## P R O C E E D I N G S

(Transcript follows in sequence from Volume 1.)

COMMISSIONER DEASON: Call the hearing back to order.

Mr. Wahlen, you may call your next witness.

MR. WAHLEN: Okay. Alltel calls Mr. David Blessing.

DAVID C. BLESSING

was called as a witness on behalf of Alltel Florida, Inc., and, having been duly sworn, testified as follows:

## D I R E C T E X A M I N A T I O N

BY MR. WAHLEN:

Q Would you please state your name.

A My name is David Blessing.

Q By whom are you employed?

A I'm a principal with the consulting firm of Parrish, Blessing & Associates.

Q And are you the same David Blessing who prepared and filed direct testimony in this case consisting of 56 pages?

A Yes, I am.

Q And do you have any corrections to your direct testimony?

A Yes, I do.

Q Okay. Can you tell us what page and line?

A Okay. On Page 42 of my testimony, Line 21, there's a figure "0.7 percent."

Q Okay.

1 A And that figure should be changed to "2.2 percent."

2 Q Okay.

3 A The same change needs to be made on Page 43, Line 6.

4 Q Okay. Are there any other corrections?

5 A The change also flows through to two tables in my  
6 Exhibit DCB-0.

7 Q Why don't we handle the testimony first and then  
8 we'll deal with the exhibits. Are there anymore changes to  
9 your testimony?

10 A No.

11 Q Okay. If I asked you the questions contained in your  
12 direct testimony today, would the answers contained in there as  
13 you've corrected them be the same?

14 A Yes, they would.

15 MR. WAHLEN: Commissioner Deason, we'd request that  
16 the prepared direct testimony of David Blessing as corrected be  
17 admitted into the record as though read.

18 COMMISSIONER DEASON: Without objection, it shall be  
19 inserted into the record.

20 BY MR. WAHLEN:

21 Q Okay. Mr. Blessing, did you also prepare a number of  
22 exhibits labeled DCB-0 through DCB-40?

23 A Yes, I did.

24 Q And are those the exhibits that have been identified  
25 as Exhibit 7 through 48?

1 A Yes.

2 Q Okay. And you indicated you had a correction to one  
3 of your exhibits. Could you tell us which one it is and give  
4 us a little time to get that so we can make the change?

5 A Certainly. It's Exhibit DCB-0.

6 Q And that would be in the first volume of your  
7 exhibits?

8 A Yes.

9 Q And what page?

10 A It's labeled, the page label is Table 2. I don't  
11 think there's a page number to it.

12 Q Okay. And is it Line 1?

13 A Yes, it is.

14 Q And what should the number be?

15 A On the far column where the number reads  
16 "0.7 percent" --

17 Q Right.

18 A -- it should be replaced with "2.2 percent."

19 Q 2.2 percent. Are there any other corrections to this  
20 exhibit?

21 A On Table 5 of the same exhibit, on Line 1 of that  
22 table in the fourth column over under Alltel's Proposed Rate is  
23 the column heading, you'll see that same "0.7 percent" figure.  
24 That should be changed to "2.2 percent."

25 Q Okay. Are there any other corrections to your

1 exhibit?

2 A No. That, that's all the corrections.

3 Q Okay. And the rest of -- now with these corrections  
4 are your exhibits true and correct to the best of your  
5 knowledge?

6 A Yes, they are.

**BEFORE THE PUBLIC SERVICE COMMISSION**  
**DIRECT TESTIMONY**  
**OF**  
**DAVID C. BLESSING**

**I. INTRODUCTION AND WITNESS BACKGROUND**

**Q. Please state your full name, position, and business address.**

**A.** My name is David C. Blessing. I am a principal partner of Parrish, Blessing, & Associates, Inc. (PBA). PBA provides consulting services to telecommunications companies regarding economic, policy, and financial issues. My business address is 10905 Fort Washington Road, No. 307, Fort Washington, MD 20744.

**Q. Please describe your educational background, work experience and present responsibilities.**

**A.** I am a principal in the consulting firm of Parrish, Blessing & Associates, Inc. I have over sixteen years of experience in the area of telecommunications regulation and economic analysis beginning with various managerial positions at Rochester Telephone Company in Rochester, New York. For the last twelve years I have been a principal in my current firm. During this period I have represented telephone companies in a number of regulatory proceedings before the Federal Communications Commission ("FCC") and state regulatory commissions in Alaska, Arkansas, Georgia, Kansas, Kentucky, Missouri, Nebraska, New York, Ohio, Pennsylvania, Texas and Puerto Rico. I have presented and defended analyses and testimony before regulatory commissions and government officials in the United States and abroad. My

1 professional background also includes an appointment to the faculty of Nazareth  
2 College of Rochester, where I taught courses in economics and finance. I hold a  
3 Baccalaureate of Arts from Kalamazoo College and a Master of Arts in Economics  
4 from Fordham University. In addition, I have successfully completed all required  
5 course work and comprehensive exams for my doctorate in economics. A detailed  
6 summary of my background is included as Exhibit No. \_\_\_ (DCB-39)  
7

8 **Q. What is the purpose of this docket?**

9 **A.** In this docket, Alltel requests that the Florida Public Service Commission (“FPSC” or  
10 “Commission”) grant its petition to decrease its intrastate switched access rates and  
11 offset the revenue loss by increasing its local rates in the same manner as was  
12 approved by the FPSC for BellSouth, Verizon, and Sprint in Dockets 030867-TL,  
13 030868-TL, 030869-TL (“Rebalancing Dockets”), respectively. Specifically, Alltel  
14 seeks to reduce its intrastate switched access rates by approximately \$6 million and  
15 increase basic local residential, single-line business and associated non-recurring rates  
16 in three increments over two years for a total of \$6 million to offset the revenue loss.  
17 The purpose of this rate rebalancing is to remove implicit support that is provided by  
18 intrastate switched access rates by moving those rates down toward cost while at the  
19 same time, offsetting the revenue loss by increasing local rates to more cost-based  
20 levels. Alltel’s plan follows the procedure set forth under Section 364.164, Florida  
21 Statutes (“Act”), and the similar plans that have been previously approved by this  
22 Commission for BellSouth, Verizon, and Sprint in the Rebalancing Dockets.<sup>1</sup>  
23

---

<sup>1</sup> See Order No. PSC-03-1469-FOF, issued December 23, 2003 in the Rebalancing Dockets (hereinafter “Rebalancing Order”), a copy of which is attached hereto as Exhibit No. \_\_\_ (DCB-10).

1 Q. Please provide a brief summary of your testimony.

2 A. I will address the portions of the Act that allow incumbent local exchange carriers  
3 (ILECs) to rebalance their intrastate switched access rates with their local rates and  
4 will demonstrate that Alltel's proposed plan satisfies the requirements of the Act.  
5 Specifically, I will discuss the following:

6

7 The need to rebalance rates and the requirements of the Act (Section II).

8

9 Intrastate switched access rates currently provide support for basic local  
10 telecommunications service that would be reduced by lowering these rates (Section  
11 III).

12

13 The existence of local service support prevents the development of a more competitive  
14 local exchange market (Section IV).

15

16 The reduction of support will induce market entry into the local exchange market  
17 (Section V).

18

19 Enhanced market entry will result in the creation of a more competitive local exchange  
20 market that will benefit residential consumers (Section VI).

21

22 After the proposed rate increases, basic local service rates will remain affordable for  
23 consumers (Section VII).

24

25 Q. What are your major conclusions?

Alltel Florida, Inc.

Docket No.

Filed: September 29, 2005

1 A. Based upon my review of the Act, Alltel's proposal to rebalance rates and Alltel's  
2 costs, I have concluded that Alltel's plan meets the criteria outlined in the Act.  
3 Specifically, upon implementation, the plan will:

4

- 5 1. Reduce current support for basic local telecommunications  
6 services that prevents the creation of a more attractive  
7 competitive local exchange market for the benefit of  
8 residential consumers; and
- 9 2. Induce enhanced market entry.

10

11 Alltel's plan, if approved, will also decrease support for basic local service by  
12 reducing prices for intrastate switched access service which are priced above average  
13 cost<sup>2</sup> to support artificially low basic local service rates. To achieve revenue neutrality  
14 as required by the Act, Alltel will increase basic local residential prices toward cost-  
15 based levels. Moving residential rates toward average cost will create a more  
16 attractive market for potential competitive local exchange company ("CLEC") entrants  
17 that will create additional choices that will benefit residential consumers.

18

19 I also conclude that Alltel's rate rebalancing plan will provide economic benefits to  
20 the public in Alltel's service territory because moving rates toward average cost will  
21 provide consumers and competitors cost-based pricing signals which will lead to more  
22 economically rational utilization of telecommunications services. This, in turn will  
23 foster competition which will increase consumer benefits by providing consumer

---

<sup>2</sup> As it is used here, average cost is defined as covering all direct costs and a proportional share of joint and common costs.

Alltel Florida, Inc.  
Docket No.  
Filed: September 29, 2005

1 choice in telecommunications services and providers, place downward cost pressure  
2 on telecommunications firms, drive telecommunication service prices downward  
3 reduce costs for businesses which will lead to lower prices for their products, and  
4 stimulate innovation and investment in telecommunications.

5  
6 The cost evidence presented below demonstrates that Alltel's basic local residential  
7 service rates are priced significantly below the average cost of providing the service.  
8 Moving these rates toward cost will provide consumers and competitors the  
9 appropriate cost-based pricing signals that will lead to more economically rational  
10 utilization of telecommunications services. It may seem counter-intuitive that  
11 telephone consumers will be better off with an increase in local service rates; however,  
12 as the Commission acknowledged when it issued the Rebalancing Order addressing  
13 BellSouth, Verizon, and Sprint ("Large ILECs"), the benefits of additional choice in  
14 local telephone service will be available when local service is priced closer to average  
15 cost.

16  
17 Alltel's plan will not jeopardize universal service in its Florida service territory. Like  
18 the rates proposed by the Large ILECs and approved by the Commission, Alltel's  
19 proposed rates for basic local residential telephone service will remain affordable and  
20 will not harm universal service. Additionally, although its proposed basic rates will  
21 remain at or below the state-wide average for such services, consistent with the Act,  
22 any price increase in basic local service will not apply to Lifeline consumers and  
23 consistent with the 2005 amendments to Section 364.10, Florida Statutes, the income  
24 eligibility for Lifeline consumers will be increased to 135 percent. This proposal

1 would extend Lifeline benefits to those additional customers that are the most likely to  
2 be sensitive to price increases.

3

4 **Q. Have you prepared exhibits to your prepared direct testimony?**

5 **A.** Yes. Accompanying my prepared direct testimony are four volumes of exhibits,  
6 numbered DCB-0 through DCB-40. These exhibits were prepared by me or under my  
7 direction and supervision and were compiled from Alltel's business records or from  
8 authoritative and/or reliable sources. My exhibits contain reports by governmental  
9 entities, authoritative papers written by persons considered to be experts in their fields  
10 and other materials upon which reasonably prudent persons rely in the conduct of their  
11 affairs. Exhibit DCB-4 contains confidential information that has been filed under  
12 separate cover with the Commission.

13

14 **II. THE NEED TO REBALANCE RATES AND THE REQUIREMENTS OF THE**  
15 **ACT.**

16

17 **Q. Please describe why local basic residential service rates are supported by**  
18 **intrastate switched access and other services.**

19 **A.** Historically, public policy to assure universally available and affordable basic  
20 telephone service dictated that rates for basic local residential telephone service should  
21 be priced at artificially low levels and supported by rates for other services whose  
22 prices were set above average cost, such as intrastate switched access services. The  
23 belief was that lower rates for basic local residential telephone service would be more  
24 affordable and would increase the penetration of local residential telephone service.  
25 While this may have been true during the introduction and growth phase of

Alltel Florida, Inc.  
Docket No.  
Filed: September 29, 2005

1 telecommunications service nearly a century ago, today, low prices for basic  
2 residential telephone service may not be an effective or necessary means to further  
3 increase penetration. Since 1983 (the earliest date in the FCC's recent 2004  
4 Monitoring Report that includes statistics on penetration), over 90% of U.S.  
5 households have subscribed to basic local residential telephone service. Today, over  
6 95% of households have at least one phone line and many have several lines including  
7 a second wired phone line and one or more wireless phone lines.<sup>3</sup> Even among the  
8 highest income groups where affordability is presumably not an issue, wireline  
9 telephone penetration does not reach 100%. Furthermore, telephone service has  
10 become so widely accepted in the United States that the demand for basic local  
11 residential telephone service has become very inelastic, so that the price appears to  
12 have little impact on a consumer's decision to purchase voice telecommunications  
13 service. While it appears that the historic policy goal of increasing local telephone  
14 subscribership by holding down local basic residential rates below average cost by  
15 supporting them with above average cost rates for intrastate switched access may have  
16 been a factor in increasing local telephone subscribership to present levels, a policy of  
17 holding down local basic residential rates below average cost is no longer effective or  
18 necessary to further increase penetration.

---

<sup>3</sup> Penetration in Florida peaked in 2003 when 95.0% of all households in Florida subscribed to basic local residential telephone service on the wireline network. See Belinfante, Alexander; *Telephone Subscribership in the United States (Data Through March 2003)*; Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission; Table 2; Released November 2003, which is included as Exhibit \_\_\_ (DCB-1). Based on the most recent FCC data (May 2005) 91.6% of all households in Florida subscribe to basic local residential telephone service on the wireline network. See Belinfante, Alexander; *Telephone Subscribership in the United States (Data Through March 2005)*; Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission; Table 2; Released May 2005, which is included as Exhibit \_\_\_ (DCB-2). It should be noted that that the FCC's household penetration statistics do not count households that only use a wireless phone for all of their voice communications and have discontinued their wireline service.

Alltel Florida, Inc.

Docket No.

Filed: September 29, 2005

1    **Q.    How has competition for local telephone service impacted the support flows to**  
2    **residential local service?**

3    **A.**    Rates for basic residential local telephone service provided by Alltel over the local  
4    wireline network continue to be priced based on past public policy principles. These  
5    principles, and the resulting low prices, may have been useful in a monopoly  
6    environment when telephony was a new service and policy-makers sought to increase  
7    subscribership. However, as discussed above, that policy is no longer an effective or  
8    necessary means to increase penetration for local residential telephone service beyond  
9    95%. Additionally, in light of today's competitive market for toll and local telephone  
10   service via wireline, wireless, VoIP and cable TV, it has become increasingly difficult  
11   to sustain the contributions from the now competitive services that support Alltel's  
12   basic local residential telephone service. Competition for toll, business lines, and  
13   other services has put pressure on Alltel and other ILECs to reduce the prices for these  
14   services and, as a result, reduce the support that they provide to local residential  
15   service. As competition forces these rates down closer to average cost, support for  
16   basic local residential telecommunications service is eroding and can no longer be  
17   sustained. Thus, as the market for all telecommunications services becomes  
18   increasingly competitive and the current support flows erode, the rates for Alltel's  
19   basic local telephone service must be increased to more accurately reflect the actual  
20   underlying cost for the service. The Florida Legislature recognized the impact of  
21   competitive pressure and the resulting necessity to rebalance rates when it adopted the  
22   Act.

23  
24   **Q.    Please describe the Florida statutory requirements with regard to the reduction**  
25   **of intrastate switched access rates to parity in a revenue-neutral manner.**

Alltel Florida, Inc.  
Docket No.  
Filed: September 29, 2005

1 A. The Act allows an ILEC to reduce its intrastate switched access rates to parity over a  
2 period of two to four years in a revenue-neutral manner. For Alltel, an ILEC with less  
3 than one million lines, "parity" is defined in the Act as: "the company's intrastate  
4 switched network access rate<sup>4</sup> is 8 cents per minute." See § 364.164(5), Fla. Stat.  
5 Under the Act, local exchange carriers that reduce their intrastate switched access rates  
6 to parity may increase the price of other services in a revenue-neutral manner.<sup>5</sup>  
7 Subsection (1) of the Act states that the Commission shall consider whether granting  
8 the petitions will:

- 9
- 10 a. Remove current support for basic local telecommunications services  
11 that prevents the creation of a more attractive competitive local  
12 exchange market for the benefit of residential consumers;
- 13 b. Induce enhanced market entry;
- 14 c. Reduce intrastate switched network access rates to parity over a period  
15 of not less than 2 years or more than 4 years; and
- 16 d. Be revenue neutral as defined in subsection (7) within the revenue  
17 category defined in subsection (2).

18

19 **Q. Is the Alltel plan similar to those the Commission approved for BellSouth, Sprint**  
20 **and Verizon?**

---

<sup>4</sup> Section 364.164(6), Florida Statutes, defines the term intrastate switched network access rate for purposes of this section as "the composite of the originating and terminating network access rate for carrier common line, local channel/entrance facility, switched common transport, access tandem switching, interconnection charge, signaling, information surcharge, and local switching." A copy of Section 364.164, Florida Statutes, ("Act") is included in Exhibit No. \_\_\_\_ (DCB-3).

<sup>5</sup> Section 364.164(7), Florida Statutes, states that the term "revenue neutral" means: "the total revenue within the revenue category established pursuant to this section remains the same before and after the local exchange telecommunications company implements any rate adjustments under this section."

1 A. Yes. In Dockets 030867-TL, 030868-TL, 030869-TL ("Rebalancing Dockets"), this  
2 Commission approved petitions by BellSouth, Verizon, and Sprint to reduce their  
3 intrastate switched access rates to parity and offset the revenue reduction by increasing  
4 their rates for basic local residential service. As I will describe in more detail later,  
5 Alltel is seeking approval of a very similar plan to reduce its intrastate switched access  
6 rates to parity and offset the revenue reduction by increasing its basic local service  
7 rates.

8

9 **III. INTRASTATE SWITCHED ACCESS RATES CURRENTLY PROVIDE**  
10 **SUPPORT FOR BASIC LOCAL TELECOMMUNICATIONS SERVICE THAT**  
11 **WOULD BE REDUCED BY LOWERING THESE RATES.**

12

13 **Q. Do Alltel's intrastate switched access rates provide support to basic local**  
14 **telecommunications service?**

15 **A.** Yes. Alltel's basic local residential telephone services are priced below average cost  
16 and are supported by contributions from a number of other telecommunications  
17 services. Chief among these are intrastate switched access rates which were set  
18 significantly above average cost in order to provide support to basic local residential  
19 telephone services. Prior to the divestiture of AT&T in 1984, interstate and intrastate  
20 toll was priced above average cost and the excess revenues were used to support basic  
21 local telecommunications services. After the divestiture of AT&T, interstate and  
22 intrastate switched network access services were created and used as the means to  
23 continue the support flow from toll users to subscribers of basic local residential  
24 telecommunications service.

25

1 The fact that intrastate switched access supports basic local telecommunications was  
2 acknowledged in the Florida *Senate Staff Analysis and Economic Impact Statement on*  
3 *the Tele-Competition Act*, which stated:

4  
5 According to the commission, intrastate network access service  
6 rates were set well above the incremental cost of providing the  
7 service in order to keep rates for basic local telecommunications  
8 service as low as possible and to encourage subscribership.<sup>6</sup>  
9

10 **Q. What demonstrates that Alltel's residential local rates are currently receiving**  
11 **implicit support contributed by intrastate access rates?**

12 **A.** Below, I present and discuss the results of three cost studies, each of which  
13 demonstrate that Alltel's residential rates are below average cost. This means that  
14 Alltel's basic residential local telephone service is being supported by other services  
15 because it is not covering its share of common and overhead costs. Conversely, the  
16 Hatfield Version 5.0a cost study cost study also demonstrates that Alltel's intrastate  
17 switched access rates are currently priced significantly above average cost, meaning  
18 that access is not only covering its own cost including overheads but is also providing  
19 support for residential local service.

20  
21 In Table 1, shown in Exhibit No. \_\_\_\_ (DCB-O), the current and proposed rates for  
22 Alltel Florida's basic local residential telephone service and intrastate switched  
23 network access service are compared to two cost studies from Florida Commission

---

<sup>6</sup> See *Senate Staff Analysis and Economic Impact Statement of CS/SB 654 - the Tele-Competition Innovation and Infrastructure Enhancement Act.*, dated April 8, 2003, p. 9, a copy of which is included as Exhibit No. \_\_ (DCB-34).

Alltel Florida, Inc.  
Docket No.  
Filed: September 29, 2005

1 Docket No. 980696-TP - a forward-looking TELRIC-based cost study calculated using  
2 the Benchmark Cost Proxy Model Version 3.1 ("BCPM 3.1") with the model default  
3 settings and a fully distributed embedded cost study also presented in that docket by  
4 the small ILECs with adjustments made by the FPSC Staff. The third study reflected  
5 in Table 1 is also a forward-looking TELRIC-based cost study and was conducted by  
6 Alltel for this proceeding. It was developed from the Hatfield Cost Model Version  
7 5.0a ("HAI 5.0a") using default inputs modified with company specific inputs for  
8 Alltel.<sup>7</sup>

9  
10 As can be seen in Table 1 of Exhibit \_\_\_\_ (DCB-O), the current price of \$10.49 for  
11 Alltel Florida's basic local residential telephone service is far below the forward-  
12 looking cost study estimates produced by the BCPM 3.1 and the HAI 5.0a proxy cost  
13 models and is below the cost study estimate produced by the Commission-approved  
14 fully distributed embedded cost study conducted in Docket No. 980696-TP.  
15 Additionally, the table illustrates that the proposed price for intrastate switched access  
16 is still higher than the HAI 5.0a forward-looking cost of providing that service despite  
17 the fact that Alltel proposes to price its switched access below the statutorily defined  
18 "parity" rate of \$0.08 per minute.

19  
20 **Q. What type of cost study does Chapter 364, Florida Statutes, require for**  
21 **determining the cost of providing basic local telecommunications service for**  
22 **small local exchange telecommunications companies?**

---

<sup>7</sup> The HAI 5.0a model is used to provide an estimate of forward-looking TELRIC rates for Alltel because the Company has not yet estimated a forward-looking model for the Florida study area. Later versions of HAI and the FCC's BCPM model that are publicly available do not contain data for Alltel. The HAI value found in Table 1 was developed using the total per line cost of service multiplied by the portion of total cost allocated to local service (non-private line) in the Company's 2004 cost study. Exhibit No. \_\_\_\_ (DCB-4) reflects related HAI 5.0a files and Exhibit No. \_\_\_\_ (DCB-5) reflects the Alltel 2004 embedded cost study.

Alltel Florida, Inc.  
Docket No.  
Filed: September 29, 2005

1 A. Section 364.025(c), Florida Statutes, which applies to ILECs with fewer than 100,000  
2 access lines, gives the Commission two options for determining the forward-looking  
3 cost of providing basic local telecommunications service for small local exchange  
4 telecommunications companies. The Commission may elect to use a proxy cost  
5 model, but one that is different than the model the Commission would develop for the  
6 larger ILECs in a public docket or the Commission may use a fully distributed  
7 embedded cost model that is consistent with 47 C.F.R. parts 32, 36, and 64.<sup>8</sup>

8  
9 The Commission has used an embedded cost study before. Docket No. 980696-TP  
10 was initiated by this Commission to satisfy the legislative requirement to determine  
11 and report to the Legislature the total forward-looking cost of providing basic local  
12 telecommunications service. The purpose of the docket was to advise the Legislature  
13 of the cost of providing local service for the purpose of establishing a permanent  
14 universal service mechanism. In Docket 980696-TP, the small ILECs sponsored an  
15 embedded cost study that was based on Part 36 jurisdictional separations procedures.  
16 The Commission determined that the fully distributed embedded cost study sponsored  
17 by the small ILECs best represented the cost of providing basic local  
18 telecommunications for the small ILECs, such as Alltel. Thus, rather than use the  
19 results generated by the BCPM 3.1 cost proxy model as the cost basis, the  
20 Commission elected to use the results from the small ILECs' embedded cost study as  
21 the appropriate cost basis for the purposes of establishing a universal service fund. In  
22 its order, the Commission ruled that under Section 364.025(4)(c), Florida Statutes, the  
23 embedded cost methodology, with adjustments as specified in the body of the Order,  
24 was "adopted for Alltel Florida ... to determine those carriers' respective costs of

---

<sup>8</sup> See § 364.025(c), Fla. Stat., a copy of which is included as Exhibit No. \_\_\_\_ (DCB-6).

1 providing basic local telecommunications service.” Relevant excerpts from the Final  
2 Order in Docket No. 980696-TP are included as Exhibit No. \_\_\_\_ (DCB-7).

3  
4 **Q. What adjustments did the Commission make to the embedded cost model  
5 proposed by the small ILECs?**

6 **A.** The Commission used the embedded cost methodology proposed by the small ILECs  
7 and made a few adjustments to the ILECs’ cost study. The Commission adjusted  
8 AFUDC (Allowance for Funds Used During Construction), Account 7370 lobbying  
9 and contribution expenses, gross receipts tax, working capital account, property taxes,  
10 interest expense, corporate operations expense per line, and cost of equity for various  
11 ILECs. After the Commission’s adjustments, the embedded cost model produced a  
12 final cost number for Alltel’s basic local service of \$41.32, which was only slightly  
13 lower than the \$41.97 cost estimate developed by Alltel. By comparison, the results of  
14 the embedded cost study were 38% lower than the cost estimate of \$66.37 generated  
15 by the BCPM 3.1 cost proxy model in that docket, but only 12% lower than the cost  
16 estimate of \$48.44 generated by the HAI Version 5.0a cost proxy model that I present  
17 in Exhibit No. \_\_\_\_ (DCB-4) and discuss in this testimony.

18  
19 **Q. What adjustments did Alltel make to the HAI 5.0a cost proxy model?**

20 **A.** Alltel changed a few of the default inputs in the HAI 5.0a cost proxy model in order to  
21 better reflect Alltel’s actual investment and expenses in Florida. Accordingly, Alltel  
22 modified the following inputs: cost of capital; depreciation lives and salvage value for  
23 some of the equipment; and the investment dollars for NID (Network Interface  
24 Device) and DLC (Digital Loop Carrier); cable investment (distribution, feeder and  
25 drop); and the factors for corporate overhead and taxes. A list of the input factors that

Alltel Florida, Inc.

Docket No.

Filed: September 29, 2005

1 Alltel changed in the HAI 5.0a cost proxy model to better reflect the costs of Alltel  
2 providing service in its Florida service area is provided in Exhibit No. \_\_\_\_ (DCB-4).

3  
4 With respect to the cost of capital, Alltel changed the HAI model inputs to reflect a  
5 lower debt ratio and a higher equity ratio, which better represents Alltel's debt-equity  
6 ratio. Additionally, Alltel's current cost of debt is lower than the HAI 5.0a model's  
7 default rate. Alltel also changed the cost of equity slightly to reflect Alltel's cost of  
8 equity. These changes produce an overall rate of return of 10.79% for Alltel as shown  
9 in Exhibit No. \_\_\_\_ (DCB-4). The depreciation lives and salvage values for twelve of  
10 the twenty-two equipment investment categories were modified to reflect the  
11 depreciation lives and salvages values that were approved by this Commission in 1996  
12 during Alltel's last depreciation study.<sup>9</sup>

13  
14 Alltel also increased the default setting for the per line monthly LNP revenue collected  
15 to 37 cents per month to reflect the amount that Alltel actually collects. The  
16 investment dollars for NIDs were changed from the HAI 5.0a model default inputs to  
17 reflect the current material prices and installation labor amounts used by Alltel Florida  
18 for capital cost estimates. The model input for DLC Investment dollars was changed  
19 to reflect the fact that Alltel uses Calix equipment which comes in different size  
20 increments than the 120/240 low-density and 672/1344/2016 high-density sizes used  
21 in the HAI model. This change led to slight increase in DLC investment when Calix  
22 equipment requirements were developed using the HAI cluster data and current  
23 material prices.

---

<sup>9</sup> See Order No. PSC-96-0680-FOF-TL; In Re: Request for Approval of 1995 Depreciation Study by Alltel Florida, Inc.; Dkt. No. 950887-TL (May 23, 1996), a copy of which is included as Exhibit No. \_\_\_\_ (DCB-8).

1 Alltel changed the investment dollars per foot and labor installation costs for  
2 distribution, feeder, and drop cable as well as for poles using current material costs  
3 and average installation hours found in Alltel's work order management system. The  
4 fill rates in the HAI model were not changed because the HAI model reflects what  
5 Alltel believes would be a reasonable forward-looking fill rate. Finally, Alltel reduced  
6 the corporate overhead cost factor and reduced the "Other Taxes" factor as shown in  
7 Exhibit No. \_\_\_ (DCB-4). The net change resulting from Alltel's input changes was  
8 to increase the HAI 5.0a model output for the default cost of local service in Alltel's  
9 service territory from \$41.76 to \$48.44. Both cost estimates are significantly greater  
10 than Alltel's current average rate for residential basic local service of \$10.49.

11  
12 **Q. What do you conclude about Alltel's cost of providing basic local service and**  
13 **whether its local service is being supported by contributions from Alltel's**  
14 **intrastate switched access revenues?**

15 **A.** The fully distributed embedded cost study as modified by the Commission Staff and  
16 as approved by the Commission in Docket 980696-TP and the HAI 5.0a forward-  
17 looking cost study developed by Alltel for this proceeding both show conclusively that  
18 the average cost of Alltel's residential basic local telecommunications services is  
19 much greater than its current price of \$10.49. This means that basic residential local  
20 telephone service is being supported by other services because it is not covering its  
21 share of common and overhead costs. Alltel's basic local service is receiving implicit  
22 support because the revenues from Alltel's basic local service are insufficient to  
23 recover its own long run forward-looking and/or direct costs. The support for basic  
24 residential local service comes from all those services that are priced above average  
25 cost; most notably intrastate switched access. Alltel's intrastate switched access rate is

1 priced significantly above average cost and is not only covering its own cost including  
2 overheads, but is also providing support for residential local service.

3 **Q. Is it clear that residential local service is being supported by intrastate switched**  
4 **access?**

5 **A.** Yes. However, even though the price of one service may be supported by the price of  
6 another, it does not mean that a subsidy exists. There is a fundamental distinction  
7 between a subsidy flow and a support flow. Although these terms are sometimes used  
8 interchangeably, they are not the same. Subsidy has a very precise definition in  
9 economic literature that a service is said to be internally subsidized if the price of the  
10 service is below its long run marginal cost while the price of another service exceeds  
11 its stand alone cost.<sup>10</sup> On the other hand, implicit support can occur even if the  
12 favored service is priced at or just above long run marginal cost but below the average  
13 cost of providing the service and other services are priced above average cost. In each  
14 case, one set of services is priced at artificially high levels (above average cost) to  
15 support other service(s) priced at below average cost. Thus, internal subsidization is  
16 an extreme example of implicit support. In either case, as competition forces the price

---

<sup>10</sup> See *Handbook of Telecommunications Economics*, Amsterdam: Elsevier Science, 2001 and *Chapter 10, UNIVERSAL RESIDENTIAL TELEPHONE SERVICE*, Michael H. Riordan, *Columbia University*, August 29, 2001, a copy of which is included as Exhibit No. \_\_\_ (DCB-9). A possible tension between the popular meaning and Faulhaber's definition of a cross-subsidy is revealed in the following quotation from Kaserman and Mayo (1994 pp. 135-6):

"To some extent, the argument over whether a subsidy exists is semantic. The answer hinges upon one's definition of a subsidy and how one would measure the costs of the services involved. Regardless of the position one adopts, however, there is no economic justification for a system that places the burden of fixed network costs on usage-sensitive prices. Such a system is inefficient whether or not a subsidy results. Consequently, one need not become mired in the subsidy debate to make definite statements about efficient pricing policies. We will continue to use the cross-subsidization terminology throughout the remainder of this article because it is convenient to characterize the overpricing of one service along with the under-pricing of another as a cross-subsidy, whether or not these prices fall outside the range that the Faulhaber criteria define. What is more, we are convinced that such cross-subsidization exists, is substantial, and is an accurate description of the existing price structure in this industry." See Exhibit No. \_\_\_ (DCB-9).

Alltel Florida, Inc.

Docket No.

Filed: September 29, 2005

1 of contributing services down to average cost, it becomes more difficult to fund the  
2 support flows. I am not claiming that residential service is internally subsidized nor  
3 does the statute require such a demonstration.<sup>11</sup> It is clear, however that residential  
4 local service prices are supported by intrastate access rates and that as competition  
5 continues to develop, these support flows are not sustainable.

6  
7 The Commission concluded in the Rebalancing Dockets that intrastate switched access  
8 rates do, in fact, provide support to basic local residential telecommunications  
9 services. Specifically, in paragraph 1 of section V, Summary of Decision, in the  
10 Rebalancing Order, the Commission stated:

11  
12 Intrastate access rates currently provide support for basic local  
13 telecommunications services that would be reduced by bringing  
14 such rates to parity with interstate access rates.<sup>12</sup>

15  
16 The Commission should make the same finding in this proceeding, that intrastate  
17 access rates currently provide support for basic local telecommunications services that  
18 would be reduced by bringing such rates to parity as defined by the Act. The cost  
19 studies clearly show that basic local residential telecommunication service is priced far  
20 below its embedded and forward-looking average cost while intrastate switched access  
21 is priced above its embedded and forward-looking average cost conclusively showing

---

<sup>11</sup> Section § 364.164(1) (a), Florida Statutes, speaks of removing support not eliminating internal subsidies.

<sup>12</sup> See Rebalancing Order at 14, Exhibit No. \_\_\_\_ (DCB-10).

1 that basic local residential telecommunications service is being supported by intrastate  
2 switched access services.

3 **Q. How should the loop be allocated?**

4 **A.** The Commission determined in the Rebalancing Dockets, that the cost of the local  
5 loop is a cost of basic local service. A contrary finding would be inconsistent with  
6 past Commission decisions, especially the Commission's 1998 Report on Fair and  
7 Reasonable Rates to the Legislature wherein it specifically stated that the costs  
8 associated with the local loop should not be allocated. This Commission has a  
9 consistent policy on this issue.<sup>13</sup>

10

11 **Q. If Alltel's intrastate switched access rates are moved to parity as defined by the**  
12 **Statute and Alltel's rates for residential local service are increased, will all**  
13 **support for Alltel's residential local service rates have been eliminated?**

14 **A.** No. In addition to some remaining support continuing to flow from access, Alltel's  
15 residential local service receives additional support from other services. To the extent  
16 that any service that Alltel provides is priced above average cost, it may be considered  
17 to be providing support to Alltel's residential local service and any other service that  
18 may be priced below its average cost. For example, intraLATA toll and custom  
19 calling features generally are considered to provide support to local residential service.  
20 However, for the purposes of this proceeding, the Legislature has specified that  
21 intrastate switched access rates are the target and are to be reduced and rebalanced  
22 against basic local rates. However, because residential rates will still be below their  
23 average costs, this proceeding will not lead to a complete rebalancing of rates.

24

---

<sup>13</sup> See Rebalancing Order at 18.

1 IV. THE EXISTENCE OF LOCAL SERVICE SUPPORT PREVENTS THE  
2 DEVELOPMENT OF A MORE COMPETITIVE LOCAL EXCHANGE  
3 MARKET.

4  
5 Q. How does support from intrastate switched access prevent the development of a  
6 more competitive local exchange market?

7 A. Artificially low local residential service prices discourage potential competitors from  
8 entering the residential market. Potential competitors look at the prevailing market  
9 price, their own costs of providing the service and the resulting profit margins as key  
10 factors in making a determination as to whether they will enter a particular market. If  
11 the market price of residential local service is less than the potential competitor's  
12 anticipated costs, the potential competitor will not view residential service as a  
13 potentially profitable venture and therefore will not enter that market.

14  
15 Even if a potential competitor has a lower underlying cost of provisioning local  
16 residential service than the ILEC, the potential competitor will not enter the market if  
17 the ILEC's artificially low price for local residential service is below the potential  
18 entrant's cost. As discussed previously, this is exactly the situation in the Alltel  
19 markets.<sup>14</sup>

20  
21 Q. What happens if the market price of residential local service is greater than the  
22 potential competitor's anticipated costs?

---

<sup>14</sup> Uneconomic competitive advantage refers to differences not resulting from underlying cost or quality differences.

1 A. If the market price of residential local service is equal to or greater than the potential  
2 competitor's anticipated costs (including a reasonable profit), the potential competitor  
3 is incented to enter that market. Of course, the greater the profit margin, the greater  
4 the number of potential competitors that will enter the market. For example, if the  
5 market price of residential local service in Alltel's territory were \$100 and the new  
6 entrants' cost to provide service was only \$30, Alltel's territory would be flooded with  
7 new entrants seeking to participate in a very lucrative market to capture those profits.  
8 While I am not advocating a market price of \$100, I simply use this example to  
9 illustrate the principle that the higher the price, the greater the number of competitors  
10 that will seek to enter the market. Ultimately, the increased competition will force  
11 prices down to cost and drive out the inefficient providers. To the extent that the price  
12 for Alltel's local residential service is moved closer to average cost, the market will  
13 become that much more attractive to potential competitors.

14  
15 **Q. Does that fact that the price of Alltel's residential local service is so far below its  
16 cost have any impact on whether a competitor will enter Alltel's local market?**

17 A. Absolutely not. Although cost and market share measures are meaningful to  
18 competitors, competitors will look principally at Alltel's price of local 1R service, not  
19 just Alltel's cost. Competitors are primarily concerned about their own cost of  
20 providing service and whether they can charge a price that is high enough to cover  
21 their own costs. If the market price (i.e., Alltel's price) of residential local service is  
22 greater than the potential competitor's anticipated costs (including a reasonable profit),  
23 the potential competitor is incented to enter that market. Thus, a competitor doesn't  
24 care if Alltel's costs are \$1 or \$100 greater than Alltel's price. A competitor only  
25 cares whether its own costs are less than Alltel's price.

1 Q. Will moving the price of Alltel's residential local service closer to average-cost  
2 attract other providers of local telecommunications besides CLECs?

3 A. Yes. As the price of Alltel's local residential service moves closer to average cost, all  
4 types of providers of local telecommunications services will factor the new market  
5 price into their market entry analyses and re-evaluate whether entry will be profitable.  
6 Today, there are a number of different technologies and carriers that compete in the  
7 local telecommunications market in Florida and/or the United States, including  
8 wireline CLECs, wireless carriers, cable telephony providers, voice over internet  
9 protocol ("VoIP") providers, electric utilities, and even satellite carriers. One  
10 important reason for moving the price of Alltel's residential local service toward  
11 average cost is that technological change is proceeding rapidly and that competitive  
12 markets can do a much better job of discovering which technologies can best provide  
13 service to customers in any given region. However, in order for the lowest-cost mix of  
14 technologies to enter or remain in the market, prices and the signals they send must  
15 not be distorted and must reflect the underlying cost of providing service. Alltel's  
16 plan to move the price of its residential local service closer to average cost will  
17 encourage new entrants, regardless of their chosen technology, to enter or expand in  
18 the marketplace. At current rate levels even competitors using lower-cost (or more  
19 attractive) technologies may not be able to compete against a supported ILEC price  
20 that does not reflect its own average costs.

21  
22 This Commission's decision in the Rebalancing Dockets also supports my conclusion.  
23 The Commission found that the existence of local service support from intrastate  
24 switched access prevents the creation of a more attractive competitive local exchange

1 market. Specifically, in paragraph 2 of the Summary of Decision portion of the  
2 Rebalancing Order, the Commission concluded:

3  
4 The existence of such support (i.e., subsidies from intrastate  
5 switched access) prevents the creation of a more attractive  
6 competitive local exchange market by keeping local rates at  
7 artificially low levels, thereby raising an artificial barrier to entry  
8 into the market by efficient competitors.<sup>15</sup>

9  
10 The same finding is appropriate in this proceeding for Alltel that the existence of  
11 support from intrastate switched network access prevents the creation of a more  
12 attractive competitive local exchange market by keeping rates for basic local  
13 residential telephone service at artificially low levels, thereby raising an artificial  
14 barrier to entry into the market by efficient competitors.

15  
16 **V. THE REDUCTION OF SUPPORT WILL INDUCE MARKET ENTRY INTO**  
17 **THE LOCAL EXCHANGE MARKET.**

18  
19 **Q. Why will the reduction of support enhance market entry into the local exchange**  
20 **market?**

21 **A.** As discussed in the preceding section, market entry will be enhanced if implicit  
22 support is removed from Alltel's local residential service rates and the service is  
23 priced at or above long run incremental cost plus a reasonable share of common and  
24 overhead costs. Reducing implicit support and raising residential service rates will

---

<sup>15</sup> See Rebalancing Order at 14.

1 better enable potential competitors with cost structures lower than and or equal to that  
2 of Alltel to compete effectively. Conversely, continuing to support 1R basic local  
3 services will continue to hamper the development of competition for those services.  
4 In effect, the elimination of implicit support will result in a price that will give more  
5 correct economic signals about the potential profitability of providing local residential  
6 telecommunications service and lead to a more efficient allocation of resources.

7  
8 **Q. What empirical evidence supports the idea that rate rebalancing will enhance**  
9 **entry into the residential local telecommunications market?**

10 **A.** The National Economic Research Associates published a research paper describing the  
11 results of an empirical investigation of whether low basic local residential rates were  
12 stifling the development of residential competition. The authors, McDermott and Ros,  
13 compared how local competition varied across different states depending on how  
14 “unbalanced” the prices were for local telephone service; that is, the extent to which  
15 rates for local residential telephone service were priced below average cost and rates for  
16 local business telephone service were priced above average cost. The authors even  
17 measured the degree to which local residential exchange prices were “distorted” in each  
18 state. The authors found that residential rates priced below average cost inhibited the  
19 development of competition for local residential telephone service.

20  
21 More specifically, Ros and McDermott set out to test the hypothesis of whether  
22 residential rates set below average cost and business rates set above average cost were  
23 having an impact on the development of local exchange competition and inhibiting the  
24 development of residential competition. Ros and McDermott noted that competitors  
25 are targeting business services because they tend to be priced above their average

1 costs. Conversely, the authors noted that CLECs are largely ignoring residential  
2 customers because residential services tend to be priced below average cost. CLECs  
3 may be ignoring residential customers not because underlying demand and supply  
4 conditions justify it but rather because of regulatory distortions. If true, the policy  
5 implication is that states should move more aggressively than they have to date in  
6 rebalancing prices – i.e., setting residential and business prices in accordance with  
7 economic efficiency.<sup>16</sup>

8  
9 Ross and McDermott measured residential competition separate from business  
10 competition and further divided competition into both facilities-based and resale.  
11 Using both ordinary least squares (OLS) and generalized least squares (GLS), the  
12 authors found that unbalanced local exchange prices had a negative impact on the  
13 development of residential local exchange competition. Specifically, they found that  
14 as prices were more unbalanced, the percent of ILEC residential lines served by  
15 switching centers where new entrants have collocation arrangements decreased.  
16 Based on the model's results, the authors concluded that a 10% increase in residential  
17 rates (which were below average cost) could lead to a 9% to 13% increase in local  
18 competition. Their paper notes:

19  
20 we found a significant and positive association between states that  
21 have more “balanced” tariffs and residential competition. For two  
22 measures of residential competition used in our data, we found that

<sup>16</sup>Agustin J. Ros and Karl McDermott, “Are Residential Local Exchange Prices Too Low? Drivers to Competition in the Local Exchange Market and the Impact of Inefficient Prices,” in Michael Crew, *Expanding Competition in Regulated Industries*, Kluwer Academic Publishers, 2000. p. 54, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-11).

1                   “rebalancing” tariffs by 10% leads to approximately a 9% and 13%  
2                   increase, respectively, in residential competition.<sup>17</sup>

3

4   **Q.    What other empirical evidence can you provide that supports this concept?**

5   **A.**   Two other studies, referenced in the Rebalancing Dockets, also support the conclusion  
6           that rate rebalancing will enhance entry into the local residential telecommunications  
7           market.<sup>18</sup> Specifically, an empirical study conducted by James Eisner and Dale E.  
8           Lehman concluded: “there appears to be less competitive entry (principally facilities-  
9           based) where residential rates are lower. These findings are generally statistically  
10          significant at the 90% level.”<sup>19</sup> Also an empirical study conducted by Ros and  
11          Banejee that examined rate rebalancing in Latin America concluded that in some Latin  
12          American countries where the supply of residential local service had been constrained  
13          by below cost pricing, rate rebalancing led to increases in the supply of main  
14          telephone lines by providing better incentives to market participants.<sup>20</sup> Specifically,  
15          the authors concluded that:

16

17                   instead of relying on artificially low prices to trigger greater use of  
18                   the telecommunications network—on the theory that low prices

---

<sup>17</sup> Id. at 67

<sup>18</sup> These studies were discussed in the Amended Direct Testimony of Dr. Kenneth Gordon On behalf of Verizon Florida Inc., BellSouth Telecommunications, Inc., and Sprint-Florida Inc, a copy of which was entered into the record in the Rebalancing Dockets and which is included as Exhibit No. \_\_\_ (DCB-12).

<sup>19</sup> James Eisner and Dale E. Lehman, *Regulatory Behavior and Competitive Entry*, presented at the 14<sup>th</sup> Annual Western Conference Center for Research in Regulated Industries, June 28, 2001; p. B24 [Hereinafter “Eisner and Lehman], a copy of which is included as Exhibit No. \_\_\_ (DCB-13).

<sup>20</sup> Agustin J. Ros and Aniruddha Banejee, “Telecommunications Privatization and Tariff Rebalancing: Evidence from Latin America,” *Telecommunications Policy*, 24 (2000) 233-252, a copy of which is included as Exhibit No. \_\_\_ (DCB-14).

1 enable consumers to harness network externalities and increase  
2 penetration rates—it is more pragmatic to allow  
3 telecommunications operators, especially in countries that have  
4 privatized, to recover their costs by charging compensatory prices.  
5 A country may be able to generate “high” levels of demand by a  
6 deliberate policy of maintaining prices below cost or at low levels,  
7 but—as long as it does not provide subsidy support for such  
8 prices—it is only by increasing actual supply that the country can  
9 actually expect to see service delivered to consumers.<sup>21</sup>

10 **Q. Please provide more detail about the Eisner and Lehman study.**

11 **A.** Using data compiled by the FCC, Eisner and Lehman, developed and ran more than 40  
12 regression models to determine the ways in which regulatory behavior may have  
13 affected the rate and type of competitive entry into the local telecommunications  
14 market. In particular, the authors were interested in the efficacy that the pricing of  
15 unbundled network elements (UNEs) and the setting of resale discounts had on CLEC  
16 entry. The authors reviewed several variables including rates for basic local  
17 residential telephone service and confirmed earlier research conducted by Ros and  
18 McDermott, which found that higher retail residential rates tend to promote facilities-  
19 based entry.<sup>22</sup> Eisner and Lehman also found that “In most of the models, CLEC lines  
20 increase with residential rates and the effect is significant at the 90 percent  
21 significance level.”<sup>23</sup> Thus, there is empirical evidence that higher retail rates for

---

<sup>21</sup> Id. at 27, Exhibit No. \_\_\_\_ (DCB-14).

<sup>22</sup> See Eisner and Lehman at B10 [Exhibit No. \_\_\_\_ (DCB-13)].

<sup>23</sup> Id. at B20.

1 basic local residential telephone service provide stronger incentives for CLECs to  
2 enter those local markets and tend to promote facilities-based entry.

3  
4 **Q. Who are the competitors that could enter Alltel's markets if rates are**  
5 **rebalanced?**

6 **A.** Since DSL is available in all of Alltel's exchanges except Hastings, it is physically  
7 possible for Vonage, AT&T, BellSouth and others to offer VoIP telephony service  
8 throughout Alltel's Florida territory. Therefore, if the price of Alltel's 1R service  
9 increases to \$16.49, then Vonage's \$14.99 plan becomes a viable competitive choice  
10 in Alltel's Florida territory that customers might choose over Alltel for a second phone  
11 line.<sup>24</sup> It is likely that other VoIP-based providers such as AT&T and BellSouth  
12 would also find it profitable to enter Alltel's territory if the average price of Alltel's  
13 1R service was increased to \$16.49.

14  
15 Skype is another potential VoIP-like competitor in Alltel's territory and may, in fact,  
16 be competing within Alltel's Florida territory today. Ebay recently spent \$2.6 billion  
17 to purchase Skype - a software-based peer-to-peer ("P2P") file sharing program  
18 similar to Napster and Kazaa (the music file-sharing programs that caused much  
19 controversy), that allows callers to use the P2P file-sharing software to place voice  
20 phone calls over the internet in real-time with call quality that is comparable to the  
21 quality provided by the traditional public switched telephone network. Skype's  
22 software is available as a free download on the internet at [www.skype.com](http://www.skype.com) and only

---

<sup>24</sup> Since Alltel provides DSL service over its own loops, Alltel's DSL customers are required to purchase 1R voice service from Alltel. Thus, existing Alltel customers would only be buying their 2<sup>nd</sup> and 3<sup>rd</sup> lines from Vonage or another VoIP provider. However, if the local cable TV provider offered broadband internet services to any of Alltel's customers, then those customer could purchase Vonage's VoIP local phone service without having to also purchase voice service from Alltel.

1 requires a 33.6 kbps dial-up internet connection for phone service although faster  
2 speeds are better. Calls between Skype customers are free and calls from a Skype user  
3 to a landline or wireless customer are approximately 2.3 cents per minute. Skype  
4 already has 54 million members in 225 countries and territories and adds  
5 approximately 150,000 users a day. In North America alone, Skype has more users  
6 and serves more voice minutes than any other Internet voice communications  
7 provider.<sup>25</sup>

8  
9 **Q. In addition to VoIP providers, could cable TV companies also provide competing**  
10 **voice telephone services in Alltel's Florida territory?**

11 **A.** Yes, many cable TV companies such as Cox, Time Warner, Comcast, and others are  
12 providing voice telephony services over their cable networks throughout the U.S. and  
13 have plans to some day offer voice telephony service in Alltel's territory if they  
14 currently provide cable TV service there. Cox Communications has over one million  
15 telephone customers and plans to offer its \$39.95 local calling/unlimited long distance  
16 calling plan in Alachua, which is currently served by Alltel.<sup>26</sup> Time Warner's Digital  
17 Phone service has been launched in all of its divisions and is available to over 70% of  
18 TWC Inc.'s homes passed.<sup>27</sup> Time Warner provides cable TV and broadband internet  
19 services in Live Oak, Mayo, Jennings, and Interlachen which are in Alltel's service  
20 territory. I anticipate that Time Warner will offer voice telecommunications in these  
21 Alltel communities in the future. In addition to offering voice telephony, Cox and  
22 Time Warner offer high speed internet service in direct competition with Alltel's DSL

1 offering. Both Cox and Time Warner bundle cable TV, broadband internet, unlimited  
2 long distance calling and, in some instances, wireless calling, with their local phone  
3 service in an effort to entice customers away from the ILEC.

4

5 **Q. What should the Commission conclude with regard to whether the elimination of**  
6 **support will enhance market entry into the residential local exchange market?**

7 **A.** The Commission should find, as it did in the Rebalancing Dockets, that the  
8 elimination of support will induce competitive entry into the residential local exchange  
9 market. In paragraph 3 in the Summary of Decision section of the Rebalancing Order,  
10 the Commission found that: "The elimination of such support (i.e., subsidies from  
11 intrastate switched access supporting local residential service) will induce enhanced  
12 market entry into the local exchange market."

13

14 Accordingly, based on the record in this case, the Commission should make the same  
15 finding in this proceeding for Alltel that the elimination of support will enhance  
16 market entry into the local exchange market. As discussed above, empirical evidence  
17 supports the contention that raising retail rates for basic local residential telephone  
18 service closer to cost provides stronger incentives for CLECs to enter those local  
19 markets and promotes facilities-based entry.

20

21 **VI. ENHANCED MARKET ENTRY WILL RESULT IN THE CREATION OF A**  
22 **MORE COMPETITIVE LOCAL EXCHANGE MARKET THAT WILL**  
23 **BENEFIT RESIDENTIAL CONSUMERS**

24

1 Q. How will enhanced market entry result in the creation of a more competitive  
2 local exchange market that will benefit residential consumers?

3 A. As discussed above, to the extent that Alltel's rates for local residential telephone  
4 service are moved closer to average cost, competitors will have a greater incentive to  
5 enter Alltel's territory and provide competitive local residential telephone service.  
6 Today, competitors are making in-roads into the local residential telecommunications  
7 market. Alltel's rate rebalancing is necessary to increase such competition.

8  
9 Q. Is there evidence that other types of local telecommunications providers are  
10 competing with ILEC fixed-wireline local service?

11 A. Yes. CLECs, wireless carriers, cable telephony providers, VoIP providers, electric  
12 utilities, and even satellite carriers are competing in the local telecommunications  
13 market in Florida. In its most recent report to the state legislature regarding the status  
14 of competition in the telecommunications market in Florida, the FPSC discussed  
15 existing and potential competitors providing local telecommunications services, and  
16 stated:

17  
18 In an environment of emerging intermodal competition for voice  
19 service, analysis of this statutory factor (i.e., the ability of customers to  
20 obtain functionally equivalent services at comparable rates, terms, and  
21 conditions) is not simple. Customers may obtain what they consider  
22 functionally equivalent services – via wireline telephony, wireless,  
23 VoIP, or cable telephony.<sup>28</sup>

---

<sup>28</sup> See Florida Public Service Commission, *Annual Report To The Florida Legislature On The Status Of Competition In The Telecommunications Industry In Florida as of May 31, 2004*, p. 75, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-15).

1 The report goes on to state that competition for local telecommunications service from  
2 wireless carriers is “fiercely competitive.” The report states:

3  
4 Approximately 23 wireless competitors serve the state, including all six  
5 nationwide providers. Some 77% of Floridians have a choice of five or  
6 more wireless carriers. Statewide subscribership is high at over 10  
7 million..... Florida’s consumers benefit from an array of services,  
8 offered at competitive prices, by numerous and fiercely competitive  
9 providers.<sup>29</sup>

10  
11 The Staff’s report declares that Florida leads the nation in recognizing the benefits of  
12 VoIP technologies because of the Florida Legislature’s proactive steps to exempt VoIP  
13 from unnecessary regulation. As a result, “[T]his model has already spurred several  
14 companies, such as Vonage, AT&T, and Bright House Networks, to offer VoIP  
15 service – a technology that makes use of a broadband connection to deliver voice  
16 service, at least in part, over the Internet.”<sup>30</sup> In addition, the RBOCs, including  
17 Bellsouth, are also starting to provide voice service using VoIP technology further  
18 ensuring that VoIP technology will survive and prosper. The FPSC report also  
19 recognizes the potential of Broadband over power line communications (BPL) as  
20 another promising technology in the competitive telecommunications arena and notes  
21 that “Because power lines reach virtually every home and community, BPL provides  
22 potential to become an additional major communications pipe into the home.”<sup>31</sup>  
23

---

<sup>29</sup> Id. at 11; Exhibit No. \_\_\_ (DCB-15).

<sup>30</sup> Id. at 14; Exhibit No. \_\_\_ (DCB-15).

<sup>31</sup> Id. at 16; Exhibit No. \_\_\_ (DCB-15).

1 As conclusive evidence that competitors are making inroads into the market for local  
2 telecommunications services in Florida, the Commission's report notes:

3  
4 While not all customers have numerous alternatives to traditional  
5 telephone service today, the decline of the traditional telecom sector –  
6 and the emergence of alternatives to traditional telephony - are hard to  
7 ignore. ILEC access lines are decreasing, due at least in part to  
8 competitive technologies such as wireless, broadband, and VoIP.  
9 Florida-specific data supports this trend of declining ILEC access lines.  
10 Specifically, ILECs lost 12% of their lines to CLECs and intermodal  
11 competitors between 2001 and 2004.<sup>32</sup>

12  
13 As Alltel moves the price of its residential local service closer to average cost, new  
14 entrants, especially those that are already competing in other areas of Florida, will  
15 have a stronger incentive to enter and compete in Alltel's service territory.

16  
17 **Q. Are competitors entering rural markets similar to those served by Alltel?**

18 **A.** Yes. Rural communities are beginning to see smaller, regional competitors entering  
19 and providing local telephone service. Companies such as Unite Communications  
20 Systems are entering rural communities, deploying fiber, and offering triple-play  
21 packages of local phone service, cable TV, and broadband internet.<sup>33</sup> In other rural

---

<sup>32</sup> Id. at 17; Exhibit No. \_\_\_\_ (DCB-15).

<sup>33</sup> Unite Communications Systems provides local phone service, cable TV, and broadband internet services to rural communities in Kansas and Missouri. See <http://www.uniteone.net/index.html> to learn more about Unite Communications Systems. A copy of the home page is included as Exhibit No. \_\_\_\_ (DCB-16).

1 communities, cable companies are beginning to offer local telephone service in  
2 addition to cable television and broadband internet services. In other states, such as  
3 Washington and Utah, public utilities and municipalities have built their own fiber  
4 networks capable of providing local phone service, cable TV, and broadband internet  
5 targeting smaller communities.<sup>34</sup> And finally, the widespread reach of the internet into  
6 even rural communities allows companies, such as Skype, to offer an alternative to  
7 traditional ILECs as long as the user has access to dial-up speeds of at least 33.6 kbps.

8

9 **Q. How will increased competition benefit consumers?**

10 **A.** Increased competition will provide local residential consumers with a wider choice of  
11 local service providers that will offer new bundles of services, new and innovative  
12 services, and lower prices as they compete for customers. While it is impossible to  
13 know exactly who the competitors are that will enter Alltel's local market service  
14 territory, when they will enter, or which new bundles of services they will offer, we  
15 can be certain that more competitors will come once rates are rebalanced and will  
16 bring benefits to residential consumers because this has occurred in other states.

17

18 The success Wyoming has found in attracting competitors to its rural local  
19 telecommunications markets by rebalancing rates is indicative of the competition that  
20 consumers in Alltel's service areas can expect and illustrative of the benefits they will  
21 enjoy. Since the Wyoming Telecommunications Act of 1995 was passed ten years

---

<sup>34</sup> In the State of Utah, 14 municipalities that have banded together to build and operate their own fiber network under the project name of Utopia (Utah Telecommunication Open Infrastructure Agency). See <http://www.utopianet.org/>, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-17). In Washington State, the Grant County Public Utility District and the Chelan County Public Utility District have built their own fiber networks. See <http://www.gcpud.org/zipp/zippnews.htm>, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-18), and [https://fiber.chelanpud.org/euedu/about\\_Us/PUD\\_Fiber/Presentations/](https://fiber.chelanpud.org/euedu/about_Us/PUD_Fiber/Presentations/), a copy of which is included as Exhibit No. \_\_\_\_ (DCB-19).

1 ago, the Wyoming PSC has worked to rebalance rates for all of Wyoming's ILECs by  
2 reducing intrastate switched access rates and 1B rates and raising 1R rates to offset the  
3 reduced revenues. The result is that new competitors have entered the local telephone  
4 market in Wyoming despite the fact that local service areas in Wyoming are largely  
5 rural, high cost areas. These new competitors are offering better bundles of services  
6 (for example, cable TV bundled with high speed internet, local calling and unlimited  
7 long distance) with lower prices.

8  
9 The Wyoming PSC's 2005 Annual Report on Telecommunications shows that  
10 Wyoming consumers now have a wider choice of local service providers offering new  
11 bundles of services as a result of increased competition caused by rate rebalancing.

12 The report states:

13  
14 The Wyoming Act and the federal Act have had a profound effect  
15 on the development of the telecommunications industry in  
16 Wyoming. They have encouraged the development of competitive  
17 alternatives for business and residential. Competition and  
18 communications infrastructure development are increasing but it is  
19 not all being done by traditional service providers. Examples of  
20 this are the high speed data services being offered by Contact  
21 Communications in a number of smaller and larger Wyoming  
22 markets, the point-to-point communications services of Bresnan  
23 Communications offered using cable television infrastructure, the

1 proliferation of digital cellular service throughout the state, and the  
2 SWEETNET local infrastructure project.<sup>35</sup>

3 The Wyoming PSC's 2005 Annual Telecom Report goes on to say that:  
4

5 The successful entry of Silver Star Communications into direct  
6 facilities-based local service competition with Qwest in the Afton  
7 exchange shows that it is possible to be technologically advanced  
8 and successful in such a competitive endeavor in Wyoming -- even  
9 in a relatively small market.<sup>36</sup>

10  
11 Rural electric cooperatives like Carbon Power & Light now offer  
12 satellite service. In March 2005, it will participate in the trial of  
13 Wild Blue, a new and more technologically advanced satellite  
14 service capable of providing television programming, Internet  
15 service, and eventually VoIP. This service is targeted at consumers  
16 in rural areas which characterize rural electric cooperative service  
17 territories in Wyoming.<sup>37</sup>

18  
19 A closer look at Contact Communications and Bresnan Communications shows that  
20 these two CLECs have carved out a niche targeting smaller towns and rural areas and  
21 providing them with quality voice telephony and high-speed internet connectivity.  
22

---

<sup>35</sup> See Wyoming Public Service Commission, *Wyoming PSC 2005 Annual Telecom Report*, prepared by the Wyoming Public Service Commission, January 10, 2005. p. 54, a copy of which is included as Exhibit No. \_\_ (DCB-20).

<sup>36</sup> Id. at 62; Exhibit No. \_\_ (DCB-20)

<sup>37</sup> Id. at 63; Exhibit No. \_\_ (DCB-20).

1           Bresnan Communications is a broadband telecommunications provider founded in  
2           1984 that targets small and medium-sized markets. Bresnan currently serves over  
3           300,000 customers in Colorado, Montana, Wyoming, and Utah providing voice  
4           telecommunications, high-speed Internet access, cable TV, video-on-demand, and  
5           digital video recorder to residential and business customers across its own fiber-optic  
6           network that reaches across 95% of its footprint. Bresnan Business Services  
7           delivers custom data, voice, and video solutions to businesses and institutions of all  
8           sizes. Bresnan Digital Phone is currently available in Grand Junction, CO, Durango,  
9           CO, Cheyenne, WY, Billings, MT, Butte, MT and Helena, MT and offers local calling  
10          with unlimited long distance for only \$39.95 per month which is superior to Qwest's  
11          bundled offers.<sup>38</sup>

12  
13          Contact Communications is a CLEC headquartered in Riverton, WY (population  
14          9,443) that grew out of Wyoming's largest privately held ISP and provides next-  
15          generation data telecom services to ISPs. Contact received certification to serve  
16          Qwest's territory in April 1997 as a wholesale data exchange carrier. The Company is  
17          expanding into additional services for ISPs and a variety of traditional  
18          telecommunications services (including voice telephony) using state-of-the-art  
19          protocols and expandable hardware designs. Contact serves numerous small, rural  
20          communities throughout Wyoming (with an average population of 13,600) and is  
21          certified in eight other western states. Contact's intent is to compete with the

---

<sup>38</sup> See Bresnan Communications home page at <http://bresnan.com>, a copy of which is included as Exhibit No. \_\_\_ (Docket B-21).

1 incumbent telephone companies so that ISPs serving rural markets are able to offer  
2 advanced services with reasonable margins.<sup>39</sup>

3  
4 In Wyoming, some consumers are substituting wireless service for their landline  
5 service. As IR prices have increased toward average cost and as cellular prices have  
6 continued to fall, some consumers are discontinuing their landline service and relying  
7 solely on their wireless service for their voice telecommunications. The Wyoming  
8 Commission expects this trend to continue.<sup>40</sup>

9  
10 As can be seen from the experience in Wyoming, competitors have moved in to  
11 provide service in Wyoming despite the fact that Wyoming is a rural, high cost state.  
12 Rebalancing rates has brought competition to Wyoming. As a result, Wyoming  
13 consumers have a wider choice of local service providers that are offering new  
14 bundles of services, new and innovative services, and lower prices as they compete for  
15 consumers' business. These same benefits will be realized in Florida after the  
16 Commission rebalances Alltel's rates.

- 17  
18 **Q. What other indication is present that enhanced entry will benefit residential**  
19 **consumers?**  
20 **A.** In reaching its decision in the Rebalancing Dockets, this Commission concluded that  
21 enhanced market entry will result in the creation of a more competitive local exchange  
22 market that will benefit residential consumers. Specifically, in paragraph 4 of the  
23 Summary of Decision portion of the Rebalancing Order, the Commission found:

---

<sup>39</sup> See Contact Communication's home page at <http://www.contactcom.net/default.htm>, a copy of which is  
attached as Exhibit No. \_\_\_ (DCB-22).  
<sup>40</sup> Wyoming PSC 2005 Annual Report; p. 54. Exhibit No. \_\_\_ (DCB-20).

1           Enhanced market entry will result in the creation of a more competitive  
2           local exchange market that will benefit residential consumers through:

- 3           a.     increased choice of service providers;  
4           b.     new and innovative service offerings, including  
5                 bundles of local and long distance service, and  
6                 bundles that may include cable TV service and high  
7                 speed internet access service;  
8           c.     technological advances;  
9           d.     increased quality of service; and  
10          e.     in the long run, reductions in prices for local  
11                 service.

12  
13           Additionally, the Florida Supreme Court agreed with the Commission that the  
14           introduction of competition will benefit residential language and stated: “We further  
15           conclude that the Commission’s determination that its grant of the petitions will  
16           “[i]nduce enhanced market entry,” is supported by competent, substantial theoretical  
17           and empirical evidence.” Crist v. Jaber, \_\_\_ So. 2d \_\_\_, 30 Fla. L. Weekly S531,  
18           2005 WL 1577998 (Fla. 2005).

19  
20           Based on the record in this case and consistent with its decision in the Rebalancing  
21           Order, the Commission should make the same finding in this proceeding for Alltel that  
22           enhanced market entry will result in the creation of a more competitive local exchange  
23           market that will benefit residential consumers.

1 VII. AFTER THE PROPOSED RATE INCREASES, BASIC LOCAL SERVICE  
2 RATES WILL REMAIN AFFORDABLE FOR CONSUMERS.

3  
4 Q. Will basic local service rates remain affordable for consumers after the proposed  
5 rate increases?

6 A. Yes. I reviewed Alltel's proposal and have concluded that it will not jeopardize  
7 universal service in its territory and its service will remain affordable. Alltel's prices  
8 for residential local service currently average around \$10.49 a month. This is  
9 substantially below the national average of \$14.53 per month (which includes only  
10 urban areas that are lower cost than rural areas).<sup>41</sup> Additionally, Section 364.164,  
11 Florida Statutes, requires that any price increase in basic local service not apply to  
12 Lifeline consumers and increases the income eligibility for Lifeline consumers to 135  
13 percent. These requirements extend protection to those customers most likely to be  
14 sensitive to potential price increases from a rebalancing plan. Consumers will be  
15 better off overall as a result of rate rebalancing proposals that properly align prices  
16 with average costs as such prices send correct signals to both buyers and suppliers.  
17 Buyers will purchase the right amount of service and suppliers will supply the right  
18 amount of service. Because the price of Alltel's local voice wireline service is priced  
19 too low, competing suppliers are not entering the market and thus, are denying Alltel's  
20 consumers the wider choice of service providers, new bundles of service offerings,  
21 and lower prices that will result when competitors enter. Additionally, when the price  
22 of Alltel's 1R service is moved toward average cost and will rely less on support from

---

<sup>41</sup> See Zimmerman, Paul R., *FCC Reference Book of Rates, Price Indices, and Household Expenditures for Telephone Service*, Industry Analysis & Technology Division, Wireline Competition Bureau, July 2005, Table 1.1, rates exclude Federal and State subscriber line charges, touch tone charge and taxes, 911 and other charges, a copy of which is included as Exhibit No. \_\_\_ (DCB-23).

1 other services, then the price of those other services (such as intrastate switched  
2 access) can be decreased. Ultimately, those decreases should flow through to end user  
3 customers in the form of lower intrastate toll rates.

4  
5 There are a number of other reasons why I believe Alltel's rates for basic local  
6 residential telephone service will remain affordable after the implementation of  
7 Alltel's proposal. Empirical evidence suggests that virtually all subscribers will  
8 continue to purchase voice communications whether it be over Alltel's wireline  
9 network, one of the cellular company's networks, one of the cable TV company's  
10 networks, or by some other means. Local rates will remain affordable and universal  
11 service will not be negatively impacted under Alltel's proposal for the following  
12 reasons:

- 13
- 14 A. Basic local service rates will remain affordable because the price increase is a  
15 very small percentage of the average household's budget -- less than the cost of  
16 a movie ticket for one adult.
  - 17 B. The majority of consumers are currently paying more than twice as much for  
18 cellular phone service, cable TV, and internet service.
  - 19 C. Other states have determined that \$20.00 is an affordable rate for basic  
20 residential local service.
  - 21 D. Support for basic local service rates should be targeted only to low-income  
22 families needing financial assistance.
  - 23 E. Lifeline ensures that basic local service will remain affordable for low-income  
24 families.

1 F. Increasing rates for basic local service has not had a negative impact on  
2 universal service in other states.

3  
4 *A. Basic local service rates will remain affordable because the price increase is a*  
5 *very small percentage of the average household's budget -- less than the cost of a*  
6 *movie ticket for one adult.*

7  
8 **Q. Why do you believe that Alltel's proposed residential rates are affordable?**

9 **A.** Under Alltel's proposed rate restructuring, Alltel's residential customers will see a  
10 maximum increase over two years of \$6.00 in their monthly expenditure for local  
11 telecommunications services. Alltel's average rate for residential local service is  
12 currently \$10.49 per month. Alltel's proposal increases rates to a maximum average  
13 of \$16.49 per month. I use the word maximum here because it must also be  
14 remembered that after the rate rebalancing proposals of the large ILECs have been  
15 implemented, residential customers should see reduced expenditures for intrastate toll  
16 calling resulting in a change in total expenditures for local and toll services that is less  
17 than the \$6.00 increase for local residential service. Even so, a \$6.00 increase is less  
18 than the cost of a movie ticket for one adult.

19  
20 A monthly total of \$16.49 generates an annual expenditure for basic local residential  
21 telephone service of only \$197.88 which represents only <sup>2.2%</sup>~~0.7%~~ of annual median  
22 family income of \$29,972 in Florida and 0.5% of the annual median household income  
23 of \$38,819 in Florida.<sup>42</sup> Table 2 in my Exhibit No. \_\_\_\_ (DCB-0) illustrates the

<sup>42</sup> See U.S. Census Bureau, Household Income and Expenditures, Census 2000 Summary File 3, Matrices P52, P53, P54, P79, P80, P81, PCT38, PCT40, and PCT41, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-24).

1 relationship between household income and telecommunications expenditures. As can  
2 be seen in Table 2, annual telephone expenditures represent less than 2% of total  
3 income for any household. It should also be noted that the majority of households in  
4 the lowest income bracket are eligible for lifeline assistance which would reduce their  
5 expenditure by \$13.50 per month; the per line amount for Lifeline in Florida, and  
6 reduce their annual expenditures for telecommunications services to only <sup>2.2%</sup>~~0.7%~~ of their  
7 annual budget.  
8

9 **Q. What would Alltel's rates for basic local residential telephone service be today if**  
10 **they had been indexed to inflation starting in 1984?**

11 **A.** Rates for Alltel's basic local residential telephone service were set in its last rate case  
12 in 1984 and as a result have not kept pace with inflation. Although the Legislature  
13 through the FPSC has recently allowed Alltel and other ILECs to index basic local  
14 residential rates to inflation, this change did not take effect until 2001. If the rates for  
15 local residential telephone service had been indexed to the rate of inflation in the  
16 Consumer Price Index ("CPI"), the average rate for all of Alltel's residential voice  
17 services of \$10.49 approved in 1984 would have gradually increased to \$19.92 today.  
18 Thus, increasing Alltel's rate to an average of \$16.49 only moves local rates two-  
19 thirds of the distance to where they would be if they were simply indexed with  
20 inflation beginning in 1984. Therefore, in terms of real dollars, the rates for Alltel's  
21 basic local residential telephone service have actually been decreasing each year by  
22 the rate of inflation up until 2001. When compounded over the past 21 years, Alltel's  
23 rates have decreased in real terms by 47% since 1984. Thus, if rates for phone service  
24 were affordable in 1984, then an average rate of only \$16.49 per month should be

1 considered even more affordable since it is 17% less than the \$19.92 rate that would  
2 be in place if Alltel's rates had simply kept pace with inflation since 1984.

3  
4 **Q. Can you provide a table to illustrate your point?**

5 **A.** Yes. Table 3, which is contained in Exhibit No. \_\_\_ (DCB-O), illustrates the change  
6 in the average price of Alltel's rates for their various residential calling plans that  
7 would have occurred if the rates had increased at the same rate of inflation as other  
8 goods and services over the past 21 years.

9  
10 As Table 3 illustrates, the prices of goods and services have nearly doubled since  
11 1984, yet Alltel's prices for basic local residential telephone service provided over  
12 wireline were frozen from 1984 to 2001. These small annual increases in CPI pass by  
13 relatively unnoticed by most consumers and have little impact on their decision to  
14 continue purchasing the product. If the rates for basic residential local telephone  
15 service were indexed with inflation and increased annually the same as prices for  
16 bread, milk, and other commodities, it is likely that these increases would also have  
17 been relatively unnoticed by consumers and have had little impact on their decision to  
18 continue purchasing local service. However, due to the nature of setting rates in  
19 regulatory proceedings, rates for regulated telephone services such as residential local  
20 service, tend to be "lumpy" or move in occasional and sporadic jumps larger than the  
21 rate of inflation for one year. The fact that Alltel's rates have remained frozen for 17  
22 years illustrates the efficiency gains made by the industry during this period.  
23

1            *B. The majority of consumers are currently paying more than twice as much as*  
2            *Alltel's proposed local residential service rate of \$16.49 for cellular phone service,*  
3            *cable TV, and internet service.*

4  
5            **Q. How does the price of Alltel's proposed rate for residential local service compare**  
6            **to what consumers are paying for cellular service?**

7            **A.** Alltel's proposed average rate of \$16.49 for basic residential local service is less than  
8            half of what consumers are paying today for cellular phone service in Florida yet,  
9            there are more mobile wireless telephone subscribers in Florida now than there are  
10           landline telephone subscribers. As of June 2004, there were 11,916,615 mobile  
11           wireless telephone subscribers in Florida<sup>43</sup> representing 68.5% of the 17,397,161  
12           people in the state as compared to 11,418,566 landline telephone subscribers.<sup>44</sup>  
13           Florida's wireless penetration of 68.5% is higher than the US national average  
14           penetration of 57% and ranks Florida as the 4th highest state in penetration.

15  
16           The average revenue per user (ARPU) for cellular phone service is \$50.64 per  
17           month,<sup>45</sup> which is nearly five times greater than the current average monthly  
18           expenditure for local wireline phone service in Florida of \$10.49. Verizon Wireless  
19           currently advertises a 450-minute wireless calling plan for \$39.99 per month and a

<sup>44</sup> Id. at Table 6, which is included as Exhibit \_\_\_ (DCB-25).

<sup>45</sup> See *CTIA - the Wireless Association's Annualized Wireless Industry Survey Results, December 1985 - December 2004 Reflecting Domestic U.S. Commercially-Operational Cellular, ESMR and PCS Providers*, p.2 @ [http://www.ctia.org/research\\_statistics/statistics/index.cfm/AID/10030](http://www.ctia.org/research_statistics/statistics/index.cfm/AID/10030). \$50.64 represents Average Revenue Per User (ARPU) or the average monthly bill for one cellular telephone user, a copy of which is included as Exhibit No. \_\_\_ (DCB-26).

Alltel Florida, Inc.

Docket No.

Filed: September 29, 2005

1 900-minute wireless calling plan for \$59.99 per month.<sup>46</sup> The fact that more  
2 Floridians purchase cellular phone service at prices that are five times the current price  
3 of Alltel's local wireline phone service indicates that Alltel's approximately 95,000  
4 customers in Florida should be able to afford local wireline phone service even when  
5 the price is raised to only \$16.49 for residential consumers which is still just one third  
6 the rate of their wireless phone service bill. If consumers can afford a mobile wireless  
7 telephone for \$50.64 per month, they can afford to pay \$16.49 for local residential  
8 telephone service.

9  
10 **Q. How does the price of Alltel's proposed rate for basic residential local service**  
11 **compare to what consumers are paying for cable TV or internet service?**

12 **A.** Not only have wireless telephones become widely used, but cable television  
13 subscription has reached high levels. In Florida today, 5,069,700 households<sup>47</sup> (out of  
14 6,839,580 TV Households) or 74% of Florida TV households subscribe to cable TV  
15 and pay an average bill of \$38.23 per month.<sup>48</sup> In addition, approximately 1,653,537  
16 households (representing a penetration rate of one-fourth of all households) subscribe  
17 to broadband internet service in Florida paying an average of \$39.95 for broadband  
18 access.<sup>49</sup> If 5,069,700 Florida households can afford to subscribe to cable TV for

<sup>47</sup> See the National Cable Television Association at <http://www.ncta.com>; Start date from Nielsen Media Research representing January 2005 TV households and September 2004 cable TV households, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-27).

<sup>48</sup> See the National Cable Television Association at <http://www.ncta.com>; Industry Overview, Statistics & Resources, revenue data provided by Kagan Research LLC, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-28).

<sup>49</sup> See "Trends in Telephone Service" - May 2004; FCC Industry Analysis and Technology Division Wireline Competition Bureau, Table 2.5 (June 30, 2003 data), a copy of which is included as Exhibit No. \_\_\_\_ (DCB-29). The estimate of \$39.95 is based on Time Warner Cable's monthly charge for digital telephone service which includes local calling, unlimited long distance toll calling, and custom calling features.

1 \$38.23 per month, there should be no question that they can afford to pay \$16.49 for  
2 basic local residential telephone service.

3

4 **Q. How do wireline subscribership and rates compare to subscribership and rates  
5 for similar services?**

6 **A.** Table 4, which is contained in Exhibit No. \_\_\_\_ (DCB-O), illustrates that Alltel's  
7 proposed rate of \$16.49 for residential local service is very reasonable when compared  
8 to the subscribership levels and the rates consumers pay for other communications  
9 services.

10 **Q. How do annual expenditures for these various services compare in terms of a  
11 percentage of annual income?**

12 **A.** As can be seen in Table 5, which is contained in Exhibit No. \_\_\_\_ (DCB-O), annual  
13 expenditures for telecommunications and video services remain a relatively small  
14 percentage of any household's annual income. Therefore, even after Alltel's rate for  
15 basic local residential telephone service is increased to \$16.49 it will still remain small  
16 in comparison to the price of other services that Floridians are purchasing today and  
17 small in relation to a household's expenditures for all goods and services.

18

19 *C. Other states have determined that \$20.00 is an affordable rate for basic  
20 residential local service.<sup>50</sup>*

21

22 **Q. What have other states determined is an affordable rate for basic residential local  
23 service?**

---

<sup>50</sup> \$20.00 represents the base rate for residential telephone service that does not include the SLC, federal USF, E911, taxes, or other charges.

1 A. The majority of states in the United States have increased rates for basic local service.  
2 A sizeable number of these states have concluded that \$20 is an affordable rate for  
3 basic local residential telephone service.<sup>51</sup> For example, in 2000, when the Illinois  
4 Commerce Commission established its state Universal Service Fund in Docket No.  
5 00-0233, the ICC found that \$22.23 was an affordable monthly rate for basic local  
6 residential telephone service for Verizon's customers.<sup>52</sup> In 1997, Wyoming  
7 established a universal service fund and simultaneously began moving basic  
8 residential rates toward cost. The weighted statewide average price for residential  
9 service rose from \$19.61 to \$26.78.<sup>53</sup>

10  
11 **Q. In terms of real dollars, what have other states determined is an affordable rate**  
12 **for basic residential local service?**

13 A. When rates for basic residential local telephone service are analyzed from the  
14 perspective of the year when they were set, it is possible to get a feel for different state  
15 commissions' perception of affordability in terms of today's dollars. Table 6, which is  
16 contained in Exhibit No. \_\_\_\_ (DCB-O), lists states that have increased rates for basic  
17 local residential telephone service and adjusts those rates for inflation to show the real

---

<sup>51</sup>For the sake of comparison, please note that the base rate of \$20 does not include the SLC, USF charges, EAS surcharges, intrastate toll, or custom calling features and is comparable to Alltel's proposed base rate of \$16.49 for residential service.

<sup>52</sup>The ICC later revised the rate to \$20.39 due to a mathematical calculation error in computing the rate the first time. See Second Interim Order On Rehearing Before the Illinois Commerce Commission; In re: Illinois Independent Telephone Association Petition for initiation of an investigation of the necessity of and the establishment of a Universal Service Support Fund in accordance with Section 13-301(d) of the Public Utilities Act; Docket 00-0233; Consolidated with Illinois Commerce Commission On Its Own Motion Investigation into the necessity of and, if appropriate, the establishment of a Universal Support Fund pursuant to Section 13-301(d) of the Public Utilities Act; Docket 00-0335; dated: March 13, 2002, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-30).

<sup>53</sup>See Wyoming Public Service Commission "2000 ANNUAL TELECOMMUNICATIONS REPORT" prepared by the Commissioners and Staff of the Wyoming Public Service Commission; January 10, 2000, a copy of which is included as Exhibit No. \_\_\_\_ (DCB-31).

1 dollar value of those rates in today's (2004) dollars.<sup>54</sup> Expressed in 2004 dollars, the  
2 average "affordable" rate for basic local residential telephone service among the  
3 various states is \$19.56.

4  
5 **Q. What did the Commission determine was an affordable rate in the Rebalancing**  
6 **Dockets with respect to Verizon, BellSouth, and Sprint areas?**

7 **A.** When the FPSC authorized rate changes for Verizon, BellSouth, and Sprint last year in  
8 the Rebalancing Dockets, the Commission approved rates for basic local residential  
9 service as high as \$18.34 for Sprint's highest rate group. Given that the Commission  
10 found that the proposed rate increases in the Rebalancing Dockets proceeding were  
11 affordable, the Commission should similarly find Alltel's proposed rate of \$16.49  
12 (which is less than Sprint's highest rate of \$18.34) is likewise, affordable. Table 7,  
13 which is included in Exhibit No. \_\_\_\_ (DCB-O), illustrates the 1R rates for Verizon,  
14 BellSouth, and Sprint before and after the rebalancing proposals, as well as Alltel's  
15 proposed rates.

16  
17 Under Alltel's proposed rate rebalancing plan, the new proposed rates will average  
18 \$16.49<sup>55</sup> with only 20% of Alltel's customers paying an average of \$1.60 more than  
19 that on a monthly basis. Therefore, I believe that Alltel's proposed 1R is clearly  
20 affordable and supported by Commission determinations in the previous case.

21

---

<sup>54</sup> 2004 represents the most current year for which annual CPI data is available.

<sup>55</sup> Weighted average of Alltel's proposed 1R rate.

1        *D. Support for basic local service rates should be targeted only to low-income*  
2        *families needing financial assistance.*

3  
4        **Q. Should the price of residential local service be kept low for all subscribers to**  
5        **ensure that rates are affordable for the lowest income levels?**

6        A. No. The price of basic local residential telephone service should not be held  
7        artificially low for all consumers in order to make it affordable for the few consumers  
8        that would need financial assistance to buy telephone service if the price were to be  
9        increased to \$16.49. Rather, financial assistance should be targeted towards those  
10       households that truly cannot afford the cost of basic local residential telephone service  
11       while allowing the price of local residential telephone service to migrate toward its  
12       average cost in order to foster a competitive market.

13

14       **Q. What is the harm in pricing residential local service low for all subscribers rather**  
15       **than targeting Lifeline support?**

16       A. By pricing basic local telephone service artificially low for all consumers rather than  
17       just for the few that need financial assistance, the size of the support mechanism is  
18       much larger than it would need to be to ensure that residential telephone service is  
19       affordable for low income households. An artificially low price also prohibits proper  
20       cost recovery, sends the wrong economic signals, and causes consumers to over-  
21       consume basic local telephone service (i.e., purchase more phone lines than they  
22       would if service was priced at average cost). From an economic perspective, this  
23       represents an inefficient allocation of resources. From a practical perspective, if the  
24       support is to be funded through rates for services that are priced above their average  
25       cost, it would not be sustainable in the long run. Finally, pricing basic residential

1 telephone service at artificially low levels serves as a significant impediment that  
2 discourages competitors from entering the local market and prevents consumers from  
3 enjoying the benefits of local telephone competition.

4  
5 Therefore, rather than holding the price of basic residential local telephone service  
6 artificially low for the sake of affordability for the least financially able consumers,  
7 support should be targeted towards those individuals, families, or households that truly  
8 need such assistance to be able to purchase local telephone service.

9  
10 **Q. Would it be relatively easy to target assistance to needy customers?**

11 **A.** Yes. Since the Federal Lifeline Assistance program is already in place, it should be  
12 relatively easy to add any additional targeted assistance to the Lifeline program's  
13 existing eligibility mechanisms.

14  
15 The affordability of any service is relative to each individual household's income. It  
16 goes without saying that an increase of \$6.00 is more affordable for households in the  
17 top 50<sup>th</sup> percentile of income levels than for households in the bottom half of income  
18 levels. However, the households in the lower income levels may already control their  
19 phone bill by using minimal amounts of intrastate toll calling services and therefore,  
20 may only see a small increase or even a decrease in their total monthly bill for local  
21 service and toll usage. Of course, the concern should be focused on consumers in  
22 households for whom affordability might truly be an issue. In Florida, the Legislature  
23 has addressed affordability by requiring ILECs that have rebalanced rates pursuant to  
24 Section 364.164 to offer their Lifeline Assistance Plan to customers with income at or

1 below 135% of the federal poverty level.<sup>56</sup> The Commission acknowledged this  
2 requirement in the Rebalancing Dockets. Therefore, Section 364.10, Florida Statutes,  
3 resolves the affordability issues for those households whose income levels are less  
4 than 135% of the current poverty level by targeting Lifeline support toward those  
5 households.

6  
7 *E. Lifeline ensures that basic local service will remain affordable for low-income*  
8 *families.*

9  
10 **Q. Is Lifeline an effective method of ensuring that telephone rates remain affordable**  
11 **for low-income families?**

12 **A.** Yes, as the FPSC determined in the Rebalancing Dockets, the best way to help low-  
13 income families continue to afford basic local service was to continue to use Lifeline  
14 subsidies, which are targeted toward low-income families. In paragraph 11 in the  
15 summary of decision portion of the Rebalancing Order, the Commission stated:

16  
17 Although we find that it is not a benefit that we should weigh in the  
18 balance in considering whether or not to grant the Petitions, the  
19 amended Lifeline provisions in Section 364.10 will help to protect  
20 economically disadvantaged consumers from the effect of local  
21 rate increases....

22  

---

<sup>56</sup> See Section 364.10(3)(a), Florida Statutes [Exhibit No. \_\_\_\_ (DCB-32)], and the Rebalancing Order at pages 6 and 15.

1 The same finding is appropriate in this proceeding for Alltel that Florida's Lifeline  
2 rules are sufficient to help protect economically disadvantaged consumers from the  
3 effect of local rate increases.

4  
5 **Q. Is it possible that competition could eliminate the need for Lifeline assistance?**

6 **A.** The Commission indicated in the Rebalancing Dockets that it anticipates that the  
7 development of a more competitive local telephone market would put downward  
8 pressure on prices for residential telephone service perhaps to the extent that the need  
9 for Lifeline assistance could be eliminated. The Commission stated:

10

11 Although we cannot predict the future with certainty, economic  
12 theory suggests, and we are encouraged to believe, that the  
13 establishment of a more competitive local market will put  
14 downward pressure on local exchange prices that will eventually  
15 reduce the need for targeted assistance programs such as Lifeline.<sup>57</sup>

16

17 *F. Increasing rates for basic local service has not had a negative impact on*  
18 *universal service in other states.*

19

20 **Q. Will increasing rates for basic local service have a negative impact on universal**  
21 **service?**

22 **A.** No. This topic has been studied a number of times. Crandall and Waverman (2000)  
23 summarized the results of research, all of which concluded that the price of local  
24 service has very little impact on the decision to subscribe to telephone service. They

---

<sup>57</sup> See Rebalancing Order at 10.

1 presented evidence from the literature that the elasticity of demand for local service  
2 ranges from -0.006 to -0.17, with most of the more recent estimates well below -0.1.  
3 These relatively low elasticity levels mean that consumers are not responsive to  
4 changes in price. In their own estimates, Crandall and Waverman found that the local  
5 monthly rate is insignificant in the subscription decision. Thus, any increase to the  
6 rates for basic local residential telephone service is likely to have little, if any, impact  
7 on penetration.<sup>58</sup>

8  
9 In the Rebalancing Dockets, the FPSC also considered this issue and concluded that  
10 increasing basic local rates has little impact on whether consumers subscribe to local  
11 telephone service. The Commission stated:

12  
13 Experience from other states that have rebalanced local and toll  
14 rates shows that approval of the ILECs' proposals will have little,  
15 if any, negative impact on the availability of universal service.  
16 While no customer likes to see a rate increase, the record shows  
17 that basic local service will continue to remain affordable for the  
18 vast majority of residential customers.<sup>59</sup>

19  
20 Accordingly, the Commission should make the same finding in this proceeding for  
21 Alltel that basic local service will continue to remain affordable for the vast majority  
22 of residential customers even after the Commission rebalances local rates.

<sup>58</sup> Robert Crandall and Leonard Waverman, *Who Pays for Universal Service? When Telephone Subsidies Become Transparent*, Brookings Institute, (2000), pp. 91 - 93, a copy of which is included in Exhibit No. \_\_\_\_ (DCB-33).

<sup>59</sup> Rebalancing Order at 14.

1 VIII. SUMMARY

2

3 Q. Please summarize your testimony and your conclusions.

4 A. Increasing competition for telecommunications services that have traditionally  
5 supported basic local residential telephone services is making it difficult to maintain  
6 the high margins required to continue to provide support for local residential telephone  
7 services. The Florida legislature recognized this problem and passed the Act, which  
8 allows ILECs to rebalance their rates by increasing rates for basic local telephone  
9 service and offset the increase by reducing rates for intrastate switched access rates.

10

11 Alltel's proposed rate rebalancing plan satisfies the statutory requirements of Section  
12 364.164, Florida Statutes. Specifically, Alltel has proposed to increase rates for basic  
13 local telephone service and to offset the increase by reducing rates for intrastate  
14 switched access that currently provide support for basic local telecommunications  
15 service. The existence of local service support prevents the creation of a more  
16 attractive competitive local exchange market. The elimination of implicit support will  
17 enhance competitive market entry into Alltel's residential local exchange market.  
18 Enhanced market entry will result in the creation of a more competitive residential  
19 local exchange market that will ultimately benefit consumers.

20

21 Alltel's rate rebalancing proposal will enhance economic welfare in Alltel's service  
22 territory. Cost analysis indicates that Alltel's rates for basic residential local service  
23 are currently priced significantly below average cost. Moving these rates toward  
24 average cost will give consumers and competitors cost-based pricing signals which  
25 will lead to more economically rational utilization of telecommunications services.

1 This, in turn, will help foster competition, which will increase consumer welfare by  
2 creating consumer choice, placing downward cost pressure on firms, driving prices  
3 downward, and stimulating innovation and investment.

4 Alltel's rate rebalancing plan will result in rates that will continue to be affordable  
5 because the proposed rates are in line with those already deemed affordable by the  
6 Commission for BellSouth, Verizon, and Sprint in the Rebalancing Dockets.  
7 Additionally, Lifeline assistance is available to ensure that local residential rates will  
8 remain affordable for low-income families.

9  
10 In order for competition to develop in local markets, residential telephone rates must  
11 be rebalanced and moved toward average cost. Residential rates that are priced below  
12 this level and supported by other services make it much more difficult for competitors  
13 to enter local markets. Additionally, telecommunications services, such as intrastate  
14 switched access, that have borne the burden of supporting local residential rates are  
15 facing increasing competitive pressures and should no longer be required to support  
16 local residential telephone services.

17  
18 Approving Alltel's petition to rebalance rates will align prices for basic local  
19 telephone service and intrastate switched access more closely to average cost which  
20 will lead to more economically rational choices by consumers and provide competitors  
21 with a better opportunity to compete in local telephone markets.

22  
23 **Q. Does this conclude your prepared direct testimony?**

24 **A.** Yes, it does.

25

1 BY MR. WAHLEN:

2 Q Could you please summarize your testimony.

3 A Good morning. My name is David Blessing, and I'm  
4 here on behalf of Alltel Florida. What I'd like to do now is  
5 summarize my testimony and basically provide you with my  
6 perspective as to why Alltel's proposal is consistent with the  
7 requirements of Section 364.164 of the Florida Statutes.

8 As we heard from Mr. Wahlen's opening statement,  
9 Alltel's proposal to rebalance rates meets all the criteria  
10 outlined in the Act. First, it will reduce current support,  
11 implicit support contained in intrastate access rates that  
12 flows to local rates. Second, the removal of the implicit  
13 support is done in a revenue-neutral manner as prescribed by  
14 the, by the Act. And third, moving the residential and  
15 business rates closer to cost by removing the implicit support  
16 will create a more attractive market for competitors that will  
17 lead to enhanced entry, more competition and ultimately  
18 benefits to consumers.

19 The rate rebalancing plan proposed by Alltel is  
20 consistent with economic theory in that theory would say that  
21 if a rate structure contains implicit support, it is sending  
22 the wrong signals to the market. Sending the wrong signals to  
23 the market will lead to a decline in social welfare.

24 The rate rebalancing plan, what it does is it takes  
25 the, the rates, removes the implicit subsidies, pushes rates

1 more to their average cost, which in turn will foster  
2 competition and lead to the benefit of increased choice for  
3 consumers, as well as benefits derived from placing downward  
4 cost pressure on telecommunications firms, which will reduce  
5 costs for businesses and residents through reductions in the  
6 costs of the products sold to the consumers of Alltel Florida's  
7 service territory.

8           The cost evidence presented demonstrates that  
9 Alltel's average basic local rates of \$10 for residential  
10 service is priced significantly below Alltel's average cost of  
11 providing the service. We present three cost studies, one of  
12 which was an embedded cost study that was approved by this  
13 Commission in Docket Number 980696-TP, as well as two  
14 forward-looking studies. These studies are unanimous in their  
15 support for the notion that the \$10 residential rate currently  
16 offered by Alltel, average rate offered by Alltel is well below  
17 average cost; therefore, that rate is being supported. The  
18 cost studies also indicate that the access rate is well above  
19 its cost, thereby being one of those services providing the  
20 implicit support to residential service.

