BUSINESS: Datascope Corp. is a diversified medical device company that manufactures and markets proprietary products for clinical health care markets. Lines consist of cardiac assist products (46% of '07 sales), patient monitoring devices (41%), interventional products (4%), and vascular grafts (9%). Distribution by employees and independent distributors. Foreign business, 41% of sales; R&D, 9.2%. '07 depreciation rate, 11.6%. Divested Patient Monitoring business, 5/08. Has 1200 employees. Chrmn. & CEO Lawrence Saper owns 18.0% of common stock; other off./dir., 2.5%; Private Cap'l Mgmt., 6.7%; AXA, 7.6%; Barclays Global Investors, 6.4% (11/07 Proxy). Inc.: DE. Address: 14 Philips Pkwy, Montvale, NJ 07645. Telephone: 201-391-8100. Internet: www.datascope.com.

Datascope continues to shed assets. In early August, the company sold the rights to its Interventional Products division to St. Jude Medical for $21 million in cash at closing and $3 million upon the expiration of an 18-month indemnification period. This divestiture follows the May sale of its Patient Monitoring business to Mindray Medical for $240 million.

We look for much of this cash to be returned to shareholders. This is likely to be done either through a stock repurchase, special dividend, or combination of the two. However, given the company's history, we believe that a large dividend is the most probable scenario.

The emerging company should be more profitable, as the capital-intensive Patient Monitoring division weighed heavily on the operating margin, and the Interventional Products segment had long been a drag on the bottom line. Indeed, Datascope's operating margin probably nearly doubled in fiscal 2008 (the earnings from the divested businesses have been classified as discontinued operations).

Growth in the counterpulsation market ought to drive earnings growth. Sales of inter-aortic balloons (IABs) rose 16% in fiscal 2008's final quarter (year ended June 30th). These balloons are typically used to treat acute coronary symptoms in high-risk patients, such as those undergoing bypass surgery. With an aging population, more of these procedures are likely to take place in the years ahead, auguring well for sales of Datascope's IABs. Also, the company has sought to increase utilization of the therapy by training and certifying its sales representatives in clinical programs and offering them incentives to focus on IAB sales.

The price of these timely shares has risen 15% since our May report, thanks largely to the market's positive response to Datascope's recent divestitures. Another possible near-term catalyst is the sale of the company as a whole. A smaller, more nimble Datascope makes an appealing acquisition target for a large medical-device manufacturer looking to enter an adjacent market. However, the stock is trading at the low end of our 3- to 5-year Target Price Range, limiting much of its long-term appreciation potential.

BUSINESS: The DIRECTV Group markets satellite-based pay-TV service through two geographic business segments. DIRECTV U.S. (90% of 2007 revenues) has 16.8 million subscribers throughout the United States. DIRECTV Latin America (10%) owns PanAmericana (1.7 million subscribers) and has equity stakes in Sky Brazil (1.5 million subs) and Sky Mexico (1.6 million subs) of 74% and 41%, respectively. Has a fleet of ten satellites (nine owned, one leased). Sold 81% stake in PanAmSat, 8/04. Has 12,300 employees. Off. & dir. own less than 1% of common stock; Liberty Media, 41% (13F, 4/07 Proxy). Chmn.: John Malone. CEO & Pres.: Chase Carey. Inc.: DE. Address: 200 North Sepulveda, El Segundo, CA 90245. Tel.: 310-662-9688. Web: www.directv.com.

DIRECTV is planning to buy back up to $3 billion worth of its stock. The pay-TV provider to over 20 million subscribers in the U.S. and Latin America announced the move in early May. The California-based company has since completed $2.5 billion in financing, through the issuance of $1.5 billion in 7 5/8% senior notes and a $1 billion floating-rate loan under its existing credit facility. At the current quotation, the buyback equals 108.2 million shares, or roughly 9% of DIRECTV's outstanding shares. The repurchase program, net of associated borrowing costs, should add nicely to share net beginning in 2009.

Additional "shareholder friendly" moves wouldn't surprise us. Based on the ratio of earnings to annual interest expense, DIRECTV's debt load is still modest next to some of its peers within the pay-TV space. Moreover, DIRECTV's new chairman of the board John Malone is well known for pushing companies to better realize shareholder value.

We look for DIRECTV to post 2008 share net of $1.47. Our assessment represents a 23% increase over the $1.20 that the company earned in 2007. Key assumptions include 6%-8% growth in both the total number of U.S.-based subscribers and average monthly revenue per domestic sub. The latter will no doubt largely reflect strong demand for Hi-Def and DVR services. On the expense side, DIRECTV ought to benefit from lower cost set-top boxes. Subscriber acquisition costs may trend higher, though, due to the recent expiration of a co-marketing agreement.

DIRECTV should build on its success in 2009 and beyond. Its leadership position in H-D and sports programming augurs well for continued subscriber growth. Technical constraints on interactive services may increasingly put the company at a competitive disadvantage, though.

DIRECTV shares are ranked 2 (Above Average) for year ahead relative price performance. We think that investment returns over the pull to 2011–2013 will also exceed major benchmarks, albeit modestly. The company's strong recurring cash flow and good cost discipline underlie our positive stance.

Nils C. Van Liew *June 27, 2008*

(A) Diluted earnings. Up to 2000, excludes charge for amortization of intangibles. In '00, 24¢/sh. Excluding nonrecurring gains (losses): '98, 96¢; '99, (42¢); '02, (51¢); '04, (81¢); '05, (2¢); '06, 4¢. BUSINESS: DaVita Inc. provides dialysis services for over 107,000 patients with chronic kidney failure through 1,359 outpatient facilities and hospitals for inpatient treatment in the U.S. It offers ancillary services, including lab and pharmacy services, physician network management, pre- and post-transplant services, vascular access management, and clinical research programs. Avg. dialysis rev./treatment, $334. '07 reimbursement: Medicare, 58%; Medicaid, 4%; other, 38%. '07 deprec. rate: 16.0%. Times Square Cap. Man. owns 6.0% of common stock; FMR Corp., 5.5%; Capital Grp. Inter., 5.4%. Officers and directors, 2.4% (4/08 proxy). Chairman and CEO: Kent J. Thiry, Inc.: Delaware. Address: 601 Hawaii Av. El Segundo, CA 90245. Tel.: 310-536-2400. Web: www.davita.com.

We are raising our earnings targets for DaVita for both 2008 and 2009. With the Gambro addition now securely integrated into its portfolio, we think the company is well positioned to reap significant cost savings. Truth be told, DVA has been spending on ancillary service lines like VillageHealth, but this entity's weak enrollment figures may well cause management to tighten funding in this space. Earnings leverage should also be aided by the company's recently announced stock-repurchase plan. A $250 million buyback with no expiration date has been approved and would translate to just under five million shares at this equity's current quotation. On top of these developments, our LIBOR assumptions have been adjusted lower. In sum, we have lifted our 2008 share-net call by a dime, to $3.40, and 2009 by $0.15, to $3.80.

The Street has already taken notice of the positive developments. DVA shares are up about 20% since our March report. A strong first quarter likely began the uptick. A $1 rise in revenues per treatment was the driving force behind the solid showing. Many had predicted this metric would slide, but an increased Medicare drug add-on helped boost the figure. Management's intimation that EPO utilization rates may have bottomed and actually started to ratchet up in the early stages of the second quarter furthered confidence. The meaningful insider buying that took place during the first three months of 2008 also augurs well.

Volume trends in the dialysis market are positive, but challenges remain. Total spending in the end-stage renal disease field is approximately $32 billion, and the patient number is growing steadily. Once a person begins treatment, he or she will have to do so for the rest of their lives assuming transplant lists remain lengthy. An aging population and improving mortality rates should be just what the doctor ordered for DVA. But labor cost growth, scrutiny of EPO usage, and insufficient reimbursement rates are all caveats.

These neutrally ranked shares have lost much of their long-term appeal. The run-up over the past three months has markedly diminished their allure.

BUSINESS: Brinker International operates and develops a number of restaurant concepts, including (with number of U.S. units as of 6/27/07): Chili's Grill & Bar (Southwestern-themed), 1,220; On The Border (Tex-Mex cuisine), 158; Maggiano's (Italian-themed), 41. Int'l restaurants: 152. Joint-venture interest in Rockfish (seafood). Romano's Macaroni Grill (Italian eatery) discontinued, 7/07; Corner Bakery (baked goods) sold, 2/06. '07 deprec. rate, 6.7%. Has about 114,000 employees. Officers & directors own 2.9% of stock; Barclay's Global, 11.0%; FMR, Corp., 10.1%; four other institutions, 28.0% (9/07 Proxy). Chairman, Pres. & CEO: Doug Brooks. Inc.: Delaware. Address: 6820 LBJ Freeway, Dallas, TX 75240. Telephone: 972-980-9917. Internet: www.brinker.com.

Profits at Brinker International remain under pressure. The absence of *Macaroni Grill*, which is now reported as a discontinued operation, has been a big factor behind the decline in sales and earnings. In addition, the remaining chains in the Brinker portfolio, like most casual-dining concepts, are facing their share of challenges, including lackluster sales at established restaurants and rising commodity and labor costs.

Share net should begin to rally in fiscal 2009, which starts June 29th. Same-store sales at the flagship *Chili's* chain have shown some signs of life. "Comps" rose 1.1% in the March quarter, the strongest comparison in two years. Based on our expectations that the economy will move onto firmer footing in the quarters ahead, we expect trends to strengthen further. Overall, the sales weakness, in our view, is more a reflection of macroeconomic, rather than chain-specific, issues. Notably, outside of four states that were particularly hard hit by the housing crunch, "comps" rose a respectable 3.5% in the March quarter. Meanwhile, Brinker has made a number of cost-cutting moves that should trim about $15 million from annual operating expenses.

Expansion plans are being cut back. The company expects to open only 15 restaurants next fiscal year, down from about 150 in fiscal 2007. (Franchise-store development figures to continue at a relatively brisk pace, with about half of this activity taking place outside the U.S.) The resulting reduction in capital spending should boost free cash flow, providing additional funds to repurchase stock and increase the dividend. Too, this strategy will allow more resources to be focused on improving existing restaurants. For now, this, rather than building new units, likely offers the greatest potential to improve shareholder returns.

This stock offers appealing total return potential for patient investors. It remains out of favor in our Timeliness Ranking System, reflecting the poor earnings momentum. The share price, however, has rallied some this calendar year, and we think that enough upside remains to make this equity a worthwhile selection for the pull to 2011-2013.

BUSINESS: Electronic Data Systems offers systems and technology services, business process management, management consulting, and electronic business services. General Motors and its affiliates accounted for about 14% of EDS's total receivables at 12/31/07. Revenue breakdown by business line (2007): Infrastructure Services, 52%; Applications Services, 29%; Business Process Outsourcing Services, 14%; other 5%. International: 50% of revenues. '07 depreciation rate: 20.0%. At 12/31/07, had 136,000 employees. The top 5 institutional investors own 46% of common; offs./dirs., .6% (3/08 proxy). Chairman: Mike Jordan; Pres./CEO: Ronald Rittenmeyer. Inc.; DE. Address: 5400 Legacy Drive, Plano, TX 75024-3199. Tel: 972-604-6000. Internet: www.eds.com.

Electronic Data Systems appears on track to merge into Hewlett-Packard. The $25-a-share cash deal has received shareholder and U.S. and European regulatory approvals, and only awaits some other minor approvals from other non-U.S. juristictions and some final paperwork.

Meanwhile, EDS remains in transition. Over the past couple of years, management has done a great job of turning the company around. We attribute its success primarily to restructuring efforts and the negotiation or elimination of poor-performing contracts. One significant example of this was its arrangement with the U.S. Navy, which was renegotiated into a very sizable deal in 2007. EDS had to make some price reductions, but thanks to substantial cuts on the cost side, that contract is now contributing positively to earnings.

The company should experience a decent expansion year despite weak economic fundamentals. Difficult business conditions are making it increasingly tough for the company's sales group to sign new deals, especially here in the U.S. Still, $5.4 billion in new orders, primarily from overseas, were signed in the June quarter, up 27% over the year-earlier period. This new business, combined with an already sizable backlog, augurs well for respectible growth in 2008.

Profitability measures ought to improve in the coming years. Management has taken several actions to widen margins, including significantly reducing the number of unprofitable contracts, restructuring the European business, and migrating the workforce to lower-cost regions around the globe, the latter of which is now about 80% complete. And finally, IT investments have risen the level of standardization and automation in the entire organization, which has led to significant expense reductions. All told, we look for double-digit profit growth over the next several years.

We expect the acquisition by HP to be completed very shortly. Together, the two companies will be able to offer a strong product portfolio and take advantage of their respective distribution channels. The Timeliness rank on EDS stock remains suspended.

BUSINESS: The Estee Lauder Companies Inc. makes and markets skin care, makeup, fragrance, and hair care products worldwide. *Brand names include Estee Lauder, Clinique, Aramis, Prescriptives, Origins, M.A.C., Bobbi Brown essentials,* and *Aveda.* EL is the global licensee for *Tommy Hilfiger* fragrances and cosmetics. Sells mostly through upscale dept. stores and perfumeries, specialty retailers and pharmacies. Int'l. bus.: 55% of '07 op. inc., 49% of sales. Sales by product: makeup, 39.0%; skin care, 37.0%; frag., 19.0%; hair care, 5.0%; Has about 28,500 emplys. Off. & dir. control 85% of voting stock (10/07 Proxy). Chairman: L. Lauder. CEO: William P. Lauder. Inc.: DE. Add.: 767 Fifth Avenue, NY, NY 10153. Tel.: 212-572-4200. Internet: www.elcompanies.com.

Estee Lauder is delving into new markets. Early in March, BeautyBank, the entrepreneurial division of Estee Lauder, and HSN (Home Shopping Network), announced that they entered into an agreement to introduce a beauty brand specifically developed for television retail. BeautyBank has developed the brand exclusively for distribution on HSN and HSN.com, and it is expected to launch on HSN in July of this year. This venture is very much in keeping with BeautyBank's mission of seeking and creating original brands and business opportunities in alternative distribution channels.

The company's international exposure is likely to be its saving grace both this fiscal year and next (ends June 30th). During the March interim, Estee Lauder reported an impressive 11% year-over-year jump in its top line, driven by double-digit sales gains at its international operations and a favorable foreign-currency environment. This provided a needed counterbalance to competitive pressure and the ongoing lackluster retail environment in the United States. However, EL's share net was tempered by a certain amount of margin pressure, the result of higher SG&A spending to support new products and increased investments in information technology. Nevertheless, we remain confident that the company will post roughly a 10% share-net improvement in fiscal 2008, on an 11% sales advance. And, in the coming fiscal year, we look for EL's bottom line to benefit from hefty foreign demand for its products and ongoing cost-containment efforts and disciplined expense control.

Estee Lauder's share-repurchase program ought to help boost earnings going forward. During the first nine months of fiscal 2008, Estee Lauder bought back roughly 2.2 million shares of its outstanding common stock. Thus, there are approximately 24.7 million shares available for repurchase under the current 88.0 million share authorization.

This stock carries a Timeliness rank of 2 (Above Average), making it a recommended selection for the coming year. More patient investors may wish to consider this issue as well, as it offers solid 3- to 5-year appreciation potential.

BUSINESS: Eastman Chemical manufactures plastic, chemical, and fiber products. Sells polyester plastics such as polyethylene terephthalate (PET), a plastic used in soft-drink containers; coatings and paint raw materials; industrial chemicals; and filter tow. Segments: Performance Chemicals and Intermediates, (31% of sales in '07); Performance Polymers, (21%); Coatings, Adhesives, Specialty Polymers and inks, (21%); Fibers, (15%); Specialty Plastics, (12%). Foreign sales: 42% of total. Has about 10,800 employees. Hotchkis & Wiley Cap. Mgmt. owns 13.4% of common stock; Barclays Global Inv., 6.6%; Off. & Dir., 1.9% (3/08 proxy). Chrm. & CEO: Brian Ferguson. Inc.: DE. Address: 200 South Wilcox Drive, Kingsport, TN 37662. Telephone: 423-229-2000. Internet: www.eastman.com.

Eastman Chemical remains on track to post decent earnings this year. Through the first half, share net was up 18%, on a 5% increase in sales. Volumes were down in the Performance Polymers and PCI segments, reflecting divestitures and other restructuring moves. But higher selling prices helped provide an offset. Escalating costs for raw materials and energy remain challenging, however, rising about $350 million in the period. The company continues to play catch-up, having recovered about 70% of the increase so far. Otherwise, a lower provision for income taxes is helping earnings. This expense will be down about three percentage points in 2008, thanks to federal gasification investment tax credits, which should continue over the next couple of years. Strength in Asia/Pacific sales (nearly 20% of company total) has also been a plus, offsetting softer domestic business. All told, we look for share-net growth of 5%–10% in 2008.

Further improvement in the PET polymers business is on tap. The company shut down 400,000 metric tons of older, higher-cost capacity, and shifted production to its new 350,000-metric-ton South Carolina facility. As a result, U.S. PET manufacturing operations had a $16 million positive earnings swing in the second quarter, to $6 million. Next up is the debottlenecking of the SC site, scheduled to begin in the fourth quarter and aimed at boosting capacity by 50%. Related shutdowns, however, will likely dampen share-net growth potential for next year.

Capital expenditures remain elevated, rising more than 15% this year, to over $600 million. A good portion of this will go toward the Beaumont, Texas industrial gasification project. Front-end engineering and design work is scheduled to be completed in the second half, with startup targeted for 2011. Management estimates that these operations will contribute about $2.00 a share to earnings by 2012.

Eastman Chemical shares remain an attractive selection for the 2011–2013 time frame, as accelerated earnings growth beyond 2009 should translate into solid appreciation potential over that period. For year-ahead relative performance, the issue has dropped back down to a 3 (Average) rank.

Mario Ferro August 15, 2008

(A) Diluted earnings. Excludes nonrecurring gain/(charges): '97, (41¢); '98, (65¢); '99, ($1.57); '01, ($1.04); '02, (31¢); '03, ($4.48); '04, (31¢); '05, 88¢; '06, (9¢); '07, ($1.22); '08 Q1, (2¢); Q2, (5¢). Excludes discontinued operations: '07, (26¢); '08 Q1, 22¢. Next earnings report due late Oct.
(B) Dividends historically paid in early January, April, July, and October.

BUSINESS: Energizer Holdings Inc. is the largest publicly traded primary battery/flashlight company. Its main brands, Energizer and EverReady, are sold in more than 150 countries. Acquired Schick-Wilkinson Sword razor business 3/03; Playtex Products, Inc., 10/07 Sales by product line: alkaline batteries 43%, carbon zinc batteries 7%, other batteries and lighting products 20%, razors and blades 30%. 2007 sales and profits by region: North America Battery 40%, (53%), International Battery 31% (28%), Razors and Blades 29% (25%). Has 16,410 employees; Officers and directors own 8.3% of common stock. (12/07 proxy). Chairman: W. P. Stiritz. CEO: J. Patrick Mulcahy. Inc. MO. Address: 533 Maryville University Dr., St. Louis, MO 63141. Tel.: 314-985-2000. Internet:www.energizer.com.

Energizer is facing challenges this fiscal year (ends September 30th). Both of the company's divisions struggled in the first half. Weaker sales and rising raw material costs weighed on margins in the household products segment. Meanwhile, in the personal care segment, the sales boost from the recent Playtex acquisition helped to offset a soft showing from the razors and blades division. However, this benefit was undermined by significantly higher interest expense related to the increased debt load. Moreover, although this review will already be in the hands of our subscribers when Energizer reports its fiscal third-quarter results, we do not expect gains to be strong enough to help offset the year-to-year declines in the first half. Furthermore, while we look for a share-net advance in the fiscal fourth quarter, sluggish economic conditions will probably limit profit growth in that period as well. We anticipate that battery pricing, along with wet shaver, and feminine products volumes, will remain unfavorable throughout the remainder of the year.

Fiscal 2009 is likely to be brighter. Much of the company's present woes stem from a weaker domestic economy. We believe economic conditions will likely improve next year. Moreover, evidence supports the sentiment that zinc raw material prices have peaked and ought to start declining over the next 12 months. While nickel and some other commodity costs may remain a tough hurdle, we are optimistic that the underlying trend for battery pricing is positive. Furthermore, we believe that the company's advertising and promotion efforts augur well for profitability. Targeting a younger consumer demographic is an encouraging approach. Lastly, we expect the Playtex acquisition to prove fruitful over the long term. The sun care category offers particular promise both domestically and on the international front, as demand remains healthy for these products.

Heavy profit-taking has continued to hammer the stock price. We believe that the gloomy economic outlook and soft consumer spending may continue to weigh on these shares in the near term. Still, these shares offer wide appreciation potential to 2011–2013.

BUSINESS: Equity Residential is a self-managed equity real estate trust that invests in multifamily properties. It is the largest publicly traded owner of multifamily properties. Structured as an umbrella-partnership REIT, shareholders do not own the properties directly, but hold an interest in a partnership, which owns and manages the properties. As of 12/31/07, the company owns all or a portion of 152,821 rental units in 24 states. Primary markets: TX, FL, AZ, and New York metropolitan area. Has about 4,600 employees. Off./dir. control 7.1% of common stock (including partnership interests); Morgan Stanley, 8.1%; Vanguard Group, 6.4% (4/08 Proxy). CEO: David Neithercut. Address: Two North Riverside Plaza, Chicago, Il. 60606. Tel.: 312-474-1300. Internet: www.equityapartments.com.

Equity Residential is slowing its pace of acquisitions. After growing its portfolio at an average rate of 7%–8% annually over the past three years, the company may put the brakes on spending for the near term. Due to the dearth of liquidity and lofty asking prices in stalwart markets such as New York and Washington, DC, the buying spree is probably on hiatus, for now. Consequently, loans and real estate under management will likely stay essentially flat this year.

The New York market bears watching. In the wake of the subprime meltdown, the hardest-hit markets, such as Florida and the Inland Empire region of California, garnered most of the headlines, and with good cause. But New York now accounts for nearly 10% of Equity's net operating income (NOI)—more than any other market—and may leave the company in a vulnerable position should it take a turn for the worse. Following the latest round of financial-sector layoffs, unemployment in New York and the surrounding area has risen 50 basis points (to roughly 5%) in recent months, which may have a cooling effect on demand for condominiums and single-family homes. Still,

Equity is on pace to post solid results this year and next. Revenues and funds from operations (FFO) may each improve 4%–5% in 2008 and 2009, thanks to the company's stockpile of properties in top-tier markets.

Acquisitions should pick up toward the tail end of 2009. There may be a materially improved economic environment next year, contingent on some of the government's fiscal and monetary moves taking hold. In that event, we expect Equity to resume spending at or near the pace of recent times.

These shares lack appeal over the long haul . . . Although we're optimistic about the company's prospects, the stock is nearing the bottom of our 3- to 5-year Target Price Range, discounting much of the capital gains potential we foresee over that time frame. Too, Equity's exposure to some of the country's hardest-hit markets muddies the waters somewhat.

. . . but they do offer a worthwhile dividend yield, which may hold interest to those investors stressing current income.

BUSINESS: Ethan Allen Interiors, Inc. is a leading manufacturer and retailer of home furnishings, offering a full range of furniture products and accessories. The company makes and distributes three principal product lines: case goods, upholstered products, and home furnishing accessories. As of 6/30/07, it operated 158 galleries, 9 manufacturing facilities, and 2 saw mills; independent franchisees owned and operated 155 stores (35 located overseas). '07 depr. rate: 4.6%. Has 6,000 empls. M. Farooq Kathwari (Chrmn., Pres., and CEO) owns 12.8% of stock; other off. & dir., 1%; FMR Corp., 10.8%; Royce & Assoc., LLC 10.7%. (11/07 Proxy). Inc.: DE. Address: Ethan Allen Dr., P.O. Box 1966, Danbury, CT 06811. Telephone: 203-743-8000. Internet: www.ethanallen.com.

Ethan Allen Interiors' stock is ranked to lag the broader market averages over the next six to 12 months. The company's sales and profits remain under pressure from lower consumer confidence. Although retail sales have been showing some improvement in recent months, the significant slowdown in the domestic economy has continued to weigh on overall demand, particularly from wholesale buyers. As a result, the near-term outlook has dampened.

The domestic housing crisis will likely cause the company's share earnings to decline further. By the time Ethan Allen reports its fiscal fourth-quarter results (year ended June 30th) this review will already have reached our subscribers. Still, we believe the company's top line buckled under the weight of the collapsing housing market. The wholesale segment has been hurt by waning demand from bulk buyers. Thus, despite continued recovery on the retail side, the lackluster wholesale segment hurt the bottom line. Moreover, heavier costs associated with the opening of four relocated design centers, and the integration of many centers that were acquired and opened during the last 15 months, further trimmed margins. Hence, we look for a double-digit year-to-year decline in share net in fiscal 2008.

However, we believe that margins will begin to recover in fiscal 2009. Given the company's complete overhaul of its business model over the past three years, we view Ethan Allen as one of the better-positioned furniture retailers in terms of product, service quality, and pricing power. The closure of several facilities and ongoing outsourcing efforts have helped the company to lower production costs, and improve the gross margin, despite sluggish sales. Furthermore, Ethan's ability to generate decent free cash flow is encouraging. In addition, considering that many of the factors hindering performance are macroeconomic concerns, we believe that when the climate improves, the company's sales and earnings recovery will likely accelerate rapidly.

The stock is a decent long-term play. It offers solid 3- to 5-year price appreciation potential and a decent dividend yield.

BUSINESS: Edwards Lifesciences Corporation is a global leader in products and technologies designed to treat advanced cardiovascular disease. Operates in five segments: Heart Valve Therapy (47.2% of pro forma '07 revenues), Critical Care (36.9%), Cardiac Surgery Systems (5.1%), Vascular (8.4%), and Other Distributed Products (2.4%). '07 R&D: $122.3 million. '07 international revenues: $604.5 million. Employs about 5,600. T. Rowe Price owns 10.2% of common shares; Baron Capital Group, 9.5%; Indian Asset Management, 7.2%; Renaissance Technologies, 5.1%; officers & directors, 6.0% (3/08 proxy). Chairman & CEO: Michael A. Mussallem. Incorporated: DE. Address: One Edwards Way, Irvine, CA., 92614. Telephone: (949) 250-2500. Internet: www.edwards.com.

Edwards Lifesciences is having a good year. Second-quarter sales surged 20% year over year. Internal revenue growth (excludes currency translation gains and discontinued operations) was 13%. Investors should be pleased with the hefty top-line advance, especially considering that all the company's franchises reported double-digit growth. Notably, Heart Valve Therapy sales jumped 24%, thanks to improved performance in the U.S. and continued robust international growth. Results here were also accelerated by the strong uptake of the *SAPIEN* valve in Europe, where procedural success has been impressive thus far. Critical Care revenues climbed 20%, due to strong demand for the *FloTrac* system among other things.

June-quarter share earnings were 16% higher than the year-earlier figure. The aforementioned top-line gain accounted for the vast majority of the profit growth. Edwards' gross profit margin was slightly better than it was a year ago, but SG&A and R&D expenses increased as a percentage of sales. The higher spending was tied to the launch of the *SAPIEN* valve and the development of the transcatheter and surgical valve programs.

We have raised our 2008 and 2009 targets. We now expect Edwards to earn $2.55 a share on sales of $1.265 billion this year (up from $2.50 a share and $1.235 billion, respectively). Similarly, we added $40 million and $0.05 to our 2009 top- and bottom-line estimates, respectively.

Edwards is still cutting its share count. During the first half of 2008, the company spent about $235 million buying back stock, thereby exhausting the existing share repurchase authorization. In response, Edwards' board of directors approved a new $250 million repurchase initiative. The new program provides Edwards with an opportunity to increase shareholder value in lieu of a dividend.

We like this issue. Thanks to its recent share-price and earnings performance, we have boosted this stock's Timeliness rank one notch, to Above Average. So, momentum investors may want to delve deeper. These shares also offer respectable, albeit slightly below-average, 3- to 5-year capital gains potential.

Erik A. Antonson *August 29, 2008*

BUSINESS: First Commonwealth Financial Corporation operates as the holding company and owns one chartered bank and trust company subsidiary, First Commonwealth Bank. It also owns First Commonwealth Financial Advisors, which offer personal financial planning. Insurance products are also provided through its wholly owned subsidiary, First Commonwealth Insurance Agency. It operates 110 banking branches and 117 ATMs in Pennsylvania. Acquired Laurel Capital Group, Inc. in 8/06. Has 1,430 employees as of 12/31/07. Off./Dir. own 5.5% of common shares (4/08 proxy). President and CEO: Joseph E. O'Dell. Chairman David S. Dahlmann. Inc.: PA. Address: 22 N. Sixth Street, Indiana, PA 15701. Tel.: (724) 349-7220. Internet: http://www.fcbanking.com.

We have increased our 2008 share-net estimate for First Commonwealth Financial by a nickel. Unlike a number of financial institutions, FCF has no exposure to the subprime mortgage market and thus, has been able to weather the challenging operating environment better than most other banks. Recently, it released June-period financial results that bested our estimate by a couple of pennies. The better-than-expected results mostly stemmed from increased loans. For the quarter, net loans advanced by 12%. Although the market for good-quality loans remains fierce, FCF has done a solid job of attracting desirable customers, and this trend should continue over the next several quarters. All told, we now believe that FCF will achieve share net of $0.70 this year, 11% better than 2007's tally.

Our outlook for 2009 has improved, as well. Along with continued loan growth, profits should be helped by the company's corporate banking operations. FCF has taken advantage of the market disruption, and we believe more and more businesses will look to FCF for their banking needs. In sum, we believe the company will post a share profit of $0.75 next year, 7% better than 2008's probable result. But,

We continue to be concerned in regards to the company's dividend payout. We estimate that FCF stands to earn $50 million in profits this year, and the current dividend could cost the company around the same amount. At this time, we do not believe that a cut will occur, but if operations do not continue to improve, a decrease in the distribution may be necessary within the next few quarters.

At this time, these shares do not stand out for the short or long term. Although our outlook for First Commonwealth has improved, our Timeliness Ranking System suggests that this equity will only mirror the year-ahead market. Also, looking long term, this stock is currently trading near the low end of our projected Target Price Range for 2011–2013, limiting appreciation potential out to that time frame. That said,

Income-oriented investors may find the 5.7% dividend yield appealing. However, we reiterate that a cut to the payout does not seem out of the question.

BUSINESS: Flowers Foods is a producer and marketer of packaged bakery goods in the U.S. Products are sold to retail-food stores, foodservice, in-store bakery, and vending companies. Products are sold under the Nature's Own, Bluebird, Mrs. Freshley's, European Bakers and Cobblestone Mill labels. Has two divisions: Flowers Bakeries, which focuses on production and marketing of bakery goods (operates 27 bakeries, has over 3,000 independent distributors) and Flowers Foods Specialty Group, specializing in snack cakes and frozen breads. Has about 7,800 empls. Off./dir. own 16.1% of stock. (Proxy 4/08) Chairm./Pres./CEO: George Deese. Inc.: GA. Addr.: 1919 Flowers Circle, Thomasville, GA 31757. Tel.: 229-226-9110. Internet: www.flowersfoods.com.

Flowers Foods continues to post strong results. During the most recent quarter (ended April 19th), the company reported year-over-year revenue growth of 11%, driven by higher pricing, positive mix shifts, and increased volume. Share net jumped 26%, despite elevated ingredient costs. Branded retail sales rose 14%, thanks to strong demand for *Nature's Own* soft variety and premium breads, along with regional white breads. Flowers' direct-store delivery group, previously known as the Bakeries Group, posted strong sales growth of 13%, due to favorable pricing and mix, as well as solid volume increases. Sales from the warehouse delivery division, previously known as the Specialty Group, posted a decent sales advance, thanks to price hikes.

We are raising our 2008 top- and bottom-line estimates by $20 million and a nickel, respectively, to $2.25 billion and $1.20 per share. We expect the direct-store delivery group to remain the primary driver of the advance. The company's manufacturing efficiency initiatives should allow for healthy profit gains during the year. Sales of the *Nature's Own* and *Whitewheat* brands should remain robust, as these products offer good quality and value for customers. The company continues to see significant increases in ingredients costs, but expects to pass much of these expenses onto customers.

The company continues to post strong cash flow growth, and this, along with a healthy balance sheet, has allowed it to increase the quarterly dividend by 20%, to $0.15 per share. It also has been active on the acquisition front. In June, it announced that it entered into a definitive agreement to purchase two bakeries, Holsum Bakery in the Phoenix area and ButterKrust Bakery in Florida. These should help Flowers expand its geographic footprint.

Shares of Flowers Foods are ranked to outperform the broader market averages over the next six to 12 months. We believe that strong operational performance, along with steady demand for its key products, should allow earnings to advance at a nice clip during this time frame. However, over the 3- to 5-year period, these shares offer subpar appreciation potential at the current quote.

Jason Dalavagas *August 1, 2008*

(A) Fiscal year ends last Saturday in Dec. First quarter is 16 weeks; others are 12 weeks. Pro forma results are shown in 1999 and 2000. Earnings adjusted to normalize tax rate. Excludes nonrecurring loss: '01, 43¢. Excludes disc. oper.: '04, (5¢); '05, (3¢); '06 (2¢). Next earnings report due in early August.
(B) Div'd historically paid in January, April, July, and Oct.= Div'd reinvest. plan available.
(C) Based on diluted shares.
(D) In millions, adj. for splits.

BUSINESS: FMC Corporation produces a broad range of chemicals for industry and agriculture. It is the world's largest producer of natural soda ash and is a major producer of phosphorus, hydrogen peroxide, agricultural chemicals, and lithium compounds. Separated machinery unit, 12/02. Oper. 32 manufacturing facilities and mines in 18 countries. Sold 60% stake in United Defense, 10/97; 80% stake in FMC Gold, 8/96. Foreign sales: 63% of 2007 total. '07 depreciation rate: 4.8%. Has about 5,000 employees. Officers and directors own 3.1% of common stock; M&G Investment Mgmt. LTD., 8.4%; Wellington Mgmt., 5.8% (3/08 Proxy). CEO: William G. Walter. Inc.: Delaware. Address: 1735 Market Street, Philadelphia, PA 19103. Telephone: 215-299-6000. Internet:www.fmc.com.

FMC appears headed for another good year. The diversified chemical company reported first-quarter earnings growth of 17%, with all three of its operating segments generating double-digit sales and profit increases. This more than offset higher raw material costs, which trimmed $0.13 a share in the period. On the plus side, the company has relatively modest exposure to rising oil prices. Based on the strong start, we've increased our 2008 share-net estimate by $0.20, to $4.10, which would make for a 20% year-over-year gain. The company's solid prospects (more below) suggest earnings momentum should carry through to next year as well. Our 2009 bottom-line outlook has been increased by $0.40, to $4.75 a share.

The Agricultural Products Group continues to do booming business. Segment earnings increased 17% in the March interim, to $83 million, driven by sales gains in Asia, Europe, and Latin America, with particular strength coming from the cotton, sugarcane, and soybean crop segments. Ongoing global supply chain improvements also helped boost profitability. Overall, rising demand (and prices) for various food crops, particularly from the emerging economies of China and India, suggest strong underlying support for FMC's crop-protection and pest-control products for years to come.

Specialty Chemicals continues to generate good results, driven by biopolymer and lithium-based products, especially going into the pharmaceutical and food ingredients markets.

Industrial Chemicals has made a strong turnaround, with earnings more than doubling in the latest quarter, to $35.6 million. A good part of this came from selling price increases and higher volumes for soda ash, hydrogen peroxide, and specialty peroxyns.

FMC shares remain best suited for momentum investors. The stock has been on a tear since early 2003, and retains our highest rank for year-ahead relative performance. Longer term, the company's prospects for continued earnings growth look good. However, this outlook already appears to be acknowledged, as the stock is trading above the middle of our 2011–2013 Target Price Range.

BUSINESS: Federal Realty Investment Trust is an owner, operator, and redeveloper of community and neighborhood shopping centers and mixed-use properties in the Northeast, the mid-Atlantic states and CA, totaling 16.2 mill. sq. ft. As of 12/31/07, 90% of invested assets were in real estate (at depreciated cost). Revenues in '07: rents, 86%; interest, 1%; other, 3%. Major lessees include: Office Depot, Barnes & Noble, Toys 'R' Us, CVS Pharmacy, Pathmark, Staples. ING Groep NV owns 8.4% of common stock; Vanguard Group, 6.5%; Officers & Directors, 1.5% (3/08 proxy). Inc.: Maryland. President & Chief Executive Officer: Donald C. Wood. Address: 1626 East Jefferson Street, Rockville, Maryland 20852-4041. Telephone: 301-998-8100. Internet: www.federalrealty.com.

Federal Realty's operating performance has held up well thanks to its focus on top-tier markets. More than half the company's holdings are located in stalwart markets, such as Maryland, Virginia, and New York, leaving the company more insulated from the general condition of the economy. Too, its properties are typically anchored by a major supermarket, which provides some measure of downside protection. However, **Shopping centers — the company's specialty — may be vulnerable should the economy slide into a recession.** Although consumer spending on necessities such as groceries usually holds steady regardless of economic conditions, expenditures on entertainment and dining out may suffer and become a drag on leasing activity. Indeed, Federal's occupancy rates have regressed slightly, down to 96.2% at the close of the March quarter, versus 96.9% in the prior year.

Revenues and funds from operations (FFO) should make steady progress this year and next. After growing at an average rate of nearly 9.5% annually over the past three years, portfolio growth may slow to 5%–7% a year out to 2010. Another source of growth is redevelopment, which involves upgrading existing facilities, and typically provides the fastest returns of all. All told, revenues will likely advance 6% each of the next two years, while FFO may improve 7%–8% thanks to an uptick in operating margins.

The balance sheet is in good shape, leaving the company well positioned for the years ahead. Federal has chipped away at its debt load, and carries its lowest debt-to-equity ratio in a decade. This puts the company in a better position to meet its obligations, and may open the door for a few opportunistic acquisitions in the coming years.

At the current quotation, Federal Realty shares lack appeal from nearly all investment perspectives. Although we're optimistic about the company's long-term prospects, the stock is trading within our 3- to 5-year Target Price Range, discounting most of the capital gains potential we foresee over that time frame. Too, its dividend yield trails most of its peers' in the REIT group.

Sharif Abdou *July 18, 2008*

BUSINESS: Federal Signal Corporation comprises four business segments: Safety/Security makes warning devices (sirens, horns, and flashers); parking/access control systems; and safety storage equipment. Fire/Rescue is a leading manufacturer of fire/rescue vehicles and ambulances. Environmental is a leading producer of street sweepers, sewer-cleaning trucks, and industrial vacuum loaders. Municipal/Government designs first-responder systems. Foreign sales: 37% in '07. Employs about 5,500. Officers & directors own 3.0% of common stock (3/08 proxy). Chairman: James C. Janning. Interim CEO: James E. Goodwin. Incorporated: DE. Address: 1415 West 22nd Street, Suite 1100, Oak Brook, IL 60523. Telephone: 630-954-2000. Internet: www.federalsignal.com.

A major shareholder has expressed interest in becoming CEO of Federal Signal. Warren Kanders, who owns a 6% stake in the company, recently went public with this intention. However, the inte im CEO has stated that Mr. Kanders is not a candidate for the position. Moreover, the board of directors adopted a revised set of by-laws, which appear to insulate the current members and make it exceedingly difficult for disgruntled shareholders like Mr. Kanders to take action. For what it's worth, more than eight months have passed since the abrupt termination of the previous CEO, and hiring an experienced candidate to work in the corner office as soon as possible is probably in the best interests of FSS shareholders.

Mr. Kanders also called for James Janning to resign as chairman, citing high executive turnover, declining sales and profitability, a "crisis" in employee morale, and underperformance of FSS stock relative to its peers during Mr. Janning's nine-year tenure on the board.

The company recently completed the sale of E-ONE, a manufacturer of fire apparatus, amid controversy. American Industrial Partners and E-ONE management paid about $20 million for the struggling enterprise. According to Federal management, the process was negotiated at arm's length. However, the price tag was well below our estimate, and the company was forced to write down $21 million in assets as a result of the transaction.

Meanwhile, Federal once again disappointed investors in the second quarter. Sales grew 5%, to $254.3 million, and share earnings from continuing operations fell 35%, to $0.17. Increased litigation expenses, elevated material costs, and a higher tax rate caused the reduction in income. On the bright side, new orders exceeded shipments in all segments, despite a difficult operating environment. The company is also set to raise product prices to help offset elevated material costs.

Investors should probably avoid this issue, at least until a CEO is hired and Federal starts moving in the right direction. The company has good long-term prospects and recent divestures should aid margin expansion, so interested investors may want to keep an eye on this issue.

Erik A. Antonson *August 29, 2008*

BUSINESS: Genzyme Corp. is a biotech company with strengths in pharmaceuticals, biotherapeutics (including treatments for cystic fibrosis), surgical products, diagnostic products (cholesterol testing), and services (genetic testing). (All data are for the General Division, excl. Tissue Repair, from 1994 on.) Acq. Vivagen, 10/02 and SangStat Medical Corp., 11/03. Eliminated tracking stocks on 7/1/03. 2007 depr. rate: 15.2%; R&D expense: 18.2% of 2007 sales. Clearbridge Advisors owns 8.3% of common; Marsico Cap. Man., 4.9%; UBS, 6.5%; officers/directors; 2.4% (5/08 Proxy). Has about 7,045 employees. Chairman, Pres. & CEO: Henri A. Termeer. Incorp.: MA. Addr.: One Kendall Square, Cambridge, MA 02139. Tel.: 617-252-7500. Internet: www.genzyme.com.

Genzyme's product portfolio is one of the broadest in the biotech industry. Less than 26% of revenue is likely to stem from any one product this year. Moreover, the fact that the company generates 52% of its sales overseas is a plus, since foreign markets for Genzyme's core products are growing faster than in the U.S. In addition, the favorable currency translation benefits earnings. Genzyme's portfolio is also relatively well insulated from generic threats as many of its treatments are difficult to emulate. Lastly, the company has widened its product base significantly over the past two years. This mitigates the risk from setbacks in clinical trials and unforeseen side effects.

Meanwhile, significant events anticipated in the second half of this year should impact the stock favorably. The next FDA regulatory decision regarding the scaling up of *Myozome* production is expected toward the end of the year. The highly anticipated U.S. launch of *Synvisc One*, an injectable osteoarthritis drug for the knee, is also expected by year-end. Favorable acceptance would encourage Genzyme to seek FDA approval for expanded use in the hip, ankle, and shoulder. Enrollment in the ongoing Phase III trials for key ms-drug *Campath* is another potentially beneficial event. Assuming all goes according to plan, the stock should be favorably affected.

Share earnings should rise at a hefty average annual clip to 2011-2013. The company is still heavily reliant on heavyweights *Cerezyme*, and *Renegal*, which together comprise about 48% of revenues. Sales growth of these products is liable to decline over the next few years, but the slack ought to be more than compensated for by *Fabrazyme*, *Myozyme*, *Synvisc*, and lesser products currently in clinical trials. Ongoing cost savings and licensing agreements should supplement profit growth.

We have raised this timely stock's 3- to 5-year Target Price Range, on the strength of the aforementioned variables. **Even so, it appears that much of the good news is already factored in.** As a result, we advise investors to remain nimble, and look for opportunities to accumulate this equity on weakness. No dividend is likely to be offered.

Jeremy J. Butler *July 18, 2008*

BUSINESS: Griffon Corp. is a diversified manufacturer and service provider organized into four segments: Garage Doors (34% of sales and 39% of operating income in 2007), Installation Services (20%; 9%), Electronic Communications (23%; 38%), and Specialty Plastic Films (23%; 15%). International sales were roughly 24% of fiscal 2007 total. Acquired Clopay do Brasil, a Brazilian specialty plastic film producer, in 6/02. '07 depreciation rate 11.7%. Ownership: Officers & Directors own 14.7% of stock; NWQ Inv. Mgmt. Co., 15.3%; Clinton Group, 9.8% (Proxy, 12/07). Has about 5,700 employees. Chmn: Harvey R. Blau. CEO: Ronald Kramer. Incorporated: DE. Address: 100 Jericho Quadrangle, Jericho, NY 11753. Telephone: 516-938-5544. Internet: www.griffoncorp.com.

Griffon will likely continue to have a tough go of it for the foreseeable future. The company lost $0.39 a share in the second quarter (fiscal year ends September 30th), way off last year's disappointing share-net gain of $0.01. The slowdown in home construction and higher raw material costs have created a challenging operating environment for the diversified manufacturer. Indeed, its plastics division, which makes lining for diapers, is being hurt by higher resin prices, while the garage doors business remains troubled by the downturn in real estate and consumer spending. Meanwhile, the Telephonics franchise is feeling the effects of the maturation of its contract with Syracuse Research, which is coming to an end. Not much is likely to change in the months to come, prompting us to estimate that the company will lose $0.45 a share this year, $0.90 below our earlier call, on $1.285 billion in sales. Likewise, we've reduced our full-year 2009 earnings figure by $0.45 to $0.50, on lower sales. **Most investors will want to take a pass on this issue.** It garners a Below Average (4) rank for Timeliness and is likely to trail the broad market for the coming six to 12 months, given the operating difficulties we envision persisting. **Those willing to ride out the near-term volatility may want to consider being buyers, however.** The stock is trading roughly 60% off its 52-week high, but will likely return to the $20-plus range by 2012, given the better economic landscape and continued momentum in the Telephonics franchise that we anticipate. Indeed, Telephonics recently inked a $64 million contract with Lockheed Martin for radar systems, which augurs well for future deals, most importantly a bid with the U.S. Army to develop communication systems that has a potential revenue stream of over $3 billion. Meanwhile, the garage doors unit is still a top manufacturer, and is expected to flourish when construction levels rebound. The potential sale of the installation business should help lift profit margins in the interim. In all, we think these shares offer wide 3- to 5-year appreciation potential, a fact that recent institutional and insider trading activity seem to support.

BUSINESS: G&K Services, Inc. is the third-largest North American supplier of uniforms for corporate sale and lease, as well as facility services, including clean-room services for the technology sector. *The company operates* over 130 processing facilities (avg. size: 43,000 sq.ft.) and services over 160,000 customers in North America. Historically, more than half the company's top-line growth has been attributable to acquisitions. *Officers and directors* control 2.3% of voting power; T. Rowe Price, 11.4% (11/07 proxy). Has about 8,285 employees (20% of which are unionized). Chairman/President/CEO: Richard Marcantonio. Address: 5995 Opus Parkway, Suite *500, Minnetonka, MN 55343. Incorporated:* MN. Telephone: 952-912-5500. Internet: www.gkservices.com.

Many of G&K Services' customers have been reducing the number of uniformed employees. Most of the company's core uniform customers, within industries such as industrial and auto manufacturing, have been on the downturn for some time. The recent lethargy in the construction market has depressed the growth in general building and lumber & wood products that had previously been a boon to the company. These declines only heighten the importance of the non-uniform businesses to help diversify away from sluggish uniform sales and rentals. With that in mind, there are some uniform products that have shown potential for growth, including those aimed at more safety-minded consumers. The latest *BioSmart* offering will fare well in the food service industry. The fabric, when washed in chlorine bleach, kills 99.9% of common bacteria and viruses during the course of normal wear.

G&K aims to counter these pullbacks through cost reductions. A recently introduced sales automation system will trim selling expenses through the elimination of materials previously required in the sales process. A helpful byproduct of the new program will be its enhanced reporting capabilities, which should improve management's ability to monitor individual sales representative's productivity. Furthermore, the streamlined approach will allow management to cut 50 administrative positions.

We have tempered our earnings forecast, reducing our 2008 and 2009 estimates by $0.10 and $0.25 a share, to $2.30 and $2.50, respectively. Weakness within the company's core uniform rental business, along with increased energy costs and a higher tax rate, caused year-over-year earnings to fall 5% in the third quarter. Furthermore, we have lowered our 2011-2013 share-earnings estimate by 20%, to $2.90.

G&K Services does not hold much appeal for investors at this time. This issue is now a 4 (Below Average) on our Timeliness scale. Longer term investors will want to wait on the sidelines at this time as a weakening domestic environment will likely reduce earnings growth over the 3- to 5-year pull.

BUSINESS: P. H. Glatfelter Company is one of the world's leading manufacturers of specialty papers and engineered products. It has paper mills in Pennsylvania, Ohio, Germany, the U.K., and France, as well as an abaca pulp mill in the Philippines. It serves the book publishing, carbonless & forms, envelope & converting, engineered products, food & beverage, and composite laminates markets. Employs about 3,655. Third Avenue Management owns 11.6% of common; Dimensional Fund, 8.5%; Mat Investors, 5.9%; NWQ, 5.7%; Franklin Resources, 5.5%; FMR, 5.1%; officers & directors, 1.5% (3/08 proxy). Chairman and CEO: George H. Glatfelter II. Incorporated: PA. Address: 96 South George Street, Suite 500, York, PA 17401. Tel.: 717-225-4711. Internet: www.glatfelter.com.

P. H. Glatfelter got off on the right foot this year, posting adjusted share net of $0.25 on revenues of $307.5 million. (Our earnings presentation excludes gains derived from timberland sales and costs associated with integrating recent acquisitions.) The hefty bottom-line improvement and margin expansion highlight the recent success of the specialty paper maker's profit improvement initiatives. Favorable demand trends and product price hikes also helped bolster profits in the interim. **We do not think the sluggish U.S. economy will slow down the company much in the June quarter.** (Glatfelter will complete its annually scheduled maintenance outages at both its Spring Grove and Chillicothe facilities in the second interim, which usually knocks share earnings down $0.20–$0.25.) Volumes are expected to be in line with the year-earlier figures for both the Specialty Papers and Composite Fibers businesses, and selling prices should be higher across the board. However, continuing increases in fiber and energy costs will probably offset most of the pricing gains, which will likely put a clamp on margin expansion.

We expect the remainder of the year to play out in similar fashion, and are leaving our estimates relatively unchanged at this time. However, management intends to aggressively manage Glatfelter's cost structure and intensify recent process-improvement and cost-reduction initiatives. The company also plans to make targeted investments in several facilities to increase productivity and output. These programs should allow Glatfelter to widen its margins some in 2008, though to a lesser degree than we previously anticipated. All told, we think the company will be able to sustain the momentum it generated in recent quarters. ***This issue has broad appeal at present.*** We rank it to outperform the broader market in the coming six to 12 months (Timeliness: 2), and believe it offers worthwhile 3- to 5-year price appreciation potential.

BUSINESS: Gentex Corporation manufactures automatic-dimming automotive rearview mirrors (96% of 2007 sales). Its *Night Vision Safety* mirrors use sensors and electronic circuitry to detect glare from trailing approaching vehicles at night, and darken accordingly to protect the driver's vision. Sells to most of the major automakers (Revenues derived from top four customers represents approximately 59% of total). Also makes commercial fire protection products (roughly 4% of the top line). Has approximately 2,720 employees. Officers and directors own 5.4% of common stock, including 4.2% owned by Chairman & CEO Fred Bauer (3/08 proxy). Incorporated: MI. Addr.: 600 N. Centennial Street, Zeeland, MI 49464. Tel.: 616-772-1800. Internet: www.gentex.com.

Gentex posted solid first-quarter results. For the period, the company reported a 13% year-over-year rise in revenues, while share net came in at $0.21, flat from the prior year. Gentex benefited from its geographic diversity and increased sales of its new value-added features such as the *Rear Camera Display Mirror* and the *SmartBeam* high-beam headlamp. The success of these new products helped to more than offset reduced vehicle production levels at the Big Three automakers in North America. Margins during the quarter widened, thanks to purchasing cost reductions, product mix, and favorable foreign exchange rates.

We anticipate 2008 top- and bottom-line growth of 10% and 12%, respectively. Management now anticipates that it will ship between 350,000 and 400,000 *Rear Camera Display Mirrors* in 2008, a 100,000-unit increase over the company's estimate last quarter. This is largely due to increased estimated take rates on vehicle models offering these mirrors. However, there is still significant uncertainty regarding the health of the domestic economy.

Business prospects at Gentex might well expand significantly in 2009 and beyond. A recent bill signed by President Bush ordered the National Highway Traffic Safety Administration (NHTSA) to initiate rulemaking to revise the federal standard regarding the field of view so that drivers can detect objects directly behind vehicles. The requirement may be met by the use of additional mirrors, sensors, or cameras. We believe that, although it may take at least a couple of years for these rules to become enacted, several auto makers may adopt the changes earlier than required.

Shares of Gentex are ranked to track the broader market averages over the next six to 12 months. Although demand for some of the company's core rear camera mirror products remains solid, we are still concerned about the health of the North American auto industry during this time frame. Over the 3- to 5-year period, these shares offer above-average appreciation prospects, given the potential for significant sales gains if the above-mentioned NHTSA rules become effective.

BUSINESS: Global Payments Inc. is a leading provider of electronic transaction processing services for consumers, merchants, financial institutions, government agencies, and other entities in the U.S., Canada, Latin America, Europe, and the Asia-Pacific region. It also provides consumer money transfer services from the U.S. and Europe to Latin America, Morocco, the Philippines, and other destinations. 2008 revenue breakdown by segment: Merchant Services, 89%; Money Transfer, 11%. Foreign operations generated 33% of 2008 revenues. Officers and directors own 3.2% of stock; T. Rowe Price, 10.1% (9/07 proxy). CEO: Paul R. Garcia. Inc.: GA. Address: 10 Glenlake Parkway, North Tower, Atlanta, GA 30328. Tel.: 800-560-2960. Internet: www.globalpaymentsinc.com.

We are upbeat about Global Payments' prospects in fiscal 2009 (which began on June 1st). The core Merchant Services unit ought to benefit, in part, from healthy expansion of the direct merchant channel in the United States, driven by initiatives to attract and retain customers in the Independent Sales Organization segment. A recently established United Kingdom joint venture with HSBC, discussed below, should help results here, too. Also within the Merchant Services division, good showings appear to be in store for the Canadian segment (reflecting favorable changes in the Canadian market interchange structure in April) and Asia-Pacific joint venture with HSBC (aided by sales force enhancements). Lastly, the domestic money transfer operation should benefit from the closing of underperforming branches during the last fiscal year, and the pricing environment has improved of late. But heightened immigration enforcement may continue to dampen results here a bit.

All told, earnings per share ought to advance nearly 15%, to $2.25, in fiscal 2009. Next year, the bottom line could climb at a similar rate, to $2.55 a share, assuming additional expansion in operating margins.

Global Payments formed a United Kingdom joint venture with HSBC. Under the terms of the deal, the company paid $439 million in cash for a 51% stake in HSBC's card payment processing business in the United Kingdom, which provides services to more than 135,000 merchant outlets. (Revenues for that unit were almost $230 million in 2007.) We estimate that the transaction will add a few pennies to Global's share net in fiscal 2009, and marketing initiatives ought to lead to more accretion to the bottom line in fiscal 2010 and afterward.

The stock is ranked 1 (Highest) for *Timeliness*. That's based, in part, on the company's good recent earnings momentum.

But long-term capital appreciation potential is not impressive because we think the good news regarding Global Payments is already factored into the current quotation. But future acquisitions could brighten things.

Frederick L. Harris, III August 22, 2008

BUSINESS: Goodrich is a major supplier of aerospace components, systems, and services. Includes landing systems, aerostructures and aviation services, engine and safety systems, and electronic systems. Acquired Rohr 12/97; Coltec 7/99; TRW Aeronautical Systems 10/02. Sold GEON 6/93, Performance Materials, 2/01. Spunoff Engineered Industrial Products 5/02. '07 depreciation rate: 8.5%. Foreign sales 46% of total; Has about 23,400 employees. Officers & directors own 1.6% of common stock; no persons or entities beneficially own more than 5% (3/08 Proxy). Chairman, President & CEO: Marshall O. Larsen. Inc.: NY. Addr.: Four Coliseum Center, 2730 West Tyvola Road, Charlotte, NC 28217. Tel.: 704-423-7000. Internet: www.goodrich.com.

Goodrich is likely headed for another year of double-digit earnings growth. Prospects for the aerospace supplier remain favorable, reflecting the continued rise in global air travel. Most of this demand is coming from overseas, namely in rapidly growing emerging markets, such as China and India. As a result, large backlogs at the major original equipment manufacturers (OEMs) suggest build rates could remain elevated for several years to come. Goodrich stands to benefit from both large commercial OEM sales and the increased number of planes requiring higher-margin aftermarket parts and services (more below). Regional, business, and general aviation demand also remain solid, and defense and space-related sales are rising as well. Overall, the upward trajectory in earnings is likely to be maintained out to 2011–2013, though at a slower pace than was evidenced over the last four years.

The company's aftermarket business is poised to continue growing. Although new aircraft orders are likely to moderate from the torrid pace of the last few years, the expanding global commercial aircraft base will require additional upkeep. Goodrich is well positioned to take advantage of this trend, thanks to its extensive worldwide network of maintenance, repair, and overhaul centers, and its replacement-parts business. This should support earnings expansion beyond the recent OEM surge.

Profitability is likely to edge higher. On top of the aforementioned increases in aftermarket business, margins should get an additional boost from the company's ongoing investment in lower-cost manufacturing facilities overseas. This should be supplemented by productivity and operational improvement initiatives.

These shares do not stand out right now. For the year ahead, they remain ranked to perform in line with the broader market averages. Longer term, the very large increase in Goodrich's share price over the last few years discounts a good portion of the continued earnings strength we project out to 2011–2013. Consequently, the issue's appreciation potential over that time frame falls around the *Value Line* median.

Noteworthy: When the company restated its financial results for the first half of fiscal 2004 to reflect operations (Fine Chemicals) reclassified as discontinued, we chose to include pension expense in our presentation, whereas we previously excluded it. This noncash expense ran at about $12 million per quarter in fiscal 2004, or about 27 cents a share. Our model currently assumes a *neutral* impact from this account in subsequent years.

BUSINESS: GenCorp designs and manufactures propulsion and electronic surveillance systems for aerospace and defense applications. Also owns 12,600 acres of land near Sacramento, CA, and is seeking zoning changes in order to develop this land. Sold GDX Automotive on 8/31/04. Fine Chemicals was reclassified as a discontinued operation in FY'04. '07 depr. rate: 5.2%. Employs 3,252.

Officers and directors own 15.9% of common shares, including Warren Lichtenstein, 14.1% (3/08 proxy). Chairman: James Henderson; Interim President & CEO: J. Scott Nelsh. Search for a permanent CEO and President is ongoing. Inc.: Ohio. Address: Hwy 50 & Aerojet Rd., Rancho Cordova, California 95670. Telephone: 916-355-4000. Internet: www.gencorp.com.

The makeup of GenCorp's upper management continues to change. Three members of the board of directors, including former chairman Timothy Wicks, resigned in May. The remaining directors selected James Henderson to replace Mr. Wicks. Mr. Henderson, who joined the board in March, is a managing director of Steel Capital, a private equity investment firm that has a 15% stake in GenCorp. Meanwhile, the company has not named a replacement for Terry Hall, who resigned as CEO in March.

A land sale caused an unexpected spike in earnings in the May period (fiscal year ends November 30th). The company sold 400 acres of land to Elliot Homes for $10 million. As a result, second-quarter earnings jumped 42%, to $0.34 a share. If this land sale were excluded, share net would have been $0.22, two pennies below the year-earlier result.

Despite GenCorp's wide appreciation potential over the coming 3 to 5 years, we see some reasons for concern. Upper management has been in a state of flux for quite some time now, as two major shareholders (Steel Capital and Pirate Capital) have tried to assume greater control of the company in the last two years. We think the boardroom machinations raise a red flag, and investors may want to wait until the board of directors exhibits more stability before opening a position. Too, much of the stock's appreciation potential is dependent on successful development of the company's land holdings in northern California. The real estate market in this region has been hit very recently, and if this weakness persists for an extended period, the company might not be able to reach our earnings projection for the 2011-2013 interim. Also, the stock carries a Below-Average (4) Safety rank and low ratings for Financial Strength and Earnings Predictability.

The Timeliness rank has dropped one notch since our April review. GY is now an average selection for the coming six to 12 months.

BUSINESS: Haemonetics Corp. operates two main divisions: Donor Products (65% of 2007 sales) provides disposable supplies used in the collection of plasma, whole blood, platelets, and red blood cells. Patient division (21%) offers disposable products used in blood salvage during surgery, and blood loss management. Equipment & Tech. services (14%). Int'l business: 54.9% of sales. R&D, 5.3% of sales. Acq'd Arryx, 6/06; Fifth Dimension Info. Sys., 1/02; Transfusion Tech, 9/00. Has 1,826 employees. Officers and directors own 4.3% of shares; other major investors, 37.7% (6/08 proxy). Chairman: R.A. Matricaria. Pres. & CEO: B. Nutter. Inc.: Mass. Address: 400 Wood Rd., Braintree, MA 02184. Telephone: 781-848-7100. Internet: www.haemonetics.com.

Haemonetics got off to a strong start in fiscal 2008 (ends March 28, 2009). First-quarter revenue advanced 18% (13% excluding currency gains), led by continued robust demand for plasma collection products, which surged 30%. Share net for the period rose 17% to $0.59, as margins remained strong despite an increase in SG&A spending for recently acquired businesses. Meanwhile, the software and services segment posted only a 1.4% sales increase, but this was due to comparisons to a large service contract in the previous year. The software business by itself improved 29%, which though less than in previous quarters, was still very solid.

We've raised our fiscal 2008 and 2009 share-net estimates by $0.05 and $0.15, respectively. The strong trend in plasma collection has allowed HAE to more than double its installed devices over the past three years. These systems provide a higher future revenue stream as they eventually necessitate the replacement of disposable parts, which is the real profitable part of the business. Around 2,300 devices were installed last year, and management expects another 1,800 to be installed during this year.

Smaller, higher-margin segments will need to make larger contributions to improve overall profitability. Although recent performance has been solid across all divisions, the lower-margin plasma business has been the real strong point. Revenue visibility is strongest at this segment, as contracts are long term in nature. Yet, other segments will need to play a larger, more consistent role to counter the margin declines from the greater mix of plasma revenue. The software segment, which is a major part of HAE's plan to become a full-service blood management provider, should continue to expand and boost profitability in the coming years. HAE has negotiated price-per-procedure contracts with much of its software business, which should provide a continuous revenue stream beyond the initial agreement.

We've raised the Timeliness rank of this stock to 2 (Above Average). We also anticipate strong earnings gains over the coming 3 to 5 years. However, the current valuation provides limited appreciation potential out to 2011-2013.

BUSINESS: Halliburton Co. is one of the world's largest energy services providers, operating in about 70 countries. Completion and Production division offers well cementing, well stimulation, intervention, and completion services. Drilling and Evaluation division provides services to model, measure, and optimize well construction activities. Sold Dresser Equipment Group, '01. Fully separated KBR engineering and construction unit, 4/07. 2007 foreign sales: 53% of total. 2007 R&D expenses were 2% of revenues. Has 51,000 employees. Wellington Management owns 5.5% of stock (4/08 Proxy). Chairman, Pres., & CEO: David J. Lesar. Inc.: DE. Addr.: 5 Houston Center, 1401 McKinney, Suite 2400, Houston, TX 77010. Tel.: 713-759-2600. Internet: www.halliburton.com.

Halliburton is turning in a solid performance. Top-line growth of 26% outside North America in the latest quarter reflects strong underlying demand. Business is up notably in Norway, Saudi Arabia, Angola, Oman, Mexico, Brazil, Colombia, and Venezuela. The common theme is that these are all oil-producing countries and, with oil over $100 a barrel, drillers are more confident about initiating projects. That's a plus for Halliburton, which has been seeking more business abroad, and for its bottom line. International revenue growth of 20%, or better, appears sustainable in the coming 12-18 months. Margins should hold up here.

North American prospects have improved. Activity is picking up as producers go after opportunities in shale rock formations. Pricing pressures have eased in certain product lines, too, although it is too early to tell if any meaningful price hikes for 2009 will be possible. Margins are being helped by the addition of fuel surcharges, but hurt by the rising cost of materials. Operations in the United States and Canada still carry a lot of weight for Halliburton, as it is one of the largest service providers in those markets. Meanwhile, natural gas prices — a leading indicator for business — are off their recent highs, but remain strong overall.

The company is positioning itself for the next leg of the drilling cycle. Part of the strategy entails ramping up the budget to make extra gear available as more oilfield projects get going. Overall capacity is up 10%-15% this year, and will climb again in 2009 on the heightened spending now occurring. There is about a nine-month lead time for new plant deliveries. Halliburton also continues to boost the technology content of its product line both through niche acquisitions and R&D. That's important because product designs that save on labor and time usually sell well. The new shale formations are not yet completely understood, either, meaning they may require more of the methodologies now being developed.

The stock remains highly ranked (1) for Timeliness. Profit growth should stay strong, although the shares have come off their best levels as oil and gas prices have pulled back sharply.

Robert Mitkowski, Jr. *August 15, 2008*

(A) Based on diluted earnings. Excludes net nonrecurring gains (losses): '92, (88¢); '93, ($1.18); '94, 26¢; '95, (29¢); '98, (85¢); '99, 16¢; '00, 28¢; '01, 30¢; '02, (76¢); '03, ($1.38); '04, ($1.55); '05, 68¢; '06, 7¢; '07, $1.11; '08, (12¢). Next earnings report due late October.
(B) Dividends historically paid in late February, May, August, and November.
(C) In millions, adjusted for stock splits.
(D) 2006 data are pro forma to reflect separation of KBR engineering and construction unit.

BUSINESS: Hasbro, Inc. is one of the world's largest toy makers. Manufactures and markets preschool toys (*Playskool*), girls' toys, boys' action toys, and games (*Milton Bradley, Parker Bros.*). Core brands include: *G.I. Joe, My Little Pony,* and *Monopoly.* Acquired Waddington Games and game & puzzle assets of Western Publishing, '94; OddzOn and Cap Toys, '97; Tiger Electronics, 4/98, Wizards of the Coast, 9/99. International: 42% of '07 sales. Alan G. Hassenfeld owns 11.5% of stock; other officers & directors, 2.7%; Barclays Global Investors, 9.5%; State Street Bank and Trust Company, 5.7%; (4/08 Proxy). Chairman: Alan G. Hassenfeld. CEO: Alfred J. Verrecchia. Inc.: RI. Addr.: 1027 Newport Ave., Pawtucket, RI 02862. Tel.: 401-431-8697. Internet: www.hasbro.com.

Hasbro remains on course to show about 10% earnings growth for 2008. The company was up against difficult comparisons with last year, its strongest in over a decade. However, share net was up 16% in the first half, on a 13% increase in sales. Strength was reported in all segments. But a good portion of the performance reflects solid contributions from toys tied to entertainment properties, such as *Indiana Jones, Star Wars,* and the Marvel super hero movies (more below). Core brands like *Nerf* and *Littlest Pet Shop* are also doing well. We look for the upward trajectory to carry into 2009, with support coming from a second *Transformers* movie, as well as a *G.I. Joe* cinematic release.

The company's Marvel-related lines remain strong performers. The *Iron Man* and *Hulk* movies were out in the second quarter, with the former doing very well at the box office and in terms of toy sales for Hasbro, with even some spot shortages reported. Hasbro has shipped out new product to restock the shelves in time for the DVD release this fall.

***Star Wars* remains an evergreen property,** with related sales up 82% in the June interim. Moreover, strong momentum should carry through for the rest of the year, supported by the theatrical release of the animated *Clone Wars,* to be followed in the fall by a TV version.

Rising input costs remain a challenge. Higher oil prices, in particular, have increased the costs of plastic resin, ocean freight, and transportation to retailers. So far, the company has been largely able to offset these through cost-cutting and process improvement efforts as well as selling price increases. A second round of modest hikes is planned to go into effect in September.

These shares have had a good run, rising about 40% over the past 12 months. Moreover, recent price and earnings momentum suggests the stock will likely continue doing better than the overall market for the year ahead. The issue is somewhat less appealing as a long-term holding, however. Even though we've increased our 3- to 5-year earnings projections by about 10%, the shares are already trading within our Target Price Range for 2011–2013.

Mario Ferro *August 15, 2008*

(A) Fiscal year ends last Sunday in December. (B) Primary earnings until '98. Diluted earnings thereafter. Quarterly earnings may not sum to total due to rounding. The Hain Celestial Group was incorporated in Delaware in May 1993 under the name 21st Century Food Products. On Nov. 12, 1993, 1,076,923 shares were offered at $3.25 a piece, by Lew Lieberbaum & Co., Inc. Upon completion of the IPO, the co. acquired Kinert Foods Corp. for $2.2 million. Since then, Hain has acquired several niche players in the natural foods industry. Namely, on May 30, 2000, Hain merged with Celestial Seasonings in a deal valued at about $390 million forming the current concern.

BUSINESS: The Hain Celestial Group, Inc. markets and sells natural and organic food and personal care products under brand names that are sold as "better for you" items. Sells mainly to specialty and natural food distributors and markets to supermarkets and natural foods stores. Products: *Health Valley, Celestial Seasonings, Hain Pure Foods, Westbrae, Westsoy, Terra Chips, Earth's Best, Arrowhead Mills, Casbah, DeBoles, Garden of Eatin', Imagine, Estes, Yves Veggie Cuisine,* & others. Has about 2,130 employees. Off./dir. own 10.7% of common; Cooke & Bieler LP, 7.6%; Dimensional Fund Advisors, 6.9% (as of 1/08). Chmn., CEO & Pres.: Irwin D. Simon. Address: 58 South Service Road, Melville, NY 11747. Tel.: 631-730-2200. Internet: www.hain-celestial.com.

Hain Celestial has performed well of late, despite a very difficult operating landscape. We continue to look for the company to report earnings in the $1.40-a-share range for fiscal 2008 (ended June 30*th*). (*Note:* Year-end results are scheduled to be released in late August.) The natural/organic foods company has successfully used selective price increases (discussed below) and productivity initiatives to offset inflationary pressures on the cost side of the business. If not for such measures, the soaring prices of wheat, corn, soybeans, and diesel fuel would have choked margins. As it stands, we believe the operating margin expanded in the recently completed fiscal year.

The company's selective price increases appear to be sticking. Hain has implemented nine price increases in selective categories since 2005, with the latest being a 4%-5% hike across the grocery and snacks category. In early January, Hain executed a similar hike in the personal care segment. Management has hinted that additional price increases may also be forthcoming in fiscal 2009. The decision to raise prices was made to simply maintain margins, which appears to be working. More important, the price increases have not hurt sales volume yet.

Rationalization of the personal care segment is under way. All told, Hain plans to eliminate 30%-40% of its lower-margined and redundant products. Indeed, several acquisitions in recent years have led to some overlapping of products. Near term, the company believes that the lost volume from the discontinued lines will be offset by focusing on higher-margined products. The ongoing restructuring, combined with the recent revamping of the Celestial Seasonings business, should position Hain well for the 3- to 5-year pull.

This issue has worthwhile long-term appreciation potential. We believe that the recent pullback in price offers an excellent entry point for investors. Studies now suggest that consumers are continuing to make eating healthier a high priority, even with recent concerns about consumer spending. In fact, mass merchandisers and supermarkets are ramping up their natural and organic food offerings, much to the delight of Hain Celestial.

William G. Ferguson *August 1, 2008*

BUSINESS: Hancock Holding Company is a bank holding company that operates in the states of Mississippi, Louisiana, and Florida. As of 12/31/07 it had 160 banking offices, more than 130 ATMs, $6.1 billion in assets, and 1,868 full-time employees. The company's regional banks are community-oriented, and focus primarily on offering customers commercial, consumer, and mortgage loans. Loan portfolio (12/31/07): real estate, 65%; consumer, 16%; commercial, 17%; other, 2%. Officers and directors own 18.0% of common shares; Hancock Bank of Mississippi, 9.5% (3/08 proxy). Chairman: George Schloegel. Co-CEO's: Carl Chaney & John Hairston. Inc: MS. Address: One Hancock Plaza, Gulfport, MS 39501. Telephone: 228-868-4727. Internet: www.hancockbank.com.

We expect Hancock Holding's earnings to rebound this year. In 2007, the flattened yield curve compressed the net interest margin, thereby hurting net interest income and earnings. And even though net interest income declined further in the first quarter of this year, we believe that a greater normalization of the yield curve will benefit net interest income by year-end. Specifically, we expect net interest income to climb 7% this year, to around $220 million. Driving this growth will probably be a higher level of earnings assets and lower deposit rates.

The bottom line should rise another 10% in 2009. Indeed, we believe that net interest income will continue benefiting from a higher level of earning assets. In particular, we anticipate an uptick in commercial and commercial real estate loans, especially if the economic landscape improves. Moreover, we think that deposit growth will be fairly modest, as an influx of public funds slightly outpaces the level of withdrawals for the ongoing rebuilding efforts in the GulfSouth region. Meanwhile, an ongoing rise in noninterest expenses, caused by increased personnel costs, will probably be partly offset by stronger noninterest income.

Credit quality will likely remain healthy over the coming years. Net charge-offs, as a percentage of average loans, in the first quarter, were 0.32%, which is still relatively decent compared to Hancock's rivals. Meanwhile, nonperforming assets as a percentage of total loans and foreclosed assets deteriorated by three basis points from a year earlier, to 0.46%, but we believe the bank can maintain its good asset quality by allocating adequate provisions for loan losses.

These shares have moved up one notch in Timeliness from our March review, to 3 (Average). Specifically, the stock has inched its way up since the beginning of this year and is up over 10% since our last coverage. Nevertheless, it is a riskier investment and holds a lower dividend yield when compared to many of its peers. Thus, we would not recommend it to conservative income-oriented investors at this time. An improvement in the credit markets and overall economy, though, may brighten our view.

Randy Shrikishun *June 20, 2008*

BUSINESS: Harte-Hanks, Inc. provides direct marketing and shopper advertising svcs. Its Direct Marketing (DM) unit (63% of '07 sales) builds customized databases and generates sales leads for retailers, healthcare orgs., drug, tech., telecom, and fin'l services firms, among others. The Shoppers unit (37%) publishes over 1,100 local edition, weekly advertising circulars (including *PennySaver* and *The Flyer*), reaching over 13 mill. homes in CA. and FL. Sold newspaper/TV assets, 10/97. About 6,580 empls. Off./dir. own 41.9% of common; Cooke & Bieler, 7.8%; Blackrock, 6.5% (4/08 Proxy). Chairman: Larry Franklin. CEO: Richard M. Hochhauser, Inc.: DE. Address: 200 Concord Plaza Drive, San Antonio, TX 78216. Tel.: 210-829-9000. Internet: www.harte-hanks.com.

Harte-Hanks' is facing tough times. Both the top and bottom lines receded 6% during the June period. Much of the weaker results were logged by its Shoppers unit. The advertising company's local weekly circulars were hard hit by the economic malaise at its target markets, mostly due to the real estate and housing-related financial troubles that Florida and California have been facing. But the Direct Marketing (DM) part of its business may soon feel the pinch, as well. The DM segment posted healthy gains during the front half of the year. But management offered a more subdued tone when discussing near-term prospects. Its customers, across various sectors, are reevaluating their marketing expenditures. And in leaner times, we may see part of its clientele take a more cautious approach and cut their advertising budgets. All told, we think that HHS will continue to struggle during the back half of the year, and believe that revenues and earnings will come in 3% and 10% lower than last year's tallies, respectively. Yet,

There should be some rays of light peeking through the clouds. Indeed, during the June quarter, revenues at the Shoppers unit showed some sequential improvement. What's more, recent cost reductions helped to widen margins, somewhat offsetting profit declines resulting from the deteriorating advertising market. The company also paused its share-repurchase program, utilizing available resources to help cut costs and improve other business fundamentals instead. Even so . . .

We have lowered our 2009 estimate by a nickel. In our view, share net is likely to show little improvement from this year's total, partly reflecting our expectations that the economy will make only halting progress.

This issue is ranked 4 (Below Average) for Timeliness. HHS shares have sunk to levels not seen in a decade. Given the current economic backdrop and dismal operating environment, investors will likely be best served remaining on the sidelines for now. Still, those with a longer-term view may want to take a closer look here, as this equity offers wide capital gains potential out to 2011-2013.

HCP, Inc. was founded as Healthcare Property Investors, Inc. In 1985, when the company was spun off from National Medical Enterprises (currently Tenet Healthcare) with approximately $90 million in gross real estate assets. Since that time, HCP has acquired a diversified portfolio of real estate assets in four healthcare real estate classes. Acquired properties are leased long term to established health care providers. HCP is currently the largest healthcare real estate investment trust.

BUSINESS: HCP, Inc., the largest healthcare REIT, had interests in 744 properties in 44 states as of 12/31/07. 2007 operating profits: senior housing, 45%; medical office buildings, 24%; acute care hospitals, 16%; life science, 9%; and skilled nursing facilities, 6%. Major tenants include Sunrise Senior Living (15% of revenues), Horizon Bay, (9%), and Brookdale Senior Living (8%). Acquired American Health Properties, 11/99; CNL Retirement Properties, 10/06; Slough Estates, 8/07. Vanguard owns 6.0% of common; Fidelity, 5.8%; officers & directors, 2.5% (4/08 proxy). Has 152 employees. Chairman & CEO: James F. Flaherty. CFO: Mark Wallace. Inc.: MD. Address: 3760 Kilroy Airport Way, Suite 300, Long Beach, CA 90806. Telephone: 562-733-5100. Internet: www.hcpi.com.

HCP's year is shaping up as rather less active than 2007. Last year, the company closed three major acquisitions, raising over $6 billion to make a similar amount of investments, including a major position in life science real estate. In 2008, HCP plans to dispose of around $750 million of properties and has already raised over $500 million of equity, returning leverage to roughly where it was a year ago. In contrast to last year, property purchases will likely be much smaller. The difference between bid and offered prices has shrunk in recent months, but it remains considerable. We expect HCP to acquire a few properties, but new construction and redevelopment will probably be relatively more important in 2008.

Seasonal items held back first-quarter results a bit. In the March period, same store operating profits rose 2.3%, led by a 5.1% gain in senior housing results. Medical office comparable profits were up just 1.2%, despite 2.3% higher rents, due to collections of past due rents in the prior-year period. And higher than normal sales and general costs reduced the first quarter's net by around a penny a share.

The picture is mixed for the balance of the year. The life science segment should do better as HCP re-leases space coming off five-year leases signed during the last recession; rent increases on some of these properties should be as high as 30%. The other segments, however, will probably show little change from the first quarter, in the absence of substantial acquisitions.

Results should pick up next year. With its debt paid down, HCP is now ready to make large property purchases again, and we think prices will moderate to the point where acquisitions again make financial sense. Redevelopment of the life science portfolio should help, since much of that segment is around San Francisco, where there is a lack of available space.

Looking ahead, HCP should profit from the graying of America. As the baby boomers retire and need more health care, they will probably make increasing use of property owned by HCP.

These neutrally ranked shares offer decent dividends and modest capital appreciation potential.

BUSINESS: Hewitt Associates, Inc. is a global outsourcing and consulting co. Outsourcing segment administers benefit programs, incl. health/welfare plans, defined contribution (401(k)) plans, and defined benefit (pension) plans. Consulting unit offers actuarial services and consulting services incl. the design, implementation, and operation of health/welfare and compensation/retirement plans. The HR-BPO (Human Resources-Business Process Outsourcing) unit provides such services as workforce admin., recruit'g, staff'g, and payroll processing. Has ab't 23,000 emps. Ariel Cap'l Mgmt. owns 16.7% of comm.; off./dir., 10.0% (12/07 proxy). Chrmn. & CEO: Russell P. Fradin. Inc.: DE. Addr.: 100 Half Day Rd., Lincolnshire, IL 60069. Tel.: 847-295-5000. Web: www.hewitt.com.

Hewitt Associates appears to be making progress turning its business around, as evidenced by the strong share net posted in the second quarter of fiscal 2008 (ends September 30th). Granted, the result included a gain from the divestiture of the Cyborg unit (payroll and HR software services) offset by charges related to the restructuring of an HR-BPO contract and the real estate portfolio (discussed below). But even without those special items, operating performance seemed to improve. **Specifically, the company continues to focus on strengthening its core segments, while stabilizing the struggling HR-BPO unit.** Indeed, the latter has been hurting margins in the last couple of years or so. Although there is still work to be done within this ailing business, we note that losses have been narrowing of late, thanks to the renegotiation of underperforming HR-BPO contracts and the consolidation of property. In the meantime, new client additions, a ramp-up in project work, and contributions from acquisitions are helping to boost revenues in the core Benefits Outsourcing and Consulting divisions.

Hewitt remains active on the acquisition front. It aims to expand its core businesses globally, tapping into markets where demand is healthy. In fact, HEW just acquired CSi, a data, analytics, and compensation consultant in Australia and New Zealand. Too, it is in the process of buying LCG, a provider of employee absence management solutions. Terms were not disclosed. While these deals will be modestly dilutive to earnings this year, they should add to profits thereafter. In all, we've raised our fiscal 2008 share-net target by a nickel, on wider margins. Note that our estimate reflects $0.06 dilution from the loss of Cyborg and the recent acquisitions. We've also factored in real estate charges and stock repurchases. **Only momentum investors should take a look here.** The stock has had a good run over the past year and a half, likely reflecting Wall Street's expectation of a bottom-line comeback. And the issue is ranked favorably for the coming year too, assuming the profit outlook remains positive. Long-term appreciation potential is average, however, at the current price.

J. Susan Ferrara *July 18, 2008*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Represents core eps until FY'06, which excl. IPO-related adjustments. Based on GAAP thereafter. Qtly. egs. may not add to total due to difference in shares outstanding/rounding. Next earnings report due early Aug.
(C) In millions.
(D) Includes intangibles. At 9/30/07: $515.4 million, or $4.81 a share.

BUSINESS: HNI Corporation is a manufacturer of metal and wood office furniture in the U.S. Sells a complete product line, including file cabinets, desks, chairs, wall systems, and credenzas. Major emphasis is on mid-priced products. Also manufactures gas- and wood-burning fireplaces. Bought Bevis Custom Furniture, Panel Systems, 11/97; Allsteel, 6/97; Heat-N-Glo, 10/98; Gunlocke, 10/99; AFC and Allied Group, 2/00. '07 depreciation rate: 8.1%. Has 13,300 employees. State Farm Insurance owns 16.6% of common stock; T.C. & L.B. Mealy, 7.7% (3/08 Proxy). President, Chairman & CEO: Stan A. Askren. Incorporated: IA. Address: 414 East Third Street, P.O. Box 1109, Muscatine, IA 52761-7109. Telephone: 563-272-7400. Internet: www.hnicorp.com.

HNI's shares have lost roughly a third of their market value since our last review. The stock has come under tremendous pressure from a slew of negative factors that have significantly hurt performance this year. The housing crisis and the subsequent credit crunch, along with the rising cost of energy and raw materials, have notably slowed the domestic economy. As a result, corporate spending has deteriorated. Hence, demand and volume have weakened considerably for the office furniture manufacturer, particularly from its small-office and home-office customers. In light of this, the near-term picture for this offering has dimmed. These shares are ranked at the bottom of the *Value Line* realm, as we expect profits to decline considerably year over year.

We look for unfavorable comparisons throughout 2008. Although this review will have already reached our subscribers by the time the company reports its second-quarter results, we anticipate that share earnings fell decisively. The company will likely continue to face challenges for the remainder of the year, as the aforementioned pressure on the top line and hefty raw material costs hurt margins. The home and hearth segment also buckled under strain from the adverse retail climate, particularly in the new construction channel. Alternative fuel products did well but were not enough to offset overall market conditions.

Still, we are cautiously optimistic that HNI can turn things around over the next couple of years. The ongoing troubles are industrywide factors that are not specific to the company. Moreover, management remains focused on offsetting market weakness by improving efficiency and productivity. This will likely entail cost restructuring and further streamlining of the business. Based on capital expenditure projections, we believe the company will continue to invest in growth initiatives and position itself to maximize the benefits of a likely market recovery. Indeed, HNI's business platforms remain strong.

These shares offer wide appreciation potential to 2011-2013. We believe the company's sales and profits will rally over the long term.

Simon R. Shoucair *July 4, 2008*

(A) Fiscal year ends Saturday nearest Dec. 31st of calendar year.
(B) Primary earnings through 1996, diluted thereafter. Excludes nonrecurring gains (loss): '96, 7¢; '94, (1¢); '89, 18¢; '99, ($0.20); '01, (26¢); '05, (5¢); '06, (12¢); '07, (8¢). Excludes FAS 109 charge: '93, (1¢). Next earnings report due early Aug.

BUSINESS: Harley-Davidson, Inc. manufactures heavyweight custom and touring motorcycles and related products. Also owns Buell Motorcycle (sport and performance motorcycles) and Eaglemark Financial, a wholesale and retail finance unit. Sold Holiday Rambler Corp. in 1995. Harley is the only major American manufacturer of heavyweight motorcycles. Has over 1,000 dealers worldwide. Foreign business is about 27% of sales; R&D, 3.2%. '07 depreciation rate: 7.9%. Has about 9,755 employees. Officers & directors own 1.2% of stock. (4/08 Proxy). Chairman: Jeffrey Bleustein. CEO and Pres.: James Ziemer. Incorporated: Delaware. Address: 3700 West Juneau Ave., Milwaukee, Wisconsin 53208. Telephone: 414-342-4680. Internet: www.harley-davidson.com.

Harley-Davidson registered a year-to-year earnings decline during the June quarter. Nevertheless, the company's share net of $0.95 was above our watered-down expectation. During the second period, Harley shipped 80,326 motorcycles, which was slightly above its guidance of 76,000–80,000. However, this represented a nearly 16% decrease from the year-earlier period. This decline reflects lackluster U.S. economic conditions, which have constrained consumers' buying habits.

Earnings comparisons might well remain weak for the remainder of this year, followed by a slight improvement in 2009. The company expects to ship 74,000–78,000 Harley motorcycles during the September period. We estimate that earnings will come in at $0.80 per share during the interim, which represents a year-over-year decline of 25%. It appears likely that motorcycle comparisons will remain subpar for the remainder of this year, owing to macroeconomic pressures. On the other hand, we look for growth, albeit slight, at the General Merchandise and Parts & Accessories divisions. The General Merchandise segment has a lower gross margin than the Bike group, while Parts & Accessories is the company's most profitable division. Next year's modest earnings recovery is based on our outlook for a slightly better economic backdrop. Harley has a healthy new product pipeline, which enables it to churn out successful new motorcycles and related products each year. What's more, Harley's international exposure (27% of 2007 revenues) should help it withstand the aforementioned pressures on the domestic front.

The company will likely continue to return capital to its shareholders in the years ahead. Stock repurchases will probably remain a part of the equation, while dividend hikes appear likely, given the company's strong cash flow prospects.

Harley stock is not on our recommended list for year-ahead price performance. However, price recovery potential for the pull to 2011–2013 is significant. Though Harley has hit a speed bump, we believe that its long-term earnings prospects remain intact.

BUSINESS: Hercules Incorporated is a leading manufacturer and marketer of specialty chemicals and related services for a broad range of business, consumer and industrial applications. Has significant operations in North America, Europe, Asia, and Latin America. Principal products are chemicals used by the paper industry to increase paper and paperboard performance and enhance the manufacturing process. Employs about 4,660. Officers and directors own 2.4% of common stock; Wellington, 8.9%; Sasco, 6.3%; State Street Bank, 5.9%; FMR, 5.3%; (3/08 Proxy). Chairman: John K. Wulff. President & CEO: Craig A. Rogerson. Incorporated: DE. Address: Hercules Plaza, 1313 North Market Street, Wilmington, DE 19894. Telephone: 302-594-5000. Internet: www.herc.com.

Hercules' March-quarter results were a mixed bag. The Aqualon Group reported a 17% sales increase, thanks to higher volume, recent acquisitions, improved pricing, and favorable rates of exchange. Profit growth from ongoing operations was negligible, though. Increased selling prices, lower pension expenses, and productivity gains were almost entirely offset by higher raw material, transportation, and utility costs. Planned and unplanned shutdowns also hurt the division's bottom line. In the Paper Technologies and Ventures Group, sales and profits from continued operations both rose 7%. The Paper Technologies business essentially treaded water in the period, posting modest top- and bottom-line gains. It seems as though growth in many of the global markets is moderating. However, the Ventures segment was able to make up the difference. This business achieved significant sales and earnings growth in the interim, thanks to higher volume of building products and synthetic lubricants.

The remainder of the year should play out in a similar fashion. We remain confident in Hercules' ability to post a 15% share-earnings advance in 2008, and are leaving our estimates largely unchanged at this time. Considerable raw material, freight, and utility cost headwinds will most likely remain a factor companywide, but announced and additional product price hikes should help to partially mitigate these costs. In addition, profitability ought to improve, thanks to higher utilization, recent capacity expansions, and product introductions.

The company's balance sheet remains in decent shape, and management is pursuing acquisition opportunities to expand Hercules' product portfolio. In the meantime, the chemical maker is repurchasing stock. It bought back 1.3 million shares at a cost of $23.3 million in the March interim, leaving a bit less than $125 million remaining on the current authorization.

These shares may warrant some consideration at this juncture. Despite the difficult investment climate, this timely issue has continued to rise. In addition, this stock offers worthwhile 3- to 5-year price appreciation potential.

BUSINESS: Hewlett-Packard Company provides computing and imaging solutions and services to consumers and businesses. Operates in 6 segments. Rev. as a % of total (and % of operating earnings) in '07: Imaging & Printing, 27% (41%); Personal Systems, 34% (16%); Enterprise Storage & Servers, 18% (19%); HP Services, 16% (17%); Financing, 2% (1%); Software, 2% (3%); Other, 1% (d1%). (May not add because of rounding.) R&D: 3.4% of '07 rev.; Foreign sales: 67% of '07 rev. '07 dep. rate: 16.5%. Acquired Compaq Computer 5/02. Has 172,000 employees. Off. & dir. own less than 1%, FMR Corp., 5.6%, of stock (1/08 proxy). Chairman, CEO, and President: Mark Hurd. Inc.: DE. Add.: 3000 Hanover St., Palo Alto, CA 94304. Tele.: 650-857-1501. Internet: www.hp.com.

Hewlett-Packard is making a big acquisition. In May, the information technology giant announced that it had agreed to acquire services provider Electronic Data Systems for $25 a share in cash, a total of $13.9 billion. That represents a premium of 28% over the EDS price before the news of the acquisition broke. The deal is subject to the usual regulatory and shareholder approvals, and is expected to close in the second half of 2008.

The deal would make Hewlett a more formidable competitor in the services field. The acquisition will more than double the size of H-P's services business, and move it into second place in the field, behind IBM. Importantly, there is little overlap between the two companies' customer bases. H-P will gain better access to large corporate accounts, which will give it an avenue to increase sales of hardware to EDS' corporate clients. On a less positive note, EDS' net margins are relatively narrow, just about half those of Hewlett. However, H-P expects to be able to achieve significant cost savings from reduced overhead, efficiencies of scale, and automating the delivery of services, as well as likely moving additional operations to lower-cost countries, such as India. We won't modify our projections until the deal is finalized, but Hewlett expects the acquisition to be accretive to earnings in fiscal 2009 (begins November 1, 2008) on a non-GAAP basis, and in fiscal 2010 on a GAAP basis.

Meanwhile, H-P's diversity is helping to keep operations on an even keel. The soft economy in the United States has slowed the company's domestic growth, but over 70% of revenues in the second quarter were from outside the U.S., and it is expanding rapidly in emerging markets. Too, it has a broad customer base, and less exposure than many of it peers to the struggling financial segment. What's more, the company continues to cut costs. It is consolidating data centers and applications, and trimming overhead. All told, we think that earnings will advance at a good annual pace over our 3- to 5-year investment horizon.

H-P shares have little appeal. They are ranked to move with the year-ahead market, and have about average appreciation potential for the haul to 2011-2013.

BUSINESS: Healthcare Realty Trust Inc. is a *self-administered and* self-managed real estate investment trust (REIT) that owns and operates real estate properties and mortgages in the healthcare services sector. The company's properties are located in 24 states throughout the *United States. As of 12/31/07, the company* had about $1.7 billion invested in 187 income producing properties, *totaling* about 10.9 million sq. ft. The company also provides management services to about 142 healthcare providers nationwide. Officers and directors own about 2.4% of common shares. (3/08 Proxy). Chairman and CEO: David R. Emery. Address: 3310 West End Ave. Suite 700. Nashville, Tennessee 37203. Telephone: (615) 269-8175. Internet Address: www.healthcarerealty.com.

Healthcare Realty Trust reported mixed results for the March quarter of 2008. Although revenues rose about 4.5% during the period, much of the advance was offset by higher property operating expenses. Consequently, funds from operations (FFO) declined about 9% during the quarter. We are lowering our FFO estimates by $0.05 per diluted share for both 2008 and 2009.

Healthcare Realty is actively pursuing property acquisitions. A selective credit environment, a weaker real estate market, and fewer speculators have made the medical office building market more attractive. The REIT will likely make about $50 million in acquisitions annually. *This will probably include properties with* strong development potential.

Development efforts are progressing well. Healthcare Realty currently has *about nine properties under construction,* requiring a capital investment of about $260 million. We expect these projects to be completed within the next two years. *Development costs* remained stable during the first quarter. Higher raw material prices have largely been offset by more-attractive financing and labor costs. The REIT's strategy of developing medical office space *adjacent to large hospitals* should provide an ample supply of tenants. Moreover, medical office buildings will likely remain attractive real estate investments, *given the country's* large aging population, and the need for a lower-cost settings for healthcare services.

The balance sheet remains healthy. Healthcare Realty *will likely fund its* development pipeline and acquisitions with income from its operations and with proceeds from the sale of older properties. Moreover, the REIT's *conservative debt-to-capital* level leaves room for additional debt issuances.

These neutrally ranked shares have declined slightly in price since our April report. This likely reflects investors' concerns about the outlook for the remainder of the year. The issue's dividend yield has risen. But the payout *ratio* remains high. Moreover, our projections indicate the stock offers below-average appreciation potential for the next 3 to 5 years

Adam Rosner *July 18, 2008*

BUSINESS: H&R Block, Inc. largest business is income tax return preparation (Tax Services). Block is also active in financial services (Consumer Financial Services) and operates a national accounting practice (Business Services). Its mortgage operations (Mortgage Services) have been discontinued, with the sale of Option One's servicing portfolio completed on 5/1/08. Acq'd McGladrey & Pullen, 8/99; Olde Financial, 12/99. Permanent employees as of 4/30/08: 9,700. Stock ownership: Davis Select Advisors, 13.7%; T. Rowe Price, 10.9%; Harris Associates, 6.4%; Officers & directors, 5.1% (7/08 proxy). Chrmn: Richard Breeden, Pres. & CEO: Russ Smyth. Incorporated: MO. Address: 4400 Main Street, Kansas City, MO 64111. Telephone: 816-753-6900. Web: www.hrblock.com.

H&R Block should be a more profitable company this fiscal year (ends April 30, 2009). The company recently divested its mortgage operations, which relieved it of a major financial burden and paved the way for renewed attention on its three remaining businesses, most notably Tax Services. Indeed, although this segment's operating margin held steady last year versus the previous 12-month period, this measure had been in decline for some time. Our sense is that increased competition and a marketing strategy aimed at too-broad a client base were primary factors in this regard. Current management seems set on streamlining the cost structure of the Tax Services group while also upgrading the segment's information systems to more efficiently handle the needs of its clients.

In addition, we expect Block to continue to focus on its core client base (including the so-called early filers who often partake in Block's RAL and associated programs) while also providing service to those whose returns are more complex. Accordingly, we estimate that Tax Services' revenues are likely to advance by about 8% this year, with its operating margin widening by some 60-80 basis points. Meanwhile,

We are also looking for better performances from the Business and Financial Services groups. Business Services (national accounting practice) should be a solid contributor to corporate earnings, though its recent record has been inconsistent. Block's new emphasis on profitability may well have a positive effect on the segment's contribution in the current year, as well as the future. Elsewhere, Consumer Financial Services may continue to find its bank charter an advantage, particularly as it relates to financial products offered to its tax clients.

Block shares are favorably ranked for Timeliness. Moreover, Block's earnings should be able to advance at a 10%-15% annual rate, reflecting more-effective operations and benefit of its share-buyback program (which may recommence at the end of this fiscal year). In addition, the likelihood of an increasing dividend makes this stock a good vehicle for total return over the longer term, in our view.

BUSINESS: Heartland Express, Inc. is a short- to medium-haul truckload carrier. Provides nationwide transportation services to major shippers, using late-model equip. and a combined fleet of company-owned and owner-operator tractors. Primary routes are btw. locations east of the Rocky Mountains, with selected service to the West. Co. targets customers in its operating area that require multiple, time-sensitive shipments. Avg. length of haul about 512 miles. Acq'd Great Coastal Express, 6/02; A & M Express, 7/97. '07 depr. rate: 13.1%. Has 3,291 employees. Off./dir. own 41.9% of common stock (3/08 proxy). Chmn. & Pres.: Russell A. Gerdin. Inc.: NV. Addr.: 2777 Heartland Drive, Coralville, IA 52241. Tel.: 319-545-2728. Internet: www.heartlandexpress.com.

Heartland Express got off to a rough start this year. First-quarter share earnings of $0.15 were 35% lower than a year earlier and *$0.04 below our estimate.* Although top-line performance was pretty good (4% higher), a difficult operating environment squeezed margins. Indeed, the company's average fuel cost rose 42%, to $3.40 a gallon. Some, but not all, of this expense was recouped in the form of fuel surcharges. In total, elevated fuel costs reduced the bottom line by about $0.03 per share. Also, industry competition was *heightened by the softening economy,* which reduced trucking demand. Thus, Heartland probably lost pricing power.

We have cut our full-year per-share earnings target by a dime. Our estimate now stands at $0.70. We think higher fuel costs will continue to weigh on the bottom line, *especially since they* are not toally offset by fuel surcharges. The company has tried to combat this expense by buying in bulk (at reduced prices) and doing the majority of refueling at terminal locations, which use this reduced-price fuel. This strategy has helped somewhat, but not quite enough to make up for the increased expense. *The industry environment should remain ultracompetitive as well.* The odds of an economic rebound in 2008 appear slim at this time. There is a chance that President Bush's economic stimulus package will provide a short-term pickup, but we think the effects of this plan may not be as enduring as hoped for. As a result, we reduced our current-year operating margin projection by about 260 *basis points.*

The bottom line should start to recover next year. The economy may take a turn for the better, we think, especially if the aforementioned stimulus package is successful. Heartland's earnings would benefit even more if fuel costs retreat from *their recent levels.* All told, we look for a double-digit gain in share net next year.

There's not much to be excited about here. The stock is only an Average selection for year-ahead performance relative to the broad market indices (Timeliness: 3). Looking further out, capital appreciation potential to the 2011-2013 interim is below the *Value Line* median.

Tom Nikic *June 6, 2008*

(A) Based on average shares outstanding through 1996, then diluted. Excludes nonrecurring gain: '00, $0.04; '03, *$0.11. Next* earnings report due late July.

On 2/12/98, HSN, Inc. and Universal Studios announced that several of Universal's television components would merge with HSN. Under the terms of the deal, Universal received about $1.6 billion in cash. The company, which eventually changed its name to IAC/InterActiveCorp, was made up of the USA Network, the Sci-Fi Channel, USA Networks studios, USA Broadcasting, Ticketmaster, the Home Shopping Network, and the Internet Shopping Network.

BUSINESS: IAC/InterActiveCorp (formerly USA Interactive Inc.) is an interactive conglomerate, operating more than 60 diversified brands in the media and electronic commerce markets. 2007 sales breakdown: Electronic Retailing—primarily HSN (48%), New IAC (post spinoff: includes Entertainment) (25%), Ticketmaster (19%), Tree.com (formerly Lending tree) (3%), Interval (5%). Spun-off Expedia Inc. and all travel-related companies 8/05. Lord, Abbet & Co. owns 15.5% of common stock; Clearbridge Advisors, 5.2%; Liberty Media, 29.9%; Barry Diller, 32.8%; All other dir. & off., 1% (5/08 proxy). Chairman & C.E.O.: Barry Diller. President: James Held. Incorp.: DE. Address: 555 West 18th St., New York, NY 10011. Tel.: 212-314-7300/7400. Internet:www.interactivecorp.com.

IAC/InterActiveCorp.'s spinoff will probably take longer than expected. IAC management was planning to spin off four subsidiaries (Tree.com — previously Lending Tree, HSN, Interval, and Ticketmaster) by the end of the second quarter. Earlier this year, a Chancery Court ruled in favor of allowing Barry Diller, the chairman of IAC to spin off these units. However, it will probably be some time before the board can agree upon how much corporate cash, debt, and overhead expense will be allocated to each of the new divisions. There is also the risk that major shareholder John Malone, the chairman of Liberty Media, will raise further objections to the terms of the agreement, in order to get some compensation for his loss of super-voting rights under the aforementioned ruling.

Meanwhile, most of the company's businesses are struggling in a difficult operating environment that is not conducive to capturing discretionary consumer income. Tree.com, the mortgage business, continues to suffer, due to fewer loans originated and sold into the secondary market, although it may finally have reached a bottom. Ticketmaster is having to discount heavily to maintain market share, and HSN (Home Shopping Network) is having to fend off stiff competition from QVC for shrinking discretionary income. The Travel segment, Interval, is the only division doing well, thanks to a contribution from ResortQuest Hawaii. The $1.51 bottom-line deficit in the second quarter was due to goodwill and intangible asset impairment charges of over $497 million associated with Cornerstone and Tree.com. Excluding these charges, share net would have been $0.35. Further such charges cannot be ruled out.

We advise investors to take a "wait and see" stance, until the four operations have been spun off. A dearth of clarity regarding a timeline for the disposition is weighing on the stock price. Further legal wranglings between Mr. Diller and Mr. Malone are possible, and it isn't clear where IAC will get equity backing for the spinoffs. Lastly, investors are wondering how much the divested units will be worth on a stand-alone basis, given their less-than-stellar prospects.

Jeremy J. Butler *August 15, 2008*

(A) GAAP Diluted earnings. Next earnings report due mid-October. Excludes nonrecurring gain: '98, $0.18. Includes nonrecurring losses: '07, $1.77; '08, $1.81, due to goodwill and intangible asset impairment charges.
(B) In millions, adjusted for stock splits. About 310 million shares outstanding when subsidiary shares are included (fully converted).
(C) Market capitalization includes 78 million subsidiary shares. (D) 2001 sales are pro forma for Vivendi joint venture. (E) Expedia spun off in 8/05. Timeliness rank suspended.

BUSINESS: Integra LifeSciences Holdings Corporation is a leader in regenerative medicine. It develops, manufactures, and markets medical instruments and surgical implants, for use in neurosurgery, extremity reconstruction, orthopedics, and general surgery. '07 U.S. sales accounted for 76% of total; Europe, 16%; Asia/Pacific, 4%; Other, 4%. '07 R&D: $30.7 mill., 5.6% of sales. Employs about 2500. Officers & directors own 33.1% of common; Provco, 24.2%; TRU ST, 24.1%; FMR, 12.6%; Neuberger Berman, 10.4%; T. Rowe Price, 8.1%; William Blair, 7.3%; Oz, 5.3% (5/08 proxy). Chairman: Richard E. Caruso, PhD. President & CEO: Stuart M. Essig. Incorporated: DE. Address: 311 Enterprise Drive, Plainsboro, NJ 08536. Telephone: (609) 275-0500. Internet: www.integra-ls.com.

Integra Lifesciences is having a banner year. The second-quarter top line was $157.2 million, 17% higher than the year-earlier figure. Neurosurgical and Orthopedic Implants revenues climbed by 37% in the interim. Demand for the company's extremity-reconstruction and bone-graft products remains very strong. In fact, sales of the *Integra Mozaik* osteoconductive scaffold have more than doubled over the past year. Elsewhere, the Medical Surgical Equipment business posted a 5% top-line gain. This was slightly below our target, but Integra has been slowly eliminating underperforming product lines. These actions tempered the unit's sales growth in the interim.

Second-quarter income surged 48%, to $13.8 million. It appears as though the company's efforts to integrate acquisitions and improve the profitability of the Medical Surgical Equipment segment are bearing fruit. Integra has also been able to leverage the increasing sales of its popular *Mozaik* bone-graft products. Owing to the solid first half and the likelihood of Integra's continued success, we have added $0.20 to our 2008 share-earnings estimate.

We expect share buybacks to slow to a halt. The company has about $54.5 million left on the current repurchase authorization, which expires at the end of this year. Integra will probably use available cash to streamline operations, fund R&D, and make acquisitions.

Integra purchased Theken Spine for $75 million in cash, subject to certain adjustments, and up to $125 million in future payments based on the revenue performance of the business in two years after closing. Theken, which specializes in pioneering spinal implant technologies, will be folded into the Neurosurgical and Orthopedic Implants group. While management will continue running the businesses in this group separately, Theken will benefit from Integra's leading position in the tissue engineering arena.

This timely issue offers worthwhile long-term capital gains potential. The company's regenerative products serve an important and growing part of the healthcare sector. Consequently, we expect profits to advance at a healthy clip out to 2011-2013.

Erik A. Antonson *August 29, 2008*

BUSINESS: IDEXX Laboratories, Inc., develops, manufactures, and distributes detection and diagnostic products for veterinary applications, the detection of contaminants in meat and dairy plants, and for soil and water testing. Also provides laboratory testing and consulting services to veterinarians. 2007 rev. by segment: Companion Animal Group, 82%; Water, 7%; Production Animal Segment, 8%; Other, 3%. Has about 4,700 employees. Foreign business: 40% of 2007 sales. R&D expense: 7.3%. 2007 depreciation rate: 16.1%. Ruane Cunniff & Goldfarb owns 14.6% of stock; Neuberger Berman, 7.0%; off. & dir., 4.0% (3/08 proxy). Chairman, Pres. and CEO: Jonathan Ayers. Inc.: DE. Add.: One IDEXX Drive, Westbrook, ME 04092. Tel.: 207-856-0300. Internet: www.idexx.com.

Current economic weakness did not dampen IDEXX Laboratories' second-quarter results. Despite waning disposable incomes, individuals have not yet greatly altered the level of care they provide for their pets. The company earned a solid $0.63 a share, well above our $0.50 estimate. It also reported sales growth in all three operating segments: Companion Animal Group (CAG), Water, and The Production Animal Segment (PAS). Sales increased 19%, 18% and 15%, respectively during the quarter.

Earnings ought to continue ascending. There is one downside though. Second-quarter share net was buoyed by sales of *PZI Vet*, IDXX's insulin treatment product for diabetic cats. The product, however, has been discontinued because the raw materials needed for production are no longer available. Because customers were aware that the product would no longer be sold, inventory was exhausted during the June period. This boosted share net by about $0.09. In view of the discontinuation, pharmaceutical sales are expected to decline sharply in the second half of this year. On the bright side, the company has a replacement product that, assuming regulatory approval, could be on the market by early next year.

Reduced operating expenses should play a role in boosting profits. R&D and SG&A costs were under control in the first half of the year, declining slightly from those of the year-ago period. Assuming management continues its current cost-control initiatives, operating margins ought to stay healthy for the rest of this year.

New products should aid share net, too. Controlled launches of *Catalyst* and *SNAPshot Dx* are progressing. Although sales of these products have not made any meaningful top-line contributions as yet, growing backlog suggests more-visible results in the second half of this year.

This timely issue may appeal to short-term investors as the stock is ranked to perform above average over the next 12 months. Capital appreciation to 2011-2013 is about average. Growth prospects are solid. The stock's current price fairly reflects the strong earnings growth we envision.

BUSINESS: Ingles Markets, Inc. operates 197 supermarkets in 6 states: GA, 75; NC, 64; SC, 35; TN, 20; VA, 2; AL, 1. Owns and operates 74 shopping centers, all but 19 of which contain an Ingles supermarket. In addition to grocery offerings, has dedicated sections for the sale of general merchandise, health & beauty care products, books, DVDs, flowers, bakery products, and prepared foods. Also operates 48 in-store pharmacies and 36 on-site fuel centers. Also engages in fluid dairy processing (4% of rev's, 10% of oper. inc.). Has about 17,000 empl's. Off./dir. own 49%/97% of Class A/B stock (1/08 proxy). CEO: Robert P. Ingle. Inc.: NC. Address: 2913 US Highway 70 W, Black Mountain, NC 28711-9103. Tel.: 828-669-2941. Internet: www.ingles-markets.com.

Ingles Markets continues to ring up double-digit sales growth. Most of this is coming from existing supermarkets. Rising fuel sales, reflecting both higher prices and increased gallons sold, are an important part of the equation. The company now operates gas stations at 49 of its stores, up from 37 a year ago. Business is vibrant inside the supermarkets, as well. Comparable-store sales, after adjusting for fuel purchases and the timing of the Easter holiday, increased 8.4% in the first half of fiscal 2008. (Fiscal years end on the last Saturday in September.)

The lackluster economy doesn't seem to be slowing the food retailer. Its recent results are certainly supportive of the view that supermarkets are relatively noncyclical. In fact, customers are perhaps more inclined to eat at home, rather than at restaurants. Too, stores like Ingles that allow shoppers to fill most of their needs at a single location may have added appeal with those looking to minimize gas consumption. One concern is that cash-strapped customers will do more of their shopping at discount-oriented competitors, though, at the moment, this doesn't appear to be a major issue.

We look for earnings to climb 15% in 2008, to $2.35 a share. The company's pursuit of higher sales and market share hasn't been coming at the expense of profits. Operating earnings, though not quite keeping pace with the growth rate on the top line, still increased at a low double-digit clip in the first half of the fiscal year. Meanwhile, interest costs have held relatively steady, with lower rates helping to offset increased borrowings.

Debt levels have been rising. Operating cash flow is unlikely to fully fund the company's capital spending and dividend. The 2008 capital budget will likely reach $200 million, up from $130 million last year. Ingles, though, only plans to open two new stores this year, with the remaining spending going toward replacing or remodeling older units, purchasing land for future projects, and other uses.

This timely stock offers good 3- to 5-year total return potential. Support for these shares has strengthened in calendar 2008, and we think considerable upside remains in the wake of last year's selloff.

Robert M. Greene, CFA *August 1, 2008*

BUSINESS: Intuit Inc. develops, markets and supports personal finance, small-business accounting, tax prep. and other consumer software products and related services and supplies that enable individuals and businesses to automate commonly performed financial tasks. Sources of revenue as of 7/31/07: Quickbooks, 22%; Payroll Business, 19%; Consumer Tax, 31%; Prof. Tax, 11%; Other, 17%. R & D totaled 18% of 2007 revenues. Has about 8,200 employees. Officers & directors own 10.4% of common shares outstanding; Scott Cook (former Chairman of the Board) owns 7.4% (10/07 Proxy). CEO and President: Brad Smith. Incorporated: Delaware. Address: 2700 Coast Ave., Mountain View, California 94043. Telephone: 650-944-6000. Internet: www.intuit.com.

Intuit's fiscal 2008 earnings probably came in around $1.65 a share. (Years end July 31st). The company was set to release fourth-quarter figures as this report headed to press, but a successful tax season is already in the books. Strong performance from its consumer tax arm likely buoyed our expectation for a 15% year-over-year bottom-line advance. Elsewhere, INTU's TurboTax offering flourished at a most opportune time, as its Web-based software penetrated well. This campaign's showing becomes even more impressive considering the tough spending environment for small businesses, a group that Intuit relies on heavily. Still,

Intuit has decided on a corporate reorganization. The workforce will be trimmed by 7%, mainly on the general and administrative side, and a pretax charge of $22 million, roughly $0.04 a share, will be recognized in the final quarter of fiscal 2008. This figure will be excluded from our presentation due to the fact it is nonrecurring in nature. Many on the Street are viewing this maneuver as a not so discreet attempt to save costs in the face of a tough economic headwind, but

Management thinks the economic slowdown will not have the impact on results that most expect. We agree with them in this regard, as nearly 50% of the company's revenues present day are in services, like payroll, payments, online banking, etc. Too, a weak domestic economy will have more taxpayers looking to avoid higher-costing tax alternatives, placing them right in INTU's lap. Therefore,

We are assuming Intuit will not miss a beat in fiscal 2009. Our estimates call for revenues to climb 10% and share net to grow by a low double-digit percentage. The consumer tax unit should put up another solid year, led by improved efforts in customer retention and good category growth. Also, a new beta version of the QuickBase Web development program should help INTU bolster its market share in the small-business arena.

This stock merits consideration for momentum-based investors and those with a long-term view. However, these shares often trade in a rather narrow range during the company's slower (non-tax season) periods.

Erik M. Manning August 22, 2008

(A) Based on weighted average number of shares outstanding through 1996, diluted shares thereafter. Excludes nonrecurring gains and losses: 1999, $2.26; 2000, $0.06; 2002, ($0.06); 2003, $0.18; 2004, $0.05; 2005, $0.07; 2006, ($0.09); '07, ($0.20); '08 Q1-Q3, ($0.03). Next earnings report due late November. May not sum due to rounding.

BUSINESS: The Interpublic Group of Companies, Inc. is one of the three largest organizations of advertising and marketing-services agencies in the world. International Agency Networks includes McCann Erickson WorldGroup, Draftfcb Group, Lowe Worldwide, and other agencies. Constituency Management Group provides public relations, events management, and other services. Has over 4,000 clients in over 100 countries. Foreign operations: 44% of revenues in 2007. Has about 43,000 employees. Off./dir. own less than 1% of stock; Franklin Resources, 11.6%; UBS, 11%; Dodge & Cox, 10.4%; Lord Abbett, 8.1% (4/08 proxy). Chmn. & CEO: Michael I. Roth. Inc.: DE. Addr.: 1114 Avenue of the Americas, New York, NY 10036. Tel.: 212-704-1200. Web.: www.interpublic.com.

Interpublic's recovery continued in the second quarter of 2008. Organic revenues grew 6.3%, up from 5.1% in the year's first quarter, with the balance of the top-line gain due to the weaker dollar. Revenues expanded well in most segments, geographical regions, and major subsidiaries. Salaries were up a bit less than revenues, while growth in other operating costs was noticeably less as Interpublic controlled noncompensation costs and continued to reduce professional fees. That produced a 42% jump in pretax income; results in the 2007 quarter reflected an income tax credit of around $0.15 a share. Adding some sauce to the good results, the company settled the SEC's charges relating to its financial statements for 1997-2002; IPG paid a fine of $12 million (which had no tax benefit) and "disgorgement" of $1 (sic).

Earnings will probably grow at a good clip for the balance of the year. In the year's first half, Interpublic saw more business from existing clients and also had positive net new business wins that should contribute to second-half results. There are comparatively few big accounts up for review, suggesting that the company will neither gain nor lose large pieces of business. Interpublic derives only about 7% of its revenues from the financial sector, but troubles at General Motors could reduce spending by that major client. Noncompensation expenses will probably continue to grow slowly and to decline as a percentage of revenue.

We look for another solid increase in 2009. To date, Interpublic has seen no effect of the current economic slowdown, although that could come by next year. Advertisers often use recessions to try to gain market share as competitors cut back outlays, and we think Interpublic's branding and other nontraditional activities should continue to do well. Moreover, international business will probably remain strong, though growth may fall from the second quarter's 21% pace.

These neutrally ranked shares have slightly below-average appreciation potential. Now that Interpublic has resolved its financial reporting problems, margins should continue to expand to approach those of its competitors.

Sigourney B. Romaine *August 15, 2008*

(A) Includes non-operating income.
(B) Primary earnings through 1996; diluted thereafter. Excl. extraordinary (losses)/gains: '92, (33¢); '94, (34¢); '95, (49¢); '96, 10¢; '00, (36¢); '01, ($2.33); '06, (15¢). Quarterly earnings may not sum to annual due to use of basic share count in loss quarters. Next earnings report due early November.
(C) Includes intangibles; at 12/31/07, $3.2 bill., $6.85 a share.
(D) In mill., adj. for stock splits.

Iron Mountain was founded in 1951 in an underground facility near Hudson, NY. In 1996 the company went public via an initial public offering. On February 1, 2000 it completed a reverse merger with Pierce Leahy in a stock-for-stock deal valued at $1.0 billion, including the assumption of debt. Because the transaction was structured as a reverse merger, IRM merged with and into Pierce Leahy, and Pierce Leahy survived the merger. After the deal, Pierce Leahy changed its name to Iron Mountain.

BUSINESS: Iron Mountain Incorporated is the leading provider of records, documents, and information-management services. The company services more than 90,000 corporate clients, operating more than 900 facilities in about 165 markets worldwide. Merged with Pierce Leahy Corp., 2/00. Since 1998 the company has acquired more than 44 records and information-management services providers. Has about 15,800 employees. Davis Selected Advisers owns 20.4% of common stock; Morgan Stanley, 5.1%; Officers & Directors, 11.6% (5/07 Proxy). Chairman, CEO & President: C. Richard Reese. Incorporated: Pennsylvania. Address: 745 Atlantic Avenue, Boston, Massachusetts 02111. Telephone: 617-535-4766. Internet: www.ironmountain.com.

Cost pressures have impacted results at Iron Mountain. Revenues for the company increased at an 18% clip during the 2008 first quarter, thanks to healthy demand for records management. Internal storage increased at a high single-digit pace. Acquisitions also played a part in revenue growth. The top-line success did not translate into higher profits, however. The company reported a small share-net decline, as inflated energy and labor costs have persisted. We anticipate more struggles in the upcoming quarters, since the domestic environment continues to falter. We target earnings of $0.80 a share this year, which represents a modest 7% advance.

The company continues to expand at a decent clip. It acquired a shredding company in New Zealand to bolster the services business in the Asia/Pacific region. Management also purchased a North American-based hard-copying firm. Additionally, Iron Mountain added to its position in a Brazilian records business and established operations in Switzerland through a joint venture.

Iron Mountain's digital segment is developing rapidly. The company made its largest acquisition in the segment in December by purchasing Stratify, which has advanced its capabilities in digital archiving. Iron Mountain is also introducing new services in the segment, including a medical records offering, which stores information such as CAT scans and MRIs.

This neutrally ranked stock has above-average appreciation potential out to the 2011–2013 time frame. Iron Mountain's extensive geographic footprint should result in healthy double-digit top-line advances over the next few years. This should translate into success at the bottom line, provided the company can contain costs and improve its execution across the globe.

However, there is a degree of risk here. The company's highly leveraged balance sheet is less than desirable at this point, given the tightening credit markets. The company lifted its debt position to over $3.2 billion to help to fund expansion, which will add to interest expenses moving forward.

BUSINESS: Journal Communications, Inc. is a diversified media company with operations in publishing, radio and television broadcasting, interactive media, and printing services. The company publishes the *Milwaukee Journal Sentinel* and 52 community newspapers and shoppers in Wisconsin and Florida. Subsidiaries include: The Journal Broadcast Group which owns and/or operates 35 radio stations and 11 television stations in 12 states;, Primenet, a direct marketing group; and IPC Printing Services. About 4,500 employees. Off. & Dir. own 12.6% of stock; The Journal Company, 43.7% (4/08 Proxy). Chairman & CEO, Steven J. Smith; President, Douglas G. Kiel. Inc.: WI. Address: 333 W. State St., Milwaukee, WI 53203. Telephone: 414-224-2000. Internet: www.jrn.com.

Journal Communications is trying to navigate rough waters. The media conglomerate's top and bottom lines fell 5% and 16%, respectively, during the second quarter. Sluggish classified and advertising revenues have stifled growth in the radio and broadcast segments, and decreasing readership rates have hurt JRN's newspaper tallies. The difficult operating environment will likely persist over the next several quarters. For the full year, we expect revenues to fall flat and share net to decline between 5% and 10%. **Management's recent initiatives ought to help the company weather the storm.** Journal has implemented aggressive cost-cutting measures at its mainstay paper, the *Milwaukee Journal Sentinel*, and throughout the company. An ongoing stock-buyback program should aid per-share comparisons as well. Over the past few years, management has worked to diversify the portfolio, as its gazettes continued to lose steam. Indeed, the company has added several new assets, including Arizona television station KWBA. It soon plans to close on a similar purchase in Boise, Idaho. Such assets help JRN build local content, and a growing online presence has helped supplement its broadcasting units. Too, interactive media and commercial printing units have performed well over the past few quarters, helping to offset struggles elsewhere. Also, during the latter part of the year, Olympic and election coverage may somewhat shore up revenues in its television and broadcasting businesses.

Conservative accounts may want to wait on dry land, for now. This stock has been drifting downward since its initial public offering in 2003. Even now, it is ranked to trail the broader market averages in the year ahead. At the current valuation, however, JRN shares offer above-average long-term appreciation potential. Earnings figures remain under pressure through 2008, but management's initiatives ought to help buoy top- and bottom-line growth over the next 3 to 5 years. Still, investor concern regarding the prospects of the newspaper company may trigger erratic price movements and this issue's behavior may be slightly riskier than its Average Safety rank would imply.

Orly Seidman *August 15, 2008*

BUSINESS: Kaydon Corporation designs, manufactures, and sells custom-engineered metal products for aerospace, construction, defense, electronic, material handling, marine equipment, medical, and other industrial customers. Products include bearings, filtration systems, rings, seals, video and data multiplexers, machine tool components, presses, and dies. International operations generated 32.0% of '07 sales. '07 depreciation rate: 6.4%. Has about 2,125 employees. Four institutional investors own more than 5% of stock (22.5% in aggregate); officers and directors own 2.0% (4/08 Proxy). President and CEO: James O'Leary. Incorporated: Delaware. Address: Suite 300, 315 East Eisenhower Pkwy., Ann Arbor, MI 48108. Telephone: 734-747-7025. Internet: www.kaydon.com.

Although Kaydon's sales growth has been strong, expansion efforts have proven costly. Higher capital expenditures to support capacity expansion projects have weighed on the operating margin in recent months. Year-to-year operating profit comparisons were unfavorable in the first quarter due in part to the direct and indirect costs associated with the Friction Control Products expansion efforts, the ongoing ramp-up of the wind energy expansion endeavors, and by relocation and workers' compensation costs incurred in the Sealing Products segment. Also, the integration of recently acquired Avon Bearings Corp. has been less than smooth, as acquisition accounting requirements are likely to continue to have a negative effect on gross margins in the short term. Meanwhile, lower interest income related to the company's fixed-income investments has also hurt the bottom line. Yields have been lower because of difficult market conditions of late.

Nonetheless, we believe the company's performance will improve. This review had already gone to press by the time the company reported its second-quarter earnings results. Still, we think that Kaydon's accelerated and increased expansion in the large-diameter bearing market, bolstered by last year's acquisition of Avon Bearings, should pay off. Too, management's renewed focus on boosting market share in high-growth developing countries, such as India and China, should yield considerable benefits in the second half of 2008 and into 2009. The record bookings achieved in the first quarter created the highest backlog level in the company's history. Meanwhile, strategic repositioning to emphasize the development of global alternative energy infrastructure also augurs well for growth. All told, we look for these costly efforts to translate into solid share-net gains over the next several quarters.

These shares are neutrally ranked for the year ahead. We look for growth initiatives to pay off in the long run, and a solid balance sheet offers promise for growth prospects. Although, the issue's 3- to 5-year price appreciation potential is below the lofty *Value Line* mean, it is worth considering.

Simon R. Shoucair *July 25, 2008*

(A) Quarters 1-3 end on the Saturday nearest to the last day of the month.

BUSINESS: Kelly Services, Inc. provides temporary and permanent staffing services to customers in various industries worldwide. Operates four major segments: Americas-Commercial; Americas-Professional, Technical, and Staffing Alternatives (PTSA); International-Commercial; and International-PTSA. It is one of the largest providers of staffing services in the U.S. Acquired Your Staff, a staff leasing firm, in January '04. Has approximately 10,000 permanent employees. Officers and directors own 16.9% of Class A stock and 93.0% of Class B stock (4/08 proxy). President & Chief Executive Officer: Carl T. Camden. Chairman: Terence E. Adderley. Incorporated: DE. Address: 999 West Big Beaver Road, Troy, MI 48084. Telephone: 248-362-4444. Internet: www.kellyservices.com.

Kelly Services had an impressive start this year. Indeed, despite the slowdown in the U.S. job market, per-share profit in the first quarter was strong due to margin improvement. Geographic diversification, a focus on higher-margin fee-based business, and expansion within the professional and technical sectors are apparently helping to offset the sluggishness in the commercial segment. Meanwhile, margins are benefiting from last year's restructuring initiatives within the commercial division in the U.S. and U.K.

But we're taking a guarded view with our 2008 and 2009 bottom-line forecasts, given the continued weakness in the U.S. staffing market, to which the company has a sizable exposure. Although demand for employees in the professional and technical disciplines has fared generally better than that in the commercial segment, the turmoil of late within the financial and credit markets renders the near-term earnings prospects somewhat uncertain. Too, while we're encouraged by the steps the company has taken to offset weakness on the domestic front (i.e., geographic diversification), the potential for a global slowdown gives us pause. Consequently, to be on the safe side, we've trimmed our share-net assessments for this year and next by a nickel and a dime, respectively.

The long-term outlook appears to be favorable, especially as the company further expands its global footprint. We applaud management's efforts to reduce its dependency on the U.S. staffing market and diversify its international operations in regions exhibiting healthy job growth trends. Specifically, we think earnings over the next few years stand to rise at a solid clip, as Kelly taps into emerging markets in Asia/Pacific and certain areas in Europe and the Middle East, where the demand for professional and technical employees is strong.

We like this issue for the long haul. Though not a standout for the year ahead, it offers attractive 3- to 5-year appreciation potential, based on the profit growth we envision, which is supported by a cyclical upturn in domestic labor market trends and global expansion. **A well-covered dividend adds appeal, too.**

BUSINESS: Kirby Corp. operates in marine transportation (79% of '07 revs.) and diesel engine services (21%). The marine trans. segment is involved in the inland transportation of various chemicals and petroleum products, as well as the offshore transportation of dry-bulk shipments. The diesel engine services segment overhauls and repairs diesel engines for the marine, railroad, and power generation/industrial markets. Acquired Hollywood Marine, Inc., 10/99. Has about 2,400 emplys. '07 depr. rate: 5.4%. Select Equity Group owns 10.5% of stock; Barclays, 7.5%; PRIMECAP, 5.7%; Off./Dir., 8.8% (3/08 proxy). Pres. & CEO: Joseph H. Pyne. Inc.: NV. Address: 55 Waugh Drive, Suite 1000, Houston, TX 77077. Telephone: 713-435-1000. Internet: www.kirbycorp.com.

Kirby Corp.'s earnings should continue to surge. We have raised our 2008 and 2009 share-net estimates by $0.35 and $0.40, respectively. Despite weakening economic conditions, solid top-line momentum ought to persist, thanks, in large part, to a strong petrochemical sector, marked by growing exports. That end market contributes about 66% of total marine transport revenue. Note, though, that second-quarter 2008 share net will likely take a hit of $0.02 to $0.03 from high water delays on the Mississippi River. Also, fuel escalators, added to shipping rates, typically lag price increases by 30 to 90 days, a factor that could hurt June- and September-period results.

Cargo rates will likely remain elevated. Revenues are receiving a boost from added vessel personnel and towboats, helping Kirby to meet rising demand. Still, barge utilization is running in the mid-90% range, allowing for price hikes. Recent first-quarter contract renewals were up approximately 10%, on average, year over year. In addition, spot rates climbed roughly 15%. The contract / spot mix has risen 5%, to 80%, enhancing predictability of the revenue stream.

Improved efficiencies are supporting margin expansion. A heightened level of time charter business within the contract area ought to help insulate Kirby from weather and navigational delays. Plus, increases in crew and horsepower should assist revenue potential.

The Diesel Engine Services business is in good shape. Revenue gains are coming from repair services in the medium-speed engine market. Profitability gains are likely, owing to a favorable demand environment, high labor utilization, and some service and parts price increases.

Capital spending is pegged to be about $155 million this year. Some $80 million will go toward the construction of 26 tank barges and five towboats. Since many of the vessels will be replacements, total fleet capacity is set to rise just 1% in 2008.

Kirby shares are recommended for year-ahead performance. But, based on a long-term moderation of earnings growth, and the stock's recent price run-up, its 3- to 5-year appeal is limited.

Damon Churchwell *June 6, 2008*

(A) Basic earnings through 1997. Diluted thereafter. 2006 and 2007 figures do not sum due to rounding or changes in shares outstanding. Excludes nonrecurring and extraordinary gains (charges): '92, ($0.29); '97, ($0.02); '98, ($0.28); '99, ($0.09); '02, $0.23. Excludes gains (losses) from discontinued operations: '97, ($0.02). Next earnings report due late-July.
(B) Includes intangibles. At 12/31/07: $229.3 mill., $4.28/sh.

Kimco Realty Corp. began operations through a predecessor company in 1966. Until 1981, the company focused on developing and building shopping centers. Since then, the company has grown primarily through improving its own properties and acquiring existing shopping center assets. In November 1991, Merrill Lynch & Co. lead-managed a 28.8 million-share initial public offering at $4.44 per share, both figures split-adjusted.

BUSINESS: Kimco Realty Corporation is a self-administered and self-managed equity real estate investment trust and the largest owner of neighborhood and community shopping centers. As of 12/31/07, owned or had an interest in about 183 million sq. ft. of gross leasable area, comprising 1973 properties in 45 states, Puerto Rico, Canada, Mexico, and Chile. Major tenants (% of 2007 base rent revs.): Home Depot (3.2%); TJX (2.8%); and Sears (2.3%). Launched Kimco Income REIT, 4/99. Has about 650 employees. Vanguard owns 6.8% of stock; Barclays Global, 5.4%; Wellington, 5.3%; off./dir., 11.2% (4/08 proxy). Inc.: MD. Chmn. & CEO: Milton Cooper. Addr.: 3333 New Hyde Park Rd., New Hyde Park, NY 11042. Tel.: 516-869-9000. Web:: www.kimcorealty.com.

Kimco's first-quarter results largely reflected nonoperating items. March-period profits from owned and operated shopping centers declined a bit, despite a 3.3% gain in "same-store" profits. Income from other real estate investments, loans, and management fees was little changed, and equity in affiliates' results rose about 30%. But the major change from the year-ago quarter was in the interest, dividend, and other category, which was up $23 million. We include these gains in our figures, since they derive from continuing activities, though they don't happen every quarter. Much higher preferred dividends, though, offset some of these profits.

The slowing economy could affect Kimco some over the balance of the year . . . In the first quarter, the company rolled over leases at an increase of 11%, and that will probably continue, as expiring leases were signed years ago. Profits from owned centers should therefore rise steadily, if slowly, since most of Kimco's centers offer basic necessities, rather than "life style" products. New property acquisitions in the U.S., however, will likely be less than last year, as a result of current high domestic valuations that make it difficult for Kimco to earn its target return. And profits from development could suffer if the credit crunch continues for long, as that makes it harder for investors to finance purchases of the company's development centers.

. . . but things should pick up next year. In contrast to buying fewer centers this year, Kimco is investing more in redoing old shopping centers. These activities yield returns well above 10%, compared with 7% or so for purchasing existing centers. Rapidly expanding activities in Mexico, Chile, and soon, Brazil, should help by 2009. And the longer the economic downturn lasts, the more Kimco should profit by investing in special situations and distressed properties, such as Albertson's. Kimco made over $70 million from helping reorganize Albertson's in 2007.

These neutrally ranked shares have decent 3- to 5-year total return potential. With its size and skill in many types of retail real estate, and increasing involvement south of the border, Kimco should grow faster than most REITs.

BUSINESS: Lamar Advertising Company owns and operates outdoor advertising structures in the U.S. In 2007, it operated over 151,000 outdoor advertising displays in 44 states. The company also is the largest manager of highway logo signs in the United States, maintaining over 95,000 logo displays in 19 states and in Ontario, Canada. Sales breakdown by industry group: Restaurants (10% of 2007 total), Retailers (10%), Automotive (9%), Real Estate (9%), Other (62%). Has approximately 3,200 employees. Officers & directors control 19.0% of class A and B shares (4/08 Proxy). Chairman, President, and CEO.: Kevin P. Reilly, Jr. Incorporated: Delaware. Address: 5551 Corporate Blvd., Baton Rouge, Louisiana 70808. Telephone: 225-926-1000. Internet: www.lamar.com.

Lamar Advertising's bottom line will very likely fall this year. The advertising market's success hinges on the strength of the broader domestic economy. At this juncture, we look for unexciting gross domestic product growth for 2008. This is due to the credit crisis, inflated gasoline prices, and subpar labor and housing markets. Thus, we look for growth in advertising spending to be only modest, at best, this year. When economic times get more difficult, budgets are among the first segments to get trimmed. The corporate mentality during a downturn appears to be that consumers don't have excessive discretionary income levels, so it doesn't pay to boost advertising dollars.

We look for share earnings to increase by a dime next year. The company is currently benefiting from a pricing recovery in local advertising and a healthier billboard business. We look for this trend to continue into next year. A likely better economic backdrop in the latter stages of 2009 also adds to our cautiously optimistic outlook.

