PROCEEDINGS

(Transcript follows in sequence from Volume 3.)

CHAIRMAN CARTER: We are back on the record. And as we left, we were just getting ready to present the next witness. Mr. Anderson, you're recognized.

MR. ANDERSON: Thank you. FPL calls as its next witness Dr. Steven Sim, who has not been sworn.

CHAIRMAN CARTER: Dr. Sim, would you please stand and raise your right hand?

DR. STEVEN R. SIM

was called as a witness on behalf of Florida Power & Light Company and, having been duly sworn, testified as follows:

CHAIRMAN CARTER: Mr. Anderson.

MR. ANDERSON: Thank you.

DIRECT EXAMINATION

BY MR. ANDERSON:

Q Would you tell us your name and your business address?

A My name is Steve Sim. My business address is 9250 West Flagler Street, Miami.

Q By whom are you employed and in what capacity?

A By Florida Power & Light Company as a Senior Manager in the Integrated Resource Planning and the Resource Assessment and Planning Business Unit.

Q Have you prepared and filed 44 pages of prefiled

direct testimony in the West County 3 docket?

A Yes.

Q And 33 pages of prefiled direct testimony in the conversion dockets for Cape Canaveral and Riviera?

A Yes.

Q Did you file errata to your testimony?

A Yes, I did.

Q In addition to your errata, do you have any further changes or revisions?

A No.

Q If I asked you the same questions contained in your prefiled direct testimony and subject to your errata, would your answers be the same?

A Yes, they would.

MR. ANDERSON: FPL asks that Dr. Sim's prefiled direct testimony be inserted into the record as though read.

CHAIRMAN CARTER: The prefiled testimony will be inserted into the record as though read.

BY MR. ANDERSON:

Q You're sponsoring some exhibits?

A I'm sorry?

Q You're sponsoring some exhibits today?

A I'm sponsoring those that are in my testimony.

Q Okay. So Exhibits SRS-1 through 16 for West County 3; correct?

A Yes.

Q And for the conversion dockets we have, what, Exhibits SRS-1 through 9; right?

A I believe so, yes.

MR. ANDERSON: Okay. Mr. Chairman, Dr. Sim's exhibits have been premarked as hearing IDs Number 31 through 46 and 86 through 94.

CHAIRMAN CARTER: 86 through 94?

MR. ANDERSON: Yes.

CHAIRMAN CARTER: Thank you.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

DIRECT TESTIMONY OF DR. STEVEN R. SIM

DOCKET NO. 08_____ - EI

APRIL 8, 2008

Q. Please state your name and business address.

A. My name is Dr. Steven R. Sim, and my business address is 9250 West Flagler Street, Miami, Florida 33174.

Q. By whom are you employed and what position do you hold?

A. I am employed by Florida Power & Light Company (FPL) as Senior Manager of Integrated Resource Planning in the Resource Assessment & Planning Business Unit.

Q. Please describe your duties and responsibilities in that position.

A. I supervise and coordinate analyses that are designed to determine the magnitude and timing of FPL's resource needs and then develop the integrated resource plan with which FPL will meet those resource needs.

Q. Please describe your education and professional experience.

A. I graduated from the University of Miami (Florida) with a Bachelor's degree in Mathematics in 1973. I subsequently earned a Master's degree in Mathematics from the University of Miami (Florida) in 1975 and a Doctorate in Environmental Science and Engineering from the University of California at Los Angeles (UCLA) in 1979.

While completing my degree program at UCLA, I was also employed full-time as a Research Associate at the Florida Solar Energy Center during 1977 - 1979. My responsibilities at the Florida Solar Energy Center included an evaluation of Florida consumers' experiences with solar water heaters and an analysis of potential renewable resources including photovoltaics, biomass, wind power, etc., applicable in the southeastern United States.

In 1979 I joined FPL. From 1979 until 1991 I worked in various departments including Marketing, Energy Management Research, and Load Management, where my responsibilities concerned the development, monitoring, and cost-effectiveness of demand side management (DSM) programs. In 1991 I joined my current department, then named the System Planning Department, where I held different supervisory positions dealing with integrated resource planning. In late 2007 I assumed my present position.

Q. Are you sponsoring any exhibits in this case?

A. Yes. I am sponsoring Exhibits SRS-1 through SRS-16, which are attached to my testimony:

Exhibit SRS-1	Initial Projection of FPL's 2011 - 2017 Capacity Needs;
Exhibit SRS-2	Evaluation of FPL Self-Build Options: Resource Plans Analyzed;
Exhibit SRS-3	Evaluation of FPL Self-Build Options: Economic Analysis Results

Exhibit SRS-4	FPL's 2007 Request for Proposals Resource Need: 2011 & 2012;
Exhibit SRS-5	List of Organizations Submitting Proposals;
Exhibit SRS-6	Proposal Details;
Exhibit SRS-7	FPL's Ten Year Power Plant Site Plan: 2008 - 2017
Exhibit SRS-8	Revised Projection of FPL's 2011 - 2017 Capacity Needs;
Exhibit SRS-9	Summary of Resource Plans Evaluated;
Exhibit SRS-10	Economic Evaluation Results for Resource Plans – Generation System Costs Only;
Exhibit SRS-11	Economic Evaluation Results for Resource Plans – Generation System and Transmission-Related Costs Only;
Exhibit SRS-12	Calculation of Peak Hour Loss Cost for Resource Plan 2;
Exhibit SRS-13	Calculation of Annual Energy Loss Cost for Resource Plan 2;
Exhibit SRS-14	Economic Evaluation Results for Resource Plans - All Costs;
Exhibit SRS-15	Non-Economic Evaluation Results; and,
Exhibit SRS-16	Eligibility Determination Evaluation Results

Q. What is the scope and purpose of your testimony?

A. My testimony addresses eleven main points. First, I briefly discuss FPL's resource planning process. Second, I discuss how FPL determines what its future resource needs are projected to be. I also discuss FPL's initial projection of additional resource needs for 2011 – on that was the basis for FPL's analysis of its self-build options and the Request for Proposals (RFP) that was issued by FPL. Third, I discuss FPL's demand side management (DSM) efforts. Fourth, I discuss the selection of the "next planned generating unit" presented in FPL's 2007 RFP for 2011/2012 Capacity. Fifth, I discuss FPL's RFP and present the proposals that FPL received in response to the RFP. Sixth, I discuss FPL's revised projection of additional resource needs for 2011 – on that was based on FPL's revised load forecast and what this revised resource need projection means in regard to FPL's analysis of its next planned generating unit and the proposals. Seventh, I discuss the resource plans that were developed to evaluate the next planned generating unit and the proposals. Eighth, I present the results of FPL's Economic Evaluation. Ninth, I present the results of the Non-Economic Evaluation of the capacity options. Tenth, I present the results of the Eligibility Evaluation to determine the proposals' compliance with the RFP's Minimum Requirements. Eleventh, I summarize the results of the Economic, Non-Economic, and Eligibility Evaluations. The conclusion I draw from this information is that approval for FPL's West County Energy Center Unit 3 (WCEC 3) in 2011 is the best, most

cost-effective option and its approval is in the best interests of FPL's customers.

Q. Please summarize your testimony.

A. In late 2007, FPL's resource planning work developed a projection of future resource needs that showed that FPL had a need for additional resources starting in 2011 and continuing thereafter. In response to this projection of resource needs beginning in 2011, FPL evaluated self-build options.

FPL selected as its next planned generating unit a new 3x1 G CC combined cycle unit sited at the West County Energy Center (WCEC) to be placed in-service in June 2011. This new unit, WCEC 3, would be identical in regard to technology and size to WCEC 1 & 2 now under construction with, respectively, 2009 and 2010 in-service dates. FPL would seek approval for the unit under the Power Plant Siting Act and, therefore, the Bid Rule is triggered. FPL subsequently issued an RFP for new capacity to meet capacity needs in the 2011/2012 time frame on December 13, 2007. The WCEC 3 unit in 2011 was designated as FPL's next planned generating unit in the RFP.

Three proposals from two organizations were received in response to the RFP. While FPL determined whether the proposals would comply with the RFP's Minimum Requirements, FPL proceeded to analyze the proposals in the Economic and Non-Economic Evaluation work in hopes that the proposals would be found to have complied with the RFP's Minimum Requirements.

Prior to starting the Economic and Non-Economic Evaluations of the next planned generating unit and the RFP proposals, FPL developed a new load forecast. This new load forecast in February 2008 resulted in a revised, lower projection of FPL's resource needs. Using this revised load forecast, plus FPL's next planned generating unit and the RFP proposals, FPL developed eight resource plans of capacity options that were then evaluated. These eight resource plans can be summarized as follows:

- Resource Plan 1 included WCEC 3 in 2011;
- Resource Plans 2 through 6 included one or more of the three RFP proposals;
- Resource Plan 7 included WCEC 3 but with the in-service date delayed to 2012; and,
- Resource Plan 8 included an FPL 3x1G CC unit identical in size and performance to WCEC 3 at a Greenfield site with an in-service date delayed one more year to 2013.

The result of FPL's Economic Evaluation is that Resource Plan 1, that included WCEC 3 in 2011, is the clear economic choice by being at least $606 million less expensive in terms of cumulative present value of revenue requirements (CPVRR) than any other resource plan that included one or more of the proposals, and at least $137 million CPVRR less expensive than either of the other two resource plans that included an FPL self-build option in the 2012-2013 time frame. The analyses conducted by an Independent

Evaluator, Sedway Consulting, Inc. (Sedway Consulting), also clearly showed that WCEC 3 in 2011 is the most economical choice. Sedway Consulting's President, Alan Taylor, has submitted testimony in this proceeding.

Evaluations of the risk components of the various capacity options were carried out. The risk components evaluated in the Non-Economic Evaluation included three risk areas (i.e., Technical, Environmental, and Project Execution) not addressed in the Economic Evaluation, plus a separate Eligibility Evaluation that determined whether proposals met all of the RFP Minimum Requirements.

The Non-Economic Evaluation concluded that all three RFP proposals had an unacceptable level of risk in one or more of the evaluation categories and that FPL's next planned generating unit and other self-build options evaluated had acceptable levels of risk. The Eligibility Evaluation found that all three proposals failed to meet one or more of the RFP's Minimum Requirements. Based on the truly significant economic advantage of WCEC 3 in 2011, FPL determined it was unnecessary to meet with the Bidders in an attempt to resolve concerns over the problematic risk areas or the failure to meet the RFP's Minimum Requirements.

Consequently, Resource Plan 1 that includes WCEC 3 in 2011 is the best choice for FPL's customers from both an economic perspective and a risk profile perspective. Consequently, FPL's petition for an affirmative determination of need for WCEC 3 in 2011 should be granted.

I. FPL's Resource Planning Process

Q. What is the objective of FPL's resource planning process?

A. FPL's integrated resource planning (IRP) process was developed in the early 1990s and has been used since that time to determine three things: 1) the timing of when new resources are needed, 2) the magnitude (MW) of the needed resources, and 3) the type of resources that should be added. The type of resources that should be added is primarily based on a determination of the resources that result in the lowest average electric rates for FPL's customers. It should be noted that when only power plants or power purchases are the resources in question, the determination can be made on the basis of lowest total costs. The lowest total cost perspective in these cases is the same as the lowest average electric rate perspective, because the number of kilowatt-hours over which the costs are distributed does not change, as would be the case when demand side management resources are being examined.

Q. Please provide an overview of this resource planning process.

A. The IRP process has four main tasks. These four tasks are as follows:

- Task 1: Determine the magnitude and timing of FPL's new resource needs.
- Task 2: Identify the resource options and resource plans that are available to meet the determined magnitude and timing of FPL's resource needs (i.e., identify the available competing options and resource plans).
- Task 3: Evaluate the competing resource options and resource plans in regard to system economics and non-economic factors.
- Task 4: Select a resource plan from which FPL management will commit, as needed, to the nearer-term options.

As previously mentioned, FPL has used this basic resource planning approach for its major resource decisions since the early 1990s.

Q. Was this resource planning approach also used to select FPL's next planned generating unit and to perform the RFP evaluation?

A. Yes. The IRP process outlined above describes the basic approach that FPL takes in its major resource planning efforts. Two examples of such efforts are the analyses performed to identify FPL's best self-build option for 2011/2012 and the evaluations conducted as part of this RFP process.

In the selection of FPL's best self-build options, the four tasks are conducted to determine which self-build option should be selected as the next planned generating unit. Once the timing and magnitude of the 2011 - on resource needs were determined, FPL's self-build options were evaluated for their

ability to meet the need in a cost-effective manner. The self-build option that emerged from the system economic and non-economic analyses as the best option was then selected as the next planned generating unit.

In regard to the evaluation work for the current RFP, each of the four tasks outlined above was performed. Once the timing and magnitude of the 2011 – on resource needs were established, FPL then determined which resource options, including the next planned generating unit, the RFP proposals, and other FPL self-build options, were available to meet those needs. FPL then developed competing resource plans that included the available resource options with which to address the resource need. System economic and non-economic analyses were then conducted and a decision was made as to the best resource plan and associated resource option for FPL's customers.

II. FPL's Initial Projection of Resource s for 2011 - On

Q. How does FPL decide whether it needs additional future resources?

A. FPL uses two analytical approaches in its reliability analyses to determine the timing and magnitude of its future resource needs. The first approach is to make projections of reserve margins both for winter and summer peak hours for future years. A minimum reserve margin criterion of 20% is used to judge the projected reserve margins. The 20% reserve margin criterion is based on the reliability planning standard that FPL currently believes is the appropriate

criterion, and that FPL committed to maintain and the Commission approved in Order No. PSC-99-2507-S-EU.

The second approach is a Loss-of-Load-Probability (LOLP) evaluation. Simply stated, LOLP is an index of how well a generating system may be able to meet its demand (i.e., a measure of how often load may exceed available resources). In contrast to the reserve margin approach, the LOLP approach looks at the daily peak demands for each year, while taking into consideration the probability of individual generators being out of service due to scheduled maintenance or forced outages. LOLP is typically expressed in units of "numbers of times per year" that the system demand could not be served. FPL's LOLP criterion is a maximum of 0.1 days per year. This LOLP criterion is generally accepted throughout the electric utility industry.

For a number of years now, FPL's projected need for additional resources has been driven by the summer reserve margin criterion. This again was the case in FPL's reliability analysis that was the basis for FPL's projected 2011 - on resource needs.

Q. In making its projection of FPL's future resource needs, what were the assumptions used?

A. In the overall RFP process, there were actually two projections of FPL's future resource needs. The initial projection was used as the basis for FPL's initial analyses of its self-build options that led to the designation of WCEC 3

as its next planned generating unit. The initial projection was also used as the basis for the development of the RFP document issued by FPL in December 2007.

All but one of the assumptions used in making the initial projection of resource needs were identical to the assumptions used in FPL's most recent need filings for the nuclear uprates and the new Turkey Point 6 & 7 nuclear units. These identical assumptions include:

- All cost-effective DSM currently approved by the Commission through 2014 as FPL's DSM Goals, additional DSM through 2014 identified by FPL after the DSM Goals were established, plus a projection of continued DSM implementation after 2014 at a rate commensurate with currently projected annual implementation rates for the years immediately preceding 2014;
- 414 MW of new capacity from the uprates at FPL's four existing nuclear units;
- No addition of any new FPL generating units after WCEC 1 & 2 are added, respectively, in 2009 and 2010;
- No additional modifications/enhancements to FPL's existing generating units;
- 143 MW of capacity from assumed contract extensions and/or new contracts with renewable energy (waste-to-energy) facilities

currently under contract but whose current contracts are set to expire in the 2010 – 2012 time period; and,

- 144 MW of additional renewable firm capacity as a "placeholder" for renewable capacity that would be provided by new renewable purchases and/or FPL's renewable development efforts.

The only change in the assumptions from those used in the recent nuclear need filings was in FPL's load forecast. This initial projection of resource needs was based on the same FPL load forecast used in the two nuclear need filings. However, to this forecast was added the load requirement from serving Lee County Electric Cooperative (Lee County) starting in 2010. The Lee County requirement is approximately 200 MW for the 2010 through 2013 time period, then this requirement ramps up to a total of approximately 900 MW starting in 2014.

FPL witness Dr. Rosemary Morley discusses the nature and magnitude of the Lee County load in her testimony and how it was integrated into FPL's load forecast that was used previously in the nuclear need filings.

Q. What was the magnitude and timing of the initial projection of resource needs?

A. The initial resource need projection showed the additional incremental MW needed by the summer of 2011 was 214 MW if the resource is to be provided by a Supply side option (i.e., power plant construction or purchase) or, due to

the 20% reserve margin criterion, 178 MW (214 MW/1.20 = 178 MW) if provided by a DSM-based reduction to the forecasted peak load. Similar incremental need values for the summers of 2012 through 2017, respectively, are another 212 MW (Supply) or 177 MW (DSM) for 2012; 317 MW (Supply) or 264 MW (DSM) for 2013; 1,281 MW (Supply) or 1,068 MW (DSM) for 2014; 672 MW (Supply) or 560 MW (DSM) for 2015; 1,965 MW (Supply) or 1,638 MW (DSM); and 692 MW (Supply) or 577 MW (DSM).

The significant increases in the 2014 and 2016 needs are primarily due to the two factors. First, FPL will begin serving the entire Lee County load beginning in 2014 as previously discussed. Second, in 2016 two significant power purchases are projected to no longer be providing capacity and energy to FPL. One of these is a 931 MW power purchase agreement with the Southern Company that expires at the end of 2015. The other is a 381 MW power purchase from the St. Johns River Power Park (SJRPP). Due to Internal Revenue Service regulations, FPL will no longer be able to receive capacity and energy from the SJRPP agreement once a certain amount of energy has been received. FPL currently estimates that this point will be reached in early 2016.

These incremental annual resource need values add to a cumulative need value for 2011 – 2017 of 5,353 MW if the resource need is to be met by supply options or 4,461 MW if the resource need is to be met by DSM. This

initial projection of resource needs to meet the summer reserve margin criterion for 2011 – 2017, if the resource needs are to be met by Supply options, are shown in Exhibit SRS - 1. This document also shows that, if these levels of Supply additions are added to meet the summer needs, these additions will also satisfy the lower resource needs to meet the winter reserve margin criterion.

III. Demand Side Management

Q. When did FPL begin its DSM efforts, and how have they progressed over time?

A. FPL has a long history of identifying, developing and implementing DSM resources to avoid or defer the construction of new power plants. FPL first began offering DSM programs in the late 1970s with the introduction of its Watt-Wise Home Program. An increasing number of additional DSM programs were offered throughout the 1980s and 1990s. These programs have included both conservation and load management programs, targeting the residential, commercial, and industrial markets.

FPL's portfolio of DSM programs has evolved over time. FPL continually looks for new DSM opportunities in its research and development activities. When a new DSM opportunity is identified and projected to be cost-effective, FPL attempts either to implement a new DSM program or to incorporate this

DSM opportunity into one or more of its existing DSM programs. In addition, FPL has modified DSM programs over time in order to maintain the cost-effectiveness of the programs. This allows FPL to continue to offer the most cost-effective programs available. On occasion, FPL has also terminated DSM programs that were no longer cost-effective and could not be modified to become cost-effective.

Q. How effective has FPL been in implementing DSM, and what are the resulting impacts of these efforts?

A. FPL has been very successful in cost-effectively avoiding or deferring new power plant construction using DSM. Since the inception of its programs through the end of 2007, FPL has achieved 3,961 MW (at the generator) of summer peak demand reduction, 2,913 MW (at the generator) of winter peak demand reduction, and 42,301 GWh (at the generator) of energy savings. FPL has also completed more than 2,537,600 energy audits of customers' homes and facilities.

This amount of summer peak demand reduction has eliminated the need for the equivalent of 12 power plants of 400 MW capacity each (after accounting for reserve margin requirements). Most importantly, FPL has achieved this level of demand reduction without penalizing customers who are non-participants in its DSM programs. FPL has been able to avoid penalizing non-participating customers by offering only DSM programs that are designed to

reduce electric rates for all customers, DSM participants and non-participants alike.

Q. How do FPL's DSM efforts compare to those of other utilities?

A. The U.S. Department of Energy (DOE) reports annually on the effectiveness of utility DSM efforts through its Energy Information Administration. DOE separately measures both conservation and load management. Based on the most current comparative data available, which is for the year 2006, FPL is ranked number one nationally for cumulative conservation (i.e., energy efficiency) achievement and number three in load management.

Q. Has FPL continued to refine and improve its DSM programs, including looking for additional cost-effective DSM opportunities?

A. Yes. FPL continually seeks ways to refine, improve, and expand its portfolio of cost-effective DSM programs through its on-going program monitoring work as well as its research and development activities.

Q. What is FPL's current DSM projection?

A. Column (5) in Exhibit SRS-1 shows FPL's current projection of DSM (summer MW) through August 2017. This amount of DSM reflects FPL's DSM Goals that were approved by the Commission in Order No. PSC-04-0763-PAA-EG, additional cost-effective DSM that was identified by FPL subsequent to the establishment of FPL's DSM Goals, and a projected continuation of DSM implementation for 2015 – 2017 at implementation rates commensurate with those for the years immediately preceding 2014.

Q. Do FPL's projections of resource needs take into account all DSM found to be cost-effective and approved by the Commission?

