inventory Group (AFIG) for verification of CLEC CA/PR and to assign BellSouth facilities for CKL 2 location. Service order will flow to CO to be wired, then to Work Maintenance Center (WMC) for a possible dispatch to the field. Service order is then routed to the UNE CWIN (Customer Wholesale Interconnection Network Services) Center for coordination and turn up of service.

If facilities are not available, the CLEC may elect to pay Special Construction charges if they wanted BST to place facilities to a location where they do not currently exist. There will be instances where UCL-ND will not be available, (i.e., in an all fiber area.)

Service Capabilities – Continued

Options

BellSouth offers three options to assist the CLEC in converting existing end-users to its service. These options are described below:

1. BellSouth offers Order Coordination (OC) as a chargeable option per UCL-ND loop when reuse of existing facilities has been requested by the CLEC. The purpose of OC is to convert an existing facility to the CLEC' s service in a manner that minimizes dial-tone interruption for the end user.

2. BellSouth also offers Order Coordination-Time Specific (OC-TS) conversions when the CLEC has ordered OC and requires a time specific order conversion. In addition to the OC charge, which is applied per loop, an OC-TS charge will be applied per UCL-ND order.

3. A CLEC may also order an EI Document that provides loop information similar to information provided on a DLR for an SL2 loop.

BellSouth Unbundled Copper Loop – Non-Designed

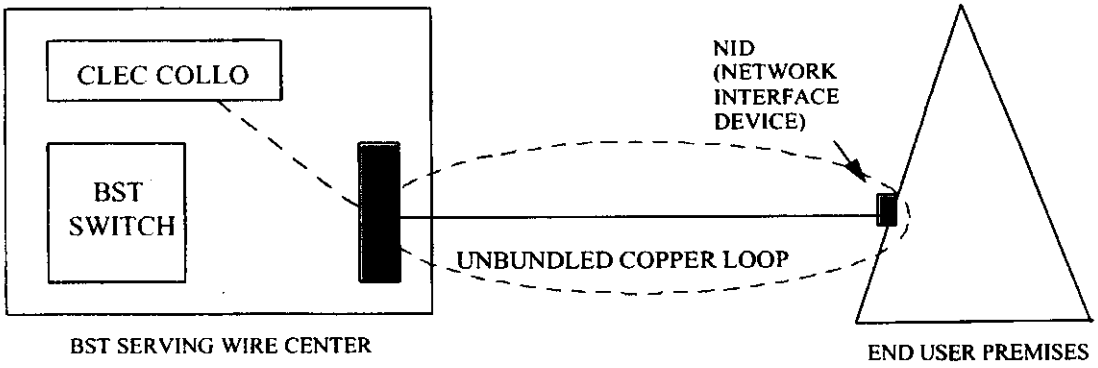
Technical Requirements

UCL-ND will be delivered to the CLEC at their collocation space via a cross- connect. Once this connection is made, the CLEC will provide connectivity needed to take the circuit back to its switch. .

UCL-ND will be provisioned as 2 Wire circuits and will meet technical specifications as described in **BellSouth's TR73600**.

BellSouth Unbundled Copper Loop – Non-Designed

Network Configuration



BellSouth Unbundled Copper Loop – Non-Designed

Ordering & Provisioning

The Local Carrier Service Center (LCSC) will receive and process orders by submission of the Local Service Request (LSR) from the CLEC. CLECs will utilize mechanized entry system where available.

Service Order Requirements

Local Service Request (LSR) Form

The CLEC will complete a Local Service Request (LSR) form according to the **BellSouth Business Rules for Local Ordering – TCIF 9/LSOG 4** or the **LEO IG (Volume 1) - TCIF 7.** The following information is unique to UCL-ND and is also required on the LSR:

LSR Field	Information Required
NC 2 Wire UCL-ND	LXT-
DRC	LMU (Populated when the CLEC is requesting an Engineering Information (EI) Document from BellSouth)

The following forms are applicable to this product:

Local Service Request form	LSR
End User Information form	EU
Loop Service with Interim Number Portability	LS-INP
Loop Service	LS

The CLEC may send the paper LSR package via fax servers, courier service or U.S. Mail.

The LSR request may be submitted by the CLEC via mechanization.

BellSouth Unbundled Copper Loop – Non-Designed Rate Elements & USOCs

Rates for UCL-ND loops will need to be included in your contract. Rates may be interim and subject to true-up pending approval of final rates by the respective State Commissions. Commission orders will specify the dates back to which true-ups are applicable. Below are the rate elements for UCD-ND:

Rate Element	USOC
2 Wire UCL-ND	UEQ2X
Manual Order Coordination (Optional)	UEAMC
Order Coordination - Time Specific (Optional)	OCOSL
Engineering Information Document (Optional)	UEANM

Other Non-Recurring Charges

Expedite Charges – Applies if CLEC requests order interval less than the stated "standard interval" in the **BellSouth Products and Services Interval Guide** .

Manual Service Order – Applies if order is manually submitted and electronic ordering is available.

Order Cancellation – Applies if the CLEC cancels an order after the FOC (Firm Order Confirmation) has been issued.

Service Order Modification Charge – Applies if the CLEC modifies a service order after the Firm Order Confirmation has been issued.

Overtime Charge – Applies for work requested outside of normal working hours. Normal working hours for provisioning work requests is between 9 a.m. and 4 p.m. local time.

Time and Material – Applies for CLEC requested dispatch, (outside the central office), if "no trouble found."

BellSouth Unbundled Copper Loop – Non-Designed

Intervals

Refer to the **BellSouth Products and Services Interval Guide** for the 2 Wire UCL-ND standard intervals.

Maintenance & Repair

The CLEC is responsible for testing and pre-screening any trouble conditions to ensure the trouble is with the UCL-ND loop before calling BellSouth. If the CLEC's testing isolates the repair problem to the UCL-ND loop, the CLEC should notify the CWINS (Customer Wholesale Interconnection Network Services) Center. CLEC will provide the results of the CLECs test, which would indicate a problem on the BellSouth provided loop.

The CLEC must provide the following information to CWINS when reporting a repair problem:

UCL-ND Circuit ID Number
CLEC Ported Number (If Applicable)
Service Address of UVL-SL1 Circuit in Trouble
Description of Trouble
Contact Name
Contact Telephone Number

The UCL-ND is provisioned without a remote access test point, therefore, if a trouble is reported and no trouble is found, BellSouth will charge the CLEC for any dispatches and tests required to confirm the loop's working status.

BellSouth will perform these repair functions during normal hours (8 a.m. – 5 p.m. local time). If the CLEC requests that BellSouth repair a trouble after normal work hours, the CLEC will be billed the appropriate overtime charges.

BellSouth Unbundled Copper Loop – Non-Designed

Contract Specific Provisions

Before any UCL-ND compatible loop can be ordered, the CLEC must have an Interconnection Agreement that includes terms, conditions and rates for this loop. This agreement must be in effect for all states where the CLEC plans to order these unbundled loops.

The information contained herein applies to the UCL-ND general offering. The general offering is in accordance with BellSouth's policies, procedures and regulatory obligations as well as the standard BellSouth Interconnection Agreement.

The general offering does not address specific contract issues within a CLEC's Interconnection Agreement that may be different from the general offering. Where specific contract issues differ from the information provided here, the contract provisions will prevail for the term of the specific CLEC Interconnection Agreement. Otherwise, the general offering provisions will apply.

BellSouth Loop Makeup (LMU)

CLEC
Pre-Ordering and Ordering Guide for Manual Loop Makeup

BellSouth Loop Makeup (LMU)

CLEC
Pre-Ordering and Ordering Guide
For
Manual Loop Makeup

(Issue 1.1 January 31, 2001)

1.1 Purpose

This document provides the Competitive Local Exchange Carrier (CLEC) with the current Unbundled Network Element (UNE) Pre-Ordering and Ordering information pertaining to BellSouth *Manual* Loop Makeup (LMU). This document serves as a supplement to the CLEC Information Package (Version 2) of BellSouth Loop Makeup (LMU), with a posting date of *09/15/00*.

The BellSouth LMU CLEC Information Package (Version 3) is located at the BellSouth Interconnection Services Web site in the CLEC Products Section at:

http://www.interconnection.bellsouth.com/products/UNE/bstlmu.pdf

1.2 Disclaimer Statement

The information contained in this document is subject to change. BellSouth will provide notification of changes to the document through the CLEC Notification Process.

This guide will be maintained until such time that it's content is incorporated into the BellSouth Business Rules – Local Ordering (BBR-LO). The BBR-LO is found at:

http://www.interconnection.bellsouth.com/guides/leo.html

1.3 Version History / Control

Any future modifications, enhancements, and/or improvements that are made to this Pre-Ordering and Ordering Guide for BellSouth *Manual* Loop Makeup (LMU) will be reflected accordingly in this section of the document.

Section	Date / Issue	Description
ALL	09/14/00 – Issue 1.0	Initial Issue Release
	01/31/01 – Issue 1.1	Notify CLEC of receipt of Manual LMU request. Ch. 5.
	01/31/01 – Issue 1.1	Requirement that for queries on ported TN, CLEC must use CKID. Ch. 5.

LMUSI FORM 19

3.1 Manual LMU Overview

Manual Loop Makeup (LMU) is requested via the ***Manual Loop Makeup Service Inquiry (LMUSI)*** process.

Manual LMU can be requested for either a working facility or for spare facilities using the following rate elements per Manual LMUSI:

USOC	Rate Element
UMKLW	MANUAL Loop Makeup - Preordering Without Reservation, per working facility queried
UMKLW	MANUAL Loop Makeup - Preordering Without Reservation, per spare facility queried [Maximum No. of Spare Facilities per Manual LMUSI is (3)]
UMKLP	MANUAL Loop Makeup - Preordering With Reservation, per spare facility queried [Maximum No. of Spare Facilities per Manual LMUSI is (3)]

BellSouth's provision of loop data to the requesting CLEC on working facilities is contingent upon ownership considerations of the loop, whether by BellSouth or the requesting CLEC. The requesting CLEC is not authorized to receive loop data on a loop owned by another CLEC.

Manual LMU of Spare Facilities may be requested With or Without Reservation. When the CLEC requests Manual LMU of Spare Facilities With Reservation, a Reservation ID is returned with the LMU information. The reservation ID is also known as a Facilities Reservation Number (FRN). Hereafter within this document, this code will be referred to as the "RESID/FRN".

The reservation holding timeframe is a maximum of four days from the time that BellSouth's loop makeup data is returned to the CLEC on the facilities queried. During this holding time that a Service Order is not placed, the reserved facilities are rendered unavailable to other customers, whether for CLEC(s) or for BellSouth. Reserved facilities for which the CLEC does not plan to place a UNE service order should be cancelled by the CLEC in a timely manner.

4.1 Availability

BellSouth will offer this product in all states within the BellSouth Region.

Per Manual LMUSI request, the CLEC may inquire for Manual Loop Makeup information on a

- single working facility, or
- maximum of three spare facilities

The **STANDARD SERVICE INTERVAL** for return of a response to Manual LMUSI is seven business days. This **STANDARD SERVICE INTERVAL** is a target interval. The interval is calculated from 'Receive Date' to 'LMU Return Date', and includes the time to render the Firm Order Confirmation (FOC). The FOC is rendered upon the issuance of the Billing Service Order. 'Receive Date' is defined as the date the Manual LMUSI is received by the designated BellSouth Account Team representative, and is counted as Day Zero. 'LMU Return Date' is defined as the date the LMU information is returned to the CLEC from BellSouth. The Interval calculation is reset to Zero when a CLEC initiated change occurs on the Manual LMU request. For a BellSouth initiated clarification to the CLEC to obtain correct information from the CLEC on its LSR, there may be a delay beyond the standard service interval in the return of a response to a Manual LMUSI request.

4.2 Contract Specific Provisions

Before a Loop Makeup Service Inquiry (LMUSI) may be submitted by the CLEC, the CLEC must have an Interconnection Agreement that includes terms, conditions and rates for the LMUSI(s) being requested. For more information on Contract Specific Provisions, refer to the BellSouth LMU CLEC Information Package.

4.3 Billing Information

Manual LMU will be billed from the Carrier Access Billing System (CABS) on a 'C' Billing Account Number (BAN). All activities herein described and associated with a unique Uniform Service Order Code (USOC) will incur a unique nonrecurring charge.

5.1 Description of Ordering Process

The following points describe the high level Manual LMU Order Process Flow. Detailed information is presented within this Chapter in the Sections that follow.

To Request Manual LMU:

1. CLECs request manual loop makeup information by submitting a Firm Order *Manual* Loop Makeup Service Inquiry (LMUSI) and a Local Service Request (LSR) form to the Complex Resale Support Group-UNE Group (CRSG), or to their direct Account Team for those CLECs not supported by the CRSG. Hereafter within this document, the use of "CRSG/Account Team" refers to both the CRSG-UNE Group and the direct Account Team, which ever is applicable.

NOTE: For those CLECs supported by the CRSG, refer to Chapter 7.0: Guidelines for Interfacing with the CRSG UNE Group.

2. BellSouth will provide an acknowledgement to the CLEC upon receipt of a Manual LMU request from the CLEC.

3. The CRSG/Account Team submits the LMUSI to the geographically appropriate Service Advocacy Center (SAC).

4. The SAC specialist prepares the LMU as specified on the LMUSI and returns the LMU, and the Facility Reservation (RESID/FRN), if requested, to the CRSG/Account Team.

5. The CRSG/Account Team sends the LMUSI and LSR to the Local Carrier Service Center (LCSC) for Billing Service Order issuance.

6. The LCSC issues the Billing Service Order for the Manual LMU.

7. The LCSC renders the Firm Order Confirmation (FOC).

8. Once the FOC has been rendered, the CRSG/Account Team returns the LMU and the RESID/FRN, if applicable, to the CLEC.

Continued on next page

5.1 Description of Ordering Process

Continued from previous page

To Cancel Reservation(s):

1. To cancel a reservation on spare facilities, the CLEC submits the LMUSI form to the CRSG/Account Team with the Cancel FRN item indicated.

2. The LSR form is not required.

3. The CRSG/Account Team sends the Cancel FRN LMUSI to the SAC.

To Cancel Pending LMUSI:

1. To cancel a pending Manual LMUSI, for which no Loop Makeup information has been processed, the CLEC submits the LMUSI form to the CRSG/Account Team with the Cancel LMUSI item indicated.

2. The LSR form is not required.

3. The CRSG/Account Team sends the Cancel LMUSI to the SAC.

5.2 Submitting a Request

For a *Manual* Loop Makeup request, the CLEC prepares and submits the

- Local Service Request (LSR) Form, Local Service Ordering Guidelines Version 4 (LSOG 4) or later, and
- Loop Makeup Service Inquiry (LMUSI) Form

A copy of the LSR Form is available at the BellSouth Interconnection Services Web site in the CLEC Customer Guides Section at:

http://www.interconnection.bellsouth.com/guides/bst_lsog4.html

A copy of the LMUSI Form is located at the end of this Guide.

Both forms must be typewritten.

The CLEC submits the LSR and the LMUSI forms together to the CRSG/Account Team for processing. See Chapter 7.0: Guidelines for Interfacing with the CRSG UNE Group of this Guide when submitting requests to the CRSG.

For a working pair LMUSI, the end user's address will be required along with either the telephone number or the circuit ID (CKID).

For spare facilities LMUSI, only the address of the service location is required.

5.3 Manual LMUSI Instructions

Instructions for preparing the LMUSI Form follow. The instructions are organized by Section, by field.

The LMUSI is a two-page form. Page 2 is only required if LMU is being requested for more than one facility. A maximum of three facilities may be requested for a single service address per LMUSI request.

The form MUST be typewritten. Unless otherwise noted, there are no restrictions regarding length of fields or alpha/numeric makeup of required information.

Section: "General Information "

Field	Instruction
Firm Order	Select for initial request
Cancel LMUSI	Select to cancel pending LMUSI for which LMU has not yet been processed
Cancel FRN	Select to cancel RESID/FRN for pair(s) previously reserved
Change	Select to update a pending Firm Order request
SI# (PON Number)	Enter the CLEC unique Purchase Order Number (PON). This entry always required.
Negotiator	Refers to the BellSouth CRSG/Account Team Representative Name
Negotiator's Tel Number	Refers to the BellSouth CRSG/Account Team Representative TN

NOTE: the reference "CRSG EMAIL ADDRESS: (CRSG UNE/m5,mail5a)" is for BellSouth use.

Section: "Customer Information"

Request Options: Select *Only* One of the Three Choices

1. Provide LMU at Telephone Number/CKID
2. Provide LMU at specified address for spare copper pair (loop facility)
3. Provide LMU at specified address for spare Digital Loop Carrier (DLC) pair

If Selected	Then Provide	
LMU for working facility	Telephone number, or, Circuit ID (CKID)	
LMU for spare copper pair	Number of spare pairs required – Maximum 3	Reserve Pair(s)? **YES / NO**
LMU for spare DLC pair	Number of spare DLC pairs required – Maximum 3	Reserve Pair(s)? **YES / NO**

NOTE On a Working Facility: For request on ported TNs, CLECs must use CKID
NOTE If Spare Facility(-ies): CLECs cannot request a mixture of copper and DLC pairs on a single LMUSI spare facility request. CLEC should provide a Y/N response regarding its choice for a reservation of the facility queried.

Continued on next page

5.3 Manual LMUSI Instructions

Section: "Customer Information", continued from previous page

Field	Instruction
Service Address	Enter the Local Exchange Navigation System (LENS), Telecommunications Gateway (TAG), or RoboTAG™ validated Service Address. Include any dept/floor/suite/room/apartment number, as well as, the U.S. postal zip code. This entry always required.
CLEC Company Name	Enter the requested information. This entry always required.
CLEC Contact/Tele No.	Enter the requested information. This entry always required.
Local Serving Central Office Common Language Location Identifier (CLLI)	Enter the eight character Serving Wire Center CLLI code. This entry always required.

Section: "Comments"

This section is always required with ***Cancel FRN***.

Enter the FRN and Cable/Pair information for the reservation being cancelled.

5.4 Manual LSR Instructions

Instructions for preparing the Manual LSR Form follow. The instructions are organized by Section, by field.

Only the sections and fields specified herein (rather than the entire LSR Form) are required for purposes of processing a Manual LMUSI.

The form MUST be typewritten, using the LSOG 4 Version form. Please note specifications on length and alphalnumeric makeup of required information.

Section: "Administrative Section"

Field	Instruction
CCNA	Enter the 3 Alpha Character Code Assigned to CLEC
PON	Enter the CLEC unique PON – MUST match SI# (PON) field of associated LMUSI
VER	Will be populated if sending a SUPP
LOCQTY	Enter the number of Loop Makeups being requested
SC	Always **LCSC**
PG OF	Enter the requested information
D/TSENT	Enter the requested information
DDD	Enter the requested information
REQTYP	Always **AB**
ACT	Always **N**
SUPP	Will be populated if sending a SUPP
CC	Enter the 4 character Numeric Code Assigned to CLEC
ACTL	Enter the CLEC 11 character CLLI code for the Serving Wire Center (SWC), where CLEC is physically or virtually collocated in BellSouth SWC
TOS	Always **1BF**

Section: "Bill Section"

Field	Instruction
BAN1	Enter the established "C" BAN, or, "N" if BAN is not established. See ***NOTE*** below regarding "C" BAN
ACNA	Enter the 3 Alpha Character Code Assigned to CLEC

NOTE: If the CLEC does not have an established "C" BAN, populate this field with an "N" and the Local Carrier Service Center (LCSC) Service Representative will establish the "C" BAN for the CLEC. (See procedures below for how to establish a "C" BAN)

Continued on next page

5.4 Manual LSR Instructions

Section: "Bill Section", continued from previous page

Procedures for Establishing "C" BAN: The fields listed below are required in order to establish a "C" BAN for the CLEC. If the CLEC's "C" BAN is already established, and thus, the CLEC populates this in the "BAN1" field on the LSR form, then the CLEC will not need to fill in the fields below.

Field	Instruction
BILLNM	Enter CLEC Company Name
STREET	Enter the requested information
FLOOR	Enter the requested information
ROOM	Enter the requested information
CITY	Enter the requested information
STATE	Enter the requested information
ZIP CODE	Enter the requested information
BILLCON	Enter Contact at CLEC
TEL NO	Enter the requested information

The CRSG/Account Team will check the LSR form to insure that the "BAN1" field is populated with either a "C" BAN number, or, an "N", the latter of which would prompt the LCSC to establish a "C" BAN for the CLEC. If the "BAN1" field is not populated, then the CRSG/Account Team will clarify the LSR and LMUSI, returning both manual forms back to the CLEC for completion.

If a "C" BAN is established for the CLEC, it is returned via the FOC.

Section: "Contact Section"

Field	Instruction
FAX NO	Enter the FAX number where Firm Order Confirmation (FOC) is to be sent by the LCSC
INIT	Enter Name of person at CLEC who initiated LSR
TEL NO	Enter Telephone number of CLEC Initiator

A Reminder When Filling Out the LSR: If a CLEC is sending in an LSR for purposes of a Supplement (SUPP), then the CLEC must populate the "VER" and "SUP" fields on the LSR, business as usual (BAU).

5.5 The LMUSI Response

Information presented on the LMUSI Response is as follows.

Section: "Outside Plant Engineering Makeup Data (N_{th}) Requested Pair"

If the LMU was requested on a working Telephone Number/Circuit ID, Outside Plant Engineering (OSPE) will fill in the Cable and Pair numbers, and list the loop makeup of that Cable and Pair facility.

If spare facilities were requested and are available, Outside Plant Engineering (OSPE) will fill in the Cable and Pair numbers; will populate the FRN if a reservation was requested by the CLEC; and list the loop makeup of that Cable and Pair facility.

If spare facilities are not available, or if the number of pairs available is less than the number requested, OSPE will indicate in the **Comments** section no spare pairs are available or that only some of the pairs are available.

5.6 The LMU Content

Loop Makeup Data is defined as the physical characteristics of the loop facilities, starting at the BST central office (CO) listed in chronological order and ending at the serving distribution terminal. Loop makeup data will consist of cable gauge and length, bridged taps (BT), load coils (LC), presence of Digital Loop Carrier (DLC) and any other equipment that is part of the local loop facilities.

The loop makeup will be listed as cable sections (e.g., F1, F2, etc.) on the LMUSI response in chronological order starting at the CO and ending at the end user serving terminal. Each section of cable (F1, F2, etc.) is distinguished by the presence of a crossbox, as indicated by an X at the appropriate point within the loop makeup response. (For example: Cable F1 would run from the CO to the first cross box; Cable F2 would run from the first crossbox to the second cross box or to the end user's serving terminal.) Facility cable sections will include the cable gauge, the length of the cable, as well as any load coils and bridged taps contained within that cable section. Length is measured in kilofeet ("kft"). The location of load coils will be indicated by the code "LC"; bridge tap will be indicated by the code "BT". The LMU response will also include the length of the bridge tap. If the loop makeup includes DLC the type of DLC will be indicated.

An example of a loop makeup response is as follows:

26NL - 10 kft	(The first facility cable section, F1, is non-loaded 26 gauge)
BT; 26NL - 2 kft	(F1 also includes BT at the end of 10 kft; the BT is 26 gauge for 2.0 kft)
X	(Location of first crossbox; thus, F1 length is a total of 12 kft)
26NL - 2 kft	(The second facility cable section, F2, is non-loaded 26 gauge)

The total length of the facility in this example would be 14 kft. Responses for manual loop makeup will be provided in a similar fashion.

Continued on next page

5.6 The LMU Content

Continued from previous page

Use the following key to interpret the information returned on the loop makeup:

Code	Description
26NL 24NL 22NL 19NL	Indicates a section of 26-gauge cable non-loaded. The other gauges are listed similarly. Changes to the numbers indicate the gauge (24NL, 22NL, and 19NL). Following this section designation is the length of the section in kilofeet to one decimal place.
26H88 24H88 22H88 19H88	Indicates a section of 26-guage cable 88 millihenry loading. The other gauges are listed similarly. Changes to the numbers indicate the gauge (24H88, 22H88, AND 19H88) and the loading marked as appropriate. The H indicates 6000 foot spacing between load coils; a D would represent 4500 foot spacing. The numbers following the H or D indicate the amount of inductance in millihenries.
LC	Location of a load coil. Following the LC indicator is the distance from the CO in kilofeet to one decimal place.
X	Location of a cross connect facility.
BT	Indicates that the following section is a Bridged tap. The bridged tap will be listed using the cable gauge and loading indicator above. Following the BT indicator is the length of the bridged tap section in kilofeet to one decimal place.
BOC.xxx	Indicates the location of a build out capacitor and its capacitance in microfarads.
DLC	Indicates the presence of Digital Loop Carrier (DLC). Following the DLC indicator is the type of DLC, e.g. DLC, Series 5.

6.1 Placing a UNE Service Order

Once the CLEC has received the LMU of a working TN or CKID, or received the LMU of spare facility(ies), and optionally reserved single or multiple spare pairs, the CLEC may determine if they wish to place an order for **BellSouth Unbundled Loop Modification** CLEC Information Package and/or for a UNE Service Order (e.g. for a 2-wire ADSL compatible loop). For such a UNE Service Order, either refer to **BellSouth Unbundled ADSL/HDSL Compatible Loops CLEC Information Package**, or to **BellSouth Unbundled Copper Loop CLEC Information Package**.

This information referenced above is located at the BellSouth Interconnection Services Web site in the CLEC Products Section at:

http://www.interconnection.bellsouth.com/products/unes.html

7.1 Submitting LMUSI & LSR to the CRSG UNE Group

Internet Email is required to submit LMUSI and LSR Forms to the CRSG UNE Group.

The following guidelines should be followed when submitting requests to the CRSG UNE Group.

Guidelines for Interfacing with the CRSG UNE Group

- In order to serve customers as efficiently as possible for manual requests, the CLEC should communicate with the CRSG UNE Group via email, whenever possible. New orders, CLEC initiated corrections, and clarification responses should be submitted via email
- The CRSG UNE Group email address is crsg.une@bridge.bellsouth.com.
- When submitting the request via email, submit only 1 PON (SI & LSR) per mail message
- Use the following guidelines in formatting the email subject header

Email Subject Header	Purpose
PON 12345 UNE NEW	For a new UNE order
PON 12345 CORRECTION	For a CLEC initiated correction or update
PON 12345 CLARIFICATION RESPONSE	For a clarification response
PON 12345 CANCEL	For a cancellation
PON 12345 STATUS	For a status request

Every effort should be used to submit requests to the CRSG UNE Group via Internet Email. In cases of extreme circumstances when Internet Email is not available, contact the UNE Group Sales Support Manager as indicated in Section 7.6 CRSG UNE Group Escalation Procedures of this document.

7.2 Verification Performed by the CRSG UNE Group

The CRSG UNE Group verifies the following fields on the LMUSI and LSR:

Form	Fields Verified
LMUSI	CLLI, ADDRESS, # OF SPARE PAIRS
LSR	ACTL, IBAN for "C" or "N"

7.3 Reporting Status to the CLEC

The CRSG UNE Group provides CLECs with the "Open PON Status Report" on a daily basis. The purpose of the report is to provide status of the PONs open in the CRSG for processing. A PON is considered closed in the CRSG once the PON has either been FOCd by the LCSC, or, the PON has been Cancelled. Once a PON has been posted 'Closed', it will no longer appear on the Open PON Status Report.

The report is pulled once per day, after 4:00pm CST, and sent via email to the designated recipient.

The following note is attached to each report:

> "Because of the volume of PONs received, all PONs submitted for processing may not appear on this report today. However, they will appear on the report for the next business day. PONs received after 3:00pm CST will also appear on the report for the next business day. If possible, please allow two business days for PONs to appear on this report before checking the status or re-sending.
>
> If you have questions regarding a particular PON listed, please inquire according to the UNE status process."

The report shows the following information:

- CLEC NAME
- DATE RECEIVED
- END USER NAME
- STATE
- TYPE OF SERVICE
- PON NUMBER
- CLARIFICATION DATE – IN & OUT
- DATE OF SERVICE INQUIRY
- DATE SENT TO LCSC
- CANCELLATION, if applicable
- NOTES TO CLEC

7.4 To Request UNE Status

To request PON specific UNE Status, the CLEC should send an Internet Email message to the CRSG UNE Email address at:

crsg.une@bridge.bellsouth.com

The Email message header should read as follows:

PON 12345 STATUS

where '12345' represents the PON Number, e.g. PON AL987654-00 STATUS.

7.5 To Specify CLEC Recipient of Open PON Status Report

To request a change to the Email Distribution List of the Open PON Status Report, send an Internet Email message to the CRSG UNE Email mailbox as stated in 7.4 above.

The Email message header should read as follows:

CHANGE DISTRIBUTION LIST

7.6 CRSG UNE Group Escalation Procedures

The following steps should be followed to initiate escalation within the CRSG UNE Group:

First Level of Escalation	Systems Designer assigned to the order
Second Level of Escalation	Customer Care Advocate Sharon Arnold (205) 321-3306
Third Level of Escalation	Sales Support Managers Cheryl Lewis (205) 321-4607 Ruby Neely (205) 321-4621
Fourth Level of Escalation	Sales Support Director Tracey Morant (205) 321-3192

Loop Service Form

1. Service Details
   - Cable ID = DLEC Collocated Cable ID
   - Shelf = Splitter Assignment Data Positions 9 and 10
   - Slot = Splitter Assignment Data Positions 11 and 12 – 13 (dash between 12 and 13.)
   - Relay Rack = FLR/AISLE/BAY (Splitter Assignment Data Positions 1 through 8. This is a 10-position field. Leave the last two positions blank. No dots or dashes.)

Example of appearance on Version 4 LSR using the splitter assignment of **SPLFIM0101500301041** would look like this:

Shelf	Slot	Relay Rack	Chan/Pr
01	04-1	01015003	151

   - Chan Pair = DLEC Collocated Cable Pair
   - LEAN = SLTN (abbreviation for shared line TN)
   - LEATN = XXX (NPA) NXX XXXX (Line shared TN)
2. Remarks
   - RESID = FRN (See Note 2 below)

General Notes:

1. Multiple telephone numbers may be submitted on the same LSR provided they are billed on the same end user customer service record and serviced at the same address.

2. The Line Shared LSR may be submitted with a Loop Makeup FRN and or a Loop Modification SI / FRN. This information should be noted in the Remarks section of the Loop Service Form as RESID = FRN.
   - The FRN associated with Loop Makeup is obtained via the *Mechanized Loop Makeup* transaction. This product is targeted to be available in July, 2000.
   - The FRN associated with Manual Loop Makeup is under development; currently no FRN is returned on a Manual Loop Makeup.
   - The FRN associated with Manual Loop Modification – New Loop, is returned on the Service Inquiry. There is no FRN used on Manual Loop Modification – Existing Loop.

3. Additional information can be obtained via the Internet at:
   www.interconnection.bellsouth.com/guides/guides.html

This site contains the BellSouth Business Rules for Local Ordering based upon the OBF industry consensus approved guidelines found in the *Local Service Ordering Guidelines (LSOG)* Version 4 Document. You can find this under the section titled **Local Exchange Ordering (LEO) Implementation Guide.**

Under the section titled **BST Customized LSOG 4 forms** you will find the new version 4 LSR in MS Word Format.

EXHIBIT TGW-4

Job Aid
Using LQS as Line Sharing Loop Qualification Tool

Job Aid
Using LQS as Line Sharing Loop Qualification Tool

LQS was created as a "Quick Check" Yes/No loop qualification tool for BellSouth's internal use and for ISPs reselling the BellSouth Industrial Class ADSL service. The information contained in LQS is derived from the LEAD database, a once-per-month-per-wire-center "snapshot" of the information contained in the LFACS database. (1/30th of all wire centers are updated every day.) LQS provides a "best effort" response regarding a loop's ability to support ADSL service. LQS is not guaranteed (currently, we have an approximate 90% accuracy rate on positive responses). Guaranteed service, or BellSouth's Business Class ADSL, does not utilize LQS (a manual Service inquiry and subsequent manual Loop Makeup is performed for exact Loop Makeup information).

This job aid, along with the information found at http://lqs.bellsouth.com, is intended to support the interim use of LQS by the CLEC community to perform loop qualification on potential Line Sharing customers. By understanding some of the proactive logic behind LQS and by defining the output codes as they relate to Line Sharing, this guide should enable the CLECs to gain some value from LQS until better solutions are available.

LQS was designed to report only "external" reason codes to reseller ISPs when a loop was not qualified. LQS was also designed to show internal BellSouth personnel more detailed "internal" reason codes. Until electronic access to LFACS is available, BellSouth has made available to the CLECs participating in Line Sharing the version of LQS which shows both the external and internal codes.

When LQS first returns a response on a phone number, the external reason is shown. By hitting the pull-down arrow on the response line, the user may also view the internal reason code.

The following table shows the possible positive responses from LQS:

External Reason Codes	Internal Reason Codes
A, C	IQ1, Copper-qualified loop IQ2, PairGain loop qualified with copper-qualified cross-box (requires cut-over) IQ3, PairGain loop qualified through BellSouth Remote DSLAM IQ4, PairGain loop qualified through BellSouth mini-RAM
A, F	Qualified through Fiber (IQ5, Qualified through CMS update)
P, C, Date	Planned for service on Copper
P, F, Date	Planned for Service on Fiber (IQ5, Qualified through CMS update)

The following is an explanation for when you receive the codes above:

IQ1, Copper-qualified loop

- This copper loop does qualify for ADSL service.

- IQ2, PairGain loop qualified through copper-qualified cross-box
- This customer is currently served via Digital Loop Carrier which will not support ADSL service. However, qualified copper pairs do exist at the cross-box. Procedures are under development in BST for a CLEC to request a pair change to a qualified copper loop.

IQ3 and IQ4, Qualified through Remote Solution

- This response code means that BellSouth has an existing remote solution (Remote DSLAM or mini-ram) available in the RT in which this customer gets their voice service.

NOTE: Due to the proactive logic in LQS, this code does mask any other codes about the loop currently serving the customer. The only valid assumption would be that the F2 portion of this customer loop is qualified for an ADSL-type of service.

IQ5, Qualified through CMS Update

- This response code means that BellSouth has an existing or planned IFITL remote solution serving this customer.

The following chart shows all of the available external and internal reason codes from LQS when a loop is not qualified:

External Reason Codes	Internal Reason Codes
E0 – Request ignored – file size limit	Same
E1 – Syntax error in phone number	Same
E2 – Service is not available for this phone number	I1: Copper loop with RZ>13 I2: Copper loop is loaded I3: Copper loop has DAML I5: Taper code is a dead zone I6: Loop has DAML I7: FN is loaded I9: Terminal CZ > 9 I10: Existing service category not compatible I11: Phone number is foreign exchange I12: Taper code distance exceeded I13: NPA-NXX is not found
E3 – Loop currently unqualified. Please try again later	I4: Pair gain loop with no Remote DSLAM I8: Wire center not DSLAM-equipped
E4 – No longer used	Same
E5 – No longer used	Same
E6 – Loop is not found. Please try again later.	Same

The following is an explanation of why you might receive the error codes above:

E2 - "Service is not available for this phone number"

- Internal codes I1, I9 and I12
  - The loop is too long to support ADSL.
    (I1: overall loop resistance >1300Ω; I9: Carrier Zone > 900Ω; I12: Average distance of

taper code to CO exceeds 18 kf).

- Internal codes I2 and I7
  - The loop contains one or more load coils.
- Internal codes I3 and I6
  - The phone number is on a Digital Added Main Line (DAML).
- Internal code I5
  - The customer falls within a known "dead" zone, an area flagged by maintenance personnel where ADSL is known not to work.
- Internal code I10
  - The line is not POTS or plain Centrex.
- Internal code I11
  - The phone number is an FX/FCO line.
- Internal code I13
  - The NPA-NXX belongs to one customer (e.g. a University) and all numbers in the range are PBX DID or Primary Rate ISDN numbers, OR
  - The NPA-NXX belongs to a CLEC.

E3 - "Loop currently unqualified. Please try again later"

- Internal code I4
  - The loop is behind a digital loop carrier system.
- Internal code I8
  - This central office is not equipped with a BellSouth DSLAM.

E6 - "Loop is not found. Please try again later."

- The phone number is on an ISDN line.
- The phone number is newly installed and not yet in LQS.
- The phone number is a direct inward dialing number (DID) behind a PBX.
- The phone number is served via Primary Rate ISDN.
- The phone number may belong to a facilities-based CLEC and is outside of BellSouth's network.

Job Aid
Using LQS as Line Sharing Loop Qualification Tool

Important notes on the logic behind LQS:

LQS stops the search and logic routines when it finds the first error condition and reports that error code. It does not continue and find all possible error codes.

The following list shows the error checking sequence used by LQS:

Item	Output upon Error Found
1) Check for proper input.	E1: Syntax error in phone number
2) Check for existence of NPA-NXX	E2: Service not available/ I13: NPA-NXX not found
3) Check for existence of loop in database	E6: Loop not found. Please try 24 hours later.
4) Check for FX Service	E2: Service not available/I11: Foreign Exchange
5) Check for incompatible services	E2: Service not available/ I10: Existing Service category not compatible
6) Check if Remote Solution exists: If Remote Solution exists, then check copper F2 for:	
a) Loading	E2: Service not available/I7: FN is loaded
b) Presence of DAML	E2: Service not available/I6: Loop has DAML
c) Carrier Zone > 900 Ω	E2: Service not available/I9: Terminal CZ>9
If NO remote solution exists: Check for copper, then DLC.	
7) Check for loaded copper pair	E2: Service not available/ I2: Copper loop is loaded
8) Check for DAML presence	E2: Service not available/ I3: Copper loop has DAML
9) Check for RZ code	E2: Service not available/ I1: Copper loop RZ>13
10) Check for DLC presence	E3: Loop currently unqualified, please try again later/I4: PairGain loop with no Remote DSLAM
11) Check taper code for dead zone	E2: Service not available/ I5: Taper code is dead zone
12) Check taper code length	E2: Service not available/ I12: Taper code distance
13) Check for BellSouth DSLAM	E3: Loop currently unqualified/

I8: Wire center not DSLAM-equipped

(End of logic)

Since LQS performs the check for the presence of a BellSouth DSLAM last, if LQS shows the error "The central office is not equipped with ADSL", the loop can be assumed, but not guaranteed, to be qualified.

If LQS finds the existence of a BellSouth Remote Solution, most of the data about the loop is ignored except for F2 qualifications. Therefore, if LQS shows the response "Qualified Through Remote Solution", only the F2 portion of the loop can be assumed to be qualified.

General Note on LQS:

Numbers not having an LFACS cable pair assignment, such as the phone in a Collocation space, will not show up in LQS.

EXHIBIT TGW-5

BELLSOUTH BUSINESS RULES
LOCAL ORDERING
FOR LINE SHARING

3.9 Unbundled (CO Based) Line Share

3.9.1 Description

UNE CO Based Line Share is a UNE offering intended to allow DLEC/CLECs access to the upper spectrum or the high frequency portion of a 2-wire copper loop for xDSL services, a.k.a. data. BellSouth will continue to be the provider of the lower spectrum or low frequency portion of the loop for analog services, a.k.a. voice.

Line Share is a UNE offering that enables the DLEC/CLEC to provide xDSL-based services for the end user customer over the same copper loop that BellSouth provides the end user's voice service.

3.9.2 Ordering Form

The following chart illustrates the required, conditional and optional forms for ordering this service. Detailed information will follow to assist you in filling out each of these forms/screens.

	Forms/Screens											
REQTYP / SERVICE TYPE	**SI**	**LSR**	**Hunting**	**EU**	**DL**	**DSCR**	**RS**	**DRS**	**PS**	**NP**	**LS**	**LSNP**
A Line Share	R	R		R							R	

R - Required C = Conditional O = optional

Completing the LSR and EU Forms/Screens

The Required, Conditional, and Optional (R/C/O) fields on the LSR and EU forms will be given for every valid REQTYP/ACT combination in the **REQTYP / ACT Combination** Section.

The following chart shows all of the valid account level activities for this requisition type.

	ACTIVITY TYPE (ACCOUNT LEVEL)												
REQTYP	**N**	**C**	**D**	**T**	**R**	**V**	**S**	**B**	**W**	**L**	**Y**	**P**	**Q**
A - Line Share	X	X	X			X						X	X

Note: " X " denotes valid account level activities. A blank entry indicates a non-valid account level activity.

Account level activities (ACT) apply to the entire account. The ACTs are defined below:
[rArr | **N** = New installation and/or account (manual)
[rArr | **C** = New installation and/or account (electronic)
[rArr | **C** = Change an existing account (e.g., Rearrangement, Partial disconnect, or addition)
[rArr | **D** = Disconnection
[rArr | **T** = Outside move of end user location
[rArr | **R** = Record activity is for ordering administrative changes
[rArr | **V** = Full Conversion of service **as specified** to new Local Service Provider (LSP)
[rArr | **S** = Seasonal suspend or restore denied account
[rArr | **W** = Full Conversion of service **as is**
[rArr | **L** = Seasonal suspension **full** account
[rArr | **Y** = Deny (non-payment)
[rArr | **P** = Conversion of service **as specified:** Partial Migration - Initial
[rArr | **Q** = Conversion of service **as specified:** Partial Migration - Subsequent

Completing the LS Form

The Loop Service (LS) form may be required or invalid depending on the account level activity. Each account level activity has valid Line Level Activities (LNAs). These LNAs determine how, or if, the LS form should be populated.

Line level activities (LNA) apply to the specified line only. The LNAs are defined below:
[rArr | **N** = New Installation (e.g., new line or additional line)
[rArr | **C** = Change or Modification to an Existing Line
[rArr | **D** = Disconnection
[rArr | **X** = Telephone Number Change
[rArr | **V** = Conversion or Migration to new LSP **as specified**
[rArr | **W** = Conversion or Migration **as is**
[rArr | **P** = PIC Change
[rArr | **L** = Seasonal Suspend
[rArr | **B** = Restore

The following chart gives the valid LNAs for each account level activity (ACT) and the associated LS form usage.

If ACT is:	Then LNA is	And LS form/screen is:
N	N	Required
C	N, C or D	Required
D	D	Required
V	N, D or V	Required
P	N, D or V	Required
Q	N, D or V	Required

The RCO fields for the Loop Service (LS) form are listed according to the Line Level Activity (LNA) in the **LNA Tables** Section .

3.9.3 REQTYP / ACT Combinations

The following charts show the Required, Conditional and Optional (R/C/O) fields on the LSR and EU forms for the valid REQTY /ACT combinations. LSR and EU forms for a valid REQTYP/ACT combination are paired together. Furthermore, the charts are organized by ACT and then Designed vs. Non-Designed within the ACT. Each chart will have a heading describing the REQTYP/ACT combination and Designed / NON-Designed status to which that chart is applicable. All unmentioned fields are either invalid, not applicable or prohibited. Populating any other fields may result in a fatal reject or a clarification of the service request.

Please note the following codes:

- Mandatory entries are indicated by quotation marks ("xxx").
- Optional fields marked with an asterisk (*) force at least one of the conditional fields to become required when populated.
- Fields used only for manual orders are followed by (m).
- Fields used only for electronic orders are followed by (e).

See the **Data Element Dictionary** Section for additional information on each of the fields listed below.

3.9.4 LNA Tables for REQTYP A

The following charts show the Required, Conditional and Optional (R/C/O) fields for the LS form/screen for the valid Line Level Activities (LNAs). The following charts are organized by type of loop (please refer to the section on **Types of Loops** for additional information on the types of loops), and then by the valid LNAs within each type of loop. Each chart will have a heading describing the type of loop and LNA to which that chart applies. Please refer to the **Completing the LS Form** Section for a listing of the valid LNAs for each account level activity. All unmentioned fields are either invalid, not applicable or prohibited. Populating any other fields may result in a fatal reject or a clarification of the service request.

Please note the following codes:

- Mandatory entries are indicated by quotation marks ("xxx").
- Optional fields marked with an asterisk (*) force at least one of the conditional fields to become required when populated.
- Fields used only for manual orders are followed by (m).
- Fields used only for electronic orders are followed by (e).

See the **Data Element Dictionary** Section for additional information on each of the fields listed below.

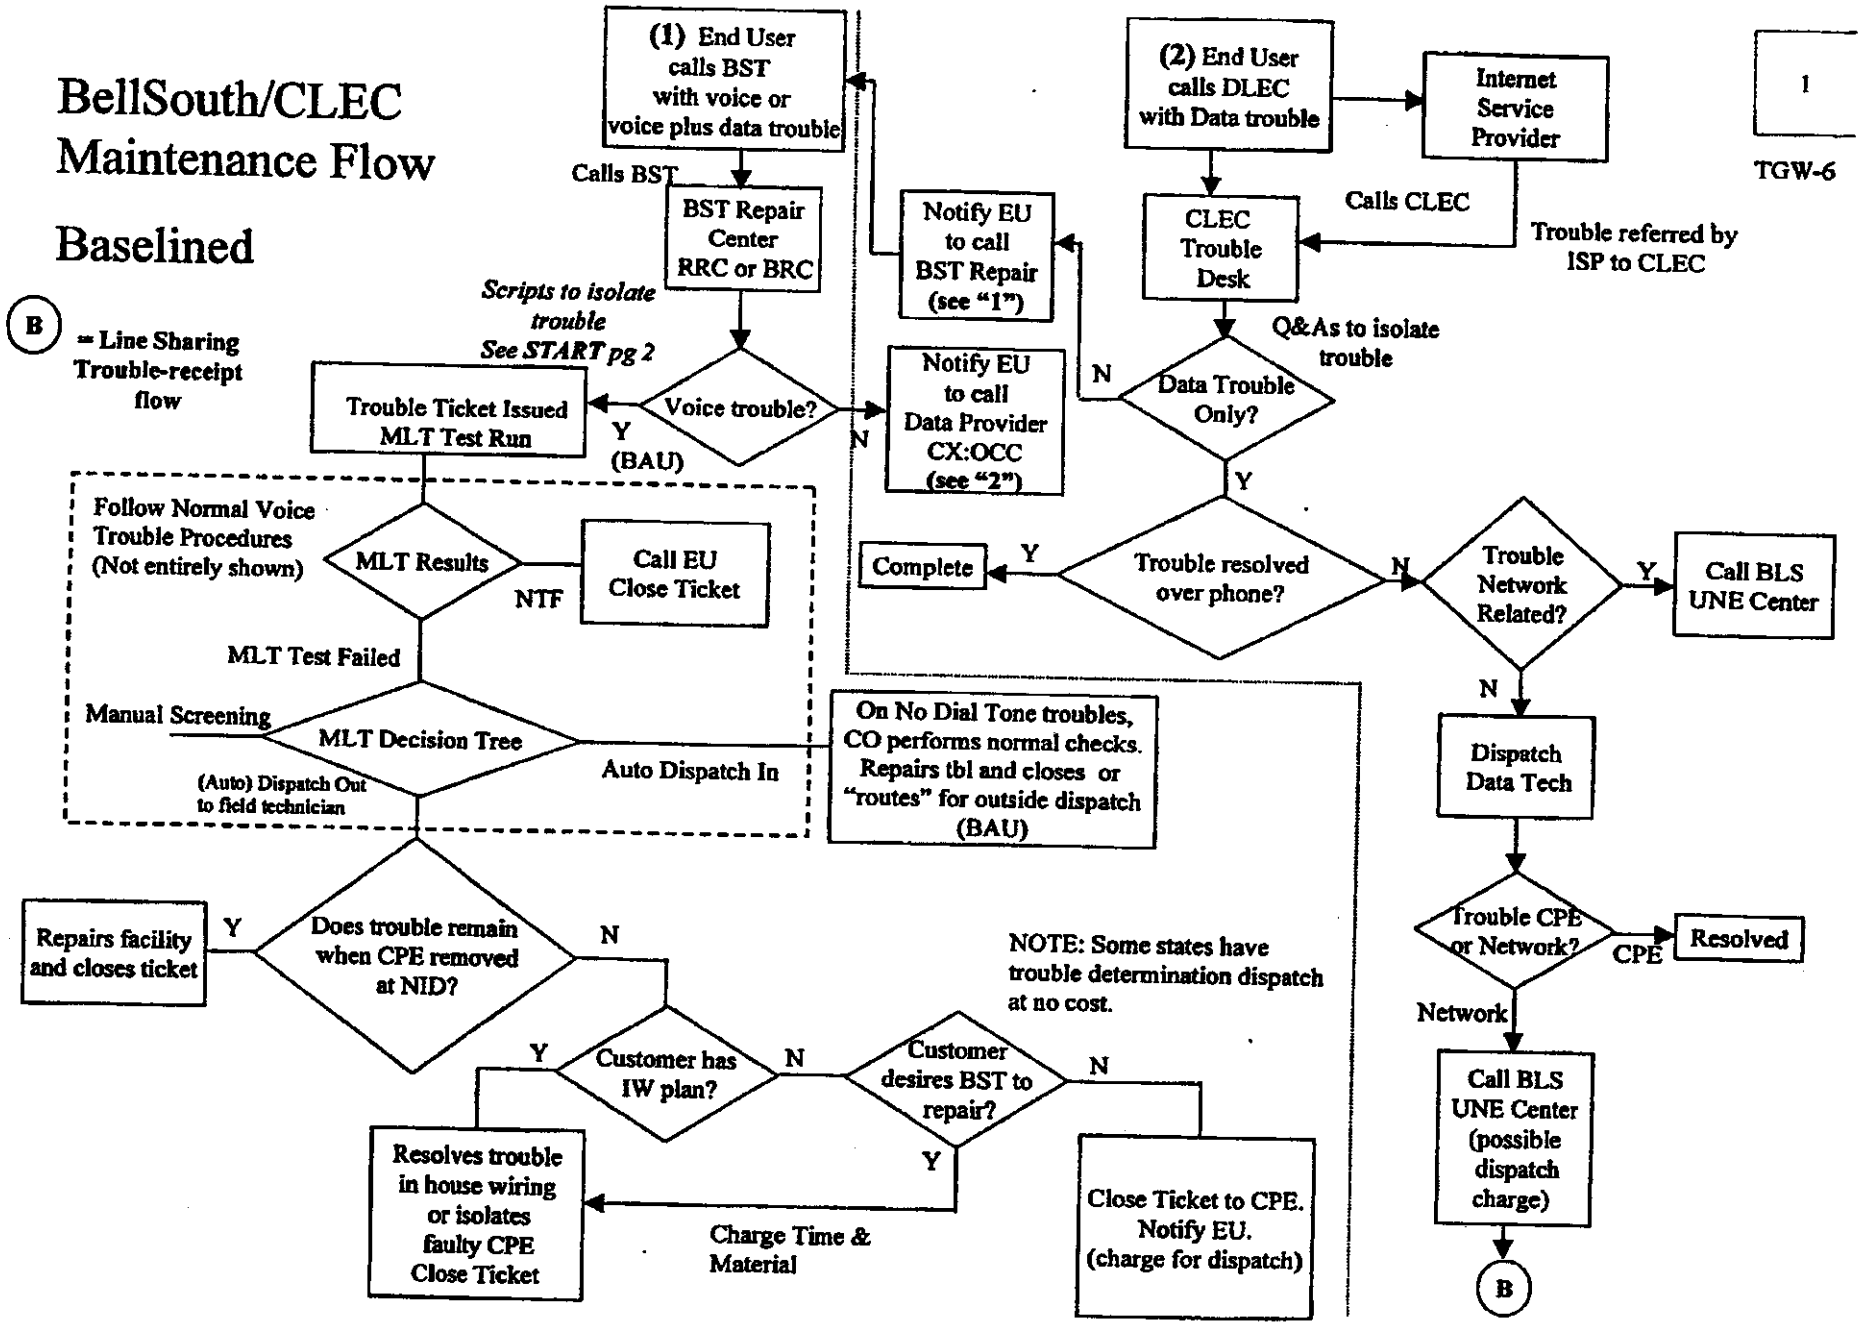
BellSouth/CLEC Maintenance Flow

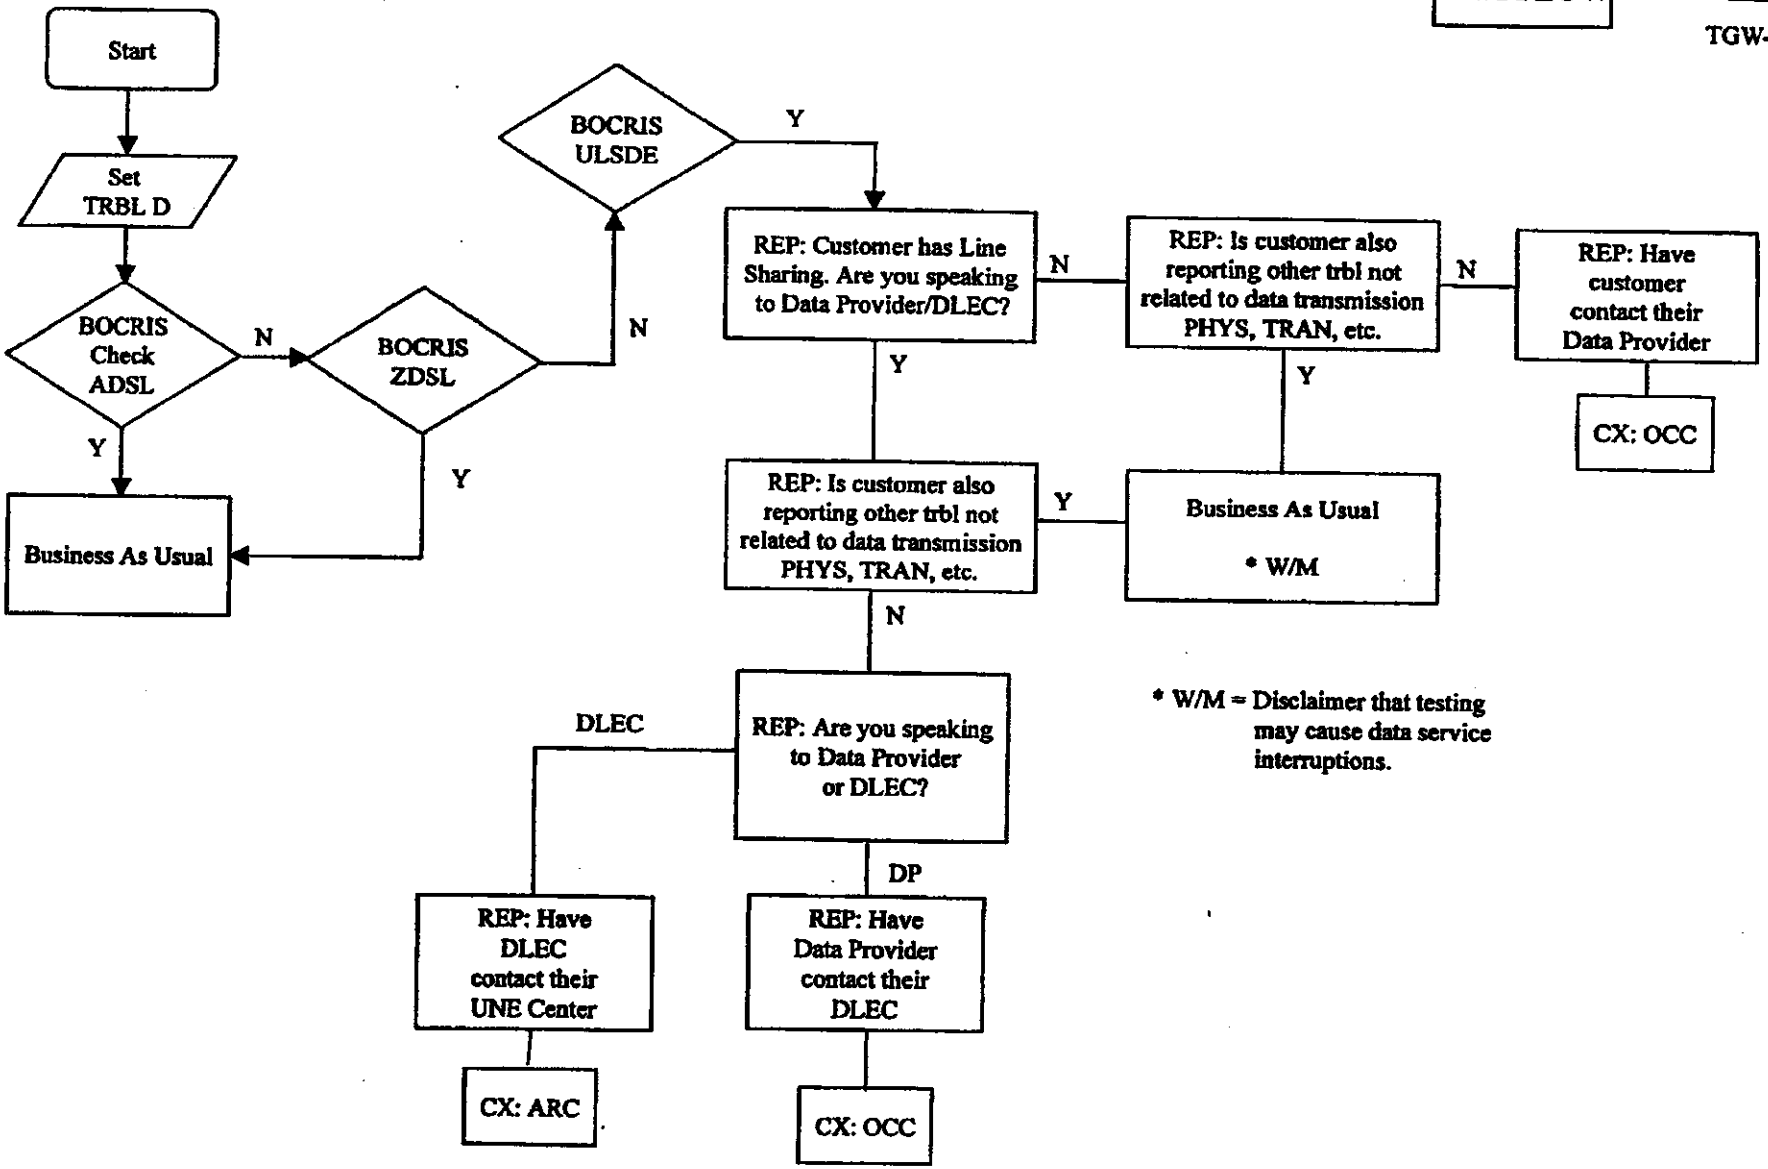
BellSouth/CLEC Maintenance Flow

Baselined



TAFI FLOW

TGW-6



BellSouth/CLEC
Maintenance Flow

- **("1") End User calls BST with voice or voice plus data trouble**
- **BST personnel follows TAFI flows to determine trouble routing**
- **If "voice" trouble exists, "voice" trouble flow will be utilized**
- **If reported trouble is "data" trouble only, End User is referred to ISP (see "2")**
- **"Voice" troubles will follow "BAU" (business as usual) flows for voice troubles within BST**

- **("2") End User calls DLEC/ISP with DATA trouble**
- **Trouble referred by ISP to DLEC/CLEC**
- **CLEC/DLEC trouble desk determines voice or data trouble**
- **If "voice" trouble exists CLEC/DLEC refers End User to call BST Repair (see "1")**
- **If "Data" trouble only CLEC/DLEC isolates trouble**
- **If Data trouble is not BST Network related CLEC/DLEC will resolve**
- **If Data trouble is isolated to BST Network CLEC/DLEC may call BST UNE Center and initiate Data trouble (see B "Line Sharing Trouble-receipt flow")**

**** BellSouth/CLEC Maintenance Flow was created to assist BST RRC/BRC personnel. Enhancements to RRC/BRC "data" TAFI scripts were developed to allow inclusion of Line Share "data" reports. An "assumed" DLEC end user flow was used.**

EXHIBIT TGW - 7

DLEC Access to TAFI

DLEC Access to TAFI

TAFI (Trouble Administration Facilitation Interface) is the vehicle used by BellSouth and CLEC users to process their end-user trouble reports on non-designed (POTS) voice-grade services. Since the DLEC is providing high-speed data access over the same physical facilities via the Line Sharing methodology, the DLEC will be limited in TAFI to only processing Line Share Data (LSD) reports.

Given:

(1) Should a CLEC expand the scope of their offerings and become a DLEC using line sharing (or visa-versa), the CLEC/DLEC will manage two unique TAFI user IDs: one for processing CLEC reports and a separate ID for processing DLEC reports.

(2) The DLEC must know the area code of his end user and provide it with the circuit_id when entering a report in TAFI.

(3) Prior to entering a LSD report via TAFI, the DLEC has confirmed with the end user that the voice service on the line shared line is working properly.

Connectivity:

The DLEC has two options for connecting to TAFI: (1) provision a LAN-LAN pipe to the nearest BellSouth POP or (2) use a modem and dial into the system via a telephone call to Atlanta. (Note: the BellSouth account team is familiar with this process as well as the process for establishing user_ids for the DLEC.)

The DLEC will access TAFI using either an X-Window terminal or a PC running Telnet protocol with VT220 terminal emulation software.

Using TAFI –
Initial Report / MLT only:

(1) Using the connectivity approach selected by each DLEC, access the TAFI processor and log in using the BellSouth provided user_id and your private password.

(2) At the Initial Trouble Entry Window (ITEW), enter the area code and circuit_id for the customer in trouble.

Note: The ITEW is formatted for telephone number entry with an expanded NNNN area. Enter the area code in the NPA section, skip the NXX section and then enter the circuit_id without the delimiters. For example:

404 _ _ _ 38HFGJ607999

Note: The DLEC can enter the end-user's telephone number instead of the circuit_id to generate the LSD report.

(3) TAFI provides several checks in the background to (a) confirm that Line Sharing is provided on this line (i.e., the presence of the ULSDE USOC in the CRIS S&E) and (b) that the DLEC entering the report is the 'owner' of the Line Sharing service. Ownership is determined by checking the OCN value found in the UNN1 FID in the CRIS S&E section and matching it with data in the DLEC's TAFI profile.

(4) TAFI returns the telephone number on which Line Shared Data is provisioned and the DLEC is automatically taken to the TAFI LSD option.

(a) If TAFI can not find the corresponding telephone number to enter the trouble report, it will return an error message stating ***"No Record of LS Found"*** and then the DLEC will be returned to the ITEW. This error could be caused by several things:

1) The wrong area code or circuit_id value was entered. (Correct errors and re-enter).

2) Line Sharing service is not deployed (i.e., the order is future dated).

3) The service order to provision Line Sharing just closed and the BellSouth down stream systems (CRIS and LMOS) have not been updated yet.

(b) If the DLEC believes that the data service was just deployed (i.e., item 3) above), enter the trouble report using the end-user's telephone number (i.e., the TN on which LS is provisioned). TAFI will look for a pending service order to validate the presence of the ULSDE USOC and UNN1 FID.

1) If a match is found, **and the service order is due "today" (or past due) and it is not in a jeopardy status**, TAFI will return the telephone number and take the DLEC to the TAFI LDS option.

2) If a match is not found, TAFI will return the error message ***"No Record of LS Found"*** and then the DLEC will be returned to the ITEW. At this point the DLEC must call the UNE Center for assistance.

(c) If TAFI finds Line Sharing on the line but the DLEC entering the report is not the owner (i.e., OCN values do not match), TAFI will return the error message ***"This Account Belongs to Another Company"*** and then the DLEC will be returned to the ITEW.

(5) The DLEC is asked the question ***"Does the end-user have trouble with his voice services – Y/N?"***

(a) If the answer is "YES", TAFI will prompt the DLEC saying ***"Please have your customer report his voice troubles to his service provider and, once repaired, retry his HS data connection"***. At this point TAFI will automatically cancel this report and return the DLEC to the ITEW.

(b) If the answer is "NO", TAFI will automatically run a MLT test.

1) If the test results indicate a potential voice trouble condition (i.e., either the DLEC did not communicate step 5 accurately or the customer did not understand, etc.), TAFI will provide the DLEC with the following message: ***"While testing we found a potential voice problem on the line. Please have your customer report his voice trouble to his service provider and, once repaired, retry his HS data connection".***

   After displaying this message for 10 seconds, TAFI will cancel the report and return the DLEC to the ITEW.

(6) TAFI will provide the DLEC with the FECO (Front End Close Out) recommendation (since the MLT test results indicate a TOK condition). At this point the DLEC can view the MLT test results (by depressing the F? key or system prompt?).

(7) Once the DLEC has viewed the MLT test results, he will be asked: ***"Do you wish to CANCEL this report (i.e., just running MLT test) – Y/N?"***

   (a) A "Yes" response will cause TAFI to cancel the report and return the DLEC to the ITEW.

   (b) A "No" response will cause TAFI to generate a LS data report and will automatically populate "%[DLEC] $Data/Lineshare Trouble Test Continuity on [ckt_id #]" in the narrative, enter LSD as the trouble type and populate the DLEC's call back number (from an internal table) in the Reach number field. The report will be routed PDI (to send it to the CO technician).

(8) The DLEC can view the commitment date/time from the final screen.

(9) Once the report is entered, the DLEC is returned to the ITEW to enter the next report.

(10) If there are no more troubles to report, the DLEC can log off by depressing the F6 key and then depressing the Enter key.

Subsequent Reports:

Once the DLEC enters an LSD report, DLEC may wish to (a) check status, (b) add information or (c) close the report because they found the problem outside of BellSouth's domain.

(11) The DLEC will execute step (2) or (4b) - depending upon how long the LS service has been active. TAFI goes to initiate an LMOS report and finds that an open report exists for this end-user's line.

   (a) TAFI will check the pending LMOS report to see if the Trouble Type is "LSD".

      1) If the Trouble Type is <u>not</u> LSD (indicating that the end-user has reported a problem with his voice service), TAFI will display the current status of the pending report and will return the following message: ***"A voice report exists for this line. Please have your customer check his HS data <u>after</u> this voice related trouble is cleared."***

      2) After displaying this message for 10 seconds, TAFI will cancel this DLEC entry and return the DLEC to the ITEW.

(b) The Trouble Type is LSD, TAFI will confirm that the DLEC is the owner of the LSD.

1) If DLEC is not the owner of the LSD, TAFI will display ***"This Account Belongs to Another Company".***

2) After displaying this message for 10 seconds, TAFI will cancel this DLEC entry and return the DLEC to the ITEW.

(c) DLEC is the owner - TAFI will display the current status of the pending report and will ask ***"Do you wish to CLOSE the existing LMOS report – Y/N?"***

1) If "Yes", TAFI will ask ***"Was the trouble Hardware related – Y/N?***

a) If "Yes", TAFI will close the report "DLEC cleared hardware trbl"

b) If "No", TAFI will close the report "DLEC reported came clear"

Note: TAFI will close the report if it is not in a dispatched status. If the report has been dispatched, TAFI will enter a subsequent report alerting the field technician that the problem is resolved.

2) If "No", TAFI will ask ***"Do you wish to Update the existing LMOS report – Y/N?"***

a) If "Yes", TAFI will advise DLEC ***"Update narrative with new information and then send the report".*** TAFI will then generate a subsequent report with the updated narrative.

b) If "No", TAFI will cancel this DLEC transaction and automatically return the DLEC to the ITEW.

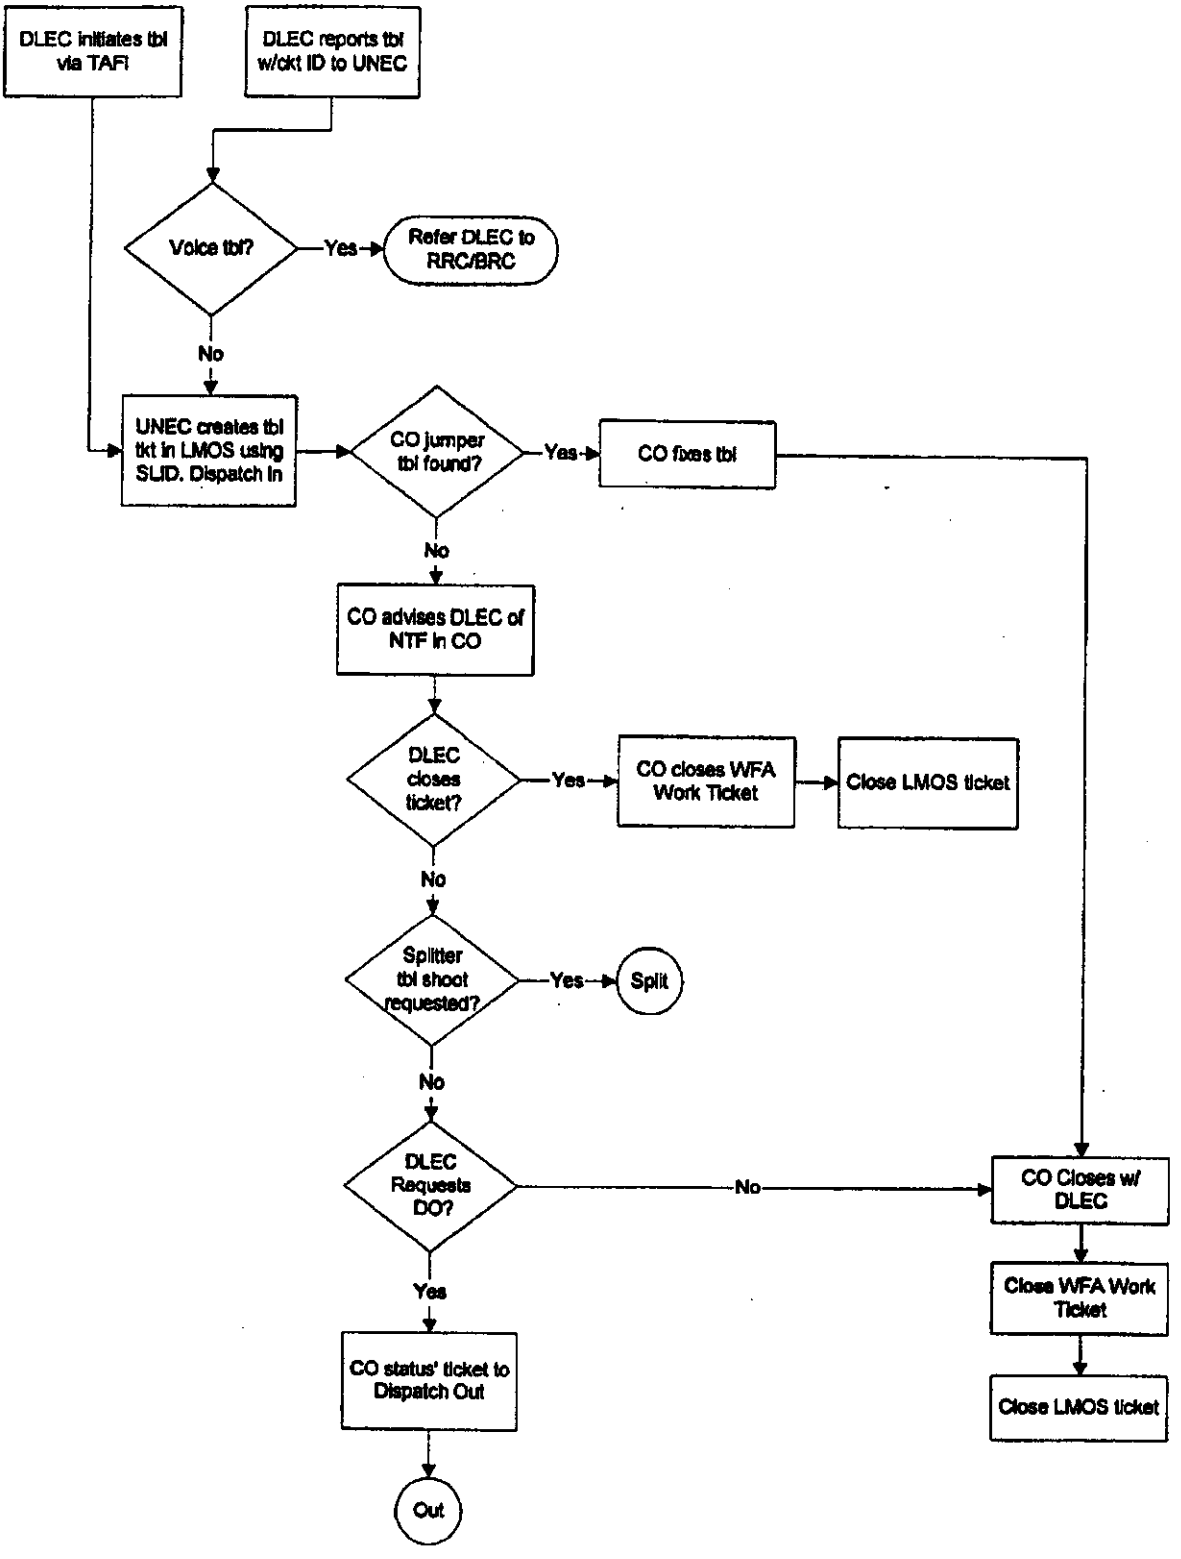
(d) Once the report is sent, TAFI will return the DLEC to the ITEW.