We like Lamar's long-term earnings growth prospects. The outdoor advertising industry will likely continue to grow at a good clip, as consumers spend an increasing amount of time away from home. The primary growth drivers over the next 3 to 5 years are digital billboards, which are a cost-effective advertising medium. The company should also be able to expand its presence in other fragmented segments of the advertising industry, as well as benefit from technological enhancements in the years ahead.

Lamar shares have fallen in price by approximately 10% over the past three months. That said, this equity offers significant turnaround potential for the pull to 2011–2013. We believe that ongoing share-repurchase activity will help support solid bottom-line gains over that time frame. Conservative accounts should note, however, that this stock's Earnings Predictability is less than average.

BUSINESS: Leggett & Platt, Inc. is a manufacturer of engineered products, including: bedding components, residential and office/instit. furniture, store fixtures, displays, die castings, custom tooling, machining, alum. raw materials, drawn wire, welded steel tubing, specialty wire pdcts., auto seating suspension, lumbar support and control cable systems. '07 sales by business segment: residential, 53%; commercial, 18%; industrial, 12%; specialized, 16%. Has about 24,000 employees. '07 depr. rate: 25%. Officers and directors own 7.6% of common stock (3/08 Proxy). Chairman: Felix E. Wright. CEO & President: David S. Haffner. Inc.: MO. Address: No. 1 Leggett Road, Carthage, Missouri 64836. Telephone: 417-358-8131. Internet: www.leggett.com.

Leggett & Platt shares have increased over 10% in price since our April review. Respectable first-quarter results and a decent outlook for the rest of 2008 led to the surge. Share earnings from continuing operations in the March interim were three cents below our estimate, but the company maintained its 2008 earnings guidance, which was a positive sign, especially in light of the difficult selling conditions that currently exist. Indeed, this appeared to be enough to encourage investors to jump on board.

The remainder of 2008 will likely be decent, if unimpressive. End-market demand for many of Leggett & Platt's products is weak, primarily owing to softness in the broader domestic economy. In fact, during the first quarter, sales in the residential furnishings segment fell about 11% from the year-earlier period. Additionally, operating costs are on the rise, as a result of elevated prices for steel and petroleum products. These factors will probably hamper margin expansion, at least in the near term. All told, we trimmed our 2008 share-net estimate by a nickel, to $1.10, and are maintaining our 2009 estimate of $1.25.

Stock repurchases should help support share earnings. In addition to Leggett & Platt's current authorization, the company's board of directors is allowing management to use divestiture proceeds to buy back even more shares. The aluminum products business and four other, smaller divisions are up for sale. Altogether, we look for about a 5% reduction in shares outstanding this year.

Given the stock's recent price increase, its long-term appeal is limited. We think that earnings will rebound, and eventually grow at a healthy pace, when the broader economy begins to improve and gain traction. However, the issue's recent quotation appears to already reflect much of our outlook. As a result, these neutrally ranked shares offer below-average share price appreciation potential over the pull to 2011-2013. Nonetheless, the stock's impressive dividend yield and above-average scores for Safety (2) and Financial Strength (A) make it an attractive choice for risk-averse investors with an appetite for current income.

Matthew E. Spencer *July 4, 2008*

(A) Primary earnings through 1996, diluted thereafter. Excludes nonrecurring gain/(loss): '98, (16¢); '05, (13¢); '06, 4¢. May not sum due to change in shares outstanding. Excludes discontinued gain/(loss): '07, (34¢); '08, 2¢. Next earnings report due late July.
(B) Dividends historically paid in mid-January, April, July, and October.

BUSINESS: Liz Claiborne, Inc. designs and markets over 20 labels, including *Juicy Couture, Kate Spade, Lucky Brand Jeans, Mexx, Liz Claiborne, Mac & Jac,* and *Narciso Rodriguez.* Sales are made primarily to department stores in the U.S. International sales: 32% of 2007 total. Partnered Brands (wholesale) were 51% of 2007 sales; Direct Brands (retail), 49%. All products are manufactured by outside sources, mainly in the Far East and Central America. Has about 16,500 employees. Officers & Directors hold 1.0% of stock; FMR Corp., 14.7%; Wellington Mgmt. Co., 13.9% (3/08 Proxy). Chairman: Kay Koplovitz. CEO: William L. McComb. Incorporated: Delaware. Address: 1441 Broadway, New York, NY 10018. Telephone: 212-354-4900. Internet: www.lizclaiborne.com.

Liz Claiborne is still trying to reinvent itself. Management is working to modernize the company's business model in an age of private-label brands and fast fashion retailers. The changes are happening slowly, but surely. A number of underperforming brands were recently sold, and management is focused on the company's more-profitable and faster-growing Direct Brands, as opposed to its Partnered Brands (wholesale) business.

Results in 2008 will probably be unimpressive. A restructuring of this magnitude can't happen overnight. Although share net should rebound somewhat from last year's dismal showing, substantial share-earnings growth will likely elude the company this year. Making things even more difficult is the weak selling environment that Liz Claiborne currently finds itself in. Consumers are being squeezed by the housing slump, the softening labor market, and elevated energy and food prices. As a result, people are tightening their belts and cutting back on discretionary purchases.

We recommend that momentum investors avoid these shares, for the time being. The combination of the sluggish economy and the company's turnaround plans makes this stock an unappealing selection for the year ahead, as it will probably remain under pressure for some time. Indeed, this issue carries our Lowest rank for Timeliness (5), and will probably underperform the broader market averages over the coming six to 12 months.

Long-term investors would probably be well served to take a wait-and-see approach. The stock has fallen even further since our May review, and is now trading at its lowest level in almost a decade. That said, the company should eventually be able to turn itself around. It will probably receive an additional boost when the broader economy rebounds and discretionary spending ticks up. Given the earnings advances we are forecasting over the pull to 2011-2013 and the issue's recent quotation, it offers impressive capital appreciation potential three to five years hence. However, we would advise waiting for more sustained improvement before committing funds, owing to the *murky near-term outlook.*

Matthew E. Spencer *August 8, 2008*

(A) Primary shares through 1996, diluted thereafter. Excludes nonrecurring gain (losses): '93, 2¢; '94, (24¢); '98, (26¢); '00, (15¢); '01, (9¢); '02, (4¢); '04, (1¢); '06, (53¢); '07, ($5.04); '08, (44¢). Next earnings report due early Nov.

BUSINESS: Linear Technology designs and manufactures high-end linear chips, which monitor, condition, amplify, or transform continuous analog signals associated with real-world phenomena (temperature, pressure, weight, position, light, sound, and speed). Markets about 4,700 products to more than 15,000 OEMs directly and via distributors. Rev's: telecom, 33%; indust'l, 32%; PC & consumer, 25%; autos, 6%; space, 4%. Sales: U.S., 32%; Europe, 18%; Japan, 13%; other, 37%. R&D, 16.9%. Had 3,837 empl. at 7/1/07. Ownership: Capital Research & Mgmt, 23.3%; off./dir., 3.2%. (9/07 proxy). Chmn: Robert Swanson; CEO: Lothar Maier; Pres.: David Bell. Inc.: CA. Addr.: 1630 McCarthy Blvd., Milpitas, CA 95035. Tel.: 408-432-1900. Internet: www.linear.com.

Things at Linear Technology seem to be going well. Indeed, share earnings rose a strong 38% on a 17% increase in the top line, both slightly besting our targets. Although optimistic, we still believe a somewhat cautious stance is prudent. It is likely that many customers are still skittish about demand, given the uncertainty of the direction of the global economy and, as a result, will be very careful about component purchases. This ought to be particularly the case for the domestic PC, industrial, and communications markets. Lead times for customers in these segments have shortened, which helps better match inventory purchasing with actual consumption. But the trend has made it a bit harder to forecast near-term business prospects. On balance, we look for Linear to post 11% higher revenues in fiscal 2009 (year began June 30th).

Distribution inventories still appear well-matched with end demand. Supply management tools are now more sophisticated than during the last economic slowdown. Additionally, distributor and OEM customers tend to be more circumspect these days when it comes to stocking shelves.

The margin outlook appears decent. Recently, the company has been able to raise the average selling price, which should offset higher operating expenses.

We look for share net to experience strong gains this year, thanks to rising volume and a very profitable and lean operation. Share earnings will probably climb 12%, to $1.90, in fiscal 2009.

The company's long-term prospects are good. The ever-growing performance levels demanded from electronic devices and systems will likely lead to new applications for analog chips. Linear's high-performance products lend themselves well to the kind of product differentiation present in this highly competitive market.

Linear Technology shares hold appeal. Value Line's Timeliness Ranking System still indicates that this equity is likely to outperform the broader market averages over the next six to 12 months. Additionally, the company's bright long-term profit outlook gives this stock strong capital gains potential over the pull to 2011–2013.

Warren Thorpe *July 11, 2008*

(A) Fiscal year ends on the Sunday nearest June 30th. (B) Based on primary shares through 1997, diluted thereafter. Includes stock-based compensation (calculated using Intrinsic Value Method prior to '08, Fair Value Method thereafter): '05, 5¢; '06, 7¢; '07, 13¢. Next earnings report due late July. (C) Dividends historically paid mid- to late February, May, August, and November. (D) In millions, adjusted for stock splits.

BUSINESS: Lowe's Companies, Inc. operates a chain of building materials and home improvement superstores in 49 states. Average store size (sq. ft.): 116,000 for large prototype and 94,000 for smaller store format. Product categories: appliances, 9%; lumber/plywood, 7%; paint, 7%; millwork, 7%; nursery, 3%; flooring, 7%; seasonal living, 5%; fashion plumbing, 6%; tools, 5%; building materials, 6%; hardware, 5%; other, 33%. Acquired Eagle Hardware, 4/99. Has about 216,000 employees. Cap'l Res. & Mgmt. owns 23.0% of common stock; State Street Bank & Trust Co., 7.4% (4/08 Proxy). Chairman & CEO: Robert A. Niblock. Incorporated: NC. Address: 1000 Lowe's Blvd., Mooresville, NC 28117. Telephone: 704-758-1000. Internet: www.lowes.com.

Lowe's Companies had a difficult fiscal first quarter (ended May 2nd). Earnings fell 15%, year over year, to $0.41 a share. Total revenues slipped 1.3%, while same-store sales fell 8.4%. Once again, sales were hurt by the weak housing market. Homeowners have been reluctant to invest in any large projects, other than basic maintenance, while their homes are losing value. These problems are compounded by rising food and fuel costs and eroding consumer confidence, which are conspiring to depress spending on non-essential items. Of course, these developments are not new; the company's first-quarter share net was in line with our previous estimate.

There is little reason to rush into these neutrally ranked shares . . . It appears that housing prices have yet to bottom out, even after two years of precipitous declines, and it will be some time yet before the market recovers. Moreover, management at both Lowe's and Home Depot have tempered store-opening plans in recent months, which signals that they do not anticipate a rapid recovery in the near future.

. . . but Lowe's does offer some long-term appeal to patient investors. We believe that the company is well positioned to gain market share during these lean times. It has the necessary cash to continue to expand (the planned locations that it has scratched are almost all in Florida and California, markets that were among the hardest hit by the housing crisis and are therefore most likely to remain sluggish). The same cannot be said of many smaller chains and local stores. Thus, we look for Lowe's to gain share in segments such as plumbing and paint, which are supplied by many smaller enterprises. Moreover, it appears that Home Depot is dramatically reducing its expansion plans (see that report for more details), which could help its smaller rival. This is not mere speculation, either; Lowe's gained share in 15 of its 19 product categories in the April quarter. Once the retail building supply market recovers, Lowe's ought to find itself in a stronger position, vis-a-vis its competition, than before the downturn. Once again, though, we caution that a recovery is not imminent.

BUSINESS: Liberty Property Trust is a self-administered and self-managed real estate investment trust (REIT). The REIT owns office, distribution, and light manufacturing properties, located in throughout the United States and the United Kingdom. At 12/31/07, the REIT's real estate portfolio consisted of over 700 properties, and comprised about 74 million square feet of leasable area. Liberty Property Trust also had about 5.4 million square feet of properties under development. Has about 488 employees. Officers & directors own about 2.3% of common stock (4/08 proxy). Inc.: MD. Chairman and CEO: William Hankowsky. Address: 500 Chesterfield Parkway, Malvern, Pennsylvania 19355. Telephone: 610-648-1700. Internet: www.libertyproperty.com.

Liberty Property's office property business remains a bit sluggish. Occupancy levels were 92.2% at the end of March, which is a bit lower than last year. This likely reflects a difficult corporate environment, and reduced demand for office space in some of Liberty's markets. As a result, income from the REIT's property portfolio declined about 1% during the first quarter.

Profitability has also narrowed a bit. Although some operating costs were well controlled during the quarter, depreciation and interest expense rose dramatically. This reflects a higher debt level and a large development pipeline. These charges reduced GAAP earnings per-diluted share during the quarter. Funds from operations (FFO), which exclude noncash items, remained flat for the quarter. We are leaving our FFO estimates unchanged for 2008 and 2009 unchanged at this time.

The REIT's development efforts are progressing well. Liberty completed three properties during the March quarter, representing an investment of about $23 million. It also began construction on four properties, which represent a total investment of about $91 million. The development pipeline, including joint venture projects, currently contains about 34 projects in 18 markets. These projects will likely require about $750 million in capital to fully complete. We expect contributions from completed properties to support healthy FFO advances over the next few years.

There will probably be few property acquisitions for a while. During the first quarter, Liberty made no property purchases. However, it sold one property. Liberty says that real estate transactions have become difficult, owing to the challenging negotiating environment. Moreover, despite a decline in prices, many properties remain unattractively priced.

These shares are ranked 3 (Average) for Timeliness. However, the issue currently offers investors an attractive dividend yield. We expect Liberty's results to support regular increases in the annual dividend. Moreover, our projections indicate that Liberty stock holds worthwhile total return potential for the 3- to 5-year horizon.

BUSINESS: Limited Brands is one of the largest companies specializing in men's and women's apparel, lingerie, and personal care products. It operates approx. 2,900 stores under the names *Victoria's Secret, Bath & Body Works, C.O. Bigelow, La Senza, White Barn Candle Co.*, and *Henri Bendel*. Also sells lingerie, swimwear, apparel, and shoes via the *Victoria's Secret Catalogue*. Acq'd Intimate Brands, 3/02. Divested 84% stake in Abercrombie & Fitch in mid-1998; 75% stake in Express, 7/07; 75% in Limited, 8/07. Has about 97,500 emplys. Off. & dir. own 17.6% of common stock (4/08 Proxy). *Chrmn. and CEO: Leslie H. Wexner. Inc.: Delaware.* Address: Three Limited Parkway, P.O. Box 16000, Columbus, OH 43216. Tel.: 614-479-7000. Internet: www.limited.com.

Same-store sales trends continue to suffer at Limited Brands. To be sure, customer traffic has remained sluggish at the company's main segments, namely the core Victoria's Secret and Bath & Body Works chains. In fact, comparable-store sales (a key metric that gauges the performance of stores open at least one year) has spiraled downward. But **that isn't surprising, given the weak economic conditions of late.** Indeed, in an environment in which the housing market remains in a slump, food and energy prices continue to escalate, credit woes are growing, and the labor market is softening, it is not unusual for many consumers to tighten their purse strings and keep visits to the mall to a minimum.

Margins stand to improve, though. Notably, leaner inventory levels and a reduction in promotional activity are providing a boost to gross margins. These factors, coupled with disciplined cost control, are benefiting the operating margin. Meanwhile, LTD's plan to scale back square footage expansion for this year should help keep SG&A expenses down.

We still figure share earnings will decline 15% in fiscal 2008 (began February 3rd), even though we've raised our forecast by $0.20 to $1.60, to include a net gain of $0.18 a share taken in the first quarter related to the sale of two noncore joint ventures. Our estimate reflects a lower top line and higher tax rate, offset by a lower share count (driven by share repurchases). Note: last year's results include gains and other items associated with the divestiture of the Limited and Express businesses.

Nonetheless, investors with a long-term strategy may want to consider these shares, based on the company's good growth prospects. For one thing, the retailer should benefit from its brand strength, once the macroeconomic picture brightens, possibly by next year. Also, initiatives such as expanding the core brands, widening the geographic footprint, enhancing operating efficiency, controlling costs, and making strategic acquisitions ought to drive profits at a solid clip beyond fiscal 2009. A well-covered dividend payout and prospects for increases, supported by good cash flow, add appeal here.

BUSINESS: Southwest Airlines is one of the largest carriers in the United States by revenues and the largest in the world by passengers flown. Specializes in low fares/no frills/short-hauls. Uses point-to-point, versus more common hub-and-spoke, model. At 12/31/07, served 64 cities; avg. trip, 816 mi.; avg. fare, $106.60. Fleet: 425 B-737s (95 leased); avg. age, 9.4 yrs. On order: 105 B-737-700s w/option for 84 more (2008-'14 delivery). 2007 labor exp. (34,378 empl's): 32.6% of revs.; fuel, 29.0%. '07 deprec. rate: 3.7%. Ownership: Capital Research., 11.0%; off./dirs., less than 1% (4/08 proxy). Chairman/CEO: Gary Kelly. Pres./COO: Colleen Barrett. Inc.: TX. Addr.: P.O. Box 36811, 2702 Love Field Drive, Dallas, TX 75235. Tel.: 214-904-4000. Internet: www.southwest.com.

The revenue outlook for Southwest Airlines doesn't look too bad. The carrier posted 2008 March-quarter receipts of more than $2.5 billion, 15% higher than last year's comparable-period level and 9% ahead of what we were looking for. We think that higher airfares will probably allow a decent top-line advance this year, probably somewhere in the neighborhood of 9%, to $10.8 billion. We expect fewer fare hikes next year, which will probably hold revenue growth to 6%, to $11.4 billion.

The cost picture is a little more unclear. Southwest has consistently managed one of the best hedging programs in the business. Investments in futures reaped savings of nearly $300 million in the March period, a much-needed benefit in a very difficult operating environment. Without this program, the airline surely would have recognized a substantial loss. Gains from hedging activities will probably total $750 million or more in 2008. Still, even with this sizable benefit, SW's fuel expenses are likely to rise about 30%, to $3.7 billion, assuming oil prices stay near the current level. Decent cost containment elsewhere has helped soften the blow to the bottom line. On balance we look for 2008 share earnings to be roughly half that of last year, down from our previous forecast of $0.65. Assuming no dramatic jump in the price of fuel, rising volume should allow for a partial profit recovery, to $0.55, in 2009.

Long-term expansion prospects appear good. With costs likely to be an issue for the foreseeable future, the need to increase revenue is clearly paramount. Because demand is weak, the airline won't likely add any cities to its system this year. Long-term growth opportunities are abundant, though. The airline accounts for less than 15% of domestic capacity, which leaves a lot of room for growth. Southwest has demonstrated that, with a low cost structure, it can move into a new market and immediately take share.

This issue has 3- to 5-year appeal. Good earnings growth potential makes this stock a worthwhile holding over the pull to 2011–2013. SW shares should keep in step with the broader market averages over the next six to 12 months.

Macy's and its predecessors have been operating department stores since 1830. The current entity is a combination of two companies formerly owned by Campeau Corp. — Allied Stores Corp. (acquired in 1986) and Federated Department Stores (1988)—that emerged from bankruptcy proceedings on February 4, 1992. The common stock, which was held mainly by creditors, began trading at that time. In May, 1992, Macy's sold 46 million common shares at $11.50 per share.

BUSINESS: Macy's operated 750 department stores and a total of 102 furniture and clearance units in 45 states, the District of Columbia, and Puerto Rico at 2/2/08. Acquired May Department Stores on 8/30/05, and then divested Lord & Taylor (55 stores) and the Bridal Group, which were May subs., in late 2006. Main nameplates are Macy's (four divisions) and Bloomingdale's. Marshall Fields and five regional May chains changed nameplates to Macy's or Bloomingdales in 2006. Acquired Macy's chain in 12/94. Private-label and "exclusive" goods account for 19% of sales. Has about 182,000 employees. Off./Dir. own 1.6% of stock (4/08 Proxy). Chmn. & CEO: Terry Lundgren. Inc. DE. Addr.: 7 W. Seventh St., Cincinnati, OH 45202. Tel.: 513-579-7000. Internet: macysinc.com.

Macy's has made progress on the merchandising front in several key segments over the past year or so ... Since the mid-2005 acquisition of May Department Stores, management's main goals included improving productivity at former May units and reaping consolidation synergies. At this juncture, these targets have just about been reached. Key factors were the conversion of all of these stores to the Macy's or Bloomingdale's nameplates, the introduction of Macy's private-label goods into these units, and the closure of redundant distribution centers. Also, last year's introduction of the *Martha Stewart Collection* has bolstered the home goods department, and the pending launch of an exclusive line of *Tommy Hilfiger* goods augurs well for Macy's apparel sales.

... but decreases in the retailer's same-store sales will likely persist for a while. That key barometer was down 1.3% and 2.6% in fiscal 2007 (ended February 2, 2008) and this year's first quarter, respectively. Given a stream of negative economic news, including declining new home sales and rising fuel prices, the prospects for increased discretionary spending by the company's moderate-income customer base are poor. Too, competition in the department store sector from J.C. Penney and Kohl's has intensified in recent years due to the latter's aggressive store-opening program and improvements in Penney's merchandising. All told, we don't expect Macy's year-to-year sales comparisons to turn positive before fiscal 2009's first quarter.

The company recently suspended its aggressive stock-repurchase program. Moreover, management intends to use less than half of fiscal 2008's estimated free cash flow of about $875 million for debt repayment. That is, Macy's has refinanced $650 million of debt due later this year with a higher-yielding (7.875%) note due in 2015, and expects to do a similar transaction in fiscal 2009.

We think most investors should await positive year-to-year earnings comparisons before committing to this untimely stock. Our near-term and 3- to 5-year earnings forecasts have been reduced in each of the past six reports.

David R. Cohen *August 8, 2008*

(A) Fiscal year ends on the Sat. nearest Jan. 31st of the following cal. year.
(B) Excl. nonrecur. (losses) gains: '97, (9¢); '98, (5¢); '00, ($1.99); '01, (25¢); '03, 10¢; '05, 60¢; '06, (33¢); '07, (18¢). BUSINESS: Manpower Inc. is the second-largest non-government employment services organization in the world, with about 4,500 offices (incl. 280 franchise units) in 80 countries. Major markets: the U.S. (10% of '07 revs. and 9% of operating profits); France (34%, 42%); Italy (7%, 11%); the balance of Europe, Middle East, and Africa (EMEA), (33%, 27%); other operations (16%, 11%). Acq'd Jefferson Wells in 2001 and Right Mgmt. Consultants in 2004. Has 30,000 full-time empls. Off. & dir. own 2.1% of common; Wellington Mgmt. Co., 11.7%; Barclays Global Investors, 8.3%; The Bank of New York Mellon Corp., 5.6% (3/08 proxy). Chmn. & CEO: Jeffrey A. Joerres. Inc.: WI. Addr.: 5301 N. Ironwood Rd, Milwaukee, WI 53217. Tel.: 414-961-1000. Internet: www.manpower.com.

We have raised our 2008 earnings outlook for Manpower by $0.40 a share, to $5.80, owing to the company's strong performance in the first quarter and management's increased guidance range. The Other EMEA (Europe, Middle East, and Africa) segment was the star performer in a better-than-expected first quarter, delivering 17% operating profit growth versus the prior-year period on a constant-currency basis. A weaker U.S. dollar made this gain even more significant. The strength of this division more than offset slowing French and American markets.

The U.S. market likely stabilized somewhat in the second quarter. Sales from Manpower's U.S. business probably advanced about 1% during the June interim, largely due to small, tuck-in acquisitions. This would mark the first period of growth in the domestic market since the December quarter of 2006. Excluding acquisitions, the U.S. business probably contracted somewhat, albeit at a lesser rate than the 11% decline of the March interim.

We look for 10% share-net growth in 2009. The U.S. market is likely to see continued improvements over the second half of 2008, giving Manpower momentum heading into next year. Further, demand for staffing services in Europe remains relatively strong (the company generated 91% of its operating profits outside of its U.S. staffing business in 2007) and should be the key to earnings gains. The company's permanent placement business should achieve particularly strong growth.

The price of these shares has fallen 5% since our April report and more than 40% from its high of a year ago. Record commodities prices and a slumping domestic economy have caused the company's P/E multiple to contract over the past several months. We feel Manpower has been overly affected by weakness at home (since it generates the vast majority of its income abroad and has actually benefited from the weakening dollar) and is undervalued at this time. Indeed, MAN is ranked to outpace the market in the year ahead. Further, the company's strong growth prospects internationally, particularly from continued expansion into emerging markets, provide this issue with wide appreciation potential to 2011–2013.

Jerry W. Gray Jr. *July 18, 2008*

(A) Based on average shares through '96; diluted thereafter. Excludes extraordinary losses: '92, 10¢; '93, 18¢; '98, 71¢. Excludes nonrecurring gains: '96, 12¢; '04, 20¢; '07, 45¢.
Next earnings report due late July.

BUSINESS: Mattel, Inc. is the largest U.S. toy maker. Brands and products are grouped into three categories: Girls & Boys (includes *Barbie, Polly Pocket, Little Mommy, Hot Wheels, Tyco,* and *Matchbox*); Fisher-Price (*Little People, View-Master, Dora the Explorer, See 'N Say,* and *Power Wheels*); American Girl (*Just Like You,* and *Bitty Baby.*). Acquired Fisher-Price, 11/93; Kransco, 5/94; J.W. Spear & Sons, 8/94; Tyco Toys, 3/97. In '07, foreign: 49% of sales. Advertising: 12% of sales. Has about 31,000 employees. Officers & Directors own 2.4% of common stock; Janus Capital Management, 6.2%; Franklin Mutual Advisors, 5.3% (3/08 Proxy). CEO: Robert A. Eckert. Inc.: DE. Addr.: 333 Continental Blvd., El Segundo, CA 90245. Tel.: 310-252-2000. Internet:www.mattel.com.

Mattel is making some headway. June-quarter sales climbed 11% year over year, which helped generate a $0.16 sequential improvement in share net. A big boost came from products tied to summer movies, including *Kung Fu Panda, Speed Racer,* and *The Dark Knight.* Overseas markets remain a key area of strength, with international sales up 15% in the period, versus a 3% gain on the domestic front. Currency gains were a big factor, adding 10 percentage points to the top-line growth. Elsewhere, price increases implemented in June should help ease input cost pressures, namely rising commodities and labor rates in China. Regarding the former, oil prices have backtracked some of late, which should help lower resin costs. All told, although we've added a nickel to our 2008 share-net estimate, an earnings rebound will likely not be in the cards until next year.

The American Girl business is expanding. The line is growing in both catalog and retail businesses, with sales up 10% in the quarter. Moreover, the momentum should carry through to the rest of the year. In July, the *Kit Kittredge* movie was released to generally favorable reviews, which is boosting demand for products tied into the movie characters. Also, the boutique stores in Atlanta and Dallas are doing well, and plans call for new locations to be added in Boston and at the Mall of America in Minneapolis.

Meanwhile, *Barbie* continues to underperform. Worldwide March-quarter sales were down 6%, even with a six-percentage-point assist from favorable currency. Declines in the *Collector* and *My Scene* lines offset gains in the *Fantasy* series. On the plus side, U.S. retail takeaway outpaced shipments, suggesting sales could pick up in the quarters ahead.

These shares are now an average selection all around. Reflecting a 10% increase in price since our May report, the stock has moved back up a notch, to 3 (Average), for year-ahead relative price performance. Longer term, we project low double-digit annual earnings growth out to 2011–2013. However, with the recent price action, the issue's appreciation potential over that period is now about even with the *Value Line* median.

McKesson stormed out of the gates this fiscal year (began April 1st), continuing the positive momentum that has been building since 2005. In the June quarter, revenues increased 9%, driven primarily by solid growth in pharmaceutical direct distribution and services sales in both the U.S. and Canada. The acquisition of the Oncology Therapeutics Network (OTN) also aided the top-line advance. Share earnings advanced 8%, despite the difficult year-over-year comparison. Distribution Solutions generated most of the profit growth. A 7% reduction in the share count also helped.

Our full-year share-earnings target now stands at $4.10. This figure is a quarter higher than our previous call, and toward the high end of management's guidance. Revenues should continue advancing at a near double-digit clip as the fiscal year wears on. Specifically, U.S. pharmaceutical direct distribution and services sales growth ought to remain robust thanks to overall customer growth and the OTN acquisition. North of the border, top-line gains should easily stay above the double-digit threshold due to new and expanded distribution agreements and favorable exchange rates. Technology Solutions revenues will probably expand at a healthy clip, as well, thanks to an expanded customer base.

The company's strong balance sheet is allowing it to boost shareholder value. In the June quarter, McKesson bought back $130 million of common stock, leaving $1.2 billion on the current repurchase authorization. In addition, it recently paid out the recently doubled quarterly dividend in early July. Finally, management used available resources to deploy $242 million for acquisitions.

These shares offer good 3- to 5-year price appreciation potential. Owing to an aging population and the introduction of new drugs, we think pharmaceutical volume will continue growing over the long haul. This augurs well for McKesson's top line. Too, as generic versions of some notable drugs are rolled out, the company's operating and profit margins should expand slightly. Finally, we have raised the stock's Safety rank one notch, to 2 (Above Average).

Erik A. Antonson *August 29, 2008*

BUSINESS: McKesson Corporation provides supply, information, and care management products and services designed to reduce costs and improve quality across the healthcare industry. Distribution Solutions (97% of FY'08 sales): Distributes drugs and health and beauty care products throughout North America; manufactures automated dispensing systems for retail pharmacies; provides consulting and outsourcing services to pharmacies; etc. Employs about 32,900. AXA Financial own 11.3% of common stock; Wellington Management Company, 11.2%; officers & directors, 2.9% (6/08 Proxy). Chairman, President & CEO: John H. Hammergren. Incorporated: DE. Address: One Post Street, San Francisco, CA 94104. Telephone: 415-983-8300. Internet: www.mckesson.com.

On September 30, 2000, The Dun & Bradstreet Corporation was separated into two independent publicly traded companies. Under terms of the transaction, Dun & Bradstreet changed its name to Moody's Corp. and through a tax-free dividend ($4.47 a share), the company spun off the D&B operating segment, which includes the information services business. Moody's Corporation, the surviving company, currently trades on the NYSE under the ticker symbol "MCO".

BUSINESS: Moody's Corporation is a provider of credit ratings, research, and analysis covering debt instruments and securities in the global capital markets. It also provides quantitative credit assessment services, credit training services, and credit process software to banks and other financial institutions. Moody's was formed as the result of the spin off of Dun & Bradstreet's two former businesses, The Dun & Bradstreet operating company and Moody's Investors Service, into stand-alone public companies. Has about 3,600 employees. Berkshire Hathaway owns 19.1% of the common stock (3/08 Proxy). Chairman & CEO: Raymond W. McDaniel, Jr. Inc.: DE. Addr.: 7 World Trade Center at 250 Greenwich Street, New York, NY 10007. Tel.: 212-553-0300. Internet: www.moodys.com.

The ongoing turmoil in the U.S. credit markets has taken its toll on Moody's. The credit ratings provider's first-quarter earnings shortfall marked the third consecutive year-over-year quarterly decline. Deteriorating conditions in both the structured and corporate finance markets have resulted in less debt issuance this year, severely reducing the revenue generated from rating these instruments. In fact, global structured and corporate rating revenue fell 57% and 31%, respectively, during the March period, with even more pronounced percentage declines on the domestic front. More significant, we don't expect much of a near-term pickup in the fixed-income sector.

We are once again lowering our 2008 earnings estimate. It now stands at $1.95 a share, the midpoint of Moody's recently revised guidance. The pessimistic outlook reflects much lower debt issuance by banks and financial firms that have become a bit gun-shy. The credit market crisis has led to more than $200 billion in writedowns over the last 12 months. We now estimate that Moody's structured finance revenues will plunge more than 50% in 2008, reflecting steep declines in residential mortgage-backed securities issuance. A pullback in commercial real estate and credit derivatives ratings revenue will also hurt near-term results.

The ongoing scrutiny of the credit ratings industry continues. SEC Chairman Christopher Cox recently said that the government may soon create new laws banning credit rating agencies from doing consulting work for issuers of debt. The commission plans to release a report on the ratings industry by early summer.

This stock is untimely. The continued problems in the residential and corporate real estate markets will likely hurt Moody's ratings business. Too, Moody's stock remains under pressure following a report in the *Financial Times* that said the ratings agency mistakenly gave triple-A ratings to billions of dollars worth of debt instruments, but didn't lower the ratings after a computer error was discovered in early 2007. That said, MCO offers above-average recovery potential to 2011-2013 for patient, venturesome investors willing to withstand the near-term volatility.

In 1988, Mohawk Industries was formed in Delaware to acquire Aladdin Manufacturing through a leveraged buyout. In April 1992, the company made an initial public offering of 7 million shares at $6.65 a share. A second issue of 4.725 million shares at $13.70 a share occurred in May 1993 (included 1.125 million shares by selling shareholders). The lead underwriter for the initial public offering was Credit Suisse First Boston. (All data adjusted for subsequent stock splits.)

BUSINESS: Mohawk Industries, Inc. designs and manufactures woven and tufted broadloom carpets/rugs and hard-surface flooring for residential and commercial use. Markets products through retailers, home centers, mass merchandisers, department stores, and commercial dealers. Acquired World Carpets, *11/98*; *Image* Inds., 1/99; Durkan Carpets, 3/99; Crown Crafts, 11/00; Dal-Tile, 3/02; Lees, 11/03; Unilin, 10/05; Columbia Forest Products, 8/07. Has 36,200 employees. Chairman & CEO Jeffrey S. Lorberbaum owns 17.1% of common; all officers and directors, 18.4%; Ruane, Cunniff, & Goldfarb 18.6%; Aladdin Partners, 12.3% (4/08 proxy). Inc.: DE. Addr.: P.O. Box 12069, 160 S. Industrial Blvd., Calhoun, GA 30703. Tel.: 706-629-7721. Internet: www.mohawkind.com.

The current environment is extremely challenging for Mohawk Industries. Historically, about 25% of Mohawk's sales are derived from commercial markets, which are holding up well. But new residential construction accounts for 20%, and activity there has been dismal. And the residential replacement business, representing the largest segment, is weak as home prices fall and consumer costs for energy and food are escalating. Mohawk is also facing higher costs for energy and raw materials. The company, however, recently completed the implementation of price increases on several products. All in all, we've lowered our 2008 share-net estimate by 7%, to $5.20, despite being short by a nickel on our first-quarter call. We think the housing market will solidify in 2009, but we have also taken that estimate down by 7%, considering the lag time between a housing start and flooring purchases.

The company has a lot of things going for it, though. Product and geographic diversity is a major plus. The acquisition of Unilin in 2005 helped Mohawk achieve both by giving it a large footprint in Europe and entrance into the laminated flooring market, which is growing faster than carpets. Sales into Eastern Europe and Russia have been strong. Unilin is now expanding laminate production in the U.S., cutting down on import expenses. Another competitive advantage is Mohawk's unmatched distribution network. Finally, the company is introducing new outdoor and commercial products.

The emergence of Columbia may take longer than expected. Mohawk purchased this wood flooring company last year to complete its product diversification strategy. Significant investments are being made to improve manufacturing efficiencies, quality, and utilization. However, Columbia has major exposure to the slumping housing market. We had expected it to be profitable in this year's fourth quarter, but are now looking for that to happen in the second quarter of 2009.

Though the issue is untimely, it has worthwhile 3- to 5-year appreciation potential. Earnings should improve quickly when housing activity recovers. We also like the strong cash flow and healthy balance sheet.

Craig Sirois *July 4, 2008*

BUSINESS: Macquarie Infrastructure Company Trust LLC owns, operates, and invests in a diverse group of infrastructure businesses in the U.S. Businesses include airport services, airport parking, district energy, natural-gas distribution, and liquid-storage terminals (through its 50% stake in IMTT Holdings). Manager, Macquarie Infrastructure Management. (MIM), is paid a fee based primarily on MIC's market cap and can also earn a performance fee equal to 20% of outperformance of a U.S. utilities index. Consol'd businesses have about 4,000 empls. MIM owns 7.1% of trust shares; BlackRock, 5.9% (4/08 proxy). C.E.O.: Peter Stokes. Address: 125 West 55th Street, 22nd Floor, New York, NY 10019. Telephone: 212-231-1000. Internet: www.macquarie.com/mic.

Macquarie Infrastructure is providing shareholders with steadily rising income. The upcoming payout of $0.645 a share represents an increase of 9% from the June 2007 distribution. In all, the company has raised its dividend in each of the last eight quarters. With further, albeit more modest, increases likely, these untimely shares will probably be of interest to income-oriented accounts. Still, conservative investors, in particular, should consider the risks of a reduction in the payout (see below) before making commitments.

The company's businesses are turning in solid results. On a GAAP basis, the bottom line remains stuck in the red, largely due to noncash expenses, such as depreciation and amortization stemming from acquisitions, and derivative losses. The various infrastructure businesses in the Macquarie portfolio, though, figure to be relatively predictable cash flow generators. This has been the case of late, despite the economy flirting with recession in recent quarters. In fact, cash available for distribution (CAD), a calculation used by the company to evaluate its ability to fund the dividend, rose 10%, year over year, in the March quarter. Most notably, EBITDA (earnings before interest, taxes, depreciation & amortization) rose 53% during the period at Macquarie's largest business, airport services. Acquisitions are providing the biggest boost, though existing operations have held their own too, with EBITDA increases of 5%.

Investors, though, are clearly skittish. The share price has declined 20% so far this year. We think the current valuation, including a yield of over 8.0%, reflects concerns about the sustainability of the payout at current levels. The company typically distributes virtually all of its CAD each quarter, meaning even relatively mild setbacks at its larger businesses, especially airport services, could prompt a reduction in the payout. Management has indicated that it expects trends within the aviation industry to make the airport services division relatively immune to downturns in the broader economy. Given the company's limited operating history, however, the stock is likely to continue to exhibit a fair amount of volatility until the market gains more confidence in this thesis.

Robert M. Greene, CFA *June 6, 2008*

(A) Diluted earnings per share. Excludes nonrecurring loss: 07, 67¢. Quart. egs. may not add to total due to changes in shares out. Next earnings report due early August.
(B) Distributions are typically paid in early April, June, September, and December.
(C) Includes intangibles. In '07: $1.7 billion, $36.84 share. (D) In millions.

BUSINESS: MAXIMUS, Inc. is a provider of program management to state and local governments in the U.S. Operates three units: Consulting (13% of '07 sales) helps state & local governments and schools to obtain federal funding reimbursements; Systems (19%) designs & implements software to improve efficiency & cost of program administration & provides systems products in justice & asset solutions; & Operations (68%), provides admin. services for health & human services programs. Has about 6,120 empls. Off./dir. own 3.6% of stock; JANA Ptnrs., 14.6%; Morgan Stanley, 8.2% Royce & Assoc., 7.9% (1/08 Proxy). Chairman: Peter Pond. CEO: Richard Montoni. Inc.: VA. Addr.: 11419 Sunset Hills Rd., Reston, VA 20190. Telephone: 703-251-8500. Internet: www.maximus.com.

MAXIMUS' earnings appear to have turned a corner. Following two consecutive quarters of notable year-to-year share-net advances, the consulting and IT services company is well positioned to have a stellar comeback year in fiscal 2008 (year ends September 30th). Marked revenue growth has considerably improved performance. The operations and systems segments were the primary contributors to the strong performance of late. Furthermore, we expect these divisions will drive profits. Indeed, management has closed a few key contracts in recent months, which augurs well for the company's earnings. We believe MAXIMUS will continue to report top-line growth as its new focus of competing on a variety of contracts to create a more diversified income stream takes hold. Too, cost containment has proven the primary contributor to the positive momentum in recent months. Lower legal expenses have substantially improved margins.

As legal issues subside, the company's prospects are improving significantly. The concentrated portfolio of large contracts proved detrimental when a dispute over a single project in Texas weighed heavily on performance and significantly dampened results. However, the company's cost structure has improved since the disagreement was resolved. Now, given the brighter environment, we believe MMS will post steady growth in its bottom line over the coming years.

Management has weathered the recent tumult in capital markets and will likely take further measures to return value to shareholders. This has been demonstrated by the aggressive $150 million accelerated share-repurchase program. All told, we believe the company's long-term revenue and earnings growth potential is bright.

These shares are neutrally ranked for price performance. We believe that MMS shares are undervalued, based on the current P/E multiple, which is below the 3- to 5-year average. Too, the wide appreciation potential to 2011–2013 further enhances the stock's investment appeal. Still, given the company's limited Earnings Predictability, the offering is best suited for venturesome investors.

Simon R. Shoucair *June 6, 2008*

(A) Fiscal year ends September 30th. Includes nonrecurring loss: '06, (26¢). Excl. nonrec. loss: '07, ($1.29). Next earnings report due early Aug.
(B) Dividends paid late Feb., May, Aug., and Nov.
(C) Includes intangibles. At 9/30/07: $89.7 mill., $4.04/sh.
(D) In millions.
(E) Includes unbilled accounts receivables. At 9/30/07: $42.2 million.

The McClatchy Company was founded in 1857 by James McClatchy, first editor of The Sacramento *Bee*, and has since remained under family control. The company went public in February, 1988, issuing 3,000,000 split-adjusted shares of Class A common stock at $13.20 a share through a syndicate headed by Goldman Sachs. Initially traded on the ASE, the stock was listed on the NYSE in 12/88. Class A shares elect 25% of directors, Class B shares, 75%. Dividends per share are equal.

BUSINESS: The McClatchy Company is the third-largest newspaper company in the U.S. by total circulation. Publishes 30 daily newspapers and about 50 non-daily community titles in 16 states. Major dailies (circulation) include: Miami *Herald* (334,000); Sacramento *Bee* (271,000); Kansas City *Star* (253,000); Charlotte NC *Observer* (211,000); Fort Worth *Star-Telegram* (208,000); Raleigh *News & Observer* (171,000). Acquired Knight-Ridder, Inc., 6/06. Employs about 15,700. Class B stockholders have voting control. Ariel Cap'l owns 28% of class A stock; Bestinver, 17%. Off./dir. hold 30.7% of cl. A, 87.2% of cl. B stk. (4/08 proxy). Chmn. & CEO: Gary Pruitt. Inc.: DE. Addr.: 2100 Q Street, Sacramento, CA 95816. Tel. 916-321-1846. Internet: www.mcclatchy.com.

McClatchy appears to be faring worse than its industry in the current slowdown. Second-quarter revenues dropped about 15%, year to year, compared with an average of 8.3% for five other newspaper chains, and operating profits plunged 38%. Classified ad revenues fell 28%, including drops of 39% for employment and 37% for real estate. The company continued to suffer from its concentrations in California and Florida, which accounted for over half the falloff in real estate ads. On a bright note, online ad revenues rose 12% in the second quarter as unique visits to company Web sites rose 24%. Cash costs decreased 3.6% and would have fallen 9%, excluding $23 million, or $0.16 a share, of severance expenses (included in our earnings figure). Newsprint costs declined 11% due to lower usage as McClatchy trimmed page widths and used lighter stock.

McClatchy is reacting to the poor advertising environment. The workforce has fallen 13% in the last 18 months, and cuts announced in June would reduce headcount by a further 1,400, or 10%. Combined with other measures, the company estimates that it will pare costs by $95 million-$100 million annually over the next year. Nonetheless,

Hard times will probably persist for a few more quarters. Earnings will likely recover somewhat from the March-period low point as McClatchy's cost cuts take effect. The fourth-quarter seasonal boost should take place in 2008, too, though not as prominently as in the past. Troubles in the housing industry appear too severe to blow over before 2009.

We look for earnings to start to bounce back next year. By then, the housing crisis should be largely past, and new home sales will probably start to increase, with attendant gains to furnishing and other ad revenues. Employment linage should begin to recover, as well. And earnings will reflect all of the cost-saving measures recently announced.

These untimely shares have above-average total return potential to 2011-2013. McClatchy should manage the shift of advertising from newspapers to other media. The dividend, however, may well be cut, even though cash flow looks adequate to maintain it.

Sigourney B. Romaine *August 15, 2008*

BUSINESS: Molex Inc. is a leading supplier of electrical components, including electrical and fiber-optic interconnection products and systems, and switches for original equipment mfrs. 2007 sales breakdown by market: Telecom, 26%; Data Products, 21%; Automotive, 18%; Consumer Products, 18%; Industrial, 15%; Other, 2%. Operates about 59 plants in 19 countries. 2007 sales by region: Americas, 24%; Europe, 17%; Asia, 50%; Other, 9%. Acquired Connecteurs Cinch, 3/04; Woodhead Industries, 8/06. Has 33,200 employees. Off./dir. control 36.3% of voting shares (9/07 Proxy). Co-Chairmen: Frederick A. Krehbiel and John H. Krehbiel, Jr. CEO: Martin P. Slark. Inc.: DE. Address: 2222 Wellington Court, Lisle, IL 60532. Tel.: 630-969-4550. Internet: www.molex.com.

Molex's revenues in the March quarter rose 2%, year to year, aided by currency translation gains. Increases in the telecom, data, and automotive markets offset a decline in the industrial market. Automotive benefited from growth in Japan and Europe. Excluding $0.09 a share in charges from restructuring and a tax adjustment, share earnings were up 6%.

Revenues for the full fiscal year 2008 (ended June 30th) probably also increased about 2%. Positive comparisons in the second half likely offset the 2% decrease in the first half. The top line was helped by currency translation, due to the weak dollar. However, gross margins came under some pressure from a higher fixed manufacturing ratio, price erosion, and increased material costs for purchases of copper, plastics, and gold. Net income was probably down about 2%. But on fewer shares outstanding, share profits may have been relatively unchanged.

Business metrics appear to be improving. Orders in the March quarter jumped 15%, year to year, to $898 million, yielding a positive book-to-bill ratio of 1.09. As a result, backlog expanded 33% from the prior-year period to $461 million. Order growth was strongest in the telecom market, but also solid in the data, consumer electronics, and medical electronics markets. The industrial market was flat.

For fiscal 2009, we are forecasting a 7% gain in revenues, supported by a prospective better global market for electronic components. Assuming wider operating margins on the higher volume, as well as operating efficiencies from restructuring initiatives (such as a plant expansion in China), we are projecting a 20%-25% profit advance in fiscal 2009.

These shares are neutrally ranked for relative price performance over the next six to 12 months. But based on our 3- to 5-year projections, MOLX stock has considerable capital appreciation potential over the 2011-2013 timeframe. Our outlook assumes that the global connector market will benefit from expanding demand for digital electronics and that Molex can increase its market share. We also anticipate that the company's restructuring plan should help lower costs and improve profitability in future periods.

BUSINESS: MSC Industrial Direct Co. markets industrial products to small- and mid-sized customers throughout the U.S. It distributes a full line of industrial products, such as cutting tools, abrasives, measuring instruments, safety equipment, fasteners, welding supplies, and electrical supplies for customers' maintenance, repair, and operations (MRO) supply requirements. MSC guarantees same-day shipping of products since over 99% of products are kept in stock. '07 deprec. rate: 10.0%. Has about 3,952 employees. Chairman: Mitchell Jacobson. CEO: David Sandler. Officers & directors own 18.9% of common stock and 49.1% of voting power (12/07 Proxy). Inc.: NY. Address: 75 Maxess Rd., Melville, NY 11747. Tel.: 516-612-2000. Internet: www.mscdirect.com.

MSC Industrial Direct's shares are ranked to outpace the broader market averages over the next six to 12 months (Timeliness: 2). Despite an expected near-term slowdown in revenues stemming from the weaker economy and a shorter fiscal fourth quarter (year ends approximately August 30th), cost control has enabled the company to maintain share-net growth. We believe the demand factors that have slowed revenue gains of late are near-term concerns. Hence, we think that long-term revenue and earnings growth prospects are promising. Too, the stock's 3- to 5-year appreciation potential is wide.

The company has continued to benefit from reasonably healthy demand and efficient cost control. Higher volume boosted gross profits over the first nine months of fiscal 2008. This helped to offset rising raw material costs and an increasingly difficult industry climate. An efficient pricing strategy buoyed the top line and the gross margin. However, in light of the expected slowdown in revenues, effective cost management will likely prop up the operating margin and bottom line. A favorable sales mix within the company's large account customer (LAC) programs ought to prove beneficial over the next several quarters. Indeed, the company's e-commerce capabilities continue to provide a competitive edge. MSC's ability to conduct transactions with clientele through various portals and directly through the MSC Web sites is an advantage over smaller suppliers. Moreover, marketing campaigns are generating new business, while the growing salesforce enhances productivity.

The company is gaining market share. National and government program accounts are rising. As these LAC markets comprise a more sizable portion of MSC's revenue base, we look for an enhanced sales mix that should further widen margins. Indeed, by expanding in these sectors management is creating diversification that will help to shelter the company from the inherent cyclicality within the industry. Although there is some risk associated with bigger clients that account for larger portions of sales, we believe these efforts ought to substantially enhance the top line and offset rising costs.

Simon R. Shoucair *July 25, 2008*

(A) Fiscal year ends the Saturday closest to August 31. Diluted earnings. Next earnings report due mid-October.
(B) Dividends payments are made in late-Jan., Apr., Jul., Oct. Special div'd of $1.50 paid 8/8/05.
(C) In millions, adjusted for split.
(D) Includes intangibles. In 2007: $76.3 mill., $1.14 a share.
(E) Each class A share is entitled to one vote. Each class B share is entitled to 10 votes. Class B shares are not traded on the open market.

BUSINESS: Vail Resorts, Inc. owns and operates ski resorts in Colorado, Nevada, and California. Has three segments: Mountain (71% of FY '07 revenue); Lodging (17%); and Real Estate (12%). Owned/managed properties include: Vail Mountain, Beaver Creek Resort, Breckenridge Mountain, Keystone Resort, and Heavenly Mountain Resort. '07 depreciation rate: 6.2%. Has about 3,100 year-round and 10,800 seasonal employees; Officers and directors own 1.4% of stock; Ralcorp Holdings, 19.2%; Ronald Baron, 12.1%; Marisco Capital Management, 10.5%, (11/07 proxy). CEO: Robert A. Katz. CFO: Jeffrey W. Jones. Chairman: Joe R. Micheletto. Incorporated: DE. Address: Post Office Box 7, Vail, CO 81658. Tel: (970) 845-2000. Internet: www.vailresorts.com

Vail Resorts registered fiscal third-quarter results (ends July 31st) that were below our expectations. Difficult weather conditons, a shift in the timing of the Easter weekend, and weakness in the travel industry all hurt. The performance has led us to temper our expectations for 2008 and 2009.

Although we have altered our near-term outlook, we expect Vail to fare better than many competitors that depend on discretionary income. Partly underscoring our cautious optimism is the fact that Vail services an affluent customer base, where demand isn't all that elastic. The average household income of the typical visitor is approximately $200,000. Furthermore, Vail continues to attract hordes of foreign tourists, thanks in part to a weakening greenback. Global trekers make up roughly 10% of visits, and they account for a greater proportion of revenue. Over the last few years, the growth of spending by oversees visitors is approximating 20% per annum.

We are not overly concerned that the credit crunch and housing crisis, which have gripped the U.S., will hurt sales at Vail's real estate unit. Vail is scheduled to close three projects over the next two years: Crystal Peak Lodge at Breckenridge, the Chalets at Vail's Front Door, and Arrabella at Vail Square. Management has secured contracts for all 125 units at these properties. Units at Arrabella are being sold on the secondary market, and very profitably. Meanwhile, the average purchase price for dwellings at Vail Chalets is more than $10 million. Buyers of these properties typically have deep pockets and are not overly susceptible to the vagaries of the economy. Vail has also secured contracts for many of its longer-term projects.

The company will likely continue to buy back stock. Vail's board of directors has approved a three million share repurchase plan. This is on top of 300,000 shares remaining under the previous program.

This neutrally ranked stock is appealing for capital gain potential. Top-notch ski facilities and a slew of real estate projects should enable share net to exceed $4.00 by 2011-2013.

BUSINESS: Murphy Oil Corporation is a worldwide oil and natural gas exploration and production company with refining and marketing operations predominantly in North America and the United Kingdom. And owns 1,126 retail outlets in the U.S., Canada, and U.K. Estimated proven reserves at 12/31/07: 128.4 million barrels of crude oil and liquids; 590.6 billion cubic feet of natural gas. Apr. 34% of proven oil and 69% of proven gas reserves have been developed. Has 7,539 employees. Off./dir. own 9.3% of common; Capital World Investors, 5.1%; T. Rowe Price, 13.5%. (3/08 Proxy). Chairman: William C. Nolan, Jr. President & CEO: Claiborne Deming. Inc.: DE. Address: 200 Peach St., El Dorado, AR 71730. Telephone: 870-862-6411. Internet: www.murphyoilcorp.com.

Business is booming for Murphy Oil Corp. Share net more than tripled during the March quarter and revenues reached almost 90% above last year's total. Much of the oil explorer's success was thanks to its Exploration and Production (E&P) unit. Indeed, output increased 34% year over year, and the company averaged 113,300 barrels of crude oil, condensate, and gas liquids daily. Surging production levels at its Kikeh field in Malaysia helped boost this segment. What's more, its achievement there easily overshadowed moderate declines at its Gulf of Mexico, western Canada, and Malaysia's West Patricia field. Few companies have been able to match Murphy's volume growth, making the stock one of the group's top performers.

The near term looks bright. Though the company has seen narrowing margins in its refining and marketing business, we believe that its production volume growth and higher realized energy pricing will outshine those clouds in the months ahead. All told, we look for double-digit top- and bottom-line gains in 2008, and healthy advances through 2009.

The company is putting its cash to good use. In the year ahead, management will probably devote close to 80% of its capital expenditures to its E&P segment, and roughly 73% of that sum on ongoing developments. It has also taken a closer look at refining its portfolio. During the quarter, Murphy sold its Berkana Energy stake in Canada for $39.9 million. Over the past few months, the energy company incorporated several downstream assets. It may continue to eye acquisitions, with a specific focus on potential international properties or natural gas assets to complement its core business. Too, it may well use available cash to pay down debt.

These shares maintain our Highest (1) Timeliness rank. Thanks to the ongoing oil boom and increased production, this issue is trading near its all-time peak. Too, Murphy's strong business fundamentals ought to support the bottom-line gains we foresee out to 2011-2013. Even so, we think that much of this good news is already reflected in MUR's current quotation, thereby limiting its long-term appreciation potential.

Orly Seidman *June 13, 2008*

BUSINESS: Max Capital Group is a holding company based in Bermuda. Through its subsidiaries it provides insurance and reinsurance for corporations, public entities, and insurers. Operates in four segments: property and casualty reinsurance, property and casualty insurance, life and annuity reinsurance, and U.S. excess and surplus lines insurance. Derived about 55% of gross premiums written in 2007 from clients based in North America. Moore Holdings owns 18.1% of common shares; T. Rowe Price, 5.5%; officers and directors, 4.4% (3/08 Proxy). Chairman and Chief Executive Officer: W. Marston Becker. Incorporated: Bermuda. Address: Max House, 2 Front Street, Hamilton, HM 11, Bermuda. Telephone: (441) 295-8800. Internet: www.maxcapgroup.com.

Shares of Max Capital Group have traded lower in recent months, in conjunction with weakness in the overall market. The company reported unimpressive performance for the first quarter. Despite higher gross premiums from additional agriculture business, net premiums earned declined modestly in the recent interim. Max Capital posted unrealized mark-to-market losses of nearly $26 million in its alternative investment portfolio. Share earnings came in at $0.11, well below the prior-year period. Looking forward, we anticipate unfavorable bottom-line comparisons in the coming quarters. Overall, share net should decline significantly in full-year 2008. Nevertheless, earnings will probably rebound in 2009. Solid results from property and casualty underwriting ought to continue to benefit net premiums earned. Also, we're assuming more-normal performance from Max Capital's alternative investment portfolio, and that the company will keep a lid on expenses.

U.S.-based subsidiary Max Specialty has recently acquired Commercial Guaranty Casualty Insurance Company. Financial terms of the transaction were not disclosed. Commercial Guaranty is licensed to write business in all fifty states and the District of Columbia. The addition of this operation will support Max Specialty's entry into Inland and Ocean Marine underwriting. Moreover, it will allow the company to write both admitted and non-admitted business.

Max Capital continues to repurchase its shares. During the first quarter, the company spent almost $94 million on buybacks, lowering its shares outstanding by over 1 million. We find this trend encouraging, and expect it will continue. The lower share count should support earnings per share going forward.

This stock has fallen a notch in Timeliness since our May review, and is unfavorably ranked for year-ahead performance. Looking further out, we anticipate higher share earnings at Max Capital by 2011-2013. However, this appears to be partly discounted by the current quotation, and appreciation potential for the coming years is below the *Value Line* median. Investors may find more suitable choices elsewhere.

BUSINESS: National Instruments designs, develops, manufactures and markets test and measurement (T&M) and industrial automation (IA) products used in a wide range of markets. These products are known as "virtual systems", consisting of standard computers plus user-friendly software employed by customers to build systems to meet specific needs. Foreign sales, 52% of total. Plants in Texas and Hungary. R&D, 17.0% of sales. Depreciation rate, 14.1%. Has 4,559 employees. Chairman & President, Dr. J. Truchard owns 22.1% of stock, other Officers/directors, 6.3%; Neuberger Berman, 7.0%; Jeff Kodosky, 5.1%; (4/08 proxy). Inc.: Delaware. Address.: 11500 North Mopac Expressway, Austin, Texas 78759-3504. Tel.: 512-338-9119. Internet: www.ni.com.

National Instruments posted solid financial results for the June interim. The top and bottom lines advanced 9% and 41%, respectively, compared to the March period. While sharenet was below our estimate of $0.34, we anticipate that the company will still meet our annual earnings total, based on larger, higher-margin orders that are expected to ship in the fourth quarter.

A broad range of applications is boosting growth. A varied consort of customers provides a good base for sales growth even while the global purchasing index is tipping downwards. A push for energy exploration has swayed some oil and mining companies to adopt the company's *LabVIEW* system to monitor production. NATI is also developing a communication interface used in surveillance offerings. And its products can also be utilized for monitoring structural integrity testing for bridges and construction. The assorted utilization should help to keep sales and earnings marching upward.

Emerging markets hold much potential. The company is broadening its reach into burgeoning economies, and revenues from these markets have more than tripled in the last five years. As NATI shifts more of its employees to these regions to service its expansion, employee and other related costs have been reduced. Plus, National's aggressive push to add to its salesforce should help propel further gains. This trend is likely to continue as this industrial automation equipment maker seeks to widen its global footprint.

Average order size has been on an upward trajectory. The company just closed its biggest order ever to supply PXI test systems to an aerospace customer. The $14.4 million, three-year deal has helped boost the average order size to over $3,600. And growth among its large system sales, those over $20,000, is up 36% from the year-ago period. Too, an increasing frequency of orders of over $1 million has aided in the order size upswing.

This timely issue is a good choice for most accounts. Despite a volatile market, NATI stock has risen for most of the year, but still offers above-average appreciation potential. It is a good choice for short- and long-term investors.

Mary Beth Wiedenkeller *August 29, 2008*

BUSINESS: Noble Energy, Inc. explores for and produces oil and natural gas, chiefly in the Gulf of Mexico, Texas, and Louisiana. 2007 average daily production: natural gas, 687.4 mill. cubic feet; oil, 84,265 barrels. Proved reserves at 12/31/07: 3.3 trillion cubic ft. gas; 329 million Bbls. oil. 3-year average reserve replacement ratio: 116%. 2007 operating cost per unit: $4.14. Purchased Energy Development Corporation. (EDC), 7/96; Patina Oil & Gas 4/05. Has about 1,398 employees. Officers/directors control 3.0% of stock; NWQ Investment Management Company., 9.7%; (3/08 proxy). Chairman., President & CEO: Charles D. Davidson. Incorporated: DE. Address: 350 Glenborough Dr., Houston, TX 77067. Telephone: 281-872-3100. Internet: www.nobleenergyinc.com.

In spite of escalating costs, Noble Energy is poised to post stellar year-to-year share-net growth this year. As domestic supply concerns and international demand continue to fuel oil prices, the company is capitalizing on this by feverishly attempting to increase production growth. Indeed, Noble is making record revenue and profit gains thanks to the recent crude bubble. Sales volumes averaged 218 thousand barrels of oil equivalent per day in the second quarter. U.S. volumes were up 5% and international volumes were up 14%. Robust market demand and ongoing development programs in the U.S. contributed outstanding volume growth in the oil segment, while natural gas sales grew in Israel and West Africa. Though, there is some concern about a sequential slowdown in production volume. This could prove problematic, as exploration costs and taxes are rising, while planned plant maintenance are likely to prove costly in the coming months. Still, we look for double digit revenue and earnings advances to more than offset these factors this year.

Effective capital spending augurs well for profits. The company's efforts to focus its capital budget on areas that provide significant growth potential, while divesting its noncore assets, should help expand margins over the next several quarters. Indeed, the recent $291 million cash acquisition of 15,000 net acres of natural gas producing properties in western Oklahoma should help to bolster production levels until some of Noble's more promising discoveries come on line, specifically in West Africa.

This stock is timely. Given the presently inflated price of oil and the uncertainty about when it will peak, recent concerns about slowing production growth led investors to take profits in NBL. Hence the stock is trading well below historical averages.

The long-term picture is less compelling. We believe that the company will face production constraints over the next 3 to 5 years. Moreover, we do not believe that the current momentum in oil prices is sustainable to 2012. Thus, based on our projections, the 3- to 5-year appreciation potential is below average.

BUSINESS: Nabors Industries Ltd. is the world's largest land drilling contractor and provides oilfield management, instrumentation and other wellsite services. Owns 548 land drilling and 749 land workover serving rigs in North America. Offshore fleet consists of 36 platform rigs, 13 jackups, and 4 barge rigs in the U.S. and internationally. Also invests in select oil and gas projects. Acquired: Bayard Drilling, 4/99; Pool Energy, 11/99. Has 23,965 employees. Officers & directors own about 10.0% of outstanding common stock; Fidelity owns 9.3%; (4/08 proxy). Chairman & CEO: Eugene M. Isenberg; Pres. & COO: Anthony G. Petrello. Inc.: Bermuda. Address: Mintflower Place 8 Par-La-Ville Rd. Hamilton, HM08 Bermuda. U.S. Tel.: 281-775-8038. Internet: www.nabors.com.

Nabors Industries' earnings look to have bottomed out. The second quarter of each year is normally slow, owing to seasonal factors in Canada and Alaska. Moreover, Canadian activity is just getting past a pessimistic period that led to a pullback in drilling. Business is clearly on the upswing now, though. In this case, the stock's nice advance early in 2008 was a harbinger of better times ahead.

New drilling prospects and higher natural gas prices have brightened possibilities considerably. There is a lot of excitement in the industry over the shale formations that produce natural gas and oil that were once viewed as too expensive to drill. Now, armed with new technology and with the benefit of higher prices, demand for rigs is accelerating rapidly. These prospects are well-suited for Nabors, since most of its fleet is geared toward land drilling. As a result, profits appear set to ramp up from here.

The boom in land drilling is extensive. In Canada, orders for equipment are on the rise as producers start to drill wells in British Columbia. The company is also benefiting from the development of the Baaken Shale, which extends into Saskatchewan from North Dakota and Montana. In addition, Nabors is picking up a lot of business in shale plays such as the Haynesville, in northern Louisiana. Expansion in these areas still has a way to go, which should make for very good earnings comparisons in 2009.

The time is ripe for Nabors to build up its capacity. Operating rates have risen to the point where the company has placed orders for a sizable number of newly constructed rigs—which may take up to one year to deliver. Drillers get the most out of the shale plays under development using state-of-the-art equipment. The newbuilds provide further assurance that the operating climate is improving.

There is more here than meets the eye. The shares are neutrally ranked for Timeliness based on momentum. But the stock's first-half rally could be rekindled if the expected uptick in earnings materializes. Oil and gas prices will probably need to start heading back up for that to happen, of course. The shares have good 3- to 5-year appreciation potential.

Robert Mitkowski, Jr. *August 15, 2008*

BUSINESS: Annaly Capital Management, Inc. is a real estate investment trust that owns and manages a portfolio of mortgage-backed securities, including mortgage pass-through certificates, collateralized mortgage obligations (CMOs), and other mortgage-related assets. Portfolio as of 12/31/07 consisted of about 71% fixed-rate pass-through certificates, 21% adjustable-rate pass-throughs, and 8% CMO floaters. Also manages fixed-income assets. Employs 39. Fidelity owns 6.3% of common; officers and directors, 1.1% (3/08 Proxy). Inc: MD. Chairman, CEO, and Pres.: Michael Farrell. Vice Chair and CIO: Wellington Denahan-Norris. Addr.: 1211 Avenue of the Americas, Suite 2902. New York, NY 10036. Tel.: 212-696-0100. Internet: www.annaly.com.

Annaly Capital stock have been trading mostly in a narrow range since our mid-April report. The shares have been unable to make new highs since the Federal Reserve has been on hold. This equity does best when the central bank is lowering interest rates, as illustrated by the nice move it made in late 2007 and early 2008 (see price chart above). The Fed was easing at that time. However, with the Fed now on hold and it's next move likely to be a hike in rates, investors have turned cool on the stock.

For now, the company is enjoying much-improved margins. The rapid series of rate reductions by the Fed in the past year has reduced funding costs considerably. The first-quarter interest-rate spread between assets and liabilities of nearly 1.5% was highly favorable compared to the 0.6% figure a year earlier. Annaly should continue to enjoy wider-than-usual margins in the coming months. The hitch is that margins will deteriorate once the Fed starts raising interest rates. Still, the company should be able to post an excellent gain in earnings per share in 2008. We've lowered our 2009 earnings estimate by $0.15 a share, reflecting the likely shift in monetary policy, though.

Annaly has been striking while the iron is hot. The mortgage real estate investment trust has been raising lots of capital to take advantage of strong business conditions while they last. The company raised about $1 billion in May through a common stock offering that enabled it to purchase more of the high-quality mortgage-backed securities it specializes in. Annaly may try to raise more capital to take advantage of the window of opportunity presented by currently wide interest-rate spreads, but our estimates don't reflect that possibility.

The shares have fallen a notch in Timeliness to 3 (Average). Earnings are coming in strong, as expected, but Wall Street is worried about the Fed's need to fight inflation. Higher interest rates would raise funding costs. The stock's low price-earnings ratio and the unusually high dividend yield reflect the uncertainty about future profit levels. Concerns about holding securities issued by struggling Fannie Mae and Freddie Mac have also arisen.

Robert Mitkowski, Jr. *July 18, 2008*

(A) Based on diluted shares outstanding. Earnings may not sum due to changes in shares outstanding. Excludes nonrecurring per-share (losses): '05, (67¢); '06, (29¢).

BUSINESS: Neenah Paper, Inc. is a leading producer of premium fine paper and technical products. It also manufactures bleached kraft pulp in Canada. The company owns about 500,000 acres of timberland and holds non-exclusive rights to another 200,000 acres. The company has three primary operations: fine paper business (37% of '07 sales), technical products (40%), and pulp business (23%). The company was spun off from Kimberly Clark Corporation in 4/04. Has about 2,450 employees. Off./dir. own 4.4% of common stock; Wachovia, 10.1%; Barclay, 5.3%; Goldman Sachs, 5.4% (3/08 proxy). Chairman, President & CEO: Sean T. Erwin. Inc.: DE. Address: 3460 Preston Ridge Road, Suite 600, Alpharetta, GA 30005. Telephone: 866-548-6569. Internet: www.neenah.com.

Neenah Paper is completing its transformation into a specialty products and premium fine paper company. The company has been working to redefine itself since it was spun off from Kimberly Clark in 2005. And, in May, Neenah announced that it was shedding the last of its commodity pulp and paper assets. It will pay Northern Pulp between $15 million and $20 million to transition its Pictou pulp as a stand-alone entity. As part of this agreement, Neenah will continue to receive an ongoing fiber supply from the mill. The company is also in the midst of pruning the last of its timberland assets.

But this transition needs some smoothing out. These sales, even with the tax benefits associated with dismissing the struggling businesses, will likely result in hefty discontinued operations charges over the next few quarters. During the first quarter, management reclassified its pulp business (which was 23% of 2007 sales) as discontinued operations. As per *Value Line* policy, we have excluded the $5.46 per-share loss from our earnings presentation. Earnings tumbled almost 44% from the year-ago period, to $0.57 per share. And may continue to decline 40%–45% in 2008. Still, we believe that divesting capital-intensive and more volatile segments of its portfolio will better position this small company for long-term growth.

Neenah has been facing a difficult operating environment. Rising raw material and energy pricing will probably continue to weigh on operating margins over the next few quarters at its Fine Paper and Technical segments. Due to domestic macroeconomic factors, the company has been pursuing opportunities globally. However, it may face problems when attempting to penetrate dollar-based markets overseas.

These shares are ranked unfavorably for year ahead price performance (Timeliness: 4). NP stock has fallen over 33% since our April review. Because of the pullback in price, however, this issue now possesses substantial long-term appreciation potential. Investors may want to wait on the sidelines, though, until management's efforts to counterbalance the difficult operating environment bear more fruit.

BUSINESS: National Presto Industries, Inc. operates three businesses: Housewares/Small Appliances (31% of '07 revenues) designs, markets, and distributes housewares and small appliances. Defense Products (53%) manufactures precision mechanical and electro-mechanical assemblies, medium caliber cartridge cases, etc. Absorbent Products (16%) manufactures and sells private-label diapers and adult-incontinence products. Employs about 1,035. Officers & directors own 30.2% of stock (Maryjo Cohen, 30.1%); Royce, 11.8%; Dimensional, 6.3%; Melvin S. Cohen, 5.7% (4/08 proxy). Chair, President & CEO: Maryjo Cohen. Incorporated: WI. Address: 3925 North Hastings Way, Eau Claire, WI 54703. Telephone: 715-839-2121. Internet: www.gopresto.com.

National Presto Industries is operating in a difficult environment. Due to the spectacular rise in oil and natural gas prices, a tremendous amount of upward pressure has been placed on the prices of commodities like aluminum and plastic. In addition, the Housewares/Small Appliance segment purchases nearly all its products from China, where there have been high levels of inflation. The weakening U.S. dollar and higher transportation expenses only exacerbate things. Making matters worse, raising product prices to levels commensurate with the cost increases is not possible. Due to high prices at the gas pump and in the grocery store, consumers are cutting back. So, retailers have reduced prices to boost traffic, making it extraordinarily difficult for the Housewares/Small Appliance segment to hike product prices. Elsewhere, the Absorbent Product group will probably struggle to break even in 2008. Despite increased efficiency, increased raw material costs will likely drag on profits. Indeed, most of the raw materials used in diapers and adult underwear are petroleum-based. We also expect a slight volume decline. In stark contrast, the Defense business should continue posting healthy top- and bottom-line gains this year, thanks to the high demand for ammunition. Moreover, the contracts it will be executing in 2008 were awarded in 2007, which allowed it to lock in most of its material costs.

The bottom line will probably rise, though. Presto has been historically successful in cutting costs, and this year should be no different. Reduced general and administrative expenses at the Housewares/Small Appliance and Defense segments should spur growth. The company is closely monitoring its headcount, and has already scrapped its national television advertising program. In addition, reduced overhead, plant consolidation, and better efficiency should prop up the Absorbent Product division's margins, even though volume may well decline slightly.

This issue is timely, thanks to positive share-price and earnings momentum. This equity also offers worthwhile 3- to 5-year price appreciation potential. The well-covered dividend only sweetens the pot, in our opinion.

Erik A. Antonson *July 25, 2008*

(A) Diluted earnings. Next earnings report due late July.

(B) Annual dividend rate is currently $1.00 a share. Includes additional extra dividends from '08: '08, $3.25.

(C) In millions.

BUSINESS: Nissan Motor Co., Ltd. is Japan's third-largest auto maker. Principal U.S. models include *Altima, Maxima, Sentra, Quest, 350Z, Pathfinder,* and the *Infiniti* brand. Builds cars and trucks in Japan, U.S., U.K., Mexico, Spain, Australia. Fiscal 2007 unit sales: Japan, 684,404; North America, 1,370,489; Europe, 705,224; other, 937,650. Also makes rockets, machinery, boats. Fgn. sales: 65% of tot. Has abt. 186,335 employees. Renault acquired a 44.3% equity stake, while Nissan holds a 15% stake in Renault. Chairman, Pres., and CEO: Carlos Ghosn. Inc.: Japan. Address: 17-1, Ginza 6-chome, Chuo-ku, Tokyo 104-23, Japan. U.S. address: 18501 South Figueroa St., Gardena, CA 90248. Telephone: 310-771-3111. Internet: www.nissanmotors.com.

Nissan Motor's engine sputtered in the first quarter (fiscal year ends March 31, 2009). The company suffered a double-digit earnings decline, though it was largely the result of currency and provisions related to leased vehicles. The stock price, in turn, has fallen over 17% since our May review. Given the pressure the shares of its American counterparts are under, it seems investors may have a little more patience for Nissan at this juncture. Whether that continues to hold true, however, remains to be seen. Indeed,

The company is likely headed in reverse this year. Nissan's U.S. sales did increase in July by 8.5%, to 95,319 vehicles, and it was the only car maker to record a gain. Still, the North American automotive market continues to worsen, as overall economic fears and inflated gas prices have scared many drivers off the lots. As a result, production cutbacks are likely to persist in the U.S., while higher raw material prices and incentive costs are also a concern. All things considered, Nissan appears headed for a share-earnings setback of around 25%, to $1.55, this year.

A robust new vehicle lineup should help revive showrooms. Nine all-new vehicles are set to launch in fiscal 2008, as part of the plan to roll out 60 over the next five years. Vehicles with fuel-efficient four-cylinder engines should be the primary focus, while Nissan is also joining in the electric/hybrid race.

The issue should appeal to investors seeking long-term recovery potential. The stock does hold a below-average rank for relative year-ahead price performance, as the industry's overall tumult will likely weigh on most auto-related shares. That said, Nissan continues to build for the future, which includes a sizable pipeline of new vehicles and an expanding international presence. Further, the company's U.S. market share remains on the rise, reaching 8.4% in July, its highest monthly level in almost 30 years. This all seems to support our long-term projections of annual share-net growth in the 20%-25% range. The stock is currently trading slightly above a five-year low. Thus, investors may want to take advantage now, as these shares offer substantial appreciation potential for the pull to 2011-2013.

BUSINESS: Norfolk Southern Corp. is the holding company formed by the merger of Norfolk & Western Railway Co. and Southern Railway on 6/1/82. Acquired 58% of Conrail on 6/1/99. Operates about 21,500 road miles of track in 22 states and Ontario. Sold North American Van Lines, 3/98. Coal, coke, and iron ore, 24% of '07 revenues; chemicals, 11%; paper, clay, and forest prods., 9%; intermodal, 20%; auto, 10%; other, 26%. '07 labor costs: about 27% of rev. '07 depr. rate: 2.6%; '07 oper. ratio: 72.5%. Has about 30,800 employees; Officers & Directors own .8% of common stock (3/08 Proxy). Chmn., Pres. & CEO: Charles W. Moorman. Inc.: VA. Address: Three Commercial Place, Norfolk, VA 23510. Telephone: 757-629-2600. Internet: www.nscorp.com.

Revenue for Norfolk Southern increased to a record high during the first quarter. The company registered $2.5 billion at the top line during the interim despite economic weakness, which typically tempers volume at the railroad. Norfolk attributes some of the gains to fuel surcharges, which have lifted rates for merchandise and commodities. A surge in overseas demand also helped. These factors ought to continue to outweigh reduced domestic volume, lifting annual revenues to over $10 billion this year.

Intermodel traffic remains healthy. Container revenues rose 5% during the first quarter, even as total volume declined. The company experienced better pricing and a more favorable merchandise mix. High export demand has also driven intermodal revenue.

Domestic transportation is likely to falter. Unit volume decreased 5% during the first quarter, reflecting economic struggles in the housing and automotive markets. A lost contract also hurt revenue. Overall weakness is likely to persist, although a boost in coal production may provide a spark to rail traffic later in the year.

Despite cost pressure, the company's operating performance has held steady. Improved railway efficiencies have kept margins intact. In the first quarter, the company was able to offset heavy legal expenses related to the Graniteville accident a few years back. Moving forward, the increased price of diesel may eventually take a toll on overall profitability, as hedging positions decline. This may result in the operating margin narrowing a bit this year. We target earnings of $4.10 a share in 2008, which represents growth of roughly 10%. In 2009, the bottom line may advance at a quicker pace.

Norfolk Southern shares are ranked to outperform the market in the coming six to 12 months. Good management and a strong operating model should lead to higher profits especially if domestic economic conditions firm. Although we forecast solid bottom-line growth to 2011–2013, share-price appreciation potential over that period is below average at the recent quotation.

BUSINESS: Novo Nordisk is a major producer of insulin and diabetes-care products, as well as treatments for coagulation disorders, and hormone replacement therapy products. World market share for insulin; 52%. 2007 sales by region: European Union, 39%; North America, 32%; Japan, 11%; other, 18%. Labor costs, 32% of sales; Research and development, 17.2%. Employees worldwide: 25,515 (49% Denmark). Novo Nordisk Foundation owns 25.5% of total share capital; (2007 Annual). Chairman: Mads Ovlisen. Pres. & CEO: Lars Rebien Sorensen. Inc.: Denmark. Address: Novo Alle, 2880 Bagsvaerd, Denmark. U.S. Address: 100 College Road West, Princeton, New Jersey 08540. Telephone: 609-919-7937. Internet: www.novonordisk.com.

Novo Nordisk continues to report solid growth in its Diabetes Care division. On a currency-neutral basis, operating profits for the segment were up 34% in the first quarter, to $354 million, reflecting good leverage off a sales increase of 10%, to $1.7 billion. The bulk of the advance was driven by continued momentum in modern insulins, sales of which rose 25%, to $810 million. These man-made insulins now make up 57% of Novo's total insulin sales, compared to 49% in the prior-year period. The company's biggest product in this category is *NovoRapid*, with sales of $382 million in the quarter. On the development front, Novo recently filed for U.S. and European regulatory approval for liraglutide, a new once-daily analogue for Type 2 diabetes, with a Japan filing due in the third quarter.

Prospects for further expansion appear stronger outside of the company's European base. Novo retains the number-one position in the global insulin market, with 52% of market share on a volume basis. Although it holds a smaller percentage of the U.S. market compared to Europe (42% vs. 56%), growth here has maintained a faster pace (27% vs. 6% in the latest quarter). China, too, holds promise for sustained sales growth.

The Biopharmaceuticals division continues to turn in decent performance. Sales of hemostatic agent *NovoSeven*, the largest component of the segment, were up 2% in the March interim, to $305 million. More so than in Diabetes Care, however, adverse currency effects masked underlying strength in the business. In local currencies, sales were up 10% in the period, largely due to increased usage in congenital bleeding disorder cases. Novo recently received European Commission approval for a room-temperature-stable version of *NovoSeven*, which allows for faster, more convenient treatment in bleeding episodes. A European launch is scheduled for the second half. Meanwhile, U.S. and Japanese approvals are pending.

These shares remain an attractive selection for momentum investors. However, following the ADR's strong price rise in recent years, appreciation potential out to 2011–2013 now falls below the *Value Line* median.

BUSINESS: Newell Rubbermaid Inc. markets and manufactures namebrand consumer products to department/specialty stores, warehouse clubs, and other volume purchasers. Multi-product offerings are divided into four segments: Cleaning & Org. (33% of '07 net sales), Office Prod. (32%), Home Fash. (15%), Tools & Hardware (20%). Products include: storage systems, cookware, glassware, strollers, children's toys, window furnishings, and writing instruments. Has about 22,000 employees. T. Rowe Price owns 8.8% of stock; Wellington Mgmt, 11.4%; Goldman Sachs, 8.1%; Off./dir., less than 1.0% (3/08 proxy). Pres./CEO: Mark D. Ketchum. Inc.: DE. Address: 10 B Glenlake Parkway, Suite 600, Atlanta, GA 30328. Tel.: 770-670-2232. Internet: www.newellrubbermaid.com.

A more difficult operating environment has taken its toll on Newell Rubbermaid's bottom line. Indeed, the household goods conglomerate's share net fell almost 9% during the first quarter. Further, management recently lowered its full-year guidance due to rising inflation and the struggling domestic market environment. And, though recent Aprica and Technical Products acquisitions should bolster top-line growth, they may be dilutive to earnings per share. All told, we think that because of these combined factors, profits will fall 7% in 2008.

It should see some relief from recent initiatives further down the road. Even though we look for Newell to post weak year-over-year earnings comparisons until the back half of 2009, management's efforts should help position the company for long-term growth. In order to counter inflationary input prices, NWL has worked to improve its cost structure. Indeed, its companywide program "Project Acceleration" should deliver, in total, $150 million in cost savings by the end of 2009. In addition, the company will likely evaluate its product pricing to better cover rising raw material costs. Product innovation and branding remains a high priority, even during leaner times. NWL expanded its core business, and extended its Commercial Products segment, with the introduction of a commercial vacuum and a motorized tilt truck to its offerings. It is also working to widen its geographic footprint to offset weaker American business.

These shares are ranked to underperform the broader market averages in the coming months (Timeliness: 4). NWL stock recently fell to a 52-week low. There is currently an IRS investigation under way at the Atlanta-based company, regarding allegations that Newell entered into a $450 million deal with the Dutch Rabobank Group to avoid paying taxes. And this, coupled with macroeconomic struggles, has put this issue out of Wall Street's favor. The pullback in price has significantly widened this issue's 3- to 5-year capital gains potential. Still, this issue possesses a low score for Price Growth Persistence. And, in our opinion, it is best suited for intrepid accounts with a long-term bent.

Orly Seidman *July 4, 2008*

BUSINESS: New York Community Bancorp is a multi-bank holding company with two primary subsidiaries. Operates 179 savings bank branches spread throughout the five boroughs of New York City, Long Island, Westchester County, and seven counties in New Jersey. Also operates a 38-branch commercial branch network serving customers in Manhattan, Queens, Brooklyn, Westchester County, and Long Island. Acquired Richmond County Fin'l, '01; Roslyn Bancorp, '03; Long Island Fin., '05; Atlantic Bank, '06; PennFed Fin., 4/07; Synergy Fin., 10/07. Has 2,834 employees. Officers & directors own 6.7% of stock; Fidelity, 6.1% (4/08 Proxy). Chairman, Pres. & CEO: Joseph Ficalora. Address: 615 Merrick Ave., Westbury, NY 11590. Tel.: 516-683-4100. Internet: www.myNYCB.com.

New York Community Bancorp stock has held up better than most in the downtrodden financial sector. That's mainly owing to the bank's stellar credit quality. The focus on lending to apartment owners with buildings in the densely populated boroughs of New York City has meant no need to record a loan loss provision in recent history. That's in stark contrast to the major difficulties that many single-family residential lenders are enduring. The shares have been mostly stable as a result, as some investors wishing to maintain an allocation in the sector have switched into NYB stock. The high dividend yield here is another plus.

The company recently issued equity that brought in around $340 million. In May, a stock offering of 17.8 million shares for $19.35 apiece was well-received by the investment community. Most of the proceeds were used to pay off higher-cost borrowings. (We're excluding a related aftertax charge of around $0.40 a share from our second-quarter 2008 estimate.) Margins are expected to improve following the move. But given that overall weakness in the economy may affect volume, we are leaving our earnings estimates unchanged.

It's been tough making bottom-line headway. Revenue gains have been offset by higher expenses and an increased share count lately. And, although some of the irrational loan pricing that was prevalent in the market has gone away, there still don't appear to be any easy pickings. Balance sheet growth may be modest in the next year or two. Ideally, New York Community would like to pick up more commercial loans to complement its core multifamily business. The company expanded its commercial lending capacity through acquisitions in recent years, but may not be able to take full advantage of the buildup until a better economic backdrop takes hold.

The stock continues to be neutrally ranked for Timeliness in the absence of a sustained pickup in earnings. The appeal here is primarily for good current income. The dividend isn't yet covered by earnings, but cash flow appears sufficient to maintain the payout. We estimate that dividend coverage will improve in the coming months, as well, as a result of lower funding costs.

Robert Mitkowski, Jr. *July 18, 2008*

BUSINESS: Realty Income Corporation, which was formed through the merger of 25 public and private partnerships, commenced operations as a real estate investment trust on August 15, 1994. As of December 31, 2007, the company owned 2,270 properties located in 49 states containing approximately 18.5 million leasable square feet, with a 97.9% occupancy rate. In addition, Realty Income's wholly owned subsidiary, Crest Net Lease, Inc., owned 30 properties, as of the above date. Has 75 employees. Officers and directors own 2.6% of common stock (3/08 proxy). Chairman: William E. Clark, Jr. Chief Executive Officer: Thomas A. Lewis, Inc.: DE. Address: 220 West Crest Street, Escondido, CA 92025. Tel.: (760) 741-2111. Internet: http://www.realtyincome.com.

Realty Income will likely slow down its acquisition activity this year. The protracted real estate slump may be here to stay, for now, due to creeping unemployment, waning consumer confidence, and the threat of a recession looming. Too, lofty asking prices for choice properties and the dearth of financing are also taking a toll on spending. Consequently, after rising at a rapid clip over the past few years, portfolio growth will probably settle at 9% and 5%, respectively, in 2008 and 2009.

Revenues and funds from operations (FFO) may be a mixed bag over the next few years. Realty's portfolio has grown nearly 30% over the last three years, which may help offset the slower pace of growth that's likely to occur during the current credit crunch. Although revenues will probably advance 9%–10% and 6%–7%, respectively, this year and next, FFO in 2008 may be flat with 2007's tally, before returning to form in 2009.

The company's disciplined approach is an asset. The balance sheet is moderately leveraged (49% debt-to-capital), and Realty carries no mortgage debt on any of its properties, leaving it well positioned to meet its obligations, and should make its performance less volatile.

Realty's diversified portfolio should serve it well over the long haul. The company has accumulated nearly 2,400 properties across 49 states, limiting its exposure to a downturn in any one market. And its holdings are leased to 119 retail chains spread over 30 industries, with no single industry comprising over 25% of its portfolio. Another factor is the company's net-lease agreements, where the tenant pays a portion of operating expenses, cutting down on costs and widening margins.

Untimely Realty Income shares offer subpar capital gains potential over the pull to 2011–2013. Too, the stock is ranked to trail the broader market over the next six to 12 months. However,

The stock continues to feature a stellar dividend yield, which may be of interest to income-minded investors. Furthermore, the company, which pays a dividend monthly instead of quarterly, has increased the payout fractionally every month for 10 years, making this a good selection for conservative accounts.

BUSINESS: Owens & Minor, Inc. distributes about 150,000 brand name medical and surgical supplies from 41 warehouses to acute care hospitals and hospital-based systems nationwide (approximately 4,000 customers). Deals mainly with acute care hospitals and integrated healthcare networks (95% of '07 sales). Acquired Stuart Medical in 5/94; Medix, 7/99. Wholesale drug div. discont. '91. Depreciation rate in 2007: 22.1%. Has 4,800 employees. Barclay's Global Investors owns 5.1% ; Wellington Management, 6.2%; T. Rowe Price, 5.8%; Vanguard, 5.1%; Officers/Directors, 4.2% (3/08 proxy). Chairman: G.G. Minor III. CEO: Craig Smith. Incorporated: V.A. Address: 9120 Lockwood Blvd., Mechanicsville, V.A. 23116. Tel.: 804-723-7000. Internet: www.owens-minor.com.

We are increasing our share-net estimates for Owens & Minor by a nickel, for 2008 and 2009. Top- and bottom-line advances during the second quarter of almost 7.0% and 27.0%, respectively, are signs that OMI is relatively sheltered from economic downturns. We expect strong demand for OMI's products to continue to facilitate robust sales and earnings advances for the rest of the year. Inflationary hikes, like rising fuel costs, will likely thwart performance a bit, but we do not expect top- and bottom-line growth trends to run out of steam soon.

The Healthcare environment has ample room for OMI to expand. OMI is gaining ground on claiming former McKesson customers (some of whom opted to sever ties with McKesson after it was acquired by Owens & Minor last year). By expanding relationships, it is augmenting the distribution base by adding to its customer spread. Also, OMI's private-label *MediChoice* has been getting some attention, as these medical and surgical products provide a low-cost alternative to similar brand-named pricier items.

Owens & Minor is working feverishly to keep costs at bay. SG&A expenses were relatively flat, year over year. Manufacturer price increases and a lower interest rate, coupled with lower-than-expected debt levels, enhanced OMI's operating leverage during the June quarter.

But expenses can still escalate and dampen the share-net horizon. Efficiency and infrastructural investments could possibly escalate operating costs in the latter half of this year as some of these plans were delayed up until now. This, in turn, may place capital-intensive burdens on OMI. Unusually high numbers of facility shifts have hampered this company before, and can reoccur, thus driving expenses on an upward trajectory.

This timely stock is well-suited for short-term investors. OMI is a heavyweight in the U.S. hospital supply market and, give or take slight variants like reimbursement changes, still has solid growth prospects. However, capital appreciation potential for the 3- to 5-year period is well below average, as we believe the current stock price discounts our earnings growth expectations.

BUSINESS: Old National Bancorp is a regional bank holding company with 120 banking offices and 260 ATM machines primarily in Indiana, Illinois, & Kentucky. Loan portfolio breakdown as of 12/31/07: commercial, 36%; commercial real estate, 27%; residential real estate, 11%; consumer, 26%. Net loan losses, .44% of average loans in 2006. As of 3/31/08, loan loss reserve was 1.54% of loans; nonperforming assets & past due loans, 1.58% of loans & other real estate owned. As of 3/31/08, had 2,478 full-time equivalent employees. Officers & directors own 4.3% of common stock (Proxy, 3/08). Chairman: L.E. Dunigan. President & CEO: R.G. Jones. Inc.: IN. Address: 1 Main Street, Evansville, IN 47708. Telephone: 812-464-1366. Internet: www.oldnational.com.

Unusual items reduced Old National's March-quarter earnings by a net $0.02 a share. The company made a $22 million provision to its loan loss reserve that included $17 million for loans involving possible misconduct by a loan officer. (We don't normally view loan loss provisions as unusual, but this situation may be out of the ordinary). The $17 million was partly offset by sizable securities gains, a gain on the redemption of Visa shares, and a $6.6 million tax liability reversal.

There were some positive core operating trends. Old's net interest margin widened, since its balance sheet was positioned to benefit from interest-rate reductions early this year. Insurance revenues were seasonally strong and expenses fell.

Excluding the loans involving possible misconduct, Old's credit quality hasn't deteriorated as much as many other banks. The loans being investigated accounted for $23 million of the $29 million increase in Old's nonaccrual loans (a third of total nonaccruals) in the March period, with two commercial real estate loans contributing the rest of the increase. Old never participated in the riskier types of lending that some other banks engaged in, and it apparently tightened its standards following a surge of bad loans in 2003. Old's problem assets probably will rise further, due to economic stress in the Midwest, but they should be manageable.

We figure 2008 earnings will come in toward the mid-point of management's $1.13-$1.19-a-share range. Weak economic activity in Old's midwestern region probably will restrain loan growth and revenues. Old's margin may also have to give back some of its recent improvement, which might limit the increase in net interest income. Earnings in the opening period of 2009 will miss the securities and Visa gains and the tax reversal that boosted results in the March quarter of this year, but the loan loss provision should decline.

Thus far in 2008, Old National shares have held up better than most bank issues. The stock doesn't have as much 3- to 5-year recovery potential as most of the bank sector. The dividend yield is attractive, but further increases in the payout may await a pickup in earnings.

Theresa Brophy *June 20, 2008*

(A) Based on diluted earnings per share. Excludes income (loss) from discontinued operations: '98, ($0.17); '99, $0.09; '05, ($0.22). BUSINESS: Oracle Corporation develops, manufactures, markets, distributes, and services database and middleware software, and applications software that helps customers manage their businesses. 2008 revenues as a percent of the total: New software licenses, 34%; software license updates and product support, 46%; services, 20%. '08 dep. rate, 7.4%. Foreign sales were 57%, pretax profits 50% of total in 2008. Research & Development: 12% of '08 sales. Has 84,235 employees. Lawrence J. Ellison owns 24.6% of stock, other Officers & Directors 0.5%, Capital Research & Management, 9.9% (9/07 proxy). Chairman: Jeffrey O. Henley. CEO: Lawrence J. Ellison. Inc.: DE. Add.: 500 Oracle Parkway, Redwood City, CA 94065. Tele.: 650-506-7000. Internet: www.oracle.com.

The broad economic picture doesn't look too good for Oracle. The economic problems in the U.S. are well documented, and could well lead to a slowdown in spending by businesses on all but the most important needs. Those problems now are almost surely spreading to Europe. And even the fast-growing countries, such as China and India, which many tech businesses had been relying on to buy products during an economic downturn stateside, aren't likely to emerge unscathed.

Nevertheless, it appears the company will continue to do well. Oracle did note the possibility of some slowing of demand late in its February quarter, but that appears to mainly have resulted from customers taking longer to close some large deals as more people become involved in the decision-making process. Importantly, the company closed out fiscal 2008 (ended May 31st) in fine fashion, and reports the pipeline of potential business is in good shape heading into the new fiscal year.

Oracle is well positioned to continue to boost sales and earnings. Its string of acquisitions over the last few years has broadened the product line, and brought new customers aboard, who then can be sold other products from Oracle's portfolio. The acquisitions also add to the stream of very profitable, annuity-like maintenance revenues, which provide a good deal of stability in good times or bad. The company also has been building up its portfolio of applications for specific industries. That allows Oracle to offer customers a complete suite of products that work well together and require much less of an investment in costly consultants to get applications from different vendors up and running together. Given these pluses, and the likelihood that the company will continue to roll out further product upgrades (Oracle is scheduled to make a major database announcement in September), we look for share net to advance at a strong double-digit annual rate through our 3- to 5-year investment horizon.

Oracle shares have a good deal of appeal. They are ranked to stay a step ahead of the market in the year ahead, and have above-average appreciation potential for the haul to 2011-2013.

BUSINESS: O'Reilly Automotive, Inc. supplies automotive aftermarket parts, tools, equipment, and accessories to both "do-it-yourself" customers and professional mechanics or service technicians. Operates stores in Texas, Missouri, Oklahoma, Kansas, Iowa, Arkansas, Louisiana, Nebraska, and Illinois. Acquired Hi-Lo Automotive, 1/98. Has 1,830 stores (12/07), about 23,575 employees. Officers and directors own 6.9% of common stock; George S. Loening, 6.2%; Capital Research, 6.9%; T. Rowe Price and Associates, 8.6% (3/08 Proxy). Co-Chairman and Chief Executive Officer: David E. O'Reilly; Co-Chairman: Larry P. O'Reilly. Inc.: MO. Address: 233 South Patterson, Springfield, MO 65801. Telephone: 417-862-6708. Web: www.oreillyauto.com.

O'Reilly Automotive is being impacted by a weak economy. The company reported a comp-sales increase during the first quarter. Still, customer traffic weakened toward the end of the period and into the second quarter, likely tempering spring and summer revenues a bit. Much of the business has been for necessary repairs, such as batteries. Less required maintenance has been deferred to compensate for higher gas and food prices. We anticipate that this trend will continue as the macroeconomy struggles and energy prices remain high. We still target sales growth of 13% this year, thanks mainly to new stores.

Profitability has declined a bit for the company. The gross margin has increased thanks to a more favorable product mix. However, the operating margin has been narrowing as O'Reilly feels the pinch from inflated expenses from new stores. Moving forward, acquisition costs and renovations may continue to pressure profitability. We target earnings of $1.75 a share in 2008, which represents growth of 4%. In 2009, earnings may grow at a double-digit pace as operating conditions improve.

O'Reilly completed its tender offer for CSK. The company acquired over 90% of the stock through a cash and stock deal worth over $500 million. Stockholders exchanged each CSK share for .4285 shares of O'Reilly Automotive and $1 in cash. CSK is a distributor of parts to garages, repair shops, and fleet maintenance organizations. The acquisition gives O'Reilly a larger presence in the wholesale market. We believe this deal augurs well for the company over the long term, as it increases O'Reilly's market share and should yield operating synergies.

We forecast decent growth out to 2011–2013. O'Reilly's operating model has proven to be very successful over the years. We believe that earnings once again will grow at a consistent double-digit pace as the domestic economy improves.

The stock is ranked to mirror the broader market averages. These shares have worthwhile appreciation potential to the 3- to 5-year time frame based on our earnings assumptions.

Garrett Sussman *August 8, 2008*

BUSINESS: Occidental Petroleum produces and markets crude oil and natural gas; manufactures industrial chemicals, plastics & fertilizers; transports natural gas through pipelines. Net reserves as of 12/31/07: oil, 2.22 bill. barrels; gas, 3.84 bill. cubic ft. Estimated pretax present value of 2007 reserves: $103.0 bill. 2007 depreciation rate: 6.0%. Acquired Placid Oil, '94; Elk Hills, '98; Altura Energy, '00; Vintage Petroleum, '06; and others. Sold IBP, '91; HDPE Chemical business, '95; MidCon, '97; and others. Has around 9,700 employees. Officers and directors own 1.8% of common stock (3/08 proxy). Chairman & Chief Executive Officer: Ray R. Irani. Inc.: Delaware. Address: 10889 Wilshire Boulevard, Los Angeles, California 90024. Telephone: 310-208-8800. Web: www.oxy.com.

Occidental Petroleum's operating performance has been nothing short of spectacular. That can be attributed primarily to the core exploration and production unit, which is benefiting partially from record crude oil prices and higher realizations for natural gas. What's more, output is being boosted by the Dolphin Project in the United Arab Emirates, which came on stream during the second half of last year. Repurchases of common stock have been another plus. Meanwhile, the chemical segment is enjoying higher margins for caustic soda, plus increased polyvinyl chloride and vinyl chloride monomer volumes exported to non-U.S. dollar-denominated economies. Escalating feedstock costs are providing somewhat of an offset here, however. At this juncture, Occidental's consolidated share net stands to surge to $9.05 in 2008 (which would be a record). For 2009, we look for the bottom line to approximate the 2008 target, assuming the generally favorable business environment persists.

Certain assets from the oil and gas division were reclassified to form a new segment. The midstream, marketing and other unit processes, transports, and markets oil, gas, and carbon dioxide, as well as generates electricity. Management contends that this move was prompted by the addition, over the past two years, of the Dolphin Project pipeline, a common carrier pipeline in the Permian Basin, and some gas processing plants. In all, we think this is a worthwhile sideline.

The quarterly common stock dividend was recently hiked 28%, to $0.32 a share, made possible by the company's cash-generating power. We anticipate additional boosts in the distribution, too, although the dividend yield is well below levels prior to the stock's breakout.

The equity has been a favorite of Wall Street. We attribute that primarily to Occidental Petroleum's excellent performance to date. Consequently, these shares have earned a Timeliness rank of 2 (Above Average).

But much of the good news appears to be factored into the present quotation, causing long-term capital appreciation potential to fall well below the *Value Line* median.

BUSINESS: Penske Automotive Group, Inc. is the second largest automotive retailer in the U.S. It sells new and used vehicles, finance and insurance products, and replacement parts, and offers maintenance and repair services. It operates 170 franchises in 19 states and Puerto Rico and 145 franchises located in Europe. Employs about 16,000. Penske Corp. owns 38.7% of stock; Mitsui, 16.3%; Baron Capital, 9.9%; Barclays Global, 6.5%; Dimension Fund, 5.4%; officers & directors, 40.9% (includes shares beneficially owned by Penske Corporation and Penske Capital Partners) (3/08 proxy). Chairman & CEO: Roger S. Penske. Incorporated: DE. Address: 2555 Telegraph Road, Bloomfield Hills, MI 48302. Telephone: 248-648-2500. Internet: www.penskeautomotive.com.

Penske Automotive Group had some problems in the June interim, following a fast start. The retail market was very challenging during the second quarter. Higher fuel prices resulted in a shift in consumer demand, that caused margins to narrow a bit from our expectation. Even so, the company, and we, still look for a good share earnings gain in 2008, which should be followed by a further gain in 2009.

The company has depended heavily on foreign sales. The domestic automotive industry may be slumping, but this has not stopped Penske from sustaining growth. In fact, over 90% of the company's revenue comes from foreign- and premium-vehicle sales, which has so far protected the company from the dismal U.S. market. However, it has been evident lately that the trends we have been seeing in 2008 may be changing. For example, European auto sales declined in May and June, and sales growth in China is moderating, which may also hurt revenues in one of the world's largest developing countries. Given these two factors, we expect this market to be pressured in 2008.

Penske made a few acquistions in the second quarter, after a quiet March interim. The company decided to utilize some of its borrowing capacity in the June interim, acquiring a 9% limited partnership interest in Penske Truck Leasing Company (PTL), a leading global transportation services provider. We expect this deal to broaden Penske's international market, as PTL operates over 1,000 locations in North America, South America, Europe, and Asia. This transaction, made with GE Capital, cost $219 million and should boost Penske's earnings in 2008 as well as in the long term. The company also acquired a California-based BMW dealership that is expected to generate an additional $125 million in revenue a year.

These neutrally ranked shares may interest patient investors. The stock price has declined over the past few months due to weakness in the automotive industry. Despite that, the company has shown the strength to weather the storm. We believe this stock's appreciation potential over the 3- to 5-year pull is above average.

BUSINESS: Paychex, Inc. is primarily engaged in providing computerized payroll-accounting services, salary deposit services, automatic payroll-tax payment and tax return filing services, and human-resource products and services to more than 572,000 businesses, mostly small- to medium-sized (10 to 200 employees), nationwide. The company operates 100 offices in 36 states and the District of Columbia. 2007 *depreciation rate:* 13.4%. Has about 12,200 employees. B. Thomas Golisano owns 9.9% of common stock, *Officers and Directors (incl. Golisano),* 10.4% (8/07 Proxy). Chairman: B. Thomas Golisano. President and CEO: J. Judge. Inc.: DE. Addr.: 911 *Panorama Trail South,* Rochester, NY 14625-0397. Tel.: 585-385-6666. Internet: www.paychex.com.

Paychex's top line has become sluggish. Revenue increased about 7% during the fourth quarter of 2008 (year ended May 31st). Although this was a respectable advance, it was slower than the increases posted in prior quarters. Some of the weakness was likely due to a mixed economy. Results at the Payroll services segment, which accounts for about 70% of the top line, have been hurt by rising unemployment levels and a competitive price environment. This was partially offset by continued steady demand for Paychex's ancillary product offerings and human resources products.

Moreover, Paychex's business is being hurt by lower interest rates. Interest on funds held for clients declined about 15% during the fourth quarter, and 2% for the full year. We expect results at this operation to decline about 25%-30% in the year ahead. In addition, investment income weakened dramatically during fiscal 2008. Given the current negative outlook, we expect investment income to remain weak for a while.

Nonetheless, well-controlled expenses have helped to lift the bottom line. General and administrative expenses were reduced by about 9% during the fourth quarter, which has helped to keep the operating margin relatively wide. We expect additional cost-cutting measures, such as reduced sales and marketing efforts, in the year ahead.

The business environment ought to remain challenging. Paychex reported a slight increase in the number of clients that are going out of business. In addition, there will probably be fewer small businesses starting up. This will likely make it more difficult for Paychex to add customers, raise its prices, or sell additional services. Consequently, we have reduced our earnings estimate by $0.05 per diluted share for fiscal 2009.

These neutrally ranked shares offer investors a healthy dividend yield. The recent increase in the quarterly dividend is a plus. The issue also currently trades at a price-to-earnings multiple that is considerably lower than its historic average. Consequently, our projections indicate that these shares offer good appreciation potential for the 3- to 5-year horizon.

Adam Rosner *August 22, 2008*

(A) Fiscal year ends May 31st.
(B) Primary earnings until 1996, diluted thereafter. Quarterly egs. do not sum due to rounding. Next earnings report due late Sep.
(C) Dividends historically paid in mid-February, May, August, and November. ■ Div'd reinvestment plan available.
(D) In millions, adjusted for stock splits.
(E) Excludes net ENS investments less related liabilities.

On April 16, 2007, People's United Financial completed its stock offering in connection with the second-step conversion of People's Mututal Holdings and People's Bank. People's and Holdings converted from a mutual holding company structure to the stock holding company structure. Shares were issued at $20 a share, and each outstanding share of People's common was exchanged for 2.1 new shares of People's United Financial common stock. Ryan Beck & Co. served as the underwriter.

BUSINESS: People's United Financial is a holding company containing the former People's Bank and Chittenden Corp., acquired January 1, 2008. Provides a full range of financial services to individual, corporate, and municipal customers, including lending, cash management, banking, brokerage, equipment leasing, asset management, insurance, and related services. Has over 300 branches throughout the Northeast, including 79 traditional branches, 75 supermarket branches, and over 250 ATMs. Offs./dirs. own 1.5% of common; no 5% holders (3/08 proxy). Has about 12,000 stockholders, 2,400 Employees. Chmn.: George Carter; President & CEO: Philip Sherringham. Inc.: CT. Addr.: 850 Main St., Bridgeport, CT 06604. Tele.: 203-338-7171. Net: www.peoples.com.

People's United Financial is integrating the Chittenden Corporation acquisition. The deal, which closed on January 1st, significantly hurt March-period results. The purchase caused a dramatic increase in loans and deposits, and produced integration costs that limited share net.

People's is sitting on almost three billion dollars in cash, which it obtained from the April, 2007 second-step conversion. Redeployment of the funds is critical, as the cash hoard represents considerable earnings power. We expect additional acquisitions in 2008, as People's looks to solidify its presence in the Northeast. Too, the board recently authorized a 5% stock repurchase plan, equal to about 17 million shares, and boosted the dividend to $0.15, from $0.13.

The large cash position is impacting earnings. Indeed, rate cuts by the Federal Reserve again caused interest earned on the large cash hoard to decline, depressing March-period margins. That said, the Fed has recently hinted at the possibility of raising rates in an attempt to quell emerging inflationary pressures, which would likely improve People's profit margins. Still, share-net prospects are challenged because the cash accounts for over 15% of earning assets, even as the share count will likely decrease via buybacks.

The Chittenden acquisition is influencing loan quality and composition. The buy raised nonperforming assets (NPAs) from 0.29% to 0.50% of total assets, and the loan mix is now more commercially oriented. Commercial loans account for 57% of the total, versus 45% a year ago. Residential mortgages remained at 14%, and home equity/other fell from 41% to 29%. The majority of the commercial loans are secured by real estate.

We would stay on the sidelines for now. In addition to the well-publicized difficulties facing the banking industry, the many ongoing changes at People's suggest more uncertainty than usual. Former longtime CEO John Klein has been replaced, the Chittenden buy has raised NPAs and altered the composition of the loan portfolio, and the large cash balance must be deployed in an appropriate, timely, and profitable manner.

BUSINESS: Patterson Companies, Inc. operates three units. Dental Supply (74% of FY'07 sales) supplies dentists, laboratories, and institutions in North America; and provides various services, such as equipment installation and maintenance & repair. Veterinary Supply (14%) supplies veterinary clinics in the eastern U.S. Rehabilitative Supply (12%) distributes rehabilitative medical supplies and assistive products globally. Employs about 6,580. Officers & directors own 8.1% of stock; DE Charter Guarantee & Trust, 17.6%; FMR, 7.2%; Bank of NY, 5.8% (8/08 proxy). Chairman: Peter L. Frechette. President & CEO: James W. Wiltz. Incorporated: MN. Address: 1031 Mendota Heights Road, St. Paul, MN 55120. Telephone: 651-686-1600. Internet: www.pattersoncompanies.com.

Patterson Companies stock currently trades at a tempting valuation. Owing to the likelihood of slowing growth, this issue was sold off in early 2005. Late last year, these shares appeared to be building up some momentum, but disappointing October- and January-quarter earnings reports turned investor sentiment sour. The equity's forward Price/Earnings ratio is now roughly 17. This figure is slightly higher than the market average, but well below the issue's historic valuation. In addition, while Patterson's growth is indeed slowing, it is far from stalling. In fact, we think this fiscal year will be a good one. All told, the currently low P/E ratio, coupled with prospects for solid share-earnings growth, gives this stock some appeal. And although the stock is pegged to run in tandem with the broader market in the year ahead (Timeliness: 3), its 3- to 5-year capital gains potential is good.

The company likely got off to a decent start this fiscal year (began April 27th). We think this distributor of dental and other medical supplies posted 8% top-line growth in the July interim. Share earnings probably rose 14%, to $0.40. (Management was set to announce results shortly after we went to press with this Issue.) Sales of consumable dental supplies likely increased at a respectable clip, and dental equipment and software volume was expected to rebound in the interim. Elsewhere, veterinary and rehabilitation revenues probably rose at a near double-digit rate. Bottom-line growth was likely on a par with sales growth, but a large stock repurchase helped boost share net.

We do not expect the sluggish economy to slow down Patterson much, if at all. Granted, more Americans will probably be forced to live with untreated cavities, since about one in three does not have a dental plan and the prices for gas and groceries are rising. However, an aging population, which needs more dental care and can probably better afford to pay for it, should offset the economic pinch. Moreover, the supplier base remains highly fragmented, which opens the door for larger distributors like Patterson to snap up more market share. Finally, the company is rekindling growth by offering trade-in programs, boosting incentives, etc.

Erik A. Antonson *August 29, 2008*

(A) Fiscal years end last Saturday in April of the following year.
(B) Basic EPS though FY'02; diluted thereafter. EPS may not sum due to rounding. Excludes effects of accounting change: FY'03, 5¢. Next earnings report due late November.
(C) Includes intangibles. In FY'07: $762.9 million or $5.47 a share.
(D) In millions, adjusted for stock splits.

BUSINESS: Pediatrix Medical Group, Inc. provides physician management services to hospital-based neonatal intensive care units administering medical care to newborn infants and to hospital-based pediatric intensive care units providing medical care to critically ill children. Since 1995, acquired multiple physician practices. Acquired Magella Healthcare 5/01. Has relationships with more than 1,070 physicians, 1,315 clinical professionals, and 1,525 other employees, in 32 states. Officers & directors own 2.8% of common stock (3/08 proxy). Chairman: John K. Carlyle. President and Chief Executive Officer: Roger J. Medel, M.D. Inc.: FL. Address: 1301 Concord Terrace, Fort Lauderdale, FL 33323. Telephone: 954-384-0175. Internet: www.pediatrix.com.

Profit-related disappointments have taken a toll in recent months on the shares of Pediatrix Medical Group. On May 8th, the provider of physician services management announced March-quarter earnings that were a penny per share below Wall Street's consensus estimate. The company also indicated that management's previously offered full-year guidance of $3.35–$3.45 might prove optimistic, citing below-trend growth in same-facility neo-natal intensive care unit (NICU) volume. Investors responded harshly, pushing PDX stock down 14% that day. The shares tumbled another 9% on May 27th, after Pediatrix lowered profit expectations for the June quarter from $0.85–$0.87 to $0.77–$0.80 and withdrew its guidance for the year. In all, PDX shares are off 23% since the end of April.

We have lowered our bottom-line estimates for 2008 and 2009. Although share net in the first quarter was up 16%, year over year, it was two cents below our $0.69 estimate. Growth in same-unit NICU volume was low, at a mere 1.9%, compared with the historical norm of 3%–5%. Even more significant, according to management, volume was down approximately 2% in the first six weeks of the current quarter, which explains the May 27th action. The correlation between economic strength and trends in birth rate is unclear, and birth rates have historically been volatile. So, essentially, it's far from clear whether the recent softness will prove ephemeral or more long lasting. That said, our revised share-net figures for this year and next are $3.20 and $3.70, respectively; they were $3.40 and $3.90. Our estimates assume a gradual return to historical growth for NICU volume. They also assume a continuation of the company's aggressive stock-repurchase program.

These shares offer above-average 3- to 5-year price appreciation potential. Following the recent weakness, valuations are at levels not seen in several years. We think the NICU business will return to trendline, and the company's initial foray last September into the large anesthesia arena gives it another growth platform. Healthy cash flow, meantime, gives management the wherewithal to perpetuate its long-time growth-by-acquisition strategy.

George Rho *June 20, 2008*

(A) Diluted earnings. Excludes nonrecurring losses (gain): '02, $0.02; '04, $0.01; '05, $0.37; '07, $0.10; '08, ($0.47). Next earnings report due early Aug. (B) Includes intangibles. 2007: $858.9 million, $17.74/share. (C) In millions, adjusted for a stock split. (D) The adoption of FASB 142 at the beginning of 2002, obviating the need to amortize acquisition-related goodwill, added $0.31 to per-share earnings.

BUSINESS: Pennsylvania Real Estate Investment Trust, organized in 1960, became an operating partnership (LP) after the merger with The Rubin Organization (TRO). The company acquired Crown America Realty Trust, 11/03. As of 12/31/07, the real estate portfolio includes about 55 properties located in thirteen states (38 shopping malls, 13 strip malls, and 4 properties under development). Some properties are owned by partnerships or joint ventures in which the trust has an equity interest (ranging from about 25% to 87.5%). Officers & Directors own about 10.5% of stock (4/08 proxy). Has about 805 employees. Org.: PA. Chairman and CEO: Ron Rubin. Address: 200 South Broad Street, Philadelphia, PA 19102. Telephone: 215-875-0700. Internet: www.preit.com.

Pennsylvania REIT's results are starting to improve. Income from the property portfolio advanced about 3.0% during the March quarter, helped by healthy occupancy levels and higher rental rates for new leases. Much of the improvement likely reflects contributions from newly completed development and redevelopment projects. Funds from operations (FFO) rose moderately during the March quarter. However, GAAP earnings per diluted share, which include noncash charges for depreciation and amortization, remained weak.

The redevelopment pipeline is progressing well. In addition to the several properties completed last year, there are about three renovation projects that should be finished sometime in 2008. Pennsylvania REIT expects to have finished renovation on about 50% of its portfolio by the second half of 2009. Fully renovated properties should help attract higher-quality tenants, and increase rental rates, which should boost profitability.

We are leaving our earnings and FFO estimates unchanged for this year and next. Although FFO will probably remain weak in 2008, contributions from the redevelopment pipeline should support a small advance next year. Further, most of the REIT's properties are located in areas that should hold up relatively well, despite a sluggish economy.

Elsewhere, finances remain adequate. Pennsylvania REIT's debt-to-capital level was about 76% at the end of March, which is considerably higher than for most other retail REITs. Some debt is due in the year ahead, and management is currently seeking refinancing. The credit facility should provide considerable liquidity. Capital can be raised through equity issuances, if financing requirements become difficult. However, this probably won't be necessary.

This untimely issue offers investors an attractive dividend yield. The dividend payout is about 62% and leaves some room for increases. But we don't expect the dividend to be increased this year, given the earnings outlook for the year ahead. Further, our projections indicate the stock offers worthwhile total return potential for the next 3 to 5 years.

BUSINESS: PerkinElmer (formerly EG&G), Inc. provides scientific and technically oriented products, custom systems, and services to technologically-oriented customers. Markets are life and analytical sciences (74% of 2007 sales) and optoelectronics (26%). Acquired Perkin-Elmer Analytical Instruments Division, 1999; NEN Life Sciences, 2000; Packard BioScience, 2001; Elcos AG, 2005. Research and Development: 6.2% of sales. 2007 depreciation rate: 13.5%. Employs 8,700. Off./dir. own 7.1% of stock; Manning & Napier Advisors, 5.7%; AXA Fin'l, 5.8%; FMR LLC, 6.9% (3/08 proxy). Pres. & CEO: Robert Friel. Chmn.: Gregory Summe. Incorporated: Massachusetts. Addr.: 45 William Street, Wellesley, MA 02481. Tel.: 781-237-5100. Internet: www.perkinelmer.com.

We have increased our 2008 share-net outlook for PerkinElmer by $0.05 a share, to $1.50, thanks to strong growth across the entire portfolio. A stabilizing pharmaceuticals market has increased demand for custom assay services, while the company's *OneSource* offering is benefiting from the desire of companies in this sector to outsource laboratory assets. Sales of chromatography products to environmental and industrial markets have also been growing. Demand for xenon camera modules continues to fuel the performance of the specialty lighting business.

The company's Diagnostic businesses have been particularly strong, due to rising demand for genetic screening and medical imaging products. Sales growth from these markets exceeded 20% in the second quarter. Indeed, PerkinElmer is benefiting from a trend toward first trimester risk assessment and increased newborn testing, both in the U.S. and abroad. Demand for prenatal and neonatal screening was especially strong in emerging markets such as China, Russia, and Mexico. Also, the transition from film-based to digital X-ray enabled the company to ship a record number of imaging panels in the June period.

PerkinElmer remains on the prowl for tuck-in acquisitions. The company has been an active consolidator over the past couple of years. This trend is unlikely to stop anytime soon given PerkinElmer's strong balance sheet and free cash flow generation. We look for the company to focus on smaller firms that either expand the technology base or market share, such as the recent additions of ViaCell and Pediatrix to the high-growth, high-margin genetic screening business. Indeed, we look for these outside additions to provide a nice complement to PerkinElmer's internal development projects over the coming three to five years.

These timely shares offer about average price appreciation potential to 2011–2013. Increased emphasis on early and accurate detection of disease internationally ought to raise the demand for maternal health products. Indeed, the company's strong earnings-growth prospects ought to appeal to investors with both long- and short-term horizons.

BUSINESS: ProLogis Trust is a real estate investment trust which owns and manages a network of global distribution centers. ProLogis has an ownership interest of approx. 508.8 million square feet in distribution facilities operated and under development in several markets located throughout North America, Europe and Asia. ProLogis also offers warehousing and distribution solutions to industrial customers worldwide. ProLogis has approx. 1535 employees in the United States and Europe as of Dec. 2007. Officers and directors own about 1.5% of shares outstanding (3/08 proxy). CEO: Jeffrey H. Schwartz. President: Walter C. Rakowich. Telephone: 303-567-5000. Address: 4545 Airport Way, Denver, Colorado 80239. Internet address: www.prologis.com.

ProLogis started 2008 with relatively healthy results. Funds from operations (FFO) advanced about 10.5% during the March quarter. Much of the strength was due to contributions from the development division. However, results also benefited from a stable performance by the REIT's wholly owned real estate portfolio, as well as by increased income from the property funds.

The development business should continue to make strong contributions. Demand for modern distribution and warehouse space in Europe and Asia should remain strong, given the rapid expansion of these economies and increased global trade. ProLogis expects that about 80%-85% of its new development projects will be located outside of the United States and the United Kingdom. The REIT started construction on about $930 million of new projects during the March quarter, bringing the total development pipeline to about $7.8 billion. About $4.1 billion of these projects are currently under construction.

ProLogis continues to expand its asset management business. The REIT currently has about $21 billion in assets in ProLogis Property Funds compared to $19 billion a year ago. In early April, ProLogis and a large partner started a China Acquisition Fund. The fund will have the capability to acquire about $2 billion in assets. As a result, we expect income from these funds to continue to make larger contributions to ProLogis' bottom line.

We are leaving our FFO estimates for 2008 and 2009 unchanged at this time. Although the environment will likely remain challenging in the United States for a while, this should be offset by strength internationally. Given its diverse business, ProLogis remains well positioned to weather a slowdown in the United States economy.

These shares are ranked 3 (Average) for Timeliness. The earnings and FFO outlook remains favorable for the year ahead. The issue offers investors a dividend yield that is somewhat lower than other REITs'. However, our current projections indicate that ProLogis shares offer worthwhile total return potential for the next 3 to 5 years.

BUSINESS: Pall Corporation is the leader in the fields of filtration, separation, and purification. Has two businesses: Life Sciences 39% of fiscal '07 sales, which includes blood/medical (20%), and biopharma (19%). Industrial (61% of '07 sales), which includes General Industrial (33%), Aerospace & Transportation (13%), and Microelectronics (15%). Overseas markets accounted for 66% of '07 sales; R&D, 4.5%. '07 deprec. rate: 8.6%. Has about 9,200 employees. Officers and directors own less than 1.0% of common; Ariel Capital, 21%; Cedar Rock, 9.7%; Schermer Management, 19% (10/07 proxy). Pres.: Donald Stevens. Chairman, and C.E.O: Eric Krasnoff. Incorp. NY. Addr.: 2200 Northern Boulevard., East Hills, New York 11548. Tel.: 516-484-5400. Internet: www.pall.com.

We look for Pall Corp. to post share net of about $1.70 in fiscal 2008 (ended July 31st). This figure includes restructuring and other charges (about $30 million) taken throughout the fiscal year (typically included in our GAAP number). Revenue probably rose to nearly $2.5 billion, bolstered by organic growth (5%), and favorable currency translation (6%). Cost savings from shifting production and sourcing to lower-cost regions should have lowered SG&A expense to 29% of sales, compared to 30% in fiscal 2007. We are looking for a tax rate of 33%. All the business divisions should have generated higher internal sales, barring the Medical division (21% of total revenue and part of the Lifesciences unit), which lost a key contract in the blood thinner business.

Earnings should increase at a 13%-14% average annual rate over the next 3 to 5 years. In the Lifesciences group (39% of sales), the company should benefit from increasing demand for blood prion removal filters, bacterial detection systems for platelets, and critical care products for hospitals. In the Industrial segment (61% of revenue), a gradual cyclical recovery in microelectronics markets should help, as should general economic improvement. Furthermore, Pall is making greater inroads into commercial and industrial water markets. It plans to expand its water processing through new products and strategic alliances with GE and Kinetico. We also look for the earnings stream to become a little smoother. Pall has a history of quarterly inconsistencies. Cost reductions are aimed at enhancing earnings predictability. By the end of fiscal 2009, we expect a decrease in manufacturing square footage of about 20% and a headcount cut of approximately 10%. We conservatively estimate annual cost savings of $40 million.

Investors should feel more comfortable about owning this good-quality issue. The IRS investigation into the understatement of Pall's income tax liabilities from 1999-2007 has been completed. The understatement didn't affect sales, cost of sales, gross profit, or operating expenses. Although there is still some uncertainty regarding the settlement amount, it shouldn't be meaningful.

Jeremy J. Butler *August 15, 2008*

(A) Fiscal year ends about July 31.
(B) Basic earnings until 1997; diluted thereafter. Excludes nonrecurring gains (losses): '92, 2¢; '93, (15¢); '94, (2¢); '95, (1¢); '97, (50¢); '98, (54¢); '02, 23¢. Next earnings report due late August.

BUSINESS: Public Storage, an equity real estate investment trust (REIT), acquires, develops, owns and operates self-storage facilities. It's the largest owner and operator of storage space in the U.S., with equity investments in 2,010 facilities with about 126 million sq. feet of net rentable space throughout the U.S. and Europe. Has 44% interest in PS Business Parks, Inc., which owns and operates commercial sites, with about 18.7 million net rentable sq. feet of space. Acqd. Shurgard Storage, 8/06. Has about 5,700 emp. Org.: CA. CEO & Pres.: Ronald L. Havner, Jr. Chmn.: B. Wayne Hughes. Exec off. & dir. and their families control about 25% of common shares (3/08 proxy). Addr.: 701 Western Ave., Glendale CA 91201. Tel.: 818-244-8080. Internet: www.publicstorage.com.

Public Storage remains on track to show modestly better results this year. Funds from operations (FFO) increased 32% in the first quarter. The company is reporting improved operations at its self-storage facilities (more below). However, more than two-thirds of the increase reflected favorable currency exchange and derivative gains related to its European operations. Altogether, these added $0.24 a share to FFO in the March interim, compared to $0.34 for all of last year. But, with the Federal Reserve's shifting to a more neutral stance on interest rates, the likelihood of these gains being repeated has diminished somewhat. This suggests the company will probably face more-difficult quarterly comparisons in the second half, with overall FFO growth of 2%–4% for the year. Under the assumption that the economic outlook begins to improve, our estimates call for a 5%–10% increase in 2009.

Domestic same-store facilities are showing continued growth, with operating income up 44% in the latest quarter, to $211 million. A good portion was due to a $35 million (30%) reduction in amortization expenses related to the 2006 merger with Shurgard Storage Centers. But overall results maintained a positive trend, with total revenues rising 3% in the period, to $327 million.

The company remains active on the development and acquisition front. Two expansion projects were wrapped up in the March quarter, adding 82,000 net rentable square feet. At the end of the period, Public Storage had 29 projects on the drawing board, representing over 1.2 million of additional square footage that would be added over the following two years.

These shares do not stand out at this juncture. The issue has shed about 10% in market value since our April review, likely reflecting growing concerns about economic conditions. The REIT remains ranked to match the broader market's performance over the year ahead. However, long-term prospects for capital appreciation appear limited. Even with the decline in price, the shares already trade within the upper half of our 2011–2013 Target Price Range.

BUSINESS: Pactiv Corporation is a global supplier of specialty packaging and consumer products. The company makes, markets, and sells items, such as plastic storage bags for food and household products, plastic waste bags, foam and molded fiber tableware, and aluminum cookware. Recognized brand names include *Hefty, Baggies, OneZip, Kordite, and E-Z Foil.* Operates 45 manufacturing facilities in the U.S. and Germany. Has about 13,000 employees. 2007 depreciation rate: 7.1%. Lord Abbett owns 7.3% of common; Officers/directors, 2.7% (4/08 Proxy). Chairman & CEO: Richard L. Wambold. CFO: Andrew A. Campbell. Incorporated: DE. Addr.: 1900 West Field Court, Lake Forest, IL 60045. Telephone: 847-482-2000. Internet: www.pactiv.com.

Pactiv's new business should enable it to generate a healthy sales gain this year. The difficult economic environment is taking a toll on demand, especially within the foodservice segment. The addition of Prairie Packaging's cups and cutlery has added healthy volume to the top line, however, and is enabling Pactiv to broaden its reach into new markets.

But the bottom line appears headed for a flat return in 2008. As oil remains on the rise, so too are raw material prices. Plastic resin rate increases have been announced, leaving Pactiv little choice but to step up its efforts on the pricing front. That said,

The company seems to be getting more aggressive with its pricing. The first-quarter earnings decline was largely attributable to rate increases in the consumer segment not being launched until mid-March. Pactiv has been slower than most to raise product prices, but it looks to catch up a bit in 2008. We anticipate another year-over-year earnings setback in the second quarter, but a bevy of hikes should turn things around in the latter half of the year. Indeed, an 8% increase was issued for June within the foodservice group, and all signs point to more raises on the consumer side in the third quarter.

Share-net gains will likely return next year. Improved pricing and Pactiv's recent cost restructuring ought to help offset some of the recent margin squeeze.

The stock is pegged to lag the broader market in the year ahead. These shares continue to trade in a narrow range in 2008. And, given that earnings are now likely to come in flat year over year, there does not seem to be much for momentum-driven investors to be excited about.

Those with a little more patience, however, may want to get on board. Pactiv comes armed with a diverse and well-known product lineup. With the recent cost restructuring and strong pricing initiatives in play, the company should be able to sustain 10%-15% annual share-earnings advances for the pull to early next decade. It appears long-term investors can still purchase the issue at a good price, as it offers substantial appreciation potential out to 2011-2013 at its recent valuation.

BUSINESS: Penn Virginia Resource Partners, L.P. is a limited partnership formed in 2001, with operations in two business units: coal and natural gas midstream. Doesn't operate any mines, but enters into leases with third party operators who mine the coal in exchange for royalty payments. As of December 31, 2007, properties contained about 816 million tons of proven and probable coal reserves. In 2007, leasses produced 32.5 million tons of coal from properties, which paid royalty revenues of $94.1 million. Acquired Cantera Gas Resources 3/05. Off./dir. own less than 1% of units outst'g (3/08 10K). Chmn. & CEO: A. James Dearlove. Inc. DE. Addr.: Three Radnor Corporate Center, Suite 230, Radnor, PA 19087. Tel.: 610-687-8900. Internet: www.pvresource.com.

Stellar performance at its Midstream segment ought to push Penn Virginia to record results this year. The unit's volume will likely jump an impressive 85%–90%—from 160 million cubic feet per day to 300 million—by yearend, thanks to the accretive effect of two new processing plants coming on line. In addition, **Coal royalty revenues may improve slighty thanks to surging demand at home and abroad.** Electric power generators, which typically consume over 90% of domestic coal production, will likely see their coal stockpiles shrink substantially this year, due to continued supply tightness in the eastern United States. Too, severe flooding in Australia, rolling blackouts in South Africa, and shortages in China and India have tipped supply and demand back into balance. Further, we expect global demand to outstrip supply by 25 million–35 million metric tonnes in 2008, which should push prices higher. However, some of the price appreciation may be offset by lower contractual volume. **All told, revenues and share earnings may advance 35%–37% and 45%–47%, respectively, in 2008.** The Midstream additions coming on line, coupled with tighter coal supplies, should spell higher-margin revenues, and a solid earnings recovery in 2008.

We're projecting 2009 top- and bottom-line estimates of $800 million and $2.10 per share, respectively. Penn's long-term contracts make its future performance less susceptible to market fluctuations. Moreover, the company doesn't operate coal mines itself, but instead leases its properties to third parties that extract the coal in exchange for royalties, which allows Penn to bank a steady stream of high-margin revenue with little direct risk. Consequently, revenues and share earnings should continue to march upward in the years ahead.

Penn Virginia Resource features a stellar dividend yield, and decent total return potential over the long haul. At 6.7%, the stock's yield places it well above the *Value Line* median, which may appeal to income-hungry investors. And, at its current quotation, the stock may have some appeal as a long-term investment.

Papa John's opened its first pizza restaurant in 1985 n Jeffersonville, Indiana. The company operated as a subchapter S corporation from January, 1986, until its initial public offering in June, 1993. At that time, Montgomery Securities brought the company public by selling 1.5 mill. shares at a price of $13 per share. The company netted $18 million in its initial offering and raised a total of $103 million through four subsequent offerings through August of 1996. All figures adjusted for splits.

BUSINESS: Papa John's International operates and franchises pizza delivery and takeout stores in 49 states and 26 international markets. At 12/30/07, there were 3,208 restaurants; 662 were owned by the company and 2,546 were franchised. Operates commissaries that distribute ingredients to individual stores. '07 revenue breakdown: company-owned stores, 47% of total; commissary and equipment sales, 38%; franchise royalties and development fees, 6%; other, 9%. Has about 17,800 employees. Off./dir. own 26.9% of common stock; FMR, 10.4%; Gates Capital Management, 5.8%; Barclays, 5.8% (3/08 Proxy). President & CEO: Nigel Travis. Inc.: DE. Address: 11492 Bluegrass Pkwy., Louisville, KY 40299-2334. Telephone: 502-266-5200. Internet: www.papajohns.com.

Papa John's International is executing well in a tough business climate. Margins remain under pressure from rising energy costs, labor expenses, and prices for key commodities, such as cheese. (Cheese typically accounts for 35%-40% of total food costs.) But the company is mitigating the profit squeeze with the help of restaurant-level efficiency gains and improvements in its supply chain and distribution system. What's more . . .

Top-line trends remain solid, notwithstanding the widespread weakness in the U.S. economy. In fact, in the first quarter, domestic same-store sales growth amounted to a decent 1.7%, as Papa John's continued to wrestle market share away from its principal rivals, Pizza Hut and Domino's Pizza. And we expect comps to track in the low single-digits through the balance of 2008 and into next year. Aside from further share advances, same-store sales will likely be buoyed by new additions to the chain's menu, including more specialty pizzas and pies with whole wheat crusts that are meant to target health-conscious consumers. Also, an extension of the customer-friendly online business, which was launched back in 2001, ought to be a big plus for the top line. Notably, Papa John's recently surpassed $1 billion in Internet-initiated sales. And today, the fast-growing online operations generate around $400 million annually.

Overseas expansion is high on the agenda. Though growth opportunities on the home front still appear plentiful, the company's current development plans have a decidedly international flavor. Indeed, the lion's share of new unit openings over the next 3 to 5 years will probably be outside of the U.S.—in emerging countries like China and more mature ones like Canada. (In early April, Papa John's inked development agreements with franchisees for the opening of 57 additional restaurants throughout Canada.)

Despite all the positives here, long-term investors are encouraged to wait for a more attractive entry point before committing funds. Momentum players should also stay on the sidelines, since this restaurant issue is just an Average (3) selection for relative year-ahead price performance.

BUSINESS: Qualcomm Inc. develops and markets CDMA-based integrated circuits through its CDMA Technologies Segment (59% of 2007 gross revenue), licenses its technology via Technology Licensing (31%), provides data and positioning services for transportation applications, develops content management technologies, provides a platform for wireless application development via Wireless & Internet (9%), and makes strategic investments through Strategic Initiatives (QSI) (1%). Has about 11,200 employees. Officers & directors own 3.2% of common stock (12/08 Proxy). Chairman & CEO: Irwin M. Jacobs. President & COO: Anthony Thornley. Inc.: DE. Addr.: 5775 Morehouse Dr., San Diego, CA 92121. Telephone: 858-587-1121. Internet: www.qualcomm.com.

