Grand Total			

Note: Generally access line services transported over HICAP facilities are included in residence and business analog access line counts and BellSouth lacks the ability to segregate those lines from the total counts. An exception to this are those lines which are provisioned over PathLink (A primary rate ISDN service). An approximation of the impact of this service is included on the Business Digital row and represents the number of PathLink facilities times 23.

NOTES/INSTRUCTIONS FOR COMPLETING TABLE-1:

A. An access line connects the end-user's customer premises equipment (CPE) to the serving switch and allows the end-user to originate and/or terminate local telephone calls on the public switched telephone network (PSTN). The access line counts in Table-1 above must be based on all of your different types of access lines such as copper, fiber, hybrid fiber/copper, coaxial cable, hybrid fiber/coaxial cable, fixed-wireless (free-space optics, microwave or satellite, etc.).

B. Each field must be populated. All entries must be made without quotation marks.

C. **Report VGE Access Lines based on how you bill the customer.** If you bill a customer for 1 DS1, the access line count would be 24 even if the customer isn't utilizing all 24 channels. If you bill a customer for 10 channels in a DS1, then the line count would be 10.

TABLE COLUMN INSTRUCTIONS:

Column 1. List Exchanges in alphabetical order.

Column 2. Enter the abbreviation Res for Residential lines or Bus for Business lines. **Each type must be entered in separate rows.**

Column 3: Enter Type of Service as either Analog or Digital. **Each type must be entered in separate rows.**

Column 4. For Analog lines, enter count of all analog loops for each method of service and service type (Res or Bus). **Each count must be entered in separate rows.** For digital services, enter line count as voice-grade equivalents (VGEs). Count lines based on how they are charged to the customer rather than how they are physically provisioned. **EXAMPLE:** Report 8 voice-grade equivalent lines if a customer buys 8 channels that happen to be provisioned over a DS1 circuit. If a customer buys a DS1 circuit that is provided as a channelized service, report 24 voice-grade equivalent lines, even if there is some indication that the customer is only using 8 of the derived lines. Report 2 VGEs for each ISDN-BRI and 23 VGEs for each ISDN-PRI. Lines must be entered without duplication. Each line count must be entered in separate rows. The Grand Total must be equal to the total number of residential and business VGE access lines connected to the serving switches.

GRAND TOTAL			

Note: UNKNOWN RSLR - Customer service record doesn't contain FID RESH to allow BellSouth to identify CLEC
 Note: UNKNOWN - BellSouth cannot determine the CLEC name for digital UNE-P and Resale services at the Exchange level.

NOTES/INSTRUCTIONS FOR COMPLETING TABLE-2:

- A. The purpose of this table is to obtain UNE-P and Resale lines (on a VGE basis) leased to CLECs. **Do not include lines or channels, such as private lines, that are not connected to a switch.**
- B. Each field must be populated. All entries must be made without quotation marks.
- C. **Report VGE Access Lines based on how you bill the CLEC.** If you bill a CLEC for 1 DS1, the access line count would be 24 even if the CLEC isn't utilizing all 24 channels. If you bill a customer for 10 channels in a DS1, then the line count would be 10.

TABLE COLUMN INSTRUCTIONS:

Column 1. Enter the CLEC's name.

Column 2. List exchanges in alphabetical order.

Column 3. Enter the abbreviation Res for Residential lines or Bus for Business lines. **Each type must be entered in separate rows.**

Column 4. Enter Method of Service as UNE-P or Resale. **Each method must be entered in separate rows.**

Column 5: Enter Type of Service as either Analog or Digital. **Each type must be entered in separate rows.**

Column 6. For Analog lines, enter count of all analog loops for each method of service and service type (Res or Bus). **Each count must be entered in separate rows.** For digital services, enter line count as voice-grade equivalents (VGEs). Count lines based on how they are charged to the CLEC rather than how they are physically provisioned. **EXAMPLE:** Report 8 voice-grade equivalent lines if a CLEC buys 8 channels that happen to be provisioned over a DS1 circuit. If a CLEC buys a DS1 circuit that is provided as a channelized service, report 24 voice-grade equivalent lines, even if there is some indication that the CLEC is only using 8 of the derived lines. Report 2 VGEs for each ISDN-BRI and 23 VGEs for each ISDN-PRI. Lines must be entered without duplication. Each line count must be entered in separate rows. The Grand Total must be equal to the total number of residential and business VGE access lines connected to the serving switches.