(12) If there are no more troubles to report, the DLEC can log off by depressing the F6 key and then depressing the Enter key.

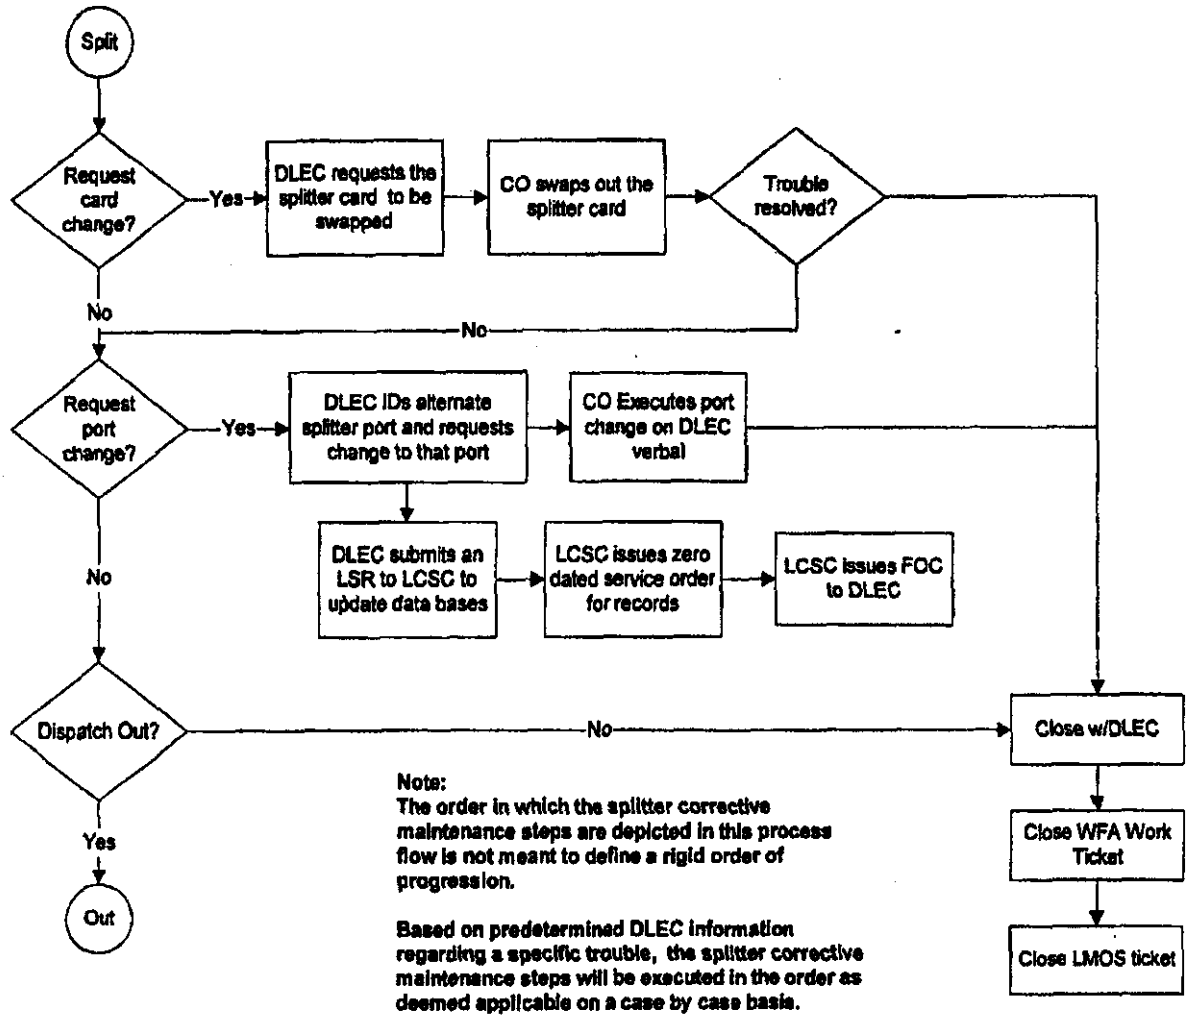
EXHIBIT TGW - 8

Trouble Receipt Process Flow

Trouble Receipt Process Flow
Baselined 8/3/2000



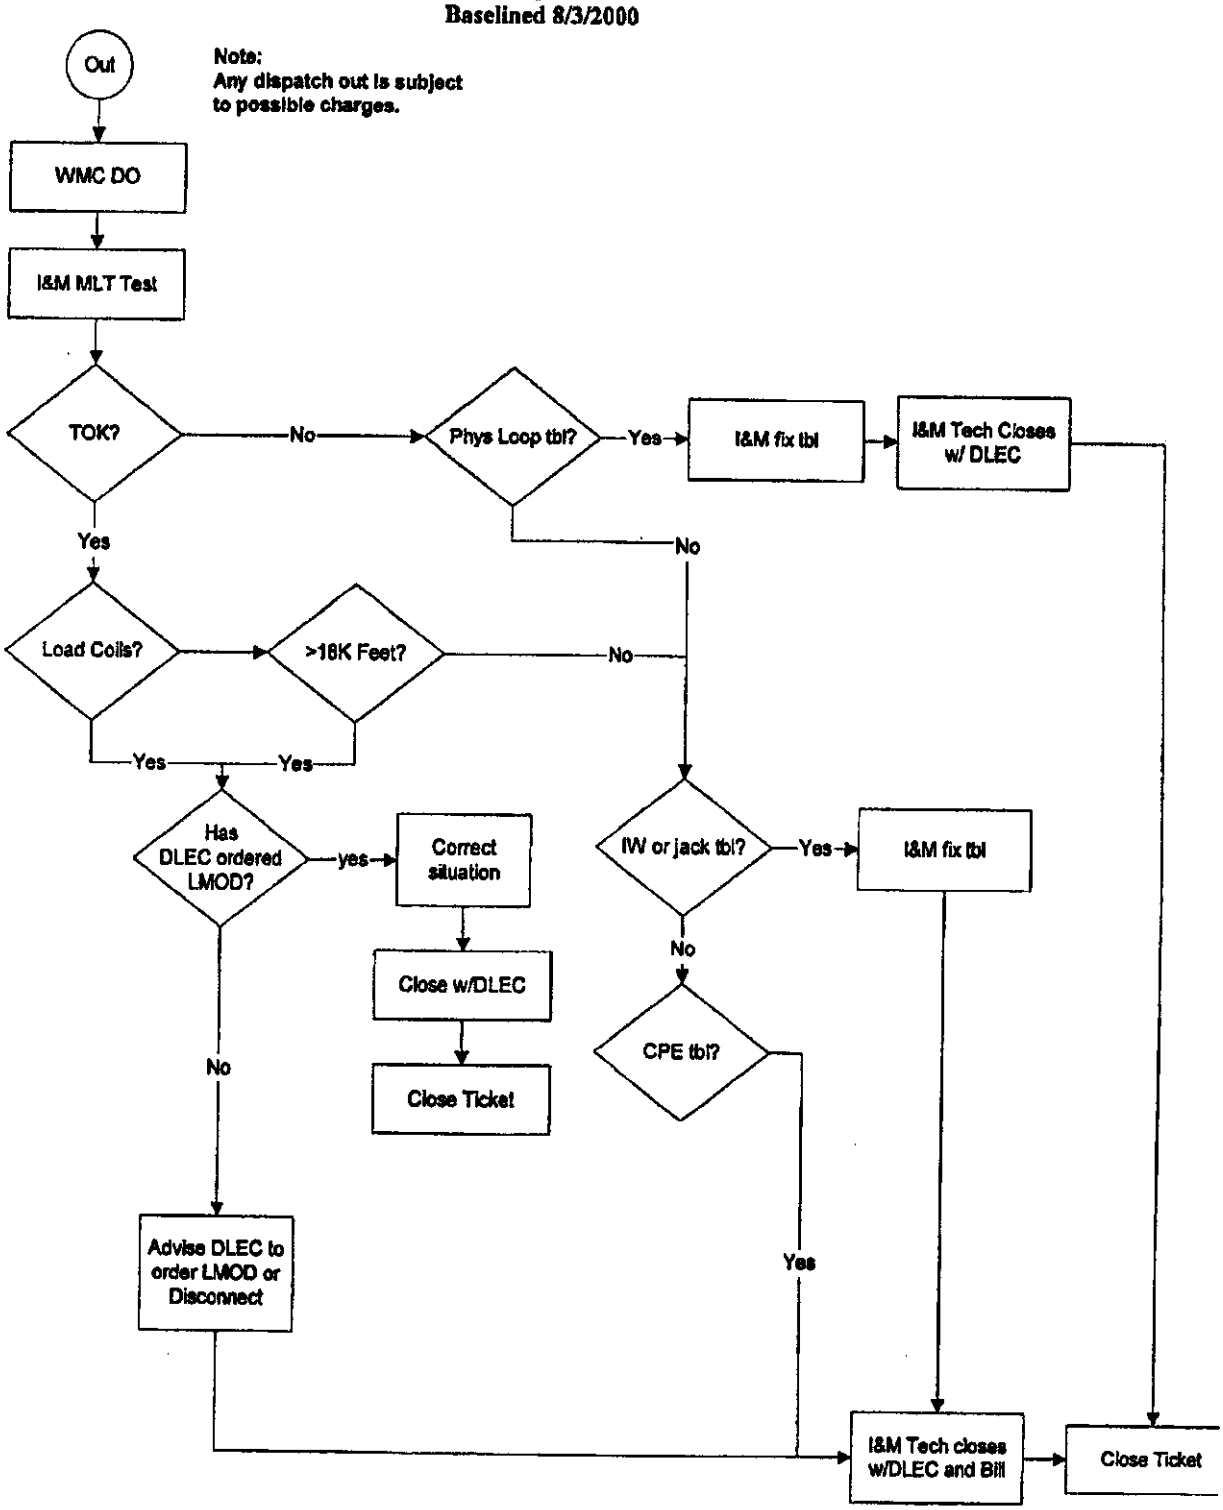
Trouble Receipt Process Flow
Baselined 8/3/2000



Note:
The order in which the splitter corrective maintenance steps are depicted in this process flow is not meant to define a rigid order of progression.

Based on predetermined DLEC information regarding a specific trouble, the splitter corrective maintenance steps will be executed in the order as deemed applicable on a case by case basis.

Trouble Receipt Process Flow
Baselined 8/3/2000



Note:
At any point in the process the DLEC can open a new ticket for a Dispatch Out Vendor Meet.

Trouble Receipt Process Flow
Baselined 8/3/2000

Maintenance Flow Documentation

ASSUMPTIONS:

This is a data only trouble flow
End User started repair process by calling their ISP
ISP had first right to dispatch.
When problem was not found, ISP referred trouble to DLEC
DLEC calls UNE Center

FLOW:

DLEC calls UNEC to report trouble with circuit ID on LS circuit

UNEC determines if trouble involves voice

If trouble involves voice, UNEC refers DLEC to have the end user call RRC/BRC

If trouble is data only, UCEC creates trouble ticket in LMOS using the circuit id format, advises DLEC of ticket number and routes trouble ticket for dispatch into CO.

CO technician receives ticket and checks continuity of data jumper

If trouble is found in CO, technician fixes trouble and closes with DLEC

If trouble is not found in CO, technician advises DLEC of NTF

DLEC will direct CO on any further action

If DLEC does not request further trouble isolation, CO closes ticket

If DLEC requests further trouble isolation, CO will perform requested activities
DLEC requests splitter card to be reseated
CO performs function
CO contacts DLEC for additional action

DLEC requests splitter card to be replaced
CO performs function
CO contacts DLEC for additional action

DLEC requests CO to rewire to another splitter
DLEC submits records only order to update databases with new splitter assignments
CO rewires per DLEC verbal request
CO advises DLEC function is completed
CO contacts DLEC for additional action

DLEC requests a dispatch out, the CO routes trouble ticket for dispatch
Note: Any dispatch out is subject to possible charges.

Trouble ticket is routed to outside technician through MAPPER

Upon receipt of ticket, TECHNET initiates MLT test on line

If MLT tests passes (TOK) I&M technician advises DLEC that no trouble was found (possible bill to DLEC)

The I&M technician checks for load coils and loop length.

If either condition exists, the I&M technician verifies that DLEC has ordered a LMOD.

If the DLEC has ordered a LMOD, the I&M technician corrects situation and closes ticket with the DLEC.

If the DLEC has not ordered a LMOD, the I&M technician advises DLEC to order a LMOD, and closes the ticket with the DLEC and bills DLEC

If MLT test fails and trouble is determined to be in loop, I&M technician repairs trouble "business as usual" and closes ticket to DLEC

If MLT test fails and trouble is determined to be in inside wire I&M technician repairs trouble and bills DLEC for repairs

Initial Trouble Reported as VOICE

CO technician will check for continuity and voice and will close ticket as NTF (ie technician cannot determine if problem is a bad splitter)

Outside technician also determines NTF.

EXHIBIT TGW – 9

Collaborative Charter CO Based DLEC Collocated Splitter Line Sharing

Collaborative Charter

Project Name	CO Based DLEC Collocated Splitter Line Sharing			Project Number:	Line Sharing
Project Manager	Brenda Slonneger	Priority Level (1-10) (1=lowest, 10=highest)	8	Date:	7/26/2000

Owner(s)	BellSouth - Tommy Williams Covad - Lans Chase Duro - Richard McDaniel New Edge - Mary Nelson Rhythms - Dick Schell Sprint - Bryant Smith

Mission

The mission of the collaborate is to support the development of, with the mutual agreement to, the processes and procedures required to jointly implement line sharing utilizing DLEC owned splitters collocated in the central office, as an option, in order to meet the requirements of the FCC line sharing order.

Scope

The collaborative will support the line sharing initiative for DLEC owned splitters located in the central office collocation space by mutually validating the business processes and inter-company interface procedures required to implement this phase of line sharing within the BellSouth area.

Objectives

1. Identify line sharing system requirements for DLEC owned splitter option
2. Identify, test, approve, and secure a line sharing splitter product for DLEC owned splitter option
3. Implement a line sharing pilot test for DLEC owned splitter option
4. Validate ordering, provisioning, maintenance, and billing processes for DLEC owned splitter option

Assumptions

1. There will be active participation by all members of the collaborative
2. All the members of the collaborative will be objective and work in good faith
3. All the members of the collaborative will maintain a mutual respect for their counterparts
4. Any member of the CLEC/DLEC community may monitor this collaborative
5. This is a working team and does not include legal representation from the participating companies.

Constraints

1. Existing collocation agreements
2. Requirement to amend existing interconnection agreements
3. Pilot agreements will be required in the event the collaborative agrees to implement a pilot
4. Resource availability for participation in the collaborative meetings
5. Product target implementation date of 9/6/2000

Time/Major Milestones

1. Collaborative start date: 6/28/2000
2. Project schedule complete 7/26/2000
3. Product target implementation date: 9/6/2000

Cost/Budget/Financial Assumptions The collaborative is a non-funded process. Each participating member will be responsible for their own respective expenses.
Quality/Specification Deploy this phase of line sharing by 9/6/2000.
Major Risks Product target implementation date of 9/6/2000

TGW – 10

Collaborative Charter BST – RT – LS Line Sharing Collaborative

Collaborative Charter

Project Name	BST-RT-LS Line Sharing Collaborative			Project Number:	Line Share
Project Manager	Brenda Slonneger	Priority Level (1-10) (1=lowest, 10=highest)	8	Date:	7/19/000

Stakeholder(s)	BellSouth - Tommy Williams NorthPoint - Chuck Polizzotti Rhythms - Jim Cuckler Duro - Richard McDaniel Sprint - Chris Monticue

Mission

The mission of the collaborative is to support the development of, with the mutual agreement to, the processes and procedures required to jointly implement line sharing utilizing splitters located in the remote terminal as one of the options to meet the requirements of the FCC line sharing order.

Scope

The collaborative will support the implementation of the line sharing initiative within the existing collocation guidelines in the remote terminal by mutually establishing the business processes and inter-company interface procedures required to implement and support this phase of line sharing within the BellSouth area.

Objectives

1. Identify line sharing system requirements for the RT located splitter option
2. Identify, test, approve, and secure a line sharing splitter product for the RT located splitter option
3. Implement a line sharing pilot test for the RT located splitter option
4. Establish ordering, provisioning, maintenance, and billing processes for the RT located splitter option

Assumptions

1. There will be regular participation by all stakeholder members of the collaborative
2. All the members of the collaborative will be objective and work in good faith
3. All the members of the collaborative will maintain a mutual respect for their counterparts
4. Any member of the CLEC/DLEC community may monitor this collaborative
5. This is a working team and does not include legal representation from the participating companies.
6. Wavers of existing collocation rules will be obtained in order to implement a pilot test and achieve the target implementation date

Constraints

1. RT collocation agreements
2. Requirement to amend existing interconnection agreements
3. Pilot agreements will be required in the event the collaborative agrees to implement a pilot
4. Resource availability for participation in the collaborative meetings
5. Product target implementation date of 3/31/2001
6. Achieving desired target date will require wavers of existing collocation rules to implement a pilot test

Time/Major Milestones

1. Collaborative start date: 7/19/2000
2. Project schedule development complete 10/16/2000
3. Product target implementation date: 3/31/2001

Cost/Budget/Financial Assumptions
The collaborative is a non-funded process. Each participating member will be responsible for their own respective expenses.

Quality/Specification
Deploy this phase of line sharing by 3/31/2001.

Major Risks
- Product target implementation date of 3/31/2001
- Obtaining wavers of existing collocation rules to implement a pilot test prior to implementation date

EXHIBIT TGW – 11

Amendment to the Interconnection Agreement Between Dieca Communications, Inc. (d/b/a Covad Communications) and BellSouth

AMENDMENT TO THE INTERCONNECTION AGREEMENT BETWEEN DIECA COMMUNICATIONS, INC. D/B/A COVAD COMMUNICATIONS COMPANY and BELLSOUTH TELECOMMUNICATIONS, INC. DATED December 1, 1998

THIS AMENDMENT ("Amendment") is made by and between BellSouth Telecommunications, Inc. ("BellSouth") and DIECA COMMUNICATIONS, INC. d/b/a Covad Communications Company ("Covad"), as of the 25th day of April 2000. (BellSouth and Covad are collectively referred to as the "Parties".)

WHEREAS, the Parties executed an Interconnection Agreement on December 1, 1998. (the "Agreement"); and

WHEREAS, the Parties desire to amend the Agreement to set forth the terms and conditions relating to BellSouth providing to Covad unbundled access to the high frequency spectrum of BellSouth's local loops as a network element.

NOW, THEREFORE, for and in consideration of the promises contained herein, the parties to this Amendment, intending to be legally bound, hereby agree to amend Attachment 2 of the Agreement by adding the following:

GENERAL

1.0 BellSouth shall provide Covad access to the high frequency portion of the local loop as an unbundled network element ("High Frequency Spectrum Network Element" or "HUNE") at the rates set forth in Section 4 herein. BellSouth shall provide Covad with the HUNE irrespective of whether BellSouth chooses to offer xDSL services on the loop.

1.1 The HUNE is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the HUNE is intended to allow Covad's the ability to provide Digital Subscriber Line ("xDSL") data services. The HUNE shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 C.F.R. Section 51.230, including, but not limited to, ADSL, RADSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules. BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. Covad shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other applicable industry standards. Covad shall provision xDSL service

on the HUNE in accordance with the applicable Technical Specifications and Standards.

1.2 The following loop requirements are necessary for Covad to be able to access the HUNE: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. The process of removing such devices is called "conditioning." BellSouth shall charge and Covad shall pay as interim rates, the same rates that BellSouth charges for conditioning stand-alone loops (e.g.,unbundled copper loops, ADSL loops, and HDSL loops) until permanent pricing for loop conditioning is established either by mutual agreement or by a state public utility commission. The interim costs for conditioning are subject to true up as provided in paragraph 4.0. BellSouth will condition loops to enable Covad to provide xDSL-based services on the same loops the incumbent is providing analog voice service, regardless of loop length. BellSouth is not required to condition a loop for shared-line xDSL if conditioning of that loop significantly degrades BellSouth's voice service. BellSouth shall charge, and Covad shall pay, for such conditioning the same rates BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops.) If Covad requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop, Covad shall pay for the loop to be restored to its original state.

1.3 Covad's meet point is the point of termination for Covad's or the toll main distributing frame in the central office ("Meet Point"). BellSouth will use jumpers to connect the Covad's connecting block to the splitter. The splitter will route the HUNE on the circuit to the Covad's xDSL equipment in the Covad's collocation space.

1.4 Covad shall have access to the Splitter for test purposes, irrespective of where the Splitter is placed in the BellSouth premises.

PROVISIONING OF HUNE AND SPLITTER SPACE

2.0 BellSouth will provide Covad with access to the HUNE as follows:

2.1 BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. Therefore, BellSouth, Covad and other CLECs have developed a process for

allocating the initial orders of splitters. BellSouth will install all splitters ordered on or before April 26, 2000, in accordance with the schedule set forth in Attachment 1 of this Agreement. Once all splitters ordered by all CLECs on or before April 26, 2000, have been installed, BellSouth will install splitters within forty-two (42) calendar days of Covad's submission of such order to the BellSouth Complex Resale Support Group; provided, however, that in the event BellSouth did not have reasonable notice that a particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice. BellSouth and Covad will reevaluate this forty-two (42) day interval on or before August 1, 2000.

2.2 After June 6, 2000, once a splitter is installed on behalf of Covad in a central office, Covad shall be entitled to order the HUNE on lines served out of that central office.

2.3 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide Covad access to data ports on the splitter. In the event that BellSouth elects to use a brand of splitter other than Siecor, the Parties shall renegotiate the recurring and non-recurring rates associated with the splitter. In the event the Parties cannot agree upon such rates, the then current rates (final or interim) for the Siecor splitter shall be the interim rates for the new splitter. BellSouth will provide Covad with a carrier notification letter at least 30 days before of such change and shall work collaboratively with Covad to select a mutually agreeable brand of splitter for use by BellSouth. Covad shall thereafter purchase ports on the splitter as set forth more fully below.

2.4 BellSouth will install the splitter in (i) a common area close to the Covad collocation area, if possible; or (ii) in a BellSouth relay rack as close to the Covad DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified Covad DS0 at such time that a Covad end user's service is established.

2.5 The HUNE shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service. In the event the end-user terminates its BellSouth provided voice service for any reason, and Covad desires to continue providing xDSL service on such loop, Covad shall be required to purchase the full stand-alone loop unbundled network element. In the event

BellSouth disconnects the end-user's voice service pursuant to its tariffs or applicable law, and Covad desires to continue providing xDSL service on such loop, Covad shall be required to purchase the full stand-alone loop unbundled network element.

2.6 Covad and BellSouth shall continue to work together collaboratively to develop systems and processes for provisioning the HUNE in various real life scenarios. BellSouth and Covad agree that Covad is entitled to purchase the HUNE on a loop that is provisioned over fiber fed digital loop carrier. BellSouth will provide Covad with access to feeder subloops at UNE prices. BellSouth and Covad will work together to establish methods and procedures for providing Covad access to the HUNE over fiber fed digital loop carriers by August 1, 2000.

2.7 Only one competitive local exchange carrier shall be permitted access to the HUNE of any particular loop.

2.8 To order HUNE on a particular loop, Covad must have a DSLAM collocated in the central office that serves the end-user of such loop. BellSouth will work collaboratively with Covad to create a concurrent process that allows Covad to order splitters in central offices where Covad is in the process of obtaining collocation space and enables BellSouth to install such splitters before the end of Covad's collocation provisioning interval. While that process is being developed, Covad may order splitters in a central office once it has installed its Digital Subscriber Line Access Multiplexer ("DSLAM") in that central office. BellSouth will install these splitters within the interval provided in paragraph 2.1.

2.9 BellSouth will devise a splitter order form that allows Covad to order splitter ports in increments of 24 or 96 ports.

2.10 BellSouth will provide Covad the Local Service Request ("LSR") format to be used when ordering the HUNE.

2.11 BellSouth will initially provide access to the HUNE within the following intervals: Beginning on June 6, 2000, BellSouth will return a Firm Order Confirmation ("FOC") in no more than two (2) business days. BellSouth will provide Covad with access to the HUNE as follows:

2.11.1 For 1-5 lines at the same address within three (3) business days from the receipt of Covad's LSR; 6-10 lines at same address within 5 business days; and more than 10 lines at the same address is to be

negotiated. BellSouth and Covad will re-evaluate these intervals on or before August 1, 2000.

2.12 Covad will initially use BellSouth's existing pre-qualification functionality and order processes to pre-qualify line and order the HUNE. Covad and BellSouth will continue to work together to modify these functionalities and processes to better support provisioning the HUNE. BellSouth will use its best efforts to make available to Covad, by the fourth quarter of 2000, an electronic pre-ordering, ordering, provisioning, repair and maintenance and billing functionalities for the HUNE.

MAINTENANCE AND REPAIR

3.0 Covad shall have access, for test, repair, and maintenance purposes, to any loop as to which it has access to the HUNE. Covad may access the loop at the point where the combined voice and data signal exits the central office splitter.

3.1 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer premise and the Meet Point of demarcation in the central office. Covad will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

3.2 If the problem encountered appears to impact primarily the xDSL service, the end user should call Covad. If the problem impacts primarily the voice service, the end user should call BellSouth. If both services are impaired, the recipient of the call should coordinate with the other service provider(s).

3.3 BellSouth and Covad will work together to diagnose and resolve any troubles reported by the end-user and to develop a process for repair of lines as to which Covad has access to the HUNE. The Parties will continue to work together to address customer initiated repair requests and other customer impacting maintenance issues to better support unbundling of HUNE.

3.3.1 The Parties will be responsible for testing and isolating troubles on its respective portion of the loop. Once a Party ("Reporting Party") has isolated a trouble to the other Party's ("Repairing Party") portion of the loop, the Reporting Party will notify the Repairing Party that the trouble is on the Repairing Party's portion of the loop. The

Repairing Party will take the actions necessary to repair the loop if it determines a trouble exists in its portion of the loop.

3.3.2 If a trouble is reported on either Party's portion of the loop and no trouble actually exists, the Repairing Party may charge the Reporting Party for any dispatching and testing (both inside and outside the central office) required by the Repairing Party in order to confirm the loop's working status.

3.4 In the event Covad's deployment of xDSL on the HUNE significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify Covad and allow twenty-four (24) hours to cure the trouble. If Covad fails to resolve the trouble, BellSouth may discontinue Covad's access to the HUNE on such loop.

PRICING

4.0 BellSouth and Covad agree to the following negotiated, interim rates for the HUNE. All interim prices will be subject to true up based on either mutually agreed to permanent pricing or permanent pricing established in a line sharing cost proceeding conducted by state public utility commissions. In the event interim prices are established by state public utility commissions before permanent prices are established, either through arbitration or some other mechanism, the interim prices established in this Agreement will be changed to reflect the interim prices mandated by the state public utility commissions; however, no true up will be performed until mutually agreed to permanent prices are established or permanent prices are established by state public utility commissions. Once a docket in a particular state in BellSouth's region has been opened to determine permanent prices for the HUNE, BellSouth will provide cost studies for that state for the HUNE upon Covad's written request, within 30 days or such other date as may be ordered by a state commission. All cost related information shall be provided pursuant to a proprietary, non-disclosure agreement.

4.1 BellSouth and Covad enter into this Agreement without waiving current or future relevant legal rights and without prejudicing any position BellSouth or Covad may take on relevant issues before state or federal regulatory or legislative bodies or courts of competent jurisdiction. This clause specifically contemplates but is not limited to: (a) the positions BellSouth or Covad may take in any cost docket related to the terms and conditions associated with access to the HUNE; and (b) the positions that BellSouth or Covad might take before the FCC or any state public utility commission related to the terms and conditions under which BellSouth must

provide Covad with access to the HUNE. The interim rates set forth herein were adopted as a result of a compromise between the parties and do not reflect either party's position as to final rates for access to the HUNE.

		RATES BY STATE								
DESCRIPTION	USOC	AL	FL	GA	KY	LA	MS	NC	SC	TN
SYSTEM, SPLITTER – 96 LINE CAPACITY	ULSDA									
Monthly recurring		$100	$100	$100	$100	$100	$100	$100	$100	$100

Non Recurring – Add'l.		$15	$15	$15	$15	$15	$15	$15	$15	$15

4.2 Any element necessary for interconnection that is not identified above is priced as currently set forth in the Agreement.

5.0 BellSouth shall make available to Covad any agreement for the HUNE entered into between BellSouth and any other CLEC. If Covad elects to adopt such agreement, Covad shall adopt all rates, terms and conditions relating to the HUNE in such agreement.

6.0 In the event of a conflict between the terms of this Amendment and the terms of the Interconnection Agreement, the terms of this Amendment shall prevail.

7.0 All of the other provisions of the Agreement shall remain in full force and effect.

8.0 Either or both of the Parties is authorized to submit this Amendment to the respective state regulatory authorities for approval subject to Section 252(e) of the Federal Telecommunications Act of 1996.

IN WITNESS WHEREOF, the Parties hereto have caused this Amendment to be executed by their respective duly authorized representatives on the date indicated below.

ATTACHMENT 1

CLEC/BellSouth Line Sharing Jointly Developed

Rules for Splitter Allocation

BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. As a result of the current shortage of splitters, CLECs and BellSouth developed the following rules for splitter allocation. These rules shall apply until such time as those CLECs participating in the creation of the rules agree that the regular splitter installation rules should apply.

1. There shall be a single CLEC priority list of central offices that shall consist of the Georgia CLEC priority list combined with the priority list from the other states in BellSouth's nine-state region (the "Priority List"). This priority list shall be used for filling orders; it shall determine the order in which splitters will be deployed in those central offices for which splitters have been ordered. Georgia central offices (CO) will have priority over other state's COs. The Priority List is attached hereto.

2. During the allocation period, a CLEC may order 24 ports or 96 ports. In either event, BellSouth shall install a 96 port splitter in accordance with the Priority List. However, during the allocation period, in the event a CLEC orders 96 ports, BellSouth will only allocate 24 ports of the 96 port splitter to the first CLEC that orders a splitter for that central office, thus creating a backlog of 72 ports that have already been ordered by that CLEC ("Backlog"). In the event of a Backlog, BellSouth will charge CLEC a monthly recurring charge appropriate for the number of ports allocated to CLEC. In addition, if CLEC requested a 96 port splitter, it shall pay a non-recurring charge for a 96 port splitter, but shall pay no non-recurring charges when additional ports are added to alleviate the Backlog.

3. BellSouth will allocate, on a first-come/first-served basis, the remaining 72 ports of the splitter (in blocks of 24 ports) to the other CLECs that place an order for a splitter at that same central office.

Orders Submitted by April 26, 2000 with Due Date of June 6, 2000 or Sooner

4. A firm order for a splitter issued to the BellSouth Complex Resale Support Group (CRSG) on or by April 26, 2000, with due date of June 6, 2000, or sooner, will be given priority over orders received after April 26, 2000.

Orders for the first 200 splitters received prior to April 26, 2000, will be installed on or before June 5, 2000, and shall be installed in accordance with the priority list. The first 25 splitter orders shall be installed no later than May 22, 2000.

5. In the event CLECs submit to BellSouth more than 200 splitter orders on or before April 26, 2000, BellSouth shall install fifty (50) splitters a week each week after June 5, 2000.

6. In the event there are more than four (4) orders submitted on or before April 26, 2000, for a splitter at a particular central office, a second splitter will be installed at that central office in accordance with the Priority List.

7. Backlogs associated with orders submitted on or before April 26, 2000 will be fulfilled in their entirety before any orders received after April 26, 2000 are worked. In fulfilling a Backlog, the CLEC's additional ports may not be on the same shelf as the initial 24 ports.

Orders Received after April 26, 2000

8. Irrespective of the Priority List, no orders received after April 26, 2000, will be worked until after all orders received on or before April 26, 2000 have been completed.

9. Once all orders received on or before April 26, 2000, have been worked in their entirety, orders received after April 26, 2000, will have a minimum interval of forty-two (42) calendar days from date of receipt.

Orders Submitted with Due Dates After June 6, 2000

10. Any order submitted on or before April 26, 2000, with a due date of after June 6, 2000, will be completed according to the due date provided there is available inventory and all orders with a due date of June 6, 2000 or earlier have been completed.

EXHIBIT TGW – 12

Amendment to the Interconnection Agreement Between New Edge Network, Inc. and BellSouth

AMENDMENT TO THE INTERCONNECTION AGREEMENT BETWEEN NEW EDGE NETWORK, INC. D/B/A NEW EDGE NETWORKS and BELLSOUTH TELECOMMUNICATIONS, INC. DATED SEPTEMBER 27, 1999

THIS AMENDMENT ("Amendment") is made by and between BellSouth Telecommunications, Inc. ("BellSouth") and New Edge Network, Inc. d/b/a New Edge Networks ("New Edge"), as of the 27th day of April 2000. (BellSouth and New Edge are collectively referred to as the "Parties".)

WHEREAS, the Parties executed an Interconnection Agreement on September 27, 1999 (the "Agreement"); and

WHEREAS, the Parties desire to amend the Agreement to set forth the terms and conditions relating to BellSouth providing to New Edge unbundled access to the high frequency spectrum of BellSouth's local loops as a network element.

NOW, THEREFORE, for and in consideration of the promises contained herein, the parties to this Amendment, intending to be legally bound, hereby agree to amend Attachment 2 of the Agreement by adding the following:

GENERAL

1.0 BellSouth shall provide New Edge access to the high frequency portion of the local loop as an unbundled network element ("High Frequency Spectrum Network Element" or "HUNE") at the rates set forth in Section 4 herein. BellSouth shall provide New Edge with the HUNE irrespective of whether BellSouth chooses to offer xDSL services on the loop.

1.1 The HUNE is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the HUNE is intended to allow New Edge the ability to provide Digital Subscriber Line ("xDSL") data services. The HUNE shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 C.F.R. Section 51.230, including, but not limited to, ADSL, RADSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules. BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. New Edge shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other applicable industry standards. New Edge shall provision xDSL service on the HUNE in accordance with the applicable Technical Specifications and Standards.

1.2 The following loop requirements are necessary for New Edge to be able to access the HUNE: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. The process of removing such devices is called "conditioning." BellSouth shall charge and New Edge shall pay as interim rates, the same rates that BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops) until permanent pricing for loop conditioning is established either by mutual agreement or by a state public utility commission. The interim costs for conditioning are subject to true up as provided in paragraph 4.0. BellSouth will condition loops to enable New Edge to provide xDSL-based services on the same loops the incumbent is providing analog voice service, regardless of loop length. BellSouth is not required to condition a loop for shared-line xDSL if conditioning of that loop significantly degrades BellSouth's voice service. BellSouth shall charge, and New Edge shall pay, for such conditioning the same rates BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops.) If New Edge requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop, New Edge shall pay for the loop to be restored to its original state.

1.3 New Edge's meet point is the point of termination for New Edge or the toll main distributing frame in the central office ("Meet Point"). BellSouth will use jumpers to connect the New Edge's connecting block to the splitter. The splitter will route the HUNE on the circuit to the New Edge's xDSL equipment in New Edge's collocation space.

1.4 New Edge shall have access to the Splitter for test purposes, irrespective of where the Splitter is placed in the BellSouth premises.

PROVISIONING OF HUNE AND SPLITTER SPACE

2.0 BellSouth will provide New Edge with access to the HUNE as follows:

2.1 BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. Therefore, BellSouth, New Edge and other CLECs have developed a process

for allocating the initial orders of splitters. BellSouth will install all splitters ordered on or before 3PM CST, April 28, 2000, in accordance with the schedule set forth in Attachment 1 of this Agreement. Once all splitters ordered by all CLECs on or before April 28, 2000, have been installed, BellSouth will install splitters within forty-two (42) calendar days of New Edge's submission of such order to the BellSouth Complex Resale Support Group; provided, however, that in the event BellSouth did not have reasonable notice that a particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice. BellSouth and New Edge will reevaluate this forty-two-(42) day interval on or before August 1, 2000.

2.2 After June 6, 2000, once a splitter is installed on behalf of New Edge in a central office, New Edge shall be entitled to order the HUNE on lines served out of that central office.

2.3 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide New Edge access to data ports on the splitter. In the event that BellSouth elects to use a brand of splitter other than Siecor, the Parties shall renegotiate the recurring and non-recurring rates associated with the splitter. In the event the Parties cannot agree upon such rates, the then current rates (final or interim) for the Siecor splitter shall be the interim rates for the new splitter. BellSouth will provide New Edge with a carrier notification letter at least 30 days before of such change and shall work collaboratively with New Edge to select a mutually agreeable brand of splitter for use by BellSouth. New Edge shall thereafter purchase ports on the splitter as set forth more fully below.

2.4 BellSouth will install the splitter in (i) a common area close to the New Edge collocation area, if possible; or (ii) in a BellSouth relay rack as close to the New Edge DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified New Edge DS0 at such time that a New Edge end user's service is established.

2.5 The HUNE shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service. In the event the end-user terminates its BellSouth provided voice service for any reason, and New Edge desires to continue providing xDSL service on such loop, New Edge shall be required to purchase the full stand-alone loop unbundled network element.

In the event BellSouth disconnects the end-user's voice service pursuant to its tariffs or applicable law, and New Edge desires to continue providing xDSL service on such loop, New Edge shall be required to purchase the full stand-alone loop unbundled network element.

2.6 New Edge and BellSouth shall continue to work together collaboratively to develop systems and processes for provisioning the HUNE in various real life scenarios. BellSouth and New Edge agree that New Edge is entitled to purchase the HUNE on a loop that is provisioned over fiber fed digital loop carrier. BellSouth will provide New Edge with access to feeder subloops at UNE prices. BellSouth and New Edge will work together to establish methods and procedures for providing New Edge access to the HUNE over fiber fed digital loop carriers by August 1, 2000.

2.7 Only one competitive local exchange carrier shall be permitted access to the HUNE of any particular loop.

2.8 To order HUNE on a particular loop, New Edge must have a DSLAM collocated in the central office that serves the end-user of such loop. BellSouth will work collaboratively with New Edge to create a concurrent process that allows Covad to order splitters in central offices where Covad is in the process of obtaining collocation space and enables BellSouth to install such splitters before the end of Covad's collocation provisioning interval. While that process is being developed, New Edge may order splitters in a central office once it has installed its Digital Subscriber Line Access Multiplexer ("DSLAM") in that central office. BellSouth will install these splitters within the interval provided in paragraph 2.1.

2.9 BellSouth will devise a splitter order form that allows New Edge to order splitter ports in increments of 24 or 96 ports.

2.10 BellSouth will provide New Edge the Local Service Request ("LSR") format to be used when ordering the HUNE.

2.11 BellSouth will initially provide access to the HUNE within the following intervals: Beginning on June 6, 2000, BellSouth will return a Firm Order Confirmation ("FOC") in no more than two (2) business days. BellSouth will provide New Edge with access to the HUNE as follows:

2.11.1 For 1-5 lines at the same address within three (3) business days from the receipt of New Edge's LSR;

6-10 lines at same address within 5 business days; and more than 10 lines at the same address is to be negotiated. BellSouth and New Edge will re-evaluate these intervals on or before August 1, 2000.

2.12 New Edge will initially use BellSouth's existing pre-qualification functionality and order processes to pre-qualify line and order the HUNE. New Edge and BellSouth will continue to work together to modify these functionalities and processes to better support provisioning the HUNE. BellSouth will use its best efforts to make available to New Edge, by the fourth quarter of 2000, an electronic pre-ordering, ordering, provisioning, repair and maintenance and billing functionalities for the HUNE.

MAINTENANCE AND REPAIR

3.0 New Edge shall have access, for test, repair, and maintenance purposes, to any loop as to which it has access to the HUNE. New Edge may access the loop at the point where the combined voice and data signal exits the central office splitter.

3.1 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer premise and the Meet Point of demarcation in the central office. New Edge will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

3.2 If the problem encountered appears to impact primarily the xDSL service, the end user should call New Edge. If the problem impacts primarily the voice service, the end user should call BellSouth. If both services are impaired, the recipient of the call should coordinate with the other service provider(s).

3.3 BellSouth and New Edge will work together to diagnose and resolve any troubles reported by the end-user and to develop a process for repair of lines as to which New Edge has access to the HUNE. The Parties will continue to work together to address customer initiated repair requests and other customer impacting maintenance issues to better support unbundling of HUNE.

3.3.1 The Parties will be responsible for testing and isolating troubles on its respective portion of the loop. Once a Party ("Reporting Party") has isolated a trouble to the other

Party's ("Repairing Party") portion of the loop, the Reporting Party will notify the Repairing Party that the trouble is on the Repairing Party's portion of the loop. The Repairing Party will take the actions necessary to repair the loop if it determines a trouble exists in its portion of the loop.

3.3.2 If a trouble is reported on either Party's portion of the loop and no trouble actually exists, the Repairing Party may charge the Reporting Party for any dispatching and testing (both inside and outside the central office) required by the Repairing Party in order to confirm the loop's working status.

3.4 In the event New Edge's deployment of xDSL on the HUNE significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify New Edge and allow twenty-four (24) hours to cure the trouble. If New Edge fails to resolve the trouble, BellSouth may discontinue New Edge's access to the HUNE on such loop.

PRICING

4.0 BellSouth and New Edge agree to the following negotiated, interim rates for the HUNE. All interim prices will be subject to true up based on either mutually agreed to permanent pricing or permanent pricing established in a line sharing cost proceeding conducted by state public utility commissions. In the event interim prices are established by state public utility commissions before permanent prices are established, either through arbitration or some other mechanism, the interim prices established in this Agreement will be changed to reflect the interim prices mandated by the state public utility commissions; however, no true up will be performed until mutually agreed to permanent prices are established or permanent prices are established by state public utility commissions. Once a docket in a particular state in BellSouth's region has been opened to determine permanent prices for the HUNE, BellSouth will provide cost studies for that state for the HUNE upon New Edge's written request, within 30 days or such other date as may be ordered by a state commission. All cost related information shall be provided pursuant to a proprietary, non-disclosure agreement.

4.1 BellSouth and New Edge enter into this Agreement without waiving current or future relevant legal rights and without prejudicing any position BellSouth or New Edge may take on relevant issues before state or federal regulatory or legislative bodies or courts of competent jurisdiction. This clause specifically contemplates but is not limited to: (a) the positions BellSouth or New Edge may take in any cost docket related to the terms and

conditions associated with access to the HUNE; and (b) the positions that BellSouth or New Edge might take before the FCC or any state public utility commission related to the terms and conditions under which BellSouth must provide New Edge with access to the HUNE. The interim rates set forth herein were adopted as a result of a compromise between the parties and do not reflect either party's position as to final rates for access to the HUNE.

		RATES BY STATE								
DESCRIPTION	USOC	AL	FL	GA	KY	LA	MS	NC	SC	TN
SYSTEM, SPLITTER – 96 LINE CAPACITY	ULSDA

4.2 Any element necessary for interconnection that is not identified above is priced as currently set forth in the Agreement.

5.0 BellSouth shall make available to New Edge any agreement for the HUNE entered into between BellSouth and any other CLEC. If New Edge elects to adopt such agreement, New Edge shall adopt all rates, terms and conditions relating to the HUNE in such agreement.

6.0 In the event of a conflict between the terms of this Amendment and the terms of the Interconnection Agreement, the terms of this Amendment shall prevail.

7.0 All of the other provisions of the Agreement shall remain in full force and effect.

8.0 Either or both of the Parties is authorized to submit this Amendment to the respective state regulatory authorities for approval subject to Section 252(e) of the Federal Telecommunications Act of 1996.

IN WITNESS WHEREOF, the Parties hereto have caused this Amendment to be executed by their respective duly authorized representatives on the date indicated below.

ATTACHMENT 1

CLEC/BellSouth Line Sharing Jointly Developed

Rules for Splitter Allocation

BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. As a result of the current shortage of splitters, CLECs and BellSouth developed the following rules for splitter allocation. These rules shall apply until such time as those CLECs participating in the creation of the rules agree that the regular splitter installation rules should apply.

1. There shall be a single CLEC priority list of central offices that shall consist of the Georgia CLEC priority list combined with the priority list from the other states in BellSouth's nine-state region (the "Priority List"). This priority list shall be used for filling orders; it shall determine the order in which splitters will be deployed in those central offices for which splitters have been ordered. Georgia central offices (CO) will have priority over other state's COs.

2. During the allocation period, a CLEC may order 24 ports or 96 ports. In either event, BellSouth shall install a 96 port splitter in accordance with the Priority List. However, during the allocation period, in the event a CLEC orders 96 ports, BellSouth will only allocate 24 ports of the 96 port splitter to the first CLEC that orders a splitter for that central office, thus creating a backlog of 72 ports that have already been ordered by that CLEC ("Backlog"). In the event of a Backlog, BellSouth will charge CLEC a monthly recurring charge appropriate for the number of ports allocated to CLEC. In addition, if CLEC requested a 96 port splitter, it shall pay a non-recurring charge for a 96 port splitter, but shall pay no non-recurring charges when additional ports are added to alleviate the Backlog.

3. BellSouth will allocate, on a first-come/first-served basis, the remaining 72 ports of the splitter (in blocks of 24 ports) to the other CLECs that place an order for a splitter at that same central office.

Orders Submitted by Three (3) P.M. EST, April 28, 2000 with Due Date of June 6, 2000 or Sooner

4. A firm order for a splitter issued to the BellSouth Complex Resale Support Group (CRSG) on or by Three (3) P.M. EST, April 28, 2000, with due date

of June 6, 2000, or sooner, will be given priority over orders received after three (3) P.M. EST, April 28, 2000. Orders for the first 200 splitters received prior to April 28, 2000, will be installed on or before June 5, 2000, and shall be installed in accordance with the priority list. The first 25 splitter orders shall be installed no later than May 22, 2000.

5. In the event CLECs submit to BellSouth more than 200 splitter orders on or before three (3) P.M. EST, April 28, 2000, BellSouth shall install fifty (50) splitters a week each week after June 5, 2000.

6. In the event there are more than four (4) orders submitted on or April 28, 2000, for a splitter at a particular central office, a second splitter will be installed at that central office in accordance with the Priority List.

7. Backlogs associated with orders submitted on or before April 28, 2000 will be fulfilled in their entirety before any orders received after April 28, 2000 are worked. In fulfilling a Backlog, the CLEC's additional ports may not be on the same shelf as the initial 24 ports.

Orders Received after Three (3) P.M. EST, April 28, 2000

8. Irrespective of the Priority List, no orders received after three (3) P.M. EST, April 28, 2000, will be worked until after all orders received on or before three (3) P.M. EST, April 28, 2000 have been completed.

9. Once all orders received on or before April 28, 2000 have been worked in their entirety, orders received after April 28, 2000 will have a minimum interval of forty-two (42) calendar days from date of receipt.

Orders Submitted with Due Dates After June 6, 2000

10. Any order submitted on or before April 28, 2000, with a due date of after June 6, 2000, will be completed according to the due date provided there is available inventory and all orders with a due date of June 6, 2000 or earlier have been completed.

EXHIBIT TGW – 13

Amendment to the Interconnection Agreements Between BlueStar Networks, Inc. and BellSouth

AMENDMENT TO THE INTERCONNECTION AGREEMENTS BETWEEN BLUESTAR NETWORKS, INC. AND BELLSOUTH TELECOMMUNICATIONS, INC.

THIS AMENDMENT ("Amendment") is made by and between BellSouth Telecommunications, Inc. ("BellSouth") and BlueStar Networks, Inc. ("BlueStar"), as of the 7th day of June 2000. (BellSouth and BlueStar are collectively referred to as the "Parties".)

WHEREAS, the Parties executed an Interconnection Agreement on December 7, 1999 (Alabama, Louisiana, Mississippi, and South Carolina), (collectively, the "Agreement"); and

WHEREAS, the Parties desire to amend the Agreement to set forth the terms and conditions relating to BellSouth providing to BlueStar unbundled access to the high frequency spectrum of BellSouth's local loops as a network element.

NOW, THEREFORE, for and in consideration of the promises contained herein, the parties to this Amendment, intending to be legally bound, hereby agree as follows:

1.0 Attachment 2 of the Agreement shall be amended by adding the following Section 12:

12.0 HIGH FREQUENCY SPECTRUM NETWORK ELEMENT

12.1 GENERAL

BellSouth shall provide BlueStar access to the high frequency portion of the local loop as an unbundled network element ("High Frequency Spectrum") High Frequency Spectrum at the rates set forth in Section 4 herein. BellSouth shall provide BlueStar with the High Frequency Spectrum irrespective of whether BellSouth chooses to offer xDSL services on the loop.

12.1.1 The High Frequency Spectrum is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the High Frequency Spectrum is intended to allow BlueStar the ability to provide Digital Subscriber Line ("xDSL") data services. The High Frequency Spectrum shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 C.F.R. Section 51.230, including, but not limited to, ADSL, RADSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules. BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. BlueStar shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other

applicable industry standards. BlueStar shall provision xDSL service on the High Frequency Spectrum in accordance with the applicable Technical Specifications and Standards.

12.1.2 The following loop requirements are necessary for BlueStar to be able to access the High Frequency Spectrum: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. The process of removing such devices is called "conditioning." BellSouth shall charge and BlueStar shall pay as interim rates, the same rates that BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops) until permanent pricing for loop conditioning is established either by mutual agreement or by a state public utility commission. The interim costs for conditioning are subject to true up as provided in paragraph 4.0. BellSouth will condition loops to enable BlueStar to provide xDSL-based services on the same loops the incumbent is providing analog voice service, regardless of loop length. BellSouth is not required to condition a loop for shared-line xDSL if conditioning of that loop significantly degrades BellSouth's voice service. BellSouth shall charge, and BlueStar shall pay, for such conditioning the same rates BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops.) If BlueStar requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop. BlueStar shall pay for the loop to be restored to its original state.

12.1.3 BlueStar's meet point is the point of termination for BlueStar on the toll main distributing frame in the central office ("Meet Point"). BellSouth will use jumpers to connect BlueStar's connecting block to the splitter. The splitter will route the High Frequency Spectrum on the circuit to BlueStar's xDSL equipment in the BlueStar's collocation space.

12.1.4 BlueStar shall have access to the Splitter for test purposes, irrespective of where the Splitter is placed in the BellSouth premises.

12.2 **PROVISIONING OF HIGH FREQUENCY SPECTRUM AND SPLITTER SPACE**

12.2.1 BellSouth will provide BlueStar with access to the High Frequency Spectrum as follows:

12.2.2 BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. Therefore, BellSouth, BlueStar and other CLECs have developed a process for allocating the initial orders of splitters. BellSouth will install all splitters ordered on or before April 28, 2000, in accordance with the schedule set forth in Attachment 1 of this Agreement. Once all splitters ordered by all CLECs on or before April 28, 2000, have been installed, BellSouth will install splitters within forty-two (42) calendar days of BlueStar's submission of such order to the BellSouth Complex Resale Support Group (assuming no splitter with excess capacity is currently located at the requested central office); provided, however, that in the event BellSouth did not have reasonable notice that a particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice. BellSouth and BlueStar will reevaluate this forty-two (42) day interval on or before August 1, 2000. In the event that BellSouth does not have a splitter available for a particular central office and BlueStar owns a splitter, BellSouth may elect to purchase such splitter from BlueStar upon rates, terms, and conditions to be agreed to by the parties.

12.2.3 After June 6, 2000, once a splitter is installed on behalf of BlueStar in a central office, BlueStar shall be entitled to order the High Frequency Spectrum on lines served out of that central office.

12.2.4 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide BlueStar access to data ports on the splitter. In the event that BellSouth elects to use a brand of splitter other than Siecor, the Parties shall renegotiate the recurring and non-recurring rates associated with the splitter. In the event the Parties cannot agree upon such rates, the then current rates (final or interim) for the Siecor splitter shall be the interim rates for the new splitter. BellSouth will provide BlueStar with a carrier notification letter at least 30 days before such change and shall work collaboratively with BlueStar to select a mutually agreeable brand of splitter for use by BellSouth. BlueStar shall thereafter purchase ports on the splitter as set forth more fully below. Anytime after July 15, 2000, BellSouth agrees to discuss with BlueStar the rates, terms and conditions to allow BlueStar to purchase its own splitters for installation in BellSouth's central offices.

12.2.5 BellSouth will install the splitter in (i) a common area close to the BlueStar collocation area, if possible; or (ii) in a BellSouth relay rack as close to the BlueStar DS0 termination point as possible.

For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified BlueStar DS0 at such time that a BlueStar end user's service is established.

12.2.6 The High Frequency Spectrum shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service. In the event the end-user terminates its BellSouth provided voice service for any reason, and BlueStar desires to continue providing xDSL service on such loop, BlueStar shall be permitted to continue using the line by purchasing the full stand-alone loop unbundled network element. In the event BellSouth disconnects the end-user's voice service pursuant to its tariffs or applicable law, and BlueStar desires to continue providing xDSL service on such loop, BlueStar shall be permitted to continue using the line by purchasing the full stand-alone loop unbundled network element.

12.2.7 BlueStar and BellSouth shall continue to work together collaboratively to develop systems and processes for provisioning the High Frequency Spectrum in various real life scenarios. BellSouth and BlueStar agree that BlueStar is entitled to purchase the High Frequency Spectrum on a loop that is provisioned over fiber fed digital loop carrier. BellSouth will provide BlueStar with access to feeder subloops at UNE prices. BellSouth and BlueStar will work together to establish methods and procedures for providing BlueStar access to the High Frequency Spectrum over fiber fed digital loop carriers by August 1, 2000.

12.2.8 Only one competitive local exchange carrier shall be permitted access to the High Frequency Spectrum of any particular loop.

12.2.9 To order High Frequency Spectrum on a particular loop, BlueStar must have a DSLAM collocated in the central office that serves the end-user of such loop. BellSouth will work collaboratively with BlueStar to create a concurrent process that allows BlueStar to order splitters in central offices where BlueStar is in the process of obtaining collocation space and enables BellSouth to install such splitters before the end of BlueStar's collocation provisioning interval. While that process is being developed, BlueStar may order splitters in a central office once it has installed its Digital Subscriber Line Access Multiplexer ("DSLAM") in that central office. BellSouth will install these splitters within the interval provided in paragraph 11.2.2.

12.2.10 BellSouth will devise a splitter order form that allows BlueStar to order splitter ports in increments of 24 or 96 ports.

12.2.11 BellSouth will provide BlueStar the Local Service Request ("LSR") format to be used when ordering the High Frequency Spectrum by May 15, 2000.

12.2.12 BellSouth will initially provide access to the High Frequency Spectrum within the following intervals: Beginning on June 6, 2000, BellSouth will return a Firm Order Confirmation ("FOC") in no more than two (2) business days. BellSouth will provide BlueStar with access to the High Frequency Spectrum as follows:

12.2.12.1 For 1-5 lines at the same address within three (3) business days from the receipt of BlueStar's LSR; 6-10 lines at same address within 5 business days; and more than 10 lines at the same address is to be negotiated. BellSouth and BlueStar will re-evaluate these intervals on or before August 1, 2000.

12.2.13 BlueStar will initially use BellSouth's existing pre-qualification functionality and order processes to pre-qualify line and order the High Frequency Spectrum. BlueStar and BellSouth will continue to work together to modify these functionalities and processes to better support provisioning the High Frequency Spectrum. BellSouth will use its best efforts to make available to BlueStar, by the fourth quarter of 2000, an electronic pre-ordering, ordering, provisioning, repair and maintenance and billing functionalities for the High Frequency Spectrum.

12.3 MAINTENANCE AND REPAIR

12.3.1 BlueStar shall have access, for test, repair, and maintenance purposes, to any loop as to which it has access to the High Frequency Spectrum. BlueStar may access the loop at the point where the combined voice and data signal exits the central office splitter.

12.3.2 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer premise and the Meet Point of demarcation in the central office. BlueStar will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

12.3.3 If the problem encountered appears to impact primarily the xDSL service, the end user should call BlueStar. If the problem impacts primarily the voice service, the end user should call BellSouth. If both services are impaired, the recipient of the call should coordinate with the other service provider(s).

12.3.4 BellSouth and BlueStar will work together to diagnose and resolve any troubles reported by the end-user and to develop a process for repair of lines as to which BlueStar has access to the High Frequency Spectrum. The Parties will continue to work together to address customer initiated repair requests and other customer impacting maintenance issues to better support unbundling of High Frequency Spectrum.

12.3.4.1 Each Party will be responsible for testing and isolating troubles on its respective portion of the loop. Once a Party ("Reporting Party") has isolated a trouble to the other Party's ("Repairing Party") portion of the loop, the Reporting Party will notify the Repairing Party that the trouble is on the Repairing Party's portion of the loop. The Repairing Party will take the actions necessary to repair the loop if it determines a trouble exists in its portion of the loop.

12.3.4.2 If a trouble is reported on either Party's portion of the loop and no trouble actually exists, the Repairing Party may charge the Reporting Party for any dispatching and testing (both inside and outside the central office) required by the Repairing Party in order to confirm the loop's working status.

12.3.5 In the event BlueStar's deployment of xDSL on the High Frequency Spectrum significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify BlueStar and allow twenty-four (24) hours to cure the trouble. If BlueStar fails to resolve the trouble, BellSouth may discontinue BlueStar's access to the High Frequency Spectrum on such loop.

12.4 PRICING

12.4.1 BellSouth and BlueStar agree to the following negotiated, interim rates for the High Frequency Spectrum. All interim prices will be subject to true up based on either mutually agreed to permanent pricing or permanent pricing established in a line sharing cost proceeding conducted by state public utility commissions. In the event interim prices are established by state public utility commissions before permanent prices are established, either through arbitration or some other mechanism, the interim prices established in this Agreement will be changed to reflect the interim

prices mandated by the state public utility commissions; however, no true up will be performed until mutually agreed to permanent prices are established or permanent prices are established by state public utility commissions. Once a docket in a particular state in BellSouth's region has been opened to determine permanent prices for the High Frequency Spectrum, BellSouth will provide cost studies for that state for the High Frequency Spectrum upon BlueStar's written request, within 30 days or such other date as may be ordered by a state commission. All cost related information shall be provided pursuant to a proprietary, non-disclosure agreement.

12.4.2 BellSouth and BlueStar enter into this Agreement without waiving current or future relevant legal rights and without prejudicing any position BellSouth or BlueStar may take on relevant issues before state or federal regulatory or legislative bodies or courts of competent jurisdiction. This clause specifically contemplates but is not limited to: (a) the positions BellSouth or BlueStar may take in any cost docket related to the terms and conditions associated with access to the High Frequency Spectrum; and (b) the positions that BellSouth or BlueStar might take before the FCC or any state public utility commission related to the terms and conditions under which BellSouth must provide BlueStar with access to the High Frequency Spectrum. The interim rates set forth herein were adopted as a result of a compromise between the parties and do not reflect either party's position as to final rates for access to the High Frequency Spectrum.

DESCRIPTION	USOC	AL	LA	MS	SC
SYSTEM, SPLITTER – 96 LINE CAPACITY	ULSDA				
Monthly recurring		$100	$100	$100	$100
Non Recurring – 1st		$150	$150	$300	$300
Non Recurring – Add'l.		$0	$0	$0	$0
Non Recurring – Disconnect Only		$150	$150	NA	NA
SYSTEM, SPLITTER – 24 LINE CAPACITY	ULSDB				
Monthly recurring		$25	$25	$25	$25
Non Recurring		$150	$150	$300	$300
Non Recurring – Add'l		$0	$0	$0	$0
Non Recurring – Disconnect Only		$150	$150	NA	NA
LOOP CAPACITY, LINE ACTIVATION – PER OCCURRENCE	ULSDC				
Monthly recurring		$8.00	$8.00	$8.00	$8.00
Non Recurring – 1st		$40	$40	$40	$40
Non Recurring – Add'l.		$22	$22	$22	$22
SUBSEQUENT ACTIVITY – PER OCCURRENCE	ULSDS				
Non Recurring – 1st		$30	$30	$30	$30
Non Recurring – Add'l.		$15	$15	$15	$15

12.4.3 Any element necessary for interconnection that is not identified above is priced as currently set forth in the Agreement.

2.0 BellSouth shall make available to BlueStar any agreement for the High Frequency Spectrum entered into between BellSouth and any other CLEC. If BlueStar elects to adopt such agreement, BlueStar shall adopt all rates, terms and conditions relating to the High Frequency Spectrum in such agreement.

3.0 In the event of a conflict between the terms of this Amendment and the terms of the Interconnection Agreement, the terms of this Amendment shall prevail.

4.0 All of the other provisions of the Agreement shall remain in full force and effect.

5.0 Either or both of the Parties is authorized to submit this Amendment to the respective state regulatory authorities for approval subject to Section 252(e) of the Federal Telecommunications Act of 1996.

IN WITNESS WHEREOF, the Parties hereto have caused this Amendment to be executed by their respective duly authorized representatives on the date indicated below.

ATTACHMENT 1

CLEC/BellSouth Line Sharing Jointly Developed

Rules for Splitter Allocation

BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. As a result of the current shortage of splitters, CLECs and BellSouth developed the following rules for splitter allocation. These rules shall apply until such time as those CLECs participating in the creation of the rules agree that the regular splitter installation rules should apply.

1. There shall be a single CLEC priority list of central offices that shall consist of the Georgia CLEC priority list combined with the priority list from the other states in BellSouth's nine-state region (the "Priority List"). This priority list shall be used for filling orders; it shall determine the order in which splitters will be deployed in those central offices for which splitters have been ordered. .

2. During the allocation period, a CLEC may order 24 ports or 96 ports. In either event, BellSouth shall install a 96 port splitter in accordance with the Priority List. However, during the allocation period, in the event a CLEC orders 96 ports, BellSouth will only allocate 24 ports of the 96 port splitter to the first CLEC that orders a splitter for that central office, thus creating a backlog of 72 ports that have already been ordered by that CLEC ("Backlog"). In the event of a Backlog, BellSouth will charge CLEC a monthly recurring charge appropriate for the number of ports allocated to CLEC. In addition, if CLEC requested a 96 port splitter, it shall pay a non-recurring charge for a 96 port splitter, but shall pay no non-recurring charges when additional ports are added to alleviate the Backlog.

3. BellSouth will allocate, on a first-come/first-served basis, the remaining 72 ports of the splitter (in blocks of 24 ports) to the other CLECs that place an order for a splitter at that same central office.

Orders Submitted by Three (3) P.M. EST, April 28, 2000 with Due Date of June 6, 2000 or Sooner

4. A firm order for a splitter issued to the BellSouth Complex Resale Support Group (CRSG) on or by Three (3) P.M. EST, April 28, 2000, with due date of June 6, 2000, or sooner, will be given priority over orders received after

three (3) P.M. EST, April 28, 2000. Orders for the first 200 splitters received prior to April 28, 2000, will be installed on or before June 5, 2000, and shall be installed in accordance with the priority list. The first 25 splitter orders shall be installed no later than May 22, 2000.

5. In the event CLECs submit to BellSouth more than 200 splitter orders on or before three (3) P.M. EST, April 28, 2000, BellSouth shall install fifty (50) splitters a week each week after June 5, 2000.

6. In the event there are more than four (4) orders submitted on or April 28, 2000, for a splitter at a particular central office, a second splitter will be installed at that central office in accordance with the Priority List.

7. Backlogs associated with orders submitted on or before April 28, 2000 will be fulfilled in their entirety before any orders received after April 28, 2000 are worked. In fulfilling a Backlog, the CLEC's additional ports may not be on the same shelf as the initial 24 ports.

Orders Received after Three (3) P.M. EST, April 28, 2000

8. Irrespective of the Priority List, no orders received after three (3) P.M. EST, April 28, 2000, will be worked until after all orders received on or before three (3) P.M. EST, April 28, 2000 have been completed.

9. Once all orders received on or before April 28, 2000, have been worked in their entirety, orders received after April 28, 2000, will have a minimum interval of forty-two (42) calendar days from date of receipt.

Orders Submitted with Due Dates After June 6, 2000

10. Any order submitted on or before April 28, 2000, with a due date of after June 6, 2000, will be completed according to the due date provided there is available inventory and all orders with a due date of June 6, 2000 or earlier have been completed.

EXHIBIT TGW – 14

Amendment to the Interconnection Agreement Between Northpoint Communications, Inc. and BellSouth

AMENDMENT TO THE INTERCONNECTION AGREEMENT BETWEEN NORTHPOINT COMMUNICATIONS, INC. and BELLSOUTH TELECOMMUNICATIONS, INC. DATED JUNE 9, 1998

THIS AMENDMENT ("Amendment") is made by and between BellSouth Telecommunications, Inc. ("BellSouth") and NorthPoint Communications, Inc. ("NorthPoint"), as of the 26th day of May 2000. (BellSouth and NorthPoint are collectively referred to as the "Parties".)

WHEREAS, the Parties executed an Interconnection Agreement on June 9, 1998, (the "Agreement"); and

WHEREAS, the Parties desire to amend the Agreement to set forth the terms and conditions relating to BellSouth providing to NorthPoint unbundled access to the high frequency spectrum of BellSouth's local loops as a network element.

NOW, THEREFORE, for and in consideration of the promises contained herein, the parties to this Amendment, intending to be legally bound, hereby agree as follows:

1.0 Attachment 2 of the Agreement shall be amended by adding the following Section 16:

16 HIGH FREQUENCY SPECTRUM NETWORK ELEMENT

16.1 GENERAL

BellSouth shall provide NorthPoint access to the high frequency portion of the local loop as an unbundled network element ("High Frequency Spectrum") at the rates set forth in Section 4 herein. BellSouth shall provide NorthPoint with the High Frequency Spectrum irrespective of whether BellSouth chooses to offer xDSL services on the loop.

16.1.1 The High Frequency Spectrum is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the High Frequency Spectrum is intended to allow NorthPoint the ability to provide Digital Subscriber Line ("xDSL") data services. The High Frequency Spectrum shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 C.F.R. Section 51.230, including, but not limited to, ADSL, RADSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules. BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz,

depending on equipment and facilities) for the purposes of providing voice service. NorthPoint shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other applicable industry standards. NorthPoint shall provision xDSL service on the High Frequency Spectrum in accordance with the applicable Technical Specifications and Standards.

16.1.2 The following loop requirements are necessary for NorthPoint to be able to access the High Frequency Spectrum: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. The process of removing such devices is called "conditioning." BellSouth shall charge and NorthPoint shall pay as interim rates, the same rates that BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops) until permanent pricing for loop conditioning is established either by mutual agreement or by a state public utility commission. The interim costs for conditioning are subject to true up as provided in paragraph 4.0. BellSouth will condition loops to enable NorthPoint to provide xDSL-based services on the same loops the incumbent is providing analog voice service, regardless of loop length. BellSouth is not required to condition a loop for shared-line xDSL if conditioning of that loop significantly degrades BellSouth's voice service. BellSouth shall charge, and NorthPoint shall pay, for such conditioning the same rates BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops.) If NorthPoint requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop, NorthPoint shall pay for the loop to be restored to its original state.

16.1.3 NorthPoint's meet point is the point of termination for NorthPoint's or the toll main distributing frame in the central office ("Meet Point"). BellSouth will use jumpers to connect the NorthPoint's connecting block to the splitter. The splitter will route the High Frequency Spectrum on the circuit to the NorthPoint's xDSL equipment in the NorthPoint's collocation space.

16.1.4 NorthPoint shall have access to the Splitter for test purposes, irrespective of where the Splitter is placed in the BellSouth premises.

16.2 **PROVISIONING OF HIGH FREQUENCY SPECTRUM AND SPLITTERS**

16.2.1 BellSouth will provide NorthPoint with access to the High Frequency Spectrum as follows:

16.2.1.1 BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. Therefore, BellSouth, NorthPoint and other CLECs have developed a process for allocating the initial orders of splitters. BellSouth will install all splitters ordered on or before April 28, 2000, in accordance with the schedule set forth in Exhibit A of this Agreement. Once all splitters ordered by all CLECs on or before April 28, 2000, have been installed, BellSouth will install splitters within forty-two (42) calendar days of NorthPoint's submission of such order to the BellSouth Complex Resale Support Group; provided, however, that in the event BellSouth did not have reasonable notice that a particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice. BellSouth and NorthPoint will reevaluate this forty-two (42) day interval on or before August 1, 2000.

16.2.1.2 On or after June 6, 2000, once a splitter is installed on behalf of NorthPoint in a central office, NorthPoint shall be entitled to order the High Frequency Spectrum on lines served out of that central office.

16.2.1.3 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide NorthPoint access to data ports on the splitter. In the event that BellSouth elects to use a brand of splitter other than Siecor, the Parties shall renegotiate the recurring and non-recurring rates associated with the splitter. In the event the Parties cannot agree upon such rates, the then current rates (final or interim) for the Siecor splitter shall be the interim rates for the new splitter. BellSouth will provide NorthPoint with a carrier notification letter at least 30 days before of such change and shall work collaboratively with NorthPoint to select a

mutually agreeable brand of splitter for use by BellSouth. NorthPoint shall thereafter purchase ports on the splitter as set forth more fully below.

16.2.1.4 BellSouth will install the splitter in (i) a common area close to the NorthPoint collocation area, if possible; or (ii) in a BellSouth relay rack as close to the NorthPoint DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified NorthPoint DS0 at such time that a NorthPoint end user's service is established. The parties shall work collaboratively towards providing NorthPoint the ability to hard-wire rather than cross connect to the splitter data ports.

16.2.1.5 The High Frequency Spectrum shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service. In the event the end-user terminates its BellSouth provided voice service for any reason, and NorthPoint desires to continue providing xDSL service on such loop, NorthPoint shall be required to purchase the full stand-alone loop unbundled network element. In the event BellSouth disconnects the end-user's voice service pursuant to its tariffs or applicable law, and NorthPoint desires to continue providing xDSL service on such loop, NorthPoint shall be required to purchase the full stand-alone loop unbundled network element. BellSouth shall give NorthPoint notice in a reasonable time prior to disconnect, which notice shall give NorthPoint an adequate opportunity to notify BellSouth of its intent to purchase such loop. The Parties shall work collaboratively towards the mode of notification and the time periods for notice.

16.2.1.6 NorthPoint and BellSouth shall continue to work together collaboratively to develop systems and processes for provisioning the High Frequency Spectrum in various real life scenarios. BellSouth and NorthPoint agree that NorthPoint is entitled to purchase the High Frequency Spectrum on a loop that is provisioned over fiber fed digital loop

carrier. BellSouth will provide NorthPoint with access to feeder subloops at UNE prices. BellSouth and NorthPoint will work together to establish methods and procedures for providing NorthPoint access to the High Frequency Spectrum over fiber fed digital loop carriers by August 1, 2000.