A. Yes. FPL's projection of 2011 - 2017 resource needs presented in Exhibit SRS-1 already account for all of the reasonably achievable, cost-effective DSM identified by FPL and approved by the Commission. And, as mentioned above, the amount of DSM included in FPL's projection of resource needs also includes additional DSM found to be cost-effective after FPL's DSM Goals were established, plus an assumed continuation of DSM implementation for 2015-2017 at annual implementation rates commensurate with planned DSM implementation rates in the years immediately preceding 2014.

IV. The Selection of FPL's Next Planned Generating Unit

Q. What power plant self-build options and sites were considered before designating a third combined cycle unit at the West County Energy Center in 2011 as FPL's "next planned generating unit" as prescribed in the Bid Rule?

A. At the time FPL was evaluating its self-build options, it was using the initial projection of capacity needs that is presented in Exhibit SRS-1 that shows FPL's capacity needs beginning in 2011 and continuing in 2012 and later years. Therefore, FPL sought self-build options that could be brought in-service by June 2011 through June 2012.

In regard to the technology, the self-build capacity options that were evaluated were gas-fired combined cycle (CC) options. There are two reasons for this. First, to date, none of the new advanced technology coal generating units for which recent approval has been sought by any electric utility in Florida have received both need and permitting approval. In addition, even if need and permitting approval were possible, the longer construction time required for new coal-fired units makes it infeasible to add such units by 2011 or 2012. The same is true for new nuclear units. Therefore, only gas-fired generating unit additions are feasible self-build options in this time frame.

Second, in regard to the two types of gas-fired generating options, CC and combustion turbine (CT) units, FPL's analyses over the years have consistently shown that, due to the substantial load growth on FPL's system, CC units are more economical generating options than are CT units due to the much greater fuel efficiency of CC units, which results in much higher capacity factors and system fuel savings of CC units. These considerations led to an evaluation of 3x1 G CC units; i.e., the same technology chosen for WCEC 1 & 2, and 2x1 G CC units. These two types of CC units were evaluated for two different sites and in two in-service years.

In terms of specific sites for FPL's next planned generating unit, the most viable sites for a 2011 or 2012 unit were the WCEC site and FPL's existing Martin site. In terms of an in-service date, only a 3x1 G CC unit at WCEC

was possible by June 2011. This WCEC 3x1 G CC unit was also possible for a June 2012 in-service date as was a 3x1 G CC at Martin and a 2x1 G CC at WCEC. The 2011 in-service date was deemed possible only for a 3x1 G CC at WCEC because both of two required factors were in place. First, FPL already has engineering and construction plans for a 3x1 G unit at the site. Two, construction crews will already be at the site working on WCEC 1 & 2. If either another site or technology were to be used, the in-service date would be delayed beyond June 2011 (i.e., to June 2012 for reserve margin planning purposes).

Q. How did FPL combine these technologies, sites, and in-service dates in its analyses of self-build options?

A. Using the initial projection of capacity need that was previously discussed, FPL created and evaluated four different resource plans in order to determine what the most economical self-build CC unit was in regard to site, technology, and in-service date. The four resource plans, labeled Resource Plans A through D, were developed using the assumptions previously discussed in regard to the initial projection of resource needs. These resource plans had significant differences in the years 2011 through 2014, but differed little in the remaining years.

Resource Plan A included a 3x1 G CC unit at WCEC in 2011 (WCEC 3), followed by a 2014 3x1 G CC unit at Martin. This resource plan also included a 3x1 G CC in 2015, a 3x1 G CC in 2016, a 2x1 G CC in 2017, Turkey Point

nuclear units in 2018 and 2020, and 36 2x1 F CC filler units in the 2021 – 2040 time frame.

All four resource plans were identical in regard to the 2018 – on capacity additions. Resource Plans B through D were also identical to each other for 2011 by including a 214 MW one-year power purchase agreement (PPA) in that year.

Resource Plan B then included a 3x1 G CC unit at Martin in 2012, a 2014 3x1 G CC at WCEC, then the same resource additions for 2015-2017 as Resource Plan A.

Resource Plan C included a 2x1 G CC unit at WCEC in 2012, a 3x1 G CC unit at Martin in 2014, and one 3x1 G CC unit in each of the years 2015, 2016, and 2017.

Resource Plan D included a 3x1 G CC unit at WCEC in 2012, and is identical to Resource Plan A for the years 2014 through 2017.

Exhibit SRS-2 provides an overview of these resource plans. Resource Plans A, B, and C address the earliest in-service dates possible for the different technologies and sites. Resource Plan D addresses the evaluation of a 3x1 G CC unit at WCEC, but with the in-service date delayed one year to 2012.

Q. What costs were included in the economic evaluation?

A. For each resource plan, FPL evaluated the generator capital, capital replacement, and operation and maintenance (O&M) costs, transmission interconnection and integration capital costs, system emission costs, startup costs, firm gas transportation costs, project fuel costs, and system fuel costs (i.e., which are referred to as the "Generator System" costs) in a multi-year resource plan approach using the P-MArea production costing model and FPL's Fixed Cost Spreadsheet Model; the same models that were used in FPL's last several need filings. Through the use of P-MArea, the impacts that each CC unit being evaluated would have on the dispatch of FPL's existing generating units located in Southeastern Florida were also captured. Because all of the self-build options were assumed to be constructed with a capital structure of 55.8% equity / 44.2% debt, there was no impact from any of the self-build options on FPL's target adjusted capital structure of 55.8% equity / 44.2% debt. Therefore, no impacts on FPL's cost of capital were included in the evaluation.

Q. What were the results of the analyses to determine the best self-build option for FPL?

A. The results of these comparative analyses are presented in Exhibit SRS-3. From an examination of this document, two primary results emerge.

First, the lower costs of Resource Plan A compared to Resource Plans B and C, in which other technologies and sites were evaluated, show that placing a

third 3x1 G CC at the WCEC site in 2011 is the economic choice by a significant margin of at least $157 million CPVRR. Second, by comparing Resource Plan A to Resource Plan D, in which the only change is a one-year delay in bringing WCEC 3 in-service, it is evident that an economic advantage of $148 million CPVRR is gained by placing WCEC 3 in-service in June 2011 compared to delaying the in-service date to June 2012.

Based on these results, FPL designated WCEC 3 with an in-service date of June 2011 as its "next planned generating unit" for purposes of the RFP as required by the Bid Rule.

Q. Was the analytical approach used to determine FPL's best self-build option similar to the economic evaluation process FPL later utilized to examine proposals received in response to its RFP?

A. Yes. The basic analytical approach used to determine FPL's next planned generating unit is very similar to the Economic Evaluation process described in the capacity RFP and used to evaluate the proposals received in response to the RFP and FPL's next planned generating unit. Both analytical approaches capture all of the cost differences between the competing options/resource plans. However, in the analyses of the proposals received in response to the RFP, the fact that the proposals will have an impact on FPL's cost of capital was also captured in the analyses of the proposals.

V. The RFP and Proposals Received in Response to the RFP

Q. Please briefly describe FPL's RFP.

A. FPL issued an RFP on December 13, 2007 after holding a Pre-Issuance Meeting on December 11, 2007. The RFP document is presented as Exhibit SRS-4. The RFP was similar in its basic design and scope to capacity RFPs previously issued by FPL. This RFP sought proposals for up to 1,250 MW that could begin to provide firm capacity and energy starting in the June 2011 to June 2012 time frame. As discussed above, FPL's WCEC 3 unit with a June 2011 in-service date was presented as FPL's next planned generating unit.

FPL held a Pre-Bid Workshop in Miami on December 20, 2007 to explain the RFP and to answer questions from potential Bidders. Subsequent to this meeting, all of the questions from the meeting, along with FPL's answers, were posted on a website designed specifically for the RFP and available to potential Bidders. These parties were encouraged to continue to pose questions to FPL regarding the RFP through January 28, 2008. Proposals were due to FPL on or before February 13, 2008.

Q. Please provide a general description of the proposals that FPL received in response to the RFP.

A. FPL received three proposals from two organizations. A listing of the organizations (Bidders) that submitted proposals is presented in Exhibit SRS-5. The proposals were labeled as Proposals 1, 2, and 3 (P1, P2, and P3) and

more detailed information regarding the proposals, including capacity, technology, in-service dates, and term-of-service, is presented in Exhibit SRS-6.

Q. Did all of the proposals clearly provide the information FPL requested for its evaluations and meet the RFP Minimum Requirements, so that FPL could immediately begin its evaluations?

A. No. FPL and the Independent Evaluator, Sedway Consulting, reviewed all proposals received on the Proposal Due Date of February 13, 2008. Questions regarding whether the RFP's Minimum Requirements had been met by the proposals were identified during this initial review. In addition, certain information requested on the RFP forms for all three proposals was either omitted or needed clarification. Issues regarding omitted or confusing information were brought to the Bidders' attention and most were resolved relatively quickly.

Issues regarding whether proposals complied with the RFP's Minimum Requirements were not resolved as quickly. In order to avoid delays in the evaluation process, FPL proceeded with the Economic and Non-Economic Evaluations in hopes that the proposals would eventually be found to be in compliance with the RFP's Minimum Requirements.

VI. FPL's Revised Projection of Resource Needs for 2011 - On

Q. You mentioned earlier that there were two projections of FPL's future resource needs for 2011 – on. Why was a second projection made and when in the RFP process did this occur?

A. FPL revised its load forecast in early February 2008. Because this load forecast was significantly lower in the near-term than the load forecast previously discussed, a new projection of future resource needs was made. FPL witness Morley's testimony discusses the revised load forecast and how it was developed. In addition, a further discussion of FPL's revised load forecast is presented in FPL's Ten Year Power Plant Site Plan: 2008-2017 that is as attached as Exhibit SRS-7.

Q. In addition to a new lower load forecast in the near-term, were there any other meaningful changes to the assumptions used in the initial resource need projection that has been previously discussed?

A. Yes. One other meaningful change to the assumptions was made. This change is a slight lowering of the previously assumed 144 MW of new renewable capacity to 126 MW.

Q. How did these assumption changes alter the projection of FPL's future resource needs?

A. Primarily as a result of the revised, lower in the near-term load forecast, FPL's projection of its 2011 – on capacity needs was also lowered. The new incremental resource need projection for 2011-2017 is as follows: no resource

need for 2011 or 2012; a need of 301 MW (Supply) or 251 MW (DSM) for 2013; an additional need of 1,232 MW (Supply) or 1,027 MW (DSM) for 2014; an additional need of 632 MW (Supply) or 526 MW (DSM) for 2015; an additional need of 1,996 MW (Supply) or 1,663 MW (DSM) for 2016; and an additional need of 683 MW (Supply) or 569 MW (DSM) for 2017. These revised incremental annual resource need values add to a cumulative need value for 2011-2017 of 4,844 MW if the resource need is to be met by supply options, or 4,037 MW if the resource need is to be met by DSM. This revised projection of resource needs was utilized in the evaluation of FPL's next planned generating unit and the proposals received in response to FPL's RFP. This revised projection of FPL's capacity needs is presented in Exhibit SRS-8.

Q. What impact does the fact that, if viewed only from a reliability perspective, FPL no longer projects a resource need for 2011 have on this need filing?

A. FPL's analyses and its request for approval of a need determination to add WCEC 3 in 2011 are not based on meeting a capacity need in that year as is the "usual" case in a need filing. Instead, other considerations such as economic savings for FPL's customers, reductions in system fuel use and emissions, plus strategic concerns are driving FPL's analyses and request.

Q. What is the relevant issue in FPL's analysis?

A. The relevant issue is whether it is beneficial to FPL's customers to secure additional generating capacity – either from FPL's next planned generating

unit or from one or more of the RFP proposals - starting in 2011 or 2012, prior to when additional resources are needed strictly based on the 20% reserve margin, reliability-only perspective. This issue is discussed in FPL's filing in regard to several additional perspectives including: system economics, system fuel use, system emissions, and whether the addition of "early" capacity is strategically advantageous in regard to creating the opportunity to potentially convert one or more of FPL's existing generating units. The remainder of my testimony addresses in detail the system economic perspective listed above (and also discusses the Non-Economic and Eligibility Evaluations) for FPL's next planned generating unit and the RFP proposals. FPL witness Rene Silva's testimony also refers to the system economics perspective, plus his testimony addresses the other perspectives listed above: system fuel use, system emissions, and potential strategic advantages.

VII. The Resource Plans Utilized in FPL's Evaluation of the Next Planned Generating Unit and the RFP Proposals

Q. How many resource plans did FPL develop for its analyses of its next planned generating unit and the RFP proposals?

A. FPL developed 8 resource plans for use in its analyses of the RFP proposals and its next planned generating unit, WCEC 3. These resource plans are presented in Exhibit SRS-9.

Q. How were these resource plans developed?

A. The resource plans were developed utilizing the same assumptions that were used in the revised projection of resource needs as previously discussed. Each resource plan is designed to meet FPL's 20% reserve margin criterion in each year of the analysis period, 2008 through 2038. Each resource plan included the new nuclear units, Turkey Point 6 & 7, in 2018 and 2020, respectively. For the time period of 2014 through 2017, new unsited 3x1 G CC units were added as needed. For the time period of 2021 through 2038, new unsited 2x1 F CC "filler" units were added as needed. In addition, several resource plans included a one-year purchase of 345 MW in 2019 from an unknown source to meet a short-term resource need.

Q. The Economic Evaluation utilized these resource plans containing FPL's next planned generating unit or the RFP proposals. Why is it appropriate to perform the Economic Evaluation based on multi-year resource plans?

A. It is not only appropriate to do this, but also necessary if one is to capture and fairly compare all of the impacts that competing generation options with different capacity amounts, terms-of-service, heat rates, types of fuel, and costs will have on FPL's system.

For example, assume we are comparing Option A and Option B that both offer the same amount of capacity. Option A has a heat rate of 7,000 Btu/kWh and is offered to FPL for 15 years. Option B has an 8,000 Btu/kWh heat rate and is offered for 20 years. Evaluating these options from a resource plan

perspective allows one to capture the economic impacts of both the heat rate and term-of-service differences. The lower heat rate of Option A will allow it to be dispatched more than Option B, thus reducing the run time of FPL's existing units more than will Option B. This results in greater production cost savings for Option A. However, Option B's longer term-of-service means that it defers the need for future generation for a longer period. Therefore, Option B will provide capacity avoidance benefits for more years.

Only by taking a multi-year resource plan approach to the evaluation can factors such as these be captured and effectively compared. In the RFP Economic Evaluation, the resource plans created addressed the FPL system through the year 2038.

Q. Why are "filler" units needed in a resource plan evaluation?

A. The "filler" units are needed in a multi-year resource plan analysis as a proxy resource added to meet FPL's capacity needs for 2021 – on (i.e., after the Turkey Point 6 & 7 new nuclear units are added in 2018 and 2020, respectively. In this way the resource plans being compared all meet FPL's reliability criteria for each year in the analysis period, ensuring both that the resource plans are comparable and that the results of the evaluation are meaningful.

Q. Please discuss the individual resource plans.

A. As presented in Exhibit SRS-9, Resource Plan 1 consisted of WCEC 3 in 2011, a 3x1 G CC unit in 2014, two 3x1 G CC units in 2016, Turkey Point 6

& 7 in 2018 and 2020, respectively, the previously mentioned 345 MW one-year power purchase in 2019, and 35 filler units in the 2021 through 2038 time period.

Resource Plans 2 through 6 are similar to Resource Plan 1, but substitute first the individual proposals (P1, P2, and P3) for the WCEC 3 unit in their proposed in-service year, then substitute combinations of the proposals (P1 & P2, then P1 & P3) in their proposed in-service years.

Resource Plans 7 and 8 were added to the analysis to gauge the economic impact of building WCEC 3 in 2012, or of building a 3x1 G CC unit at a Greenfield site in 2013, instead of proceeding with the next planned generating unit or RFP proposals in their respective in-service years.

In Resource Plan 7, the capital costs for a third 3x1 G CC unit at the WCEC site, but with a one-year delay to 2012, are significantly greater, largely as a result of having approximately a one-year interruption in engineering and construction work between the 2009 and 2010 WCEC 1 & 2 units and a third CC unit in 2012. Resource Plan 8 reflects FPL's view that it is unlikely that a third CC unit would be built at the WCEC site if that unit were not to come in-service by 2012. FPL witness John Gnecco's testimony addresses both the greater cost for a third CC unit at the WCEC site if the unit is delayed until

2012, and the reasons why it is unlikely that the WCEC site would be used for a third CC unit if the in-service date were to be delayed until 2013.

VIII. The Results of the RFP Economic Evaluation

Q. Did FPL follow the RFP evaluation methodology described in the RFP?

A. Yes. The eight-step evaluation methodology described in Appendix D of the RFP was utilized in FPL's RFP evaluation work. In practice, a number of these steps are conducted simultaneously. In addition, and as discussed in Appendix D of the RFP, a couple of the steps are considered to be optional and FPL chose not to utilize these optional steps in this evaluation.

One of these optional steps is "Step 2: Economic Evaluation of Individual Proposals". The RFP's Appendix D states that "If there are a relatively small number of eligible proposals, FPL may choose to forego this step of evaluating individual proposals and proceed to the creation and evaluation of portfolios". Because three proposals were submitted in response to the RFP, FPL chose to forego this step and used the proposals directly to create the resource plans (or portfolios) previously discussed.

Another optional step is "Step 7: Best and Final Offer Evaluation". Based on the significant differences in the Economic Evaluation results that will be discussed in the remainder of my testimony, FPL chose to also forego this step

and, as described in the RFP's Appendix D, to "base its decision on the evaluation (Economic and Non-Economic) performed on the original proposals."

Q. How did FPL address the first step, "Initial Screening for Eligibility", in the evaluation?

A. The issue of eligibility was an on-going one for the three proposals. Rather than wait to start the Economic and Non-Economic Evaluations until this issue had been resolved, FPL chose to begin its evaluation work with the hope that all proposals would eventually be found to be eligible. I'll return to the eligibility issue later in my testimony.

Q. What fuel cost and environmental compliance cost forecasts were used in the economic evaluation?

A. In the Economic Evaluation, FPL used the same fuel cost and environmental compliance cost forecasts that were made available to prospective Bidders as part of the information presented by FPL about the RFP evaluation process. These forecasts were presented as addenda to the RFP that were posted on FPL's RFP website shortly after the RFP was issued on December 13, 2007.

These forecasts are identical to specific forecasts used in FPL's two recent nuclear need filings to the FPSC (Docket Nos. 070602-EI and 070650-EI). These dockets were underway at the time the RFP was prepared and issued and these forecasts represented the most current forecast information available. The fuel cost and environmental compliance cost forecasts used in

the RFP Economic Evaluation were labeled in the nuclear filings, respectively, as the Medium Gas Cost forecast and the Env II forecast. FPL witness Heather Stubblefield discusses the fuel cost forecast in her testimony and FPL witness Kennard Kosky discusses the environmental compliance cost forecast in his testimony.

Q. What were the results of the initial economic analysis of the resource plans?

A. The results of the initial economic analysis of the resource plans, referred to as Step 3 in the RFP's Appendix D, are presented in Exhibit SRS-10. This step presents the Generation System costs for each of the resource plans. The Generation System costs include: generation capital, fixed O&M, capital replacement, variable O&M, project fuel, FPL system fuel, firm gas transportation, transmission interconnection capital, startup costs, system emissions, and proposal payments.

At this stage of the Economic Evaluation, Resource Plan 1, that features WCEC 3 in 2011, is the most economical plan with an economic advantage of at least $505 million CPVRR compared to Resource Plans 2 through 6 that include one or more proposals, and at least $131 million CPVRR compared to Resource Plans 7 and 8 that include other FPL self-build options.

Q. In Steps 4 and 5 of the economic analysis, additional system costs related to the transmission system, the fuel system, and costs of capital are developed and added to the results of the initial economic analysis of the

resource plans. How did the economic results change when these additional system costs are included?

A. Exhibit SRS-11 presents the results when the transmission system-related costs are included in the analysis. These additional costs address transmission integration capital costs, peak hour capacity losses, and annual energy losses.

In regard to the transmission integration costs, the transmission integration costs for WCEC 3 in 2011 were already included in the capital costs for that unit and, therefore, had already been captured for Resource Plan 1. Likewise, the transmission integration costs were also included in the capital costs for the two other FPL self-build options evaluated, WCEC 3 in 2012 that is included in Resource Plan 7 and a 3x1 G CC at a Greenfield site that is included in Resource Plan 8. Consequently, there were zero additional transmission integration costs for Resource Plans 1, 7, and 8.

The transmission integration costs for the remaining five resource plans were projected to be negligible (i.e., approximately $0.4 million or less). Therefore, for purposes of the Economic Evaluation, the transmission integration costs for Resource Plans 2 through 6 are assumed to be zero as well.

However, significant differences are projected in the transmission system losses for the resource plans. In calculating the cost of these losses, the costs are presented in terms of relative costs to those of Resource Plan 1.

As shown in Exhibit SRS-11, the economic advantage of Resource Plan 1, that features WCEC 3 in 2011, is increased to at least $607 million CPVRR compared to Resource Plans 2 through 6 that include one or more of the proposals, or to at least $137 million CPVRR compared to Resource Plans 7 and 8 that include other FPL self-build options, by the inclusion of these transmission system-related costs.

Q. Do the projected transmission costs for integration and losses presented in Exhibit SRS-11 capture all of these potential transmission-related costs for the eight resource plans?