21           These findings, I don't think, have been rebutted in  
22 this proceeding. In fact, I believe that staff has basically  
23 endorsed the idea that, that the access rates are contributing,  
24 are contributing support flow to residential rates.

25           It may seem counterintuitive that telephone consumers

1 will be better off with an increase in local service rates.  
2 However, as this Commission acknowledged when it approved the  
3 rate rebalancing plans proposed by BellSouth, Verizon and  
4 Sprint, rate rebalancing will enhance the development of  
5 competition, and the development of competition will lead to  
6 the various benefits that we've all learned in, in basic  
7 economics classes that derive from competition.

8           Additionally, Alltel's plan is not going to  
9 jeopardize universal service in its Florida service territory.  
10 Alltel's rates are in line with those approved for Sprint and  
11 the other large LECs in the large LEC docket. Additionally,  
12 and probably most importantly, those customers that need help  
13 will get it with the income eligibility Lifeline proposal of  
14 135 percent or requirement of 135 percent. So those customers  
15 that would need support to make sure that telephone service is  
16 affordable will get that under this plan.

17           Two years ago in the large LEC docket the Commission  
18 determined that the rate rebalancing would enhance competitive  
19 entry in the exchanges served by the large LECs. Alltel  
20 Florida's presentation is very much the same. In fact, if  
21 Alltel had participated in the large LEC docket, presumably its  
22 plan would have been approved along with those of the large  
23 LECs.

24           Of key importance, and I think this was mentioned by  
25 both Mr. Beck and Mr. Wahlen, Alltel's service territory is

1 rural, but so too is the service territory of, much of the  
2 service territory of the large LECs. I think it was already  
3 said that there are probably ten times as many rural customers  
4 served by the large LECs than there are by the, by Alltel  
5 Florida, something in the range of about 750,000 as compared to  
6 73,000.

7           The Commission's final order in the large LEC docket  
8 didn't draw any distinctions between exchanges serving rural  
9 and urban areas and didn't question whether or not rate  
10 rebalancing would enhance competition in urban exchanges but  
11 not rural exchanges. And I think that this is, is a -- the  
12 Commission was right on target in this because the Commission  
13 recognized that costs are higher in rural exchanges and  
14 approved higher rates for those exchanges, with the  
15 understanding that by eliminating the support between  
16 intrastate switched access rates and moving local rates closer  
17 to their average cost local competition would be enhanced. And  
18 I think it's important to realize that the need to enhance  
19 competitive development is probably more necessary in rural  
20 exchanges than it is in urban exchanges. And I think  
21 experience has borne that out just by looking at where  
22 competition has developed first in the urban areas and then  
23 later in the, the rural exchanges. I think the rural exchanges  
24 need help if the benefits of competition are going to reach all  
25 customers, including rural customers.

1           Finally, Alltel's rate rebalancing proposal is  
2 economically sound, it's consistent with the Act, it follows  
3 the past precedent of this Commission and, therefore, I believe  
4 it should be approved. Thank you.

5           COMMISSIONER DEASON: Just one quick question. Just  
6 so the record is clear, the exhibit -- I think we entered the  
7 exhibits earlier. But you want the corrected exhibit as the  
8 one that's corrected on the stand to be part of the exhibit  
9 that was entered into the record.

10          MR. WAHLEN: Yes, sir. That's correct.

11          COMMISSIONER DEASON: Okay. Commissioner.

12          COMMISSIONER EDGAR: Is this an appropriate time for  
13 questions?

14          COMMISSIONER DEASON: Sure. It's as good as any.

15          COMMISSIONER EDGAR: I have two questions from your  
16 statement, if I may.

17                 The first is I believe early in your statement you  
18 said that current conditions contained, and these may not have  
19 been your exact words but I think they're close, that current  
20 conditions contain an inherent subsidy which sends wrong  
21 signals to the market, which causes, quote, a decline in social  
22 welfare. Could you elaborate on the decline in social welfare  
23 that either has been caused or is being caused?

24          THE WITNESS: Sure. By, by a reduction in social  
25 welfare, what I'm referring to is that resources are directed

1 incorrectly or inefficiently. And let me give you a case in  
2 point.

3           Probably the easiest example is to look at the case  
4 between business rates and residential rates and the  
5 differential that lies between those when there's relatively  
6 little difference of actually providing, the cost of providing  
7 the service. What it does do then is it provides support, a  
8 reduced price for those consumers that buy residential  
9 telephone service. But for those consumers that are buying the  
10 products of the businesses that are paying the higher rates,  
11 those businesses are passing that increased cost along to those  
12 consumers. So the prices of those businesses' services and  
13 goods are higher than they, than the efficient level would be  
14 and, therefore, consumers are paying more for that than they  
15 should. And that basically has a ripple effect all through the  
16 local economy, regional economy to a national economy that  
17 reduces the level of benefit or welfare that all consumers are,  
18 that all consumers have available to them.

19           COMMISSIONER EDGAR: Okay. And I had one other  
20 question. You also said that the, that the requested raise in  
21 rates will enhance competition and, therefore, I believe your  
22 words were, that benefits will flow to the customers. What is  
23 the time frame that you would expect those benefits to flow to  
24 current or future customers?

25           THE WITNESS: Well, that's a difficult question to

1 ask -- to answer. But we see competition all around us. You  
2 know, in the hotel when I was here for my deposition I watched  
3 the Vonage commercial numerous times. It's all around. And  
4 the question is whether or not those companies are going to  
5 market heavily in the rural exchanges, in the rural areas: Are  
6 they going to buy radio time on the local radio stations, are  
7 they going to put up billboards, are they going to, in Vonage's  
8 case, are they going to take whatever steps are necessary to  
9 get local numbers for all these rural exchanges?

10           And I think what, what this plan does by adding \$6 in  
11 additional margin to the business plans of Vonage and whoever  
12 else, it speeds up their decisions. That's the first thing.  
13 So I think that, you know, the question is, well, competition  
14 seems to be coming anyway. And the, the answer to that, I  
15 think, is that, yes, it's coming anyway, but it's picking its  
16 spots. And if we want to induce the competitors to come into  
17 these rural exchanges, we have to make it profitable for them.  
18 They have to look at this as a reasonable business opportunity,  
19 and certainly increasing the margin by, by \$6 or 60 percent is,  
20 is a pretty good idea or a pretty good way.

21           COMMISSIONER EDGAR: If I may just on that point  
22 though, and I do agree that it's probably a hard question to  
23 answer, but, but I guess the point I'm trying to get to and  
24 have a better understanding is that potential increase of \$6 --  
25 as you said, competition is all around, but that potential

1 increase of \$6 is to jump-start, I guess, or to accelerate  
2 perhaps competition coming into these, these areas. And is  
3 there a way or can you speak to that \$6 potential increase,  
4 what impact that will have on the time frame of that  
5 competition coming sooner rather than later?

6 THE WITNESS: Yeah. Well, it'll certainly make it  
7 faster. It'll certainly speed up the process. And let's say  
8 that under the normal competitive development or, as it's going  
9 now, the Vonages of the world are going to come in, make their,  
10 concentrate their efforts on the more urban exchanges or the  
11 exchanges, rural exchanges that have already had the rate  
12 increase, and maybe over time it would bleed over to, say, into  
13 Alltel territory. If you say that was, that would take 15  
14 years or ten years, I think this would cut that in half or by a  
15 third just, just because it's going to get not only the Vonages  
16 of the world focused on the rural exchanges and saying, hey,  
17 this is a good place to do business, let's include this in our  
18 marketing and business plan, but it's also going to make  
19 consumers say, hey, I'm paying \$16 for flat rate residential  
20 service. I can pay \$25.99 for Vonage, on top of whatever their  
21 broadband access cost is, of course, but I get everything else  
22 including broadband Internet and long distance and so on and so  
23 forth. So I think it makes it -- it opens the eyes of both the  
24 competitors and the consumers, and that is going to have the  
25 effect of speeding things up, I think, significantly.

1           COMMISSIONER EDGAR: Okay. I think you said by  
2 approximately a half or a third. And can you tell me what,  
3 what your estimate of that time frame is based upon?

4           THE WITNESS: Well, competition is, competition and  
5 technology is increasing at an increasing rate. But what we  
6 see around us is, again, it's picking its spots and it's  
7 picking its targets. And I think that if we look at -- if I  
8 thought that, that VoIP, Voice over IP was going to become a  
9 mainline or mainstream competitor to wireline telephone or  
10 wireless will become a mainstream competitor to wireless,  
11 wireline telephone by, in, say, three years, I would say, well,  
12 it's probably going to happen in the urban areas first and then  
13 later, and then, you know, take twice as long, say, to happen  
14 in the rural areas. And I was just kind of speculating that if  
15 we can sort of level the playing field for the rural exchanges,  
16 then it would happen about at the same time it happens or just  
17 a little bit after than when it happens for the larger  
18 exchanges.

19           COMMISSIONER EDGAR: Thank you.

20           COMMISSIONER DEASON: Commissioner Bradley.

21           COMMISSIONER BRADLEY: As a part of your statement  
22 you made mention of the fact that many of the large LECs here  
23 in the state of Florida also serve rural areas. And as I  
24 process what you were saying, I got to thinking about maybe  
25 what some of the advancements are as a result of the fact that

1 they have had by this Commission rate rebalancing petitions  
2 approved. And then I started thinking about Alltel's footprint  
3 or service area or LATA, and I was trying to figure out if the  
4 implication is that maybe Alltel's customers are not being  
5 afforded some of the technological advances and other things  
6 that, that come with competition. And also I was thinking that  
7 here in the state of Florida what we're confronted with is, in  
8 my opinion, and it depends on who you ask, how rapidly we're  
9 growing, either a figure of 900 individuals a day or  
10 900 individuals a week, which indicates that at that rate a lot  
11 of these rural areas are going to not be so rural, and I don't  
12 consider them as being so rural even at this point. I just  
13 think that we have some areas that are sparsely populated in  
14 between some major metropolitan areas. And Florida is unique  
15 in that it has a lot of metropolitan, has probably more  
16 metropolitan areas than most other states in the country  
17 outside of maybe one or two.

18 But my question is this: What is it -- is it your  
19 opinion that, that Alltel's customers are not being afforded  
20 the same offerings as, as, at this point technological  
21 offerings at this point that, that are being afforded to other  
22 rural customers who are served by large ILECs?

23 THE WITNESS: At this point I think that Alltel's  
24 technology is probably on par or superior to what you'll find  
25 in the old GTE properties or maybe some of BellSouth's

1 properties, and that's just based on my knowledge of how it is  
2 generally.

3           But the danger is, that we face here is what was in  
4 the Telecom Act of 1996 and in the three major initiatives that  
5 sprang out of the Act, and that being local competition,  
6 universal service and access reform. And that is a real worry  
7 that as competition develops in a patchwork fashion, urban  
8 areas first, business first, and not in rural residential  
9 areas, then there would be a sort of, a situation with the  
10 haves and have-nots in terms of technology and technological  
11 advance. And I think that has been a worry not just about  
12 competition in telephone but also the development of, of  
13 broadband, the Internet and everything else that public policy,  
14 good public policy states that or has stated that we want to  
15 make sure that rural customers have the same access to the same  
16 advanced technology as any other customer does, as an urban  
17 customer does and, therefore, gets the benefits of that new  
18 technology, consumer choice and so on.

19           And I think one of the real problems with, with  
20 denying this petition is that if you maintain residential rates  
21 at \$10.49 for Alltel, what incentive does that provide for a  
22 competitor to come in and offer service and provide choice and  
23 technological innovation and so on? But even beyond that, what  
24 incentive does that provide the rural ILEC to continue to  
25 invest in those areas? I mean, they're doing their business

1 plans the same way that the competitor is doing their business  
2 plans, and they're going to look to place their finite capital  
3 dollars in areas that they think have the most potential  
4 long-term. And if there is a growing gap between rural and  
5 urban areas in terms of technology, I think capital dollars are  
6 going to be focused on the urban areas and to a lesser degree  
7 on the rural areas.

8 COMMISSIONER BRADLEY: Okay.

9 COMMISSIONER DEASON: I have a follow-up question to  
10 one of the questions that Commissioner Edgar asked, and it was  
11 in regard to the, to the effect of the roughly \$6 a month  
12 increase in local rates and how that would -- and I don't mean  
13 to be putting words in your mouth, so if I misinterpret, please  
14 correct me -- but you said that would have an effect on  
15 potential competitors looking at perhaps having a larger profit  
16 margin if they were to enter a market. And you had said that  
17 it also would have an effect on customers because if they start  
18 looking at a higher local rate, well, then they're more likely  
19 to look at other alternatives; is that correct?

20 THE WITNESS: That's right.

21 COMMISSIONER DEASON: Okay. I want to put, ask the  
22 question in terms of the effect of customers that may be  
23 interested in looking at a VoIP alternative. And the question  
24 that I have is that is there really an incentive for customers  
25 to increase their local rate if they still have to pay that

1 higher local rate in order to get the broadband access which  
2 they have to have as a prerequisite to get VoIP service?

3 THE WITNESS: Well, yeah. And that's, that's an  
4 important issue that sometimes gets, in my mind, glossed over.

5 VoIP costs, charges \$25.99, and basically their  
6 function is -- I'm sorry. Vonage, the VoIP provider,  
7 charges \$24.99, and their function is really similar to what we  
8 would call in the old days a long lines provider. They don't  
9 provide the local loop; they don't provide that connection to  
10 the customer. So when we talk about it costing \$25.99 or  
11 \$24.99 for Vonage, what we're really talking about is \$24.99 on  
12 top of the broadband connection.

13 In a lot of cases people are using cable service  
14 broadband, and so what they're doing is buying their cable  
15 service and they're paying, you know, upwards of \$60, \$70 for  
16 their broadband cable service, and then they're adding on the  
17 \$25 or \$24.99 to that for their phone service. So the real  
18 question is in incremental cost, is really a comparison of  
19 incremental costs. The person wants cable, already has cable,  
20 broadband cable, and wants to add phone service to it. The  
21 incremental cost of that phone service is \$24.95. If they want  
22 to do the DSL route, if they want to use the telephone  
23 company's DSL route, they have the phone line already at \$10.49  
24 or \$16.49, and then they add the DSL in Alltel's case for \$35  
25 more. So when you look at it that way, the incremental cost

1 is \$35 on top of phone service, but \$25 on top of cable  
2 service, but where you're starting from is a lot different.  
3 Basic local phone service is, you know, if this proposal is  
4 approved, is \$16.49, where digital or broadband cable is  
5 probably \$70.

6           So I guess when we, when we look at it and we say  
7 will customers really start looking more heavily at VoIP  
8 providers under this circumstance, if they've already got the  
9 cable service in place and they want to just add phone service  
10 to it, it's \$24.95 for calling, you know, for unlimited calling  
11 all across the country versus \$16.49 for flat rate calling just  
12 in Alltel Florida's service territory. If the person makes  
13 any, makes any number of long distance calls or is just sort of  
14 a risk adverse person that wants to know what their bill is  
15 going to be every month, they're not going to want things to  
16 jump around, you know, it's, it's a, it makes them look a lot  
17 longer and a lot harder at that decision. And that, I think,  
18 will make the marketing people of the, of Vonage and other  
19 competitors say, hey, this is a market that, that is probably a  
20 better opportunity for us than it was even with a, with just  
21 a \$6, \$6 lower rate.

22           COMMISSIONER DEASON: Do you know what the digital  
23 cable penetration rate is in the Alltel territory in Florida?

24           THE WITNESS: No, I don't know that.

25           COMMISSIONER DEASON: Commissioner.

1           COMMISSIONER BRADLEY: One other question on the  
2 social welfare issue. Was that a reference to the  
3 subsidization of rural services? My question is was it -- when  
4 you said social welfare, I think that's what you -- was that  
5 the question?

6           THE WITNESS: I'm sorry?

7           COMMISSIONER BRADLEY: When you mentioned social  
8 welfare, was that in reference to the subsidization of rural  
9 phone services?

10          THE WITNESS: Oh, no, no. By social welfare, I mean  
11 the -- social welfare is kind of the pie that the economy  
12 creates. And by, by eliminating distortions in markets, you  
13 basically maximize the size of the pie which all people,  
14 consumers can, can take a bite out of or share.

15          When you enter distortions or place distortions  
16 inside the market, what happens is that that pie shrinks.  
17 Okay? And one of the distortions is, are implicit support  
18 flows.

19          Now I'm not saying that we should eliminate all  
20 implicit support flows, make that pie as big as possible,  
21 because there are certain public policy reasons why support  
22 flows are, are considered practical and desirable.

23          For instance, Ms. Willis mentioned the fact that  
24 Alltel is not reducing its access rates all the way down to  
25 parity with intrastate, so there's still going to be a flow

1 from intrastate access, a support flow from intrastate access  
2 back to, to residential service.

3 But there is a, there's a trade-off. Do you want to  
4 increase your rates by \$10 immediately or do you just want to  
5 go to \$6? And that's sort of a social policy trade-off that,  
6 that has to be determined in, in proceedings, proceedings like  
7 this.

8 I also think that because of the, the idea that we  
9 don't want a technological and competitive divide between rural  
10 and urban areas that we want to keep a pretty straight eye or a  
11 pretty good eye on what's happening in the rural areas or the,  
12 quote, unquote, high cost areas to make sure that those  
13 consumers are still receiving state-of-the-art technology,  
14 telephone service, Internet and so on.

15 COMMISSIONER BRADLEY: And I know we need to let you  
16 give your testimony, but Commissioner Deason asked a question  
17 that kind of goes to something that's been in the back of my  
18 mind. When I think of the rural areas, I think of not cable  
19 but satellite, and satellite is not inexpensive. But if there  
20 is something that can be done by this Commission in order to  
21 jump-start more digital cable penetration which would eliminate  
22 the cost of satellite, it seems to me that rural customers  
23 would be saving a tremendous amount of money. And I don't know  
24 what the cost of satellite is in terms of installation and what  
25 the monthly payment is to maintain the service, but do you see

1 that as one of the residuals?

2 THE WITNESS: Well, I do see that the -- I mean, not  
3 to be flippant about it, but some people say that cable is the  
4 last great monopoly out there. And, you know, we pay a lot of  
5 money for our cable service, but a lot of us do it. And I  
6 think what holds penetration back for cable is not necessarily  
7 lack of demand but lack of supply. But that's changing over  
8 time. The cable companies are building out, competitors are  
9 coming in. Verizon, where I live in Fairfax County, Virginia,  
10 just got the okay from the county government to offer full  
11 cable service, so they're going to be coming in with fiber to  
12 the curb and, you know, the whole bit. But anything you can do  
13 that is going to push out technology to rural areas, I mean, I  
14 think is a good, good thing. But there's -- again, we have  
15 that trade-off. If you do do that in a public policy fashion  
16 which introduces distortions into the market, then you could be  
17 restricting the size of that social welfare pie. So it's --  
18 you've got to kind of weigh the benefits and the costs and  
19 determine what's the best way to go.

20 COMMISSIONER DEASON: Mr. Wahlen, anything before you  
21 tender the witness?

22 MR. WAHLEN: No, sir. The witness is tendered.

23 COMMISSIONER DEASON: Mr. Beck.

24 CROSS EXAMINATION

25 BY MR. BECK:

1 Q Mr. Blessing, could you turn to Page 7 of your  
2 prefiled testimony, please.

3 A I have it.

4 Q What I'd like to do is discuss to begin with a little  
5 bit about penetration of telephone service in Florida, and you  
6 address that at Footnote 3 on Page 7, do you not?

7 A Yes.

8 Q In Footnote 3 you state that penetration in Florida  
9 peaked in 2003 when 95.0 percent of all households in Florida  
10 subscribed to basic local residential service on the wireline  
11 network. Do you see that?

12 A Yes.

13 Q And then a little further down you say, "Based on the  
14 most recent FCC data, May 2005, 91.6 percent of all households  
15 in Florida subscribe to basic local residential telephone  
16 service on the wireline network." Do you see that?

17 A Yes.

18 Q Okay. And then you conclude and say, "It should be  
19 noted that the FCC's household penetration statistics do not  
20 count households that only use a wireless phone for all of  
21 their voice communications and have discontinued their wireline  
22 service." Do you see that?

23 A Yes.

24 Q What I'd like to do is take you to some source  
25 documents I believe you probably used for this in your

1 exhibits.

2 A Yes.

3 Q And could you turn -- go to your Exhibit 2, which is  
4 in your first volume of exhibits, and Table 3 on Page 19.

5 Mr. Blessing, this table contains some of the data  
6 concerning household penetrations by state, does it not?

7 A Yes.

8 Q I take it -- and at the top it shows there's a row  
9 for the United States as a whole and then it shows each state  
10 underneath including Florida; is that right?

11 A That's right.

12 Q Okay. And in March of 2003 Florida had 95.0 percent  
13 penetration. And I believe -- is that the number you used in  
14 your footnote?

15 A I believe so, yes.

16 Q Okay. Penetration actually peaked at 95.2 percent in  
17 July of 2003, did it not?

18 A It appears that way, yes.

19 Q Okay. And in July of 2003 the penetration in Florida  
20 at 95.2 percent was exactly the same as United States as a  
21 whole at 95.2 percent; is that right?

22 A Yes.

23 Q Okay. You see there's different columns: One says  
24 "Unit" and one says "Available." Do you know what the  
25 difference is between those two?

1           A     You know, I did at one time, but I can't remember  
2 what the difference is.

3           Q     Would "Unit" be the actual household where  
4 "Available" means the phone is available either in the  
5 household or elsewhere to the subscriber?

6           A     It could be, yes.

7           Q     Well, let's straighten that out. On Page 4 of that  
8 same exhibit at the very bottom, in the very last paragraph,  
9 the bottom of that, doesn't it say that the column headed  
10 "Unit" indicates the percentage of households for which there  
11 is telephone service in the housing unit, and the column  
12 "Available" indicates the percentage of households which have  
13 telephone service available for incoming and outgoing calls  
14 either in the housing unit or elsewhere such as at work or in a  
15 neighbor's home? Is that the difference between those two  
16 columns?

17          A     Yes.

18          Q     Okay. We've been discussing the "Unit," which means  
19 there's actually a telephone in the household unit; is that  
20 right?

21          A     That's right.

22          Q     Okay. Now could you turn to Page 21 of the exhibit.  
23 That's the most recent one that's, that's contained in your  
24 testimony; is that right?

25          A     That's right.

1 Q And this is March 2005?

2 A Yes.

3 Q And the United States as a whole went to 92.4 percent  
4 and Florida went to 91.6 percent. Do you see that?

5 A Yes.

6 Q Okay. Would you agree with me that between July of  
7 2003 and March of 2005 the relative standing of Florida  
8 compared to the national average actually dropped?

9 A It's lower than the national average, yes.

10 Q Okay. And in July of 2003 it was at the national  
11 average, wasn't it?

12 A Right.

13 Q So relative to the national average, Florida is doing  
14 worse in March 2005 than it did in July of 2003; would you  
15 agree with that?

16 A Well, you know, I, I don't, I don't like to use the  
17 term "worse" here because you're talking about monthly data and  
18 monthly survey data, and there's a lot of little issues  
19 involved in collecting it. But I will say that the number is  
20 lower in Florida in March of 2005 than it is nationally.

21 Q Okay. And do you know or do you have any explanation  
22 of why both the national average dropped and Florida dropped  
23 from July 2003 to March of 2005?

24 A Well, I think the -- most people would speculate that  
25 a lot of people are -- this wireless -- this penetration stuff

1 generally deals with wireline penetration, and there are other  
2 intermodal options available now that may not be picked up in  
3 these numbers.

4 Q Okay. There's been one more report issued since you  
5 filed your testimony, has there not, concerning penetration or  
6 do you know?

7 A I haven't seen it, if there has been.

8 MR. BECK: Commissioner Deason, I'd like to ask that  
9 this exhibit be given an identification for -- or be given an  
10 exhibit number for identification purposes.

11 COMMISSIONER DEASON: Okay. It will be identified as  
12 Exhibit 58.

13 (Exhibit 58 marked for identification.)

14 BY MR. BECK:

15 Q Mr. Blessing, do you have Exhibit 58 for  
16 identification in front of you?

17 A Yes, I do.

18 Q Okay. And would you be willing to accept, subject to  
19 check, that this is one more -- or more recent results of the  
20 survey than was available when you filed your testimony?

21 A Yes, I would.

22 Q Okay. And in this data it shows the, the United  
23 States as a whole increased between March and July of 2005 to  
24 94 percent penetration. Do you see that?

25 A Yes.

1 Q And Florida went from 91.6 to 93.0; is that right?

2 A Yes.

3 Q Okay. So that in July of 2005 there was overall  
4 increases in penetration both nationally and in Florida, but  
5 the difference between Florida and the national penetration is  
6 even greater in July of 2005 than it was in March; is that  
7 right?

8 A Well, it's by two-tenths of a percent. Is that what  
9 you're referring to?

10 Q The difference increased by two-tenths of a percent  
11 so that the actual difference is a full percentage point.

12 A Yes.

13 Q In other words, nationally it's 94.0; Florida, it's  
14 93.0.

15 A Yes. But I would -- you know, I don't know where  
16 you're heading with this, but I would caution putting a lot of  
17 emphasis on variations within a few months of a few tenths of a  
18 percent. I mean, if you're just looking at the change in the  
19 numbers, then, yes, I agree with you.

20 Q Okay. Do you have anything further or any reasons in  
21 your mind of why there appears to be a difference between the  
22 national penetration rate and Florida's?

23 A Well, there could be any number of reasons. One pops  
24 into my head that Florida has a large percentage of, of  
25 part-time residents who may or may not have wireline telephone

1 service in their house, preferring to rely on wireless or some  
2 other form. But there are probably several reasons.

3 Q Okay. You don't believe that these numbers reflect  
4 wireless telephones being available in the unit, do you?

5 A No, I don't.

6 Q Okay. Could you turn to Page 2 of your Exhibit 2.  
7 And I'd like to refer you to Footnote 2 on Page 2. Could you  
8 take a second -- have you read the Footnote 2?

9 A I will read it again.

10 Q Please.

11 (Pause.)

12 Have you read it, Mr. Blessing?

13 A Yes, I have.

14 Q Would you agree that this survey is intended to  
15 include wireless, VoIP and any other telephone that's available  
16 to a household?

17 A Well, yes, I think they try to get at that, that  
18 information. But if you read Footnote 2, they've been changing  
19 the questions, you know, year over year trying to get at that  
20 information.

21 My understanding is that they don't think that they  
22 have really solved this problem yet to really get a full  
23 intermodal penetration rate, and that's what I was referring  
24 to.

25 Q Okay. But you would agree that, that they are

1 trying, in fact, to count cell phones and other types. It's  
2 not -- in other words, the statistics aren't intended to only  
3 reflect wireline.

4 A They are trying, but whether they're successful at it  
5 is up in the air.

6 Q The statement in your testimony that the FCC's  
7 household penetration statistics do not count households that  
8 only use wireless phones really isn't the whole story, is it?

9 A Well, I think when this was written it was in the  
10 midst of this, and in Footnote 2 there were questions about  
11 whether or not people understood the question to mean wireless  
12 only and so on and so forth. So could that line be clearer?  
13 You know, maybe. But I don't think it's incorrect.

14 Q You were listening when I had a discussion with  
15 Ms. Willis. We talked about the availability of Vonage and the  
16 availability of telephone numbers to subscribers where they  
17 could get a local telephone number in Alltel wireless  
18 exchanges. Did you or somebody who works for you do the  
19 research that indicated they could?

20 A One of my colleagues did, yes.

21 Q Okay. Can you provide any more information about it  
22 than we had in my discussion with Ms. Willis?

23 A Yes. What my colleague did is he went onto the  
24 website, I think pretty much probably the same website that you  
25 printed that page from, and he had collected, previous to going

1 onto the website he had collected a number of phone numbers in  
2 various territories or towns in Alltel's territory by going to  
3 the online yellow pages. And he would get, say, the chamber of  
4 commerce in the town, the city hall or a restaurant, and he  
5 would enter the numbers into the Vonage Web page. And those  
6 that came back saying, yes, you can keep your same number, we  
7 took to mean that, that Vonage could provide a local number in  
8 that territory.

9 Q So you think that every 904 exchange that Alltel has  
10 can get, can be provided a local phone number by Vonage in the  
11 Alltel exchange?

12 A I don't know about that. I think the interrogatory  
13 response listed a certain number of towns that you could do it,  
14 and I think that's what, that's what we discovered in the  
15 research.

16 Q The interrogatory response is Interrogatory 76 at  
17 Page 2 of 3. Do you see that where you list certain cities and  
18 say that it's 22 percent of Alltel's customer base?

19 A Yes. And I also see in parentheses a list of towns,  
20 and I think what we did -- you know, obviously we couldn't put  
21 in every phone number in the 904 exchange that Alltel serves,  
22 but we took samples or we took numbers from these towns and it  
23 came back and said you could get service.

24 Q Are there some exchanges in the 904 area code that  
25 Alltel serves that are not included on that list?

1 A I don't know.

2 Q On Page 28 of your testimony you do a comparison of  
3 Alltel's local rate to the Vonage \$14.99 plan; is that right?

4 A Yes.

5 Q Okay. And in essence you say that at the current R1  
6 rate Vonage is not attractive, but that if you can increase  
7 your R1 rate to be greater than Vonage's, that it would be  
8 attractive. Does that fairly --

9 A I think any time you raise the rate it becomes more  
10 attractive for competitors.

11 Q When you compare the price of Alltel's R1 service in  
12 your testimony, and I'm referring specifically to Line 9 at  
13 Page 28, did you include the subscriber line charge that's  
14 charged on --

15 A No.

16 Q Don't you think you ought to?

17 A Well, you could. But then also for Vonage's service  
18 you also have to talk about what else is there, and then you  
19 would have to try to make a full apples-to-apples comparison,  
20 you would have to put in some estimate of toll.

21 I think the only point I was trying to make here is  
22 the simple one. If the rate goes up, you know,  
23 from \$10 to \$16, which is a 60 percent increase, it's going to  
24 be more attractive for competitors to come in and compete in  
25 that area. And on the same, by the same token, it's going to

1 be more likely that consumers will, will take the time to  
2 evaluate whether they want to switch.

3 Q But right now if you add the subscriber line charge  
4 to Alltel's existing rate, it already exceeds the \$14.99 plan  
5 of Vonage, does it not?

6 A \$6.50 plus \$16.49 is higher than \$14.99.

7 Q And \$6.50 plus the current rates of \$10 and something  
8 exceed it as well, does it not?

9 A That's right.

10 Q Do you know of any companies that offer DSL on a  
11 stand-alone basis where they're not, you don't have a tie-in  
12 with purchasing local residential service?

13 A I know that, you know, you mentioned the example of  
14 Verizon. I also know that other companies are willing to do it  
15 but that it becomes a matter of price. Now if you wanted to  
16 figure out a price for DSL service, you would have to look at  
17 what the cost is. And that cost of DSL service, and I'm just  
18 talking about stand-alone DSL service, is going to include the  
19 loop, it's going to include some sort of termination device  
20 that puts it into a DSLAM, and then it's going to have to  
21 include something that takes it from the DSLAM out to the ISP,  
22 in this case Alltel or whoever is the ISP.

23 Now given that Alltel's loop cost is in the range of  
24 about \$25 to \$30, it would seem to me -- and that's just for  
25 the loop, that's not anything else, not the Internet service or

1 anything -- it would seem to me that paying \$16 for that and  
2 getting everything, plus, and then paying your Internet charge  
3 on top of that isn't that bad a deal.

4 Q But Alltel is not willing to offer DSL as a  
5 stand-alone product without residential service at any price;  
6 is that true?

7 A But if you called up Alltel and said, I want a  
8 residential service line for \$16.49 and you ended up not using  
9 it for residential service, they'd sell it to you. I don't  
10 understand -- it becomes a matter of price. That's all I'm,  
11 I'm trying to say to you.

12 Q Right. But Alltel will not offer DSL unless you also  
13 buy residential service or business service from them.

14 A That's true. But in Alltel's case with the rates as  
15 low as they are I don't see that as a hindrance to a consumer  
16 buying it.

17 Q Right. And as the -- if the petition is granted and  
18 residential rates go up by \$6, then that tie-in also affects  
19 somebody who wants to purchase DSL service in order to use a  
20 VoIP provider, does it not?

21 A That's right.

22 Q Okay. And there's no technological reason you can't  
23 offer DSL as a stand-alone product; it's just a policy decision  
24 by the company?

25 A Right. But if I'm a consumer, I don't care -- the

1 fact that Alltel has made that policy decision, I don't really  
2 mind because I know that I can pay for that \$16.49 R1 line, pay  
3 \$16.49 for it, and that's going to be a lot cheaper than the  
4 cost of buying that loop and then the other pieces to, to  
5 complete just a stand-alone Internet service.

6 Q Mr. Blessing, you just mentioned or I guess a moment  
7 ago mentioned the price of the loop, and I believe you  
8 discussed that with staff in their deposition of you, did you  
9 not, the cost of a loop?

10 A I'll take your word for it.

11 Q Well, let me ask you to turn to your deposition at  
12 the bottom of Line 16.

13 A I don't have a copy of my deposition.

14 MR. WAHLEN: Hold on.

15 THE WITNESS: Page 116, Mr. Beck?

16 MR. BECK: 16. I'm afraid my line is different  
17 than -- hang on a second. My printed out version is different  
18 from the one staff handed out.

19 THE WITNESS: Yeah. Because I only have 40 pages  
20 here.

21 MR. WAHLEN: I just gave him the compressed version,  
22 so it may be a little harder for us to do this.

23 BY MR. BECK:

24 Q Let me ask this. Is it your understanding that the  
25 unseparated cost of a loop for Alltel is approximately \$25?

1 A Somewhere in that neighborhood, yes.

2 Q Okay. And if you wanted to get the intrastate  
3 portion of that loop, approximately you would look at  
4 three-quarters of that cost to find the intrastate portion; is  
5 that right?

6 A That's right.

7 Q So that would be about \$17; is that right?

8 A I think it's closer to \$18, but.

9 Q Let's go with that. Now your current local service  
10 price is \$10.49; is that right?

11 A That's right.

12 Q But you also have a subscriber line charge of \$6.50;  
13 is that right?

14 A Well, but that subscriber line charge, if you're  
15 going to throw that in, then you can't whack the unseparated  
16 loop cost by 25 percent because the subscriber line charge is  
17 recovering that 25 percent.

18 Q Okay.

19 A And whack is the technical term. I'm sorry.

20 MR. BECK: That's all I have, Mr. Blessing. Thank  
21 you much.

22 THE WITNESS: Thank you.

23 COMMISSIONER DEASON: Staff?

24 MR. SUSAC: Thank you, Mr. Chairman.

25 CROSS EXAMINATION

1 BY MR. SUSAC:

2 Q Good morning, Mr. Blessing. As I mentioned earlier,  
3 my name is Jeremy Susac. I'm an attorney here at the  
4 Commission. I have a few questions for you. To the extent you  
5 can answer yes or no, we'd appreciate it, although I understand  
6 that sometimes your answers can't fall in with a yes or no and  
7 you need to qualify. That is fine.

8 At the outset I'd like to refer you to your direct  
9 testimony, Page 31, Lines 6 through 13, and if you need so,  
10 your response to staff's interrogatory number 38. And I'm  
11 going to proceed with the question because I don't think it's  
12 necessary that you have to actually refer to it.

13 Am I correct that you cite CLEC resellers, wireless  
14 carriers, VoIP providers and cable telephone providers as  
15 competing with Alltel in its local market and that the rate  
16 rebalancing is necessary to increase such competition?

17 A Yes.

18 Q And one of the criteria that the Commission must  
19 consider in addressing Alltel's petition is whether the  
20 approval of the petition will induce enhanced market entry; is  
21 that correct?

22 A Yes.

23 Q And in your direct testimony along the lines of Page  
24 24 through 28 you discuss two empirical studies, one by Ros and  
25 McDermott and the other by Eisner and Lehman, which you also

1 discussed in your deposition; is that correct?

2 A That's right.

3 Q Could you please refer to your direct testimony,  
4 Pages 24 through 25, pertaining to the Ros and McDermott study?

5 A Okay.

6 Q According to your testimony, this study addresses the  
7 effects of, quote, unquote, unbalanced rates on the development  
8 of competition for local residential service; is that correct?

9 A That's right.

10 Q For the purposes of this study how were unbalanced  
11 prices defined?

12 A I think generally they were just defined as a large  
13 divergence between residential and business rates.

14 Q And as prices were more unbalanced, do the studies  
15 show that smaller percentage of ILEC residential lines were  
16 served from wire centers with CLEC collocation arrangements?

17 A I think it did say that. But I think what they also  
18 said was that a smaller percentage of residential lines were  
19 served by CLECs, period.

20 Q Okay. But there were some CLECs with collocation  
21 arrangements; is that correct?

22 A Yes.

23 Q And for CLEC resellers, wireless carriers, VoIP  
24 providers, cable telephone providers, we established in your  
25 deposition, did we not, that none of these providers use

1 collocation, collocation arrangements?

2           A       Right. But I think if you read the, the abstract of,  
3 of Ros and McDermott, they say right in there that the results  
4 support the idea that you should price -- your prices should be  
5 more reflective of cost. In other words, you should eliminate  
6 implicit support flows. And that was the purpose of, of citing  
7 the Ros and McDermott study in my testimony is that they found  
8 the pretty obvious result, their research found a fairly  
9 obvious result. If the residential rate is really low, then  
10 competitors are not likely to come in. And as the rate  
11 increases, then more competitors have a tendency to come in.  
12 That was the purpose of citing the study in my testimony.

13           Q       Turning now to the Eisner and Lehman study. And if  
14 you need a reference, that's Page 27, Lines 14 through 16 of  
15 your direct testimony. Am I correct that according to your  
16 testimony, quote, unquote, the authors were interested in the  
17 efficacy that the pricing of unbundled network elements and the  
18 setting of resale discounts has on a CLEC entry?

19           A       That's correct.

20           Q       And for CLEC resellers, wireless carriers, VoIP  
21 providers and cable telephone providers, we established, did we  
22 not, in your deposition that none of these providers use UNES  
23 or currently receive a discount from Alltel?

24           A       That's right. But, again, the Eisner and Lehman  
25 study concluded in the body of the paper that there is a direct

1 relationship between the number of residential lines served by  
2 CLECs and residential rates. The higher the residential rate,  
3 the higher number of residential lines served by CLECs.

4 Q And that's a traditional CLEC?

5 A Any CLEC.

6 Q Any CLEC?

7 A Yeah.

8 Q And in your deposition do you recall that we also  
9 discussed how wireless carriers, VoIP-based providers and cable  
10 telephone providers may react to Alltel's rate increase for  
11 basic local service?

12 A I recall that line, yes.

13 Q And for these competitors would any increase in  
14 average gross margin per customer depend on whether the  
15 competitor could increase its price?

16 A Well -- and I don't know if we got into this at the  
17 deposition, but thinking about it, if they're not in the  
18 market, they don't have a price to increase. So that question  
19 is kind of, was kind of confusing to me in the discovery. And  
20 you say, well, geez, will this allow them to increase their  
21 margin? Well, it depends on whether they increase their price  
22 whether the margin is going to go up.

23 But I think the point is if the residential rate goes  
24 up, more competitors are going to come in and the existing  
25 competitors are going to view the market as a better

1 opportunity and increase their efforts.

2 Q Okay. Well, just going along the lines of the Vonage  
3 commercial that you saw, and I think Mr. Beck alluded to this  
4 earlier, are approximately \$25 per month on a nationwide basis.  
5 To the extent everything else holds true and they enter  
6 Alltel's footprint and they charge \$25, would they have to  
7 increase their price to increase their gross margin per  
8 customer?

9 A If they're not in Alltel's market yet?

10 Q Yes.

11 A They have -- again, they wouldn't have a margin to  
12 increase or a price to increase because they're not, not there  
13 yet. Are you saying would they increase their price from  
14 \$24.99?

15 Q Yes. That's exactly what I'm saying.

16 A I doubt it, no.

17 Q Okay. And just for clarification of the record, do  
18 wireless carriers, VoIP-based providers and cable telephone  
19 providers offer a stand-alone service akin to Alltel's basic  
20 local service?

21 A Well, wireless providers have basic, very basic plans  
22 that, that can be viewed as being similar to, to traditional  
23 wireline service.

24 Q In what ways?

25 A Well, you have a relatively low price and a bucket of

1 minutes. Now consumers that don't make a lot of calls can pay,  
2 you know, in some cases, I don't know what it is here in  
3 Florida, but they can pay \$19.95 for, you know, a basic  
4 wireless package with, you know, 100 minutes included or  
5 something like that. If they don't make a lot of calls and go  
6 over that allowance, then their bill is \$20 compared with what  
7 the wireline customer is paying, if the proposal is approved,  
8 the \$16.49.

9 Q If the Commission approves Alltel's petition, Alltel  
10 would increase its rates for basic local service but not, but  
11 not bundled packages; is that correct?

12 A That's right.

13 Q And do wireless carriers, VoIP providers, cable  
14 telephone providers typically offer services only in a package?

15 A I think most VoIP providers offer bundled services  
16 because generally that's what customers want. But, again, the  
17 wireless people have a number of different options and plans,  
18 some of which are bundled, some of which aren't.

19 Q And if you could indulge me in these next couple of  
20 questions, it's the same line of questions, just for different  
21 providers: Wireless, VoIP-based and cable telephone providers.  
22 What we're going to ask you to do is maybe put the importance  
23 on a scale of one to five being the most important.

24 And I'll just -- for the record, how important would  
25 the following rates be for a competing wireless provider in

1 setting its own prices: Alltel's rates for basic local  
2 service, would that be a one to five, five being the most  
3 important?

4 A How, how important would it be to a wireless company  
5 in its rate setting process of what Alltel's rates are?

6 Q For basic local service.

7 A For basic local service. To the extent that they  
8 launched a package that was designed to compete with wireline  
9 service, in other words, they were trying to get customers to  
10 drop wireline and use their wireless, I would say it's very  
11 important.

12 Q Somewhere along the lines of a four or a five maybe?

13 A Yeah.

14 Q Okay. Thank you for your indulgence. I mean, I know  
15 it's probably an awkward question, but it helps us greatly.

16 Same question, if the Commission approves Alltel's  
17 petition, how important would it be for Alltel's rates for  
18 unbundled (sic) packages?

19 A For bundled packages?

20 Q Yes.

21 A Well, bundled packages are a little bit different in  
22 the sense that -- take Alltel's bundle, it includes both local  
23 and toll. So the fact that the wireline portion of the bundle,  
24 the rate is going up, but for the long distance portion we hope  
25 the rate comes down because of the, the pass-through of the

1 access charge reductions. So to that extent, you know, I think  
2 that's the reason why Alltel's bundle shouldn't necessarily  
3 change their prices. And if the bundles don't change their  
4 prices, I don't suspect those competitors that are competing  
5 with Alltel's bundled offerings would be very likely to change  
6 their prices either. So I would say in your scale, your  
7 one-to-five scale, one or two.

8 Q Same question for a VoIP-based provider.

9 A For a bundle or for a --

10 Q Well, they offer it in a bundle; is that correct?

11 A Okay. Yes. But you had made the distinction  
12 earlier. I just wanted to be clear.

13 Q Okay.

14 A So to what degree would the pricing decisions of a  
15 VoIP provider offering a bundled service reflect or be  
16 influenced by changes in Alltel's local flat rate, that's the  
17 question?

18 Q Actually I think I might, might be confusing you.  
19 It's how important would the following rates be for a competing  
20 wireless provider in setting its own prices: Rates charged by  
21 a VoIP-based provider offering a bundled package?

22 A To the extent that the wireless provider was going  
23 after local customers, in other words, not just traditional  
24 wireless customers, but getting people to turn off their  
25 wireline connection, be it whether it's Alltel's wireline or

1 VoIP, I think those prices will be important.

2 Q Let me move along and see if I can't bring this all  
3 together with a couple of questions.

4 When wireless carriers, VoIP providers, cable  
5 providers set their own prices, would you agree that these  
6 providers consider rates of various competitors and services  
7 which include much more than Alltel's rates for basic local  
8 service?

9 A Yes.

10 Q Would wireless carriers, VoIP providers, cable  
11 telephone providers experience any cost reductions as a result  
12 of the Commission approving Alltel's petition?

13 A To the extent that they are terminating toll calls on  
14 Alltel's network, they would see, potentially see a reduction  
15 in access charges.

16 Q And in the grand scheme of things is that a large  
17 reduction?

18 A For a Vonage? Overall.

19 Q For a wireless carrier, a VoIP provider or a cable  
20 telephone provider.

21 A I guess where I'm having trouble is are you talking  
22 about in the, across their entire operation nationally would  
23 the fact that what happens to Alltel Florida have much of an  
24 impact one way or the other?

25 Q Just doing business in Alltel's footprint. Would

1 they -- would wireless carriers, VoIP providers, cable  
2 telephone providers experience any cost reduction as a result  
3 of the Commission approving Alltel's petition, Alltel Florida's  
4 petition?

5 A To the extent that they terminate toll calls to  
6 Alltel customers, yes, they would, they would experience a cost  
7 reduction. The degree of that cost reduction would depend on  
8 how many toll calls they terminate.

9 Q And my next question addresses the passage in Order  
10 Number PSC-03-1469-FOF-TL, which was the Commission's final  
11 order on the access charge reduction petitions by BellSouth,  
12 Sprint and Verizon. You have also provided this as an Exhibit  
13 DCB-10 attached to your direct testimony. If you could, could  
14 you please turn to Page 23 of that exhibit, sir?

15 A Okay.

16 Q And could you please now look to the paragraph under  
17 "Findings and Decision"?

18 A Okay.

19 Q Could you please -- hold on one second. Give me a  
20 chance to get there. And looking at the second full paragraph  
21 starting with "Companies providing bundled offerings," could  
22 you just read that into the record and for the benefit of  
23 myself?

24 A Sure. The paragraph beginning with "Companies"?

25 Q Yes.

1           A       "Companies providing bundled offerings that include  
2 both local and long distance service will benefit not only from  
3 the increased rate at which residential service can be offered  
4 on a competitive basis, but also from the decreased terminating  
5 access rate. These changes will make providing bundled  
6 packages to residential customers more economically attractive  
7 because companies will increase their profit margin."

8           Q       And in your deposition I believe you agreed that this  
9 paragraph indicates that for companies providing bundled  
10 offerings of local and long distance service, the average gross  
11 margin per customer would improve as a result of BellSouth,  
12 Sprint and Verizon's access charge reduction petitions being  
13 approved; is that correct?

14          A       Yes.

15          Q       And if the Commission approves Alltel's petition, do  
16 you agree that there is a considerable uncertainty whether the  
17 average gross margin per customer would improve for wireless  
18 carriers, VoIP providers and cable telephone providers?

19          A       No.

20          Q       And could you elaborate on that?

21          A       Well, is it uncertain whether or not they will see  
22 the same benefits that are listed in this, this paragraph?  
23 Again, to the extent that they terminate toll calls, they're  
24 going to see the reduction in access charges. And the  
25 increased rate at which residential service can be offered will

1 also help. So I don't know -- I don't understand what you mean  
2 by -- I don't understand why you would think there would be  
3 some gross uncertainty or large degree of uncertainty.

4 Q I didn't say gross, but to the extent -- is that a no  
5 then?

6 A Well, I answered the question no, and then you asked  
7 me to elaborate.

8 Q Okay. Since the Commission's final order on the  
9 access charge reduction petitions filed by BellSouth, Sprint  
10 and Verizon issued in December 2003 has the level of  
11 competition in Florida between wireless carriers, VoIP  
12 providers, cable telephone providers and incumbent wireline  
13 carriers generally increased?

14 A I would, I would imagine it has, yes.

15 Q And has Alltel observed the same competitive trends  
16 in its Florida service territory?

17 A I think Alltel is, is seeing competitive pressure,  
18 but nothing to the degree that you see in the urban areas. And  
19 the purpose of this proposal is to increase that rate of, of  
20 competitive entry.

21 Q With the increase of competition then from a variety  
22 of sources, are all providers now more limited in their ability  
23 to increase rates for residential service packages?

24 A In a competitive -- to answer your question I have to  
25 take a step back. In a competitive market you're limited in

1 your ability to raise prices once that, once your price is at  
2 its average cost or the average cost prevailing in the industry  
3 if you have a number of competitors with different  
4 technologies, so on and so forth.

5 I think the point here is at \$10.49 Alltel's  
6 residential rate is nowhere near that point. Okay? And if we  
7 ever hope to get any competition into a rural territory like  
8 Alltel for the residential customers, any large degree of  
9 competition in the same time frame that we're going to see it  
10 in the urban areas, those rates have to come up. The FCC saw  
11 it, the Telecom Act of 1996, the FCC's orders in universal  
12 service and local competition and interstate access, access  
13 reform all said those implicit support flows are a hindrance to  
14 competitive development and they have to go. And there is a  
15 much larger degree of support flow as we see by the level of  
16 the access charges in the rural areas than there is in the  
17 urban areas. But that doesn't change the fact that for  
18 competition to develop, those flows have got to go.

19 Q How would Alltel benefit from reduction in the level  
20 of switched access charges in a commensurate revenue-neutral  
21 increase in basic local rates?

22 A In those same documents that I was referring to, the  
23 FCC's local competition orders and universal service orders, it  
24 is very clear and very plainly laid out that implicit support  
25 flows are not sustainable. So eventually those support flows

1 are going to go away. And the way to correct that, as the FCC  
2 correctly pointed out, is to eliminate the implicit support  
3 flows. You can do it one of two ways: You can rebalance the  
4 rates or you can institute some sort of universal service fund.

5 Q Okay. Moving on to your Exhibit DCB-0 in Table 1.  
6 And you're there with me?

7 A Yes, I am. I'm sorry.

8 Q I'm sorry. Is it your testimony that Alltel's  
9 residential rates are below what you refer to as average cost?

10 A Yes.

11 Q And could you briefly explain what you mean by  
12 average cost?

13 A Average cost means that the, the rate -- well, a rate  
14 being equal to average cost means that the rate is covering its  
15 direct or long-run incremental cost plus a proportional share  
16 of joint common shared costs otherwise known as overhead.

17 Q So is it accurate to state that your view, since  
18 Alltel residential rates are below average costs, other Alltel  
19 services are providing support to residential service?

20 A Yes.

21 Q And specifically intrastate switched access is one of  
22 those services; is that correct?

23 A That's right.

24 Q Now, Mr. Blessing, in Table 1 of your, of this  
25 exhibit you offer three different estimates of the cost of

1 local service; is that correct?

2 A That's right.

3 Q And you discuss these three cost estimates in your  
4 direct testimonies on Pages 11 through approximately Page 19;  
5 is that correct?

6 A I believe that's correct, yes.

7 Q And is that the only portion of your direct testimony  
8 in which you address these three?

9 A I believe so.

10 Q Okay. Referring back to Table 1, the first 1R cost  
11 estimate of \$66.37 is labeled "BCPM 3.1 Defaults"; is that  
12 correct?

13 A That's right.

14 Q And your footnote indicates this value came from the  
15 Commission's final order in Docket Number 980696-TP, the  
16 universal service proceeding; is that correct?

17 A That's right.

18 Q Do you know when this order was issued?

19 A A number of years ago, I believe. I don't know the  
20 exact date.

21 Q Subject to check, would you accept January 7th, 1999?

22 A Yes.

23 Q Now would you agree with me that in the universal  
24 service docket in order to fulfill a statutory mandate the  
25 Commission was required to determine and report to the

1 Legislature the total forward-looking cost of providing basic  
2 local telecommunications service at least for Florida,  
3 Florida's large ILECs?

4 A That's right.

5 Q And in order to satisfy this requirement for the  
6 large ILECs didn't this Commission have to choose the  
7 appropriate cost proxy model to use to determine the cost of  
8 basic local service?

9 A That would be one step, yes.

10 Q And in order to compute the cost of basic local  
11 service for the three large ILECs using the, using a cost proxy  
12 model, didn't the Commission also have to determine the  
13 appropriate input values to use in the model?

14 A That's right.

15 Q And would you agree with me that the cost proxy  
16 models require a substantial number of inputs in order to yield  
17 cost results?

18 A Yes.

19 Q Mr. Blessing, what is your understanding of the input  
20 values that were used in the BCPM 3.1 to arrive at  
21 forward-looking cost estimates for Alltel and other small LECs  
22 in that proceeding?

23 A Are you asking me whether they're old?

24 Q No. I'm asking you what is your understanding of the  
25 input values that were used in the BCPM 3.1 to arrive at a

1 forward-looking cost estimate for Alltel and other small LECs.

2 A I think they were the default inputs that were in the  
3 model.

4 Q That were used for the large ILECs?

5 A I'm not sure. I'm not sure.

6 Q Would you, would you accept, subject to check, that  
7 the BCPM 3.1 was run with the Commission-ordered input values?

8 A Yes.

9 Q Weren't the Commission-ordered input values for the  
10 large ILECs?

11 A Like I said, I believe they are, yes, but I'm not  
12 sure.

13 Q So these input values may not be completely  
14 appropriate for the use of small LECs such as Alltel?

15 A That's right.

16 Q And depending on the input, its use may underestimate  
17 or overestimate the cost results; is that correct?

18 A Well, since they're large LEC inputs, I would suspect  
19 that if it's going to, it's going to be in error, it would  
20 probably understate the cost.

21 Q Okay. Now turning back to Table 1, the next cost  
22 estimate I'd like to discuss is the \$41.32 that's labeled  
23 "Embedded Cost." To your knowledge does this also come from  
24 the Commission's universal service order?

25 A Yes.

1 Q And this represents Alltel Florida's embedded costs  
2 per line?

3 A That's right.

4 Q Has Alltel Florida's number of access lines increased  
5 in the past seven or so years since the issuance of that order?

6 A Well, yes.

7 Q Do you know whether Alltel Florida's expense and  
8 investment levels are the same in 2005 as they were in 1998?

9 A Well, no. The, the cost, Alltel's costs obviously  
10 have changed. And I think as I explain in my testimony, we  
11 used the models that were available. Alltel doesn't have a  
12 forward-looking model of its own for Florida because no one has  
13 come in and requested UNEs and, therefore, there was never any  
14 reason to develop one. The only point of this is to show that  
15 the \$10.49 rate is so far below, and the \$16.49 for that  
16 matter, so far below what these cost model estimates are that  
17 there can be no doubt that it's on the receiving end of some  
18 sort of implicit support flow. I believe staff in your  
19 prehearing statement, you said there's -- if anything, our  
20 estimates are probably conservative. There's probably more  
21 support than what we're indicating here. But we used what we  
22 had to work with just to illustrate that there's probably no  
23 doubt that a support flow exists directed towards residential  
24 service.

25 Q And going down further on Table 1, the third and last

1 estimate of \$48.44 is indicated to be derived using the  
2 HAI 5.0a cost model.

3 A That's right.

4 Q Could you provide me with a brief description of this  
5 model, sir?

6 A The HAI model was originally developed or sponsored  
7 by AT&T for the purpose of developing forward-looking costs.  
8 It was used heavily in the FCC universal service docket and  
9 it's been used in several state UNE proceedings as well. The  
10 version that we used here, HAI 5.0a, was a universal service,  
11 was developed for the universal service proceeding at the FCC  
12 and contained demographic, geological and other type data that  
13 fit Alltel Florida's service territory. In other words, it  
14 had, had a block of data that was Alltel Florida specific. So  
15 what we did was we used that framework and inserted some Alltel  
16 Florida specific data, input data into it where we could and  
17 ran the estimate.

18 Q And did you alter any of the HAI 5.0a default inputs?

19 A Yes.

20 Q And -- I'm sorry. And, for example, did you change  
21 the cost of capital input?

22 A Yes.

23 Q What overall rate of return results from your cost of  
24 capital changes?

25 A I don't know the exact number offhand, but I believe

1 it was in the 10 percent range.

2 Q And what is the HAI model's derived overall rate of  
3 return using its default cost of capital inputs?

4 A I don't recall what the default one was.

5 Q Subject to check, would you say it was also around  
6 10 percent?

7 A Yes.

8 Q And you indicate on Page 15 at Lines 9 through 12 of  
9 your direct testimony that you also changed the model's default  
10 depreciation lives and salvage values for 12 out of the 22  
11 investment categories; is that correct?

12 A That's right.

13 Q Do you know the general impact of these changes?

14 A Generally they probably moved it up slightly, moved  
15 the result up slightly.

16 Q The overall impact of your input changes is an  
17 increase of 16 percent over the HAI 5.0a model's default cost  
18 of local service of \$41.76; is that correct?

19 A I'll take it subject to check.

20 Q Subject to check. And does the HAI 5.0a model  
21 compute the TELRIC cost of services?

22 A You can calculate the TELRIC cost of services from  
23 the results file of the HAI 5.0a.

24 Q Mr. Blessing, my colleague is going to hand you an  
25 excerpt of the Code of Federal Regulations. Specifically I'm

1 referring to 47 CFR, subpart 51.505. This is the TELRIC  
2 Pricing Rule. If you could please, take a moment and  
3 familiarize yourself with the rule.

4 A I'm familiar with it.

5 Q And could you please briefly read for me subpart  
6 51.505(b)(1), starting with the "Total element long-run"?

7 A That's, that's just (b). Do you want me to read (b)  
8 or (b)(1)?

9 Q (B)(1), please.

10 A Okay. "Efficient network configuration. The total  
11 element long-run incremental cost of an element shall be  
12 measured based on the use of the most efficient  
13 telecommunications technology currently available and the  
14 lowest cost network configuration, given the existing location  
15 of the incumbent LEC's wire centers."

16 Q Doesn't this require that the TELRIC-compliant cost  
17 study must locate a switch where an ILEC currently has a  
18 switch?

19 A Yes.

20 Q Does Alltel Florida have any tandem switches in its  
21 network?

22 A No. Alltel Florida doesn't have any tandem switches  
23 in its network, but it does pay tandem switching costs, and  
24 that's why for universal service purposes a tandem switching  
25 cost was developed for all carriers, even those that didn't

1 have tandem switches.

2 Q And, Mr. Blessing, does the HAI model method require  
3 inputs for residential and business dial equipment minutes  
4 known as DEM in order to calculate switching costs?

5 A Yes.

6 Q What is the vintage of the DEM minutes used in the  
7 HAI model run prepared for this proceeding?

8 A I believe it is mid to late '90s.

9 Q Subject to check, 1995?

10 A Yes.

11 Q Are these DEM inputs Alltel Florida specific?

12 A They were the default inputs in the model. So, no, I  
13 don't believe they are Alltel Florida.

14 Q Doesn't the HAI model require access line data by  
15 wire center to be input?

16 A Yes.

17 Q What is the vintage of the access line data used in  
18 the HAI model run prepared for this proceeding?

19 A 1995/1996, that time frame.

20 Q Does Alltel Florida have more access lines today than  
21 it had in 1995/1996?

22 A I believe so, yes.

23 Q Holding everything else constant, would using a  
24 larger number of access lines yield a lower average cost per  
25 line access?

1           A       In general, yes, but it is not going to take the rate  
2 down from \$48.44 to -- it is not going to take it down to \$30,  
3 much less 16 or 10.

4           Q       Does the model use ARMIS data to derive expense  
5 factors for use in the model?

6           A       The model uses ARMIS data -- now, this is going back,  
7 my recollection, the model uses ARMIS data for the large LECs.  
8 It also has a small LEC or mid-sized LEC component in it, and I  
9 don't believe that that -- I'm not sure whether that is ARMIS  
10 data or not.

11          Q       Based on the three cost estimates for residential  
12 service that you sponsor, is the Commission to conclude that it  
13 is your view that Alltel Florida's average cost of residential  
14 service is somewhere in the neighborhood of \$41 to \$66 per line  
15 per month?

16          A       No, I think my personal opinion is that the cost of  
17 ALLTEL's local service right now is probably in the \$40 range.

18          Q       Would you agree with me, sir, that the three cost  
19 estimates represent unseparated costs? In other words, total  
20 company cost rather than just the intrastate portion?

21          A       The BCPM and the HAI do. I would have to check to  
22 see whether or not the embedded cost has already been  
23 separated.

24          Q       Well, isn't the interstate subscriber line charge  
25 designed to recover loop costs assigned to the interstate

1 jurisdiction?

2 A Yes.

3 Q And that is approximately how much?

4 A The SLC charge?

5 Q The SLC charge.

6 A For residential customers, \$6.50.

7 Q Mr. Blessing, my colleague is also going to hand you  
8 an exhibit that was prepared by us based on the numbers from  
9 your Table Number 1, plus data on residential access lines in  
10 Ms. Willis' Exhibit BJW-8. The purpose of this exhibit, sir,  
11 is to estimate support levels attributable to residential  
12 service. Could you please just take a moment of your time and  
13 look this over?

14 A Okay.

15 Q Looking at this table and based on the cost data that  
16 you presented, do you believe these are reasonable support  
17 estimates?

18 A They are rough, rough estimates.

19 Q And do you think they are reasonable or do you think  
20 they need to be adjusted?

21 A I'm not sure. I can't tell from just looking at  
22 these.

23 Q Am I correct that the amount of support to  
24 residential service that Alltel proposes to remove from  
25 intrastate access charges is approximately \$6 million?

1 A Yes.

2 MR. SUSAC: I have no further questions, Mr.  
3 Chairman. I would like to ask you that we mark this Exhibit  
4 59, and if there is no objections, we would like to move it  
5 into the record.

6 MR. WAHLEN: No objection.

7 MR. BECK: No objection.

8 COMMISSIONER DEASON: It will be identified as  
9 Exhibit 59 and shall be admitted.

10 (Exhibit 59 marked for identification and admitted  
11 into the record.)

12 COMMISSIONER DEASON: Commissioners, questions?  
13 Redirect.

14 MR. WAHLEN: Mr. Blessing, let's stick with this  
15 Exhibit 59 for a minute.

16 REDIRECT EXAMINATION

17 BY MR. WAHLEN:

18 Q What staff has done is taken the studies that we  
19 provided and they have made some adjustments and then they have  
20 assumed that even if we are off by 25 percent, under any of  
21 these models there is still \$6 million worth of support flowing  
22 from access charges to local. Do you agree with that  
23 conclusion?

24 A Yes. Based on this, yes.

25 Q Okay. And so whether it is 15 million, or 30

1 million, or 19 million, it is really not important; there is at  
2 least \$6 million, is that correct?

3 A Yes.

4 Q And you think that Exhibit 59 demonstrates that?

5 A I think Exhibit 59 is one more piece in the puzzle  
6 that indicates that the current rate, residential rate is  
7 receiving a significant amount of implicit support from other  
8 rates.

9 Q Great. Commissioner Bradley asked you some questions  
10 about what might happen in the rural areas, and you had a  
11 discussion about the haves and have nots. Looking at the  
12 benefits of competition, do you think that the benefits of  
13 competition include new technologies?

14 A Yes, absolutely.

15 Q Increased economic activity?

16 A Yes.

17 Q Enhanced service offerings?

18 A Yes.

19 Q New employment opportunities?

20 A Yes.

21 Q Improved customer service?

22 A Yes.

23 Q Efficient use of resources?

24 A Yes.

25 Q And you think eventually competition pushes the price

1 of services down in the long run?

2 A In the long run, the overall price value ratio goes  
3 down, yes. In other words, the price may not change, but the  
4 value increases and that is just as much of a benefit as if the  
5 value stays the same and the price goes down.

6 Q Let's stick with this have and have not's theme. You  
7 are familiar with Alltel's service territory and you know that  
8 Alltel serves in Jasper, Florida, is that correct?

9 A Yes.

10 Q Do you know that Sprint -- do you know whether Sprint  
11 serves immediately adjacent to that in Madison County?

12 A I believe they do, yes.

13 Q And you understand that the Commission has approved  
14 rebalancing in Madison County?

15 A Yes.

16 Q Do you think the likelihood of enhanced market entry  
17 in Madison County is greater now that the Commission has  
18 approved rebalancing in Madison County?

19 A Absolutely, yes.

20 Q And do you think that will bring competition to  
21 Madison County?

22 A I think it will come a lot faster in Madison County  
23 than it will to Jasper.

24 Q But if Jasper gets rate rebalancing, then Jasper has  
25 a chance to get the benefits of competition, too?

1           A     Again, absolutely. It is a very simple thing; the  
2 higher the price, the more attractive the market is to  
3 potential competitors.

4           Q     I think your testimony indicates and some of the  
5 questions were about bundles and things like that. Cable  
6 companies are beginning to provide telephone service on an  
7 incremental basis, isn't that correct?

8           A     That's right.

9           Q     And by that you mean they are already providing cable  
10 service and then they are making additional investment so that  
11 they can also provide telephone service?

12          A     That's right.

13          Q     Now, if the incremental price of R1 service charged  
14 by Alltel increases by \$6, do you think it is more likely that  
15 a cable company will decide to offer cable telephone service on  
16 an incremental basis?

17          A     Absolutely, yes.

18          Q     And if they can price the cable telephone service and  
19 the cable service in a bundle in an attractive way, aren't  
20 there going to be some cable companies who decide to bring  
21 cable service and cable telephone service into -- cable  
22 television service and cable telephone service into Alltel's  
23 market? Won't that be more likely if the price is increased  
24 six bucks for R1?

25          A     It is \$6 in additional potential margin, so, yes.

1 Q I would like you to refer briefly in your testimony  
2 to the discussion about the Wyoming rebalancing experience.

3 MR. BECK: I'm going to object. First of all, it is  
4 beyond the scope of the cross-examination; and, second of all,  
5 counsel is leading the witness excessively.

6 MR. WAHLEN: I will stop leading. I apologize.

7 BY MR. WAHLEN:

8 Q Let me just ask this question. Commissioner Bradley  
9 asked some questions about bringing cable in. Does your  
10 testimony provide real world evidence of how rebalancing has  
11 brought cable into the rural areas?

12 A The Wyoming experience demonstrates that by  
13 rebalancing, by basically coming up with a more rational rate  
14 structure for telephone, they were able to induce a number of  
15 cable providers to come into Wyoming and offer service.

16 MR. WAHLEN: No further questions.

17 COMMISSIONER DEASON: I have a quick question. For  
18 cable companies that choose to provide telephone service, do  
19 they derive revenues from access charges?

20 THE WITNESS: Yes, they can.

21 COMMISSIONER DEASON: Do they set those charges  
22 themselves or is that something the FCC does?

23 THE WITNESS: No, they set them themselves.

24 COMMISSIONER DEASON: What constraints are they faced  
25 with in determining the maximum amount of excess revenue or

1 charges that they can assess?

2 THE WITNESS: They have the same situation as any  
3 CLEC, basically, in setting access charges. Generally, there  
4 isn't much of a hue and cry about it as long as their access  
5 rates are similar to the incumbents. Now, as the access rates  
6 have plummeted, especially in interstate rates for the larger  
7 carriers under the calls plan that the FCC came up with, a lot  
8 of the CLECs kept their access rates higher, and that has led  
9 to a lot of complaints from the IXCs. But, to my knowledge,  
10 there is no legal requirement that they have to file their  
11 rates with the cost support and so on and so forth before any  
12 commissions.

13 COMMISSIONER DEASON: Well, explain to me, then, if  
14 there is a cable company that is anticipating providing  
15 telephone service in the Alltel service territory and they are  
16 looking at what revenue they could derive from providing that  
17 service to cover their costs, what difference does it make as  
18 to whether they charge that in terms of direct rates to the end  
19 use customer versus access revenue they would derive by having  
20 that customer on their system?

21 THE WITNESS: Well, usually for calls originating  
22 from their local customers, they are handling -- you know, they  
23 don't have an equal access, generally don't have an equal  
24 access provision where the customer can say I want you for  
25 local but I want AT&T for long distance. Generally, they

1 handle that themselves. So if there are access charges, they  
2 are paying them to themselves. So it is basically being  
3 recovered in the rate they are charging the end user.

4 It is only terminating access that is at issue. And  
5 they don't really control where the call comes from, what  
6 carrier has the call that is handing it off to them. So they  
7 are going to want to recover whatever costs they are incurring  
8 plus whatever margin that can --

9 COMMISSIONER DEASON: Well, I guess my question is  
10 this: If someone wanted to go to Alltel, why is it that rate  
11 rebalancing is going to entice them? If the cable company is  
12 just looking at total revenue and if they match terminating  
13 access as to what Alltel is charging, what difference does it  
14 make as to whether the local rate is \$6 higher and the access  
15 is lower or vice versa, if they are going to get the same  
16 revenue? And that may be a big if, but making the assumption  
17 that there is a wash there.

18 THE WITNESS: And there may be a wash, but they have  
19 to get the customer.

20 COMMISSIONER DEASON: They have to get the customer.

21 THE WITNESS: They have to get that local customer  
22 before they can even play. And in order to get that customer,  
23 it is a lot earlier -- let's put it this way. It is a lot  
24 earlier to get that customer when you are competing against a  
25 \$16.49 rate than it is a \$10.49 rate. So I think the induced

1 entry, enhanced/induced entry comes from the fact that there is  
2 now \$6 of additional margin that that carrier can get.

3 COMMISSIONER DEASON: Mr. Wahlen, do you need any  
4 further redirect?

5 MR. WAHLEN: No, sir.

6 COMMISSIONER DEASON: Mr. Beck, I think you had an  
7 exhibit that was identified as 58. Do you wish to move that?

8 MR. BECK: Yes, please.

9 COMMISSIONER DEASON: Any objection?

10 MR. WAHLEN: No objection.

11 COMMISSIONER DEASON: Show then that Exhibit 58 is  
12 admitted.

13 (Exhibit 58 admitted into the record.)

14 COMMISSIONER DEASON: Thank you, Mr. Blessing. You  
15 may be excused.

16 MR. WAHLEN: Staff had an Exhibit 59. Has that been  
17 moved into the record?

18 COMMISSIONER DEASON: Yes, we already did. That is  
19 in.

20 MR. WAHLEN: Okay.

21 COMMISSIONER DEASON: I believe that we are at the  
22 point where we can entertain closing argument, is that correct?

23 MR. WAHLEN: Very well.

24 COMMISSIONER DEASON: We are going to take ten  
25 minutes. Well, first of all, let me ask. (Pause.) We will

1 take ten minutes and come back and have closing argument.

2 MR. WAHLEN: Very well. Thank you.

3 (Recess.)

4 COMMISSIONER DEASON: Call the hearing back to order.

5 Mr. Wahlen.

6 MR. WAHLEN: Thank you, Commissioners. Alltel very  
7 much appreciates the time and attention that everyone has given  
8 to our proceeding today. We appreciate the questions that were  
9 asked. And before we go on, I want to compliment the staff and  
10 Public Counsel. We have gone through a lot of information in a  
11 very short of period of time in these 90 days, and we couldn't  
12 have done it without the cooperation that we got from them.  
13 There was very little pushing and shoving, which is helpful to  
14 the whole process, and I appreciate that.

15 Commissioners, the 2003 Act was enacted to address a  
16 continuing lack of competition fostered by rate subsidies, and  
17 to encourage more competition in the local market. I think the  
18 standard that Alltel must meet in this case is that we must  
19 show by a preponderance of competent, substantial evidence that  
20 the petition should be granted. I think it is important to  
21 note that we are the only party that provided testimony. No  
22 one else provided any testimony. And we believe that the  
23 points we have made in our testimony stand and they support our  
24 petition.

25 I have already talked with you this morning about the

1 four standards in the statute, and I don't think I need to go  
2 over them again except as part of my discussion in a moment.  
3 But Mr. Beck is going to remind you that while you are  
4 exercising your jurisdiction under Section 364.164, you have to  
5 exercise your jurisdiction to ensure that basic local rates are  
6 reasonable and affordable. And that is true. The Supreme  
7 Court said it is true.

8 But I would like to remind the Commission that the  
9 same part of the statute that imposes that burden on you  
10 imposes a burden to encourage competition and promote  
11 competition and encourage all providers of telecommunications  
12 services to introduce new or experimental services. And there  
13 are several other places in that same statute that talk about  
14 encouraging competition. So you do have, I believe, a clear  
15 mandate from the legislature that encouraging competition is  
16 part of your mission. And we just ask you to keep that in mind  
17 as we go through the rest of this proceeding.

18 The first issue in this case is really the first  
19 disputed issue. I don't think there is any real question on  
20 revenue neutrality, the flow-through. All of those things, I  
21 believe, are undisputed. And I think it is clear from the  
22 record that there is at least \$6 million worth of support here  
23 that we are talking about. I believe Staff's Exhibit 59  
24 demonstrates that, and we have agreed to it.

25 So the first real disputed issue is whether that

1 support is preventing the creation of a more competitive local  
2 exchange telecommunications market. Our testimony says that it  
3 is. No one has filed any testimony contrary to that. If you  
4 want to have a little more information on that point, it has  
5 come out today that we don't have any providers who are using  
6 UNEs, we don't have any providers who are using collocation or  
7 resale.

8 So something is working in our territory to keep  
9 competition from coming. And we think, and the record in this  
10 case shows, that that something is the level of support that is  
11 in our access rates that is allowing us to have low local  
12 rates, and those low local rates which are priced below cost  
13 are what is keeping the market from becoming competitive.

14 Now, there may be some other factors, but that is a  
15 key one, and that is the only one that you can deal with in  
16 this rate rebalancing process. If you have any question about  
17 this, you can look at your own competition report. It is in  
18 the record, the 2004 report. The market share for CLECs for  
19 rural companies was three percent in 2004. The market share  
20 for BellSouth was 22 percent CLECs, 11 percent CLECs for  
21 Verizon, and 8 percent for Sprint.

22 Something is keeping competitors from coming into the  
23 rural areas as quickly as they are the urban areas. And what  
24 we are encouraging you to do in this case is increase those  
25 local rates by about \$6. That will provide some inducement to

1 bring people into the market, and it will keep, we think, the  
2 rural areas like Alltel on par with the larger company areas.

3 Now, there has been some questions. The next issue  
4 is whether this is going to provide any benefit to the rural  
5 customers. We have provided the same kinds of evidence that  
6 was provided in the big company case. Mr. Blessing testified  
7 that rebalancing is going to induce market entry, that there  
8 will be more choice, there will be new bundles, there will be  
9 new and innovative services, and all of those same things. And  
10 his theoretical testimony is supported by the experience in  
11 Wyoming where they went from zero percent market share to eight  
12 and a half percent market share for CLECs over a period of  
13 time, in part because they rebalanced.

14 And I think it is pretty abundantly clear that if  
15 Alltel's territory is rural, Wyoming is really rural. So, we  
16 presented you with real world evidence that shows that  
17 rebalancing will work in a rural area. And it brought with it  
18 in Wyoming new competitors, new services, new bundles, and all  
19 of the things that you said would come when you adopted  
20 rebalancing for the large companies.

21 We don't think there is any big difference here for  
22 the rural companies. We think it is the same principle and we  
23 think it will work in Alltel's territory. And the proof is in  
24 the pudding, which is Wyoming.

25 Now, there was a question about the flow-through of

1 the access charges and whether that would be any benefit to the  
2 consumers. The Supreme Court said and agreed with you that you  
3 don't have to look at that. But if you look at it, it is clear  
4 that about a third, based on the record here today, of the  
5 access charge reduction here is going to end up back in  
6 Alltel's territory, and it is not going to get lost in the  
7 statewide averaging process. Some will, but there will be a  
8 demonstrable benefit in the Alltel territory from the access  
9 charge reduction.

10 Will this induce enhanced market entry? That is the  
11 big question. All of the evidence that we have put on shows  
12 that it will. We have provided the same theoretical testimony  
13 that was provided in the big company case, and we have provided  
14 the same empirical studies, and we have provided the experience  
15 from Wyoming that you can look at. If there is a question  
16 about whether this can work in the rural territories, we think  
17 that is answered by what happened in Wyoming.

18 Now, the fact that Alltel doesn't have any  
19 interconnection agreements for unbundled network elements or  
20 resale at a wholesale discount or collocation should not bar  
21 granting the petition. I don't know if that is what staff is  
22 thinking. They have asked a lot of questions about that, but  
23 it should not bar granting the petition. We have waived our  
24 rural exemption, which means that anybody can now come in and  
25 seek unbundled network elements, collocation, and resale at a

1 wholesale discount, and they don't have to come first to the  
2 Public Service Commission and wait 120 days to do it. They can  
3 get right to the business of doing that. We have done it in  
4 other states. That is what the testimony is, and we don't  
5 think there is any problem with that.

6 We think, in fact, one of the reasons that they  
7 haven't done it is because our rates are low. And we believe,  
8 and the testimony here today shows that if we go from \$10.50 to  
9 \$6.50 (sic), it is more likely that people will come in and try  
10 to compete on an unbundled network element basis.

11 Now, I think it is important to note that when the  
12 first case was done, the Attorney General asked for  
13 reconsideration of your order because the federal court entered  
14 an order that made the continued viability of unbundled network  
15 elements kind of unclear, and that was one of the main points  
16 they offered on reconsideration. They said, oh, there is not  
17 going to be unbundled network elements anymore, and so all this  
18 premise behind this whole case is going to -- you know, it all  
19 falls down. Well, your order was clear on that. You said even  
20 if the D.C. Circuit's decision remains in place, carriers that  
21 compete using their own facilities will be not be affected.  
22 And that is the same thing we have here.

23 Unbundled network elements is just one of the ways  
24 that someone can compete in our territory. Whatever method or  
25 choice of technology they use, it will be more likely that we

1 will have more competitors and more services offerings and  
2 those things if the price goes up. That is the premise behind  
3 the big company case, there is no reason to think that won't  
4 work here.

5 We have put on proof that our rates are similar to  
6 the ones that are approved for the big companies. We don't  
7 think that is a big dispute. We think it is pretty clear and  
8 the best evidence of whether our rates are affordable is what  
9 you approved for the big companies' case. That is the market  
10 for residential rate in Florida, and what we have done is  
11 stayed in that general area.

12 Now, I would like to make just a couple of more  
13 points and then I'm going to close. There has been a  
14 suggestion that this just won't work in the rural areas. But I  
15 want to remind the Commission and draw your attention to  
16 Interrogatory Answer Number 73. We have looked and we have  
17 done a study, and our study shows that you have approved  
18 rebalancing for approximately 775,000 customers of the large  
19 companies who are in areas that are just about as dense, or not  
20 dense as the case may be, of Alltel's territory. You may not  
21 have been thinking about it specifically when you did the  
22 order, but implicitly you have said this will work in the rural  
23 areas, and that is all we are asking you to do here. You have  
24 done it for the big companies in the rural areas, we don't  
25 think there is any real reason not to do it for Alltel.

1           Now, it has been suggested, but we don't think it has  
2 been proved, that granting Alltel's petition will not change  
3 the economics of providing residential service sufficient to  
4 induce competitors to enter Alltel's market. It has also been  
5 suggested, but not proved, that intermodal carriers are going  
6 to come into our territory whether or not Alltel's petition is  
7 granted. The first suggestion seems to suggest that what we  
8 really should be doing is increasing local rates even more.  
9 And if we increase rates even more, that's when we are going to  
10 bring competitors in.

11           Well, we are constrained by the same reasonable and  
12 affordable standard that you are, and we have done the most we  
13 can within the confines of the statute to induce competition.  
14 We think it is similar to what the large companies did, and it  
15 is going to work in their rural areas and it ought to work in  
16 ours.

17           Now, the other suggestion is, well, it is going to  
18 come anyway, so let's not do anything. But the testimony here  
19 today has been clear. The easiest place for competition to  
20 come is the dense areas of the state. And if competition  
21 coming anyway is an excuse for not approving a rebalancing  
22 petition, you should have never done it in the urban areas  
23 because competition would come anyway.

24           Well, we don't think that suggestion is true. We  
25 don't think you made a mistake in the big company case. We

1 don't think competition is coming anyway. We think the  
2 rebalancing statute was the legislature's prescription for  
3 inducing competition in all areas of the state, both the urban  
4 and the rural areas. We think you recognized that in the big  
5 company case, and now we are going to ask you to recognize that  
6 in Alltel's case.

7           And for all of those reasons, we ask that you grant  
8 the petition. The Commission has given us until next Tuesday  
9 to file a brief. We intend to file a brief that outlines in  
10 more detail what our proof is and how it compares to the big  
11 companies. And we think that after the briefs have been  
12 reviewed and after you have considered the arguments and the  
13 testimony today you should grant the petition. Thank you very  
14 much.

15           COMMISSIONER DEASON: Thank you. Mr. Beck.

16           MR. BECK: Thank you, Commissioners.

17           Commissioners, I hate it when opposing counsel tells  
18 you what I'm going to say, and it's even more aggravating when  
19 he is right. But before we get into the affordable and  
20 reasonable rates, I would like to address the issue of whether  
21 their petition will create a more competitive local exchange  
22 market and whether that will benefit residential customers.

23           This case is not the case that you heard two years  
24 ago. It is not the big company case at all. Alltel has an  
25 independent obligation to prove that the granting of the

1 proposal will make a more competitive market and that customers  
2 will benefit in their territory. And the landscape today is  
3 vastly different than it was a few years ago. UNEs are not  
4 being sought out by competitors. That is not the kind of  
5 competition that you see today. It is different. There is no  
6 Knologys in this case like there was in the big case.

7           What Alltel has shown you, I think, goes to disprove  
8 their case, that the competitors that they are talking about  
9 are VOIP providers and cell phone providers. That is really  
10 it. There's a few resellers who resell at the retail rate  
11 because there is no discount that Alltel offers for resellers.  
12 There already is competition going on for VOIP and cell phone  
13 providers, and the granting of this petition won't make any  
14 difference whatsoever in that competition.

15           They are not competing against the R1 rate. The  
16 competitors are competing against Alltel's connect unlimited  
17 case, and we talked quite a bit about that with Ms. Willis.  
18 They charge 54.95 for that. There are certain add-ons if you  
19 want to have functional equivalent packages of service that the  
20 VOIP providers and the cell phone providers have.

21           This case will not change Alltel's price that they  
22 charge for their competitive service, and you know it is not  
23 going to affect at all what the competitors charge because they  
24 are set nationally, in any event, so all the competition that  
25 is going on between Alltel and the VOIP and the cell phone is

1 not going to change one iota if you grant this petition. What  
2 you are going to do is simply increase the price of residential  
3 service for customers.

4 Now, regarding the flow back in the big companies'  
5 case, the access charges, you know, virtually all of the access  
6 charges flowed back in some manner to some customers in that  
7 case. Probably 99 percent. In this case, they have shown you  
8 maybe a third will flow back, if it is that, because one-third  
9 of the access charges are paid by Alltel's long distance  
10 affiliate, but they served territories greater than Alltel.

11 So probably less than a third is going to flow back  
12 to Alltel's territory, split between business and residential  
13 customers. It is vastly different. It means there is going to  
14 be very little benefit compared to the burden that is going to  
15 be placed on residential and single line business customer. It  
16 simply will not flow back to these customers.

17 We talked briefly with Mr. Blessing about the  
18 penetration rates for phone service in Florida, and I think  
19 this is something that the Commission must keep in mind in view  
20 of the obligation under the statutes to have reasonable and  
21 affordable rates. And what we have seen in the last few years  
22 is that Florida is falling behind the national average. You  
23 know, you would hope that Florida would be exceeding the  
24 national average, but, in fact, the 93, we are exactly at it.  
25 The most recent data from the FCC shows that we are a full

1 percentage point behind.

2           What causes that, I don't know, and the witnesses  
3 didn't know either. But it is something I think that ought to  
4 be a concern of the Commission that we seem to be falling  
5 behind the national average in penetration in telephone rates.  
6 Going forward and increasing the residential rates for Alltel's  
7 customers by another \$6 simply is the wrong step to take at a  
8 time when our penetration is falling compared to the national  
9 average.

10           In summation, I mean, basically what you have here is  
11 Alltel has not shown a case that it is going to make a more  
12 competitive market for the benefit of residential customers.  
13 It is simply going to place a burden on residential customers.  
14 They are not going to see the benefits that were in the  
15 evidence in the other case, and we think you should deny their  
16 petition.

17           COMMISSIONER DEASON: Thank you, Mr. Beck.

18           Staff, do you have any type of a closing statement?

19           MR. SUSAC: No, Chairman.

20           COMMISSIONER DEASON: Okay. I think we have some  
21 dates that we can review.

22           The briefs are due Tuesday, is that correct?

23           MR. SUSAC: That is correct, Chairman.

24           COMMISSIONER DEASON: And there is a 15-page  
25 limitation on those briefs.

1 MR. WAHLEN: That is correct.

2 COMMISSIONER DEASON: And we are set for a special  
3 agenda on December 12th, is that correct?

4 MR. SUSAC: That is also correct.

5 COMMISSIONER DEASON: Commissioners, anything before  
6 we conclude the hearing? Anything final from the parties?  
7 Staff, anything?

8 MR. SUSAC: Nothing, Chairman.

9 COMMISSIONER DEASON: Just let me express my  
10 appreciation to staff and the parties. It is difficult to  
11 process a case in 90 days, and this is a case with some very  
12 specific statutory criteria and information that has to be  
13 produced, and it seems to have been done efficiently and  
14 orderly and professionally, and I want to express appreciation  
15 for that.

16 And if there is nothing else, this hearing is  
17 adjourned. Thank you all.

18 MR. WAHLEN: Thank you.

19 (The hearing concluded at 1:40 p.m.)

STATE OF FLORIDA       )  
  
                                  :  
COUNTY OF LEON        )

CERTIFICATE OF REPORTERS

WE, JANE FAUROT, RPR, and LINDA BOLES, RPR, CRR, Official Commission Reporters, do hereby certify that the foregoing proceeding was heard at the time and place herein stated.

IT IS FURTHER CERTIFIED that we stenographically reported the said proceedings; that the same has been transcribed under our direct supervision; and that this transcript constitutes a true transcription of our notes of said proceedings.

WE FURTHER CERTIFY that we are not a relative, employee, attorney or counsel of any of the parties, nor are we a relative or employee of any of the parties' attorneys or counsel connected with the action, nor are we financially interested in the action.

DATED THIS 2nd DAY OF DECEMBER, 2005.

13. (a) Has the Company received a bona fide request (BFR) for interconnection, services or network elements pursuant to Section 251(c)?
- (b) If the response to (a) is affirmative, please identify: the entities submitting the BFRs; when the BFRs were submitted; and the resolution of the BFR.

ANSWER:

- (a) Yes.
- (b) The requested information is proprietary Confidential Business Information. A schedule reflecting the requested information is included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named: Staff First IRR, No. 13(b).

15. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Willis, page 7, lines 1-4.
- (a) Will the additional Lifeline credit to offset the residential rate increases be permanent?
  - (b) If the response to (a) is negative, please indicate the duration of additional Lifeline credit.
  - (c) By way of clarification, will the additional Lifeline credit apply to both current and new Lifeline subscribers?

ANSWER:

- (a) At the end of the rebalancing period, Alltel will evaluate whether or not to make the Lifeline Credit offset the rate increases permanent.
- (b) See response to (a).
- (c) The credit will apply to any Lifeline subscriber existing at the time the additional credits are applied.

19. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Willis, page 11, lines 1-3. Please explain what gave rise to the disparity between the intrastate interLATA switched access interconnection charge and the MABC interconnection charge.

ANSWER:

MABC interconnection charges were set by the Florida Public Service Commission pursuant to Order No. 17743 in docket No. 850310-TL. In October 1996, the residual interconnection charge for MABC was increased from \$0.008313 to \$0.0218 and the intrastate interLATA went from \$0.008313 to \$0.005262. In October 1997, the intrastate interLATA decreased to \$0.002211 with no changes to the MABC. This is the only rate element that is different between MABC and intrastate interLATA.

20. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 4, lines 11-13. Please identify all cost studies prepared by or for the Company which indicate the cost of ALLTEL-provided intrastate switched access.

ANSWER:

The Company prepared the HAI 5.0a cost proxy model cost study with input adjustments specific to Alltel-Florida which indicated the cost of ALLTEL-provided intrastate switched access. The results of the HAI 5.0a cost study can be found in Exhibit No. \_\_\_ (DCB-4) attached to the Direct Testimony of David C. Blessing. The HAI 5.0a model produced a cost of \$0.03243 for the cost of Alltel-provided intrastate switched access.

21. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 5, lines 20-24. Please identify "the state-wide average for such services."

ANSWER:

The phrase "state-wide average for such services" refers generally to the 1R rates that the FPSC approved for BellSouth, Verizon, and Sprint in the Large LEC Rate Rebalancing docket. The rates are shown in Blessing Exhibit No. \_\_\_ (DCB-0), Table 7 attached to the Direct Testimony of David C. Blessing. The table is repeated here as follows:

Table 7

**COMPARISON OF REBALANCED LOCAL RATES**

|                      | Verizon  | BellSouth | Sprint   | ALLTEL  |
|----------------------|----------|-----------|----------|---------|
| <b>Former Rates</b>  |          |           |          |         |
| Lowest               | \$ 9.72  | \$ 7.57   | \$ 7.63  | \$9.64  |
| Highest              | \$ 12.06 | \$ 11.04  | \$ 11.48 | \$12.67 |
| Average              | \$ 10.89 | \$ 9.31   | \$ 9.56  | \$10.49 |
|                      |          |           |          |         |
| <b>Rate Increase</b> | \$ 4.73  | \$ 3.86   | \$ 6.86  | \$6.00  |
|                      |          |           |          |         |
| <b>New Rates</b>     |          |           |          |         |
| Lowest               | \$ 14.45 | \$ 11.43  | \$ 14.49 | \$15.64 |
| Highest              | \$ 16.79 | \$ 14.90  | \$ 18.34 | \$18.67 |
| Average              | \$ 15.62 | \$ 13.17  | \$ 16.42 | \$16.49 |

Alltel's average proposed rate of \$16.49 places it within the range of rates approved by the FPSC for the large ILECs.

22. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 8, lines 9-12.
- (a) Please identify the wireline providers that compete with ALLTEL in its service territory for toll and local service.
  - (b) Please identify the VoIP providers that compete with ALLTEL in its service territory for toll and local service.
  - (c) Please identify the cable TV providers that compete with ALLTEL in its service territory for toll and local service.
  - (d) Has ALLTEL lost local service customers to other wireline providers?
  - (e) If the response to (d) is affirmative, please indicate how many local customers have been lost.
  - (f) Has ALLTEL lost local service customers to VoIP providers?
  - (g) If the response to (f) is affirmative, please indicate how many local customers have been lost.
  - (h) Has ALLTEL lost local service customers to cable TV providers?
  - (i) If the response to (h) is affirmative, please indicate how many local customers have been lost.

ANSWER:

- (a) In the Alltel Corporation wireline service area, carriers such as Brandenburg Telephone (Kentucky), Time Warner Cable and Comcast cable offer competing local and toll services. Additionally, CLECs such as Actel Wireless, Belleruid, Cat Communications, Coastal Telephone Connections, Flatel, Global Connection, Met Communications, Ring Connection, Source One Communication, and Universal Telecom all provide toll and local service in Alltel Florida's service territory.

- (b) Alltel competes with universal VoIP providers such as Vonage and Skype for toll and local service, but also Time Warner Cable, Comcast Cable, Charter Cable, Southern Cable, Communicon Cable, Cox Communications, Medicon, and ComSouth offer service or have plans to offer service in various areas of the Alltel Corporation wireline service area, including some Alltel Florida exchanges.
- (c) Time Warner Cable, Comcast Cable, Charter Cable, Southern Cable, Communicon Cable, Cox Communications, Medicon and ComSouth either already offer voice services in various areas throughout the Alltel Corporation wireline service area, or have the capability to offer voice services including in Alltel Florida exchanges Alachua, Callahan, High Springs, Hilliard, Interlachen and Live Oak.
- (d) Yes. Companies such as Southeast Telephone and Brandenburg Telephone in Kentucky compete directly with Alltel companies for local and toll service. CLEC resellers Actel, Flatel, Ring Connection, Cat Communications, Source One Communication, Universal Telecom, MET Communications, Coastal Telephone Connections, and Global Connections offer resold services in Alltel Florida territory.
- (e) Since January 2004, approximately 108,000 local service customers have disconnected service throughout the Alltel Corporation wireline service areas for such reasons as moving service to a reseller or other voice provider or customer going to wireless only. Approximately 2,200 Alltel Florida local customers have disconnected service for the above reasons. A two page schedule showing Alltel's analysis of disconnects is being produced in response to Staff's First Request for Production of Documents, No. 12, and is incorporated into this answer by reference. This schedule is included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named Staff First RPD, No. 12 (disconnects).
- (f) Yes.
- (g) See response to (e).
- (h) See response to (d).

23. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 8, lines 12-15. Please indicate for which services ALLTEL reduced prices due to competitive pressures.

ANSWER:

Alltel Florida offers multiple packages and bundles of services, as well as various long distance service offerings in order to give its customers competitive choices. Alltel offers several custom calling feature packages at prices that are discounted from the price of the features if purchased individually, tariff sheets for which are included with these answers at Attachment Two. Alltel also offers residential customers the "Connect Unlimited Bundle" for \$54.95 a month. This service includes the residential line, a feature package which includes Caller ID, Call Waiting, Caller ID on Call Waiting and Call Return bundled with Protection Plus and an unlimited long distance calling plan offered by Alltel Florida's long distance affiliate. Priced separately, these services would be significantly higher than the bundled price. Additionally, through its long distance affiliate Alltel offers a "Dime All of the Time" calling plan which is \$0.10 per minute for any call placed within the state of Florida. At various times Alltel offers promotional discounts for customers who subscribe to its DSL service.

24. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 12, lines 4-8.
- (a) When was the study using HAI 5.0a prepared?
  - (b) Please identify who prepared the cost study.
  - (c) Referring to footnote 7, are the data contained in the HAI 5.0a ALLTEL Florida-specific?
  - (d) If the response to (c) is affirmative, please identify what ALLTEL Florida-specific data are being referred to in footnote 7.
  - (e) How did ALLTEL obtain access to HAI 5.0a?
  - (f) Referring to footnote 7, has ALLTEL estimated a forward-looking model for any of its service territories?
  - (g) If the response to (f) is affirmative, please identify for which service territories a model has been estimated and briefly describe the model.
  - (h) Referring to footnote 7, to what 2004 cost study is reference made?