Qualcomm continues to benefit from a transitioning cell phone market. In the second quarter, the company's chipset volume rose 40% over last year, driven by accelerating consumer adoption of third-generation (3G) mobile devices, which feature superior Internet download speeds. This, along with a rise in its average selling price, and a favorable tax rate, allowed the company to deliver top- and bottom-line gains of 18% and 9%, respectively.

We expect demand for 3G chipsets to increase further in the near term. Recently, some service providers have been subsidizing 3G phone prices in an effort to entice customers to upgrade. Although the service providers will charge a higher monthly fee in order to do so, we think consumers will pay, because of the lower up-front cost and vastly improved phone functionality. This trend should lead to significant expansion of the 3G market and, in turn, benefit Qualcomm's earnings through increased chipset sales and royalty fees. Specifically, QCOM's main customers, LG and Samsung, have been gaining market share of late, and we expect future business with Motorola and probably Research in Motion, to help boost earnings by 10% next year to about $2.15 a share. Also, a resolution to the Nokia litigation, regarding what royalty rate it will pay Qualcomm, should prove beneficial to the stock price as well.

Long-term prospects appear solid. The company should profit from three new chip set platforms, which give laptop, navigation, and media devices the ability to access mobile Internet service. Further, we think there is significant growth potential in China. Recently, the Chinese government took a step toward licensing companies to supply 3G phones, and we think phone producers there will start paying QCOM royalty fees as early as next year.

We find timely Qualcomm shares attractive at this time. Industry data suggest that the worldwide 3G phone market will rise 35% this year, and triple by 2012. Qualcomm is in an excellent position to reap the benefits of this widening. Its expansion into the laptop and consumer electronic markets is also encouraging. This should translate to above-average price appreciation over the next 3 to 5 years.

BUSINESS: Ryder System, Incorporated is engaged in full-service truck leasing, programmed maintenance, commercial truck rental & integrated supply chain logistics, with over 1,100 service locations throughout the United States, Canada, Europe, and Latin America. The company spun off its aviation division 12/93; sold consumer rental division 10/96; sold automotive carrier division 9/97; sold public transportation business 10/99. Has approximately 28,800 employees. Officers/directors own 2.1% of common stock; FMR, LLC, 14.6%; UBS, 9.9%, Goldman Sachs, 5.5% (4/08 proxy). Chairman, President & CEO: Greg Swienton. Incorporated: Florida. Address: 3600 North West 82nd Avenue, Miami, Florida 33166. Telephone: 305-593-3726. Internet: www.ryder.com.

Ryder's newly adopted net revenue reporting method makes revenue comparisons difficult. The new reporting method is a result of an agreement with a specific supply chain solutions (SCS) customer that has modified Ryder's role in the purchase of subcontracted transportation, effective January 1, 2008. Under the terms of the new arrangement, Ryder will act as an agent rather than principal in purchasing subcontracted transportation services.

Earnings growth, however, will likely remain strong. The aforementioned change does not affect operating earnings. Furthermore, the company's margins are widening. The fleet management solutions segment is driving positive results, primarily thanks to higher fuel service revenue related to elevated oil prices. Too, continued contractual revenue growth, improved commercial rental operations, and better-than-expected used vehicle sales contributed to gains. Specifically, full-service lease operations benefited from higher North American demand and help from recent acquisitions. Also, contract maintenance revenue is showing strength in new contract sales. Commercial rentals are improving due to fleet realignment efforts that have increased utilization efficiency. All told, we look for strong results from the FMS segment this year.

Cost efficiency is a key driver of long-term growth prospects. The company's operating margin is likely to expand at a steady clip over the next 3 to 5 years, as management remains focused on aligning capacity to meet market demand and streamlining corporate operations. We expect effective management of marketing expenses and lower carrying costs to further enhance profitability.

The smaller supply chain solutions (SCS) and dedicated contract carriage (DCC) segments have exhibited mixed results. SCS results have faltered again because of fluctuating demand and rising costs. But the DCC segment continues to benefit from operational improvements that have reduced costs and increased margins considerably.

This stock is top-ranked for Timeliness. However, price appreciation potential to 2011–2013 is limited.

BUSINESS: Ralcorp Holdings consists of: Ralston Foods (27% of '07 sales), a producer of private-label breakfast cereals; Bremner (15%), a maker of private-label crackers and cookies; Nutcracker (11%), a producer of private-label and value-brand snack nuts; Carriage House (19%), a manufacturer of dressings, syrups, jellies, and sauces; and Bakery Chef (28%), a maker of frozen bakery products. Also owns 19.0% equity stake in Vail Resorts, Inc (9/07). Acquired Bloomfield Bakers, 3/07; Cottage Bakeries, 11/08. Has about 7,800 employees. Off./dir. own 9.1% of common (12/07 proxy). Co-CEOs & Presidents: Kevin J. Hunt & David P. Skarie. Inc.: MO. Address: 800 Market Street, Suite 2900, St. Louis, MO 63101. Telephone: 314-877-7000. Internet: www.ralcorp.com.

Ralcorp Holdings' merger with Kraft's Post cereals business is nearing completion. As we went to press, Kraft was in the process of splitting off its Post cereal business. Kraft will distribute to its shareholders all of the outstanding shares of its subsidiary, Cable Holdco, which owns the assets and liabilities of the Post cereals unit. Once this process is completed (scheduled for August 4th), Cable Holdco common stock would then be exchanged at a 10% discount to the per-share value of Ralcorp Holdings common stock. Kraft shareholders would receive 0.6613 of a share of Ralcorp stock for each share exchanged. Ultimately, Kraft holders will own 54% of the combined entity, with Ralcorp stockholders accounting for the remaining interest. (Note: The merger is excluded from our financial presentation until it is completed.)

The pending deal significantly changes the composition of Ralcorp. The company's share count would go from roughly 26 million to 57 million. Ralcorp expects the transaction to be highly accretive ($0.44-$0.68 a share) to earnings in the first year. We believe that the accretion will probably be at the high end of the range, since Ralcorp has historically done a good job of integrating new businesses. It plans to identify and eliminate any overlapping functions. That said,

The merger doesn't come without some risk. Post's market share in the all-important cereal category has declined since 2005. This will likely force Ralcorp to increase its spending on advertising and product development. Moreover, Ralcorp must prove that it can successfully manage two distinct businesses (private label and branded) and compete with the industry stalwarts (i.e., Kellogg and General Mills) in the latter category.

This unranked issue remains a volatile near-term play. The amount of short interest in Ralcorp stock has risen sharply in recent weeks, as arbitrage investors are likely looking to take advantage of the discount exchange rate used in the conversion of Cable Holdco shares to Ralcorp units. Too, the company, like all of its food processing peers, continues to battle an onerous cost environment, one that has strained operating margins.

William G. Ferguson August 1, 2008

BUSINESS: Reynolds American Incorporated is the second-largest producer of cigarettes in the U.S. Brands include *Winston, Camel, Salem, Pall Mall, Kool, Doral, Vantage,* and *More. Winston* and *Camel* are the company's largest selling premium brands, and *Doral* is its largest selling discount brand. Acquired Brown & Williamson, 7/04, Conwood Smokeless Tobacco, 5/06. Sold international tobacco business to Japan Tobacco, 5/99. Has about 7,100 employees. British American Tobacco owns 42% of common stock; *Officers & Directors own* less than 1% (3/08 proxy). Chairman, President & Chief Executive Officer: Susan M. Ivey. Incorporated.: Del. *Address:* 401 North Main Street, Winston-Salem, NC 27101. Telephone: 336-741-2000. Internet: www.ReynoldsAmerican.com.

Reynolds American tempered its forecast for 2008. *Management now looks for* share net to be consistent with 2007's year-end number of $4.57. The company had previously forecast a mid-single-digit increase. The revision is due to volume declines, which reflect the tough economic environment that is weighing on RAI's price-sensitive smokers' spending habits.

A tough operating environment should pressure results for the remainder of the year. Reynolds' recent struggles will likely continue, as management tries to improve its position in this challenging market. As a result, we lowered our 2008 earnings estimate by a quarter to $4.60 a share.

The board approved a share-repurchase program. The company has the option to buy back up to $350 million worth of stock over the coming year, which should support share earnings. British American Tobacco, which owns a large interest in Reynolds, agreed to participate in the program in order to maintain its stake at 42%. What's more, RAI offers an attractive yield. However, given the recent problems, there is a degree of uncertainty regarding the rate at which the payout will advance in the near term. Still, Reynolds is a solid business supported by a strong cash flow, which should allow management to return value to shareholders through a dividend over the long haul.

Reynolds' Smokeless business should help drive results over the long term. Demand for smokeless products remains strong. As a result, RAI's Conwood Smokeless Tobacco segment continues to post good results. Thus, we believe management will focus on growing RAI's presence in this market over the coming years.

The company may face some regulatory pressure over the 3- to 5-year pull. Namely, the federal excise tax will probably increase over this time frame. Additionally, Congress may put tobacco firms under the FDA's authority, which would further place limitations on how tobacco firms conduct their business.

We have lowered this issue a notch to 4 (Below Average) for Timeliness. Therefore, we recommend investors look elsewhere until Reynolds' business prospects improve.

BUSINESS: Royal Caribbean Cruises Ltd. is the world's second largest cruise company with 37 cruise ships in service and seven under construction. It operates five brands: Royal Caribbean International, Celebrity, Azamara, Pullmantur, and CDF Croisieres de France. In 2001, it began operations of Royal Celebrity Tours; in 2004, Celebrity Xpeditions. Has 46,545 employees. Significant stockholders: A. Wilhelmsen AS. (Norway), 20%; Osiris Holding, Inc., 18%; Cruise Associates (Bahamas), 18%; Massachusetts Financial Services, 9%; Private Capital Management, 6%; Officers/dirs., 21% (4/08 proxy). Chairman & CEO: R.D. Fain. Inc.: Liberia. Addr.: 1050 Caribbean Way, Miami, FL 33132. Tel.: 305-539-6000. Web: www.rclinvestor.com.

Higher fuel costs are putting pressure on Royal Caribbean's margins. When the cruise operator reported results for 2007, it noted that if fuel prices remained at the then-current level, its costs for that commodity would be roughly $595 million this year. By the end of the second quarter, the company estimated that at then-current prices its fuel expenses for the year would be some $772 million, a difference of 80-85 cents a share.

The company is working to reduce costs. It plans to cut roughly 400 shoreside positions and eliminate some noncore operations. The moves are expected to trim costs by $125 million annually. The company expects to book a charge of $15 million (seven cents a share) related to the actions in the third quarter. That charge will be offset by an $18 million (eight cents a share) gain from the settlement of a lawsuit. Other initiatives, such as changed itineraries, new engines, and more efficient hull designs, also are intended to produce cost savings. But those efforts probably won't be sufficient to offset the higher fuel costs. Share net likely will fall 5%-10% this year.

Only a modest gain looks likely in 2009. There are some pluses. The company reports that bookings for 2009 are off to a good start. Too, capacity will rise by nearly 7%, thanks to a full year of operation of three ships launched this year and the addition of two more ships in 2009. And the company will have a full year of savings from the cost-cutting initiatives instituted this year. But, although so far consumers seem willing to pay up for vacations, ongoing economic weakness in the U.S., and growing problems in Europe, could cause people to rein in spending. Too, fuel costs are likely to rise again next year, to $890 million, based on prices at the end of the second quarter.

After that, earnings should return to an upward path. We think the economy will be on a sounder footing by late in 2009. And four more ships are scheduled to be launched by the end of 2012. Assuming that fuel-price increases slow, share net ought to rise at a good annual pace over the next 3 to 5 years. If so, these untimely shares should stay a step ahead of the market averages over that span.

George A. Niemond *August 15, 2008*

BUSINESS: Ruddick Corp. is a holding co. with two wholly owned subsidiaries: Harris Teeter, Inc. (91% of FY '07 sales, 99% of operating profit), a southeastern regional supermarket chain; and American & Efird, Inc. (9%, 1%), a manufacturer and distributor of industrial sewing thread, with manufacturing ops. in N.C. and 22 foreign countries, mainly China. The Jordan Graphics, Inc. subsidiary was sold in Jan. of 1996. Assets from Threads USA were acquired in June of 1996. 24,800 employees. Off. & dir. own 7.7%; T. Rowe Price, 12.9%; Southeastern Asset Mgmt., 10.1%; (12/07 Proxy). Chairman, President, and CEO: Thomas W. Dickson. Inc.: North Carolina. Address: 301 S. Tryon St., Suite 1800, Charlotte, N.C. 28202. Telephone: 704-372-5404. Website: www.ruddickcorp.com.

Ruddick's share net will likely advance close to 20% for fiscal 2008 (year ends September 30th). Sales for the March quarter totaled less than our estimate, but the company worked to contain rising commodity and energy expenses, producing an earnings advance of 19% when compared to the prior-year period. Same-store sales at its Harris Teeter (HT) division increased over 3%, but the slower overall sales may indicate that some customers are heading to discount retailers, instead.

Harris Teeter is the key driver of the company's profit growth. As economic headwinds prevail, this division has been proactive in targeting its promotional spending and passing on price increases to its customers in order to keep margins healthy. Its new store program added a net five stores in the first half of fiscal 2008 for a total of 169 stores in operation. Expansion, remodeling, and new store plans are continuing, albeit at a slower pace than the company originally envisioned. The migration northward on the East Coast will likely continue, in an effort to diversify its geographic reach. This enlarged footprint should help buffer any potential downturn in its home market, where many of its sales are concentrated.

The American & Efird (A&E) division is struggling to boost sales. The thread manufacturer has shifted its production outside the U.S. in an attempt to lower costs and remain competitive in apparel sourcing. This division has formed several joint ventures in India, China, and Brazil as a way to cautiously expand its footprint. However, global economic weakness is providing a challenging retail environment, with sales trending downward. In the March interim, this division posted a loss. But since A&E is less than 10% of total revenues and 1% of profits, we are not too concerned about the ongoing softness. There may likely be an uptick once retail spending strengthens.

Ruddick shares do not hold much appeal. Though this issue has shed about 10% since our May review, appreciation potential is limited as RDK shares already trade within our 3- to 5-year Target Price Range. And, for the next year this stock is ranked to match the market.

Mary Beth Wiedenkeller *August 1, 2008*

(A) Periods end on last Sunday in calendar quarter. Fiscal year ends on Sunday closest to Sept. 30th.
(B) Pro-forma through '96, diluted thereafter. Excludes nonrecurring items: '93, (14¢); '01, ($1.05); '02 ($0.09). Next earnings report due early November.
(C) Dividends historically paid in early January, April, July, and October. ▪ Div'd reinvestment plan available.
(D) In millions, adjusted for stock split.

BUSINESS: Regions Financial Corp. (formerly First Alabama Bancshares) had 1,936 banking offices in AL, AR, FL, GA, IL, IN, IA, KY, LA, MS, MO, NC, SC, TN & TX as of 6/30/08. Merged with Union Planters, 7/04; AmSouth Bancorporation, 11/06. Net loan losses, .29% of average loans in 2007. Loan loss reserves, 1.50% of loans (6/30/08); problem assets (including 90-days past due), 2.08%. Loan portfolio as of 12/31/07: resid. RE, 18%; commercial RE, 22%; consumer, 22%; commercial, 38%. Had 31,564 full-time equivalent employees on 6/30/08. Officers & directors own 1.76% of stock; Barclays Global, 5.12% (4/08 proxy). Chairman: J.W. Moore. Pres. & CEO: C.D. Ritter. Inc.: DE. Address: 417 N. 20th St., Birmingham, AL 35202. Tel.: 205-944-1300. Web: regions.com.

Regions' credit costs have risen significantly. Much of the deterioration in its credit quality stemmed from loans in Florida, where residential property values have fallen dramatically in the past year and a lot of homes weren't the owner's primary residence. The company's problem assets rose 35% from the end of March, with the increase consisting mostly of residential homebuilder loans and a handful of large condominium projects in south Florida. Loan losses rose 66%, with more than half of the increase driven by deterioration in home equity credits. Of Regions' total home equity loans, 22% of the portfolio (the Florida-based second-lien portion) had a loan loss rate of 4.74% in the June quarter. Earnings in the period were also held back by net interest margin pressure and relatively flat core fee revenue compared with the March quarter.

The company has a number of initiatives to strengthen asset quality. Management established a loan disposition program, stopped making land and condominium loans, and adopted more rigorous underwriting and review processes. It has updated home equity portfolio valuations and is offering more borrower assistance. Our sense, however, is that it will take a number of quarters for Regions to work down its credit costs meaningfully.

In other areas, prospects are mixed. The company is enjoying decent loan growth, but several items, including the higher problem assets, are likely to continue to squeeze the margin and pressure net interest income. On the expense front, cost reductions from the 2006 merger with AmSouth are expected to reach a $700 million run rate by the end of 2008 from a $660 million run rate at mid-year. Taking the higher anticipated credit costs into account, however, we are sharply lowering our share-net estimates for this year and next, to $1.15 and $1.35, respectively.

The company reduced the quarterly dividend to a dime a share, starting with the October payout, to strengthen its regulatory capital ratios. Although the very depressed stock has considerable upside potential to 2011-2013, most investors probably would do well to heed the unfavorable Timeliness rank and stay on the sidelines for now.

BUSINESS: Regis Corp. is a leading owner and franchisor of hair and retail product salons. It operates over 12,400 hairstyling salons & beauty schools in six divisions consisting of: *Regis Hairstylists, Supercuts* franchises, *MasterCuts, Trade Secret, Wal-Mart,* and *International.* Acquired *Jean Louis David 4/02, Hair Club For Men and Women,* 12/04. Provides hair-care services and products to customers in different market groups through salons in high-traffic shopping mall locations. Has roughly 62,000 employees. Officers & directors own about 6.2% of common; The TCW Group, Inc., 5.3%; (9/07 proxy). Chairman, President & CEO: Paul D. Finkelstein. Incorporated: MN. Address: 7201 Metro Blvd., Minneapolis, MN 55439-2130. Tel.: 952-947-7777. Internet: www.regiscorp.com.

We look for Regis Corp. to post a relatively flat year-over-year earnings comparison in fiscal 2008 (year ends June 30th). During the March interim, the company reported its first positive share-net comparison in a year, driven by a 3.3% uptick in same-store service sales (RGS' highest quarterly service increase in the last eight years). This impressive result may be attributed to the combined effects of this year's early Easter holiday and an ongoing focus on bolstering the cost of an average visit to one of the company's locations. In this vein, Regis has implemented price increases in over 5,600 salons during the third quarter. And the company's performance is even more impressive, given that it has deconsolidated its beauty schools and the European franchise salon operations during the last 12 months, which tempered the top line by roughly $28 million in the March quarter. Finally, the recent turnaround in RGS' bottom line is in stark contrast to the company's lackluster results late in fiscal 2007 and earlier this year, the result of a long hair trend and a slowing U.S. economy.

Prospects for the coming fiscal year seem promising. At present, Regis is in the midst of transforming its Trade Secret salons from a retailer of professional products to European-style boutiques offering an exceptional assortment of prestige products. Moreover, as a result of the aforementioned merger of its European franchise salon operations with the Franck Provost Salon group, RGS now owns a 30% minority interest in the recently formed Provalliance Group, the largest hair salon company in Europe. This provides a counterbalance to fluctuations in the domestic marketplace. All told, we look for Regis to post fiscal 2009 earnings of $2.30 a share, on a 5% year-over-year top-line advance, the result of a solid improvement in same-store sales.

Based on recent price and earnings momentum, Regis stock now carries a Timeliness rank of 3. As such, it is likely to run in tandem with the market over the next six to 12 months. However, more patient investors may wish to consider this issue, as it offers appealing appreciation potential through the early years of the coming decade.

Kenneth A. Nugent *June 27, 2008*

(A) Fiscal year ends June 30th of calendar year.
(B) Dilut earnings. Excludes nonrecurring gains/(losses): 1998, ($0.03); 1999, ($0.29); 2002, $0.04; 2005, ($0.84); 2006, ($0.25); '08 Q2, $0.05, Q3, ($0.07). Next earnings report due late July.
(C) Dividends historically paid in early March, June, September, and December.
(D) In millions, adjusted for stock splits.

BUSINESS: ResMed Inc. develops, manufactures, and distributes medical equipment for treating, diagnosing, and managing sleep-disordered breathing (SDB) and other respiratory disorders. SDB includes obstructive sleep apnea and other respiratory disorders that occur during sleep. Markets its products in over 68 countries through a combination of wholly owned subsidiaries and independent distributors. FY'08 R&D: $60.5 mill (7.2% of sales). FY'07 depreciation rate: 8.8%. Employs about 2,700. Officers and directors own 4.5% of stock; T. Rowe Price, 7.3%; William Blair, 5.3% (9/07 proxy). Chairman: Peter C. Farrell. President & CEO: Kieran T. Gallahue. Inc.: DE. Address: 14040 Danielson Street, Poway, CA 92064. Telephone: 858-746-2400. Internet: www.resmed.com.

ResMed closed out fiscal 2008 on a sound note ... (Years end June 30th.) Revenue in the fiscal fourth quarter totaled $235.2 million, a 23% increase over the year-earlier figure. Favorable currency movements added $14.1 million to the top line, though. Still, growth was stimulated by regions around the globe. Specifically, the company's overseas operations continued to fire on all cylinders, posting a 32% sales advance. France and Germany were the main drivers in Europe. At home, ResMed was able to get back on track, returning to mid-double-digit growth. Many new products were recently launched in the Americas, and initial feedback has been very positive. This robust revenue gain allowed the company to report a 14% share-net gain in the period. But bottom-line growth lagged a bit because margins narrowed. This was mainly the result of costs associated with bolstering the sales-force. Too, R&D outlays were 24% higher.

... and Wall Street applauded the performance. These shares were stuck in a rut, trending sideways to lower with the overall market. But the issue traded up sharply following the recent earnings announcement. In addition, we look for strong share-earnings growth in the coming six to 12 months. All told, momentum investors may want to keep a close eye on this neutrally ranked stock.

We think fiscal 2009 will shape up to be a banner year for ResMed. Indeed, the medical equipment maker should earn $1.75 a share on sales of $985 million. Both figures represent hefty advances over the comparable 2008 tallies. We think the company's new products will quickly gain traction in the marketplace.

This issue offers worthwhile 3- to 5-year capital gains potential. Profit growth should easily exceed double-digits on an annual basis out to 2011-2013. We think the niche market ResMed serves remains one of the most attractive segments in the medical supplies industry. Recent studies suggest that the risks associated with sleep-disordered breathing are much greater than medical professionals previously believed. Indeed, home sleep testing, which would no doubt buoy the top line, will probably be accepted by most insurers before long.

RenaissanceRe Holdings Ltd. was established in Bermuda in 1993. In July of 1995 the company went public with an offering of 8,100,000 shares at a price of $6.50 (adjusted for the May 2002 three-for-one split). Merrill Lynch & Company was the lead underwriter for the IPO. RNR had further public offerings in 1996, 1997, and 2001, which resulted in proceeds of $84 million, $240 million, and $347 million respectively.

BUSINESS: RenaissanceRe Holdings Ltd. provides property catastrophe and specialty reinsurance coverage to insurers and reinsurers on a global basis. Policies are written through the principal operating subsidiary Renaissance Re and joint ventures, DaVinci, Top Layer Re, Starbound, Glencoe Group and Starbound II. Mix of premiums earned as of 12/31/07: reinsurance, 69.2% and individual risk 30.8%. The company has approximately 236 empls. Officers and directors own 3.6% of common stock; FMR LLC, 10.7%; AXA Financial, Inc., 8.5%; Pzena Investment Management, 8.2% (4/08). CEO and President: Neill A.Currie. Incorporated: Bermuda. Address: 8-20 E. Broadway, Pembroke HM 19, Bermuda. Telephone.: 441-295-4513. Internet: www.renre.com.

RenaissanceRe Holdings likely posted a share-net decline of about 10% for the June interim. The company was expected to issue its second-quarter results shortly after this report went to press. The performance downturn probably stemmed from the competitive rate environment affecting the insurance markets. Furthermore, RNR has been maintaining its underwriting discipline. The combination of these two factors likely weighed on the top line (premiums earned), resulting in a relatively flat figure for the period. Offsetting factors should have come from the commercial property business, which typically has heavy renewals occurring in May and June. Nonetheless, the company ought to register a boost in profits by year's end.

We look for the 2008 earnings tally to increase 5%-10%. Premiums should decline in the low single-digit range this year. The softening market conditions for both the catastrophe and specialty units of the reinsurance segment seem set to contribute to this trend. Meanwhile, the independent risk unit will likely continue to have trouble finding quality attractively priced policies. However, RNR's emphasis on underwriting discipline should decrease claims, benefit its combined ratio, and drive the earnings advance.

Recent acquisitions ought to pick up steam as the year progresses. Synergies should result, as those takeovers meld with RNR and effectively minimize expenses. Claims Management Services (CMS) is now part of one of RNR's wholly owned subsidiaries. CMS was previously employed as a third party administrator, focusing on claims adjustments. Meanwhile, the buyout of Agro National augurs well for the company's longer-term prospects. The need for multi-peril crop insurance will likely rise in the years to come. Recent flooding in the Midwest, resulting in damaged crops and rising commodity prices, should only reinforce the need for coverage in these areas.

These average ranked shares may appeal to patient accounts. The equity offers wide long-term appreciation potential for the pull to 2011-2013. However, some uncertainty stems from this year's hurricane season. Therefore, the stock may not be suitable for conservative accounts.

Bryan Fong *August 1, 2008*

BUSINESS: Rockwell Automation is a world leader in electronic controls. It has two operating segments: Architecture & Software and Control Products & Solutions. Sold graphic systems unit, 10/96; aerospace and defense ops., 12/96; Power Systems (Dodge and Reliance Electric), 1/07. Spun off Semiconductor business (called Conexant Systems), 12/98; Avionics business (called Rockwell Collins), 7/01; FirstPoint Contact, 9/04. R&D: 2.9% of '07 sales. Has about 20,000 employees. Officers and directors own 2.3% of common stock (12/07 proxy). President & Chief Executive Officer: Keith Nosbusch. Incorporated: Delaware. Address: 1201 South Second Street, Milwaukee, Wisconsin 53204. Telephone: 414-382-2000. Internet: www.rockwell.com.

Rockwell Automation revised its bottom-line guidance for the third quarter (fiscal year ends September 30th). Greater-than-expected deterioration in ROK's markets in the United States and Europe led to the new outlook. The company's performance is influenced by the overall economy, so, as the economic environment weakens, capital spending also drops, which hurts demand for Rockwell's services. Consequently, management now expects third-quarter share net to be between $0.93 and $1.00. The company also believes it will miss its earlier guidance for fiscal 2008 of earnings between $4.25 and $4.45 a share. Of note, the company plans to give more detailed guidance for the year when results for the June period are announced.

We have scaled back our estimates for fiscal 2008. We are cautious about this issue's near-term prospects in light of the poor visibility and the current operating environment. Accordingly, we look for sales of about $5.5 billion and earnings of roughly $3.95 a share.

Rockwell will likely continue to add new businesses to its operations. Since divesting its Power Systems business in fiscal 2007, the company has been adding bolt-on acquisitions in an effort to strengthen its offerings in the automation market. On point, we believe the recent additions of CEDES's Safety and Automation business and Incuity Software may provide a boost to Rockwell's results.

International business will probably be a growth driver over the coming years. The company's investment in emerging markets should boost top- and bottom-line gains over the long-haul. Management highlighted Asia and Latin America as regions that will likely begin to contribute more meaningfully to results starting in the second half of this year.

We have lowered these shares' Timeliness rank to 4 (Below Average). Management's earnings revision coupled with the tough operating environment limit this issue's appeal for the near term. However, the recent drop in ROK's share price may create an interesting entry point for long-term investors. Indeed, this stock has above-average capital appreciation potential over the 2011-2013 time frame.

BUSINESS: Rollins, Inc. owns and operates Orkin Exterminating, one of the nation's largest pest- and termite-control service providers. Services approximately 1.7 million customers in the United States, Canada, Latin America, the Caribbean, the Middle East, and Asia. Sold off Orkin Lawn Care and Orkin Planiscaping, 7/97, and Rollins Protective Services, 10/97. Acq'd PRISM, 5/99 and PCO Svcs., 10/99; Western Pest Svcs, 4/04; Industrial Fumigant Co., 10/05; HomeTeam Pest Defense, 4/08. Has about 8,500 employees. Rollins family & directors own 58.8% of com.; M. Gabelli, 6.0% (3/08 proxy). Chrmn.: R. Randall Rollins. Pres., CEO, & COO: Gary W. Rollins. Inc.: DE. Addr.: 2170 Piedmont Rd., N.E., Atlanta, GA 30324. Telephone: 404-888-2000. Internet: www.rollins.com.

Rollins' first-quarter results came in as expected. Commercial services were quite strong, while the residential business was seasonally slow. Additionally, elevated gasoline prices for Rollins' fleet of trucks added to operating expenses.

The company continues to expand its global reach. In the March interim, three new international franchises came on line in the Middle East. Specifically, they are in Saudi Arabia, Qatar, and Bahrain. We like this strategy, as we believe overseas operations offer the company vast growth potential.

Additionally, growth through acquisitions continues. In April, Rollins paid $137 million in cash to Centex Corporation for *HomeTeam Pest Defense*. In addition to traditional pest-control services, *HomeTeam* installs its proprietary Taexx "tubes-in-the-walls" technology in new homes, as a way to stave off an infestation. We believe that the acquisition will be beneficial to Rollins over the long haul. However, given the weak state of the homebuilding sector and the growing pains that will inevitably come with integrating the new segment, we do not think that *HomeTeam* will add substantially to Rollins' bottom line in the near term.

We recommend that momentum investors take a pass on these shares for the time being. The company has a number of things going for it, including international expansion and the fact that pest control is a recession-resistant business. However, the near-term outlook is somewhat cloudy, due to the recent acquisition amid a severe housing slump. The stock is ranked to perform roughly in line with the broader market averages over the coming six to 12 months (Timeliness: 3). We think that the recent acquisition and overseas expansion will yield steady earnings growth over the next 3 to 5 years. However, much of our positive outlook appears to already be discounted in the issue's recent quotation, leaving it with below-average share-price appreciation potential over the pull to 2011-2013. Our projections may prove to be conservative, though. The strong balance sheet provides the flexibility to seek further growth opportunities.

Matthew E. Spencer *June 6, 2008*

BUSINESS: Ross Stores, Inc. operates a chain of 838 off-price retail stores, mostly in the West and Southeast. Stores offer primarily first-quality, in-season apparel, shoes, cosmetics, apparel-related accessories, fragrances, giftware, linens, and a variety of home merchandise, sold 20%-70% below department- and specialty-store prices. Also has 52 dd's DISCOUNTS stores in CA. Has 39,100 full-time and part-time employees. *Off. & dir. own* 3.4% of stock; Invesco Ltd., 11.7%; Cap'l Research Global Investors, 10.7%; FMR, LLC, 10.2%; Eminence Cap'l, 6.9% (4/08 proxy). Chrmn.: Norman A. Ferber. Vice Chairman, CEO & Pres.: Michael Balmuth. Inc.: Delaware. Addr.: 4440 Rosewood Dr., Bldg. 4, Pleasanton, CA 94588-3050. Tel.: 925-965-4400. Internet: www.rossstores.com.

We have raised our fiscal 2008 share-net estimate for Ross Stores by $0.10, to $2.35, to reflect the company's strong sales trends. Ross has been able to deliver solid top-line gains year to date on lower in-store inventories, which is contributing to faster turns and fewer markdowns compared to the prior year. As a result, the company probably saw sales gains in the typically clearance-driven month of July.

The buying environment remains strong. The difficult retailing environment has increased the supply of branded merchandise available at closeout prices. Ross has been able to take advantage of these bargains and improve the marketability of its offerings. Indeed, the company's ability to offer quality products at cheap prices has enabled it to achieve a string of comparable-store sales gains over the past several quarters. Struggling women's specialty stores still have not right-sized their inventory levels, creating a particularly attractive opportunity in the dress, shoe, and accessory lines, which have been Ross' strongest performers over the past few months.

Management plans to roll out its new micro-merchandising technology this fall. The software will be gradually released over the coming three years, with 15% of product categories being updated in the current quarter, followed by an additional 50% in 2009, and the remaining 35% in 2010. The system enhancements should improve Ross' ability to buy and allocate products at a more local level. We look for these micro-merchandising tools to boost profitability across the board by enabling the company to operate with the leanest inventory possible. Also, faster inventory turns should help Ross to continue to offer a steady stream of exciting, on-trend products.

Ross shares possess our Highest (1) ranking for Timeliness. The company's sustained growth in the face of a difficult retailing environment has helped ROST stock to rise nearly 10% in price since our May report. Further, we look for the company to achieve annual average earnings growth in the mid-teens over the haul to 2011–2013. However, much of this potential is already reflected in the stock's price, limiting its appeal for that period.

Jerry W. Gray Jr. *August 8, 2008*

(A) Fiscal year ends on Saturday closest to Jan. 31 of following calendar year.
(B) Excl. sales of leased departments. May not sum to total due to rounding.
(C) Diluted earnings. Next earnings report due late Aug. Excl. nonrecurring gain (losses): '94, 3¢; '99, (3¢); '04, (5¢).
(D) Dividends historically paid in early January, June, August, and November. Two dividends paid in 4Q.
(E) In millions, adj. for stock splits.

BUSINESS: Safeco is a property and casualty insurance company. The company has four business segments: Safeco Personal Insurance, Safeco Business Insurance (SBI), Surety, and P&C and other. Safeco Personal Insurance writes auto, homeowners, and other property and specialty insurance products for individuals. SBI offers a wide array of products to businesses. Safeco completed the sale of its life and investments business in 2004. Has approximately 7,055 employees. Officers and directors control approximately 3.3% of common stock (3/08 proxy). President and CEO: Paula Rosput Reynolds. Chairman: Jay Brown. Incorporated: Washington. Address: Safeco Plaza, 1001 4th Ave., Seattle, WA 98184. Tel.: 206-545-5000. Internet: www.safeco.com.

The sale of Safeco appears to be progressing. Since our March review, Liberty Mutual Group has agreed to purchase Safeco for $6.2 billion in a cash deal. In its attempt to create the nation's fifth-largest property and casualty insurer, Liberty offered $68.25 a share, that, at the time of the announcement, represented a 51% premium over SAF's closing price the day prior. Safeco's board quickly approved the sale and, more recently, the expiration of a regulatory waiting period leaves few obstacles. Despite tighter credit markets, we do not foresee Liberty having any trouble funding the offer, as it holds a sizable cash reserve on hand and has already assumed an additional $1 billion in debt. The pending merger still awaits shareholder approval, though we do not anticipate any significant opposition here either. The deal should close in the third quarter. Once under the Liberty umbrella, SAF shares will no longer receive coverage in *The Survey*.

Investors were quick to take advantage. After reaching a 10-year high, the stock price has experienced a steady regression over the last 16 months. That said, Liberty still valued these shares at a touch under last year's peak quotation. And investors were quick to follow suit. Indeed, the issue soared 45% immediately following the announcement, and is now trading just below the purchase price. Thus, it appears the window of opportunity is limited for momentum-based investors for now. The stock's Timeliness rank has been suspended, as it is no longer trading on business fundamentals.

Meanwhile, an earnings decline appears inevitable this year. Safeco's earnings were flat in the first quarter, as market-share erosion persists despite product price reductions. Now, as the company looks to spur profitability through rate increases, its market position will likely be further tested.

The stock is a subpar long-term selection. On its own, Safeco should generate average annual earnings gains in the mid-single-digit range for the pull to 2011-2013. Still, much of that growth already seems to be priced into the issue following the recent run. In fact, at its current valuation, the stock is now trading just below our 3- to 5-year Target Price Range.

BUSINESS: Sonic Automotive Inc. is primarily an automotive retailer with 169 franchises and 34 collision repair centers (as of 12/31/07) in 15 states. It sells new (61% of 2007 sales, 27% gross profit) and used (23%, 10%) cars, replacement parts and services, (14%, 47%) and financing/insurance (2%, 16%). Sells more than 20 different brands of new cars (5 largest, 61% of '07 sales). Sonic had about 11,400 employees at the end of 2007. Officers & Directors own 33.7% of common stock; Artisan Partners, 6.1%; Dimensional Fund, 6.8%; Lord Abbett & Co., 6.7% (3/08 Proxy). Chairman & CEO: Bruton Smith. Incorporated: DE. Address: 6415 Idlewild Road, Suite 109, Charlotte, NC 28212. Telephone: 704-566-2400. Internet: www.sonicautomotive.com

Sonic Automotive struggled throughout the second quarter. The company continues to suffer from weak demand. Elevated gas prices have turned many consumers away from purchasing new vehicles. Indeed, same-store sales fell by 7% during the period, with SUVs and larger cars experiencing significant declines. There has also been waning demand for import and luxury vehicles, an area that Sonic specializes in. The company is selling more used vehicles, although unit margins have been on the decline, as prices have deteriorated. We expect tough times to continue for Sonic and the entire retail auto sector this year. Thus, we anticipate a regression at the top line based on the ongoing weakness.

Pricing has been an issue for the company. A high supply of vehicles and diminishing demand has resulted in lower selling prices and higher depreciation rates. These conditions have squeezed margins. During the second quarter, margins for new vehicles fell modestly, while profitability for used autos declined by 80 basis points. We target earnings of $1.75 a share in 2008, which represents a significant dropoff. In 2009, the bottom line may recover somewhat, pending an improvement in the auto environment.

Business for repairs and maintenance has been sound. Revenues in this segment increased in the June period despite recent consumer trends. Higher-margin repair revenues have helped to offset some of the declines in the retail and wholesale business.

The company will probably not expand in the near future. Sonic's high debt level makes it difficult to acquire more dealerships at this point. This somewhat dampens prospects for long-term profit growth for Sonic.

We expect moderate earnings growth for the company over the next few years. Although expansion remains unlikely, the company should benefit from improved leverage and a better operating environment. This supports the case for wide appreciation potential for Sonic shares out to 2011–2013.

Meantime, the stock is ranked to underperform the year-ahead broader-market averages.

Garrett Sussman August 8, 2008

BUSINESS: SAP AG develops, markets, sells, and supports enterprise application software products for corporations, government agencies, and educational institutions in Europe, the Middle East, Africa, North and Latin America, and Asia/Pacific. The company offers SAP Business All-in-One; SAP Business ByDesign; and SAP Business One. It also offers custom development, active global support, consulting, and education services, as well as managed services, and running and managing SAP solutions on behalf of customers. Employs about 51,275. Officers & directors own 10.4% of common stock (4/08 Form 20-F). Chairman & CEO: Dr. Henning Kagermann. Address: Dietmar-Hopp-Allee 16, Walldorf, Germany 69190. Telephone: 49 62 2774 7474. Internet: www.sap.com.

SAP bounced back from a rocky start in 2008, posting higher-than-expected license sales and software-related service revenues. More specifically, Europe's largest maker of business management software said its top line rose 20% (28% at constant currencies) in the June interim, to 2.91 billion euros. Software license sales, a key indicator of future support revenues and growth in general, rose 25% (34% net of currency exchange), to 898 million euros. This figure surpassed our expectation by almost 10%. Importantly, SAP managed to generate considerable growth in license sales in the U.S., despite concerns that the economic slowdown would begin to hurt demand. In fact, rival Oracle warned that as a result of the difficult operating environment in the U.S., demand for new software licenses would likely slow as 2008 wears on.

Investors were pleased with the German firm's second-quarter performance. This issue has risen some 15% since our May review, and remains ranked 2 (Above Average) for Timeliness. The group seems to have partially reversed the lackluster March-quarter showing by returning to its traditional area of strength — providing services to large and global enterprises. The group clearly has momentum, and ought to be able to convert its pipeline into steady earnings growth.

We are raising our 2008 and 2009 bottom-line estimates. The company recently said that it expected its operating margin to come in at the high end of its target of 28.5%–29.0%. Management also expects revenue growth from software and software-related services to be at the upper end of its forecast of 24%–27%. Ongoing share repurchases should also boost per-share results. Consequently, we have boosted our 2008 and 2009 share-earnings estimates by $0.25 each, to $3.05 and $3.55, respectively.

This timely issue also offers solid 3- to 5-year total return potential. SAP should continue reporting healthy annual profit growth thanks to overall execution and the continued strength in all three core areas of the business—the established business, the midmarket, and business user solutions. Finally, it is one of the few software makers that pays a dividend.

Erik M. Manning *August 22, 2008*

(A) Dividend is paid annually the day after the yearly shareholders meeting, usually in late May or early June.

(B) Each SAP American Depositary Receipt represents one SAP ordinary share. Next earnings report due late October.

(C) Quarterly revenue totals are calculated by taking reported revenue figures in euros and multiplying that figure by euro/dollar ratio on last day of the quarter.

BUSINESS: Starbucks Corp. is the leading retailer, roaster, and brand of specialty coffee in the world. Sells whole bean coffees through its specialty sales group, mail-order business, supermarkets, and online. Has 7,257 company-owned stores in the U.S. and 1,867 in international markets. Also has 7,102 licensed stores worldwide. Retail sales: 85% of '07 total; Specialty sales, 15%. Has joint ventures with Pepsi-Cola and Dreyer's to develop bottled coffee drinks and ice creams, respectively; partnership with Kraft Foods to distribute coffee in grocery stores. Has approximately 172,000 employees. Off./Dir. own 5.5% of common (1/08 proxy). CEO: Howard Schultz. Inc.: WA. Addr.: 2401 Utah Ave. So., Seattle, WA 98134. Tel.: 206-447-1575. Web: www.starbucks.com.

Starbucks is experiencing some serious growing pains for the first time in its storied history. In fact, we now expect share net to decline slightly in fiscal 2008 (ends September 28th), to $0.85, because of lower customer counts at its domestic stores, particularly those located in the California and Florida markets that are being hard hit by the housing downturn. (Together, California and Florida account for nearly one-third of Starbucks' U.S. retail revenues.) Rising commodity costs, big investments in new sales initiatives, and heightened price competition from the likes of McDonald's and Dunkin' Donuts are also contributing to the profit squeeze. Of note, the company's operating margin is now tracking a few hundred basis points below its peak of 16%-plus, which was achieved in fiscal 2005.

The long-term outlook is still solid, in our view. Howard Schultz, who returned to the CEO position in January, will be hard-pressed to orchestrate a quick turnaround in the current climate. But Starbucks seems to have a good recovery plan in place. For starters, the company has reduced its U.S. development pipeline substantially, so that it may focus more of its attention and resources on boosting comps at existing sites. And it is spending more on product innovation, which should breathe new life into the *Starbucks* brand and help the firm to maintain its dominant market position in the coffee segment of the restaurant industry. Specifically, in the coming quarters, we look for the company to reemphasize drip coffee, increase its advertising efforts, and discontinue its breakfast sandwich program, which appears to have had a negative impact on transaction times. Meanwhile . . .

International expansion remains a priority. While store openings are being scaled back at home, Starbucks intends to aggressively expand overseas in the years ahead. China, where the company has already established a strong presence, will probably see the largest number of openings during the balance of the decade.

These shares are untimely. We still have faith in management and the Starbucks concept, however. And we believe that patient investors will be rewarded handsomely over the long haul.

Justin Hellman *June 6, 2008*

(A) Fiscal year ends on the Sunday closest to September 30th.
(B) Based on primary earnings through '96; diluted thereafter. Excludes nonrecurring gains (losses): '94, $0.03; '96, $0.04; '98, ($0.07); '00, ($0.11); '02, ($0.01). Next earnings report due in late July.
(C) In millions, adjusted for stock splits.
(D) Excludes occupancy costs prior to '94.
(E) Includes company-operated stores only.
(F) Includes stock-based compensation starting in '06.

BUSINESS: Scholastic Corp. creates and distributes children's books and classroom magazines and educational technology. Sells directly to children and teachers in elementary and secondary schools through sch. book clubs, book fairs and library sales. Has oper. in U.S. and 15 foreign countries. 2008 sales by business seg.: Children's Pub., 53%; International, 21%; Educ'l Pub., 19%; Media, Lic. & Adv., 7%. Acq'd Grolier, 6/00. Has about 10,200 full-time employees. Robinson family owns all Class A shares and 17.3% of common; all other off. & dir. own 5.5% of common; T. Rowe Price, 7.4% (8/07 Proxy). Chairman, President & CEO: Richard Robinson. Inc.: DE. Address: 557 Broadway, New York, NY 10012. Telephone: 212-343-6100. Internet: www.scholastic.com.

Scholastic's earnings rallied substantially in fiscal 2008 (year ended May 31st). The world renowned educational publisher enjoyed a significant margin recovery last fiscal year. Sales comparisons were paltry because of the discontinuation of the direct-to-home and the school-based continuities businesses, as well as lower volume in the second half of the fiscal year related to the recent consumer spending squeeze. However, a favorable sales mix enabled the company to generate higher gross margins. Moreover, the decision to exit the aforementioned units significantly improved the share-net picture, as the ailing divisions were written off as discontinued operations and have been excluded from our actual figures. Meanwhile, efforts to exercise efficient marketing strategies within book clubs that focus on subscription fulfillment have helped offset declining sales.

We look for challenging comparisons in the fiscal year ahead. The divestiture of a large portion of the ailing direct-to-home continuities business has made for difficult sales comparisons. In addition, recent indicators foretell of an increasingly tough funding environment for educational publishing. Hence, further spending will be necessary to buoy this segment. Meanwhile, an overall softening of the economy is likely to hurt performance. Furthermore, unless the company can put out another smash-hit series to recreate the success of the highly acclaimed *Potter* books, it is unlikely that Scholastic will be able to enjoy the substantial gains that it generated during the *Potter* era.

Still, the company's margins should stay afloat over the next 3 to 5 years. Revenues and profits in the international segment ought to rise over the long term, particularly for print products in the educational segment. Too, the company's decision to initiate a dividend distribution, coupled with ongoing share repurchases, indicates that management is making good use of ample free cash flows.

However, these shares are untimely for the year ahead. Furthermore, the stock offers below average price appreciation potential to 2011–2013. In light of these factors, investors can find more-suitable options.

Simon R. Shoucair *August 15, 2008*

(A) Fiscal year ends May 31st. (B) Primary EPS through 1997. Dil. thereafter. Excl. nonrecur. gains (losses): '96, (43¢); '97, (2¢); '00, (15¢); '01, ($1.23); '02, 4¢; '03, (3¢); '04, (5¢); '07, 4¢. Next egs. rept. due late Sept. (C) Com. shrs. elect at least 1/5 of board; Class A shares elect remaining board members and exercise all other voting rights. (D) In mill., adjusted for split. (E) Qrtly. egs. may not sum due to changes in shares out. (F) Reflects $200 mill. new debt for stock repurchase, 6/07. (G) Dividend initiated in mid-2008.

Steelcase Inc, then known as the Metal Office Furniture Company, began manufacturing office safes in 1912. In the subsequent years, the company gradually expanded its business mix, becoming the dominant supplier in nearly every category of the office-furniture industry. It assumed the Steelcase name in 1954. On February 18, 1998, a group of equity owners sold, in aggregate, 13,972,500 shares of Class A common stock in an initial public offering.

BUSINESS: Steelcase, Inc. is the world's leading producer of office furniture and systems. The company, its subsidiaries, and joint ventures operate more than 50 manufacturing facilities globally. Products are distributed through a network of more than 800 independent dealers. Int'l operations generated 26% of 2007 sales. Has 13,500 employees. 2007 depreciation rate: 5.1%. Officers & directors control 3.0% of Class A and 39.0% of Class B shares; Fifth Third Bank (as trustee, agent, or custodian), 11.5% of Class A and 62.2% of Class B; Ariel Capital Management, 15.3% of Class A (5/08 Proxy). Pres. & CEO: James P. Hackett. Chrmn.: Earl D. Holton. Inc.: MI. Address: 901 44th St. SE, Grand Rapids, MI 49508. Telephone: (616) 247-2710. Internet: www.steelcase.com.

Fiscal 2008 (ends February 28, 2009) is likely to be less favorable for Steelcase. The challenging economic conditions have likely caught up with the company, as a slowdown in corporate spending has weighed upon the entire commercial furnishings industry. The turmoil from the residential housing market spilled over into the financial services sector via the subprime mortgage crisis. As a result, many office furniture companies have been hit hard. This review had gone to press by the time the company announced its fiscal first-quarter figures. Nonetheless, we anticipate that the aforementioned factors hampered revenues. Furthermore, we look for higher costs to reduce share earnings this year.

On the upside, we anticipate an earnings rebound in fiscal 2009. Based on the company's performance prior to the recent macroeconomic downturn, we believe management's growth strategies were gaining traction. Hence, Steelcase is well positioned to benefit from an economic recovery. We look for decent revenue growth both on the domestic side and abroad, accompanied by cost savings generated from newly adopted lean manufacturing methods and plant consolidation, to spark a profit recovery next year.

Steelcase is firming its footprint in the international arena. Recent acquisitions have broadened the company's exposure to rapidly expanding commercial furniture markets in developing countries. Indeed, the burgeoning commerce and financial sectors in countries like China offer considerable promise for long-term profitability. We believe the company's efficient global supply system enhances its competitive stance.

These shares are untimely. The challenging economic climate and difficulties facing the financial services markets have hurt the company's near-term earnings prospects. This will likely hold the stock back over the next few months.

However, we look for earnings to rally considerably to 2011–2013. Moreover, the current quotation offers wide appreciation potential over the next 3 to 5 years. In addition, investors with an income bent should take note of the impressive dividend yield.

Simon R. Shoucair *July 4, 2008*

(A) Fiscal year ends on the last Friday in February of the following calendar year.
(B) Diluted earnings. Excludes net nonrecurring (charges) gains: '00, 7¢; '01, 23¢; '02, $1.70; '03, (8¢); '04, (1¢); '05, (17¢); '07, (7¢). Next egs. report due late Sept. BUSINESS: Sealed Air Corporation is a leading manufacturer of a variety of packaging and performance-based materials and equipment systems, servicing food, industrial, medical, and consumer applications. The company sells foam-in-place packaging (Instapak), air-cellular cushioning materials (PolyCap), padded mailers (Jiffy), polyethylene foam, food and medical-device packaging materials (Cryovac). Acquired Trigon Ind. Ltd., 1/95; pack. div. of Southcorp Hold., 6/96; Cryovac div. of W.R. Grace, 3/98. Has approx. 17,700 empls. 2007 depr. rate: 5.4%. Fgn. sls.: 55% of 2007 tot. Off. & dir. own 1.9% of comm. stk. (4/08 proxy). Pres. & CEO: William V. Hickey. Inc.: DE. Addr.: 200 Riverfront Blvd., Elmwood Park, NJ 07407. Tel.: 201-791-7600. Web: www.sealedair.com.

Sealed Air's operating margins have been burdened by a sharp rise in material costs. Most of the difficulties relate back to the use of petroleum in the resin used in the manufacture of packaging materials. Indeed, roughly 40% of the increase in cost of goods sold came from the rise in petrochemical-based raw material costs. However, the Food Packaging unit may give margins a boost as the recent trade deal between the U.S. and South Korea should increase the amount of domestic beef shipped to the latter nation. **Most of the year-to-year sales growth came from acquisitions in the Other Business division.** The unit's top line rose 40%, year to year, largely due to the additions in the second half of 2007 of Alga Plastics, a medical packaging company, and Ethafoam, a maker of insulation and weatherproofing materials. At this juncture, however, margins have been narrowed despite the expansions, inasmuch as costs have been higher since the new units have the manufacturing integrated into the company.

Sealed Air's global manufacturing strategy is making progress in emerging markets. The recently opened plants in China and Mexico should permit easier access to these new and growing markets. In fact, within the Chinese market, a deal was recently reached with a multinational, Shanghai-based retailer to launch a pilot program using the company's case-ready packaging format. Moreover, international operations contributed over 80% of the year-over-year sales increase, although a portion of that was due to the weakened state of the U.S. dollar.

A difficult operating environment during 2008 will likely limit earnings. A challenging cost structure, as well as a competitive packaging market, should limit year-to-year share-net growth during 2008 to about 3%. We are anticipating some improvements to the cost structure and a focus abroad to lead to double-digit earnings growth in 2009.

Despite its recent struggles, Sealed Air is an appealing option for long-term investors. With the 35% dip in stock price over the last six months, the price appreciation potential of issue to 2011-2013 is above average.

BUSINESS: Smithfield Foods, Inc., is the largest hog producer and pork processor in the world. The company conducts its business through six segments, Hog Production (HP), Pork, Beef, International, Corporate, and Other, each comprised of a number of subsidiaries. Brand names include: *Smithfield Lean Generation, Smithfield Premium, John Morrell, Farmland,* and *Gwaltney.* Acquired Premium Standard Farms, 5/07. Signed definitive aggrement to sell beef business, transaction still pending. 2007 depr. rate: 6.1%. Has about 58,100 employees. Off./dir. own 13.6% of common stock (Proxy 7/07). *Chairman:* Joseph W. Luter, III. CEO & President: C. Larry Pope. Inc.: VA. Address: 200 Commerce Street, Smithfield, VA 23430. Tel.: 757-365-3000. Internet: www.smithfieldfoods.com.

Smithfield Foods is in the midst of a very difficult stretch. This was evident in the final quarter of fiscal 2007 (ended April 27, 2008) when the company earned a penny a share. That figure was well below both our estimate of $0.20 a share and the year-earlier tally of $0.36. For the full fiscal year, Smithfield reported share earnings of $1.04, well off the prior-year figure of $1.68. More significant, we expect the recent problems to continue during the current fiscal year.

The biggest problem remains the Hog Production Group (HPG). Indeed, the losses keep piling up for this segment, which has been hampered by both lower live pig prices and considerably higher raising costs. The latter is the result of skyrocketing corn and soybean prices. During the April period, the average live hog price was $42 per hundredweight, while the average raising cost was $54 per hundredweight. While we don't expect such a huge discrepancy to continue, fiscal 2008 is shaping up to be another difficult year for the world's largest hog producer. The struggles in HPG will probably more than offset any gains registered by a thriving pork processing business. Thus, we now look for earnings to fall in fiscal 2008.

The sale of the company's beef processing business is progressing. Smithfield hopes to complete the deal by the fiscal second (October) quarter. The sale of the red meat operations to Brazilian beef packer JBS S.A. should net $565 million in cash. (Note: SFD's fiscal 2007 data were restated, with the beef business treated as a discontinued operation.)

The recent operating problems have brought about some liquidity concerns. In fact, Smithfield recently sold $350 million of convertible notes due 2013, with the intention of using the proceeds to pay down its short-term credit facilities. The company also agreed to sell seven million shares (5% stake in SFD) to COFCO, China's largest agricultural trading and processing company, to raise monies for working capital purposes and to reduce its debt-laden balance sheet. That said,

We recommend that investors avoid these untimely shares, given the company's aforementioned operating problems and liquidity issues.

William G. Ferguson *August 1, 2008*

BUSINESS: A. Schulman Inc. sells high-performance plastic resins which are used as raw materials in its customers' manufacturing operations. The company also purchases plastic resins for resale or to formulate proprietary compounds tailored to customer specifications. A. Schulman acts as a manufacturer (62% of '07 sales), merchant (19%), and distributor (19%). Foreign sales, 69% of '07 total. '07 depr. rate: 5.9%. Has about 2,410 employees. Officers/directors own 11.2% of stock; Barclay's, 6.4%; Snyder, 5.2%; Dimensional Funds, 6.4%; Royce & Assoc.; 11.1%; Barrington, 5.6% (11/07 proxy). Chairman & CFO: R. A. Stefanko. President & CEO: Joseph M. Gingo. Inc.: DE. Addr.: 3550 W. Market St., Akron, OH 44333. Tel.: 330-666-3751. Internet: www.aschulman.com.

A. Schulman's fiscal second-quarter loss requires an explanation. (Fiscal 2008 ends August 31st.) The bottom-line deficit of $0.13 is GAAP-based and includes an array of relatively minimal charges related to asset impairments, severance costs, lease terminations, and restructuring. Similar charges were included in last year's fiscal second quarter. From a purely operating viewpoint, the company earned $0.12 a share in the second quarter of fiscal 2007 and $0.29 in this year's second interim.

Top-line increases in the second half of fiscal 2008 are unlikely to match those of the first half. The company's North American business has weakened since the end of the fiscal second quarter, due to very sluggish economic conditions. And since 45% of Schulman's U.S. sales are dependent on the domestic auto industry, it is easy to see why top-line advances will be tough to come by. In addition, overseas sales are starting to weaken, and foreign operations are expected to account for 70% of 2008 revenue. Currency gains are unlikely to increase, as the dollar looks to have started stabilizing against the euro.

In an attempt to maintain margins, Schulman has been on a radical cost-cutting streak. Two plants have been shuttered in Texas, the workforce has been cut at the Ohio plant, and an Ontario facility is expected to be closed. Working capital needs should be lowered over the next two years, and lower-margin products are being phased out. Most important, however, raw material purchases are being addressed in a more efficient manner. Admittedly, there is only so much Schulman can do on this front, though, since oil is a major ingredient of its high-performance plastic resins.

This stock has good total return potential. The decent and gradually rising dividend (recently raised to $0.15 a share/quarter) is a pleasant sweetener for the patient investor. That Schulman is gaining a solid footprint in faster-growing and more-lucrative Asian markets is the bright spot. Too, by 2011-2013, the domestic auto market should have recovered and be more interested in Schulman's proprietary *Invision* product, particularly since it is priced so competitively.

Jeremy J. Butler *June 13, 2008*

(A) Fiscal year ends Aug. 31st.
(B) Diluted earnings. Weighted avgerage until '97. Excludes nonrecurring (loss)/gain: '98, (6¢); '04, (16¢); '05 2Q, 22¢.

Next earnings report due late June.
(C) Dividends historically paid in the first week of February, May, August, and November.
(D) In mill., adjusted for stock splits.

BUSINESS: Selective Insurance Group, Inc. is a holding company for five property/casualty insurance companies. (Main subsidiary: Selective Insurance Company of America.) Markets products primarily in the East and Midwest. New Jersey accounted for 30% of premiums written in '07; 33% in '06. Mix of 2007 premiums written: personal lines, 13%; commercial lines, 87%. Commercial premiums by industry (as percentage of total): automobile, 24%; general liability, 31%; workers' compensation, 25%; other, 20%. Has about 2,100 employees. Officers/directors own 4.0% of common stock (4/08 Proxy). Chairman, President & CEO: Gregory E. Murphy. Inc.: N.J.. Address: 40 Wantage Ave., Branchville, N.J. 07890. Telephone: 973-948-3000. Internet: www.selective.com.

We think Selective Insurance will post its second consecutive year of declining earnings in 2008. The insurer started this year off on rough ground with net premiums earned barely improving in the first quarter, and operating earnings decreasing 35%, year over year. Specifically, higher losses in the commercial auto segment and pricing pressures were the primary factors behind the 300-basis-point deterioration in the insurer's combined ratio in the March interim. What's more, we believe that over the next few quarters, Selective will face greater competition, lower retention on larger accounts, and flat renewal pricing. As a result, growth in the personal and commercial automobile lines' premiums earned will likely be minimal. Our assumption for lower investment income this year also does not augur well for the profits. All told, we expect the bottom line to drop 5% in 2008, to $2.10.

Earnings should make a recovery in 2009. The underwriting margin will probably not improve much over the next year, given our expectations for intensified competition in the standard commercial lines and personal lines. In addition, we think that the premium pricing environment will remain relatively soft through 2009, thereby limiting premium growth to 2.5%. However, the insurer should be able to improve the expense ratio by about 50 basis points through greater cost-cutting. Also, Selective will likely maintain adequate reserves to cover any unusual events. Finally, the company ought to remain successful at gaining new business, assuming retention of its solid underwriting efforts and technological advantage over new market entrants.

The bottom line should advance at a mid-single-digit pace over the pull to 2011–2013. Ongoing reserve strengthening and decent premium growth will likely offset greater catastrophe losses. Further, prospects for an improving economic picture over this time frame presage investment income growth.

This equity has slipped 12% since our March review. Additionally, it is ranked to underperform the broader markets in the year ahead, and only offers average capital appreciation potential over the next 3 to 5 years.

BUSINESS: Shaw Communications Inc. is the second-largest multiple-system cable TV operator in Canada. The cable TV unit (72% of 2007 revenues) serves 2.2 million basic cable and 1.5 million Internet subscribers, mainly in Alberta and British Columbia. Also provides satellite TV and services (25%). Cancom (94%-owned) results consolidated with those of Shaw as of 7/00. Acq'd: Moffat Comm., 3/01; Monarch Cablesystems, 3/04. Radio broadcasting div. was spun off (9/1/99). 2007 depr. rate: 9%. JR Shaws control 78.8% of Cl. A shares (12/07 proxy). Chrmn: JR Shaw. Pres.: Peter Bissonnette. CEO: Jim Shaw. Inc.: Alberta. Addr.: Suite 900, 630-3rd Ave. S.W., Calgary, Alberta T2P 4L4 Canada. Tel.: 403-750-4500. Web: www.shaw.ca.

Shaw Communications reported strong results during the fiscal second quarter (year ends August 31, 2008). The company posted earnings of $0.26 a share during the interim, up 37% from last year's figure. Healthy subscriber growth and increased demand for add-on services have contributed to profits. These positive trends ought to continue for the remainder of this year. We target earnings of $1.05 a share in fiscal 2008, on a 10% top-line advance. In 2009, share net may well increase another 12%–15% based on further market-share gains in Canada.

Cable television and Internet sales continue to lead the way. The proliferation of high-definition televisions resulted in more digital cable subscribers. This segment's customer base climbed 11%, year over year, in the second quarter. Also, satellite revenue advanced decently thanks to improved penetration in rural areas. Price increases have also helped. Investments in on-demand and its HDTV offering should begin to reap benefits for the company. Meanwhile, Shaw continues to experience success at its online segment, with over 1.5 million subscribers installed. Overall penetration currently stands at roughly 67%, with this figure likely to rise further in the coming months.

The company ought to benefit from gains in digital phone sales. Shaw continues to build its footprint in Canada, which augurs well for increases in its customer base. Service was recently added to include new regions in both Ontario and Saskatchewan. Digital phone revenues might well increase at a double-digit pace this year.

These shares have above-average price appreciation potential out to the 2011–2013 time frame. We forecast solid annual bottom-line growth for the company over that period based on strengthening prospects in the cable industry. In the meantime, the stock is ranked to mirror the broader market averages over the coming six to 12 months.

BUSINESS: Schlumberger Ltd. is the world's leading oilfield services company. Oilfield Services (87% of revenue; 85% of pretax profit) technologies include wireline, drilling & measurements, well testing, well services, completions, artificial lift, data & consulting services, and information solutions. Western Geco (13%, 15%) offerings include land and marine seismic, multiclient services, reservoir services, and data processing. Has operations in 80 countries. 74% of 2007 revenues were generated outside North America. Employs 80,000. FMR owns 5.9% of common shares; Officers and directors, 3.3% (3/08 Proxy). Chairman & CEO: Andrew Gould. Inc.: Netherlands Antilles. U.S. Address: 5599 San Felipe, 17th Fl., Houston, TX 77056. Tel.: 713-513-2000. Web: www.slb.com.

Schlumberger is benefiting from the broad upturn in the oilfield services industry. Drilling customers have more cash flow with oil prices at record levels. As a result, most of the company's extensive product line is enjoying higher demand, and there's a solid-to-strong tone to the majority of operating regions. These trends point to around a 15% gain in earnings per share this year.

But not everything is great. One soft spot has been drilling in Canada, where changes in the laws affecting producers combined with low natural gas prices to dampen activity in the first half of 2008. A rise in gas prices, plus some new prospects, seems to be helping that region get going again, though. The slow ramp-up of the seismic business—used in oil and gas exploration—is also a concern. A rising backlog has not yet translated into higher revenues. All told, margin growth appears to have slowed, which has kept a lid on the stock price lately.

There is plenty of earnings growth yet to be had. Even assuming relatively stable margins in the coming year, profits still stand to benefit from higher volume. There are 35 new offshore rigs scheduled to begin working in the second half of 2008, and Schlumberger should pick up its fair share of the trade. We now figure share net could climb another 15%-17% in 2009. Moreover, the 180 new rigs set for delivery to customers out to 2012 augur well for an extended business upturn.

The company is boosting its capacity aggressively to meet product demand while the market is hot. The push is broad-based, as the company beefs up its mainstay lines and increases its technological edge by way of niche acquisitions. The reward promises to be higher profits down the road. Extra strong cash flow is supporting the expansion.

This good-quality stock remains a timely consideration. The latest earnings release indicated that things are basically fine here. But there is some concern that oil prices—which skyrocketed before pulling back—are hurting the global economy. That, in turn, could reduce oil usage and limit the demand for oilfield services. The developing sideways pattern in the stock suggests some recognition of this.

Robert Mitkowski, Jr. *August 15, 2008*

Silgan Holdings was founded in 1987 by Co-Chief Executive Officers, R. Philip Silver and D. Greg Horrigan, who are former senior member managers, of Continental Group's packaging operations. The company went public in 1996, but the two co-CEO's maintained a major stake in the company. Since its inception, the company has had an appetite for acquisitions, purchasing 19 businesses in 17 years.

BUSINESS: Silgan Holdings, Inc. manufactures consumer goods packaging products. It produces steel and aluminum containers for human and pet food; customer-designed plastic containers for personal care, healthcare, food, pharmaceutical, and household products; and specialty packaging items, including metal caps, plastic bowls, and paper containers. The company has over 60 manufacturing facilities throughout North America. Has around 8,400 employees. Officers & directors own 34.3% of outstanding common shares (4/08 Proxy). President & CEO: Anthony J. Allott. Co-chairmen: R. Philip Silver & D. Greg Horrigan. Inc. Delaware. Address: 4 Landmark Square, Suite 400, Stamford, CT 06901. Telephone: (203) 975-7110. Internet: www.silganholdings.com.

Silgan Holdings continues to face a very volatile price/cost environment. As oil continues its record run, the cost of raw materials remains a persistent obstacle. Silgan continues to battle these inflating input costs, however, with price increases. Double-digit metal food can price hikes are already on tap for 2008. The plastics segment, meanwhile, has been slow to pass through much of these higher costs. But product price increases, albeit at a lower rate than most contractually protected can hikes, are likely to come to fruition here this year, as well. And, although resin costs appear to be still on the rise, the supply/demand situation signals that a price regression may develop by yearend, which would relieve some margin pressure within the plastics segment.

Sales growth of 3%-5% is likely this year and next. Innovation remains vital, and the recent acquisition should bolster SLGN's footing in the niche closures segment. Further, Silgan should continue to shift the remainder of its metal can product mix to higher-margin EZ Open tops.

Internal cost reductions remain a priority. A focus on trimming overhead costs should help margin expansion return in 2009. Indeed, plant consolidation is already under way on the metal food can side, while reduced SG&A expenses ought to help the plastics closures business.

This stock appears to be a bit overvalued at its recent quotation. The company's earnings did not decline as far as the market had anticipated in the first quarter, with the ensuing relief rally lifting the share price about 10% since our April report. Despite the stronger-than-expected start, we are leaving our 2008 and 2009 share-earnings estimates unchanged. And, although we believe the profits will continue to advance in the high-single-digit range over the long haul, investors appear to have priced in much of this growth. In fact, these shares are already trading within our 3- to 5-year Target Price Range. **The issue has little appeal for long-term investors for now.**

BUSINESS: The Scotts Miracle-Gro Company (formerly Scotts Co.) is the world's largest maker and marketer of turf & horticultural products. Brand names include *Scotts, Turf Builder, Ortho & Miracle-Gro.* Foreign sales: 18.4% of '07 total. Acquired Republic, 11/92; Grace-Sierra, 12/93; Miracle-Gro, 5/95; Miracle Garden Care, 1/97; Emerald Green, 10/97; Levington Ltd., 12/97; Ortho, 12/98; Rhone-Poulenc, 1/99; Smith & Hawken, 10/04; Morning Song, 11/05. Has 6,120 empls. Hagedorn Partnership owns 32.4% of common; Off. & Dir., 35.5% (incl. Hagedorn Partnership shares); three institutions, 25.8% (12/07 Proxy). CEO: James Hagedorn. Incorporated: Ohio. Address: 14111 Scottslawn Road, Marysville, OH 43041. Tel.: 937-644-0011. Internet: www.scottscompany.com.

Scotts Miracle-Gro's near-term prospects have weakened. (So, too, has its stock price, which recently fell to a six-year low). The major damage started in early May when the company reported March-quarter earnings, and lowered 2008 share guidance from $2.37 to the $2.00-$2.20 range. The main reasons for the reduced expectations were 1) a slow start to the lawn and garden season weather-wise; 2) the impact of the economic slowdown on lawn services and Smith & Hawken (outdoor living products); 3) recalls from two product lines that will likely trim share net by $0.10; and 4) a spike in urea costs. Until these conditions improve, untimely Scotts shares may continue to lag the market

Our earnings estimates for fiscal 2009 (begins October 1st) and beyond have been cut significantly. Investors are concerned about commodity prices such as urea (fertilizers) and grains (birdseed). With Scotts recently losing a modest share of the fertilizer market, we believe the category leader won't be able to pass along all of its increased urea costs. We remain cautious about consumer spending for lawn services, and their trading-down approach. The absence of recall expenses, though, should be a plus going forward.

Key competitors are hurting, as well. Spectrum Control is unprofitable and Central Garden & Pet is modestly positive. Scotts spends more on advertising than these and other rivals combined. An added impediment to competitors' growth is Scotts having merchandisers and in-store counselors at its leading retail customers. So, Scotts should boost its market share.

Long-term investors might consider taking advantage of Scotts' current problems. The company should benefit from favorable demographic trends, namely gardening correlating with an aging population, and the population moving to warmer climates, which have longer growing seasons. Scotts has over a 50% share of the lawn and garden market, and a large research budget. Balance sheet deleveraging is also likely to bolster earnings. Furthermore, should CEO Jim Hagedorn adhere to his planned retirement in about three years, his family, which controls Scotts, might opt to sell the company.

BUSINESS: Snap-on Inc. is a leading global manufacturer and marketer of tools, diagnostics, equipment, software, and service solutions for professional users. Product lines include hand and power tools, tool storage, diagnostics software, information and management systems, shop equipment and other solutions for vehicle dealers and repair centers. The company also derives income from various financing programs. Has about 11,600 employees. Officers & directors own 2.8% of stock; Lord, Abbett & Co., 8.1%; Harris Associates 7.6%; EARNEST Partners, 5.9% (3/08 proxy). Chairman: Jack D. Michaels. CEO: Nicholas T. Pinchuk. Incorporated: DE. Address: 2801 80th Street, Kenosha, WI 53143. Telephone: 262-656-5200. Internet: www.snapon.com.

Snap-on hit the ground running this year. First-quarter profits increased mightily, thanks to better-than-expected margins, lower restructuring costs, and favorable currency translations. Revenue growth was somewhat soft, though, due to inventory corrections, lower North American franchise sales, and reduced OEM facilitation and tool sales.

The tool maker will probably continue humming along in 2008. Top-line growth should be more robust in the coming quarters, since demand has remained strong. The Commercial & Industrial group ought to benefit from higher industrial volume, continued strong sales in emerging markets, and increased power tool revenues. The Tools business will probably continue posting slight top-line gains, thanks to foreign exchange gains and heightened activity overseas. A moderate decline in North American franchise sales in likely, though. Finally, the Diagnostics & Information segment should get back on track in the second half, when the timing of OEM programs improves.

We have raised our full-year share-net target by a quarter, to $4.00. Better pricing and the ongoing benefits from Rapid Continuous Improvement and other cost-reduction initiatives should keep offsetting higher production and raw material expenses. Lower restructuring costs and currency translation gains will also boost the bottom line.

Snap-on is branching out abroad. Management has increased spending to further expand the company's presence in emerging markets. Snap-on also recently bought a 60% interest in Zhejiang Wanda Tools, a hot-forged hand tool maker in China. The majority stake in Wanda represents the company's first hand tool manufacturing facility in China, and it complements existing production capabilities. It could also serve as an export base for non-Snap-on branded hand tools.

We like this issue. The stock is ranked to outperform relative to the broader market in the year ahead (Timeliness: 2). In addition, it offers solid 3- to 5-year capital gains potential, as the company ought to be able to successfully penetrate emerging, high-growth markets. The decent dividend yield only sweetens the pot.

Erik A. Antonson *July 25, 2008*

(A) Years end on Saturday closest to December 31st. Based on average shares thru '96; diluted thereafter. Excludes nonrecurring losses: '98, $1.95; '99, 44¢; '01, $1.47; '02, 4¢; '05, 6¢; '06, 35¢; '07, 14¢. Excludes gain from accounting change: '02, 5¢. Next earnings report due late July.

BUSINESS: Sonic Corporation franchises and operates the largest chain of drive-in restaurants in the United States. As of August 31, 2007, there were 3,343 Sonic drive-ins, of which 2,689 were franchised and 654 were company-owned through a limited liability partnership. Sonic offers made-to-order sandwiches, an assortment of frozen and fountain drinks, as well as dessert items. The average Sonic has between 24 to 36 covered parking spaces and features an intercom speaker system through which orders are placed. Has roughly 357 corporate employees. Officers and directors own 8.5% of common stock (12/07 proxy). Chairman: E. Dean Werries, Inc.: DE. Address: 101 Park Avenue, Oklahoma City, OK 73102. Telephone: 405-280-7654. Internet: www.sonicdrivein.com.

Sonic shares are coming under pressure. The current softness in the economy has weakened consumer confidence. In addition, with the cost of food rising significantly in recent months, consumer discretionary spending has slowed and, at the same time, the company's operating expenses have increased. As a result of present conditions, fewer people are dining out. This undermined price hikes and led to a negative earnings comparison in the 2008 fiscal second quarter (year ends August 31st). Moreover, with the threat of higher minimum wages and commodities costs, it is likely that this trend will continue to check earnings growth in the coming months. The current climate has led to some investor profit-taking, as the stock is down roughly 12% since our last review. Hence, the offering will probably only mirror the broader market averages over the next six to 12 months.

Still, we remain optimistic about the restaurant chain's prospects. Despite the likelihood of a sluggish performance in fiscal 2008, we look for a strong rally in the following year. We believe the slowdown in traffic is primarily linked to the difficult economic environment. Indeed, once the economy begins to show signs of stabilization, we look for customer traffic to bounce back considerably. Too, management's recent efforts to shift marketing away from specials, like the "Happy Hour", which essentially sell themselves and offer lower margins, toward premium and snack menu items, augurs well for top-line growth.

We are confident in Sonic's business model. The company's underlying growth fundamentals are promising. Although the current economic climate is difficult, we expect volume in core and developing markets to rise steadily over the long term, driven mainly by the company's successful marketing program, new unit growth, and higher franchising income. Indeed, the unique ascending royalty rate and early conversion of older license agreements augur well for profits.

The stock offers good price appreciation potential over the next 3 to 5 years. The company's growth initiatives and emphasis on cost management should yield decent profit growth to 2011–2013.

BUSINESS: Sovereign Bancorp, Inc. is the holding company for Sovereign Bank. Operates about 750 community banking offices throughout Penn., New Jersey, Rhode Isl., Conn., Mass., and New Hampshire. Acquired Main St. Bancorp 3/02, First Essex 2/04, Seacoast Financial Services 7/04, Waypoint Fncl. 1/05, Independence Community Bank 6/06. Loan portfolio as of 12/31/07: Commercial loans, 53.5%; consumer loans, 46.5%. Has about 11,975 employees. Officers and directors own 6.8% of common stock; Banco Santander Central Hispano, S.A., 24.4%; Relational Investors, LLC, 6.3%. (3/08 proxy). President and CEO: Joseph C. Campanelli. Inc.: PA. Address: 2000 Market Street, Philadelphia, PA 19103. Tel.: 215-557-4630. Internet: www.sovereignbank.com.

Sovereign Bancorp has raised some fresh capital. Management has been moving to help shore up finances in the face of deteriorating economic conditions. Previous actions included closing up its auto loan operations in the Southeast and Southwest, selling $7 billion in noncore assets, cutting $100 million in operating expenses, and eliminating the dividend. Most recently, it issued 179.7 million shares of common stock at $8.00 per share, netting proceeds of $1.39 billion. It also sold $500 million in fixed-rate 10-year subordinated notes, yielding 8.75%.

The operating environment remains difficult. Reflecting ongoing turmoil in the credit arena, Sovereign's nonperforming loans rose more than 170% year on year in the March quarter, to $418 million. This represented 0.71% of total loans, up 18 basis points. Meanwhile, the provision for credit losses nearly tripled, to $135 million. We were previously looking for a share-net decline of 15%–20% this year, but dilution from the stock issuance increases the shortfall to over 40%.

Some improvement appears in the cards. Rate cuts by the Federal Reserve have helped reduce funding costs for lenders, thus paving the way for improved profitability. As early evidence of this, the company's net interest margin posted an 18-basis-point year-over-year increase in the first quarter, to 2.88%.

Our 2009 share-net estimate has been reduced by $0.25. This largely reflects the dilutive impact of the new shares, but also modestly lower expectations for the pace of Sovereign's profit recovery. Overall, under the assumption that economic conditions stabilize, we continue to look for a resumption in share-net growth next year.

This untimely issue remains best suited for aggressive investors. Reflecting the continued difficulties facing lenders, the stock has shed more than 63% of its market value in the past 12 months. Our projections call for earnings to double over the coming 3 to 5 years. But even with the stock's price decline, this suggests below-average appreciation potential over the period. The shares retain speculative appeal, however, based on the likelihood that the bank will eventually be acquired.

Mario Ferro *July 18, 2008*

BUSINESS: Staples Inc. is one of the largest office supply superstore chains in the U.S. It operated 1,738 leased stores in North America, and a total of 303 stores internationally operating in Europe, Asia and South America as of 5/3/08. Also sells Staples-branded products in over 2,400 grocery stores (mainly Safeway) in the U.S. Acquired Quill in 5/98 and a large European mail-order operation in 10/92. Sales mix in 2007: office supplies and services (42%), business machines (31%), computers and access. (20%), furniture (7%). Has 75,588 empl. (43% are part time). Off./dir. own 1.9% of stock; FMR LLC 14.9%, (5/08 Proxy). Chrmn. and CEO: Ronald L. Sargent. Inc.: DE. Address: 500 Staples Drive, Framingham, MA 01702. Tel.: 508-253-5000. Internet: www.staples.com.

Staples delivered healthy results in the April quarter, despite economic headwinds. Same-store sales declined 6% owing to weak customer traffic and a lower average ticket in the North American Retail division. The company has diligently worked to lower inventory per store in an attempt to cut expenses in this weak spending environment. North American Delivery, however, saw top-line growth of 8%, though earnings were pressured by increasing fuel costs, which were up over 50% from year-ago prices. The bright side was clearly the International division, thanks to better economic conditions in the countries served abroad. All told, we estimate Staples' share net will advance close to 10% this year.

Regulatory authorities have approved Staples' takeover of Corporate Express. After multiple offers, Corporate Express has accepted Staples' latest proposal of 9.25 euro per share, and the European Commission has approved the deal, which was the final hurdle. Corporate Express will likely add over $8 billion in sales and help Staples establish a contract business in Europe and Canada. The all-cash deal will also extend its global reach into Australia and New Zealand. Staples expects to garner savings through logistics and procurement management as well as favorable volume pricing. The transaction, which is expected to close in the third quarter of 2008, will be excluded from our financial presentation until it is finalized.

Share repurchases have been put on the back burner. The company has suspended its stock buyback program while it digests its acquisition of Corporate Express. There is over $1 billion left on the current authorization, but the company does not expect to re-instate the program for at least 18 months. We have adjusted our share-net projections slightly downward to adjust for the larger share count.

This Average ranked issue offers decent total return potential for the 3 to 5 years ahead. Staples has thus far weathered the downturn with minimal impact and will likely benefit once business spending strengthens. At this point, we anticipate average price performance in the year ahead.

Mary Beth Wiedenkeller *July 11, 2008*

(A) Fiscal year ends on Sat. closest to Jan. 31st of the following cal. year. Same-store sales gains (decreases) since fiscal '94: '95, 20%; '96, 14%; '97, 10%; '98, 11%, '99, 9%; '00, 7%; '01, (4%); '02, 1%; '03, 4%; 04, 4%; '05, 3%; '06, 3%; '07 (3%) (B) Diluted earnings starting in '96. BUSINESS: SPX Corporation is a global *multi-industry manufacturing company.* Provides flow technology solutions, test and measurement products, thermal equipment and services, and industrial products and services. Products and services include: wet and dry cooling systems, thermal service and repair work, heat exchangers, power transformers, pumps, metering systems, valves, packaged cooling towers, boilers, heating and ventilation equipment, etc. Employs about 14,300. Officers & directors own 4.9% of common stock; FMR, 15.0%; AXA, 14.8% (4/08 Proxy). President & CEO: Christopher J. Kearney. Chairman: Charles E. Johnson II. Incorporated: DE. Address: 13515 Ballantyne Corporate Place, Charlotte, NC 28277. Telephone: 704-752-4400. Internet: www.spx.com.

SPX Corporation stormed out of the gates this year . . . The top line rose 35%, to $1.39 billion. Internal revenue growth was 7%, and acquisitions and favorable currency exchanges made up the difference. Flow Technology sales more than doubled, but this was almost entirely the result of last year's acquisition of APV. The remainder of this group's revenue advance was driven by strong demand in the power, oil & gas, and sanitary markets. The power industry's need for cooling systems lifted the Thermal Equipment & Services top line. Finally, the demand for domestic power transformers was robust, due to the overwhelming need to upgrade U.S. utility infrastructure. This helped fuel a 26% sales advance for the Industrial Products & Services segment. Almost all of the top-line growth here was generated internally. All told, the good first-quarter revenue gain enabled the diversified manufacturer to more than double its profits.

. . . and Wall Street took notice. The stock price had risen above $140 (or more than 30% since our April review) before succumbing to the recent bear market. Still, thanks to the mostly positive share-price momentum and the strong earnings advances posted of late, we have raised this equity's Timeliness rank. It is now expected to outperform relative to the broader market in the year ahead, so momentum investors may want to take a closer look at this issue.

The company should not slow down much in the second half, despite the likelihood of ongoing macroeconomic weakness. In fact, we are raising our 2008 share-earnings target by a dime, to $6.40. This increase is due to SPX's solid first-quarter showing, strong order trends in the global infrastructure markets, and management's ability to drive productivity and improve margins.

SPX sold its Air Filtration business to The Riverside Company. The business was a part of the Flow Technology segment, and operated primarily in Europe. The terms of the deal were not disclosed.

This timely equity's 3- to 5-year total return potential is below average. Although the company will likely post solid profit gains over the long haul, better options are out there.

Erik A. Antonson *July 25, 2008*

2008					

BUSINESS: Stericycle Incorporated is the largest provider of regulated medical waste management services in the United States, as well as the only company in the industry with a national presence. The company provides medical waste collection, transportation, treatment, and disposal to its approximately 394,600 customers in the continental United States, Puerto Rico, Canada, Europe, and Latin America. Has 78 treatment centers and 98 transfer sites. Has roughly 6,342 employees. 2007 depreciation rate: 9.8%. Officers and directors own 8.4% of stock (4/08 proxy). Chairman: Jack W. Schuler. President & CEO: Mark C. Miller. Incorporated: Delaware. Addr.: 2816 North Keith Drive, Lake Forest, Illinois 60045. Tel.: 847-367-5910. Internet: www.stericycle.com.

Stericycle is off to a strong start. Despite the souring economic picture, the company continues to benefit from favorable trends in the medical waste sector. Indeed, firmer pricing has continued to boost revenues and profits across the company's segments. With its domestic and foreign demand remaining healthy and with limited competition, we believe that Stericycle is likely to enjoy solid growth over the next several quarters.

The growth in small-quantity accounts was primarily driven by SteriSafe. The bulk of small-quantity customers continue to opt for the premium Select and Preferred services. The expansion of this business augurs well for profits, as margins in this unit are quite high. As economic pressures weigh on large hospitals, the rising trend of patient care at doctors' offices and small clinics benefits small-quantity revenues and profits. Such factors have contributed to premium pricing strength and ought to further widen margins in this segment.

Meanwhile, the large-quantity segment has benefited from rising demand for the BioSystems platform. As was the case last year, higher recall activity, particularly among pharmaceutical products, and stricter hospital reimbursement policies should continue to drive revenue gains in the large-quantity segment. Insurers have begun to withhold more patient reimbursements for certain infections and medical errors that are due to hospital staff mistakes. As a result, hospitals are placing more emphasis on limiting these errors. This has driven up demand for external resources to minimize operational risks. We believe this should be a positive for the BioSystems platform, as well as some of Stericycle's other services, such as nascent water management and pharmaceutical waste compliance.

We believe the company's increased international exposure enhances its longer-term prospects. The company is experiencing robust revenue and earnings growth from foreign operations. We believe recent acquisitions, particularly in the U.K., ought to help boost profitability in the coming years.

This stock is a timely choice for year-ahead investment.

Simon R. Shoucair *June 6, 2008*

BUSINESS: STERIS Corporation is a manufacturer of infection-prevention systems and similar consumables, accessories, and services for the worldwide health-care markets. Offers a portfolio of over 2,500 products, including its flagship *STERIS SYSTEM 1*, to approximately 35,000 customers. Operates 50 facilities in 14 countries. Acq. Surgicot, 9/96; Joslyn Sterilizer, 7/97; Isomedix, 9/97; Hamo Holding AG, 4/03; Albert Browne Limited, 8/04. 2007 foreign sales: 23.0% of total. Has about 5,300 empls. Barclays Global Investors owns 9.5% of common stock; off. and dir., 10.8%, including Richard Breeden, 8.7% (6/08 proxy). Pres. & CEO: Walt Rosebrough. Chmn.: John Wareham. Inc.: OH. Addr.: 5960 Heisley Rd., Mentor, OH 44060. Tel.: 440-354-2600. Web: www.steris.com.

STERIS performed well in the June period (fiscal 2008 began April 1st). Share earnings nearly doubled, thanks to an 11% rise in sales, successful cost-cutting efforts, a lower effective tax rate, and a reduced share count. Looking ahead, sales and earnings comparisons will probably be more modest in the next few quarters. Management believes that the top line will grow at a 4%-6% clip this year, suggesting that much of the advance was already recorded in the fiscal first quarter. Our $1.65-per-share earnings estimate is at the high end of guidance, but this implies that the bottom line will be roughly flat for the remainder of the fiscal year. The effective tax rate will probably return to a normalized level, affecting sequential comparisons. Also, fiscal 2007's fourth quarter was especially strong, which will make comparisons challenging this year.

We think earnings will grow at a nearly 25% pace in fiscal 2009, to $2.05 per share. Sales growth will probably be moderate once again (about 5%), since the company's products do not seem to be taking hold with consumers. STERIS will probably focus on the cost side to keep the bottom line increasing at a healthy pace. We also believe the company will continue buying back stock, giving a boost to per-share results.

The company announced that it is raising its dividend. Shareholders will receive a distribution of $0.08 per share in mid-September, 33% greater than the previous payout.

This stock's Timeliness rank has risen a notch since our May review. Because of strong June-period results, the share price has risen over 20% since our May review. As a result, STE now carries our Highest (1) rank for year-ahead relative price performance. However, this stock's 3- to 5-year capital appreciation potential now falls below the *Value Line* median. Earnings should benefit from cost-cutting and share repurchases, but top-line growth will probably remain tepid. We advise interested parties to monitor this stock closely, because the emergence of a sales growth catalyst would probably make these shares an attractive long-term holding.

BUSINESS: Constellation Brands, Inc. is a leading international producer and marketer of beverage alcohol brands with a broad portfolio of wine, spirits, and imported beers. Acquired BRL Hardy Limited, Australia's largest wine producer, in fiscal '03 and The Robert Mondavi Corp. in fiscal '04. U.S. Consists of two business divisions: Constellation Wines (branded wines and U.K. wholesale, 89% of '07 net sales) and Constellation Beers and Spirits (imported beers and spirits, 11%). Owns 46 production facilities. Has about 8,200 employees. Sands family owns 6.1% Cl. A, 65% Cl. B shs. (6/08 Proxy). Chairman: Richard Sands. CEO: Robert S. Sands. Incorporated: DE. Address: 370 Woodcliff Drive, 3rd Floor, Fairport, NY 14450. Telephone: 585-218-3600. Internet: www.cbrands.com.

Constellation Brands will likely record 21.0% and 5.5% share-net and revenue advances, respectively, in fiscal 2008 (year ends February 28, 2009). Although the company is experiencing some operating woes, it still posted favorable first-quarter results. Management is adopting the necessary measures to ensure profitability is enhanced this year.

The main growth catalysts thus far have been increased pricing and a better product mix. It implemented planned price increases in the U.K. and Australia in an attempt at boosting profits and improving operating margins. Indeed, Constellation, like many other companies in the beverage industry, continues to feel the pressure of rising raw material costs and cautionary spending practices. Although there have been increases in sales because of higher prices, volume levels have declined. We expect further volume declines, if prices continue to escalate. Also, STZ is seeking to simplify its brand portfolio, by focusing more on high-end wine brands and eliminating those with lower margins. This seems to be a good strategy because consumers are opting for more premium wine offerings of late.

Other spirits are high for Constellation, as well. Management is aggressively promoting its *Svedka* vodka brand, and within the past year has gained a substantial number of new accounts both here and abroad. Nevertheless, STZ is streamlining where necessary. It intends to sell a Quebec production facility, thereby eliminating excess capacity and reducing costs. As for the recent buyout of Anheuser-Busch by Inbev, consequences here remain speculative (Modelo, a Mexican brewery, has exclusive rights to distribute Anheuser-Busch beer in Mexico). But Modelo's joint venture with Constellation is intact through 2016.

Constellation still has to contend with a difficult business environment. In Australia and the U.K., continued pricing pressures are likely to have some fallout. And in the U.S., inflationary prices are leading to more cautious spending habits.

This neutrally ranked stock has limited appreciation potential for the 3- to 5-year period. As a result, it is not particularly attractive at this time.

BUSINESS: Superior Industries International, Inc. designs and manufactures highly stylized aluminum and steel wheels for the automotive industry. OEM customers include GM (36% of '07 sales), Ford (33%), Chrysler (13%), Honda, Mazda, Nissan, and Toyota. Production of other aluminum parts, including control arms and bed plates, for auto industry disconl., 1/06. '07 depreciation rate: 6.5%. Est. plant age: 8 years. Has about 5,300 employees. Officers & directors control 19% of common (incl. Louis L. Borick, 13%); Third Ave. Mgmt., 18%; Barclays Global, 10%; Dimensional Fund, 9%; (Proxy 4/08). Chairman, Pres. & CEO: Steven J. Borick. Inc.: DE. Address: 7800 Woodley Ave., Van Nuys, CA 91406. Telephone: 818-781-4973. Internet: www.supind.com.

Superior Industries has lost its top-line momentum. A strike at another supplier, which lasted until mid-May, and lower aluminum prices, which are passed along to customers, contributed to the weak first-quarter revenues. The company's relatively narrow sales base, from both a customer and geographic perspective, has been the biggest hurdle of late, though. The vast majority of the wheel maker's products wind up in the U.S., where vehicle sales appear headed for a multiyear low. Compounding matters, the three domestic auto makers continue to lose market share. In fact, the swing in popularity of late from light trucks and SUVs to more fuel-efficient passenger cars appears to have accelerated the trend.

The earnings recovery figures to remain on track, with share earnings likely to reach $0.60 in 2008 and $1.00 in 2009. The headwind from a weak U.S. auto market remains the big concern but, for now, we think the progress being made on margins will be enough to keep profits on the rise. The company made significant improvement over the course of 2007, as it dealt with production inefficiencies at several plants. Superior appears to have made further strides in the March quarter, though this was partially obscured by strike-related issues. Meanwhile, the company's European joint venture also got off to a good start this year, generating higher unit volumes and gross profits.

The company figures to remain debt-free. With the earnings improvement we look for in 2008, combined with a very modest capital spending budget, Superior should generate free cash flow this year. To help minimize spending, the parts maker has been utilizing equipment from a plant closed last year at other facilities. Meanwhile, management continues to evaluate opportunities in Asia. This may well necessitate additional cash outlays in the future if the company opts to establish production capabilities in that region.

These shares do not stand out at the moment. The Timeliness rank on this stock has dropped a notch, to 3 (Average), since our March report. Moreover, the current valuation seems to discount much of the earnings recovery we envision over the next three to five years.

BUSINESS: Susquehanna Bancshares, Inc. offers banking, investment advisory, asset management, and brokerage services in the mid-Atlantic region. As of 3/31/08, loans breakdown: real estate-commercial, 29.3%; real estate-residential, 24.4%; commercial and industrial, 21.3%; real estate-construction, 14.5%; leases, 6.0%; consumer, 4.5%. Net charge-offs to average loans, .25%; non-performing assets to total assets, 1.03%; allowance for loan losses to gross loans, 1.05%. Has roughly 3,300 employees. Barclays Global Investors, NA owns 5.4% of common shares outstanding; off./dir., 2.9% (3/08 Proxy). Chairman, CEO & President: William J. Reuter. Inc.: PA. Address: 26 North Cedar Street, Lititz, PA 17543. Telephone: (717) 626-4721. Internet: http://www.susquehanna.net.

Susquehanna Bancshares' operating performance has been a mixed bag. Loans outstanding grew 19% from the year-ago period, and may advance another 2%–3% by yearend. However, deposits only inched up 1% from the prior year, largely due to fierce deposit competition, which may create a shortfall and make funding those loans more costly for the time being. *(Note: Comparisons exclude the acquisition of Community Banks, discussed below.)*

The company's credit metrics are slipping . . . Net charge-offs jumped during the June period, to $10.7 million from $1.9 million in the prior year, and now account for .48% of loans outstanding from .14%. Too, nonperforming assets nearly tripled from a year earlier, and rose to .99% of total assets from .66%. Surprisingly, net interest margin is essentially even with last year, and the company's efficiency ratio—how much it costs to generate one dollar of revenue—has improved, from roughly 81 cents to 62 cents, year to year.

. . . and its allowance for loan losses may be too conservative. Given the general state of the economy, and the anemic condition of the real estate market specifically, it may be prudent to set aside more funds to cover uncollectable loans. SUSQ's allowance actually fell during the second quarter, to 1.04% of loans from 1.11% in the year-ago period, and may leave profits vulnerable should delinquencies rise. Nonetheless,

We're maintaining our share-earnings estimates for this year and next, at $1.45 and $1.60, respectively. Two recent acquisitions — Community Banks and investment manager Stratton Holding Company — should expand the company's reach, and be moderately accretive to the top and bottom lines in the years ahead. Consequently, share net may advance 18% and 10%, respectively, in 2008 and 2009.

Susquehanna Bancshares stock offers substantial total return potential. These shares have languished this year, largely due to waning investor sentiment about the banking sector as a whole. At its current quotation, the stock offers above-average appreciation potential over the 3- to 5-year horizon. Too, its stellar yield may appeal to income-hungry investors.

BUSINESS: SUPERVALU INC. supplies more than 5,000 stores, and is a large retailer, with about 2,475 stores, including 873 licensed limited assortment food stores. Revenue (and operating earnings, after dep.) in '07: Supply Chain Services: $9.7 billion, ($274 million); Retail: $34.3 billion, ($1.6 billion). Acquired certain Albertson's retail operations 6/06. '07 dep. rate: 9.2%. Has about 192,000 employees. Officers & directors own 2.6% of common, AXA Financial, 10.8%, FMR, 5.8%, Goodman Sachs, 5.7%, Lord, Abbett, 8.2%, State Street, 5.0%, Wellington, 8.3% (5/08 Proxy). Chairman & CEO: Jeffrey Noddle. President & COO: Michael Jackson. Inc.: DE. Add.: 11840 Valley View Road, Eden Prairie, MN 55344. Tele.: 952-828-4000. Internet: www.supervalu.com.

SUPERVALU is operating in a difficult environment. Food price inflation, turmoil in the housing and financial markets, and high fuel costs are sapping consumer confidence. As a result, shoppers are making fewer trips to stores, although they are purchasing more per trip. And they are cutting back on impulse buys, using more coupons, and buying more economy sizes and promotional items. **Nevertheless, the food distributor is likely to post another nice gain in share net this year.** The consumer movement to lower-priced items is increasing sales of the company's more-profitable own-branded goods. And, Sav-A-Lot, the company's chain of limited assortment stores, should see higher sales as shoppers search for bargains. What's more, the company has been paying off the debt assumed to acquire certain of Albertson's retail operations in June of 2006, which lightens the interest burden. It also expects to achieve further cost savings, on the order of $40 million-$50 million this year, related to merging the Albertson's acquisition. Finally, the company also will benefit from having an extra week in its fiscal year. That will boost sales by an estimated $800 million and earnings by six cents. What's more . . .

The company continues to refurbish its store base. It aims to do major remodels of 165 stores, open 15 traditional supermarkets, and 55 to 65 limited assortment stores (including 30 licensed outlets) in fiscal 2008 (ends February 28, 2009). SUPERVALU has experienced high single-digit sales growth at remodeled stores. **SUPERVALU also is working to widen margins.** It is centralizing merchandising, increasing automation in the warehouses, and installing an updated pharmacy management system. It also is working with manufacturers to increase sales. Furthermore, it aims to increase the proportion of its own-branded products in the sales mix. To that end, it has rolled out a line of natural organic products and plans to introduce a premium line of its own-branded goods. Assuming a degree of success, we look for share net to advance at a decent annual pace into the next decade. If we're close to the mark, the stock should outpace the market averages over that span.

George A. Niemond *August 1, 2008*

(A) Fiscal year ends last Saturday in Feb. of following year. Interim periods are 16, 12, 12, and 12 weeks. (B) Based on average shares through '96, then diluted. Quarters may not add to total. Excludes nonrecurring gains (losses): '94, 84¢; '97, 82¢; '99, 11¢; '00, ($1.16); '01, 27¢; '03, (7¢); '04, 35¢; '05, (80¢). Next earnings report due mid-October. (C) Dividends historically paid mid-March, June, Sept., Dec. ■ Dividend reinvestment plan available. (D) Includes intangibles. In 2007, $42.02 a share. (E) In millions, adjusted for split.

BUSINESS: Safeway Inc. operates about 1,750 supermarkets in the California, Pacific Northwest, Rocky Mountain, Southwest, Mid-Atlantic, and Western Canada regions, most with #1 or #2 market share. Operates 32 manufacturing and processing facilities. Acq'd. Vons Co., 4/97; Dominick's, 11/98; Carr-Gottstein, 4/99; Randall's, 9/99; Genuardi's, 4/01. Has a 49% interest in Casa Ley, a food retailer in Mexico (results are reported on a 1-quarter delay). Has 201,000 employees (80% unionized). 2007 depr. rate: 5.5%. AXA Financial owns 10.9% of stock; FMR Corp., 8.8%; Brandes Invest., 6.3%; offs. & dirs., 2.6% (4/08 proxy). CEO: Steven A. Burd. Inc.: DE. Address: 5918 Stoneridge Mall Road, Pleasanton, CA 94588-3229. Telephone: 925-467-3000. Internet: www.safeway.com.

Safeway's sales momentum has cooled off. Identical-store sales, excluding fuel purchases, dipped 0.3% in the June quarter, the retailer's weakest performance in several years. A weak economy and inflationary pressures are likely contributing to the softness. Safeway's exposure to western markets that have been hit hard by the housing slump isn't helping either. Notably, though, Kroger, the nation's largest supermarket operator, has yet to report any deterioration in its mid-single-digit "comp" growth. This appears to be raising concerns that Safeway's value-driven strategy, centered around its "Lifestyle" stores (see below), may be putting it at a disadvantage to more price-oriented formats.

We look for earnings to advance about 13% in 2008. Despite the lackluster sales, share net rose 8%, to $0.53, in the June quarter. Operating margins expanded modestly, helped by lower product losses, cutbacks in advertising, a shift to higher-margined private-label goods, and reduced employee costs. Share net also got a boost below the operating line from lower interest expense and a smaller share base. Of note, though, second-half growth will likely be heavily weighted toward the December quarter. This year's final interim will be one week longer than the prior-year period. Too, the savings from the cost-cutting program initiated last fall and incremental sales from recent initiatives to reignite "comps" will likely become more pronounced as 2008 winds down.

The rollout of the "Lifestyle" format continues. These supermarkets, which emphasize high-margined perimeter departments, now represent about 63% of the store base, up from 26% at the start of 2006. This transition will likely be largely completed by the end of next year. The subsequent reduction in costs related to this program should provide management with additional flexibility as it looks to win market share and boost profits.

These shares offer good total return potential to 2011-2013. Concerns that Safeway won't fare as well as more price-oriented retailers in the current economic climate appear to be undermining the stock. The long-term outlook, though, continues to look relatively bright in our view.

Robert M. Greene, CFA *August 1, 2008*

(A) Fiscal yr. ends on Sat. nearest Dec. 31. Interim periods are 12, 12, 12, and 16 wks. long. (B) Based on diluted shares outstanding. Next egs. report due early Oct. Excl. nonrecur. gain / losses: '01, d15¢; '02, d$3.04; '03, d$2.18; '05, d15¢; '06, 21¢. Excl. extra. loss: '97, 13¢. '02 results exclude Dominick's (loss of $1.47), which was temporarily classified as a disc. op. Quarterly egs. adjusted to sum to full-year total. (C) Initial quarterly dividend declared, 5/25/05. Div'ds paid in Jan., April, July, Oct. (D) In millions, adj. for stock splits.

BUSINESS: Standex Intl. Corp.'s various products and services are in five segments. Food Service: Refrigerated cabinets, ovens, baking equip. & display cases. Air Distribution: Ducts for heating, ventilating & air conditioning. Engraving: Texturizes plastics, paper, etc. Engineered Products: Formed components for aerospace and other ind., and sensors & reed switches. Hydraulics Products: Provides components for hydraulic lifts for the truck industry. 2007 depr. rate: 6.1%. Has about 5,500 empls. Off. & dir. control 2.5% of stk; Royce and Assoc., 6.1%; Wedge Capital Mgmt., 5.7%; Empls.' Retirement Svgs. Plan, 4.7%. (9/07 proxy). Chmn: Edward J. Trainor. Pres. & CEO: Roger Fix. Inc.: DE. Address: 6 Manor Pkwy, Salem, NH 03079. Tel.: 603-893-9701. Internet: www.standex.com.

Standex International's recovery is facing some headwinds:

• Its big Food Service segment, bolstered by two acquisitions made in January, 2007, had performed very well, indeed, in the first nine months of fiscal 2008 (years end June 30th) and the fiscal year probably finished strongly. But looking ahead, we see some problems reflecting nervousness about the state of the economy and the high cost of gasoline that tend to discourage dining at restaurants, which provide an important market for food processing and storage equipment.

• Air distribution is being hit hard by the weakness of the housing market. Not only has customer demand fallen off sharply, but inventories are generally too high throughout the distribution network, and must be brought in line.

• Hydraulics supplies components for many large trucks. When the government made a change in engine regulations effective January, 2007, demand fell off sharply. Now the demand comeback is being slowed by the soaring price of diesel fuel.

Even so, the earnings recovery seems likely to continue in fiscal 2009, although the pace will probably be slower than we had anticipated. A program of consolidating production in lower-cost plants should continue to bear fruit, and synergism on the selling end in the Food Service units should help the company gain market share. In addition, the Spincraft unit is doing well with NASA, and will probably obtain business from a number of new programs. Once the company's soft markets recover, we expect the margins to expand again, permitting a rapid pickup in earnings, which gives the stock wide capital gains potential over the pull to 2011-2013.

We expect a buildup in working capital over the 3- to 5-year pull. Standex's free cash flow, after paying out dividends and investing in new plants, is more than enough to increase its funds. Years ago, the company was a heavy purchaser of its own stock, but that slowed to a crawl in fiscal 2002. Since then, over $160 million has been invested in new units, paid for by using excess "Cash Flow", additional debt, and funds derived from the disposal of discontinued operations.

Morton L. Siegel *July 25, 2008*

(A) Fiscal year ends June 30th.
(B) Prim. egs. through 1997, then diluted. Excl. nonrecur. gains (losses): '92, 12¢; '95, 23¢; '98, (61¢); '99, 5¢; '00, (22¢); '02, (31¢); '03, (31¢); '04, (93¢); '05, (13¢), '06, 18¢; '07, 48¢; '08, (3¢). Amort. FASB 106 liability over 20 years, began 1994. Next egs. rpt. due late Aug.
(C) Dividends historically paid in late Feb., May, Aug., and Nov.

BUSINESS: Sensient Technologies supplies colors, flavors, and fragrances to makers of packaged foods, beverages, cosmetics, and inkjet inks. Sales breakdown (2007): flavors and fragrances, 65%; colors, 31%; other, 4%. Believed to be the second largest U.S. producer of dehydrated onion and garlic products. 46% of sales generated outside North America. Purchased Formulabs, 7/03; flavors operation of C. Melchers, 3/02. As of 12/31/07, had 3,623 employees. Officers & directors own 5.2% of common stock; Gabelli Asset Management, 9.4%; Dimensional Fund Advisors, 6.9% (3/08 proxy). Chairman, President & CEO: Ken Manning. Inc.: WI. Address: 777 E. Wisconsin Ave., Milwaukee, WI 53202. Telephone: 414-271-6755. Internet: www.sensient-tech.com.

Sensient Technologies posted healthy results for the June interim. The company's sales and earnings were up 9% and 18%, respectively, when compared to the prior-year period. This performance benefited from pricing improvements, new product launches, and favorable foreign currency translation. Thus far, the company has been able to offset rising materials and energy costs with price increases in all of its product offerings. We expect that Sensient will continue performing well, given its strong pipeline within cosmetics, pharmaceutical, and technical color product lines.

Raw material costs increases may temper bottom-line growth. Sensient has some flexibility within its cost structure, because it uses a wide range of materials for its products. It has also stockpiled some raw materials when the opportunity has arisen, though this creates some vulnerability should input costs head downward. Nonetheless, increases have dominated, which the company has been able to successfully pass onto customers. That said, ongoing rising commodity costs will likely shrink margins, as customers may push back when faced with continued price increases.

The new product pipeline is healthy. Proprietary technologies, coupled with an approximately $25 million research and development budget, is helping keep product innovation fresh. Recent introductions of new cosmetic formulations and self-dispersing pigments for inkjet inks contributed considerably to last quarter's results. Food and beverage offerings have the added pressure of keeping pace with trends, but new developments for organic food products are on tap, thanks to an increased focus on healthy lifestyles.

These shares have benefited from investor support despite broader market weakness. Plus, this issue has risen a notch in Timeliness, to 2, and is now ranked to outperform the market in the year ahead. But investors should keep in mind that successful product launches will be vital to future share-net advances. Moreover, at the current quotation, the stock does not offer worthwhile appreciation potential, as it already trades within our 3- to 5-year Target Price Range.

BUSINESS: Sybase, Inc. provides relational database management systems used in network-based client/server computing. Products include database server products, middleware, development tools, and wireless messaging services. Also provides consulting services and technical support. License fees 33.6% of 2007 revenues; Services, 66.4%; R&D, 14.9%. Acquired PowersoR, 2/95; Home Financial Network, 1/00; New Era of Networks, 6/01; Mobile 365, 11/06. Employs about 4,035 (6/30/08). Stock ownership: Four financial institutions, 24.4%; Officers & directors, 5.8% (3/08 proxy). Chairman, President & CEO: John Chen. Incorporated: DE. Address: One Sybase Drive, Dublin, CA 94568. Telephone: 925-236-5000. Internet: www.sybase.com.

Business activity at Sybase, Inc. is healthy. License revenues advanced by some 15% in the first half, benefiting from continued interest in its database server and analytics products and services (*ASE 15* and *Sybase IQ*) by existing and new customers. Moreover, growth at its messaging business, Sybase 365, remains strong, with a 40% advance in the first six months of 2008. That said, progress at the top line in the second half may only be modest. Although the difficult macroeconomic environment has yet to take a toll on Sybase, despite its large customer base in financial services, it is probably prudent to keep revenue estimates conservative, following the company's own forecast. Moreover, in any event, our sense is that the software vendor will be up against a difficult comparison in the December quarter. Meanwhile,

Share earnings should advance between 15% and 20% this year. We look for the company's operating margin to expand, reflecting a combination of higher revenues and its traditional emphasis on expense management. In addition, the $300 million Dutch Auction, which was completed earlier this year and reduced shares outstanding by some 10.7 million, will also work to support earnings progress in the next few quarters.

At this juncture, we continue to estimate respectable revenue and earnings growth for 2009. The assumptions here are that the company continues to experience good demand for its products and services, particularly in the international arena, and that contracting activity with its customers in financial services does not take a downturn.

Sybase shares remain favorably ranked for Timeliness. And market support for this issue has generally been good so far this year. As mentioned above, we expect the company to continue posting good financial results in the second half, though the quarterly comparisons may narrow. Accordingly, new commitments to this issue should be made carefully and by investors with a near-term horizon. Indeed, the stock's current valuation already incorporates a good portion of the revenue and earnings growth that we project over the longer term.

BUSINESS: *Stryker Corp. develops,* mfrs., & markets Orthopaedic implants (59.5% of '07 sales), and MedSurg Equipment (40.5%). Orthopaedic products include hip, knee, trauma, spinal, and craniomaxillofacial implants. MedSurg includes powered instruments, endoscopic systems, other operating room devices, specialty stretchers, and maternity beds. Physical Therapy Services business sold '07. About 36% of '07 sales were foreign. Acq. Howmedica 12/98. R&D: 6.3% of sales. '07 depr. rate: 20.5%. Has 16,025 employees. Off. and dir. (incl. Stryker family trust) own 26.0% of stock (4/08 proxy). Chairman: John Brown. Pres. & CEO: Stephen MacMillan. Inc.: MI. Addr.: P.O.Box 4085, Kalamazoo, MI 49003. Tel.: 616-385-2600. Web site: www.stykercorp.com.

Stryker continued to perform impressively in the second quarter. Revenues rose 17% (year over year) on a reported basis and a still-strong 12.6% in constant currencies (cc). Domestic sales were up 12.4% (to $1.05 billion), while international contributions surged 25.2% ($660 million), helped by a $65 million exchange-rate tailwind. Both the Orthopaedic implant and MedSurg Equipment segments posted double-digit percentage sales growth, with the former up 14.5% (to $1.0 billion) and the latter up 20.8% ($696 million). Significantly, too, strength was evident across all business lines except hips (up 2% cc), which is being hindered by the recent *Trident* recall and a slow start for the *Cormet* hip resurfacing product. Profits, meantime, rose 20%, topping our $0.72-a-share estimate by a penny.

Myriad concerns have inhibited the company's stock in recent months. Increased costs associated with resolving quality and compliance issues with the Food & Drug Administration have perturbed some on Wall Street. The weak hip business is another depressant, as is speculation that Stryker may use its growing cash reserves to execute a large, dilutive acquisition. Finally, there remains the ever-present concern about the medical devices maker's ability to keep share net rising at a 20%-plus rate.

Our expectations that the bottom line will rise 20% in both 2008 and 2009 stay unchanged . . . In conjunction with reporting second-quarter results, the company reiterated cc revenue growth guidance of 11%–13% and earnings per share of $2.88. Stryker's year-to-date results, its new-product pipeline, the prevailing business trends, and management's enviable long-term track record give us ample confidence that our near-term share-profit targets of $2.88 and $3.45 are achievable.

. . . and we think these shares will perform well over the long haul. Global socioeconomic and demographic trends ought to keep Stryker prosperous for years to come. As well, the debt-free company could benefit from some financial leverage. Indeed, concerns about an acquisition seem excessive. In all, we believe valuations are at levels that would support superior price appreciation over the next 3 to 5 years.

BUSINESS: Molson Coors Brewing Company, which was created by the February 2005 merger of Molson and Adolph Coors Company, is the fifth-largest brewer in the world, with combined beer sales of roughly 42 million barrels. It sells its products in three of the world's top-eight beer markets, including North America, Europe & Asia. The company's brands include Coors Light, Molson Canadian, Carling, Blue Moon, Coors, Killian's Irish Red & Zima XXX. Sold interest in Kaiser, '06. Began a domestic joint venture with SABMiller, 7/08. Has approximately 9,700 employees and 17 breweries worldwide. Chairman: Eric H. Molson. President and CEO: W. Leo Kiely III. Inc.: CO. Address: 1225 17th Street, Denver, CO 80202. Telephone: 303-279-6565. Internet: www.molsoncoors.com.

Molson Coors announced the launch of its joint venture with SABMiller. The partnership, called MillerCoors, creates a new entity that should be able to better compete in the U.S. beer market against Anheuser-Busch, which makes up nearly half of the business. MillerCoors started operating on July 1st, when both firms began transferring assets to the new firm. The entity will be based in Chicago, but Molson Coors and SABMiller will maintain their offices in Denver and Milwaukee, respectively. The venture is expected to save roughly $500 million in operating costs, which should provide a boost to TAP's profitability over the coming years.

Industry consolidation was punctuated with InBev's deal to acquire Anheuser-Busch. The agreement, which was announced in mid-July, could place pressure on TAP over the long haul. The larger competitor should benefit from economies of scale throughout the world.

The company should register good results in 2008. Molson Coors started the year off with a strong performance on the top and bottom lines. Sales were $1.35 billion, which beat our estimates by 4%, while share net came in at $0.32, topping our number by 14%. Management attributed the results to effective pricing and cost management. Indeed, the company has performed well, despite rising costs and the changing industry landscape. We believe this highlights TAP's strong management team, which has helped make this issue a top performer in the beverage industry of late. All told, we look for sales to increase to $6.5 billion and for earnings to jump to $3.50 a share in 2008.

Molson Coors' prospects beyond 2008 are cloudy. Given the new venture with SABMiller and the potential impact of a combined InBev-Budweiser entity, the beverage industry's consolidation will probably change the dynamics of the U.S. market going forward. Therefore, we believe most investors may want to consider taking a wait-and-see approach here.

These shares are ranked to outperform the broader market over the next six to 12 months. Thus, momentum investors may be interested in this issue's near-term prospects.

Richard Gallagher *August 1, 2008*

BUSINESS: TCF Financial is a national bank holding company. Has 453 branches in AZ, CO, MN, MI, IL, WI, and IN (12/31/07). TCF affiliates include mortgage banking, annuity, mutual fund, business equipment leasing, consumer loans, and student loans. Net loan losses, .3% of average loans and leases in 2007. Loan breakdown as of 12/31/07: consumer, 53%; residential real estate, 4%; comm. real estate, 21%; comm. business, 5%; lease financing, 17%. Has about 8,600 empl. Off. & dir. control 8.0% of common stock; company ESOP, 5.7%; Barclays Global, 5.5 % (3/08 proxy). Chrmn. and CEO: William A. Cooper. Pres.: Lynn A. Nagorske. Inc.: DE. Address: 200 Lake Street East, Wayzata, Minnesota 55391. Tel.: 612-661-6500. Internet: www.tcfexpress.com.

The tough times continue for TCF Financial. March-quarter share earnings were below our expectation, even though the bank booked gains on securities sales and on the recent Visa Inc. IPO. Fee income declined since the December quarter, and expenses, the loan-loss provision, and nonperforming assets increased, pushing the shares about 15% lower than they were at our last update.

Credit quality is declining. Nonperforming assets now exceed 1% of total assets, up from .7% a year ago, prompting management to increase the provision for credit losses to $30 million in the March period, compared to $4.7 million in the year-ago quarter. The higher charge-offs are largely due to the depressed real estate conditions and oversupply of homes in Minnesota and Michigan. The bank now owns 130 homes obtained through foreclosure, up from 121 last quarter.

The high dividend yield may be attractive to income-oriented investors. We believe that earnings should be able to cover the dividend, and that TCF has about $100 million of excess capital, meaning it will probably not be forced to dilute share net by issuing more shares. That said, our view assumes that economic conditions do not worsen significantly, and we note that dividend cuts historically have occurred late in the credit cycle, which we believe is yet to come. We encourage yield-seeking investors to build positions slowly over time, as part of a diversified basket of bank and financial services stocks.

Most investors are urged to delay commitments to this untimely stock. Home equity lending has been important to TCF for over a decade, and these loans now total over half of the loan portfolio. Although Midwest real estate values had not appreciated as much as the more-speculative markets in the West and Southwest, we believe that the bank's high exposure to home equity loans, coupled with still weakening home prices, may result in even higher credit losses and foreclosures over the next two or three quarters. We are lowering our estimates (again) to reflect our view, and are unable to identify a catalyst that we believe would likely push these shares meaningfully higher in 2008.

Douglas G. Maurer, CFA *June 20, 2008*

BUSINESS: Tidewater Inc., with its fleet of about 500 ships, is the world's largest provider of supply vessels and marine support services to the worldwide petroleum drilling industry. Provides towing, transport, and barge services, principally in the Gulf of Mexico and the waters offshore Australia, Brazil, Egypt, India, Indonesia, Malaysia, Mexico, Trinidad, Venezuela, & West Africa. International operations generated 85% of fiscal '07 revenues. Acquired O.I.L. Ltd., 5/97; Hornbeck Offshore, 3/96. '07 depreciation rate: 4.4%. Has about 8,000 employees. Off./dir. own 2.3% of common stock (5/08 Proxy). Chairman, President, and CEO: Dean E. Taylor. Inc.: DE. Address: 601 Poydras Street, Suite 1900, New Orleans, LA 70130. Telephone: 504-568-1010. Internet: www.tdw.com.

Tidewater's fiscal first quarter (year ends March 31, 2009) was somewhat disappointing. Following its respectable finish in fiscal 2007, the company faced some challenges in the June period. Domestic operations have been burdened by rising operating costs and a difficult economic environment. The global oil service outfit is conducting a fleet renewal effort that has further limited operating profits, as a heavy dry-docking schedule weakened utilization rates in the Gulf of Mexico during the span.

Still, the outlook for the remainder of the year is bright. The world's largest provider of marine support services will likely continue to benefit from high demand for oil services. Indeed, against the backdrop of an economic slowdown, offshore service vessel (OSV) dayrates continue to rise steadily, largely thanks to robust international demand. We believe that the trend in these markets, particularly in the international arena, should help keep margins afloat this year.

The company's fleet expansion efforts augur well for revenue and earnings growth, but may weigh on margins next year. The company's 59 newbuild vessels currently under construction are likely to provide some organic growth and enhance dayrates due to the premium being paid for tonnage on newbuild vessels. However, this initiative, coupled with the ongoing renewal plan may eat away at operating profits. Although indicators suggest that Tidewater's gains on asset sales should help to offset these expenses this year, we believe margins may slip again in fiscal 2009.

International prospects are encouraging. The growth in the offshore work programs of foreign operators has intensified competition. As a result, many of these operators are bidding up dayrates to ensure term contracts and available capacity to meet rising demand for vessels. Indeed, Tidewater's sizable footprint in the international arena should enable them to benefit at the top line.

These neutrally ranked shares are a solid long-term play. Earnings growth momentum will likely accelerate over the next 3 to 5 years. Thus, the stock offers wide appreciation potential to 2011–2013.

BUSINESS: Tech Data Corp. is a leading distributor of microcomputer-related hardware and software products to value-added resellers and computer retailers throughout the Americas, Europe, and the Middle East. Acquired Computer 2000 (7/98), Azlan (3/03). Distributes more than 100,000 products, and sells to over 100,000 customers. Tech Data distributes for over 1,000 vendors, including Hewlett-Packard (28% of '07 sales), Apple, Compaq, Cisco, Epson, IBM, Intel, Microsoft, NEC, Seagate. Has about 8,300 emplys. AXA Assurances owns 9.9% of stock; off./dir., 6.6% (4/08 proxy). Chrmn.: Steven A. Raymund CEO: Robert M. Dutkowsky. Inc.: FL. Address: 5350 Tech Data Dr., Clearwater, FL 34620. Telephone: 727-539-7429. Internet: www.techdata.com.

Tech Data continues to expand its foreign operations. In fiscal 2007 (ended January 31, 2008), it purchased a Switzerland-based electronics distributor for about $20 million, opened an operation center in Costa Rica, and TD's joint venture with Brightstar Europe commenced sales of cellphones. Thus far this year, TD has expanded the scope of that business through distribution of other vendors' cellphones in Europe, and acquired assets of an IT (information technology) distributor, whose main markets are in the Nordic region of Europe. The company's European sales in the April, 2008 quarter accounted for 56% of its total, and that figure will likely be almost 60% next year.

We've raised our share-earnings estimates for 2008 and 2009 by $0.05 and $0.15, respectively. Despite integration and consulting costs related to the aforementioned Nordic acquisition, earnings in the fiscal 2008 first quarter bested our estimate by $0.06 a share. This strong performance was largely fueled by a 16% increase, year to year, in European sales and a 14-basis-point expansion, to 4.86%, of the gross margin. The latter reflected improvement in the company's pricing and inventory management practices, partially offset by intensified competitive pricing. During the year's remaining quarters, though, a likely continuation of the last factor, relatively high integration and consulting expenses, and lackluster internal sales growth prospects suggest little change from fiscal 2007's earnings.

The company is progressing on several merchandising fronts. In the Americas region, TD is shifting its marketing focus to higher-margin customer segments and "product adjacencies". It has also expanded the salesforce segment that targets the SMB (small and mid-sized business) market.

The board approved a $100 million stock-repurchase authorization in late 2007, following a one-year hiatus in this program. Estimated free cash flow of $140 million appears ample to cover these expenditures and the recent acquisitions.

This stock's Timeliness rank has just slipped one notch, to 3 (Average). Too, its 3- to 5-year appreciation potential is modestly below *Value Line*'s median.

David R. Cohen *July 11, 2008*

BUSINESS: Techne Corp. is a holding company. R&D Systems manufactures and sells more than 11,000 cytokines, enzymes, antibodies, and related biotech products (93% of '07 sales), used for research and clinical diagnostics. Hematology Controls (7%) are used to calibrate blood analysis instruments. Int'l sales accounted for 43% of '07 business; R&D, 9.0% of sales. 2007 deprec. rate: 5.2%. Acq'd Genzyme's R&D products, '98; European distributor, '94. Has 19.3% stake in ChemoCentryx (cytokine-related drugs). Has 628 employees. Off. & dir. own 13.1% of stock; other major shareholders, 3.9% (9/07 proxy). Chairman & Pres.: T.E. Oland. Inc.: Minnesota. Address: 614 McKinley Pl., N.E., Minneapolis, MN 55413. Tel.: 612-379-8854. Internet: www.techne-corp.com.

Earnings prospects appear bright for Techne Corp in the coming years. Indeed, the over-25% gain garnered in the third quarter of 2008 (year ends June 30th), in comparison to the like period last year, continues to buoy our optimism for the future. We anticipate that the company will continue to enjoy profitability spurts because of avid interest in ongoing research studies, good advances in certain segments of the business, as well as increased interest in the company's offerings from foreign countries. Our share-net estimates of 20%-plus in 2008 and over 7.5% in 2009 reflect this bright outlook.

The company's Biotechnology Division continues to be a main driver in its strong performance. Revenues in this segment advanced about 15.0% during this quarter and 13.5% for the year so far. These augmentations came, in part, from greater shipping volume and proper delivery execution to diagnostic customers. Although precise delivery timing in the future is not guaranteed, we believe Techne will be able to continue this strategy.

Increases in foreign sales further contributed to both top- and bottom-line gains. In fact, R&D Systems Europe sales were up 16% over the prior year. Added to this is the favorable impact from foreign currency gains, which have added about $0.02 to earnings for the year so far.

Ongoing research and new products are priorities for Techne. The R&D segment recently introduced a human *HGF R/c-MET* kit. This latest company addition is geared toward cancer research since it involves the migration of tumor cells, and cells of interest are tagged for further testing. With positive feedback and successful trials, the segment will likely be accretive to future earnings.

Extra cash on hand gives the company flexibility. In fact, at the end of March, Techne had over $200 million in excess cash. Part of this will go toward share repurchases as well as for ongoing research efforts, leading to additional product offerings.

This timely issue is up about 17% since our March report, despite domestic weakness in other industries. But appreciation potential is below average for the 2011-2013 haul.

Nira Maharaj June 20, 2008

(A) Fiscal year ends on June 30th.
(B) Diluted earnings. Excl. nonrecur. gains (losses): '01, 3¢; '02, (27¢); '04, (4¢). Next earnings report due late July.

BUSINESS: Teva Pharmaceutical Industries Limited, based in Israel, is a global pharmaceutical company that develops, manufactures, and markets generic and proprietary branded drugs and active pharmaceutical ingredients. Nearly 85% of sales are derived from North America and Europe. Teva's largest product is Copaxone, a proprietary branded drug, used to treat multiple sclerosis. Its other branded product is Azilect, for Parkinson's disease. Acq'd Sicor in 1/04; IVAX, 1/06. Has about 27,900 empls. worldwide. Officers and directors own approx. 6.6% of common (2007 20-F). Chairman: Eli Hurvitz. Pres./CEO: Shlomo Yanai. Inc.: Israel. Address: 5 Basel Street, P.O. Box 3190, Petach Tikva 49131 Israel. Telephone: 972-3-926-7267. Internet: www.tevapharm.com.

Teva Pharmaceutical ADR's have been range-bound of late. This likely reflects, in part, Wall Street's disappointment with the failure of a recent study on *Copaxone* (which was intended to expand its indications as a way to stave off generic competition in the future). On the other hand, we think investors seem fairly pleased with the current operating results and are probably also counting on the success of Teva's other sizable drug opportunities to propel earnings down the road. **The company should deliver a sturdy share-net advance this year of at least 13%, with a similar increase in 2009.** The generic drugmaker giant had an impressive start to 2008, logging a 52% earnings-per-share gain in the first quarter. Record sales of *Copaxone* and global market-share gains were largely behind the strong showing. Indeed, besides *Copaxone*, generic versions of *Protonix* (acid reflux) and *Lotrel* (blood pressure), as well as the launch of a nonbranded form of *Fosamax* (osteoporosis) are helping to drive sales up in North America (represents more than half of the top line). Likewise, sales are rising at a robust clip in the European and international segments. Management still expects share earnings to be between $2.60 and $2.75 in 2008, on sales of about $11 billion, with share net to be more than $3.00 next year.

A growth strategy is being implemented to ensure that profits remain on an upswing over the long haul. Teva remains focused on doubling the size of the business, targeting sales of $20 billion and a net income margin in excess of 20% by 2012. Expansion within emerging markets (i.e., Latin America, Eastern Europe), driven by a broader and more diverse pipeline of generics and branded drugs will likely be key. To support such growth, Teva plans to double its manufacturing and R&D output. We're taking a somewhat conservative view with our projections, however.

Teva ADRs may interest a wide range of investors. Despite the recent *Copaxone* setback, the issue is timely for the year ahead. It also offers attractive appreciation potential for the 3- to 5-year span, assuming the company's long-term growth strategy proves successful.

BUSINESS: Target Corp.'s operations as of 2/2/08 consisted of 1,591 discount stores, mostly in California (14%), Texas (9%), Florida (7%), and the upper Middle West. Includes about 210 SuperTargets, which avg. 177,000 sq. ft. and carry groceries. Sold *Marshall Field's* department stores (5% of '03 sales) on 7/31/04 and *Mervyn's* soft goods stores (8% of sales) on 8/28/04. Current retail space is about 210 million square feet; sales per square foot in '07: $310 and '06: $316. Credit operations accounted for 13.0% of pretax profits in '07. Has about 366,000 employees. Off./dir. own less than 1% of common stock (4/08 Proxy). Chairman: Robert Ulrich. CEO: Gregg Steinhafel. Inc.: MN. Address: 1000 Nicollet Mall, Minneapolis, MN 55403. Tel.: 612-761-6627. Net: target.com.

Target's important credit card operation is facing a new challenge. It accounted for an increasing percentage of operating profits in recent years, but bad debt expenses more than doubled, year to year, in fiscal 2008's first quarter (ended May 3rd). Consequently, the division's operating profits were 8% below fiscal 2007's level. Due to a likely continuation of economic pressures on many mid-income families for a while, we don't foresee meaningful improvement in profit comparisons during the balance of this year. Moreover, **Near-term growth prospects at the core retail division have deteriorated lately.** Following average same-store sales gains of 4.5% during the preceding three years, this barometer slipped 0.7% in fiscal 2008's initial interim. There was a modest improvement, to -0.1%, in the first two months of the July quarter, though. About 40% of Target's inventory is in relatively discretionary categories, with the balance devoted to food and commodity items. Thus, its recent comp-store results were considerably better than those of most department store chains but were worse than Wal-Mart's. All told, we think the company's net profit will decline 8% this year. In fiscal 2009, though, profits may well rebound to last year's level thanks to contributions from new stores and easy comparisons.

Target purchased almost $3.9 billion of its stock during the past five quarters. These expenditures were funded with new debt. The share count dropped 9.5% between the close of fiscal 2006 and May 28, 2008. On balance, the reduction just about offset the impact of higher interest expense and lower operating income on share earnings in this year's first quarter. Given the company's stated intent to purchase another $1 billion of TGT stock during the balance of the year and our expectation of improved same-store sales in the fourth quarter, we think earnings in that period will be about 10% above fiscal 2007's level. That said, **This stock is not likely to outpace the market averages in the coming six to 12 months or over the pull to 2011-2013.** Our 3- to 5-year projections for both selling-space and share-earnings have been lowered since the May report.

David R. Cohen *August 8, 2008*

(A) Fiscal year ends Sat. nearest Jan. 31 of following cal. year. Revenues include credit card charges.
(B) Based on diluted shares. Excludes net nonrecur. gain (losses): '96, (20¢); '97, (3¢); '98, (3¢); '99, (1¢); '01, (6¢). Next earnings report due late Aug.
(C) Dividends historically paid in early March, June, September, and December. ■ Div'd. reinvest. plan available.

Allmerica Financial Life Insurance and Annuity Co. was organized as a mutual life insurance company until 10/16/95. On that date, FAFLIC converted to a stock life insurance company and became a wholly owned subsidiary of AFC. After the reorganization, the company issued 37.5 million shares of common stock to eligible policyholders. Too, AFC sold 12.6 million shares of common stock to the general public, resulting in proceeds of $248.0 million, and sold $200 million in senior debentures. The company changed its name to Hanover 12/2005.

BUSINESS: The Hanover Insurance Group, Inc. underwrites property and casualty insurance through its subsidiaries, primarily through an independent agent network concentrated in the Midwest, Northeast, and Southeast United States. In 2007, Personal Lines accounted for about 55% of operating income; Commercial Lines, 44%; Other P&C, 3%; Life Ins., -2%. Life insurance segment is in a run-off mode. Net reserves: $2.2 bill. at 12/07. Sold Allmerica Financial, '05. Officers and directors own 2.7% of common stock (4/08 proxy). Has approximately 3,900 employees. Inc.: DE. Chairman: Michael P. Angelini. Pres. and CEO: Frederick H. Eppinger, Jr. Address: 440 Lincoln Street, Worcester, MA 06153. Tel.: 508-855-1000. Internet address: www.hanover.com.

Hanover Insurance stock has been moving sideways of late. The shares dipped noticeably from the $50 level nearly a year ago, when the financial sector began to suffer, and haven't been able to regain that mark since. The fear regarding financial stocks in general has been that exposure to subprime assets could cause big trouble, which it has in a number of cases. Hanover, itself, has little to no exposure to the subprime market, though about 25% of the company's investments are in various types of mortgage-backed securities. Fear over the extent to which subprime woes will spread is one factor dampening enthusiasm here.

Meantime, prospects for premium growth are modest. The property and casualty business is currently suffering from pricing pressures and the effects of difficult economic conditions. In particular, the company has been having a tough time retaining business in hard-hit Michigan, while new insurance regulations in Massachusetts mean that state is in a period of transition. Stricter underwriting in coastal states also crimps growth, although that practice does improve the risk profile. Overall, we figure earnings per share will essentially tread water in 2008 and 2009, barring unusual circumstances.

It might take a catastrophic event, such as Hurricane Katrina was, to change the tone of the property and casualty market. Hanover stock barely reacted to that disaster in 2005, even though the company incurred a large quarterly loss. The stock began to tick higher afterwards, however, on the feeling the company would be able to command higher premiums. It may take a different set of circumstances for the stock to realize the near-median appreciation potential we project for it out to 2011-2013.

At this point, the neutrally ranked stock doesn't stand out. Hanover is leaner and more focused than when it started the decade. Poor market conditions for financial services in 2002 (which hurt the stock badly) led to the decision to exit the annuities and asset management lines, but that's in the past. These days, the company looks to be more of a steady performer, if constrained by a narrower product line and a highly competitive industry.