A. Not necessarily. Although FPL believes that the projected costs for transmission integration and losses shown in Exhibit SRS-11 fully capture all of these transmission-related costs for Resource Plans 1, 7, and 8, it is possible that there are additional transmission-related costs for Resource Plans 2, 3, 4, 5, and 6.

These five resource plans all include one or more of the RFP proposals. Each of these proposals is based on generating facilities for which the transmission screening analyses indicated a potential for transmission overloads on non-FPL transmission systems that would need to be addressed if one or more of the RFP proposals were ultimately selected.

This finding increases the potential for additional costs that could be incurred in order for these proposals to supply capacity and energy to FPL.

Q. How were the costs of the transmission losses calculated?

A. These calculations were performed consistent with the methodology described in Appendix D of the RFP. In order to demonstrate how the costs associated with the peak hour capacity losses and the annual energy losses are developed, Exhibits SRS-12 and SRS-13 present those calculations for Resource Plan 2.

Q. Did the economic results change when the other additional system costs, the gas system costs and the cost of capital impacts, were included?

A. Yes. FPL's analysis showed there were no upstream gas costs associated with the resource plans that had not already been addressed in the initial economic analyses of the resource plans, but there were cost of capital impacts associated with the resource plans that included new purchases of firm capacity; i.e., the Resource Plans 2 through 6 that included one or more of the proposals.

Q. What were these cost of capital impacts for the resource plans?

A. There were no cost of capital impacts for Resource Plans 1, 7, and 8 because these resource plans included no proposals for additional purchased power. In addition, FPL's projected cost of capital was used in developing the capital costs of the FPL self-build options included in these resource plans. In regard to Resource Plans 2 through 6, there were impacts to FPL's cost of capital because these resource plans each included at least one proposal for a firm capacity purchase. The cost of capital impacts were calculated according to the methodology described in Appendix D of FPL's RFP in which an equity adjustment calculation based on Standard & Poor's (S&P) methodology is

calculated first, then the value of two mitigating factors are determined and subtracted from the equity adjustment calculation to derive a net equity adjustment, or cost of capital impact, value.

The cost of capital impacts included a credit of $1 million CPVRR for Resource Plan 2 that included the 3-year proposal P1 to a range of costs of $69 to $99 million CPVRR for Resource Plans 3 through 6 that included either a 20-year or a 25-year proposal. As presented in Appendix D of the RFP, the S&P equity adjustment calculation results in relatively low equity adjustment costs for a short-term proposal, and increasingly higher equity adjustment costs for a longer term proposal. This "escalation" in the equity adjustment costs depending upon the proposed term-of-service is higher than the growth in the mitigating factors values. This characteristic of the equity adjustment calculation resulted in the mitigating factors yielding a slight net equity adjustment credit for Resource Plan 2 that includes the 3-year proposal. However, Resource Plans 2 through 6 that include the 20-year or 25-year proposals, have a net equity adjustment cost.

Q. What were the results of this evaluation of total costs?

A. Exhibit SRS-14 presents the Economic Evaluation results for the resource plans after these additional costs have been included. This document presents the total system costs of each resource plan. The final Economic Evaluation results presented in Exhibit SRS-14 show that the economic advantage of Resource Plan 1, featuring WCEC 3 in 2011, is at least $606 million CPVRR

compared to Resource Plans 2 through 6 that include one or more of the proposals, and at least $137 million CPVRR compared to Resource Plans 7 and 8 that include other FPL self-build options.

Therefore, from an economic perspective, Resource Plan 1, featuring WCEC 3 in 2011, is the best, most cost-effective choice for FPL's customers.

Q. Did FPL change the cost estimate for its next planned generating unit at any time during the RFP?

No.

IX. The Results of the RFP Non-Economic Evaluation

Q. What is the objective of the Non-Economic Evaluation?

A. The Non-Economic Evaluation is a form of risk assessment for the capacity options being considered. This evaluation focused on three aspects of risk: Environmental, Technical, and Project Execution. These three aspects of risk were evaluated for the individual capacity options in terms of having an acceptable or unacceptable level of risk. Representatives from FPL's Environmental, Power Generation, and Resource Assessment & Planning departments/business units (who had not participated in either the development or the selection of FPL's next planned generating unit) performed these evaluations.

Q. What were the results of the Non-Economic Evaluation?

A. The results of this evaluation are presented in Exhibit SRS-15. The results shown can be summarized in four statements. First, all three RFP proposals were found to have acceptable levels of risk in regard to the Environmental category. Second, two of the proposals, P2 and P3, were found to have unacceptable levels of risk in the Technical category. Third, all three of the proposals, P1, P2, and P3, were found to have unacceptable levels of risk in the Project Execution category. Fourth, in regard to the FPL self-build options featured in Resource Plans 1, 7, and 8, these units are based on the same design, and in two of the resource plans are sited at the same site, as the approved WCEC 1 & 2 CC units. Consequently, the FPL self-build options are considered to have acceptable levels of risk in regard to the Environmental and Technical categories. (The Project Execution category is not applicable for an FPL self-build option because no contract between FPL and a purchased power provider is required.)

As a result of these findings, FPL would need to meet with each of the Bidders and work together to resolve FPL's concerns in the Technical and Project Execution categories in order to further consider the proposals.

However, based on the results of the Economic Evaluation presented previously, none of the Resource Plans that include one or more proposals is closer than $606 million CPVRR to Resource Plan 1 that includes WCEC 3 in

2011. Because the proposals are not economically competitive, FPL determined that attempts to resolve these risk-related issues were unnecessary.

X. The Results of the Eligibility Evaluation of the RFP Proposals

Q. Please discuss the Eligibility Evaluation of the proposals received in response to FPL's RFP.

A. FPL evaluated the individual proposals to ensure that they were properly submitted and complied with all of the Minimum Requirements listed in the RFP. The Eligibility Evaluation was on-going while the Economic and Non-Economic Evaluation work took place. This evaluation examined the information contained in the proposals and information supplied by the Bidders in response to FPL's request for clarification and/or to supply missing information. Using this information, each proposal was evaluated to determine if all of the RFP Minimum Requirements had been met.

Q. What were the results of the Eligibility Evaluation?

A. The results of this evaluation are presented in Exhibit SRS-16. As shown in this exhibit, all three RFP proposals failed to meet one or more of the RFP's Minimum Requirements.

As a result of this finding, FPL would need to meet with each of the Bidders to see if the proposals could be modified to comply with the RFP's Minimum Requirements so that FPL could further consider the proposals.

However, as discussed above in regard to the Non-Economic Evaluation results, because the proposals are not economically competitive, FPL determined that attempts to resolve these failures to comply with RFP Minimum Requirements were unnecessary.

XI. Conclusions

Q. Would you please summarize the results of the three evaluations; Economic, Non-Economic, and Eligibility?

A. Yes. The Economic Evaluation results showed that Resource Plan 1, featuring WCEC 3 in 2011, is the economic choice because it is at least $606 million CPVRR less expensive than any resource plan that included one or more of the proposals, and at least $137 million CPVRR less expensive than either of the two resource plans that included other FPL self-build options.

The Non-Economic Evaluation resulted in a finding that all three proposals received in response to the RFP had unacceptable levels of risk in the Technical and Project Execution categories of the evaluation. In the Eligibility Evaluation, all three proposals were also found to be not in compliance with

one or more of the Minimum Requirements listed in the RFP. However, because the resource plans that include the proposals are not economically competitive with Resource Plan 1 that includes WCEC 3 in 2011, FPL determined that it was unnecessary to meet with the Bidders in an attempt to resolve concerns regarding these risk issues and the failure to comply with the RFP's Minimum Requirements.

Consequently, Resource Plan 1, featuring WCEC 3 in 2011, is the best choice for FPL's customers from both an economic and a risk profile perspective. Consequently, FPL's petition for an affirmative determination of need for WCEC 3 in 2011 should be granted.

Q. Does this conclude your testimony?

A. Yes.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

DIRECT TESTIMONY OF DR. STEVEN R. SIM

DOCKET NO. 08_____ - EI

APRIL 30, 2008

Q. Please state your name and business address.

A. My name is Steven R. Sim, and my business address is 9250 West Flagler Street, Miami, Florida 33174.

Q. By whom are you employed and what position do you hold?

A. I am employed by Florida Power & Light Company (FPL) as Senior Manager of Integrated Resource Planning in the Resource Assessment & Planning Business Unit.

Q. Please describe your duties and responsibilities in that position.

A. I supervise and coordinate analyses that are designed to determine the magnitude and timing of FPL's resource needs and then develop the integrated resource plan with which FPL will meet those resource needs.

Q. Please describe your education and professional experience.

A. I graduated from the University of Miami (Florida) with a Bachelor's degree in Mathematics in 1973. I subsequently earned a Master's degree in Mathematics from the University of Miami (Florida) in 1975 and a Doctorate in Environmental Science and Engineering from the University of California at Los Angeles (UCLA) in 1979.

While completing my degree program at UCLA, I was also employed full-time as a Research Associate at the Florida Solar Energy Center during 1977 - 1979. My responsibilities at the Florida Solar Energy Center included an evaluation of Florida consumers' experiences with solar water heaters and an analysis of potential renewable resources including photovoltaics, biomass, wind power, etc., applicable in the Southeastern United States.

In 1979 I joined FPL. From 1979 until 1991, I worked in various departments including Marketing, Energy Management Research, and Load Management, where my responsibilities concerned the development, monitoring, and cost-effectiveness of demand side management (DSM) programs. In 1991 I joined my current department, then named the System Planning Department, where I held different supervisory positions dealing with integrated resource planning. In late 2007 I assumed my present position.

Q. Are you sponsoring any exhibits in this case?

A. Yes. I am sponsoring Exhibits SRS-1 through SRS-9, which are attached to my testimony:

Exhibit SRS-1	FPL's Ten Year Power Plant Site Plan 2008-2017;
Exhibit SRS-2	Projection of FPL's Capacity Needs: 2008-2017;
Exhibit SRS-3	Resource Plans Utilized in the Analyses;
Exhibit SRS-4	Comparison of Two Resource Plans: Projection of Annual Summer Reserve Margins 2010-2017;

Exhibit SRS-5	Economic Evaluation Results for Two Resource Plans – Generation System Costs Only;
Exhibit SRS-6	Economic Evaluation Results for Two Resource Plans - All Costs;
Exhibit SRS-7	Comparison of Two Resource Plans: Projection of System Emissions 2010-2017;
Exhibit SRS-8	Comparison of Two Resource Plans: Projected 2017 System CO_2 Emission Levels; and,
Exhibit SRS-9	Comparison of Two Resource Plans: Projected System Oil and Natural Gas Usage: 2013-2017.

Q. What is the scope and purpose of your testimony?

A. My testimony addresses seven main points. First, I briefly discuss FPL's resource planning process. Second, I discuss how FPL determines what its future resource needs are projected to be. I also discuss FPL's projection of additional resource needs for the 2008-2017 time period. Third, I discuss FPL's DSM efforts. Fourth, I briefly discuss the resource option, conversion of two existing FPL plants, which is the focus of the FPL's analyses that are presented in this filing. Then I present and discuss the two resource plans that were developed in order to analyze the conversion option. Fifth, I present the results of FPL's economic analyses of the two resource plans. Sixth, I present the results of a non-economic analysis that examined the two resource plans from three perspectives. Seventh, I summarize the results of the economic and non-economic analyses of the two resource plans. The conclusion I draw from

this information is that approval for the conversion of two of FPL's existing plants is the best, most cost-effective option and its approval is in the best interests of FPL's customers.

Q. Please summarize your testimony.

A. In FPL's resource planning work in late 2007 and early 2008, one of the focal points was the possibility of a conversion of various existing FPL plants. This conversion basically involves taking the existing generating unit(s) at each plant out-of-service, removing the unit(s), and building a new 3x1 G combined cycle (CC) unit at the plant. The new 3x1 G CC unit would be virtually identical to those CC units being constructed at FPL's West County Energy Center (WCEC) site. FPL's analysis identified that the best candidates for conversion were the generating units at the Cape Canaveral plant; Cape Canaveral units 1 & 2, and the generating units at the Riviera plant; Riviera units 3 & 4. (In the remainder of my testimony I will generally refer only to the Cape Canaveral and Riviera plants.)

In order to analyze these conversions, FPL developed two resource plans. One of these, the Resource Plan with Conversions, featured the conversions of the two plants. The Cape Canaveral plant is projected to be taken out-of-service in September 2010 with completion of the conversion at the plant in 2013. The Riviera plant is projected to be taken out-of-service in April 2011 with completion of the conversion at the plant in 2014. Therefore, the existing capacity at the two plants would be permanently removed from the FPL

system and replaced with two new 3x1 G CC units, one new CC at each of the two plants.

The other resource plan, the Resource Plan without Conversions, did not include any conversions. All new generating units in this resource plan were assumed to be new 3x1 G CC units at new, "Greenfield" sites, including a new 3x1 G CC unit projected to be added in 2014.

FPL then analyzed the two resource plans from both an economic and a non-economic perspective. In the economic analysis, the cumulative present value of revenue requirements (CPVRR) were calculated for each resource plan and compared. In the non-economic analysis, three perspectives were taken. First, system annual emissions of sulfur dioxide (SO_2), nitrogen oxides (NO_x), and carbon dioxide (CO_2) emissions were projected for each of the resource plans and directly compared. Second, the CO_2 projections for 2017 for each resource plan were compared in light of Governor Crist's Executive Order No. 07-127 that calls for significant CO_2 reductions to be reached by that year. Three, the two resource plans were directly compared in regard to projections of FPL system annual usage of oil and natural gas.

The economic analysis results showed that the Resource Plan with Conversions results in an economic savings to FPL's customers of $457 million CPVRR compared to the Resource Plan without Conversions.

The non-economic analysis found that the Resource Plan with Conversions, compared to the Resource Plan without Conversions, is projected to result in an average during the 2013 through 2017 time period of approximately 4,600 tons per year less of SO_2 emissions, 3,900 tons per year less of NO_x emissions, and 960,000 tons per year less of CO_2 emissions once the conversions have been completed. During the life of the conversion plants, the total emission reductions are projected to be approximately 60,300 tons of SO_2, 55,300 tons of NO_x, and 15.7 million tons of CO_2. In regard to CO_2 emissions in the year 2017 (the year targeted in the Governor's Executive Order), the Resource Plan with Conversions is projected to result in approximately 900,000 tons less of CO_2 emissions compared to the Resource Plan without Conversions. The Resource Plan with Conversions is also projected to achieve significant reductions in the FPL system annual usage of oil and natural gas, once the conversions are completed. This outcome is primarily driven by the fact that the Resource Plan with Conversions is projected to result in an improvement of approximately 1.1% in FPL's system average heat rate compared to the Resource Plan without Conversions.

Consequently, the Resource Plan with Conversions is the best choice for FPL's customers from both an economic and a non-economic perspective. Consequently, FPL's petition for a determination of need to convert its existing Cape Canaveral and Riviera plants should be granted.

I. FPL'S RESOURCE PLANNING PROCESS

Q. What is the objective of FPL's resource planning process?

A. FPL's integrated resource planning (IRP) process was developed in the early 1990s and has been used since that time to determine three things: 1) the timing of when new resources are needed, 2) the magnitude (MW) of the needed resources, and 3) the type of resources that should be added. The type of resources that should be added is primarily based on a determination of the resources that result in the lowest average electric rates for FPL's customers. It should be noted that when only power plants or power purchases are the resources in question, the determination can be made on the basis of lowest total costs. The lowest total cost perspective in these cases is the same as the lowest average electric rate perspective, because the number of kilowatt-hours over which the costs are distributed does not change, as would be the case when DSM resources are being examined.

Q. Please provide an overview of this resource planning process.

A. The IRP process has four main tasks. These four tasks are as follows:

- Task 1: Determine the magnitude and timing of FPL's new resource needs.
- Task 2: Identify the resource options and resource plans that are available to meet the determined magnitude and timing of FPL's resource needs (i.e., identify the available competing options and resource plans).

- Task 3: Evaluate the competing resource options and resource plans in regard to system economics and non-economic factors.
- Task 4: Select a resource plan from which FPL management will commit, as needed, to the nearer-term options.

As previously mentioned, FPL has used this basic resource planning approach for its major resource decisions since the early 1990s. Additional information regarding FPL's IRP process appears in FPL's Ten Year Power Plant Site Plan 2008-2017 that is presented as Exhibit SRS-1. This document also provides a variety of additional information regarding the FPL system.

Q. Was this resource planning approach used to analyze the conversion option?

A. Yes. The IRP process outlined above describes the basic approach that FPL takes in its major resource planning efforts, including the analysis presented in this filing.

In regard to the analysis work conducted for this filing, each of the four tasks outlined above was performed. Once the timing and magnitude of FPL's resource needs were established, FPL then identified resource options that could meet those needs. These options included the conversion of the existing Cape Canaveral and Riviera plants, and a 3x1 G combined cycle (CC) unit at a Greenfield site. FPL then developed two resource plans that included these competing resource options. System economic and non-economic analyses

were then conducted and a decision was made as to the best resource plan and associated resource option for FPL's customers.

II. FPL'S PROJECTION OF RESOURCE NEEDS FOR 2008-2017

Q. How does FPL decide whether it needs additional future resources?

A. FPL uses two analytical approaches in its reliability analyses to determine the timing and magnitude of its future resource needs. The first approach is to make projections of reserve margins both for winter and summer peak hours for future years. A minimum reserve margin criterion of 20% is used to judge the projected reserve margins. The 20% reserve margin criterion is based on the reliability planning standard that FPL currently believes is the appropriate criterion, and that FPL committed to maintain and the Commission approved in Order No. PSC-99-2507-S-EU.

The second approach is a Loss-of-Load-Probability (LOLP) evaluation. Simply stated, LOLP is an index of how well a generating system may be able to meet its demand (i.e., a measure of how often load may exceed available resources). In contrast to the reserve margin approach, the LOLP approach looks at the daily peak demands for each year, while taking into consideration the probability of individual generators being out of service due to scheduled maintenance or forced outages. LOLP is typically expressed in units of "numbers of times per year" that the system demand could not be served.

FPL's LOLP criterion is a maximum of 0.1 days per year. This LOLP criterion is generally accepted throughout the electric utility industry.

For a number of years now, FPL's projected need for additional resources has been driven by the summer reserve margin criterion. This again was the case in FPL's reliability analysis that was the basis for FPL's projected resource needs for 2008-2017.

Q. In making its projection of FPL's future resource needs, what were the assumptions used?

A. The assumptions used in making the projection of resource needs were identical to the assumptions used in the revised projection of resource needs presented in FPL's most recent need filing for the West County Energy Center unit 3 (WCEC 3). The identical assumptions include:

- All cost-effective DSM currently approved by the Commission through 2014 as FPL's DSM Goals, additional DSM through 2014 identified by FPL after the DSM Goals were established, plus a projection of continued DSM implementation after 2014 at a rate commensurate with currently projected annual implementation rates for the years immediately preceding 2014;
- 414 MW of new capacity from the uprates at FPL's four existing nuclear units;
- FPL's February 2008 load forecast that includes the Lee County Electric Cooperative (Lee County) load. (This load forecast was

also referred to as the Revised Load Forecast in the WCEC 3 determination of need filing);

- No new units after the addition of WCEC units 1 & 2 in 2009 and 2010, respectively;
- No additional modifications/enhancements to FPL's existing generating units;
- 143 MW of capacity from assumed contract extensions and/or new contracts with renewable energy (waste-to-energy) facilities currently under contract but whose current contracts are set to expire in the 2010 – 2012 time period; and,
- 126 MW of additional renewable firm capacity as a "placeholder" for renewable capacity that would be provided by new renewable purchases and/or FPL's renewable development efforts.

Q. What was the magnitude and timing of the projection of resource needs?

A. The incremental resource need projection for 2008-2017 is as follows: no resource need for 2008-2012; a need of 301 MW (Supply) or 251 MW (DSM) for 2013; an additional need of 1,232 MW (Supply) or 1,027 MW (DSM) for 2014; an additional need of 632 MW (Supply) or 526 MW (DSM) for 2015; an additional need of 1,996 MW (Supply) or 1,663 MW (DSM) for 2016; and an additional need of 683 MW (Supply) or 569 MW (DSM) for 2017. These incremental annual resource need values add to a cumulative need value for 2011-2017 of 4,844 MW if the resource need is to be met by supply options, or 4,037 MW if the resource need is to be met by DSM.

The significant increases in the 2014 and 2016 needs are primarily due to the two factors. First, FPL will begin serving the entire Lee County load beginning in 2014 as discussed in FPL witness Dr. Rosemary Morley's testimony. Second, in 2016 two significant power purchases are projected to no longer be providing capacity and energy to FPL. One of these is a 931 MW power purchase agreement with the Southern Company that expires at the end of 2015. The other is a 381 MW power purchase from the St. Johns River Power Park (SJRPP). Due to Internal Revenue Service regulations, FPL will no longer be able to receive capacity and energy from the SJRPP agreement once a certain amount of energy has been received. FPL currently estimates that this point will be reached in the first half of 2016. Because the loss of capacity from these two power purchases is projected to occur in 2016, and the decision years in this filing are 2013 and 2014, the loss of these power purchases are not a factor in this filing.