ANSWER:

- (a) September 12, 2005
- (b) The study was done under the direction and supervision of David Blessing by Kris Carson, Senior Consultant at Parrish, Blessing and Associates, Inc.

- (c) Yes, some of the data is ALLTEL-specific and some of the data are the default inputs found in the Hatfield model.
- (d) The Alltel Florida company specific data that is referred to in footnote 7 is identified in the Direct Testimony of David C. Blessing page 14 line 19 through page 16 line 10. In addition, the Alltel Florida specific data that was used in the HAI 5.0a is identified in Exhibit No. \_\_ (DCB-4), pages 72-74. A complete list of all inputs (both the Alltel Florida company specific and the default HAI inputs) are identified in Exhibit No. \_\_ (DCB-4), pages 75-94.
- (e) Parish, Blessing and Associates provided a copy of the HAI 5.0a model to be used in this proceeding.
- (f) Yes.
- (g) Alltel has estimated forward-looking UNE and collocation costs for its service territories in Kentucky, Nebraska, Ohio, and New York-Jamestown. Forward-looks costs were estimated for reciprocal compensation rates in Pennsylvania. The Alltel model develops a forward-looking network design based on current wire center locations and forecasted demand. Model upgrades feeder facilities to fiber, determines DLC requirements, and optimizes distribution facilities. The forward-looking network investment is then determined using current material prices and estimated engineering and installation costs. The model then develops

- (h) forward-looking costs for the network and allocates those costs over forecasted demand for each unbundled network element.
- (i) Please see the 2004 Embedded Cost Study provided as Exhibit No. \_\_ (DCB-5).

Fort Washington, MD 20744  
Consultant

25. Referring to Exhibit DCB-0, Table 1, is the Hatfield 5.0a cost an unseparated cost?
- (a) If the response to (a) is affirmative, please explain why the subscriber line charge was not reflected in this table.
  - (b) Referring to Exhibit DCB-0, Table 1, is the BCPM 3.1 cost an unseparated cost?
  - (c) If the response to (c) is affirmative, please explain why the subscriber line charge was not reflected in this table.

ANSWER:

- (a) Yes.
- (b) The SLC was not subtracted from the cost output of the HAI 5.0a cost model because the SLC was not subtracted from the BCPM cost study default output shown in FPSC Docket No. 980696-TP, Order No. PSC-99-0068-FOF-TP. This allows for an apples-to-apples comparison with the FPSC-approved embedded cost study estimate of \$41.32 and the BCPM cost study estimate of \$66.37 as those numbers were presented in Order No. PSC-99-0068-FOF-TP. If the federal subscriber line charge of \$6.50 was subtracted from the HAI 5.0a cost estimate of \$48.44 to show a total state revenue requirement, the total would be \$41.94. If the federal subscriber line charge of \$6.50 was subtracted from the BCPM cost estimate of \$66.37 to show a total state revenue requirement, the total would be \$59.87.
- (c) Yes.
- (d) Please see the response to 2(b), above.

David C. Blessing  
10905 Fort Washington Road, No. 307  
Fort Washington, MD 20744  
Consultant

26. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 12, lines 15-18. Please describe the network architecture assumed by HAI 5.0a as it relates to the provision of switched access, in comparison to ALLTEL Florida's actual network architecture.

ANSWER:

The HAI 5.0a cost proxy model assumes the traditional telephony network architecture of tandem switching and end office switching for the provisioning of switched access services. It should be note that the HAI 5.0a cost proxy model is a forward-looking cost model and does not use the incumbent's existing network but designs a more efficient network.

29. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 15, lines 15-18. Please identify the source for the NID inputs.

ANSWER:

Please refer to the confidential file named "Staff First RPF, No. 15," produced on a confidential CD in response to Staff's First RPD, No. 15, which is incorporated in this answer by reference. The NID inputs are from the model which Alltel uses to develop forward-looking costs. Material costs are based on the items required for a typical NID installation and the current Alltel Communications Products prices for those items. Installation labor is based on an estimated one half hour per installation times the average Alltel loaded labor costs for a communications technician. The one half hour installation time is the standard contained in Alltel's Work Order Management system (WOMS). WOMS is an engineering tool used to develop estimated work order and capital budget costs.

30. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 15, lines 18-23.
- (a) Please identify the size increments for Calix DLC equipment.
  - (b) Was it necessary to alter any of the sizing algorithms in the HAI model due to assuming the use of Calix DLC equipment?
  - (c) If the response to (b) is negative, please explain why not and indicate for what size increments Calix inputs were used.
  - (d) Please identify the source for the DLC investment amounts used in the model.

ANSWER:

- (a) Size increments for the Calix DLC equipment are 120 lines, 480 lines, 960 lines, and 1920 lines.
- (b) No.
- (c) Alltel used the following described procedure to arrive at the Calix DLC material investment amount in the HAI model. This procedure consisted of two steps. First, the Alltel Florida cluster information from the HAI 5.0a model was extracted into a separate worksheet, where Calix sizing criteria was used to determine the size and number of Calix DLC units required. Each DLC was then equipped with line cards and ancillary equipment using a 90% fill rate (the HAI model default). Algorithms in this spreadsheet developed the DLC investment amount based on the Calix equipment required for each cluster and current vendor prices. Second step was to determine the difference between the HAI default DLC investment value and the total Calix DLC equipment investment. This difference of \$661,000 was divided by the number of "Low Density DLC Basic Common Eqpt Invest + initial lines" elements (327) from the default results. The resulting \$2,020 was added to the \$16,000 HAI model cost for this component. When the HAI model was re-calculated, it produced a DLC investment amount very close to the total for the Calix equipment requirement.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's First Set of Interrogatories  
Interrogatory No. 30

32. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 16, line 25 through page 17, lines 1-2. Please identify the basis for the assertion that ALLTEL's intrastate switched access rate is priced above average cost.

ANSWER:

The basis for the assertion that ALLTEL's intrastate switched access rate is priced above average cost is the HAI 5.0a cost model estimates the cost of ALLTEL's intrastate switched access to be \$0.03243 while the average price of ALLTEL's intrastate switched access is \$ 0.1132294. The Hatfield HAI 5.0a cost model calculates the TELRIC cost of services which includes an allocation or contribution toward the recovery of joint and common costs or administrative overhead which approximates the average cost of a service. Conversely, the Hatfield HAI 5.0a cost model calculates the TELRIC cost (which includes an allocation or contribution toward the recovery of joint and common costs or administrative overhead) of 1R local service as \$48.44 while the current average price of ALLTEL's 1R service is only \$10.49, far below its cost.

**33. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 20, lines 10-13. Other than the incumbent's pricing, what are other key factors that govern a competitor's entry decision?**

ANSWER:

There are numerous factors that may influence a competitor's decision to enter any given market and the factors vary significantly between different competitors with their unique business plans, and they simply cannot all be listed here. For example, who could have foreseen carriers such as Skype (which was recently sold to eBay for \$2 billion) that use Point to Point ("P2P") file-sharing technology to create a seamless voice communications service over a 33.6kbps dial-up internet line? However, one key factor that all new competitors will consider before entering a new market is the market price of local service (generally, the ILEC's price). Generally speaking, if the competitor's cost of providing local service is less than the market price of local service, the competitor will be given an incentive to enter the market.

The following list includes, but is not inclusive of, other factors besides the LEC's price of local service that influence a competitor's decision to enter a market:

1. The potential competitor's cost of providing service, which can include,
  - a. The existence of a competitor's own facilities in the ILEC's territory that can be used to provision competing voice telephone services (cable TV facilities, electrical power lines, gas lines for conduit for running fiber, other right-of-way, wireless facilities

- b. The existence of existing broadband facilities (cable TV or DSL) that a VOIP provider could use,
  - c. The existence of wireless broadband facilities that a VoIP provider could use,
  - d. The availability of UNE facilities for those CLECs that are still seeking to purchase UNEs.
  - e. The competitor's cost of capital which it will use to expand into the LEC's territory.
  - f. The competitor's proprietary technology/network design that may give it a cost advantage when compared to simply replicating a traditional wireline LEC network (e.g., Skype's P2P technology, Vonage's VoIP technology, etc.).
  - g. The proximity of installation and repair personnel, if such are required, to the new service area.
2. Market Research and customer demographics
- a. Information regarding whether the new territory's customer base will be accepting of or able to use your voice communications product (e.g., for Skype - does the customer own a computer, have internet access, and do they have the ability to download a free copy of Skype's proprietary P2P software?)
  - b. Information regarding whether the new territory's customer base is willing to switch local service providers.

c. Information regarding whether the new territory's customer base is willing to switch local service providers.

3. Location-Specific Support - Does the new competitor have the necessary personnel infrastructure located close to the new service territory? Including installation and repair personnel to install and maintain the new local network (to the extent that physical facilities need to be built),

4. Corporate Back Office Support - Does the new competitor have the necessary corporate back office resources to expand into a new territory? Including –

a. legal and regulatory personnel to negotiate interconnection agreements for the exchange of local traffic and termination of toll and wireless traffic, as well as handle customer complaints;

b. engineers and operations personnel to design and build the new local network (to the extent that physical facilities need to be built) plus lease and provision needed network pieces (loops, transport, etc.) from other providers;

c. marketing personnel to develop and direct marketing campaigns for the new service territory;

d. billing personnel to modify billing systems to bill for a new region;

e. accounting personnel to handle revenues and expenses for the new region; and

f. customer service representatives to handle the new influx of orders in the new region as well as other customer care issues.

As discussed in the Direct Testimony of David C. Blessing, artificially low local residential service prices, such as Alltel's average rate of only \$10.49, discourage potential competitors from entering Alltel's residential market. Potential competitors look at the prevailing market price, their own costs of providing the service and the resulting profit margins as key factors in making a determination as to whether they will enter a particular market. If the market price of residential local service is less than the potential competitor's anticipated costs, the potential competitor will not view residential service as a potentially profitable venture and therefore will not enter that market.

34. **For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 24, lines 18-19. What are other factors inhibit the development of competition for local residential service?**

ANSWER:

To the extent that any of the cost factors described in the response to question number 33 above cause the competitor's cost of service to exceed the market price or, that the other factors discussed in the response to question number 33 above would prevent general acceptance of the competitor's alternative local phone service, those factors would inhibit the development of competitor for local residential service.

35. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 25, lines 2-4.
- (a) Is price the only "regulatory distortion"?
  - (b) If the response to (a) is negative, please identify other "regulatory distortions."
  - (c) To the extent not identified in response to (b), is the existence of the section 251(f)(1) rural exemption a regulatory distortion?
  - (d) If the response to (c) is negative, please explain why not.

ANSWER:

- (a) No.
- (b) Any regulation that impacts the provisioning of local telephone service within the State of Florida has the potential to be a regulatory distortion.
- (c) Theoretically, yes, but Alltel does not believe that Section 251(f)(1) is a material distortion in its service territory. It should be noted that the type of CLEC competitors that are successful in today's market are self-provisioning their own facilities and do not rely on the UNE-leasing capabilities that might be impacted by section 251(f)(1). For example, cable TV companies such as Time Warner, GCI, Comcast, and Cox do not lease UNEs from the LECs and are some of the most successful competitors in the residential local telephone market. Likewise, VoIP and other internet-based providers such as Skype, are making in-roads into the residential local telephone market and do not rely on leasing UNEs from LECs. Wireless service is increasingly being substituted for residential local phone service and is becoming a strong competitor for wireline voice telephony. Most wireless carriers do not rely on the UNE-leasing capabilities that might be impacted by section 251(f)(1). Finally, the FCC continues to limit and restrict the ability of CLECs to lease certain UNEs or UNE combinations in any location (urban or rural) further reducing the CLECs' reliance upon UNEs in general.

- (d) Alltel does not believe that the exemption in 251(f)(1) is a material regulatory distortion in its Florida service territory. First, consistent with Florida's strong public policy in favor of encouraging competition, competition was allowed into Alltel's territory by operation of Section 364.052, Florida Statutes, when Alltel elected price regulation, and whether a small LEC that has elected price regulation could sustain the federal rural exemption in light of Section 364.052, Florida Statutes, is questionable. Second, Alltel Florida does not assert a 251(f)(1) exemption to prevent competitors from entering Alltel's market and, in fact, Alltel has entered into a variety of agreements with competitors or potential competitors (over 40) as shown in its answer to Interrogatory No. 1, above. Third, under Section 251(f)(1), a competitor who seeks to terminate the rural exemption is required under Section 251(f)(1) to petition the state commission for an order terminating the exemption. To Alltel's knowledge, none of the competitors or potential competitors with whom Alltel has entered agreements has ever deemed it necessary to file their bona fide request for an agreement with the FPSC or to request that the FPSC terminate the 251(f)(1) exemption because, again, the exemption is not utilized by Alltel Florida. The fact that over 40 companies have entered into agreements with Alltel and none of them have felt the need to seek action from the FPSC formally addressing 251(f)(1) shows that competitors and potential competitors are not deterred or constrained by 251(f)(1) in Alltel's territory and that Section 251(f)(1) is not a material regulatory distortion therein. Finally, to the extent the Commission is concerned about Section 251(f)(1), if the Commission approves Alltel's rebalancing plan in this docket, Alltel would consent to language in the final order formally terminating whatever rights Alltel has under Section 251(f)(1).

36. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 28, lines 6-8.
- (a) By way of clarification, is it meant that ALLTEL offers DSL service in all of its exchanges except Hastings?
  - (b) If the response to (a) is negative, please clarify what is meant.
  - (c) Do any providers other than ALLTEL offer DSL service in any of ALLTEL's exchanges?
  - (d) If the response to (c) is affirmation, please identify which competitive providers serve which ALLTEL exchanges.

ANSWER:

- (a) Yes.
- (b) N/A
- (c) No.
- (d) N/A

37. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 28, footnote 24.
- (a) Will ALLTEL currently offer "naked DSL"?
  - (b) If the response to (a) is negative, does ALLTEL have any plans to offer naked DSL in the future?
  - (c) In ALLTEL's territory, does "the local cable TV provider" offer broadband services?
  - (d) If the response to (c) is affirmative, please identify, by exchange, which cable TV provider offers broadband service.

ANSWER:

- (a) Not at this time.
- (b) Alltel is exploring the feasibility of Naked DSL.
- (c) Yes, in some exchanges.
- (d)

38. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 31, lines 11-13. Please identify which of these entities are competing in ALLTEL's local telecommunications market.

ANSWER:

CLECs (resellers), wireless carriers, VoIP providers and cable telephone providers all provide competing services in Alltel local telecommunications market. CLECs such as Actel Wireless, Belleruid, Cat Communications, Coastal Telephone Connections, Flatel, Global Connection, Met Communications, Ring Connection, Source One Communication, and Universal Telecom all provide service in Alltel Florida's service territory. Alltel Communications (wireless), Cingular and Sprint-Nextel are some of the wireless providers serving Alltel's local market. VoIP providers Vonage and Skype are universal providers whose services are generally available in most areas and in some cases can be purchased from retail outlets such as Best Buy and Circuit City stores.

40. For purposes of the following request, please refer to Exhibit DCB-4.
- (a) Referring to page 1, what is the vintage of the Lines data?
  - (b) On, e.g., pages 2 through 8 the header is "Investment Input." Aren't these amounts actually the results of intermediate calculations? Please explain.
  - (c) Referring to page 9, please explain to what "prop" refers in the headers.
  - (d) Referring to page 10, what is the vintage of the total residential annual DEMs, and what is their source?
  - (e) Referring to page 10, what is the vintage of the total business annual DEMs, and what is their source?
  - (f) Referring to page 10, Total Trunks, does this represent the total number of trunks "engineered" by the model?
  - (g) If the response to (f) is negative, please explain to what Total Trunks refers.
  - (h) Results are shown on page 17 for Tandem Switching Direct Cost. Does ALLTEL operate any tandems?
  - (i) If the response to (h) is affirmative, please indicate which switches are tandems.
  - (j) If the response (h) is negative, please explain why the costs of tandem switches are included in the analysis.
  - (k) On page 22 values for Distribution Unit Cost are shown. Please explain what these values represent, their source, and how they are computed.
  - (l) Referring to page 54, excluding the cost of capital inputs, are all of these inputs the HAI defaults?
  - (m) If the response to (l) is negative, please identify which inputs are not HAI defaults, and identify their vintage and source.

- (n) Referring to page 56, Calculation of EO usage, please identify the source and vintage of the inputs.
- (o) Referring to pages 60 through 65, is the ARMIS data shown of 1995 vintage?
- (p) If the response to (o) is affirmative, why weren't these data updated?
- (q) If the response to (o) is negative, please identify the vintage of the ARMIS data.
- (r) Referring to pages 66 through 69, is the data shown 1996 actuals?
- (s) If the response to (r) is affirmative, why weren't these data updated?
- (t) If the response to (r) is negative, please identify the vintage and source of these data.
- (u) Referring to pages 69 and 70, is the data shown circa 1996?
- (v) If the response to (u) is affirmative, why weren't these data updated?
- (w) If the response to (u) is negative, please identify the vintage and source of these data.
- (x) (deleted per discussion with staff counsel)

ANSWER:

- (a) The vintage of the line data is the 1995-1996 default data within the HAI 5.0a model.
- (b) These amounts are the results of the investment development produced by the HAI 5.0a model.
- (c) "Prop" refers to "proposed."

- (d) The vintage of the DEM data is 1995-1996, the source is ARMIS data for those companies who report ARMIS. For those companies who don't report ARMIS data the proxy data is used. ALLTEL Florida doesn't report ARMIS so the data used herein is a proxy.
- (e) See answer to 40(d).
- (f) Yes, these would be the proposed number of trunks developed by the HAI 5.0a model.
- (g) N/A
- (h) No.
- (i) N/A
- (j) Tandem costs are estimated because even if there are no tandems the company will still pay tandem switching costs. In other words, even though ALLTEL Florida doesn't have a tandem those functions performed by the tandem are still required, hence there are costs associated with the tandem switching function estimated by the model.
- (k) The Distribution Unit Cost represents the distribution component of the loop designed by the HAI 5.0a model. It is a function of the distribution investment and the demand. The investment is developed using the inputs contained herein the model.

- (l) Yes.
- (m) N/A
- (n) See answer to 40(d).
- (o) Yes, the ARMIS proxy data shown herein is vintage 1995-1996.
- (p) The Hatfield version 5.0a cost proxy model is the most current publicly available version of the model that provides data on ALLTEL Florida and contains ARMIS data from 1995 – 1995. The Hatfield model was designed to use proxy data for many of its inputs. The Hatfield model also contains a user-input section that allows users to change select data inputs to customize the report to their LECs. The user-allowable changes are shown in Exhibit DCB-04 and discussed in ALLTEL's responses to question 24(d).
- (q) N/A
- (r) Yes, the proxy data shown herein is vintage 1995-1996.
- (s) Please see the response to answer 40(p) above.
- (t) N/A
- (u) Yes, the proxy data shown herein is vintage 1995-1996.
- (v) Please see the response to answer 40(p) above.
- (w) N/A
- (x) No answer required per staff counsel.

\_\_\_\_\_ )

**ALLTEL'S ANSWERS TO  
STAFF'S SECOND SET OF INTERROGATORIES**

Pursuant to Rule 25-22.034, Florida Administrative Code and Rule 1.350, Florida Rules of Civil Procedure, Alltel Florida, Inc. ("Alltel"), by and through undersigned counsel, hereby answers Staff's Second Set of Interrogatories as set forth below.

41. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Willis, page 5, lines 17-24, pertaining to access line density in ALLTEL's service territory as compared to BellSouth, Sprint and Verizon. How does ALLTEL's relatively low access lines per square mile connection impact the ability of wireline CLECs to compete in ALLTEL's Florida service territory?

ANSWER:

The fact that there are a relatively low number of access lines per square mile in ALLTEL's Florida service territory does not affect the ability of CLECs to compete, but it does affect the potential strategy. The fact that ALLTEL's 1R prices are supported by other services is the key driver in that decision. While it is more costly for a CLEC to compete in a rural area by replicating a traditional wireline network again, the real problem is that the prices for voice services are so far below the average cost of a wireline network as calculated by the HAI 5.0a model or the embedded cost model approved by the FPSC in Docket 980696-TP and shown in Exhibit No. \_\_\_ (DCB-0), Table 1. CLECs are competing in rural areas using different technologies and/or service bundles. For example, cable TV companies, such as Time Warner and Cox that have already deployed facilities to provision cable TV and broadband internet services (and are receiving revenue from selling those services that can pay for those facilities) can also provision voice telephony for a relatively low incremental cost. Additionally, companies that offer VoIP-based voice telephony face a low entry cost if the customer already has access to broadband internet services. Wireless carriers have a significant cost advantage over traditional wireline-based LECs because they do not incur the expense of running wireline loops to reach customers and therefore, may be able to enter rural areas such as ALLTEL's Florida service territory and compete profitably. Thus, CLEC have the ability to compete in a rural area such as ALLTEL's and will be stimulated to do so when the pricing more closely is allowed to reflect costs.

David C. Blessing

- 42. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Willis, page 10, lines 4-9, pertaining to the calculation of switched network access revenue reductions. How did ALLTEL determine that \$6 million was the appropriate amount to reduce intrastate switched network access revenues?**

ANSWER:

Alltel examined the impact on the local residential rate if Alltel Florida were to rebalance rates to move access closer to or to achieve parity with interstate access charges. Alltel compared resulting rebalanced rate to existing local rates for residential service in other states in the southeast region. In comparison, Alltel found that the resulting rate was within the range of rates in some of the other southeastern states. Alltel then compared the resulting rebalanced rate to the rate determined by this Commission to be an affordable rate in the generic proceeding in Docket No. 98000a. Finally, Alltel compared the resulting rebalanced rate to the final rebalanced rates approved by the FPSC for the three large ILECs in Florida. Based on this analysis, Alltel concluded that the resulting residential rate if access rate parity was achieved, was above the rate determined by this commission to be affordable and greater than the final rebalanced rate approved by the Florida Public Service Commission for the large ILECs. Therefore, Alltel proposed to rebalance rates by an amount that allowed the company to raise residential rates to a rate consistent with the rebalanced rate approved for the large ILECs in Florida, in particular Sprint.

Alltel and Sprint operate in some very comparable rural areas. For example, Sprint provides service in, among others, the following counties: Jackson, Jefferson, Madison and Wakulla which are similar to Alltel's Alachua, Bradford, Suwannee and Union Counties in median income. The median income for these Sprint areas is \$29,744-\$37,149 and that of comparable Alltel areas is \$29,963-\$34,562. The commission approved rebalanced rates for Sprint exchanges in these areas of a maximum of \$16.80 and Alltel is proposing maximum rates of \$17.68 (excluding mandatory EAS) in exchanges located in comparable counties. The Commission has already therefore concluded that rebalancing in rural areas in amounts similar to that proposed by Alltel is favorable to competition and that service will remain affordable.

Bettye Willis

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Second Set of Interrogatories  
Interrogatory No. 43  
Page 1 of 1

- 43. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Willis, page 11, line 1, pertaining to ALLTEL's intrastate composite switched network access rate. Please explain the origin of and basis for the Modified Access Based Compensation (MABC) rate and the circumstances when MABC applies rather than its intrastate switched network access charges.**

ANSWER:

MABC interconnection charges were established by the Florida Public Service Commission pursuant to Order No. 17743 in Docket No. 850310-TL. The MABC rate is applied to intrastate minutes of use terminating to Alltel Florida from other incumbent local exchange carriers in Florida using the Feature Group C network (FGC).

Bettye Willis

44. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 3, line 16, pertaining to induced market entry. How soon does ALLTEL believe the reduction of so-called "implicit support" will have the objective result of inducing market entry into the local exchange market in ALLTEL's Florida service territory?

ANSWER:

The market entry plans of potential competitors are not publicly available, so we cannot know exactly how soon this rebalance will trigger their entry into specific markets. Generally speaking, however, we can say that as the market price for a service increases, the more suppliers that will seek to provide service. The timing of competitive entry is impacted, in large part, by the new market price. The sooner the price is reset more comparable to costs, the more interested competitors will be in providing service in that market. This conclusion is supported by the FPSC's decision for the Large LECS, which was upheld by the Florida Supreme Court. *See Florida Supreme Court Decision at pages 7-10.*

David C. Blessing

**45. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 3, lines 19-20, pertaining to enhanced market entry.**

- (a) Describe in detail the features of a “more competitive local exchange market” as referenced in this passage.**
- (b) Assuming the Commission grants ALLTEL’s Petition, how soon does ALLTEL believe this “more competitive local exchange market” will begin to provide benefits to residential consumers and describe what ALLTEL believes those benefits will be.**

ANSWER:

(a) A more competitive local market will increase the interest and number of competitors than exist today providing local residential phone service. The new entrants will be incented to increase both the availability but also the marketing of new services. The new entrants will be incented to use whatever technologies they believe will be competitive, including technologies other than a traditional wireline to provide voice telephony to customers. As discussed in the direct testimony of Alltel witness Blessing, section VI. (pp. 30 – 39) and in the FPSC’s *Annual Report to the Florida Legislature on the Status of Competition in the Telecommunications Industry in Florida as of May 31, 2004*, new competitors may provision competing voice service via wireless technology, cable TV facilities, VOIP or file-sharing technology, electrical power lines, or other technology. It is anticipated that the competitors would offer service bundles and pricing similar to those offered by Alltel as well as additional services and bundles not currently offered by Alltel.

(b) The Florida Supreme Court agreed with the Commission’s conclusion that higher residential prices will lead ultimately lead to benefits for consumers. As the Court notes section 364.164(1)(a) requires the Commission to determine whether granting a petition will *ultimately* benefit residential customers (See Decision at page 8). As discussed in the response to Interrogatory No. 44, above, the market entry plans of potential competitors are not publicly available, so we cannot know with certainty the exact timing when competitors will enter ALLTEL’s markets. Generally speaking, however, we can say that as the market price of a service increases, more suppliers will seek to provide that service. The timing of competitive entry is impacted, in part, by the new market price. Therefore, the sooner the market price is increased to be more reflective of costs, the sooner and greater will be the interest of competitors in providing service in that market. It should be noted that there are a number of competitive alternatives to ALLTEL’s local residential voice service today that are being provided in various markets but they may not be as attractive of an alternative in Alltel’s markets because

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Second Set of Interrogatories  
Interrogatory No. 45  
Page 2 of 2

ALLTEL's 1R price is priced so far below average cost and is being supported by intrastate switched access revenues and other services. For example, cellular phone service is a competitive alternative that offers mobility in addition to voice service, but it is priced higher than fixed wireline service. If ALLTEL was able to increase the price of its 1R service to recover its average cost, cellular service at its current price would be considered an adequate substitute for wireline service by more customers.

The benefits of competition will be: (1) A greater number of service providers to choose from that offer a comparable service to ALLTEL's 1R voice service that consumers would consider to be a reasonable substitute, and (2) Competitive service providers that would distinguish themselves by offering a similar product at a better price or by offering better services and/or features, or better bundles of services.

David C. Blessing

46. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 5, lines 12-15. Given the relatively low access line density in ALLTEL's territory versus that of BellSouth, Sprint and Verizon, what characteristics of ALLTEL's territory make it likely that pricing ALLTEL's basic service closer to average cost will bring the benefits of competition to ALLTEL's consumers. Please explain in detail.

ANSWER:

Although the major CLECs have largely focused on competing in urban areas, there are a number of other CLECs that are focusing on rural areas. In some cases, a CLEC may chose to compete in rural areas because it knows that it will face less competition from the large CLECs. In other cases, the CLEC may already have facilities in place providing a different service that it can use to also provide telephony. This is the case with the Cable TV companies. As noted, in the responses to Staff's first request for production of documents, Both Cox and Time Warner have facilities and provide cable TV in some of Alltel's exchanges and have announced plans to provide voice telephony in the future.

While we do not have specific cost evidence in this docket to know what minimum 1R price is needed for entry to be profitable for the various types of CLECs that could enter Alltel's territory, it is certain that as the price of 1R increases, more CLECs will be able to recover their costs of providing service using their specific technology and will seek to enter Alltel's market. A CLEC's decision to enter Alltel's territory has less to do with the characteristics of Alltel's territory and more to do with the profitability of serving customers there. If the price of 1R service is higher, then profits for CLECs will be sufficient to support service provision by CLECs.

As discussed in the Direct Testimony of David Blessing, there are examples of competitive carriers entering rural markets especially where rates have been rebalanced. For example, the State of Wyoming specifically sought to rebalance rates to encourage competitive entry. As outlined in Mr. Blessing's testimony on pages 33 – 39, numerous providers have entered local markets in Wyoming despite their rural nature. Time Warner Cable and Cox Communications have already announced through their websites that they intend to enter ALLTEL's territory. Rebalancing ALLTEL's 1R rates will give these two potential competitors incentive to enter ALLTEL's territory sooner than they might have originally planned.

As discussed earlier in response to Interrogatory number 42, above, Sprint serves rural areas like Madison and Jefferson Counties that are rural and are demographically similar to Alltel's territory (based on, for example, median income). The fact that Sprint serves rural areas was

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Second Set of Interrogatories  
Interrogatory No. 46  
Page 2 of 2

before the Commission in the large ILEC rebalancing case and this Commission approved rebalancing like that proposed by Alltel in this proceeding. The Commission's prior decision shows the Commission's view that competition can be encouraged in rural areas via rebalancing.

David C. Blessing

47. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 6, lines 19-22, pertaining to past public policy regarding rates for residential basic telephone service. Please cite the origin of the "public policy" that "dictated" that rates for basic local residential telephone service should be priced at artificially low levels.

ANSWER:

The specific origin of the universal service-based public policy that 1R should be supported by other services to aid the spread of residential local telephone service to all customers may be unknown, but it is universal. Theodore Vail, the CEO of AT&T in the early 1900s, coined the phrase, "one system, one policy, one universal service" which, at that time, simply meant that one company should be the sole monopoly provider of local exchange telephone service yet subjected to regulation by government. However, Vail's goal was more in response to positioning AT&T as the sole provider of local telephone service and eliminating competitors under the guise of allowing all customers to be interconnected to each other by using one phone company rather than five separate phone companies that were not interconnected with each other. The concept of pricing local service below average cost to spur the spread of 1R phone service under the banner of "universal service" appears to have evolved later, perhaps around 1934 with the passage of the 1934 Communications Act. Regardless of when and where the current concept of universal service originated, it cannot be disputed that a public policy of holding 1R rates below average cost and supporting 1R rates by pricing other services such as intrastate switched access above average cost does not exist in light of the fact that the overwhelming majority of states in the United States, price 1R service significantly below 1B service (which costs approximately the same as 1R service) and support 1R service by charging more than average costs for such services as intrastate switched access service, intraLATA toll calling, and custom calling features.

David C. Blessing

**48. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing Pg 7, lines 3-18, pertaining to telephone penetration rates.**

- (a) Please provide figures and sources you have for the 2004 calendar year relating to telephone penetration rates specific to ALLTEL's Florida territory?**
- (b) Do you believe that a 90% penetration rate is an acceptable level of telephone subscribership in ALLTEL's service territory? If so, please explain why.**
- (c) Please provide the average penetration rate for telephone subscribership in Florida for households at or below the median household income for Florida of \$38,819.**
- (d) Please provide the median household income by county for those counties in ALLTEL's Florida service territory.**

ANSWER:

(a) FCC data on penetration rates for wireline service measures this rate at the state and national levels, not in a service providers territory, so Alltel has no data that measures penetration rates in its Florida territory. A comparison of households and residential access lines in Alltel Florida exchanges show that the number of access lines is generally greater than the number of households which would lead one to believe penetration rates are at least in the 90% range.

(b) Alltel is aware of no studies that suggest the ideal rate of penetration for local phone service. Even in the highest income levels, where affordability is clearly not a factor that could prevent subscribership, FCC data indicate that penetration is less than 100% suggesting that 1) some people may simply not want a phone; 2) that measuring penetration by households is a flawed measure and may not accurately account for vacation homes, apartments without tenants or other factors, 3) penetration rates everywhere are facing downward pressure as consumers begin substituting wireless service for wireline service, or 4) other unidentified reasons..

Additionally, FCC penetration data only measure penetration of wireline-based telephone service rather than measuring telephone penetration regardless of the technology the customer uses. As more households adopt alternative telecommunications technologies (wireless, cable TV, VoIP, etc.) and discontinue wireline telephone service, it will become more difficult to measure penetration unless the FCC changes the way it measures penetration.

(c) ALLTEL does not track telephone subscribership based on the income levels of its subscribers.

(d)

Florida Median Household Income **\$38,819**  
Florida Per Capita Money Income **\$21,557**  
Florida Percentage of Persons below Poverty **12.5%**

| County           | Median Household Income | Per Capita Money Income | Population for Whom Poverty is Determined | Number of Persons below Poverty | Percentage of Persons below Poverty |

Bettye Willis 48 (a)  
David C. Blessing 48(b) – (d)

49. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing Pg 7, footnote 3, pertaining to the FCC's most recent report, *Telephone Subscribership in the United States (Data through March 2005)*. Does ALLTEL believe it is significant that based on the most recent FCC data (through March 2005), telephone penetration declined in Florida by 1.8% from the annual average for 2004 and declined nationwide 1.4% from the national annual average for 2004? Please explain why or why not.

ANSWER:

No. As discussed in the answer to Interrogatory No. 48b above, there are flaws with the FCC's current data for measuring telephone penetration. First, FCC penetration data only measure penetration of wireline-based telephone service rather than measuring penetration inclusive of other telecommunications technology that customers use. There is a growing body of evidence that supports the idea that increasingly more telephone users are discontinuing their landline service and relying on only their wireless service as their sole provider for voice telephony services. The FCC current penetration data does not reflect the fact that a telecommunications user may not have a landline, but may be served by a wireless line or a Cable TV based voice connection. As more households adopt alternative technologies (wireless, cable TV, VoIP, etc.) and discontinue wireline telephone service, it will become more difficult to accurately measure penetration unless the FCC changes the way it measures penetration and attempts to measure all telecommunications technologies. Therefore, it is difficult to draw any definitive conclusion from an apparent decline in wireline telephone penetration of 1.8% in Florida and 1.4% nationwide. Total telecommunications subscribership may have actually increased during that period if one considers the increases in wireless and voice over broadband usage which could mean that the decline may simply reflect the fact that people are shifting away from wireline-based telephony and using other technologies for their voice communications needs. Therefore, given the problems with measuring penetration, it is not possible to draw any definitive conclusions from the FCC's data for March 2005.

David C. Blessing

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Second Set of Interrogatories  
Interrogatory No. 50  
Page 1 of 1

**50. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 8, lines 12-18, pertaining to competitive pressures on ALLTEL's rates for certain services. Please describe in detail any competitive pressures ALLTEL is currently experiencing relating to business customers in its Florida service territory.**

ANSWER:

While Alltel Florida's competitive pressure relating specifically to business customers appears relatively minimal at this time, Alltel is experiencing access line decreases. Alltel has experienced some business customers porting their phone numbers to wireless carriers, and anticipates continued decline in business access lines as cable competitors gear up to offer voice service in Alltel's territory.

Bettye Willis

**51. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing Pg 17, footnote 10, pertaining to the definition of cross-subsidy. Please provide the Faulhaber definition of a cross-subsidy.**

ANSWER:

Faulhaber's analysis concludes that a cross-subsidy exists if the revenue received from each individual service and each possible combination of services falls outside of the range bounded by the Long Run Incremental Cost (LRIC) and the Stand-Alone Cost (SAC) of each individual service and combination of services. Simply put this means that in order to declare a rate or rate structure to be subsidy-free no service or group of services can be receiving or providing a subsidy to another service or group of services. If we assume that the total revenue of all services equals economic cost then no subsidy is received or provided if revenue falls between LRIC and SAC for each individual or group of services.

David C. Blessing

- 52. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 21, lines 1-13, pertaining to the development of a more competitive local exchange market. At the local service rate levels targeted by ALLTEL's rebalancing petition, does ALLTEL believe a competitor would be able to attract sufficient numbers of consumers in ALLTEL's territory to achieve economies of scale necessary to effectively compete for residential consumers? Please explain your answer.**

ANSWER:

Yes. Although Alltel is unaware of the specific market entry requirements of all competitors that may be willing to enter Alltel's territory once its proposed prices are adopted, including the target price for 1R service that each competitor must have to make market entry viable, ALLTEL notes that certain carriers (Time Warner and Cox Communications) have already publicly announced via their websites that they intend to provide voice telecommunications services at some future date in ALLTEL's service area. Additionally, internet-based service providers such as Skype may already be competing in ALLTEL's territory today. Skype appears to have a low target price for 1R and a low customer acquisition cost. Inasmuch as subscribership through Skype is a self-motivated customer decision where a customer would simply decide to download Skype software and begin paying for Skype service, it is possible that Skype may already be providing service to some Alltel customers without the knowledge of Alltel. When Alltel's new proposed prices go into effect, Skype's service will become that much more attractive to consumers.

The Direct Testimony of David Blessing pages 22 and 28 – 38 discuss in detail, potential competitors entering Alltel's rural territory. Pages 33 – 38 specifically discuss CLECs entering rural markets and cite real world examples where the state regulatory commissions have rebalanced a LEC's rates which has induced CLECs to enter those rural markets. Finally, in the large ILEC rate rebalancing case, the Commission addressed the issue of promoting competition in rural areas by rebalancing rates and determined that rate rebalancing would promote competition in the rural areas that Sprint serves. Given that Sprint and Alltel both serve rural areas, it stands to reason that rate rebalancing should also increase competition in Alltel's rural areas.

David C. Blessing

**53. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 25, lines 13-15, pertaining to the Ros and McDermott study. This testimony addresses the relationship between unbalanced prices and the "percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements."**

**(a) In ALLTEL's Florida service territory, how many switching centers have CLEC collocators?**

**(b) If the answer to (a) is zero, please explain the relevance of the Ros and McDermott study to the instant proceeding.**

**(c) Does ALLTEL allow CLEC collocators in its Florida service territory? If not, please explain why.**

ANSWER:

(a) Alltel Florida has several Interconnection Agreements in Florida that allow for collocation but as of today none have Physical or Virtual equipment collocated in our offices.

(b) Some CLEC service providers may not need to collocate a switch within any of ALLTEL's central offices in order to provide service to customers within ALLTEL's territory. For example, Time Warner Cable has its own facilities and switches and does not need to collocate a switch with ALLTEL. Additionally, none of the wireless carriers need to collocate a switch with ALLTEL in order to provide service within ALLTEL's territory. VoIP-based service providers do not need to collocate a switch with ALLTEL in order to provide service within ALLTEL's territory. Nor do file-sharing-based service providers such as Skype. Inasmuch as not all telecommunications service providers need to collocate a switch to provide service, Ros and McDermott's study suggesting that rebalancing rates leads to increased competition still seems relevant with the main point being that more CLECs will enter a market if the market price of the service increases.

(c) Yes.

Bettye Willis 53 (a); David C. Blessing 53(b) – (c)

54. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 27, lines 14-16, pertaining to the Eisner and Lehman study, stating that the "authors were interested in the efficacy that the pricing of unbundled network elements (UNEs) and the setting of resale discounts had on CLEC entry."
- (a) Does ALLTEL Florida offer UNEs? If not, please explain why.
  - (b) Does ALLTEL Florida offer resale discounts? If not, please explain why.
  - (c) If the answers to (a) and (b) are negative, please explain the relevance of the Eisner and Lehman study to the instant proceeding.

ANSWER:

- (a) Alltel Florida has interconnection agreements in Florida that allow for UNEs but as of today the company is not providing any UNEs. For example, Alltel Florida's agreement with GlobalNaps allows for UNEs.
- (b) As of today Alltel Florida is not providing any discounts to current resellers in our territory because no reseller has requested discounts.
- (c) N/A

Bettye Willis 54(a) & (b)  
David C. Blessing 54 (c)

**55. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, pages 29 and 30, lines 21-22 and 1-3 respectively, pertaining to combined service offerings by Cox and Time Warner cable providers.**

**(a) Does ALLTEL offer bundled packages, e.g., local and long distance; local, long distance, and wireless, etc.? If so, please list the package name, whether it is a residential or business package, the services it includes, and its price.**

**(b) If the Commission approves ALLTEL's petition, will the rates of any ALLTEL bundled packages increase? If so, which ones and by how much?**

ANSWER:

(a) Alltel currently has Connect Unlimited bundles available in Florida. Connect Unlimited includes local service, 4 calling features, and unlimited long distance for \$54.95. When bundled with DSL, we provide additional discounts with DSL 1.5M for \$19.95. When bundled with DSL and our video service, we provide additional discounts with DSL 1.5M for \$14.95 and video with 120 channels for \$34.99. Customers can get all three services with Alltel for \$104.89 (plus taxes & fees).

(b) No.

Bettye Willis

**56. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 29, lines 11-21, pertaining to cable TV companies providing competing voice telephone service in ALLTEL's Florida territory.**

**(a) When does Cox Communications intend to begin offering local calling plans in ALLTEL's Florida territory?**

**(b) Does Time Warner Cable (TWC) currently offer voice communications services in ALLTEL's service territory? If so, in what ALLTEL exchanges does TWC offer these services?**

**ANSWER:**

(a) Cox Communications did not publish specific entry dates on when it will begin offering local calling plans in Alltel's Florida territory.

(b) Time Warner Cable does not currently offer voice communications services in Alltel's service territory. Time Warner Communications did not publish a specific entry date on its website but intends to provide service in the following Alltel Florida exchanges – Melrose, Interlachen, Dowling Park, Live Oak, and Jennings.

David C. Blessing

**57. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 30, lines 1-3, pertaining to cable TV companies providing competing voice telephone service in ALLTEL's Florida territory.**

**(a) Do either Cox or TWC offer bundled service offerings that include local phone service in ALLTEL's Florida service territory?**

**(b) If so, in what ALLTEL exchanges are these services offered and by which company(s)?**

ANSWER:

(a) Not at this time.

(b) N/A

David C. Blessing

- 58. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 33, lines 18-21, pertaining to competitors entering rural markets similar to those served by ALLTEL. Does Unite Communications Systems provide residential or business voice communications service anywhere in Florida? If so, where?**

ANSWER:

No. Unite Communications does not provide voice communications services in Florida; however, the success of Unite Communications shows that a company can be successful serving smaller, rural markets by building its own network and providing multiple services.

David C. Blessing

**59. For the following questions, please refer to the direct testimony of witness Blessing beginning on page 34, line 18 and continuing through page 35, line 7.**

**(a) Did Wyoming rebalance its rates in order to start or increase local competition? If not, why did Wyoming rebalance its rates? Please explain your answer.**

**(b) What was the CLEC market share in Wyoming when Wyoming first began to balance its rates?**

**(c) What is the current CLEC market share in Wyoming?**

**ANSWER:**

- (a) Yes. The fostering of local competition was a main goal of rebalancing local rates in Wyoming.
- (b) When the Wyoming Telecommunications Act of 1995 (which had provisions to rebalance rates) went into effect on March 1, 1995, there were no CLECs in Wyoming.
- (c) CLECs currently serve 25,876 lines in Wyoming of a total of 307,130 access lines in service or 8.4%.

David C. Blessing

60. For the following questions, please refer to Exhibits, DCB-20 (Wyoming PSC 2005 Annual Telecom Report) and DCB-40 (the FCC's status report on local telecom competition as of June 30, 2004) to the direct testimony of witness Blessing.

(a) The FCC report did not provide a CLEC market share percentage for Wyoming, noting "[D]ata withheld to maintain firm confidentiality" (DCB-40, Table 6). In the Wyoming PSC's report, however, CLEC lines are reported to number 25,876 out of a total 307,130 access lines (DCB-20, page 61). Why is there a discrepancy between the two reports? Please explain your answer.

(b) For each of the Wyoming PSC's 2004, 2003, 2002, 2001, and 2000 reports, what were the total number of ILEC access lines and CLEC access lines?

ANSWER:

- (a) ALLTEL is not aware of the reason as to why there would be a discrepancy in the data between the FCC report and the Wyoming PSC's report.
- (b) The Wyoming PSC Reports contain the following data regarding the total number of ILEC access lines and CLEC access lines.

|      | ILEC    | CLEC    | Total   |
|------|---------|---------|---------|
| 1998 |         | unknown | 296,979 |
| 1999 |         | unknown | 303,107 |
| 2000 |         | unknown | 310,073 |
| 2001 | 292,344 | 28,300  | 320,644 |
| 2002 | 296,760 | 29,684  | 326,444 |
| 2003 | 289,810 | 28,840  | 318,650 |
| 2004 | 281,254 | 25,876  | 307,130 |

David C. Blessing

61. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 42, lines 20-23, pertaining to measures of income. Please describe the difference between annual median family income compared to annual median household income.

ANSWER:

The definitions of household income and family income are taken from the US Census Bureau, Census 2000, page B-19.

**Income of households.** This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income. Although the household income statistics cover calendar year 1999, the characteristics of individuals and the composition of households refer to the time of enumeration (April 1, 2000). Thus, the income of the household does not include amounts received by individuals who were members of the household during all or part of calendar year 1999 if these individuals no longer resided in the household at the time of enumeration. Similarly, income amounts reported by individuals who did not reside in the household during 1999 but who were members of the household at the time of enumeration are included. However, the composition of most households was the same during 1999 as at the time of enumeration.

**Income of families.** In compiling statistics on family income, the incomes of all members 15 years old and over related to the householder are summed and treated as a single amount. Although the family income statistics cover calendar year 1999, the characteristics of individuals and the composition of families refer to the time of enumeration (April 1, 2000). Thus, the income of the family does not include amounts received by individuals who were members of the family during all or part of calendar year 1999 if these individuals no longer resided with the family at the time of enumeration. Similarly, income amounts reported by individuals who did not reside with the family during 1999 but who were members of the family at the time of enumeration are included. However, the composition of most families was the same during 1999 as at the time of enumeration.

62. Subsection 364.051(3), Florida Statutes, provides that a local exchange company that has elected price cap regulation may adjust its basic service revenues by inflation less 1 percent once in any twelve month period. Please indicate the effective date and the percentage increase for each annual filing ALLTEL has implemented pursuant to this statutory provision.

ANSWER:

| <u>Effective Date</u> | <u>% Increase</u> |
|-----------------------|-------------------|
| June 24, 2001         | 1.34%             |
| July 1, 2002          | .54%              |
| July 4, 2003          | .34%              |
| July 7, 2004          | .908%             |

(Note, Key and Pushbutton increases were accidentally left off the June 2001 filing - filed later, effective 2/9/02)

- 64. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 46, lines 1-8, pertaining to affordability of basic telephone service in Florida. What is the percentage of households that subscribe to wireless telephone service in ALLTEL's service territory?**

ANSWER:

Neither the Cellular Telephone Industry Association nor the FCC track wireless subscribership by any other factor other than by statewide subscribership. Thus, there is no wireless subscribership data by LEC service territory, by county, or by household.

David C. Blessing

65. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 46, lines 12-18, pertaining to what Florida households pay for cable TV or internet service.

- (a) What is the cable television penetration rate for all households in ALLTEL's service territory?
- (b) What percentage ALLTEL wireline customers subscribe to ALLTEL DSL service in ALLTEL's service territory?

ANSWER:

The answer to this interrogatory contains proprietary confidential business information and is being filed with the Clerk under a separate confidential cover, subject to Alltel's Fourth Notice of Intent to Request Confidential Classification and Fourth Motion for Temporary Protective Order.

David C. Blessing (a)  
Bettye Willis (b)

66. For purposes of the following request, please refer to the direct testimony of ALLTEL witness Blessing, page 52, lines 12-14, pertaining to Lifeline as an effective method of ensuring telephone rates remain affordable in Florida.
- (a) How many Lifeline subscribers did ALLTEL have as of the date it filed its petition?
  - (b) How many households in ALLTEL's Florida service area does the company estimate are presently eligible for Lifeline assistance under current eligibility criteria?
  - (c) How many additional households does the company estimate will become eligible under the income eligibility standard of 135% of the federal poverty guideline that would become effective if ALLTEL's rebalancing petition is approved?

ANSWER:

- (a) Alltel had 3,067 lifeline customers as of September 30, 2004.
- (b) Alltel does not have data to estimate the number of households in its service area that are eligible for Lifeline assistance under the current eligibility criteria.
- (c) Alltel does not currently have data to estimate the number of households that will become eligible under the income eligibility standard of 135% of the federal poverty guideline.

**ALLTEL'S ANSWERS TO STAFF'S  
THIRD SET OF INTERROGATORIES (NOS. 73-92)**

Pursuant to Rule 25-22.034, Florida Administrative Code and Rule 1.350, Florida Rules of Civil Procedure, Alltel Florida, Inc. ("Alltel"), by and through undersigned counsel, hereby answers Staff's Third Set of Interrogatories as set forth below.

73. In response to Staff's First Set of Interrogatories, No. 33, Alltel states in part "one key factor that all new competitors will consider before entering a new market is the market price of local service (generally, the ILEC's price)." With intermodal competition from wireless, VOIP, and cable telephone providers, please explain why the relevant market price for entry is the price of Alltel's basic local service.

ANSWER:

Alltel's price of basic local service is the relevant market price that competitors will consider when analyzing whether to enter Alltel's territory to provide competing voice telecommunications service because all competitors will compare their cost to provide voice service against the prevailing market price at which they can sell that service in order to determine if there is a sufficient profit margin to justify entering that market. All competitors for voice telecommunications service that are contemplating entering a new market, whether they provision voice services via wireless, cable TV, VoIP, or some other technology, look at the market price of the service they are seeking to provide. Although they may provide a bundle of services such as R1, custom calling features, voicemail, and long distance calling, they will look at the market price of each service (R1, custom calling features, voicemail, and long distance calling) individually and collectively as a bundled offering when making their decision about whether to enter. It is assumed that if the price of R1 increases, then the price of the bundle of services will increase also if it includes R1 service.

Cost is the other key component, which is related to price, that all competitors will consider in evaluating whether to enter a particular market. Although all competitors face the same market price for R1 service, each competitor will likely have a different cost of providing service even among those competitors that provision service using the same technology, but particularly more so among competitors that use different technologies. As discussed in the Direct Testimony of David C. Blessing and in response to the previous two sets of interrogatories propounded by Staff, different carriers have different costs of providing local service. For example, while it may be expensive for a wireline-based CLEC to replicate Alltel's PSTN network in a rural area even using a combination of their own switches and leasing loops from Alltel, it may be significantly less expensive for a cable TV-based CLEC such as Time Warner Communications or Cox Communications to provide voice telephony over their cable TV facilities. Furthermore, internet-based CLECs such as Vonage or AT&T that use VoIP technology or CLECs such as Skype/eBay that use file-sharing technology, may enjoy provisioning costs that are even lower than those faced the cable TV providers especially in light of the fact that they offer their voice telephony software as a free download. Additionally, the wireless carriers already have facilities in place today and are offering competitive voice telephony throughout Alltel's service territory. Their cost to provide voice telephony may be relatively low and not reflected in their current price of service.

Customer density can be a large factor in determining the cost of serving customers. Generally speaking, rural areas are more expensive to serve than urban areas in large part because rural areas contain fewer customers per square mile which means that rural areas will have lower economies of scale for both loops and switching.

Loops. In rural areas, individual loop runs are generally longer. There are fewer loops to aggregate into trunk groups. In rural areas, customer premises can be very spread out and far apart especially when a wireline LEC must serve farms with houses several miles apart meaning the LEC will have less loop aggregation. By contrast, a city will have customer premises closer together such as in apartment building complexes, multi-tenant units, and residential subdivisions. This allows the wireline LEC to run short drops from the customers' premises to a pedestal, digital loop carrier, or other aggregation point, and aggregate multiple loops onto a larger copper cable or even onto fiber. Rural areas lack the same degree of customer density to justify investing in the same type of facilities aggregation as found in urban areas.

Switches. Switching costs are higher in rural areas than in urban areas because there are fewer customers and less network traffic passing through the switch over which to recover the switching investment costs. Switching costs are largely a large fixed investment and are typically recovered based on network usage. That is measured traffic such as local exchange access for originating and terminating intraLATA and interLATA (intrastate and interstate) toll calls and transport and termination charges for local traffic (reciprocal compensation for terminating local traffic from interconnecting local carriers, both wireline and wireless) are billed on a per minute of usage basis to help recover the cost of the local switch. Additionally, some portion of the local switch may be recovered for local calling via local measured service charges for those LECs that have local measured service or simply as part of the flat rate that local end users pay for using the local network.

The challenge for a CLEC serving a rural area that has very low R1 rates that are supported by intrastate switched access revenues and other revenues as well is to find the least cost technology that will allow it to serve those customers given the price constraints it will face. Clearly, as Alltel's R1 price increases, we should see those CLECs with an average cost to provide R1 service that is below Alltel's new average rate of \$16.49 entering Alltel's territory.

The difference in cost between serving customers in rural versus urban markets is similar to the difference in cost to serving residential versus business customers. Large businesses typically have a large aggregation of access lines per location which can be served on a very low cost on a per line basis. By contrast, residential customers may have only one or two access lines per customer location which makes them much more expensive to serve on a per line basis.

Likewise, urban areas typically have a large aggregation of access lines per urban area which can be served on a relatively lower cost on a per line basis. By contrast, rural areas may have only a few access lines per area which makes them much more expensive to serve on a per line basis. However, as the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC docket, "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers." (See Order at page 23.) The Commission goes on to cite Maine and Georgia (two states with large rural populations) as states where Commissions successfully rebalanced rates and the resulting increase in competition "drove the price back down." (See Order at page 23.)

It should also be noted that Sprint, Verizon, and BellSouth each serve more rural customers than Alltel currently serves in the State of Florida. When the Commission approved the rate rebalancing plans for these three carriers, the Commission approved these three carriers' plans to rebalance rates in their rural exchanges with the express idea that rebalancing local R1 rates would "promote competition for the benefit of residential customers." (Order at p. 22.) If the Commission believed that rate rebalancing was only beneficial for urban areas and would not promote competition in rural areas, then the Commission would have only approved of rate rebalancing for Sprint, Verizon, and BellSouth in their urban exchanges.

Alltel currently provides 95,266 access lines in its Florida exchanges with an average population density of 58 people per square mile. By comparison, Sprint, Verizon, and BellSouth serve more access lines than does Alltel in exchanges of the same or lower population density. Sprint currently serves a total of 2,063,198 access lines in Florida all of which are classified as rural by USAC. I estimate Sprint provides approximately 507,233 access lines in its 62 least dense exchanges with a combined average population density of 58 people per square mile which represents nearly one half of all of Sprint's exchanges in Florida. Verizon currently serves a total of 2,221,297 access lines in Florida of which I estimate BellSouth provides approximately 45,920 access lines in its 10 least dense exchanges with a combined average population density of 58 people per square mile. BellSouth currently serves a total of 6,277,815 access lines in Florida of which I estimate BellSouth provides approximately 360,114 access lines in its 43 least dense exchanges with a combined average population density of 58 people per square mile. Inasmuch as the Commission has determined that rebalancing rates for the rural customers in Sprint, Verizon, and BellSouth territory will promote competition in those territories, it stands to reason that rebalancing Alltel's rates will also promote competition in Alltel's territory.

It should also be noted that the R1 price increase may last for only a short period. As new competitors enter the market, competition will increase which will, in turn, put downward

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 73  
Page 4 of 4

pressure on the price of R1 service as providers find increasingly cheaper means to provide service. It is anticipated that increased competition will lead to the survival of the lowest cost providers as competition continues to force the price down and squeeze profit margins. As the Commission determined in the Large LEC rebalancing order, "Furthermore, the witness testified that in AT&T's experience in Michigan and Georgia, where rates have already been rebalanced, although basic local service rates initially went up, in the long run, competition drove the price back down." (See Order at p. 23.)

David C. Blessing

74. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are the same or similar to those provided by the service offerings of wireless providers? If so, please list all such functions.

ANSWER:

Alltel's Connect Unlimited bundle includes local service, four calling features (the feature package included in the bundle has: caller ID deluxe, call waiting, caller ID on call waiting and selective call rejection), and unlimited long distance to anywhere in the U.S. (including Puerto Rico) and Canada for a total of \$54.95. Alltel's Connect Unlimited bundle does not include Voice Mail.

A number of wireless carriers offer calling packages that are comparable to Alltel's Connect Unlimited bundle.

Sprint Wireless offers a couple of different calling plans depending upon the needs of the customer.

Sprint Fair & Flexible Plan - For \$55.95, subscribers receive 1,000 Anytime minutes, unlimited Nights (9 p.m. – 6 a.m.) and weekends. Nationwide Long Distance Calling, Voice Mail, Caller ID, Call Waiting, Numeric Paging, Three-Way Calling, Call Forwarding (\$0.10/minute), Directory Assistance (\$1.25/call), 911 Dialing, Roaming, Voice Activated Dialing.

Sprint PCS Fair & Flexible America Plan for Families - For \$69.99, subscribers receive 800 Anytime minutes, unlimited calling to other Sprint/Nextel phones, unlimited Nights (9 p.m. – 6 a.m.) and weekends. Nationwide Long Distance Calling, Voice Mail, Caller ID, Call Waiting, Numeric Paging, Three-Way Calling, Call Forwarding (\$0.10/minute), Directory Assistance (\$1.25/call), 911 Dialing, Roaming, Voice Activated Dialing. Can add up to 3 more lines for \$10 per month per line.

Sprint Free Incoming Plan - For \$59.99, subscribers receive 500 Anytime minutes, unlimited incoming minutes from any network, unlimited PCS Ready Link (Push-to-talk), unlimited Nights (9 p.m. – 6 a.m.) and weekends. Nationwide Long Distance Calling, Voice Mail, Caller ID, Call Waiting, Numeric Paging, Three-Way Calling, Call Forwarding (\$0.10/minute), Directory Assistance (\$1.25/call), 911 Dialing, Roaming, Voice Activated Dialing. Can add up to 3 more lines for \$10 per month per line.

Sprint Wireless reaches 94.2% of Alltel's customers by providing service in the following Alltel exchanges: Alachua, Branford, Brooker, Callahan, Citra, Crescent City, Dowling Park,

Florahome, Fort White, Hastings, High Springs, Hilliard, Interlachen, Jasper, Jennings, Lake Butler, Live Oak, Mayo, McIntosh, Melrose, Raiford, Waldo, Wellborn, and White Springs. Verizon Wireless offers a couple of different calling plans depending upon the needs of the customer.

Verizon Wireless America's Choice Plan - For \$59.99, subscribers receive 900 Anytime minutes, unlimited calling to other Verizon phones, unlimited Nights (9 p.m. – 6 a.m.) and weekends in home calling area, Nationwide Long Distance Calling, Voice Mail, Caller ID, Call Waiting, Numeric Paging, Three-Way Calling, Call Forwarding, Directory Assistance, 911 Dialing, Roaming, and No Answer/Busy.

Verizon Wireless America's Choice Family Share Plan - For \$69.99, subscribers receive two phones and 700 Anytime minutes, unlimited calling to other Verizon phones, unlimited Nights (9 p.m. – 6 a.m.) and weekends in home calling area, Nationwide Long Distance Calling, Voice Mail, Caller ID, Call Waiting, Numeric Paging, Three-Way Calling, Call Forwarding, Directory Assistance, 911 Dialing, Roaming, and No Answer/Busy.

Verizon Wireless reaches 48.9% of Alltel's customers by providing service in the following Alltel exchanges: Alachua, Callahan, Citra, High Springs, Live Oak, McIntosh, Melrose, and Waldo.

Cingular Wireless offers a couple of different calling plans depending upon the needs of the customer.

Cingular Wireless Individual Plan - For \$59.99, subscribers receive 900 Anytime minutes, unlimited calling to other Cingular phones (nationwide), unlimited Nights (9 p.m. – 6 a.m.) and weekends, Nationwide Long Distance Calling, Enhanced Voice Mail, Caller ID, Call Waiting, , Three-Way Calling, Call Forwarding, Directory Assistance, and 911 Dialing.

Cingular Wireless Family Plan - For \$69.99, subscribers receive two phones and 700 Anytime minutes, unlimited calling to other Cingular phones (nationwide), unlimited Nights (9 p.m. – 6 a.m.) and weekends, Nationwide Long Distance Calling, Enhanced Voice Mail, Caller ID, Call Waiting, , Three-Way Calling, Call Forwarding, Directory Assistance, and 911 Dialing.

Cingular Wireless reaches 73.6% of Alltel's customers by providing service in the following Alltel exchanges: Alachua, Branford, Brooker, Callahan, Citra, Crescent City, Florahome, Fort White, Hastings, High Springs, Hilliard, Interlachen, Lake Butler, Luraville, McIntosh, Melrose, Raiford, and Waldo.

David C. Blessing

**75. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are different from those provided by the service offerings of wireless providers? If so, please list all such functions.**

ANSWER:

No. The wireless carriers offer all of the functions that Alltel offers and, in fact, offer additional functions that Alltel does not offer including mobility, text messaging, voice activated dialing, additional custom calling features, and more.

David C. Blessing

- 76. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are the same or similar to those provided by the service offerings of VOIP providers? If so, please list all such functions.**

**ANSWER:**

Alltel's Connect Unlimited bundle includes local service, four calling features (the feature package included in the bundle has: caller ID deluxe, call waiting, caller ID on call waiting and selective call rejection), and unlimited long distance to anywhere in the U.S. (including Puerto Rico) and Canada for a total of \$54.95. Alltel's Connect Unlimited bundle does not include Voice Mail.

A number of VoIP-based providers offer calling packages that are comparable to Alltel's Connect Unlimited bundle. Of particular concern is the fact that Verizon VoiceWing, Skype and other internet-based providers bypass Alltel's public switched telephone network and thus, Alltel's intrastate and interstate switched access charges. This highlights the importance of rebalancing Alltel's rates so that Alltel's R1 service can be supported by charges for R1 service rather than rely on support from access charges which are being bypassed by a new generation of VoIP-based providers. Internet-based providers also challenge the old concept that it is too costly for CLECs to compete in rural areas and show that competition can indeed come to rural areas. Clearly, this type of VoIP-based providers competition will be enhanced when Alltel's rates are rebalanced.

**Verizon VoiceWing**

For \$34.95 per month, Verizon offers its premium package (VoiceWing Unlimited) which includes: Unlimited local calling, Unlimited long distance calling anywhere in the U.S. (including Puerto Rico) and Canada, Voicemail (Voicemail Plus) and a host of custom calling features including: Caller ID with Name, Caller ID Block, Call Waiting, Call Waiting with Caller ID, Call Forwarding, 3-Way Calling, 911 Dialing, Repeat Dial, Return Call, Do Not Disturb, Fax capability as well as internet-based features such as address book, address book synchronization, Anonymous Call Rejection, Call Logs, Click-to-Dial, Enhanced Call Forwarding with Scheduling, Incoming Call Block, Internet Directory Look-up, Permanent Caller ID Block, Schedule Call Back, Simultaneous Ring, Visual Voice Mail. Verizon's VoiceWing is available in every Alltel exchange in the State of Florida and accessible to 100% of Alltel's customer base.

**Skype**

Skype offers unlimited free calling between Skype users worldwide. For calls from a Skype User to nonSkype users virtually anywhere in the world (wireline or wireless) the customer pays \$0.021 per minute. Skype users can receive calls from nonSkype users. Skype's per minute pricing differs from typical VoIP providers and is priced differently than traditional voice telephone service. Accordingly, the actual cost to the customer depends upon whom the customer calls. If the customer has a large network of friends on the Skype network, then it is conceivable that the Skype customer would pay very little for monthly calling. At a rate of \$.021 cents per minute, the Skype customer would have to talk for nearly 44 hours per month (2,617 minutes, specifically) to nonSkype users to generate a charge as high as Alltel's \$54.95 per month for Alltel's Connect Unlimited Bundle.

Skype offers free unlimited local calling to other Skype users, free unlimited long distance calling within the US and Canada to other Skype users, free unlimited long distance calling to any country in the world to other Skype users. Calls to nonSkype users are 2.1 cents per minute within the U.S. and to most major countries in the world. In addition, Skype offers a host of traditional custom calling features as well as numerous web-based calling features too numerous to mention. However, a few of the more typical features that Skype offers include: Voicemail, Call Log, Phone Book, Locate Me, Speed Dial, Do Not Disturb, 3-Way Calling, Alternative 911 or Alternative E-911 Service, Call Forwarding, Call Waiting, Caller ID, Safe Forward Number, Fax and Modem Support, Directory Assistance. Being an internet-based VoIP provider, Skype morphs easily into E-mail, instant messaging, text messaging, and other web-based applications. Skype is available in every Alltel exchange in the State of Florida and accessible to 100% of Alltel's customer base.

**VONAGE**

For \$24.95 per month, Vonage offers its premium package (Premium Unlimited Plan) which includes: Unlimited local calling, Unlimited long distance calling anywhere in the U.S. (including Puerto Rico) and Canada, Voicemail (Voicemail Plus), Caller ID with Name, Call Waiting, Call Forwarding, 3-Way Calling, 911 Dialing, and other custom calling features. Vonage's VoIP-based service is available in every Alltel exchange, but customers can only get a local number in the 904 area code (Crescent City, Hastings, High Springs, Hilliard, Jasper, and Mayo) which is 22% of Alltel's customer base.

**AT&T CallVantage**

For \$29.95 per month, AT&T offers its premium package (Premium Unlimited Plan) which includes: Unlimited local calling, Unlimited long distance calling anywhere in the U.S. (including Puerto Rico) and Canada, Voicemail, Call Log, Phone Book, Locate Me, Speed Dial, Do Not Disturb, 3-Way Calling, Alternative 911 or Alternative E-911 Service, Call Forwarding

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 76  
Page 3 of 3

Call Waiting, Caller ID, Safe Forward Number, Fax and Modem Support, and Directory Assistance. AT&T's CallVantage VoIP-based providers service is available in all Alltel exchanges but customers can only get a local number in the 904 area code (Crescent City, Hastings, High Springs, Hilliard, Jasper, and Mayo) which is 22% of Alltel's customer base.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 77  
Page 1 of 1

**77. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are different from those provided by the service offerings of VOIP providers? If so, please list all such functions.**

ANSWER:

No. The VoIP-based provider offer all of the functions that Alltel offers and, in fact, offer additional functions that Alltel does not offer including, but not limited to: E-mail, instant messaging, text messaging, and other web-based applications.

David C. Blessing

- 78. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are the same or similar to those provided by the service offerings of cable telephone providers? If so, please list all such functions.**

ANSWER:

Alltel's Connect Unlimited bundle includes local service, four calling features (the feature package included in the bundle has: caller ID deluxe, call waiting, caller ID on call waiting and selective call rejection), and unlimited long distance to anywhere in the U.S. (including Puerto Rico) and Canada for a total of \$54.95. Alltel's Connect Unlimited bundle does not include Voice Mail.

A number of cable telephone providers offer calling packages that are comparable to Alltel's Connect Unlimited bundle.

Time Warner Cable

Time Warner Communications has a proven track record of providing voice telephony over its fiber/co-axial cable TV network. Time Warner offers a bundled voice package that is comparable to Alltel's Connect Unlimited bundle for only \$39.95 per month. Time Warner's voice package includes, Unlimited Local Phone service, Unlimited Long Distance calling to anywhere in the U.S. (including Puerto Rico) and Canada and custom calling features such as: Call Waiting, Caller ID, Call Waiting ID, Voicemail, Published Directory Listing & Directory Assistance Listing, Unpublished Directory Listing & No Directory Assistance Listing, Caller ID Block, Cancel Call Waiting, Call Forwarding, Speed Dial, Anonymous Call Reject, Caller ID Unblocking, and Enhanced 911 Service. Time Warner currently provides cable TV service in the following Alltel exchanges: Dowling Park, Interlachen, Live Oak, Mayo, and Melrose, reaching 25% of Alltel's subscriber base. Time Warner has announced via its website that it intends to offer voice telephony to those exchanges in the near future.

Similar to the concerns discussed with the VoIP-based providers, cable telephone providers such as Time Warner also bypass Alltel's public switched telephone network and thus, Alltel's intrastate and interstate switched access charges. Again, this highlights the importance of rebalancing Alltel's rates so that Alltel's R1 service can be supported by charges for R1 service rather than rely on support from access charges which are being bypassed by a new generation cable TV and VoIP-based CLECs. Cable telephony providers such as Time Warner also challenge the old concept that it is too costly for CLECs to compete in rural areas and show that

competition can indeed come to rural areas. Clearly, cable telephony-based competition will be enhanced when Alltel's rates are rebalanced.

Other Alltel Services: Alltel also sells high speed internet and satellite TV in addition to voice services so that it can compete with companies like Time Warner that provide a complete suite of communications and entertainment services. Alltel's sells DSL (1.5Mbps) service for \$34.95 per month, but offers a discount of \$15 if the customer also purchases Alltel's Connect Unlimited package. A customer that selects Alltel's Connect Unlimited package, can purchase Alltel's DSL 1.5Mbps service for only \$19.95 per month. The customer can receive further discounts if the customer also purchases Alltel's satellite TV service (via Dish Network). Thus, if the customer buys Alltel's Connect Unlimited package plus Alltel's DSL 1.5 Mbps service plus Alltel's satellite TV video service, Alltel will provide an additional discount for DSL 1.5Mbps selling it for only \$14.95 per month and selling 120 channels of satellite TV for an additional \$34.99 per month. Alltel customers can purchase all three services (voice telephony, high speed internet, and cable TV) from Alltel for \$104.89 per month. Voicemail can be added to the Alltel bundle for an additional \$3.95.

By comparison, Time Warner offers a bundle of services including digital telephony (the \$39.95 package described above with unlimited local and long distance calling), broadband internet (4.5 Mbps), and Digital Cable TV (150+ channels) plus one premium movie package (approximately 12 movie channels) for a bundled price of \$111.95 per month. Voicemail can be added for \$3.95.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 79  
Page 1 of 1

79. Does Alltel's "Connect Unlimited Bundle" mentioned in response to Staff's First Set of Interrogatories, No. 23, provide functions that are different from those provided by the service offerings of cable telephone providers? If so, please list all such functions.

ANSWER:

No. The cable TV providers offer all of the functions that Alltel offers and offer additional custom calling functions that Alltel does not currently offer.

David C. Blessing

- 80. If two providers each offer a service with the same or similar functions, but the two providers use different technologies, would the two services be considered part of the same market for purposes of determining a market price? Please explain your answer.**

ANSWER:

Yes. The market is two-way voice and data communications – not wireline voice or POTS or other. Therefore, consumers are largely indifferent to the type of technology that delivers the services desired provided that the service is of similar quality and price between the two technologies. For example, most customers are indifferent whether their voice telecommunications service is delivered via the telephone company's wireline facilities, the cable TV company's fiber/coax facilities, the wireless carrier's wireless facilities, or the VoIP carriers digital internet facilities provided that the quality and the price of the voice telecommunications service is similar among all of the different providers of the service. Competitors then seek to differentiate their voice telecommunications service from their rivals by offering promotional price discounts or by creating a perception among consumers that their voice telephony service provided via their type of technology is superior (e.g., fewer outages, fewer dropped calls, clear voice, etc.) to that of their rivals.

David C. Blessing

The following interrogatories address various types of competitors referenced in Alltel's response to Staff's First Set of Interrogatories, No. 38:

81. If Alltel's petition is approved and all other variables held constant, should an existing CLEC reseller's average gross margin per customer in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.

ANSWER:

Yes. If Alltel's petition is approved and all other variables are held constant, an existing CLEC reseller's average gross margin per customer in Alltel Florida's service territory should increase. A CLEC reselling Alltel's R1 service would see an increase in their gross margin provided that the reseller matched Alltel's price increase. For example, if the reseller purchases Alltel's 1R service at a 15% discount, the reseller would pay an average of \$8.92 for a single line and sell it retail for \$10.49 receiving a gross margin of \$1.57 per customer assuming the reseller sells the service at Alltel's retail rate. If Alltel's 1R rate is rebalanced to an average rate of \$16.49 then the CLEC reseller would pay \$14.02 for a single line and sell it retail for \$16.49 receiving an average gross margin of \$2.47 per customer again assuming the reseller sells the service at Alltel's retail rate.

As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers. This will be accomplished by increasing in the short term the rate at which residential service can be offered by competitors, leading to increased profit margins for CLECs serving residential customers." (See Order at page 23.)

David C. Blessing

**82. If Alltel's petition is approved and all other variables held constant, should an existing wireless provider's average gross margin per customer in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

Yes. If Alltel's petition is approved and all other variables are held constant, the effect on the existing wireless provider's average gross margin per customer in Alltel Florida's service territory depends upon the wireless carrier's response to Alltel's R1 price increase. If the wireless carrier does not increase its price, its average gross margin per customer would stay the same, but the wireless provider's overall gross margin would increase to the extent that Alltel's R1 price increase caused more customers to view wireless service as a substitutable service for Alltel's R1 service and switched their local and long distance service to the wireless provider. While wireless carriers face competitive price pressure from other wireless carriers, they also face some competitive price pressure from the incumbent LEC because they are selling a substitutable voice telecommunications service. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, wireless carriers compete with wireline carriers in the residential market; "...wireline companies are facing increased competition from providers using alternative technologies such as wireless, cable, and voice over internet protocol (VoIP). See FPSC Annual Report on Competition (June 30, 2003). (See Order at page 5.) If the incumbent LEC raises its price for R1 service, more customers may begin to view wireless service as an acceptable substitute for their wireline local and long distance calling and switch to the wireless carrier. The increase in customers would increase the wireless provider's overall gross margins. It is also possible that as Alltel's R1 price increases the competitive pressure on the wireless carriers to reduce prices would decrease which would allow the wireless carrier the option to either raise prices and improve average gross margins per customer or postpone any planned price decreases and preserve existing per customer gross margins for a longer period of time. As the Commission noted in the large LEC rate rebalancing order, "by increasing in the short term the rate at which residential service can be offered by competitors, leading to increased profit margins for CLECs serving residential customers." (See Order at page 23.)

David C. Blessing

- 83. If Alltel's petition is approved and all other variables held constant, should an existing VOIP provider's average gross margin per customer in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

Yes. If Alltel's petition is approved and all other variables are held constant, the effect on the existing VoIP-based provider's average gross margin per customer in Alltel Florida's service territory depends upon the VoIP-based providers response to Alltel's R1 price increase. If the VoIP-based provider does not increase its price, its average gross margin per customer would stay the same, but the VoIP-based provider's overall gross margin would increase to the extent that Alltel's R1 price increase causes more customers to view VoIP-based voice telephony as a substitutable service for Alltel's R1 service and switched their local and long distance service to the VoIP-based provider. While VoIP-based providers face competitive price pressure from other VoIP-based providers, they also face some competitive price pressure from the incumbent LEC because they are selling a substitutable voice telecommunications service. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, VoIP-based providers compete with wireline carriers in the residential market; "...wireline companies are facing increased competition from providers using alternative technologies such as wireless, cable, and voice over internet protocol (VoIP). See FPSC Annual Report on Competition (June 30, 2003). (See Order at page 5.) If the incumbent LEC raises its price for R1 service, more customers may begin to view VoIP-based provider's service as an acceptable substitute for their wireline local and long distance calling and switch to the VoIP-based provider. The increase in customers would increase the VoIP-based provider's overall gross margins. It is also possible that as Alltel's R1 price increases the competitive pressure on the VoIP-based providers to reduce prices would decrease which would allow the VoIP-based provider the option to either raise prices and improve average gross margins per customer or postpone any planned price decreases and preserve existing per customer gross margins for a longer period of time. As the Commission noted in the large LEC rate rebalancing order, "by increasing in the short term the rate at which residential service can be offered by competitors, leading to increased profit margins for CLECs serving residential customers." (See Order at page 23.)

David C. Blessing

- 84. If Alltel's petition is approved and all other variables held constant, should an existing cable telephone provider's average gross margin per customer in Alltel Florida's service territory increase, decrease, or stay the same? Please consider both telecommunications offerings and service bundles that include telecommunications, and explain your answer.**

**ANSWER:**

If Alltel's petition is approved and all other variables are held constant, the effect on the existing cable telephone providers average gross margin per customer in Alltel Florida's service territory depends upon the cable telephone provider's response to Alltel's R1 price increase. If the cable telephone provider does not increase its price, its average gross margin per customer would stay the same, but the cable telephone provider's overall gross margin would increase to the extent that Alltel's R1 price increase causes more customers to view cable telephone providers voice telephony as a substitutable service for Alltel's R1 service and switched their local and long distance service to the cable telephone provider. While cable telephone providers face competitive price pressure from other cable telephone providers, they also face some competitive price pressure from the incumbent LEC because they are selling a substitutable voice telecommunications service. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, cable telephone providers compete with wireline carriers in the residential market; "...wireline companies are facing increased competition from providers using alternative technologies such as wireless, cable, and voice over internet protocol (VoIP). See FPSC Annual Report on Competition (June 30, 2003). (See Order at page 5) If the incumbent LEC raises its price for R1 service, more customers may begin to view cable telephone provider's service as an acceptable substitute for their wireline local and long distance calling and switch to the cable telephone provider. The increase in customers would increase the cable telephone providers overall gross margins. It is also possible that as Alltel's R1 price increases the competitive pressure on the cable telephone providers' to reduce prices would decrease which would allow the cable telephone provider the option to either raise prices and improve average gross margins per customer or postpone any planned price decreases and preserve existing per customer gross margins for a longer period of time. As the commission noted in the large LEC rate rebalancing order, "by increasing the short term the rate at which residential service can be offered by competitors, leading to increased profit margin for CLECs service residential customer." (See Order at page 23)

Alltel is not aware of any existing cable TV company currently providing voice telephony in any of Alltel's exchanges. However, Time Warner and Cox Communications have both announced via their websites that they intend to provide voice telephony in competition with Alltel in the exchanges where they currently provided cable TV. If Alltel's petition is approved, Time

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories

Warner and Cox Communications will have a stronger incentive to provide voice telephony within Alltel's territory.

David C. Blessing

- 85. If Alltel's petition is approved and all other variables held constant, should an existing CLEC reseller's customer base in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

If Alltel's petition is approved and all other variables are held constant, an existing CLEC reseller's customer base in Alltel Florida's service territory should increase. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, rebalancing rates will increase the choice of providers competing with the ILEC in the residential market. "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers." (See Order at page 23.) By extension, an increase in CLEC competition should also translate into an increase in each CLEC's customer base. Additionally, it should be noted that Alltel is not aware of any CLEC currently reselling Alltel's R1 service within Alltel's territory. However, if Alltel's petition is approved, CLEC resellers will have a stronger incentive to provide voice telephony within Alltel's territory and will increase their customer base.

David C. Blessing

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 86  
Page 1 of 1

- 86. If Alltel's petition is approved and all other variables held constant, should an existing wireless provider's customer base in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

If Alltel's petition is approved and all other variables are held constant, an existing wireless provider's customer base in Alltel Florida's service territory should increase. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, rebalancing rates will increase the choice of providers competing with the ILEC in the residential market. "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers." (See Order at page 23.) By extension, an increase in CLEC competition should also translate into an increase in each wireless carrier's customer base because customers are likely to view wireless as a substitute service.

David C. Blessing

- 87. If Alltel's petition is approved and all other variables held constant, should an existing VOIP provider's customer base in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

If Alltel's petition is approved and all other variables are held constant, an existing VoIP provider's customer base in Alltel Florida's service territory should increase. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, rebalancing rates will increase the choice of providers competing with the ILEC in the residential market. "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers." (See Order at page 23.) By extension, an increase in CLEC competition should also translate into an increase in each VoIP-based provider's customer base. Additionally, it should be noted that Alltel is aware that a number of VoIP-based providers (Verizon VoiceWing, Skype, and Vonage, Packet 8, and likely others) are currently able to provide competitive voice services within Alltel's territory but, Alltel does not know the current size of their customer base. However, if Alltel's petition is approved, the VoIP-based providers will have a stronger incentive to provide voice telephony within Alltel's territory and will increase their customer base to the extent customers view their service as a viable substitute for wireline service.

David C. Blessing

- 88. If Alltel's petition is approved and all other variables held constant, should an existing cable telephone provider's customer base in Alltel Florida's service territory increase, decrease, or stay the same? Please consider both telecommunications offerings and service bundles that include telecommunications, and explain your answer.**

ANSWER:

If Alltel's petition is approved and all other variables are held constant, an existing cable telephone provider's customer base in Alltel Florida's service territory should increase. As the Commission noted in Order Number PSC-03-1469-FOF-TL in the large LEC rate rebalancing docket, rebalancing rates will increase the choice of providers competing with the ILEC in the residential market. "As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers." (See Order at page 23.) By extension, an increase in CLEC competition should also translate into an increase in each cable telephone provider's customer base. Additionally, it should be noted that Alltel is not aware of any cable TV provider that is currently providing competitive voice services within Alltel's territory but, Alltel does know that both Time Warner Communications and Cox Communications have expressed their intention to begin providing competitive voice services within Alltel's territory. If Alltel's petition is approved, Time Warner, Cox, and other cable TV telephone providers will have a stronger incentive to provide voice telephony within Alltel's territory and will increase their customer base.

The cable TV telephone providers should have greater success than most CLECs in increasing their customer base because they are able to offer broadband internet and cable TV in addition to voice services. Such bundles of services (cable TV, broadband internet, and voice telephony) have proven extremely popular with customers as evidenced by the large penetration levels cable TV companies have made in a number of more developed markets. For example, GCI, in Alaska offers a cable TV, voice telephony, broadband internet, and wireless phone service and has been able to capture nearly 50% of the Anchorage, Alaska market. Cox Communications offers cable TV, voice telephony, and broadband internet and has been able to capture 40% of the voice market in Orange County, CA and Omaha, NE. A noted industry analyst stated,

"The threat [to the phone companies] from cable is not theoretical," says Scott Cleland, CEO of Precursor, a research firm that serves institutional investors. "It is real, and it is devastating." He notes that in Orange

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 88  
Page 2 of 2

County, California, and Omaha, Cox [Cable] has a 40 percent market share for voice.<sup>1</sup>

I anticipate that when Time Warner and Cox offer voice telephony in addition to cable TV and broadband internet in Alltel's exchanges that they will have similar success.

- 89. If Alltel's petition is approved and all other variables held constant, should an existing CLEC reseller's cash flow from operations in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

ANSWER:

Yes. If Alltel's petition is approved and all other variables are held constant, an existing CLEC reseller's cash flow from operations in Alltel Florida's service territory should increase assuming that more customers means more cash flow. Additionally, per my response to question number 81, if the CLEC reseller's gross margin increases, then the CLEC reseller's cash flow (cash receipts minus disbursements from telecommunications assets) should increase as well.

David C. Blessing

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 90  
Page 1 of 1

- 90. If Alltel's petition is approved and all other variables held constant, should an existing wireless provider's cash flow from operations in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

**ANSWER:**

Yes. If Alltel's petition is approved and all other variables are held constant, an existing wireless provider's cash flow from operations in Alltel Florida's service territory should increase assuming that more customers means more cash flow. Additionally, per my response to question number 82, if the wireless carrier's gross margin increases, then the wireless carrier's cash flow (cash receipts minus disbursements from telecommunications assets) should increase as well.

David C. Blessing

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Third Set of Interrogatories  
Interrogatory No. 91  
Page 1 of 1

- 91. If Alltel's petition is approved and all other variables held constant, should an existing VOIP provider's cash flow from operations in Alltel Florida's service territory increase, decrease, or stay the same? Please explain your answer.**

**ANSWER:**

Yes. If Alltel's petition is approved and all other variables are held constant, an existing VOIP provider's cash flow from operations in Alltel Florida's service territory should increase assuming that more customers means more cash flow. Additionally, per my response to question number 83, if the VoIP provider's gross margin increases, then the VoIP provider's cash flow (cash receipts minus disbursements from telecommunications assets) should increase as well.

David C. Blessing

- 92. If Alltel's petition is approved and all other variables held constant, should an existing telephone provider's cash flow from operations in Alltel Florida's service territory increase, decrease, or stay the same? Please consider both telecommunications offerings and service bundles that include telecommunications, and explain your answer.**

ANSWER:

Yes. If Alltel's petition is approved and all other variables are held constant, an existing telephone provider's (CLEC reseller, wireless, VoIP, cable TV, or other) cash flow from operations in Alltel Florida's service territory should increase assuming that more customers means more cash flow. If the telephone provider's gross margin increases, then the telephone provider's cash flow (cash receipts minus disbursements from telecommunications assets) should increase as well.

**ALLTEL'S ANSWERS TO STAFF'S  
FOURTH SET OF INTERROGATORIES (NOS. 93-105)**

Pursuant to Rule 25-22.034, Florida Administrative Code and Rule 1.350, Florida Rules of Civil Procedure, Alltel Florida, Inc. ("Alltel"), by and through undersigned counsel, hereby answers Staff's Fourth Set of Interrogatories as set forth below.

93. For the following questions, please refer to ALLTEL's response to Citizens' First Set of Interrogatories, No. 1 (No. 1) and ALLTEL's response to Staff's Second Set of Interrogatories, No. 66 (No. 66).
- a. Why did the number of Florida Lifeline customers decrease from 2,670 in 2004 to 2,445 in 2005 (as shown in No. 1)? Explain your answer.
  - b. Should the date in No. 66 (a) be September 30, 2005 rather than September 30, 2004?
  - c. Assuming the date should be September 30, 2005, please explain the rise in Lifeline customers from 2,445 on January 1, 2005 to 3,067 as of September 30, 2005, e.g., seasonal variation, increased Lifeline promotion, etc.?

ANSWER:

- a. The 2,670 report for 2004 was incorrect and should have been 1,676 which means the number of Lifeline subscribers increased from 2004 to 2005.
- b. No. The number of Lifeline customers as of September 30, 2005 is 3,322.
- c. The number of Lifeline subscribers increased from January 1, 2005 to September 30, 2005. Alltel believes the increase can be attributed to an increased awareness of the Lifeline program.

Bettye Willis

94. For the following question, please refer to ALLTEL's response to Citizens' Second Set of Requests for Production of Documents, No. 20. Why does ALLTEL not forecast its Florida access lines separately from its other wireline subsidiaries? Explain your answer.

ANSWER:

In its forecasting process, Alltel initially considers current trends, known impacts such as rebalancing, and other factors that will impact subscribership and applies those impacts at the exchange level where appropriate. The company then applies other factors it would normally consider in its forecasting process to all Alltel Corp. exchanges resulting in a forecast of total wireline access lines. While Alltel begins its process by looking at factors at the exchange level, there are overall corporate considerations that are applied at a higher level that result in a total company forecast of access line growth or decline. In the company's response to Citizens' Second Set of Request for Production of Documents, No. 20, exchange-specific forecast data was provided for every Alltel Florida exchange.

Bettye Willis

95. **For the following questions, please refer to ALLTEL's response to Staff's First Set of Interrogatories, No. 16. The response shows that the number of residential access lines decreased from 74,693 in 2003 to 73,653 in 2004.**
- a. **Why did the access lines decrease? Explain your answer.**
  - b. **Does ALLTEL believe the number of access lines will increase or decrease in 2005? Explain your answer.**

ANSWER:

- a. Residential access lines decreased from 2003 to 2004 for a variety of reasons including customers going wireless only, low usage of wireline service, customers moving from an Alltel exchange and disconnects for non-payment.
- b. Alltel believes the number of residential lines will decrease. Alltel continues to see an increase in disconnects (primarily for reasons given above) and a decrease in gross additions, resulting in negative net additions, or access line decreases. This trend is confirmed from actual data through October 31, 2005.

Bettye Willis

96. For the following questions, please refer to ALLTEL's response to Staff's First Set of Interrogatories, No. 17. The response shows that the number of single-line business access lines increased from 8,188 in 2003 to 8,268 in 2004.
- a. Why did the access lines increase? Explain your answer.
  - b. Does ALLTEL believe the number of access lines will increase or decrease in 2005? Explain your answer.

ANSWER:

- a. Business access lines increased from 2003 to 2004 due to customer migration from Centrex services to single dedicated access lines to utilize DSL service.
- b. Alltel believes the number of access lines will decrease in 2005 because of VoIP technology offering alternate solutions for the business sector.

Bettye Willis

97. **For the following question, please refer to ALLTEL's response to Staff's First Set of Interrogatories, No. 22(e). How did ALLTEL determine why a customer disconnected service, e.g., request for porting, question asked by customer service personnel, etc.?**

ANSWER:

Our customer service representatives ("CSRs") ask for a reason whenever taking an order to disconnect service. That reason code is placed on the order to remove service. In addition, CSRs who take orders from other carriers to port an Alltel number also place a reason code on the service order to indicate the customer is disconnecting service and porting his or her number.

Bettye Willis

98. For the following questions, please refer to ALLTEL's response to Staff's First Set of Interrogatories, No. 23.
- a. What percentage of residential access lines are subscribed to the Connect Unlimited bundle?
  - b. What percentage of business access lines are subscribed to the Connect Unlimited bundle?
  - c. What percentage of residential access lines are subscribed to the "Dime All of the Time" calling plan?
  - d. What percentage of business access lines are subscribed to the "Dime All of the Time" calling plan?

ANSWER:

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

99. For the following questions, please refer to ALLTEL's response to Staff's First Set of Interrogatories, No. 32 and B. Willis Exhibit No. BJW-1. The interrogatory response states that the HAI 5.0a model estimated the cost of ALLTEL's intrastate switched access as \$0.03243 while the average price is \$0.1132294.
- a. Is \$0.03243 an originating or terminating per minute cost, or is it a total of one minute of originating access and one minute of terminating access? Explain your answer.
  - b. Is the average price of \$0.1132294, as shown in Exhibit BJW-1, a total of one minute of originating access and one minute of terminating access?
  - c. Does the average price of \$0.1132294 include any allocation or contribution toward the recover of joint and common costs or administrative overhead? Explain your answer.
  - d. Does ALLTEL calculate its own average per minute price of intrastate switched access? If so, how is it calculated and what is it?

ANSWER:

- a. The HAI model develops per minute costs using DEMs (dial equipment minutes) which includes both originating and terminating minutes. Therefore, the \$0.03243 is the average costs of one originating or terminating minute of use.
- b. Yes.
- c. Yes. Joint and common costs, both direct assigned and allocated, are included in the cost studies used to set rates.
- d. Alltel calculates an average price based on the per minute rate elements (common line, local switching, interconnection, tandem switching, tandem switched termination, and tandem witched facility) and 10 miles of transport. Currently the rate is \$0.05937 for terminating and \$0.05157 for originating.

Bettye Willis

- 100. For the following questions, please refer to ALLTEL's response to Staff's Second Set of Interrogatories, No. 55.**
- a. What percentage of residential access lines subscribe to ALLTEL Florida's DSL?**
  - b. What percentage of business access lines subscribe to ALLTEL Florida's DSL?**
  - c. To what percentage of residential access lines is ALLTEL Florida's DSL available?**
  - d. To what percentage of business access lines is ALLTEL Florida's DSL available?**
  - e. If DSL is not available in all of ALLTEL Florida's wire centers, please list the wire centers where DSL is not available.**

**ANSWER:**

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Fourth Set of Interrogatories  
Interrogatory No. 101  
Page 1 of 1

**101. Please provide total intrastate switched access originating and terminating revenue for the years 2000, 2001, 2002, 2003, and 2004.**

ANSWER:

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

102. For the following questions, please refer to ALLTEL witness Willis' Amended Direct Testimony page 13, beginning on line 17 and concluding on page 14, line 6.
- a. Has ALLTEL estimated any repression (decrease) or stimulation (increase) in demand for basic residential access lines for the second and third rate increase increments? If so, how, and what are the results. If not, why not. Please fully explain your answer.
  - b. Has ALLTEL estimated any repression (decrease) or stimulation (increase) in demand for single-line business access lines for the second and third rate increase increments? If so, how, and what are the results. If not, why not. Please fully explain your answer.
  - c. Which non-recurring service charges will be increased, by how much, and at what intervals?
  - d. Has ALLTEL estimated any repression (decrease) or stimulation (increase) in demand for the increased non-recurring service charges for the second and third increase increments? If so, how, and what are the results. If not, why not. Please fully explain your answer.
  - e. Has ALLTEL estimated any repression (decrease) or stimulation (increase) in demand for intrastate switched access for the second and third rate decrease increments? If so, how, and what are the results. If not, why not. Please fully explain your answer.
  - f. If the Commission approves ALLTEL's petition, what are the dates of the first, second and third increments of the rate changes? For this question, assume January 1, 2006 as the date of the first rate change.

ANSWER:

- a. Alltel did not perform a formal study of the impact of the first, second and third rate increases on consumer demand for its basic services. Alltel estimates that the demand for its basic service will decrease as the rate increases. Alltel expects that as the price increases the value of the service will decrease for customers compared to services offered by wireless carriers, VoIP providers, and CLECs that are bundled with other features. Specific estimated impacts will be considered when Alltel prepares its 2007 and 2008 access line growth/decline forecast.

b. See response for a.

c. Business Non-recurring Charge Increases:

| Charge              | Current Rate | Increment 1 | Increment 2 | Increment 3 |
|---------------------|--------------|-------------|-------------|-------------|
| Primary Svc Order   | \$22.19      | \$2.81      | \$2.50      | \$2.50      |
| Secondary Svc Order | \$15.13      | \$2.87      | \$2.90      | \$2.85      |
| Premise Visit       | \$14.63      | \$5.37      | \$4.00      | \$4.00      |
| Central Office Work | 20.18        | 2.57        | \$1.15      | \$1.10      |

Residential Non-recurring Charge Increases:

| Charge              | Current Rate | Increment 1 | Increment 2 | Increment 3 |
|---------------------|--------------|-------------|-------------|-------------|
| Primary Svc Order   | \$19.17      | \$1.73      | \$1.90      | \$0.20      |
| Secondary Svc Order | \$11.09      | \$1.81      | \$1.35      | \$0.75      |
| Premise Visit       | \$14.63      | \$5.22      | \$1.75      | \$3.40      |
| Central Office Work | \$20.18      | \$2.67      | \$0.75      | \$1.40      |

d. Alltel did not perform a formal study on demand for these services as a result of the price increases, however, as gross additions decrease we will see a corresponding decrease in non-recurring charges. In addition, as competition increases, Alltel may have to waive certain non-recurring charges in order to be competitive, resulting in a decrease of non-recurring revenues.

e. No. All other things being equal, Alltel does not believe the decrease in access rates alone will significantly impact demand for access minutes of use. The increase in local rates must be considered along with the decrease in access rates for there to be a measurable impact to demand for intrastate switched access.

f. If the Commission approves Alltel's rebalancing plan, the first rate increases will take place in the first quarter of 2006, the second rate increases in the first quarter of 2007, and the third rate increases in the first quarter of 2008.