Robert Mitkowski, Jr. *June 20, 2008*

BUSINESS: The TJX Companies, Inc. is a leading off-price retailer of clothing and home fashions. Its Marmaxx division comprises *T.J. Maxx* (847 stores as of 1/08) and *Marshalls* (762). Other store chains include *Winners* (191) and *HomeSense* (71) in Canada, *HomeGoods* (289), *T.K. Maxx* in Europe (221), *A.J. Wright* (129), and *Bob's Stores* (34). Sold *Chadwick's Of Boston*, 12/96. Acquired *Marshalls* 11/95. Has about 125,000 employees. Officers & directors own 1.1% of common shares; Capital Research & Mgmt., 5.5%; Ruane, Cunniff & Goldfarb, Inc., 5.7% (4/08 Proxy). President and CEO: Carol Meyrowitz. Chairman: Bernard Cammarata. Inc.: DE. Address: 770 Cochituate Road, Framingham, MA 01701. Telephone: 508-390-1000. Internet: www.tjx.com.

TJX has been one of the only retailers to consistently post comparable-sales gains in this rough environment. Steady, moderate growth and strong margins have become synonymous with the company's performance in difficult economic times. This is largely the product of a smooth-running off-price business model that allows TJX to remain somewhat shielded from a consumer downturn. In fact, there are a number of ways in which it benefits from this type of environment. The struggles of department stores present a wider and higher-quality array of merchandise for the company to purchase. As a result of this large availability of quality goods, the company is able to purchase at its own pace, thereby running on lower inventory and avoiding heavy markdowns. Further, a stronger assortment of goods is helping to win over new customers who are trading down from high-price retailers.

We've raised our fiscal 2008 and 2009 share-net estimates by $0.05 and $0.10, respectively. Recent sales have been higher than we had expected, and margins have largely held up. Meanwhile, store-traffic trends remain strong, and smaller segments are making larger contributions to the mix. Additionally, we expect share net to benefit from continued stock buybacks. The company repurchased seven million shares in the first quarter for a total of $225 million and expects to spend $900 million on repurchases this year.

The company plans to expand further into Europe and Canada where stores have performed well and there is little competition. Currently, there is no major off-price brand-apparel company of TJX's size in Europe, and the market opportunities are tremendous. The strong cash flow generated by the Marmaxx division should help fund the expansion.

This solid stock should continue to perform well in the year ahead. The predictable, albeit moderate, growth of its main business should generate sound results despite a weak retail market. However, our projections indicate below-average returns out to 2011-2013. But this may change if smaller divisions become more profitable and the company is successful in expanding into other regions.

Joel Schwed *August 8, 2008*

(A) Fiscal year ends the last Sat. in Jan. of following year. (B) Primary earnings thru '96, diluted thereafter. Excl. nonrecur. gain/(losses): '85, (6¢); '96, (1¢); '97, (1¢); '98, (1¢); '01, (7¢); '02, (2¢); '04, (4¢); '05, 12¢; '07, (26¢). Quarterly earnings may not sum to total due to rounding or change in share count. Next earnings report due late August. (C) Dividends historically paid in late Feb., May, Aug. and Nov. (D) In mill., adjusted for splits.

BUSINESS: Teekay Corp. provides crude oil, petroleum product, and LNG transportation and offshore services to oil companies, traders, and government agencies. Manages 172 vessels (104 owned) as of 4/30/08. 28 vessels on order. Owns 65% of Petrojarl (floating production); 58% of Teekay LNG Partners (NYSE: TGP); 60% of Teekay Offshore Partners (NYSE: TOO); 54% of Teekay Tankers (NYSE: TNK). Acquired OMI assets 6/07. Has about 6,400 empls. Resolute Investments, Inc. owns 41.8% of stock; FMR Corp., 11.3%; Neuberger Berman, 9.1%; offs./dirs., 2.1% (2007 20-F). Pres. & CEO: Bjorn Moller. Chrmn.: C. Sean Day. Addr.: TK House, Bayside Executive PK, West Bay St., P.O. Box AP-59212, Nassau, Bahamas. Tel.: 242-502-8820. Internet: www.teekay.com.

Experience in offshore services and exposure to the Brazilian market are major pluses for Teekay. Skyrocketing prices for oil have resulted in an explosion of offshore drilling and development activity. And Brazil will likely be among the biggest beneficiaries, aided by huge new deepwater oil discoveries. Recent March-quarter operating cash flow from Teekay's offshore segment fell 22% due to vessel repair costs and unscheduled downtime. But the company delivered a floating production storage and offtake unit to Brazilian waters in February, and full charter-hire income started in April. There should be plenty more opportunities to come, including shuttle tankers business.

The liquefied gas sector has favorable long-term prospects. Development projects continue to be delayed, but liquefied gas is expected to be a fast-growth market well into the future. As a pioneer in this field, Teekay built most of its existing liquefied gas fleet during a quiet period. March-period cash flow from these operations rose 50%, thanks to a larger fleet. Teekay has between a 40% and 70% interest in six vessels that will be delivered through early 2009. They all have secured contracts of 20 years or more. A 33%-owned joint venture will also charter four new vessels to the Angola LNG Project beginning in 2011. In addition, Teekay will take delivery of two flexible multigas ships in the second half of 2010. All of these assets are expected to be moved to 58%-owned Teekay LNG Partners, which has a lower cost of capital.

The spot tanker market is the wildcard. Dayrates for Teekay's crude oil tankers spiked in the March period and are currently near record levels for a second quarter. Higher rates were driven largely by Chinese oil demand and constrained vessel supply— a result of conversions to other uses and increased scrapping of older tonnage, spurred by record steel prices. But we expect rates to decline by late summer and through 2009 due to weaker oil demand and a much bigger ship delivery schedule.

Investors should proceed with caution. The issue is untimely, and we expect a challenging shipping rate environment to develop over the next few months.

Craig Sirois *June 6, 2008*

BUSINESS: Tennant Company designs, manufactures, and markets floor maintenance equipment. Products include sweepers, scrubbers, and other specialized equipment used primarily for maintaining industrial and commercial floors, roadways, and parking areas. Also produces industrial floor coatings. Foreign sales made up 37% of '07 total. 2007 depreciation rate: 6.8%. Has about 2,775 employees. Vanguard Fiduciary Trust owns 10.3% of common stock; Royce & Associates, 9.8%; Keeley Asset Management Company, 8.4%; Officers and directors, 2.2% (3/08 Proxy). President & Chief Executive Officer: H. Chris Killingstad. Incorporated: Minnesota. Address: 701 N. Lilac Drive, Minneapolis, MN 55440. Telephone: 763-540-1200. Internet: tennantco.com.

After being one of Wall Street's darlings in 2007, Tennant has not received much love of late. A substantial earnings miss for the first quarter of 2008 started the decline. Share net came in at $0.33 (excluding the $0.05 dilutive effect of acquisitions), well below consensus. Higher-than-expected SG&A expenses related to new product launches and market expansion comprised the variance, but jittery investors jumped ship in droves, and these shares are down over 35% since our April review.

The stock has fallen out of favor in our momentum-based Timeliness Ranking System, as well. Management reaffirmed its guidance for a bottom line in the range of $2.25 to $2.40, but we think this target is a touch too bold. Truth be told, our $2.10 call still represents robust earnings growth that falls just short of 17%. And upside potential does exist if cost-cutting initiatives take stronger hold and the company's market share is expanded. An improved product mix slanted toward higher-margin products would also boost our outlook, and if such elements surface in TNC's June-quarter showing, our EPS expectation will, in all likelihood, rise.

Acquisitions and new products have Tennant's future looking bright. Applied Sweepers of Scotland and Sociedade Alfa of Brazil were both recently purchased, and should add $40 million to revenues in 2008 but be earnings-neutral. Both companies carry higher margins than TNC, however, and once fully integrated should contribute handsomely to the bottom line. Elsewhere, *ech20* electrically turns plain tap water into a powerful detergent without using chemicals. It should be applicable in 70% of cleaning environments, will likely be sold at a premium price, and should aid efforts to grow market share. We will be monitoring preorder levels for this product.

Domestic growth in the face of economic uncertainty should be aided by the "green" movement. In emerging markets, environmental standards are more lax, but in the U.S., concern over the environment is forcing people to look for eco-friendly cleaning solutions, an area where Tennant is well vested.

On April 23, 1993, Nelson Peltz and Peter W. May (through DWG Acquisition Group) acquired Victor Posner's majority share ownership of Triarc (incorporated in 1994). In July 1996, Merrill Lynch and DLJ led a 6.3 million-share public offering of Triarc's National Propane subsidiary, generating $117.4 million. Late in 1998, Peltz and May made a "going private" proposal to purchase the remaining Triarc shares outstanding, but withdrew the offer in March 1999.

BUSINESS: Triarc Companies, Inc. owns 1,106 and franchises 2,582 Arby's quick-service restaurants (as of 12/31/07). Arby's specializes in slow-roasted meat sandwiches, multi-brands with T.J. Cinnamons' (243 outlets) products, primarily gourmet cinnamon rolls and coffees, and Pasta Connection's (6) products. 2007 depreciation rate: 11.1%. Acqu. Sybra, Inc., 12/02; RTM, 7/05. Sold Snapple, 10/00. Has 26,605 employees. Officers & directors control 38.0% of common stock; Peter May, 34.4%; Nelson Peltz, 34%; Advisory Research Inc., 12.9% (4/08 Proxy). CEO: Roland C. Smith. President: Thomas Garrett. Incorporation: DE. Address: 1155 Perimeter Center West, Atlanta, GA 30338. Telephone: (678) 514 4100 Internet: www.triarc.com.

Triarc has agreed to buy Wendy's International. The deal, which has been approved by both boards of directors, is an all-stock acquisition in which Wendy's shareholders will receive 4.25 shares of Triarc class A common stock for each Wendy common share. Management expects the deal to close during the second half of 2008, after securing regulatory approval as well as consent from both Triarc and Wendy's shareholders. The combined company will have pro forma annual sales of roughly $13 billion, becoming the third-largest quick-service chain in the U.S.

Management has a likeable game plan for the merged company. It intends to save $100 million in operating costs, primarily from reduced food and labor expenses. Additionally, the company plans to generate $60 million in overhead savings through streamlining corporate functions. We are skeptical that the quick-service retailer will succeed in achieving the full $160 million in annual savings in the current operating environment of rising wages and food costs. Also, much work will be needed to turn around operations at Wendy's. This, combined with the fact that a large number of Triarc shares will be issued if the acquisition is approved, should ensure earnings dilution in 2008. However, this deal has considerable long-term potential, assuming the cost savings are achieved. As per *Value Line* convention, we only incorporate acquisitions and buyouts into estimates and projections once they are finalized.

Meanwhile, this quick-service restaurant operator is accelerating expansion plans. As of December, 2007, management had plans to build 386 units through 2013. This figure is up from 373 announced just three months earlier.

We have lowered our 2008 share-earnings estimate by $0.16, to $0.24. Consumer anxiety about a possible recession is hurting the top line. We expect a systemwide same-store sales gain of less than 1%. This, combined with higher food and labor costs, should lead to an earnings decline this year. However, the bottom line should rebound next year, based on the assumption that economic woes wane. Venturesome investors may find this untimely stock's long-term potential appealing.

Total System Services posted June-period earnings little changed compared to last year. The company's top line advanced about 5% thanks to new business deals and solid results from international operations. Meanwhile, stock buybacks provided a boon to share net. But the lower-than-expected earnings figure stemmed from customer losses, spinoff costs, and economic headwinds.

New contracts and renewals should augur well for the company's prospects. Total recently penned a deal with Globalcard to provide account processing services, risk management, and reporting tools to the Mexican-based credit card company. TSS will also process the consumer credit card portfolio for PartnersFirst, a division of Torrey Pines Bank. And it renewed multiyear contracts with Canadian Tire and Target.

However, economic woes may hinder Total's top- and bottom-line performance this year. And, therefore, we have trimmed a nickel off our 2008 earnings estimate. The economic downturn has been causing consumers to tighten purse strings. This trend has reduced the amount of card use. Thus, processing fees have slowed a bit, and this trend may well continue. However, solid global service revenues, coupled with new contracts and renewals, may offset some of this shortfall.

Moving forward, the JPMorgan Chase deconversion will no longer be an issue. Last June, Chase opted to move its processing inhouse. This was not a total loss, as Chase decided to license Total's software for those purposes. However, the reduction in processing accounts-on-file did apply pressure to revenues and earnings. This past June marked the anniversary of those lost accounts and, moving forward, they will no longer weigh on year-to-year comparisons.

These shares have declined 15%-20% since our May report. The good news is that they now offer above-average appreciation potential for the pull to 2011-2013. Meanwhile, the equity's price performance is ranked to mirror the broader market for the year ahead. But some uncertainty stems from the economic downturn, and how that will impact card processing demand in the future.

BUSINESS: Texas Instruments Incorporated is a global manufacturer of semiconductors and electronic products. The company is the leading supplier of digital signal processors and analog devices. Markets electrical controls, educational and productivity solutions, and metallurgical materials. Royalty income from licensing proprietary technology is significant. Acquired Burr-Brown, 8/00; Unitrode, 10/99. Sold DRAM business, 10/1/98; defense business, 7/11/97. R&D, 15.6% of 2007 revenues. Has 35,207 empls. Barclays Global Investors and Fund Advisors own 5.4% of common stock; Off. and dir. own 1.5% of stock (3/08 proxy). CEO & Pres.: Richard Templeton. Inc.: DE. Addr.: 12500 TI Boulevard, P.O. Box 660199, Dallas, TX 75266-0199. Tel.: 972-995-3773. Internet: www.ti.com.

Texas Instruments' sales in the March interim increased 3% from the year-earlier period. A 20% jump in high-performance analog semiconductors more than offset lower sales of digital chips for cell phone applications. Gross margins benefited from a favorable shift in the product mix, and operating margins were aided by lower R&D expense owing to collaborative work with chip foundries on advanced digital process technologies. As a result, share earnings from operations rose 23%. Including a $0.06 tax gain, share profit advanced 40%.

We are forecasting a slight (0.5%) dip in sales for full-year 2008, reflecting somewhat negative comparisons in coming quarters. Assuming margins are maintained, net income may come in relatively flat. But, with fewer shares outstanding, we are estimating a 7% share-profit gain for 2008.

For 2009, we are projecting a 5% gain on the top line, based on a prospective moderate upturn in demand in the semiconductor industry. We are projecting gains in both analog and digital products, driven by high-performance analog chips. Aided by improved volume, we are anticipating share earnings growth of around 10% in 2009.

In recent months, the company has made a couple of strategic acquisitions. In May, TXN acquired Commergy Technologies, an Ireland-based company with expertise in power conversion technology, especially in the areas of AC adapters and high-power-density computing. And in June, TXN bought Innovative Design Solutions, a Florida-based firm that designs integrated high-speed analog products for test and measurement, communications, and medical electronics.

This chip stock is ranked to perform in line with the general market averages in the year ahead. But, assuming semiconductor demand will eventually re-establish its long-term growth trend, TXN offers significant capital appreciation potential over the 3- to 5-year timeframe. Reflecting short-term uncertainty over the macroeconomic environment, the equity is currently selling at about 15 times our 2008 estimate, which is below its historical average.

Lester Ratcliff — *July 11, 2008*

BUSINESS: UnitedHealth Group is a diversified health and well-being company. It offers products and services to approximately 70 million individuals through four business segments: Health Care Services (UnitedHealthcare, Uniprise, Ovations, and AmeriChoice), OptumHealth, Ingenix, and Prespription Solutions. Acq. Oxford Health Plans 7/04; PacifiCare Health Sys. 12/05; Sierra Health Svcs. 2/08. Medical care ratio: 80.6% in 2007. Has about 67,000 employees. Marsico Capital Management owns 7.1% of common shares outstanding; Marsico Capital Mgmt., 5.1%; officers & directors, 1.8% (4/08 Proxy). President and CEO: Stephen J. Helmsley. Inc.: MN. Address: 9900 Bren Rd. East, Minnetonka, MN 55343. Tel.: 952-938-1300. Internet: www.unitedhealthgroup.com.

UnitedHealth Group's earnings growth trend has stumbled. Although the health insurer's first-quarter earnings were above its prior-year results, they came in about 6% below the company's original guidance. Reflecting the weaker-than-expected performance and softer operating environment (more below), we have lowered our full-year share-net estimate by $0.45 since our March report, to $3.55. This would make for the first time in 12 years that United failed to generate a double-digit profit advance.

The company is facing a number of near-term challenges. Among them, increased competition is affecting enrollment volumes and net premium yields at a time when a weakening economic outlook threatens employment levels. On top of that, a growing number of employed consumers are declining coverage altogether. Meanwhile, lower interest rates on investments and inflationary cost trends are also taking a toll on margins. As an offset, management is looking to realign operating costs with the lower growth outlook. As one example, in the Commercial Markets Group, it's raising base rates and cutting back on new business discounts in order to preserve margins. The overall aim will be to reduce the operating cost run rate by 3%–5%. Elsewhere, the company has trimmed its share-repurchase target for the year by about 20%, to $4 billion. Assuming the company achieves some traction with these efforts, we're looking for earnings growth to improve next year. However, we've reduced our share-net estimate by $0.55, to $3.95.

The stock has been lowered to a 3 (Average) Timeliness rank for the year ahead, reflecting the recent softening in relative price and earnings performance. Longer-term prospects remain generally favorable. Under the assumption that the economy remains on the expansion path, the company should experience rising demand for its products and services. Although the low double-digit annual earnings growth rate we project out to 2011–2013 is still respectable, it would only be about a third of what was averaged over the last five years. Still, it's good enough to support above-average appreciation potential over that period.

Mario Ferro *June 20, 2008*

BUSINESS: Unum Group is an insurance holding company. The company and its subsidiaries are leading providers of group and individual disability insurance in the United States and United Kingdom. Also a major provider of employee benefits, including group life insurance and long-term care insurance. As of 12/31/07, the Unum US division comprised 64% of premium income; individual Income Protection-Closed Block and Other (13%); Unum UK (12%); Colonial (11%). Has roughly 11,100 employees. Relational Investors, LLC owns 10.0% of common stock (4/08 Proxy). Chief Executive Officer: Thomas R. Watjen. Incorporated: Delaware. Address: 2211 Congress Street, Portland, Maine 04122. Telephone: 423-755-1011. Internet: www.unum.com.

Unum Group's solid first-quarter earnings masked some areas of concern. Share net for the period advanced 18%, to $0.59, despite the lack of any top-line growth, as margin expansion lifted the bottom line. However, this was largely due to a better benefit ratio, which reflected unusually low benefit claims in the Unum U.K. and Colonial segments. Without the effect of the lower claims, which are unlikely to be sustainable in the long run, the quarter was decent at best. Sales continued to be mixed across varying segments, and premiums were essentially flat. We expect premium growth to remain constrained throughout the year as a result of the sales decline in 2007.

Despite our expectation of meager top-line gains, we've raised our share-net estimate to reflect aggressive stock buybacks. The company has already bought back $350 million in shares as part of an accelerated repurchase program. Management has stated that it intends to complete the other half of the $700 million plan over the rest of this year.

We remain somewhat cautious regarding the potential impact of a weak economic environment on the disability insurance business. Although there has been no sign as of yet of any spike in benefits, a deteriorating job market may eventually lead to increased disability claims. In fact, the lack of any noticeable effect may be attributed to a general time lag between the employment environment and the impact on disability claims.

Consistent sales gains will be needed in the U.S. and U.K. divisions to ensure future premium growth. New sales affect subsequent premium growth, which is the primary factor in its top-line improvement. Recent earnings gains have been due to margin advancement, but we expect margins to moderate over the next few years. Thus, sales growth will be required to bolster the bottom line.

These neutrally ranked shares have declined in recent months and may face additional pressure in the year ahead. However, long-term investors may well reap above-average gains as earnings improve out to 2011-2013.

United Stationers Inc. was organized in 1981 as a holding company for United Stationers Supply Co., a wholesaler founded in 1922 as Utility Supply Co. The parent went public in 1981, selling 3.4 million common shares, including 1.1 million shares offered by principal stockholders. Since then, it has formed and acquired additional office-supply subsidiaries, including Stationers Distributing Co. in 1992. Merged with Associated Holdings, parent of Associated Stationers, in '95.

BUSINESS: United Stationers, Incorporated is the largest wholesaler of office supplies and equipment (including computers and furniture) in the U.S. Also distributes janitorial and foodservice supplies. Has over 15,000 reseller customers. Sales by product group (12/31/07): technology, 37%; traditional office products, 30%; janitorial/foodservice, 20%; furniture, 12%; Other, 1%. Has about 6,100 employees. Depreciation rate ('07): 10.1%. Farallon Partners owns 9.3% of common shs; Neuberger Berman 11.0%; Barclays, 8.4%; Wellington, 7.6%; officers and directors, 7.0% (4/08 proxy). President/CEO: Richard W. Gochnauer. Incorporated: Delaware. Address: 2200 East Golf Road, Des Plaines, IL 60016. Telephone: 847-699-5000. Internet: www.unitedstationers.com.

This year, United Stationers' top and bottom lines will benefit from the December, 2007 acquisition of ORS Nasco. The buyout, which gives United a wholesale industrial supplies operation, contributed $74 million in revenues, and $0.04 in share net, in the first quarter. ORS is likely to positively impact the bottom line by $0.15 to $0.20 a share in 2008. **But profits from key segments may well be lackluster.** Technology products revenues are suffering from a soft spending environment. Customers are foregoing purchases of higher-priced discretionary items, such as printers and hardware, in lieu of basics, like ink cartridges. Sales of traditional office products, meantime, may well trend about flat. The same trends are present in that category, though strong cut sheet paper sales are offsetting slow sales of other offerings. Elsewhere, office furniture sales are under pressure from the weak economy, which is hurting sales to small and mid-sized businesses.

The Janitorial segment should remain a bright spot. Along with recent acquisitions, revenues from this business are seeing gains from the penetration of new end markets. Sales of food service, paper, and janitorial sanitation supplies ought to continue to rise, too.

Plans to revitalize sales could bear fruit. In the technology category, United is implementing promotional and marketing programs. As for office products, the company has launched a "green" product catalog, containing environmentally friendly items.

Gross margins are being constrained by several factors, including a lower-margined product mix, competitive pricing, and high fuel costs. Accordingly, we anticipate a narrowing of the operating margin this year. Overall, given also the effect of share buybacks, we estimate roughly flat share earnings this year. For 2009, based on some rebound in core segment sales and a recovery in the operating margin, we forecast 17% earnings growth.

United stock has fallen a notch in Timeliness, to 4 (Below Average). Due to a recent selloff, its long-term appeal is substantial. Out to 2011-2013, we project annual sales growth of about 6% and mid-teens percentage share-net gains.

Conducts business in more than 35 countries and employs more than 25,000 permanent and seasonal workers. Sold lumber and building products business, 9/06; majority of agri-products division, 9/08. Officers & directors own 3.1% of stock; Barclays Global, 10.2% (6/07 proxy). Chairman: Henry H. Harrell. President and CEO: Allen B. King. Incorporated: VA. Address: 1501 North Hamilton Street, Richmond, VA 23230. Tel.: 804-359-9311. Internet: www.universalcorp.com.

Universal Corporation ended fiscal 2007 on a relatively weak note. (Year ended March 31, 2008.) Excluding several one-time items, the Virginia-based tobacco leaf merchant and processor posted a 57% decline in March-quarter earnings. We had actually expected year-to-year share-net comparisons to be slightly positive. Large tobacco-leaf shipments earlier in the year hurt March-period volumes significantly more than we initially envisioned. Small African and Canadian crops were a drag, as well.

We recently lowered our fiscal 2008 share-net estimate by $0.25, to $4.75. Our assessment represents a 18% increase over the $4.02 that Universal earned last year. A less aggressive stance seems warranted, given expectations not only of relatively low carryover sales but of higher locally denominated costs overseas, coinciding with continued weakness in the U.S. dollar.

Food shortages and recent price spikes in nontobacco agricultural commodities are concerns, as well. Strong demand and high prices for corn and soybeans, for example, may very well result in a reduction in tobacco-growing acreage. The situation could leave Universal hard-pressed to meet the processed-tobacco demand of cigarette makers.

There is some good news here. Importantly, Universal has a tight rein on more-controllable costs and risks. The company, for example, recently ended various flue-cured tobacco-growing projects in Africa due to cost considerations. Alternative sourcing, via auctions and contracts with regional growers, should save Universal some money. A recent divestiture-funded debt paydown, meanwhile, reduces financial risk. It also frees up cash that can be returned to shareholders in the form of dividends or stock buybacks.

Universal shares are ranked 3 (Average) for year-ahead relative price performance. They've sold off sharply following the company's release of March-quarter results. A more aggresssive deployment of excess cash (i.e., share buybacks) could give the stock support. However, at this juncture, we'd still wait for a lower entry point before committing additional funds.

Nils C. Van Liew *August 1, 2008*

BUSINESS: Varian Medical Systems, Inc., is the surviving entity of Varian Associates, following the predecessor's spinoff of its instruments and semiconductor equipment businesses in April 1999 and the earlier (1995) discontinuance of electron device operations. Is the leading maker of integrated cancer care systems (85% of sales) and X-ray tubes for diagnostic imaging applications (15%). Research and development, 5.9% of sales. 2007 depreciation rate: 8.3%. Has 3,600 employees. Officers/directors own 4.2% of common; Sands Capital Mgmt., 8.8%; The TCW Group, Inc, 8.3% (12/07 proxy). Chairman & President: R. Levy. Inc.: Delaware. Address: 3100 Hansen Way, Palo Alto, CA 94304-1030. Telephone: 650-493-4000. Internet: www.varian.com.

Varian Medical continues to post strong results as it experiences robust demand across all product segments. Share net advanced 48% in the fiscal third quarter (year ends October 3rd), to $0.58, as revenues improved 21%. Strong demand for oncology systems fueled the top-line growth, with the recently released *RapidArc* system being well received. The company reported 70 new *RapidArc* orders in the recent quarter, which is quite impressive considering the high price tag and relatively unproven technology. The system delivers greater precision by simultaneously controlling the rotation speed of the accelerator gantry, the shape of the beam, and the delivery dose rate. The added efficiency provides quicker delivery of treatment and greater patient comfort.

We've raised our fiscal 2008 and 2009 share-net estimates by $0.12 and $0.15, respectively. The 2008 revision primarily reflects the better-than-anticipated third quarter. Over the first nine months, the backlog has advanced 13%, and now stands at $1.78 billion. Meanwhile, the solid performance of *RapidArc*, coupled with a large, expanding backlog, should provide for strong results in fiscal 2009.

X-ray imaging products continue to make greater contributions to the overall mix. Notably, strong sales of flat panel devices in the recent period led to a 22% increase in segment sales. We expect this to continue, as new orders for the year are 25% above last year's total. Moreover, demand should remain high as more customers transition from film to digital imaging. There is a wide market opportunity for digital imaging, and segment expansion ought to provide cross-selling opportunities for VAR's management software.

This timely stock should continue to outperform the market in the year ahead. The shares have surged over the past few months on the promising *RapidArc* prospects, and the recent strong quarter. Meanwhile, healthy demand for its products and a large backlog should drive top-line growth, while margin expansion bolsters earnings over the coming years. However, based on the current valuation, appreciation potential is below average for the 3 to 5 year period.

BUSINESS: Varian, Inc. is a diversified manufacturer with two business segments. Scientific Instruments (83% of '07 sales, 71% of pretax earnings) markets mass spectrometers, NMR systems, and other products used in the compositional analysis of liquids, gases, and solids. Vacuum Technologies (17%, 29%) sells and services products used to create, control, measure and test vacuum environments in life science, industrial, and scientific applications where ultra-clean, high-vacuum environments are needed. Generates 67% of sales outside the U.S. Has 3,800 employees. Officers & directors own 3.1% of common stock (12/07 Proxy). President & CEO: Garry Rogerson. Inc.: CA. Address: 3120 Hansen Way, Palo Alto, CA 94304. Tel.: 650-213-8000. Web: www.varianinc.com.

Varian, Inc. recently issued a profit warning. With the release of surprisingly weak third-quarter results on July 23rd, the supplier of industrial vacuum components and analytical instruments lowered its fiscal 2008 share-net guidance to $2.02-$2.20, excluding a $0.05 charge for the impairment of a private-equity investment. (Fiscal year ends September 28th.) Share net is now expected to increase 7% at best over the $2.05 that the California-based company earned in 2007. Previously, Varian thought that adjusted earnings would advance 12%-20%, to $2.29-$2.47, this year.

The more conservative stance partly reflects restructuring-related manufacturing and outsourcing disruptions. Following a series of acquisitions, Varian is working aggressively to improve its cost structure through plant consolidations and the increased use of component sub-assemblers. The moves have resulted in some unusually large transition costs and delayed sales. That said, the restructuring should ultimately yield significant margin expansion.

The company is also recognizing sales of some large research systems later than originally envisioned. Apparently, a number of laboratories weren't ready for installations while other system installs are dragging on longer than anticipated. Varian should recognize these sales in the coming quarters.

We look for higher, more-normalized earnings growth next year and out to 2011-2013. Importantly, the aforementioned transitional issues should be behind Varian. New products, meanwhile, ought to increasingly gain market traction. Varian, for example, has begun to take orders for a new high-field NMR system and related probes. These systems help elucidate the structure of proteins and are being used in the field of drug discovery.

Varian shares are ranked 4 (Below Average) for year-ahead relative price performance. However, the stock's recent selloff presents long-term investors with a decent entry point. End-market demand for Varian's products is reportedly still strong. It remains to be seen, though, if the company can deliver the goods in a more cost effective and timely manner.

Nils C. Van Liew *August 29, 2008*

(A) Fiscal year ends on the Friday nearest to September 30th.
(B) Diluted earnings. Next earnings report due late Oct. Excludes nonrecurring (losses)/gain: '03, (16¢); '04, (6¢); '05, 3¢.
(C) In millions.
(D) Earnings decline in 2005 reflects sale of Electronics Manufacturing unit. That business contributed $0.41 to fiscal 2004's $1.73 share net.
(E) Quarterly earnings don't sum to total due to change in shares outstanding or rounding.

Viad Corp, formerly known as The Dial Corporation, changed its name following the August, 1996 divestiture of its consumer-products division (now known as Dial Corporation, trading on the NYSE as 'DL'). The company sold its airline catering segment in July of 1999. MoneyGram International was spun off to shareholders on June 30, 2004. In the 1980s, Viad, then known as The Greyhound Corp., began to sell many of its businesses, including a majority interest in the bus line of the same name.

BUSINESS: Viad Corporation provides design and management services for conventions and tradeshows (about 92% of '07 revenues). Major subsidiaries include Exhibitgroup/Giltspur of Chicago, GES Exposition of Las Vegas, Brewster Tours Company in Canada, and Glacier Park of Phoenix. The company also provides recreation services (8%). Spun off MoneyGram International, 6/30/04. Has approximately 4,110 employees. Officers and directors own 4.7% of common stock; Marathon Asset Management, 11.8%; Morgan Stanley & Co., 10.4%; Columbia Wanger Asset Mgmt., 8.1% (3/08 proxy). President, CEO, and Chairman: Paul Dykstra. Inc: Delaware. Addr: 1850 N. Central Avenue, Suite. 800, Phoenix, AZ 85004. Tel: (602) 207-4000. Internet: www.viad.com.

Viad Corp. had a strong first-quarter showing. The events and tradeshows coordinator posted earnings of $0.81 a share, marking a 20% advance. Revenues increased 18%, to $335 million, thanks to positive show rotation at GES, the addition of Melville Exhibit, and new business at Exhibitgroup.

However, management warned that things may take a turn for the worse. It said that it expects to earn between $0.37 and $0.48 a share in the June period, down from last year's figure of $0.87, as the integration of Becker Group, acquired in the second quarter of last year, is not going as smoothly as originally anticipated. In accordance, we've trimmed our share-net estimate by 31%, to $0.45 and our revenue outlook by $25 million, to $265 million. We are now near the low end of full-year guidance, too, looking for the company to earn $2.20 a share on $1.13 billion in revenues.

Wall Street has not taken kindly to the recent news. The stock has plummeted and is down 30% since our April review. It is ranked 3 (Average) for Timeliness, based on our momentum-driven ranking system.

We think now may be a good entry point for investors willing to ride out any near-term volatility. Viad is currently trading at roughly 12 times our 2008 earnings estimate, a drastic discount compared to its historic levels and our 2011-2013 projections. The current price seems to factor in most of the near-term troubles we envision, and we do not believe there to be much downside at this time. Viad should continue to grow its bottom line at healthy rates over the next few years, benefiting from recent acquisitions as well as ongoing cost-cutting measures at Exhibitgroup, where organizational restructuring and a salesforce realignment are benefiting margins. That said, we look for the bottom-line to rebound handsomely in 2009, despite more-modest top-line growth (a product of show rotation).

The company's finances are a plus. With nearly $5 a share in cash and negligible debt on the balance sheet, Viad is poised to try its hand at another acquisition, perhaps even looking to branch out into a new segment of the market.

BUSINESS: WD-40 Company manufactures and markets two multi-purpose lubricant products. The primary product is a petroleum-based spray lubricant, *WD-40*, which also prevents rust, penetrates, and displaces moisture. The other is *3-IN-ONE* oil, which has multiple household and industrial applications. Other products include, two heavy-duty hand cleaners *LAVA* and *SOL-VOL*, and three household cleaners known as *X-14*, *2000 Flushes*, and *Carpet Fresh*. Acquired Global Household Brands, 4/01; Heartland Corp., 5/02. Has about 278 emplys. Officers and directors own 8.3% of shares. (11/07 Proxy). Chairman: Neal E. Schmale. President & CEO: Garry Ridge. Address: 1061 Cudahy Place, San Diego, CA 92110. Tel.:619-275-1400. Internet: www.wd40.com.

Fiscal 2008 (ends August 31st) has been challenging for WD-40. Following a slight year-to-year decline in share net in the fiscal second quarter, we look for flat share earnings results in the second half. By the time the company reports its fiscal third-quarter figures, this review will already be in the hands of our subscribers. It appears that the slowing economy is weighing on revenues. The sluggish top line has pressured margins and offset effective cost management. The economic climate has weakened consumer products markets, as confidence and spending have diminished in recent months. Moreover, although management has taken steps to keep fixed costs under control by adjusting production capacity accordingly, rising raw material costs are likely to further hamper margin expansion over the next few months.

Nonetheless, we are cautiously optimistic about fiscal 2009. The company is attempting to implement a more favorable sales mix over the next few months. We believe this move ought to ease some margin stress. Too, strong underlying demand from international markets should allow sales growth to accelerate next fiscal year and beyond. Indeed, the company's efforts to diversify its portfolio of brands and seek out more-efficient trade channels offers considerable promise. As a result, revenue gains abroad have risen considerably, with double-digit growth in Europe (excluding the United Kingdom) and the Asia/Pacific region. This was demonstrated in the fiscal third quarter when roughly 57% of revenues came from foreign consumers. In fact, the company continues to gobble up market share in these regions. This strategy augurs well for long-term profits.

We expect growth initiatives to pay off. Heavy spending on research and development, as well as on marketing, offers promise. We expect the company to continue to support revenue growth with product enhancements and promotional activity.

These neutrally ranked shares offer limited price appreciation potential over the long haul. Earnings have been inconsistent over the past decade. Thus, our projections will remain somewhat conservative until profit growth becomes more stable.

Simon R. Shoucair *July 4, 2008*

(A) Fiscal year ends August 31st.
(B) Primary earnings through 1997, then diluted. Next earnings report due early Oct. Excludes nonrecurring (losses) gains: '93, (10¢); '94, (52¢); '02, (4¢); '03, (4¢); '05, (2¢); '06, (1¢). Includes extra gains: '92, 13¢; '93, 18¢; '94, 10¢.
(C) Dividends are historically paid in January, April, July, and October.
(D) In millions, adj. for split.

BUSINESS: Werner Enterprises, Inc. is a truckload carrier of general commodities throughout the continental U.S., Canada, and Mexico. Targets service-sensitive segment of dry-van, flatbed, and temperature-controlled truckload market. Provides dedicated and regional carriage. As of 12/06, the company had 8,250 tractors (7,470 company-owned) and 24,855 trailers. 2007 depreciation rate: 10.4%. Has 13,608 employees. The Werner family owns approximately 41.4% of common stock; Wellington Mgmt., 13.3%; Dimensional Fund Advisors, 8.2% (4/08 proxy). Chairman & CEO: Clarence L. Werner. President: Gregory L. Werner. Incorporated: Nebraska. Address: P.O. Box 37308, Omaha, Nebraska 68137. Telephone: 402-895-6640. Internet Address: www.werner.com.

Werner Enterprises continues to bump along through a rough operating landscape. March-period revenues rose only 2%, primarily a result of surcharges levied on customers to account for higher fuel costs. Excluding these surcharges, the top line declined 6%. Demand for trucking services has fallen in conjunction with an economic slowdown. As a result, competition has become more intense, causing price cuts and tighter operating margins. The bottom line was also adversely affected by the skyrocketing price of fuel. The aforementioned surcharges helped out a bit, but the price of fuel rose too quickly for the company to completely offset this cost. All told, the company recorded a 43% drop in share earnings, to $0.12.

Full-year earnings will likely be depressed as well. It appears that the economy will continue to struggle, at least through yearend. Furthermore, elevated fuel prices may persist throughout 2008. Thus, our share-net estimate is now $0.90, which is $0.20 lower than our previous target. Our bottom-line expectation would have probably been lower, if not for last year's capacity reduction. The company has reduced its medium-to-long haul fleet by 850 vehicles since March, 2007. This has been the hardest-hit area of the trucking industry, especially since the trend in recent years has been toward shorter hauls. Indeed, the average trip length in the March period was 542 miles, 5% lower than a year earlier. Reducing the fleet size proved prescient, but we still expect operating margins to contract substantially this year.

Earnings may begin to head northward in 2009. Our model assumes that economic conditions will improve somewhat, possibly as a result of President Bush's economic stimulus plan. The company would also benefit if fuel prices fall from their recent highs. The bottom line may well grow at a 20%-25% clip, to $1.10 per share, by our estimates.

These neutrally ranked shares do not stand out for performance over the pull to 2011-2013. This stock offers below-average 3- to 5-year capital appreciation potential, based on our earnings projections.

Tom Nikic *June 6, 2008*

BUSINESS: Whirlpool Corporation is the leading manufacturer of major home appliances. It makes products in 12 countries under 13 principal brand names, and markets products in nearly every country around the world. Its principal products are home refrigerators and freezers (30% of '07 sales); home laundry appliances (29%); home cooking appliances (15%); and other (26%). Acquired Maytag Corporation (3/06). Has about 73,000 employees. Officers & directors own 2.0% of stock; FMR, 12.6%; PRIMECAP Management, 11.4%; Pzena Investment Management, 10.8%; Vanguard, 5.6% (3/08 proxy). Chairman & CEO: Jeff M. Fettig. Incorporated: DE. Address: 2000 North M-63, Benton Harbor, MI 49022. Telephone: 269-923-5000. Internet: www.whirlpoolcorp.com.

Whirlpool Corporation has certainly seen better days. The unprecedented raw material cost increases and lower U.S. demand have resulted in a very challenging operating environment. Domestic demand declined about 9% in the first quarter, and U.S. profits plummeted. The international business seems to be holding its own, but first-quarter results were rather pedestrian after removing the benefits associated with the weakening dollar. All told, we have cut almost $2.00 off our 2008 share-earnings target.

The appliance maker is looking to streamline its operations. In early July, it announced the closure of two manufacturing facilities. Units produced at these locations will be absorbed by other plants in an attempt to better leverage existing resources and increase efficiency. More consolidations and/or headcount reductions could be on the horizon.

Switching gears, we do not expect Whirlpool to bid on General Electric's appliance arm. The conglomerate put this business on the auction block a short while ago, and is hoping to get about $8 billion for it. Whirlpool may be interested, but a combination would likely raise serious antitrust concerns. Indeed, in 2007, GE and Whirlpool combined to account for slightly less than half of all domestic appliance sales. It is far more likely that a European or Asian heavy machinery company with American aspirations will propose the winning offer.

Momentum investors should probably turn the page for now. Indeed, we recently lowered this issue's Timeliness rank one notch, to 4 (Below Average), due to the recent price momentum and the first-quarter earnings shortfall. And, things could certainly get worse in the near term, given the state of the housing market and global economy.

This stock offers good 3- to 5-year price appreciation potential, though. We expect the global leader in home appliances to make good on its promise to realize the cost-cutting benefits from acquiring Maytag, and the housing market will pick up again eventually. As it stands, the stock is trading at less than 10 times this year's earnings, which is relatively low from a historical standpoint.

Erik A. Antonson *July 25, 2008*

(A) Diluted earnings. Quarterly earnings may not sum due to rounding. Excludes nonrecurring: '93, d$3.08; '94, 24¢; '96, 25¢; '99, d79¢; '01, d$5.14; '02, d$11.75; '03, 3¢; '06, d68¢, '07, d9¢. Next earnings report due late July.

BUSINESS: W.P. Carey & Co. LLC is a global real estate investment firm, which invests in commercial properties, as well as operates publicly owned, non-traded real estate investment trusts. The company also provides asset management services and offers real estate financing solutions, such as long-term net lease financing for major corporations in the United States and internationally. As of February '08, The W.P. Carey Group owned more than 850 commercial and industrial properties (about 100 million square feet) located in 14 countries. Officers/directors own about 35% of common stock (04/08 proxy). President & CEO: Gordon F. DuGan. Address: 50 Rockefeller Plaza New York, NY 10020 Telephone: 212-492-1100. Internet: www.wpcarey.com.

W.P. Carey continues to post relatively healthy results, despite a more challenging operating environment. The top line rose about 28% for the first quarter of 2008, helped by higher asset management revenue. Results at this segment, which account for about 35% of the top line, increased 34% during the quarter. This largely reflects higher fees and income from W.P. Carey's property portfolios, owing to the ongoing increases in assets under management.

Moreover, W.P. Carey's properties continue to perform well. Occupancy at the wholly owned portfolio was about 96%, and about 99% at the portfolios owned by the W.P. Carey's REIT funds. The company was also able to raise rents at some properties.

The company continues to raise capital. The new CPA Global Fund opened to investors at the start of 2008. The company plans to raise about $2 billion for this fund, and has secured about $110 million, so far. During the quarter, W.P. Carey also formed Carey Watermark Investors, Inc., which will acquire assets in the lodging sector. This $1 billion fund will likely be made available to investors in the second half of this year.

Nonetheless, structuring revenue will probably remain sluggish for a while. The company structured investments worth about $57 million in the first quarter, compared with $167 million a year ago. The recent decline at this segment likely reflects a more challenging environment, particularly for sale-lease back properties. Comparisons at this segment will also probably be difficult during the second quarter of 2008, owing to the $400 million investment in Germany that was structured last year. Consequently, we have reduced our earnings-per-share estimates by $0.40 per diluted share for both 2008 and 2009.

These neutrally ranked shares may be suitable for income-oriented investors. The issue currently offers investors an attractive dividend yield, and we expect the business to support regular quarterly distribution increases in the years ahead. Elsewhere, our projections indicate that W.P. Carey stock offers good total return potential over the next 3 to 5 years.

Adam Rosner *June 27, 2008*

(A) Next earnings report due late July. Excludes nonrecurring gains (losses); '07, ($0.53); '02, $0.35; '00, ($0.83). Excludes disc. Ops.: '07, $0.27.
(B) Div'ds historically paid early April, July, October, January. Special Div. $0.27 declared 12/27/07.
(C) Includes real estate purchases through '06.
(D) Incl. intangibles as of 12/31/07: $99.9 million, $2.55/sh.
(E) In millions.

BUSINESS: Watson Pharmaceuticals, Inc. engages in the development, manufacture, marketing, sale and distribution of brand and generic pharmaceutical products. It markets more than 150 generic drugs and 27 brand drugs (12/07). Owns a 50% interest in Somerset Pharmaceuticals, a joint venture with Mylan Laboratories. Somerset and Bristol-Myers Squibb have agreed to distribute Emsam. Acqr'd Andrx Group (11/06). 2007 R&D: $144.8 million. Employs about 5,640. Off./dir. own 8.2% of common; The TCW Group, 10.8%; Franklin Resources, 9.4%; Goldman Sachs., 5.3%; Putnam LLC, 5.0% (4/08 Proxy). Chmn.: Allen Chao, Ph.D. Pres. & CEO: Paul M. Bisaro. Inc.: NV. Addr.: 311 Bonnie Circle, Corona, CA, 92880. Tel.: 951-493-5300. Web: www.watsonpharm.com.

We look for Watson Pharmaceuticals' share earnings to rise about 45% in 2008, thanks largely to cost-saving initiatives. Downsizing has begun at the company's Carmel, NY facility, which is on track to be shuttered in 2010, and the first wave of product transfers from that site to the Goa, India plant was completed during the first quarter. The Goa campus is scheduled to produce about one billion units by the end of this year, with that number growing to three billion in 2009. **Watson's clinical research facility in Mumbai, India has also been completed.** This site is capable of initiating 20 to 30 biostudies a year, depending on the scope of the projects. Lower costs in India are likely to help the operating margin to expand roughly 140 basis points this year. **Generic product approvals are likely to accelerate.** Watson's Davie, FL manufacturing facility has been removed from the FDA's official action indicated (OAI) status list. New abbreviated new drug applications (ANDAs) for products pending at this plant are now eligible for approval. This site was shut down before it was acquired as part of the Andrx purchase in late 2006, and its reopening should further enhance the company's cost efficiency. **The upcoming release of branded urology products ought to help drive sales in 2009.** Watson has announced positive Phase III data involving its treatments for prostate enlargement and overactive bladder. The *Silodosin* treatment for prostate enlargement, the number-one condition treated by urologists in the U.S., should be of importance to older men that are taking blood pressure medications, due to its improved cardiovascular profile. However, its higher incidence of retrograde ejaculation and the emergence of generics in 2010 ought to prevent it from having a large impact. The company's other branded products are further off, but should begin to contribute over the pull to 2011–2013. **These shares offer wide appreciation potential to 2011–2013,** thanks largely to the company's strong generic portfolio, a growing branded product segment, and improving production efficiency. Watson stock is likely to only keep pace with the market in the year ahead, though.

Jerry W. Gray Jr. *July 18, 2008*

(A) Primary earnings through '96; diluted thereafter. Excludes nonrecurring items: '97, (11¢); '98, (11¢); '99, 16¢; '00, 53¢; '01, (57¢); '02, 1¢; '04, (41¢); '05, (13¢); '06, ($5.48); '07, (8¢).
Next earnings report due late July.
(B) Share earnings may not sum due to the inclusion of convertible contingent debentures in diluted share count.
(C) Includes intangibles: in 2007: $1480.1 mill. or $14.28 a share.
(D) In millions, adjusted for stock split.
(E) Acquired Andrx Group (11/06).

BUSINESS: W.R. Berkley Corporation is an insurance holding company, operating in regional property/casualty insurance, reinsurance, int'l insurance, specialty insurance, and alternative insurance. Regional P/C operations are concentrated in the southern and midwestern United States. Specialty and alternative insurance businesses are conducted nationally. 2007 premium breakdown: 27% Regional ops., 38% Specialty ops., 14% Alternative Insurance, 18% Reinsurance, 5% International. Has approximately 5,495 employees. Officers & directors own 18.1% of common (4/08 Proxy). President, Chairman & CEO: William Berkley. Incorporated: Delaware. Address: 475 Steamboat Road, Greenwich, CT 06830. Telephone: 203-629-3000. Internet: www.wrbc.com.

Shares of W.R. Berkley have been under pressure since our March report. The investment community reacted negatively to a weaker-than-expected first (March) quarter performance. Indeed, operating income came in at $0.83 a share, which was below both our estimate of $0.93 and the year-earlier tally of $0.91. The primary culprit was a 13% drop in investment income. Specifically, declining returns from Berkley's alternative investment and equity portfolios took a toll. Too, the company's investment income was impacted by the $750 million used on share repurchases during the prior 12 months.

We are lowering our full-year 2008 earnings estimate by $0.35, to $3.45 a share. The downward revision is mainly due to the aforementioned drop in investment income. We don't anticipate conditions improving very much in WRB's merger arbitrage portfolio. Historically, the insurer's equity exposure has come from its arbitrage account.

The company remains very aggressive on the share-repurchase front. In fact, W.R. Berkley bought back roughly 10 million shares (5.5% of outstanding) during the first quarter. The board of directors also recently authorized the repurchase of another 10 million units. If completed, the new buyback plan would reduce the company's share count by another 6%. Given this aggressive behavior, we are only lowering our 2009 earnings forecast by a dime, to $3.70 a share.

These shares are ranked 3 (Average) for relative year-ahead price performance. The ongoing weakness in the company's arbitrage and equity portfolio business may lead to near-term earnings volatility here. In fact, we look for Berkley to report year-over-year earnings declines for the final three quarters of 2008. However, this stock does offer attractive 3- to 5-year total return potential. (Note that the company recently increased its quarterly dividend payout by 20%, to $0.06 a share.) Long term, we believe W.R. Berkley will continue to produce profitable underwriting results. W.R. Berkley focuses on casualty insurance lines, which tend to be less volatile than property underwriting. The latter is more susceptible to catastrophic events.

William G. Ferguson *June 20, 2008*

BUSINESS: Whitney Holding Corporation through its subsidiary, Whitney National Bank, provides commercial and retail banking and trust and investment services. The company serves the five-state Gulf Coast region. Whitney National operates more than 155 banking locations in Louisiana, Florida, Alabama, Mississippi, and Texas. Subsidiary Whitney Community Development provides equity and debt investments. Whitney Securities, L.L.C., is a registered broker-dealer in securities. Acquired Signature Financial Holdings, Inc. (3/07). Has 2542 employees. Chairman & C.E.O.: William L. Marks. Barclays Global owns 5.6% of shares; Off./dir., 11.1% (4/08 proxy). Inc.: LA. Addr.: 228 St. Charles Avenue, New Orleans, LA 70130. Tel.: (504) 586-7272. Internet: www.whitneybank.com.

Shares of Whitney Holding continue to fall. The stock is down 7% since our May report and 25% over the past year. The most recent decline stemmed from the company's June-period results. For the quarter, share earnings were $0.20, well below our estimate and the year-ago tally. The poor results were mainly attributed to increased net charge-offs. Whitney's operations are mostly based in Louisiana and Florida, two markets hit hardest by the housing slump and credit crisis. During the quarter, management added a large amount of funds to its provision for loan losses, and we believe that net charge-offs will remain elevated over the next several quarters. Thus, we have lowered our 2008 share-net estimate by 30%, to $1.15.

The company's prospects for 2009 are unexciting, as well. The bulk of Whitney's operations are in regions of the U.S. that have been hit hardest by the slumping economy and credit crisis. The economy will likely remain weak until at least the second half of 2009, which will hurt Whitney's lending operations and lead to additional net charge-offs. Also, stiff competition for deposits and good-quality loans should remain fierce. This will probably cause decreases in prices and a further narrowing of the net interest margin over the next few quarters. All told, we have lowered our 2009 share-net estimate for Whitney by about 20%, to $1.50.

At present, earnings do not cover the dividend payout. We estimate that Whitney will earn $75 million in profits this year, but the current dividend yield of 5.8% could cost the company about $80 million. On the bright side, a dividend cut will likely not occur at this time, but if operations do not improve soon, a cut may be necessary within the next few quarters.

This equity does not stand out for the short or long term. Increased net charge-offs ought to lead to a share-net decline this year, and our Timeliness Ranking System suggests that this stock will lag the year-ahead market. In addition, this issue already trades within our projected Target Price Range for 2011–2013, limiting appreciation potential to that time frame. **That said, income-oriented accounts may find the dividend yield appealing.**

BUSINESS: Weight Watchers International, Inc. is a leading provider of weight loss services, serving 28 countries worldwide. The company promotes a program of lifestyle changes and behavior modification through weekly classroom meetings. Generates 60% (as of 12/07) of revenues through the collection of meeting fees, with the remaining 40% via product sales (snack bars, POINTS calculators), franchise income, and licensing and publishing revenues. Artal Group owns 55.0% of comm.; Delaware Mgmt. Business Trust, 11.2%; FMR, 10.5%; off./dir., 1.1% (3/07 Proxy). Inc.: VA. Chrmn.: Raymond Debbane. Pres. and CEO: David Kirchhoff. Addr.: 175 Crossways Park West, Woodbury, NY 11797. Tel.: 516-390-1400. Internet: weightwatchersinternational.com.

We've lowered our 2008 share-net estimate for Weight Watchers International by a dime, to $2.90. Our assessment represents a 16% increase over the $2.50 that the marketer of weight management products and services earned in 2007. We previously thought that earnings would advance 20% this year. A less-aggressive stance appears warranted, given a generally challenging environment for consumer discretionary spending. Initial costs associated with Weight Watchers' Chinese joint venture (jv) are also likely to limit bottom-line growth.

The company is establishing a weight-management business in China, through a jv with yogurt and food maker Groupe Danone of France. Weight Watchers owns a 51% stake in the venture. The start-up of retail operations within the world's most populous country is expected to cost Weight Watchers up to a nickel in share net this year.

Continued declines in support-meeting attendance remain a concern, as well. The total number of paid weeks is still growing, coinciding with the ongoing rollout of Monthly Pass, an auto-renewal membership plan that allows unlimited access to meetings. (Note: The company is transitioning from a "pay as you go" business model) Overall support-meeting attendance in Weight Watchers' core North American operations, nonetheless, is down about 5%, year over year. Lower attendance is limiting the growth of in-meeting product sales.

The company is a long-term investment play on the growing problem of obesity in the developed world. Growth in new, innovative programs will, no doubt, be key to Weight Watchers' success. The lack thereof has largely been cited for recent declines in support meeting attendance. That said, there is the risk that new programs won't resonate with dieters. The company also continues to face stiff competition in the weight management space.

Weight Watchers shares are ranked 3 (Average) for year-ahead price performance. Long-term investors should be well rewarded, though. Strong recurring cash flow should enable the company to pursue lucrative growth opportunities.

Nils C. Van Liew *August 8, 2008*

BUSINESS: World Wrestling Entertainment, Inc., an integrated media and entertainment company, engages in the development, production, and marketing of television and pay-per-view programming, and live events, as well as in the licensing and sale of branded consumer products. Segments include: Live and Televised Entertainment (65% of '07 rev.), Consumer Products (24%), Digital Media (7%), and WWE Films (4%). Off. and dir. own 67.1% of common stock; Invamed Catalyst Fund, 10.8%; Renaissance Tech., 8.0% (4/08 proxy). Has about 570 employees, not including their "Superstars", who are independent contractors. Chairman: Vincent McMahon. Address: 1241 East Main Street, Stamford, CT 06902. Telephone: (203) 352-8600. Internet: http://www.wwe.com.

This should be a solid year for World Wrestling Entertainment. Although earnings for the second quarter were flat on a year-over-year basis, investors should note that the bottom line was hampered by a $3.5 million charge for the "McMahon's Million Dollar Mania" promotion. Also hindering year-to-year comparisons is the timing of the *WrestleMania* event, which occurred in the first quarter this year, and in the second quarter of 2007. Excluding this show, pay-per-view buys for comparable events increased by 6%. Also offsetting the timing of the event was the 25% increase of contributions from the home video division, boosted by record sales of the *Wrestlemania 24* DVD.

The company should be able to sustain this momentum. Although the domestic live-event market has been subdued due to difficulties in the economy, this has been offset by rising demand for these tours in the international markets. Sales contributions from WWE.com have been relatively flat; this segment usually adds more to margins during the fourth quarter. As such, we expect the bottom line to advance approximately 39% and 15% for 2008 and 2009, respectively.

WWE has drafted performers over to its Smackdown brand to draw greater interest for its *MyNetworkTv* debut. In an effort to enhance its presence on free TV, a number of the more-popular superstars were sent over to the Smackdown show, and should draw more interest in the show for its October 3rd premiere.

The company is expanding its focus to bolster earnings growth. As a reflection of this strategy, the former WWE Films division has been changed to WWE Studios, and will expand its new productions into the direct-to-DVD, scripted television and reality TV programming markets. This should enhance share-net advances for the 2011–2013 stretch.

These neutrally ranked shares have above-average price appreciation potential over the coming 3 to 5 years. Although the attractive dividend yield does not appear to be covered by available cash flow or share net, investors should note that the Class 'B' shareholders have waived the increase for the first three years (receiving $0.24 per share).

BUSINESS: Wyeth is a leading manufacturer of prescription, over-the-counter, and proprietary drugs (infant formulas, cold remedies). Important product names include *Effexor, Protonix, Advil, Centrum, Dimetapp, Robitussin, Caltrate,* and *Rapamune.* Acquired A.H. Robins, '89; Genetics Institute, '96; Solvay S.A., '97; Solgar Vitamin and Herb Co., '98; and others. Divested household products unit, '90; food unit, '97; medical devices business, '98; agricultural prod. unit, '00; and others. International business: 48% of sales. '07 depreciation rate: 5.2%. Has around 50,530 employees. President and Chief Executive Officer: Bernard Poussot. Incorporated: Delaware. Address: Five Giralda Farms, Madison, New Jersey 07940. Telephone: 973-660-5000. Internet: www.wyeth.com.

Wyeth has registered lackluster earnings of late. That can be traced largely to the Pharmaceuticals division, which is encountering a sharp decline in sales of *Protonix* because generic forms of that drug were launched by Teva Pharmaceuticals and Sun Pharmaceuticals. (The company is seeking to remedy the situation through cost-cutting measures. A patent-infringement suit is in the works, as well.) To make matters worse, the performance of the Animal Health unit is suffering from diminished sales of equine and companion animal products. Though corporate results are being aided by the Consumer Healthcare operation (thanks to healthy demand for *Centrum, Advil,* and *Caltrate*), plus the repurchase of common stock, the bottom line may decline moderately in 2008. But share net ought to recover next year, supported by new products (discussed below) and benefits from the aforesaid restructuring plan.

Some promising drugs were introduced over the past year. In 2007, *Tbrisel* (for people with advanced renal cell carcinoma) and *Lybrel* (oral contraceptive for women) were brought to market. What is more, *Pristiq* (depression), *Xyntha* (hemophilia A), and *Relistor,* in Canada, for opioid-induced constipation, received the green light from regulators during this year's first quarter. It should also be mentioned that an Alzheimer drug is in clinical trials. If approved, this pharmaceutical would mark a major step in the treatment of that disease (estimated to afflict more than 25 million people worldwide).

We are positive about Wyeth's operating performance out to 2011-2013. The company boasts a variety of commonly used prescription drugs, vaccines, and over-the-counter medications. Other strengths include significant foreign operations and strategic alliances with top-flight drug firms. Excluding future business combinations, annual share-net gains ought to be in the upper-single-digit range over the 3- to 5-year horizon.

These high-quality shares have strengthened in recent months, arising partially, it appears, from market optimism surrounding the aforesaid Alzheimer drug. But the Timeliness rank is only 3 (Average).

Frederick L. Harris, III *July 18, 2008*

BUSINESS: XL Capital Ltd., through its wholly owned subsidiaries, provides property/casualty (P/C) insurance and reinsurance coverage, and certain financial services on a worldwide basis. Acquired GCR Holdings in 1997, Mid-Ocean Limited in 1998, and NAC Re in July 1999. Completed the acquisition of Winterthur International in December 2001. Has 4,011 employees. Officers & directors own 2.3% of common stock; Barrow, Hanley, Mewhinney & Strauss, 10.0%; AXA Financial, 7.4%; Capital World Investors, 7.3%; Pzena Investment Management, 6.7% (3/08 proxy). Chairman: Brian M. O'Hara. Chief Executive Officer: Michael S. McGavick. Addr.: One Bermudiana Rd., XL House, Hamilton, Bermuda HM 11. Tel.: (441) 292-8515. Internet: www.xlcapital.com.

XL Capital shares remain depressed, reflecting investors' disappointment with recent operating results. In fact, XL has gotten hammered by its investment operations, while its insurance business is struggling, too. By and large, **Wall Street still seems concerned over the insurance company's exposure to the credit market crisis** through its investment in Security Capital Assurance Ltd. (SCA). Upon conducting an extensive analysis of SCA's underlying financial guarantee portfolio, XL decided to reduce the value of its stake in SCA. Its earnings took a hit last year from that sizable writedown and from other charges associated with its investment portfolio. And the bottom line wasn't spared in the first quarter of 2008 either, missing our estimate by $0.73 and year-ago tally by $1.46. Additional charges and investment writedowns may well be incurred in the months ahead.

Meanwhile, pricing softness in the P/C insurance market persists. Industrywide competition has undoubtedly driven down rates within most P/C insurance lines over the past few years. And we don't expect conditions to improve for a while, which means the top line will likely remain under pressure. That, coupled with an uptick in the loss ratio, may well squeeze underwriting profits.

An earnings turnaround largely hinges on the company reducing its investment-related risk, in our view. Since it has suffered from such losses and there is potential for additional ones, we think it would be prudent for XL to mitigate the risk within its investment portfolio and instead focus on strengthening its core insurance operations. All told, we expect profits to slip further in 2008 and 2009.

These shares have been downgraded to 4, Below Average, for Timeliness, due to the poor price and earnings momentum of late. For the time being, investor interest is likely to remain subdued, as the company works to improve the risk profile of its investment portfolio.

Total return potential for the 3- to 5-year haul is still compelling, however, based on a well-covered dividend and brighter earnings prospects, assuming the P/C insurance backdrop picks up.

J. Susan Ferrara *June 20, 2008*

(A) Premiums Earned excludes Life.

BUSINESS: Xerox Corp. develops, manufactures, markets, finances, and services a wide range of copiers, laser printers, and document publishing equipment. Equipment sales (mainly color and high-end black-and-white copiers/ printers and publishing systems) accounted for 27% of 2007 revenues; supplies and document-management outsourcing, 68%; and finance income, 5%. Foreign operations accounted for 47% of revs. and 54% of pretax income in '07; R&D (excluding sustaining engineering of $148 million) was $764 million. Exited retail channels in 2002. Has about 53,700 employees. Off./ dir. beneficially own 1.1% of stock (4/08 Proxy). Chairman and CEO: Anne Mulcahy. Inc.: NY. Addr.: P.O. Box 1600, Stamford, CT 06904. Tel.: 203-968-3000. Internet: www.xerox.com.

Xerox's mid-2007 acquisition of Global Imaging has meaningfully boosted its top and bottom lines. That subsidiary sells and services document management equipment, such as copiers, printers, and multifunction devices, to small and mid-sized businesses (SMB). Global's salesforce now sells Xerox products, in addition to those that it traditionally represents. Moreover, the pace of the company's product introductions targeted at the SMB market notably increased last year. In the March, 2008 quarter, Global's revenues accounted for over half of the 13% year-to-year gain, and its profit contribution likely boosted share net by $0.02.

The sales mix is getting healthier. Declines in sales of low-end black & white copiers, as well as price reductions in several product lines, have partially offset revenue gains generated by color copiers/ printers and productions systems during the past six years. That said, product categories with good growth prospects now account for 75% of the Equipment segment. Also, the new digital systems generate healthy post-sales and service revenues. Finally, acquisitions and software development in document management are helping to expand the customer base for this high-margined service.

Xerox's renowned research program is running at about $900 million annually. Thanks to this program, it has the leading market share for digital black & white publishing equipment and high-end color systems in both the U.S. and Europe. Much of the company's R&D is currently devoted to color-output products, such as the recently launched *Phaser 8860*, which uses its proprietary solid-ink, cartridge-free technology. Too, Xerox is the beneficiary of the research efforts of 25%-owned Fuji Xerox.

We look for low double-digit earnings gains in the coming 3 to 5 years. Cash flow, net of planned capital expenditures and resumed dividend payments, should be almost $1.5 billion both this year and next. These funds are mainly earmarked for stock repurchases, acquisitions, and debt repayment.

This stock is likely to approximate the market averages in the year ahead and over the pull to 2011–2013.

David R. Cohen *July 11, 2008*

(A) Diluted earnings after 1993. Excl. nonrecurring gains (losses): '91, ($.18); '92, ($.04); '93, ($1.25); '95, $.17; '98, ($1.53); '00, ($.56); '01, $.13; '02, ($.53); '03, ($.21); '04, $.07; discont. ops.: '92, ($1.38); '93, $.11; '95, ($2.26); '98, ($.28); '05, $0.04; '06, $0.17; '08-Q1, ($0.54). BUSINESS: Zebra Technologies Corp provides bar-code labeling solutions for use in automatic identification and data-collection systems. Chief products include bar-code printers and related software, plastic-card printers, maintenance services, and label stock. Merged with Eltron International 10/98. Purchased Comtec Information Systems, 4/00. Research and development was 6.6% of 2007 sales. International sales made up 52% of 2007 total. Has approximately 3,200 employees. Neuberger Berman owns 7.3% of the stock; Shapiro Capital, 5.9%; Eminence Capital, 5.8%; officers & directors, 6.0% (4/08 proxy). CEO: Anders Gustafsson. Inc.: Delaware. Address: 333 Corporate Woods Parkway, Vernon Hills, IL 60061. Telephone: 847-634-6700. Internet: www.zebra.com.

Zebra began 2008 well . . . Sales of its core printers segment rose 11%, year to year as almost all product lines posted gains. Moreover, sales did not reflect the normal seasonal pullback in several lines. The balance of the revenue increase was from the new enterprise solutions group, comprising the three acquisitions completed last year and the small radio frequency identification (RFID) division. The gross margin rose a percentage point, to 50%, due largely to a better product mix, and operating expenses of core operations were up 5.2%. Higher amortization of intangibles, resulting from the $287 million of acquisitions in 2007, cost $0.02 a share, and costs of outsourcing most of Zebra's manufacturing activities to Jabil Circuit in China pared the bottom line by $0.03.

. . . and we look for good earnings growth over the balance of the year. Following the absence of the usual seasonal weakness in the first quarter, sales of most printer lines to most industries should grow well in the final three quarters of 2008. Now that the enterprise solutions group has been established, Zebra ought to garner some cross-sales between the target customers of the recently acquired subsidiaries. Printer sales to "big-box" U.S. retailers will probably continue to be soft, but business with second-tier retailers still looks good, despite the mediocre economy. And overseas revenues will probably grow fast. Zebra should also see further cost gains from transferring manufacturing to China. But the current expenses for that move will probably rise a bit, to around $0.05 a share per quarter.

Earnings should grow at double-digit rates out to 2011-2013. The economic slowdown will likely end by sometime in 2009, leading to better sales to retailers. Printer sales should remain strong overseas. And last year's acquisitions, which provide hardware and software to track vehicles and goods in warehouses and marine terminal and airport management, should also see strong growth. Finally, Zebra remains debt free, and we think it will garner substantial earnings growth through repeated acquisitions.

These neutrally ranked shares have above-average 3- to 5-year capital appreciation potential.

BUSINESS: Zimmer Holdings, Inc. designs and markets orthopedic products, including reconstructive implants (84% of '07 sales) and fracture management devices (10%). The company also manufactures surgical products, such as tourniquets and blood management systems (6%). Zimmer operates in 20 countries and sells its products to hospitals, doctors, and other healthcare providers in more than 70 countries. International sales accounted for about 42% of total sales in 2007. Has about 7,600 employees. All officers and directors as a group of 16 persons own less than 1% of common stock, (3/08 Proxy). Chairman: John L. Goldrick. CEO: David Dvorak. Incorporated: Delaware. Address: 345 East Main St., Warsaw, IN. 46580. Tel: 800-613-6131. Internet: www.zimmer.com.

We have tempered our top- and bottom-line estimates for Zimmer Holdings. We still believe ZMH has solid growth platforms, but some near-term issues, notably product recalls and increased spending on ongoing programs, will likely sully sales and earnings growth. Our more moderate top- and bottom-line advances of about 9% this year are slightly down from the 10% and 13% respective growth rates we had previously envisioned. While we believe the problems will only place a slight drag on sales and earnings this year, they will still have an impact.

Zimmer's Durom Cup is not currently available in the U.S.. This hip replacement implant had reported incidents of after-surgery malfunctions. As a result, sales of this product have been halted in the U.S. until surgeons undergo proper training. The move will hurt both sales and share net this year by about $20 million-$30 million, and $0.03, respectively. A plus is resumption of sales of ZMH's orthopedic surgical products that were recalled due to manufacturing glitches at the Ohio facility. These products should be relaunched within a few months.

Operating margins will feel the pinch from increased spending. The company is continuing to invest heavily in infrastructural and technological improvements. Spending on compliance has been hiked too. Also, integration expenses from prior acquisitions have more than tripled, year over year. Such moves will stunt ZMH's operating leverage this year. However, on the horizon, lies the premise that these actions will likely facilitate growth.

New product launches ought to aid bottom-line recovery. FDA clearance to market *EPOCH*, a hip replacement solution, is expected shortly, and a launch could begin within a few months. In addition, recently introduced hip and knee solutions are being well received.

Zimmer stock is appealing to short- and long-term portfolios. ZMH's geographic and product diversification caters to the changing needs of an aging population. Although not immune from economic weakness and problems unique to the company, its vital products enhance everyday living for afflicted individuals and signal the staying power of this company.

BUSINESS: *Allstate Corporation* is the second-largest property/casualty insurer, and one of the largest life insurers in the country. 2007 Revenue breakdown: property/casualty (74%); life insurance (5%); investment income (21%). Total work force 38,000 employees. Property/Casualty premium breakdown: standard auto, 63% of net written premiums; *non-standard*, 5%; *homeowners*, 23%; other personal lines, 9%. Life insurance includes annuity, term, universal life, whole life. Northern Trust Corporation owns 5.1% of common shares outstanding; officers & directors own 1.0% (5/08 proxy). Chairman and CEO: Thomas J. Wilson. Address: Allstate Plaza, Northbrook, Illinois 60062. Telephone: 847-402-5000. Internet: www.allstate.com.

Conditions in the first quarter remained tough for Allstate Corp. Lower-than-expected earnings mainly reflect above-average tornado activity, which drove unusually high catastrophe losses ($568 million compared to the year-ago figure of $161 million). The company also strengthened its reserves related to Hurricane Katrina litigation. Premium growth across the company's lines continues to be mostly flat to down. Even as auto insurers raise rates to better reflect underwriting experience, new applications at Allstate were down, likely due to the weak domestic environment.

This slump may persist into next year. High gas prices and rising unemployment lead to weak car sales and fewer cars on the road. On the plus side, this appears to be a prime factor behind the decrease in claims being filed lately. However, lower claims frequency has been more than offset by growing severity of damage and rising medical care costs, which have increased expenses. And net investment income for the quarter declined about 3% on lower portfolio yields and lower average balances. In this challenging climate, next year's earnings may well fall short of 2006's record level.

Still, new offerings augur well for growth. Rather than slash new premiums to gain market share from more price-sensitive shoppers, Allstate programs like *Your Choice Auto* offer higher-premium packages that reward policyowners for periods without an accident and have an accident forgiveness rider. Also, later this quarter, the company plans to introduce a line of retirement-related products.

Allstate repurchased $424 million of its shares in the quarter. This completed a $4.0 billion stock-buyback program that began in 2006. The board authorized another program to buy back an additional $2.0 billion of ALL shares over the next year. The company also increased its quarterly dividend.

Meanwhile, we don't expect year-to-year earnings comparisons to turn positive until 2008's fourth quarter. Although stock repurchases should bolster share net over this period, the issue's appreciation potential out to 2011-2013 is not particularly attractive.

William Kuo *June 20, 2008*

(A) Excludes life.
(B) Earnings from operations in 2002 and thereafter, based on operating income per diluted share. Before 2002, included realized cap. gains: '00, $0.36; '99, $0.79; '98, $0.86; '97, $0.79; '96, $0.49; '95, $0.34. Next earnings report due late July.
(C) Dividends historically paid in early January, April, July, and October. Special dividend, rights buyback, $0.01 per right, paid 1/2/04.
(D) In millions, adjusted for split.

American Financial Group's predecessor, American Premier Group, was formed in 1994 for the purpose of acquiring American Financial Corp. and American Premier Underwriters (formerly known as Penn Central Corp.) in merger transactions completed in April 1995. Over the years, AFG and its predecessors have owned, operated and invested in businesses in a variety of industries. Generally, AFG's interests have been in insurance, savings and loans, leasing, banking, real estate, communications/entertainment and food distribution.

BUSINESS: American Financial Group, Inc. is engaged primarily in property and casualty insurance and is focused on specialized commercial products for businesses, and in the sale of various annuities and supplemental insurance products. Its main entity, Great American Insurance Group, conducts operations through its Property and Transportation, Specialty Insurance, Specialty Financial, and California Workers' Comp. segments. Acq'd American Financial Corp. 4/95. Has about 6,900 emplys. The Lindner family owns 28.5% of stock. All other Off. & dir. own about 1% of stock (4/08 Proxy). Chmn.: Carl H. Lindner. Co-CEO's: Carl H. Linder III & S. Craig Linder. Inc.: OH. Addr.: National City Tower, One East 4th St., Cincinnati, OH 45202. Tel.: 513-579-2121. Web: www.afginc.com.

American Financial Group should perform decently this year, despite the tough rate environment. Indeed, lower property/casualty premium prices continue to hurt the top line. In particular, average rates in the first quarter dropped 4% from the previous year's level, causing net premiums earned to inch down to around 1%. Moreover, we expect the ongoing softness in the rate environment over the coming quarters to keep premiums relatively flat from 2007. That said, we think favorable reserve development and solid expense management will help offset the weakness in the top line, even with greater losses. These factors, along with a lower share count, should aid in lifting share earnings 12% this year, to $4.00.

The outlook for 2009 is lackluster. We think that earned premium growth next year will be driven by ongoing strength in the insurer's renewal business, greater profits in the Property and Transportation sector, and improvement in California workers' compensation businesses. And while the softness in the rate environment will probably persist through 2009, American Financial's strict underwriting discipline and claims management should help to lift the top line. However, results next year will probably be impacted by greater reserve strengthening charges and higher losses, thereby hampering earnings growth.

The insurer should perform well over the next 3 to 5 years. Annual premium growth of between 5% and 10% will likely boost underwriting results in all of the insurer's segments and lift the bottom line at a comparable rate. All told, we believe that American Financial's combined ratio will hover around 90%. Furthermore, our assumptions for a brighter economic landscape over this time frame augurs well for investment income.

These shares have rebounded around 15% since our March review. Nonetheless, the selection does not stand out for the year ahead or over the 2011–2013 haul. In addition, investors should note that risks to AFG's performance include, but are not limited to, a significant increase in catastrophe losses, a prolonged softening in the premium pricing environment, and reserve deficiencies.

Randy Shrikishun *June 20, 2008*

BUSINESS: Automatic Data Processing, Inc. is the nation's largest payroll and tax filing processor with about 585,000 accounts (71% of fiscal 2008 revenues). The Professional Employer Organization unit (12%) provides comprehensive human resources solutions to smaller companies. Services for auto and truck dealerships (16%) include accounting, inventory, leasing, and parts ordering. Other (1%) includes processing services. Brokerage services (21% of 2006 revenues) was spun-off in March, 2007. U.S. accounts for about 82% of revenues. Has about 46,000 employees. Off. and dir. own 2.1% of stock. (9/07 Proxy). Chairman: Arthur F. Weinbach. CEO: Gary C. Butler. Inc.: DE. Address: 1 ADP Boulevard, Roseland, NJ 07068. Tel.: 973-974-5000. Internet: www.adp.com.

Automatic Data Processing generated a 12.5% revenue gain in fiscal 2008 (ended June 30th). This positive performance was achieved, despite the challenging economic environment and the impact of lower interest rates on funds held for payroll clients. The top line was supported by increases of 20% in the Professional Employment Organization (PEO) unit, 9% in Employer Services, and 8.5% in Dealer Services. With margins holding steady, net income from continuing operations advanced 14%. Aided by fewer shares outstanding, share earnings jumped 20%.

For fiscal 2009, we are projecting revenue expansion of roughly 7%. The lower growth rate reflects the impact of the weakened economic environment and expected tough comparisons in the fiscal first half. Our forecast is predicated primarily on growth in the core Employer Services business. Assuming a modest improvement in margins, we are estimating a share-profit gain of about 11%.

The 3- to 5-year outlook appears relatively positive. Long-term prospects should be enhanced by the favorable demand picture for integrated computing outsourcing solutions and ADP's solid position in the payroll and tax segments of the market.

The company has returned a significant amount of excess cash to shareholders. During fiscal 2008, ADP repurchased almost $1.5 billion of common stock and paid out $549 million in dividends. At June 30th, the company still had $1.66 billion ($3.23 a share) of cash on its balance sheet and minimal debt (1% of total capital).

These high-quality shares are neutrally ranked for relative price performance over the next six to 12 months. But based on our 3- to 5-year projections, they offer worthwhile capital appreciation potential over the 2011-2013 timeframe. Reflecting the company's excellent Financial Strength rating (A++) and the stock's high Safety rank (1), ADP is considered a below-average risk holding suitable for conservative investors. In addition, the equity trades with low volatility, as denoted by its below-market Beta coefficient (0.75) and high Stock Price Stability rating (100).

Lester Ratcliff *August 22, 2008*

(A) Fiscal year ends June 30th.
(B) Primary earnings through 6/30/97, diluted thereafter. Excl. charge for accounting change, '94, 2¢. Incl. stock option expense starting '06.
Next earnings report due late Oct.
(C) Dividends historically paid about the 1st of Jan., Apr., Jul., Oct.

BUSINESS: Bank of America Corp. was formed by the merger of NationsBank with BankAmerica on 9/30/98. Acquired FleetBoston Financial, 4/1/04; MBNA, 1/1/06; LaSalle Bank, 10/1/07. About 6,130 offices in 29 states & Wash. D.C. Loans (12/31/07): commercial, 27%; commercial real estate, 7%; residential, 31%; consumer, 32%; international, 3%. Net loan losses, .84% of average loans in '07; loan loss reserve, 1.98% of gross loans (6/30/08); nonperforming assets (including 90-day past-due), 1.64%. Had 206,587 full-time equivalent empl. (6/30/08). Directors & officers own 1.06% of stock (Proxy, 3/08). Chairman, CEO & President: K. Lewis. Inc.: DE. Address: Bank of America Corp. Ctr., Charlotte, NC 28255. Telephone: 704-386-5667. Internet: investor.bankofamerica.com.

Bank of America's June-quarter revenues rose 19% sequentially, helping to offset another sizable provision to the loan loss reserve and $1.2 billion of asset writedowns, the latter related to capital markets disruption (down from $2.8 billion in the March period). A wider net interest margin and a turnaround in trading income aided revenue growth.

Higher credit costs probably will limit the company's earnings progress in the second half. Real estate-related credits (home equity, mortgage, and commercial loans tied to housing) and credit card lending are the areas of most concern. A lot of the deterioration in real estate loans has taken place in former growth markets that experienced significant home price declines in the past year, like California and Florida. B of A has strengthened its lending practices, but further economic stress could cause credit losses to worsen before they moderate sometime in 2009.

Management now expects the acquisition of mortgage lender Countrywide Financial on July 1st to contribute positively to earnings in 2008. But Countrywide lost $2.3 billion in the June quarter, and its bottom-line contribution may depend on home prices stabilizing and the absence of a significant adverse effect from pending litigation. B of A issued 106 million shares of its stock for Countrywide. Cost reductions from the merger are estimated at $900 million by 2011.

We've lowered our share-net estimates for 2008 and 2009, by $0.50 and $0.15, respectively. Credit costs will likely stay high next year. Preferred dividends will rise due to the recent sale of $7 billion of preferred, limiting the growth of income available for common shareholders. And with Countrywide's earnings contribution unclear, our estimates are tentative.

Bank of America's diversification with regard to geography and business mix should facilitate an eventual earnings rebound and foster decent stock price recovery potential to 2011-2013. But most investors may want to heed the unfavorable Timeliness rank and defer commitments, given the near-term earnings uncertainty. The dividend yield remains high, but the payout should hold if earnings come in as we expect.

Theresa Brophy *August 22, 2008*

(A) All figures prior to '98 are for NationsBank alone. (B) Based on diluted shares. Excludes nonrecurring charges: '93, $0.20; '98, $0.37; '99, $0.10; '01, $0.39. Quarterly earnings per share may not equal total due to change in shares. Next earnings report mid-Oct. (C) Dividends historically paid late March, June, September, & December. ■ Dividend reinvestment plan available. (D) Includes intangibles. In '07: $87.8 billion, $19.79/sh. BUSINESS: Bank of Nova Scotia, the third largest bank (by assets) in Canada, operates over 2,330 offices and branches (almost 5,285 ATMs) in Canada, the U.S., and over 50 fgn. countries. Owns Scotia-Capital. Acquired Montreal Trustco, '94; National Trust, '97. Loans in 2007: real estate and mortgage, 40%; commercial, 34%; personal/other, 17%; repo, 9%. Net loan losses, .28% of average loans in 2007. As of 10/31/07, loan loss reserves, 0.9% of loans; problem assets, 0.62% of loans. Has about 60,000 employees. Officers and directors own less than 1% of common shares (3/08 Proxy). President & CEO: Richard E. Waugh, Inc.: Canada. Address: Scotia Plaza, 44 King St. West, Toronto, Ontario, Canada M5H 1H1. Telephone: 416-866-6161. Internet: www.scotiabank.ca.

Credit quality is becoming more of a concern for Bank of Nova Scotia. Although credit conditions are still showing signs of stability in most of the bank's lending markets, the environment continues to weaken. In the second quarter, total net impaired loans climbed 23%, to $845 million, and will probably remain on the rise. Lower net recoveries are also likely to play a factor. In all, we have raised our 2008 estimate for loan loss provisions (LLPs) by $85 million, to $585 million. And next year, we look for a jump in LLPs of over 35%, to $800 million.

A share-net decline seems inevitable this year. But, with the asset-backed commercial paper writedowns behind it, Scotiabank ought to generate double-digit earnings growth next year.

The bank seems to be back on its usual expansion path. At our May review, Scotiabank had considered entering the U.S. market, with the purchase of struggling lender National City Corp. (NCC). Shortly thereafter, however, all discussions ceased. Given the price tag, the Canadian bank wisely avoided making NCC, and its tattered balance sheet, its first entry south of the border. In the meantime, though, Scotiabank continues to build its emerging markets business, specifically in the Caribbean and Latin America, with a venture into the Peruvian pension fund business being one of its latest initiatives. Whether it will make the jump into the U.S. remains to be seen. But with numerous valuations continuing to surface, we would not be surprised to see Scotiabank window-shop a bit more.

Shareholder-friendly spending persists. The bank continued its biannual trend of dividend hikes, raising the third-quarter payout by 4%, to $0.49 a share.

These shares are an average selection for year-ahead price performance. The stock offers lackluster appreciation potential for the pull to 2011-2013. That said,

There may be some lure here for more-conservative, income-oriented investors. The stock offers an Above-Average Safety rank (2) and top scores for Price Stability and Earnings Predictability. Too, healthy dividend growth ought to support the elevated yield we anticipate 3 to 5 years out.

Jason A. Smith *August 1, 2008*

BUSINESS: BOK Financial Corporation is a bank holding company. It operates four principal lines: corporate banking, consumer banking, mortgage banking, and trust services from 150 locations. Its banking and bank-related activities are primarily performed through Bank of Oklahoma, N.A. (BOK); Bank of Texas, N.A.; Bank of Albuquerque, N.A.; Bank of Arkansas, N.A.; and Colorado State Bank and Trust, N.A. Has about 4,110 employees. At 12/31/07, loan loss reserve was 1.06% of loans. Officers and directors own 66.6% of shares (3/08 proxy). Chairman: George B. Kaiser. President & CEO: Stanley Lybarger. Incorporated: Oklahoma. Address: Bank of Oklahoma Tower, P.O. Box 2300, Tulsa, Oklahoma 74192. Telephone: 918-588-6000. Internet: www.bokf.com.

BOK Financial is making steady progress. We believe that the bank's net interest margin will widen in the coming quarters as the yield curve continues to shift from being flattened to more normalized. Indeed, in the first quarter the net interest margin improved one basis point from a year earlier, to 3.31%. What's more, a greater level of earning assets helped to boost net interest income 14% year over year, to $14 million. And while competition remains intense on the deposit side, BOK Financial has been able to increase loans at a relatively decent pace. Overall, we think that the bank's bottom line will rise 9%, to $3.65 this year.

BOK will likely maintain healthy credit quality in the years ahead. Net charge-offs as a percentage of total average loans and nonperforming assets increased in the March interim. Nonetheless, we still think that they are at fairly manageable levels for the bank. The fact that BOK has limited exposure to the subprime market should also help. Furthermore, it is maintaining solid reserves to cushion against any further deterioration in asset quality.

We expect BOK Financial to geographically expand in the coming years. This Oklahoma-based institution has a strong foothold in the southern U.S. and has been slowly increasing its presence in other regions over the past few years. Going forward, the company will likely purchase additional banks that fit with its strategy of taking over well-managed organizations.

Our projections indicate annual earnings advances of approximately 10% over the next 3 to 5 years. Modest loan and deposit growth, along with greater fee income, will probably drive the bottom-line gains we envision over this period. Factors that may limit our projections, though, are more competitive pricing in the market and greater noninterest expenses related to branch expansion.

These shares are ranked to perform in line with the broader markets over the coming year. In addition, risk-averse investors may find some appeal in this fairly safe investment. However, the stock's total return possibilities over the pull to 2011–2013 are unexciting.

Randy Shrikishun *June 20, 2008*

(A) Diluted earnings (primary in 1995 and 1996). Next earnings report due in mid-July.

BUSINESS: BP p.l.c. is one of the world's largest integrated oil companies. Daily 2007 production (including equity interests): crude oil & liquids, 2,414,000 barrels; natural gas, 8.1 billion cubic feet; refinery runs, 2.4 mill. bbls. 2007 refining margin: $9.94/barrel; refining availability: 82.9%. Acquired Amoco, 1998; Arco, 2000; Burmah Castrol, 2000. Proved reserves (incl. equity int.) as of 12/31/06: 9.8 bill. barrels of oil; 45.9 tcf of natural gas. Estimated pretax present value of reserves: $139 bill. Has 96,200 employees. Fixed assets: 69% oil and gas; 26% refining; 5% other. Chairman: Peter Sutherland. Chief Executive: A. Hayward. Inc.: England and Wales. Addr.: 1 St. James Square, London SW1Y 4PD, England. U.S. Tel.: 212-451-8034. Internet: www.bp.com.

BP has put most of its recent problems behind it. Difficulties at one of the two refineries that had been experiencing significant downtime have been cleared up. Operating rates at the other have risen notably, too, and are expected to be up to full speed in the months ahead. The pickup in profits early in 2008 is partly attributable to the improved performance in this area. Rising oil prices have also helped, of course.

Rising oil prices may slow production growth, but the net effect is positive. BP has 60 major oil and gas development projects under way, with the brightest possibilities for extra volume from the Gulf of Mexico, Angola, Azerbaijan, and Indonesia. Nine ventures are due on stream in 2008. Budgeted at a $60 a barrel oil price, completion of these ventures might lift production by 10% by 2012. But the many production-sharing contracts in force mean that BP maxes out sooner on the revenues it is allowed to earn as oil prices rise. That suggests a more flattish tone for the production profile, if the spike in crude quotations holds. Even so, rising oil prices are bullish for profits, despite their dampening effect on volume.

BP is working to secure resources. A planned joint venture with Husky Energy would get it into the Canadian oil sands. BP has agreed to give up a half-share in its Ohio refinery — which would be upgraded to handle more heavy oil — for a 50% stake of the large Sunrise field in Alberta. Cost estimates for the undertaking are now being confirmed. BP could break ground in 2010 if all goes as planned.

Meantime, Russian production has leveled off. BP did well to get into that resource-rich nation when its competitors were unable to, and has profited accordingly. But disputes with the company's partners have cast a cloud over operations lately. It's not clear when BP will realize more growth in Russia. State-controlled Gazprom may eventually move in on the partnership and gain the upper hand.

This top-quality issue is timely and offers good risk-adjusted 3- to 5-year total return potential. Without question, though, oil prices will need to remain high for BP to achieve the earnings and dividend progress we envision.

BUSINESS: Campbell Soup is the world's largest soup maker, as well as a leading producer of packaged foods and beverages. Brands include *Campbell's*, *Erasco*, and *Liebig* soups; *Swanson* broths; *Pepperidge Farm* cookies; *Campbell's* canned pasta and chili; *V8* juices; *Prego* pasta sauces; and *Godiva* chocolates. Acquired Australia's Snack Foods Limited, 7/02. Spun off Vlasic Foods division, 3/98. Foreign operations in '07: 30% of sales, 20% of earnings. R&D, 1.3% of '07 sales. Has 24,000 employees. Off. and dir. (*including heirs of founder John T. Dorrance*) own 43% of shares (10/07 Proxy). Chairman: George Sherman. Pres. & CEO: Douglas Conant. Inc.: NJ. Address: Campbell Place, Camden, New Jersey 08103. Tel.: 856-342-4800. Web: www.campbellsoup.com.

Although Campbell Soup has posted mixed results in recent quarters, we generally look for a decent growth year in fiscal 2009 (begins August 4th). The New Jersey-based company has experienced heightened competition in its core soup operation, primarily from rival General Mills, which makes the *Progresso* line. Sales of ready-to-eat soups fell 9% in the April quarter. However,

A focus on specialty lines should prove beneficial. Recently introduced low-sodium soups are targeted, in part, at expanding Campbell's market to include consumers that have previously avoided canned soup in order to keep salt intake low. A number of new products are due in the coming weeks, including several under the *Select Harvest* name, the soupmaker's health-oriented brand. Meanwhile, in the past couple of quarters, premium refrigerated and shelf-stable, aseptically packaged soups have been marketed successfully to a more upscale demographic. Further planned promotions should generate additional interest for these products.

Markets in Russia and China hold significant promise. Soup consumption in these two countries is notably high. Even modest penetration of these markets, which are roughly eightfold Campbell's current global market, would be very rewarding. To that end, the company is gradually introducing soups to the Moscow metropolitan area, as well as throughout China's Guandong province. So far, the endeavor appears to be meeting with expectations. In-store cooking demonstrations and sampling events, extensive marketing campaigns, and free product samples should foster demand.

The Godiva divestiture is complete. Campbell sold the premium chocolate maker, which generates about $500 million in annual revenue, to Turkey's Yildiz for $850 million. The deal should enable the company to better position itself toward healthy offerings, which are more lucrative and have better growth prospects.

Neutrally ranked Campbell Soup shares have limited appeal. The current price of CPB stock already reflects much of our profit-growth assumptions for the company.

BUSINESS: Chevron Corp. is the world's fourth largest oil company based on proven reserves. Daily 2008 gross production: crude oil & NGLs, 2.239 mill. barrels; natural gas, 4.414 bill. cubic feet. Net proved reserves, 12/07: oil, 8.589 bill. bbls.; *natural gas*, 22.480 trill. cu. ft. Avg. 5-yr. finding costs: $5.43 a barrel (vs. ind. avg. $5.22). 5-yr. reserve replacement rate: 97% (vs. ind. avg. 112%). Est. present value of reserves: $167.2 bill. Product sales: 4.4 mill. bbls./day. Has 4,132 owned/leased stations, mainly in the U.S.; supplies 11,414 others. Has about 125,000 employees. Officers & Directors own less than 1% of stock (5/08 proxy). Chairman and CEO: David J. O'Reilly. Inc.: DE. Addr.: 575 Market St., San Francisco, CA 94105. Tel.: 925-842-1000. Web: www.chevroncorp.com.

Chevron stock has risen over 15% since our March report. Much of the ascent is due to skyrocketing crude oil prices, despite a pullback in production. Additionally, the Refining and Marketing (R&M) operation performed better than anticipated in the first quarter. Thanks to the completion of the El Segundo project, Chevron was able to increase its heavy crude throughput, which is cheaper, while minimizing its sweet crude throughput. This permitted the U.S. R&M sector to post a profit of $4 million, as opposed to an expected loss of over $35 million.

The company's financial flexibility remains high. Chevron bought back over $2 billion of stock in the first interim, and we look for this pace to continue unabated. Too, the quarterly dividend was hiked 12%, to $0.65 a share. Meanwhile, capital expenditures are likely to surpass $23 billion this year, given the large amount of international activity expected in the second half, as well as ongoing cost pressures. With the per-share numbers escalating, and the stock price higher, we wouldn't be surprised to see the company declare a 2-for-1 stock split to make the equity appear more affordable.

Start-ups in the E&P division remain on track. Major upstream projects, such as Agbami and Tengiz SGP, are slated for the third quarter. The Tengiz SGI start-up occurred in the first period, as did the Moho-Bilondo (Angola) undertaking, well ahead of schedule. The Blind Faith (GOM) project has been pushed back into the second half, however.

Share earnings should top $10 this year. We roughly estimate that for every $10 a barrel rise in light sweet crude, Chevron's per-share earnings rise about $0.30. This figure has further upside potential depending on whether natural gas prices increase, which they have of late. As such, despite our expectation for a weak summer refining outlook, and lower production volume (around 2.5 mmboe/d, compared to 2.6 in 2007), due to the high price of oil, our earnings estimate may well prove conservative.

We have raised our Target Price Range. This high-quality and timely issue has decent risk-adjusted total-return potential over the pull to 2011-2013.

BUSINESS: The Chubb Corporation is a holding company engaged in property and casualty insurance. The company has offices located throughout North America, Europe, South America, and the Pacific Rim. Acquired Executive Risk, Inc. in July 1999. Sold life/health and real estate operations in 1997. Mix of p/c premiums written at 12/31/07: personal lines, 31%; standard commercial, 43%; specialized commercial, 25%; Reinsurance, 1%. Has about 10,600 employees. Morgan Stanley owns 6.2% of common stock; officers and directors control less than 1% of common (3/08 proxy). Chairman, President, and CEO: John D. Finnegan. *Incorporated:* N.J. Address: 15 Mountain View Road, P.O. Box 1615, Warren, NJ 07061. *Telephone:* 908-903-2000. *Internet:* www.chubb.com.

Chubb Corp. started 2008 on a solid note. Although operating income dropped a bit during the first quarter, the P/C insurance provider managed to post a sturdy 8% share-earnings advance, thanks largely to a lower share count resulting from aggressive buyback activity of late. (Note that at the end of March, nearly 15 million shares remained in the repurchase program.) Too, underwriting performance was healthy, with the combined ratio at just under 84%, aided by favorable reserve releases and light catastrophe losses.

The soft P/C pricing environment remains a challenge, however. To be sure, lower rates have tempered top-line momentum for more than a couple of years. Recent market data suggest that pricing competition within the P/C insurance industry in the U.S. will likely continue in the foreseeable future. Against this backdrop, the top line figures to be hurt by difficulties in winning new business and retaining existing accounts within Chubb's core U.S. operations.

Underwriting profits may well narrow. For one thing, reserve development will probably moderate in the quarters ahead. Also, the company's exposure to the credit market crisis is still somewhat concerning, even though CB has indicated that its risk is manageable, thanks to strict underwriting practices. Indeed, loss trends within the professional liability and directors & officers lines bear watching, as claims may begin to pick up there. Catastrophe losses, meanwhile, are another unknown factor, which may well push the combined ratio higher. For this year, we continue to assume such outlays will account for three percentage points.

Accordingly, we still expect share earnings to decline this year and next. Despite the first-quarter showing, full-year profits will probably decline 6% in 2008 and recede a bit more next year, based on lackluster premium growth and an uptick in loss trends.

Still, a well-covered dividend gives this stock some appeal. The stock is neither a standout for the year ahead nor the long haul, as earnings progress will likely remain muted. Nonetheless, a decent dividend payout and prospects for increases are pluses here.

BUSINESS: Cincinnati Financial Corporation is a holding company. Subsidiaries operate in the following areas: property and casualty insurance (Cincinnati Insurance, Cincinnati Casualty, and Cincinnati Indemnity), life and health insurance (Inter-Ocean Insurance and Life Insurance Company of Cincinnati which merged into Cincinnati Life Insurance Company 2/88), and financial services (CFC Investment Company). 2007 Property/Casualty premium distribution: Commercial lines, 77%; Personal lines, 23%. Has approximately 4,090 employees. Officers and directors own 10.6% of stock (3/08 Proxy). Chairman & CEO: J.J. Schiff, Jr. Vice-chair. & Pres.: James Benoski. Inc.: Ohio. Address: 6200 S. Gilmore Road, Fairfield, Ohio 45014. Telephone: 513-870-2000. Internet: www.cinfin.com.

Cincinnati Financial had a poor start to 2008. In fact, first-quarter share earnings missed our estimate by $0.06 and plummeted from the year earlier, with much of the weakness stemming from a sharp rise in the combined ratio of nine percentage points, largely reflecting high catastrophe losses. A steep decline in premiums written and earned, mostly within the commercial insurance segment, didn't help either, as soft pricing conditions persisted.

Intense pricing competition will likely continue to hurt underwriting performance in the near term. Rate declines in recent years have inevitably driven down the top line. Indeed, although CINF continues to be selective with the new commercial business it brings in, pricing seems apt to weaken further in the coming months. Similarly, lower rates within the homeowners and auto liability lines will probably make it difficult for the personal insurance segment to contribute much to the top line, even though policy credits and pricing adjustments implemented a couple of years ago have helped to attract new business. These factors, coupled with a likely rise in loss trends and high catastrophe losses, may well elevate the combined ratio for this year and next.

Consequently, we've trimmed our share-net estimates for 2008 and 2009 by a dime each. More specifically, we expect share earnings this year to drop some 20% versus 2007, on a 5% decline in premiums written and a combined ratio of between 96% and 98% (including catastrophe losses of 4.5 percentage points and a benefit from favorable reserve development of a similar amount). Profits may well be flat in 2009, based on continued pricing weakness and a potential pickup in loss trends. A more stable P/C insurance backdrop, the rollout of new services, and geographic expansion should help drive profits modestly higher over the long haul.

That said, this stock boasts a good, well-covered yield. Although these shares lack appeal for year-ahead and 3- to 5-year price performance, the recent dividend hike and the likelihood for additional increases make them mostly suitable for income-oriented accounts.

BUSINESS: Commerce Bancshares, Inc. has over 360 locations in Missouri, Illinois, Kansas, Oklahoma, & Colorado. Subsidiaries engaged in mortgage, credit-related insurance, venture capital, and real estate activities. Annualized net loan losses, .42% of average loans in '07. Loan loss reserve, 1.30% of loans at 3/31/08; problem & past-due assets, .56%. Loan portfolio (12/31/07): commercial, 31%; commercial real estate, 27%; residential mortgage, 15%; consumer, 27%. On 3/31/08, had 5,128 full-time equivalent empl. Directors & officers own 9.4% of stock; Commerce Bank in trust capacities, 12.5%; American Century, 5.7% (proxy 3/08). CEO: D.W. Kemper. Inc.: MO. Address: 1000 Walnut, P.O. Box 13686, Kansas City, MO 64199. Tel.: 816-234-2000. Internet: commercebank.com.

Commerce Bancshares booked a gain of $0.21 a share related to Visa's initial public offering in the March quarter. It also reversed some of the Visa-related expenses recorded in the final period of 2007, which increased March-quarter share net by about $0.08. The gains were partly offset by $0.05 of noncash impairment charges. A larger loan loss reserve provision depressed underlying results.

Although measures of Commerce's credit quality still look good, the company probably can't avoid experiencing some increase in bad loans in the current weak economic climate. Its problem and past-due loans each rose by about $5 million in the March quarter, but the problem asset ratio is still fairly low. Moreover, the loan loss reserve covers problem assets and past-due loans more than twice. Construction loans accounted for only 6.3% of total loans at the end of March, with less than 25% ($163 million) of the portfolio for residential construction, an area of some concern. On the other hand, potential problem loans doubled in 2007 and rose another 10% in the March period (to $141 million). Given the economic stress on consumers and businesses, higher provisions to the reserve probably will be needed this year and in early 2009 to offset further growth in charge-offs and to maintain Commerce's reserve levels relative to its healthy loan growth.

In anticipation of a moderate rise in credit costs, we have trimmed our share-net estimates for 2008 and 2009 by $0.10 and $0.15, respectively. But we still expect earnings to advance at a mid-single-digit pace this year and next. Deposit service charge, trust, bank card, and brokerage income all seem to be growing nicely. The pace of loan growth, bolstered in the March period by a seasonal rise in lending to a number of large grain dealers, may moderate to a still healthy mid- to upper-single-digit pace, supporting a similar increase in net interest income. Expenses appear well controlled.

The stock is ranked to track the market averages in the year ahead (Timeliness: 3, Average). And unless earnings growth over the next few years exceeds our projections, the issue's appreciation potential to 2011-2013 is limited.

BUSINESS: ConAgra Foods, Inc. is a consumer food company that markets and manufactures a variety of products sold in supermarkets and restaurants. Popular consumer brands include *Chef Boyardee, Healthy Choice, Orville Redenbacher, Slim Jim, Reddi-wip, Hebrew National, Swiss Miss, PAM, Crunch 'n Munch,* and *Hunt's.* It operates through three divisions: Consumer Foods, Food and Ingredients, and International Foods. Sold its ham and seafood operations, 4/06; refrigerated meats, 10/06. Depr. rate: 6.8%. Has *24,500 employees.. Off./dir. own .7% of common;* Capital Research & Mgmt., 6.1% (8/07 proxy). CEO & President: Gary Rodkin. Inc.: DE. Addr.: One ConAgra Drive, Omaha, NE 68102-5001. Telephone: 402-595-4000. Internet: www.conagrafoodscompany.com.

The operating landscape for ConAgra Foods in fiscal 2009 (began May 26th) appears quite challenging. Indeed, there are several factors in play right now that will likely result in a negative year-to-year earnings comparison. The absence of CAG's Trading and Merchandising Group (discussed below), which has performed exceptionally in recent quarters, will hurt near-term results. Too, the company faces a very onerous cost environment. Soaring ingredients and fuel prices continue to weigh on margins. Moreover, the company's aggressive pricing initiatives, implemented to offset the impact of inflationary cost pressures, have led to some weakness in volume. Based on these factors, we now look for fiscal 2009 share earnings to come in about 15% lower than last year.

The sale of the commodities trading business was completed in late June. The trading and merchandising unit netted ConAgra roughly $2.75 billion, $650 million more than originally expected. The company plans to use most of the proceeds to aggressively buy back shares and reduce its leveraged balance sheet. Long term, we believe this is a good move for ConAgra Foods. First, it removes a volatile, commodity-driven business from CAG's portfolio, which should lead to greater earnings clarity. And despite the recent success, the trading group's performance can be rather erratic. Second, it allows the company to focus more on its main consumer foods business. Lastly, ConAgra received a nice premium, as the commodities markets are overheated right now. That said,

The jury is still out as to how well ConAgra will perform over the next 3 to 5 years. Our chief concern here always has been the company's lack of high-growth products. If ConAgra puts the recent proceeds from the trading group divestiture to good use, in terms of product innovation and marketing spending, our recently revised 3- to 5-year projections could prove conservative.

This equity does not now stand out for either the year ahead or the 3- to 5-year pull. The stock's above-average dividend yield, though, may appeal to income-oriented investors.

BUSINESS: Cullen/Frost Bankers, Inc., is a financial holding company based in San Antonio, Texas, with about $13.5 billion in assets. Net charge-offs were .14% of average loans in 2007. In 2007, loan loss reserve was 1.19% of loans; nonperforming assets, .72% of loans and foreclosed property. Loans breakdown: commercial and industrial, 46.4%; commercial mortgage, 23.7%; construction real estate, 10.3%; home equity & other consumer, 12.2%; land, 5.5%; 1-4 family, 1.6%; other, 0.3%. Had 3,781 employees at 12/31/07. Officers and directors own 8.5% of common stock (4/08 Proxy). Chairman and CEO: Richard W. Evans, Jr. Incorporated: Texas. Address: 100 W. Houston Street, San Antonio, Texas 78205. Telephone: (210) 220-4011. Internet: www.frostbank.com.

The sluggish U.S. economy has begun to take its toll on Cullen/Frost. The company recently released its June-period financial results. For the quarter, share earnings were $0.89, a few pennies below our estimate and flat compared to the year-earlier interim. Although it continued to expand its loan portfolio at a good clip, lower interest rates, fierce competition, and the weak housing market caused Cullen's net interest margin to narrow slightly, year over year. Looking ahead,

We have reduced both our 2008 and 2009 share-earnings estimates. The U.S. economy has shown few signs of rebounding, and we believe it will remain weak for the next several quarters. Competition will also play a role and in our view, loan and deposit growth will slow into 2009. Moreover, these factors will impact the net interest margin, and we believe that it will narrow by 10–20 basis points over the next year or so. An increased share count will also hurt share profits. All told, we now believe that Cullen will post share net of $3.60 and $3.85 this year and in 2009, down from our previous estimates of $3.70 and $4.00, respectively. On the bright side,

Cullen will likely benefit from its strong balance sheet. The company possesses a large amount of cash and a manageable amount of debt. In our view, it will continue to focus on expanding its operations in the metropolitan areas of Dallas, Fort Worth, and Houston. We expect that the U.S. economy will improve by the second half of 2009, and by then, Cullen will likely be able to grow its net loans at a good pace. In sum, we think the company will reach profits of more than $5.00 a share by the 2011–2013 time frame.

These shares are not particularly appealing at this time. Fierce competition, coupled with the lackluster economy, will likely lead to Cullen registering uninspiring share-earnings gains this year and in 2009. Furthermore, our Timeliness Ranking System suggests that this equity will only mirror the year-ahead market. Looking long term, although Cullen possesses good growth prospects, this stock offers below-average appreciation potential out to 2011–2013. Income seekers can probably find better-yielding stocks elsewhere.

BUSINESS: DuPont is engaged in the field of science and technology in a range of disciplines, including high performance materials, electronics, safety and security, biotechnology. The company operates on a global scale, manufacturing a wide range of products for distribution and sale to many different markets, including automotive, construction, agricultural, medical, protective apparel, electronics and nutrition. In 2007: R&D, 4.6% of sales; depreciation rate, 5.2%. Has approximately 60,000 employees. Capital World Investors owns 5.1% of common stock; officers and directors, 1.0% (3/08 Proxy). Chairman & CEO: Charles O. Holliday, Jr. Incorporated: Delaware. Address: 1007 Market St., Wilmington, DE 19898. Telephones: 302-774-1000. Internet: www.dupont.com.

DuPont turned in another solid performance for the first quarter. The top line advanced at a nice clip during the period, as sales benefited from higher local prices and favorable currency movements. Growth in emerging markets led the way, while the company continued to experience weakness in the domestic construction and automotive markets. Despite higher operating costs, DuPont benefited from a lower tax rate and a decline in shares outstanding. Earnings came in at $1.31 a share, a 22% improvement. Looking forward, slowing demand in the United States should offset growth in agriculture and international markets. Overall, we expect a moderate bottom-line advance in the current year, due to growth in the first quarter.

The company has received registration approvals from the EPA and Canadian authorities for Altacor and Coragen. These two new insecticides offer growers long-lasting control for a wide variety of pests. This reflects the company's focus on developing solutions for agricultural markets.

DuPont has formed a joint-venture cellulosic ethanol company with Genencor, a division of Denmark-based Danisco. The venture will develop and commercialize low-cost technological solutions for the production of cellulosic ethanol, a next-generation biofuel produced from non-food sources. DuPont and Danisco will initially invest $140 million over the next three years. With food and gas prices at elevated levels, there appears to be a significant market opportunity for sustainable biofuels technologies.

These shares are neutrally ranked for year-ahead performance. We project solid share-earnings growth at the company over the pull to 2011-2013. Moreover, DuPont offers a healthy dividend yield, and earns high marks for Safety and Financial Strength. Total return potential is fairly attractive, on a risk-adjusted basis.

Michael Napoli, CPA *July 18, 2008*

On September 30, 2000, The Dun & Bradstreet Corp. was separated into two independent publicly traded companies. Under terms of the transaction, "Old" Dun & Bradstreet changed its name to Moody's Corp. and through a special dividend of shares of "New" Dun & Bradstreet distributed to shareholders of record at the close of business on September 20th, spun off the company's D&B operating company, which was subsequently renamed The Dun & Bradstreet Corp.

BUSINESS: The Dun & Bradstreet Corp. is a worldwide provider of business information and related decision-support services. It operates offices in 28 countries, conducts operations in 10 other nations through minority interests in joint-venture companies and operates through independent correspondents in more than 150 additional countries. The company compiles credit information on over 100 million businesses worldwide. Has about 4,900 employees. Officers/directors own 3.1% of common shares. Davis Selected Advisers owns 15.8% of the common stock (3/08 Proxy). Chairman, CEO & President: Steven W. Alesio. Incorporated: Delaware. Address: 103 JFK Parkway, Short Hills, New Jersey 07078. Telephone: 973-921-5500. Internet: www.dnb.com.

Dun & Bradstreet has adjusted its pricing structure to gain more business from each customer. The company has bundled its services to encourage its subscribers to step up spending levels for its *DNBi* product. Whereas previous arrangements gave limited access to reports and data from its Risk Management unit, this upgraded plan gives users a broader range of data in exchange for a slight premium in pricing. This endeavor has helped to increase revenues during the year as sales levels within the RM division were 9.5% higher, year to year, during the first six months of 2008, primarily from the shifting of its customers' purchasing habits.

A new offering should extend its reach among smaller customers. Dun & Bradstreet launched a credit-monitoring program for small businesses called *Trade Exchange*. The software links to the company's accounts receivable files in *QuickBooks* to identify vendors that are slow or delinquent in payment. Companies that participate in the program receive discounted access to the company's existing credit reports. D&B is able to use the data to sell to larger companies, banks, and other financial service companies for uses in credit evaluation.

Operations abroad have been helped through the use of joint ventures. International sales during the second quarter increased 23% over the year-earlier period, bolstered through new joint ventures in the Japanese and Russian markets. These undertakings should also help to enhance the database of information offered to existing customers.

Increased usage of its *DNBi* subscription products should be beneficial to the bottom line. With D&B continuing to move more of its customers into these higher-priced products, margins should widen in coming years. Along with the continuing share-repurchase program, this buying shift by its consumers should increase earnings roughly 10%–15% in both 2008 and 2009.

Dun & Bradstreet's Timeliness rank is now Above Average (2). Still, the earnings gains over the 3- to 5-year pull leave this stock with less than ideal appreciation potential at the current valuation.

Christopher T. Wells *September 5, 2008*

BUSINESS: Ecolab Inc. develops and markets chemicals and services for cleaning, pest elimination, sanitizing, and maintenance. It sells to the hospitality, institutional, and industrial markets. Began a 50-50 European joint venture with Henkel KGaA, 7/91 (bought remaining 50%, 11/01). Acquired Stove Parts Supply, 8/00; Spartan, 2/00; Blue Coral Systems, 2/99; GCS Service, 7/98 and others. Foreign operations: 46% of '07 sales; R&D, 1.5%. '07 depreciation rate: 11.2%. Has about 26,050 employees. Henkel KGaA owns about 17.7% of stock; Henkel Corp., 11.7%; Officers & Directors, 1.8% (3/08 proxy). CEO: Douglas M. Baker. Inc.: Delaware. Address: Ecolab Ctr., 370 N. Wabasha Street, St. Paul, MN 55102. Tel.: 651-293-2233. Internet: www.ecolab.com.

Things are going well, overall, for Ecolab these days. Operations in the United States, Latin America, and Asia Pacific regions have registered the strongest sales gains. Results are also benefiting from additional improvements in operating efficiency and repurchases of common stock. Despite a lackluster showing in Europe and escalating raw material costs, earnings per share could well increase about 11%, to $1.85, in 2008. Positive contributions from completed acquisitions ought to enable the bottom line to advance another 14%, to $2.10 a share, next year.

Prospects out to 2011-2013 look sound, too. Management's strategy of aggressively cross-selling the various divisions' complementary products ought to continue to pay off nicely. New cleaning solutions and more restructurings should also help. Consequently, share net stands to advance between 10% and 15% annually over the 3- to 5-year horizon.

The company recently completed its purchase of Ecovation, a provider of renewable energy solutions and effluent management systems primarily for domestic food and beverage manufacturers, for $210 million. (Ecovation's 2007 sales were $50 million.) This business has tremendous expansion potential, given increasingly difficult environmental regulations. We estimate that the purchase will be modestly dilutive to 2008 earnings, due to integration expenses, but synergies ought to bring about accretion to the bottom line in 2009 and thereafter. There are quite a few smaller companies that provide specialized services that Ecolab would like to bring under its wing, if the price is right.

The stock has enjoyed a steady rise in price over the years, thanks to Ecolab's ability to generate healthy results on a consistent basis. Note, also, the 1 (Highest) Safety rank and excellent mark for Price Stability.

But it appears that some of the good news is discounted by the present quotation, leading to subpar capital appreciation possibilities out to 2011-2013. More business combinations could prompt us to raise the Target Price Range, however.

Frederick L. Harris, III *June 13, 2008*

BUSINESS: Emerson Electric Company designs and manufactures a broad range of electrical and electronic products and systems for the commercial, industrial, and consumer markets. Operating segments include: Process Management (in 2007, provided 24% of revenues, 30% of operating income), Industrial Automation (18%, 19%), Network Power (22%, 18%), Climate Technologies (17%, 16%), and Appliances and Tools (19%, 17%). In 2007, foreign sales were 52% of total; Research & Development, 1.7%. Has about 127,800 employees. Officers and directors own .5% of stock (12/07 Proxy). Chairman & CEO: David N. Farr. Incorporated: MO. Address: 8000 W. Florissant Avenue, St. Louis, MO 63136. Telephone: 314-553-2000. Internet: www.gotoemerson.com.

Emerson continues to deliver outstanding results in the face of a challenging macro environment. For the fiscal second quarter (year ends September 30th) earnings advanced 23% year over year, and revenues increased 9%. Half of the top-line growth came from internal gains, with the rest stemming from foreign currency translation and acquisitions. The company offset rising raw material costs by increasing its prices, and actually improved the operating margin by 100 basis points over last year, aided by efficiency initiatives and increased volumes.

We expect the company to maintain similar growth in coming quarters. Orders in May increased 10%, marking the ninth straight month of double-digit gains. Despite contending with tough year over year comparisons, the Industrial Automation, Network Power, and Process Automation segments continue to perform very well due to their exposure to the global energy and infrastructure markets. Importantly, these businesses are expanding rapidly in emerging markets, which now account for roughly 30% of the company's sales. There's been speculation about whether or not Emerson can keep up this growth rate, but we remain optimistic.

The company is investing in its future. Much of Emerson's current success can be attributed to investment in new technologies made during an industry downturn years ago. Now the company is attempting to replicate this by investing in next-generation products before its competitors do. Specifically, new products that help companies reduce emissions should benefit EMR in the long term.

Emerson shares are ranked favorably for both Timeliness and Safety. The company has relatively low debt and robust free cash flow. Further, it has a varied product mix and a very diversified international presence (52% of sales). Emerson also has bright earnings prospects, as order growth remains vibrant and the company is doing an excellent job of controlling costs. Although EMR's stellar performance is no secret to investors, we believe there is still some price upside in the year ahead, as we expect hearty internal revenue growth to continue. Indeed, we think these shares are a solid choice.

Kevin Downing *July 11, 2008*

(A) Fiscal year ends September 30th.
(B) Based on avg. shs. outst'g until fiscal '97, diluted thereafter. Excludes nonrecurring loss: '05, 8¢; gain: '07, 5¢. Next earnings report due early August.
(C) Dividends historically paid in mid-March, June, Sept., Dec. Has div'd reinvest. plan.
(D) Incl. intang. in '07: $6412.0 mill., $8.06/sh.
(E) In mill., adj. for stk. splits.
(F) Depr. on an accel. basis to 9/30/92; straight-line basis afterwards.

BUSINESS: Exxon Mobil Corp. is the largest publicly traded oil company. Owns 69.6% of Imperial Oil (Canada). Daily production in 2007: crude oil, 2.6 mil. barrels; natural gas, 9.4 bill. cubic feet. Reserves as of 12/31/07, including equity interests: 21.5 billion barrels of oil equivalent, about 52% gas, 48% oil. Est. pretax present value of reserves at 12/31/07: $267 bill. Daily refinery runs, 5.6 million barrels; product sales, 7.1 mill. bbls. Annual chemical sales, 27.5 mill. tonnes. Has 32,386 service stations. Average capital employed: 49% upstream, 20% downstream, 10% chemicals, 21% corp. Employs 80,800. Chairman and CEO: Rex Tillerson. Inc.: NJ. Addr.: 5959 Las Colinas Blvd., Irving, TX 75039-2298. Tel.: 972-444-1000. Internet: www.exxonmobil.com.

Exxon Mobil is powering ahead. Fueled by rising oil prices, earnings may be headed for another record year in 2008. Further per-share gains could be realized in 2009 and out to early next decade, if the oil market remains supportive.

The run-up in oil prices is not all roses. Higher feedstock costs at the refineries and chemical plants have taken a toll on results in those lines. Falling gasoline demand is another problem. But the boom in profits from the exploration and production division is more than making up for the weakness downstream.

A dip in oil production highlights why that fuel has become so costly. Exxon Mobil pumped 10% less oil in the first quarter of 2008, due to the loss in output from Venezuela, the effects of production sharing contracts, and declines from mature fields. Oil traders have bid up quotations as much as they have partly because industry stalwarts, such as Exxon Mobil, are unable to boost volume. The big move in oil prices more than offset the dip in volume. But even though this wasn't slated to be an especially good year for production, investors were disappointed by the extent of the falloff.

The overall production picture is not as bad, when natural gas is included. Exxon boosted its gas production slightly in the first quarter, so that combined output fell about 6%. There is still promise that results will pick up in the years ahead. Spending is up 20% this year, and will very likely remain in a high range in the coming three to five years (partly to offset cost inflation). A dozen large projects are due to start up in 2008, and more are scheduled further down the line. That translates into modest volume potential, although any supplies held back by host nations, owing to high oil prices, undermines those possibilities to an extent.

The stock is well ranked (2) for Timeliness. The shares are a good way for conservative investors to take part in the oil boom, given Exxon Mobil's top (1) Safety rank. Risk-adjusted total return potential to 2011-2013 is adequate in view of the equity's top quality. Large, ongoing share repurchases provide an underpinning for the stock. Steady dividend increases will also help.

Robert Mitkowski, Jr. *June 13, 2008*

Fortune Brands, Inc. is the successor to American Brands, Inc. (AMB) following the divestiture of its United Kingdom-based Gallaher tobacco subsidiary and subsequent name change. AMB was established on 12/31/85 with the merger of American Tobacco Co. (spun-off 12/22/94) and American New Jersey. On 5/30/97, AMB shareholders of record received one American Depositary Receipt (representing four shares of Gallaher Group, PLC) for each AMB share held.

BUSINESS: Fortune Brands, Inc. (formerly American Brands) is a consumer-products company primarily involved in the manufacture of hardware, sporting goods, and distilled spirits. Brand names include: *Aristokraft* (cabinets), *Moen* (faucets), *Master Lock* (padlocks), *Jim Beam* (bourbon), *Courvoisier* (cognac) *Foot-Joy* (athletic footwear), *Titleist* (golf balls), *MasterBrands* (kitchen and bath cabinets), *Therma-Tru* (residential doors) and *Waterloo* (tool storage). International operations generated 28% of sales in '07. '07 depreciation rate: 9.0%. Has 31,027 employees. Off./dir. own 1.5% of stock (3/08 proxy). President and CEO: Bruce Carbonari. Inc.: DE. Address: 520 Lake Cook Road, Deerfield, IL 60015. Telephone: (847) 484-4400. Internet: www.fortunebrands.com.

Investors should hold off on Fortune Brands' untimely shares for now. The stock has plummeted since our last review, and significant downside risk remains.

The company's first-quarter year-to-year revenue and earnings declines were the beginning of what will likely be a steep slide over the next few quarters. Indeed, the difficult economic climate, plagued by the ongoing correction in the housing market, the spike in energy commodity prices, and the result of waning consumer confidence, has begun to take its toll on the top and bottom lines. As consumers begin to tighten purses, home improvement purchases and homebuilding remain soft, many golfers are deferring "big ticket" purchases of golf clubs, and trading up to pricier brands of spirits has moderated considerably in the U.S.. In addition, higher costs for commodities, such as petroleum-based materials, glass and steel, are adding to the margin pressures. Moreover, higher taxation on ready-to-drink spirits in Australia likely eroded operating profits during the second quarter. Meanwhile, the sale of Fortune's domestic wine business to Constellation Brands has been making comparisons even more unfavorable.

Still, we believe the company will adjust its cost structure to offset the top-line slump. The cost savings that will result from the recent asset sale ought to boost margins. This move should improve the sales mix, as the premium spirits business is Fortune's most profitable segment. Meanwhile, we believe the company will begin to soften the blow of recent economic woes by employing company wide productivity initiatives, manufacturing capacity realignment, and aggressive supply-chain adjustments in the home products business. Too, the annualization of increased brand-building investments should help Fortune to regain market share in key categories, particularly in international markets.

Simon R. Shoucair *July 25, 2008*

BUSINESS: General Dynamics operates in divisions: Marine Systems (18% of '07 sales, 14% op. profit); Combat Systems (29%, 29%); Information Systems & Technology (35%, 32%); Aerospace (18%, 25%). Acq'd. Anteon Int. (6/06), FC Business Systems, Inc. (1/06) GTE's Gov't Systems (9/99), Gulfstream Aero. (7/99), NASSCO (11/98), Computing Dev. (12/97), Advanced Tech. Sys. (10/97), Lockheed's Armament & Def. Sys. (1/97). Has 81,000 employees. Off. & dir. own 7.6% of com.; Longview Management, 7.6%; Northern Trust, 8.3%; Marsico Capital, 5.7% (4/08 Proxy). Chairman & Chief Executive Officer: N. D. Chabraja. Inc.: DE. Addr.: 2941 Fairview Park Dr. Suite 100, Falls Church, VA 22042. Tel.: 703-876-3000. Web: www.generaldynamics.com.

General Dynamics began 2008 with results that were well ahead of both the year-before figures and our expectation for a solid period. Sales were 11.2% higher (we had looked for an 8.7% gain) and share earnings rose by a hefty 32.7% (our estimate had been 21.4%).

Profitability is widening, reflecting rising sales and more-efficient production. As a result, we've increased our share-net estimates for both 2008 and 2009.

The Aerospace group is a particular standout, as its sales surge and its operating margins soar. In fact, its first-quarter operating returns widened from 15.8% in last year's first quarter to 18.5% in the 2008 March period. This reflects strong demand for its *Gulfstream* business jets, a favorable product shipment mix, higher prices, and labor efficiencies. Note however, that this segment's margins are likely to dip a bit in later periods due to increased product development and selling costs. Even so, we look for full-year group operating margins of about 18% versus last year's 16.8%.

The *Gulfstream G650* (now under development) has generated super demand around the globe. The new private jet, scheduled for first deliveries in 2012, will fly at 700 mph, proceed at 51,000 feet, and have a range exceeding 8,000 miles. With a base price of $58 million, the *G650* is not low-cost but orders have surged. Indeed, so many letters of intent (with refundable deposits) have already been received that production seems likely to be accelerated. In fact, GD noted that the initial response was six to seven times the 83 shipments originally planned for the first 2.5 years of the program. Overseas demand appears to be bolstered by the weakness of the dollar, with foreign orders running well over 50% of the total.

General Dynamics should benefit from the U.S. Navy's need for replacement ships, which seems to be well accepted by Congress. As one of two domestic producers of warships, the company is well positioned to benefit from the USN's recapitalization. But though these shares are timely, their price has risen so well over the last five years that much of the company's good growth potential seems already discounted.

Morton L. Siegel *June 20, 2008*

(A) Primary egs. through 1996, then diluted. Excl. disc. ops.: '92, $0.64; '93, 3¢; '95, 22¢; '07, d2¢. Excl. nonrecur. items; '92, $1.59; '93, $2.64; '95, 8¢; '99, 41¢; '03, 2¢; '04, 6¢. Next egs. rpt. due late July.

BUSINESS: General Electric Co. is one of the largest & most diversified industrial companies in the world. Segments include: Infrastructure (33% of '07 revenues; 37% of operating profits); Healthcare (10%, 11%); NBC Universal (9%, 11%); Industrial (10%, 6%); Commercial Finance (20%, 21%), other (18%, 14%). In 2005, sold Insurance Solutions business and reduced ownership to less than 20% of Genworth Financial. Foreign revenues: 50%; R&D, 2.4%; '07 deprec. rate: 8.6%. Has about 327,000 employees. Officers/ directors own less than 1% of stock (3/08 Proxy). Chairman & Chief Executive Officer: Jeffrey Immelt. Incorporated: NY. Address: 3135 Easton Turnpike, Fairfield, Connecticut 06431. Telephone: 203-373-2211. Internet: www.ge.com.

We have moved General Electric to a new industry. The stock was previously included in the Electrical Equipment group, but will now be included in the Diversified Company group. We believe the current designation better reflects GE's well-diversified business.

Although our most recent review was only two weeks ago, a lot has happened since then. First of all, the company released its June-period financial statements. Revenues rose 11%, led by the Infrastructure segment, where the top line advanced 26%. However, the Industrial segment felt the effects of the soft U.S. economy. Indeed, sales increased a modest 2%, while higher costs caused operating profit to fall 32%. Also, the company announced that it is considering spinning off the entire Consumer and Industrial segment. Indeed, management has already stated its desire to shed its appliances operations, but now wishes to spin off the segment's other two subdivisions (lighting and industrial) as well. Lastly, GE announced that it was selling its Japanese Commercial Finance division to Shinsei Bank for $5.4 billion. The company did not specify what it plans to do with the sale proceeds.

We think earnings will be flat this year. The struggling economy should make operating conditions difficult through year's end. Although the Infrastructure segment will probably continue its recent run of strong performances, weakness in other areas of the company will probably weigh on the bottom line. However, we think earnings will rise at a 9%-10% clip in 2009, thanks to an increased focus on industries with stronger fundamentals. Too, international operations should provide a nice cushion from the rocky domestic economy, especially in high-growth emerging markets.

We like these neutrally ranked shares for the long haul. At its recent quotation, GE offers above-average capital appreciation potential over the coming 3 to 5 years. Too, the stock carries our Highest (1) Safety rank, as well as excellent ratings for Financial Strength, Price Stability, and Earnings Predictability. All told, we see a very attractive risk-reward scenario here.

Tom Nikic *July 25, 2008*

BUSINESS: Genuine Parts Company is a distributor of automotive replacement parts in the U.S., Canada, and Mexico. It also distributes industrial replacement parts in the U.S. and Canada through its Motion Industries subsidiary. S.P. Richards Company, the Office Products group, distributes business products in the U.S. and Canada. The Electrial/Electronic group, EIS, distributes electrical and electronic compenents in the U.S., Canada, and Mexico. Has approximately 32,000 employees. Dodge & Cox owns 8.9% of common stock; Barclays Global, 7.6%; officers & directors, 3.2% (2/08 proxy). Chairman, President & CEO: Thomas C. Gallagher. Incorporated: GA. Address: 2999 Circle 75 Parkway, Atlanta, GA 30339. Telephone: 770-953-1700. Internet: www.genpt.com.

Genuine Parts is holding its own during these trying times. A difficult operating climate has been brought about by the sluggish U.S. economy and weak automotive industry fundamentals. This poses a clear challenge to this purveyor of automotive and industrial parts. Nevertheless, the company's top line totaled $2.74 billion in the March quarter, up 3% from a year earlier. Net income in the interim grew 2%, to $123.5 million. Importantly, the Automotive Group, Genuine's largest segment, reported a 4% sales increase. This was the segment's highest percentage gain since the second quarter of 2006. Elsewhere, EIS, the Electrical Group, and Motion Industries, the Industrial Group, reported strong showings. On the other hand, S.P. Richards, the Office Products distributor, experienced a slight top-line decline in the first quarter, reflecting continued softness in business fundamentals. However, we expect this division to turn things around before the year is out. For now, we are leaving our 2008 sales and earnings estimates largely unchanged. We are, however, more confident in the company's ability to reach these targets.

We like what management is doing with Genuine's strong cash flow. The company once again raised the annual dividend. Genuine also made some opportunistic share repurchases, buying back approximately 2.4 million shares in the March interim. Finally, management has not neglected operations. Three of the company's businesses recently made bolt-on acquisitions.

Wall Street has gotten back on board. This stock is up more than 5% since March, thanks to Genuine's respectable first-quarter showing. We have bumped this issue's Timeliness rank up one notch, to 3 (Average), and now expect this equity to mirror the year-ahead market. Longer-term investors may well like this stock's 3- to 5-year total return potential.

Andre J. Costanza *June 27, 2008*

BUSINESS: *The Hershey Company* is the largest U.S. producer of chocolate and nonchocolate confectionery products. (Major brands: *Hershey's, Reese's, Cadbury, Ice Breakers, Kit Kat, Jolly Rancher, Good 'n' Plenty, Heath, Mounds,* and *Milk Duds*). Sold majority of pasta operations, 1/99. Acquired Henry Heide, 12/95; Leaf North America, 12/96. Advertising costs, 2.6% of '07 sales. '07 depreciation rate: 8.6%. Has 11,000 full-time employees. Hershey Trust owns 7.5% of common & 99.7% of Class B; T. Rowe Price Associates, 7.1%; Officers & Directors, 1.6% (3/08 proxy). Chairman: Kenneth L. Wolfe. CEO and President: David J. West. Inc.: Delaware. Address: 100 Crystal A Drive, Hershey, PA 17033. Telephone: 717-534-4200. Internet: www.hersheys.com.

Hershey's share net likely will slip some 10% this year. Higher costs, such as for dairy products and cocoa, are a problem. What's more, the company is beefing up spending on marketing. It also is expanding the salesforce. The moves are needed to prevent a further erosion of market share, but they put additional pressure on margins. To offset the increased costs, the company has imposed a 13% price hike on roughly one-third of its U.S. product line. And it has rolled out two new premium products, *Bliss* and *Starbucks*. On balance, though, in view of the cost pressures, we think the company will post earnings of only $1.85 a share this year. *Note:* Our 2008 earnings presentation excludes expected charges of some 39 cents-42 cents a share related to the company's business realignment efforts.

We look for only a modest earnings recovery next year. Commodity prices may well continue to climb in 2009. And the company plans to boost advertising spending by more than 20%. That should pay off with higher sales, since the spending is targeted at core brands that produce roughly 60% of sales in the U.S. but, again, it will keep pressure on margins. On the other hand, the company may well initiate additional price increases, and will derive some benefit from the supply chain realignment and increased production from a facility in Mexico.

The longer-term outlook is more favorable. The company will have to continue to invest in advertising if it is to boost sales. But Hershey's initiatives to cut costs are aimed at taking $170 million-$190 million a year out of expenses. The actions also ought to help improve capacity utilization. And the company has processes in place to spur innovation and develop new products to boost sales. Finally, efforts to expand outside its traditional U.S. markets should be a plus.

Still, most investors probably will want to look elsewhere. Good-quality Hershey shares are untimely, and have below-average 3- to 5-year appreciation potential. What's more, a statement by the head of the Hershey Trust, the company's controlling shareholder, that Hershey is not for sale removes most of the previous speculative interest in the issue.

George A. Niemond *August 1, 2008*

(A) Years end Dec. 31; quarters end Sun. on or following end of 13th, 26th, & 39th weeks of year. (B) Primary earnings until '96, then diluted. BUSINESS: Illinois Tool Works Inc. manufactures components and fasteners for automotive, construction, and general industrial applications; specialty products; machinery and related consumables for automotive, construction, food and beverage, and general industrial markets. Has over 825 business units in 52 countries. Research & development, 1% of '07 sales; foreign sales 55.0% of total. '07 depreciation rate: 9.1%. Has about 60,000 employees. All directors, nominees, and executive officers own 10.9% of common stock; The Northern Trust Co. owns 12.4% (3/08 Proxy). CEO and President: David B. Speer. Chairman: W. James Farrell. Inc.: Delaware. Address: 3600 West Lake Avenue, Glenview, Illinois 60025. Telephone: 847-724-7500. Internet: www.itwinc.com.

Illinois Tool Works continues to face a challenging environment on the domestic front. Although it's well diversified with 825 businesses in over 50 countries, a good portion (27% in 2007) is concentrated in construction and automotive. On both of those fronts, positive news is scarce. On the residential side, the U.S. housing market continues to seek a bottom. But even once it stabilizes, that segment will likely remain depressed for some time. Meanwhile, commercial construction is picking up downside momentum. Elsewhere, Big 3 automotive sales continue to downshift. Most notably, GM (ITW's largest customer in this segment) recently announced a number of factory closings as it scales down SUV production. On the positive side, acquisitions and more favorable business trends overseas should support 5%–10% earnings growth for this year and next (more below).