This projection of resource needs to meet the summer reserve margin criterion for 2008–2017, if the resource needs are to be met by Supply options, are shown in Exhibit SRS-2. This document also shows that, if these levels of Supply additions are added to meet the summer needs, these additions will also satisfy the lower resource needs to meet the winter reserve margin criterion.

III. DEMAND SIDE MANAGEMENT (DSM)

Q. When did FPL begin its DSM efforts, and how have they progressed over time?

A. FPL has a long history of identifying, developing and implementing DSM resources to avoid or defer the construction of new power plants. FPL first began offering DSM programs in the late 1970s with the introduction of its Watt-Wise Home Program. An increasing number of additional DSM programs were offered throughout the 1980s and 1990s, and continues in this decade. These programs have included both conservation and load management programs, targeting the residential, commercial, and industrial markets.

FPL's portfolio of DSM programs has evolved over time. FPL continually looks for new DSM opportunities in its research and development activities. When a new DSM opportunity is identified and projected to be cost-effective, FPL attempts either to implement a new DSM program or to incorporate this DSM opportunity into one or more of its existing DSM programs. In addition, FPL has modified DSM programs over time in order to maintain the cost-effectiveness of the programs. This allows FPL to continue to offer the most cost-effective programs available. On occasion, FPL has also terminated DSM programs that were no longer cost-effective and could not be modified to become cost-effective.

Q. How effective has FPL been in implementing DSM, and what are the resulting impacts of these efforts?

A. FPL has been very successful in cost-effectively avoiding or deferring new power plant construction using DSM. Since the inception of its programs through the end of 2007, FPL has achieved 3,961 MW (at the generator) of summer peak demand reduction, 2,913 MW (at the generator) of winter peak demand reduction, and 42,301 GWh (at the generator) of energy savings. FPL has also completed more than 2,537,600 energy audits of customers' homes and facilities.

After accounting for reserve margin requirements, the 3,961 MW of summer peak demand reduction from FPL's DSM efforts equates to 4,753 MW (= 3,961 x 1.20) of new generation facilities that otherwise would have been needed. Stated another way, this amount of summer peak demand reduction has eliminated the need for the equivalent of 12 power plants of 400 MW capacity each. Most importantly, FPL has achieved this level of demand reduction without penalizing customers who are non-participants in its DSM programs. FPL has been able to avoid penalizing non-participating customers by offering only DSM programs that are designed to reduce electric rates for all customers, DSM participants and non-participants alike.

Q. How do FPL's DSM efforts compare to those of other utilities?

A. The U.S. Department of Energy (DOE) reports annually on the effectiveness of utility DSM efforts through its Energy Information Administration. DOE

separately measures both conservation and load management. Based on the most current comparative data available, which is for the year 2006, FPL is ranked number one nationally for cumulative conservation (i.e., energy efficiency) achievement and number three in load management.

Q. Has FPL continued to refine and improve its DSM programs, including looking for additional cost-effective DSM opportunities?

A. Yes. FPL continually seeks ways to refine, improve, and expand its portfolio of cost-effective DSM programs through its on-going program monitoring work as well as its research and development activities.

Q. What is FPL's current DSM projection?

A. Column (5) in Exhibit SRS-2 shows FPL's current projection of DSM (summer MW reduction) through August 2017. This amount of DSM reflects FPL's DSM Goals that were approved by the Commission in Order No. PSC-04-0763-PAA-EG, additional cost-effective DSM that was identified by FPL subsequent to the establishment of FPL's DSM Goals, and a projected continuation of DSM implementation for 2015-2017 at implementation rates commensurate with those for the years immediately preceding 2014.

Q. Do FPL's projections of resource needs take into account all DSM found to be cost-effective and approved by the Commission?

A. Yes. FPL's projection of resource needs for 2008-2017 presented in Exhibit SRS-2 already account for all of the reasonably achievable, cost-effective DSM identified by FPL and approved by the Commission. And, as mentioned above, the amount of DSM included in FPL's projection of resource needs

also includes additional DSM found to be cost-effective after FPL's DSM Goals were established, plus an assumed continuation of DSM implementation for 2015-2017 at annual implementation rates commensurate with planned DSM implementation rates in the years immediately preceding 2014.

IV. THE RESOURCE OPTIONS AND RESOURCE PLANS ANALYZED

Q. Briefly describe the resource options that were considered in FPL's analyses.

A. The resource options that were considered in FPL's analyses are gas-fired combined cycle (CC) options. There are two reasons for this. First, to date, none of the new advanced technology coal generating units for which recent approval has been sought by electric utilities in Florida has received both need and permitting approval. In addition, even if need and permitting approval were possible, the longer construction time required for new coal-fired units makes it very unlikely that such units could be added in the decision years of 2013 and 2014 in this filing. Even longer construction times are true for new nuclear units. Therefore, only gas-fired generating unit additions are feasible new construction options in this time frame.

Second, in regard to the two types of gas-fired generating options, CC and combustion turbine (CT) units, FPL's analyses over the years have consistently shown that, due to the substantial load growth on FPL's system, CC units are more economical generating options than are CT units. The much greater fuel efficiency of CC units, which results in much higher capacity factors and system fuel savings of CC units, more than offset the lower capital cost of CT units. These considerations led to an evaluation of 3x1 G CC units; i.e., the same technology chosen for WCEC units 1, 2, and 3.

FPL then considered two different "paths" to take in adding new 3x1 G CC capacity. One path is to continue to build 3x1 G CC units at new, Greenfield sites. Each 3x1 G CC unit at a Greenfield site is assumed to provide 1,219 MW (summer). The second path is to "convert" existing plants. In a conversion, an older, less efficient generating unit(s) at the plant would be taken out of service, removed from the plant, and replaced with a new 3x1 G CC unit.

After considering a number of potential conversion options, FPL determined that its Cape Canaveral and Riviera plants were the best choices for a conversion path to adding new capacity.

The Cape Canaveral plant is projected to be taken out-of-service in September 2010 with completion of the conversion at the plant in June 2013. The Riviera

plant is projected to be taken out-of-service in April 2011 with completion of the conversion at the plant in June 2014. Therefore, the existing capacity at the two plants would be permanently removed from the FPL system and replaced with two new 3x1 G CC units, one new CC unit at each of the two plants.

In the conversion option, the existing capacity at the Cape Canaveral plant, 792 MW (summer), and the existing capacity at the Riviera plant, 565 MW (summer), would be removed. At each plant, a new 3x1 G CC unit would be added. The projected capacity of the new 3x1 G CC units is 1,219 MW (summer) at the Cape Canaveral plant and 1,207 MW (summer) at the Riviera plant.

Consequently, the conversion of both plants will result in a net summer capacity addition of 427 MW (= 1,219 – 792) at the Cape Canaveral plant and 642 MW (= 1,207 – 565) at the Riviera plant. Together, the net summer capacity addition from the conversion path will be 1,069 MW (= 427 + 642). While the net summer capacity addition from the conversion path is slightly less (150 MW) than from a Greenfield 3x1 G CC unit (= 1,219 – 1,069), the conversion path will result in a significant improvement in FPL's system average heat rate as will be discussed later in my testimony.

Q. How did FPL analyze these two paths to adding the required new capacity?

A. Using the resource need projection presented in Exhibit SRS-2, and the previously discussed assumptions used in making that need projection, FPL developed two resource plans for use in its economic and non-economic analyses. One of these, the Resource Plan with Conversions, featured the conversions of the Cape Canaveral and Riviera plants. The other resource plan, the Resource Plan without Conversions, did not include any conversions and, instead, included a new 3x1 G CC unit in 2014 at a Greenfield site.

Q. Please describe these two resource plans.

A. The two resource plans are presented in Exhibit SRS-3. The two resource plans contain a number of similarities and a number of differences. The similarities can be summarized as follows:

- FPL's summer reserve margin criterion is met each year;
- The WCEC 3 unit is added in 2011;
- The nuclear uprates are added in 2011 and 2012;
- Two new 3x1 G CC units are added in 2016;
- The new nuclear units, Turkey Point 6 & 7, are added in 2018 and 2020, respectively; and,
- For the 2021-2040 time period, the required annual numbers of 2x1 F CC filler units are added.

The two plans differ primarily in the 2010-2017 time period and these differences can be summarized as follows:

For the Resource Plan with Conversions:

- The existing generating capacity is taken out-of-service at the Cape Canaveral plant in September 2010, and at the Riviera plant in April 2011. Consequently, all of the existing generating capacity at the two plants has been taken out of service by summer 2011;
- A new 3x1 G CC unit with a capacity of 1,219 MW (summer) at the Cape Canaveral plant is brought into service in 2013.
- A new 3x1 G CC unit with a capacity of 1,207 MW (summer) at the Riviera plant is brought into service in 2014; and,
- A five-month 500 MW firm power purchase is added in 2019 and a five-month 250 MW firm power purchase is added in 2020. (Both of these assumed purchases are from currently unspecified sources.)

For the Resource Plan without Conversions:

- A new 3x1 G CC with a capacity of 1,219 MW (summer) at a Greenfield site is added in 2014; and,
- A five-month 345 MW firm power purchase is added in 2019. (The assumed purchase is from a currently unspecified source.)

The Resource Plan without Conversions is identical to Resource Plan 1 in FPL's recent determination of need filing for WCEC 3.

Q. Are there differences in the summer reserve margins projected for the two resource plans?

A. Yes. Part of the information presented in the tabular format of Exhibit SRS-3 is a projection of annual summer reserve margins for each resource plan starting in 2010. Exhibit SRS-4 graphically displays the same summer reserve margin values for the 2010 through 2017 time period.

As shown in the graph, the projected reserve margins are identical for 2010, then differ significantly for the next two years as the Cape Canaveral and Riviera plants are taken out of service by the summer of 2011 in the Resource Plan with Conversions. The removal of this capacity in the Resource Plan with Conversions results in projected reserve margins of 21.7% in 2011 and 20.0% in 2012, compared with 27.9% in 2011 and 26.0% in 2012 for the Resource Plan without Conversions. Therefore, the projected difference in reserve margins is approximately a 6.0% lower reserve margin for the Resource Plan with Conversions. (For 2011: 27.9% - 21.7% = 6.2%; and for 2012: 26.0% - 20.0% = 6.0%.)

The projected summer reserve margins for the two resource plans become more comparable starting in 2013 as the first of the conversions (Cape Canaveral) comes in-service. The projected difference in reserve margins for

2013 is a 0.6% lower reserve margin for the Resource Plan with Conversions. This difference is maintained through the year 2017.

In summary, the summer reserve margins for the two resource plans differ for each year starting in 2011 (the first year in which there is a difference in the resource plans) through 2017, with the Resource Plan with Conversions having a lower reserve margin. In addition, for the years 2011 and 2012, the Resource Plan with Conversions has a significantly lower reserve margin.

Q. What costs were included in the economic analysis?

A. The economic analysis consisted of two steps. In the first step, for each resource plan, FPL evaluated the generator capital, capital replacement, and operation and maintenance (O&M) costs, transmission interconnection and integration capital costs, system emission costs, startup costs, firm gas transportation costs, project fuel costs, and system fuel costs. These costs are referred to in FPL's resource planning work as the Generator System costs and the values were derived using the P-MArea production costing model and FPL's Fixed Cost Spreadsheet Model; the same models that were used in FPL's last several determination of need filings. Through the use of P-MArea, the impacts that each new CC unit being evaluated would have on the dispatch of FPL's existing generating units located in Southeastern Florida were also captured.

In the second step of the economic analysis, the costs due to transmission losses were calculated and added to the Generator System costs.

In FPL's economic evaluation of resource plans, additional costs for transmission integration, upstream gas pipeline impacts, and cost of capital impacts are typically considered. In this analysis, the transmission integration costs were already accounted for in the Generator System costs. Likewise, the firm gas transportation costs included in the Generator System costs already addressed all upstream gas pipeline costs. Therefore, there were no additional upstream gas pipeline costs. Also, there were no additional impacts to FPL's cost of capital. All of the FPL self-build options were assumed to be constructed with a capital structure of 55.8% equity / 44.2% debt so there was no impact from any of the self-build options on FPL's target adjusted capital structure of 55.8% equity / 44.2% debt. In addition, the assumed power purchases that appear in both resource plans are assumed to be short-term (five-month) purchases for which there are no cost of capital impacts.

Q. Why is it appropriate to perform economic analyses based on multi-year resource plans?

A. It is not only appropriate to do this, but also necessary if one is to capture and fairly compare all of the impacts that competing generation options with different capacity amounts, terms-of-service, heat rates, types of fuel, and costs will have on FPL's system.

For example, assume we are comparing Option A and Option B that both offer the same amount of capacity. Option A has a heat rate of 7,000 Btu/kWh and is offered to FPL for 15 years. Option B has an 8,000 Btu/kWh heat rate and is offered for 20 years. Evaluating these options from a resource plan perspective allows one to capture the economic impacts of both the heat rate and term-of-service differences. The lower heat rate of Option A will allow it to be dispatched more than Option B, thus reducing the run time of FPL's existing units more than will Option B. This results in greater production cost savings for Option A. However, Option B's longer term-of-service means that it defers the need for future generation for a longer period. Therefore, Option B will provide capacity avoidance benefits for more years.

Only by taking a multi-year resource plan approach to the evaluation can factors such as these be captured and effectively compared. In the economic analyses, the resource plans created addressed the FPL system through the year 2040.

Q. Why are "filler" units needed in a resource plan evaluation?

A. The "filler" units are needed in a multi-year resource plan analysis as a proxy resource added to meet FPL's capacity needs for 2021–2040 (i.e., after the Turkey Point 6 & 7 new nuclear units are added in 2018 and 2020, respectively. In this way the resource plans being compared all meet FPL's reliability criteria for each year in the analysis period, ensuring both that the

resource plans are comparable and that the results of the evaluation are meaningful.

V. THE RESULTS OF THE ECONOMIC ANALYSES

Q. What fuel cost and environmental compliance cost forecasts were used in the economic analysis?

A. In the economic analysis, FPL used fuel cost and environmental compliance cost forecasts developed using the most current information available through March 2008 regarding fuel costs and environmental compliance costs. The updated fuel cost and environmental compliance cost forecasts represent medium-level natural gas costs and medium-level CO_2 compliance costs.

FPL witness Heather Stubblefield discusses the fuel cost forecast in her testimony and FPL witness Kennard Kosky discusses the environmental compliance cost forecast in his testimony.

Q. Are these updated fuel costs and environmental compliance costs different from those used in FPL's analyses presented in the WCEC 3 determination of need filing?

A. Yes. The analyses performed in regard to the WCEC 3 determination of need filing used forecasts that were based on the most current information available regarding fuel costs and environmental compliance costs in mid-December

2007 when FPL's Request for Proposals (RFP) was issued. These forecasts were officially updated in the first quarter of 2008.

Q. Compared to the assumptions used in the analysis for the recent WCEC 3 determination of need filing, were there any other changes in assumptions used in the analysis for this filing?

A. Yes. Several other assumptions changed from those used in WCEC 3 analysis. That analysis used assumptions that were current at or near the December 13, 2007 issuance date of FPL's RFP. The analysis discussed in this filing used several other updated assumptions in addition to the fuel cost and environmental compliance cost forecasts previously mentioned.

FPL updated its cost of debt assumption from 6.43% to 6.60%. The discount rate also changed from 8.40% to 8.35%. The change in the discount rate assumption is due partly as a result of the change in the cost of debt assumption and partly because FPL no longer assumes that the federal manufacturing tax credit would likely apply to new generating units built in the time frame discussed in this analysis. This latter assumption change also resulted in the same discount rate (8.35%) being applied to both generation and non-generation costs in the analyses presented in this filing.

In addition, the projected capital cost of future Greenfield 3x1 G CC units has increased, and the projected firm gas transportation costs for future 3x1 G CC units has increased, compared to the assumptions used in the WCEC 3 filing.

Q. What were the results of the first step of the economic analysis of the resource plans?

A. As previously discussed, the first step of the economic analysis was to determine the Generator System costs. The results of the first step analysis are presented in Exhibit SRS-5.

At this stage of the economic analysis, the Resource Plan with Conversions is the most economical plan with an economic advantage of $362 million CPVRR compared to the Resource Plan without Conversions.

Q. How did the economic analysis results change in the second step of the economic analysis which adds the costs of transmission system losses?

A. Exhibit SRS-6 presents the results when the costs of transmission system losses are included in the analysis. These additional costs address both peak hour capacity losses and annual energy losses. In calculating the cost of these losses, the costs are presented in terms of relative costs to those of the Resource Plan with Conversions.

As shown in Exhibit SRS-6, the economic advantage of the Resource Plan with Conversions is increased to $457 million CPVRR compared to the Resource Plan without Conversions. The results presented in Exhibit SRS-6 represent the total system costs for the two resource plans.

Therefore, from an economic perspective, the Resource Plan with Conversions is clearly the economic choice. Therefore, the conversions of the existing Cape Canaveral and Riviera plants represent the best, most cost-effective choice for FPL's customers.

Q. You explained earlier that FPL used a medium-level natural gas cost forecast and a medium-level CO_2 compliance cost forecast in its analyses. Would the conversion option still be the economic choice if FPL had used a high natural gas cost forecast and/or a high CO_2 compliance cost forecast?

A. Yes. FPL conducted a sensitivity economic analysis that used an updated high CO_2 compliance cost forecast. The use of this compliance cost forecast increased the economic advantage of the Resource Plan with Conversions from $457 million CPVRR to $890 million CPVRR. FPL also conducted another sensitivity economic analysis in which it combined the updated high natural gas cost forecast with a high CO_2 compliance cost forecast. In this analysis, the economic advantage of the Resource Plan with Conversions increased further to $1,221 million CPVRR.

Consequently, if natural gas costs and/or environmental compliance costs turn out to be higher than the medium-level forecasted values used in FPL's economic analysis, the conversions of the two plants will provide even greater benefits to FPL's customers than those presented in this filing.

VI. THE RESULTS OF THE NON-ECONOMIC ANALYSIS

Q. What different perspectives of the FPL system were considered in the non-economic analysis?

A. The non-economic analysis focused on three perspectives in regard to the two resource plans. The first perspective is a direct comparison of projected system SO_2, NO_x, and CO_2 emissions for the years 2010 through 2017 for the two resource plans. The second perspective was a comparison of what the projected level of system CO_2 emissions would be for each resource plan in the year 2017 because one of the Executive Orders issued by Governor Crist in 2007 calls for significant CO_2 emission reductions by 2017. The third perspective is a direct comparison of projected system oil and natural gas usage for the two resource plans for the years 2015-2017; i.e., in the years immediately after the conversions would have been completed.

Q. What were the results of the Non-Economic Evaluation from the first perspective, a comparison of system emissions for the two resource plans?

A. In regard to the first perspective, a direct comparison of projected system emissions for each resource plan is presented in Exhibit SRS-7. As shown in this exhibit, the Resource Plan with Conversions is projected to result in lower annual system SO_2, NO_x, and CO_2 emissions than the Resource Plan without Conversions beginning in 2013; i.e., once the conversions have been completed. The annual average system emission reduction advantage of the Resource Plan with Conversions for the years 2013 through 2017 is

approximately 4,600 tons for SO_2, 3,900 tons for NO_x, and 960,000 tons for CO_2. Over the life of the analyses (i.e., through 2040), the Resource Plan with Conversions is projected to save approximately 60,300 tons of SO_2, 55,300 tons of NO_x, and 15.7 million tons of CO_2, compared to the Resource Plan without Conversions.

Q. What were the results of the Non-Economic Evaluation from the second perspective, a comparison of system CO_2 emissions for the two resource plans in 2017, the year in which significant CO_2 emission reductions are called for by the Governor's Executive Order?

A. Exhibit SRS-8 presents the projected system CO_2 emissions in the year 2017 for the two resource plans in 2017. As shown in this exhibit, the projected system CO_2 emissions are approximately 62.7 million tons for the Resource Plan with Conversions and approximately 63.6 million tons for the Resource Plan without Conversions.

Q. What is the significance of these projected CO_2 emission values in light of the CO_2 emission reductions called for in the Governor's Executive Order?

A. By comparing this value to the projected values of 62.7 million tons in 2017 for the Resource Plan with Conversions, and the 63.6 million tons in 2017 for the Resource Plan without Conversions, it is clear that the Resource Plan with Conversions is projected to lower FPL's system CO_2 emissions by approximately 900,000 tons in 2017. This is a truly significant difference in annual CO_2 emissions that is attributable to the plant conversions. Therefore,

the plant conversions will contribute significantly towards achieving the targets reflected in Governor Crist's Executive Order 07-127, and whatever specific legal requirements may be implemented as a result of that Order or pursuant to federal law.

Q. What were the results of the Non-Economic Evaluation from the third perspective, a comparison of FPL system usage of oil and natural gas for the two resource plans?

A. Exhibit SRS-9 presents the results of this comparison for the years 2013-2017; i.e., the years immediately following the conversions. The Resource Plan with Conversions is projected to reduce FPL's annual system oil usage by an average of approximately 9.6 million mmBTU, and to reduce FPL's annual system natural gas usage by an average of approximately 2.1 million mmBTU, compared to the Resource Plan without Conversions. This result is primarily driven by the fact that the Resource Plan with Conversions will result in a system average heat rate of 8,040 BTU/kwh by 2015 compared to 8,127 BTU/kwh in 2015 for the Resource Plan without Conversions, or an improvement of approximately 1.1%.