Bettye Willis

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Fourth Set of Interrogatories  
Interrogatory No. 103  
Page 1 of 1

**103. Please identify the number of DSL lines in service as of year-end 2000 through 2004, and as of August 2005.**

ANSWER:

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

- 104. For purposes of the following request, please refer to Alltel's response to Staff Interrogatory 40.**
- a. Referring to your response to 40(a), does the 1995-1996 default data for access lines reflect Alltel Florida's actual 1995-1996 access lines in service?**
  - b. If the response to (a) is negative, please identify how the HAI developers arrived at default access line values for Alltel Florida, for use in the model.**
  - c. Referring to your response to 40(d), did Alltel examine the model's total residential DEM proxy value to determine if this proxy was reasonable to use for Alltel?**
  - d. If the response to (c) is affirmative, please describe the analysis that was conducted and its results.**
  - e. Referring to 40(j), please explain how "the company will still pay tandem switching costs" if Alltel Florida does not own any tandems.**
  - f. Referring to 40(j), please explain how "even though ALLTEL Florida doesn't have a tandem those functions performed by the tandem are still required".**
  - g. Is it Alltel's position that a forward-looking network to serve Alltel Florida's service area would consist of tandem switches, as opposed to the architecture currently in place? Please explain.**
  - h. Given that all of the traffic parameters used in the HAI model run reflect the model defaults, how does Alltel know whether the switched access cost per minute derived by the model is representative of Alltel Florida's costs?**
  - i. Does Alltel Florida currently have in place more access lines than are reflected in the HAI model run submitted in this proceeding?**
  - j. Please describe what review and analysis Alltel conducted to confirm or disconfirm the reasonableness of the wire center boundary data for Alltel contained in the HAI model.**

- k. **To the extent not provide in response to a prior request, please describe what review and analysis was conducted to ascertain the reasonableness of the default inputs and parameters in the HAI model as applied to Alltel Florida.**

ANSWER:

- a. No. The most accurate way for the HAI Model to reflect an ILEC's actual 1995-1996 access lines in service is to use ARMIS data. However, Alltel Florida does not currently file ARMIS reports with the FCC and did not file ARMIS reports in 1995-1996 either. In the absence of ARMIS data, the lines used in the HAI model are approximations of Alltel Florida's line counts developed by the HAI model using data from NECA USF Loops filing: 1996 data; USTA report: 1995 data; RUS report: 1995 data; USF Data Request: 1993 data; or ARMIS-based line factors.
- b. HAI Consulting, Inc. provides the following explanation regarding how the HAI Model Release 5.0a calculates lines by study area. Additionally, Appendix C to the HAI Model Description documentation provides a flow chart of the process. (See HAI Model Release 5.0a, Model Description, HAI Consulting, Inc., Boulder, Colorado, Revised February 16, 1998, Section 5.1, p. 24 and Appendix C, p.2.)

### **5.1 Line Type Counts by Study Area**

Counts of access lines by type (i.e., residence, single line business, multiline business, public telephone and special access lines) for each distinct NECA Study Area for calendar year 1996 are developed from several data sources. These include:

1. ARMIS 43-08: 1996 data, released 10/01/97;
2. ARMIS 43-01: 1996 data, released 10/01/97;
3. NECA USF Loops filing: 1996 data;
4. USTA report: 1995 data;
5. RUS report: 1995 data;
6. USF Data Request: 1993 data;
7. ARMIS-based line factors.

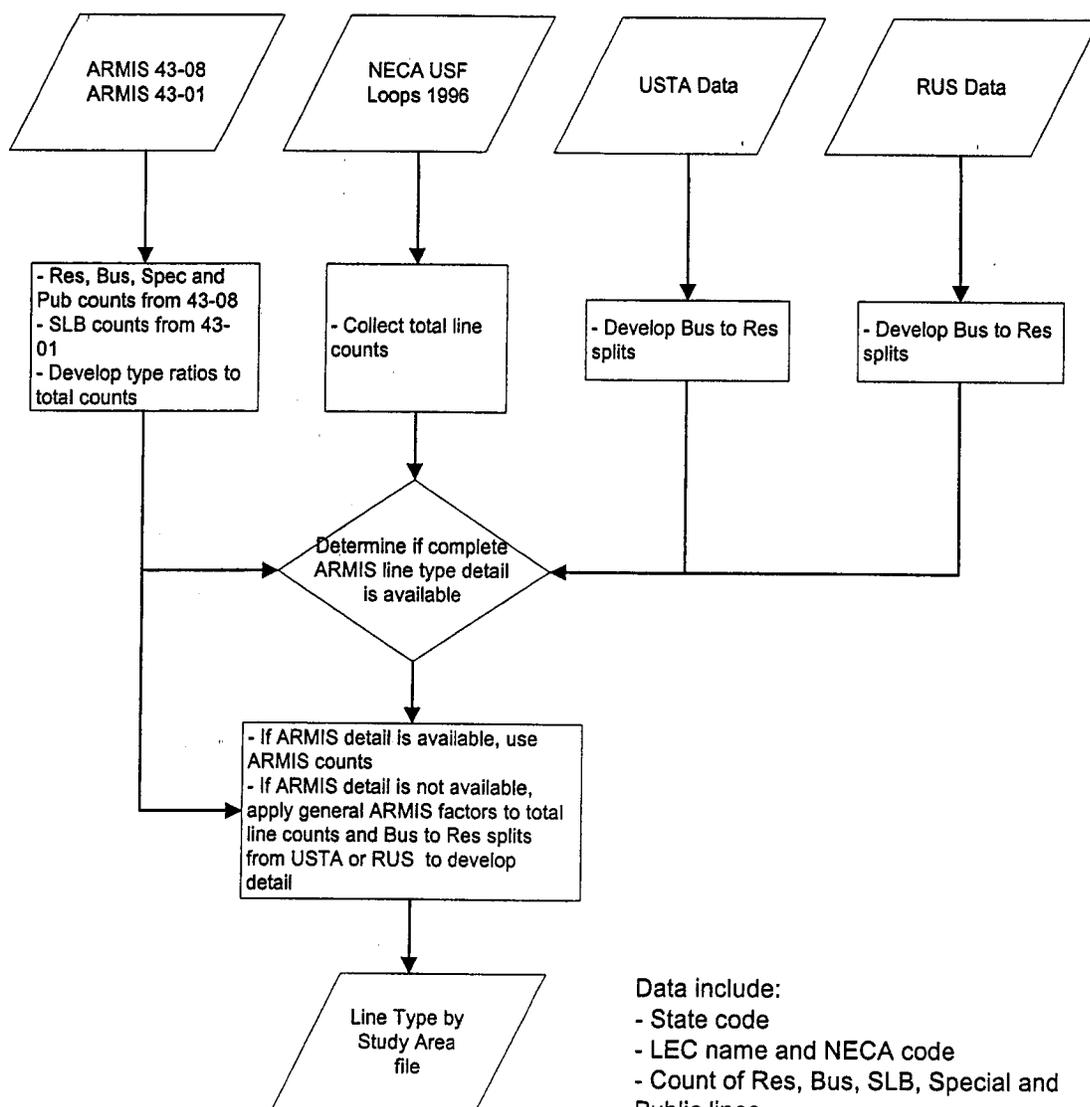

The rules by which the best of these data are selected are as follows.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Fourth Set of Interrogatories  
Interrogatory No. 104  
Page 3 of 5

- a) When NECA Study Area name matches exactly ARMIS Company name, populate line types directly from ARMIS data for business lines (43-08), single line business lines (43-01), residence lines (43-08), special access lines (43-08), and public lines (43-08) data.
- b) For remaining ARMIS Companies, determine counts of line types for NECA Study Area name by applying ARMIS line type distributions to total reported NECA USF Loops.
- c) For non-ARMIS Companies, match NECA Study Area name to best available data source (i.e., USTA, RUS or USF Data Request) for residence and business line splits.
- d) When no company-specific line type data exist, apply average ARMIS line type distributions to reported NECA USF Loops for NECA Study Area name.

On page 2 of Appendix C of the HAI Model documentation, HAI Consulting, Inc, provides the following flow chart showing how the HAI Model calculates line type counts by study area.

## LINE TYPE COUNTS BY STUDY AREA

- c. No.
- d. Not applicable.
- e. As a subtending ILEC, Alltel Florida pays tandem switching costs to the tandem owner (BellSouth, Sprint, or Verizon) and passes those tandem charges on to the IXC in addition to Alltel's own charges to recover the cost of transport and termination (end office local switching). The HAI model produces switching costs that include tandem switching costs that approximate the tandem switching charges the tandem owners bill Alltel Florida. Thus, the proxy switching rates developed by the HAI model appropriately include the tandem switching costs.
- f. See response to question 104(e) above.
- g. Alltel's current network architecture is a traditional tandem switched network design; however, Alltel Florida does not own any tandems in Florida and therefore, must purchase tandem switching from the ILEC tandems owned by BellSouth, Verizon, or Sprint to which the Alltel switches subtend. Since Alltel Florida purchases and uses tandem switching from the ILEC tandem owner, it is appropriate to include tandem switching costs in the overall composite cost of Alltel Florida's switched access rate. Tandem switching is part of the Alltel Florida forward-looking cost of providing switched access and is appropriately included in the forward looking results produced by HAI cost model.
- h. The HAI model has been reviewed and scrutinized by numerous parties in multiple state and federal cost proceedings since its development ten years ago. Countless revisions have been made to the HAI cost model to enable the HAI cost model to forecast reasonable estimates of LEC costs.
- i. Yes. Alltel Florida currently has more access lines in service than are reflected in the HAI model run.
- j. Alltel would have compared the wire center boundary data contained in the HAI model to information contained in other Alltel costs studies run for other states to determine if the data was reasonable for Alltel Florida.
- k. Alltel compared the HAI cost model default inputs to the known Alltel inputs. Where the Alltel inputs were close to the HAI cost model inputs, Alltel used HAI cost model default inputs because they were a reasonable representation of Alltel Florida's costs.

David C. Blessing

- 105. For purposes of the following request, please refer to Alltel's response to staff's Interrogatories No. 11 and 85.**
- a. Is the number of resold lines identified in response to Interrogatory No. 11 only business lines?**
  - b. If the response to (a) is negative, please provide a breakdown of this amount between residential and business.**
  - c. Please identify the entities to whom these lines are being provided.**
  - d. Please identify how many resold lines are being provided to each of the entities identified in response to (c).**
  - e. Does the company know whether any of the entities identified in response to (c) are providing prepaid local service?**
  - f. If the response to (e) is affirmative, please identify which entities are providing prepaid local service.**

ANSWER:

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

**ALLTEL'S ANSWERS TO STAFF'S  
FIFTH SET OF INTERROGATORIES (NOS. 106-112)**

Pursuant to Rule 25-22.034, Florida Administrative Code and Rule 1.350, Florida Rules of Civil Procedure, Alltel Florida, Inc. ("Alltel"), by and through undersigned counsel, hereby answers Staff's Fifth Set of Interrogatories as set forth below.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Fifth Set of Interrogatories  
Interrogatory No. 106  
Page 1 of 1

**106. Does the total of approximately 2,200 customers include any customers that disconnected service due to moving out of Alltel's Florida service territory?**

ANSWER:

No. . .

Bettye Willis

Alltel Florida, Inc.  
Docket No. 050693-TL  
Staff's Fifth Set of Interrogatories  
Interrogatory No. 107  
Page 1 of 1

**107. If so, under which category appearing in response to Staff's First Request for Production of Documents, No. 12, are the type of disconnects described in 1. above reflected?**

ANSWER:

N/A

Bettye Willis

**108. If customers disconnecting due to moving from Alltel's service territory are not reflected in response to Staff's First RPD, please provide the number of these disconnects for each month from January 2004 through August 2005.**

**ANSWER:**

The answer to this interrogatory contains proprietary confidential business information and will be filed with the Clerk's office under separate cover and a notice of intent to request confidential classification.

109. Referring to RPD No. 12, please explain the differences between each of the following categories appearing on the document:
- a. **Disconnect due to competition – voice**
  - b. **Disconnect due to customer going to wireless only**
  - c. **Customer Lost to CLEC--# Not Ported**
  - d. **Customer Lost to CLEC--# Ported**
  - e. **Low Usage – Customer Line Usage is Low**
  - f. **Port to ACI Wireless**
  - g. **Port to Other Wireless**
  - h. **Porting of Type 1 Circuit**

ANSWER:

- a. Customer is leaving for another provider of wireline service.
- b. Phone has been replaced with wireless service. The customer is not porting number but is calling to disconnect wireline service.
- c. Customer moves service to a CLEC without keeping same number.
- d. Customer moves service to a CLEC and is taking their current number to new provider.
- e. Customer rarely uses wireline phone – is not leaving specifically for another wireline provider or wireless provider.
- f. Customer is porting wireline number to ACI wireless.
- g. Customer is porting wireline number to a wireless carrier other than ACI wireless such as Cingular.
- h. Type 1 numbers porting out to another wireless carrier.

Betty Willis

For the following question please refer to response to Staff's Second Set of Interrogatories, #50 and to RPD No. 12. This response indicates that some Alltel business customers in Florida have ported their numbers to wireless carriers.

**110. Please identify the number of business customers by month and by category as reflected on RPD No. 12 that have ported their numbers to wireless carriers.**

**ANSWER:**

|         |   |
|---------|---|
| 01/2004 | 0 |
| 02/2004 | 0 |
| 03/2004 | 0 |
| 04/2004 | 0 |

Interrogatory No. 112  
Page 1 of 1

For the following questions please refer to response to Citizens' First Request for Production of Documents entitled Minutes and Messages Originating Intrastate Toll. In column A of the document under Carrier Name is a list of Carriers designated as Alltel and followed by several entries designated as Carrier 1, Carrier 2, etc.

**112. Are any of the numerically designated Carriers in any way affiliated with Alltel? If so, how many?**

ANSWER:

Yes. One of the numerically designated carriers is an Alltel Florida affiliate.

**ALTEL'S RESPONSE TO STAFF'S FIRST  
REQUESTS FOR PRODUCTION OF DOCUMENTS (NOS. 1-20)**

Pursuant to Rule 28-106.206, Florida Administrative Code, Alltel Florida, Inc. ("Alltel"), by and through its undersigned counsel, hereby responds to Staff's First Requests for Production of Documents as set forth below.

**DOCUMENTS REQUESTED**

- 1. Please provide those documents identified in response to Interrogatory No. 1.**

**RESPONSE:**

Copies of the requested documents are contained on a CD labeled : 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

- 2. Please provide those documents identified in response to Interrogatory No. 2**

**RESPONSE:**

Copies of the requested documents are contained on a CD labeled : 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**3. Please provide those documents identified in response to Interrogatory No. 3.**

RESPONSE:

Copies of the requested documents are contained on a CD labeled : 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**4. Please provide those documents identified in response to Interrogatory No. 4.**

RESPONSE:

Copies of the requested documents are contained on a CD labeled : 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**5. Please provide those documents identified in response to Interrogatory No. 5.**

RESPONSE:

Copies of the requested documents are contained on a CD labeled: 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**6. Please provide those documents identified in response to Interrogatory No. 6.**

RESPONSE:

Copies of the requested documents are contained on a CD labeled: 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**7. Please provide those documents identified in response to Interrogatory No. 7.**

**RESPONSE:**

Copies of the requested documents are contained on a CD labeled: 050693-TL, Staff's First RPD, Nos. 1-7, served on Staff Counsel under separate cover pursuant to the Order Establishing Procedure.

**8. Please provide any documents that support your response to Interrogatory No. 13(b).**

**RESPONSE:**

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is a PDF file named: Staff First RPD, No. 8 (BFR).

**9. Please provide all cost studies identified in response to Interrogatory No. 20.**

**RESPONSE:**

The documents responsive to this request are in Exhibit No. \_\_\_ (DCB-4), which was filed with the prepared direct testimony of David C. Blessing, and in the confidential CD produced in response to Staff's First RPD, Nos. 19a, b and c.

**10. Please provide any documents that support your response to Interrogatory No. 21.**

**RESPONSE:**

The document responsive to this request is Table No. 7 in Exhibit No. \_\_\_ (DCB-O), a copy of which was filed with the direct testimony of David C. Blessing.

- 11. Referring to the direct testimony of ALLTEL witness Blessing, page 12, provide the 2004 cost study and all supporting work papers referred to in footnote 7.**

RESPONSE:

The documents responsive to this request are in Exhibit No. \_\_\_ (DCB-04), which was filed with the direct testimony of David C. Blessing.

- 12. Please provide any documents that support your response to Interrogatory No. 22.**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named: Staff First RPD, No. 12 (disconnects).

- 13. Please provide any documents that support your response to Interrogatory No. 25.**

RESPONSE:

No documents were used in preparing the response to Interrogatory No. 25.

- 14. Please provide any documents that support your response to Interrogatory No. 28.**

RESPONSE:

The documents responsive to this request are included in Alltel's response to Staff's First RPD, No. 19b.

- 15. Please provide any documents that support your response to Interrogatory No. 29.**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative

Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named: Staff First RPD, No. 15.

- 16. Referring to the direct testimony of ALLTEL witness Blessing, page 16, lines 1-7, please provide all work papers and supporting documents related to the inputs discussed herein.**

RESPONSE:

The Alltel Florida company specific inputs can be located in Exhibit No. \_\_ (DCB-4), pages 72 to 74. In addition, a complete list of all inputs (both ALLTEL Florida company specific and HAI 5.0a default) can be found on Exhibit No. \_\_ (DCB-4), pages 75 to 94, which was filed with the prepared direct testimony of David C. Blessing. See also documents produced in response to Request Nos. 19a, b and c.

- 17. Referring to the direct testimony of ALLTEL witness Blessing, page 46, lines 13-18, please provide analogous data reflecting the demographics in ALLTEL's service territory.**

RESPONSE:

There are approximately 86,000 households in the exchanges served by Alltel Florida. Alltel does not possess analogous data regarding the number of households in Alltel Florida exchanges that subscribe to cable TV or broadband, nor does it have data regarding the average bill for cable TV or broadband service within Alltel's territory.

- 18. Referring to the direct testimony of ALLTEL witness Blessing, page 49, lines 17-19, please provide (a) the derivation of the weighted average new 1R rate and (b) the calculation that supports that "only 20% of Alltel's customers paying an average of \$1.60 more than that on a monthly basis."**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative

Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is an excel file named: Staff First RPD, No. 18.

**19. Referring to Exhibit DCB-0, Table 1, HAI 5.0a results, please provide:**

- (a) the HAI 5.0a model run with ALLTEL modified inputs that support the values on Table 1, on CD;**
- (b) the HAI 5.0a model with HAI defaults, on CD;**
- (c) the HAI 5.0a user documentation;**
- (d) a complete printout showing all discrete outputs of the HAI 5.0a model run with ALLTEL modified inputs;**
- (e) a derivation of the \$.110222 average current access rate, and a reconciliation of this value with that shown on Exhibit BJW-1; and**
- (f) a derivation of the \$.057362 average proposed access rate, and a reconciliation of this values with that shown on Exhibit BJW-5.**

**RESPONSE:**

(a) The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The responsive excel file is in a zip folder: Staff First RPD, No 19a Company Specific Inputs.

(b) The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to

Request Confidential Classification. The responsive excel file is in a zip folder named: Staff RPD, No. 19b Default Scenario.

(c) The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The files are in a zip folder named: Staff First RPD, No. 19c HAI Documentation.

(d) The Alltel Florida company specific inputs can be located in Exhibit No. \_\_\_\_ (DCB-4), pages 72 to 74. In addition, a complete list of all inputs (both Alltel Florida company specific and HAI 5.0a default) can be found on Exhibit No. \_\_\_\_ (DCB-4), pages 75 to 94.

(e) The value \$.110222 shown in Table 1 of DCB-0 is incorrect. The value shown on Exhibit BJW-1 is the correct value.

(f) The value \$.057362 shown in Table 1 of DCB-0 is incorrect. The value shown on Exhibit BJW-5 is the correct value.

**20. Referring to Exhibit DCB-4:**

- (a) **On page 1 it is indicated that Monthly Line Cost is the sum of costs of loop plus port plus transport plus usage. To the extent not provide in response to POD 19(d), provide the derivations of these amounts.**
- (b) **On page 1 it is indicated that Residential Line and Business Line costs come from Worksheet USF. Provide this worksheet, and explain how the calculations were performed.**
- (c) **Referring to page 55, please provide derivations and supporting documents for the corporate overhead factor and the other taxes factor.**

RESPONSE:

(a) The ALLTEL Florida company specific outputs showing that the Monthly Line Cost is the sum of costs of loop plus port plus transport plus usage can be located in Exhibit No. \_\_\_ (DCB-4), pages 24 to 25. Additionally, the outputs are shown by exchange the excel file named Staff First RPD, No. 19a company specific inputs, worksheet tab "Investment Input", cells, HN1:HV29, which contains proprietary confidential business information and is included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification.

(b) The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named: Staff First RPD, No. 20b.

(c) The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's First Notice of Intent to Request Confidential Classification. The file is named: Staff First RPD, No. 20c.

Re: Docket No. 050693-TL

Dear Ms. Bayo:

Consistent with the discussions between the Staff of the Florida Public Service Commission, the Office of Public Counsel and Alltel Florida, Inc. ("Alltel") on October 18, 2005, Alltel makes the following affirmative commitment:

If the Florida Public Service Commission approves Alltel's rebalancing plan in this docket, Alltel consents to language in the final order acknowledging that as part of the approval of the rebalancing plan, Alltel has voluntarily waived the exemption in its favor contained in 47 U.S.C. §251(f)(1) and formally terminating Alltel's rights under 47 U.S.C §251(f)(1) in the State of Florida.

This commitment shall have no force or effect if Alltel's rebalancing plan is not approved.

The undersigned is authorized to make this commitment on behalf of Alltel.

Sincerely,

A handwritten signature in cursive script that reads "James White".

**ALLTEL'S ANSWERS TO  
CITIZENS' FIRST SET OF INTERROGATORIES**

Pursuant to Rule 25-22.034, Florida Administrative Code and Rule 1.350, Florida Rules of Civil Procedure, Alltel Florida, Inc. ("Alltel"), answers Citizens' First Set of Interrogatories as set forth below. These answers are provided subject to Alltel's Objections to Citizen's First Set of Interrogatories, dated October 11, 2005, which are incorporated herein by reference.

✱

Alltel Florida, Inc.  
Docket No. 050693-TL  
Citizens' First Set of Interrogatories  
Interrogatory No. 1  
Page 1 of 1  
REVISED 11.30.05

1. Please provide the number of Lifeline customers served by Alltel Florida as of January 1 of 2001, 2002, 2003, 2004, and 2005.

ANSWER:

| 2001  | 2002  | 2003  | 2004  | 2005  |
|-------|-------|-------|-------|-------|
| 1,128 | 1,434 | 1,737 | 1,676 | 2,445 |

2. **Please describe in detail all efforts made by Alltel Florida during the last four years to increase the number of households taking advantage of Lifeline and Linkup.**

ANSWER:

Alltel currently publishes a description of our Lifeline & Link-Up services annually in newspapers in our local service area and in bill inserts in local customer bills. Alltel also partnered with the FPSC to develop a brochure and application which were made available to local schools, and is currently available on the PSC website. Alltel continues to evaluate its outreach efforts and will consider additional outreach efforts as necessary.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Citizens' First Set of Interrogatories  
Interrogatory No. 3  
Page 1 of 1

3. **Please provide a detailed description of Alltel's current plan to increase the number of customers taking advantage of Lifeline and Linkup.**

**ANSWER:**

Alltel will continue with its current outreach efforts which appear to be successful based on the increase in subscribership since 2000. If in the future it appears Alltel's outreach efforts should be increased, Alltel will consider additional outreach efforts.

Alltel Florida, Inc.  
Docket No. 050693-TL  
Citizens' First Set of Interrogatories  
Interrogatory No. 4  
Page 1 of 1

4. **Please provide the percent of all households subscribing to basic local telephone service in Alltel Florida's region during each year 2002 through 2005.**

ANSWER:

Alltel does not have this information as requested. In response to Citizen's Request for Production of Documents Number 14, Alltel is providing 2003 and 2004 access line data and total households in Alltel Florida's exchanges. A comparison of access lines and households in general shows that subscribership in Alltel Florida exchanges is consistent with telephone subscribership in the United States as a whole as shown in Exhibit Nos. \_\_\_ (DCB-1) and \_\_\_ (DCB-2).

**ALLTEL'S RESPONSES TO CITIZENS' FIRST SET OF  
REQUESTS FOR PRODUCTION OF DOCUMENTS (NOS. 1-17)**

Pursuant to Rule 28-106.206, Florida Administrative Code, Alltel Florida, Inc. ("Alltel"), by and through its undersigned counsel, hereby responds to Citizens' First Set of Requests for Production of Documents as set forth below. These responses are subject to Alltel's Objections to Citizen's First Request for Production of Documents, dated October 11, 2005, which are incorporated herein by reference.

**DOCUMENTS REQUESTED**

- 1. Please provide all documents in your possession, custody or control discussing or evaluating the impact of rate rebalancing in general, or the rate rebalancing petition you filed in this proceeding, on customers' bills or the amount your customers will pay for telecommunications services.**

**RESPONSE:**

The following documents were reviewed to analyze the impact of the rate rebalancing on customers' bills or the amount customers will pay for telecommunications services. These documents are found as exhibits attached to the Direct Testimony of David C. Blessing.

**Exhibit DCB-0:** Composite Exhibit – Tables 2 - 7

**Exhibit DCB-1:** Belinfante, Alexander; *Telephone Subscribership in the United States (Data Through March 2003)*; Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission; Table 2; Released November 2003.

**Exhibit DCB-2:** Belinfante, Alexander; *Telephone Subscribership in the United States (Data Through March 2005)*; Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission; Table 2; Released May 2005.

**Exhibit DCB-3:** Florida Statute § 364.164.

**Exhibit DCB-6:** Florida Statute § 364.025 Universal Service.

**Exhibit DCB-9:** See *Handbook of Telecommunications Economics*, Amsterdam: Elsevier Science, 2001; Chapter 10, UNIVERSAL RESIDENTIAL TELEPHONE SERVICE, Michael H. Riordan, *Columbia University*, August 29, 2001.

**Exhibit DCB-10:** Order No. PSC-03-1469-FOF-TL Florida Public Service Commission; Comprised of Docket No. 030867-TL, In re: Petition by Verizon Florida Inc. to reform intrastate network access and basic local telecommunications rates in accordance with Section 364.164, Florida Statutes; Docket No.. 030868-TL, In re: Petition by Sprint-Florida, Incorporated to reduce intrastate switched network access rates to interstate parity in revenue-neutral manner pursuant to Section 364.164(1), Florida Statutes; Docket No. 030869-TL, In re: Petition for implementation of Section 364.164, Florida Statutes, by rebalancing rates in a revenue-neutral manner through decreases in intrastate switched access charges with offsetting rate adjustments for basic services, by BellSouth Telecommunications, Inc.; and Docket No. 030961-TI, In re: Flow-through of LEC switched access reductions by IXCs, pursuant to Section 364.163(2), Florida Statutes.; Issued: December 24, 2003.

**Exhibit DCB-11:** Agustin J. Ros and Karl McDermott, "Are Residential Local Exchange Prices Too Low? Drivers to Competition in the Local Exchange Market and the Impact of Inefficient Prices," in Michael Crew, *Expanding Competition in Regulated Industries*, Kluwer Academic Publishers, 2000.

**Exhibit DCB-12:** Amended Direct Testimony of Dr. Kenneth Gordon On behalf of Verizon Florida Inc., BellSouth Telecommunications, Inc., and Sprint-

Florida Inc. Before the Florida Public Service Commission; in Docket No. 030867-TL, In re: Petition by Verizon Florida Inc. to reform intrastate network access and basic local telecommunications rates in accordance with Section 364.164, Florida Statutes; Docket No. 030868-TL, In re: Petition by Sprint-Florida, Incorporated to reduce intrastate switched network access rates to interstate parity in revenue-neutral manner pursuant to Section 364.164(1), Florida Statutes; Docket No. 030869-TL, In re: Petition for implementation of Section 364.164, Florida Statutes, by rebalancing rates in a revenue-neutral manner through decreases in intrastate switched access charges with offsetting rate adjustments for basic services, by BellSouth Telecommunications, Inc.; and Docket No. 030961-TI, In re: Flow-through of LEC switched access reductions by IXCs, pursuant to Section 364.163(2), Florida Statutes. See Also Final Order No. PSC-03-1469-FOF-TL, Issued: December 24, 2003.

- 2. Please provide all documents in your possession, custody or control discussing or showing the mean, median, or other distribution of customer intrastate long distance calling in Florida by your customers or other customers in Florida.**

RESPONSE:

Alltel is not privy to data regarding calling revenues for other carriers and does not maintain the requested data for its own traffic. However, Alltel does have data regarding intrastate long distance calling minutes of use and is producing a schedule showing that data. Specifically, the attached document shows that Alltel Florida local customers in total average over 9 million minutes a month in intrastate toll calls or 2.7 million intrastate toll calls per month. The average number of calls per customer for the past three months was 29.63.

A schedule showing the details supporting this response contains proprietary confidential business information and is included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 2.

- 3. Please provide all documents in your possession, custody or control discussing or evaluating the typical, average, or median bill of customers for local telecommunications services, including ancillary services.**

RESPONSE: The document responsive to this request contains proprietary confidential business information. It is included on a CD stamped confidential and filed

contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 3.

- 4. Please provide all documents in your possession, custody or control discussing or evaluating the possible effect of your proposal in this case on telephone subscribership.**

RESPONSE:

The documents reviewed to analyze and evaluate the possible effect of the proposal in this case on telephone subscribership are the same as those identified in the response to request no. 1, above.

- 5. Please provide all documents in your possession, custody or control discussing or evaluating criteria or business cases for entering new markets in Florida for local telecommunications services.**

RESPONSE:

The following documents were reviewed to analyze and evaluate the criteria or business cases for entering new markets in Florida for local telecommunications services. These documents are found as exhibits attached to the Direct Testimony of David C. Blessing.

**Exhibit DCB-4: (Non-Confidential)** Hatfield HAI 5.0a – Default and ALLTEL-specific model runs plus input changes.

- 7. Please provide all documents in your possession, custody or control describing, characterizing, calculating, evaluating or analyzing the amount of increases in basic residential rates required to induce enhanced market entry.**

**RESPONSE:**

The documents reviewed to analyze and evaluate the amount of increases in basic residential rates required to induce enhanced market entry are the same as those identified in the response to request no. 6, above.

- 8. Please provide copies of all documents in the company's possession custody or control relating to the number or percentage of customers who do not make a long distance call during a given month.**

**RESPONSE:**

Alltel does not have documents responsive to this request.

- 9. Please provide all forecasts of access line growth or decline in your territory, and please provide all documents in your possession, custody or control discussing or evaluating the effect of rate rebalancing on access line growth or decline.**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 9.

This document shows the forecasted access line decline in Alltel Florida territory. Alltel is not in possession of specific documents that discuss the effect of rate rebalancing on access line growth or decline. In general, access line growth or decline for a particular company will be impacted by many factors one of which could be the availability of choices to customers.

In addition, the following documents were reviewed to evaluate the effect of the rate rebalancing on access line growth or decline. These documents are found as exhibits attached to the Direct Testimony of David C. Blessing.

**Exhibit DCB-1:** Belinfante, Alexander; *Telephone Subscribership in the United States (Data Through March 2003)*; Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission; Table 2; Released November 2003.

- 10. Please provide all forecasts of access minute of use growth or decline in your territory, and please provide all documents in your possession, custody or control discussing or evaluating the effect of rate rebalancing on access minute of use growth or decline.**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 10.

The document shows the access minute of use forecasts for Alltel Florida. Alltel is not in possession of specific documents that discuss the effect of rate rebalancing on access minutes of use growth or decline. In general, access minutes of use growth or decline for a particular company will be impacted by such things as competition as customers make choices regarding service providers and bypass as service providers find ways to avoid using the network of the local exchange company or use new technologies such as VoIP that do not require the use of the local network.

See also documents responsive to request no. 9, above. Parrish, Blessing, and Associates did not create a separate study evaluating the effect of the rate rebalancing on access minute of use growth or decline.

- 11. Please provide copies of all documents in the company's possession custody or control relating to the impact of the rates proposed in this docket on residential customers.**

RESPONSE:

The documents reviewed to analyze and evaluate the impact of the rates proposed in this docket on residential customers are the same as those identified in the response to request no. 1, above.

- 12. Please provide all documents in the company's possession, custody or control describing Alltel Florida's plans related to Lifeline or Link-Up Service.**

RESPONSE:

Please see documents included as Attachments One and Two, electronic copies of

FL Lifeline-Link Up

Alltel – Providing Telephone Assistance in Your Community

Striving to make telecommunications services affordable for all consumers, Alltel is proud to offer two financial assistance programs: Lifeline and Link Up Florida. Through these programs, eligible customers will receive discounts on monthly local basic service, service order charges and deposits (including voluntary toll blocking). To qualify for these plans, customers must receive benefits from at least one of the following programs: Medicaid, Food Stamps, Supplemental Security Income, Federal Public Housing Assistance or Low-Income Home Energy Assistance Program.

If you have any questions or would like more information, please call your Alltel business office at 1-800-347-1991, or contact the Florida Department of Human Services.

response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 13-1, 13-2, 13-3 and 13-4.

- 14. Please provide all documents in your possession, custody or control showing the percent of all households subscribing to basic local telephone service in Alltel Florida's region during the years 2002 through 2005.**

RESPONSE:

Alltel does not have information available that shows the percent of all households subscribing to basic local telephone service in its region for the years requested. The attached worksheet shows total number of POPs, access lines and households by exchange for Alltel Florida's region for 2003. The total number of households by exchange for 2004 is also included.

This document contains proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 14.

- 15. Please provide all documents in your possession, custody or control analyzing or describing the reasons for a change in the percent of all households subscribing to basic local telephone service in Alltel Florida's region during all or part of the years 2002 through 2005.**

RESPONSE:

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Second Notice of Intent to Request Confidential Classification. The file is a PDF file named: OPC First RPD, No. 15. This documents shows why customers disconnect local telephone service for 2004 and 2005.

16. **Please provide all documents in your possession, custody or control showing the household income of customers residing in the territory of Alltel Florida, as well as all documents in your possession, custody or control comparing the household income of customers residing in the territory of Alltel Florida to others customers in Florida or to Florida as a whole.**

RESPONSE:

See document included as Attachment Three shows the median household income and per capita money income for each Alltel Florida Exchange and for the state of Florida in total. An electronic version of this document is also embedded in this response.

"FL income.xls"

17. **Please provide copies of testimony of David C. Blessing filed at any public utility commission since January 1, 2003, as well as all transcripts in your possession, custody or control of any cross examination of Mr. Blessing before any public utility commission since January 1, 2003.**

RESPONSE: A list of the proceedings in which Mr. Blessing pre-filed testimony will be produced as soon as possible and will be marked as Attachment Four. Alltel will produce the testimony and transcripts is soon as they are available.

DATED this 19<sup>th</sup> day of October, 2005.

To Reduce Intrastate Switched Network )  
Access Rates In A Revenue Neutral )  
Manner Pursuant to Section 364.164, )  
Florida Statutes )  
\_\_\_\_\_ )

Docket No.: 050693-TL  
Filed: 10.24.05

**ALLTEL'S RESPONSES TO CITIZENS' SECOND SET OF REQUESTS FOR PRODUCTION OF DOCUMENTS**

Pursuant to Rule 28-106.206, Florida Administrative Code, Alltel Florida, Inc. ("Alltel"), by and through its undersigned counsel, hereby responds to Citizens' Second Set of Requests for Production of Documents as set forth below. These responses are subject to Alltel's objections, filed October 19, 2004, which are incorporated herein by reference.

**DOCUMENTS REQUESTED**

18. Please provide copies of all documents relating to any analysis or study of the impact on the number of residential subscribers and/or residential revenues if the company rebalanced rates to move access closer to or to achieve parity with interstate access charges.

**RESPONSE:**

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Third Notice of Intent to Request Confidential Classification. The file is named: OPC Second RPD, No. 18.

These show the analysis Alltel performed of the impact on the number of residential subscribers if the company rebalanced rates to move access closer to or achieve parity with interstate access charges. The documents show the impact on the local residential rate if Alltel Florida were to rebalance rates to move access closer to or to achieve parity with interstate access charges. Alltel compared the amount of residential rate increase and the final rebalanced rate to the rebalanced rate of the three large ILECs in Florida against the local rates for residential service in other states in the southeast region. Based on this analysis, Alltel concluded that the resulting residential rate if access rate parity was achieved was still affordable, however outside the range approved by the Florida Public Service Commission for the large ILECs. Accordingly, Alltel proposed to rebalance rates by an amount that resulted in residential rates consistent with the rebalanced rate of the large ILECs in Florida.

- 19. Please provide copies of all documents that relate to total interstate and intrastate access charge revenues, stated separately, projected for 2006, 2007, 2008 and 2009, which include, exclude, or compare the impact from the rebalancing petition in this case.**

**RESPONSE:**

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Third

Notice of Intent to Request Confidential Classification. The file is named: OPC Second RPD, No. 19.

The attached document shows total interstate and intrastate access charge revenues forecast for interstate and intrastate access charge revenues for 2006. Alltel does not have documents responsive for 2007-2009. The 2006 forecast includes the impact of the rebalancing petition as well as other factors Alltel would normally include in its forecasting process. Alltel Corporation does not forecast access revenues for Alltel Florida separately from its other wireline subsidiaries. Factors were applied to all Alltel Corp. wireline access revenues, allowing for specific known impacts such as rebalancing, resulting in a forecast of total wireline access revenues.

**20. Please provide copies of all documents that relate to total residential and business subscribers, stated separately, projected for year 2005, 2006, 2007, 2008 and 2009, which include, exclude, or compare the impact from the rebalancing petition in this case.**

**RESPONSE:**

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Third Notice of Intent to Request Confidential Classification. The file is named: OPC Second RPD, No. 20.

This document shows the forecasted residential and business access lines for 2005-2009 for Alltel Florida. This forecast includes the impact of the rebalancing petition as well as other factors Alltel normally considers in its forecasting process. Alltel Corporation does not forecast access lines for Alltel Florida separately from its other wireline subsidiaries. Factors are applied to all Alltel Corp. wireline exchanges, allowing for specific known impacts, resulting in a forecast of total wireline access lines.

- 21. Please provide copies of all documents that relate to total residential and business DSL service access lines that are not included in the data requested in POD 20, stated separately, projected for year 2006, 2007, 2008 and 2009, which include, exclude, or compare the impact from the rebalancing petition in this case.**

**RESPONSE:**

The documents responsive to this request contain proprietary confidential business information. They are included on a CD stamped confidential and filed contemporaneous with this response under a separate confidential cover with the Division of Commission Clerk and Administrative Services, together with Alltel's Third Notice of Intent to Request Confidential Classification. The file is named: OPC Second RPD, No. 21. This shows forecasted residential and business DSL service access lines for 2006-2009. This forecast does not include the impact of the rebalancing petition.

22. Please provide copies of all documents that relate to the repression that may occur as a result of the rebalancing proposals in this docket.

RESPONSE:

Except for the forecast documents Alltel has produced, Alltel does not have any documents responsive to this request.

DATED this 24<sup>th</sup> day of October, 2005.

IT IS STIPULATED that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that objections, except as to the form of the question, are reserved until hearing in this cause; and that reading and signing was not waived.

IT IS ALSO STIPULATED that any off-the-record conversations are with the consent of the deponent.

## P R O C E E D I N G S

1  
2 MR. SUSAC: Good morning. My name is Jeremy Susac.  
3 I'm an attorney here at the Commission. This is a deposition  
4 in Docket Number 050693-TL.

5 Just some preliminary matters. Mr. Wahlen, do you  
6 agree to the usual stipulations here at the Commission?

7 MR. WAHLEN: Yes.

8 MR. SUSAC: And with that, I guess we could swear in  
9 the witness.

## DAVID C. BLESSING

10  
11 appeared as a witness and, after being duly sworn by the court  
12 reporter, testified as follows:

13 MR. SUSAC: And at this point in time maybe we should  
14 just get down your address for ordering a transcript.

15 MR. WAHLEN: Sure. Jeff Wahlen, Ausley & McMullen  
16 Law Firm, P.O. Box 391, Tallahassee, Florida 32302, appearing  
17 for Alltel.

## DIRECT EXAMINATION

18  
19 BY MR. SUSAC:

20 Q Mr. Blessing, as I mentioned earlier, my name is  
21 Jeremy Susac. I'm an attorney here at the Commission. I'm  
22 going to ask you some questions today in this docket, 050693.  
23 To the extent you can answer yes or no, we appreciate it. We  
24 know, you know, that's not always possible, but please try to  
25 start with a yes or no and then qualify your answers.

1           With that, Mr. Blessing, did you file testimony in  
2 this docket?

3           A     Yes, I did.

4           Q     And what did you prepare or what did you review in  
5 preparation of today's deposition?

6           A     I reviewed the testimony, the exhibits attached to  
7 the testimony, the Florida Statutes, which was actually one of  
8 the exhibits, the other Alltel witness, Bettye Willis, her  
9 testimony.

10          Q     And do you have your direct testimony with you here  
11 today?

12          A     Yes, I do.

13          Q     And would you please turn with me to Page 31 of your  
14 direct testimony. In particular I'm looking at Lines 6 through  
15 13. This is also mentioned in staff's interrogatory number 38.  
16 I don't think it's necessary to turn there at this point in  
17 time, but if you do, your counsel, it looks like, has the  
18 discovery in this matter before us.

19               MR. WAHLEN: Which one is it again, Jeremy? I'm  
20 sorry.

21               MR. SUSAC: Interrogatory number 38. We have an  
22 extra copy here.

23 BY MR. SUSAC:

24          Q     In your interrogatory response, excuse me, you cited  
25 CLEC resellers, wireless carriers, VoIP providers and cable

1 telephone providers as providing service in Alltel's local  
2 telecommunications market; is that correct?

3 A Yes.

4 Q Further in your testimony on Line 7 that we referred  
5 to earlier you state that, quote, unquote, Alltel's rate  
6 rebalancing is necessary to increase such competition, end  
7 quote. Is that correct?

8 A Yes.

9 Q Do CLEC resellers use collocation from Alltel?

10 A Do CLEC resellers use collocation?

11 Q Yes.

12 A Not to my knowledge, no.

13 Q And do CLEC resellers use UNEs, unbundled network  
14 elements, from Alltel?

15 A No.

16 Q Do CLEC resellers currently receive a resale discount  
17 from Alltel?

18 A I believe that the resellers on, in Alltel's  
19 territory are not receiving the discount.

20 Q Okay. So that is a no?

21 A Yes.

22 Q Do wireless carriers use collocation from Alltel?

23 A They're interconnected. Whether it's under a  
24 collocation agreement or not, I'm not sure.

25 Q Do wireless carriers use UNEs from Alltel?

1 A Not to my knowledge.

2 Q Do they purchase services for resale from Alltel?

3 A Not to my knowledge.

4 Q Going on the same line of questions for VoIP  
5 carriers, do VoIP providers use collocation from Alltel?

6 A I'm not aware that they do, no.

7 Q Do VoIP providers use UNEs from Alltel?

8 A No.

9 Q And do VoIP providers purchase resale from Alltel?

10 A I don't know.

11 Q Same line of questions for cable telephone providers.  
12 Do they collocate from Alltel?

13 A I'm not sure.

14 Q How about do they use UNEs from Alltel?

15 A Not that I'm aware of.

16 Q And do they purchase services for resale from Alltel?

17 A Not that I'm aware of.

18 Q Looking back, going back to your direct testimony,  
19 could we please turn to Page 25. In particular I'm looking at  
20 Lines 13 through 15.

21 Pertaining to the Ros and McDermott study, according  
22 to your testimony this study addresses the relationship between  
23 unbalanced prices and the, quote, percent of ILEC residential  
24 lines served by switching centers where new entrants have  
25 collocation agreements, end quote. Is that correct?

1 A Yes.

2 Q Based on the series of questions that I just asked  
3 you in regard to CLEC resellers, wireless carriers, VoIP  
4 providers, cable telephone providers, none of these competitors  
5 use collocation from Alltel; is that correct?

6 A That's my understanding, yes.

7 Q And, Mr. Blessing, then does the Ros and McDermott  
8 study address different types of competitor?

9 A Not necessarily. I think it addresses different  
10 types of arrangements. But I think the, the, the point still  
11 holds that I was trying to make here.

12 Q And could you reiterate that point for us?

13 A Well, the idea is if the rates are unbalanced, which  
14 means that the residential rates are supported by the rates of  
15 some other service, if that is the situation, that means that  
16 the residential rates are artificially low, which means it's  
17 much tougher for competition to come in.

18 Q And when you say unbalanced, are you referring to a  
19 subsidy maybe built into the switched access?

20 A Well, I don't like to use the term "subsidy" because  
21 subsidy has a technical meaning in economics. What we're  
22 talking about is a support flow. One of the support flows is  
23 from access to local, yes.

24 Q And to the extent these carriers aren't using UNES  
25 from Alltel, how does that affect them?

1 A I don't think I understand your question.

2 Q To the extent they don't, these carriers that we just  
3 referred to don't use UNEs, they don't collocate, they don't  
4 purchase resale, how does that, how does that affect their  
5 bottom line?

6 A How does what affect?

7 Q I referred to it as a subsidy. I believe you  
8 referred to it as something else, a support.

9 A Uh-huh. Yes. Well, it doesn't matter how the  
10 competitor enters the market or what vehicle the competitor  
11 uses to provide service. The idea is if the ILEC's market  
12 price is artificially low, it's going to make it less likely  
13 that competitors are going to make the decision to come in  
14 through whatever vehicle.

15 Q And when you say difficult, it is much more difficult  
16 for which types of competitors?

17 A Any competitor. I'm not making any distinction  
18 between how the competitor would enter or what vehicle they  
19 would use to provide service.

20 Q Okay. So that would be an intermodal competition or  
21 it could be a traditional CLEC.

22 A It could be a traditional CLEC, it could be  
23 intermodal, it could be someone using -- when I say traditional  
24 CLEC, split it between someone who builds their own facilities  
25 versus someone that's going to lease them from the ILEC. I

1 don't think it matters.

2 Q But not reseller, wireless, VoIP, cable; right?

3 A Not -- I'm not sure what you mean.

4 Q I believe -- when speaking in terms of competitors,  
5 are you including resellers, wireless, VoIP and cable?

6 A Yes.

7 Q Okay.

8 A Yes.

9 Q And just for clarification for the record, based on  
10 those series of questions that I just asked you, none of those  
11 competitors currently receive a resale discount from Alltel; is  
12 that correct?

13 A I'm not aware that they do. Yes.

14 Q Then in your opinion, Mr. Blessing, does the Eisner  
15 and Lehman study address different types of competitors?

16 A Again, I think the point of referencing those studies  
17 in my testimony was that, A, you're not going to see a lot of  
18 competition with unbalanced rates. And, B, if an ILEC raises  
19 its residential rates, you know, up to a certain point, you're  
20 not going to see a, a real degradation in universal service.  
21 Those are the only points of those, those papers. I did not  
22 intend them to be a, you know, to relate to the situation here  
23 in Florida on a point-by-point basis.

24 Q Thank you. And could we now move on to staff  
25 interrogatory number 80. I think we can move on without the

1 actual interrogatory, if that's okay. In the event you need  
2 the interrogatory, we'll furnish it to you, sir.

3 MR. WAHLEN: Here you go.

4 BY MR. SUSAC:

5 Q In your response you stated that, quote, unquote, the  
6 market is two-way voice and data communications, end quote.  
7 Based on this remainder of your response, is it correct to  
8 infer that the market includes all various forms of  
9 telecommunications provided over various technologies that  
10 provide two-way voice and data communications?

11 A Let me read the question to make sure I can --

12 Q Certainly.

13 A Well, I think the point is it doesn't matter what the  
14 technology is. If it's functionally the same, customers are  
15 likely to view it as being the same service.

16 Q And now turning to staff interrogatory number 73, and  
17 I'll just give you my copy in which you state, "Alltel's price  
18 of basic local service is the relevant market price that  
19 competitors will consider." If the market is defined as a,  
20 quote, unquote, two-way voice and data communications, end  
21 quote, how can Alltel's price of basic local service be the  
22 relevant market price?

23 A What I'm referring to there is if you're talking  
24 about the, a residential service, say, okay, that particular  
25 service, the market price is Alltel's residential rate.

1 Q And that's the residential rate for what services,  
2 sir?

3 A For residential basic local service.

4 Q Basic local service. And now turning to staff, your  
5 response to staff's interrogatories number 74, 76 and 78. I'm  
6 going to -- you indicated that a number of wireless carriers,  
7 VoIP-based providers and cable telephone providers offer  
8 calling packages that are comparable to Alltel's Connect  
9 Unlimited bundle; is that correct?

10 A Yes. That's what the interrogatory says, yes.

11 Q And could -- and for my benefit could you please  
12 elaborate on what Alltel's Connect Unlimited bundle is?

13 A Well, you know, that's probably a question better  
14 left to Bettye Willis.

15 Q Okay.

16 A But I thought it was some sort of bundled local/long  
17 distance plan.

18 Q For the next question could we please refer to your  
19 response to staff's interrogatory number 55(b)? It was  
20 provided by Bettye Willis.

21 In the response Ms. Willis indicated that Alltel does  
22 not plan to increase the rates for any un -- for any bundled  
23 packages; is that correct?

24 A Yes.

25 Q I'm sorry to make you jump around like this, but now

1 going to your response to staff's interrogatories 82 through  
2 84. Your response is you discuss how competitors may react to  
3 Alltel's R1 price increase. You indicate that if wireless  
4 carriers, VoIP providers and cable telephone providers do not  
5 increase their prices, the average gross margin per customer  
6 would stay the same for the competitors; is that correct?

7 A Well, the question was -- yes, that's what the, the  
8 answer is, the first line of the answer. But I thought the  
9 question was a bit unclear. The idea is if Alltel, say, raises  
10 their residential rates by \$6, \$6 a month, that gives an  
11 additional \$6 of margin, makes that margin available to any  
12 potential or existing competitor. But, you know, I can't say  
13 or I don't think anyone can say exactly what they're going to  
14 do, whether they're going to adjust their rates to take  
15 advantage of that, whether they're going to use it to justify  
16 bringing in capital dollars into the area, investing in the  
17 Alltel market. So I wanted to answer it with that caveat that  
18 if they don't change the price, it's not going to impact the  
19 margin. If they do, it would.

20 Q In your opinion, sir, how likely or unlikely would it  
21 be for wireless providers, VoIP providers, cable providers to  
22 increase their prices if the Commission approves Alltel's  
23 petition?

24 A Well, I think it's probably more likely that  
25 additional competitors will come in or the existing competitors

1 will increase their efforts in the Alltel area. And will that  
2 reflect rate offerings that are higher than what the current  
3 competitors are, are offering? Maybe, maybe not. I, you know,  
4 I, I think it's probably likely, but I think it's more likely  
5 that additional competitors will enter.

6 Q And just to be clear, would the average gross margin  
7 per customer stay the same for these competitors because they  
8 would not experience any cost reduction as a result of the  
9 Commission approving Alltel's petition?

10 A It depends, it depends on what they would do with  
11 price, with their price.

12 Q Do you --

13 A And, again, we're, we're talking about two things.  
14 You've got existing competitors that may or may not target the  
15 Alltel service area with marketing efforts or anything to try  
16 to get deeper into that part of the market or you have new  
17 competitors that can enter. So you're kind of, you're kind of  
18 asking me to speculate as to what would happen, and I'm just  
19 not sure.

20 Q Do you think the competitors are constrained in the  
21 least bit by pricing of other competitors and coupled with the  
22 fact that Alltel is not raising their prices?

23 A Well, I thought Alltel is raising.

24 Q I mean bundled packages.

25 A I mean, the connect bundle I think is a, as I said,

1 is a bundled long distance/local plan. To the extent that  
2 those people are offering similar bundles that, and whatever  
3 Alltel's market share is in that sort of subsector of the  
4 market, there may be some constraint because of that. But for  
5 the basic local service, Alltel is raising its prices or at  
6 least petitioning to raise its prices in the same manner that  
7 the larger LECs did. So I don't see that as a constraint to  
8 competitors' behavior in the basic local service market.

9 Q My next question is in regards to the order, the  
10 Commission's final order on the access charge reduction by the  
11 petitions of BellSouth, Sprint, Verizon, which I believe you're  
12 familiar with.

13 A Yes.

14 Q We're furnishing you with Page 29 of the order, and  
15 looking at the first full paragraph.

16 A Uh-huh.

17 Q Okay. Would you agree with me, sir, that this  
18 paragraph indicates that for companies providing bundled  
19 offerings of local and long distance service, the average gross  
20 margin per customer would improve as a result of BellSouth,  
21 Sprint, and Verizon's access charge reduction petitions being  
22 approved?

23 A Again, you're assuming that there's going to be a  
24 change in the price. Well, actually, in terms of the access  
25 charges -- well, if their access charge bill goes down, all

1 else being equal, their margins will improve.

2 Q So was that a yes, you do agree that --

3 A Well, yes, with the caveat that all else being equal,  
4 if access charges go down and these people are paying access  
5 charges.

6 Q And in contrast, if the Commission approves Alltel's  
7 petition, do you agree that based on your earlier answers the  
8 average gross margin per customer may not improve for the  
9 wireless carriers, VoIP providers and cable telephone  
10 providers?

11 A Well, again, it depends on what they, what they do  
12 with their price. It's certainly available. Okay? If the,  
13 the competitors want to increase their efforts into the market,  
14 they have six additional dollars or eventually they'll have \$6  
15 in additional margin that they can use to finance those  
16 efforts.

17 Q You briefly just touched on my next question, if you  
18 could elaborate. In the event the Commission would approve,  
19 does approve Alltel's petition, could you please explain  
20 further why wireless, VoIP-based and cable telephone providers  
21 would have a greater economic incentive to compete in Alltel  
22 Florida's service territory?

23 A Well, to the extent that, and I don't think anybody  
24 is disputing this, to the extent that, let's take wireless, for  
25 instance, that there is wireless substitution both on a service

1 level, people turn off their wireline and just go exclusively  
2 with wireless or a minute level where they decide I'm going to  
3 use my wireless phone to make this call instead of their  
4 landline, to the extent that happens and it becomes more  
5 expensive, the price of Alltel service increases, that makes it  
6 more likely that consumers will make those substitution  
7 choices. And, and a company, take a wireless carrier like  
8 Verizon Wireless, they may decide to market more heavily in the  
9 Alltel service areas, billboards, whatever, to try to take  
10 advantage of that.

11 Q Do wireless, VoIP-based and cable telephone providers  
12 offer any plans that are comparable to Alltel's basic local  
13 service?

14 A Well, wireless plans, you know, they're going to  
15 offer their plans based on whatever the local calling area is  
16 for wireless carriers here in Florida. VoIP providers  
17 generally are bundling local service with long, long distance.  
18 I think the issue is whether or not the services are one to  
19 one, you know, comparable. The issue is whether or not a  
20 customer -- like when I watched the Vonage commercial on TV  
21 this morning at the hotel, the question is: Do I want to pay  
22 \$25.99 for a bundle which includes long distance throughout the  
23 U.S. and Puerto Rico or do I want to pay \$10.49 for local  
24 service and then have to buy my long distance separately? Now  
25 it seems to me that I'm more likely to look at a Vonage or some

1 other competitor at \$25.99 with an inclusive package if the  
2 Alltel rate is \$16.49 for just basic local than I am if it's  
3 \$10.49.

4 Q Okay. Now my next question refers to interrogatories  
5 numbers 76 and 78. Excuse me.

6 In those responses, you expressed concerns that  
7 VoIP-based providers and telephone, cable telephone providers  
8 bypass Alltel's public switched network and, thus, Alltel's  
9 switched access charges. Is that correct, sir?

10 A Well, I'd have to read the answer.

11 Q Okay.

12 A But, I mean, in general that's true. But let me read  
13 the -- you said 76?

14 Q And 78.

15 A Yes, that's true.

16 Q And if VoIP-based providers and cable telephone  
17 providers do not pay Alltel's switched access charges, these  
18 providers could not benefit from a reduction in the level of  
19 switched access charges; is that correct?

20 A Yes. But I think you're missing, missing the point.  
21 Right now the system is set up where Alltel Florida looked up  
22 their unseparated loop costs the other day. Now the most  
23 recent one you can get is from the 2004 FCC monitoring report,  
24 which is 2002 data. The unseparated loop costs for Alltel  
25 Florida is \$25 and some change. Okay. If you take 75 percent

1 of that to get just the intrastate piece of that, you're  
2 looking at something, you know, off the top of my head, \$17,  
3 \$18 a month just for the loop.

4           Okay. And we're, Alltel is charging \$10.49 on  
5 average to residential customers. And that doesn't just  
6 include the loop, that includes switching, transport, all the  
7 other functions associated with providing telephone service,  
8 billing, things of that nature. So the question becomes if  
9 that access goes away because people are bypassing it -- and  
10 there's a reason why they're bypassing it. They're bypassing  
11 it because it's well above its average cost. It's much easier  
12 for them to go around it and it's cheaper for them to go around  
13 it. That does two things: It provides, I think, an unfair  
14 competitive advantage to these other folks, and it  
15 eliminates -- it causes the support flow to be reduced and,  
16 therefore, the support that Alltel depends on or any ILEC  
17 depends on to help support those artificially low residential  
18 rates goes away.

19           Q     And under -- excuse me. I kind of got a cold this  
20 weekend. Unfortunately for you I'm the attorney that's  
21 assigned to this.

22                     Under what circumstances, if any, do wireless  
23 carriers pay Alltel's originating switched access charges?

24           A     To the extent that wireless carriers -- well, let's  
25 see. I believe to the extent that they complete a call outside

1 of whatever their local calling area is, they would pay the  
2 originating, terminating carrier -- well, it would be either  
3 the originating or terminating carrier, depending on which way  
4 the call went access.

5 Q Okay.

6 A I guess it would be terminating carrier. Let me, let  
7 me fix that.

8 Q And how is local calling area defined for wireless  
9 carriers?

10 A The FCC defines the local calling areas -- what do  
11 they call it? There's a term for it -- MTA or something.

12 Q Is that the metropolitan trading area?

13 A I believe that's what it stands for, yes.

14 Q And you touched on this as well, but under what  
15 circumstances, if any, do wireless pay Alltel's terminating  
16 switched access charges?

17 A Well, if a wireless, if a wireless customer  
18 originates a call and terminates it outside of their local  
19 calling area boundaries, whatever carrier, whatever ILEC  
20 terminates that call would charge them terminating access  
21 charges.

22 Q And how would Alltel benefit from a reduction in the  
23 level of switched access charges and a commensurate  
24 revenue-neutral increase in basic local rates?

25 A Well, I think the main reason and probably the most

1 important issue here is that access, switched access is a  
2 declining revenue stream. It's going away. To the extent  
3 that -- and the reason it's going away is because it's  
4 contributing to an implicit support flow. It's priced higher  
5 than average cost. So, therefore, competitors come in and  
6 undercut it.

7 As it goes away, the support flow dries up and Alltel  
8 or any other ILEC is no longer able to sustain its, its  
9 artificially low local rates.

10 Q And for the following -- excuse me. Strike that.

11 Okay. For the following question could you please  
12 refer to staff's first set of production of documents number  
13 12.

14 MR. WAHLEN: Just a caution to the witness: We claim  
15 that this is confidential. In order to make the transcript a  
16 little cleaner, if you can avoid calling out the numbers. If  
17 you can refer to the numbers by page and line and row number,  
18 it'll be easier for everybody who has to deal with it.

19 MR. SUSAC: Well, let's -- can we go off the record  
20 for a second?

21 (Discussion held off the record.)

22 BY MR. SUSAC:

23 Q Okay. Back on the record. And my question with  
24 regards to production of document number 12, we asked that you  
25 please identify the number of lines that were lost and how many

1 were, were reported to Alltel Wireless or its affiliate.

2 A Do you want me to say the number?

3 Q If you can do it by column maybe.

4 MR. WAHLEN: Yeah. There's two numbers. There's, on  
5 Page 1 there's this column, Line 22, Column F, and on Page  
6 2 it's Column --

7 THE WITNESS: I think this is all. This is Florida  
8 and this is total system.

9 MR. WAHLEN: Okay. Do you want Florida or  
10 systemwide?

11 MR. SUSAC: Might as well do Florida.

12 MR. WAHLEN: Okay.

13 THE WITNESS: So I guess it would be Column PA and --  
14 or Column F, Row 21.

15 BY MR. SUSAC:

16 Q Okay. Thank you very much for your indulgence there.  
17 Going back to your direct testimony, Mr. Blessing,  
18 Page 19. In specifically Lines 22 to 23 you refer to a, quote,  
19 unquote, complete rebalancing of rates, end quote.

20 Could you please describe what you believe to  
21 constitute a complete rebalancing of rates?

22 A Sure. In this context I'm referring to a complete  
23 rebalancing of rates as being bringing the rate up to its  
24 average cost for those receiving the support and down to its  
25 average cost for those contributing to the support.

1           If you'd like me to tell you what I mean by average  
2 cost --

3           Q     Yeah.  Could you just elaborate on that?

4           A     Generally what we see in situations like this where  
5 we have a support flow between two services it is because of an  
6 unequal or disproportional allocation of fixed, common, shared,  
7 joint, whatever, however you want to refer to them, costs,  
8 nondirect costs, put it that way.  Those costs are generally  
9 allocated between the services.  And if the allocation is  
10 proportional, we can generally assume that, given that the  
11 direct costs are calculated correctly, that the rate is, is at  
12 its average cost.  If the allocation is disproportional or  
13 disproportionate, then you will have a divergence from average  
14 cost.

15          Q     Okay.  And if you believe a complete rebalancing of  
16 Alltel's local service rates would be an appropriate objective,  
17 over what period of time would it be appropriate to achieve a  
18 complete rebalancing of Alltel's rates?

19          A     Well, I think the FCC in the universal service, first  
20 universal service order as well as the local competition order  
21 took it straight from the language of the Telecom Act '96,  
22 implicit support flows had to be eliminated.  They had to be  
23 eliminated because, one, they tend to stifle competition and  
24 they lead to basically reductions in social welfare.  That --  
25 after the Telecom Act of '96 it was clear that the two -- that

1 that policy, to eliminate the implicit support flows, would  
2 come in conflict with universal service objectives, and so,  
3 therefore, some sort of more gradual approach would, would be  
4 required.

5 I think that said, the timing of the necessary  
6 changes or the rebalancing is in large part determined by  
7 what's happening in the market. And as we see across the  
8 country, toll services are declining rapidly, which means  
9 access revenues are declining rapidly. We have a lot of  
10 competition in business, very little in -- less in residence  
11 because of the disparate rates between the two.

12 As we see these things happen, it becomes clearer and  
13 clearer that the rebalancing has to occur more quickly. And I  
14 think in terms of access charges it's been clear for a number  
15 of years that access reductions had to happen. Most states  
16 have done it, the FCC has done it. Florida has done it for the  
17 large LECs. And the same reasons that the implicit support  
18 flow coming from access had to be eliminated for the large LECs  
19 also applies to the small LECs. That support flow is drying  
20 up.

21 Q And could you elaborate and explain on the concept of  
22 social welfare that you alluded to?

23 A Well, this has to do with pricing signals and, and  
24 market signals to competitors. If we have a rate that's,  
25 that's well below its average cost, artificially low, like a

1 \$10.49 residential rate, what signal is that sending to the  
2 market? It's certainly telling competitors we don't want to be  
3 in that market because it's very hard to make a go of it. And  
4 I think what that does is it ends up limiting the choices that  
5 the, the residential customers have available to them, which  
6 impacts social welfare.

7           On the flip side, artificially high access rates,  
8 artificially high business rates mean that competitors focus on  
9 those, which means resources are poured into those. Okay. So  
10 misallocation of resources in that sense.

11           And, finally, if business customers are paying much  
12 more than, say, residential customers, they're passing that  
13 cost through in the prices for their products and services, so  
14 that impact or that effect is going to ripple through the whole  
15 economy. So basically it's a distortion. And like any sort of  
16 market distortion, it impacts social welfare.

17           Q     Thank you. On Page 21 of your direct testimony,  
18 Lines 1 through 13, you suggest that a high enough price for  
19 local service Alltel would be, quote, unquote, flooded with new  
20 entrants. And on Page 16, Lines 8 through 9, you report that  
21 the HAI 5.0a model default cost local service in Alltel's  
22 service territory to range from \$41.76 to \$48.44. Is that  
23 correct?

24           A     Yes.

25           Q     Does this represent Alltel's best estimate of the

1 cost of basic local service in Florida?

2 A No. No. I don't know what other cost studies the  
3 company has done about basic local service. The, the HAI model  
4 is a generally accepted or generally recognized model to  
5 estimate forward-looking costs. We use that simply to  
6 illustrate that the current rate is well below even what the  
7 HAI model says. The HAI model having been developed by AT&T  
8 generally has a downward bias to it. So it was just to  
9 illustrate that under any reckoning \$10.49 does not represent  
10 the true cost of providing basic residential service.

11 Q In your opinion, sir, could you give me a realistic  
12 figure as to how many facilities-based competitors could  
13 Alltel's service territory support if Alltel's basic local  
14 service were priced at a range between \$41.76 and \$48.44?

15 A How many carriers it could support?

16 Q Yes.

17 A Just in -- are you trying -- are you isolating the  
18 Alltel service area or are you --

19 Q Yes.

20 A Well, I don't think that's a realistic, necessarily a  
21 realistic question. But just put it this way: Basic economic,  
22 microeconomic theory is going to tell you if you price -- the  
23 higher you price, the more likely suppliers are to come into  
24 the market and supply service.

25 So how many carriers could it support? I don't know.

1 If, if statewide the rates were similar or, you know,  
2 nationwide, then you would, you would say there would be a lot  
3 of carriers coming into Alltel because they'd be competing all  
4 over.

5 But to just isolate it to just Alltel when the market  
6 doesn't do that, I really don't know how to answer that.

7 Q Do you believe Alltel enjoys economies of scale in  
8 Florida?

9 A Well, economies of scale is a relative term.  
10 Economies of scale as compared to who, I would have to ask?

11 Q Well, who competes with you in Alltel's territory?

12 A Are you saying do they, do they enjoy economies of  
13 scale in relation to potential competitors?

14 Q I guess the question is designed that to the extent a  
15 competitor was to come into Alltel's service territory, how  
16 likely would it be for them or just one carrier to achieve  
17 economies of scale to a level that Alltel currently enjoys?

18 A Well, to answer your question, I'll give you an  
19 example. Say Verizon Wireless decided it was going to push  
20 service substitution; in other words, an ad campaign that said  
21 get rid of your local phone, your wireline phone and use our  
22 wireless service. Do I think Alltel has economies of scale  
23 relative to Verizon Wireless? No, not, you know, not even  
24 close.

25 But I think maybe what your question is directed at

1 is market share. Does, you know, given that Alltel is the  
2 incumbent in the, obviously in the Alltel service territory,  
3 does that give it a leg up on competitors? Well, certainly it  
4 has a leg up on competitors just because it has the customers  
5 right now. That's always an advantage. But that advantage  
6 will decline every time that rate goes up. Every time Alltel's  
7 rate goes up, that advantage gets smaller and smaller. So if  
8 you're going to compare the situation at \$10.49 versus \$16.49,  
9 I would say that the advantage is much lower at \$16.49 than it  
10 is at \$10.49.

11 Q Okay. Do you believe that wireless and VoIP are  
12 viewed as -- strike that.

13 Do you believe that wireless and VoIP are viewed by a  
14 majority of customers to be viable substitutes for wireline  
15 telecommunications?

16 A Well, you know, it's funny. I have the technical  
17 ability of a tree, and so these kind of things always scare me,  
18 you know, VoIP and Skype and things like that. Well, I started  
19 using Skype and it's getting easier and easier. So I think  
20 right now a lot of people are afraid of the new technology.  
21 You know, they don't want another situation where they can't  
22 program the VCR when it comes to their phone service. Okay.  
23 They're afraid of it. But I think it's getting easier and  
24 easier and the companies are starting to market it in that way.

25 That Vonage commercial I saw this morning, the gist

1 of it was -- price was sort of secondary. What the real  
2 message that they're trying to bring out was this is really  
3 easy. You hook up your regular phone to it and off you go.

4 So I think whatever the percentage is of customers  
5 who would feel comfortable with it now, that is increasing and  
6 I would think increasing at an increasing rate as people get  
7 used to the technology.

8 Q But going back to the question, do you believe it's  
9 viewed by the majority of customers to be a viable substitute?

10 A Well, my answer is I don't know what the majority of  
11 companies do. But I think that every day more and more people  
12 are getting comfortable with it.

13 Q Okay.

14 A And, therefore, it becomes a viable substitute.

15 Q Fair enough. My next question refers to staff's  
16 interrogatory number 33, and we're looking at the second  
17 paragraph.

18 A Oh, I'm sorry.

19 MR. WAHLEN: Second paragraph?

20 MR. SUSAC: Yes. Second paragraph.

21 BY MR. SUSAC:

22 Q And you've had time to review that?

23 A Yes.

24 Q Okay. In this response you list the cost of  
25 competitors' own facilities as a factor in determining the

1 decision to offer local service. You also list facilities that  
2 can be used to provide voice services as including cable TV  
3 facilities, electrical power lines, gas lines for conduit for  
4 running fiber, other right-of-way and wireless facilities. My  
5 first question is can you explain what you mean by other  
6 right-of-way?

7 A Well, I think one of the costs of telephone network  
8 are, is provisioning the outside plant. One of the big  
9 components of that is securing the right-of-ways and the routes  
10 that would be needed. And so, therefore, if you already have  
11 that, you have a leg up. All these things, cable TV, electric,  
12 gas, you know, the oil pipeline companies that have their own  
13 fiber network running here and there, if they had facilities  
14 that they're using for one purpose that they can also piggyback  
15 off those facilities and use it to provide local service, you  
16 know, that means that the, the average cost across the two  
17 services goes down.

18 Q To your knowledge are any owners of such facilities  
19 that we just referenced in Alltel Florida's service territory  
20 currently providing voice service other than wireless  
21 providers?

22 A Well, as I recall in my testimony, some of the cable  
23 TV folks are either providing service or have announced that  
24 they will provide service in the Alltel Florida territory.

25 Q Okay. And was that off your, off the website you saw

1 that?

2 A Yeah, I believe so.

3 Q Okay. I remember reading that. What -- is that a,  
4 a, in all of Alltel Florida's --

5 A I believe it was in, it was in pieces, parts of  
6 Alltel's service territory. But I think the key point is that,  
7 you know, just because, you know, a cable company serving a  
8 particular area hasn't announced that they're doing it yet, it  
9 is an option and it is an option I'm sure they're looking at.  
10 And one of the things that's going to drive, is going to drive  
11 their decision is what the market price is for local service,  
12 and right now the market price is \$10.49 for residential.

13 Q And in this same response to staff's number 33, you  
14 list market research and demographics as a factor influencing  
15 the market entry decision. Can you please tell me the  
16 particular customer demographics of Alltel Florida's service  
17 territory that might exert a positive influence on a  
18 competitor's decision to enter the market?

19 A Well, my understanding is that Alltel Florida's  
20 service territory is, is not, wouldn't be classified or  
21 considered to be low income and, therefore, income level is one  
22 of those demographics that's, that's very important. In fact,  
23 if you compare the demographics, and I think I did in the  
24 testimony, between the rural areas served by Sprint, BellSouth  
25 and Verizon in Florida to that of Alltel, you don't see, you

1 don't see any dramatic difference between density, in terms of  
2 density or income or anything like that.

3 Q And were those -- to your knowledge has Alltel  
4 conducted any Florida-specific demographic and/or market  
5 research regarding any of its product offerings?

6 A I'm not aware of any, no.

7 Q Okay. Just a few more questions, sir. Now turning  
8 to staff interrogatory number 46. And this, we kind of touched  
9 upon this a little bit earlier. In the third paragraph you  
10 state that Time Warner Cable and Cox Communications have  
11 announced through their web sites that they intend to offer  
12 voice service in Alltel's territory. Are you referring to  
13 Alltel Florida's territory?

14 A Let's see. I believe in that, in that -- I'm not  
15 sure. I think in this passage I think we're referring to  
16 Alltel Corporation or the Alltel system.

17 Q To your knowledge is Time Warner and/or Cox Cable  
18 going to penetrate Alltel's market here in Florida?

19 A Off the top of my head, I don't know.

20 Q Okay.

21 MR. WAHLEN: Jeremy, Bettye Willis is probably a  
22 little more tuned into that.

23 MR. SUSAC: Bettye Willis? Sure.

24 Sorry.

25 THE WITNESS: That's all right.

1 BY MR. SUSAC:

2 Q Okay. Now turning to staff interrogatory number 73.  
3 I think we've already briefly touched on this one.

4 Alltel states that, "While it may be expensive for a  
5 wireline-based CLEC to replicate Alltel's PSTN network in rural  
6 area," and the quote goes on. In light of this statement, how  
7 likely is it that approval of Alltel's petition will provide  
8 the appropriate incentive to facilities-based providers to  
9 enter Alltel's service territory?

10 A Well, the intermodal carriers don't have that  
11 constraint, so I think the increased incentive certainly exists  
12 there. And whether you, you subscribe to the FCC's definition  
13 or definition of a few years ago where UNE loop, competitors  
14 using UNE loop were considered to be facilities-based, the cost  
15 of building a circuit switched-based infrastructure doesn't  
16 apply there either. So I think for people that want to use  
17 UNE-based, UNE-based service as the competitive entry vehicle  
18 or intermodal, an intermodal service, I think the incentives  
19 are there. Increase the price and people will be more  
20 interested.

21 Q Is that across the board with traditional CLECs and  
22 intermodal or do you draw a distinction between the two?

23 A Well, if you're talking about people that are  
24 actually going to construct their own facilities, the market  
25 price certainly will make it easier for them to prove in their,

1 their business plans in the Alltel Florida territory. If you  
2 raise that price, it makes it easier for their business plans  
3 to go into the black. But -- and the outside plant tends to be  
4 the most expensive part.

5           What I was saying is that intermodal as well as  
6 UNE-based competition is going to have that incentive  
7 without -- it's going to have even more incentive because it  
8 doesn't have that infrastructure problem.

9           Q     And how are you defining facilities-based or  
10 UNEs-based, I think you said?

11           A     Well, that was when I said the FCC's definition of a  
12 few years ago where they considered competitors that were  
13 buying UNEs or providing service over UNEs to be, quote,  
14 unquote, facilities-based. So I didn't know how you meant your  
15 question, so.

16           Q     Was that for purposes of ETC status or is that across  
17 the board facilities-based?

18           A     Well, you know, they used it for universal service  
19 purposes in ETC status determinations. But I think they  
20 referred to leasing the lines as being the same as actually  
21 building them. I think in more recent years they made a  
22 distinction and said, hey, we really want to see more  
23 competitive facilities out there and less UNE. But I didn't  
24 know what you meant by the question, so I figured I'd answer it  
25 both ways.

1 Q I appreciate that, too.

2 Going on to staff's interrogatory number 73, Alltel  
3 cites the orders for the Sprint, BellSouth and Verizon  
4 rebalancing dockets as support for rebalancing in rural areas.  
5 Do you consider Alltel Florida to be a predominantly rural  
6 carrier?

7 A I believe it's classified that way, yes.

8 Q And do you consider Sprint Florida to be a  
9 predominantly rural carrier?

10 A Well, what I do know, and as I said in the, in  
11 testimony, those companies have far more rural customers than  
12 Alltel does. What I'm afraid of here is that your, that if  
13 Alltel's petition isn't granted or if another small company,  
14 small rural company's petition is not granted because they just  
15 do provide rural service, that sets up sort of a dichotomy  
16 between the big companies and the small companies. And my, my  
17 main concern about this is, is that those, that support flow,  
18 those revenues that are generated by access aren't going to be  
19 around much longer. And to the extent that those revenues go  
20 away and there's not a corresponding recovery on the local  
21 side, that means that Alltel is less likely or anybody is less  
22 likely to invest in the rural properties. It's, it's a, it's a  
23 dangerous thing in my mind.

24 Q And going back to that final order that Alltel cites,  
25 does it, does it make any reference to rural carriers or rural

1 customers for BellSouth, Sprint and Verizon?

2 A I don't believe they make any distinction.

3 Q Without making that distinction or without specifying  
4 rural customers or carriers, do you believe the conclusions  
5 reached in that order appropriately apply to a rural carrier?

6 A I believe -- you know, there was a number of  
7 conclusions reached in that order, but I believe that the  
8 rebalancing provisions in the statute are, are right on target.  
9 I think that the access rates are way too high. You know,  
10 Alltel's access rate is 11 cents a minute. If you look -- I  
11 don't know -- I don't care what kind of cost study you use, it  
12 would be very hard to come up with anything close to 11 cents a  
13 minute on a two-way, two-way access call.

14 That support flow is drying up. People are using  
15 their wireless phone. You know, if the access rate is 11 cents  
16 a minute, that means the retail toll rate, at least for a  
17 regional carrier like Alltel that's actually paying it, has got  
18 to reflect that. And that means people's long distance bills  
19 are a lot higher than they should be. And what does that mean?  
20 That means they're going to look for alternatives, wireless  
21 being the most obvious one for toll. That means that that  
22 support flow is going away.

23 And, you know, I think that the, the statute is right  
24 on by saying that, following the FCC's direction and the '96  
25 Act's direction, those support flows, implicit support flows

1 have got to go because they're not sustainable.

2 Q And --

3 MR. WAHLEN: Did he answer your question? I think it  
4 called for a yes or no, and I'm not sure he answered the  
5 question. Can you ask it again and make sure he --

6 BY MR. SUSAC:

7 Q Sure. Well, just to briefly go back to the line of  
8 questioning, we were talking about the Commission orders in the  
9 Verizon, Sprint and BellSouth docket and we were talking about  
10 rural versus nonrural. To the extent the Commission order did  
11 not address the rural versus nonrural, do you still believe  
12 that the conclusions reached in that order are appropriately  
13 applied to a rural carrier such as Alltel?

14 A Well, I think what I -- in the beginning of my answer  
15 I said, you know, there was a lot of conclusions reached. But  
16 the conclusion that there should be rebalancing reductions in  
17 access rates and a corresponding increase in local, yes, I  
18 agree with that.

19 Q Okay. And as we discussed about access rate declines  
20 and things of that nature, could you give examples of access  
21 revenue going away in Alltel's territory?

22 A Well, when you say can I point to numbers that show  
23 the, that the access revenue is declining or --

24 Q Would that be confidential?

25 MR. WAHLEN: Yeah. Let me -- you want to go off the

1 record for a minute?

2 MR. SUSAC: Yeah. Can we go off the record?

3 (Discussion held off the record.)

4 BY MR. SUSAC:

5 Q Going back to my, my last and final question,  
6 Mr. Blessing. I appreciate your patience with me today. If I  
7 can find my last question.

8 Could you please cite some examples of access  
9 revenues going away in Alltel's Florida territory?

10 A Well, again, the specific numbers are probably best  
11 dealt with by Bettye. But I think it's pretty clear that  
12 people everywhere, Alltel Florida, everywhere, are using their  
13 wireless phones to make, you know, long distance calls because  
14 they generally have bundles of minutes that are, you know, that  
15 are either statewide, nationwide or whatever.

16 MR. SUSAC: That concludes all of the questions I  
17 have.

18 Mr. Wahlen, would you like to redirect?

19 MR. WAHLEN: I just have one.

20 MR. SUSAC: Okay.

21 CROSS EXAMINATION

22 BY MR. WAHLEN:

23 Q Mr. Blessing, staff asked you a question about  
24 whether VoIP, I think, and cable are a substitute for basic  
25 residential local service. Was that the question?

1 MR. SUSAC: Reliable substitute for wireless.

2 BY MR. WAHLEN:

3 Q Right. Do you remember that?

4 A Yes.

5 Q Okay. And I think your answer included a discussion  
6 about how people feel about the technology and maybe they're a  
7 little scared of the technology or uncertain about the  
8 technology or whatever. Do you remember that?

9 A Yes.

10 Q Okay. Whatever their feelings are about the  
11 technology, do you believe that increasing Alltel's R1 rate to  
12 an average of \$16.49 is going to make Alltel customers more  
13 likely to substitute VoIP or some other type of service for  
14 Alltel's?

15 A Absolutely. Yes.

16 MR. WAHLEN: Thank you. No more questions.

17 MR. SUSAC: That concludes our deposition. I thank  
18 you very much.

19 (Deposition concluded at 11:20 a.m.)

### Notice of Public Hearing

The Florida Public Service Commission announces public hearings in Docket No. 050693-T1, to which all interested persons and parties are invited to attend. This docket addresses Alltel Florida, Inc.'s ("Alltel") petition to increase local rates and reduce intrastate switched access rates in a revenue-neutral manner to the company pursuant to Section 364.164, Florida Statutes. The dates, times and locations of the public hearing are:

**Monday, November 28, 2005**  
11:00 a.m.  
Alachua City Hall  
City Commission Chambers  
15001 NW 140<sup>th</sup> Street  
Alachua, FL 32615

**Monday, November 28, 2005**  
6:00 p.m.  
Live Oak City Hall  
City Council Chambers  
101 SE White Avenue  
Live Oak, FL 32064

The Florida Public Service Commission is holding these public hearings in the service territories of Alltel to elicit public testimony regarding Alltel's proposal to decrease its intrastate switched access rates and increase its basic residential (R1) rates in three increments of approximately \$2.11 over two years to an average rate of \$16.49 and business (B1) rates in three increments of approximately \$1.47 over two years to an average rate of \$30.27 in a revenue neutral manner to the company as required in Section 364.164. Alltel has proposed to increase certain installation and service charges as well. Public testimony will be received relating to the factors outlined in Section 364.164, Florida Statutes, which the Commission must consider in making its decision in this matter. Members of the public appearing at the hearings shall be subject to cross-examination at the conclusion of their testimony. The proceedings will be governed by the provisions of Chapter 120, F.S., and Chapter 25-28, F.A.C. Any person requiring some accommodation at this hearing because of a physical impairment should call the Division of the Commission Clerk and Administrative Services at (850) 413-6770 at least 48 hours prior to the hearing. Any person who is hearing or speech impaired should contact the Florida Public Service Commission by using the Florida Relay Service, which can be reached at 1-800-955-8771 (TDD). One or more of the Commissioners of the Florida Public Service Commission may attend and participate in the meeting.

| 7   | \$ 75,000                       | to \$ 99,999     | 552,379                | 8.7%                         | 0.2%   |
| 8   | \$ 100,000                      | to \$ 149,999    | 398,860                | 6.3%                         | 0.2%   |
| 9   | \$ 150,000                      | to \$ 199,999    | 114,432                | 1.8%                         | 0.1%   |
| 10  | \$ 200,000                      | and higher       | 147,373                | 2.3%                         | 0.1%   |
|   | <b>Total</b>                    |                  | <b>6,341,121</b>       |                              |  |
|   | <b>Median Income</b>            | <b>38,819</b>    |                        |                              | 0.5%   |
|   | <b>Poverty Level</b>            | <b>\$ 12,172</b> |                        |                              | 1.6%   |
|   | <b>Household @ 100% Poverty</b> |                  | <b>792,640</b>         | <b>12.5%</b>                 |  |

<sup>3</sup> The percentage is based on an annual expenditure of \$197.88 divided by the average Household income in each band. For example, the average household income in Band 1 is \$5,000 (\$1 + \$9,999 divided by 2 = \$5,000). Thus, \$197.88 (less \$162.00 for Lifeline) divided by \$5,000 equals 0.7%.

<sup>4</sup> 0.7% after the Lifeline discount of \$13.50 per month is applied to the customer's bill.

## FCC RELEASES NEW TELEPHONE SUBSCRIBERSHIP REPORT

Washington, D.C. – The Federal Communications Commission (FCC) today released its latest report on telephone subscribership levels in the United States. The report presents subscribership statistics based on the Current Population Survey (CPS) conducted by the Census Bureau in March 2003. Statistics from that survey estimated that 95.5% of all households in the United States had telephone service. The report also shows subscribership levels by state, income level, race, age, household size, and employment status.

### Statistical Summary

In March 2003:

- The telephone subscribership penetration rate in the U.S. was 95.5%. It is up 0.2% from the last report, for November 2002.
- The telephone penetration rate was 80.5% for households with annual incomes below \$5,000, while the rate for households with incomes over \$75,000 was 99.3%.
- By state, the penetration rates ranged from a low of 90.5% in Alabama to a high of 98.5% in Maryland.
- Households headed by whites had a penetration rate of 96.2%, while those headed by blacks had a rate of 91.0% and those headed by Hispanics had a rate of 92.3%.
- By age, penetration rates ranged from 90.4% for households headed by a person under 25 to 97.3% for households headed by a person between 60 and 64.
- Households with one person had a penetration rate of 92.6%, compared to a rate of 97.0% for households with four or five persons.
- The penetration rate for unemployed adults was 92.5%, while the rate for employed adults was 96.7%.

This report is updated three times a year and is available in the FCC's Reference Information Center, Courtyard Level, 445 12th Street SW, Washington, DC 20554. # Telephone Subscribership in the United States

## (Data through March 2003)

### Executive Summary

This is the Federal Communications Commission's (FCC's) report on telephone subscribership in the United States, presenting subscribership statistics based on the Current Population Survey (CPS) conducted by the Census Bureau in March 2003. Statistics from that survey estimated that 95.5% of all households in the United States had telephone service. The report also shows subscribership levels by state, income level, race, age, household size, and employment status.

### Statistical Findings

In March 2003:

- The telephone subscribership penetration rate in the U.S. was 95.5%. It is up 0.2% from the last report, for November 2002.<sup>1</sup>
- The telephone penetration rate was 80.5% for households with annual incomes below \$5,000, while the rate for households with incomes over \$75,000 was 99.3%.
- By state, the penetration rates ranged from a low of 90.5% in Alabama to a high of 98.5% in Maryland.
- Households headed by whites had a penetration rate of 96.2%, while those headed by blacks had a rate of 91.0% and those headed by Hispanics had a rate of 92.3%.
- By age, penetration rates ranged from 90.4% for households headed by a person under 25 to 97.3% for households headed by a person between 60 and 64.
- Households with one person had a penetration rate of 92.6%, compared to a rate of 97.0% for households with four or five persons.
- The penetration rate for unemployed adults was 92.5%, while the rate for employed adults was 96.7%.

### Background

The number and percentage of households that have telephone service represent the most fundamental measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This report presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the FCC. Along with telephone penetration statistics for the United States and each of the states from November 1983 to March 2003, data are provided on penetration based on various demographic characteristics.

The most widely used measure of telephone subscribership is the percentage of households with telephone service, sometimes called a measure of telephone penetration. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. Measures of penetration based on the number of residential lines, however, became subject to a large margin of error as more and more

---

1 Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Telephone Subscribership in the United States* (April 10, 2003).

households added second telephone lines and more consumers acquired second homes. By 1980, the traditional measure of penetration (residential lines divided by the number of households) reached 96%, while the number of households reporting that they had telephones in the 1980 census was 92.9%.

Recognizing the need for more precise periodic measurements of subscribership, the Commission requested that the Census Bureau include questions on telephone availability as part of its CPS, which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included in the survey for four consecutive months in one year and the same four months in the following year. Use of the CPS has several advantages: it is conducted every month by an independent and expert agency; the sample is large; and the questions are consistent. Thus, changes in the results can be compared over time with a reasonable degree of confidence.

Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980, 1990, and 2000 decennial censuses. This is due to differences in sampling techniques and survey methodologies and because of differences in the context in which the questions were asked. For example, the 2000 decennial census reported 97.6% of all occupied housing units in the United States had telephone service available, whereas the CPS data showed a penetration rate of 94.6% of households for March 2000. This difference is statistically significant and appears to indicate that the CPS value may be on the low side and the decennial census value may be on the high side, with the most probable value lying somewhere in between.

The specific questions asked in the CPS are: "Is there a telephone in this house/apartment?"<sup>2</sup> And, if the answer to the first question is "no," this is followed up with, "Is there a telephone elsewhere on which people in this household can be called?" If the answer to the first question is "yes," the household is counted as having a telephone "in unit." If the answer to either the first or second question is "yes," the household is counted as having a telephone "available." The "in unit" data are reported in all of the tables and charts in this report. The "available" data are also reported in Tables 3 through 12 and Charts 1 and 8.

Although the survey is conducted every month, not all questions are asked every month. The telephone questions are asked once every four months, in the month that a household is first included in the sample and in the month that the household re-enters the sample a year later. Since the sample is staggered, the reported information for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the Commission, based on the surveys conducted through March, July, and November of each year.

---

2 The questions are intended to be neutral as to whether the household has wireline or wireless phones. For the November 2001 survey, households were also asked which type(s) of phones they had. While the response rate was not sufficient for a complete reporting of the results of this follow-up question, 1.2% of the households indicated that they had only wireless phones. 5.9% of the households failed to answer this question. The CPS no longer asks this follow-up question.

The CPS data are based on a nationwide sample of about 50 to 60 thousand households in the 50 states and the District of Columbia. (The CPS does not cover outlying areas that are not states, such as Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Northern Mariana Islands.) Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than 0.4% may be due to sampling error and cannot be regarded as statistically significant. As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.3% are not statistically significant. When comparing annual averages, changes of less than or equal to 0.2% are not statistically significant. The annual averages are the average of the three surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater, because the sample sizes are smaller. This will require larger changes to yield statistical significance at the same confidence level.

The data in this report are not seasonally adjusted. After adjusting for the trend over time, there is an average increase of 0.2% between November and March, followed by an average decrease of less than 0.1% between March and July and an average decrease of more than 0.1% between July and November. The change from November to March is just above the threshold of statistical significance.

### **Results and Statistical Analysis**

Census Bureau figures for March 2003, the most recent data available, show that the percentage of households subscribing to telephone service is 95.5%. This is unchanged from March 2002. This level matches the highest recorded penetration level for households included in the CPS.

This report includes figures showing subscribership percentages by state, by the head of the household's age and race, by household size, by income, and, for adult individuals, by labor force status. The March 2003 data show that 96.2% of adult individuals in the civilian non-institutionalized population have a telephone in their household. This figure is unchanged from March 2002. This level matches the highest recorded penetration level for individuals included in the CPS.

This report contains twelve tables and eight charts presenting penetration statistics for various geographic and demographic characteristics. The charts and the first two tables present summaries of the available information. Tables 3 through 7 present more detailed information. In these tables, only the annual averages are included for the years 1984 through 1999. March, July, and November data for those years are available in previous subscribership reports or Monitoring Reports in CC Docket Nos. 87-339 or 98-202. Tables 8 through 12 provide information necessary to determine the statistical significance of changes in the penetration rates over time.

Table 1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 1 graphically depicts the nationwide penetration rates for households over time.

Table 2 summarizes the telephone penetration rates by state, showing the rates for November 1983 and March 2003, the change between those two months, and an indication as to whether the change is statistically significant. The statistical significance of a change is determined not only by the magnitude of that change, but also by the sizes of the samples used to estimate the change.

Chart 2 depicts the states with March 2003 penetration rates (as shown in Table 2) more than 1% below the national average, within 1% of the national average, or more than 1% above the national average.

Chart 3 depicts changes in household penetration rates by state (as shown in Table 2) between the November 1983 and March 2003 rates. States with statistically significant increases or decreases are shown, along with other states with increases or decreases.

Chart 4 depicts the relationship between telephone penetration and household income, using March 2003 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 4.

Chart 5 depicts the relationship between telephone penetration and household size, using March 2003 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 5.

Chart 6 depicts the relationship between telephone penetration and the head of the household's age, using March 2003 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.

Chart 7 depicts the relationship between telephone penetration and labor force status for civilian non-institutionalized adults, using March 2003 penetration rates for all adults and for white, black, and Hispanic adults. It is based on data in Table 7.

Chart 8 graphically depicts the nationwide penetration rates for civilian non-institutionalized adults over time. It is also based on data in Table 7.

Table 3 shows the CPS responses for the United States and for each state beginning with November 1983. Because the CPS began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which there is a telephone in the housing unit. The column headed "Avail." indicates the percentage of households which have telephone service available for incoming calls, either in the housing unit or elsewhere (such as at work or at a neighbor's home).

Table 4 shows the nationwide penetration rates for households by income and the race of the head of the household. It shows a strong relationship between income and penetration. Caution should be used in comparing these figures over time, because these income levels are not adjusted for inflation. Thus, the same nominal income level at two points in time will reflect

different real incomes in terms of purchasing power.<sup>3</sup> Also, the income categories have changed over time due to the changing value of the dollar.

Table 5 shows the nationwide penetration rates for households by the size of the household and the race of the head of the household. It shows that penetration is higher for households of 2 to 5 people than it is for single-person households or those with 6 or more people.

Table 6 shows the nationwide penetration rates for households by the age and race of the head of the household. It shows that the penetration rate is lowest for young and non-white households.

Table 7 shows the nationwide penetration rates for all persons that are at least 15 years old in the civilian non-institutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Tables 8 through 12 present the critical values at the 95% confidence level for testing the statistical significance of changes in penetration rates over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases, these critical values are very large because the sample sizes are very small for these subcategories, rendering the changes in estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently, the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys and hence have a lower standard error. When comparing annual averages of two consecutive years, the critical values should be multiplied by .46, taking into account both of the above factors.

---

3 Our publication *Telephone Penetration by Income by State* (last published April 23, 2002) makes adjustments for inflation, making comparisons over time more appropriate.