The company's acquisition pipeline remains robust. Illinois picked up in the March interim 16 companies with about $230 million in annualized revenues. It's targeting about $1 billion in annualized revenues for 2008, but this could easily be surpassed should it pursue its bid to acquire Britain's Enodis plc, a commercial foodservice equipment company with $1.6 billion in revenues last year. Illinois' $2.3 billion offer was recently topped by the Manitowoc Company, but a counteroffer would not be a surprise.

Overseas markets present more favorable prospects. ITW is benefiting from a combination of faster growth (particularly in Asia), lower foreign taxes, and favorable currency translation rates (thanks to the weakened U.S. dollar). The latter has been a big boon in recent years, and even in the latest quarter accounted for as much as 4.8% of revenue growth. However, this tailwind may soon run its course. Specifically, the U.S. Federal Reserve has indicated that growing concerns over inflation would likely forestall any further rate cuts, suggesting the dollar may be poised to strengthen.

These shares retain some long-term appeal. Although neutrally ranked for year-ahead performance, the stock holds moderately above-average appreciation potential over the 2011–2013 time span.

Mario Ferro *June 20, 2008*

(A) Primary earnings through 1996, diluted thereafter. Excludes nonrecurring (losses): '99, (24¢); '08 Q1, (22¢). Excl. discontinued operations: '07, 8¢. Next earnings report due mid-July.

BUSINESS: International Flavors & Fragrances is a leading manufacturer of flavor and fragrance chemicals sold to consumer products manufacturers worldwide. Fragrances account for about 56% of 2007 sales; flavors, 44%. Its products are principally used in perfumes, cosmetics, soaps and detergents, prepared foods, beverages, dairy foods, pharmaceuticals, and confectionery and tobacco products. In '07, international operations generated 72% of sales; R&D, 8.7% of sales. '07 depreciation rate: 7.4%. Acquired Bush Boake Allen, 11/00. Has about 5,300 employees. Off./dir. own 1.9% of stock; 2 instit. (*in total*), 13.7% (3/08 proxy). Chairman & CEO: Robert M. Amen. Inc.: NY. Address: 521 W. 57th St., New York, NY 10019. Telephone: 212-765-5500. Internet: www.iff.com.

International Flavors & Fragrances has been performing well despite the difficult operating environment. The company posted first-quarter earnings in line with last year. The relatively flat results stemmed from mixed performance at its two product divisions. IFF's Flavor unit experienced a top-line increase of 12% for the March interim. This was largely a result of increased market share in Latin America and Asia. Meanwhile, cost control efforts have worked to widen margins and bolster the bottom line. However, the Fragrance division posted flat sales. Its functional fragrance segment did well in Asia and Europe, but those results were moderated by weakness in North America. Moreover, global fine fragrance and ingredient sales were down this year, applying further pressure on this division's top- and bottom-line contributions.

Second-quarter sales and earnings ought to advance about 9% and 8%, respectively. The flavors division should continue to benefit from new contract wins in emerging markets such as China, India, and Brazil. Meanwhile, the fragrance division has been in the process of realigning its portfolio of ingredients due to pricing pressure and margin compression. In the near term, this will likely reduce sales, but the new mix should benefit margins and earnings moving forward.

Meanwhile, share net ought to benefit from the accelerated share-repurchase program (ASRP). The company has bought back approximately 700,000 shares this year. And with roughly $270 million remaining in the previously authorized ASRP, IFF was expected to buy back another one million shares before the close of the second quarter.

International Flavors and Fragrances stands to post solid results next year, as well. The Flavors segment ought to contribute most of the mid-single-digit increase in sales. Meanwhile, efficiency initiatives and the fragrance portfolio realignment may have taken hold by then, aiding margin expansion and the estimated 10% bottom-line advance.

These neutrally ranked shares offer a decent dividend yield, and about average capital appreciation potential for the pull to 2011-2013.

Kraft Foods Inc. was formed in 1989 when Philip Morris (now Altria Group) merged General Foods Corporation (which it acquired in 1985) with Kraft Inc. (acquired in 1988). In December of 2000, the company acquired Nabisco Holding Corporation. The company completed its initial public offering of 280 million shares at $31 each on June 12, 2001. Net proceeds totaled roughly $8.7 billion. Credit Suisse First Boston and Salomon Smith Barney were the lead underwriters. Philip Morris retained an 84% stake in Kraft, which it has since spun off.

BUSINESS: Kraft Foods Inc. is the largest branded food and beverage company headquartered in the U.S. and second largest worldwide. The company markets many of the world's leading food brands, including *Kraft* cheese, *Maxwell House* coffee, *Nabisco* cookies and crackers, *Philadelphia* cream cheese, *Oscar Mayer* meats, and *Post* cereals. Its products are currently sold in more than 150 countries around the globe. North American sales accounted for 64% of '07 total; International, 36%. Acquired Nabisco, 12/00. Has approximately 103,000 employees. Officers & Directors own less than 1% of common stock (3/08 Proxy). Chairman & CEO: Irene B. Rosenfeld. Address: Three Lakes Drive, Northfield, IL 60093. Telephone: 847-646-2000. Internet: www.kraft.com.

Kraft will probably be contending with a difficult operating environment for a while. In the coming periods, we think that earnings growth will be kept in check by higher energy and packaging expenses and by needed investments in the areas of marketing and product innovation. Additionally, surging prices for key commodities, from milk to corn and wheat, are apt to remain a problem, as they have been for most participants in the food processing industry. That said . . . **The company should be able to offset some of the cost headwinds by strategically raising prices across its product portfolio.** (The price hikes, which have become more aggressive lately as input cost inflation has accelerated, are expected to provide more relief to the bottom line in the second half of the year.) Moreover, Kraft, now in the second year of an ambitious three-year turnaround plan, ought to benefit from its ongoing restructuring activities. In fact, cumulative annualized savings from restructuring measures, including sizable headcount reductions and plant closures/divestitures, are on track to reach $1.0 billion by the end of 2008 and around $1.2 billion by the end of next year.

Over the long haul, margins will likely rebound from current levels. Apart from restructuring-related savings, profits should get a lift from an increasingly favorable product mix and economies of scale in emerging international markets. Plus, we look for the company to realize ample cost synergies from its recently completed $7.8 billion acquisition of Groupe Danone's biscuit division.

Top-line trends remain encouraging. Though commodity-oriented categories (e.g., cheese) are suffering in the current economic climate, the majority of Kraft's product lines are gaining market share these days. This is attributable to the company's brand-building actions, especially overseas, and focus on new products for health-conscious consumers.

Defensive-minded investors with a long-term view would do well to consider this quality issue. Annual share-net advances in the 5%-8% range are likely over the next 3 to 5 years, even if operating conditions remain challenging.

Lockheed Martin Corporation was formed in March, 1995 when Lockheed Corp. (LK) merged with Martin Marietta (ML) in a tax-free, stock-for-stock transaction. Under the terms of the agreement, Lockheed shareholders received 1.63 shares of the newly formed company for each Lockheed share. Martin Marietta shareholders received stock in the combined company on a one-for-one basis. On March 16, 1995, the stock of this newly formed entity began trading on the NYSE under the symbol "LMT".

CAPITAL STRUCTURE as of 3/30/08
Total Debt $4907 mill. Due in 5 Yrs $350 mill.

BUSINESS: Lockheed Martin Corporation provides a broad range of products and services to the world's governments and commercial customers. Areas of concentration include space and missile systems, electronics, aeronautics, and information systems. Program base includes F-16, F-22, F-35 aircraft, ballistic and other missile systems, C-130 military transport, and Titan launch vehicles. '07 deprec. rate: 8.0%. Has about 140,000 empl. Off. & dir. control about .5% of com. shs.; employee plans, about 16.1%; Barclays Global Investors, 6.8%. (3/07 Proxy). Chrmn., Pres. and CEO: Robert J. Stevens. Incorporated: Maryland. Address: 6801 Rockledge Drive, Bethesda, Maryland 20817-1877. Telephone: (301) 897-6000. Internet: www.lockheedmartin.com.

Lockheed Martin's first quarter's sales and earnings exceeded our estimates, bolstered by some special benefits, but we haven't raised our full-year expectations. As we noted in our March report, our estimates were "a bit above company guidance". Following the March-quarter report, Lockheed raised its expectations. As a result, our share-earnings estimate for 2008 is now at the top end of company guidance.

Our estimates for 2008 and 2009 assume further recovery to "normal" profitability. Back in 2004, the company's operating margins were quite narrow, reflecting an unfavorable mix of production and development contracts and high pension costs. (Even so, a very low effective tax rate of 23.9% bolstered the year's share-earnings comparisons.) Since then, pension costs have come under control as a large proportion is charged on government contracts, and performance on contracts continues to improve. Accordingly, even though we look for a somewhat higher effective income tax rate, share earnings stand to rise during 2008 and 2009 by 7% and 11%, respectively.

The company's F-35 program (the Joint Strike Fighter) is "the elephant in the house". First production deliveries are scheduled for 2010. The United States plans to buy thousands of F-35s in three variations for the Air Force, Navy, and Marines. In addition, eight nations are partners on the program and plan to buy 730 more. Further, Israel, Japan, and Singapore expect to procure these aircraft. In fact, Lockheed compares international interest to that for its F-16 (still getting orders), of which, so far, some 4,600 aircraft have been sold to 25 nations. Industry estimates of the production value for the F-35 have reached *$300 billion*. And service and repair of these aircraft should provide hundreds of billions more, much of which will go to Lockheed Martin. As a result, the F-35 may be compared to a multi-decade annuity for this company.

This stock is timely, and company earnings should rise at a good pace for years to come. Nonetheless, LM's fine prospects are well known to investors, who have put the price at a level that discounts much of the probable growth.

Morton L. Siegel *June 20, 2008*

Manulife Financial Corp. was created by the demutualization of the Manufacturers Life Insurance Company on 9/24/99. In the demutualization, the policyholders' interests were converted into Manulife common stock. The initial public offering was led by Scotia Capital for 138 million shares at $12.20 a share. Of note, Manufacturers Life was incorporated in 1887, and Canada's first Prime Minister, Sir John A. Macdonald, was elected as its first President.

BUSINESS: Manulife Financial Corporation is Canada's largest life insurance company. It is also a leading global provider of other financial products and services, including pension products, annuities and mutual funds to individual and group customers in Canada, the U.S., and Asia. The company also provides reinsurance and investment management services. Premium income, 56% of '07 sales; investment income, 27%; Other, 17%. Acquired John Hancock Financial, 4/04. Has over 20,000 empls. Off. & dir. own less than 1% of common stock (3/08 proxy). Chrmn.: Arthur R. Sawchuk. Pres. & CEO: Dominic D'Alessandro. Inc.: Canada. Addr.: 200 Bloor Street East, Toronto, ON, M4W 1E5. Telephone: (416) 926-3000. Internet: www.manulife.com.

Manulife Financial reported a mixed performance for the first quarter. Premium income increased at a moderate clip during the period. However, sharp declines in global equity markets reduced earnings significantly, and share net came in well below the prior-year figure. Weakness in equities also hindered growth in funds under management. Looking forward, we expect a moderate share-earnings decline for full-year 2008.

We anticipate further growth in Asian markets. We look for continued strength in variable annuity sales in Japan, as the company should further benefit from an expanded distribution network. In addition, joint-venture subsidiary Manulife-Sinochem is currently licensed to operate in 30 cities across China. Moreover, the company has recently opened a sales office in Indonesia.

Manulife continues to expand its product offerings. It has recently introduced *Group IncomePlus* in Canada. This product provides group retirement savings plans with a guaranteed minimum withdrawal benefit. This follows the success of *IncomePlus*, a product introduced in 2006 that features a guaranteed minimum withdrawal benefit for individuals. Elsewhere, subsidiary John Hancock has launched *Protection Whole Life*, a policy that combines guaranteed death benefit protection with a guaranteed cash value and a long-term care rider. The addition of these products should benefit sales in the coming years.

Manulife has been active in repurchasing shares. During the first quarter, the company spent roughly $175 million in this effort. This pattern is encouraging, and we expect it will continue. The lower share count should benefit share net.

This stock is ranked to track the broader market for the coming six to 12 months. We expect solid bottom-line growth at Manulife from 2009 to 2011-2013. Moreover, these good-quality shares earn high marks for Safety and Price Stability, and the company's Earnings Predictability is high. This issue offers decent total return potential, on a risk-adjusted basis. A further decline in the stock price may provide investors with a more attractive entry point.

Michael Napoli, CPA *July 18, 2008*

(A) Diluted operating earnings. Quarterly figures are adjusted for exchange rates at year-end and may change from previous reports. Next earnings report due in August.
(B) Dividends are historically paid in March, June, September, and December. Adjusted for exchange rate at time of payment.
(C) Includes intangibles. At 3/31/08: $8309.0 mill., $5.55/share.
(D) In millions, adjusted for stock split.
(E) All figures are in U.S. Dollars, unless otherwise stated. MFC also trades on the Toronto Stock Exchange.

BUSINESS: Mercury General is an insurance holding company that writes private passenger (83.7% of '07 premiums written), and commercial auto insurance (4.1%), as well as other property/casualty insurance (12.2%). Sells through approx. 4,500 agents. Most of the company's business is in California (78.0% of '07 premiums written), but also operates in Georgia, Illinois, Oklahoma, Texas, Florida, Virginia, New York, New Jersey, Arizona, Pennsylvania, Michigan and Nevada. Acq'd American Fidelity 12/96. Has about 5,200 employees. Off. and dir. own 34.8% of stock (incl. George Joseph's 34.4%); (3/08 proxy). Chrmn.: George Joseph. Pres. & CEO: Gabriel Tirador. Inc: CA. Addr.: 4484 Wilshire Blvd., Los Angeles, CA 90010. Tel.: 323-937-1060. Web: www.mercuryinsurance.com.

We have lowered our 2008 share earnings estimate for Mercury General by a nickel, to $4.10. The insurer started the year out at a slow pace with March-quarter share net and net premiums earned declining 8% and 5%, respectively. What's more, adverse loss reserve development in California and ongoing reserve strengthening, especially in the Florida and New Jersey markets, continued to limit underwriting growth, and we expect this trend to persist over the coming quarters. Meanwhile, lower investment income also pressured results. Finally, the competitive environment remains challenging. Nonetheless, Mercury currently writes private passenger automobile insurance in 13 states, and management plans to increase that number in the coming years. Because the company is a low-cost insurance provider, the expansion program should become an important contributor to earnings.

We think the bottom line will advance around 2% in 2009. The premium pricing environment has been soft over the past several quarters, and we expect this trend to continue through the next year. Moreover, competition will likely remain fierce for a while, especially within the California market. That said, even though we do not foresee an improvement in the insurer's combined ratio, modest investment income growth should help lift earnings.

Our projections indicate annual bottom-line gains of 10%–15% over the pull to 2011–2013. Even if the premium pricing environment improves, Mercury should benefit from its position as a low-cost provider. Also, contributions from the automobile insurance operations in new markets will probably rise further as Mercury gains a greater hold in these regions. Additionally, we think investment income will increase 5%–10% per annum, given the likelihood of a greater asset base.

This stock has rebounded approximately 15% since our March report. However, it is ranked to only mirror the year-ahead markets and offers limited appreciation potential over the next 3 to 5 years. Conservative income-oriented investors may find the equity appealing, though, given its Above-Average Safety rank and solid dividend yield.

BUSINESS: MetLife, Inc. is the largest life insurance company in the U.S., with about $3.4 trillion of life insurance in force. It also is a leading group non-medical health insurer, & provides financial services to institutions and individuals. Serves about 13 mill. households in the U.S., and has insurance operations in 35 countries. Prem. Income, 53% of '07 sales; Inv. Income, 36%; Other, 11%. Owns 52.5% of Reinsurance Group of America. Acquired Travelers Life & Annuity, 7/05; GenAmerica, 1/00. 54,000 empls. Off. & dir. own less than 1% of common stock; policyholders' trust, 36.3% (3/08 proxy). Chairman, President & CEO: C. Robert Henrikson. Incorporated: DE. Address: 200 Park Ave., New York, NY 10166. Telephone: 212-578-2211. Internet: www.metlife.com.

MetLife will divest its stake in Reinsurance Group of America (RGA), through a tax-free spinoff of RGA stock to MetLife stockholders. MetLife currently owns 52% of RGA, and we look for the company to offer RGA Class B common stock in exchange for shares of MET. The current market value of MetLife's stake in RGA is about $1.6 billion. The transaction, which is likely to be completed sometime during the current quarter, is in effect a share repurchase for MetLife.

The spinoff should not have a material effect on earnings. The company's Reinsurance segment comprises only 3% of earnings, and the associated reduction in share count should offset the lost income.

The bottom line is likely to stagnate this year, though. The likelihood of low long-term interest rates and volatile equity markets for much of this year should limit MetLife's investment income growth. Growing premiums and improved underwriting results from the Institutional business should help to offset the weak investment performance. The company's pension closeout and dental businesses were particularly strong performers in this year's first quarter.

The International business ought to drive long-term gains. MetLife's International business comprises about 12% of operating earnings, though, we look for this contribution to double over the coming three to five years. The company is not likely to expand its footprint in that time, however, as management seems inclined to strengthen its position within existing markets before seeking to do business in additional countries. When combined with MET's dominant position in the domestic group and individual life markets, our projection of strong growth abroad augurs well for earnings advances.

The price of these shares has fallen 15% since our April report. Given our projected strong earnings growth subsequent to 2008, MET stock has worthwhile appreciation potential as a result of the decline. The company's aggressive share-repurchase program and solid gains from international markets ought to drive gains to 2011–2013. The prospect of a mediocre performance in the year ahead, though, limits its near-term appeal.

Jerry W. Gray Jr. *July 18, 2008*

News Corp.'s predecessor was incorporated in 1923 as News Ltd. in Australia. In 1949, K. Rupert Murdoch bought a minority stake. News Ltd. expanded abroad in '69, acquiring a minority interest in what is now News Intl. in the U.K. In '79, News Corp. was formed to acquire all shs. of News Ltd. News Int'l became a sub. in '80; shs. not held by News Corp. were converted into Spec. Div'd. shs. In '04, News Corp. reincorporated from Australia to the U.S and created the Class A and Class B shares.

BUSINESS: News Corporation makes and distributes films and produces TV shows (24% of fiscal 2008 operating profits); operates TV stations (21%), and owns cable television networks (24%). Also publishes newspapers, magazines, and books (23%) and operates satellite television broadcasting systems (8%). Owns 100% of Fox Entertainment Group. Satellite-TV operations include 100% of SKY Italia; 100% of STAR Television (in Asia); and 38% of British Sky Broadcasting (BSkyB). Keith Rupert Murdoch controls 31% of Class B stock (9/07 proxy). Chairman, President, & CEO: K. Rupert Murdoch. Incorporated: Delaware. Address: 1211 Avenue of the Americas, New York, NY 10036. Telephone: 212-852-7000. Internet: www.newscorp.com.

News completed a great year well . . . (Fiscal years end June 30th.) In the fourth quarter, profits increased at double-digit rates in all of the company's seven operating divisions but television, led by a 107% jump in filmed entertainment results and a 37% gain from direct broadcast satellite. The former benefited from the DVD releases of last year's films *Alvin and the Chipmunks, Alien Versus Predator,* and *Juno.* Direct broadcast profits were boosted by strong results at SKY Italia, which raised its subscriber count by 8% during fiscal 2008. TV profits, however, fell 28% in the June period as earnings declined at Fox Network, and Star; too, station profits were down 26% as local advertising revenues dropped 10%.

. . . but the outlook for fiscal 2009 is muted. Cable network profits will probably rise decently, thanks to higher affiliate fees for the highly rated Fox News channel, lower losses at the new business channel, and better results from the 40 international channels launched in 2008. SKY Italia will likely have another good year, as pay TV penetration in Italy is well below the average for Western Europe. Television profits, though, will probably continue to suffer from weak local ad revenues as the current economic slowdown continues, despite strong network ratings for *American Idol* and a healthy increase in upfront ad sales last May. Film results may not equal last year's record, which featured big box office action from eight releases. Finally, News sold units that contributed about 2% of last year's profits and reduced cash holdings by $3 billion in buying Dow Jones and repurchasing stock.

Share net will likely continue to grow at a double-digit pace out to 2011-2013. News Corp. figures to keep broadening its palette of entertainment and (some) information offerings and international reach in the coming years. Acquisitions that it can easily afford, thanks to its relatively low debt-to-capital ratio, should help. Fox cable affiliate fees will likely rise as those 10-year agreements are renewed. Film profits should increase, too, since News seems to know what the consumer will pay for.

These neutrally ranked shares have above-average appreciation potential.

BUSINESS: Northrop Grumman Corp. operates in several main sectors. It is a leading maker of airborne systems; a designer of electronic warfare items; provides advanced information systems; builds warships and cargo ships; makes space systems. Acquired Litton Industries and Newport News, 2001; TRW, 2002. Has 122,600 employees. U.S. Government accounted for total of 90.0% of sales in '07. 2007 depr. rate: 9.0%. Off. & dir. control about 0.7% of stock.; State Street Bank, 9.7%; Capital Research, 9.0%; AXA Fin'l, 8.6%; Barclay's Global Investors, 5.2%. (4/08 Proxy). Chairman & CEO: Ronald D. Sugar. President: Wesley G. Bush. Inc.: DE. Address: 1840 Central Park East, Los Angeles, CA 90067. Telephone: 310-553-6262. Internet: www.northgrum.com.

Northrop Grumman took a big charge in the first quarter. It wrote off $0.61 a share, reflecting a "re-evaluation of the estimated schedule and cost to complete the *LHD-8* amphibious assault ship, as well as the resource impacts on other Gulf Coast ships". We believe this is due to the lingering effects of Hurricane Katrina, which hit the Gulf Coast and the shipyard division very hard, a couple of years ago. As a result of the charge, we look for little change in full-year share earnings this year, although we estimate a very good gain in 2009.

The company is hoping for confirmation of its award of the U.S. Air Force's new tanker aircraft. The ancient KC-135s must be replaced soon. Northrop won the contract to produce 179 KC-45 tankers, which were developed from Europe-based Airbus Industrie's (AI) A330 airliner. Boeing has appealed the decision, which is being reviewed by the nonpartisan Government Accountability Office. Accusations of European financial support for Airbus are a factor in the dispute. Meanwhile, reports that AI has asked France and Germany for aid to finance development of its new A350 is a complicating factor. Should Northrop Grumman finally win all or part of this much-needed program, we would adjust our projections accordingly.

The company's *nonshipbuilding* divisions are performing well. In fact, first-quarter operating profits for the other units were up 10% year to year, and we look for these gains to continue. In fact, the total backlog for the company reached $68 billion at the end of March, up 6.8% from a year ago. Northrop is a 40% partner on the F/A-18 fighter, makes about 25% of the new F-35 (there are industry estimates of $300 billion in production value), and is one of two makers of ships serving the Navy.

These shares are untimely for the year to come, but we project about average 3- to 5-year capital appreciation potential, based on the contracts now in the company's possession. Meanwhile, should the aerial tanker contract be finalized in Northrop Grumman's favor, we would expect to increase our projections.

Novartis AG was created by the merger of Sandoz AG and Ciba-Geigy AG in December 1996. The company went public on December 23, 1996, issuing about 69 million shares at $27 a share on the Swiss stock exchange. On May 11, 2000 they became available in the form of American Depositary shares on the NYSE. On May 7, 2001 the company conducted a 1-for-40 stock split for each underlying share to bring it into parity with an ADR on the NYSE.

BUSINESS: Novartis AG is a major Swiss-based pharmaceutical and health care company. Sales by business category for '07: Pharmaceuticals, 62%; Generics (Sandoz), 20%; Consumer health, 14%; Vaccines and Diagnostics, 4%. Major therapeutic area: hypertension. Major products include *Diovan, Lotrel, Gleevec, Zometa, Neoral, Femara, Sandostatin, Lamisil,* and *Zelnorm.* Major product in development: *Exforge.* '07 R&D, 16.5% of sales. Has about 80,500 employees in 140 countries. Acqd. Chiron, 4/20/06. Largest single investor: Emasan A G, which owns 3.2% of common ('07 Form 20F). Chairman & CEO: Daniel Vasella, Inc.: Switzerland. Addr.: Lichtstrasse 35, CH-4056 Basel, Switzerland. Tel.: 011-41-61-324-1111. U.S. tel.: 212-830-2440. Internet: www.novartis.com.

Novartis' patent expirations, although not nearly as severe as many drug companies, are still a concern. Novartis has some key product expirations. Chief among these is best-selling hypertension treatment *Diovan*, which is due to expire in 2012, and also *Femara*, in 2011. On the more immediate front, we have *Lamisil* and *Lotrel*, which are already facing stiff generic competition. The upcoming expirations of *Trileptal* and *Famvir* are also going to impact the earnings stream. Lastly, the marketing suspension of *Zelnorm* (irritable bowel syndrome), due to some patients experiencing angina, has been a setback.

To partially offset the anticipated earnings shortfall, Novartis is making cutbacks. The company is conservatively estimating cost savings of around $1.6 billion by 2010, which is about 5% of 2007 costs. Approximately $1.2 billion of this is expected to arise from the pharmaceutical division, with the remainder stemming from the generic drug (Sandoz), and consumer health businesses.

It is also investing heavily in product diversification. To this end, the company has entered into an agreement with Nestle, whereby Novartis would acquire Nestle's 77% stake in the U.S./Swiss eye care company, Alcon. For a total price tag of $39 billion, NVS would buy a 25% stake for $11 billion, and have a call option on the remaining 52% for $28 billion. (Alcon reported full-year 2007 profits of $1.6 billion.) Although we think the asking price is high, it should be worth the investment over the long term, given Alcon's high growth profile and leading global market share. Indeed, as more and more drug companies lose patent exclusivity on their mainline products, we believe they will scramble to find consumer health entities, such as Alcon, and selling prices will rise even higher.

This high-quality issue has decent total return potential to 2011-2113. By then, the Alcon acquisition should be paying off since it has higher margins than the pharmaceutical business. Cost cuts and new product introductions (*Lucentis, Exforge,* the *Exelon patch,* and *Aclast/Reclast*) should also help profits. The dividend is reliable and growing.

Jeremy J. Butler *July 18, 2008*

(A) At fiscal yearend.
(B) Based on U.S. GAAP and diluted ADR's. *Each ADR represents one common share.* Includes restructuring charge of $0.19 a share in 2007 (4Q). Next earnings report due late July.
(C) Annual dividend normally paid in the June quarter. (March in 2004). Dividend payments before 15% Swiss excise tax. CHF 1.35 a share (ADR) in 2007.
(D) In millions.

BUSINESS: PartnerRe Ltd. provides multiline reinsurance to insurance companies on a worldwide basis through the company and its subsidiaries. Premium breakdown as of 12/07: United States, 27%; Global (Non-U.S.), 20%; Global (Non-U.S.) Specialty, 27%; Catastrophe, 11%; Life, 15%. Has offices in Paris, Zurich, Greenwich, Bermuda, and Toronto. Has approximately 950 employees. Officers & directors own 3.1% of common stock; FMR, 8.5%; AXA Assurances, 6.4%; Lord Abbett, 6.0%; TPG-Axon, 5.4% (4/08 proxy). Chairman: John Rollwagen. President & Chief Executive Officer: Patrick Thiele. Incorporated: Bermuda. Address: 90 Pitts Bay Road, Pembroke HM 08, Bermuda. Telephone number: 441-292-0888. Internet address: www.partnerre.com.

PartnerRe registered a year-over-year earnings decline during the March quarter. The company posted operating earnings per share of $1.98, which represented a 27% reduction from the year-earlier tally. *Actual results exclude capital gains and losses from the insurer's investment portfolio.* The primary culprit behind the underperformance relative to 2007 was less profitable underwriting results. Indeed, the combined ratio climbed to 92.3%, a 7.5% increase from the year-ago tally. This implies that PartnerRe generated $7.70 in pretax profit for every $100 that it underwrote. This was on top of income generated from the company's investment portfolio. It should be noted that last year's March-quarter combined ratio was particularly strong, reflecting a historically low number of catastrophes.

The company's share net might well decline both this year and next, owing to a lackluster reinsurance market. We look for new business wins to keep premiums earned roughly flat over the next two years, as rates are poised for a decline. That said, management's keen underwriting ability should result in a positive underwriting margin over the next 18 to 24 months. Our assumption, of course, is based on a normal level of catastrophe activity. Too, investment income per share should trend higher, thanks to high levels of operating cash flow, along with a decent return on invested assets.

We have lowered PartnerRe stock's Timeliness rank by a notch over the past three months. This reflects the company's steep price decline since early May. However, the broader market averages have been in a tailspin over that time, though reinsurance stocks seem to have been especially hard hit. This likely reflects investor uncertainty regarding the near-term prospects for this industry. We look for intense competitive pressures to result in pricing constraints over the next year or so. Although recent catastrophes, namely floods and forest fires, might result in somewhat lower capacity, we don't see a rate catalyst in the near term. PartnerRe stock is ranked to track the year-ahead market index. However, over the 3- to 5-year pull price-recovery potential is worthwhile at the current valuation.

BUSINESS: Pitney Bowes is the world's largest manufacturer of postage meters and mailing equipment. Mailstream Solutions rents postage meters and sells mail-processing systems in the U.S. and Europe (71% of revenues in 2007; 89% of operating profit). Mailstream Services provides mail room and document mgt. services and sells and services marketing systems; 29%, 11%. Sold Capital Services (financed equip. leases) in 7/06. Spun off operation that markets copiers and facsimile systems in 2001. Foreign opers.: 28% of revs.; R&D: 3.0%. Has about 36,100 employees. Off./ Dir. own under 1% of common (3/08 Proxy). Chrmn.: Michael Critelli. CEO: Murray Martin. Inc.: DE. Addr.: 1 Elmcroft Road, Stamford, CT 06926. Tel.: 203-356-5000. Internet: www.pitneybowes.com

Pitney Bowes will likely post much improved year-to-year earnings comparisons in the second half of 2008. A number of problems surfaced in 2007's third quarter, and they will not be completely resolved for a while. First, mailing equipment orders from financial institutions, a key customer base, have dropped from historical norms. Second, benefits from the mandated migration to digital meters in the U.S. have slowed considerably since mid-2007. Finally, regulatory changes and several other temporary factors hurt profits at the International division lately. That said, our expectation for considerable earnings improvement in the coming quarters is based on easy comparisons, an acceleration of share repurchases, new operating efficiencies (discussed below), and a resolution of the problems at International.

The company is nearing completion of its latest restructuring program. The previous program was completed in 2006, but the beneficial impact on operating margins was offset by rising pension costs and intensified pricing pressures. At present, the main objectives are to pare the employment count by 1,400 (4%) and reduce annual overhead costs by at least $100 million by 2009. Related charges are estimated at about $350 million.

Stock repurchases are running well above last year's level. Outlays of $180 million for this activity in the 2008 first quarter were twice last year's same-period level, and most of the remaining amount of the board's $500 million authorization was slated to be spent in the June interim. The total was $400 million in 2007. Estimated free cash flow of $450 million plus additional debt should cover this year's likely purchases.

Long-term revenue and profit growth potential is modest. Given the downward trend in the operating margin since 2000, we think PB's targeted operating efficiencies will, at best, enable the margin to stabilize. Too, the likely decrease in shares outstanding to 2011–2013 accounts for almost half of projected annual earnings growth of almost 8%.

At the currently depressed quotation, these shares offer good risk-adjusted total return potential to 2011–2013.

Plains All American Pipeline, L.P. constructed its first pipeline terminal in 1993. It acquired Plains Resources' oil pipeline business in September, 1998, in a deal that set the stage for the new company's IPO. On November 17, 1998, Plains All American Pipeline completed its initial public offering as a master limited partnership. Under lead manager Salomon Smith Barney, 13.09 million units were offered at $20.00 per unit.

BUSINESS: Plains All American Pipeline, L.P., is a publicly traded master limited partnership which operates through various subsidiaries. It engages in the transportation, storage, terminaling, and marketing of crude oil, refined products, and liquefied petroleum gas. The company owned or leased approximately 20,000 miles of active pipelines and gathering systems (at 12/31/07); 23 million barrels of active, above-ground terminaling and storage facilities; and 1.3 million barrels of active, underground terminaling and storage facilities in North America. Has a 50% ownership in PAA/Vulcan Gas Storage LLC. Has about 2,000 empls. Chmn. & C.E.O.: Greg L. Armstrong. Addr.: 333 Clay Street, Suite 1600, Houston, TX 77002. Tel.: (713) 646-4100. Web: www.plainsallamerican.com.

Plains All American features an excellent distribution yield. The stock's 7.6% payout, coupled with its relatively low risk (Beta: .75), make this a choice selection for conservative, income-hungry accounts. Meanwhile,

The company's top and bottom lines are *moving in opposite* directions. Revenues will likely jump over 40% this year, largely due to the accretive effect of PAA's acquisition of Pacific Energy. Indeed, after some early miscues hobbled the integration, the two sides finally appear to be on the same page. PAA's management expects Pacific to add $40 million–$45 million to gross margins this year, and believes that number may widen to $70 million by 2012. But earnings tell a different story. Profits may slide 6%–7% this year as rising energy prices negate much of the margin improvements we foresee. However,

A series of expansion projects should bear fruit next year and beyond. In all, 1.3 million barrels of daily capacity are set to come on line in the first half of 2008, with another 1.4 million barrels coming into service well into 2009. Further,

Plains is well positioned to make another addition. The challenging economic backdrop could make it harder for smaller operators to compete with larger, better-funded firms, which may spark a wave of consolidation. This may open the door for PAA to make a few opportunistic acquisitions over the next several years. Thanks to a solid balance sheet (44% debt-to-total capital), management has the luxury to set aside $200 million–$300 million this year for potential purchases. Consequently,

We're projecting 2009 revenue and earnings estimates of $30 billion and $2.90 per unit, respectively. Higher price realizations, continued cost control efforts, and more-efficient operations spurred by pipeline additions ought to push the top and bottom lines higher next year.

Plains All American has limited appreciation potential over the pull to 2011–2013. Nonetheless, although the stock is untimely, it has appeal as a current-income vehicle based on the stellar yield.

Sharif Abdou *June 13, 2008*

(A) Based on average diluted units outstanding. Excludes nonrecurring gains/(losses): '05, ($0.76); '06, ($0.73); '07, ($0.58). Quarterly total may not sum due to rounding. Next earnings report due mid-July.

BUSINESS: PNC Financial Services Group is one of the largest bank holding companies in the U.S. based on assets. Primary markets include DE, FL, IN, KY, MA, NJ, OH, and PA. Businesses include regional & corp. banking, real estate finance, asset-based lending, wealth & asset mgmt., and global fund services. Loan breakdown: Comm., 41%; Consumer, 26%; Residential mortgage, 14%; Comm. real estate, 13%, other 6%.; Net loan losses, .49% of avg. loans in 2007. As of 6/30/08, loan loss reserves, 1.35% of loans; nonperforming assets, .51% of total assets. Off. & dir. own 1.5% of common stock. (3/08 proxy). Chrmn., Pres. & CEO: James Rohr. Inc.: PA. Address: One PNC Plaza, 249 Fifth Ave., Pittsburgh, PA 15222. Tel.: 412-762-8257. Internet: www.pnc.com.

PNC Financial Services Group continues to perform well. Total revenue rose about 19% during the June quarter, compared to a year ago. Net interest income, which accounts for about 48% of revenue, advanced 32% during the quarter. Much of the strength was due to improved profitability. The net interest margin expanded to 3.47% during the quarter, compared with 3.03% a year ago, reflecting lower interest and funding costs. This segment also got a boost from acquired business. In addition, noninterest income, which accounts for about 52% of revenues, advanced 9% during the quarter, thanks to higher service fees.

Some segments have been performing better than others. The Corporate and Institutional Banking division posted a 10% increase in income during the June quarter. Moreover, contributions from PNC's recently acquired interest in BlackRock, an asset management business, were substantial. This offset sluggishness at the Global Investment Servicing division, as well as declining profits at the Retail Banking segment.

Elsewhere, credit quality has weakened further. Nonperforming assets rose to 1.0% of loans during the quarter, compared with .40% a year ago. This reflects additional weakness in the residential and commercial real estate loan portfolios. As a result, PNC has boosted its provision for losses to $186 million during the June quarter, compared with $54 million a year ago.

The outlook remains positive. We are leaving our earnings estimate for 2008 unchanged, for now. Although we are lowering our estimate by $0.10 per share for 2009, we still expect a healthy advance for the year. Elsewhere, PNC Financial has done a good job of controlling costs. Although noninterest expense rose about 9% during the second quarter, this was easily offset by top line strength.

These neutrally ranked shares have moved up in price since our May report. This reflects PNC's strong second-quarter results and the healthy profit outlook for the year ahead. Nonetheless, our current projections indicate this stock offers somewhat below-average appreciation potential for the next 3 to 5 years.

BUSINESS: Raytheon Company represents the 12/97 merger of (old) Raytheon Co. and the defense electronics business of Hughes Electronics Corp. This corporation is a global major provider of ground-based air defense systems, air intercept missiles, airborne and ground-based radar systems, communication and other military systems, and is an important producer of electronics-based aerospace and defense products & systems. Foreign sales: 20%. 2007 depreciation rate: 6.8%. Officers & Directors control .7% of stock, FMR, 6.2% (3/08 proxy). Has 72,100 employees. Chairman & Chief Executive Officer: William H. Swanson. Incorporated: Delaware. Address: 870 Winter Street, Waltham, Massachusetts. 02451. Telephone: 781-522-3000. Internet: www.raytheon.com.

Raytheon began 2008 on a strong note. First-quarter share earnings were up 30% from the year before and $0.07 above our estimate. As a result, even though our full-year forecast was a bit above company guidance, which remains $3.65-$3.80, we've decided to raise our sights again for both 2008 and 2009. Meanwhile, our sales estimate for 2008 is near the high end of management guidance of $22.4 billion-$22.9 billion. The profit difference reflects our expectation of a further widening of operating margins. **The U.S. Department of Defense (DOD) is this company's main customer,** with sales to the DOD accounting for over 80% of sales. And international business, part of which must, by law, be directed through the Pentagon, amounts to about 20% of the top line. Raytheon provides products, systems, services, and research, which tend to serve the high-tech segments of governmental demand. **First-quarter bookings handily exceeded sales,** even though sales were up 11.4% from the 2007 period. (Note that comparisons with a few years ago are distorted by the company's concentration on military products and systems, following last year's disposition of both its general aircraft division and Flight Aircraft, which serves the commercial airline industry. Last year's figures exclude the discontinued divisions, although it is our policy not to restate prior years.) The first quarter's order flow raised the March 31st backlog to a record $37.7 billion, which amounts to 165% of our estimate of 2008 sales. **Raytheon develops a considerable amount of "Cash Flow" in excess of its operating needs.** As a result, it has been able to raise its dividend four times in the past four years, and in recent years, the debt level has been reduced sharply. In addition, the company has an aggressive stock-repurchase program. These improvements have caused us to give the stock our Highest Safety rank. **Meanwhile, these shares are highly ranked for Timeliness over the coming year.** But their price is now over three times the low set back in 2000. As a result, even though we look for good growth in future years, the current valuation largely discounts the gains we foresee by 2011-2013.

Republic Services was spun off from Republic Industries (since renamed AutoNation) in July 1998. The initial public offering was for 50,600,000 domestic shares and 12,650,000 international shares, both at a price of $24 per share. The offering was through a syndicate led by Merrill Lynch; Deutsche Bank; and Donaldson, Lufkin & Jenrette. AutoNation sold its controlling 64% stake in the company in April 1999.

BUSINESS: Republic Services, Inc. is one of the largest non-hazardous solid waste companies in the U.S., providing collection, processing, recycling, and disposal services. The company owns and operates 58 solid waste landfills, 94 transfer stations, and 33 recycling facilities ('07 10-K). Provides collection services for municipal, industrial, commercial, and residential customers through 136 collection companies in 21 states. Acq. Olympic Disposal, 8/98; Imperial Sanitation, 8/98; Rapid Disposal, 8/98. Has 13,000 employees. Officers/directors as a group own less than 1% of common (4/08 Proxy). Chairman & CEO: James E. O'Connor, Inc.: Delaware. Addr.: 110 S.E. 6th St., 28th Floor, Fort Lauderdale, FL 33301. Tel.: 954-769-2400. Internet: www.republic.com.

Republic Services has agreed to buy rival Allied Waste for upwards of $6 billion in stock. Under terms of the transaction, announced on June 23rd and expected to close in the fourth quarter, Republic will pay Allied Waste shareholders .45 of a Republic share for each share of Allied held. The combined entity will bear the Republic Services name and still be headed by CEO James O'Connor, but shareholders of Allied will own 52% of the trash hauler once the merger is completed. **The deal seems to make sense,** despite the fact that M&A activity in the waste industry has not always produced positive results. The addition of Allied should help Republic to widen its geographic footprint and expand its still-small landfill business. Moreover, the new company, with sector leader Waste Management as its only national competitor, ought to benefit from a benign pricing environment. In the meantime, from a financial standpoint . . . **The transaction is expected to be accretive to share net in 2009 and to yield $150 million in annual operating synergies within three years.** Cost savings will most likely stem from collection route optimization and transfer station-related efficiency gains. Headcount reductions will probably be limited, however, especially since the two companies' service territories do not overlap very much.

Republic has rejected unsolicited takeover bids from Waste Management. Concerned about the ramifications of a Republic/Allied tie-up, Waste Management, in July, offered to buy Republic for $34 a share in cash (this amount was later raised to $37 a share). But Republic dismissed the bids as inadequate and reiterated its commitment to the Allied deal. In fact, in an effort to avoid a hostile takeover battle with Waste Management, Republic has put in place measures that would penalize companies for trying to make large-scale purchases of its stock.

These unranked shares have some speculative, long-term appeal. While the company appears richly valued on a stand-alone basis, anticipated synergies from the Republic/Allied merger should give a big boost to the bottom line by 2011-2013. (Note that our estimates will not factor in Allied until the transaction closes.)

BUSINESS: Sara Lee Corporation is a diversified international manufacturer and marketer of branded consumer products with operations in beverages, specialty meats, baked goods, and household/personal care. Meats group includes: *Hillshire Farms, Jimmy Dean,* and *Ball Park.* Bakery group includes *Earthgrains* and *Sara Lee.* Beverage group includes numerous brands of coffee and tea. Apparel business (intimates and underwear) spun off, 9/06. Int'l sales: 54% of total. '07 deprec. rate: 10.1%. Has about 52,000 employees. Officers & directors own less than 1% of stock; three financial institutions, 18.5% (9/07 proxy). Chairman & CEO: Brenda C. Barnes. Inc.: Maryland. Address: Three First National Plaza, Chicago, IL 60602. Tel.: 312-726-2600. Internet: www.saralee.com.

Sara Lee's top line is climbing at a good clip. Foreign currency translations are providing a noticeable boost, reflecting the company's sizable presence overseas, where it generates over half of its sales. Otherwise, revenues have been rising at a solid, mid-single-digit clip, with all six businesses contributing to the gains. Price increases to combat rising commodity costs have been a big element of this growth, particularly in the North American and International Bakery divisions. Thus far, these actions don't seem to be sparking too much resistance from consumers.

Sara Lee likely halted a three-year earnings slump in fiscal 2008, which ended on June 28th. Lower interest expense and a smaller share base have share net headed back in the right direction, and the company probably maintained this momentum in the June quarter. From an operating perspective, though, progress has been slower to develop, with adjusted operating income actually declining modestly year over year during the first nine months of the fiscal year. Still,

The food producer appears to be gaining the upper hand on rising commodity costs. In fact, improved pricing, along with lower marketing spending and ongoing cost-cutting initiatives, should allow Sara Lee to report meaningful growth in operating profits for the final three months of fiscal 2008.

The stock is an Average (3) selection for Timeliness. Likewise, total return potential to 2011-2013, though getting a boost from an above-average dividend yield, is unexceptional in our view. Earnings now look to be headed in the right direction, and should climb another 13%, to $0.90 a share, in fiscal 2009. The market, though, seems reluctant to give Sara Lee much credit for this just yet. The restructuring efforts begun by management in 2005 have been slow to bear fruit, and profits will likely remain below their mid-decade peak for several more years. Too, the company has expressed concerns about the impact on its business of volatile commodity prices and weaker economic conditions in some key markets. In response, we have trimmed our fiscal 2008 and 2009 calls by $0.02 and $0.05, respectively, since our May report.

BUSINESS: Sigma-Aldrich Corp. develops, manufactures, and distributes a wide range of biochemicals, organic chemicals, chromatography products and diagnostic reagents. The company markets more than 130,000 products in 165 countries. These products are used in research and development in universities, in the chemical industry, in the diagnosis of disease, and as specialty chemicals for manufacturing processes. Foreign sales about 61% of '07 rev. Has about 7,745 employees. Offs. and dirs. own 1.9% of shares; State Farm Mutual Fund, 10.9%; Capital World Investors, 7% (3/08 proxy). Chairman: David Harvey; Pres. & CEO: Jai Nagarkatti. Inc.: DE. Address: 3050 Spruce St., St. Louis, MO 63103. Tel.: 314-771-5765. Internet: www.sigma-aldrich.com.

We look for Sigma-Aldrich to post share net of around $2.60 in 2008. Sigma has a 20% share of the domestic market and a 10% share of the global market for research chemical sales. We are conservatively estimating internal revenue growth of 7% this year. The February, 2007 Epichem purchase is expected to have a more robust effect on the top line. Currency translation benefits should add another 4% to revenue. Additionally, the bottom line ought to benefit from the repurchase of around three million shares. We also believe Sigma's supply chain initiatives will help keep costs down.

Profits should continue upward next year. Our numbers reflect the effect of minor acquisitions (under $50 million in annual sales), since such minor bolt-on purchases have been a constant element in SIAL's business strategy. Such buys will most likely add to the Sigma-Aldrich Fine Chemicals (SAFC), and Research Biotech segments, since these are faster-growing, and more profitable, particularly overseas (where SIAL generates about 60% of total sales). Share buybacks will probably continue, albeit at a slower clip.

The company has executed well on the bottom line over the last few years, and should continue to do so. The Stock Price Stability and Earnings Predictability ratings have both improved during this decade. Sigma has wisely segued into faster-growth niches, specifically into the drug and biotech industries. This has helped earnings growth. Earnings stability has been achieved by courting more smaller accounts (those under $1 million), thus increasing market share and spreading risk. SIAL has also kept costs down by enhancing inventory management, and has subsequently reduced product obsolescence. It has also minimized delivery times to the customer, by working closely with suppliers.

This timely stock has possessed our top rank for Safety (1) since 2006. This is a major reason it has become an institutional darling on Wall Street. Rock solid finances, robust cash flow generation, and monumental market share means that it is difficult to purchase these shares at anything but a premium price. **We encourage accumulation on weakness.**

Jeremy J. Butler *June 13, 2008*

(A) Incl. the acquisitions of the Supelco chromatography division of Rohm and Haas from 5/93; and Circle AW Products Company from 6/93.
(B) Basic earnings until end of '97, diluted thereafter. Excludes loss from discontinued operations: '02, $0.76. Next earnings report due mid-July.
(C) Dividends historically paid in mid-March, June, September, and December.
(D) In millions, adjusted for stock splits.

BUSINESS: SunTrust Banks is one of the largest bank holding companies in the Southeast. It was created by the merger of Trust Corp. of Georgia and Sun Banks on 7/1/85. Acquired GB&T Bancshares, 5/08; National Commerce Financial, 10/04; Lighthouse Financial, 6/03; and others. As of 12/31/07, real estate loans were 61% of total loans; commercial, 29%; consumer loans and other, 10%. As of 12/31/07 net charge-offs to average loans, .35%; allowance to year-end loans, 1.05%; nonperforming assets to total loans, 1.35%. Officers and directors own 1.1% of common shares (3/08 proxy). Chairman and CEO: James M. Wells III. Incorporated: Georgia. Address: 25 Park Place N.E., Atlanta, Georgia 30303. Telephone: 404-588-7711. Internet: www.suntrust.com.

These are challenging times for SunTrust. Deteriorating conditions in the housing market have caused both charge-offs and nonperforming assets to climb. (Real estate loans account for roughly 60% of total loans at present.) Consequently, management has boosted the provision for loan losses to an extra high level. Unfortunately, it appears that these unfavorable trends will persist a while longer.

But we see some bright patches. For one thing, there has been a substantial decline in net valuation losses from distressed assets, including structured investment vehicles, that were purchased to bail out certain money market funds during the fourth quarter of last year. That's because management is slashing exposure to the aforesaid securities (amounting to less than $800 million at the end of the second quarter, compared to over $2.6 billion at yearend 2007) via sales and paydowns. Efforts to improve operating efficiency are also helping SunTrust, to a certain degree.

But share net may still plummet about 43%, to $2.35, in 2008. A partial bottom-line recovery seems possible next year, if business conditions improve (which should prompt management to drastically reduce the provision for loan losses).

The company sold 10 million shares of stock in The Coca-Cola Company, leading to a gain of $0.99 a share during the second quarter, excluded from our figures. Moreover, 3.6 million Coke shares were donated to the SunTrust Foundation (which should result in an income-tax deduction in this year's third quarter). The remaining 30 million Coke shares are expected to be sold in time. These deals raise sorely needed capital in these hard times.

SunTrust acquired $225 million in FDIC-insured deposits of the failed First Priority Bank in Florida. We think the current operating environment may present similar opportunities for the company to expand its client base.

Despite recent strength, the untimely stock is still trading at much-reduced levels, given the bank's weak near-term earnings prospects.

But we see good price-recovery potential here, as supported by our upbeat 2011-2013 projections. Patient investors may want to take a look.

Frederick L. Harris, III *August 22, 2008*

Company's Financial Strength	A

BUSINESS: Tootsie Roll Industries, Inc. produces candy. Products include: *Tootsie Roll, Tootsie Pop, Tootsie Bubble Pop, Tootsie Pop Drops,* and *Mason Dots.* Acq'd Concord Confections *(Dubble Bubble),* 8/04; Brach's Confections' *Andes Candies,* 5/00; Warner-Lambert's former chocolate/caramel brands *(Junior Mints, Sugar Daddy, Sugar Babies, Charleston Chew,* and *Pom Poms),* 10/93; Charms Co. *(Charms, Blow Pops),* 9/88; Celia's Confections, 7/85. Int'l ops. (Mexico and Canada): 9.5% of '07 sales. Has about 1,950 employees. M.J. and E.R. Gordon control 60% of vot. power; L.R. Weiner, 14% (3/08 Proxy). Chairman & CEO: M.J. Gordon. Pres. & COO: E.R. Gordon. Inc.: VA. Addr.: 7401 S. Cicero Ave., Chicago, IL 60629. Tel.: 773-838-3400. Internet: www.tootsie.com.

Tootsie appears headed for a share-earnings decline in 2008. Despite recent product and packaging innovations, sales are probably going to be flat this year. Meanwhile, soaring ingredient costs, especially for corn syrup and sugar, should continue to take a toll. Tootsie faces a telling test with its prime season (*Halloween*) on the horizon. In all, we look for earnings to fall around 9%, to $0.83 a share.

Growth should return next year. Lethargic sales are likely to persist in 2009. That said, it will be the company's ability to incorporate higher-margined products and price increases into its lineup that determines whether it can meet our share-net estimate of $0.90. Indeed, new candies and flavors should help, as will the introduction of more bulk and variety packaging.

The stock is ranked to track the broader market in the year ahead. These shares continue to trade in a narrow range, and we do not expect a significant change anytime soon. The company is poised to generate annual earnings growth of just under 10% over the coming 3 to 5 years. Still, at its recent valuation, much of the long-term growth we anticipate is already priced into these shares.

The appeal of the issue lies in its stability. Indeed, these shares have a time-tested history and durable track record. All this is evidenced in the stock's Highest Safety rank (1) and top scores for Price Stability and Earnings Predictability. As an added incentive, shareholders can count on a 3% annual stock dividend that has been paid every year since the mid-1960s.

Of note, acquisition rumors may begin to have an impact on share-price movements in the near term. Although mere speculation at this junction, the pending Mars-Wrigley merger has reignited the consolidation rumblings of the candy industry. With that in mind, Tootsie's name again has risen to the top of the list of potential acquisition targets, given its well-known brands, yet sluggish sales growth of late. However, the Gordon family has not been very receptive to such talk in the past, and as long as they are still at the helm, it is difficult to foresee Tootsie accepting bids.

Jason A. Smith *August 1, 2008*

A) Fiscal year ends Dec. 31. First three quarters end on Saturday closest to end of month. (B) Based on average shares through 1996, diluted thereafter. Next earnings report due mid-Aug. Total may not sum due to rounding. (C) Dividends historically paid in Jan., Apr., July, and Oct. 3% stock div'd paid each year about Apr. 21, since 1966. (D) Includes intangibles. In '07: $262.3 million, $5.13/share. (E) In millions, adjusted for stock splits.

BUSINESS: The Travelers Companies, Inc. (formerly St Paul Travelers) is a leading provider of commercial property/casualty insurance and asset management services. Following the April 1, 2004 acquisition of Travelers, the company is now a leading underwriter of homeowners insurance and automobile insurance through independent agents. USF&G was another notable acquisition which was purchased in April of 1998. Has approximately 33,300 employees. Officers and directors own approximately 1.4% of common stock outstanding (3/08 proxy). Chief Executive Officer and President: Jay S. Fishman. Incorporated: Minnesota. Address: 385 Washington St., St. Paul, Minnesota 55102. Telephone: 651-310-7911. Internet: www.travelers.com.

The Travelers Companies got off to a good start this year. The insurer posted operating earnings per share (excluding capital gains and losses) of $1.61, which bested last year's tally by roughly 4%. The share-net gains stemmed from a slight increase in net premiums written as overall retention rates remained strong. Meanwhile, the company repurchased 20.8 million shares during the March interim. However, a downturn in renewal prices and lighter volumes for new business persisted as earnings detractors.

But we look for a bottom-line decline of about 11% for the second quarter. As the year progresses, Travelers will probably find it difficult to gain new business and increase its market share. Meanwhile, the heightened competition across all types of insurance continues to depress policy prices. In an effort to write a profitable book of business from a risk/reward standpoint, TRV has been maintaining its underwriting discipline, and this practice ought to help keep the combined ratio in check. However, top-line growth will likely be about 1% this year.

New product offerings could bear fruit this year and beyond. The company continues to roll out the TravelersExpress platform. This enhanced pricing program for smaller businesses has been successful in the marketplace and ought to pick up steam moving forward. Meanwhile, QuantumAuto, TRV's computerized/sophisticated automobile insurance pricing product that is now offered in 39 states and the District of Columbia is also gaining acceptance.

Despite a decent dividend yield, the equity offers lackluster total return potential for the pull to 2011-2013. Still, our projections may prove a bit conservative depending on this year's hurricane season. Uncertainty stems from the effects this year's wind season will have on 2009 rates. In the event of large catastrophe losses, insurers would be afforded greater bargaining power during renewal season. But if this year proves as mild as the last two, the industry will likely continue to face increased competition and pricing pressure. Meanwhile, these shares are ranked to perform in line with the broader market for the year ahead.

BUSINESS: U.S. Bancorp was formed by the merger of Firstar and U.S. Bancorp on 2/27/01. Merged with Star Banc on 11/20/98; Mercantile Bancorporation on 9/20/99. At 12/31/07, had 2,518 banking offices in 24 states. Loans breakdown: commercial, 33%; comm. real estate, 19%; resid, 15%; consumer, 33%. In '07, net loan losses: .54% of average loans. At 3/31/08: loan loss reserve, 1.42% of loans; problem assets, past-due, & restructured loans, 1.40% of loans & other real estate. Directors & officers own 0.64% of common (proxy, 3/08). At 12/31/07, over 54,000 average full-time equivalent employees. Chairman, Pres. & CEO: Richard Davis. Inc.: DE. Address: 800 Nicollet Mall, Minneapolis, MN 55402-4302. Tel.: 651-466-3000. Internet: www.usbank.com.

U.S. Bancorp used a sizable gain related to the Visa initial public offering to offset all but $0.02 a share of larger-than-usual expenses, including a provision to its loan loss reserve that exceeded its credit charge-offs by $192 million. Some of the expenses, like a charitable contribution, might be considered discretionary. The excess loan loss provision (which we don't consider discretionary) reflected the stress in the residential real estate sector and the growth in consumer loans and loan losses. U.S. Bancorp's problem loans probably will rise further in the next several quarters. Even so, on March 31st, the problem asset ratio was lower than for most other large banks (even including past-due credits and restructured loans accruing interest). Only 2.6% of its loans were subprime residential and home equity credits. Total problem assets were offset by the loan loss reserve.

The company may be benefiting from a flight to quality, with its relative financial health enabling it to attract customers from weaker competitors. We expect revenues, excluding the Visa gain, to continue growing at a healthy pace, fueled by good commercial loan generation, a fairly stable net interest margin, and strong increases in selected types of noninterest income (card, treasury management, corporate, and mortgage revenues). Core operating expenses should remain under control, and a resumption of stock repurchases in the latter half of 2008 (after USB completes an acquisition) may enhance share net. Despite the higher provision, we expect earnings to advance slightly this year and about 8% in 2009, when credit costs ought to moderate.

U.S. Bancorp stock is one of the few bank equities that have held up well despite the turmoil in the financial sector during the past year. Note the issue's relatively low Beta (0.90) and high Price Stability rating (95). The stock doesn't have as much 3- to 5-year recovery potential as most bank equities, and is ranked 3 (Average) for Timeliness. But the dividend yield is attractive and, while the moderately elevated payout ratio may limit the disbursement's growth over the next few years, the dividend should be safe if earnings come in as we expect.

Theresa Brophy *June 20, 2008*

United Parcel Service of America Inc. was founded in 1907 and is now the world's largest package delivery company. The initial public offering occurred on November 10, 1999, when 109,400,000 Class B shares were sold at $50.00 each. Morgan Stanley Dean Witter was the lead underwriter. Just prior to the IPO, UPS merged with United Parcel Service, Inc. Each share of United Parcel Service, Inc. was converted to two shares of UPS class A common stock.

BUSINESS: United Parcel Service, Inc. is the world's largest integrated air and ground package delivery carrier. Also provides specialized transportation and logistics services. Service is offered throughout the U.S. and in over 200 other countries and territories. Domestic package operations accounted for 64% of '07 revenues; international (19%); supply chain & freight (17%). Fleet owned and leased (at 12/31/07): 617 planes and 100,000 ground vehicles. 2007 depreciation rate: 5.5%. Has about 425,300 employees (over 57% unionized). Officers and directors own 1.0% of common stock; Capital Research, 4.3% (3/08 Proxy). Chrmn./CEO: D. Scott Davis. Incorporated: DE. Address: 55 Glenlake Pkwy., NE, Atlanta GA 30328. Telephone: 404-828-6000. Internet: www.ups.com.

United Parcel Service has felt the brunt of rising fuel costs during 2008. In particular, the Domestic Package division continues to struggle since its price increases have been offset by customers' shift away from higher-margined Next Day Air shipping options. This has also negated the benefits of the fuel surcharges instituted at the end of 2007.

International operations continue to gain from newer markets and a weak dollar. The company has made moves to expand its presence in the Chinese market through acquisitions, an advertising campaign, and sponsorship of the Beijing Summer Olympics. In Europe, a proposed purchase of TNT Post would help to widen its footprint in the region. At this time, TNT has more than double the market share of UPS in the European market. Nevertheless, the weaker American dollar has done as much as improved operations to widen margins within the International Package division.

A proposed deal with DHL should be accretive to earnings in coming years. By the end of this year, United Parcel should have a deal finalized to take over all of DHL's U.S. cargo shipments in a cost-cutting move for the German shipper. The deal, which will bring $1 billion annually in revenues to UPS over the next 10 years, should help the company to position itself to assume DHL's current domestic business.

Earnings will likely be curbed in 2008 and 2009 by a difficult operating environment. Even with the operational improvements of late, the fact remains that fuel costs will weigh on earnings for the next couple of years at least. Thus, we have lowered our share-net estimates for 2008 and 2009 by 45 cents and 25 cents, respectively.

United Parcel Service's returns will likely lag behind the broader market. With the recent weakening of earnings results in mind, we have lowered the Timeliness rank to 4 (Below Average). With that said, though, if one is willing to weather some short-term difficulties UPS' above-average Safety (1), dividend yield, and 3- to 5-year appreciation potential may interest investors who take a more patient approach.

Christopher T. Wells *September 5, 2008*

BUSINESS: United Technologies Corp. operates in six business segments. *Pratt & Whitney* (22% of '07 revenues, 27% of operating profits) makes & services aircraft engines. *Carrier* (27%, 18%) makes heating, ventilating, and air-conditioning equipment. *Otis* (22%, 31%) manufactures and services elevators. *Sikorsky* (9%, 5%) makes helicopters. *Hamilton Sundstrand* (10%, 13%) produces electronic controls. *UTC F&S* (10%, 6%) provides security and fire protection services. Also has a power division dealing in fuel cells. International ops.: 52% of '07 revenues. Directors & officers own about 1.5% of stock (2/08 proxy). Emplys.: about 225,600. Chairman and CEO: George David. Inc.: DE. Addr.: One Financial Plaza, Hartford, CT 06101. Tel.: 860-728-7000. Internet: www.utc.com.

United Technologies' earnings may well reach the $5.00-a-share plateau this year. On the domestic side, results are not spectacular, but the company's global emerging market footprint and sizable backlog have it well positioned for a potential 17% share-net advance in 2008. It is the urbanization of these economies that has them in need of virtually all of UTX's business lines. Too, back on the home front, Carrier is likely to gain market share during the downturn due to its hedging strategies and limited need to raise prices. Also, the company has already purchased roughly $800 million of stock under its $2 billion authorization for 2008, which should support the bottom line. This may be vital if the weakened dollar becomes more of a headwind.

These shares have been beaten down of late. While much of the 17% dip in quotation since our April review can be tied to the general market malaise, some skeptics are fanning the flames. When the U.S. legacy carriers announced reductions in domestic capacity via parking older airplanes, entities that depend on aftermarket business obviously took a hit, and UTX's Pratt & Whitney and Hamilton Sundstrand were no exception. These units sell parts and services to the existing fleet and their revenues from commercial transport comprise approximately 8% of United's total sales. However, the older engines being taken out of the rotation are the types likely to be serviced by third-party providers, so we think only about 1% of revenues will be affected. Therefore, any investor fears regarding this situation are overblown. And with these neutrally ranked shares now trading at a handsome discount to our P/E ratio for 2011-2013, a buying opportunity has arisen.

We have raised our 2009 bottom-line call by $0.15, to $5.60. The aerospace business will likely continue pumping out favorable results for the foreseeable future, and higher volumes for the company's international base show no signs of slackening.

A war chest earmarked for acquisitions will not be wasted. Advances to Diebold have been met with resistance, leading management to explore other opportunities while monitoring that pursuit.

Erik M. Manning *July 25, 2008*

(A) Diluted earnings. Excludes disc. operations: '99, 68¢, '04, 15¢, '05, 6¢. Excludes nonrecurring losses: '92, $3.14; '94, 12¢. Next earnings report due late October.

BUSINESS: The Washington Post Co. publishes *The Washington Post* (daily circ.: 658,059). Also publishes *The Herald* (in Everett, Washington), and *Newsweek* magazine (weekly circ.: 3.1 mill.). Owns six network-affiliated TV stations and numerous small cable TV systems in non-urban markets in 19 states (702,700 basic cable subscribers). Kaplan, Inc. provides an extensive range of educational services for children, students and professionals. Employs roughly 19,000. Insiders control 76.5% of Class B shares, with Berkshire Hathaway holding 18.2%. Chairman Donald E. Graham, holds 92.8% of Class A shares., has voting control (3/08 proxy). Incorporated: Del. Address: 1150 15th St., N.W., Washington, D.C. 20071. Telephone: 202-334-6000. Web:www.washpostco.com.

The Washington Post Company's publishing and broadcasting business continues to struggle. The weakness here weighed on second-quarter earnings, which fell about 21%, to $5.70 a share. Note, also, that these results exclude a large severance expense related to a recent retirement program. The charge of $87.4 million (the after tax impact was $52.9 million, or $5.58 a share) was primarily to cover early retirement packages at its *Newsweek* magazine, corporate offices, and flagship newspaper.

The company will likely post a poor performance in 2008. The majority of the Washington Post's businesses are slumping. Namely, revenues declined in newspapers, magazines, and broadcasting in the most recent quarter. Moreover, the recent retirement program may well continue to disrupt operations for the duration of the year. All told, we are estimating share net will decline roughly 20% this year, to $24.30.

Demand for print publications is falling. This trend will likely continue, as readers are increasingly moving to new mediums to consume information. As a result, advertisers have been allocating more of their spending away from traditional media businesses. Accordingly, we believe this shift will continue to drive the decline of newspaper publishing for the foreseeable future.

Management has focused the business toward education. In response to the changing landscape of the media industry, many companies have looked to new opportunities to drive growth. On point, the Washington Post continues to expand its presence in the education market. In fact, about half of WPO's revenue now comes from this sector. We believe the company will continue to invest in this business in order to offset the weakness in its traditional media assets. Moreover, this division should be the driver behind the share-net growth we are forecasting over the 3- to 5-year pull.

These shares hold our Lowest rank (5) for Timeliness. Furthermore, this issue has below-average capital appreciation potential over the 2011-2013 time frame. Thus, we recommend investors avoid this stock until prospects improve.

Richard Gallagher *August 15, 2008*

(A) Fiscal years end on Sunday closest to Dec. 31st. (B) Based on diluted shares. Excludes extraordinary charge: '91, $3.50. Excl. non-recurring gains/losses: '93, $1.14; '97, $4.15; '98, $19.20; '01, $16.52; '02, $0.55; '06 ($.18); '08 ($6.01). BUSINESS: Waste Management is the largest solid-waste disposal company in No. America. The company and USA Waste Services merged in July, 1998. Other major acquisitions incl.: Western Waste (5/96), Sanifill (9/96), and United Waste Systems (8/97). It operates about 285 landfills, 600 collection operations and 340 transfer stations in No. Amer.; rev. mix consists of collection (56%), landfill fees (20%), and waste-to-energy, recycling, transfer stations (24%). Eastern and southern regions account for 57% of total revenues. Has about 48,000 employees. Off./dir. control less than 1.0% of stock (3/08 proxy). Chairman: John C. Pope. CEO: David P. Steiner. Inc.: DE. Address: 1001 Fannin, Suite 4000, Houston, TX 77002. Telephone: 713-512-6200. Internet: www.wm.com.

Waste Management recently made two unsolicited bids to acquire a leading competitor, Republic Services (RSG). On August 12th, WM raised its per-share cash offer by $3.00, to $37.00, equivalent to $6.7 billion for the whole company. The catalyst for these bids is Republic's offer to acquire Allied Waste, the second-largest player in the domestic waste services industry. Republic's directors have rebuffed WM's offers and taken steps to preclude a hostile buyout. Industry sources indicated that WM would have to raise its bid to about $40 a share to have a decent chance at an acquisition. Given WM's relatively high long-term debt-to-capitalization ratio of 58% and the lessened return on investment of a higher purchase price, it seems unlikely that the company will prevail in this matter.

Although still modest, near-term revenue growth prospects have improved. Price hikes have accounted for all of the top-line gains since 2005. Waste-collection volumes trended down over this period due to customer reaction to the higher fees. WM's raised criteria for accepting new municipal and commercial contracts, and lackluster economic growth. However, in this year's second quarter, the customer retention percentage rebounded somewhat. This, along with the likelihood of continued above-norm price increases, including fuel surcharges, suggests revenues may well advance 3%–4% both this year and next, compared to a decline in 2007.

Waste Management is reaping the benefit of a number of efficiency-boosting programs implemented in recent years. They include the consolidation of operating units, a reduction of administrative positions, a new fleet maintenance system, and intensified safety training. All told, we look for further expansion of the operating margin in each of the coming three years.

Despite a higher effective tax rate, earnings are on track to increase about 10% this year, and a similar gain is likely in 2009. The higher rate reflects the termination of tax credits from WM's interests in two synthetic fuel facilities.

This timely stock's risk-adjusted total return potential should appeal to most investors.

David R. Cohen *September 5, 2008*

(A) Based on diluted shares. Next earnings report due late Oct. Excludes extraord. losses: '95, $0.43; '96, $0.89; '97, $0.39; '98, $3.14; '99, $2.46; '00, $1.36; '01, $0.36; '03, $0.18. Excl. extraord. gains: '02, $0.02; '04, $0.20; '05, $0.54; '06, $0.28; '07, $0.16; '08-Q1-2, $0.03.
(B) Dividends ususally paid in late March, June, Sept., and Dec. ■ Div. reinvestment plan avail.
(C) Incl. intangs. At 12/31/07: $5535 mill., $11.06/sh. (D) In millions.

Public Service Commission
INTERNAL AFFAIRS MINUTES
Monday - September 29, 2008
3:00 pm – 3:15 pm
Room 140 - Betty Easley Conference Center

COMMISSIONERS PRESENT: Chairman Carter
Commissioner Edgar
Commissioner McMurrian
Commissioner Argenziano
Commissioner Skop

STAFF PARTICIPATING: Bane, Hill, Cooke, Lynn, Sharma, Evans, Graves

1. Approve September 4, 2008, Internal Affairs Meeting Minutes.

   The minutes were approved.

   Commissioners participating: Carter, Edgar, McMurrian, Argenziano, Skop

2. Consideration of Legislative Budget Request for FY 2009-10. Approval is sought.

   The Legislative Budget Request for FY 2009-10 was approved. The Chairman directed staff to begin working on the Commission's legislative package for the 2009 session.

   Commissioners participating: Carter, Edgar, McMurrian, Argenziano, Skop

3. Staff Update on the Event Analysis Team's Review of the February 26 Outage in Peninsular Florida.

   Mr. Graves briefed the Commissioners on the status of the Event Analysis Team's Review of the February 26 outage. A report is expected by December.

   Commissioners participating: Carter, Edgar, McMurrian, Argenziano, Skop

HEARING EXHIBIT 00000574

From the Director

This update on PURC research and outreach is intended to serve as an overview for FPSC commissioners and professional staff. Below are highlights of a very active year. At the end of this summary is a list of recent research papers, which are also available through the research papers search engine on the PURC Web site at www.purc.ufl.edu. We truly appreciate the support of the FPSC and welcome opportunities for continued collaboration.

Mark A. Jamison, Ph.D.
Director, Public Utility Research Center

Highlights

Storm Hardening

PURC is assisting Florida's electric utilities by coordinating a research effort in the area of hardening the electric infrastructure to better withstand and recover from hurricanes. Projects in this effort have included (1) research on undergrounding existing electric distribution facilities by surveying the current literature, performing case analyses of Florida underground projects, and developing a model for projecting the benefits and costs of converting overhead facilities to underground; (2) data gathering and analysis of hurricane winds in Florida and the possible expansion of a hurricane simulator that can be used to test hardening approaches; and (3) an investigation of effective approaches for vegetation management. Reports are available on the Energy Initiatives page of the PURC Web site, www.purc.ufl.edu.

Climate Change

PURC researchers have been engaged in research and outreach related to Florida's new energy and climate initiatives. Research areas include (1) emission trading, (2) distributed generation, (3) drivers for utility-scale renewable energy deployment, and (4) rate design considerations for policy implementation. Outreach activities include numerous presentations and recent annual conferences on climate change.

- Our leadership seminars at NARUC meetings this year examined how regulators can provide leadership on climate issues.
- The 36th Annual PURC Conference, Changes in Climate and Information Technologies: Who's Driving Utility Policy? February 4-5, 2009 will examine the tradeoffs and merits of carbon policies, energy conservation and efficiency, and investments in plants using nuclear power, natural gas, and renewable energy. Conference details are available online at www.purc.ufl.edu.

(When) to Build or Not to Build?: The Role of Uncertainty in Nuclear Power Expansion

Investments in nuclear power plants are irreversible and involve uncertainties during both construction and commercial operation. Uncertainties confronted by developers of merchant plants and price-regulated plants differ due to the regulatory and market paradigm in which these plants operate. This paper by Lynne Holt, Paul Sotkiewicz, and Sanford Berg concludes with several observations about strategies states may consider undertaking to mitigate investment risk.

HEARING EXHIBIT 00000575

It appeared earlier this year in an issue of the *Texas Journal of Oil, Gas, and Energy Law.* Additional research papers can be found online at www.purc.ufl.edu.

Lifeline

In Florida, low-income households can receive a discount on their monthly local phone bills through a program called Lifeline. Surveys by PURC researchers this year, and in 2005, have found evidence that low-income households are quickly cutting the chord and adopting cellular phones, especially prepaid phones. In fact, they are doing this at a faster rate than are higher-income households. These and other findings call into question the design and effectiveness of this program. PURC Director Dr. Mark Jamison presented these findings to the FPSC in May.

Broadband

State and federal policies for broadband are the subject of two PURC papers in 2008. A paper by Dr. Lynne Holt and Mary Galligan examines how the federal-state partnership has evolved since 1996 to further broadband deployment and subscription goals, particularly in matters of shared public policy concern, such as health care services, education, economic development, and public safety and security. It also suggests an approach for state broadband policy development. A paper by Drs. Holt and Jamison examines U.S. broadband development and policies that impact innovation. They critically review arguments favoring provider subsidies and conclude that stimulating demand would be more productive. Drs. Holt and Jamison also published a paper about federal policies on telecommunications provider access to multitenant dwellings.

International Outreach

One hundred sixty-nine regulatory professionals from around the world attended the PURC/World Bank International Training Program on Utility Regulation and Strategy in 2008. Since its inception in 1997, this program has educated 1,979 professionals from 135 countries. We also contributed to a water regulation course in Bulgaria and provided a customized training program for the telecommunications regulator in Portugal. In addition, we were invited to deliver presentations in Brazil, Mexico, Spain, Canada, and Australia this year.

Communicopia: Market Dynamics in Telecommunications

PURC and the Florida Communications Bar Association will present a forum to examine the dynamic changes occurring in telecommunications November 7, 2008 at the Florida Public Service Commission in Tallahassee.

Energy Policy Leadership Summit

PURC is co-sponsoring this executive dialogue with Gee Strategies December 9-10, 2008 in Orlando to bring together top utility regulators, representatives from the new administration's transition team, political analysts, industry executives, Wall Street analysts, and journalists to examine the way forward on energy and environmental policy.

HEARING EXHIBIT 00000576

Research

Body of Knowledge on Infrastructure Regulation (BoKIR) Web site

We completed a comprehensive update of content on this Web site, including new case studies and reference materials, as well as a translation of the glossary into Portuguese. An Italian translation has been completed, and PURC Director of Water Studies Dr. Sanford Berg will give a presentation in Rome on October 29 to the Italian regulators. This site, www.regulationbodyofknowledge.org, is a useful resource for practitioners, researchers, students, and those interested in utility regulation. We originally developed the site in 2006 in collaboration with the University of Toulouse, the Pontificia Universidad Católica del Perú, The World Bank, and a group of international regulatory experts.

Survey of Benchmarking Methodologies in the Water Sector

The focus of this survey (funded by The World Bank) was on *metric benchmarking* that quantifies the relative performance of organizations. The study identified the strengths and limitations of several techniques that yield performance scores based on production or cost estimates ("total" methods). Dr. Sanford Berg is revising the report as a book to be published by the International Water Association – to expand access to the framework.

Water Policy

PURC and the UF Water Institute have assisted the Florida section of the American Water Works Association in evaluating sector governance, water allocation, and conservation. Dr. Sanford Berg hosted a meeting of the Water Allocations and Transfers Task Force in May. The task force is one of several established by the AWWA and charged with creating a Florida 2030 Vision to address water issues in the state.

Emissions Trading and Renewable Energy

With growing evidence that the first generation of cap-and-trade programs have not achieved all of their potential cost savings *vis-à-vis* traditional command-and-control policies, further examination is needed. A dissertation by PURC Graduate Assistant Dr. Joshua Kneifel focused on this issue and also examined the economic, political, and regulatory factors that affect the use of renewable energy.

Universal Service High-Cost Assistance

Dr. Eric Chiang (Florida Atlantic University) and Dr. Janice Hauge (University of North Texas) are working with Dr. Jamison to study how high-cost assistance impacts telecommunications competition. PURC Graduate Assistant Liangliang Jiang is studying how high-cost support affects companies' costs.

Competition in Telecommunications

We are in the final phases of a collaborative effort with Thammasat University in Thailand to examine best practices for assessing and facilitating competition in developing countries. The project involves a team of 10 experts from the United States. PURC researchers have developed

HEARING EXHIBIT 00000577

papers analyzing case studies of competitive market assessment, metrics that developed and developing countries can use for quantitative assessment of market competition, and best practices for removing barriers to competition. Training courses are scheduled in December 2008. New PURC research examines business separation and open access issues.

Net Neutrality

PURC researchers have written three papers analyzing the net neutrality debate. The PURC research shows that providing premium transmission service benefits small Web site providers and stimulates innovation, contrary to the claims of many net neutrality proponents.

Outreach

Emerging Issues Policy Forum: Digital Pathway to U.S. Economic Recovery and Prosperity Summit

A bipartisan cross section of industry, government, academic, and consumer-interest organizations gathered to focus on the unrealized potential of broadband as an economic stimulus to address this nation's most pressing social issues. PURC was invited as the only academic center to develop program materials for the October event featuring former FCC chairmen Michael Powell and Bill Kennard. We are in the process of compiling a report with the Joint Center for Political and Economic Studies which will be sent to the new administration in Washington, D.C. Details can be found online at www.digitalpathway.org.

Telecommunications Policy Research Conference

Why does broadband matter? What are the important broadband policy issues for the U.S.? These are just two of the questions addressed in the Holt and Jamison paper, "Broadband and Contributions to Economic Growth: Lessons from the U.S. Experience," presented by Dr. Jamison in September at the Telecommunications Policy Research Conference (TPRC) in Alexandria, Virginia.

How do rapidly changing telecommunications technologies and customer demand affect universal service policies? This was the theme of a TPRC presentation by PURC Senior Research Associate Dr. Janice Hauge about the paper "More than a Lifeline: Low-Income Households' Telecommunications Preferences," by Drs. Hauge, Jamison, and Chiang. Additional papers can be found online at www.purc.ufl.edu.

World Bank Workshop

In September, Dr. Sanford Berg delivered the presentation, "Critical Issues in Utility Regulation" at a meeting in Miami of The World Bank's Economics Unit and Sustainable Development Department of Latin America and the Caribbean. The workshop provided an opportunity to examine a number of issues, including environmental regulation in the region, infrastructure expansion, affordability, benchmarking, and the role of new technologies.

HEARING EXHIBIT 00000578

Benchmarking in Brazil

In July, PURC Research Associate Maria Corton delivered a presentation in Brazil about benchmarking at a workshop for the Agência Reguladora de Saneamento e Energia de São Paulo (ARSESP), the São Paulo regulatory agency. The agency recently expanded the sectors it regulates to include water and sanitation services, as well as energy.

Australian Competition and Consumer Commission Conference

"What Should Regulators Know?" was the topic of a keynote address by Dr. Jamison in July at the Australian Competition and Consumer Commission annual conference in Gold Coast, Australia. He emphasized that regulatory commissions today face adaptive challenges—situations where there is general disagreement over the relevant questions and how to make tradeoffs—and that regulators should be cautious about adopting technical fixes too soon in the process.

FIAR

Former Florida Public Service Commissioner Isilio Arriaga, a PURC associate, spoke in July in Mexico City, Mexico at FIAR (Foro Iberoamericano de Agencias de Regulación), a forum on infrastructure regulation. His presentation focused on the value of collaborative activities between regulatory agencies and universities. He was joined by PURC Assistant Director Araceli Castaneda who updated forum attendees on PURC research and recent programs in Latin America and other regions of the world.

Research Grant

University of Florida Ph.D. candidate Sangwon Lee was awarded a NET Institute Summer 2008 grant in June by the Networks, Electronic Commerce, and Telecommunications (NET) Institute based on a proposal he submitted with PURC Research Associate Justin Brown, a UF assistant professor of telecommunication.

International Telecommunications Society Conference

What happens if ISPs are allowed to charge Web sites for higher quality delivery of content? The amount and diversity of content grows. That is the conclusion of a recent study by Dr. Mark Jamison and Dr. Janice Hauge. Dr. Jamison presented the paper, "Getting What You Pay For: Analyzing the Net Neutrality Debate," in June at the International Telecommunications Society conference in Montreal, Canada. He also presented this paper in March 2008 at the European Communications Policy Research (EuroCPR) conference in Seville, Spain.

Telecom Environment Management (TEM) 2008

Will broadband be an engine of economic growth? That depends on whether consumers and businesses adopt new ways of using broadband and whether government policies encourage competition, according to Dr. Mark Jamison in his keynote speech at TEM 2008 in April in Orlando, Florida.

HEARING EXHIBIT 00000579

International Water Association Pi08 Conference

Managers and regulators are familiar with process benchmarking as a tool for improving utility performance. Metric benchmarking provides another approach to evaluating and rewarding improvements in cost containment and service quality. Dr. Sanford Berg presented the paper, "Water Utility Benchmarking for Managerial and Policy Decisions: Lessons from Developing Countries" in March at the International Water Association Pi08 Conference on Performance Assessment of Urban Infrastructure Services in Valencia, Spain. The paper has been published in the book, *Performance Assessment of Urban Infrastructure Services: Drinking Water, Wastewater, and Solid Waste* by IWA Publishing.

Universal Service Obligations and Regulation Regimes: The Experience of Latin America Conference

Lessons can be learned from the experiences of utilities in other nations. Experiences in developing countries offer insights into how transparency, information, and citizen participation can strengthen citizen confidence in infrastructure policies. Dr. Sanford Berg presented the paper, "Water Utility Performance in Central America: The Political Economy of Coverage, Quality, and Cost," in March at the Latin American conference in Barcelona hosted by the Center for International Relations and Development Studies (CIDOB).

Bulgarian Workshop

Economies in transition from socialized systems face significant problems in attracting investments in infrastructure. Water professionals from the Bulgarian State Energy and Water Regulatory Commission learned about building the block tariff, vulnerable customer protections, service quality indicators, international best practice, and information requirements for benchmarking during workshop sessions in Sofia in March taught by Dr. Sanford Berg. He participated as part of PURC's collaboration with the law firm Pierce Atwood.

Bandwidth-Driven Growth: Policy Essentials for Next Generation Development

This seminar in March, delivered by Dr. Jamison in Lisbon, Portugal and sponsored by the Portugal telecommunications regulator ANACOM, explored how telecommunications, and broadband in particular, affect economic growth and the regulatory policies that promote this development.

Partnership with Brazilian Regulators

PURC is pleased to announce an activities partnership with the Brazilian Regulator Agency, Associação Brasileira de Agências de Regulação (ABAR). The partnership was formed in March to facilitate activities and initiatives that strengthen regulatory capacity and support research on infrastructure performance.

35th Annual PURC Conference

More than 150 key leaders in industry and government attended the 35th Annual PURC Conference in February, The Real Climate Change: Planning and Investing Under Uncertainty. Speakers included FPL President Armando Olivera and Harvard Electricity Policy Group President Ashley Brown.

HEARING EXHIBIT 00000580

Training and Development

January

PURC/World Bank International Training Program on Utility Regulation and Strategy

Seventy infrastructure managers from 30 different nations learned from each other and from leading experts during the 23rd PURC/World Bank International Training Program on Utility Regulation and Strategy. This two-week program is designed to enhance the economic, technical, and policy skills required to design and manage sustainable regulatory systems for infrastructure sectors. The participants studied ongoing infrastructure reform programs, networked with international speakers, and offered their own insights into regulatory policies. Chairman Matthew Carter was a featured speaker at both the January and June programs.

February

Providing Leadership in Utility Policy: Federal and State Leadership Roles in Energy Policy

Leadership challenges for federal and state officials were the subject of a leadership seminar sponsored by PURC and Cambridge Leadership Associates (CLA) in Washington, D.C. Bob Gee joined Dr. Jamison in facilitating the workshop.

March

PURC Basic Course on Regulatory Economics for Telecommunications for ANACOM, Portugal

The basics of economic issues in telecommunications regulation were the focus of this course for 35 regulatory professionals at ANACOM, the telecommunications regulatory agency in Lisbon, Portugal.

June

PURC/World Bank International Training Program on Utility Regulation and Strategy

The 99 regulatory professionals who attended the 24th delivery of the PURC/World Bank International Training Program on Utility Regulation and Strategy raised the total number of participants since 1997 to 1,979. They have represented 135 nations.

Practicing Leadership in a Political Environment – A One-Day Intensive Training Workshop for Emerging Leaders in Utility Policy

International regulatory professionals examined the activities, behaviors, mindsets, and skills of a successful leader during this training workshop designed by PURC for emerging leaders in utility policy.

July

Providing Leadership in Utility Policy Seminar

Utility commissioners from the United States examined the leadership skills needed to help the nation confront its energy and environmental challenges during this leadership seminar presented by PURC and CLA.

RE: Docket No. 080006-WS – Water and wastewater industry annual reestablishment of authorized range of return on common equity for water and wastewater utilities pursuant to Section 367.081(4)(f), F.S.

AGENDA: 05/20/08 – Regular Agenda – Proposed Agency Action - Interested Persons May Participate

COMMISSIONERS ASSIGNED: All Commissioners

PREHEARING OFFICER: Argenziano

CRITICAL DATES: 12/30/08 – Pursuant to Section 367.081(4)(f), Florida Statutes

SPECIAL INSTRUCTIONS: None

FILE NAME AND LOCATION: S:\PSC\ECR\WP\080006.RCM.DOC

Case Background

Section 367.081(4)(f), Florida Statutes, authorizes the Commission to establish, not less than once each year, a leverage formula to calculate a reasonable range of returns on equity (ROE) for water and wastewater (WAW) utilities. In Docket No. 070006-WS, the Commission established the current leverage formula by Order No. PSC-07-0472-PAA-WS, issued June 1, 2007.

DOCUMENT NUMBER-DATE
03800 MAY-8 08
FPSC-COMMISSION CLERK

HEARING EXHIBIT 00000585

This staff recommendation utilizes the current leverage formula methodology established in Order No. PSC-01-2514-FOF-WS, issued December 24, 2001, in Docket No. 010006-WS. Since then, the Commission has used this methodology in establishing the leverage formula.

This methodology uses returns on equity from financial models based upon an index of natural gas utilities. In establishing the methodology, the Commission found that relatively few WAW utilities have actively traded stocks. Furthermore, the available WAW utilities were heavily influenced by regulation in one state – California – and by merger activity. Therefore, the Commission has used natural gas utilities as the proxy companies for the leverage formula since 2001. There are many natural gas utilities that have actively traded stocks and forecasted financial data. Staff used natural gas utilities that derive at least 55% of their revenue from regulated rates. These utilities have market power and are influenced significantly by economic regulation. As explained in the body of this recommendation, the model results based on natural gas utilities are adjusted to reflect the risks faced by Florida WAW utilities.

The Commission has jurisdiction pursuant to Section 367.081, Florida Statutes.

HEARING EXHIBIT 00000586

Discussion of Issues

Issue 1: What is the appropriate range of returns on common equity for water and wastewater (WAW) utilities pursuant to Section 367.081(4)(f), Florida Statutes?

Recommendation: Staff recommends that the current leverage formula methodology be applied using updated financial data. Staff recommends the following leverage formula:

Return on Common Equity = 7.36% + 2.123/Equity Ratio

Where the Equity Ratio = Common Equity / (Common Equity + Preferred Equity + Long-Term and Short-Term Debt)

Range: 9.48% @ 100% equity to 12.67% @ 40% equity

(Springer)

Staff Analysis: Section 367.081(4)(f), Florida Statutes, authorizes the Commission to establish a leverage formula to calculate a reasonable range of returns on equity for WAW utilities. The Commission must establish this leverage formula not less than once a year.

Staff notes that the leverage formula depends on four basic assumptions:

1) Business risk is similar for all WAW utilities;

2) The cost of equity is an exponential function of the equity ratio;

3) The marginal weighted average cost of investor capital is constant over the equity ratio range of 40% to 100%; and,

4) The debt cost rate at an assumed Moody's Baa3 bond rating, plus a 50 basis point private placement premium and a 50 basis point small utility risk premium, represents the average marginal cost of debt to a Florida WAW utility over an equity ratio range of 40% to 100%.

For these reasons, the leverage formula is assumed to be appropriate for the average Florida WAW utility.

The leverage formula relies on two ROE models. Staff adjusted the results of these models to reflect differences in risk and debt cost between the index of companies used in the models and the average Florida WAW utility. Both models include a four percent adjustment for flotation costs. The models are as follows:

- A Discounted Cash Flow (DCF) model applied to an index of natural gas utilities (NG) that have publicly traded stock and are followed by the Value Line Investment Survey (Value Line). This DCF model is an annual model and uses prospective growth rates. The index consists of 10 companies that derive at least 55% of their total revenue from

HEARING EXHIBIT 00000587

gas distribution service. These companies have a median Standard and Poor's bond rating of A.

- A Capital Asset Pricing Model (CAPM) using a market return for companies followed by Value Line, the average yield on the Treasury's long-term bonds projected by the Blue Chip Financial Forecasts, and the average beta for the index of NG utilities. The market return for the 2008 leverage formula was calculated using a quarterly DCF model.

Staff averaged the indicated returns of the above models and adjusted the result as follows:

- A bond yield differential of 39 basis points is added to reflect the difference in yields between an A/A2 rated bond, which is the median bond rating for the NG utility index, and a BBB-/Baa3 rated bond. Florida WAW utilities are assumed to be comparable to companies with the lowest investment grade bond rating, which is Baa3. This adjustment compensates for the difference between the credit quality of "A" rated debt and the credit quality of the minimum investment grade rating.

- A private placement premium of 50 basis points is added to reflect the difference in yields on publicly traded debt and privately placed debt, which is illiquid. Investors require a premium for the lack of liquidity of privately placed debt.

- A small utility risk premium of 50 basis points is added because the average Florida WAW utility is too small to qualify for privately placed debt.

After the above adjustments, the resulting cost of equity estimate is included in the average capital structure for the NG utilities. The cost of equity is determined at a 40% equity ratio and the leverage formula is derived. The derivation of the recommended leverage formula using the current methodology with updated financial data is presented in Attachment 1.

Staff recommends that the Commission cap returns on common equity at 12.67% for all water and wastewater utilities with equity ratios less than 40%. Staff believes that this will discourage imprudent financial risk. This cap is consistent with the methodology in Order No. PSC-01-2514-FOF-WS.

HEARING EXHIBIT 00000588

Issue 2: Should the Commission close this docket?

Recommendation: No. Upon expiration of the protest period, if a timely protest is not received from a substantially affected person, the decision should become final and effective upon the issuance of a Consummating Order. However, this docket should remain open to allow staff to monitor changes in capital market conditions and to readdress the reasonableness of the leverage formula as conditions warrant. (Hartman, Springer)

Staff Analysis: Upon expiration of the protest period, if a timely protest is not received from a substantially affected person, the decision should become final and effective upon the issuance of a Consummating Order. However, this docket should remain open to allow staff to monitor changes in capital market conditions and to readdress the reasonableness of the leverage formula as conditions warrant.

HEARING EXHIBIT 00000589

SUMMARY OF RESULTS

Leverage Formula Update

	Updated Results	Currently in Effect
(A) DCF ROE for Natural Gas Index	9.68%	8.89%
(B) CAPM ROE for Natural Gas Index	11.40%	10.98%
AVERAGE	10.54%	9.93%
Bond Yield Differential	0.39%	0.42%
Private Placement Premium	0.50%	0.50%
Small-Utility Risk Premium	0.50%	0.50%
Adjustment to Reflect Required Equity Return at a 40% Equity Ratio	0.73%	0.66%
Cost of Equity for Average Florida WAW Utility at a 40% Equity Ratio	12.67%	12.01%

2007 Leverage Formula (Currently in Effect)

Return on Common Equity =	7.10% + 1.961/ER
Range of Returns on Equity =	9.07% - 12.01%

2008 Leverage Formula (Recommended)

Return on Common Equity =	7.36% + 2.123/ER
Range of Returns on Equity =	9.48% - 12.67%

HEARING EXHIBIT 00000590

Marginal Cost of Investor Capital
Average Water and Wastewater Utility

Capital Component	Ratio	Marginal Cost Rate	Weighted Marginal Cost Rate
Common Equity	46.37%	11.94%	5.53%
Total Debt	53.63%	7.36% *	3.95%
	100.00%		9.48%

A 40% equity ratio is the floor for calculating the required return on common equity. The return on equity at a 40% equity ratio is 7.36% + 2.123/.40 = 12.67%

Marginal Cost of Investor Capital
Average Water & Wastewater Utility at 40% Equity Ratio

Capital Component	Ratio	Marginal Cost Rate	Weighted Marginal Cost Rate
Common Equity	40.00%	12.67%	5.07%
Total Debt	60.00%	7.36% *	4.42%
	100.00%		9.48%

Where: ER = Equity Ratio = Common Equity/(Common Equity + Preferred Equity + Long-Term Debt + Short-Term Debt)

* Assumed Baa3 rate for March 2008 plus a 50 basis point private placement premium and a 50 basis point small utility risk premium.

PROFESSIONAL EXPERIENCE

1996-2006

As a Principal (Vice President – 1996-2006), I offer testimony as an expert witness on the subjects of fair rate of return and cost of capital before state public utility commissions. I provide assistance and support to clients throughout the entire ratemaking litigation process.

1994-1996

As an Assistant Vice President, I prepared fair rate of return and cost of capital exhibits which are filed along with expert testimony before various state and federal public utility regulatory bodies. These supporting exhibits include the determination of an appropriate ratemaking capital structure and the development of embedded cost rates of senior capital. The exhibits also support the determination of a recommended return on common equity through the use of various market models, such as, but not limited to, Discounted Cash Flow analysis, Capital Asset Pricing Model and Risk Premium Methodology, as well as an assessment of the risk characteristics of the client utility. I also assisted in the preparation of responses to any interrogatories received regarding such testimonies filed on behalf of client utilities. Following the filing of fair rate of return testimonies, I assisted in the evaluation of opposition testimony in order to prepare interrogatory questions, areas of cross-examination, and rebuttal testimony. I also evaluated and assisted in the preparation of briefs and exceptions following the hearing process. I have submitted testimony before state public utility commissions regarding appropriate capital structure ratios and fixed capital cost rates.

1990-1994

As a Senior Financial Analyst, I supervised two analysts in the preparation of fair rate of return and cost of capital exhibits which are filed along with expert testimony before various state and federal public utility regulatory bodies. The team also assisted in the preparation of interrogatory responses.

I evaluated the final orders and decisions of various commissions to determine whether further actions are warranted and to gain insight which may assist in the preparation of future rate of return studies.

I assisted in the preparation of an article authored by Frank J. Hanley and A. Gerald Harris entitled "Does Diversification Increase the Cost of Equity Capital?" published in the July 15, 1991 issue of Public Utilities Fortnightly.

I co-authored an article with Frank J. Hanley entitled "Comparable Earnings: New Life for an Old Precept" which was published in the American Gas Association's Financial Quarterly Review, Summer 1994.

I was awarded the professional designation "Certified Rate of Return Analyst" (CRRA) by the National Society of Rate of Return Analysts (now the Society of Utility and Regulatory Financial Analysts (SURFA)). This designation is based upon education, experience and the successful completion of a comprehensive examination.

As Administrator of Financial Analysis for AUS Utility Reports, which reports financial data for over 200 utility companies and has approximately 1,000 subscribers, I oversee the preparation of this monthly publication, as well as the annual publication, Financial Statistics - Public Utilities.

COMPANY Utilities Inc. (Direct)
WITNESS Pauline M. Ahern (PMA-1)
DATE 10/23/08

1988-1990

As a Financial Analyst, I assisted in the preparation of fair rate of return studies including capital structure determination, development of senior capital cost rates, as well as the determination of an appropriate rate of return on equity. I also assisted in the preparation of interrogatory responses, interrogatory questions of the opposition, areas of cross-examination and rebuttal testimony. I also assisted in the preparation of the annual publication C. A. Turner Utility Reports - Financial Statistics - Public Utilities.

1973-1975

As a research assistant in the Research Department of the Regional Economics Division of the Federal Reserve Bank of Boston, I was involved in the development and maintenance of econometric models to simulate regional economic conditions in New England in order to study the effects of, among other things, the energy crisis of the early 1970's and property tax revaluations on the economy of New England. I was also involved in the statistical analysis and preparation of articles for the New England Economic Review. Also, I acted as assistant editor for New England Business Indicators.

1972

As a research assistant in the Office of the Assistant Secretary for International Affairs, U.S. Treasury Department, Washington, D.C., I developed and maintained econometric models which simulated the economy of the United States in order to study the results of various alternate foreign trade policies so that national trade policy could be formulated and recommended.

I am also a member of the Society of Utility and Regulatory Financial Analysts (formerly the National Society of Rate of Return Analysts).

RESUME OF JAMES A. ROTHSCHILD

UTILITY REGULATION EXPERIENCE

- Filed expert testimony on rate of return, accounting and/or financial issues with regard to electric, telephone, gas, water, health care and insurance rate setting matters in the following jurisdictions:

Alabama	Kentucky	Oklahoma
Arizona	Maryland	Oregon
Connecticut	Maine	Pennsylvania
Delaware	Massachusetts	Rhode Island
FERC	Minnesota	South Carolina
Florida	New Jersey	Vermont
Georgia	New York	Washington, DC
Illinois	Nova Scotia	Washington

OTHER BUSINESS EXPERIENCE

- Economic Analyst - Evaluated profitability of expansion and new venture proposals and provided financial support material for contract negotiations.

- Process Engineer - Responsible for process design and invented process improvements, which included a device that reduced a major water pollution problem.

Modigliani-Miller Theorem
From Wikipedia

The Modigliani-Miller theorem (of Franco Modigliani, Merton Miller) forms the basis for modern thinking on capital structure. The basic theorem states that, in the absence of taxes, bankruptcy costs, and asymmetric information, and in an efficient market, the value of a firm is unaffected by how that firm is financed.[1] It does not matter if the firm's capital is raised by issuing stock or selling debt. It does not matter what the firm's dividend policy is. Therefore, the Modigliani-Miller theorem is also often called the capital structure irrelevance principle.

Modigliani was awarded the 1985 Nobel Prize in Economics for this and other contributions.

Miller was awarded the 1990 Nobel Prize in Economics, along with Harry Markowitz and William Sharpe, for their "work in the theory of financial economics," with Miller specifically cited for "fundamental contributions to the theory of corporate finance."

Historical background

Miller and Modigliani derived the theorem and wrote their pathbreaking article when they were both professors at the Graduate School of Industrial Administration (GSIA) of Carnegie Mellon University. In contrast to most other business schools, GSIA put an emphasis on an academic approach to business questions. The story goes that Miller and Modigliani were set to teach corporate finance for business students despite the fact that they had no prior experience in corporate finance. When they read the material that existed they found it inconsistent so they sat down together to try to figure it out. The result of this was the article in the American Economic Review and what has later been known as the M&M theorem.

Propositions

The theorem was originally proven under the assumption of no taxes. It is made up of two propositions which can also be extended to a situation with taxes.

Consider two firms which are identical except for their financial structures. The first (Firm U) is unlevered: that is, it is financed by equity only. The other (Firm L) is levered: it is financed partly by equity, and partly by debt. The Modigliani-Miller theorem states that the value of the two firms is the same.

Without taxes

Proposition I: V_U = V_L \, where VU is the value of an unlevered firm = price of buying a firm composed only of equity, and VL is the value of a levered firm = price of buying a firm that is composed of some mix of debt and equity.

To see why this should be true, suppose an investor is considering buying one of the two firms U or L. Instead of purchasing the shares of the levered firm L, he could purchase the shares of firm U and borrow the same amount of money B that firm L does. The eventual returns to either of these investments would be the same. Therefore the price of L must be the same as the price of U minus the money borrowed B, which is the value of L's debt.

This discussion also clarifies the role of some of the theorem's assumptions. We have implicitly assumed that the investor's cost of borrowing money is the same as that of the firm, which need not be true in the presence of asymmetric information or in the absence of efficient markets.

Proposition II:
Proposition II with risky debt. As leverage (D/E) increases, the WACC stays constant.
Proposition II with risky debt. As leverage (D/E) increases, the WACC stays constant.

k_e =k_0+ \frac{D}{E}\left({k_0 - k_d } \right)

* ke is the required rate of return on equity, or cost of equity.
* k0 is the cost of capital for an all equity firm.
* kd is the required rate of return on borrowings, or cost of debt.
* D / E is the debt-to-equity ratio.

This proposition states that the cost of equity is a linear function of the firm's debt to equity ratio. A higher debt-to-equity ratio leads to a higher required return on equity, because of the higher risk involved for equity-holders in a company with debt. The formula is derived from the theory of weighted average cost of capital.

These propositions are true assuming the following assumptions:

* no taxes exist,
* no transaction costs exist, and
* individuals and corporations borrow at the same rates.

These results might seem irrelevant (after all, none of the conditions are met in the real world), but the theorem is still taught and studied because it tells us something very important. That is, capital structure matters precisely because one or more of these assumptions are violated. It tells us where to look for determinants of optimal capital structure and how those factors might affect optimal capital structure.

[edit] With taxes

Proposition I:

$$V_L = V_U + T_C D$$

where

* VL is the value of a levered firm.
* VU is the value of an unlevered firm.
* TCD is the tax rate (TC) x the value of debt (D)

This means that there are advantages for firms to be levered, since corporations can deduct interest payments. Therefore leverage lowers tax payments. Dividend payments are non-deductible.

Proposition II:

$$r_E = r_0 + \frac{D}{E}(r_0 - r_D)(1-T_C)$$

where

* rE is the required rate of return on equity, or cost of equity.
* r0 is the cost of capital for an all equity firm.
* rD is the required rate of return on borrowings, or cost of debt.
* D / E is the debt-to-equity ratio.
* Tc is the tax rate.

The same relationship as earlier described stating that the cost of equity rises with leverage, because the risk to equity rises, still holds. The formula however has implications for the difference with the WACC. Their second attempt on capital structure included taxes and identified that as the level of gearing increases by replacing equity with cheap debt the level of the WACC drops and an optimal capital structure does indeed exist at a point where debt is 100%

The following assumptions are made in the propositions with taxes:

* corporations are taxed at the rate TC on earnings after interest,

* no transaction costs exist, and
* individuals and corporations borrow at the same rate

Miller and Modigliani published a number of follow-up papers discussing some of these issues.

The theorem was first proposed by F. Modigliani and M. Miller in 1958.

[edit] Economic consequences

The Modigliani-Miller theorem, which justifies near limitless financial leverage, has largely boosted economic and financial activities.[citation needed] But it also brought increased complexity, lack of transparency, higher risk and uncertainty in those activities.[citation needed]

APPENDIX A TO THE REBUTTAL TESTIMONY OF PAULINE M. AHERN, CRRA

Proxy Group

Q. Please explain how you chose the proxy group of six AUS Utility Reports water companies.

A. The basis of selection for the proxy group of six AUS Utility Reports water companies were those companies which meet the following criteria: 1) they are included in the Water Company Group of AUS Utility Reports (September 2008); 2) they have Value Line or Reuters consensus five-year EPS growth rate projections; 3) they have a Value Line adjusted beta; 4) they have not cut or omitted their common dividends during the five years ending 2007 or through the time of the preparation of this testimony; 5) they have 60% or greater of total net operating income derived from and 60% or greater of total assets devoted to regulated water operations; and 5) which, at the time of the preparation of this testimony, had not publicly announced that they were involved in any major merger or acquisition activity.

Discounted Cash Flow Model

Q. Please describe the dividend yield you used in your application of the DCF model.

A. The unadjusted dividend yields are based upon an average of a recent spot date (August 29, 2008) as well as an average of the three months ended August 29, 2008, respectively, which are derived on page 3 of Exhibit (PMA-28)__. The average unadjusted yield is 2.78% and the median unadjusted yield is 2.86% for the six AUS Utility Reports water companies and 3.62% and 3.63%, respectively, for the FL PSC Natural Gas Index.

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 080006-WS EXHIBIT 15
COMPANY Utilities Inc. (Rebuttal)
WITNESS Pauline M. Ahern (Append. A)
DATE 10/23/08

Q. Please explain the dividend growth component shown on page 2 of Exhibit (PMA-28)__, Column 2.

A. Because dividends are paid quarterly, or periodically, as opposed to continuously (daily), an adjustment to the dividend yield must be made. This is often referred to as the discrete, or the Gordon Periodic, version of the DCF model.

Since the various companies in the proxy groups increase their quarterly dividend at various times during the year, a reasonable assumption is to reflect one-half the annual dividend growth rate in the D_1 expression, or $D_{1/2}$. This is a conservative approach which does not overstate the dividend yield which should be representative of the next twelve-month period. Therefore, the actual average dividend yields in Column 1 on page 2 of Exhibit (PMA-28)__ have been adjusted upward to reflect one-half the growth rates shown in Column 4.

Q. Please explain the basis of the growth rates of the proxy groups which you use in your application of the DCF model.

A. In my opinion, investors are likely to place great significance on the opinions expressed by financial information services, such as Value Line and Reuters, which are easily accessible and/or available on the Internet. Forecasts by analysts, including Value Line, are typically limited to five years. In my opinion, investors in water utilities would have little interest in historical growth rates beyond the most recent five years because an historical five-year period balances the five-year period for projected growth rates. Consequently, the use of five-year historical and five-year projected growth rates in earnings per share (EPS) and dividends per share (DPS) as well as the sum of internal and external growth in per share value (BR + SV) is appropriate to consider in the

determination of a growth rate for use in this application of the DCF model. In addition, investors realize that analysts have significant insight into the dynamics of the industries and they analyze individual companies as well as companies' abilities to effectively manage the effects of changing laws and regulations. Consequently, I have reviewed analysts' projected growth in EPS, as well as historical and projected five-year compound growth rates in EPS, DPS and (BR + SV) for each company in the proxy groups. Because the gas distribution industry has been partially deregulated, it is my opinion that investors rely upon forecasted EPS growth rates when arriving at their required return on common equity for gas distribution companies. Therefore, for these companies, I will rely exclusively upon forecasted growth rates in EPS in my application of the DCF. However, for the water companies, because the industry has not experienced the deregulation experienced by the gas distribution companies, I will also rely upon historical growth rates in my application of the DCF. The historical growth rates are from Value Line or are calculated in a manner similar to Value Line, while the projected growth rates in earnings are from Value Line and Reuters forecasts. Reuters growth rate estimates are not available for DPS and internal growth, and they do not include the Value Line projections.

For the water companies, in addition to evaluating EPS and DPS growth rates, it is reasonable to assume that investors also assess (BR + SV). The concept is based on well documented financial theory that future dividend growth is a function of the portion of the overall return to investors which is reinvested in the firm plus the sales of new common stock. Consequently, the growth component as proxied by internal and external growth is defined as follows:

$$g = BR + SV$$

Where:

B = the fraction of earnings retained by the firm, i.e., retention ratio

R = the return on common equity

S = the growth in common shares outstanding

V = the premium/discount of a company's stock price relative to its book value, i.e., one minus the complement of the market/book ratio.

Consistent with the use of five-year historical and five-year projected growth rates in EPS and DPS, I have derived five-year historical and five-year projected (BR + SV) growth. Projected EPS growth rate averages and medians are shown in Column 4 on the lower half of Schedule PMA-7, while historical and projected growth rates in DPS, EPS, and BR + SV are shown in Column 4 on the upper half of page 2 of Exhibit (PMA-28)__. The bases of these growth rates are summarized for the companies in the proxy groups on page 4, Exhibit (PMA-28)__. Supporting growth rate data are detailed on pages 5 through 10 of Exhibit (PMA-28)__, while pages 31 through 46 contain all of the most current Value Line Investment Survey data for the companies in the two proxy groups.

Q. Please summarize the DCF model result.

A. As shown on page 2 of Exhibit (PMA-28)__, the result of the application of the DCF model is 11.47% using the average and 11.46% when using the median value of the six AUS Utility Reports water companies results. As also shown on page 2 of Exhibit (PMA-28)__, the results of the application of the DCF model is 9.82% using the average and 9.43% when using the median value of the FL PSC Natural Gas Index

result. In arriving at conclusions of indicated common equity cost rate for the proxy groups, I have relied upon the median of the results of the DCF. I utilize the median due to the wide range of DCF results as well as the currently extremely volatile capital market condition. In my opinion, the median is a more accurate and reliable measure of central tendency, and provides recognition to all the DCF results.

In view of the foregoing, as shown on page 2 of Exhibit (PMA-28)__, the indicated common equity cost rate based upon the application of the DCF model is 11.66% for the six AUS Utility Reports water companies and 9.43% for the FL PSC Natural Gas Index.

The Risk Premium Model (RPM)

Q. Please describe the theoretical basis of the RPM.

A. Risk Premium theory indicates that the cost of common equity capital is greater than the prospective company-specific cost rate for long-term debt capital. In other words, the cost of common equity equals the expected cost rate for long-term debt capital plus a risk premium to compensate common shareholders for the added risk of being unsecured and last-in-line for any claim on the corporation's assets and earnings.

Q. Please explain the basis of the expected bond yields of 6.58% and 6.76% applicable to the average company in each proxy group, respectively.

A. Because the cost of common equity is prospective, a prospective yield on similarly-rated long-term debt is essential. As shown on page 12 of Exhibit (PMA-28)__, although based upon only one water company, the average Moody's bond rating is A2 for the six AUS Utility Reports water companies while the average Moody's bond rating is A3 for the FL PSC Natural Gas Index. I relied upon a consensus forecast of

about 50 economists of the expected yield on Aaa rated corporate bonds for the six calendar quarters ending with the fourth calendar quarter of 2009 as derived from the September 1, 2008 Blue Chip Financial Forecasts (shown on page 2 of Exhibit (PMA-12)__. As shown on Line No. 1 of page 11 of Exhibit (PMA-28)__, the average expected yield on Moody's Aaa rated corporate bonds is 5.87%. It is necessary to adjust that average yield to be equivalent to a Moody's A2 rated public utility bond. Consequently, an adjustment to the average prospective yield on Aaa rated corporate bonds of 0.71% was required. It is shown on Line No. 2, page 12 and explained in Note 2 at the bottom of the page. After adjustment, the expected bond yield applicable to a Moody's A rated public utility bond is 6.58% as shown on Line No. 3.

Because the proxy group of six AUS Utility Reports water companies average Moody's bond rating is A2, no adjustment is necessary to make the prospective bond yield applicable to an A2 public utility bond. However, because the average Moody's bond rating of the FL PSC Natural Gas Index is A3, an adjustment of 18 basis points (0.18%) is necessary to make the prospective bond yield applicable to an A3 public utility bond. Therefore, the expected specific bond yields is 6.58% for the proxy group of water companies and 6.76% for the FL PSC Natural Gas Index.

Q. Please explain the method utilized to estimate the equity risk premium.

A. I evaluated the results of two different historical equity risk premium studies, as well as Value Line's forecasted total annual market return in excess of the prospective yield on high grade corporate bonds, as detailed on pages 15, 16 and 17 of Exhibit (PMA-28)__. As shown on Line No. 3, page 15, the mean equity risk premium is 5.58% applicable to the proxy group of six AUS Utility Reports water companies and 4.96% applicable to

the FL PSC Natural Gas Index. These estimates are the result of an average of a beta-derived historical equity risk premium exclusively as will be discussed subsequently as well as the mean historical equity risk premium applicable to public utilities with bonds rated A based upon holding period returns.

The basis of the beta-derived equity risk premium applicable to the proxy group is shown on page 16 of Exhibit (PMA-28)__. The beta-determined equity risk premium should receive substantial weight because betas are derived from the market prices of common stocks over a recent five-year period. Beta is a meaningful measure of prospective relative risk to the market as a whole and is a logical means by which to allocate a relative share of the market's total equity risk premium.

> The total market equity risk premium utilized is 6.20% and is based exclusively upon the long-term historical market risk premium after a review of both the long-term historical and forecasted market risk premia. Because it is my opinion that the current and recent substantial volatility in the stock market is extraordinary and not representative of the expected long-term, neither is the current forecasted market risk premium as shown on page 16 of Exhibit (PMA-28)__. To derive the historical market equity risk premium, I used the most recent Morningstar[1] data on holding period returns for the S&P 500 Composite Index and the average historical yield on Moody's Aaa and A rated corporate bonds for the period 1926-2007.

The long-term arithmetic mean total return rate on the market as a whole of 12.30% and the long-term arithmetic mean yield on corporate bonds of 6.10% were used, as shown at Line Nos. 1 and 2 of page 16 of Exhibit (PMA-28)__. As shown on Line No. 3 of page 16, the resultant long-term historical equity risk premium on the market as a whole is 6.20%. I used arithmetic mean return rates because they are appropriate for cost of capital purposes as discussed previously.

[1] Morningstar, Inc. acquired Ibbotson Associates in 2006.

The basis of the forecasted market equity risk premium can be found on Line Nos. 4 through 6 on page 16 of Exhibit (PMA-28)__. It is derived from an average of the most recent 3-month (using the months of June 2008 through August 2008) and a recent spot (August 29, 2008) median market price appreciation potentials by Value Line as explained in detail in Note 1 on page 21 of Exhibit (PMA-28)__.

The average expected price appreciation is 78% which translates to 15.51% per annum and, when added to the average (similarly calculated) dividend yield of 2.32% equates to a forecasted annual total return rate on the market as a whole of 17.83%. Thus, this methodology is consistent with the use of the 3-month and spot dividend yields in my application of the DCF model. To derive the forecasted total market equity risk premium of 11.96% shown on Exhibit (PMA-28)__, page 16, Line No. 6, the September 1, 2008 forecast of about 50 economists of the expected yield on Moody's Aaa rated corporate bonds for the six calendar quarters ending with the fourth calendar quarter 2009 of 5.87% from Blue Chip Financial Forecasts was deducted from the Value Line total market return of 17.83%. The calculation resulted in an expected market risk premium of 11.96%.

However, because I believe the current and recent substantial volatility in the stock market is extraordinary and not representative of the expected long-term, in this instance, I will not rely upon the forecasted market equity risk premium but rather, will rely upon this historical long-term arithmetic market equity risk premium of 6.20%.

On page 18 of Exhibit (PMA-28)__, the most current Value Line betas for the companies in the two groups are shown. Applying the median beta of the proxy group, consistent with my reliance upon the median DCF results as previously discussed, to the

market equity risk premium of 6.20% results in a beta adjusted equity risk premium of 6.51% for the proxy group of six AUS Utility Reports water companies and 5.27% for the FL PSC Natural Gas Index as shown on Line No. 9.

A mean equity risk premium of 4.65% applicable to companies with A rated public utility bonds was calculated based upon holding period returns from a study using public utilities, as shown on Line No. 2, page 15 of Exhibit (PMA-28)__, and detailed on page 17 of the same Exhibit.

The equity risk premia applicable to the proxy group of six AUS Utility Reports water companies and FL PSC Natural Gas Index are the averages of the beta-derived premia and that based upon the holding period returns of public utilities with A rated bonds, as summarized on Exhibit (PMA-28)__, page 15, i.e., 5.58% and 4.96%, respectively.

Q. What are the indicated RPM common equity cost rates?

A. They are 12.16% for the six AUS Utility Reports water companies, 11.72% for the FL PSC Natural Gas Index as shown on Exhibit (PMA-28)__, page 1.

The Capital Asset Pricing Model (CAPM)

Q. Please explain the theoretical basis of the CAPM.

A. CAPM theory defines risk as the covariability of a security's returns with the market's returns. This covariability is measured by beta ("β"), an index measure of an individual security's variability relative to the market. A beta less than 1.0 indicates lower variability while a beta greater than 1.0 indicates greater variability than the market.

The CAPM assumes that all other risk, i.e., all non-market or unsystematic risk, can be eliminated through diversification. The risk that cannot be eliminated through

diversification is called market, or systematic, risk. The CAPM presumes that investors require compensation for risks that cannot be eliminated through diversification. Systematic risks are caused by macroeconomic and other events that affect the returns on all assets. Essentially, the model is applied by adding a risk-free rate of return to a market risk premium. This market risk premium is adjusted proportionately to reflect the systematic risk of the individual security relative to the market as measured by beta. The traditional CAPM model is expressed as:

$$R_s = R_f + \beta(R_m - R_f)$$

Where:

R_s	=	Return rate on the common stock
R_f	=	Risk-free rate of return
R_m	=	Return rate on the market as a whole
β	=	Adjusted beta (volatility of the security relative to the market as a whole)

Numerous tests of the CAPM have confirmed its validity. These tests have measured the extent to which security returns and betas are related as predicted by the CAPM. However, Morin observes that while the results support the notion that beta is related to security returns, it has been determined that the empirical Security Market Line (SML) described by the CAPM formula is not as steeply sloped as the predicted SML. Morin[2] states:

> With few exceptions, the empirical studies agree that ... low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.

* * *

[2] Id., at p. 175.

Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = R_F + x\,\beta(R_M - R_F) + (1-x)\,\beta(R_M - R_F)$$

where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = R_F + 0.25(R_M - R_F) + 0.75\,\beta(R_M - R_F)^3$$

In view of theory and practical research, I have applied both the traditional CAPM and the empirical CAPM to the companies in the proxy group and averaged the results.

Q. Please describe your selection of a risk-free rate of return.

A. As shown at the top of column 3 on page 20 of Exhibit (PMA-28)__, the risk-free rate adopted for both applications of the CAPM is 4.78%. It is based upon the average consensus forecast of the reporting economists in the September 1, 2008 Blue Chip Financial Forecasts as shown in Note 2, page 21, of the expected yields on 30-year U.S. Treasury bonds for the six quarters ending with the fourth calendar quarter 2009.

Q. Please explain the estimation of the expected equity risk premium for the market.

A. After estimating investors' expected total return rate for the market, I subtract the expected risk-free rate from the expected total return rate for the market to arrive at an expected equity risk premium for the market, some proportion of which must be allocated to the companies in the proxy group through the use of beta. The total market equity risk premium utilized was 7.1% and, in this instance, is based upon the long-term historical market risk premia because, in my opinion, the current and recent substantial

[3] Id., at p. 190.

volatility in the stock market is extraordinary and not representative of the expected long-term.

The basis of the projected median market equity risk premium is explained in detail in Note 1 on page 21 of Exhibit (PMA-28)__. As previously discussed, it is derived from an average of the most recent 3-month (using the months of June 2008 through August 2008) and a recent spot (August 29, 2008) 3 - 5 year median total market price appreciation projections from Value Line, and the long-term historical average from Morningstar. The appreciation projections by Value Line plus average dividend yield equate to a forecasted annual total return rate on the market of 17.83%. The long-term historical return rate of 12.30% on the market as a whole is from SBBI. In each instance, the relevant risk-free rate was deducted from the total market return rate. For example, from the Value Line projected total market return of 17.83%, the forecasted average risk-free rate of 4.78% was deducted indicating a forecasted market risk premium of 13.05%. From the Ibbotson Associates' long-term historical total return rate of 12.30%, the long-term historical income return rate on long-term U.S. Government Securities of 5.20% was deducted indicating an historical equity risk premium of 7.10%. Thus, the average of the projected and historical total market risk premia of 13.11% and 7.10%, respectively, is 10.08%. However, as stated previously, I will rely upon the historical market equity risk premium of 7.10%.

Q. What are the results of your application of the traditional and empirical CAPM to the two groups?

A. As shown on Exhibit (PMA-28)__, Line No. 1 of page 19, the traditional CAPM cost rate is 12.24% for the proxy group of six AUS Utility Reports water companies and

10.95% for the FL PSC Natural Gas Index. And, as shown on Line No. 2 of page 20, the empirical CAPM cost rate is 12.15% for the six AUS Utility Reports water companies and 11.08% for the FL PSC Natural Gas Index. The traditional and empirical CAPM cost rates are shown individually by company on Exhibit (PMA-28)__. As with the DCF results discussed previously, and for the same reasons, namely the wide range of results and the current extremely volatile capital markets, I rely upon the median results of the traditional CAPM and ECAPM for the proxy group. As shown on Line No. 3, the CAPM cost rate applicable to the proxy group of six AUS Utility Reports water companies is 12.20%, while the CAPM cost rate applicable to the FL PSC Natural Gas Index is 11.95% based upon the traditional and empirical CAPM.

Comparable Earnings Model (CEM)

Q. Please describe your application of the comparable earnings model and how it is used to determine common equity cost rate.

A. My applications of the CEM are summarized on pages 22 through 30 of Exhibit (PMA-28)__. Pages 22 through 24 show the CEM results for the proxy group of six AUS Utility Reports water companies and page 25 shows the CEM results for the FL PSC Natural Gas Index. Supporting data are shown on pages 26 through 29 and page 30 contains notes related to pages 22 through 29.

The comparable earnings approach is derived from the "corresponding risk" standard of the landmark cases of the U.S. Supreme Court. Therefore, it is consistent with the Hope doctrine that the return to the equity investor should be commensurate with returns on investments in other firms having corresponding risks.

The CEM is based upon the fundamental economic concept of opportunity cost

which maintains that the true cost of an investment is equal to the cost of the best available alternative use of the funds to be invested. The opportunity cost principle is also consistent with one of the fundamental principles upon which regulation rests: that regulation is intended to act as a surrogate for competition and to provide a fair rate of return to investors.

The CEM is designed to measure the returns expected to be earned on the book common equity, in this case net worth, of similar risk enterprises. Thus, it provides a direct measure of return, since it translates into practice the competitive principle upon which regulation rests. In my opinion, it is inappropriate to use the achieved returns of regulated utilities of similar risk because to do so would be circular and inconsistent with the principle of equality of risk with non-price regulated firms.

The difficulty in application of the CEM is to select a proxy group of companies which are similar in risk, but are not price regulated utilities. Consequently, the first step in determining a cost of common equity using the comparable earnings model is to choose an appropriate proxy group or groups of non-price regulated firms. The proxy group(s) should be broad-based in order to obviate any company-specific aberrations. As stated previously, utilities need to be eliminated to avoid circularity since the returns on book common equity of utilities are substantially influenced by regulatory awards and are therefore not representative of the returns that could be earned in a truly competitive market.

Q. Please describe your application of the CEM.

A. My application of the CEM is market-based in that the selection of non-price regulated firms of comparable risk is based upon statistics derived from the market prices paid by

investors.

I have chosen two proxy groups of domestic, non-price regulated firms to reflect both the systematic and unsystematic risks of the proxy groups of six AUS Utility Reports water companies and the FL PSC Natural Gas Index, respectively. The proxy group of two hundred twenty-two non-utility companies similar in risk to the proxy group of six AUS Utility Reports water companies and forty-nine non-utility companies similar in risk to the FL PSC Natural Gas Index are listed on pages 22 through 25, Exhibit (PMA-28)__. The criteria used in the selection of these proxy companies were that they be domestic non-utility companies and have a meaningful rate of return on net worth, common equity or partners' capital reported in Value Line (Std. Ed.) for each of the five years ended 2007, or projected for 2011-2013. Value Line betas were used as a measure of systematic risk. The standard error of the regression was used as a measure of each firm's unsystematic or specific risk. The standard error of the regression reflects the extent to which events specific to a company's operations will affect its stock price and, therefore, is a measure of diversifiable, unsystematic, company-specific risk. *In essence, companies which have similar betas and standard errors of the regressions, have similar investment risk, i.e., the sum of systematic (market) risk as reflected by beta and unsystematic (business and financial) risk, as reflected by the standard error of the regression, respectively. Those statistics are derived from regression analyses using market prices which, under the EMH reflect all relevant risks. The application of these criteria results in proxy groups of non-price regulated firms similar in risk to the average company in each proxy group.*

Using a Value Line, Inc. proprietary database dated June 16, 2008, the proxy

Notes: Moody's®Long-Term Corporate Bond Yield Averages have been published daily since 1929. They are derived from pricing data on a regularly-replenished population of nearly 75 seasoned corporate bonds in the US market, each with current outstandings over $100 million. The bonds have maturities as close as possible to 30 years; they are dropped from the list if their remaining life falls below 20 years, if their ratings change. Bonds with deep discounts or steep premiums to par are generally excluded. All yields are yield-to-maturity calculated on a semi-annual basis. Each observation is an unweighted average, with Average Corporate Yields representing the unweighted average of the corresponding Average Industrial and Average Public Utility observations. Because of the dearth of Aaa -rated railroad term bond issues, Moody's® Aaa railroad bond yield average was discontinued as of December 15, 1967. Moody's® Aaa public utility average suspended from Jan. 1984 thru Sept. 1984. Oct. 1984 figure for last 14 business days only. The Railroad Bond Averages were discontinued as of July 17, 1989 because of insufficient frequently tradable bonds. The July figures were based on 8 business days.
Because of the dearth of Aaa rated public utility bond issues, Moody's Aaa public utility bond yield average was discontinued as of December 10, 2001.
Note: October 2002 figures have been adjusted.
Note: January 2003 figures have been adjusted.

STANDARD & POOR'S

CORPORATE RATINGS CRITERIA

Dear Reader,

This volume updates the 1994 edition of *Corporate Finance Criteria*. There are several new chapters, covering our recently introduced Bank Loan Ratings, criteria for "notching" junior obligations, and the role of cyclicality in ratings. Naturally, the ratio medians have been brought up to date.

Standard & Poor's criteria publications represent our endeavor to convey the thought processes and methodologies employed in determining Standard & Poor's ratings. They describe both the quantitative and qualitative aspects of the analysis. We believe that our rating product has the most value if users appreciate all that has gone into producing the letter symbols.

Bear in mind, though, that a rating is, in the end, an opinion. The rating experience is as much an art as it is a science.

Solomon B. Samson
Chairman, Corporate Ratings Criteria Committee

Standard & Poor's receives compensation for rating debt obligations. Such compensation is based on the time and effort to determine the rating and is normally paid either by the issuers of such securities or by the underwriters participating in the distribution thereof. The fees generally vary from $2,500 to $50,000. While Standard & Poor's reserves the right to disseminate the rating, it receives no payment for doing so, except for subscription to its publications.

Utilities

The utilities rating methodology encompasses two basic components: business risk analysis and financial analysis. Evaluation of industry characteristics, the utility's position within that industry, its regulation, and its management provides the context for assessing a firm's financial condition.

Historical analysis is a tool for identifying strengths and weaknesses, and provides a starting point for evaluating financial condition. Business position assessment is the qualitative measure of a utility's fundamental creditworthiness. It focuses on the forces that will shape the utilities' future.

Utilities credit analysis factors

Business risk	Financial risk
• Markets and service area economy	• Earnings protection
• Competitive position	• Capital structure
• Operations	• Cash flow adequacy
• Regulation	• Financial flexibility/capital attraction
• Management	
• Fuel, power, and water supply	
• Asset concentration	

The credit analysis of utilities is quickly evolving, as utilities are treated less as regulated monopolies and more as entities faced with a host of challengers in a competitive environment. Marketplace dynamics are supplanting the power of regulation, making it critically important to reduce costs and/or market new services in order to thwart competitors' inroads.

Markets and service area economy

Assessing service territory begins with the economic and demographic evaluation of the area in which the utility has its franchise. Strength of long-term demand for the product is examined from a macroeconomic perspective. This enables Standard & Poor's to evaluate the affordability of rates and the staying power of demand.

Standard & Poor's tries to discern any secular consumption trends and, more importantly, the reasons for them. Specific items examined include the size and growth rate of the market, strength of the franchise, historical and projected sales growth, income levels and trends in population, employment, and per capita income. A utility with a healthy economy and customer base—as illustrated by diverse employment opportunities, average or above-average wealth and income statistics, and low unemployment—will have a greater capacity to support its operations.

For electric and gas utilities, distribution by customer class is scrutinized to assess the depth and diversity of the utility's customer mix. For example, heavy industrial concentration is viewed cautiously, since a utility may have significant exposure to cyclical volatility. Alternatively, a large residential component yields a stable and more predictable revenue stream. The largest utility customers are identified to determine their importance to the bottom line and assess the risk of their loss and potential adverse effect on the utility's financial position. Credit concerns arise when individual customers represent more than 5% of revenues. The company or industry may play a significant role in the overall economic base of the service area. Moreover, large customers may turn to cogeneration or alternative power supplies to meet their energy needs, potentially leading to reduced cash flow for the utility (even in cases where a large customer pays discounted rates and is not a profitable account for the utility). Customer concentration is less significant for water and telecommunication utilities.

Competitive position

As competitive pressures have intensified in the utilities industry, Standard & Poor's analysis has deepened to include a more thorough review of competitive position.

Electric utility competition

For electric utilities, competitive factors examined include: percentage of firm wholesale revenues that are most vulnerable to competition; industrial load concentration; exposure of key customers to alternative suppliers; commercial concentrations; rates for various customer classes; rate design and flexibility; production costs, both marginal and fixed; the regional capacity situation; and transmission constraints. A regional focus is evident, but high costs and rates relative to national averages are also of significant concern because of the potential for electricity substitutes over time.

Mounting competition in the electric utility industry derives from excess generating capacity, lower barriers to entering the electric generating business, and marginal costs that are below embedded costs. Standard & Poor's has already witnessed declining prices in wholesale markets, as *de facto* retail competition is already being seen in several parts of the country. Standard & Poor's believes that over the coming years more and more customers will want and demand lower prices. Initial concerns focus on the largest industrial loads, but other customer classes will be increasingly vulnerable. Competition will not necessar-

fly be driven by legislation. Other pressures will arise from global competition and improving technologies, whether it be the declining cost of incremental generation or advances in transmission capacity or substitute energy sources like the fuel cell. It is impossible to say precisely when wide-open retail competition will occur; this will be evolutionary. However, significantly greater competition in retail markets is inevitable.

Gas utility competition

Similarly, gas utilities are analyzed with regard to their competitive standing in the three major areas of demand: residential, commercial, and industrial. Although regulated as holders of monopoly power, natural gas utilities have for some time been actively competing for energy market share with fuel oil, electricity, coal, solar, wood, etc. The long-term staying power of market demand for natural gas cannot be taken for granted. In fact, as the electric utility industry restructures and reduces costs, electric power will become more cost competitive and threaten certain gas markets. In addition, independent gas marketers have made greater inroads behind the city gate and are competing for large gas users. Moreover, the recent trend by state regulators to unbundle utility services is creating opportunities for outsiders to market niche products. Distributors still have the upper hand, but those who do not reduce and control costs, and thus rates, could find competition even more difficult.

Natural gas pipelines are judged to carry a somewhat higher business risk than distribution companies because they face competition in every one of their markets. To the extent a pipeline serves utilities versus industrial end users, its stability is greater. Over the next five years, pipeline competition will heat up since many service contracts with customers are expiring. Most distributor or end-use customers are looking to reduce pipeline costs and are working to improve their load factor to do so. Thus, pipelines will likely find it difficult to recontract all capacity in coming years. Being the pipeline of choice is a function of attractive transportation rates, diversity and quality of services provided, and capacity available in each particular market. In all cases though, periodic discounting of rates to retain customers will occur and put pressure on profitability.

Water utility competition

As the last true utility monopoly, water utilities face very little competition and there is currently no challenge to the continuation of franchise areas. The only exceptions have been cases where investor-owned water companies have been subject to condemnation and municipalization because of poor service or political motivations. In that regard, Standard & Poor's pays close attention to costs and rates in relation to neighboring utilities and national averages. (In contrast, the privatization of public water facilities has begun, albeit at a slower pace than anticipated. This is occurring mostly in the form of operating contracts and public/private partnerships, and not in asset transfers. This trend should continue as cities look for ways to balance their tight budgets.) Also, water utilities are not fully immune to the forces of competition; in a few instances wholesale customers can access more than one supplier.

Telephone competition

The Telecommunications Act of 1996 accelerates the continuing challenge to the local exchange companies' (LECs) century-old monopoly in the local loop. Competitive access providers (CAPs), both facilities-based and resellers, are aggressively pursuing customers, generally targeting metropolitan areas, and promising lower rates and better service.

Most long-distance calls are still originated and terminated on the local telephone company network. To complete such a call, the long-distance provider (including AT&T, MCI, Sprint and a host of smaller interexchange carriers or "IXCs") must pay the local telephone company a steep "access" fee to compensate the local phone company for the use of its local network. CAPs, in contrast, build or lease facilities that directly connect customers to their long-distance carrier, bypassing the local telephone company and avoiding access fees, and thereby can offer lower long-distance rates. But the LECs are not standing still; they are combating the loss of business to CAPs by lowering access fees, thereby reducing the economic incentive for a high usage long-distance customer to use a CAP. LECs are attempting to make up for the loss of revenues from lower access fees by increasing basic local service rates (or at least not lowering them), since basic service is far less subject to competition. LECs are improving operating efficiency and marketing high margin, value-added new services. Additionally, in the wake of the Telecommunications Act, LECs will capture at least some of the inter-LATA long-distance market. As a result of these initiatives, LECs continue to rebuild themselves—from the traditional utility monopoly to leaner, more marketing oriented organizations.