VII. CONCLUSIONS

Q. Would you please summarize the results of the economic and non-economic analyses?

A. Yes. The economic analysis results showed that the Resource Plan with Conversions is projected to result in an economic savings to FPL's customers of at least $457 million CPVRR compared to the Resource Plan without Conversions.

The non-economic analysis found that the Resource Plan with Conversions, compared to the Resource Plan without Conversions for the years 2013-2017, is projected to result in an average of approximately 4,600 tons per year less of SO_2 emissions, 3,900 tons per year less of NO_x emissions, and 960,000 tons per year less of CO_2 emissions. Over the life of the analyses (i.e., through 2040), the Resource Plan with Conversions is projected to save approximately 60,300 tons of SO_2, 55,300 tons of NO_x, and 15.7 million tons of CO_2, compared to the Resource Plan without Conversions. In addition, the Resource Plan with Conversions is projected to lower CO_2 emissions by more than 900,000 tons in 2017, the year addressed in the Governor's Executive Order. The Resource Plan with Conversions is also projected to significantly lower FPL system usage of oil and natural gas once the conversions are completed, a result that is driven by an improvement of approximately 1.1% in FPL's system average heat rate due to the conversions.

The Resource Plan with Conversions is clearly the best choice for FPL's customers from both an economic and a non-economic perspective. Consequently, FPL's petition for a finding of a determination of need to convert its existing Cape Canaveral and Riviera plants should be granted.

Q. Does this conclude your testimony?

A. Yes.

BY MR. ANDERSON:

Q Dr. Sim, have you prepared a summary of your testimony?

A Yes, I have.

Q Please provide your summary to the Commission.

A Okay. Good afternoon, Chairman Carter and Commissioners. In regard to the projected economic impacts to FPL's customers, the projected total economic benefit to our customers of adding West County 3 in 2011 plus the conversions of Cape Canaveral and Riviera is approximately $1.2 billion cumulative present value revenue requirements. Adding West County 3 in 2011 is projected to be at least $606 million CPVRR less expensive than any individual proposal or combinations of proposals that were received in response to FPL's December 2007 RFP. Therefore, West County 3 in 2011 is a better economic choice for FPL's customers than any of the RFP proposals.

Furthermore, adding West County 3 in 2011 was originally projected to be $137 million CPVRR less expensive than delaying West County 3 to 2012 and $460 million CPVRR less expensive than delaying a similar greenfield unit to 2013. A later analysis using updated fuel costs and environmental compliance cost forecasts resulted in the $460 million worth of savings increasing to $735 million CPVRR savings. Therefore, adding West County 3 in 2011 is a better economic choice for FPL's customers than delaying this unit or a similar unit to

2012 or 2013.

An additional benefit of bringing West County 3 in service in 2011 is that bringing this capacity in earlier than a reliability-only perspective alone would require allows FPL the opportunity to take older, less efficient FPL units out of service and replace them with new fuel-efficient generation. Taking advantage of this opportunity to convert FPL's existing Cape Canaveral and Riviera plants is projected to result in an additional economic benefit to FPL's customers of $457 million CPVRR, thus resulting in a total economic savings for our customers of approximately $1.2 billion CPVRR. Consequently, the addition of West County 3 in 2011 followed by the conversions of Cape Canaveral and Riviera is the best choice for FPL's customers from an economic perspective.

In regard to the noneconomic impacts to our customers, assuming that West County 3 is added in 2011, the conversions of Cape Canaveral and Riviera are projected to lower FPL's system emissions through 2040 by approximately 15.7 million tons of CO2, 60,000 tons of SO2 and 55,000 tons of NOx. Likewise, the conversions of Cape Canaveral and Riviera are projected to lower FPL's annual system fuel usage in the 2013 through 2017 time frame by approximately $9.6 trillion Btus of oil and 2.1 trillion Btus of natural gas.

Adding West County 3 in 2011 was also projected to be significantly less risky than any individual proposal or

combination of proposals received in response to FPL's RFP. Consequently, the addition of West County 3 in 2011 plus the conversions of Cape Canaveral and Riviera is also the best choice for FPL's customers from a noneconomic perspective. That concludes my summary.

MR. ANDERSON: Dr. Sim is available for questions.

CHAIRMAN CARTER: Thank you.

Commissioner Skop, you're recognized.

COMMISSIONER SKOP: Thank you, Mr. Chairman.

Good afternoon, Dr. Sim.

THE WITNESS: Good afternoon.

COMMISSIONER SKOP: Just one quick question. And I guess this -- or actually two quick questions, but this got deferred to you from Mrs. Morley or Dr. Morley. With respect to the economic and growth assumptions, and I've read your prefiled testimony, she deferred to you in terms of the sensitivity analysis on what would happen if those underlying economic growth price of consumer commodities like electricity or income -- if those parameters changed, what would be the sensitivity analysis on the cumulative present value revenue requirement that you calculated?

THE WITNESS: I believe the sensitivity that we did looked at a lower load growth forecast than what we did our analyses on. And in regard to the conversions, the number that we have presented is $457 million cumulative present value

revenue requirements. With a lower load forecast it drops but only by a small amount to, if memory serves me correctly, $434 million CPVRR. So still very significant savings even with a lower load forecast.

COMMISSIONER SKOP: Okay. So the, taken as a composite group, the sensitivity analysis, depending on the underlying assumptions, is not really that drastic. It still converges to the same result; is that correct?

THE WITNESS: Essentially the same result. Yes, sir.

COMMISSIONER SKOP: Essentially the same result. And what was the most critical variable in terms of when you're looking at your sensitivity analysis out of all of those underlying assumptions?

THE WITNESS: In regard to either the 457 or the 434?

COMMISSIONER SKOP: Yes, sir.

THE WITNESS: I would say there were two factors: One would be fuel cost and the other would be the environmental compliance cost. Of the two, I would tend to pick the fuel cost as probably the larger driver.

COMMISSIONER SKOP: Okay. So the growth and the personal income and the retail rate of electricity, none of those factors really influenced the outcome of either analysis?

THE WITNESS: A relatively minor player compared to the other drivers.

COMMISSIONER SKOP: Okay. And, like I say, I was

willing to stipulate to your testimony and I was happy that, I guess, one of my colleagues had called you, and that was the question I had.

One question in passing, however, I noticed that there is a difference looking at the -- and I'm trying to get this right in my head because I'm looking at two different books. So give me a second here to flip this page.

The one docket has, one of your exhibits, and that would be SRS-4, and I'm not sure whether that's in the WCEC 3 or whether that's in the -- I assume that's in the WCEC 3 proposal, and that would be the ten-year power site plan for 2007 through 2016. And correct me if I'm wrong because I just noticed it and it was puzzling me at the time. And the other one in the, in the conversion project has the updated ten-year power plant site plan for 2008 through 2017, and I believe that's in SRS-1; is that correct?

THE WITNESS: I believe that's correct.

COMMISSIONER SKOP: Okay. And the difference between, on using the WCEC 3 in the April 2007 versus the April 2008 plan between the two plants, is there a reason why they were, they were different?

THE WITNESS: Different in what respect, Commissioner?

COMMISSIONER SKOP: Well, it's funny that you ask that question. I guess with respect to -- on Page 64 of the --

first let me ask a question. Are you directly responsible for the ten-year power plant site plan? Do you prepare that or is that --

THE WITNESS: I play a large role in it. Yes, sir.

COMMISSIONER SKOP: Okay. At least with the one that was filed for WCEC, WCEC 3, the one dated April 2007 with the 2007 through 2016 time frame, the testimony beginning on Page 64 for renewable resources seems to be substantially different than the one in the updated time frame on the, of the conversion projects. And I guess that struck me as a little bit odd, so I was trying to get some additional insight from you in that regard because I think on -- and let me find the page here, if I may. Beginning on Page --

THE WITNESS: Commissioner, while you're looking that up, if I may, may I have a copy of the 2007 site plan? I have a copy with me of the 2008.

COMMISSIONER SKOP: Okay. I think your counsel would be able to provide that for you. I don't have my spare. I mean, I only have my one copy.

THE WITNESS: It should be in the yellow exhibits book. Yes, sir.

COMMISSIONER SKOP: And at the, on the 2007 one -- and I'll give you a minute to, to have a copy of that. If you'd look at the bottom of Page 66.

THE WITNESS: Yes, sir. I have it in front of me.

Thank you.

COMMISSIONER SKOP: And if you would generally describe the discussion at the bottom of Page 66, what program that pertains to.

THE WITNESS: At the bottom of Page 66 it's discussing our Green Pricing Research Project, which later developed into what we are currently calling the Sunshine Energy Program.

COMMISSIONER SKOP: Okay. And, again, I'm going to leave it at that. But I guess my concern is frankly this is the -- and the testimony between the two on that subject matter, the 2007 testimony goes into quite far detail about that program; whereas, the -- I mean, the 2007 is far more detailed and it's a little bit more limited and succinct than the 2008 site plan. But I guess my concern just in passing, because, again, this program is the subject of a separate docketed matter before the Commission and, you know, this is twice now in the course of a need determination proceeding that basically they've opened the door. And, you know, I don't know, and maybe you can, you know, discuss, but that program really has no relevance on the proceeding before us today; is that correct?

THE WITNESS: In terms of capacity need, I would say, no, it has, it has very little impact on the capacity need.

COMMISSIONER SKOP: Okay. I'll save my questions for

another day. But, again, I just, it caught my attention and, again, I had previously made a comment upon that. But, again, I think that just as a point in passing that's the second time that they've opened the door, and I would not want to needlessly hold up these proceedings asking a bunch of questions related to that program that are better saved for the appropriate time. So thank you very much.

CHAIRMAN CARTER: Commissioner Argenziano, you're recognized.

COMMISSIONER ARGENZIANO: Yes. Thank you.

Hi, Dr. Sim, thank you. I think you know I'm going to ask a few questions. You've been the guy I've been pointed to to ask the questions, and maybe I'll ask the questions just a little bit differently.

I'm very intrigued about the availability and the sustainability of natural gas and with the shale markets, and I had forgotten about Texas. I think it's the Hainesville, Texas, well that's been of great interest lately. And I guess my concern is the cost to extract natural gas from shale. I believe you have to do vertical wells rather than horizontal wells, which are, I think, quite a bit costlier, and I'm wondering if that cost at some point -- let me, let me take a step back. Has any natural gas actually come out of any of those wells yet from the shale?

THE WITNESS: I'm afraid that's beyond my area of

expertise. I don't deal in the fuel department.

COMMISSIONER ARGENZIANO: Okay. Okay. So then maybe you're not the guy I'm supposed to ask the questions to.

Let me just, let me just pose this to FPL and staff and maybe I can get this information. Because my, what I'm looking at is we want to reduce CO2, but I want our money to go in the most cost-efficient way. And I think -- I don't think large companies are going to, I hope not, expend a lot of dollars if there's no sustainable source out there. And I guess what the questions that I need answered, is the, are those sources sustainable? And if we are dealing with now getting the natural gas from the shale versus our more conventional extraction, how do we know that it's sustainable other than hearing that there's probably a lot of, of natural gas 11,000 feet below or whatever it is in the case of -- I think it's the Marcellas wells in the Appalachian range. I think they're a mile down, anticipated to have quite a bit of natural gas. But I guess the answer I want is how do we know? And I want somebody to give me more information on are we, you know, going to expend all these dollars and not have the natural gas there? So if there's some information that would help me, I would appreciate that. And I don't know -- Dr. Sim, I guess you can't answer that or --

THE WITNESS: In general I can try to address it, Commissioner.

COMMISSIONER ARGENZIANO: Okay.

THE WITNESS: Not only FPL but all of the utilities collectively through the FRCC look on a regular basis, the FRCC certainly annually as part of its reporting, as to whether or not there's sufficient natural gas delivery over the long term to support the natural gas-fired new units that are coming into the state. And we have been assured time and time again by a variety of experts that there is sufficient supply of natural gas from conventional sources to power these units through the expected lifetime of the units.

Price is something that is, I think, a little bit more in question. I think we see, as you do, the increase in natural gas prices. And, frankly, that's one reason in our projections why we see the, in particular the two conversions being particularly attractive because we will greatly improve the efficiency with which natural gas is burned.

For example, just taking the two conversion units, the existing units at Canaveral and Riviera are approximately 1350 megawatts of capacity and they're operating at a heat rate of about 10,000 Btus per kilowatt hour. The new units after they're converted will be running at approximately 6,580 Btus per kilowatt hour or, as I like to think of it in simple terms, the current units are running about three units of fuel for every kilowatt hour they put out. The new units will be about two units of fuel to put out, which is a huge increase in

efficiency. It allows the natural gas that we will be using to be used much more efficiently and to use less of it.

As indicated in my summary, I believe over the 2013 through 2017 snapshot of time we're going to be using about two trillion Btus of gas less on our system than we would otherwise due to the conversions.

COMMISSIONER ARGENZIANO: And that is resource efficiency, which is great. I think that's fantastic. What I'm worried about is cost efficiency afterwards. At what point -- and I don't know that that's going to happen, but what I'm looking at is the extraction of natural gas seems to be getting a lot harder or more difficult and more costly, and I don't know if there's an infinite number that the efficiency remains or where is it that it cuts off? In other words, at some point, quite simply put, as simple as I can, is that at some point is it going to be ten years from now or five years from now that it wouldn't be cost-efficient anymore because the price was so high to extract that natural gas, and would the dollars be better spent putting windmills and solar -- and I know solar is not quite as efficient as it can be yet but it's on the verge -- and that's probably what I'm looking for, something that makes me feel more comfortable about, you know, the cost. Because everything I'm reading about it and finding about it is it's very costly at this time and some of the wells haven't even produced any gas yet even though there's, there is

evidence, as you indicate, that there is natural gas down there. But I would like to read that and know what leads them to believe that. Thank you.

CHAIRMAN CARTER: Mr. Anderson, do you have, do you have access to information that you could supply later on just for --

MR. ANDERSON: Let me consult with my colleagues for a moment because we're very interested in ensuring you have whatever you need to be comfortable with your decision. Just one moment.

CHAIRMAN CARTER: Okay.

COMMISSIONER ARGENZIANO: I'm going to, I'm going to do a little research on it myself as far as trying to go to the USGS and find out what they have. I'm sure that there, there have been scientists and geologists and so on that have looked into it and it may answer some of the questions I have. But everything I'm reading to this point sounds promising but it just doesn't give me everything. It sounds promising, but yet, okay, how much is it finally going to cost to be able to do it because you have to drill differently, you have to go down further, and how much, you know, energy would be expended? And that's just things I would just like to have because part of our job is looking at cost efficiency also.

CHAIRMAN CARTER: Absolutely. And also, staff, if there's information that you have access to that would be

helpful in this process, we certainly would appreciate that.

Mr. Anderson.

MR. ANDERSON: Yeah. One thing we could offer that might be of assistance is, you know, there have been references to a number of government studies and things. And, for example, there's Department of Energy data with respect to gas efficiency and things like that. My suggestion would be, you know, if it's acceptable to the Commission, would be to coordinate with your counsel and submit such information as a late-filed exhibit. Would that be helpful?

COMMISSIONER ARGENZIANO: Mr. Chairman, I think that would be very helpful. I think part of, you know, looking at this in that greater sense would be, would be most helpful, anything you can come up with. And I'll do my own diligence on trying to find out some of that information too.

MR. ANDERSON: That would be great. And if that could, with the Chairman's permission, just be indicated as admitted, we'll provide that to staff as a late-filed exhibit.

COMMISSIONER ARGENZIANO: Thank you.

MS. BROWN: And we could have a short title of Natural Gas Analysis.

CHAIRMAN CARTER: And that will be Exhibit 100.

MS. BROWN: Yes.

CHAIRMAN CARTER: Natural Gas Analysis. This will be our short title, Natural Gas Analysis.

(Late-Filed Exhibit 100 identified for the record.)

Commissioner Argenziano, you're recognized. That's it?

Commissioners, anything further?

Mr. Anderson, you're recognized, sir. Wait, one second.

Staff?

MS. BROWN: We have no questions. Thank you, Commissioner.

CHAIRMAN CARTER: Mr. Anderson.

MR. ANDERSON: Thank you, Chairman Carter. The Commissioners have asked some very thoughtful questions today. Earlier today Commissioner Argenziano in particular asked some questions relating to solar and things. And just for the purposes of completeness of the record we asked Dr. Sim just to do some computations to kind of put what FPL's proposal -- will that help?

COMMISSIONER ARGENZIANO: Yes.

MR. ANDERSON: Yes. What I'd ask Dr. Sim to just take a moment to do is kind of provide a comparison of what, if you were to take the amount of money involved, you know, generally speaking for West County 3 in the conversions, what does that translate into if you did that solar PV, for example, for megawatts, how much land, how many customers, just to kind of put that in perspective. And if I might, I'd just ask

Dr. Sim to, to address that topic.

THE WITNESS: I'll be happy to. I did the calculation in regard both to photovoltaics and in regard to solar water heaters because I believe both were mentioned in the morning session. And what I did, I started with the approximately $3.26 billion of installed capital dollars that these three units are projected to cost. And if we spent all of that solely on photovoltaics or solely on solar water heaters, what would we get out of it? And here are the results. If we spent it on photovoltaics, if I use a, what I think is a reasonable number for the cost of photovoltaics of about $7,000 a KW installed, we'd end up with about 465 megawatts of installed PV capacity. That would be the name plate rating and it doesn't represent what those photovoltaic modules would be able to contribute in regard to firm capacity.

At present we don't know how much would be firm capacity because our summer peak hour is at 4:00 to 5:00 p.m. in the afternoon on summer, not where the name plate rating is designed to be measured at, which is essentially solar noon when the sun is directly overhead. So by 4:00 to 5:00 p.m. The sun is hitting these modules at a pretty oblique angle, but -- and it is possible that we might get zero megawatts in the afternoon of firm capacity. But for the sake of this calculation, I used what I think is an optimistic estimate of about 20 percent of the name plate rating would be providing

firm capacity at our summer peak hour.

Now let me just take a step aside. Our winter peak hour is from 6:00 to 7:00 in the morning. Essentially zero megawatts of contribution from photovoltaics would be occurring in our winter. But, and by comparison, the proposed three generating units after I subtract out the amount of megawatts at the existing units that would be taken away, it's about 2300 megawatts of incremental firm summer capacity from the proposed units versus, using the 20 percent number, about 90 megawatts from photovoltaics at our summer peak hour. So 2300 versus 90.

In regard to land, photovoltaics, if I use an assumption of about six acres are required for every one megawatt, I come to just under 2,800 acres or about 4.4 square miles of additional land would be needed for the photovoltaics, where the proposed generating units that FPL has brought before you, all of this will be built on land already dedicated to power plants.

Now in regard to how much, how many customers would essentially be served by this expenditure on photovoltaics, the equivalent annual usage would be about the equivalent of 56,000 residential customers. By comparison's sake, the three power plants we brought before you, their expected output will be serving the full annual needs of about 2 million residential customers. So about 56,000 versus 2 million.

Now switching over and doing the same type of calculation for solar water heaters where we again spend the $3.26 billion on solar heaters, using what I think is a reasonable number of about $3,000 for every solar water heater installation it comes to just under 1.1 million solar water heaters could be bought and installed. Now in regard to what the demand reduction and the equivalent generation that would represent, the KW reduction for each solar water heater, I'm assuming it's going to take all of our, all of the average electric water heating load off of those 1.1 million customers. It comes to about 220 megawatts of summer demand reduction, and with our 20 percent reserve margin criteria, that equates to about 260 megawatts of equivalent generation that wouldn't be needed. However, those same dollars being spent on the proposed generating units we have in front of you again is 2300 versus the 260.

Now taking the annual usage of residential customers and the projected annual kilowatt hour savings, what we come to is the equivalent total residential usage that spending $3.26 billion on solar water heaters would come to is a little under 121,000 residential customers, the equivalent of their annual usage again versus the 2 million residential customers whose full annual usage would be supplied by the three units we brought before you today.

COMMISSIONER ARGENZIANO: I have some questions.

CHAIRMAN CARTER: You're recognized.

COMMISSIONER ARGENZIANO: Thank you for that. But now in regards to the solar water heaters, you're referring to peak demand; right?

THE WITNESS: I'm referring both to summer peak demand, that's correct, in the .2 KW, and also in regard to the total kilowatt hour usage that the solar water heaters are designed to take off the system.

COMMISSIONER ARGENZIANO: Take off. Okay.

THE WITNESS: Yes.

COMMISSIONER ARGENZIANO: But it would offset some of the average usage, wouldn't it? I mean, it might be --

THE WITNESS: Well, it would, it would certainly decrease.

COMMISSIONER ARGENZIANO: Right. But not enough, you're saying, to supply -- to not have to build additional plants.

THE WITNESS: It would, it would contribute far less, as these numbers show, than would be supplied by spending the same amount of money on the proposed units we have.

COMMISSIONER ARGENZIANO: Okay. And just two other questions very quickly. In regards to the six acres versus one megawatt and I guess your peak hours for sun generation, but that's not -- that would be for typical photovoltaic panels. But there are thermal photovoltaic, voltaic mechanisms that you

can use that store the heat, aren't there?

THE WITNESS: There are. They're generally not thought of as photovoltaics. They're generally referred to, Commissioner, as solar thermal units.

COMMISSIONER ARGENZIANO: Right. Right.