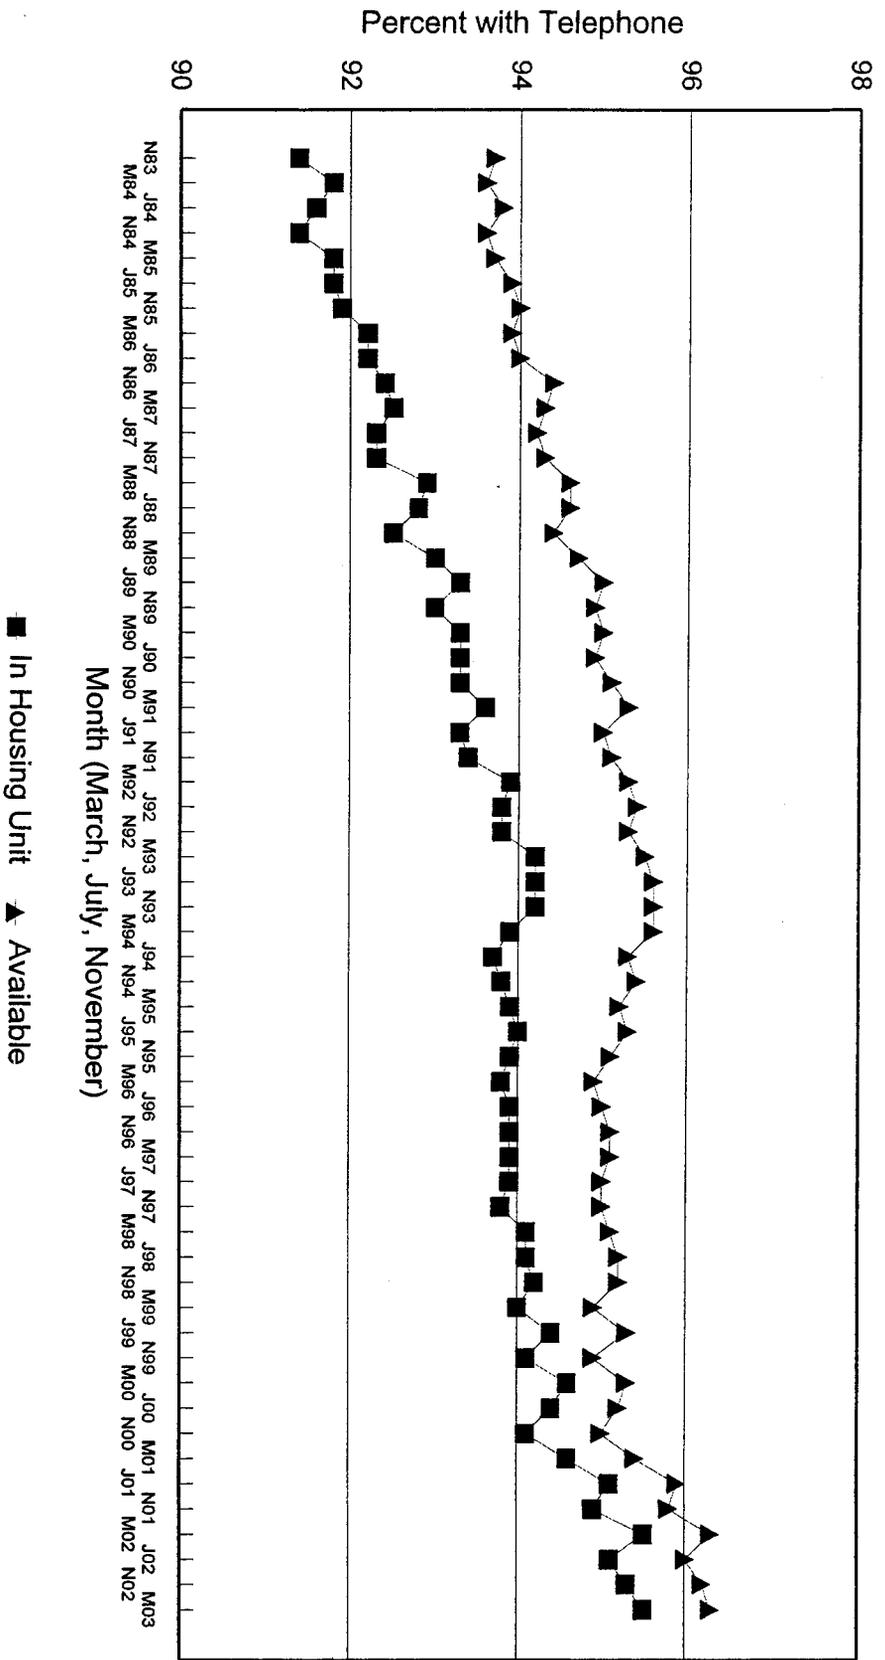

**Table 1**  
**Household Telephone Subscribership in the United States**

| Date          | Households (millions) | Households with Telephones (millions) | Percentage with Telephones | Households without Telephones (millions) | Percentage without Telephones |
|---------------|-----------------------|---------------------------------------|----------------------------|--|-------------------------------|
| November 1983 | 85.8                  | 78.4                                  | 91.4%                      | 7.4                                      | 8.6%                          |
| March 1984    | 86.0                  | 78.9                                  | 91.8%                      | 7.1                                      | 8.2%                          |
| July 1984     | 86.6                  | 79.3                                  | 91.6%                      | 7.3                                      | 8.4%                          |
| November 1984 | 87.4                  | 79.9                                  | 91.4%                      | 7.5                                      | 8.6%                          |
| March 1985    | 87.4                  | 80.2                                  | 91.8%                      | 7.2                                      | 8.2%                          |
| July 1985     | 88.2                  | 81.0                                  | 91.8%                      | 7.2                                      | 8.2%                          |
| November 1985 | 88.8                  | 81.6                                  | 91.9%                      | 7.2                                      | 8.1%                          |
| March 1986    | 89.0                  | 82.1                                  | 92.2%                      | 6.9                                      | 7.8%                          |
| July 1986     | 89.5                  | 82.5                                  | 92.2%                      | 7.0                                      | 7.8%                          |
| November 1986 | 89.9                  | 83.1                                  | 92.4%                      | 6.8                                      | 7.6%                          |
| March 1987    | 90.2                  | 83.4                                  | 92.5%                      | 6.8                                      | 7.5%                          |
| July 1987     | 90.7                  | 83.7                                  | 92.3%                      | 7.0                                      | 7.7%                          |
| November 1987 | 91.3                  | 84.3                                  | 92.3%                      | 7.0                                      | 7.7%                          |
| March 1988    | 91.8                  | 85.3                                  | 92.9%                      | 6.5                                      | 7.1%                          |
| July 1988     | 92.4                  | 85.7                                  | 92.8%                      | 6.7                                      | 7.2%                          |
| November 1988 | 92.6                  | 85.7                                  | 92.5%                      | 6.9                                      | 7.5%                          |
| March 1989    | 93.6                  | 87.0                                  | 93.0%                      | 6.6                                      | 7.0%                          |
| July 1989     | 93.8                  | 87.5                                  | 93.3%                      | 6.3                                      | 6.7%                          |

## FCC RELEASES NEW TELEPHONE SUBSCRIBERSHIP REPORT

Washington, D.C. – The Federal Communications Commission (FCC) today released its latest report on telephone subscribership levels in the United States. The report presents subscribership statistics based on the Current Population Survey (CPS) conducted by the Census Bureau in March 2005. The report also shows subscribership levels by state, income level, race, age, household size, and employment status.

### Statistical Summary

In March 2005:

- The telephone subscribership penetration rate in the U.S. was 92.4%.
- The telephone penetration rate was 80.4% for households with annual incomes below \$5,000, while the rate for households with incomes over \$75,000 was 96.9%.
- By state, the penetration rates ranged from a low of 86.7% in Mississippi to a high of 96.9% in Utah and Washington.
- Households headed by whites had a penetration rate of 93.2%, while those headed by blacks had a rate of 87.7% and those headed by Hispanics had a rate of 88.2%.
- By age, penetration rates ranged from 85.5% for households headed by a person under 25 to 94.8% for households headed by a person between 65 and 69.
- Households with one person had a penetration rate of 89.0%, compared to a rate of 94.5% for households with four or five persons.
- The penetration rate for unemployed adults was 90.1%, while the rate for employed adults was 93.7%.

This report is updated three times a year and is available in the FCC's Reference Information Center, Courtyard Level, 445 12th Street SW, Washington, DC 20554. # Telephone Subscribership in the United States

## (Data through March 2005)

### Executive Summary

This is the Federal Communications Commission's (FCC's) report on telephone subscribership in the United States, presenting subscribership statistics based on the Current Population Survey (CPS) conducted by the Census Bureau in March 2005.<sup>1</sup> Statistics from that survey estimated that 92.4% of all households in the United States had telephone service. The report also shows subscribership levels by state, income level, race, age, household size, and employment status.

### Statistical Findings

In March 2005:

- The telephone subscribership penetration rate in the U.S. was 92.4%.
- The telephone penetration rate was 80.4% for households with annual incomes below \$5,000, while the rate for households with incomes over \$75,000 was 96.9%.
- By state, the penetration rates ranged from a low of 86.7% in Mississippi to a high of 96.9% in Utah and Washington.
- Households headed by whites had a penetration rate of 93.2%, while those headed by blacks had a rate of 87.7% and those headed by Hispanics had a rate of 88.2%.
- By age, penetration rates ranged from 85.5% for households headed by a person under 25 to 94.8% for households headed by a person between 65 and 69.
- Households with one person had a penetration rate of 89.0%, compared to a rate of 94.5% for households with four or five persons.
- The penetration rate for unemployed adults was 90.1%, while the rate for employed adults was 93.7%.

### Background

The number and percentage of households that have telephone service represent the most fundamental measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This report presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the FCC. Along with telephone penetration statistics for the United States and each of the states from November 1983 to March 2005, data are provided on penetration based on various demographic characteristics.

The most widely used measure of telephone subscribership is the percentage of households with telephone service, sometimes called a measure of telephone penetration. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. Measures of penetration based on the number of residential lines, however, became subject to a large margin of error as more and more households added second telephone lines and more consumers acquired second homes. By 1980,

---

<sup>1</sup> The last published report was Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Telephone Subscribership in the United States* (March 8, 2005).

the traditional measure of penetration (residential lines divided by the number of households) reached 96%, while the number of households reporting that they had telephones in the 1980 census was 92.9%.

Recognizing the need for more precise periodic measurements of subscribership, the Commission requested that the Census Bureau include questions on telephone availability as part of its CPS, which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included in the survey for four consecutive months in one year and the same four months in the following year. Use of the CPS has several advantages: it is conducted every month by an independent and expert agency; the sample is large; and the questions are consistent. Thus, changes in the results can be compared over time with a reasonable degree of confidence.

Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980, 1990, and 2000 decennial censuses. This is due to differences in sampling techniques and survey methodologies and because of differences in the context in which the questions were asked. For example, the 2000 decennial census reported 97.6% of all occupied housing units in the United States had telephone service available, whereas the CPS data showed a penetration rate of 94.6% of households for March 2000. This difference is statistically significant and appears to indicate that the CPS value may be on the low side and the decennial census value may be on the high side, with the most probable value lying somewhere in between.

The specific questions asked in the CPS are: "Does this house, apartment, or mobile home have telephone service from which you can both make and receive calls? Please include cell phones, regular phones, and any other type of telephone."<sup>2</sup> And, if the answer to the first question is "no," this is followed up with, "Is there a telephone elsewhere on which people in this household can be called?" If the answer to the first question is "yes," the household is counted

---

2 The questions are intended to be neutral as to whether the household has wireline or wireless phones. Through November 2004, this question had been worded: "Is there a telephone in this house/apartment?" For the November 2001 survey, households were also asked which type(s) of phones they had. While the response rate was not sufficient for a complete reporting of the results of this follow-up question, 1.2% of the households indicated that they had only wireless phones. 5.9% of the households failed to answer this question. The CPS no longer asks this follow-up question on a regular basis. However, a similar question was again asked in February 2004 for a special supplement given to a portion of the sample. In that month, 4.9% of those completing the supplement indicated that they had only wireless phones. 12.5% of the households failed to complete the supplement, and when imputed responses of those households are included, the estimate of households with only wireless goes up to 6.0%. Because of the increasing number of households that have wireless only, there was some concern that some of these households may not think of their cell phones when asked if they have a telephone. Consequently, beginning in December 2004, CPS changed its telephone question to the wording given above. It is possible that some of the drop in the penetration rate between November 2004 and March 2005 is for households who had a phone, but did not have service.

as having a telephone "in unit." If the answer to either the first or second question is "yes," the household is counted as having a telephone "available." The "in unit" data are reported in all of the tables and charts in this report. The "available" data are also reported in Tables 3 through 12 and Charts 1 and 8.

Although the survey is conducted every month, not all questions are asked every month. The telephone questions are asked once every four months, in the month that a household is first included in the sample and in the month that the household re-enters the sample a year later. Since the sample is staggered, the reported information for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the Commission, based on the surveys conducted through March, July, and November of each year.

The CPS data are based on a nationwide sample of about 50 to 60 thousand households in the 50 states and the District of Columbia. (The CPS does not cover outlying areas that are not states, such as Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Northern Mariana Islands.) Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than 0.4% may be due to sampling error and cannot be regarded as statistically significant. As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.3% are not statistically significant at the 95% confidence level. When comparing annual averages, changes of less than or equal to 0.2% are not statistically significant. The annual averages are the average of the three surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater, because the sample sizes are smaller. This will require larger changes to yield statistical significance at the same confidence level.

The data in this report are not seasonally adjusted. After adjusting for the trend over time, there is an average seasonal variation of less than 0.2% among the reported months. All of the changes are below the threshold of statistical significance.

### **Results and Statistical Analysis**

Census Bureau figures for March 2005, the most recent data available, show that the percentage of households subscribing to telephone service is 92.4%. This figure is down 1.1% from November 2004. This decrease is statistically significant.

This report includes figures showing subscribership percentages by state, by the head of the household's age and race, by household size, by income, and, for adult individuals, by labor force status. The March 2005 data show that 93.2% of adult individuals in the civilian non-institutionalized population have a telephone in their household. This figure is down 1.2% from November 2004. This decrease is statistically significant.

This report contains twelve tables and eight charts presenting penetration statistics for various geographic and demographic characteristics. The charts and the first two tables present summaries of the information. Tables 3 through 7 present more detailed information. In these tables, only the annual averages are included for the years 1984 through 2002. March, July, and November data for those years are available in previous subscribership reports or Monitoring

Reports in CC Docket Nos. 87-339 or 98-202. Tables 8 through 12 provide information necessary to determine the statistical significance of changes in the penetration rates over time.

Table 1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 1 graphically depicts the nationwide penetration rates for households over time.

Table 2 summarizes the telephone penetration rates by state, showing the rates for November 1983 and March 2005, the change between those two months, and an indication as to whether the change is statistically significant. The statistical significance of a change is determined not only by the magnitude of that change, but also by the sizes of the samples used to estimate the change.

Chart 2 depicts the states with March 2005 penetration rates (as shown in Table 2) more than 1% below the national average, within 1% of the national average, or more than 1% above the national average.

Chart 3 depicts changes in household penetration rates by state (as shown in Table 2) between the November 1983 and March 2005 rates. States with statistically significant increases or decreases are shown, along with other states with increases or decreases.

Chart 4 depicts the relationship between telephone penetration and household income, using March 2005 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 4.

Chart 5 depicts the relationship between telephone penetration and household size, using March 2005 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 5.

Chart 6 depicts the relationship between telephone penetration and the head of the household's age, using March 2005 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.

Chart 7 depicts the relationship between telephone penetration and labor force status for civilian non-institutionalized adults, using March 2005 penetration rates for all adults and for white, black, and Hispanic adults. It is based on data in Table 7.

Chart 8 graphically depicts the nationwide penetration rates for civilian non-institutionalized adults over time. It is also based on data in Table 7.

Table 3 shows the CPS responses for the United States and for each state beginning with November 1983. Because the CPS began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which there is telephone service in the housing unit. The column headed "Avail." indicates the percentage of households which have telephone service available for incoming and outgoing calls, either in the housing unit or elsewhere (such as at work or at a neighbor's home).

Table 4 shows the nationwide penetration rates for households by income and the race of the head of the household. It shows a strong relationship between income and penetration. Caution should be used in comparing these figures over time, because these income levels are not adjusted for inflation. Thus, the same nominal income level at two points in time will reflect different real incomes in terms of purchasing power.<sup>3</sup> Also, the income categories have changed over time due to the changing value of the dollar.

Table 5 shows the nationwide penetration rates for households by the size of the household and the race of the head of the household. It shows that penetration is higher for households of 2 to 5 people than it is for single-person households or those with 6 or more people.

Table 6 shows the nationwide penetration rates for households by the age and race of the head of the household. It shows that the penetration rate is lowest for young and non-white households.

Table 7 shows the nationwide penetration rates for all persons that are at least 15 years old in the civilian non-institutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Tables 8 through 12 present the critical values at the 95% confidence level for testing the statistical significance of changes in penetration rates over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases, these critical values are very large because the sample sizes are very small for these subcategories, rendering the changes in estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently, the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys and hence have a lower standard error. When comparing annual averages of two consecutive years, the critical values should be multiplied by .46, taking into account both of the above factors.

---

3 Our publication *Telephone Penetration by Income by State* (last published March 10, 2005) makes adjustments for inflation, making comparisons over time more appropriate.

**Table 1**  
**Household Telephone Subscribership in the United States**

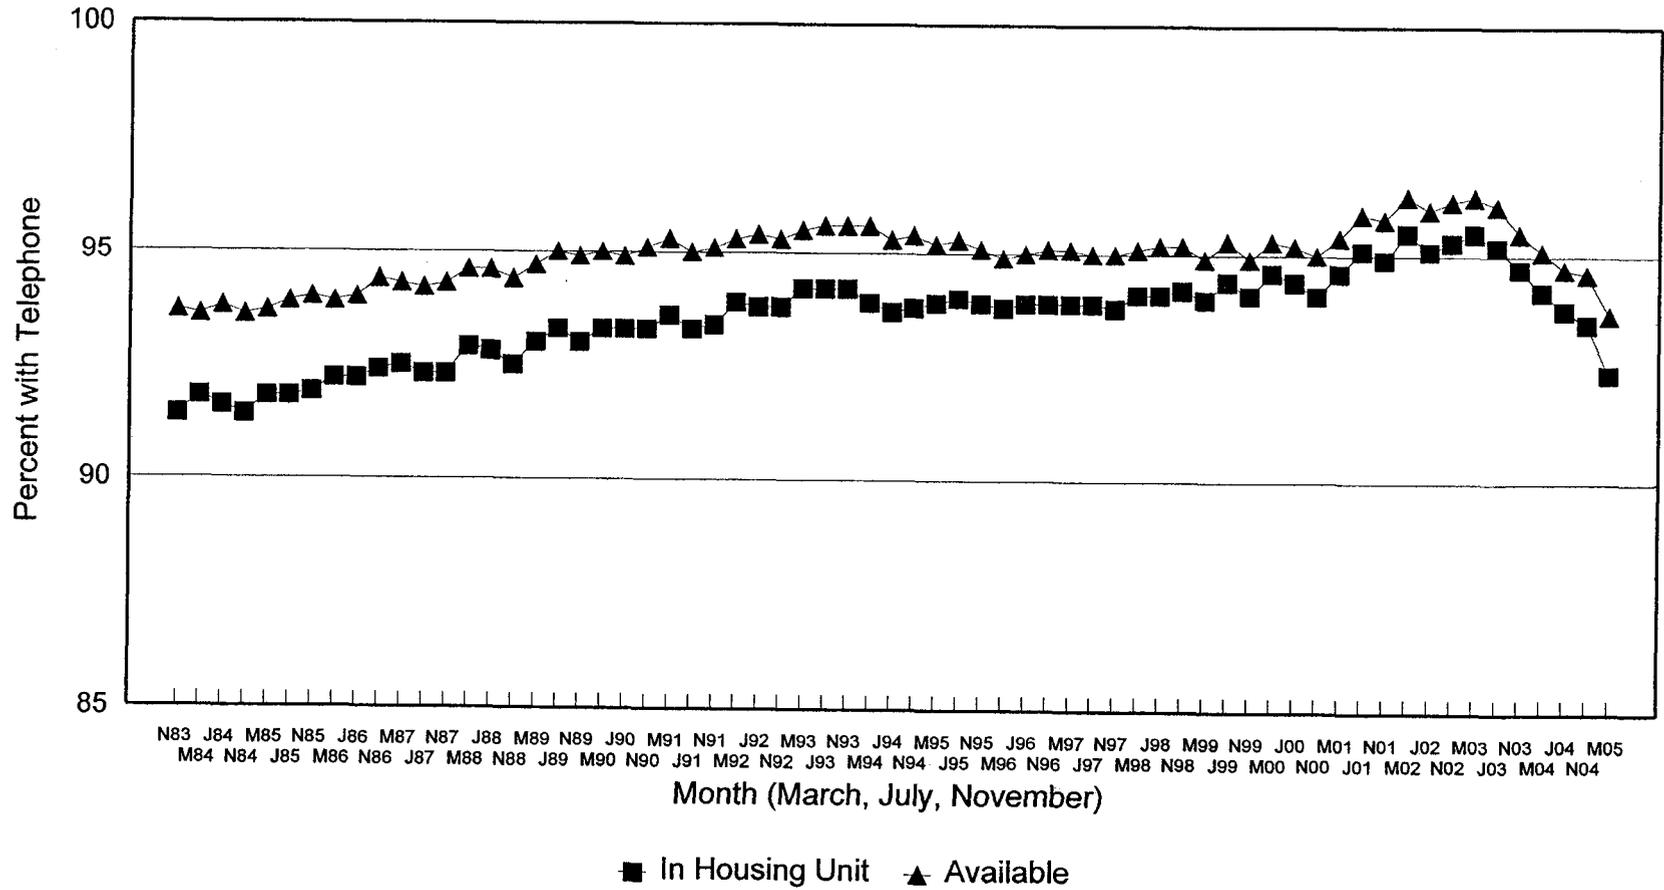

| Date          | Households (millions) | Households with Telephones (millions) | Percentage with Telephones | Households without Telephones (millions) | Percentage without Telephones |
|---------------|-----------------------|---------------------------------------|----------------------------|--|-------------------------------|
| November 1983 | 85.8                  | 78.4                                  | 91.4%                      | 7.4                                      | 8.6%                          |
| March 1984    | 86.0                  | 78.9                                  | 91.8%                      | 7.1                                      | 8.2%                          |
| July 1984     | 86.6                  | 79.3                                  | 91.6%                      | 7.3                                      | 8.4%                          |
| November 1984 | 87.4                  | 79.9                                  | 91.4%                      | 7.5                                      | 8.6%                          |
| March 1985    | 87.4                  | 80.2                                  | 91.8%                      | 7.2                                      | 8.2%                          |
| July 1985     | 88.2                  | 81.0                                  | 91.8%                      | 7.2                                      | 8.2%                          |
| November 1985 | 88.8                  | 81.6                                  | 91.9%                      | 7.2                                      | 8.1%                          |
| March 1986    | 89.0                  | 82.1                                  | 92.2%                      | 6.9                                      | 7.8%                          |
| July 1986     | 89.5                  | 82.5                                  | 92.2%                      | 7.0                                      | 7.8%                          |
| November 1986 | 89.9                  | 83.1                                  | 92.4%                      | 6.8                                      | 7.6%                          |
| March 1987    | 90.2                  | 83.4                                  | 92.5%                      | 6.8                                      | 7.5%                          |
| July 1987     | 90.7                  | 83.7                                  | 92.3%                      | 7.0                                      | 7.7%                          |
| November 1987 | 91.3                  | 84.3                                  | 92.3%                      | 7.0                                      | 7.7%                          |
| March 1988    | 91.8                  | 85.3                                  | 92.9%                      | 6.5                                      | 7.1%                          |
| July 1988     | 92.4                  | 85.7                                  | 92.8%                      | 6.7                                      | 7.2%                          |
| November 1988 | 92.6                  | 85.7                                  | 92.5%                      | 6.9                                      | 7.5%                          |
| March 1989    | 93.6                  | 87.0                                  | 93.0%                      | 6.6                                      | 7.0%                          |
| July 1989     | 93.8                  | 87.5                                  | 93.3%                      | 6.3                                      | 6.7%                          |
| November 1989 | 93.9                  | 87.3                                  | 93.0%                      | 6.6                                      | 7.0%                          |
| March 1990    | 94.2                  | 87.9                                  | 93.3%                      | 6.3                                      | 6.7%                          |
| July 1990     | 94.8                  | 88.4                                  | 93.3%                      | 6.4                                      | 6.7%                          |
| November 1990 | 94.7                  | 88.4                                  | 93.3%                      | 6.3                                      | 6.7%                          |
| March 1991    | 95.3                  | 89.2                                  | 93.6%                      | 6.1                                      | 6.4%                          |
| July 1991     | 95.5                  | 89.1                                  | 93.3%                      | 6.4                                      | 6.7%                          |
| November 1991 | 95.7                  | 89.4                                  | 93.4%                      | 6.3                                      | 6.6%                          |
| March 1992    | 96.6                  | 90.7                                  | 93.9%                      | 5.9                                      | 6.1%                          |
| July 1992     | 96.6                  | 90.6                                  | 93.8%                      | 6.0                                      | 6.2%                          |
| November 1992 | 97.0                  | 91.0                                  | 93.8%                      | 6.0                                      | 6.2%                          |
| March 1993    | 97.3                  | 91.6                                  | 94.2%                      | 5.7                                      | 5.8%                          |

## Customer Response

Publication: Telephone Subscribership in the United States (Data through March 2005)

You can help us provide the best possible information to the public by completing this form and returning it to the Industry Analysis and Technology Division of the FCC's Wireline Competition Bureau.

1. Please check the category that best describes you:

- press
- current telecommunications carrier
- potential telecommunications carrier
- business customer evaluating vendors/service options
- consultant, law firm, lobbyist
- other business customer
- academic/student
- residential customer
- FCC employee
- other federal government employee
- state or local government employee
- Other (please specify)

2. Please rate the report:

|                      | Excellent             | Good                  | Satisfactory          | Poor                  | No opinion            |

ANNOTATED  
TITLE XXVII. RAILROADS  
AND OTHER REGULATED  
UTILITIES (CHAPTERS  
350-368)  
CHAPTER 364.  
TELECOMMUNICATIONS  
COMPANIES  
PART I. GENERAL  
PROVISIONS**

*Current through Chapter 484 and H.J.R.  
No. 1 and S.J.R. No. 2394 (End) of 2004  
Special "A" Session of the Nineteenth  
Legislature*

**364.164. Competitive market enhancement**

(1) Each local exchange telecommunications company may, after July 1, 2003, petition the commission to reduce its intrastate switched network access rate in a revenue-neutral manner. The commission shall issue its final order granting or denying any petition filed pursuant to this section within 90 days. In reaching its decision, the commission shall consider whether granting the petition will:

(a) Remove current support for basic local telecommunications services that prevents the creation of a more attractive competitive local exchange market for the benefit of residential consumers.

(b) Induce enhanced market entry.

(c) Require intrastate switched network access rate reductions to parity over a period of not less than 2 years or more than 4 years.

(d) Be revenue neutral as defined in subsection (7) within the revenue category defined in subsection (2).

(2) If the commission grants the local exchange telecommunications company's petition, the local

exchange telecommunications company is authorized, notwithstanding, to immediately implement a revenue category mechanism consisting of basic local telecommunications service revenues and intrastate switched network access revenues to achieve revenue neutrality. The local exchange telecommunications company shall thereafter, on 45 days' notice, adjust the various prices and rates of the services within its revenue category authorized by this section once in any 12-month period in a revenue-neutral manner. An adjustment in rates may not be offset entirely by the company's basic monthly recurring rate. All annual rate adjustments within the revenue category established pursuant to this section must be implemented simultaneously and must be revenue neutral. The commission shall, within 45 days after the rate adjustment filing, issue a final order confirming compliance with this section, and such an order shall be final for all purposes.

\*43993 (3) Any filing under this section must be based on the company's most recent 12 months' pricing units in accordance with subsection (7) for any service included in the revenue category established under this section. The commission shall have the authority only to verify the pricing units for the purpose of ensuring that the company's specific adjustments, as authorized by this section, make the revenue category revenue neutral for each filing. Any discovery or information requests under this section must be limited to a verification of historical pricing units necessary to fulfill the commission's specific responsibilities under this section of ensuring that the company's rate adjustments make the revenue category revenue neutral for each annual filing.

(4) This section does not affect the local exchange telecommunications company's exemptions pursuant to s. 364.051(1)(c) or authorize any local exchange telecommunications company to increase the cost of local exchange services to any person providing services under s. 364.3375.

(5) As used in this section, the term "parity" means that the local exchange telecommunications company's intrastate switched network access rate

is equal to its interstate switched network access rate in effect on January 1, 2003, if the company has more than 1 million access lines in service. If the company has 1 million or fewer access lines in service, the term "parity" means that the company's intrastate switched network access rate is equal to 8 cents per minute. This section does not prevent the company from making further reductions in its intrastate switched network access rate, within the revenue category established in this section, below parity on a revenue-neutral basis, or from making other revenue-neutral rate adjustments within this category.

(6) As used in this section, the term "intrastate switched network access rate" means the composite of the originating and terminating network access rate for carrier common line, local channel/entrance facility, switched common transport, access tandem switching, interconnection charge, signaling, information surcharge, and local switching.

(7) As used in this section, the term "revenue neutral" means that the total revenue within the revenue category established pursuant to this section remains the same before and after the local exchange telecommunications company implements any rate adjustments under this section. Calculation of revenue received from each service before the implementation of any rate adjustment must be made by multiplying the then-current rate for each service by the most recent 12 months' actual pricing units for each service within the category, without any adjustments to the number of pricing units. Calculation of revenue for each service to be received after implementation of rate adjustments must be made by multiplying the rate to be applicable for each service by the most recent 12 months' actual pricing units for each service within the category, without any adjustments to the number of pricing units. Billing units associated with pay telephone access lines and Lifeline service may not be

included in any calculation under this subsection.

**\*43994** (8) If either the Federal Communications Commission or the commission issues a final order determining that voice-over-Internet protocol service or a functionally equivalent service shall not be subject to the payment of switched network access rates pursuant to a local exchange telecommunications company tariff or interconnection agreement or other law, the provisions of subsection (2) shall immediately become operative as if the commission had granted a petition pursuant to subsection (1). Any local exchange telecommunications company subject to this section shall be authorized to reduce its switched network access rates to the company's authorized local reciprocal compensation rates in a revenue-neutral manner, pursuant to subsections (2)-(7), in the shortest remaining timeframe allowable under this section.

Exp Assignment

Use this sheet to vary the proportion of expenses assigned to loop-related network elements on the basis of lines and on the basis of direct expenses, respectively. Change only the % assigned "per line" -- the "per direct cost" will be calculated.

|  | Total Annual Amount assigned to loops | % to be assigned per line | % to be assigned per direct cost | Annual Amount to be assigned per line | Annual Amount to be assigned per direct cost |
|--|---------------------------------------|---------------------------|----------------------------------|---------------------------------------|--|

| Total Operating Expense per Line | \$ 17.63       | \$ 15.05       |       |
| Total Cost per Line              | \$ 61.52 72.76 | \$ 56.94 53.51 | 41.32 |
| Gross Receipts Tax <sup>2</sup>  | \$ 1.08        | \$ 0.83        |       |

#### Line Data

|                                  |        |
|----------------------------------|--------|
| Average Loop Length in Feet      | 30,685 |
| Lines Above \$4K Loop Investment | 2,857  |
| Number of Households             | 53,054 |
| Number of Residential Lines      | 64,372 |
| Number of Single Business Lines  | 2,636  |
| Multiple Business Lines          | 14,265 |
| Non Switched Lines               | 0      |
| Total GRID Lines Served          | 81,273 |

GRIDs with Average Loop Investment per line over \$4,350 are capped at \$4,350.  
 Application varies so much on a state by state basis, it is not included in the Monthly Cost.

**WEST'S FLORIDA STATUTES  
ANNOTATED  
TITLE XXVII. RAILROADS  
AND OTHER REGULATED  
UTILITIES (CHAPTERS  
350-368)  
CHAPTER 364.  
TELECOMMUNICATIONS  
COMPANIES  
PART I. GENERAL  
PROVISIONS**

*Current through Chapter 484 and H.J.R.  
No. 1 and S.J.R. No. 2394 (End) of 2004  
Special "A" Session of the Nineteenth  
Legislature*

**364.025. Universal service**

(1) For the purposes of this section, the term "universal service" means an evolving level of access to telecommunications services that, taking into account advances in technologies, services, and market demand for essential services, the commission determines should be provided at just, reasonable, and affordable rates to customers, including those in rural, economically disadvantaged, and high-cost areas. It is the intent of the Legislature that universal service objectives be maintained after the local exchange market is opened to competitively provided services. It is also the intent of the Legislature that during this transition period the ubiquitous nature of the local exchange telecommunications companies be used to satisfy these objectives. Until January 1, 2009, each local exchange telecommunications company shall be required to furnish basic local exchange telecommunications service within a reasonable time period to any person requesting such service within the company's service territory.

(2) The Legislature finds that each telecommunications company should contribute its fair share to the support of the universal service objectives and carrier-of-last-resort obligations. For a transitional period not to exceed January 1, 2009, the interim mechanism for maintaining

universal service objectives and funding carrier-of-last-resort obligations shall be established by the commission, pending the implementation of a permanent mechanism. The interim mechanism shall be applied in a manner that ensures that each competitive local exchange telecommunications company contributes its fair share to the support of universal service and carrier-of-last-resort obligations. The interim mechanism applied to each competitive local exchange telecommunications company shall reflect a fair share of the local exchange telecommunications company's recovery of investments made in fulfilling its carrier-of-last-resort obligations, and the maintenance of universal service objectives. The commission shall ensure that the interim mechanism does not impede the development of residential consumer choice or create an unreasonable barrier to competition. In reaching its determination, the commission shall not inquire into or consider any factor that is inconsistent with s. 364.051(1)(c). The costs and expenses of any government program or project required in part II of this chapter shall not be recovered under this section.

\*43905 (3) If any party, prior to January 1, 2009, believes that circumstances have changed substantially to warrant a change in the interim mechanism, that party may petition the commission for a change, but the commission shall grant such petition only after an opportunity for a hearing and a compelling showing of changed circumstances, including that the provider's customer population includes as many residential as business customers. The commission shall act on any such petition within 120 days.

(4)(a) Prior to January 1, 2009, the Legislature shall establish a permanent universal service mechanism upon the effective date of which any interim recovery mechanism for universal service objectives or carrier-of-last-resort obligations imposed on competitive local exchange telecommunications companies shall terminate.

(b) To assist the Legislature in establishing a permanent universal service mechanism, the commission, by February 15, 1999, shall

determine and report to the President of the Senate and the Speaker of the House of Representatives the total forward-looking cost, based upon the most recent commercially available technology and equipment and generally accepted design and placement principles, of providing basic local telecommunications service on a basis no greater than a wire center basis using a cost proxy model to be selected by the commission after notice and opportunity for hearing.

(c) In determining the cost of providing basic local telecommunications service for small local exchange telecommunications companies, which serve less than 100,000 access lines, the commission shall not be required to use the cost proxy model selected pursuant to paragraph (b) until a mechanism is implemented by the Federal Government for small companies, but no sooner than January 1, 2001. The commission shall calculate a small local exchange telecommunications company's cost of providing basic local telecommunications services based on one of the following options:

1. A different proxy model; or

2. A fully distributed allocation of embedded costs, identifying high-cost areas within the local exchange area the company serves and including all embedded investments and expenses incurred by the company in the provision of universal service. Such calculations may be made using fully distributed costs consistent with 47 C.F.R. parts 32, 36, and 64. The geographic basis for the calculations shall be no smaller than a census block group.

(5) After January 1, 2001, a competitive local exchange telecommunications company may petition the commission to become the universal service provider and carrier of last resort in areas requested to be served by that competitive local exchange telecommunications company. Upon petition of a competitive local exchange telecommunications company, the commission shall have 120 days to vote on granting in whole or in part or denying the petition of the competitive local exchange company. The commission may establish the competitive local

exchange telecommunications company as the universal service provider and carrier of last resort, provided that the commission first determines that the competitive local exchange telecommunications company will provide high-quality, reliable service. In the order establishing the competitive local exchange telecommunications company as the universal service provider and carrier of last resort, the commission shall set the period of time in which such company must meet those objectives and obligations.

VI. COST PROXY MODEL RESULTS

A. LECS With Greater Than 100,000 Access Lines

In the first part of this section, we address which local exchange companies must use the cost proxy model that we have selected in this proceeding, the BCPM 3.1. The answer is quite simple. Sections 364.025(4)(b) and (c), Florida Statutes, clearly indicate that all companies with 100,000 or greater access lines must use the cost proxy model selected. Those companies with fewer than 100,000 access lines may use the cost proxy model at our discretion. The parties unanimously concur that BellSouth, GTEFL, and Sprint are the only three local exchange companies that meet this criterion and must use the cost proxy model. Therefore, we find that BellSouth, GTEFL, and Sprint must use the cost proxy model selected in this proceeding.

In Section III of this Order, we ordered the BCPM sponsors to make certain structural changes to the model, primarily associated with minimizing the gap between the amount of facilities built by the plant versus the required amount indicated by a minimum spanning tree (MST) analysis. In addition, we required that the sponsors submit a revised version of the model (on CD-ROM), and model runs reflecting our approved inputs with the revised MST analyses. Further, in Section V of this Order, we required that certain adjustments be made to some input values filed in this proceeding (notably, the removal of inflation/deflation values embedded in some of BellSouth's inputs). Accordingly, given the compressed schedule associated with preparing the report to the Legislature that reflects our decisions in this proceeding, we require that BCPM sponsors submit these compliance filings no later than January 12, 1999.

Due to the required structural changes to the model, we are unable to provide final cost proxy model results. Appendix B to this Order shall be filed with the report to the Legislature and will contain the final cost proxy model results.

B. LECS With 100,000 Or Fewer Access Lines

Methodology

ALLTEL witness Curry sponsored the universal service embedded cost methodology used by all of the small local exchange companies

(small LECs) in this proceeding. These companies include ALLTEL Florida (ALLTEL), Vista-United Telecommunications (Vista-United), Northeast Florida Telephone Company (Northeast), Frontier Communications of the South, Inc. (Frontier), TDS Telecom/Quincy (TDS), GTC Inc. (GTC), and ITS Telecommunications Systems, Inc. (ITS) Witness Curry states that all of the small LECs used Part 36 jurisdictional separations procedures in developing the embedded costs for each of the companies, and he believes that the small LEC methodology satisfies the legislative requirements for embedded studies. Witness Curry adds that rural LECs are to continue to calculate their interstate Universal Service Costs using embedded costs until at least January 1, 2001.

As witness Curry describes in his direct testimony, all of the small LECs used an 11.25% return on net investment. Modifications were also made by the small LECs to the Part 36 universal cost study including assigning 100% of non-traffic sensitive plant to the state jurisdiction along with non-traffic sensitive local switching equipment. The small LEC methodology excluded private line costs as well as all expenses, investments and reserves associated with pay telephones.

Witness Curry states that the cost proxy models are not appropriate for the small rural LECs, because the proxy models are not representative of the small company costs. He states that because one cannot re-create the network with new plant in reality, higher costs for new technology in the proxy models versus the lower costs of older technology in an embedded network causes the proxy model results to be higher. Witness Curry explains that while electronic costs are declining, copper and the installation costs are increasing. He also argues that when one compares loop plant that averages twenty years old to new plant, the proxy models with new plant are going to be significantly higher.

Witness Curry's embedded cost methodology adopted by the small LECs generally assigns the same types of costs to universal service as do the proxy models used by the larger LECs. When witness Curry was asked why 100% of the non-traffic sensitive plant was assigned to the state jurisdiction, he responded as follows:

If you look at the proxy models or any other of these cost models, that's the way they're assigning costs in there. What we try to do is parallel the embedded cost of service study

with the proxy model methodology, and that's what that is right there.

Witness Curry described the similarities between his embedded cost methodology and the cost proxy models in the following manner:

Well, basically the proxy models, again, they take all the non-traffic sensitive costs and assign it to the cost of universal service. In addition, traffic-sensitive costs associated with local switching are assigned by a factor that equates to local usage through the end-office switch, and that's basically the cost drivers in the embedded cost study also.

#### Adjustments

Although we will not require major adjustments to the general methodology proposed by the small LECs, we will require numerous adjustments to the monthly cost per access line amounts filed by the companies. Each company states that its calculations are based on the same methodology. There were several differences, however, between the companies. ALLTEL, GTC, ITS and Northeast included Allowance For Funds Used During Construction (AFUDC) in the calculations and the other small LECs did not. ALLTEL, ITS, TDS and Vista included account 7370 Special Charges while the others did not. Account 7370 includes costs such as lobbying and contributions. We have removed AFUDC and account 7370 from the revenue requirements calculation, which is consistent with our normal method of calculating revenue requirements. Only Northeast included uncollectible revenue. Uncollectible revenues were added for the other companies. None of the companies included the amount of gross receipts tax which corresponds to the revenue of the company. Therefore, we recalculated gross receipts tax for all companies.

Some of the adjustments have been made to make the calculation of costs consistent with our usual method of calculating revenue requirements. For example, the amount of working capital was adjusted for each company to the amount computed using the balance sheet method. This resulted in increases for GTC and ITS and decreases for ALLTEL, Northeast and TDS to working capital.

Company-specific adjustments were necessary for several of the companies. Frontier's filed amounts were for total company and had to be adjusted to reflect local amounts only. We corrected the property taxes and also included interest expense in Frontier's amounts. ITS Telecommunication's Systems, Inc.'s ratebase and expenses were reduced to reflect Contributions in Aid of Construction, which was not included by the company. Northeast's deferred taxes were reduced to properly match the amounts on the company's balance sheet.

For the small LECs, the average for corporate operations expense is \$6.88 per line per month. For Northeast and ITS, the amounts are \$15.31 and \$30.74 per line per month, respectively. According to witness Curry, the Federal Communications Commission (FCC) limits the amount of corporate expense per access line which a company is allowed for federal high cost fund purposes. In Florida, only ITS's and Northeast's corporate expenses exceed the limit. We have made an adjustment to limit the amount of corporate expenses included in the calculations of costs for ITS and Northeast, based on the FCC's methodology. This adjustment results in a reduction of the monthly local costs of \$.62 and \$3.56 for Northeast and ITS, respectively. Even after making this adjustment, Northeast's and ITS's corporate expenses are well above the statewide average for small LECs. Northeast's and ITS's embedded costs per access line shown on Table VI-2 exceed the results of the BCPM model due to the high amount of corporate expenses. The FCC limits corporate expenses, since they are often discretionary and subject to management control. We agree with the FCC and believe that it is reasonable to limit the amount of corporate expense allowed for calculating the amount of high cost support which a company may need for intrastate purposes. For purposes of this Order, we are limiting corporate expenses based on the FCC's methodology. However, if an intrastate universal service fund is implemented, we recommend that a further review of the allowable amount of corporate expenses be conducted.

In 1996, the operations of three companies (St. Joseph Telephone & Telegraph Company, Gulf Telephone Company and The Florida Telephone Company, Inc.) were purchased and merged into GTC, Inc. (GTC). For purposes of this proceeding, the three former companies have been reported separately. After the purchase, the net plant (ratebase) recorded on the books of GTC was increased to reflect a higher value. GTC has not provided any justification to increase its ratebase above the original cost of the assets.

ORDER NO. PSC-99-0068-FOF-TP  
DOCKET NO. 980696-TP  
PAGE 240

Therefore, we have adjusted the ratebases for the GTC divisions to original cost.

#### Capital Structure and Return on Equity

As discussed earlier, all of the small LECs used an overall cost of capital of 11.25% for purposes of this proceeding. No witnesses appearing on behalf of the small LECs offered any testimony supporting the capital structure, cost of debt, or cost of equity underlying the assumed 11.25% rate of return. Moreover, there was no evidence presented to support the reasonableness of the 11.25% return other than the fact that this was the default rate established by the FCC in September 1990.

In FCC Report No. CC 98-33 (Docket No. 98-166) issued October 5, 1998, the FCC announced that it was seeking comment on how the formula for calculating the authorized rate of return for local telephone companies should be modified to reflect current market conditions. Since the time of the FCC's determination of the 11.25% rate of return, 30-year Treasury bond rates have fallen 380 basis points from an average of 8.99% in September 1990 to an average of 5.19% in September 1998. AT&T/MCI witness Hirshleifer testified that given the significant decline in capital costs as indicated by the drop in yields on 30-year Treasury bonds, there is no evidence to support 11.25% as the true cost of capital for the provision of universal service.

To be consistent with our use of the embedded cost studies filed by the small LECs for purposes of determining the cost of providing local service, we have used the company-specific debt and equity amounts and embedded cost of debt in determining the appropriate cost of capital for each of these companies. The one exception is the determination of the return on equity (ROE). The estimation of an appropriate ROE is the one input that is the same regardless of whether the return is used in an embedded cost study or a forward-looking cost model.

Because no evidence was presented by the small LECs regarding an appropriate ROE for purposes of this proceeding, it is necessary to estimate a reasonable return. Based upon our analysis in Section V-B of this Order, we shall require an ROE of 11.50% be used for determining the overall cost of capital. Because the purpose of this proceeding is essentially to determine the cost of providing service to high cost areas, it is reasonable to assume

the cost of equity for this limited purpose would be the same for all efficient providers of telecommunications service.

Rural Telephone Bank stock was removed from the rate base and included as part of the capital structure. We used the company-specific debt and equity amounts, embedded cost of debt, and an ROE of 11.50% for determining the appropriate cost of capital for each company. The one exception was the determination of the cost of capital for Vista-United. Because Vista-United filed a capital structure comprised of 100% equity, it was necessary to use a hypothetical capital structure to determine the appropriate cost of capital for an efficient provider of universal service. Consistent with our determination in Section V-B of this Order, we shall require a relative capital structure of 60% equity and 40% debt, a cost of debt of 6.50%, and an ROE of 11.50% to determine Vista-United's cost of capital. The return resulting from these assumptions represents an appropriate cost of capital for an efficient provider of universal service.

Results

Table VI-1 shows the cost of basic local telecommunications service per access line per month as filed by the small LECs, the cost after our modifications as described above, and the cost based on BCPM defaults.

**Table VI-1:  
Comparison of Results: Embedded Costs vs. Cost Proxy Model**

| COMPANY       | EMBEDDED COST PER ACCESS LINE |                | BCPM DEFAULTS |
|---------------|-------------------------------|----------------|---------------|
|               | Per Company                   | Per Commission |               |
| ALLTEL        | \$ 41.97                      | \$ 41.32       | \$ 66.37      |
| Frontier      | \$ 56.13                      | \$ 44.30       | \$ 77.96      |
| GTC - Florala | \$ 49.81                      | \$ 42.18       | \$ 96.34      |
| GTC - Gulf    | \$ 38.07                      | \$ 33.43       | \$ 64.69      |
| GTC - St. Joe | \$ 44.16                      | \$ 38.99       | \$ 66.85      |
| ITS           | \$ 71.00                      | \$ 65.50       | \$ 51.76      |
| Northeast     | \$ 65.39                      | \$ 55.43       | \$ 55.39      |

| COMPANY      | EMBEDDED COST PER ACCESS LINE |                | BCPM DEFAULTS |
|--------------|-------------------------------|----------------|---------------|
|              | Per Company                   | Per Commission |               |
| Quincy       | \$ 44.40                      | \$ 42.81       | \$ 50.82      |
| Vista-United | \$ 66.54                      | \$ 63.34       | \$ 31.36      |

The amounts shown above in the column labeled "per Commission" are the results of using the small LEC methodology and our adjustments. Those amounts should be reported as the 1997 embedded costs of basic local telecommunications service using the small LEC sponsored methodology. The amounts are based on 1997 costs. Costs change from year to year, and the general trend has been a decline in costs. Therefore, these costs should be updated and reviewed before any use is made of the results.

The embedded cost methodology proposed by the small LECs and adjusted by us generally produces a lower cost for basic local service than the outputs of the models. We believe that it is appropriate to use the lower costs. It does not seem reasonable to provide the small LECs with more financial support than they need based on embedded costs. Providing the companies with more support than needed will not necessarily increase competition in the high cost areas. If the embedded costs of the incumbent LEC are lower than the costs of a new entrant, then the incumbent LEC has a cost advantage and will be able to underprice the new entrant and likely keep out competition. Providing the same amount of support per access line to both the incumbent LEC and the new entrant does not help the new entrant overcome any cost advantage of the incumbent LEC.

The amounts do not represent just the cost of basic local telecommunications service. The small LEC methodology does not separate out the costs of certain services such as call waiting and call forwarding. It also does not remove the costs for other services such as nonrecurring services or operator services, which are charged for separately. We nevertheless believe the small LEC methodology is appropriate, and we are not recommending a different definition of basic local telecommunications service than found in Section II of this Order. However, the small LEC methodology does generally produce lower costs than the proxy models.

Conclusion

Section 364.025(4)(c) states as follows:

(c) In determining the cost of providing basic local telecommunications service for small local exchange telecommunications companies, which serve less than 100,000 access lines, the commission shall not be required to use the cost proxy model selected pursuant to paragraph (b) until a mechanism is implemented by the Federal Government for small companies, but no sooner than January 1, 2001. The commission shall calculate a small local exchange telecommunications company's cost of providing basic local telecommunications services based on one of the following options:

1. A different proxy model; or
2. A fully distributed allocation of embedded costs, identifying high-cost areas within the local exchange area the company serves and including all embedded investments and expenses incurred by the company in the provision of universal service. Such calculations may be made using fully distributed costs consistent with 47 C.F.R., sections 32, 36, and 64. The geographic basis for the calculations shall be no smaller than a census block group.

Therefore, for the purpose of fulfilling our statutory obligation under Section 364.025(4)(c), we will choose between a fully allocated, embedded cost study or a cost proxy model different than the one selected for the three LECS with 100,000 or greater access lines. Upon consideration, we shall determine the cost of basic local telecommunications service for each of the Florida LECs that serve fewer than 100,000 access lines using the embedded cost methodology proposed by witness Curry, with the modifications discussed above. The resulting costs are shown below in Table VI-2:

Table VI-2:

| Company      | 1997 Costs per<br>Access Line<br>per Month |
|--------------|--|
| ALLTEL       | \$41.32                                    |
| Frontier     | \$44.30                                    |
| GTC-Floralá  | \$42.18                                    |
| GTC-Gulf     | \$33.43                                    |
| GTC-St. Joe  | \$38.99                                    |
| ITS          | \$65.50                                    |
| Northeast    | \$55.43                                    |
| Quincy       | \$42.81                                    |
| Vista-United | \$63.34                                    |

As stated above, we will not use a different cost proxy model as Section 364.025(4)(c), Florida Statutes, permits. We will, however, provide the results for the small LECs using the BCPM 3.1 cost proxy model with the Commission-ordered input values. There was concern raised regarding the use of an embedded cost methodology to determine forward-looking costs for universal service for any local telecommunications service provider, whether large or small. Therefore, we will provide to the Legislature the results for the small LECs using the BCPM with its Commission-ordered input values in Appendix B with our report.

VII. CONCLUSION

We have conducted this proceeding under Chapter 120, Florida Statutes, and the directives of Section 364.025(4)(b) and (c), Florida Statutes. We have based our decision on the evidentiary record before us, the briefs of the parties, and the advisory recommendation of our staff. We believe that our decision is consistent with legislative mandate. This Order will be attached

NOTICE OF PROPOSED AGENCY ACTION  
ORDER REVISING DEPRECIATION  
RATES AND RECOVERY SCHEDULES

BY THE COMMISSION:

NOTICE IS HEREBY GIVEN by the Florida Public Service Commission that the action discussed herein is preliminary in nature and will become final unless a person whose interests are substantially affected files a petition for a formal proceeding, pursuant to Rule 25-22.029, Florida Administrative Code.

Background

ALLTEL Florida, Inc.'s (ALLTEL's) current depreciation rates and recovery schedules have been effective since January 1, 1993. Since then, ALLTEL's planning and net plant balances have changed. These changes require revision of the currently approved depreciation rates and recovery schedules.

Reserve Allocations

ALLTEL has discovered that the reserve for each of its amortizable general support asset accounts is misstated. Although these accounts were established correctly in 1988, an error was made in determining the annual expenses. ALLTEL reviewed each of these accounts and has revised its data to correct the reserve levels. As a result, there is a reserve surplus of \$137,598. ALLTEL proposes to allocate this amount to reduce the reserve deficit in Metallic Buried Cable. We believe that its proposal is appropriate. The approved allocations are shown on Attachment A.

Recovery Schedules

ALLTEL's last depreciation study allowed for the recovery of six digital switches expected to retire between 1993 and 1995. As of January 1996, ALLTEL had only retired the Alachua and Florahome switches. ALLTEL projects that it will retire the Dowling Park switch by year-end 1997. ALLTEL proposes extending the recovery period of the existing schedule through December 31, 1999. Although it does not have firm retirement dates for three of these switches, ALLTEL expects to retire them within five years.

Our practice is to allow recovery of investments scheduled to be retired within three years. In this instance, only the Dowling Park switch falls into this category. Accordingly, we find that only the net investments associated with the Dowling Park switch should be recovered.

A review of the existing recovery schedule indicates that expenses were not adjusted to reflect changes in activity. As a result, Dowling Park has an unrecovered investment of \$28,931 as of January 1, 1996. We approve a two-year recovery period, since that matches the projected remaining life of the switch. The recovery amount and monthly expenses for this recovery schedule are estimates based on current projections. Actual incurred net salvage may differ from that projected. If the remaining life or net salvage value change, the recovery schedule expenses should be revised to reflect the difference.

ALLTEL retired the Florahome switch at year-end 1995, leaving a shortfall of \$77,095 to accumulated reserve. This shortfall should be recovered during 1996.

Subsequent to filing its study, ALLTEL undertook to identify and inventory the equipment booked to Account No. 2311.2, Station Apparatus - Network Terminal Equipment. It found that all equipment associated with this investment had been retired. In order to correct its accounts, ALLTEL should record an inventory adjustment for 1996. This will result in a reserve shortfall of approximately \$4,000, which we believe should be recovered in 1996.

The approved recovery schedules are shown on Attachment B. These schedules allow for the recovery of unrecovered investments resulting from a digital switch retirement in 1995, a planned switch retirement in 1997, and an inventory adjustment.

Appropriate Lives, Net Salvages, Reserves,  
and Depreciation Rates Per Account

In general, we agree with ALLTEL's depreciation study. One minor difference exists regarding analog circuit: ALLTEL rounded the reserve to one decimal place; we believe that the reserve should be rounded to two decimal places.

The major change to expense derives from alterations in ALLTEL's projections for the retirement of digital switching equipment. As discussed above, ALLTEL projected that it would retire six switches between 1993 and 1995. It has already retired two of the switches, and intends to retire a third in 1997. Retirement dates for the remaining three switches are uncertain; however, ALLTEL expects to retire them after 1997. We believe that these investments should be transferred to the digital switching account. The approved remaining lives reflect the inclusion of these investments.

Currently, analog circuit equipment is divided among two subaccounts. Digital circuit equipment is divided among four. ALLTEL proposes to combine these subaccounts into two single accounts: analog and digital.

ALLTEL's investment in analog circuit equipment is steadily declining. Beginning in 1990, the average annual retirements exceeded \$250,000. In contrast, additions for each of the last three years were less than \$50,000. Some analog equipment may remain in service well into the next century. However, the total investment in analog circuit equipment will continue to decline. As this equipment is phased out, the distinctions between the different types will diminish.

ALLTEL's investment in digital circuit equipment continues to grow. However, the newer digital switches have digital circuit functions incorporated into their operational capability. Accordingly, future growth in digital circuits may slow as new switches are installed. Due to these circumstances, we agree with ALLTEL's proposal to maintain analog and digital circuits in separate single accounts.

The approved lives, net salvages, reserves, and resulting depreciation rates are depicted on Attachment C.

ORDER NO. PSC-96-0680-FOF-TL  
DOCKET NO. 950887-TL  
PAGE 4

Amortization of Investment Tax Credits (ITCs)  
and Flowback of Excess Deferred Income taxes

Section 46(f)(6), Internal Revenue Code, states that the amortization of ITCs should be determined by the period of time used in computing depreciation expense for purposes of reflecting regulated operating results of the utility. Since we have approved changes in depreciation rates, it is also necessary to revise the amortization of ITCs.

In addition, Section 203(e) of the Tax Reform Act of 1986 (TRA) prohibits rapid write-back of protected (depreciation related) deferred taxes. Moreover, under Rule 25-14.013, Florida Administrative Code, Accounting for Deferred Income Taxes under SFAS 109, excess deferred income taxes associated with temporary differences may not be reversed any faster than allowed under Section 203(e) of the TRA, absent good cause shown.

Accordingly, the current amortization of ITCs and the flowback of excess deferred income taxes should be revised to reflect the approved depreciation rates and recovery schedules. The flowback of excess deferred taxes should also be revised to comply with Section 203(e) of the TRA and Rule 25-14.013, Florida Administrative Code. ALLTEL should file detailed calculations of the revised ITC amortization and flowback of excess deferred taxes at the time it files its December 1997 surveillance report.

It is, therefore,

ORDERED by the Florida Public Service Commission that ALLTEL Florida, Inc.'s 1995 depreciation study is approved, as modified in the body of this Order, effective January 1, 1996. It is further

ORDERED that the appropriate reserve allocations for the amortizable general support asset accounts are those depicted on Attachment A to this Order. It is further

ORDERED that the appropriate schedules for the recovery of unrecovered investments associated with digital switch retirements and an inventory adjustment are those depicted on Attachment B to this Order. It is further

ORDERED that the appropriate lives, net salvages, reserves, and resulting depreciation rates are those depicted on Attachment C to this Order. It is further

ORDER NO. PSC-96-0680-FOF-TL  
DOCKET NO. 950887-TL  
PAGE 5

ORDERED that ALLTEL Florida, Inc. shall revise the current amortization of investment tax credits and the flowback of excess deferred income taxes to reflect the approved depreciation rates and recovery schedules. It is further

ORDERED that ALLTEL Florida, Inc. shall revise the flowback of excess deferred taxes to comply with Section 203(e) of the Tax Reform Act of 1986 and Rule 25-14.013, Florida Administrative Code. It is further

ORDERED that ALLTEL Florida, Inc. shall file detailed calculations of the revised investment tax credit amortization and flowback of excess deferred taxes at the time it files its December 1997 surveillance report. It is further

ORDERED that, unless a person whose interests are substantially affected by the action proposed herein files a petition in the form and by the date specified in the Notice of Further Proceedings or Judicial Review, this Order shall become final and this docket shall be closed on the following date.

By ORDER of the Florida Public Service Commission, this 23rd day of May, 1996.

/s/ Blanca S. Bayó

BLANCA S. BAYÓ, Director  
Division of Records and Reporting

NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW

The Florida Public Service Commission is required by Section 120.59(4), Florida Statutes, to notify parties of any administrative hearing or judicial review of Commission orders that is available under Sections 120.57 or 120.68, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing or judicial review will be granted or result in the relief sought.

The action proposed herein is preliminary in nature and will not become effective or final, except as provided by Rule 25-22.029, Florida Administrative Code. Any person whose substantial interests are affected by the action proposed by this order may file a petition for a formal proceeding, as provided by Rule 25-22.029(4), Florida Administrative Code, in the form provided by Rule 25-22.036(7)(a) and (f), Florida Administrative Code. This petition must be received by the Director, Division of Records and Reporting, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on June 13, 1996.

In the absence of such a petition, this order shall become effective on the day subsequent to the above date as provided by Rule 25-22.029(6), Florida Administrative Code.

Any objection or protest filed in this docket before the issuance date of this order is considered abandoned unless it satisfies the foregoing conditions and is renewed within the specified protest period.

If this order becomes final and effective on the date described above, any party substantially affected may request judicial review by the Florida Supreme Court in the case of an electric, gas or telephone utility or by the First District Court of Appeal in the case of a water or wastewater utility by filing a notice of appeal with the Director, Division of Records and Reporting and filing a copy of the notice of appeal and the filing fee with the appropriate court. This filing must be completed within thirty (30) days of the effective date of this order, pursuant to Rule 9.110, Florida Rules of Appellate Procedure. The notice of appeal must be in the form specified in Rule 9.900(a), Florida Rules of Appellate Procedure.

## 1. INTRODUCTION

Universal service is a chameleon-like phrase. It refers generally to widespread access to and affordability of telecommunications services, but it takes on different meanings depending on the time and the place, and the particular policy debate. AT&T president Theodore Vail coined the phrase in 1907 to refer to the company's goal of achieving an integrated centrally-controlled telephone network, but today in the United States and other developed countries the phrase essentially means high household telephone penetration (Mueller 1997). In less developed countries, where telephone penetration is low, the phrase more likely means good access to pay telephones (Hudson 1995). Recent universal service initiatives in the United States subsidize high-speed Internet access for schools, libraries, and health centers (Hausman 1998). And in the blue sky of the future, universal service may come to mean high residential penetration of broadband Internet access.

Since this landscape is too big to cover succinctly, this chapter focuses on the "paradigm problem" of advancing and maintaining universal service for basic residential telephone services in the United States in the late 20th century. The focus seems appropriate, if for no other reason than because this is where academic economic research has concentrated its attention. Moreover, some of the issues addressed by the chapter have wider applicability. For example, there is a "deadweight loss" of economic efficiency from taxing regular telephone service in order to subsidize advanced services (Hausman 1998). The chapter makes some international comparisons, and mentions a few emerging issues, but the reader is forewarned not to expect too much on these fronts.

Universal residential telephone service is an important and complex policy issue because large amounts of consumer welfare and corporate profits are at stake in the design of regulatory policies in the pursuit of universal service (Hausman 1998), and because important noneconomic values, like political democracy and social cohesion, are prominent in the policy debates. This volatile mix of elements makes for highly charged political debates on universal service policies, often with the Federal Communications Commission (FCC) at the center.<sup>2</sup> Economic arguments matter in these debates, even when noneconomic values have great salience, making universal service a worthy policy problem for applied economic analysis. What are the economic determinants of telephone penetration? What are the economic arguments for and against universal service policies? What is the most efficient way to achieve universal service goals? How successful are actual universal policies at increasing telephone penetration? The purpose of this chapter is to assess the current state of economic knowledge about universal service, and to point out needs for further research. The chapter mainly restricts its attention to published economic research which presumably has been vetted by some form of peer review.

Section 254 of the 1996 Telecommunication Act directs the FCC and the states to adopt policies "for the preservation and advancement of universal service..." and defines universal service as "an evolving level of telecommunications services that the Commission shall establish periodically..." So far, the FCC has defined universal service essentially to encompass basic residential telephone services (Federal Communications Commission 2000). The language of the Act suggests that universal basic telephone service has been substantially but perhaps incompletely achieved in the United States. Figure 1 confirms this idea by showing that house-

---

<sup>2</sup>The FCC has various policies designed to promote universal service: subsidies for schools, libraries and rural health centers; support to carriers serving high cost areas; subsidies for low income consumers. See [http://www.fcc.gov/ccb/universal\\_service/](http://www.fcc.gov/ccb/universal_service/).

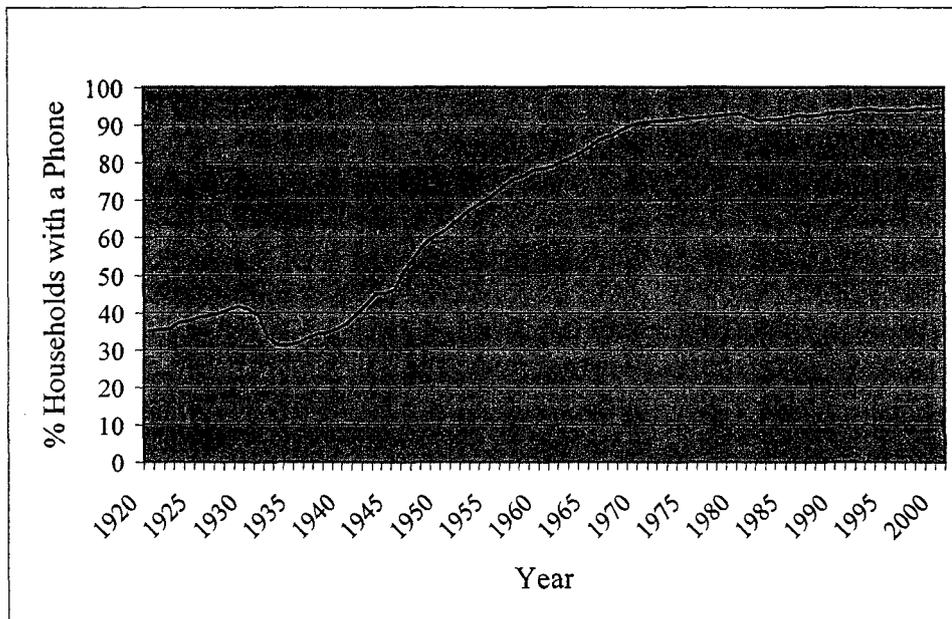

Figure 1: Telephone penetration in the United States, 1920-2000

hold telephone penetration has remained over 90% for more than a quarter century, and today approaches 95%.<sup>3</sup>

Behind this rosy aggregate picture, however, there is considerable regional and local variation. The map in Figure 2 shows that penetration rates varied significantly across the states in 1990, ranging from 87.4% in Mississippi to 97.9% in Maine.<sup>4</sup> The variance is even greater at the county level, where penetration ranges from 40.3% in Apache County, Arizona to 99.5% in Waukesha County, Wisconsin. Mueller and Schement (1996) find large variations in penetration rates among neighborhoods of a single city. At the census block level, penetration varies between zero and one hundred percent.

The United States has one of the highest household telephone penetration rates in the world. Still, some other developed countries enjoy a higher aggregate household penetration rate, e.g. Canada has maintained penetration over 98% through the 1990's. Moreover, while household telephone penetration has remained relatively flat in the U.S. in the 1990s, it has increased significantly elsewhere, e.g. in France, from 94% in 1990 to 98% in 1997 (International Telecommunications Union 1999). Thus, it appears that more could be done to advance universal residential telephone service in the United States. Questions for economists are "How

<sup>3</sup>This chart is constructed from various Census Bureau and FCC data sources, and contains linear approximations for some years to deal with missing and inconsistent data. Details of the construction are available from author upon request. See FCC, "Trends in Telephone Service," March 2000, Wash D.C. for a discussion of subscriber data.

<sup>4</sup>This is based on 1990 census data. See Dyer (1997) on regional variation in penetration rates in the United Kingdom.

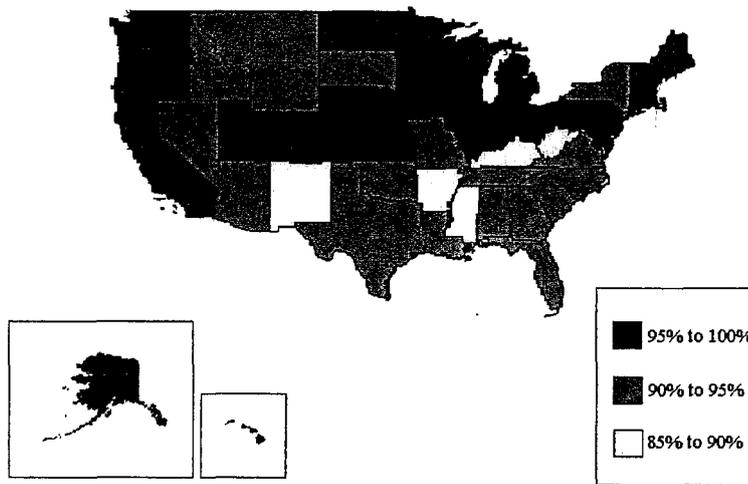

Figure 2: Telephone penetration by state, 1990

and at what cost?” and “Do the benefits outweigh the costs?”

The universal service problem for basic residential services has several dimensions, and the balance of the chapter is organized accordingly. Section II presents empirical evidence on the determinants of telephone penetration rates in the U.S. in 1990. The analysis shows that most of the variation in telephone penetration in the United States is explained by demography and climate. Cost proxies explain a statistically significant but quantitatively small fraction of the variation in penetration, and there is some slight evidence of local network externalities boosting penetration. While there remain significant differences between the states even after controlling for these factors, it appears that superior state regulatory policies can explain at most only a few percentage points of universal service performance. Section 3 reviews the normative economic theory of telecommunications pricing and its implications for universal service. Scale economies and especially network externalities provide theoretical rationales for departures from strict cost-based pricing, even though such departures sacrifice economic efficiency on some margins. Economic theory also demonstrates that optional service plans and low-income and high-cost universal service support potentially are valid methods of price discrimination in the pursuit of universal service goals. Section 4 reviews published empirical evidence on the performance of actual universal service policies. This limited evidence shows that low-income and high-cost subsidy policies are at best only marginally effective at advancing universal service. Section 5 summarizes and draws conclusions.

## 2. TELEPHONE PENETRATION IN THE UNITED STATES

Although approximately 95% of American households have a telephone, penetration varies significantly from place to place. Figure 2 illustrates different penetration rates in different states. Is this variation due to differences in population characteristics and other factors affecting the demand for telephone service, or differences in costs and regulatory policies affecting the price and availability of service? This section explores this question with a reduced form regression analysis. The purpose of the analysis is to identify and interpret some stylized facts, and to motivate the possibility that differences in state regulatory policies matter for the achievement of universal service goals.

Schement (1995) uses FCC and census data to describe the characteristics of households lacking telephones. The data show that the achievement of universal service varies across population groups. For example, the poor are less likely to have a telephone, as are blacks and Hispanics.<sup>5</sup> This kind of descriptive analysis is suggestive, but could be misleading, and leaves open important questions. For example: Are black households less likely to have a telephone because of different tastes, or because blacks tend to have lower incomes and telephone service is a normal good, or because blacks are discriminated against in the provision of telephone service? Or do blacks tend to live in states with less aggressive policies for promoting universal telephone service? Regression analysis is the appropriate tool for disentangling these effects.

*A priori* it seems plausible that demography might explain much of the geographic variations in penetration rates. Column (I) in Table 1 reports a regression equation explaining the telephone penetration rates of 1990 census block groups (CBGs) as a function of selected population demographics.<sup>6</sup> The definitions of variables and summary statistics are in an appendix. The numbers in parentheses are t-statistics, with the usual interpretation that a t-statistic above approximately 2.0 indicates statistical significance above a 95% confidence level. At given prices, shifts in the demographic composition of a group of consumers can be expected to shift the community demand for telephone service and change the penetration of service within the community. Nevertheless, the regression must be interpreted cautiously because it does not control for prices. The regression equation can be interpreted as capturing the pure effect of demand shifts on telephone penetration only if demand is price inelastic or if price differences are uncorrelated with population demographics. The results are broadly consistent with demand studies of penetration that do control directly for prices (Crandall and Waverman 2000; Taylor 1994; 2000).

Two things about the regression are striking. First, as expected from Schement's descriptive analysis, poverty is a major predictor of low CBG penetration. An income redistribution that would lower the poverty rate of a CBG by one percentage point, while holding its median income constant, would add 1/4 percentage point to telephone penetration. FCC Lifeline and LinkUp policies, discussed later in more detail, are designed to make telephone service more affordable to low income households. Second, Native American populations have much lower telephone penetration than other population groups, even after controlling for poverty, median income, education, and other demographics. It is not clear why this is the case. Do Native Americans place less value on telephone service, are they victims of discrimination, or is service

<sup>5</sup>Schement, Belinfante and Povich (1997) provide a more detailed analysis showing among other things that households receiving various forms of public assistance have lower penetration rates.

<sup>6</sup>All of the data for this regression equation are from the 1990 census. This is a weighted least squares regression which adjusts for the varying population sizes of CBGs. For a description of this procedure see Greene (1993).

more expensive or less available in areas occupied by Native Americans? Recently, the FCC targeted increased subsidies at federally-recognized Indian tribes, on grounds that the 47% average telephone penetration for this consumer group is partly due to expensive and unavailable service.<sup>7 8</sup>

Other demographic characteristics of CBG populations influence penetration noticeably but less dramatically. The estimated effects are generally consistent with published descriptive analyses (Schement 1995; Schement, Belinfante, and Povich 1997) and demand studies (Crandall and Waverman 2000; Taylor 1994). People living in wealthier and more educated communities are much more likely to have a phone in the house. Asian populations are more likely, and black and Hispanic populations less likely than white households to have a phone. Elderly populations are marginally more likely to have telephones, as are households headed by women.

Column (II) adds variables designed to capture aspects of network externalities at the local level, i.e. the idea that the household demand for telephone service depends on who else has telephone service locally. As discussed in Section 3, network externalities are a potentially important theoretical rationale for universal service policies. Controlling for population density, telephone service increases with the size of the wire center population to which the CBG belongs, suggesting that demand shifts out with the reach of local service. This stylized fact supports the hypothesis of local network externalities associated with the number of people that can be reached by a local telephone call.<sup>9</sup> Adding an additional 10,000 people to the wire center increases penetration by about 1/5 percentage point.<sup>10</sup> Controlling for population size, CBG population density reduces penetration in this regression, suggesting that face-to-face communication is to some extent a substitute for telephone usage. In contrast, Crandall and Waverman (2000), discussed in Section 4,<sup>11</sup> find a small positive significant coefficient on population density, which they interpret as confirming a positive local network externality. Their demand analysis controlled for prices but did not include a variable for population size. Since population size and density are positively correlated, it is possible that their density variable is picking up two contrary effects, the local network externality effect, and a face-to-face communication effect (Taylor 1994 p. 236). Finally, it is noteworthy that including these variables increases the coefficient on Native American population share by several percentage points, suggesting that Native Americans tend to live in relatively unpopulated areas where the ability to make free local calls is not very valuable. Alternatively, the less negative coefficient could be an artifact of a restricted sample, which arises from the fact that wire center data are available only for

<sup>7</sup> See paragraph 20 of FCC (2000), *Twelfth Report and Order, Memorandum Report and Order, and Further Notice of Proposed Rule Making*, CC Docket No. 96-45, June.

<sup>8</sup> The policy appears to have had an earlier impact in Oklahoma, where \$1 a month Lifeline service added 6,000 new subscribers in October 2000. See Kade L. Twist, "The Digital Divide in Oklahoma Indian Country," Benton Foundation (kade@benton.org).

<sup>9</sup> The estimated local network externality could be biased downward, because state tariffs typically set lower prices where the number of lines is fewer. See National Association of Regulatory Commissioners (NARUC), *Bell Operating Companies Exchange Service Telephone Rates*, various years.

<sup>10</sup> Moreover, doubling population size and density has a significant positive effect on penetration, which is generally consistent with Perl's 1983 study, discussed in Section 3.3. Perl allowed for a non-linear effect of phone density, and found a significant positive effect for areas with between 1,000-2,500 phones per square mile, and a negative effect elsewhere (Taylor 1994).

<sup>11</sup> The other studies discussed in Section 4 also include density variables ("urban" and "rural") with consistent signs.

large local exchange carriers.

| # Observations   | 222,264           | 116,715           | 95,171            | 95,171            | 95,171            |

<sup>12</sup>The coefficients in this table represent the percentage point change in telephone penetration in response to a unit change in the independent variable. For example, in column (I) a 1 percentage point increase in *% Poor* is

Column (III) controls for climate (precipitation and temperature) to capture the possibility that people living in inhospitable climates may spend more time indoors and therefore may have a greater demand for telephone service as a means of communication. This is superficially plausible, as the map in Figure 2 shows that penetration rates tend to be higher in the colder northern states. Indeed, Crandall and Waverman (2000) find a significant positive coefficient on a “cold northern state” dummy in their demand analysis. It turns out that penetration is higher where weather is more extreme.<sup>13</sup>

Column (IV) adds FCC estimates of the monthly forward-looking cost of local service and average loop length into the mix. The argument for including these variables is that local service prices, and especially installation charges, are partly cost-based.<sup>14</sup> As predicted by a cost-based pricing hypothesis, higher average costs and longer loop lengths have negative effects on penetration. However, these effects are small quantitatively, as would be expected from the low price elasticities estimated by demand studies (Crandall and Waverman 2000; Taylor 1994). An extra \$1 cost per month (about 3% of the mean CBG monthly cost) reduces penetration by three or four one hundredths of one percent. This implies an elasticity of about  $-0.01$ , which is roughly consistent with the demand studies under a cost-based pricing hypothesis.<sup>15</sup> The introduction of these supply side variables does not influence the other estimated coefficients in the regression model remarkably.

Finally, column (V) includes dummy variables for the state in which the CBG is located (“state effects”). The regression indicates significant differences between states even after controlling for demography and costs. An F-test of the joint significance of the state effects easily passes, indicating that these unexplained differences between states cannot be ignored. However, the state effects adds only 0.0153 to the  $R^2$ , and the variance share of the estimated state effects ( $S^2$ ) is only 0.0174.<sup>16</sup> Thus the state effects appear to explain somewhere between

associated with a .267 percentage point decrease in penetration, while a \$1,000 increase in *Median income* (which is defined in thousands of dollars) is associated with a 0.035 percentage point increase in penetration.

<sup>13</sup>The estimated quadratic specifications for climate effects in this and subsequent regressions are:

|                            | (III)              | (IV)               | (V)                |
|----------------------------|--------------------|--------------------|--------------------|
| Temperature                | -0.5<br>(20.2)     | -0.5<br>(21.1)     | -0.3<br>(8.0)      |
| Temperature <sup>2</sup>   | 0.004<br>(17.9)    | 0.004<br>(18.6)    | 0.003<br>(8.6)     |
| Precipitation              | -0.006<br>(-0.678) | -0.02<br>(2.7)     | -0.03<br>(2.3)     |
| Precipitation <sup>2</sup> | 2.56E-04<br>(5.6)  | 3.48E-04<br>(7.7)  | 4.16E-04<br>(6.4)  |
| Temp.*Precip.              | -6.77E-04<br>(5.1) | -4.74E-04<br>(3.6) | -3.15E-04<br>(1.6) |

<sup>14</sup>As mentioned before, state tariffs typically set lower residential service prices in wirecenters with fewer lines, suggesting that prices are inversely related to costs within individual states. The regression, however, already captures this by controlling for the number of households served by a wirecenter. The cost-variables possibly could be picking up cost-related price variation across the states. For data on across- and within-state variation in prices see the *Bell Operating Companies Exchange Service Telephone Rates*, published annually by NARUC until 1997.

<sup>15</sup>Admittedly, cost-based pricing of local service is a tenuous hypothesis. Rosston and Wimmer (2000b) estimate that a 10% increase in average costs is associated with only a 0.65% percent increase in average local revenues. Such a small degree of pass-through would imply a much higher price elasticity.

<sup>16</sup> $S^2$  is equal to the variance of the estimated state effects divided by the variance of telephone penetration.  $\Delta R^2$  is the increase in  $R^2$  that results from adding the state effects. These two numbers can be interpreted as upper and

1 and 2 percent of the variance in CBG penetration rates. These differences could be due to other population characteristics that are correlated with state of residence, or could be due to differences in state policies. Inasmuch as the total variation of penetration rates explained by the regression is not much more than 50%, the former explanation seems reasonable. However, it is unclear *a priori* what appropriate demographic or locational variables might soak up the state effects. For example, including more detailed income data into the regressions reduces the explanatory contribution of the state effects only slightly. Although it is worth entertaining the possibility that differences in state regulatory policies matter, the most optimistic interpretation of the evidence is that differences in state policies can explain no more than a small fraction of the variance in penetration rates.<sup>17</sup>

The final regression reported in Table 1 can be interpreted as a reduced form of a structural model in which both penetration and prices are endogenous. The first equation of the structural model is a community demand curve explaining CBG penetration as a function of prices, population demographics (including proxies for network externalities), and climate, as in demand studies (Crandall and Waverman 2000; Taylor 1994). The other equations explain relevant prices as a function of access costs (proxied by loop length and forward-looking cost) and state dummies. The state dummies capture differences in state policies, e.g. different approaches to price regulation or universal service subsidies.<sup>18</sup> It is an open question whether price variation alone is sufficient to explain the state effects on penetration rates. Published research generally finds the price elasticity of demand for local service to be very low - on the order of  $-0.01$  or  $-0.02$  (Crandall and Waverman forthcoming; Taylor 1994). The price elasticity for low income households is significantly higher (Cain and MacDonald 1991), and the elasticity with respect to installation charges is significantly higher than for monthly service charges (Hausman, Tardiff, and Belinfante 1993; Crandall and Waverman 2000). Thus published economics research finds some weak support for universal service policies that target low income households and focus on lowering installation charges. These are the aims of the FCC's Lifeline and LinkUp programs, which are evaluated in Section 4.

An intriguing possibility is that some of the substantial unexplained geographic variation in penetration rates is due to "coordination failures" associated with network externalities.<sup>19</sup> The basic economics of the telephone network externality is that an individual subscriber benefits when other consumers connect to the network. This interdependence of decision-making creates a coordination problem for consumers: "If enough consumers connect, then so will I, but if others don't connect then neither will I." Thus, under the network externality hypothesis, consumer decision-making depends on consumers' expectations about other consumers' decision-making. The circular reasoning inherent in consumer coordination problems allows multiple equilibria, e.g. low level equilibria in which few people connect to the network, and high level equilibria in which many connect. Depending on nonlinearities in demand, there can be many equilibria for a given community, yielding a variety of different possible stable penetration levels. Thus, in theory, part of the geographic variation in penetration levels could be

---

lower bounds on the percentage of penetration variance explained by state effects.  $\Delta R^2$  is a lower bound because it implicitly attributes the explanatory power of the correlated components of the state effects to other variables.  $S^2$  implicitly attributes the correlated components to the state effects.

<sup>17</sup>Sappington (2001) discusses the possibility that certain forms of incentive regulation may increase penetration rates.

<sup>18</sup>Differences in state universal service policies, which establish low-income subsidies, are discussed later.

<sup>19</sup>See Katz and Shapiro (1994) and Liebowitz and Margolis (2001) for discussions of network effects.

due to similar communities arriving at different equilibrium levels of penetration for historical reasons. The significance of network externalities for optimal telecommunications pricing is discussed further in Section 3 below.

The questions “Could the United States do more to promote universal service?” and “Do state policies matter for the achievement of universal service goals?” are important questions in the realm of positive economics. The corresponding normative questions are “What are optimal levels of telephone penetration and how do they vary with the characteristics of consumer groups?” and “What are the best ways to achieve universal service goals?” The next section surveys what economic theory has to say about these and related normative questions.

### 3. NORMATIVE ECONOMICS OF UNIVERSAL SERVICE

#### 3.1 Price distortions

Perhaps the most fundamental advice of economists is that marginal cost pricing maximizes economic efficiency. As discussed in detail in following subsections, the standard marginal cost pricing prescription must be qualified in the presence of scale economies and network externalities. Nevertheless, economists generally agree that universal service policies that distort usage prices above incremental costs sacrifice economic efficiency.

In the United States, access regulation and universal service policies have helped keep the prices of long distance usage above marginal cost. For example, the price of an interLATA long distance call carried by AT&T reflects federally-mandated access charges paid to the local telephone companies who originate and terminate the call. Almost everyone recognizes that usage-based components of these access charges have been maintained above the marginal cost of access.<sup>20</sup> Hausman (1998) and Prieger (1998) interpret the resulting price distortion as a usage tax,<sup>21</sup> and use approximations from public finance theory to measure the resulting loss of economic efficiency.<sup>22</sup> The analysis below follows Hausman’s logic closely, but measures efficiency losses exactly by assuming a constant elasticity of demand over the relevant range.

The basic issue is illustrated in Figure 3, adapted from Hausman (1998). The price per minute of long distance is  $p$ , the marginal cost is  $c$ , and usage is  $q$ . The usage tax is  $t$ . In the absence of the tax, consumers would pay  $p - t$  per unit of long distance usage. The revenue raised from the tax is

$$R = tq \tag{3.1.1}$$

For an otherwise fixed market structure, the efficiency loss from the tax (called “deadweight loss” by economists) is measured by the sum of areas  $A$  and  $B$ . Area  $A$  represents the reduction in profits (“producer surplus”) caused by the tax, assuming the tax is fully passed on to consumers.<sup>23</sup> Area  $B$  is the loss of consumer welfare (“consumer surplus”) from the tax.

<sup>20</sup>The FCC is phasing out significantly above-cost usage-based access prices, replacing them with higher fixed charges and with revenue-based universal service “contributions” (i.e. revenue taxes).

<sup>21</sup>The FCC is moving from a system of usage taxes, implicit in access taxes, to a system of revenue taxes, implicit in the calculation of universal service contributions. Depending on market structure, revenue taxes may be more efficient than usage taxes.

<sup>22</sup>Hausman (2001) applies the methodology to the market for mobile telephony. See additional references therein.

<sup>23</sup>The assumption of full pass through is hard to defend theoretically in an oligopoly context, and exaggerates the

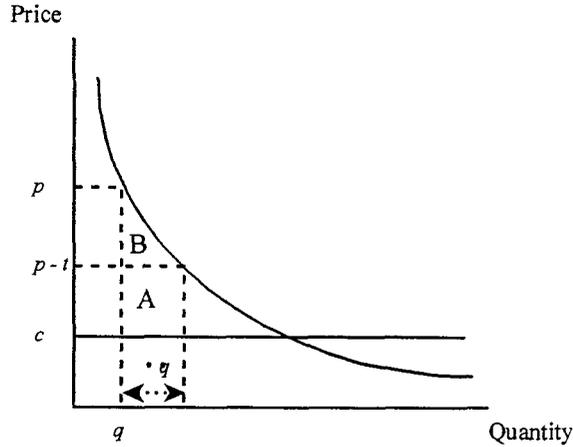

Figure 3: Consequences of an access tax

The deadweight loss per unit of tax revenue raised can be calculated as follows. Assume that the demand for long distance usage has a constant elasticity  $\epsilon$  over the range of prices between  $p - t$  and  $p$ . Then the reduction in quantity resulting from the usage tax is

$$\Delta q = \left[ \left( 1 - \frac{t}{p} \right)^{-\epsilon} - 1 \right] q \quad (3.1.2)$$

and loss of producer surplus (Area A) is

$$(p - t - c) \Delta q = (p - t - c) \left[ \left( 1 - \frac{t}{p} \right)^{-\epsilon} - 1 \right] q \quad (3.1.3)$$

The corresponding loss of consumer surplus (Area B) is calculated by integrating the demand curve between  $p - t$  and  $p$  and subtracting tax revenue. This gives the formula

$$\left\{ \frac{1}{1 - \epsilon} \left[ p - (p - t) \left( 1 - \frac{t}{p} \right)^{-\epsilon} \right] - t \right\} q \quad (3.1.4)$$

The incremental loss of economic efficiency (“incremental deadweight loss”) is equal to the sum of lost producer surplus and consumer surplus. Simple calculations yield an expression

efficiency loss if the tax partially extracts rents from oligopoly market power. Further analysis of tax incidence and welfare consequences in the oligopoly case would clarify the debate on efficiency losses from usage price distortions.

for the incremental deadweight loss per unit of tax revenue: adding the expressions for lost producer and consumer surplus in equations (3.1.3) and (3.1.4), and dividing by the definition of tax revenue in equation (3.1.1), yields lost consumer and producer surplus per unit revenue raised by the tax; adding these up reveals that the average incremental deadweight loss equals

$$\left(\frac{p}{t} - 1 - \frac{c}{p} \frac{p}{t}\right) \left[ \left(1 - \frac{t}{p}\right)^{-\epsilon} - 1 \right] + \left\{ \frac{1}{1 - \epsilon} \left[ \frac{p}{t} - \left(\frac{p}{t} - 1\right) \left(1 - \frac{t}{p}\right)^{-\epsilon} \right] - 1 \right\}.$$

The significance of this complicated-looking formula is that a calculation of the average incremental deadweight loss from the price distortion caused by the access tax requires three numbers: the demand elasticity  $\epsilon$ , the tax rate  $\frac{t}{p}$ , and the cost share  $\frac{c}{p}$ . Some representative calculations are presented in Table 2. Each entry in the table has two numbers. The first (larger) number is the incremental deadweight loss per unit of tax revenue; the second number is the corresponding loss of consumer surplus alone. A consensus estimate of the price elasticity of long distance usage is about  $\epsilon = 0.7$  (Taylor 1994). For this elasticity, if the tax rate and cost shares are  $\frac{t}{p} = 0.25$  and  $\frac{c}{p} = 0.25$ , the incremental deadweight loss is \$0.55 per unit of revenue,<sup>24</sup> of which \$0.10 is lost consumer surplus, the rest being lost profit. In other words, every dollar of revenue raised by the tax costs the economy an additional fifty-five cents and reduces consumer surplus by ten cents.<sup>25</sup>

A debatable aspect of this analysis is the calculation of lost producer surplus. Hausman's calculations make sense if there are prohibitive barriers to entry into the long distance market, enabling incumbent firms to sustain supracompetitive profits. In this case, elimination of the tax does not cause a change in market structure, and area A represents an increase in industry profits that results from the expansion of incumbent firms. However, as Hausman (1998) notes, it is possible "that the industry is imperfectly competitive and price exceeds marginal cost to cover fixed costs." In this case, the elimination of the tax could prompt additional entry, and at least part of area A represent the additional fixed costs incurred by the new entrants. Increased industry fixed costs do not add to economic welfare, suggesting that Hausman's calculation of the efficiency loss from an access tax is biased upward. Indeed, if equally efficient firms drive equilibrium profits to zero both before and after the elimination of the tax, then the efficiency loss from the access tax is only the loss in consumer surplus measured by area B, which is the second, smaller number in each entry of Table 2.<sup>26</sup> Thus one's perspective on the efficiency loss

<sup>24</sup>Perhaps surprisingly, the average efficiency loss is not monotonic in  $\frac{t}{p}$ . This is because an increase in  $\frac{t}{p}$  increases both numerator (total efficiency) and the denominator (tax revenue) of the expression for average efficiency loss.

<sup>25</sup>Hausman (1998) apparently estimated the deadweight loss using a second-order Taylor series approximation, although his precise calculations are difficult to unravel. He also assumed a higher tax rate of  $\frac{t}{p} = .403$ , which was plausible a few years ago before price caps lowered access rates. He arrived at an estimated deadweight loss of \$0.654 for each dollar of revenue raised. Substituting  $\frac{t}{p} = .403$  into the above exact formula yields a smaller \$0.56. Prieger (1998) applies a similar public finance methodology (and explains it better) to estimate the deadweight loss from prospective universal service taxes. The point is the same. Price distortions to support universal service potentially entail substantial efficiency losses. The authors agree that a more efficient way to fund explicit universal service subsidies would be to tax local access. See also Hausman (1999).

<sup>26</sup>More generally, if entry is "lumpy", then abnormal long run profits can persist in a free entry equilibrium. However, it is unclear *a priori* whether industry profits will rise or fall if the elimination of a tax prompts additional entry. If industry profits were to fall then the efficiency loss from the tax would be even less than area B, and conversely. Lacking finely detailed information on market structure, it appears reasonable to assume a zero effect of entry on long run industry profits and to measure the efficiency loss by area B alone. However, if firms differ

from universal service taxes depends on assumptions about the industrial organization of the long distance market.<sup>27</sup>

Table 2: Efficiency and consumer surplus losses per \$ tax revenue

| $= 0.50$             | 0.88                     | 0.25     | 0.56     | 0.25     | 0.25 | 0.25 |      |      |
| $= 0.75$             | 1.06                     | 0.51     | 0.51     | 0.51     |      |      |      |      |
| $\epsilon = 0.8$     |                          |          |          |          |      |      |      |      |
| $\frac{t}{p} = 0.25$ | 0.90                     | 0.12     | 0.64     | 0.12     | 0.38 | 0.12 | 0.12 | 0.12 |
| $= 0.50$             | 1.04                     | 0.29     | 0.67     | 0.29     | 0.29 | 0.29 |      |      |
| $= 0.75$             | 1.29                     | 0.61     | 0.61     | 0.61     |      |      |      |      |

Hausman (1998 p. 14) argues that a more relevant calculation is the marginal effect of reducing usage taxes. Hausman assumed that any increase in the usage tax is fully passed on to consumers. Under this assumption, the marginal deadweight loss with respect to  $t$  is

$$\left(1 - \frac{c}{p}\right)\epsilon q \quad (3.1.5)$$

of which

$$\frac{t}{\epsilon - p} q \quad (3.1.6)$$

is the marginal loss in consumer surplus. The marginal tax revenue for an increase in  $t$  is

$$\left(1 - \epsilon \frac{t}{p}\right) q. \quad (3.1.7)$$

in efficiency, then part of area A could represent the rents of the more efficient firms, in which case the efficiency loss per unit of tax revenue is somewhere between the two numbers reported in Table 2.

<sup>27</sup>Prieger (1998 p. 66) recognizes that the efficiency loss depends on industry structure, but downplays it by suggesting that short run entry barriers might allow above-normal profits to persist temporarily. His calculations (1998 Table 2) confirm that the welfare loss from an access tax is much lower in the long run once new entry erodes the temporary market power of the incumbents. See Kaserman and Mayo (2001) for a detailed discussion of the industrial organization of the long distance market.

Dividing (3.1.5) and (3.1.6) by (3.1.7) gives the marginal efficiency loss and the marginal consumer surplus loss for an extra dollar of tax revenue raised by an increase in the usage tax. Table 3 presents some representative calculations. Following Hausman, these calculations assume that an increase in the usage tax is fully passed on to consumers in the final price. For example, if  $\varepsilon = 0.7$ ,  $\frac{t}{p} = 0.25$  and  $\frac{\varepsilon}{p} = 0.25$ , then a \$1 increase in the amount of revenue raised by the access tax costs society an additional \$0.64, of which \$0.21 is a direct loss to consumers. A comparison of Tables 2 and 3 shows that marginal losses exceed average losses.