While LECs, and indeed all segments of the telecommunications sector, face increasing competition, there are favorable industry factors that tend to offset heightened business risk and auger for overall ratings stability for most LECs. Importantly, telecommunications is a declining-cost business. With increased deployment of fiber optics, the cost of transport has fallen dramatically and digital switching hardware and software have yielded more capable, trouble-free and cost-efficient networks. As a result, the cost of network maintenance has dropped sharply, as illustrated by the ratio of employees per 10,000 access lines, an oft cited measurement of efficiency. Ratios as low as 25 employees per 10,000 lines are being seen, down from the typical 40 or more employees per 10,000 ratio of only a few years ago.

In addition, networks are far more capable. They are increasingly digitally switched and able to accommodate high-speed communications. The infrastructure needed to accommodate switched broadband services will be built into telephone networks over the next few years. These advanced networks will enable telephone companies to look to a greater variety of high-margin, value-added serv-

ices. In addition to those current services such as call waiting or caller ID, the delivery of hundreds of broadcast and interactive video channels will be possible. While these services offer the potential of new revenue streams, they will simultaneously present a formidable challenge. LECs will be entering the new (to them) arena of multimedia entertainment and will have to develop expertise in marketing and entertainment programming acumen; such skills stand in sharp contrast to LECs' traditional strengths in engineering and customer service.

Operations

Standard & Poor's focuses on the nature of operations from the perspective of cost, reliability, and quality of service. Here, emphasis is placed on those areas that require management attention in terms of time or money and which, if unresolved, may lead to political, regulatory, or competitive problems.

Operations of electric utilities

For electrics, the status of utility plant investment is reviewed with regard to generating plant availability and utilization, and also for compliance with existing and contemplated environmental and other regulatory standards. The record of plant outages, equivalent availability, load factors, heat rates, and capacity factors are examined. Also important is efficiency, as defined by total megawatt hour per employee and customers per employee. Transmission interconnections are evaluated in terms of the number of utilities to which the utility in question has access, the cost structures and available generating capacity of these other utilities, and the price paid for wholesale power.

Because of mounting competition and the substantial escalation in decommissioning estimates, significant weight is given to the operation of nuclear facilities. Nuclear plants are becoming more vulnerable to high production costs that make their rates uneconomic. Significant asset concentration may expose the utility to poor performance, unscheduled outages or premature shutdowns, and large deferrals or regulatory assets that may need to be written off for the utility to remain competitive. Also, nuclear facilities tend to represent significant portions of their operators' generating capability and assets. The loss of a productive nuclear unit from both power supply and rate base can interrupt the revenue stream and create substantial additional costs for repairs and improvements and replacement power. The ability to keep these stations running smoothly and economically directly influences the ability to meet electric demand, the stability of revenues and costs, and, by extension, the ability to maintain adequate creditworthiness. Thus, economic operation, safe operation, and long-term operation are examined in depth. Specifically, emphasis is placed on operation and maintenance costs, busbar costs, fuel costs, refueling outages, forced outages, plant statistics, NRC evaluations, the potential need for repairs, operating licenses, decommissioning estimates and amounts held in external trusts, spent fuel storage capacity, and management's nuclear experience. In essence, favorable nuclear operations offer significant opportunities but, if a nuclear unit runs poorly or not at all, the attendant risks can be great.

Operations of gas utilities

For gas pipeline and distribution companies, the degree of plant utilization, the physical condition of the mains and lines, adequacy of storage to meet seasonal needs, "lost and unaccounted for" gas levels, and per-unit nongas operating and construction costs are important factors. Efficiency statistics such as load factor, operating costs per customer, and operating income per employee are also evaluated in comparison to other utilities and the industry as a whole.

Operations of water utilities

As a group, water utilities are continually upgrading their physical plant to satisfy regulations and to develop additional supply. Over the next decade, water systems will increasingly face the task of maintaining compliance, as drinking water regulations change and infrastructure ages. Given that the Safe Drinking Water Act was authorized in 1974, the first generation of treatment plants built to conform with these rules are almost 20 years old. Additionally, because the focus during this period was on satisfying environmental standards, deferred maintenance of distribution systems has been common, especially in older urban areas. The increasing cost of supplying treated water argues against the high level of unaccounted for water witnessed in the industry. Consequently, Standard & Poor's anticipates capital plans for rebuilding distribution lines and major renewal and replacement efforts aimed at treatment plants.

Operations of telephone companies

For telephone companies, cost-of-service analysis focuses on plant capability and measures of efficiency and quality of service. Plant capability is ascertained by looking at such parameters as percentage of digitally switched lines; fiber optic deployment, in particular in those portions of the plant key to network survival; and the degree of broadband capacity fiber and coaxial deployment and broadband switching capacity. Efficiency measures include operating margins, the ratio of employees per 10,000 access lines, and the extent of network and operations consolidation. Quality of service encompasses examination of quantitative measures, such as trouble reports and repeat service calls, as well as an assessment of qualitative factors, that may include service quality goals mandated by regulators.

Regulation

Regulatory rate-setting actions are reviewed on a case-by-case basis with regard to the potential effect on creditworthiness. Regulators' authorizing high rates of return is of little value unless the returns are earnable. Furthermore, allowing high returns based on noncash items does not benefit bondholders. Also, to be viewed positively, regulatory treatment should allow consistent performance from

period to period, given the importance of financial stability as a rating consideration.

The utility group meets frequently with commission and staff members, both at Standard & Poor's offices and at commission headquarters, demonstrating the importance Standard & Poor's places on the regulatory arena for credit quality evaluation. Input from these meetings and from review of rate orders and their impact weigh heavily in Standard & Poor's analysis.

Standard & Poor's does not "rate" regulatory commissions. State commissions typically regulate a number of diverse industries, and regulatory approaches to different types of companies often differ within a single regulatory jurisdiction. This makes it all but impossible to develop inclusive "ratings" for regulators.

Standard & Poor's evaluation of regulation also encompasses the administrative, judicial, and legislative processes involved in state and federal regulation. These can affect rate-setting activities and other aspects of the business, such as competitive entry, environmental and safety rules, facility siting, and securities sales.

As the utility industry faces an increasingly deregulated environment, alternatives to traditional rate-making are becoming more critical to the ability of utilities to effectively compete, maintain earnings power, and sustain creditor protection. Thus, Standard & Poor's focuses on whether regulators, both state and federal, will help or hinder utilities as they are exposed to greater competition. There is much that regulators can do, from allocating costs to more captive customers to allowing pricing flexibility—and sometimes just stepping out of the way.

Under traditional rate-making, rates and earnings are tied to the amount of invested capital and the cost of capital. This can sometimes reward companies more for justifying costs than for containing them. Moreover, most current regulatory policies do not permit utilities to be flexible when responding to competitive pressures of a deregulated market. Lack of flexible tariffs for electric utilities may lure large customers to wheel cheaper power from other sources.

In general, a regulatory jurisdiction is viewed favorably if it permits earning a return based on the ability to sustain rates at competitive levels. In addition to performance-based rewards or penalties, flexible plans could include market-based rates, price caps, index-based prices, and rates premised on the value of customer service. Such rates more closely mirror the competitive environment that utilities are confronting.

Electric industry regulation

The ability to enter into long-term arrangements at negotiated rates without having to seek regulatory approval for each contract is also important in the electric industry. (While contracting at reduced rates constrains financial performance, it lessens the potential adverse impact in the event of retail wheeling. Since revenue losses associated with this strategy are not likely to be recovered from ratepayers, utilities must control costs well enough to remain competitive if they are to sustain current levels of bondholder protection.)

Natural gas industry regulation

In the gas industry, too, several state commission policies weigh heavily in the evaluation of regulatory support. Examples include stabilization mechanisms to adjust revenues for changes in weather or the economy, rate and service unbundling decisions, revenue and cost allocation between sales and transportation customers, flexible industrial rates, and the general supportiveness of construction costs and gas purchases.

Water industry regulation

In all water utility activities, federal and state environmental regulations continue to play a critical role. The legislative timetable to effect the 1986 amendments to the Safe Drinking Water Act of 1974 was quite aggressive. But environmental standards-setting has actually slowed over the past couple of years due largely to increasing sentiment that the stringent, costly standards have not been justified on the basis of public health. A moratorium on the promulgation of significant new environmental rules is anticipated.

Telecommunications industry regulation

Despite the advances in telecommunications deregulation, analysis of regulation of telephone operators will continue to be a key rating determinant for the foreseeable future. The method of regulation may be either classic rate-based rate of return or some form of price cap mechanism. The most important factor is to assess whether the regulatory framework—no matter which type—provides sufficient financial incentive to encourage the rated company to maintain its quality of service and to upgrade its plant to accommodate new services while facing increasing competition from wireless operators and cable television companies.

Where regulators do still set tariffs based on an authorized return, Standard & Poor's strives to explore with regulators their view of the rate-of-return components that can materially impact reported versus regulatory earnings. Specifically these include the allowable base upon which the authorized return can be earned, allowable expenses, and the authorized return. Since regulatory oversight runs the gamut from strict, adversarial relationships with the regulated operating companies to highly supportive postures, Standard & Poor's probes beyond the apparent regulatory environment to ascertain the actual impact of regulation on the rated company.

Management

Evaluating the management of a utility is of paramount importance to the analytical process since management's abilities and decisions affect all areas of a company's operations. While regulation, the economy, and other outside factors can influence results, it is ultimately the quality of management that determines the success of a company.

With emerging competition, utility management will be more closely scrutinized by Standard & Poor's and will become an increasingly critical component of the credit evaluation. Management strategies can be the key determinant in differentiating utilities and in establishing where companies lie on the business position spectrum. It is imperative that managements be adaptable, aggressive, and proactive if their utilities are to be viable in the future; this is especially important for utilities that are currently uncompetitive.

The assessment of management is accomplished through meetings, conversations, and reviews of company plans. It is based on such factors as tenure, industry experience, grasp of industry issues, knowledge of customers and their needs, knowledge of competitors, accounting and financing practices, and commitment to credit quality. Management's ability and willingness to develop workable strategies to address their systems' needs, to deal with the competitive pressures of free market, to execute reasonable and effective long-term plans, and to be proactive in leading their utilities into the future are assessed. Management quality is also indicated by thoughtful balancing of public and private priorities, a record of credibility, and effective communication with the public, regulatory bodies, and the financial community. Boards of directors will receive ever more attention with respect to their role in setting appropriate management incentives.

With competition the watchword, Standard & Poor's also focuses on management's efforts to enhance financial condition. Management can bolster bondholder protection by taking any number of discretionary actions, such as selling common equity, lowering the common dividend payout, and paying down debt. Also important for the electric industry will be creativity in entering into strategic alliances and working partnerships that improve efficiency, such as central dispatching for a number of utilities or locking up at-risk customers through long-term contracts or expanded flexible pricing agreements. Proactive management teams will also seek alternatives to traditional rate-base, rate-of-return rate-making, move to adopt higher depreciation rates for generating facilities, segment customers by individual market preferences, and attempt to create superior service organizations.

In general, management's ability to respond to mounting competition and changes in the utility industry in a swift and appropriate manner will be necessary to maintain credit health.

Fuel, power, and water supply

Assessment of present and prospective fuel and power supply is critical to every electric utility analysis, while gauging the long-term natural gas supply position for gas pipeline and distribution companies and the water resources of a water utility is equally important. There is no similar analytical category for telephone utilities.

Electric utilities

For electric utilities emphasis is placed on generating reserve margins, fuel mix, fuel contract terms, demand-side management techniques, and purchased power arrangements. The adequacy of generating margins is examined nationally, regionally, and for each individual company. However, the reserve margin picture is muddied by the imprecise nature of peak-load growth forecasting, and also supply uncertainty relating to such things as Canadian capacity availability and potential plant shutdowns due to age, new NRC rules, acid rain remedies, fuel shortages, problems associated with nontraditional technologies, and so forth. Even apparently ample reserves may not be what they seem. Moreover, the quality of capacity is just as important as the size of reserves. Companies' reserve requirements differ, depending upon individual operating characteristics.

Fuel diversity provides flexibility in a changing environment. Supply disruptions and price hikes can raise rates and ignite political and regulatory pressures that ultimately lead to erosion in financial performance. Thus, the ability to alter generating sources and take advantage of lower cost fuels is viewed favorably.

Dependence on any single fuel means exposure to that fuel's problems: electric utilities that rely on oil or gas face the potential for shortages and rapid price increases; utilities that own nuclear generating facilities face escalating costs for decommissioning; and coal-fired capacity entails environmental problems stemming from concerns over acid rain and the "greenhouse effect."

Buying power from neighboring utilities, qualifying facility projects, or independent power producers may be the best choice for a utility that faces increasing electricity demand. There has been a growing reliance on purchased power arrangements as an alternative to new plant construction. This can be an important advantage, since the purchasing utility avoids potential construction cost overruns as well as risking substantial capital. Also, utilities can avoid the financial risks typical of a multiyear construction program that are caused by regulatory lag and prudence reviews. Furthermore, purchased power may enhance supply flexibility, fuel resource diversity, and maximize load factors. Utilities that plan to meet demand projections with a portfolio of supply-side options also may be better able to adapt to future growth uncertainties. Notwithstanding the benefits of purchasing, such a strategy has risks associated with it. By entering into a firm long-term purchased power contract that contains a fixed-cost component, utilities can incur substantial market, operating, regulatory, and financial risks. Moreover, regulatory treatment of purchased power removes any upside potential that might help offset the risks. Utilities are not compensated through incentive rate-making; rather, purchased power is recovered dollar-for-dollar as an operating expense.

To analyze the financial impact of purchased power, Standard & Poor's first calculates the net present value of future annual capacity payments (discounted at 10%). This represents a potential debt equivalent—the off-balance-sheet obligation that a utility incurs when it enters into a long-term purchased power contract. However, Standard

& Poor's adds to the utility's balance sheet only a portion of this amount, recognizing that such a contractual arrangement is not entirely the equivalent of debt. What percentage is added is a function of Standard & Poor's qualitative analysis of the specific contract and the extent to which market, operating, and regulatory risks are borne by the utility (the risk factor). For unconditional, take-or-pay contracts, the risk factor range is from 40%-80%, with the average hovering around 60%. A lower risk factor is typically assigned for system purchases from coal-fired utilities and a higher risk factor is usually designated for unit-specific nuclear purchases. The range for take-and-pay performance obligations is between 10%-50%.

Gas utilities

For gas distribution utilities, long-term supply adequacy obviously is critical, but the supply role has become even more important in credit analysis since the Federal Energy Regulatory Commission's Order 636 eliminated the interstate pipeline merchant business. This thrust gas supply responsibilities squarely on local gas distributors. Standard & Poor's has always believed distributor management has the expertise and wherewithal to perform the job well, but the risks are significant since gas costs are such a large percentage of total utility costs. In that regard, it is important for utilities to get preapprovals of supply plans by state regulators or at least keep the staff and commissioners well informed. To minimize risks, a well-run program would diversify gas sources among different producers or marketers, different gas basins in the U.S. and Canada, and different pipeline routes. Also, purchase contracts should be firm, with minimal take-or-pay provisions, and have prices tied to an industry index. A modest percentage of fixed-price gas is not unreasonable. Contracts, whether of gas purchases or pipeline capacity, should be intermediate term. Staggering contract expirations (preferably annually) provides an opportunity to be an active market player. A modest degree of reliance on spot purchases provides flexibility, as does the use of market-based storage. Gas storage and on-property gas resources such as liquefied natural gas or propane air are effective peak-day and peak-season supply management tools.

Since pipeline companies no longer buy and sell natural gas and are just common carriers, connections with varied reserve basins and many wells within those basins are of great importance. Diversity of sources helps offset the risks arising from the natural production declines eventually experienced by all reserve basins and individual wells. Moreover, such diversity can enhance a pipeline's attractiveness as a transporter of natural gas to distributors and end users seeking to buy the most economical gas available for their needs.

Water utilities

Nearly all water systems throughout the U.S. have ample long-term water supplies. Yet to gain comfort, Standard & Poor's assesses the production capability of treatment plants and the ability to pump water from underground aquifers in relation to the usage demands from consumers. Having adequate treated water storage facilities has become important in recent years and has helped many systems meet demands during peak summer periods. Of interest is whether the resources are owned by the utility or purchased from other utilities or local authorities. Owning properties with water rights provides more supply security. This is especially so in states like California where water allocations are being reduced, particularly since recent droughts and environmental issues have created alarm. Since the primary cost for water companies is treatment, it makes little difference whether raw water is owned or bought. In fact, compliance with federal and state water regulations is very high, and the overall cost to deliver treated water to consumers remains relatively affordable.

Asset concentration in the electric utility industry

In the electric industry, Standard & Poor's follows the operations of major generating facilities to assess if they are well managed or troubled. Significant dependence on one generating facility or a large financial investment in a single asset suggests high risk. The size or magnitude of a particular asset relative to total generation, net plant in service, and common equity is evaluated. Where substantial asset concentration exists, the financial profile of a company may experience wide swings depending on the asset's performance. Heavy asset concentration is most prevalent among utilities with costly nuclear units.

Earnings protection

In this category, pretax cash income coverage of all interest charges is the primary ratio. For this calculation, allowance for funds used during construction (AFUDC) is removed from income and interest expense. AFUDC and other such noncash items do not provide any protection for bondholders. To identify total interest expense, the analyst reclassifies certain operating expenses. The interest component of various off-balance-sheet obligations, such as leases and some purchased-power contracts, is included in interest expense. This provides the most direct indication of a utility's ability to service its debt burden.

While considerable emphasis in assessing credit protection is placed on coverage ratios, this measure does not provide the entire earnings protection picture. Also important are a company's earned returns on both equity and capital, measures that highlight a firm's earnings performance. Consideration is given to the interaction of embedded costs, financial leverage, and pretax return on capital.

Capital structure

Analyzing debt leverage goes beyond the balance sheet and covers quasi-debt items and elements of hidden financial leverage. Noncapitalized leases (including sale/leaseback obligations), debt guarantees, receivables financing, and purchased-power contracts are all considered debt equivalents and are reflected as debt in calculating capital

structure ratios. By making debt level adjustments, the analyst can compare the degree of leverage used by each utility company.

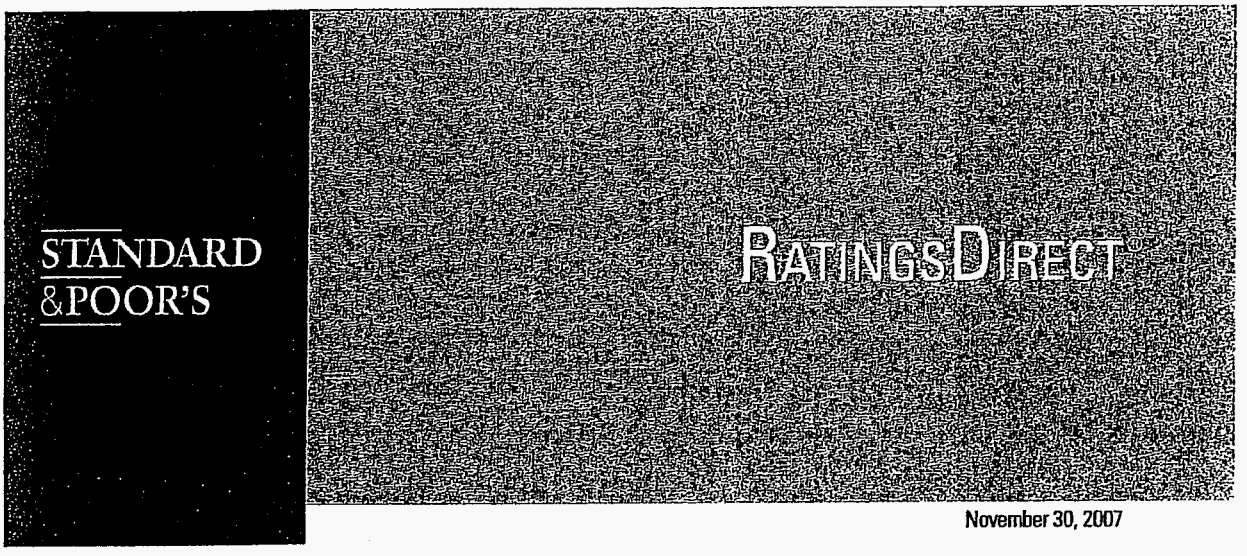
Furthermore, assets are examined to identify undervalued or overvalued items. Assets of questionable value are discounted to more accurately evaluate asset protection.

Some firms use short-term debt as a permanent piece of their capital structure. Short-term debt also is considered part of permanent capital when it is used as a bridge to permanent financing. Seasonal, self-liquidating debt is excluded from the permanent debt amount, but this situation is rare—with the exception of certain gas utilities. Given the long life of almost all utility assets, short-term debt may expose these companies to interest-rate volatility, remarketing risk, bank line backup risk, and regulatory exposure that cannot be readily offset. The lower cost of shorter-term obligations (assuming a positively sloped yield curve) is a positive factor that partially mitigates the risk of interest-rate variability. As a rule of thumb, a level of short-term debt that exceeds 10% of total capital is cause for concern.

Similarly, if floating-rate debt and preferred stock constitute over one-third of total debt plus preferred stock, this level is viewed as unusually high and may be cause for concern. It might also indicate that management is aggressive in its financial policies.

A layer of preferred stock in the capital structure is usually viewed as equity—since dividends are discretionary and the subordinated claim on assets provides a cushion for providers of debt capital. A preferred component of up to 10% is typically viewed as a permanent wedge in the capital structure of utilities. However, as rate-of-return regulation is phased out, preferred stock may be viewed by utilities—as many industrial firms would—as a temporary option for companies that are not current taxpayers that do not benefit from the tax deductibility of interest. Even now, floating-rate preferred and money market perpetual preferred are problematic; a rise in the rate due to deteriorating credit quality tends to induce a company to take out such preferred stock with debt. Structures that convey tax deductibility to preferred stock have become very popular and do generally afford such financings with equity treatment.

Cash flow adequacy



Cash flow adequacy relates to a company's ability to generate funds internally relative to its needs. It is a basic component of credit analysis because it takes cash to pay expenses, fund capital spending, pay dividends, and make interest and principal payments. Since both common and preferred dividend payments are important to maintain capital market access, Standard & Poor's looks at cash flow measures both before and after dividends are paid.

To determine cash flow adequacy, several quantitative relationships are examined. Emphasis is placed on cash flow relative to debt, debt service requirements, and capital spending. Cash flow adequacy is evaluated with respect to a firm's ability to meet all fixed charges, including capacity payments under purchased-power contracts. Despite the conditional nature of some contracts, the purchaser is obligated to pay a minimum capacity charge. The ratio used is funds from operations plus interest and capacity payments divided by interest plus capacity payments.

Financial flexibility/capital attraction

Financing flexibility incorporates a utility's financing needs, plans, and alternatives, as well as its flexibility to accomplish its financing program under stress without damaging creditworthiness. External funding capability complements internal cash flow. Especially since utilities are so capital intensive, a firm's ability to tap capital markets on an ongoing basis must be considered. Debt capacity reflects all the earlier elements: earnings protection, debt leverage, and cash flow adequacy. Market access at reasonable rates is restricted if a reasonable capital structure is not maintained and the company's financial prospects dim. The analyst also reviews indenture restrictions and the impact of additional debt on covenant tests.

Standard & Poor's assesses a company's capacity and willingness to issue common equity. This is affected by various factors, including the market-to-book ratio, dividend policy, and any regulatory restrictions regarding the composition of the capital structure.

U.S. Utilities Ratings Analysis Now Portrayed In The S&P Corporate Ratings Matrix

The electric, gas, and water utility ratings ranking lists published today by Standard & Poor's U.S. Utilities & Infrastructure Ratings practice are categorized under the business risk/financial risk matrix used by the Corporate Ratings group. This is designed to present our rating conclusions in a clear and standardized manner across all corporate sectors. Incorporating utility ratings into a shared framework to communicate the fundamental credit analysis of a company furthers the goals of transparency and comparability in the ratings process. Table 1 shows the matrix.

Table 1

Business Risk/Financial Risk

	Financial Risk Profile				
Business Risk Profile	**Minimal**	**Modest**	**Intermediate**	**Aggressive**	**Highly leveraged**
Excellent	AAA	AA	A	BBB	BB
Strong	AA	A	A-	BBB-	BB-
Satisfactory	A	BBB+	BBB	BB+	B+
Weak	BBB	BBB-	BB+	BB-	B
Vulnerable	BB	B+	B+	B	B-

The utilities rating methodology remains unchanged, and the use of the corporate risk matrix has not resulted in any changes to ratings or outlooks. The same five factors that we analyzed to produce a business risk score in the familiar 10-point scale are used in determining whether a utility possesses an "Excellent," "Strong," "Satisfactory," "Weak," or "Vulnerable" business risk profile:

- Regulation,
- Markets,
- Operations,
- Competitiveness, and
- Management.

Regulated utilities and holding companies that are utility-focused virtually always fall in the upper range ("Excellent" or "Strong") of business risk profiles. The defining characteristics of most utilities--a legally defined service territory generally free of significant competition, the provision of an essential or near-essential service, and the presence of regulators that have an abiding interest in supporting a healthy utility financial profile--underpin the business risk profiles of the electric, gas, and water utilities.

As the matrix concisely illustrates, the business risk profile loosely determines the level of financial risk appropriate for any given rating. Financial risk is analyzed both qualitatively and quantitatively, mainly with financial ratios and other metrics that are calculated after various analytical adjustments are performed on financial statements prepared under GAAP. Financial risk is assessed for utilities using, in part, the indicative ratio ranges in table 2.

Standard & Poor's All rights reserved No reprint or dissemination without S&P's permission See Terms of Use/Disclaimer on the last page.

Table 2

Financial Risk Indicative Ratios - U.S. Utilities

(Fully adjusted, historically demonstrated, and expected to consistently continue)

	Cash flow		Debt leverage
	(FFO/debt) (%)	(FFO/interest) (x)	(Total debt/capital) (%)
Modest	40 - 60	4.0 - 6.0	25 - 40
Intermediate	25 - 45	3.0 - 4.5	35 - 50
Aggressive	10 - 30	2.0 - 3.5	45 - 60
Highly leveraged	Below 15	2.5 or less	Over 50

The indicative ranges for utilities differ somewhat from the guidelines used for their unregulated counterparts because of several factors that distinguish the financial policy and profile of regulated entities. Utilities tend to finance with long-maturity capital and fixed rates. Financial performance is typically more uniform over time, avoiding the volatility of unregulated industrial entities. Also, utilities fare comparatively well in many of the less-quantitative aspects of financial risk. Financial flexibility is generally quite robust, given good access to capital, ample short-term liquidity, and the like. Utilities that exhibit such favorable credit characteristics will often see ratings based on the more accommodative end of the indicative ratio ranges, especially when the company's business risk profile is solidly within its category. Conversely, a utility that follows an atypical financial policy or manages its balance sheet less conservatively, or falls along the lower end of its business risk designation, would have to demonstrate an ability to achieve financial metrics along the more stringent end of the ratio ranges to reach a given rating.

Note that even after we assign a company a business risk and financial risk, the committee does not arrive by rote at a rating based on the matrix. The matrix is a guide--it is not intended to convey precision in the ratings process or reduce the decision to plotting intersections on a graph. Many small positives and negatives that affect credit quality can lead a committee to a different conclusion than what is indicated in the matrix. Most outcomes will fall within one notch on either side of the indicated rating. Larger exceptions for utilities would typically involve the influence of related unregulated entities or extraordinary disruptions in the regulatory environment.

We will use the matrix, the ranking list, and individual company reports to communicate the relative position of a company within its business risk peer group and the other factors that produce the ratings.

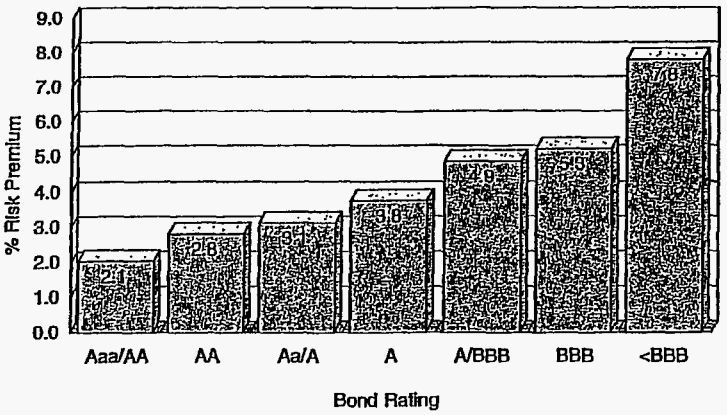
Any forward-looking cost of capital calculation already embodies tax effects since investors price securities on the basis of after-tax returns. Besides, a very large proportion of trading is conducted by tax-exempt financial institutions (pension funds, mutual funds, 401K, etc.) for whom tax issues are largely immaterial.

The existence of a negative risk premium is highly unlikely, as it is at serious odds with the basic tenets of finance, economics, and law. Using proper definitions for expected rates of return of equity and debt, the preponderance of the evidence indicates that the negative risk premium does not exist. Several risk premium studies cited in this chapter have found positive risk premiums well in excess of 5% over the last decade. Risk premiums do narrow during unusually turbulent and volatile interest rate environments, but then return to normal levels. They are most unlikely to ever become negative.

4.7 Risk Premium Determinants

Fundamentally, the primary determinant of expected returns is risk. To wit, the various paradigms of financial theory, including the Capital Asset Pricing Model and the Arbitrage Pricing Model covered in subsequent chapters, posit fundamental relationships between return and risk. There are also secondary influences on the relative magnitude of the risk premium, however, including the level of interest rates, default risk, and taxes.

Interest Rates



Published studies by Brigham, Shome, and Vinson (1985), Harris (1986), Harris and Marston (1992, 1993), Carleton, Chambers, and Lakonishok (1983), Morin, (2005), and McShane (2005), and others demonstrate that, beginning in 1980, risk premiums varied inversely with the level of interest rates—rising when rates fell and declining when interest rates rose. The reason for this relationship is that when interest rates rise, bondholders suffer a capital loss. This is referred to as interest rate risk. Stockholders, on the other hand, are more concerned with the firm's earning power. So, if bondholders' fear of interest rate risk exceeds shareholders' fear of loss of earning power, the risk differential will narrow and hence the risk premium will shrink. This is particularly true in high inflation environments. Interest rates rise as a result of accelerating inflation, and the interest rate risk of bonds intensifies more than the earnings risk of common stocks, which are partially hedged from the ravages of inflation. This phenomenon has been termed as a "lock-in" premium. Conversely in low interest rate environments, when bondholders' interest rate fears subside and shareholders' fears of loss of earning power dominate, the risk differential will widen and hence the risk premium will increase.

Harris (1986) showed that for every 100 basis point change in government bond yields, the equity risk premium for utilities changes 51 basis points in the opposite direction, for a net change in the cost of equity of 49 basis points. For example, a 100 basis point decline in government bond yields would lead to a 51 basis point increase in the equity risk premium and therefore an overall decrease in the cost of equity of 49 basis points, a result almost identical to the estimate reported in Morin (2005). As discussed earlier, similar results were uncovered by McShane (2005), who examined the statistical relationship between DCF-derived risk premiums and interest rates using a sample of natural gas distribution utilities.

The gist of the empirical research on this subject is that the cost of equity has changed only half as much as interest rates have changed in the past. The knowledge that risk premiums vary inversely to the level of interest rates can be used to adjust historical risk premiums to better reflect current market conditions. Thus, when interest rates are unusually high (low), the appropriate current risk premium is somewhat below (above) that long-run average. The empirical research cited above provides guidance as to the magnitude of the adjustment.

Risk premiums also tend to fluctuate with changes in investor risk aversion. Such changes can be tracked by observing the yield spreads between different bond rating categories over time. Brigham, Shome, and Vinson (1985) examined the relationship between risk premium and bond rating and found, unsurprisingly, that the risk premiums are higher for lower rated firms than for higher rated firms. Figure 4-5 shows the results graphically.

Utilities Inc.
Derivation of Investment Risk Adjustment Based upon
Ibbotson Associates' Size Premia for the Decile Portfolios of the NYSE

Notes:

(1) From page 3 of this Exhibit.

(2) Line No. 1 Column 3 – Line No. 4 Column 3. For example, the 2.66% in Column 4, Line No. 1 is derived as follows 2.65% = 4.19% - 1.54%.

(3) With an estimated market capitalization of $356.392 million based upon the Florida PSC Natural Gas Index, Utilities Inc. falls in between the 9th and 10th deciles of the NYSE/AMEX/NASDAQ which has an average market capitalization of $278.767 as shown in the table on the bottom half of page 1 of this Exhibit.

(4) Average size premium applicable to midpoint of the 9th and 10th deciles of the NYSE/AMEX/NASDAQ as shown in the table on the bottom half of page 1 of this Exhibit.

(5) With an estimated market capitalization of $5.662 million based upon the Florida PSC Natural Gas Index, the average Florida operating subsidiary of Utilities, Inc. falls in the 10th decile of the NYSE/AMEX/NASDAQ which has an average capitalization of $113.637 as shown in the table on the bottom half of page 1 of this Exhibit.

(6) Size premium applicable to the 10th decile of the NYSE/AMEX/NASDAQ as shown in the table on the bottom half of page 1 of this Exhibit.

(7) With an estimated market capitalization of $6.518 million based upon the Florida PSC Natural Gas Index, the average Florida water and waste water utility falls in the 10th decile of the NYSE/AMEX/NASDAQ which has a capitalization of $113.637 as shown in the table on the bottom half of page 1 of this Exhibit.

(8) Size premium applicable to the 10th decile of the NYSE/AMEX/NASDAQ as shown in the table on the bottom half of page 1 of this Exhibit.

(9) With an estimated market capitalization of $2,119.571 million, the Florida PSC Natural Gas Index, falls between the 5th and 6th deciles of the NYSE/AMEX/NASDAQ which has an average capitalization of $2,152.256 million as can be gleaned from the information shown in the table on the bottom half of page 1 of this Exhibit.

(10) Average size premium applicable to the midpoint of the 5th and 6th deciles of the NYSE/AMEX/NASDAQ as can be gleaned from the information shown in the table on the bottom half of page 1 of this Exhibit.

Chapter 7
Firm Size and Return

The Firm Size Phenomenon

One of the most remarkable discoveries of modern finance is that of a relationship between firm size and return. The relationship cuts across the entire size spectrum but is most evident among smaller companies, which have higher returns on average than larger ones. Many studies have looked at the effect of firm size on return.[1] In this chapter, the returns across the entire range of firm size are examined.

Construction of the Decile Portfolios

The portfolios used in this chapter are those created by the Center for Research in Security Prices (CRSP) at the University of Chicago's Graduate School of Business. CRSP has refined the methodology of creating size-based portfolios and has applied this methodology to the entire universe of NYSE/AMEX/NASDAQ-listed securities going back to 1926.

The New York Stock Exchange universe excludes closed-end mutual funds, preferred stocks, real estate investment trusts, foreign stocks, American Depository Receipts, unit investment trusts, and Americus Trusts. All companies on the NYSE are ranked by the combined market capitalization of their eligible equity securities. The companies are then split into 10 equally populated groups, or deciles. Eligible companies traded on the American Stock Exchange (AMEX) and the Nasdaq National Market (NASDAQ) are then assigned to the appropriate deciles according to their capitalization in relation to the NYSE breakpoints. The portfolios are rebalanced, using closing prices for the last trading day of March, June, September, and December. Securities added during the quarter are assigned to the appropriate portfolio when two consecutive month-end prices are available. If the final NYSE price of a security that becomes delisted is a month-end price, then that month's return is included in the quarterly return of the security's portfolio. When a month-end NYSE price is missing, the month-end value of the security is derived from merger terms, quotations on regional exchanges, and other sources. If a month-end value still is not determined, the last available daily price is used.

Base security returns are monthly holding period returns. All distributions are added to the month-end prices, and appropriate price adjustments are made to account for stock splits and dividends. The return on a portfolio for one month is calculated as the weighted average of the returns for its individual stocks. Annual portfolio returns are calculated by compounding the monthly portfolio returns.

Size of the Deciles

Table 7-1 reveals that the top three deciles of the NYSE/AMEX/NASDAQ account for most of the total market value of its stocks. Nearly two-thirds of the market value is represented by the first decile, which currently consists of 167 stocks, while the smallest decile accounts for just over one percent of the

1 Rolf W. Banz was the first to document this phenomenon. See Banz, Rolf W. "The Relationship Between Returns and Market Value of Common Stocks," *Journal of Financial Economics*, Vol. 9, 1981, pp. 3–18.

market value. The data in the second column of Table 7-1 are averages across all 82 years. Of course, the proportion of market value represented by the various deciles varies from year to year.

Columns three and four give recent figures on the number of companies and their market capitalization, presenting a snapshot of the structure of the deciles near the end of 2007.

Table 7-1‡
Size-Decile Portfolios of the NYSE/AMEX/NASDAQ Size and Composition
1926 through September 30, 2007

Decile	Historical Average Percentage of Total Capitalization	Recent Number of Companies	Recent Decile Market Capitalization (in thousands)	Recent Percentage of Total Capitalization
1-largest	63.22%	167	$10,357,817,750	62.34%
2	13.97%	174	2,327,351,920	14.01%
3	7.56%	192	1,111,672,200	6.69%
4	4.73%	184	709,696,610	4.27%
5	3.24%	203	541,399,790	3.26%
6	2.38%	251	411,039,680	2.47%
7	1.75%	275	379,465,160	2.28%
8	1.30%	380	291,182,590	1.75%
9	1.02%	641	284,538,240	1.71%
10-Smallest	0.83%	1775	201,705,150	1.21%
Mid-Cap 3-5	15.53%	579	2,362,768,280	14.22%
Low-Cap 6-8	5.43%	806	1,081,687,170	6.51%
Micro-Cap 9-10	1.85%	2,416	486,243,740	2.93%

Historical average percentage of total capitalization shows the average, over the last 82 years, of the decile market values as a percentage of the total NYSE/AMEX/NASDAQ calculated each month. Number of companies in deciles, recent market capitalization of deciles, and recent percentage of total capitalization are as of September 30, 2007.

Table 7-2 gives the current breakpoints that define the composition of the NYSE/AMEX/NASDAQ size deciles. The largest company and its market capitalization are presented for each decile. Table 7-3 shows the historical breakpoints for each of the three size groupings presented throughout this chapter. Mid-cap stocks are defined here as the aggregate of deciles 3–5. Based on the most recent data (Table 7-2), companies within this mid-cap range have market capitalizations at or below $9,206,713,000 but greater than $2,411,794,000. Low-cap stocks include deciles 6–8 and currently include all companies in the NYSE/AMEX/NASDAQ with market capitalizations at or below $2,411,794,000 but greater than $723,258,000. Micro-cap stocks include deciles 9–10 and include companies with market capitalizations at or below $723,258,000. The market capitalization of the smallest company included in the micro-capitalization group is currently $1,922,000.

9	723,258	Citadel Broadcasting Corp.
10-Smallest	363,479	Emergency Medical Services Corp.

Presentation of the Decile Data

Summary statistics of annual returns of the 10 deciles over 1926–2007 are presented in Table 7-4. Note from this exhibit that both the average return and the total risk, or standard deviation of annual returns, tend to increase as one moves from the largest decile to the smallest. Furthermore, the serial correlations of returns are near zero for all but the smallest deciles. Serial correlations and their significance will be discussed in detail later in this chapter.

Graph 7-1 depicts the growth of one dollar invested in each of three NYSE/AMEX/NASDAQ groups broken down into mid-cap, low-cap, and micro-cap stocks. The index value of the entire NYSE/AMEX/NASDAQ is also included. All returns presented are value-weighted based on the market capitalizations of the deciles contained in each subgroup. The sheer magnitude of the size effect in some years is noteworthy. While the largest stocks actually declined 9 percent in 1977, the smallest stocks rose more than 20 percent. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and tenth decile returns was far more substantial, with the largest stocks rising 46 percent, and the smallest stocks rising 218 percent. This divergence in the performance of small and large company stocks is a common occurrence.

Table 7-3
Size-Decile Portfolios of the NYSE/AMEX/NASDAQ
Largest and Smallest Company by Size Group

from 1926 to1965

	Capitalization of Largest Company (in thousands)			Capitalization of Smallest Company (in thousands)

Aspects of the Firm Size Effect

The firm size phenomenon is remarkable in several ways. First, the greater risk of small stocks does not, in the context of the capital asset pricing model (CAPM), fully account for their higher returns over the long term. In the CAPM only systematic, or beta risk, is rewarded; small company stocks have had returns in excess of those implied by their betas.

Second, the calendar annual return differences between small and large companies are serially correlated. This suggests that past annual returns may be of some value in predicting future annual returns. Such serial correlation, or autocorrelation, is practically unknown in the market for large stocks and in most other equity markets but is evident in the size premia.

Third, the firm size effect is seasonal. For example, small company stocks outperformed large company stocks in the month of January in a large majority of the years. Such predictability is surprising and suspicious in light of modern capital market theory. These three aspects of the firm size effect—long-term returns in excess of systematic risk, serial correlation, and seasonality—will be analyzed thoroughly in the following sections.

Year-end 1925 = $1.00

1925–2007

Long-Term Returns in Excess of Systematic Risk

The capital asset pricing model (CAPM) does not fully account for the higher returns of small company stocks. Table 7-5 shows the returns in excess of systematic risk over the past 82 years for each decile of the NYSE/AMEX/NASDAQ. Recall that the CAPM is expressed as follows:

$$k_s = r_f + (\beta_s \times ERP)$$

Table 7-5 uses the CAPM to estimate the return in excess of the riskless rate and compares this estimate to historical performance. According to the CAPM, the expected return on a security should consist of the riskless rate plus an additional return to compensate for the systematic risk of the security. The return in excess of the riskless rate is estimated in the context of the CAPM by multiplying the equity risk premium by β (beta). The equity risk premium is the return that compensates investors for taking on risk equal to the risk of the market as a whole (systematic risk).[2] Beta measures the extent to which a security or portfolio is exposed to systematic risk.[3] The beta of each decile indicates the degree to which the decile's return moves with that of the overall market.

A beta greater than one indicates that the security or portfolio has greater systematic risk than the market; according to the CAPM equation, investors are compensated for taking on this additional risk. Yet, Table 7-5 illustrates that the smaller deciles have had returns that are not fully explained by their higher betas. This return in excess of that predicted by CAPM increases as one moves from the largest companies in decile 1 to the smallest in decile 10. The excess return is especially pronounced for micro-cap stocks (deciles 9–10). This size-related phenomenon has prompted a revision to the CAPM, which includes a size premium. Chapter 4 presents this modified CAPM theory and its application in more detail.

This phenomenon can also be viewed graphically, as depicted in the Graph 7-2. The security market line is based on the pure CAPM without adjustment for the size premium. Based on the risk (or beta) of a security, the expected return lies on the security market line. However, the actual historic returns for the smaller deciles of the NYSE/AMEX/NASDAQ lie above the line, indicating that these deciles have had returns in excess of that which is appropriate for their systematic risk.

2 The equity risk premium is estimated by the 82-year arithmetic mean return on large company stocks, 12.26 percent, less the 82-year arithmetic mean income-return component of 20-year government bonds as the historical riskless rate, in this case 5.21 percent. (It is appropriate, however, to match the maturity, or duration, of the riskless asset with the investment horizon.) See Chapter 5 for more detail on equity risk premium estimation.

3 Historical betas were calculated using a simple regression of the monthly portfolio (decile) total returns in excess of the 30-day U.S. Treasury bill total returns versus the S&P 500 total returns in excess of the 30-day U.S. Treasury bill, January 1926–December 2007. See Chapter 6 for more detail on beta estimation.

Security Market Line versus Size-Decile Portfolios of the NYSE/AMEX/NASDAQ
1926–2007

Further Analysis of the 10th Decile

The size premia presented thus far do a great deal to explain the return due solely to size in publicly traded companies. However, by splitting the 10th decile into two size groupings we can get a closer look at the smallest companies. This magnification of the smallest companies will demonstrate whether the company size to size premia relationship continues to hold true.

As previously discussed, the method for determining the size groupings for size premia analysis was to take the stocks traded on the NYSE and break them up into 10 deciles, after which stocks traded on the AMEX and NASDAQ were allocated into the same size groupings. This same methodology was used to split the 10th decile into two parts: 10a and 10b, with 10b being the smaller of the two. This is equivalent to breaking the stocks down into 20 size groupings, with portfolios 19 and 20 representing 10a and 10b.

Table 7-7 shows that the pattern continues; as companies get smaller their size premium increases. There is a noticeable increase in size premium from 10a to 10b, which can also be demonstrated visually in Graph 7-3. This can be useful in valuing companies that are extremely small. Table 7-6 presents the size, composition, and breakpoints of deciles 10a and 10b. First, the recent number of companies and total decile market capitalization are presented. Then the largest company and its market capitalization are presented.

Breaking the smallest decile down lowers the significance of the results compared to results for the 10th decile taken as a whole, however. The same holds true for comparing the 10th decile with the Micro-Cap aggregation of the 9th and 10th deciles. The more stocks included in a sample the more significance can be placed on the results. While this is not as much of a factor with the recent years of data, these size premia are constructed with data back to 1926. By breaking the 10th decile down into smaller components we have cut the number of stocks included in each grouping. The change over time of the number of stocks included in the 10th decile for the NYSE/AMEX/NASDAQ is presented in Table 7-8. With fewer stocks included in the analysis early on, there is a strong possibility that just a few stocks can dominate the returns for those early years.

While the number of companies included in the 10th decile for the early years of our analysis is low, it is not too low to still draw meaningful results even when broken down into subdivisions 10a and 10b. All things considered, size premia developed for deciles 10a and 10b are significant and can be used in cost of capital analysis. These size premia should greatly enhance the development of cost of capital analysis for very small companies.

Table 7-6‡
Size-Decile Portfolios 10a and 10b of the NYSE/AMEX/NASDAQ, Largest Company and Its Market Capitalization
September 30, 2007

Decile	Recent Number of Companies	Recent Decile Market Capitalization (in thousands)	Market Capitalization of Largest Company (in thousands)	Company Name
10a	386	108,458,780	363,479	Emergency Medical Services Corp.
10b	1,405	143,681,297	211,590	Miller Industries Inc., Tenn.

Note: These numbers may not aggregate to equal decile 10 figures.

Low-Cap, 6–8	1.22	15.49%	10.29%	8.64%	1.65%
Micro-Cap, 9–10	1.36	18.46%	13.25%	9.59%	3.65%

*Betas are estimated from monthly portfolio total returns in excess of the 30-day U.S. Treasury bill total return versus the S&P 500 total returns in excess of the 30-day U.S. Treasury bill, January 1926–December 2007.

**Historical riskless rate is measured by the 82-year arithmetic mean income return component of 20-year government bonds (5.21 percent).

†Calculated in the context of the CAPM by multiplying the equity risk premium by beta. The equity risk premium is estimated by the arithmetic mean total return of the S&P 500 (12.26 percent) minus the arithmetic mean income return component of 20-year government bonds (5.21 percent) from 1926–2007.

Alternative Methods of Calculating the Size Premia

The size premia estimation method presented above makes several assumptions with respect to the market benchmark and the measurement of beta. The impact of these assumptions can best be examined by looking at some alternatives. In this section we will examine the impact on the size premia of using a different market benchmark for estimating the equity risk premia and beta. We will also examine the effect on the size premia study of using sum beta or an annual beta.[4]

Changing the Market Benchmark

In the original size premia study, the S&P 500 is used as the market benchmark in the calculation of the realized historical equity risk premium and of each size group's beta. The NYSE total value-weighted index is a common alternative market benchmark used to calculate beta. Table 7-9 uses this market benchmark in the calculation of beta. In order to isolate the size effect, we require an equity risk premium based on a large company stock benchmark. The NYSE deciles 1–2 large company index offers a mutually exclusive set of portfolios for the analysis of the smaller company groups: mid-cap deciles 3–5, low-cap deciles 6–8, and micro-cap deciles 9–10. The size premia analyses using these benchmarks are summarized in Table 7-9 and depicted graphically in Graph 7-4.

For the entire period analyzed, 1926–2007, the betas obtained using the NYSE total value-weighted index are higher than those obtained using the S&P 500. Since smaller companies had higher betas using the NYSE benchmark, one would expect the size premia to shrink. However, as was illustrated in Chapter 5, the equity risk premium calculated using the NYSE deciles 1–2 benchmark results in a value of 6.35, as opposed to 7.05 when using the S&P 500. The effect of the higher betas and lower equity risk premium cancel each other out, and the resulting size premia in Table 7-9 are slightly higher than those resulting from the original study.

4 Sum beta is the method of beta estimation described in Chapter 6 that was developed to better account for the lagged reaction of small stocks to market movements. The sum beta methodology was developed for the same reason that the size premia were developed; small company betas were too small to account for all of their excess returns.

Costs of Capital for Projects of Differing Riskiness. As noted in Chapter 11, care must be taken to assign different risk-adjusted discount rates to capital budgeting projects of differing degrees of riskiness.

Capital Structure Weights. In this chapter we have simply taken as given the target capital structure and used this target to obtain the weights used to calculate k. As we shall see in Chapter 17, establishing the target capital structure is a major task in itself.

Dynamic Considerations. Capital budgeting and cost of capital estimates are a part of the *planning process*—they deal with ex ante, or estimated, data rather than ex post, or historical data. Hence, we can be wrong about the location of the IOS and the MCC. For example, we can underestimate the MCC and hence accept projects that, with 20-20 hindsight, we should have rejected. In a dynamic, changing world this is a real problem. Interest rates and money costs could be low at the time plans are being laid and contracts to build plants are being let, but six or eight months later these capital costs could have risen substantially. Thus, a project that formerly looked good could turn out to be a bad one because we improperly forecasted the MCC schedule.

Although this listing of problem areas may appear formidable, the state of the art in cost of capital estimation is really not in bad shape. The procedures outlined in this chapter can be used to obtain cost of capital estimates that are sufficiently accurate for practical purposes, and the problems listed here merely indicate the desirability of certain refinements. The refinements are not unimportant, but the problems we have identified do not invalidate the usefulness of the procedures outlined in the chapter.

Small Business

COST OF EQUITY CAPITAL FOR SMALL FIRMS

The three equity cost estimating techniques that were discussed in this chapter have serious limitations when applied to small firms, thus increasing the need for the small-business manager to use judgment. Consider first the constant growth model, $k_s = D_1/P_0 + g$. Imagine a small, rapidly growing firm, such as Bio-Technology General (BTG), which does not now and will not in the foreseeable future pay dividends. For firms like this, the constant growth model is simply not applicable. In fact, it is difficult to imagine any dividend model that would be of practical benefit for such a firm because of the difficulty of estimating growth rates.

The method which calls for adding a risk premium of about 3 percent to the firm's cost of debt can be used for some small firms, but problems arise if the firm does not have a fixed rate issue outstanding. BTG, for example, has no such debt issue outstanding, so we could not use the bond-yield-plus-risk-premium approach for BTG.

The third approach, the CAPM, is also often unusable because if the firm's stock is not publicly

traded, then we cannot calculate the firm's beta. For the privately owned firm, we might use the so-called "pure play" CAPM technique. This involves finding a firm in the same line of business that does have public equity, estimating its beta, and then using this beta as a proxy for that of the small business in question.

To illustrate the pure play approach, again consider BTG. The firm is not publicly traded, so we cannot estimate its beta. However, data are available on more established firms, such as Genentech and Genetic Industries, so we could use their betas as representative of the biological and genetic engineering industry. Of course, these firms' betas would have to be subjectively modified to reflect their larger sizes and more established positions, as well as to take account of the differences in the nature of their products and their capital structures as compared to those of BTG. Still, as long as there are public companies in similar lines of business available for comparison, the estimates of their betas can be used to help estimate the cost of capital of a firm whose equity is not publicly traded. Note that a "liquidity premium" as discussed in Chapter 3 would also have to be added to reflect the illiquidity of the small, nonpublic firm's stock.

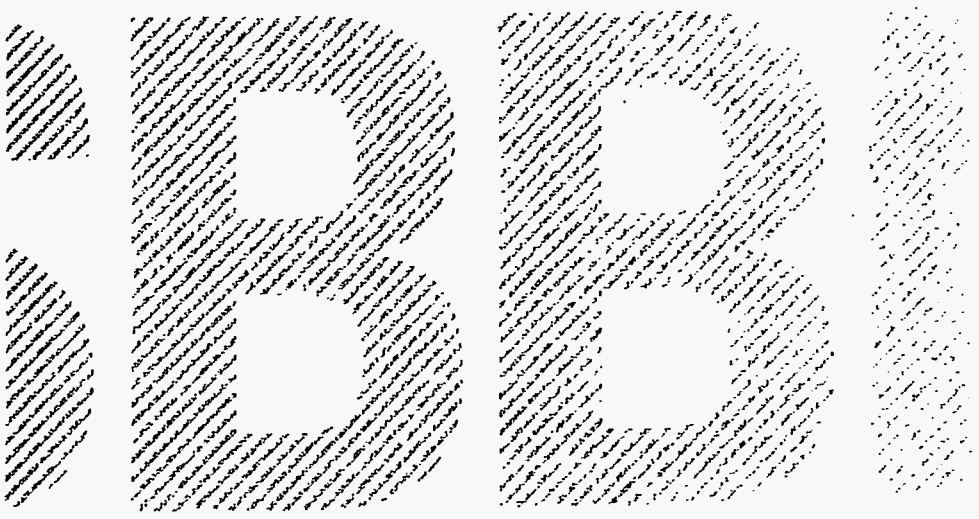
Flotation Costs for Small Issues

When external equity capital is raised, flotation costs increase the cost of equity capital beyond what it would be for internal funds. These external flotation costs are especially significant for smaller firms, and they can substantially affect capital budgeting decisions involving external equity funds. To illustrate this point, consider a firm that is expected to pay constant dividends forever, and hence whose growth rate is zero. In this case, if F is the percentage flotation cost, then the cost of equity capital is $k_e = D_1/[P_0(1 - F)]$. The higher the flotation cost, the higher the cost of external equity.

How big is F? According to the latest Securities and Exchange Commission data, the average flotation cost of large common stock offerings (more than $50 million) is only about 4 percent. For a firm that is expected to provide a 15 percent dividend yield (that is, $D_1/P_0 = 15\%$), the cost of equity is 15%/(1 − 0.04), or 15.6 percent. However, the SEC's data on small stock offerings (less than $1 million) show that flotation costs for such issues average about 21 percent. Thus, the cost of equity capital in the preceding example would be 15%/(1 − 0.21), or about 19 percent. When we compare this to the 15.6 percent for large offerings, it is clear that a small firm would have to earn considerably more on the same project than a large firm. Small firms are therefore at a substantial disadvantage because of the effects of flotation costs.

The Small-Firm Effect

A number of researchers have observed that portfolios of small-firm stocks have earned consistently higher average returns than those of large-firm stocks; this is called the "small-firm effect." On the surface, it would seem to be advantageous to the small firm to provide average returns in the stock market that are higher than those of large firms. In reality, it is bad news for the small firm; what the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of large firms. Therefore, the cost of equity capital is higher for small firms. This compounds the high flotation cost problem noted above.



It may be argued that stocks of small firms are riskier than those of large ones and that this accounts for the differences in returns. It is true that academic research usually finds that betas are higher on average for small firms than for large ones. However, the larger returns for small firms remain larger even after adjusting for the effects of their higher risks as reflected in their beta coefficients.

The small-firm effect is an anomaly in the sense that it is not consistent with the CAPM theory. Still, higher returns reflect a higher cost of capital, so we must conclude that smaller firms do have higher capital costs than otherwise similar larger firms. The manager of a small firm should take this factor into account when estimating his or her firm's cost of equity capital. In general, the cost of equity capital appears to be about four percentage points higher for small firms (those with market values of less than $20 million) than for large, New York Stock Exchange firms with similar risk characteristics.

Table 6-7
Ordinary Least Squares Betas for the NYSE Size Portfolios
1926–2007

	January 2003–December 2007	1926–2007
Decile 1	0.89	0.90
Decile 2	0.97	1.02
Decile 3	1.17	1.08
Decile 4	1.20	1.11
Decile 5	1.23	1.13
Decile 6	1.33	1.16
Decile 7	1.37	1.21
Decile 8	1.53	1.27
Decile 9	1.61	1.32
Decile 10	1.42	1.40

By looking at the same analysis over a number of 60-month periods, the relationship between the betas of large and small companies becomes clearer. Graph 6-9 shows rolling 60-month betas for selected NYSE deciles. The beta of each decile is calculated over the 60-month period January 1, 1926 through December 31, 1930, then the calculation is carried forward for each consecutive 60-month period through December 31, 2007. While the portfolio containing the largest companies has a very stable beta, the portfolio containing the smallest companies has periods where the beta is high and periods where it is low. Referring back to Table 6-7, the most recent 60-month period is one in which small company betas are low. There does not appear to be the consistency in the beta measure of smaller companies as there is with larger companies.

9 Capital Budgeting and Risk

Long before the development of modern theories linking risk and expected return, smart financial managers adjusted for risk in capital budgeting. They realized intuitively that, other things being equal, risky projects are less desirable than safe ones. Therefore financial managers demanded a higher rate of return from risky projects, or they based their decisions on conservative estimates of the cash flows.

Various rules of thumb are often used to make these risk adjustments. For example, many companies estimate the rate of return required by investors in their securities and use the **company cost of capital** to discount the cash flows on all new projects. Since investors require a higher rate of return from a very risky company, such a firm will have a higher company cost of capital and will set a higher discount rate for its new investment opportunities. For example, in Table 8-1 we estimated that investors expected a rate of return of .163 or about 16.5 percent from Microsoft common stock. Therefore, according to the company cost of capital rule, Microsoft should have been using a 16.5 percent discount rate to compute project net present values.[1]

This is a step in the right direction. Even though we can't measure risk or the expected return on risky securities with absolute precision, it is still reasonable to assert that Microsoft faced more risk than the average firm and, therefore, should have demanded a higher rate of return from its capital investments.

But the company cost of capital rule can also get a firm into trouble if the new projects are more or less risky than its existing business. Each project should be evaluated at its *own* opportunity cost of capital. This is a clear implication of the value-additivity principle introduced in Chapter 7. For a firm composed of assets A and B, the firm value is

$$\text{Firm value} = PV(AB) = PV(A) + PV(B) = \text{sum of separate asset values}$$

Here PV(A) and PV(B) are valued just as if they were mini-firms in which stockholders could invest directly. Investors would value A by discounting its forecasted cash flows at a rate reflecting the risk of A. They would value B by discounting at a rate reflecting the risk of B. The two discount rates will, in general, be different.

---

[1]Microsoft did not use any significant amount of debt financing. Thus its cost of capital is the rate of return investors expect on its common stock. The complications caused by debt are discussed later in this chapter.

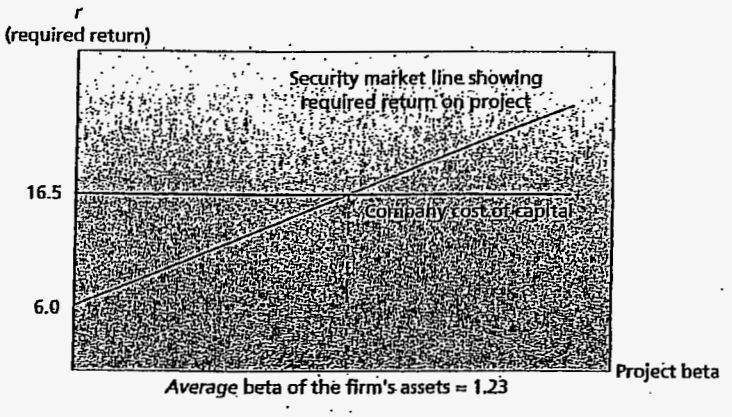

Figure 9-1 A comparison between the company cost of capital rule and the required return under the capital asset pricing model. Microsoft's company cost of capital is about 16.5 percent. This is the correct discount rate only if the project beta is 1.23. In general, the correct discount rate increases as project beta increases. Microsoft should accept projects with rates of return above the security market line relating required return to beta.

If the firm considers investing in a third project C, it should also value C as if C were a mini-firm. That is, the firm should discount the cash flows of C at the expected rate of return that investors would demand to make a separate investment in C. *The true cost of capital depends on the use to which the capital is put.*

This means that Microsoft should accept any project that more than compensates for the *project's beta*. In other words, Microsoft should accept any project lying above the upward-sloping line that links expected return to risk in Figure 9-1. If the project has a high risk, Microsoft needs a higher prospective return than if the project has a low risk. Now contrast this with the company cost of capital rule, which is to accept any project *regardless of its risk* as long as it offers a higher return than the *company's* cost of capital. In terms of Figure 9-1, the rule tells Microsoft to accept any project above the horizontal cost-of-capital line, i.e., any project offering a return of more than 16.5 percent.

It is clearly silly to suggest that Microsoft should demand the same rate of return from a very safe project as from a very risky one. If Microsoft used the company cost of capital rule, it would reject many good low-risk projects and accept many poor high-risk projects. It is also silly to suggest that just because Duke Power has a low company cost of capital, it is justified in accepting projects that Microsoft would reject. If you followed such a rule to its seemingly logical conclusion, you would think it possible to enlarge the company's investment opportunities by investing a large sum in Treasury bills. That would make the common stock safe and create a low company cost of capital.[2]

The notion that each company has some individual discount rate or cost of capital is widespread, but far from universal. Many firms require different returns from different categories of investment. For example, discount rates might be set as follows:

[2]If the present value of an asset depended on the identity of the company that bought it, present values would not add up. Remember, a good project is a good project is a good project.

Category	Discount Rate
Speculative ventures	30%
New products	20%
Expansion of existing business	15% (company cost of capital)
Cost improvement, known technology	10%

The capital asset pricing model is widely used by large corporations to estimate the discount rate. It states

$$\text{Expected project return} = r = r_f + (\text{project beta})(r_m - r_f)$$

To calculate this, you have to figure out the project beta. Before thinking about the betas of individual projects, we will look at some problems you would encounter in using beta to estimate a company's cost of capital. It turns out that beta is difficult to measure accurately for an individual firm: Much greater accuracy can be achieved by looking at an average of similar companies. But then we have to define *similar*. Among other things, we will find that a firm's borrowing policy affects its stock beta. It would be misleading, e.g., to average the betas of Chrysler, which has been a heavy borrower, and General Motors, which has generally borrowed less.

The company cost of capital is the correct discount rate for projects that have the same risk as the company's existing business but *not* for those projects that are safer or riskier than the company's average. The problem is to judge the relative risks of the projects available to the firm. To handle that problem, we will need to dig a little deeper and look at what features make some investments riskier than others. After you know *why* AT&T stock has less market risk than, say, Ford Motor, you will be in a better position to judge the relative risks of capital investment opportunities.

There is still another complication: Project betas can shift over time. Some projects are safer in youth than in old age; others are riskier. In this case, what do we mean by *the* project beta? There may be a separate beta for each year of the project's life. To put it another way, can we jump from the capital asset pricing model, which looks out one period into the future, to the discounted-cash-flow formula that we developed in Chapters 2 and 6 for valuing long-lived assets? Most of the time it is safe to do so, but you should be able to recognize and deal with the exceptions.

We will use the capital asset pricing model, or CAPM, throughout this chapter. But don't infer that the CAPM is the last word on risk and return. The principles and procedures covered in this chapter work just as well with other models such as arbitrage pricing theory (APT). For example, we could have started with an APT estimate of the expected rate of return on Microsoft stock; the discussion of company and project costs of capital would have followed exactly.

9-1 MEASURING BETAS

Suppose that you were considering an across-the-board expansion by your firm. Such an investment would have about the same degree of risk as the existing business. Therefore you should discount the projected flows at the company cost of capital. To estimate that, you could begin by estimating the beta of the company's stock.

An obvious way to measure the beta of the stock is to look at how its price has responded in the past to market movements. For example, in Figure 9-2*a* and *b* we have plotted monthly rates of return from AT&T and Hewlett-Packard against mar-

Thus we could view the project as offering an expected payoff of .5(1500) + .5(0) = 750, or $750,000, at $t = 1$ on a $125,000 investment at $t = 0$. Of course, the certainty equivalent of the payoff is less than $750,000, but the difference would have to be very large to justify rejecting the project. For example, if the certainty equivalent is half the forecasted cash flow and the risk-free rate is 7 percent, the project is worth $225,500:

$$\text{NPV} = C_0 + \frac{\text{CEQ}_1}{1 + r_f}$$

$$= -125 + \frac{.5(750)}{1.07} = 225.5, \text{ or } \$225{,}500$$

This is not bad for a $125,000 investment—and quite a change from the negative NPV that management got by discounting all future cash flows at 25 percent.

A Common Mistake

You sometimes hear people say that because distant cash flows are "riskier," they should be discounted at a higher rate than earlier cash flows. That is quite wrong: Using the same risk-adjusted discount rate for each year's cash flow implies a larger deduction for risk from the later cash flows. The reason is that the discount rate compensates for the risk borne *per period*. The more distant the cash flows, the greater the number of periods and the larger the *total* risk adjustment.

It makes sense to use a single risk-adjusted discount rate as long as the project has the same market risk at each point in its life. But look out for exceptions like the electric mop project, where market risk changes as time passes.

9-6 SUMMARY

In Chapter 8 we set out some basic principles for valuing risky assets. In this chapter we have shown you how to apply these principles to practical situations.

The problem is easiest when you believe that the project has the same market risk as the company's existing assets. In this case, the required return equals the required return on a portfolio of the company's securities. This is called the *company cost of capital*.

Capital asset pricing theory states that the required return on any asset depends on its risk. In this chapter we have defined risk as beta and used the capital asset pricing model to calculate expected returns.

The most common way to estimate the beta of a stock is to figure out how the stock price has responded to market changes in the past. Of course, this will give you only an estimate of the stock's true beta. You may get a more reliable figure if you calculate an industry beta for a group of similar companies.

Suppose that you now have an estimate of the stock's beta. Can you plug that into the capital asset pricing model to find the company's cost of capital? No, the stock beta may reflect both business and financial risk. Whenever a company borrows money, it increases the beta (and the expected return) of its stock. Remember, the company cost of capital is the expected return on a portfolio of all the firm's securities, not just the common stock. You can calculate it by estimating the expected return on each of the securities and then taking a weighted average of these separate returns. Or you can calculate the beta of the portfolio of securities and then plug this *asset beta* into the capital asset pricing model.

The company cost of capital is the correct discount rate for projects that have the same risk as the company's existing business. Many firms, however, use the company cost of capital to discount the forecasted cash flows on all new projects. This is a dangerous procedure. In principle, each project should be evaluated at its own opportunity cost of capital; the true cost of capital depends on the use to which the capital is put. If we wish to estimate the cost of capital for a particular project, it is *project risk* that counts. Of course the company cost of capital is fine as a discount rate for average-risk projects. It is also a useful starting point for estimating discount rates for safer or riskier projects.

We cannot give you a neat formula that will allow you to estimate project betas, but we can give you some clues. First, avoid adding fudge factors to discount rates to offset worries about bad project outcomes. Adjust cash-flow forecasts to give due weight to bad outcomes as well as good; *then* ask whether the chance of bad outcomes adds to the project's market risk. Second, you can often identify the characteristics of a high- or low-beta project even when the project beta cannot be calculated directly. For example, you can try to figure out how much the cash flows are affected by the overall performance of the economy: Cyclical investments are generally high-beta investments. You can also look at the project's operating leverage: Fixed production charges work like fixed debt charges; i.e., they increase beta.

There is one more fence to jump. Most projects produce cash flows for several years. Firms generally use the same risk-adjusted rate r to discount each of these cash flows. When they do this, they are implicitly assuming that cumulative risk increases at a constant rate as you look further into the future. That assumption is usually reasonable. It is precisely true when the project's future beta will be constant, i.e., when risk *per period* is constant.

But exceptions sometimes prove the rule. Be on the alert for projects where risk clearly does *not* increase steadily. In these cases, you should break the project into segments within which the same discount rate can be reasonably used. Or you should use the certainty-equivalent version of the DCF model, which allows separate risk adjustments to each period's cash flow.

APPENDIX: USING THE CAPITAL ASSET PRICING MODEL TO CALCULATE CERTAINTY EQUIVALENTS

When calculating present value, you can take account of risk in either of two ways. You can discount the expected cash flow C_1 by the risk-adjusted discount rate r:

$$PV = \frac{C_1}{1 + r}$$

Alternatively, you can discount the certainty-equivalent cash flow CEQ_1 by the risk-free rate of interest r_f:

$$PV = \frac{CEQ_1}{1 + r_f}$$

In this appendix we show how you can derive CEQ_1 from the capital asset pricing model.

We know from our present value formula that $1 + r$ equals the expected dollar payoff on the asset divided by its present value:

expectations. The sheer volume of earnings forecasts available from the investment community relative to the scarcity of dividend forecasts attests to their importance. The fact that these investment information providers focus on growth in earnings rather than growth in dividends indicates that the investment community regards earnings growth as a superior indicator of future long-term growth. Surveys of analytical techniques actually used by analysts reveal the dominance of earnings and conclude that earnings are considered far more important than dividends. Finally, Value Line's principal investment rating assigned to individual stocks, Timeliness Rank, is based primarily on earnings, accounting for 65% of the ranking.

Historical Growth Rates Versus Analysts' Forecasts

Obviously, historical growth rates as well as analysts' forecasts provide relevant information to the investor with regard to growth expectations. Each proxy for expected growth brings information to the judgment process from a different light. Neither proxy is without blemish; each has advantages and shortcomings. Historical growth rates are available and easily verifiable, but may no longer be applicable if structural shifts have occurred. Analysts' growth forecasts may be more relevant since they encompass both history and current changes, but are nevertheless imperfect proxies.

9.5 Growth Estimates: Sustainable Growth Method

The third method of estimating the growth component in the DCF model, alternately referred to as the "sustainable growth" or "retention ratio" method, can be used by investment analysts to predict future growth in earnings and dividends. In this method, the fraction of earnings expected to be retained by the company, b, is multiplied by the expected return on book equity, r, to produce the growth forecast. That is,

$$g = b \times r$$

The conceptual premise of the method, enunciated in Chapter 8, Section 8.4, is that future growth in dividends for existing equity can only occur if a portion of the overall return to investors is reinvested into the firm instead of being distributed as dividends.

For example, if a company earns 12% on equity, and pays all the earnings out in dividends, the retention factor, b, is zero and earnings per share will not grow for the simple reason that there are no increments to the asset base (rate base). Conversely, if the company retains all its earnings and pays no dividends, it would grow at an annual rate of 12%. Or again, if the company earns 12% on equity and pays out 60% of the earnings in dividends, the

retention factor is 40%, and earnings growth will be 40% × 12% = 4.8% per year.

In implementing the method, both 'b' and 'r' should be the rate that the market expects to prevail in the future. If no explicit forecast of 'b' is available, it is reasonable to assume that the utility's future retention ratio will, on average, remain unchanged from its present level. Or, it can be estimated by taking a weighted average of past retention ratios as a proxy for the future on the grounds that utilities' target retention ratios are usually, although not always, stable.[14]

Both historical and forecast values of 'r' can be used to estimate g, although forecast values are superior. The use of historical realized book returns on equity rather than the expected return on equity is questionable since reliance on achieved results involves circular reasoning. Realized returns are the results of the regulatory process itself, and are also subject to tests of fairness and reasonableness. As a gauge of the expected return on book equity, either direct published analysts' forecasts of the long-run expected return on equity, or authorized rates of return in recent regulatory cases can be used as a guide. As a floor estimate, it seems reasonable for investors to expect allowed equity returns by state regulatory commissions to be in excess of the current cost of debt to the utility in question.

Another way of obtaining the expected 'r' is to examine its fundamental determinants. Since earnings per share, E, can be stated as dividends per share, D, divided by the payout ratio (1 − b), the earnings per share capitalized by investors can be inferred by dividing the current dividend by an expected payout ratio. Provided that a utility company follows a fairly stable dividend policy, the possibility of error is less when estimating the payout than when estimating the expected return on equity or the expected growth rate. Using this approach, and denoting book value per share by B, the expected return on equity is:

$$r = E/B = (D/(1 - b)) / B \qquad (9\text{-}9)$$

Estimates of the expected payout ratio can be inferred from historical 10-year average payout ratio data for utilities, assuming a stable dividend policy has been pursued. Since individual averages frequently tend to regress toward the grand mean, the historical payout ratio needs to be adjusted for this tendency, using statistical techniques for predicting future values based on this tendency of individual values to regress toward the grand mean over time.

An application of the sustainable growth method is shown in example 9-1.

[14] Statistically superior predictions of future averages are made by weighting individual past averages with the grand mean, with the variance within the individual averages and the variance across individual averages serving as weights.

EXAMPLE 9-1

Southeastern Electric's sustainable growth rate is required for upcoming rate case testimony. As a gauge of the expected return on equity, authorized rates of return in recent decisions for eastern U.S. electric utilities as reported by Value Line for 2005 and 2006 averaged 11%, with a standard deviation of 1%. In other words, the majority of utilities were authorized to earn 11%, with the allowed return on equity ranging from 10% to 12%. As a gauge of the expected retention ratio, the average 2006 payout ratio of 34 eastern electric utilities as compiled by Value Line was 60%, which indicates an average retention ratio of 40%, with a standard deviation of 5%. This was consistent with the long-run target retention ratio indicated by the management of Southeastern Electric. It is therefore reasonable to postulate that investors expect a retention ratio ranging from 35% to 45% for the company with a likely value of 40%. In Table 9-4 below, expected retention ratios of 35% to 45% and assumed returns on equity from 10% to 12% are multiplied to produce sustainable growth rates ranging from 3.8% to 5.4% with a likely value of 4.6%.

TABLE 9-4
SUSTAINABLE GROWTH METHOD ILLUSTRATION

Expected Retention Ratio (b)	Expected Return on Book Equity (r)		
	10%	11%	12%
35%	3.5%	3.9%	4.2%
40%	4.0%	4.4%	4.8%
45%	4.5%	5.0%	5.4%

It should be pointed out that published forecasts of the expected return on equity by analysts such as Value Line are sometimes based on end-of-period book equity rather than on average book equity. The following formula[15]

[15] The return on year-end common equity, r, is defined as $r = E/B_t$, where E is earnings per share, and B_t is the year-end book value per share. The return on average common equity, r_a, is defined as: $r_a = E/B_a$ where B_a = average book value per share. The latter is by definition: $B_a = (B_t + B_{t-1})/2$ where B_t is the year-end book equity per share and B_{t-1} is the beginning-of-year book equity per share. Dividing r by r_a and substituting:

$$\frac{r}{r_a} = \frac{E/B_t}{E/B_a} = \frac{B_a}{B_t} + \frac{B_t + B_{t-1}}{2B_t}$$

Solving for r_a, a formula for translating the return on year-end equity into the return on average equity is obtained, using reported beginning-of-the year and end-of-year common equity figures:

$$r_a = r\frac{2B_t}{B_t + B_{t-1}}$$

adjusts the reported end-of-year values so that they are based on average common equity, which is the common regulatory practice:

$$r_a = r_t \frac{2B_t}{B_t + B_{t-1}} \tag{9-10}$$

The sustainable growth method can also be extended to include external financing. From Chapter 8, the expanded growth estimate is given by:

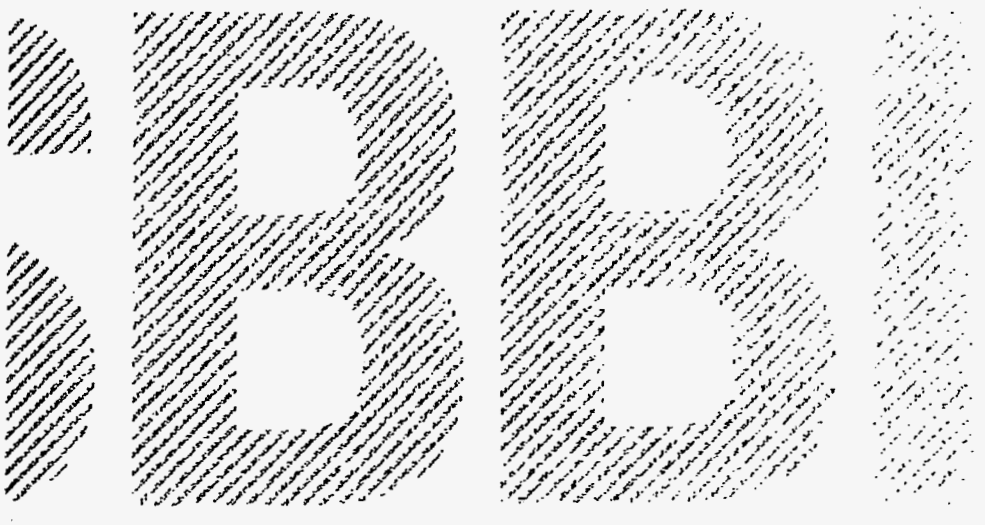
$$g = br + sv$$

where b and r are defined as previously, s is the expected percent growth in number of shares to finance investment, and v is the profitability of the equity investment. The variable s measures the long-run expected stock financing that the utility will undertake. If the utility's investments are growing at a stable rate and if the earnings retention rate is also stable, then s will grow at a stable rate. The variable s can be estimated by taking a weighted average of past percentage increases in the number of shares. This measurement is difficult, however, owing to the sporadic and episodic nature of stock financing, and smoothing techniques must be employed. The variable v is the profitability of the equity investment and can be measured as the difference of market price and book value per share divided by the latter, as discussed in Chapter 8.

There are three problems in the practical application of the sustainable growth method. The first is that it may be even more difficult to estimate what b, r, s, and v investors have in mind than it is to estimate what g they envisage. It would appear far more economical and expeditious to use available growth forecasts and obtain g directly instead of relying on four individual forecasts of the determinants of such growth. It seems only logical that the measurement and forecasting errors inherent in using four different variables to predict growth far exceed the forecasting error inherent in a direct forecast of growth itself.

Second, there is a potential element of circularity in estimating g by a forecast of b and ROE for the utility being regulated, since ROE is determined in large part by regulation. To estimate what ROE resides in the minds of investors is equivalent to estimating the market's assessment of the outcome of regulatory hearings. Expected ROE is exactly what regulatory commissions set in determining an allowed rate of return. In other words, the method requires an estimate of return on equity before it can even be implemented. Common sense would dictate the inconsistency of a return on equity recom-

mendation that is different than the expected ROE that the method assumes the utility will earn forever. For example, using an expected return on equity of 11% to determine the growth rate and using the growth rate to recommend a return on equity of 9% is inconsistent. It is not reasonable to assume that this regulated utility company is expected to earn 11% forever, but recommend a 9% return on equity. The only way this utility can earn 11% is that rates be set by the regulator so that the utility will in fact earn 11%. One is assuming, in effect, that the company will earn a return rate exceeding the recommended cost of equity forever, but then one is recommending that a different rate be granted by the regulator. In essence, using an ROE in the sustainable growth formula that differs from the final estimated cost of equity is asking the regulator to adopt two different returns.



The circularity problem is somewhat dampened by the self-correcting nature of the DCF model. If a high equity return is granted, the stock price will increase in response to the unanticipated favorable return allowance, lowering the dividend yield component of market return in compensation for the high g induced by the high allowed return. At the next regulatory hearing, more conservative forecasts of r would prevail. The impact on the dual components of the DCF formula, yield and growth, are at least partially offsetting.

Third, the empirical finance literature discussed earlier demonstrates that the sustainable growth method of determining growth is not as significantly correlated to measures of value, such as stock price and price/earnings ratios, as other historical growth measures or analysts' growth forecasts. Other proxies for growth, such as historical growth rates and analysts' growth forecasts, outperform retention growth estimates. See for example Timme and Eiseman (1989).

In summary, there are three proxies for the expected growth component of the DCF model: historical growth rates, analysts' forecasts, and the sustainable growth method. Criteria in choosing among the three proxies should include ease of use, ease of understanding, theoretical and mathematical correctness, and empirical validation. The latter two are crucial. The method should be logically valid and consistent, and should possess an adequate track record in predicting and explaining security value. The retention growth method is the weakest of the three proxies on both conceptual and empirical grounds. The research in this area has shown that the first two growth proxies do a better job of explaining variations in market valuation (M/B and P/E ratios) and are more highly correlated to measures of value than is the retention growth proxy.

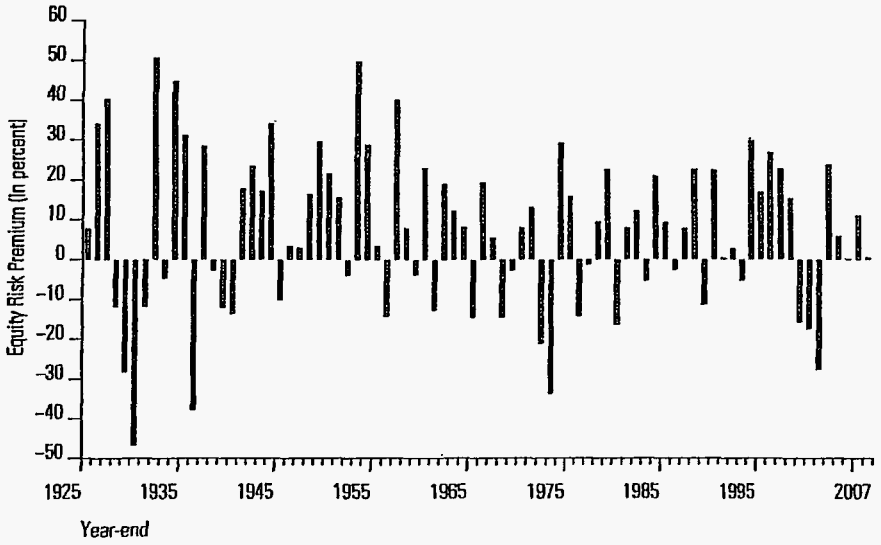
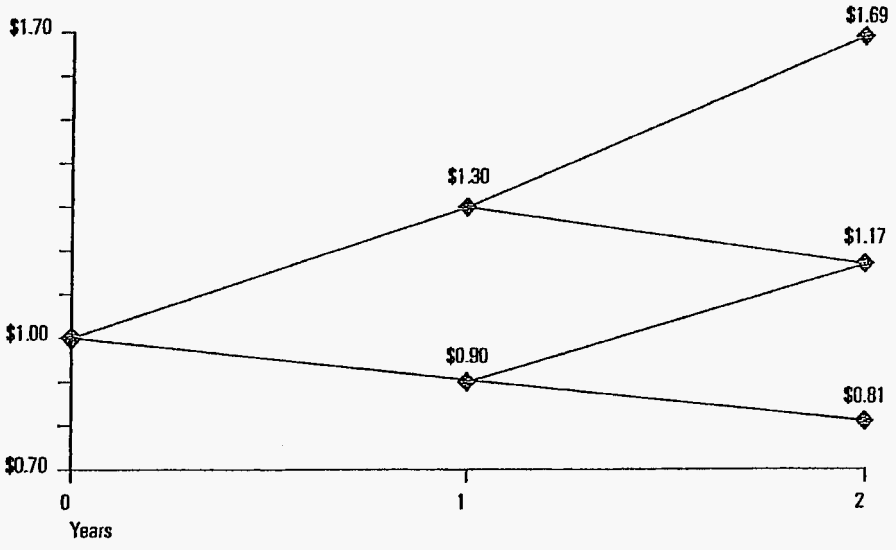
For example, if bond yields rise unexpectedly, investors can receive a higher coupon payment from a newly issued bond than from the purchase of an outstanding bond with the former lower-coupon payment. The outstanding lower-coupon bond will thus fail to attract buyers, and its price will decrease, causing its yield to increase correspondingly, as its coupon payment remains the same. The newly priced outstanding bond will subsequently attract purchasers who will benefit from the shift in price and yield; however, those investors who already held the bond will suffer a capital loss due to the fall in price.



Anticipated changes in yields are assessed by the market and figured into the price of a bond. Future changes in yields that are not anticipated will cause the price of the bond to adjust accordingly. Price changes in bonds due to unanticipated changes in yields introduce price risk into the total return. Therefore, the total return on the bond series does not represent the riskless rate of return.The income return better represents the unbiased estimate of the purely riskless rate of return, since an investor can hold a bond to maturity and be entitled to the income return with no capital loss.

Arithmetic versus Geometric Means

The equity risk premium data presented in this book are arithmetic average risk premia as opposed to geometric average risk premia. The arithmetic average equity risk premium can be demonstrated to be most appropriate when discounting future cash flows. For use as the expected equity risk premium in either the CAPM or the building block approach, the arithmetic mean or the simple difference of the arithmetic means of stock market returns and riskless rates is the relevant number. This is because both the CAPM and the building block approach are additive models, in which the cost of capital is the sum of its parts. The geometric average is more appropriate for reporting past performance, since it represents the compound average return.



The argument for using the arithmetic average is quite straightforward. In looking at projected cash flows, the equity risk premium that should be employed is the equity risk premium that is expected to actually be incurred over the future time periods. Graph 5-3 shows the realized equity risk premium for each year based on the returns of the S&P 500 and the income return on long-term government bonds. (The actual, observed difference between the return on the stock market and the riskless rate is known as the realized equity risk premium.) There is considerable volatility in the year-by-year statistics. At times the realized equity risk premium is even negative.

Graph 5-3
Realized Equity Risk Premium Per Year
1926–2007

To illustrate how the arithmetic mean is more appropriate than the geometric mean in discounting cash flows, suppose the expected return on a stock is 10 percent per year with a standard deviation of 20 percent. Also assume that only two outcomes are possible each year: +30 percent and –10 percent (i.e., the mean plus or minus one standard deviation). The probability of occurrence for each outcome is equal. The growth of wealth over a two-year period is illustrated in Graph 5-4.

Graph 5-4

The most common outcome of $1.17 is given by the geometric mean of 8.2 percent. Compounding the possible outcomes as follows derives the geometric mean:

$$[(1+0.30)\times(1-0.10)]^{\frac{1}{2}}-1=0.082$$

However, the expected value is predicted by compounding the arithmetic, not the geometric, mean. To illustrate this, we need to look at the probability-weighted average of all possible outcomes:

(0.25 × $1.69)	= $0.4225
+ (0.50 × $1.17)	= $0.5850
+ (0.25 × $0.81)	= $0.2025
Total	$1.2100

Therefore, $1.21 is the probability-weighted expected value. The rate that must be compounded to achieve the terminal value of $1.21 after 2 years is 10 percent, the arithmetic mean:

$$\$1\times(1+0.10)^2=\$1.21$$

The geometric mean, when compounded, results in the median of the distribution:

$$\$1\times(1+0.082)^2=\$1.17$$

The arithmetic mean equates the expected future value with the present value; it is therefore the appropriate discount rate.

Appropriate Historical Time Period

The equity risk premium can be estimated using any historical time period. For the U.S., market data exists at least as far back as the late 1800s. Therefore, it is possible to estimate the equity risk premium using data that covers roughly the past 100 years.

Our equity risk premium covers the time period from 1926 to the present. The original data source for the time series comprising the equity risk premium is the Center for Research in Security Prices. CRSP chose to begin their analysis of market returns with 1926 for two main reasons. CRSP determined that the time period around 1926 was approximately when quality financial data became available. They also made a conscious effort to include the period of extreme market volatility from the late twenties and early thirties; 1926 was chosen because it includes one full business cycle of data before the market crash of 1929. These are the most basic reasons why our equity risk premium calculation window starts in 1926.

Implicit in using history to forecast the future is the assumption that investors' expectations for future outcomes conform to past results. This method assumes that the price of taking on risk changes only slowly, if at all, over time. This "future equals the past" assumption is most applicable to a random time-series variable. A time-series variable is random if its value in one period is independent of its value in other periods.

Does the Equity Risk Premium Revert to Its Mean over Time?

Some have argued that the estimate of the equity risk premium is upwardly biased since the stock market is currently priced high. In other words, since there have been several years with extraordinarily high market returns and realized equity risk premia, the expectation is that returns and realized equity risk premia will be lower in the future, bringing the average back to a normalized level. This argument relies on several studies that have tried to determine whether reversion to the mean exists in stock market prices and the equity risk premium.[3] Several academics contradict each other on this topic; moreover, the evidence supporting this argument is neither conclusive nor compelling enough to make such a strong assumption.

Our own empirical evidence suggests that the yearly difference between the stock market total return and the U.S. Treasury bond income return in any particular year is random. Graph 5-3, presented earlier, illustrates the randomness of the realized equity risk premium.

3 Fama, Eugene F., and Kenneth R. French. "Permanent and Temporary Components of Stock Prices," *Journal of Political Economy*, April 1988, pp. 246–273. Poterba, James M., and Lawrence H. Summers. "Mean Reversion in Stock Prices," *Journal of Financial Economics*, October 1988, pp. 27–59. Lo, Andrew W., and A. Craig MacKinlay. "Stock Market Prices Do Not Follow Random Walks: Evidence from a Simple Specification Test," *The Review of Financial Studies*, Spring 1988, pp. 41–66. Finnerty, John D., and Dean Leistikow. "The Behavior of Equity and Debt Risk Premiums: Are They Mean Reverting and Downward-Trending?" *The Journal of Portfolio Management*, Summer 1993, pp. 73–84. Ibbotson, Roger G., and Scott L. Lummer. "The Behavior of Equity and Debt Risk Premiums: Comment," *The Journal of Portfolio Management*, Summer 1994, pp. 98–100. Finnerty, John D., and Dean Leistikow. "The Behavior of Equity and Debt Risk Premiums: Reply to Comment," *The Journal of Portfolio Management*, Summer 1994, pp. 101–102.

A statistical measure of the randomness of a return series is its serial correlation. Serial correlation (or autocorrelation) is defined as the degree to which the return of a given series is related from period to period. A serial correlation near positive one indicates that returns are predictable from one period to the next period and are positively related. That is, the returns of one period are a good predictor of the returns in the next period. Conversely, a serial correlation near negative one indicates that the returns in one period are inversely related to those of the next period. A serial correlation near zero indicates that the returns are random or unpredictable from one period to the next. Table 5-3 contains the serial correlation of the market total returns, the realized long-horizon equity risk premium, and inflation.

Table 5-3
Interpretation of Annual Serial Correlations
1926–2007

Series	Serial Correlation	Interpretation
Large Company Stock Total Returns	0.03	Random
Equity Risk Premium	0.03	Random
Inflation Rates	0.65	Trend

The significance of this evidence is that the realized equity risk premium next year will not be dependent on the realized equity risk premium from this year. That is, there is no discernable pattern in the realized equity risk premium—it is virtually impossible to forecast next year's realized risk premium based on the premium of the previous year. For example, if this year's difference between the riskless rate and the return on the stock market is higher than last year's, that does not imply that next year's will be higher than this year's. It is as likely to be higher as it is lower. The best estimate of the expected value of a variable that has behaved randomly in the past is the average (or arithmetic mean) of its past values.

Table 5-4 also indicates that the equity risk premium varies considerably by decade. The complete decades ranged from a high of 17.9 percent in the 1950s to a low of 0.3 percent in the 1970s, however, thus far the 2000s have shown a –2.4 percent equity risk premium. This look at historical equity risk premium reveals no observable pattern.

Table 5-4
Long-Horizon Equity Risk Premium by Decade
1926–2007

1920s*	1930s	1940s	1950s	1960s	1970s	1980s	1990s	2000s**	1997-2007
17.6%	2.3%	8.0%	17.9%	4.2%	0.3%	7.9%	12.1%	–2.4%	4.2%

*Based on the period 1926–1929.

**Based on the period 2000–2007.

Finnerty and Leistikow perform more econometrically sophisticated tests of mean reversion in the equity risk premium. Their tests demonstrate that—as we suspected from our simpler tests—the equity risk premium that was realized over 1926 to the present was almost perfectly free of mean reversion and had no statistically identifiable time trends.[4] Lo and MacKinlay conclude, "the rejection of the random walk for weekly returns does not support a mean-reverting model of asset prices."

Choosing an Appropriate Historical Period

The estimate of the equity risk premium depends on the length of the data series studied. A proper estimate of the equity risk premium requires a data series long enough to give a reliable average without being unduly influenced by very good and very poor short-term returns. When calculated using a long data series, the historical equity risk premium is relatively stable.[5] Furthermore, because an average of the realized equity risk premium is quite volatile when calculated using a short history, using a long series makes it less likely that the analyst can justify any number he or she wants. The magnitude of how shorter periods can affect the result will be explored later in this chapter.

Some analysts estimate the expected equity risk premium using a shorter, more recent time period on the basis that recent events are more likely to be repeated in the near future; furthermore, they believe that the 1920s, 1930s, and 1940s contain too many unusual events. This view is suspect because all periods contain "unusual" events. Some of the most unusual events of the last hundred years took place quite recently, including the inflation of the late 1970s and early 1980s, the October 1987 stock market crash, the collapse of the high-yield bond market, the major contraction and consolidation of the thrift industry, the collapse of the Soviet Union, the development of the European Economic Community, and the attacks of September 11, 2001.

It is even difficult for economists to predict the economic environment of the future. For example, if one were analyzing the stock market in 1987 before the crash, it would be statistically improbable to predict the impending short-term volatility without considering the stock market crash and market volatility of the 1929–1931 period.

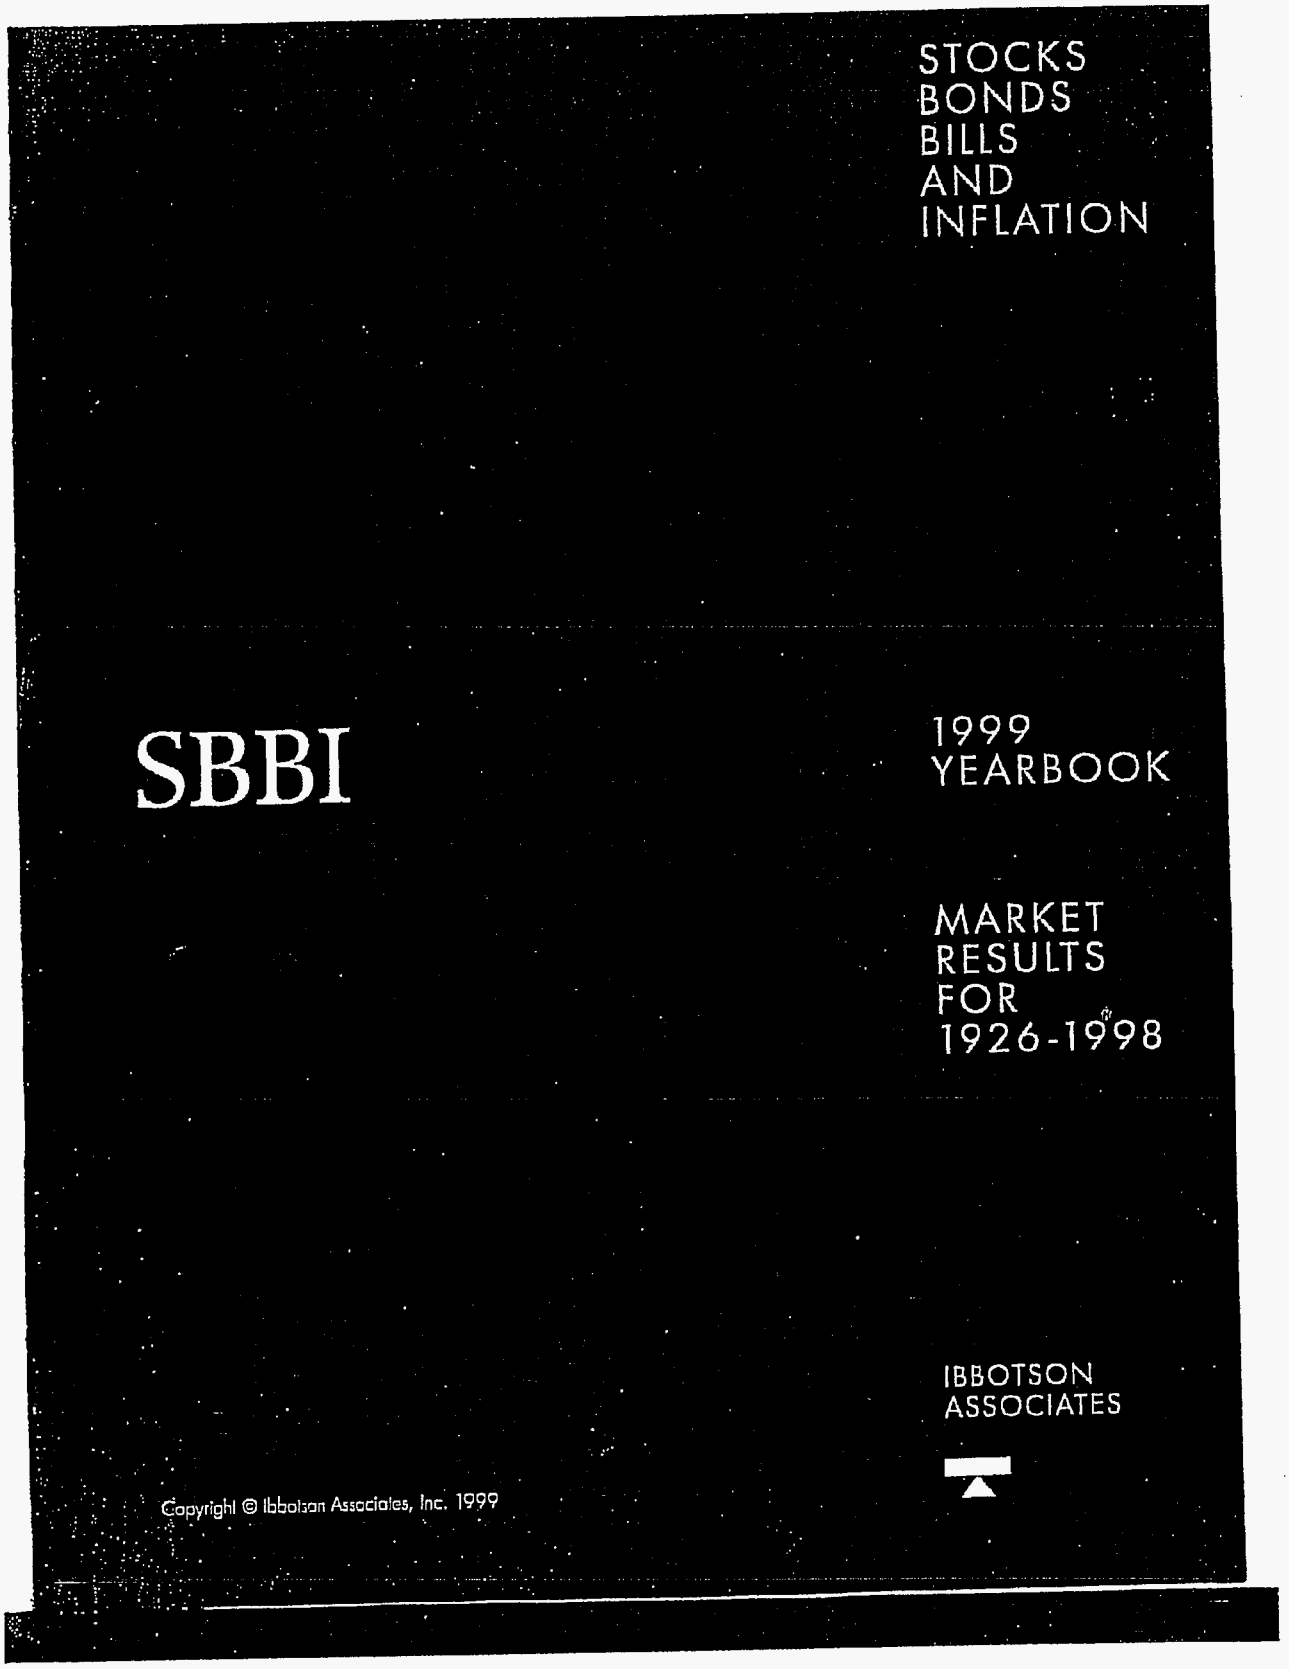
Without an appreciation of the 1920s and 1930s, no one would believe that such events could happen. The 82-year period starting with 1926 is representative of what can happen: it includes high and low returns, volatile and quiet markets, war and peace, inflation and deflation, and prosperity and depression. Restricting attention to a shorter historical period underestimates the amount of change that could occur in a long future period. Finally, because historical event-types (not specific events) tend to

4 Though the study performed by Finnerty and Leistikow demonstrates that the traditional equity risk premium exhibits no mean reversion or drift, they conclude that, "the processes generating these risk premiums are generally mean-reverting." This conclusion is completely unrelated to their statistical findings and has received some criticism. In addition to examining the traditional equity risk premia, Finnerty and Leistikow include analyses on "real" risk premia as well as separate risk premia for income and capital gains. In their comments on the study, Ibbotson and Lummer show that these "real" risk premia adjust for inflation twice, "creating variables with no economic content." In addition, separating income and capital gains does not shed light on the behavior of the risk premia as a whole.

5 This assertion is further corroborated by data presented in *Global Investing: The Professional's Guide to the World of Capital Markets* (by Roger G. Ibbotson and Gary P. Brinson and published by McGraw-Hill, New York). Ibbotson and Brinson constructed a stock market total return series back to 1790. Even with some uncertainty about the accuracy of the data before the mid-nineteenth century, the results are remarkable. The real (adjusted for inflation) returns that investors received during the three 50-year periods and one 51-year period between 1790 and 1990 did not differ greatly from one another (that is, in a statistically significant amount). Nor did the real returns differ greatly from the overall 201-year average. This finding implies that because real stock-market returns have been reasonably consistent over time, investors can use these past returns as reasonable bases for forming their expectations of future returns.

repeat themselves, long-run capital market return studies can reveal a great deal about the future. Investors probably expect "unusual" events to occur from time to time, and their return expectations reflect this.

A Look at the Historical Results



It is interesting to take a look at the realized returns and realized equity risk premium in the context of the above discussion. Table 5-5 shows the average stock market return and the average (arithmetic mean) realized long-horizon equity risk premium over various historical time periods. Similarly, Graph 5-5 shows the average (arithmetic mean) realized equity risk premium calculated through 2007 for different starting dates. The table and the graph both show that using a longer historical period provides a more stable estimate of the equity risk premium. The reason is that any unique period will not be weighted heavily in an average covering a longer historical period. It better represents the probability of these unique events occurring over a long period of time.

Table 5-5
Stock Market Return and Equity Risk Premium Over Time
1926–2007

Period Length	Period Dates	Large Company Stock Arithmetic Mean Total Return	Long-Horizon Equity Risk Premium
82 Years	1926–2007	12.3%	7.1%
70 Years	1938–2007	12.8%	7.3%
60 Years	1948–2007	13.1%	7.1%
50 Years	1958–2007	12.2%	5.5%
40 Years	1968–2007	11.8%	4.4%
30 Years	1978–2007	14.0%	6.3%
20 Years	1988–2007	13.0%	6.6%
15 Years	1993–2007	11.8%	6.0%
10 Years	1998–2007	7.2%	1.9%
5 Years	2003–2007	13.2%	8.3%

Looking carefully at Graph 5-5 will clarify this point. The graph shows the realized equity risk premium for a series of time periods through 2007, starting with 1926. In other words, the first value on the graph represents the average realized equity risk premium over the period 1926–2007. The next value on the graph represents the average realized equity risk premium over the period 1927–2007, and so on, with the last value representing the average over the most recent five years, 2003–2007. Concentrating on the left side of Graph 5-5, one notices that the realized equity risk premium, when measured over long periods of time, is relatively stable. In viewing the graph from left to right, moving from longer to shorter historical periods, one sees that the value of the realized equity risk premium begins to decline significantly. Why does this occur? The reason is that the severe bear market of 1973–1974 is receiving proportionately more weight in the shorter, more recent average. If you continue to follow the line to the right, however, you will also notice that when 1973 and 1974 fall out of the recent average, the realized equity risk premium jumps up by nearly 1.2 percent.

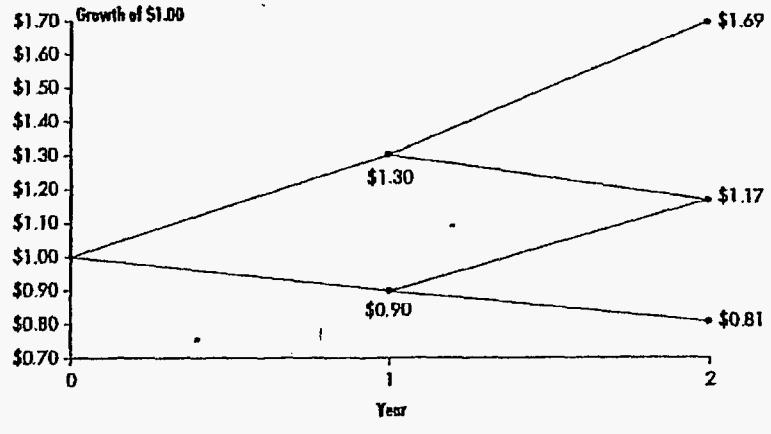
Calculating the Expected Equity Risk Premium



Arithmetic Versus Geometric Differences

For use as the expected equity risk premium in the CAPM, the *arithmetic* or *simple difference* of the *arithmetic means* of stock market returns and riskless rates is the relevant number. This is because the CAPM is an additive model where the cost of capital is the sum of its parts. Therefore, the CAPM expected equity risk premium must be derived by arithmetic, *not geometric*, subtraction.

Arithmetic Versus Geometric Means

The expected equity risk premium should always be calculated using the arithmetic mean. The arithmetic mean is the rate of return which, when compounded over multiple periods, gives the mean of the probability distribution of ending wealth values. (A simple example given below shows that this is true.) This makes the arithmetic mean return appropriate for computing the cost of capital. The discount rate that equates expected (mean) future values with the present value of an investment is that investment's cost of capital. The logic of using the discount rate as the cost of capital is reinforced by noting that investors will discount their expected (mean) ending wealth values from an investment back to the present using the arithmetic mean, for the reason given above. They will, therefore, require such an expected (mean) return prospectively (that is, in the present looking toward the future) to commit their capital to the investment.

For example, assume a stock has an expected return of +10 percent in each year and a standard deviation of 20 percent. Assume further that only two outcomes are possible each year— +30 percent and -10 percent (that is, the mean plus or minus one standard deviation), and that these outcomes are equally likely. (The arithmetic mean of these returns is 10 percent, and the geometric mean is 8.2 percent.) Then the growth of wealth over a two-year period occurs as shown below:

Note that the median (middle outcome) and mode (most common outcome) are given by the geometric mean, 8.2 percent, which compounds up to 17 percent over a 2-year period (hence a terminal wealth of $1.17). However, the *expected value*, or probability-weighted average of all possible outcomes, is equal to:

	(.25	x	1.69)	=	0.4225
+	(.50	x	1.17)	=	0.5850
+	(.25	x	0.81)	=	0.2025
TOTAL					1.2100

Now, the rate that must be compounded up to achieve a terminal wealth of $1.21 after 2 years is 10 percent; that is, the expected value of the terminal wealth is given by compounding up the *arithmetic*, not the geometric mean. Since the arithmetic mean equates the expected future value with the present value, it is the discount rate.

Stated another way, the arithmetic mean is correct because an investment with uncertain returns will have a higher expected ending wealth value than an investment that earns, with certainty, its compound or geometric rate of return every year. In the above example, compounding at the rate of 8.2 percent for two years yields a terminal wealth of $1.17, based on $1.00 invested. But holding the uncertain investment, with a possibility of high returns (two +30 percent years in a row) as well as low returns (two -10 percent years in a row), yields a higher expected terminal wealth, $1.21. In other words, more money is gained by higher-than-expected returns than is lost by lower-than-expected returns. Therefore, in the investment markets, where returns are described by a probability distribution, the arithmetic mean is the measure that accounts for uncertainty, and is the appropriate one for estimating discount rates and the cost of capital.

Arbitrage Pricing Theory

APT is a model of the expected return on a security. It was originated by Stephen A. Ross, and elaborated by Richard Roll. APT treats the expected return on a security (*i.e.*, its cost of capital) as the sum of the payoffs for an indeterminate number of risk factors, where the amount of each risk factor inherent in a given security is estimated. Like the CAPM, APT is a model that is consistent with equilibrium and does not attempt to outguess the market. APT may be viewed as an extended CAPM with multiple "betas" and multiple risk premia.

RISK IN FINANCIAL ANALYSIS

The riskiness of an asset is defined in terms of the likely variability of future returns from the asset. For example, if one buys a $1 million short-term government bond expected to yield 5 percent, then the return on the investment, 5 percent, can be estimated quite precisely, and the investment is defined to be relatively risk free. However, if the $1 million is invested in the stock of a company just being organized to prospect for uranium in Central Africa, then the probable return cannot be estimated precisely. The rate of return on the $1 million investment could range from minus 100 percent to some extremely large figure; because of this high variability, the project is defined to be relatively risky. Similarly, sales forecasts for different products of a single firm might exhibit differing degrees of riskiness. For example, the Union Carbide Company might be quite sure that sales of its Eveready batteries will range between 50 and 60 million for the coming year, but be highly uncertain about how many units of a new laser measuring device will be sold during the year.

Risk, then, is associated with project variability—the more variable the expected future returns, the riskier the investment. However, we can define risk more precisely, and it is useful to do so. This more precise definition requires a step-by-step development, which constitutes the remainder of this section.

Probability Distributions

Any investment decision—or, for that matter, almost *any* kind of business decision—implies a forecast of future events, with the forecast being either explicit or implicit. Ordinarily, the forecast of annual cash flow is a single figure, or point estimate, frequently called the "most likely" or "best" estimate. For example, one might forecast that the cash flows from a particular project will be $500 a year for three years.

How good is this point estimate; that is, how confident is the forecaster of his predicted return? Is he very certain, very uncertain, or somewhere in between? This degree of uncertainty can be defined and measured in terms of the forecaster's "probability distribution"—the probability estimates associated with each possible outcome. In its simplest form, a probability distribution could consist of just a few potential outcomes. For example, in forecasting cash flows, we could make an optimistic estimate, a pessimistic estimate, and a most likely estimate; or, alternatively, we could make high, low, and "best guess" estimates. We might expect our high, or optimistic,

Appendix 4-A
Arithmetic versus Geometric Means in Estimating the Cost of Capital

The use of the arithmetic mean appears counter-intuitive at first glance, because we commonly use the geometric mean return to measure the average annual achieved return over some time period. For example, the long-term performance of a portfolio is frequently assessed using the geometric mean return.

But performance appraisal is one thing, and cost of capital estimation is another matter entirely. In estimating the cost of capital, the goal is to obtain the rate of return that investors expect, that is, a target rate of return. On average, investors expect to achieve their target return. This target expected return is in effect an arithmetic average. The achieved or retrospective return is the geometric average. In statistical parlance, the arithmetic average is the unbiased measure of the expected value of repeated observations of a random variable, not the geometric mean. This appendix formally illustrates that only arithmetic averages can be used as estimates of cost of capital, and that the geometric mean is not an appropriate measure of cost of capital.

The geometric mean answers the question of what constant return you would have had to achieve in each year to have your investment growth match the return achieved by the stock market. The arithmetic mean answers the question of what growth rate is the best estimate of the future amount of money that will be produced by continually reinvesting in the stock market. It is the rate of return which, compounded over multiple periods, gives the mean of the probability distribution of ending wealth.

While the geometric mean is the best estimate of performance over a long period of time, this does not contradict the statement that the arithmetic mean compounded over the number of years that an investment is held provides the best estimate of the ending wealth value of the investment. The reason is that an investment with uncertain returns will have a higher ending wealth value than an investment which simply earns (with certainty) its compound or geometric rate of return every year. In other words, more money, or terminal wealth, is gained by the occurrence of higher than expected returns than is lost by lower than expected returns.

In capital markets, where returns are a probability distribution, the answer that takes account of uncertainty, the arithmetic mean, is the correct one for estimating discount rates and the cost of capital.

While the geometric mean is appropriate when measuring performance over a long time period, it is incorrect when estimating a risk premium to compute the cost of capital.

TABLE 4A-1
GEOMETRIC VS. ARITHMETIC RETURNS

	Stock A	Stock B
1996	50.0%	11.61%
1997	−54.7%	11.61%
1998	98.5%	11.61%
1999	42.2%	11.61%
2000	−32.3%	11.61%
2001	−39.2%	11.61%
2002	153.2%	11.61%
2003	−10.0%	11.61%
2004	38.9%	11.61%
2005	20.0%	11.61%
Standard Deviation	64.9%	0.0%
Arithmetic Mean	26.7%	11.6%
Geometric Mean	11.6%	11.6%

Theory

The geometric mean measures the magnitude of the returns, as the investor starts with one portfolio and ends with another. It does not measure the variability of the journey, as does the arithmetic mean. The geometric mean is backward looking. There is no difference in the geometric mean of two stocks or portfolios, one of which is highly volatile and the other of which is absolutely stable. The arithmetic mean, on the other hand, is forward-looking in that it does impound the volatility of the stocks.

To illustrate, Table 4A-1 shows the historical returns of two stocks, the first one is highly volatile with a standard deviation of returns of 65% while the second one has a zero standard deviation. It makes no sense intuitively that the geometric mean is the correct measure of return, one that implies that both stocks are equally risky since they have the same geometric mean. No rational investor would consider the first stock equally as risky as the second stock. Every financial model to calculate the cost of capital recognizes that investors are risk-averse and avoid risk unless they are adequately compensated for undertaking it. It is more consistent to use the mean that fully impounds risk (arithmetic mean) than the one from which risk has been removed (geometric mean). In short, the arithmetic mean recognizes the uncertainty in the stock market while the geometric mean removes the uncertainty by smoothing over annual differences.

Empirical Evidence

If both the geometric and arithmetic mean returns over the 1926–2004 data are regressed against the standard deviation of returns for the firms in the

deciles, the arithmetic mean outperforms the geometric mean in this statistical regression. Moreover, the constant of arithmetic mean regression matches the average Treasury bond rate and therefore makes economic sense while the constant for the geometric mean matches nothing in particular. This is simply because the geometric mean is stripped of volatility information and, as a result, does a poor job of forecasting returns based on volatility.

The following illustration is frequently invoked in defense of the geometric mean. Suppose that a stock's performance over a two-year period is representative of the probability distribution, doubling in one year ($r_1 = 100\%$) and halving in the next ($r_2 = -50\%$). The stock's price ends up exactly where it started, and the geometric average annual return over the two-year period, r_g, is zero:

$$\begin{aligned} 1 + r_g &= [(1 + r_1)(1 + r_2)]^{1/2} \\ &= [(1 + 1)(1 - .50)]^{1/2} = 1 \\ r_g &= 0 \end{aligned}$$

confirming that a zero year-by-year return would have replicated the total return earned on the stock. The expected annual future rate of return on the stock is not zero, however. It is the arithmetic average of 100% and −50%, $(100 - 50)/2 = 25\%$. There are two equally likely outcomes per dollar invested: either a gain of \$1 when $r = 100\%$ or a loss of \$0.50 when $r = -50\%$. The expected profit is $\$1 - \$.50)/2 = \$.25$ for a 25% expected rate of return. The profit in the good year more than offsets the loss in the bad year, despite the fact that the geometric return is zero. The arithmetic average return thus provides the best guide to expected future returns.

What Academics Have to Say

Bodie, Kane, and Marcus (2005) cite:

> Which is the superior measure of investment performance, the arithmetic average or the geometric average? The geometric average has considerable appeal because it represents the constant rate of return we would have needed to earn in each year to match actual performance over some past investment period. It is an excellent measure of *past* performance. However, if our focus is on future performance, then the arithmetic average is the statistic of interest because it is an unbiased estimate of the portfolio's expected future return (assuming, of course, that the expected return does not change over time). In contrast, because the geometric return over a sample period is always less than the arithmetic mean,

> it constitutes a downward-biased estimator of the stock's expected return in any future year.
>
> Again, the arithmetic average is the better guide to future performance.

Another way of stating the Bodie, Kane, Marcus argument in favor of the arithmetic mean is that it is the best estimate of the future value of the return distribution because it represents the expected value of the distribution. It is most useful for determining the central tendency of a distribution at a particular time, that is, for cross-sectional analysis. The geometric mean, on the other hand, is best suited for measuring an investment's compound rate of return over time, that is, for time-series analysis. This is the same argument made by Ibbotson Associates (2005) where it is shown, using probability theory, that future terminal wealth is given by compounding the arithmetic mean, and not the geometric mean. In other words, if we accept the past as prologue, the best estimate of a future year's return based on a random distribution of the prior years' returns is the arithmetic average. Statistically, it is our best guess for the holding-period return in a given year.

Brigham and Ehrhardt (2005) in their widely used corporate finance text point out that the arithmetic average is more consistent with CAPM theory, as one of its key underpinning assumptions is that investors are supposed to focus, in their portfolio decisions, upon returns in the next period and the standard deviation of this return. To the extent that this next period is one year, the preference for the arithmetic mean, which derives from a set of single one year period returns, follows. It is also noteworthy that one of the crucial assumptions inherent in the CAPM is that investors are single-period expected utility of terminal wealth maximizers who choose among alternative portfolios on the basis of each portfolio's expected return and standard deviation.

Brealey, Myers, and Allen (2006) in their leading graduate textbook in corporate finance opt strongly for the arithmetic mean. The authors illustrate the distinction between arithmetic and geometric averages and conclude that arithmetic averages are appropriate when estimating the cost of capital:

> The proper uses of arithmetic and compound rates of return from past investments are often misunderstood. Therefore, we call a brief time-out for a clarifying example.
>
> Suppose that the price of Big Oil's common stock is $100. There is an equal chance that at the end of the year the stock will be worth $90, $110, or $130. Therefore, the return could be −10 percent, +10 percent or +30 percent (we assume that Big Oil does not pay a dividend). The expected return is 1/3(−10+10+30) = +10 percent.

If we run the process in reverse and discount the expected cash flow by the expected rate of return, we obtain the value of Big Oil's stock:

$$PV = \frac{110}{1.10} = \$100$$

The expected return of 10 percent is therefore the correct rate at which to discount the expected cash flow from Big Oil's stock. It is also the opportunity cost of capital for investments which have the same degree of risk as Big Oil.

Now suppose that we observe the returns on Big Oil stock over a large number of years. If the odds are unchanged, the return will be −10 percent in a third of the years, +10 percent in a further third, and +30 percent in the remaining years. The arithmetic average of these yearly returns is

$$\frac{-10 + 10 + 30}{3} = +10\%$$

Thus the arithmetic average of the returns correctly measures the opportunity cost of capital for investments of similar risk to Big Oil stock.

The average compound annual return on Big Oil stock would be

$$(.9 \times 1.1 \times 1.3)^{1/3} - 1 = .088, \text{ or } 8.8\%$$

less than the opportunity cost of capital. Investors would not be willing to invest in a project that offered an 8.8 percent expected return if they could get an expected return of 10 percent in the capital markets. The net present value of such a project would be

$$NPV = -100 + \frac{108.8}{1.1} = -1.1$$

Moral: If the cost of capital is estimated from historical returns or risk premiums, use arithmetic averages, not compound annual rates of return (geometric averages).

(Richard A. Brealey, Stewart C. Myers, and Paul Allen, *Principles of Corporate Finance*, 8th Edition, Irwin McGraw-Hill, 2006, page 156-7.)

The widely cited Ibbotson Associates publication also contains a detailed and rigorous discussion of the impropriety of using geometric averages in estimating the cost of capital.[12]

[12] Ibbotson Associates, *Stocks, Bonds, Bills, and Inflation, 2005 Yearbook, Valuation Edition*, page 75.

> The arithmetic average equity risk premium can be demonstrated to be most appropriate when discounting future cash flows. For use as the expected equity risk premium in either the CAPM or the building block approach, the arithmetic mean or the simple difference of the arithmetic means of stock market returns and riskless rates is the relevant number. This is because both the CAPM and the building block approach are additive models, in which the cost of capital is the sum of its parts. The geometric average is more appropriate for reporting past performance, since it represents the compound average return.
>
> The argument for using the arithmetic average is quite straightforward. In looking at projected cash flows, the equity risk premium that should be employed is the equity risk premium that is expected to actually be incurred over the future time periods.
>
> The best estimate of the expected value of a variable that has behaved randomly in the past is the average (or arithmetic mean) of its past values.

In their widely publicized research on the market risk premium, Dimson, Marsh and Staunton (2002) state

> The arithmetic mean of a sequence of different returns is always larger than the geometric mean. To see this, consider equally likely returns of +25 and −20 percent. Their arithmetic mean is 2½ percent, since (25 − 20)/2 = 2½. Their geometric mean is zero, since (1 + 25/100) × (1 − 20/100) − 1 = 0. But which mean is the right one for discounting risky expected future cash flows? For forward-looking decisions, the arithmetic mean is the appropriate measure.
>
> To verify that the arithmetic mean is the correct choice, we can use the 2½ percent required return to value the investment we just described. A $1 stake would offer equal probabilities of receiving back $1.25 or $0.80. To value this, we discount the cash flows at the arithmetic mean rate of 2½ percent. The present values are respectively $1.25/1.015 = $1.22 and $0.80/1.025 = $0.78, each with equal probability, so the value is $1.22 × ½ + $0.80 × ½ = $1.00. If there were a sequence of equally likely returns of +25 and −20 percent, the geometric mean return will eventually converge on zero. The 2½ percent forward-looking arithmetic mean is required to compensate for the year-to-year volatility of returns.

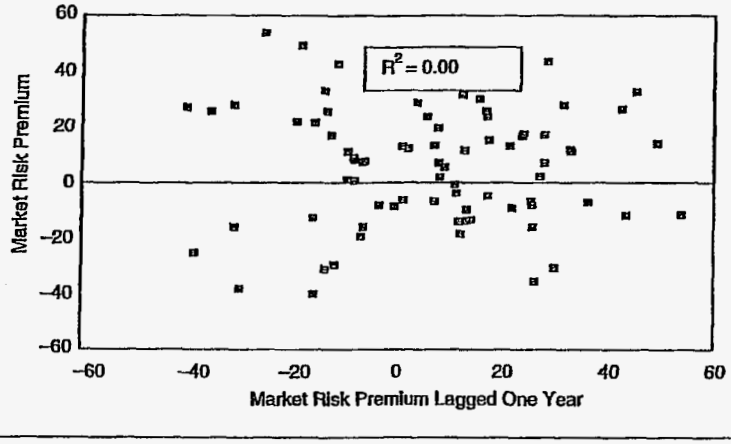
Lastly, on the practical side, Bruner, Eades, Harris, and Higgins (1998) found that 71% of the texts and tradebooks in their extensive survey of practice supported use of an arithmetic mean for estimation of the cost of equity.

Mean Reversion Argument

Some academics have argued that if stock returns were expected to revert to a trend, this would suggest the use of a geometric mean since the geometric mean is, by definition, an estimate of a smoothed long-run trend increment. These same academics have argued that the historical estimate of the market risk premium ("MRP") is upward-biased by the buoyant performance of the stock market prior to 2002, and because of the extraordinary and unusually high realized MRPs in those years, investors expect a return to lower MRPs in the future, bringing the average MPR to a more "normal" level.

The presence or absence of mean reversion is an empirical issue. The empirical findings are weak and highly contradictory; the empirical evidence is inconclusive and unconvincing, certainly not enough to support the "mean reversion" hypothesis. The weight of the empirical evidence on this issue is that the more sophisticated tests of mean reversion in the MRP demonstrate that the realized MRP over the last 75 years or so was almost perfectly free of mean reversion, and had no statistically identifiable time trend. It is also noteworthy that most of these studies were performed prior to the stock market's debacle in 2000–2002, years of extraordinary and unusually low realized MRPs. The stock market's dismal performance of 2000–2002 has certainly taken the wind out of the mean reversion school's sails.

An examination of historical MRPs reveals that the MRP is random with no observable pattern. To the extent that the estimated historical equity risk premium follows what is known in statistics as a random walk, one should expect the equity risk premium to remain at its historical mean. Therefore, the best estimate of the future risk premium is the historical mean.



Ibbotson Associates (2005) find no evidence that the market price of risk or the amount of risk in common stocks has changed over time:

> Our own empirical evidence suggests that the yearly difference between the stock market total return and the U.S. Treasury bond income return in any particular year is random ... there is no discernable pattern in the realized equity risk premium. (Ibbotson Associates, *Stocks, Bonds, Bills, and Inflation, 2005 Yearbook, Valuation Edition*, pages 74–75)

In statistical parlance, there is no significant serial correlation in successive annual market risk premiums, that is, no trend. Ibbotson Associates go on to state that it is reasonable to assume that these quantities will remain stable in the future (*Id.*):

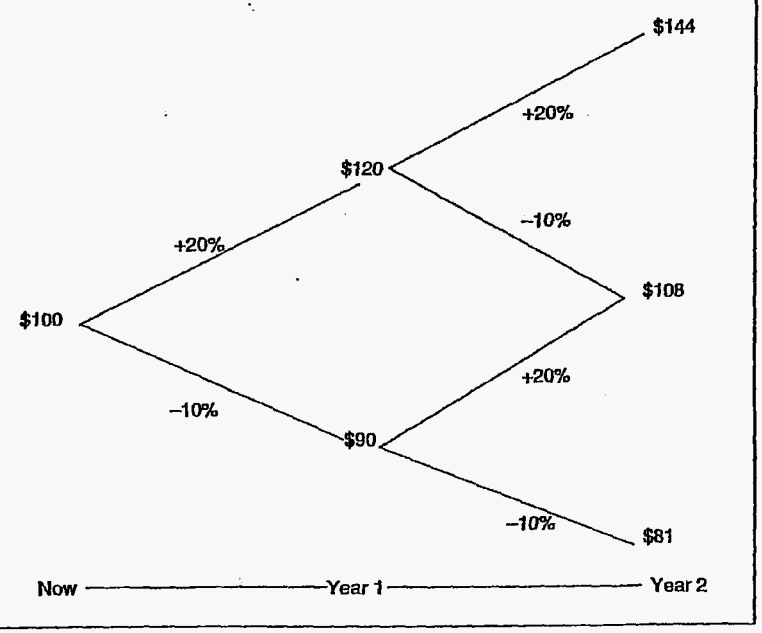
> The best estimate of the expected value of a variable that has behaved randomly in the past is the average (or arithmetic mean)

FIGURE 4A-1
MARKET RISK PREMIUM 1926–2004
Year-to-Year Correlation

of its past values. (Ibbotson Associates, *Stocks, Bonds, Bills, and Inflation, 2004 Yearbook, Valuation Edition*, page 75)

Nowhere is it suggested by Ibbotson Associates that the market risk premium has declined over time.

Because there is little evidence that the MRP has changed over time, it is reasonable to assume that these quantities will remain stable in the future. Figure 4A-1 shows the relationship, or the lack of relationship, between year-to-year MRPs reported in the Ibbotson Associates Valuation Yearbook, 2005 edition, for the 1926–2004 period. The relationship is virtually absent, as indicated by the low R^2 of zero between successive MRPs. In other words, there is no history in successive MRPs as indicated by the zero serial correlation coefficient.



In short, the determination of the cost of capital with the CAPM requires an unbiased estimate of the expected annual return. The expected arithmetic return provides the appropriate measure for this purpose.

Formal Demonstration

This section shows why arithmetic rather than geometric means should be used for forecasting, discounting, and estimating the cost of capital.[13] By

[13] This section is adapted from a similar treatments and demonstration in Brealey, Myers, and Allen (2006) and Ibbotson Associates (2005).

FIGURE 4A-2
POSSIBLE STOCK PRICES

definition, the cost of equity capital is the annual discount rate that equates the discounted value of expected future cash flows (from dividends and the sale of the stock at the end of the investor's investment horizon) to the current market price of a share in the firm. The discount rate that equates the discounted value of future expected dividends and the end of period expected stock price to the current stock price is a prospective arithmetic, rather than a prospective geometric, mean rate of return. Since future dividends and stock prices cannot be predicted with certainty, the "expected" annual rate of return that investors require is an average "target" percentage rate around which the actual, year-by-year returns will vary. This target rate is, in effect, an arithmetic average.

A numerical illustration will clarify this important point. Consider a non-dividend paying stock trading for $100 which has, in every year, an equal chance of appreciating by 20% or declining by 10%. Thus, after one year, there is an equal chance that the stock's price will be $120 and an equal chance the price will be $90. Figure 4A-2 presents all possible eventualities after two periods have elapsed (the rates of return are presented at the end of the lines in the diagram).

The possible stock prices are shown in the following table.

TABLE 4A-2 STOCK PRICES AFTER TWO PERIODS	
Price	Chance
$144	1 chance in 4
$108	2 chances in 4
$ 81	1 chance in 4

The expected future stock price after two periods is then:

$$1/4\ (\$144) + 2/4\ (\$108) + 1/4\ (\$81) = \$110.25$$

The cost of equity capital is calculated as the discount rate that equates the present value of the future expected cash flows to the current stock price. In the present simple example, the only cash flow is the gain from selling the stock after two periods have elapsed. Thus, using the expected stock price of $110.25 calculated above, the expected rate of return is that r, which solves the following equation:

$$\text{Current Stock Price} = \frac{\text{Expected Stock Price}}{(1 + r)^2}$$

The factor $(1 + r)^2$ discounts the expected stock price to the present. Substituting the numerical values, we have:

$$\$100 = \frac{\$110.25}{(1+r)^2}$$

$$r = 5\%$$

Thus, the cost of equity capital is 5%. This 5% cost of equity capital is equal to the prospective arithmetic mean rate of return, which is the probability-weighted average single period rate of return on equity. Since in every period there is an equal chance that the stock's return will be 20% or −10%, the probability-weighted average is:

$$1/2\ (20\%) + 1/2\ (-10\%) = 5\%$$

However, the 5% cost of equity capital is not equal to the prospective geometric mean rate of return, which is a probability-weighted average of the possible compounded rates of return over the two periods. Now consider the prospective geometric mean rate of return. Table 4A-3 shows the possible compounded rates of return over two periods, and the probability of each.

Thus, the prospective geometric mean rate of return is:

$$1/4\ (20\%) + 2/4\ (3.92\%) + 1/4\ (-10\%) = 4.46\%$$

TABLE 4A-3
STOCK PRICES AND RETURNS AFTER TWO PERIODS

Price	Chance	Compounded Return
$144	1 chance in 4	20.00%
$108	2 chances in 4	3.92%
$ 81	1 chance in 4	−10.00%

This return is not equal to the 5% cost of equity capital.

The example can easily be extended to include the case of a dividend-paying company and will reach the same conclusion: the implied discount rate calculated in the DCF model is an expected arithmetic rather than an expected geometric mean rate of return.

The foregoing analysis shows that it is erroneous to use a prospective multi-year geometric mean rate of return as a "target" rate of return for each year of the period. If, for example, investors currently require an expected future rate of return on an investment of 13% each year, then 13% is the appropriate annual rate of return on equity for ratemaking purposes. Consequently, in using a risk premium approach for the purposes of rate of return regulation, the single-year annual required rate of return should be estimated using arithmetic mean risk premiums.

It should be pointed out that the use of the arithmetic mean does not imply an investment holding period of one year. Rather, it is premised on the uncertainty with respect to each year's return during the holding period, however many years that may be. When computing the arithmetic average of historic annual returns in order to calculate the average return (expected value of the return), every achieved return outcome is one possible future outcome for each year the security will be held. Each historic return has an equal probability of occurring during each year of the holding period. The resulting expected value of the risk premium is the arithmetic average of all of the past premiums considered, regardless of the length of the expected holding period.

TABLE 7-1

Average rates of return on Treasury bills, government bonds, corporate bonds, and common stocks, 1926–1994 (figures in percent per year)

Portfolio	Average Annual Rate of Return: Nominal	Average Annual Rate of Return: Real	Average Risk Premium (Extra Return versus Treasury Bills)
Treasury bills	3.7	.6	0
Government bonds	5.2	2.1	1.4
Corporate bonds	5.7	2.7	2.0
Common stocks (S&P 500)	12.2	8.9	8.4
Small-firm common stocks	17.4	13.9	13.7

Source: Ibbotson Associates, Inc., *1995 Yearbook.*

You may ask why we look back over such a long period to measure average rates of return. The reason is that annual rates of return for common stocks fluctuate so much that averages taken over short periods are meaningless. Our only hope of gaining insights from historical rates of return is to look at a very long period.[3]

Arithmetic Averages and Compound Annual Returns

Notice that the average returns shown in Table 7-1 are arithmetic averages. In other words, Ibbotson Associates simply added the 69 annual returns and divided by 69. The arithmetic average is higher than the compound annual return over the period. The 69-year compound annual return for the S&P index was 10.2 percent.[4]

The proper uses of arithmetic and compound rates of return from past investments are often misunderstood. Therefore, we call a brief time-out for a clarifying example.