THE WITNESS: Which we are planning, I think, 75 megawatts of that at our existing Martin Unit to displace fossil fuel.

COMMISSIONER ARGENZIANO: And how does that comparison cost when you're talking about actually storing the heat and being able to use it?

THE WITNESS: I have not done that comparison. Typically though what happens, as you store the heat, you are putting out less energy or, excuse me, less at the peak hour than you otherwise would because you're using some of the energy for storage. So it works a little bit against the concept that way.

The proposal that we have, I believe, in front of you in a separate filing for that 75 megawatts of solar thermal is not designed to be a contributor to our peak output. Rather it's designed in my terminology simply as a fuel substitute. For every hour it can produce steam, it, we back off fossil fuel, in this case natural gas-fired steam, that would be driving our unit.

COMMISSIONER ARGENZIANO: And just one last question.

I don't know if you have the answer to this. In regards to innovation when it comes to new solar technology coming down, not there yet, but as far as capturing more of the sun's colors for greater efficiency, how far away is that or is it something that's feasible soon? Do you know?

THE WITNESS: I've not heard of anything that is imminent. I've tried to keep up with solar technology since the mid '70s when I worked at the Florida Solar Energy Center. And there are always possibilities of breakthroughs but there's nothing that I know that is imminent. If there is, we will be very happy to try to take advantage of it.

COMMISSIONER ARGENZIANO: Thank you very much. Thank you.

CHAIRMAN CARTER: Commissioners, anything further? Thank you.

Mr. Anderson, you're recognized.

Staff, any --

MS. BROWN: No questions.

CHAIRMAN CARTER: Mr. Anderson.

MR. ANDERSON: We'd like to offer Dr. Sim's exhibits, which are Numbers 31 through 46 and 86 through 94.

CHAIRMAN CARTER: One second. 31 through --

MR. ANDERSON: 46.

CHAIRMAN CARTER: -- 46. Any objections? No objections, show it done.

(Exhibits 31 through 46 admitted into the record.)

Now we go to Exhibits Number 86 through 94.

MR. ANDERSON: 94. Right.

CHAIRMAN CARTER: Any objections? No objections, show it done.

(Exhibits 86 through 94 admitted into the record.)

Thank you. The witness may be excused.

MS. BROWN: Mr. Chairman.

CHAIRMAN CARTER: Yes, ma'am. You're recognized, Ms. Brown.

MS. BROWN: I may have missed this, but I wanted to check on Mr. Kosky's exhibits. Were they entered into the record?

MR. ANDERSON: I'm not recalling. My notes are always just to do that, but --

CHAIRMAN CARTER: Yes. 30 -- let me see here.

MS. BROWN: It's 28 and 29.

CHAIRMAN CARTER: Mr. Kosky is 28, 29, 30, and the other ones were -- help me find.

MS. BROWN: 79 through 85.

CHAIRMAN CARTER: Yes. Yes. 79 through 85. Yes.

MS. BROWN: All right.

MR. ANDERSON: I think it was 78 through 85. Yeah.

CHAIRMAN CARTER: 78 through 85?

MR. ANDERSON: Exactly.

CHAIRMAN CARTER: Yes. They have been.

MR. ANDERSON: Thank you, counsel.

MS. BROWN: One more housekeeping item with respect to the exhibit list.

CHAIRMAN CARTER: Yes, ma'am.

MS. BROWN: We need to move the public witness's composite exhibit into the record. It's Exhibit 97. It's been compiled by our paralegal and is ready to go.

CHAIRMAN CARTER: Okay. That was the information we got this morning from our public testimony.

MS. BROWN: Yes. And then one final matter.

CHAIRMAN CARTER: Any objections?

MR. ANDERSON: No.

CHAIRMAN CARTER: Without objection, show it done.

(Exhibit 97 admitted into the record.)

Yes, ma'am.

MS. BROWN: With respect to the two late-filed exhibits, we need a date for when they will be supplied, and they'll become part of the record at that time, subject to any objection.

CHAIRMAN CARTER: That would be Exhibits 99 and 100.

MS. BROWN: Yes.

CHAIRMAN CARTER: 99 is the information requested from the University of Florida on the population data and 100 is the natural gas analysis.

MS. BROWN: That's correct. We were hoping for June 30th.

CHAIRMAN CARTER: Is that possible, Mr. Anderson?

MR. ANDERSON: Yes, it is, Mr. Chairman.

CHAIRMAN CARTER: Okay. Show it done.

MS. BROWN: All right.

CHAIRMAN CARTER: Ms. Brown, you're recognized.

MS. BROWN: All right. We have the record of our proceeding now. In light of the testimony that's been given today, staff would like to come back with a written recommendation, posthearing recommendation for you on this matter. And in light of that, the transcript of the hearing will be due June 27th, the posthearing brief will be due 7/11, with the staff recommendation August 7th and an agenda August 19th.

CHAIRMAN CARTER: Okay. Commissioner Skop, you had a comment.

COMMISSIONER SKOP: Thank you, Mr. Chair. And just to staff with respect to the written recommendation, again, we're in a consolidated posture. We, too, are on an accelerated time frame. But, again, that has judicial economies to the extent we're able to combine everything in a single hearing right now.

What I would expect to see is a detailed staff discussion on why departure from the Bid Rule is warranted,

with specific discussion in relation to protecting the consumer protection aspects that are alluded to within, I believe it was provision 15 or 16 that talks about pursuant to the same language that's in the preliminary staff response to Item, I believe, or Issue 24. And also, too, I think would need a little bit of staff development to the extent of not locking in the turbine technology at the appropriate time. So I would like to see discussion in all of those areas within the rec, please.

CHAIRMAN CARTER: Commissioner McMurrian.

COMMISSIONER McMURRIAN: Thank you, Chairman.

While we're talking about that again, I wanted to share my thoughts on those concerns that you raised, Commissioner Skop, because I want to make sure -- I want to share my thoughts so the parties have the opportunity to respond to, to my thinking on that as well in their briefs and staff in their recommendation.

I don't want to take a position on the issues regarding whether or not we waive the Bid Rule. I know that will be addressed in the recommendation. It's my belief, and, again, it's a belief, and I'm hoping for a lot of clarity when we get the staff recommendation on this, that just because we might waive the Bid Rule process, that we wouldn't be waiving protections that we are statutorily able to afford under our other statutory, excuse me, other statutory provisions. And

that just -- I think we talked about that a little bit earlier. It's my opinion that in asking to waive the Bid Rule process it's more about not going through the RFP process. And I'm just sharing my thoughts, Commissioner Skop. I'm not trying to argue with you about it.

But, again, I do want clarification on that because even if we were to waive the Bid Rule process in some other forum, I want to make sure that we have the authority to, I mean, we have the ability to look at other protections to afford consumers in that respect, that we don't have to strictly abide by that one sentence in the Bid Rule to have the protections that I think we already have under Florida law.

CHAIRMAN CARTER: Anything -- are you -- is it on the same issue?

COMMISSIONER SKOP: Yes, sir.

CHAIRMAN CARTER: Okay. You're recognized, sir.

COMMISSIONER SKOP: Thank you, Mr. Chair.

And I think that, just in response to Commissioner McMurrian's concerns, which I do agree to that there may be some statutory provisions overarching, but, you know, for the folks at home here let's lay this out and make it concise. We have three need determination proceedings that are typically handled separately. They've been consolidated into one. Two of the three are in an accelerated docket for administrative convenience to have the hearing. On top of that, there's

additional concessions being requested: Departure from the Bid Rule, which, again, I agree with on the RFP. There's also an additional concession being requested that they don't want to definitize the technology yet, they want flexibility. And also they want an affirmative finding of need pursuant to the consolidation request for each individual plant. Okay. So there are things that they want, and I think in upholding the public trust and interest there's things that the Commission needs to make sure.

Now pursuant to the rule which says, "If a public utility selects a self-build option, costs in addition to those identified in the need determination proceeding shall not be recoverable unless the utility can demonstrate that such costs were prudently incurred and due to extraordinary circumstances." That's express. That's not implied for other things. But, again, I do think, and I want to collect my thoughts for a second, I do think that that's a very, very, very important consideration.

Again, they are asking for things that are ahead of their time. By their own admission they don't need a ruling by October 2008. They have not yet filed for site cert on either one of the proposed conversion plants. You know, if they need more time to definitize costs, then, you know, perhaps maybe we can wait on that. But if they're asking for accelerated treatment and approval by this Commission, I think it's in the

interest of fairness for the ratepayers to make sure that we're protected. And I'm not willing to give up anything. Okay?

So my concern, I think that we do have those protections, but in the totality of the circumstances, you know, to me that's an important consideration that I feel strongly about. I mean, we're talking about nearly a $4 billion decision here. And if you don't collar that and lock it in -- you know, if they feel that costs will escalate, they can justify that at the appropriate time. But we still have this express language. And maybe that's the lawyer in me, but, again, they're the ones that are asking for this on an accelerated time frame. I mean, some could construe this as being the rocket docket. But the fact remains, if they need time to go further definitize the costs and have confidence in that, then maybe that's something certainly they could do on their own volition. But if they're going to come forth before the Commission and request for accelerated review in the need determination process on top of additional concessions, then I'm just putting adequate protections in place that already exist that are express, and I think that's a very important position for the Commission to do.

I know that the Bid Rule, essentially the RFP process -- and I see the whole screening process. But, again, the catchall there is that they under the Bid Rule commit to the numbers that they provided in all the prefiled testimony

for each of the three respective plants. And if they're not willing to do that, then maybe the Commission ought to require they go definitize the estimates a little bit more and come back to us. But to me it seems a reasonable tradeoff to request that, and I know staff in their preliminary position feels the same way. So, again, that's my, that's my thoughts on that.

CHAIRMAN CARTER: Commissioner McMurrian.

COMMISSIONER McMURRIAN: I didn't mean to get into a volleyball here, but I, perhaps I was -- well, I can tell that I was inarticulate in what I said. I was not suggesting, Commissioner Skop, not to lay that out in the, in the recommendation in some way.

I guess what I was saying was, I was trying to share what my understanding of our general authority would be so that that's addressed as well. And I guess it's because I share those same concerns you do; that I would want to know that if we were, if we had a similar case and perhaps this hadn't come up in the way it's been brought up, that we still have those protections for customers even if we weren't being faced with that specific issue and the wording that's been added to that Issue 24 that you pointed out earlier. I'm not suggesting that that shouldn't be in there. I'm just trying to suggest that I think that we do have protections in place. And, again, this is my understanding, and I think it will give the parties an

ability to respond to that, but that we do have protections in place, even if we were to waive the Bid Rule with respect to the two conversion projects and even if we didn't have some language in the rec that specifically said that. I want to -- I want that extra comfort that we have that ability to afford those protections in general. So that's what I'm getting at. I'm not suggesting that that language come out or that that not be addressed in some way at all. So thank you, Chairman.

CHAIRMAN CARTER: Thank you.

Commissioner Edgar, you're recognized.

COMMISSIONER EDGAR: Thank you, Mr. Chairman. Just in an effort to add just a closing, and I'm terrible at telling jokes so I won't even begin to try, but I do think this is maybe the first time that I've heard the Florida PSC compared to the FCC. So sometimes we are, as a government agency are asked, are criticized for moving too slow, sometimes it seems, you know, people may say that we're moving too fast. What I do know is that our staff and our aides and everybody else involved tries very hard to move forward with all due diligence and thoroughness. And I appreciate the questions and discussions that we've had today particularly pointed towards fuel diversity and options and costs. I think that that discussion and that information is very, very, very helpful and goes right to the heart of what our role is, trying to do those economic analyses and have those cost benefit discussions, and

I think that's very helpful.

You know, we, the Bid Rule has been waived before. In my own view I see it as a tool, not the be-all end-all, not the only protection. I do see it as a tool. And I also believe that there are a number of statutes that we can point to for overarching authority to look at and assure prudence and I think that this goes right along with that.

So my last statement would just be to say that I know each of us takes very, very seriously the public trust with which we have been charged. I certainly in my almost 19 years of government service think about that truly every day. And I think that proceedings such as we've had today and the expert testimony go hand in hand with that public trust. So to my Commissioners, thank you all for your thoughtful questions, and I look forward to reading the briefs and the staff recommendation.

CHAIRMAN CARTER: Commissioner Argenziano.

COMMISSIONER ARGENZIANO: I guess what I'd like to have, and I guess I'd like to ask Commissioner Skop because maybe I've been reading and, and thinking about other questions pertaining to the shale and doing some things here, I would like for you to succinctly, if you could, give me your concerns. We are talking about $4 billion and you're talking about the bidding process. I'd like you to articulate to me, if you would bear with me once again because I was distracted,

I'd like to know your concern there and hear it again, please.

COMMISSIONER SKOP: Thank you, Mr. Chair, Commissioner Argenziano.

Again, my concern is couple fold. Again, the consolidation, as I previously mentioned, again, being properly consolidated, but the issue with that is that two of the three need determinations that are typically heard on a standalone basis one by one by one have been related back to the original filing date and for administrative convenience all heard in one hearing that is here before us today.

Now staff initially had some concerns and apparently some things were worked through, but staff has addressed the fact that they can step up to the plate and get this done. The underlying question to me is even if we can do something, why do we need to do it so quick? But beyond that with respect to the Bid Rule, on top of the accelerated procedure under which this is moving forward, there has been a request to depart from the Bid Rule, which may or may not be justified. Certainly you can make some reasonable assumptions that they've effectively done a proxy. But the issue that I have, and, again, this is, you know, putting on the consumer advocate hat that we're supposed to be cognizant of, is under the selection of generating capacity, Rule, PSC Rule 25-22.082(15), it talks about "If a public utility selects a self-build option, costs in addition to those identified in the need determination

proceeding shall not be recoverable unless the utility can demonstrate that such costs were prudently incurred and due to extraordinary circumstance."

So at least what this provision provides to me -- and if we waive it, as Mr. Anderson has said, I had to extract it from him, but if we waive the Bid Rule, we also waive that express provision. Now there may be some other catchall provisions, statutory things we could go point to and say we ultimately have the, the prudency review, but at the end of the day this expressly states under normal circumstances subject to the Bid Rule not being waived that they are held accountable to the numbers that I had the witnesses articulate that are in the prefiled testimony for each of the respective plants absent extraordinary circumstance and making sure that such costs were prudently incurred. To me as a lawyer it's an express provision, it's there, and to waive it, you know, basically to waive it basically foregoes that express provision that protects the consumer.

And all I'm saying again, my issues aren't necessarily technical, I recognize the environmental benefits, I recognize the fuel cost savings, I recognize the efficiency gains and the new technology, but my concerns are making sure, particularly in the heightened scrutiny of an accelerated process, that as we move forward we're not giving away concessions that the utility are clearly asking for and we're

protecting the consumer. And I think it's fair and reasonable, if they want something on an accelerated basis -- I mean, two of the three plants they haven't filed for site cert yet, they don't know what the true cost is going to be because they haven't firmly definitized the technology, and they're asking for flexibility to be able to choose whatever they want to do and asking for waiver of the Bid Rule, which is also a waiver of locking in the cost that they've estimated. And, you know, to me, I'm concerned that if we don't hold them to that standard, it's analogous to unrestrained costs that under the favorable cost recovery treatment that's in the current settlement agreement under the GBRA treatment they get first year system revenue requirements and they just put it right in the rate base.

And the bottom line here is that if this cost is what they've stated in the prefiled testimony and that goes in the rate base or whatever it is less than that, fine. But if it grows unbounded and suddenly that is the first year system revenue requirement and we've waived our provision, who's to say that, you know, they can't justify that? They can justify whatever they want to justify. But to me, I'm not for on an accelerated basis giving up express language that protects the consumers. It's plain and simple; we need to protect the consumers. I don't know why, you know, you have other utilities looking to add additional baseload generation in the

same time frame and they're going through the normal process.

COMMISSIONER ARGENZIANO: Okay. Why -- that would be my question, why are we not going through the normal process, for what purpose? If somebody would repeat that to me. I may be dense or whatever it is. I'd like to know.

COMMISSIONER SKOP: Well, essentially, at least I think from what I've heard from the testimony of Mr. Taylor and such, is that they conducted an RFP for WCEC 3 and did not do so for the, for the conversion plants because it was temporally in time. They just took it and tweaked it to use it as a proxy or a substitute for having to repeat the whole RFP process. There may be some merit in that. But there's certainly no merit in my eyes in giving away express provisions. If we waive, arbitrarily waive the Bid Rule, we're giving out all the express provisions. I mean, maybe they don't have to rebid, but certainly that provision in (15) protects the consumers.

COMMISSIONER ARGENZIANO: Then that would be, Mr. Chair, that would be my question to our counsel. Are we waiving, are we really waiving that protection for the consumer?

CHAIRMAN CARTER: I think that -- let me just kind of, as I get ready to ask staff to comment, let me kind of jump in here first. This morning staff pointed out that that specific language is in staff's recommendation, that specific language that Commissioner Skop has talked about in terms of

the language in provision (15). That will be in staff's recommendation.

The other aspect of it is that complete issue will be briefed by the parties and will be reviewed also by staff. So by the time we get ready to make a decision, we'll have that information in front of us.

Staff, did I correctly characterize that?

MS. BROWN: Yes, Mr. Chairman. We will address all these matters in our posthearing recommendation.

COMMISSIONER ARGENZIANO: Okay. So that, that addresses the concern on the waiving of the consumers.

COMMISSIONER SKOP: And to, Mr. Chair, to Commissioner Argenziano's point -- and, again, I commend staff. Again, I extended my apologies. That certainly is staff's initial position in terms of the Prehearing Order and ultimately you guys will decide what comes in the final rec.

What I'd like to see is a little bit more definitization of that because, again, I think that the concern is it may find its way in there. But, you know, certainly it's an important issue as we move forward because, again, I think the alternative is if they're not able to commit to the number like they would in the normal process by what they put in bound or paper -- because in any other need determination they're bound to that number. In WCEC 3, based -- if we don't waive the Bid Rule because they did the bid for the RFP on WCEC 3,

they're bound to that number pursuant to this rule. Now if we waive it for the conversion plants, they're not bound to that number anymore. And to me it's just very important, if they're not ready to commit themselves to the numbers that they presented in direct testimony to this Commission, then maybe they need to take a step back and go definitize the numbers a little bit more.

COMMISSIONER ARGENZIANO: Well, all I can say is at this point to staff also, I am very concerned. I do not want to see any consumer protections being eliminated or, or waived. So I'll look forward to the staff's recommendation, and I understand fully what your concern is.

MS. BROWN: And, Commissioner Argenziano, if I might add, at the agenda there will be plenty of opportunity to further discuss this and analyze what should be included in the order.

CHAIRMAN CARTER: Thank you. Commissioners, anything further? Thank you all.

Ms. Brown, did we cover -- you gave the hearing dates for briefs?

MS. BROWN: Yes. Yes.

CHAIRMAN CARTER: Any concluding matters?

MS. BROWN: Not that I'm aware of.

CHAIRMAN CARTER: Mr. Anderson.

MR. ANDERSON: We look forward to addressing all

these considerations in the brief. We did want to take a moment to thank very much your staff. They've done an enormous amount of work in their usual very high quality, integrity way, and we're very appreciative to them. Thank you.

CHAIRMAN CARTER: Thank you. Commissioners, with that, we are adjourned.

(Proceeding adjourned at 4:45 p.m.)

STATE OF FLORIDA)
: CERTIFICATE OF REPORTER
COUNTY OF LEON)

I, LINDA BOLES, RPR, CRR, Official Commission Reporter, do hereby certify that the foregoing proceeding was heard at the time and place herein stated.

IT IS FURTHER CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript constitutes a true transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorneys or counsel connected with the action, nor am I financially interested in the action.

DATED THIS 27th day of June, 2008.

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

In re: Florida Power & Light Company's Petition to Determine Need for West County Energy Center Unit 3 Electrical Power Plant	))))	Docket No. 080203-EI Dated: May 13, 2008

FLORIDA POWER & LIGHT COMPANY'S OBJECTIONS AND RESPONSES TO THE STAFF OF THE FLORIDA PUBLIC SERVICE COMMISSION'S FIRST SET OF INTERROGATORIES (NOS. 1, 4-8, 13-19, 23-26, 28-54), FIRST REQUEST FOR PRODUCTION OF DOCUMENTS (NOS. 1-11), AND FIRST REQUEST FOR ADMISSIONS (NO. 1)

Florida Power & Light Company ("FPL"), pursuant to Rules 1.340 and 1.350, Florida Rules of Civil Procedure, and Rule 28-106.206, Florida Administrative Code, submits the following objections and responses to the Staff of the Florida Public Service Commission's ("Staff's") First Set of Interrogatories (Nos. 1, 4-8, 13-19, 23-26, 28-54), First Request for Production of Documents (Nos. 1-11), and First Request for Admissions (No. 1).

I. General Objections

FPL objects to each and every request for documents that calls for information protected by the attorney-client privilege, the work product doctrine, the accountant-client privilege, the trade secret privilege, or any other applicable privilege or protection afforded by law, whether such privilege or protection appears at the time response is first made or is later determined to be applicable for any reason. FPL in no way intends to waive such privilege or protection. The nature of the document(s), if any, will be described in a privilege log prepared by FPL.