Table 3: Marginal efficiency and consumer surplus losses

|                      | $\frac{\varepsilon}{p} = 0$ | $= 0.25$ | $= 0.50$ | $= 0.75$ |

Hausman argues that it would be more efficient to finance universal service subsidies from general tax revenues. He bases this recommendation on published estimates of the marginal efficiency losses of general taxes ranging between 0.260 and 0.395 (Hausman 1998 p. 15). Table 3 shows that the marginal welfare effects of the asset tax exceed this range (for  $\varepsilon = 0.70$ ) if lost producer surplus (area A of Figure 3) is part of incremental deadweight loss. However, if producer surplus is dissipated by entry costs, as in a symmetric free entry oligopoly equilibrium, then the marginal welfare effect of the usage tax, which is equal to the marginal consumer surplus loss, is less and may be below the marginal social cost of public funds. Thus, depending on the industrial organization of the long distance market, the access tax may or may not be an economically attractive method to finance universal service compared to financing out of general revenues.<sup>28</sup>

Hausman's main policy recommendation is that universal service is best achieved by targeted subsidies financed by a fixed universal service tax on access. The FCC is moving in

<sup>28</sup>The industrial organization literature recognizes that oligopoly entry may be excessive from a social perspective (Mankiw and Whinston 1986). In this case, an access tax can improve social efficiency by reducing excessive entry.

this direction by reducing per minute long distance access charges and by raising the monthly subscriber line charge (SLC). The wisdom of "going all the way" and completely eliminating per minute access charges depends on scale economies and network externalities, discussed in the next two subsections.

### 3.2 Scale economies

Local economies of scale provide a rationale for universal service policies, although this economic argument does not feature prominently in today's policy debates on the subject. Certainly, local scale economies cannot be dismissed out of hand. Maher (1999) reports modest estimated scale economies in access, based on central office cost data provided anonymously by two local telephone companies. If there are economies of scale of connecting people, then adding people to the network lowers the average cost of connections, potentially to the benefit of all.

The *a priori* plausibility of local scale economies depends on the nature of the universal service problem. One flavor of scale economy is an economy of density. An increase in telephone penetration at a wire center service area that is already built out amounts to an increase in the number of lines served in a given geographic area. For example, if 95 out of 100 households on a street already are getting telephone service, then the incremental cost of serving an additional household must be less than the average incremental cost of serving the street. The reason is that the necessary poles and conduits, and perhaps even spare copper wire pairs, are already in place. Thus scale economies are very plausible if the universal service problem is to increase penetration in a given service area.

Another flavor of local scale economy is an economy of geographic scope. If greater penetration requires extending the perimeter of the wire center, then it is plausible that the incremental cost of service is either greater or less than the average cost. On the one hand, average cost may decline because the geographic extension relies on existing remote terminals, transport and switching infrastructure. On the other hand, the greater costs of installing and maintaining longer copper wire loops could cause the incremental costs of service to rise above the average cost. For this reason, economies of geographic scope seem less plausible than economies of density as a source of local scale economies.

The economies of scale rationale for universal service poses a well known dilemma. Average cost pricing results in an inefficiently low level of penetration, but marginal cost pricing leaves a deficit to be funded somehow. What's a regulator to do? The famous Ramsey rule for second-best pricing resolves the dilemma optimally by marking-up prices above marginal cost in inverse proportion to the price elasticity of demand.

Most U.S. households pay a fixed monthly price for access (and local service) and usage sensitive prices for long distance calling. The long distance prices may depend on whether the call is intrastate or interstate, and on the distance of the call. However, a simple two-part service arrangement featuring a fixed usage price provides a good basis for an analysis of optimal pricing with economies of scale. The standard Ramsey rule requires some modification if there are separate prices for access and usage. The modification is required because access is a necessary ingredient of residential access to the telephone network. This section outlines the relevant theory of optimal two-part tariffs, along the lines developed by Brown and Sibley (1986), Vogelsang and Mitchell (1991), and Schmalensee (1981). It is appropriate to interpret the economy of scale in the theoretical model as an economy of density.

Ramsey pricing rules are based on demand as well as costs. Thus, the derivation of the optimal pricing rule requires a model of both. To keep matters simple, assume that there are just two services, usage and access, and a separate price for each,  $p$  and  $r$ .<sup>29</sup> Consumer heterogeneity is represented by a parameter  $\theta$ . A type  $\theta$  individual has a utility (consumer surplus) of

$$V = U(p, \theta) - r$$

from connecting to the telephone network. A service plan that is more favorable to the consumer yields a higher consumer surplus.

Different types of consumers have different preferences over service plans. To simplify further, assume a multiplicatively-separable functional form

$$U(p, \theta) = \theta u(p),$$

Thus the consumer surplus of a type  $\theta$  consumer with service plan  $(p, r)$  is

$$V = \theta u(p) - r$$

where  $u(p)$  is assumed to be a smooth, convex, and decreasing function of  $p$ . A consumer with a higher value of  $\theta$  is more willing to accept a higher access price for a lower usage price. However, all consumers have the same price elasticity of demand for usage. By a standard economic argument,<sup>30</sup> a type  $\theta$  individual has a demand curve for usage,

$$\begin{aligned} X(p, \theta) &= -\theta u'(p) \\ &\equiv \theta x(p), \end{aligned}$$

that is derived from the utility function. The corresponding price elasticity of demand for usage is

$$\epsilon = -\frac{px'(p)}{x(p)}$$

The price elasticity might depend on  $p$ , but it does not depend on  $\theta$ .

Only consumers with a positive consumer surplus will opt to connect to the network. The marginal type is  $\theta_o$  satisfying

$$r = \theta_o u(p), \tag{3.2.1}$$

meaning that this consumer is just indifferent between connecting or not. By substituting this expression for  $r$  into the utility function expressed by equation (3.2.1), the consumer surplus of a type  $\theta$  is written as

$$V = (\theta - \theta_o)u(p),$$

<sup>29</sup>This is an oversimplification: usage can be interpreted as long distance usage, with local usage bundled into access. More generally, economic efficiency requires separate usage-sensitive prices for local and long distance usage, because these have different price elasticities.

<sup>30</sup>The argument is known in the consumer theory literature as Roy's identity. The partial equilibrium framework adopted here assumes a constant marginal utility of income, implicitly interpreting a decrease in  $r$  as an increase in income.

which is a function of the consumer's type, the marginal consumer type, and the usage price.

If  $M$  is the total number of consumers, and  $N$  are connected, then the penetration rate is  $n = \frac{N}{M}$ . The penetration rate is related to the identity of the marginal consumer by the formula

$$n = \int_{\theta_o}^{\infty} f(\theta) d\theta \equiv [1 - F(\theta_o)]$$

Here  $f(\theta)$  is the frequency (density) of type  $\theta$  consumers in the population, and  $F(\theta)$  is the fraction of consumers who make fewer calls than does a type  $\theta$ . In this model, the elasticity of the penetration rate with respect to the access price  $r$  is

$$\eta = \frac{\theta_o f(\theta_o)}{n}$$

This "access elasticity" measures the sensitivity of the marginal consumer to a change in the access price. The average consumer is type

$$\bar{\theta} = \frac{\int_{\theta_o}^{\infty} \theta f(\theta) d\theta}{n},$$

makes  $\bar{\theta}x(p)$  calls, and enjoys a consumer surplus of  $\bar{\theta}u(p) - r$ . The average consumer surplus over the entire population is therefore

$$\bar{V} = n [\bar{\theta}u(p) - r]. \quad (3.2.2)$$

Substituting equation (3.2.1) for the marginal consumer into (3.2.2) yields an expression for average population consumer surplus,

$$\bar{V} = n(\bar{\theta} - \theta_o)u(p)$$

as a function of the usage price, the marginal consumer, and the average consumer.

Now turn to costs and profits. Assume for simplicity that the marginal cost of usage is a constant at  $c$ . The average cost of a connection is  $\bar{h}(\theta_o)$  when all types  $\theta \geq \theta_o$  are connected to the network. The marginal cost is related to the average cost according to the formula

$$h(\theta_o) = \bar{h}(\theta_o) - \frac{\bar{h}'(\theta_o)\theta_o}{\eta}.$$

An economy of scale in providing access exists if  $\bar{h}'(\theta_o) > 0$ . In this case the marginal cost of a connection is lower than the average cost. This means that, as more subscribers are added to the network, the average cost declines. The profits earned on an average consumer are  $r + (p - c)\bar{\theta}x(p) - \bar{h}(\theta_o)$ . Using equation (3.2.1) to substitute for  $r$  and averaging over the entire population yields an expression for the average population profit,

$$\bar{\Pi} = n [\theta_o u(p) + (p - c)\bar{\theta}x(p) - \bar{h}(\theta_o)].$$

The problem of maximizing total welfare subject to a break-even constraint on profits amounts to maximizing a weighted sum of consumer surplus and profits according to the Lagrangian function

$$L = \bar{V} + (1 + \lambda) \bar{\Pi}$$

where  $\lambda \geq 0$  is the shadow price of the break-even constraint. In other words, the optimal service plan maximizes an appropriately weighted sum of consumer surplus and profits (producer surplus). The greater weight on profits reflects the cost to society of solving the Ramsey dilemma of how best to recover access costs. As shown below, the shadow price is strictly positive if there are economies of scale.

Maximizing  $L$  with respect to  $p$  yields the modified Ramsey formula for pricing usage [?, p. 95]:

$$\frac{p - c}{p} = \frac{\lambda}{1 + \lambda} [1 - \varpi] \frac{1}{\epsilon}$$

where  $\epsilon$  is the price elasticity of usage defined earlier, and the variable

$$\varpi = \frac{\theta_0}{\bar{\theta}}$$

is equal to the ratio of usage of the marginal consumer to average usage. Thus, assuming that the Ramsey dilemma is real and  $\lambda > 0$ , the usage markup is higher the greater is the difference in usage between the marginal and average subscriber. Brown and Sibley (1986 p. 96) interpret  $1 - \varpi$  as "an adjustment term accounting for the cross-elasticity between consumption and participation." More specifically, the adjustment accounts for the facts that an increase in  $p$  requires a decrease in  $r$  in order to maintain penetration, and that this rebalancing impacts both average utility and profits.

The usage formula makes clear that marginal cost pricing can solve the welfare maximization problem only if  $\lambda = 0$ . This case obtains for a particular value of  $\theta_0$ . In this singular case  $p = c$ , requiring  $r = \bar{h}(\theta_0)$  if the firm is to break even. This consumer type is just willing to accept a strictly cost-based service plan with access price  $r = \bar{h}(\theta_0)$  and a usage price  $p = c$ . Can this be optimal? The answer is no if there is an economy of scale in connecting people to the network, i.e. if

$$\bar{h}'(\theta_0) > 0$$

To reach this conclusion, consider how social welfare changes with the identity of the marginal consumer. Evaluating the derivative of  $L$  with respect to  $\theta_0$  at the point of strict cost-based pricing yields

$$\frac{dL}{d\theta_0} = -\bar{h}'(\theta_0)n$$

which is unambiguously negative if  $\bar{h}'(\theta_0) > 0$ , meaning that welfare would be increased by lowering  $\theta_0$ . But then the profit constraint becomes binding, i.e.  $\lambda > 0$ , and  $p > c$  according to the usage formula. Thus, economies of scale provide a clear rationale for "price distortions."

The average consumer benefits from the resulting network expansion because economies of scale enable a lowering of the access price relative to the increase in the usage price.

The optimal access price satisfies a modified Ramsey formula that appropriately accounts for opportunity costs. The first-order condition for optimal  $\theta_o$  yields (Brown and Sibley 1986 p. 95).

$$\frac{r - m}{r} = \frac{\lambda}{1 + \lambda \eta}$$

where

$$m = h(\theta_o) - (p - c) \theta_o x(p)$$

is the marginal opportunity cost of a connection. The formula modifies the standard Ramsey inverse elasticity rule by treating marginal usage revenues as a component of marginal opportunity cost. A key observation from the formula is that, for purposes of optimal access pricing, the theoretically correct definition of marginal cost is marginal opportunity cost, which subtracts the usage profits earned on the marginal consumer from the marginal cost of a connection.

Economists' advice that usage should be priced close to its marginal cost is based on empirical evidence that the access elasticity is small, and on an implicit assumption that the revenue contribution of the marginal consumer is not likely to be large relative to marginal cost.<sup>31</sup> For example, suppose that the usage profits on the marginal consumer just cover the marginal cost of a connection. Then  $m = 0$ ,  $\frac{\lambda}{1 + \lambda} = \eta$ , and  $\frac{p - c}{p} = (1 - \omega) \frac{\eta}{\epsilon}$ . If the access elasticity ( $\eta$ ) is small relative to the usage elasticity, then the usage markup is small. Empirical estimates of the price elasticities of access and (long distance) usage are in the neighborhood of  $\eta = 0.02$  and  $\epsilon = 0.70$ , i.e. the usage elasticity is an order of magnitude greater than the access elasticity, which implies that the usage markup is small. Thus, unless the profit contribution of marginal consumers exceeds the marginal connection cost significantly, scale economies do not appear to be an important justification for large price distortions to achieve universal service.<sup>32</sup>

### 3.3 Network externalities

Network externalities are inherent in the idea of a telephone network. The larger the network, the more people there are to call, and therefore the greater is the value of being connected to the network. Although network externalities provide a clear rationale for universal service policies, it is a rationale that has lost center stage in the policy debate. Laffont and Tirole (2000 p. 230) offer the following explanation for its neglect:

<sup>31</sup>The fact that penetration is lower for lower income households suggests that marginal consumers are predominantly lower income households. Crandall and Waverman (2000) document that lower income households do spend less on long distance usage, although the difference is not a dramatic one.

<sup>32</sup>This conclusion needs some qualification. If the average demand is great, then even a small usage markup (i.e. small  $\lambda$ ) can justify a significant access discount. Moreover, it is possible to construct realistic examples of optimal two-part tariffs featuring both small usage markups and moderate access discounts. Using a model calibrated to 1970 data Mitchell (1978 p. 531) calculated that the optimal two-part tariff for local service has moderately-sized access discounts and usage markups, while achieving a high penetration rate. However, it is noteworthy that price elasticity for local usage implicit in Mitchell's model is significantly less than the consensus 0.7 elasticity for long distance usage (Mitchell 1978 p. 528). Building on Mitchell's example, Brown and Sibley (1986 p. 96) calculated that the optimal two-part tariff raised average consumer welfare by 5 cents a month compared to pricing usage at average cost, although at the cost of significantly reduced penetration.

Network or club externalities are no longer at the forefront of the universal service debate (except perhaps for new services such as the Internet), partly because networks are largely developed in OECD countries and partly because it is recognized that network externalities are to a large extent internalized by operators.

This dismissal of the network externality rationale for universal service is not fully convincing. The argument that network externalities are unimportant in developed economies rests on an assumption that the average subscriber to the network does not have much interest in calling the marginal subscriber.<sup>33</sup> Crandall and Waverman (2000 p. 25) put the argument this way:

(T)he network externality argument has little relevance for telephony in developed economies today for several reasons. If my telephone in Manhattan reaches 2 million people, another connection will probably have little value to me. Of course, if that connection is my mother, then the connection is of real value to me, and ... I can subsidize her telephone directly! Otherwise, there is no reason why I - in Manhattan - should subsidize someone in Kalamazoo.

The rhetoric does not quite hit its mark. Even if the average telephone subscriber in Manhattan places a small value on being able to call the marginal subscriber, multiplication of that small value by 2,000,000 can be a large number. Moreover, there surely are people in Manhattan who value calling people in Kalamazoo; that is, a network externality can be long distance as well as local. The magnitude of the network externality remains an empirical issue on which evidence is scant.

How do regulated firms internalize network externalities? To a large extent, this is up to the regulators. Raising the price of usage above its marginal cost, and reducing the price of access below its incremental cost, encourages the subscription of consumers who most likely do not originate a lot of calls.<sup>34</sup> Nevertheless, these subscribers may receive calls from other consumers who benefit from making these calls. Moreover, the increased call volume from this externality generates additional revenue which limits the need to raise the usage price to cover the access deficit. The economic efficiency of such price distortions is the focus of the network externality debate.

It is not hard to construct a theoretical model that illustrates the potential importance of network externalities. Consider a telephone network serving  $N$  consumers. Suppose that each consumer is potentially interested in calling a fraction  $\theta$  of the others, and places an average of  $x(p)$  calls to each at a price of  $p$ . Therefore, the number of calls the consumer makes is

$$X(p, \theta, N) = \theta(N - 1)x(p)$$

and the consumer's value of calling is

$$U(p, \theta, N) = \theta(N - 1)u(p).$$

<sup>33</sup>There are other less obvious network externalities. A large subscriber base creates a "market" for various network-based transactions. e.g. bank by phone. Such indirect network externalities most likely less important for mature networks, but arguably of crucial importance for emerging networks such as the Internet. See Katz and Shapiro (1994).

<sup>34</sup>On the other hand, Hausman *et. al.* (1993) report estimates suggesting that rebalancing rates in the opposite direction could increase penetration.

where the relationship between  $u(p)$  and  $x(p)$  is as in the previous section. Each consumer's usage and value of being connected increases linearly with the number of other consumers connected to the network. This is a mathematical statement of a particularly strong network externality.<sup>35</sup> More generally though, the network externality hypothesis only requires that value increases monotonically with subscribers.

The consequences of network externalities for usage prices can be derived by building on the previous model of optimal two-part pricing; see Vogelsang and Mitchell (1991) for a literature survey and a related model. With a network externality, the utility of an average subscriber is

$$\bar{\theta} (N - 1) u(p) - r$$

and the marginal consumer (type  $\theta_o$ ) is defined by

$$r = \theta_o (N - 1) u(p).$$

Substitution and multiplication by the penetration rate gives the population average utility,

$$\bar{V} = n (\bar{\theta} - \theta_o) (N - 1) u(p).$$

Similarly, if the average network cost is fixed at  $\bar{h}$  (ignoring scale economies), then the population average profit is

$$\bar{\Pi} = n \{ (N - 1) [\theta_o u(p) + (p - c) \bar{\theta} x(p)] - \bar{h}(\theta_o) \}$$

The Lagrangian is defined as before, and the "Ramsey formula" for the optimal usage price is exactly the same:

$$\frac{p - c}{p} = \frac{\lambda}{1 + \lambda} [1 - \varpi] \frac{1}{\epsilon}$$

where  $\varpi$  is the ratio of marginal to average usage. The optimal access price generalizes the previous formula:

$$\frac{[r - m]}{r} = \frac{\lambda}{1 + \lambda} \frac{1}{\eta} - \chi;$$

with opportunity cost similar to as before:

$$m = \bar{h} - (p - c) (N - 1) \theta_o x(p);$$

and a new term reflecting the network externality:

$$\chi = \frac{N - 1}{N} \left[ \frac{\bar{h}}{r} + \frac{1}{1 + \lambda} \left( \frac{1}{\varpi} - 1 \right) \right].$$

As in the case of scale economies, marginal cost pricing is not optimal, i.e.  $\lambda > 0$ , which requires an access deficit ( $r < \bar{h}$ ) from the break-even constraint.

<sup>35</sup>This is a statement of "Metcalfe's Law" that the value of a network increases with the number of users squared. Robert Metcalfe was the founder of 3Com Corporation.

The network externality clearly justifies pricing access below the average cost of a connection, perhaps substantially depending on the values of  $\lambda$  and  $\varpi$ . Using the approximation  $\frac{N-1}{N} \approx 1$ , and assuming constant returns to scale, we obtain

$$\frac{r - \bar{h}}{r} \approx \frac{1}{1 + \lambda} \left( \frac{1}{\varpi} \right)^2 - \frac{\lambda}{1 + \lambda} \left( \frac{1}{\eta} - 1 \right) \left( \frac{1}{\varpi} \right)$$

The following is an example demonstrating that the network externality can justify a significant discount on the price of access. Suppose that the elasticities of access and usage are  $\eta = 0.02$  and  $\varepsilon = 0.70$ , respectively, and that costs are  $c = 0.015$  and  $\bar{h} = 20$  with no scale economies. In dollars and cents, this means that the marginal cost of usage is a penny and a half, and the cost of access is \$20. Suppose further that  $\varpi = 0.11$  and  $\lambda = 0.186$ .<sup>36</sup> The solution to the model for this example is:  $p = 0.019$ ;  $r = 16.90$ . The optimal usage price is just under two cents and the optimal access price is just under \$17.

The example demonstrates that the network externality hypothesis potentially provides a sound theoretical rationale for subsidizing access to achieve universal service. Of course the model is too simple for practical purposes and probably overstates the case for an access subsidy. One blemish is the unrealistic assumption that doubling the size of the network also doubles the amount of usage at a given price. Telephone calls take time and consumers have other things to do. An increasing opportunity cost of time will curtail telephone usage even as network size grows. Nevertheless, with more calling opportunities, consumers can substitute from lower to higher value calls. The increased substitution opportunities of a larger network still validates the network externality hypothesis even if consumers do not make more calls. However, the rising opportunity cost of calls does lessen the quantitative significance of the network externality.

A second blemish is that the model assumes that all consumer types receive the same number of calls, even though they differ in their originating usage. It is possible and perhaps likely that people who make few calls when connected to the network also tend to receive few calls. The external benefits of connecting such people to the network are small. If this were true for marginal users as a class, then the case for an access subsidy is weakened significantly. This apparently is what Crandall and Waverman mean in the quotation above. However, the empirical validity of this intuitively plausible hypothesis remains unclear.

A final blemish is that the analysis ignores call externalities. A call externality occurs when some of the benefits of a telephone call accrue to the recipient, and are not internalized by the caller. In the United States and elsewhere the calling party pays for the telephone call,<sup>37</sup> and may decline to place a call if the price is too high, even though the joint benefits of the call are worth the cost. For example, I may wait for you to call me, and vice versa, and the call gets put off. The model can be modified to account for call externalities by supposing that the

<sup>36</sup>These values can be justified by a suitable choice of distribution function for  $\theta$ , and by a suitable multiplicative scaling of the value of usage. The usage ratio  $\varpi = 0.11$  determines the penetration rate from the distribution of types; for example, if  $\theta$  has a standard uniform distribution, then the implied penetration rate is about 94%. The Lagrange multiplier  $\lambda = 0.186$  means that it costs the economy an additional \$0.18 for every \$1.00 raised this way via the usage markup.

<sup>37</sup>An exception is a call to a wireless phone. In the United States the wireless receiver pays airtime charges. Elsewhere in the world, "calling party pays" is the norm even for wireless calls, and there is a move afoot for the FCC to require a "calling party pays" option in the U.S. as well.

value of receiving a call is (on average) equal to  $\nu$ . Then the Ramsey formula for optimal usage pricing becomes

$$\frac{p - c}{p} = \frac{\lambda}{1 + \lambda} \left[ (1 - \varpi) \frac{1}{\epsilon} - \frac{\nu}{p} \right].$$

Clearly, if  $\nu$  is sufficiently large relative to  $p$ , then the optimal markup is negative, i.e. it is optimal to encourage more calls by setting the usage price below marginal cost.<sup>38</sup> Clearly, if usage is priced below cost, then access must be priced above cost if the firm is to break even. Thus, the call externality could completely undermine the case for access subsidies based on scale economies and network externalities.

Despite the conflict between call externalities and network externalities, the former has not received as much attention in the academic literature. Brown and Sibley (1986 p. 197) put the case against call externalities this way:

The call externality is probably not too important. It only involves two people and can probably be easily "internalized." For example, two frequent callers could arrange to share the cost of calling. Furthermore, not all call externalities are positive externalities; there are certain phone calls that one is annoyed to receive. Since the telephone company cannot be expected to distinguish between positive and negative call externalities, it is probably not useful to incorporate them into price formulas. For this reason, and because call externalities can be internalized fairly well, they do not provide a strong case for call price reductions.

Vogelsang and Mitchell (1991) give more credence to the call externality by observing that successful bargaining over how to divide the cost of calling may itself require a costly telephone call. They also argue that call externalities are relatively more important in developed economies; their reason is that call externalities involve interactions among all consumers, while network externalities only involve interactions with marginal consumers. In the context of the above theoretical model, this means that, while network externalities increase with network size at rate  $N$ , call externalities increase at rate  $N^2$ . This is an interesting theoretical argument. However, empirical evidence on the relative significance of call and network externalities is lacking.

There are scraps of evidence on network externalities in telecommunications networks. As discussed in Section 2, Crandall and Waverman (2000) find a positive effect of population density on the demand for residential access, and interpret this as supporting the network externality hypothesis. Another scrap of evidence comes from Louis Perl's 1983 unpublished study of access demand, summarized by Taylor (1994 p. 86-96). Perl included in his discrete choice model measures of the size and density of the local network. His estimates imply that doubling size and density of a local network of 25,000 increases the average value of a subscription by \$4.36, while doubling the network again creates another \$1.17 of value for each subscriber (Taylor 1994 pp. 236-8). Thus, only modest network externalities appear at the local level, and the magnitude of the local network externality declines with size.

<sup>38</sup>Note that  $\frac{\lambda}{1+\lambda}\nu$  can be interpreted as an additional component of opportunity cost in the Ramsey formula for usage prices. The reason for the  $\frac{\lambda}{1+\lambda}$  adjustment is that the call externality enables the firm to charge a higher access price to the marginal consumer.

Network externalities can be either local or long distance. It is valuable to reach more people with a long distance call, as well as to be able to place more calls within a local service territory. It is unclear *a priori* which kind of network externality is the more important. The value of being able to call someone on the telephone depends both on the price of the call and on the availability of alternative means of communication. On the one hand, even though a local call typically is free, face-to-face communication is often an excellent alternative. On the other hand, a long distance call, while costly, often lacks a good substitute. The fact that long distance prices have been dropping sharply suggest that long distance network externalities are becoming more important.<sup>39</sup>

The network externality hypothesis allows that usage increases with the number of connected consumers. Taylor (1994 Appendix 3) estimated a log linear equation relating the average number of calls from city A to city B to relevant prices, the average household income in A, and the number of addressable telephones in B (market size) using quarterly data on off-peak long-haul traffic between Canadian cities between 1974 and 1983. The estimated elasticity of usage with respect to market size was 1.482 with a t-value of 8.5! It is not clear what to conclude from this estimate. Taylor speculates that the high elasticity reflects a usage externality, whereby one call leads to another.<sup>40</sup>

Barnett and Kaserman (1998) caution about the limits of the network externality hypothesis as a justification for subscriber subsidies. They make three important points. First, network externalities are mostly inframarginal at high penetration levels, and it is unnecessary to subsidize the bulk of subscribers who would join the network anyway. Second, economic efficiency is increased by targeting subscriber subsidies at marginal consumers who are most likely to generate network externalities. For example, these might be individuals who receive more calls than they make, and do not value communication sufficiently to subscribe without a subsidy. Third, subscriber subsidies only improve welfare if the external benefits of subscription from the network externality exceed the efficiency losses from financing the subsidies. These arguments lead the authors to the bottom-line conclusion that uniform subsidies are unlikely to improve average consumer welfare.

Although this conclusion is probably overdrawn, Barnett and Kaserman's three cautions are well taken. In particular, it is clearly desirable to target universal service support more efficiently. Third degree price discrimination, which offers discounts to selected consumer groups, or second degree price discrimination based on optional calling plans, are ways to do this.

#### 3.4. Third degree price discrimination

Notwithstanding the attractive properties of Ramsey rules, a simple two-part tariff is not the best way to achieve universal service goals. The efficiency burden of maintaining universal service can be lessened by allowing price discrimination. Economists distinguish various kinds of price discrimination. First-degree price discrimination is charging different prices to different people based on their identity. Leaving aside the question of its legality, an effective first degree

<sup>39</sup>Implicit in this discussion is the idea that it may be possible to draw inferences about network externalities from changes in usage prices. The economic consequences of disconnecting someone from a network is not much different from charging an exceedingly high price for telephone calls. It may be possible to draw an inference about network externalities by extrapolating the consequences of small price change.

<sup>40</sup>This usage externality is discussed also by Taylor (2001).

price discrimination scheme is infeasible for mortal regulators because it requires an omniscient knowledge of consumers' preferences. Second-degree price discrimination is something of a misnomer, because all consumers are offered the same menu of choices and elect different items on the menu according to their preferences. Thus consumers end up paying different prices under second degree price discrimination because they choose to do so. Third-degree price discrimination charges different prices to groups of consumers based on observable characteristics of the group. Different prices based on income or location are examples.

Third degree price discrimination is a recognized tool for promoting universal service. The FCC's low-income and high-cost support policies, discussed in more detail in the next section, fall into this category. Low-income support policies provide discounts to individuals meeting certain means tests. High-cost support policies seek to narrow price differences based on the average cost of service in different locations.

The analytics of optimal third degree price discrimination are a straightforward generalization of the normative theories presented earlier. Suppose consumers are divided into two classes, Class I and Class II, and consider the theory of optimal two-part tariffs with access scale economies but no network externalities (a further generalization to allow for network externalities is pretty straightforward). In general, the two classes may have different demand characteristics and different costs of service. The Ramsey formulas for optimal usage and access prices generalize readily, with notation analogous to before. For Class I, the prices are

$$\frac{p_I - c_I}{p_I} = \frac{\lambda}{1 + \lambda} [1 - \varpi_I] \frac{1}{\epsilon_I}$$

$$\frac{r_I - m_I}{r_I} = \frac{\lambda}{1 + \lambda} \frac{1}{\eta_I}$$

and for Class II

$$\frac{p_{II} - c_{II}}{p_{II}} = \frac{\lambda}{1 + \lambda} [1 - \varpi_{II}] \frac{1}{\epsilon_{II}}$$

$$\frac{r_{II} - m_{II}}{r_{II}} = \frac{\lambda}{1 + \lambda} \frac{1}{\eta_{II}}$$

The optimal pricing policies for the two classes are linked by a common value of the Lagrange multiplier  $\lambda$ , which captures the social cost of meeting the expected profit constraint. The linkage arises because profits are aggregated across the two consumer classes. Thus, it is possible for profits on one class of consumers to compensate losses on the other.

This theory provides a rationale for low-income support policies. For simplicity, assume that both classes are served jointly and have the same cost of service, or equivalently that costs are "averaged". Assume also that both classes have the same price elasticity of usage, i.e. the two classes have different demand characteristics based only on different distributions of  $\theta$ . For concreteness, suppose that Class II consumers are more likely to have a greater demand for usage, i.e. a lower value  $\theta$  (in the sense of first-order stochastic dominance). Given the empirical evidence that usage increases with income (Crandall and Waverman 2000), it is natural to think of Class I as a low income group.

How should universal service support be targeted at low income (Class I) consumers? Applying the simplifying assumptions, the Ramsey formulas imply

$$\frac{p_I - c}{p_I} = \frac{[1 - \varpi_I] p_{II} - c}{[1 - \varpi_{II}] p_{II}}$$

$$\frac{r_I - m_I}{r_I} = \frac{\eta_{II} r_{II} - m_{II}}{\eta_I r_{II}}$$

That is, the price-cost markups for the two groups are proportional, although the proportionality factors differ for usage and access. For usage prices, the factor of proportionality depends on the ratios of usage demand for the marginal and average subscribers ( $\varpi$ ) for each class. If both populations were to face the same prices, then the marginal type would be the same for the two classes, but  $\varpi_I > \varpi_{II}$  because of differing mean values of  $\theta$ . Thus the proportionality factor for usage prices is less than one, i.e.

$$\frac{[1 - \varpi_I]}{[1 - \varpi_{II}]} < 1,$$

indicating that Class I consumers should face a lower usage price. For access prices, the proportionality factor is the ratio of access elasticities. Although a common marginal type implies  $m_I = m_{II}$ , Class I would have a lower penetration rate because of the less favorable distribution  $\theta$ , implying  $\eta_I > \eta_{II}$ , and indicating that Class I consumers should also get a lower access price. Since, at the point of no price discrimination, optimality conditions for usage and access prices fail in the same direction, it would be desirable both to lower  $p_I$  (relative to  $p_{II}$ ) and to lower the price of  $r_I$  (relative to  $r_{II}$ ), to bring the proportionality conditions into balance. This heuristic analysis suggests that optimal low income policies should involve both usage subsidies and access subsidies.<sup>41</sup>

The theory of third degree price discrimination also provides a logical basis for high-cost support policies, although the logic is rather different than for low-income support. Suppose that Class I and Class II consumers are identical, except that Class I consumers have a higher cost of access. At the optimum:

$$\frac{p_I - c}{p_I} = \frac{\lambda}{1 + \lambda} [1 - \varpi_I] \frac{1}{\epsilon}$$

$$\frac{r_I - m_I}{r_I} = \frac{\lambda}{1 + \lambda} \frac{1}{\eta_I};$$

and:

$$\frac{p_{II} - c}{p_{II}} = \frac{\lambda}{1 + \lambda} [1 - \varpi_{II}] \frac{1}{\epsilon}$$

$$\frac{r_{II} - m_{II}}{r_{II}} = \frac{\lambda}{1 + \lambda} \frac{1}{\eta_{II}}.$$

There are two interesting possibilities. On the one hand, if the marginal cost of access were the same for both consumer classes, and the difference were entirely in the fixed cost of access, then  $m_I = m_{II}$  implies that both consumer classes should face the same prices. This is the economic logic for "geographic averaging". On the other hand, if the marginal cost of access were greater for Class I, then  $m_I > m_{II}$  implies higher access prices for Class I. The resulting lower penetration rate means that  $\eta_I > \eta_{II}$  and  $\varpi_I > \varpi_{II}$ ; hence access and usage markups

<sup>41</sup>This theoretical analysis has not been developed much in the literature on optimal pricing. It is worth much more attention.

should be lower for Class I. Thus, some degree of geographic price discrimination is efficient when marginal access costs vary locationally. The price differences between the two classes for access and usage should move in opposite directions, even though the markup differences move in the same direction.

The fact that geographic price discrimination sometimes is efficient does not imply that the two geographic regions should be priced separately based on their respective costs. If the two classes were treated independently, then Class I would necessarily have higher markups to cover its higher access cost. Consequently, the structure of prices would be the same for both classes, except  $\lambda_I > \lambda_{II}$ . This means that it would be economically efficient to relax the profit constraint on Class I customers, and to tighten the constraint on Class II customers to make up the difference. This could be accomplished by balanced subsidies and taxes on the firms serving Class I and Class II consumers. These transfers should proceed until  $\lambda_I = \lambda_{II}$  resulting in the optimal structure. Service to Class I consumers should operate at a deficit, recovered from profits (or taxes) on service to Class II consumers. This is almost a stylized description of federal high-cost policies in the United States. The difference is that in practice high income areas do not receive a usage subsidy, and perhaps receive an excessive access subsidy.

### 3.5 Second degree price discrimination

Optional tariffs are an example of second-degree price discrimination. Consumers are offered a choice of service plans, and allowed to self-select the plan that is best. In particular, consumers could be offered a range of service plans that trade off the access price against the usage price. Low volume consumers would prefer a plan with a lower access price and a higher usage price, and conversely for higher volume consumers. The optimal menu of service plans can be constructed using what are now well accepted methods from the mechanism design literature in economics.

The following analysis sketches the mechanism design approach to constructing an optimal menu of service plans, and characterizes the price distortions embedded in those plans. Let  $[p(\theta), r(\theta)]$  denote the service plan chosen by a type  $\theta$  consumer. Ignoring network externalities, the consumer enjoys a consumer surplus of

$$V(\theta) = \theta u(p(\theta)) - r(\theta)$$

Using standard analytical tools (i.e. the envelope theorem and integration), it can be shown that consumers maximize utility by choosing from the menu so that

$$V(\theta) = \int_{\theta_0}^{\theta} u(p(s)) ds,$$

and that average consumer surplus over the entire population is

$$\bar{V} = \int_{\theta_0}^{\infty} u(p(\theta)) [1 - F(\theta)] d\theta.$$

Now consider profits. Sales to a type  $\theta$  consumer are

$$X(\theta) = \theta x(p(\theta)) \equiv -\theta u'(p(\theta))$$

and access revenues are related to usage prices according to

$$r(\theta) = \theta u(p(\theta)) - V(\theta).$$

Allowing for scale economies, the profit earned on the type  $\theta$  consumer is

$$\pi(\theta) = [\theta u(p(\theta)) - V(\theta)] + [p(\theta) - c] \theta x(p(\theta)) - \bar{h}(\theta_o),$$

and average population profit is

$$\bar{\Pi} = \int_{\theta_o}^{\infty} \{ \theta u(p(\theta)) - [p(\theta) - c] \theta x(p(\theta)) - \bar{h}(\theta_o) \} f(\theta) d\theta - \bar{V}.$$

Maximizing the Lagrangian  $L = \bar{V} + (1 + \lambda)\bar{\Pi}$  with respect to this price function yields the modified Ramsey formula

$$\frac{p(\theta) - c}{p(\theta)} = \frac{\lambda}{1 + \lambda \varepsilon} \left[ \frac{1 - F(\theta)}{f(\theta)\theta} \right].$$

This formula depends on the hazard rate  $\frac{f(\theta)}{1-F(\theta)}$ , which is the probability of being a type  $\theta$  consumer conditional on not being a lower type. If the hazard rate is increasing in  $\theta$ , as it is for many common distributions, and the average profit constraint is binding ( $\lambda > 0$ ), as it is in the presence of scale economies, then the usage mark-up is smaller for higher volume users.<sup>42</sup> For higher volume users, the usage price is closer to marginal cost. The access price is correspondingly higher for higher volume users, i.e.  $r'(\theta) = -\theta x(p(\theta))p'(\theta) > 0$ . Moreover, since usage is priced above marginal cost, it is immediate from the break-even constraint that  $r(\theta) < \bar{h}(\theta_o)$  for at least some users. An optimal menu of service plans results in higher volume users selecting a plan with a lower usage price and higher access price. The usage price optimally is set above marginal cost for all but the highest volume users, and the access price is below the average cost of access for lower volume users.<sup>43</sup>

Cain and MacDonald (1991) provide some econometric evidence supporting the desirability of optional tariffs for local service. Their demand estimates show that, if a measured service option is available for local service, then telephone penetration is insensitive to the monthly charge for flat rate service. This result is consistent with the idea that marginal consumers opt for measured service when given the choice. Cain and MacDonald interpret their results in the following way (1991 p. 303):

These estimates suggest that universal service can be maintained and expanded, even while more of the NTS financial burden is shifted to local charges. In particular, since telephone subscribership is sensitive to measured access charges, universal service goals can be met, at relatively low cost, by introducing and expanding budget measured service options.

<sup>42</sup>This generalizes the formula for an unregulated monopolist. See Tirole (1988 p. 156).

<sup>43</sup>Faulhaber and Panzar (1977) is an early analysis of the issue. Riordan (2000) considers the  $c = 0$  case and shows that a choice of two extreme service plans is optimal. High volume users would choose a flat rate plan with unlimited long distance usage. Low volume users would choose a cheaper plan with prohibitively expensive long distance usage. By continuity, an extreme two-option menu is approximately optimal for  $c$  positive but sufficiently small. As a practical matter, the marginal cost of usage is dropping with technological advance and rapidly approaching zero.

Riordan (2000) points out that similar principles can be applied to long distance usage. In particular, consumers (or long distance companies acting as their agents) can be offered optional access arrangements, or, equivalently, optional arrangements for contributing to a universal service fund. Offered the choice, higher volume users would select a higher fixed monthly payment and lower usage-sensitive payment. Such an arrangement would better target universal service subsidies to marginal consumers.

#### 4. POSITIVE ECONOMICS OF UNIVERSAL SERVICE

##### 4.1 *Cross-subsidies in the price structure?*

Commentators frequently decry cross-subsidies in the structure of telecommunications prices. The AT&T divestiture was based partly on a claim of cross-subsidies running from local to long distance services (Temin 1990). In contrast, the frequent claims today are that business cross-subsidizes residential, long distance subsidizes local, and urban subsidizes residential services. While the term "cross-subsidy" often is used loosely even in the academic literature, economists typically are complaining that some set of services (residential, local, or rural) is priced below its long run incremental cost (LRIC). This appears to have become the "popular" meaning of cross-subsidy.

Twenty-five years ago, Faulhaber (1975) sought to discipline the discussion of cross-subsidies by advancing a formal definition and corresponding tests. He defined a subsidy-free price structure as one whose revenues do not exceed the stand-alone cost for any subset of services.<sup>44</sup> Moreover, assuming weak economies of scope, subsidy-free prices must also cover the incremental cost of any subset of services.<sup>45</sup> The stand-alone and incremental cost tests are equivalent for a zero-profit firm. If the firm makes positive economic profits, then cross-subsidies are indicated by a failure of the stand-alone test applied to whole product set, even though no product need fail the incremental cost test. Thus, the popular meaning of a cross-subsidy in a regulated price structure is justified in Faulhaber's (1975) framework if the firm is held to zero economic profits.

Temin (1990) recognizes Faulhaber (1975) by defining a "cross-subsidizing service" as one priced above stand-alone cost, but still accepts popular usage by defining a "cross-subsidized service" as one priced below LRIC. If the firm were to earn positive economic profits, then, by this terminology, it would be possible in the presence of joint costs to have a service receiving a cross-subsidy, but no other service doing the cross-subsidization. Temin meant these definitions to apply only to environments in which rate of return regulation held total profits to zero, e.g. the old Bell system.<sup>46</sup> In this case, a failure of incremental cost test for some group of services, necessarily implies a failure of the stand-alone test for other services.

A possible tension between the popular meaning and Faulhaber's definition of a cross-subsidy is revealed in the following quotation from Kaserman and Mayo (1994 pp. 135-6):

To some extent, the argument over whether a subsidy exists is semantic. The answer hinges upon one's definition of a subsidy and how one would measure the

<sup>44</sup>The stand-alone cost is the cost of producing the relevant services in isolation.

<sup>45</sup>The incremental cost is the cost-saving from not producing these services. The necessary and sufficient condition for the equivalence result is that the services are produced subject to weak economies of scope.

<sup>46</sup>Personal communication with the author.

costs of the services involved. Regardless of the position one adopts, however, there is no economic justification for a system that places the burden of fixed network costs on usage-sensitive prices. Such a system is inefficient whether or not a subsidy results. Consequently, one need not become mired in the subsidy debate to make definite statements about efficient pricing policies. We will continue to use the cross-subsidization terminology throughout the remainder of this article because it is convenient to characterize the overpricing of one service along with the underpricing of another as a cross-subsidy, whether or not these prices fall outside the range that the Faulhaber criteria define. What is more, we are convinced that such cross-subsidization exists, is substantial, and is an accurate description of the existing price structure in this industry.

Kaserman and Mayo's blanket condemnation of price distortions implicitly denies the importance of scale economies and network externalities. As discussed earlier, normative theory provides a rationale for recovering fixed network costs from usage sensitive prices under these conditions. However, more importantly for the discussion at hand is Kaserman and Mayo's insistence on evaluating the merits of price structures in terms of economic efficiency. This is undoubtedly the principal perspective of economists when discussing cross-subsidy issues. Economists' complaints about cross-subsidies typically are on normative grounds: prices below LRIC encourage an overexpansion of telecommunications networks and are a barrier to more efficient entrants.

In contrast, Faulhaber (1975) had a more practical preoccupation. He was concerned that prices above stand-alone cost were not sustainable in a competitive market. The reason is that an equally efficient entrant could successfully undercut a price above stand-alone cost. This is an important issue for universal service, especially in the wake of the 1996 Telecommunications Act. The Act intends to open all telecommunications markets to competition. To the extent that universal service implicitly is supported by Faulhaber cross-subsidies, these subsidies are likely to be undermined by new competition. Recognizing this, the Act requires that implicit subsidies be made explicit and portable.<sup>47</sup> State regulators have been concerned about too much competition until new universal service mechanisms are in place. So far, there has been substantial new entry into business markets and not much entry into residential markets, suggesting cross-subsidies flowing from business to residential services. The existence of such a business-to-residential cross-subsidy has been established empirically by Palmer (1992). Rosston and Wimmer (2000b) estimate that nationally the average revenue per line for local service is \$39.14 for business lines compared to \$18.29 for residential.

A problem with the stand-alone test is that the stand-alone cost of a group of services typically is not observed and therefore is difficult to estimate (Curien 1991). Palmer (1992) addressed this issue for the case of two services by deriving an upper bound on the stand-alone cost under a non-decreasing returns to scale assumption. Using this bound Palmer derived a pair of sufficient conditions for prices to satisfy the stand-alone and incremental cost tests

<sup>47</sup>A portable subsidy is paid to whichever firm provides services. The flip side of the sustainability argument is that services priced below their stand-alone costs are immune to new competition from equally efficient entrants. This appears to be the case for residential local access services in rural areas. Thus, these areas should not expect much local competition unless there is a portable explicit subsidy that makes up the difference. The FCC has recently established limited portable subsidies for the highest cost wire centers in the highest cost states, but largely has left to the states the problem of creating local competition in high-cost rural areas. See Rosston and Wimmer (2000).

for subsidy-free prices. Palmer estimated costs and revenues for 32 suburban central offices operated by New England Telephone in the mid-to-late 1980s. Almost all of these central offices failed the stand-alone test and a majority failed the incremental cost test. On average, residential revenue fell short of the lower bound on incremental cost by \$0.39 per line per month, implying a business-to-residential subsidy of at least \$3.45 per business line. These results suggest a substantial business-to-residential subsidy. However, Palmer does not provide confidence intervals or otherwise address estimation errors.

There is some controversy and confusion in the literature about whether long distance services cross-subsidize local services. The stylized fact is that the revenues from local services do not recover their stand-alone costs while the revenues from toll services exceed their incremental costs. The following statement by Curien (1991 p. 91) is typical:

In telecommunications industries all over the world, the local networks run a deficit, i.e. the connection and subscription charges which are paid by users for their access fail to recover the cost of building and maintaining the connection line and other non-traffic sensitive equipment. As a result, the non-traffic-sensitive costs are subsidized by the revenues derived from traffic and especially from trunk traffic.

Such an assertion apparently flies in the face of Faulhaber's (1975) definition of a cross-subsidy. Indeed, the conditions identified by Curien satisfy Faulhaber's conditions for subsidy-free prices:<sup>48</sup> the price of access is below its stand-alone cost, and the price of usage is above its incremental cost. Gabel (1995) builds on this point, arguing that the access services provided by the local loop should be interpreted as a shared input into local exchange and toll services. The published literature does not contain any rigorous showing of a cross-subsidy from toll services to local exchange services.<sup>49</sup>

It is also widely held that geographic averaging results in a cross-subsidy from urban to rural services. This follows almost immediately for a zero profit firm under the reasonable assumptions that the stand-alone cost of urban service is substantially less than the stand-alone cost of rural services, and that joint costs are small. However, if the firm is making significant positive profits, then the validity of the claim is less clear. In the United States, regulated local exchange carriers are allowed to earn positive profits on unregulated vertical services, e.g. voice mail and call forwarding. The published literature lacks a rigorous demonstration of an urban-to-rural cross-subsidy that takes account of the profits from vertical services.

#### 4.2 *Low income subsidies*

In the United States, universal service subsidies are targeted at low-income households via the Lifeline (LL) and LinkUp (LU) programs established by the FCC at the end of 1984. The LL program reduces the monthly cost of telephone service of eligible low income households by an amount equal to \$7.00 currently.<sup>50</sup> States provide additional support resulting in total

<sup>48</sup>Curien's (1991 p. 91) characterization of a "cross-subsidy from traffic to access" is based on an *ad hoc* approach of using "revenue trade-offs" to measure cross-subsidies. The revenue trade-off approach arbitrarily allocates profits and costs to services, including joint and common costs, and asks whether service revenues recover allocated costs plus profits.

<sup>49</sup>See L. Taylor (1993), W. Taylor (1993), Kahn (1993), Gabel and Kennet (1993), and Gabel (1995) for debate on whether access should be regarded to be an input or a separate service.

<sup>50</sup>This is twice the federal subscriber line charge (SLC). The SLC is scheduled to increase to \$5.00 under a recent FCC access reform order. Presumably, the LL subsidy will increase commensurately.

monthly subsidies typically ranging between \$5.25 and \$10.50; the Virgin Islands is an anomaly with total support of \$14.05. The LU program subsidizes the installation charges of a new subscription for eligible households up to \$30 plus up to \$200 in interest on deferred payments. Eligibility criteria for both programs are established by the individual states subject to FCC approval and vary widely (Federal Communications Commission 1999). Together, the federal components of these programs are projected to cost \$480 million in 1999 (Eisner 2000).

Schement, Belinfante and Povich (1997 pp. 193-6) identify twelve states who experienced large increases in telephone penetration for low income households between 1984 and 1994: Connecticut, Georgia, Hawaii, Michigan, Nevada, New Mexico, North Carolina, South Carolina, Tennessee, Vermont, Washington, and Wyoming. Two-thirds of these states were among the early adopters of the federal low-income support programs. This casual evidence suggests that LL and LU programs have been effective at promoting universal service.

There is also some more rigorous empirical evidence showing that low-income subsidies have increased telephone penetration rates, although the quantitative impact appears to be small relative to the cost of these programs.<sup>51</sup> Table 4 reports selected regressions from three different studies: Garbacz and Thompson (1997; hereafter G&T); Eriksson, Kaserman and Mayo (1990; hereafter EKM); and Crandall and Waverman (2000; hereafter C&W). The three studies employ different data; G&T examines state-level data from the 1990 census; EKM examines annual state-level data from the Current Population Survey; and C&W examines 1990 census data at the level of town. The three studies also employ different specifications, and report the significance of estimates differently.<sup>52</sup>

G&T estimate a logit model of state-level penetration, and conclude that the LL and LU programs have a statistically significant but small marginal effect on penetration for the average state. Their explanatory variables include the monthly price of (flat rate) local service, and the installation charge for new accounts. Demographic variables include the percent of households living below the poverty line, and the percent of households living in urban areas. The key variable for testing the effectiveness of low income subsidies is the amount of LL and LU funds paid out per poor household in the state. Although G&T interpret their regression equation as a demand equation, the price variables are not significant.<sup>53</sup>

EKM report a related analysis based on pooled state-level cross section and time series data for the period from 1985 through 1993 and draw similar conclusions. The annual penetration data is drawn from the Current Population Survey, which Garbacz and Thompson (1997; 2000) criticize as being more subject to measurement error than the decennial census data, resulting in unreliable estimates. Also worrisome is that EKM apparently ignore serial correlation in the error terms for each state, which could bias their statistical tests. EKM find a positive significant effect of LL and LU subsidies only in states that have a large poor population.<sup>54</sup>

<sup>51</sup>Park and Mitchell (1989) show in a calibrated simulation model that Lifeline rates are unlikely to significantly increase penetration.

<sup>52</sup>See also Albery (1995) for a related study.

<sup>53</sup>This could be due to endogeneity bias. Prices of local service and installation are regulated by the states. The coefficients on these variables would be biased toward zero if states with low penetration rates tended to choose lower prices for residential service. (The LL and LU estimates could suffer similar endogeneity bias; see the discussion of C&W below.) G&T do find significant price coefficients in other specifications.

<sup>54</sup>EKM include 1984 penetration in all of their specifications as an explanatory variable "in order to standardize for the cross-sectional variation in the observed penetrations rates prior to the sample time period." It is unlikely that the relationship is stable over time; why should penetration levels in 1993 and 1998 bear the same relation

Both G&T and EKM interpret the estimated quantitative significance of the low income subsidies with the aid of "policy experiments". G&T estimate from their regression analysis that an across the board 10% increase in subsidies would increase average penetration by "substantially less than one tenth of one percent." EKM conclude that an additional \$10,000 in subsidies would add only 18 new subscribers for a state whose poverty level is average, and 75 new subscribers for the poorest states. While these calculations are provocative, the policy interpretations are not really valid, because the parameter estimates on which they are based do not have clear structural interpretations. In particular, the models do not distinguish whether the increased subsidy levels of the policy experiment come from more generous support levels or more generous eligibility criteria.

To illustrate how eligibility criteria might matter consider the following simple model. Suppose that a subsidy of  $s$  dollars is targeted at households below the poverty line, but that the prevailing eligibility criterion results in only a fraction  $\lambda$  of poor households being able to receive the subsidy. Suppose further that households above the poverty rate choose to have a telephone with probability  $\beta_1$ , subsidized poor households with probability  $\beta_2$ , and unsubsidized poor households with probability  $\beta_3$ , with  $\beta_1 > \beta_2 > \beta_3$ . If  $POV$  is the poverty rate, then the observed penetration rate would be

$$PEN = \beta_1(1 - POV) + \beta_2\lambda POV + \beta_3(1 - \lambda)POV$$

and the subsidy per household would be

$$SUB = s\lambda POV.$$

Thus, looser eligibility criteria (i.e. higher  $\lambda$ ) increases both the penetration rate and the amount of subsidy. Solving these two equations to eliminate  $\lambda$  gives

$$PEN = \beta_1 - (\beta_1 - \beta_3) POV + \left( \frac{\beta_2 - \beta_3}{s} \right) SUB.$$

Therefore, holding constant the amount of the subsidy ( $s$ ), the penetration rate is decreasing in the poverty rate and increasing in the subsidy per household ( $SUB$ ). In this specification, the subsidy per household is serving as a proxy for eligibility criteria. This simple model provides some justification for including per household subsidies directly into a penetration equation, but also suggests that functional form may be important and that the parameter estimates need to be interpreted carefully. In this example, a doubling of subsidy payments corresponds to the policy experiment of doubling the size of the eligible population. The effect of this experiment on measured penetration would be  $\beta_2 - \beta_3$ . Thus, the estimated coefficient on  $SUB$  would have to be multiplied by  $s$  to measure the effect of the policy change on telephone penetration.

---

to 1984? It is not clear *a priori* how this source of specification error might bias the estimated effects of the low income subsidies. G&T show in their study that inclusion of lagged penetration does not much matter.

\* Statistically significant at 0.05 level.

*A priori*, C&W seems the most interesting of the three studies because it relies on more disaggregated data. The study matches price data to census data on towns (cities, or designated places). The price data were obtained directly from large local exchange carriers, resulting in 1896 observations. The study measures the effect of LL subsidies with a dummy variable for the state's implementation of the program interacted with the poverty rate. Effectively, this is measuring whether poor communities in states who have LL programs in place have higher penetration rates than similar poor communities in states lacking LL programs. The regression analysis does not find a significant effect of LL on the measured penetration rate. This seems consistent with their related finding that the effect of local service prices is not significant either.

<sup>55</sup>This is regression (2) in Table 4 of Garbacz and Thompson (1997).

<sup>56</sup>Model A in Table 2 of Eriksson, Kaserman, and Mayo (1998).

<sup>57</sup>Model (1a) in Table 5-5 of Crandall and Waverman (2000).

These results suggest that LL has not been an effective policy tool for advancing universal service. It is possible that the supporting estimates suffer from endogeneity bias, although this seems less likely than in G&T and EKM, because in C&W the regulated prices and subsidy policies are set at the state level while penetration is measured at the town level.

C&W measure the effect of LU simply as a dummy variable interacted with poverty, effectively comparing penetration rates of poor towns in states with and without the LinkUp program. The regression equation finds that the LinkUp policies have a statistically significant *negative* effect on telephone penetration. This paradoxical result seems hard to explain, and appears inconsistent with the finding that higher installation charges reduce penetration. C&W suggest that the result is due to the fact that only two states, Delaware and Illinois, lacked LU programs and that the regulators in these states declined to implement LU because penetration rates were already high. In other words, the estimated coefficient suffers from an endogeneity bias. In view of this potential problem, the C&W study does not appear to provide very convincing evidence on the effectiveness of LinkUp.

#### 4.3 High cost subsidies

Telephone companies serving high-cost areas in the U.S. receive direct subsidies. Federal subsidies to companies serving high-cost areas have been paid out under a variety of mechanisms (Federal Communications Commission 1999). "High-cost loop support" has been given to companies with above average non-traffic sensitive costs. Additional "long term support" subsidizes a uniform below-cost carrier line rate for participating companies. Finally, "local switching support" defrays some of the traffic sensitive costs of companies serving small market areas. Taken together, these mechanisms provided \$1.7 billion in assistance in 1999. A new high-cost program established in 2000 consolidated the subsidies to larger companies in a new cost fund, and established intrastate subsidies based on forward-looking economic cost and targeted to high-cost wire centers within the receiving state. The Telecommunications Act requires that implicit universal subsidies be made explicit and financed by taxes ("contributions") on the revenues of telecommunications companies. The federal programs are financed by taxes on interstate and international revenues.

Eriksson, Kaserman and Mayo (1998) studied the effectiveness of high-cost support on the prices of Bell Operating Companies (BOCs) with the following regression equation

$$PRI = 15.53250 + 0.014660 \cdot CST - 20.20702 \cdot BUS - 0.13469 \cdot USF$$

where *PRI* is a weighted average flat rate for residential service, *CST* is the historical cost of "outside plant" for providing local access in the rate base, *BUS* is the ratio of business and residential lines, and *USF* is high cost support per household paid from the Universal Service Fund. These variables are measured at the state level. Although the coefficients are all statistically significant, the  $R^2$  of this regression equation is only 0.20. The regression indicates a negative correlation between the amount of high cost support and the price of local service. This estimated equation suggests that an extra dollar of high-cost support translates into only a 13 cent reduction in the price of local service. Thus, given a low price elasticity for local access, this suggests that high-cost subsidies paid to companies are not very effective at increasing penetration rates. Indeed, Eriksson, Kaserman and Mayo (1998 p. 498) conclude that a \$10,000 increase in BOC high-cost support would add only 15 subscribers at a cost of

\$666 per new subscriber. As above, this "policy experiment" is suggestive, but not definitive because the estimated parameters lack clear structural interpretations.

Recent FCC policy has left the problem of high-cost support largely to the state jurisdictions. Rosston and Wimmer (2000a) ask what level of state universal service funds would be necessary to cover the forward-looking economic costs of local service under the assumption that telephone companies earn \$32 per line, which is a benchmark revenue level that the FCC had considered previously as relevant for establishing high-cost support levels. They estimate that the state high-cost subsidies would come to almost \$3 billion in the aggregate, the financing of which would require consumers to pay an weighted-average tax rate of 2.41% on intrastate revenues. They further estimate that, if instead of establishing high-cost subsidies, the states rebalanced rates to reflect costs, then telephone penetration rates would drop by only one-half of one percent nationwide. This calculation leads them to question whether this modest effect on penetration is worth the efficiency loss created by the distortionary revenue taxes, and to recommend that high-cost support be targeted better to low-income households.

## 5. CONCLUSIONS

A number of conclusions can be drawn from this survey of issues about universal residential telephone service. First, the two important "underserved" populations in the United States are the poor and Native Americans. These populations have substantially lower residential telephone penetration rates even after controlling for locational, demographic, and cost factors. Second, although penetration rates for similar communities are different in different parts of the United States, differences in state regulatory policies account for no more than 1-2% of this variation. Third, the extent to which "taxes" on long distance usage are an inefficient means of public finance for universal service programs depends on details of the industrial organization of long distance telephone services. Fourth, while scale economies and especially network externalities provide potentially important theoretical rationales for universal service policies, the empirical evidence on their quantitative significance is scant and inconclusive. Fifth, optional tariffs governing local and long distance toll services potentially are effective devices for targeting implicit subsidies for local access. Sixth, there is some econometric support for the proposition that business rates have cross-subsidized residential rates, according to the formal economic definition of a cross-subsidy, but the frequent claims that long distance cross-subsidizes local and that urban cross-subsidizes rural services rest on more casual appraisals. Seventh, although economic theory provides rationales for well-designed low-income and high-cost support policies for promoting universal service, the limited empirical evidence on the issue suggests that low income and high-cost subsidies have at best a quantitatively small impact on penetration rates relative to their cost.

The main conclusion of the chapter, though, is that there remains a shortfall of research on the economics of universal service. First, the determinants of telephone penetration are still not completely understood. For example, it is unclear why Native American populations suffer lower telephone penetration even after controlling for poverty, climate, and costs. It is also unclear to what extent price regulation and universal service policies explain state-specific variations in telephone penetration. Second, the empirical importance of scale economies and network externalities as rationales for universal service remains cloudy. For example, more information on usage profits earned by service providers on marginal subscribers would permit a better calculation of the economic opportunity cost of expanding basic access services. A se-

rious attempt to estimate the quantitative significance of “long distance network externalities” from price elasticities for long distance services would contribute usefully to the policy debate. Evidence on the significance of offsetting call externalities is also sorely needed. Third, an empirical quantification of the potential welfare gains from implementing optional tariffs, or other forms of second-degree price discrimination, seems to be within reach of modern structural econometrics with a sufficiently rich data set (Miravete 2000). Fourth, well-crafted tests of the propositions that long distance has cross-subsidized local services and that urban have cross-subsidized rural services are long overdue. Fifth, a fully convincing appraisal of the performance of low-income and high-cost programs in advancing universal service awaits better data and more careful econometrics. Settling these issues for the paradigm problem of maintaining and advancing basic universal residential telephone service will strengthen the foundations for debating and evaluating the next generation of universal service policies.

Only a few qualified lessons can be drawn for policy-makers. First, while state regulators should “benchmark” their regulatory and universal service policies to other states, the adoption of “best practices” might increase residential telephone penetration by only a few percent. Second, even though policy-makers can in good faith remain hesitant to embrace too closely the chorus of calls for strict cost-based pricing of local access services, the economic case for a significant markup of usage prices is debatable. Third, while the FCC and the states should consider optional arrangements for universal service contributions as a better way to target universal service support, the quantitative significance of such policies remains an open question. Fourth, the FCC most likely should exempt service provided to Lifeline and LinkUp recipients from universal service contributions. All such advice is tentative, of course, pending further economic research.

Although beyond the scope of this chapter, it is worth mentioning, in closing, a few upcoming issues. One new issue is universal service auctions. The 1996 Telecommunications Act opens the door for the FCC to consider auctions as an alternative mechanism for high-cost support. The FCC has so far refrained from doing so, although in its 1997 *Universal Service Order* expressed an intention to open a proceeding on the matter. In the mid 1990s, California considered but did not adopt auctions for awarding state high-cost support. Other places, including Europe and Australia, have also considered auction mechanisms for high cost support. There is a new theoretical literature on the topic (Laffont and Tirole 2000; Sorana 2000). Another new issue for which there is an emerging literature is the effect of universal service policies on competition (Gasmi, Laffont, and Sharkey 2000; Choné, Flochel, and Perrot 2000). The Telecommunications Act requires that universal service policies in the United States be competitively neutral. In the U.S. and even more blatantly in other countries, new competitors pay taxes to incumbents to help finance the incumbents’ universal service obligations. Armstrong (2001a, 2001b) argues that a well-designed universal service policy, together with cost-based access pricing, nevertheless can provide efficient incentives for entry and make-or-buy decisions. A third emerging issue is a broader definition of universal service, discussed by Crandall and Waverman (2000). There is considerable and growing political pressure to further expand the definition of universal service to encompass Internet access. Downes and Greenstein (1999) show empirically that access to Internet services is already widely available, albeit at very different speeds in different places. Cremer (2000) develops a theoretical argument that network externalities might be particularly strong for broadband Internet service. These are all likely to be among the important universal service policy issues in the coming decade.

## 6. APPENDIX: VARIABLE DEFINITIONS AND SUMMARY STATISTICS FOR TABLE 1

### 6.1 Census data

The following variables were created from the 1990 Census STF-3 files. Each variable is measured at the Census Block Group (CBG) level.

*Penetration* is the fraction of occupied housing units in the CBG with a telephone in the housing unit.

*% Poor* is the fraction of CBG population living below the poverty line.

*Median income* is the median household income of the CBG, measured in thousands of dollars.

*% Female head of household* is the fraction of households in the CBG with a female head of household.

*% Senior* the fraction of CBG population that is 65 years of age or older.

*% Children* the fraction of CBG population that is 15 years of age or younger.

*% High school* is the fraction of CBG population with a high school degree, including those with some college but no college degree.

*% College* is the fraction of CBG population with a college degree.

*% Black* is the fraction of CBG population that is black.

*% Hispanic* is the fraction of CBG population that is of Hispanic origin. If a person is black, white, Asian, etc., and also of Hispanic origin, then they are counted only as being Hispanic.

*% Native* the fraction of CBG population that is Native American.

*% Asian* the fraction of CBG population that is Asian.

*% Other nonwhite* the fraction of CBG population that is nonwhite and not a member of the aforementioned race categories.

*Population density* is the number of people, measured in thousands, per square kilometer living in the CBG.

*Wire center population* is the number of people, measured in thousands, living in the area serviced by the same wire center that services the CBG. This variable was created from the 1990 Census STF-3 files, but only after linking the CBGs to wire centers using data obtained from the FCC.

## 6.2 Climate data

In order to measure the effect of climate on telephone penetration, data from the United States Historical Climatology Network (U.S. HCN) was linked to the census data.<sup>58</sup> The U.S. HCN data is measured at the station level, identified by its latitude and longitude. Each CBG was assigned to the station with the minimum product of absolute differences between latitude and longitude. Data is available from 1221 stations for the 48 contiguous state, although data from Tennessee was missing. Data for Alaska, Hawaii, and the District of Columbia are not available from this source. A fully quadratic form was specified for the following variables:

*Temperature* is the annual mean temperature in 1989 recorded by the station, within state, nearest to the CBG.

*Precipitation* is the total precipitation in inches in 1989 recorded by the station, within state, nearest to the CBG.

## 6.3 Cost Data

The FCC has published an economic-engineering model that estimates, among other things, the forward-looking economic cost of providing basic local service.<sup>59</sup> This model incorporates locational data and 1996 quantity and price data into an optimization model. The cost estimation procedure is based on the FCC's TELRIC (total element long run incremental cost) methodology. The CBGs are matched to wire centers. Given the relatively small increase in telephone penetration rates in recent years, the relative forward-looking costs probably have not changed too much between 1990 and 1996, except that boundaries of wire centers do change occasionally. For given wire center assignments locational data, e.g. terrain, which are a critical determinant of cost differences, certainly remain constant.

Not every CBG can be matched to a wire center. The model uses a selection of wire centers in Bellcore's LERG database. Only wire centers which were listed as end offices, hosts or remotes, and which were not owned by wireless, long distance or competitive access providers were used. This left roughly some 12,000 wire centers, covering roughly half of the original sample of CBGs. When wire centers are matched to the CBGs for which weather data is available, roughly forty percent of the original sample of CBGs were left.

The cost variables used in the estimation are defined as follows.

*Loop length* is an estimate of the average length of the connection of the customer to the wire center, including distribution (the cable connecting a customer to a Serving Area Interface (SAI)) and feeder (the cable connecting an SAI to a wire center) distances.

*Average forward looking cost* is the FCC's estimate of the average monthly forward-looking cost of providing basic local service, including distribution, feeder and end-office switching costs, measured in dollars.

<sup>58</sup>The U.S. HCN data is made publicly available by the Carbon Dioxide Information Analysis Center. For more information see: Easterling, D. R., T. R. Karl, E. H. Mason, P. Y. Hughes, D. P. Bowman, and R. C. Daniels, T. A. Boden (eds.). "United States Historical Climatology Network (U.S. HCN) Monthly Temperature and Precipitation Data." ORNL/CDIAC-87, NDP-019/R3. Carbon Dioxide Information Analysis Center, Oak Ridge National Laboratory. Oak Ridge, Tennessee, 1996.

<sup>59</sup>See Sharkey (2001) for a description of the FCC's Hybrid Proxy Cost Model.

On behalf of the Commission.

ORDER ON ACCESS CHARGE REDUCTION PETITIONS

I. INTRODUCTION AND HISTORY

The telecommunications industry is in transition from an industry characterized by regional monopolies to one characterized by national competition. For most of its history, telephone service was furnished on a monopoly basis by a single provider. In exchange for a statutory monopoly, the telephone company was subject to economic regulation that gave it the opportunity to earn a fair rate of return on its investment. In this monopoly regime, prices for long distance and other premium services were set substantially above cost based on value of service principles. At the same time, local telephone service was priced residually to advance the social policy goal of providing universal service.

Effective January 1, 1984, this monopoly regime was radically changed nationwide by the entry of the "modified final judgment"<sup>1</sup> which reorganized AT&T and divested it of its

---

<sup>1</sup> United States v. American Telephone and Telegraph Co., 552 F. Supp 131 (D.D.C. 1982) aff'd sub nom, Maryland v. United States, 460 U.S. 1001 (1983), as subsequently modified by United States v. Western Electric Co., 569 F. Supp. 990 (D.D.C. 1983) and United States v. Western Electric Co., 569 F. Supp. 1057 (D.D.C.), aff'd sub nom, California v. United States, 464 U.S. 1013 (1983).

local telephone companies, restricted the operating areas of the local telephone companies, and provided for competitive interstate long distance service. See, Microtel, Inc. v. Florida Public Service Commission, 483 So.2d 415, 416 (Fla. 1986)(Microtel II). In apparent anticipation of the forthcoming consent judgment in the AT&T case, and motivated by a desire to promote competitive long distance telephone service within Florida, the Legislature in 1982 amended Florida law to allow the Commission to issue certificates for competitive intrastate long distance service. Id. at 417-418. As the Florida Supreme Court recognized in Microtel Inc. v. Florida Public Service Commission, 464 So.2d 1189, 1191 (Fla. 1985)(Microtel I), the 1982 Legislature made the "fundamental and primary policy decision" that there be competition in long distance telephone services" in Florida.

As long distance competitors entered the market, state and federal regulators instituted a system of intercarrier compensation under which long distance companies paid "access charges" to the local exchange telephone companies for the use of the local networks to originate and terminate long distance calls. As the record reflects, these access charges were initially set to take the place of the revenue that had been provided by long distance service under the monopoly regime.

A decade after the introduction of long distance competition, the landscape in the telecommunications industry changed again with the elimination, first in Florida and then nationwide, of the statutory monopoly for local exchange service. In 1995, the Florida Legislature amended Chapter 364, Florida Statutes, to allow for competition in the provision of local service. The Legislature found that "the competitive provision of telecommunications services, including local exchange service, is in the public interest and will provide customers with freedom of choice, encourage the introduction of new telecommunications service, encourage technological innovation, and encourage investment in telecommunications infrastructure." Section 364.01(3), Florida Statutes. In conjunction with the opening of the local exchange market to competition, the incumbent local exchange companies (ILECs) were permitted to elect to substitute price regulation for the former rate base, rate of return regulation. Section 364.051, Florida Statutes.

The opening of the Florida local market to competition was followed the next year by the enactment of the federal Telecommunications Act of 1996 (1996 Act). Pub. L. No. 104-104, 104th Congress 1996, 110 Stat. 56, 47 U.S.C. §§ *et. seq.* This act established a national framework to enable competitive local exchange carriers (CLECs) to enter the local telecommunications market and to allow the former Bell Operating Companies to reenter the interLATA long distance market. The purpose of the 1996 Act was to bring the benefits of competition to all telecommunications markets by creating a pro-competitive, de-regulatory national policy framework. Senate Rpt. 104-023, entitled "Telecommunications Competition" (March 30, 1995).

Over the 19 years since the introduction of long distance competition, both interstate access charges and intrastate access charges have been reduced. Despite these reductions, the record shows that intrastate access charge rates in Florida are among the highest in the nation and are substantially above interstate access charge rates. The record also shows, as further analyzed in Section VI(B) of this Order, that intrastate long distance rates in Florida (through which an IXC must recover, among other things, its intrastate access charge costs) are likewise among the highest in the nation, and are substantially above interstate long distance rates. Local service rates in Florida, however, are the lowest in the Southeast.

While the long distance market is now vigorously competitive, local wireline competition has progressed more slowly, particularly in the residential market. At the same time, wireline companies are facing increased competition from providers using alternative technologies such as wireless, cable, and voice over internet protocol (VoIP). See FPSC Annual Report on Competition (June 30, 2003).

Against this backdrop, the Florida Legislature, during the 2003 Regular Session, enacted the Tele-Competition Innovation and Infrastructure Enhancement Act (2003 Act), which became effective on May 23, 2003. In broad terms, the 2003 Act allows the Commission to consider whether allowing the ILECs to reduce their intrastate access charges to interstate levels, and to make offsetting increases in local service rates, will further the Legislature's goal of increasing competition in the local telephone market. By returning some regulation of intrastate access charges to the Commission, the Legislature has given us the tools to address the question of whether access charges in fact support artificially low local service rates that may be impairing the implementation of competition in the local telephone market.

A key provision in the 2003 Act, Section 364.164, Florida Statutes, provides a process by which ILECs may petition this Commission to reduce their intrastate switched network access rates in a revenue-neutral manner. We are required by law to issue our final order granting or denying any such petition within 90 days of the filing. In reaching our decision, Section 364.164(1), Florida Statutes, sets forth four mandatory criteria we must consider. Those criteria are:

[W]hether granting the petition will:

- (a) Remove current support for basic local tele-communications services that prevents the creation of a more attractive competitive local exchange market for the benefit of residential consumers.
- (b) Induce enhanced market entry.

- (c) Require intrastate switched network access rate reductions to parity over a period of not less than 2 years or more than 4 years.
- (d) Be revenue neutral as defined in subsection (7), within the revenue category defined in subsection (2).

In laymen's terms, subsection (1)(d) means that any ILEC that is permitted to reduce its intrastate switched network access rates may offset those reductions through simultaneous increases in the local rates charged to its flat-rate residential and single-line business customers.

In addition, Section 364.163(2), Florida Statutes, provides a mechanism to ensure that any IXC that receives the benefits of access charge rate reductions will flow those benefits through to both residential and business customers in the form of lower intrastate long distance rates:

Any intrastate interexchange telecommunications company whose intrastate switched access rate is reduced as a result of the rate adjustments made by a local exchange telecommunications company in accordance with s. 364.164 shall decrease its intrastate long distance revenues by the amount necessary to return the benefits of such reduction to both its residential and business customers. The intrastate interexchange telecommunications company may determine the specific intrastate rates to be decreased, provided that residential and business customers benefit from the rate decreases. Any in-state connection fee or similarly named fee shall be eliminated by July 1, 2006, provided that the timetable determined pursuant to s. 364.164(1) reduces intrastate switched network access rates in an amount that results in the elimination of such fee in a revenue-neutral manner. The tariff changes, if any, made by the intrastate interexchange telecommunications company to carry out the requirements of this subsection shall be presumed valid and shall become effective on 1 day's notice.

Section 364.163(3) gives this Commission continuing regulatory oversight regarding the access charge reduction flow-throughs described in subsection (2).

Finally, the 2003 Act amended Section 364.10 to provide increased protection to economically disadvantaged customers. This section requires any ILEC that reduces its access charges (and increases its local rates) pursuant to Section 364.164 to make its Lifeline Assistance Plan available to customers with incomes at or below 125% of the federal poverty level, up from 100% or less under the prior law.

Our jurisdiction in this matter arises from the above statutory provisions.

## II. CASE BACKGROUND

On August 27, 2003, Verizon Florida Inc. (Verizon), Sprint-Florida, Incorporated (Sprint), and BellSouth Telecommunications, Inc. (BellSouth), each filed petitions pursuant to Section 364.164, Florida Statutes. Dockets Nos. 030867-TL (Verizon), 030868-TL (Sprint), and 030869-TL (BellSouth) were opened to address these petitions in the time frame provided by Section 364.164, Florida Statutes. On September 4, 2003, the Order Establishing Procedure and Consolidating Dockets for Hearing, Order No. PSC-03-0994-PCO-TL, was issued. At the September 15, 2003, Agenda Conference, the Commission decided to hold public hearings in the above referenced dockets.

On September 3, 2003, the Office of Public Counsel (OPC) filed Motions to Dismiss the Petitions in each of these dockets on the grounds that the Petitions proposed to make rate changes over one year, rather than the two year minimum required by Section 364.164(1)(c). On September 10, 2003, Verizon filed its Response to OPC's Motion to Dismiss. Also on September 10, 2003, Sprint and BellSouth filed their Joint Response to OPC's Motion to Dismiss. At the September 30, 2003, Agenda Conference, we voted to dismiss Verizon, Sprint, and BellSouth's Petitions with leave to amend within 48 hours to address the Commission's determination regarding the application of the two-year time frame in Section 364.164(1)(c), Florida Statutes. On September 30, October 1, and October 2, 2003, respectively, BellSouth, Sprint, and Verizon filed their amended petitions.

By Order No. PSC-03-1240-PCO-TL, we consolidated Docket No. 030961-TI, which was opened to address questions regarding the IXCs' flow-through to customers of any access charge reductions, into this proceeding for hearing. By Order No. PSC-03-1269-PCO-TL, the procedure in these consolidated Dockets was amended to include additional testimony filing dates and issues to reflect the consolidation of Docket No. 030961-TI. A hearing on this matter was held on December 10-12, 2003.

In this matter, we received the testimony of 26 witnesses on behalf of the ILECs, intervenors, the consumer advocates, and our own Commission staff. We also received testimony from customers at 14 customer service hearings conducted throughout the state, as well as written comments from customers submitted to the docket files associated with this case. In addition, we received into evidence 86 exhibits. We have carefully considered the evidence received in its entirety, as well as the arguments of counsel. Based thereon, we hereby render our decision on the issues presented.

### III. MOTIONS

Three motions remained outstanding at the start of our hearing in this matter -- two motions for reconsideration of prior orders and one motion for entry of a summary final order. As a preliminary matter, we addressed the motions as follows:

A. Joint Petitioners Motion for Reconsideration of Order No. PSC-03-1269-PCO-TL, issued Nov. 10, 2003 - Second Order Modifying Procedure for Consolidated Dockets to Reflect Additional Docket, Associated Issues, and Filing Dates

This motion asked that the Commission reconsider the inclusion of Issues 6-10 in the Second Order Modifying Procedure. The motion argued that the inclusion of those issues, which relate to the IXCs' flow-through of any access charge reductions they receive, inappropriately imposed additional criteria on the Joint Petitioners' Petitions for switched network access rate reductions that go beyond the four mandatory criteria enumerated in Section 364.164(1). The Office of Public Counsel filed a response to this Motion on behalf of the Citizens. Upon consideration, we granted the Petitioners' request for oral argument on this Motion at the outset of the hearing.

The standard of review for a motion for reconsideration is whether the motion identifies a point of fact or law which was overlooked or which the Commission failed to consider in rendering its Order. See, Stewart Bonded Warehouse, Inc. v. Bevis, 294 So. 2d 315 (Fla. 1974); Diamond Cab Co. v. King, 146 So. 2d 889 (Fla. 1962); and Pingree v. Quaintance, 394 So. 2d 162 (Fla. 1<sup>st</sup> DCA 1981). In a motion for reconsideration, it is not appropriate to reargue matters that have already been considered. Sherwood v. State, 111 So. 2d 96 (Fla. 3<sup>rd</sup> DCA 1959); citing State ex. rel. Jaytex Realty Co. v. Green, 105 So. 2d 817 (Fla. 1<sup>st</sup> DCA 1958). Furthermore, a motion for reconsideration should not be granted "based upon an arbitrary feeling that a mistake may have been made, but should be based upon specific factual matters set forth in the record and susceptible to review." Stewart Bonded Warehouse, Inc. v. Bevis, 294 So. 2d 315, 317 (Fla. 1974). This standard is equally applicable to reconsideration by the Commission of a Prehearing Officer's order. See, Order No. PSC-96-0133-FOF-EI, issued January 29, 1996, in Docket No. 950110-EI.

Throughout this proceeding, one hotly contested issue has been whether, in making its determination to grant or deny the Petitions, the Commission can consider only the four mandatory criteria enumerated in Section 364.164(1) or whether it is also required or permitted to consider the extent to which residential customers whose local rates would be increased if the Petitions are granted are likely to benefit from offsetting long distance rate decreases. This is ultimately an issue of statutory construction which we indicated on several occasions would be considered at the conclusion of the evidentiary hearing.

The thrust of the Petitioners' motion for reconsideration is that the inclusion of Issues 6 through 10 in the Second Order Modifying Procedure improperly introduced consideration of this long distance rate impact into the proceedings on their Petitions. OPC, on the other hand, argues that these Issues were properly included, since the Commission must consider the combined impact on residential customers of any local rate increases and any long distance rate decreases.

Upon consideration, we conclude that the Motion for Reconsideration does not identify a mistake of fact or law made by the Prehearing Officer in rendering his decision. The determination about which the Joint Petitioners express concern is not one made by the Prehearing Officer in his Order. The Prehearing Officer did not impose additional requirements on the ILECs' Petitions to reduce access charges; instead, he included additional issues for consideration in this proceeding based upon our decision to consolidate Docket No. 030961-TI with Dockets Nos. 030867-TL, 030868-TL, and 030869-TL for hearing. His Order clearly set forth that this is the basis upon which he modified the schedule and the issues list for the proceeding. As such, his decision is not only correct, but needs no clarification. The decision to consolidate Docket No. 030961-TI was made by this Commission in Order No. PSC-03-1240-PCO-TP, issued November 4, 2003. Reconsideration of that decision was not requested. The Prehearing Officer's Order merely implements that decision by amending the schedule and including issues to reflect the consolidation. As for the legal issue raised by the Joint Petitioners, that being whether we should consider impacts on the toll market in making our decision on the ILECs' Petitions, that issue was not addressed by the Prehearing Officer and remains for decision by this Commission at the conclusion of the hearing. For these reasons, the Joint Motion For Reconsideration is denied.

B. OPC's Motion for Reconsideration of Order No. PSC-03-1331-FOF-TL (filed Dec. 5, 2003) / AARP's Motion for Reconsideration of Same Order (filed Dec. 8, 2003)(The Attorney General Joined in the Motions on December 9)

These motions asked that we reconsider certain language in our Order denying AARP's Motion to Dismiss these cases for failure to join the IXCs as indispensable parties. OPC and AARP argue that the language contained in the order did not accurately capture the rationale for the Commission's decision as expressed during the Commission's deliberations on that motion. A response in opposition was filed by the Joint Petitioners on December 9, 2003. We received additional argument on this Motion at the outset of the hearing.

While we do not believe that reconsideration is appropriate in this instance, upon consideration of the arguments and review of the Order itself, we do believe that some clarification is in order. It is clear that certain language included in the Order could be misconstrued. Therefore, Order No. PSC-03-1331-FOF-TL, at pages 11 and 12, is amended and clarified as reflected in the following type and strike version:

In reaching this conclusion, we refer to the language of Section 364.164, Florida Statutes. Contrary to AARP's assertions, none of the four mandatory criteria set forth for our consideration in addressing the petitions mandates necessitates participation by the IXCs. ~~As plainly stated by the Legislature, t~~The first factor set forth in Section 364.164(1), Florida Statutes, for our consideration does not mandate that ~~direct~~ the Commission ~~to~~ consider how the ILECs'

proposals will affect the *toll market* “for the benefit of residential consumers.” Instead, the plain language states that consideration should be given to whether granting the petitions will:

- (a) Remove current support for basic local telecommunications services that prevents the creation of **a more attractive local exchange market** for the benefit of residential consumers. [Emphasis added].

~~As such, the relevant market for use in making the final determination on the Petitions is the local exchange market.~~ Thus, we find that, for purposes of Section 364.164, Florida Statutes, consideration of the impact on the toll market (and resulting impact on toll customers) is not *required* for the Commission’s ~~full and complete~~ determination of the Petitions.<sup>3</sup> In reaching this conclusion, we do not find that we are precluded from such consideration, rather we conclude only that we are not required to do so.

---

<sup>3</sup>~~In reaching this conclusion, we do not find that we are precluded from such consideration, rather we conclude only that we are not required to do so.~~

~~The language of Section 364.164, Florida Statutes, appears clear; thus, under principles of statutory interpretation, this Commission need not look further to divine the Legislature's intent. Southeastern Utilities Service Co. v. Redding, 131 So.2d 1 (Fla. 1950).~~ That said, we nevertheless acknowledge AARP's contention that the Legislature considered the impacts on customers' toll bills in passing the new legislation.<sup>4</sup> We emphasize, though, that the Legislature did address the impact on the toll market if the Petitions are granted, but it did so through a separate section of the statutes, Section 364.163, wherein intrastate toll providers are required to pass the benefits of the access charge reductions on to their residential and business customers. This Commission is charged under that section with ensuring that reductions are, in fact, flowed through.

Based on the foregoing, Order No. PSC-03-1331-FOF-TP is clarified as set forth above.

C. Attorney General's Motion for Summary Final Order, filed Nov. 17 (AARP and OPC Joined in the Motion)

The Attorney General moved for a summary final order on the grounds that the record raises no genuine issue of fact regarding whether granting the Petitions will benefit residential consumers. Verizon, AT&T/MCI, BellSouth, and Sprint timely filed responses to the Motion. We received argument on this Motion at the hearing.

As became clear from the oral argument on this motion, the underlying contention by the Attorney General, OPC, and AARP is that Section 364.164 requires the Petitioners to demonstrate that residential consumers will benefit from long distance rate reductions, and that the prefiled testimony and exhibits showed that such benefits are not sufficient to offset the impact of the proposed local rate increases. The opponents of the motion contended that no such showing is required, and that the prefiled testimony establishes that residential customers will benefit from increased competition if the Petitions are granted.

Rule 28-106.204(4), Florida Administrative Code, provides:

---

<sup>4</sup>At footnote 1 of the Motion, AARP states that it is in the process of having the relevant industry and legislator comments recorded and transcribed for filing at a later date. This material was officially recognized during the final hearings in these proceedings.

Any party may move for summary final order whenever there is no genuine issue as to any material fact. The motion may be accompanied by supporting affidavits. All other parties may, within seven days of service, file a response in opposition, with or without supporting affidavits. A party moving for summary final order later than twelve days before the final hearing waives any objection to the continuance of the final hearing.

The standard for granting a summary final order is very high. The purpose of summary judgment, or in this instance summary final order, is to avoid the expense and delay of trial when no dispute exists concerning the material facts. The record is reviewed in the light most favorable to the party against whom the summary judgment is to be entered. When the movant presents a showing that no material fact on any issue is disputed, the burden shifts to his opponent to demonstrate the falsity of the showing. If the opponent does not do so, summary judgment is proper and should be affirmed. The question for determination on a motion for summary judgment is the existence or nonexistence of a material factual issue. There are two requisites for granting summary judgment: first, there must be no genuine issue of material fact, and second, one of the parties must be entitled to judgment as a matter of law on the undisputed facts. See, Trawick's Florida Practice and Procedure, §25-5, Summary Judgment Generally, Henry P. Trawick, Jr. (1999).

In summary, under Florida law, "the party moving for summary judgment is required to conclusively demonstrate the nonexistence of an issue of material fact, and . . . every possible inference must be drawn in favor of the party against whom a summary judgment is sought." Green v. CSX Transportation, Inc., 626 So. 2d 974 (Fla. 1st DCA 1993)(citing Wills v. Sears, Roebuck & Co., 351 So. 2d 29 (Fla. 1977)). Furthermore, "A summary judgment should not be granted unless the facts are so crystallized that nothing remains but questions of law." Moore v. Morris, 475 So. 2d 666 (Fla. 1985); City of Clermont, Florida v. Lake City Utility Services, Inc., 760 So. 1123 (5<sup>th</sup> DCA 2000).

The parties disagree on the proper interpretation of Section 364.164, Florida Statutes. We find, based on the pleadings, the arguments, and the prefiled testimony, there are genuine issues of material fact in dispute, regardless of whose statutory interpretation is ultimately determined to be correct. Since the motion must be viewed in the light most favorable to the parties against whom the motion is sought, the Motion must be denied in this case. In reaching this conclusion, we make no determination on the legal or factual issues to be addressed through the hearing. Rather, we conclude only that the high standard for granting a summary final order has not been met.

#### IV. STATUTORY INTERPRETATION

The question of the proper interpretation of Section 364.164 is one that has been raised time and again in this case in various motions, testimony, and in this Commission's own comments. We carefully withheld ruling on the question of whether Section 364.164, Florida Statutes, is ambiguous until after conclusion of the evidentiary hearing and the closing arguments of counsel. It is important to address this question before reaching the other issues in the case, because our decision will determine whether we can consider arguments and evidence presented in the case regarding the Legislative history and intent of the statute.

The law on this aspect of statutory interpretation is clear. When interpreting statutory provisions, one first should look to the provision at issue to determine whether the "language is clear and unambiguous and conveys a clear and definite meaning. . . ." Holly v. Auld, 450 So. 2d 217 (Fla. 1984), citing A.R. Douglass Inc. v. McRainey, 102 Fla. 1141 (1931). If the meaning is clear, there is no need to resort to statutory interpretation. Furthermore, an unambiguous statutory provision cannot be construed to extend, modify, or limit its express terms or its reasonable and obvious implications. Holly, at 219. However, a statute should not be given its literal reading if such reading would lead to an unreasonable conclusion. Id.

Section 364.164 sets forth the criteria we must consider in determining whether to grant the ILECs' petitions. Those criteria are as follows:

[W]hether granting the petition will:

- (a) Remove current support for basic local telecommunications services that prevents the creation of a more attractive competitive local exchange market for the benefit of residential consumers.
- (b) Induce enhanced market entry.
- (c) Require intrastate switched network access rate reductions to parity over a period of not less than 2 years or more than 4 years.
- (d) Be revenue neutral as defined in subsection (7) within the revenue category defined in subsection (2).

The ILECs argue that this language clearly expresses the Legislature's intent and, thus, is not subject to interpretation. The OPC, the Attorney General, and AARP present a vastly differing interpretation of the statute, and have offered into evidence and in their arguments the Legislative history of the bill. Each side offers tenable arguments regarding how the statute could be interpreted. We note that the lack of clarifying language or punctuation in the provisions at issue contributes to the differing interpretations. As such, having considered the arguments and the language of the statute itself, we find that the language of Section 364.164, Florida Statutes, is not clear on its face and, thus, is

subject to statutory interpretation. Having reached this conclusion, our decisions as set forth below reflect our interpretation of the Legislature's intent as gleaned from the Legislative history, including consideration of the potential impacts of granting the Petitions on the toll rates paid by residential customers.

V. SUMMARY OF DECISION

As discussed in more detail later in this order, we find and conclude, based on the record, that:

1. Intrastate access rates currently provide support for basic local telecommunications services that would be reduced by bringing such rates to parity with interstate access rates.
2. The existence of such support prevents the creation of a more attractive competitive local exchange market by keeping local rates at artificially low levels, thereby raising an artificial barrier to entry into the market by efficient competitors.
3. The elimination of such support will induce enhanced market entry into the local exchange market.
4. Enhanced market entry will result in the creation of a more competitive local exchange market that will benefit residential consumers through:
  - a. increased choice of service providers;
  - b. new and innovative service offerings, including bundles of local and long distance service, and bundles that may include cable TV service and high speed internet access service;
  - c. technological advances;
  - d. increased quality of service; and
  - e. over the long run, reductions in prices for local service.
5. The ILECs' proposals will reduce intrastate switched network access rates to parity over a period of not less than two years or more than four years.
6. The ILECs' proposals will be revenue neutral within the meaning of the statute, which permits access charge reductions to be offset, dollar for dollar, by increases in basic local service rates for flat-rate residential and single-line business customers.

7. Because of the mandatory flow-through provisions of Section 364.163, approval of the plans will be financially neutral to the IXC's, who are required to reduce their intrastate toll rates and charges to consumers to offset the benefit of any access charge reductions the IXC's receive.

8. Contrary to the position taken by the Attorney General in these proceedings, the statute does not require that implementation of the proposals be "bill neutral" to any particular customer or class of customers.

9. We are not mandated by Section 364.164 to consider the impact of the proposals on toll rates paid by residential consumers. However, consistent with the legislative history of the 2003 Act, we conclude that we are permitted to do so. In this regard, we find that many residential customers will benefit directly from the elimination of in-state connection fees and reductions in per-minute intrastate toll rates. We also find that residential customers as a whole will enjoy prices for toll services that are closer to economic costs and, therefore, will have less of a repressive effect on long distance usage. We also find that under the long distance rate reduction plans offered by the IXC's, residential customers as a whole will get a proportionate share of any toll rate reductions based on their share of total access minutes of use.

10. Experience from other states that have rebalanced local and toll rates shows that approval of the ILEC's proposals will have little, if any, negative impact on the availability of universal service. While no customer likes to see a rate increase, the record shows that basic local service will continue to remain affordable for the vast majority of residential customers.

11. Although we find that it is not a benefit that we should weigh in the balance in considering whether or not to grant the Petitions, the amended Lifeline provisions in Section 364.10 will help to protect economically disadvantaged consumers from the effect of local rate increases. This protection is enhanced by the ILEC's agreement to further increase the eligibility criteria for Lifeline assistance from 125% to 135% of the federal poverty level, increasing the number of customers eligible for the program by approximately 119,000, and to protect Lifeline recipients against basic local service rate increases for four years. Although we cannot predict the future with certainty, economic theory suggests, and we are encouraged to believe, that the establishment of a more competitive local market will put downward pressure on local exchange prices that will eventually reduce the need for targeted assistance programs such as Lifeline.

The following sections set forth a detailed analysis of our decisions on the points outlined above.

## VI. REMOVAL OF CURRENT SUPPORT

In this section, we address whether the ILECs' proposals meet the requirements of Section 364.164(1)(a), Florida Statutes. For clarity of analysis, we have considered these requirements in three parts: (A) what is a reasonable estimate of the level of support for basic service provided by access charges; (B) does that support prevent the creation of a more attractive local exchange market; and (C) would the creation of a more attractive local exchange market benefit residential consumers.

### A. REASONABLE ESTIMATE OF SUPPORT

#### 1. Arguments

Verizon contends that its basic local services receive support from its network access charges, and that its plan removes this support by bringing the prices of those services more in line with costs. Verizon asserts that removing support for basic local services will promote local exchange competition for the benefit of residential customers. Verizon contends that it will make residential customers more attractive to competitors and thus induce enhanced market entry, encourage innovation, and promote increased freedom of choice. Verizon asserts that the plan will also reduce intrastate access rates, thereby allowing residential customers to make more long distance calls at lower prices. Verizon, along with BellSouth and Sprint, sponsored the testimony of Dr. Kenneth Gordon addressing this issue. Verizon's witnesses Fulp and Danner also offered testimony in this regard.

Verizon states that for purposes of this proceeding, it seeks to remove \$76.2 million of support from basic local telecommunication services. Verizon contends that this amount is necessary to bring its intrastate switched network access rate to parity with its interstate switched network access rate.

