Assumptions

Macroeconomic Assumptions - The macroeconomic forecasts of GDP and its chain price index are from BellSouth's late September 2001 economic view. It provided a post September 11th outlook for the economy. JPC provided the forecasts of the other variables in line with BellSouth's general economic outlook.

The Conference Board has officially declared that a recession has begun in the U.S. economy with peak economic activity having been reached in the month of March 2001. That means that the expansion lasted exactly 10 years from the previous trough, reached in March 1991. Third quarter GDP fell 1.1 percent, and BellSouth's forecast for the year as a whole is for an increase of only 0.8 percent compared with 2000's growth rate of 4.1 percent. The long-term trend rate of growth in GDP during the 2001-2010 time period now averages 2.9 percent per year, a revision downward of almost 0.7 percentage points per year. Price increases are expected to remain modest averaging about 1.8 percent per year during the forecast period. Capital equipment price increases are expected to average slightly less than 1 percent per year during the forecast period as flat or declining electronic prices continue to offset most of the increases in other types of capital equipment. The unemployment rate has risen sharply since September 11th. Consequently, union wage growth will be somewhat lower than in the last forecast.

Indexes and Weights - The actual 2000 BellSouth indexes are in the forecast tables. The indexes and the forecasts are being composited using weights that are based on BellSouth's 1999 construction expenditures.

ESS Materials - BellSouth spent \$1 billion on digital switch construction in 2000, up about 8 percent from 1999. Much of that increase is associated with analog switch replacement. Based on ARIMIS reports, analog SPC switches in the BellSouth network were reduced from 83 to 69 between 1999 and 2000, leaving only about 4 percent of lines served by that technology. Digital switches increased by 11 during this time period.

The contracts for the large circuit switches being installed as replacements for the analog SPC switches called for upfront discounts on prices. Consequently, we do not anticipate that this account will experience the same price declines in the next few years as it did in 1999. Digital ESS material prices were about flat in 2000.

One factor that will contribute to further declines in the digital ESS account is the increased use of packet switching equipment in the network over the next few years. Before the end of this decade, that equipment will account for a majority of the expenditures on new switching equipment and thus will have a steadily increasing impact on the price trend. As this equipment becomes more widely used, its price is expected to decline further and will put downward pressure on the account overall.

Circuit - The circuit forecast is divided among analog, digital subscriber pair gain and other digital equipment. Throughout the forecast period the overall circuit account is weighted based on the relative expenditures on those three types of equipment in 1999. However, analog circuit was only about 1 percent of all circuit expenditures in 1999; therefore, it has virtually no impact on the combined circuit index. Based on 1999 weights, expenditures on digital SPG and other digital circuit equipment were split almost evenly.

Digital SPG - BellSouth spent \$828 million on equipment and installation of digital pair gain equipment in 2000, an increase of about 25 percent.

BellSouth's long term strategy for loop deployment focuses on FTTC or FTTH. DSL technology will be used to take advantage of existing copper-based distribution facilities, but is not a long-term strategy. Next generation digital loop carrier is being used to support current narrowband services and is the platform that probably will be used to support broadband services. Consequently, purchases of this equipment will continue. The older forms of loop carriers will be phased out over time and the purchases of plugs and other add-on equipment to those systems will be reduced over the next few years.

Interoffice Digital Circuit - BellSouth spent over \$900 million for the installation of digital circuit equipment other than pair gain equipment. That was a double-digit increase from 1999's level. SONET equipment dominated BellSouth's interoffice digital circuit purchases in 1999 and 2000. The prices for that equipment are continuing downward. While the use of WDM equipment is still somewhat limited and the recent turmoil in telecommunications equipment markets has caused some revisions to network improvement plans, this technology will continue to grow as a share of new purchases. With continuing improvements in manufacturing of optical equipment and wider use of the equipment in most networks, prices will tend to trend downward. It is unlikely that it will be feasible to put a fully optical system into place during the decade of this forecast. However, the movement toward that goal will put increasing amounts of that equipment in the network.

Copper and Copper Cable Prices - BellSouth's copper cable contracts have escalator clauses that adjust cable prices with a lag with respect to raw copper prices. Copper markets have been very volatile in recent years. Prices rose at double-digit rates in 1999 and then fell sharply as manufacturing demand began to weaken in 2000. With the U.S. economy in recession and other world economies slumping, copper prices fell further in 2001 and are expected to stay relatively weak during the first half of 2002. Beyond that prices will improve as the economic recovery increases the demand for copper. Copper cable prices will follow a similar pattern. Falling and then increasing as the recovery begins to push up raw copper prices.

Fiber Optic Cable Prices - BellSouth's fiber cable network has continued to grow strongly. 2000 demand for optical fiber and cable was relatively strong and prices did not fall by as much as they did in 1999. Prices fell only about 2.0 percent. By late in 2000, the telecommunications industry was in major turmoil and the equipment and fiber manufacturers faced significant adjustments due to lower demand. Many of those

Attachment 1

adjustments are still taking place. Consequently, some buyers are seeing fiber cable prices increasing as the major manufacturers try to improve their bottom lines. A significant amount of fiber manufacturing will be shutdown in the fourth quarter and prices are expected to remain relatively flat in the near term.

Other Outside Plant Materials - PVC prices have fallen sharply in 2001 and are expected to show further declines because of the declining price of crude oil and natural gas. Consequently, the cost of plastic conduit should decline by 2002.

Wages - A new contract was reached with BellSouth's unionized workforce in August 2001. That contract calls for semi-annual wage increases of 1.6 percent (in August 2001), 1.5 percent, 2 percent, 2.5 percent, 2.25 percent and 2.5 percent. The final wage increase takes place in February 2004. While, the contract calls for continuous bargaining, and therefore theoretically could leave the door open for some of the wage increases to be renegotiated, JPC considers that unlikely. Consequently, these increases will be the basis of the wage forecast for the union workers. Past August 2004, the forecast assumes that wage gains will reflect the experience in the general economy at that time. BellSouth's overhead costs have been moving downward over the past few years. Part of that reflects the gains from equities that have reduced the payments to the pension fund. However, recent events have severely eroded the value of most equity holdings. Consequently, it is less likely that changes in the benefits ratios will tend to offset wage gains.