In certain circumstances, FPL may determine, upon investigation and analysis, that information responsive to certain discovery requests to which objections are not otherwise asserted are confidential and proprietary and should not be produced without provisions in place

to protect the confidentiality of the information, if at all. By agreeing to provide such information in response to such request, FPL is not waiving its right to insist upon appropriate protection of confidentiality by means of a protective order or other action to protect the confidential information requested. FPL asserts its right to require such protection of any and all documents that may qualify for protection under the Florida Rules of Civil Procedure and other applicable statutes, rules and legal principles.

FPL is a large corporation with employees located in many different locations. In the course of its business, FPL creates numerous documents that are not subject to Florida Public Service Commission or other governmental record retention requirements. These documents are kept in numerous locations and frequently are moved from site to site as employees change jobs or as business is reorganized. Therefore, it is possible that not every relevant document may have been consulted in developing FPL's response. Rather, these responses provide all the information that FPL obtained after a reasonable and diligent search conducted in connection with this discovery request. To the extent that the discovery requests propose to require more, FPL objects on the grounds that compliance would impose an undue burden or expense on FPL.

FPL objects to any production location other than FPL's offices at 215 South Monroe Street, Suite 810, Tallahassee, Florida.

FPL objects to each request to the extent that it seeks information that is not relevant to the subject matter of this docket and is not reasonably calculated to lead to the discovery of admissible evidence.

FPL objects to each request to the extent it is vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of such discovery requests.

FPL also objects to these discovery requests to the extent they call for FPL to prepare information in a particular format or perform calculations or analyses not previously prepared or performed as purporting to expand FPL's obligations under applicable law. FPL will comply with its obligations under the applicable rules of procedure.

FPL objects to providing information to the extent that such information is already in the public record before the Florida Public Service Commission and available to Staff through normal procedures.

FPL objects to each discovery request and any definitions and instructions that purport to expand FPL's obligations under applicable law.

In addition, FPL reserves its right to count requests for production of documents and their sub-parts (as permitted under the applicable rules of procedure) in determining whether it is obligated to respond to additional requests served by any party.

Notwithstanding any of the foregoing general objections and without waiving these objections, FPL intends in good faith to respond to Staff's discovery requests.

II. Responses

1) Staff's First Set of Interrogatories (Nos. 1, 4-8, 13-19, 23-26, 28-54)

Attached hereto are FPL's answers to Staff's First Set of Interrogatories (Nos. 1, 4-8, 13-19, 23-26, 28-54), consistent with its objections, together with the affidavits of the persons providing said answers.

2) Staff's First Request for Production of Documents (Nos. 1-11)

FPL's responses are without waiver of its objections. All documents will be made available by FPL for inspection and review by Staff at FPL's offices at 215 South Monroe Street,

Florida Power & Light Co.

Major Rating Factors

Strengths:

- High quality electric utility generates steady cash flows;
- Constructive regulatory environment in Florida; and
- Strong customer growth with predominantly residential base.

Corporate Credit Rating
A/Stable/A-1

Weaknesses:

- Dependent on natural gas to generate electricity; and
- Higher-risk cash flows from affiliate FPL Energy's merchant generation detracts from the entire group's credit quality.

Rationale

The ratings on Florida Power & Light Co. (FP&L) are based on the consolidated credit profile of parent FPL Group Inc. (FPL) Ratings reflect the strength of the regulated cash flows from integrated electric utility FP&L. The utility contributes to about three-quarters of the consolidated credit profile and has better business fundamentals than most of its integrated electric peers, with a healthy and growing service territory, sound operations, and a supportive regulatory environment. However, the following factors detract from credit quality: the company's increasing exposure to wholesale energy activities, its willingness to expand through acquisitions and increase its risk profile, the fluctuating cash flows from FPL Energy Inc.'s portfolio of merchant generation, and the utility's significant exposure to natural gas.

Short-term credit factors

The short-term rating on FP&L is 'A-1'. The utility's liquidity is managed by the parent, but it does have its own sources of liquidity. FPL's available cash flow is not sufficient to fund its large capital expenditures and dividends and is expected to remain negative for the foreseeable future. FPL has adequate liquidity with $6.5 billion of revolving bank facilities maturing in 2012 and a $250 million revolving term loan maturing in 2011. Almost all of that capacity was available as of Sept. 30, 2007. The facilities support commercial paper programs and letters of credit.

By analyzing a stress scenario to assess FPL's liquidity adequacy to cover exposure to adverse market and credit events, Standard & Poor's expects that the company has sufficient liquidity under those conditions. The company's maturity schedule subsides over time, with maturities peaking at $1.6 billion in 2008.

Outlook

The stable outlook on FP&L and FPL reflects the predictable utility cash flows, a favorable regulatory environment, and growing service territory. The rating could be pressured if growth in the unregulated portfolio increases the consolidated company's business risk, the forecast becomes more dependent on earnings growth at FPL Energy, or the projected cash flow is insufficient to maintain ratings in line with the our expectations. An improvement in the rating is possible if FPL can demonstrate sustainable stronger financial performance.

Opinion

Company Profile

Headquartered in Juno Beach, Florida, Florida Power and Light Company (FP&L, A1 Issuer Rating, stable outlook) is a vertically integrated regulated utility with a service territory that includes most of the high growth Florida coastal communities. It is the principal subsidiary of FPL Group (FPL, A2 Issuer Rating, stable outlook), one of the largest providers of electricity-related services in North America with annual revenues close to $16 billion. FPL is also the parent and guarantor of FPL Group Capital Inc (A2 senior unsecured, stable outlook), the entity that finances most of FPL's unregulated operations, primarily independent power projects through its wholly owned subsidiary, FPL

Energy, LLC (unrated). FPL derives most of its cash flows from the regulated operations of FP&L, although an increasing amount of cash flow is also being generated from FPL Energy.

Rating Rationale

The key factors influencing FP&L's A1 Issuer Rating and stable outlook include:

- Strong financial performance and cash flow coverage ratios

FP&L's rating reflects the company's strong financial performance and cash flow coverage ratios that are above average for its rating in accordance with Moody's rating methodology for global regulated electric utilities. The company's credit metrics have experienced significant volatility in recent years, however, due to hurricane costs incurred in 2004 and 2005 and high fuel costs in 2005, much of which were deferred and recovered in subsequent years. As a result, cash flow coverage ratios are overstated in 2006 and for the first quarter of 2007 as the company recovered a large portion of these previously incurred but deferred storm and fuel costs. Ratios are expected to return to more normalized levels in 2007 and thereafter at approximately 6.0 times CFO before working capital plus interest to interest and 30% CFO before working capital plus interest to debt, barring any additional large deferrals. FP&L's metrics place the company strongly within the A rating category for medium business risk utilities in accordance with Moody's global ratings methodology for regulated electric utilities.

- FP&L operates in a constructive regulatory environment with rate stability through 2009

FP&L operates in a generally constructive regulatory environment that provides for reasonable rates and has established fuel and purchase power cost recovery mechanisms. The company is currently midway through a rate agreement set to expire in 2009. Recovery of generation additions is allowed under the settlement, as are all prudently incurred storm-related costs. Fuel costs are directly passed through to its customers. The company can also recover prudently incurred costs for the potential siting, designing, licensing and construction of new nuclear baseload generation.

FP&L did recently receive a regulatory setback, however, when the Florida Public Service Commission rejected a new 1,980 MW coal plant to be built by the utility in Glades County, Florida, highlighting the issue of fuel diversity in Florida. Without new coal or nuclear baseload generation additions, FP&L will become increasingly dependent on natural gas for generation needs. This will further expose the company to potentially higher and more volatile fuel costs and risks possible service interruptions should the supply of natural gas to Florida be disrupted as was the case in 2005 following hurricane damage to the Gulf Coast.

- Significant capital expenditure program to meet baseload generation needs, as well as for transmission and distribution improvements, including its "storm secure" program

FP&L is in the midst of a substantial capital expenditure program that includes a new natural gas fired unit at Turkey Point, which came into service on 5/1/07, and a new two-unit natural gas plant in western Palm Beach County. A significant amount of new debt will be necessary at the utility to fund this expansion, which will likely result in coverage metrics that are lower than historical averages, although they are expected to remain strong for its current rating category. The utility's leverage should also remain strong for its rating category at below 40% over the next several years. Overall capital expenditures for the next 5 years are projected at $11 billion with capital expenditures for 2007 estimated at $2 billion.

- FP&L has a high growth service territory with good demographics and a robust economy

FP&L benefits from Florida's healthy economy, high rate of population growth, and favorable customer mix. Population growth is expected to average 2% a year for the next 20 years, about twice the national average and among the highest of the most populous states. A favorable customer mix heavily skewed towards residential and commercial customers, high population growth, and the resulting increase in demand for electricity should support continued annual revenue growth of 2% despite recent declines in customer usage due to cooler weather and conservation initiatives.

Rating Outlook

The stable outlook reflects the continued constructive regulatory environment in Florida and Moody's expectation that the utility will continue to exhibit a strong financial performance, robust cash flow coverage ratios appropriate for its rating category, and moderate leverage during the its generation build out phase over the next several years.

What Could Change the Rating - Up

An upgrade could be merited if the utility's financial metrics improved significantly for a sustained period, including a ratio of CFO before working capital plus interest to debt above 30% and a ratio of CFO plus working capital plus interest to interest above 6.0 times, on a normalized basis. However, the lack of geographic diversity and the company's ongoing exposure to storms and likely increased proportion of natural gas in its fuel mix limits the

upside potential for the rating.

What Could Change the Rating - Down

A substantial increase in dividends upstreamed to the parent company; a sustained decline in cash flow coverage metrics, including a ratio of CFO before working capital plus interest to debt below 25% and a ratio of CFO plus working capital plus interest to interest below 5.0 times, on a normalized basis; an increase in FP&L's debt-to-capital ratio above the 40% range; unanticipated higher capital expenditures; a significant decline in the constructiveness of the regulatory environment in Florida.

Rating Rationale

- The ratings and Outlook of Florida Power & Light Co. (FP&L) are consistent with the strong individual financial condition of the utility.
- The ratings also benefit from regulatory policies and procedures in Florida that generally minimize regulatory lag and permits reasonably timely recovery of fuel and purchased-power expense and investment in fixed assets.
- High capital investment spending will require external financing and entail implementation and execution risks.
- Fitch's ratings of FP&L also consider the business and financial profile of its parent, FPL Group, Inc.

Key Rating Drivers

- The utility has a large and robust service territory that has experienced growing population and customer demand. Demand is primarily residential or commercial, with a very small industrial component.
- The company has above-average exposure to tropical storms, mitigated by regulatory policies that permit the company to recoup its costs of storm repair and restoration.
- Maintaining a supportive political and regulatory environment in Florida that permits full and timely recovery of utility capital investments, commodity costs and storm recovery is important to the maintenance of the current ratings.

Recent Events

Profitability and Cash Flow

FP&L's cash flow measures improved in 2007 after a drop in 2005 and early 2006 related to delays in recovering higher fuel and purchased power expenses, as well as storm repair costs. The expenses were deferred for subsequent billing, and FP&L received full recovery through charges on customer bills spread over late 2006 and early 2007. This event illustrated FP&L's sensitivity to natural gas commodity prices and to storms, and the potential correlation of severe storms with natural gas supply shortage and price spikes. It also illustrated the efficacy of the utility tariff recovery mechanisms, albeit with a lag of at least a year in ultimate recovery.

Hurricane Damage/Securitization

In May 2007, a subsidiary of FP&L issued $652 million of storm recovery bonds. The net proceeds were used to reimburse FP&L for $519 million of expenses for storm recovery and to build a storm and insurance reserve fund of $123 million (after tax). In Fitch's view, the transaction was a favorable sign of the support of the state legislature and utility commission for timely recovery of costs of severe storms.

Future Power Supply

The Florida Public Service Commission (FPSC) in June 2007 rejected FP&L's plan to site a coal plant (pulverized coal) at a new Glades County site. Shortly thereafter, Governor Charlie Crist announced his administration's opposition to any new coal-fired plants, a

major shift in state policy that will have wide-ranging implications for FP&L's future capital expenditures. FP&L is no longer pursuing the plan for the Glades County coal facilities and has since proposed to expand existing nuclear plants, build new nuclear plants and add natural gas-fired power plants to meet growth in demand.

Florida Housing Market

FP&L's service territory was one of the "overheated" housing markets in 2006–2007, and housing prices have declined in the area. Currently, there are reported vacancies of unsold housing units. These conditions in the real estate market could result in slower payments and/or higher delinquencies of accounts receivables, which would be made up in a subsequent tariff adjustment. The second half of 2007, and especially in the fourth quarter, gave evidence of a slower rate of growth in number of customers and lower growth rate in consumption per customer. While slower growth or no growth in sales puts more pressure on the utility's profit margins, it could also delay the utility's need to build new power plants and invest in the distribution network and new customer connections. Thus, slowing growth could have a neutral credit implication.

Utility Business

FP&L is a large, integrated electric utility with a service territory that spans most of the east and lower west coasts of Florida. The company served approximately 4.5 million electric customers at Sept. 30, 2007. FP&L does not provide gas distribution service. The company's electric load growth has exceeded the average for US utilities. Sales volume grew by 3.1% over the 10 years from 1996–2005, by 1.7% in 2006, and an estimated 2% in 2007. Growth in number of customers served and in consumption requires the utility to maintain an active construction program, both for distribution services and for power supply (discussed in greater detail on page 4.)

Regulatory Matters

The FPSC sets FP&L's tariffs and has regulatory authority over the company's operations. Florida has generally been among the more constructive utility regulatory regimes in the country. However, Fitch notes that there have been new commissioner appointments and some discontinuity in regulatory policy under a new administration headed by Governor Crist, whose term began in January 2007. Two out of five commissioners have served for two years or less, and two were appointed by the new governor in the past eight months.

FP&L tariffs are subject to a number of tariff adjustment mechanisms that allow for recovery of individual cost elements minimizing regulatory lag. Examples include:

- Generation Base Rate Adjustment Clause (GBRA)—Automatic rate adjustment when new generation authorized by FPSC is placed in operation.
- Conservation cost recovery rider—Recovers costs incurred for demand side management, but without any adjustment for volumes lost due to customer conservation.
- Nuclear Cost Recovery Rule—Allows recovery of "all prudently incurred" costs associated with siting, designing, licensing, constructing and operating new nuclear power plants.
- Cost Recovery Clauses—Allow recovery of substantially all fuel, purchased power, interchange expenses, capacity fees, environmental expenses, certain revenue taxes and franchise fees. The adjustments are determined annually, but FP&L can petition for an interim adjustment if under-recovered by more than 10%. This mechanism was used in 2005, as noted below.

In 2005–2006, FP&L financial results suffered due to extensive hurricane damage and a substantial increase in gas prices in the final quarter of 2005. A state law was passed to permit Florida utilities to securitize expenses associated with storm costs and to refill the storm reserve account. FP&L had to absorb a relatively small disallowance of storm costs that the FPSC deemed imprudent. In May 2007, a subsidiary of FP&L issued $652 million of storm recovery bonds. The net proceeds were used to reimburse FP&L for $519 million of expenses for storm recovery and to provide a storm and insurance reserve fund of $123 million. FP&L could absorb storm costs of up to $200 million (pre-tax) based on this reserve without any charge to earnings.

FP&L's ability to recover all of its fuel and purchase power costs after the very rapid rise in gas prices during 2005 illustrates the supportive character of the FPSC. FP&L had deferred for future recovery fuel costs of $770 million for the eight months ended Aug.31, 2005 and projected additional under-recoveries of $200 million for the balance of 2005. The utility filed an application seeking to boost its energy component to recover its fuel costs. The FPSC authorized a tariff increase to recover most of the 2005 deferred fuel costs in 2006 and the balance in early 2007.

On Aug. 24, 2005, the FPSC approved a negotiated rate settlement in FP&L's general rate case. The agreement will remain in effect until Dec. 31, 2009 and thereafter, until new rates are determined by the FPSC. Key elements included:

- No base rate increase—However, fuel and purchased power expenses and many related cost components are subject to annual adjustment, outside of base rates. Also, FP&L was authorized to continue collecting base rates that incorporated a component for nuclear decommissioning and storm damage funds, but to cease remitting those amounts to the decommissioning and storm damage funds, equivalent to approximately $78.5 million and $20.3 million annually.
- Continuation of revenue sharing—Customers will receive refunds if future sales growth exceeds a threshold based on an extrapolation of the rolling 10-year average growth in kilowatt-hour sales.
- Storm reserve—FP&L can recover prudently incurred storm restoration costs through securitization or surcharges. The ongoing accruals to the storm reserve were suspended.
- Depreciation credit—The agreement continues an annual depreciation credit of $125 million to adjust for excessive depreciation expense recognized in prior years. This boosts reported income but does not contribute to cash flow.
- Decommissioning accruals—FPL suspended contributions to its nuclear decommissioning fund for a minimum of four years to prevent overfunding.
- Generation base rate adjustment—For power plant projects that go through the Florida Power Plant Siting Act and are approved by the FPSC, an adjustment to base rates will be allowed, calculated on the revenue requirements of that project based on an 11.75% ROE and an equity ratio of 55.8%.
- Recovery for potential incremental costs—FP&L will be allowed to recover through a clause any costs associated with complying with a FPSC order regarding a regional transmission organization (RTO) if established.
- Return on Equity (ROE)—There is no determination of ROE under the agreement, but the ROE implied in the rate settlement was deemed to be equivalent to 11.75%. FP&L may petition the FPSC for a rate adjustment if its ROE drops below 10% during the course of the agreement.

Largely reflecting the tariff adjustments and recovery mechanisms described earlier in this section, Fitch expects the utility to maintain a fairly stable return on invested capital over the next several years.

Power Supply

For the full-year 2007, FP&L generated around 86% of the power it sold to customers, and purchased approximately 14% under a combination of long-term and short-term contracts. Nuclear and coal power plants comprised only 15% of the company's owned capacity, and FP&L generated 25% of the power it sold to customers from those sources. In 2007, 60% of the power FP&L sold to customers was generated by FP&L using natural gas or oil. Furthermore, 14% was purchased from other producers, and such purchases tend to be sensitive to gas and oil market prices. Clearly, the company has significant gas and oil commodity cost exposure, but the financial effect is generally offset by regulatory mechanisms that allow the company to adjust its fuel recovery tariff annually with true-ups for under-recovered or over-recovered amounts. To date, the company has been able to recover from customers under tariff recovery mechanisms the full cost of higher gas prices, but rapid cost increases can result in material under-recovery, as when gas prices rose dramatically late in 2005.

Given the location of the company's service territory at the extreme southern end of the Florida peninsula, there are limits on the ability to import power. Power plant development is subject to stringent wetlands regulations, FPSC certification of need and siting approval, and other environmental rules. Air conditioning drives substantial per capita consumption, and the company's service territory also has exhibited above-average population increases. Recent growth in demand has been met by additions of gas combined-cycle or peaking plants, resulting in mounting exposure to natural gas supply and commodity price issues.

FP&L Generating Capacity and Net Generation by Source

Source: FPL Group, Inc.

The company sought regulatory approval to site a coal plant (pulverized coal) at a new Glades County site. In June 2007, the FPSC denied authorization, and Governor Crist announced his administration's opposition to any new coal-fired power construction, a major change in state policy. Subsequently, FP&L asked the FPSC to authorize investment to expand capacity at existing nuclear units at Turkey Point and St. Lucie by 400 megawatts (MW) in the intermediate term, and the FPSC granted a certificate of need. FP&L has asked for authorization to construct two new nuclear units (2,200 MW—3,000 MW) at Turkey Point for completion in around 2020. In December 2007, FP&L also issued a request for proposals on 1,250 MW of gas fired combined-cycle gas turbines (CCGT) by 2011–2012. FP&L has no alternative but to add gas-fired CCGTs or new power

purchases from other suppliers based on gas fuel in the interim to meet demand, and its exposure to gas prices will only increase for the foreseeable future.

Purchased Power

Committed contractual expenditures for purchased power are set out in the table "FP&L Contractual Commitments" above. The general approach Fitch uses in considering purchased-power obligations is to assess the risk associated with the purchased power obligation. To the extent that such power is economically justified (in quantity and relative to the prevailing market price) or is purchased by a rate-regulated utility with a strong regulatory mechanism to recover the costs from consumers, the presumption is that such contracts are not debt-equivalents. In the case of FP&L, this presumption is bolstered by the history of recovery of fuel costs under the FPSC policies and procedures. Fitch has not capitalized any portion of the power purchase agreements and treats their ongoing costs as an operating expense.

Capital Expenditures

FP&L finances its activities using a mix of internal cash flow, secured first mortgage bonds, tax-exempt pollution control revenue bonds, unsecured credit facilities and equity capital provided by its parent, FPL Group, Inc. FP&L maintains a relatively low rate of debt leverage, generally maintaining the authorized amount of equity capital as a component in the regulated capital structure compensated under the tariff settlement (currently around 56% equity as a percent of total capital.) FP&L has an active construction program relating to new customer additions (largely for distribution) and storm-hardening its transmission and distribution systems. Also, new generation is needed in Florida to support customer growth. The projected capital spending is indicated in the table below. Fitch anticipates capital expenditures will be funded using internally generated funds and debt issuance by the utility, plus infusions of equity from its parent, FPL Group.

FP& L Capital Expenditures
($ Mil.)