Likewise, Sprint argues that the level of support provided for basic local services by intrastate switched network access rates in excess of parity in Sprint's service areas is \$142,073,492 per year, based upon current access minutes of use. Sprint offered the testimony of witnesses Dickerson, Felz, and Staihr on this issue.

BellSouth emphasizes that this Commission has already found that BellSouth's residential rates receive support from access charges, which is further buttressed by the detailed testimony of BellSouth's witness Bernard Shell, particularly the information in witness Shell's exhibit WBS-1 (Hearing Exhibit 53). This support from above-parity intrastate access charges ranges from \$125.2 million to \$136.4 million per year, depending on the method used to perform the calculation. BellSouth maintains that its proposal will remove current support for basic local telecommunications

services, and will bring the rates for basic local exchange service to a level that encourages competitive entry in the local exchange market. BellSouth argues that this is evidenced, in part, by the testimony of AT&T and Knology in this proceeding. BellSouth adds that residential customers will benefit from having new choices of providers and services that additional competition will bring and will also benefit from the pass-through of access charge reductions in the form of reduced toll rates. To address this aspect of its petition, BellSouth submitted the testimony of its witnesses Shell and Banerjee.

Knology asserts that granting these petitions will materially diminish the current support for basic local telecommunications services. Knology contends that this support prevents creation of a more competitive market. Knology asserts that diminution of the support will spur additional competition. Knology states that its experience in its existing markets provides examples of how the entry of a facilities-based competitor for telephone service expands the products available to consumers, increases the customer service levels, and promotes product and pricing competition.

AT&T and MCI agree that the ILEC proposals will remove current support for basic local telecommunications services by simultaneously reducing intrastate switched access rates that have been established at economically inefficient levels through the residential rate setting process and adjusting local exchange rates upward on a revenue neutral basis. They assert that through the process of residual ratemaking, intrastate switched access charges have been historically elevated well above their relevant economic cost and the surplus has served as residual support for basic local telecommunications services. Dr. John Mayo testified on AT&T and MCI's behalf on this point.

OPC asserts that residential basic local telephone service is not subsidized by access service or any other service. OPC contends that the ILECs' petitions, therefore, do not remove current support, because there is none. OPC further asserts that Basic Local Telecommunication Services (BLTS) are not supported by the rates for intrastate access, because the existing BLTS rates exceed their incremental costs. AARP, Common Cause, and Sugarmill Woods agree to a large extent, although they further argue that there is no support, because the loop itself is a common cost that should be fully allocated among all services that use the loop. Dr. David Gabel provided testimony on behalf of OPC addressing this issue, while Dr. Mark Cooper testified on behalf of AARP.

## 2. Findings and Decision

We find that the ILECs' access charge rates provide support to local exchange service. In making this determination, we accept the economic testimony of the ILECs' and IXCs' witnesses, which treat the cost of the local loop as a cost of basic local service. In particular, the testimony shows there is no economic principle requiring that the cost of that loop be allocated across other ancillary services that are provided over the loop.

We are not persuaded by the testimony of AARP and OPC's witnesses that all or some of the cost of the local loop should be shared, such that any costs shared by more than one service would be excluded from the ILECs' Total Service Long Run Incremental Cost (TSLRIC) calculations. This would be inconsistent with our past decisions, perhaps most notably in our 1998 Report on Fair and Reasonable Rates to the Legislature, that the costs associated with the local loop should not be allocated. The arguments raised by OPC and AARP have been considered and rejected in the past, and we find no new persuasive basis upon which to deviate from our consistent policy on this issue.

We note that the record raises some concern about the cost information provided in the proceeding by the ILECs. For instance, BellSouth's use of model inputs is inconsistent with past Commission decisions in the Docket No. 990649-TP, in which we established rates for unbundled network elements (UNEs). Also, we find that Verizon's use of interstate minutes to calculate switching and transport costs is problematic, and that Sprint and BellSouth's use of retail costs appears to be excessive, particularly since they do not differentiate between costs that apply to basic local service and costs that apply to all other services. Nevertheless, after weighing all the evidence, we find that the correction of these deficiencies would not alter our conclusion that local exchange rates are supported by intrastate access charge rates; that the ILECs have, in fact, provided a reasonable estimate of the level of support for basic local telecommunications service; and that their proposals appropriately remove that support as required by the statute. In reaching this decision, we do not in any way indicate agreement with the ILECs' costs, inputs, or methodologies considered herein for any purpose beyond this proceeding.

In addition, we note that AT&T/MCI witness Mayo emphasized that the statute does not require removal of a pure economic subsidy, but rather "support" for basic local service. Thus, he disputes witnesses Gabel and Cooper's arguments that there is no subsidy to be removed. We also find this argument persuasive in view of the plain language of the statute.

**B. SUPPORT PREVENTS THE CREATION OF A MORE ATTRACTIVE COMPETITIVE LOCAL EXCHANGE MARKET**

**1. Arguments**

Verizon contends that its current residential basic monthly rates are well below incremental cost, and therefore impair competition for residential customers. Verizon asserts that the availability of local service at supported prices limits the prices that competitive local providers can charge. Verizon contends that to the extent that competitive providers' costs are similar to Verizon's, the existing supported prices make it economically infeasible for those providers to compete. Dr. Gordon spoke to this issue on behalf of the three ILECs. In addition, Verizon offered the testimony of witness Danner in this regard.

Sprint contends that the presence of heavily supported residential basic local service acts as an obstacle to the creation of widespread residential local competition. The removal of this obstacle, according to Sprint, is the goal of the 2003 Act. Sprint's witness Staihr spoke to this issue.

BellSouth again contends that we have already determined that its residential rates are supported. BellSouth emphasizes that the testimony of its witness Shell lends further support to the argument that removal of the support for basic local service will bring rates to a level that encourages competition, leading to new choices for consumers, as well as reduced toll rates. BellSouth's witnesses Ruscilli and Banerjee offered additional testimony on this point.

Knology maintains that granting these petitions will materially diminish the current support for basic local telecommunications services. Knology asserts that this support prevents creation of a more competitive market and that diminution of the support will spur additional competition.

AT&T and MCI assert that the currently excessive intrastate switched access charge rate levels make it difficult for a telecommunications company to enter the local exchange market and compete against incumbent providers whose local rates are supported by access charges; the support allows incumbent providers to subject their competitors to an anticompetitive price squeeze. AT&T and MCI contend that excessive access charges further depress competition by limiting competitors' ability to compete across the full range of service categories. Dr. Mayo addressed this aspect of the ILEC Petitions on behalf of AT&T and MCI.

Although their analysis differs somewhat, OPC, AARP, Common Cause Florida, and Sugarmill Woods each contend there is no support for basic local service; therefore, raising current prices will not create a more attractive competitive local exchange market for the benefit of residential consumers. They contend that the existing levels of basic local telecommunications service rates have minimal, if any, impact on making the local exchange market more attractive to competitors. Drs. Gabel and Cooper also provided testimony in this regard on behalf of OPC and AARP, respectively.

The Commission staff offered the testimony of witness Ollila for purposes of providing additional perspective on this issue by way of the Commission's 2002 Report on Competition in Telecommunications Markets in Florida. In addition, the 2003 Report was received into the record as a stipulated exhibit.

## 2. Findings and Decision

Upon consideration, we agree with witness Gordon that the current level of support has allowed residential rates to remain lower than they would be in an undistorted competitive market, and that they are, in fact, lower than in other states in our region. We can find no basis in economics for the underpricing of basic service which is demand-inelastic relative to usage. Except for a limited range of residential customers, it is not economically feasible for a CLEC to price complementary products and packages in a manner that would allow it to make up for lack of profitability in the provision of basic service. As a result, there is little opportunity or ability to bundle products and services for consumers, and a very limited range of customers can truly be served on a profitable basis.

As recognized by both witness Mayo and witness Gordon, the state law, as well as the federal Telecommunications Act of 1996, shifts the utility commission's role away from historically protecting monopolists from competitors' entry and protecting consumers from the monopolist, to a role of encouraging competition. Under the old regime, utility commissions set rates for non-basic services, such as long distance, carrier switched access, and vertical features, above cost in order to hold down the price for basic local exchange service. This was in furtherance of universal service.

As witness Mayo emphasized, even as we moved toward price cap regulation, the pricing structure did not really change; thus, the prices for non-basic services continued to support basic service. Specifically, access charges were created after divestiture of AT&T to provide a source of revenue that would enable the local exchange companies to continue to keep prices low. Witness Mayo added that at the federal level, access charges have been reduced dramatically over the past 19 years, and this process has taken place for intrastate access charges in other states as well. Nevertheless, the witness emphasized that intrastate access rate levels in Florida are still in excess of their incremental cost, serving as continued support for low local service rates. As such, according to witnesses Mayo and Gordon, approving the ILECs' petitions to reduce intrastate access charges in a revenue neutral manner will, in fact, remove some of the support for local service, which will in turn make local service market entry more attractive for prospective entrants. This testimony was very compelling.

Witness Gordon further testified that the effect of having rates that are below cost is to discourage entry, as well as investment, by both new entrants and incumbents. Thus, not only is there less likelihood of competition, but of innovation as well. He emphasized that there is empirical evidence on this point, as referenced in the Ros-McDermott study he mentions in his pre-filed testimony. He also testified that in states that have implemented rebalancing, namely California, Illinois, Ohio, Massachusetts, and Maine, there was little noticeable impact on subscribership levels in spite of residential local service rate increases comparable to the increases proposed in the ILECs' petitions. In addition, he noted that, in the states that have implemented rebalancing, toll rates were lowered.

Our 2003 Competition Report shows that CLEC residential market share is only 9% in Florida, while CLEC's serve 29% of the business market. Similarly, Verizon's competition study for its territory shows that there is a 100 to 1 ratio of business versus residential customers being served by facilities-based CLECs. This drops to 10 to 1 if UNE-P and resale are taken into account. Together, these studies persuade us that competition for residential customers is currently suffering as a result of barriers to entry.

In addition, Knology's witness Boccucci specifically stated that, ". . .under current rates for local services in Florida, Knology has not been able to generate rates of return sufficient to attract the capital necessary to expand in adjacent areas to Panama City or elsewhere in Florida. If rate rebalancing is implemented, Knology has every intention to expand and compete further in Florida." He emphasized that because of Florida's low local rates, that ". . . from our investors' perspective, in the competition for the valuable CAPX or the capital expenditures, it was tough to make a business case to expand into the panhandle when we could expand into Georgia, Tennessee, Alabama and North Carolina [where local rates are higher] and be more assured that we could meet the returns that our investors expected in the marketplace."

Based on the foregoing, we find that current support provided by access charges does, in fact, impede competition in the residential local exchange markets.

### C. BENEFIT TO RESIDENTIAL CONSUMERS AS CONTEMPLATED BY SECTION 364.164, FLORIDA STATUTES

#### 1. Arguments

Verizon asserts that by moving basic local residential rates toward cost, its rate rebalancing plan will promote competition for the benefit of residential customers, which is the benefit contemplated by Section 364.164, Florida Statutes. Verizon contends that implementation of its rebalancing proposal will make these residential customers more attractive to competitors and thus induce enhanced market entry, encourage innovation, and promote increased freedom of choice. Verizon asserts that, in addition, its rebalancing plan will lower intrastate access rates and, ultimately, allow residential customers to make more long distance calls at lower prices. Again, Dr. Gordon provided testimonial support for the three ILECs on this point. In addition, Verizon's witnesses Danner and Fulp addressed this issue.

Similarly, Sprint contends that the creation of a more attractive competitive local exchange market will benefit residential consumers by giving them choices in providers, services, technologies, and pricing options. Sprint maintains that this is what consumers are demanding, and that this range of choice will only be made available through a

competitive market. Sprint offered the testimonies of witnesses Staihr and Felz on this point.

BellSouth again argues that its residential rates are supported. BellSouth emphasizes that the testimony of its witness Shell lends further support to the argument that removal of the support for basic local service will bring rates to a level that encourages competition, leading to new choices for consumers, which is the benefit contemplated by the 2003 Act, as well as reduced toll rates. BellSouth's witnesses Banerjee and Ruscilli provided testimony on this issue.

Knology states that its experience in its existing markets provides examples of how the entry of a facilities-based competitor for telephone service expands the products available to consumers, increases the customer service levels, and promotes product and pricing competition. Knology's witness Boccucci emphasizes that telecommunications services are converging, such that a wireless consumer does not really think of his or her service in terms of local versus long distance service. He envisions that with increased competition in the wireline market, the same will hold true for wireline customers. Likewise, he argues that the value for consumers in a competitive market is a converged bill with multiple telecommunications services, upgraded service quality, as well as price competition. He also added that a higher local rate will enable Knology to provide bundled packages at prices economical to seniors on fixed incomes, so that they can receive more economic and better quality service than they do today.

AT&T and MCI agree that the ILECs' proposals will benefit residential consumers as contemplated by Section 364.164, Florida Statutes. They contend that the ILECs' proposals will reduce current deterrents to local market entry and create a more level playing field, which will ultimately induce increased market entry. The result will be to provide consumers, residential and business alike, with a wider choice of providers' offerings and prices. They contend that residential consumers will further benefit from toll rate reductions and the elimination of any in-state connection fee. Dr. Mayo provided testimony addressing this point on behalf of AT&T and MCI, while witness Fonteix provided additional information on behalf of AT&T.

OPC, AARP, Common Cause Florida, and Sugarmill Woods contend that the ILECs' rebalancing petitions will not benefit residential consumers as contemplated by Section 364.164, Florida Statutes. They assert that the ILECs have not made a showing that the proposed rebalancing of basic local telecommunications service rates would create a more attractive competitive local exchange market for the benefit of residential customers, nor that market entry will be enhanced, because the ILECs' analyses are based on a model that no entrant would ever use. They argue that, moreover, any claims of benefits to consumers based on the removal or reduction of support for residential basic local

telecommunications service are moot, since no such support exists. Again, Drs. Gabel and Cooper provided testimony on this point for OPC and AARP, respectively.

Commission staff's witness Shafer testified that the ILECs' proposals will likely result in benefits for residential customers, such as increased value and choice in products.

## 2. Findings and Decision

Upon consideration of the evidence presented, as well as the Legislature's clear policy to enhance competition in Florida's telecommunications market, we find that the ILECs' proposals will ultimately benefit residential consumers as contemplated by Section 364.164, Florida Statutes. As evidenced by the results in other states that have engaged in rate rebalancing, the ILECs' proposals will make the residential market more economically attractive for CLECs, which should lead to an increase in choice of providers.

This will be accomplished by increasing in the short term the rate at which residential service can be offered by competitors, leading to increased profit margins for CLECs serving residential customers. Witness Fonteix specifically stated that AT&T's decision to enter BellSouth's territory was ". . . predicated upon an assumption after the passage of the Act that it would be implemented." Furthermore, the witness testified that in AT&T's experience in Michigan and Georgia, where rates have already been rebalanced, although basic local service rates initially went up, in the long run, competition drove the price back down.

Companies providing bundled offerings that include both local and long distance service will benefit not only from the increased rate at which residential service can be offered on a competitive basis, but also from the decreased terminating access rate. These changes will make providing bundled packages to residential customers more economically attractive, because companies will increase their profit margin.

Again, as argued by AT&T's witness Fonteix, because the Bell incumbents are now able to enter the long distance market, it is better to proceed with access charge reform, which has been underway at the federal level for some time now. The witness emphasized that waiting will only further harm the long distance market. This testimony was consistent with that of witness Gordon, who maintained that long distance service is overpriced, because of the support provided by access charges to local service. He asserted that as prices come down for long distance service, people will respond by making more long distance calls, which he contends is a benefit to society. He concluded that:

If the toll prices are overpriced, then there will be less calling and that constitutes a loss to society. And there's no reason to have it. It's a very expensive way to achieve the goal in Crandall's and Waverman's point. If you really want to have

universal service and you think it's a problem, you know, a policy problem that should be addressed, better that the payments should be made directly in some fashion than by distorting the entire price structure, which is the mechanism we've used to date.

While it is uncontested that some customers will not receive a direct benefit as a result of the implementation of the ILECs' proposals, we find that Florida consumers as a whole will reap the benefits of increased competition and, ultimately, competition will serve to regulate the level of prices consumers will pay. Increased competition will lead not only to a wider choice of providers, but also to technological innovation, new service offerings, and increased quality of service to the customer. The evidence in this case shows that Knology will continue its plans to enter Florida markets if the Petitions are granted, and will consider broadening the number of Florida markets it enters, as demonstrated through the testimony of witness Boccucci. AT&T witness Fonteix has also indicated that AT&T's entry into BellSouth's territory has been largely influenced by the 2003 Legislation and the hope that with the granting of these Petitions, the raising of local rates will make Florida markets more profitable for competitors. Furthermore, witness Gordon explained that less regulation in the wireless market has not only produced lower prices, but also a beneficial impact on consumer welfare, because the use of the technology has become so prevalent.

While Section 364.164 does not mandate that we consider the degree of benefit to residential customers from long distance rate reductions, our review of the legislative history convinces us that it is within our discretion to do so. Thus, we have considered witness Ostrander's argument that the Petitioners have been unable to quantify the impact of competition, and therefore have been unable to show the benefit to customers. We reject that argument, and find that the preponderance of the evidence in the proceeding shows that the benefits to residential customers as a whole generated by the resulting decreases in long distance rates and elimination of the in-state connection fee will outweigh the increases in local rates. This benefit should be a continuing one, since the IXCs have indicated that they will flow through the reductions on a pro-rata basis according to minutes of access, and the record indicates that market forces should exert enough pressure to ensure that rates are kept low. Furthermore, as in the wireless industry, whose ability to offer bundled packages has been facilitated by the fact that they do not pay the high level of access fees that the wireline carriers do, we anticipate that the reduction in access fees will result in an increase in bundled offerings by wireline carriers and a decrease in the distinction between wireline local and long distance service.

We acknowledge, as OPC, the Attorney General and AARP have argued, that not every residential customer will get a long distance rate reduction, and those who do receive reductions will not necessarily receive reductions that totally offset the increase in their rate for local service. Such "bill neutrality" is not required by the statute and, in fact, would be

inconsistent with its plain language. First, there could never be "bill neutrality" unless every residential customer made exactly the same number of long distance calls and could therefore share per capita in any long distance rate decreases. Second, Section 364.164 achieves revenue neutrality to the ILEC by permitting it to increase rates for flat-rate residential and single-line business service. Section 364.163, Florida Statutes, in contrast, gives the IXCs discretion in where to flow through their long distance rate decreases so long as some portion of the benefit goes to residential and business customers. As discussed in Section X(D), we find that the IXCs' proposals to flow through these reductions between business and residential customers in proportion to their access minutes of use complies with both the language and spirit of the statute.

Also on this issue, we acknowledge that the testimony from the public hearings was mixed. Many customers did not believe that the ILEC proposals would benefit them, but others were hopeful that they would see competition in their area. Generally, the written comments we received tended to be unfavorable. However, when considered with the economic testimony received through our technical hearing, we find that customers as a whole will benefit as contemplated by the statute. As noted by witness Boccucci, customers will get better quality service for the products they choose, as well as a wider variety of products and providers. The evidence also shows that even those customers that use calling cards or dial-around service will receive benefits from increased competition, as will older citizens that use 1+ calling.

We also acknowledge the customer testimony critical of extended calling service (ECS) rates. In recognition of the concerns raised, we direct our staff to organize a Commission workshop to discuss the history of ECS, the current state of the law on ECS, and what role, if any, ECS has in today's market. The Petitioners have all agreed to participate fully in this workshop. In addition, it is notable that Sprint's petition includes a five-free-call allowance for ECS.

Although we find that it is not a benefit that we should weigh in the balance in considering whether or not to grant the Petitions, we observe that the amended Lifeline provisions in Section 364.10 will help to protect economically disadvantaged consumers from the effect of local rate increases. The use of targeted assistance, rather than implicit rate subsidies, to address this social issue will result in more efficient pricing, which will benefit the competitive market, spur innovations and new product offerings. This is the benefit contemplated by the Legislature when it enacted this legislation and is further supported by the testimony of AT&T/MCI's witness Mayo. As noted by the witness, the ability to target assistance is far more effective at promoting universal service objectives. The witness also testified that targeted assistance is more economically efficient than continuation of implicit support from access charge prices. We agree, and expect that, over time, competition should take care of those protected by Lifeline, in spite of the current limited duration that these customers are protected from the local increases at

issue here. The evidence shows that even with the proposed local rate increases, there will not be a significant number of customers that drop off the network. While the need for continued targeted assistance for some customers may foster its own social welfare concerns, those concerns must be balanced with the Legislature's clear intent to move Florida's telecommunications markets towards increased competition.

Furthermore, Dr. Cooper acknowledged that Exhibit 85 indicates that many seniors on fixed incomes take a number of additional services, such as cellular service, cable service, and Internet service. This indicates not only a likelihood that the increases proposed are within the zone of affordability for this segment of consumers, but also, as indicated by witness Boccucci, demonstrates that this segment in particular may see increased benefits as a result of bundled competitive offerings. Similarly, the evidence shows that 53% to 72% of Lifeline customers served by the Petitioners purchase one or more ancillary services.

As argued by witness Mayo, in approaching this task we must balance "hard-headed" economic principles with "soft-hearted" social welfare goals. It is the application of sound economic principles that will bring efficiencies, and as a result, competition to the telecommunications market, while the statute itself provides for targeted assistance that will assist those unable to afford the proposed increases.<sup>5</sup> At the end of the day, capitalism and the free market will maximize benefits to consumers in a way that regulation cannot. That is not, however, to say that the companies should not be encouraged to consider their social welfare obligations in targeting assistance to customers and coming up with new ideas to address the needs of the economically disadvantaged.

In the end, we find that the ILECs' proposals meet the statutory requirement set forth in Section 364.164(1)(a), Florida Statutes, providing required benefit of a more attractive competitive telecommunications market for Florida consumers.

## VII. INDUCE ENHANCED MARKET ENTRY

In this section, we address whether the ILECs' proposals will induce enhanced market entry as required by Section 364.164(1)(b), Florida Statutes.

### A. Arguments

---

<sup>5</sup> It is noteworthy that the ILECs have also agreed to the increase the number of customers to whom Lifeline is available to those whose income is 135% or less of the federal poverty level. This increases the pool of Lifeline eligible customers by approximately 119,000 when compared to the 125% standard required by Section 364.10.

BellSouth states that by removing implicit support from basic local exchange rates, competitors will have increased business opportunities to attract new customers and offer new products, services, and bundles. BellSouth contends that competitors base their entry decisions on whether or not they can at least match the rates charged by ILECs. BellSouth argues that if these rates are lowered artificially by subsidies, but the incremental costs do not change, then competitors are likely to be deterred from entering the market. BellSouth concludes that this situation limits competition. BellSouth witness Banerjee offered testimony in this regard.

BellSouth further explains that there will never be competitive alternatives for customers who are receiving service at a price below the relevant cost of providing that service. As the price of service is raised to, and above, its relevant costs, such customers become more attractive to competitors, according to BellSouth witness Ruscilli.

Witness Gordon contends that when the price of services increases, a cash flow analysis would show that the investment project becomes more profitable (or less of a loss) and, thus, more attractive for new market entrants. Dr. Gordon adds that technology is changing so rapidly that competitive markets will do a much better job than a monopoly would of discovering which technologies can or cannot succeed in the long run. Dr. Gordon further opines that in order for the lowest cost mix of technologies to remain in the market, price and the signals it sends must not be distorted and must reflect the underlying cost of providing service.

BellSouth emphasizes that lowering intrastate access rates to parity with interstate rates eliminates an artificial discrepancy between two nearly identical services. Lower intrastate access rates make long distance calling more attractive for customers and competitors who wish to bundle long distance service with local service. BellSouth witness Banerjee testifies that the unevenness of the business market versus the residential market entry is attributable in large part to the relationship between end-user rates for basic local telephone service and UNE/UNE-P rates. Dr. Banerjee explains that generally the margins are far more substantial for business service. Unconstrained by public policy or regulation, the CLECs have gravitated naturally to business markets. As indicated by Dr. Gordon, the problem of an unattractive residential market may be worse in Florida than in other states because these other states have higher residential rates, indicating a greater need to rebalance the rates in Florida.

Verizon states that its rate rebalancing plan will bring the prices of its basic local services more in line with costs. Verizon asserts that prices that more closely reflect underlying costs, such as those proposed in its rate rebalancing plan, will increase the likelihood that competitive providers can offer services at a price equal to or lower than that offered by Verizon, and still remain profitable. Verizon contends that as a result, the reformed prices proposed in Verizon's rate rebalancing plan will make the local exchange market more attractive to competitors and induce enhanced market entry.

Verizon further contends that by removing implicit support from basic local exchange rates, competitors will be enticed into the market. Verizon contends that Knology's testimony that it decided to enter the Florida market following the passage of the access reduction legislation demonstrates that Verizon's rebalancing proposal will encourage competitive entry. Also, Verizon cites to Dr. Gordon's testimony, which includes statistical studies demonstrating that rebalancing will have a positive effect on competitive entry.

Sprint concurs with BellSouth and Verizon, stating that CLECs will benefit from the higher residential basic prices, without being required to reduce their own intrastate access prices. Sprint contends that rebalancing reduces risk for CLECs, improving the cash flow equation for serving residential customers. Sprint witness Staihr testifies that rebalancing rates for basic local service will create a situation where competitors will find that, on average, a larger percentage of the residential market will be financially attractive to serve. Witness Staihr states further that the current artificially low prices are unsustainable in the face of competition, and they come at a cost: (1) fewer options among services; (2) less innovation; and (3) in large portions of Sprint's territory, no competitive choices. Sprint concludes that rebalancing will induce enhanced market entry, thereby providing customers with the benefits of more choices, enhanced service offerings and greater innovation.

Knology states that the ILEC petitions should be granted because that decision will help to implement the policy underlying Section 364.164, Florida Statutes, and it will enhance the competitive choice available to Florida citizens. Knology identifies itself as a prime example of how granting the ILECs' Petitions will induce enhanced competition. As stated previously, Knology is a facilities-based intermodal competitor offering voice, video and data services over hybrid fiber coax (HFC) and fiber to the curb (FTTC) network in Panama City, with plans to expand in Pinellas County, Florida. Knology has been providing telecommunications services in Florida since 1997 and is currently providing its services to over 275,000 residential and business customers in Florida. Knology's witness Boccucci testified, however, that Knology's decisions on whether to further expand service in other Florida markets will be greatly influenced by whether or not the ILECs' Petitions are granted.

Knology witness Boccucci testified that the 2003 Act creates the regulatory environment necessary to attract capital investment to expand telephone competition in Florida. Knology contends that granting the ILEC petitions will allow it to attract and deploy new capital investment in Florida, thereby offering consumers a choice in facilities-based providers for new and advanced high-tech services. Knology asserts, however, that if the petitions are not granted, it will be forced to deploy capital in states with more favorable market conditions as it has done in the past.

AT&T and MCI state that economic theory demonstrates that a decrease in overpriced access charges together with an increase in the retail price of residential service will encourage market entry. AT&T and MCI contend that prices are a key signal to prospective entrants regarding the desirability of a particular market. Higher prices relative to cost provide greater inducements for

entry. AT&T and MCI contend further that bundled offerings are undermined by excessive access charges, because the lower bound to which competitors can drive prices is defined by the artificially high level of access charges. The presence of excessive access charges will limit the ability of competitors to enter the market. AT&T/MCI witness Mayo offered testimony in this regard. Dr. Mayo opines that the reduction of existing access support will also make the market more attractive for traditional long distance companies to enter the telecommunications market.

Witnesses Mayo and Fonteix testified that the reduction and eventual elimination of the access support is critical to sustainable competition as it will allow CLECs to compete on a more equal footing. Witness Mayo explains that the anemic CLEC market share for residential customers provides prima facie evidence that low residential prices are inhibiting competitive entry.

AT&T states further that reducing intrastate access charges to parity will significantly reduce the ILECs' advantage of receiving large access charge subsidies, thereby moving ILECs and competitors closer to an equal footing and enhancing competition.

OPC responds that competition will not be enhanced to the residential consumer's benefit, although the ILECs' revenue from inelastic basic local service will be enhanced and the respective ILEC's market share will increase using revenues as a basis of measurement, according to OPC witness Ostrander. Witness Ostrander further contends that there will be no new or unique service introductions and no uniquely associated benefits of capital investment. OPC witness Gabel states that entry decisions are made on the basis of the expected total revenues and costs of all services an entrant can offer, not just one service. If total revenues cover total costs, it is completely irrelevant to a firm's decision to enter a market if one of the components of the offering (e.g. basic local service) may produce a loss according to some measure. Therefore, OPC surmises that a rise in total revenue from current levels may not be sufficient to allow entrants to overcome existing competitive barriers.

AARP concurs with OPC in its basic position that granting the ILECs' petitions will not induce enhanced market entry or increase competition. AARP witness Cooper argues that the Legislature intended that the ILECs be required to demonstrate that competition would, in fact, occur, as opposed to simply being more likely to occur, if the Petitions are approved. Witness Cooper further argues that none of the companies have provided such proof for any of their geographic areas. AARP contends that competition for bundled service is where the focus is in telecommunications. Therefore, AARP concludes that the shifting of costs from intraLATA long distance to basic service will have little, if any, impact on this competition since both are in the bundle.

However, Commission Staff witness Shafer testified that the likelihood of increased market entry is improved by granting the rebalancing petitions, particularly in those markets where profitability is marginal. Witness Shafer states that there appears to be a relationship between the subsidy and market entry, indicating that the removal of the subsidy will also increase market entry. Witness Shafer concludes that one can reasonably expect the ILECs' petitions will create additional

ORDER NO. PSC-03-1469-FOF-TL

PAGE 30

market entry, particularly in markets that, to date, have been only marginally profitable or slightly unprofitable.

B. Findings and Decision

Upon consideration, we are persuaded that granting the ILEC petitions will induce enhanced market entry.

There are two types of evidence that the parties have presented in this case: empirical, which is based on real-life scenarios, and economic theory. We believe that the ILECs have offered strong theoretical and empirical evidence that the proposed changes to intrastate access charges and basic local service rates will improve the level of competition in many markets. The ILECs' witness Gordon testified that when the price of services increases, a cash flow analysis would show that investment in the market becomes more profitable and, thus, more attractive for market entry. BellSouth explains that if these rates are lowered artificially by subsidies but the incremental costs do not change, then competitors ineligible to receive the subsidy are likely to be deterred from entering the market. In addition, AT&T and MCI indicate that the reduction and eventual elimination of the access support is critical to sustainable competition as it will allow CLECs to compete on equal footing with the ILECs. We find that these arguments compelling. We conclude from the evidence presented that entry into the local telephone market is deterred if the ILECs' local service prices are below cost and that rate rebalancing is critical to actually promoting competition.

While OPC and AARP have expressed doubt about the effect that a reduction in access charges will have on competition, they have failed to convince us that these rate reductions will not induce enhanced market entry. To the contrary, Knology presents a model case on the impact that these reductions have had and will have on market entry by CLECs. Witness Boccucci testified that the granting of the ILEC petitions will allow Knology to attract and deploy new capital in Florida, thereby offering consumers a choice in facilities-based providers for new and advanced high-tech services. In addition, AT&T indicated that it has entered the BellSouth territory as a result of the 2003 Act.

We are persuaded that companies like Knology and AT&T provide the empirical evidence of how the ILECs' proposals will increase competition. We note that poor profitability, or limited profitability, is the main deterrent to market entry. We conclude that the evidence presented by the ILECs demonstrates that granting the petitions will induce enhanced market entry, thereby promoting competition, as required by Section 364.164(1)(b), Florida Statutes.

For almost 20 years, the telecommunications industry has been in transition from a monopolistic regime to a competitive one. While changes to Florida law and enactment of the Telecommunications Act of 1996 have made great strides in promoting competition, there is still a lack of widespread competition in the residential local exchange market. Implementation of the access reductions and offsetting rate increases permitted by the 2003 Act should serve to enhance competition in this important market.

Based on the foregoing, we find that the existing rate structure impairs competition for residential customers. Granting the ILECs' petitions will result in more attractive pricing for basic local telephone service, providing market entry opportunities for competitors that have been constrained by inefficient pricing in the past. Thus, we find that the petitions filed by BellSouth, Verizon and Sprint to reduce intrastate switched network access charges will induce enhanced market entry.

### VIII. PARITY

In this section, we address the requirement of Section 364.164(1)(c) that any plan provide for intrastate access rates to be reduced to parity with interstate rates over a period of not less than two years or more than four years.

#### A. Arguments

Verizon contends that its proposal will reduce intrastate switched network access rates to interstate parity over a period of not less than two years or more than four years. Specifically, Verizon proposes to reduce its composite intrastate access total average revenue per minute (ARPM) from \$.0485441 to \$.0117043 in three increments over two years. The total Verizon reduction would be \$76.2 million.

There was conflicting testimony in the record regarding whether Verizon's inclusion of its non-traffic sensitive interstate presubscribed interexchange carrier charge (PICC) in the calculation of its switched access charge reduction was appropriate. Verizon's witness Fulp testified that the PICC was included because its interstate access rates include both traffic sensitive and non-traffic sensitive charges. Witness Fulp asserts that the 2003 Act permits the inclusion of the PICC, since the 2003 Act defines the term "intrastate switched access rate" to include the carrier common line charge and the PICC is a federal common line charge. He asserts that because the Act includes common line charges in Verizon's intrastate access rates, the analogous PICC federal common line charge must be included in Verizon's calculation of the interstate ARPM for a consistent comparison.

Verizon's witness Fulp asserts that if the PICC is excluded from its calculation, Verizon would have to reduce its composite intrastate access rate by a greater amount than originally proposed. As such, to preserve revenue neutrality, Verizon's basic local rates would have to increase more than its original proposal. Specifically, the witness explained that if Verizon were to exclude the PICC from the parity calculation, Verizon would have to reduce its access revenues by \$12,679,052 more than originally proposed, and, consequently, Verizon would have to increase its basic local revenues by a corresponding amount. The result would be an increase to Verizon's basic local rates of \$0.86 more than Verizon originally proposed.

AT&T and MCI assert that Verizon's proposal does not correctly reduce its intrastate switched access rates to interstate parity. AT&T witness Fonteix contends that Verizon's inclusion of the PICC is inappropriate for two reasons. He contends that the PICC is not part of the intrastate rate elements. Witness Fonteix asserts that even if the PICC was appropriate for inclusion in the calculation, Verizon should have used the interstate minutes of use in calculating the ARPM rather than the intrastate minutes of use. Finally, Witness Fonteix argues that the PICC should have been excluded because the PICC charge applies to multiline business customers and the access charge reductions allow Verizon to collect business line revenue from all Florida residents.

AARP, Common Cause Florida, and Sugarmill Woods also contend that Verizon's inclusion of the interstate PICC end-user charge in its calculation of intrastate access charges for the purpose of rebalancing means that Verizon has failed to comply with the provisions of the Act requiring parity and revenue neutrality. They assert that Verizon's petition should be denied on these grounds.

Sprint asserts that its proposal will reduce intrastate switched network access rates to interstate parity over a period of not less than two years or more than four. Sprint contends that its petition, testimony, and exhibits demonstrate that rebalancing prices over a two-year period (three annual increments) will provide the marketplace with the appropriate competitive signals and will not result in consumer rate shock. Sprint's initial proposal was to reduce its access rate by \$62,319,890 the first year, \$56,211,862 the second year, and \$23,541,711 the third year. Sprint's total proposed reduction is \$125.2 million. However, during closing arguments Sprint agreed to spread its reduction and corresponding increase in four steps over a period of three years, consistent with the position advocated by Commission staff witness Shafer. Under Sprint's revised proposal, the basic local telecommunications services increases will be \$2.25 the first year, \$2.25 the second year, \$1.50 the third year, and \$0.86 the fourth year.

BellSouth contends that its proposal will reduce intrastate switched network access rates to interstate parity over a period of not less than two years or more than four. BellSouth asserts that its proposed increases will occur over three installments, 1<sup>st</sup> quarter 2004, 1<sup>st</sup> quarter 2005, and 1<sup>st</sup> quarter 2006. BellSouth presents two alternative methodologies by which parity can be achieved: "mirroring" and the "typical network." Witness Ruscilli testified that BellSouth's proposed reductions under either methodology will be 40% in the 1<sup>st</sup> quarter of 2004, 35% in the 1<sup>st</sup> quarter of 2005, and 25% in the 1<sup>st</sup> quarter of 2006. Witness Ruscilli further testified that BellSouth's proposal reaches parity in 24 months, consistent with the requirement in Section 364.164(1)(c), Florida Statutes, that parity be reached in not less than 2 years and not more than 4 years.

AT&T and MCI assert that BellSouth's "mirroring" proposal appears to correctly reduce its switched access rates to interstate parity, but they contend that BellSouth's "typical network" proposal does not. Witness Fonteix explains that BellSouth's "mirroring" methodology appropriately quantifies the revenue impact of the intrastate rate reductions necessary to achieve parity by multiplying the demand times the difference between its intrastate and interstate tariffed rates. However, witness Fonteix asserts that BellSouth's "typical network" methodology is inappropriate because it targets only a select set of rate elements to equal interstate rate levels, and thus fails to address all of the rate elements in the statutory definition of intrastate switched network access rate.

Witness Shafer contends that Sprint should extend its implementation of access reductions and increases to basic local service rates by 12 months in order to mitigate rate shock to consumers. Witness Shafer testified that while the statute did not directly address or define rate shock, the statute does provide for a transition period for the access charge and basic local service rate adjustments of not less than 2 years and not more than 4 years. He asserts that due to this range it is reasonable to infer that the Legislature recognized the concept of rate shock or rate reasonableness. Witness Shafer asserts that it would be appropriate for Sprint to implement an additional incremental rate adjustment 36 months after the initial adjustment in order to complete its transition to parity. He argues that this would put Sprint's residential customers more on par with those of BellSouth and Verizon in terms of the amount of the increase they receive at any one time.

#### B. Findings and Decision

Section 364.164(1)(c), Florida Statutes, requires that we consider whether the Petitions will require intrastate switched network access rate reductions to parity over a period of not less than 2 years or more than 4 years. We find that each of the three amended Petitions meets the requirement of 364.164(1)(c), Florida Statutes.

As noted above, there was testimony regarding whether it was appropriate for Verizon to include the PICC in its access charge reduction calculation. Section 364.164(6), Florida Statutes,

defines the term "intrastate switched network access rate" as:

... the composite of the originating and terminating network access rate for carrier common line, local channel/entrance facility, switched common transport, access tandem switching, interconnection charge, signaling, information surcharge, and local switching.  
(Emphasis added.)

Based on the definition in the statute, as well as the testimony of witness Fulp, we are persuaded that the PICC can be included in the calculation of the interstate rate target, since it was developed to recover nontraffic sensitive charges that were originally in the traffic sensitive carrier common line charge. In construing the statute in this manner, we are mindful that the interpretation advocated by other parties would result in a higher overall charge to the consumer. Thus, we conclude that Verizon's explanation for inclusion of the PICC is not inconsistent with the statute and find that Verizon's methodology for calculating its switched access charge reduction complies with Section 364.164(1)(c), Florida Statutes.

We note that witness Shafer testified that it would be appropriate for Sprint to implement an additional incremental rate adjustment 36 months after the initial adjustment in order to complete its transition to parity. However, we find that Sprint's original proposal met the criteria set forth in Section 364.164(1)(c), Florida Statutes. We also note that Sprint subsequently agreed to spread its reduction and corresponding increase over a period of three years and that this revised proposal also meets the statutory criteria.

Finally, we address which of BellSouth's methodologies, "mirroring" or "typical network," is the appropriate method to be applied in the next section. However, we find that either method meets the "parity" criteria set forth in Section 364.164(1)(c), Florida Statutes.

IX. REVENUE NEUTRALITY

In this section, we address whether the ILECs' proposals will achieve revenue neutrality as required by Section 364.164(1)(d), Florida Statutes.

A. Arguments

Verizon contends that its rate rebalancing plan is revenue neutral, as defined in the statute. Verizon asserts the plan will reduce Verizon's intrastate switched network access rates by \$76.2 million and offset that reduction with a corresponding increase in basic local rates. Verizon proposes incremental residential local service rate increases of \$1.58 in its first increment, \$1.58 in its second increment, and \$1.57 in its third increment.<sup>6</sup> Verizon asserts that single-line business recurring rates will be raised to \$32.00 per month. Verizon proposes to raise its network establishment charge and central office connection charges by \$5.00 over three increments. Verizon proposes to raise its non-recurring single line business network establishment charges by \$0.10.

Sprint asserts that, as demonstrated by the testimony and exhibits it filed, rebalancing will be accomplished in a revenue neutral manner. Sprint testified that it will be reducing its switched network access charges by a total of \$142.1 million. Sprint initially proposed basic residential rate increases of \$2.95 for increment one, \$2.75 for increment two, and \$1.16 for increment three for a total of \$6.86. However, as noted previously, Sprint agreed in its closing argument to four incremental increases of \$2.25 in 2004, \$2.25 in 2005, \$1.36 in 2006, and \$1.00 in 2007. Sprint also proposes to increase its single-line business rates by \$2.70 in the first increment, \$2.40 in the second increment, and \$0.90 in the third increment.

BellSouth argues that its proposal, using either methodology, reflects a reduction in intrastate access that will be rebalanced through increases in basic local exchange rates. Witness Hendrix explains that the "mirroring" methodology actually mirrors the recurring rate elements listed in Section 364.164(6), namely the carrier common line, local channel/entrance facility, switched common transport, access tandem switching, interconnection charge, signaling, information surcharge, and local switching. He testified that the revenue impact of reducing these elements to interstate parity is \$136.4 million. Under the "mirroring" methodology, BellSouth would raise residential recurring rates a \$1.39 in the first increase, \$1.38 in the second increase, and \$1.09 in the

---

<sup>6</sup> We note that Verizon in its closing argument agreed to increase the amount it recoups through non-recurring revenues from \$1.2 million to \$2.4 million, so that basic local rates will be raised by \$1.2 million less than originally requested.

third increase, for a total of \$3.86 per month. BellSouth proposes to raise single line business to \$25 (rate groups 1-3), \$28 (rate groups 4-6), and \$30.20 (rate groups 7-11, X2, X4) in two equal installments. BellSouth also proposes to raise its non-recurring charges in three installments.

Witness Hendrix also explained that BellSouth's "typical network" methodology achieves parity by comparison of the "typical network" composite rate for interstate switched access with the composite rate for intrastate switched network access utilizing the rate elements in BellSouth's annual filing with this Commission, the Florida Access and Toll Report, Tables 1 and 2. He further testified that the revenue reduction resulting from the achievement of parity using the "typical network" methodology is \$125.2 million. Under the "typical network" methodology, BellSouth would raise residential recurring rates a total of \$3.50; \$1.25 for the first increase, \$1.25 for the second increase; and \$1.00 for the third increase.<sup>7</sup> BellSouth's proposal to raise single line business rates remains the same as set forth under the "mirroring" methodology, as does its proposed increase in non-recurring charges.

Witness Hendrix asserts that the difference in the revenue impact between these two methodologies stems from the number of rate elements utilized in each methodology. He contends that both methodologies use the most recent 12-months' demand to determine the intrastate switched network access revenue reduction. He asserts that the "mirroring" methodology uses all of the recurring switched network access rate elements, whereas the "typical network" methodology uses the limited, specific rate elements that are considered to be representative of averages for BellSouth's network. Witness Hendrix testified that use of composites from a typical network is consistent with the Commission's past practice for determination of switched access revenue reductions.

AT&T and MCI contend that the ILECs' rebalancing proposals appear to be revenue neutral notwithstanding any failures to correctly reach interstate parity. Under the parity section, AT&T and MCI argued that BellSouth's "mirroring" methodology, but not the "typical network" methodology, meets the criteria for parity. As noted previously, witness Fonteix claims that BellSouth's "typical network" methodology targets only a select set of rate elements to equal interstate rate levels, and thus fails to address all of the rate elements in the statutory definition of intrastate switched network access rate.

---

<sup>7</sup>BellSouth agreed to increase its non-recurring charge so that the single line residential rates would be lowered by approximately \$0.36.

AARP, Common Cause Florida, and Sugarmill Woods assert that the ILECs have not substantiated that their respective intrastate long distance rate reductions for residential customers will equal their corresponding basic long distance telecommunications service increases. They further assert that Verizon's inclusion of the interstate PICC end-user charge in its calculation of intrastate access charges for the purpose of rebalancing results in Verizon's failure to comply with the provisions of the Act requiring both parity and revenue neutrality. They conclude that Verizon's petition should be denied on these grounds.

The Attorney General argues that the ILECs have not substantiated that their respective intrastate long distance rate reductions for residential customers will equal their corresponding basic local telecommunications services increase. He argues that the ILECs have failed to demonstrate that the increase is revenue neutral.

#### B. Findings and Decision

AARP, Common Cause Florida, and Sugarmill Woods, articulate their specific position that because the PICC should not have been included in Verizon's switched network access charge reduction, Verizon's petition is not revenue neutral. For the reasons noted in the previous section, we find that it is appropriate for Verizon to include the PICC in its switched network access charge reduction calculation. Given that the PICC is appropriately included, we find that Verizon's proposed revenue reduction and basic rate increases are revenue neutral. Thus, we find that Verizon's proposal meets the criteria set forth in Section 364.164(1)(d), Florida Statutes. We also find that Sprint's proposed revenue reduction and basic rate increases are revenue neutral.

BellSouth has proposed two methodologies, "mirroring" and "typical network," which could be used to achieve revenue neutrality. We find that both the "mirroring" and "typical network" methodologies meet the statutory requirements for revenue neutrality. We note that the "typical network" methodology provides for less of an increase in basic local residential rates. Thus, we find it appropriate to approve the "typical network" methodology as the methodology which has a lesser impact on the local rates. In addition, we find that BellSouth's proposal meets the criteria set forth in Section 364.164 (1)(d), Florida Statutes.

Section 364.164(1)(d), Florida Statutes, requires that we consider whether approving the ILECs' proposals will be revenue neutral as defined in subsection (7) within the revenue category defined in subsection (2). Subsection (7) states that "revenue neutrality" means that the total revenue within the revenue category established by the statute remains the same before and after the local exchange telecommunications company implements any rate adjustments under this section. Subsection (2) states that once the ILEC petitions are granted, the local exchange telecommunications company is authorized to immediately implement a revenue category mechanism consisting of basic

ORDER NO. PSC-03-1469-FOF-TL  
DOCKETS NOS. 030867-TL, 030868-TL, 030869-TL, 030961-TI  
PAGE 39

local telecommunications service revenues and intrastate switched network access revenues to achieve revenue neutrality. We find that each of the three amended Petitions meet the revenue neutrality requirement of 364.164(1)(d), Florida Statutes.

Furthermore, contrary to the position taken by the Attorney General in these proceedings as further elucidated in Section VI(C) of this Order, we find the statute does not require that implementation of the proposals be "bill neutral" to any particular customer or class of customers.

X. FLOW-THROUGH CONSIDERATIONS

In this section, we consider the proper application of Section 364.163, Florida Statutes. We note that for each of the flow-through issues, Common Cause Florida and Sugarmill Woods adopted the position of AARP.

A. Applicability and Content of Flow-Through Tariffs.

This section addresses which IXCs should be required to file flow-through tariffs and what information should accompany those filings.

1. Argument

AT&T and MCI argue that all IXCs should be required to flow through the switched access reductions they receive in order to keep long distance carriers on a level playing field. For competitive neutrality, any flow-through conditions imposed must be applied to all IXCs. However, AT&T and MCI would not be opposed to a de minimus threshold established by this Commission for those IXCs for which the flow-through would have no meaningful impact. Such threshold, however, should be set sufficiently low to allow only those IXCs with very low volume of access use to qualify.

BellSouth Long Distance notes that Section 364.163, Florida Statutes, requires that all IXCs who benefit from the access reductions must flow through the benefits. Also, a company's tariff filings should specify the rates to be reduced and contain a statement of the particular company's corresponding anticipated revenue reduction.

Sprint Communications Company's conditional position is that any IXC paying more than \$1 million in access charges should be required to demonstrate that the required flow-through has occurred. It is not clear that the demonstration of flow-through should occur in the tariff filings. The demonstration of compliance with the statutory requirements should be up to each company and should insure that confidentiality is maintained where needed. Tariffs should reflect rates and charges that flow through benefits of reduced access charge prices.

Verizon Long Distance argues that any IXC that receives the benefit of intrastate switched access rate reductions must file intrastate tariffs (if tariff filings are required) flowing through such reductions. An IXC reseller should not be required to reduce prices to its customers unless it receives a reduction in the prices it is charged by its facilities-based supplier. IXCs should have the discretion to determine how to flow through the access charge reductions by lowering the in-state per minute rates, or monthly recurring plan charges, or both. If this Commission should decide to deregulate long distance services and eliminate long distance tariffing obligations, Verizon contends the reductions should be passed through to end users under end user service agreements.

OPC and AARP urge that all IXC's in Florida should be required to file tariffs and flow through the impacts of access rate reductions, except for those IXC's whose intrastate access expense reduction is \$100 or less, per month. Those IXC's which are not required to flow through the reductions should attest to such, via a letter filed with this Commission. These flow-through reductions should be directed to residential customers in the same proportion as the basic local telephone service revenue increases proposed by the ILECs. Included in these tariff filings should be the information delineated in the testimony of witness Ostrander.

The Attorney General argues that all IXC's in Florida should be required to file tariffs and flow through the impacts of access rate reductions, except for those IXC's whose intrastate access expense reduction is \$100 or less, per month. Those IXC's which are not required to flow through the reductions should attest to such, via a letter filed with this Commission.

## 2. Findings and Decision

There appears to be little disagreement among the parties as to the fact that the savings must be flowed through. There is disagreement, however, as to the type of documentation that should be required to demonstrate that this requirement has been met.

Upon consideration, all IXC's that paid \$1 million or more in intrastate switched access charges within the most recent 12 month period shall include in their tariff filings: (1) a calculation of the dollar benefit associated with the LEC's intrastate access rate reductions; (2) separate demonstrations that residential and business long distance rates have been reduced and the estimated annualized revenue effect, residential and business, including how those estimates were made; and (3) a demonstration that all rate reductions have been flowed through.

Further, IXC's that paid less than \$1 million in intrastate switched access charges within the most recent 12-month period shall include in their tariff filings a letter certifying that they paid less than \$1 million in intrastate switched access charges within the most recent 12 month period, and that they have complied with each of the flow-through requirements as specified in Section 364.163(2), Florida Statutes. Any IXC whose intrastate switched access expense reduction is \$100 or less per month shall not be obligated to flow through its reduction, but must attest to such through a letter filed with this Commission.

Finally, we direct our staff to work with the parties on an appropriate reporting format with consideration given to the formats used to demonstrate the 1998 access charge reduction flow throughs. In addition, our staff shall be diligent in assuring compliance with the requirements of this Order.

A. Timing

This section of our Order addresses the appropriate timing for filing of the IXC flow-through tariffs required by this Order.

1. Argument

AT&T and MCI state that it is unnecessary to set the exact same filing dates for both the ILECs and IXCs. They maintain the statute clearly requires the IXC's revenues to be reduced by the amount of access reductions it receives, but does not specify a time frame for making the reduction. They believe IXCs need a sufficient amount of time to both calculate the savings they will receive and to prepare tariffs for filing. As such, they argue that IXCs should be allowed 60 days from the date the ILEC files its access tariff revisions to file any IXC tariff revisions for flow-through. If this Commission chooses to mandate the ILEC and IXC tariffs be effective simultaneously, the ILEC access tariff revisions should be filed 60 days in advance of the effective date so that IXCs have the time necessary to conduct their analysis and file their tariffs, according to AT&T and MCI.

BellSouth Long Distance notes that affected IXCs should file their tariffs to flow through the access reductions within 15 days of the effective date of the last of the three LECs' filings. This would allow the carriers to avoid unnecessary multiple filings.

Sprint Communications Company's position is that IXCs should be allowed to have up to 60 days from the time that ILECs access reductions are effective in order to implement the tariff, billing and other administrative changes necessary to flow through the price adjustments.

Verizon Long Distance argues that facilities-based IXCs that benefit from reductions in the price of access should be required to pass through rate reductions via their intrastate tariffs (if tariffs are required), as soon as possible after the approved ILEC access rate reductions. Non-facilities-based IXCs should be required to flow through access charge reductions when they are received from the underlying facilities-based carrier. Since the flow-through of the access charges will require facilities-based carriers as well as IXC resellers, to make modifications to, for example, billing systems, rate tables, marketing and fulfillment materials, carriers should be given a reasonable amount of time to implement necessary plan and system changes before they are required to pass through access rate reductions.

On cross-examination, most of the IXC witnesses conceded that tariffs could be filed within 44 days after an ILEC's access charge tariff filing.

ORDER NO. PSC-03-1469-FOF-TL

DOCKETS NOS. 030867-TL, 030868-TL, 030869-TL, 030961-TI

PAGE 43

OPC, AARP and the AG all simply state that IXCs should be required to flow through the benefits of any rate reductions, via the tariffs, simultaneously with the approved ILEC access rate reductions.

## 2. Findings and Decision

Based on past experience with the 1998 access charge reduction flow-through, IXC's have not had difficulty complying with filing requirements as short as 21 and 30 days. We have heard no compelling testimony as to why, for the present dockets, 44 days from the filing of the LEC tariffs is not a reasonable time frame for filing of the IXC tariffs. The ILECs are required by Section 364.164(2), Florida Statutes, to give 45 days notice before tariffs go into effect, but IXC's need give only one day's notice. The goal of this requirement would be to have the ILEC and IXC tariffs become effective simultaneously. Accordingly, the IXC tariffs shall be required within 44 days after the filing of the ILECs tariffs, and the ILEC and IXC tariffs shall become effective simultaneously.

### B. Duration of Revenue Reductions

Here, we address the appropriate duration of the IXC revenue reductions necessary to fully flow through the benefits of the access charge reductions to customers.

#### 1. Argument

AT&T and MCI state that the highly competitive long distance market should and will decide this issue. They urge that specific restrictions have been unnecessary in the past, and could have negative consequences. In a highly competitive market, imposing any restrictions on the length of time a revenue reduction is in place could place the IXC's at a disadvantage in that it could prevent an IXC from implementing a pricing strategy that maximizes its competitive position. AT&T and MCI state that, should this Commission mandate the time period over which the reductions should be maintained, it would be the first time such a mandate has been imposed. In the earlier flow-throughs identified in these proceedings, this Commission did not impose a period of time that the rate reductions must be in place.

BellSouth Long Distance argues that, given the completely and irrevocably competitive nature of the intrastate interexchange long distance market in Florida, market forces will ensure that any long distance revenue reductions resulting from the flow-through of access charges will remain in place. There is significant and considerable competition among traditional long distance carriers as well as competition from other providers, such as voice over internet protocol providers and wireless carriers. According to BellSouth Long Distance, this competition will cause carriers to move their prices toward cost and prevent them from raising rates. Intrastate interexchange carriers should have the flexibility to change rates to meet market conditions, as long as they reduce their revenues in an amount equal to their access charge reductions.

Sprint Communications Company's conditional position is that

market forces will insure that the revenue benefits of access reductions will be effective in maintaining the revenue benefits of the access reductions. Nevertheless, each provider required to make a flow-through filing should reduce average prices by an amount at least equivalent to the access reduction on a per minute basis and should maintain those average price reductions for all three years of the access reductions plus at least one additional year.

Verizon Long Distance urges that the long distance market is highly competitive in that the traditional wireline long distance carriers compete against each other as well as with wireless carriers, cable companies and IP telephony providers. Competition will ensure that IXCs flow through access reductions without any need for Commission intervention. Nevertheless, to remove any doubt about whether customers will actually receive the benefit of the access reductions, Verizon Long Distance (and its affiliates) agree to flow through the reductions for three years. After that time, Verizon Long Distance argue IXCs should be free to change their long distance rates in accordance with the demands of the marketplace.

OPC, AARP and the AG argue that the IXCs should be required to cap and maintain their long distance rate reductions for a period of three years after parity is achieved, as required by Section 364.163, Florida Statutes, and as further described by witness Ostrander.

## 2. Findings and Decision

We find that, in order to implement the intent of the statutory requirements, there needs be a period of rate certainty after parity is achieved. We are not, however, persuaded by the arguments that we should mandate that the reductions remain in effect for a period of three years after parity is achieved. This is contrary to the fact that the long distance market is highly competitive, and as noted by witness Kapka, market forces will likely prove effective in keeping long distance rates low over the long term. Accordingly, we find that rate reductions shall remain in effect for no less than one year subsequent to parity being accomplished.

### C. Allocation of the Flow-Through Benefits between Residential and Business Customers.

Here, we address the proper method for allocating the flow-through benefits between residential and business customers.

#### 1. Argument

AT&T and MCI argue that the 2003 Act simply requires the IXCs to return the benefits of access reductions to both residential and business customers. However, it does not micro-manage the IXC market by mandating a methodology or specific allocation between the customer classes. In doing so, the Act recognizes the competitive market will determine the specifics of the access flow-through. They argue the 2003 Act specifically has given IXCs the maximum flexibility to determine how best to make reductions that meet the needs of the market place. As long as both residential and business customers benefit, each IXC should be left to accomplish its flow-through consistent with its market needs, according to the companies. In addition, each IXC must eliminate any in-state connection fee by July 1, 2006.

BellSouth Long Distance urges that both residential and business customers must receive benefits from the reduction in access charges, but emphasizes that Section 364.163, Florida Statutes, does not require any specific allocation. Nonetheless, under current market conditions, and so long as the other carriers agree to do so, BellSouth Long Distance will allocate the revenue reductions in an approximately pro rata manner between residential and business customers based upon access minutes of use.

Sprint Communications Company states that the methodology contained in witness Kapka's direct testimony should be a guide for flow-through. In his testimony, witness Kapka explained his methodology as follows:

For services which are substantially used by residential subscribed customers, Sprint would determine the average revenue per minute for these services in the aggregate.

With each reduction in access charges, Sprint would adjust the average revenue per minute for this base of customers such that the average revenue per minute would be reduced by an amount at least equal to the reduction in access charges per minute. . . .

This general approach will ensure that the residential subscriber base will experience a reduction in long distance prices at a level at least as much as the reduction in access costs associated with long distance minutes that customer segment consumes.

Verizon Long Distance (and the Verizon affiliates) plan to flow through the benefits realized from access reductions to both residential and business customers based on the relative proportion of access minutes associated with those classes of customers. The amount of intrastate switched access that Verizon Select Services uses is significantly less than the amount that Verizon Long Distance uses.

The position of OPC, AARP and the AG is that the IXC's should allocate rate reductions between residential and business customers in the same proportion as the respective percent revenue increases for those two classes of customers that have been proposed by the ILECs.

## 2. Findings and Decision

Each of the IXC's has agreed that the allocation of rate reductions between the residential and business customer classes should be in proportion to the respective access minutes of use. While we have considered the argument that the reductions should be allocated in accordance with the increases on the local exchange side, we are not persuaded that this is feasible, economically appropriate, or even contemplated by the statute. Accordingly, we acknowledge the reasonableness of the IXC proposals that the allocation of the rate reductions being flowed through to residential and business customers on a pro-rata basis according to access minutes of use is reasonable.

## XI. CONCLUSION

Based on the foregoing, we hereby grant the Petitions of Verizon, Sprint, and BellSouth as filed in Dockets Nos. 030867-TL, 030868-TL, and 030869-TL, as amended by commitments made on the record at the final hearing. In doing so, we find that these Petitions meet the statutory criteria set forth in Section 364.164, Florida Statutes, and that granting the Petitions furthers the Legislature's stated policy of furthering competition in the local exchange market and promoting new offerings and innovations in the telecommunications market for Florida consumers.

We hereby accept and approve the additional proposals offered by the companies as listed below:

|           |        |         |
|-----------|--------|---------|
| BELLSOUTH | SPRINT | VERIZON |
|-----------|--------|---------|

| BELLSOUTH  | SPRINT   | VERIZON   |
|--|--|---|
| Increase non-recurring charges so that the single line residential rates would be lowered by approximately 36 cents. | Increases to basic residential recurring and non-recurring rates would be in four steps spread over three years. | Increase non-recurring revenues from \$1.2 million to \$2.4 million so that basic local rates can be raised by \$1.2 million less than requested. |
| Increase Lifeline eligibility to 135% of the federal poverty level.  | Increase Lifeline eligibility to 135% of the federal poverty level.  | Increase Lifeline eligibility to 135% of the federal poverty level.   |
|  | Lifeline rates would not be increased for four years.  | Lifeline rates would not be increased for four years.   |
| Will work with PSC to review ECS in a Commission workshop.   | Will work with PSC to review ECS in a Commission workshop.   | Will work with PSC to review ECS in a Commission workshop.  |

The tariffs reflecting the ILECs' agreement to increase Lifeline eligibility to 135% of the federal poverty level shall be effective concurrently with the ILECs' 45-day tariff filings.

In addition, the IXC's shall flow through the benefits resulting from the granting of the ILECs' Petitions in accordance with the specific requirements set forth in Section X of this Order.

Finally, Commission staff is hereby authorized to administratively review and approve the tariff filings received implementing these proposals.

It is therefore

ORDERED by the Florida Public Service Commission that the Petitions filed by Verizon Florida, Inc., Sprint-Florida, Incorporated, and BellSouth Telecommunications, Inc., in respective Dockets Nos. 030867-TL, 030868-TL, and 030869-TL are hereby approved as set forth in the body of this Order. It is further

ORDERED that the modifications proposed by these companies are also accepted and approved as set forth herein. It is further

ORDERED that the tariffs implementing the increased Lifeline eligibility criteria shall be effective concurrently with the Petitioners' 45-day tariff filings. It is further

ORDER NO. PSC-03-1469-FOF-TL

**NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW**

The Florida Public Service Commission is required by Section 120.569(1), Florida Statutes, to notify parties of any administrative hearing or judicial review of Commission orders that is available under Sections 120.57 or 120.68, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing or judicial review will be granted or result in the relief sought.

Any party adversely affected by the Commission's final action in this matter may request: 1) reconsideration of the decision by filing a motion for reconsideration with the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, within fifteen (15) days of the issuance of this order in the form prescribed by Rule 25-22.060, Florida Administrative Code; or 2) judicial review by the Florida Supreme Court in the case of an electric, gas or telephone utility or the First District Court of Appeal in the case of a water and/or wastewater utility by filing a notice of appeal with the Director, Division of the Commission Clerk and Administrative Services and filing a copy of the notice of appeal and the filing fee with the appropriate court. This filing must be completed within thirty (30) days after the issuance of this order, pursuant to Rule 9.110, Florida Rules of Appellate Procedure. The notice of appeal must be in the form specified in Rule 9.900(a), Florida Rules of Appellate Procedure.

Agustin J. Ros and Karl McDermott, "Are Residential Local Exchange Prices Too Low? Drivers to Competition in the Local Exchange Market and the Impact of Inefficient Prices," in Michael Crew, *Expanding Competition in Regulated Industries*, Kluwer Academic Publishers, 2000.

FLORIDA PUBLIC SERVICE COMMISSION  
DOCKET  
NO. 050693-74 Exhibit No. 19  
Company/ Alltel  
Witness: David C. Blessing (DCB-11)  
Date: 12-01-05

**ARE RESIDENTIAL LOCAL EXCHANGE PRICES TOO LOW? DRIVERS TO  
COMPETITION IN THE LOCAL EXCHANGE MARKET AND THE IMPACT OF  
INEFFICIENTLY-SET PRICES**

Agustin J. Ros<sup>1</sup> and Karl McDermott<sup>2</sup>

In this paper we examine the major drivers and determinants of local exchange competition and investigate the proposition that inefficiently-set local exchange prices are having an impact on competition and inhibiting competition for residential customers. Examining data as of the end of 1998, we find support for both propositions. Using OLS and GLS estimates we find a significant and positive association between states that have more “balanced” tariffs and residential competition. We also find that those states that have a state-level universal service fund have higher levels of residential competition. This paper provides additional support for setting prices to reflect costs. For two measures of residential competition used in our data, we find that “rebalancing” tariffs by 10% leads to approximately a 9% and 13% increase, respectively, in residential competition.

**I. INTRODUCTION**

Nearly five years after passage of the Telecommunications Act of 1996 (“the Act”) there is still widespread debate about the status and extent of competition in the local exchange market and whether the Act has succeeded or failed in one of its intended goal of fostering competition. While a consensus appears to have emerged that competition for large business customers in dense metropolitan areas is beginning to take hold, no such consensus exists for other types of customers.<sup>3</sup> Specifically, policymakers are asking when they will begin to see a consensus emerge that competition is taking hold for:

- Smaller business customers located in non-urban, rural areas; and
- Residential customers.

---

<sup>1</sup> Senior Consultant at National Economic Research Associates and Instructor at Northeastern University.

<sup>2</sup> Vice President at National Economic Research Associates.

<sup>3</sup> See section II below.

There are plausible economic reasons why local exchange competition is developing in this manner. It should be no surprise that competition will first occur where the returns to investing are greatest. Only after these major opportunities are fully exploited will competitors seek out less profitable opportunities. For reasons dealing with the relative expense of deploying facilities in urban as opposed to non-urban areas and the volume of demand generated by large business customers as opposed to single-line business or residential customers, one would expect the pattern of local exchange competition to develop in this manner.

However, there may be other valid reasons that help explain this pattern of local exchange competition. Specifically, are there policy-related features of local exchange markets—which may not be what one would find in undistorted competitive markets—that are having an impact? In this paper we concentrate on a unique feature of local exchange markets. In the pursuit of universal service and fully exploiting the positive network externalities present in telecommunications, policy makers have historically priced residential network access below economic costs—i.e., lower than what one would find in competitive markets. The revenue sources that have historically been used to support residential prices include business services. While this policy has helped in permitting the United States to achieve high rates of telephone penetration, is it now distorting the development of local exchange competition and impeding competition for residential customers?

The purpose of this paper is to test this hypothesis. Are inefficiently-set local exchange prices having an impact on the development of local exchange competition and inhibiting the development of residential competition? We attempt to find empirical evidence for this proposition and control for other factors that are impacting local exchange competition and identify major drivers and determinants of local exchange competition. Section II and III provide a background on local competition and the economic predictors of local exchange competition. Section IV presents an econometric analysis.

## II. BACKGROUND

The fundamental purpose of TA 96 was to open up local exchange markets to competition in the hope that competitive markets will do a superior job of accommodating the enormous technological changes taking place in the industry than monopolies. The Act opened up the local exchange market by, *inter alia*: eliminating legal barriers to entry; removing technical barriers to entry—e.g., requiring incumbent carriers to offer unbundled network elements (“UNEs”) and to resell retail services at a wholesale discount; and requiring all carriers to interconnect.

A consensus appears to be emerging on the status and extent of local exchange competition: competition is taking hold and becoming robust for certain relevant economic markets—e.g., large business customers in dense urban areas—but is still in its infancy for other relevant economic markets—e.g., residential customers in non-urban areas. This consensus can best be reflected in the statements of many various parties who normally oppose each other in regulatory arenas. For example, the Competitive Telecommunications Association (“Comptel”) stated:

“The effectiveness of this landmark piece of legislation is particularly evident in the market for business service...In particular, competition in the market for residential service has been slow to develop.”<sup>4</sup>

A report by Peter Huber indicated that:

“In the local market, competition has developed rapidly-but only where competition makes strategic sense for new entrants. It makes sense in the business markets of large cities.”<sup>5</sup>

The Consumer Federation of America and the Consumers Union stated:

“To the extent there is competition, it is almost entirely restricted to large urban areas.”<sup>6</sup>

---

<sup>4</sup> Comptel Report on the State of Local Competition to the Honorable Tom Bliley, Jr. Chairman U.S. House of Representatives Committee on Commerce, December 9, 1998.

<sup>5</sup> Peter Huber, *Local Exchange Competition Under the 1996 Act: Red-Lining the Local Residential Customer*.

And, finally, the Department of Justice indicated that:

“without universal service reform, local residential service, except in low-cost urban or other similarly densely populated area...will be uneconomical for competitors to provide.”<sup>7</sup>

### **III. DRIVERS OF LOCAL EXCHANGE COMPETITION**

#### **A. Economic Determinants**

Traditional wisdom among economists throughout most of the twentieth century was that local exchange markets were considered to be natural monopolies. For any given level of output, a natural monopoly exists if total industry costs are minimized by having a single firm produce. Natural monopolies and those industries approaching natural monopolies are characterized by efficient firm size being large relative to total industry demand. Beginning in the early 1990s, the view that local exchange markets were natural monopolies began to change especially as it pertained to certain relevant economic markets—e.g., business customers in urban markets. There are two sources that explain this transformation: demand and cost conditions. Any attempt to determine the “drivers” of local exchange competition should account for these two factors.

On the demand side, as the total market demand increases relative to the minimum efficient scale of production more firms are able to efficiently serve the market. Reasons why a change in demand occurs include changes in consumer preferences, income, price of complements or development of complementary products—such as the Internet—that raise the value consumers place on the service. As the market demand shifts upward, the socially optimal output increases relative to efficient firm size and more firms enter. Therefore, in our econometric analysis we include variables that control for the level of demand in each state.

---

<sup>6</sup> Mark Cooper and Gene Kimmelman, *The Digital Divide Confronts the Telecommunications Act of 1996*.

<sup>7</sup> Joel I. Klein, *The Role for Local Competition: A Long Distance Run, Not a Sprint*, Speech to the American Enterprise Institute, November 5, 1997.

Telecommunications costs include a fixed component that does not vary with the level of output and a variable component that does vary with the level of output. A major determinant of efficient firm size is the output level at which economies of scale exhaust and a major determinant of when economies of scale exhaust is the level of fixed costs that are present. As the level of fixed costs decrease two things happen: (i) first, in competitive markets prices track costs and lower prices result in higher demand, and (ii) minimum efficient scale decreases. Both changes mean that the number of firms that can efficiently serve the market increases. In our econometric analysis, we include a variable that controls for the costs—especially the fixed costs—to deploy infrastructure.

### **B. Regulatory Distortions**

An important hypothesis that we test in this paper is the proposition that inefficiently-set local exchange prices are having a significant impact on how local exchange competition is developing. Traditionally, business services have been used a revenue source to keep residential local exchange prices below economically efficient levels. Therefore, once competition is permitted in the local exchange, *at the margin* competitors may inefficiently target business customers and ignore residential customers. That is, under current conditions where business prices are likely above their economic costs there is too little residential competition. CLECs may be ignoring residential customers not because underlying demand and supply conditions justify it but rather because of regulatory distortions. If true, the policy implication is that states should move more aggressively than they have to date in rebalancing prices—i.e., setting residential and business prices in accordance with economic efficiency.

## **IV. EMPIRICAL ANALYSIS**

In this section, we analyze the determinants of local exchange competition and test the hypothesis that inefficiently-set local exchange prices are having an impact on the development of local exchange competition. We begin by describing the data, sources used and presenting descriptive statistics. We continue by discussing our hypotheses and our econometric model. We conclude this section by presenting our results.

## A. Data

### 1. Dependent Variables

Table 1 below presents a description of the data that were used in this study.<sup>8</sup> The dependent variables used in our study are measures of local exchange competition. We use several different measures of local exchange competition; some examine the extent of facilities-based competition while others examine the extent of resale competition. Furthermore, some of the variables distinguish between business as opposed to residential competition. Each competition variable comes from the Federal Communications Commission’s *Local Exchange Competition: August 1999* which reports the extent of competition as of the end of 1998.<sup>9</sup>

The number of lines provided by CLECs (i.e., not UNEs or resale) are not publicly available although estimates are that about a quarter of all lines provided by CLECs are facilities based.<sup>10</sup> As a result, we rely on variables that are likely proxies for facilities-based competition such as: the number of CLECs holding numbering codes; percent of ILEC lines (residential and other lines) served by switching centers where new entrants have collocation arrangements; and ILEC lines leased to CLECs as UNE loops.<sup>11</sup> Variables used for resale competition include: the number of ILEC voice grade lines (residential and other lines) provided to CLECs for resale to end users; and the percent of resold lines serving residential or other than residential customers.

---

<sup>8</sup> For both the dependent and independent variables, the data are state-specific—one measure for the state in question. We use data from the RBOCs, GTE and Sprint. For variables such as population, per capita income this presents no issue because the data are collected at the state level. When the variables are company-specific (such as the percent of ILEC lines leased to CLECs as UNE loops) a weighted average based on the number of lines for each company is used.

<sup>9</sup> Federal Communications Commission, Industry Analysis Division, *Local Competition: August 1999*.

<sup>10</sup> *Ibid.*, at

<sup>11</sup> In this paper, ILEC lines leased to CLECs as UNE loops are considered a measure of facilities-based competition because there is the likelihood those CLECs that lease loops are providing their own switching. There is an exception to this general rule in those jurisdictions where the platform approach to local competition has been adopted—i.e., where a CLEC leases a loop, switching and transport. However, for the time period that this study takes place, few jurisdictions had adopted the platform approach to local exchange competition.

## 2. Independent Variables

There are a host of independent variables used in our analysis that are hypothesized to have an impact on the extent of local exchange competition (both facilities based and resale). Independent variables that control for demand-side effects include: per capita personal income, total gross state product, gross state product for finance, insurance and real estate (“fire”), and gross state product for manufacturing; and the average UNE loop price; and the average resale discount.<sup>12</sup> On the supply side we use lines per square mile as a proxy measuring how expensive or inexpensive it is to deploy facilities and the average resale discount.<sup>13</sup>

As discussed above, we also include two other variables that likely have an impact on the development of local exchange competition—the degree to which local exchange prices are inefficiently-set and whether the state has some type of functioning universal service program. For the degree to which local exchange prices are inefficiently-set, we use two measures. The first measure is the ratio of the monthly rate for a business with a PBX trunk and the monthly residential rate while the second measure is the ratio of the connection charge for a business with a PBX trunk and the connection charge for a residential line.<sup>14</sup>

---

<sup>12</sup> Data for per capita income and gross state product are from the Bureau of Economic Analysis and are for 1997. Data for UNE loop prices are for 1997 and are mainly taken from the National Association of Regulatory Utility Commission (“NARUC”) *Telecommunications Competition Report 1998* and from the National Regulatory Research Institute (“NRRI”) web page.

<sup>13</sup> Data for the resale discount are for 1997 and are mainly taken from the National Association of Regulatory Utility Commission (“NARUC”) *Telecommunications Competition Report 1998* and from the National Regulatory Research Institute (“NRRI”) web page.

<sup>14</sup> The data are for 1997 and are mainly taken from the Federal Communication Commission’s *Reference Book of Rates Price Indices and Expenditures for Telephone Service*, tables 1.4, 1.5, 1.19 and 1.20. For a few states, information was taken from the Center for Communications Management Information (“CCMI”) and from tariffs obtained directly from the states.

Table 1: Description of Variables

| Variable    |   |
|-------------|---|
| Resale      | ILEC voice grade lines provided to CLECs for resale to end users as of Dec 31, 1998, (000).   |
| Resale%     | Percent of ILEC voice grade lines resold, as of Dec 31, 1998.   |
| Resale_res  | ILEC resold lines serving residential customers as of Dec 31, 1998, (000).  |
| Resale_oth  | ILEC resold lines serving customers other than residential as of Dec 31, 1998, (000).   |
| Resale_res% | Percent of resold lines serving residential customers as of Dec 31, 1998.   |
| Resale_oth% | Percent of resold lines serving customers other than residential as of Dec 31, 1998.  |
| Une         | ILEC lines leased to CLECs as UNE loops as of Dec 31, 1998, (000).  |
| Per_une     | Percent of ILEC lines leased as UNEs, as of Dec 31, 1998.   |
| Col_res     | Percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements, as of Dec 31, 1998. |
| Col_oth     | Percent of ILEC other lines served by switching centers where new entrants have collocation arrangements, as of Dec 31, 1998.       |
| Col_tot     | Percent of ILEC total lines served by switching centers where new entrants have collocation arrangements, as of Dec 31, 1998.       |
| Code        | CLECs holding numbering codes as of Dec 31, 1998.   |
| Pop         | Population (000) 1997.  |
| Lines       | Access lines of all incumbent local exchange carriers in thousands.   |
| Sqmi        | Square miles.   |
| Popsqmi     | 1997 population per square mile.  |
| Linesqm     | 1998 access lines per square mile.  |
| GSP_com     | 1997 Gross state product in communications, (000,000).  |
| GSP_fire    | 1997 Gross state product in finance, insurance and real estate, (000,000).  |
| GSP_tot     | 1997 Gross state product all industries, (000,000).   |
| GSP_man     | 1997 Gross state product in the manufacturing industry, (000,000).  |
| Percap      | 1997 Per capita personal income.  |
| P_bs        | Monthly rate for a business with a PBX trunk, 1997 dollars.   |
| P_rs        | Monthly residential rate, 1997 dollars.   |
| Bs_rs       | Ratio of monthly rate for a business with a PBX trunk and monthly residential rate.   |
| P_bscn      | Connection charges for a business with a PBX trunk, 1997 dollars.   |
| P_rscn      | Connection charges for a residential line, 1997 dollars.  |
| Bs_rs_cn    | Ratio of PBX connection and residential connection charges.   |
| Resale_dis  | Average resale discount in the state.   |
| UNE_price   | Average UNE loop price in the state.  |
| US          | 1 if state has a universal service plan that is either functioning or under revision, 0 otherwise.                                  |

For our universal service variable we use a survey report from NRRI.<sup>15</sup> The NRRI report provides the results of a survey that NRRI conducted to examine state commission actions to further and support universal service. The NRRI survey examined the status of each state's universal service plan as of the early part of 1998. NRRI found that while there were many states that had either approved a state universal service fund or where approval was pending, fewer states indicated that their fund was either functioning or currently under revision. Therefore, we created a dummy variable to identify those states where their fund was either functioning or currently under revision.

Table 2 below presents the descriptive statistics of the variables used in this study. The data indicate that as of the end of 1998 local competition was in its infancy. The average number of resold lines per state was about 50,000 which represented about 1.5 percent of the market. On average, there were fewer UNE loops sold in each state, only about 5,000 which represented about .2 percent of the market. What the data do not show, however, and which is confirmed in the FCC's *Local Exchange Competition: August 1999* report is that local competition is growing rapidly.<sup>16</sup> The data also indicate that competitors have collocated in end offices that contain about 50 percent of non-residential lines and 37 percent of residential lines. This means that competitors are able to "address" a fairly large percent of the market. In the face of profitable opportunities or the attempt by incumbent carriers to exercise market power, competitors are well positioned to provide alternative services.

The data also indicate that monthly business prices are significantly above residential prices and the same applies, although to a lesser extent, for connection charges. This variable is a measure of the degree to which local exchange prices in each state are inefficiently set—i.e., the degree to which local exchange prices are unbalanced. The data indicate that, on

---

<sup>15</sup> *State Universal Service Funding and Policy: An Overview and Survey*, Edwin A. Rosenberg and John D. Wilhelm, NRRI, September 1998.

<sup>16</sup> For example, compared to the long distance market at similar points in time, local competition is progressing more rapidly. In the first quarter of 1998, CLECs added more access lines than the RBOCs. The non-AT&T long distance carriers did not have more incremental minutes until a full 10 years after MCI carried its first switched long distance minute.

average, monthly business prices are about 2.9 times above residential prices and business connection charges are about 1.5 times above residential connection charges.

**Table 2: Descriptive Statistics**

| Variable    | Observations | Mean     | Std. Dev. | Minimum Value | Maximum Value |
|-------------|--------------|----------|-----------|---------------|---------------|
| Resale      | 50           | 46.15648 | 64.09523  | 0             | 284.0132      |
| Resale%     | 50           | 1.508219 | 1.135412  | 0             | 5.028401      |

| P rs        | 51           | 18.66948 | 4.38621   | 9.82          | 27.68         |
| Bs rs       | 51           | 2.888258 | .6713013  | 1.834631      | 4.620785      |
| P bscn      | 51           | 53.97    | 19.75     | 15.10         | 99.04         |
| P rscn      | 51           | 38.79    | 10.23     | 9.82          | 60.61         |
| Bs rs cn    | 51           | 1.50     | .70       | .53           | 3.40          |
| Resale dis  | 48           | 18.18    | 4.98      | 9.88          | 32.75         |
| Une price   | 46           | 20.65    | 16.89     | 9.96          | 121.75        |
| US          | 51           | .275     | .451      | 0             | 1             |

Other interesting findings from Table 2 are state policies on pricing of UNE loops, the resale discount and progress on universal service. The data indicate that in 1997 the average resale discount was 18.2 percent and the average UNE loop price was \$20. Also, as of 1998 only about 28 percent of states had a universal service fund that was either functioning or under revision.

**B. Econometric Analysis**

**1. Testable Hypotheses**

There are two broad measures of competition in this study: facilities-based and resale. This is further broken into, where possible, residential and business competition. The impact that the independent variables are hypothesized to have on the dependent variable depends on whether the dependent variable is measuring facilities as opposed to resale competition and whether the dependent variable is measuring residential as opposed to business competition. Table 3 below indicates the expected signs of our econometric analysis.

**Table 3: Predicted signs of econometric analysis**

| Independent Variables | Resale      |      | Facilities-Based |      |             |      |
|-----------------------|-------------|------|------------------|------|-------------|------|
|                       | Residential | Bus. | UNE Loop         |      | Collocation |      |
|                       |             |      | Residential      | Bus. | Residential | Bus. |
| Per-capita Income     | +           | +    | +                | +    | +           | +    |
| GSP Variables         | +           | +    | +                | +    | +           | +    |
| Lines/sq. mile        | -           | -    | -                | -    | +           | +    |
| Bus./res. Ratio       | -           | +    | -                | +    | -           | +    |
| UNE Loop Price        | +           | +    | -                | -    | +           | +    |
| Resale Discount       | +           | +    | -                | -    | -           | -    |
| U.S. Fund             | -           |      | +                |      | +           |      |

We predict that the variable measuring the degree to which local exchange prices are inefficiently-set—specifically, the degree to which business rates are being used to support residential rates—will have a negative impact on residential competition regardless of whether the dependent variable is measuring resale or facilities-based competition. On the other hand,

we predict that as the business/residential ratio increases competitors have increased incentives to target business customers and so we expect the sign to be positive when the dependent variable is measuring business competition.

We expect the universal service variable to have a positive impact on facilities-based competition (including UNE competition) when the dependent variable is measuring residential or competition. To the extent residential prices are set below economically efficient levels, the universal service fund is intended to provide a subsidy to carriers that serve the customer. Because the universal service payment is only for residential and single-line business customers and since our measure of business competition is for more than one line, we do not expect to see an impact when the dependent variable is measuring facilities-based competition for business customers. Also, since universal service payments are not given to carriers that provide service through reselling, we do not expect to see an impact when the dependent variable is measuring resale competition.

We expect the UNE loop price to be negatively related to UNE competition but positively related to other facilities-based competition or resale competition regardless of whether the dependent variable is measuring residential or business competition. As the UNE price increases, other forms of competition become more attractive. The same logic applies for the resale discount. As the resale discount increases other forms of competition become less attractive. Therefore, we expect to see the resale discount positively related to resale competition but negatively related to other facilities-based competition including UNE competition.

Other independent variables include access lines per square mile, the gross state product variables (fire, manufacturing and total) and per-capita income. Access lines per square miles measure how expensive or inexpensive it is to deploy facilities. Therefore, as access lines per square miles increase we expect to observe a positive sign when the dependent variable is facilities-based competition excluding UNE competition. As it becomes cheaper to deploy facilities, competitors are less likely to use UNE loops or resale. Finally, we expect that the gross state product variables and per capital income will likely have a positive impact on all

forms of competition—resale, UNE loop, facilities—and for both residential and business customers.

## 2. Results

We use the dependent and independent variables mentioned above to run several different econometric models. The models take the following form:

$$(1) \quad Y_i = \beta_0 + \beta_j X_j + e$$

where:  $Y_i$  is a vector of local exchange competition variables such as resale or facilities-based and type of customer such as residential or business;  $X_j$  is a vector of the independent variables described in Section III A above;  $\beta_0$  is a constant term and  $e$  is a random disturbance variable assumed to be distributed with zero mean and specifiable covariance structure.<sup>17</sup> Equation (1) is estimated using ordinary least squares (“OLS”) except when heteroscedasticity is present and we use generalized least squares (“GLS”). Table 4 presents the results when the dependent variable is a measure of facilities-based competition and Table 5 presents the results when the dependent variable is a measure of resale competition.

Equation (1) in Table 4 is estimated using OLS and uses the number of CLECs assigned numbering codes in each state as the dependent variable (code). The most important variable explaining the variation in the dependent variable is the gross state product for fire—finance, insurance and real estate.  $GSP\_fire$  is positively related to code at the 5% level.

The results from equation (1) indicate that there is support for our hypothesis that inefficiently-set local exchange prices ( $Bs\_rs$ ) are having an impact on the development of local exchange competition. Specifically, our data set indicates that, holding all other factors constant, as prices are less efficiently set—i.e., more unbalanced—the number of CLECs holding numbering codes increases. The  $Bs\_rs$  variable has a t-stat of 1.99, which at 46 observations is significant at the 10% level and almost significant at the 5% level. As

---

<sup>17</sup> The starting assumption is that  $e$  is distributed identically and independently with zero mean and finite, constant variance. This assumption can be relaxed to allow for heteroscedasticity (non-identical distribution) and/or serial correlation (non-independent distribution) following tests on the data. We heteroscedasticity is present we estimate equation (1) using GLS.

discussed above, by the end of 1998 much of the competition occurring in local markets was focused toward the business customers. As such, unless a variable specifically measures residential competition—such as the amount of residential resale—measures of generic local exchange competition like code are likely more reflective of business competition. With this interpretation in mind, the results from equation (1) indicate that unbalanced local rates are encouraging competitors to target business customers.

**Table 4: Determinants of Facilities-based Competition (Std. Error in parenthesis)**

| Independent Variable | Dependent Variables   |                      |                       |
|----------------------|-----------------------|----------------------|-----------------------|

| F-stat               | F(5, 40) = 15.04*     | F(5,40) = 19.30*     | F(5,40) = 62.15*      |
| Adj R-squared        | .61                   | .35                  | .35                   |

\*Significant at the 5% level or above; \*\* significant at the 10% level;

Other interesting finds from equation (1) are the importance of states having some type of functioning universal service fund and the impact of the UNE loop price. According to our data, those states that have a functioning universal service fund or whose fund is currently under revision had approximately three more CLECs holding number codes holding other factors constant. Also, higher UNE loop prices had a negative, though small, impact on the

number of CLECs holding number codes. Both the universal service and UNE loop price variables are statistically significant at the 10% level.

Equation (2) provides additional empirical support for the proposition that inefficiently-set local exchanges prices are impacting the development of local exchange competition and, specifically, inhibiting competition for residential customers. Equation (2) is estimated using GLS. The dependent variable in equation (2)—Col\_res— is the percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements. The results from equation (2) indicate that as the prices are less efficiently set—i.e., more unbalanced, the percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements decreases. The Bs\_rs variable has a t-stat of 1.96, which at 46 observations is significant at the 10% level and almost significant at the 5% level. When substituting the average value of Bs\_rs (2.89) into equation (2), we conclude that rebalancing prices by 10% leads to a 3.2 percentage point increase in the percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements. This is approximately a 9% increase from the average value of the dependent variable.

Other important variables explaining the variation in the dependent variable are, once again, universal service and UNE loop prices. The universal service variable is significant at the 5% level. The coefficient indicates that those states that either have a functioning universal service fund or whose fund is under revision have more residential competition. The magnitude of the US coefficient is quite high. Specifically, when US is one the percent of ILEC residential lines served by switching centers where new entrants have collocation arrangements increases by 12 percentage points. Finally, the UNE loop price is negative and significant at the 5% level, although as in equation (1) the impact is relatively small.

Equation (3) uses the percent of other lines (i.e., non-residential lines) that are served by switching centers where new entrants have collocation arrangements and is estimated using GLS. The results from equation (3) indicate that lines per square miles, GSP\_fire, Bs\_rs ratio and the UNE loop price explain about 35 percent of the variation in the dependent variable.

Lines per square mile and GSP\_fire are both significant and positively related to the dependent variable at the 5% level.

The Bs\_rs ratio and the UNE loop price are both significantly related to the dependent variable at the 10% level, however, their signs are negative, the opposite of what we predicted in Table 3 above. A plausible explanation is that the dependent variable is not a perfect measure of facilities-based business competition. Competitors are not required to collocate in order to serve a customer via their own facilities. All that is required is some point of interconnection that need not be in an end office serving customers. What the results of equation (3) may be indicating is that if the Bs\_rs ratio is significantly high, competitors will find it more advantageous to pursue a pure facilities-based strategy where collocation is not required. This can also explain why the UNE loop price variable is also negative. As the loop price increases, competitors turn away from purchasing loops and do not need to collocate as much. Further examination of this issue would be fruitful, however, given our data constraint we were not able to pursue this area of inquiry.

Table 5 below presents the results from our econometric analysis when the dependent variables are measuring some type of facilities-based competition. Specifically, equation (4) in Table 5 uses the number of ILEC voice grade lines provide to CLECs for resale to end users (Resale) as the dependent variable while equation (5) uses the number of ILEC resold lines serving residential customers (Resale\_res).

Equation (4) was estimated using OLS. The results indicate that based on our data, the major drivers of resale competition are GSP\_fire and the level of the resale discount. The degree to which local exchange prices are inefficiently-set have no impact on Resale. GSP\_fire is positively related to Resale at the 5% level and the coefficient indicates that each additional \$1 billion in GSP\_fire increases resold lines by about 1,300. The level of the resale discount is positively related to Resale at the 5% level and the coefficient indicates that each percentage point increase in the resale discount increases resold lines by about 3,200.

**Table 5: Determinants of Resale Competition (Std. Error in parenthesis)**

| Independent | Dependent Variable |            |
|-------------|--------------------|------------|
|             | Resale             | Resale_res |

| Variable      | Equation (4)        | Equation (5)         |
|---------------|---------------------|----------------------|
| Linesqm       |                     | -.00196*<br>(.00064) |
| GSP_fire      | .00126*<br>(.00013) |                      |
| Percap        | -.00245<br>(.0017)  |                      |
| Bs_rs         |                     | -5.44<br>(6.13)      |
| Bs_rs_cn      | -9.11<br>(8.45)     | -10.86**<br>(6.25)   |
| Resale_dis    | 3.20*<br>(1.34)     | .879<br>(.790)       |
| UNE_price     | .491<br>(.350)      |                      |
| Constant      | 11.01<br>(41.86)    | 37.11<br>(25.48)     |
| N             | 44                  | 48                   |
| F-stat        | F(5, 38) = 20.13*   | F(4, 43) = 3.60*     |
| Adj R-squared | .69                 | .09                  |

\*Significant at the 5% level or above; \*\* significant at the 10% level;

Equation (5) was estimated using GLS and the results provide support for the proposition that inefficiently-set local exchange prices are impacting the development of resale competition for residential customers. While the Bs\_rs ratio has no impact on the amount of residential resale competition, the Bs\_rs\_cn ratio does—i.e., the ratio of the business connection charge to the residential connection charge. The Bs\_rs\_cn ratio was negatively related to residential competition and was significant at the 10% level. When substituting the average value of Bs\_rs\_cn into equation (1), the coefficient on Bs\_rs\_cn indicates that rebalancing prices by 10%—where by rebalancing we mean higher residential prices and lower business prices—leads to an increase in residential resold lines of approximately 2,700 or approximately a 13% increase from the average value of the dependent variable.<sup>18</sup> The other variable of significance was lines per square mile which is a proxy for the cost of deploying

<sup>18</sup> For the “unbalanced” bs\_rs\_cn value we took the ratio of the P\_bs\_cn and P\_rs\_cn which was 1.39. To obtain the 10% “rebalanced” value for the Bs\_rs\_cn variable, we decreased and increased the average business and residential connection prices, respectively, by 10% and took the ratio of these numbers which turned out to be 1.14.

facilities. Lines per square miles are negatively related to residential resale competition and the variable is significant at the 5% level.

## **V. CONCLUSIONS**

In this paper we examined the major drivers and determinants of local exchange competition and investigated the proposition that inefficiently-set local exchange prices are having an impact on competition and inhibiting competition for residential customers. Examining data as of the end of 1998, we found support for both propositions. Using OLS and GLS estimates we found a significant and positive association between states that have more “balanced” tariffs and residential competition. We also found that those states that have a state-level universal service fund have higher levels of residential competition. This paper provides additional support for setting prices to reflect costs. For two measures of residential competition used in our data, we found that “rebalancing” tariffs by 10% leads to approximately a 9% and 13% increase, respectively, in residential competition.

GORDON**

**On behalf of Verizon Florida Inc., BellSouth Telecommunications,  
Inc., and Sprint-Florida Inc.**

**September 30, 2003**

1 AMENDED DIRECT TESTIMONY OF DR. KENNETH GORDON

2

3 I. PURPOSE & SUMMARY OF CONCLUSIONS

4 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

5 A. My name is Dr. Kenneth Gordon. My business address is One Main Street, Cambridge,  
6 Massachusetts 02142. My C.V. is provided as Attachment A.

7

8 Q. WHAT IS YOUR CURRENT POSITION?

9 A. I am a Special Consultant of National Economic Research Associates, Inc. ("NERA").  
10 Previously, I was Senior Vice President at NERA.

11

12 Q. WILL YOU PLEASE SUMMARIZE YOUR EDUCATION AND PROFESSIONAL  
13 QUALIFICATIONS?

14 A. I am an economist and former Chairman of the Maine Public Utilities Commission  
15 ("Maine Commission") and the Massachusetts Department of Public Utilities ("Mass.  
16 DPU"). The Mass. DPU is now known as the Massachusetts Department of  
17 Telecommunications and Energy. I have been an economist since 1965, and I have been  
18 directly involved with developing and establishing regulatory policy at the federal and  
19 state levels since 1980, when I became an industry economist at the Federal  
20 Communications Commission ("FCC").