Example: Suppose that the price of Big Oil's common stock is $100. There is an equal chance that at the end of the year the stock will be worth $90, $110, or $130. Therefore, the return could be −10 percent, +10 percent, or +30 percent (we assume that Big Oil does not pay a dividend). The *expected* return is ½(−10 + 10 + 30) = +10 percent.

If we run the process in reverse and discount the expected cash flow by the expected rate of return, we obtain the value of Big Oil's stock:

[3]Even with 69 years of data we cannot be sure that this period is truly representative and that the average is not distorted by a few unusually high or low returns. The reliability of an estimate of the average is usually measured by its *standard error.* For example, the standard error of our estimate of the average risk premium on common stocks is 2.5 percent. There is a 95 percent chance that the *true* average is within plus or minus 2 standard errors of the 8.4 percent estimate. In other words, if you said that the true average was between 3.5 and 13.4 percent, you would have a 95 percent chance of being right. (*Technical note:* The standard error of the mean is equal to the standard deviation divided by the square root of the number of observations. In our case the standard deviation is 20.6 percent, and therefore the standard error is $20.6/\sqrt{69} = 2.5$.)

[4]This was calculated from $(1 + r)^{69} = 811$, which implies $r = .102$. (*Technical note:* For lognormally distributed returns the annual compound return is equal to the arithmetic average return minus half the variance. For example, the annual standard deviation of returns on the U.S. market was about .20, or 20 percent. Variance was therefore $.20^2$, or .04. The compound annual return is .04/2 = .02, or 2 percentage points less than the arithmetic average.)

$$PV = \frac{110}{1.10} = \$100$$

The expected return of 10 percent is therefore the correct rate at which to discount the expected cash flow from Big Oil's stock. It is also the opportunity cost of capital for investments which have the same degree of risk as Big Oil.

Now suppose that we observe the returns on Big Oil stock over a large number of years. If the odds are unchanged, the return will be −10 percent in a third of the years, +10 percent in a further third, and +30 percent in the remaining years. The arithmetic average of these yearly returns is

$$\frac{-10 + 10 + 30}{3} = +10\%$$

Thus the arithmetic average of the returns correctly measures the opportunity cost of capital for investments of similar risk to Big Oil stock.

The compound annual return on Big Oil stock is

$$(.9 \times 1.1 \times 1.3)^{1/3} - 1 = .088, \text{ or } 8.8\%,$$

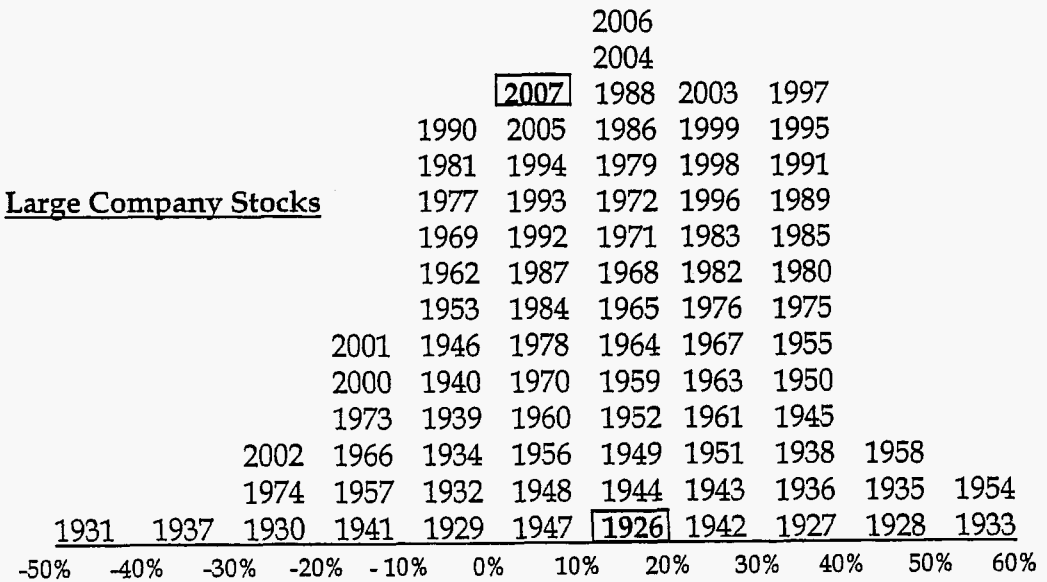
less than the opportunity cost of capital. Investors would not be willing to invest in a project that offered an 8.8 percent expected return if they could get an expected return of 10 percent in the capital markets. The net present value of such a project would be

$$NPV = 100 + \frac{108.8}{1.1} = -1.1$$

Moral: If the cost of capital is estimated from historical returns or risk premiums, use arithmetic averages, not compound annual rates of return.

Using Historical Evidence to Evaluate Today's Cost of Capital

Suppose there is an investment project which you *know*—don't ask how—has the same risk as Standard and Poor's Composite Index. We will say that it has the same degree of risk as the *market portfolio*, although this is speaking somewhat loosely, because the index does not include all risky securities. What rate should you use to discount this project's forecasted cash flows?



Clearly you should use the currently expected rate of return on the market portfolio; that is the return investors would forgo by investing in the proposed project. Let us call this market return r_m. One way to estimate r_m is to assume that the future will be like the past and that today's investors expect to receive the same "normal" rates of return revealed by the averages shown in Table 7-1. In this case, you would set r_m at 12.2 percent, the average of past market returns.

Unfortunately, this is *not* the way to do it: r_m is not likely to be stable over time. Remember that it is the sum of the risk-free interest rate r_f and a premium for risk. We know that r_f varies. For example, as we finish this chapter in early 1995, Treasury bills yield about 6 percent, more than 2 percentage points above the 3.7 percent average return of Treasury bills.

What if you were called upon to estimate r_m in 1995? Would you have said 12.2 percent? That would have squeezed the risk premium by 2.2 percentage points. A more sensible procedure takes the current interest rate on Treasury bills plus 8.4 percent, the average *risk premium* shown in Table 7-1. With a rate of 6 percent for Treasury bills, that gives

$$\begin{aligned} r_m\,(1995) &= r_f\,(1995) + \text{normal risk premium} \\ &= .06 + .084 = .144, \text{ or } 14.4\% \end{aligned}$$

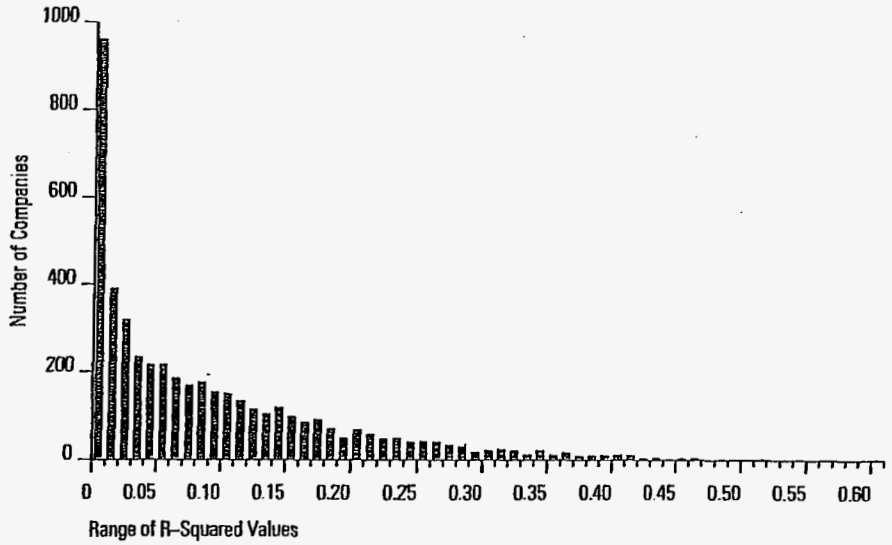
than 1.67; thus, the beta of Company B is not statistically different from zero at that confidence level. If the regression provides a beta of 0.90 but is not statistically different from zero, then other measures of beta may need to be consulted (such as the company's peer betas or industry average betas).

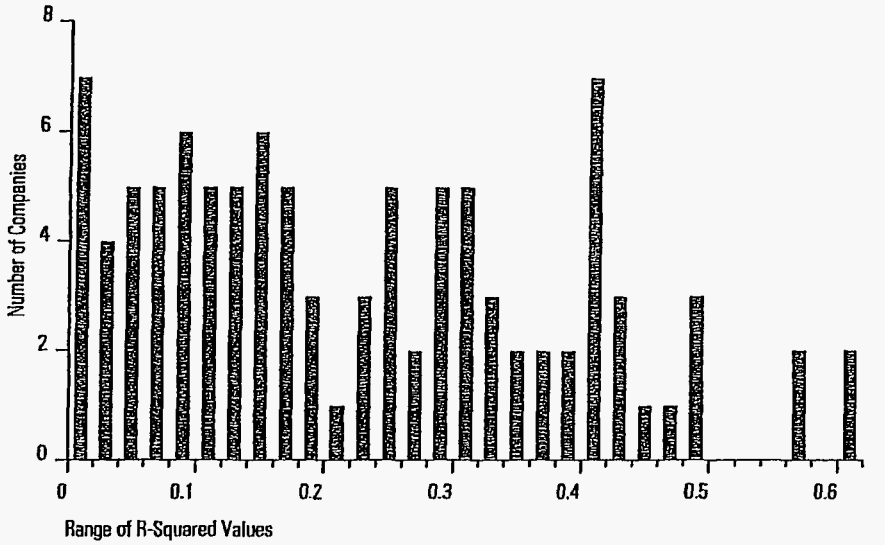
To better illustrate the typical range of a beta's t-statistic, Graph 6-3 depicts the distribution of all t-statistics calculated with respect to the betas of the approximately 5,000 companies included in the *Ibbotson® Beta Book*. Since these beta calculations use 60 months of data, the critical value for the t-statistic is again 1.67 at the 90 percent confidence level. Recall that the absolute value is what is compared to the critical value; t-statistics above 1.67 or below –1.67 would therefore be considered statistically significant.

Graph 6-3
t-Statistic Distribution
October 2002 through September 2007



R-Squared

Another valuable regression statistic is the coefficient of determination, or R-squared. The R-squared is a statistic that measures the "goodness of fit" of the regression line and describes the percentage of variation in the dependent variable that is explained by the independent variable. The R-squared measure may vary from zero to one. An R-squared of 1.00 means that the independent variable explains 100 percent of the variation of the dependent variable. An R-squared of 0 indicates that the independent variable does not explain any of the variation of the dependent variable.



In terms of measuring beta via regression, a high R-squared means that the movements of the returns of the security are explained largely by the movements of the returns of the market. The R-squared for security betas are usually quite low. Graphs 6-4 and 6-5 show a distribution of R-squared statistics from the *Ibbotson® Beta Book*. The first graph shows the distribution of R-squared for the approximately 5,000 companies included in the publication. The second graph shows the distribution of R-squared for the largest 100 companies, in terms of equity capitalization, that are included in the book.

Graph 6-4
R-Squared Distribution for Entire Population
October 2002 through September 2007

Note that most betas have an R-squared less than 0.3. What can we infer from this data? There may be other company- or industry-specific factors that drive security prices. While the CAPM includes only one factor in determining expected returns, it does not disallow the existence of others.

Graph 6-5
R-Squared Distribution for Largest 100 Companies
October 2002 through September 2007

Standard Error

A third common regression statistic is the standard error of the regression coefficient. The standard error measures the extent to which each individual observation in a sample differs from the value predicted by the regression. In other words, the standard error attempts to measure sampling error. The standard error can be interpreted in a fashion similar to the standard deviation of a return. For example, suppose a beta regression results in a standard error of 0.2. There is therefore a 68 percent likelihood that the true measure of this company's beta lies within 0.2 of the estimated beta coefficient. Likewise, there is a 96 percent likelihood that the true beta measure lies within two standard errors of the estimate, or plus or minus 0.4.

Stability of beta is a key issue under the CAPM. While we expect betas to change over time as companies increase or decrease their systematic risk, we do not expect a huge fluctuation in beta from one period to the next. One would expect the beta of a company with a low standard error to be more stable over time than the beta of a company with a high standard error. An example of two companies is presented in Graph 6-6. The current beta of 1.10 for Valspar Corp. has a low standard error of 0.19. On the other hand, Technical Ventures Inc. has a current beta of 1.80 with a high standard error of 1.86. The chart shows the beta of each company on a rolling 60-month basis, meaning that the beta is calculated over the 60-month period October 31, 1997 through September 30, 2002, then the calculation is carried

Beta Measurements The beta coefficient is an *index of systematic risk.* Beta coefficients may be used for ranking the systematic risk of different assets. If the beta is larger than 1, $b > 1.0$, then the asset is more volatile than the market and is called an **aggressive asset.** If the beta is less than 1, $b < 1.0$, the asset is a **defensive asset;** its price fluctuations are less volatile than the market's. Figure 10-1 illustrates the characteristic lines for three different assets that have low, medium, and high levels of beta (or undiversifiable risk).

Figure 10-2 shows that IBM is a stock with an average amount of systematic risk. IBM's beta of 1.02 indicates that its return tends to increase 2 percent more than the return on the market average when the market is rising. When the market falls, IBM's return tends to fall 2 percent more than the market's. The characteristic line for IBM has an above average correlation coefficient of $\rho = .7495$, indicating that the returns on this security follow its particular characteristic line slightly more closely than those of the average stock.

Partitioning Risk Total risk can be measured by the variance of returns, denoted Var(r). This measure of *total risk is partitioned into its systematic and unsystematic components in Equation (10-8).*[7]

$$\begin{aligned}\text{Var}(r_i) &= \text{total risk of } i\text{th asset} \\ &= \text{Var}(a_i + b_i r_{m,t} + e_{i,t}) \\ &\quad \text{by substituting } (a_i + b_i r_{m,t} + e_{i,t}) \text{ for } r_{i,t} \\ &= 0 + \text{Var}(b_i r_{m,t}) + \text{Var}(e_{i,t}) \\ &\quad \text{since Var}(a_i) = 0 \end{aligned} \tag{10-8}$$

$$\begin{aligned}\text{Var}(r_i) &= b_i^2\,\text{Var}(r_m) + \text{Var}(e) \qquad \text{since Var}(b_i r_m) = b_i^2\,\text{Var}(r_m) \\ &= \text{systematic} + \text{unsystematic risk}\end{aligned} \tag{10-8a}$$

$$.01389 = .00780 + .00609 \qquad \text{for IBM}$$

The unsystematic risk measure Var(e) is called in regression language the *residual variance* or, synonymously, the *standard error squared.*

Undiversifiable Proportion The percentage of total risk that is systematic can be measured by the coefficient of determination ρ^2 (that is, the characteristic line's squared correlation coefficient).

[7]In this context, **partition** is a technical statistical term that means to divide the total variance into *mutually exclusive* and *exhaustive* pieces. This partition is only possible if the returns from the market are statistically independent from the residual error terms that occur simultaneously, $\text{Cov}(r_{m,t}, e_{i,t}) = 0$. The mathematics of regression analysis will orthogonalize the residuals and thus ensure that the needed statistical independence exists.

$$\frac{\text{Systematic risk}}{\text{Total risk}} = \frac{b_i^2 \operatorname{Var}(r_m)}{\operatorname{Var}(r_m)} = \rho^2 \tag{10-9}$$

$$\frac{.007802}{.01389} = \frac{(1.021)^2\,(.00749)}{.00749} = .5617 \times 100 = 56.17\% \quad \text{for IBM}$$

Diversifiable Proportion The percentage of unsystematic risk equals $(1.0 - \rho^2)$.

$$\frac{\text{Unsystematic risk}}{\text{Total risk}} = \frac{\operatorname{Var}(e)}{\operatorname{Var}(r_i)} = (1.0 - \rho^2)$$

$$\frac{.00609}{.01389} = (1.0 - .5617) = .438 \times 100 \tag{10-10}$$

$$= 43.8\% \text{ unsystematic} \quad \text{for IBM}$$

Studies of the characteristic lines of hundreds of stocks listed on the NYSE indicate that the average correlation coefficient is approximately $\rho = .5$.[8] This means that about $\rho^2 = 25$ percent of the total variability of return in most NYSE securities is explained by movements in the market.

	NYSE average	IBM
Systematic risk: ρ^2	.25	.5617
Unsystematic risk: $(1.0 - \rho^2)$	.75	.4383
Total risk: 100%	1.00	1.0000

As explained above, systematic changes are common to all stocks and are therefore undiversifiable.

A primary use of the characteristic line (or *market model*, or the *single-index model*, as it is also called) is to assess the risk characteristics of one asset.[9] The statistics in Table 10-2, for instance, indicate that IBM's common stock is slightly more risky than the average common stock in terms of total risk and

[8]The average ρ was found to be about .5, as reported in Marshall Blume, "On the Assessment of Risk," *Journal of Finance*, March 1971, p. 4. For similar estimates, see J. C. Francis, "Statistical Analysis of Risk Surrogates for NYSE Stocks," *Journal of Financial and Quantitative Analysis*, Dec. 1979.

[9]Professor Jensen reformulated the characteristic line in a risk-premium form. See M. C. Jensen, "The Performance of Mutual Funds in the Period 1945 through 1964," *Journal of Finance*, May 1968, pp. 389–416. See also M. C. Jensen, "Risk, the Pricing of Capital Assets, and the Evaluation of Investment Portfolios," *Journal of Business*, vol. XLII, 1969. Jensen interprets the alpha intercept term of the characteristic line, as he formulates it, as an investment performance measure. It has been suggested that Jensen's performance measure is biased. See Keith V. Smith and Dennis A. Tito, "Risk-Return Measures of Ex-Post Portfolio Performance," *Journal of Financial and Quantitative Analysis*, Dec. 1969, vol. IV, no. 4, p. 466.

systematic risk.[10] New risk measurements must be made periodically, however, because the risk and return of an asset may change with the passage of time.[11]

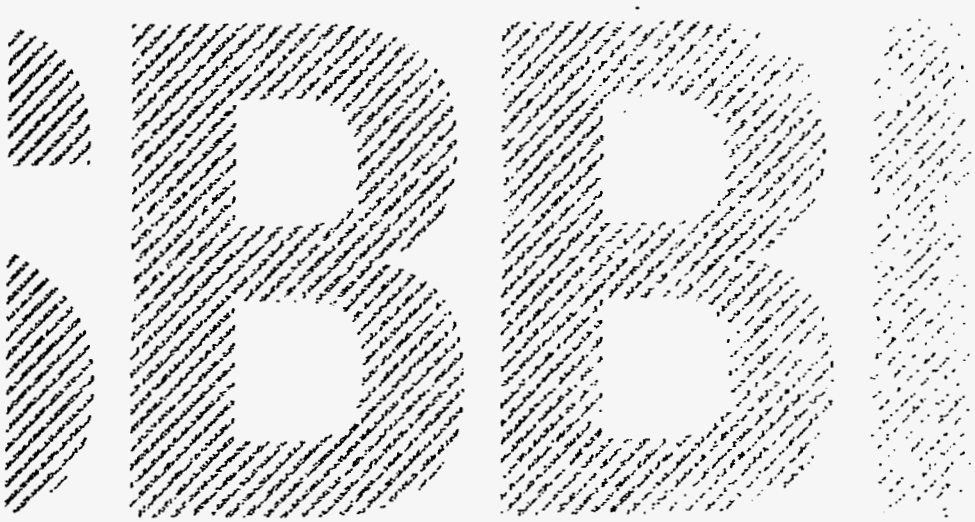
10-3 CAPITAL ASSET PRICING MODEL (CAPM)

An old axiom states "there is no such thing as a free lunch." This means that you cannot expect to get something for nothing—a rule that certainly applies to investment returns. Investors who want to earn high average rates of return must take high risks and endure the associated loss of sleep, the possibility of ulcers, and the chance of bankruptcy. The question to which we now turn is: Should investors worry about total risk, undiversifiable risk, diversifiable risk, or all three?

In Chapter 1 it was suggested that *investors should seek investments that have the maximum expected return in their risk class.* Their happiness from investing is presumed to be derived as indicated in the expected utility $E(U)$ function below.

$$E(U) = f[E(r), \sigma]$$

The investment preferences of wealth-seeking risk-averse investors represented by the function above cause them to maximize their expected utility (or, equivalently, happiness) by (1) maximizing their expected return in any given risk class, $\partial E(U)/\partial E(r) > 0$, or, conversely, (2) minimizing their total risk at any given rate of expected return, $\partial E(U)/\partial \sigma < 0$. However, in selecting individual assets, investors will not be particularly concerned with the asset's total risk σ. Figure 9-1 showed that the unsystematic portion of total risk can be easily diversified by holding a portfolio of different securities. But, systematic risk affects all stocks in the market because it is undiversifiable. Portfolio theory therefore suggests that only the undiversifiable (or systematic) risk is worth avoiding.[12]



[10]Statements about the relative degree of total risk are made in the context of a long-run horizon—that is, over at least one *complete business cycle*. Obviously, an accurate short-run forecast which says that some particular company will go bankrupt next quarter makes it more risky than IBM, although IBM may have had more historical variability of return.

[11]Empirical studies documenting the intertemporal instability of betas have been published. Marshall Blume, "Betas and Their Regression Tendencies," *Journal of Finance*, June 1975, pp. 785–795. See also J. C. Francis, "Statistical Analysis of Risk Coefficients for NYSE Stocks," *Journal of Financial and Quantitative Analysis*, Dec. 1979, vol. XIV, no. 5, pp. 981–997. An appendix at the end of this chapter reviews some evidence about shifting betas, standard deviations, and correlations.

[12]Both the systematic and unsystematic portions of total risk must be considered by **undiversified investors.** Entrepreneurs who have their entire net worth invested in one business, for example, can be bankrupted by a piece of bad luck that could be easily averaged away to zero in a diversified portfolio. Poorly diversified investors should not treat diversifiable risk lightly. Only well-diversified investors can afford to ignore diversifiable risk.

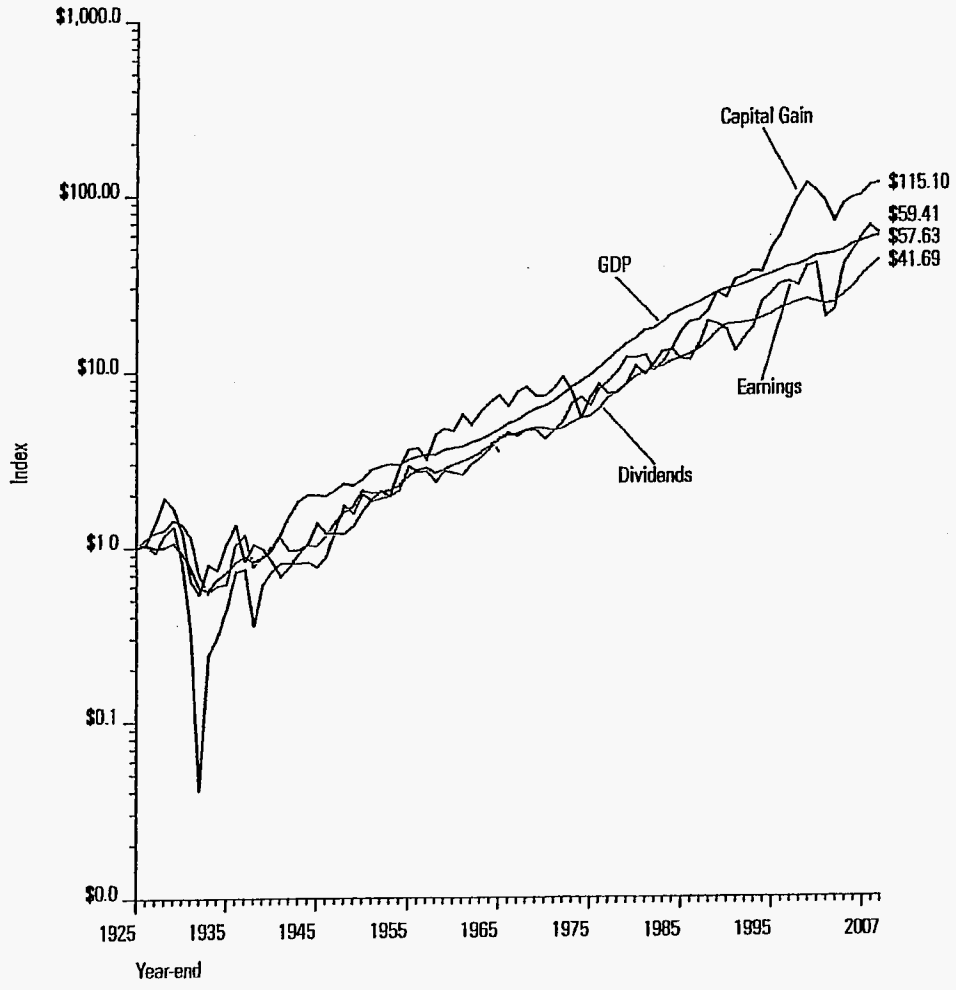
Graph 5-11
Rolling 60-Month Standard Deviation for Large and Small Stocks
January 1926–December 2007

There are two arguments against this rationale. First, it could easily be argued that we have moved through a series of market regimes during the 82-year history of the equity risk premium calculation window used in this book. Given that markets and investor attitudes have changed over time and the equity risk premium has remained relatively constant, there is no reason to believe that a new market regime will have any greater or lesser impact than any other time period.

A second argument relates to the demand for investments. If investors are more comfortable with the market and with stock investing, they will probably place more money into the market. This influx of funds will increase the demand for stocks, which will ultimately increase, not decrease, the equity risk premium.

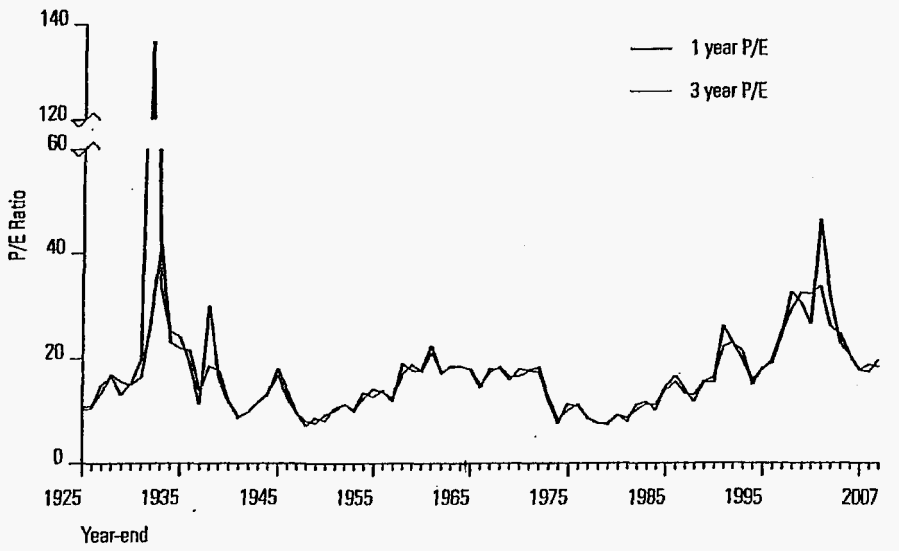


Supply Model

Long-term expected equity returns can be forecasted by the use of supply side models. The supply of stock market returns is generated by the productivity of the corporations in the real economy. Investors should not expect a much higher or lower return than that produced by the companies in the real economy. Thus, over the long run, equity returns should be close to the long-run supply estimate.

Graph 5-12 shows the growth of the stock market, GDP per capita, dividends, and earnings from the end of 1925 to the end of 2007. The graph illustrates that earnings and dividends have historically grown in tandem with the overall economy (GDP per capita). However, although GDP per capita kept pace with earnings and dividends, the overall stock market price grew faster than GDP per capita. This is primarily because the price-to-earnings ratio increased 1.94 times during the same period.

Graph 5-12
Capital Gains, GDP Per Capita, Earnings, and Dividends
Year-End 1925 = $1.00



from 1925 to 2007

Roger G. Ibbotson and Peng Chen forecast the equity risk premium through a supply side model using historical data.[10] They utilized an earnings model as the basis for their supply side estimate. As seen from Graph 5-12, the growth in corporate earnings is in line with the growth of overall economic productivity. The earnings model breaks historical returns into four pieces, with only three historically being supplied by companies: inflation, income return, and growth in real earnings per share. The growth in the P/E ratio, the fourth piece, is a reflection of investors' changing prediction of future earnings growth. The past supply of corporate growth is forecasted to continue; however, a change in investors' predictions is not. P/E rose dramatically from 1980 through 2001 because people believed that corporate earnings were going to grow faster in the future. This growth of P/E drove a small portion of the rise in equity returns over the same period.

Graph 5-13 illustrates the price to earnings ratio calculated using one-year and three-year average earnings from 1926 to 2007. The P/E ratio, using one-year average earnings, was 10.22 at the beginning of 1926 and ended the year 2007 at 19.80—an average increase of 0.81 percent per year. The highest P/E was 136.52 recorded in 1932, while the lowest was 7.07 recorded in 1948. Ibbotson Associates revised the calculation of the P/E ratio from a one-year to a three-year average earnings for use in equity forecasting. This is because reported earnings are affected not only by the long-term productivity, but also by "one-time" items that do not necessarily have the same consistent impact year after year. The three-year average is more reflective of the long-term trend than the year-by-year numbers. The P/E ratio calculated using the three-year average of earnings had an increase of 0.67 percent per year.

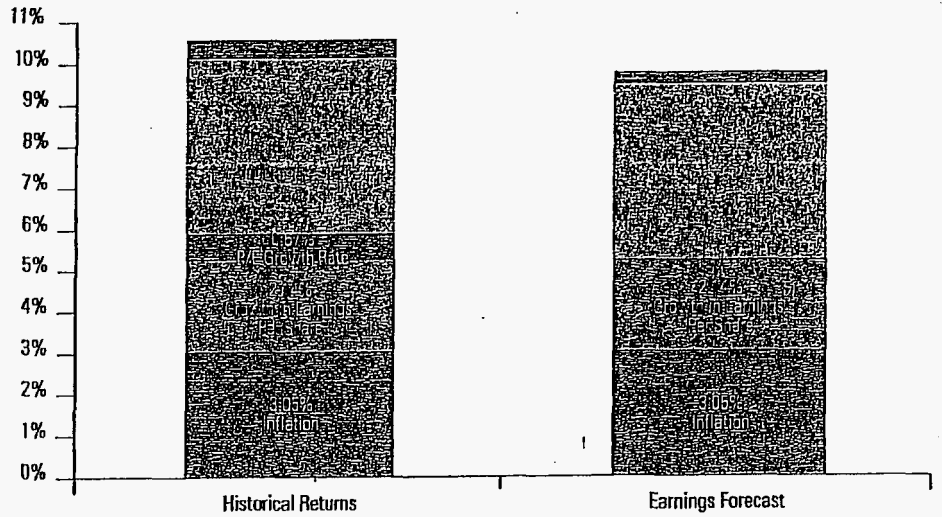
Graph 5-13
Large Company Stocks
P/E Ratio

10 Ibbotson, Roger G., and Peng Chen, "Long-Run Stock Returns: Participating in the Real Economy." *Financial Analysts Journal*, January/February, vol. 59, no.1, 2003, pp. 88-98.

The historical P/E growth factor using three-year earnings of 0.67 percent per year is subtracted from the forecast because it is not believed that P/E will continue to increase in the future. The market serves as the cue. The current P/E ratio is the market's best guess for the future of corporate earnings and there is no reason to believe, at this time, that the market will change its mind.

Thus, the supply of equity returns only includes inflation, the growth in real earnings per share, and income return:

$$SR = [(1 + CPI) \times (1 + g_{REPS}) - 1] + Inc + Rinv$$



$$9.66\%^{*} = [(1 + 3.05\%) \times (1 + 2.14\%) - 1] + 4.20\% + 0.23\% \quad {}^{*}\text{difference due to rounding}$$

where:

SR = the supply of the equity return;
CPI = Consumer Price Index (inflation);
g_{REPS} = the growth in real earning per share;
Inc = the income return;
Rinv = the reinvestment return.

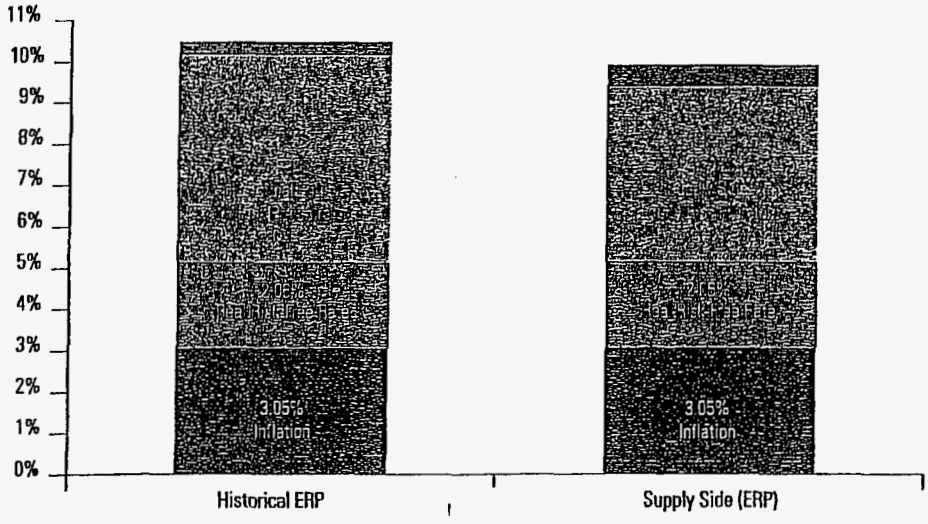
The forward-looking earnings model calculates the long-term supply of U.S. equity returns to be 9.66 percent.

Graph 5-14
Historical and Forecast Equity Returns Based on Earnings Model
1926–2007

Results add up geometrically, not arithmetically.
The darkest shade in the graph represents reinvested returns and an interaction factor between the return components.

Graph 5-14 illustrates the decomposition of historical equity returns from 1926-2007. It also illustrates the historical components that are supplied by companies: inflation, income return, and growth in real earnings per share. Once again the main difference between the historical and forecast equity returns is the exclusion of growth in P/E ratio in the forecasted earnings model.

The equity risk premium, based on the supply side earnings model, is calculated to be 4.24 percent on a geometric basis.



$$SERP = \frac{(1+SR)}{(1+CPI)\times(1+RRf)} - 1$$

$$4.24\%^{*} = \frac{(1+9.66\%)}{(1+3.05\%)\times(1+2.06\%)} - 1 \qquad ^{*}\text{difference due to rounding}$$

where:

SERP = the supply side equity risk premium;
SR = the supply of the equity return;
CPI = Consumer Price Index (inflation);
RRf = the real risk-free rate.

Graph 5-15
Historical and Forecast Equity Risk Premium
1926–2007

Results add up geometrically, not arithmetically.
The darkest shade in the graph represents reinvested returns and an interaction factor between the return components.

Graph 5-15 compares the historical equity risk premium, which includes the P/E ratio, to the supply side equity risk premium calculated from 1926 to 2007 on a geometric basis. Contrary to several recent studies on equity risk premium that declare the forward-looking equity risk premium to be close to zero, or even negative, Ibbotson and Chen have found the long-term supply of equity risk premium to be only slightly lower than the straight historical estimate.

The supply side equity risk premium calculated earlier is a geometric calculation. An arithmetic calculation, as mentioned earlier in the chapter, is most appropriate when discounting future cash flows. For use as the expected equity risk premium in either the CAPM or the buildup approach, the arithmetic calculation is the relevant number. There are several ways to convert the geometric average into an arithmetic average. One method is to assume the returns are independently lognormally distributed over time, where the arithmetic and geometric averages roughly follow the following relationship:

$$R_A = R_G + \frac{\sigma^2}{2}$$

$$6.23\% = 4.24\% + \frac{19.97\%^2}{2}$$

where:

R_A = the arithmetic average;
R_G = the geometric average;
σ = the standard deviation of equity returns.

As stated in IRS Ruling 59-60, although valuation is a forward-looking process, it must be based on facts available as of the required date of appraisal. Therefore, Ibbotson provides data critical to the valuation process as far back as 1926, such as the historical equity risk premium and size premium presented in Appendix A of this book. Similarly, Table 5-6 presents the supply side equity risk premium, on an arithmetic basis, beginning in 1926 and ending in each of the last 22 years.

Utilities Inc.
Brief Summary of Common Equity Cost Rate

No.	Principal Methods	Proxy Group of Six AUS Utility Reports Water Companies	Florida PSC Natural Gas Index
1.	Discounted Cash Flow Model (DCF) (1)	11.47 %	9.82 %
2.	Risk Premium Model (RPM) (2)	12.16 (3)	11.72 (3)
3.	Capital Asset Pricing Model (CAPM) (4)	12.20 (5)	10.95 (5)
4.	Comparable Earnings Model (CEM) (6)	13.56	15.75

Notes: (1) From page 2 of this Exhibit
(2) From page 11 of this Exhibit.
(3) Ms. Ahern did not utilize the average of the historical and projected market risk premia in calculating the Risk Premium Derived Common Equity Cost Rate. If she had utilized the average of the historical and projected market risk premia, the conclusions of her Risk Premium results would be 13.67% and 12.95% for the proxy group of six AUS Utility Reports water companies and the Florida PSC Natural Gas Index respectively.

(4) From page 19 of this Exhibit.
(5) Ms. Ahern did not utilize the average of the historical and projected market risk premia in calculating the CAPM/ECAPM Derived Common Equity Cost Rate. If she had utilized the average of the historical and projected market risk premia the conclusions of her CAPM results would be 15.02% and 13.54% for the proxy group of six AUS Utility Reports water companies and the Florida PSC Natural Gas Index respectively.

(6) From pages 24 and 29 of this Exhibit.

Average	3.62 %	0.10 %	3.72 %	6.11 %	9.82 %
Median	3.63 %	0.10 %	3.72 %	5.33 %	9.43 %

Conclusion

Proxy Group of Six AUS Utility Reports Water Companies	
Average	11.47 %
Median	11.46 %
Florida PSC Natural Gas Index	
Average	9.82 %
Median	9.43 %

Notes:

(1) From page 3 of this Exhibit.
(2) This reflects a growth rate component equal to one-half the conclusion of growth rate (from page 1 of Schedule PMA-8 of this Exhibit) x Column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for American States Water Co., 2.70% x (1/2 x 5.18%) = 0.07%.
(3) Column 1 + Column 2.
(4) From page 4 of this Exhibit.
(5) Column 3 + Column 4.

Utilities Inc.
Derivation of Dividend Yield for Use in the
Discounted Cash Flow Model

	Dividend Yield		
	Spot (08/29/2008) (1)	Average of Last 3 Months (2)	Average Dividend Yield (3)

Piedmont Natural Gas	3.60	3.90	3.75
South Jersey Inds.	3.03	2.87	2.95
Southwest Gas	2.97	3.01	2.99
WGL Holdings Inc.	4.41	4.09	4.25
Average	3.60 %	3.64 %	3.62 %
Median	3.47 %	3.78 %	3.63 %

Notes: (1) The spot dividend yield is the current annualized dividend per share divided by the spot market price on 08/29/08.
(2) The average 3-month dividend yield was computed by relating the indicated annualized dividend rate and market price on the last trading day of each of the three months ended July 31, 2008.
(3) Equal weight has been given to the 3-month average and spot dividend yield. This provides recognition of current conditions, but does not place undue emphasis thereon.

(2) The average yield spread of A rated public utility bonds over Aaa rated corporate
(3) No adjustment necessary as the average Moody's bond rating of the proxy group is A2 as shown on page 2 of this Exhibit.
(4) Adjustment to reflect the A3 Moody's Bond Rating of the Florida PSC Natural Gas Index. The 18 basis point adjustment is derived by taking 1/3 of the spread between Baa and A2 Public Utility Bonds (1/3 * 0.55% = 0.18%)
(5) From page 15 of this Exhibit.
(6) Ms. Ahern did not utilize the average of the historical and projected market risk premia in calculating the Risk Premium Derived Common Equity Cost Rate. If she had utilized the average of the historical and projected market risk premia, the conclusions of her Risk Premium results would be 13.67% and 12.95% for the proxy group of six AUS Utility Reports water companies and the Florida PSC Natural Gas Index respectively.

Utilities Inc.
Judgment of Equity Risk Premium for
the Proxy Group of Six AUS Utility Reports Water Companies
and the Florida PSC Natural Gas Index

Line No.		*Proxy Group of Six AUS* Utility Reports Water Companies	Florida PSC Natural Gas Index
1.	Calculated equity risk premium based on the total market using the beta approach (1)	6.51	5.27
2.	Mean equity risk premium based on a study using the holding period returns of public utilities with A rated bonds (2)	4.65	4.65
3.	Average equity risk premium (3)	5.58 %	4.96 %

Notes: (1) From page 16 of this Exhibit.
(2) From page 17 of this Exhibit.
(3) If the average of the historical and projected equity risk premium were used in deriving the average equity risk premium the results would be 7.09% and 6.18% for the proxy group of six AUS Utility Reports water companies and the Florida PSC Natural Gas Index respectively.

Utilities Inc.
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for
the Proxy Group of Six AUS Utility Reports Water Companies
and the Florida PSC Natural Gas Index

Line No.		Proxy Group of Six AUS Utility Reports Water Companies	Florida PSC Natural Gas Index
1.	Arithmetic mean total return rate on the Standard & Poor's 500 Composite Index - 1926-2007 (1)	12.30 %	12.30 %
2.	Arithmetic mean yield on Aaa and Aa Corporate Bonds 1926-2007 (2)	(6.10)	(6.10)
3.	Historical Equity Risk Premium	6.20 %	6.20 %
4.	Forecasted 3-5 year Total Annual Market Return (3)	17.83 %	17.83 %
5.	Prospective Yield an Aaa Rated Corporate Bonds (4)	(5.87)	(5.87)
6.	Forecasted Equity Risk Premium	11.96 %	11.96 %
7.	Conclusion of Equity Risk Premium (5)	6.20 %	6.20 %
8.	Adjusted Value Line Beta (6)	1.05	0.85
9.	Beta Adjusted Equity Risk Premium	6.51 %	5.27 %

Notes:
(1) From Ibboston SBBI - 2008 Valuation Yearbook - Market Results for Stocks Bonds Bills and Inflation for 1926-2007 - 2008 Yearbook Valuation Edition, Morningstar, Inc., 2008 Chicago, IL.

(2) From Moody's Industrial Manual and Mergent Bond Record Monthly Update.

(3) From page 21 of this Exhibit.

(4) Average forecast based upon six quarterly estimates of Aaa rated corporate bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated September 1, 2008 (see Exhibit (PMA-2) Page 2 of 2. The estimates are detailed below.

Third Quarter 2008	5.70 %
Fourth Quarter 2008	5.70
First Quarter 2009	5.80
Second Quarter 2009	5.90
Third Quarter 2009	6.00
Fourth Quarter 2009	6.10
Average	5.87 %

(5) The average of the Historical Equity Risk Premium of 6.20% from Line No. 3 and the Forecasted Equity Risk Premium of 11.60% from Line No. 6 ((6.20% + 11.60%) / 2 = 8.90%. Normally, Ms. Ahern would use the average Historical Equity Risk Premium in her Risk Premium Analysis. However, in Ms. Ahern's opinion, the current and recent substantial volatility in the stock market is extraordinary and *not representative of the expected long-term. Consequently, in this instance, Ms. Ahern will not* consider what she believes is an extraordinary expected capital appreciation and instead will rely only upon the 6.20% historical market premium. If she had relied on the average of the historical and the forcasted equity risk premium, the results for the beta adjusted equity risk premium would be 9.53% and 7.72% for the proxy group of six AUS Utility reports water companies and the Florida PSC Natural Gas Index respectively

(6) From page 18 of this Exhibit.

Utilities Inc.
Derivation of Mean Equity Risk Premium Based on a Study
Using Holding Period Returns of Public Utilities

Line No.		Over A Rated Public Utility Bonds AUS Consultants - Utility Services Study (1)
Time Period		1928-2007
1.	Arithmetic Mean Holding Period Returns (2): Standard & Poor's Public Utility Index	11.24 %
2.	Arithmetic Mean Yield on: Moody's A Rated Public Utility Bonds	(6.59)
3.	Equity Risk Premium	4.65 %

Notes: (1) S&P Public Utility Index and Moody's Public Utility Bond Average Annual Yields 1928-2007, (AUS Consultants - Utility Services, 2008).

(2) Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.

See page 21 for notes.

Utilities Inc.
Development of the Market-Required Rate of Return on Common Equity Using
the Capital Asset Pricing Model for
the Proxy Group of Six AUS Utility Reports Water Companies
and the Florida PSC Natural Gas Index
Adjusted to Reflect a Forecasted Risk-Free Rate and Market Return

Notes:

(1) For reasons explained in Ms. Ahern's accompanying direct testimony, from the three previous month-end (Jun. '08 – Aug. '08), as well as a recently available (Aug. 29, 2008), Value Line Summary & Index, a forecasted 3-5 year total annual market return of 17.83% can be derived by averaging the 3-month and spot forecasted total 3-5 year total appreciation, converting it into an annual market appreciation and adding the Value Line average forecasted annual dividend yield.

The 3-5 year average total market appreciation of 78% produces a four-year average annual return of 15.51% ((1.78^{25}) - 1). When the average annual forecasted dividend yield of 2.32% is added, a total average market return of 17.83% (2.32% + 15.51%) is derived.

The 3-month and spot forecasted total market return of 17.83% minus the risk-free rate of 4.78% (developed in Note 2) is 13.05% (17.83% - 4.78%). The Morningstar, Inc. (Ibbotson Associates) calculated market premium of 7.10% for the period 1926-2007 results from a total market return of 12.30% less the average income return on long-term U.S. Government Securities of 5.20% (12.30% - 5.20% = 7.10%). This is then averaged with the 13.05% Value Line market premium resulting in a 10.08% market premium. In Ms. Ahern's opinion, the current and recent substantial decline in the stock market is extraordinary and not representative of the expected long-term. Consequently, in this instance, Ms. Ahern will not consider what she believes is an extraordinary expected capital appreciation and instead will rely only upon the 7.10% historical market premium which will be then multiplied by the beta in column 1 of page20 of this Exhibit.

(2) Average forecast based upon six quarterly estimates of 30-year Treasury Note yields per the consensus of nearly 50 economists reported in the Blue Chip Financial Forecasts dated September 1, 2008 (see page 2 of Exhibit. (PMA-2)_) The estimates are detailed below:

	30-Year Treasury Note Yield
First Quarter 2008	4.60%
Second Quarter 2008	4.60
Third Quarter 2008	4.70
Fourth Quarter 2008	4.80
First Quarter 2009	4.90
Second Quarter 2009	5.10
Average	4.78%

(3) The traditional Capital Asset Pricing Model (CAPM) is applied using the following formula:

$R_S = R_F + \beta (R_M - R_F)$

Where R_S = Return rate of common stock
R_F = Risk Free Rate
β = Value Line Adjusted Beta
R_M = Return on the market as a whole

(4) The empirical CAPM is applied using the following formula:

$R_S = R_F + .25 (R_M - R_F) + .75 \beta (R_M - R_F)$

Where R_S = Return rate of common stock
R_F = Risk-Free Rate
β = Value Line Adjusted Beta
R_M = Return on the market as a whole

Utilities Inc.
Comparable Earnings Analysis

Notes:

(P) = Preliminary

(1) The criteria for selection of the proxy group of two hundred twenty-two non-utility companies was that the non-utility companies be domestic and have a meaningful rate of return on book common equity, shareholders' equity, net worth, or partners' capital for each of the five years ended 2007 and projected 2011 - 2013 as reported in Value Line Investment Survey (Standard Edition). The proxy group of two hundred twenty-two non-utility companies was selected based upon the proxy group of six AUS Utility Reports water companies' unadjusted beta range of 0.54 – 1.28 and standard error of the regression range of 2.8187 – 3.6743. These ranges are based upon plus or minus three standard deviations of the unadjusted beta and standard error of the regression as detailed in Ms. Ahern's rebuttal testimony. Plus or minus three standard deviations captures 99.73% of the distribution of unadjusted betas and standard errors of the regression.

(2) Ending 2007.

(3) 2011 - 2013.

(4) The Student's T-statistic associated with these returns exceeds 1.96 at the 95% level of confidence. Therefore, they have been excluded, as outliers, to arrive at proper mean historical and projected returns as fully explained in Ms. Ahern's testimony.

(5) The standard deviation of group of six AUS Utility Reports water companies' standard error of the regression is 0.1426. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{/2N}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus, } 0.1426 = \frac{3.2465}{/518} = \frac{3.2465}{22.7596}$$

(6) Median five year projected rate of return on book common equity, shareholder's equity, net worth, or partners' capital including returns identified as outliers as outlined in Note (4) above.

(7) Median five year historical and projected rate of return on book common equity, shareholder's equity, net worth, or partner's capital excluding returns identified as outliers as outlined in Note (4) above.

(8) Median of the five year historical and five year projected return on book common equity, shareholder's equity, net worth or partner's capital excluding returns identified as outliers as outlined on Note (4) above.

(9) The criteria for selection of the proxy group of forty-nine non-utility companies was that the non-utility companies be domestic and have a meaningful projected rate of return on book common equity, shareholders' equity, net worth, or partners' capital 2011 - 2013 as reported in Value Line Investment Survey (Standard Edition). The proxy group of forty-nine non-utility companies was selected based upon the Florida PSC Natural Gas Index's unadjusted beta range of 0.56 – 1.00 and standard error of the regression range of 1.6896 – 2.2026. These ranges are based upon plus or minus three standard deviations of the unadjusted beta and standard error of the regression as detailed in Ms. Ahern's rebuttal testimony. Plus or minus three standard deviations captures 99.73% of the distribution of unadjusted betas and standard errors of the regression.

(10) The standard deviation of the Florida PSC Natural Gas Index's standard error of the regression is 0.0867 (1.9731 / 22.7596).

2008					

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Company, it supplies water to more than 250,000 customers in 75 communities in 10 counties. Service areas include the greater metropolitan areas of Los Angeles and Orange Counties. The company also provides electric utility services to nearly 23,250 customers in the city of Big Bear Lake and in areas of San Bernardino County. Acquired Chaparral City Water of Arizona (10/00). Has roughly 555 employees. Officers & directors own 3.1% of common stock (4/07 Proxy). Chairman: Lloyd Ross. President & CEO: Floyd Wicks. Inc: CA. Addr.: 630 East Foothill Boulevard, San Dimas, CA 91773. Tele.: 909-394-3600. Internet: www.aswater.com.

We've raised our near-term expectations for American States Water. The California Public Utilities Commission (CPUC) recently announced that it approved the company's general rate case appeal for its Region II service area as well as the request to recover general office expenses. The decision, which is retroactive to January 1, 2007, and will be recorded in the company's fourth-quarter 2007 results (set to be released as we headed to press), ought to increase revenue by roughly $6.4 million and add more than a dime to share earnings for the quarter. We now look for the company to earn $0.46 a share in the final quarter of 2007. Note that our estimate would have been higher if not for the unfavorable weather conditions that have limited usage rates in recent months. **There may be additional regulatory backing on the horizon.** Although the regulatory climate is much improved from years ago, the CPUC is mulling over the idea of instituting a few of the proposals included in the Water Action Plan of 2005. Doing so would likely further streamline the decision making process, while removing some earnings volatility through the adoption of a weather normalization clause.

Even still, we advise investors to look elsewhere at this time. The aforementioned changes at the CPUC are still speculation and are not being factored into our estimates just yet. That said, earnings growth will probably slow considerably in 2008. Even if adopted, we suspect that a fair portion of the benefits coming from these changes would likely be offset by capital constraints. Indeed, American is highly leveraged and had only $3.6 million in cash on hand at the end of the most recent quarter. Infrastructure costs are expected to remain high, given aging systems and tighter EPA regulations, forcing management to look to outside financiers for help. The higher interest costs associated with taking on more debt and/or additional shares will likely limit shareholder gains, as well. Meanwhile, the once robust dividend yield pales in comparison to years past, despite the recent 6% hike. **These shares offer limited 3- to 5-year total-return appeal,** despite the 10% drop in price since our October review.

Andre J. Costanza *January 25, 2008*

(A) Primary earnings. Excludes nonrecurring gains: '91, 73¢; '02, 13¢; '04, 14¢; '05, 25¢; '06, 6¢. Next earnings report due early February.
(B) Dividends historically paid in early March, June, September, and December. ■ Div'd reinvestment plan available.
(C) In millions, adjusted for splits.

2008					

BUSINESS: Aqua America, Inc. is the holding company for water and wastewater utilities that serve approximately 2.8 million residents in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Florida, Indiana, and five other states. Divested three of four non-water businesses in '91; telemarketing group in '93; and others. Acquired AquaSource, 7/03; Consumers Water, 4/99; and others. Water supply revenues '06: residential, 60%; commercial, 14%; industrial & other, 26%. Officers and directors own 1.2% of the common stock (4/07 Proxy). Chairman & Chief Executive Officer: Nicholas DeBenedictis. Incorporated: Pennsylvania. Address: 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010. Telephone: 610-525-1400. Internet: www.aquaamerica.com.

We have lowered our share-net estimate for Aqua America's recently completed fourth quarter. Due to the struggling housing market and the inability of the company to raise its rates in a few markets, we now believe that the company earned $0.22 a share during the December period, down from our previous estimate of $0.24 (WTR will release its fourth-quarter financial results within the next few weeks). On the bright side,

We expect a healthy share-net advance this year. Aqua's profits will likely be fueled by its recent acquisition activities. Over the last several months, it has purchased a number of water companies that have expanded its market reach to new areas in Florida, New Jersey, Indiana, Pennsylvania, and Texas. Moreover, management continues to implement rate hikes throughout the nation, which will help advance the operating margin and profits this year. In sum, Aqua will likely post share earnings of $0.90 this year, 20% better than our estimate for 2007.

The company's balance sheet should be able to support a few more purchases. Although Aqua does not have a huge stash of cash (only $15 million), and already possesses an ample amount of debt, it probably generates enough funds to complete a few more acquisitions this year. Aqua will likely seek opportunities to bolster its water utility businesses in Texas, Pennsylvania, and Virginia.

These shares are not particularly appealing at this time. Although recent acquisitions should help Aqua America register a solid share-earnings advance in 2008, our Timeliness Ranking System suggests that this issue will lag the year-ahead market. Furthermore, looking long term, this stock already trades at the low end of our projected Target Price Range for 2010–2012, limiting appreciation potential out to that time frame. That said, our share-net estimates would likely be raised if Aqua can complete a few additional acquisitions over the next few years. Lastly,

Income-oriented accounts can probably find better options elsewhere. Although Aqua has raised its quarterly dividend every year over the past decade, its current yield of 2.5% is probably not a good enough reason to look here.

2008					

BUSINESS: California Water Service Group provides regulated and nonregulated water service to over 2 million people (483,900 customers) in 83 communities in California, Washington, New Mexico, and Hawaii. Main service areas: San Francisco Bay area, Sacramento Valley, Salinas Valley, San Joaquin Valley & parts of Los Angeles. Acquired National Utility Company (5/04); Rio Grande Corp. (11/00). Revenue breakdown, '06: residential, 70%; business, 18%; public authorities, 5%; industrial, 5%; other, 2%. '06 reported deprec. rate: 3.3%. Has roughly 870 employees. Chairman: Robert W. Foy. President & CEO: Peter C. Nelson. Inc.: Delaware. Address: 1720 North First Street, San Jose, California 95112-4598. Telephone: 408-367-8200. Internet: www.calwatergroup.com.

We've softened our outlook for California Water Service Group a bit since our October report. The water utility provider ran into some unforeseen problems in the third quarter 2007, when unfavorable weather conditions, and lower usage rates, caused it to post earnings of $0.67 a share, a penny off the prior year's mark. Meanwhile, there has been an unexpected holdup on the regulatory front. The California Public Utilities Commission, which appeared to have turned over a new leaf and had been handing out more timely and favorable rulings in recent memory, has yet to rule on the company's 2006 general rate case. Also, approval of parts of the Water Action Plan, namely of a Water Revenue Adjustment Mechanism (WRAM) and modified cost-balancing accounting was postponed. As a result, we've reduced our fourth-quarter 2007 share-net estimate by a few pennies to $0.32 and our full-year 2008 figure by a dime to $1.65. Note, that our 2008 figure would receive a boost if any of the WRAM amendments are implemented before the third quarter. **The stock has given back most of the gains it enjoyed last year . . .** Indeed, it has fallen from its $45-plus perch, trading down more than 10% since our October report. The issue is now ranked 4 (Below Average) for Timeliness based on our momentum-driven system.

. . . however, we still think it is richly valued according to current market conditions. The stock is currently trading at nearly 25 times 12-month earnings (through June), a premium compared to our 2010-2012 projections. Although we suspect that recent regulatory lag is just a hiccup, and that an improving landscape paints a favorable backdrop for the industry as a whole, we think that the current share price accounts for these potential changes. Meanwhile, capital constraints continue to concern us. Infrastructure costs are likely to continue rising as systems and pipelines age and EPA requirements grow tougher. However, California does not have the cash to fund these endeavors and will probably have to issue more shares and/or debt, thereby limiting shareholders' gains. Although the dividend provides some downside risk, income-minded investors have better options.

Andre J. Costanza *January 25, 2008*

(A) Basic EPS. Excl. nonrecurring gain (loss): '00, (7¢); '01, 4¢; 02, 8¢. Next earnings report due early February.

BUSINESS: Southwest Water Company provides a broad range of services including water production, treatment and distribution; wastewater collection and treatment; utility billing and collection; utility infrastructure construction management; and public works services. It operates out of two groups, Utility (38% of 2006 revenues) and Services (62%). Utility owns and manages rate-regulated public water utilities in California, New Mexico, Oklahoma, and Texas. Services does mostly maintenance work on a contract basis. Off. & dir. own 6.3% of com. shs.; Glen Roe Investment Council, 9.7% (4/07 proxy). CEO and Chairman: Mark Swatek. Inc.: DE. Addr.: One Wilshire Building, 624 S. Grand Ave. Ste. 2900, Los Angeles, CA 90017. Tel.: 213-929-1800. Internet: www.swwc.com.

Southwest Water has struggled of late. A couple of months ago, it reported weak September-period financial results. For the quarter, due to record rainfall in Texas and the weak housing market, share net came in at just $0.08, well below our estimate of $0.15. In addition, for the recently completed fourth quarter, we have lowered our share-net estimate by $0.03 to $0.10. Along with the struggles of the housing market, which probably limited construction and repair opportunities for SWWC, profits were likely hampered by increased operating costs, stemming from its restructuring initiative. **On the bright side, the situation should improve this year.** Although the housing market has shown few signs of rebounding, Southwest will likely begin to benefit from the improvement of its operations. It recently introduced a new integrated operating system, which has helped improve its communication processes and should help lower operating expenses. Thus, we estimate that this new system will help widen the operating margin by about 50 basis points this year.

Profits will be fueled by Southwest's recent acquisition activity, as well. A few months ago, it purchased Diamond Water Company, which provides services to approximately 7,500 residents near San Antonio. This purchase helped SWWC expand its market reach and customer base in the Lone Star State. Moreover, the company is currently attempting to implement rate hikes in several of its markets. This action will help margins and profits this year. All told, we believe that 2008 share net will be $0.50, about 67% better than last year's 2007 probable results.

These shares do not stand out for the short or long term. Although its restructuring initiative and recent acquisitions may well help the company achieve a large share-net gain this year, our Timeliness Ranking System suggests that this issue will lag the year-ahead market. In addition, looking out to the 2010–2012 period, this stock offers below average appreciation potential to that timeframe. That said, Southwest will probably remain active on the acquisition front. Additional purchases would probably cause us to raise our earnings projections.

Jan Gendler *January 25, 2008*

(A) Diluted earnings. Excludes nonrecurring gains (losses): '00, (3¢); '01, (5¢); '02, 1¢; '05, (23¢). Next earnings report due mid-Mar.

AGL Resources reported solid performance for the fourth quarter. Revenues declined slightly in the recent interim. However, the company enjoyed lower operating costs, and the bottom-line improved considerably. But share earnings for 2007 as a whole only matched the prior year's figure, owing to unfavorable comparisons in the first and third quarters. Operating earnings were lower at the company's Wholesale Services business, resulting from a significant decrease in commercial activity due to lower volatility in the natural gas market during the year. Performance was supported by solid earnings growth in the company's Distribution Operations, and a strong bottom-line advance in its Retail Energy Operations. The Distribution business benefited from modest customer growth and higher base rates at Chattanooga Gas. The Retail Energy line experienced higher average customer usage, a greater customer base, and increased late payment fees.

Earnings growth ought to resume in 2008. The company has initiated share-net guidance of $2.75 to $2.85 for the current year. Our estimate lies at the midpoint of this range. This assumes normal weather patterns and average volatility for gas prices in 2008. Earnings per share stand a good chance of advancing at about the same deliberate pace in 2009, as well.

The board of directors recently approved a modest dividend increase. The quarterly dividend will now increase to $0.42, beginning with the March payout. This represents slower growth than in the past few years, which makes sense, considering the company's flat earning comparison for 2007 and its lower cash balance in recent times. Nevertheless, this level of dividend growth will probably continue going forward.

These shares have improved a notch in Timeliness, and are now ranked 3 (Average). That said, this issue earns good marks for Safety and Price Stability, and we project steady earnings growth at AGL Resources over the pull to 2011-2013. Income-seeking investors may also find this stock attractive, considering its healthy dividend yield. Overall, these shares offer worthwhile total return potential for the coming years.

Michael Napoli, CPA *March 14, 2008*

Atmos Energy's history dates back to 1906 in the Texas Panhandle. Over the years, through various mergers, it became part of Pioneer Corporation, and, in 1981, Pioneer named its gas distribution division Energas. In 1983, Pioneer organized Energas as a separate subsidiary and distributed the outstanding shares of Energas to Pioneer shareholders. Energas changed its name to Atmos in 1988. Atmos acquired Trans Louisiana Gas in 1988, Western Kentucky Gas Utility in 1987, Greeley Gas in 1993, United Cities Gas in 1997, and others.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to 3.2 million customers via six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Combined 2007 gas volumes: 297 MMcf. Breakdown: 56% residential; 32% commercial; 8% industrial; and 4% other. 2007 depreciation rate 3.7%. Has around 4,470 employees. Officers and directors own approximately 1.8% of common stock (12/07 Proxy). Chairman and Chief Executive Officer: Robert W. Best. Incorporated: Texas. Address: P.O. Box 650205, Dallas, Texas 75265 Telephone: 972-934-9227. Internet: www.atmosenergy.com

Atmos Energy began fiscal 2008 (ends September 30th) on a sour note. That was attributable primarily to the nonregulated marketing segment, which experienced a drop in margins because of less volatility in natural gas prices. We look for this trend to continue, barring major storm activity.

But one bright spot was the utility unit, thanks to higher rates in Texas, Louisiana, Tennessee, and Kentucky. It should also be mentioned that mechanisms reducing exposure to possible adverse weather patterns during the 2007-2008 winter heating season are in place for virtually all operations.

Nonetheless, we think share net will advance only 3%, to $2.00, this fiscal year. The bottom line stands to increase at a somewhat stronger 5% pace, to $2.10 a share, in fiscal 2009, assuming additional expansion in operating margins. Please note that our estimates exclude amounts from pending rate cases in Texas, where Atmos is seeking a, $52 million increase in annual revenues, and Kansas (where a $5 million boost in annual revenues is being sought).

We envision steady, albeit unspectacular, earnings gains out to 2011-2013. With the utility unit currently serving customers across 12 states, Atmos does not depend on the business climate in any one region of the country. Moreover, the nonregulated segments, particularly pipelines, possess healthy overall prospects. Lastly, management will undoubtedly stick to its winning strategy of purchasing less-efficient utilities and shoring up their profitability via expense-reduction initiatives, rate relief, and aggressive marketing efforts. (Future business combinations are not factored into our presentation, however.) In the present configuration, annual share-net growth may be in the mid-single-digit range over the 3- to 5-year horizon.

The good-quality stock offers an attractive dividend, which is well covered by the company's earnings. Further moderate increases in the distribution seem plausible.

Risk-adjusted total return possibilities are decent, too. But the shares are ranked only 3 (Average) for Timeliness.

BUSINESS: Equitable Resources, Inc. markets natural gas products and energy services. Distributes natural gas to 274,400 customers, mainly residential, in parts of PA, WV, and KY. Operates 8,500 miles of pipelines in WV, KY, VA, and PA. Produces natural gas in the Appalachian Basin with total proved reserves of 2,365 Bcfe. Operates approx. 12,000 wells in Appalachia. '06 net operating revenues by business segment: Utilities (36%), Supply (64%) Sold NORESCO, 12/05. '06 dep. rate: 2.8% About 1,250 employees. Off./dir. own 3.0% of common stock; Capital Research and Mngt., 8.9% (3/07 proxy). Chairman, President & CEO: Murry S. Gerber. Inc.: PA. Address: 1 Oxford Centre, Pittsburgh, PA 15219. Tel.: 412-553-5700. Internet: www.eqt.com.

Equitable Resources is going through a major expansion. EQT's board of directors recently approved capital commitments worth approximately $1.2 billion for 2008. Roughly $535 million of this amount is earmarked for well development. In particular, management is speeding up the company's horizontal drilling initiative. Indeed, Equitable plans to drill approximately 200 in 2008, compared with 88 last year. Horizontal shale wells are generally three times more productive than vertical wells. This enhanced productivity (see below) has encouraged the energy producer to increase investments in *midstream* infrastructure, including gathering, transmission, and compression. The energy producer has plans to expend $570 million *towards midstream infrastructure* at Equitable Supply. All told, EQT plans to build 470 miles of pipe and add 82,000 HP of compression. The remainder is planned *toward other* midstream and infrastructure initiatives.

The elevated capital expenditure level will require additional financing. The company will likely raise $1 billion via the debt and equity markets. A secondary issuance is probable if management fails to secure debt at an attractive rate. Our projections assume that EQT will utilize both types of financing.

Equitable's total natural gas reserves increased considerably. As of the end of 2007, *management estimates* natural gas reserves, including proved, probable, and possible, of 7,227 billions of cubic feet equivalent. This represents a 26% increase *over the previous year's mark.*

Management has stopped its courting of Dominion's People and Hope natural gas utilities. The move, which was largely due to a lengthy regulatory process, coincides with management's decision to pursue growth opportunities in production and infrastructure.

These neutrally ranked shares have participated in the recent rally in natural gas-related stocks. We are confident that management's embrace of horizontal drilling will pay off in the long run. Investors seem to share this sentiment. Indeed, this good-quality stock has held up well despite weakness in the broader market indexes.

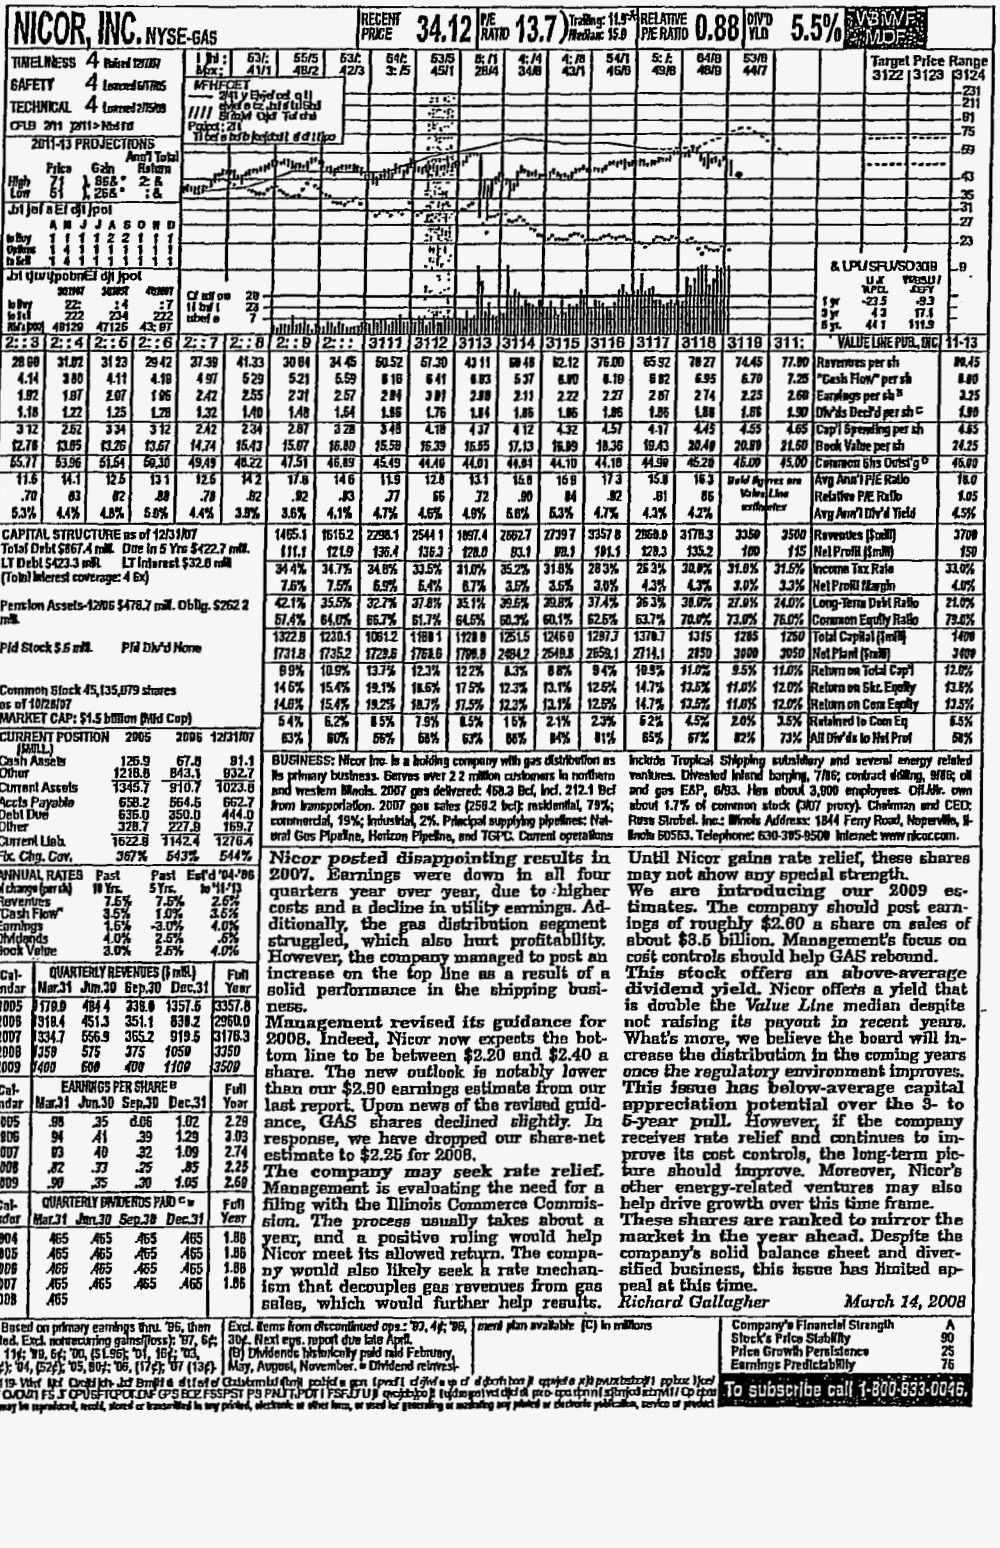
BUSINESS: Laclede Group, Inc., is a holding company for Laclede Gas, which distributes natural gas in eastern Missouri, including the city of St. Louis, St. Louis County, and parts of 10 other counties. Has roughly 632,000 customers. Purchased SM&P for approximately $43 million (1/02). Therms sold and transported in fiscal 2007: 1.12 mill. Revenue mix for regulated operations: residential, 60%; commercial and industrial, 24%; transportation, 1%; other, 15%. Has around 3,845 employees. Officers and directors own approximately 7.0% of common shares (1/08 proxy). Chairman, Chief Executive Officer, and President: Douglas H. Yaeger, Incorporated: Missouri. Address: 720 Olive Street, St. Louis, Missouri 63101. Telephone: 314-342-0500. Internet: www.thelacledegroup.com.

Laclede Group began fiscal 2008 (which ends September 30th) on a decent note. That can be attributed largely to Laclede Energy Resources, which enjoyed higher per-unit gas sales prices and increased volumes (held back a bit by a rise in operating expenses). Furthermore, results for Laclede Gas, the core subsidiary, benefited from a general rate hike that became effective on August 1st of last year, that, among other things, provides greater earnings stability and recovery of its distribution costs. But partial offsets here included a decline in margins within the service area (reflecting an unusually late start to the winter heating season) and increased maintenance costs. At this juncture, we look for earnings per share to advance at a moderate rate, to $2.35, this fiscal year. The bottom line may be relatively flat in fiscal 2009, given the utility operation's limited growth prospects.

Management intends to sell SM&P Utility Resources, the unregulated unit specializing in locating and marking services for underground facilities, to Stripe Acquisition. A portion of the $85 million in proceeds (nearly double what Laclede paid for SM&P in 2002) would be used to bolster the balance sheet. We think SM&P was not central to present corporate strategy, as it accounted for just around 6% of fiscal 2007 share net. (Our presentation will exclude the divestiture when it is completed shortly, pending customary closing conditions.)

Unexciting results appear to be in store for the company over the next three to five years. The market in which the natural gas division operates has encountered sluggish customer growth for some time because it is in a mature phase. Too, we don't see any major acquisitions on the horizon. Consequently, annual share-net gains may be between 4% and 5% out to 2011-2013.

Total return potential is limited. That's because Laclede shares are currently trading within our 3- to 5-year Target Price Range, and we assume moderate hikes in the dividend (just increased 2.7%). What's more, the equity is ranked to perform only in line with the broader market averages.



Frederick L. Harris, III *March 14, 2008*

(A) Fiscal year ends Sept. 30th.
(B) Based on average shares outstanding thru. '97, then diluted. Excludes nonrecurring loss: '06, 7¢. Next earnings report due late April.

BUSINESS: Northwest Natural Gas Co. distributes natural gas to 90 communities, 652,000 customers, in Oregon (80% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Service area population: 2.5 mill. (77% in OR). Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Rev. breakdown: residential, 55%; commercial, 28%; industrial, gas transportation, and other, 17%. Employs 1,100. Fidelity owns 14.8% of shares; Snyder Cap'l, 8.7%; off./dir., 2.6% (4/07 proxy). CEO: Mark S. Dodson. Inc: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Telephone: 503-226-4211. Internet: www.nwnatural.com

Northwest Natural benefited from unusually high gas cost savings in 2007. The company retains one-third of the difference between forecasted and actual gas costs in Oregon, passing on two-thirds to its customers. Last year, it earned a record $0.27 a share through skillful gas buying, mostly in the first and third quarters. While Northwest has usually made a small profit on gas purchasing, it has shared a loss on the activity about a quarter of the time. Ignoring the commodity profits and some other unusual items, NWN would have earned about $2.45 a share in 2007, a respectable but not extraordinary performance.

We look for a roughly 6% earnings gain, from normalized 2007 results, this year. Northwest's customer growth, at over 3% per year for many years, slowed to 2.4% in 2007. Customer growth will likely continue to ease in 2008 as the Portland area suffers a bit from the widespread housing problems but should remain above the national average. The company is increasing its marketing efforts directed at persuading people to switch to gas heat, and that should bear fruit this year. Operating costs, which rose just 1% on a normalized basis last year, will likely grow slower than revenues.

Another mild earnings gain is likely in 2009. By then, customer growth will probably be heading back toward the recent 3% average. Northwest will have completed its work reorganization program, including outsourcing some functions and centralizing others. And the company could start to benefit from enhanced automated meter-reading capacity.

Continued customer growth and two large projects should help boost earnings toward the end of our time horizon. Portland's high-density zoning has been expanded many times over the last 30 years, making it profitable to lay gas mains. An expansion to the southeast of the city should add substantially to customer growth over the next 10 years. And by 2011, NWN will probably invest around $300 million in a gas storage project in California and a new pipeline in Oregon.

These top-quality shares, though untimely, have worthwhile risk-adjusted total-return potential.

BUSINESS: Piedmont Natural Gas Company is primarily a regulated natural gas distributor, serving over 832,097 customers in North Carolina, South Carolina, and Tennessee. 2007 revenue mix: residential (54%), commercial (30%), industrial (14%), other (2%). Principal suppliers: Transco and Tennessee Pipeline. Gas costs: 69.4% of revenues. '07 deprec. rate: 3.4%. Estimated plant age: 8.7 years. Non-regulated operations: sale of gas-powered heating equipment; natural gas brokering; propane sales. Has about 1,876 employees. Officers & directors own less than 1% of common stock (1/08 proxy). Chairman, CEO, & President: Thomas E. Skains, Inc.: NC. Addr.: 4720 Piedmont Row Drive, Charlotte, NC 28210. Telephone: 704-364-3120. Internet: www.piedmontng.com.

Piedmont Natural Gas likely posted relatively unchanged earnings for the first quarter (ended January 31st). The company was scheduled to report earnings for its January interim after this report went to press. We have racheted down our top-line estimate for 2008, though, we look for some progress this year. During the first quarter, Piedmont's revenues likely advanced in the low single-digit range. The reduced expectations stem from slower growth in the residential construction market. Subsequently, in an effort to increase volumes, PNY has been working on converting users of other types of energy to natural gas. Meanwhile, the fourth quarter of 2007 experienced warmer-than-normal weather. But that interim is not subject to the weather normalization clause (WNC) for its Tennessee and South Carolina service areas. The WNC protects the bottom line against decreased usage. The adjustment should help during the January interim, though. Overall, we look for a nominal advance in share net for the first quarter.

The company ought to experience better volume comparisons as the year progresses. And its revenues ought to advance approximately 3% this year and next. Efforts to gain customers from the conversion markets should help this cause. Furthermore, the company intends to file a general rate case in North Carolina, its largest service area. Meanwhile, its nonutility business ought to pick up steam as the Hardy Storage joint venture (JV) contributes to both top and bottom lines for the whole of 2008. And, we expect solid performance to persist from its South Star Energy JV.

All told, we look for the bottom line to advance 7% and 8% for this year and next, respectively. This ought to stem from continued investments in its natural gas infrastructure. Further streamlining and consolidation of business processes and operations should help maintain margins, as well.

The equity offers a solid dividend yield and decent total return potential to 2011-2013. Meanwhile, these shares are ranked to perform in line with the broader market averages for the year ahead.

2008					

BUSINESS: South Jersey Industries, Inc. is a holding company its subsidiary, South Jersey Gas Co., distributes natural gas to 335,863 customers in New Jersey's southern counties, which covers 2,500 square miles and includes Atlantic City. Gas revenue mix '07: residential, 46%; commercial, 23%; cogeneration and electric generation, 8%; industrial, 23%. Non-utility operations include: South Jersey Energy, South Jersey Resources Group, Marina Energy, and South Jersey Energy Service Plus. Has 604 employees. Off.&Dir. hold 1.2% of com. shares; Dimensional Fund Advisors, 8.3%; Barclays, 6.0% (3/07 proxy). Chmn. & CEO: Edward Graham. Incorp.: NJ. Address: 1 South Jersey Plaza, Folsom, NJ 08037. Tel.: 609-561-9000. Internet: www.sjindustries.com.

South Jersey Industries reported a modest advance in revenues for 2007, although economic earnings increased roughly 14%. Utility South Jersey Gas benefited from continued growth in the customer base and lower interest costs. The company's nonutility operations also posted a solid performance. Readers are advised that our earnings-per-share figures are now based on economic earnings, a non-GAAP measure that excludes unrealized gains and losses from commodity derivative transactions. Thus, the share-net figures from 2007 onward are not directly comparable with those from previous years.

The company has solid long-term prospects. Natural gas remains the fuel of choice in the markets served by South Jersey Gas, as it enjoys a considerable price advantage over alternatives. Indeed, the vast majority of new homes built have chosen natural gas as their main heating source. Moreover, the company expects economic development in the Atlantic City area will boost housing demand in the coming years. In addition, this business ought to continue to benefit from the Conservation Incentive Program (CIP). This initiative allows South Jersey to promote energy conservation and insulate itself from the negative impact of lower customer usage. The CIP protected $7.6 million of net income during 2007, offsetting reduced customer utilization. Elsewhere, the performance of the nonutility Commodity Marketing business should continue to have an important impact on earnings. This unit maintains 10 billion cubic feet of gas storage capacity, which allows it to take advantage of volatility in natural gas pricing and lock in attractive profit margins. Looking forward, we anticipate moderate share-earnings and dividend growth in the current year. This pattern seems likely to continue in 2009, as well.

These shares are ranked to lag the broader market for the coming six to 12 months. Looking further out, we project solid bottom-line growth at South Jersey over the pull to 2011-2013. Moreover, this issue scores high marks for Price Stability and Earnings Predictability. Thus, this stock offers worthwhile total return potential for a natural gas utility.

Michael Napoli, CPA *March 14, 2008*

(A) Based on GAAP EPS through 2006, economic earnings thereafter. GAAP EPS: '97, $2.10. Excl. nonrecur. gain: '01, $0.13. BUSINESS: Southwest Gas Corporation is a regulated gas distributor serving approximately 1.8 million customers in sections of Arizona, Nevada, and California. Comprised of two business segments: natural gas operations and construction services. 2007 margin mix: residential and small commercial, 86%; large commercial and industrial, 5%; transportation, 9%. Total throughput: 2.4 billion therms. Sold PriMerit Bank in July of 1996. Has 5,073 employees. Officers & Directors own roughly 1.4% of common stock (3/07 Proxy). Chairman: LeRoy C. Hanneman, Jr. Chief Executive Officer: Jeffrey W. Shaw. Incorporated: California. Address: 5241 Spring Mountain Road, Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com

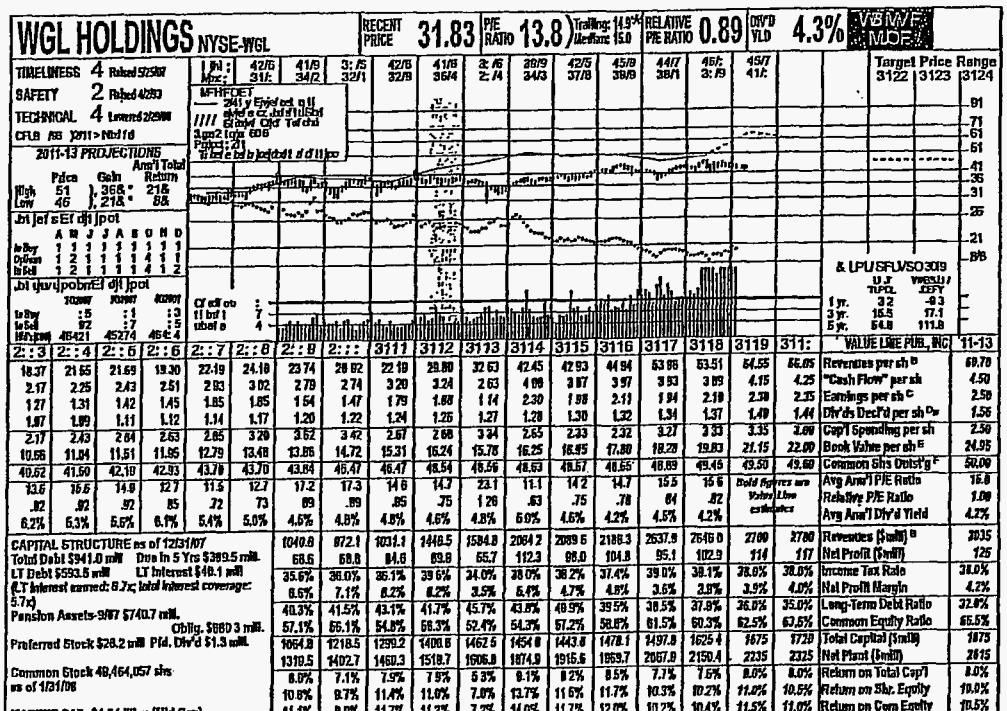
Southwest Gas reported unimpressive performance for the fourth quarter. Share earnings fell roughly 10% from the prior year's period. The company experienced softness in heating demand, owing to warmer-than-usual temperatures during the period. This was partially offset by modest growth in the customer base. Overall, 2007 earnings came in slightly below the 2006 figure. Looking forward, conditions may remain somewhat challenging in the current year. We anticipate relatively slow customer growth, due partly to the downturn in the housing market. Thus, we have lowered our bottom-line estimate by $0.20 a share, to $2.05.

The company remains focused on procuring rate relief and improving rate design. In order to address weather-related volatility, Southwest has included several proposed rate design changes in its most recently filed Arizona rate case. The utility is seeking a rate hike of $50.2 million (nearly 5%). It has asked the commission to implement the new rates at the start of October. The company has also filed a rate case application with California, requesting a $9.1 million increase in operating revenues, beginning in January of 2009. Such approved revenue increases help Southwest Gas to cope with higher operating expenses, and provide the company with greater earnings stability. Indeed, a full year of rate relief in 2009 should produce healthy growth in earnings, to $2.20 per share.

The board of directors has increased the dividend. Starting with the June payout, the quarterly dividend is now $0.225 a share, an increase of 4.7%. This follows a similar increase last year. However, this issue's current dividend yield of roughly 3.5% is not a standout by utility standards.



Shares of Southwest Gas are ranked unfavorably in our momentum-based system. Looking further out, we anticipate solid share-earnings growth over the pull to 2011-2013. At the present quotation, this stock offers impressive total return potential for the coming years, and may appeal to patient investors. That said, conservative accounts are advised not to overweight this issue, considering the regulatory risks.

BUSINESS: WGL Holdings, Inc. is the parent of Washington Gas Light, a natural gas distributor in Washington, D.C. and adjacent areas of VA and MD to residential and comm'l users (1,045,201 meters). Hampshire Gas, a federally regulated sub., operates an underground gas-storage facility in WV. Non-regulated subs.: Wash. Gas Energy Svcs sells and delivers natural gas and provides energy related products in the D.C. metro area; Wash Gas Energy Sys designs/installs comm'l heating, ventilating, and air cond. systems. American Century Inv. own 8.2% of common stock; Off./dir. less than 1% (2008 proxy). Chmn. & CEO: J.H. DeGraffenreidt, Inc.; D.C. and VA. Addr.: 1100 H St., N.W., Washington, D.C. 20080. Tel.: 202-624-6410. Internet: www.wglholdings.com.

WGL Holdings has been experiencing progress with its rate cases. The company recently received approval for a rate hike in the District of Columbia (DOC). The incremental cash flow from the rate hike, which was not expected to be approved until March, added approximately $0.05 per share to the bottom line in the first quarter (ended December 31st). Furthermore, the earlier-than-expected rate increase has prompted us to raise our annual estimate by 5%, to $2.80 per share. The company's earnings will likely get a 2%-3% lift for the March interim. WGL's gas and light utility division has been experiencing higher usage volumes and system charges as a result of 12,810 new customers. And it is expected to add about 5,200 more accounts by the end of fiscal 2008. Furthermore, the asset management business likely continued to enjoy strong off-system sales as excess reserves are released in order to meet the heightened demand during the colder winter months. These results ought to be partially offset by increased operation and maintenance costs.

We look for the share net to advance approximately 10% this year. Lifts in the top-line volumes ought to stem from the heightened rates in the DOC, additional customer growth, and expansion of the company's asset management program. Meanwhile, gas sales at the Washington Gas Energy Services unit have been down as a result of warmer-than-normal weather patterns. However, this unit's margins have been widening on a per-therm basis, offsetting the lower volumes and boosting the bottom line.

In 2009, the bottom-line increase ought to moderate. The majority of benefits from efficiency initiatives and the effects of the recent DOC rate hike will have cycled through by next year. Therefore, we look for earnings advances to slow to a low single-digit rate.

These neutrally ranked shares may appeal to income-oriented accounts. The equity offers a solid dividend yield. Meanwhile, the stock garners our Highest Safety rank (1), and our best mark for Price Stability (100), indicating suitability for conservative accounts with an eye on capital preservation.

VI. EVALUATION OF THE TESTIMONY OF DR. MORIN

A. Summary

Q. PLEASE SUMMARIZE THE TESTIMONY OF DR. MORIN.

A. Dr. Morin has recommended that Nova Scotia Power Company be allowed a return on equity of 10.20% to 11.20.[1] Based upon this range, the Company based its overall capital request on the 10.20% low end of the range[2]. Dr. Morin arrived at this recommendation based upon his implementation of the DCF method, risk premium methods, and a comparable earnings method.

Q. PLEASE SUMMARIZE YOUR ANALYSIS OF DR. MORIN'S EVIDENCE.

A. An analysis of his evidence shows that each of the approaches he has relied upon to determine the cost of equity contains significant errors that have caused him to overstate the cost of equity. Following is a brief summary of the problems with Dr. Morin's testimony that are explained in detail later in this section of my testimony.

DCF Method:

- Violating the assumptions of the constant-growth DCF model by failing to use sustainable growth in constant growth form of DCF method.
- Skewing the results of his DCF method by eliminating companies for which the results were too low without making a similar elimination of results that were too high.

Risk Premium and CAPM Methods:

[1] Appendix G, Page 8 lines 5-7.
[2] Appendix A revised, Table 13.

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 080006-WS EXHIBIT 43
COMPANY Office of Public Counsel (Surrebuttal
WITNESS James A. Rothschild (JAR-12)
DATE 10/23/08

- Overstating historic actual performance by giving weight to arithmetic average and arithmetic median rather than using the geometric averaging method.

- Failure to consider the decline in the risk premium that has been occurring over the last several decades.

Comparable Earnings Method:

- Not an equity costing method. All it does is assume that whatever is the future expected return on book equity is automatically the cost of equity.

As a result of the flaws in Dr. Morin's analysis, he has recommended a cost of equity range that is higher than can be justified.

B. Dr. Morin's DCF Method

Q. YOU HAVE EXPLAINED THAT THERE IS BOTH A CONSTANT-GROWTH FORM AND A NON-CONSTANT GROWTH FORM OF THE DCF MODEL. WHICH HAD DR. MORIN USED IN THIS PROCEEDING?

A. Dr. Morin has only used a constant growth rate form of the model, but applies the constant growth form by using non-constant growth rate inputs.

Q. DID DR. MORIN PROPERLY APPLY THE SIMPLIFIED OR CONSTANT DCF METHOD?

A. No. While the basic approach used by Dr. Morin to implement the DCF model is inherently flawed because he uses a growth rate indicator that is inappropriate for the formula he has selected, in this case he has introduced an even greater level of error in his DCF result. He did this by selectively excluding results that were too low without making any adjustment for companies whose results were too high.

Q. HOW DO YOU KNOW DR. MORIN INTRUDUCED EVEN GREATER ERROR INTO HIS DCF ANALYSIS BY SELECTIVELY EXCLUDING RESULTS THAT WERE TOO LOW?

A. The following is where Dr. Morin selectively excluded companies from his analysis:

a) His Exhibit RAM-8 presents his DCF analysis of "Investment-Grade Vert. Integr. Electric Utilities DCF Analysis: Value Line Growth Projections". The note on the bottom of this schedule states that he excluded the results from Alliant, Energy East, IDACORP, and TECO because his DCF results were "... less than the cost of debt...".

b) His Exhibit RAM-9 presents his DCF analysis of "Investment-Grade Vertically Integrated Elect. Utilities DCF Analysis" Analysts' Growth Forecasts". The note on the bottom of this exhibit states that he eliminated the results for Central Vermont, Cleco, and Green Mountain Power because the results were less than the cost of debt.

c) His Exhibit RAM-10, Page 2 presents his DCF analysis of "Natural Gas Utilities DCF Analysis: Value Line Growth Forecasts". The note at the bottom of this exhibit states that he eliminated the results of Nicor because the DCF result was less than the cost of debt.

Q. DID DR. MORIN EXCLUDE ANY COMPANIES BECAUSE HIS DCF RESULTS WERE TOO HIGH?

A. No. For example, on his Exhibit RAM-8, he left in his DCF result of 19.8% for Northeast Utilities, on Exhibit RAM 9, he left in the 16.1% result for Empire District Electric, and on Exhibit RAM-10, Page 2 he left in his 16.4% result for UGI Corp. In other words, Dr. Morin caused an upward bias his conclusion by eliminating results that were too low while keeping results that were too high.

Q. WHAT WOULD DR. MORIN'S DCF RESULTS HAD BEEN IF HE HAD NOT EXCLUDED ANY COMPANIES SIMPLY BECAUSE THE RESULT WAS TOO LOW?

A. I do not know. Dr. Morin was asked to provide the necessary information both in information requests (UARB IR-76 and77) and as a follow-up during a technical conference. Both times, he refused to provide the necessary information.

Q. IF ONE WANTED TO EXCLUDE RESULTS THAT ARE KNOWN TO BE TOO LOW WITHOUT PRODUCING A BIASED ANSWER HOW COULD THIS BE DONE?

A. Yes. One approach that could be reasonable would be to exclude an equal amount of low result and high results. That way a central tendency to the data could be determined.

Q. IF AN EQUAL NUMBER OF LOW DCF RESULTS AND HIGH DCF RESULTS WERE EXCLUDED FROM DR. MORIN'S GROUP, WHAT WOULD HIS RESULTS HAVE BEEN?

A. The results Dr. Morin would have obtained would have been as follows:

1) Exhibit RAM-8, Electric Utilities based on Value Line would have been 9.1% instead of 9.9%;

2) Exhibit RAM-9, Electric Utilities based on Value Line Forecasts would have been 8.9% instead of 9.9%;

3) Exhibit RAM-10, Page 1 of 2 Gas Utilities based on Analysts' forecasts would remain at the 9.3% shown by Dr. Morin, and

4) Exhibit RAM-10, Page 2, Gas Utilities based upon Value Line forecasts would drop from 11.5% to 11.0%.

The results of Dr. Morin's DCF analysis thus modified to remove his upward bias produces an average DCF result of 9.575% instead of the average 10.15% he obtained. In other words, even though there are many other problems with Dr. Morin's approach to determining the cost of equity, in this case essentially all of the difference between the cost of equity requested by NSPI and what I recommend could be attributed simply to the upward bias Dr. Morin built into his interpretation of the DCF results.

Q. WHY IS THE GROWTH RATE INDICATOR HE USED INAPPROPRIATE FOR USE IN THE DCF FORMULA HE SELECTED?

A. One approach used by Dr. Morin to determine the growth rate he used in his DCF method was to examine only the earnings per share growth rate forecast made by Value Line. The Value Line earnings per share growth rate he used is the growth in earnings per share from the average actual earnings per share from 2001-2003 to the average earnings per share forecast by Value Line for 2007-2009. The second approach used by Dr. Morin was to use the analysts' earnings per share forecast for growth from the most recently completed fiscal year (generally 2003) to five years later (generally 2008). Neither of these approaches measures the long-term sustainable growth rates in earnings, dividends, book value, and stock price that are **required** in the implementation of the constant-growth form of the DCF model.

Q. WHY ARE ANALYSTS' FIVE-YEAR CONSENSUS GROWTH RATES NOT INDICATIVE OF LONG-TERM SUSTAINABLE GROWTH RATES?

A. These short-term earnings per share growth rate forecasts are not indicative of future sustainable growth rates in part because the sources of cash flow to an investor are dividends and

stock price appreciation. While both stock price and dividends are impacted in the long-run by the level of earnings a company is capable of achieving, earnings growth over a period as short as five years is rarely in synchronization with the cash flow growth from increases in dividends and stock price. For example, if a company experiences a year in which earnings are temporarily below investor expectations, stock prices generally do not decline at the same percentage that earnings decline, and dividends are usually not cut just because of a temporary decline in a company's earnings. Unless both the stock price and dividends mirror every down swing in earnings, they cannot be expected to recover at the same growth rate that earnings recover. Therefore, growth rates such as five-year projected growth in earnings per share are not indicative of long-term sustainable growth rates in cash flow. As a result, they are inapplicable for direct use in the simplified DCF method.

Q. PLEASE ELABORATE ON WHY THE USE OF FIVE-YEAR EARNINGS PER SHARE GROWTH RATES IN THE DCF MODEL IS IMPROPER?

A. A raw, unadjusted, five-year earnings per share growth rate is usually a very poor proxy for either short-term or long-term cash flow growth that an investor expects to receive. When implementing the DCF method, the time value of money is considered by equating the current stock price of a company to the present value of the future cash flows that an investor expects to receive over the entire time that he or she owns the stock. The discount rate required to make the future cash flow stream, on a net present value basis, equal to the current stock price is the cost of equity. The only two sources of cash flow to an investor are dividends and the net proceeds from the sale of stock at whatever time in the future the investor finally sells. Therefore, the

DCF method is discounting future cash flows that investors expect to receive from dividends and from the eventual sale of the stock.

Five-year earnings growth rate forecasts are especially poor indicators of cash flow growth even over the five years being measured by the five-year earnings growth rate number. This is because, for different reasons, the five-year earnings per share growth rate is not indicative of growth in either of the two cash flow sources to an investor.

Q. WHY IS A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATOR OF THE FIVE-YEAR CASH FLOW EXPECTATION FROM DIVIDENDS?

A. The board of directors changes dividend rates based upon long-term earnings expectations combined with the capital needs of a company. Most companies do not cut the dividend simply because a company has a year in which earnings were below sustainable trends, and similarly they do not increase dividends simply because earnings for one year happened to be above long-term sustainable trends. Therefore, over any given five-year period, earnings growth is frequently very different from dividend growth. In order for earnings growth to equal dividend growth, at a minimum, earnings per share in the first year of the five-year earnings growth rate period would have to be exactly on whatever long-term earnings trend line is expected by investors. Since earnings in most years are either above or below the trend line, the earnings per share growth rate over most five-year periods is different than what is expected for earnings growth.

Q. IS A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE A POOR INDICATOR OF FUTURE STOCK PRICE GROWTH?

A. Yes. If a company happens to experience a year in which earnings decline below what investors believe are consistent with the long-term trend, then the stock price does not drop anywhere near as much as earnings drop. Similarly, if a company happens to experience a year in which earnings are higher than the investor-perceived long-term sustainable trend, then the stock price will not increase as much as earnings. In other words, the P/E (price/earnings) ratio of a company will increase after a year in which investors believe earnings are below sustainable levels, and the P/E ratio will decline in a year in which investors believe earnings are higher than expected. Since it is stock price that is one of the important cash flow sources to an investor, a five-year earnings growth rate is a poor indicator of cash flow both because it is a poor indicator of stock price growth over the five years being examined and is equally a poor predictor of dividend growth over the period.

Q. WHAT CHARACTERISTICS MUST A GROWTH RATE HAVE IN ORDER FOR IT TO BE A VALID INDICATOR OF THE GROWTH RATE TO USE IN THE CONSTANT GROWTH DCF FORMULA?

A. The only proper growth rate to use in the simplified version of the DCF model is a growth rate that investors expect is sustainable for many years into the future. A long-term sustainable growth rate in cash flow is a very special type of growth rate. Short-term, five-year earnings per share growth rates, such as those reported by First Call/IBES, are frequently substantially different from future sustainable growth rates.

Q. PLEASE SUMMARIZE WHY A FUTURE ORIENTED "B X R" METHOD IS SUPERIOR IN PROVIDING A LONG-TERM SUSTAINABLE GROWTH RATE THAN A FIVE-YEAR EARNINGS PER SHARE GROWTH RATE FORECAST?

A. The primary cause of sustainable earnings growth is the retention of earnings. A company is able to create higher future earnings by retaining a portion of the prior year's earnings in the business and purchasing new business assets with those retained earnings. There are many factors that can cause short-term swings in earnings growth rates, but the long-term sustainable growth is caused by retaining earnings and reinvesting those earnings.

Factors that cause short-term swings include anything that causes a company to earn a return on book equity at a rate different from the long-term sustainable rate. Assume, for example, that a particular utility company is regulated so that it is provided with a reasonable opportunity to earn 10.0% on its equity. If the company should experience an event such as the loss of several key customers, or unfavorable weather conditions which cause it to earn only 6.0% on equity in a given year, the drop from a 10% earned return on equity to a 6% earned return on equity would be concurrent with a very large drop in earnings per share. In fact, if a company did not issue any new shares of stock during the year, a drop from a 10% earned return on book equity to a 6% earned return on book equity would result in a 40% decline in earnings per share over the period.[3] However, such a drop in earnings would not predict the long-term sustainable earnings per share growth rate. If the drop were caused by weather conditions, the drop in earnings would be immediately offset once normal weather conditions return. If the drop is from the loss of some key customers, the company would replace the lost

[3] By definition, earned return on equity is earnings divided by book value. Therefore, whatever level of earnings is required to produce earnings of 6% of book would have to be 40% lower than the level of earnings required to produce a return on book equity of 10%.

earnings by filing for a rate increase to bring revenues up to the level required for the company to be given a reasonable opportunity to recover its cost of equity.

For the above reasons, changes in earnings per share growth rates that are caused by non-recurring changes in the earned return on book equity are inconsistent with long-term sustainable growth. However, changes in earnings per share from the periodic reinvestment of retained earnings cause of sustainable earnings growth. The "b x r" term in the DCF equation computes sustainable growth because it measures only the growth which a company can expect to achieve when its earned return on book equity "r" remains in equilibrium. If analysts have sufficient data to be able to forecast varying values of "r" in future years, then a complex, or multi-stage DCF method must be used to accurately quantify the effect. Averaging growth rates over sub-periods, such as averaging growth over the first five years with a growth rate expected over the subsequent period will not provide an appropriate representation of the cash flows expected by investors in the future and, therefore, will not provide an acceptable method of quantifying the cost of equity using the DCF method. The choices are either a constant growth DCF, in which one "b x r" derived growth rate should be used, or a complex DCF method in which the cash flow anticipated in each future year is separately estimated.

Q. WHEN REJECTING THE USE OF SHORT-TERM ANALYSTS CONSENSUS EARNINGS PER SHARE GROWTH RATE FORECASTS, ARE YOU SAYING THAT ANALYSTS' CONSENSUS EARNINGS PER SHARE GROWTH RATES ARE USELESS AS AN AID TO PROJECTING THE FUTURE?

A. No. **Analysts' EPS growth rate are, however, very dangerous if used in a simplified DCF without proper interpretation**. While they are not useful if used in their "raw" form, they

can be useful in computing estimates of what earned return on equity investors expect will be sustained in the future, and as such, are useful in developing long-term sustainable growth rates. But, the growth rate from an arbitrary starting year is, in and of itself, as useless as attempting to measure the average slope of a mountain based upon the slope encountered over the last five minutes of hiking on a jagged trail up the mountain. In my implementation of the simplified DCF method, I use the Zacks five-year earnings per share growth only to help determine what earned return on book equity investors anticipate will be achieved in five years. Then, I consider the resultant earned return on book equity as one of the inputs to determine the value of "r" that I use in the "b x r" growth rate computation. In this way, I give consideration to analysts' consensus growth rate, but do so in a way that results in a long-term sustainable cash flow growth rate rather than making the erroneous assumption that a five-year earnings per share growth rate is somehow an indicator of cash flow growth remember, cash flow received by an investor is in the form of either dividends or stock price appreciation.

Q. DO ARTICLES IN BUSINESS LITERATURE DEFINITIVELY SHOW THAT INVESTORS ARE AWARE OF THE SERIOUS BIASES CONTAINED IN THE RECOMMENDATIONS OF MANY ANALYSTS' REPORTS?

A. Yes. There have been countless articles that appeared in both business publications and the popular press throughout the last year that show these biases. *Business Week*, a widely read and important business publication, contained numerous articles that reported on the problems with securities analysts. These include:

1. A cover story entitled "How Corrupt is Wall Street" appeared in the May 13, 2002 issue of *Business Week.*

a) The article mentions that Merrill Lynch, Solomon Smith Barney, Morgan Stanley Dean Witter along with 10 other firms are being investigated by the US Securities and Exchange Commission for unethical practices.[4]
b) According to the article, New York State Attorney General Eliot Spitzer made public e-mail exchanges at Merrill where, e-mail messages uncovered by Dr. Spitzer showed that "...analysts disparage stocks as 'crap' and 'junk' that they were pushing at the time. The e-mails are so incendiary that they threaten to thrust Wall Street into the sort of public-relations nightmare that Philip Morris, Ford, Firestone, and Arthur Andersen have endured in recent years."[5]
c) The article features the following quote from David Komansky, the CEO of Merrill Lynch, by placing it in bold letters and large print:

We have failed to live up to the high standards that are our tradition, and I want to take this opportunity to publicly apologize to our clients, our shareholders, and our employees.[6]

In the above quote, Dr. Komansky was responding to what *Business Week* describes as "...the analyst debacle..."[7]
2. The cover of the July 29, 2002 issue of *Business Week* features the article entitled "THE ANGRY MARKET." The Cover summarizes the article by saying "THE BLUNT MESSAGE: Investors are re-pricing stocks to reflect a more honest picture of earnings, options, and the future." In a discussion about the inaccurate and misleading earnings reporting done by many companies, *Business Week* says:

Brokerage-house analysts aren't much help either. They tend to do what companies want. For example, only six of the 21 analysts that have given First Call their estimates for AOL Time Warner Inc.'s 2003 earnings actually provided GAAP figures.

3. A cover article in the August 5, 2002 issue of *Business Week* is entitled " INSIDE THE TELECOM GAME. How a small group of insiders made billions as the industry collapsed." The article discusses the buy recommendations consistently made by Dr. Grubman on these companies, and says on page 34:

Now, investors are questioning whether Grubman was motivated by his true opinions – or by the millions of dollars he received from supporting his telecom clique.

4. "HOW TO FIX CORPORATE GOVERNANCE" is the cover article in the in the May 6, 2002 issue of *Business Week*. Page 76 of this article says:

If investors have learned anything from this crisis, it's that Wall Street's analysts are often loath to put a bad spin on a stock. Historically, "sell" ratings have constituted fewer than 1% of analysts' recommendations, according to Thompson Financial/First Call...It's more a case of an inherently conflicted system, that is now the focus of a Justice Department investigation.

[5] *Business Week*, May 13, 2002 page 39
[6] *Business Week* "How Corrupt is Wall Street" May 13, 2002 page 42
[7] Ibid, page 42.

"'Investors need to realize that the free research they're getting is often just a marketing tool', says Kent Womack, a professor at Dartmouth College's Amos Tuck school of business."

5. A June 10, 2002 issue of *Fortune* had an article entitled "In Search of the Last Honest Analyst". The *Fortune* article noted:

In fact, stock research sank so low during the bubble that it actually became a contrary indicator of a stock's performance. Researchers at the University of California and Stanford reviewed almost 40,000 stock recommendations from 213 brokerages during the year 2000. The most highly rated stocks had a –31% return for the year, according to the study. Meanwhile, the stocks least favorably recommended (that is, the sells) soared an annualized 49% -- a differential of 80 percentage points.[8]

6. A September 24th, 2002 *Wall Street Journal* article entitled "Will Grubman Case Tone Down the Exaggeration by Analysts?" states the following:

During the 1980s and 1990s, analysts often served as quasiadvocates for companies that hired their firms for investment-banking work, accompanying them on road shows to sell their stock, setting up one-on-one meetings between management and institutional investors, and proffering their access to management to give an unofficial version of the companies' view of business developments.[9]

7. On October 22, 2002, a *Wall Street Journal* article entitled "Massachusetts Claims CSFB Stock Reports Led Investors Astray" appeared on pages C-1 and C-10. Following are some highlights from this article:

The complaint [by the Secretary of the Commonwealth of Massachusetts] alleges CSFB misled investors by allowing its investment-banking division – in particular, star Frank Quattrone – to exert undue influence on the firm's research department.

The complaint which echoes one filed earlier this year by Elliott Spitzer against Merrill Lynch & Co. will no doubt add to investor concern that Wall Street peddled research it didn't believe only to get its hands on the much more lucrative investment-banking fees.

'The presumption that every firm engaged in this behavior is fair,' says Roy Smith, a professor of finance at New York University and a former partner at Goldman Sachs Group, Inc. 'It reminds me of how we used to talk in the locker room after a football game. That talk happens all the time, but it would sure be embarrassing if anyone ever recorded it.'[10]

Q. HAS ALL THE UNFAVORABLE PRESS REGARDING EQUITY ANALYSTS RESULTED IN POSITIVE REFORM IN THE INDUSTRY?

A. No. A *Business Week* editorial published on September 8, 2003 called "The Myth of Independence" states that the new independent research firms also have conflicts of interest to deal with and "Many hire analysts with little or no track record, raising questions about the quality of their research."

Q. ONE OF THE GROWTH RATES THAT DR. MORIN RELIES UPON IS VALUE LINE FORECASTED EARNINGS PER SHARE GROWTH RATES. IS THE VALUE LINE EARNINGS PER SHARE GROWTH RATE SUFFICIENTLY NORMALIZED TO MAKE IT AN ACCURATE INDICATOR OF LONG-TERM SUSTAINABLE GROWTH RATES?

A. A. No, because Value Line's method results in only a very incomplete normalization of the base period earnings it uses in its earnings per share five-year forecast. The Value Line earnings per share forecast of the type presented by Dr. Morin is defined by Value Line as the earnings per share growth from "Est'd '01-'03 to "07-'09". The procedure used by Value Line is to average the earnings per share from the 2001-03 base period and relate that three-year average to the earnings per share it expects will be achieved, on average, over the future 2007-2009 time period. The method used by Value Line does not assure the appropriate normalization of earnings per share in the base period, because there is not even an attempt by Value Line to make the average earned return on book equity in the base period reflective of the normal expected return on book equity. In fact, in the case of all the gas companies covered by Value Line, the average earned return on book equity from 2001-2003 is lower than Value Line expects in the 2007-2009 period.

C. Dr. Morin's Risk Premium Method

Q. PLEASE BRIEFLY DESCRIBE THE RISK PREMIUM METHOD.

A. The risk premium method estimates the cost of equity by analyzing the historic difference between the cost of equity and a related factor such as the rate of inflation or the cost of debt.

Q. PLEASE COMMENT ON THE RISK PREMIUM METHODS AS PRESENTED BY DR. MORIN.

A. Dr. Morin applies the risk premium method by computing the difference in the returns earned by common stocks as compared to the return earned on bonds in a variety of different ways. However, these approaches rely upon one of two common flaws: they either rely upon the use of an arithmetic average to compute historic actual differences in earned returns, or they rely upon a risk premium computed from Dr. Morin's flawed approach to the DCF method.

In addition to improperly computing the risk premium for the reasons stated above, Dr. Morin's risk premium approach is also flawed because he incorrectly concludes that the risk premium between debt and equity are constant, when they are not. As I have shown earlier in this testimony, empirical evidence, financial theory, and financial articles all show that the risk premium as measured against interest rates has been anything but constant. It is risk premiums measured against the inflation rate, not interest rates, which have shown to be reasonably constant.

Q. PLEASE EXPLAIN THE PROBLEMS CAUSED BY USING THE ARITHMETIC METHOD TO QUANTIFY THE RISK PREMIUM.

A. As will be explained in detail later in this testimony, textbooks, the U.S. Securities and Exchange Commission ("SEC"), and Value Line have all recognized that the only proper way to measure long-term historic actual earned returns is to use the geometric mean, not the arithmetic mean put forward by Dr. Morin. In contrast, Dr. Morin used the arithmetic mean. The arithmetic mean is specifically identified by several sources as a method that will specifically result in an answer that is upwardly biased.

Q. IS THERE A MATHEMATICAL RELATIONSHIP BETWEEN THE GEOMETRIC AVERAGE AND THE ARITHMETIC AVERAGE?

A. Yes. Page 24 of the third edition of *Stocks for the Long Run* by Professor Jeremy J. Siegel © 2002 contains the following:

> The geometric return is approximately equal to the arithmetic return minus one-half of the variance σ^2 of yearly returns $r_G=r_A-1/2\ \sigma^2$.
>
> Investors can be expected to realize geometric returns only over long periods of time. The average geometric return is always less than the average arithmetic return except when all yearly returns are exactly equal. This difference is related to the volatility of yearly returns.

As correctly explained above, the only reason the arithmetic average is higher than the geometric average is because of the volatility of yearly returns. Therefore, from the perspective of the cost of equity to allow a regulated utility, the correct return is the geometric return. The geometric return, if allowed, will be the return the utility company is given a reasonable opportunity to earn. If there is a difference between the geometric return and the arithmetic return, for a regulated utility this difference will occur simply because a utility company's stock

price will fluctuate up and down even though the allowed return on equity remains fixed at least until the next rate case.

Q. HAVE YOU DR. MORIN'S CLAIM THAT THE GEOMETRIC AVERAGE IS THE CORRECT AVERAGE TO USE WHEN MEASURING HISTORIC RETURNS, BUT THE ARITHMETIC AVERAGE IS SOMEHOW CORRECT FOR FORECASTING FUTURE RETURNS?

A. Yes, I have seen this argument. But, given that the difference between the geometric return and the arithmetic return is due to volatility and not the true return actually being achieved, such an argument that claims a different measurement technique applies to historic data than to forecast data is incorrect. Consider the following example. Assume that the Canadian Government issued a 30-year bond 15 years ago that pays an annual interest rate of 5.0% on the face amount of the bond. Further assume that although interest rates fluctuated over the last 15 years, the current interest rate demanded by investors happens to be 5% today. Under these assumptions, over the last 15 years, the price of the bond has gone up in some years and gone down in other years. But, if the current interest rate demanded by investors on this bond is still the same 5% as was demanded by investors at the time of the original issuance, the bond will be selling for the same price as it did when originally issued 15 years ago. Because of this fluctuation, if the total return (price appreciation or price depreciation plus the 5% interest income) is measured using the arithmetic average, then the measured return will include the 5% real return actually obtained by investors plus an additional illusory return cause by volatility rather than an actual return received by the investor. From the perspective of the investor who is forecasting the return on this 5% government bond with 15 years remaining, we know with

certainty that the accurate forecasted future return will be 5% per year. We also can be confident that interest rates will fluctuate over the next 15 years. Therefore, this fluctuation will cause the arithmetic return measurement to be higher than the 5% annual return even though the 5% return is the only possible return an investor who holds this bond to maturity could get.

Q. IS IT THE 5% RETURN ON THE TREASURY BOND OR IS IT THE ARITHMETIC AVERAGE RETURN THAT IS ANALAGOUS TO THE ALLOWED RETURN ON EQUITY TO A REGULATED UTILITY COMPANY?

A. The 5% coupon return is the return that is analogous to the allowed return. Therefore, even if we were to attempt to satisfy the investor who was incorrectly led to believe that he or she would achieve the arithmetic average and not the geometric average, the return based upon the geometric average should form the return allowed. Then, an investor who wishes to be fooled into achieving a higher return than is achieved by the geometric average will continue to be under the misconception that he or he is earning more than the geometric average. This can happen because the stock price fluctuation will still produce annual returns that, under the arithmetic average method, will appear to be higher than the allowed geometric return.

Consider the problem that would develop if allowed returns were errantly set based upon the arithmetic average rather than the geometric average. If a utility company is allowed to earn a return on rate base equal to the arithmetic average, then the normal stock price fluctuations would cause the new arithmetic average measured result to continue to exceed the old allowed arithmetic average. A repetition of the error caused by using the arithmetic average, if repeated in the next rate case, would cause yet a further ratcheting up of the allowed return in each future rate case where this mistake to use the arithmetic average is repeated.

Q. CAN YOU PROVIDE A MATHEMATICAL EXAMPLE THAT SHOWS WHY RISK PREMIUM BASED UPON HISTORIC ARITHMETIC RETURNS ARE IMPROPER?

A. Yes. As previously stated, arithmetic average returns overstate the actual returns received by investors because arithmetic returns measure volatility, not actual returns earned by investors. The more variable historic growth rates have been, the more his method exaggerates actual growth rates. Arithmetic average returns ignore the impact of compound interest. For example, if a company were to have a stock price of $10.00 in the beginning of the first year of the measurement period and a $5.00 stock price at the end of the first year, an arithmetic average approach would conclude that the return earned by the investor would be a loss of 50% [($5-$10)/($10)]. If, in the second year, the stock price returned to $10.00, then the arithmetic average would compute a gain of 100% in the second year [($10-$5)/($5)]. The arithmetic average approach would naively average the 50% loss in the first year with the 100% gain in the second year to arrive at the conclusion that the total return received by the investor over this two year period would be 25% per year [(-50% +100%)/2 years]. In other words, the arithmetic average approach is so inaccurate that it would conclude the average annual return over this two year period was 25% per year even though the stock price started at $10.00 and ended at $10.00. The geometric average would not make such an error. It would only consider the compound annual return from the beginning $10.00 to the ending $10.00, and correctly determine that the annual average of the total returns was not 25%, but was zero.

In order to protect investors from misleading data, the SEC requires mutual funds to report historic returns by using the geometric average only. The arithmetic average is not permitted. The geometric average, or SEC method, has the compelling advantage of providing a

true representation of the performance that would have actually been achieved by an investor who made an investment at the beginning of a period and re-invested dividends at market prices prevailing at the time the dividends were paid.

Q. DOES THE FINANCIAL COMMUNITY COMPUTE HISTORIC ACTUAL ACHIEVED RETURNS BASED UPON ARITHMETIC MEANS OR GEOMETRIC MEANS?

A. As shown earlier in this testimony, the financial community (as represented by articles from *The Wall Street Journal* and from *Business Week*) refers to geometric averages when evaluating historic returns. Additionally, an article on page 92 of the August 16, 1999 issue of *Fortune* magazine refers to the return that is equal to the geometric mean from Ibbotson Associates as "...the oft-quoted calculation..." of historic actual returns on common stocks. The article does not even mention the number that is equal to the historic arithmetic return.

Q. DO FINANCIAL TEXTBOOKS SUPPORT THE USE OF THE GEOMETRIC AVERAGE FOR COMPUTING HISTORIC ACTUAL RETURNS?

A. Yes. For example, the textbook *Valuation. Measuring and Managing the Value of Companies*, by Copeland, Koller, and Murrin of McKinsey & Co. , John Wiley & Sons, 1994, in a description of how to use the Ibbotson Associates data states the following on pages 261-262:

> We use a geometric average of rates of return because arithmetic averages are biased by the measurement period. An arithmetic average estimates the rates of return by taking a simple average of the single period rates of return. Suppose you buy a share of a nondividend-paying stock for $50. After one year the stock is worth $100. After two years the stock falls to $50 once again. The first period return is 100 percent; the second period return is -50 percent. The arithmetic average return is 25 percent [(100 percent - 50 percent)/2]. The geometric average is zero. (The geometric average is the compound rate of return that equates the beginning and ending value.) **We believe that the geometric average represents a better estimate of investors' expected returns over long periods of time.** [Emphasis added]

Similarly, in another textbook discussion that specifically addresses the use of the Ibbotson data, *Financial Market Rates & Flows*, by James C. Van Horne, Prentice Hall, 1990, states the following on page 80:

> The geometric mean is a geometric average of annual returns, whereas the arithmetic mean is an arithmetic average. For cumulative wealth changes over long sweeps of time, the geometric mean is the appropriate measure.

The textbook *Investments* by Nancy L. Jacob and R. Richardson Pettit, Irwin, 1988, puts it well when it says:

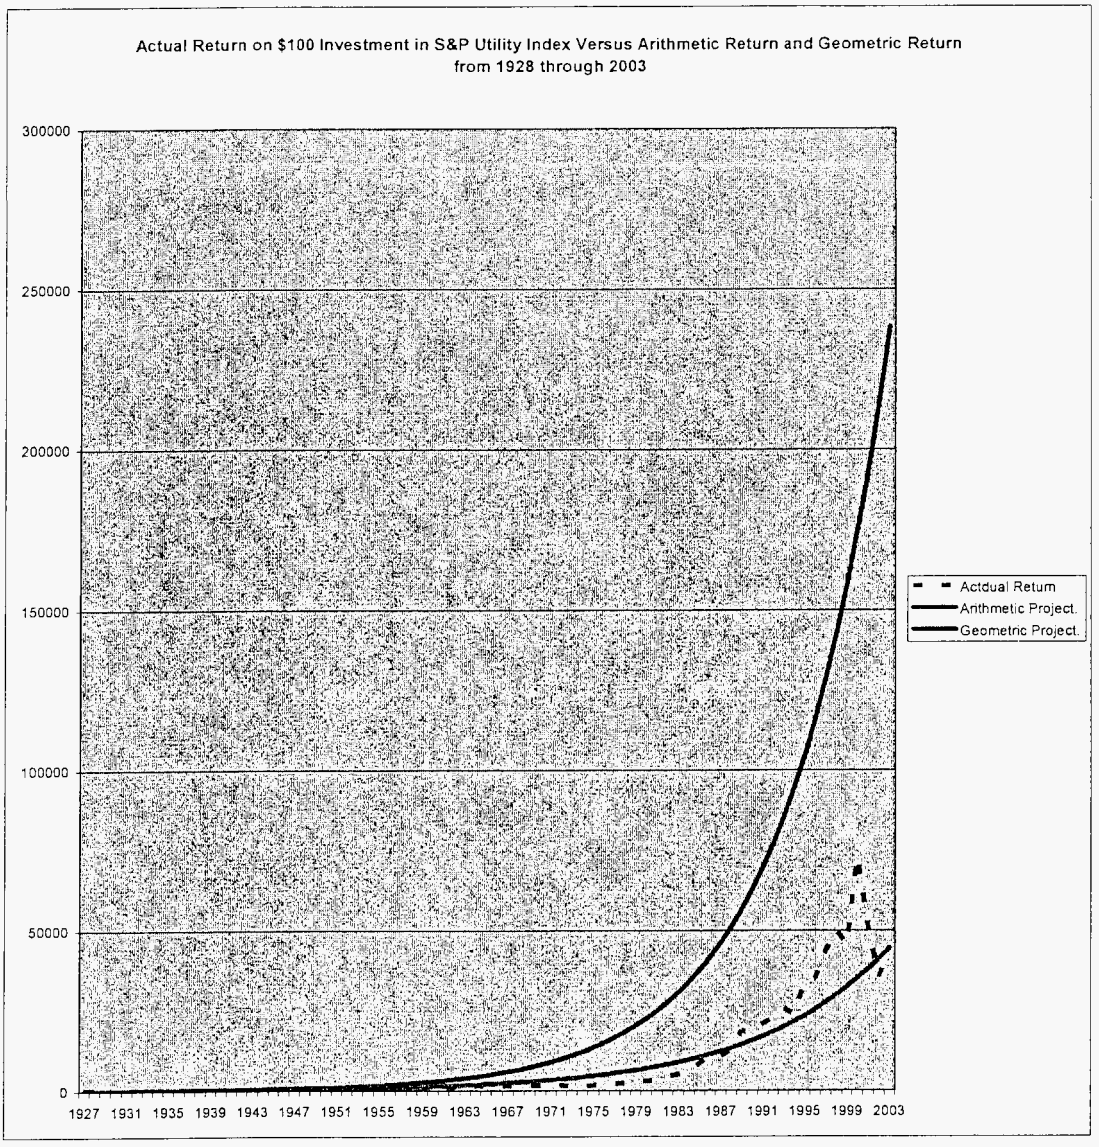
> The existence of uncertainty as reflected in a distribution of possible values makes the **expected value**, or arithmetic average rate of return, a misleading and biased representation of the wealth increments which will be generated from multiperiod investment opportunities.
> The average *annual* rate of wealth accumulation over the investment period, termed the **average annual geometric rate of return**, correctly measures the average annual accumulation to wealth when multiple periods are involved.
> [Emphasis is contained in the original]

B. Q. HAS VALUE LINE SAID ANYTHING REGARDING THE USE OF AN ARITHMETIC AVERAGE OR A GEOMETRIC AVERAGE?

A. Yes. On May 9, 1997, Value Line issued a report entitled "The Differences in Averaging". This report was contained on pages 6844-6845 of the "Value Line Selection & Opinion" portion of its weekly mailings to subscribers. This report says that:

> (t)he arithmetic average has an upward bias, though it is the simplest to calculate. The geometric average does not have any bias, and thus is the best to use when compounding (over a number of years) is involved.

The Value Line report then goes on to provide examples that show why the arithmetic average overstates the achieved returns while the geometric average produces the correct result.



Ibbotson Associates has also said that it is the geometric average that is "... the correct average to compare with a bond yield..."[11]

Therefore, when Dr. Morin chose to give weight to the arithmetic average, he chose a method that both a financial textbook and Value Line have specifically noted to be biased. The more weight that is given to the arithmetic average result, the larger the upward bias in the risk premium method.

Q. HAVE YOU COMPARED GRAPHICALLY THE CAPITAL APPRECIATION GROWTH RATE USING THE ARITHMETIC AVERAGE METHOD WITH THE CAPITAL APPRECIATION GROWTH RATE THAT IS OBTAINED USING THE SEC METHOD?

A. Yes. In the following graph I show the actual movement of the S&P Utility index from 1928 through 2003. I also show how the index would have behaved on a year-by-year basis using the average growth obtained from the SEC method and using the arithmetic average historic growth rate methodology. The graph illustrates that the arithmetic average calculation of historic actual returns deviates at an ever-increasing rate over time from the actual S&P Utility Index, overstating the total return from 1928-2003 by about 500%. By contrast, the historic actual returns computed using the SEC method is a dramatically more reasonable track of the growth of the S&P utility over time and thus is the proper measure of historic actual return rates realized by investors.

[11] Page 75 of Stocks, Bonds, Bills, and Inflation 1986 Yearbook.

1

2

In the above chart, the top line shows that if $100 had been invested in public utility common stocks from the beginning of 1928 through 2003 and had earned the arithmetic return, the $100 would have grown to about $238,000. The dotted line in the graph shows what actually would have happened to a real $100 investment if it had been invested in public utility common stocks. As shown on the graph, the $100 investment would have actually grown to about $44,000. While the increase from $100 to $44,000 is a very sizeable return, it is far less than the $238,000 return that would have been achieved if the arithmetic return methodology had been achieved. The smooth line that ends at the same place as the dotted actual return line is the ongoing value of $100 invested in 1928 that grew at the geometric return rate. Note that the $100 invested at the geometric return rate is, by 2003, exactly equal to the actual return. Therefore, the geometric return accurately measures the actual return that was achieved from 1928 through 2003, but the arithmetic average return exaggerates the actual return by over five times.

Q. HOW MUCH HIGHER IS THE RISK PREMIUM DIFFERENCE BASED UPON AN ARITHMETIC AVERAGE THAN IT IS BASED UPON A GEOMETRIC AVERAGE?

A. From 1928 to 2003, the arithmetic average method (to which Dr. Morin gives weight) produced an indicated risk premium that was 2.13% higher for public utility stocks versus public utility bonds than the risk premium indicated by using the SEC, or geometric average method. The arithmetic median method is essentially identical to the arithmetic mean method and therefore produces an error that is similar to the error produced by the arithmetic average method.

Q. HAVE RISK PREMIUMS BEEN STABLE OVER THE YEARS?

A. No. This is yet another important problem with Dr. Morin's approach to the risk premium method. As I have previously stated, U.S. Federal Reserve Chairman Alan Greenspan has noted that risk premiums have declined. Dr. Morin failed to see this downtrend because he only examined changes from one year to the next without examining the bigger picture.

Q. DR. MORIN CITES IBBOTSON ASSOCIATES IN HIS EVIDENCE. WHAT DOES IBBOTSON ASSOCIATES SAY IS THE CURRENT APPROPRIATE RISK PREMIUM?

A. Yes. Page 189 of the "Stocks, Bonds, Bills, and Inflation" 2004 Yearbook by Ibbotson Associates says:

Long-term Market Predictions

Ibbotson and Chen believe that stocks will continue to provide significant returns over the long run, averaging around 9.22 percent per year, assuming historical inflation rates. The geometric equity risk premium, based on the supply side earnings model, is calculated to be 3.84 percent.

E. Comparable Earnings Method

Q. PLEASE BRIEFLY DESCRIBE THE COMPARABLE EARINGS METHOD.

A. A method in which a group of companies are chosen that are allegedly in the same risk category as the subject company. The future expected return on book equity is estimated. This future expected return on equity is equated the cost of equity without any mechanism to determine weather or not this future expected return on equity is more than is needed to attract capital on reasonable terms.

Q. PLEASE EXPLAIN THE COMPARABLE EARNINGS METHOD PRESENTED BY Dr. Morin.

A. Dr. Morin examined the actual earned returns achieved by three different groups of companies: Canadian Electric Utilities (Exhibit RAM-11), Transmission and Distribution Electric Utilities (Exhibit RAM-12), and a group of Canadian high quality industrial companies. After selecting the companies, he presents the historic return on book equity achieved by these companies.

Q. DO ACTUAL EARNED RETURN RATES EQUATE TO THE COST OF EQUITY?

A. No. The overriding problem with Dr. Morin's comparable earnings analysis is that it did not address the cost of equity at all. It simply considered the returns on book equity that were achieved. The earned return on book equity is an entirely different concept from the cost of equity. A company raises capital at prices approximating its market value, not its book value. Yet, the returns being examined in the comparable earnings method are returns on book, not

returns on market. The DCF model, when properly applied, measures the returns investors are demanding on the market value of their investment, not the book value. The DCF approach is proper because, in contrast to the Comparable Earnings method, the DCF method focuses on the returns investors expect to be able to achieve on the capital they provide.

G. Conclusion on Analysis of Dr. Morin Testimony

Q. PLEASE SUMMARIZE YOUR ANALYSIS OF DR. MORIN'S TESTIMONY.

A. Dr. Morin recommends that the Company be allowed a return on equity of 10.2%-11.2%. This is his recommendation even though the numbers behind his DCF analysis support a cost of equity of approximately 9.5%. To exaggerate his DCF indicated cost rate, Dr. Morin had to bias his DCF results by excluding the results for companies in which the indicated result was too low without making a corresponding elimination of a similar number of companies that were on the high end of his results. His Risk Premium method was developed based upon an improper mathematical approach to quantifying historic actual returns, or through the continued application of his flawed approach to the DCF method Dr. Morin's approach to the risk premium method also overstates the cost of equity because he fails to consider the significant downtrend in risk premiums that has been occurring. His Comparable Earnings method is not really an equity costing method at all as no consideration was given to investor's reactions to the earned returns on book equity.

Financial Advisers and Fuzzy Math

By KAJA WHITEHOUSE
Dow Jones Newswires

Next time your financial adviser makes a prediction for an average rate of return during an investment pitch, you might want to doublecheck the math.

Some financial advisers rely too heavily on a formula known as arithmetic average, which can be misleading when investing for the long term. Financial advisers who use this formula may be overstating your potential profit and leading you to take risks you might otherwise avoid, academics and other financial professionals say. Errors tend to widen when it comes to very volatile securities like emerging-markets stocks.

Arithmetic math involves a very simple formula, which is probably why so many people rely on it. To decide an average return, you add up all the return percentages and divide the results by the number of percentages.

It's a perfectly valid way to determine an average, as long as it's used to frame a stand-alone one-year return, said Knut Larsen, a partner with Brigus Group, a Toronto education service for financial advisers.

The classic example to illustrate the flaws with arithmetic math goes like this: You start with an investment of $100 and it grows 100% the first year and loses 50% the next year. To calculate the total return using arithmetic math, you would add the returns from both years—in this case 100 minus 50—and divide them by two, or the number of returns.

That leaves you with the illusion of a 25% profit, when in reality you're right back where you started—with $100. After rising 100% the first year, you had $200; but a drop of 50% cut that in half, back down to $100.

The alternative is known as geometric average, or compound annual return. This takes compounding and volatility into consideration.

Unfortunately, geometric average is a complicated formula, involving cube roots, so it may not be possible to figure out the results without a spreadsheet. But the point is to educate yourself on the issue, not to memorize complex formulas, Mr. Larsen said. Simply understanding when one formula should be used over the other, and knowing the flaws of arithmetic math is a good start, he said.

S&P 500 index annual returns from 1927 until now are lower using geometric math.

When comparing the two results, the arithmetic average generally ends up being higher than the geometric average, said Campbell Harvey, a finance professor with Duke University's Fuqua School of Business. For example, annual returns on the S&P 500 index from 1927 until now are about 12% using arithmetic math, and 10% using geometric math. That's a two percentage point difference.

The deviation isn't always enough to get worked up about, but it depends on factors such as volatility, and even fees and interest. For example, the greater the volatility of the security in question, the greater the spread will be between the two results, Mr. Harvey said.

He recalls feeling struck once by an advertisement touting Brazilian stocks attached to data showing "incredible returns" of about 50% a year. Knowing Brazil is a volatile market, Mr. Harvey went back and applied geometric math to the returns. His findings produced an average return closer to zero.