	2007	2008	2009	2010	2011	Total
New Generation	420	700	210	10	0	1,340

General and Other	145	160	170	205	210	890
Total FP&L Capital Expenditures	2,185	2,575	2,110	2,005	1,825	10,700

Source: For 2007, 2006 10-K; all other years, forecasts from 10-Q for the period ended Sept. 30, 2007.

Liquidity and Debt Structure

FP&L's debt is comprised of secured senior mortgage debt backed by property, plants and equipment; the company's obligation for tax-exempt debt issued in the form of unsecured revenue bonds; and unsecured commercial paper or borrowings under committed credit facilities.

Early in 2007, management replaced and expanded the FP&L revolving credit facility ($2.5 billion currently) at the same time as it expanded the facility for FPL Group Capital ($4 billion currently). Both are five-year facilities with an option to renew for one year. The Available Liquidity table below provides more details on amounts available at FP&L.

Available Liquidity
($000s, As of Sept. 30, 2007)

Bank Revolving Lines of Credit	2,500
Less: Letters of Credit	43
Available	2,457
Revolving Loan Term Facility	250
Less: Borrowings	0
Available	250
Cash and Cash Equivalents	56
Total Available Liquidity	2,763

Source: 10-Q for the period ended Sept. 30, 2007.

FP&L covenants to maintain debt-to-capitalization (as defined) of less that 65%, a level well in excess of current or anticipated leverage. There are no other financial covenants in the company's credit facilities. Violation of any covenant or default on any issue of FPL Group Capital or FPL Energy would not result in a cross default or cross acceleration for any FP&L agreements or bonds, nor limit the right to draw unused amounts of the FP&L credit facility.

FP&L's debt maturities are $241 million in 2008, $263 million in 2009 and in the range of $42 million–$45 million in each of 2010 and 2011. These amounts are quite low relative to the size of the company and easily manageable, given the company's capital market access.

FPL's Response to Staff's 2nd Request for Production of Documents (Nos. 12, 14, 15, and 17)

HEARING EXHIBIT 00000036

RECEIVED
MAY 27 2008
FLORIDA PUBLIC SERVICE COMMISSION
OFFICE OF THE GENERAL COUNSEL

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

In re: Florida Power & Light Company's Petition to Determine Need for West County Energy Center Unit 3 Electrical Power Plant	)	Docket No. 080203-EI
	)	Dated: May 22, 2008

FLORIDA POWER & LIGHT COMPANY'S
OBJECTIONS AND RESPONSES TO THE STAFF OF THE FLORIDA PUBLIC SERVICE COMMISSION'S ~~THIRD SET OF INTERROGATORIES (NOS. 61-71)~~ AND SECOND REQUEST FOR PRODUCTION OF DOCUMENTS (NOS. 12-17)

Florida Power & Light Company ("FPL"), pursuant to Rules 1.340 and 1.350, Florida Rules of Civil Procedure, and Rule 28-106.206, Florida Administrative Code, submits the following objections and responses to the Staff of the Florida Public Service Commission's ("Staff's") Third Set of Interrogatories (Nos. 61-71) and Second Request for Production of Documents (Nos. 12-17).

I. General Objections

FPL objects to each and every request for documents that calls for information protected by the attorney-client privilege, the work product doctrine, the accountant-client privilege, the trade secret privilege, or any other applicable privilege or protection afforded by law, whether such privilege or protection appears at the time response is first made or is later determined to be applicable for any reason. FPL in no way intends to waive such privilege or protection. The nature of the document(s), if any, will be described in a privilege log prepared by FPL.

In certain circumstances, FPL may determine, upon investigation and analysis, that information responsive to certain discovery requests to which objections are not otherwise asserted are confidential and proprietary and should not be produced without provisions in place

to protect the confidentiality of the information, if at all. By agreeing to provide such information in response to such request, FPL is not waiving its right to insist upon appropriate protection of confidentiality by means of a protective order or other action to protect the confidential information requested. FPL asserts its right to require such protection of any and all documents that may qualify for protection under the Florida Rules of Civil Procedure and other applicable statutes, rules and legal principles.

FPL is a large corporation with employees located in many different locations. In the course of its business, FPL creates numerous documents that are not subject to Florida Public Service Commission or other governmental record retention requirements. These documents are kept in numerous locations and frequently are moved from site to site as employees change jobs or as business is reorganized. Therefore, it is possible that not every relevant document may have been consulted in developing FPL's response. Rather, these responses provide all the information that FPL obtained after a reasonable and diligent search conducted in connection with this discovery request. To the extent that the discovery requests propose to require more, FPL objects on the grounds that compliance would impose an undue burden or expense on FPL.

FPL objects to any production location other than FPL's offices at 215 South Monroe Street, Suite 810, Tallahassee, Florida.

FPL objects to each request to the extent that it seeks information that is not relevant to the subject matter of this docket and is not reasonably calculated to lead to the discovery of admissible evidence.

FPL objects to each request to the extent it is vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of such discovery requests.

FPL also objects to these discovery requests to the extent they call for FPL to prepare information in a particular format or perform calculations or analyses not previously prepared or performed as purporting to expand FPL's obligations under applicable law. FPL will comply with its obligations under the applicable rules of procedure.

FPL objects to providing information to the extent that such information is already in the public record before the Florida Public Service Commission and available to Staff through normal procedures.

FPL objects to each discovery request and any definitions and instructions that purport to expand FPL's obligations under applicable law.

In addition, FPL reserves its right to count requests for production of documents and their sub-parts (as permitted under the applicable rules of procedure) in determining whether it is obligated to respond to additional requests served by any party.

Notwithstanding any of the foregoing general objections and without waiving these objections, FPL intends in good faith to respond to Staff's discovery requests.

II. Responses

1) Staff's Third Set of Interrogatories (Nos. 61-71)

Attached hereto are FPL's answers to Staff's Third Set of Interrogatories (Nos. 61-71), consistent with its objections, together with the affidavits of the persons providing said answers.

2) Staff's Second Request for Production of Documents (Nos. 12-17)

FPL's responses are without waiver of its objections. All documents will be made available by FPL for inspection and review by Staff at FPL's offices at 215 South Monroe Street, Tallahassee Florida, during regular business hours of 8:00 a.m. to 5:00 p.m., Monday through Friday, upon reasonable notice to FPL's counsel.

Respectfully submitted this 22nd day of May, 2008.

HEARING EXHIBIT 00000043 -C

Statistical Detail

A. Macroeconomic and Gas Prices

1. Short-Term Henry Hub Gas Price Forecast
2. Short-Term Regional Gas Basis Forecast
3. Bidweek Gas Prices By Major Region 1990 - Present
4. U.S. Gas and Oil Comparative Prices
5. U.S. Gas and Oil Prices 2000 - Present
6. US and Canada GDP and Industrial Production By Year and By Quarter
7. US Industrial Gas Demand Indicators

B. U.S. Gas Balances and Demand

1. U.S. Gas Balances 2000 - 2008
2. U.S. Gas Demand Summary
3. U.S. Electricity Generation By Source

C. U.S. Gas Supply/Storage/Drilling

1. U.S. Gas Supply Summary
2. U.S. Monthly Gas Storage By Region
3. Lower 48 Dry Gas Production in Federal Offshore GOM and Major States
4. U.S. Dry Gas Production By Major Region
5. Rocky Mountain Dry Gas Production and Disposition
6. U.S. LNG Imports/Exports
7. Lower 48 Drilling by Region
8. U.S. PIRA Group Production
9. U.S. PIRA Group Gas Drilling

D. Canada/Mexico Gas

1. Canadian Gas Balances
2. Western Canada Drilling
3. Mexican Gas Balances

GWHDDs for Sep.'07-May'08 and Sep.'08-Dec'08 are 10 yr (1997-2006) averages.

Electric generation includes electric utility generators (EUGs) plus non-utility generators (NUGs) which include gas-fired utility divested plants, new merchant plants as well as industrial cogeneration. Traditional industrial sector gas demand equals DOE/EIA industrial sector gas demand less gas demand for NUGs. Miscellaneous demand includes lease and plant fuel and pipeline fuel. Balancing item changes can reflect storage reclassifications between base gas and working gas.

Negative storage change denotes net injections; if positive net withdrawals. Storage levels (BCF) are at end of month shown.

For 2H07 and 2H08, assumed production shut-ins of 50 BCF in October.

Gulf of Mexico (GOM) SW (Shallow Water) refer to offshore Gulf of Mexico production in less than 1,000 feet water depth.
Gulf of Mexico (GOM) DW (Deepwater) refer to offshore Gulf of Mexico production in greater than 1,000 feet water depth.
State SW includes state offshore portions of Alabama, Louisiana, and Texas.
Onshore GOM includes Texas districts 1-4, Alabama, Florida, Southern Louisiana and Mississippi. Greater Midcontinent includes Texas districts 5, 6, 7B, 9, 10, Arkansas, Kansas, Northern Louisiana, and Oklahoma. Permian includes Texas districts 7C, 8, 8A and Southeast New Mexico.

San Juan includes West New Mexico and Southwest Colorado. Rocky Mountain consists of all states in the Mountain census region plus Nebraska, North Dakota, South Dakota, but excludes Southeast New Mexico. Appalachia region includes Kentucky, Maryland, New York, Ohio, Pennsylvania, Tennessee, Virginia and West Virginia. Other West region includes California and Oregon.
North Central region includes Illinois, Indiana and Michigan.

Other demand includes industrial, electric power, pipeline fuel demand and a balancing item, but excludes lease and plant in accordance with Statistics Canada's definition. Other West gas production refers to British Columbia, Northwest Territories, Saskatchewan, Manitoba and Ontario. Atlantic gas production refers to Sable Island. To obtain end-of-month storage levels, PIRA prorates Enerdata's weekly storage and adjusts western storage to include facilities outside Enerdata's survey.

Domestic production through 5/07 is derived from Pemex data.
Exports and imports are from the DOE/EIA and LCI Inc.
Domestic demand is derived from other components of Mexican gas balances.

SJRPP & Scherer - Solid Fuel Forecast Basis, Assumptions & Methodology - June 4, 2007 Forecast

	SJRPP	Scherer
Actual Historical Data Period	Thru April 2007	No monthly data available
Planned Purchases & Contracts	Fully committed for 2007; 2.0 MMT baseload CMC committed for 2008 at $51.549/ton; used new CMC offer at 11,300 Btu/lb for (1) remaining 2.25 MMT in 2008 at $60.00/ton and (2) all needed coal tonnage in 2009 and 2010 at $60.66/ton and $60.75/ton, respectively. Used Koch Pet Coke offer price ($71.00/ton @ 14,000 Btu/lb) for 2009 and 2010 Pet Coke volumes	Committed 100% mine mouth PRB coal for 2007, 90% for 2008, 69% for 2009, 24% for 2010 and 19% for 2011; JD Energy May 2007 forecast for PRB mine mouth coal for remaining volumes in those years; FPL contracted rail thru 2014
Future Requirements Forecast Source	JD Energy May 2007 forecast for Colombian coal, Pet Coke and vessels to JAX	JD Energy May 2007 forecast for (1) PRB coal as needed to reach 100% of needs from 2008 thru 2011 and 100% starting 2012 and (2) rail transport starting 2015
Annual Volume	4,301,012 tons purchased for 2007; in 2008 with a 58 day outage need 4,250,000 tons at 11,300 Btu/lb (no Pet Coke); in 2009 with a 58 day outage and 15% Pet Coke need 4,102,947 tons; in 2010 and on with a 30 day outage and 30% Pet Coke need 4,327,426 tons/year (higher volume due to shorter outage over riding Pet Coke's higher Btu/lb)	For coal at 8,800 Btu/lb - 2,806,314 tons/year (87.2% CF) in 37 day outage years (even years) & 3,057,625 tons/year (95.0% CF) in non-outage years (odd years); tonnage is adjusted for lower Btu/lb purchases and 86 day outages in 2010 and 2012
Pet Coke Usage	None in 2007 & 2008; 15% in 2009; 30% in 2010 and on	None
Dispatch Price	100% spot coal (i.e. CMC offer with no Pet Coke) in 2007 & 2008; 85% spot coal (CMC offer) with 15% Pet Coke (Koch offer) in 2009; 70% spot coal (CMC offer) with 30% Pet Coke (Koch offer) in 2010 and 70% spot coal (JDE forecast) with 30% Pet Coke (JDE forecast) in 2011 and on	All years - JD Energy PRB mine mouth coal price plus FPL rail price thru 2014 then JD Energy rail price from 2015 - ignore PRB mine mouth committed purchases

Florida Glades Power Park (FGPP) - Solid Fuel Forecast Basis, Assumptions & Methodology

4.25 MMT supports a 58 day outage year (2008 & 2009)
ST. JOHNS RIVER POWER PARK
[redacted]
2008 Btu/Lb = 11,300

For 30 day outage years need MMT = 4.64 104,810,261 = MMBtu
With a 30% PC mix at 14,000, total tons fuel = 4,327,426 1,298,228
2008 thru 2010 Btu/Lb = 11,300
2011 and on Btu/Lb = 11,800

Check = 104,810,261

[redacted]
2007 Btu/Lb = 12,502
DTE CLOVER SYNFUEL
EXPIRES: 12/31/2007
2006 = 12,500 Btu/LB.; 2007 = 12,498 Btu/LB.

[redacted]
EXXON(aka Cerrejon, CMC)
EXPIRES: 12/31/08; Using 11,300 Btu/LB - 2007 value

[redacted] Feb-05

If this is a backbone curve, then you may (or may not) enter Bid/Ask information around that curve. If it is not a backbone curve then you may enter either or both of the basis and physical information. Those are your choices. If it is a backbone curve, the basis and physical columns will be IGNORED. If it isn't the fixed, and bid and ask will be IGNORED.

If this is a backbone curve, then you may (or may not) enter Bid/Ask information around that curve. If it is not a backbone curve then you may enter either or both of the basis and physical information. Those are your choices. If it is a backbone curve, the basis and physical columns will be IGNORED. If it isn't the fixed, and bid and ask will be IGNORED.

This is Gulfstream Backhaul

Today I uploaded the gas curves for EMT. Several changes were made to reflect movements in the forward markets. I agree that these changes are correct. FGT basis curves are extremely illiquid, so in some cases I used my best judgement to anticipate what

NUCLEAR NEED FILING ASSUMPTIONS

ASSUMPTIONS

1. Monthly demand charge ($) = daily volume (MMBTU/day)*demand charge ($/MMBTU)*number of days in specific month
2. Dispatch Price: Assume all units beyond WCEC 2 are on FGT using column E of the RAP-Natural Gas Price tabs for the Dispatch Price except the "SF CC 3x1 G" which is assumed to be on Gulfstream using Column H.
3. Assume Firm Transport starts January 1 of the COD year of the unit.

2.50%

FPL000061.101

Table D.1 - 1

Firm Gas Transportation Cost Values for the Initial Economic Evaluation of Portfolios (Note 1:)

I. For FPL and non-FPL Combined Cycle (CC) Units in the 2011 - 2012 time frame:

Type of CC Unit:	1x1 F	2x1 F	3x1 F	4x1 F	(Two) 4x1 F	1x1 G	2x1 G	3x1 G	(Two) 3x1 G
Firm Gas Volume (mmBTU/day):	43,750	87,500	131,250	175,000	350,000	66,667	133,333	200,000	400,000
Firm Transportation Cost ($/mmBTU):	$1.165	$1.165	$1.165	$1.165	$1.165	$1.165	$1.165	$1.165	$1.165

II. For FPL CC Filler Units (2013 - on):

Year	Firm Transport Cost ($/mmBTU)
2013 - 2014	$1.165
2015 - 2017	$1.500
2021 - on	**(see Note 2)**

III. For non-FPL Combustion Turbine (CT) units in the 2011 - 2012 time frame:

Firm Gas Volume (mmBTU/day): 25% of nameplate capacity (Example: 165MW CT at a 10,400 Btu/Kwh heat rate would require 10,296 MMBTU/day)
0.25* (((165 MW) • (1000 Kw/MW) • (10400 Btu/Kwh).*(24 hr./day))/1000000) = 10,296 MMBTU/day

Firm Transportation Cost ($/mmBTU): $1.165

Notes:

- Note 1: Firm Transportation Cost assumes a 25 year contract term.
- Note 2: A price of $1.50/MMBTU starting in 2017 with annual escalation of 2.5% per year will be used.

HEARING EXHIBIT 00000043 -PM

Q.
FPL's fuel price forecast was prepared on July 31, 2007. If FPL has in its possession a more recent forecast for any fuel type for the forecast horizon in excess of 10 years, please provide.

A.
The file submitted as part of this request is FPL's March 13, 2008 fossil fuel price and natural gas availability forecast.

Florida Power & Light Company
Docket No. 080203-EI
Staff's Second Request for Production of Documents
Request No. 15
Page 1 of 1

Q.
To the extent not provided in response to No. 1 above, please provide copies of each contemporary fuel price forecast: (a.) to which FPL compared its fuel price forecast or, (b.) which FPL used in the development of its fuel price forecast.

A.
For the purposes of responding to Staff's Second Request for Production of Documents No. 15, FPL assumes that this question is referring to Staff's Second Request for Production of Documents No. 12. There are no additional documents responsive to this request that were not included in the response to Staff's Second Request for Production of Documents No. 12. In addition, please see FPL's response to Staff's Third Set of Interrogatories No. 61.

Florida Power & Light Company
Docket No. 080203-EI
Staff's Second Request for Production of Documents
Request No. 17
Page 1 of 1

Q.
Please provide the annual estimated transportation cost in real and nominal terms for the forecast horizon to the extent not provided in No. 1 above.

A.
For the purposes of the answer, FPL assumes that this question is referring to Staff's Second Request for Production of Documents No. 12. The monthly and annual estimated transportation costs in nominal dollar terms for the forecast horizon are provided in FPL's response to Staff's Second Production of Documents No. 12. The file submitted as part of this request includes the annual projections in real terms.

	)	Dated: June 4, 2008

FLORIDA POWER & LIGHT COMPANY'S OBJECTIONS AND RESPONSE TO THE STAFF OF THE FLORIDA PUBLIC SERVICE COMMISSION'S FOURTH REQUEST FOR PRODUCTION OF DOCUMENTS (NO. 19)

Florida Power & Light Company ("FPL"), pursuant to Rules 1.340 and 1.350, Florida Rules of Civil Procedure, and Rule 28-106.206, Florida Administrative Code, submits the following objections and responses to the Staff of the Florida Public Service Commission's ("Staff's") Fourth Request for Production of Documents (No. 19).

I. General Objections

FPL objects to each and every request for documents that calls for information protected by the attorney-client privilege, the work product doctrine, the accountant-client privilege, the trade secret privilege, or any other applicable privilege or protection afforded by law, whether such privilege or protection appears at the time response is first made or is later determined to be applicable for any reason. FPL in no way intends to waive such privilege or protection. The nature of the document(s), if any, will be described in a privilege log prepared by FPL.

In certain circumstances, FPL may determine, upon investigation and analysis, that information responsive to certain discovery requests to which objections are not otherwise asserted are confidential and proprietary and should not be produced without provisions in place to protect the confidentiality of the information, if at all. By agreeing to provide such information in response to such request, FPL is not waiving its right to insist upon appropriate protection of confidentiality by means of a protective order or other action to protect the confidential information requested. FPL asserts its right to require such protection of any and all documents that may qualify for protection under the Florida Rules of Civil Procedure and other applicable statutes, rules and legal principles.

FPL is a large corporation with employees located in many different locations. In the course of its business, FPL creates numerous documents that are not subject to Florida Public Service Commission or other governmental record retention requirements. These documents are kept in numerous locations and frequently are moved from site to site as employees change jobs or as business is reorganized. Therefore, it is possible that not every relevant document may have been consulted in developing FPL's response. Rather, these responses provide all the information that FPL obtained after a reasonable and diligent search conducted in connection with this discovery request. To the extent that the discovery requests propose to require more, FPL objects on the grounds that compliance would impose an undue burden or expense on FPL.

FPL objects to any production location other than FPL's offices at 215 South Monroe Street, Suite 810, Tallahassee, Florida.

FPL objects to each request to the extent that it seeks information that is not relevant to the subject matter of this docket and is not reasonably calculated to lead to the discovery of admissible evidence.

FPL objects to each request to the extent it is vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of such discovery requests.

FPL also objects to these discovery requests to the extent they call for FPL to prepare information in a particular format or perform calculations or analyses not previously prepared or performed as purporting to expand FPL's obligations under applicable law. FPL will comply with its obligations under the applicable rules of procedure.

FPL objects to providing information to the extent that such information is already in the public record before the Florida Public Service Commission and available to Staff through normal procedures.

FPL objects to each discovery request and any definitions and instructions that purport to expand FPL's obligations under applicable law.

In addition, FPL reserves its right to count requests for production of documents and their sub-parts (as permitted under the applicable rules of procedure) in determining whether it is obligated to respond to additional requests served by any party.

Notwithstanding any of the foregoing general objections and without waiving these objections, FPL intends in good faith to respond to Staff's discovery requests.

II. Response

FPL's response is without waiver of its objections. All documents will be made available by FPL for inspection and review by Staff at FPL's offices at 215 South Monroe Street, Tallahassee, Florida, during regular business hours of 8:00 a.m. to 5:00 p.m., Monday through Friday, upon reasonable notice to FPL's counsel.

Respectfully submitted this 4th day of June, 2008.