16.2.1.7 Only one competitive local exchange carrier shall be permitted access to the High Frequency Spectrum of any particular loop.

16.2.1.8 To order the High Frequency Spectrum on a particular loop, NorthPoint must have a DSLAM, or access to a DSALM, that serves the end-user of such loop. BellSouth shall allow NorthPoint to order splitters in central offices where NorthPoint is in the process of collocating or augmenting their current collocation arrangement. BellSouth will begin billing NorthPoint the Recurring and Non-Recurring charges associated with the splitter once notification of the completed splitter installation is provided to NorthPoint by BellSouth via the splitter completion notice. BellSouth will install these splitters within the interval provided in paragraph 16.2.1.1.

16.2.1.9 BellSouth will devise a splitter order form that allows NorthPoint to order a portion of the shelf or a full shelf of splitter ports.

16.2.1.10 BellSouth will provide NorthPoint the Local Service Request ("LSR") format to be used when ordering the High Frequency Spectrum.

16.2.1.11 BellSouth will initially provide access to the High Frequency Spectrum within the following intervals:

16.2.1.11.1

Lines	FOC or Error notice	After LSR Receipt
1-5	48 hours manual Less than 24 hours electronic	3 Business days
6-10	48 hours manual Less than 24 hours electronic	5 Business days
10 +	48 hours manual Less than 24 hours electronic	To Be Negotiated

BellSouth and NorthPoint will re-evaluate these intervals on or before August 1, 2000. Upon BellSouth's deployment of real-time, flow through ordering systems referenced in 16.2.1.12, BellSouth will provide FOCs and error notification to NorthPoint in real-time, or as close to real-time as possible, and in no event greater than a monthly average of 4 hours.

16.2.1.12 NorthPoint will initially use BellSouth's existing pre-qualification functionality and order processes to pre-qualify line and order the High Frequency Spectrum. NorthPoint and BellSouth will continue to work together to modify these functionalities and processes to better support provisioning the High Frequency Spectrum. In particular, BellSouth will work with NorthPoint to develop a real-time, mechanized, integratable preordering and ordering functionality with real-time flow through functionality with a target of the 4th Quarter 2000.

16.3 MAINTENANCE AND REPAIR

16.3.1 NorthPoint shall have access, for test, repair, and maintenance purposes, to any loop as to which it has access to the High Frequency Spectrum. NorthPoint may access the loop at the point where the combined voice and data signal exits the central office splitter.

16.3.2 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer premise and the Meet Point of demarcation in the central office. NorthPoint will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

16.3.3 If the problem encountered appears to impact primarily the xDSL service, the end user should call NorthPoint. If the problem impacts primarily the voice service, the end user should call BellSouth. If both services are impaired, the recipient of the call should coordinate with the other service provider(s).

16.3.4 BellSouth and NorthPoint will work together to diagnose and resolve any troubles reported by the end-user and to develop a process for repair of lines as to which NorthPoint has access to the High Frequency Spectrum. The Parties will continue to work

together to address customer initiated repair requests and other customer impacting maintenance issues to better support unbundling of High Frequency Spectrum.

16.3.4.1 The Parties will be responsible for testing and isolating troubles on its respective portion of the loop. Once a Party ("Reporting Party") has isolated a trouble to the other Party's ("Repairing Party") portion of the loop, the Reporting Party will notify the Repairing Party that the trouble is on the Repairing Party's portion of the loop. The Repairing Party will take the actions necessary to repair the loop if it determines a trouble exists in its portion of the loop.

16.3.4.2 If a trouble is reported on either Party's portion of the loop and no trouble actually exists, the Repairing Party may charge the Reporting Party for any dispatching and testing (both inside and outside the central office) required by the Repairing Party in order to confirm the loop's working status.

16.3.4.3 BellSouth and NorthPoint will work together to provide NorthPoint the ability to have remote access to BellSouth's testing capability on a non discriminatory basis for those loops where NorthPoint has access to the High Frequency Spectrum.

16.3.5 In the event NorthPoint's deployment of xDSL on the High Frequency Spectrum significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify NorthPoint and allow twenty-four (24) hours to cure the trouble. If NorthPoint fails to resolve the trouble, BellSouth may discontinue NorthPoint's access to the High Frequency Spectrum on such loop.

16.4 PRICING

16.4.1 BellSouth and NorthPoint agree to the following negotiated, interim rates for the High Frequency Spectrum. All interim prices will be subject to true up based on either mutually agreed to permanent pricing or permanent pricing established in a line sharing cost proceeding conducted by state public utility commissions. In the event interim prices are established by state

public utility commissions before permanent prices are established, either through arbitration or some other mechanism, the interim prices established in this Agreement will be changed to reflect the interim prices mandated by the state public utility commissions; however, no true up will be performed until mutually agreed to permanent prices are established or permanent prices are established by state public utility commissions. Once a docket in a particular state in BellSouth's region has been opened to determine permanent prices for the High Frequency Spectrum, BellSouth will provide cost studies for that state for the High Frequency Spectrum upon NorthPoint's written request, within 30 days or such other date as may be ordered by a state commission. All cost related information shall be provided pursuant to a proprietary, non-disclosure agreement.

16.4.2 BellSouth and NorthPoint enter into this Agreement without waiving current or future relevant legal rights and without prejudicing any position BellSouth or NorthPoint may take on relevant issues before state or federal regulatory or legislative bodies or courts of competent jurisdiction. This clause specifically contemplates but is not limited to: (a) the positions BellSouth or NorthPoint may take in any cost docket related to the terms and conditions associated with access to the High Frequency Spectrum; and (b) the positions that BellSouth or NorthPoint might take before the FCC or any state public utility commission related to the terms and conditions under which BellSouth must provide NorthPoint with access to the High Frequency Spectrum. The interim rates set forth herein were adopted as a result of a compromise between the parties and do not reflect either party's position as to final rates for access to the High Frequency Spectrum.

		RATES BY STATE								
DESCRIPTION	USOC	AL	FL	GA	KY	LA	MS	NC	SC	TN
SYSTEM, SPLITTER – 96 LINE CAPACITY	ULSDA

16.4.3 Any element necessary for interconnection that is not identified above is priced as currently set forth in the Agreement.

2.0 BellSouth shall make available to NorthPoint any agreement for the High Frequency Spectrum entered into between BellSouth and any other CLEC. If NorthPoint elects to adopt such agreement, NorthPoint shall adopt all rates, terms and conditions relating to the High Frequency Spectrum in such agreement.

3.0 In the event of a conflict between the terms of this Amendment and the terms of the Interconnection Agreement, the terms of this Amendment shall prevail.

4.0 All of the other provisions of the Agreement shall remain in full force and effect.

5.0 Either or both of the Parties is authorized to submit this Amendment to the respective state regulatory authorities for approval subject to Section 252(e) of the Federal Telecommunications Act of 1996.

IN WITNESS WHEREOF, the Parties hereto have caused this Amendment to be executed by their respective duly authorized representatives on the date indicated below.

EXHIBIT A

CLEC/BellSouth Line Sharing Jointly Developed

Rules for Splitter Allocation

BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. As a result of the current shortage of splitters, CLECs and BellSouth developed the following rules for splitter allocation. These rules shall apply until such time as those CLECs participating in the creation of the rules agree that the regular splitter installation rules should apply.

1. There shall be a single CLEC priority list of central offices that shall consist of the Georgia CLEC priority list combined with the priority list from the other states in BellSouth's nine-state region (the "Priority List"). This priority list shall be used for filling orders; it shall determine the order in which splitters will be deployed in those central offices for which splitters have been ordered. Georgia central offices (CO) will have priority over other state's COs.

2. During the allocation period, a CLEC may order 24 ports or 96 ports. In either event, BellSouth shall install a 96 port splitter in accordance with the Priority List. However, during the allocation period, in the event a CLEC orders 96 ports, BellSouth will only allocate 24 ports of the 96 port splitter to the first CLEC that orders a splitter for that central office, thus creating a backlog of 72 ports that have already been ordered by that CLEC ("Backlog"). In the event of a Backlog, BellSouth will charge CLEC a monthly recurring charge appropriate for the number of ports allocated to CLEC. In addition, if CLEC requested a 96 port splitter, it shall pay a non-recurring charge for a 96 port splitter, but shall pay no non-recurring charges when additional ports are added to alleviate the Backlog.

3. BellSouth will allocate, on a first-come/first-served basis, the remaining 72 ports of the splitter (in blocks of 24 ports) to the other CLECs that place an order for a splitter at that same central office.

Orders Submitted by April 28, 2000 with Due Date of June 6, 2000 or Sooner

4. A firm order for a splitter issued to the BellSouth Complex Resale Support Group (CRSG) on or by April 28, 2000, with due date of June 6, 2000, or sooner, will be given priority over orders received after April 28, 2000.

Orders for the first 200 splitters received prior to April 28, 2000, will be installed on or before June 5, 2000, and shall be installed in accordance with the priority list. The first 25-splitter orders shall be installed no later than May 22, 2000.

5. In the event CLECs submit to BellSouth more than 200 splitter orders on or before April 28, 2000, BellSouth shall install fifty (50) splitters a week each week after June 5, 2000.

6. In the event there are more than four (4) orders submitted on or before April 28, 2000, for a splitter at a particular central office, a second splitter will be installed at that central office in accordance with the Priority List.

7. Backlogs associated with orders submitted on or before April 28, 2000 will be fulfilled in their entirety before any orders received after April 28, 2000 are worked. In fulfilling a Backlog, the CLEC's additional ports may not be on the same shelf as the initial 24 ports.

Orders Received after April 28, 2000

8. Irrespective of the Priority List, no orders received after April 28, 2000, will be worked until after all orders received on or before April 28, 2000 have been completed.

9. Once all orders received on or before April 28, 2000, have been worked in their entirety, orders received after April 28, 2000, will have a minimum interval of forty-two (42) calendar days from date of receipt.

Orders Submitted with Due Dates After June 6, 2000

10. Any order submitted on or before April 28, 2000, with a due date of after June 6, 2000, will be completed according to the due date provided there is available inventory and all orders with a due date of June 6, 2000 or earlier have been completed.

High Frequency Spectrum Network Element Amendment to the Interconnection Agreement Between Rhythms Links Inc. and BellSouth

HIGH FREQUENCY SPECTRUM NETWORK ELEMENT AMENDMENT TO THE INTERCONNECTION AGREEMENT BETWEEN RHYTHMS LINKS INC. and BELLSOUTH TELECOMMUNICATIONS, INC. DATED JANUARY 8, 1999

THIS HIGH FREQUENCY SPECTRUM NETWORK ELEMENT AMENDMENT (the "Amendment") is made by and between BellSouth Telecommunications, Inc. ("BellSouth") and Rhythms Links Inc. ("Rhythms"), as of the 26th day of May 2000. (BellSouth and Rhythms are individually referred to as a "Party" and collectively referred to as the "Parties".)

WHEREAS, the Parties executed an Interconnection Agreement on January 8, 1999, (the "Agreement"); and

WHEREAS, the Parties desire to amend the Agreement to set forth the terms and conditions relating to BellSouth providing to Rhythms unbundled access to the high frequency spectrum of BellSouth's local loops as a network element.

NOW, THEREFORE, for and in consideration of the promises contained herein, the Parties to this Amendment, intending to be legally bound, hereby agree as follows:

1. Attachment 2 of the Agreement shall be amended by adding the following Section 16 to Attachment 2 of the Agreement:

16 High Frequency Spectrum Network Element

16.1 **GENERAL**

BellSouth shall provide Rhythms access to the high frequency portion of the local loop as an unbundled network element ("High Frequency Spectrum Network Element" or "High Frequency Spectrum") at the rates set forth in Section 4 herein. BellSouth shall provide Rhythms with the High Frequency Spectrum irrespective of whether BellSouth chooses to offer xDSL services on the loop.

16.1.1 The High Frequency Spectrum is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the High Frequency Spectrum is intended to allow Rhythms' the ability to provide Digital Subscriber Line ("xDSL") data services. The High Frequency Spectrum shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 C.F.R. Section 51.230, including, but not limited to, ADSL, RADSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules.

BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. Rhythms shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other applicable industry standards. Rhythms shall provision xDSL service on the High Frequency Spectrum in accordance with the applicable Technical Specifications and Standards.

16.1.2 The following loop requirements are necessary for Rhythms to be able to access the High Frequency Spectrum: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. The process of removing such devices is called "conditioning." BellSouth shall charge and Rhythms shall pay as interim rates, the same rates that BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops) until permanent pricing for loop conditioning is established either by mutual agreement or by a state public utility commission. The interim costs for conditioning are subject to true up as provided in paragraph 4.0. BellSouth will condition loops to enable Rhythms to provide xDSL-based services on the same loops the incumbent is providing analog voice service, regardless of loop length. BellSouth is not required to condition a loop for shared-line xDSL if conditioning of that loop significantly degrades BellSouth's voice service. BellSouth shall charge, and Rhythms shall pay, for such conditioning the same rates BellSouth charges for conditioning stand-alone loops (e.g., unbundled copper loops, ADSL loops, and HDSL loops.). If Rhythms requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop, Rhythms shall pay for the loop to be restored to its original state.

16.1.3 Rhythms' meet point is the point of termination for Rhythms' or the toll main distributing frame in the central office ("Meet Point"). BellSouth will use jumpers to connect the Rhythms' connecting block to the splitter. The splitter will route the High Frequency Spectrum on the

circuit to the Rhythms' xDSL equipment in the Rhythms' collocation space.

16.1.4 Rhythms shall have access to the Splitter for test purposes, irrespective of where the Splitter is placed in the BellSouth premises.

16.1A BellSouth and Rhythms enter into this Agreement without waiving current or future relevant legal rights and without prejudicing any position BellSouth or Rhythms may take on relevant issues before state or federal regulatory or legislative bodies or courts of competent jurisdiction. This clause specifically contemplates but is not limited to: (a) the positions BellSouth or Rhythms may take in any cost docket related to the terms and conditions associated with access to the High Frequency Spectrum; and (b) the positions that BellSouth or Rhythms might take before the FCC or any state public utility commission related to the terms and conditions under which BellSouth must provide Rhythms with access to the High Frequency Spectrum, including but not limited to the positions that BellSouth or Rhythms might take before the Florida Public Service Commission in docket no. 000501-TP or before the Georgia Public Service Commission in docket no. 12228-U.

16.2 PROVISIONING OF HIGH FREQUENCY SPECTRUM AND SPLITTER SPACE

BellSouth will provide Rhythms with access to the High Frequency Spectrum as follows:

16.2.1 BellSouth Owned Splitters

16.2.1.1 BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. Therefore, BellSouth, Rhythms and other CLECs have developed a process for allocating the initial orders of splitters. BellSouth will install all splitters ordered on or before April 28, 2000, in accordance with the schedule set forth in Attachment 1 of this Agreement. Once all splitters ordered by all CLECs on or before April 28, 2000, have been installed, BellSouth will install splitters within forty-two (42) calendar days of Rhythms' submission of such order to the BellSouth Complex Resale Support Group; provided, however, that in the event BellSouth did not have reasonable notice that a

particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice. BellSouth and Rhythms will reevaluate this forty-two (42) day interval on or before August 1, 2000.

16.2.1.2 After June 6, 2000, once a splitter is installed on behalf of Rhythms in a central office, Rhythms shall be entitled to order the High Frequency Spectrum on lines served out of that central office.

16.2.1.3 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide Rhythms access to data ports on the splitter. In the event that BellSouth elects to use a brand of splitter other than Siecor, the Parties shall renegotiate the recurring and non-recurring rates associated with the splitter. In the event the Parties cannot agree upon such rates, the then current rates (final or interim) for the Siecor splitter shall be the interim rates for the new splitter. BellSouth will provide Rhythms with a carrier notification letter at least 30 days before of such change and shall work collaboratively with Rhythms to select a mutually agreeable brand of splitter for use by BellSouth. Rhythms shall thereafter purchase ports on the splitter as set forth more fully below.

16.2.1.3.1 BellSouth will install the splitter in (i) a common area close to the Rhythms collocation area, if possible; or (ii) in a BellSouth relay rack as close to the Rhythms DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified Rhythms DS0 at such time that a Rhythms end user's service is established.

16.2.2 Rhythms Owned Splitters

16.2.2.1 Upon completion of the conditions set forth in 16.2.2.2.1, 16.2.2.2.2, and 16.2.2.2.3, BellSouth (i) shall provide Rhythms with the option of purchasing, installing, and maintaining central office POTS splitters in its collocation arrangements, and (ii) shall enable Rhythms to obtain access to, and provide digital subscriber line services to Rhythms' Customers via, High Frequency Spectrum Network Elements that utilize such splitters.

16.2.2.2 Consistent with this splitter option, the Parties agree to meet collaboratively as often as necessary to resolve the following operational issues, in no event later than September 6 or sooner if possible:

16.2.2.2.1 Maintenance & Repair procedures must be established for locating and resolving voice troubles found to be in Rhythms' equipment or wiring.

16.2.2.2.2 Procedures will be developed for BellSouth's testing of voice circuits that enter Rhythms collocation arrangement.

16.2.2.2.3 COSMOS must be modified to be able to accept two CFA pair assignments from Rhythms when Rhythms orders High Frequency Spectrum. In order for this modification of COSMOS to be completed as quickly as possible, the Parties agree as follows:

16.2.2.2.3.1 By July 6, 2000, Rhythms shall identify for BellSouth the cable pairs in specific central offices that Rhythms intends to use for line sharing; and

16.2.2.2.3.2 BellSouth agrees to complete modifications to COSMOS for these cable pairs by September 6, 2000.

16.2.2.2.3.2.1 If it is not technically feasible for BellSouth to complete these modifications by

September 6, 2000, BellSouth will use its best efforts to develop a work-around solution that will enable Rhythms to provide its services using High Frequency Spectrum and Rhythms' splitters by September 6, 2000. In the event such a work-around must be developed, BellSouth agrees to work collaboratively with Rhythms to develop said work-around and the Parties shall use their best efforts to develop a work-around that enables BellSouth to access records for maintenance and repair purposes.

16.2.2.3 In the event Rhythms desires to place a splitter in its physical collocation space, and such placement does not require additional cabling, cable racking, or space, BellSouth will not require an application to modify existing collocation space pursuant to Attachment 4 of the Agreement. A splitter, for purposes of this Agreement, is a passive device requiring no power and emitting no heat. Rhythms shall provide BellSouth ten (10) calendar days advance written notice of its intent to place a splitter in its collocation space. Such notice shall include the following: (1) the date Rhythms anticipates commencing the work; and (2) the estimated date of completion. Prior to installation of the splitter, Rhythms or its certified vendor will provide a Methods of Procedure for each affected collocation space. In the event the equipment installed by Rhythms does not comply with Section 16.2.2.4, below, or with applicable provisions of Attachment 4 of the Agreement, BellSouth, upon delivery of written notice to Rhythms, may require Rhythms to remedy such non-compliance. Such remedy may include removal of the equipment installed if such removal is necessary to comply with Section 3.8 of Attachment 4 of the Agreement. BellSouth shall

permit Rhythms a reasonable amount of time to remedy such noncompliance unless such noncompliance is of a character that poses an immediate and substantial threat of damage to property, injury or death to any person.

16.2.2.4 Any splitters installed by Rhythms in its collocation arrangements shall comply with ANSI T1.413, Annex E, or any future ANSI splitter standards. BellSouth shall also permit Rhythms to install any splitters in that BellSouth deploys or permits to be deployed for itself or any BellSouth Affiliate.

16.2.3 The High Frequency Spectrum shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service. In the event the end-user terminates its BellSouth provided voice service for any reason, and Rhythms desires to continue providing xDSL service on such loop, Rhythms shall be required to purchase the full stand-alone loop unbundled network element. In the event BellSouth disconnects the end-user's voice service pursuant to its tariffs or applicable law, and Rhythms desires to continue providing xDSL service on such loop, Rhythms shall be required to purchase the full stand-alone loop unbundled network element.

16.2.4 Rhythms and BellSouth shall continue to work together collaboratively to develop systems and processes for provisioning the High Frequency Spectrum in various real life scenarios. BellSouth and Rhythms agree that Rhythms is entitled to purchase the High Frequency Spectrum on a loop that is provisioned over fiber fed digital loop carrier. BellSouth will provide Rhythms with access to feeder subloops at UNE prices. BellSouth and Rhythms will work together to establish methods and procedures for providing Rhythms access to the High Frequency Spectrum over fiber fed digital loop carriers by August 1, 2000.

16.2.5 Only one competitive local exchange carrier shall be permitted access to the High Frequency Spectrum of any particular loop.

16.2.6 To order High Frequency Spectrum on a particular loop, Rhythms must have a DSLAM collocated in the central office that serves the end-user of such loop. BellSouth will work collaboratively with Rhythms to create a concurrent

process that allows Rhythms to order splitters in central offices where Rhythms is in the process of obtaining collocation space and enables BellSouth to install such splitters before the end of Rhythms' collocation provisioning interval. While that process is being developed, Rhythms may order splitters in a central office once it has installed its Digital Subscriber Line Access Multiplexer ("DSLAM") in that central office. BellSouth will install these splitters within the interval provided in paragraph 16.2.1.

16.2.7 For splitters owned by BellSouth (as described in Section 16.2.1 above), BellSouth will devise a splitter order form that allows Rhythms to order splitter ports in increments of 24 or 96 ports.

16.2.8 BellSouth will provide Rhythms the Local Service Request ("LSR") format to be used when ordering the High Frequency Spectrum.

16.2.9 BellSouth will initially provide access to the High Frequency Spectrum within the following intervals: Beginning on June 6, 2000, BellSouth will return a Firm Order Confirmation ("FOC") in no more than two (2) business days. Once BellSouth implements electronic OSS for High Frequency Spectrum, BellSouth will return a FOC in four (4) hours ninety-five percent (95%) of the time or, for orders that do not flow-through, in forty-eight (48) hours. BellSouth will provide Rhythms with access to the High Frequency Spectrum as follows:

16.2.9.1 For 1-5 lines at the same address within three (3) business days from the receipt of Rhythms' LSR; 6-10 lines at same address within 5 business days; and more than 10 lines at the same address is to be negotiated. BellSouth and Rhythms will re-evaluate these intervals on or before August 1, 2000.

16.2.10 Rhythms will initially use BellSouth's existing pre-qualification functionality and order processes to pre-qualify line and order the High Frequency Spectrum. Rhythms and BellSouth will continue to work together to modify these functionalities and processes to better support provisioning the High Frequency Spectrum. BellSouth will use its best efforts to make available to Rhythms, by the fourth quarter of 2000, an electronic pre-ordering, ordering,

provisioning, repair and maintenance and billing functionalities for the High Frequency Spectrum.

16.2.11 In the event that BellSouth does not deliver, or knows that it will be unable to deliver, the High Frequency Spectrum to Rhythms on the due date, BellSouth will provide jeopardy notices to Rhythms in a timely manner according to processes and procedures to be worked out between BellSouth, Rhythms and other CLECs collaboratively.

16.3 MAINTENANCE AND REPAIR

Rhythms shall have access, for test, repair, and maintenance purposes, to any loop to which it has access to the High Frequency Spectrum. Consistent with the Amendment to the Agreement Between ACI Corp. and BellSouth Telecommunications, Inc. dated January 8, 1999 that became effective on December 13, 1999, Rhythms may access the High Frequency Spectrum at the point where the combined voice and data signal exits the central office splitter on a twenty-four (24) hour per day, seven (7) day per week basis and without the need for a BellSouth escort. Where BellSouth owns the splitter in a physical collocation arrangement, BellSouth shall provide Rhythms with access to splitters on such a basis regardless of where in a central office the splitter is located.

16.3.1 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer premise and the Meet Point of demarcation in the central office. Rhythms will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

16.3.2 If the problem encountered appears to impact primarily the xDSL service, the end user should call Rhythms. If the problem impacts primarily the voice service, the end user should call BellSouth. If both services are impaired, the recipient of the call should coordinate with the other service provider(s).

16.3.3 BellSouth and Rhythms will work together to diagnose and resolve any troubles reported by the end-user and to develop a process for repair of lines as to which Rhythms has access to the High Frequency Spectrum. The Parties will continue to work together to address customer initiated repair requests and other customer impacting maintenance issues to better support unbundling of High Frequency Spectrum.

16.3.3.1 The Parties will be responsible for testing and isolating troubles on its respective portion of the loop. Once a Party ("Reporting Party") has isolated a trouble to the other Party's ("Repairing Party") portion of the loop, the Reporting Party will notify the Repairing Party that the trouble is on the Repairing Party's portion of the loop. The Repairing Party will take the actions necessary to repair the loop if it determines a trouble exists in its portion of the loop.

16.3.3.2 If a trouble is reported on either Party's portion of the loop and no trouble actually exists, the Repairing Party may charge the Reporting Party for any dispatching and testing (both inside and outside the central office) required by the Repairing Party in order to confirm the loop's working status.

16.3.3.3 BellSouth shall cure any troubles reported by Rhythms for the High Frequency Spectrum in the same interval in which BellSouth is required to cure a trouble reported for POTS line.

16.3.4 In the event Rhythms' deployment of xDSL on the High Frequency Spectrum significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify Rhythms and allow twenty-four (24) hours to cure the trouble. If Rhythms fails to resolve the trouble, BellSouth may discontinue Rhythms' access to the High Frequency Spectrum on such loop.

16.4 PRICING

BellSouth and Rhythms agree to the following negotiated, interim rates for the High Frequency Spectrum. All interim prices will be subject to true up based on either mutually agreed to permanent pricing or permanent pricing established in a line sharing cost proceeding or arbitration conducted by state public utility commissions. In the event interim prices are established by state public utility commissions before permanent prices are established, either through arbitration or some other mechanism, the interim prices established in this Agreement will be changed to reflect the interim prices mandated by the state public utility commissions; however, no true up will be performed until mutually agreed to permanent prices are established or permanent prices are established by state public utility commissions. Once a docket in a particular state in BellSouth's region has been opened to determine permanent prices for the High Frequency Spectrum, BellSouth will provide cost studies for that state for the High

Frequency Spectrum upon Rhythms' written request, within 30 days or such other date as may be ordered by a state commission. All cost related information shall be provided pursuant to a proprietary, non-disclosure agreement negotiated by the Parties.

16.4.1 The interim rates set forth herein were adopted as a result of a compromise between the parties and do not reflect either party's position as to final rates for access to the High Frequency Spectrum.

		RATES BY STATE								
DESCRIPTION	USOC	AL	FL	GA	KY	LA	MS	NC	SC	TN

16.4.2 Any element necessary for interconnection that is not identified above is priced as currently set forth in the Agreement.

2. BellSouth shall make available to Rhythms any agreement for the High Frequency Spectrum entered into between BellSouth and any other CLEC. If Rhythms elects to adopt such agreement, Rhythms shall adopt all rates, terms and conditions relating to the High Frequency Spectrum in such agreement.

3. In the event of a conflict between the terms of this Amendment and the terms of the Interconnection Agreement, the terms of this Amendment shall prevail.

4. All of the other provisions of the Agreement shall remain in full force and effect.

5. Either or both of the Parties is authorized to submit this Amendment to the respective state regulatory authorities for approval subject to Section 252(e) of the Federal Telecommunications Act of 1996.

IN WITNESS WHEREOF, the Parties hereto have caused this Amendment to be executed by their respective duly authorized representatives on the date indicated below.

ATTACHMENT 1

CLEC/BellSouth Line Sharing Jointly Developed

Rules for Splitter Allocation

BellSouth is unable to obtain a sufficient number of splitters for placement in all central offices requested by competitive local exchange carriers ("CLECs") by June 6, 2000. As a result of the current shortage of splitters, CLECs and BellSouth developed the following rules for splitter allocation. These rules shall apply until such time as those CLECs participating in the creation of the rules agree that the regular splitter installation rules should apply.

1. There shall be a single CLEC priority list of central offices that shall consist of the Georgia CLEC priority list combined with the priority list from the other states in BellSouth's nine-state region (the "Priority List"). This priority list shall be used for filling orders; it shall determine the order in which splitters will be deployed in those central offices for which splitters have been ordered. Georgia central offices (CO) will have priority over other state's COs.

2. During the allocation period, a CLEC may order 24 ports or 96 ports. In either event, BellSouth shall install a 96 port splitter in accordance with the Priority List. However, during the allocation period, in the event a CLEC orders 96 ports, BellSouth will only allocate 24 ports of the 96 port splitter to the first CLEC that orders a splitter for that central office, thus creating a backlog of 72 ports that have already been ordered by that CLEC ("Backlog"). In the event of a Backlog, BellSouth will charge CLEC a monthly recurring charge appropriate for the number of ports allocated to CLEC. In addition, if CLEC requested a 96 port splitter, it shall pay a non-recurring charge for a 96 port splitter, but shall pay no non-recurring charges when additional ports are added to alleviate the Backlog.

3. BellSouth will allocate, on a first-come/first-served basis, the remaining 72 ports of the splitter (in blocks of 24 ports) to the other CLECs that place an order for a splitter at that same central office.

Orders Submitted by April 28, 2000 with Due Date of June 6, 2000 or Sooner

4. A firm order for a splitter issued to the BellSouth Complex Resale Support Group (CRSG) on or by April 28, 2000, with due date of June 6, 2000, or sooner, will be given priority over orders received after April 28, 2000. Orders for the first 200 splitters received prior to April 28, 2000, will be installed on or before June 5, 2000, and shall be installed in accordance with the priority list. The first 25 splitter orders shall be installed no later than May 22, 2000.

5. In the event CLECs submit to BellSouth more than 200 splitter orders on or before April 28, 2000, BellSouth shall install fifty (50) splitters a week each week after June 5, 2000.

6. In the event there are more than four (4) orders submitted on or before April 28, 2000, for a splitter at a particular central office, a second splitter will be installed at that central office in accordance with the Priority List.

7. Backlogs associated with orders submitted on or before April 28, 2000 will be fulfilled in their entirety before any orders received after April 28, 2000 are worked. In fulfilling a Backlog, the CLEC's additional ports may not be on the same shelf as the initial 24 ports.

Orders Received after April 28, 2000

8. Irrespective of the Priority List, no orders received after April 28, 2000 will be worked until after all orders received on or before April 28, 2000 have been completed.

9. Once all orders received on or before April 28, 2000 have been worked in their entirety, orders received after April 28, 2000 will have a minimum interval of forty-two (42) calendar days from date of receipt.

Orders Submitted with Due Dates After June 6, 2000

10. Any order submitted on or before April 28, 2000, with a due date of after June 6, 2000, will be completed according to the due date provided there is available inventory and all orders with a due date of June 6, 2000 or earlier have been completed.

High Frequency Spectrum Network Element

3. High Frequency Spectrum Network Element

3.1 General

3.1.1 BellSouth shall provide CLEC-1 access to the high frequency portion of the local loop as an unbundled network element only where BellSouth is the voice service provider to the end user ("High Frequency Spectrum") at the rates set forth in Exhibit C. BellSouth shall provide CLEC-1 with the High Frequency Spectrum irrespective of whether BellSouth chooses to offer xDSL services on the loop.

3.1.2 The High Frequency Spectrum is defined as the frequency range above the voiceband on a copper loop facility carrying analog circuit-switched voiceband transmissions. Access to the High Frequency Spectrum is intended to allow CLEC-1 the ability to provide Digital Subscriber Line ("xDSL") data services to the end user for which BellSouth provides voice services. The High Frequency Spectrum shall be available for any version of xDSL presumed acceptable for deployment pursuant to 47 CFR Section 51.230, including, but not limited to, ADSL, HDSL, and any other xDSL technology that is presumed to be acceptable for deployment pursuant to FCC rules. BellSouth will continue to have access to the low frequency portion of the loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. CLEC-1 shall only use xDSL technology that is within the PSD mask parameters set forth in T1.413 or other applicable industry standards. CLEC-1 shall provision xDSL service on the High Frequency Spectrum in accordance with the applicable Technical Specifications and Standards.

3.1.3 The following loop requirements are necessary for CLEC-1 to be able to access the High Frequency Spectrum: an unconditioned, 2-wire copper loop. An unconditioned loop is a copper loop with no load coils, low-pass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and T1.601. BellSouth will provide CLEC-1 access to the Unbundled Loop Modification (Line Conditioning), in accordance with Section 2.2 of this Agreement. BellSouth is not required to condition a loop for access to the high frequency spectrum if conditioning of that loop significantly degrades BellSouth's voice service. If CLEC-1 requests that BellSouth condition a loop longer than 18,000 ft. and such conditioning significantly degrades the voice services on the loop, CLEC-1 shall pay for the loop to be restored to its original state.

3.1.4 CLEC-1's termination point is the point of termination for CLEC-1 on the toll main distributing frame in the central office ("Termination Point"). BellSouth will use jumpers to connect CLEC-1's connecting block to the splitter. The

splitter will route the High Frequency Spectrum on the circuit to CLEC-1's xDSL equipment in CLEC-1's collocation space.

3.1.5 CLEC-1 shall have access to the splitter for test purposes, irrespective of where the splitter is placed in the BellSouth premises.

3.2 Provisioning of High Frequency Spectrum and Splitter Space

3.2.1 BellSouth will provide CLEC-1 with access to the High Frequency Spectrum as follows:

3.2.1.1 BellSouth will install splitters within forty-two (42) calendar days of CLEC-1's submission of such order to the BellSouth Complex Resale Support Group; provided, however, that in the event BellSouth did not have reasonable notice that a particular central office was to have a splitter installed therein, the forty-two (42) day interval shall not apply. Collocation itself or an application for collocation will serve as reasonable notice.

3.2.1.2 Once a splitter is installed on behalf of CLEC-1 in a central office, CLEC-1 shall be entitled to order the High Frequency Spectrum on lines served out of that central office.

3.2.1.2.1 BellSouth will bill and CLEC-1 shall pay the SOMAN and SOMEC charges as described in Section 2.13 of this Agreement when CLEC-1 orders High Frequency Spectrum for end-user service.

3.2.1.3 BellSouth will select, purchase, install, and maintain a central office POTS splitter and provide CLEC-1 access to data ports on the splitter. At least 30 days before making a change in splitter suppliers, BellSouth will provide CLEC-1 with a carrier notification letter, informing CLEC-1 of change. CLEC-1 shall purchase ports on the splitter as set forth more fully below.

3.2.1.4 BellSouth will install the splitter in (i) a common area close to the CLEC-1 collocation area, if possible; or (ii) in a BellSouth relay rack as close to the CLEC-1 DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. BellSouth will cross-connect the splitter data ports to a specified CLEC-1 DS0 at such time that a CLEC-1 end user's service is established.

3.2.1.5 The High Frequency Spectrum shall only be available on loops on which BellSouth is also providing, and continues to provide, analog voice service directly to the end user. In the event the end-user terminates its BellSouth provided voice service for any reason, and CLEC-1 desires to continue providing xDSL service on such loop, CLEC-1 shall be required to purchase a full stand-alone loop unbundled network element. In the event BellSouth disconnects the

end-user's voice service pursuant to its tariffs or applicable law, and CLEC-1 desires to continue providing xDSL service on such loop, CLEC-1 shall be permitted to continue using the line by purchasing the full stand-alone loop unbundled network element. To the extent commercially practicable, BellSouth shall give CLEC-1 notice in a reasonable time prior to disconnect, which notice shall give CLEC-1 an adequate opportunity to notify BellSouth of its intent to purchase such loop. In those cases in which BellSouth no longer provides voice service to the end user and CLEC-1 purchases the full stand-alone loop, CLEC-1 may elect the type of loop it will purchase. CLEC-1 will pay the appropriate recurring and non-recurring rates for such loop as set forth in Exhibit C to this Attachment. In the event CLEC-1 purchases a voice grade loop, CLEC-1 acknowledges that such loop may not remain xDSL compatible.

3.2.1.6 Only one competitive local exchange carrier shall be permitted access to the High Frequency Spectrum of any particular loop.

3.3 Ordering

3.3.1 To order High Frequency Spectrum on a particular loop, CLEC-1 must have a DSLAM collocated in the central office that serves the end-user of such loop. CLEC-1 may order splitters in a central office once it has installed its Digital Subscriber Line Access Multiplexer ("DSLAM") in that central office. BellSouth will install these splitters within the interval provided in paragraph 3.2.1.1.

3.3.2 BellSouth will devise a splitter order form that allows CLEC-1 to order splitter ports in increments of 24 ports.

3.3.2.1 BellSouth will provide CLEC-1 the Local Service Request ("LSR") format to be used when ordering the High Frequency Spectrum.

3.3.3 BellSouth will provide access to the High Frequency Spectrum within the following target intervals: BellSouth will return a manual Firm Order Confirmation ("FOC") in no more than two (2) business days after receipt of a valid, error free manual LSR. When CLEC-1 submits an electronic LSR for High Frequency Spectrum, BellSouth will return a FOC in four (4) hours ninety-five percent (95%) of the time, or, for orders that do not flow-through, in two (2) business days. BellSouth will provide CLEC-1 with access to the High Frequency Spectrum at the following target intervals:

3.3.3.1 For 1-5 lines at the same address within three (3) business days from BellSouth's issuance of a FOC; 6-10 lines at same address within 5 business days from BellSouth's issuance of a FOC; and more than 10 lines at the same address is to be negotiated.

3.3.4 BellSouth will provide to CLEC-1 BellSouth's Loop Qualification System that BellSouth uses to qualify loops for its own ADSL offering as described below.

3.3.5 BellSouth will provide CLEC-1 access to the Preordering Loop Makeup (LMU), in accordance with Section 2.14 of this Agreement. BellSouth shall bill and CLEC-1 shall pay the rates for such services, as described in Exhibit C.

3.4 Maintenance and Repair

3.4.1 CLEC-1 shall have access, for test, repair, and maintenance purposes, to any loop as to which it has access to the High Frequency Spectrum. CLEC-1 may access the loop at the point where the combined voice and data signal exits the central office splitter.

3.4.2 BellSouth will be responsible for repairing voice services and the physical line between the network interface device at the customer's premises and the Termination Point of demarcation in the central office. CLEC-1 will be responsible for repairing data services. Each Party will be responsible for maintaining its own equipment.

3.4.3 CLEC-1 shall inform its end users to direct data problems to CLEC-1, unless both voice and data services are impaired, in which event the end users should call BellSouth.

3.4.4 Once a Party has isolated a trouble to the other Party's portion of the loop, the Party isolating the trouble shall notify the end user that the trouble is on the other Party's portion of the loop.

3.4.5 In the event CLEC-1's deployment of xDSL on the High Frequency Spectrum significantly degrades the performance of other advanced services or of BellSouth's voice service on the same loop, BellSouth shall notify CLEC-1 and allow twenty-four (24) hours to cure the trouble. If CLEC-1 fails to resolve the trouble, BellSouth may discontinue CLEC-1's access to the High Frequency Spectrum on such loop.

3.5 **Rates**

The prices that CLEC-1 shall pay to BellSouth for Network Elements and Other Services are set forth in Exhibit C to this Attachment. If CLEC-1 purchases a service(s) from a tariff, all terms and conditions and rates as set forth in such tariff shall apply.

3.6 **Operational Support Systems (OSS)**

The terms, conditions and rates for OSS are as set forth in Section 2.13 of this Attachment.

BELLSOUTH

BellSouth Interconnection Services
675 West Peachtree Street
Atlanta, Georgia 30375

Carrier Notification
SN91082407

Date: May 23, 2001

To: Competitive Local Exchange Carriers (CLECs)

Subject: CLECs - Line Splitting Service Information Package, Version 1

This is to advise that BellSouth's Line Splitting Service will be available on June 19, 2001.

The Line Splitting Information Package, Version 1, will be posted to the BellSouth Interconnection Services' Web site on May 25, 2001, and may be reviewed at the following address:

http://www.interconnection.bellsouth.com/products/index.html

If you have any questions, please contact your BellSouth account team representative.

Sincerely,

How Broadband Deployment Skews Economic/Business Growth

Summary: Precursor believes many do not appreciate the **broad investment and economic implications of the highly skewed nature of current broadband deployment.** While nearly all large businesses in the U.S. *already have* broadband service, only around 6.5 million or roughly 6% of residential households have broadband—73% cable modem and 26% DSL (see attached chart). More importantly, **investors are missing entirely the broad implications of meager broadband deployment to small and medium enterprises (SMEs)** that employ less than 100 employees. Investors should care because **SMEs comprise roughly 85% of U.S. business firms, 40% of employment, and one-third of the nation's economic output.** The broadband deployment contrast between large businesses and SMEs is stark. Only about **6% of SMEs have broadband** and this segment is almost exclusively DSL (~90% see attached chart). Precursor has discovered that the SMEs, which need broadband most, are also the least likely to get broadband deployment. That's because distance from network hubs increases the business need for broadband at the same time distance increases cost of deployment. Precursor believes this **broadband skew has broad under appreciated implications for productivity and earnings growth.** If large companies, which enjoy broadband productivity gains, are experiencing slower growth, this signals relatively greater trouble for SMEs, which are not enjoying broadband productivity gains. This could be a **hidden negative precursor for economic growth because SMEs are the primary driver of national job and economic growth** and productivity is a key driver of earnings growth.

Implications of Skewed Broadband Deployment: **(1) Distance Matters Much More for Broadband Than Dial-up: (A) Cost:** Unlike narrowband dial-up which requires minor modification of the telecom network, DSL and cable modems require an expensive re-engineering of their respective networks. Thus **the key broadband cost variable is density/distance**: how far away and how far apart the customers are, because density/distance drives average cost. Customer density matters to DSL specifically because speed directly correlates to the distance from the central office. Customer density matters to both DSL and cable because it creates breakeven efficiencies in marketing, engineering, installation, and service. **(B) Revenues:** Customer ability to pay drives average revenues. Relative customer ability to pay is also important because it drives the priority sequence of deployment and also whether deployment can ever reach breakeven in a given area. These cost and revenue realities heavily skew broadband deployment to the biggest cities with the most concentrated business districts and the most affluent, concentrated neighborhoods. Moreover, because cable's entertainment-driven infrastructure almost exclusively serves the residential market, cable modem deployment is unlikely to be a factor for SMEs. Given the financial difficulties that CLECs are experiencing, it looks like the SME market will increasingly become the exclusive domain of DSL. **(2) Broadband Deployment Paradox:** Ironically, the **geographic areas that make the least business sense to deploy to are precisely the businesses that most need broadband to grow.** A substantial portion of U.S. employment is generated by SMEs, and most employment tends not to be located in the densest, highest rent areas where it makes most business sense to deploy broadband. Precursor suggests a *surprising correlation*: those SMEs that require lots of physical space and low rent also tend to have the most mission critical need for broadband. For example: engineering, manufacturing and construction firms that regularly use computer-aided design (CAD) need broadband to transmit schematics/blueprints efficiently; yet only about 10% have broadband. Farmers and construction companies that need equipment parts have a mission critical need for broadband to efficiently scan schematics and participate in auctions for spare parts; yet only about 10% have broadband. Some other small businesses, which need broadband, but tend to be dispersed from where broadband is being deployed include: residential rural doctors (which need bandwidth to view x-rays and CAT scans from hospitals and specialists), travel agents, and printing companies – to name some of the more obvious industries with largely unmet broadband needs. This suggests a **broadband investment cleave that could advantage: large/mid cap over small/micro cap companies;** concentrated/geographically-clustered industries over fragmented and dispersed industries; and high-rent industries over low rent industries. **(3) Home-to-Office Telecommuting Hindered:** To remain a proprietary network, cable broadband networks have been designed to prevent cable customers from being able to link at high speed with DSL—unless it is cable-provided DSL (a de minimis share of SMEs). This effectively prevents a cable modem telecommuter working from home from linking at high speed into their office's DSL network. On a broader scale, it also prevents the creation of integrated suburban-urban metro-wide high-speed networks. This is another hidden drag on future productivity growth. **(4) Broadband Job Flight:** Increasingly states and localities are realizing that broadband is a mission critical utility for business and a core factor in attracting or keeping businesses in a locality or state. Broadband increasingly is a prerequisite for growth. ***This has positive implications for relatively broadband rich REITs and negative implications for relatively broadband poor REITs.*** *Geo-economic data source: www.imapdata.com* • • • • •

Mr. Ruscilli.

THE WITNESS: Thank you, sir.

CHAIRMAN JACOBS: Staff.

MR. FORDHAM: Thank you, Mr. Chairman.

CROSS-EXAMINATION

BY MR. FORDHAM:

Q Mr. Ruscilli, we have had some rather extensive conversation on Issue 7, but let me try just one clarifying question and then we will try to move on.

Would it be BellSouth's position that in order for BellSouth to deliver at no cost or no charge to AT&T, would it be BellSouth's position that its originating traffic to AT&T's point of interconnection, AT&T must have a point of interconnection within the local calling area in which the call is originated and terminated, is that the only scenario in which there would be no charge to AT&T?

A Yes, that I can think of. I mean, what we are specifically talking about is when it is in two different local calling areas.

Q Let's skip to Issue 4 for a minute. In your mind is there a difference between elements being combined as opposed to elements being connected?

A Well, yes. Let me explain on that. And I apologize to the Commission and to staff for the -- Mr.

I said earlier, if we had two carriers that wanted to engage in splitting and they wanted to use the UNE-P loop, we would take the loop and we would take it over to whichever carrier had the DSLAM, it most likely would be the data carrier. And we would cross-connect from the main distribution frame over to that collocation space, let that carrier connect it to his DSLAM. Then he would feed back to us in that collocation space the voice portion. We would pick that up on a cross-connect and carry it back to our port.

Q So he would have to feed it back to BellSouth, he could not go directly to AT&T?

A I don't believe so. Mr. Milner would be the best one to ask that.

Q When Mr. Turner was testifying this morning he expressed some concerns of BellSouth terminating xDSL customer contracts where AT&T would win the voice customer. Are you aware of any instance where BellSouth has disconnected an xDSL customer under those conditions?

A No, I'm not aware of any.

Q Is there any language that you are aware of in BellSouth's contracts that would give BellSouth the right to terminate xDSL customer -- or xDSL service to a customer because of the customer's switch of voice providers?

A I'm not aware of any language, no, sir.

MR. FORDHAM: Staff has no further questions, Mr. Chairman.

COMMISSIONER PALECKI: Mr. Chairman, I have just a few.

CHAIRMAN JACOBS: Go ahead.

COMMISSIONER PALECKI: In your testimony you talk about that measuring competition based solely on UNEs is misguided. And you talk about three prongs, the two others being building facilities and resale. Would a measurement of competition using either of these other two prongs yield a different result? What would our report card be in the State of Florida?

THE WITNESS: Well, I don't know the actual numbers in the State of Florida. But you have got three ways for ALECs to compete, either with resale, just simply reselling what BellSouth has, and I'm sure a good bit of that goes on today. Or they could use the UNEs, either combine them themselves or switch as is with the UNE platform, and I'm sure that goes on today, too. I don't know any specifics on numbers. And then the third area of competition was where you would have direct facility-based competition where a carrier such as AT&T would have its own switch and its own wire or glass in the ground. And some of that is certainly going on today, I think, in the

October 1, 2001

Dear valued customer,

We are writing to inform you that we will no longer be able to provide BellSouth® FastAccess® Internet Service on your telephone line.

BellSouth FastAccess DSL service is only available where facilities permit. In order to provide this service, BellSouth must have access to the high frequency spectrum of your telephone line. Our records show a telecommunications provider other than BellSouth currently has access to this spectrum. As a result, **your FastAccess DSL service will be disconnected on November 1, 2001.** If you have any questions regarding your telephone line, please contact your local service provider.

In order to minimize any inconvenience to you, we would like to offer you **1 FREE month of dial-up service from BellSouth® Internet Service.** The monthly rate for unlimited dial-up service from BellSouth Internet Service will be $20.95 after your first month. Please call 1-877-574-8832 between 9:00 AM and 5:00 PM Monday through Friday before November 1, 2001 if you would like to take advantage of this offer and sign up for dial-up service.

It has been our pleasure to serve you. We hope you will continue to give us the opportunity to serve your telecommunications needs.

Sincerely,

BellSouth Internet Services
Customer Service

Frequently Asked Questions

What is the connection between BellSouth Internet Services and my local telecommunications service provider?
Your local provider has access to the spectrum that BellSouth Internet Services uses to provide FastAccess service.

How will this impact my current local phone service?
This should not impact your current local phone service. Only your FastAccess service will be disconnected.

What does "facilities" mean?
"Facilities" refers to the BellSouth network. FastAccess service is only available where BellSouth has access to the high-frequency spectrum on a telephone line.

What does "high frequency spectrum" mean?
A telephone line can support a wide range of frequencies. Voice service is provided on the lower frequency range, usually between 300 hertz and 3000 hertz. DSL service is provided on the higher frequency range, usually over 20,000 hertz.

What does this letter really mean to me?
Your BellSouth FastAccess Internet Service will be disconnected on 11/1/01 and we would like to offer you the opportunity to convert to our dial-up Internet service. If you decide to convert, your first month of dial-up service from BellSouth Internet Service will be free.

Why are you disconnecting my FastAccess service?
BellSouth FastAccess DSL service is only available where facilities permit. In order to provide this service, BellSouth must have access to the high frequency spectrum of your telephone line. Our records show a telecommunications provider other than BellSouth currently has access to this spectrum.

What is included with BellSouth Internet Service?
You'll get reliable dial-up connections, free 24/7 live technical support, a customizable home page, 5 e-mail boxes, Web mail access and 10 MB of personal Web space.

Cambridge, Massachusetts 02142

(617) 621-2615
(617) 621-0336 (fax)
william.taylor@nera.com

Dr. Taylor received a B.A. magna cum laude in Economics from Harvard College, an M.A. in Statistics and a Ph.D. in Economics from the University of California at Berkeley. He has taught economics, statistics, and econometrics at Cornell and the Massachusetts Institute of Technology and was a post doctoral Research Fellow at the Center for Operations Research and Econometrics at the University of Louvain, Belgium.

At NERA, Dr. Taylor is a Senior Vice President, heads the Cambridge office and is Director of the Telecommunications Practice. He has worked primarily in the field of telecommunications economics on problems of state and federal regulatory reform, competition policy, terms and conditions for competitive parity in local competition, quantitative analysis of state and federal price cap and incentive regulation proposals, and antitrust problems in telecommunications markets. He has testified on telecommunications economics before numerous state regulatory authorities, the Federal Communications Commission, the Canadian Radio-Television and Telecommunications Commission, federal and state congressional committees and courts. Recently, he was chosen by the Mexican Federal Telecommunications Commission and Telmex to arbitrate the renewal of the Telmex price cap plan in Mexico. Other recent work includes studies of the competitive effects of major mergers among telecommunications firms and analyses of vertical integration and interconnection of telecommunications networks. He has appeared as a telecommunications commentator on PBS Radio and on The News Hour with Jim Lehrer.

He has published extensively in the areas of telecommunications policy related to access and in theoretical and applied econometrics. His articles have appeared in numerous telecommunications industry publications as well as *Econometrica*, the *American Economic Review*, the International *Economic Review*, the *Journal of Econometrics*, *EconometricReviews*, the *Antitrust Law Journal*, *The Review of Industrial Organization*, and *The Encyclopedia of Statistical Sciences*. He has served as a referee for these journals (and others) and the National Science Foundation and has served as an Associate Editor of the *Journal of Econometrics*.

EDUCATION

UNIVERSITY OF CALIFORNIA, BERKELEY
Ph.D., Economics, 1974

UNIVERSITY OF CALIFORNIA, BERKELEY
M.A., Statistics, 1970

HARVARD COLLEGE
B.A., Economics, 1968
(Magna Cum Laude)

EMPLOYMENT

NATIONAL ECONOMIC RESEARCH ASSOCIATES, INC. (NERA)
1988- Senior Vice President, Office Head, Telecommunications Practice Director. Dr. Taylor has directed many studies applying economic and statistical reasoning to regulatory, antitrust and competitive issues in telecommunications markets. In the area of environmental regulation, he has studied statistical problems associated with measuring the level and rate of change of emissions.

BELL COMMUNICATIONS RESEARCH, INC. (Bellcore)
1983-1988 Division Manager, Economic Analysis, formerly Central Services Organization, formerly American Telephone and Telegraph Company. While at Bellcore, Dr. Taylor performed theoretical and quantitative research focusing on problems raised by the implementation of access charges. His work included design and implementation of demand response forecasting for interstate access demand, quantification of potential bypass liability, design of optimal nonlinear price schedules for access charges and theoretical and quantitative analysis of price cap regulation of access charges.

BELL TELEPHONE LABORATORIES
1975-1983 Member, Technical Staff, Economics Research Center. Performed basic research on theoretical and applied econometrics, focusing on small sample theory, panel data and simultaneous equations systems.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Fall 1977 Visiting Associate Professor, Department of Economics. Taught graduate courses in econometrics.

CENTER FOR OPERATIONS RESEARCH AND ECONOMETRICS
Université Catholique de Louvain, Belgium.

1974-1975 Research Associate. Performed post-doctoral research on finite sample econometric theory and on cost function estimation.

CORNELL UNIVERSITY
1972-1975 Assistant Professor, Department of Economics. (On leave 1974-1975.) Taught graduate and undergraduate courses on econometrics, microeconomic theory and principles.

MISCELLANEOUS

1985-1995 Associate Editor, *Journal of Econometrics*, North-Holland Publishing Company.
1990- Board of Directors, National Economic Research Associates, Inc.
1995- Board of Trustees, Treasurer, Episcopal Divinity School, Cambridge, Massachusetts.

MIT Economist Says Iowa Consumers Will Benefit From Qwest's Re-entry into Long-Distance Business

Predicts annual savings of more than $30 million, increased competition

DES MOINES -- Iowa consumers could save at least $30 million a year when Qwest re-enters the long distance market in the state, according to a new study by a noted economist.

Professor Jerry A. Hausman, Director of the Massachusetts Institute of Technology (MIT) Telecommunications Economics Research Program, recently completed a detailed study of the effect of long-distance entry by Bell Operating Companies (BOCs), such as SBC in Texas and Verizon in New York (executive summary attached). Hausman found that consumers saved 10-20% on long distance in the first year after BOC entry, compared to changes in states without BOC entry. In addition, he found that local phone bills in those states where the BOC had entered the long distance market had decreased by around 4% and that the number of consumers purchasing services from Competitive Local Exchange Carriers (CLECs) increased significantly after BOC entry.

Using Hausman's formula to calculate savings for the average Iowa residential and small business customer, the projected impact of Qwest's re-entry into the Iowa long-distance market will be significant.

The average Iowa residential customer will save nearly $35 a year in local and long distance charges, with high-volume users seeing higher savings. The average Iowa small business will save more than $40 a year, with high-volume business customers again seeing greater savings.

"This is good news for Iowa consumers," said Iowa Competitive Telecommunications Coalition (ICTC) Executive Director Bill Menner. "It proves what we've been saying all along—that increased competition will help lower phone bills for average Iowans."

The Coalition was created to give the state's consumers a voice in advocating for greater competitive choice in communications service. The Coalition's members include residential consumers, associations, business leaders and communications companies such as Qwest. The Coalition believes that increased competition will deliver lower prices, better service and advanced technology in all sectors of the communications marketplace, local, long-distance, wireless, high-speed Internet and cable.

For more information, visit the Coalition website at www.iacompetition.org.

Effect of BOC Entry into InterLATA and IntraLATA Service in New York and Texas

Executive Summary

Background

In an effort to quantify the consumer benefit of BOC entry into the long distance business, Hausman undertook the most complete effort to date to compare local and long distance telephone rates pre- and post-BOC long distance entry.

Hausman obtained a sample of local and long distance phone bills in New York, Pennsylvania, Texas and California, using them to compare pre-entry and post-entry changes in prices in a state where entry occurred to the change in prices over the same time period in a state where no entry occurred. New York was compared to Pennsylvania and Texas was compared to California. The comparison states were chosen because of similarities such as LATAs, BOC ownership of the ILEC and geography.

In an effort to quantify the effect of BOC entry on the development of local service competition, Hausman tracked the percentage of households using a Competitive Local Exchange Carrier (CLEC) rather than the BOC during the pre- and post-entry periods.

Results

New York/Pennsylvania

- In the pre-entry period, prices and monthly fees in New York and Pennsylvania were quite similar.
- Prices fell between the pre-entry and post-entry periods in both states, Pennsylvania peak-calling prices fell by 11%. Hausman found that much of this price decease was associated with changes made by the FCC in long distance access tariffs.
- Prices in New York decreased relative to Pennsylvania. The data demonstrated that BOC entry had a substantial price-reducing effect on long-distance prices in New York. Prices in New York were 9-14% lower than they would have been in the absence of BOC entry.
- In New York, the average consumer would have paid a long-distance bill of $18.41 in the pre-entry period and $16.63 in the post-entry period, for a savings of $1.78 or 11%.
- In Pennsylvania the average consumer would have paid $19.25 in the pre-entry period and $18.89 in the post entry period, for a savings of $0.36 or 2%. Thus, in New York, the average consumer would have saved an additional $1.42 or 9% relative to Pennsylvania.
- In New York after BOC entry, Hausman found a decrease in basic local service bills of 6.6%.
- Finally, Hausman found that CLECs share of the local service market in New York increased from 3.5% to 17.2% after BOC entry. This change was much larger than the CLEC increase of 1.1% in Pennsylvania where BOC entry has not occurred.

Texas/California

- In the pre-entry period, Texas had substantially higher long-distance prices than California. The average monthly fees in the two states were roughly the same.
- Prices fell between the pre-entry and post-entry periods in both states, California peak-calling prices fell by 8%. Hausman found that much of this price decease was associated with changes made by the FCC in long distance access tariffs.
- Prices in Texas decreased relative to California. The data demonstrated that BOC entry had a substantial price-reducing effect on long-distance prices in Texas. Prices in Texas were 19-24% lower than they would have been in the absence of BOC entry.
- In Texas, the average consumer would have paid a long-distance bill of $16.58 in the pre-entry period and $13.54 in the post-entry period, for a savings of $3.04 or 22%.

- In California the average consumer would have paid $12.73 in the pre-entry period and $12.83 in the post entry period, for a loss of $0.10 or 1%. Thus, in Texas, the average consumer would have saved an additional $3.14 or 23% relative to California.
- In Texas after BOC entry, Hausman found a decrease in basic local service bills of 2.8 percent.
- Finally, Hausman found that CLECs share of the local service market increased from 8% to 15.1% in Texas after BOC entry. This change was much larger than the CLEC increase of 0.9% in California where BOC entry has not occurred.

FCC Form 477, Instructions for March 1, 2001 Filing (of data as of 12/31/00)
Approved by OMB 3060-0816
Estimated Average Burden Hours Per Response: 11 Hours

Instructions for the Local Competition and Broadband Reporting Form (FCC Form 477)

I. PURPOSE

The FCC Form 477 collects information on the deployment of broadband, local telephone and mobile telephony services from providers of these services. Data obtained from this form will be used to describe competition for local telecommunications services and deployment of broadband services. *See Local Competition and Broadband Reporting*, Order, FCC 00-114 (rel. March 30, 2000) for additional information about this collection.

II. WHO MUST FILE THIS FORM?

Three types of communications service providers must file this form:

- **Providers of Broadband Services:**

  Facilities-based providers of broadband services (including incumbent and competitive LECs, cable companies, fixed wireless providers, terrestrial and satellite mobile wireless providers, MMDS providers, utilities, and others) must complete and file the applicable portions of this form for **each state** in which they provide **250 or more** "full or one-way broadband" lines (or wireless channels) or provide "full or one-way broadband" service to **250 or more** end user consumers. The applicable portions of the form are: 1) the Cover Page; 2) Part I; 3) Part IV (if necessary); and Part V.

  Note: an entity is considered a "facilities-based broadband provider" if it provides broadband services over facilities that it owns or provisions/equips as broadband. More specifically, "facilities-based providers" include entities that provide broadband services over their own "local loop" facilities connecting to end users, or over unbundled network elements (UNEs), special access lines, and other leased lines and wireless channels that they obtain from other entities and equip as broadband.

- **Providers of Local Telephone Services:**

  Incumbent and competitive local exchange carriers (LECs) must complete and file the applicable portions of the form for **each state** in which they provide **10,000 or more** "voice-grade equivalent lines (or wireless channels)." For purposes of this threshold, filers need only consider the number of voice-grade equivalent lines (or wireless channels) that would be reported in Line D.II-7(a) of the form. The applicable portions of the form are: 1) the Cover Page; 2) Part II; 3) Part IV (if necessary); and Part V.

- **Providers of Mobile Telephony Services:**

Facilities-based providers of mobile telephony services (see 47 C.F.R. 20.15(b)(1)) must complete and file the applicable portions of this form for **each state** in which they serve **10,000 or more** mobile telephony subscribers. Firms providing mobile telephony services using spectrum obtained via lease or other agreement with a Band Manager must also complete the applicable portions of this form. The applicable portions of the form are: 1) the Cover Page; 2) Part III; 3) Part IV (if necessary).

Note: Mobile telephony is defined as real-time, two-way switched voice service that is interconnected with the public switched network using an in-network switching facility that enables the provider to reuse frequencies and accomplish seamless handoff of subscriber calls.

Important Note for All Providers about Calculating Reporting Thresholds: Reporting thresholds are calculated based collectively on all commonly-owned and commonly-controlled affiliates operating in a given state. [See 47 U.S.C. § 153(1) (establishing a 10% equity interest as indicia of ownership).] That is, a provider must report for each state in which it and all affiliates collectively meet reporting thresholds. Such affiliates are, nevertheless, permitted to file forms for such states either combined or separately -- at their discretion.

III. LINE-BY-LINE INSTRUCTIONS FOR COMPLETING FORM FCC 477

A. Cover Page -- Name and Contact Information (All Filers)

Line 1: Select from the drop-down menu the applicable filing status.

Line 2: Provide the name of the entity whose data is contained in the form.

Line 3: Select the category that best describes the type of technology that you use to provide services. Choose from Cable Coaxial, Fiber, Fixed Wireless, Mobile Wireless, Reseller, Satellite, Wireline Local Exchange Carrier, or Other.

Line 4: In general, you can combine operations in a state or report them separately. However, entities that are, or are affiliated with, an incumbent LEC must complete and file separate forms for their incumbent LEC and non-incumbent LEC operations. All filers should indicate whether this filing is for an incumbent LEC filing or a non-incumbent LEC filing.

Line 5: You must provide a single name, such as a holding company name, so that all affiliated or commonly operated companies can be identified. See "Important Note for All Providers about Calculating Reporting Thresholds," above, for more information on which companies should be considered to be affiliated or commonly-controlled. The Excel 97 spreadsheet version of the form (preferred) has a drop down box with standardized names. The Lotus 123 spreadsheet version of the form has a list of standardized names. If your company's name is not in the list, enter a name in the space provided.

Line 6: File a separate form for each state in which you meet the filing threshold. In this line, indicate the state for which you are filing data. For this purpose, treat the District of Columbia, Puerto Rico, and the U.S. Virgin Islands as states. Voluntary submissions for American Samoa, Guam, and the Northern Mariana Islands may also be indicated on this line.

Line 7: Provide a contact name for the person who prepared this filing.

Line 8: Provide the telephone number and e-mail address for the contact person listed in Line 7.

Line 9: File a revised form if you discover mistakes. Use Line 9 to indicate whether this filing is an original or a revised filing.

Line 10: Indicate whether you request non-disclosure of some or all of the information reported in the Form 477. You may request non-disclosure if you believe that this information is privileged and confidential and that public disclosure of such information would likely cause substantial harm to the competitive position of the filer. Note that if you request non-disclosure of some or all of the data, you must also file a public version of the form with such information redacted, as explained below in Sections IV-B and IV-C of the instructions.

Line 11: If you requested non-disclosure in Line 10, indicate whether the file is your complete or redacted filing. See Sections IV-B and IV-C of the instructions for information on preparing a redacted file.

B. Part I: Broadband (Broadband Providers Only)

INCLUDE in Part I: In this section, broadband providers report information about their **full and one-way broadband lines/wireless channels** (for purposes of this section "lines") in service to end users. **Full broadband lines** are lines with information carrying capability in excess of 200 Kbps in both directions, simultaneously. **One-way broadband lines** are lines with information carrying capacity in excess of 200 Kbps in one direction (typically downstream) and less than or equal to 200 Kbps in the other direction (typically upstream). For purposes of this information collection, the information carrying capacity of a line or wireless circuit is the customer's authorized maximum usage ("speed") on that line or wireless circuit. Filers must report broadband lines that they provide over their own "local loop" facilities connecting to end users as well as those provided over UNEs, special access lines, and other leased lines that the filer obtains from another entity and equips as broadband.

EXCLUDE in Part I: Broadcast cable television service and other multi-channel video programming; video-on-demand type service unless it is bundled with Internet-type access or uses Internet-type delivery protocols; and channelized services which restrict the customer to both transmitting and receiving data at 200 Kbps or less. Exclude lines that connect two locations of the same customer (not to be reported anywhere on FCC Form 477) and special access and private line services that you believe are used for exchange telephone service (to be reported in Part II-C). Where a provider does not know whether a high capacity line or wireless channel is being used as a broadband line or as a telephone service line, it should report that line in Part II, on Line C.II-6. If you provide a line to another filer who is likely to include services provided over that line in its own report (for example, because the other filer equips the line or UNE as broadband), then that line should be reported in Part II-C of your filing.

Report broadband lines on Lines I-1 through I-8 based on the technology employed by the part of the line that actually connects to the end user's premises. If different technologies are used in different directions, then report the line based on the direction for which you provide the greatest bandwidth.

Lines

Important note about categorizing services to provide line counts: In general, a single service offering should be reported in only one part of the form by a single reporter. In categorizing lines, base your response on the portion of the line or channel that connects to the end user's premises and the type

of service that is provided. **Count only lines that are in service**, including lines that you provide to end users and lines that you provide to companies that in turn use those lines to provide broadband or telephone service to end users.

Line A.I-1: Report the number of broadband lines/wireless channels used to provide asymmetric xDSL service.

Line A.I-2: Report the number of broadband lines/wireless channels provided over other traditional wireline facilities including symmetric xDSL service.

Line A.I-3: Report the number of broadband lines/wireless channels provided over coaxial carrier systems (including hybrid fiber-coaxial systems).

Line A.I-4: Report the number of broadband lines/wireless channels provided over optical carrier (fiber to the end user).

Line A.I-5: Report the number of broadband lines/wireless channels provided over satellite.

Line A.I-6: Report the number of broadband lines/wireless channels provided over terrestrial fixed wireless.

Line A.I-7: Report the number of broadband lines/wireless channels provided over terrestrial mobile wireless.

Line A.I-8: Report the number of broadband lines/wireless channels provided over all other technologies.

Columns

Note about Reporting Percentage Breakouts: Parts I, II, and III of Form 477 direct filers to provide percentages breakouts for specific line/wireless channel counts. If disaggregated counts exist for another purpose, then these must be used to calculate the requested percentage breakouts. However, filers are not expected to calculate percentages based on exhaustive counts performed solely for this task. Rather, where disaggregated counts do not exist, filers may provide good faith estimates of percentages based on the best information available to the filer. For example, if there is a pricing distinction between services provided to residential, small business and large business customers, then billing information should be used to estimate the percentage of lines provided to residential and small business customers. In the absence of such counts, however, filers should rely on studies done for other purposes, such as marketing and business plan information, demographic data, etc. A filer should conduct limited special studies only in the event that it cannot provide estimates that it reasonably expects to be accurate within plus or minus five percentage points.

Column (a): Report the number of total one-way and full-broadband lines/wireless channels in service that are used to provide service for each of the lines described above (Lines A.I-1 through A.I-8).

Column (b): Report the percentage of total lines from column (a) that are used by residential and small business customers (as opposed to large business, institutional, or other customers). In Part I, classify service provided to customers as residential and small business if they take broadband services normally associated with residential customers. Such lines could be classified as residential and small business

based on marketing information, such as demographics associated with the geographic area where the lines are provided.

Column (c): Report the percentage of broadband lines and wireless channels from column (a) that are provided over your own **local loop** facilities connecting to the end user's premises. Count as your own such facilities, those facilities that you actually owned as well as facilities that you obtained the right to use from other entities as dark fiber or satellite transponder capacity (and that you used as part of your own system). Do **not** include, in column (c), broadband lines that you provided over UNEs, special access lines, and other leased lines that you obtained from another entity and equipped as broadband.

Column (d): Report the percentage of total lines from column (a) that are provided – that is, billed – directly to end users by the filer. End users are residential, business, institutional and government customers who use the services for their own purposes and do not resell them to other entities. Classify lines/wireless channels as end-user lines if they are billed or marketed by your agents. For example, do not classify as end user, broadband lines/channels provided to Internet Service Providers that are incorporated into their premium Internet service options for provision to their end-user consumers.

Column (e): Report the percentage of total lines from column (a) that deliver to the end-user consumer greater than 200 Kbps in both directions, simultaneously.

Column (f): Report the percentage of total lines from column (a) that deliver to the end-user consumer greater than 2 Mbps in both directions, simultaneously. Note that every line reported in this column would, by definition, also be reported in column (e). Thus, column (f) should not contain a greater percentage than column (e).

C. Part II: Wireline and Fixed Wireless Local Telecommunications (Local Telephone Service Providers Only)

INCLUDE in Part II: Report all **voice-grade equivalent local exchange service lines** and all lines that are used for exchange access services that you do not report in Part I. Include lines you provide using wireline as well as fixed wireless technologies. Include lines (or wireless channels) that you reported as broadband in Part I, but that your customer can switch between broadband and local exchange or exchange access service without you changing how the line (or wireless channel) is provisioned.

EXCLUDE in Part II: Do **not** report in Part II lines not yet in service, lines used for interoffice trunking, lines that connect two locations of the same customer, company official lines, or lines that you provide as a broadband service reported in Part I. Do not report in Part II transport lines between your switching center and Internet protocol, ATM or circuit switched networks, where you already are reporting the portion of the line between the end user and your switching center, even if you multiplexed those lines and provided higher capacity lines between your switching center and those networks.

Note for reporting channelized service: In Part II-A and Part II-B, providers are to report voice-grade equivalent lines. Count as one voice-grade equivalent line: traditional analog POTS lines, Centrex-CO extensions, and Centrex-CU trunks. Count lines based on how they are charged to the customer rather than how they are physically provisioned. For example, count Basic Rate Integrated (BRI) Services Digital Network (ISDN) lines as two voice-grade equivalent lines. Report 8 voice-grade equivalent lines if a customer buys 8 trunks that happen to be provisioned over a DS1 circuit. If a customer buys a DS1 circuit that is provided as channelized service, report 24 voice-grade equivalent lines, even if there is

some indication that the customer is only using 8 of the derived lines. Lines reported in Part II, section C, however, should **not** be reported in voice-grade equivalents, but should reflect actual circuit counts. **Note for competitive LECs providing local exchange service over hybrid fiber-coaxial cable television systems:** If you cannot determine the number of lines from your records, you are permitted to report the number of subscribers.

Lines

Important note about categorizing services to provide line counts: see this note, above, at page 3.

In **Lines A.II-1** (service provided to end users) and **Lines B.II-2 through B.II-3** (service provided to other carriers), report voice-grade equivalent lines (or wireless channels) used to provide voice telephone service. By "voice telephone service," we mean local exchange or exchange access services that allow end users to originate and terminate local telephone calls on the public switched network, whether used by the end user for voice telephone calls or for other types of calls carried over the public switched network (for example, lines used for facsimile equipment). Filers report voice telephone service in terms of voice-grade equivalent lines or wireless channels. Thus, a voice-grade equivalent line (or wireless channel) is a line or channel that directly connects an end user to a carrier and allows the end user to originate and terminate local telephone calls on the public switched network. Voice-grade equivalent lines include high capacity lines that are channelized to provide voice-grade service. See "Note for reporting channelized service," above, at page 5.