21

22 I received my A.B. degree from Dartmouth College in 1960. I received my M.A. degree  
23 in 1963 and my Ph.D. degree in 1973, both in economics, from the University of Chicago.  
24 I have taught applied microeconomics, industrial organization, and regulation (as well as  
25 other subjects) at Georgetown University, Northwestern University, University of

1 Massachusetts at Amherst, and Smith College.

2

3 From 1980 to 1988, I was an industry economist at the FCC's Office of Plans and Policy,  
4 where I worked on a full range of regulatory issues, including telecommunications, cable,  
5 broadcast, and intellectual property rights. At the FCC, one of the major focuses of my  
6 work was activity aimed at introducing competition into communications markets.

7

8 Prior to joining NERA in November 1995, I chaired the Maine Commission (1988 to  
9 December 1992) and the Mass. DPU (January 1993 to October 1995). During my term as  
10 Chairman of the Mass. DPU, the DPU investigated and approved a price cap incentive  
11 regulation plan for NYNEX and also undertook a proceeding to examine interconnection  
12 and other issues related to the development of competition at all levels of  
13 telecommunications, including basic local service.

14

15 While a regulator, I was active in the National Association of Regulatory Utility  
16 Commissioners ("NARUC"), serving on its Communications and Executive Committees.  
17 In 1992, I served as President of NARUC. I was also Chairman of the BellCore Advisory  
18 Committee and the New England Governor's Conference Power Planning Committee.

19

20 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

21 A. Verizon Florida Inc., BellSouth Telecommunications, Inc., and Sprint-Florida Inc., ("the  
22 companies") are seeking to restructure their rates for intrastate network access services  
23 ("intrastate access") and basic local telecommunications services ("basic local") in

1 accordance with recently passed legislation by the Florida Legislature.<sup>1</sup> The companies'  
2 revised plans—which must address the criteria established in the legislation—call for  
3 them to restructure their intrastate access and basic local rates in a revenue-neutral  
4 manner.

5  
6 The companies have asked me to provide an economic and policy analysis of their revised  
7 rate plans and to testify on whether I believe those revised plans meet the criteria laid out  
8 in the legislation.

9  
10 **Q. WHAT ARE YOUR MAJOR CONCLUSIONS?**

11 A. After reviewing the newly-enacted legislation, the evidence in this case—specifically the  
12 companies' revised plans and the cost evidence submitted by the companies' witnesses—  
13 and based on my general knowledge and expertise on telecommunications economic and  
14 regulatory matters, I conclude that the revised plans submitted by the companies meet the  
15 criteria contained in the legislation. Specifically, upon implementation, the revised plans  
16 will, *inter alia*:

- 17       • Reduce current support for basic local telecommunications services that prevents  
18       the creation of a more attractive competitive local exchange market for the benefit  
19       of residential consumers; and  
20       • Induce enhanced market entry.

21 The companies' revised plans significantly decrease support for basic local service by  
22 reducing prices for a service that has historically and purposely been an important  
23 source—but by no means the only source—of support for basic local services, namely

---

<sup>1</sup> See Section II below.

1 intrastate access. In order to achieve revenue neutrality, the companies' revised plans  
2 increase residential basic local prices towards cost-based levels, thus creating a more  
3 attractive market for potential entrants, ultimately for the benefit of residential consumers.  
4 Both theory and empirical evidence show that low residential basic local prices have  
5 hindered the development of residential competition. By better aligning residential basic  
6 local prices with cost, competitors will have increased incentives to target a broader mix  
7 of residential consumers, which is the intent of the Florida legislature.

8  
9 In addition, I conclude that the revised plans will enhance economic welfare in Florida by  
10 increasing economic activity. As described in the respective testimonies of the  
11 companies' cost witnesses, the cost evidence submitted in this proceeding demonstrates  
12 that rates for residential basic local service diverge significantly from their underlying  
13 costs. A movement toward costs—and, therefore toward more rational economic  
14 pricing—will bring with it several economic benefits. These benefits include providing  
15 market participants—i.e., customers, the companies and potential and actual  
16 competitors—with more cost-based price signals, which will improve economic decision  
17 making and lead to more economically rational utilization of telecommunications services.  
18 Economic activity in Florida will increase as a result of the companies' revised plans  
19 because rebalancing generates substantial consumer benefits. Telephone consumers are  
20 better off as a result of moving prices more in line with costs, and will likely increase their  
21 purchases of those services whose price has come down. Perhaps of even greater  
22 significance, competitive telephone service providers will be seeing better price signals  
23 for local service, and will be able to invest without having to face the level of subsidized  
24 competition they have faced in the past. New investment by these providers should, at the  
25 margin, increase.

19

20

21

22

23

24

25

The cost evidence presented by the companies demonstrates that basic local prices are receiving an economic subsidy from other services. The companies submitted forward-looking direct cost evidence to demonstrate that their residential basic local services are priced below the costs the companies incur to provide the services. Forward-looking direct cost is the basis for determining whether a service is receiving an economic subsidy. Moreover, consistent with this Commission's ruling, the companies' cost witnesses, when measuring the economic subsidy flowing to basic local services, correctly assign the entire cost of the loop to basic local.

I also conclude that the companies' revised plans will not jeopardize universal service in the state of Florida. The companies' residential basic local prices are substantially below the national average and Florida is not a poor state. The Florida Public Service Commission ("Commission") has the flexibility to approve the companies' revised plans and still have residential basic local prices remain affordable. The Florida Legislation requires that any price increase in basic local service not apply to Lifeline consumers and also increased the income eligibility for Lifeline consumers to 125 percent, thus protecting those customers most likely to be sensitive to potential price increases from a rebalancing plan. Importantly, the companies' revised rebalancing plans will lead to lower intrastate toll prices for all consumers. At the end of the day, the mix of services that consumers purchase as a result of the companies' revised plans will make consumers better off overall.

Finally, the fact that some customers may experience unwanted rate changes should not be an argument for the status quo. Good policy requires weighing and balancing the costs

1 and benefits of particular actions. While it may seem that maintaining current prices is the  
2 least objectionable thing to do from a policy perspective, there is an implicit but very real  
3 cost to continuing the status quo. The deployment of next generation, advanced networks  
4 depends crucially on providing all market participants the sound economic signals that  
5 will encourage efficient investment and innovation. Cost-based prices provide the  
6 incentives needed to bring to market the new services that customers demand. This  
7 cannot be accomplished by distorted prices.

8

9 **Q. YOU HAVE NOTED IN YOUR MAJOR CONCLUSIONS THAT VERIZON**  
10 **FLORIDA INC., BELLSOUTH TELECOMMUNICATIONS, INC., AND SPRINT-**  
11 **FLORIDA INC. HAVE REVISED THEIR RESPECTIVE RATE REBALANCING**  
12 **PLANS FILED ON AUGUST 27, 2003 TO EXTEND THE TIME OVER WHICH**  
13 **INTRASTATE NETWORK ACCESS AND BASIC LOCAL**  
14 **TELECOMMUNICATIONS RATES WILL BE REFORMED. HAVE YOU**  
15 **REVIEWED THESE COMPANIES' REVISED PLANS?**

16 A. Yes, I have.

17

18 **Q. DO THESE REVISIONS AFFECT YOUR ANALYSIS OF THE COMPANIES'**  
19 **PLANS OR YOUR TESTIMONY?**

20 A. No. With the exception of the minor changes — changing “plans” to “revised plans” —  
21 as well as this and the previous question and answer, my testimony remains unchanged  
22 from the testimony that I filed on August 27, 2003.

23

1 **II. BACKGROUND**

2 **Q. PLEASE DESCRIBE THE BASIS FOR THE COMPANIES' REQUEST TO**  
3 **INCREASE BASIC EXCHANGE PRICES.**

4 A. From an economic perspective, the fact that the companies' current residential basic local  
5 prices are not fully recovering their forward-looking economic cost is, by itself, a good  
6 enough reason to begin the process of moving them to more economically rational levels.  
7 Both theoretical and empirical research have shown that rebalancing rates and moving  
8 them toward levels more commensurate with their underlying costs results in significant  
9 benefits to telecommunications consumers and, by so doing, benefits the economy as  
10 well.<sup>2</sup> Rebalancing rates has also been demonstrated to have a positive effect on  
11 competitive entry into the local exchange market.<sup>3</sup>

12

13 The immediate catalyst for the companies' revised plans is the recent changes in Florida  
14 laws. I have been informed by counsel that the legal authority for the companies' request  
15 arises from recent changes in the statutory framework in Florida. During the 2003 regular  
16 legislative session, the Legislature passed Senate Bill 654, the Tele-Competition  
17 Innovation and Infrastructure Enhancement Act ("Tele-Competition Act"). The Tele-  
18 Competition Act implements several important policies, but for our purposes the relevant  
19 Section of the Tele-Competition Act is § 364.164 "Competitive market enhancement."

20

21 **Q. WHAT ARE THE IMPORTANT PROVISIONS OF § 364.164?**

22 A. § 364.164 permits local exchange telecommunications companies to petition the

---

<sup>2</sup> See Section IV below.

<sup>3</sup> See Section III.

1 Commission to reduce their intrastate access rates in a revenue-neutral manner. In  
2 reaching its decision, § 364.164 (1) states that the Commission shall consider whether  
3 granting the petitions will:

- 4 a. Remove current support for basic local telecommunications services that  
5 prevents the creation of a more attractive competitive local exchange  
6 market for the benefit of residential consumers;
- 7 b. Induce enhanced market entry;
- 8 c. Require intrastate switched network access rate reductions to parity over a  
9 period of not less than 2 years or more than 4 years; and
- 10 d. Be revenue neutral as defined in subsection (7) within the revenue  
11 category defined in subsection (2).

12 Throughout my testimony, I will focus on whether the companies' revised plans are  
13 consistent with and meet the criteria provided in § 364.164 (1) (a) and (b). Other  
14 company witnesses discuss how the companies' revised plans would meet criteria (c) and  
15 (d).

16

17 **Q. IN ORDER TO REDUCE INTRASTATE ACCESS RATES IN A REVENUE**  
18 **NEUTRAL MANNER, RATES FOR OTHER SERVICES NEED TO BE**  
19 **INCREASED. WHAT SERVICES DO YOU BELIEVE SHOULD BE**  
20 **INCREASED?**

21 A. The first category of services that should be considered are those services whose current  
22 prices do not recover fully their underlying costs, such as residential basic local  
23 telecommunications services. Rates for these subsidized services should be increased in  
24 order to better reflect their real economic cost. This is confirmed in §364.164 (2), where  
25 the legislation calls for the creation of a revenue category mechanism consisting of basic

1 local telecommunications service revenues and intrastate switched network access  
2 revenues in order to achieve revenue neutrality. That is, the legislation states that in order  
3 to achieve revenue neutrality, if intrastate access prices are reduced, then basic local  
4 service prices need to be increased.

5  
6 The current rate design for telephone services—where basic local services are priced  
7 below cost and other services, including intrastate access service, are priced in such a way —  
8 so as to provide the support—while in the process of being reduced or eliminated in a  
9 number of states, continues to be encountered in state regulation of telephone services.  
10 However, as the Florida Legislature wisely recognized, whatever benefits such a rate  
11 design policy has arguably achieved in the past, such as helping the United States achieve  
12 universal telephone service—the continuation of such policies frustrates another important  
13 policy goal of Federal and state regulators, namely, the establishment of efficient  
14 competition to as broad a base of business and residential consumers as is economically  
15 feasible—not to mention the economic costs that arise from price-cost distortions, *per se*,  
16 as I discuss further below.

17  
18 The current rate design policy as it pertains to residential basic local services, frustrates  
19 that policy goal and by enacting § 364.164, the Florida Legislature has provided the  
20 Commission with the direction it needs to make competition work better for all Florida  
21 consumers.

22 **Q. ARE THE COMPANIES' REVISED PLANS CONSISTENT WITH § 364.164 (1) (a)**  
23 **and (b)?**

24 A. Yes. The companies' revised plans are consistent with and meet the criterion of §  
25 364.164(1)(a) and (b). Below in Section III, I fully describe why I believe that the

1 companies' revised plans are consistent with and meet those criteria.

2

3 **Q. DR. GORDON, FROM A POLICY PERSPECTIVE DO YOU BELIEVE THAT IT**  
4 **IS APPROPRIATE TO ENGAGE IN THE TYPE OF REBALANCING THAT IS**  
5 **BEING CONTEMPLATED BY THE COMPANIES' PLANS?**

6 A. Yes, I do. In this testimony, I describe fully why I believe that the companies' revised  
7 plans are consistent with the criteria of the Tele-Competition Act that the Commission  
8 shall consider and why the revised plans would likely result in increasing competitive  
9 activity in the state of Florida. Specifically, the revised plans will create a more attractive  
10 local exchange market for residential consumers and lead to enhanced market entry—two  
11 criteria that need to be considered by the Commission in addressing the companies'  
12 revised plans. By making the residential local exchange market more attractive,  
13 residential consumers will likely see more companies competing for their business, which  
14 will, in turn, result in more options for residential consumers, improved services and  
15 lower prices for their telecommunications services. From a policy perspective, it is  
16 appropriate to accomplish these tasks.

17

18 In addition, I describe below the history of rate design for basic local services in the  
19 United States and how the end result of these policies has been uneconomically low  
20 residential basic local prices; lower than what one would expect to find in undistorted  
21 competitive markets. Of course, states have differed in their implementation of these  
22 policies and, as a result, residential basic local service prices vary quite a bit from state to  
23 state. In Florida, residential basic local prices are quite low when compared to prices in  
24 other states. In Table 1 below, I list the flat-rate charges for each of the three companies'  
25 lowest and highest rate groups compared to the national average flat-rate charges. As can

1 be seen in the table, each of the companies' highest rate group is well below the national  
2 average of \$14.55 per month.

3  
4 **Table I – Comparison of Verizon, BellSouth and Sprint's flat-rate residential basic**  
5 **local charges and National Average flat-rate charges**

| Company                    | Lowest Rate<br>Group | Highest Rate<br>Group | Unweighted<br>Average | National<br>Average (2002) |
|----------------------------|----------------------|-----------------------|-----------------------|----------------------------|
| Verizon                    | \$9.72               | \$12.06               | \$10.89               |                            |
| BellSouth                  | \$7.57               | \$11.04               | \$9.31                |                            |
| Sprint                     | \$7.63               | \$11.48               | \$9.56                |                            |
| National Average<br>(2002) |                      |                       |                       | \$14.55                    |

8 exclude Federal and State subscriber line charges, touch tone charge and taxes, 911 and other charges.

9  
10 **Q. HOW DOES THE FACT THAT FLORIDA HAS LOW RESIDENTIAL BASIC**  
11 **LOCAL TELECOMMUNICATIONS PRICES RELATE TO THIS**  
12 **PROCEEDING?**

13 A. It relates to this proceeding in two important ways. First, the Legislature has correctly  
14 perceived that low residential basic local prices have led the residential local exchange  
15 market to be less attractive to competitors than would be the case with more economically  
16 rational residential basic local prices. In Section III below, I describe fully why, from an  
17 economic perspective, I believe the Legislature is absolutely correct on this point. Put

1 simply, holding all other factors constant, the lower the residential basic local price (when  
2 set governmentally without regard to whether the prices cover cost), the more unattractive  
3 those customers are to actual and potential competitors. Since Florida residential basic  
4 local prices are lower than those in many other states, and in fact lower than the national  
5 average, the problem facing potential new entrants as a result of these low rates is likely to  
6 be even more severe and pronounced in Florida than in other states. For this reason, it is  
7 even more important that Florida policymakers tackle this problem sooner rather than  
8 later.

9  
10 **Q. IS THERE ANY SUPPORT FOR YOUR ASSERTION THAT THE PROBLEM OF**  
11 **AN UNATTRACTIVE RESIDENTIAL MARKET MAY BE WORSE IN FLORIDA**  
12 **THAN IN OTHER STATES?**

13 A. Yes, there is some support for my assertion. The FCC compiles data on local telephone  
14 competition. Its most recent report, released June 12, 2003 included a table that lists, for  
15 each state available, the percentage of lines provided to residential and small business  
16 customers by ILECs and CLECs.<sup>4</sup> The FCC provided data on 40 states and of those 40  
17 states Florida ranked 30th in the percent of CLEC lines that were sold to residential and  
18 small business customers. This means that in 29 out of 40 states, CLECs' served  
19 proportionately greater residential customers than in Florida (see Figure 1 at the end of  
20 this testimony). Florida ranks below states such as Georgia (58%), Alabama (52%),  
21 Louisiana (61%) and Virginia (70%) to name a few, all of which have higher residential  
22 prices. This provides some evidence that low residential basic local prices are having a

---

<sup>4</sup> See, *Local Telephone Competition: Status as of December 31, 2002*, Table 11, Industry Analysis and Technology Division Wireline Competition Bureau, Federal Communications Commission.

1 negative impact on residential competition in Florida.

2

3 Q. YOU MENTIONED THAT THERE WAS A SECOND REASON WHY YOU  
4 BELIEVE THAT FLORIDA'S LOW RESIDENTIAL BASIC LOCAL PRICES, IN  
5 COMPARISON WITH OTHER STATES, ARE RELEVANT IN THIS  
6 PROCEEDING. WHAT IS THAT SECOND REASON?

7 A. The second reason has to do with affordability considerations and the flexibility this  
8 Commission has in rebalancing rates while still maintaining basic residential local rates  
9 that are quite affordable for most Florida consumers. As mentioned above, the  
10 companies' prices for residential basic local services are generally well below the national  
11 average. However, Florida is not a poor state. According to data from the U.S. Bureau of  
12 Economic Analysis, Florida is on par with the national average in personal income per  
13 capita.<sup>5</sup> Specifically, as of 2001, the data show that personal income per capita in Florida  
14 was \$29,047 compared to the national average of \$30,413. Thus, the Commission has the  
15 flexibility to increase residential basic local prices, which are currently well below the  
16 national average, to more economically reasonable levels without making the services  
17 unaffordable to Florida consumers.

18

19 At the same time, Florida consumers will pay less for intrastate toll calls. The companies'  
20 rebalancing plan will lower the access charge component of the cost of producing  
21 intrastate toll calls. IXCs are required to pass these cost savings through to consumers in  
22 the form of lower prices. Thus, even with the increase in basic residential local rates,  
23 telecommunications will be just as affordable to Florida consumers as before, yet

---

<sup>5</sup> Bureau of Economic Analysis, Regional Economic Information System, Table SA1-3.

1 consumers will be better off because they will be consuming a different mix of  
2 telecommunications services that provides more value than they are currently receiving.

3  
4 In addition, the Tele-Competition Act also requires that any increase in basic local service  
5 rates not apply to Lifeline customers and that the ILECs increase Lifeline participation to  
6 125 percent of federal poverty income level.<sup>6</sup> These requirements further protect low-  
7 income consumers—and it is low-income consumers who would be most prone to  
8 disconnections in the face of price increases—thus providing the Commission with even  
9 more flexibility to approve the companies' rate rebalancing request with minimal concern  
10 that such a rate restructuring would negatively affect subscribership. I discuss this point,  
11 and other reasons why I believe the companies' revised plans will not negatively affect  
12 subscribership in Florida, in more detail in Section VI below.

13  
14 **Q. VERIZON, BELLSOUTH AND SPRINT ARE FILING THEIR REVISED PLANS**  
15 **AT THE SAME TIME. IS THERE ANY PUBLIC POLICY BENEFIT TO**  
16 **HAVING THE COMMISSION REVIEW THE COMPANIES' REVISED PLANS**  
17 **AT THE SAME TIME?**

18 A. Yes. The benefits are at least threefold. First, to the extent that basic local rates are  
19 simultaneously adjusted closer to their costs throughout the territory of the three  
20 companies serving 98 percent of the ILEC customers, the better competition will be  
21 benefited and market entry enhanced. Certain providers who might be positioned to  
22 provide facilities-based basic local service (e.g. cable telephony, electric and wireless  
23 providers) will not necessarily configure their coverage areas based on the ILECs service

---

<sup>6</sup> § 364.10(3)(a).

1 territories. For them the potential staggered implementation of the rebalancing could be  
2 an obstacle to competitive entry. There are several areas within Florida where at least  
3 two of the three major ILECs provide service where it may be economical for a new  
4 entrant to provide service regardless of the ILEC boundary. For example, the  
5 Orlando/Central Florida (BellSouth/Sprint) area, Southwest Florida (between Sarasota and  
6 Ft. Myers (Verizon/Sprint)) area and the Pensacola – Ft. Walton – Destin -- Panama City  
7 (BellSouth/Sprint/BellSouth) area are three relatively compact geographic areas served in  
8 part by at least two of the three companies. Each of these areas might appropriately  
9 comprise the service territory of a single facilities-based entrant. When the price  
10 increases contained in the company plans are implemented and signal to these entrants that  
11 pricing distortions are being reduced on a broad basis, the competitors may be able to  
12 more efficiently execute their business plans.

13  
14 Second, it is also important to avoid unnecessary marketplace distortions that could affect  
15 the purchase decisions of end-users. End-users normally make their purchase decisions  
16 based in large part on relative price differences among providers. If the rate-rebalancing is  
17 not implemented across all companies simultaneously, end-users will make these  
18 decisions based on incomplete and imperfect information as they see some providers'  
19 rates increasing while other providers' rates remain the same (at least temporarily). The  
20 risk will be that regulatory scheduling rather than the relative costs and benefits of various  
21 service offerings becomes the driving force behind consumers' decisions. For example, it  
22 is easy to imagine a situation involving two or more of the ILECs —where a CLEC might  
23 be able to offer service at a legitimate cost savings to all customers, but if re-balancing is  
24 not done simultaneously perhaps only one firm's customers would respond to the  
25 competitive offer, because the other firm's rate increase had yet to be implemented.

1 Coordinated rate rebalancing across all companies will ensure that potential competitors  
2 are not artificially disadvantaged when introducing new service offers by artificial  
3 boundaries, and that customers are not disadvantaged by incorrect and incomplete  
4 information driving their purchase decisions.

5  
6 Third, the magnitude and timing of the access charge price reductions for the three  
7 companies would also benefit end users statewide. IXCs will be able to implement more  
8 meaningful price reductions if they can aggregate their access cost reductions into a single  
9 round of pricing changes.

10  
11 **Q. THE LEGISLATION PERMITS A COMPANY TO RESTRUCTURE ITS RATES**  
12 **OVER A MINIMUM OF TWO YEARS AND A MAXIMUM OF FOUR. EACH OF**  
13 **THE COMPANIES PLANS TO HAVE INTRASTATE ACCESS RATES REACH**  
14 **PARITY WITH INTERSTATE RATES OVER A TWO-YEAR PERIOD. DO YOU**  
15 **BELIEVE THIS IS A GOOD IDEA?**

16 A. Yes I do, for several reasons. First, it is clearly permitted by the Tele-Competition Act.  
17 Second, it is a matter of economic principle that economic welfare is at its highest when  
18 prices are based on their underlying forward-looking costs and are not distorted. As I  
19 discuss in greater detail in Section III, prices that are distorted provide inferior signals for  
20 market participants and result in losses in consumer welfare because investment and  
21 purchase decisions by firms and consumers do not reflect the true costs that society incurs  
22 to provide the services. The companies' revised plans reduce these pricing distortions in  
23 the Florida telecommunications markets sooner rather than later and, by so doing, achieve  
24 economic efficiency gains sooner as well.

25

1 Third, a possible reason why one would prefer a more gradual rate restructuring time  
2 frame has to do with avoiding consumer "rate shock". As the words imply, rate shock  
3 implies that the increase in price proposed by the company is so high, that consumers  
4 would be obviously and adversely affected. However, based upon my personal  
5 experience as a former commissioner, as well as what I have observed in other states, I do  
6 not believe that the yearly increase in basic local prices will result in rate shock.

7

8 **Q. PLEASE EXPLAIN WHY YOU BELIEVE THAT THE COMPANIES' PLANS**  
9 **WILL NOT RESULT IN RATE SHOCK.**

10 A. The companies' revised plans will result in relatively minor increases in a customer's  
11 basic local price. In addition, as I stated earlier, these price increases will not even apply  
12 to current Lifeline consumers and new Lifeline consumers who have become eligible as a  
13 result of the Tele-Competition Act raising the income threshold to 125% of the poverty  
14 level.

15

16 In addition, with the reduction and elimination of the in-state connection fees, many  
17 customers might not even experience a significant change in their total bill. If there is an  
18 increase in the customers' bill, it will likely result in large part from increased stimulation  
19 from lower long distance charges that represent real gains to consumers because they are  
20 now able to make more calls at the new lower prices.

21

22 Finally, the companies' revised plans compare favorably with other states that have  
23 approved rate-rebalancing plans that approved much larger increases than the companies'  
24 request. Importantly, these states' price adjustments did not jeopardize universal service.  
25 In Section VI, I also discuss the experience of some of the states that have already

1 implemented serious rate rebalancing plans, including Massachusetts where I presided as  
2 Chairman through one such adjustment.

3

4 **III. THE COMPANIES' REVISED PLANS WILL RESULT IN A**  
5 **"MORE ATTRACTIVE COMPETITIVE LOCAL EXCHANGE**  
6 **MARKET FOR THE BENEFIT OF RESIDENTIAL CONSUMERS"**  
7 **AND WILL INDUCE "ENHANCED MARKET ENTRY"**

8

9 **Q. HOW DO YOU JUDGE WHETHER THE COMPANIES' REVISED PLANS**  
10 **MEET THE CRITERIA OF § 364.164 (1) (a) AND (b)?**

11 A. § 364.164 (1) (a) states that the companies' plans should remove the current support for  
12 basic local telecommunications services that is impeding the creation of a more attractive  
13 competitive local exchange market for the benefit of residential consumers. In order for  
14 the companies' revised plans to meet the first criterion, they must show that the revised  
15 plans remove—or at a minimum reduce—support for basic local telecommunications. By  
16 so doing, they create a more "attractive" competitive local exchange market, because the  
17 price to be competed against by new entrants is raised to more closely reflect the real  
18 economic costs of doing business. The second criterion for the Commission's  
19 consideration is § 364.164 (1) (b) which simply states that the plans should induce  
20 enhanced market entry and no distinction is made between residential or business  
21 consumers.<sup>7</sup>

22

---

<sup>7</sup> There are other criteria in § 364.164 (1) that I do not discuss but that are the subject of the companies' respective witnesses.

1 Therefore, in evaluating whether the companies' revised plans meet the criteria in these  
2 sections, I must ascertain whether the revised plans: (1) remove current support for basic  
3 local telecommunications services, and (2) will likely result in a more attractive  
4 competitive environment that would benefit residential consumers and induce enhanced  
5 market entry.

6

7 **Q. DO THE COMPANIES' REVISED PLANS REMOVE CURRENT SUPPORT FOR**  
8 **BASIC LOCAL TELECOMMUNICATIONS SERVICES?**

9 A. Yes, the companies' revised plans significantly decrease current support for basic local  
10 telecommunications services. The revised plans do this by reducing the prices of a service  
11 that has historically been set by regulators to provide an important source—but by no  
12 means the only source—of support for basic local services, namely, intrastate switched  
13 network access.

14

15 **Q. WHY DO YOU BELIEVE THAT INTRASTATE SWITCHED NETWORK**  
16 **ACCESS CURRENTLY SUPPORTS BASIC LOCAL TELECOMMUNICATIONS**  
17 **SERVICES?**

18 A. There are two reasons. The first is the historical rate design policy prevalent in  
19 telecommunications regulation in Florida and throughout the United States. As I  
20 mentioned earlier, historically, telecommunications rate design was premised on the  
21 policy goal—at times stated and sometimes left implicit—of keeping the price of basic  
22 local telecommunications low or as low as possible. This policy began early on in  
23 telecommunications regulation and was accomplished through the rate design mechanisms  
24 that were part and parcel of traditional regulation. Traditional regulation required two  
25 broad steps. The first was to determine a revenue requirement that was sufficient to meet

1 the prudently incurred operating expenses and a reasonable return on prudently invested  
2 capital. The second broad step was the rate design process, which determined the price of  
3 each regulated service to ensure that the regulated company had the opportunity to recover  
4 its revenue requirement from its regulated service.<sup>8</sup> Normally, a proper rate design  
5 process would require that the price of any service recover at least its underlying cost and,  
6 in addition, contribute to the firm's shared and common cost in some manner. At times  
7 that manner was consistent with economic efficiency goals—as when demand  
8 considerations were taken into account—and at other times it was more reflective of other  
9 policy considerations—as when an equal percentage markup was applied across the board  
10 to the different services.

11  
12 For basic local services, however, in most instances the price was set on a residual basis  
13 without taking into consideration the underlying cost of providing basic local  
14 telecommunications. That is, the goal of residual pricing was to keep basic local prices  
15 low, or as low as possible, and to recover more revenue from other telecommunications  
16 services, constrained by what consumers were willing to pay for the non-basic  
17 telecommunications services and by—as competition began to become more prevalent in  
18 telecommunications markets—the threat of customers bypassing the public switched  
19 telecommunications network.

20  
21 Prior to divestiture of AT&T in 1984, toll prices provided the bulk of support for basic  
22 local telecommunications services. As technological advances lowered the cost of

---

<sup>8</sup> I say opportunity to recover its revenue requirement because the regulatory process does not generally guarantee a regulated company a certain return, it only provides the regulated company the opportunity to earn a certain return.

1 providing toll services, toll prices did not decrease commensurately and were used as a  
2 means to support basic local telecommunications services—i.e., to keep the prices of basic  
3 local lower than would otherwise be the case. After divestiture of AT&T, interstate and  
4 intrastate switched network access services were substituted as a means of supporting  
5 basic local telecommunications services.

6  
7 Notably, even after the substitution of price cap regulation for traditional regulation, the  
8 cross subsidies that were present under traditional regulation have been maintained.

9  
10 The notion that intrastate switched network access services have been used as a source of  
11 support for basic local telecommunications is confirmed in the *Florida Senate Staff*  
12 *Analysis and Economic Impact Statement on the Tele-Competition Act*, where it states:

13 According to the commission, intrastate network access service rates were set  
14 well above the incremental cost of providing the service in order to keep rates  
15 for basic local telecommunications service as low as possible and to encourage  
16 subscribership.<sup>9</sup>

17  
18 The second reason why I believe that intrastate access services currently support basic  
19 local service is cost considerations. As described in the testimonies of their witnesses, the  
20 companies have established that the price of residential basic local telecommunications  
21 services is below forward-looking direct cost estimates. From an economic perspective,  
22 whenever the revenues from a service are insufficient to recover its forward-looking direct  
23 costs, that service is said to be in receipt of an economic subsidy. The source of the

---

<sup>9</sup> See Senate Staff Analysis and Economic Impact Statement on CS/SB 654, April 8, 2003.

1       subsidy—including that for residential basic local services—comes from all those services  
2       that are priced above their respective forward-looking direct costs. As a whole, these  
3       services contribute to the support of residential basic local. Because intrastate access  
4       services are priced significantly above their forward-looking direct costs, this means that  
5       intrastate switched network access services are supporting basic local service.

6

7       **Q. DOES THIS IMPLY THAT THERE MAY BE OTHER SERVICES, BESIDE**  
8       **INTRASTATE ACCESS SERVICES, THAT MAY ALSO BE SUPPORTING**  
9       **BASIC LOCAL TELECOMMUNICATIONS SERVICES?**

10      A. Yes, that is correct. In general, for multi-product firms, where there are significant  
11      amounts of shared and common costs, firms must, in the aggregate, price their services  
12      above forward-looking direct costs in order to earn sufficient revenues to remain viable.  
13      When one service is priced below its forward-looking direct costs, as is the case for  
14      residential basic local telecommunications services, other services that are priced above  
15      forward-looking direct costs are supporting the service that is priced below its own  
16      forward-looking direct costs.

17

18      The Florida Legislature, however, has specifically determined that it is the support  
19      provided by intrastate switched network access that is to be reduced. The Tele-  
20      Competition Act calls for rebalancing to take the form of lowering intrastate access rates  
21      to parity—over a 2 to 4 year period—with interstate switched network access rates and to  
22      simultaneously increase basic local telecommunications services by an amount sufficient  
23      to make up the revenue over the same time period. Under this approach, there is still no  
24      guarantee that residential basic local services recover at least their forward-looking direct  
25      costs once intrastate access rates are set to parity with interstate switched access rates. In

1 fact, according to the companies' evidence, residential rates will still be below forward-  
2 looking direct costs even when intrastate switched network access rates reach parity with  
3 the interstate rates.

4

5 Therefore, while the companies' revised plans are consistent with the criteria to be  
6 considered by the Commission, the plans do not result in the complete rebalancing of  
7 rates. Thus, there will still likely be some (lesser) distortions in prices even after the  
8 implementation of the plans.

9

10 **Q. AS AN ECONOMIST, DO YOU BELIEVE THAT REBALANCING IS**  
11 **COMPLETED ONCE BASIC RESIDENTIAL PRICES ARE SET AT FORWARD-**  
12 **LOOKING DIRECT COSTS?**

13 **A.** While having basic local services recover at least their underlying forward-looking direct  
14 costs is a good first step, it would not necessarily result in economically efficient prices.  
15 As I discuss in greater detail below in Section IV, economically efficient prices require  
16 that a multi-product firm's shared and common costs be recovered through markups on  
17 each service or product above forward-looking direct costs in a manner that least distorts  
18 economic efficiency. Therefore, to have economically efficient basic local prices would  
19 likely require that basic local services be priced above forward-looking direct costs.  
20 However, as markets become more competitive, markups will be limited by the need to be  
21 competitive with other firms in the market.

22

23 **Q. HAVING ESTABLISHED THAT THE REVISED PLANS REMOVE CURRENT**  
24 **SUPPORT FOR BASIC LOCAL, § 364.164 (1) (a) PROVIDES THAT, AS A**  
25 **RESULT OF THE REMOVAL, THEY WILL RESULT IN A MORE**

1       ATTRACTIVE COMPETITIVE LOCAL EXCHANGE MARKET FOR THE  
2       BENEFIT OF RESIDENTIAL CONSUMERS. WILL THE COMPANIES'  
3       REVISED PLANS MEET THIS CRITERION?

4       A. Yes, the companies' revised plans will create a more attractive competitive local exchange  
5       market for the benefit of residential consumers. Economic theory and empirical research  
6       both indicate that this will likely be the case. I discuss these two factors below.

7  
8       Q. PLEASE DISCUSS WHY YOU BELIEVE THAT ECONOMIC THEORY  
9       SUGGESTS THAT THE COMPANIES' REVISED PLANS WILL LIKELY  
10       RESULT IN A MORE ATTRACTIVE COMPETITIVE LOCAL EXCHANGE  
11       MARKET FOR THE BENEFIT OF RESIDENTIAL CONSUMERS?

12       A. One of the key components of the companies' revised plans is that intrastate access  
13       revenues will be decreased in a revenue-neutral manner by increasing the price of (and  
14       revenue from) basic local telecommunications services for residential consumers. The  
15       cost information provided by the companies in this proceeding indicates that residential  
16       basic local telecommunications prices are currently below forward-looking direct costs.  
17       Increasing the price of a service, especially a service that is below forward-looking direct  
18       costs, will make for a more attractive market for actual and potential competitors.  
19       Competitors will not rationally try to compete against heavily subsidized prices.

20  
21       Q. WOULD YOU PLEASE EXPLAIN WHY YOU BELIEVE THIS TO BE THE  
22       CASE?

23       A. In a market economy, prices are the essential tool that send signals to market participants  
24       that, in turn, determine market behavior and outcomes. For example, as prices increase or  
25       decrease, consumers alter their consumption decision because the value consumers place

1 on goods and services changes in relation to price. Producers alter their production,  
2 investment and research and development decisions as well, because as prices increase or  
3 decrease, profits change along with them. It is the search for profits that drives firms to  
4 enter or expand into new markets. As prices change, potential entrants into the market  
5 will be affected as well. Lower prices may act to keep new firms from entering the  
6 market and higher prices more reflective of cost will tend to attract new firms into the  
7 market.

8  
9 Like any other firm, the investment decision of a telecommunications competitor is based  
10 on the present value of the cash flows that the investment project is likely to generate over  
11 the useful economic life of the project. Holding all other factors constant, when the price  
12 of a service increases, a cash flow analysis would show that the investment project  
13 becomes more profitable (or less of a loss) and thus more attractive. In the case before us,  
14 an increase in the price of basic local telecommunications service would increase the  
15 revenues from residential basic local services in a cash flow analysis, thus increasing the  
16 attractiveness of providing those residential services. As a result of rate rebalancing,  
17 where the companies plan to raise residential basic local prices, the residential local  
18 exchange market will look more attractive to all actual and potential telecommunications  
19 providers of residential services.

20

21 **Q. WILL THE COMPANIES' REVISED PLANS ALSO PROVIDE INCREASED**  
22 **INCENTIVES FOR OTHER COMPETING TELEPHONY TECHNOLOGIES?**

23 A. Yes. An important reason for opening local telecommunications markets to competition is  
24 the belief that technological change is proceeding so rapidly that competitive markets will  
25 do a much better job than monopoly of discovering which technologies can or cannot

1 succeed in the long run. For example, access to customers for their telecommunications  
2 needs comes in the form of fixed-wireline access, wireless access, cable telephony,  
3 Internet, and potentially satellite and even access via electric utilities. Of course, not all of  
4 these technologies will necessarily survive in the long run and competition will likely lead  
5 to a mix of technologies surviving and providing the lowest possible cost for each  
6 consumer's telecommunications needs.

7  
8 However, in order for the lowest-cost mix of technologies to remain in the market, prices  
9 and the signals they send must not be distorted and must reflect the underlying cost of  
10 providing service. The companies' revised plans move positively in this direction and  
11 encourage new entrants—regardless of the chosen technology—to enter or expand in the  
12 marketplace because even competitors using lower-cost (or more attractive) technologies  
13 may not be able to compete against a subsidized ILEC price that does not fully reflect its  
14 own costs. This would be a loss for consumers and the Florida economy.

15  
16 **Q. IS THERE EVIDENCE THAT OTHER FORMS OF ACCESS ARE COMPETING**  
17 **WITH FIXED-WIRELINE ACCESS?**

18 A. Yes. The Florida Commission has recognized the actual and potential substitution  
19 occurring between fixed-wireline and other forms of access, including wireless and  
20 emerging IP-telephony providers. As the Commission states:

21       Regarding the substitution of technology and services, as they are being found  
22       to be close substitutes to traditional wireline services, both wireless and

1 emerging broadband IP-telephony providers must be included in the analysis.<sup>10</sup>

2

3 In the same report, the Florida Commission cites nation-wide data indicating that about  
4 5% of U.S. wireless subscribers have disconnected wireline service and conclude that  
5 substituting wireless for wireline services appears to be a national trend.<sup>11</sup> Moreover, as  
6 the same report concludes, Florida may be especially susceptible to this phenomenon  
7 because of the large population in Florida that also has residences in other states. For  
8 many of these consumers, "it makes little sense to continue paying for telephone service  
9 that sits idle much of the year when wireless enables them to stay connected wherever  
10 they are."<sup>12</sup>

11

12 The Florida Commission has also concluded that cable providers are competing directly  
13 with fixed-wireline providers. The Commission cites to national data that shows that by  
14 second quarter of 2002, there were 2.5 million cable telephony subscribers and that cable  
15 companies expect to see one-third of their digital cable households take cable telephony  
16 service by 2005.<sup>13</sup>

17

18 There is evidence that the Tele-Competition Act is already having a positive impact on  
19 competitors' incentive to enter and expand in the Florida market. On July 18, 2003,  
20 Knology, a provider of broadband and voice telephony services, announced it has entered

---

<sup>10</sup> See, Florida Public Service Commission, *Telecommunications Market in Florida Annual Report on Competition As of June 30, 2002*, December 2002, p. 6.

<sup>11</sup> *Ibid.*, at 7.

<sup>12</sup> *Ibid.*, at 9.

<sup>13</sup> *Ibid.*, at 10.

1 into a definitive agreement to purchase certain assets from Verizon Media Ventures, Inc.<sup>14</sup>  
2 Knology offers local and long distance telephone service and its purchase of Verizon's  
3 Americast cable system will permit it to compete directly with Verizon. In its press  
4 release announcing its decision, Knology stated:

5 In commenting on this transaction, Knology noted that the Tele-Competition  
6 Act recently enacted in Florida positively influenced its decision to expand  
7 operations in the state. This Act, as written by the Florida Legislature and  
8 supported by Governor Bush, laid the foundation for companies like Knology  
9 to enter the Florida market, and offer competitive services and products to  
10 consumers.

11  
12 **Q. IS THERE EMPIRICAL EVIDENCE THAT SUPPORTS YOUR VIEW THAT**  
13 **RATE REBALANCING WILL LIKELY MAKE THE RESIDENTIAL LOCAL**  
14 **EXCHANGE MARKET MORE ATTRACTIVE?**

15 A. Yes, there is empirical evidence. Two of my colleagues at NERA investigated empirically  
16 whether low residential basic local rates were having any impact on competition in the  
17 states and, specifically, whether low rates were hindering the development of residential  
18 competition.<sup>15</sup> In that paper, the authors hypothesized that inefficient local exchange  
19 prices are having an impact on competition and that, specifically, low residential prices  
20 are inhibiting competition for residential customers. To test their hypotheses, the authors  
21 compared how local competition varied across the different states depending on how

---

<sup>14</sup> See, Knology Press Release July 18, 2003, *Knology Announces Agreement to Purchase Broadband Asset*.

<sup>15</sup> See, Agustin J. Ros and Karl McDermott, "Are Residential Local Exchange Prices Too Low? Drivers to Competition in the Local Exchange Market and the Impact of Inefficient Prices," in Michael Crew, *Expanding Competition in Regulated Industries*, Kluwer Academic Publishers, 2000.

1 “unbalanced” were local exchange prices. Specifically, the authors estimated several  
2 cross-section econometric models of facilities-based competition, controlling for things  
3 such as cost and demand considerations in the different states. The authors also included  
4 several policy variables, including one that measured the degree to which residential local  
5 exchange prices were “distorted” in each state. The authors summarized their results, as  
6 they pertained to residential competition, as follows:

7 Using OLS and GLS estimates we found a significant and positive association  
8 between states that have more “balanced” tariffs and residential competition.  
9 For two measures of residential competition used in our data, we found that  
10 “rebalancing” tariffs by 10% leads to approximately a 9% and 13% increase,  
11 respectively, in residential competition.<sup>16</sup>

12  
13 In addition, James Eisner (an FCC staff member) and Professor Dale E. Lehman  
14 performed a somewhat similar study.<sup>17</sup> Eisner and Lehman state in their conclusion:

15 ...in some specifications, there appears to be less competitive entry  
16 (principally facilities-based) where residential rates are lower. These findings  
17 are generally statistically significant at the 90% level.<sup>18</sup>

18  
19 Finally, another empirical study examined rate rebalancing in Latin America and found  
20 that rate rebalancing in some Latin American countries has led to increases in the supply

---

<sup>16</sup> *Ibid.*, at 167.

<sup>17</sup> See, James Eisner and Dale E. Lehman, *Regulatory Behavior and Competitive Entry*, presented at the 14<sup>th</sup> Annual Western Conference Center for Research in Regulated Industries, June 28, 2001. The authors' main motivation appears to have been ascertaining how regulatory behavior—as it pertains to unbundled loop prices and 271 entry—affects competitive entry. Nevertheless, they control for local exchange prices as well.

<sup>18</sup> *Ibid.*, p. 25.

1 of main telephone lines by providing better incentives to market participants.<sup>19</sup>

2

3 In summary, both economic theory and the empirical literature suggest that the  
4 companies' revised plans—by setting residential rates at more economically efficient  
5 levels—would likely make the residential local exchange marketplace more attractive to  
6 actual and potential competitors.

7

8 **Q. BUT ISN'T IT THE CASE THAT CLECS ALREADY HAVE ENOUGH**  
9 **INCENTIVES TO SERVE LUCRATIVE RESIDENTIAL CUSTOMERS?**

10 A. Yes, it is probably the case that CLECs have enough incentive to serve a subset of  
11 residential customers, namely those customers that are very profitable either because the  
12 cost of serving them is especially low or because their volumes are unusually high. But  
13 the promise of the Tele-Competition Act is to ensure that competition for residential  
14 customers is as broad and diffuse as is economically feasible, and by better aligning the  
15 prices of residential basic local services with their underlying costs, a broader base of  
16 residential customers will obtain the benefits of competition.

17

18 **Q. § 364.164 (1) (b) PROVIDES THAT THE COMPANIES' PLANS CONSIDER THE**  
19 **EFFECT ON ENHANCED MARKET ENTRY. WILL THE COMPANIES'**  
20 **REVISED PLANS MEET THIS PROVISION?**

21 A. Yes, the companies' revised plans will induce enhanced market entry. Above, I have  
22 discussed how the revised plans would likely create a more attractive competitive local

---

<sup>19</sup> See, Agustin J. Ros and Aniruddha Banerjee, "Telecommunications Privatization and Tariff Rebalancing: Evidence from Latin America," *Telecommunications Policy*, 24 (2000) 233-252.

1 exchange market for the benefit of residential consumers. This is an example of how the  
2 revised plans will induce enhanced market entry.

3  
4 In general, the companies' revised plans will provide for improved entry signals into the  
5 local exchange market by diminishing distorted price signals that may encourage  
6 uneconomic entry into the overpriced markets. Prices that are free of distortions will lead  
7 to several economically-efficient outcomes known as allocative, technical and-dynamic  
8 efficiencies. First, efficient pricing assumes that the marginal cost that society incurs to  
9 produce goods and services reflects the value that consumers place on the good or service  
10 consumed, (allocative efficiency). Second, optimal signals are provided to firms in the  
11 industry (e.g., whether to increase production or exit the industry) and to potential entrants  
12 contemplating entering the market. This ensures that it is the lowest cost firms that stay in  
13 the market and provide goods and services. In this way the use of society's scarce  
14 resources is minimized (technical efficiency). Third, prices that adequately cover costs  
15 ensure that appropriate incentives exist for improvement in technology, increased research  
16 and development and higher quality goods and services (dynamic efficiency).

17  
18 **Q. UNDER WHAT CONDITIONS CAN IT BE SAID THAT PRICES ARE FREE OF**  
19 **DISTORTION, AND ARE THE COMPANIES' CURRENT PRICES FOR BASIC**  
20 **LOCAL SERVICES FREE OF DISTORTIONS?**

21 A. Prices are free of distortion when: (1) they recover at least the forward-looking  
22 incremental cost of production and (2) for multi-product firms, markups above  
23 incremental costs take into account demand characteristics in the market, subject, of  
24 course, to the need for the firm to meet competition. As described in the companies' cost  
25 testimonies, the companies' prices for basic local residential services are not recovering

1 the forward-looking direct cost of production. As such, prices for these services do not  
2 meet the economic criterion that prices should at a minimum recover the forward-looking  
3 direct cost of production.

4

5 By adopting the companies' revised plans, however, the Commission will be reducing  
6 significantly the distortions in the price of intrastate access and residential basic local  
7 services and achieving the economically efficient outcomes described above.

8

9 **IV. OTHER ECONOMIC BENEFITS FROM THE COMPANIES'**  
10 **REVISED PLANS**

11

12 **Q. ARE THERE OTHER ECONOMIC BENEFITS THAT WILL LIKELY ARISE**  
13 **FROM THE COMPANIES' REVISED REBALANCING PROPOSAL?**

14 A. Yes, there are other economic benefits that will likely arise from the companies' revised  
15 rebalancing proposals. Both economic theory and empirical research suggest that rate  
16 rebalancing will likely increase economic activity in Florida as increased competition  
17 brings benefits to Florida consumers of telecommunications services.

18

19 **Q. WOULD YOU PLEASE DESCRIBE WHY ECONOMIC THEORY SUGGESTS**  
20 **THAT RATE REBALANCING WILL INCREASE ECONOMIC ACTIVITY IN**  
21 **FLORIDA?**

22 A. Rate rebalancing consists of increasing the prices of services that are priced below  
23 forward-looking direct costs and reducing the prices of services that are priced  
24 significantly above forward-looking direct costs. As mentioned earlier in my testimony,  
25 the history of telecommunications rate design is such that residential basic local prices

1 were set low and usage services (such as toll and intrastate access services) were set high.

2  
3 However, economic theory teaches that economic efficiency (and overall consumer  
4 welfare) is at its highest level when prices of goods and services in an economy are set at  
5 forward-looking direct cost. Of course, in industries where there are significant fixed  
6 costs—that give rise to economies of scale—and in multi-product firms where there are  
7 significant amounts of shared and common costs, pricing services at forward-looking  
8 direct cost does not permit the firm to earn sufficient revenues to recover all its costs.  
9 Under such conditions, markups above forward-looking direct costs are required.  
10 Specifically, as competition develops, those services that are more price elastic will likely  
11 receive a proportionately lower markup above cost than those services that are more price  
12 inelastic.

13  
14 **Q. PLEASE DESCRIBE HOW REBALANCING RESULTS IN INCREASED**  
15 **ECONOMIC ACTIVITY IN FLORIDA?**

16 A. The companies' revised plans will lower intrastate access prices, which will in turn result  
17 in lower intrastate toll prices, as required by the Tele-Competition Act. As a result of the  
18 reduction in intrastate toll prices, Florida consumers will use more toll services. This will  
19 create value for them that they are not now receiving. This, in turn, will reflect an  
20 increase in economic activity in Florida. In addition, and of more direct importance to this  
21 proceeding, more cost reflective prices for local service will send signals to competitors  
22 that will more efficiently guide their investment decisions, and in all likelihood, increase  
23 their investment beyond what it is in the face of today's artificially low prices. Thus,  
24 rebalancing will generate significant gains in economic activity in Florida. It is important  
25 to stress the point that demand for access to the network by consumers depends not only

1 on the price of network access but it also depends on the value that consumers obtain  
2 (consumers' surplus) from using the network. While higher network access prices may, in  
3 theory, decrease the quantity of access consumed, the concomitant decrease in long  
4 distance price will increase the quantity of access consumed. Empirical evidence suggests  
5 that, in net, we may well find that rebalancing leads to more consumers subscribing to the  
6 network.<sup>20</sup>

7  
8 **Q. IS THERE EMPIRICAL EVIDENCE THAT QUANTIFIES THE AMOUNT OF**  
9 **ECONOMIC BENEFIT THAT A REBALANCING PLAN CAN GENERATE?**

10 A. Yes, there is empirical support. There have been several studies that have examined the  
11 welfare gains arising from rate rebalancing. One of the first studies found that, for the  
12 U.S. as a whole, the loss from overpricing long distance service to business and residential  
13 consumers in 1983 was around \$10 billion, a finding that was confirmed in subsequent  
14 research.<sup>21</sup> More recent research confirms the significant gains in economic welfare that  
15 can be achieved from more economically rational prices. For example, a 2000 study by  
16 Robert Crandall and Leonard Waverman (a NERA colleague) found the total cost of the  
17 current rate design—i.e., lower basic local prices and higher long distance prices—to be  
18 anywhere between \$2.5 to \$7.0 billion per year, depending on the assumptions made.<sup>22</sup>

## 1 V. COST ISSUES

2

3 Q. WHAT IS THE CORRECT COST CONCEPT TO USE FOR DETERMINING  
4 WHETHER A SERVICE IS RECEIVING AN ECONOMIC SUBSIDY?

5 A. From an economic perspective, use of forward-looking direct costs (economic costs as  
6 opposed to embedded or historical costs) is the proper basis for determining whether a  
7 specific service is in receipt of an economic subsidy. The embedded cost or historical cost  
8 of an activity is a record of the costs a firm attributes to the pursuit of its activity in a  
9 given (past) accounting period. That cost reflects what the firm actually paid for capital  
10 equipment,<sup>23</sup> its actual costs of operating and maintaining that equipment, and other costs  
11 incurred in operating the enterprise. By contrast, the economic cost of an activity is the  
12 actual forward-looking cost of accomplishing that activity in an efficient manner. In  
13 contrast to embedded costs, forward-looking costs are those associated with present and  
14 future uses of the firm's (or society's) resources. Only these forward-looking costs are  
15 relevant for making present and future production and investment decisions, for placing  
16 resources in alternative uses, and for setting efficient prices for the services to be provided  
17 presently or in the future.

18

19 According to the evidence presented by the companies, their residential basic local rates  
20 are below forward-looking direct costs and I conclude, therefore, that those rates are in  
21 receipt of an economic subsidy.

22

---

<sup>23</sup> Embedded costs also include the annual depreciation expenses associated with the stock of equipment that (1) was purchased in the current and previous years and (2) is still in use.

1 Q. THE COMPANIES' REVISED PLANS ARE BASED UPON THE FACT THAT  
2 THE LOCAL LOOP IS NOT A SHARED OR COMMON COST AND THAT ITS  
3 COST IS CAUSED SIMPLY BY PROVIDING CUSTOMERS ACCESS TO THE  
4 TELEPHONE SYSTEM AND CANNOT APPROPRIATELY BE SPREAD  
5 AMONG THE REMAINING TELEPHONE SERVICES. DOES THE FLORIDA  
6 COMMISSION AGREE WITH THIS APPROACH REGARDING THE LOCAL  
7 LOOP?

8 A. Yes, it does. In a report to the Florida Legislature in 1999, the Commission explicitly  
9 rejected the notion that the cost of the loop should be recovered from non basic local  
10 telecommunications service.<sup>24</sup> In that report, the Commission stated:

11 Is the cost of local loop facilities properly attributable to the provision of basic  
12 local telecommunications service? By definition, yes. Section 364.02(2),  
13 Florida Statutes, defines "basic local telecommunications service as"

14 Voice grade, flat-rate residential and flat-rate single-line business local  
15 exchange services which provide dial tone, local usage necessary to  
16 place unlimited calls within a local exchange area, dual tone multi-  
17 frequency dialing, and access to the following emergency services such  
18 as "911," all locally available interexchange companies, directory  
19 assistance, operator services, relay services, and an alphabetical  
20 directory listing.

21

---

<sup>24</sup> See, "Report of the Florida Public Service Commission on the Relationship Among the Costs and Charges Associated with Providing Basic Local Service, Intrastate Access, and Other Services Provided by Local Exchange Companies, in Compliance with Chapter 98-277, Section 2(1), Laws of Florida," Florida Public Service Commission Tallahassee, Florida February 15, 1999.

1 Given such an identification of the cost object to be studied, the principle of  
2 cost causation leads one to the unavoidable conclusion that the decision to  
3 have local service leads to the incurrence of loop costs.<sup>25</sup>  
4

5 **VI. UNIVERSAL SERVICE WOULD NOT BE PUT AT RISK AS A**  
6 **RESULT OF THE COMPANIES' REVISED PLANS**

7 —  
8 **Q. SHOULD THE COMMISSION BE CONCERNED ABOUT UNIVERSAL**  
9 **SERVICE?**

10 A. While it is true that, in theory, as the price of basic local service increases, some  
11 consumers may decide the new price is above the value he or she places on the service—  
12 and may, as a result, decide to do without telephone service—I do not believe that, in  
13 practice, this would occur, or occur to such an extent as to jeopardize universal service in  
14 Florida. There are several reasons why I believe this is the case.

15  
16 First, although low-income subscribers may be more sensitive to price increases than are  
17 middle and higher income users, the Tele-Competition Act does two things to help low  
18 income consumers. It provides that, in the event of an increase in residential basic local  
19 service prices, low-income consumers who are Lifeline customers will be exempted from  
20 the price increase; and, it expands the number of Lifeline-eligible customers to 125  
21 percent of the federal poverty level. These steps should go far to address any problems of  
22 affordability.  
23

---

<sup>25</sup> *Ibid*, at 51.

1 Second, the price elasticity of demand for access to the network is quite low, meaning that  
2 the vast majority of consumers will continue to subscribe. Specifically, the price elasticity  
3 of demand measures the percentage impact on demand given a percentage change in price.  
4 Previous research has demonstrated that customers generally do not disconnect their  
5 phone service when prices for basic local service increase.<sup>26</sup>

6  
7 Third, and very importantly, in addition to its own price, the demand for residential basic  
8 local service is determined by the amount of value consumers obtain from using the  
9 services produced by the network, i.e., local calling, intraLATA toll, interLATA toll,  
10 vertical services and newer services such as broadband Internet access. As prices for  
11 these services decrease over time due to competitive pressure and technological  
12 innovation, the value that consumers place on having access to the network increases and  
13 so, therefore, does their demand to stay on the network.<sup>27</sup> The companies' revised plans  
14 call for rate increases phased in over a two year period and to the extent that prices for  
15 complementary goods decrease so will consumers' desire to remain on the network  
16 increase. This helps reduce, or may even offset, the negative effect of the price increase.

17  
18 Finally, as discussed above, less distorted prices should provide better incentives for  
19 competitors to compete for residential consumers. Competition brings with it improved  
20 quality, different selection of goods and services bundled together in a way that customers  
21 find attractive, and lower prices. These factors provide additional reasons why during the

---

<sup>26</sup> See, Lester D. Taylor, (1994), *op. cit.*

<sup>27</sup> Hausman, J., T. Tardiff, and A. Belinfante, "The Effects of the Breakup of AT&T on Telephone Penetration in the United States," *The American Economic Review*, Vol. 83, May 1993, pp 178-184.

1 phase-in period, customers will likely place increased value on subscribing to the network,  
2 thus mitigating the effects of any local rate increase.

3  
4 To the extent the Florida Commission is concerned with the few remaining users who may  
5 decide to drop off the network it is also important to be aware that alternatives to the fixed  
6 network are growing and at least some customers may be turning to alternative means of  
7 meeting their communications needs. For example, the extraordinary growth of wireless  
8 service, driven by lower wireless prices and pricing plans that include a "bucket" of  
9 minutes provides customers with more meaningful opportunities to use wireless service as  
10 a substitute to wireline service.

11

12 **Q. SHOULD THE COMMISSION BE CONCERNED IF CUSTOMERS DROP OFF**  
13 **THE FIXED NETWORK BUT INSTEAD RELY PRIMARILY ON OTHER**  
14 **FORMS OF ACCESS?**

15 A. No. An important goal for policymakers has been to ensure that as many consumers as  
16 possible have access to the public switched telecommunications network, irrespective of  
17 how that access is obtained. When a customer drops off the fixed-line network and  
18 accesses the public network via wireless access, this is simply a substitution effect caused  
19 by the customer choosing between fixed and wireless access. This is not a universal  
20 service concern for policymakers.

21

22 **Q. DR. GORDON, HAVE OTHER STATES IMPLEMENTED RATE**  
23 **REBALANCING?**

24 A. Yes, there are other states that have implemented rate rebalancing including California,  
25 Illinois, Ohio, and in Massachusetts where I served as Chairman. Even in Maine, where

1 by statute basic residential services are to be set as low as possible and where I also served  
2 as Chairman, they have recently approved a rebalancing plan.

3

4 **Q. WOULD YOU PLEASE DESCRIBE THE RATE REBALANCING PROCESS IN**  
5 **MASSACHUSETTS?**

6 A. The process for changing prices in Massachusetts began before I became Chairman of the  
7 Massachusetts Commission and continued during my tenure. In Massachusetts,  
8 residential fixed monthly charges were increased significantly, with offsetting decreases in  
9 business, toll, and carrier access prices. The Massachusetts Commission early on after  
10 divestiture recognized the problems that historic pricing policies were creating, as other  
11 (especially institutional) barriers to market entry were being eliminated, and thus ordered  
12 a change in price structure:

13 "properly defined incremental costs should be used as the primary basis for  
14 pricing all services, including local exchange service .. to the extent that  
15 current rates do not reflect an appropriate allocation of costs, the [MDPU] will,  
16 consistent with the need to avoid major discontinuities in rate levels, move  
17 toward that goal." IntraLATA Competition, D.P.U. 1731 (1985), p. 36-38.

18

19 "Traditionally, the pricing of telephone service was based on a method  
20 whereby residential monthly exchange rates were priced below cost in order to  
21 promote universal service; and long-distance, toll, and business rates were  
22 priced above cost in order to subsidize residential exchange rates. While this  
23 system succeeded in serving a social purpose, it was a pricing scheme not  
24 conducive to the development of a fully-competitive market, in which the  
25 benefits associated with competition would be realized by all customers."

1           NET, D.P.U. 93-125 (1994), pp. 10-11.

2

3           In Massachusetts, moving prices more in line with incremental costs required a significant  
4           shift in revenue recovery from usage-based prices, such as intraLATA toll and intrastate  
5           carrier access, to fixed monthly prices for all classes of customers. In addition, because  
6           the MDPU found that there were no significant cost differences in serving different  
7           classes of customers, the price-rebalancing process also entailed a further shift in revenue  
8           recovery from business customers to residential customers. Of course, the necessary  
9           changes were not made overnight. The MDPU established a series of annual, revenue-  
10          neutral, price-rebalancing investigations in order to achieve its goal over time.

11

12          When the Massachusetts price-rebalancing process ended in January of 1994 (with the  
13          adoption of a price cap plan), the price for basic residential dial-tone service (1MR) had  
14          risen from about \$3.00 per month in 1990 to \$9.91 per month in 1994 (net of the SLC).<sup>28</sup>  
15          Comparable increases also occurred for residential flat-rate service (1FR), which was the  
16          most popular service in Massachusetts, at that time. Flat rate residential prices had ranged  
17          from \$9.95 in rural areas to \$12.38 in urban areas. The rebalancing process moved flat  
18          rate residential prices to \$16.85 state wide. During this period, the average increase for  
19          residential consumers was \$2.18 per year over four years and, according to the DTE,  
20          record evidence shows virtually no impact on residential telephone subscriber  
21          penetration.<sup>29</sup> Because the price-rebalancings were revenue-neutral, these increases were

---

<sup>28</sup> I was Chairman of the MDPU for the last of these annual investigations.

<sup>29</sup> See, "Re Verizon New England, Inc. dba Verizon Massachusetts D.T.E. 01-31-Phase II," *Public Utilities Reports - 223 PUR4th*, p. 397.

1 completely offset by decreases in prices for other services, notably residential and  
2 business intraLATA toll and carrier switched access.

3  
4 Massachusetts was one of the first states to open toll and local markets to competitive  
5 entry, and the price rebalancing helped to lessen opportunities for uneconomic bypass and  
6 thus promoted the development of an efficient competitive process.

7  
8 More recently, Massachusetts has continued to better align prices with their underlying  
9 costs by reducing switched access and increasing residential dial-tone rates. Specifically,  
10 the DTE authorized the ILEC to implement a one-time increase of \$2.44 to its residential  
11 dial-tone line charge. In commenting on its decision, the DTE stated:

12       Moreover, the department finds that with the \$2.44 increase in the dial-tone  
13       line charge, competitive local exchange carriers (CLECs) can profitably enter  
14       and serve the residential telephone market in Massachusetts.<sup>30</sup>

15  
16 The DTE concluded that a \$2.44 increase will not harm the Department's universal  
17 service goals, based on similarity to the several, annual \$2.18 increase in the early 1990s  
18 rebalancing plans and comparable increases in several other states and in the Federal  
19 subscriber line charge since 2000. For example, the Maine PUC approved a \$1.78  
20 increase in Verizon's basic monthly per line rate in May 2001 and the New York Public  
21 Service Commission authorized a two-year Incentive Plan which permitted an increase of  
22 \$1.85 on March 1, 2002 and another \$0.65 on March 1, 2003 for a total increase of \$2.50  
23 in the space of a year. The FCC's Federal subscriber line charge has increase from \$4.35

---

<sup>30</sup> *Ibid*, p. 361.

1 in July 2000 to \$6.50 in July 2003.

2

3 **Q. PLEASE DISCUSS MAINE'S EXPERIENCE WITH RATE REBALANCING?**

4 A. Significant rate rebalancing has been achieved in Maine in recent years, with no  
5 noticeable impact on telephone subscribership levels. In 1997, the Maine legislature  
6 (M.R.S.A. 35-A, §7101-B) directed the Maine Public Utility Commission to establish,  
7 notwithstanding any other provision of state law, intrastate access rates that are less than  
8 or equal to interstate access rates established by the FCC (*i.e.*, parity with interstate access  
9 rates) by May 30, 1999. At the time, Bell Atlantic's intrastate access rates were \$0.26 per  
10 minute, significantly higher than its then-current Federal interstate access rate of about  
11 \$0.07 per minute.

12

13 Subsequently, on March 17, 1998, the Commission approved an Order (Docket No. 94-  
14 123 reopened) that approved a stipulation between Bell Atlantic-Maine (now known as  
15 Verizon-Maine) and a group of intervenors, including the Commission's Advocacy Staff  
16 and the Public Advocate. This stipulation allowed Bell Atlantic-Maine to increase its  
17 basic local exchange rates by a total of \$3.50 by May 30, 1999, with steps of \$1.50 in  
18 1998 and \$2.00 in 1999. This was followed by another increase of \$1.78 in 2000.

19

20 Maine continues to have the highest telephone penetration rate in the country—about 98  
21 percent of Maine's households have telephone service.<sup>31</sup> In addition, lower intrastate toll  
22 rates have benefited some customer classes, especially those customers in rural areas with  
23 relatively small toll-free calling areas.

<sup>31</sup> MPUC Annual Report 2002, pp. 43.

1

2 **Q. WHAT OTHER STATE EXPERIENCES DO YOU BELIEVE ARE RELEVANT?**

3 A. In California in 1994, the Commission approved a rebalancing plan for GTE and Pacific  
4 Bell. GTE's residential rates immediately went from \$9.75 to \$17.25 while Pacific's  
5 residential rates went from \$8.35 to \$11.25.<sup>32</sup> Recently, as part of a rebalancing plan for  
6 Sprint's local telephone company in Ohio where intrastate access fees were lowered to  
7 mirror Federal charges, the Commission approved the creation of an end user charge of  
8 \$4.10 for residential customers and \$6.00 for single-line business.<sup>33</sup>

9

10 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

11 A. Yes.

**AMENDED DIRECT TESTIMONY OF DR. KENNETH  
GORDON**

**On behalf of Verizon Florida Inc., BellSouth Telecommunications,  
Inc., and Sprint-Florida Inc.**

**August 27 September 30, 2003**

1 AMENDED AMENDED DIRECT TESTIMONY OF DR. KENNETH  
2 GORDON DIRECT TESTIMONY OF DR. KENNETH GORDON

3

4 **I. PURPOSE & SUMMARY OF CONCLUSIONS**

5 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

6 A. My name is Dr. Kenneth Gordon. My business address is One Main Street, Cambridge,  
7 Massachusetts 02142. My C.V. is provided as Attachment A.

8

9 **Q. WHAT IS YOUR CURRENT POSITION?**

10 A. I am a Special Consultant of National Economic Research Associates, Inc. ("NERA").  
11 Previously, I was Senior Vice President at NERA.

12

13 **Q. WILL YOU PLEASE SUMMARIZE YOUR EDUCATION AND PROFESSIONAL**  
14 **QUALIFICATIONS?**

15 A. I am an economist and former Chairman of the Maine Public Utilities Commission  
16 ("Maine Commission") and the Massachusetts Department of Public Utilities ("Mass.  
17 DPU"). The Mass. DPU is now known as the Massachusetts Department of  
18 Telecommunications and Energy. I have been an economist since 1965, and I have been  
19 directly involved with developing and establishing regulatory policy at the federal and  
20 state levels since 1980, when I became an industry economist at the Federal  
21 Communications Commission ("FCC").

22

23 I received my A.B. degree from Dartmouth College in 1960. I received my M.A. degree  
24 in 1963 and my Ph.D. degree in 1973, both in economics, from the University of Chicago.

25 I have taught applied microeconomics, industrial organization, and regulation (as well as

1 other subjects) at Georgetown University, Northwestern University, University of  
2 Massachusetts at Amherst, and Smith College.

3  
4 From 1980 to 1988, I was an industry economist at the FCC's Office of Plans and Policy,  
5 where I worked on a full range of regulatory issues, including telecommunications, cable,  
6 broadcast, and intellectual property rights. At the FCC, one of the major focuses of my  
7 work was activity aimed at introducing competition into communications markets.

8  
9 Prior to joining NERA in November 1995, I chaired the Maine Commission (1988 to  
10 December 1992) and the Mass. DPU (January 1993 to October 1995). During my term as  
11 Chairman of the Mass. DPU, the DPU investigated and approved a price cap incentive  
12 regulation plan for NYNEX and also undertook a proceeding to examine interconnection  
13 and other issues related to the development of competition at all levels of  
14 telecommunications, including basic local service.

15  
16 While a regulator, I was active in the National Association of Regulatory Utility  
17 Commissioners ("NARUC"), serving on its Communications and Executive Committees.  
18 In 1992, I served as President of NARUC. I was also Chairman of the BellCore Advisory  
19 Committee and the New England Governor's Conference Power Planning Committee.

20  
21 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

22 A. Verizon Florida Inc., BellSouth Telecommunications, Inc., and Sprint-Florida Inc., ("the  
23 companies") are seeking to restructure their rates for intrastate network access services

1 (“intrastate access”) and basic local telecommunications services (“basic local”) in  
2 accordance with recently passed legislation by the Florida Legislature.<sup>1</sup> The companies’  
3 revised plans—which must address the criteria established in the legislation—call for  
4 them to restructure their intrastate access and basic local rates in a revenue-neutral  
5 manner.

6  
7 The companies have asked me to provide an economic and policy analysis of their revised  
8 rate plans and to testify on whether I believe those revised plans meet the criteria laid out  
9 in the legislation.

10  
11 **Q. WHAT ARE YOUR MAJOR CONCLUSIONS?**

12 A. After reviewing the newly-enacted legislation, the evidence in this case—specifically the  
13 companies’ revised plans and the cost evidence submitted by the companies’ witnesses—  
14 and based on my general knowledge and expertise on telecommunications economic and  
15 regulatory matters, I conclude that the revised plans submitted by the companies meet the  
16 criteria contained in the legislation. Specifically, upon implementation, the revised plans  
17 will, *inter alia*:

- 18 • Reduce current support for basic local telecommunications services that prevents  
19 the creation of a more attractive competitive local exchange market for the benefit  
20 of residential consumers; and  
21 • Induce enhanced market entry.

22 The companies’ revised plans significantly decrease support for basic local service by  
23 reducing prices for a service that has historically and purposely been an important

---

<sup>1</sup> See Section II below.

1 source—but by no means the only source—of support for basic local services, namely  
2 intrastate access. In order to achieve revenue neutrality, the companies' revised plans  
3 increase residential basic local prices towards cost-based levels, thus creating a more  
4 attractive market for potential entrants, ultimately for the benefit of residential consumers.  
5 Both theory and empirical evidence show that low residential basic local prices have  
6 hindered the development of residential competition. By better aligning residential basic  
7 local prices with cost, competitors will have increased incentives to target a broader mix  
8 of residential consumers, which is the intent of the Florida legislature.

9  
10 In addition, I conclude that the revised plans will enhance economic welfare in Florida by  
11 increasing economic activity. As described in the respective testimonies of the  
12 companies' cost witnesses, the cost evidence submitted in this proceeding demonstrates  
13 that rates for residential basic local service diverge significantly from their underlying  
14 costs. A movement toward costs—and, therefore toward more rational economic  
15 pricing—will bring with it several economic benefits. These benefits include providing  
16 market participants—i.e., customers, the companies and potential and actual  
17 competitors—with more cost-based price signals, which will improve economic decision  
18 making and lead to more economically rational utilization of telecommunications services.  
19 Economic activity in Florida will increase as a result of the companies' revised plans  
20 because rebalancing generates substantial consumer benefits. Telephone consumers are  
21 better off as a result of moving prices more in line with costs, and will likely increase their  
22 purchases of those services whose price has come down. Perhaps of even greater  
23 significance, competitive telephone service providers will be seeing better price signals  
24 for local service, and will be able to invest without having to face the level of subsidized  
25 competition they have faced in the past. New investment by these providers should, at the

1 margin, increase.

2

3 The cost evidence presented by the companies demonstrates that basic local prices are  
4 receiving an economic subsidy from other services. The companies submitted forward-  
5 looking direct cost evidence to demonstrate that their residential basic local services are  
6 priced below the costs the companies incur to provide the services. Forward-looking  
7 direct cost is the basis for determining whether a service is receiving an economic subsidy.  
8 Moreover, consistent with this Commission's ruling, the companies' cost witnesses, when  
9 measuring the economic subsidy flowing to basic local services, correctly assign the entire  
10 cost of the loop to basic local.

11

12 I also conclude that the companies' revised plans will not jeopardize universal service in  
13 the state of Florida. The companies' residential basic local prices are substantially below  
14 the national average and Florida is not a poor state. The Florida Public Service  
15 Commission ("Commission") has the flexibility to approve the companies' revised plans  
16 and still have residential basic local prices remain affordable. The Florida Legislation  
17 requires that any price increase in basic local service not apply to Lifeline consumers and  
18 also increased the income eligibility for Lifeline consumers to 125 percent, thus protecting  
19 those customers most likely to be sensitive to potential price increases from a rebalancing  
20 plan. Importantly, the companies' revised rebalancing plans will lead to lower intrastate  
21 toll prices for all consumers. At the end of the day, the mix of services that consumers  
22 purchase as a result of the companies' revised plans will make consumers better off  
23 overall.

24

25 Finally, the fact that some customers may experience unwanted rate changes should not be

1 an argument for the status quo. Good policy requires weighing and balancing the costs  
2 and benefits of particular actions. While it may seem that maintaining current prices is the  
3 least objectionable thing to do from a policy perspective, there is an implicit but very real  
4 cost to continuing the status quo. The deployment of next generation, advanced networks  
5 depends crucially on providing all market participants the sound economic signals that  
6 will encourage efficient investment and innovation. Cost-based prices provide the  
7 incentives needed to bring to market the new services that customers demand. This  
8 cannot be accomplished by distorted prices.

9  
10 **Q. YOU HAVE NOTED IN YOUR MAJOR CONCLUSIONS THAT VERIZON**  
11 **FLORIDA INC., BELLSOUTH TELECOMMUNICATIONS, INC., AND SPRINT-**  
12 **FLORIDA INC. HAVE REVISED THEIR RESPECTIVE RATE REBALANCING**  
13 **PLANS FILED ON AUGUST 27, 2003 TO EXTEND THE TIME OVER WHICH**  
14 **INTRASTATE NETWORK ACCESS AND BASIC LOCAL**  
15 **TELECOMMUNICATIONS RATES WILL BE REFORMED. HAVE YOU**  
16 **REVIEWED THESE COMPANIES' REVISED PLANS?**

17 **A. Yes, I have.**

18  
19 **Q. DO THESE REVISIONS AFFECT YOUR ANALYSIS OF THE COMPANIES'**  
20 **PLANS OR YOUR TESTIMONY?**

21 **A. No. With the exception of the minor changes — changing “plans” to “revised plans” —**  
22 **as well as this and the previous question and answer, my testimony remains unchanged**  
23 **from the testimony that I filed on August 27, 2003.**

24

1 **II. BACKGROUND**

2 **Q. PLEASE DESCRIBE THE BASIS FOR THE COMPANIES' REQUEST TO**  
3 **INCREASE BASIC EXCHANGE PRICES.**

4 A. From an economic perspective, the fact that the companies' current residential basic local  
5 prices are not fully recovering their forward-looking economic cost is, by itself, a good  
6 enough reason to begin the process of moving them to more economically rational levels.  
7 Both theoretical and empirical research have shown that rebalancing rates and moving  
8 them toward levels more commensurate with their underlying costs results in significant  
9 benefits to telecommunications consumers and, by so doing, benefits the economy as  
10 well.<sup>2</sup> Rebalancing rates has also been demonstrated to have a positive effect on  
11 competitive entry into the local exchange market.<sup>3</sup>

12

13 The immediate catalyst for the companies' revised plans is the recent changes in Florida  
14 laws. I have been informed by counsel that the legal authority for the companies' request  
15 arises from recent changes in the statutory framework in Florida. During the 2003 regular  
16 legislative session, the Legislature passed Senate Bill 654, the Tele-Competition  
17 Innovation and Infrastructure Enhancement Act ("Tele-Competition Act"). The Tele-  
18 Competition Act implements several important policies, but for our purposes the relevant  
19 Section of the Tele-Competition Act is § 364.164 "Competitive market enhancement."

20

21 **Q. WHAT ARE THE IMPORTANT PROVISIONS OF § 364.164?**

22 A. § 364.164 permits local exchange telecommunications companies to petition the.

---

<sup>2</sup> See Section IV below.

<sup>3</sup> See Section III.

1 Commission to reduce their intrastate access rates in a revenue-neutral manner. In  
2 reaching its decision, § 364.164 (1) states that the Commission shall consider whether  
3 granting the petitions will:

- 4 a. Remove current support for basic local telecommunications services that  
5 prevents the creation of a more attractive competitive local exchange  
6 market for the benefit of residential consumers;
- 7 b. Induce enhanced market entry;
- 8 c. Require intrastate switched network access rate reductions to parity over a  
9 period of not less than 2 years or more than 4 years; and
- 10 d. Be revenue neutral as defined in subsection (7) within the revenue  
11 category defined in subsection (2).

12 Throughout my testimony, I will focus on whether the companies' revised plans are  
13 consistent with and meet the criteria provided in § 364.164 (1) (a) and (b). Other  
14 company witnesses discuss how the companies' revised plans would meet criteria (c) and  
15 (d).

16

17 **Q. IN ORDER TO REDUCE INTRASTATE ACCESS RATES IN A REVENUE**  
18 **NEUTRAL MANNER, RATES FOR OTHER SERVICES NEED TO BE**  
19 **INCREASED. WHAT SERVICES DO YOU BELIEVE SHOULD BE**  
20 **INCREASED?**

21 A. The first category of services that should be considered are those services whose current  
22 prices do not recover fully their underlying costs, such as residential basic local  
23 telecommunications services. Rates for these subsidized services should be increased in  
24 order to better reflect their real economic cost. This is confirmed in §364.164 (2), where  
25 the legislation calls for the creation of a revenue category mechanism consisting of basic

1 local telecommunications service revenues and intrastate switched network access  
2 revenues in order to achieve revenue neutrality. That is, the legislation states that in order  
3 to achieve revenue neutrality, if intrastate access prices are reduced, then basic local  
4 service prices need to be increased.

5  
6 The current rate design for telephone services—where basic local services are priced  
7 below cost and other services, including intrastate access service, are priced in such a way  
8 so as to provide the support—while in the process of being reduced or eliminated in a  
9 number of states, continues to be encountered in state regulation of telephone services.  
10 However, as the Florida Legislature wisely recognized, whatever benefits such a rate  
11 design policy has arguably achieved in the past, such as helping the United States achieve  
12 universal telephone service—the continuation of such policies frustrates another important  
13 policy goal of Federal and state regulators, namely, the establishment of efficient  
14 competition to as broad a base of business and residential consumers as is economically  
15 feasible—not to mention the economic costs that arise from price-cost distortions, *per se*,  
16 as I discuss further below.

17

18 The current rate design policy as it pertains to residential basic local services, frustrates  
19 that policy goal and by enacting § 364.164, the Florida Legislature has provided the  
20 Commission with the direction it needs to make competition work better for all Florida  
21 consumers.

22 Q. ARE THE COMPANIES' REVISED PLANS CONSISTENT WITH § 364.164 (1)

23 (a) and (b)?

24 A. Yes. The companies' revised plans are consistent with and meet the criterion of §  
25 364.164(1)(a) and (b). Below in Section III, I fully describe why I believe that the

1 companies' revised plans are consistent with and meet those criteria.

2

3 Q. DR. GORDON, FROM A POLICY PERSPECTIVE DO YOU BELIEVE THAT IT  
4 IS APPROPRIATE TO ENGAGE IN THE TYPE OF REBALANCING THAT IS  
5 BEING CONTEMPLATED BY THE COMPANIES' PLANS?

6 A. Yes, I do. In this testimony, I describe fully why I believe that the companies' revised  
7 plans are consistent with the criteria of the Tele-Competition Act that the Commission  
8 shall consider and why the revised plans would likely result in increasing competitive  
9 activity in the state of Florida. Specifically, the revised plans will create a more attractive  
10 local exchange market for residential consumers and lead to enhanced market entry—two  
11 criteria that need to be considered by the Commission in addressing the companies'  
12 revised plans. By making the residential local exchange market more attractive,  
13 residential consumers will likely see more companies competing for their business, which  
14 will, in turn, result in more options for residential consumers, improved services and  
15 lower prices for their telecommunications services. From a policy perspective, it is  
16 appropriate to accomplish these tasks.

17

18 In addition, I describe below the history of rate design for basic local services in the  
19 United States and how the end result of these policies has been uneconomically low  
20 residential basic local prices; lower than what one would expect to find in undistorted  
21 competitive markets. Of course, states have differed in their implementation of these  
22 policies and, as a result, residential basic local service prices vary quite a bit from state to  
23 state. In Florida, residential basic local prices are quite low when compared to prices in  
24 other states. In Table I below, I list the flat-rate charges for each of the three companies'  
25 lowest and highest rate groups compared to the national average flat-rate charges. As can

1 be seen in the table, each of the companies' highest rate group is well below the national  
2 average of \$14.55 per month.

3

4 **Table I – Comparison of Verizon, BellSouth and Sprint's flat-rate residential basic**  
5 **local charges and National Average flat-rate charges**

| Company                    | Lowest Rate<br>Group | Highest Rate<br>Group | Unweighted<br>Average | National<br>Average (2002) |
|----------------------------|----------------------|-----------------------|-----------------------|----------------------------|
| Verizon                    | \$9.72               | \$12.06               | \$10.89               |                            |
| BellSouth                  | \$7.57               | \$11.04               | \$9.31                |                            |
| Sprint                     | \$7.63               | \$11.48               | \$9.56                |                            |
| National Average<br>(2002) |                      |                       |                       | \$14.55                    |

6 Source: Florida Senate Staff Analysis And Economic Impact Statement, p. 4. April 8, 2003; FCC *Reference*

8 exclude Federal and State subscriber line charges, touch tone charge and taxes, 911 and other charges.

9

10 **Q. HOW DOES THE FACT THAT FLORIDA HAS LOW RESIDENTIAL BASIC**  
11 **LOCAL TELECOMMUNICATIONS PRICES RELATE TO THIS**  
12 **PROCEEDING?**

13 A. It relates to this proceeding in two important ways. First, the Legislature has correctly  
14 perceived that low residential basic local prices have led the residential local exchange  
15 market to be less attractive to competitors than would be the case with more economically  
16 rational residential basic local prices. In Section III below, I describe fully why, from an  
17 economic perspective, I believe the Legislature is absolutely correct on this point. Put

1 simply, holding all other factors constant, the lower the residential basic local price (when  
2 set governmentally without regard to whether the prices cover cost), the more unattractive  
3 those customers are to actual and potential competitors. Since Florida residential basic  
4 local prices are lower than those in many other states, and in fact lower than the national  
5 average, the problem facing potential new entrants as a result of these low rates is likely to  
6 be even more severe and pronounced in Florida than in other states. For this reason, it is  
7 even more important that Florida policymakers tackle this problem sooner rather than  
8 later.

9  
10 **Q. IS THERE ANY SUPPORT FOR YOUR ASSERTION THAT THE PROBLEM OF**  
11 **AN UNATTRACTIVE RESIDENTIAL MARKET MAY BE WORSE IN FLORIDA**  
12 **THAN IN OTHER STATES?**

13 A. Yes, there is some support for my assertion. The FCC compiles data on local telephone  
14 competition. Its most recent report, released June 12, 2003 included a table that lists, for  
15 each state available, the percentage of lines provided to residential and small business  
16 customers by ILECs and CLECs.<sup>4</sup> The FCC provided data on 40 states and of those 40  
17 states Florida ranked 30th in the percent of CLEC lines that were sold to residential and  
18 small business customers. This means that in 29 out of 40 states, CLECs' served  
19 proportionately greater residential customers than in Florida (see Figure 1 at the end of  
20 this testimony). Florida ranks below states such as Georgia (58%), Alabama (52%),  
21 Louisiana (61%) and Virginia (70%) to name a few, all of which have higher residential  
22 prices. This provides some evidence that low residential basic local prices are having a

<sup>4</sup> See. *Local Telephone Competition: Status as of December 31, 2002*, Table 11, Industry Analysis and Technology Division Wireline Competition Bureau, Federal Communications Commission.

1 negative impact on residential competition in Florida.

2

3 **Q. YOU MENTIONED THAT THERE WAS A SECOND REASON WHY YOU**  
4 **BELIEVE THAT FLORIDA'S LOW RESIDENTIAL BASIC LOCAL PRICES, IN**  
5 **COMPARISON WITH OTHER STATES, ARE RELEVANT IN THIS**  
6 **PROCEEDING. WHAT IS THAT SECOND REASON?**

7 A. The second reason has to do with affordability considerations and the flexibility this  
8 Commission has in rebalancing rates while still maintaining basic residential local rates  
9 that are quite affordable for most Florida consumers. As mentioned above, the  
10 companies' prices for residential basic local services are generally well below the national  
11 average. However, Florida is not a poor state. According to data from the U.S. Bureau of  
12 Economic Analysis, Florida is on par with the national average in personal income per  
13 capita.<sup>5</sup> Specifically, as of 2001, the data show that personal income per capita in Florida  
14 was \$29,047 compared to the national average of \$30,413. Thus, the Commission has the  
15 flexibility to increase residential basic local prices, which are currently well below the  
16 national average, to more economically reasonable levels without making the services  
17 unaffordable to Florida consumers.

18

19 At the same time, Florida consumers will pay less for intrastate toll calls. The companies'  
20 rebalancing plan will lower the access charge component of the cost of producing  
21 intrastate toll calls. IXCs are required to pass these cost savings through to consumers in  
22 the form of lower prices. Thus, even with the increase in basic residential local rates,  
23 telecommunications will be just as affordable to Florida consumers as before, yet

---

<sup>5</sup> Bureau of Economic Analysis, Regional Economic Information System, Table SA1-3.

1 consumers will be better off because they will be consuming a different mix of  
2 telecommunications services that provides more value than they are currently receiving.

3  
4 In addition, the Tele-Competition Act also requires that any increase in basic local service  
5 rates not apply to Lifeline customers and that the ILECs increase Lifeline participation to  
6 125 percent of federal poverty income level.<sup>6</sup> These requirements further protect low-  
7 income consumers—and it is low-income consumers who would be most prone to  
8 disconnections in the face of price increases—thus providing the Commission with even  
9 more flexibility to approve the companies' rate rebalancing request with minimal concern  
10 that such a rate restructuring would negatively affect subscribership. I discuss this point,  
11 and other reasons why I believe the companies' revised plans will not negatively affect  
12 subscribership in Florida, in more detail in Section VI below.

13  
14 **Q. VERIZON, BELLSOUTH AND SPRINT ARE FILING THEIR REVISED PLANS**  
15 **AT THE SAME TIME. IS THERE ANY PUBLIC POLICY BENEFIT TO**  
16 **HAVING THE COMMISSION REVIEW THE COMPANIES' REVISED PLANS**  
17 **AT THE SAME TIME?**

18 A. Yes. The benefits are at least threefold. First, to the extent that basic local rates are  
19 simultaneously adjusted closer to their costs throughout the territory of the three  
20 companies serving 98 percent of the ILEC customers, the better competition will be  
21 benefited and market entry enhanced. Certain providers who might be positioned to  
22 provide facilities-based basic local service (e.g. cable telephony, electric and wireless  
23 providers) will not necessarily configure their coverage areas based on the ILECs service

---

<sup>6</sup> § 364.10(3)(a).

1 territories. For them the potential staggered implementation of the rebalancing could be  
2 an obstacle to competitive entry. There are several areas within Florida where at least  
3 two of the three major ILECs provide service where it may be economical for a new  
4 entrant to provide service regardless of the ILEC boundary. For example, the  
5 Orlando/Central Florida (BellSouth/Sprint) area, Southwest Florida (between Sarasota and  
6 Ft. Myers (Verizon/Sprint)) area and the Pensacola – Ft. Walton – Destin -- Panama City  
7 (BellSouth/Sprint/BellSouth) area are three relatively compact geographic areas served in  
8 part by at least two of the three companies. Each of these areas might appropriately  
9 comprise the service territory of a single facilities-based entrant. When the price  
10 increases contained in the company plans are implemented and signal to these entrants that  
11 pricing distortions are being reduced on a broad basis, the competitors may be able to  
12 more efficiently execute their business plans.

13

14 Second, it is also important to avoid unnecessary marketplace distortions that could affect  
15 the purchase decisions of end-users. End-users normally make their purchase decisions  
16 based in large part on relative price differences among providers. If the rate-rebalancing is  
17 not implemented across all companies simultaneously, end-users will make these  
18 decisions based on incomplete and imperfect information as they see some providers'  
19 rates increasing while other providers' rates remain the same (at least temporarily). The  
20 risk will be that regulatory scheduling rather than the relative costs and benefits of various  
21 service offerings becomes the driving force behind consumers' decisions. For example, it  
22 is easy to imagine a situation involving two or more of the ILECs —where a CLEC might  
23 be able to offer service at a legitimate cost savings to all customers, but if re-balancing is  
24 not done simultaneously perhaps only one firm's customers would respond to the  
25 competitive offer, because the other firm's rate increase had yet to be implemented.

1 Coordinated rate rebalancing across all companies will ensure that potential competitors  
2 are not artificially disadvantaged when introducing new service offers by artificial  
3 boundaries, and that customers are not disadvantaged by incorrect and incomplete  
4 information driving their purchase decisions.

5  
6 Third, the magnitude and timing of the access charge price reductions for the three  
7 — companies would also benefit end users statewide. IXCs will be able to implement more  
8 meaningful price reductions if they can aggregate their access cost reductions into a single  
9 round of pricing changes.

10  
11 **Q. THE LEGISLATION PERMITS A COMPANY TO RESTRUCTURE ITS RATES**  
12 **OVER A MINIMUM OF TWO YEARS AND A MAXIMUM OF FOUR. EACH OF**  
13 **THE COMPANIES PLANS TO HAVE INTRASTATE ACCESS RATES REACH**  
14 **PARITY WITH INTERSTATE RATES OVER A TWO-YEAR PERIOD. DO YOU**  
15 **BELIEVE THIS IS A GOOD IDEA?**

16 A. Yes I do, for several reasons. First, it is clearly permitted by the Tele-Competition Act.  
17 Second, it is a matter of economic principle that economic welfare is at its highest when  
18 prices are based on their underlying forward-looking costs and are not distorted. As I  
19 discuss in greater detail in Section III, prices that are distorted provide inferior signals for  
20 market participants and result in losses in consumer welfare because investment and  
21 purchase decisions by firms and consumers do not reflect the true costs that society incurs  
22 to provide the services. The companies' revised plans reduce these pricing distortions in  
23 the Florida telecommunications markets sooner rather than later and, by so doing, achieve  
24 economic efficiency gains sooner as well.

25

1 Third, a possible reason why one would prefer a more gradual rate restructuring time  
2 frame has to do with avoiding consumer "rate shock". As the words imply, rate shock  
3 implies that the increase in price proposed by the company is so high, that consumers  
4 would be obviously and adversely affected. However, based upon my personal  
5 experience as a former commissioner, as well as what I have observed in other states, I do  
6 not believe that the yearly increase in basic local prices will result in rate shock.

7  
8 **Q. PLEASE EXPLAIN WHY YOU BELIEVE THAT THE COMPANIES' PLANS**  
9 **WILL NOT RESULT IN RATE SHOCK.**

10 A. The companies' revised plans will result in relatively minor increases in a customer's  
11 basic local price. In addition, as I stated earlier, these price increases will not even apply  
12 to current Lifeline consumers and new Lifeline consumers who have become eligible as a  
13 result of the Tele-Competition Act raising the income threshold to 125% of the poverty  
14 level.

15  
16 In addition, with the reduction and elimination of the in-state connection fees, many  
17 customers might not even experience a significant change in their total bill. If there is an  
18 increase in the customers' bill, it will likely result in large part from increased stimulation  
19 from lower long distance charges that represent real gains to consumers because they are  
20 now able to make more calls at the new lower prices.

21  
22 Finally, the companies' revised plans compare favorably with other states that have  
23 approved rate-rebalancing plans that approved much larger increases than the companies'  
24 request. Importantly, these states' price adjustments did not jeopardize universal service.  
25 In Section VI, I also discuss the experience of some of the states that have already

1 implemented serious rate rebalancing plans, including Massachusetts where I presided as  
2 Chairman through one such adjustment.

3

4 **III. THE COMPANIES' REVISED PLANS WILL RESULT IN A**  
5 **"MORE ATTRACTIVE COMPETITIVE LOCAL EXCHANGE**  
6 **MARKET FOR THE BENEFIT OF RESIDENTIAL CONSUMERS"**  
7 **AND WILL INDUCE "ENHANCED MARKET ENTRY"**

8

9 **Q. HOW DO YOU JUDGE WHETHER THE COMPANIES' REVISED PLANS**  
10 **MEET THE CRITERIA OF § 364.164 (1) (a) AND (b)?**

11 A. § 364.164 (1) (a) states that the companies' plans should remove the current support for  
12 basic local telecommunications services that is impeding the creation of a more attractive  
13 competitive local exchange market for the benefit of residential consumers. In order for  
14 the companies' revised plans to meet the first criterion, they must show that the revised  
15 plans remove—or at a minimum reduce—support for basic local telecommunications. By  
16 so doing, they create a more "attractive" competitive local exchange market, because the  
17 price to be competed against by new entrants is raised to more closely reflect the real  
18 economic costs of doing business. The second criterion for the Commission's  
19 consideration is § 364.164 (1) (b) which simply states that the plans should induce  
20 enhanced market entry and no distinction is made between residential or business  
21 consumers.<sup>7</sup>

22

---

<sup>7</sup> There are other criteria in § 364.164 (1) that I do not discuss but that are the subject of the companies' respective witnesses.

1 Therefore, in evaluating whether the companies' revised plans meet the criteria in these  
2 sections, I must ascertain whether the revised plans: (1) remove current support for basic  
3 local telecommunications services, and (2) will likely result in a more attractive  
4 competitive environment that would benefit residential consumers and induce enhanced  
5 market entry.

6  
7 **Q. DO THE COMPANIES' REVISED PLANS REMOVE CURRENT SUPPORT FOR**  
8 **BASIC LOCAL TELECOMMUNICATIONS SERVICES?**