Volatility can affect the portfolio in negative ways because a severe drop makes it that much harder to catch up on the reduced amount, even if returns are phenomenal thereafter. But when using arithmetic average, all that is known is the one-year average return, not total results.

Misleading return projections using arithmetic math are common in the insurance world, said Peter Katt, an insurance analyst in Mattawan, Mich. Some products require high return forecasts to make the products work, and this is one way to get around that, he said, adding that consumers need to educate themselves.

"I deal with very bright clients and advisers, and they have no idea what I'm talking about" when referring to the different formulas for calculating results, he said.

It may seem like a lot of financial hocus-pocus, but sometimes the misrepresentations aren't intentional, Mr. Larsen said. He published a primer on the subject this summer after bumping into a financial adviser who legitimately didn't know the effects arithmetic math was having on his planning. The adviser had a client who suffered a portfolio loss of 45%, and the adviser believed the client would need an annual return of 15% a year to get back to the original investment in three years. In reality, he would have to prepare for a return of more like 22% a year, according to Mr. Larsen's calculations.

The Differences in Averaging

One of the frequent questions we receive is related to the proper procedure to calculate the average return of an investment (stock, mutual fund, or anything else). This article will briefly examine how to compute the average change of a specific investment 1) over a set period of time, 2) over a number of years, and 3) annualizing returns over a period shorter than a year.

Averaging Calculations

There are actually three averaging methods: arithmetic, geometric, and harmonic. These formulas are shown below:

Arithmetic: $(y_1 + y_2 + \ldots + y_n)/n$

Geometric: $(((1+y_1) * (1+y_2) * \ldots * (1+y_n)) - 1)^{1/n}$

Harmonic: $(1/((1/n) \bullet ((1+y_1) + (1+y_2) + \ldots + (1+y_n)))) - 1$

In each case *n* is the number of years of data and each *y* is the ending price divided by the beginning price minus 1. Stated simply, the geometric mean is the n^{th} root of the product of the individual averages. Since there are often negative returns involved in this sort of calculation, one is added to each term. At the end, the one is subtracted to get back to the decimal fraction number.

The arithmetic average has an upward bias, though it is the simplest to calculate. The geometric average does not have any bias, and thus is best to use when compounding (over a number of years) is involved. Lastly, the harmonic average has a downward bias. But since it is rarely used, we will focus on the arithmetic and geometric averages in the following discussion.

Over a Set Period of Time

The simplest way to compute the price change is to take the ending price and divide it into the beginning price. After subtracting one from the result, you are left with the holding period yield. This calculation produces the decimal fraction equivalent of the percentage change. A change in price from 4 to 5, would be computed as (5 ÷ 4) - 1, which yields .25, or 25%.

The holding period return is independent of time. That means that it can be computed on an annual basis, over a ten-year period, or any other time frame.

Compounding: Averages Over a Number of Years

Now assume we have been watching a stock for two years, and we want to compute the annual return for each year, and the average annual return for the two-year period. Let's say this stock was initially priced at $10, rose to $20 by the end of year 1, but fell back down to $10 by the end of year two. From the above-mentioned example, we know how to find the price change for the first and second year. Then we can also find the total price change over the two year period. These figures are shown in the table below:

Year	Price	% Price Change
0	$10	—
1	20	100%
2	10	-50%

Price change from year 0 to year 2: 0%

Arithmetic Average:	25%
Geometric Average:	0%

One of the more interesting observations that arises from such an example is the asymmetric nature of the returns. Notice that in this example, the stock only has to fall half as much in year two as it rose in year one to completely wipe out any paper gains the investor had during the interim. This nature highlights the importance of using the geometric return. As shown, the arithmetic average indicates that the stock had an average annual return of 25% over the past two years. However, the true return, which is corroborated by the geometric mean, is zero.

Another interesting point is that the asymmetry magnifies as the price changes increase in size. For example, let's say the stock price increased to $50 before falling back to $10.

Year	Price	% Price Change
0	$10	—
1	50	400%
2	10	-80%

Price change from year 0 to year 2: 0%

Arithmetic Average:	160%
Geometric Average:	0%

Originally, the stock had to fall 50% to wipe a 100% gain. But in the second scenario, the stock had to drop only 80% to wipe out a phenomenal 400% gain. This growing discrepancy between the different averaging techniques highlights the importance of accurately measuring and portraying investment results. Again we see that the geometric average portrays the true return accurately.

Annualizing Returns

An annualized holding period return figure can be computed by taking the $1/n^{th}$ root of the holding period return, where n is the length of the sub-period relative to the year. (For a three-month period, n would equal .25, or one-fourth of the year. For a two-year period, n would equal 2.) Below are two examples that show how this operation is performed.

Let's say you wanted to figure out the annualized return of a stock that rose 5% in the first quarter. The annualized return would then be computed as $(1.05)^{1/.25}$, or 21.6%.

We can also compute an average annualized return figure from a period longer than a year. For example, if the stock rose 20% for two straight years, the cumulative growth rate would be 44% (1.20 * 1.20). This figure could be dissected into the average annual rate using the same formula shown above $(1.44)^{1/2}$, which we can verify as 1.20, or 20%.

Roger J. Bos
Analyst

Timely Income Stocks

For equity investors with more of an eye for current income, we've screened our database for issues that combine high estimated dividend yields and above-average relative year-ahead performance potential, without undue investment risk.

This roster includes only those equities whose dividend yields are at least 2.7%, which is 70 basis points above the 2.0% median for all stocks in Value Line's universe. Ranks here must be no less than 2 (Above Average) for Timeliness and no less than 3 (Average) for Safety.

Although the focus here is on current income and near-term price performance, we shape our criteria to ensure solid potential returns for longer-term investors as well. Accordingly, we require a minimum projected three- to five-year total return potential of 15%, compared with the median of 14.6% for all stocks under our review. In addition, our analyst's projection for capital appreciation had to be at least 55%, which is in line with the current median price appreciation potential for all stocks in the Value Line universe.

Given the relatively stringent criteria applied here, this is a fairly short list which encompasses stocks from a fairly diverse group of industries. This list would seem to be a good starting point for income-minded investors with both short- and long-term investment perspectives. As always, though, we urge investors to consult the individual and supplementary analyses in *Ratings & Reports* before committing to any of the issues listed in the table below.

Ratings & Reports Page	Ticker	Company Name	Div'd Yld.	Recent Price	Timeliness	Safety	3-5 Yr. App. Pot.	3-5 Yr. Avg. Ret.	P/E

PROCEEDINGS

MS. HARTMAN: Could you state your full name, please?

THE NOTARY: Sure. Vida, V-I-D-A, Rothschild.

MS. HARTMAN: Okay. And you're a notary and you are licensed, I guess, in Connecticut?

THE NOTARY: Yes, state of Connecticut.

MS. HARTMAN: Okay, great. Thank you. We need to take appearances now. My name is Jean Hartman. I'm the Commission attorney assigned to this docket.

MR. BECK: And my name is Charlie Beck. I'm with the Office of Public Counsel.

MR. FRIEDMAN: And my name is Marty Friedman. I'm the attorney for Utilities Inc.

MS. HARTMAN: If Ms. Rothschild would go ahead and swear the witness in, please.

(Witness sworn.)

MS. HARTMAN: Charlie, I just e-mailed you my fax number. I don't know if you received it.

MR. BECK: I have, and I have forward it to Jim Rothschild. Do you have a form that you would like Ms. Rothschild to fill out?

MS. HARTMAN: Yes, and I thought it was attached to the notice of deposition.

THE NOTARY: Yes, I have it here.

MR. ROTHSCHILD: Let's double check that. I wrote

that fax number down, but why don't we double check to make sure it is correct.

THE NOTARY: Okay. You said (850)413-6194.

MS. HARTMAN: That's correct.

THE NOTARY: Okay. I will fill it out and notarize it and fax it to you.

MS. HARTMAN: Great. Thank you.

THE NOTARY: Thank you.

MS. HARTMAN: Okay, great. I will go ahead and start.

DIRECT EXAMINATION

BY MS. HARTMAN:

Q Mr. Rothschild, again, my name is Jean Hartman, and I am the Commission attorney assigned to this docket. And I appreciate your time this afternoon. Thank you very much. If at any point during the deposition you need a break, please let me know. Also, if you need clarification regarding any of my questions or the terms I use, please also let me know.

A Okay.

Q Great. Thank you. Could you please state your name and business address for the record?

A Yes. James A. Rothschild, business address 115 Scarlet Oak Drive, Wilton, Connecticut.

Q And who are you employed by?

A Rothschild Financial Consulting.

Q In what capacity?

A Consultant.

Q Mr. Rothschild, you filed testimony and exhibits and surrebuttal and testimony in this docket, is that correct?

A Yes.

Q At this time do you have any additions, deletions, or corrections to your testimony, exhibits, or your surrebuttal?

A Yes, I do have few. There was one -- I guess it's a two-page change that Mr. Beck was going to distribute. Earlier, just in reviewing the testimony last night and this morning, I felt that it would be helpful to everybody to clarify the hypothetical example that was in the testimony. So that was handed out; hopefully everybody has that. And there are other, a very few small changes. I think they are all in the surrebuttal testimony. I will be happy to list those.

MS. HARTMAN: Okay. Charlie, have you sent those to me or to Marty?

MR. BECK: I have. I e-mailed them, I don't know, maybe 20 minutes ago, 15 minutes ago.

MR. FRIEDMAN: Jean, I did get an e-mail with -- it looked like some changes to the testimony.

THE WITNESS: In addition to those two pages, I would like to change on Page 7, Line 12 -- all of these changes I'm talking about now are in the surrebuttal testimony. Page 7, Line 12, the number 9.50 should read 9.00.

BY MS. HARTMAN:

Q Mr. Rothschild, I'm sorry, could you please repeat that?

A Sure. In the surrebuttal testimony, Page 7 -- when you are there let me know and I will give you the rest of it.

Q We're there.

A Okay. Page 7, Line 12, in the middle of that line there is a number 9.50. Please change that to 9.00.

Q Okay.

A And then skipping to Page 14, there's a question that runs from Lines 18 to 20. Instead of ending with the words then B times R growth rate, it should end with then five year earnings per share growth rates.

MR. FRIEDMAN: Could you read just the way it should be?

THE WITNESS: The whole question? Yes. Are B times R growth rates more or less susceptible to changes in the allowed return on equity than five year earnings per share growth rates.

MR. FRIEDMAN: All right.

THE WITNESS: All right. Then on the next page, which is Page 15, Line 14, the number $1.0567 should be 1.567.

MR. FRIEDMAN: 1.567?

THE WITNESS: Yes.

And then on Page 27, we just need to add the letter T at the very end of the page so that the word is correct instead of correc.

BY MS. HARTMAN:

Q Are there any other --

A One final change. It is just a spelling error on Page 33, Line 20, reasonableness should have two Ss.

Q Are there any other additions, deletions, or corrections to the testimony or the exhibits?

A No.

Q Great.

Mr. Rothschild, could you please describe your understanding of the purpose of the Commission's water and wastewater return on equity leverage formula?

A Yes. I tried to put that in my testimony. If we go to the direct testimony, Page 2, the answer to the question starts on Line 16 is my understanding.

Q Could you read that line for me, please?

A Sure. The Florida Public Service Commission is authorized by statute, quote, "To establish no less than once each year a leverage formula to calculate a reasonable range of return on equity (ROE) for water and wastewater (WAW) utilities. While the FPC has provided the required annual updates to the leverage formula every year, an order establishing the procedures to be used for this update was last

established by Order Number PSC-01-2514-FOF-WS in Docket Number 010006-WS issued on December 24th, 2001."

Q Anything else?

A Well, I explained -- it goes on in the testimony, so I am explaining the points that were addressed by the Commission in the order and so forth.

Q Thank you.

Could you please describe your understanding of how the Commission's leverage formula is currently applied?

A Well, how it is currently applied is there is a formula which is a starting cost of equity, and then that cost of equity is -- the starting cost of equity which would apply to a water or wastewater company with a common equity ratio of 40 percent, and then that amount would change based upon the equity ratio. I said that wrong. There is a constant number and then there is another number which is added to that, and how much is added to that depends on the equity ratio.

So that the constant number, whichever one is being used right at this moment, would be divided by the percentage of common equity that a particular company is using, and which would arrive at a result that a company can use as a filing basis without additional proof. However, my understanding is that the parties could feel or the company itself could choose not to use that number, or another party could say they don't feel that number is applicable and could provide alternatives

to that.

Q Your attorney asked that you have a copy of Commission Order Number PSC-01-2514-FOF-WS issued December 24th, 2001, in Docket Number 010006-WS available to refer to today for the purposes of your deposition. Do you have a copy of this order with you?

A Would you read the order number again?

Q Sure. It's Commission Order Number PSC-01-2514-FOF-WS issued December 24th, 2001.

A Yes, I have that.

Q Are you familiar with this order?

A Yes.

Q What is your understanding of what the Commission approved when it issued this order?

A My understanding, it approved a specific leverage formula that it felt was appropriate at the time that basically takes the form that I gave you in my prior answer.

Q In your opinion is the Commission's water and wastewater return on equity leverage formula tailored for a particular water and wastewater company, or for the average water and wastewater company under the Commission's jurisdiction?

A It is supposed to be for an average water and wastewater company. And the specific answer would change in part based upon the specifics of whatever company is in for its

rate request.

Q What's your definition of the average Florida water and wastewater utility under the Commission's jurisdiction?

A Well, as I understand the leverage formula, the leverage formula was intended to apply unless somebody feels it's inappropriate. And knowing how the formula is derived, a group of comparative companies is chosen, and indeed the Commission decided it was more appropriate to use a group of gas companies than a group of water companies.

And it determined that the cost of capital for that group, the cost of equity for that group, and what the cost of debt would be if that group effectively issued new debt as of the time of the decision. And also came up with a formula which it used to determine how that cost of equity would change only in consideration of differences in financial risk from one company to another. And the financial risk is just the fancy way or the jargon way, if you will, of saying changes in the capital structure.

MR. FRIEDMAN: Was that the answer to the question?

MS. HARTMAN: No. Let me try this again.

BY MS. HARTMAN:

Q Could you just define the average Florida water and wastewater utility under the Commission's jurisdiction? I'm trying to get a definition of the average Florida --

A I guess I don't understand what you are -- to me that

was the answer to the question, because to me when you talk about average, the average relates to what the Commission did. And in this case what the Commission did was use one group and only change it for capital structure. So, therefore, it is making -- it's saying, to me, that we are presuming that the group result applies but for capital structure changes, and if you had a company then -- at least how I would interpret that -- if you had a company with something particularly unusual or whatever other reason somebody might feel the leverage formula isn't working, then the company is free not to use the leverage formula, or if the company chooses to use the leverage formula another party is free to argue for an alternative. Other than that, I'm not sure how -- that to me defines the average. The average is the use of the group.

MR. BECK: Jean, do you have a reference to the order that you are referring to?

MS. HARTMAN: We're going to consult for a minute. We are going to go off the record for one minute, and we'll be right back.

(Off the record.)

MS. HARTMAN: Hi. We're back on the record.

BY MS. HARTMAN:

Q Mr. Rothschild, would you agree, subject to check, of the 148 water utilities under the Commission's jurisdiction, 101 of these utilities had annual revenue in 2007 of less than

$2,000 -- I'm sorry, $200,000?

MR. BECK: Jean, this is Charlie. If you know, go ahead and give the answer.

A I don't know. My only hesitation, subject to check, is I'm not sure where I can readily get that information. I'm aware that there are a lot of small water companies that are covered by this.

Q Would you agree, subject to check, of the 148 water utilities under the Commission's jurisdiction, 138 of these utilities had average -- I'm sorry, had annual revenues in 2007 of less than $1 million.

MR. BECK: Jean, this is Charlie Beck. I'm going to object. I don't have any way to check that, and I don't know how you would know subject to check. If you want to do a hypothetical, you can go ahead and do that, but otherwise I object.

BY MS. HARTMAN:

Q If you could go ahead and try to answer, Mr. Rothschild, if you can.

A Well, that's my problem. I don't know how I could check it. I don't have any personal knowledge of what the revenues are. My general understanding is there are a lot of companies covered by this, and a high percentage of those companies are what we generally consider to be small.

Q Okay.

A But I have not done an independent analysis of that, and I don't know how I would check your number. I mean, is it right? It probably is, but I wouldn't have knowledge of that.

Q Mr. Rothschild, in the notice for your deposition today you were instructed to have workpapers supporting your direct testimony available for reference. Do you have access to those workpapers?

A I have -- well, probably. I mean, generally what I put in my testimony is the schedules, and I'm not sure that there are necessarily additional workpapers other than perhaps copies of Value Line reports or something like that that I have used. But I probably have access to them.

Q Well, if you would refer to the Value Line publication you relied on for purposes of preparing Exhibit JAR-9, which is attached to your direct testimony. Do you have that?

A Just one minute. Is there one particular company you would like me to look at?

Q I will, but if you would just have that publication in front of you.

A I don't know that I have a printed-out version of all of them.

Q Do you need five minutes to get a copy of it?

A Let's see. Hold on. We're looking through our papers here to see how readily available they are.

(Pause.)

THE WITNESS: I have somebody looking for them, if you want to ask some other questions and go back to them if that works for you, otherwise we can --

MS. HARTMAN: We will go ahead and wait, Mr. Rothschild.

(Off the record.)

MS. HARTMAN: Mr. Rothschild?

THE WITNESS: Yes.

MS. HARTMAN: In particular, we are looking for the Value Line publications that report on ATMOS Energy, and South Jersey Industries, just those two?

THE WITNESS: ATMOS and South Jersey?

MS. HARTMAN: Yes.

THE WITNESS: I think the problem is we might have used them for another case and they might have been out of this file, so it could take us a few minutes to find it. We certainly can go to Value Line's website and get the reports. I'm just not 100 percent sure if they are the same ones that were current as of the time the testimony was prepared or not.

MS. HARTMAN: Mr. Rothschild, I'm going to give you a couple more minutes to locate those Value Line reports on ATMOS Energy and on South Jersey Industries.

THE WITNESS: Okay. All right. I'm going to put you on hold and we will see what we can find.

(Off the record.)

BY MS. HARTMAN:

Q Mr. Rothschild?

A Yes. We're still looking for it. It probably got moved to another case file is the problem. If you have them and want to fax them to me, we could probably work with it that way.

Q No. I mean, we were able to get that information by looking it up on-line.

A Right. The problem is that it doesn't keep it -- I can get the information on-line, but it's going to be a September 12th report, which is going to be much more current than the one that I used when this testimony was prepared.

Q Well, Mr. Rothschild, I'm going to back up a little bit. Earlier I had asked you about the definition of an average Florida water and wastewater utility under the Commission's jurisdiction. My question to you now is have you evaluated the size of water and wastewater utilities under the Florida Public Service Commission's jurisdiction?

A No, I have not. And, in part, because size is not an appropriate factor for consideration in determining the cost of capital.

Q Are you aware that the Commission breaks down the water industry into three classes?

A I probably was not specifically aware of that. I

have seen commissions that do tend to regulate differently based on size and have categories, but I specifically have not reviewed that.

Q Are you aware that Class C has revenues of 200,000 or less?

A I didn't specifically know that, but --

Q Are you aware that Class B has revenues less than 200,000 but greater than -- but more than $1 million?

I'm sorry, I need to repeat that. Are you aware that Class B has revenues of less than -- I'm sorry, more than 200,000, but less than $1 million annually?

A I was not specifically aware of that.

Q Okay. And are you familiar that Class A has revenues of --

A I will bet greater than a million. (Laughter.)

Q Are you aware of that? Yes, greater than a million; are you aware of that?

A No, I was not aware of that.

Q Okay. Skipping forward now to the Value Line publication questions. Subject to check, do you agree that the schedule shows selected financial data for the ten natural gas utilities in the group of comparable companies included in your DCF analysis?

A Does the Value Line page show selected financial data for each of the companies?

Q I'm sorry. I'm referring, again, to Exhibit JAR-9.

A Okay. So you want me to turn to my JAR-9.

Q Yes, please turn to JAR-9.

And this schedule shows selected financial data for ten natural gas utilities in the group of comparable companies included in your DCF analysis, is this correct?

A You're a little faster than I am turning to 9. Give me a minute. Yes, that is correct.

Q Of the ten companies in this proxy group, did Value Line report that ATMOS Energy had the greatest annual revenue in 2007? Can you agree to that?

A I'm sorry, part of your question was for whatever reason blanked out. I didn't hear it. So could you repeat that again, please?

Q Okay. Can you agree that of the ten companies in this proxy group, Value Line reported that ATMOS Energy had the greatest annual revenue in 2007, subject to check?

A It was the highest of this group of ten?

Q The greatest annual revenue in 2007.

A When you say greatest in 2007, I don't know if you mean greater than ATMOS had at any other year or if you mean greater than any of the others companies had in 2007?

Q The latter.

A I would be happy to accept that subject to check. I can check that, yes.

Q Thank you. Would you agree that Value Line reported annual revenues of $5.9 billion for ATMOS Energy, subject to check?

A I can certainly agree that these companies are much larger than Class B or C water utilities.

Q Of the ten companies in this proxy group, do you agree that Value Line reported that South Jersey Industries had the lowest annual revenue in 2007, subject to check?

A I answered that yes. I don't know if you heard me.

Q Okay. Would you agree that Value Line reported annual revenues of $956 million for South Jersey Industries, subject to check?

A Subject to check, yes.

Q Would you agree, subject to check, that the average annual revenue in 2007 for these ten companies was $2.3 billion?

A Given what you said as the high and low, that would sound about right. The number was 2.3 billion?

Q Right, 2.3 billion.

A That sounds about right.

Q So you agree subject to check?

A Yes.

Q Mr. Rothschild, if you could refer to Pages 28 through 30 of your direct testimony. Do you have that in front of you?

A I will in a minute.

Q Okay, great.

A Page 28. I am now on Page 28.

Q Thank you. What is your understanding for why the Commission water and wastewater return on equity leverage formula includes a bond yield differential adjustment?

A The bond yield differential adjustment is done to add an additional amount above and beyond the cost of debt that's actually incurred by companies with the same bond rating that are within the comparative group.

Q Do you believe the average water and wastewater company under the Commission's jurisdiction has access to debt at the same cost rate available to large publicly traded companies with an average bond rating of single A2?

A Those companies that have a capital structure consistent with the parameters that exist for large companies with a single A have access to capital at the same rate, yes. It's not necessarily true that all of these companies would qualify for a single A rating. And, indeed, the whole concept of looking at a large formula recognizes, and I might add correctly recognizes that financial risk, i.e., capital structure risk, does influence the cost of debt and the cost of equity. And a proper formula should take that into consideration, and certainly the one I propose does do that.

Q So, just to clarify, you said yes.

MR. BECK: I'm sorry, what was the question to which you said he said yes?

MS. HARTMAN: Okay. And I would like a yes or no answer, please.

BY MS. HARTMAN:

Q Do you believe the average water and wastewater company under the Commission's jurisdiction has access to debt at the same cost rate available to large publicly traded companies with an average bond rating of single A2?

A And I guess my answer was not necessarily for the reasons that I explained, because capital structure matters. So if I gave you a yes or a no it would be --

Q So you are giving me a maybe?

A Well, yes, because it depends on capital structure. If you have a small company, which I believe I gave you in my prior answer, if you have a small company that has the characteristics consistent with that which would achieve a single A bond rating, it will have a cost of debt the same as a company with single A characteristics.

Q Mr. Rothschild, what is your understanding for why the Commission water and wastewater return on equity leverage formula includes a private placement premium adjustment?

A Well, it's including a private placement premium adjustment under a belief, which I think is incorrect, that if a company issues securities with a private placement, that it

has to pay more than a company that doesn't have that private placement premium. And there is no evidence to suggest there is any truth to that.

Q Thank you.

Could you please explain your understanding of the issuance of common equity through the New York Stock Exchange?

A My understanding of the issuance of common equity through the New York Stock Exchange?

MR. BECK: Jean, this is Charlie Beck. I do not understand the question. Could you rephrase it?

MS. HARTMAN: We are going to go off the record for a second to see if we can assist you. Hold on, please.

(Off the record.)

MS. HARTMAN: We are back on the record.

BY MS. HARTMAN:

Q Mr. Rothschild, do you know the minimum number of shareholders a company must have to qualify to have its common stock traded on the New York Stock Exchange?

A No, I do not.

Q Would you agree, subject to check, that a company must have at least 2,200 shareholders to be listed on the New York Stock Exchange?

A I agree, subject to check. There are other listing requirements on the New York Stock Exchange, as well. I don't happen to know offhand what they all are. There are certain

reporting requirements and earnings requirements, et cetera.

Q How many water and wastewater utilities under the Commission's jurisdiction have 2,200 shareholders?

A I do not know.

Q Would you agree, subject to check, that other than Aqua America there are no other Florida water and wastewater companies under the Commission's jurisdiction that have at least 2,200 shareholders?

MR. BECK: This is Charlie Beck. I'm going to object, Jean. How do you want us to check that? I mean, look up every PSC jurisdictional water company and then determine the number of shareholders?

MS. HARTMAN: Let me ask the question in a different way.

BY MS. HARTMAN:

Q Other than Aqua America, can you identify any other Florida water and wastewater companies under the Commission's jurisdiction that have at least 2,200 shareholders?

A I have not studied the number of shareholders for any of these companies, so, therefore, I do not know. I also know that when you start counting the number of shareholders it can be misleading because sometimes you will see a name of what seems like one stockholder, but, in fact, it could be Morgan Stanley and all the accounts that Morgan Stanley -- that show up as one entity. So it is a tough number to get accurate.

Q Do you know the average monthly trading volume necessary to be listed on the New York Stock Exchange?

A No, I do not. I am not familiar with the listing requirements of the New York Stock Exchange.

Q Would you agree, subject to check, that a company must have an average monthly trading volume of 100,000 shares to be listed on the New York Stock Exchange?

A Again, my hesitation is I'm not sure how I can readily check that. It might be something available on the New York Stock Exchange website, it might not be. But the New York Stock Exchange is typically reserved for larger companies. There are examples of very large companies, such as Microsoft, that is traded on the NASDAQ, not the New York Stock Exchange. But, typically, the companies on the New York Stock Exchange are larger than --

Q Thank you. Do you know the minimum stockholder equity that must be maintained to be listed on the American Stock Exchange?

A The American Stock Exchange now?

Q Yes.

A No, I don't know the listing requirements there. The American Stock Exchange tends to not be used anywhere near as such anymore. You typically find companies either on the New York Stock Exchange or NASDAQ, although there are still some on the American.

Q Would you agree, subject to check, that a company must have a minimum stockholder equity of $4 million to be listed on the American Stock Exchange?

A Again, my hesitation of agreeing is I'm not sure how readily available that information is. It's certainly not something that I did or would consider in my determination of the appropriate leverage formula.

Q Mr. Rothschild, can you identify any water and wastewater utilities under the Commission's jurisdiction that have issued common stock on the New York Stock Exchange since 2001?

A I have not specifically studied that, so I wouldn't know.

Q Can you identify any water and wastewater utilities under the Commission's jurisdiction that have issued common stock on the NASDAQ since 2001?

A I have not specifically studied the issuance of common stock by any of the water and wastewater utility companies, so I wouldn't know if there are any or not that have issued on the New York exchange, the NASDAQ, or the American exchange.

Q Could you please explain your understanding of the issuance of common equity through the private placement market?

A Yes. If a company wishes to sell common equity it can do so either through a public offering or through a private

placement. A private placement could be a relatively small offering to individuals or it could be directly to pension funds, insurance companies, other financial institutions such as that where you have a situation where perhaps an insurance company would like to have an investment in one or more water companies, and is happy to take the entire offering. It is good for them because they can get enough stock to be a meaningful investment for them even though it is a relatively small company, and it can be good for the company because they can save on financing costs in making the issuance and just making it easier. So there are times when that becomes a win/win situation vote for the company and the investor.

Q Thank you. Can you identify any Florida water and wastewater utility under the Commission's jurisdiction that has issued equity through private placement?

A I have not specifically studied the issuances for the companies, so there might have been many or there might have been none, I don't know.

Q Can you please identify any Florida water and wastewater utilities under the Commission's jurisdiction that have issued debt through private placements?

A Again, I have not specifically looked at issuance-by-issuance which companies have or have not issued debt, and so how it was issued over the last several years. It is not information that I would have used in my testimony. If

I had it now, I still wouldn't use it. So, no, I don't know the answer to your question.

Q What is your understanding for why the Commission water and wastewater return on equity leverage formula includes a small utility premium adjustment?

A My understanding is it has included a small utility premium adjustment because it apparently believes that there is a high risk associated with an investment in a small company. As I explained in my testimony, both financial theory and empirical evidence shows that statement to be incorrect. There is no size-related risk, because risk is a diversifiable item. And, in effect, you could look at a large company as a portfolio of small companies. And investors -- many investors, not all investors, but many investors invest in a diversified portfolio, so they create the same effect of a large company.

You could have a pension fund, for example, and make the decision to invest in 150 different private placements of small water companies. Any one of the 150 might be small, but when you aggregate it together, it becomes effectively like one large water company that consists of 150 divisions. So the risk is taken away by the marketplace because there is more than one pension fund, more than one insurance company, more than one hedge fund that invests in private placement.

Q All right. In your opinion, do the average Florida water and wastewater utilities under the Commission's

jurisdiction have access to the public equity and debt markets?

A Well, I don't know if they have tried to have access or whether some of them would be sufficiently small that the financing costs could be prohibitive and, therefore, it would make more sense to do a private placement. It would make it more economical. In some cases they might be large enough that a public offering could be economically feasible.

Q Thank you. In your opinion, do the average Florida water and wastewater utilities under the Commission's jurisdiction have access to the private placement equity and debt markets?

A Well, they should be able to have that access if they so choose. It might be more efficient for them and maybe in some cases they don't need to do that, that they are just able to be financed through individual investors. I guess you could call that a private market, depending on how you choose to define the term.

Q Your attorney asked that have you a copy of Commission staff's recommendation filed on May 8th, 2008, in Docket Number 080006-WS available for the purposes of your deposition today. Do you have a copy of this recommendation that you can refer to?

A Yes.

Q And are you familiar with this recommendation?

A Yes.

Q Please discuss the elements of the determination of the water and wastewater return on equity leverage formula discussed in this recommendation that you agree with?

A The elements that I agree with. I agree with the concept that a leverage formula approach is an efficient practical approach that if done properly makes a lot of sense, since there are so many water companies that the Florida Public Service Commission has to regulate. To have a separate independent cost of equity determination for each small water company would be prohibitively expensive and time consuming. And if an appropriate leverage formula is used, it would be unnecessary especially since there is a relief valve, if you will, where either the company or another party could say no, the average result doesn't apply here for whatever reason. So I agree with that.

Q What other elements do you agree with?

A I agree with the concept of using a DCF analysis. I think using it of the natural gas index is acceptable. I realize that whatever -- any group you pick is never going to be perfect. There are, in this marketplace, some problems with using the water company index, water company group. There aren't that many of them, and there is the problem with the concentration in one state. I agree with that.

And I also -- let's see, I would also agree that the DCF result, while it is a little bit high, it's close to

reasonable. I agree with the concept of using the B times R approach in the DCF. I have explained in my testimony that I would -- there are certain adders to that which I won't do, but there is one other adder that I do make that wasn't done, so the net result of my DCF result is pretty close to the DCF result that was done by staff.

I agree with the concept of also using a CAPM. I do not agree with the concept of using a CAPM where a five year earnings per share forecast is used as a proxy for long-term sustainable growth. And as I explained to you in my prior answer, there was an adder to the DCF result, which I thought was appropriate, but I do not agree that it is -- I disagree with the concept of using a bond yield differential, private placement premium, a small utility risk premium.

Q Mr. Rothschild, so you did review the DCF and CAPM analysis staff performed to determine the leverage formula it recommended in Docket Number 080006?

A Yes, I did review that, and I discuss it in my direct testimony.

Q In reviewing the CAPM model, did you find any math errors?

A Well, it depends on your definition of math error. The concept of using a five year earnings per share growth rate as a proxy for long-term growth might not be an arithmetic error, but it is, in my definition, a math error, because it's

misusing the formula from which the constant growth DCF was derived.

Q In your opinions regarding the appropriate growth rate to use in a DCF analysis aside, did you find any math errors in staff's DCF?

I'm sorry, let me go back. In your opinions of the appropriate means of estimating the market return for purposes of the CAPM analysis aside, did you find any math errors in staff's CAPM analysis?

A Well, the truth is when I saw the approach was so inherently flawed, I no longer cared if the arithmetic was done correctly. So, no, I didn't check that. I don't know if it's correct or not.

Q Similar question. In reviewing the DCF model, did you find any mathematical errors?

A I'm trying to think whether I went through to check the arithmetic, and I don't remember that I did. But, again, the staff's result from the DCF and my result from the DCF were quite close. So there's a good chance that what staff did, other than for some pluses and minuses which pretty much -- not totally -- cancel out, but very close to totally cancel out, I would say that it's helpful.

Q What about math errors in staff's DCF analyses?

A I think I just answered that one for you.

Q I'm sorry. Thank you.

For the next couple of questions, I would like to refer you to both the 2001 order and the 2008 staff recommendation. If you could turn to Page 28 of the 2001 order, and Page 9 of the 2008 staff recommendations. And please let me know when you have those pages in front of you.

A Okay. So page --

Q Page 28 of the 2001 order, and Page 9 of the 2008 staff recommendation.

A Page 28 and Page 9. Okay. I have both of those pages. Page 28, which is Attachment A, is that the first page?

Q Yes. These two pages are a summary of the CAPM results, is that correct?

A The Attachment A on the 2001 order?

Q Uh-huh, yes. And Page 9 of the 2008 staff recommendation. The heading on both should be capital asset pricing model, cost of equity for an average water or wastewater utility.

A There is a slight difference in the title, but --

Q Right, that's the 2001. And the 2008 title is capital asset pricing model, cost of equity for water and wastewater industry.

A Yes. One doesn't say average, but presumably it is intended to mean average.

Q Do you agree that these two pages are summaries of CAPM results?

A Both of those pages show the CAPM analysis formula, the definition of the terms, and the result that was obtained by providing a quantification for each of those terms.

Q Would you agree the risk free rate using the CAPM analysis dropped from 5.74 percent in 2001 to 4.54 percent in 2008?

A Well, if you are asking me to agree that a long-term treasury bond is a risk-free rate, my answer is no, it is not a risk free rate.

Q No, Mr. Rothschild, that's not what I'm asking you.

A If you are asking me if the long-term treasury bond rate --

Q No, let me repeat the question.

Would you agree the risk-free rate used in the CAPM analysis dropped from 5.74 percent in 2001 to 4.54 percent in 2008?

A I cannot agree to a long-term treasury bond --

Q Per these sheets. Per these sheets.

MR. BECK: Jean, this is Charlie Beck. The sheets say what they say. If you ask the witness what his opinion is, he's going to give it to you.

BY MS. HARTMAN:

Q Would you agree the beta using the CAPM analysis increased from .61 in 2001 to .87 in 2008?

A That is what the sheets show, yes.

Q Thank you. For the purpose of the 2008 staff recommendation, do you have any reason to believe staff applied the DCF portion of the Commission-approved CAPM analysis differently in 2008 than it was applied in 2001?

A I have no reason to believe that it was mechanically used differently. However, the financial factors are such that using it in the current environment is much more prone to error than it was in 2001. It's a formula whose vulnerability wasn't as readily apparent in 2001.

Q Mr. Rothschild, could you please turn to Page 19 of your direct testimony. And this is the section of your testimony where you discuss beta.

A I have Page 19 of my direct testimony.

Q And would you agree this is the section of your testimony where you discuss beta?

A I do see a question which asks me what is beta and an answer that defines it, yes.

Q Could you please define beta for me?

A Beta is a measurement of the correlation between a given stock and the market as a whole. A portfolio made up of companies with a beta that averages 1.0 tends to have price swings that match the market in magnitude. A portfolio with an average beta of 1.5 tends to move 1.5 percent for every 1 percent the market moves. A portfolio with an average beta of .08 tends to move .08 percent for every 1 percent the market

moves.

Q So would you agree that beta is a measure of systematic risk; a measure of how a stock's price moves relative to the price movement of the market in general?

A Beta is a measure of the systematic risk.

Q Please explain how beta and required return are related.

A How beta and required return are related. There is a risk-free rate and then there is a risk premium. The risk premium, if you start with a risk premium that is average for the market, which is typically defined as a beta of 1.0, then the cost of equity changes in proportion to the change in the beta. So there is a constant plus the amount that changes. The overall cost of equity doesn't change the same percentage of as a move in beta, but the risk component changes as a percentage of the change in beta.

Q Is it fair to say the greater a company's beta the greater its risk?

A At the same point in time one would expect that the greater the risk for which a return is provided. There could be other factors which could make a company risky, but if that risk is diversifiable it would not influence its beta.

Q Would you agree the greater the risk the greater the required return, all other things held constant?

A Well, again, you have to be careful that you are only

talking about the risk which is nondiversifiable. So if you inject in that the nondiversifiable risk, then I would agree with your statement.

Q Please turn to Exhibit JAR-3 attached to your direct testimony. And let me know when you are there, please.

A Okay. I have JAR-3.

Q Please explain what the numbers in the line entitled "Portfolio by Size Decile" represent.

A I'm sorry, where are you looking?

Q Let's see. It is "Portfolio by Size Decile." It's right after A, above Beta.

A On Page 1 or Page 2?

Q Page 2.

A Okay. Now I'm with you. What was done in what is now the Morningstar Report, which was the Ibbotson SBBI Report, and now it is the Morningstar SBBI report, has done is taken a very large number of companies and broken them down by size decile. What size decile means is you take all of the companies and you put in ten difference groups, each group being a decile. So there is the 10 percent largest, the next 10 percent, the next 10 percent, and so on until you get the 10 percent smallest. And each of those companies was broken down into groups by size. And what we could see from each of those groups is the returns that they earned and the average beta for each group.

Q So the size of the companies decrease as one moves from one decile -- from Decile 1 through Decile 10?

A Yes.

Q And Decile 1 includes the largest companies in this analysis, and Decile 10 includes the smallest companies, is this correct?

A Yes.

Q Describe the size of the companies in each of the ten portfolios listed?

A Group one is going to be the very largest companies in the U.S., and the ten smallest are going to be the smallest listed size. I could look in the Ibbotson SBBI book to see if it gives the size of each group. I don't know it offhand, but I do have the book over here. I can take a look.

Q In which portfolio would the largest Florida water and/or wastewater utility under the Florida Public Service Commission's jurisdiction be assigned?

A Offhand, I don't know. That is not the purpose of the analysis. It doesn't matter. What this is showing -- the purpose of the analysis here is to show that size doesn't matter, and I'm trying to figure out a way that it might matter. It shows that the return differential is proportional to beta, and so what we need to be concerned about, therefore, is beta, not size.

Q In which portfolio would the average Florida water

and wastewater utility under the Commission's jurisdiction be assigned?

A I don't have the information. I don't know. As I'm looking in the Morningstar Book, which is the 2008 classic yearbook, Page 140, the decile size is by market capitalization. And the largest decile has a capitalization of over $10 billion, where the smallest has a capitalization less than $200 million.

Q Please explain what the values in the line titled "Beta" represent?

A Beta is the average beta for each of those groups. It is the same beta that we were talking about a few minutes ago when you asked me to define beta. So it defines the relative volatility of the stocks of each of those companies compared to the volatility of a broad index.

Q It appears that the largest companies have the lowest average beta and the smallest companies have the largest average beta. Is this accurate?

A Yes. That's what the data shows. It also shows that the returns go along with that. The proper interpretation of that is that beta captures the risk. It's not the size, it's the beta. The whole reason for doing this is, and if you look at the history of CAPM, what CAPM was all about is saying we can capture all of the risks that a company has by looking at its beta. And when you get into size, what you find is that

small companies do tend to have higher betas. It doesn't mean that all of the small companies have high betas, it just means that they tend to. So when you get into looking at that, what is going on here, is it size or is it something else?

The great majority of the companies in this analysis are not water utilities, and so what you have then is a situation that says, well, what is really going on here? A small company will tend to have a product which is more subject to obsolescence, more subject to competitive pressures, but when you jump to a water utility, water is not becoming obsolete. I think that is probably the safest statement that anybody could make. Water is too basic to our lives. We need that and nobody is coming along with water --

Q Thank you, Mr. Rothschild. That answers my question.

Do you know what the beta is for the average Florida water and wastewater utility?

A Well, you were not going to be able to compute a beta for a company that doesn't have publicly traded stock. But when you look at the betas for water companies that do trade, you see that the betas tend to be relatively -- on the lower risk side of things, because the water utility industry is inherently a low-risk industry for all the reasons that I have said.

So if you compare water companies as a group and look at their beta and compare their size, you will see that size --

that their beta is much lower than would be predicted just from size. And that's because of the industry that they are in, the regulation part and the lack of any risk of a competitive product coming along.

Q Thank you. Could you please explain what the values in the line titled "Historic Actual Compounded Annual Return" represent?

A Yes. That is the total return, the total geometric return that an investor who invested in that portfolio consisting of the companies in that decile would have earned from 1926 through 2007.

Q What is the relationship between the beta value and the historic annual return listed for each decile?

A When that is graphed, what you discovery is the linear relationship that is predicted by CAPM. And what that means then is that the beta is explaining the risk differential. And so long as you are working off beta, you have explained the risk differential. And it's not size, it is industry characteristics of beta.

Q Please explain what the values in the line titled "Reduced Compounded Annual Return" represent?

A Oh, that represents -- the historic numbers that are on Line B are the actual returns that were earned over that period. And what financial theory says is that investors receive an allowance for inflation, they receive a bare rent

for their money, and they receive an allowance for risk. When you are computing earned returns over a long period, you would expect if everything is working as investors expect, you would expect the allowance for inflation was earned at whatever rate it was over that time period.

But when you come to the time when you are evaluating what investors are looking at today, what you should consider is what investors are expecting for inflation, and should recognize that if inflation expectations at the moment the analysis are being done are higher than over the time period the results were quantified, then investors should be demanding a higher return for that higher inflation allowance. If it happens to be lower, then they should be demanding a lower return.

And that is what this analysis reflects. Because actually what we have right now is, and for the last, I don't know, five or ten years, we have been able to get a very accurate reading on what investors are expecting for inflation because the U.S. Treasury now sells what are called in the jargon TIPS, T-I-P-S, which stands for Treasury Inflation Protected Securities, or something like that.

So that investors can either invest in normal U.S. treasuries, in which the interest rate is whatever it is, and investors take the risk for inflation, or investors can buy these TIP Securities where the investors receive a return, an

interest return plus a change in value each year based upon the actual inflation rate.

Q Thank you, Mr. Rothschild. I think you answered my question.

Could you tell me what is the relationship between the beta value and the reduced annual return listed for each decile?

A What is the relationship between the beta --

Q The beta value and the reduced annual return listed for each decile?

A Well, that is shown in -- there is a graph that shows that, and it shows the linear relationship of what actually happened.

Q What is the R squared score for the series in Box D?

A I don't have that offhand.

Q Can you get it?

A I can try to. I'm not sure if the -- this was done on an Excel spreadsheet, I'm not sure whether that provides the R squared or not. But if it does, I'll get it for you.

Q Okay. What is the R squared score for the series in Box E?

A The same answer. If I can get it for you, I will. If I have the software to do it.

MS. HARTMAN: Charlie, this is Jean. We want a late-filed exhibit on those scores.

MR. BECK: Would you like it Exhibit 1?

MS. HARTMAN: Yes, please.

MR. BECK: Okay.

(Late-filed Exhibit 1 marked for identification.)

BY MR. BECK:

Q And we want to know what is the R squared score for the series in Box D, and also what is the R squared score for the series in Box E.

A D and E, right? Did you say C?

Q No. E as in elephant; D as in Democrat.

A Or donkey and elephant?

Q Or donkey and elephant, even better.

Please turn to Page 50 of your direct testimony, Mr. Rothschild.

A Page 50?

Q Yes.

A Okay.

Q Beginning on Line 16 of Page 50 and continuing through the next page, you discuss your CAPM analysis, is this correct?

A I explain there how I apply the CAPM, yes.

Q You relied on an ex post form of estimating the market return for purposes of your CAPM analysis, is this correct?

A I'm not sure what you mean by ex post, so let's maybe

make sure we are talking correctly.

Can you explain what you mean by that?

MS. HARTMAN: We're going to go off the record for a second.

(Off the record.)

MS. HARTMAN: We are back on.

BY MS. HARTMAN:

Q Mr. Rothschild, would you agree that an ex post form of estimating the market return for purposes of your CAPM analysis is based on historic earned returns?

A My analysis is based on historic earned returns.

Q Thank you.

A And validated to see whether or not they are consistent with what investors likely expect.

Q The CAPM analysis included in the 2001 order and the 2008 staff recommendation relied on an ex ante form of estimating the market return, correct?

A Well, it used the DCF -- an approach to the DCF which if it were correct would have produced a result which would be based upon investors anticipated results. However, because my result was verified to be consistent with to project down to a risk-free rate that is credible, and because the result I obtained is consistent with the DCF result I got, what I have is effectively a much more accurate -- tested much more accurate version of the forward-looking approach than was used

by staff.

Q All right. Great. Thank you very much.

A In its problems with using the DCF where it is taking a five year earnings per share growth rate and assuming, and I might add very incorrectly assuming that that is somehow a long-term sustainable growth.

Q Thank you.

Are you familiar with the work of Doctor Eugene Brigham regarding the accuracy of relying on ex post versus ex ante means of estimating the market risk premium in a CAPM analysis?

A I have over the years provided testimony in similar proceedings with Doctor Brigham. I filed rebuttal testimony that I have found flaws, numerous flaws in what he has done. I don't remember specifically looking at that aspect of his work, so I, at the moment, can't comment on that.

Q So you are not familiar with his work regarding the accuracy of relying on ex post versus ex ante means of estimating the market risk premium in a CAPM analysis?

A I didn't say that. I have seen lot of things by Doctor Brigham over the years. I don't know offhand whether or not I have looked at the specific analysis you are talking about. If I see the analysis, I could give you a more accurate answer as to whether or not I have specifically used that. I would say that I have found, in general -- there are exceptions

to it -- but, in general, Doctor Brigham's work in the area of public utility ratemaking has had -- usually has some serious problems with it. And I don't know whether or not the analysis you are talking about does or does not.

Q But with respect to your view of Doctor Brigham's work regarding an ex post versus ex ante risk premium, do you have a view of that for today, yes or no? Yes or no.

A I do not have a view of an analysis that I haven't seen, but I will say --

Q So if you haven't --

MR. BECK: Jean, please let the witness complete his answer.

Go ahead, Mr. Rothschild.

BY MS. HARTMAN:

Q Go ahead.

A Thank you. But I will say that what I have done is, as I explained to you in my prior answer, tested the results of the CAPM which are based on, as you call it, ex post analysis, and am satisfied that because the results project down to a risk premium -- to a risk-free rate, which is consistent with the risk-free rate that existed in the past, and because I have modified that result to be consistent with what investors expect in the future for inflation based upon an analysis of the U.S. Treasury bills, the difference between bills and bonds, the difference between the interest rate on bonds with

full inflation and interest rate without inflation, that what I have is an accurate estimate of what investors are expecting for the future. I doubt very much that the analysis you are talking about from Doctor Brigham has specifically tested the approach that I have used. And I don't know, I would be surprised if Doctor Brigham didn't find that analysis compelling, my analysis compelling.

Q Mr. Rothschild, have you finished your answer?

Hello, Mr. Rothschild?

A Yes.

Q Does a CAPM indicated ROE match the ROE result of your version of the DCF model?

A Does the -- are you talking about my CAPM indicated result or somebody else's?

Q I apologize. Let me try again.

Does any CAPM indicated ROE have to match the ROE result of your version of the DCF model to be accurate?

A Well, I would put it this way. The CAPM and the DCF are measuring the same thing. So if they are measuring the same thing and they get a very different answer, either one of them is wrong or both of them are wrong. So what I believe is appropriate is if you see a material differential, the caution lights should be flashing, and the bigger that differential the more that caution light should be flashing. And I think that is especially true-up when you are looking at what the Florida

Public Service Commission's results were when you apply that -- based upon the current report here, when you are taking a situation where you have such a huge change in a CAPM result that is inconsistent with the changes in the interest rate and so inconsistent with the DCF result, and that that should be flashing very bright, very rapid caution flag.

And when you take that a step further, which is to say that here you have an approach to the DCF that was used in the CAPM which is known to be wrong, known to be that you can't take a five year earnings per share growth rate and plug it in, and to the credit of the staff report, the alternative approach to the DCF, when it was called DCF, was to use a very rational E times R approach. And so when you compare the result of a rational approach to the DCF with a flawed approach to the CAPM, and when you see a huge difference, one shouldn't be surprised if there's a problem.

When you take it a step further and compare it to what happens when you take a more accurate view to the CAPM, as I have presented and everything comes together, the DCF done in the staff report, the DCF that I have done, and the CAPM that I have done and superimpose that on knowing what's wrong with the CAPM that was presented by staff, I think the result becomes compelling.

Q Thank you, Mr. Rothschild. Have you finished your answer?

A Yes.

Q Please turn to Page 57 of your direct testimony referring to the risk premiums discussed on Lines 18 through 20. Could you tell me how these risk premiums are calculated?

A I'm sorry, Page 57, Line --

Q 18 through 20.

A So you are asking me how the SBBI Morningstar computed its risk premiums?

Q Yes.

A I don't believe it's -- well, let me look in the book and see if it gives any more information on what it did.

There is a whole bunch of different analyses about what it did. It goes on for numerous pages. I could provide you copies of those pages.

MS. HARTMAN: Thank you. And I jumped the gun a little bit, I'm sorry.

Charlie, could we get a late-filed exhibit on this, please? I think it would be Exhibit Number 2.

MR. BECK: And would you restate what the question is for the exhibit?

MS. HARTMAN: Is a calculation of risk premiums.

MR. BECK: As done by Morningstar?

MS. HARTMAN: Yes.

MR. BECK: I think Mr. Rothschild has offered up the pages from the document that discussed that.

THE WITNESS: Yes. What I will provide to you is the entire chapter in which my testimony has quoted the summary of that, the results of that chapter.

MS. HARTMAN: Thank you.

MR. BECK: And that is going to be Late-filed 2?

MS. HARTMAN: Late-filed 2.

BY MS. HARTMAN:

Q And, Mr. Rothschild, these values represent an equity risk premium over what base?

A This is specifically intended to be the equity risk premium that SBBI Morningstar believes will occur over the long-run, using its words, meaning into the future, assuming historical inflation rates. As I explained to you earlier, the current investor expectations of inflation are a bit lower than the historical inflation rates. So if one wanted to make an adjustment for that to make it totally in line with investor expectations you would come down a little bit below the 9.66 percent quoted in the IBIS Morningstar Report.

Q In your opinion, what is the --

A Excuse me, the SBBI Morningstar Report.

Q What interest rates are these equity risk premiums added to?

A The equity risk premiums are added to -- what you're looking at here is an overall continuum. So you can take this result and you are effectively adding it simultaneously to all

the various interest rates over the entire yield curve. You are starting with -- you are using an allowance for inflation, and you are recognizing that in addition to that allowance for inflation is a risk which starts out to be virtually zero if you are adding it to a very short-term treasury, and goes up as you are adding it to a longer and longer term treasury. So it looks at the whole yield curve all at once. It makes it the one hand a simpler, and at the other hand a much more sophisticated approach than if you just merely take any one point in the yield curve and add a premium to it.

For example, if you take -- as I explained in my testimony -- if you just take a short-term treasury and add a premium to that, the short-term treasury, if you just take it at one point in time is subject to variations of what the fed is doing. If the fed is, as it is right now, trying to stimulate the economy, you are going to have very low short-term treasury rates, and short-term treasury rates are right this minute essentially almost zero. But that is because of the current issues in the economy, not because the true risk-free rate is zero. The true risk-free rate is higher than zero at the moment.

If you took a different point in time you could find a time when the economy in the judgment of the fed was overheated, and it was time to hit the brakes. And so you could find a time when the short-term interest rate is higher

than the risk-free rate. But if you look at a long-term average, everything comes together. And if you consider that if you looked at a long-term interest rate, like a five-year treasury, ten-year treasury, or a thirty-year treasury, even though those longer-term treasuries have a risk component, because you are looking at the entire beta curve, you are effectively adding the interest rates to the whole thing. And so, on the one hand, if you are using short-term you are taking away the variability of it, if you are using the long-term you are appropriately recognizing there is some risk component to even long-term treasury.

Q In your opinion, what is a reasonable spread in basis points between a given company's cost of debt and its required return on equity?

A Well, that is something that -- there are a lot of reasons why you shouldn't do that on a company-by-company basis. Other things get in the way. Perhaps one of the most simple things to understand is if you had a company with long-term debt and a company with preferred stock and common stock, the common stock would be more risky than would be expressed in the debt, because preferred stock is in the way, taking away the lower risk component. Conversely, if you have a company with no preferred stock, then the equity is effectively a blend of the lower risk preferred and the higher risk common.

Q Can you give me a range?

A No, I can't give you a range, because it really then depends on the beta of the company and other characteristics. So I haven't done the analysis the way that you are suggesting because I do not believe the analysis done that way is as accurate as done the way that I have done it. You could back figure it, if you wanted to. You could look at what the cost of equity is for a company, and then from that -- and see what their bond rating is and see what their probable current cost of debt is and put it together that way. But I don't think you -- to do it the other way around is -- for the purpose of determining the cost of capital is a substantially less precise way than the way that I have done it.

Q Please turn to Page 58 of your direct testimony.

MR. BECK: Jean, this is Charlie. We have been going for an hour and a half. Could we take a break for awhile, five or ten minutes?

MS. HARTMAN: Sure.

(Recess.)

MS. HARTMAN: I apologize. We are running a little late.

BY MS. HARTMAN:

Q Mr. Rothschild, could you please turn to Page 28 of your direct testimony. I'm sorry, Page 58 of your direct testimony.

A Sure. But before we do that, if you like, I was able to compute the R squared that you requested earlier.

Q Great.

A So the answer is .83 for both. It is really the same analysis one modified for the inflation.

Q I'm sorry, could you repeat that, please.

A Yes. The R squared is .83 for both D and E.

Q Okay. Thank you. Now, on Page 58 of your direct testimony --

A Could you hold on one second?

Q Sure. So you are on Page 58 of your direct testimony?

A Yes.

Q If you look at your testimony on Lines 1 through 7.

A Yes.

Q How do you define stock of average risk?

A In the context that it is discussed here, the average risk would be the average of the companies in this analysis, which would be those -- probably those with a beta of 1.0.

Q How does the stock of average risk compare to the average Florida water and wastewater utility under the Commission's jurisdiction?

A The estimate is that since size doesn't matter, it is a reasonable estimate, although probably conservatively high in risk to use the gas group as a proxy, but adjusting for the

financial risk or the capital structure risk. And in so doing one compares the results from the CAPM with the beta that is specific to those gas companies and making the inference that it applies to the water companies. Again, since size doesn't matter, that's a reasonable inference. But, in general, the water industry is probably lower risk than gas, so it is a conservative estimate.

Q For the purposes of the next few questions, I would like you to refer to Exhibit JAR-2 attached to your direct testimony. Could you let me know when you have it available for reference, please?

A Somehow or other my copy is missing. This is kind of, I guess, a production error. I don't have it. Which is JAR-2, and maybe I can find the --

MR. BECK: JAR-2 is the discounted cash flow indicated cost of equity.

MS. HARTMAN: Do you need to take a couple of minutes to get it?

THE WITNESS: I can probably -- for whatever reason, when I got the PDF version it didn't have that showing there. But I can go back to an original Excel spreadsheet and it is probably going to be the same as what you have.

MS. HARTMAN: Okay. Well, if I give you a couple of minutes, do you think you can pull it up?

THE WITNESS: Yes. It should be quicker than that.

I think I have it.

MS. HARTMAN: Okay. We'll wait for you to get it.

THE WITNESS: Hopefully -- we're looking at the one where it shows 9.42 and 9.43 percent on Line 7?

MS. HARTMAN: Yes.

THE WITNESS: Okay. Then I have it.

BY MS. HARTMAN:

Q Mr. Rothschild, for the purpose of -- tell me what this schedule shows?

A This schedule shows the implementation of the DCF model where the first line shows the dividend yield on market price, which is the normal way the dividend yield is computed, and then it derives the -- and also as another important input is the future expected return on equity, which is, in essence, identical to the R. Conceptually identical. I'm not sure what the value was that was used by staff at the moment, but conceptually it's the same as the R term in staff's B times R growth rate analysis.

It goes a step further in sophistication in that it recognizes that really, by definition, a company -- for every dollar of earnings a company earns, it either pays that dollar out in dividends or it retains that. So what the formula is doing is computing the retention rate consistent with the dividend yield computation and consistent with the return on future expected return on equity computation to arrive at a

retention rate on Line 2D.

And so from that retention rate and the return on equity, the B times R, which I'm calling reinvestment growth on Line 3 is computed, and then there is another growth factor which is also important that recognizes that in addition to this B times R reinvestment growth, there is another growth that occurs when a company does new financing, sells new stock above book value, and that growth is the sustainable growth and belongs in the DCF formula. So that I, therefore, arrive at a total investor estimated growth rate on Line 5 which was in the range of 5.62 to 5.73 percent.

Then on Line 6, I recognized that the dividend yield should be adjusted up to recognize that there is -- when an investor is looking out for a year as in the context of an annual DCF model, the investor does expect there will be some growth in dividends over the year and that has to be factored in. So when you add the dividend yield, the reinvestment growth, the new financing growth, and incremented dividend growth for the next year you arrive at the total DCF indicated cost of equity on Line 7.

Q And just for clarification, is this a single stage DCF model?

A This is a single stage DCF model. But the single stage is normalized to be fully sustainable. So it's a more bulletproof and much more accurate single stage DCF model than

you generally find because of the synchronization with the retention rate and the dividend yield.

Q Okay. And does Line 5 show the growth rate you used in your DCF analysis?

A Yes. That's the sum of the reinvestment growth and new financing growth. Depending on your perspective, you could argue that Line 6 is either part of the dividend yield or part of growth. That's semantics, because it all ends up in the answer the same way.

Q You used growth rates of 5.62 percent in one model and 5.73 percent in the other model, is this correct?

A Well, I would call it the same model. What's different is whether you are using the spot stock price at the end of the year or whether you are using the average of the high and low stock price for the year.

Q How long are you assuming these growth rates will remain constant?

A First, the word assumption kind of bothers me. I'm not making an assumption here, I am making a best estimate of what investors are expecting. Investors need to be expecting that that growth rate is the best estimate for earnings, dividends, book value, and stock price for as long as one can reasonably look into the future.

Q If you would turn to Page 29 of your direct testimony, and let me know when you are there.

A Twenty-nine. Yes, I have it.

Q For the benefit of everyone on the phone, could you please read aloud your testimony from Line Number 1 through 5.

A "I believe that all the above adders are appropriate. However, one adder which is actually larger than any other ones which is omitted" -- excuse me, let me start again. I think I read that wrong. "I believe all of the move adders are inappropriate. However, one adder which is actually larger than any of the other ones and was omitted but should have been included into the second stage of the DCF model is the increment to growth caused by sales of new common stock above book value. After excluding the four above listed improper additions to the cost of equity and adding the impact of sales of new common stock above book value --

Q I'm sorry, I think you are going beyond Line 5.

A Oh, I'm sorry.

Q With respect to your recommendation of including an adjustment to the second stage growth rate due to the sale of new common stock above book value, how many basis points does this adjustment add to the DCF result?

A How many basis points does which adjustment add?

I'm sorry, could repeat the question, please?

Q Sure. I mean second stage growth rate, but I will read the whole question again.

With respect to your recommendation on including an

adjustment to the second stage growth rate due to the sale of new common stock above book value, how many basis points does this adjustment add to the DCF result?

A Well, I prefer to think of it as not an adjustment to the DCF, but as something that belongs in it as an inherent part of it. But with that qualification, the answer is as shown on Line 4 of my Exhibit JAR-2. The answer is 241 to 253 basis points.

Q I'm sorry, could you please repeat that?

A 241 to 253 basis points.

Q And can you tell me where that's shown?

A On Line 4 of Exhibit JAR-2.

Q So it's part of the 5.62 growth rate?

A Yes. And the 5.73, as well, yes. Part of both depending on which period. It is part of 5.62 percent growth rate for the year ended 5/31/08 and it is part of the 5.73 growth rate which is applicable to the market price as of 5/31/08.

Q If you would now turn to Page 41 of your direct testimony and let me know when you're there.

A I'm there.

Q Also for the benefit of everyone on the phone, could you please read aloud your testimony on Line 16?

A Just the one line?

Q Yes, please.

A All of the components must grow at a rate equal to ROE times retention rate.

Q How often does this assumption hold true?

A Well, it's not an assumption. When you're looking at an analysis, if you don't believe conditions are such that you can reasonably make that the best estimate for the various factors, you shouldn't do the analysis. With that clarification, I would say that the purpose here isn't to determine whether or not you are going to have a difference in the growth rate of the various components. Everybody knows that you are going to have a difference, but the conditions must be such that you can't get a better estimate of the growth -- let me say it again rather than a double negative.

What you should be doing is expecting the best estimate for growth, and earnings, and dividends, and book value, and stock price is all the same number. And what I mean is not that they are all going to grow at 5 percent, but you think that, well, the best estimate for earnings is 5 percent, and the best estimate of dividends is five percent, and the best estimate for stock price is 5 percent, and the best estimate for book value growth is 5 percent. And that must be done or you should not use the constant growth DCF.

If you think that earnings are going to be growing more rapidly than dividends, then you must -- in order to be consistent with the derivation of the formula and for the

formulas all to make any sense, you must go back a step in the DCF model and no longer use the constant growth formula. You must go to a multi-stage model.

Q Is it your understanding that the Commission's leverage formula is applied to all water and wastewater utilities under the Commission's jurisdiction regardless of the size of the individual utility?

A Yes, it is my understanding. And I agree that it is -- that if you do it properly, which is don't make a size adjustment, then that's okay. If you start making a size adjustment, then in the first place you're making a computation which is not consistent with financial value, size doesn't matter, but then the formula since it doesn't adjust for size, if size mattered then you would have to adjust for size in the formula.

But since you can't quantify it because it doesn't exist -- maybe you could quantify it, but not with a valid analysis, if it doesn't exist you shouldn't do it. So I agree that the formula is applied to all companies irrespective of size, and I also say that size shouldn't matter. It doesn't matter from a perspective of the cost of equity, so we should have, if you will, a simpler and more accurate result of the leverage formula by ignoring size.

Q If you would refer to Exhibit JAR-8, Page 1 of 2. And let me know when you're there.

A JAR-8, Page 1 of 2, yes.

Q What does the schedule show?

A This is a schedule that shows the capital structure of each of the comparative gas companies. It starts out with the numbers that are in Value Line and computes the capital structure based upon those numbers.

Q Thank you.

Mr. Rothschild, can you identify the largest Florida water and/or wastewater utility under the Commission's jurisdiction?

A I believe that's -- I think that's Aqua America.

Q How does the --

A Of the Florida portion of the Aqua America operation. If Aqua America is the largest company. I'm not 100 percent sure if the Florida operation of Aqua America by themselves are the largest.

Q How does the largest Florida water and/or wastewater utility under the Commission's jurisdiction compare in size to the companies in the natural gas proxy group?

A We talked about earlier, I guess at the beginning of this discussion, of this deposition today I haven't made that specific comparison, so I don't know offhand. But I'm not concerned with that, because for all the reasons that I have already discussed both in my prefiled testimony and here today, size doesn't matter.

Q Can you tell me how does the average Florida water and/or wastewater utility under the Commission's jurisdiction compare in size to the companies in the natural gas proxy group?

A Well, the average size -- I'm sure if you start talking about -- just by knowing how many water companies we are talking about, the average size has to be much smaller. But so what, because size doesn't influence the cost of equity. As we have discussed earlier today, you can have, for example, a pension fund who buys -- who creates a diversified portfolio. Theoretically, such a pension fund could invest in 50, or 100, or 150 different small water companies.

And from its perspective, then, its overall investment in the water business is very well diversified. It is as diversified as a large company, or as a very large company, so it creates the diversification benefit. And this is exactly why in the competitive marketplace size risk influences the diversified out. And that exactly why when you look at size, when you are looking at it through the decile analysis we talked about earlier that was done by SBBI Morningstar, it shows that size doesn't matter. It's data, not size, that matters.

Q Thank you. Sticking with Exhibit JAR-8 for a couple more questions. Can you tell me what kind of analyses, if any, have you done to compare the water and wastewater utilities

under the Commission's jurisdiction and the natural gas companies listed on this company?

A Well, what I have -- in what respect? I mean, what I have done is I have recognized -- I have looked at the Commission's decision to use gas companies and agreed with that as a reasonable approach because of the problems with not being enough water companies and with the concentration in California, so that you are looking to too large of an extent the results from one jurisdiction.

So from that I have agreed with the Commission to use the gas companies. I know from my experience in working with other water companies that water companies tend to be even lower in risk than gas companies. So using this group results in a conservatively high cost of equity. As I said before, I am certainly aware that these are bigger companies, but I don't care about that. It doesn't matter. It is not a cost driver, because size is a diversifiable risk.

Q Well, do you believe the water and wastewater utilities under the Commission's jurisdiction and the natural gas companies listed on your Exhibit JAR-8, Page 1 of 2, are comparable in terms of business risk?

A I think that the gas companies probably have a slightly higher business risk, and they have a product where -- for example, they have a product which is more subject to -- it is possible in some uses for natural gas for customers to

switch to alternative fuels, which creates a larger risk, and that can cause somewhat of a risk differential. I don't know if the risk differential is so overwhelming that I felt sufficiently comfortable in using the gas companies, but it is a little bit higher risk than the water companies.

Q And do you believe the water and wastewater utilities under the Commission's jurisdiction and the natural gas companies listed on Exhibit JAR-8, Page 1 of 2, are comparable in terms of financial risk?

A Well, they aren't necessarily comparable in terms of financial risk, and the leverage formula does and should adjust for financial risk. So with financial risk -- which the definition of physical risk is capital structure differences. That's why as you look at JAR-8, I have computed the capital structure for these gas companies and do agree with the concept and recommend that the leverage formula continue to adjust the cost of equity result based upon the specific capital structure of the company to which the formula is being applied.

Q Thanks. Sticking with JAR-8, can you flip to the second page, 2 of 2, and tell me what this schedule shows.

A Yes. This shows that the bond rating is predictive of -- that capital structure and bond ratings are related, let me say it that way. That as the percentage of common equity and the capital structure goes up, the bond rating a company is likely to achieve goes up.

Q Do you --

A In other words, it is a confirmation of the concept of the leverage formula.

Q Can you tell me what the R squared score is for this series?

A I presume we can get that from Excel and let you know. I don't know offhand.

MS. HARTMAN: Charlie, could we make this Late-filed 2? Or, I'm sorry, it's 3.

THE WITNESS: I presume I don't have to answer Late-filed 1 any more?

MS. HARTMAN: I'm sorry. We're going to be off the record for a second.

(Off the record.)

MS. HARTMAN: Charlie, this is Jean. Are you there?

MR. BECK: I am here.

THE WITNESS: If I can interrupt it might help things. The answer to your question about the R squared of the analysis on JAR-8 Page 2 is .57.

MS. HARTMAN: Thank you.

BY MS. HARTMAN:

Q Moving forward, could you please identify every Florida water and/or wastewater utility under the Commission's jurisdiction that is assigned a credit rating by Standard and Poor's?

A I have not done that analysis, I do not know.

Q Great.

Can you identify every Florida water and wastewater utility under the Commission's jurisdiction that is assigned a credit rating by Moody's Investor Services?

A I have not done an analysis of that, either. No, I do not know.

Q Okay. And I assume the same would be -- that you would have the same answer if I asked you to identify every Florida water and wastewater utility under the Commission's jurisdiction that is assigned a credit rating by Fitch Rating Service?

A You're correct, my answer would be the same.

Q Could you please refer to Exhibit JAR-4, Page 2 of 3, attached to your testimony. And let me know when you are there.

A Yes, I have it.

Q What does this schedule show?

A This schedule shows the overall cost of capital that is obtained from the inputs into the -- the starting point inputs into the leverage formula. It develops the cost of capital that should be held constant, which is the 10.610636 percent shown towards the bottom of the page. It starts out with the -- it's based on the actual capital structure of the comparative gas companies, the 9.40 percent

cost of equity that is applicable to the gas companies, and the 6.08 percent cost of debt applicable to those companies. The 9.40 percent is multiplied as is normally done by the .4912 equity ratio, but you notice that the weighted cost is higher than you would normally get, the 7.52, because it is grossed up for taxes.

The reason it is grossed up for taxes here is to protect ratepayers from not being overcharged from a company that uses an inefficient capital structure, it is the revenue requirement basis of the capital structure that should be held constant in appropriate implementation of the leverage formula.

Q Does your recommended leverage formula include any adjustments for the difference in risk between the average Florida water and wastewater utility under the Commission's jurisdiction and the proxy group of large publicly traded natural gas companies?

A Yes, it takes into consideration risk differences that are related to financial risk.

Q Okay. Can you identify where on the exhibit?

A Well, it's not -- this exhibit is the exhibit that develops the 10.61 percent that is held constant. But where you see the difference is when that result is applied to the formula and you see that the cost of equity goes up or down as the percentage of common equity in the capital structure of the specific company changes.

Q Is it your testimony that the average Florida water and wastewater utility under the Commission's jurisdiction has the same access to capital from the public debt markets at the same cost rates as the proxy group of large publicly traded natural gas companies?

A They wouldn't necessarily have the same access to the public market, but as I said to you earlier, it would have the same cost rate consistent with its likely bond rating given its specific capital structure.

Q And is it your testimony that the average Florida water and wastewater utility under the Commission's jurisdiction should receive the same return on equity as the large publicly traded natural gas companies in the proxy group?

A No. Again, it should be adjusted for the financial risk up or down depending upon the capital structure.

Q Turning again to Exhibit JAR-4, Page 2 of 2. It appears that the rate for BAA bonds is the same as the rate for single A bonds, is this correct?

A Okay. So are you talking -- I'm not sure you have the correct schedule. JAR-4, Page 2 of 3?

Q I'm sorry, it should be 2 of 3. You're correct. Do you want me to repeat the question?

A Yes, please.

Q In Exhibit JAR-4, Page 2 of 3, it appears that the rate for AA bonds is the same as the rate for -- I'm sorry, I

will start over again.

On Exhibit JAR-4, Page 2 of 3, it appears the rate for BAA bonds is the same as the rate for single A bonds. Is this correct?

A It is certainly not my intent, no. I see where you are looking where the line says BAA rate. I'm not sure what is -- it should indicate A rate on where the 6.08 shows up, because the A rating would apply to the 49.12 percent common equity ratio. So, no, it is not correct that I am assuming that --

Q Could you provide a corrected schedule?

A I think the only thing you need to change is the BAA to A. But if you want me to provide that, I will.

Q No, that's okay. Thank you.

Mr. Rothschild, could you get a little closer to the phone so we could hear you better over here?

A I'll do the best I can. Is that better?

Q Yes, that's much better. Thank you.

If you would please refer to Exhibit JAR-5, and let me know when you have it in front of you.

A Yes, I have it.

Q Could you please tell me the R squared score for this series?

A If you wait a minute, I probably can, yes. It is going to be low.

Q Thank you.

A If you want to go ahead, I can answer some other questions while I'm getting that.

Q Okay. Could you turn to Page 16 of your direct testimony?

A I'm sorry, Page 16?

Q Sixteen, 1-6.

A Yes.

Q And if you would take a minute to look at your testimony beginning on Page 16, Line 22, through Page 17, Line 4. I'm sorry, Page 17 through Line 5.

Mr. Rothschild, are you ready for me to ask a question?

A I think so. I can read it again if I need to.

Q What did you mean by your comment on Page 17, Lines 3 through 5?

A What I meant was that if you looked at the comparative group of companies in 2001, they were using more debt and less equity than they are currently using. And so, therefore, the increase in the percentage of common equity in the capital structure, other things being equal, would have resulted in a reduction in the cost of equity. So we had two things that we are changing, if you would. Not only did the interest rate environment drops in 2001, but the financial risk also was lower for the gas companies.

Q And is it your testimony that any time a company's equity ratio increases, its required return on equity automatically decreases?

A No, and that's not what I said. But it is a factor that would contribute to the decrease. It certainly works in favor of a decrease. But, on the other hand, if you had a company that increased its common equity ratio from 42 percent to 52 percent, its risk could have changed which could offset that. The overall environment for interest rates could have changed, which could offset that. Other factors could. But if you are looking at the factors we can measure easily, which is the capital structure and the financial risk, and we look at interest rate risk, the two should have been additive to causing a reduction, which makes it all the more less likely, but not impossible that the cost of equity could have gone up.

Q If you could still speak up a little bit. You are starting to fade on us a little bit.

Mr. Rothschild, if you would please turn to Page 14. If you will go back a couple of pages on your direct testimony, and let me know when you have that in front of you.

A I have Page 14.

Q The 9.40 percent return shown on Line 20 of your testimony is the average of the results of your DCF and CAPM analysis, is that correct?

A Well, it is in consideration of both. I don't know

that it is necessarily a mechanical average of the two. I'm not sure.

Q Can you please identify any natural gas company in Florida with an authorized return on equity of 9.40 percent?

A I have not specifically studied that. I have not looked at it, so I don't know if there is or there isn't. But I would say that there has been a general downtrend in the cost of equity over numerous years, and so that one would expect if you go back in history that you would -- even if the allowed returns were computed exactly correctly, you would expect that if you go back enough years they would tend to be higher. So the kind of analysis you are talking about is ladened with problems. Looking at what the cost of equity is now and priced accordingly, if you are always looking over your shoulder you are never going to change cost of equity.

Q Can you identify any natural gas company in Florida with an authorized return on equity less than 11 percent?

A I haven't looked at the analysis. I would sure hope there are, because there must be, unless it has been a long time since they have been in for rate cases. The cost of equity has been less than 11 percent for awhile.

Q Could you please flip to Page 26 of your direct testimony, and let me know when you have it in front of you.

A Twenty-six?

Q Yes, 2-6.

A I have it.

Q According to Line 19, if the Commission adopted your leverage formula, a water and wastewater utility with a 60 percent equity ratio would receive an authorized return on equity of 8.46 percent, is this correct?

A That is correct. And that number should be understood that this particular number is a number that recognizes that a 60 percent common equity ratio would be inefficient in that it wouldn't be providing sufficient tax benefits. And so, as a result, the number that is appropriate to protect ratepayers is to provide a number that would not allow management that uses an inefficiently expensive capital structure to overly penalize ratepayers.

Q Would you accept, subject to check, that there are two Florida electric utilities with equity ratios in excess of 60 percent?

A Two Florida electric utilities now?

Q Yes.

A I haven't looked at the electric utilities. My hesitation with subject to check is there starts to be a lot of computations to check that.

Q Okay. Let me just go ahead and ask, do you know what their return on equity is for regulatory purposes?

A What the cost of equity that is allowed to electric utilities?

Q Yes. Assuming that there are two Florida electric utilities with equity ratios in excess of 60 percent.

A I don't know.

Q Would you agree, subject to check, that these two utilities have an ROE for regulatory purposes of 11.75 percent?

A Well, I'm not sure what I'm going to do with that number. I mean, do you want to tell me when those decisions were, or whether there are any extenuating circumstances, whether the capital structure was computed correctly by using a consolidated capital structure, or using a subsidiary only capital structure, what kind of evidence that the Commission was forced to rely on, et cetera, et cetera. So I don't know what to do with those numbers. I wouldn't do anything with them anyway. This is an independent analysis.

Q I'll move on to the next question.

In your opinion, should the authorized return on equity for Florida water and wastewater utilities under the Commission's jurisdiction systemically be hundreds of basis points less than the authorized return allowed for electric utilities under the Commission's jurisdiction?

A Well, I haven't done the analysis of the specific electric utilities you are discussing, but I think if it's true that there are comparable risks, then the question is whether or not the electric utilities should perhaps be brought in to lower their rates, or whether these were settlement decisions

that might have other implications that sometimes in a settlement people give things up one instead of another, and how do you put that in context, and what was really done. So there are too many things in there I just don't know.

Q Do water and wastewater utilities need to attract capital in order to provide regulated utility service?

A They should be given a reasonable opportunity to attract capital, yes.

Q Are you familiar with the Federal Power Commission versus Hope Natural Gas Company decision of the United States Supreme Court?

A Yes.

Q And are you familiar with the Bluefield Waterworks and Improvement Company versus Public Service Commission of West Virginia decision of the United States Supreme Court?

A Yes.

Q In general terms, would you agree that these two decisions hold that the authorized return for a public utility should be commensurate with returns on investments in other companies of comparable risk sufficient to maintain the financial integrity of the company and sufficient to maintain its ability to attract capital under reasonable terms?

A Yes. And that doesn't mean that they need to be given a return that is the same as some other company was authorized. It means that what they should be given is a

return that is sufficient to attract capital, i.e., it's consistent with what investors -- a return that is sufficient to have investors be willing to put money into the company, and that's the specific numbers that I'm recommending.

Q Is there any exceptions cited in either of these decisions that suggests that returns for water utilities should be significantly less than returns for other regulated companies operating in the same state?

A What you are -- I think you are going way, way, way far afield of my reading of either of these cases, but what you have to do, and I think you should do, I certainly agree with both of those decisions, is that what you need to do is provide a sufficient return to attract capital, not more and not less. And if you should hypothetically find some other company, whether it be in the same state or some other state, where a commission might have made a mistake and arrived at a return that is too high, or too low, or might have arrived at a return that was correct at the time, but it isn't applicable in the current market, it would be inappropriate to match that up. You would need to be able to give a company a reasonable opportunity to earn its cost of capital in the current environment, and that is what I am doing in this recommendation.

Q Going back to my question with regard to the R squared for JAR-5, do you have a number for me?

A Not yet, no.

MS. HARTMAN: Charlie, could we make this a late-filed exhibit?

MR. BECK: We can.

MS. HARTMAN: What would you prefer, this to be Late-filed 3 or 2? We had 2 set up, but then Mr. Rothschild came back with the answers.

MR. BECK: I would say make Number 1 the chapter from Morningstar and make this one Number 2.

MS. HARTMAN: Thank you. That works for everyone.

(Late-filed Exhibit 2 marked for identification.)

MS. HARTMAN: We are done with our questions, and I wanted to thank Mr. Rothschild for his time today. I don't know if Marty has any questions.

MR. FRIEDMAN: No, I don't have any questions for Mr. Rothschild.

Thanks, though.

MR. BECK: Nor do I have any myself.

Jean, we do not waive reading and signing. We would like to do that.

MS. HARTMAN: All right. Well, thanks everyone for their time. This concludes the deposition. Thank you.

(The deposition concluded at 4:38 p.m.)

To: ROBERTS.BRENDA
Subject: Deposition errata sheet

Brenda:

Charlie asked me to read the transcript of my deposition in the leverage formula proceedings and let you know of any changes I may have had. Following is that list:

1. There are numerous references to B times R. The conventional way of writing this is to use a lower case "b" and a lower case "r". Not the most important change in the world, but to get it correct this change should be made.

2. Page 36, line 25 says .08. It should read 0.80. Even though it is a hypothetical example, companies do commonly have betas of 0.80, but essentially never 0.08.

3. Page 42, line 25, "TIP Security" should be "TIPS Security".

3. Page 42, line 13 E times R should be "b" times "r".

Thanks,

Jim

Under penalties of perjury, I declare that I have read my deposition and that it is true and correct subject to any changes in form or substance entered here.

Chapter 9 from the 2008 Ibbotson SBBI Yearbook

Using Historical Data in Forecasting and Optimization

Deposition of James A. Rothschild
October 8, 2008
Docket 080006-WS

Late Filed Deposition Exhibit 2

The R-squared is 0.01.

Chapter 9

Using Historical Data in Forecasting and Optimization

Probabilistic Forecasts

When forecasting the return on an asset or a portfolio, investors are (or should be) interested in the entire probability distribution of future outcomes, not just the mean or "point estimate." An example of a point estimate forecast is that large company stocks will have a return of 13 percent in 2008. It is more helpful to know the uncertainty surrounding this point estimate than to know the point estimate itself. One measure of uncertainty is standard deviation. The large company stock return forecast can be expressed as 13 percent representing the mean with 20 percent representing the standard deviation.

If the returns on large company stocks are normally distributed, the mean (expected return) and the standard deviation provide enough information to forecast the likelihood of any return. Suppose one wants to ascertain the likelihood that large company stocks will have a return of -25 percent or lower in 2008. Given the above example, a return of -25 percent is [13 - (-25)]/20 = 1.9 standard deviations below the mean. The likelihood of an observation 1.9 or more standard deviations below the mean is 2.9 percent. (This can be looked up in any statistics textbook, in the table showing values of the cumulative probability function for a normal distribution.) Thus, the likelihood that the stock market will fall by 25 percent or more in 2008 is 2.9 percent. This is valuable information, both to the investor who believes that stocks are a sure thing and to the investor who is certain that they will crash tomorrow.

In fact, the historical returns of large company stocks are not exactly normally distributed, and a slightly different method needs to be used to make probabilistic forecasts. The actual model used to forecast the distribution of stock returns is described later in this chapter.

Some people are wary of probabilistic forecasts because they seem too wide to be useful, or because they lack punch. (The most widely quoted forecasters, after all, make very specific predictions.) However, the forecast of a probability distribution actually reveals much more than the point estimate. The point estimate reflects what statisticians call an "expected value"-but one does not actually expect this particular outcome to happen. The actual return will likely be higher or lower than the point estimate. By knowing the extent to which actual returns are likely to deviate from the point estimate, the investor can assess the risk of every asset, and thus compare investment opportunities in terms of their risks as well as their expected returns. As Harry Markowitz showed nearly a half-century ago in his Nobel Prize-winning work on portfolio theory, investors care about avoiding risk as well as seeking return. Probabilistic forecasts enable investors to quantify these concepts.

The lognormal Distribution

In the lognormal model, the natural logarithms of asset return relatives are assumed to be normally distributed. (A return relative is one plus the return. That is, if an asset has a return of 15 percent in a given period, its return relative is 1.15.)

The lognormal distribution is skewed to the right. That is, the expected value, or mean, is greater than the median. Furthermore, if return relatives are lognormally distributed, returns cannot fall below negative 100 percent. These properties of the lognormal distribution make it a more accurate characterization of the behavior of market returns than does the normal distribution.

In all normal distributions, moreover, the probability of an observation falling below the mean by as much as one standard deviation equals the probability of falling above the mean by as much as one

standard deviation; both probabilities are about 34 percent. In a lognormal distribution, these probabilities differ and depend on the parameters of the distribution.

Forecasting Wealth Values and Rates of Return

Using the lognormal model, it is fairly simple to form probabilistic forecasts of both compound rates of return and ending period wealth values. Wealth at time o (assuming reinvestment of all income and no taxes) is:

$$W_n = W_0(1 + r_1)(1 + r_2)\ldots(1 + r_n) \qquad (30)$$

where,

Wn	the wealth value at time 0;
W0	the initial investment at time 0; and,
r" rz' etc.	the total returns on the portfolio for the rebalancing period ending at times 1,2, and so forth.

The compound rate of return or geometric mean return over the same period, rG, is:

$$r_G = \left(\frac{W_n}{W_0}\right)^{\frac{1}{n}} - 1 \qquad (31)$$

where,

rG = the geometric mean return;
Wn = the ending period wealth value at time 0;
W0 = the initial wealth value at time 0; and,
n = the inclusive number of periods.

By assuming that all of the (l+rnls are lognormally distributed with the same expected value and standard deviation and are all statistically independent of each other, it follows that Wn and (l+rGl are lognormally distributed. In fact, even if the (1+rn]s are not themselves lognormally distributed but are independent and identically distributed, Wn and (l+rd are approximately lognormal for large enough values of o. This "central-limit theorem" means that the lognormal model can be useful in long-term forecasting even if short-term returns are not welJ described by a lognormal distribution.

Calculating Parameters of the lognormal Model

To use the lognormal model, we must first calculate the expected value and standard deviation of the natural logarithm of the return relative of the portfolio. These parameters, denoted m and s respectively, can be calculated from the expected return (μ) and standard deviation (0") of the portfolio as follows:

$$m = \ln(1 + \mu 0) - \left(\frac{\quad}{2}\right)$$

(32)

$$s = \sqrt{\ln\left[1 + \left(\frac{\sigma}{1+\mu}\right)^2\right]} \qquad (33)$$

where,

ln = the natural logarithm function.

To calculate a particular percentile of wealth or return for a given time horizon, the only remaining parameter needed is the z-score of the percentile. The z-score of a percentile ranking is that percentile ranking expressed as the number of standard deviations that it is above or below the mean of a normal distribution. For example, the z-score of the 95th percentile is 1.645 because in a normal distribution, the 95th percentile is 1.645 standard deviations above the 50th percentile or median, which is also the mean. Z-scores can be obtained from a table of cumulative values of the standard normal distribution or from software that produces such values.

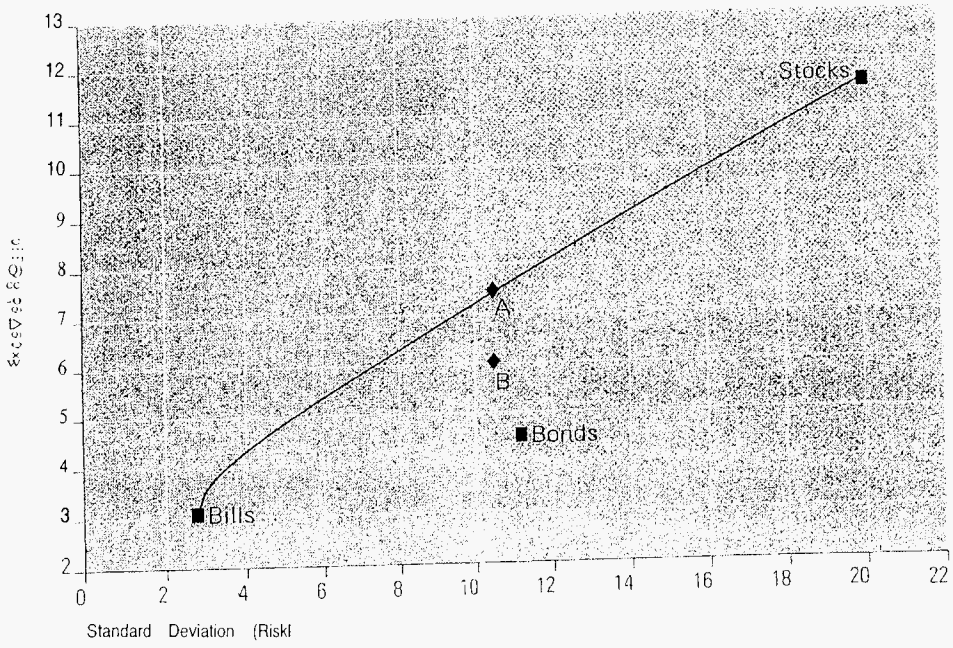
Given the logarithmic parameters of a portfolio (m and s), a time horizon (0), and the z-score of a percentile (z), the percentile in question in terms of cumulative wealth at the end of the time horizon (W_n) is:

$$e^{(mn+zs\sqrt{n})} \qquad (34)$$

Similarly, the percentile in question in terms of the compound rate of return for the period (rG) is:

$$e^{\left(m+z\frac{s}{\sqrt{n}}\right)} - 1 \qquad (35)$$

Mean-Variance Optimization



One important application of the probability forecasts of asset returns is mean-variance optimization. Optimization is the process of identifying portfolios that have the highest possible expected return for a given level of risk, or the lowest possible risk for a given expected return. Such a portfolio is considered "efficient," and the locus of all efficient portfolios is called the efficient frontier. An efficient frontier constructed from large company stocks, long-term government bonds, and Treasury bills is shown in Graph 9-1. All investors should hold portfolios that are efficient with respect to the assets in their opportunity set.

The most widely accepted framework for optimization is Markowitz or mean-variance optimization (MVO), which makes the following assumptions: 1) the forecast mean, or expected return, describes the attribute that investors consider to be desirable about an asset; 2) the risk of the asset is measured by its expected standard deviation of returns; and 3) the interaction between one asset and another is captured by the expected correlation coefficient of the two assets' returns. MVO thus requires forecasts of the return and standard deviation of each asset, and the correlation of each asset with every other asset.}

The standard deviation is the square root of the variance; hence the term "mean-variance" in describing this form of the optimization problem.

In the 1950s, Harry Markowitz developed both the concept of the efficient frontier and the mathematical means of constructing it (mean-variance optimization)2. Currently, there are a number of commercially available mean-variance optimization software tools available, including Morningstar *EnCorr®3*. This advanced analytical software unites proven financial models, sophisticated Ibbotson methodologies, and comprehensive Morningstar investment data.

Efficient Frontier
Large Company Stocks, Long-Term Government Bonds, and U.S. Treasury Bills

Estimating the Means, Standard Deviations, and Correlations of Asset Returns

To simulate future probability distributions of asset and portfolio returns, one typically estimates parameters of the historical return data. The parameters that are required to simulate returns on an asset are its mean and standard deviation. To simulate returns on portfolios of assets, one must also estimate the correlation of each asset in the portfolio with every other asset. Thus, the parameters required to conduct a simulation are the same as those required as inputs into a mean-variance optimization.[4]

To illustrate how to estimate the parameters of asset class returns relevant to optimization and forecasting, we construct an example using large company stocks, long-term government bonds, and

2 Markowitz, Harry M., Portfolio Selection: Efficient Diversification of Investments. New York: John Wiley & Sons, 1959.

3 For more information about Morningstar *EnCorr®* software refer to the Investment Tools and Resources page at the back of this book, or within the United States, call +1 866910-0840. Outside the United States, call +44 02.0 31 7- 00 2.0.

4 It is also possible to conduct a simulation using entire data sets, that is, without estimating the statistical parameters of the data sets. Typically, in such a non parametric simulation, the frequency of an event occurring in the simulated history is equal to the frequency of the event occurring in the actual history used to construct the data set.

Treasury bills. The techniques used to estimate these parameters are described below. These are similar techniques as those used in Morningstar *EnCorr®* software.

Means, or Expected Returns

The mean return (forecast mean, or expected return) on an asset is the probability-weighted average of all possible returns on the asset over a future period. Estimates of expected returns are based on models of asset returns. While many models of asset returns incorporate estimates of GNP, the money supply, and other macroeconomic variables, the model employed in this chapter does not. This is because we assume (for the present purpose) that asset markets are informationally efficient, with all relevant and available information fully incorporated in asset prices. If this assumption holds, investor expectations (forecasts) can be discerned from market-observable data. Such forecasts are not attempts to outguess, or beat, the market. They are attempts to discern the market's expectations, i.e., to read what the market itself is forecasting.

For some assets, expected returns can be estimated using current market data alone. For example, the yield on a riskless bond is an estimate of its expected return. For other assets, current data are not sufficient. Stocks, for example, have no exact analogue to the yield on a bond. In such cases, we use the statistical time series properties of historical data in forming the estimates.

To know which data to use in estimating expected returns, we need to know the rebalancing frequency of the portfolios and the planning horizon. In our example, we will assume an annual rebalancing frequency and a twenty-year planning horizon. The rebalancing frequency gives the time units in which returns are measured.

With a twenty-year planning horizon, the relevant riskless rate is the yield on a twenty-year coupon bond. At the end of 2007, the yield on a twenty-year coupon bond was 4.5 percent. This riskless rate is the baseline, from which the expected return on every other asset class is derived by adding or subtracting risk premia.

large Company Stocks

The expected return on large company stocks is the riskless rate, plus the expected risk premium of large company stocks over bonds that are riskless over the planning horizon. With a twenty-year planning horizon, this risk premium is 7.1 percent, shown as the long-horizon expected equity risk premium in Table 9-1. Hence, the expected return on large company stocks is 4.5 (the riskless rate) plus 7.1 (the risk premium) for a total of 11.6 percent.

Bonds and Bills

For default-free bonds with a maturity equal to the planning horizon, the expected return is the yield on the bond; that is, the expected return is the riskless rate of 4.5 percent. For bonds with other maturities, the expected bond horizon premium should be added to the riskless rate (for longer maturities) or subtracted from the riskless rate (for shorter maturities). Since expected capital gains on a bond are zero, the expected horizon premium is estimated by the historical average difference of the income returns on the bonds.[5]

5 The expected capital gain on a par bond is self-evidently zero. For a zero-coupon (or other discount) bond, investors expect the price to rise as the bond ages, but the expected portion of this price increase should not be considered a capital gain. It is a form of income return.

For Treasury bills, the expected return over a given time horizon is equal to the expected return on a Treasury bond of a similar horizon, less the expected horizon premium of bonds over bills. This premium is estimated by the historical average of the difference of the income return on bonds and the return on bills. From Table 9-1, this is 1.5 percent. Subtracting this from the riskless rate gives us an expected return on bills of 3.0 percent. Of course, this forecast typically differs from the current yield on a Treasury bill, since a portfolio of Treasury bills is rolled over (the proceeds of maturing bills are invested in new bills, at yields not yet known) during the time horizon described.

Standard Deviations

Standard deviations are estimated from historical data as described in Chapter 6. Since there is no evidence of a major change in the variability of returns on large company stocks, we use the entire period 1926-2007 to estimate the standard deviation of these asset classes. For bonds and bills, we use the period 1970-2007. The use of this more recent period reflects the fact that the volatility of bonds has increased over time.

Table 9-1

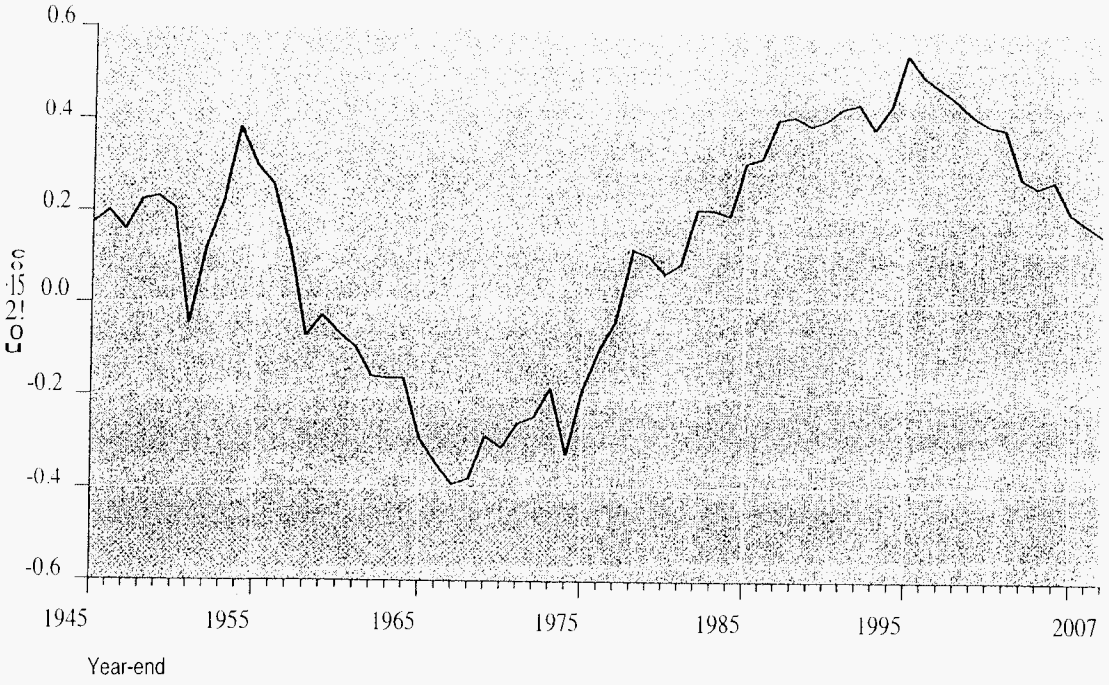
Building Blocks for Expected Return Construction

	Value (in percent)
Yields (Riskless Rates)[1]	
Long-Term (20-year) U.S. Treasury Coupon Bond Yield	4.5
Intermediate-Term (5-year) U.S. Treasury Coupon Note Yield	3.3
Short-Term (30-day) U.S. Treasury Bill Yield	2.8
Fixed Income Risk Premia[2]	
Expected default premium *long-term corporate bond total returns minus long-term government bond total returns*	*0.0*
Expected long-term horizon premium: *long-term government bond income returns minus US. Treasury bill total returns*[4]	1.5
Expected intermediate-term horizon premium: *intermediate-term government bond income returns minus US. Treasury bill total returns*[4]	*1.0*
Equity Risk Premia[3]	
Long-horizon expected equity risk premium: *large company stock total returns minus long-term government bond income returns*	*7.1*
Intermediate-horizon expected equity risk premium: *large company stock total returns minus intermediate-term government bond income returns*	*7.5*
Short-horizon expected equity risk premium: *large company stock total returns minus US Treasury bill total returns*[4]	*8.5*
Small Stock Premium: *small company stock total return minus large company stock total return*	*4.8*

1 As of December 31,2007. Maturities are approximate

2 Expected risk premia for fixed income are based on the differences of historical arithmetic mean returns from 1970-2007.

3 Expected risk premia for equities are based on the differences of historical arithmetic mean returns from 1926-2007.



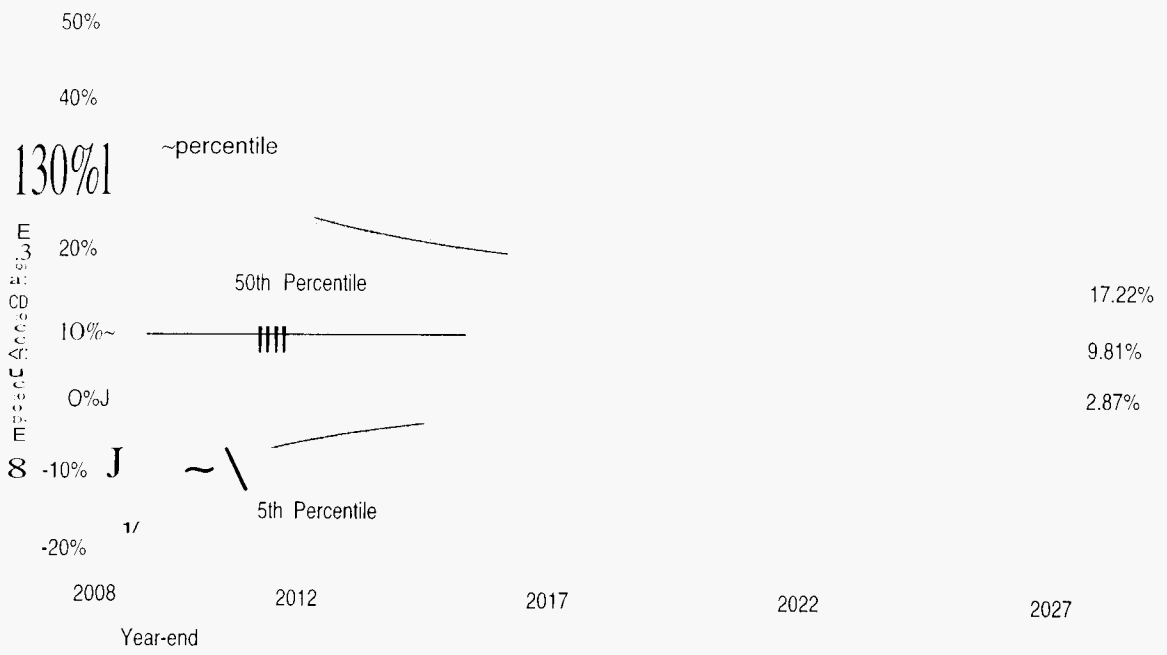
[4]For US. Treasury bills, the income return and total return are the same.

Correlations

Correlations between the asset classes are estimated from historical data as described in Chapter 6. Correlation coefficients for stocks, bonds, and bills are derived from 1970-2007. Correlations between major asset classes change over time. Graph 9-2 shows the historical correlation of annual returns on large company stocks and long-term bonds over 20 year rolling periods from 19_{26}-1945 through 1988-2007.

Graph 9-2

Twenty Year Rolling Period Correlations of Annual Returns
Large Company Stocks and Long-Term Government Bonds
from 1926-1945 through 1988-2007



Generating Probabilistic Forecasts

For large company stocks in Table 9-2, the logarithmic parameters are calculated to be m = 0.093_6 and s = 0.1776 based on equations (32) and (33). The z-scores of the 95th, 50th, and 5th percentile are $1.645_{,0}$, and -1.645, respectively. Using these parameters, we can calculate the 95th, 50th, and 5th percentiles of cumulative wealth and compound returns over various time horizons using equations (34) and (35). Graph 9-3 shows percentiles of compound returns over the entire range of one to twenty year horizons in graphical form. This type of graph is sometimes called a "trumpet" graph because the high and low percentile curves taken together make the shape of a trumpet. The "mouthpiece" of the trumpet is on the right side of the graph because for long time horizons, all percentiles converge to the median (50th percentile).

Graph 9-3

Forecast Total Return Distribution

100 Percent Large Stocks from 2008 to 2027

Graph 9-4

Forecast Distribution of Wealth Index Value

100 Percent Large Stocks from 2008 to 2027

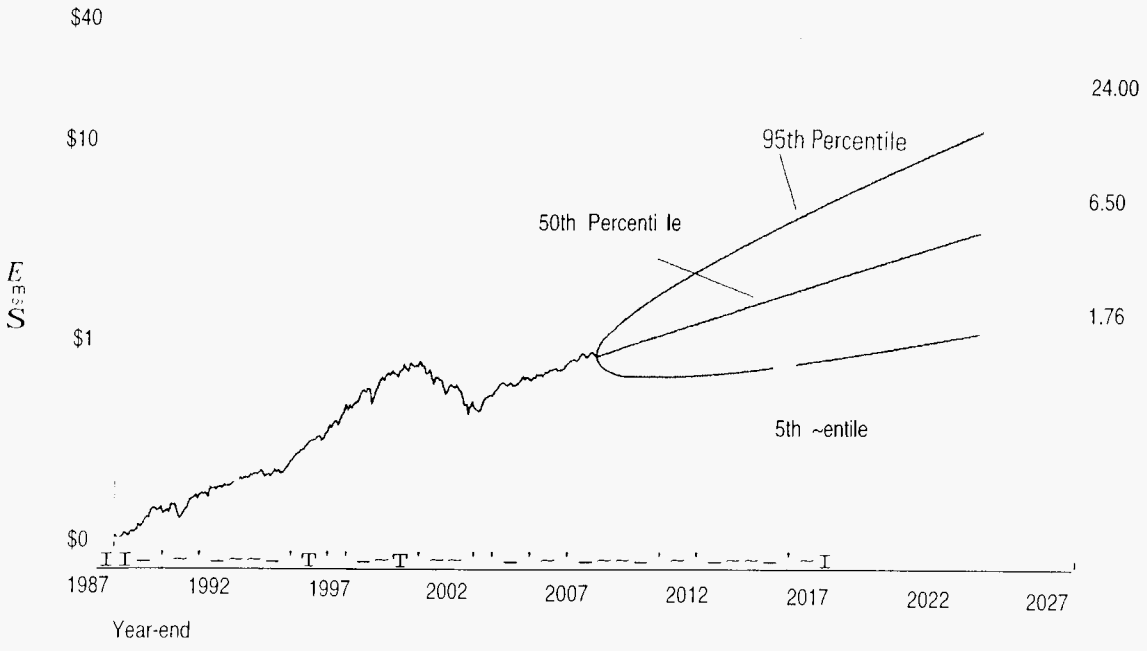


Table 9-2

Optimization Inputs: Year-End 2007 large Company Stocks, Long-Term Government Bonds, and U.S. Treasury Bills (In percent)

	Expected Return	Standard Deviation	Correlation with Stocks	Bonds	Bills
Stocks	11.6	20.0	100		
Bonds	4.5	11.2	0.27	100	
Bills	3.0	2.9	0.05	0.04	1.00

Graph 9-4 is a graph showing percentiles of cumulative wealth over the entire range of zero to twenty year time horizons, along with the back history of the portfolio's performance. The past and forecasted (future) values on the graph are connected by setting the wealth index to $1.00 at the end of 2007. The past index values show how much wealth one would have had to hold in large company stocks to have $1.00 at the end of 2007; the percentiles of future value show the probability distribution of future growth of $1.00 invested in large company stocks. This type of graph is sometimes called a "tulip" graph because of its overall shape.

Table 9-3 shows (in the top panel) the probability distribution of compound annual returns on large company stocks over the next 20 years. The top line shows the 95th percentile or optimistic case, the middle line the 50th percentile or median case, and the bottom line the 5th percentile or pessimistic case. The bottom panel shows the same projections, redrawn as cumulative values of $1.00 invested at the beginning of the period simulated. Simulations such as these are used for asset allocation, funding of liabilities, and other portfolio management-related applications; Morningstar *EnCorr®* mean-variance optimization software can produce these forecasts.

Table 9-3

Forecast Distributions of Compound Annual Returns and End of Period Wealth

Large Company Stocks Year-End 2007

	Compound Annual Return (In percent)				
Percentile	2008	2012	2017	2022	2027
95th	4706	25.13	20.44	18.41	17.22
90th	37.87	21.58	18.00	16.46	15.54
75th	23.78	15.85	1405	13.26	12.79

10th	0.87	0.96	1.24	1.69	2.35
5th	0.82	0.83	1.01	1.31	176

Constructing Efficient Portfolios

A mean-variance optimizer uses the complete set of optimizer inputs (the expected return and standard deviation of each asset class and the correlation of returns for each pair of asset classes) to generate an efficient frontier. The efficient frontier shown in Graph 9-1 was generated from the inputs described above and summarized in Table 9-2. Each point on the frontier represents a portfolio mix that is mean-variance efficient. The point labeled A represents a portfolio that contains 50 percent in large company stocks,9 percent in long-term bonds, and 41 percent in Treasury bills. (Recall that other asset classes were not considered in this example.) From the location of point A on the grid, we can find its expected return (7·44 percent) and standard deviation (ro. 52 percent).

Using Inputs to Form Other Portfolios

Given a complete set of inputs, the expected return and standard deviation of any portfolio (efficient or other) of the asset classes can be calculated. The expected return of a portfolio is the weighted average of the expected returns of the asset classes:

$$r_p = \sum_{i=1}^{n} X_i r_i \qquad (36)$$

where,

r_p = the expected return of the portfolio p;

n - the number of asset classes;

X_i = the portfolio weight of asset class i, scaled such that:

$\sum_{i=1}^{n} X_I = 1$; and,

r_i - the expected return of asset class i.

The point labeled B in Graph 9-1 represents a portfolio that contains 22 percent in large company stocks (asset class 1),76 percent in long-term bonds (asset class 2), and 2 percent in Treasury bills (asset class 3)· Applying the above formula to this portfolio using the inputs in Table 9-_2, we calculate the expected return to be 6.0 percent as follows:

$$(022 \times 0.116) + (0.76 \times 0045) + (0.02 \times 0.03) = 0.060$$

The standard deviation of the portfolio depends not only on the standard deviations of the asset classes, but on all of the correlations as well. It is given by:

$$\sigma_p = \sum_{i=1}^{n} \sum_{j=1}^{n} X_i X_j \sigma_i \sigma_j \rho_{ij} \qquad (37)$$

where,

σ_p	the standard deviation of the portfolio;
X_i and X_j	the portfolio weights of asset classes i and j;
σ_i and σ_j	the standard deviations of returns on asset classes i and j; and,
ρ_{ij}	the correlation between returns on asset classes i and j. (Note that ρ_{ii} equals one and that ρ_{ij} is equal to ρ_{ji})

The standard deviation for point B in Graph 9-1 (containing three asset classes) would be calculated as follows:

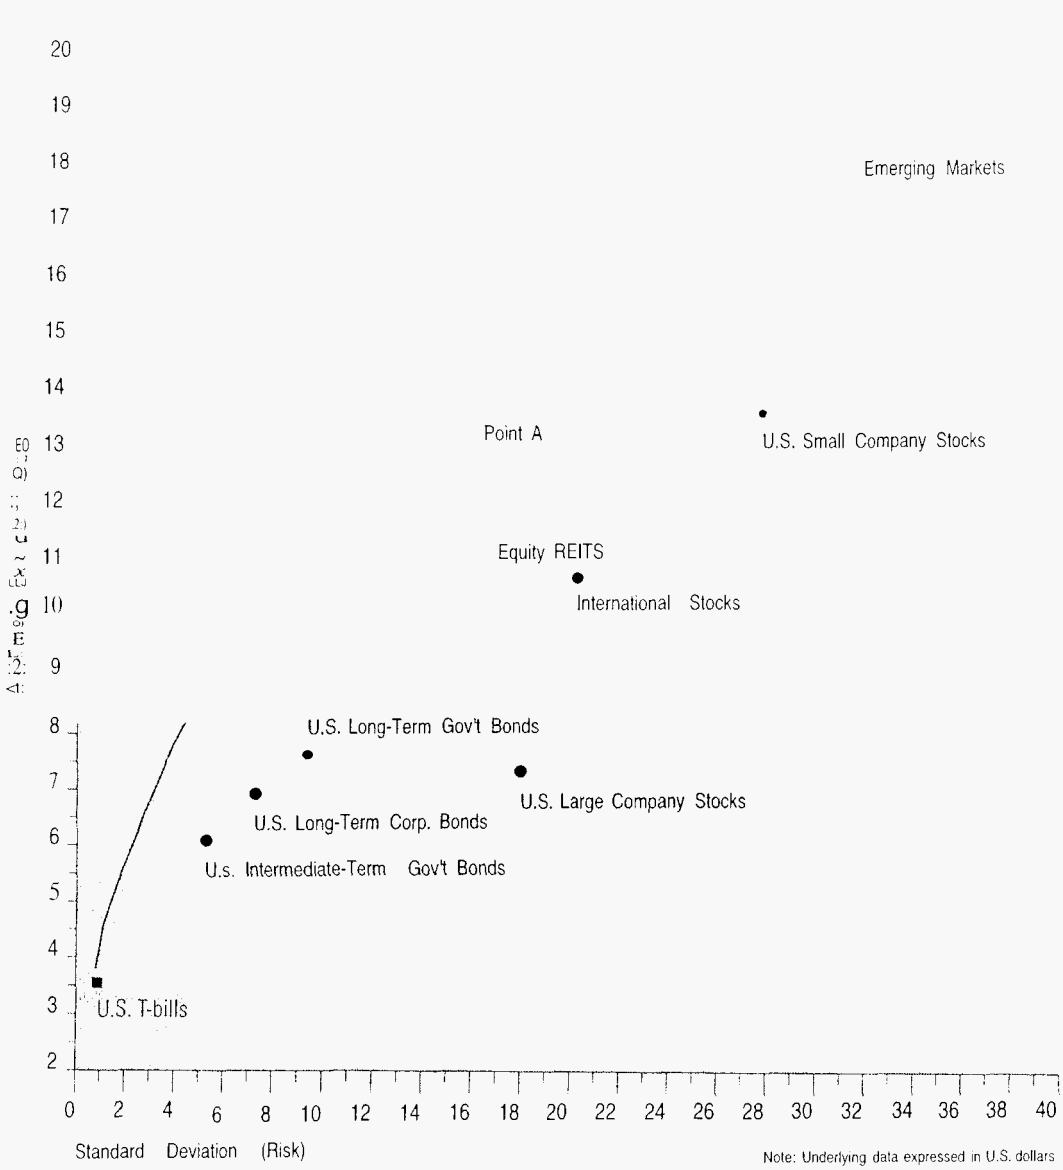
	Stocks (asset class 1)	Bonds (asset class 2)	Bills (asset class 3)
Stocks	$X_1 X_1 \sigma_1 \sigma_1 \rho_{11}$ ~ (0.22)Z(0200)2(1) ~ 0001930	$X_1 X_2 \sigma_1 \sigma_2 \rho_{12}$ ~ (022) (Ol6) (0200) (0112)(027)~ 0.000995	$X_1 X_3 \sigma_1 \sigma_3 \rho_{13}$ ~ (0.22)(0.02)(0.200)(0029)(005) ~ 0.000001
Bonds	$X_1 X_2 \sigma_1 \sigma_2 \rho_{12}$ ~ (0.22)(Ol6)(0200)(0112)(027) ~ 0000995	$X_2 X_2 \sigma_2 \sigma_2 \rho_{22}$ ~ (076)2(0112)Z(1)~ 0007241	$X_2 X_3 \sigma_2 \sigma_3 \rho_{23}$ ~ (076)(0.02)(0.112)(0029)(004) ~ 0.000002
Bills	$X_1 X_3 \sigma_1 \sigma_3 \rho_{13}$ ~ (0.22)(0.02)(0.200)(0029)(005) ~ 0.000001	$X_2 X_3 \sigma_2 \sigma_3 \rho_{23}$ ~ (Ol6)(0.02)(0.112)(0029)(004) ~ 0.000002	$X_3 X_3 \sigma_3 \sigma_3 \rho_{33}$ ~ (O.02)Z(0029)2(1) ~ 0000000

By summing these terms and taking the square root of the total, the result is a standard deviation of IO.57 percent.

All of the previous tables and graphs presented in this chapter were prepared using Morningstar *EnCorr®* asset allocation software. Using these tools, similar analyses can be performed for a wide variety of asset classes, historical time periods, percentiles, and planning horizons. Additionally, Morningstar, Inc. offers a returns-based style analysis product to aid in the evaluation of mutual funds for use in implementing an optimal asset mix.6

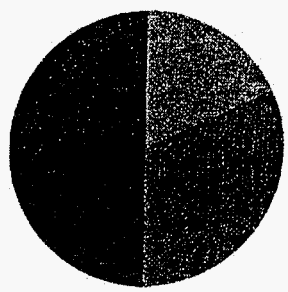
6 For more information about Morningstar *EnCorr®* software and other Morningstar products, refer to the Investment Tools and Resources page at the back of this book, or within the United States, call +1 866 9IO-0840. Outside the United States, call +44 020 3107-0020.

Enhancements to Mean-Variance Optimization



Ibbotson Associates creates asset class model guidelines on the basis of mean-variance optimization, a Nobel Prize-winning economic theory. Optimization has three inputs: the expected risk and return of each asset class and the correlation among the asset classes. Using these three inputs, optimization models then determine which combination of asset classes will provide either the highest return for a given risk level or the lowest risk for a given return level. Over the last-half century, the Markowitz mean-variance optimization (MVO) framework has become the textbook approach for creating these optimal asset allocations, but the approach has several shortcomings.

Shortcomings of Traditional Optimization Techniques



One notable shortcoming is that the output (optimal asset allocation weights) is very sensitive to the inputs (expected returns, standard deviations, and correlations). Input sensitivity oftentimes can lead to highly concentrated allocations in only a small number of the available asset classes. For example, if a typical optimization starts with around 10 asset classes to choose from, it wouldn't be uncommon to see just a few of these asset choices ending up in the resulting optimal allocation, with the remaining asset choices not even getting a mention. An example of this is shown in Graph 9-5, where only three of the nine asset classes originally considered made it into the final optimized mix (Point A).

Graph 9-5 highlights the potential pitfalls of blindly following mean-variance optimization results. Mean-variance optimization is a powerful tool, but it needs to be used with caution. For instance, basing mean-variance optimization inputs on shorter time periods, as was done in Graph 9-5, can contribute to the extreme results. Basing the mean-variance optimization inputs on longer time periods, such as those presented elsewhere in this book, can help mitigate the extreme asset allocations mixes. The reason that longer time periods are preferred is that with longer time periods there is usually a more consistent ratio of return to risk amongst the different asset classes.

In addition to basing inputs on longer term histories, the most common solution to the problem of the highly concentrated asset allocations is to place maximum and minimum allocation constraints on each asset. For instance, in the example shown in Graph 9-5, we could specify a minimum allocation of 5 percent and a maximum allocation of 15 percent for each of the nine asset choices. This would ensure that each asset gets represented in the final allocation and also that no single asset completely dominates in the final allocation mix. Unfortunately, these artificial minimums and maximums are arbitrary, and usually end up limiting the ability of the optimizer to properly act on the information contained in the inputs.

Point A.

- Emerging Markets 50%
- Equity REITs 18%
- U.S. Long-Term Gov't Bonds 32%

'The inputs for Graph 9-5 were estimated using 10 years of quarterly data.

"International stocks are represented by the Morgan Stanley Capital International Europe, Australasia, and Far East (EAFE®) Index, REITsare represented by the FTSE NAREIT Equity REIT Index®; emerging markets are represented by the Morgan Stanley Capital International Emerging Markets Index.

Two Popular Enhancements to Traditional Optimization Techniques

Two popular enhancements to traditional optimization techniques have emerged in recent years that can help overcome these difficulties. While both of these methods can help develop well-diversified asset allocations, they approach the problem in very different ways. The first of these, the Black-Litterman model, attempts to create better inputs. The second, resampled mean-variance optimization, attempts to build a better optimizer.

The Black-Litterman model was created by Fischer Black and Robert Litterman in the late 1980s. The Black-Litterman model combines investors' views regarding expected returns and the expected returns predicted by the capital asset pricing model CAPM to form a single blended estimate of expected returns. When this new combined estimate is used as an input within a traditional mean-variance optimization framework, it produces well-diversified portfolios that include not only market-based asset allocations but also allocations in assets that received favorable views.

The second approach, resampled mean-variance optimization, is an attempt to build a better optimizer. Resampling grew out of the work of a number of authors, but is most closely associated with the work of Richard Michaud. While traditional mean-variance optimization treats the capital market assumptions as if they were known with 100 percent certainty, resampled mean-variance optimization recognizes that the capital market assumptions are forecasts, and are therefore not known with 100 percent certainty. Conceptually, resampled mean-variance optimization is a combination of Monte Carlo simulation[7] and the more traditional Markowitz mean-variance optimization approach. The simulation randomly resamples possible returns from a forecasted return distribution or randomly resamples possible returns from a historical distribution. The simulated returns lead to a simulated set of capital market assumptions that are used in a traditional mean-variance optimizer, and the asset allocations are recorded. After combining the asset allocations from the numerous intermediate optimizations, the resulting asset allocations are those that, on average, are predicted to perform best over the range of potential outcomes implied by the capital market assumptions. Research has shown that asset allocations selected from a resampled efficient frontier may outperform those from a traditional efficient frontier.[8]

In addition to the problem of getting results that are highly concentrated in just a few of the assets available, there are two more criticisms of the traditional mean-variance optimization framework.

First, the traditional approach focuses on a subset of the total portfolio. Traditionally, the focus is on finding a mix of asset classes that maximizes the expected return, subject to a risk constraint. However, because the purpose of most asset portfolios is to fund a specified future cash-flow stream-a liability-the true risk for the portfolio is not the standard deviation of the assets or the performance of the assets relative to that of peers-the true risk is not being able to fund the future liability.

An asset allocation approach that takes the future liability into account is called liability-relative optimization (or surplus optimization). The usual method employed to accomplish this is to constrain the optimizer to hold an asset class representing the liability short.

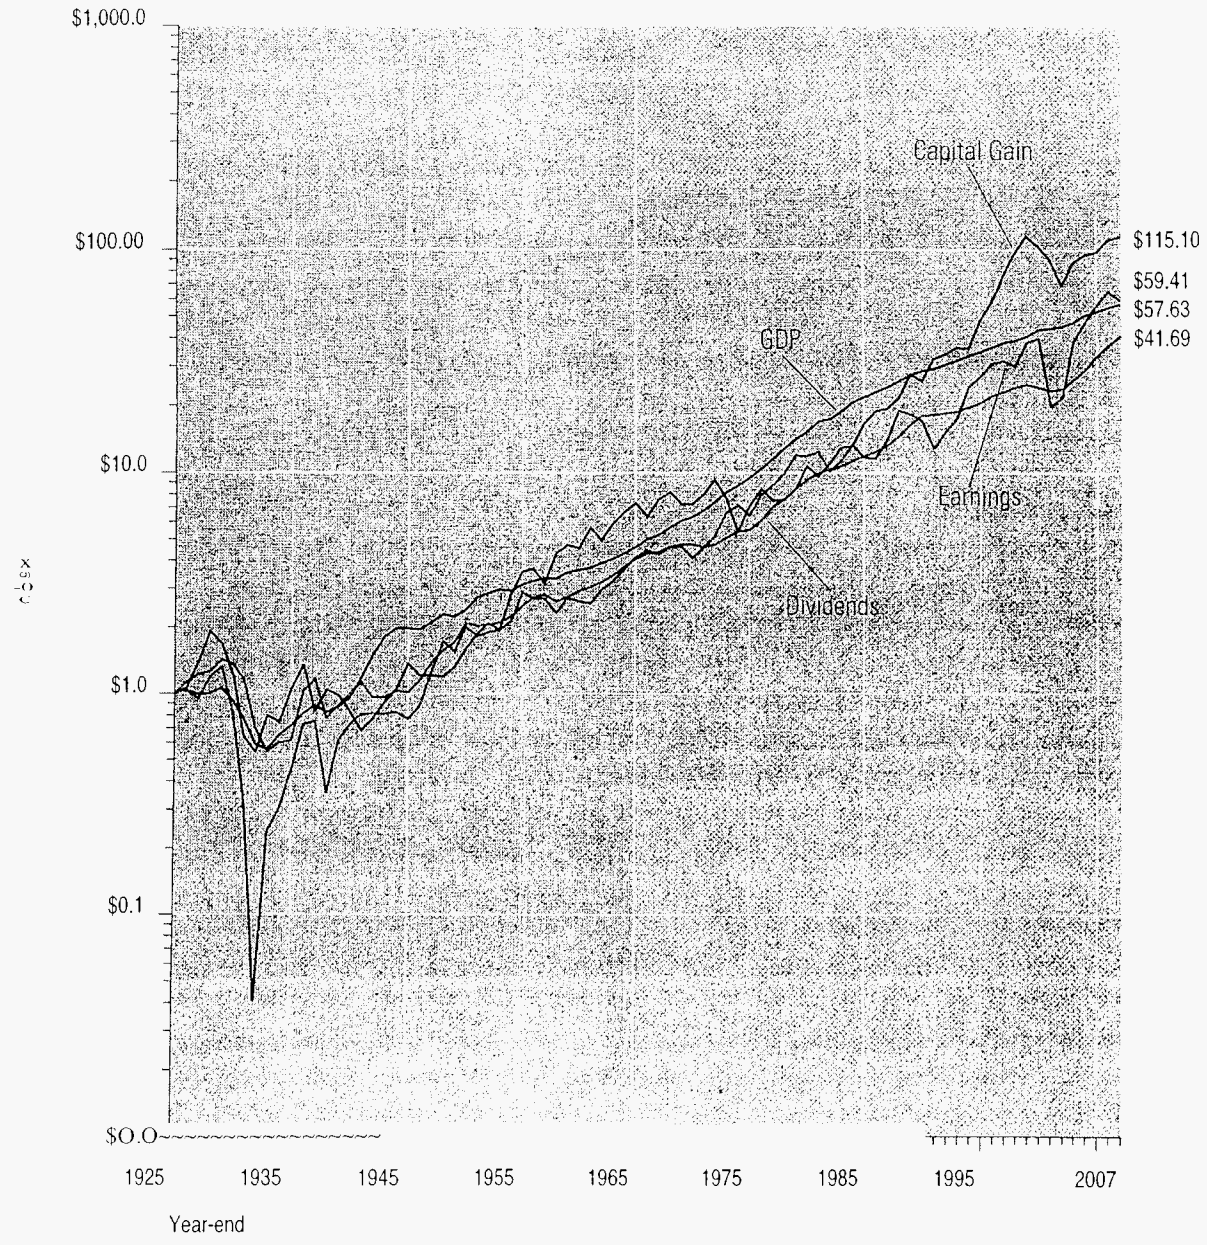
7 See Chapter 10, "Wealth Forecasting with Monte Carlo Simulation" for more information.

8 See Markowitz and Usmen (2003).

Second, the traditional mean-variance optimization framework assumes that the returns of the assets in the optimization are normally distributed. As illustrated in Table 2-1, the return distributions of different asset classes don't always follow a standard, symmetrical bell-shaped curve. Some assets have distributions that are skewed to the left or right, while others have distributions that are skinnier or fatter than others. These more complicated characteristics are called skewness and kurtosis, respectively. The next wave of enhancements to the traditional mean-variance optimization are frameworks that incorporate these additional types of non-normalities into the optimization.

The Debate over Future Stock Market Returns

The impressive performance of the stock market over the last two decades and the resultant increase in investor expectations have spurred numerous articles that call attention to the historical market return and caution investors about their overly optimistic expectations. The articles point to the recent stock market performance which was well below its historical average, while the bond market, on the contrary, has performed quite well. In fact, many studies are predicting stock returns that are much lower when compared to the historical average. A few even predict that stocks won't outperform bonds in the future.



Approaches to Calculating the Equity Risk Premium

The expected return on stocks over bonds, the equity risk premium, has been estimated by a number of authors who have utilized a variety of different approaches. Such studies can be categorized into four groups based on the approaches they have taken. The first group of studies derive the equity risk premium from historical returns between stocks and bonds. Supply side models, using fundamental information such as earnings, dividends, or overall productivity, are used by the second group to measure the expected equity risk premium. A third group adopts demand side models that derive the expected returns of equities through the payoff demanded by equity investors for bearing the additional risk. The opinions of financial professionals through broad surveys are relied upon by the fourth and final group.

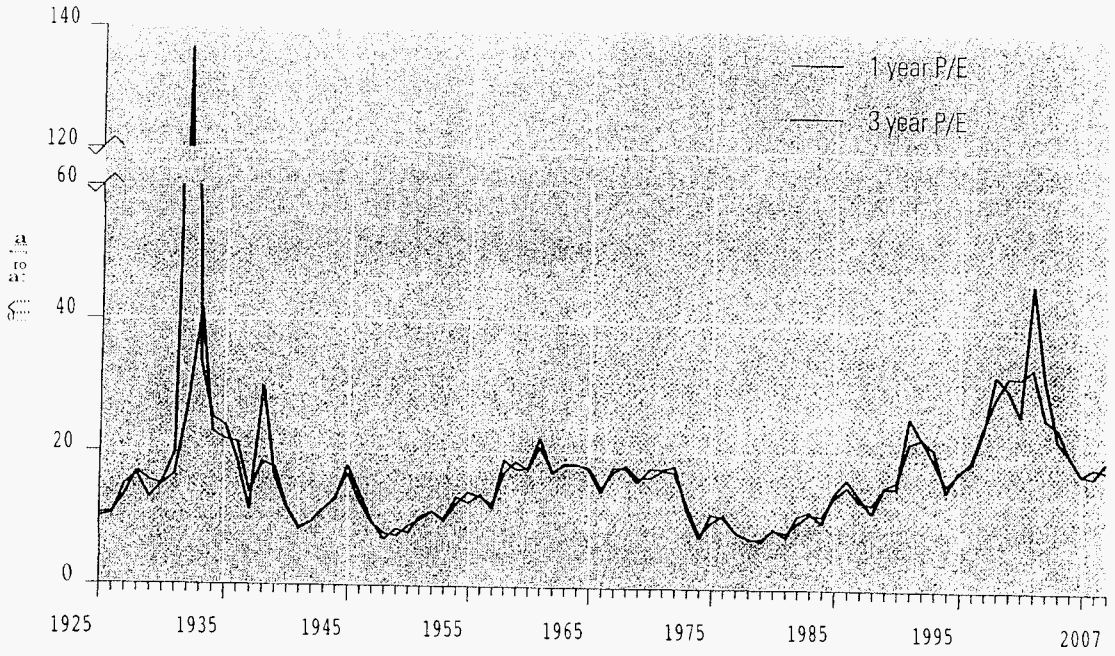
This section is based upon the work by Roger G. Ibbotson and Peng Chen, who combined the first and second approaches to arrive at their forecast of the equity risk premium.[9] By proposing a new supply side methodology, the Ibbotson-Chen study challenges current arguments that future returns on stocks over bonds will be negative or close to zero. The results affirm the relationship between the stock market and the overall economy.

9 "Long-Run Stock Returns: Participating in the Real Economy," Roger G. Ibbotson and Peng Chen, *Financial Analysts Journal*, January/February 2003.

from 1925 to 2007

Supply Model

Long-term expected equity returns can be forecasted by the use of supply side models. The supply of stock market returns is generated by the productivity of the corporations in the real economy. Investors should not expect a much higher or lower return than that produced by the companies in the real economy. Thus, over the long run, equity return should be close to the long-run supply estimate.



Earnings, dividends, and capital gains are supplied by corporate productivity. Graph 9-6 illustrates that earnings and dividends have historically grown in tandem with the overall economy (GDP per capita). However, GDP per capita did not outpace the stock market. This is primarily because the *PIE* ratio increased 1.94 times during the same period. So, assuming that the economy will continue to grow, all three should continue to grow as well.

Forward-Looking Earnings Model

Roger G. Ibbotson and Peng Chen forecast the equity risk premium through a supply side model using historical data. They utilized an earnings model as the basis for their suppy side estimate. The earnings model breaks the historical equity return into four pieces, with only three historically being supplied by companies: inflation, income return, and growth in real earnings per share. The growth in the *PIE* ratio, the fourth piece, is a reflection of investors' changing prediction of future earnings growth. The past supply of corporate growth is forecasted to continue; however, a change in investors' predictions is not. *PIE* rose dramatically from 1980 through 2001 because people believed that corporate earnings were going to grow faster in the future. This growth in *PIE* drove a small portion of the rise in equity returns over the same period.

Graph 9-7 illustrates the price to earnings ratio from 1926 to 2007. The *PIE* ratio, using one-year average earnings, was 10.22 at the beginning of 1926 and ended the year 2007 at 19.80, an average increase of 0.81 percent per year. The highest *PIE* was 136.52 recorded in 1932, while the lowest was 7.07 recorded in 1948. Ibbotson Associates revised the calculation of the *PIE* ratio from a one-year to a three-year average earnings for use in equity forecasting. This is because reported earnings are affected not only by the long-term productivity, but also by "one-time" items that do not necessarily have the same consistent impact year after year. The three-year average is more reflective of the long-term trend than the year-by-year numbers. The *PIE* ratio calculated using the three-year average of earnings had an increase of 0.67 percent per year.

Graph 9-7
large Company Stocks
PIE Ratio

The historical *PIE* growth factor, using three-year earnings, of 0.67 percent per year is subtracted from the equity forecast, because it is not believed that *PIE* will continue to increase in the future. The market serves as the cue. The current *PIE* ratio is the market's best guess for the future of corporate earnings and there is no reason to believe, at this time, that the market will change its mind.

Thus, the supply of equity return only includes inflation, the growth in real earnings per share, and income return. The forward-looking earnings model calculates the long-term supply of U.S. equity returns to be 9.66 percent:

$$SR = [(1 + CPI) \times (1 + {}_{gREPS}) - 1] + Inc + Rinv$$

$$9.66\% = [(1 + 3.05\%) \times (1 + 2.14\%) - 1] + 4.18\% + 0.23\%$$ 'Difference due to rounding

where:

SR = the supply of the equity return;
CPI = Consumer Price Index (inflation);
$_{gREPS}$ = the growth in real earning per share;
Inc = the income return;
Rinv = the reinvestment return.

The equity risk premium, based on the supply side earnings model, is calculated to be 4.24 percent on a geometric basis:

$$SERP = \frac{1+SR}{} - 1$$

$$4.24\%^{*} = \frac{1 + 9.66\%}{(1 + 3.05\%) \times (1 + 2.06\%)} - 1$$

*Difference due to rounding

where:

SERP	the supply side equity risk premium;
SR	the supply of the equity return;
CPI	Consumer Price Index (inflation);
RRf	the real risk-free rate.

Converting the geometric average into an arithmetic average results in an equity risk premium of 6.23 %:

$$R_A = R_G + \frac{\sigma^2}{2}$$

$$6.23\% = 4.24\% + \frac{19.97\%2}{}$$

where:

RA - the arithmetic average;

RG = the geometric average;

σ" = the standard deviation of equity returns.

long-Term Market Predictions

The supply side model estimates that stocks will continue to provide significant returns over the long run, averaging around 9.66 percent per year, assuming historical inflation rates. The equity risk premium, based on the supply side earnings model, is calculated to be 4.24 percent on a geometric basis and 6.23 percent on an arithmetic basis.

In the future, Ibbotson and Chen predict increased earnings growth that will offset lower dividend yields. The fact that earnings will grow as dividend payouts shrink is in line with Miller and Modigliani Theory.

The forecasts for the market are in line with both the historical supply measures of public corporations (i.e. earnings) and overall economic productivity (GDP per capita).