Line A.II-1: Report total voice-grade equivalent lines/wireless channels you provided directly to end-user consumers. Include lines provided to end users by your agents or under traditional marketing arrangements. For example, include lines provided to shared tenant service providers.

Line B.II-2: Report total lines/wireless channels you provided to other communications carriers under a Total Service Resale arrangement (i.e., provided pursuant to section 251(c)(4) of the Communications Act of 1934, as amended).

Line B.II-3: Report total lines/wireless channels you provided to other communications carriers under other resale arrangements.

In **Lines C.II-4 through C.II-6**, report the actual number of lines billed to the customer. Note that in Line C.II-6, the customer may be either an end user or another telecommunications carrier. Do not convert high capacity lines into voice-grade equivalent counts. Include high capacity lines that would meet the definition of broadband, but that are provided to another entity who is likely to report as broadband any services provided over those lines.

Line C.II-4: Report lines/wireless channels that you provided under a UNE loop arrangement, where you do **not** provide switching for the line. Include the high frequency portion of the loop if sold as a UNE.

Line C.II-5: Report lines/wireless channels that you provided under a UNE loop arrangement, where you also provide switching for the line.

Line C.II-6: Report special access lines that you do not provide as broadband and private lines that connect an end-user premise to a telecommunications carrier and that you do not provide as broadband.

Line D.II-7: Report the total lines/wireless channels reported in Lines A.II-1, B.II-2, and B.II-3.

Columns

Column (a): For **Lines A.II-1** (service provided to end users), **Lines B.II-2 through B.II-3** (service provided to other carriers), and **Line D.II-7** (total voice-grade equivalent lines in service), report voice-grade equivalent lines used to provide local exchange services. For **Lines C.II-4 through C.II-6** (UNEs, and special access and private lines not provided as broadband), report the number of lines or wireless channels (*i.e.*, **not** the voice-grade equivalent of those lines or wireless channels) that are used for exchange access services that you do not report in Part I.

Note: See note above, page 4, about reporting data on percentages.

Column (b): Report percentage of column (a) used for service billed to residential and small business customers. In Part II, classify lines provided to other carriers as residential and small business if the lines are ordered in quantities of fewer than four (4) voice-grade equivalent lines, if they are ordered as services rated as residential or small business, or based on marketing information, such as demographic information associated with the geographic areas where the lines are provided. Include as residential lines that you provide to a shared tenant service provider in an apartment building.

Column (c): Report percentage of lines and wireless channels in column (a) provided over your own **local loop** facilities connecting to the end user's premises. Count as your own such facilities, those facilities that you actually owned as well as facilities that you obtained the right to use from other entities as dark fiber or satellite transponder capacity (and that you used as part of your own system). Do **not** include, in column (c), lines provided over UNE loops that you obtained from another carrier.

Note for competitive LECs that own telephone switches: A competitive LEC should include, in column (c), a line for which it provided its own switching **only if** it also owned (as just discussed) the local loop connecting to the end user's premises.

Column (d): Report percentage of column (a) provided over UNE loops (including UNE loops obtained on a stand-along basis and also UNE loops obtained in combination with other UNEs).

Column (e): In column (e), **incumbent LECs** should report the percentage of column (a) that they offered through switching centers in which another carrier had at least one operational collocation arrangement ("ILEC COLO switching center"). **Other reporting carriers** should report in column (e) the percentage of column (a) that they provided through use of a collocation arrangement. Thus, a competitive LEC that provided lines on a pure resale basis would report 0% in column (e), even if some of its resold lines were served from incumbent LEC switching centers in which some other entity had a collocation arrangement. Also, a competitive LEC would **not** report in column (e) any line served by means of a combination of UNEs (e.g., "UNE-Platform") that allows the competitive LEC to avoid using a collocation arrangement to serve that line. Therefore, a competitive LEC's entry in column (e) logically cannot be larger than its entry in column (d).

Note: For the purposes of completing Part II, an "ILEC COLO switching center" is an incumbent LEC switching center in which one or more competitive LECs has an operational collocation arrangement as defined in 47 C.F.R. §51.5. A switching center is a location containing one or more switches. Do not consider separate three-digit telephone prefixes as separate switching centers. Consider a remote as a separate switching center if a competing carrier could obtain a UNE loop **only** at the remote switch rather than at the host switch. This definition of a switching center is different from wire center based definitions of switching centers, which include all remote switch locations as switching centers. If

collocation occurs only at a remote switch, treat all lines served at the remote as being provided at an ILEC COLO switching center and treat lines at the host switch as not being provided at an ILEC COLO switching center.

Column (f): For Line D.II-7, report percentage of column (a) carried over cable coaxial facilities used in the part of the line/wireless channel at the end user location.

Column (g): For Line D.II-7, report percentage of column (a) carried over fixed wireless facilities used in the part of the line/wireless channel at the end user location.

Column (h): For Line D.II-7, report percentage of column (a) carried over all other facilities, including but not limited to twisted copper pair, used in the part of the line/wireless channel at the end user location.

D. Part III: Mobile Local Telephone (Mobile Telephony Providers Only)

Line A. III-1: Report all mobile telephone subscribers served over your own facilities that give customers the ability to place or receive calls from the public switched telephone network. Include: satellite, cellular, and PCS telephone service & other terrestrial mobile services; and, units in service that combine voice telephone with other services. Report only mobile telephony subscribers that you serve using spectrum licenses you own or manage, and not subscribers that you serve via resale of another firm's facilities.

Note: Exclude mobile services that customers cannot use to directly place calls to subscribers of ordinary telephone service, such as dispatch services and one-way or two-way paging services. Also exclude voice services that permit communications between only a narrow range of locations such as automobile units that permit drivers to communicate only with a specific road service.

Column (a): Report the total number of subscribers, as described above, in the state. Count as a subscriber a mobile handset, car-phone or other activated voice unit that has a unique phone number and that can place and receive calls from the public switched network. Mobile telephony subscriber counts by state should be based on billing addresses, not area codes of telephone numbers provided to subscribers.

Column (b): Report the percentage of subscribers in column (a) that you bill directly to end users (as opposed to those units in service that were provided through resellers or distributors for pre-paid service).

E. Part IV: Explanations and Comments (All Filers, only if necessary)

Complete Part IV if you wish to furnish any explanatory information with your data. Filers should identify the Part and Line to which their comment applies in the columns provided.

F. Part V: Zip Code Listings (Broadband Providers and Local Telephone Service Providers)

Line V-1: Report the 5 digit Zip Codes -- for this state -- in which you provide service to end user locations.

Column (a): If you file broadband information in Part I, you must provide a list of Zip Codes in the

state in which you provide broadband service.

Column (b): If you file local exchange service information in Part II, then you must provide a list of Zip Codes in the state in which you provide local exchange service. Providers of mobile telephony services need not provide this information.

Note: These Zip Code lists should correspond to areas in which service is actually being used by customers, including "point Zip Codes" (i.e., a Zip Code assigned to a particular customer). The list should not include authorized territory in which you have no customers in service, planned build-out, location of facilities, etc. The list can be based on engineering information (such as maps showing actual service territory) or on billing information, such as the Zip Codes of actual customers. If the latter approach is selected, please review the resulting list and delete any Zip Codes which clearly are out of your service territory and which appear only because the billing address is likely different from the service address.

IV. GENERAL INFORMATION

A. Where and When to File

1. When to File

Service providers that meet the reporting thresholds must file the FCC Form 477 semi-annually:

- March 1st of each year: providers must file data as of December 31 of the preceding year.
- September 1st of each year: providers must file data as of June 30 of the same year.

2. Where to File

All filers must mail the Certification Statement and 3.5 inch floppy diskette(s), or compact disk, containing your completed Form 477(s) to: Industry Analysis Division, Rm. 6-A220, 445 12th St., S.W., Washington, D.C. 20554. The Certification Statement is the single page that constitutes Section V of these Instructions.

B. How to File

1. Preparation of Data Files

You must file your local competition and broadband deployment data using the electronic version available at http://www.fcc.gov/formpage.html or by contacting International Transcription Services (ITS) at (202) 857-3800. Form 477 will change over time, so filers must obtain the latest version of this spreadsheet each filing period.

The electronic version of Form 477 is provided in two formats: Excel 97 and Lotus 123 Version 5. The Excel 97 version contains drop-down boxes and some edit checks. The Lotus version should be usable in most spreadsheet programs. **Once you complete a filing, rename the file in accordance with instructions provided below.** If you wish to assert confidentiality for any information provided in the filing, you must provide a redacted version of the file, renamed in accordance with the instructions provided below. If you do not provide a redacted version of the file using the proper file names, you risk having confidential information released.

Note: If you are required to complete a particular Part of Form 477, answer all the questions within that Part; if a particular question in that Part does not apply to you, enter the number "0" (zero) as your response. For non-zero entries, enter all digits of the number. You may not move cells, insert or delete rows, or change the validation or formatting characteristics of any cell. **If the FCC cannot load your files into its databases as a result of modifications to the file, the file will be returned to you for correction and resubmission.** When a filer submits multiple Form 477s, the filer may place multiple spreadsheet files on a single 3.5 inch IBM format floppy diskette, or on a compact disk. However, filers must save each Form 477 as a separate spreadsheet file. Do not submit multiple Form 477 worksheets within a single Excel 97 workbook or as multiple levels in a single Lotus file.

Each file name must adhere to the following convention:

SST#Hyearname.XLS or SST#Hyearname.WK4; where:

SS is the two letter post office abbreviation for the state.

T is a single character representing principal filing type. Since incumbent LEC (ILEC) data must be filed separately from non-ILEC data, this convention distinguishes the files. In addition, this character is used to distinguish refiled and redacted data. Use the following codes:

- A = original filing for non-ILEC operations
- B = original filing for ILEC operations
- C = original redacted filing for non-ILEC operations
- D = original redacted filing for ILEC operations
- E = revised filing for non-ILEC operations
- F = revised filing for ILEC operations
- G = revised redacted filing for non-ILEC operations
- H = revised redacted filing for ILEC operations

\# is a "sequence number" (i.e., 1, 2, 3, etc.) to be used to differentiate what would otherwise be identically named files when the file names are constructed according to the convention specified here. If no such redundancy of file names occurs, use the number "1" in place of the character "#".

H is the half of year, use:
"J" for data as of June 30
"D" for data as of December 31

year is the last two digits of the year in which the filing is being made (e.g., 2000 = 00).

name is the name identified on Line 2 of the Cover Page of Form 477. If you use software that limits file names to 8 characters plus a three character file extension, then use a one-character name abbreviation and identify that name in the Certification Statement.

Example: NCB1J00BellSouth.XLS

2. Additional Directions for Filing

Filers must mail the Certification Statement (which is the single page that constitutes Section V of these Instructions) and 3.5 inch floppy diskette(s), or compact disk, containing your completed Form 477(s) to: Industry Analysis Division, Rm. 6-A220, 445 12th St., S.W., Washington, D.C. 20554. **The Certification statement must be signed in ink by an officer of the filer of one of the legal entities whose data is included.** An officer is a person who occupies a position specified in the articles of incorporation (or partnership agreement), and would typically be president, vice president for operations, vice-president for finance, comptroller, treasurer or a comparable position. If the filer is a sole proprietorship, the owner must sign the certification.

C. Requesting Confidentiality

Some information from the FCC Form 477 may be made publicly available. Any respondent to this form may submit a request that information on the FCC Form 477 not be made routinely available for public inspection by so indicating on Line 10 of the form and on the Certification Statement. See also 47 C.F.R. §§0.457, 0.459, 1.7001(d), 43.11(c); *Examination of the Current Policy Concerning the Treatment of Confidential Information Submitted to the Commission*, FCC 98-184 (rel. Aug. 4, 1998). Respondents seeking confidential treatment should provide a separate floppy diskette, or compact disk, containing a redacted version of all files. Note that these redacted files must be given different names from the complete filings, as specified above. Redacted data should replaced with "xxxxxx" in the redacted data file.

D. Obligation to File Revisions

Filers must submit a revised form if the filer discovers a significant error in the data. For counts, a difference amounting to 5 percent of the filed number must be refiled. For percentages, a difference of 5 percentage points is significant and must be refiled.

Revisions should consist of a certification statement and one or more electronic files. Carriers should refile all data for a state if one or more data element must be revised. A refiled Form 477 spreadsheet should contain all appropriate data for the state, not just the corrected figures. Note that files containing revisions must be given different names from the original filings, as specified above, Section IV-B.1.

E. Compliance

Service providers that are required to file the Form 477 but fail to do so may be subject to the enforcement provisions of the Communications Act and any other applicable law.[1]

[1] 47 U.S.C. §§ 502, 503.

V. CERTIFICATION STATEMENT

FCC Form 477 Local Competition and Broadband Reporting
CERTIFICATION STATEMENT

Mail to Industry Analysis Division
Rm. 6-A220
445 12th St, SW
Washington, D.C. 20554

This filing is an (check one) ___original filing ___revised filing

Organization name: _____

Number of files provided for this reporting period: _____

VI. DISCLOSURE, PRIVACY ACT, PAPERWORK REDUCTION ACT NOTICE

The Privacy Act of 1974 and the Paperwork Reduction Act of 1995 require that when we ask you for information, we must first tell you our legal right to ask for the information, why we are asking for it, and how it will be used. We must also tell you what could happen if we do not receive it and whether your response is voluntary, required to obtain a benefit, or mandatory under the law. See Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C. § 552a (e)(3), and the Paperwork Reduction Act of 1995, P.L. No. 104-13, 44 U.S.C. § 3501, *et seq.*

Our legal right to ask for this information is sections 1.7000-1.7002, 20.15, 43.01, 43.11 of the Federal Communications Commission's rules require. 47 C.F.R. §§ 1.7000-1.7002, 20.15, 43.01, 43.11. Your response is mandatory.

This collection of information stems from the Commission's authority under Sections 4(i), 201, 218-220, 251-252, 303(r), 332, and 403 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 154(i), 201, 218-220, 251-252, 303(r), 332, and 403, and section 706 of the Telecommunications Act of 1996. The data in the worksheet will be used to monitor the deployment of broadband services and the development of local telephone service competition. Selected information provided in the worksheet will be made available to the public in a manner consistent with the Commission's rules and orders.

We have estimated that each response to this collection of information will take, on average, 11 hours. Note that many companies will file multiple responses and that this estimated average reflects the fact that many companies will be required to file only a single service count that should be readily available from internal company records. Our estimate includes the time to read the instructions, look through existing records, gather and maintain the required data, enter the data in a Form 477 spreadsheet, prepare a floppy diskette, or compact disk, and certification for each state, and actually file the report. If you have any comments on this estimate, or how we can improve the collection and reduce the burden it causes you, please write the Federal Communications Commission, AMD-PERM, Washington, D.C. 20554, Paperwork Reduction Project (3060-0855). We also will accept your comments via the Internet if you send them to jboley@fcc.gov. Please DO NOT SEND COMPLETED WORKSHEETS TO THIS ADDRESS.

Remember -- You are not required to respond to a collection of information sponsored by the Federal government, and the government may not conduct or sponsor this collection, unless it displays a currently valid Office of Management and Budget (OMB) control number. This collection has been assigned an OMB control number of 3060-0816.

The Commission is authorized under the Communications Act of 1934, as amended, to collect the personal information we request in this form. If we believe there may be a violation or potential violation of a statute or a Commission regulation, rule, or order, your filing may be referred to the Federal, state, or local agency responsible for investigating, prosecuting, enforcing, or implementing the statute, rule, regulation, or order. In certain cases, the information in your worksheet may be disclosed to the Department of Justice, court, or other adjudicative body when (a) the Commission; or (b) any employee of the Commission; or (c) the United States government, is a party to a proceeding before the body or has an interest in the proceeding.

Reporting entities failing to file the worksheet in a timely fashion may be subject to penalties under the Communications Act, including Sections 502 and 503 (b).

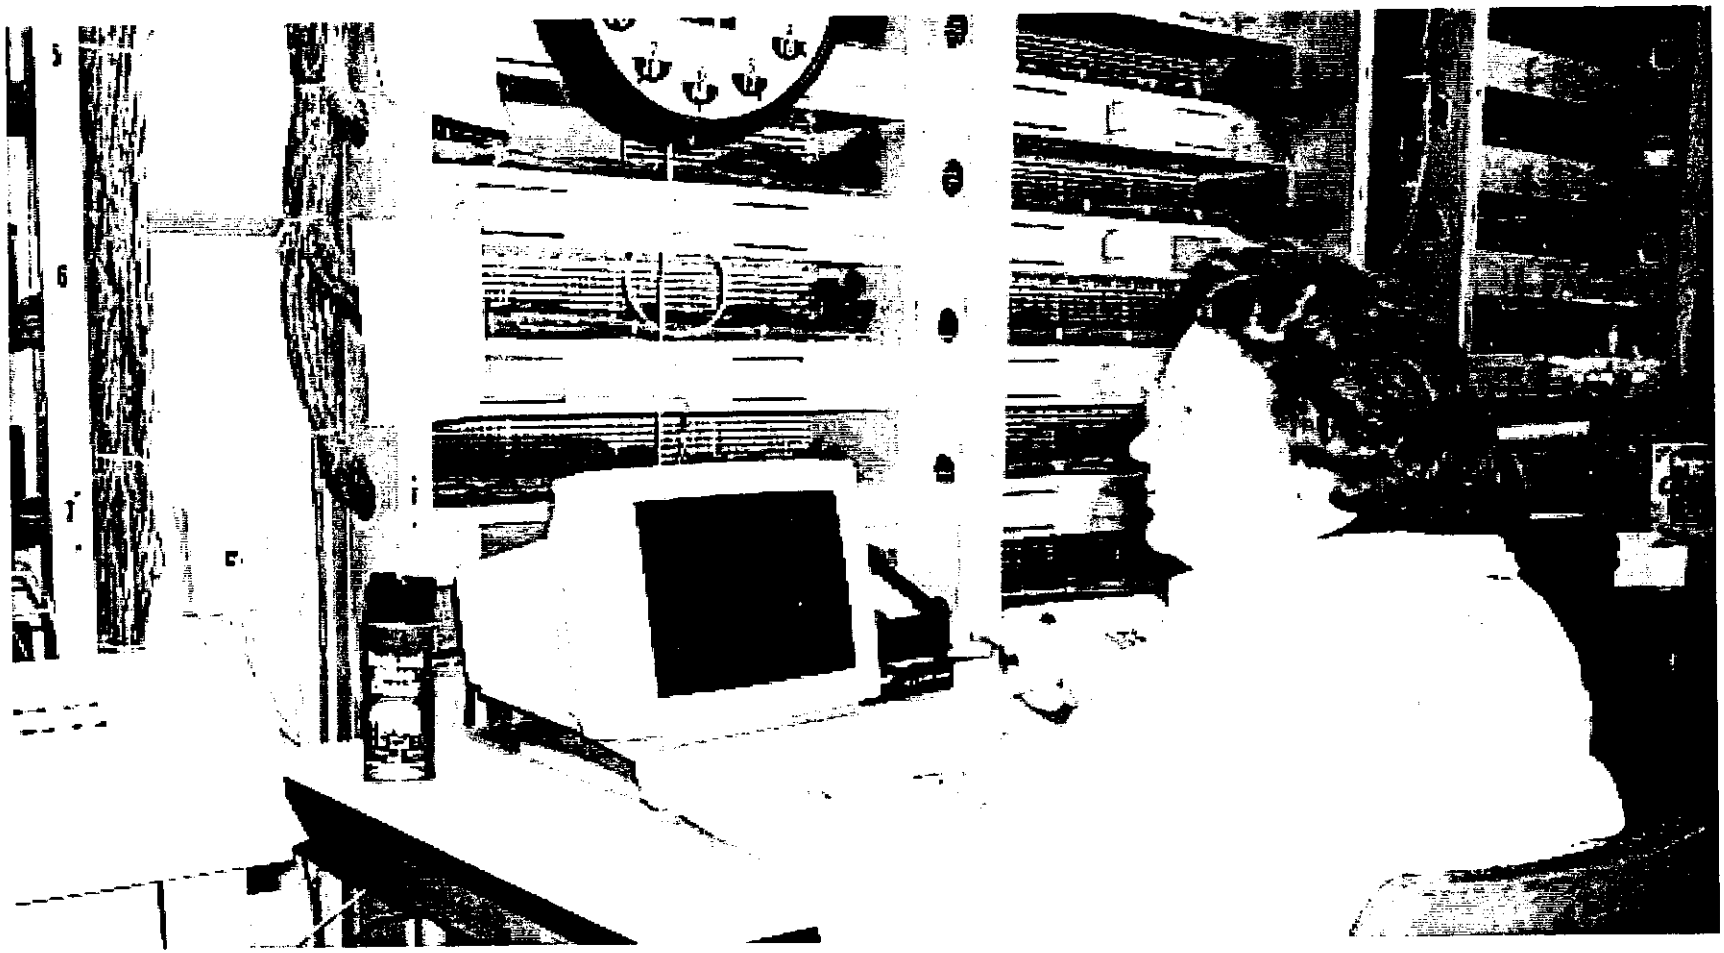
WKM-2
LOOP CUTOVER PROCESS

LOOP CUTOVER PROCESS

Step 1: Technician gets call to begin cutover. Asks for cable pair information.

LOOP CUTOVER PROCESS

Step 2: Technician types in cable pair number to obtain order number.



LOOP CUTOVER PROCESS

Step 3: Technician retrieves copy of work order.

LOOP CUTOVER PROCESS

Step 4: Technician responds to UNE Center request to initiate overall cutover of service from BellSouth to ALEC.

LOOP CUTOVER PROCESS

Step 5: Technician conducts ANAC test to verify that correct loop is being cutover.

LOOP CUTOVER PROCESS

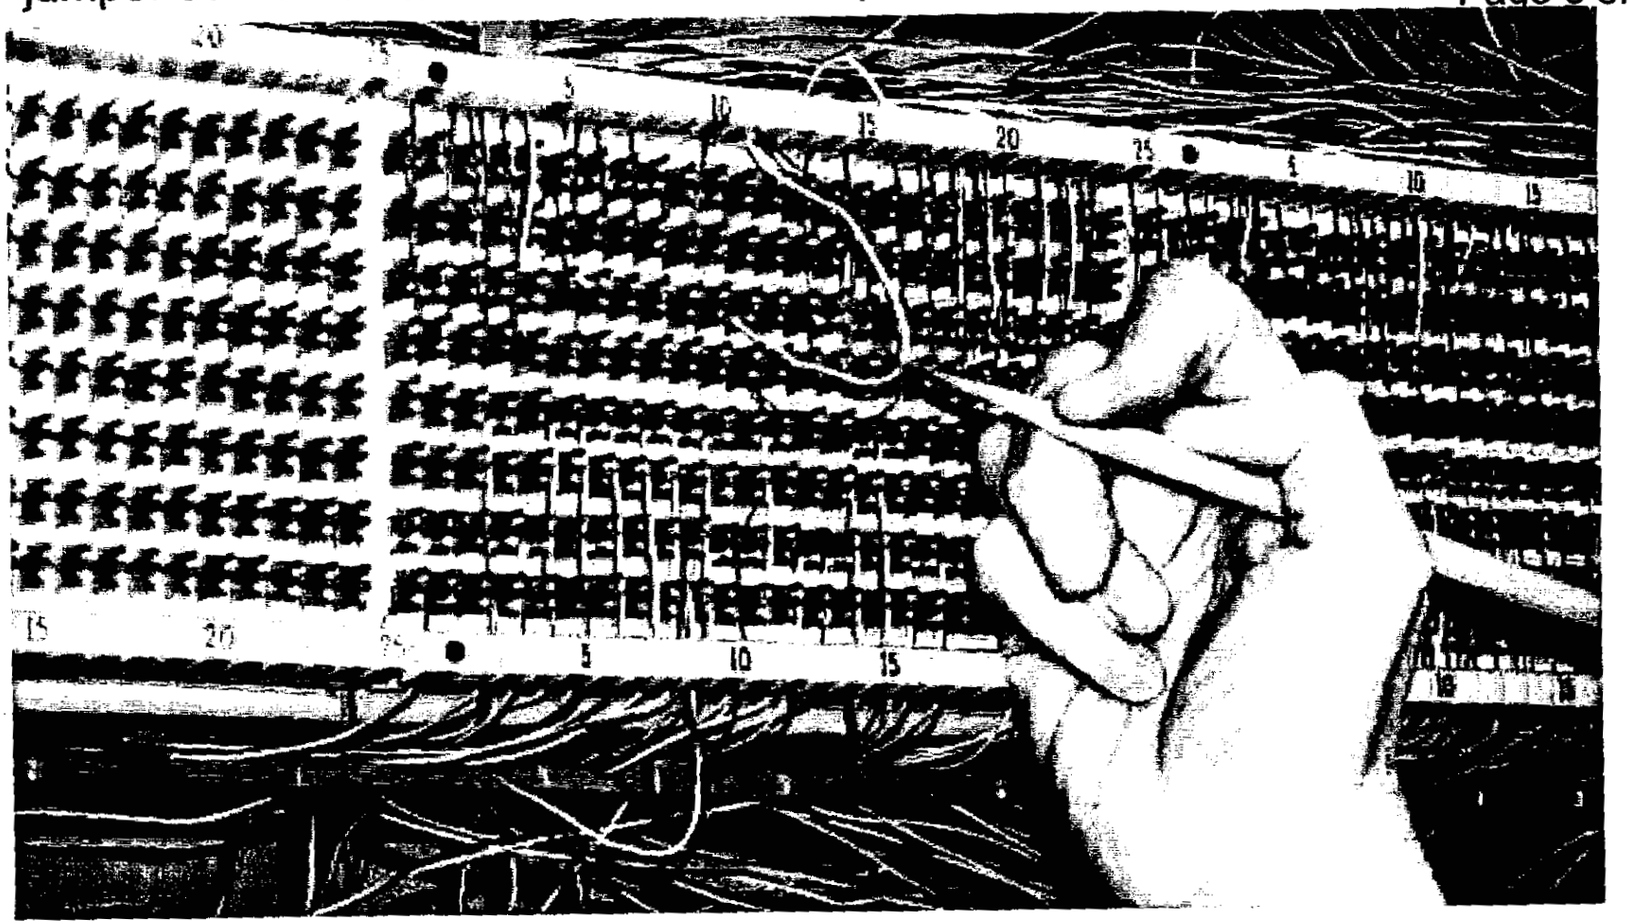
Step 6: Technician walks along Main Distributing Frame to locate both ends of jumper to be cut.

LOOP CUTOVER PROCESS

Step 7: Technician locates precise location of jumper.

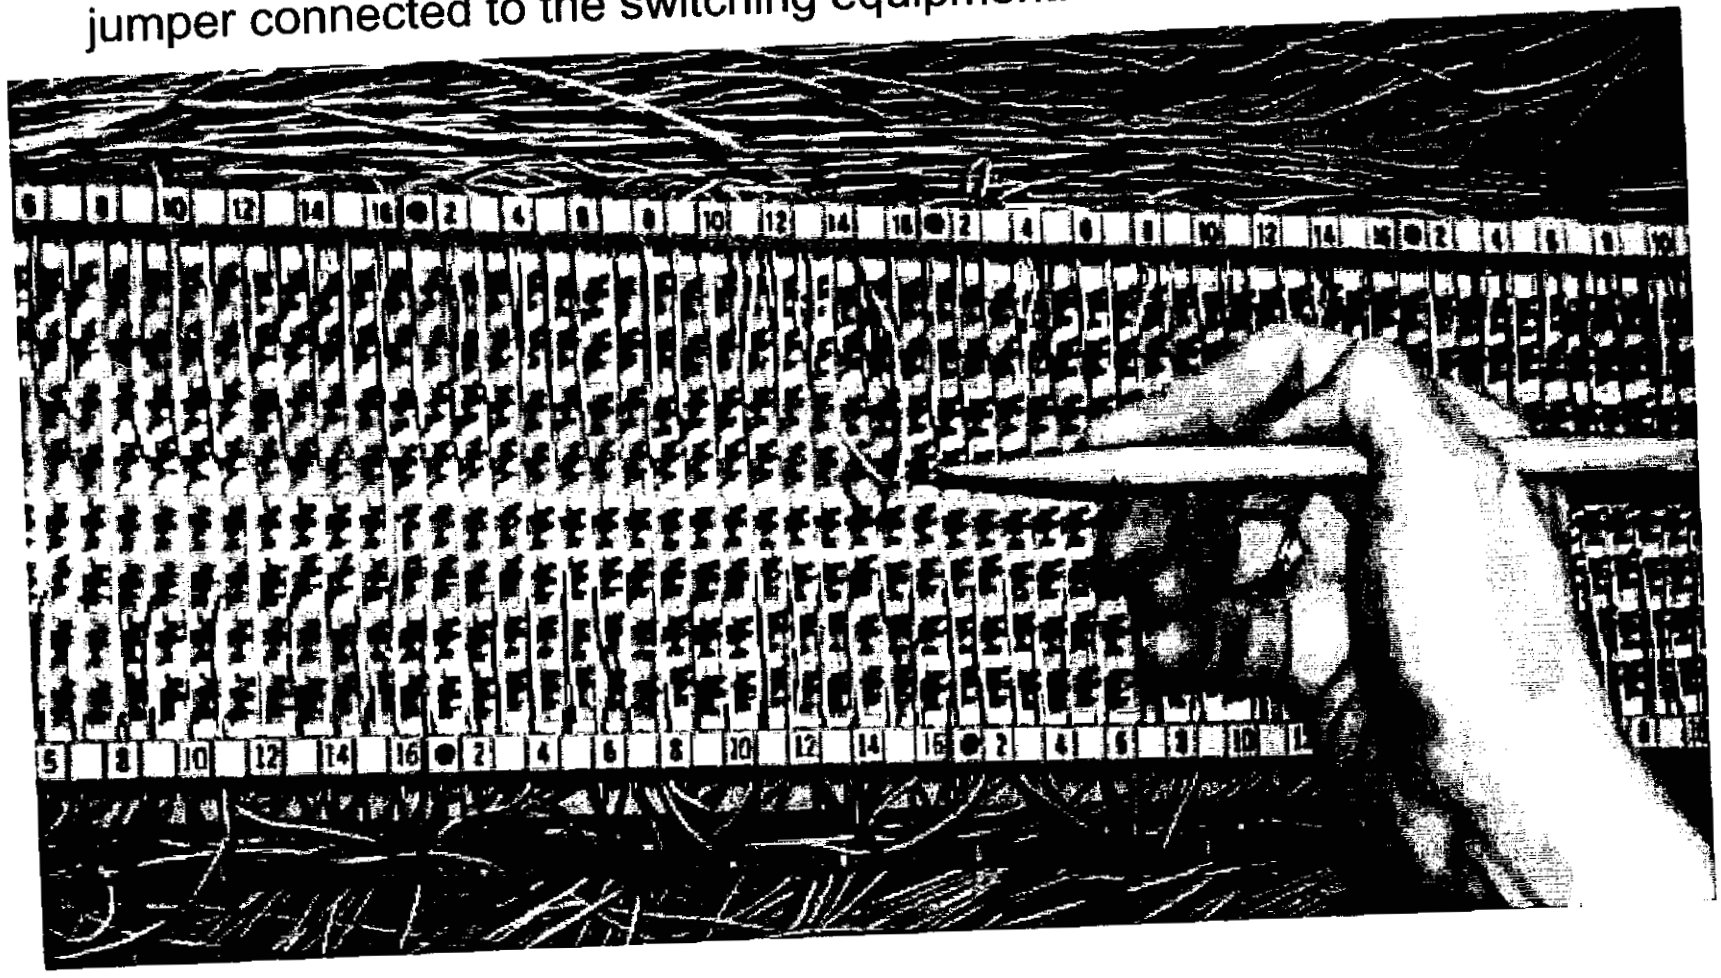
LOOP CUTOVER PROCESS

Step 8: Technician locates and removes end of jumper connected to the BellSouth cable pair.



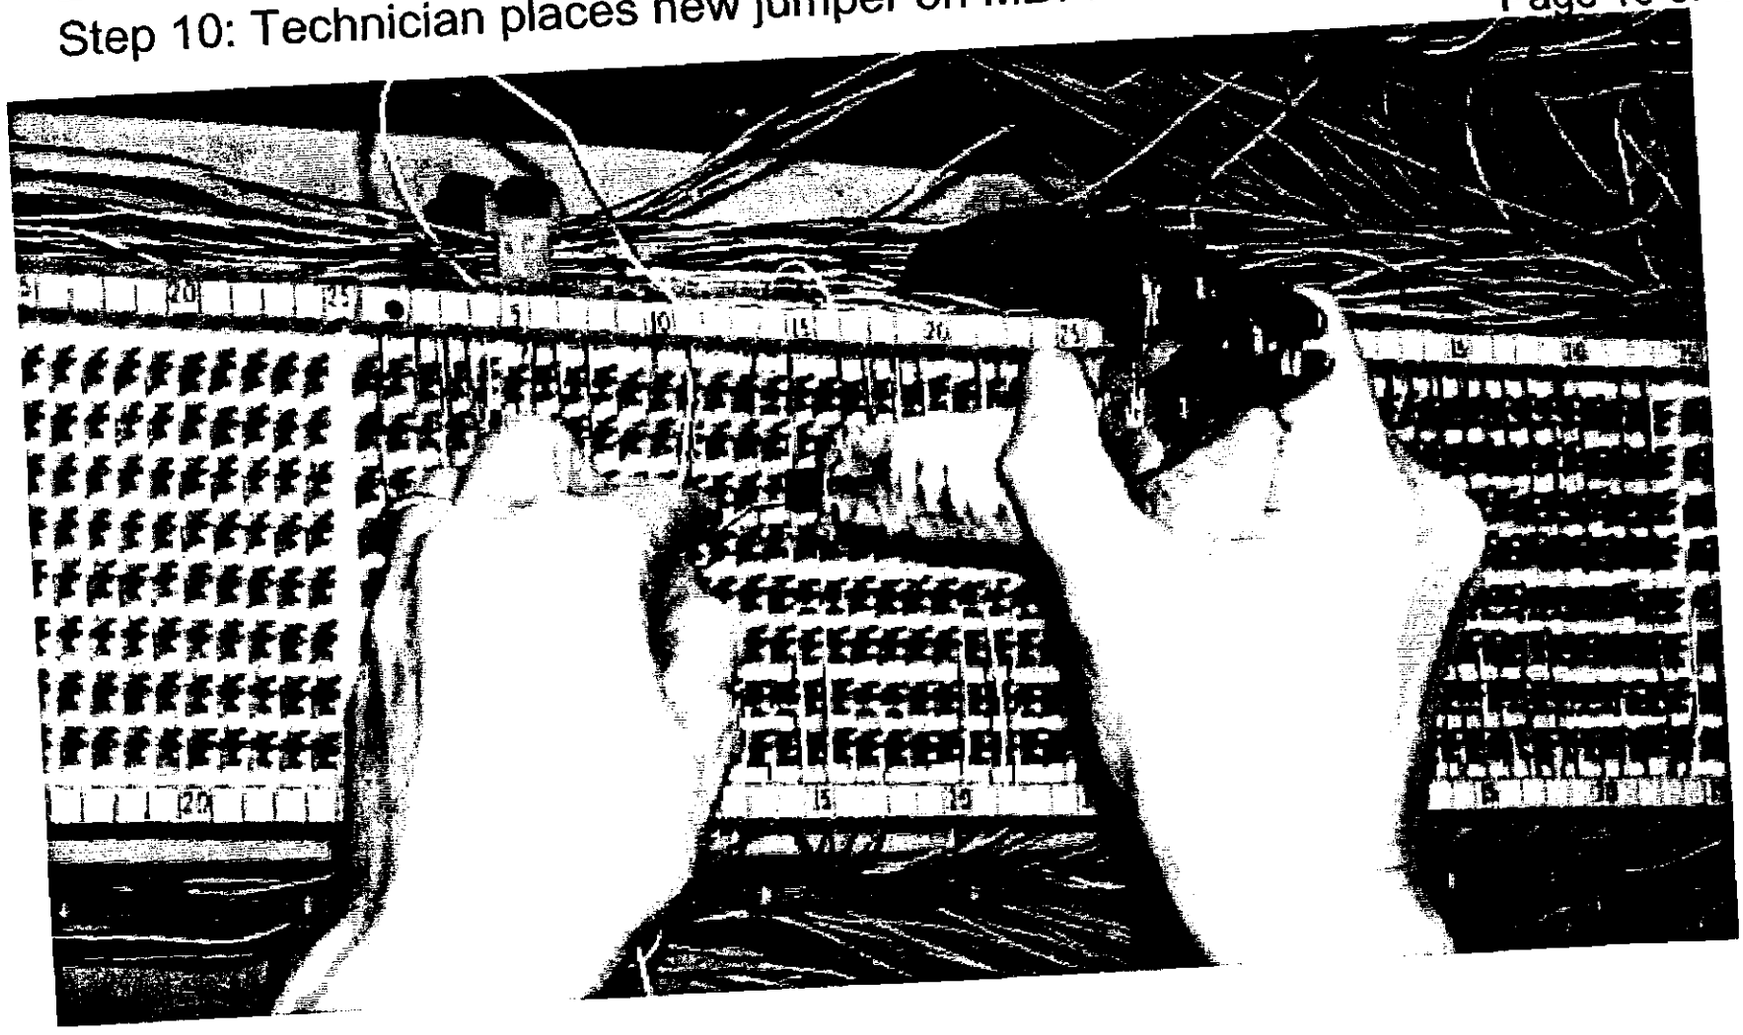
LOOP CUTOVER PROCESS

Step 9: Technician locates and removes end of jumper connected to the switching equipment.



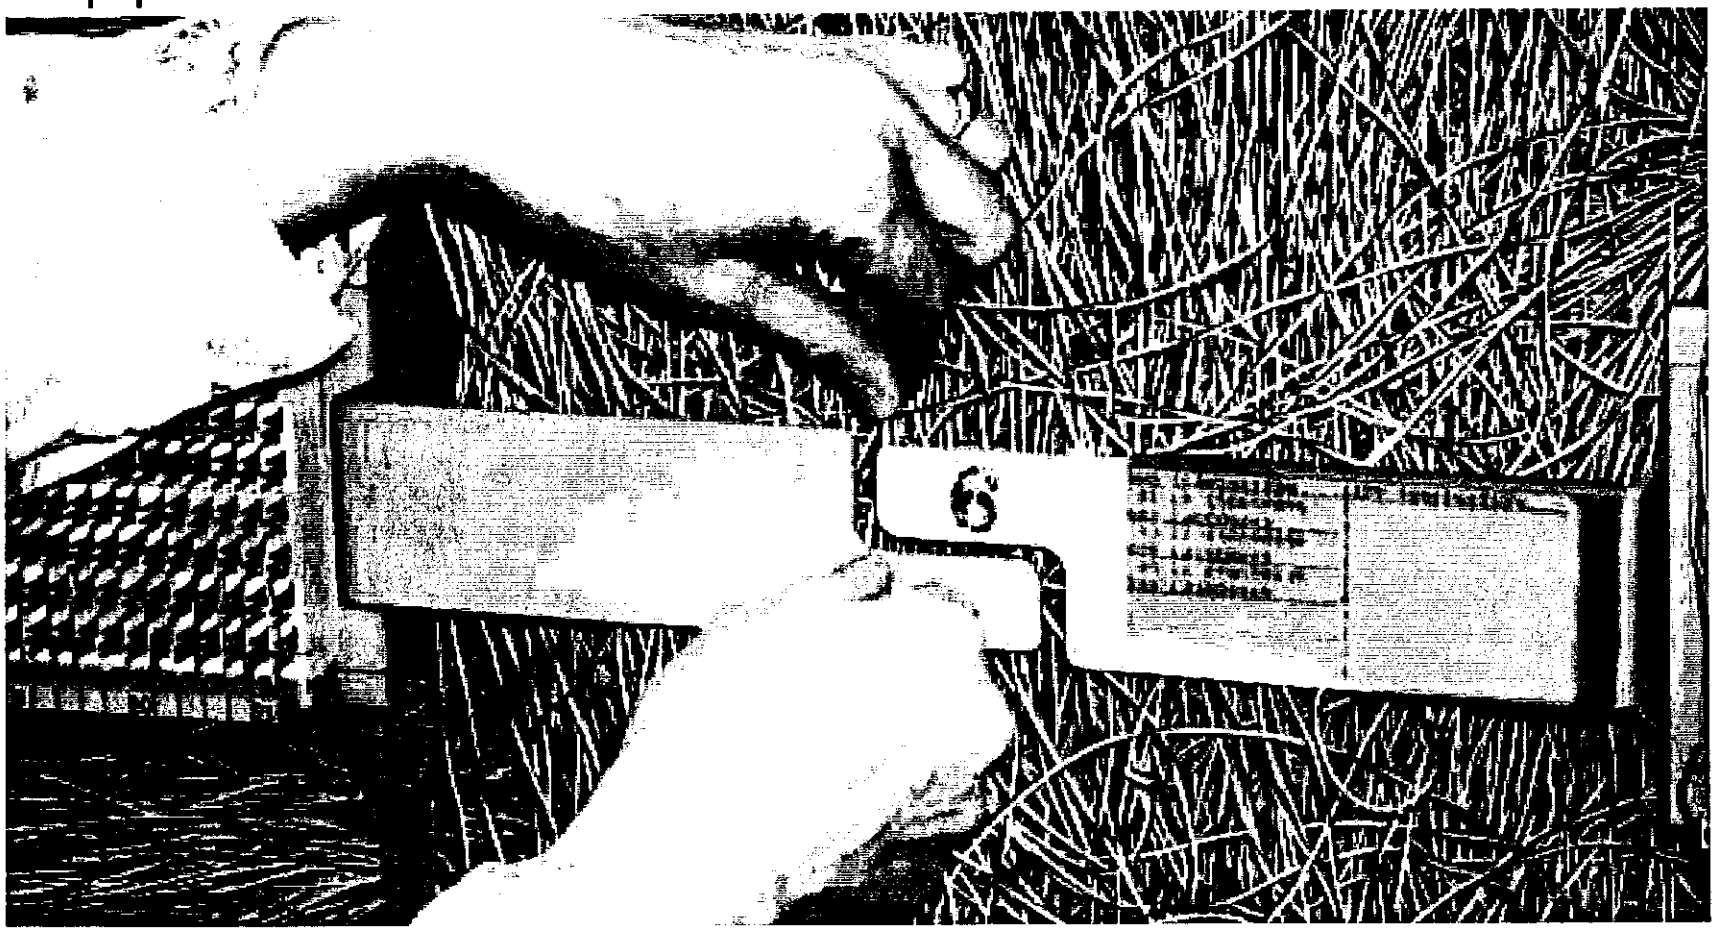
LOOP CUTOVER PROCESS

Step 10: Technician places new jumper on MDF.



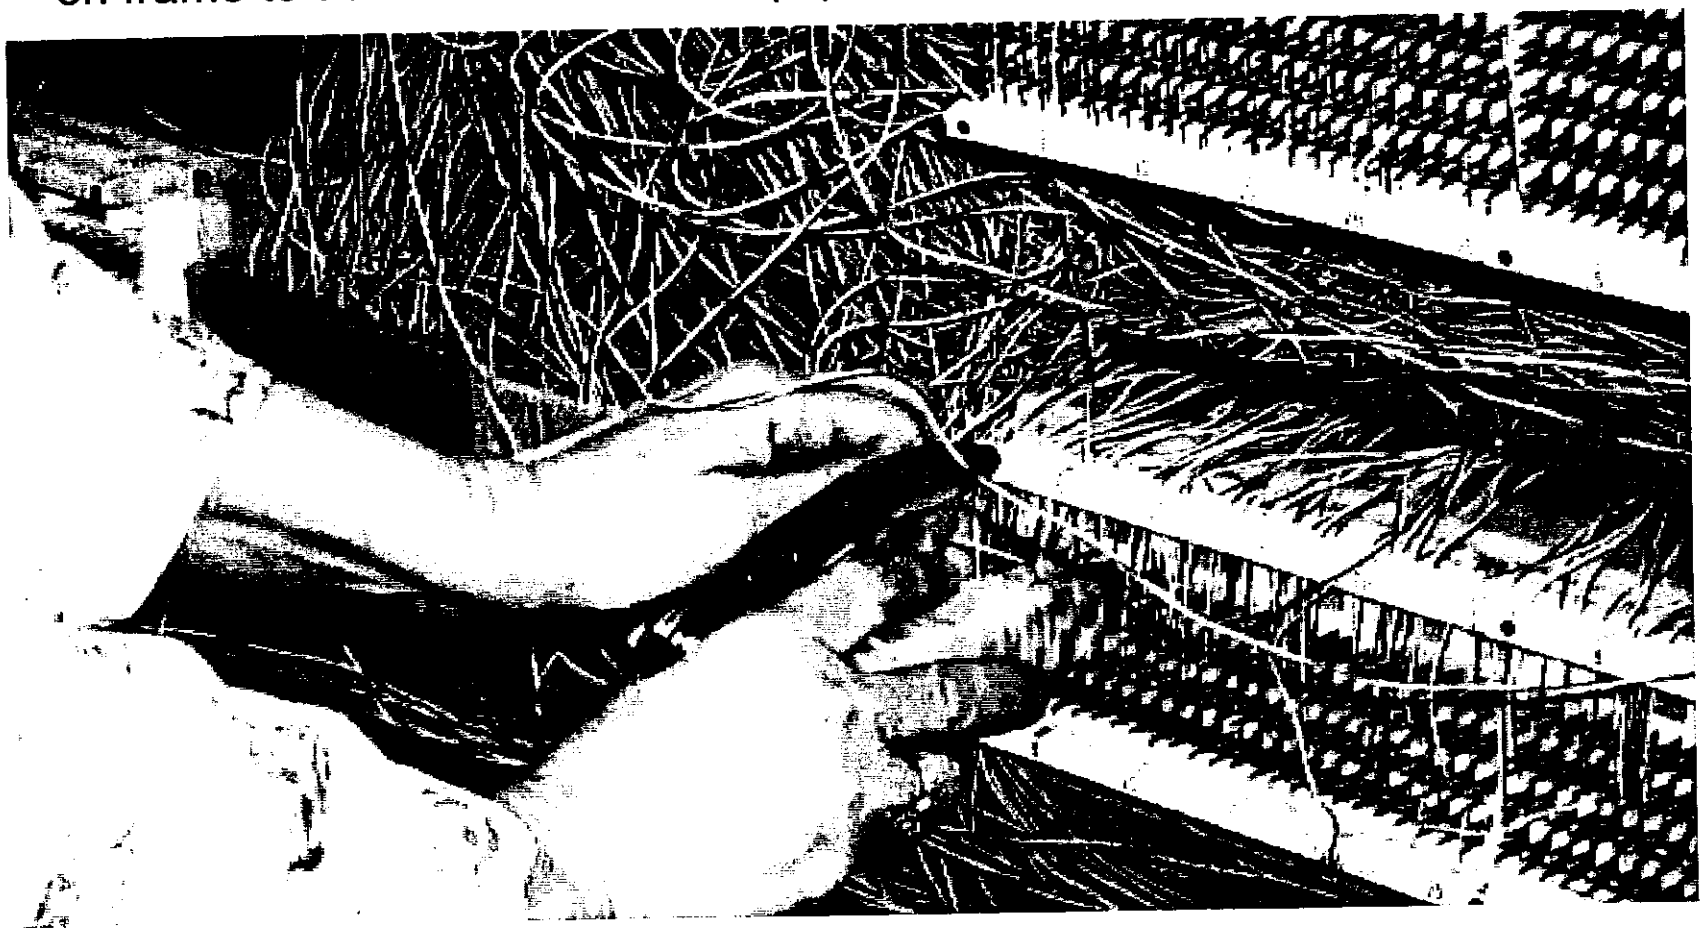
LOOP CUTOVER PROCESS

Step 11: Technician weaves wire through cable rack to reach tie cable to ALEC's collocation equipment.



LOOP CUTOVER PROCESS

Step 12: Technician connects new jumper on frame to tie cables to ALEC equipment.



LOOP CUTOVER PROCESS

Step 13: Technician conducts ANAC test to verify that loop has been cut to correct ALEC switch port.

LOOP CUTOVER PROCESS

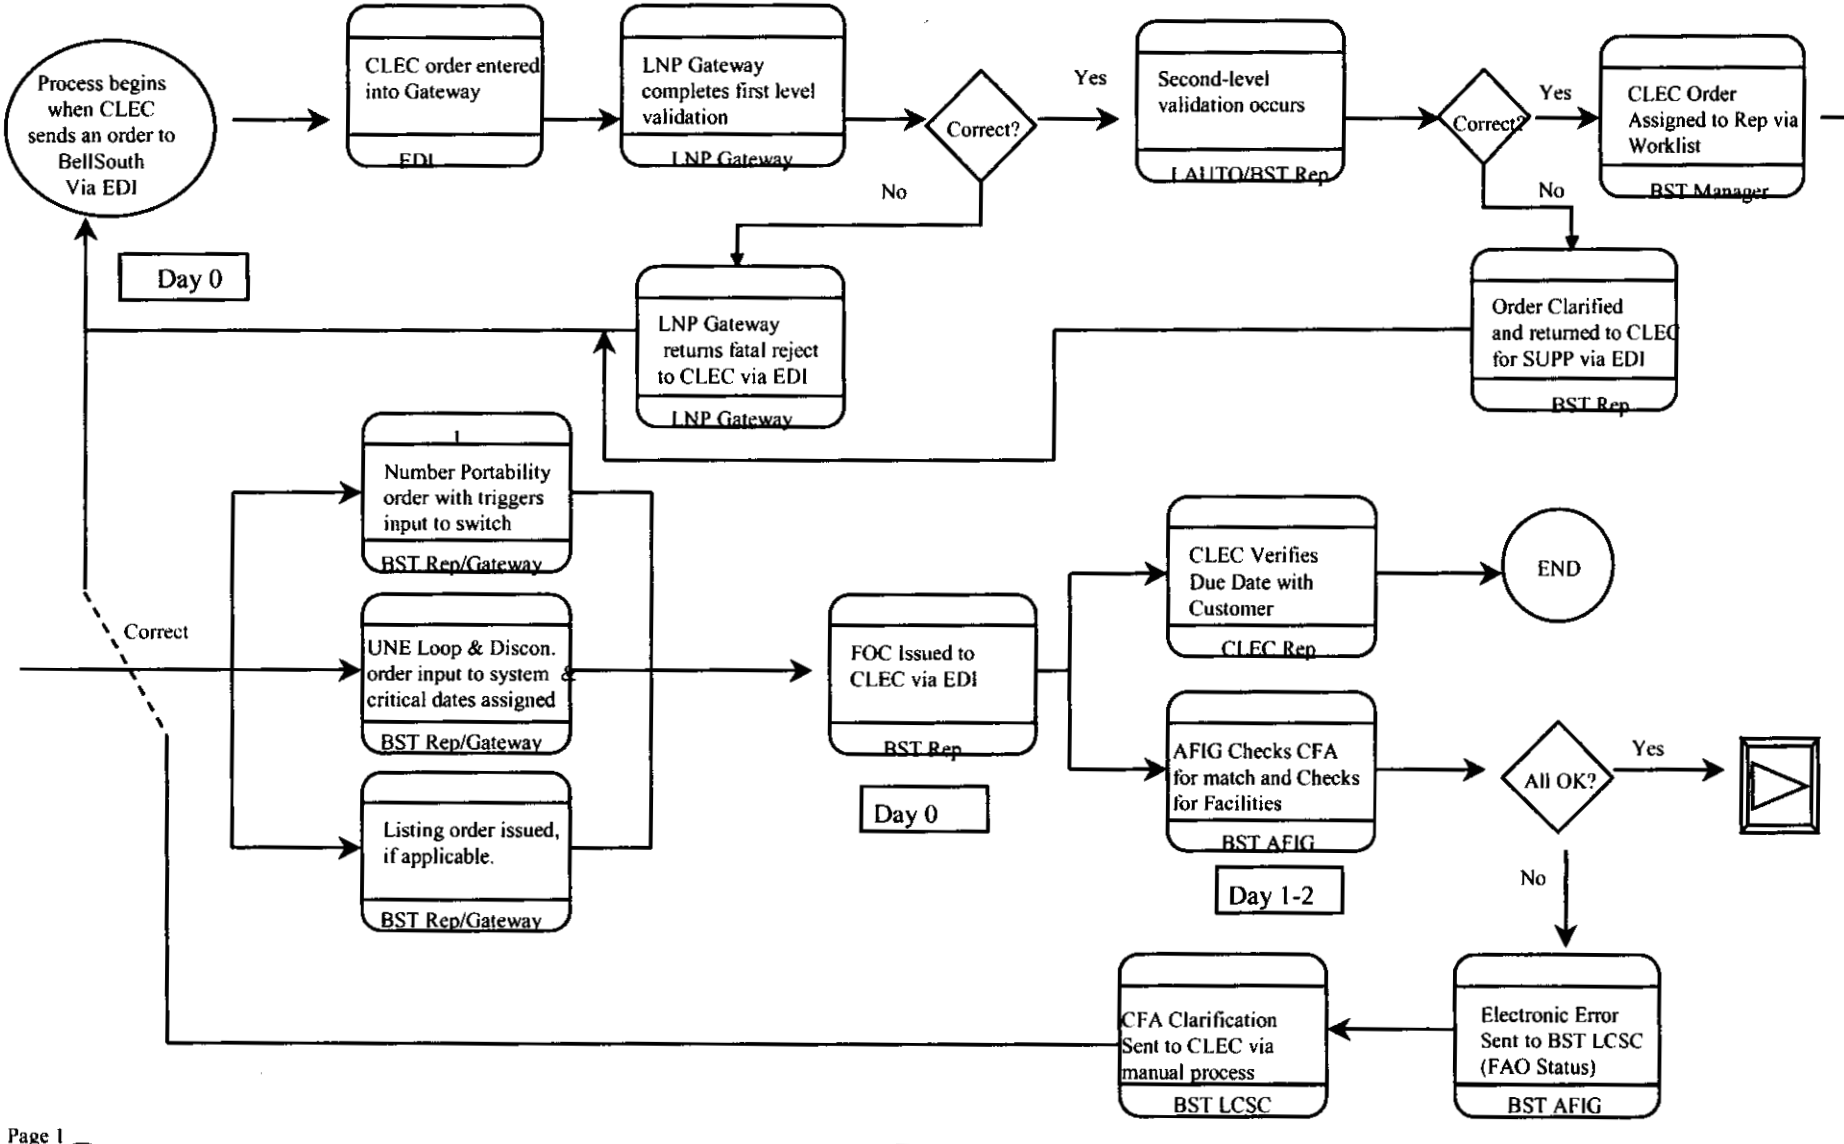
Step 14: Technician verifies cutover with ALEC, closes order, and notifies the UNE Center.

WKM-3
COORDINATED HOT CUT PROCESS

Coordinated Hot Cut Process

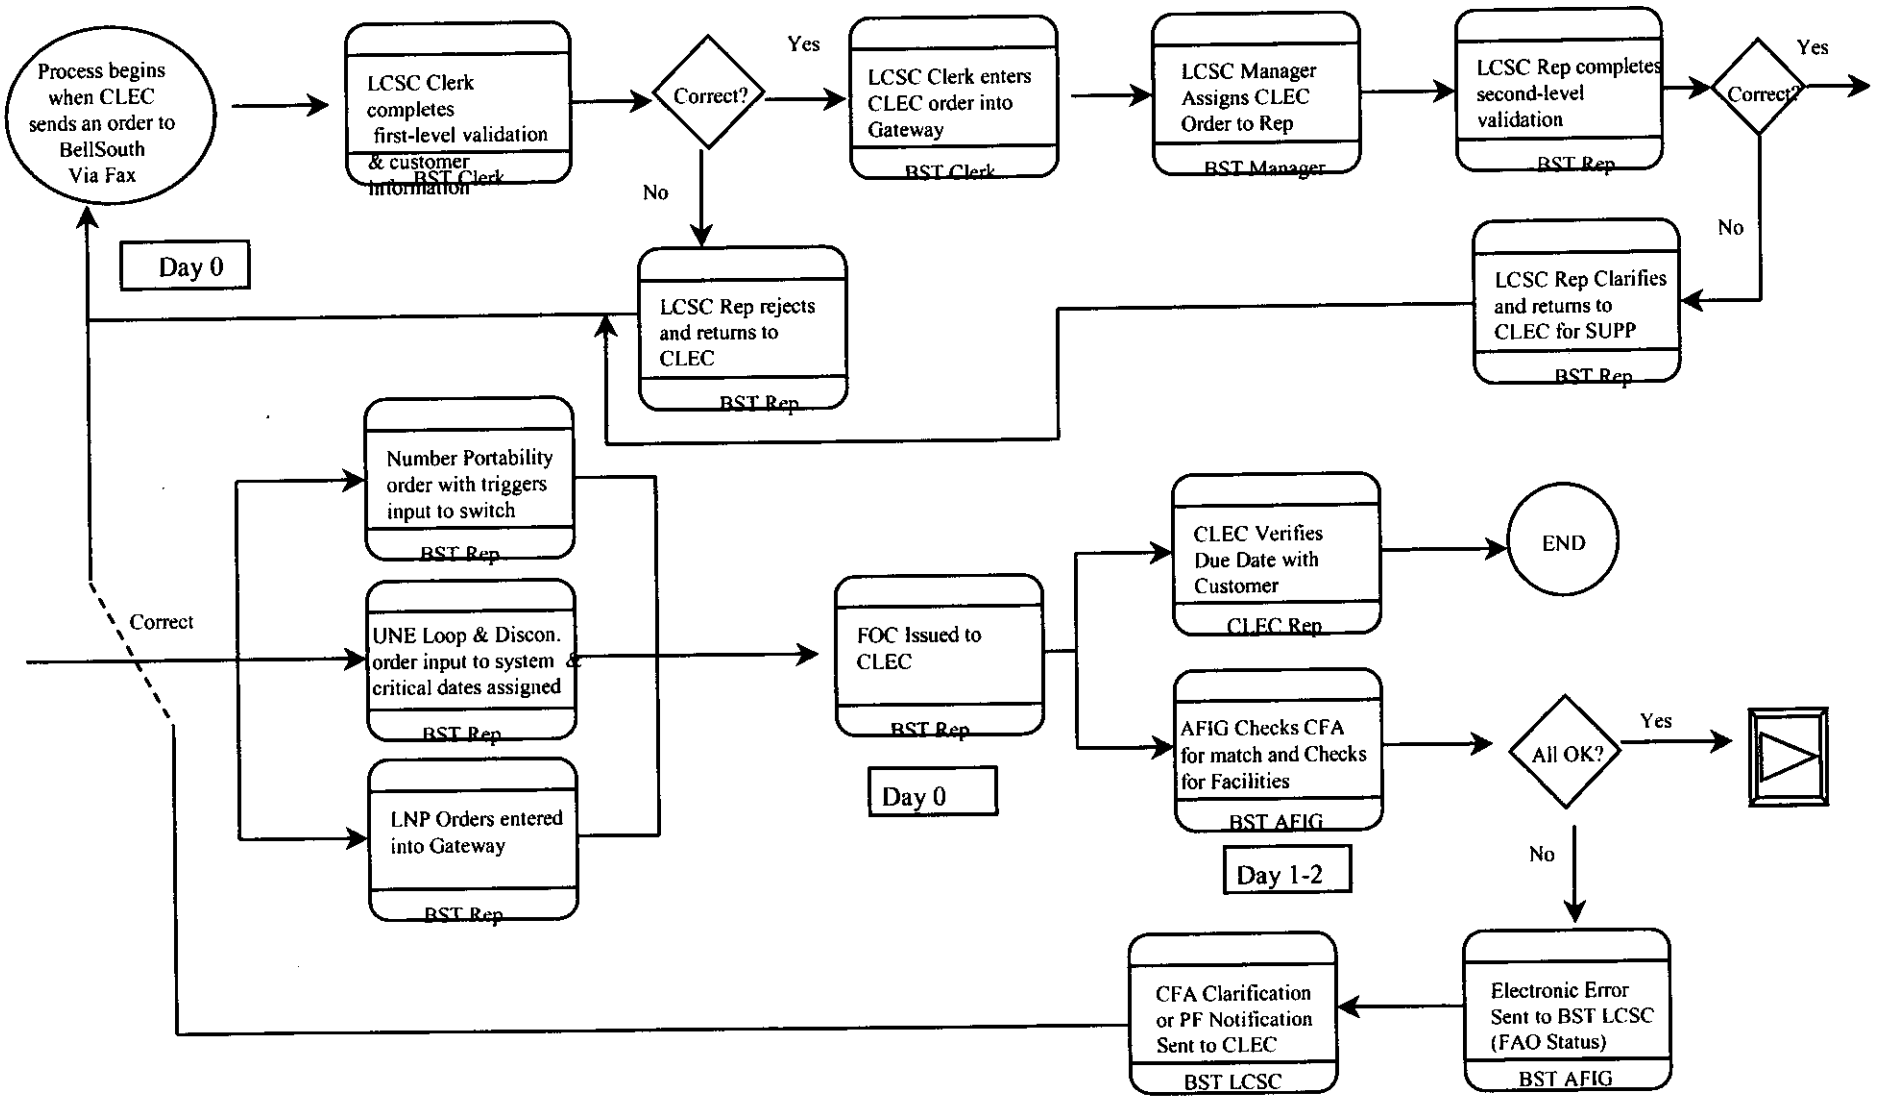
Issue 2
4/18/0

Assumptions: SL2 loop with LNP or XDSL loop with LNP also assumes for XDSL loops that a Loop make up has been processed either manually or electronically prior to submission of the LSR.. LNP Gateway communicates with NPAC.

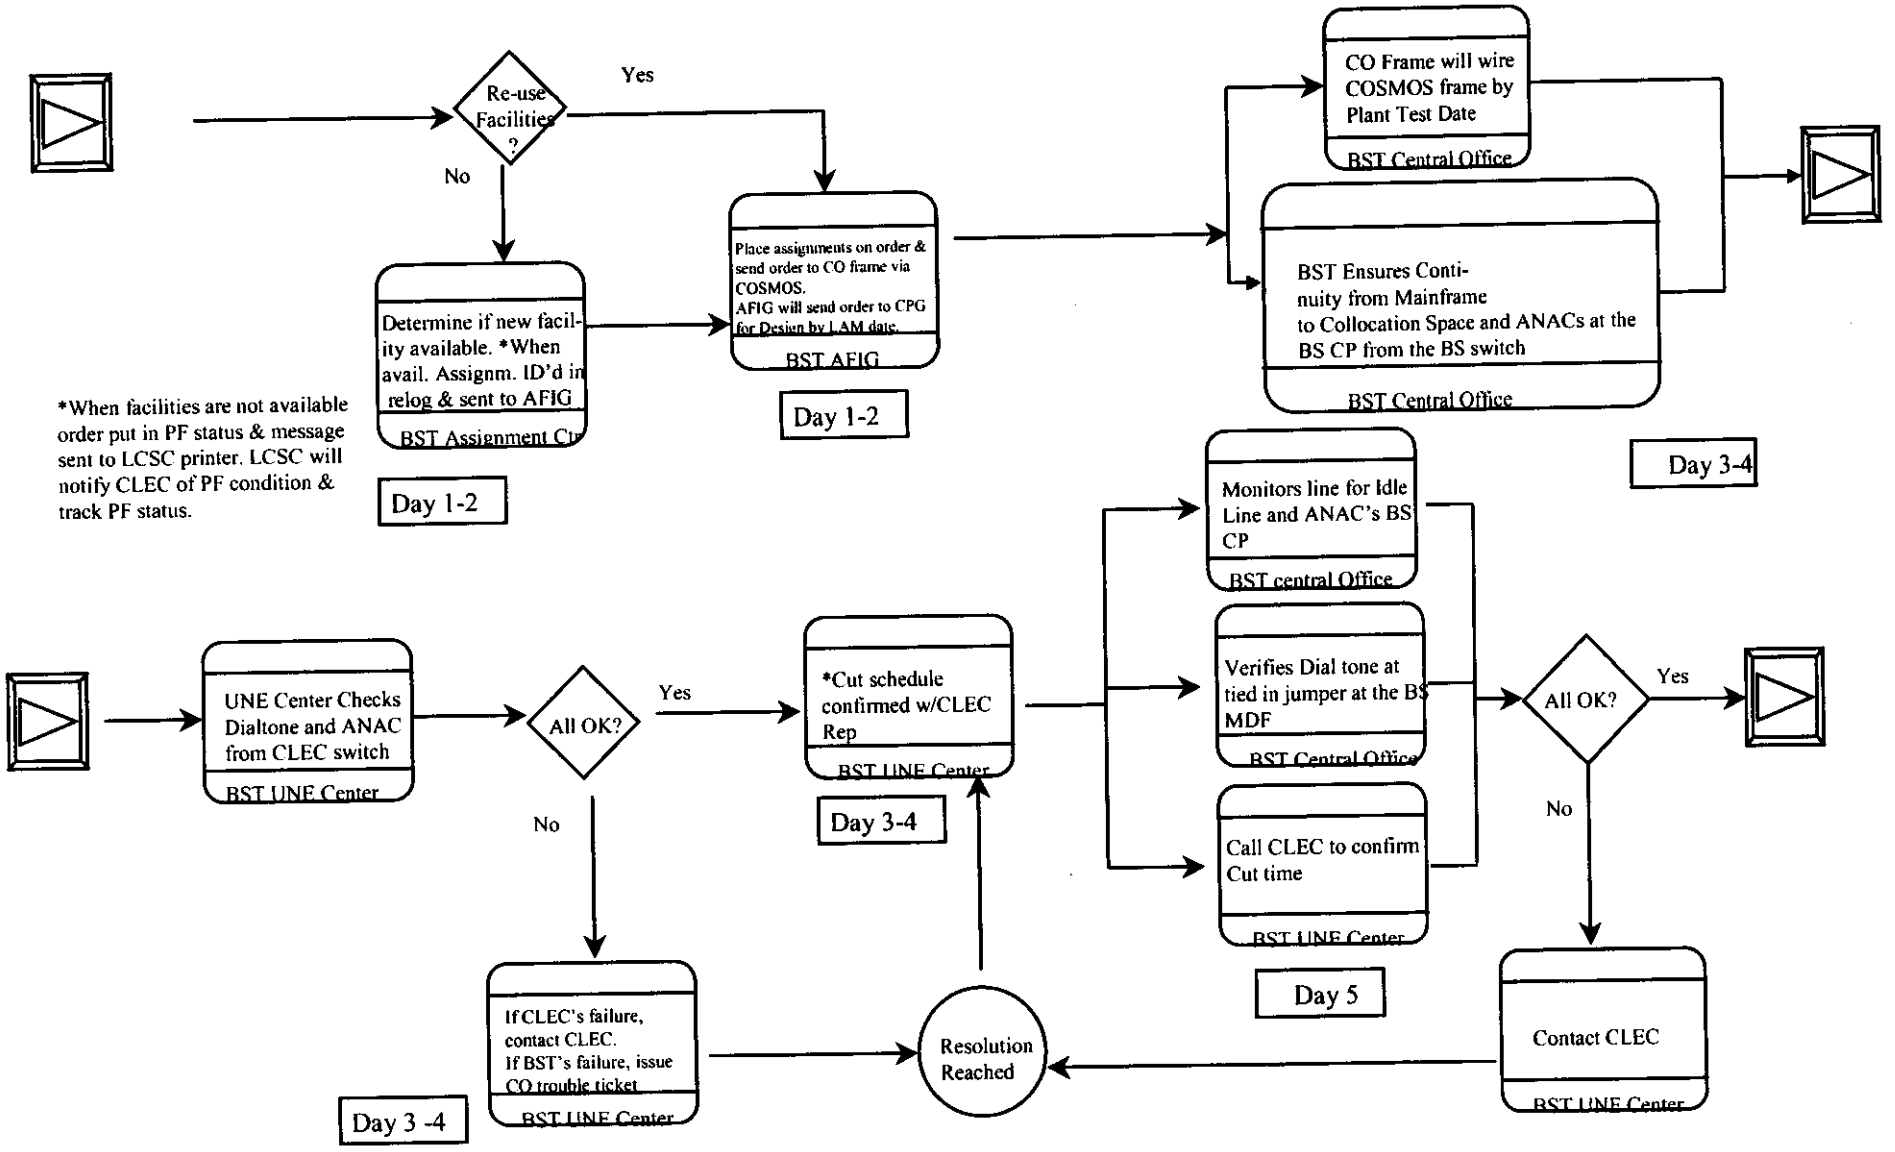


Issue 2,
4/18/00

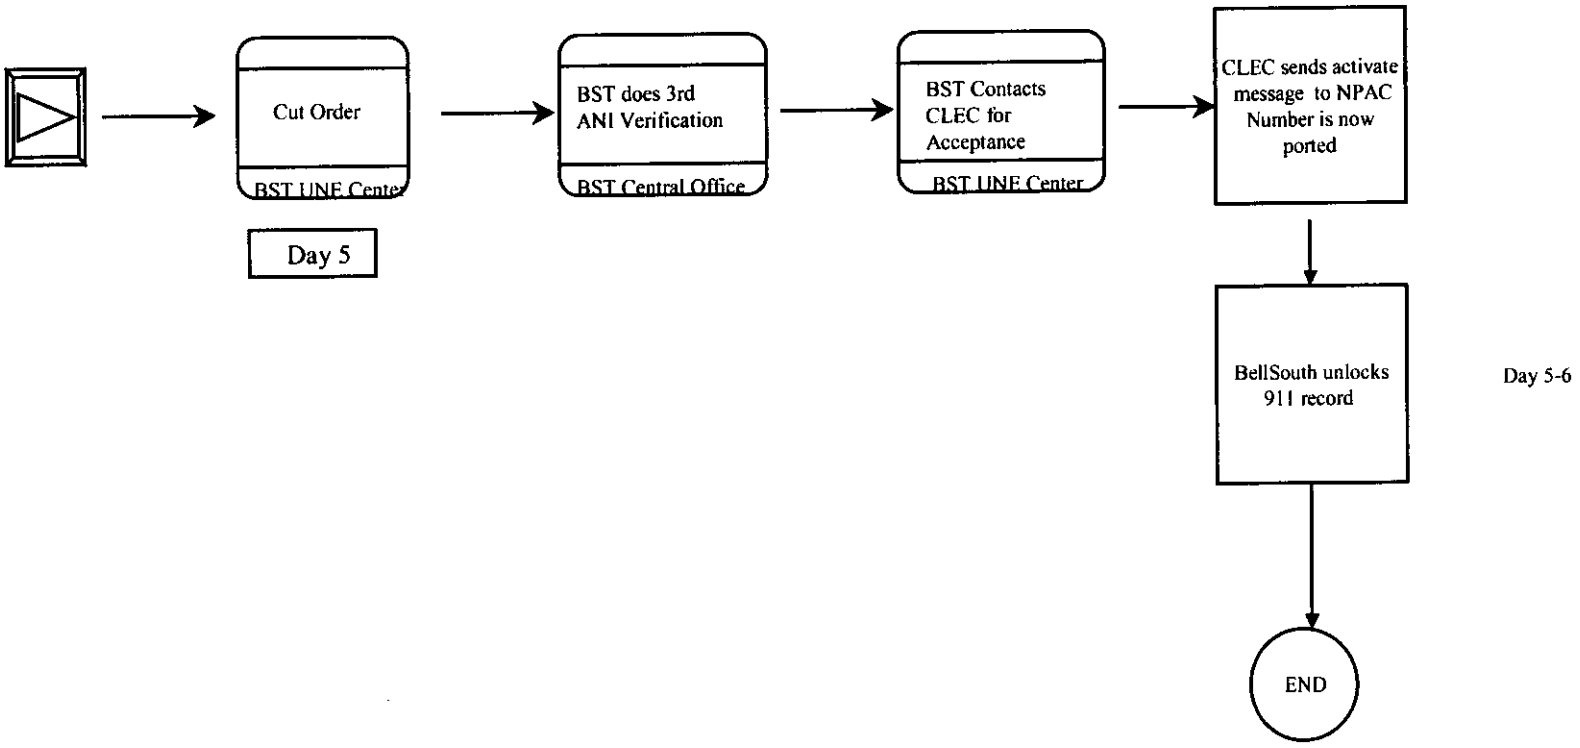
Coordinated Hot Cut Process



Coordinated Hot Cut Process



Coordinated Hot Cut Process



The intervals depicted are business days and assume the order is transmitted and processed mechanically and or manually or electronically and requires manual handling, and received by the LCSC prior to 10 AM location time of the respective LCSC. Manual requests or requests requiring manual handling received after 10 AM, add 1 business day.

The LCSC is located in Bir/Atl
The AFIG is located in Tn
The UNE Center is located in Bir/Atl
The Co is located in Tn
The CPG is located in Tn

WKM-4
UNE CENTER PROCEDURES

Non-design Unbundled Voice Loops and Non-design Unbundled Sub-Loops
UNE Center Procedures

Conversion Coordination

PRESERVICE: For coordinated UVL or USL conversions the UNE Center will contact the CLEC 24/48 hours prior to due date to confirm conversion date and time. Time specific requests by the CLEC is identified on the service order behind the OCOSL USOC. The UNE center will hand off an appointment ticket within 48 hours prior to the Due Date, or as soon as possible upon receipt of the assignments on the order. Coordinated non time specific requests will be scheduled at the discretion of the UNE center and CLEC notified. Non coordinated SL1s will not have pre Due Date notification by the UNEC. Prior to the coordinated conversion the UNEC will check COSMOS for an ID jeopardy to ensure the CO is wired. If COMOS does not show the ID jeopardy, the UNEC will call the CO to determine pre-wiring status.

DUE DATE: .For coordinated SL1 UVL conversions the UNEC will contact the CO. Handoff for a test assist ticket does not apply on SL1's. The UNEC will have the *C.O. Tech access the existing BellSouth Cable and Pair at the cut point. The* C.O. Tech will ANAC the BellSouth line to ensure the assignments on the order are correct. The UNEC and C.O. Tech will resolve any discrepancies. The UNEC will then have the C.O. Tech check for CLEC dialtone on all circuits at the cut point. CLEC dialtone must be present on all circuits for the conversion to continue. If the CO technician advises the UNEC that the line is in use, the UNEC will contact the CLEC for assistance. At the direction of the CLEC, the conversion will either be initiated or the order will be placed in an MA status per the UNEC SD/MA policy.

- CLEC will be notified on due date of conversion. If contact is unsuccessful, conversion will proceed at appropriate time.
- If CLEC dialtone is present, continue to next paragraph.
- If dialtone is not present at the cut point for any one of the circuits, have the C.O. Tech go the C.O. demarcation point (Collocation Cable and Pair) and test for CLEC dialtone.
  - If dialtone is present at the demarcation point have the C.O. Technician isolate and clear the wiring trouble in the C.O. Redo this work step.
  - If dialtone is not present at the demarcation point, the C.O. Technician will inform the UNEC. The UNEC will inform the CLEC and give the CLEC 15 minutes to correct the problem.
    - If the CLEC can correct the problem in the allotted time, repeat this work step.
    - If the CLEC cannot correct the problem in the allotted time, the UNEC will call off the conversion and place the order into a MA status according the the UNEC SD/MA policy.

When CLEC dialtone has been verified the cutwill begin. The UNEC will start the Coordinated

Cut Scheduling System (CCSS) conversion timer as appropriate. After the C.O. Tech advises the UNEC the cutover has been completed the UNEC will stop the CCSS conversion timer. Have the C.O. Tech go to the end user side of the cut point. Then use the
CLEC ANAC code, to ANAC the UVL. Note the CLEC number and match against the
CLEC telephone number associated with the UVL on the cut sheet.

- If the numbers match, continue on to next work step.
- If the numbers are different, have the C.O. Tech isolate and clear the trouble. After the trouble has been resolved redo this step.
- If the numbers are different, but no BellSouth trouble can be isolated and cleared, inform the CLEC that they may have a potential translations problem in their switch. There are certain types of legitimate end-user services where the telephone number you call to reach that end-user, and the telephone number you hear when you ANAC the circuit will be different. The CLEC will have to determine if this is the cause of the ANAC mismatch. An example of when this will occur is with terminals within a Multiline Hunt Group (MLHG). Usually the terminals in the MLHG will ANAC the Main Telephone Number assigned to terminal one (1) in the group.

Notify the CLEC of the completed conversion.
Upon CLEC acceptance the associated service orders will be completed in WFA and SOCS. For coordinated USL conversions, the UNEC will wait for the outside technician to get to the crossbox or equipment room. The UNEC should have the FWG Tech ANAC the BellSouth pairs prior to conversion to verify assignments. CLEC dialtone will also be verified prior to the conversion. The CLEC will then be advised that the cut will begin. The UNEC will document the conversion time in CCSS as appropriate. Upon CLEC acceptance the associated service orders will be completed in WFA and SOCS.

DUE DATE: SL1 UVL non coordinated conversion due date activities for the UNE Center require only post conversion notification to the CLEC and tracking for network order completion. The UNEC will be notified of order completion by EnDI and the UNEC will place a notification call to the CLEC. The UNEC will follow up on any order pending completion as of 2:30 PM on the due date. The UNE Center will escalate all pending orders to the WMC in order to meet the service due date. The UNE Center will also be the CLEC point of contact for any SL1 non coordinated order provisioning issue. The UNE Center will complete or validate completion of the service order after CLEC notification.

Designed 2 Wire Loop and Ground Start - Unbundled Voice Loop
UNE Center Procedures

Testing

Pre-Service Testing Requirements for Due Date

Once wiring steps have posted complete in WFA/DI, perform all pretesting that is applicable. It is very important that continuity has been verified from the interface facility of the CLEC to the main frame of the Unbundled Loop. The UNEC should validate via dial tone verification test if test points are available. If test points are not available the UNEC will hand off to the CO for a test assist. The UNEC must TEST, TRACK, and ESCALATE until all pre-work has been completed. The CLEC will be contacted 24 to 48 hours prior to DD to confirm conversion schedule. The UNEC will attempt to handoff an appointment ticket (work-type AP) within 48 hours of the DD, or as soon as possible upon receipt of the engineering WORD document.

Check in WFA/C RO field of the OSSOI screen or behind the RRSO FID of the SOCS order for any other related order activity.

Testing Requirements for Due Date

The UNEC tech will handoff an immediate test assist ticket, Work Type IA, to the C.O. The UNEC will then call the C.O. If the handoff goes to the toll group in the C.O. and the toll group does not do these conversions it is the responsibility of the C.O. Toll Tech to get this handoff to the correct person in the C.O. It is not the responsibility of the UNEC to handoff to the frame. The C.O. Tech will show the work time taken to complete the conversion against this test assist ticket.

The CLEC will be notified on the due date of conversion. If contact attempt is unsuccessful, the conversion will proceed at the appropriate time.

For the existing service on the disconnect order, have the C.O. Tech go to BellSouth Cable Pair, pull BellSouth dial tone and ANAC the cable pair and verify that the exiting service on the D order is working to the documented assignments.

- If the existing service is working as documented, continue on to next paragraph.
- If the existing service is not working as assigned, the C.O. Tech will resolve the assignment error. Then redo this workstep.
- If the existing service is in a trouble condition the C.O. Tech will resolve the trouble. Then redo this workstep.

Have the C.O. Tech go to the cut point for Unbundled Loop. Have the C.O. tech check for CLEC dialtone on each of the circuits on the service order. CLEC dialtone must be on all circuits on an order for the conversion to continue. If the CO technician advises the UNEC that the line is in use, the UNEC will contact the CLEC for assistance. At the direction of

the CLEC, the conversion will either be initiated or the order will be placed in an MA status per the UNEC SD/MA policy..

- If dialtone is present at the cut point for each circuit, have C.O. tech begin the conversion. Start the CCSS timer for the conversion, and proceed to the next paragraph.
- If dialtone is not present at the cut point for any one of the circuits, have the C.O. Tech go the the C.O. demarcation point (Collocation Cable and Pair) and test for CLEC dialtone.
    - If dialtone is present at the demarcation point have the C.O. Technician isolate and clear the wiring trouble in the C.O. Redo this workstep.
    - If dialtone is not present at the demarcation point, the C.O. Technician will inform the UNEC. The UNEC will inform the CLEC and give the CLEC 15 minutes to correct the problem.
        - If the CLEC can correct the problem in the allotted time, repeat this workstep.
        - If the CLEC cannot correct the problem in the allotted time, the UNEC will call off the conversion and place the order into a MA status according the the UNEC SD/MA policy.

On cutovers that use new facilities, the cut point may be at the F2 facility or at the Network Interface. **It is very important on Network Interface Cut points, that the existing Network Interface is reused.**

Have the Field Work Group (FWG) Tech prior to conversion, go to the cut point pull BellSouth dial tone and ANAC the cable pair and verify that the existing service on the D order is working to the documented assignments.

- If the existing service is working as documented continue to next paragraph.
- If the existing service is not working as assigned, the FWG tech will resolve the assignment error. After the assignment error has been resolved, have the FWG redo this workstep.
- If the existing service is in a trouble condition the FWG tech will resolve the trouble. After the trouble condition has been resolved, redo this workstep.

Have the Field Work Group (FWG) Tech check each circuit on the order for CLEC dialtone. CLEC dialtone must be present on all circuits on the service order to proceed with the conversion.

- If CLEC dialtone is present on all circuits, have the FWG Tech begin the conversion. Start the CCSS timer, and proceed to the next paragraph.
- If CLEC dialtone is not present on all circuits, the UNEC will coordinate the FWG Tech and a C.O. Tech in determining if CLEC dialtone is present at the C.O. demarcation point (CLEC Cable and Pair).
    - If dialtone is present at the demarcation point, have the C.O. and FWG Techs isolate the wiring trouble and repair. Repeat this work step.
    - If dialtone is not present at the demarcation point, the C.O. Technician will inform the UNEC. The UNEC will inform the CLEC and give the CLEC 15 minutes to correct the problem.
        - If the CLEC can correct the problem in the alloted time, repeat this work step.
        - If the CLEC cannot correct the problem in the alloted time, the UNEC will call off the conversion and place the order into a MA status according the

the UNEC SD/MA policy.

Due to contract negotiations the CLECs have the opportunity to specify a time window for the cutover. The negotiated time for conversion must be met. Failure to do so could result in rebating the non-recurring service order charges back to the CLEC based on contract language.

After the cutover is complete have the C.O. Tech/FWG Tech go to the end user side of the cut point. Then use the CLEC ANAC code, to ANAC the UVL. Note the CLEC number and match against the CLEC telephone number associated with the UVL on the cut sheet.

- If the numbers match, continue on to next workstep.
- If the numbers are different, have the C.O. Tech/FWG Tech isolate and clear the trouble. After the trouble has been resolved redo this step.
- If the numbers are different, but no BellSouth trouble can be isolated and cleared, inform the CLEC that they may have a potential translations problem in their switch. There are certain types of legitimate end-user services where the telephone number you call to reach that end-user, and the telephone number you hear when you ANAC the circuit will be different. The CLEC will have to determine if this is the cause of the ANAC mismatch. An example of when this will occur is with terminals within a Multiline Hunt Group (MLHG). Usually the terminals in the MLHG will ANAC the Main Telephone Number assigned to terminal one (1) in the group.

After the CO technician advises the UNEC that the cutover has been completed, the UNEC will stop the CCSS conversion timer and notify the CLEC of the completed conversion

9.0 CENTRAL OFFICE UNBUNDLED LOCAL LOOPS PROVISIONING JOB AID

9.1 **SL2 Unbundled Loop Design Circuits**

9.2 All designed circuits will be manually coordinated by the UNE Center
2 WFA/DI Tickets Issued
PSA Ticket to provision TIRKs Circuits
LNP or UNE Ticket to provision the COSMOS Circuits

9.3 **UNE** tickets will consist of orders with all facilities in a Spare Pending Connect Status. These orders may be wired, tested, and completed prior to the order Due Date. Presence of CLEC Dial Tone or Signaling is not required. A cross office continuity test must be preformed. The WFA/DI tickets must be completed 100%. The 'Start Date & Time' fields must be populated prior to WFA/DI ticket completion.

9.4 **LNP** tickets consist of orders reusing the BellSouth Cable Pairs (CP). These circuits must be wired (made ready at the BellSouth CP) and a cross office continuity test performed from the CLEC demarcation point (POT) to the tied in jumper at the BellSouth CP on or before WOT date. If this is a voice grade circuit, the BellSouth line should be ANAC'd to insure Database integrity. If the TN that is ANAC'd and the TN in COSMOS do not match, the Central Office (CO) will place this order in A1 jeopardy with a remark noting the actual working TN on that Cable Pair.

9.5 PSA ticket with a WOT step should be completed 100%.

9.6 LNP ticket should be completed 100%.

9.7 UNE Center will issue a SPLAP (work code of NT) ticket notifying CO of cut 48 hours prior to due date. For a non-attended office or outside of normal business hour cuts, the CO technician should notify the Network Manager and complete ticket 100%. The TIRKS engineering is not always available 48 hours prior to due date so the UNE Center will issue the appointment ticket as soon as the engineering is available.

9.8 UNE Center will issue a SLPIA ticket and call the CO to cut the circuits.

9.9 CO will advise UNE Center to Hold and proceed to cut location (BellSouth CP).

9.10 If voice grade circuit, CO will test for CLEC Dial Tone (DT) at tied in jumper.

9.11 If No Dial Tone (NDT), CO will go to Demarcation point (POT) and test for CLEC DT. If CLEC DT is not present, CO will remove the bridging clips, wait 2 minutes, and retest on CLEC side. When NDT condition exists from CLEC equipment, CO will advise UNE Center of specific CLEC CP that NDT condition is on. If a multi-line order, no cuts will be made if NDT condition exists on one or more circuits.

9.12 If CLEC DT is present at tied in jumper, CO will monitor the BellSouth line. If the line is idle, CO will ANAC the BellSouth TN. When the line is not idle, CO will notify the UNE Center that the conversion can not continue and the UNE Center will direct further activities. If the BellSouth TN does not match the Service Order, CO will locate the correct CP. When CLEC DT is present on the tied in jumper and the BellSouth TN is ANAC'd, CO will advise UNE Center that they are ready to begin the conversion. CO will remove jumper from BellSouth Cable Pair and terminate tied in jumper. CO will ANAC the line and report the CLEC TN to UNE Center. CO will remain on line with UNE Center until CLEC has accepted circuit.

9.13 If DDS grade circuit, CO will test for proper Signaling at tied in jumper.

9.14 If No Signaling (NS), CO will go to Demarcation point (POT) and test for CLEC Signaling. When NS condition exists from CLEC equipment, CO will advise UNE Center of specific CLEC CP that NS condition is on. If a multi-line order, no cuts will be made if NS condition exists on one or more circuits.

9.15 If Signaling is present at tied in jumper, CO will advise UNE Center that they are ready to begin the conversion. CO will remove jumper from BellSouth Cable Pair and terminate tied in jumper. CO will advice UNE Center when all circuits have been cut. CO will remain on line with UNE Center until CLEC has accepted circuit.

9.16 When UNE Center advises CO that CLEC accepted circuit, the CO will complete the SLPIA ticket 100%.

NOTE 1: If Unbundled DS1 Loops (Hicap), the WFA/DI tickets will be SPAH for provisioning, HISAP for the appointment ticket, and HISPIA for the cut.

NOTE 2: The industry standard ANAC number is 800-223-1104. If this number does not work contact the UNE Center and have them acquire the CLEC's ANAC number.

10.0 CENTRAL OFFICE UNBUNDLED LOCAL LOOPS PROVISIONING JOB AID

10.1 **SL1 Unbundled Loop Non-Designed Circuits with a Frame Due Time (FDT) of 9:00pm**

10.2 Non-designed circuits with a FDT of 9:00pm (Circuit ID of TYNU) will be voice grade circuits and will be manually coordinated by the UNE Center. A single WFA/DI ticket (LNP or UNE) will be issued for the provisioning of each order. The LNP or UNE ticket will contain the COSMOS Work Package Number (WPN).

10.3 **UNE** tickets will consist of orders with all facilities in a Spare Pending Connect Status. These orders may be wired, tested, and completed prior to the order Due Date. Presence of CLEC Dial Tone is not required. If No Dial Tone (NDT) exists Central Office (CO) will perform a cross office continuity test. The WFA/DI ticket must be completed 100%. The 'Start Date & Time' fields must be populated prior to WFA/DI ticket completion.

10.4 **LNP** tickets consist of orders reusing the BellSouth Cable Pairs (CP). These circuits must be wired (made ready at the BellSouth Cable Pair) and a cross office continuity test performed from the CLEC demarcation point (POT) to the tied in jumper at the BellSouth CP before the due date. CO will ANAC the BellSouth line to insure Database integrity. If the TN that is ANAC'd and the TN in COSMOS do not match, the CO will place this order in A1 jeopardy with a remark noting the actual working TN on that Cable Pair.

10.5 After successfully wiring and testing, the COSMOS WPN will be placed in ID jeopardy (Hold for Call) and the WFA/DI ticket will be completed 100%. The 'Start Date and Time' fields must be completed.

10.6 The Frame Output will be filed in a unique ID Jeopardy folder, bin, file, etc. on the local frame desk.

10.7 UNE Center will issue a NDSAP (work code of ND) ticket notifying CO of cut 48 hours prior to due date. For a non-attended office, outside of normal business hour cuts, or if a Time Specific cut, the CO technician will notify his/her Network Manager and complete ticket 100%. Orders are not always assigned 48 hours prior to Due Date so the UNE Center will input the appointment ticket as soon as the Order is available.

10.8 UNE Center will call the CO to cut the circuits.

10.9 CO will advise UNE Center to hold and proceed by testing for Dial Tone (DT) from the CLEC at the tied in jumper at the BellSouth CP. If multi-line order, DT should be checked on all circuits prior to making any cuts. No circuits are to be cut if No Dial Tone (NDT) condition exists on one or more circuits.

10.10 If NDT, CO should proceed to the CLEC Demarcation point (POT) and test for DT. If CLEC DT is not present, CO will remove the bridging clips, wait 2 minutes and retest on CLEC side. If NDT from CLEC equipment, CO will notify UNE Center of problem with specific CLEC CP having NDT condition.

10.11 If CLEC DT is present at tied in jumper, CO will monitor the BellSouth line. If the line is idle, CO will ANAC the BellSouth TN. When the line is not idle, CO will notify the UNE Center that the conversion can not continue and the UNE Center will direct further activities. If the BellSouth TN does not match the Service Order, CO will locate the correct CP. When CLEC DT is present on the tied in jumper and the BellSouth TN is ANAC'ed, CO will advise UNE Center that they are ready and to start the conversion. CO will remove jumper from BellSouth Cable Pair and terminate tied in jumper. CO will ANAC the line and report the CLEC TN to UNE Center. CO will remain on line with UNE Center until CLEC has accepted circuit.

10.12 CO will remain on the line with the UNE Center until they report acceptance from the CLEC.

10.13 CO will create a SONPK ticket in WFA/DI to report conversion time and complete the order directly in COSMOS.

NOTE 1: The industry standard ANAC number is 800-223-1104. If this number does not work contact the UNE Center and have them acquire the CLEC's ANAC number.

11.0 CENTRAL OFFICE UNBUNDLED LOCAL LOOPS PROVISIONING JOB AID

11.1 **SL1 Unbundled Loop Non-Designed Circuits With A Frame Due Time (FDT) of 3:30pm**

11.2 Non-designed circuits with a FDT of 3:30pm (Circuit ID of TYNU) will be non-coordinated voice grade circuits. Central Office (CO) will cut these circuits anytime on the DUE DATE.

11.3 A single WFA/DI ticket (LNP or UNE) will be issued for the provisioning of each order.

The LNP or UNE ticket will contain the COSMOS Work Package Number (WPN).

11.4 **UNE** tickets will consist of orders with all facilities in a Spare Pending Connect Status. These orders may be wired, tested, and completed prior to the order Due Date. Presence of CLEC Dial Tone is not required. If No Dial Tone (NDT) exists CO will perform a cross office continuity test. The WFA/DI ticket must be completed 100%. The 'Start Date & Time' fields must be populated prior to WFA/DI ticket completion.

11.5 **LNP** tickets consist of orders reusing the BellSouth Cable Pairs (CP). These circuits must be wired (made ready at the BellSouth Cable Pair) and a cross office continuity test performed from the CLEC demarcation point (POT) to the tied in jumper at the BellSouth CP before the Due Date. CO will ANAC the BellSouth line to insure Database integrity. If the TN that is ANAC'd and the TN in COSMOS do not match, the CO will place this order in A1 jeopardy with a remark noting the actual working TN on that Cable Pair.

11.6 After successfully wiring and testing, the WFA/DI ticket will be completed at 10%.

11.7 Frame output should be filed by Due Date at the Frame desk.

11.8 The CO will cut the circuit(s) on the Due Date.

11.9 If No Dial Tone (NDT) on the tied in jumper, CO will proceed to the CLEC Demarcation point (POT) and test for DT. If DT is not present, CO will remove the bridging clips wait 2 minutes, and retest on CLEC side. If NDT from CLEC, CO will place the COSMOS WPN in I4 jeopardy, complete the WFA/DI ticket at 20%. On multi-line orders no circuits are to be cut if NDT condition exists on one or more circuits.

11.10 The Frame Output will be filed in a unique I4 Jeopardy folder, bin, file, etc., on the local frame desk.

11.11 If CLEC DT is present at tied in jumper, CO will monitor the BellSouth line. If the line is idle, CO will ANAC the BellSouth TN. When the line is not idle, CO will monitor the BellSouth line every 5 to 10 minutes until the line is idle. If the BellSouth TN does not match the Service Order, CO will locate the correct CP. When CLEC DT is present on the tied in jumper and the BellSouth TN is ANAC'd, CO will lift off jumper at BellSouth CP and terminate the tied in jumper. CO will complete the WFA/DI ticket 100% as soon as cut is completed. The 'Start Date and Time' fields must be completed prior to WFA/DI ticket completion.

NOTE 1: The industry standard ANAC number is 800-223-1104. If this number does not work contact the UNE Center and have them acquire the CLEC's ANAC number.

1. Order Turn-Up

1.1 Purpose/Scope

This document presents the steps and associated actions required to successfully complete turn-up of CWINS/ UNE Center Designed Inside-Cut-Only Conversion Orders.

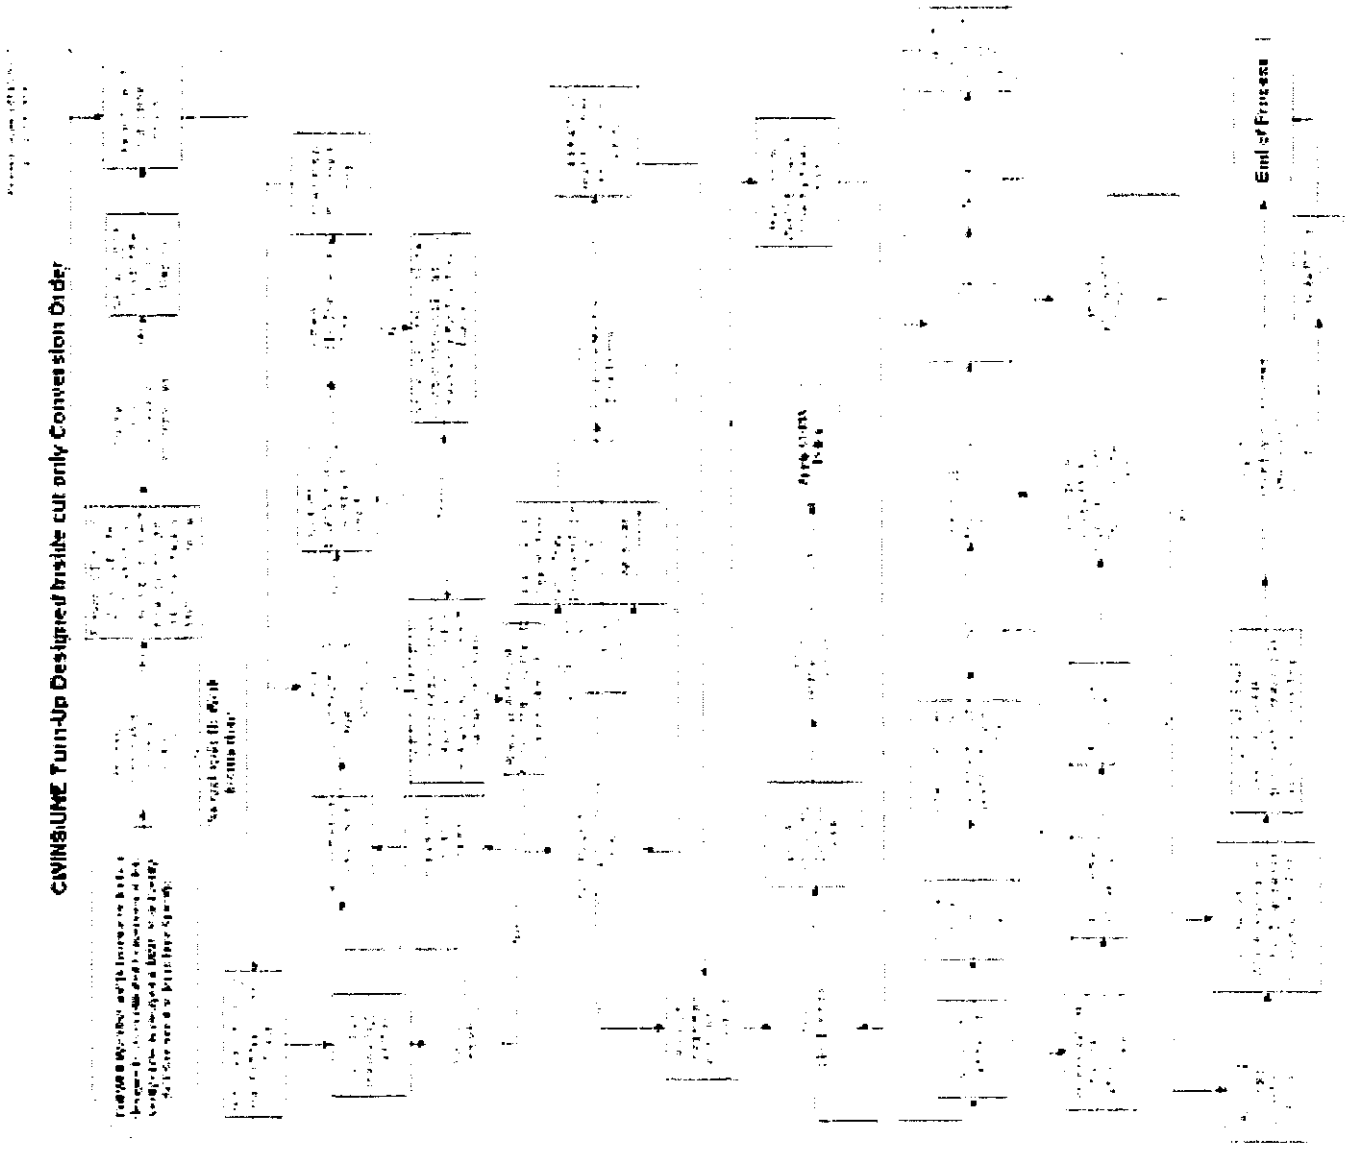
1.2 Responsibilities

This document describes the responsibilities of the Electronic Technician (ET) and/or Maintenance Administrator (MA) in turning up Center Designed Inside-Cut-Only Conversion Orders. Also refer to JA-PETT-001, Job Aid for Provisioning Performance Review, requirements.

1.3 Requirements

1.3.1 Steps for Turning Up CWINS/ UNE Center Designed Inside-Cut-Only Conversion Orders

Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.



PRIVATE/PROPRIETARY

Except Pursuant To A Written Agreement.

The ET/MA will complete the following actions:

Step	Action	If / Then
1	Pull WFA worklist and determine if order is a designed CO coordinated conversion order. Verify that the order is delayed in MARCH and verify SOCS to see if order is Time Specific.	If order is a coordinated conversion order Proceed to next step. If order is not a coordinated conversion order refer to task specific work instructions.
2	Between Due Date-1 and Due Date-2, call CLEC to verify order Due Date and content. CLEC may check for LNP Concurrence. Are there Due Date discrepancies?	If no, proceed to next step. If yes, advise CLEC to contact the LCSC to get discrepancy resolved. Once resolved proceed to next step.
3	Check to see if order is Time specific. (see note below for ***Time Specific)	Proceed to next step
4	Between Due Date-1 and Due Date-2 handoff an appointment ticket to the Central Office.	Proceed to next step.
5	On WOT+1, check WFA/DI load steps. Is wiring complete?	If yes, proceed to next step. If no, escalate, according to escalation procedure, until wiring is complete. Then proceed to next step.
6	Access test point and test. Does circuit test okay? Dial Tone and continuity inside CO?	If yes, skip to Step 10. If no, proceed to next step.
7	Handoff to CO to verify order is wired and correct to CO. Is there CLEC dial tone?	If yes, have CO correct the problem and return to step 6. If no, advise CLEC of no-dial-tone condition and when CLEC advises they have gotten Dial Tone, retest circuit, and proceed to next step.
8	Does circuit test OK?	If yes, proceed to next step If no, return to step 7.

- continued -

PRIVATE/PROPRIETARY
Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.

- continued -

Step	Action	If / Then
9	On DD, contact CLEC to confirm schedule or make scheduling adjustment if mutually agreed, Hand-off a Test Assist Ticket, work type IA, to the CO. Call CO to advise that you are ready to do the cut. Is the CO ready to perform preconversion activity?	If yes, Skip to Step 12. If no, and order is not time specific, proceed to next step. If no, and order is Time Specific, escalate to WMC/CO for coverage, proceed to next step
10	Ask CO for a specific time when they will be ready to do the cut.	Proceed to next step.
11	Does response meet required time frame?	If no, escalate according to Escalation Procedure until CO is ready to perform preconversion activity, proceed to next step. If yes, proceed to next step.
12	Ask CO to begin their ANAC and Dial Tone test.	
13	Is there CLEC dial tone?	If yes, Advise the CO will START the cut. Skip to step 15. If no, advise CLEC of no-dial-tone condition and proceed to next step.
14	Can the CLEC get dial tone on the circuit?	If yes, have the CO retest the circuit and return to step 13. If no, apply SD/MA policy. **END OF PROCESS**
15	Record the START time in the CCSS system. **Note:** Note: For Time Specific Conversions the WINS/UNEC goal is to begin the conversion at the scheduled time; however, we will use best effort to begin the conversion within +/- 15 Min. of the scheduled time.	
16	When CO advises cut is complete, record test results and the END time in the CCSS system.	

- continued -

Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.

- continued -

Step	Action	If / Then
17	Is the order ILNP?	If yes, access MARCH system and record start time in the CCSS system. If no, proceed to step 21.
18	Release the MARCH orders	
19	Resolve any rejects.	
20	Once order is accepted by the switch, record the END time in the CCSS system.	Proceed to next step.
21	Inform CLEC that the physical cut is complete	
22	CLEC tests circuit. Does the circuit test okay?	If yes, skip to step 24. If no, proceed to next step.
23	Work with CLEC, CO, and or OST to fix problem.	Return to step 22.
24	Can the CLEC accept the order at this time?	If yes, proceed to next step. If no, apply the UNE center acceptance policy and proceed to next step.
25	Complete order in WFA by placing an "O" by the Due Date and enter a remark and Depress PF11. **Note:** Ensure all entries are complete per additional Responsibilities and Requirements found in JA-PETT-001 , Job Aid for Provisioning Performance review.	

- continued -

PRIVATE/PROPRIETARY
Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.

- continued -

Step	Action	If / Then
26	Complete all related orders. (Except those orders in an HC status. Like the N orders for listing.) **Note: If the order was for LNP, access the MARCH system and run the disconnect order**	
27	Was this cut scheduled and completed afterhours?	If yes, create a bill on the OSSCSC screen **END OF PROCESS** If no this is the **END OF PROCESS**

This completes the turn up of CWINS/ UNE Center Designed Inside-Cut-Only Conversion Orders.

1.4 *** Time Specific*** Negotiate The Time for the Conversion of Service

Due to contract negotiations the CLECs have the opportunity to specify a time window for the cutover (Time Specific Conversions). In order to prevent miscommunications, 24/48 hours prior to Due Date, BellSouth will contact the CLECs and confirm agreement to Time Specific schedule or **mutually** renegotiate Time Specific schedule to meet load/force capabilities. **Mutually agreed** Time Specific schedule changes on the due date are not recommended but are acceptable to allow flexibility to meet the service order due date. All Time Specific schedule confirmations and mutually agreed reschedules must be documented in the WFA log and be accurately entered into CCSS to reflect the confirmed or mutually agreed Time Specific scheduled time.

A single CLEC request for multiple Time Specific conversions in a single central office at the same time should be negotiated for a sequential order conversion in order of CLEC preference, if requested. WFA log documentation should reflect this agreement and subsequent orders should have WFA log entries identifying the association with the first order in the conversion sequence. The Time Specific scheduled time in CCSS for the first conversion in the sequence must represent the CLEC requested schedule time or mutually negotiated schedule time. All following sequential order schedule times should be entered into CCSS to match the actual conversion start time.

Note: Individual CLEC contract language may differ slightly from the stated process and should be reviewed if necessary. The contract agreement supersedes any difference in the stated process and will be followed.

The ET/MA will complete the following actions:

Step	Action	If / Then
1	Pull WFA worklist and determine if order is inside coordinated conversion order. Verify the order is delayed in MARCH and verify in SOCS to determine if order is Time Specific.	If yes, (order is coordinated conversion order) proceed to next step If no, (order is not coordinated conversion) refer to Task specific work instructions.
2	Between Due Date -1 and Due Date -2, call CLEC to verify order due date and content. CLEC may check for LNP Concurrence. Are there Due Date or concurrence discrepancies?	If no, proceed to next step If yes, advise the CLEC to contact the LCSC to get discrepancy resolved. Once resolved proceed to next step.
3	Is the order time-specific? (see note below for ***Time Specific)	If yes, proceed to next step. If no, skip to Step 5.
4	Between Due Date -1 and Due Date -2, Handoff an appointment ticket.	
5	On Due Date, call the CLEC to confirm conversion schedule. At appropriate time call the CO to verify that CO is ready has completed preconversion verification and is ready to cut.	
6	Has CO ANAC'd BST Dial Tone (When appropriate) and ready to proceed?	If yes, skip to Step 8 If no, proceed to step 7.
7	Ask CO for a specific time when they will be ready to do the cut. Does response meet time frame?	If yes, return to step 5. If no, escalate, according to escalation procedure and go to step 8
8	Is there CLEC dial tone?	If yes, skip to Step 11. If no, call CLEC to advise them of no-dial-tone condition and proceed to next step.
10	Can the CLEC get dial tone on the circuit within the next 15 Min?	If yes, have the CO retest the circuit after CLEC says they have Dial Tone on circuit and then proceed to next step. If no, apply SD/MA policy. **END OF PROCESS**

- continued -

PRIVATE/PROPRIETARY
Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.

- continued -

Step	Action	If / Then
11	Have CO start the cut.	
12	Record the START time in the CCSSsystem. Note: Foe Time Specific conversions the WINS/UNEC goal is to begin the conversion at the scheduled time; however, we will use best effort to begin the conversion within +/- 15 Min. of the scheduled time.	
13	When CO advises cut is complete, record test results and END time in the CCSS system.	Proceed to next step.
14	Is the order ILNP or LNP?	If the order is ILNP go to step 18. If the order is LNP go to step 15.
15	Inform the CLEC the physical cut is complete.	
16	CLEC tests circuit. Does the circuit test okay?	If yes, skip to Step 22 If no, proceed to next step.
17	Work with the CLEC, CO and outside technician to fix the problem.	Return to Step 16.
18	Access MARCH and release translation orders.	
19	Record the START time in the CCSSsystem.	
20	Resolve any rejects.	
21	Once the orders are accepted by the switch, record the END time in the CCSS system.	
22	Can the CLEC accept the order at this time?	If yes, proceed to next step. If no, apply the UNE center acceptance policy
23	Access MARCH system and release disconnect orders. (LNP only)	

- continued -

Contains Private And/Or Proprietary Information.
May Not Be Used Or Disclosed Outside The BellSouth Companies
Except Pursuant To A Written Agreement.

- continued -

Step	Action	If / Then
24	Complete order in WFA: place an "O" by Due Date, and depress PF11. **Note:** Ensure all entries are complete per additional Responsibilities and Requirements found in JA-PETT-001, Job Aid for Provisioning Performance review.	
25	Complete all related orders. (Except those orders in an HC status, like the N orders for listing.)	End of Process

This completes the turn up of CWINS/ UNE Center Non-Designed Inside-Cut-Only Conversion Orders.

1.4 *** Time Specific*** Negotiate The Time for the Conversion of Service

Due to contract negotiations the CLECs have the opportunity to specify a time window for the cutover (Time Specific Conversions). In order to prevent miscommunications, 24/48 hours prior to Due Date, BellSouth will contact the CLECs and confirm agreement to Time Specific schedule or **mutually** renegotiate Time Specific schedule to meet load/force capabilities. **Mutually agreed** Time Specific schedule changes on the due date are not recommended but are acceptable to allow flexibility to meet the service order due date. All Time Specific schedule confirmations and mutually agreed reschedules must be documented in the WFA log and be accurately entered into CCSS to reflect the confirmed or mutually agreed Time Specific scheduled time.

A single CLEC request for multiple Time Specific conversions in a single central office at the same time should be negotiated for a sequential order conversion in order of CLEC preference, if requested. WFA log documentation should reflect this agreement and subsequent orders should have WFA log entries identifying the association with the first order in the conversion sequence. The Time Specific scheduled time in CCSS for the first conversion in the sequence must represent the CLEC requested schedule time or mutually negotiated schedule time. All following sequential order schedule times should be entered into CCSS to match the actual conversion start time.

Note: Individual CLEC contract language may differ slightly from the stated process and should be reviewed if necessary. The contract agreement supersedes any difference in the stated process and will be followed.

END OFFICE HANDLING OF OPERATOR AND DIRECTORY ASSISTANCE CALLS OF BELLSOUTH AND ALEC END-USERS

End Office Handling of Operator and Directory Assistance Calls
Of
BellSouth and ALEC End-Users

1. Introduction

1.1. Scope and Purpose

The purpose of this paper is to show the service parity that exists between BellSouth Telecommunications Inc. (BellSouth) Retail customers and Alternate Local Exchange Carrier (ALEC) customers. It will compare Retail vs. Resale, Retail vs. Unbundled Network Element (UNE) with respect to functions that involve a BellSouth switch and Retail vs. UNE or Resale with the Selective Call Routing option. This includes the dial tone provided to the lines, both BellSouth and ALEC, and the routing of the calls to the various trunk groups. In each case, BellSouth provides parity, subject only to the ALEC's ordering of sufficient facilities to deliver its customized traffic to the BellSouth switch.

1.2. General

Switch translations as defined here are the variable software parameters that allow for individual line identification, vertical services capability, and the applicable Automatic Message Accounting (AMA) recording. The term also applies to the routing schemes based on a defined trunking architecture. In BellSouth, switch translations provisioning is performed by eight geographic software centers supported by a regional staff. This regional staff provides written methods and procedures for new services and features, as well as day-to-day support.

Dial tone, access to subscribed features, and access to all trunk groups in the BellSouth end offices is provided to customers on a first come, first served basis.

2. ALEC Resale Customer vs. BellSouth Retail Customer:

ALEC Request for Service:

An ALEC orders service for its customer by submitting the required forms to the Local Carrier Service Center ("LCSC"). The LCSC serves as BellSouth Telecommunications' point of contact for processing local service requests from ALECs. One of the required forms for Resale the ALEC submits to the LCSC is the Resale Service Form. It is on this form that the ALEC lists appropriate Universal Service Order Codes (USOCs). The USOC identifies specific items of service or equipment. It is also on the Resale Service Form that the ALEC lists any call blocking or calling restrictions, such as 900 and 976 blocking.

The LCSC generates a BellSouth service order once all information is received from the ALEC. The BellSouth service order contains the USOCs required to provide the service. The service order also carries a special Field Identifier Code ("FID"). The FID provides a four-digit code that identifies the ALEC to the billing system. The FID is not input into the switch.

BellSouth Customer Request for Service:

A BellSouth customer orders service from the BellSouth Business Office. The BellSouth business office generates a BellSouth service order. The BellSouth service order contains the USOCs required to provide the service.

Service Order Flow:

BellSouth Retail customer service orders and ALEC Resale customer service orders utilize the exact same USOCs. The service orders enter a system called the Line Class Code Assignment Module ("LCCAM"). The LCCAM takes the USOCs assigned on service orders and converts them to a Line Class Code ("LCC"). The LCC is a three character alphanumeric entry that identifies the routing and screening characteristics of the line to the switch.

The service orders flow into MARCH (not an acronym). MARCH is a memory administration system that translates line-related service order data into switch provisioning messages and automatically transmits the messages to targeted stored program control system switches. Nothing input into the switch identifies a line as an ALEC line. A BellSouth line and an ALEC line with the same LCC look identical to the

switch. They use the exact same routing, screening, and trunking. Therefore, parity between a BellSouth customer Retail line and an ALEC Resale line is guaranteed.

Once the service order is completed by the Service Representative, the entire service order process described above is totally mechanized, unless an error is encountered.

See Diagram 1 for an example of a BellSouth Retail line and an ALEC Resale line. Both lines in the example have requested single party flat rate residential service with 900 and 976 blocking.

3. ALEC UNE Customer vs. BellSouth Retail Customer:

ALEC Request for Service:

An ALEC orders UNE service for its customer, either a Port only, or a Port/Loop Combo, by submitting the required forms to the LCSC. (Note: for the purposes of switch input, Port only orders and Port/Loop Combos are identical.) The LCSC serves as BellSouth's point of contact for processing local service requests from ALECs. One of the required forms for a UNE the CLEC submits to the LCSC is the Port Service Form. It is on this form that the CLEC lists the appropriate USOCs. UNE service uses one of four distinct provisioning USOCs, as well as other USOCs as required to define the service. The USOC identifies specific items of service or equipment. It is also on the Port Service Form that the ALEC lists any call blocking or calling restrictions, such as 900 and 976 blocking.

The LCSC generates a BellSouth Service Order once all information is received from the ALEC. The BellSouth Service Order contains the USOCs required to provide the service. The Service Order also carries a special Field Identifier Code ("FID"). The FID provides a four-digit code that identifies the ALEC to the billing system. The FID is not input into the switch.

BellSouth Customer Request for Service:

A BellSouth customer orders service from the BellSouth Business Office. The BellSouth Business Office generates a BellSouth Service Order. The BellSouth Service Order contains the USOCs required to provide the service.

Service Order Flow:

BellSouth Retail customer service orders and ALEC UNE customer service orders utilize most of the same USOCs. The exception is that one of four distinct provisioning USOCs must be used for the UNE port, along with any other USOCs that may be required to provide the service. The service orders enter a system called the Line Class Code Assignment Module ("LCCAM"). The LCCAM takes the USOCs assigned on service orders and converts them to a Line Class Code ("LCC"). The LCC is a three-character alphanumeric entry that identifies the routing and screening characteristics of the port to the switch.

The service orders flow into MARCH. The MARCH system formats the input messages to the switch. The ports are then translated in the switch. Nothing input into the switch identifies a port as an ALEC port. A BellSouth port and an ALEC port with the same LCC look identical to the switch. They use the exact same routing, screening, and trunking. Therefore, parity between a BellSouth customer Retail port and an ALEC UNE port is guaranteed.

Once the service order is completed by the Service Representative, the entire service order process described above is totally mechanized, unless an error is encountered.

See Diagram 2 for an example of a BellSouth Retail line and an ALEC UNE line. Both lines in the example have requested single party measured rate residential service with 900 and 976 blocking.

4. ALEC UNE/Resale Customer with Selective Call Routing vs. BellSouth Retail Customer:

Overview of Selective Call Routing:

Selective Call Routing is an option that allows an ALEC to select their own Operator Services, Directory Assistance, and Repair Service providers for their customers that are served from a BellSouth switch. Some of the choices available to the ALEC for Operator Services and Directory Assistance are 1) BellSouth operators - BellSouth Brand, 2) BellSouth operators - no Brand, 3) BellSouth operators – ALECs' own Brand, 4) Other Operator Services platform, 5) Announcement, 6) Other arrangement as requested by the ALEC and agreed to by BellSouth. Repair Service would generally be to an ALEC designated location.

Depending on the type of service requested, new trunk groups may by required in each end office where the ALEC is requesting service. If the ALEC requests BellSouth operators with no Brand, a new trunk group is ordered by BellSouth's Operator Services and installed by BellSouth. One would be installed to TOPS for Operator Services and one would be installed to TOPS for Directory Assistance. These trunk groups are not installed in an end office until the first ALEC requests Selective Call Routing for that particular end office. These trunk groups are not dedicated to a particular ALEC but are shared by any ALEC requesting unbranded service.

New trunk groups will be required for an ALEC requesting Customized Branding. These trunk groups will be required to every end office where the ALEC has requested service. The separate trunk groups from each end office are required to provide the same nondiscriminatory branding for the ALECs that is provided for BellSouth. The ALEC branded trunk group identifies to the TOPS equipment that this call is for a specific ALEC and the requested ALEC identification is automatically provided to the customer without operator intervention, just as is provided for a BellSouth customer. These trunk groups will be ordered by the ALEC to TOPS and will be installed by BellSouth. A separate trunk group will be required for Operator Services and for Directory Assistance. These trunk groups are dedicated to the particular ALEC who has ordered them.

ALECs who utilize BellSouth operators for Operator Services and Directory Assistance - BellSouth Brand, use the exact same trunk groups to TOPS as BellSouth Retail customers.

An ALEC has the option of providing its own Operator Services and Directory Assistance functions. The ALEC would be required to provision a trunk group (or trunk groups) from the end office to their Operator Services and/or Directory Assistance location.

ALEC Request for Selective Call Routing:

An ALEC must preorder Selective Call Routing through their BellSouth Account Team. This preordering will cause the required Selective Routing Codes to be assigned and the translations and required trunk groups to be provisioned in the switches.

Once an ALEC has preordered Selective Call Routing and the required translations have been built in the switch, the ALEC orders it by using a FID of ZSRC, followed by the Selective Routing Code assigned to the ALEC for the type of service required. This FID is entered on the Resale Service Form or Port Service Form and sent to the LCSC. The LCSC generates a BellSouth Service Order once all information is received from the ALEC. The BellSouth Service Order contains the USOCs required to provide the service and the special Selective Routing FID and Selective Routing Code.

Service Order Flow:

The service orders enter a system called the Line Class Code Assignment Module ("LCCAM"). The LCCAM takes the Selective Routing Code entered against the ZSRC FID and converts it to a Line Class Code. This Line Class Code represents the type of routing and screening requested for the ALEC customer.

The service orders flow into MARCH. The MARCH system formats the input messages to the switch. The lines are then translated in the switch using the special Line Class Code assigned in just the same manner as for a BellSouth retail line.

Once the service order is completed by the Service Representative, the entire service order process described above is totally mechanized, unless an error is encountered.

Parity:

Parity between BellSouth Retail Customers and ALEC customers with Selective Routing as it relates to Operator Services and Directory Assistance is dependent upon the type of service requested by the ALEC.

When BellSouth Operator Services and Directory Assistance - no Branding is requested, the trunk groups used are not dedicated to a particular ALEC but are shared by any ALEC requesting unbranded service. These trunk groups are monitored by BellSouth and additional trunks are installed when required. This monitoring will assure service parity with BellSouth customers.

When BellSouth Operator Services and Directory Assistance - Custom Branding is requested, the trunk groups used are dedicated to the particular ALEC who has ordered them. The level of service provided to the ALEC customers may be equal to, better than, or worse than, that provided to BellSouth customers, depending on the utilization of the group as determined by the ALEC's trunk ordering decisions. The same is true if an ALEC sends the Operator Services and Directory Assistance traffic to another Operator Services platform of its choosing.

When BellSouth Operator Services and Directory Assistance - BellSouth Branding is requested, the trunk groups used are the exact same trunk groups as BellSouth Retail customers. There is no difference and parity is assured.

The routing of calls to end office trunk groups, InterExchange Carriers, 911 Tandem, and the Access Tandem is the same as is provided to BellSouth Retail Customers. The exact same trunk groups to these locations are used. Parity is thus assured.

See Diagram 3 for an example of a BellSouth Retail line and an ALEC UNE line, with Selective Call Routing. Both lines in the example have requested single party measured rate residential service with 900 and 976 blocking. The Selective Routing requested by the ALEC is for routing to their own Operator Services and Directory Assistance. The Selective Routing code assigned is SAAT4.

Diagram 1: Flat rate residence customer with customized code restriction 4 (Blocks 900/976)

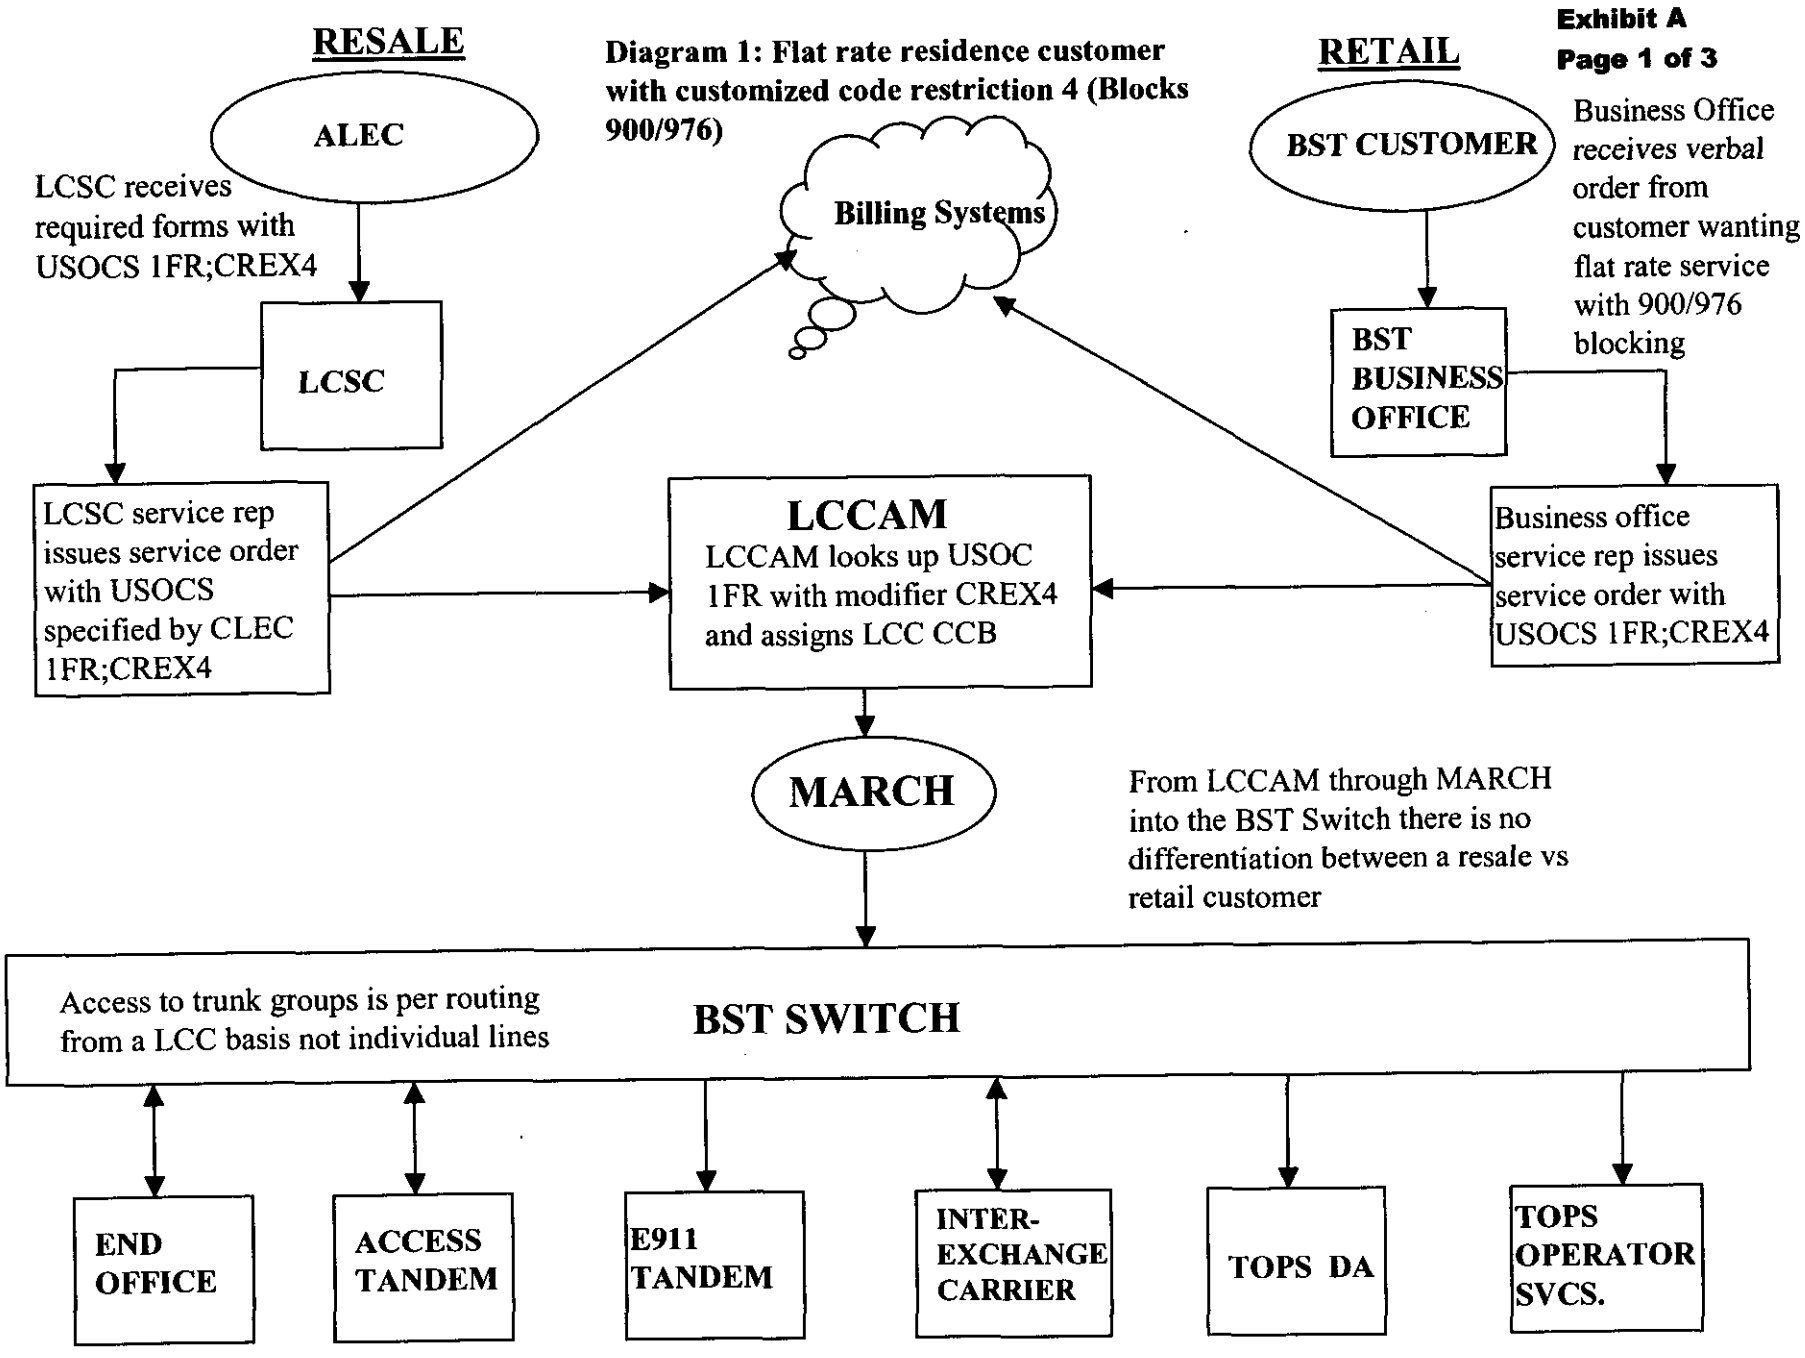

Diagram 2: UNE customer with customized code restriction 4 (Blocks 900/976)

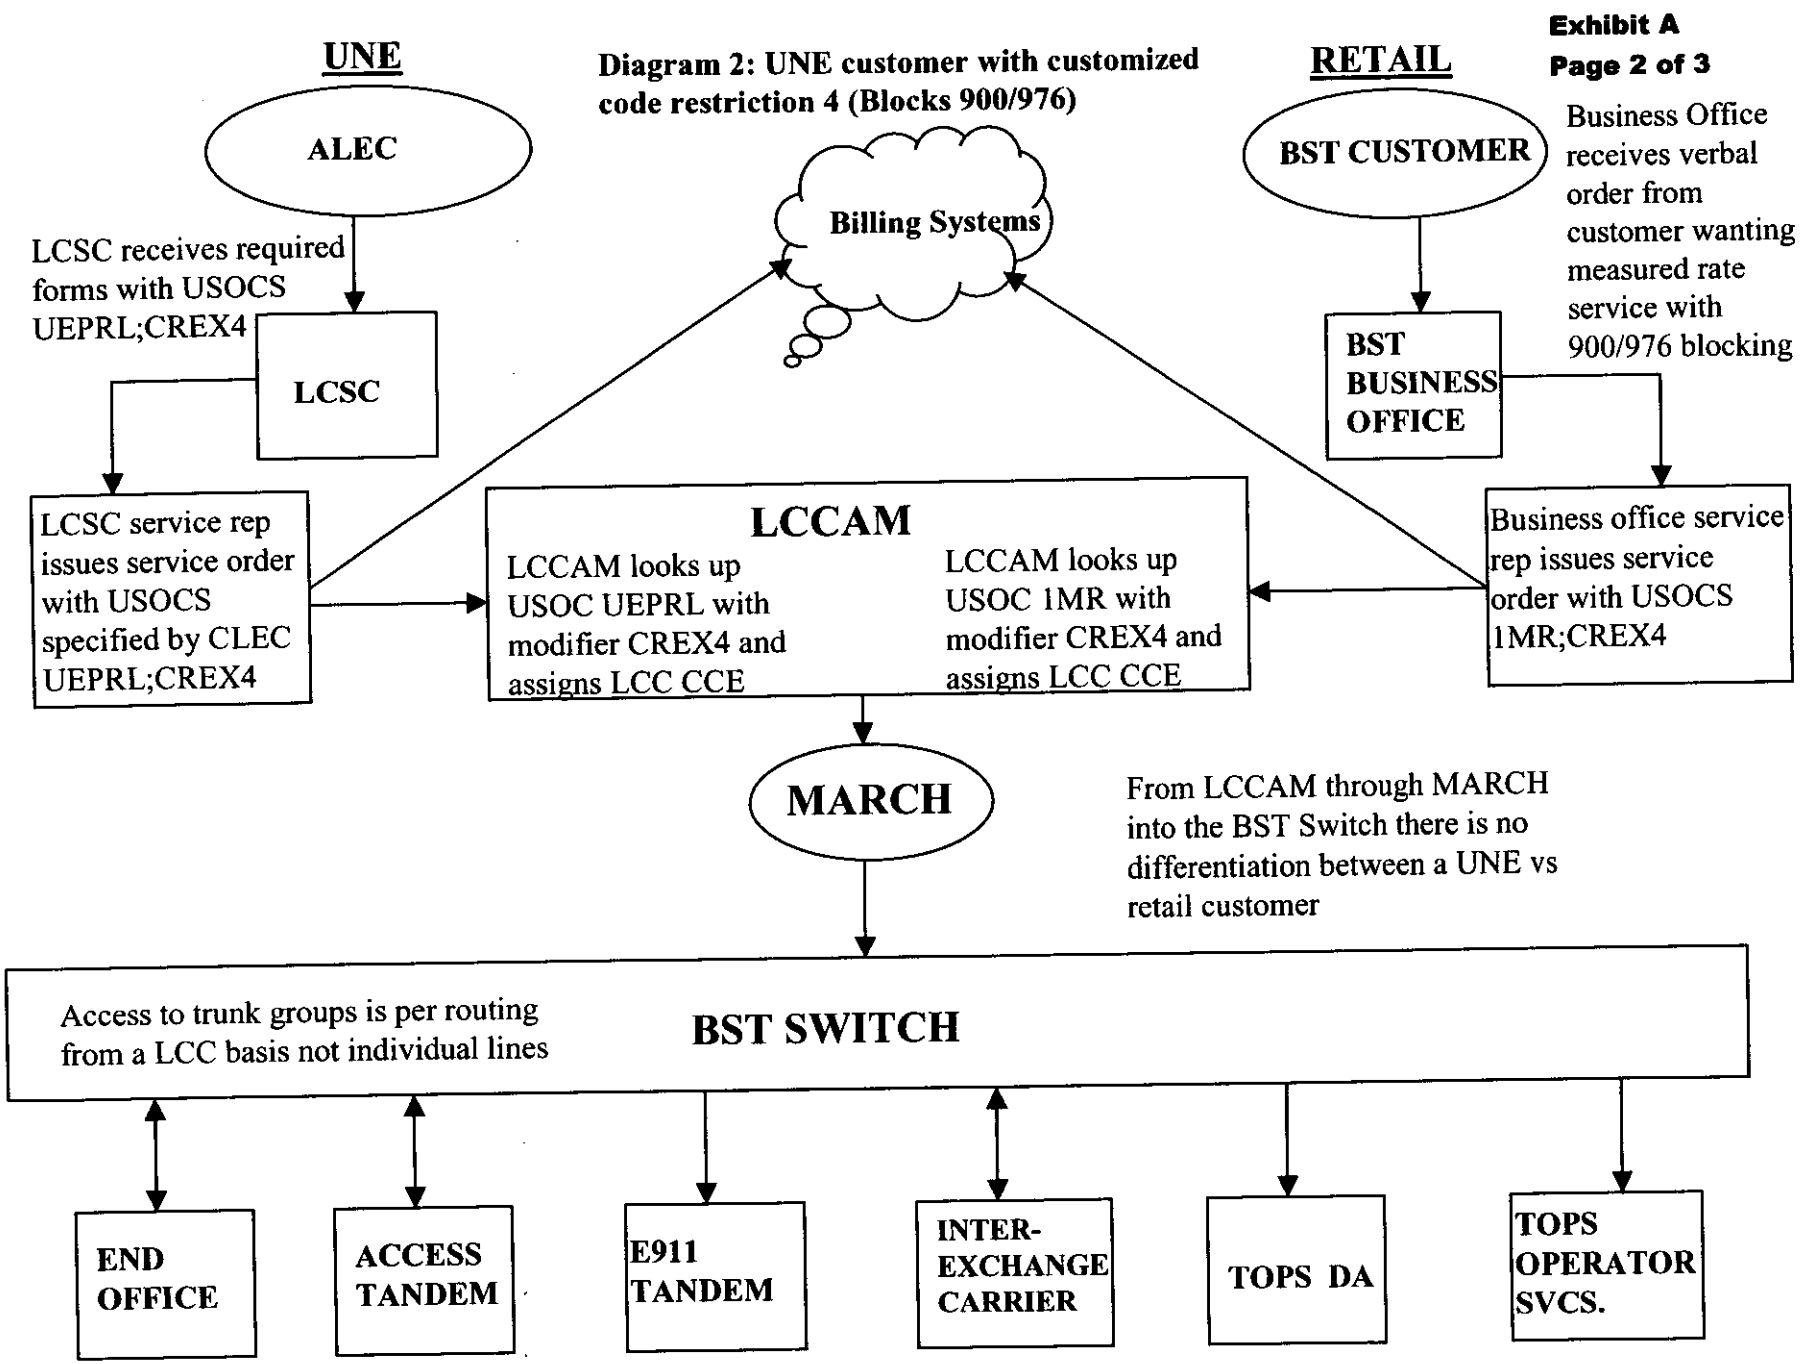

Diagram 3: RESALE or UNE customer with customized code restriction 4 (Blocks 900/976) with Selective Routing

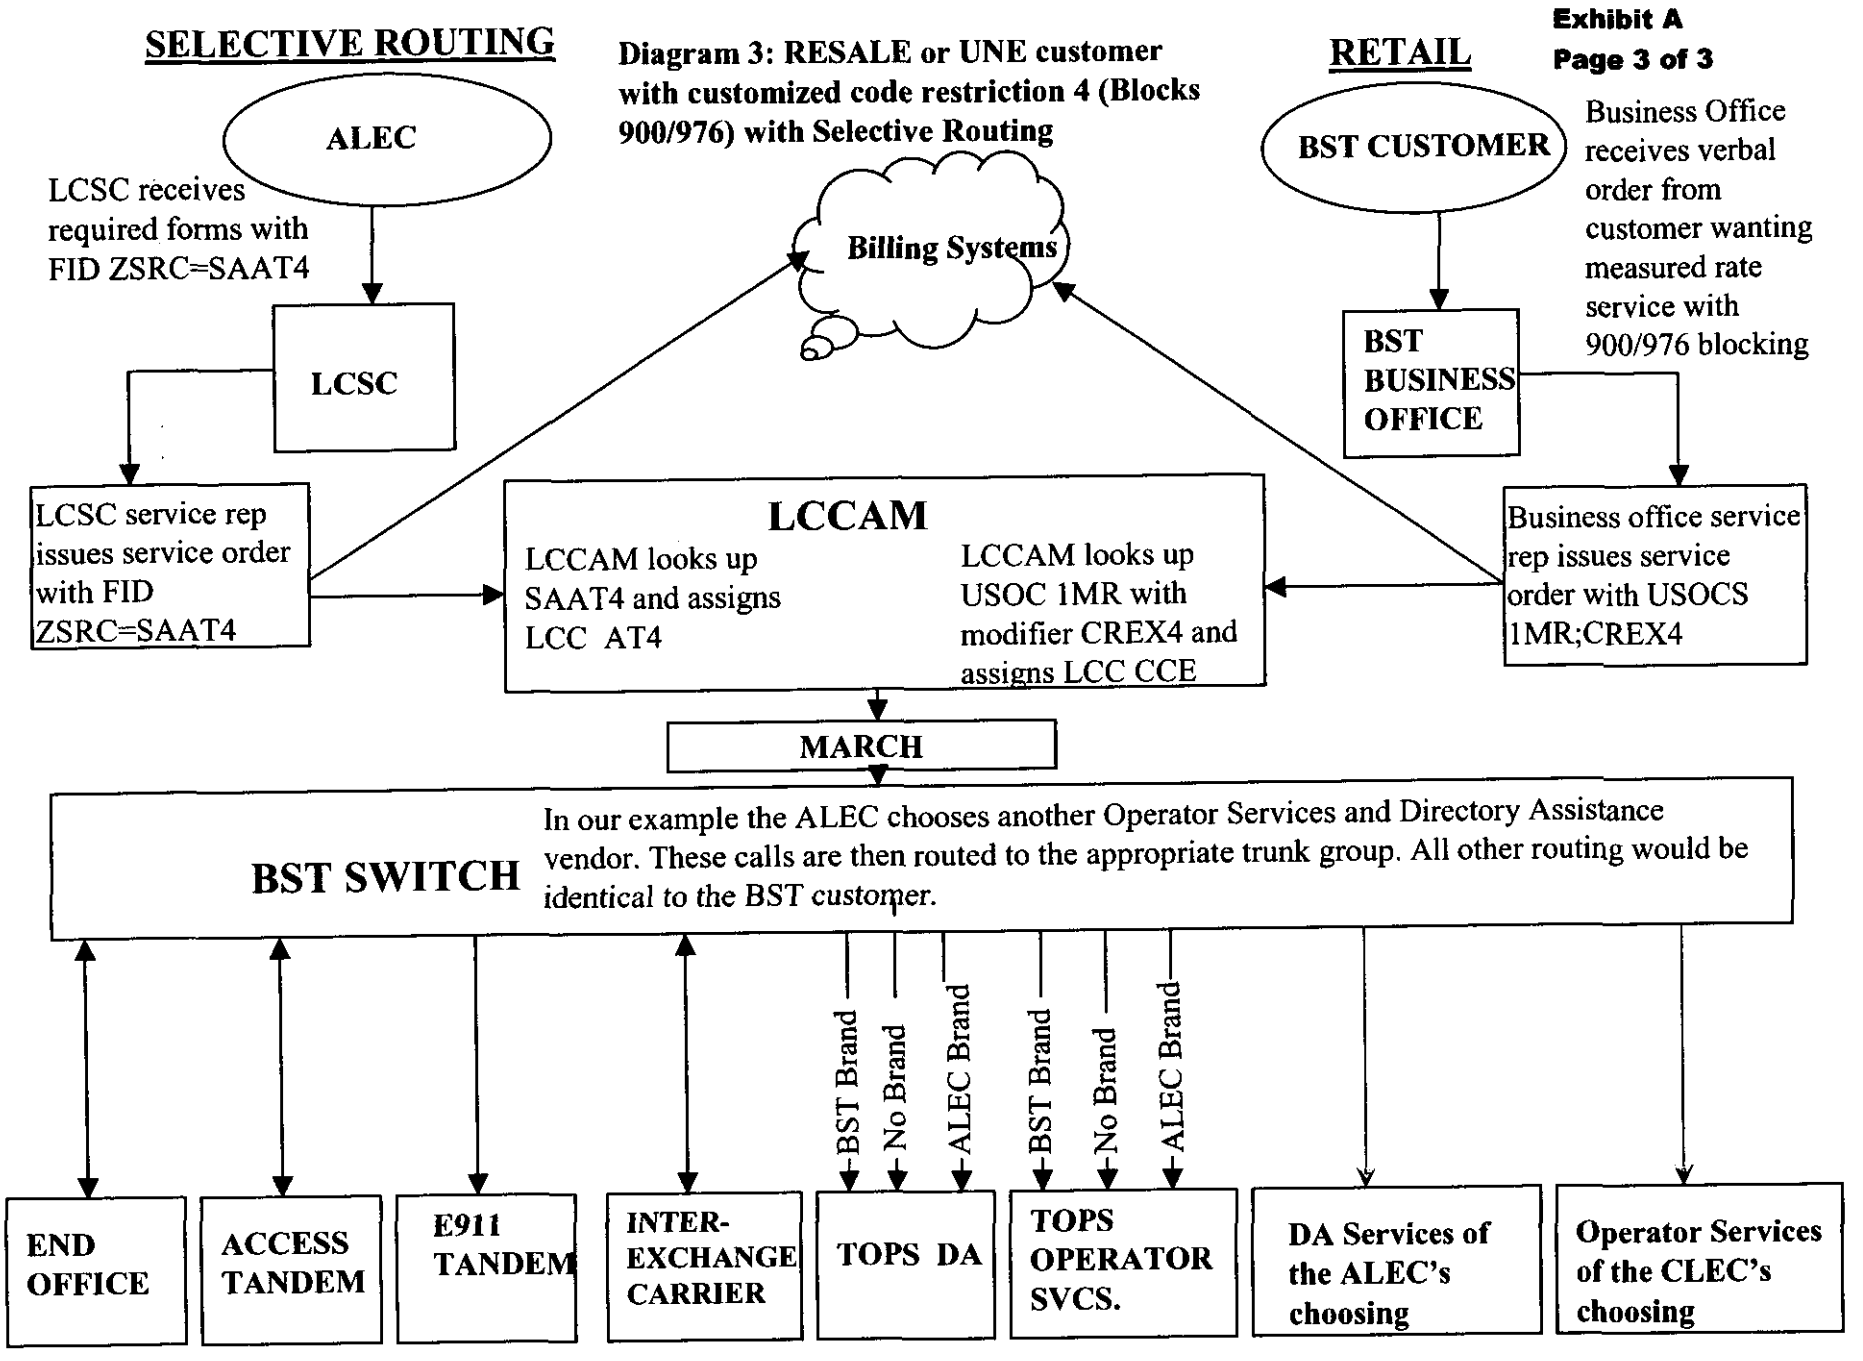

WKM-7

TRAFFIC OPERATING POSITION SYSTEM (TOPS) CALL FLOW VIA QUEUE MANAGEMENT SYSTEM (QMS)

TRAFFIC OPERATING POSITION SYSTEM (TOPS) CALL FLOW VIA QUEUE MANAGEMENT SYSTEM (QMS)

Call origination type is the most frequently used means of call queue assignment in existing TOPS. National translations or a standard pretranslator can be used to assign a call origination type, although most call origination types are hard-coded and determined in the call setup phase through signaling information. The call origination type is used by table QMSTOPS to assign a CT4QNAM to the call. BellSouth marks calls requiring an operator as QMS in table TOPSTOPT.

Traffic Operator Position System Trunk Options Table (TOPSTOPT) is used to specify different options for Traffic Operator Position System (TOPS) trunks. The Automatic Call Distribution (ACD) field is used to specify the processing used on a trunk group basis. The GRPKEY consists of subfield CLLI. The ACDDATA field consists of subfield ACD and refinements LOCATIONS, ORG_AREA, ORIGCRIT_SEL and ORIGCRIT. The DISPCLG field indicates if the calling number is displayed at the TOPS terminal for use by the TOPS operator. The ADASSERV field is for automated directory assistance service (ADAS) availability. Field ADASANS controls when answer supervision is returned to the originating trunk. ANITOCLI enables conversion of ANI on an incoming trunk to CLI for an outgoing ISUP trunk. Originating Line Number Screening Query (OLNSQRY) indicates which calls can launch a query on a given incoming trunk. DCIBIDX is currently non-functional, intended for a later release. Local number portability calling number AMA (LNPCLGAM) specifies whether to append a module 720 to the AMA record for calls that originate on the trunk group. Field XLASCHEM enables this trunk group for use by the new TOPS translations process. Service provider identifier processing (SPIDPRC) field enables SPID processing for this incoming trunk group. Trunk Service Provider Identifier (TRKSPID) indicates whether a default SPID has been assigned for the given trunk group.

SAMPLE ENTRIES FOR TABLE : TOPSTOPT

UHC5230JCM4 QMSCAM CORECAM Y SFLA2_CLEC Y ADASPLUS IMMEDIATE N NONE 0 Y N N N

INITIAL CALL QUEUE

To manage the segregation of traffic across call queues each call is assigned an initial call queue (CT4Q) in table QMSTOPS. Then, this initial call queue is refined (changed) by refinement tables. The call type for queuing (CT4Q) refinement allows the TOPS office to divide incoming traffic into separately manageable categories based on different call attributes, according to its office-specific criteria. Tables TQORDERA or TQORDERB specifies the relative ordering of the call type for queuing refinement tables

at the three different call states where call queue assignment processing is performed in TOPS QMS. The values in the key fields match the names of the eleven currently available CT4Q refinement tables. Data in a particular CT4Q refinement table has no effect until TQORDERA or TQORDERB has a non-zero ordering added against that CT4Q table. Only one of these tables is active at a time. The active table is shown in table TQMSOPT.

Pre-operator relative ordering defines the relative ordering for calls that have not yet been to either an operator or an automated service. All active preopr refinement tables are used before postauto refinements are utilized. Post-automated service ordering defines the relative ordering for calls that have not yet been to an operator but have been to an automated service. Recall/transfer ordering defines the relative ordering for calls that have already been to an operator and are now recalling for operator service. Assistance relative ordering defines the relative ordering for calls which a QMS operator has requested, and the request maps to the Customer Service Expert (CSE) assistance in table TQMSFCQA.

SAMPLE ENTRIES FOR TABLE: TQORDERA

CT4QTABL	PREOPR	POSTAUTO	RECALL	ASST
CT4QCLAS	2	0	0	0
CT4QREST	4	0	0	0
CT4QPFXT	1	0	0	0
CT4QCAR	0	0	0	0
CT4QCLD	0	1	0	0
CT4QORIG	3	0	0	0
CT4QTIME	5	3	1	0
CT4QLANG	0	2	0	0
CT4QAUTO	0	4	0	0
CT4QSPID	0	0	0	0
CT4QBLST	0	0	0	0

Refer to the sample datafill. Incoming calls PREOPR traverse the call queue refinement phase in the following order: CT4QPFXT, CT4QCLAS, CT4QORIG, CT4QREST and CT4QTIME. Note that table CT4QCLD is not traversed in the preoperator stage, as it contains a 0 in the PREOPR data field.

FIRST REFINEMENT TABLE

CT4QPFXT is the first refinement table checked for changes. Since this is the first refinement table, the oldct4q (call type for queuing) will be the CT4Q entry in table QMSTOPS. Sample entries for QMSTOPS and CT4QPFXT are listed below:

SAMPLE ENTRIES FOR TABLE: QMSTOPS

CO	CT4Q
UNSPEC	UNSPEC
OH	0_MINUS
OA	0_PLUS
DD	1_PLUS
CAMA	CAMA

555	DA_555
411	DA_411
HOM555	DA_555
FOR555	DA_555

A decision was made to isolate operator assisted (OA) directory assistance calls. Therefore, the datafill in this table has entries changing the CT4Q's assigned to 411, 555 and FOR555. The dialed prefix value is either operator assisted (OA) or direct dialed (DD).

SAMPLE ENTRIES FOR TABLE: CT4QPFXT

OLDCT4Q	PFXTCRIT	NEWCT4Q
DA_411	OA	OA_DA_411
DA_411	DD	DD_DA_411
DA_555	OA	OA_DA_555
DA_555	DD	DD_DA_555

SECOND REFINEMENT TABLE

The second refinement table used is CT4QCLAS. The OLDCT4Q for this table will come from table CT4QPFXTor QMSTOPS for entries not refined in CT4QPFXT. Table CT4QCLAS provides call type for queuing (CT4Q) refinement on the basis of clascrit, which is the class of service associated with the calling number. The class of service associated with the calling number can be UNKNOWN, STATION, HOTEL, COIN, or RESTRICTED. Entries are required for calls that need to be separated for queuing purposes.

SAMPLE ENTRIES FOR TABLE: CT4QCLAS

OLDCT4Q	CLASCRIT	NEWCT4Q
0_MINUS	COIN	0_MINUS_COIN
0_MINUS	STATION	0_MINUS_STATION
0_MINUS	HOTEL	0_MINUS_HOTEL
0_MINUS	RESTRICTED	0_MIN_REST
0_PLUS	COIN	0_PLUS_COIN
0_PLUS	STATION	0_PLUS_STATION
0_PLUS	HOTEL	0_PLUS_HOTEL
0_PLUS	RESTRICTED	0_PLUS_REST
1_PLUS	COIN	1_PLUS_COIN
1_PLUS	STATION	1_PLUS_STATION
1_PLUS	HOTEL	1_PLUS_HOTEL
1_PLUS	RESTRICTED	1_PLUS_REST
OA_DA_411	COIN	OA_411_COIN
DD_DA_411	COIN	DD_411_COIN
DD_DA_411	RESTRICTED	DA_REST

THIRD REFINEMENT TABLE

The third refinement table used is Call Type for Queuing by Originating Location Table (CT4QORIG). Table CT4QORIG provides call type for queuing refinement on the basis of ORIGCRIT, which is an originating location associated with the call. This table is used to route calls to special groups of operators who have knowledge of geographical area or have fluency in a particular language so that these operators can effectively handle calls from special groups of subscribers. The OLDCT4Q for this table will come from table CT4QCLAS, CT4QPFXT, or QMSTOPS respectively if not refined in CT4QCLAS or CT4QPFXT. The name to be used in field ORGCRIT must first be defined in table TQORGNAM. If calls are to be CT4Q refined by the originating criteria, they must be marked as yes (Y) in ORIGCRIT_SEL in table TOPSTOPT. If originating criteria is marked no (N) on a trunk group in table TOPSTOPT, this table will not be used for refinement on that trunk group

SAMPLE ENTRIES FOR TABLE: CT4QORIG

FOURTH REFINEMENT TABLE

Call Type for Queuing by Restricted Billing Index Table (CT4QREST) is the fourth refinement table used. Table CT4QREST provides call type for queuing (CT4Q) refinement on the basis for RESTCRIT, which is a restricted billing index. The OLDCT4Q for this table will come from CT4QORIG, CT4QCLAS, CT4QPFXT or QMSTOPS. A restricted billing index is defined only for calls with COIN or RESTRICTED class of service. Normally, restricted billing types that do not require their own queues are not datafilled in this table.

FIFTH REFINEMENT TABLE

The fifth refinement table used is CT4QTIME. Table CT4QTIME provides call type for queuing (CT4Q) refinement on the basis of TIMECRIT, which is a time criterion associated with the call. A set of tables is provided to allow the specification of differently treated times of day for each of the week and for holidays. Table CT4QTIME diverts traffic to a new CT4Q based on the

TIMECRIT value determined upon call arrival. This allows for the consolidation of different types of traffic into a smaller number of call types for queuing at known low-traffic periods providing savings in operator requirements. The OLDCT4Q for this table will come from one of the previously used refinement tables or Table QMSTOPS. The switch will look at one or more of the five other tables related to time of day of week criterion before table CT4QTIME is used. First, the switch must determine the daytype. Is today a HOLIDAY? Check Table TQHOLIDAY. If yes, use the DAYTYPE value for index into table TQDAYDEF. Otherwise, use DAYTYPE value from table TQWKDAY for index into table TQDAYDEF. Next, determine TIMECRIT. Index table TQDAYDEF with DAYTYPE. In field TIMESLOT, obtain TIMECRIT for index into table CT4QTIME. The daytype must be datafilled in table TQDAYNAM before it can be used in the other tables. Table TQTIMENM defines the TIMECRIT values used in tables TQDAYDEF and CT4QTIME.

SIXTH REFINEMENT TABLE

The sixth refinement table used in our sample is listed in the post automated service ordering (POSTAUTO) column. Only calls that have been to an automated service can be further refined in the POSTAUTO ordering. This refinement table is used after all active PREOPR refinements are utilized. Table CT4QCLD provides call type for queuing refinement on the basis of CLDCRIT, which is a called number criterion associated with the call. The CLDCRIT to be used must first be defined in table TQCLDNAM. Table TQCLDNAM defines a group of names to describe types of called numbers associated with calls. The values in field CLDCRIT in this table are used in table CT4QCLD to segregate incoming traffic in the basis of groups of called digits or called criterion. The *OLDCT4Q will come from* one of the preopr tables. In our example, the calls will be further refined by the ADASPLUS system. The ADASPLUS system sends the switch a CLDCODE for National Directory Assistance (NDA). The switch will look in table CT4QCLD to see if the OLDCT4Q is listed with a CLDCRIT of NDA_FLA or NDA_FL. If the OLDCT4Q is not listed, the switch will ignore the CLDCODE criterion

SEVENTH REFINEMENT TABLE

The seventh refinement table used is CT4QLANG. The CT4QLANG (call type for queueing language) table allows companies to specify the language refinement to calls. Table TOPSLANG defines the valid languages for the system. The LANGCRIT is a language criterion and is from existing table TOPSLANG. The NEWCT4Q field is the new CT4Q name assigned to a call that meets the criterion.

FINAL CALL QUEUING

After passing through all the criteria of call type for queuing (CT4Q) refinements, a given call may have had its CT4Q changed several times, or it may still have its initial call type for queuing (CT4Q). After refinement, the final CT4Q is used to determine the call queue, and service to be assigned to the call. Table TQMSFCQA specifies the final call queue (CALLQ) for initial calls and recalls assigned to a call after call type for queuing (CT4Q) refinement is complete. The final CT4Q is used as an index to table TQMSFCQA, which returns a numeric value for the CALLQ that is known by the call agent manager (CAM) component of the TOPS QMS. The call queue must be defined in table TQCQINFO and QMSCQDEF before being assigned in this table.

CHARACTERISTICS OF CALL QUEUES (TABLE QMSCQDEF)

Table QMSCQDEF defines the characteristics of the call queues required by each application. The table is indexed by a two-part key containing the application name and a call queue number. Call queue priority (CQPRIO) indicates the priority of the call queue (0 = lowest priority, 126 = highest priority). Calls in queue s with the same priority are then chosen according to call age. Call queue assignable grade of service aging (CQAGS) allows artificial aging of a call. A value between 10 and 80 may be selected, representing aging factors from 1.0X to 8.0X. The age of the oldest call in a queue is multiplied by the queue's aging factor, and the resulting age is used for comparison with the oldest calls in other served queues. A 10 indicates no aging. Call queue maximum size defines the maximum number of calls allowed in the queue, above which all calls are deflected due to queue overflow, including calls with a deflect status of NO DEFLECT. The call is deflected and sent to CQOV treatment. The CQMAXSIZ value should be set so that it is not exceeded during anticipated peak traffic conditions. The CQCDTIME field should be utilized to control the input of calls to the call queues so that the CQMAXSIZ thresholds are not reached. The deflect area (DEFLAREA) consists of subfield ALLOWDEF and refinements. Allowed deflection (ALLOWDEF) indicates whether a deflection threshold should be considered before queuing a call. If this field is set to N, then calls are queued regardless of the predicted wait time. If calls

marked for a call queue are to be deflected when the predicted wait for a call exceeds the threshold specified in field CQCDTIME, enter Y. A Y entry requires refinements CQCDTIME and MINODEFL. Call queue call deflection time (CQCDTIME) is the predicted call wait time in tenths of seconds before the call is deflected from the queue. Minimum no deflection (MINODEFL) is the minimum number of calls in queue below which calls are not deflected, even if the value in CQCDTIME is exceeded. This prevents calls from being prematurely deflected from call queues with very low or erratic throughput. If the number of calls in queue would be equal to or greater than MINODEFL, then CQCDTIME is applied. Priority (PRAQAREA) consists of subfield PRIOAQ and refinements. Priority agent queue (PRIOAQ) indicates whether a priority agent (operator) queue should be associated with the given call queue. If this field is set to Y, then the agent queue specified in field AQNUM is searched first for an agent to serve incoming calls, even if agents in other queues able to serve the call have been idle longer. If this field is set to Y, datafill refinements AQNUM and PRTHTIME are required. Otherwise, if set to N, no further refinements require datafill.

CALL SERVICES QUEUE
(TABLE TQCQINFO)

Table TQCQINFO marks the service of each call based on the call queue (CALLQ) assigned in table TQMSFCQA. The value in field QMSSERV corresponds to a value in Table TQMSSERV. Fields CWOFF and CWON allow the operator's Call Waiting (CW) displays to function. The call waiting on and off time is entered in tenths of seconds. The emergency treatment that will be used when call deflection is activated is also defined in the table. The treatment used must first be defined in Table TMTCNTL.TREAT.

INDIVIDUAL OPERATOR SERVICES PROFILE (TABLE TQMSSERV)

Table TQMSSERV defines a list of services that each operator can provide in the Queue Management System (QMS). Every TOPS QMS call is assigned one of the service names datafilled in this table. The service index number is any number from 0 to 62. The QMS service name (QMSSERV) is an alphanumeric character of up to 32 characters. This is the name that will be used in Table TQCQINFO. Basic service name (BASESERV) consists of subfield basic service name selector (BASESERV_SEL). Services are defined as TASERV, DASERV, or INTCSERV. DASERV and INTCSERV service requires the use of a subset for APPLICATION and SETNO. APPLICATION and SETNO refer to the database link set number previously defined in table SERVICES. Implicit CT4Q (IMPLCT4Q) assigns a CT4Q implicitly to the call when the service changed through operator keying actions. QMS service type (SERVTYPE) consists of selector SERVTYPE_SEL and refinements. The values are defined as BASE or CUSTOM. Base mimics non QMS services, Custom requires datafill refinements. The AUTOAMA subfield automatically produce AMA record when changing from this service to any other service. Enter No (N) if an automatic message accounting (AMA) record is not to be produced when the operator changes the call from this service to any other service.

TOPS QMS INDIVIDUAL POSITION PROFILES (TABLE TQSVPROF)

Table TQSVPROF creates service profiles by associating lists of TOPS QMS service names with a QMS service profile number. The service profiles defined are then available for inclusion in Tables TOPSPOS and TQOPROF. These profiles then indicate the TOPS QMS services that a TOPS QMS position is configured to provide, and the TOPS QMS services that a TOPS QMS operator is designated to provide. In table TOPSPOS all operator positions have been assigned PROFNUM 4 which includes the 3 basic services. Operators are assigned a PROFNUM that reflects the services they handle.

TOPS SYSTEM FUNCTIONS AND CHARACTERISTICS (TABLE TOPSPOS)

Table TOPSPOS specifies the functions and characteristics of all Traffic Operator Position System (TOPS) positions. This table contains information describing the location of the trunk circuits associated with the positions. The QMSCAM selector is only used if the TOPS office has the Queue Management System (QMS) software package. Corecam is entered to specify that the location of the call and agent manager (CAM) is the core. The service profile number (SERVPROF) is selected from one of the profiles datafilled in Table TQSRVPROF.

CALL QUEUE PROFILES (TABLE TQCQPROF)

Table TOPS QMS Call Queue Profile Table (TQOPROF) defines call queue profiles by associating lists of call queues with a call queue profile number. Individual operator numbers are then associated with one of these profile numbers. Datafill for profiles common to several operators is centralized for easier maintenance and reduced data storage. Call queue profiles datafilled using office-wide priorities contain a list of call queues. The priority and assignable grade of service aging (AGS) associated with each of the call queues specified are the office-wide values defined for the call queue in table QMSCQDEF. Office-wide priority call queue profiles result in consistent office-wide priorities and AGS values being applied to all operators. To override the system priority and AGS associated with each call queue, the particular profile is datafilled using priority and AGS values specific to that profile. To use this override, set PRIOTYPE to PROF. PROF gives you the ability to use each of up to four priority levels labeled PRIO3, PRIO2, PRIO1, and PRIO0, with PRIO3 being the highest priority level. Each priority level can list up to 32 call queues along with the desired AGS for each call queue listed.

OPERATOR NUMBER SPECIFICATION MATCH (TABLE TQOPROF)

Table TOPS QMS Operator Profile (TQOPROF) allows specification of which Traffic Operator Position System (TOPS) QMS calls selection and service profiles apply to a particular operator number. The table also allows specification of the team of which the operator is a member, for the purposes of force management (FM). When an operator logs on to a suitably configured position, calls are presented according to the operator's call selection profile. Once a call arrives at a position, the operator can provide for the call any service defined in the operator's TOPS QMS service profile.

SAMPLE ENTRIES FOR TABLE: TQOPROF

OPRNUM		DFLTTEAM	SVCPRNUM	CAPPRNUM	SELAREA

SAMPLE DATA EXAMPLES

Listed below is sample data captured from a TOPS switch. Bell and CLEC DA and Toll & Assist trunk groups are shown starting with table TRKGRP. QVIEW was used to show the refinement tables used and the final call queue assignment for the 3 DA originating call types and an OA call originating type.

LETTER FROM ROBERT SUMMERS
OF NORTEL NETWORKS
DATED – MAY 4, 2000

AND

LETTER FROM MR. DAVID C. THOMPSON
OF NORTEL NETWORKS
DATED – MAY 5, 2000

NORTEL NETWORKS™

How the world shares ideas.

Date: 4 May 2000

To: Whom It May Concern

From: Robert Summers, Program Manager – TOPS Professional Services
William Greytock, Senior Manager - TOPS Global Support

As the TOPS Professional Services Program Manager, I have performed in a number of assignments involving the design and functioning of the Traffic Operating Position System (TOPS) utilizing the Queuing Management System (QMS) for use by local telephone companies.

I have read the attached document concerning the processing of operator assistance and directory assistance calls via TOPS and QMS. To the best of my knowledge and belief, the attached document (*Traffic Operating Position System (TOPS) Call Flow via Queuing Management System (QMS)*) accurately describes the methods, procedures, and processes involved in the processing of operator assistance and directory assistance calls by TOPS equipment purchased from Nortel, Inc. by BellSouth

This arrangement allows for non-discriminatory access to the operator services and directory assistance functions for BST and CLECs within all areas being provided TOPS Operator Service utilizing QMS.

Signed,

Robert Summers

William Greytock

NORTEL NETWORKS

How the world shares ideas.

Date: May 5, 2000

To: Whom It May Concern

From: Mr. David C. Thompson,
Product Marketing, Line Provisioning and OSS Interface

My current duties at Nortel Networks Inc. ("Nortel") include Product Management of the Line Provisioning interface to Nortel's DMS-100 Family switching systems as well as primary OSS Interface support, including interface to Telcordia Technologies, Inc. Previously, my duties at Nortel have included a number of assignments involving the product management and functioning of DMS-100 Family end-office switches for use by local telephone companies.

I have read the attached document (*End Office Handling of Operator and Directory Assistance Calls of BellSouth and CLEC End-Users*) concerning the operation of end-offices and the processing of operator assistance and directory assistance calls, which provides a detailed description of the inter-relationship between service order USOC codes, the LCCAM system and March.

To the best of my knowledge and belief, the attached document (*End Office Handling of Operator and Directory Assistance Calls of BellSouth and CLEC End-Users*) accurately describes the methods, procedures, and processes involved in the processing of operator assistance and directory assistance calls by DMS-100 Family end-offices switches purchased from Nortel by BellSouth Telecommunications, Inc.

SWORN TO AND
SUBSCRIBED BEFORE ME
This is the 5th day
Of May, 2000.

Tonya J. Pope
NOTARY PUBLIC

LISC Response to Newsouth Issues

Newsouths recurring blockage by BST

- Newsouth's insistence on reducing BST reciprocal trunk quantities and Newsouth's failure to notify BST prior to large customers being brought on line, is the primary reason for traffic blockage. The possibility for future blockages exists in all of their markets unless corrected by Newsouth.

-**Charleston** traffic blockage identified by BellSouth on 7/25. A call to Newsouth confirmed "new" customer brought on line without prior notification to BellSouth (BST). The traffic increase was immediate
AC212603 turned-up 5/26/99 consisted of 24 members. BellSouth's original request was for 72 members, however, Newsouth requested it be reduced to 24 members. On **7/27,** 96 to a total of 120 members increased AC212603.
Amy Gardner, with Newsouth, sent a letter of commendation to BST for Roy Barnes, Vickie Butler and Carl Brown for their role in resolving this blockage. To prevent future occurrences, the BST Account Team was notified and asked to assist in educating the customer. The Account Team delivered the message to Newsouth.

- **Charlotte** traffic blockage was identified by BST in early September. A call to Newsouth confirmed that a very large customer was brought on line resulting in 2000 lines being ported. Newsouth of this new customer being brought on line never notified BST. The traffic increase was immediate causing blockage. **AC217015** turned-up on 11/17/99, consisting of 24 members. Newsouth reduced BellSouth's original request for 72 members to 24. On 9/15, 72 to a total of 96 members increased AC217015. Many conversations between Roy Barnes with BST and Amy Gardner and Devin Hickerson with Newsouth, regarding prior notification of traffic increases.

- On **9/26**, a customer visit to Greenville was made by BST to discuss issues. In attendance were Marc Cathy, Paul Parker, Jon Rey Sullivan and Roy Barnes with BST. Newsouth's attendees were Eddie Terrell, Amy Gardner, Janet Fancher, Debra Hunter and Frankie Nelson. One of the issues discussed was prior notification of large customers brought on line without prior notification. Newsouth understood the need for prior notification before bringing large customers on line and agreed to do so.

- **Louisville** traffic blockage was identified by BST on 10/18. BST issued orders to Newsouth for 120 members to local tandem and 120 members to access tandem. On 7/19 Newsouth reduced **AF190980** from 120 members to 24 members to access tandem. Also on 7/19, Newsouth reduced **AF191002** from 120 members to 48 members to the local tandem.
- **On 10/17** large customer brought on line by Newsouth without any notification to BellSouth.
- **10/18** blocking observed by BST. Call to Newsouth confirmed large customer brought on line. A BST translation error was corrected with NO impact on blocking.
-**On 10/26**, AF190980 was increased from 24 members to 72 members. Blocking issue resolved.

NOC –Newsouth states NOC not notified by BST

In each of the instances described above, BST circuit capacity management and project management was in constant contact with Newsouth personnel providing status. At no time was a NOC mentioned. The point of contact at Newsouth has always been Amy Gardner, Devin Whickers and Matt Risen. In each of these instances, project management brought in the account team to assist in providing timely status to the correct Newsouth personnel. I have worked with Newsouth for over a year, and have never been asked to talk to their NOC. BST will notify the NOC if Newsouth's SPOC requests so.

Trunk Augmentation-Newsouth feels BST responsibility

Trunk augmentation is triggered by utilization. Circuit Capacity Management (CCM) does utilization for reciprocal trunks. In each of the Newsouth blocking cases, utilization went from well below threshold figures to immediate blocking. When thresholds are reached as described in CCM procedures, CCM will issue an order for trunk augmentation. This process is extremely effective when traffic is brought on in intervals causing a ramp-up effect. This process will not take into account large customers brought on line without prior notification to BST. BST will work with Newsouth as how they will notify BST.

Switch Translation Errors-Newsouth states translation errors by BST unacceptable

Unfortunately translation errors do occur partially due to the complex nature of the business. However, translations error did not contribute to the blocking issues discussed here. BST is constantly working to improve quality through training of personnel and process improvement. BST does not feel there has been a high percentage of translation errors occurring.

Utilization Issues-Newsouth is requesting a utilization figure of 70% be used

It is my understanding that the Account Team is negotiating these issues at this time. The standard figure used to trigger augmentations is 80-85% at the final group.

Forecasting -Description

Two forecasts of trunk requirements are requested by BST. A six-month or long range forecast, is aggregated with all other forecasts provided by our customers and sent to each state to assist in sizing the network. This forecast is used to initiate growth jobs in our network. The second type of forecast is a 3-month or implementation forecast, which is used to identify a customer's trunking needs. This trunk group service request or TGSR, is used as a 'HEADSUP" to the network organizations. If trunk requests provided by the customer do not follow measured traffic patterns either high or low, conference calls will be used to reach an agreement with the customer. These trunk requirement requests do not trigger automatic reciprocal augmentation.

Roy Barnes

Subject: Reciprocal Trunking Requests Initiated by NewSouth but Denied by BellSouth

February 8, 2001

John Fury and NewSouth Traffic Engineering,

Please be aware that I have been in conversation with Jon Rey Sullivan regarding the letter that was just sent by John Fury regarding the Reciprocal Trunking Requests that NewSouth has made to BellSouth that have been denied. He and I agreed that in the future if this type of request is denied it should immediately be escalated to our BellSouth Project Manager, Lisa Hubbard, and she will respond within 24 hours indicating that she has, at a minimum, received the request and is looking into it.

Please keep in mind that we should use our Project Manager at BellSouth in these instances as an escalation point within BellSouth. If our Project Manager is not responding in a timely manner, please go to her Director, Roy Barnes.

I promised Jon Rey Sullivan over a month ago that he and I would talk first about instances like this and try to resolve them as much as possible in conversation whether than via letters. Therefore, please keep me informed of issues that have already been escalated within BellSouth or continue to recur where I may be able to help.

Thanks again and please put implement this new process immediately,

Amy Gardner

Subject: Reciprocal Trunking Requests Initiated by NewSouth but Denied by BellSouth

February 16, 2001

To: John Fury

From: Jon Rey Sullivan

Subject: Reciprocal Trunk Requests from NewSouth

This is in reply to your February 8, 2001 letter to me concerning the two trunk groups that the CCM in BellSouth would not initially agree to augment. BellSouth and NewSouth do share a common goal to ensure that all offered get through the network. We also share a common goal to trunk the network in the most efficient manner possible.

I would like to restate how BellSouth augments its reciprocal trunk groups. This is the same message that I shared with the PSC in Louisiana when you were there in January. The CCM monitors our reciprocal trunk groups and adds trunks when the growth warrants. We will also augment existing groups when NewSouth tells us of significant end user customer adds. When this does not occur, blockage occurs as in the Baton Rouge situation. In meetings between Amy Gardner's staff and me and my staff last fall, we reached agreement on the above. It is up to NewSouth to share information and request meeting through the Project Manager, Lisa Hubbard, whenever it wishes to discuss individual metro areas growth. We do not however, add strictly from the forecast. The forecast is used to try to size our terminations and facilities.

Whenever information is brought to our CCMs, they will evaluate it together with the spare capacity to determine if it warrant s our ordering additional trunks from NewSouth. As Amy's letter states, anytime NewSouth is unhappy with the answer and feels more trunks should be added, it shoud escalate to Lisa Hubbard as we agreed in September. We certainly want to be a good partner in supplying telephone service.

I hope that this letter answers your inquiry.

NewSouth communications

2/16/01 Responded

February 8, 2001

Mr. Jon Rey Sullivan
Asst. Vice President, Operations
BellSouth Telecommunications, Inc.
600 N. 19th St., 9th Floor
Birmingham, AL 35203

Subject: Reciprocal Trunking Requests Initiated by NewSouth Communications

Dear Jon Rey:

I am writing to inform you of two recent attempts by NewSouth Communications to augment Reciprocal Trunk Groups. NewSouth Communications endeavors to collaborate with BellSouth in maintaining proper Grade of Service on all Interconnection Trunking, including the Reciprocal Trunks that deliver BellSouth end user traffic to NewSouth Communications end users.

In late January, NewSouth twice requested that BellSouth augment Reciprocal Trunk Groups to maintain Grade of Service. In both cases, BellSouth Circuit Capacity Managers denied these requests. Both Circuit Capacity Managers told NewSouth Communications Traffic Managers that they would monitor these Trunk Groups and augment when appropriate (conversation between Anthony Welsh - NewSouth and both Wanda Nipper – BellSouth and Connie Moore – BellSouth). Within days of the original requests, NewSouth Communications Traffic Engineers made follow up requests which were subsequently granted. NewSouth Communications is concerned that BellSouth was unwilling to augment these groups on our initial request. Delaying these augment requests has resulted in delays in provisioning these trunks. These delays place BellSouth end users at risk of having their calls to NewSouth customers blocked.

The Trunk Group details are as follows:

TSC	CLLI	Date of First Request	Date of Second Request	Augment Qty
AF190194	KNVLTNMA84T	1/24/2001	1/25/2001	48
AF411009	BRHMALMT0GT	1/24/2001	1/30/2001	48

I believe that we both share the goal of avoiding service quality degradation that affects our customers. The incidents referred to above placed that goal in jeopardy. NewSouth Communications provided a forecast to BellSouth in July 2000 that called for the augment quantities referenced above. Our expectation is that Circuit Capacity Management uses these forecasts to guide their actions and that BellSouth will honor requests that are in accordance with NewSouth Communications' forecasts.

Please let me know if you wish to discuss this matter further. I can be reached at (864) 672-8064 or jfury@newsouth.com.

Thank you,

John B. Fury

Jan M. Burriss
Sales Assistant Vice President
AT&T Regional Account Team

August 25, 2000

Ms. Denise Berger
AT&T
Room 12256
1200 Peachtree Street, NE
Atlanta, GA 30309

Dear Denise:

This is in response to your letter dated August 14, 2000, requesting that BellSouth "solve the 10-digit trigger problem" because of the negative impacts to AT&T.

BellSouth agrees that limitations in some of its switches may prohibit the use of 10-digit triggers on some services. Your letter stipulates Direct Inward Dialing (DID) and complex orders. This limitation should be transparent to end-users because BellSouth provides project management for all complex service types, which includes DID service. When AT&T and BellSouth follow the appropriate procedures for project-managed services, the post-porting call completion problem mentioned in your letter should not occur. Since you have not previously made this problem known to my team, I would appreciate your providing specific Purchase Order Numbers (PONs) for which AT&T perceived a problem, as quickly as possible so that BellSouth can investigate and address the results of the investigation as appropriate.

Thank you for your offer to assign AT&T subject matter experts (SMEs), however, the issue is well understood by BellSouth SMEs. The capability for 10-digit triggers is not available in all of BellSouth's switches; therefore, BellSouth established procedures to mitigate negative end-user impact. My intent is to investigate the examples provided by you and take action to ensure that the process is followed to fully support end-user services where 10-digit triggers cannot be used. If, however, AT&T feels this course of action will not adequately address the problems you allege AT&T is experiencing, the only alternative solution would be a new business request from AT&T to determine the feasibility and costs associated with BellSouth's retrofitting the switching equipment involved.

Denise, I would appreciate your sending the PONs associated with the post-port call completion problem to Sandra Jones. Sandra and her team will be responsible for resolving this issue.

Sincerely,

Jan Burriss

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s, entry into interLATA Services pursuant to Section 271 Of the Federal Telecommunications Act of 1996.	))))))	DOCKET NO. 960786-TL

AFFIDAVIT OF WAYNE GRAY
ON BEHALF OF BELLSOUTH

STATE OF GEORGIA
COUNTY OF FULTON

I, A. Wayne Gray, being first duly sworn upon oath, hereby depose and state as follows:

1. My name is A. Wayne Gray. I am a Director-Collocation in the Network Planning and Support organization located at 675 W. Peachtree Street, Atlanta, GA 30375.

I. PROFESSIONAL EDUCATION AND EXPERIENCE

2. I graduated from Georgia Tech in 1979 with a Bachelor of Electrical Engineering degree. In 1992, I graduated from Emory University with a Master of Business Administration degree. I began working for Southern Bell in 1979 in the Equipment Engineering organization in Miami, Florida. Throughout my 22-year career with BellSouth, I have held various line and staff positions in Equipment Engineering, Traffic Engineering (Capacity Management), Infrastructure Planning and Project Management. Since November 1999, I have held the position of Director-Collocation in the Network Planning and Support organization. In this position, I am responsible for ensuring that BellSouth provisions collocation space in the timeframes established by contractual agreements and governmental mandates.

II. PURPOSE OF AFFIDAVIT

3. The purpose of my affidavit is to demonstrate that BellSouth's Collocation processes comply with Section 251(c)(6) and Section 271(c)(2)(B)(i) of the Telecommunications Act ("the Act") and with applicable Federal Communications Commission ("FCC") and Florida Public Service Commission ("FPSC") rules regarding collocation. BellSouth is providing collocation at rates, terms, and conditions that are just, reasonable, and nondiscriminatory, and is therefore offering Competitive Local Exchange Carriers ("CLECs") a meaningful opportunity to compete in Florida.

III. GENERAL DISCUSSION

4. In Florida, BellSouth provides physical collocation through either BellSouth's Florida Access Services Tariff, Section E20, Expanded Interconnection Service ("Florida Access Tariff") (Exhibit AWG-1) or negotiated Interconnection Agreements. Virtual collocation is offered to the CLECs in accordance with the FPSC's Final Order on Arbitration in regard to Metropolitan Fiber Systems of Florida, Inc., AT&T Communications of the Southern States, Inc. and MCI Telecommunications Corporation and MCI Metro Access Transmission Services, Inc. in Docket Nos. 960757-TP, 960833-TP, and 960846-TP, Order No. PSC-98-0604-FOF-TP ("MFS/AT&T/MCI Arbitration Order") (Exhibit AWG-2) or through the Florida Access Tariff, Section E20, Expanded Interconnection Service (Exhibit AWG-1). As part of obtaining collocation via Interconnection Agreement, the tariff, or an FPSC Arbitration Order, the parties agree to comply with all applicable federal, state and/or local laws, ordinances, rules and/or regulations. Over the years, BellSouth has developed a Standard Interconnection Agreement that is updated, as necessary, to comply with all applicable provisions of state and federal law and the requirements of the FCC and state commissions such as Florida. The Standard Interconnection Agreement that BellSouth offers to all parties seeking interconnection is used

in negotiations with the CLECs. Its use ensures that the signed Interconnection Agreement, although negotiated, is compliant with the afore-mentioned provisions and requirements. The Interconnection Agreement contains the cost-based rates, terms and conditions by which BellSouth provides Central Office Physical Collocation.

5. In the FPSC's Proposed Agency Action ("PAA") Order in Docket Nos. 981834-TP and 990321-TP, Order No. PSC-99-1744-PAA-TP ("FPSC September 7, 1999 Collocation Order") (Exhibit AWG-3), dated September 7, 1999, the FPSC ruled that the Incumbent Local Exchange Carriers ("ILECs") should provision physical collocation within 90 calendar days and virtual collocation within 60 calendar days. If the ILEC believes that it will be unable to meet the applicable provisioning intervals established by the FPSC and the parties are unable to agree to an extension, then an extension of time must be sought from the FPSC within 45 calendar days of receipt of the firm order. The FPSC also noted in its Order that these provisioning intervals superseded any time frames contained in the collocation agreements in Florida, which were in existence on the effective date of this Order; however, the FPSC did permit the renegotiation or adoption of new collocation agreements to incorporate time frames different from those set forth in its FPSC September 7, 1999 Collocation Order (Exhibit AWG-3). The Final Consummating Order, which made the above PAA Order effective, was issued by the FPSC on December 7, 1999. Also in Docket Nos. 981834-TP and 990321-TP, Order No. PSC-00-0941-FOF-TP ("FPSC May 11, 2000 Collocation Order") (Exhibit AWG-4), the FPSC issued a Final Order on May 11, 2000, establishing the application response interval (which includes information regarding space availability and price quotes) and the provisioning interval for cageless collocation. These FPSC ordered intervals are different from the national default intervals established by the FCC in its Collocation Order and

Collocation Reconsideration Order for Incumbent Local Exchange Carriers ("ILECs").[1] In Paragraph 22 of the Collocation Reconsideration Order, the FCC stated that, "we should adopt national standards for physical collocation provisioning that will apply when the state does not set its own standards or if the requesting carrier and incumbent LEC have not mutually agreed to alternative standards. A state could set its own standards by statute, through an existing or future rulemaking order, by enforcing a state tariff, or by applying the precedent of a state to extend the application processing and provisioning interval deadlines in specific circumstances."

6. As noted above, the FPSC has set specific state standards for the application response and the provisioning intervals for various collocation arrangements through its FPSC September 7, 1999 Collocation Order and FPSC May 11, 2000 Collocation Order. BellSouth specifies both the physical and virtual collocation intervals in Section E20 of the Florida Access Tariff, (Exhibit AWG-1) or in CLEC-negotiated Interconnection Agreements.

7. The attached Interconnection Agreement between BellSouth and YipesTransmission, Inc., Attachment 4 (Physical Collocation) ("Yipes Agreement") (Exhibit AWG-5), as well as other Florida Interconnection Agreements, and the rates, terms and conditions specified in Section E20 of the Florida Access Tariff (Exhibit AWG-1) establish BellSouth's legally binding obligation to provide physical collocation in accordance with Section 251(c)(6) and Section 271(c)(2)(B)(i) of the Act, as well as applicable FCC and FPSC provisions and requirements.

---

[1]See First Report and Order and Future Notice of Proposed Rulemaking, *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, 14 FCC Rcd 4761 (1999) (" *FCC Collocation Order*"), *vacated in part, GTE Servs. Corp. v. FCC*, 205 F.3d 416 (D.C. Cir. 2000); Order on Reconsideration and Second Further Notice of Proposed Rulemaking in CC Docket No. 98-147, and Fifth Further Notice of Proposed Rulemaking in CC Docket No. 96-98, *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, 15 FCC Rcd 17806 (2000) ("*FCC Collocation Reconsideration Order*"), *recon. pending.*

8. In regard to the provision of virtual collocation, the Florida Access Tariff (Exhibit AWG-1) contains a description of the Virtual Expanded Interconnection Service ("VEIS") tariff offering and sets forth rates, terms, and conditions for the provision of virtual collocation. A CLEC may submit an Application for virtual collocation pursuant to Section E20 of the Florida Access Tariff to obtain the rates contained in the tariff. In the alternative, a CLEC may request the cost-based rates approved by the FPSC in the MFS/AT&T/MCI Arbitration Order. No matter which rates the CLEC chooses to govern its collocation arrangement, the terms and conditions of the arrangement are provided pursuant to the Florida Access Tariff.

9. Both virtual and physical collocation are made available on a first come, first served basis to all CLECs (depending on space availability) for interconnection to unbundled network elements ("UNEs"), local interconnection trunking, access services and local exchange services as requested by CLECs. Examples of ways a CLEC may use its collocated facilities include, but are not limited to, interoffice trunking to originate and terminate calls between a CLEC's switch and a BellSouth switch; for intermediary traffic to or from a third party via a BellSouth tandem switch; for dedicated point-to-point service; and for combining UNEs.

10. BellSouth first provided collocation to carriers pursuant to the FCC's Expanded Interconnection Order released in 1992 and 1993. BellSouth subsequently adapted its Interconnection Agreements to meet the requirements of the FCC's Local Competition Order, issued shortly after Congress passed the Act.[2] Most recently, the FCC Memorandum Opinion

[2]See First Report and Order, *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, 11 FCC Rcd 15499 ("Local Competition Order"), modified on recon., 11 FCC Rcd 13042 (1996), *vacated in part, Iowa Utils. Bd. v. FCC*, 120 F.3d 753 (8th Cir. 1997), *aff'd in part, rev'd in part sub nom. AT&T Corp. v. Iowa Utils. Bd.*, 525 U.S. 366 (1999), *decision on remand, Iowa Utils. Bd. v. FCC*, 219 F.3d 744 (8th Cir. 2000), *petitions for cert. pending*, Nos. 00-511 & 00-587.

and Order, CC Docket No. 98-147, released February 20, 2001, In Matter of Deployment of Wireline Services Offering Advanced Telecommunications Capability, ("FCC MO&O")(Exhibit AWG-6) outlined additional collocation obligations for ILECs. BellSouth meets these additional collocation obligations by offering both physical and virtual collocation arrangements and complying with the additional requirements established by the FCC in its MO&O.

11. As noted below, BellSouth will continue to operate in accordance with the rules promulgated in the FCC Collocation Order that the D.C. Circuit Court vacated and remanded to the FCC for further consideration in *GTE Services Corporation v. FCC*, 205 F.3d 416 (D.C. Cir. 2000). BellSouth will not change any existing collocation arrangements or procedures for processing requests under any existing collocation contracts during the life of such contracts unless the FCC, or a state commission, issues new rules regarding collocation in response to the D.C. Circuit Court's remand or unless the FCC determines that BellSouth's adherence to these prior agreements is discriminatory. A copy of correspondence from BellSouth to Mr. Lawrence Strickling, Chief Common Carrier Bureau, confirming this position is attached to this affidavit as Exhibit AWG-7.

12. BellSouth's affiliate companies obtain collocation in the same manner and under the same rates, terms, and conditions as CLECs. For example, BellSouth Long Distance ("BSLD") obtained collocation rights by signing BellSouth's Standard Physical Collocation Agreement. Any CLEC may request and receive physical collocation arrangements pursuant to the rates, terms, and conditions contained in the BSLD agreement. BSLD has not received any preferential treatment including, but not limited to, treatment related to the amount of space, prices charged, reservation policies, or installation intervals. Moreover, BSLD has not had

discriminatory access to information regarding collocation space. All CLECs have the same access to this information.

13. BellSouth offers the CLECs a choice of various types of collocation arrangements in Florida. The physical collocation arrangements that are available to CLECs include caged, shared caged, cageless, adjacent, remote site, and microwave. Virtual collocation arrangements can also be requested by CLECs. Consistent with 47 C.F.R. §51.321(c), a requesting CLEC seeking a particular collocation arrangement, either physical or virtual, is entitled to a presumption that such arrangement is technically feasible, if any ILEC has deployed such collocation arrangement on any ILEC premises. Each process, procedure, requirement or service discussed below applies to BSLD or any other BellSouth affiliate in exactly the same way as it applies to the CLECs.

IV. PHYSICAL COLLOCATION

14. Physical collocation is an arrangement for the placement of CLEC-owned facilities and equipment in BellSouth central offices and may include any type of equipment that is necessary for interconnection to BellSouth's network or access to UNEs in the provision of telecommunications services. See Yipes Agreement, Section 5.1 (Exhibit AWG-5) and Florida Access Tariff, Section E20.2.2 (Exhibit AWG-1). Equipment used for interconnection and access to UNEs includes, but is not limited to: (1) transmission equipment including, but not limited to, optical terminating equipment and multiplexers, (2) equipment being collocated to terminate basic transmission of facilities pursuant to §§ 64.1401 and 64.1402 of Title 47 of the Code of Federal Regulations as of August 1, 1996, and (3) digital subscriber line access multiplexers ("DSLAMs"), routers, and asynchronous transfer mode ("ATM") multiplexers, and

remote switching modules. Equipment ownership, maintenance and insurance are the responsibility of the CLEC or its approved agent.

V. CAGED COLLOCATION

15. Caged collocation is the enclosure of a CLEC's equipment and facilities in compliance with the CLEC's collocation request. As specified in the Yipes Agreement, Attachment 4, Sections 3.2, 3.3 and 3.3.1, (Exhibit AWG-5) and the Florida Access Tariff, Section E20.2.3.B, (Exhibit AWG-1), BellSouth will permit the CLEC, at its sole expense, to arrange with a BellSouth Certified Contractor ("BCC") to construct a collocation arrangement enclosure in accordance with BellSouth's guidelines and specifications prior to starting equipment installation. BellSouth will provide guidelines and specifications to the CLEC or its BCC upon request. Where local building codes require enclosure specifications more stringent than BellSouth's standard enclosure specifications, the CLEC and its BCC must comply with such applicable and enforceable building code requirements to the same extent BellSouth complies with such building code requirements. BellSouth makes caged collocation available in increments small enough to collocate a single rack, or bay, of equipment.

VI. SHARED CAGED COLLOCATION

16. In a shared caged collocation arrangement, a CLEC may allow other CLECs to share its caged collocation arrangement pursuant to terms and conditions agreed to by the CLEC ("Host") and the other CLEC(s) ("Guests"), except where the BellSouth central office is located within a leased space and BellSouth is prohibited by the lease from offering such an option. The Host must also indemnify and hold harmless BellSouth from any and all claims, actions, causes of actions, of whatever kind or nature arising out of the presence of the Guest(s) in the Collocation Space. Furthermore, the CLECs' sharing agreement must contain

a certification that incorporates by reference the terms and conditions of the Interconnection Agreement between BellSouth and the Host. BellSouth offers shared caged collocation in increments small enough to collocate a single rack, or bay, of equipment. See Yipes Agreement, Attachment 4, Sections 3.4 and 3.4.2 (Exhibit AWG-5) and Florida Access Tariff, Sections E20.2.3.C.1 and E20.2.3.C.3, (Exhibit AWG-1).

17. As specified in the Yipes Agreement, Attachment 4, Section 3.4.1 (Exhibit AWG-5) and Florida Access Tariff, Section E20.2.3.C.2 (Exhibit AWG-1), in a shared caged collocation arrangement, the Host or the Guest(s) may be the contact and responsible party to BellSouth for the purpose of submitting Applications to BellSouth for initial and additional equipment placements of the Guest(s). However, the Host is the sole interface and responsible party to BellSouth for the payment of rates and charges contained in the Interconnection Agreement with BellSouth and for ensuring that the safety and security requirements of its Interconnection Agreement with BellSouth are fully complied with by the Guest(s), its employees and agents. In the event the Host and Guest(s) jointly submit an initial Application, only one Application fee will be assessed. A Guest may arrange directly with BellSouth for the provision of the interconnecting facilities between itself and BellSouth and for the provision of the services and access to UNEs.

18. BellSouth does not increase the price of site preparation or the non-recurring charges for a shared collocation arrangement above the cost for provisioning a cage of similar dimensions and material to a single collocating party. The charge for site conditioning and preparation undertaken by BellSouth to construct the shared collocation cage or condition the space for collocation use is prorated based on the number of CLECs and the space used by each. See

the Yipes Agreement, Attachment 4, Section 3.4.1 (Exhibit AWG-5) and the Florida Access Tariff, Section E20.2.3.C.2 (Exhibit AWG-1).

VII. CAGELESS COLLOCATION

19. Cageless collocation allows the CLEC to place its equipment and facilities within the BellSouth central office without requiring the construction of a cage or similar structure. As specified in the Yipes Agreement, Attachment 4, Section 3.1 (Exhibit AWG-5) and Florida Access Tariff, Section E20.2.3.A, (Exhibit AWG-1), the CLEC is allowed to have direct access to its equipment and facilities. BellSouth makes cageless collocation available in single bay increments. Except where the CLEC's equipment requires special technical considerations (e.g., special cable racking, isolated ground plane), BellSouth will locate cageless arrangements in conventional equipment rack lineups where technically feasible on a space-available basis.

20. Pursuant to the Yipes Agreement, Attachment 4, Sections 3.2 and 3.3 (Exhibit AWG-5), and Florida Access Tariff, Section E20.2.3.A (Exhibit AWG-1), where the CLEC's equipment requires special technical considerations (as described above), the CLEC must provide the equipment layout, including spatial dimensions, and will be responsible for constructing all special technical requirements associated with such equipment. The CLEC must utilize a vendor that has been approved as a BCC to perform all engineering and installation work required in the collocation space. The process for becoming a BCC is described in more detail later in this affidavit.

VIII. ADJACENT COLLOCATION

21. Where physical collocation space is legitimately exhausted in a particular BellSouth central office, a CLEC will be permitted to locate its equipment in an adjacent controlled environmental vault or similar structure located on BellSouth's premises (e.g., land owned, controlled or leased where the lessor does not prohibit such activity) subject to technical feasibility. The adjacent arrangement cannot interfere with access to existing or planned structures or facilities on the BellSouth premises and must be permitted by zoning and other applicable state and local regulations. See Yipes Agreement, Attachment 4, Section 3.5 (Exhibit AWG-5), and Florida Access Tariff, Section E20.2.3.D, (Exhibit AWG-1).

22. As specified in the Yipes Agreement, Attachment 4, Section 3.5.1 (Exhibit AWG-5), and in the Florida Access Tariff, Section E20.2.3.D, (Exhibit AWG-1), the CLEC must arrange with a BCC to construct an adjacent arrangement structure in accordance with BellSouth's guidelines and specifications. BellSouth will provide these guidelines and specifications to the CLEC or its BCC upon request. Where local building codes require enclosure specifications more stringent than BellSouth's standard specifications, the CLEC and its BCC must comply with the more stringent local building code requirements.

23. The CLEC's BCC is also responsible for filing and receiving any and all necessary zoning, permits and/or licenses for construction of the adjacent arrangement. The CLEC must provide a concrete pad, the structure housing the arrangement, heating/ventilation/air conditioning ("HVAC"), lighting, and all facilities that connect the structure (e.g., racking and conduits) to the BellSouth point of demarcation. At the CLEC's option, and where the local authority having jurisdiction permits, BellSouth will provide an AC power source in accordance with the requirements of the National Electrical Code and access to physical collocation

services and facilities subject to the same nondiscriminatory requirements as applicable to any other physical collocation arrangement.

24. Only in the case of an emergency will BellSouth access the CLEC's locked enclosure prior to notifying the CLEC.

25. BellSouth may elect to review the CLEC's plans and specifications prior to construction of an adjacent collocation arrangement(s). BellSouth may also inspect the adjacent arrangement(s) after construction, whether or not BellSouth elected to review the CLEC's plans and specifications prior to construction, to ensure the design and construction comply with BellSouth's guidelines and specifications. (These guidelines and specifications apply to BellSouth's own construction projects as well.)

26. BellSouth may require the CLEC, at the CLEC's sole expense, to remove or correct within seven (7) calendar days any structure that does not meet the CLEC's plans and specifications or, where applicable, BellSouth's guidelines and specifications found during such inspection, unless the parties mutually agree to an alternative time frame.

27. As with caged collocation, and under similar terms and conditions, a CLEC may allow other CLECs to share its adjacent collocation arrangement(s).

28. The CLEC may place equipment necessary for interconnection and/or access to UNEs for the provision of telecommunications services in the adjacent collocation facility including, but not limited to, copper cables, coaxial cables, fiber cables and telecommunications equipment.

29. If physical collocation space becomes available in a previously exhausted BellSouth structure, BellSouth will not require a CLEC that has collocated adjacently to move or prohibit a CLEC from moving a collocation arrangement into that structure. Instead, BellSouth will continue to allow the CLEC to collocate in any adjacent structure that the CLEC has constructed or otherwise procured.

IX. REMOTE SITE COLLOCATION

30. In accordance with the attached Interconnection Agreement between BellSouth and Yipes Transmission, Inc., Attachment 4-RS (Remote Site Physical Collocation) ("Remote Site Agreement")(Exhibit AWG-8), BellSouth will grant a CLEC the right to occupy that certain area designated by BellSouth within a BellSouth Remote Site Location, of a size which is specified by the CLEC and agreed to by BellSouth. BellSouth Remote Site Locations include cabinets, huts, and controlled environmental vaults owned or leased by BellSouth that house BellSouth network facilities. BellSouth complies with the FCC's rules regarding remote site collocation.

X. MICROWAVE COLLOCATION

31. The January 23, 2001 Amendment to the Interconnection Agreement between BellSouth and Winstar Wireless, Inc., dated July 28, 2000, contains Exhibit L, Physical Collocation. Attached to Exhibit L is Attachment A, Microwave Collocation. As stated on Page 1 of Attachment A, Microwave Collocation ("Winstar Agreement") (Exhibit AWG-9), where technically feasible and where space is available, BellSouth will provide for physical collocation of microwave equipment on the roofs of BellSouth's central office buildings. Microwave collocation includes placements of supporting masts, non-penetrating roof mounts, penetrating pipe stands, parapet mounts and microwave antenna(e) on the rooftop or other suitable exterior spaces of BellSouth's central offices, excluding towers. The microwave

equipment may include any equipment that is directly related to, and thus necessary for, interconnection or access to UNEs in the provision of telecommunications services.

XI. EQUIPMENT OWNERSHIP, OPERATION, MAINTENANCE AND INSURANCE

32. Equipment ownership, operation, maintenance and insurance are the responsibility of the CLEC or its approved agent. BellSouth places no restrictions on the type of telecommunications equipment that may be physically collocated (in enclosed or non-enclosed space) within a BellSouth central office provided such equipment is necessary for interconnection to BellSouth's network or access to UNEs in the provision of telecommunications services (*see GTE Services Corporation v. FCC*, 205 F.3d 416 (D.C. Cir. 2000)). Equipment that may be used for interconnection and access to UNEs in a CLEC's collocation space was described earlier in this affidavit. As previously stated, BellSouth will continue to operate in accordance with the rules vacated by the *GTE Services* decision for the life of current agreements or until the FCC or a state commission issues new rules regarding collocation. In addition, although not required to do so under the Act, FCC Rules, or state commission orders, BellSouth will allow the placement of switching equipment (including remote switching modules) in physical collocation space. Under certain conditions, CLECs may be permitted to place power plant and battery equipment within code-specified, fire-rated enclosures as part of their collocation arrangement.

XII. VIRTUAL COLLOCATION

33. Virtual collocation is a type of collocation arrangement that provides for the placement of CLEC-owned equipment (leased to BellSouth) in BellSouth's central offices that is necessary for interconnection to the BellSouth network or accessing UNEs. Virtual collocation arrangements may connect to designated BellSouth tariffed services, local interconnection

trunks and/or UNEs. Virtual collocation is available through the Florida Access Tariff, Section E20.1 (Exhibit AWG-1). A CLEC, regardless of the availability of physical collocation, can request virtual collocation.

34. As stated in the Florida Access Tariff, Sections E20.1.1 and E20.1.2 (Exhibit AWG-1), the CLEC may place fiber optic entrance cable from outside the central office to an interconnection point designated by BellSouth (e.g., a serving manhole). The CLEC must leave a sufficient length of cable to be pulled from the interconnection point into the cable vault. BellSouth pulls the fiber cable through entrance conduit into the central office cable vault and splices it into a pre-terminated, fire-retardant riser cable, which connects the entrance facility to the collocated equipment. Multiple facility entrance points are made available to the CLEC where multiple cable entrances exist and capacity is available. Microwave facilities, in lieu of fiber facilities, may be used for interconnection where they may reasonably be provided. See Winstar Agreement (Exhibit AWG-9). The CLEC may directly contract with its selected BCC for engineering and installation of the collocation equipment arrangement.

35. The CLEC provides the collocation equipment and cabling facilities in a virtual collocation arrangement. The equipment that can be placed for virtual collocation must conform to the same equipment requirements as those specified earlier in this affidavit for physical collocation.

36. BellSouth leases the CLEC's entrance fiber, cabling, equipment and provisioning/maintenance tools for the nominal fee of one dollar. For this reason, virtual collocation equipment arrangements are most commonly located in the BellSouth equipment

area. Performance monitoring, alarm monitoring, and software cross-connect control of all CLEC-owned equipment and facilities (leased to BellSouth) are the responsibility of the CLEC and must be performed remotely. At the CLEC's request, BellSouth will perform installation, maintenance and repair of the facilities, from the point of interconnection up to the demarcation point. Upon notification from the CLEC that work is necessary, BellSouth will, at a minimum, install, maintain and repair collocated equipment in the same manner as BellSouth does for its own equipment.

XIII. SPACE AVAILABILITY REPORT

37. In accordance with the Yipes Agreement, Attachment 4, Section 2.2 (Exhibit AWG-5), the Remote Site Agreement, Attachment 4-RS, Section 2.3 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.4, (Exhibit AWG-1), BellSouth will provide a written report ("Space Availability Report") specifying the amount of collocation space available at the premises requested, the number of CLECs present at the premises, any modifications in the use of the space since the last report on the premises requested and the measures BellSouth is taking to make additional space available for collocation arrangements. The request for a Space Availability Report from a CLEC must be written and must include the central office premises address and Common Language Location Identification ("CLLI") code. Central office premises addresses and CLLI codes are located in the National Exchange Carrier Association ("NECA") Tariff FCC No. 4.

38. BellSouth will respond to a request for a Space Availability Report for a particular central office location within ten (10) calendar days of receipt of such a request when the request includes from two (2) to five (5) BellSouth premises within the same state. The response time for requests of more than five (5) premises will be negotiated between BellSouth and the CLEC.

The request for a Space Availability Report does not require the CLEC to submit an Application for collocation.

XIV. APPLICATION PROCESS

39. BellSouth will negotiate a collocation agreement (e.g. Yipes Agreement, Attachment 4, Exhibit AWG-5) as part of the Interconnection Agreement or as a separate, stand-alone document. The collocation agreement defines the rates, terms and conditions for collocation as well as the process by which BellSouth offers collocation. The agreement includes detailed BellSouth commitments on the use of space, the duty to perform preparatory activities, the Application review and response process with associated interval(s), and the provisioning process with associated interval(s). Using this agreement as a starting point, a CLEC may negotiate a regional or state-specific agreement with BellSouth. Once a collocation agreement is negotiated by a CLEC, it is not necessary to renegotiate another collocation agreement each time a collocation arrangement is requested.

40. In the alternative, a CLEC may submit, at its own discretion, an Application for collocation pursuant to the rates, terms and conditions of the Florida Access Tariff, Section E20, (Exhibit AWG-1). The rates, terms and conditions of the Florida Access Tariff will govern that particular Application, even if the CLEC also has an Interconnection Agreement with BellSouth.

41. The Application process for both physical and virtual collocation is a two-phase process consisting of (1) the Application Inquiry phase and (2) the Bona Fide Firm Order ("BFFO") phase. For both phases, the CLEC can use the paper or electronic BellSouth Expanded Interconnection ("BSTEI") forms. The order document is called BSTEI-1-P for physical

collocation requests and BSTEI-1-V for virtual collocation requests. Applications and BFFOs may be placed electronically through BellSouth's new electronic application ("e-app") system. Within each Customer Account Team[3], BellSouth has designated a Regional Collocation Coordinator to process collocation requests.

42. To initiate the Application Inquiry phase, a CLEC must submit a completed BSTEI-1 Application Inquiry document to its designated Regional Collocation Coordinator either in paper form or electronically utilizing the e-app system. A proposed equipment layout drawing for the type of collocation arrangement requested (virtual or physical) must accompany each Application Inquiry. The Regional Collocation Coordinator reviews the Application for completeness and accuracy.

43. If the Regional Collocation Coordinator identifies deficiencies, omissions, or errors in the Application Inquiry document, the Regional Collocation Coordinator will work closely with the CLEC and various BellSouth departmental representatives, as necessary, to resolve the open issues. This might include, for example, convening a conference between the CLEC's engineering staff and BellSouth's power engineers to resolve issues concerning power specifications.

44. If the Application is complete and correct, the Regional Collocation Coordinator distributes the BSTEI-1 to the following BellSouth departmental representatives for review, planning, cost development, and response: (1) the Interconnection Network Access Coordinator, who acts

[3] Each CLEC is assigned to a BellSouth Customer Account Team, which is responsible for working with the CLEC to address any questions, concerns, problems or issues that might arise between the CLEC and BellSouth in regard to its existing or potential future services. Within the Customer Account Team, a Regional Collocation Coordinator is assigned to handle specific CLEC collocation requests and issues in regard to collocation services ordered or contemplated by a particular CLEC.

as the state-specific implementation manager; (2) Capacity Management for determination of the equipment floor space, terminal equipment, tie cable, cable support structure, demarcation point equipment and power requirements, and estimated construction intervals; (3) Corporate Real Estate & Services for review of the building floor space availability, design and construction cost estimates, and interval projections; (4) Outside Plant Engineering for the determination of the entrance facility capacity and placement; and (5) Central Office Operations for general planning and review. Based on the space and infrastructure analysis from the departmental review team, BellSouth provides a written response to the Application Inquiry ("Application Response"). This response describes space availability, technical parameters, interval and cost estimates, technical contacts and next step procedures.

45. BellSouth does not require an Application fee at the time an Application is submitted. The Application fee is billed after BellSouth determines that space is available. BellSouth will bill the CLEC an Application Fee via a service order, which is issued at the time BellSouth responds that space is available. Space Preparation Fees will be billed upon receipt of a BFFO. BellSouth will bill for construction of the collocation space in accordance with the price quote provided to the CLEC in the Application Response. The price quote will be developed using standard pricing pursuant to the FPSC May 11, 2000 Collocation Order (Exhibit AWG-4). A CLEC may choose to have its collocation arrangement billed in accordance with the rates, terms and conditions of the tariff, which has been updated to include standard pricing. In the alternative, a CLEC may choose to have its Interconnection Agreement govern the rates, terms, and conditions of the collocation arrangement. The only exception in this case would be that BellSouth will bill the standard space preparation rates for Firm Order Processing and Power, as ordered in the FPSC May 11, 2000 Collocation Order(Exhibit

AWG-4). The remaining costs, based on standard pricing or the negotiated Interconnection Agreement, are then billed when construction is completed.

XV. SPACE NOTIFICATION / TOUR OF PREMISES

46. Pursuant to the FPSC September 7, 1999 Collocation Order (Exhibit AWG-3) and the FPSC May 11, 2000 Collocation Order (Exhibit AWG-4), BellSouth will respond to inquiries regarding physical collocation space availability in a particular premises within fifteen (15) calendar days of receipt of a Bona Fide Application (when the Application is complete and correct). See Yipes Agreement, Attachment 4, Section 6.3.2 (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Section 6.5.2 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.7.B (Exhibit AWG-1).

47. As specified in the Florida Access Tariff, Section E20.2.7.B (Exhibit AWG-1), when space has been determined to be available, BellSouth will provide a written response ("Application Response") within fifteen (15) calendar days of the receipt of a Bona Fide Application. The Application Response will include the configuration of the space and information sufficient to enable the CLEC to place a firm order, including information on space availability and a complete price quote. BellSouth does not place any limits on the number of collocation Applications that it will accept per month; however, when a CLEC submits ten (10) or more Bona Fide Applications within ten (10) calendar days, the initial fifteen (15) calendar day response period will increase by ten (10) calendar days for every additional ten (10) Applications or fraction thereof. See FPSC May 11, 2000 Collocation Order (Exhibit AWG-4).

48. If the amount of space requested by a CLEC is not available, BellSouth will notify the applicant of the amount of space that is available. Should BellSouth determine that there is

no space available for physical collocation in the requested central office, BellSouth will provide a written letter ("Denial of Application") to the CLEC denying the collocation request. Furthermore, pursuant to the FPSC September 7, 1999 Collocation Order, if BellSouth intends to deny collocation, BellSouth will submit a Notice of Intent to Seek Waiver of Physical Collocation Requirements to the FPSC on the same date of its initial response to the applicant CLEC. The notice will include a basic statement of the reason for its denial (i.e., technical infeasibility or lack of space). If the denial is based upon lack of space, BellSouth will also file detailed floor plans or diagrams of the premises with the notice. BellSouth will also provide a copy of these floor plans or diagrams to the applicant CLEC. BellSouth will schedule a tour of the entire premises, upon request, for the applicant CLEC(s), without charge, within ten (10) calendar days of the CLEC's receipt of BellSouth's Denial of Application. (See Yipes Agreement, Attachment 4, Section 2.3, Exhibit AWG-5, and Florida Access Tariff, Section E20.2.4.C, Exhibit AWG-1). These requirements are consistent with the FPSC September 7, 1999 Collocation Order, the FPSC May 11, 2000 Collocation Order, the FCC's Collocation Order and the FCC's Reconsideration Order.

XVI. PUBLIC NOTIFICATION

49. BellSouth maintains on its Interconnection Website (www.interconnection.bellsouth.com) a notification document listing all central offices where physical collocation space has been exhausted. BellSouth updates this document within ten (10) calendar days of the date of the first Denial of Application when space has become exhausted in a central office. At BellSouth's Interconnection Website, CLECs may subscribe to an automatic email notification process, which includes, among other notifications, a notice that the central office space exhaust list has been updated. BellSouth also posts a general notice indicating when space has become available in a central office that was previously on the space exhaust list.

BellSouth will allocate the available space pursuant to the waiting list maintained for that central office.

XVII. WAITING LIST

50. Pursuant to the FPSC May 11, 2000 Collocation Order (Exhibit AWG-4), BellSouth maintains a waiting list on a first come, first served basis (governed by the date of receipt of an Application or Letter of Intent) of requesting CLECs who have either received a Denial of Application or, where it is publicly known that the central office is out of space, have submitted a Letter of Intent to collocate. Sixty (60) days prior to space becoming available, if known, BellSouth will notify the FPSC and the CLECs on the waiting list by mail when space becomes available in a particular central office based upon the amount of space that becomes available and the position of CLEC on the waiting list. If not known sixty (60) days in advance, BellSouth will notify the FPSC and the CLECs on the waiting list within two business days of the determination that space is available. Upon request, BellSouth will notify a CLEC of its position on the list. See Yipes Agreement, Attachment 4, Section 2.5.1 (Exhibit AWG-5) and Florida Access Tariff, Section E20.2.4.E (Exhibit AWG-1).

XVIII. SPACE AVAILABILITY

51. Of the one hundred ninety-six (196) BellSouth central office buildings in Florida (as of April 30, 2001), there are only eight (8) central offices with inadequate space to immediately provide physical collocation. For these eight (8) offices, the appropriate waivers have been filed with the FPSC and BellSouth continues to offer virtual collocation arrangements. The status of the eight (8) central offices with inadequate space to immediately provide physical collocation, as of April 30, 2001, is as follows: (a) four central offices (Milton-Ravine, Miami West Dade, Jacksonville – Atlantic, and North Dade Golden Glades) have building additions in progress;

(b) one central office (Miami-Palmetto) has a building addition planned; (c) two central offices (Lake Mary-Main and Pensacola-Perdido Bay) have feasibility studies for building additions under way; and (d) one central office (Jacksonville-Jay Turner) is on a leased facility and BellSouth is prohibited by the conditions of its lease to offer physical collocation. In accordance with the FCC's Collocation Order, BellSouth will, upon request, remove obsolete unused equipment, if any, from its premises to increase the amount of space available for collocation.

XIX. APPLICATION MODIFICATION PROCESS

52. As specified in the Yipes Agreement, Attachment 4, Section 6.4.2 (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Section 6.6.2 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.7.C (Exhibit AWG-1), if a modification or revision is made to any information in the Bona Fide Application for Physical Collocation or the Bona Fide Application for Adjacent Collocation, with the exception of modifications to Customer Information, Contact Information or Billing Contact Information, either at the request of the CLEC or necessitated by technical considerations, the Application will be considered a new Application and shall be handled as a new Application for purposes of the response and provisioning intervals. BellSouth will respond to the Bona Fide Application within fifteen (15) calendar days after BellSouth receives such revised Application or at such other date as agreed by the Parties. If, at any time, BellSouth needs to reevaluate the Bona Fide Application as a result of changes requested by the CLEC to its original Application, then BellSouth will charge the CLEC a Subsequent Application Fee. Major changes may require the CLEC to resubmit the Application with an Application Fee. Such modifications or revisions include, but are not limited to, changes in the air conditioning requirements, power requirements, and/or network infrastructure.

53. Since BellSouth must reevaluate the Application, the provisioning clock must be reset. Where the Application Modification does not require assessment for provisioning or construction work by BellSouth, no Application Fee will be required. The fee for an Application Modification where the modification requested has limited effect (e.g., requires limited assessment and no capital expenditure by BellSouth) will be the Subsequent Application Fee. Major changes such as requesting additional space or adding equipment may require the CLEC to resubmit the Application, along with an Application Fee.

XX. BFFO INTERVAL

54. Pursuant to the Florida Access Tariff, Section E20.2.7.D (Exhibit AWG-1), Yipes Agreement, Attachment 4, Section 6.5.1 (Exhibit AWG-5), and Remote Site Agreement, Attachment 4-RS, Section 6.7.1 (Exhibit AWG-8), requesting CLECs have thirty (30) calendar days after the date of BellSouth's written Application Response to submit a complete and accurate BFFO document for each location for which the CLEC wishes to proceed. A BFFO requires the CLEC to complete the Application process and submit a BellSouth Expanded Interconnection BFFO document ("BSTEI-1P-F") indicating acceptance of the Application Response provided by BellSouth. As noted above, the BFFO document may be submitted via paper or electronically utilizing the e-app system.

XXI. FIRM ORDER DATE

55. For each individual BFFO Request received, BellSouth will establish a Firm Order Date based upon the date BellSouth receives the complete and accurate BFFO document and detailed equipment drawing. If the BFFO Request is not received within thirty (30) calendar days of the Application Response date, the CLEC forfeits its requested space (and the Application expires).

56. In accordance with the Yipes Agreement, Attachment 4, Section 6.5.3 (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Section 6.7.3 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.7.D.1 (Exhibit AWG-1), BellSouth will acknowledge receipt of the BFFO within seven (7) calendar days of receipt by providing a Firm Order Confirmation, which indicates the Firm Order Date. If the BFFO is not accurate and complete, BellSouth will acknowledge receipt of the BSTEI-1 form with a letter that details the information necessary to make the order accurate and complete within the same time period. Because BellSouth cannot finalize its collocation design specifications until it has obtained the CLEC's complete technical and spatial requirements, CLEC-specified building construction and infrastructure provisioning can only begin after an accurate and complete firm order has been received in writing from the requesting CLEC. BellSouth subject matter experts will consult with requesting CLECs to expeditiously resolve any outstanding CLEC technical issues. Requesting CLECs may begin the Application Inquiry process prior to the execution of a physical collocation agreement with BellSouth; however, the agreement must be executed prior to proceeding with the BFFO phase.

XXII. ASSIGNMENT OF SPACE

57. Pursuant to the FCC MO&O (Exhibit AWG-6) and the FPSC May 11, 2000 Collocation Order (Exhibit AWG-4), BellSouth offers and assigns space for collocation based on space availability on a first come, first served basis. Physical collocation space is assigned based on the CLEC's request, where space permits. BellSouth will consider any unused space within BellSouth's central office for cageless collocation. The size specified by the CLEC may contemplate a request for space sufficient to accommodate the CLEC's growth within an 18-month period. Neither BellSouth nor any BellSouth affiliate, reserves space for future use on

preferential terms. For virtual collocation, space is assigned within the BellSouth equipment line-up based on the rack requirements for the equipment installation. See Florida Access Tariff, Section E20.2.5.A (Exhibit AWG-1), Yipes Agreement, Attachment 4, Section 1.2.2 (Exhibit AWG-5), and Remote Site Agreement, Attachment 4-RS, Section 1.2.2 (Exhibit AWG-8).

XXIII. SPACE DESIGN AND EQUIPMENT CONFIGURATION

58. In accordance with the Florida Access Tariff, Section E20.2.7.F (Exhibit AWG-1), Yipes Agreement, Attachment 4, Section 6.7 (Exhibit AWG-5), and the Remote Site Agreement, Attachment 4-RS, (Exhibit AWG-8), unless otherwise agreed to by BellSouth and the CLEC, a joint planning meeting or other method of joint planning will be held within a maximum of twenty (20) calendar days from BellSouth's receipt of a BFFO. At this meeting, the parties will agree to the preliminary design of the collocation space and the equipment configuration requirements as reflected in the Application and affirmed in the BFFO. The collocation space completion time period will be provided to the CLEC during the joint planning meeting or as soon as possible thereafter. Immediately following the planning meeting, BellSouth, the CLEC and the CLEC's contractors will complete architectural and infrastructure designs, file building permits as required, and begin construction and/or other necessary work. Building construction may not begin until building permits are received.

XXIV. SITE VISITS

59. After receipt of the BFFO and prior to completion of the Security Training and Space Acceptance, a CLEC or its approved agent will be permitted one accompanied site visit to its designated collocation arrangement location or access to the entrance manhole, free of charge. See Yipes Agreement, Attachment 4, Sections 6.5.4 and 7.9 (Exhibit AWG-5),

Remote Site Agreement, Attachment 4-RS, Sections 6.8 and 7.4 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.7.D.2 (Exhibit AWG-1). Further visits under the above circumstances are allowed, but a Security Escort fee may apply.

60. In a physical collocation arrangement, a CLEC may also request access keys/cards at any time after BFFO, once the security and training requirements have been completed. Further information regarding these security and training requirements will be discussed later in this affidavit.

XXV. CONSTRUCTION OF PHYSICAL COLLOCATION SPACE

61. Pursuant to the standards set forth in the FPSC September 7, 1999 Collocation Order (Exhibit AWG-3), BellSouth will complete construction, in accordance with the requesting CLEC's application, of physical collocation space in Florida within a maximum of ninety (90) calendar days from receipt of a BFFO or as agreed to by the Parties. For changes to collocation space after initial space completion, BellSouth will complete construction within a maximum of forty-five (45) calendar days from receipt of the BFFO or as agreed to by the Parties. If BellSouth does not believe that construction will be completed within the relevant time frame and BellSouth and the requesting CLEC cannot agree upon a completion date, within forty-five (45) calendar days of receipt of the BFFO for an initial request, and within 30 calendar days for augmentations (i.e., modifications), BellSouth may seek an extension from the FPSC. See Yipes Agreement, Attachment 4, Section 6.6.1 (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Sections 6.10.1 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.7.E (Exhibit AWG-1).

XXVI. EQUIPMENT PLACEMENT

62. As soon as construction has been completed ("Space Ready Date"), BellSouth will turn the functional space over to the requesting CLEC. The Space Ready Date for physical collocation is the date that BellSouth finishes construction in accordance with the requesting CLEC's Application and turns functional space over to the requesting CLEC. On the Space Ready Date, the CLEC may begin placing its equipment in its physical collocation space. At this point, BellSouth has completed its provisioning requirements as mandated by the FPSC or FCC.

XXVII. EARLY SPACE ACCEPTANCE

63. Depending on the particular conditions at a given central office and provided the space is adequately secured, BellSouth may, at its discretion, permit the collocation equipment installation to begin prior to the Space Ready Date. In such cases, the CLEC must sign a liability waiver before equipment installation work may begin. This waiver addresses liability issues associated with potential damage to equipment or injury to CLEC personnel as a result of ongoing construction related activities, debris or obstructions.

XXVIII. VIRTUAL COLLOCATION PROVISIONING INTERVALS

64. Pursuant to the FPSC September 7, 1999 Collocation Order (Exhibit AWG-3), virtual collocation arrangements are to be completed within a maximum of sixty (60) calendar days from receipt of the BFFO or as agreed to by the parties. BellSouth fully complies with this requirement. If BellSouth does not believe that construction will be completed within the required time frame, and BellSouth and the requesting CLEC cannot agree upon a completion date, within forty-five (45) calendar days of receipt of the BFFO for an initial request, and

within 30 calendar days for augmentations (i.e., modifications), BellSouth may seek an extension from the FPSC.

XXIX. MODIFICATIONS TO EXISTING COLLOCATION SPACE

65. Additions or modifications are treated under the same terms and conditions that apply for any other type of collocation request. An Application is the appropriate method for requesting an addition or modifications to collocation space. The Application provides all of the equipment, facilities, and service modifications that will enable BellSouth to provision or augment the collocation space. The amount of work performed by BellSouth in response to the CLEC's Application is dependent on the nature and scope of the request and the particular premises involved.

XXX. INTERCONNECTION FACILITIES

66. With either physical collocation or virtual collocation, a CLEC may opt to place a private fiber optic entrance cable to serve its collocation space. If a CLEC has no cable facilities of its own available for interconnection, it can lease the necessary facilities from BellSouth. See 47 C.F.R. § 51.323(g). BellSouth will provide an interconnection point or points at which the fiber transmission cables carrying the CLEC's circuits enter(s) BellSouth's premises. For BellSouth's premises where there are at least two existing entry points and where capacity exists for the placement of new facilities in those entry points, BellSouth will provide the CLEC use of at least two such interconnection points. Where multiple entry points are not available or do not exist, BellSouth will provide access to the existing entry point. (Pursuant to 47 C.F.R. § 51.323(d)(1) and 47 C.F.R. § 51.323(d)(2)).

XXXI. ENGINEERING AND INSTALLATION

67. In order to protect BellSouth facilities, equipment and personnel, and the equipment and personnel of other CLECs, a CLEC must select a BCC to perform all engineering and installation work associated with the collocation arrangement. Installed equipment must also meet Bellcore (now known as Telcordia) Network Equipment and Building Specifications ("NEBS") Criteria Level 1 standards (FCC Collocation Order and FCC Collocation Reconsideration Order FCC 99-48 ¶35 and FCC 00-297 ¶56). Use of a BCC for engineering and installation activities is necessary to ensure compliance with technical, safety and quality standards as set forth in BellSouth Technical Requirements 73503 Engineering and Installation Standards for Central Office Equipment, dated February 1995. BellSouth adheres to this requirement itself and expects any other entity installing equipment and facilities within a BellSouth central office to do likewise.

68. Any CLEC interested in becoming a BCC may contact BellSouth to obtain the certification process information. To become a BCC, an applicant must have a working knowledge of the required standards and appropriate references and demonstrate this through a trial installation. The applicant must also be proficient at operating within these technical, safety and quality engineering and installation guidelines and specifications. Guidelines for obtaining BCC status are available upon request from the BellSouth Account Team. BellSouth provides updated copies of its BCC lists on a frequent basis upon request.

69. After a CLEC becomes a BCC, BellSouth will allow it to perform engineering and installation activities for the CLEC's own equipment installations, as well as those for other CLECs.

XXXII. CLEC RESPONSIBILITIES

70. For a physical collocation arrangement, the CLEC and its BCC are responsible for:

a) installation of the collocated equipment and components;

b) installation and connection of power feed(s) from the Battery Distribution Fused Board ("BDFB") to the collocated equipment or the installation and connection of the power feed(s) from the BellSouth power board interconnection cables to a CLEC-provided BDFB;

c) installation and connection of interconnection cables to the point of demarcation (e.g., BellSouth Conventional Distributing Frame, Digital System Cross-connect ("DSX") panel, or Light Guide Cross-connect ("LGX") panel);

d) in caged collocation, construction of low level frame and aisle lighting, as required within the caged space;

e) performance of operational tests as requested by the CLEC; and

f) notification to the local BellSouth Central Office foremen (and the CLEC) upon successful completion of the installation and testing.

71. For a virtual collocation arrangement, the CLEC and its BCC are responsible for providing the transmission equipment (e.g., fiber optic terminals, DS3/DS1 channelization equipment, fiber terminating device) pursuant to FPSC Access Tariff, Section E20.1 (Exhibit AWG-1). The CLEC must also specify all software options for the transmission equipment and associated plug-ins. In addition, the CLEC must provide the following:

A) all necessary plug-ins/circuit packs (both working and spare) including any required options that must be physically set on the plug-ins;

B) all unique tools and test equipment;

C) initial and subsequently added equipment sized and equipped to handle a minimum of 12

months forecasted growth;

D) lockable rack mounted storage unit to house spare plug-ins, tools, and test equipment;

E) any desired equipment for remote monitoring and control;

F) fuse panel(s) with sufficient capacity for all BellSouth Virtual Collocation equipment;

G) network facility rack(s) (i.e., relay racks) to mount all of the above referenced equipment; and

H) notification to the local BellSouth Central Office Foreman (and the CLEC) upon successful completion of the installation and testing.

XXXIII. EQUIPMENT INSTALLATION STANDARDS

72. BellSouth specifies a minimum standard for equipment to be installed by a CLEC in its physical collocation space. In compliance with 47 C.F.R. § 51.323(b), as revised by the FCC Collocation Reconsideration Order, BellSouth does not object to the collocation of equipment by a CLEC on the grounds the equipment does not comply with safety and engineering standards that are more stringent than the safety and engineering standards that BellSouth applies to its own equipment.

73. BellSouth can deny the collocation of a CLEC's equipment on the grounds that the equipment does not meet the minimum safety standards. If BellSouth denies the collocation of a CLEC's equipment due to safety concerns, BellSouth will provide to the CLEC within five (5) business days of the denial, a list of all BellSouth equipment that BellSouth has located at the premises in question. Included with this list, BellSouth will attach an affidavit attesting that all of BellSouth's equipment meets or exceeds the safety standards that BellSouth contends the CLEC's equipment fails to meet. The affidavit will set forth in detail the exact safety requirement(s) that the CLEC's equipment fails to satisfy; BellSouth's basis for determining

that the CLEC's equipment fails to comply with this safety requirement; and BellSouth's basis for concluding why collocation of the CLEC's equipment would compromise network safety.

XXXIV. POST-INSTALLATION RESPONSIBILITIES

74. The CLEC must notify BellSouth in writing that the collocated equipment is installed, tested and ready for service provisioning. At this time, BellSouth will establish the arrangement Installation Complete Date based upon the written notification received. For physically collocated equipment, the CLEC must notify BellSouth. For virtually collocated equipment, either the CLEC or the CLEC's equipment vendor may provide this notification.

XXXV. COMMENCEMENT DATE

75. BellSouth establishes a Commencement Date for each collocation arrangement. The Commencement Date is the date that the CLEC's equipment becomes operational (cross-connected to BellSouth's network for the purpose of service provision).

76. For physical collocation, the Commencement Date is the Installation Complete Date.

77. For virtual collocation, the BCC must (for insurance purposes) provide BellSouth with a complete and accurate inventory list of all equipment and facilities installed as part of the arrangement. This inventory list is used to verify receipt of all equipment, circuit packs, spare parts, and test equipment and is a critical part of the "Acceptance Process". Until central office personnel receive this inventory list, the installation cannot be accepted and BellSouth assumes no responsibility for the equipment (or any spare parts). This list becomes an attachment to the Equipment Lease. For a virtual collocation arrangement, BellSouth prepares the Equipment Lease agreement upon receipt of notification of the Installation

Complete Date, which includes the "as installed" equipment and facilities list. The Virtual Collocation Commencement Date then becomes the date the Equipment Lease is executed.

XXXVI. SERVICE INTERCONNECTION

78. A CLEC may interconnect to BellSouth's network at 2-wire, 4-wire, DS1, DS3 and 2-fiber/4-fiber optical levels from either a physical or virtual collocation arrangement. BellSouth assigns and pre-wires interconnection facilities from within its network to the collocation demarcation point. BellSouth does not require CLECs to use an intermediate interconnection arrangement in lieu of direct connection to its network unless technically necessary.

XXXVII. DEMARCATION POINT

79. Pursuant to the FPSC May 11, 2000 Collocation Order (Exhibit AWG-4), BellSouth will designate the location of the demarcation point at the perimeter of the CLEC's collocation space, unless a different demarcation point is negotiated by the parties. BellSouth is not obligated to offer access to its Main Distributing Frame ("MDF") or Conventional Distributing Frame ("CDF"). Furthermore, BellSouth is not required to terminate cabling onto any CLEC device or equipment. A CLEC may negotiate with BellSouth for the designation of other demarcation points up to the CDF; however, if terms cannot be reached between the parties, the CLEC's collocation site will be the default demarcation point. Each party will be responsible for maintenance and operation of all equipment/facilities on its side of the demarcation point.

80. For physical collocation, the demarcation point between the CLEC's arrangement and BellSouth's network is the Conventional Distributing Frame, DSX panel or LGX panel. In a DSX panel, electrical digital connections are made and jumpers are used to tie connections

together. In a LGX panel, optical fiber connections are made and jumpers are used to tie connections together.

81. The CLEC is also responsible for providing the common block and necessary cabling in a physical collocation arrangement. For all other terminations, BellSouth will designate a demarcation point on a per arrangement basis. The CLEC may opt, at its own expense, to place a Point of Termination ("POT") bay or frame within its collocation space, but this POT bay or frame will not serve as the demarcation point between the CLEC's equipment and BellSouth's network.

82. For a virtual collocation arrangement, the demarcation point is either the BellSouth Distribution Frame, DSX or LGX. The CLEC's facilities will run directly between the BellSouth Distribution Frame, DSX or LGX and the CLEC's equipment.

XXXVIII. SECURITY ACCESS

83. After BFFO, BellSouth will allow a CLEC to have direct access to its equipment and facilities twenty-four (24) hours a day, seven (7) days a week as required by the FCC Collocation Order and FCC Collocation Reconsideration Order. BellSouth will allow a CLEC to have direct access without the need for a security escort, provided that the CLEC complies with BellSouth's security and safety requirements set forth in its Interconnection Agreement. BellSouth does not require CLEC employees to receive security training from BellSouth, but provides information to the CLEC on the specific type of training required. See Yipes Agreement, Attachment 4, Sections 5.6 and 11, (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Sections 5.6 and 11 (Exhibit AWG-8), and Florida Access Tariff, Section E20.2.10, (Exhibit AWG-1).

84. Prior to CLEC completion of the security and safety requirements, BellSouth offers one free escorted site visit to the CLEC's designated collocation arrangement location or access to the entrance manhole and unlimited paid escorted visits until the CLEC complies with the BellSouth Security and Safety requirements. See Yipes Agreement, Attachment 4, Sections 6.5.4 and 11, (Exhibit AWG-5), Remote Site Agreement, Attachment 4-RS, Sections 6.8 and 11 (Exhibit AWG-8), and Florida Access Tariff, Sections E20.2.7.D.2 and E20.2.10 (Exhibit AWG-1).

85. To gain access to BellSouth's premises, the CLEC's agent or employee is required to carry a picture identification at all times. The CLEC is required to certify that each agent or employee seeking access has had security training, that a background check has been performed, and that no felony convictions were found. These requirements are reasonable and necessary to ensure the safety of BellSouth's and other CLEC's facilities and employees working in and around BellSouth premises and to maintain the efficient operation of the network. These same measures are required for all BellSouth and BellSouth affiliate personnel. Additionally, BellSouth will provide restroom facilities and reasonable parking on a first come, first served basis.

86. BellSouth is installing security access systems in its central offices to effectively monitor compliance with BellSouth's security and safety requirements, reasonably protect the central office and CLEC equipment and facilities, and ensure network reliability. These systems will allow entry to central offices with an appropriate card key, while tracking and recording the time of entry by each cardholder. Where security systems are not yet installed, access keys are provided to the collocated CLECs.

87. BellSouth recovers the costs of implementing the security access systems per central office from all collocating parties, including itself, through an allocation of these costs based on the amount of square feet used by each collocator and BellSouth, relative to the total useable square footage in the central office. This fee is assessed on a monthly basis for each central office in which the CLEC has obtained collocation space. BellSouth's security requirements are addressed in the Florida Access Tariff, Subsection E20.2.10 (Exhibit AWG-1), Yipes Agreement, Attachment 4, Section 11 (Exhibit AWG-5) and the Remote Site Agreement, Attachment 4-RS, Section 11 (Exhibit AWG-8).

88. BellSouth does not and will not use the information that it obtains as a result of the implementation of its security requirements for marketing or other competitive purposes.

89. This concludes my affidavit

The information contained in this affidavit and its Exhibits is true and correct to the best of my knowledge and belief.

Executed on May 29, 2001.

My Commission Expires March 17, 2003

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s, entry into interLATA Services pursuant to Section 271 Of the Federal Telecommunications Act of 1996.	))))))	DOCKET NO. 960786-TL

AFFIDAVIT OF LINDA M. KINSEY
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.

STATE OF GEORGIA
COUNTY OF FULTON

I, LINDA M. KINSEY, being first duly sworn upon oath, do hereby depose and state:

I. Professional Experience

1. My name is Linda M. Kinsey. I am employed by BellSouth Telecommunications, Inc. ("BellSouth"). My business address is 675 West Peachtree Street, Atlanta, Georgia 30375. I am the Director of Outside Plant Engineering Support. In this position, I am responsible for, among other things, the development and implementation of processes and procedures that ensure nondiscriminatory access to poles, ducts, conduits, and rights-of-way. I have held various positions within the BellSouth Network organization, both line and staff.

II. Purpose of Affidavit

2. The purpose of my affidavit is to demonstrate that BellSouth offers nondiscriminatory access to poles, ducts, conduits and rights-of-way to competing providers of telecommunications services in compliance with sections 251(b)(4) and section 224 of the

Communications Act (the "Act"), and item (iii) of the Competitive Checklist (Checklist) as contained in section 271(c)(2)(B) of the Act.

3. This affidavit describes the process used by BellSouth to provide CLECs access to poles, ducts, conduits, (hereinafter "structures") and rights-of-way, and compares it to the process that BellSouth uses to provision the same facilities and services to itself or any affiliate. Although the processes are not always identical, as explained below, the procedure available to CLECs is nondiscriminatory and offers competitors a meaningful opportunity to compete. The Federal Communications Commission ("FCC") deemed these procedures nondiscriminatory when reviewing BellSouth's application for in-region, interLATA authority in Louisiana. See Application of BellSouth Corporation, BellSouth Telcoms, Inc., and BellSouth Long Distance, Inc., for Provision of In-Region, InterLATA Services in Louisiana, 13 FCC Rcd 20599, 20706-12 (1998). Additionally, following is a list of BellSouth region state proceedings that have found that BellSouth provides non-discriminatory access to Poles, Ducts, Conduits and Rights-of-Way in compliance with Checklist Item 3: (1) Florida Public Service Commission ("FPSC") in Order No. PSC-97-1459-FOF-TL, Docket No. 960786-TL, issued November 19, 1997, pp. 99-100; (2) Kentucky Public Service Commission (KPSC) in Case No. 96-608, Advisory Opinion dated July 8, 1999, p. 5; (3) Louisiana Public Service Commission (LPSC) in Docket No. U-22252-A, Order dated September 5, 1997, p. 8; (4) Mississippi Public Service Commission (MPSC) in Docket No. 97-AD-0321, Order dated November 9, 1998, p. 32; (5) North Carolina Utilities Commission (NCUC) in its Order Regarding Section 271 Requirements, Docket No. P-55, Sub 1022, January 14, 1998, p. 58; and (6) South Carolina Public Service Commission (SCPSC) in Docket No. 97-101-C, Order No. 97-640, dated July 31, 1997, p. 41. The

provision of access remains to this day consistent with the affirmative conclusions reached by the FCC, FPSC, KPSC, LPSC, MPSC, NCUC and SCPSC.

III. **Process Explanation**

4. BellSouth established a Competitive Structures Provisioning Center (CSPC) in Birmingham, Alabama for processing all CLEC requests for access to BellSouth's poles, ducts, conduits and rights-of-way. BellSouth established the center to ensure that competitors requesting such access receive prompt, consistent, and nondiscriminatory treatment.

5. To gain access to poles, ducts, conduits, and rights-of-way, a CLEC must execute a license agreement with BellSouth. The purpose of the License Agreement is to set out the terms and conditions applicable to all specific licenses granted to the CLEC upon BellSouth approval of a CLEC application. BellSouth offers a standard license agreement (together with operational guidelines and application forms) to CLECs seeking access to poles, ducts, conduit, and rights-of-way. See, e.g., Nextlink Florida, Inc. License Agreement for Rights of Way (ROW), Conduits, and Pole Attachments – Exhibit LMK-1. A CLEC either can adopt the standard license agreement or negotiate a non-standard agreement with BellSouth. In either case, the license agreement sets out the terms and conditions applicable to all licenses granted the CLEC by BellSouth. CLECs may execute agreements on a state-wide or region-wide basis.

6. At the time BellSouth provides the CLEC with the final agreement for its signature, BellSouth also provides operational guidelines to assist the CLEC in completing the necessary application forms related to specific poles, ducts, and conduits. Upon request, BellSouth personnel also are available to help CLECs with the application forms.

7. After execution of a license agreement, a CLEC may submit an application to attach to or occupy specific structures or rights-of-way owned or controlled by BellSouth. The application process permits the CLEC to convey its structure requirements to BellSouth. This allows BellSouth, in turn, to respond with timely and accurate information to enable the CLEC to evaluate and schedule its plans of operation. BellSouth evaluates all CLEC requests according to widely-accepted standards regarding capacity, safety, reliability, and general engineering.

8. CLECs must specify in writing the geographic location, type and quantity of structures, and the in-service date required (Exhibit LMK-1, page 18). This process involves completing and submitting the appropriate application forms through the CSPC single point of contact. BellSouth processes all applications on a first-come, first-served basis without regard to applicant, and, as described below, on a nondiscriminatory basis as compared to BellSouth itself.

9. When an application is approved, BellSouth grants a license to the CLEC to attach to or occupy BellSouth's requested poles, ducts, conduits or rights-of-way. Multiple licenses may be granted under a single CLEC license agreement; however, separate license applications must be submitted for each set of poles, ducts, conduits or rights-of-way to which access is desired.

10. BellSouth may deny applications within forty-five (45) days of receipt if there is insufficient capacity, or for reasons of safety, reliability or other generally applicable engineering concerns (Exhibit LMK-1, page 5). If an application were denied for one of these reasons, BellSouth would provide the requesting carrier a written explanation of BellSouth's decision. BellSouth takes all reasonable steps to accommodate the request for

access prior to denying a request. BellSouth will, for instance, remove retired cable from conduit if the requesting CLEC agrees to pay the cost, as required by the Act. On poles, BellSouth will do rearrangements and/or pole changeouts, again if the CLEC pays the expenses of all parties involved.

IV. **Access to Information**

11. The CLECs may obtain access to geographic-specific engineering information regarding poles, ducts, and conduits either by requesting that BellSouth provide the information to them, or they may seek access to BellSouth's records. (Exhibit LMK-1, page 18). In order to protect the confidential proprietary information of BellSouth and other users, procedures have been established for providing record information that designates facilities of existing companies, without identifying those companies. If the CLEC requests to view BellSouth's records, BellSouth will make paper copies available at a Records Maintenance Center within five (5) business days. See Exhibit LMK-1, Appendix II for locations of Records Maintenance Centers. These copies may be taken by the CLEC. If the CLEC instead chooses to receive these records through the mail, BellSouth has committed to accomplish this within twenty (20) business days, including time required for handling and mailing. This twenty (20)-day period reflects the amount of time required for BellSouth to reasonably produce, redact, and deliver the record information to the CLECs' designated location. On larger-than-normal requests, BellSouth routinely works with CLECs to establish a priority for the production and delivery of records on a negotiated schedule. No party, in Florida or any other state within the BellSouth region, has raised any objections that BellSouth's time for responding to requests for delivery of records is unreasonable. Upon

receipt of the record copies, the CLEC can begin its planning phase based upon available information.

12. BellSouth maintains an inventory mapping system that records the location and physical attributes of its pole, duct, and conduit structures and associated facilities. CLECs can subscribe to the entire mapping system utilized by BellSouth (with proprietary information removed), but they are responsible for covering the costs of removing proprietary information and producing an redacted copy. Because CLECs are primarily interested in specific geographic areas, the costs of duplicating the entire system may not be considered a reasonable business expense. Indeed, no CLEC has expressed an interest in duplicating BellSouth's complete records system.

13. Contemporaneous with the record review, a field inspection is conducted in response to the application. This entails a physical inspection of existing structures to determine availability (Exhibit LMK-1, page 22). If spare capacity is not available and an application must be denied, BellSouth will so advise the CLEC within forty-five (45) days from the receipt of request. If a records investigation indicates the availability of structures, a physical (field) inspection may be required to determine the usability (this would only normally apply to ducts or conduit) of the structures. In addition to determining the availability of requested structures, BellSouth also performs an investigation of the work it would have to perform relative to making structures available to the CLEC (e.g., physically relocating cables on pole lines and or rodding ducts, etc.).

V. **Provisioning**

14. Upon completing the investigation, BellSouth informs the CLEC of any costs that would be required to make BellSouth's facilities ready to accommodate its request ("make-

ready" costs), the time it would take BellSouth to complete the required work, and the date by which BellSouth could complete it. BellSouth will provide the CLEC at least forty-eight (48) hours notice prior to initiating a field survey, if the CLEC has indicated a desire to be present for that survey (Exhibit LMK-1, page 18). Alternatively, BellSouth permits the CLEC to perform the field investigation itself. The time required for BellSouth to determine the extent of make-ready work needed and, therefore, to process the CLEC application, varies based upon the magnitude of the request.

15. BellSouth employees, or independent contractors acting on behalf of BellSouth, would then issue a work authorization to complete the CLEC's required work. The time that it takes to complete the work is dictated by the complexity, degree of detail, and size (number of poles, feet of conduit, route miles, etc.) of each request.

16. If BellSouth requires additions to its own facilities, these proposed additions are handled internally using the same criteria and processes that are used for evaluating a CLEC request. BellSouth does not reserve space for its own future business needs or give itself a preference when assigning space. BellSouth does not and will not favor itself, as a matter of policy, procedure or fact, over other carriers when provisioning access to poles, ducts, conduits and rights-of-way. BellSouth employees, or independent contractors acting on behalf of BellSouth, are responsible for the scheduled planning, engineering, and overall management of BellSouth's structures. This same workforce evaluates all requests for access to these structures using the same criteria regardless of whether the request was made by a CLEC or by BellSouth.

17. Work requests receive identical treatment regardless of their source. In every case, a work authorization is created and the work is scheduled for completion, in a nondiscriminatory manner, within BellSouth's normal workload.

18. BellSouth utilizes a mechanized scheduling system for this purpose. To assure nondiscriminatory treatment, the identity of the party requesting work is kept anonymous when authorization details are entered into the system. The work authorizations are evaluated and scheduled based upon specific job-related details such as job type, job size, and due date. Scheduling is the same regardless of whether the requesting party is a CLEC or BellSouth.

19. The CLEC pays for all make-ready work undertaken by BellSouth to prepare BellSouth's conduit system, poles, or anchors and related facilities for the requested occupancy or attachment. Make-ready work includes clearing obstructions and rearrangement, transfer, replacement, removal, repair, or modification of BellSouth's facilities. BellSouth does not charge the CLEC and bears the costs for any changes that are made to meet BellSouth's needs.

20. To the extent that parties other than BellSouth (such as power and CATV companies) are required to perform make-ready work because they have facilities on the poles or in the conduit, all parties must work together to ensure timely completion of all necessary work. The CLEC may contract with BellSouth or a BellSouth-certified contractor to perform certain make-ready work (Exhibit LMK-1, page 19). However, in accordance with BellSouth's agreement with the Communications Workers of America (CWA), some types of work on poles must be performed by BellSouth pursuant to a joint use agreement whether the work is carried out for a CLEC's benefit or for BellSouth's benefit. Under this

agreement, all make-ready work on BellSouth's aerial plant must be performed by BellSouth union employees represented by the CWA (Exhibit LMK-1, page 19).

21. For conduit and underground work, the CLEC can contract with BellSouth or hire a BellSouth-approved contractor. The CLEC, at its option, may arrange for the performance of such work by a contractor not currently approved by BellSouth by submitting its choice of contractor for approval. Certification shall be granted based upon reasonable and customary criteria employed by BellSouth in the selection of its own contract labor. If the CLEC contracts with BellSouth to perform the make-ready work, BellSouth will follow its normal construction time frame (Exhibit LMK-1, page 18). A CLEC may request that make-ready work be expedited in accordance with the terms of its licensing agreement.

22. Charges for make-ready work performed by BellSouth are payable in advance (Exhibit LMK-1, page 19). Annual rental fees for access to poles, ducts, conduit, and rights-of-way in Florida are set using the FCC's formula, and comport with BellSouth's obligations under Section 224, applicable state regulations, and its negotiated rates. BellSouth's rates are set out in the license agreement rate page (Exhibit LMK-1, Appendix I).

23. Billing for annual rentals occurs on or about July 1 for six months in arrears (January through June) and six months in advance (July through December) for each calendar year. If a facility is not in use or occupied for the entire year, charges will be prorated for the portion of the year the facilities are in use or occupied. Attachment and/or occupancy licenses issued after current-year billing occurs will be billed in arrears the following year. Upon the cancellation of a license, the CLEC will be billed for space utilization from the period covered by the last bill through the date of removal of the CLEC's facilities. BellSouth charges for the actual costs incurred in evaluating requests prior to issuing the

license (such as production and delivery of records, field investigation of structures, and make-ready work) at cost-based time and material charges. No rental fee is charged to the CLEC until a license to use the particular BellSouth structure has been issued. There is a one-month minimum charge. The monthly fee is prorated for the time between issuance of the license and the beginning of the first monthly billing period.

24. After the required make-ready work is completed, BellSouth issues the CLEC a license for use of poles, ducts, conduit, or rights-of-way (Exhibit LMK-1, page 24). If BellSouth determines that no make-ready work is required, BellSouth will approve the CLEC's request for pole attachment and/or conduit occupancy licenses and issue such licenses within twenty (20) business days after the determination has been made that no make-ready work is required, but in no event later than 45 days after BellSouth receives the CLEC's application, which period shall exclude any time BellSouth is awaiting a response from CLEC. At this point, no further work by BellSouth is required; the CLEC may then attach its cable ("facilities") to BellSouth's structures. The CLEC has one (1) year after issuance of the license to make its attachments or place its facilities in the specified ducts or conduits. If not used within this time, the space becomes available for others to use and the license is canceled.

25. Placement and maintenance of CLEC aerial and underground facilities are the responsibility of the CLEC. The CLEC can utilize a contractor that demonstrates compliance with BellSouth certification requirements -- the same requirements that BellSouth uses for certifying its own contractors. (Exhibit LMK-1, page 11). BellSouth does not and will not, as a matter of policy, procedure and fact, use its certification process to discriminate against any

of its competitors. The CSPC maintains a list of approved contractors which it makes available to interested CLECs upon request.

26. Under normal working conditions, BellSouth requires forty-eight (48) hours notice from CLECs seeking access to manholes to investigate facilities (Exhibit LMK-1, page 13). In emergency situations, however, shorter notice will be accepted at no charge. The license agreement, consistent with Section 224 and the FCC's implementing rules (see 47 C.F.R. § 1.1403 (c)), provides that BellSouth and the CLEC will each give sixty (60) days advance written notice, if practicable, regarding modification, relocation, and replacement of facilities covered by the license agreement.

VI. Implementation of License Agreements in Florida

27. BellSouth currently has license agreements for access to poles, ducts, conduit, and rights-of-way (executed by the CSPC) with fifty-one (51) CLECs in the state of Florida.

28. Available data for the state of Florida as of May 17, 2001, indicates 26 of the total 51 CLECs having executed license agreements with BellSouth have made 338 applications through the CSPC for access to BellSouth poles, ducts, conduit, and rights-of-way. There have been no denials of CLEC requests for access to BellSouth structures where BellSouth has existing facilities (either poles, ducts or conduit). In addition, in several locations, CLECs are currently in the process of building their own facilities or have completed placement of their own facilities. Further details on provisioning for access to BellSouth poles, ducts, and conduit are given in testimony of Keith Milner.

29. This concludes my affidavit.

The information contained in this affidavit and its Exhibit is true and correct to the best of my knowledge and belief.

Executed on May 29, 2001.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s, entry into interLATA Services pursuant to Section 271 Of the Federal Telecommunications Act of 1996.	))))))	DOCKET NO. 960786-TL

AFFIDAVIT OF DOUGLAS R. COUTEE
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.

I, DOUGLAS R. COUTEE, being of lawful age and duly sworn upon my oath, depose and state:

1. My name is Douglas R. Coutee. I am employed by BellSouth Telecommunications, Inc. ("BellSouth"). My business address is 3535 Colonnade Parkway, Room SE5B1, Birmingham, AL 35243. I am a Senior Business Analyst in the Operator Services department under the Network and Carrier Services organization. In this position, I provide strategic support for the development, implementation, and life cycle management of a family of number services and database listings products and services. I have over 28 years of service at BellSouth with experience in consumer sales and marketing, new product development, project management, and market plan development. I have a degree in Business Administration from Louisiana State University and a Masters Certificate in Project Management from George Washington University.

2. The purpose of this affidavit is to discuss the means by which BellSouth provides nondiscriminatory access to BellSouth's Directory Assistance (DA) and Operator Services (OS) for Competitive Local Exchange Carriers ("CLECs") in compliance with Section 271(c)(2)(B)(vii) of the Telecommunications Act of 1996 ("the Act"). Following is a list of BellSouth region state proceedings that have found that BellSouth provides non-discriminatory access to OS/DA in compliance with Checklist Item 7:
(1) Florida Public Service Commission ("FPSC") in Order No. PSC-97-1459-FOF-TL, Docket No. 960786-TL, issued November 19, 1997, pp. 118 (partial approval);
(2) Louisiana Public Service Commission (LPSC) in Docket No. U-22252-A, Order dated September 5, 1997, p. 11; (3) Mississippi Public Service Commission (FPSC) in Docket No. 97-AD-0321, Order dated November 9, 1998, p. 38; (4) North Carolina Utilities Commission (NCUC) in its Order Regarding Section 271 Requirements, Docket No. P-55, Sub 1022, January 14, 1998, pp. 81-83; and (5) South Carolina Public Service Commission (SCPSC) in Docket No. 97-101-C, Order No. 97-640, dated July 31, 1997, p. 47. The provision of access remains to this day consistent with the affirmative conclusions reached by the FPSC, LPSC, MPSC, NCUC and SCPSC.

3. BellSouth's local exchange customers can obtain Directory Assistance Services (Directory Assistance and Directory Assistance Call Completion (DACC)), Operator Services (Operator Provided Call Assistance, Operator Call Completion Services, mechanized or operator assisted Alternate Billing Services (ABS) for billing a third number, calling card or collect call and Verification and Interruption Services) and Intercept Service through BellSouth's retail tariffs.

4. Typically, a BellSouth local exchange customer contacts a service representative in one of BellSouth's residence or business service centers to order a local telephone line that includes Directory Assistance and Operator Services. Depending upon whether the customer is a residence or business subscriber, the service representative uses a system known as the Regional Negotiation System (RNS) or the Regional Ordering System (ROS), respectively, to input the customer's order. These systems automatically forward the order into BellSouth's Service Order Control System (SOCS). The order is then transmitted to the appropriate assignment, installation, network and database work groups and/or mechanized systems to establish the customer's local telephone line. The customer's local telephone line automatically includes the provisioning of Directory Assistance and Operator Services and Intercept Service.

5. To make the BellSouth retail local exchange customer's listing (listed name, address, telephone number) available for Directory Assistance, the order flows from SOCS to the BellSouth Listing Information System (LIST) database, and then from the LIST database into BellSouth's Directory Assistance databases. Completed service orders containing the subscriber listings are accumulated, batched in a file and input to the DA databases once daily. To make the BellSouth retail local exchange customer's listing available for Intercept Service, the order flows from SOCS to the BellSouth Line Information for Open Networks (LION) system to establish the appropriate intercept message. To make the BellSouth retail local exchange customer's telephone number and Calling Card number, if requested, available for ABS, the order flows from SOCS to

BellSouth's Database Administration System (DBAS) and then to the BellSouth Line Information Database (LIDB).

6. For local exchange customers of CLEC resellers, all of the processes described above are identical and the service is provided in the same manner, timeliness and quality as is done for BellSouth retail local exchange customers through BellSouth retail tariffs. A CLEC that is reselling BellSouth service can generate a mechanized service request for a local telephone line with Directory Assistance, Operator Services, and Intercept Services through the Electronic Data Interchange (EDI) interface, the Telecommunications Access Gateway (TAG) interface, or the Local Exchange Navigation System (LENS) interface, to establish the service. EDI, TAG, and LENS will then automatically forward a clean and correct service request into SOCS. From SOCS, the service order follows the same flow as orders that are submitted by BellSouth retail service representatives via RNS and ROS, as described above. The CLEC may also transmit a service request manually to the Local Carrier Service Center (LCSC). When a CLEC service request is transmitted manually, a LCSC service representative will input the service request into the Service Order Negotiation System (SONGS) or the Direct Order Entry (DOE) system. From SONGS or DOE, the service request will automatically flow into SOCS. From SOCS, the service order flow follows the same path as if it had been entered by a BellSouth service representative in RNS or ROS or by a CLEC service representative in EDI, TAG, or LENS.

7. BellSouth includes facilities-based CLEC subscribers' listings in BellSouth's

Directory Assistance databases via the same process described in paragraph 5 above. The facilities-based CLEC can use EDI, TAG, or LENS to transmit the necessary listing information, which will be transmitted to SOCS. From SOCS, the order follows the same flow as described for BellSouth's retail customers. The facilities-based CLEC can also fax the necessary listing information to a LCSC service representative who issues a service order through SONGS or DOE which will automatically flow into SOCS. From SOCS, the CLEC subscriber's listing request follows the same flow as described above. After entry into the system via the CLEC electronic interfaces or by the LCSC service representative, the process for facilities-based CLECs is identical to the way BellSouth makes its own local exchange subscriber listings available in DA.

8. BellSouth also makes facilities-based CLECs subscribers' numbers available for Intercept Service and includes their line numbers and Calling Card numbers in BellSouth's LIDB. The CLEC submits a written request with the appropriate information to BellSouth's Database Administration Center (DBAC). Using an administrative terminal, a DBAC clerical person enters the information into the LION system for Intercept and the Database Administration System (DBAS), which automatically updates the line number and calling card in LIDB. The request can be sent via fax, US mail, email or internet mail. The CLEC and BellSouth together formulate appropriate procedures regarding lead time, timeliness, format and content of the CLEC's subscriber information. The CLEC requests for Intercept and LIDB are submitted to the appropriate systems within forty-eight hours of receipt of the requests, which is the same time frame applicable to BellSouth retail customers. These requests are processed in a timely,

accurate and quality manner and BellSouth has sufficient personnel available to handle the volume of requests being received from CLECs and reasonably foreseeable demand. Because the requests for Intercept and LIDB go directly to the DBAC and avoid service order system edit checks, CLEC subscribers' line numbers and calling card numbers may actually be processed more quickly than those of BellSouth's own retail customers. BellSouth's DBAC handles LIDB transactions for 14 CLECs and Intercept transactions for 2 CLECs for the BellSouth region. BellSouth's DBAC processes an average of 5,655 LIDB transactions and 80 Intercept transactions monthly for these CLECs based on total transactions received during March and April, 2001. In Florida, there are three facilities-based CLECs subscribing to LIDB storage and no facilities-based CLEC subscribing to Intercept Service.

9. When a BellSouth retail local exchange customer dials 4-1-1 in BellSouth's service territory for Directory Assistance, the customer is connected to an automated system which brands the call with "BellSouth, we can now help you find a number anywhere in the country" and asks the customer, "what city? what state (if appropriate)? what listing?"[1] Depending upon the requested state and/or city, the customer is connected to an operator that handles in-region DA calls or an operator that handles national DA calls. The operator inputs the customer's listing request into the workstation and initiates the search. For in-region requests, the operator searches BellSouth's DA

[1] On April 11, 2000 the Federal Communications Commission (FCC) issued its Memorandum Opinion and Order (CC Docket No. 97-172) granting BellSouth's Petition for Forbearance for Nonlocal Directory Assistance Service. The FCC concluded that BellSouth may provide nonlocal directory assistance service on an integrated basis subject to the nondiscrimination requirements outlined in the order. BellSouth is in compliance with the FCC's order and fully intends to continue providing its nonlocal directory assistance

regional database. For nationwide DA (NDA) requests, the operator searches a NDA database. Based on the search request initiated by the operator, the matching listings are returned to the operator's workstation. The operator selects the correct listing and provides the telephone number to the customer verbally or by using an automated audio announcement. If the telephone number is provided via the automated audio announcement system, the customer will be given the option to have the call completed only if it is a local or intraLATA call. If the customer selects DACC, the call will be automatically completed by BellSouth's network.

10. CLECs that are reselling BellSouth services can provide their local exchange customers with the same access to BellSouth's DA using the same 4-1-1 dialing pattern as BellSouth provides its retail customers. The DA request will be handled in the same manner as BellSouth does for its own retail local exchange customers. The same operators, the same automated systems, and the same databases are used to provide the CLEC local exchange customer with DA. The CLEC can elect to brand the DA call with its name, the BellSouth brand, or elect no brand. Whether the CLEC elects to brand with its name or not brand, the call is handled with the same speed, care, accuracy, and quality that a BellSouth retail local exchange customer would receive. Calls to OS and DA are delivered to the serving switches via various trunking arrangements, placed in queue and answered on a first-come-first-serve basis. If a CLEC does not order customized branding for OS and/or DA, there is no way to differentiate the CLEC calls from BellSouth calls because both sets of calls are routed over the exact same trunking

---

service.

arrangement from the BellSouth central office. This is also true when BellSouth receives a call from a customer that dialed 1-5-5-5-1-2-1-2 or 1-N-P-A[2]-5-5-5-1-2-1-2. Other types of customers such as interexchange carriers, facilities-based CLECs, and independent companies deliver calls directly to this switching arrangement. Accordingly, the only way to ensure parity of treatment to all customers is to serve the call that has waited the longest by connecting the next available operator.

11. A CLEC can elect to perform Directory Assistance for its local exchange customers using its own operators and facilities by ordering BellSouth's Direct Access Directory Assistance Service (DADAS) or Directory Assistance Database Service (DADS). DADAS provides the CLEC with access, on a per query basis, to the same BellSouth DA databases that BellSouth uses to provide DA to its own local exchange customers. The CLEC connects to the BellSouth DA database using its own switch, workstation, audio, and transport facilities. DADS provides the CLEC with a complete extract of the BellSouth DA database in bulk form on readily accessible tape or electronic formats and daily updates to allow the CLEC to establish its own Directory Assistance type service. DADS includes all eligible BellSouth subscriber listing information (e.g., for non-published numbers only, name and address with NP indicator is provided) and third party listings of CLECs and independent local exchange companies.

12. BellSouth local exchange customers dial 0 for Operator Services (OS). When a

BellSouth local exchange customer in the BellSouth service territory dials 0 + the area code + the 7-digit number for a local or intraLATA call (referred to as 0+), the BellSouth switch brands the call "BellSouth" and routes the call to BellSouth's Automated Alternate Billing System (AABS) for mechanized handling of the call. The BellSouth customer hears a "bong tone" and then enters a calling card number. The call is then completed by BellSouth's network. When a BellSouth local exchange customer dials 0 and no other digits (referred to as 0-), the BellSouth switch brands the call "BellSouth" and connects the customer to an automated menu which gives the customer access to an operator. If the customer presses 0- again or stays on the line, the customer will be connected to a BellSouth operator. The operator generally provides call assistance and/or completes the call for the customer. Operator and Directory Assistance services are available to CLECs in their entirety including access to adjacent features, rating tables, customer information databases, etc.

13. CLECs can provide their local exchange customers with the same access to BellSouth's Operator Services as BellSouth's retail customers have by dialing 0 + the area code and the appropriate local or intra-LATA number or 0- for an operator. Calls are handled in precisely the same way as for a BellSouth retail customer, except that the CLEC can elect to brand the call with its name, the BellSouth brand, or elect no brand. Regardless of whether the CLEC elects to brand or not brand, the CLEC subscriber's call

[2] NPA (numbering plan area) is the area in which no two 7-digit telephone numbers are the same. Each such area is assigned a unique 3-digit number for use in dialing telephone numbers in that area. NPA is very often referred to as an area code as well.

is handled with the same timeliness and quality that a BellSouth local exchange customer would receive.

14. Based on the foregoing, BellSouth provides nondiscriminatory access to BellSouth DA and OS in accordance with Section 271(c)(2)(B)(vii) of the Act.

15. This concludes my affidavit.

The information contained in this affidavit is true and correct to the best of my knowledge and belief.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s, entry into interLATA Services pursuant to Section 271 Of the Federal Telecommunications Act of 1996.	))))))	DOCKET NO. 960786-TL

AFFIDAVIT OF R. F. (ROOK) BARRETTO
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.

I, R. F. Barretto, being of lawful age and duly sworn upon my oath, depose and state:

1. My name is R. F. Barretto. Until my recent retirement, I was employed by BellSouth Advertising & Publishing Corporation ("BAPCO") as Director-Local Exchange Carrier/Operations Support. My business address was 59 Executive Park South, Atlanta, Georgia 30329. I reported to the Vice President – Operations of BAPCO, and now serve as a consultant to the company.

I. PROFESSIONAL EXPERIENCE AND EDUCATIONAL BACKGROUND

2. I have over thirty years of experience in directory publication and directory advertising, involving almost every aspect of directory operations, e.g., production, listings, specifications, sales, systems, marketing and planning. I was an employee of BAPCO for sixteen years, holding a number of different positions in that company, including Director of Marketing.

3. My most recent position, which I assumed in February of 1996, was Director - Local Exchange Carrier/Operations Support. In this position, I was responsible for negotiating directory contracts between new local exchange carrier entrants and BAPCO. I was also responsible for ensuring BAPCO is effectively positioned to handle the changed

telecommunications environment brought about by the passage of the Telecommunications Act of 1996 ("the Act"). This included coordinating changes to BAPCO's operations to accept new information and perform new functions and ensuring development of procedures and training materials to handle the new requirements of this telecommunications environment. I also developed the many support documents provided to competitive local exchange carriers ("CLECs") and the support materials related to directory matters used by BellSouth and BAPCO.

4. As Director - Local Exchange Carrier/Operations Support, I was also responsible for the contracts between BAPCO and local exchange carrier entrants, providing support to the carriers that contract with BAPCO, and developing the strategic planning and future requirements necessary to accommodate new carriers. Finally, I was the focal point for communications regarding those carriers within BAPCO.

II. PURPOSE OF AFFIDAVIT

5. The purpose of my affidavit is to prove that BellSouth provides nondiscriminatory appearance and integration of white page listings for CLEC subscribers in full compliance with Section 271(c) (2) (B) (viii) of the Act (Checklist Item 8). I describe the flow of orders received for the production of White Pages directories and how this process is accomplished for both BellSouth listings and CLEC listings. Further, I discuss the error detection process and extraction of listings from BAPCO's database to produce our White Pages directories, along with some of the measures and processes in place to ensure listing accuracy.

III. SUMMARY OF MY AFFIDAVIT

6. In the *Application of BellSouth Corporation for Provision of In-Region, Inter-LATA Services in Louisiana*, Memorandum Opinion and Order, 13 FCC Rcd at 20599 at 20747-50, paras. 252-259, ("LA II Order"), the Federal Communications Commission ("FCC") found that BellSouth met this Checklist Item. Additionally, following is a list of BellSouth region state proceedings that have found that BellSouth met the requirements of Checklist Item 8 (White pages directory listings for customers of the other carrier's telephone exchange service): (1) Florida Public Service Commission ("FPSC") in Order No. PSC-97-1459-FOF-TL, Docket No. 960786-TL, issued November 19, 1997, pp. 123; (2) Kentucky Public Service Commission (KPSC) in Case No. 96-608, Advisory Opinion dated July 8, 1999, p. 6; (3) Louisiana Public Service Commission (LPSC) in Docket No. U-22252-A, Order dated September 5, 1997, p. 11; (4) Mississippi Public Service Commission (MPSC) in Docket No. 97-AD-0321, Order dated November 9, 1998, p. 39; (5) North Carolina Utilities Commission (NCUC) in its Order Regarding Section 271 Requirements, Docket No. P-55, Sub 1022, January 14, 1998, p. 85; and (6) South Carolina Public Service Commission (SCPSC) in Docket No. 97-101-C, Order No. 97-640, dated July 31, 1997, p. 48. The provision of Checklist Item 8 remains to this day consistent with the affirmative conclusions reached by the FCC, FPSC, KPSC, LPSC, MPSC, NCUC and SCPSC.

7. BAPCO publishes White Pages directories to fulfill the directory responsibilities of BellSouth and includes within these directories the listings of CLEC subscribers. BAPCO does not charge CLECs for publishing their customers' listings or delivering directories to those customers. To publish these listings BAPCO receives business,

residential and government orders from BellSouth's Local Carrier Service Center ("LCSC") for processing listings to its White Pages database. All of these listings are published and provided to CLECs in the same manner that BellSouth provides listings to its own customers.

8. One of three activities can occur regarding these listings. The listing may be added, deleted, or changed in the BAPCO database. Establishing new accounts or making changes to or deleting existing accounts requires listing information to be sent by the CLEC. If a CLEC chooses to do a "Switch As Is" (no change to an account, except in the billing), no listing change is required. All published listings will remain exactly the way they were when BellSouth provided service to the end user. For these accounts, BAPCO will simply receive an order indicating a change in billing responsibility.

9. Exhibit RFB-1, attached to this affidavit, provides a simple flowchart of the sequence of listing-related activities that occur from the initial request of the end-user to the production of the directory for CLECs and BellSouth accounts. I will first describe this process in general terms, and then discuss it in more detail. For a BellSouth end-user, a BellSouth representative provides listing information to BAPCO via a service order. The service order is the base document for all activity on an account and is the basis of all input to BAPCO.

10. In the case of a CLEC, irrespective of whether the CLEC is a reseller or a facilities-based provider, listing information is also provided via a service order. The order is forwarded to BAPCO from BellSouth. As described in other affidavits in support of

BellSouth's application, all CLECs can submit local service requests ("LSR") and Directory Listing Requests ("DLR") via electronic or manual interfaces to BellSouth.

11. Each day BAPCO receives a file which contains all such orders from BellSouth and the CLECs. The entire file is processed by BAPCO without regard to which company initiated the order.

12. Several weeks in advance of publication, listings for the specific directory to be published are extracted from the BAPCO database and used to create a Closing Directory File for the upcoming directory. This Closing Directory File is formatted and sent to the printer to be printed, bound, and shipped to its eventual destination for distribution. CLEC customers receive directories in the same time and manner as BellSouth customers. BAPCO distributes directories to all end user customers without knowing whether the customers are CLEC or BellSouth accounts. The number of directories that a residential or business customer receives is established by an entry made by the CLEC or BellSouth on the initial order establishing or changing the listing.

IV. LISTING PROCESSING AND PUBLICATION

13. BAPCO examines each order received from the LCSC to determine whether it affects directory listings. For example, a change in coin telephone service, regardless of carrier, generally would not affect a directory listing. For any order that does affect a directory listing, BAPCO mechanically examines the individual components of the service order. This account is then processed to update BAPCO's database for eventual production of the directory. This same process is performed in the same way and at the same time for BellSouth

and for CLEC orders, including both resale and facilities-based. All processing and updates are the same for all orders and are carried out for each directory in the order received.

14. BAPCO's computer system has certain built-in edits to detect listing errors for all accounts, both BellSouth's and CLECs'. The system flags an account if certain data presented are not correct. To the degree it can, BAPCO seeks to rectify many errors itself. If unable to do so, BAPCO will query back directly to the appropriate service provider, either BellSouth or the CLEC, for clarification or correction to the account. This usually occurs for only a small percentage of the accounts. This same process is followed for both CLEC and BellSouth accounts.

15. As previously mentioned, at the appropriate time, all of the listings for a given directory are extracted from BAPCO's database and formatted to be sent to the printer. BAPCO handles the CLEC listings in precisely the same way it handles the BellSouth listings. For example, a customer, whether from either BellSouth or a CLEC, would not be deleted from a directory without receipt by BAPCO of a disconnect order.

16. CLEC customers are not separately classified, or otherwise identified, on the printed directory pages. All listings are included alphabetically in the same font, size and typeface as BellSouth customers' listings and without any distinguishing characteristics. The listing for a CLEC customer looks identical to the listing for a BellSouth customer.

17. Every four months, BellSouth provides CLECs with its schedule of the Business Office Close Dates for directories. This date, the last scheduled day to send listings

that are to appear in an upcoming directory, applies to BellSouth and all CLECs. BAPCO also accepts, from both CLECs and BellSouth, special listing orders that provide another short window of time after the Business Office close date to process orders. BellSouth or any CLEC can contact BAPCO to address any extenuating circumstances near a close date. Indeed, BAPCO has already assisted a number of CLECs in processing late activity.

18. BellSouth provides enhanced White Page Listings services, such as signature listings, to both BellSouth and to CLECs. This special type of listing is provided pursuant to the tariff (General Subscriber Services Tariff, Section A6). CLEC customers are also allowed to request and negotiate enhanced listings that need not be identical to those of BellSouth customers.

19. BAPCO's methods and procedures for listing the subscribers of other local service providers have been successfully in place since March of 1996 and only minor changes have been made since that time. During that time, BAPCO has witnessed, and successfully published listings for, a steady growth of CLEC orders. BAPCO is fully equipped and prepared to continue to process and publish any anticipated increase in orders from any source in the future.

V. Listing Accuracy

20. Maintaining the accuracy and reliability of BAPCO directories is fundamental to the success of our company as a directory publisher. This is true for the listings of any and all carriers' subscribers. The accuracy of BAPCO's White Pages listings has always been and remains outstanding. This accuracy applies equally to listings for BellSouth and CLEC

customers. Our success as a publisher depends on maintaining our high accuracy standards. We use the same process and procedures to process all the listings we receive, and provide CLEC subscribers with the same accuracy and reliability as we do for BellSouth subscribers. From time to time, we find CLEC-caused errors in CLEC listing orders received by BellSouth, e.g., processing listings after the close of a directory or inadvertently dropping of additional listings for their subscribers. We monitor for any error trends or major error situations and report significant findings back to CLECs as needed.

21. Any error caused by either BAPCO or BellSouth results in an adjustment to BellSouth's charge to the CLEC for the customer's service pursuant to BellSouth tariff and contract with the CLEC. Whenever BAPCO is responsible for an error, it undertakes to correct the listing in its database to ensure the error will not recur. If the CLEC is responsible, BAPCO provides feedback to help ensure the CLEC corrects its database and avoids making the same error in the future. Three times each year, BAPCO provides CLECs instructional information addressing common CLEC concerns or questions that have occurred to date in order to assure a positive working relationship with CLECs. BAPCO makes available annually to requesting CLECs, under contract but at no charge, a Directory Review Listings report for each of its directories prior to directory publication that allows verification of listing accuracy for directories that are about to close. These printouts are used successfully by both resale and facilities-based CLECs throughout the BellSouth region and provide a record of the CLEC listings appearing in the particular directory in question. In addition, CLECs also have available to them confirmation orders sent by BellSouth indicating the receipt of their orders. A CLEC can, by comparing sent orders to confirmation copies received, confirm the

processing of its listings before requesting a report from BAPCO. Finally, the CLEC can also review their listing on the BellSouth LENS system.

VI. CLEC Listing Support

22. BAPCO provides to CLECs under contract, but at no charge, a schedule of all of its directories, showing when each directory closes and when it is delivered. BAPCO also provides a list of all headings and several other fields of information required for its publication of listings. The list of BAPCO deliverables to CLECs is attached as Exhibit RFB-2. Updates are provided three times a year.

23. Finally, BAPCO provides, upon request, training for CLEC listing order takers at the carrier's location or centrally. Travel expense of the instructor is the only charge to the CLEC for this initial training.

24. Although it is not required by law to do so, BAPCO includes listings of CLECs' business subscribers in the appropriate Yellow Pages classified directory at no charge to either CLECs or their customers. BAPCO also makes available for those companies, under contract with BAPCO, the capability to list, at no charge, their company name and contact number under the heading of "Establishing Service, Billing and Repair" in the customer guide pages that appear in every directory.

VII. Conclusion

25. In summary, the result of the process I have described is that CLEC listings are

published in the same manner as BellSouth listings and without distinction between the two from the time an order is processed through publication and delivery. The information in this affidavit as well as BellSouth's successful publication of CLEC listings over a substantial time clearly demonstrates BellSouth's satisfaction of Checklist Item 8.

26. This concludes my affidavit.

The information contained in this affidavit and its Exhibits is true and correct to the best of my knowledge and belief.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s Entry into interLATA Services pursuant to Section 271 of the Federal Telecommunications Act of 1996.	)))))	Docket No. 960786-TL

AFFIDAVIT OF DENNIS L. DAVIS
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.
MAY 31, 2001

STATE OF ALABAMA
COUNTY OF JEFFERSON

I, DENNIS L. DAVIS, being first duly sworn upon oath, do hereby depose and state as follows: My business address is Room SE5G1, 3535 Colonnade Parkway, Birmingham, Alabama. I am employed by BellSouth Telecommunications, Inc. as Director, Local Number Portability Program Management.

I. PROFESSIONAL EXPERIENCE AND EDUCATION

1) I have 24 years of experience in telecommunications in a variety of areas: provisioning and billing of Key Systems, PBX, and ESSX products, methods development for access charge collection, new service implementation including strategic development and implementation of the 800 Database Product and Local Number Portability planning and project management. I graduated from the University of Alabama in Birmingham in 1979 with a Bachelor of Science Degree in Business Administration with areas of concentration in Finance and Management. I successfully completed certification programs from Duke University's Fuqua School

of Business in October 1989 and received a Master's Certificate in Project Management from the George Washington University School of Business and Public Management in February 1997.

II. PURPOSE OF AFFIDAVIT

2) The purpose of this affidavit is to demonstrate that BellSouth has met the requirements of Section 271(c)(2)(B)(xi) of the Telecommunications Acot of 1996 ("the Act"), as well as the Federal Communications Commission's (FCC) implementing orders such as the First Report and Order[1] ("First Order"), First Memorandum Opinion and Order on Reconsideration[2] ("First Reconsideration Order"), Second Report & Order[3] ("Second Order"), Third Report and Order[4] ("Third Order"), and Second Memorandum Opinion and Order on Reconsideration[5] ("Second Reconsideration Order") with respect to local number portability ("LNP"). This affidavit describes BellSouth's implementation of LNP on a permanent basis within its territory as ordered by the FCC. In addition, I discuss how BellSouth handles bona fide LNP service requests and the current status of LNP deployment in the BellSouth region. I also discuss the proactive approach BellSouth has taken to further implement LNP beyond the top 21 Metropolitan Statistical Areas (MSAs) in the BellSouth area. Interim local number portability (ILNP) is discussed in the testimony

[1] *In the Matter of Telephone Number Portability*, First Report & Order and Further Notice of Proposed Rulemaking, CC Docket No. 95-116 (1996) ("First Order")

[5] *In the Matter of Telephone Number Portability*, Second Memorandum Opinion and Order on Reconsideration, CC Docket No. 95-116 (1998).

of Mr. Keith Milner. The local service request (LSR) process flow is discussed in the affidavits of Mr. William N. Stacy and Ken L. Ainsworth.

III. REGULATORY BACKGROUND:

3) The Act defines number portability as "the ability of users of telecommunications services to retain, at the same location, existing telecommunications numbers without impairment of quality, reliability, or convenience when switching from one telecommunications carrier to another."[6] Under the Act, Local Exchange Carriers (LECs) are required to "provide, to the extent technically feasible, number portability in accordance with requirements prescribed by the Commission."[7] BellSouth provides LNP pursuant to its Interconnection Agreements with other local exchange carriers.

4) The LNP deployment requirements established in the FCC's orders include the following:

   a) Specific performance criteria;

   b) Implementation schedules;

   c) Adherence to technical, operational architectural and administrative requirements;

   d) Cost recovery in accordance with FCC rules.

5) In the First Report and Order, the FCC set forth nine performance criteria that local exchange carriers must meet when implementing LNP. The FCC approved the use of Location Routing Number (LRN) for providing number portability and precluded the

[6] 47 U.S.C. § 153(30).

[7] *Id.* §251(b)(2).

use of the Query on Release (QoR) method. In the First Memorandum Opinion and Order on Reconsideration, issued March 1, 1997, the FCC removed one of the initial performance criteria and reaffirmed its decision. In order to comply with this Order, BellSouth must:

a) Support existing network services, features & capabilities;

b) Efficiently use numbering resources;

c) Not result in a carrier having proprietary interest in any long term method;

d) Not result in any degradation of service quality or network reliability when customer switch carriers;

e) Not result in unreasonable degradation in service quality or network reliability when implemented;

f) Be able to accommodate location and service portability in the future;

g) Have no significant impact outside areas where number portability is deployed.

IV. IMPLEMENTATION OF LNP

6) BellSouth has met all requirements established by the FCC's orders in providing long-term number portability. BellSouth has provided number portability through the use of the Location Routing Number (LRN) methodology, which the FCC found would satisfy its performance criteria. BellSouth has met the implementation schedule for permanent number portability established in the FCC's orders, as modified at BellSouth's request. In addition, BellSouth has proactively worked with the industry to expand the implementation of LNP beyond the scope of the FCC's initial order. Finally, BellSouth has processed bona fide LNP service requests in accordance with the FCC rules and regulations.

7) Even prior to the First Order dated July 2, 1996, BellSouth was actively involved in

efforts to begin the implementation of number portability in the Southeast Region. The Georgia Public Service Commission convened an LNP workshop in 1995 that met over an extended period of time and that was ultimately comprised of a Steering Committee and several subtending committees. These subtending committees focused on requirements, operations, implementation, cost recovery, architecture and legal issues. BellSouth was active in all subcommittees and was co-chair of the Georgia Steering Committee with AT&T and chair of the Number Portability Administration Center (NPAC) Service Management System (SMS) Database Subcommittee. BellSouth, as well as AT&T, MCI and MediaOne, eventually formed a limited liability company (L.L.C.), the Georgia L.L.C., which was later renamed the Southeast Region L.L.C. The purpose of the L.L.C. was to prepare a request for proposal for the regional number portability database, to select a local number portability database administrator (LNPA), and to finalize a contract for the ongoing administration. Because the Georgia effort to implement LNP was ahead of Florida's effort, the carriers in Florida believed it would be beneficial to use the extensive work done by the industry in Georgia and apply it to Florida. This approach minimized the duplication of efforts in areas that would be shared between states in a regional approach, such as the establishment of the number portability database. Thus, the Florida PSC endorsed the Florida carriers working with other state implementation efforts to develop a Southeast Region approach to number portability. The Georgia L.L.C. evolved to include all the BellSouth states and Perot Systems was selected by the L.L.C. to perform the database administrative functions as the LNPA throughout the Southeast Region. Following release of the First Order by the FCC, Perot

Systems was confirmed as the LNPA for the Southeast Region. However, Perot Systems was unable to fulfill its role of the LNPA for the Southeast Region and Lockheed Martin replaced Perot Systems as the LNPA for the Southeast Region and fulfilled this role until 1998. Ultimately, due to Lockheed Martin's involvement in a satellite telecommunications company, the FCC ruled that Lockheed Martin was not a neutral third party and ordered that Lockheed Martin divest itself from numbering administration duties such as the LNPA and the North American Numbering Administrator. As a result, NeuStar Corporation assumed the role of LNPA for the Southeast Region. The FCC approved NeuStar as a neutral third party administrator for numbering administration for the Southeast Region (Region 4).

8) In its First Order, the FCC directed that LNP be implemented in the 100 largest MSAs based on a five-phase MSA deployment schedule that began October 1, 1997 and concluded December 31, 1998. See, Exhibit DLD-1. On March 2, 1998 BellSouth filed a petition in CC Docket No. 95-116 requesting an extension of time to implement long-term number portability. BellSouth's petition was necessitated by of the inability of the original LNPA (Perot Systems) to establish the Number Portability Administration Center (NPAC) Region 4 Service Management System (SMS) database. Timely availability of the NPAC/SMS database was beyond BellSouth's control. Perot System's failure to provide a working NPAC/SMS for the Southeast Region meant that BellSouth was unable to meet the FCC's original deadlines for implementing LNP within the Southeast Region.

9) The FCC concluded that BellSouth had demonstrated unique circumstances that justified additional time to implement number portability and granted a series of

waivers to BellSouth that modified the implementation dates of LNP for Phases I-IV. The FCC's mandatory LNP deployment schedule for BellSouth extended Phase I, II, III, and IV MSAs. BellSouth successfully completed the deployment of LNP for Phases I-V for the top 21 MSAs within the BellSouth territory. The Miami, Fort Lauderdale, Orlando and Tampa Bay MSAs were included in Phase II of the FCC schedule. The Jacksonville and West Palm Beach MSAs were included in Phase IV of the FCC schedule. BellSouth is providing LNP in accordance with FCC guidelines.

10) Prior to implementation of LNP, end-to-end testing for LNP was conducted between BellSouth and Competitive Local Exchange Carriers (CLECs). This testing consisted of ordering and provisioning testing that included service order interface and validation testing, passing orders to BellSouth's Local Carrier Service Center, issuing preliminary subscription messages to the NPAC and sending final activate broadcast messages through the NPAC to BellSouth's LNP Gateway SMS. The testing included call processing, which included actual porting of telephone numbers between the BellSouth and CLEC network elements, initiating test calls to the numbers to validate switch software, translations, database integrity and routing instructions. Although the First Order prescribed the deadlines for the implementation of these MSAs, the Order did not prescribe which specific carrier switches should be equipped for LNP within each MSA. Rather, in the First Order on Reconsideration, the FCC established rules for determining which switches in the top 100 MSAs should be equipped.

11) The FCC gave state commissions responsibility for overseeing the switch selection process and reviewing switch requests to ensure that the carrier's switch requests

were reasonable. For each MSA, the Incumbent Local Exchange Carrier (ILEC) was required to complete switch selections no later than nine months prior to the implementation deadline for that MSA. The First Order on Reconsideration also allowed for carriers to negotiate agreements to exclude specific switches within an MSA in exchange for conversion of other switches.

12) Based on the First Order on Reconsideration, carriers in the Southeast Region Operations Workshop developed a mutually agreeable switch selection process that was applied to all MSAs in the BellSouth area. The process was as follows:

a) ILECs provided a list of their switches within the MSA to the carriers.

b) The carriers selected the switches of interest and prioritized them as high, medium and low.

c) Based on the data, BellSouth developed an office-by-office schedule.

d) The office-by-office schedule was presented to the carriers in the Southeast Region Operations Workshop.

e) Carriers used this information to develop implementation plans.

This process was followed for the 21 largest MSAs within the BellSouth territory, i.e. the BellSouth MSAs covered by Phases I-V.

13) In addition, the FCC ruled in the First Order that, after implementation of LNP in the initial 100 MSAs, each LEC must make number portability available in additional MSAs within six months after a bona fide request (BFR) has been received from another telecommunications carrier. BellSouth had 2 BFRs in Florida requesting a total of 7 offices. At the carrier's request, BellSouth advanced the implementation

dates of the offices to 06/30/99 from their original dates of either 09/30/99 or 12/31/99.

14) To allow for an orderly scheduling and deployment of LNP in offices outside the top 21 MSAs, BellSouth developed an LNP deployment schedule similar to the schedule in the First Order. That is, as a general rule, the remaining MSAs within each state would be ordered by size, with the largest MSAs in each state scheduled for LNP implementation first and the smallest last. BellSouth presented this schedule to the carriers at the Southeast Region Operations Workshop on August 18, 1998. During September 1998, carriers provided proposed modifications to the schedule. On November 11, 1998, BellSouth published the schedule based on the industry agreements and discussions. Due to requests from carriers to modify the schedule, on April 12, 1999, BellSouth issued a revised LNP deployment schedule. Under this schedule, BellSouth deployed LNP in a total of 1450 of its 1653 (87.7 %) end offices throughout its territory by end of first quarter 2000. By the end of second quarter 2000, more than 97% of the access lines (approximately 26,316,000 lines) served by BellSouth were LNP capable. By March 31, 2000, 100% of BellSouth switches in Florida were LNP capable. Exhibit DLD-2 lists the Florida offices equipped for LNP and the dates these offices became LNP capable. As of April 30, 2001, 626,037 access lines in Florida have been ported using LNP and 1,853,439 such lines in the BellSouth region. This does not include the interim number portability (INP) telephone numbers that are currently converting from the INP method to permanent number portability.

15) In the Second Report and Order, the FCC adopted several modifications recommended by the North American Numbering Council (NANC) with regard to technical, operational, architectural and administrative requirements for number portability. For example, in the Second Report and Order, the FCC set forth rules to determine which entity is required to make the database query to determine the service provider of the called party. These technical, operational and administrative requirements include:

a) NPAC provisioning process flows;

b) Compliance with the Functional Requirements Specifications (FRS) and the Interoperable Interface Specifications (IIS);[8]

c) Policy of reserved and unassigned numbers;[9]

d) N-1[10] carrier call routing obligations and default routing;[11]

e) Policy on the treatment of disconnected ported numbers;[12]

f) Change Management Process to ensure the consistent and uniform provision of number portability and that individual carriers or industry segments are not disadvantaged.[13]

BellSouth is in compliance with these procedures.

16) In the Third Report and Order, the FCC adopted a federal cost recovery mechanism for long-term number portability. It allowed ILECs to recover their costs directly related to implementing LNP through federally tariffed, monthly number portability

[8] Id., 12 FCC Rcd at 12,317-19, ¶¶ 59-64.

[9] Id., 12 FCC Rcd at 12,319-21, ¶¶ 65-67.

[10] The "N" carrier is the entity terminating the call to the end user, and the "N-1" carrier is the entity transferring the call to the N, or terminating, carrier.

[11] Id., 12 FCC Rcd at 12,323-26, ¶¶ 73-78.

[12] Id., 12 FCC Rcd at 12,326-27, ¶ 79.

end user line charges and number portability query service charges.

17) BellSouth filed with the FCC a cost-recovery tariff (Transmittal No. 502)[14] on April 30, 1999, with a scheduled effective date of May 15, 1999. On May 11, 1999, the FCC suspended BellSouth's tariff transmittal, and set it for investigation on May 14, 1999. Based on meetings with the FCC, BellSouth revised its tariff filing and, on June 11, 1999, it filed its revised tariff (Transmittal No. 510). Based on this revised tariff, on June 14, 1999, the FCC released its reconsideration order, *Reconsideration of Decision to Suspend and Investigate Tariff Filing of BellSouth Telecommunications, Inc.* In the Order, the FCC approved the end user line charge and the query charges submitted in the revised tariff.

18) In summary, BellSouth has worked diligently to implement long-term number portability. BellSouth has met the revised implementation dates for Phases I-V in Florida. In addition, BellSouth proactively implemented, or has established plans to implement LNP, widely throughout its nine-state region. BellSouth has complied with all requirements of governing statutes and the FCC implementing orders and related rules, including cost recovery.

19) Issues related to Operational Support Systems are covered in the affidavit of William N. Stacy.

20) This concludes my affidavit.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Consideration of BellSouth Telecommunications, Inc.'s, entry into interLATA Services pursuant to Section 271 Of the Federal Telecommunications Act of 1996.	))))))	DOCKET NO. 960786-TL

AFFIDAVIT OF VALERIE SAPP
ON BEHALF OF BELLSOUTH TELECOMMUNICATIONS, INC.

STATE OF Alabama
COUNTY OF Jefferson

I, Valerie Sapp, being first duly sworn upon oath, do hereby depose and state as follows:

1. My name is Valerie Sapp. My business address is 600 North 19 Street, Birmingham, Alabama 35203. I am employed by BellSouth Telecommunications, Inc. (hereinafter referred to as "BellSouth") as a Manager–911 Interconnection Implementation.

I. PROFESSIONAL EXPERIENCE AND EDUCATION

2. I joined Southern Bell (now BellSouth) in 1969. The majority of my career was spent in Miami, Florida where I spent approximately 20 years in the Executive Department performing various budget and regulatory duties. From 1992 until September 1998, I worked with Independent Telephone Companies ("ICOs") and Competitive Local Exchange Carriers ("CLECs") (since December, 1995) that interconnected to BellSouth for 911 service. From September 1998 until July 1, 2000, I worked as a Local Interconnection Product Manager dealing with Meet Point Billing and Reciprocal Compensation issues related to CLECs. Effective July 1, 2000. I returned as the BellSouth 911 Implementation Manager. In my current position, I am responsible for the coordination and implementation of CLEC interconnection to the BellSouth 911 network for the provision of 911 service to the CLECs' customers.

II. PURPOSE OF AFFIDAVIT

3. The purpose of this affidavit is to demonstrate that BellSouth offers CLECs nondiscriminatory access to 911 services. Specifically, I discuss: the documentation available to CLECs; the agreements needed to obtain 911 access; the databases used by BellSouth to provide this service; trunking arrangements; the general processes used including updates to the 911 databases; the access BellSouth provides to government bodies; and statistics regarding CLEC interconnection with BellSouth's 911 services and facilities in Florida.

4. In its South Carolina and Second Louisiana Orders, the Federal Communications Commission (FCC) found that BellSouth was providing non-discriminatory access to its 911 and E911 services. See Application of BellSouth Corp., et al. Pursuant to Section 271 of the Communications Act of 1934, as amended, To Provide In-Region InterLATA Services in South Carolina, 13 FCC Rcd 539, 666-67 (1997); Application of BellSouth Corporation, BellSouth Telcoms, Inc., and BellSouth Long Distance, Inc., for Provision of In-Region, InterLATA Services in Louisiana, 13 FCC Rcd 20599, 20738, & 236 (1998). The systems, processes and procedures that BellSouth uses to provide CLECs access to 911 and E911 services in Florida are the same as those approved by the FCC in these prior orders. Additionally, following is a list of BellSouth region state proceedings that have found that BellSouth provides non-discriminatory access to 911/E911 in compliance with Checklist Item 7: (1) Florida Public Service Commission ("FPSC") in Order No. PSC-97-1459-FOF-TL, Docket No. 960786-TL, issued November 19, 1997, pp. 113 & 118; (2) Louisiana Public Service Commission (LPSC) in Docket No. U-22252-A, Order dated September 5, 1997, p. 11; (3) Mississippi Public Service Commission (MPSC) in Docket No. 97-AD-0321, Order dated November 9, 1998, p. 38; (4) North Carolina

Utilities Commission (NCUC) in its Order Regarding Section 271 Requirements, Docket No. P-55, Sub 1022, January 14, 1998, p. 77; and (5) South Carolina Public Service Commission (SCPSC) in Docket No. 97-101-C, Order No. 97-640, dated July 31, 1997, p. 47. The provision of access remains to this day consistent with the affirmative conclusions reached by the FCC, FPSC, LPSC, MPSC, NCUC and SCPSC.

III. DISCUSSION

5. In Florida, access to 911 and E911 services is provided through existing tariffs to local government bodies. Once these local government bodies select a particular type of 911 service, BellSouth provides customers of CLECs with access to the 911 service selected for the area in which they reside, in a manner identical to the 911 service supplied to BellSouth's own customers.

6. The original 911 service, known as Basic 911 (911), routes a call to 911 to a centralized answering location known as a Public Safety Answering Point (PSAP). The following steps are involved in the 911 emergency call process:

a. The subscriber requires emergency aid and dials 911.

b. The dialed digits are received in the Telco end office that sends the Automatic Number Identification ("ANI") to the PSAP.

c. The attendant at the PSAP obtains the pertinent information that identifies the call and the caller's need.

d. The attendant then determines the appropriate agency and dials a 7-digit or 10-digit number, as appropriate, to transfer the caller to that agency. The calling party's emergency information is verbally relayed to the responding agency and a unit is dispatched to the caller's location.

7. Enhanced 911 service ("E911") is a full featured electronic system that provides three (3) major enhancements to 911 service:

   a. Selective Routing electronically routes 911 emergency calls from a Telco 911 tandem to the proper PSAP based on the Emergency Services Number ("ESN") routing code that has been assigned to the caller's address. The tandem office is a central office designated for a geographical area to receive end office E911 calls and route to the appropriate PSAP.

   b. The ANI provides the calling party's 7-digit or 10-digit telephone number, as appropriate, on a display at the PSAP.

   c. Automatic Location Identification (ALI) provides the name and address associated with the calling party's telephone number on the display at the PSAP.

To receive the maximum benefit of E911, the area served must be assigned valid house numbers. Without a house number, dispatching is delayed and the responding agency has difficulty finding the correct address.

8. The following steps are involved in the E911 emergency call process:

   a. The subscriber requires emergency aid and dials 9-1-1.

   b. The digits are received in the Telco end office that sends the ANI to the E911 BellSouth tandem office.

   c. The tandem office finds the associated ESN for the calling telephone number via the Telephone Number/Emergency Services Number (TN/ESN) translation table.

   d. Based on the ESN, the call is switched, via a dedicated trunk, to the appropriate PSAP.

   e. The subscriber's ANI from the serving Telco is displayed at the PSAP.

   f. The ANI information is sent to the Automatic Location Identification/Data Management System (ALI/DMS) processors for retrieval of subscriber information.

   g. The ALI/DMS processor returns the ALI to the PSAP for display.

h. The PSAP attendant verifies the telephone number and the street address that has appeared on the screen and obtains information as to which emergency service is needed. The attendant then depresses the button corresponding to the agency request, e.g., fire, police or ambulance and the call is automatically transferred.

i. The details for each call (calling number, answering attendant's number, time of answer, time of transfer and/or disconnect and the trunk number) are printed at the PSAP after the call is disconnected.

j. The agency receives the call and, if it so chooses, the caller's telephone number, name and street address are displayed. The PSAP attendant remains on the line for as long as needed to relay the call.

k. The agency then dispatches an emergency unit to the caller's address.

9. When a reseller or facilities-based CLEC customer dials 9-1-1, the call is treated just like that of any BellSouth customer. BellSouth routes the CLEC customer's E911 call to the appropriate PSAP, and it provides and validates the necessary customer information to the PSAP as outlined in ¶ 8, proceeding. A 911 call is also treated just like that of any BellSouth customer. In the case of 911, the reseller or facilities-based CLEC must deliver the ANI of their customer to the correct PSAP just as BellSouth is required to do.

10. When a reseller CLEC purchases BellSouth's local service for resale to its customers, 911 service is included. Similarly, a CLEC that purchases the Unbundled Network Element – Platform (UNE-P) from BellSouth also obtains 911 service automatically. BellSouth provides and maintains the service. Facilities-based providers have their own switch and are responsible for getting the 911 call to the appropriate PSAP or, if E911, to the appropriate BellSouth 911 tandem. They are also responsible for getting their customer information in the BellSouth 911 database in the proper format.

11. For resale customers, BellSouth updates and maintains the ALI/DMS database that supports 911/E911 services at the same time it updates and maintains the ALI/DMS database for BellSouth's end users. Facilities-based CLECs electronically provide BellSouth with updated data for their end user customers that are added to the ALI/DMS database as the records are received.

12. BellSouth provides 911/E911 services to resale/UNE CLECs exactly as set forth in BellSouth's retail tariffs. BellSouth provides facilities-based CLECs access to 911/E911 services through interconnection agreements making their customers' numbers and address information available to 911 governmental agencies that provide emergency services.

13. For 911 service, BellSouth provides CLECs a list consisting of each municipality that subscribes to 911 service. The list also provides, if known, the conversion date to E911. This list is provided via the internet at the following address: http://www.interconnection.bellsouth.com/markets/lec/911/911_availability.html. In municipalities that subscribe to 911 service, a facilities-based CLEC must arrange to have 911 calls from its end users accepted at the appropriate PSAP.

14. In order to ensure reliability of the 911 system, a facilities-based CLEC, in the same manner as BellSouth, installs a minimum of two dedicated trunks connecting the CLEC's end office to the BellSouth 911 tandem serving the calling customer's PSAP. The trunk interface may be either a 2-wire analog interface or a digital DS1 interface. The CLEC is responsible for the trunks and any cost associated with providing the trunks needed to reach the appropriate BellSouth 911 tandem. If a municipality has converted to E911 service, a facilities-based CLEC forwards its 911 calls to the appropriate BellSouth E911 tandem, along with the caller's ANI,

according to which E911 tandem the end office information is loaded. If the E911 tandem trunks are not available (i.e., due to high levels of end user calls in an emergency situation), BellSouth allows the facilities-based CLEC to route the call over BellSouth's network using a designated 7-digit or 10-digit voice line number, as appropriate, for the appropriate PSAP. This call will be transported over BellSouth's interoffice network along with BellSouth calls and, because the line does not carry data, it will not carry the ANI of the calling party.

15. BellSouth has developed the E911 Local Exchange Carrier Guide for facilities-based providers ("CLEC Guide") (Exhibit VKS-1) that provides the information facilities-based providers need to interconnect to BellSouth for 911 services. In general, the process for a facilities-based carrier begins when it first contacts the BellSouth CLEC 911 Implementation Manager, who will provide the CLEC with a non-disclosure agreement for 911 services. Once the CLEC signs and returns the non-disclosure agreement, and any concerns are discussed and resolved, the CLEC, with the assistance of its BellSouth Trunking Project Manager, orders the necessary 911 trunks through BellSouth's Local Interconnection Switching Center (LISC). The BellSouth CLEC 911 Implementation Manager works with the CLEC to determine the appropriate 911 tandem for routing the CLEC's 911 calls.

16. BellSouth provides and maintains the necessary equipment at the E911 Control Office (E911 Tandem) and the Database Management System to perform E911 services for the requesting local E911 customer. These services include some or all of the following as needed:

a. Transporting the E911 calls from the CLEC's switches to the E911 tandem of the E911 system;

b. Switching the E911 calls through the E911 Tandem to the Public Safety Answering Point;

c. Storing the names, addresses, and associated telephone numbers from the CLEC's customers in electronic data processing databases for the E911 Database Management System;

d. Transmission of the information associated with the CLEC's customers to the PSAP upon the customer dialing 9-1-1.

17. The facilities-based CLEC furnishes lists of its NPA/NXXs and 911 tandems to BellSouth and obtains from BellSouth a Master Street Address Guide ("MSAG") which is a listing of standard street names, address ranges and ESN used for validation of subscriber data.

18. BellSouth has contracted with a third-party 911 database provider, SCC, located in Boulder, Colorado to provide 911 database services on its behalf for all subscribers, on a non-discriminatory basis, for whom BellSouth is the 911 host. The facilities-based CLEC uses the CLEC Guide and MSAG to format customer data correctly before sending an electronically mechanized file to SCC. These data are then included in BellSouth's 911 database, with subsequent updates processed on a daily basis. If these daily update records fail system validity edits when compared to the current MSAG, the erroneous record is marked with an error code (as specified in the CLEC Guide) and mechanically faxed back to the relevant CLEC for review, investigation, correction, and resubmission. The facilities-based CLEC is responsible for correcting the errors and mechanically resubmitting its subscriber information to SCC. The processing cycle is repeated daily until the record passes all validity edits and the data can be posted to the E911 databases. It is the CLEC's responsibility to review and correct its own errors since SCC does not have access to the facilities-based CLEC customer's records. In this fashion, SCC, on behalf of BellSouth, maintains CLEC customer 911 database listings with the same

accuracy and reliability as for BellSouth's customer listings. SCC receives a file every night from BellSouth containing E911/911 updates for BellSouth's own customers as well as BellSouth's Reseller and UNE-P customers. The data are processed and SCC corrects the errors on behalf of BellSouth. The CLEC also has the option of hiring SCC or another database vendor to perform error correction and other database functions on their behalf if they choose not to do it themselves.

19. During nightly E911 database processing, SCC creates an updated file and transmits it to BellSouth. This file contains 911 call routing information for BellSouth subscribers as well as subscribers of other service providers such as facilities-based and reseller CLECs. Information in this file is used to update the BellSouth network switches allowing 911 calls to be routed to the appropriate city or county agency for handling. This nightly process of updating end user subscriber information keeps the E911 network and database current, thereby allowing proper 911 call routing and display of location information to emergency service agencies.

20. The facilities-based CLEC also has a responsibility to remain in contact with the governmental body providing emergency services to determine the following information:

a. Default ESN - a 3-digit number that translates to a specific PSAP where calls are routed in case the CLEC cannot deliver ANI from their switch to the BellSouth E911 tandem, and

b. Surcharge information – the money billed by the CLEC on behalf of the county to their customers for providing E911 service. The CLEC must also obtain information from the county in order to remit these surcharges back to the county. A list of county coordinators for each state is provided, upon request, by the BellSouth CLEC E911 Implementation Manager.

21. Subscribers, regardless of their current local service provider, are able to choose the local service provider of their choice and retain their current telephone number as long as they are remaining in the same rate center. This is referred to Service Provider Local Number Portability (LNP). In order to reflect the correct dial tone provider during an emergency call, the National Emergency Number Association (NENA) implemented the assignment of a NENA Company ID for each Incumbent LEC and CLEC. When an end user changes local service providers (LSP), the NENA Company ID reflected in the E911 database must be updated to change from the former LSP to the new LSP. The E911 database is modified to accommodate this change so that the PSAP display reflects the current local service provider company by displaying their Company's NENA ID. There are two new function of change codes, U and M, that accomplish this. The current local service provider will issue a service order that will allow the record to be available or "unlocked" (coded as "U"). The new local service provider will issue an update to the record to "migrate" (coded as "M") the record with the information for the new company. This process is generally accepted nation-wide and allows the actual record to remain in the database "as is". The CLEC is fully responsible for submitting the needed U or M, as appropriate, to update the E911 database. In order to protect the integrity of the E911 data, BellSouth and SCC have implemented a validation process using the Number Portability Administration Center (NPAC) database to identify the correct dial tone owner. The U and M process, the error processes and the NPAC validation processes are provided in the CLEC Guide. This system insures that BellSouth is able to meet the requirements of any foreseeable reasonable demand for 911/E911 service.

22. BellSouth provides and maintains sufficient dedicated E911 circuits according to provisions of the E911 tariff and the specifications of the E911 customer. BellSouth routinely monitors service levels (including call blockages) on E911 trunk groups and takes appropriate, coordinated action with the responsible CLEC to provide additional trunks as needed. These trunk servicing activities are performed at the same time and in the same manner that BellSouth services the E911 trunk groups from its own switches, on a first come first served basis. For an extended discussion of BellSouth's trunking architecture and procedures, see testimony of Keith Milner.

23. BellSouth has had procedures in place since early 1996 for CLECs to connect their switches to BellSouth's E911 tandems. As of March 31, 2001, CLECs had requested and BellSouth had provided some 1,078 E911 trunks in Florida, and in its nine-state region, BellSouth had a total of 4,400 trunks in service connecting CLEC switches to BellSouth's E911 tandems.

24. As of March 31, 2001, 38 facilities-based CLECs in Florida were sending BellSouth mechanized updates for inclusion in the 911 database. Within BellSouth's entire nine-state region, 66 facilities-based CLECs were sending such mechanized updates. Because the methods and procedures that allow other carriers, including independent LECs, to access BellSouth's E911 and 911 updating capabilities have been in place for some time, it has become routine for CLECs to obtain such updating. For this reason, end-to-end testing of E911 database updating was not necessary.

25. When BellSouth makes any changes to the 911 system, it notifies all potentially affected CLECs. CLECs are notified officially on the BellSouth Interconnection website:

http://www.interconnection.bellsouth.com/carrier/network/index.html. This includes, but is not limited to, NPA split or overlay information, Central Office conversions and E911 Tandem re-homes. In addition to the official notification, the 911 Implementation Manager sends out correspondence informing the CLECs of any 911 specific information on these system changes that might affect them.

26. By this affidavit, I have shown, among other things, that:

a. Education and assistance is given to CLECs to provide 911/E911 service by providing project managers for trunking, a CLEC Implementation Manager and the E911 Local Exchange Carrier Guide for Facilities-Based Providers

b. BellSouth's 911 network is non-discriminatory because it does not distinguish between BellSouth's customers and the customers of other service providers;

c. All calls are routed to the PSAP over the same trunks;

d. The same vendor maintains, in a nondiscriminatory manner, the ALI/DMS database for all other Local Service Providers that interconnect to BellSouth.

e. Maintenance and testing activities done by BellSouth on any 911 facilities are done without regard to the owner of the facilities;

f. All records remain in the 911 database with the implementation of the "unlocking" and "migrating" process with Service Provider Local Number Portability; and

g. BellSouth is able to meet any reasonable foreseeable demand for 911/E911 service.

Based on the foregoing, BellSouth has demonstrated that it offers CLECs nondiscriminatory access to 911/E911 services in the State of Florida in accordance with the rules of the Florida Public Service Commission, the FCC and the requirements of the Telecommunications Act of 1996.

27. This concludes my affidavit.

The information contained in this affidavit and its Exhibits is true and correct to the best of my knowledge and belief.

Interconnection Agreement Between BellSouth Telecommunications Inc. and NewSouth Communications Corp.

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 960786A-TL EXHIBIT NO. 38
COMPANY/ WITNESS. NewSouth
DATE: 12-17&18-01

INTERCONNECTION AGREEMENT BETWEEN BELLSOUTH TELECOMMUNICATIONS INC. AND NEWSOUTH COMMUNICATIONS CORP.

AGREEMENT

THIS AGREEMENT is made by and between BellSouth Telecommunications, Inc., ("BellSouth"), a Georgia corporation, and NewSouth Communications, Corp., ("NewSouth") a Delaware corporation, and shall be deemed effective as of the date of the last signature of both Parties ("Effective Date"). This Agreement may refer to either BellSouth or NewSouth or both as a "Party" or "Parties."

WITNESSETH

WHEREAS, BellSouth is an Incumbent Local Exchange Telecommunications Company (ILEC) authorized to provide telecommunications services in the states of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee; and

WHEREAS, NewSouth is or seeks to become a Competitive Local Exchange Telecommunications Company ("CLEC") authorized to provide telecommunications services in the states of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee; and

WHEREAS, the Parties wish to resell BellSouth's telecommunications services and/or interconnect their facilities, purchase network elements and other services, and exchange traffic specifically for the purposes of fulfilling their obligations pursuant to sections 251 and 252 of the Telecommunications Act of 1996 ("the Act").

NOW THEREFORE, in consideration of the mutual agreements contained herein, BellSouth and NewSouth agree as follows:

1. Purpose

The Parties agree that the rates, terms and conditions contained within this Agreement, including all Attachments, comply and conform with each Parties' obligations under sections 251 and 252 of the Act. The resale, access and interconnection obligations contained herein enable NewSouth to provide competing telephone exchange service to residential and business subscribers within the territory of BellSouth. The Parties agree that NewSouth will not be considered to have offered telecommunications services to the public in any state within BellSouth's region until such time as it has ordered services for resale or interconnection facilities for the purposes of providing business and/or residential local exchange service to customers.

2. Term of the Agreement

2.1 The term of this Agreement shall be two years, beginning on the Effective Date and shall apply to the states of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee. If as of the expiration of this Agreement, a Subsequent Agreement (as defined in Section 2.2 below) has not been executed by the Parties, this Agreement shall continue on a

3.5 Common Channel Signaling. Both Parties will provide LEC-to-LEC Common Channel Signaling ("CCS") to each other, where available, in conjunction with all traffic in order to enable full interoperability of CLASS features and functions except for call return. All CCS signaling parameters will be provided, including automatic number identification ("ANI"), originating line information ("OLI") calling company category, charge number, etc. All privacy indicators will be honored, and each Party will cooperate with each other on the exchange of Transactional Capabilities Application Part ("TCAP") messages to facilitate full interoperability of CCS-based features between the respective networks. Neither Party shall alter the CCS parameters, or be a party to altering such parameters, or knowingly pass CCS parameters that have been altered in order to circumvent appropriate interconnection charges.

3.6 Signaling Call Information. BellSouth and NewSouth will send and receive 10 digits for Local Traffic. Additionally, BellSouth and NewSouth will exchange the proper call information, i.e. originated call company number and destination call company number, CIC, and OZZ, including all proper translations for routing between networks and any information necessary for billing.

3.7 **Forecasting for Trunk Provisioning**

3.7.1 Within six (6) months after execution of this agreement, NewSouth shall provide an initial interconnection trunk group forecast for each LATA that it shall provide service within BellSouth's region. Upon receipt of NewSouth's forecast, the Parties shall schedule and participate in a joint planning meeting to develop a joint interconnection trunk group forecast. Each forecast provided under this Section shall be deemed "Confidential Information" under the General Terms and Conditions – Part A of this Agreement.

3.7.1.1 At a minimum, the forecast shall include the projected quantity of Transit Trunks, NewSouth-to-BellSouth one-way trunks ("NewSouth Trunks"), BellSouth-to-NewSouth one-way trunks ("Reciprocal Trunks") and/or two-way interconnection trunks, if the Parties have agreed to interconnect using two-way trunking to transport the Parties' local and intraLATA toll. The quantities shall be projected for a minimum of six months in advance and shall include the current year plus next two years total forecasted quantities. Considering NewSouth's provided forecast, the Parties shall mutually develop Reciprocal Trunk and/or two-way interconnection trunk forecast quantities for the time periods listed and to be included within the initial forecast.

3.7.1.2 Additionally, all forecasts shall include, at a minimum, trunk group type (local/intraLATA toll, Transit, Operator Services, 911, etc.), A location/Z location (CLLI codes for NewSouth location and BellSouth location where the trunks shall terminate), interface type (e.g., DS1), Direction of Signaling, Trunk Group Access Code, if known, (commonly referred to as the 2-6 code) and forecasted trunks in service each year (cumulative).

3.7.2 Each Party shall exercise its best efforts to provide the quantity of interconnection trunks mutually forecasted. However, the provision of the forecasted quantity of interconnection trunks is subject to trunk terminations and facility capacity existing at the time the trunk order is submitted. Furthermore, the receipt and development of trunk forecasts does not imply any liability for failure to perform if capacity (trunk terminations or facilities) is not available for use at the forecasted time.

3.7.3 The submitting and development of interconnection trunk forecasts shall not replace the ordering process in place for local interconnection trunks.

3.7.4 Once initial interconnection trunk forecasts have been developed, NewSouth shall continue to provide interconnection trunk forecasts on a semiannual basis or at otherwise mutually agreeable intervals. NewSouth shall use its best efforts to make the forecasts as accurate as possible based on reasonable engineering criteria. Interconnection trunk forecasts shall be updated and provided to BellSouth on an as needed basis, but no less frequently than semiannually and no more frequently than monthly. Upon receipt of NewSouth's forecast, including forecast updates, the Parties shall confer to mutually develop BellSouth Reciprocal Trunk and/or two-way interconnection trunk forecasted quantities for the listed time periods within such subsequent forecasts.

3.8 **Trunk Utilization**

3.8.1 BellSouth and NewSouth shall monitor traffic on each interconnection trunk group that is installed pursuant to the initial interconnection trunk requirements and subsequent forecasts six months after the initial installation of the trunks and any time after the end of a calendar quarter thereafter. Based on a review of the capacity utilization during such quarter for installed Reciprocal Trunk groups and/or two-way interconnection trunk groups, subject to the provisions of the section following, BellSouth may disconnect any Non-utilized Reciprocal Trunk(s) or Under-utilized Reciprocal Trunk(s), as defined in Section 3.8.1.1 below, and NewSouth shall refund to BellSouth associated trunk and facility charges paid by BellSouth retroactive to the date on which such trunks failed to maintain compliance with the threshold described in Section 3.8.1.1 below. In addition, BellSouth may request NewSouth to disconnect any Non-utilized or Under-utilized two-way interconnection trunk(s)if BellSouth has determined that the trunk group is not being utilized as described in Section 3.8.1.1 below, provided that the Parties have not otherwise agreed. NewSouth shall comply with such request, subject to Section 3.8.1.1 below.

3.8.1.1 The Parties agree that within 180 days of the installation of a trunk or trunks, the trunks will be utilized at 60 percent (60%) of the time consistent busy hour utilization level. The Parties agree that within 365 days of the installation of a trunk or trunks, the trunks will be utilized at eighty percent (80%) of the time consistent busy hour utilization level. Any trunk or trunks not meeting the minimum thresholds set forth in this Section are defined as "Under-utilized" trunks.

3.8.1.2 BellSouth's Local Interconnection Switching Center ("LISC") will notify NewSouth of any under-utilized reciprocal trunk groups and the number of trunks that BellSouth wishes to disconnect. BellSouth will provide supporting information either by email or facsimile to the designated NewSouth interface. NewSouth will provide concurrence with the disconnection in seven (7) business days of its receipt of such notification or will provide specific information supporting why the trunks should not be disconnected. Such supporting information should include expected Local Number Ported (LNP) and traffic volumes and the timeframes within which NewSouth expects to need such trunks. BellSouth's LISC project manager and Circuit Capacity Manager will discuss the information with NewSouth to determine if agreement can be reached on the number of trunks to be removed. If no agreement can be reached, BellSouth will issue disconnect orders to NewSouth. The due date of these orders will be four weeks from the date on which NewSouth received notice, in writing, of BellSouth's request to disconnect the underutilized trunk groups.

3.8.1.3 To the extent NewSouth requests BellSouth and BellSouth agrees to install additional Reciprocal and/or two-way interconnection trunks in any forecast period following the initial forecasting period that are not included in the forecast for that period (as such forecast may be revised from time to time), such trunks may be provisioned by BellSouth subject to the conditions set forth in the preceding sections.

3.8.2 To the extent that any Final interconnection trunk group is utilized at, or, based on trend (incorporating linear regression analysis using Erlang B theory with weekly tracked historical traffic data per trunk group engineered at a P.01 grade of service) will reach within six weeks, a time-consistent busy hour utilization level of eighty percent (80%) or greater, the Parties shall negotiate in good faith for the installation of augmented facilities.

4. Local Dialing Parity

4.1 BellSouth and NewSouth shall provide local and toll dialing parity as described in the Act and required by FCC rules, regulations and policies. Dialing parity shall be provided for all originating telecommunications services that require dialing to route a call. BellSouth and NewSouth shall permit similarly situated telephone exchange service end users to dial the same number of digits to make a local telephone call notwithstanding the identity of the end user's or the called party's telecommunications service provider. In addition, NewSouth end users shall experience at least the same service quality level as BellSouth end users in terms of post-dial delay, call completion rate and transmission quality.

5. Interconnection Compensation

5.1 Compensation for Call Transportation and Termination for Local Traffic

Lisa,

As I explained in the message below, there is not a single 10 digit number that your customers will be calling. This augment will be for normal growth and there are several customers with many phone numbers that we will be adding in May alone. This email is my 5th request for an augment to the Macon reciprocal. In January of this year, we forecasted the additional need of 48 trunks for this quarter. Again, I am trying to prevent a blocking situation from occurring in the near future.

Thanks,

Anthony Walsh, CCNA
Supervisor, Traffic Engineering

John, Anthony,

Tom Burnley's original message which is attached indicated a concern over the
request to augment a trunk group that is currently under utilized.

John I am sorry for the confusion, but BellSouth is requesting the 10 digit code
terminating this traffic. This information will be used by BellSouth to appropriately size the trunk groups. Switch resources have become critical at
many of BellSouth's tandem's due to under utilization of trunks. BellSouth will
use this information to identify end offices needing trunks versus tandem trunking.

If you wish to discuss further, please call me.

Thanks, Lisa R. Hubbard

=->
=->
=->Lisa,
=->
=->This is my written request for an augment to the reciprocal trunk group
=->(AC217811) in Macon, GA. Over the past few weeks, we have noticed this
=->trunk group increasing in busy hour utilization--reaching as high as 78%.
=->Our most recent BellSouth forecast for Georgia shows an additional 48
trunks
=->required this quarter. My most recent forecast shows this trunk group
=->blocking calls once we install our current sold customers in Macon. So,
I
=->left Tom two messages as advance notice of an increase in traffic in
Macon.
=->I understand that this group is not currently being utilized at 100%.

(2)

With
=->our projected growth, it is my job to make sure that we keep utilization
=->well below 100% to allow for continually increasing traffic loads. I am
=->trying to prevent any and all possibilities of call deflections on this
=->reciprocal group. NewSouth recently completed an add order on our
=->reciprocal group to prepare for this increase in traffic. I hope that
=->BellSouth will do the same. I request an add of 48 trunks.
=->
=->Thank You.

Lisa,

I received a call from Anthony Walsh requesting we add 48 trunks/2 T1s to our
recip trunk group (AC217811) in Macon, GA. There are 2 problems with this.
First, I show that the 24 trunks currently in service are under utilized.
Unless there is going to be a project or growth that we don't know about, I
don't see justification for adding to this group. If there is a project,
please
let me know so I can have documentation to justify an addition. I need
something more substatial than just a forecast.

The second problem I have is that there will not be any termiantions
available
in Macon until AT LEAST the middle of July.

Please contact Anthony concerning this matter. His number is 864-672-5257.
Let
me know what you find out. My number is 770-391-4430.

Thanks.

Tom Burnley

Subject: RE: New South--Macon

We just received the order for the Macon reciprocal. It is for 48 trunks and Bell's requested due date is 6/5/01. Our initial request for an augment was on 4/18/01. We received the order on 5/8/01. Busy hour occupancy on this group is now at 88%. It was at 55% on 4/18/01.

Subject: RE: New South--Macon

Jon Rey mentioned below that we are needing to add 48 trunks to the existing 72. That is incorrect. The trunk group currently has only 24 trunks and we are suggesting an add of 48 to the existing 24--bring the new total to 72.

Anthony

Amy,

I have asked Roy and Lisa to get back with your manager after talking with the CCM folks. I would ask that you ask the Sales group to see if they can let us know why it is going from underutilized trunk group to needing 48 added to the existing 72 overnight?
We definitely want to keep the network from blocking!
Thanks for bringing this to my attention. Hope all is going well with you.
Jon Rey

TRUNK GROUP PERFORMANCE AGGREGATE SUMMARY REPORT

(consisting of 3- pages)

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 960786A-TL EXHIBIT NO. 41
COMPANY/ WITNESS: BellSouth
DATE: 10-11+12-01

Section 9: Trunk Group Performance

TGP-1: Trunk Group Performance-Aggregate

Definition

The Trunk Group Performance report displays, over a reporting cycle, aggregate, average trunk group blocking data for each hour of each day of the reporting cycle, for both CLEC affecting and BellSouth affecting trunk groups.

Exclusions

- Trunk groups for which valid data is not available for an entire study period
- Duplicate trunk group information
- Trunk groups blocked due to CLEC network/equipment failure
- Trunk groups blocked due to CLEC delayed or refused orders
- Trunk groups blocked due to unanticipated significant increases in CLEC traffic
- Final groups actually overflowing, not blocked

Business Rules

The purpose of the Trunk Group Performance Report is to provide trunk blocking measurements on CLEC and BellSouth trunk groups for comparison only. It is not the intent of the report that it be used for network management and/or engineering.

Monthly Average Blocking:

- The reporting cycle includes both business and non-business days in a calendar month.
- Monthly average blocking values are calculated for each trunk group for each of the 24 time consistent hours across a reporting cycle.

Aggregate Monthly Blocking:

- Used to compare aggregate blocking across trunk groups which terminate traffic at CLEC points of presence versus BellSouth switches.
- Aggregate monthly blocking data is calculated for each hour of the day across all trunk groups assigned to a category.

Trunk Categorization:

This report displays, over a reporting cycle, aggregate, average blocking data for each hour of a day. Therefore, for each reporting cycle, 24 blocking data points are generated for two aggregate groups of selected trunk groups. These groups are CLEC affecting and BellSouth affecting trunk groups. In order to assign trunk groups to each aggregate group, all trunk groups are first assigned to a category. A trunk group's end points and the type of traffic that is transmitted on it define a category. Selected categories of trunk groups are assigned to the aggregate groups so that trunk reports can be generated. The categories to which trunk groups have been assigned for this report are as follows.

CLEC Affecting Categories:

	Point A	Point B
Category 1:	BellSouth End Office	BellSouth Access Tandem
Category 3:	BellSouth End Office	CLEC Switch
Category 4:	BellSouth Local Tandem	CLEC Switch
Category 5:	BellSouth Access Tandem	CLEC Switch
Category 10:	BellSouth End Office	BellSouth Local Tandem
Category 16:	BellSouth Tandem	BellSouth Tandem

BellSouth Affecting Categories:

	Point A	Point B
Category 9:	BellSouth End Office	BellSouth End Office

Calculation

Monthly Average Blocking:

- For each hour of the day, each day's raw data are summed across all valid measurements days in a report cycle for blocked and attempted calls.
- The sum of the blocked calls is divided by the total number of calls attempted in a reporting period.

Aggregate Monthly Blocking:

- For each hour of the day, the monthly sums of the blocked and attempted calls from each trunk group are separately aggregated over all trunk groups within each assigned category.
- The total blocked calls is divided by the total call attempts within a group to calculate an aggregate monthly blocking for each assigned group.
- The result is an aggregate monthly average blocking value for each of the 24 hours by group.
- The difference between the CLEC and BellSouth affecting trunk groups are also calculated for each hour.

Report Structure

- CLEC Aggregate
- BellSouth Aggregate
  - State

Data Retained

Relating to CLEC Experience	Relating to BellSouth Experience
• Report Month • Total Trunk Groups • Number of Trunk Groups by CLEC • Hourly blocking per trunk group • Hourly usage per trunk group • Hourly call attempts per trunk group	• Report Month • Total Trunk Groups • Aggregate Hourly blocking per trunk group • Hourly usage per trunk group • Hourly call attempts per trunk group

SQM Disaggregation - Analog/Benchmark

SQM Level of Disaggregation	SQM Analog/Benchmark:
• CLEC aggregate • BellSouth aggregate	• Any 2 hour period in 24 hours where CLEC blockage exceeds BellSouth blockage by more than 0.5% using trunk groups 1, 3, 4, 5, 10, 16 for CLECs and 9 for BellSouth

Trunk Group Performance - Aggregate

KALEO CONSULTING EMPLOYMENT EXPERIENCE:

TELECOMMUNICATIONS AND FINANCIAL CONSULTANT (Jan 1997-Present)

- Provide expert testimony on technical issues surrounding the unbundling and interconnection to incumbent Local Exchange Company (ILEC) networks. The testimony includes analysis of ILEC unbundling and interconnection per the Telecommunications Act of 1996 (Section 271) as well as other technical issues of local market entry. Further, the testimony includes evaluating and conducting unbundled element and interconnection cost studies.
- Provide expert testimony on the level and extent of facilities-based competition in the local market place. This testimony which quantitatively and economically evaluates the extent of competition results in an assessment of ILEC compliance with Section 271 proceedings.
- Develop models to aid companies in developing market entry plans for the local telecommunications market. This assistance includes evaluating what market entry alternatives as well as which geographies provide the best profit opportunities for the new entrant.

AT&T EMPLOYMENT EXPERIENCE:

DISTRICT MANAGER - CONNECTIVITY NETWORK PLANNING - LI&AM (Feb 1996-Dec 1996)

- Managed the development of AT&T's Infrastructure Plans of Record for the Southwest region. These plans entailed defining the right mix of built and leased infrastructure to meet AT&T's local offer needs at the least cost.
- Managed AT&T's dedicated access inventory in the Southwest region. This effort involved identifying the optimum supplier(s) in each market for AT&T's access needs to meet both financial and strategic objectives.

MANAGER - STRATEGIC ACCESS PLANNING - Access Strategic Planning (Nov 1994-Feb 1996)

- Managed the development of strategic models to analyze alternatives for entering the local market. These models considered various technologies for entering local that would optimize the contribution to AT&T from a revenue, expense, and capital perspective.

RE-ENGINEERING MANAGER - Network Operations (Jul 1994-Oct 1994)

- Directed a CCS-NSD management-union team in re-engineering the engineering, provisioning, and maintaining of the Operator Services network. Delivered a re-engineered process that reduced operational expense significantly while mitigating the impacts on customers and employees.

PROJECT MANAGER/SYSTEM ENGINEER - CCS Centralized Test Center (Jan 1992-Jun 1994)

- Coordinated implementation plans and system development for new services and network elements in the Common Channel Signaling (CCS) Network. The planning scope included provisioning, monitoring, and maintaining the T1.5 facilities for the CCS signaling circuits.
- Acquired funding (development, capital, and head count) through writing and defending business cases in support of projects for new services or network elements in the CCS Network. Upon approval, coordinated the implementation of system development and capital projects affecting the CCS Centralized Test Center.

COMPANY/
WITNESS: Turner
DATE: 10-19-98-01

AT&T EMPLOYMENT EXPERIENCE (cont.):

DEPARTMENTAL QUALITY MANAGER - Network Operations (Jan 1990-Jan 1992)

- Developed the Network Operations Quality Management System and implemented it into an organization of 5000 people. Implementation required gaining organizational support for staffing and training 40 Quality Specialists and managing their efforts in transferring the quality technology into Network Operations.

OPERATIONS SUPERVISOR - Regional Network Service Center (Nov 1988-Dec 1989)

- Managed the Regional Network Service Center serving AT&T customers in the Southeastern United States through correcting their service troubles. Responsibilities included leading a team of 20 associates who responded to over 2000 customer troubles per month and escalating with Local Exchange Companies to remove barriers to trouble resolution.

4ESS SWITCH ENGINEER - Network Engineering Services (Dec 1987-Nov 1988)

- Identified current levels of asset utilization, analyzed future needs, and developed a capital budget to purchase and provision the necessary equipment to efficiently meet customer needs. Managed the implementation of over $10M in capital projects.

GENERAL ELECTRIC EMPLOYMENT EXPERIENCE:

RESEARCH AND DESIGN ENGINEER - Simulation and Control Systems (Jun 1986-Dec 1987)

- Designed and developed a major sub-system for a high-speed graphics simulator supporting both defense and commercial customers.
- Designed and developed a Very Large-Scale Integrated (VLSI) Chip with over 80,000 transistors used in the video display sub-system for the high-speed graphics simulator.

ACHIEVEMENTS:

- Developed the strategic planning system used throughout AT&T Connectivity Planning that identifies the mix of connectivity options (Wireless, CATV, LEC) that AT&T should implement within a market. This model is being used to determine AT&T's local market entry strategy for the entire country.
- Re-engineered the Operator Services operations processes through a collaborative effort of management and union employees yielding $19.9 million in operational expense savings annually while making the new organization more customer responsive.
- Planned and implemented a modification to the CCS Network data collection architecture resulting in operational expense savings of $7.3 million per year.
- Significantly advanced the implementation of Total Quality Management in Network Operations through the Quality Specialist strategy initiative begun in 1990.
- Completed development of a Win Back Program for non-AT&T customers who called the Regional Network Service Center in error. This program generated over $1.6 million in new revenue for AT&T in 1989.
- Designed and developed a Management Information System enabling the measurement of asset utilization in switching equipment at any point in time. The use of the information provided with this system and the resulting changes in engineering practices reduced Network Operations under-utilized switching assets by approximately $250 million.
- Re-engineered the installation process for switching equipment resulting in a 70% reduction in the installation interval.

- Designed and developed the largest VLSI chip with General Electric at that time in only five months.

Re: CC Docket No. 96-98

Dear Ms. Salas:

This is to inform you that on August 15, 2000 Steve Klimacek, Tommy Williams, Randy Sanders, Jonathan Banks, and I, representing BellSouth, met with Commission staff to discuss BellSouth's policies on line-splitting. The Commission staff participating in the discussion included Jake Jennings, Kathy Farroba, John Stanley, Jon Reel, and Jessica Rosenworcel of the Common Carrier Bureau's Policy and Program Planning Division and Andrea Kearney and Jim Carr of the Office of General Counsel. The attached document formed the basis for our discussion.

We are filing notice of this ex parte meeting in the docket identified above, as required by Section 1.1206(b)(2) of the Commission's rules. Please associate this notice with the record of that proceeding.

Sincerely,

Kathleen B. Levitz

Line Splitting and UNE-P

August 15, 2000

Exhibit No. SET – 2
FPSC Docket No. 960786-TL
Page 2 of 8

12/20/2000 14:23 FAX 8725300143

Line Splitting and UNE-P

1. Line Splitting

- Paragraph 324 of the FCC's Order authorizing SBC to provide in-region InterLATA service defines line splitting as a situation where the voice and data service are being provided by competing carrier(s) -- other than the incumbent LEC -- over a single loop.

- In paragraph 325 of that Order the FCC further stated that incumbent LECs have an obligation to permit line splitting where the competing carrier purchases the entire loop and provides its own splitter. In paragraph 327 the FCC further stated that the incumbent LEC is not required to furnish the splitter.

- BellSouth is prepared to permit CLECs to do line splitting as long as competitive carriers provide their own splitter.

- Line splitting operational procedures must be developed.

Exhibit No. SET – 2
FPSC Docket No. 960786-TL
Page 3 of 8

2. UNE-P

- UNE-P is a combination of a loop and a port.

- To access the high frequency spectrum on a loop, a data provider must use a splitter. A splitter, however, is not part of a loop. Consequently, if a splitter is on a loop or is to be attached to a loop, a loop and port will lose its status as a UNE-P.

- Line Splitting on UNE-P is thus a misnomer.

- BellSouth will accommodate line splitting with a loop and port that is delivered to a collocation space.

12/20/2000 14:24 FAX 9725300143

3. Steps Necessary to Implement Line Splitting

A. Interconnection Agreements

- The voice provider will need an interconnection agreement that authorizes it to buy loops and ports.

- The voice provider, the data provider, or both the voice and data providers will need a collocation agreement and will also need authorization to order cross-connects.

B. Splitter Ownership

- BellSouth's proposed architecture is for the CLEC to own the splitter.

Exhibit No. SET – 2
FPSC Docket No. 960786-TL
Page 5 of 8

C. OSS Ordering and Provisioning Systems

- BellSouth envisions that in the near future a minimum of two service requests will be required. Modifications of BellSouth's OSS's will be necessary.

D. Agency Issues

- BellSouth proposes a single customer of record for line splitting.

- BellSouth does not wish to be in the middle of disputes between a competing voice and data provider.

4. Collocation Issues

- BellSouth allows CLECs to sublease collocation space without any additional charges, unless the guest CLEC requires additional power or floor space.
- The guest CLEC's use of subleased collocation space must be consistent with the contractual obligations that exist between BellSouth and the host CLEC.
- BellSouth will permit CLECs to sublease a virtual collocation space. BellSouth proposes to have the host CLEC as its only point of contact.
- BellSouth currently provides in-office wiring between a shared collocation space and BellSouth-provided network elements.

12/20/2000 14:24 FAX 9725300143

5. Pricing

❖ Georgia, Zone 1	Monthly	Non-recurring
❖ UNE-P (Conversion as-is only)	$12.59	$ 2.01
❖ Loop (No IDLC)	$14.21	$42.54
❖ Port	$ 1.85	$17.16
❖ Total loop and port	$16.06	$59.70

❖ Collocation must be purchased in addition

provide the specific line class code and put it on each customer's order, is justified by the FCC's order that it issued when it rejected BellSouth's second Louisiana 271 application, right?

A Yes. What the FCC said was if an ALEC has a single routing plan for all its customers, which you could read to mean all its customers in BellSouth's nine-state region, then BellSouth should be able to figure out AT&T's choice. And we agree. If they only have one choice and AT&T says for all of my customers send it to any one of these options, any one of those options, we will know what to do. It's only where it becomes situational that we don't know what to do and we need input from AT&T.

Q Well, the FCC also said that BellSouth should not require the competitive LEC to provide the actual line class code if BellSouth is capable of accepting a single code region-wide, right?

A That's right. But that's back to the same -- back to the same logic, I think. Yes, we don't -- and, in fact, we don't ask you to put a line class code designation on your order if we know what your choice is. For example, in Atlanta, Georgia in BellSouth's Peachtree Place central office, AT&T and BellSouth have worked together, since we preprogram those line class codes, you pass us an order that has got that single choice on it,

you don't have to specify a line class code and the order flows-through well.

Q So the real nub here is that we disagree on what the FCC meant in this order, right?

A Apparently so.

Q And BellSouth is capable of accepting a single code region-wide to route to AT&T's operator service platform, right?

A Yes.

Q Not a line class code, but an indicator?

A Well, yes. And in a fashion we are doing that with what we have done for AT&T in BellSouth's Peachtree Place central office. What we did was build logic into part of the ordering system that told BellSouth based on the class of service, the given central office, and the blocking features that came across on AT&T's order, we built those line class codes in a system called LESOG, L-E-S-O-G.

That system looks in its tables and says, okay, given that combination of class of service, blocking levels, and the central office involved, this is the right line class code to use. So that's what we are doing. And we are in conformance with the FCC's requirement that we take a single indicator. Your single indicator is you have told us what your default plan is, and where you

KPMG Consulting

EXCEPTION 69

BellSouth Florida OSS Testing Evaluation

Date: June 12, 2001

EXCEPTION REPORT

KPMG Consulting has identified an exception as a result of the POP Functional Evaluation (TVV-1).

Exception:

BellSouth does not provide an accurate method for assigning the Universal Service Order Code (USOC) to request BellSouth's Operator Services & Directory Assistance (OS/DA) Branding feature. (TVV1)

Background:

BellSouth's OS/DA Branding feature enables Competitive Local Exchange Companies (CLECs) to select Unbranded and/or Custom Branded Operator Services provided by BellSouth operators. Custom Branding identifies a CLEC-defined company name to the CLEC's end users, prior to being placed in queue, or prior to being connected to applicable operator services. The Unbranded option does not identify a specific company name when connecting a CLEC end user to an operator.

USOCs are codes used to identify features, and their associated tariffs, in a service request. BellSouth business rules specify, "The CLEC must float the ZSRC FID behind the Line Class of Service USOC followed by the Selective Routing Code in the feature detail field."[1]

KPMG Consulting submitted a Selective Routing Service Inquiry form to the BellSouth Account Manager, and obtained Line Class of Service Codes and Selective Routing Codes to be used in association with the OS/DA service request as outlined in BellSouth's business rules.

Issue:

The instructions for identifying the Line Class of Service USOC on the Local Service Request (LSR) are incomplete. BellSouth does not provide feature "USOCs, FIDs, or TCIF maintained EDI codes" as required by the BellSouth business rules.[2]

---

KPMG Consulting

EXCEPTION 69

BellSouth Florida OSS Testing Evaluation

Without a feature code for an OS/DA feature, KPMG Consulting was unable to process the service requests, using any electronic interface. Service requests for OS/DA are rejected by BellSouth's front-end edits when the appropriate code on the feature code field of the Resale Service (RS) form is not specified.

Furthermore, the instructions on how to populate the feature detail field do not clearly indicate whether the ZSRC Field Identifier precedes the Line Class of Service USOC or not.

Impact:

BellSouth's incomplete instructions relating to USOCs for the OS/DA feature may impact a CLEC in the following ways:

- **Decrease in Customer Satisfaction.** A misidentification of a CLEC's operator assistance service might negatively impact a customer's view of a CLEC's service quality.
- **Increase in Operating Costs.** Ordering problems might require additional CLEC resources before completion. Delays in problem resolution might increase the effort CLEC resources must expend before successfully processing individual OS/DA service requests.

FLORIDA OSS BELLSOUTH'S RESPONSE TO EXCEPTION 69

BELLSOUTH

Florida OSS Test
Exception #69

Date: July 2, 2001

EXCEPTION REPORT

KPMG Consulting has identified an exception as a result of the POP Functional Evaluation (TVV-1).

Exception:

BellSouth does not provide an accurate method for assigning the Universal Service Order Code (USOC) to request BellSouth's Operator Services & Directory Assistance (OS/DA) Branding feature. (TVV1)

Background:

BellSouth's OS/DA Branding feature enables Competitive Local Exchange Companies (CLECs) to select Unbranded and/or Custom Branded Operator Services provided by BellSouth operators. Custom Branding identifies a CLEC-defined company name to the CLEC's end users, prior to being placed in queue, or prior to being connected to applicable operator services. The Unbranded option does not identify a specific company name when connecting a CLEC end user to an operator.

USOCs are codes used to identify features, and their associated tariffs, in a service request. BellSouth business rules specify, "The CLEC must float the ZSRC FID behind the Line Class of Service USOC followed by the Selective Routing Code in the feature detail field."[1]

KPMG Consulting submitted a Selective Routing Service Inquiry form to the BellSouth Account Manager, and obtained Line Class of Service Codes and Selective Routing Codes to be used in association with the OS/DA service request as outlined in BellSouth's business rules.

[1] See *Selective Call Routing Using Line Class Codes CLEC Information Package*, Version 1, May 17, 2001, page 8. This document can be found at the following URL: http://www.interconnection.bellsouth.com/products/html/unes.html

FLORIDA OSS BELLSOUTH'S RESPONSE TO EXCEPTION 69

Issue:

The instructions for identifying the Line Class of Service USOC on the Local Service Request (LSR) are incomplete. BellSouth does not provide feature "USOCs, FIDs, or TCIF maintained EDI codes" as required by the BellSouth business rules.[2]

Without a feature code for an OS/DA feature, KPMG Consulting was unable to process the service requests, using any electronic interface. Service requests for OS/DA are rejected by BellSouth's front-end edits when the appropriate code on the feature code field of the Resale Service (RS) form is not specified.

Furthermore, the instructions on how to populate the feature detail field do not clearly indicate whether the ZSRC Field Identifier precedes the Line Class of Service USOC or not.

Impact:

BellSouth's incomplete instructions relating to USOCs for the OS/DA feature may impact a CLEC in the following ways:

- **Decrease in Customer Satisfaction.** A misidentification of a CLEC's operator assistance service might negatively impact a customer's view of a CLEC's service quality.
- **Increase in Operating Costs.** Ordering problems might require additional CLEC resources before completion. Delays in problem resolution might increase the effort CLEC resources must expend before successfully processing individual OS/DA service requests.

BellSouth's Response:

BellSouth does provide the feature "USOCs, FIDs, or TCIF maintained EDI codes" as required by the BellSouth business rules. Documents containing "USOCs, FIDs, or TCIF maintained EDI codes" are available on the BellSouth Interconnection Services Customer Guides and Documentation web site by selecting Products/Services and Documentation or Unbundled Network Elements (UNE).

BellSouth documentation does not indicate "a feature code for an OS/DA feature" is required. BellSouth will need the specific document and page number referenced by KPMG that includes this information. BellSouth documentation does indicate the use of USOCs and FIDs populated in the FEATURE and FEATURE DETAIL fields for OS/DA service requests.

---

[2] See *BellSouth Business Rules for Local Ordering – OSS99, Issue 9N May 31,* 2001, pages 1567 &1568. This document can be found at the following URL: http://www.interconnection.bellsouth.com/guides/html/leo.html

FLORIDA OSS BELLSOUTH'S RESPONSE TO EXCEPTION 69

KPMG should continue to populate USOCs in the FEATURE field as documented in the BellSouth Business Rules for Local Ordering. The Selective Routing Code (ZSRC) FID and the Line Class Codes assigned to KPMG for OS/DA should be populated in the FEATURE DETAIL field associated with the applicable FEATURE field. The use of FEATURE and FEATURE DETAIL fields remains consistent for OS/DA and other products/services.

Example:	FEATURE	1FR
	FEATURE DETAIL	ZSRC XXXXX

The BellSouth CLEC Information Package, Selective Call Routing Using Line Class Codes will be updated by July 13, 2001 to clarify the terms Line Class of Service USOC and Basic Class of Service USOC.

Introduction and Scope

This Product Information Package is intended to provide to CLECs a product description and general ordering information specific to the service described herein.

Detailed ordering guidelines are provided in documents located on the BellSouth Interconnection Web site.

The information contained in this document is subject to change. BellSouth will provide notification of changes to the document through the CLEC Notification Process.

Please contact your BellSouth Account Manager, if you have any questions about the information contained herein.

Revisions

Version 2

Within the BellSouth Default Branding section of the Ordering Information section, clarification was made to include the 'Basic Class of Service' USOC as a possible USOC that the ZSRC FID may be floated behind. Further explanation was also provided to explain that the Line Class of Service USOC is the appropriate USOC that the ZSRC FID must be floated behind when ordering the service with complex services and UNE port/loop combinations.

Product Name

Selective Call Routing Using Line Class Codes

Service Description

BellSouth's Operator Services & Directory Assistance (OS/DA) Branding feature provides Unbranded and/or Custom Branded Operator Services provided by BellSouth operators to Competitive Local Exchange Companies (CLECs) reselling BellSouth telecommunications services (Reseller) or utilizing unbundled local switching (UNE Port CLEC). Custom Branding provides definable announcements to the CLEC's end users prior to placing them in queue or connecting them to an available operator or Automated Operator System. The BellSouth provided Unbranded option does not identify a specific company brand name when connecting the end user to an operator.

Selective Call Routing using Line Class Codes (SCR-LCC) provides the capability for a CLEC to have its OS/DA calls routed to BellSouth's OS/DA platform for BellSouth provided Custom Branded or Unbranded OS/DA or to its own or an alternate OS/DA platform for Self-Branded OS/DA. SCR-LCC is only available if line class code capacity is available in the requested BellSouth end office switches.

Where available, CLEC-specific and unique line class codes are programmed in each BellSouth end office switch where the CLEC intends to serve end users with customized OS/DA branding. The line class codes specifically identify the CLEC's end users so OS/DA calls can be routed over the appropriate trunk group to the requested OS/DA platform. Additional line class codes are required in each end office if the end office serves multiple NPAs (i.e., a unique LCC is required per NPA), and/or if the end office switch serves multiple rate areas and the CLEC intends to provide CLEC-branded OS/DA to its end users in these multiple rate areas.

CLEC dedicated trunking is required and must be ordered from each end office to the BellSouth TOPs tandem for Custom Branded OS/DA and to the appropriate point of interface for Self-Branded OS/DA. BellSouth will provide the trunking on shared trunk groups for Unbranded OS/DA.

In addition to supporting selective routing for customized OS/DA branding, line class codes are also utilized to provision end user specific call blocking/restrictions, optional dialing plans, measured versus flat rate pricing plans and multi-line hunting in 5E switches. Therefore, the CLEC-specific line class codes must be programmed to include the handling of these services as well as specific OS/DA branding. The SCR-LCC ordering forms will prompt the CLEC to choose if such other services will be needed and allow such services to be listed on the service request.

When utilizing SCR-LCC to establish an OS/DA branding option, the CLEC may select one of two types of OS/DA Branding Defaults. The Branding Default applies when no specific OS/DA branding instructions are provided on the Local Service Request (LSR). The CLEC may select the Standard OS/DA Branding Default, which is BellSouth, or it may select a Customized Branding

Default. Specific instructions and requirements concerning the Branding Default are explained further in this guide.

Pre-Ordering

Availability

The availability of this service is dependent on the specific terms of the contract between BellSouth and the CLEC. Furthermore, this service is offered on a first come, first serve basis and is dependent on the availability of Line Class Codes in the requested BellSouth switch.

Pre-Ordering Applications (included within this guide)

1. CLEC Selective Routing Service Inquiry
2. CLEC Selective Routing Ordering Document
3. Selective Routing End Office Detail Information

CLEC Selective Routing Service Inquiry

The CLEC notifies BellSouth of its intent to order SCR-LCC for OS/DA Branding by submitting the CLEC Selective Routing Service Inquiry form. On this form, the CLEC must include its desired due date, contact information, form issuance date, CLLI codes of the BellSouth end offices where it desires SCR, the NPA that will be affected by SCR and the number of Line Class Codes desired for that CLLI/NPA combination. If the CLEC desires multiple NPAs in a CLLI to be affected by SCR, each CLLI/NPA combination will need to be listed on an individual line and unique Line Class Codes for such combinations will be necessary.

The number of Line Class Codes to be listed on this form will be determined by the completion of the CLEC Selective Routing Ordering Document.

CLEC Selective Routing Ordering Document

This form must be completed and submitted to the CLEC's Account Team along with the CLEC Selective Routing Service Inquiry. This form must be provided for each BellSouth end office where the CLEC desires SCR-LCC. In addition to the CLEC's contact information, end office CLLI code and state, the following fields must be completed:

1. **Option** – This field identifies the call blocking/restriction (CREX) option desired for the Line Class Code. Each option requires its own unique Line Class Code. Refer to the tables on page 3 for the possible Option choices. If a CREX option is not requested to apply with specific OS/DA branding and therefore unique Line Class Codes are not established, that CREX option shall not be able to be ordered with CLEC-specific OS/DA Branding.

2. **NPA** – This field identifies the desired NPA to be affected by SCR-LCC. Each NPA per CLLI requires its own line on this form or unique Line Class Code.

3. **Line Class** – This field identifies the Line Class of Service that will be affected by SCR-LCC. Refer to page 4 for possible selections. POTS should be selected for Residential and Business unbundled ports, port/loop switched combinations and UNE-P.

4. **ODP (Optional Dialing Plan) (Y/N)** – BellSouth provisioned optional dialing plans require unique Line Class Codes. If the CLEC desires SCR-LCC for UNE port or Resale USOCs that include optional dialing plans, then "Yes" should be listed in this field. Furthermore, "No" should be listed if the CLEC desires SCR-LCC to affect only basic dialing plans.

5. **Flat/Meas (Flat or Measured Service)** – This field identifies whether the service is flat rated or measured rated, as separate Line Class Codes are required for each. Unbundled ports, switched port/loop combinations and UNE-P are measured services. Resale, however, may be a measured or flat service. For example, Resellers desiring SCR-LCC on a resold 1FR must request flat rated Line Class Codes. Additionally, measured Line Class Codes may be used for measured Resale services and unbundled ports, switched port/loop combinations and UNE-P.

6. **MLH Hunt (Multi-line Hunting) (Y/N)** – Multi-line Hunting requires unique Line Class Codes in 5E switches. If Multi-line Hunting is desired select "Yes" and if it is not select "No". If both options are desired, then separate lines will need to be completed. If the applicable BellSouth switch is not a 5E, then completing this field is not necessary.

7. **0- Brand 1/2/3/4** – This field allows the CLEC to select the level of 0- branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded.

8. **DA Brand 1/2/3/4** - This field allows the CLEC to select the level of DA branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded.

9. **0+ Local Brand 1/2/3/4** - This field allows the CLEC to select the level of 0+ Local branding. The numbers represent the following: 1-BellSouth Brand, 2-No Brand or Unbranded, 3-Custom Branded and 4-Self Branded. 0+ intralata toll calls and 0+ interlata toll calls shall be routed to the end user's LPIC'd and PIC'd carriers respectively.

10. **611 Customized Routing** – This field allows the CLEC to select SCR to its own platform for its end user dialed 611 calls. For BellSouth retail end users in Georgia, Florida, North Carolina and South Carolina, 611 is BellSouth's repair line. This capability is only offered in these states and applies only to Self Branding OS/DA. Select "Yes" if 611 SCR is desired and "No" if it is not.

11. **Default Branding** - The Standard Default Branding for SCR-LCC is BellSouth Branding if no branding is identified on the CLEC's Local Service Request (LSR). However, the CLEC may choose to have Customized Default Branding. This allows a CLEC to select a single specific OS/DA branding option by class of service and such arrangement shall be provided as the default, meaning that such branding shall be provided without specific

instructions placed in the LSR. Customized Default Branding requires BellSouth to program its ordering systems and will take three to six months to develop for each request.

Within this field, list either BellSouth or Customized for each Line Class of service. For POTS, the branding option may be divided between residence and business and should be listed accordingly (e.g. Residence – BellSouth).

Each line completed on the CLEC Selective Routing Ordering Document, results in a unique Line Class Code. The sum of the Line Class Codes for each CLLI should be populated accordingly on the CLEC Selective Routing Service Inquiry.

Upon submitting these two forms to the BellSouth Account Team, BellSouth will determine if the quantity of requested Line Class Codes are available in the requested BellSouth end office switches. If they are and if the CLEC is establishing Custom Branded or Self Branded OS/DA, at this point the CLEC must order dedicated OS/DA trunking with MOSS signaling from the applicable BellSouth end offices to the appropriate BellSouth or alternate service provider OS/DA platforms. This must be complete before the Line Class Codes are built in the BellSouth end office switches, as they must be directed to specific trunk groups and tested.

Selective Routing End Office Detail Information Form

If dedicated trunking is required and once it has been established, the Selective Routing End Office Detail Information Form must be completed and submitted to the Account Team. Each Two-Six code for 0-, 0+ Local, DA and 611 for each CLLI/NPA combination must be listed on this form. This provides the information necessary for BellSouth to direct the appropriate Lines Class Codes to the appropriate trunk groups.

Once the Line Class Codes have been established, BellSouth will provide to the CLEC the Selective Routing Codes used in each CLLI for each option by returning the CLEC Selective Routing Ordering Document.

Ordering Information

BellSouth Default Branding

When choosing BellSouth Default Branding (i.e. BellSouth OS/DA branding is applied when no OS/DA branding instructions are placed on the LSR), specific information is required on the LSR in order to receive the desired OS/DA Branding when ordering. The CLEC must float the **ZSRC** FID behind the **Basic Class of Service/Line Class of Service USOC** followed by the **Selective Routing Code** in the feature detail field. Again, the **Selective Routing Codes** will be provided by the BellSouth Account Team during the provisioning of this service. For complex services and UNE Port/Loop switched combination services, the ZSRC FID follows the Line Class of Service USOC.

Selective Call Routing Using Line Class Codes

CREX codes for specific call blocking and restrictions should not be placed on the LSR with this option as such desired functionalities shall be accommodated by the Selective Routing Code. If a CREX code was not requested as an option when requesting an Selective Routing Code, it may not be ordered to apply to an OS/DA branding option. Such requests will be rejected.

Customized Default Branding

When choosing Customized Default Branding, no specific OS/DA branding instructions are required on the LSR when ordering, and the CLEC desired OS/DA branding shall be applied to the end user's service. With this option the CLEC must place CREX codes that have corresponding Selective Routing Codes on the LSR in order for BellSouth to determine which Selective Routing Codes to automatically apply to the end user's line. If a CREX code is ordered and a corresponding Selective Routing Code has not been established by the CLEC, the order shall be rejected.

Billing Information

- The CLEC must provide BellSouth with a Facility-based OCN and have requested a facilities based Q-account number through its Account team before ordering this service.

- Current BellSouth Billing Account establishment rules require an OS/DA Branding option for each Master Q Account. This service, however, is defined to provide the CLEC the functionality to select multiple branding options within the Master Q Account (but no lower than the Earning Account), as multiple types of service may apply to that single Master Q Account. Therefore, until system changes can be completed, the bill phrase as well as the branding information on the CSR shall reflect the branding option residing on the Master Q Account. The CLEC should refer to the Selective Routing Codes on the CSR to identify the exact type of branding.

Pricing

The specific charges for this service are listed in the Interconnection Agreement between the Parties. There is a nonrecurring charge for the establishment of each Line Class Code in each BellSouth central office. Furthermore, for Unbranded and Custom Branded OS/DA provided by BellSouth Operator Services with unbundled ports, unbundled port/loop switch combinations and UNE-P, monthly recurring usage charges shall apply for the UNEs necessary to provide the service, such as end office and tandem switching and common transport. A flat rated end office switching charge shall apply to Self-Branded OS/DA when used in conjunction with unbundled ports, unbundled port/loop switch combinations and UNE-P.

RE: June 12, 2001, AT&T/BellSouth Executive Meeting

Dear Jan:

The purpose of this letter is to document the discussion between AT&T and BellSouth at our monthly Executive Meeting on June 12, 2001.

At the meeting, BellSouth, represented by Jan Flint and Bob Bickerstaff alone as Jan Burriss was on vacation, committed to provide the following:

1. A written process for requesting Billing Account Numbers (BANs). This process should provide sufficient detail to understand both BellSouth's and AT&T's responsibilities, as well as the expected time frames for delivery of the BAN to AT&T.
2. A detailed explanation of the OLNS "enhancement" or fix that BellSouth will deliver on June 22, 2001 along with an outline as to what AT&T's customers should hear once BellSouth removes the current prompts which reference BellSouth. AT&T requested this information prior to the June 22nd BellSouth fix. On June 25, 2001 AT&T received a fax letter that listed what BellSouth provided with the June 22nd fix to OS & DA via OLNS for AT&T OCN 8392.
3. When the Account Team receives calls from AT&T Local Work Center personnel, BellSouth will redirect the caller back to LSAM as was requested by BellSouth and agreed to by AT&T.

FAX 404 810-8605
PAGER 888 858-7243 PIN 125159
bseigler@ems.att.com

AT&T committed to the following:

1. A planning session will be scheduled to include AT&T Local Service and BellSouth SMEs to understand AT&T's plans and timeline for an UNE-P entry in North Carolina.
2. A planning session will be scheduled and/or information provided to discuss the North Point collocation acquisition.
3. Investigation into BellSouth's statements that other AT&T suppliers are not counting failures correctly.
4. Reminding all AT&T Local Work Center personnel to call LSAM for Local support, not the BellSouth Account team, as was requested by the BellSouth Account Team.

Also at this meeting AT&T's BellSouth Account Team informed AT&T that it is unable to respond to AT&T on local service issues that have been filed in any regulatory forum. Furthermore it was stated that the Account Team will listen to AT&T's concerns and take issues back to the appropriate persons within BellSouth, but cannot respond nor address our issues or concerns. The response from BellSouth to those issues or concerns brought to the attention of the Account Team would be provided to AT&T via the regulatory forum in which they were filed. Bob further explained that AT&T has two options: to bring the issues to the account team or bring the issues in the regulatory arena. As you stated, "It's your choice." Why the change in policy?

During the meeting, AT&T expressed its concern regarding this position. AT&T is concerned that BellSouth's policy removes the potential of solving local service issues in a timely business-to-business fashion. Additionally, this policy is likely to lead to more regulatory dockets and lengthens an already painfully slow process.

BellSouth further explained that any written responses sent to AT&T from the BellSouth Account Team, even operational or customer-affecting local service issues, must go through the BellSouth Legal External Review Team (ERT). We discussed, and you acknowledged, that this review will delay any responses sent to AT&T. Bob committed to work on improving the timeliness of the Account Team's turn-around on written responses to AT&T.

We would like to see our joint ability to quickly address and resolve problems evolve and mature into a process that works well and quickly – more like we are able to accomplish most of the time in the access environment. AT&T is respectfully requesting that BellSouth change its position, so that our companies can work together in a more productive fashion that will benefit our customers.

Sincerely,

Bernadette Seigler

RE: Duplicate Billing Problems

Dear Jan:

The purpose of this letter is to ask for your assistance in solving a problem with duplicate billing that AT&T and its customers have been experiencing for over a year.

We have referred several isolated instances of these duplicate billing issues to the account team in the past. The answer we have always gotten from the Account Team is that each instance was "isolated" or that it was "rep error." However, the AT&T Account Team supporting the Pep Boys account has recently informed us that of the approximately 100 Pep Boys locations that have transitioned from BellSouth to AT&T, 42 of them continue to get BellSouth retail bills for the same service. As far as we can tell, BellSouth fails to work the post port disconnect order through all of their systems, resulting in the customer's continuing to receive the BellSouth bills. This causes tremendous customer dissatisfaction. Additionally, it inhibits AT&T's ability to compete. Although this is a BellSouth problem, presented on a BellSouth retail bill, the customer perceives the problem to be caused by AT&T, since he never had the problem when he was a BellSouth customer. Further, based on AT&T's experience, customers will withhold payment from AT&T and BellSouth until the problem is resolved. There have even been instances of BellSouth's billing office turning customers over to a collection agency before fixing the problem.

Recycled Paper

Additionally, AT&T resources are required to help the customer get the issue resolved. AT&T has had no choice but to adjust its "first bill validation" process to include verification of the telephone numbers and lines that were disconnected from their BellSouth bill. If a problem is found, AT&T's care center will attempt to work the issue back to the BellSouth LCSC. If, however, BellSouth's LCSC has been unwilling to resolve the customer's BellSouth billing issue with AT&T if its records show that the order is complete and the numbers ported in NPAC. This leaves AT&T with no means to resolve the customer's problems with BellSouth.

Many customers have attempted to resolve the issue directly with BellSouth, since technically it is an issue between the customer and BellSouth. When customers call the BellSouth retail business office to inquire about the billing, BellSouth refers the customer back to AT&T. The reason given to the customer is that AT&T must resolve the problem, since AT&T is acting as the customer's agent. AT&T must then orchestrate a call with all parties to explain the situation and get the issue resolved.

It appears that BellSouth has neither a clearly defined internal process for insuring that all orders are worked within the BellSouth systems nor a responsible party designated to resolve these duplicate billing issues. AT&T has not yet found a way to insure the billing has stopped from BellSouth beyond continuing to ask the customer to examine their BellSouth bill. Please advise me of BellSouth's plans to examine the internal ordering and completion processes. I would also like to understand BellSouth's plan to isolate and repair the associated process gaps. Finally, I will expect escalation names and contact information for the appropriate BellSouth representatives for ongoing resolution that can be used by our Customer Care centers. Your response by August 18, 2000, will be appreciated.

Sincerely,

cc: Greg Terry

Docket No.: 960786-TL
DUF Charges

Estimated Cost of "Billing Information"

Traffic Type	Calls (1000s)		Total Calls	UNE Rate[1]	Annual Cost
	Originating[2]	Terminating			
Local	23,027,888	23,027,888[3]	46,055,776	$0.006729	$309,887,210
Access	3,560,942	5,582,449[4]	9,143,391	$0.014057	$128,531,117
		Average UNE Rate		$0.007942	$438,418,327

UNE Rate Comparison
(Daily Usage Files)

	UNE Rate	Average Cost Per Line
BellSouth - Florida	$0.007942	$5.53
Ameritech - Michigan	$0.000700	$0.49
Qwest - Arizona	$0.000762	$0.53

[1] There is some confusion concerning the application of these charges. During the Alabama cost proceeding, BellSouth was asked to identify the unbundled network element charges that a ALEC would incur to offer basic local service (*see* Item No. 6 of DeltaCom's 1st Data Request, Docket No. 27821, February 20, 2001). In its response, BellSouth *did not* include charges for daily usage files. For purposes of the analysis described above, however, DUF charges are assessed on all local and access messages.

[2] Source: ARMIS 43-08, Table IV.

[3] Assumes local calling is balanced – that is, for every originating minute there is a single terminating minute.

[4] Source: Estimated from originating calling information by applying the average originating-to-terminating ratio for carrier common line minutes (1997 and 1998). ARMIS 43-01, Table IIa. Terminating switched access usage typically exceeds originating usage because of the prevalence of dedicated connections to some large customers.
